ENGINE (DIAGNOSTICS)(H4DO) > Freeze Frame Data

OPERATION

Note:

- **Refer to “COMMON (diag)”. Ref. to COMMON(diag)>Freeze Frame Data.**
- **For details on freeze frame data, refer to the list. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data>LIST.**

ENGINE (DIAGNOSTICS)(H4DO) > Freeze Frame Data

LIST

Display	Contents	REMARKS
Engine Speed	Value calculated from crankshaft position sensor output value.	rpm
Air Flow Rate from Mass Air Flow Sensor	Value calculated from air flow sensor output value.	g/s or lb/m
Vehicle Speed Sensor	Value calculated from vehicle speed sensor output value.	km/h or MPH
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	%

Display	Contents	REMARKS
Accel. Opening Angle	Accelerator pedal opening angle (in percentage) calculated from accelerator pedal position sensor output value.	%
Ignition Timing Advance for #1 Cylinder	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	°
Coolant Temp.	Value calculated from engine coolant temperature sensor output value.	°C or °F
Short Term Fuel Trim (B1)	Air fuel ratio correction control value for the front oxygen (A/F) sensor.	%
Long Term Fuel Trim (B1)	Air fuel ratio learning control value for the front oxygen (A/F) sensor.	%
Mani. Absolute Pressure	Value calculated from manifold pressure sensor output.	kPa, mmHg, inHg or psig
Bank 1 - Sensor 2 present at that location	Rear oxygen sensor voltage value.	V
VVT Adv. Ang. Amount R	AVCS advance angle amount for the RH bank on the intake side.	deg
VVT Advance Target Angle Amount R	AVCS target advance angle amount for the RH bank on the intake side. This value is compared with the AVCS advance angle amount R to judge if the intake AVCS is operating properly. Response delays during the transition time.	deg
VVT Adv. Ang. Amount L	AVCS advance angle amount for the LH bank on the intake side.	deg
VVT Advance Target Angle Amount L	AVCS target advance angle amount for the LH bank on the intake side. This value is compared with the AVCS advance angle amount L to judge if the intake AVCS is operating properly. Response delays during the transition time.	deg
Exh. VVT Retard Ang. R	AVCS retard angle amount for the RH bank on the exhaust side.	deg
Ex VVT Retard Target Angle R	AVCS target retard angle amount for the RH bank on the exhaust side. This value is compared with the AVCS retard angle amount R to judge if the exhaust AVCS is operating properly. Response delays during the transition time.	deg
Exh. VVT Retard Ang. L	AVCS retard angle amount for the LH bank on the exhaust side.	deg

Display	Contents	REMARKS
Ex VVT Retard Target Angle L	AVCS target retard angle amount for the LH bank on the exhaust side. This value is compared with the AVCS retard angle amount L to judge if the exhaust AVCS is operating properly. Response delays during the transition time.	deg
Control module voltage	ECM input power supply voltage.	V
Target Equivalence Ratio	Target air fuel ratio. (Lambda). It usually becomes 1.0 aiming at a theoretical air fuel ratio.	—
Oil Temperature	Value calculated from the engine oil temperature sensor output value.	°C or °F
Intake Air Temp.	Value calculated from the intake air temperature sensor output value.	°C or °F
Ambient air temperature	Value that ECM estimates by using input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	°C or °F
Ambient Temperature Sensor Signal	Data value of the ambient temperature input from the combination meter via CAN. Ambient temperature used for diagnosis.	°C or °F
Ambient Temperature for Control	Data value of the ambient temperature input from the combination meter via CAN. Ambient temperature used for control.	°C or °F
Calculated LOAD Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	%
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	%
Barometric Pressure	Value calculated from atmospheric pressure sensor output value.	kPa, mmHg, inHg or psig
Actual Throttle Opening Angle	Actual throttle opening angle. Calculated by ECM based on the throttle sensor input value.	deg
Commanded Throttle Actuator Control	Control value of the target throttle opening angle calculated by ECM. Target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	%
Relative Throttle Position	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value.	%

Display	Contents		REMARKS
	The value will be approx. 70% at full open.		
Idle Mass Air Flow	Air volume correction value to maintain the target rotation speed in each water temperature. Corrects air volume when the water temperature changes. It includes values of the feedback correction amount and the learning value.	g/s	
Idle Mass Air Flow Feedback correct	Air volume compensation value of ISC as a feedback correction to stabilize the idling speed.	g/s	
ISC Learning Value	Learning control value of ISC. After warming up, learning control is executed to reduce the ISC feedback correction to zero, in order to stabilize the engine speed.	g/s	
Idle A/C load correct	Air volume correction when the air conditioner is turned on. ECM corrects the air volume against the target rotation speed when the air conditioner is turned ON.	g/s	
Electric Load Feedback Val	Air volume correction value when an electric load is turned on. ECM corrects the air volume against the set target rotation speed when the electric load is turned ON.	g/s	
Idle dirty throttle correct	Calculates the ISC learning values on a long-term basis, and judges as an ISC dirty throttle correction when the learning value increases gradually. When carbon or other dirt accumulates on the ISC throttle and make the throttle dirty, air volume decreases when the throttle is fully closed. The ECM increases the amount of compensation air to keep the rotation speed.	g/s	
Fuel Rail Pressure A	Fuel pressure sensor output value set to the high pressure fuel line. Input value to ECM.	kPa	
Fuel Rail Pressure B	Fuel pressure sensor output value set to the high pressure fuel line. Input value to ECM.	kPa	
Commanded Fuel Rail Pressure A	Target fuel pressure for high pressure fuel line calculated by ECM.	kPa	
Commanded Fuel Rail Pressure B	Target fuel pressure for high pressure fuel line calculated by ECM.	kPa	
Fuel Level Input	Fuel level sensor output value. Input value to ECM. Total value of main and sub.	%	

Display	Contents		REMARKS
Fuel level resistance	Fuel level sensor resistance value. Input value to ECM.	Ω	
Commanded Evaporative Purge	Evaporative purge rate displayed by the OBD.	%	
Purge Density Learn Value	Leaning value of the evaporation gas density purged from the canister. ECM displays the estimated leaning value.	%	
Evap Purge Flow	Purge ratio when the evaporation gas is purged from the canister. ECM performs a duty drive to the purge solenoid valve. The amount of gas actually purged will vary depending on the vacuum pressure difference before/after the solenoid valve. Purge ratio displayed here shows current purge amount in percentage against the maximum purge amount when the maximum vacuum pressure is applied.	%	
ALT Duty	Value calculated by the ECM as an electric power generation voltage. Indicator voltage value from ECM to alternator is under a duty control.	%	
Alternator control mode	Control mode of the electric power generation voltage by the alternator. Low: Mode that controls the battery charge Mid: Mode where the battery is not charged and discharged High: Mode that fixes the voltage when the battery is charged or when an electric load is turned on ExHigh: Mode where the battery is charged during deceleration Smart: Mode that maintains target SOC and restrains unnecessary power generation Low (Start): Mode that gradually increases the voltage at start Low (Acceleration): Mode that suppresses power generation load when slightly stronger acceleration was judged Low (Deceleration): Mode that suppresses power generation load when the vehicle is decelerated to stop Neutral: Neutral mode passing through the transition to the next mode from ExHigh	—	
Battery Terminal Voltage	Voltage value between battery terminals input from the battery sensor.	V	

Display	Contents	REMARKS
Battery Charge/Discharge Current	Battery charge/discharge current value input from the battery sensor. When the value is positive: The current flows to a direction that the battery is charged. When the value is negative: The current flows to a direction that the battery is discharged.	A
Estimated Battery Temperature	Battery temperature input from the battery sensor.	°C
Remaining battery capacity	Remaining amount of battery estimated by ECM.	%
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	—
Fuel system for Bank 2	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	—
A/F Sensor #1 Resistance	Value calculated from the front oxygen (A/F) sensor output value.	ohm
No. of EGR steps	Number of EGR valve steps. Number of stepping motor steps. ECM output value.	STEP
Commanded EGR	Target value as EGR setting value calculated by ECM.	%
EGR Error	Percentage of the difference in actual EGR steps as compared to the target EGR steps. Both a positive value and a negative value mean that it doesn't fulfill the target. When the value is positive: It opens more than the target value. When the value is negative: It opens smaller than the target value.	%
TGV Drive	Tumble generator valve drive status. Set to "Open" when the tumble generator valve is open. ECM control status.	—
Cylinder Monitor #1	Calculates the rotation speed between certain angles on the #1 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm
Cylinder Monitor #2	Calculates the rotation speed between certain angles on the #2 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm

Display	Contents		REMARKS
Cylinder Monitor #3	Calculates the rotation speed between certain angles on the #3 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm	
Cylinder Monitor #4	Calculates the rotation speed between certain angles on the #4 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm	
Active Grille Shutter Position	Pulse count value of active grille shutter position. Fully open: 100% Fully closed: 0%	—	
Active Grille Shutter Mechanical Break Status	Mechanical error status of the active grille shutter. During the calibration procedure, if a linkage of the active grille shutter is off, calibration is not performed. Judgment is done by the active grille shutter and the status is sent to ECM.	—	
Active Grille Shutter Sensor Error Status	Judges a malfunction of the active grille shutter opening angle sensor. Judges the sensor malfunction on the pulse counter. Judgment is done by the active grille shutter and the status is sent to ECM.	—	
Active Grille Shutter Voltage Error Status	Judges a malfunction of the power source voltage supplied to the active grille shutter. Judgment is done by the active grille shutter and the status is sent to ECM.	—	
Active Grille Shutter Control Circuit Error Status	Judges a malfunction of the active grille shutter internal circuit (drive motor). Judgment is done by the active grille shutter and the status is sent to ECM.	—	
Active Grille Shutter Stuck Error Status	Judges an abnormal stuck of the active grille shutter. Detects the status where the operation failed because of any foreign matter or ice clogging in the active grille shutter.	—	
Active Grille Shutter Temperature Error Status	Detects internal temperature of the active grille shutter. The judgment is performed to check if the temperature is excessively high. Judgment is done by the active grille shutter and the status is sent to ECM.	—	
Active Grille Shutter Communication Error	Communication is performed between the active grille shutter and ECM, and judges the abnormality	—	

Display	Contents	REMARKS
Status	of the communication status.	
Active Grille Shutter Position Commanded Status	Active grille shutter drive instruction status Shutter open: Open Shutter closed: Closed	—
Active Grille Shutter Calibration in progress	Status of the active grille shutter calibration. Active grille shutter performs the calibration when the ignition is ON. Set to “ON” when the calibration was performed.	—
Active Grille Shutter Calibration Commanded Status	Commands from ECM to the active grille shutter.	—
Active Grille Shutter Calibration Status	Status of the active grille shutter calibration. When completed: Completed When not completed: Not completed **Note:** **Always completed when there is no abnormality in the active grille shutter.**	—
Active Grille Shutter Warning Status	Warning signal of the active grille shutter. When the active grille shutter has a malfunction, signal is sent to the combination meter to illuminate the warning light.	—
Active Grille Shutter Control Status 1	Status such as operating factors (air conditioner, radiator fan etc.) or frozen judgment of the active grille shutter controlled by the ECM.	—
Active Grille Shutter Control Status 2	Status such as operating factors (air conditioner, radiator fan etc.) or frozen judgment of the active grille shutter controlled by the ECM.	—
Trip Count	Time stamp information. Number of times the ignition is ON since the vehicle was manufactured. The number of ignition ON is also recorded when a trouble code is recorded, so the comparison with that number will show you how many times the ignition has turned on since the diagnostic code was recorded.	time
Count	Time stamp information. Each unit individually counts the elapsed time since the ignition is turned to ON. Master integrated unit and ECM synchronize with the master time. When synchronized: “Common” When not synchronized: “Originally”	—
Time Count	Time stamp information. Elapsed time after ignition ON.	ms

Display	Contents	REMARKS
	When a trouble code is recorded, the elapsed time after ignition ON is also recorded.	
Time Since Engine Start	Elapsed time after starting the engine.	sec
Initial Engine Oil Temp	Oil temperature when starting the engine, which is input to ECM from the oil temperature sensor.	°C
Initial Engine Coolant Temp.	Water temperature when starting the engine, which is input to ECM from the water temperature sensor.	°C
Initial Intake Air Temp.	Intake air temperature when starting the engine, which is input to ECM from the intake air temperature sensor.	°C
Engine Starting Time	Time needed since the cranking started till the judgment of engine start is complete.	ms
Start Mask Control Check 1	Shows whether the start prohibition control is executed on the engine side when the engine is started. Values other than zero means that the control is executed and the engine start is prohibited.	—
IG OFF Elapsed Time	Time the vehicle has been left since the engine stopped. This value can be used to check how long the vehicle has been left with the ignition switch ON after the engine stopped.	sec
Fuel Cut Elps Time	Elapsed time after experienced high rotation speed.	sec
Catalyst Temperature #11	Estimated temperature of the front catalytic converter.	°C or °F
Auto Trans Neutral Drive Status	Neutral condition. Information input from the inhibitor switch. (CVT model)	—
Manual Trans Neutral Gear Status	Neutral condition. Information input from the neutral switch. (MT model)	—
Clutch Switch	Clutch switch signal. Set to “ON” when the clutch switch is ON. (MT model) Input value to ECM.	—
Stop Light Switch	Stop light switch signal. Set to “ON” when the stop light illuminates. Input value to ECM.	—
Idle Switch Signal	Idle signal. Set to “Idle” while idling.	—
Ignition Switch	Ignition switch signal. Set to “ON” when the ignition switch is ON.	—

Display	Contents	REMARKS
A/C Mid Pressure Switch	Air conditioner middle pressure switch signal. Set to “ON” when the switch is ON. Input value to ECM.	—
A/C Compressor Signal	A/C compressor drive signal. Set to “ON” when the drive signal is output. ECM output value.	—
Variable Load Compressor Torque Value	Load value of the variable capacity air compressor. The value that the air conditioner CM estimates and outputs.	N·m
Starter Switch	Starter switch signal. Set to “ON” when the starter is ON. Input value to ECM.	—
AT turbine speed	Turbine rotation speed of the transmission. Turbine rotation speed is input from the transmission CM via CAN. (CVT model)	—
Lock up status	Lock-up status of the transmission. Lock up status is input from the transmission CM via CAN. (CVT model)	—
P/N Signal	P/N status of the transmission. P/N range status is input from the transmission CM via CAN. (CVT model)	—
Trailer signal	Trailer towing status. Signal that indicates the presence of trailer towing is input via the integrated unit.	—
Alternator Mechanical Error Status	Status where alternator is judged as having mechanical trouble.	—
Alternator Electrical Output Error Status	Status where alternator is judged as having electric abnormality.	—
Alternator High Temperature Error Status	Status where alternator is judged as having high temperature malfunction.	—
Alternator Communication Error Status	Status where alternator is judged as having communication failure.	—
Regulator Temperature	Alternator regulator temperature.	°C
Imbalance Check 1 #1	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 1 #2	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 1 #3	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—

Display	Contents	REMARKS
Imbalance Check 1 #4	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 2 #1	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 2 #2	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 2 #3	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 2 #4	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 3 R	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
Imbalance Check 4 R	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—
O2 Sensor #11	Installation status of the front oxygen (A/F) sensor.	—
O2 Sensor #12	Installation status of the rear oxygen sensor.	—
Short term fuel trim #12	Air fuel ratio correction control value of the rear oxygen sensor.	%
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	—
A/F Sensor #11	Front oxygen (A/F) sensor output voltage.	V
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	—
A/F Sensor #11	Front oxygen (A/F) sensor current value.	mA
Absolute Throttle Position B	Shows the sub throttle sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Accelerator Pedal Position D	Shows the main accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Accelerator Pedal Position E	Shows the sub accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
O2 Sensor Impedance		ohm
Crush Detection Signal	Collision detection signal input value to ECM. ON = Collision detection OFF = Collision not	—

Display	Contents	REMARKS
	detected	
Final Injection Mode	Number of injections to cylinder in one cycle	—
Final valid Injection Quantity	For direct injection engine, fuel injection is performed several times in one cycle. And this is the total injection amount value of that multiple stage injection.	mm3/st
Starting Timing of 1st final Direct Injection	Timing of starting first fuel injection in one cycle	°CA
Starting Timing of 2nd final Direct Injection	Timing of starting second fuel injection in one cycle	°CA
Starting Timing of 3rd final Direct Injection	Timing of starting third fuel injection in one cycle	°CA
Starting Timing of 4th final Direct Injection	Timing of starting fourth fuel injection in one cycle	°CA
Completed Flag of Cylinder Discrimination	Flag for completion of cylinder judgment If this flag is not ON, it is possible to judge that the crankshaft position sensor and camshaft position sensor are faulty.	—
Fuel Increase 1 at the High Temperature Restart	Fuel injection compensation coefficient at restarting with high coolant temperature	—
Judgment Flag of Heavy Fuel	Result of heavy mass fuel judgment	—
Engine Startup Mode	Mode at engine starting 00 = initial start 01 = Normal start 02 = Short term engine stall restart 03 = Idling stop restart 04 = Change mind restart	—
Current Gear Position	Gear status 00 = P, N range 14 = R range 13 = Auto neutral status 06 = 6th 05 = 5th 04 = 4th 03 = 3rd 02 = 2nd 01 = 1st	—
Load Value	Engine load value	%
Clutch Start SW	Clutch start switch status ON = Clutch depressed status OFF = Clutch not depressed status	—

ENGINE (DIAGNOSTICS)(H4DO) > Active Test

OPERATION

Caution:

After executing the system operation check mode, clear the memory. Ref. to COMMON(diag)>Clear memory.

Note:

- **∗: After replacing ECM or active grille shutter, be sure to perform this procedure.**
- **For detailed operation procedures, refer to “Application help”.**

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, enter vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Engine Control System].
5. On [Select Function] display, select [Active Test].

ENGINE (DIAGNOSTICS)(H4DO) > Active Test

LIST

Active test items	Contents	Execution condition
Fuel Pump Relay	ON/OFF of the fuel pump can be set.	Ignition switch ON (engine OFF)
CPC Solenoid Valve	ON/OFF of the purge control solenoid valve can be set.	
Radiator Fan Relay	ON/OFF of the radiator fan relay can be set.	
ELCM switching valve	ON/OFF of the leak check valve assembly switching valve can be set.	
ELCM pump	ON/OFF of the leak check valve assembly vacuum pump can be set.	
Fuel Pump Control (OFF Drive)	Fuel pump can be set to OFF.	Idling
Fixed Idle Ignition Timing	Idle ignition timing can be set and fixed to 10.0°.	Idling
Idle Speed Control	Idle speed can be set to 500 — 2000 rpm.	Idling
Injection Stop Mode (Injector 1) Injection Stop Mode (Injector 2)	Injector of each cylinder can be set to stop the fuel injection.	Idling

Active test items	Contents	Execution condition
Injection Stop Mode (Injector 3) Injection Stop Mode (Injector 4)		
Injection Quantity Control	The amount of fuel injection can be set to 0 — 20%.	Idling
EGR Valve Control (Step)	EGR control valve can be set to 0 — 255 STEP.	Idling
Alternator control	Alternator control mode can be set to one of the followings: Low mode Middle mode High mode ExHigh mode	Idling
Active Grille Shutter Control	Open ←→ close of the active grille shutter can be set.	• Ignition switch ON (engine OFF) • Experienced 20 seconds or more of the elapsed time after starting engine (when replacing ECM)
Compression monitor	Compression can be measured.	• Ignition switch ON (engine OFF) • Accelerator pedal is fully depressed

ENGINE (DIAGNOSTICS)(H4DO) > Work Support

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, enter vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Engine Control System].
5. On [Select Function] display, select [Work Support].
6. On [Work Support] display, select an appropriate function.
7. Perform the procedures shown on the display screen.

Note:

For detailed operation procedures, refer to “Application help”.

ENGINE (DIAGNOSTICS)(H4DO) > Work Support

LIST

Work support item	Contents	REMARKS
Simple Roughness Monitor	Engine speed and misfiring counter for each cylinder can be displayed.	• Calculates in range of engine speed (300 rpm to 2000 rpm) • Interval of data update is 60 ms at minimum (at 2000 rpm)
High-Grade Roughness Monitor (without harness)	Standard deviation, engine speed, etc. can be calculated based on the pulse data of crankshaft position sensor and camshaft position sensor, and the value and graph can also be displayed.	• Calculates in range of engine speed (300 rpm to 2000 rpm) • Interval of data update is 60 ms at minimum (at 2000 rpm)
Entry VIN	V.I.N can be registered.	Ignition switch ON (engine OFF)

ENGINE (DIAGNOSTICS)(H4DO) > All Readiness Diagnostic Code(s)

OPERATION

Note:

- **The readiness code shows self-diagnosis status of each DTC. The DTCs displayed here are either not yet self-diagnosed or self-diagnosed but not completed. After the self-diagnosis is complete, DTC will no longer be displayed regardless of the diagnostic result.**
- **Self-diagnosis is executed every time when the ignition switch is turned to ON. Therefore, even after the self-diagnosis is complete and nothing is displayed on the readiness code display, if you turn the ignition switch to ON again after turning it OFF, some DTCs may be displayed on the readiness code display.**
- **After you repair a DTC and perform the Inspection Mode, use the readiness code to check if the self-diagnosis of the DTC is completed. If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 4).**
- **For detailed operation procedures, refer to “Application help”.**

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Engine Control System], and then select [Next].
5. On [Select Function] display, select [DTC].
6. On [DTC] display, select [All Readiness Diagnostic Code(s)].

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

- **Refer to “COMMON (diag)”. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**
- **For details on DTCs, refer to the list. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC)>LIST.**

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1

Note:

For the diagnostic procedure, refer to DTC P0011. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1.

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge NG when the amount of AVCS actual timing advance does not approach to the amount of AVCS target timing advance.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage AVCS control |Target timing advance change amount (per 64 ms)|	10.9 V or more In operation Less than 3.2°CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while AVCS is operating.

4. DIAGNOSTIC METHOD

When the differences of target timing advance amount and actual timing advance amount is calculated during AVCS control, and the difference per predetermined time is the specified value or larger.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
Σ|(Target position − Actual position)|	More than 4000°CA (bank 1)
Σ|(Target position − Actual position)|	More than 4000°CA (bank 2)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1

Note:

For the diagnostic procedure, refer to DTC P0014. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1.

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge NG when the amount of exhaust AVCS actual timing advance does not approach the amount of exhaust AVCS target timing advance.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Exhaust AVCS control	In operation
|Target timing advance change amount (per 64 ms)|	Less than 3.2°CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the engine speed increases and exhaust AVCS operates.

4. DIAGNOSTIC METHOD

When the differences of target timing advance amount and actual timing advance amount is calculated during exhaust AVCS control, and the difference per predetermined time is the specified value or larger. Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
Σ|(Target position − Actual position)|	More than 4000°CA (bank 1)
Σ|(Target position − Actual position)|	More than 4000°CA (bank 2)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P000C "A" CAMSHAFT POSITION SLOW RESPONSE BANK 2

Note:

For the diagnostic procedure, refer to DTC P0021. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to P000A. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1.

DTC P000D "B" CAMSHAFT POSITION SLOW RESPONSE BANK 2

Note:

For the diagnostic procedure, refer to DTC P0024. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to P000B. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0010 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1

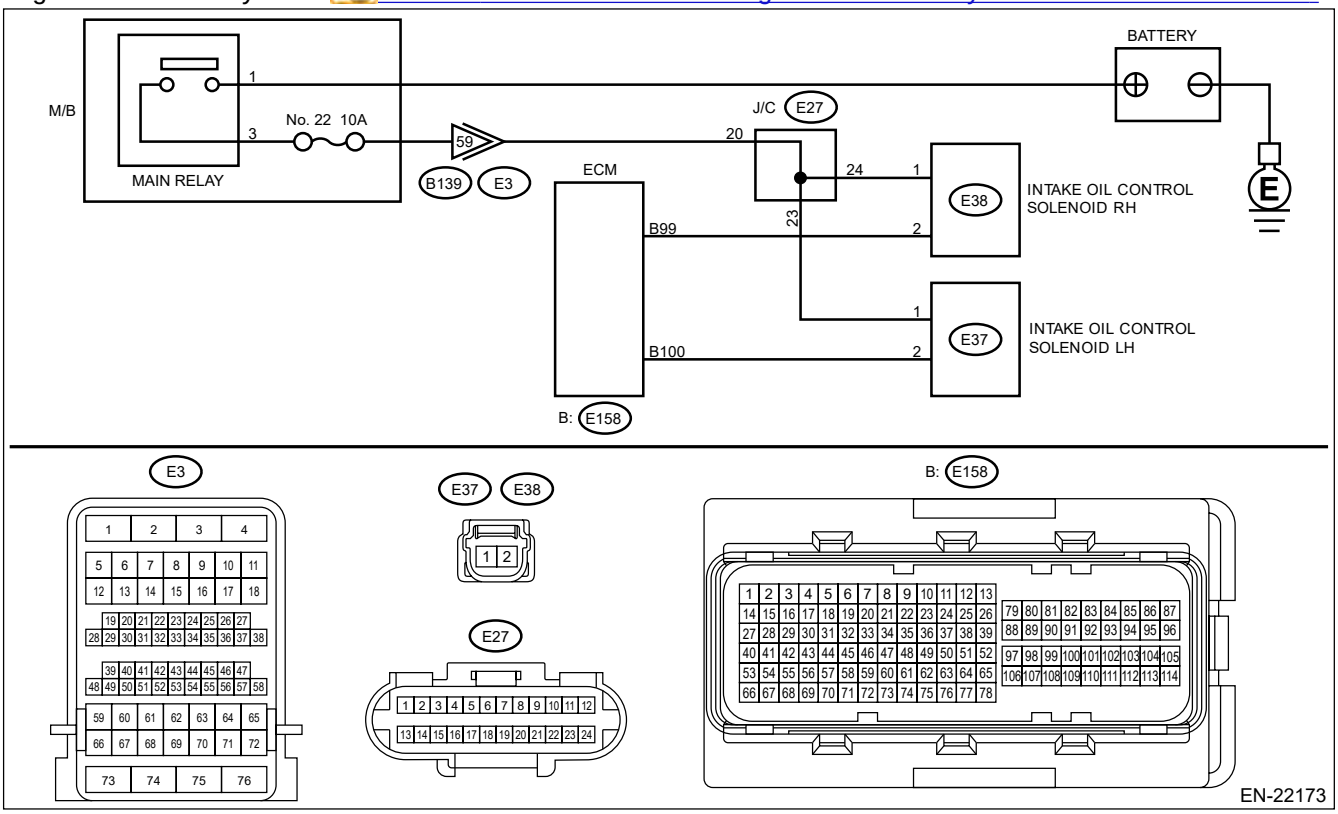
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK OUTPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 99 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Go to 3.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID RH.

Measure the voltage between intake oil control solenoid RH connector and engine ground.
Connector & terminal
(E38) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil control solenoid RH.
4. Turn the ignition switch to ON.
5. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 99 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power supply in harness between ECM connector and intake oil control solenoid RH connector.
No	Go to 5.

5. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil control solenoid RH.
4. Measure the resistance between intake oil control solenoid RH connector and engine ground.
   Connector & terminal
   (E38) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid RH connector.

6. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (OPEN).

Measure the resistance of harness between ECM connector and intake oil control solenoid RH connector.

Connector & terminal

(E158) No. 99 — (E38) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair the open circuit in harness between ECM connector and intake oil control solenoid RH connector.

7. CHECK INTAKE OIL CONTROL SOLENOID RH.

Measure the resistance between intake oil control solenoid RH terminals.

Terminals

No. 1 — No. 2:

Is the resistance 6 — 12 Ω?

Yes	Repair the poor contact of intake oil control solenoid RH connector.
No	Replace the intake oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the oil control solenoid.
Judge as NG when the current is small even though the duty signal is large.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Oil control solenoid control duty	99.61% or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Oil control solenoid control present current	Less than 0.306A

Time needed for diagnosis: 2000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

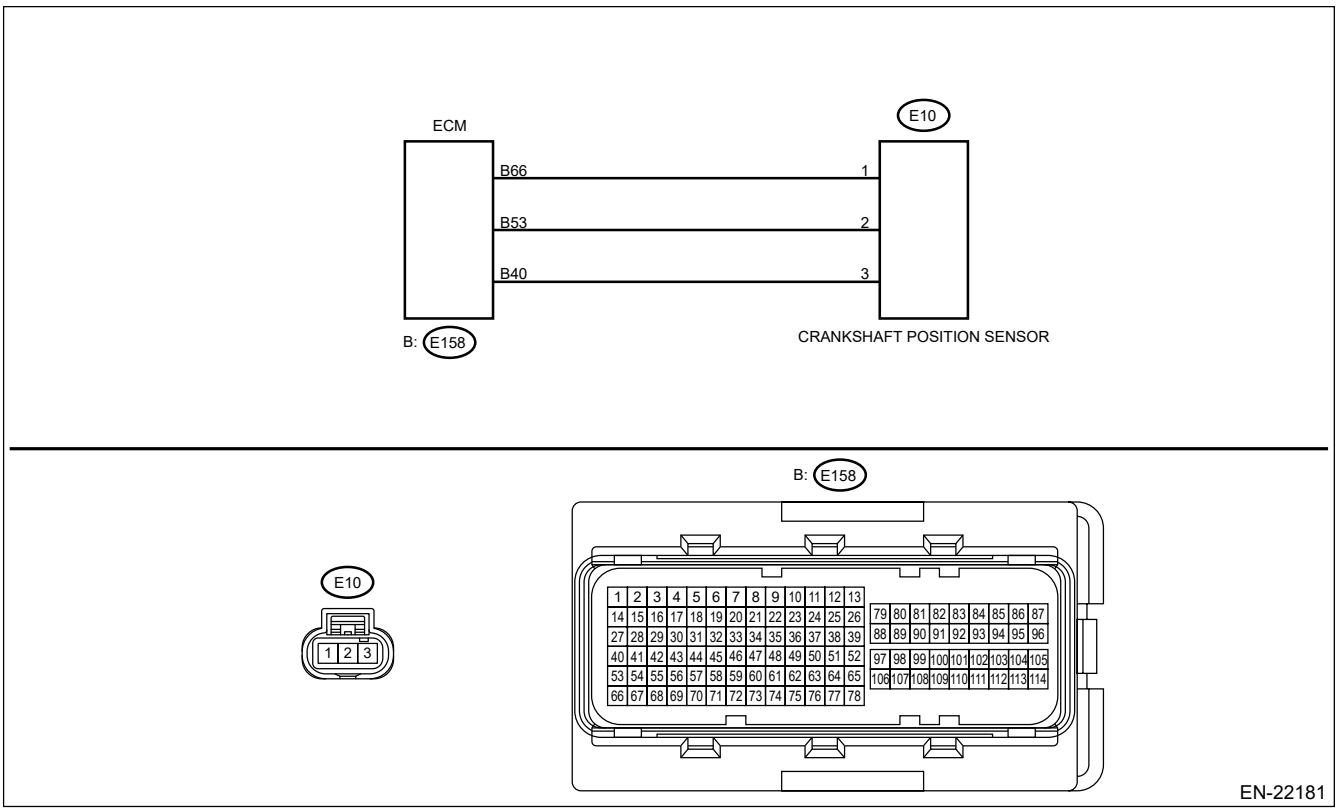
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

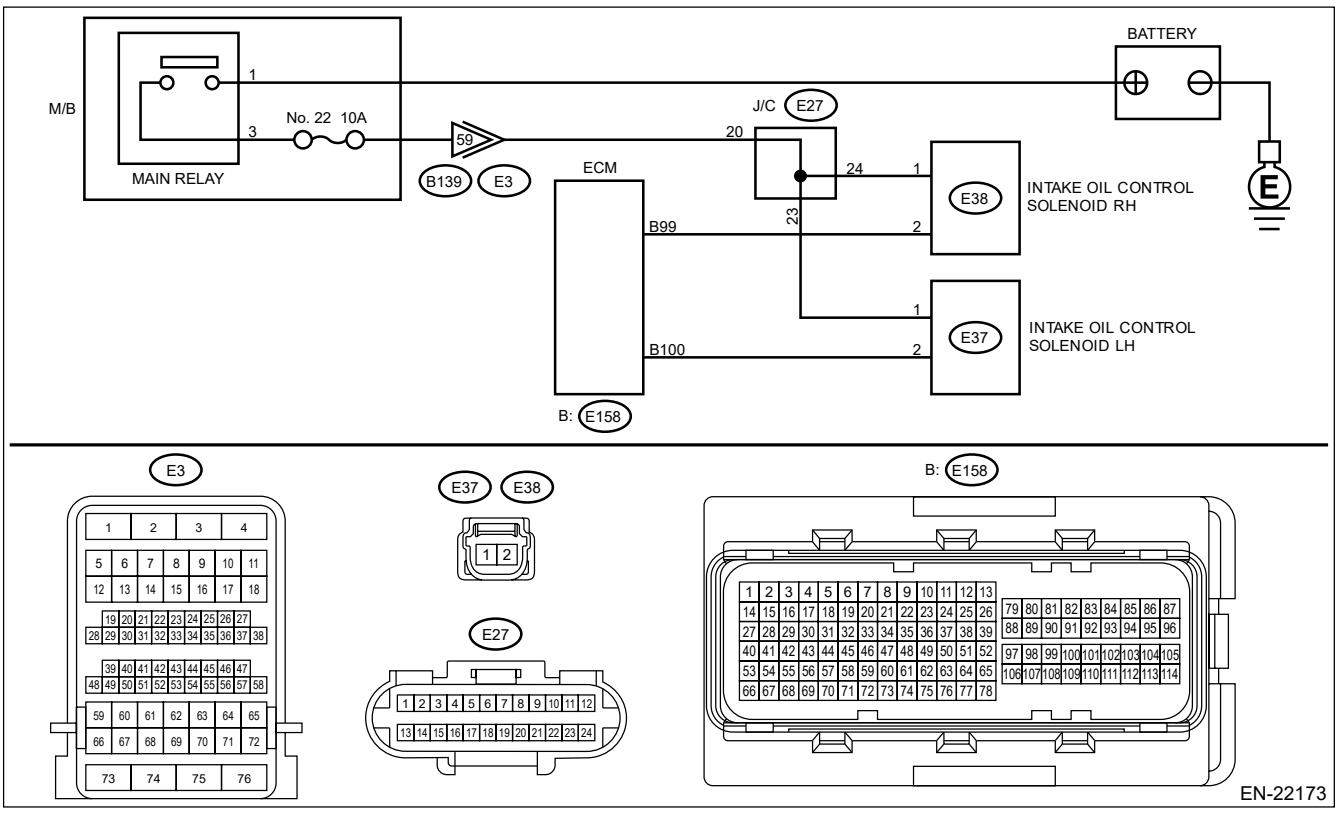
Trouble symptom:

- Engine stall
- Improper idling

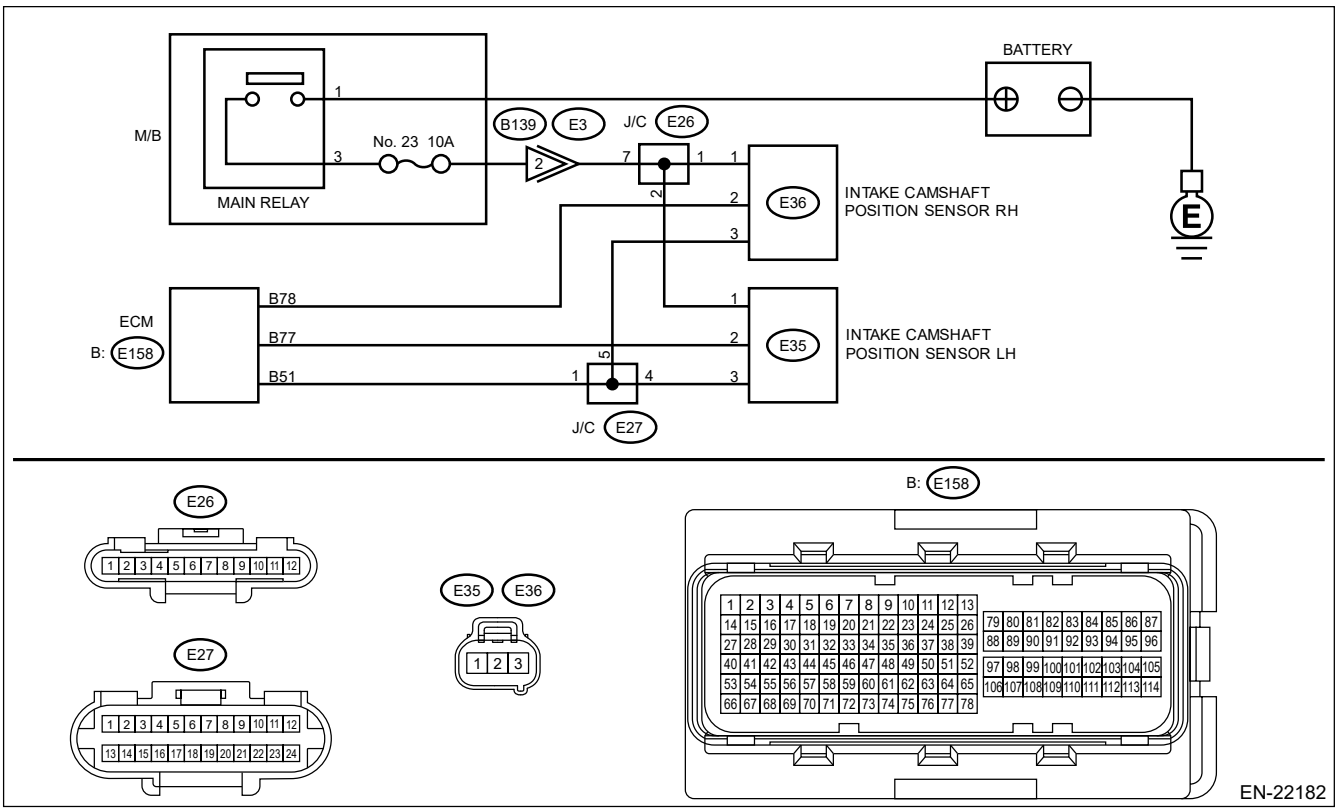
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC other than P000A and P0011 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the intake oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Always keep on checking the data while reading out the diagnostic value because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 1] of the replaced oil control solenoid 1000 or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 3.

Is the value of [VVT monitor bank 1] 1000 or less, and more than (value of [VVT monitor bank 2] ×1.5+ 100) compared with the value of [VVT monitor bank 2]?

Yes	Go to 5.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 14.

5. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 6.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 6.

6. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil control solenoid RH.
4. Measure the resistance between intake oil control solenoid RH connector and ECM connector.
   Connector & terminal
   (E158) No. 99 — (E38) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair or replace faulty parts. Go to 14.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake camshaft position sensor RH.
4. Measure the resistance between the intake camshaft position sensor RH connector and ECM connector.
   Connector & terminal
   (E158) No. 78 — (E36) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 14.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 14.

9. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 11.
No	Go to 10.

10. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 11.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 12.

11. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 12.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 12.

12. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 1) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 2).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 13.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 13.

13. CHECK OIL PASSAGE BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 14.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 14.

14. CHECK ON-BOARD MONITOR TEST RESULT.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
3. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

Caution:

- **Performing inspection mode needs a driver along with a checker who should check the data.**
- **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

Note:

- **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
- **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**

4. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 1] 1000 or more?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Go to 15.

15. CHECK DTC.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 14.

Is the value of [VVT monitor bank 1] 1000 or less, and more than (value of [VVT monitor bank 2] ×1.5+ 100) compared with the value of [VVT monitor bank 2]?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	End.

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge NG when the amount of AVCS actual timing advance does not approach to the amount of AVCS target timing advance.

2. EXECUTION CONDITION

- Target error

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
AVCS control	In operation

- Intermediate lock position

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Engine speed	500rpm or more
Elapsed time after starting the engine	More than 500ms and Value of Map or less

Engine coolant temperature at engine starting °C (°F)	−40 (−40)	−30 (−22)	−20 (−4)	−10 (14)	0 (32)	10 (50)	20 (68)
Elapsed time after starting the engine (ms)	10000	10000	10000	8000	5000	3500	2800

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while AVCS is operating.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of AVCS target timing advance amount and AVCS actual timing advance amount is large continues for certain amount of time.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

- Target error:

Malfunction Criteria	Threshold Value
|(Target position − Actual position)|	More than 10°CA

- Intermediate lock position:

Malfunction Criteria	Threshold Value
|(Target position − Actual	More than 10°CA

Malfunction Criteria	Threshold Value
position)|	

Time needed for diagnosis:

- Target error: 5000ms
- Intermediate lock position: 2000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0013 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1

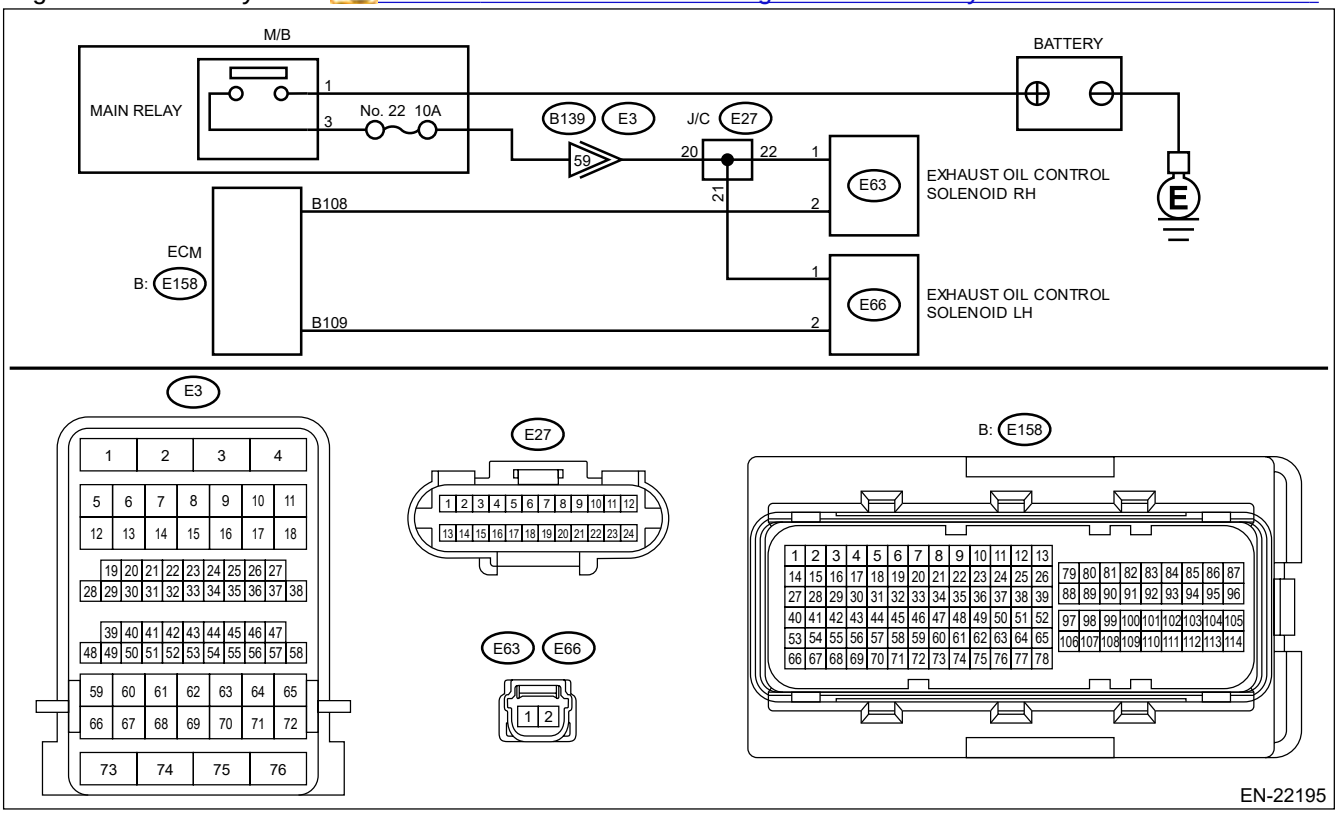
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK OUTPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 108 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Go to 3.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID RH.

Measure the voltage between exhaust oil control solenoid RH connector and engine ground.
Connector & terminal
(E63) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid RH.
4. Turn the ignition switch to ON.
5. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 108 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power supply in harness between ECM connector and exhaust oil flow control solenoid valve RH connector.
No	Go to 5.

5. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid RH.
4. Measure the resistance between exhaust oil control solenoid RH connector and engine ground.
   Connector & terminal
   (E63) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid RH connector.

6. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH (OPEN).

Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH.

Connector & terminal

(E158) No. 108 — (E63) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and exhaust oil control solenoid RH connector** • **Poor contact of coupling connector**

7. CHECK EXHAUST OIL CONTROL SOLENOID RH.

Measure the resistance between exhaust oil control solenoid RH terminals.

Terminals

No. 1 — No. 2:

Is the resistance 6 — 12 Ω?

Yes	Repair the poor contact of exhaust oil control solenoid RH connector.
No	Replace the exhaust oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the oil control solenoid.
Judge as NG when the current is small even though the duty signal is large.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Oil control solenoid control duty	99.61% or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Oil control solenoid control present current	Less than 0.306A

Time needed for diagnosis: 2000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

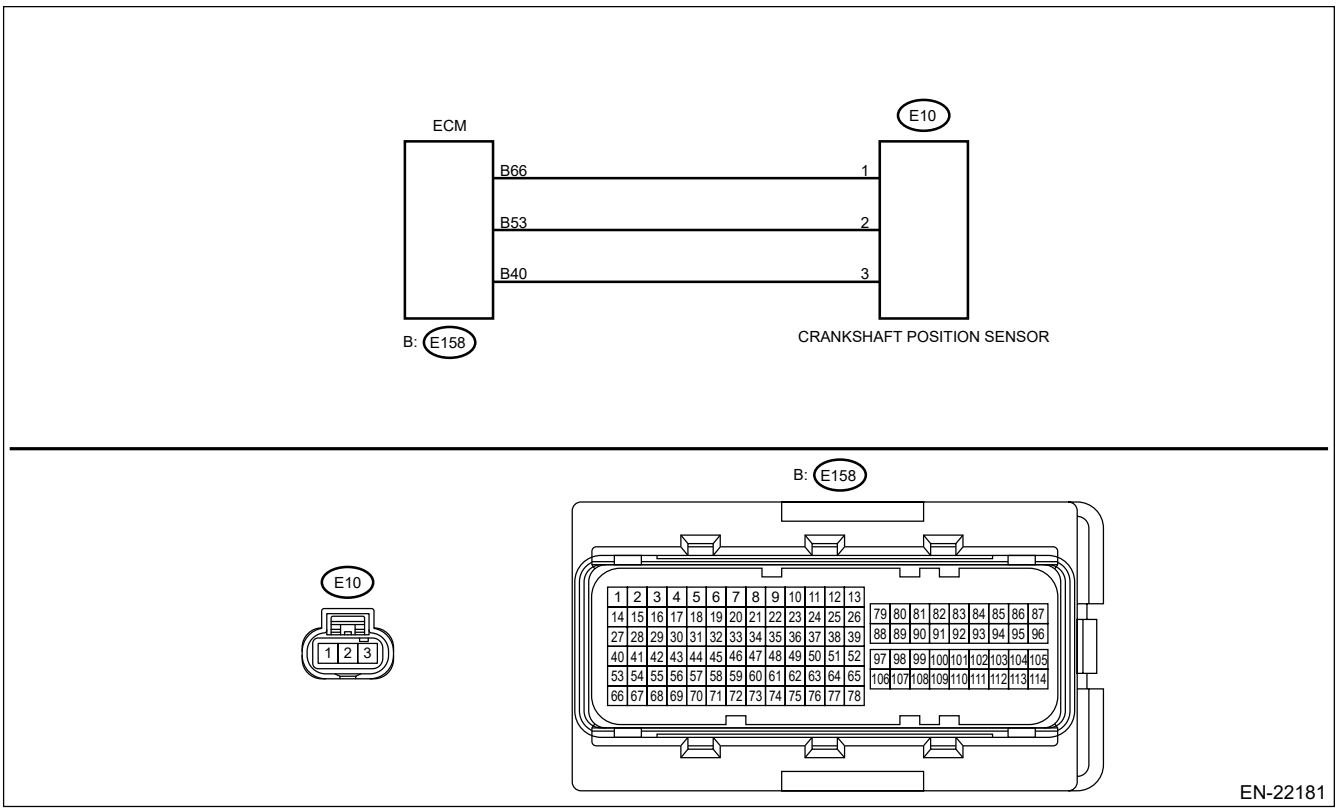
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

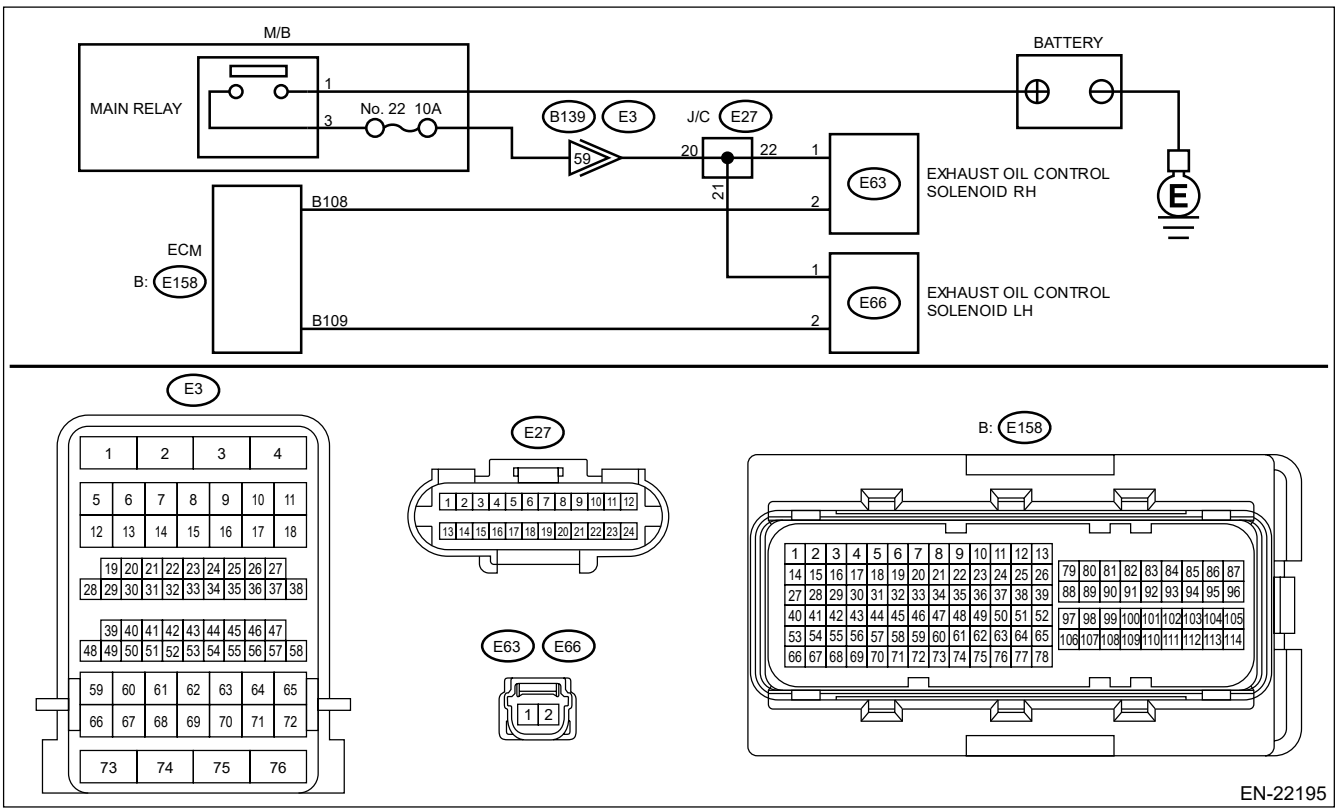
Trouble symptom:

- Engine stall
- Improper idling

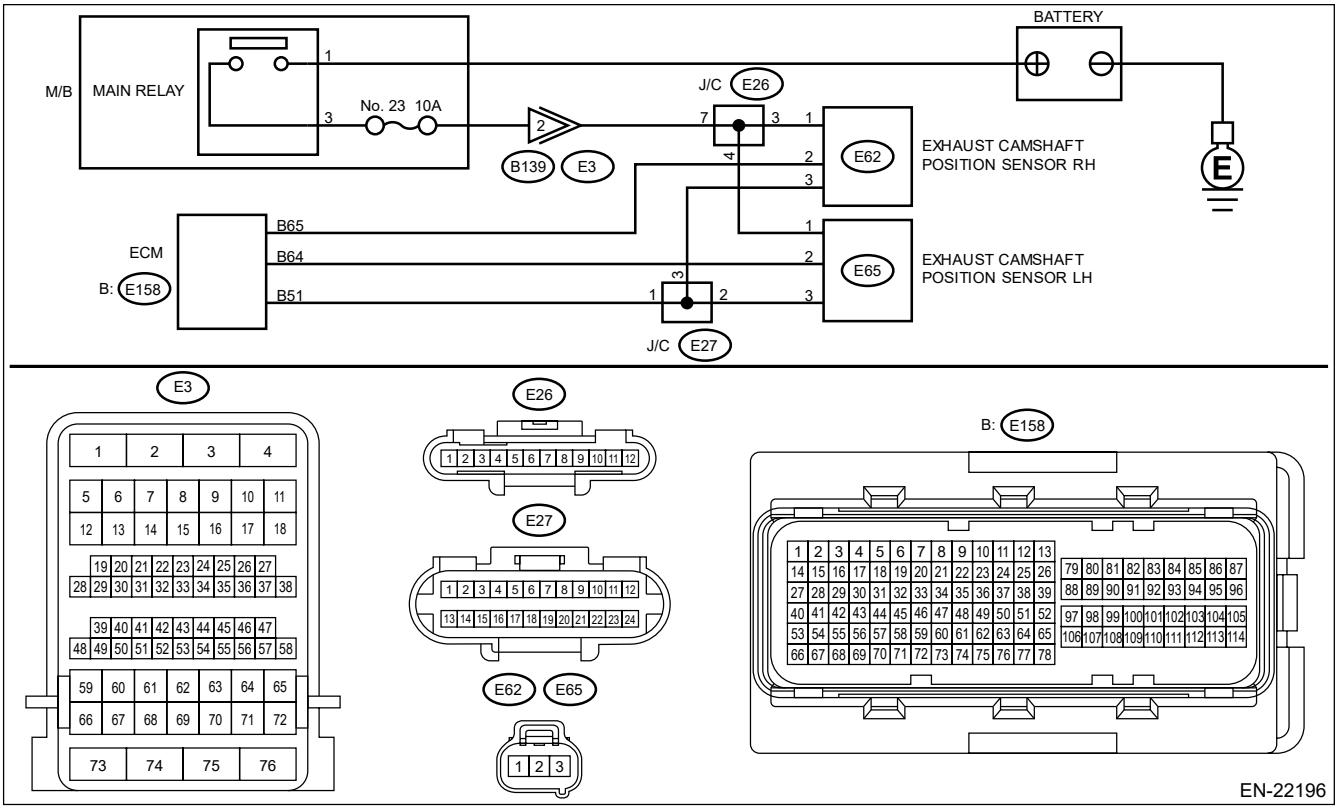
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC other than P000B and P0014 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the exhaust oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Always keep on checking the data while reading out the diagnostic value because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 1] of the replaced oil control solenoid 1000 or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 3.

Is the value of [VVT monitor bank 1] 1000 or less, and more than (value of [VVT monitor bank 2] ×1.5+ 100) compared with the value of [VVT monitor bank 2]?

Yes	Go to 5.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 14.

5. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 6.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 6.

6. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid RH.
4. Measure the resistance between exhaust oil control solenoid RH connector and ECM connector.
   Connector & terminal
   (E158) No. 108 — (E63) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair or replace faulty parts. Go to 14.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust camshaft position sensor RH.
4. Measure the resistance between the exhaust camshaft position sensor RH connector and ECM connector.
   Connector & terminal
   (E158) No. 65 — (E62) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 14.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 14.

9. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 11.
No	Go to 10.

10. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 11.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** Go to 12.

11. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 12.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 12.

12. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 1) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 2).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 13.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 13.

13. CHECK OIL PASSAGE BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 14.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 14.

14. CHECK ON-BOARD MONITOR TEST RESULT.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
3. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

Caution:

- **Performing inspection mode needs a driver along with a checker who should check the data.**
- **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

Note:

- **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
- **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**

4. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 1] 1000 or more?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Go to 15.

15. CHECK DTC.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 14.

Is the value of [VVT monitor bank 1] 1000 or less, and more than (value of [VVT monitor bank 2] ×1.5+ 100) compared with the value of [VVT monitor bank 2]?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	End.

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge as NG when the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Exhaust AVCS control	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the engine speed increases and exhaust AVCS operates.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues for certain amount of time.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
|(Target position – Actual position)|	More than 10°CA

Time needed for diagnosis: 10000ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A

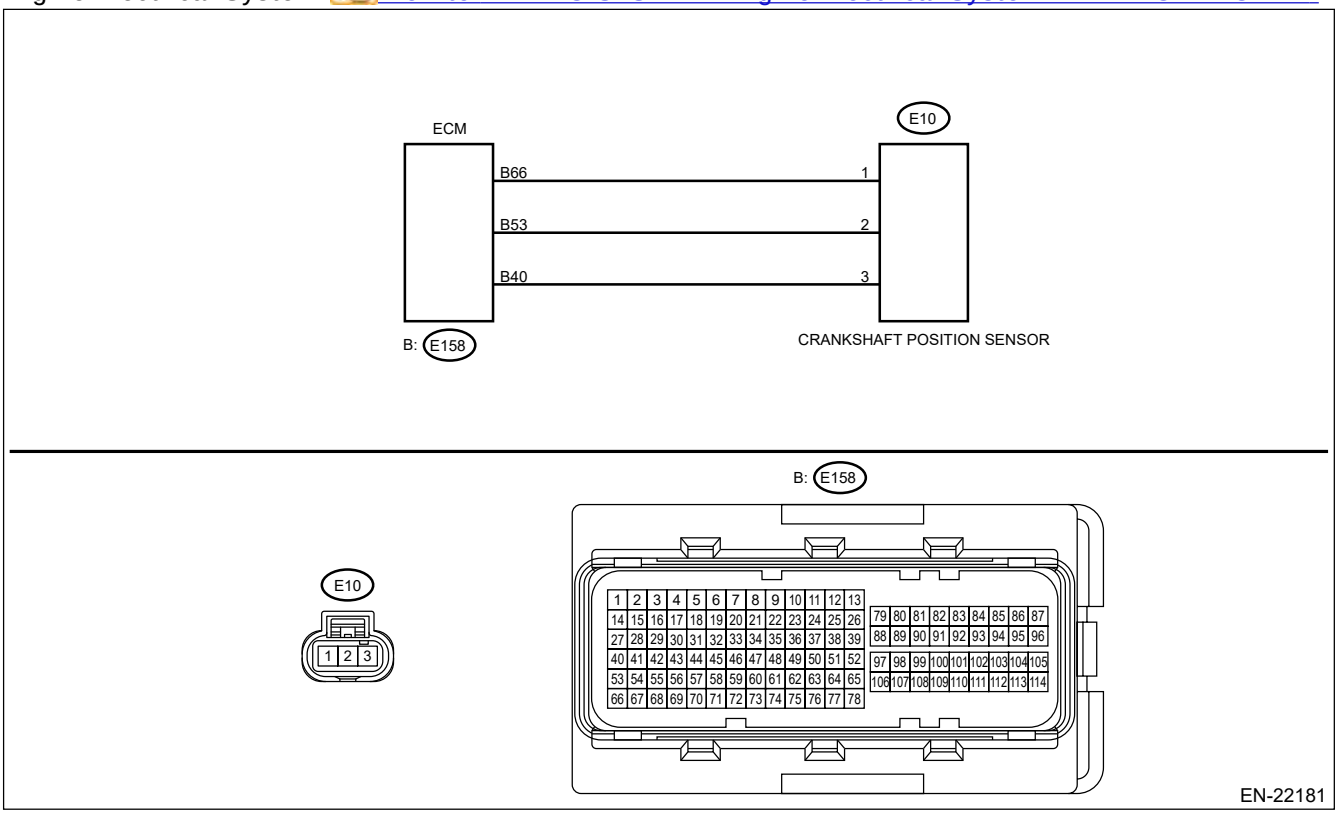
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

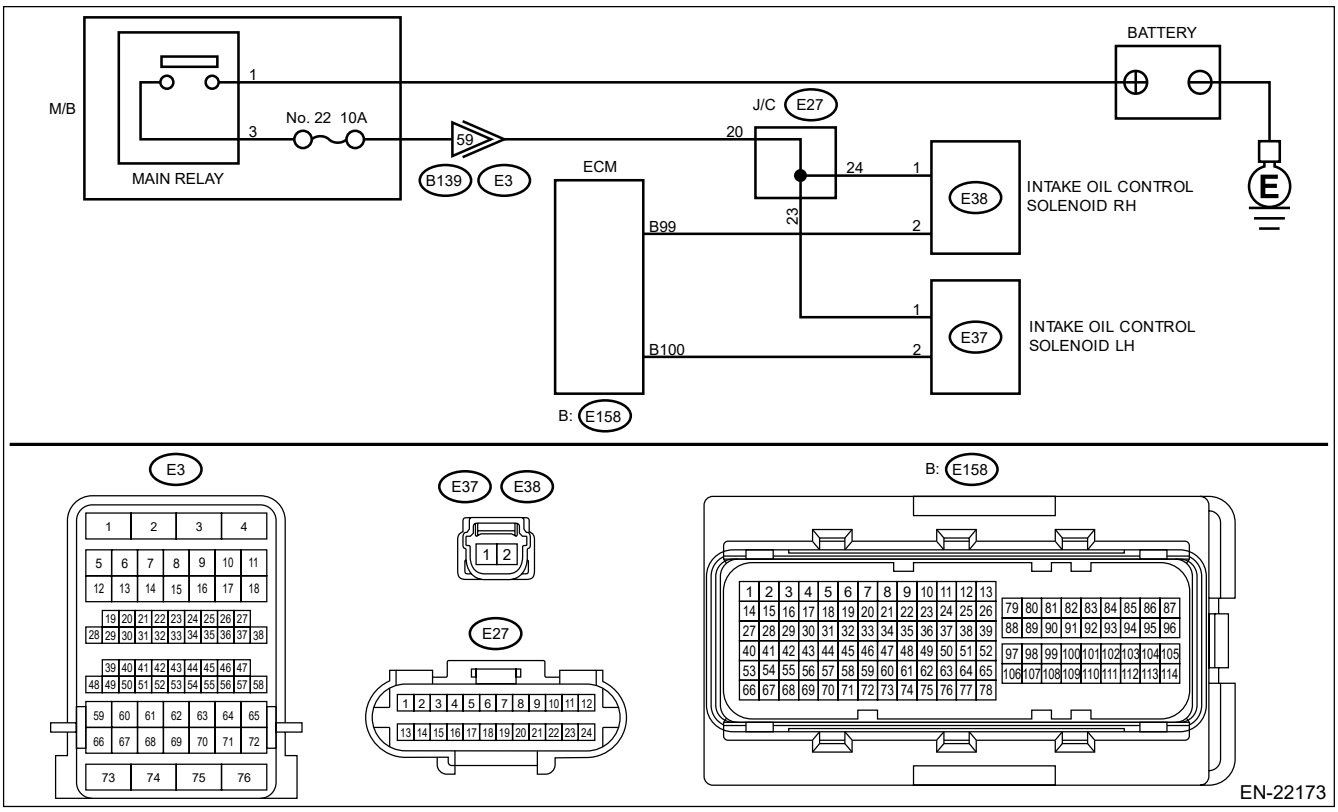
Trouble symptom:

- Engine stall
- Improper idling

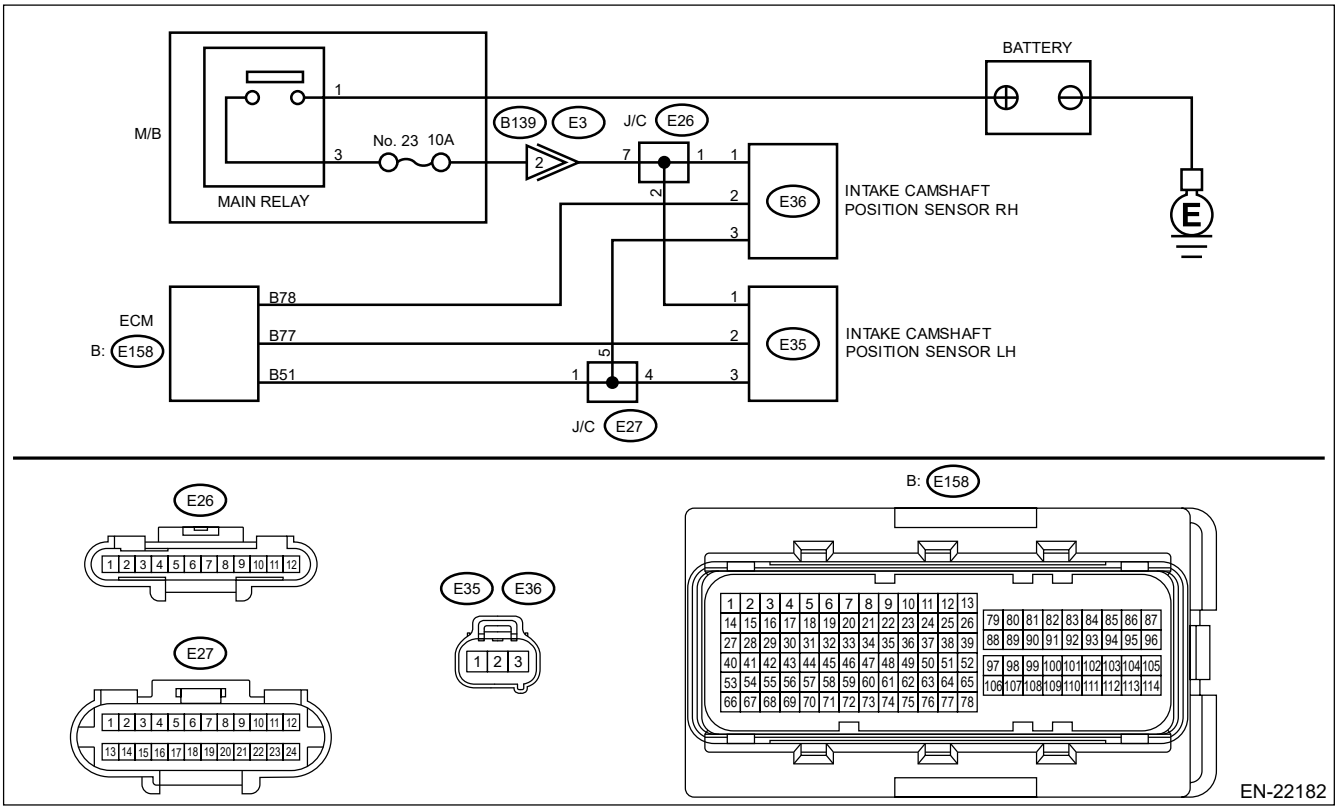
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

EN-22182

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC other than P0016 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK TIMING CHAIN.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the connector of the intake oil control solenoid RH. (DTC will be set but this will not affect the inspection)
4. Turn the ignition switch to ON.
5. Start monitoring [VVT Adv. Ang. Amount R] on the data monitor.
6. Start the engine.
7. Read [VVT Adv. Ang. Amount R] within 10 seconds after engine is started.
   Note:
   The display will indicate [0] by judging the position as standard after 10 seconds elapse since the engine was started.
8. Record the readings [VVT Adv. Ang. Amount R].
9. Stop the engine.

Is [VVT Adv. Ang. Amount R] out of standard (0 deg) by ±10 deg or more within 10 seconds after starting?

Yes	Repair the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly. Go to 15.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the intake oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 1] of the replaced oil control solenoid 1000 or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 4.

Is the value of [VVT monitor bank 1] 1000 or less, and more than (value of [VVT monitor bank 2] ×1.5+ 100) compared with the value of [VVT monitor bank 2]?

Yes	Go to 6.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 15.

6. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 7.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 7.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil control solenoid RH.
4. Measure the resistance between intake oil control solenoid RH connector and ECM connector.
   Connector & terminal
   (E158) No. 99 — (E38) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 15.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake camshaft position sensor RH.
4. Measure the resistance between the intake camshaft position sensor RH connector and ECM connector.
   Connector & terminal
   (E158) No. 78 — (E36) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 15.

9. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Repair or replace faulty parts. Go to 15.

10. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 12.
No	Go to 11.

11. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 12.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** Go to 13.

12. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 13.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 13.

13. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 1) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 2).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 14.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 14.

14. CHECK OIL PASSAGE FROM OIL PUMP TO OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 15.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 15.

15. CHECK CURRENT DATA (LEARNING VALUE ERROR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Using the Subaru Select Monitor, read the data monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
4. Read the current value of [VVT Initial Position Learning Value #1].
5. Find the sum value of read [VVT Initial Position Learning Value #1] and [VVT Adv. Ang. Amount R] recorded in step 3.

Is the sum value within standard?
Standard:
45 — 74

Yes	ECM is good; finish the diagnosis.
No	Replace the ECM and perform inspection mode N. When DTC is not displayed, end the diagnosis. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Elapsed time after external load (power steering, neutral position switch) change	3000ms or more
AVCS learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting engine and while AVCS is not operating.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.
Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Crankshaft position when camshaft position sensor signal is input – Learning value|	More than 10°CA

Time needed for diagnosis: 1000ms

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Camshaft position sensor signal input position (Bank 1)	Less than 30.12 °CA or More than 89.18 °CA
Camshaft position sensor signal input position (Bank 2)	Less than 29.59 °CA or More than 87.71 °CA

Time needed for diagnosis: 1000ms

Illumination of malfunction indicator light: Illuminates when two consecutive driving cycles with fault occur.

Note:

Initial standard learning value is the value of crank angle initially input at the production plant. And then it will be updated every time normal judgment has been completed. Learning value will not be updated if NG judgment occurs because timing belt or chain derails suddenly in process or because wrong assembly occurs during servicing.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B

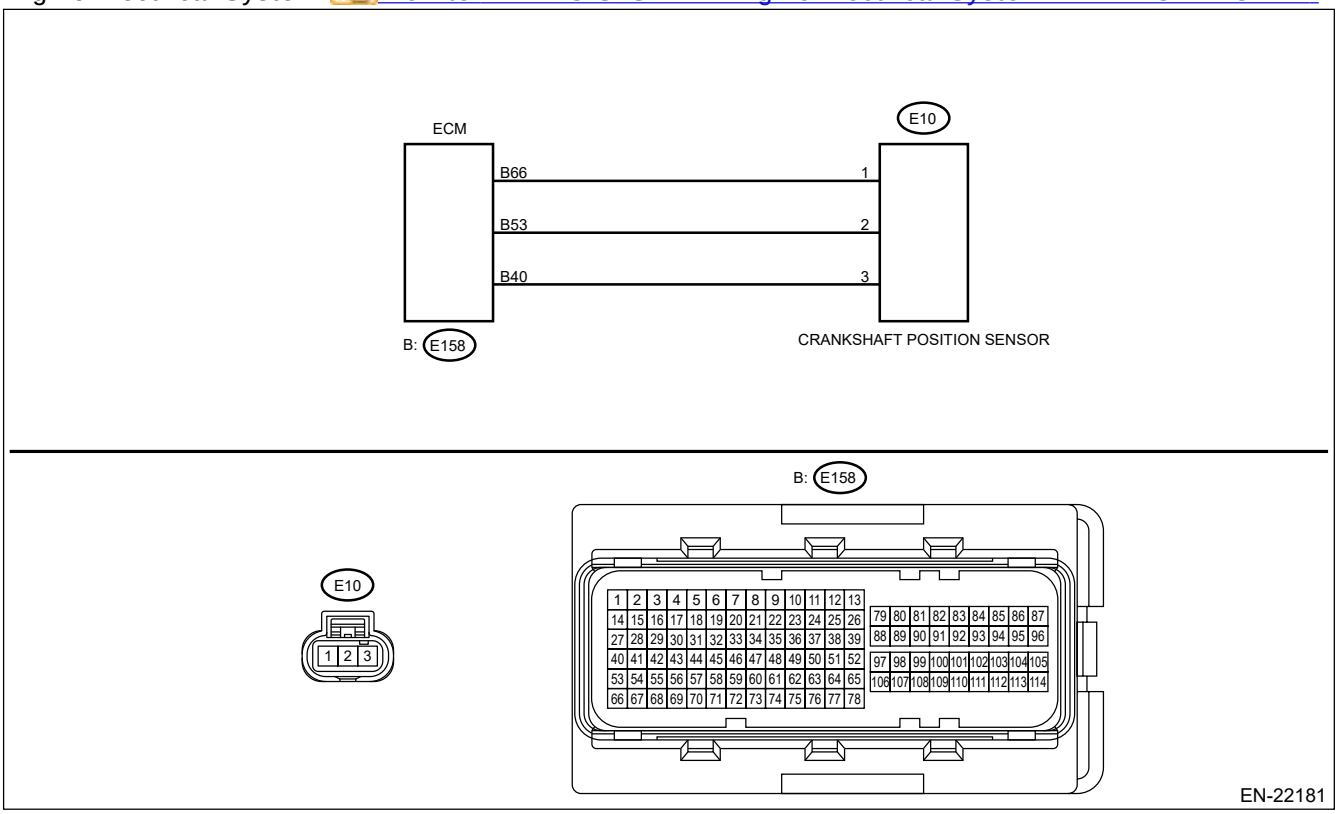
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

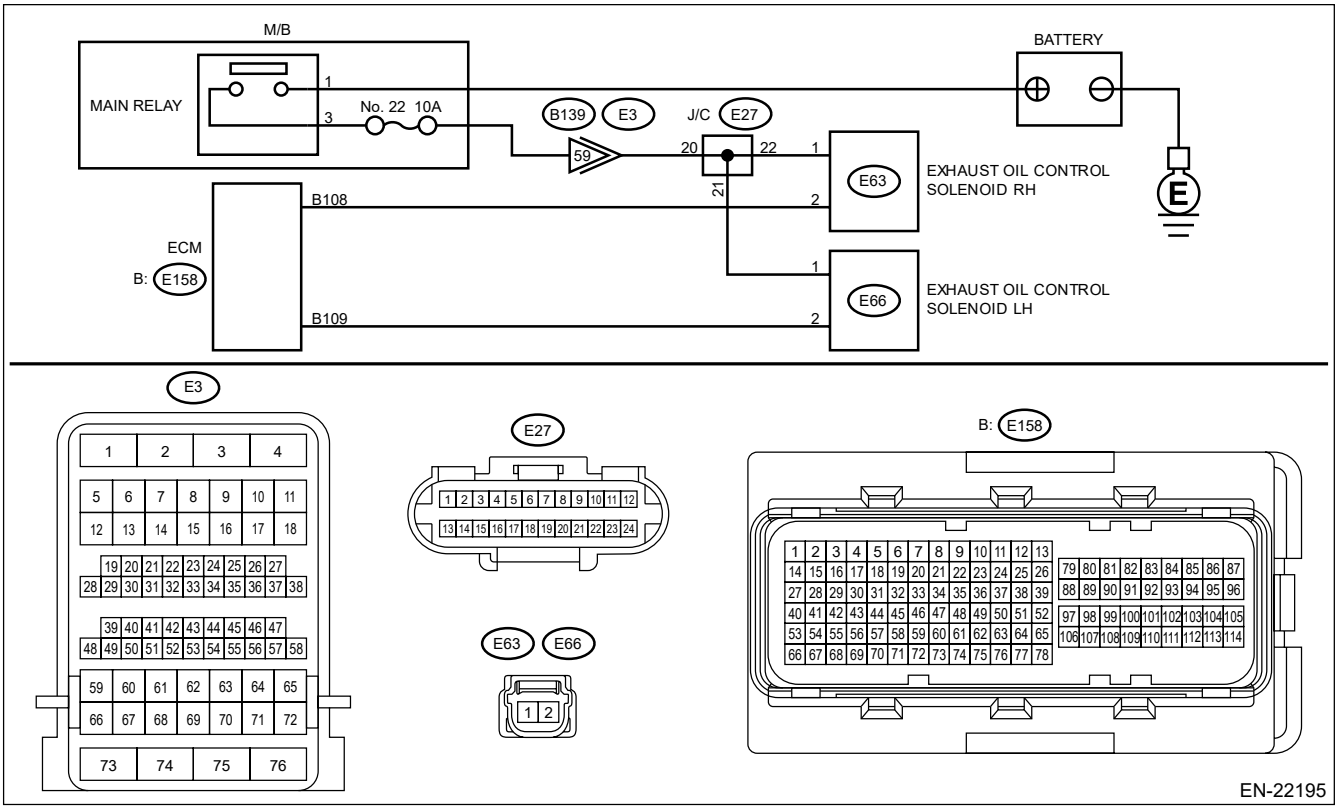
Trouble symptom:

- Engine stall
- Improper idling

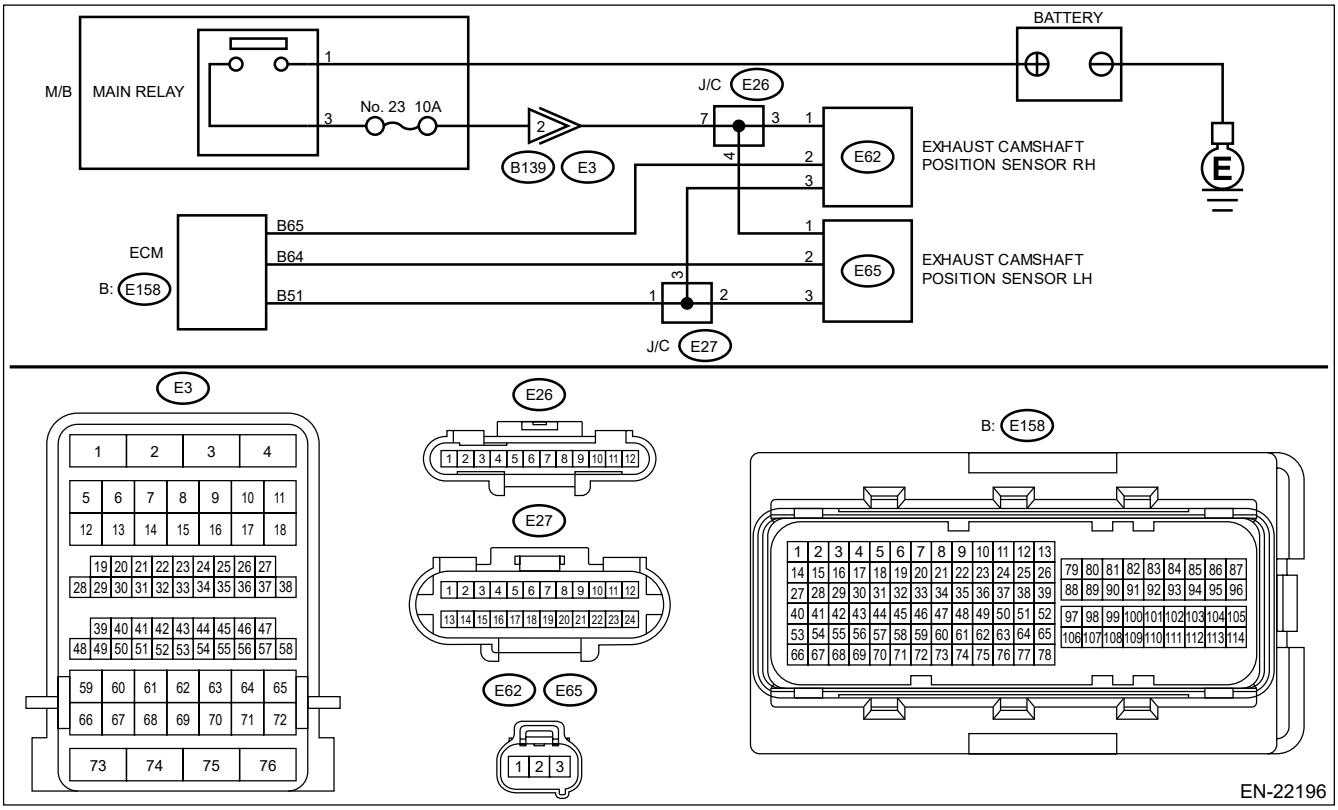
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC other than P0017 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK TIMING CHAIN.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the connector of the exhaust oil control solenoid RH. (DTC will be set but this will not affect the inspection)
4. Turn the ignition switch to ON.
5. Start monitoring [Exh. VVT Retard Ang. R] on the data monitor.
6. Start the engine.
7. Read [Exh. VVT Retard Ang. R] within 10 seconds after engine is started.
   Note:
   The display will indicate [0] by judging the position as standard after 10 seconds elapse since the engine was started.
8. Record the readings [Exh. VVT Retard Ang. R].
9. Stop the engine.

Is [Exh. VVT Retard Ang. R] out of standard (0 deg) by ±10 deg or more within 10 seconds after starting?

Yes	Repair the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly. Go to 15.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the exhaust oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 1] of the replaced oil control solenoid 1000 or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 4.

Is the value of [VVT monitor bank 1] 1000 or less, and more than (value of [VVT monitor bank 2] ×1.5+ 100) compared with the value of [VVT monitor bank 2]?

Yes	Go to 6.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 15.

6. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 7.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 7.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid RH.
4. Measure the resistance between exhaust oil control solenoid RH connector and ECM connector.
   Connector & terminal
   (E158) No. 108 — (E63) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 15.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust camshaft position sensor RH.
4. Measure the resistance between the exhaust camshaft position sensor RH connector and ECM connector.
   Connector & terminal
   (E158) No. 65 — (E62) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 15.

9. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Repair or replace faulty parts. Go to 15.

10. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 12.
No	Go to 11.

11. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 12.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** Go to 13.

12. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 13.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 13.

13. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 1) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 2).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 14.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 14.

14. CHECK OIL PASSAGE FROM OIL PUMP TO OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 15.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 15.

15. CHECK CURRENT DATA (LEARNING VALUE ERROR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Using the Subaru Select Monitor, read the data monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
4. Read the current value of [VVT Ex Initial Position Learning Value #1].
5. Find the sum value of read [VVT Ex Initial Position Learning Value #1] and [Exh. VVT Retard Ang. R] recorded in step 3.

Is the sum value within standard?
Standard:
73 — 104

Yes	ECM is good; finish the diagnosis.
No	Replace the ECM and perform inspection mode N. When DTC is not displayed, end the diagnosis. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	18.9 V or more
Elapsed time after external load (power steering, neutral position switch) change	3000ms or more
Exhaust AVCS position learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while the exhaust AVCS is not operating after warming up.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.
Judgment value

Malfunction Criteria	Threshold Value
<Diagnosis 1> |Crankshaft position when camshaft position sensor signal is input − Learning value|	More than 10°CA
<Diagnosis 2>	
Camshaft position sensor signal input position (Bank 1)	Less than 61.47°CA or More than 118.29°CA
Camshaft position sensor signal input position (Bank 2)	Less than 59.68°CA or More than 117.44°CA

Time needed for diagnosis: 5000ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A

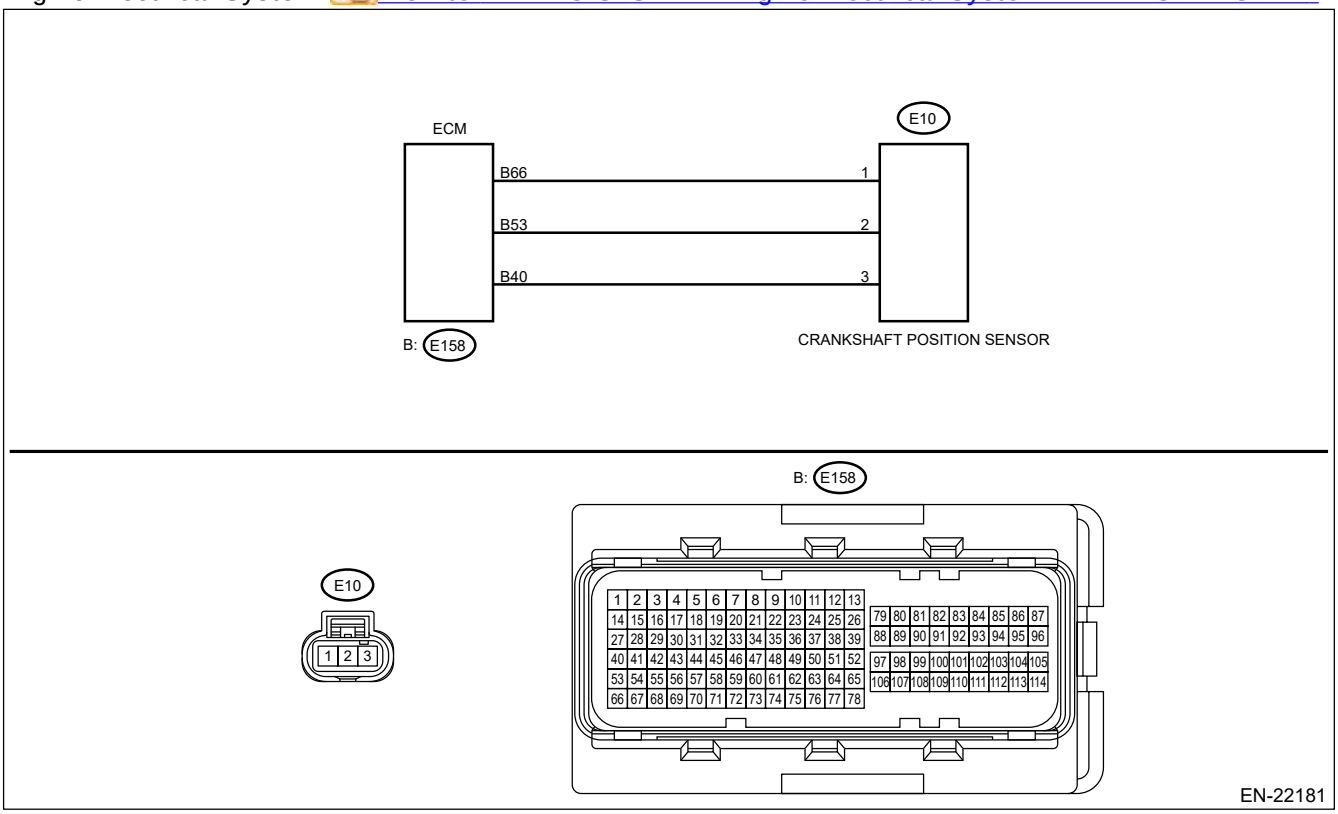
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

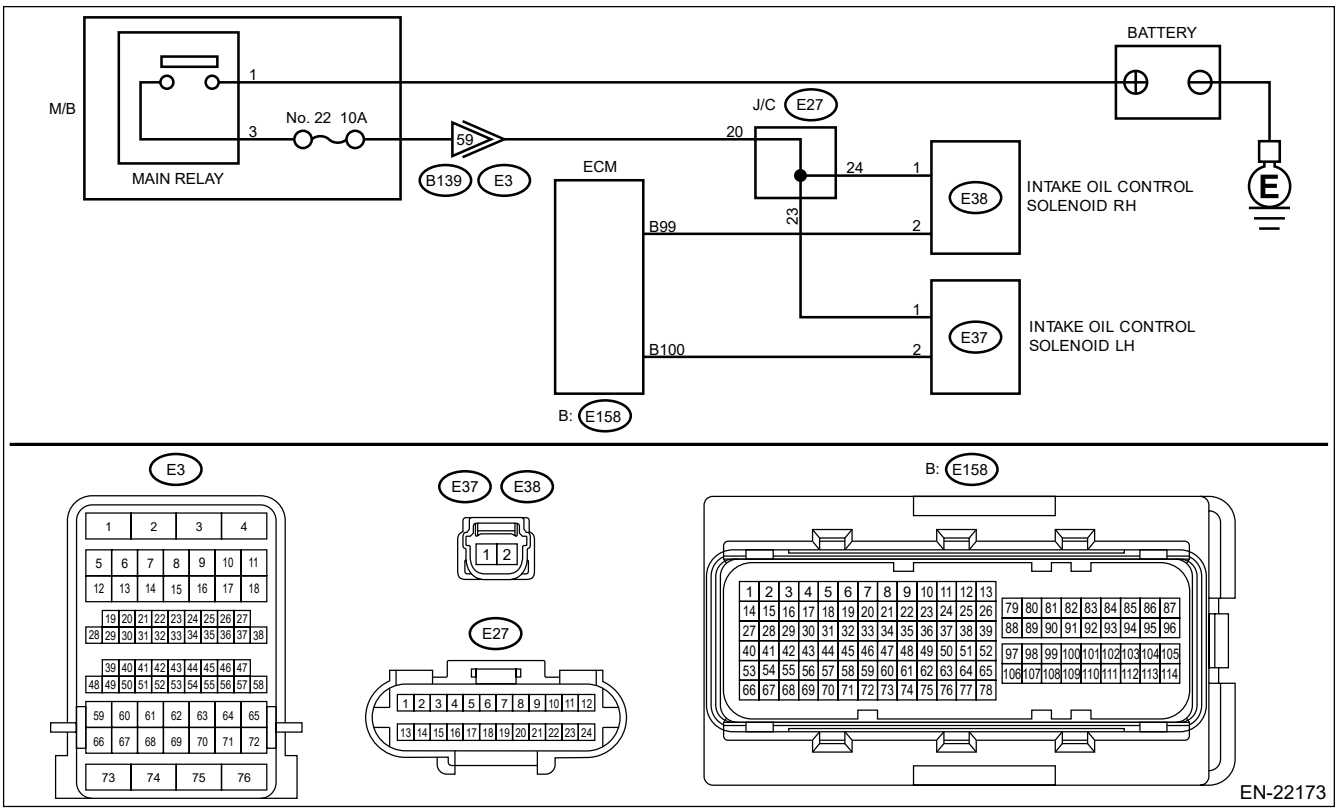
Trouble symptom:

- Engine stall
- Improper idling

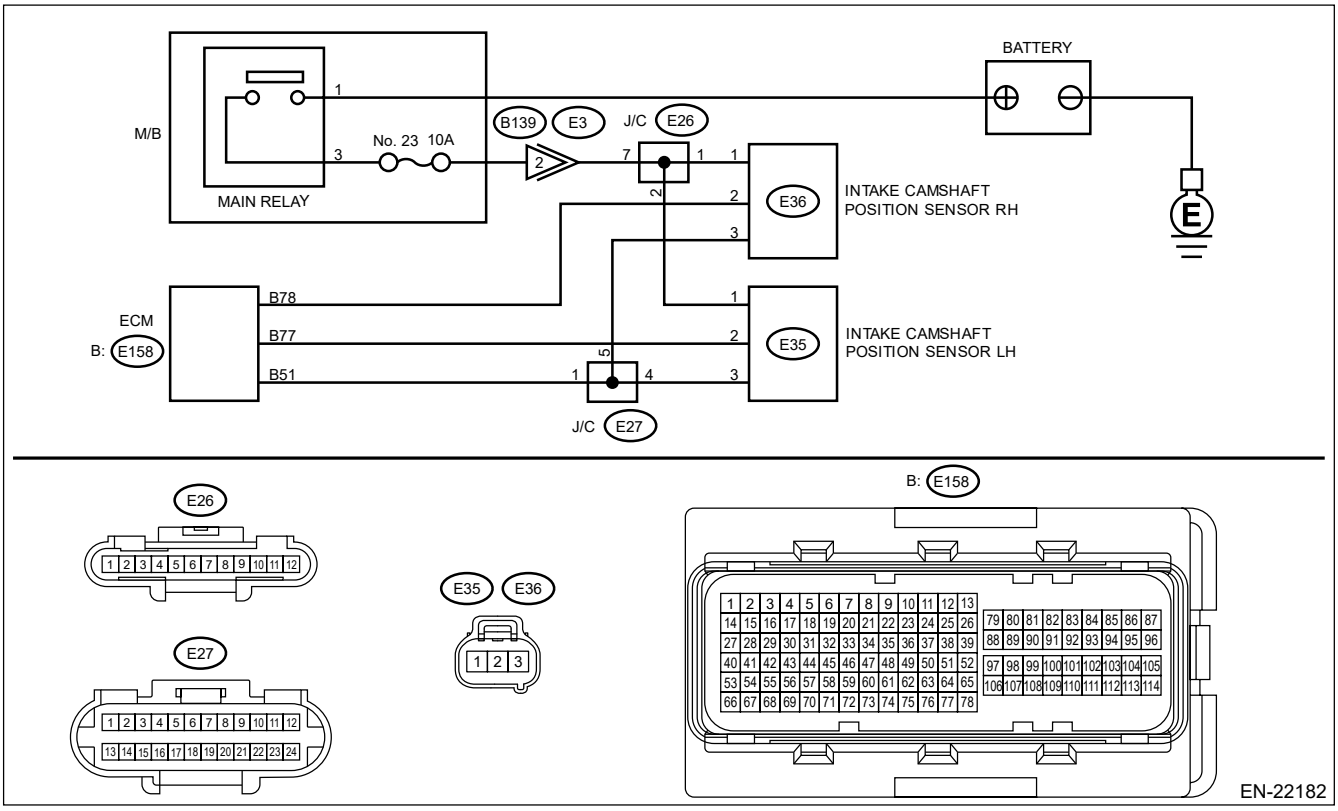
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC other than P0018 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK TIMING CHAIN.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the connector of the intake oil control solenoid LH. (DTC will be set but this will not affect the inspection)
4. Turn the ignition switch to ON.
5. Start monitoring [VVT Adv. Ang. Amount L] on the data monitor.
6. Start the engine.
7. Read [VVT Adv. Ang. Amount L] within 10 seconds after engine is started.
   Note:
   The display will indicate [0] by judging the position as standard after 10 seconds elapse since the engine was started.
8. Record the readings [VVT Adv. Ang. Amount L].
9. Stop the engine.

Is [VVT Adv. Ang. Amount L] out of standard (0 deg) by ±10 deg or more within 10 seconds after starting?

Yes	Repair the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly. Go to 15.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the intake oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 2] of the replaced oil control solenoid 1000 or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 4.

Is the value of [VVT monitor bank 2] 1000 or less, and more than (value of [VVT monitor bank 1] ×1.5+ 100) compared with the value of [VVT monitor bank 1]?

Yes	Go to 6.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 15.

6. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 7.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 7.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil control solenoid LH.
4. Measure the resistance between intake oil control solenoid LH connector and ECM connector.
   Connector & terminal
   (E158) No. 100 — (E37) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 15.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from intake camshaft position sensor LH.
4. Measure the resistance between the intake camshaft position sensor LH connector and ECM connector.
   Connector & terminal
   (E158) No. 77 — (E35) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 15.

9. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Repair or replace faulty parts. Go to 15.

10. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 12.
No	Go to 11.

11. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 12.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** Go to 13.

12. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 13.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 13.

13. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 2) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 1).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 14.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 14.

14. CHECK OIL PASSAGE FROM OIL PUMP TO OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 15.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 15.

15. CHECK CURRENT DATA (LEARNING VALUE ERROR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Using the Subaru Select Monitor, read the data monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
4. Read the current value of [VVT Initial Position Learning Value #2].
5. Find the sum value of read [VVT Initial Position Learning Value #2] and [VVT Adv. Ang. Amount L] recorded in step 3.

Is the sum value within standard?
Standard:
45 — 74

Yes	ECM is good; finish the diagnosis.
No	Replace the ECM and perform inspection mode N. When DTC is not displayed, end the diagnosis. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P0016. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0019 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B

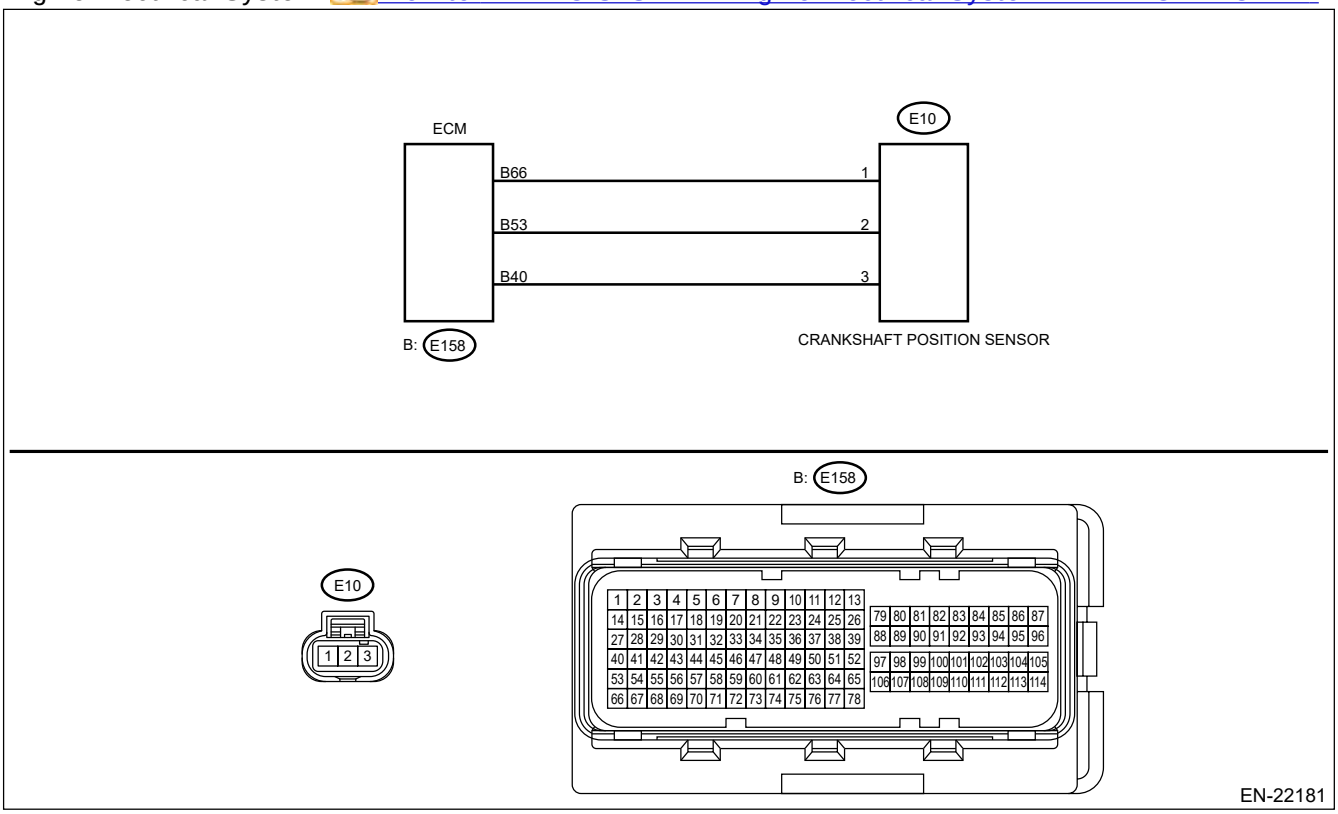
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

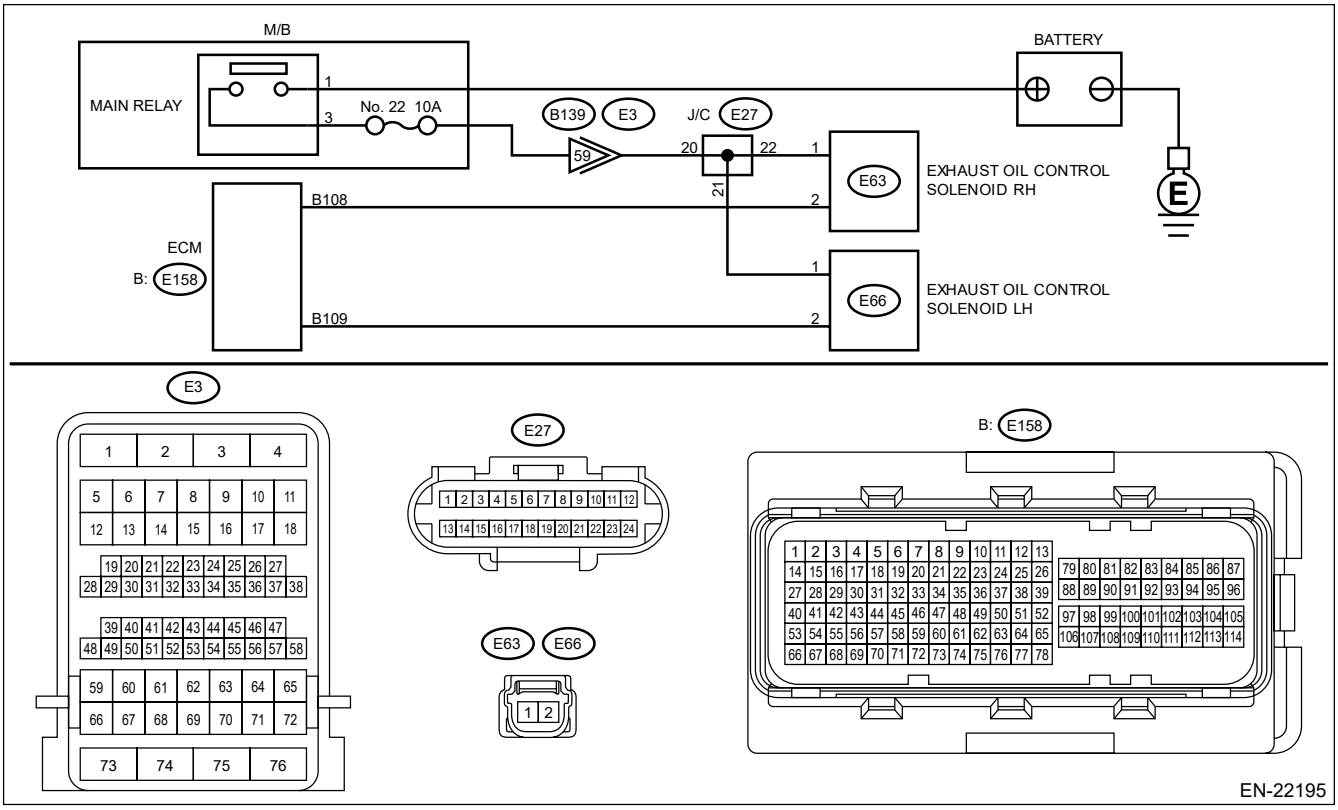
Trouble symptom:

- Engine stall
- Improper idling

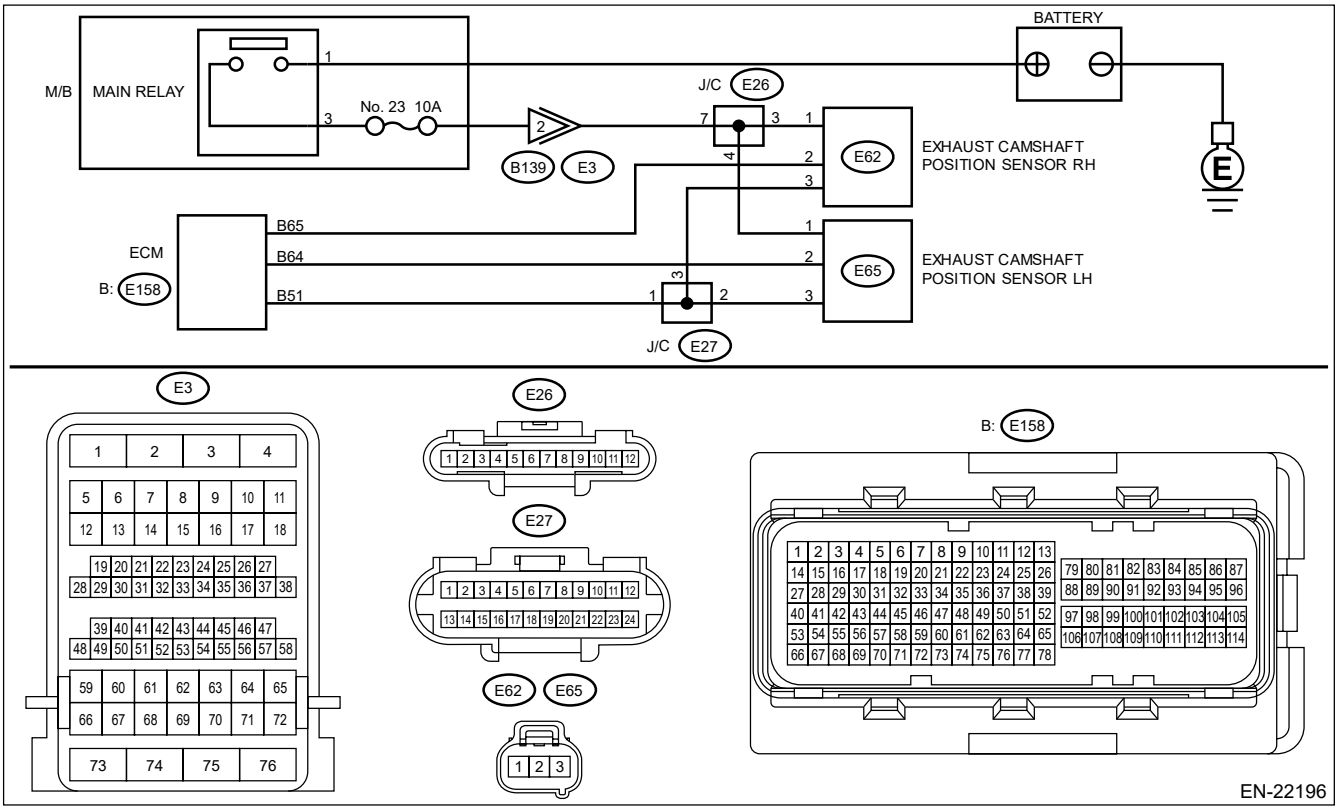
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC other than P0019 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK TIMING CHAIN.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the connector of the exhaust oil control solenoid LH. (DTC will be set but this will not affect the inspection)
4. Turn the ignition switch to ON.
5. Start monitoring [Exh. VVT Retard Ang. L] on the data monitor.
6. Start the engine.
7. Read [Exh. VVT Retard Ang. L] within 10 seconds after engine is started.
   Note:
   The display will indicate [0] by judging the position as standard after 10 seconds elapse since the engine was started.
8. Record the readings [Exh. VVT Retard Ang. L].
9. Stop the engine.

Is [Exh. VVT Retard Ang. L] out of standard (0 deg) by ±10 deg or more within 10 seconds after starting?

Yes	Repair the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly. Go to 15.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the exhaust oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 2] of the replaced oil control solenoid 1000 or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 4.

Is the value of [VVT monitor bank 2] 1000 or less, and more than (value of [VVT monitor bank 1] ×1.5+ 100) compared with the value of [VVT monitor bank 1]?

Yes	Go to 6.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 15.

6. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 7.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 7.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid LH.
4. Measure the resistance between exhaust oil control solenoid LH connector and ECM connector.
   Connector & terminal
   (E158) No. 109 — (E66) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 15.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from exhaust camshaft position sensor LH.
4. Measure the resistance between the exhaust camshaft position sensor LH connector and ECM connector.
   Connector & terminal
   (E158) No. 64 — (E65) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 15.

9. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Repair or replace faulty parts. Go to 15.

10. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 12.
No	Go to 11.

11. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 12.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** Go to 13.

12. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 13.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 13.

13. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 2) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 1).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 14.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 14.

14. CHECK OIL PASSAGE FROM OIL PUMP TO OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 15.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 15.

15. CHECK CURRENT DATA (LEARNING VALUE ERROR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Using the Subaru Select Monitor, read the data monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
4. Read the current value of [VVT Ex Initial Position Learning Value #2].
5. Find the sum value of read [VVT Ex Initial Position Learning Value #2] and [Exh. VVT Retard Ang. L] recorded in step 3.

Is the sum value within standard?
Standard:
73 — 104

Yes	ECM is good; finish the diagnosis.
No	Replace the ECM and perform inspection mode N. When DTC is not displayed, end the diagnosis. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P0017. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0020 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 2

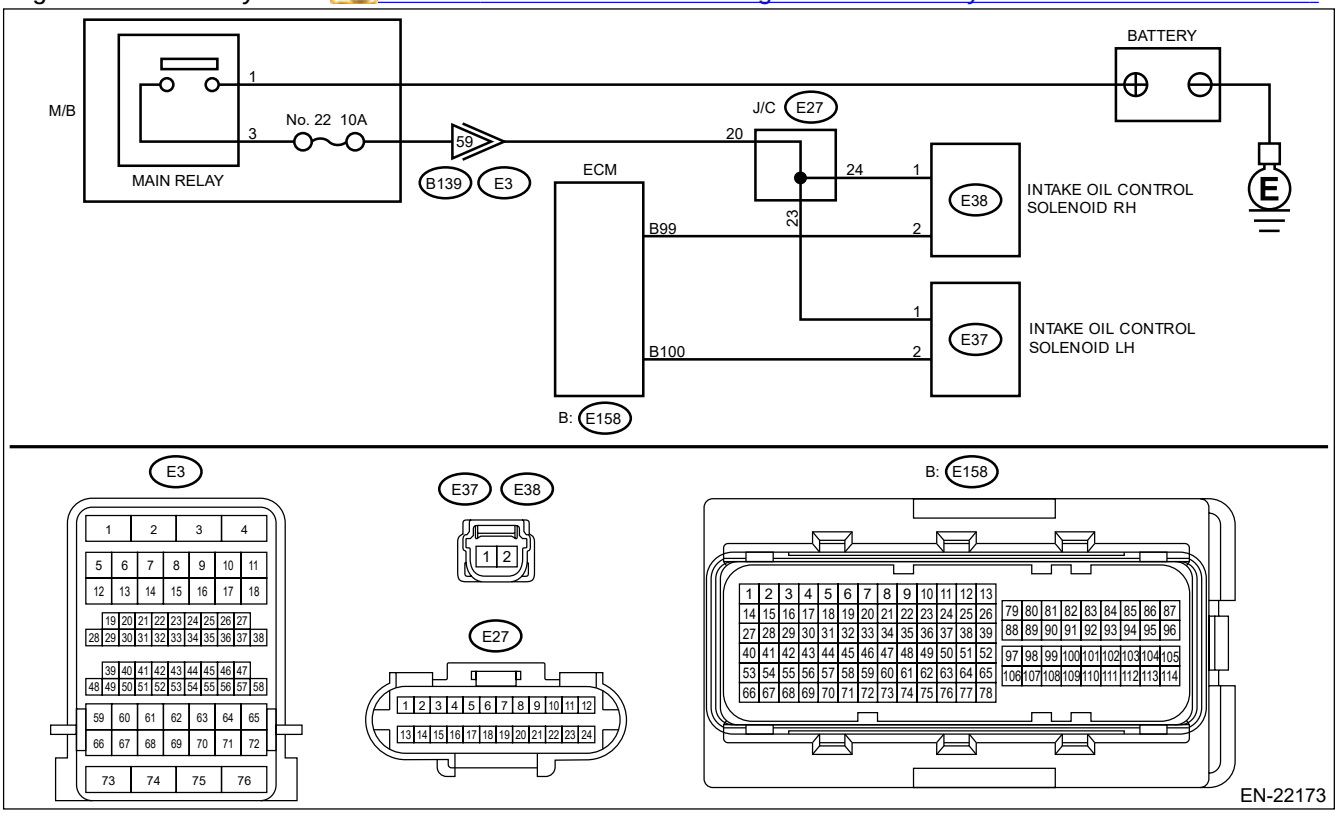
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK OUTPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 100 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Go to 3.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID LH.

Measure the voltage between intake oil control solenoid LH connector and engine ground.
Connector & terminal
(E37) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS BETWEEN ECM AND INTAKE OIL FLOW CONTROL SOLENOID VALVE LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil flow control solenoid valve LH.
4. Turn the ignition switch to ON.
5. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 100 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power supply in harness between ECM connector and intake oil flow control solenoid valve LH connector.
No	Go to 5.

5. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil control solenoid LH.
4. Measure the resistance between intake oil control solenoid LH connector and engine ground.
   Connector & terminal
   (E37) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid LH connector.

6. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH (OPEN).

Measure the resistance of harness between ECM connector and intake oil control solenoid LH.

Connector & terminal

(E158) No. 100 — (E37) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair the open circuit in harness between ECM connector and intake oil control solenoid LH connector.

7. CHECK INTAKE OIL CONTROL SOLENOID LH.

Measure the resistance between intake oil control solenoid LH terminals.

Terminals

No. 1 — No. 2:

Is the resistance 6 — 12 Ω?

Yes	Repair the poor contact of intake oil control solenoid LH connector.
No	Replace the intake oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0010. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0010 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1.

DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

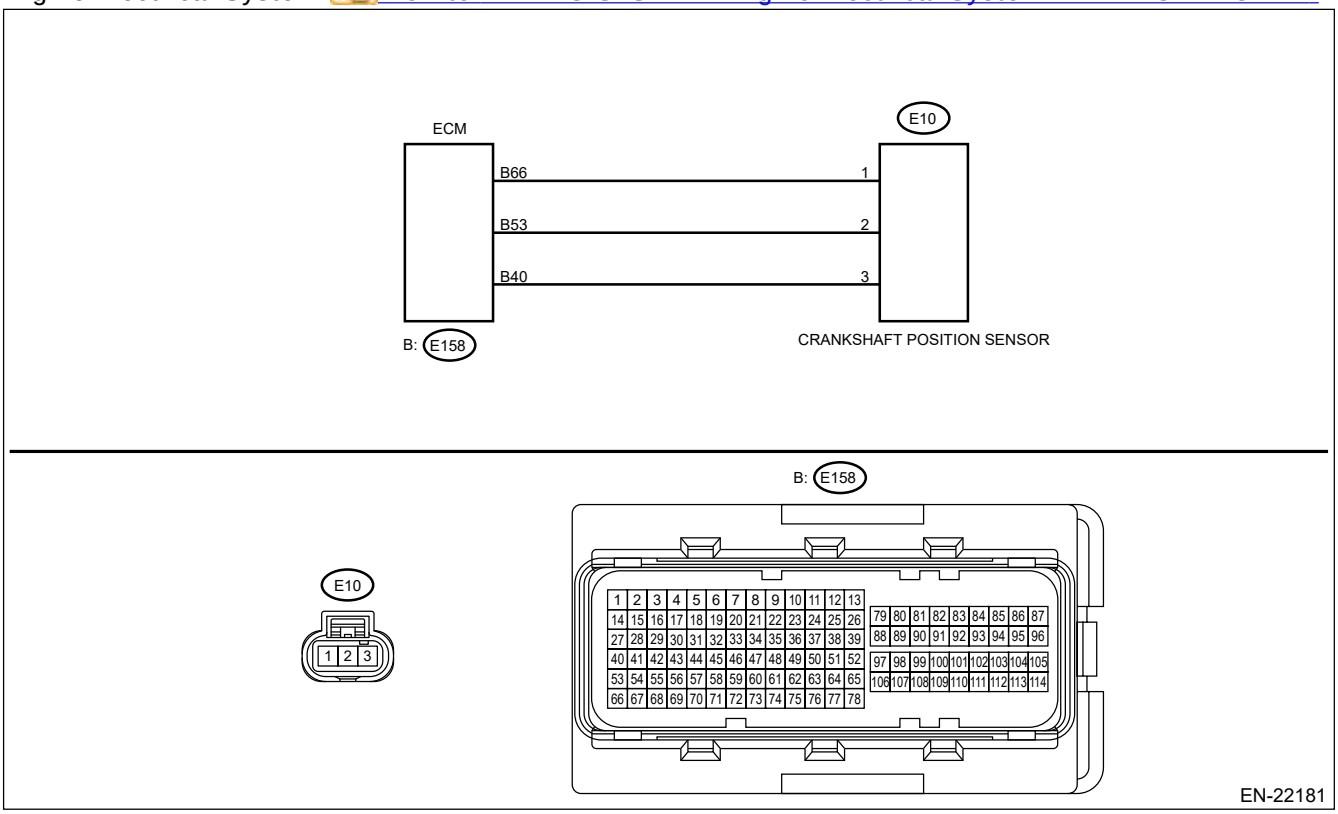
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

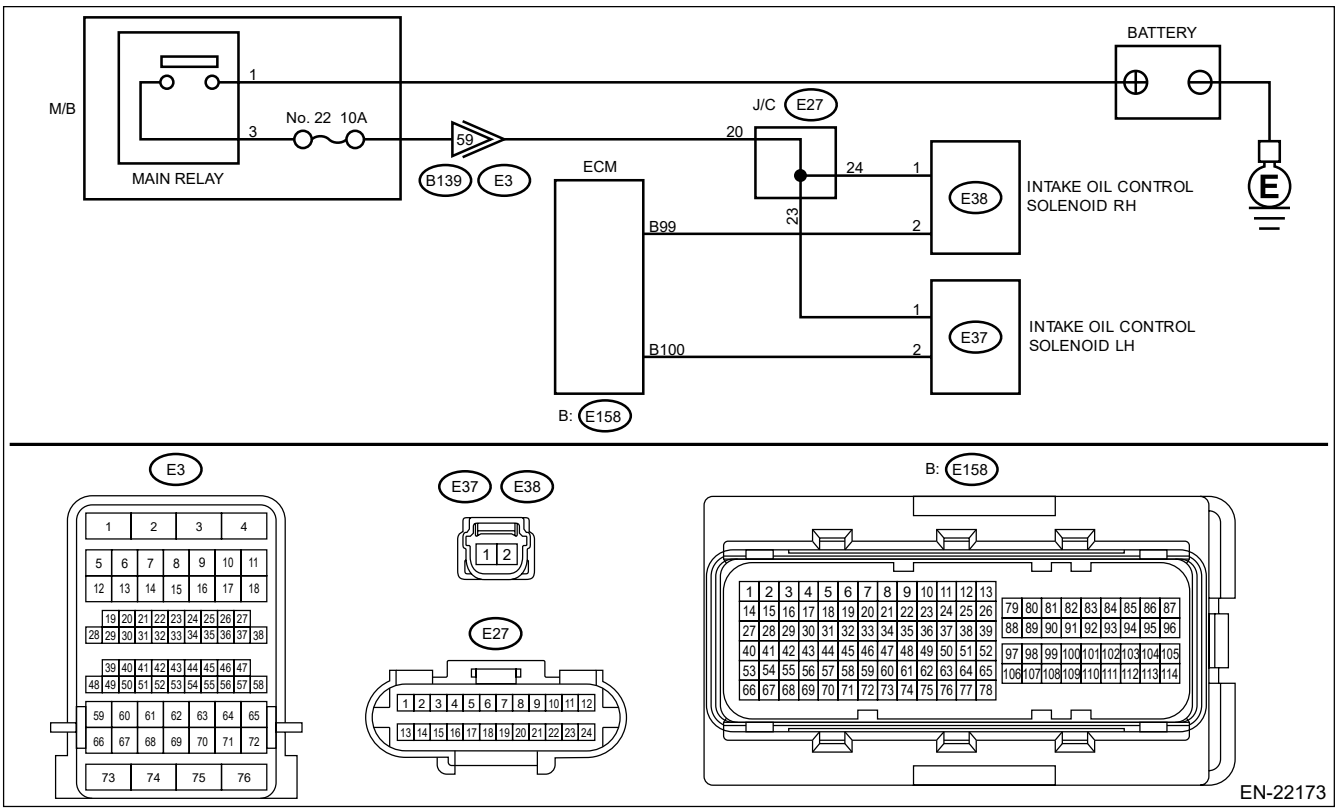
Trouble symptom:

- Engine stall
- Improper idling

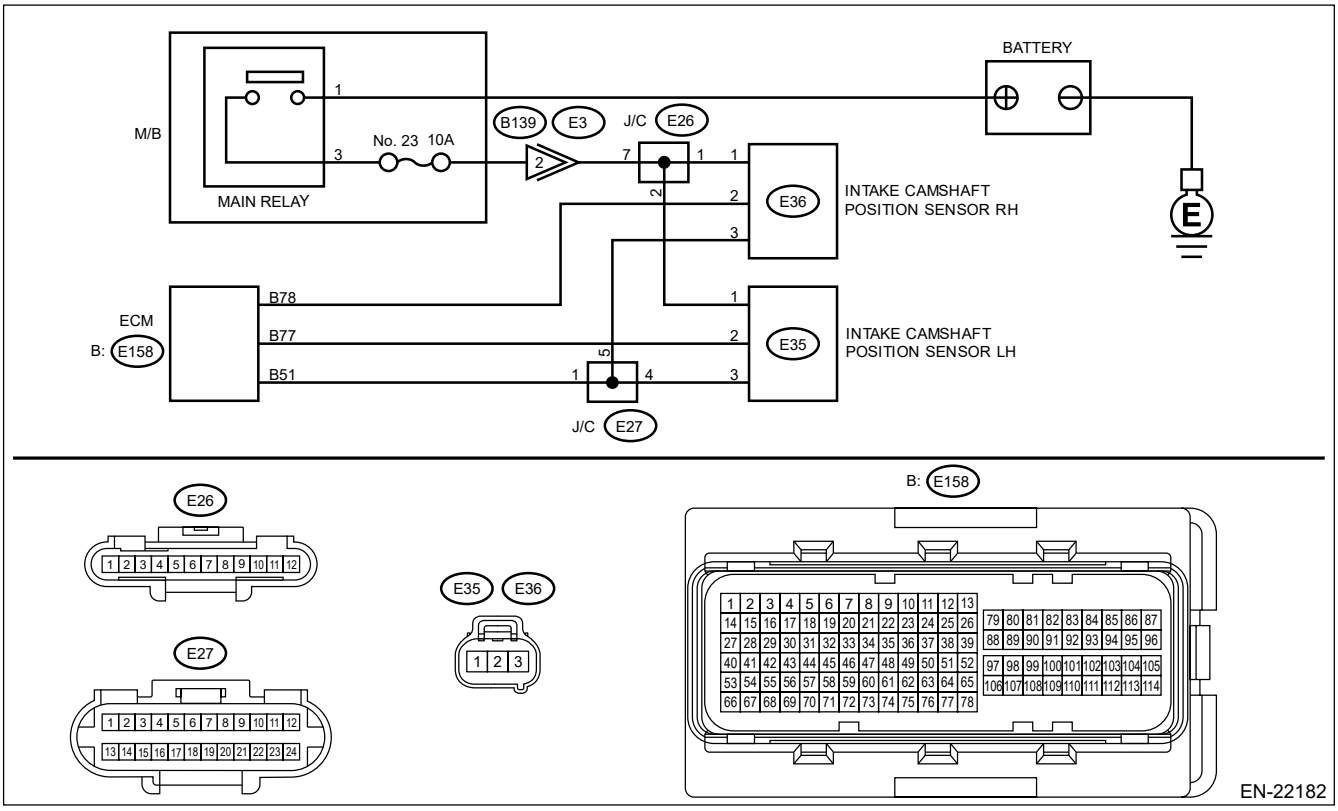
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC other than P000C and P0021 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the intake oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Always keep on checking the data while reading out the diagnostic value because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 2] of the replaced oil control solenoid 1000 or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 3.

Is the value of [VVT monitor bank 2] 1000 or less, and more than (value of [VVT monitor bank 1] ×1.5+ 100) compared with the value of [VVT monitor bank 1]?

Yes	Go to 5.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 14.

5. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 6.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 6.

6. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the intake oil control solenoid LH.
4. Measure the resistance between intake oil control solenoid LH connector and ECM connector.
   Connector & terminal
   (E158) No. 100 — (E37) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair or replace faulty parts. Go to 14.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from intake camshaft position sensor LH.
4. Measure the resistance between the intake camshaft position sensor LH connector and ECM connector.
   Connector & terminal
   (E158) No. 77 — (E35) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 14.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 14.

9. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 11.
No	Go to 10.

10. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 11.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** Go to 12.

11. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 12.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 12.

12. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 2) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 1).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 13.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 13.

13. CHECK OIL PASSAGE BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 14.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 14.

14. CHECK ON-BOARD MONITOR TEST RESULT.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
3. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

Caution:

- **Performing inspection mode needs a driver along with a checker who should check the data.**
- **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

Note:

- **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
- **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**

4. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of[VVT monitor bank 2] 1000 or more?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Go to 15.

15. CHECK DTC.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 14.

Is the value of [VVT monitor bank 2] 1000 or less, and more than (value of [VVT monitor bank 1] ×1.5+ 100) compared with the value of [VVT monitor bank 1]?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	End.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0011. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0023 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 2

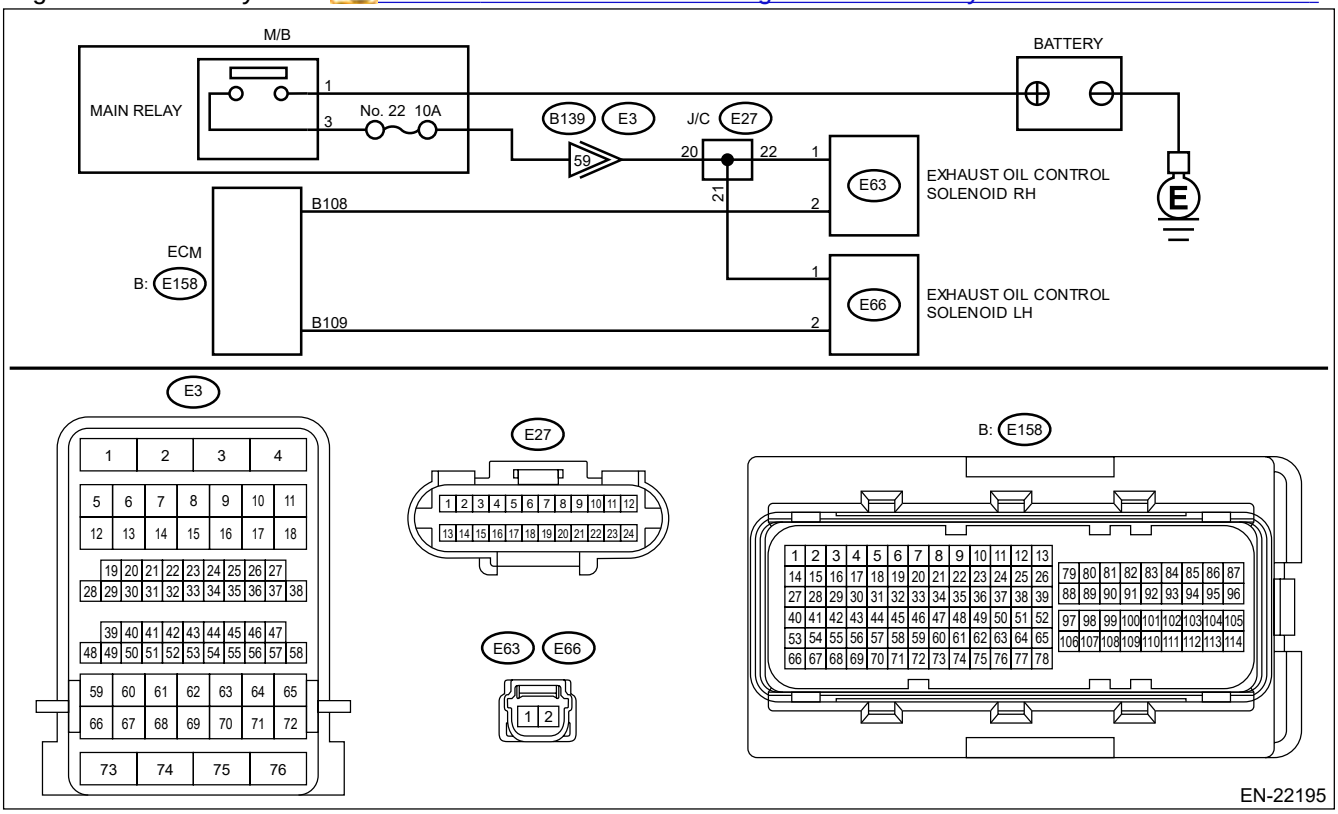
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK OUTPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 109 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Go to 3.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID LH.

Measure the voltage between exhaust oil control solenoid LH connector and engine ground.
Connector & terminal
(E66) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid LH.
4. Turn the ignition switch to ON.
5. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 109 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power supply in harness between ECM connector and exhaust oil control solenoid LH connector.
No	Go to 5.

5. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid LH.
4. Measure the resistance between exhaust oil control solenoid LH connector and engine ground.
   Connector & terminal
   (E66) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid LH connector.

6. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH (OPEN).

Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH.

Connector & terminal

(E158) No. 109 — (E66) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and exhaust oil control solenoid LH connector** • **Poor contact of coupling connector**

7. CHECK EXHAUST OIL CONTROL SOLENOID LH.

Measure the resistance between exhaust oil control solenoid LH terminals.

Terminals

No. 1 — No. 2:

Is the resistance 6 — 12 Ω?

Yes	Repair the poor contact of exhaust oil control solenoid LH connector.
No	Replace the exhaust oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0013. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0013 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

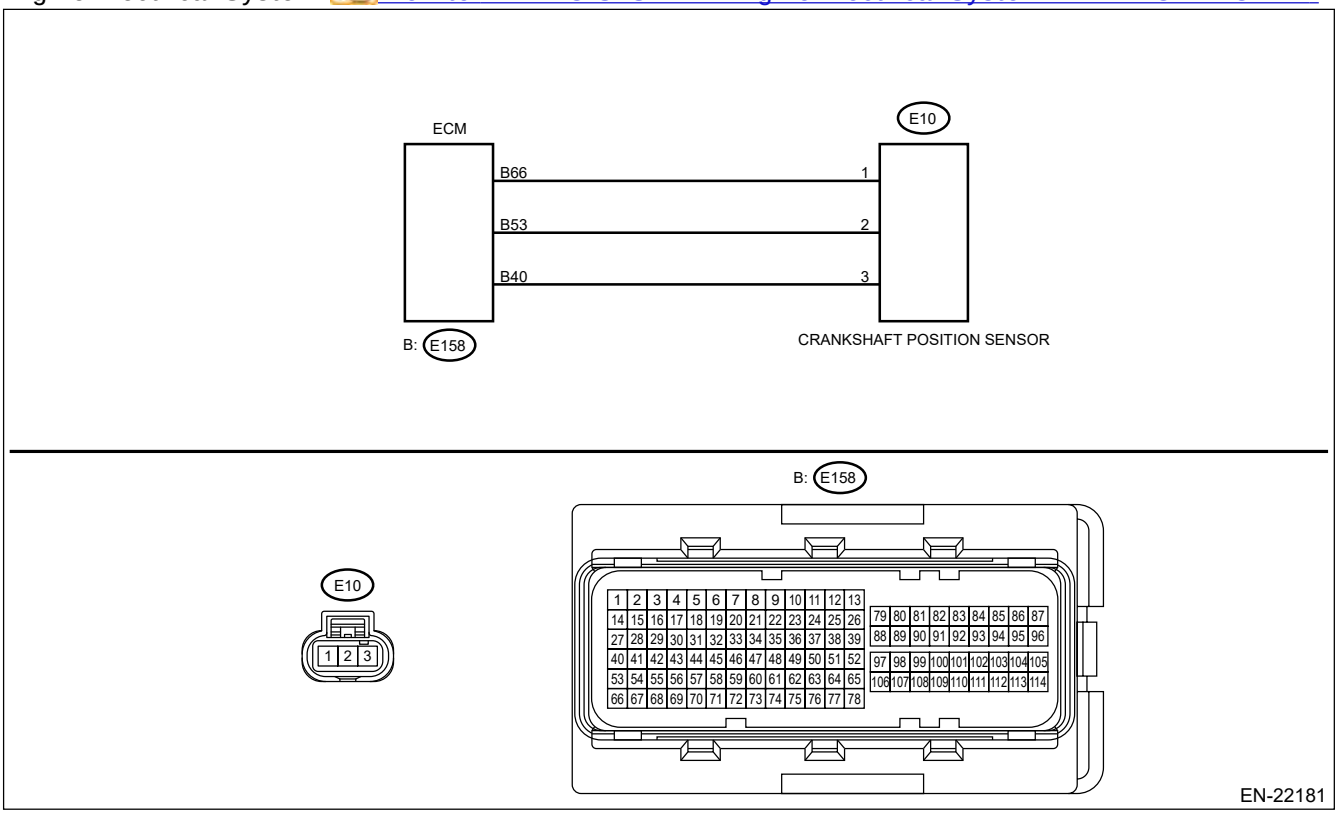
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

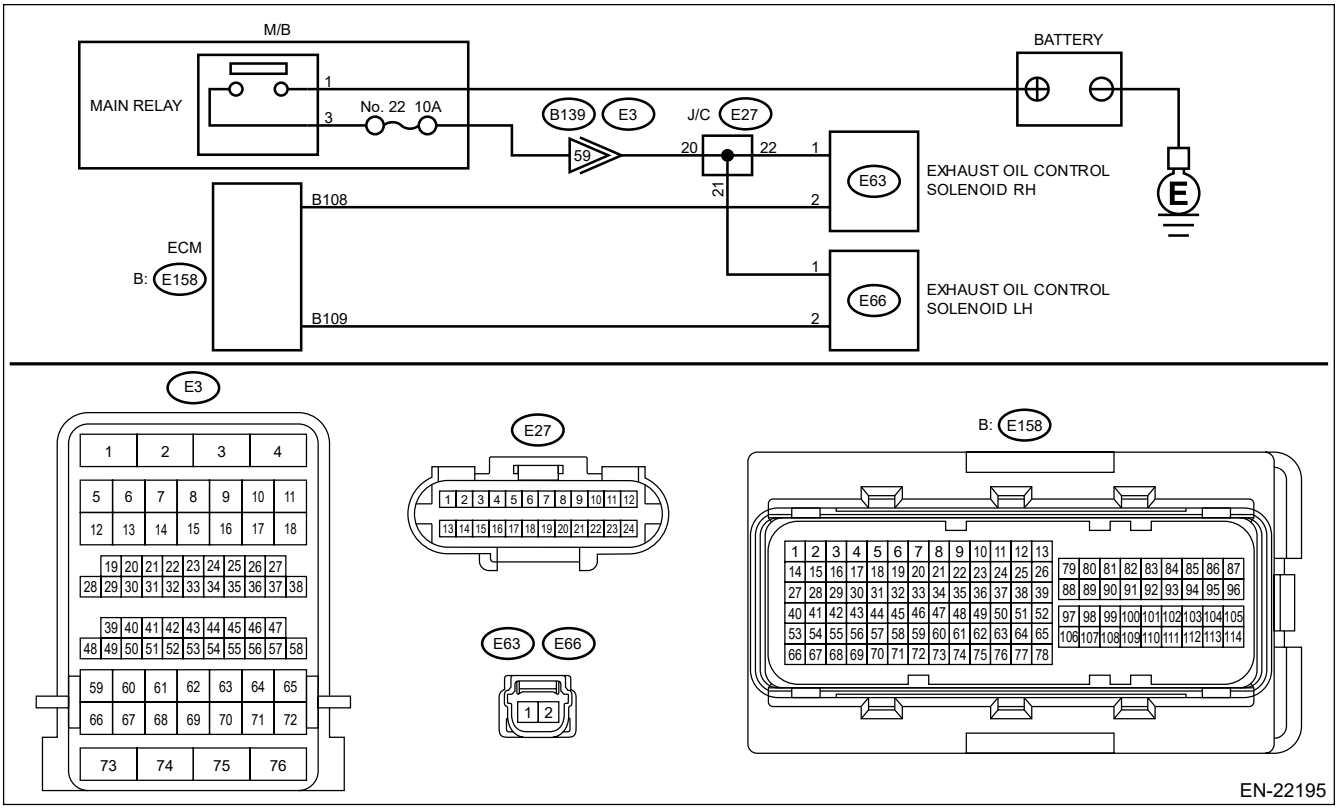
Trouble symptom:

- Engine stall
- Improper idling

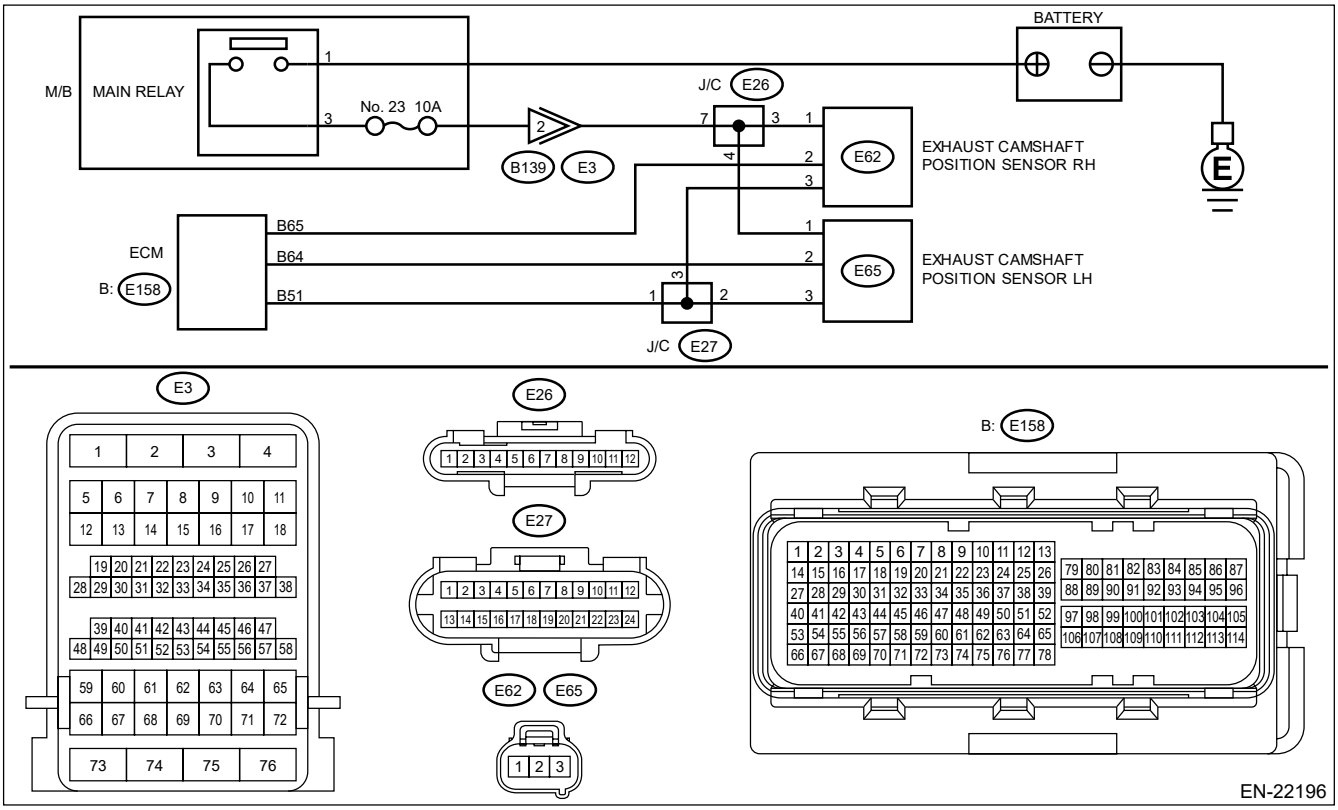
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC other than P000D and P0024 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Save the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Go to 2.

2. CHECK ENGINE OIL CONDITION.

Check the engine oil condition.

Note:

Check the following items.

- **Within the specified range in amount**
- **Excessively dirty**
- **Coagulated by additives**
- **Use of oil of specified viscosity**

Is the check result OK?

Yes	Go to 3.
No	Adjust the oil amount, or replace the engine oil and engine oil filter. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 3.

3. CHECK ON-BOARD MONITOR TEST RESULT.

1. Replace the exhaust oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

   Caution:
   - **Performing inspection mode needs a driver along with a checker who should check the data.**
   - **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

   Note:
   - **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
   - **Always keep on checking the data while reading out the diagnostic value because the diagnostic value is repeatedly updated.**
5. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of [VVT monitor bank 2] of the replaced oil control solenoid 1000 or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK ON-BOARD MONITOR TEST RESULT.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 3.

Is the value of [VVT monitor bank 2] 1000 or less, and more than (value of [VVT monitor bank 1] ×1.5+ 100) compared with the value of [VVT monitor bank 1]?

Yes	Go to 5.
No	Idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter. Go to 14.

5. CHECK HARNESS AND CONNECTOR.

Check for a bend, damage and poor contact of harness and connector.

Note:

Check the following items.

- **ECM Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).**
- **Oil control solenoid Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.**
- **Camshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSPECTION.**
- **Crankshaft position sensor Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.**

Is the check result OK?

Yes	Go to 6.
No	Repair or replace faulty parts. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor. Go to 6.

6. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the exhaust oil control solenoid LH.
4. Measure the resistance between exhaust oil control solenoid LH connector and ECM connector.
   Connector & terminal
   (E158) No. 109 — (E66) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair or replace faulty parts. Go to 14.

7. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from exhaust camshaft position sensor LH.
4. Measure the resistance between the exhaust camshaft position sensor LH connector and ECM connector.
   Connector & terminal
   (E158) No. 64 — (E65) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace faulty parts. Go to 14.

8. CHECK HARNESS AND CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the crankshaft position sensor.
4. Measure the resistance between the crankshaft position sensor connector and ECM connector.
   Connector & terminal
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair or replace faulty parts. Go to 14.

9. CHECK ENGINE OIL PRESSURE.

Check the engine oil pressure. Ref. to MECHANICAL(H4DO)>Engine Oil Pressure>INSPECTION.

Is the oil pressure of engine oil normal?

Yes	Go to 11.
No	Go to 10.

10. CHECK OIL STRAINER.

Check the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan>INSPECTION.

Does any foreign matter exist at the oil strainer in the oil pan?

Yes	Check and clean inside the oil strainer. Ref. to LUBRICATION(H4DO)>Oil Pan. Go to 11.
No	Replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. **Caution:** **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** Go to 12.

11. CHECK OIL PATH OF CHAIN COVER.

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Check the oil path of the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSPECTION.

Note:

Check the O-rings in the following oil path and also check that no foreign matter exists.

- **Inlet of oil pump**
- **Outlet of oil pump**
- **Each O-ring in the path leading to left/right cylinder head**
- **Oil control solenoid**
- **Foreign matter exists**

Is the check result OK?

Yes	Go to 12.
No	Replace faulty parts. If there is any foreign matter, replace the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover. Go to 12.

12. CHECK THE CAMSHAFT CONDITION.

1. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
2. Rotate the camshaft by hand to compare the rotational resistance of the four.

Note:

Check the following items if there is a clearly faulty condition in the camshaft (bank 2) such as restriction or rotational resistance by comparing it with the rotational resistance of the camshaft (bank 1).

- **Foreign matter attached to camshaft**
- **Damage of camshaft (scratching, galling, wear, etc.)**
- **Check for consequence from improper rotation of cam journal bearing**

Is the check result OK?

Yes	Go to 13.
No	Replace the cam carrier and camshaft. Ref. to MECHANICAL(H4DO)>Cam Carrier. Ref. to MECHANICAL(H4DO)>Camshaft. Go to 13.

13. CHECK OIL PASSAGE BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.

Visually check the following parts of the oil passage from the oil pump to the oil control solenoid to check obvious defectiveness such as foreign matter, clogging, etc.

- Oil passage in cam Carrier
- Oil passage on cylinder head side
- Oil passage at the joint between cam sprocket and camshaft
- Oil passage at the back of sprocket and the end of camshaft when the sprocket is removed

Note:

Refer to removal procedure of cam carrier in service manual. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.

Is the check result OK?

Yes	Replace the sprocket. Ref. to MECHANICAL(H4DO)>Cam Sprocket. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** Go to 14.
No	Remove the foreign matter. Replace the cam carrier oil filter (reuse not allowed). Ref. to MECHANICAL(H4DO)>Cam Carrier. **Caution:** • **Overuse of liquid gasket may cause a malfunction when installing the chain cover. Use one specified in the service manual with an appropriate amount (line diameter) of application. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.** • **Make sure that the insertion amount of oil filter matches the surface of cam carrier. (Do not over-insert) Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.** **Note:** **After servicing, idle the engine for 5 minutes, and then replace the oil filter and engine oil (flushing). Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT. Ref. to LUBRICATION(H4DO)>Oil Filter.** Go to 14.

14. CHECK ON-BOARD MONITOR TEST RESULT.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform the inspection mode T. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
3. Using the Subaru Select Monitor or general scan tool, read the values in [VVT monitor bank 1] and [VVT monitor bank 2] according to the reading out procedure of MODE$06. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.

Caution:

- **Performing inspection mode needs a driver along with a checker who should check the data.**
- **When performing inspection mode on a public road, pay sufficient attention to the traffic condition and give the highest priority to road safety.**

Note:

- **Perform the inspection mode again without stopping the engine because the diagnosis is not completed yet when the diagnostic value indicates 0.**
- **Keep on checking the data during inspection mode because the diagnostic value is repeatedly updated.**

4. Record the readings [VVT monitor bank 1] and [VVT monitor bank 2].

Is the value of[VVT monitor bank 2] 1000 or more?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Go to 15.

15. CHECK DTC.

Compare the values of [VVT monitor bank 1] and [VVT monitor bank 2] recorded in step 14.

Is the value of [VVT monitor bank 2] 1000 or less, and more than (value of [VVT monitor bank 1] ×1.5+ 100) compared with the value of [VVT monitor bank 1]?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	End.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0014. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1.

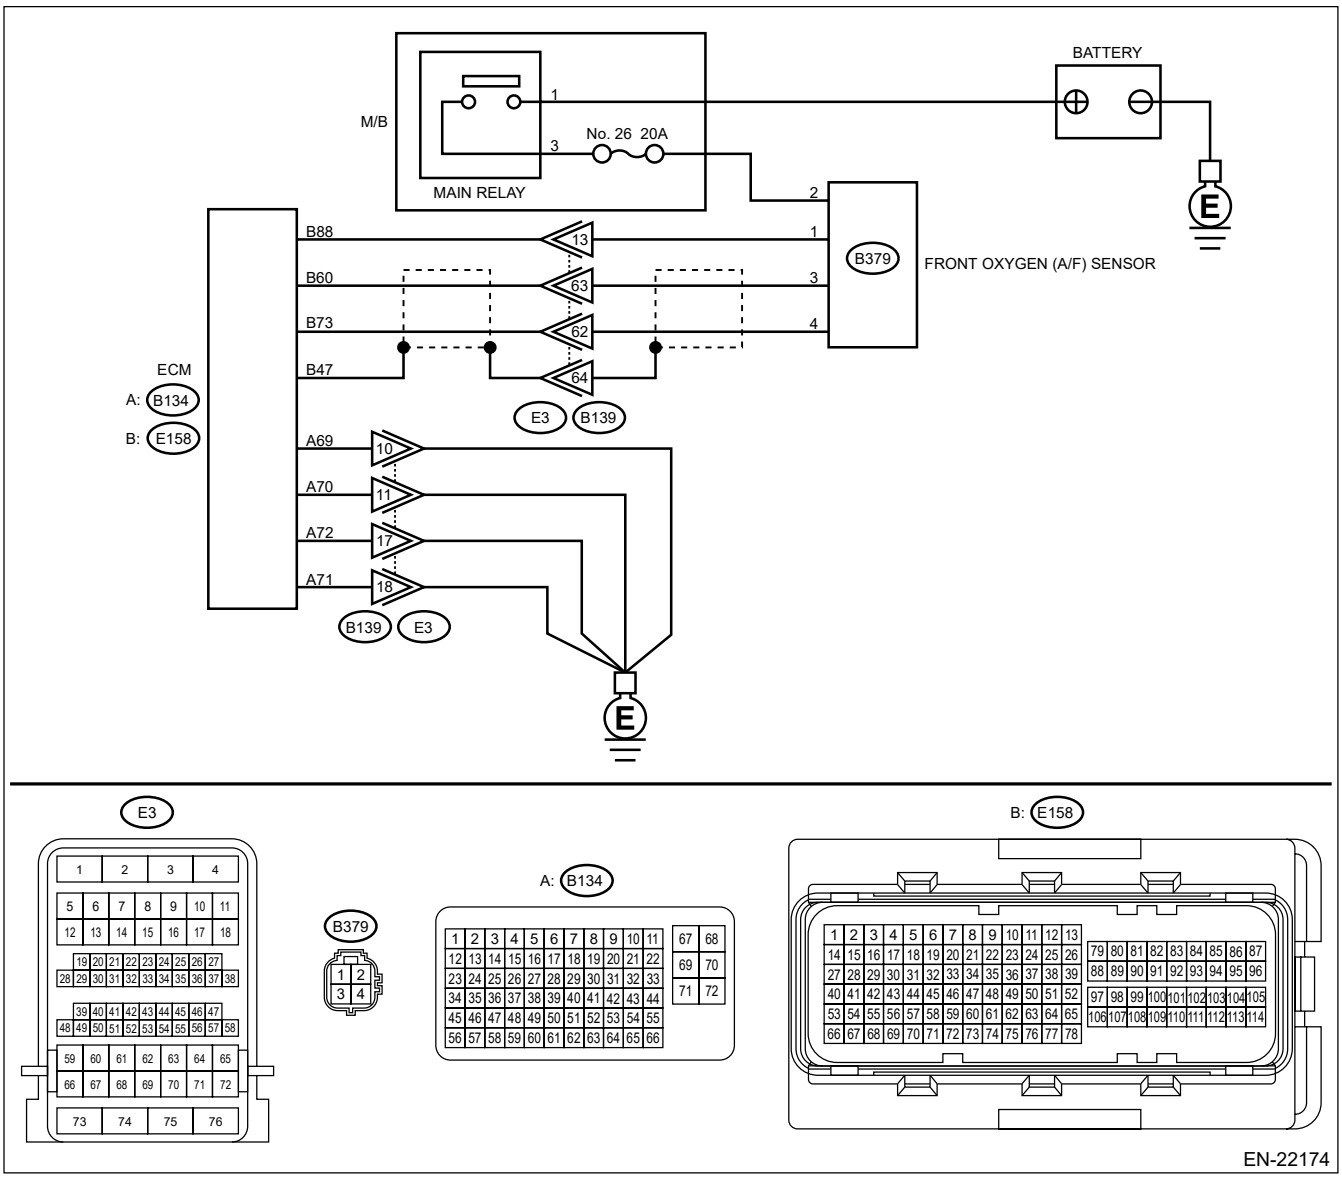
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0030 A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR (OPEN).

1. Start and warm up the engine.
2. Turn the ignition switch to OFF.
3. Disconnect the connector from ECM.
4. Disconnect the connectors from front oxygen (A/F) sensor.
5. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

Connector & terminal

(E158) No. 88 — (B379) No. 1:
(E158) No. 60 — (B379) No. 3:
(E158) No. 73 — (B379) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.

2. CHECK FRONT OXYGEN (A/F) SENSOR.

Measure the resistance between front oxygen (A/F) sensor terminals.

Terminals

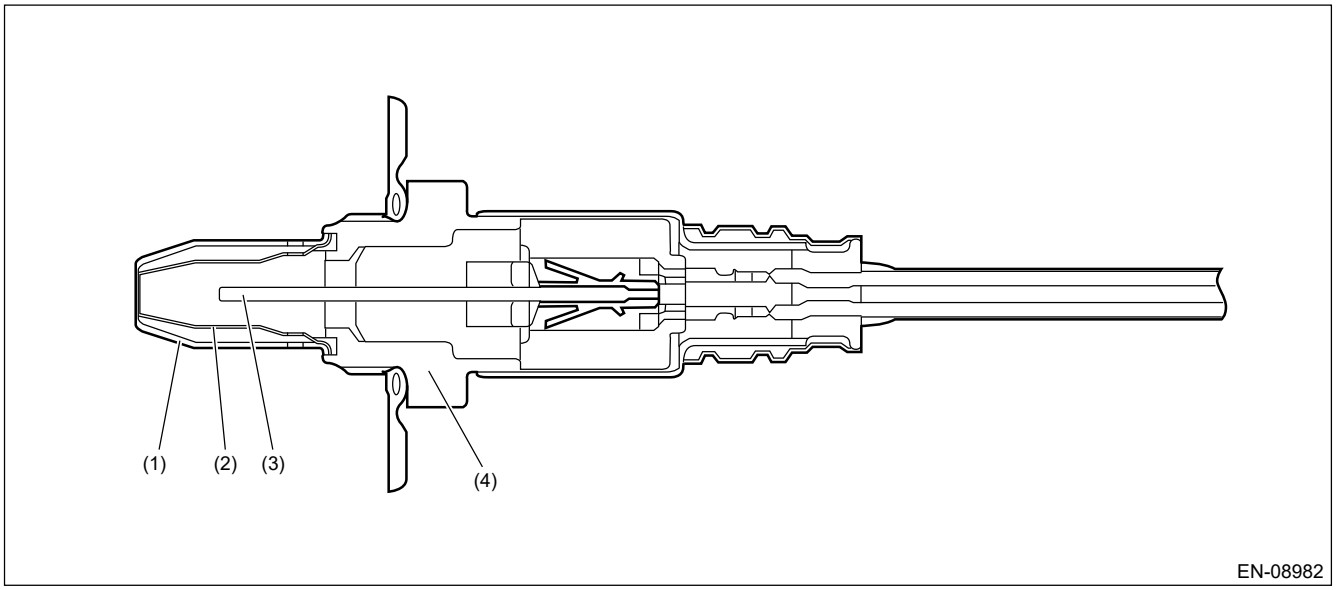
No. 1 — No. 2:

Is the resistance 2 — 3 Ω?

Yes	Go to 3.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

3. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and front oxygen (A/F) sensor connector.



Is there poor contact of ECM or front oxygen (A/F) sensor connector?

Yes	Repair the poor contact of ECM or front oxygen (A/F) sensor connector.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

1. OUTLINE OF DIAGNOSIS

Detect functional errors of the front oxygen (A/F) sensor heater.
Judge as NG when it is determined that the front oxygen (A/F) sensor impedance is large when looking at engine status such as deceleration fuel cut.

2. COMPONENT DESCRIPTION

(1) Element cover (outer)
(2) Element cover (inner)
(3) Sensor element
(4) Sensor housing

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
A/F sensor heater control duty	More than 15%
Elapsed time after returning from the fuel cut	20000ms or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when 20000ms have elapsed since the fuel cut was initiated after starting the heater control.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Front oxygen (A/F) sensor impedance	More than 75Ω

Time needed for diagnosis: 10000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

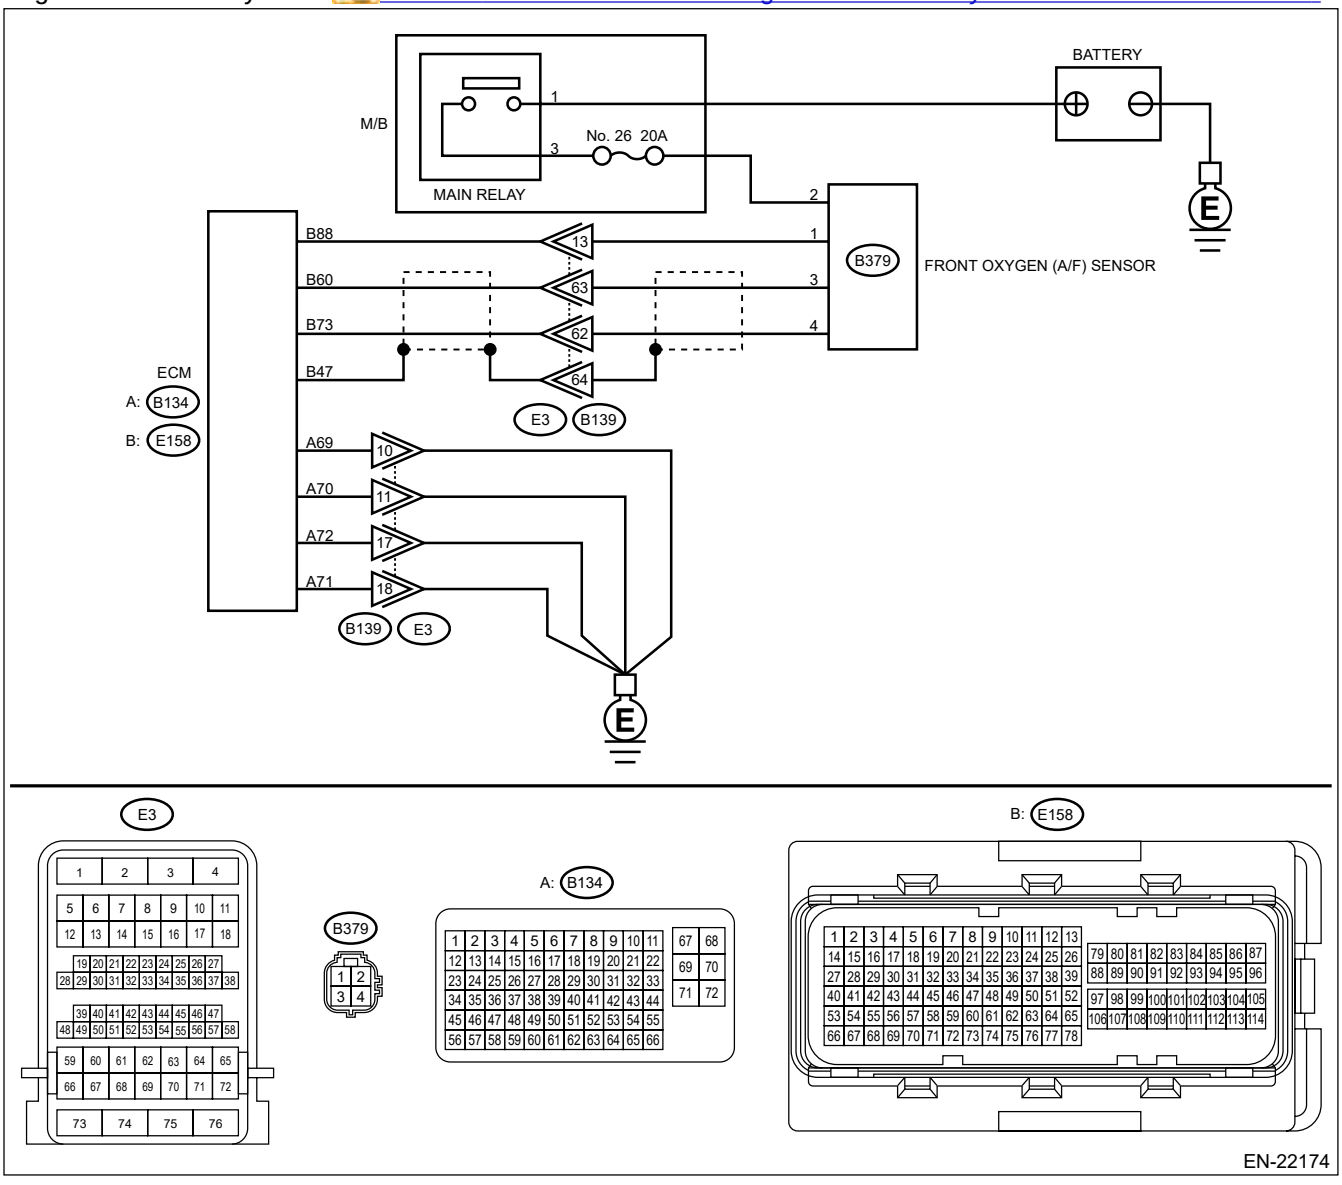
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0031 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from front oxygen (A/F) sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between front oxygen (A/F) sensor connector and engine ground.
   Connector & terminal
   (B379) No. 2 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the power supply line. **Note:** **In this case, repair the following item:** • **Open circuit in harness between A/F, oxygen sensor relay connector and front oxygen (A/F) sensor connector** • **Poor contact of A/F, oxygen sensor relay connector** • **Poor contact of coupling connector** • **Malfunction of A/F, oxygen sensor relay**

2. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and front oxygen (A/F) sensor connector.
   Connector & terminal
   (E158) No. 88 — (B379) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector** • **Coupling connector**

3. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).

Measure the resistance of harness between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 — Chassis ground:
(B134) No. 70 — Chassis ground:
(B134) No. 71 — Chassis ground:
(B134) No. 72 — Chassis ground:

Is the resistance less than 5 Ω?

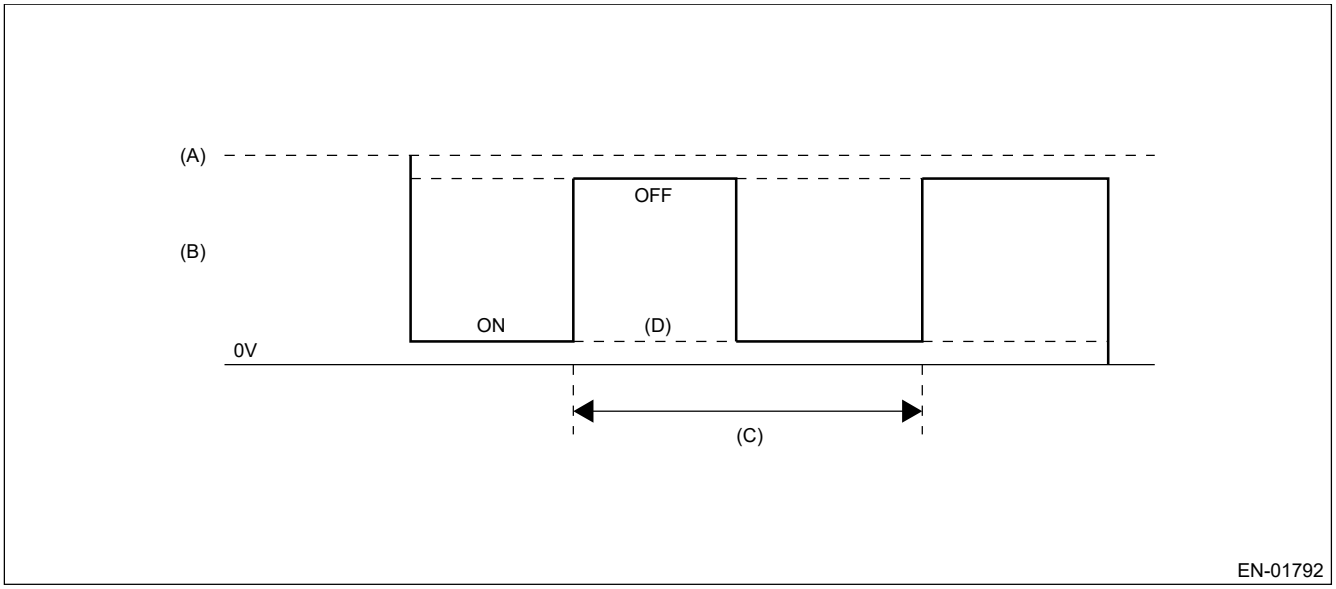
Yes	Go to 4.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Coupling connector**

4. CHECK FRONT OXYGEN (A/F) SENSOR.

Measure the resistance between front oxygen (A/F) sensor terminals.

Terminals

No. 1 — No. 2:



Is the resistance 2 — 3 Ω?

Yes	Repair the poor contact of ECM connector.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

1. OUTLINE OF DIAGNOSIS

Detect front oxygen (A/F) sensor heater open or short circuit.
The front oxygen (A/F) sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains Low.

2. COMPONENT DESCRIPTION

(A) Battery voltage (B) Front oxygen (A/F) sensor heater output voltage (C) 128 ms

(D) Low error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage Front oxygen (A/F) sensor heater control duty	10.9 V or more Less than 87.5%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 1.3 V

Time needed for diagnosis: 1 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

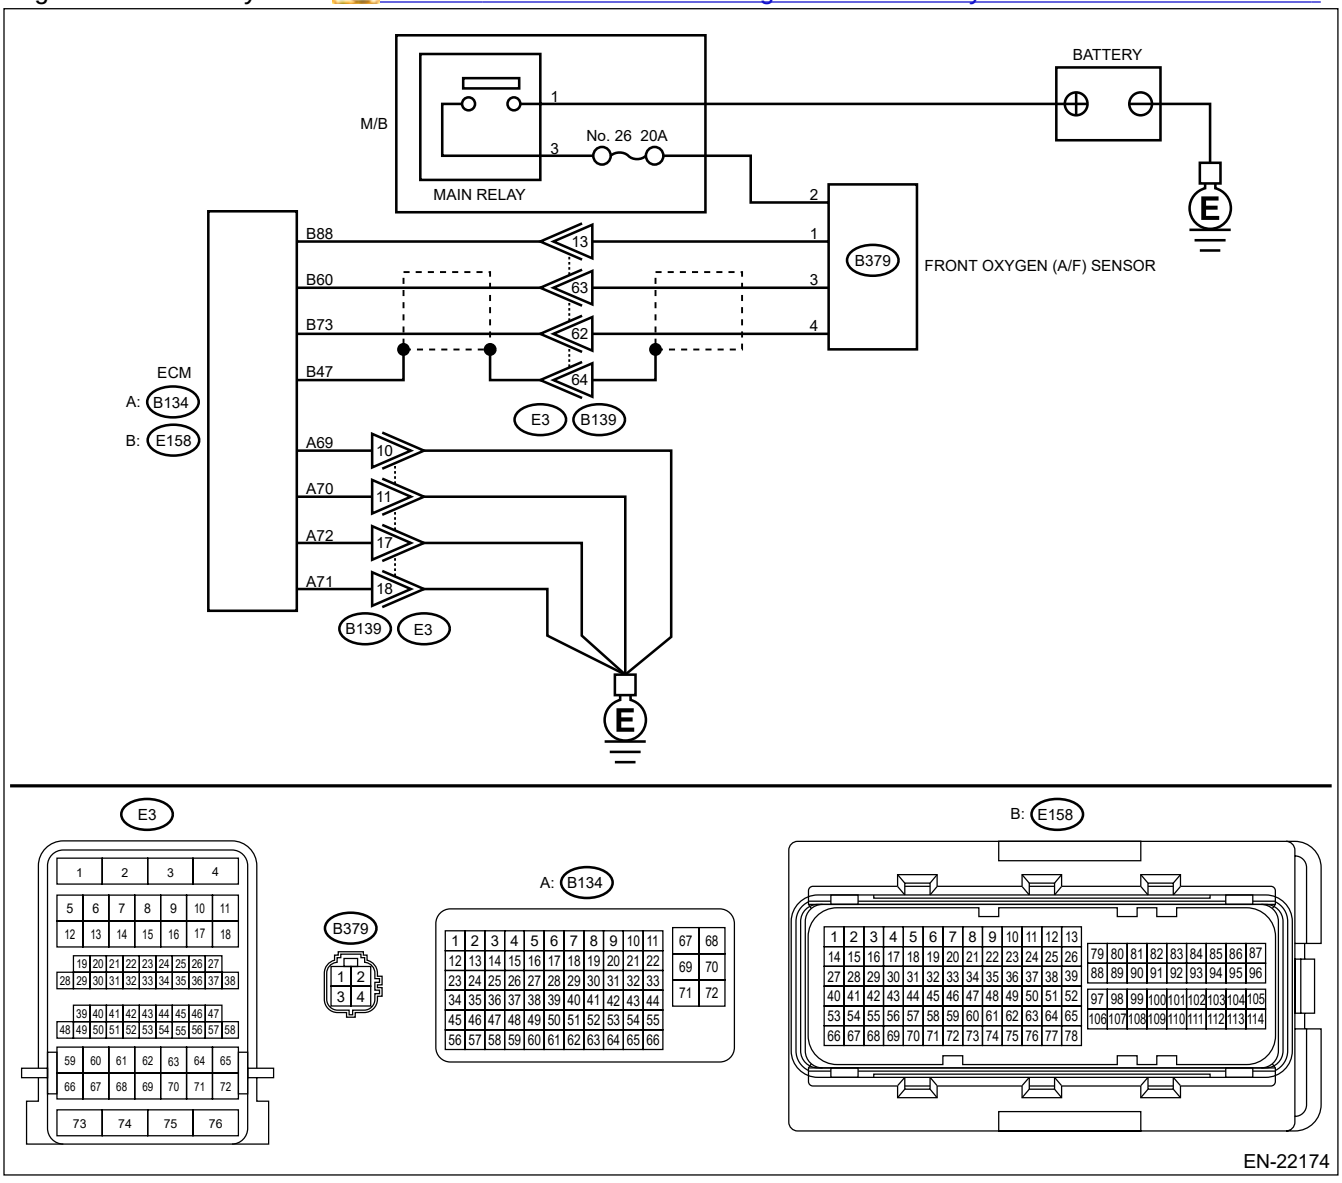
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0032 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 88 (+) — Chassis ground (−):

Is the voltage 10 V or more?

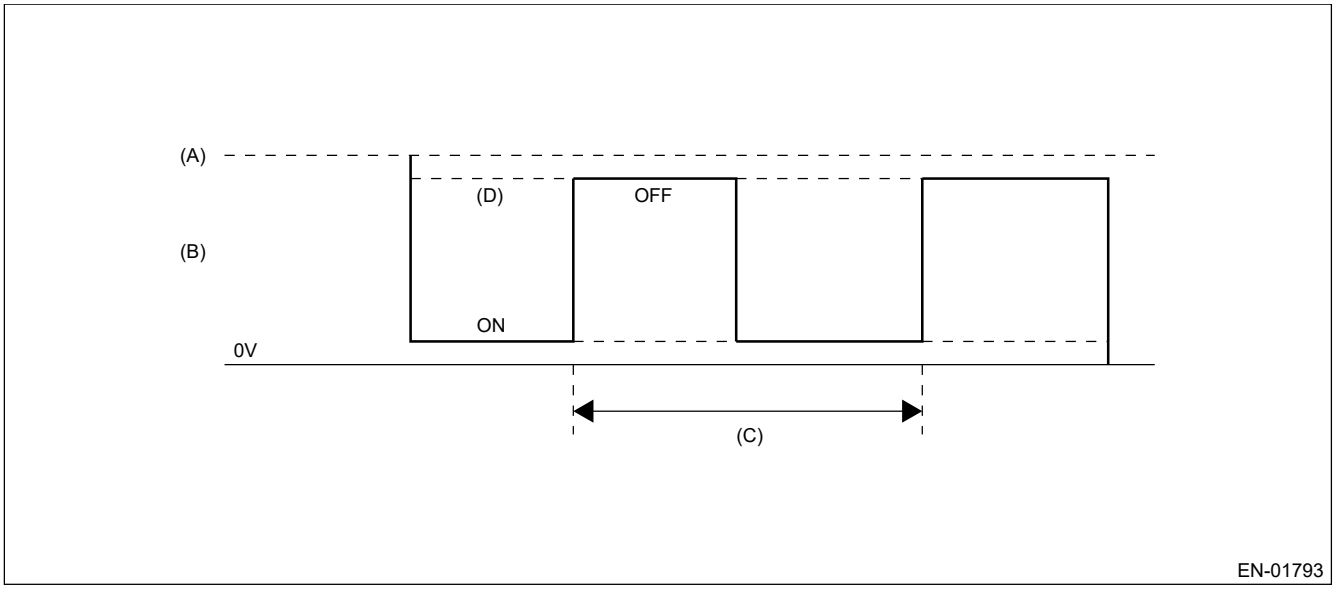
Yes	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.
No	Go to 2.

2. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).

1. Disconnect the connector from ECM.
2. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 — Chassis ground:
(B134) No. 70 — Chassis ground:
(B134) No. 71 — Chassis ground:
(B134) No. 72 — Chassis ground:



Is the resistance less than 5 Ω?

Yes	Repair the poor contact of ECM connector.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Coupling connector**

1. OUTLINE OF DIAGNOSIS

Detect front oxygen (A/F) sensor heater open or short circuit.
The front oxygen (A/F) sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains High.

2. COMPONENT DESCRIPTION

(A) Battery voltage (B) Front oxygen (A/F) sensor heater output voltage (C) 128 ms

(D) High error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Front oxygen (A/F) sensor heater control duty	More than 12.5%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.4 V or more

Time needed for diagnosis: 1 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

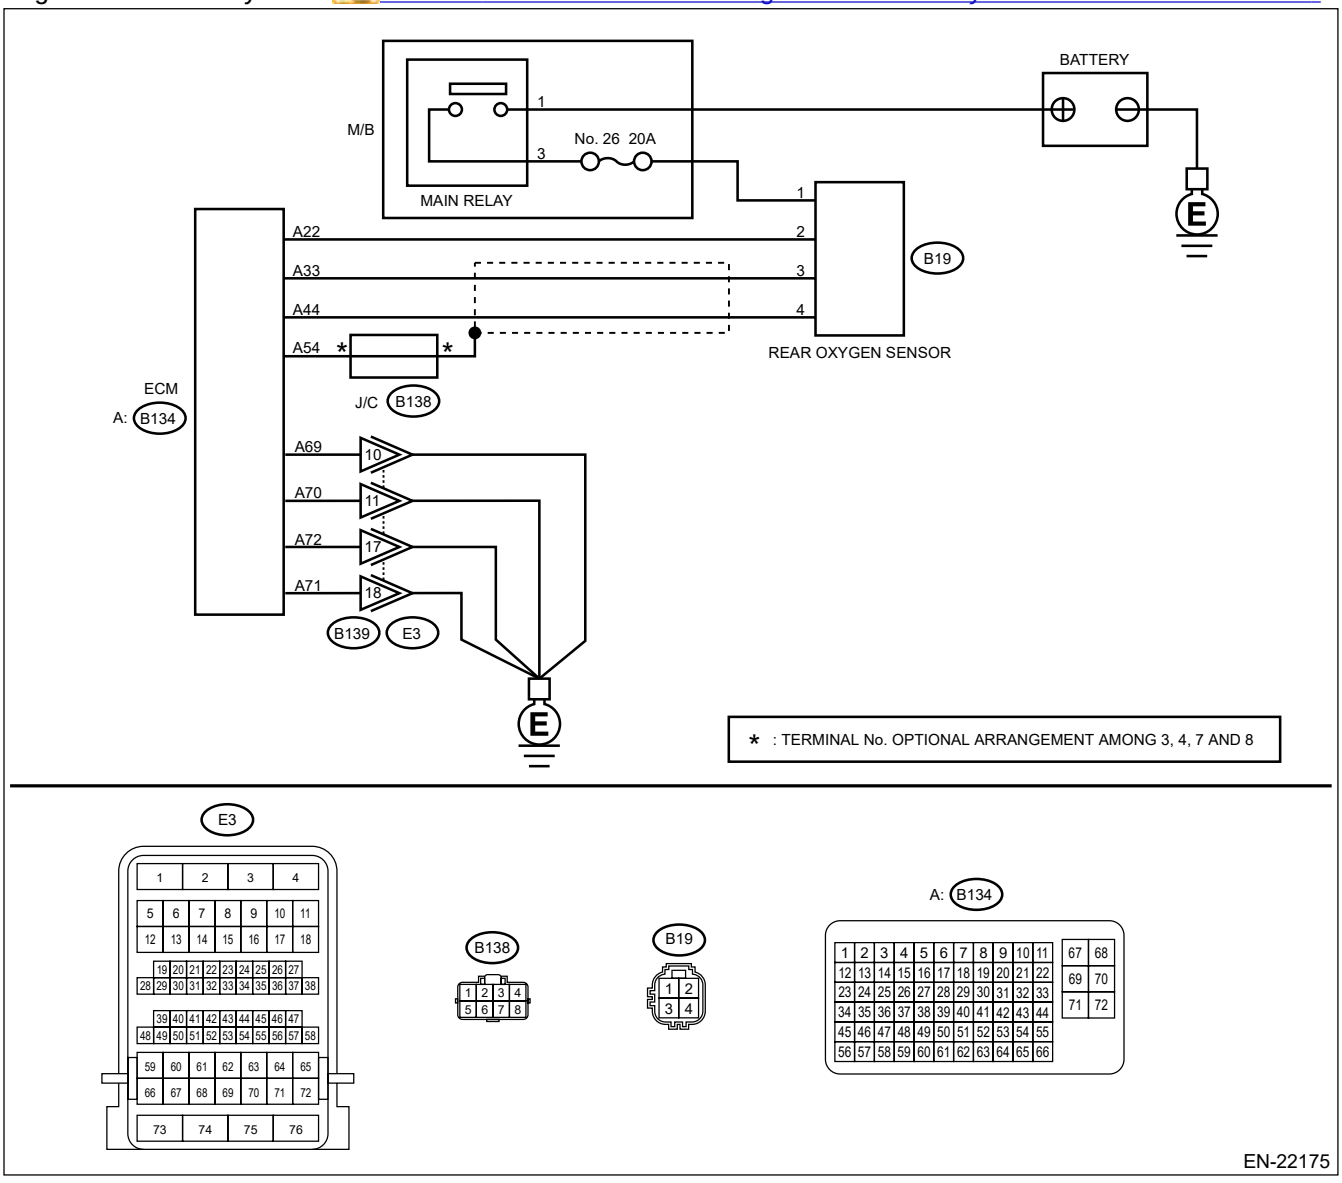
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY TO REAR OXYGEN SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from rear oxygen sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between rear oxygen sensor connector and engine ground.
   Connector & terminal
   (B19) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the power supply line. Or replace the main relay. **Note:** **In this case, repair the following item:** • **Open circuit in harness between A/F, oxygen sensor relay connector and rear oxygen sensor connector** • **Poor contact of A/F, oxygen sensor relay connector** • **Poor contact of coupling connector** • **Malfunction of A/F, oxygen sensor relay**

2. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and oxygen sensor connector.
   Connector & terminal
   (B134) No. 22 — (B19) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.

3. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).

Measure the resistance of harness between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 — Chassis ground:
(B134) No. 70 — Chassis ground:
(B134) No. 71 — Chassis ground:
(B134) No. 72 — Chassis ground:

Is the resistance less than 5 Ω?

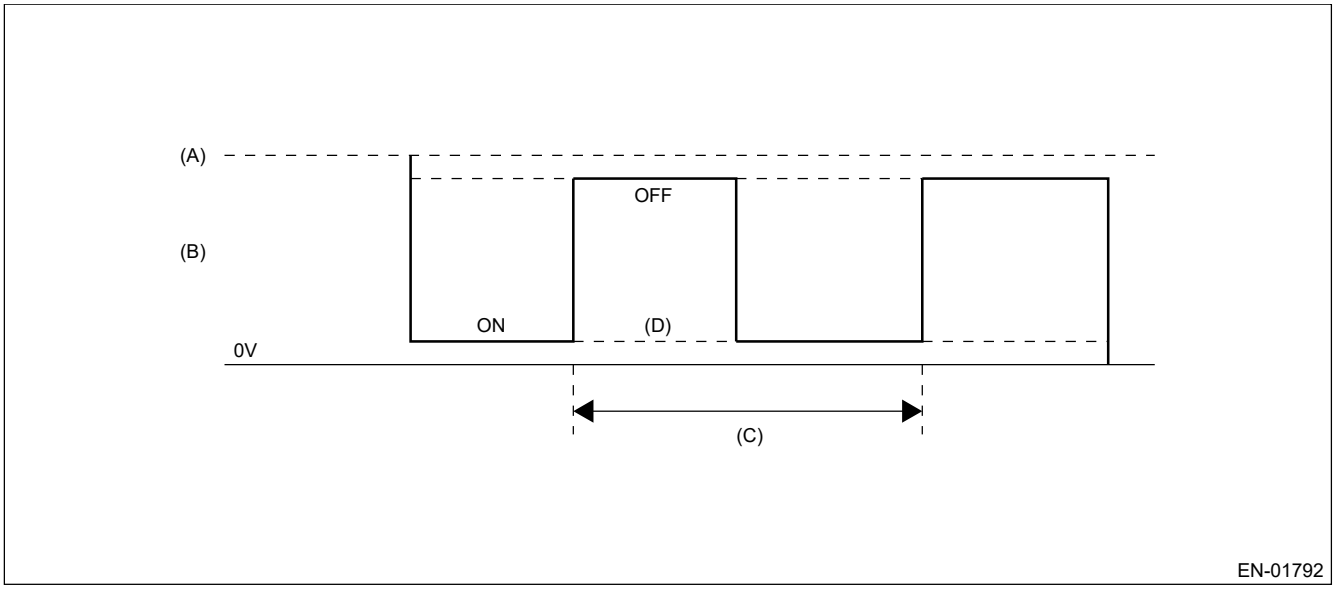
Yes	Go to 4.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Coupling connector**

4. CHECK REAR OXYGEN SENSOR.

Measure the resistance between rear oxygen sensor terminals.

Terminals

No. 2 — No. 1:



Is the resistance 5 — 7Ω?

Yes	Repair the poor contact of ECM connector.
No	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the rear oxygen sensor heater open or short circuit.
The rear oxygen sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains Low.

2. COMPONENT DESCRIPTION

(A) Battery voltage (B) Output voltage of the rear oxygen sensor heater (C) 256 ms (cycles)

(D) Low error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Rear oxygen sensor heater control duty	Less than 75%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Battery voltage × 0.47 or less

Time needed for diagnosis: 10 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

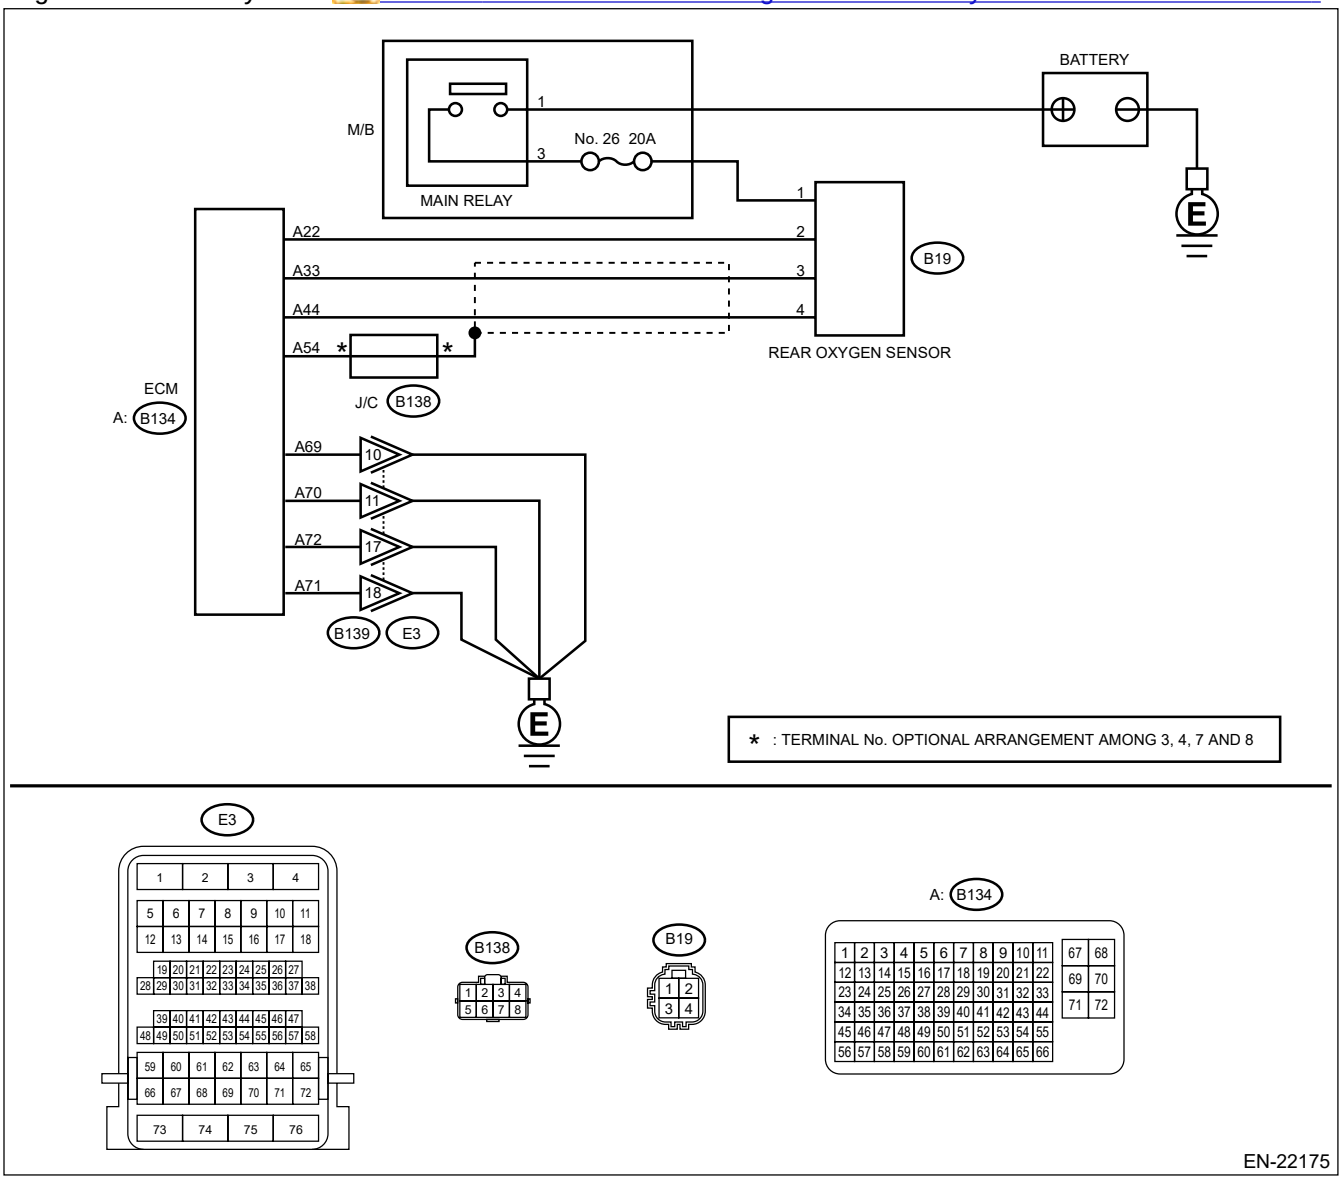
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0038 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 22 (+) — Chassis ground (−):

Is the voltage 10 V or more?

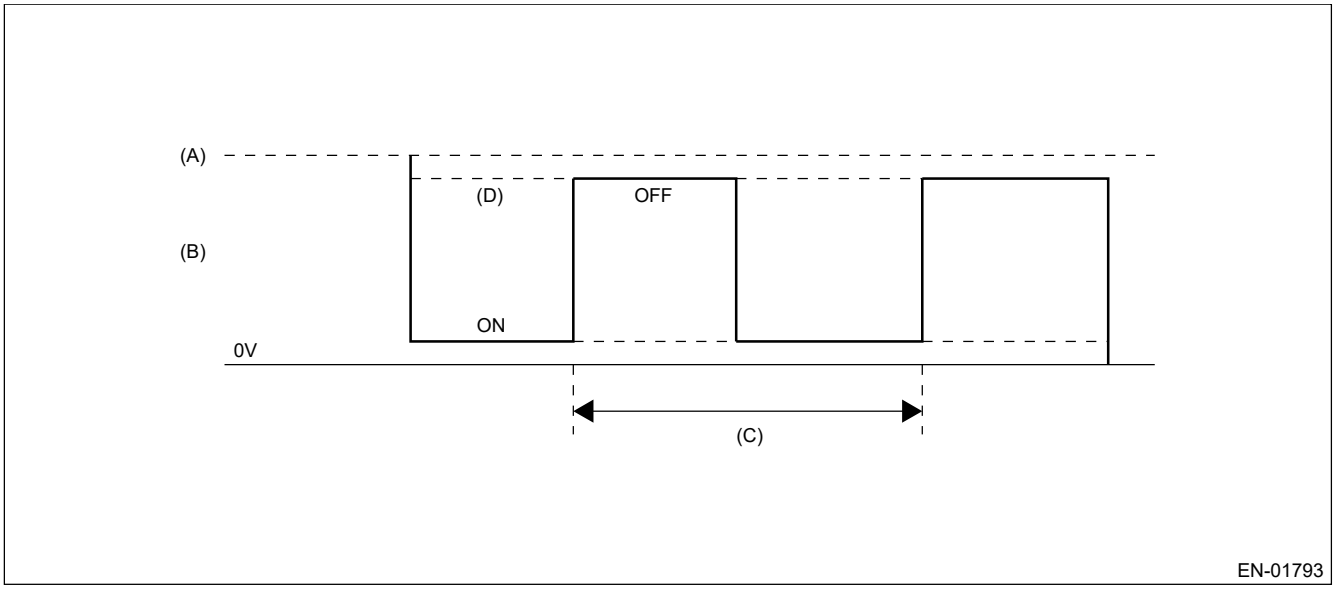
Yes	Repair the short circuit to power in the harness between ECM connector and rear oxygen sensor connector.
No	Go to 2.

2. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).

1. Disconnect the connector from ECM.
2. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 — Chassis ground:
(B134) No. 70 — Chassis ground:
(B134) No. 71 — Chassis ground:
(B134) No. 72 — Chassis ground:



Is the resistance less than 5 Ω?

Yes	Repair the poor contact of ECM connector.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Coupling connector**

1. OUTLINE OF DIAGNOSIS

Detect the rear oxygen sensor heater open or short circuit.
The rear oxygen sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains High.

2. COMPONENT DESCRIPTION

(A) Battery voltage

(B) Output voltage of the rear oxygen sensor heater

(C) 256 ms (cycles)

(D) High error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Rear oxygen sensor heater control duty	25% or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	More than battery voltage × 0.11

Time needed for diagnosis: 2.56 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0068 MAP/MAF - THROTTLE POSITION CORRELATION

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system.
No	Go to 2.

2. CHECK MANIFOLD ABSOLUTE PRESSURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Using the Subaru Select Monitor or a general scan tool, read the value of [Mani. Absolute Pressure].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Mani. Absolute Pressure]73.3—106.6 kPa (550 — 800 mmHg, 21.65—31.50 inHg) at ignition ON, and 20.0—46.7 kPa (150 — 350 mmHg, 5.91—13.78 inHg) at idling?

Yes	Go to 3.
No	Replace the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor.

3. CHECK THROTTLE OPENING ANGLE.

Using the Subaru Select Monitor or a general scan tool, read the value of [Throttle Opening Angle].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Throttle Opening Angle] less than 5% when throttle is fully closed?

Yes	Go to 4.
No	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.

4. CHECK THROTTLE OPENING ANGLE.

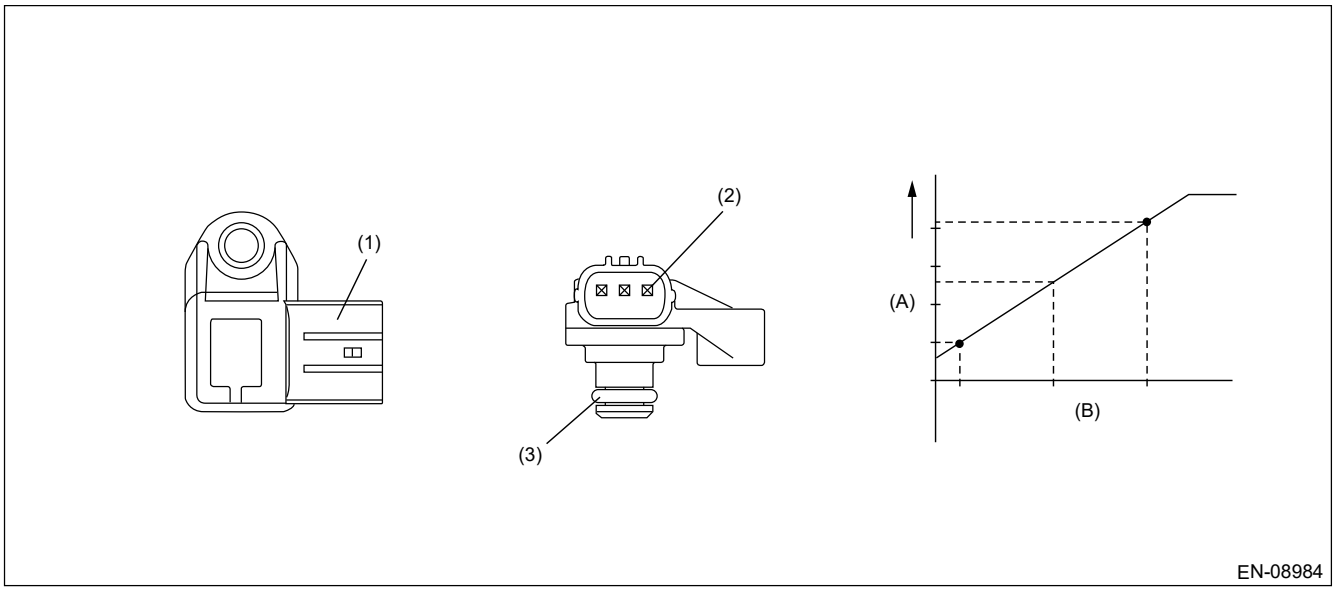
Using the Subaru Select Monitor or a general scan tool, read the value of [Throttle Opening Angle].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Throttle Opening Angle] 85% or more when throttle is fully closed?



Yes	Replace the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor.
No	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.

1. OUTLINE OF DIAGNOSIS

Detect problems in the intake manifold pressure sensor output properties.
Judge as NG when the intake air pressure AD value is Low whereas it seemed to be High from the

viewpoint of engine condition, or when it is High whereas it seemed to be Low from the engine condition.

2. COMPONENT DESCRIPTION

(A) Output voltage
(B) Absolute pressure
(1) Connector
(2) Terminals
(3) O-ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Low	
Engine speed	Less than 4000rpm
Engine load (with atmospheric pressure compensation)	More than 0.56g/rev (0.02oz/rev)
Throttle position	8% or more
High	
Engine speed	500rpm—900rpm
Engine load (with atmospheric pressure compensation)	Less than 0.31g/rev (0.01oz/rev)
Throttle position	Less than 4%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.
If the duration of time while the following conditions are met is longer than the time indicated, judge as

NG.

Judgment value

Malfunction Criteria	Threshold Value
Low	
Output voltage	Less than 2.18V (CVT model) Less than 2.18V (MT model)
High	
Output voltage	2.18V or more

Time needed for diagnosis:

Low side: 5000ms

High side: 5000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0071 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P0071 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK DATA MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Ambient Air Temperature].

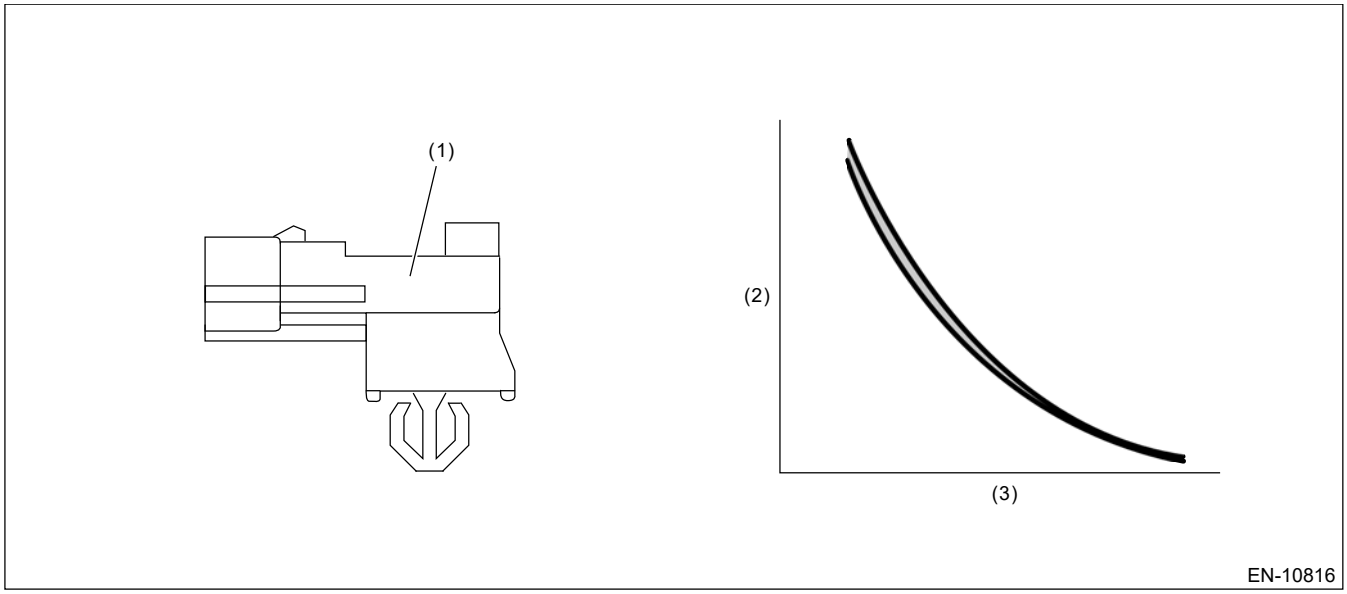
   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Current Data Display For HVAC System". Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.
3. Read the change of the value in [Ambient Air Temperature] while heating and cooling the ambient sensor using a hair dryer.

   Data Monitor

   Caution:
   Do not heat the part to the temperature where you cannot touch it with your bare hand in order to prevent burning yourself and protect the part.

Does the value of [Ambient Air Temperature] change between heating and cooling?



Yes	Repair the poor contact of ECM connector.
No	Replace the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ambient temperature sensor characteristics.
After the engine starts after the specified period of soaking time has elapsed, judge by correlation between ambient temperature sensor value, intake air temperature sensor value and engine coolant temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between ambient air temperature and intake air temperature, ambient air temperature and engine coolant temperature.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.

(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Soaking time	21600s or more
Block heater judgment	Completed
Block heater operation	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Ambient air temperature 30 sec. after engine start − Intake air temperature 30 sec. after engine start|	More than value of Map
|Ambient air temperature at engine start − Engine coolant temperature at engine start|	More than 25°C (45°F)

Map

Ambient temperature °C (°F)	−30 (−22)	45 (113)	60 (140)	80 (176)

Ambient temperature °C (°F)	**−30 (−22)**	**45 (113)**	**60 (140)**	**80 (176)**
|Ambient air temperature 30 sec. after engine start − Intake air temperature 30 sec. after engine start| °C (°F)	20 (36°F)	20 (36°F)	32 (57.6F)	32 (57.6F)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW

DTC detecting condition:
Immediately at fault recognition

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

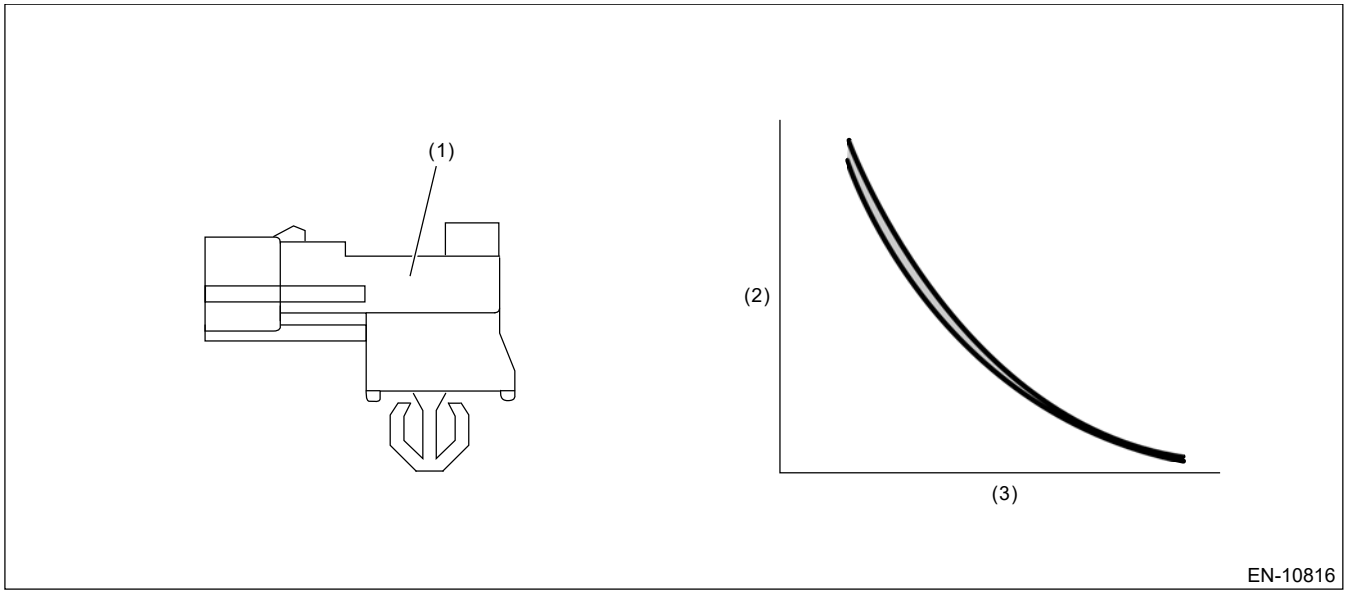
Is DTC P0073 or P0072 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK COMBINATION METER.

Check the combination meter system. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?



Yes	Repair the poor contact of ECM connector.
No	Repair the combination meter system. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.

(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.42 V

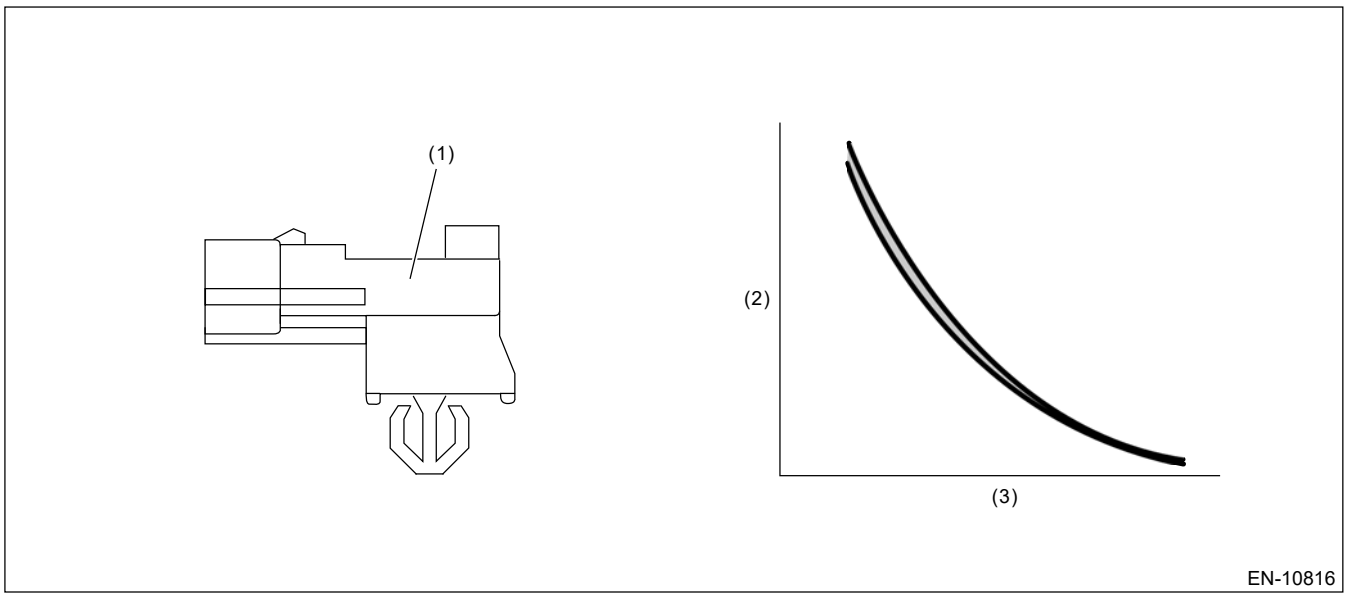
Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0073 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH

Note:



For the diagnostic procedure, refer to DTC P0072. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.

(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	More than 4.88 V

Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0087 FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Poor acceleration

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK FOR FUEL DELIVERY LINE LEAKAGE.

Visually check the fuel delivery line for leakage.
Warning:
- **When checking fuel delivery line during engine operation, be very careful so that one's hair, body and clothes do not touch the rotating part in the engine compartment.**
- **If there is fuel leakage, the fuel can be combusted spontaneously by the engine heat, resulting in serious accident. Therefore, take extra care.**
- **Prepare the necessary fire-extinguishing appliance for immediate fire fighting in case of fire.**

Note:
Concerning the section where visible inspection is difficult, the fuel odor provides a good indication of determining the fuel leakage.

Are there leaks from the fuel delivery line?

Yes	Replace the faulty fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.
No	Go to 2.

2. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0087 displayed? (Current malfunction)

Yes	Go to 3.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

3. CHECK EXPERIENCE OF RUNNING OUT OF FUEL.

Check if there was an experience of running out of fuel using “Check List for Interview”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Check List for Interview>CHECK > CHECK LIST NO. 2.

Has the vehicle experienced running out of fuel?

Yes	Finish the diagnosis. **Note:** **DTC may be stored by running out of fuel.**
No	Go to 4.

4. CHECK FUEL PRESSURE.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value of [Fuel Rail Pressure A] and [Commanded Fuel Rail Pressure A] when racing the engine.

   Data Monitor

   Note:
   For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Fuel Rail Pressure A] synchronized with that of [Commanded Fuel Rail Pressure A]?

Yes	Go to 5.
No	• The value in [Fuel Rail Pressure A] does not increase: Go to 7. • The value in [Fuel Rail Pressure A] does not change: Replace the fuel pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pressure Sensor.

5. CHECK OF FUEL PUMP.

1. Turn the ignition switch to ON. (Engine OFF)
2. On the item [Active Test], select [Fuel Pump Relay] and perform ON/OFF drive.
   Note:
   For detailed operation procedures, refer to “Application help”.
3. Check for operating sound in the fuel pump according to ON/OFF switching operation.

Does the fuel pump emit operating sound?

Yes	Go to 6.
No	Check fuel pump circuit. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.

6. CHECK FUEL PRESSURE (LOW PRESSURE SIDE).

Check the fuel pressure on low-pressure side. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.

Is the check result OK?

Yes	Go to 7.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

7. CHECK FOR FUEL DELIVERY LINE LEAKAGE (HIGH PRESSURE SIDE).

1. Start the engine.
2. Using the Subaru Select Monitor, read the change in values of [Fuel Rail Pressure A] when stopping the engine.

   Data Monitor

   Note:
   - **In order to maintain the communication with Subaru Select Monitor, turn the ignition switch to OFF, and immediately turn it to ON.**
   - **For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**

Does the value of [Fuel Rail Pressure A] decrease rapidly?

Yes	Go to 8.
No	Go to 9.

8. CHECK HIGH-PRESSURE FUEL PUMP.

Check the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump.

Is the check result OK?

Yes	Go to 9.
No	Replace the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump.

9. CHECK FOR REPRODUCTION OF FAILURE.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform the corresponding Inspection Mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
3. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is the same DTC as current diagnosis output?

Yes	Replace the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump. After replacement, go to the next step. Go to 10. **Note:** **When the high-pressure fuel pump has been replaced in step 8, go to the next step without replacing the high-pressure fuel pump. Go to 11.**
No	End.

10. CHECK FOR REPRODUCTION OF FAILURE.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform the corresponding Inspection Mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
3. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0087 displayed? (Current malfunction)

Yes	Go to 11.
No	End.

11. CHECK FOR FUEL DELIVERY LINE LEAKAGE (HIGH PRESSURE SIDE).

1. Start the engine.
2. Using the Subaru Select Monitor, read the change in values of [Fuel Rail Pressure A] when stopping the engine.

Note:

- **In order to maintain the communication with Subaru Select Monitor, turn the ignition switch to OFF, and immediately turn it to ON.**
- **For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**

Does the value of [Fuel Rail Pressure A] decrease rapidly?

Yes	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0088. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0088 FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1.

DTC P0088 FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Poor driving performance
- Poor acceleration

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P0088 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK FUEL PRESSURE.

1. Start the engine.
2. Using Subaru Select Monitor, read the value of [Fuel Rail Pressure A] and [Commanded Fuel Rail Pressure A] while the vehicle is accelerated from the parked state to 60 km/h (37.3 MPH) and stops again.

Caution:

- **Follow traffic rules and give the highest priority to safe driving.**
- **During driving, do not operate or gaze at the Subaru Select Monitor.**
- **Always check the measurement value after bringing the vehicle to a stop in a safe place.**

Note:

- **In order to apply the running load to the vehicle, actually drive the vehicle, and read the measurement value.**
- **For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**

Is the value of [Fuel Rail Pressure A] synchronized with that of [Commanded Fuel Rail Pressure A]?

Yes	Replace the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>High Pressure Fuel Pump. After replacement, go to the next step. Go to 3.
No	Replace the fuel pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Fuel Pressure Sensor.

3. CHECK FOR REPRODUCTION OF FAILURE.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform the corresponding Inspection Mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
3. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0088 displayed? (Current malfunction)

Yes	Repair the poor contact of ECM connector.
No	End.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high pressure fuel system function.
Judge as NG when actual pressure is not close to target pressure.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Continuous time after fuel cut	More than 4000ms
Target pressure change every 64 ms	1.9MPa or less

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Actual fuel pressure − Target fuel pressure	Less than −3.5MPa	P0087

Malfunction Criteria	Threshold Value	DTC
Actual fuel pressure – Target fuel pressure	More than 6MPa	P0088

Time needed for diagnosis: 10 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0101 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/PERFORMANCE

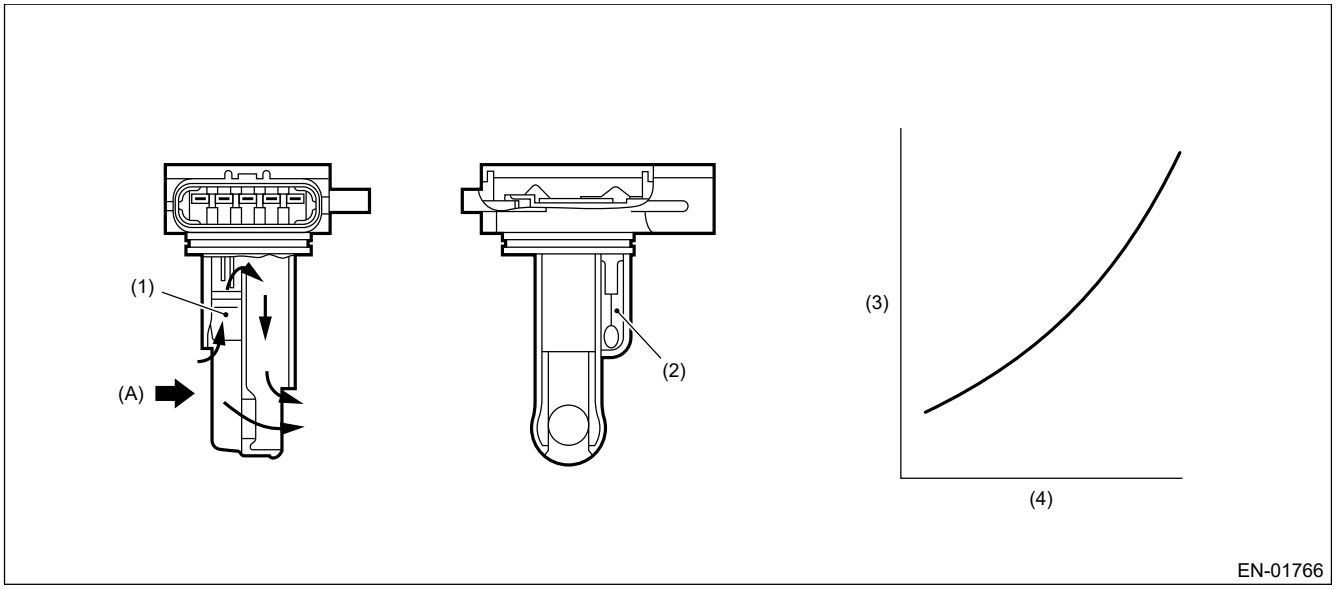
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Engine stall
- Poor driving performance

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check



Is DTC P0101 displayed? (Current malfunction)

Yes	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of air flow sensor output properties.
Judge as a low side NG when the air flow voltage indicates a small value regardless of running in a state where the air flow voltage increases. Judge as a high side NG when the air flow voltage indicates a large value regardless of running in a state where the air flow voltage decreases. Judge air flow sensor property NG when the Low side or High side becomes NG.

2. COMPONENT DESCRIPTION

(A) Air

(1) Air flow sensor

(3) Voltage (V)

(4) Amount of intake air (kg (lb)/s)

(2) Intake air temperature sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Low	
Engine speed	2000rpm or more
Throttle position	12° or more
Intake manifold pressure (with atmospheric pressure compensation)	74.7kPa (560mm Hg ,22inHg) or more (CVT model) 74.7kPa (560mm Hg ,22inHg) or more (MT model)
High	
Engine speed	500rpm — 900rpm (CVT model) 500rpm — 900rpm (MT model)
Throttle position	Less than 5°
Intake manifold pressure (with atmospheric pressure compensation)	50.7kPa (380mm Hg ,15inHg) or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Low	
Output voltage	Less than 8.3g/s (0.29oz/s)
High	
Output voltage	8.3g/s (0.29oz/s) or more

Time needed for diagnosis:
Low: 5000ms
High: 5000ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0102 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW

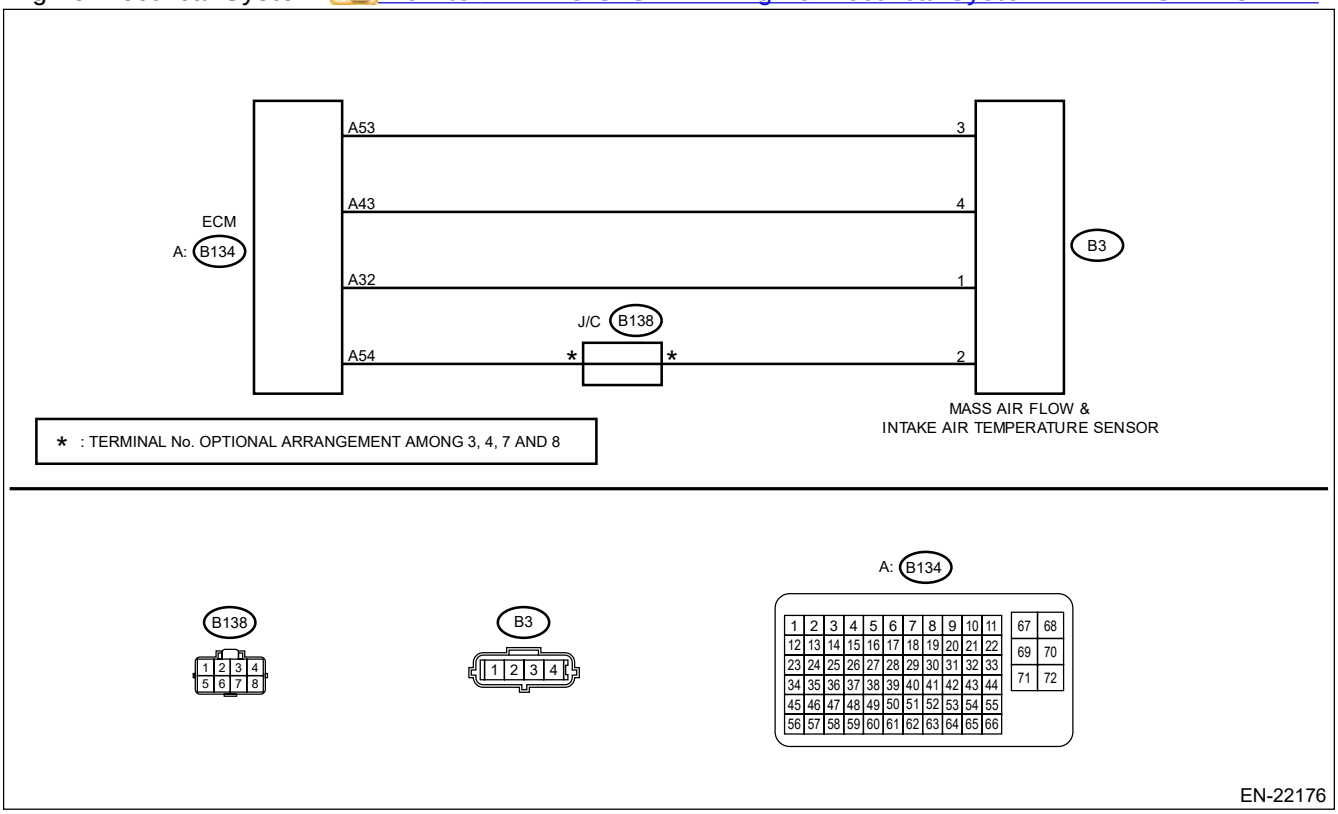
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [Mass Air Flow].
   Note:
   For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Mass Air Flow] 0 g/s (0 oz/s)?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK POWER SUPPLY OF MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from the mass air flow and intake air temperature sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between mass air flow and intake air temperature sensor connector and engine ground.
   Connector & terminal
   (B3) No. 3 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between main relay and mass air flow and intake air temperature sensor connector** • **Poor contact of main relay connector**

3. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

Connector & terminal

(B134) No. 53 — (B3) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

4. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 53 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

5. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and engine ground.
   Connector & terminal
   (B134) No. 59 (+) — Chassis ground (−):

Is the value of [Air Flow Sensor Voltage] 5 V or more?

Yes	Repair the short circuit of harness to power supply between ECM connector and the mass air flow and intake air temperature sensor connector.
No	Go to 6.

6. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (OPEN).

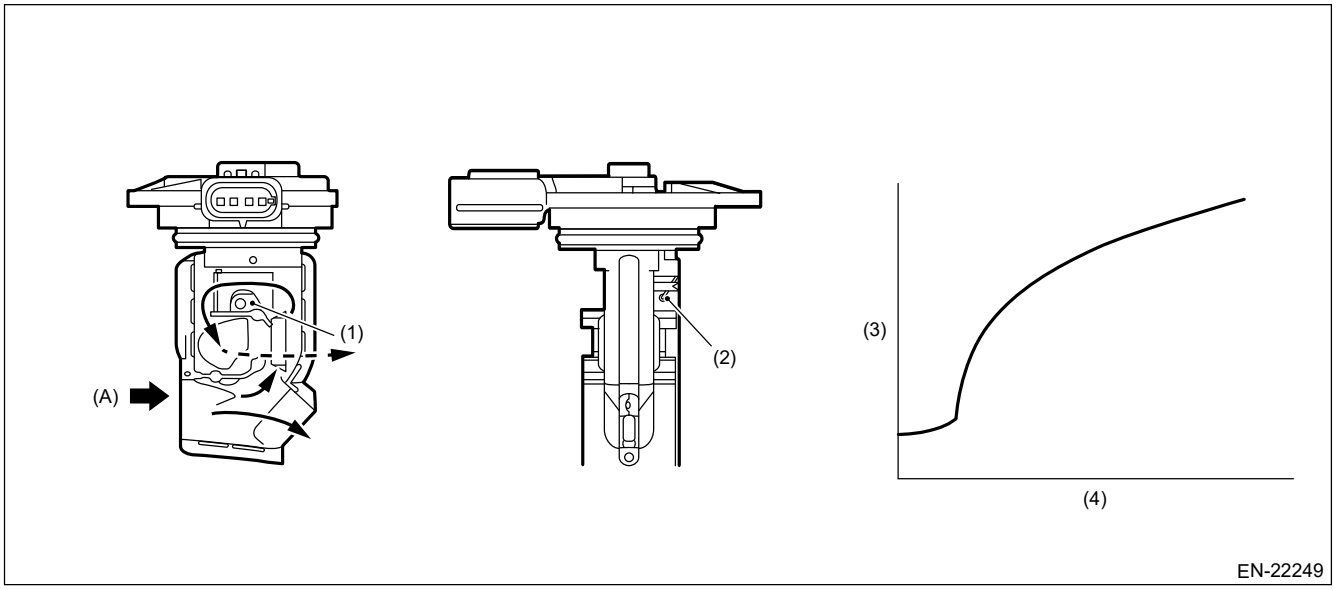
1. Turn the ignition switch to OFF.
2. Connect the connector to ECM.
3. Measure the resistance of harness between mass air flow and intake air temperature sensor connector and engine ground.
   Connector & terminal
   (B3) No. 2 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 7.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector** • **Poor contact of ECM connector**

7. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and mass air flow and intake air temperature sensor connector.



Is there poor contact of ECM or mass air flow and intake air temperature sensor connector?

Yes	Repair the poor contact of ECM or mass air flow and intake air temperature sensor connector.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuits of the air flow sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Air
(1) Air flow sensor
(2) Intake air temperature sensor
(3) Frequency (kHz)
(4) Amount of intake air (kg (lb)/s)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition state is crank or run	500ms or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
MAF sensor frequency	Less than 1.034kHz

Time needed for diagnosis: 500ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0103 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT HIGH

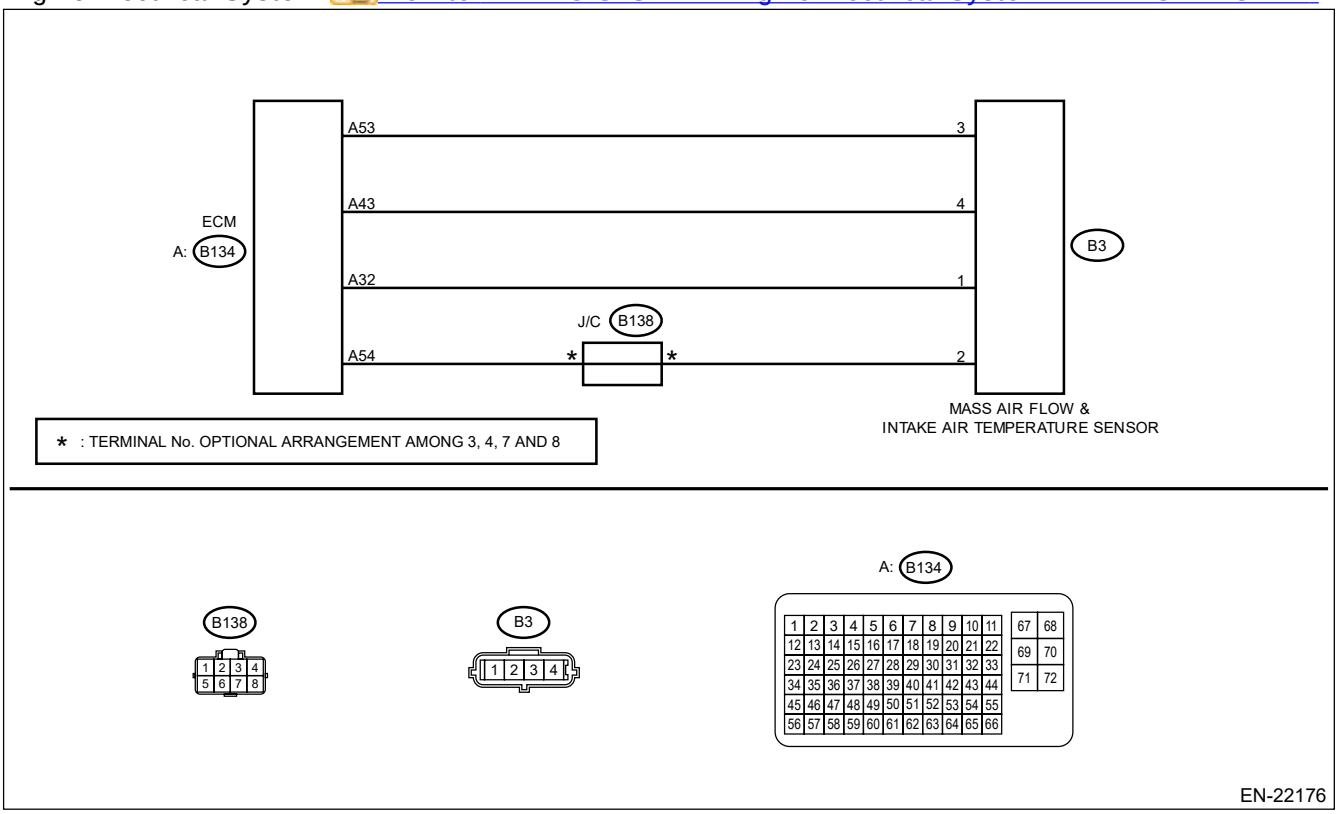
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [Air Flow Rate from Mass Air Flow Sensor].

Data Monitor

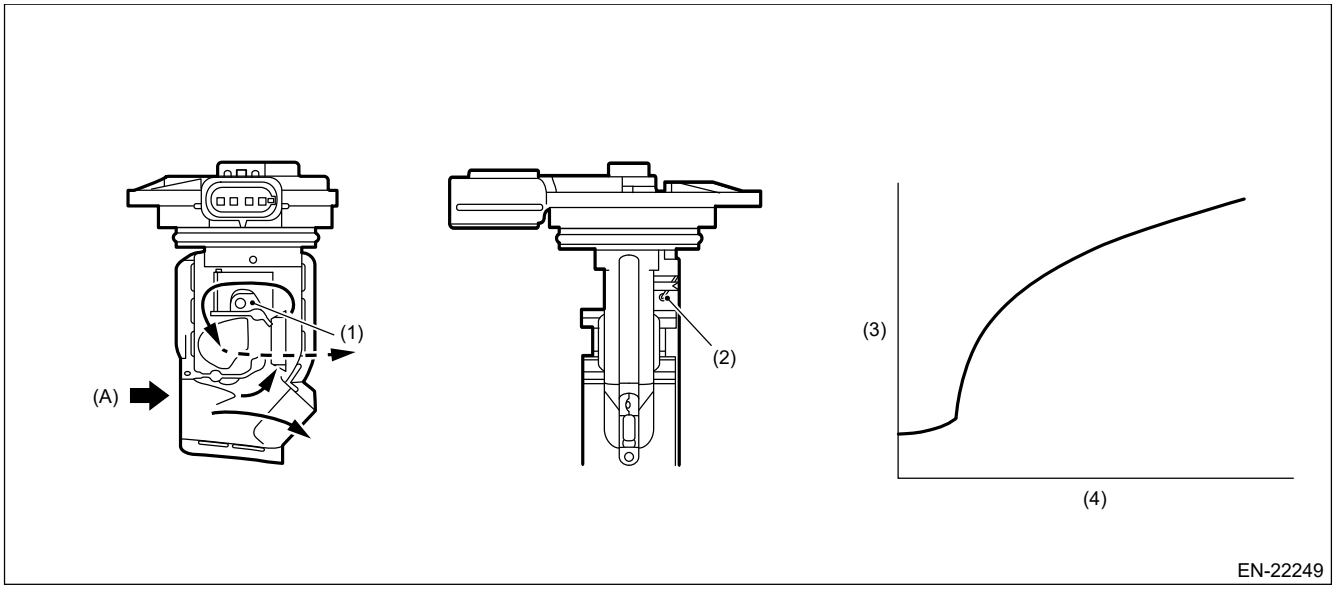
Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Mass Air Flow]232.32 g/s (8.19 oz/s)?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK FOR POOR CONTACT.

Check for poor contact of mass air flow and intake air temperature sensor connector.



Is there poor contact of mass air flow and intake air temperature sensor connector?

Yes	Repair the poor contact of mass air flow and intake air temperature sensor connector.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuits of the air flow sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Air

(1) Air flow sensor

(2) Intake air temperature sensor

(3) Frequency (kHz)

(4) Amount of intake air (kg (lb)/s)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition state is crank or run	500ms or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
MAF sensor frequency	9.207kHz or more

Time needed for diagnosis: 500ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

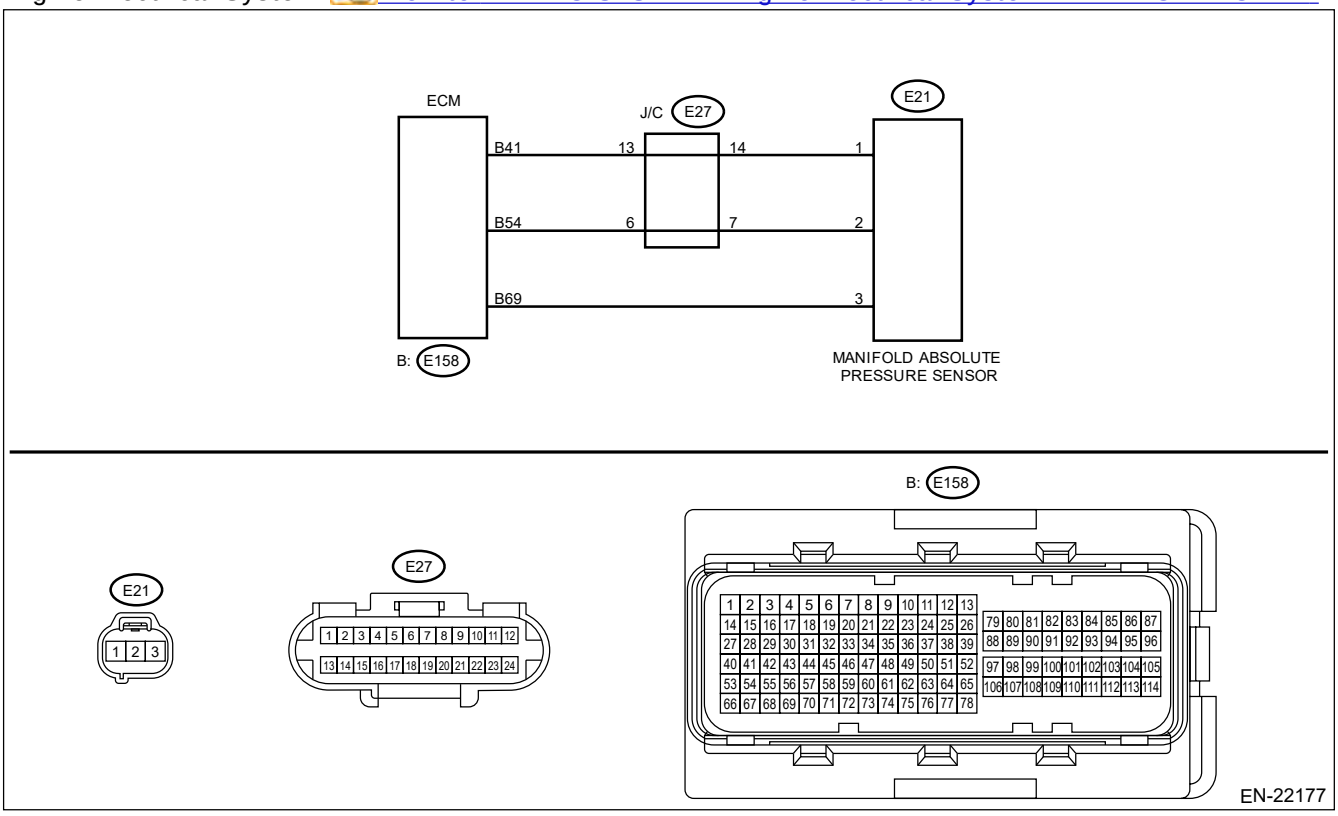
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Mani. Absolute Pressure].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Mani. Absolute Pressure] less than 13.3 kPa (100 mmHg, 3.94 inHg)?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK POWER SUPPLY OF MANIFOLD ABSOLUTE PRESSURE SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from manifold absolute pressure sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between manifold absolute pressure sensor connector and engine ground.
   Connector & terminal
   (E21) No. 3 (+) — Engine ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and manifold absolute pressure sensor connector** • **Poor contact of ECM connector**

3. CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and manifold absolute pressure sensor connector.
   Connector & terminal
   (E158) No. 54 — (E21) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and manifold absolute pressure sensor connector**

4. CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

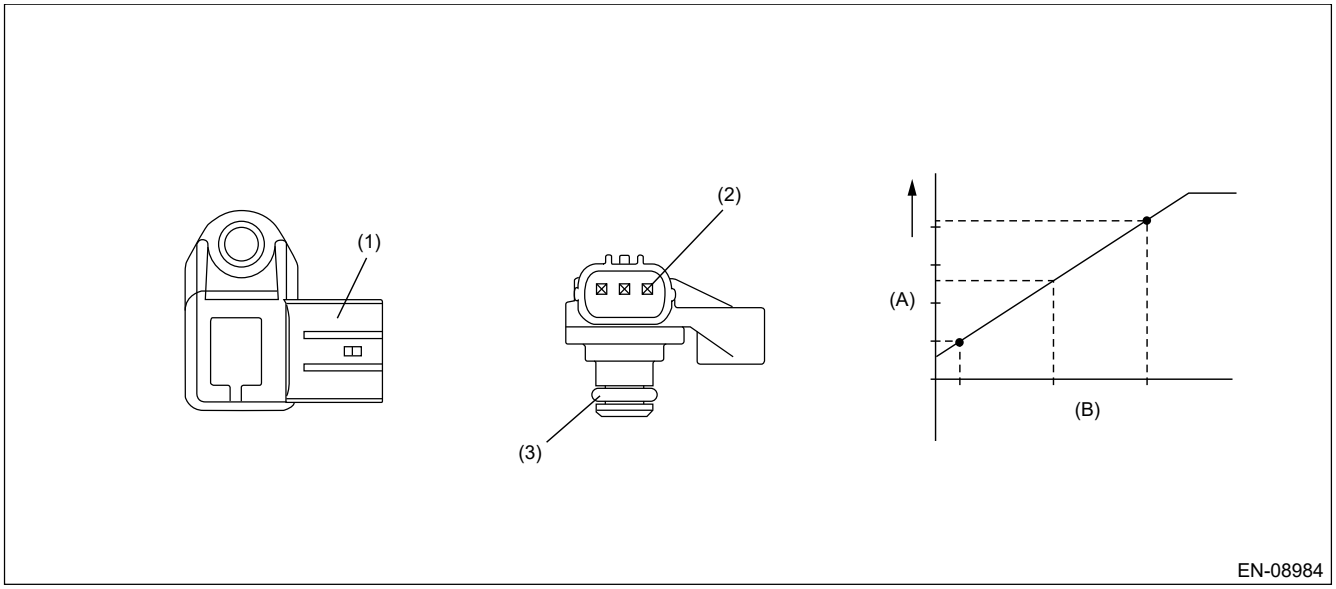
(E158) No. 54 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair short circuit to ground in harness between ECM connector and manifold absolute pressure sensor connector.

5. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and manifold absolute pressure sensor connector.



Is there poor contact of ECM or manifold absolute pressure sensor connector?

Yes	Repair the poor contact of ECM or manifold absolute pressure sensor connector.
No	Replace the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake manifold pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Output voltage (B) Absolute pressure

(1) Connector (2) Terminals (3) O-ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.165V

Time needed for diagnosis: 2000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

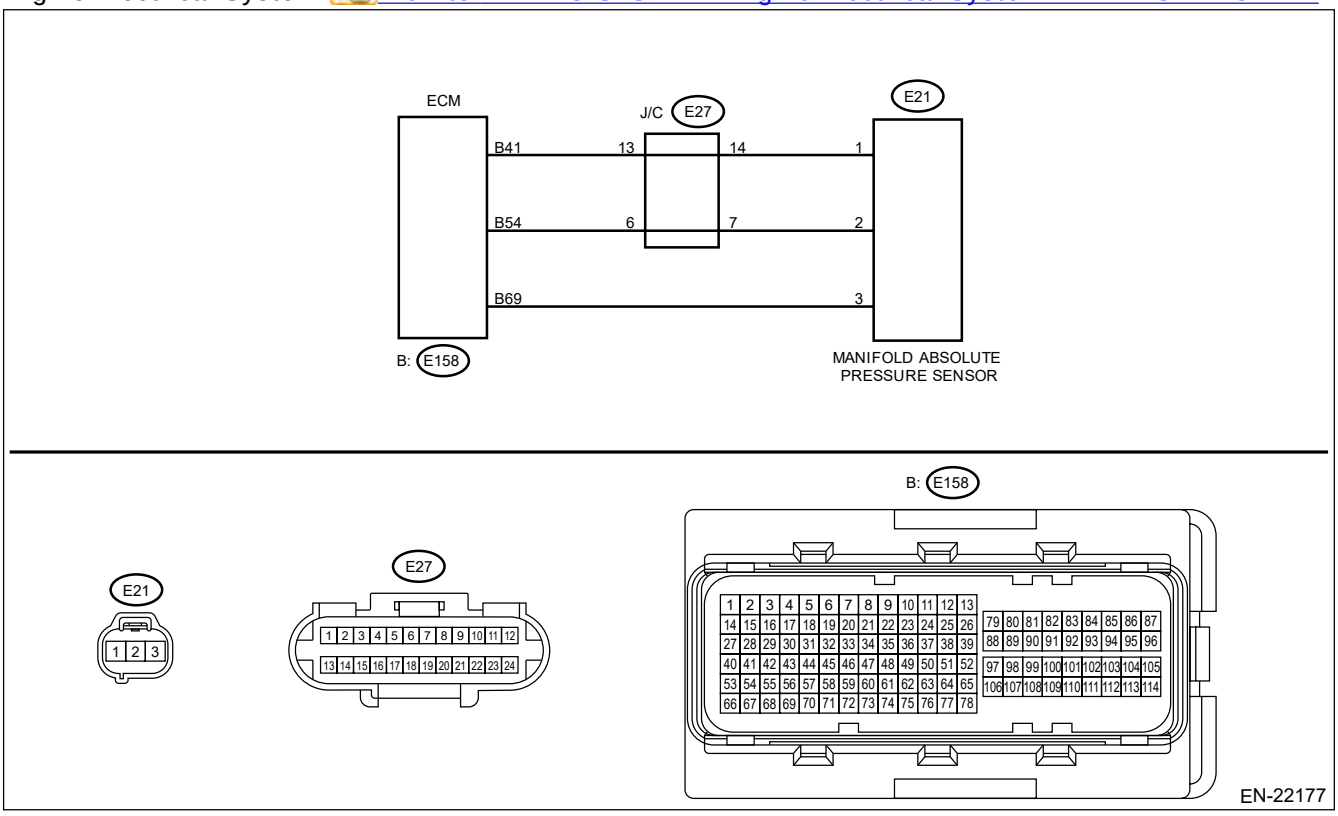
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Mani. Absolute Pressure].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Mani. Absolute Pressure]111.5 kPa (836.5 mmHg, 32.93 inHg) or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from manifold absolute pressure sensor.
3. Start the engine.
4. Using the Subaru Select Monitor or a general scan tool, read the value of [Mani. Absolute Pressure].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value in [Mani. Absolute Pressure] 125 kPa (937.7 mmHg, 36.92 inHg) or more?

Yes	Repair the short circuit to power in harness between ECM connector and manifold absolute pressure sensor connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between manifold absolute pressure sensor connector and engine ground.

Connector & terminal

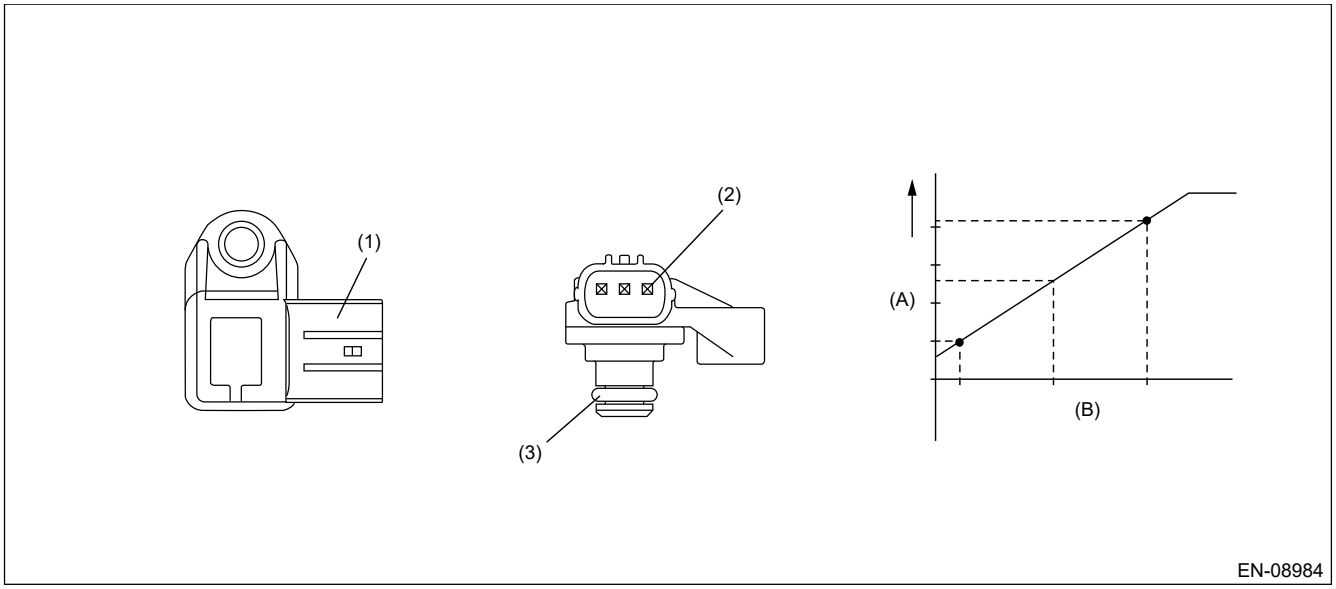
(E21) No. 2 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and manifold absolute pressure sensor connector** • **Poor contact of ECM connector**

4. CHECK FOR POOR CONTACT.

Check for poor contact of manifold absolute pressure sensor connector.



Is there poor contact of manifold absolute pressure sensor connector?

Yes	Repair the poor contact of manifold absolute pressure sensor connector.
No	Replace the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake manifold pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Output voltage (B) Absolute pressure

(1) Connector (2) Terminals (3) O-ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.523V or more

Time needed for diagnosis: 2000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0111 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Poor driving performance

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

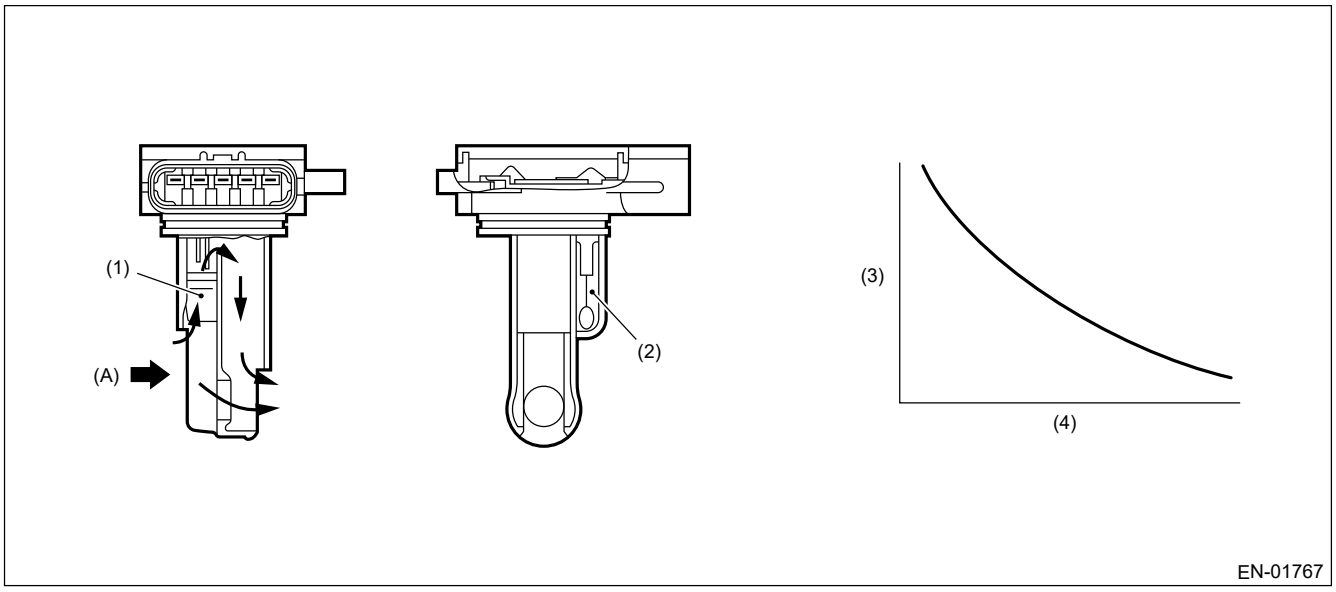
1. CHECK ENGINE COOLANT TEMPERATURE.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

Data Monitor

Note:
- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.] 75°C (167°F) or more?



Yes	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.
No	Check for DTC P0125. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor output properties. Using the following two diagnoses, judge as NG when either is NG.
- **Diagnosis 1 (correlation diagnosis):** After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between intake air temperature sensor value, engine coolant temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between intake air temperature and engine coolant temperature, intake air temperature and ambient air temperature.
- **Diagnosis 2 (stuck diagnosis):** Judge as NG when intake air temperature does not change under the

driving condition where it should change, considering engine condition.

2. COMPONENT DESCRIPTION

(A) Air

(1) Air flow sensor

(3) Resistance value (Ω)

(4) Intake air temperature °C (°F)

(2) Intake air temperature sensor

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Soaking time	21600s or more
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Engine coolant temperature	60°C (140°F) or more
Integrated value of intake air amount	Value of Map 1 or more
Number of experiences under following driving conditions	3time(s)
• Duration of driving condition 1	15s or more

Secondary parameters	Execution condition
Vehicle speed	40km/h (24.9MPH) or more
and	
Amount of intake air	10g/s (0.35oz/s) or more
• Duration of driving condition 2	Value of Map 2 or more
Vehicle speed	Less than value of 4 km/h (2.5 MPH)

Map 1

Engine coolant temperature °C (°F)	−15 (5)	−10 (14)	0 (32)	10 (50)	25 (77)
Integrated value of intake air amount g (oz)	30500 (1075.74)	5500 (193.99)	5500 (193.99)	5500 (193.99)	5500 (193.99)

Map 2

Engine coolant temperature °C (°F)	−30 (−22)	−10 (14)	10 (50)	25 (77)
Duration of driving condition 2 (s)	250	15	15	15

4. GENERAL DRIVING CYCLE

- **Diagnosis 1:** Perform the diagnosis only once after the engine starts after a certain period of soaking time.
- **Diagnosis 2:** Perform the diagnosis when the vehicle speed condition is met after warming up from a cold condition.

5. DIAGNOSTIC METHOD

Judge as NG when Diagnosis 1 or Diagnosis 2 becomes NG.

Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Intake air temperature 30 sec. after engine start − Engine coolant temperature at engine start|	More than value of Map 3

Malfunction Criteria	Threshold Value
|Intake air temperature 30 sec. after engine start − Ambient air temperature 30 sec. after engine start|	More than value of Map 4

Map 3

Ambient temperature °C (°F)	**−30 (−22)**	**30 (86)**	**45 (113)**	**60 (140)**
|Intake air temperature 30 sec. after engine start − Engine coolant temperature at engine start| °C (°F)	12 (21.6)	12 (21.6)	22 (39.6)	22 (39.6)

Map 4

Ambient temperature °C (°F)	**−30 (−22)**	**30 (86)**	**45 (113)**	**60 (140)**
|Intake air temperature 30 sec. after engine start − Ambient air temperature 30 sec. after engine start| °C (°F)	20 (36)	20 (36)	32 (57.6)	32 (57.6)

Time needed for diagnosis: Less than 1 second

Diagnosis 2

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage difference between Max. and Min.	Less than 0.02V (Equivalent to approximately 0.5°C (32.9°F) near 25°C (77°F)) (Equivalent to approximately 0.9°C (33.6°F) near −7°C (19.4°))

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0112 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1

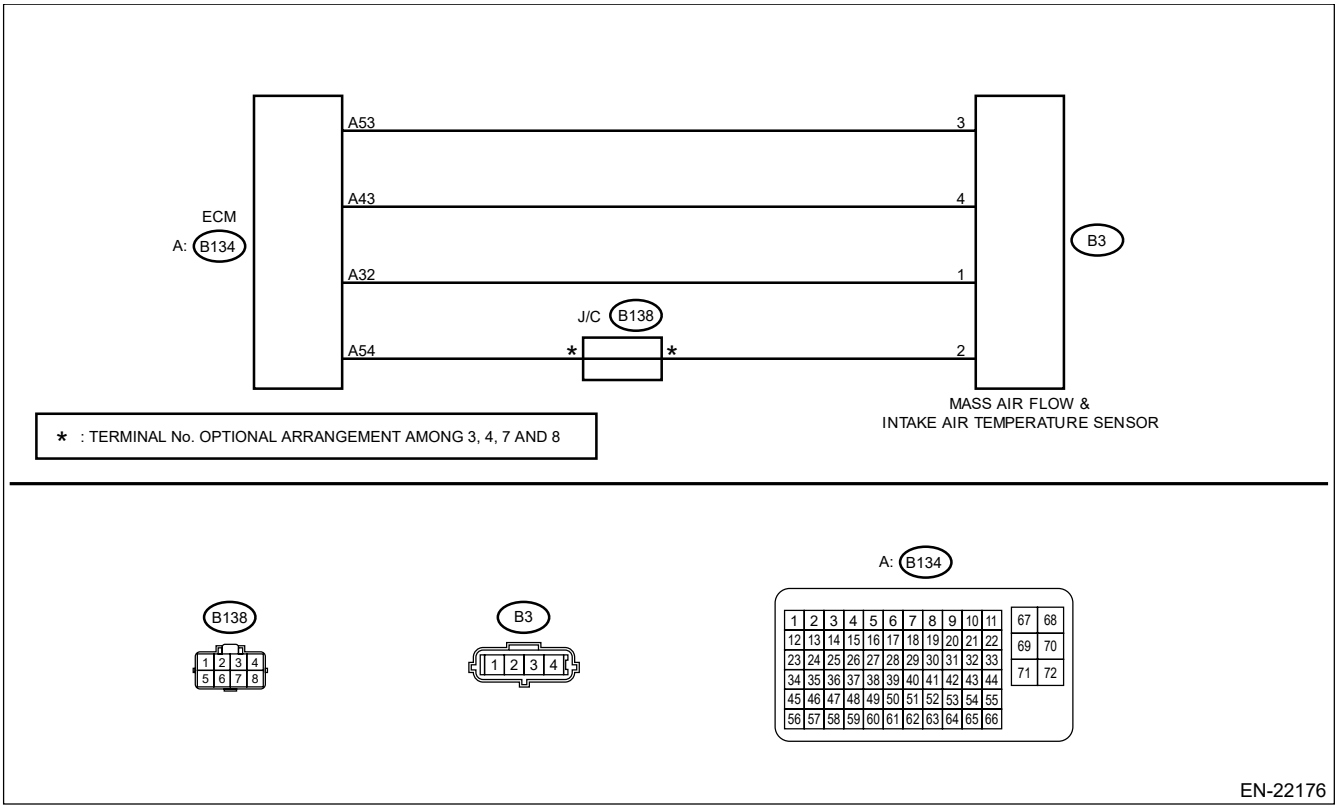
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Intake Air Temp.].

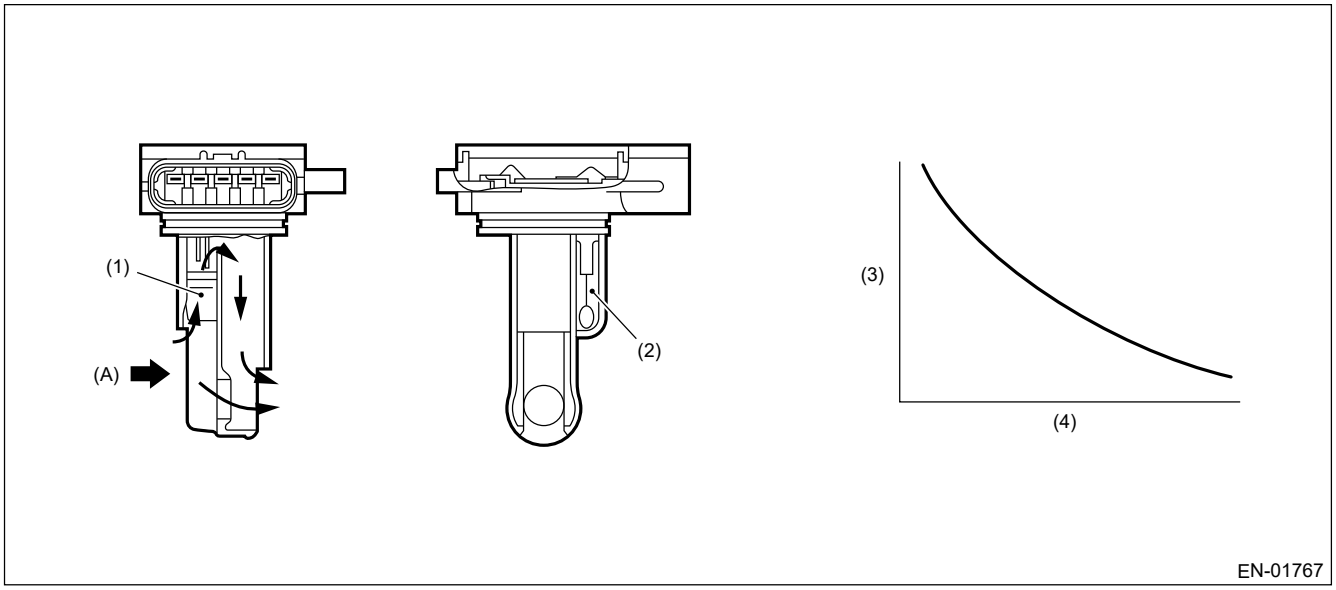
Note:
- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Intake Air Temp.] 120°C (248°F) or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from the mass air flow and intake air temperature sensor.
4. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 32 — Chassis ground:



Is the resistance 1 MΩ or more?

Yes	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.
No	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Air

(1) Air flow sensor

(2) Intake air temperature sensor

(3) Resistance value (Ω)

(4) Intake air temperature °C (°F)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.403V

Time needed for diagnosis: 500ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0113 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT HIGH BANK 1

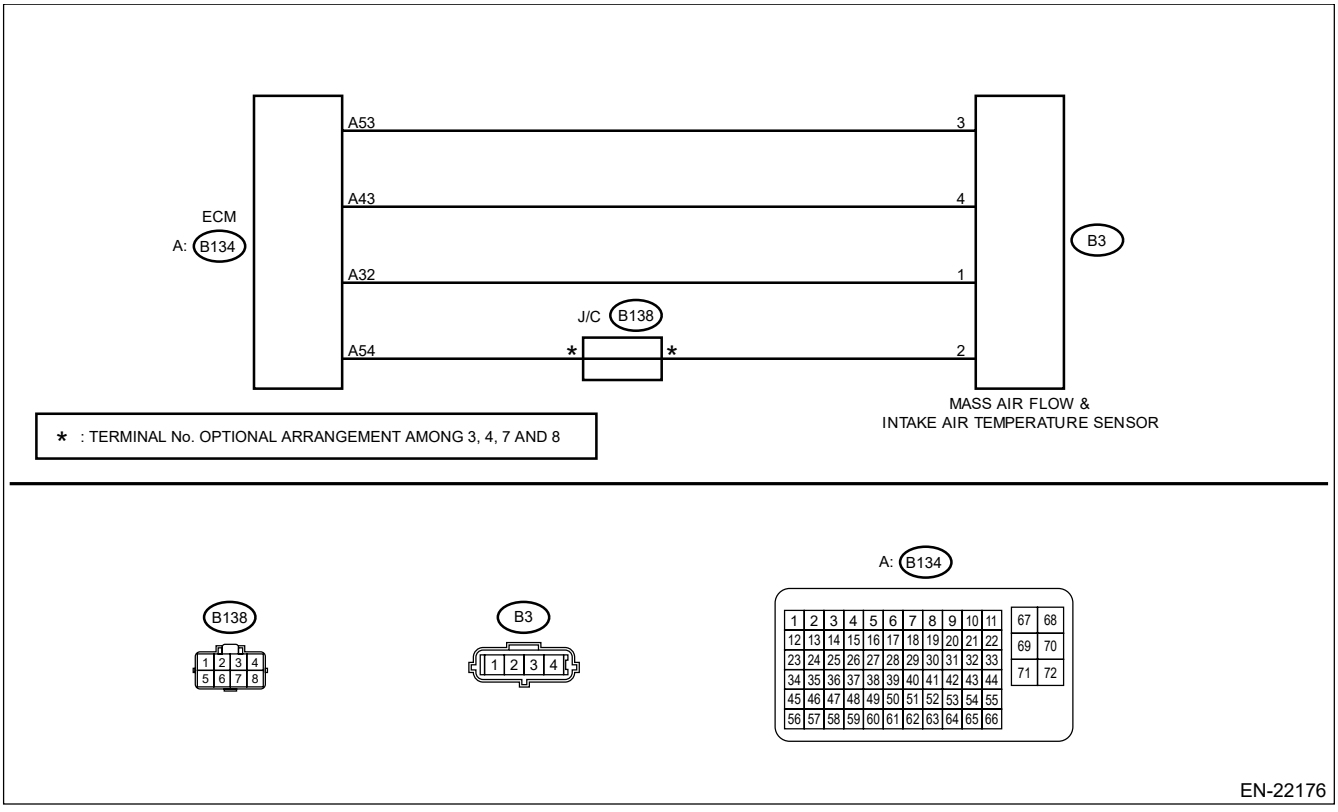
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Intake Air Temp.].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Intake Air Temp.]−40°C (−40°F) or less?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and mass air flow and intake air temperature sensor connector.

Is there poor contact of ECM or mass air flow and intake air temperature sensor connector?

Yes	Repair the poor contact of ECM or mass air flow and intake air temperature sensor connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from the mass air flow and intake air temperature sensor.
4. Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

Connector & terminal

(B134) No. 32 — (B3) No. 1:

(B134) No. 54 — (B3) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector** • **Poor contact of joint connector**

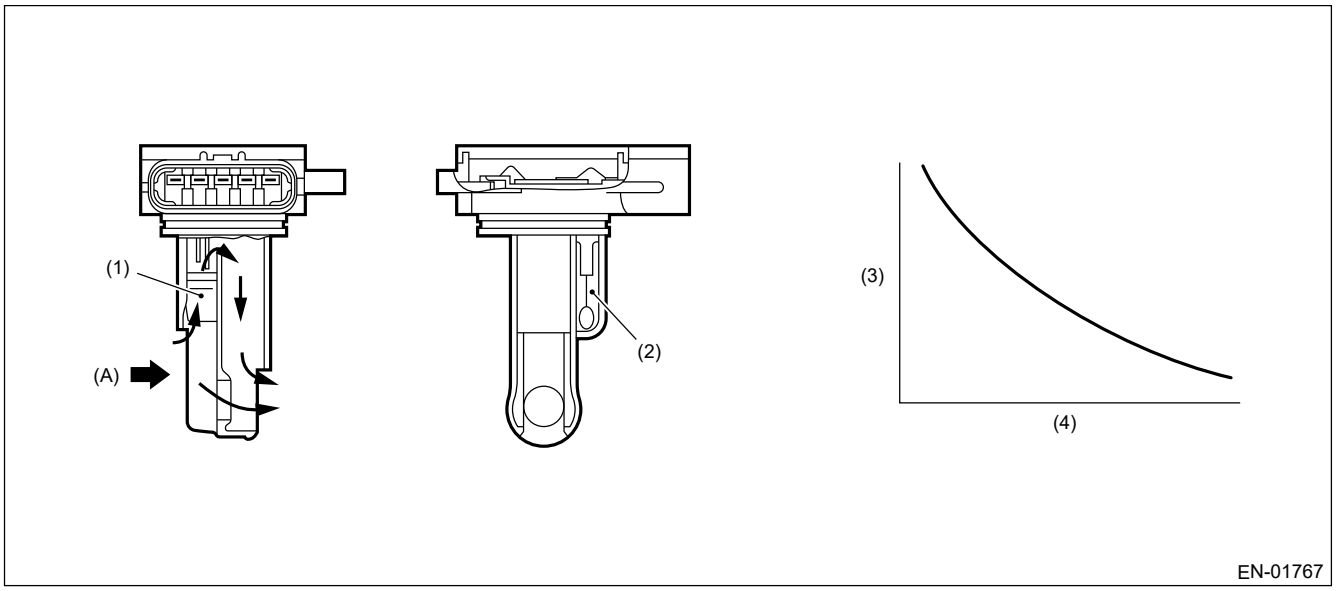
4. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (SHORT TO POWER SUPPLY).

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 32 (+) — Chassis ground (−):

Is the voltage 5 V or more?



Yes	Repair the short circuit of harness to power supply between ECM connector and the mass air flow and intake air temperature sensor connector.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor.

Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Air

(1) Air flow sensor

(2) Intake air temperature sensor

(3) Resistance value (Ω)

(4) Intake air temperature °C (°F)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.705V or more

Time needed for diagnosis:500ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0116 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Hard to start
- Improper idling
- Poor driving performance

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P0116 displayed? (Current malfunction)

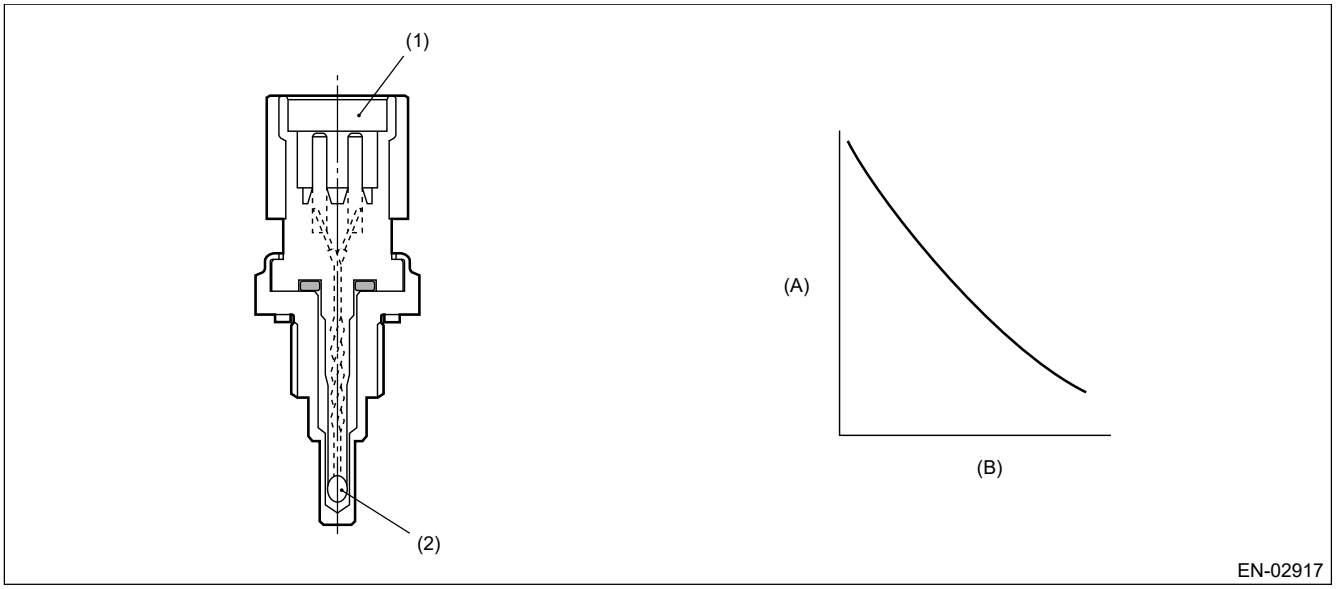
Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

1. Disconnect the connectors from the engine coolant temperature sensor.
2. Measure the resistance between engine coolant temperature sensor terminals when the engine coolant is cold and after warmed up.

   Terminals

   No. 1 — No. 2:



Is the resistance of engine coolant temperature sensor different between when engine coolant is cold and after warmed up?

Yes	Repair the poor contact of ECM connector.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the engine coolant temperature sensor characteristics.
After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between engine coolant temperature sensor value, intake air temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between engine coolant temperature and ambient air temperature, engine coolant temperature and intake air temperature.

2. COMPONENT DESCRIPTION

(A) Resistance value (kΩ)
(B) Temperature °C (°F)
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 v or more
Soaking time	21600s or more
Block heater judgment	Completed
Block heater operation	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Engine coolant temperature at	More than value

Malfunction Criteria	Threshold Value
engine start − Intake air temperature 30 sec. after engine start|	of Map
|Engine coolant temperature at engine start − Ambient air temperature at engine start|	More than 25°C(45°F)

Map

Ambient temperature °C (°F)	**−30 (−22)**	**30 (86)**	**45 (113)**	**60 (140)**
|Engine coolant temperature at engine start − Intake air temperature 30 sec. after engine start| °C (°F)	12 (21.6)	12 (21.6)	22 (39.6)	22 (39.6)

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0117 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW

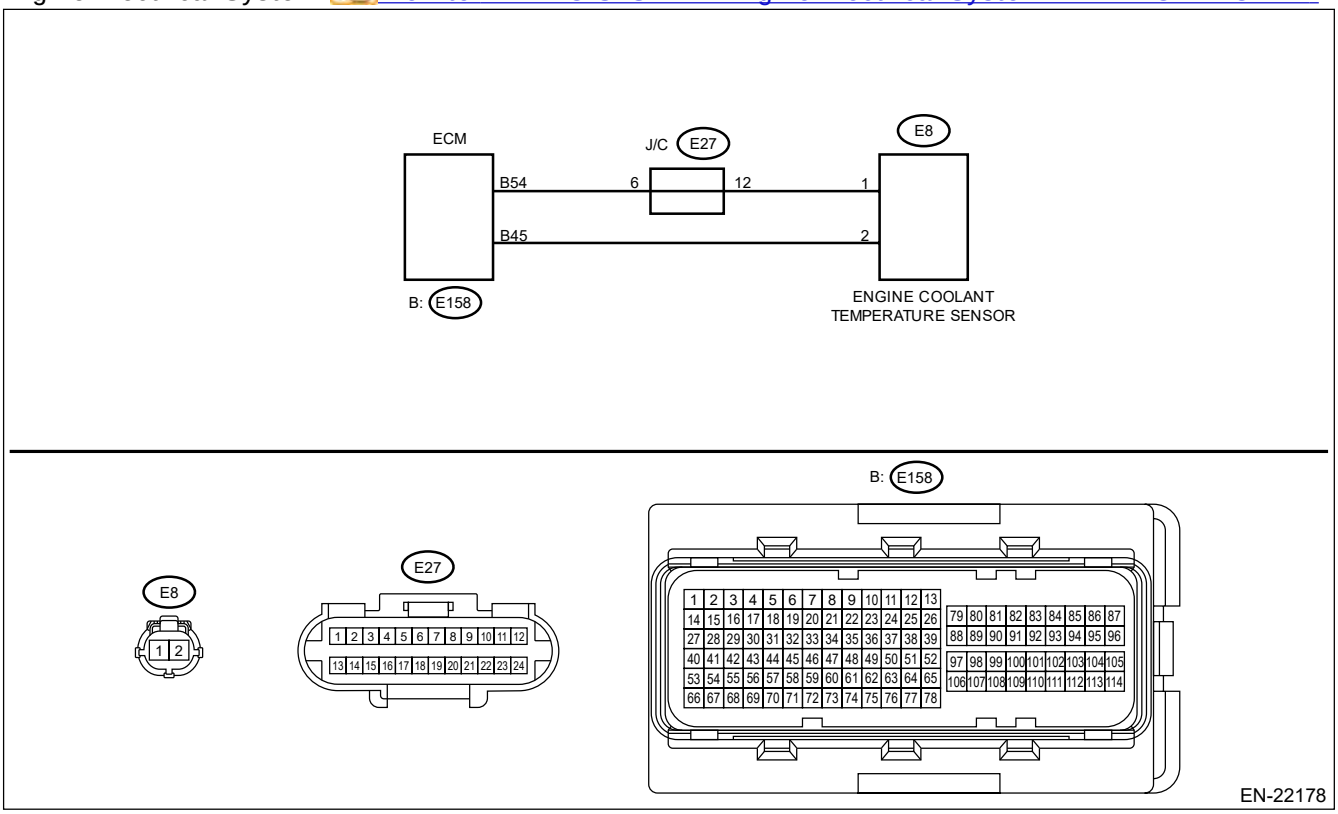
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Hard to start
- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

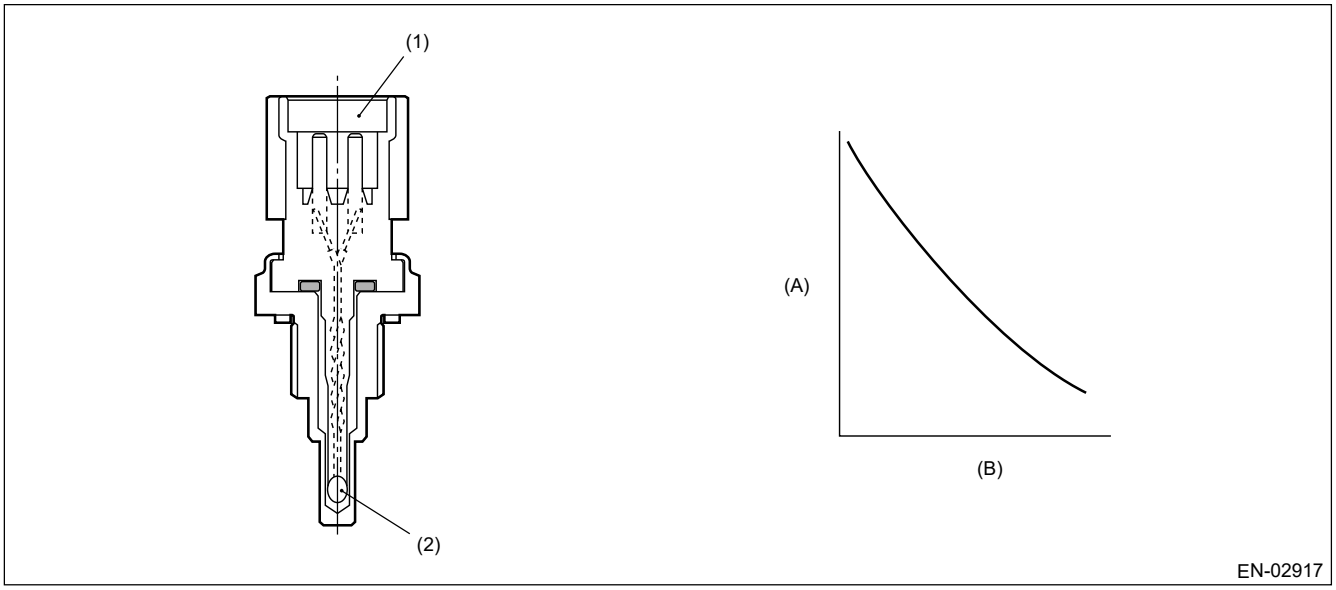
Note:
- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.] 120°C (248°F) or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from the engine coolant temperature sensor.
4. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 45 — Chassis ground:



Is the resistance 1 MΩ or more?

Yes	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.
No	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the engine coolant temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Resistance value (kΩ)
(B) Temperature °C (°F)
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.351V

Time needed for diagnosis: 500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0118 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH

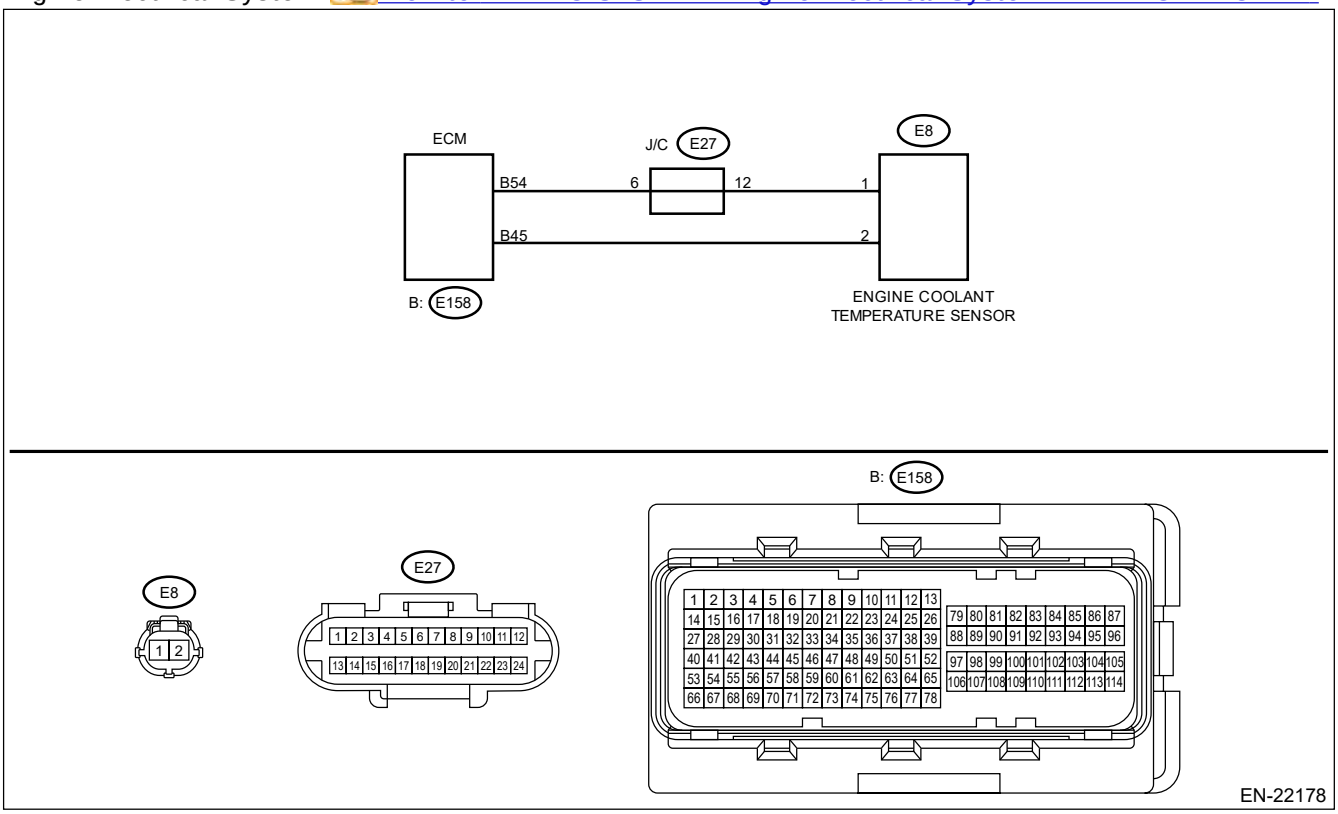
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Hard to start
- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.]−40°C (−40°F) or less?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and engine coolant temperature sensor connector.

Is there poor contact of ECM or engine coolant temperature sensor connector?

Yes	Repair the poor contact of ECM or engine coolant temperature sensor connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from the engine coolant temperature sensor.
4. Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector.

Connector & terminal

(E158) No. 45 — (E8) No. 2:

(E158) No. 54 — (E8) No. 1:

Is the resistance less than 1 Ω?

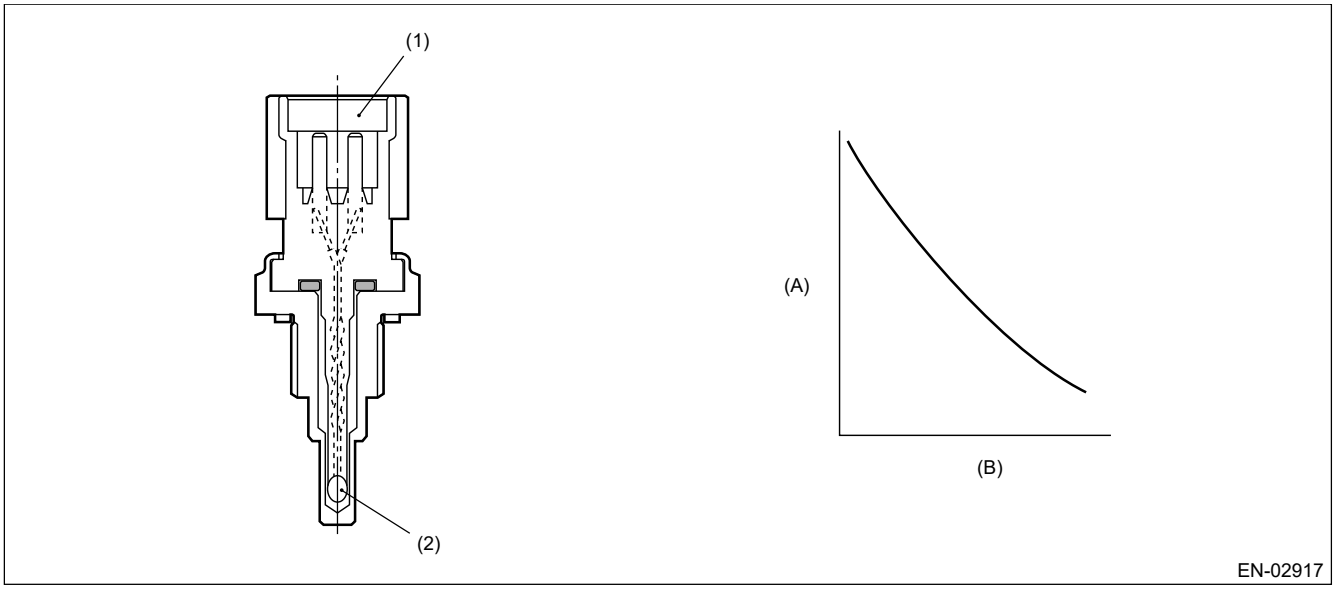
Yes	Go to 4.
No	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.

4. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (SHORT TO POWER SUPPLY).

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 45 (+) — Chassis ground (−):



Is the voltage 5 V or more?

Yes	Repair the short circuit of harness to power supply between ECM connector and engine coolant temperature sensor connector.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the engine coolant temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Resistance value (kΩ)
(B) Temperature °C (°F)
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.695V or more

Time needed for diagnosis: 500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW

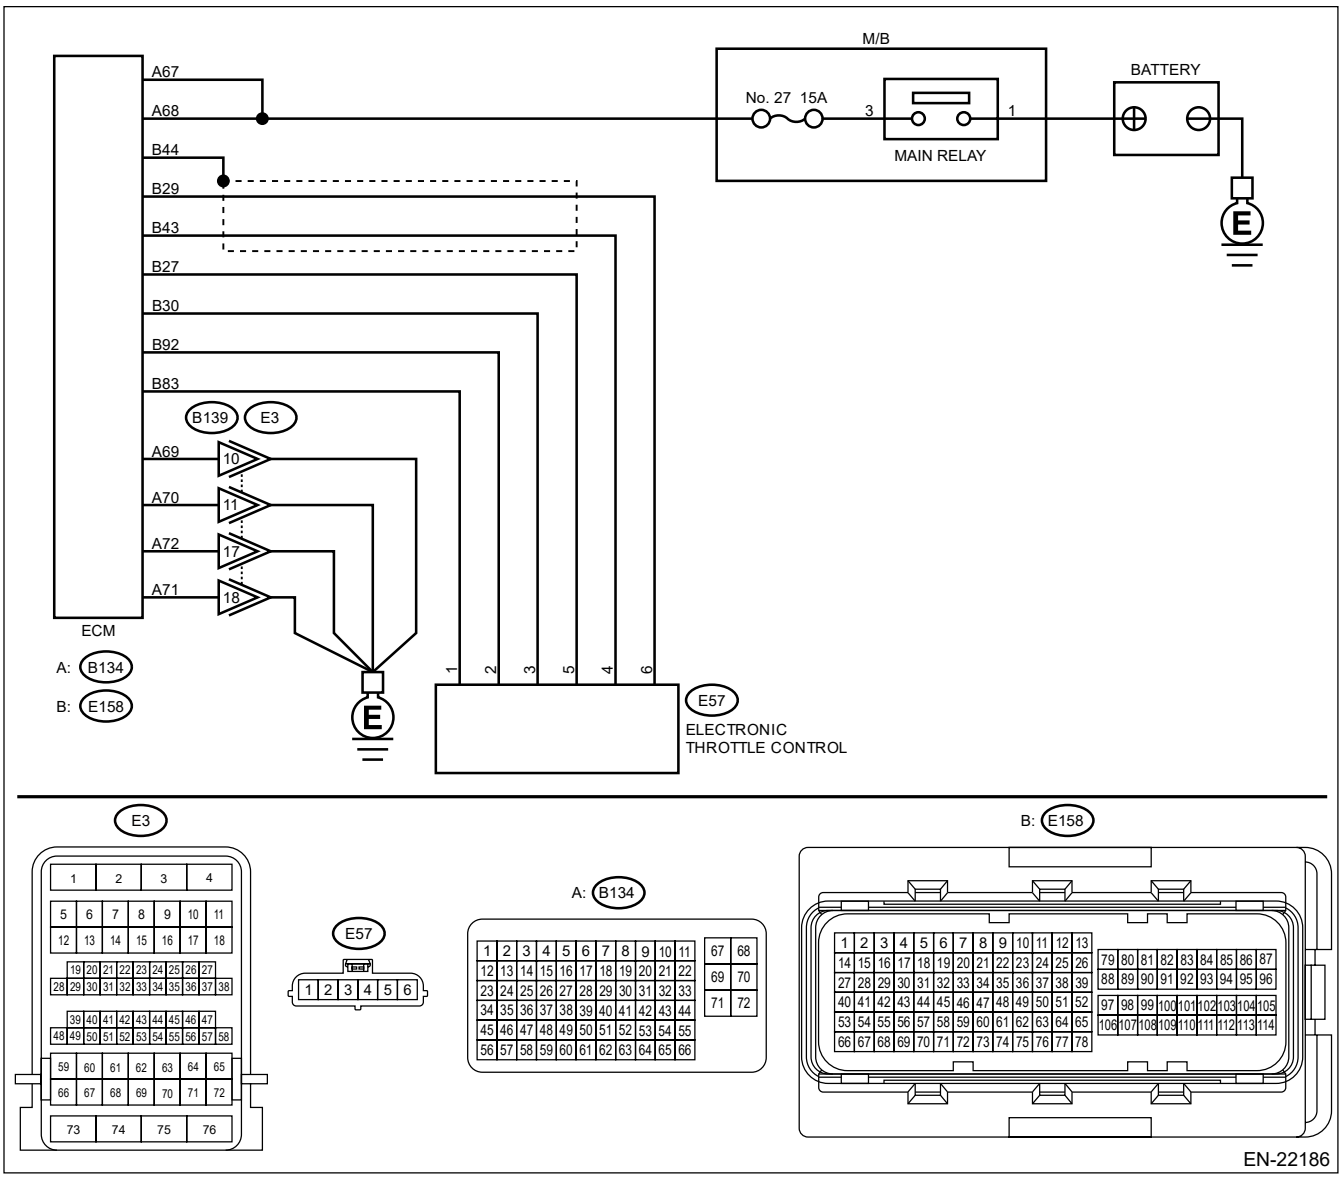
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 27 — Chassis ground:
(E158) No. 29 — Chassis ground:
(E158) No. 29 — (E158) No. 44:

Is the resistance 1 MΩ or more?

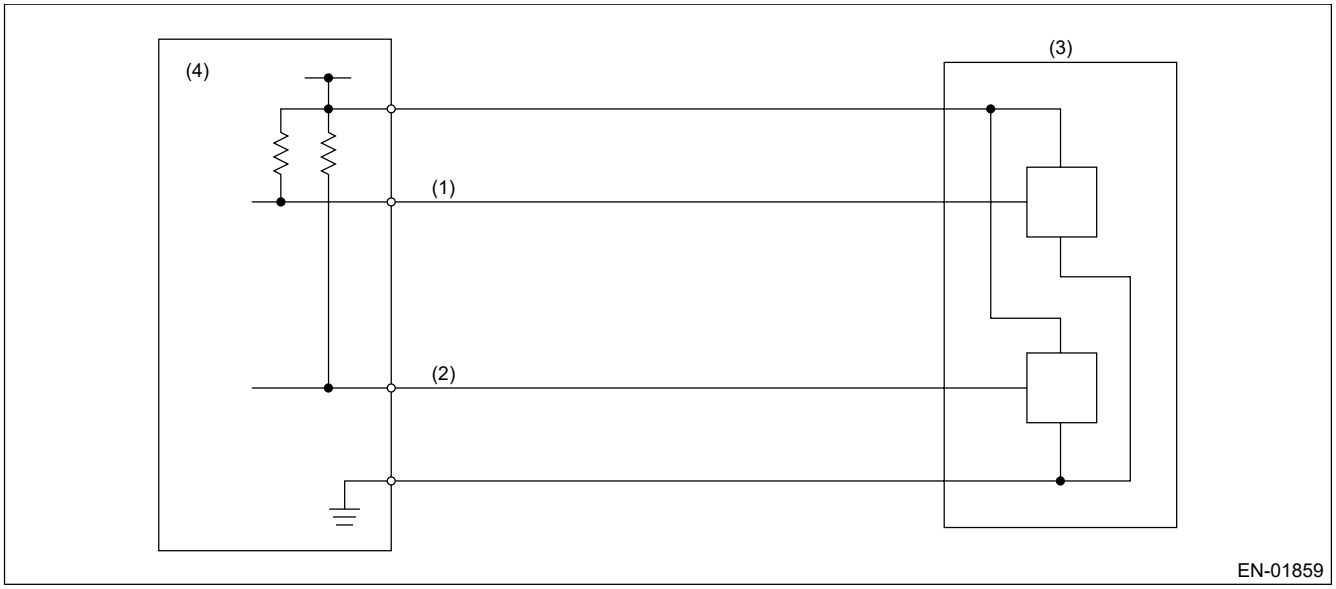
Yes	Go to 2.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

2. CHECK ECM (INTERNAL SHORT).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 6 — Engine ground:



Is the resistance 1 MΩ or more?

Yes	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	0.276V or less

Time needed for diagnosis: 24ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH

1. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance of harness between ECM connector and electronic throttle control connector.

Connector & terminal

(E158) No. 29 — (E57) No. 6:

(E158) No. 30 — (E57) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

2. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Poor contact of ECM connector**

3. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO POWER SUPPLY).

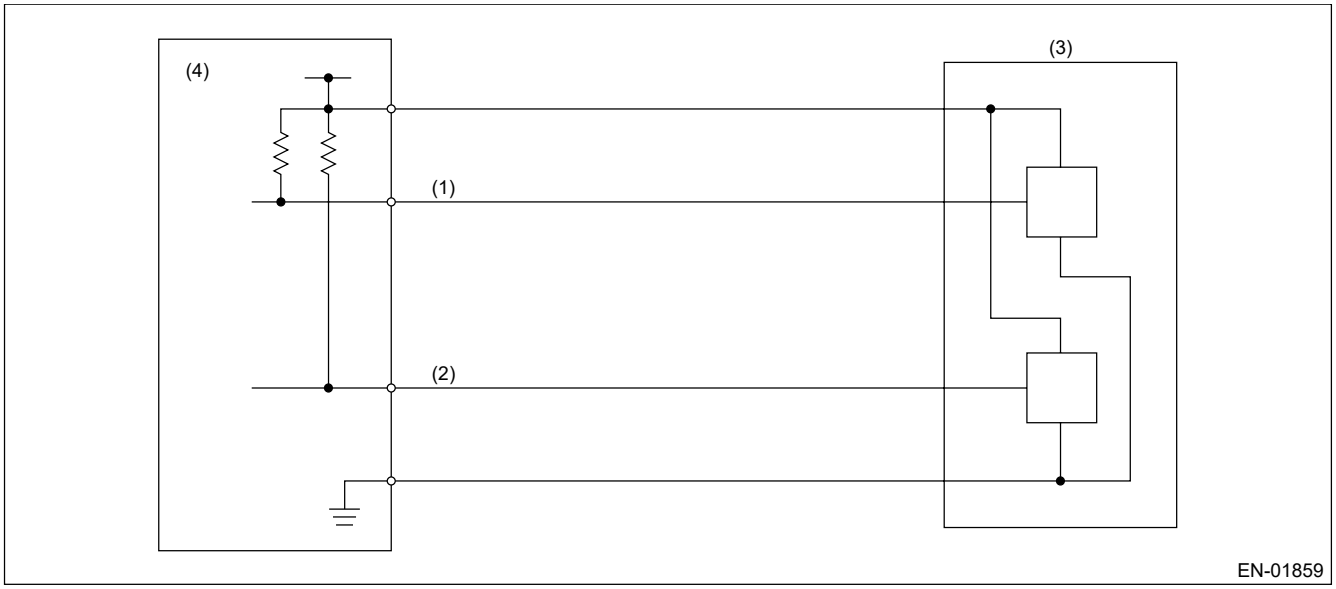
1. Turn the ignition switch to ON.
2. Measure the voltage between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 6 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
No	Go to 4.

4. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 27 — (E158) No. 29:



Is the resistance 1 MΩ or more?

Yes	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.
No	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	4.701V or more

Time needed for diagnosis: 24ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Engine does not return to idle.
Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK ENGINE COOLANT.

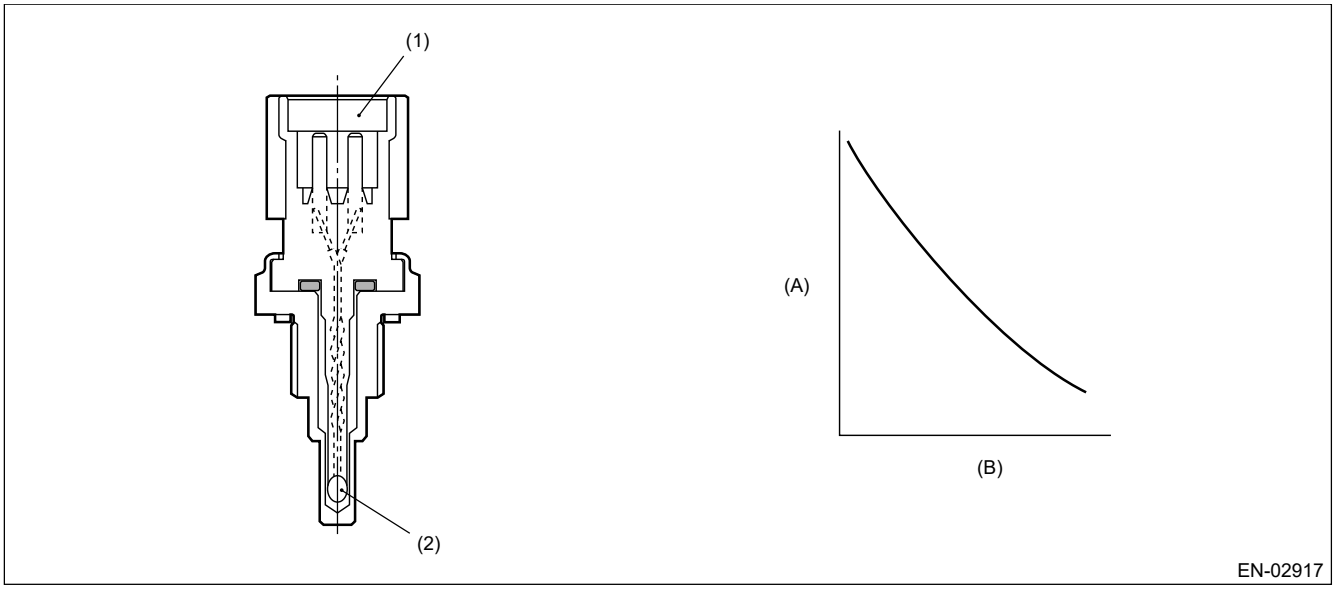
Check the following items:
- Amount of engine coolant
- Engine coolant freeze
- Contamination of engine coolant

Is the check result OK?

Yes	Go to 2.
No	Fill or replace the engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT.

2. CHECK THERMOSTAT.

Check the thermostat.



Does the thermostat remain opened?

Yes	Replace the thermostat. Ref. to COOLING(H4DO)>Thermostat.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature sensor output property.
Judge as NG when engine coolant temperature does not rise to the specified value after predetermined time has elapsed since engine start.

2. COMPONENT DESCRIPTION

(A) Resistance value (kΩ)
(B) Temperature °C (°F)
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Engine speed	500 rpm or more
Engine coolant temperature at engine start	Less than −15°C(5°F)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine from cold condition.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine coolant temperature	Less than −15°C(5°F)
Elapsed time after starting the engine ((Smaller value of either engine coolant temperature and intake air temperature at engine start) −23.3°C (−9.9°F) or more) or	120 s or more

Malfunction Criteria	Threshold Value
(Less than (Smaller value of either engine coolant temperature and intake air temperature at engine start) −23.3°C (−9.9°F))	300 s or more

Time needed for diagnosis: 120 or 300 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0128 COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Thermostat remains open.
- Coolant temperature rises slowly.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P0128 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK ENGINE COOLANT.

Check the engine coolant level.

Is the check result OK?

Yes	Go to 3.
No	Refill the engine coolant. Ref. to COOLING(H4DO)>Engine Coolant.

3. CHECK RADIATOR FAN.

1. Start the engine.
2. While keeping idling for approx. 3 minutes (with accelerator OFF), check the operation of the radiator fan.

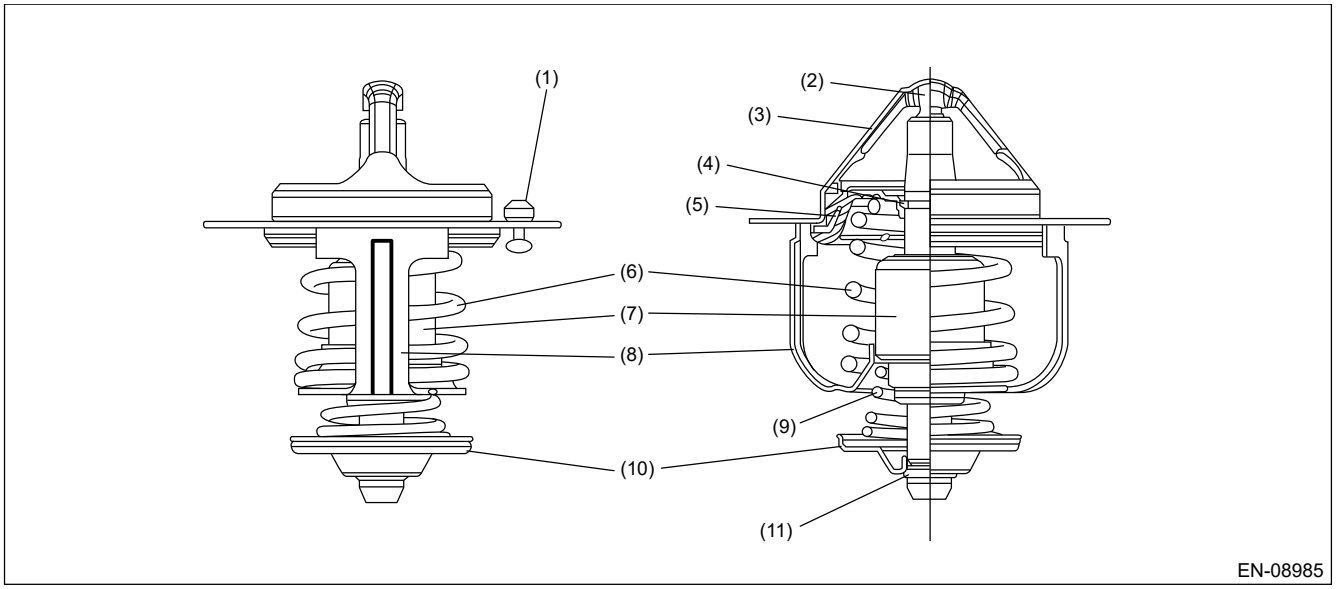
Does the radiator fan continuously rotate for 3 minutes or more during idling?

Yes	Repair radiator fan circuit. Ref. to COOLING(H4DO)>Radiator Fan and Fan Motor Assembly.
No	Go to 4.

4. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

Check the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor>INSPECTION.

Is the check result OK?



Yes	Replace the thermostat. Ref. to COOLING(H4DO)>Thermostat.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect malfunctions of the thermostat function.
Judge as NG when any one of the following conditions is established.

- When the actual engine coolant temperature does not reach the maximum temperature necessary to perform other OBDII diagnosis and Σ (Estimated engine coolant temperature − actual engine coolant temperature) exceeded the predetermined value. (Judgment 1)
- When the actual engine coolant temperature does not reach the range within −11°C (−19.8°F) from the regulated temperature and Σ (Estimated engine coolant temperature − actual engine coolant temperature) exceeded the predetermined value. (Judgment 2)
- When the difference between the estimated coolant temperature and the actual engine coolant temperature exceeds the predetermined value, and Σ (Estimated engine coolant temperature − actual engine coolant temperature) exceeded the predetermined value. (Judgment 3)

2. COMPONENT DESCRIPTION

(1) Jiggle valve
(2) Piston
(3) Flange
(4) Stop ring
(5) Dust seal
(6) Main spring
(7) Wax element
(8) Frame
(9) Bypass spring
(10) Bypass valve
(11) Stop ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
<Judgment 1>	
Battery voltage	10.9 V or more
Ambient air temperature	−7°C(19.4°F) or more
Vehicle speed	30km/h (18.6MPH) or more
Estimated coolant temperature	More than value of Map 1
Engine coolant temperature at engine start	Less than 60°C(140°F)
<Judgment 2>	
Battery voltage	10.9 V or more
Ambient air temperature	−7°C(19.4°F) or more
Vehicle speed	30km/h (18.6MPH) or more
Estimated coolant temperature	More than value of Map 2

Secondary parameters	Execution condition
Engine coolant temperature at engine start	Less than 60°C(140°F)
<Judgment 3>	
Battery voltage	10.9 V or more
Ambient air temperature	−7°C(19.4°F) or more
Vehicle speed	30km/h (18.6MPH) or more
Estimated coolant temperature	Value of Map 3 or more
Engine coolant temperature at engine start	Less than 60°C(140°F)

Map 1

Engine coolant temperature at engine starting °C (°F)	**−7 (19.4)**	**8 (46.4)**	**10 (50)**	**25 (77)**
Estimated coolant temperature °C (°F)	60 (140)	60 (140)	60 (140)	60 (140)

Map 2

Engine coolant temperature at engine starting °C (°F)	**−7 (19.4)**	**8 (46.4)**	**10 (50)**	**25 (77)**
Estimated coolant temperature °C (°F)	69.8 (157.6)	78.4 (173.1)	78.4 (173.1)	78.4 (173.1)

Map 3

Engine coolant temperature at engine starting °C (°F)	**−7 (19.4)**	**10 (50)**	**25 (77)**	**30 (86)**
Estimated coolant temperature °C (°F)	50 (122)	66 (150.8)	76 (168.8)	78.4 (173.1)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
When any one of the followings is established:	
<Judgment 1>	
Actual engine coolant temperature and Σ (Estimated engine coolant temperature − actual engine coolant temperature)	Less than value of Map 4 More than value of Map 5
<Judgment 2>	
Actual engine coolant temperature and Σ (Estimated engine coolant temperature − actual engine coolant temperature) *Regulated temperature = 89.5 degrees	Regulated temperature* − Less than value of Map 6 More than value of Map 7
<Judgment 3>	
Estimated engine coolant temperature − actual engine coolant temperature and Σ (Estimated engine coolant temperature − actual engine coolant temperature)	More than value of Map 8 More than value of Map 9

*Regulated temperature = 89.5(195°F)

Map 4

Estimate ambient temperature °C (°F)	**−7 (19.4)**	**8 (46.4)**	**10 (50)**	**25 (77)**
Threshold Value °C (°F)	60 (140)	60 (140)	60 (140)	60 (140)

Map 5

Engine coolant temperature at engine starting	**−7 (19.4)**	**0 (32)**	**8 (46.4)**	**10 (50)**	**30 (86)**	**40 (104)**

°C (°F)						
Threshold Value °C (°F)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1200 (2160)

Map 6

Estimate ambient temperature °C (°F)	**−7 (19.4)**	**8 (46.4)**	**10 (50)**	**25 (77)**
Threshold Value °C (°F)	19.7 (67.5)	11.1 (20)	11.1 (20)	11.1 (20)

Map 7

Engine coolant temperature at engine starting °C (°F)	**−7 (19.4)**	**0 (32)**	**8 (46.4)**	**10 (50)**	**30 (86)**	**35 (95)**
Threshold Value °C (°F)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1500 (2700)

Map 8

Estimate ambient temperature °C (°F)	**−7 (19.4)**	**8 (46.4)**	**10 (50)**	**25 (77)**
Threshold Value °C (°F)	11.1 (20)	11.1 (20)	11.1 (20)	11.1 (20)

Map 9

Engine coolant temperature at engine starting °C (°F)	**−7 (19.4)**	**8 (46.4)**	**10 (50)**	**25 (77)**
Threshold Value °C (°F)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

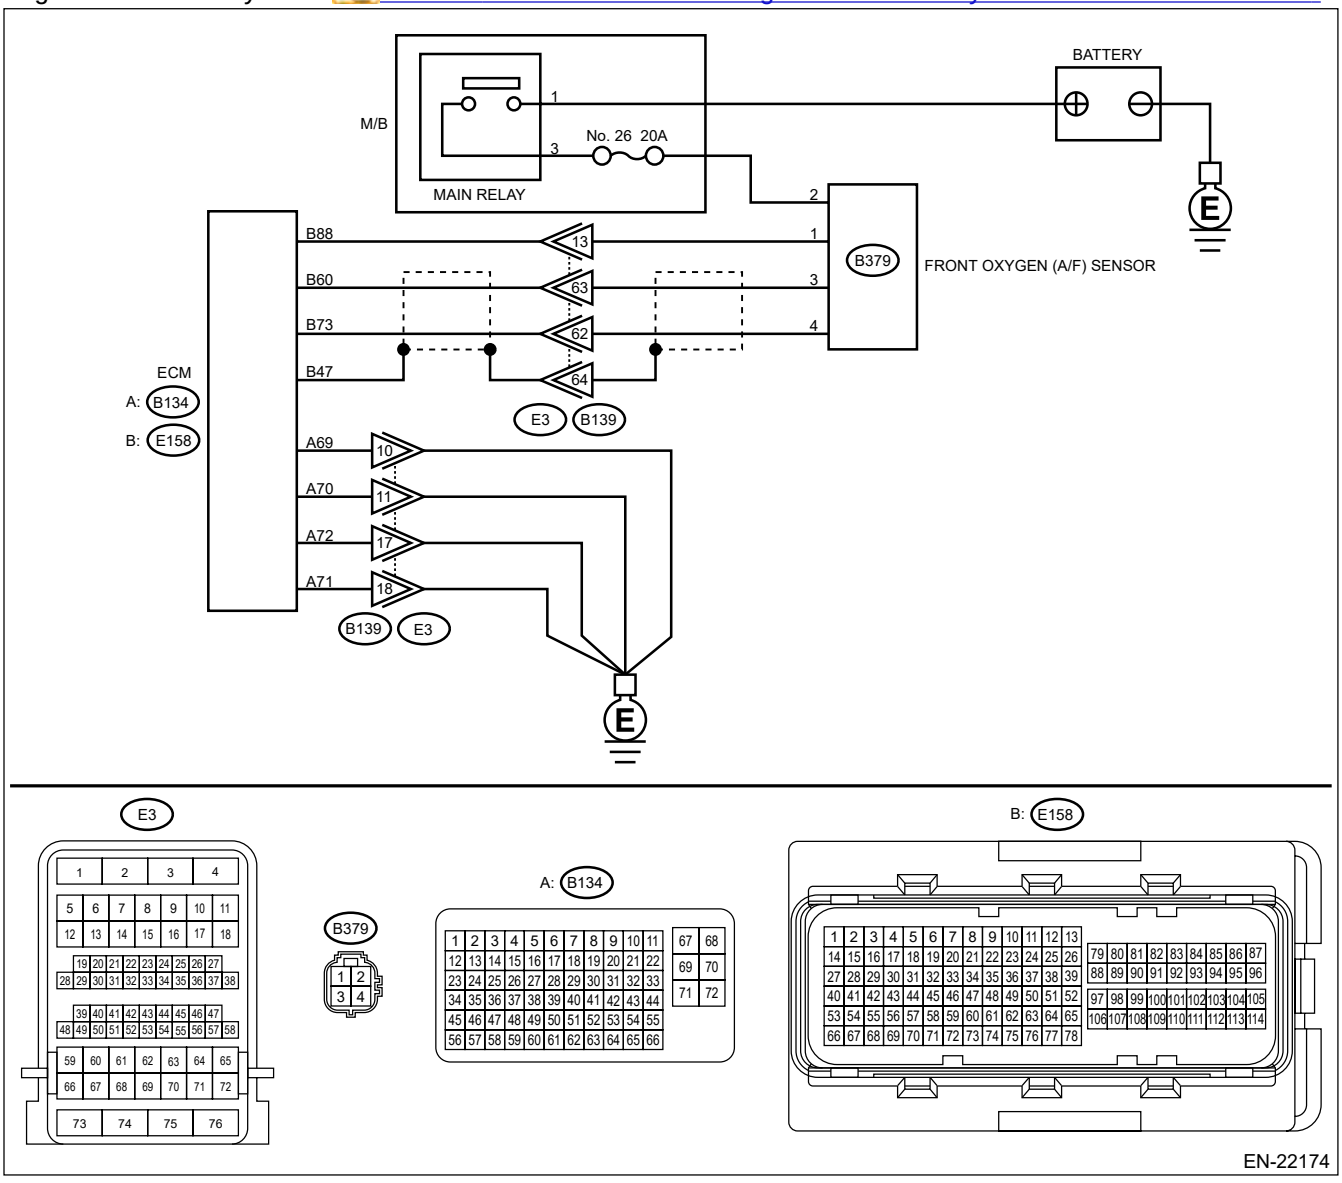
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0131 A/F / O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 1

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the front oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from front oxygen (A/F) sensor.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 — Chassis ground:

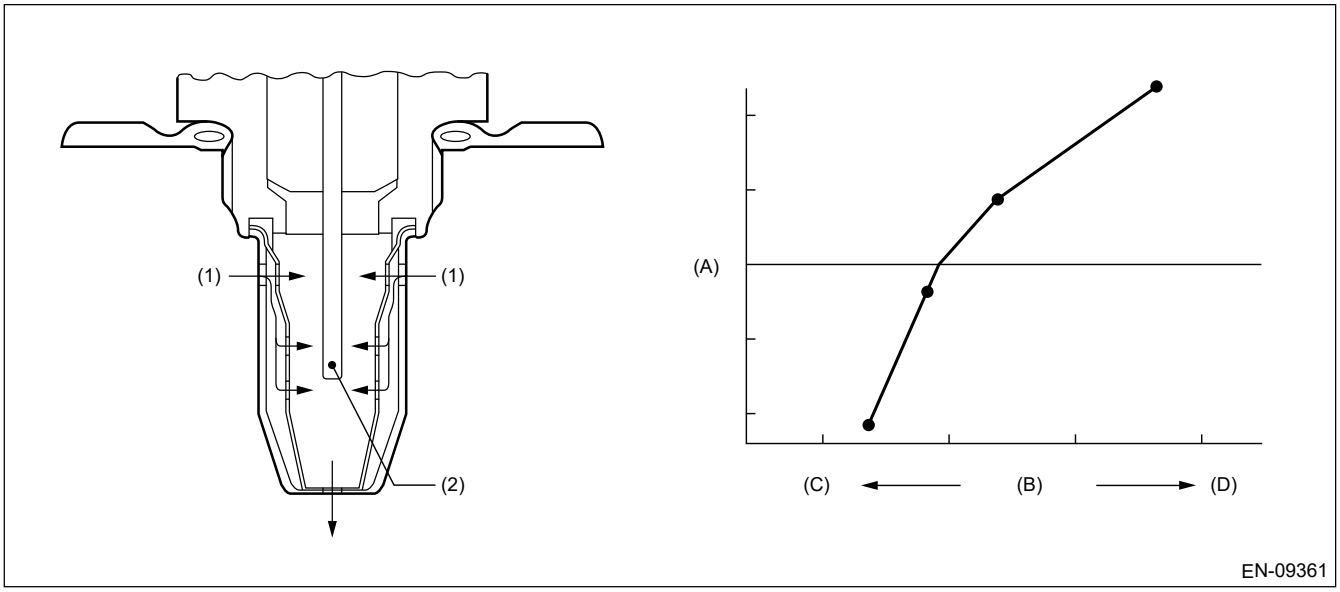
(E158) No. 73 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

3. CHECK FOR POOR CONTACT.

Check for poor contact of the front oxygen (A/F) sensor connector.



Is there poor contact of front oxygen (A/F) sensor connector?

Yes	Repair the poor contact of front oxygen (A/F) sensor connector.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.
Judge as NG, when the element voltage is out of the specified range.

2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean
(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
1) Input voltage (+) or 2) Input voltage (−) or 3) |Input voltage (+) − Input voltage (−)| and Input voltage (−) 3.6 V — 4.6 V	Less than 0.725V Less than 0.725V Less than 0.15V

Time needed for diagnosis: 1000ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

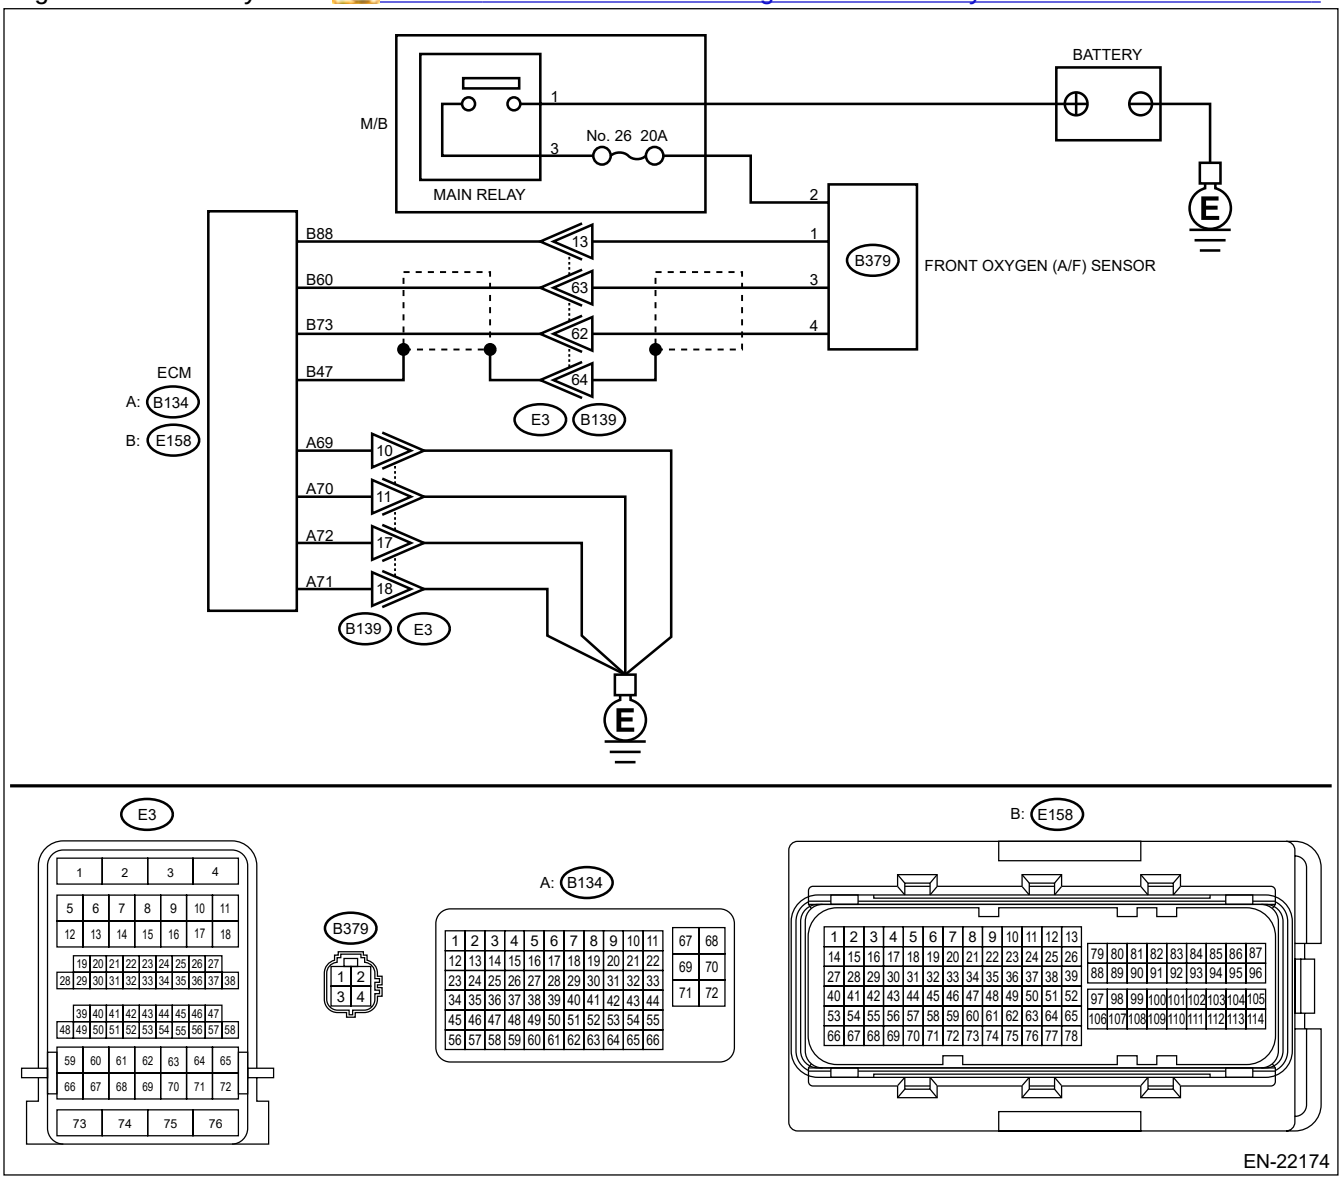
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0132 A/F / O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 1

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the front oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

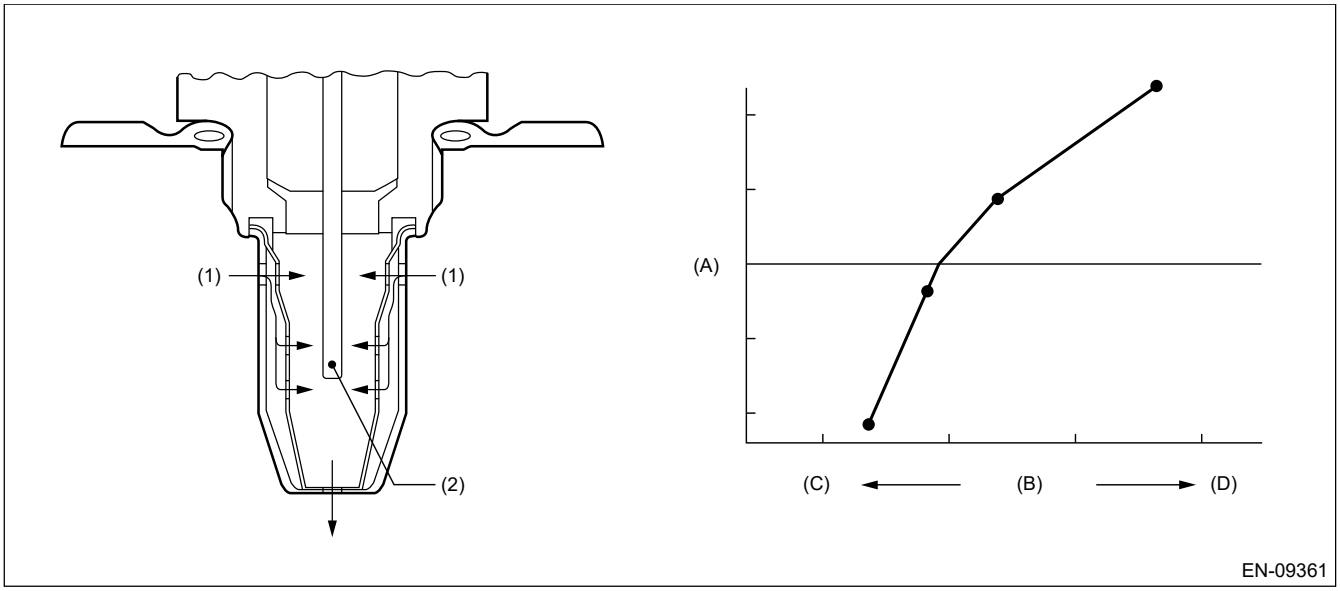
Yes	Completely remove any water inside.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from front oxygen (A/F) sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 (+) — Chassis ground (−):
(E158) No. 73 (+) — Chassis ground (−):



Is the voltage 8 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.
Judge as NG, when the element voltage is out of the specified range.

2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Rich

(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
(1) Input voltage (+) or (2) Input voltage (−)	More than 4.6V More than 4.6V

Time needed for diagnosis: 1000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

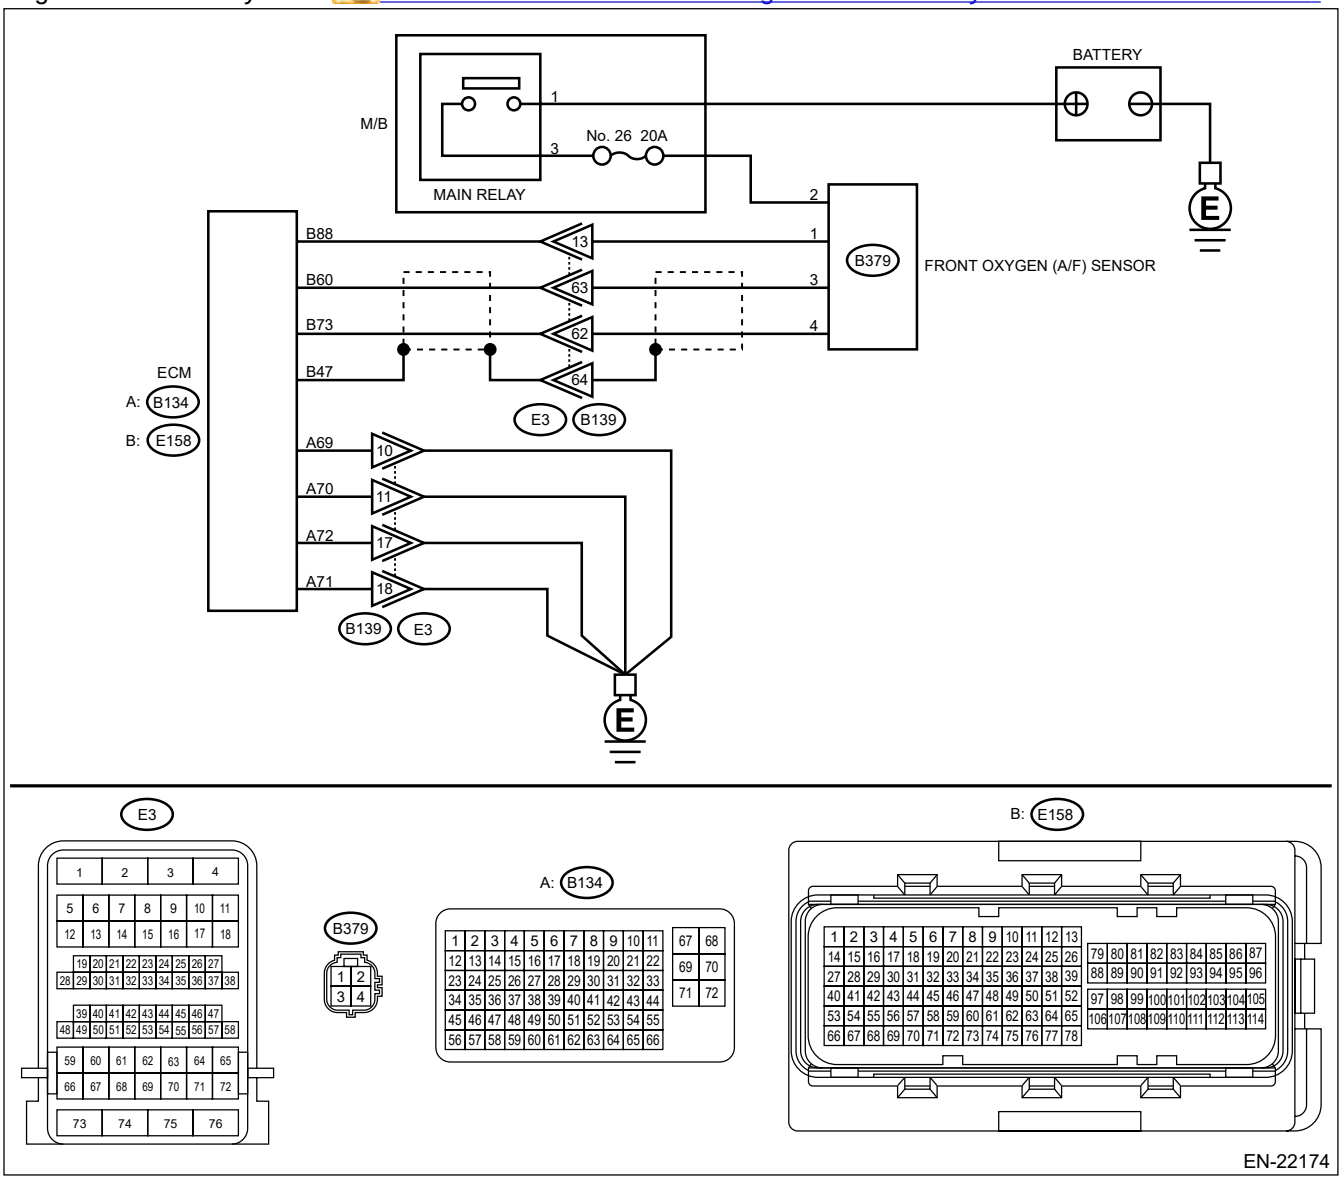
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0134 A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from front oxygen (A/F) sensor.
4. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

Connector & terminal

(E158) No. 60 — (B379) No. 3:

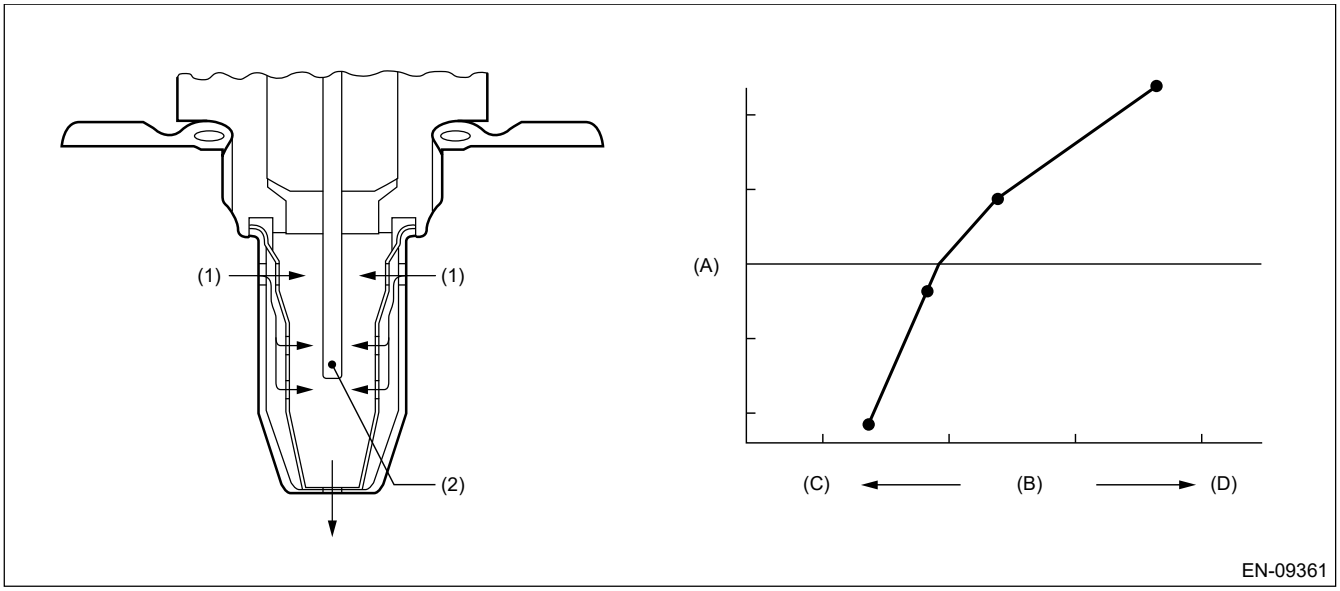
(E158) No. 73 — (B379) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and front oxygen (A/F) sensor connector.



Is there poor contact of ECM or front oxygen (A/F) sensor connector?

Yes	Repair the poor contact of ECM or front oxygen (A/F) sensor connector.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

1. OUTLINE OF DIAGNOSIS

Detect open circuits of the sensor.
Judge as NG when the impedance of the element is large.

2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Rich

(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Time of heater control duty at 70% or more	36000ms or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Front oxygen (A/F) sensor impedance	More than 450Ω

Time needed for diagnosis: 5000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

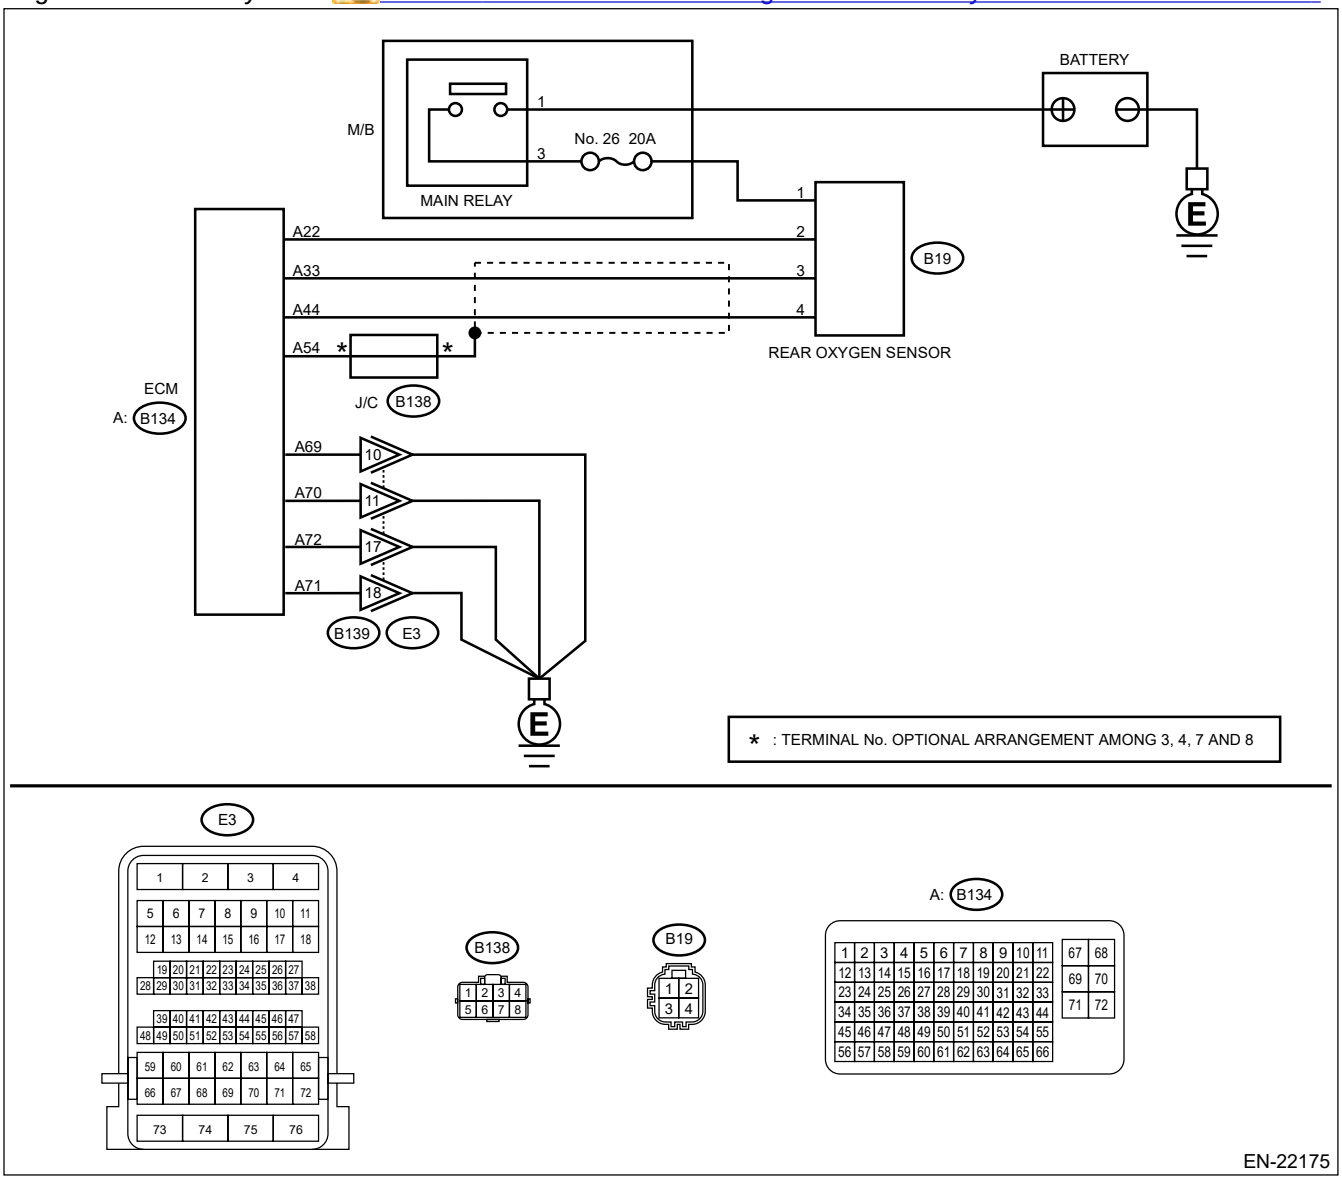
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0137 O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum)
2. Keep the engine speed at idle. (One minute)
3. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to the "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.490 V or more?

Yes	Go to 5.
No	Go to 2.

2. CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the rear oxygen sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from rear oxygen sensor.
4. Measure the resistance of harness between ECM connector and rear oxygen sensor connector.
   Connector & terminal
   (B134) No. 33 — (B19) No. 3:
   (B134) No. 44 — (B19) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.

4. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between rear oxygen sensor connector and chassis ground.
   Connector & terminal
   (B19) No. 4 (+) — Chassis ground (−):

Is the voltage 1.8 V or more?

Yes	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

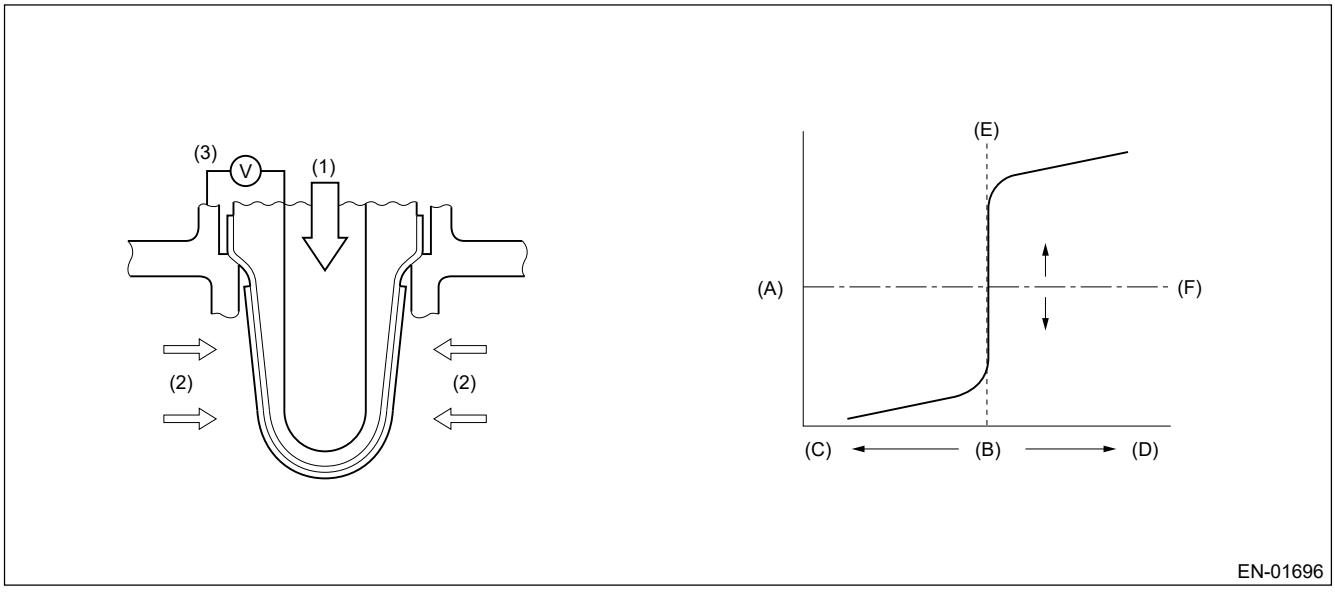
5. CHECK EXHAUST SYSTEM.

Check exhaust system parts.

Note:

Check the following items.

- **Looseness and improper fitting of exhaust system parts**
- **Damage (crack, hole etc.) of parts**
- **Loose part and improper installation between front oxygen (A/F) sensor and rear oxygen sensor**



Is there any fault in exhaust system?

Yes	Repair or replace faulty parts.
No	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.

1. OUTLINE OF DIAGNOSIS

Detect for NG of the rear oxygen sensor continuity.
Judge as NG if the rear oxygen sensor voltage is not within the possible range.

2. COMPONENT DESCRIPTION

(A) Electromotive force	(B) Air fuel ratio	(C) Rich
(D) Lean	(E) Theoretical air fuel ratio	(F) Comparative voltage
(1) Atmosphere	(2) Exhaust gas	(3) Electromotive force

3. EXECUTION CONDITION

Secondary parameters	Execution

	condition
Judgment 1	
Battery voltage	10.9 V or more
Judgment 2 . 3	
Battery voltage	10.9 V or more
Estimated secondary oxygen sensor element temperature (Refer to “P0420 General description”)	-500°C(-932°F) o r more
Integrated duty ratio of the secondary oxygen sensor heater operation from engine start	11800% or more
Secondary oxygen sensor offset signal	1.8V or more and 2.2V or less

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Judgment 1: Short to ground	
Secondary oxygen sensor offset signal	Less than 1.8V
Judgment 2: Circuit open	
Impedance of secondary oxygen sensor	1.7V or more
Judgment 3: Out of range	
Secondary oxygen sensor output voltage	Less than −0.22V

Time needed for diagnosis:1000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

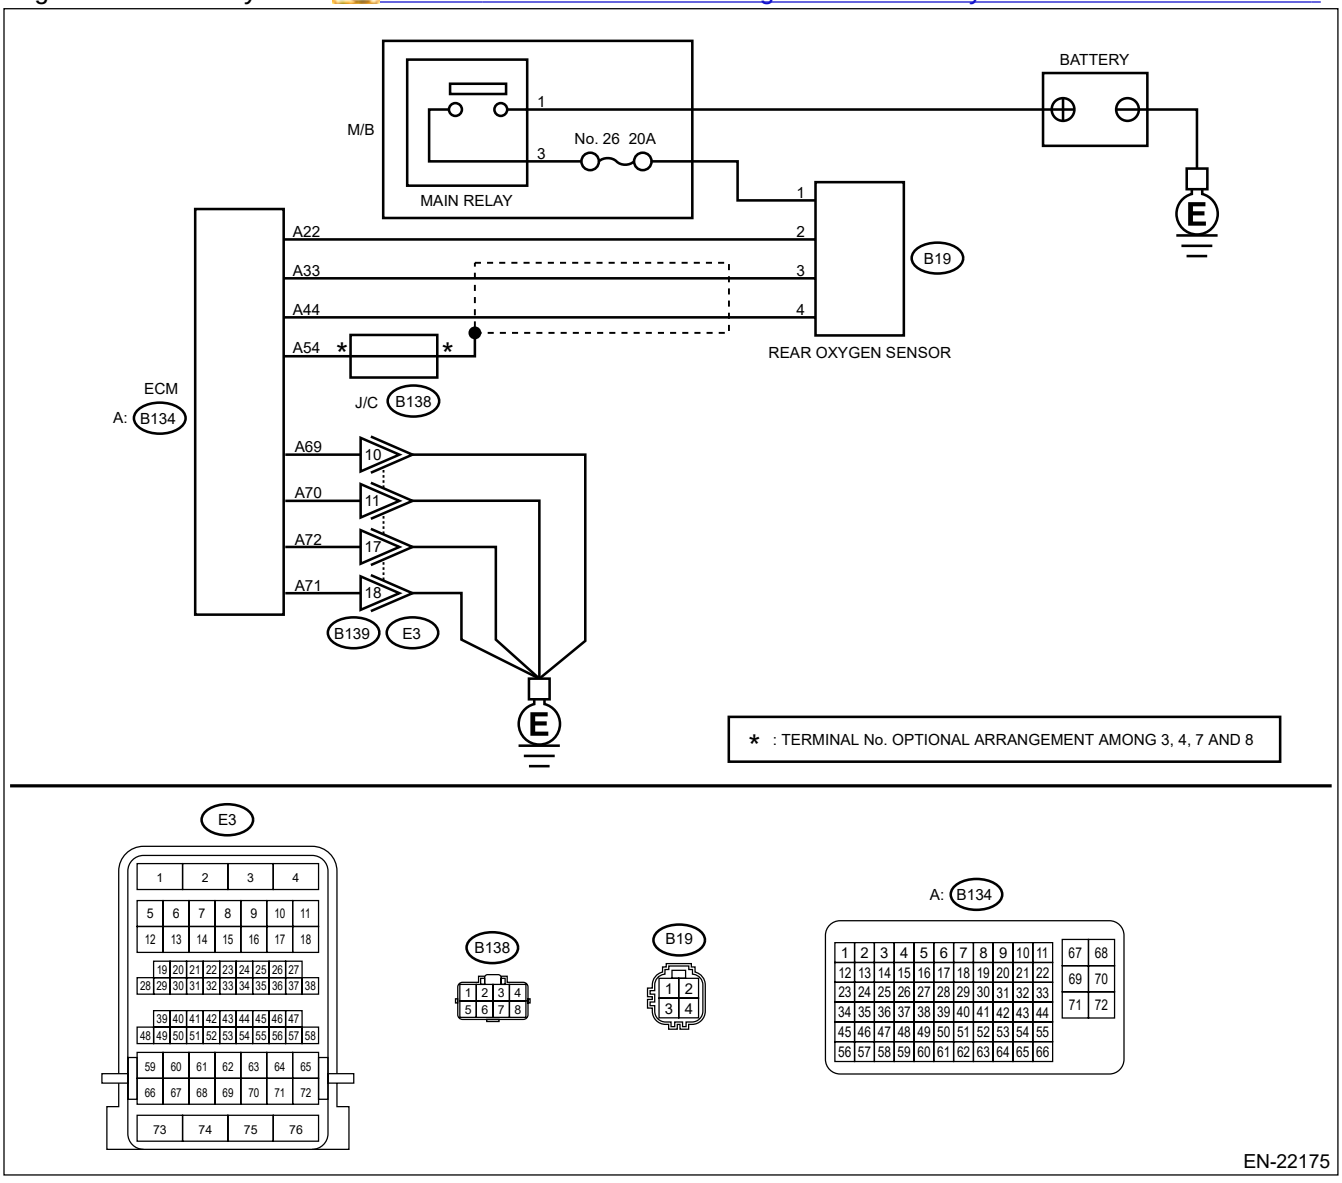
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0138 O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to the "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.250 V or less?

Yes	Go to 5.
No	Go to 2.

2. CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the rear oxygen sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from rear oxygen sensor.
4. Measure the resistance of harness between ECM connector and rear oxygen sensor connector.
   Connector & terminal
   (B134) No. 33 — (B19) No. 3:
   (B134) No. 44 — (B19) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and rear oxygen sensor connector**

4. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between rear oxygen sensor connector and chassis ground.
   Connector & terminal
   (B19) No. 3 (+) — Chassis ground (−):

Is the voltage 2.2 V or less?

Yes	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.
No	Replace the ECM.

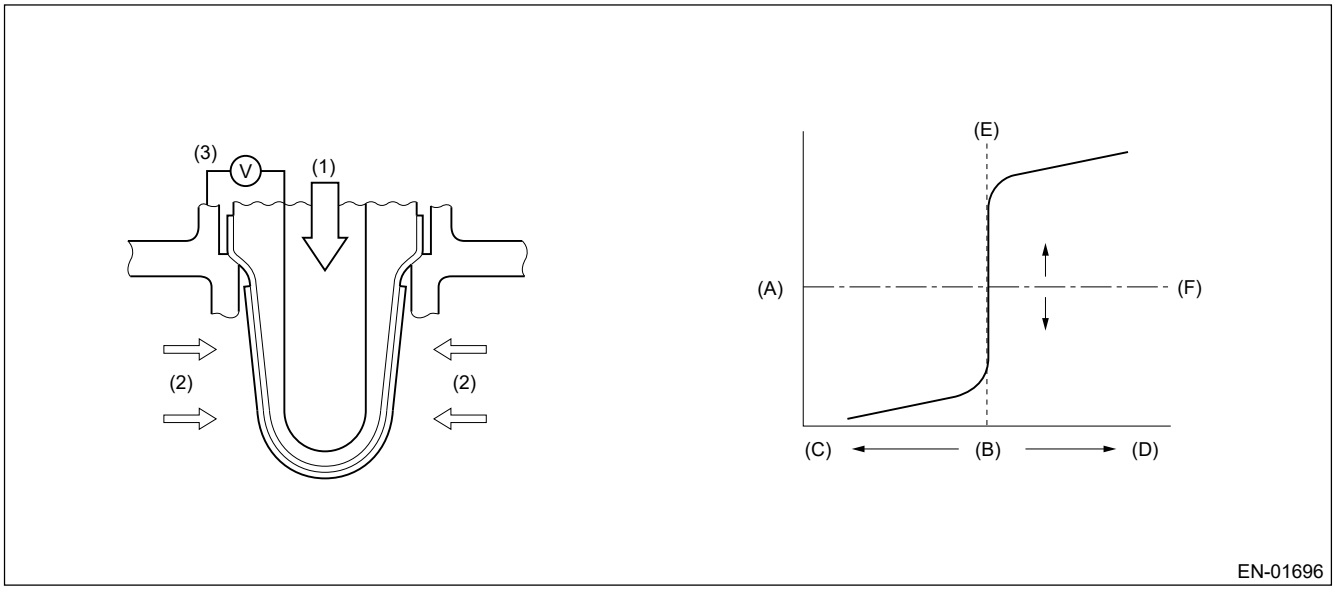
5. CHECK EXHAUST SYSTEM.

Check exhaust system parts.

Note:

Check the following items.

- **Looseness and improper fitting of exhaust system parts**
- **Damage (crack, hole etc.) of parts**
- **Loose part and improper installation between front oxygen (A/F) sensor and rear oxygen sensor**



Is there any fault in exhaust system?

Yes	Repair or replace faulty parts.
No	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.

1. OUTLINE OF DIAGNOSIS

Detect for NG of the rear oxygen sensor continuity.
Judge as NG if the rear oxygen sensor voltage is not within the possible range.

2. COMPONENT DESCRIPTION

(A) Electromotive force	(B) Air fuel ratio	(C) Rich
(D) Lean	(E) Theoretical air fuel ratio	(F) Comparative voltage
(1) Atmosphere	(2) Exhaust gas	(3) Electromotive force

3. EXECUTION CONDITION

Secondary parameters	Execution

	condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Judgment 1: Short to battery	
Secondary oxygen sensor offset signal	More than 2.2V
Judgment 2: Short to battery	
Secondary oxygen sensor signal	More than 3.25V
Judgment 3: Out of range Secondary oxygen sensor output voltage	More than 1.2V

Time needed for diagnosis:1000ms

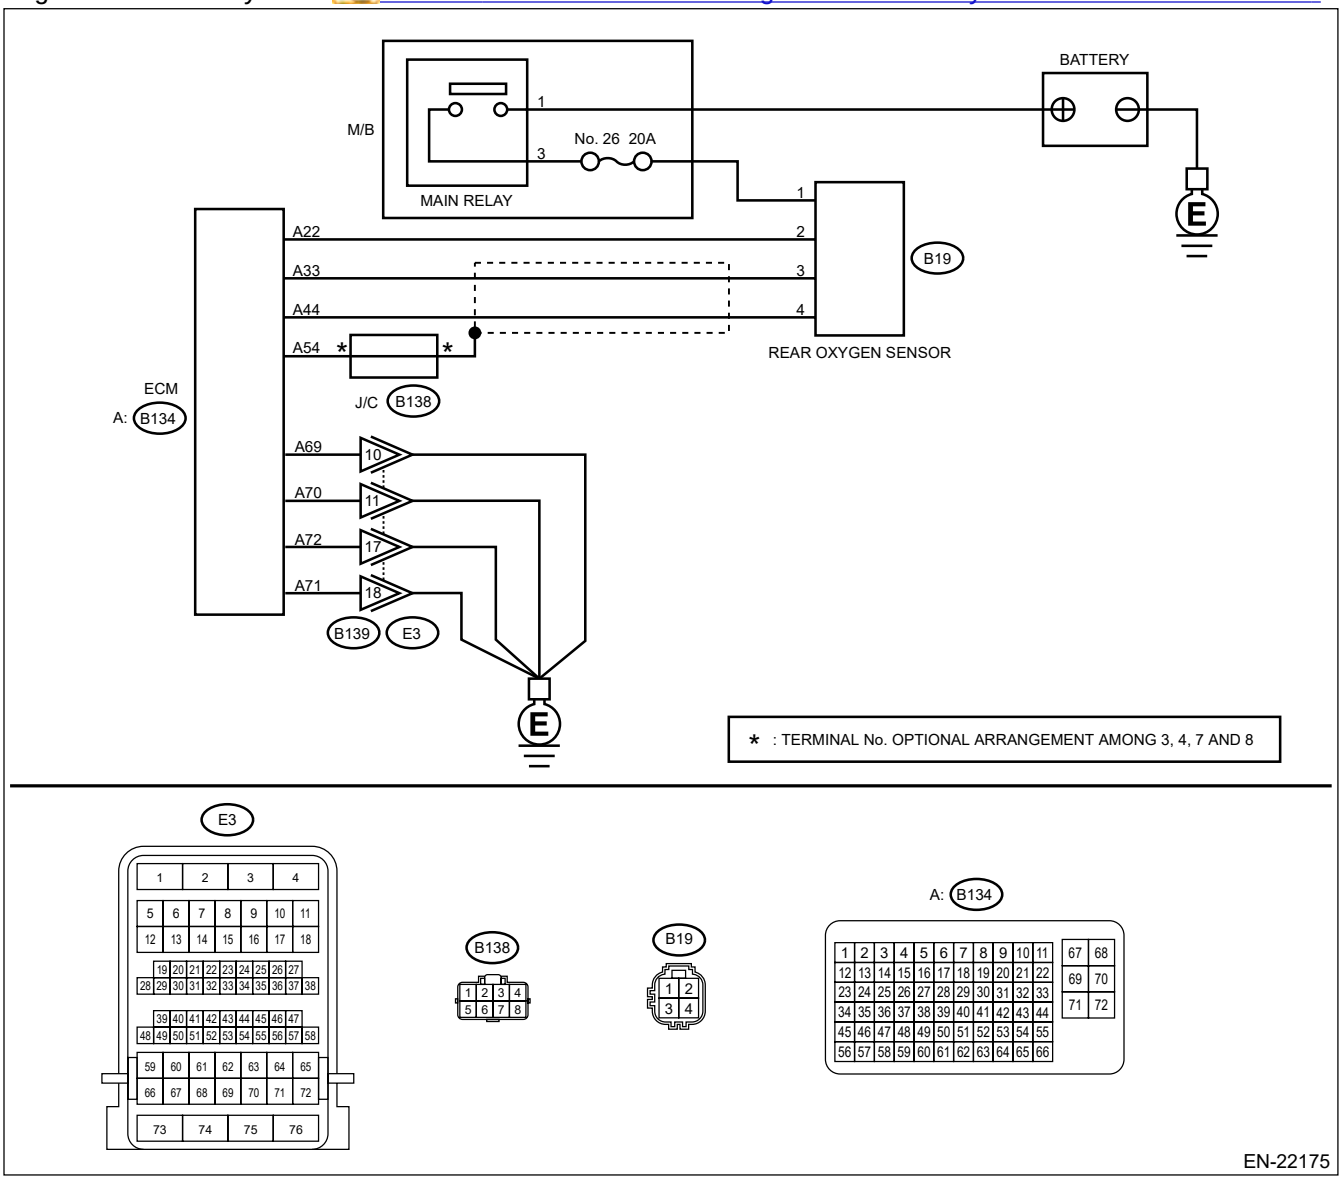
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from rear oxygen sensor.
4. Measure the resistance of harness between ECM connector and rear oxygen sensor connector.
   Connector & terminal
   (B134) No. 33 — (B19) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.

2. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (SHORT TO GROUND).

Measure the resistance between rear oxygen sensor connector and chassis ground.

Connector & terminal

(B19) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

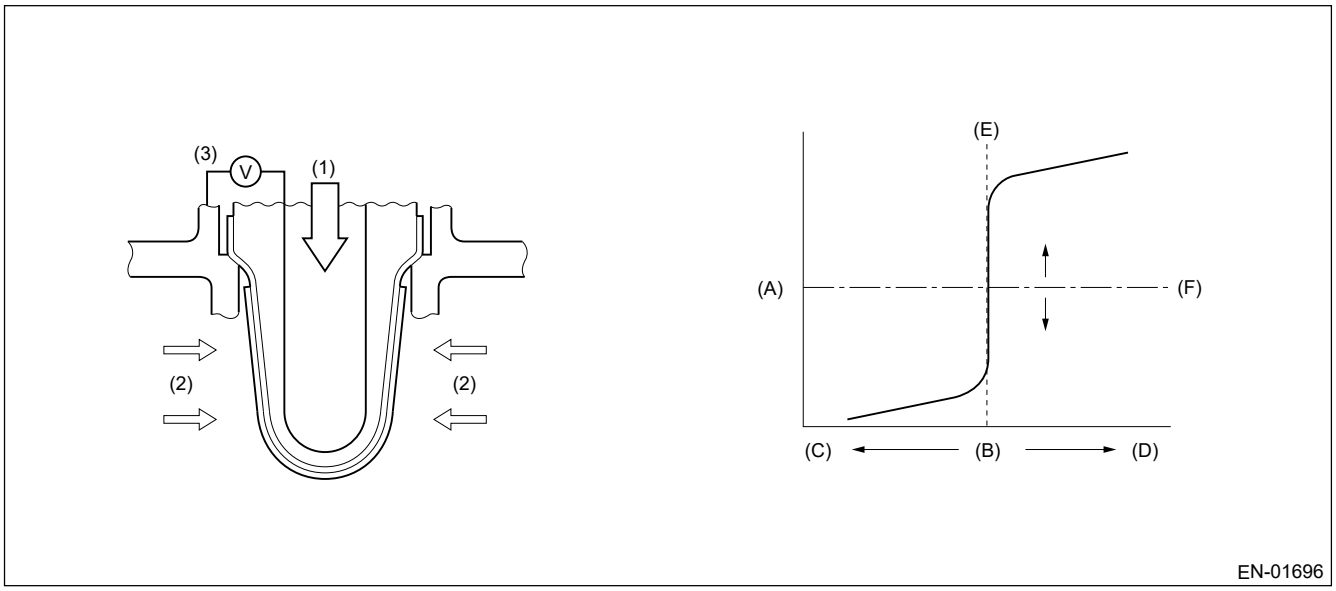
Yes	Go to 3.
No	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.

3. CHECK REAR OXYGEN SENSOR.

Measure the resistance between rear oxygen sensor terminals.

Terminals

No. 3 — No. 4



Is the resistance less than 1 Ω?

Yes	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

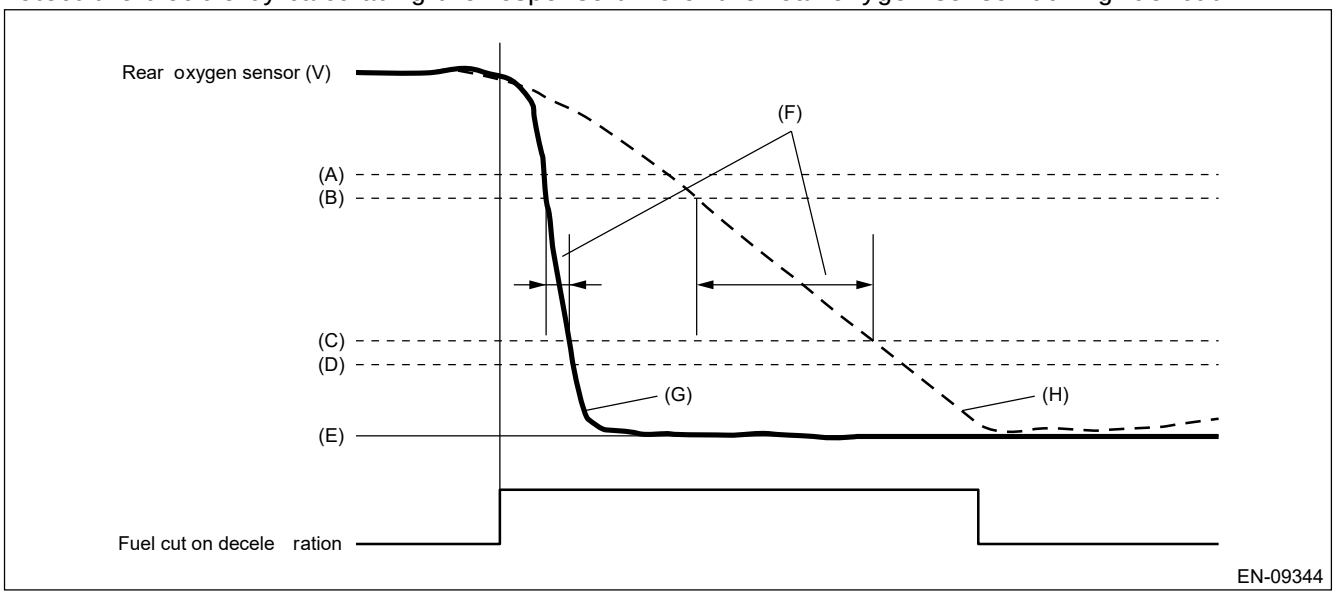
1. OUTLINE OF DIAGNOSIS

Detect the slow response of rich → lean for rear oxygen sensor output.
When the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage
(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION



Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Current calculation time of the rear oxygen sensor heater after starting	180000ms or more
Rear oxygen sensor voltage when fuel cut starts	0.55V or more
Fuel cut duration	5000ms or more
Estimated temperature of rear oxygen sensor element when fuel cut starts	500°C(932°F) or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the deceleration fuel cut is activated from a high and constant speed driving.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor during fuel cut.

(A) 0.55 V
(B) 0.50 V
(C) 0.20 V
(D) 0.15 V
(E) 0 V
(F) Diagnostic parameter
(G) Normal
(H) Malfunction

Judge as NG when the following conditions are established.

Judgment value

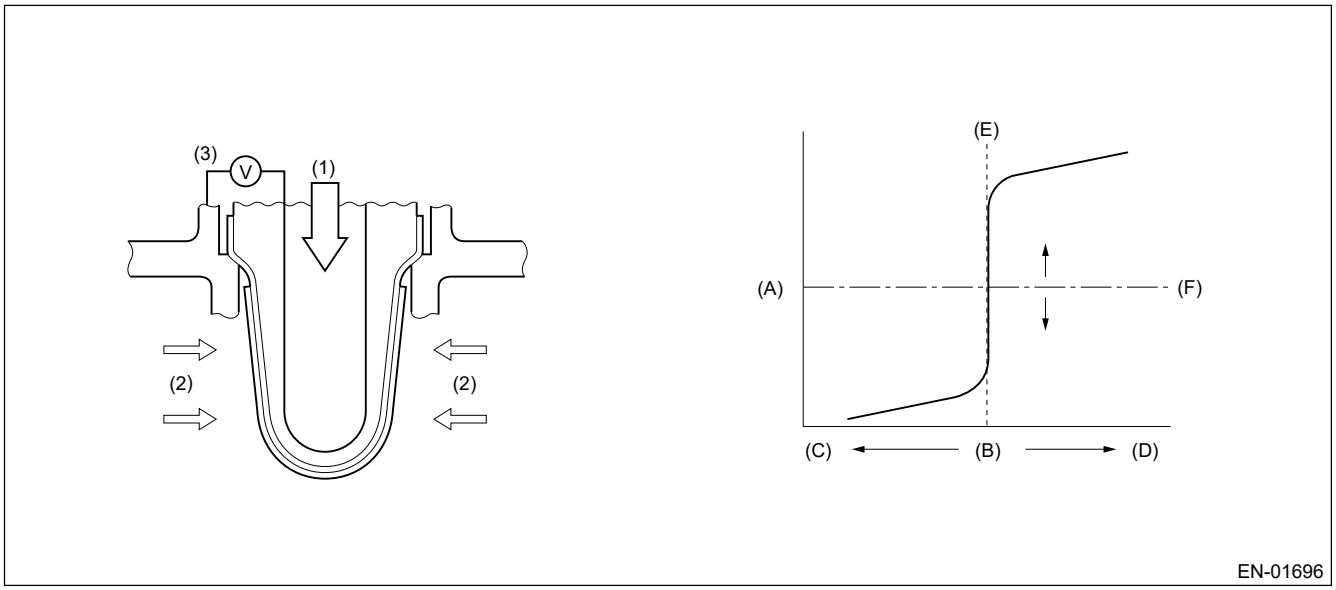
Malfunction Criteria	Threshold Value
Time needed for rear oxygen sensor voltage to change from 0.5 V to 0.2 V	More than 500ms

Time needed for diagnosis: Less than 1 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P013B O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2



Note:

For the diagnostic procedure, refer to DTC P013A. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2.

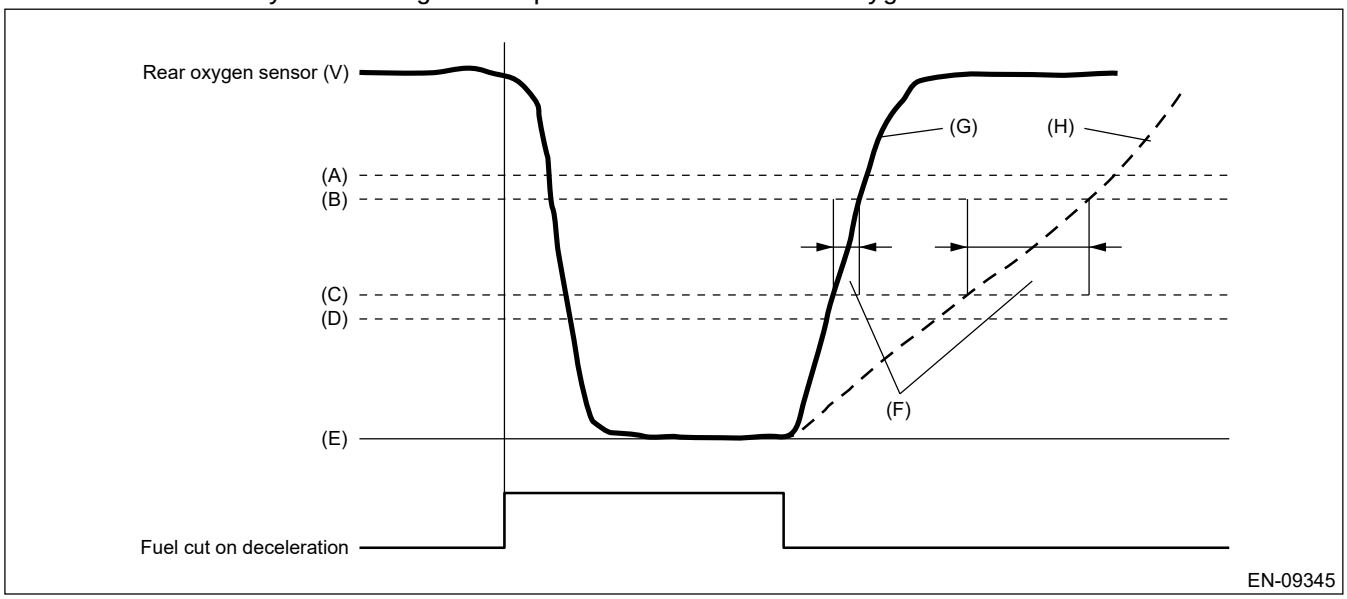
1. OUTLINE OF DIAGNOSIS

Detect the slow response of lean → rich for rear oxygen sensor output.
After the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage
(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION



Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Main feedback	In operation
(Fuel cut elapsed time	5000ms or more
Fuel cut recovery time thereafter)	3300ms or more

4. GENERAL DRIVING CYCLE

Perform diagnosis only once after recovering from a deceleration fuel cut continued for more than predetermined time.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor after fuel cut.

(A) 0.55 V
(B) 0.50 V
(C) 0.30 V
(D) 0.25 V
(E) 0 V
(F) Diagnostic parameter
(G) Normal
(H) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time needed for rear oxygen sensor voltage to change from 0.2V to 0.5 V	More than 3300ms

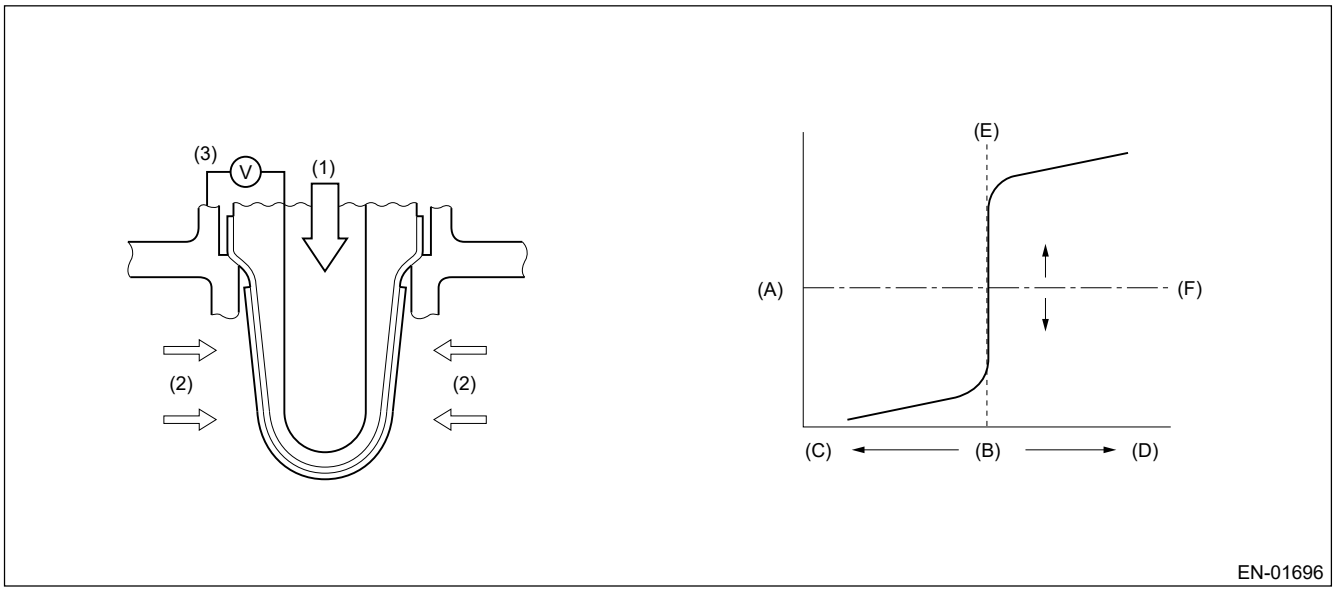
Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P013E O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

Note:



For the diagnostic procedure, refer to DTC P013A. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2.

1. OUTLINE OF DIAGNOSIS

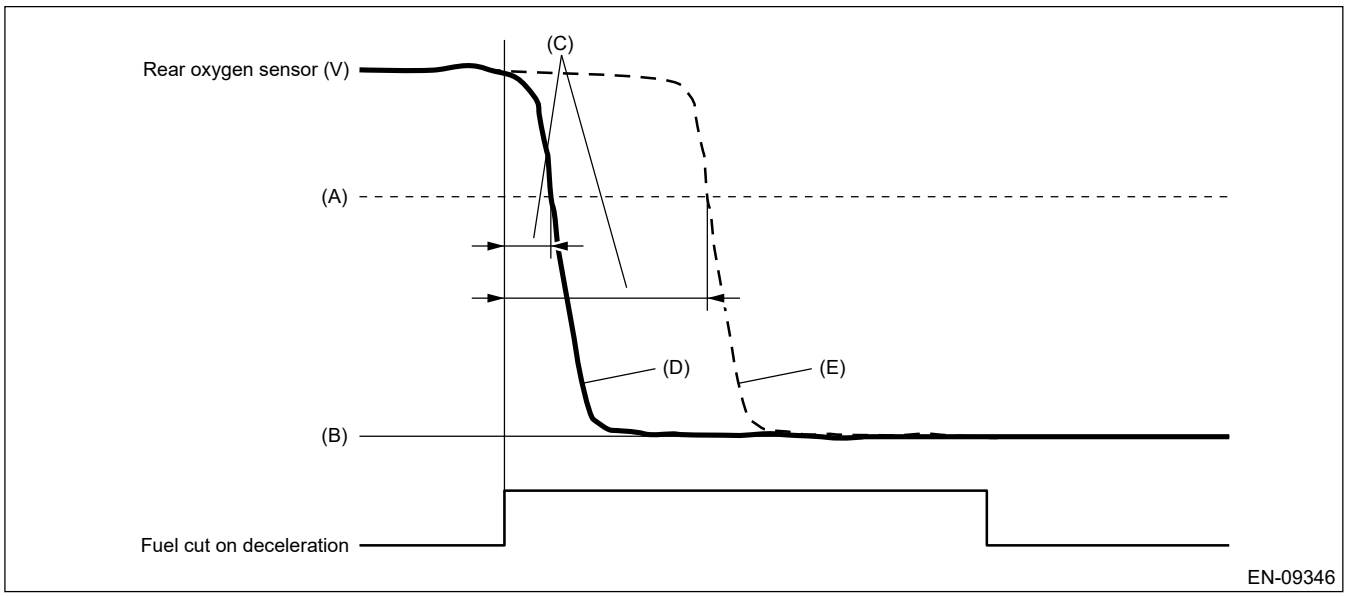
Detect the delayed response of rear oxygen sensor output for rich → lean.

After the deceleration fuel cut has started, detect the trouble by calculating the time when the rear oxygen sensor output decreases to the predetermined voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage
(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION



Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Rear oxygen sensor voltage when fuel cut starts	0.55V or more
(Fuel cut elapsed time	5000ms
Fuel shut-off function thereafter)	Not in operation
Estimated temperature of rear oxygen sensor element when fuel cut starts	500°C(932°F) or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the deceleration fuel cut is activated from a high and constant speed driving.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the beginning of the fuel cut to the beginning of the rear oxygen sensor voltage starting to drop.

(A) 0.5 V (B) 0 V (C) Diagnostic parameter
(D) Normal (E) Malfunction

Judge as NG when the following conditions are established.

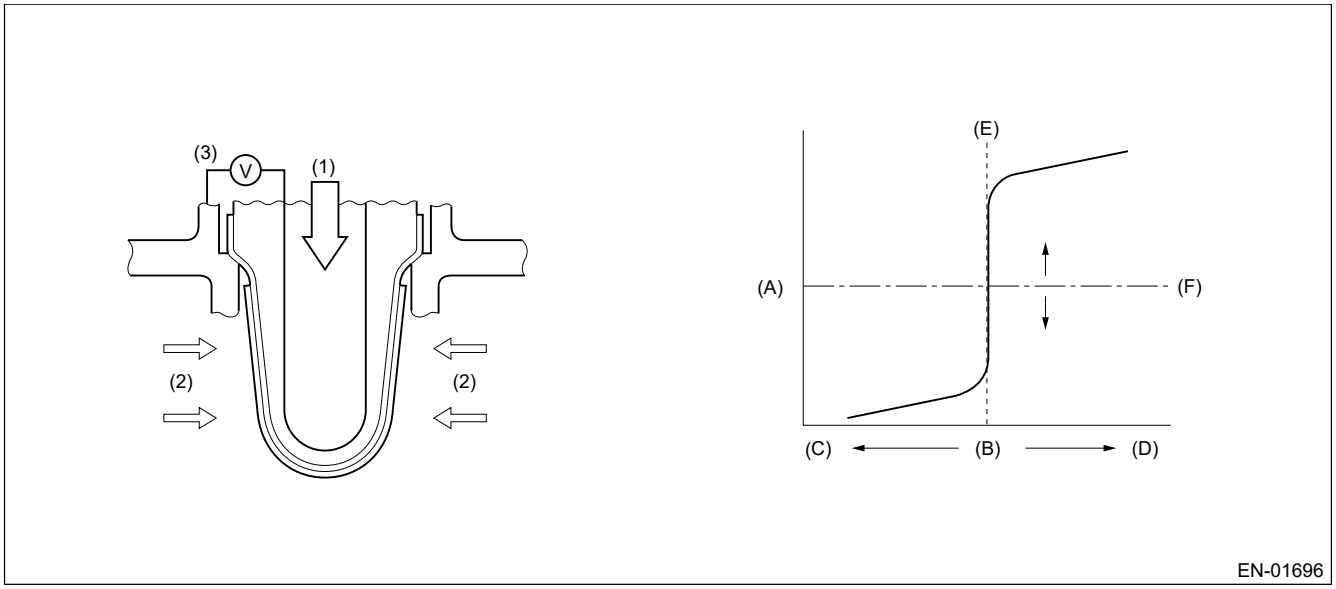
Judgment value

Malfunction Criteria	Threshold Value
Time needed for the rear oxygen sensor voltage to change up to 0.5 V after the fuel cut started	More than 3600ms

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P013F O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2



Note:

For the diagnostic procedure, refer to DTC P013A. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2.

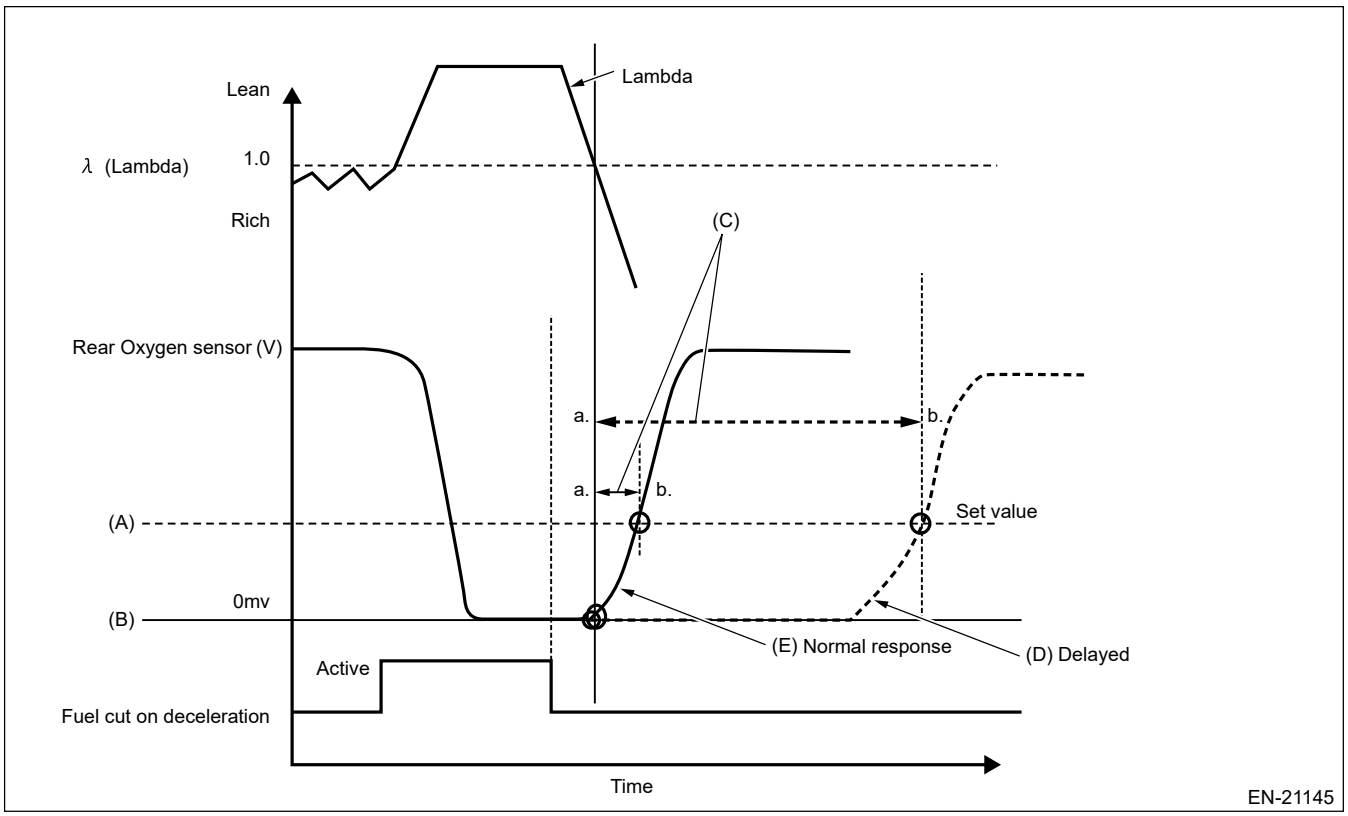
1. OUTLINE OF DIAGNOSIS

Detect the delayed response of rear oxygen sensor output for lean → rich.
After the deceleration fuel cut has completed, detect the trouble by calculating the time when the rear oxygen sensor output increases to the predetermined voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION

(A) Electromotive force
(B) Air fuel ratio
(C) Lean
(D) Rich
(E) Theoretical air fuel ratio
(F) Comparative voltage
(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION



Secondary parameters	Execution condition
Battery voltage	More than 10.9 V
Main feedback	In operation
Rear oxygen sensor voltage when fuel cut ends	Less than 0.15V
(Fuel cut elapsed time	5000ms or more
Fuel shut-off function thereafter)	Not in operation
Estimated element temperature of rear oxygen sensor when fuel cut has completed	500°C(932°F) or more
Amount of intake air	10g/s(0.35oz/s) or more

4. GENERAL DRIVING CYCLE

Perform diagnosis only once when recovering from the deceleration fuel cut continued for more than predetermined time with the rear oxygen sensor warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the completion of the fuel cut to the beginning of the rear oxygen sensor voltage starting to rise.

(A) 0.3 V (B) 0 V (C) Diagnostic parameter

(D) Normal (E) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage value of rear oxygen sensor	Less than 0.2V

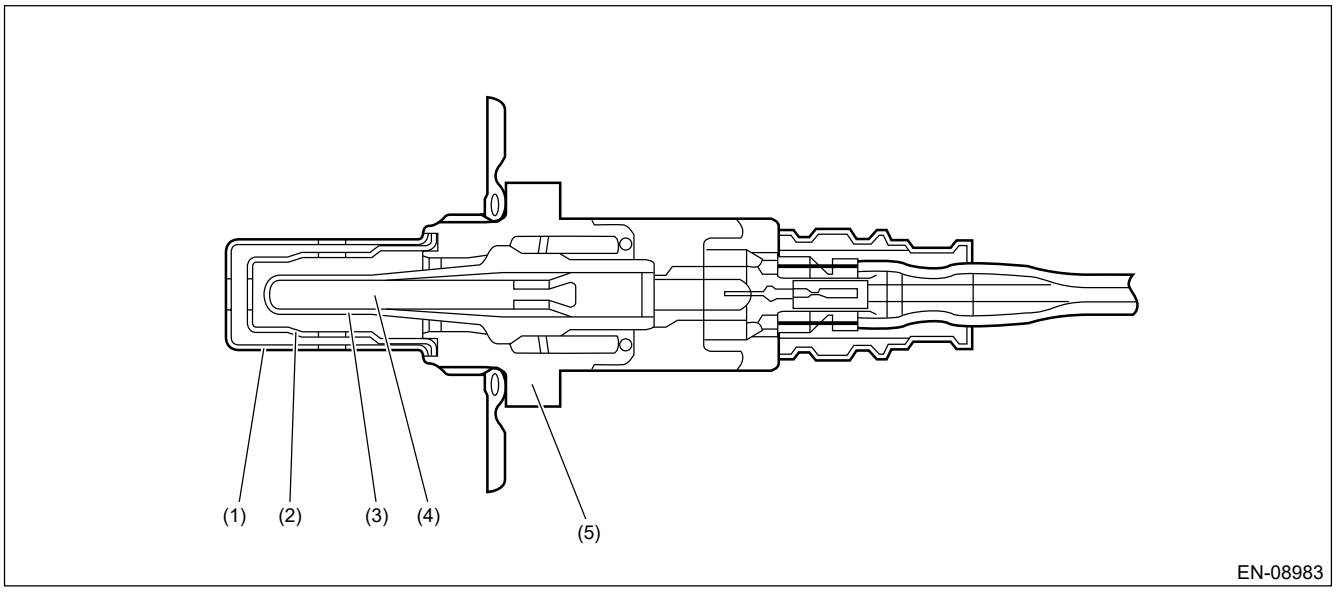
Time needed for diagnosis: Value of Map

Amount of intake air g/s (oz/s)	10 (0.35)	12 (0.42)	14 (0.49)	18 (0.63)	22 (0.78)	24 (0.85)
Elapsed time (s)	7.5	6.5	5.5	4.0	2.6	2.0

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0141 O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2



Note:

For the diagnostic procedure, refer to DTC P0037. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2.

1. OUTLINE OF DIAGNOSIS

Detect malfunction of the rear oxygen sensor heater.
Judge as NG if it is determined that the rear oxygen sensor impedance is large by observing the engine conditions.

2. COMPONENT DESCRIPTION

(1) Element cover (outer)
(2) Element cover (inner)
(3) Sensor element
(4) Ceramic heater
(5) Sensor housing

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Elapsed time after the heater starts continuity	60000ms or more
Elapsed time after fuel cut	20000ms or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Rear oxygen sensor impedance	More than 110Ω

Time needed for diagnosis: 10000ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving

cycles.

DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK EXHAUST SYSTEM.

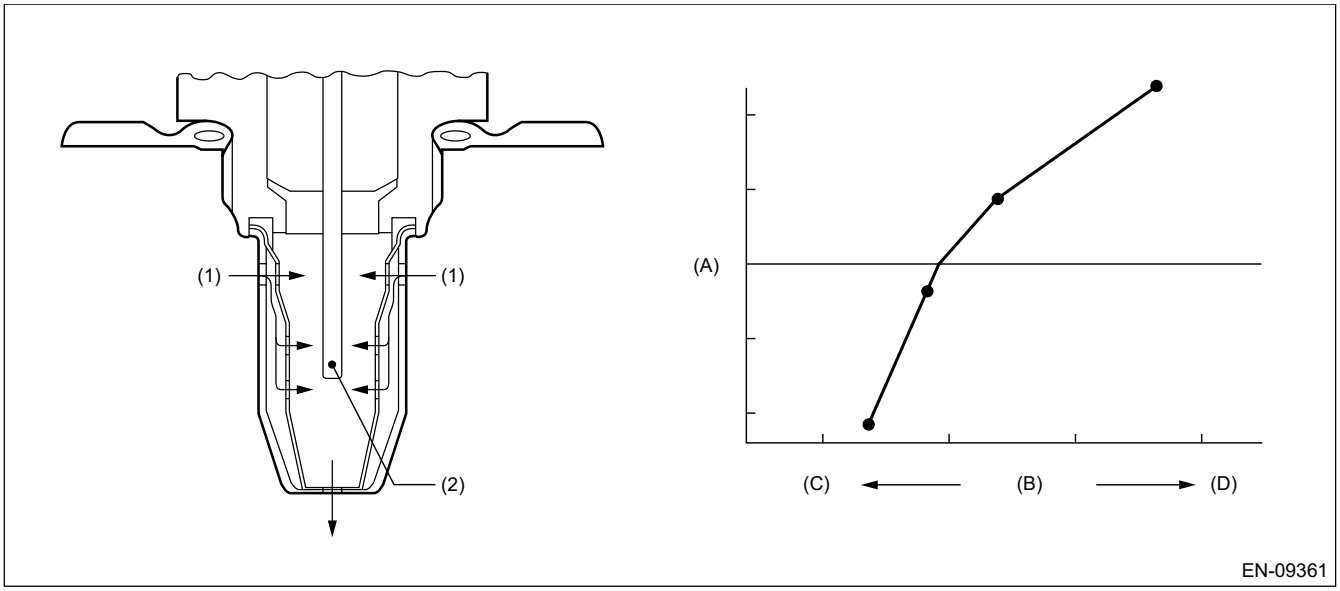
Check the exhaust system.

Note:

Check the following items.

- **Loose installation of front portion of exhaust pipe onto cylinder heads**
- **Loose connection between front exhaust pipe and front catalytic converter**
- **Damage of exhaust pipe resulting in a hole**

Is there any fault in exhaust system?



Yes	Repair the exhaust system.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Front Oxygen (A/F) Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the slow response of front oxygen (A/F) sensor.

For diagnosis, detect the trouble by processing the λ waveform in normal driving without forcibly changing the target air fuel ratio.

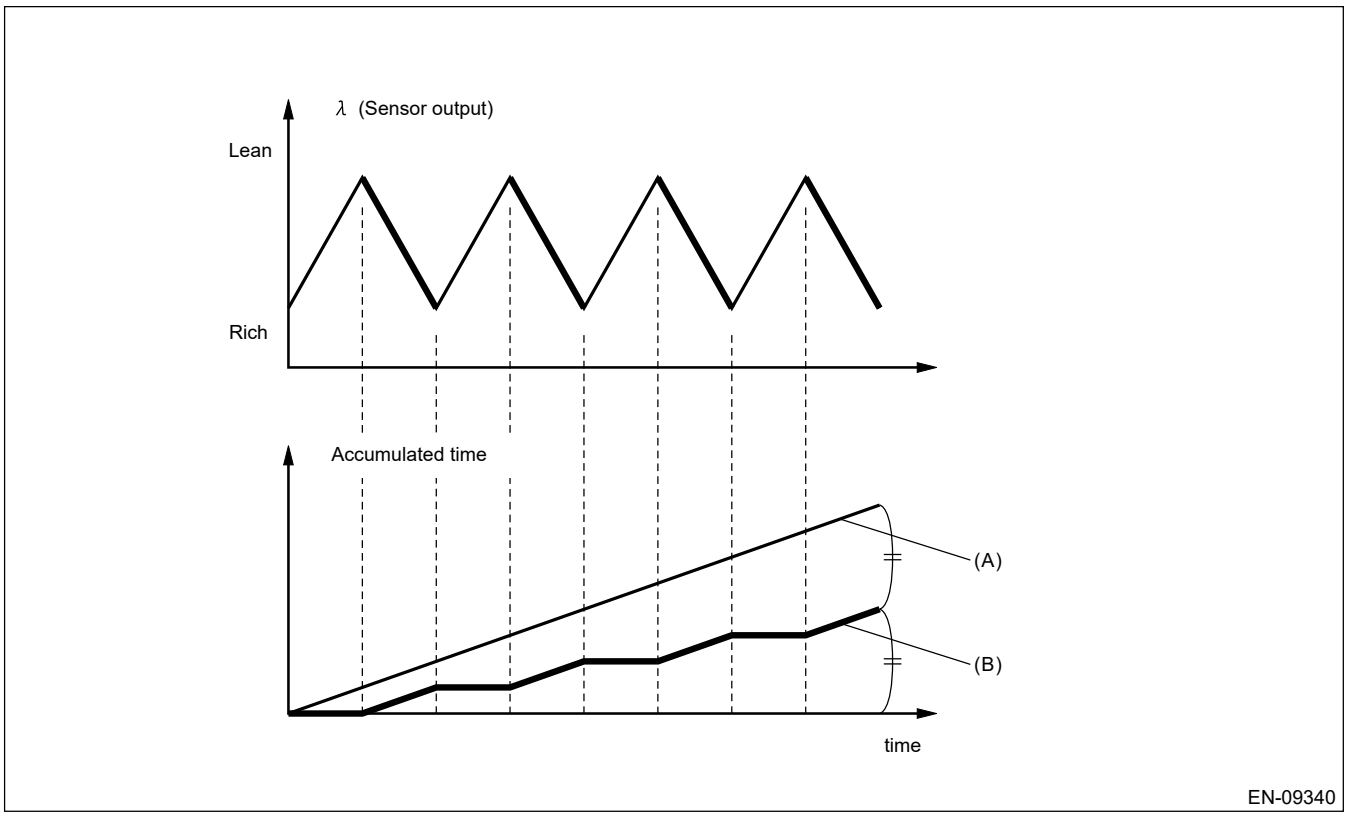
2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Rich

(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION



Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa(563mmHg,22.2inHg) or more
Time of main feedback operation	3000ms or more
Engine speed	1000rpm or more
Amount of intake air	10g/s(0.35oz/s) or more

4. GENERAL DRIVING CYCLE

Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction by checking “Cumulative value of time when λ changes from lean → rich” in comparison to “Time during which diagnosis is in progress”.

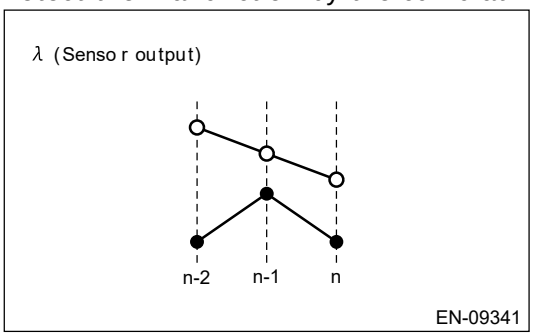
(A) Time during which diagnosis is in progress

(B) Cumulative value of time when λ changes from lean → rich

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
(Cumulative value of time when λ changes from lean → rich) / (Time during which diagnosis is in progress) and	Less than 0.35	P014C
Average value of time necessary for λ to inverse the air fuel ratio to Lean → Rich → Lean	More than 30ms	
(Cumulative value of time when λ changes from lean → rich) / (Time during which diagnosis is in progress) and Average value of time necessary for λ to inverse the air fuel ratio to Rich → Lean → Rich	More than 0.65 More than 20ms	P014D



Time needed for diagnosis: 90000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving

cycles.

6. DIAGNOSTIC METHOD 2

Detect the malfunction by the cumulative value obtained from the amount of variation in λ change.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Cumulative value obtained from the amount of variation in λ change	Less than value of Map	P014C and P014D

Map

Cumulative value obtained from the amount of variation in λ	**0.00**	**3.50**
Cumulative value obtained from the amount of variation in λ change	0.00	5.00

Time needed for diagnosis: 90000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P014D A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1

Note:

For the diagnostic procedure, refer to DTC P014C. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1.

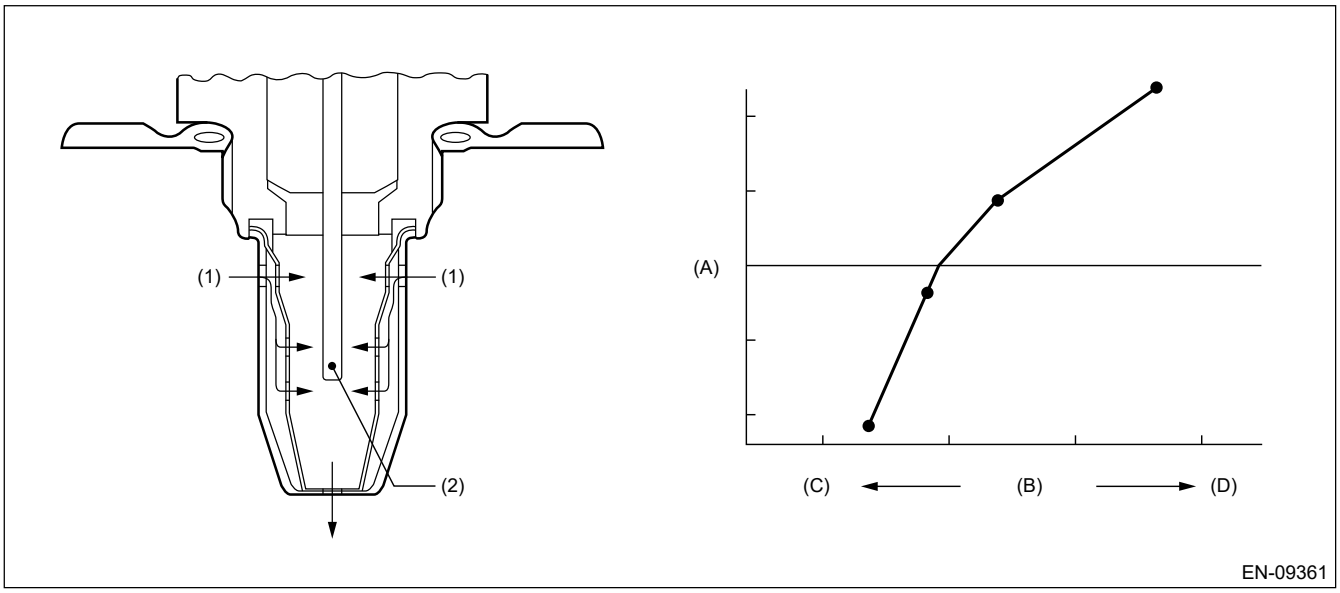
1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P014C. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1



Note:

For the diagnostic procedure, refer to DTC P014C. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1.

1. OUTLINE OF DIAGNOSIS

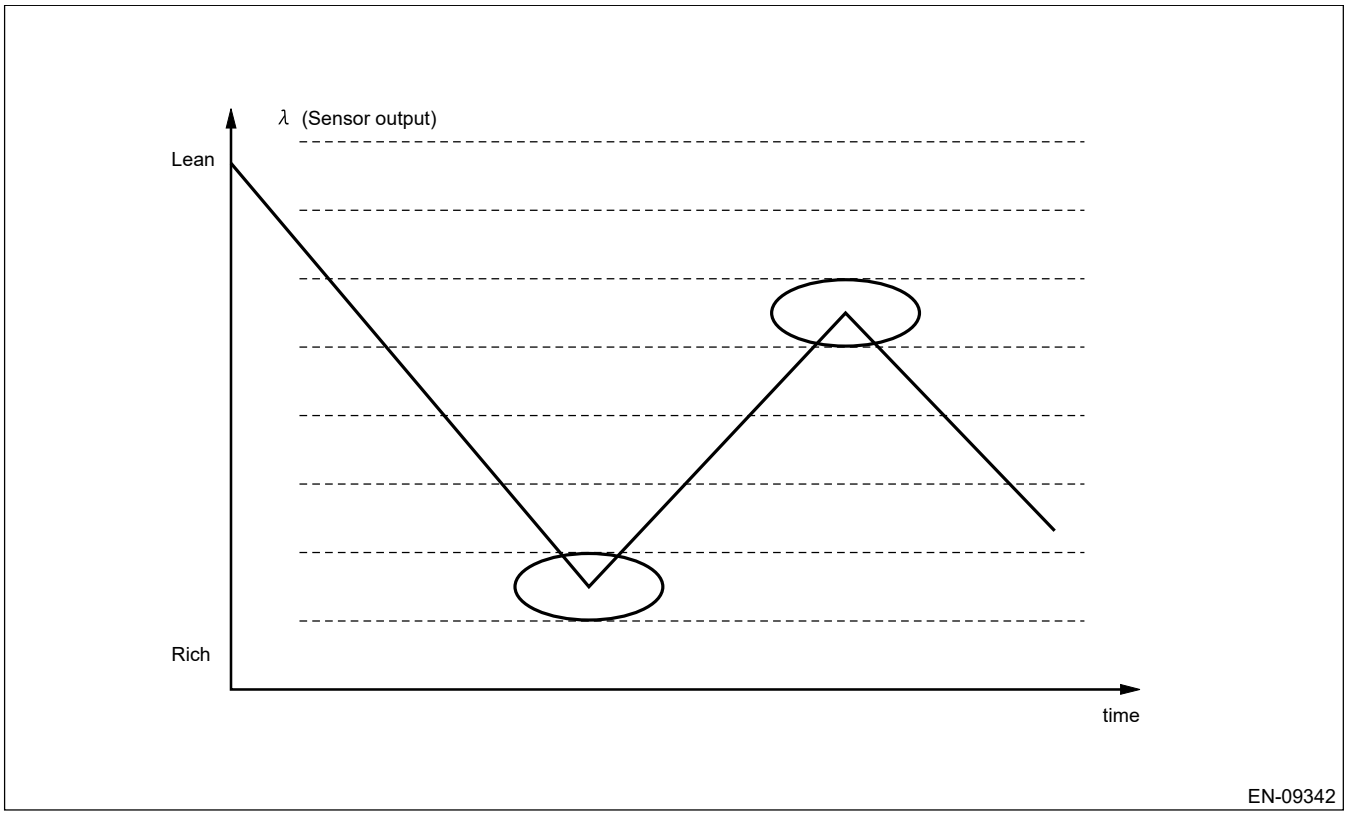
Detect the slow response of front oxygen (A/F) sensor.
For diagnosis, detect the trouble by processing the λ waveform in normal driving without forcibly changing the target air fuel ratio.

2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean
(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Diagnostic method 1 and 2



Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa(563mmHg,22.2inHg) or more
Time of main feedback operation	3000ms or more
Engine speed	1000rpm or more
Amount of intake air	10g/s(0.35oz/s) or more

4. GENERAL DRIVING CYCLE

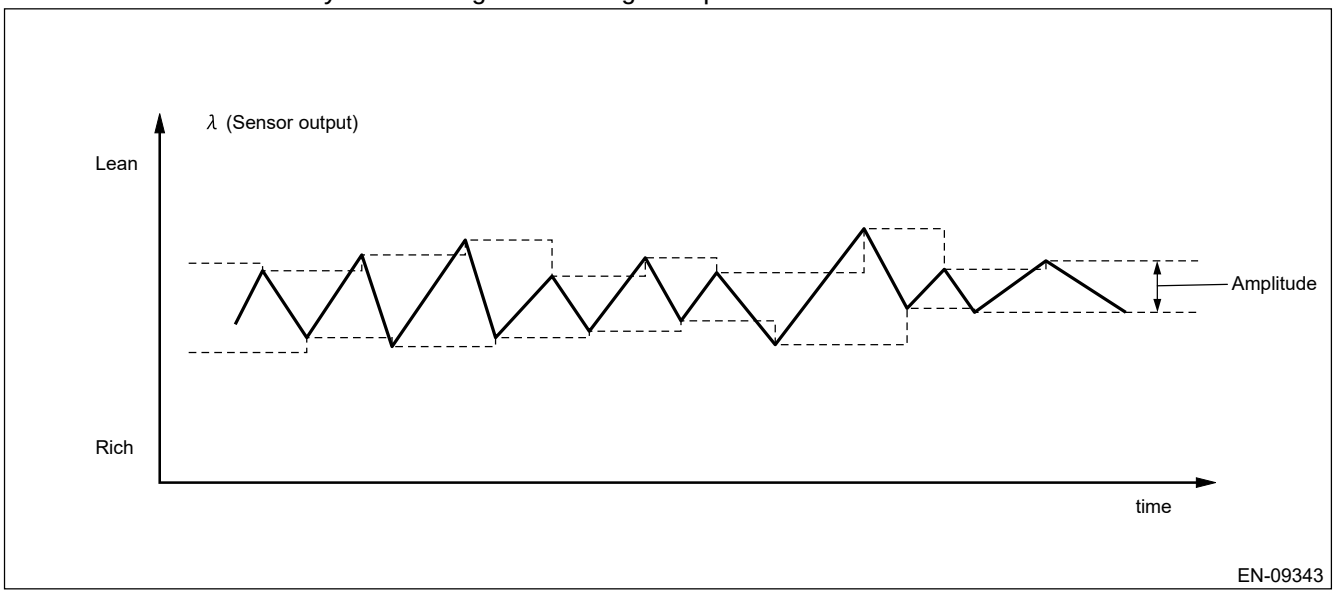
Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction depending on the average value of time necessary for λ to inverse the air fuel ratio from “Lean → Rich → Lean” to “Rich → Lean → Rich”.

Judge as NG when the following conditions are established.

Judgment value



Malfunction Criteria	Threshold Value	DTC
Average value of time necessary for λ to inverse the air fuel ratio to Lean → Rich → Lean and Average value of time necessary for λ to inverse the air fuel ratio to Lean → Rich → Lean	More than 200ms More than 250ms	P015A
Average value of time necessary for λ to inverse the air fuel ratio to Rich → Lean → Rich and Average value when λ is rich	More than 250ms More than 300ms	P015B

Time needed for diagnosis: 90000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. DIAGNOSTIC METHOD 2

Detect the malfunction by calculating the average amplitude of λ.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Average value for λ amplitude	More than 0.044 (CVT model) More than 0.044 (MT model)	P015A and P015B

Time needed for diagnosis: 90000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P015B A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1

Note:

For the diagnostic procedure, refer to DTC P014C. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P015A. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0171 SYSTEM TOO LEAN BANK 1

Refer to DTC P0172 for diagnostic procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0172 SYSTEM TOO RICH BANK 1.

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	Operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during the closed loop.

4. DIAGNOSTIC METHOD

Compare the diagnostic value with the threshold value, and if a condition meeting the malfunction criteria continues for 10s × 3time(s) or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback	Value of Map or more

Map

Amount of air g/s (oz/s)	0(0)	3.2(0.11)	
Threshold Value	1.35	1.35	

Time needed for diagnosis: 10s×3time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0172 SYSTEM TOO RICH BANK 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK EXHAUST SYSTEM.

Check the installation condition of exhaust system.

Are there holes or loose bolts on exhaust system?

Yes	Repair the exhaust system.
No	Go to 2.

2. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system.
No	Go to 3.

3. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Release fuel pressure before removing the fuel pressure gauge.

Is the measured value 350 — 450 kPa (3.5—4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 4.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

4. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

Data Monitor

Note:
- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to the “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.] 75°C (167°F) or more?

Yes	Go to 5.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

5. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Using the Subaru Select Monitor or a general scan tool, read the value of [Mass Air Flow].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to the “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Mass Air Flow]2.0—5.0 g/s (0.26—0.66 lb/m)?

Yes	Go to 6.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

6. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Open the front hood.
6. Measure the ambient temperature.
7. Using the Subaru Select Monitor or a general scan tool, read the value of [Intake Air Temp.].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to the “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Subtract ambient temperature from [Intake Air Temp.]. Is the obtained value −10 — 50°C (−18 — 90°F)?

Yes	Go to 7.
No	Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

7. CHECK PCV VALVE.

Check the PCV valve.

Check that the PCV valve has no deformation, cracks or other damages.

Yes	Repair or replace the PCV valve.
No	Go to 8.

8. CHECK PCV HOSE.

Check the PCV hose.

Check the PCV hose assembly for cracks, damage or looseness.

Yes	Repair or replace the PCV hose.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during the closed loop.

4. DIAGNOSTIC METHOD

Compare the diagnostic value (fsobd) with the threshold value, and if a condition meeting the malfunction criteria continues for 10s×3time(s) or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback compensation	Less than value of Map

Map

Warm-up increase compensation coefficient	0.000	0.100	0.200	0.300	0.400	0.416
Threshold Value	0.65 - 0.000	0.65 - 0.090	0.65 - 0.166	0.65 - 0.233	0.65 - 0.291	0.65 - 0.299

Time needed for diagnosis: 10s×3time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0191 FUEL RAIL PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE BANK 1

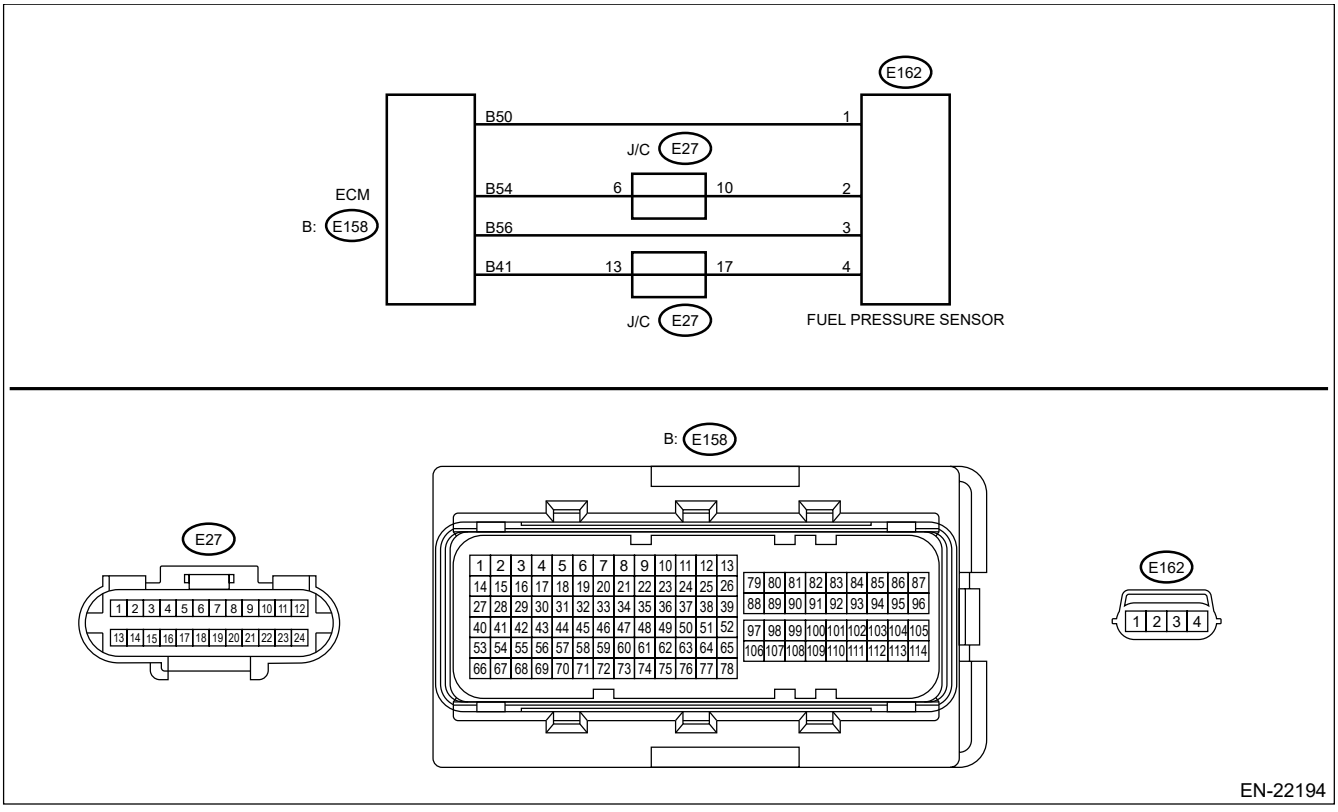
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Start the engine.
4. Read [Fuel Rail Pressure A] and [Fuel Rail Pressure B] on “data monitor” using the Subaru Select Monitor or general scan tool.

Is the difference of the values between [Fuel Rail Pressure A] and [Fuel Rail Pressure B]2.18MPa(16354mmHg, 644 inHg) or more?

Yes	Replace the fuel pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pressure Sensor.
No	Check permanent non-occurrence of malfunction Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>INSPECTION > CHECK NON-PERMANENT OCCURRENCE MALFUNCTIONS.

1. OUTLINE OF DIAGNOSIS

Detect the offset malfunction of the fuel pressure sensor.
Judge as NG when the difference of the relative pressure between the fuel pressure and the barometric pressure is equal to or more than the judgment value when the predetermined conditions are met.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
ABS(Main HPFR pressure sensor - Sub HPFR pressure sensor)	2.183MPa (16377 mmHg, 645 inHg)

Malfunction Criteria	Threshold Value
	or more

Time needed for diagnosis:2500ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0192 FUEL RAIL PRESSURE SENSOR CIRCUIT LOW BANK 1

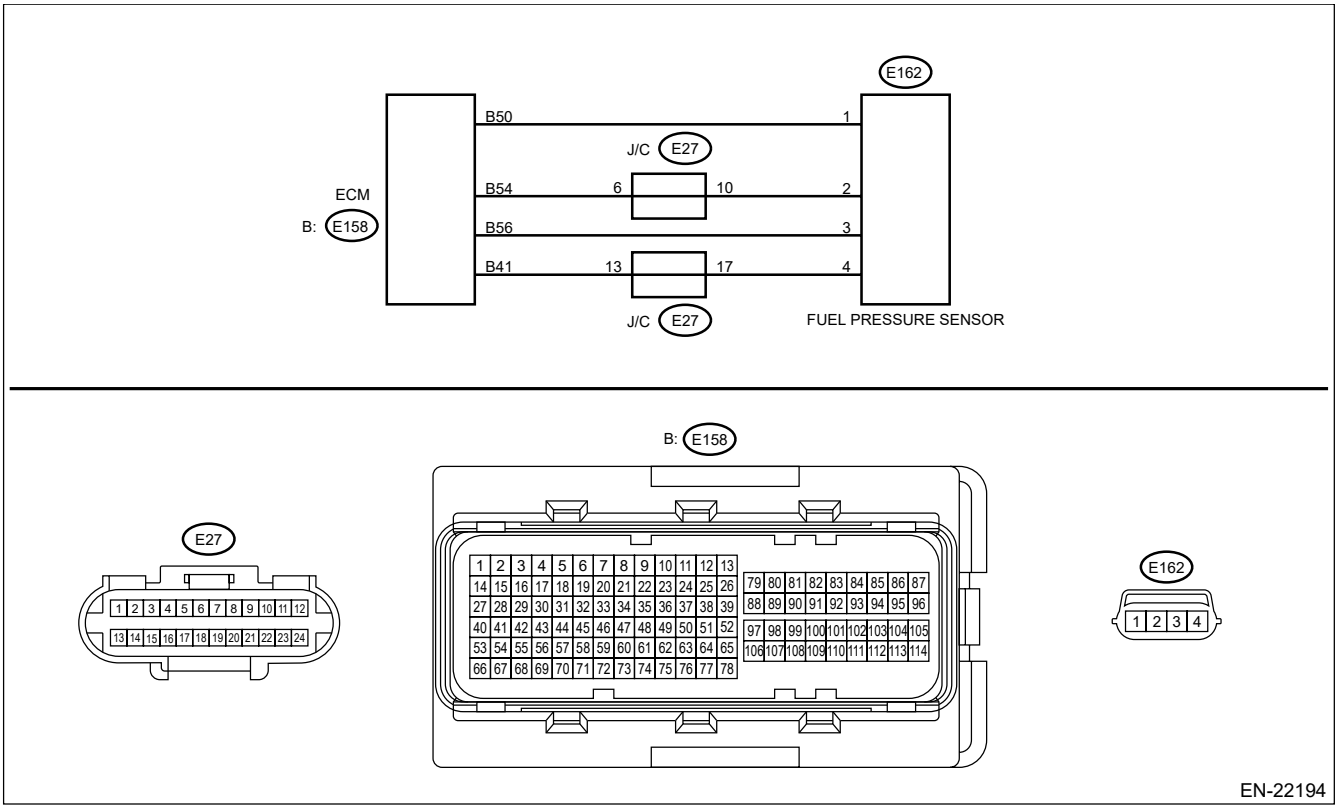
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

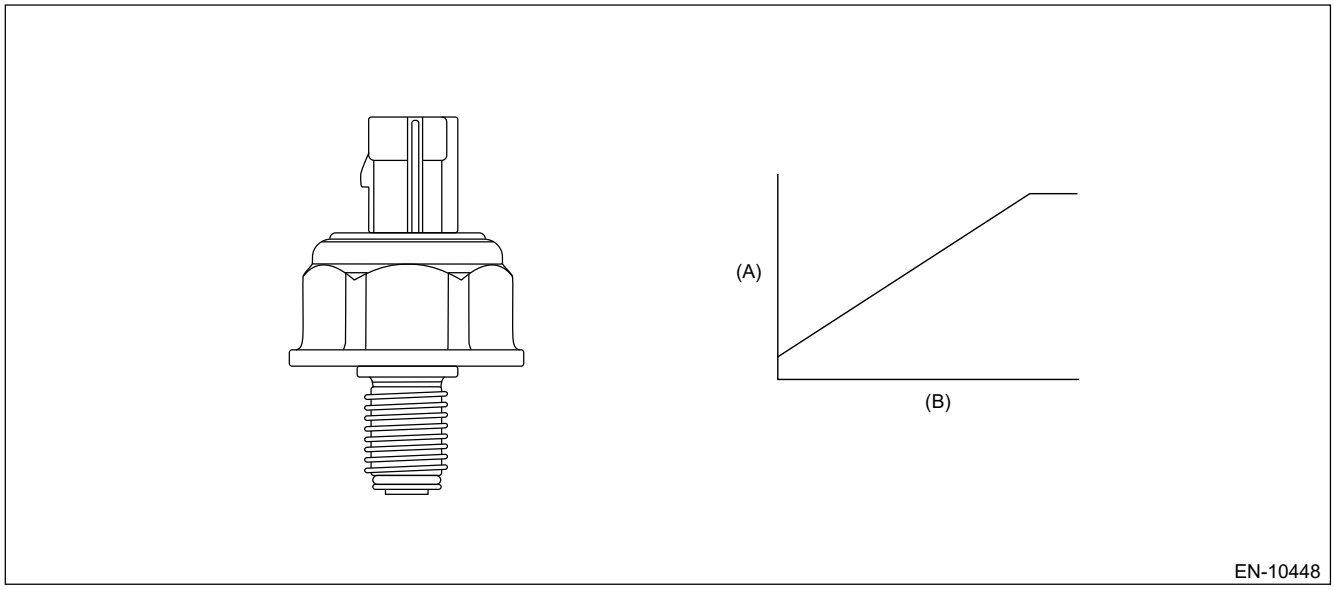
2. Turn the ignition switch to OFF.
3. Start the engine.
4. Read [Fuel Rail Pressure A] on “data monitor” using the Subaru Select Monitor or general scan tool.

Is the value of [Fuel Rail Pressure A] approx. 0MPa (0 mmHg, 0 inHg)?

Yes	Go to 2.
No	Check permanent non-occurrence of malfunction Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>INSPECTION > CHECK NON-PERMANENT OCCURRENCE MALFUNCTIONS.

2. CHECK HARNESS AND CONNECTOR BETWEEN ECM AND FUEL PRESSURE SENSOR (SHORT TO GROUND).

1. Clear the memory. Ref. to COMMON(diag)>Clear memory.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the fuel pressure sensor.
4. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (E158) No.56 — Chassis ground:
   (E162) No.3 — Chassis ground:



Is the resistance 1 MΩ or more?

Yes	Replace the fuel pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pressure Sensor.
No	Repairing or replacing the wiring harness or connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the fuel pressure sensor.

2. COMPONENT DESCRIPTION

(A) Output voltage (B) Absolute pressure

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.321V

Time needed for diagnosis:2400ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0193 FUEL RAIL PRESSURE SENSOR CIRCUIT HIGH BANK 1

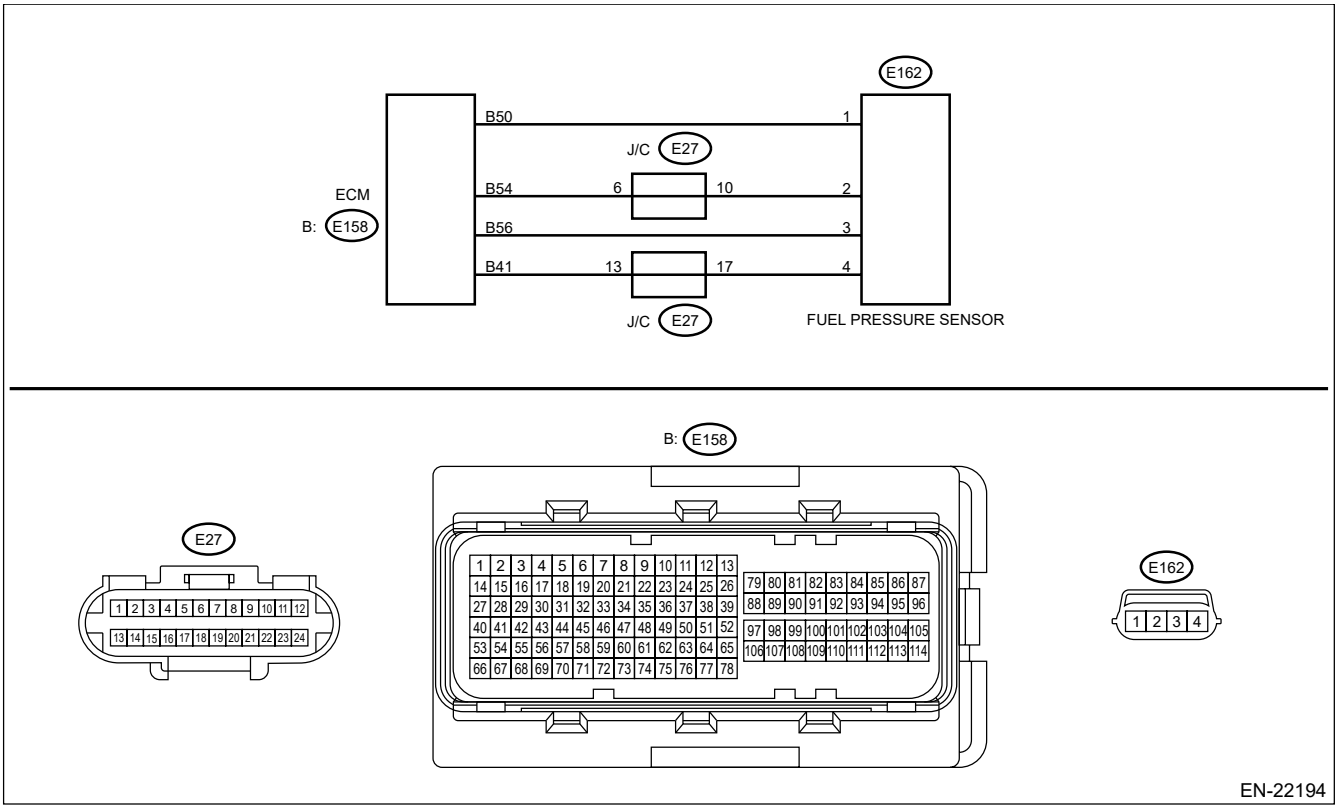
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Read [Fuel Rail Pressure A] on “data monitor” using the Subaru Select Monitor or general scan tool.

Data Monitor

Is the value of [Fuel Rail Pressure A] approx. 25MPa (0 mmHg, 0 inHg)?

Yes	Go to 2.
No	Check permanent non-occurrence of malfunction Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>INSPECTION > CHECK NON-PERMANENT OCCURRENCE MALFUNCTIONS.

2. CHECK VOLTAGE BETWEEN FUEL PRESSURE SENSOR AND CHASSIS GROUND.

1. Turn the ignition switch to OFF.
2. Disconnect the connector of the fuel pressure sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between the fuel pressure sensor connector and chassis ground.
   Connector & terminal
   (E162) No. 4 (+) — Chassis ground (−):

Is the voltage between 4.5 and 5.5 V?

Yes	Go to 3.
No	Go to 5.

3. CHECK HARNESS AND CONNECTOR BETWEEN ECM AND FUEL PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF. Ref. to COMMON(diag)>Clear memory.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the fuel pressure sensor.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 50 — (E162) No. 1:
(E158) No. 54 — (E162) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repairing or replacing the wiring harness or connector.

4. CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR (SHORT TO POWER SUPPLY).

1. Connect all connectors.
2. Turn the ignition switch to OFF.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 50 (+) — Engine ground (−):
(E162) No. 1 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair or replace the wiring harness or connector.
No	Replace the fuel pressure sensor.

5. CHECK WIRING HARNESS AND CONNECTOR (OPEN).

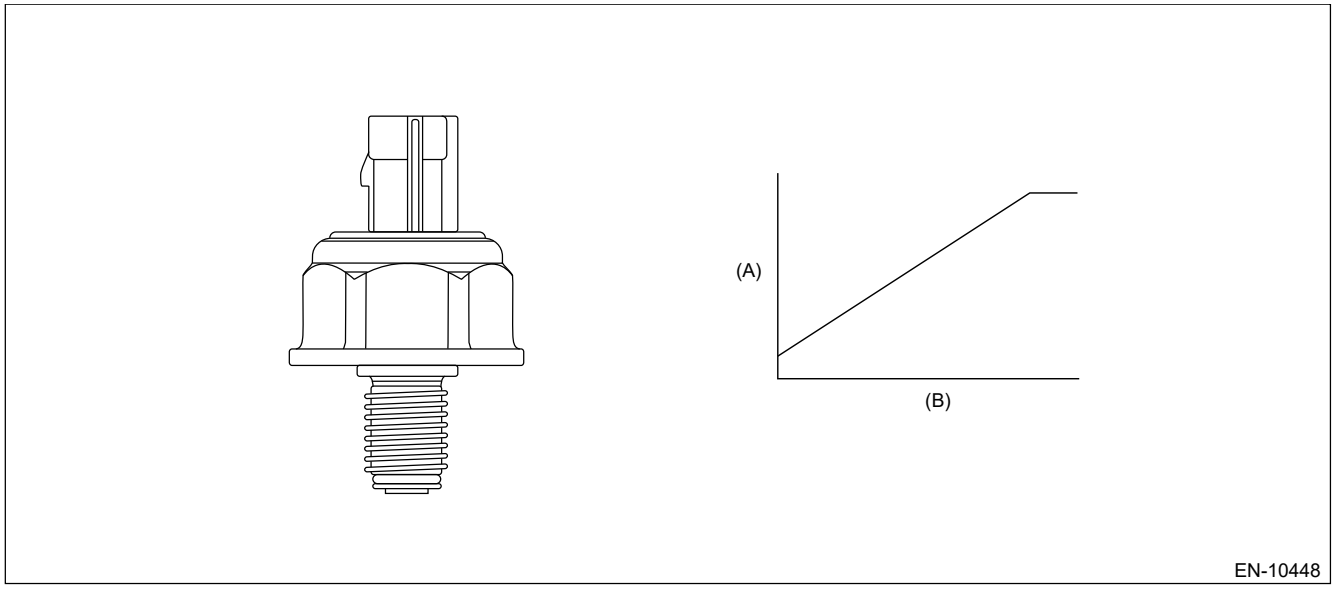
1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 41 — (E162) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair or replace the wiring harness or connector.

6. CHECK WIRING HARNESS AND CONNECTOR (SHORT).

1. Disconnect the connector from ECM.
2. Disconnect the connector from the fuel pressure sensor.
3. Measure the resistance between ECM connector and fuel pressure sensor connector.
   Connector & terminal
   (E158) No. 41 — Chassis ground:
   (E162) No. 4 — Chassis ground:



Is the resistance 1 MΩ or more?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair or replace the wiring harness or connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the fuel pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) Output voltage (B) Absolute pressure

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	3.739V or more

Time needed for diagnosis:2400ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0196 ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE

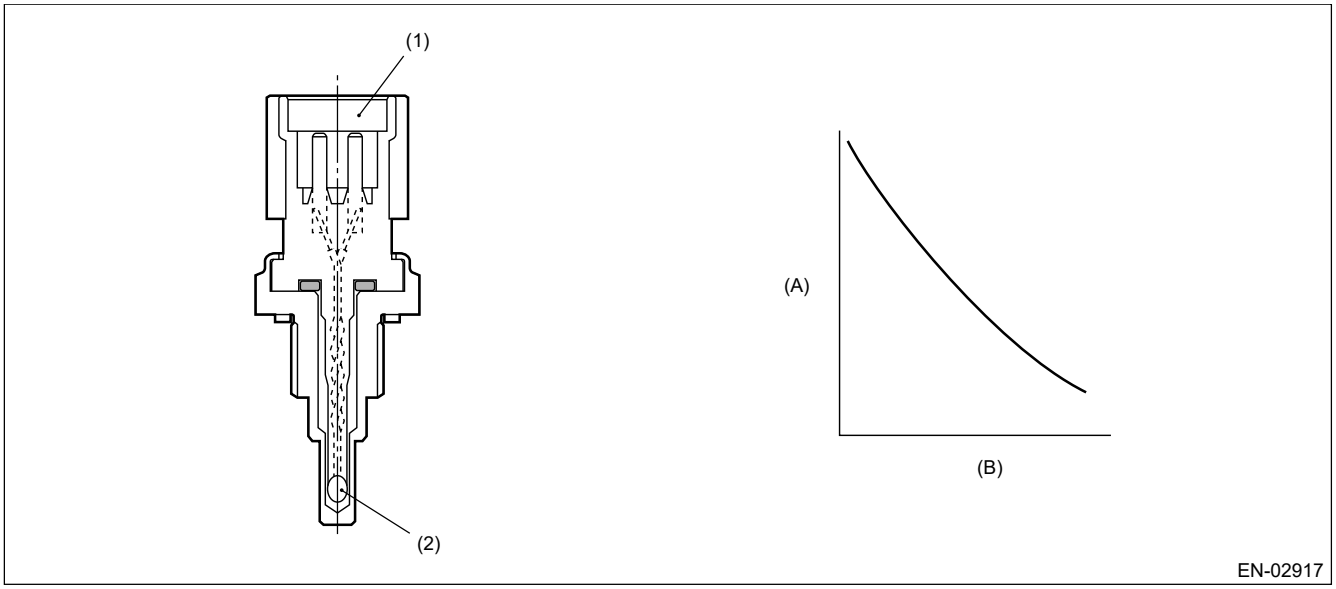
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check



Is DTC P0196 displayed? (Current malfunction)

Yes	Replace the engine oil temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Oil Temperature Sensor.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the engine oil temperature sensor output properties. Using the following two diagnoses, judge as NG when either is NG.
- **Diagnosis 1 (correlation diagnosis):** After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between engine oil temperature sensor value, engine coolant temperature sensor value and intake air temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between engine oil temperature and engine coolant temperature, engine oil temperature and intake air temperature.
- **Diagnosis 2 (function diagnosis):** Judge as NG when engine oil temperature does not rise to the specified value regardless of an engine running condition that clears certain conditions.

2. COMPONENT DESCRIPTION

(A) Resistance value (kΩ)
(B) Temperature °C (°F)
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Soaking time	21600s or more
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Engine oil temperature at engine starting	Less than 45°C (113°F)
Engine speed	500 rpm or more
Idling ratio	0.5× 100 or less

4. GENERAL DRIVING CYCLE

- **Diagnosis 1:** Perform the diagnosis only once after the engine starts after a certain period of soaking time.
- **Diagnosis 2:** Perform the diagnosis only once after starting the engine from cold condition.

5. DIAGNOSTIC METHOD

Judge as NG when Diagnosis 1 or Diagnosis 2 becomes NG.
If the duration of time while the following conditions are met is longer than the time indicated, judge as

NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
|Engine oil temperature at engine start − Engine coolant temperature at engine start|	More than 10°C(18°F)
|Engine oil temperature at engine start − Intake air temperature 30 sec. after engine start|	More than value of Map 1

Map 1

Ambient temperature °C (°F)	−30 (−22)	30 (86)	45 (113)	60 (140)
|Engine oil temperature at engine start − Intake air temperature 30 sec. after engine start| °C (°F)	10 (18)	10 (18)	22 (39.6)	22 (39.6)

Time needed for diagnosis: Less than 1 second

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Engine oil temperature	Less than 45°C (113°F)
Elapsed time after starting the engine	Value of Map 2 or more

Map 2

		Intake air temperature at engine start °C (°F)							
		−30 (−22)	−20 (−4)	−10 (14)	0 (32)	10 (50)	20 (68)	30 (86)	40 (104)
Percentage of time when engine is at stop against time elapsed since engine start	0.0	1620000	1420000	1220000	1040000	860000	680000	500000	320000
	0.3	1620000	1420000	1220000	1040000	860000	680000	500000	320000
	0.6	1620000	1420000	1220000	1040000	860000	680000	500000	320000
	1.0	1620000	1420000	1220000	1040000	860000	680000	500000	320000
ms									

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0197 ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT LOW

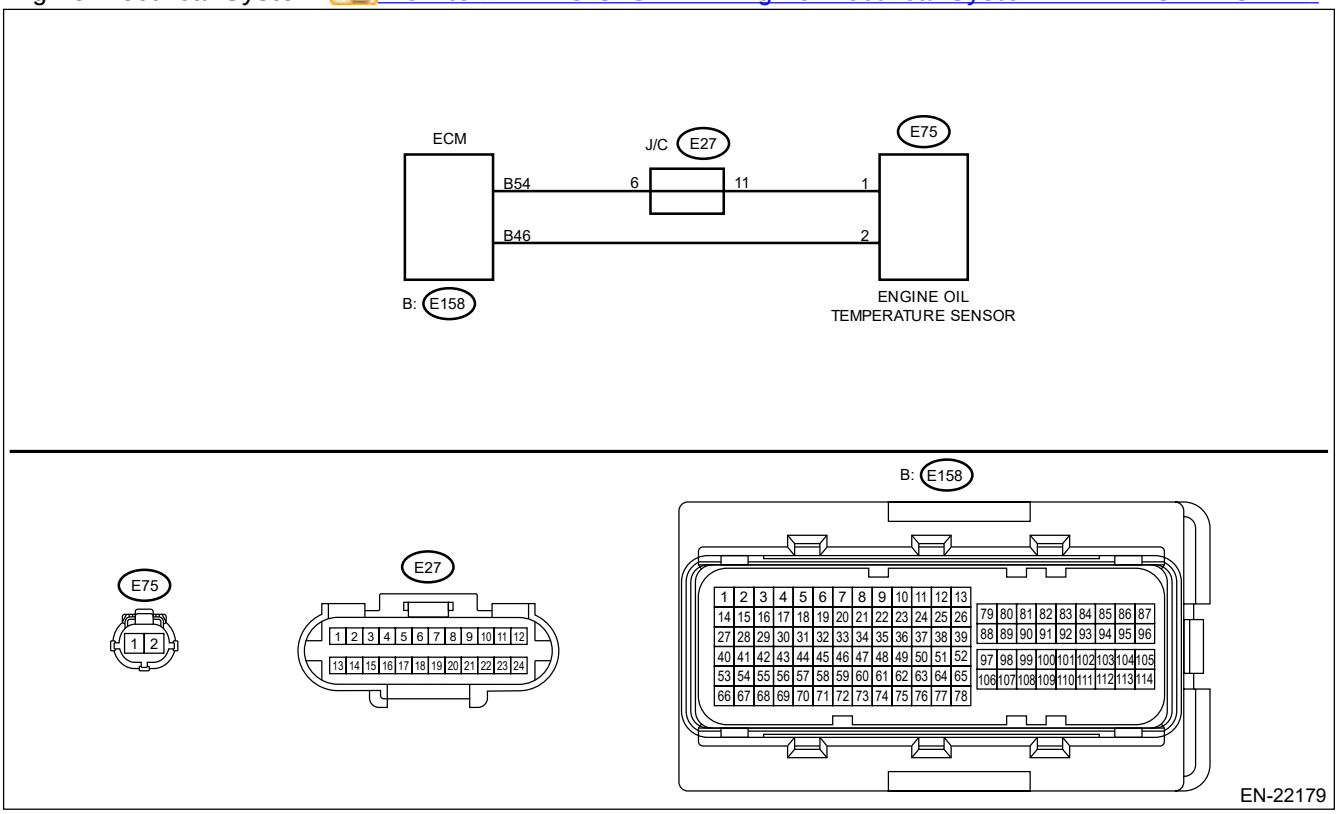
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Hard to start
- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [Engine Oil Temperature].

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

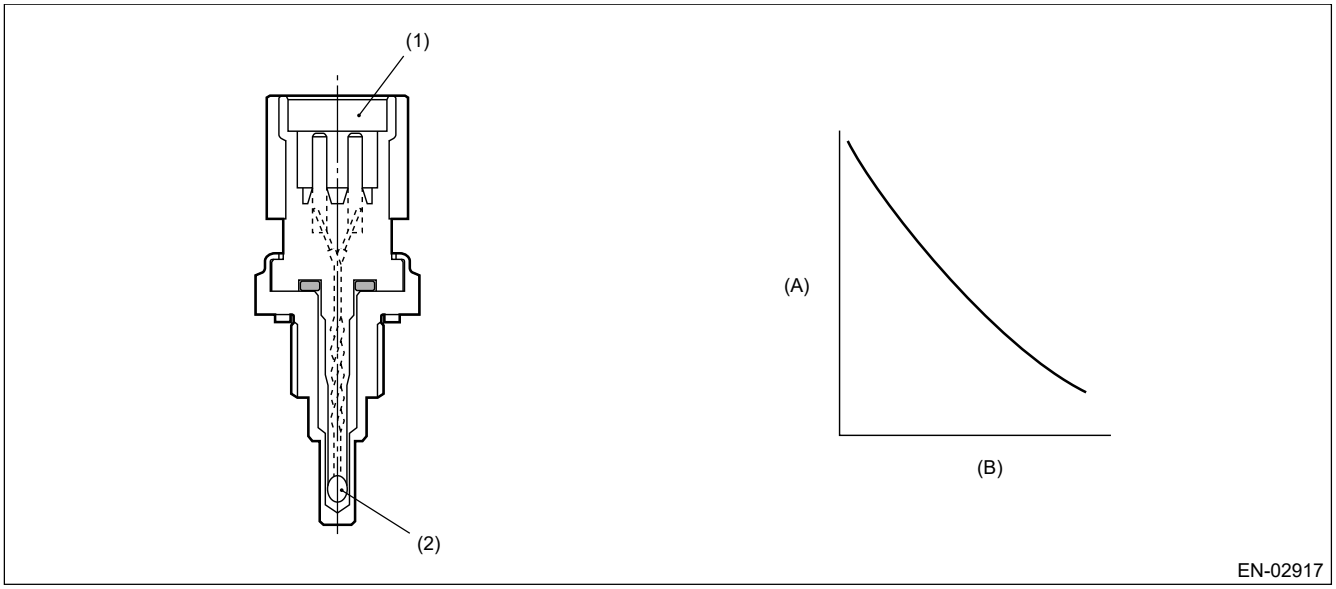
Is the value of [Engine Oil Temperature] 150°C (302°F) or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND ENGINE OIL TEMPERATURE SENSOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from the engine oil temperature sensor.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal
(E158) No. 46 — Chassis ground:



Is the resistance 1 MΩ or more?

Yes	Replace the engine oil temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Oil Temperature Sensor.
No	Repair the short circuit to ground in the harness between the ECM connector and engine oil temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the oil temperature sensor.
Judge as NG when outside of the judgment value.

2. COMPONENT DESCRIPTION

(A) Resistance value (kΩ)
(B) Temperature °C (°F)
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.205V

Time needed for diagnosis: 500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0198 ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT HIGH

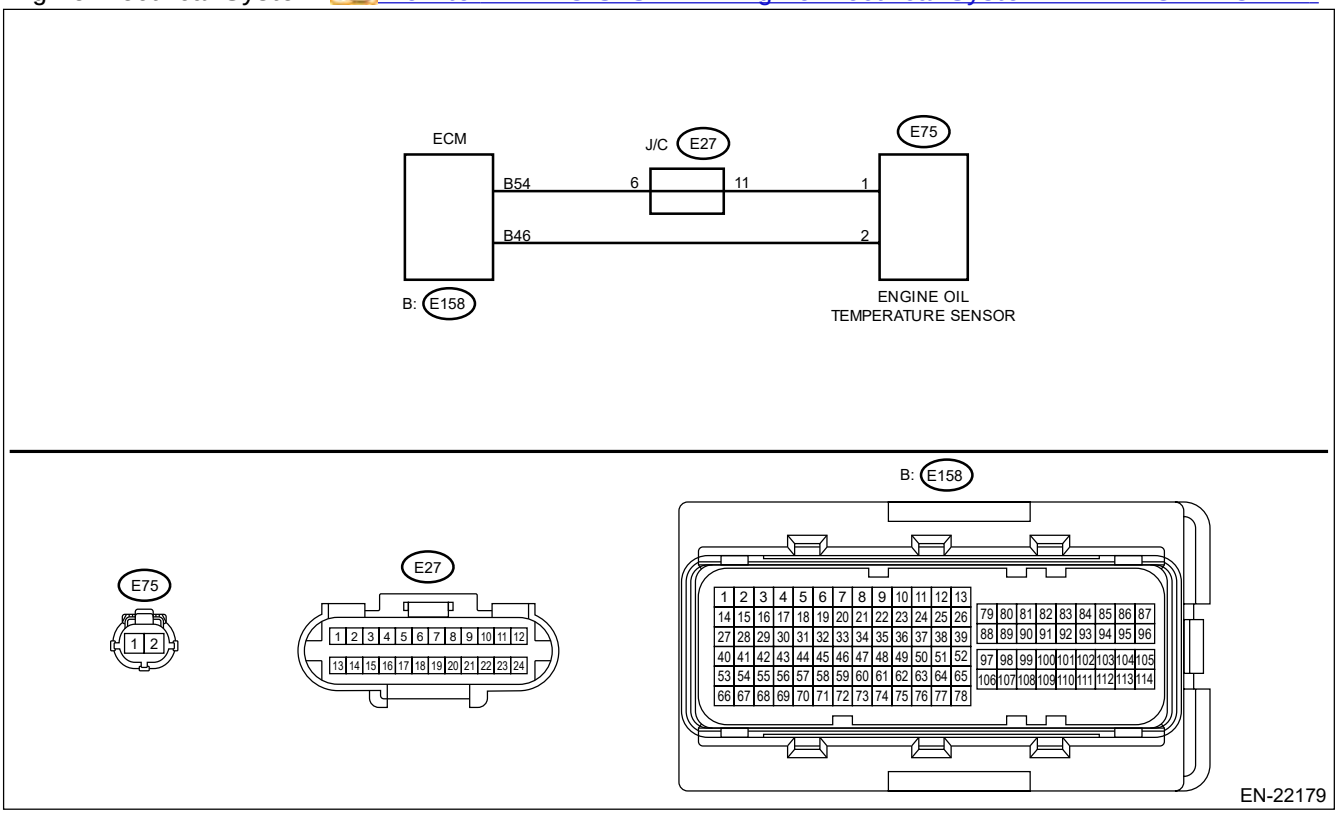
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Hard to start
- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [Engine Oil Temperature].

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Engine Oil Temperature]−40°C (−40°F) or less?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK FOR POOR CONTACT.

Check for poor contact between the ECM and engine oil temperature sensor connectors.

Is there poor contact of the ECM or engine oil temperature sensor connectors?

Yes	Repair the poor contact of ECM or engine oil temperature sensor connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND ENGINE OIL TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from the engine oil temperature sensor.
4. Measure the resistance of the harness between the ECM connector and engine oil temperature sensor connector.

Connector & terminal

(E158) No. 46 — (E75) No. 2:

(E158) No. 54 — (E75) No. 1:

Is the resistance less than 1 Ω?

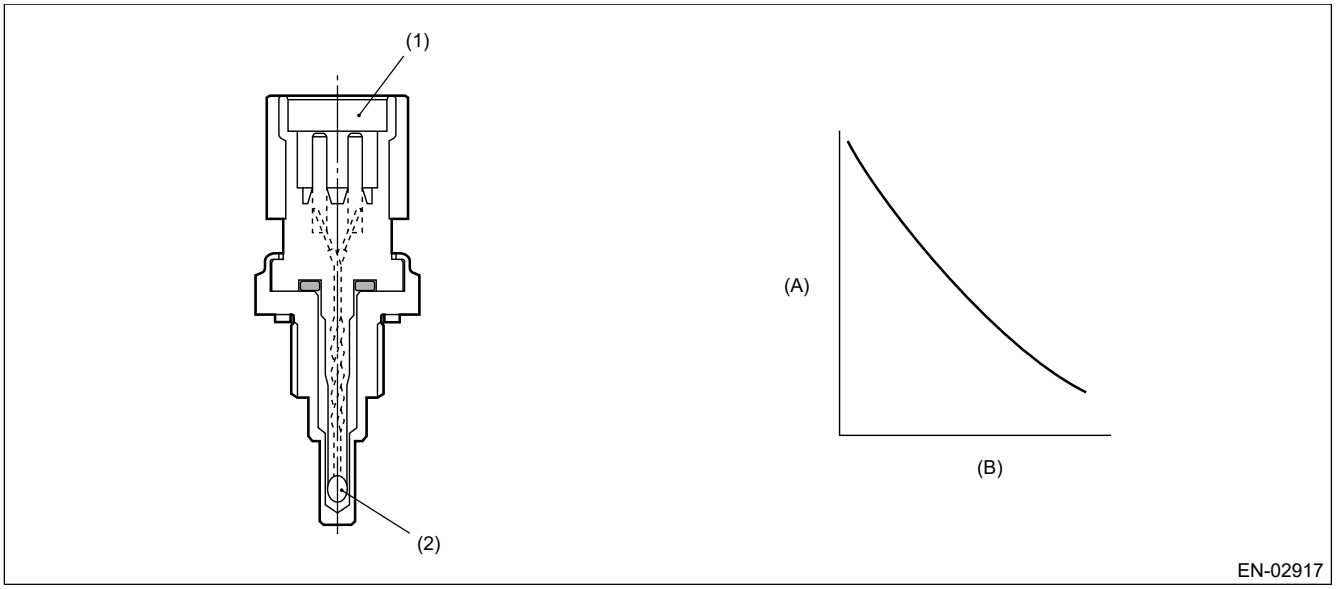
Yes	Go to 4.
No	Repair the open circuit in the harness between ECM connector and engine oil temperature sensor connector.

4. CHECK HARNESS BETWEEN ECM AND ENGINE OIL TEMPERATURE SENSOR (SHORT TO POWER SUPPLY).

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 46 (+) — Chassis ground (−):



Is the voltage 5 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and engine oil temperature sensor connector.
No	Replace the engine oil temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Oil Temperature Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the oil temperature sensor.
Judge as NG when outside of the judgment value.

2. COMPONENT DESCRIPTION

(A) Resistance value (kΩ)
(B) Temperature °C (°F)
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.695V or more

Time needed for diagnosis: 500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW

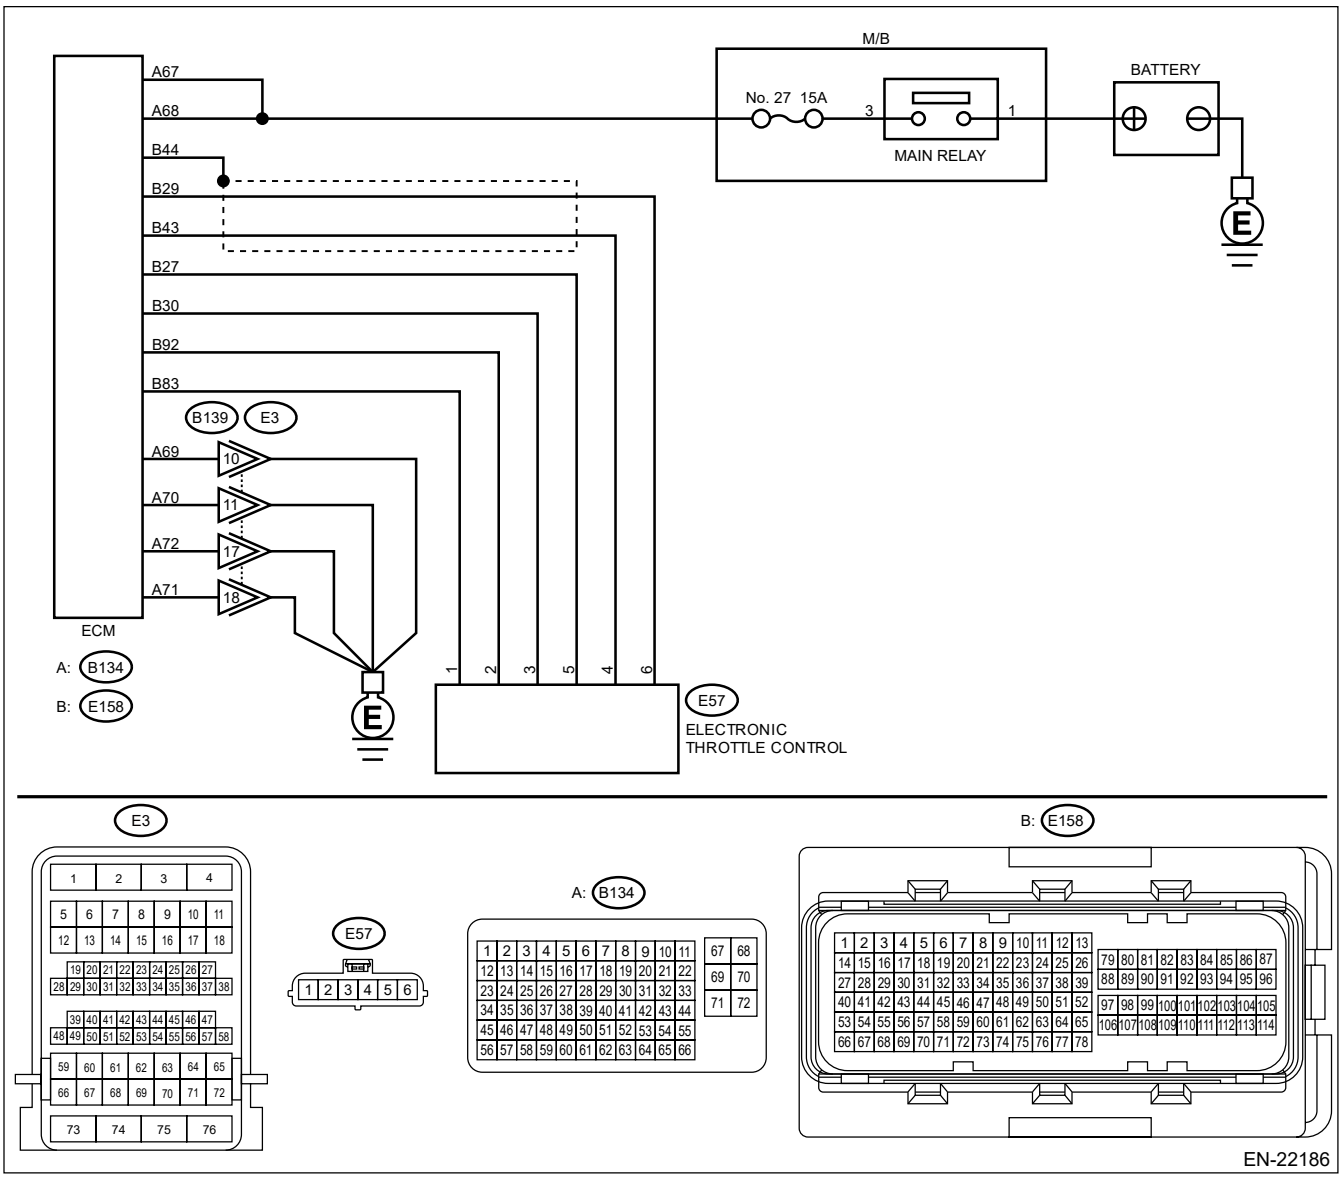
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance
- Engine stall

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 29 — Chassis ground:
(E158) No. 43 — Chassis ground:
(E158) No. 43 — (E158) No. 44:

Is the resistance 1 MΩ or more?

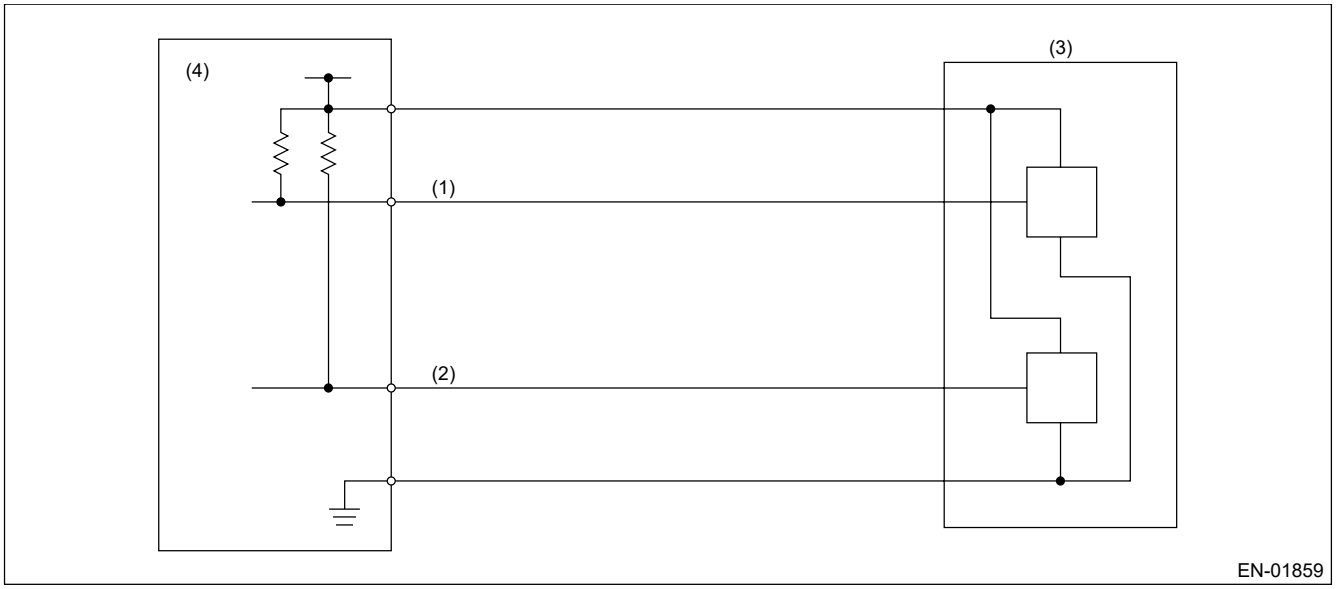
Yes	Go to 2.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

2. CHECK SHORT CIRCUIT INSIDE THE ECM.

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 4 — Engine ground:



Is the resistance 1 MΩ or more?

Yes	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 2 input voltage	1.148V or less

Time needed for diagnosis: 24ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH

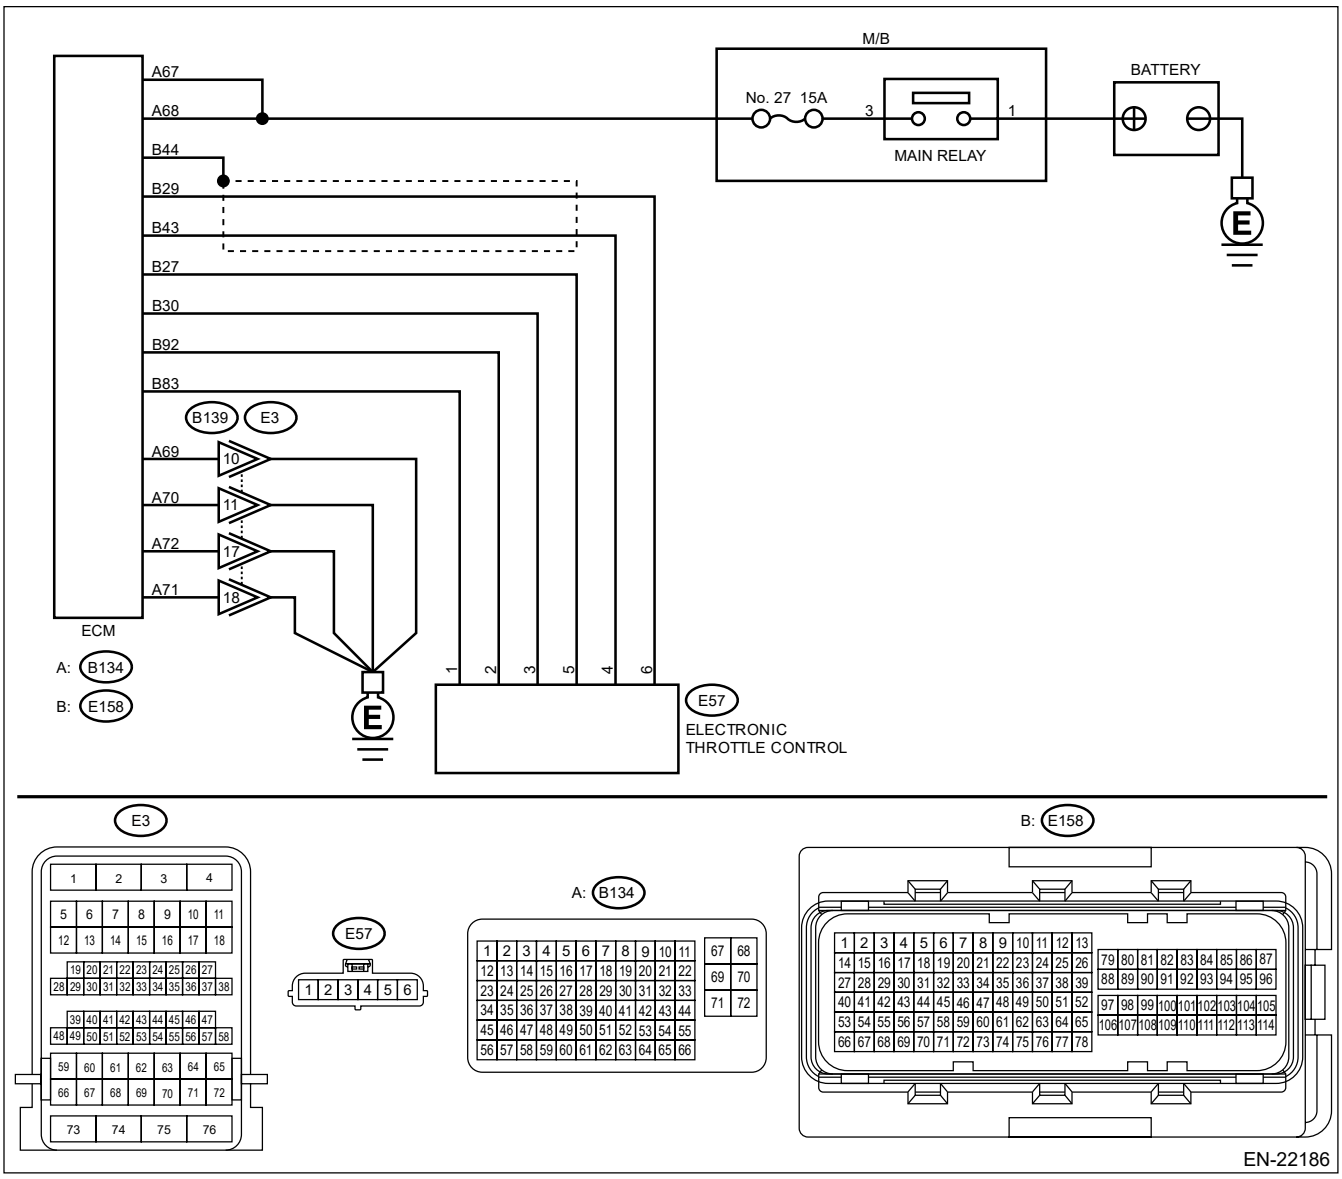
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance
- Engine stall

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

1. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance of harness between ECM connector and electronic throttle control connector.

Connector & terminal

(E158) No. 43 — (E57) No. 4:

(E158) No. 30 — (E57) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

2. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Poor contact of ECM connector** • **Poor contact of coupling connector**

3. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO POWER SUPPLY).

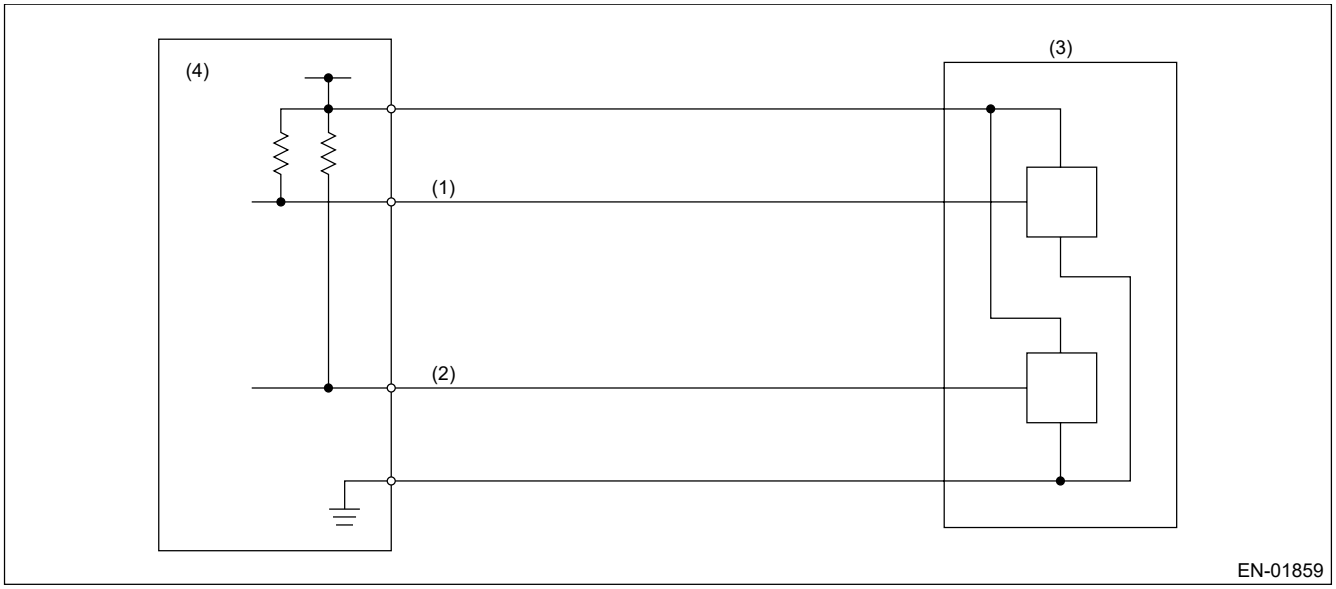
1. Turn the ignition switch to ON.
2. Measure the voltage between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 4 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
No	Go to 4.

4. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT BETWEEN LINES).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 27 — (E158) No. 43:



Is the resistance 1 MΩ or more?

Yes	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.
No	Repair the short circuit between lines in harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 2 input voltage	4.785V or more

Time needed for diagnosis: 24ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0300 RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED

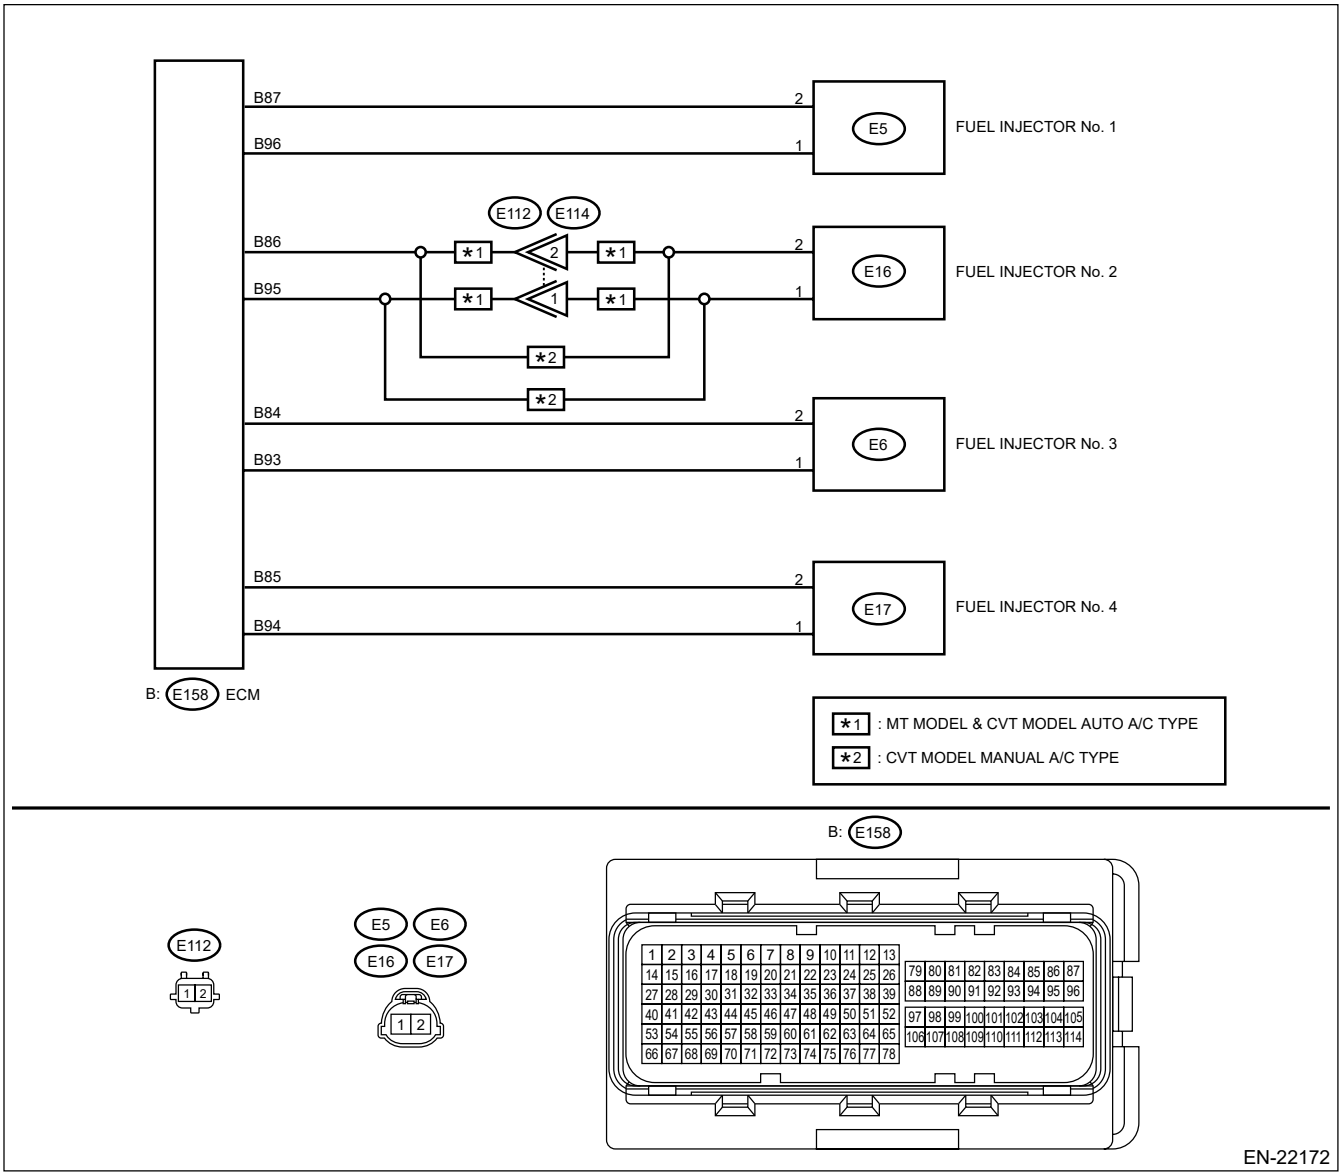
DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

Trouble symptom:

- Engine stall
- Improper idling
- Rough driving

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between the ECM and fuel injector connector.

3. CHECK FUEL INJECTOR.

Check all fuel injectors. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 4.
No	Replace the faulty fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

4. CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.

Check the installation condition of the camshaft position sensor and crankshaft position sensor.

Is the camshaft position sensor or crankshaft position sensor loosely installed?

Yes	Tighten the camshaft position sensor or crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.
No	Go to 5.

5. CHECK CRANKSHAFT POSITION SENSOR PLATE.

Check the crankshaft position sensor plate.

Is the crankshaft position sensor plate rusted or does it have broken teeth?

Yes	Replace the crankshaft position sensor plate. Ref. to MECHANICAL(H4DO)>Cylinder Block.
No	Go to 6.

6. CHECK INSTALLATION CONDITION OF TIMING CHAIN.

Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block.

ST 18252AA000 CRANKSHAFT SOCKET

Is the timing chain dislocated from its proper position?

Yes	Correct the installation condition of timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly.
No	Go to 7.

7. CHECK FUEL LEVEL.

Check the fuel gauge display.

Is the fuel meter indication higher than the “Lower” level?

Yes	Go to 8.
No	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to 8.

8. CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Start the engine, and drive the vehicle at 60 km/h(37.3 MPH) or mare for 10 minutes or more.

Does the malfunction indicator light illuminate or blink?

Yes	Go to 9.
No	Repair the poor contact of connector. **Note:** **In this case, repair the following item:** • **Poor contact of ignition coil connector** • **Poor contact of fuel injector connector on faulty cylinders** • **Poor contact of ECM connector** • **Poor contact of coupling connector** • **Go to 9.**

9. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Is there any fault in air intake system?

Yes	Repair the air intake system. **Note:** **Check the following items.** • **Are there air leaks or air suction caused by loose or dislocated nuts and bolts?** • **Are there cracks or any disconnection of hoses?**
No	Go to 10.

10. CHECK ALL CYLINDERS.

Is there a fault in any cylinder?

Yes	Repair or replace the faulty part of the faulty cylinder. **Note:** **Check the following items.** • **Spark plug** • **Ignition coil** • **Fuel injector** • **Compression** • **Skipping timing chain teeth**
No	Go to DTC P0171. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0171 SYSTEM TOO LEAN BANK 1.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0301. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0301 CYLINDER 1 MISFIRE DETECTED.

DTC P0301 CYLINDER 1 MISFIRE DETECTED

Note:

For the diagnostic procedure, refer to DTC P0304. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0304 CYLINDER 4 MISFIRE DETECTED.

1. OUTLINE OF DIAGNOSIS

Detect the presence of misfire occurrence. (Revolution fluctuation method)
Monitoring misfire which influences exhaust deterioration (1.5 times of FTP) and catalyst damage is made obligatory by the law. Misfire affecting these two has two patterns below:

- Intermittent misfire (the same cylinder misfires in random, or different cylinders misfire in random): FTP 1.5 times misfire
- Every time misfire (the same cylinder misfires every time): FTP 1.5 times misfire, catalyst damage misfire

The following detecting methods are adopted for these detection.

1. Intermittent misfire: FTP 1.5 times misfire
   - 180° Interval Difference Method
   - 360° Interval Difference Method
   - 720° Interval Difference Method
2. Misfire every time: FTP 1.5 times misfire, catalyst damage misfire
   - 360° Interval Difference Method

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	8V or more
Throttle position change during 16 milliseconds	Less than 21°
Fuel shut-off	Not in operation
Engine speed	450rpm — 6400rpm (CVT model) 500rpm — 6700rpm (MT model)
Intake manifold pressure	More than value of Map 1
Time elapsed after engine start	2 crankshaft revolution or more
Following condition A or B is met	
A: Engine coolant temperature at engine starting	More than -6.7°C (19.4°F)

Secondary parameters	Execution condition
B: Following conditions (b1) and (b2) are met	
(b1) Engine coolant temperature at engine starting	-6.7°C (19.4°F) or less
(b2) Engine coolant temperature	21.1°C (69.8°F) or more

Map 1

- Normal ignition

CVT model without active grille shutter

		Barometric pressure kPa (mmHg, inHg)		
		65.3 (490 , 19.3)	**73.3 (550 , 21.7)**	**102.4 (768 , 30.2)**

	6400	36.8 (275.8 , 10.9)	38.1 (286.1 , 11.3)	40 (300.3 , 11.8)

kPa (mmHg, inHg)

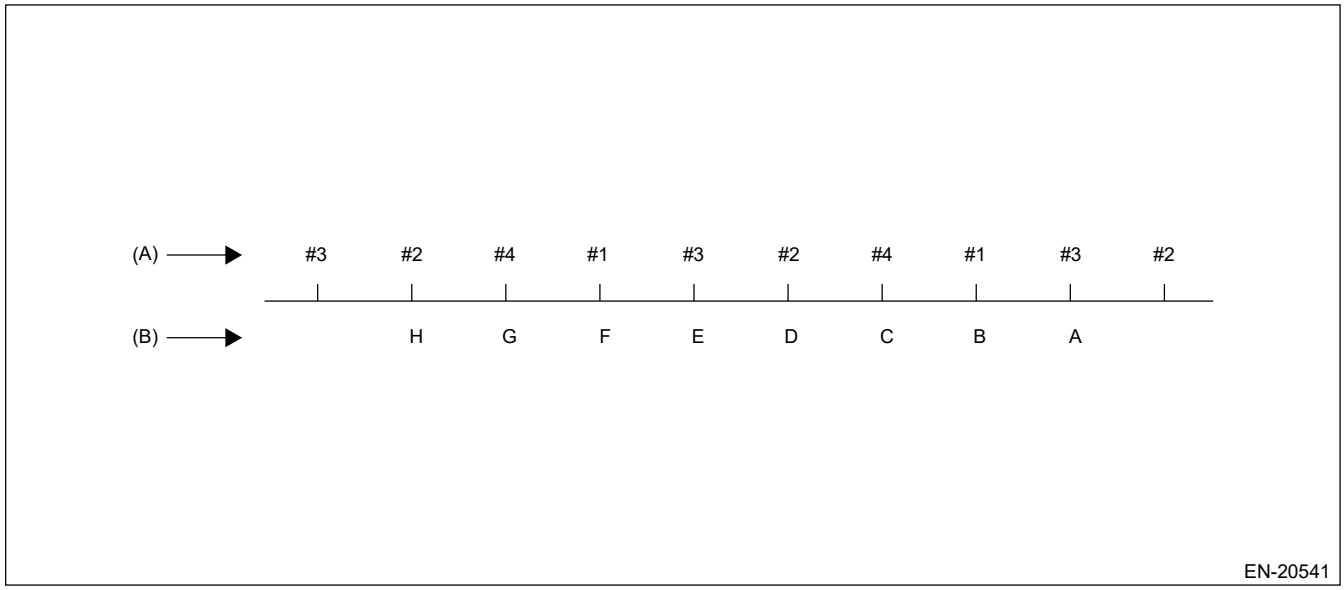
3. GENERAL DRIVING CYCLE



- If conditions are met, it is possible to detect the misfires from idling to high engine speed. However, in case any engine load or breakage occurs, perform with the engine at idle.
- Perform the diagnosis continuously.

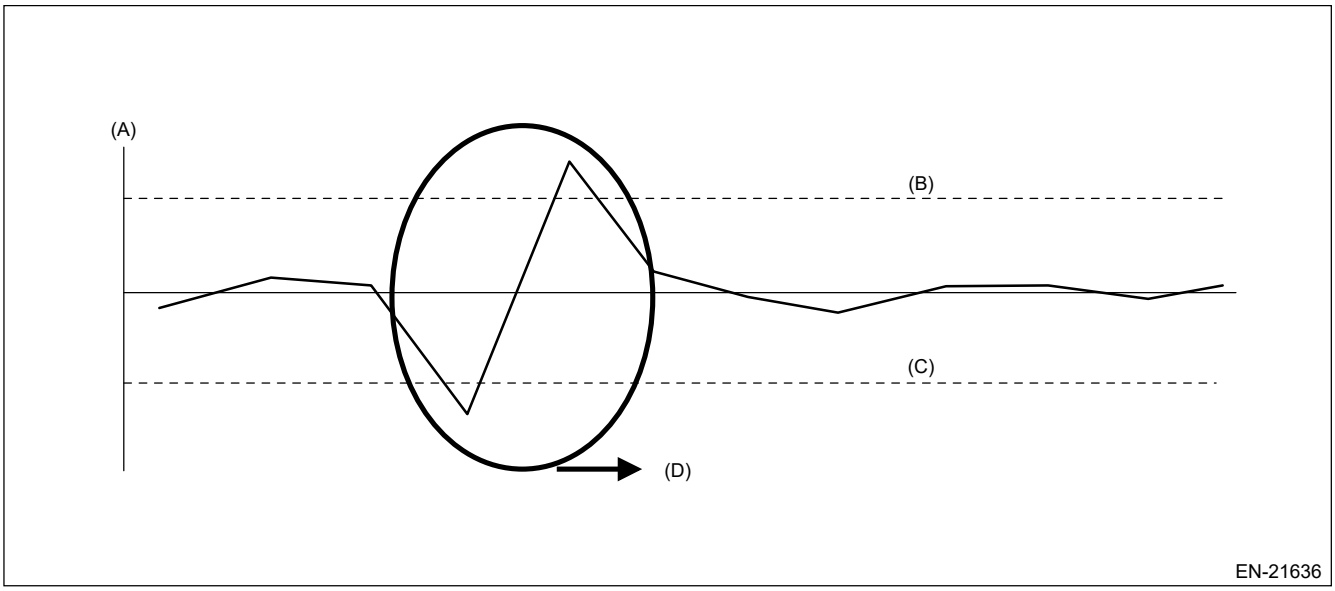
4. DIAGNOSTIC METHOD

When a misfire occurs, the engine speed will decrease and the crankshaft position speed will change. Calculate the interval difference value (diagnostic value) from crankshaft position speed by the following formula, and judge whether a misfire is occurring or not comparing the calculated result with judgment value. Count the number of misfires, if the misfire ratio is higher during 1000 revs. or 200 revs., judge corresponding cylinders as NG.

Diagnostic value calculation (Calculate from angle speed) →	**Misfire detection in every single ignition (Compare diagnostic value with judgment value) →**	**NG judgment (Misfire occurrence judgment required by the law) (Compare number of misfire with judgment value)**
	• 180 Degree Interval Difference Method • 360 Degree Interval Difference Method • 720 Degree Interval Difference Method	• FTP 1.5 times misfire NG judgment • NG judgment for catalyst-damaging misfire

As shown in the following figure, pick a cylinder as the standard and name it A. And the former crankshaft position speed is named B, the second former crankshaft position speed is named C, the third is named D, etc.

(A) Ignition order (B) Crankshaft position speed

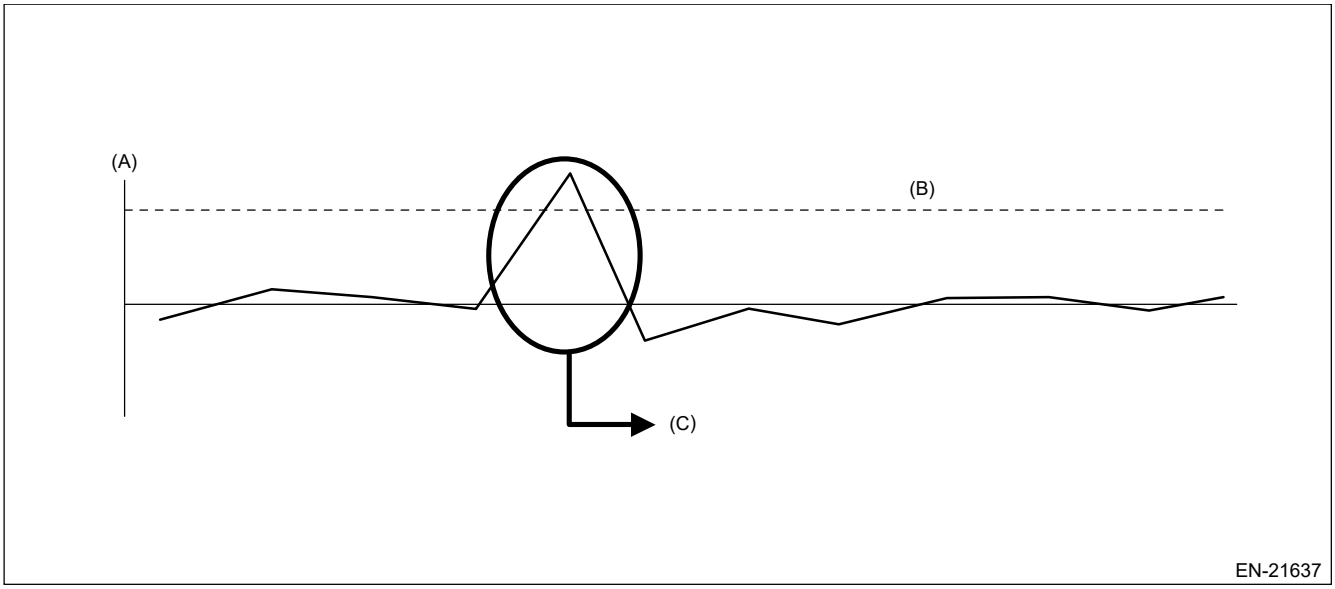


180° INTERVAL DIFFERENCE METHOD

Diagnostic value	**180 degree interval difference = {(C – B) – (G – C)/4} – {(B – A)**

– (F – B) / 4}

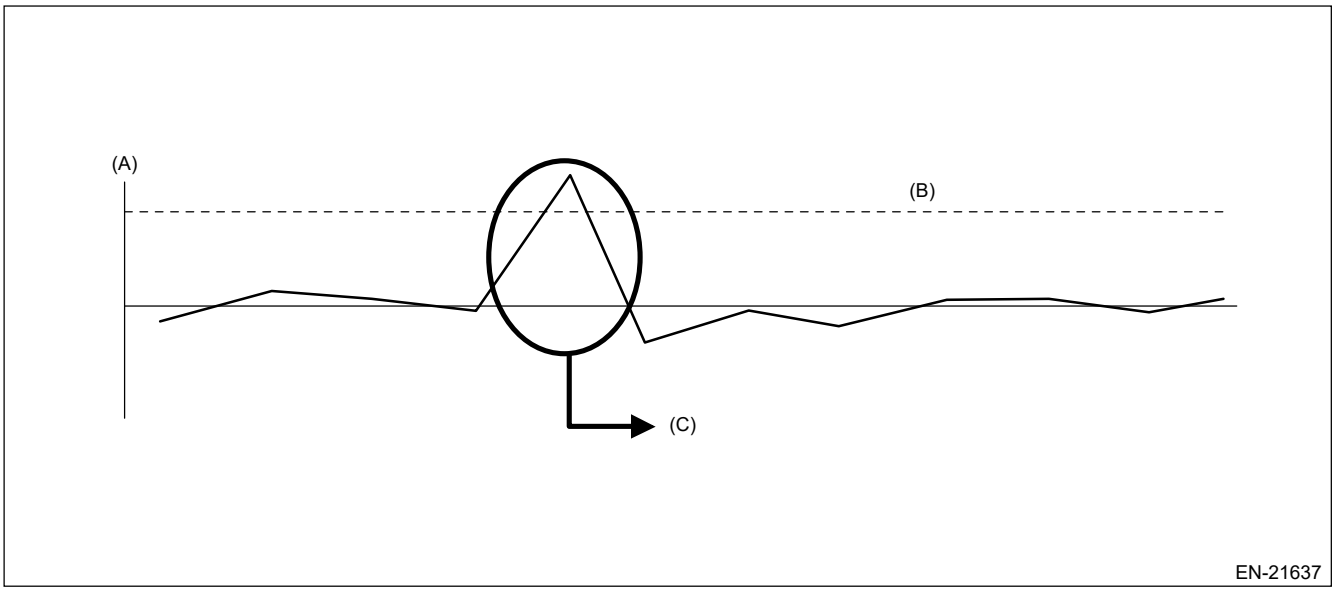
Judge as a misfire in the following cases.



- 180 degree interval difference: More than judgment value of positive side
- 180 degree interval difference: Judgment value of negative side or less
  (Diagnostic value before 180° CA)

(A) 180 degree interval difference
(B) Threshold value (positive number)
(C) Threshold value (negative number)
(D) Judged as misfire

360° INTERVAL DIFFERENCE METHOD



Diagnostic value	360 degree interval difference = (B – A) – (D – C)
Misfire judgment	360 degree interval difference > Judgment value → Judged as misfire

(A) 360 degree interval difference (B) Threshold value (C) Judged as misfire

720° INTERVAL DIFFERENCE METHOD

Diagnostic value	720 degree interval difference = (B – A) – (F – E)
Misfire judgment	720 degree interval difference > Judgment value: → Judged as misfire

(A) 720 degree interval difference (B) Threshold value (C) Judged as misfire

- **FTP 1.5 TIMES MISFIRE (MISFIRE OCCURRENCE LEVEL WHICH INFLUENCES EXHAUST GAS) Judgment value (Judge that malfunction occurs when the misfire ratio is high in 1000 engine revs.)**

Malfunction Criteria	Threshold Value

Malfunction Criteria	Threshold Value
FTP emission diagnostic value	48×100/2000% in 1000 revs.

Time needed for diagnosis: 1000 engine revs.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

- **CATALYST-DAMAGING MISFIRE (MISFIRE OCCURRENCE LEVEL THAT WILL DAMAGE CATALYST)**

Judgment value

Malfunction Criteria	Threshold Value
Catalyst-damaging misfire diagnostic value	Value of Map 2 or more

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0302 CYLINDER 2 MISFIRE DETECTED

Note:

For the diagnostic procedure, refer to DTC P0304. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0304 CYLINDER 4 MISFIRE DETECTED.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0301. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0301 CYLINDER 1 MISFIRE DETECTED.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0303 CYLINDER 3 MISFIRE DETECTED

Note:

For the diagnostic procedure, refer to DTC P0304. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0304 CYLINDER 4 MISFIRE DETECTED.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0301. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0301 CYLINDER 1 MISFIRE DETECTED.

DTC P0304 CYLINDER 4 MISFIRE DETECTED

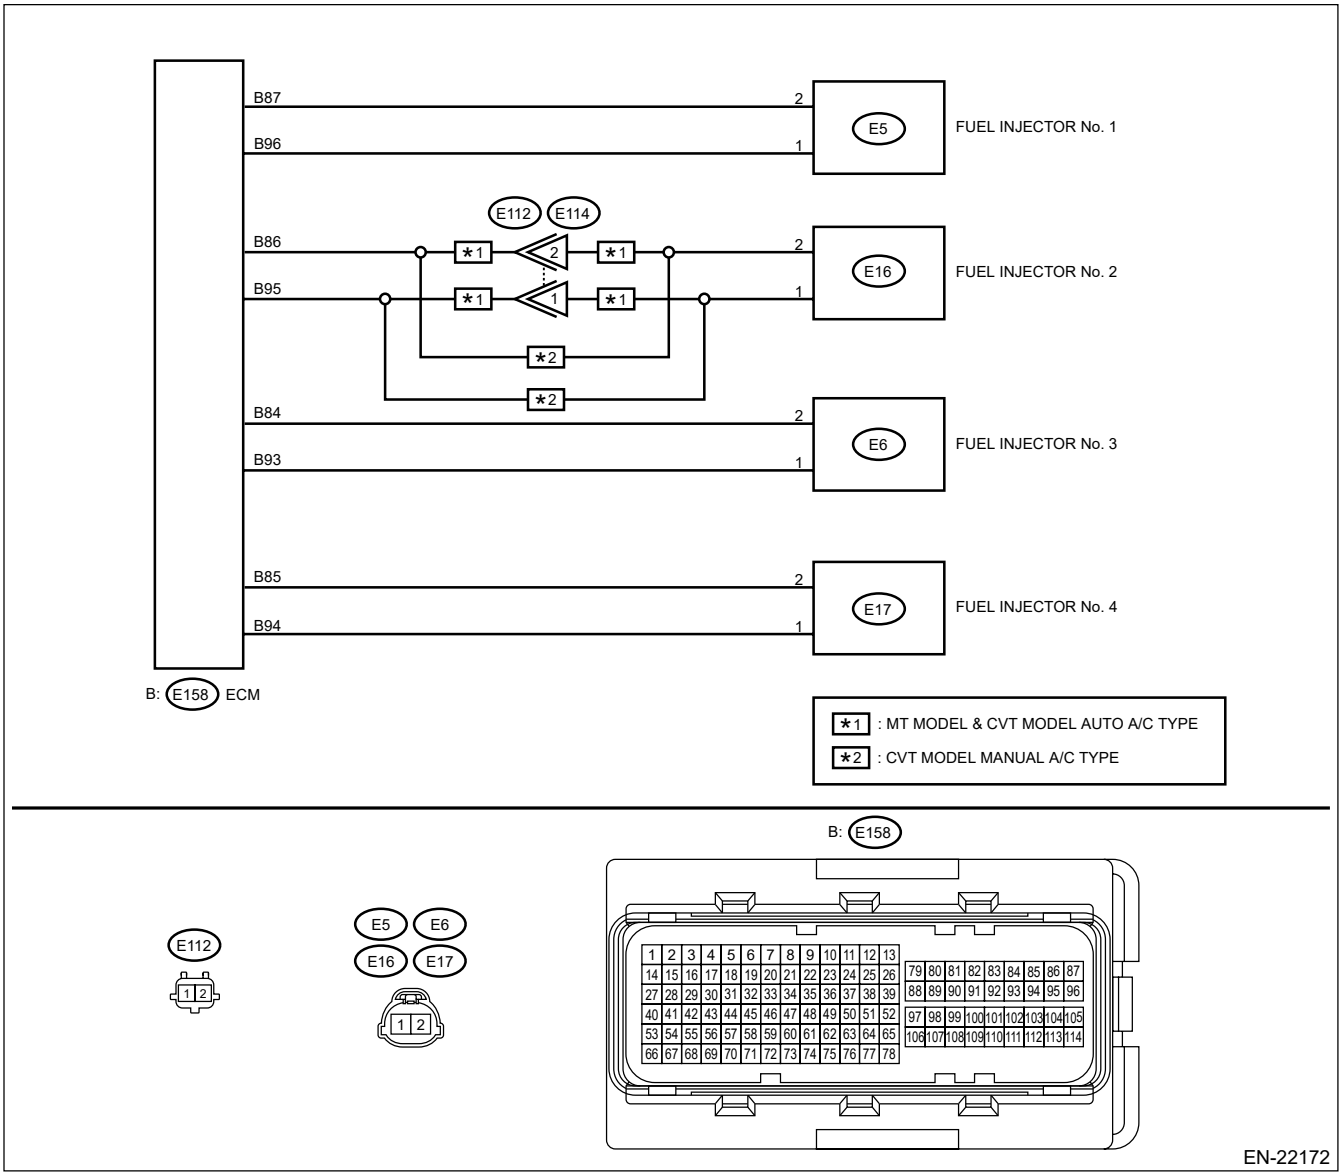
DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

Trouble symptom:

- Engine stall
- Improper idling
- Rough driving

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from fuel injector on faulty cylinders.
4. Measure the resistance between fuel injector connector and engine ground on faulty cylinders.

Connector & terminal

#1 (E5) No. 1 — Engine ground:
#1 (E5) No. 2 — Engine ground:
#2 (E16) No. 1 — Engine ground:

#3 (E6) No. 2 — Engine ground:
#4 (E17) No. 1 — Engine ground:
#4 (E17) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 2.
No	Repair the short circuit to ground in harness between ECM and fuel injector connector.

2. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

Measure the resistance of harness between ECM and fuel injector connector on faulty cylinders.

Connector & terminal

#1 (E158) No. 96 — (E5) No. 1:
#1 (E158) No. 87 — (E5) No. 2:
#2 (E158) No. 95 — (E16) No. 1:
#2 (E158) No. 86 — (E16) No. 2:

#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between the ECM and fuel injector connector.

3. CHECK FUEL INJECTOR.

Check the fuel injector on faulty cylinder. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 4.
No	Replace the faulty fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

4. CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR AND CRANKSHAFT POSITION SENSOR.

Check the installation condition of the camshaft position sensor and crankshaft position sensor.

Is the camshaft position sensor or crankshaft position sensor loosely installed?

Yes	Install the camshaft position sensor or crankshaft position sensor properly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.
No	Go to 5.

5. CHECK CRANKSHAFT POSITION SENSOR PLATE.

Check the crankshaft position sensor plate.

Is the crankshaft position sensor plate rusted or does it have broken teeth?

Yes	Replace the crankshaft position sensor plate. Ref. to MECHANICAL(H4DO)>Cylinder Block.
No	Go to 6.

6. CHECK INSTALLATION CONDITION OF TIMING CHAIN.

Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block.

ST 18252AA000 CRANKSHAFT SOCKET

Is the timing chain dislocated from its proper position?

Yes	Correct the installation condition of timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly.
No	Go to 7.

7. CHECK FUEL LEVEL.

Check the fuel gauge display.

Is the fuel meter indication higher than the “Lower” level?

Yes	Go to 8.
No	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to 10.

8. CHECK PCV VALVE.

Check the PCV valve.

Check that the PCV valve has no deformation, cracks or other damages.

Yes	Repair or replace the PCV valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Valve.
No	Go to 9.

9. CHECK PCV HOSE.

Check the PCV hose.

Is the PCV hose assembly free from cracks, damage or looseness?

Yes	Repair or replace the PCV hose. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Hose.
No	Go to 10.

10. CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Start the engine, and drive the vehicle 10 minutes or more.

Does the malfunction indicator light illuminate or blink?

Yes	Go to 12.
No	Repair the poor contact of connector. **Note:** **In this case, repair the following item:** • **Poor contact of ignition coil connector** • **Poor contact of fuel injector connector on faulty cylinders** • **Poor contact of ECM connector** • **Poor contact of coupling connector** Go to 11.

11. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Is there any fault in air intake system?

Yes	Repair the air intake system. **Note:** **Check the following items.** • **Are there air leaks or air suction caused by loose or dislocated nuts and bolts?** • **Are there cracks or any disconnection of hoses?**
No	Go to 12.

12. CHECK CYLINDER.

Check the following items for cylinder.
- Spark plug
- Ignition coil
- Fuel injector
- Compression
- Skipping timing chain teeth

Is there any fault in the cylinder?

Yes	Repair or replace faulty parts. **Note:** **Check the following items.** • **Spark plug** • **Ignition coil** • **Fuel injector** • **Compression** • **Skipping timing chain teeth**
No	Go to DTC P0171. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0171 SYSTEM TOO LEAN BANK 1.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0301. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0301 CYLINDER 1 MISFIRE DETECTED.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0327 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT LOW BANK 1 OR SINGLE SENSOR

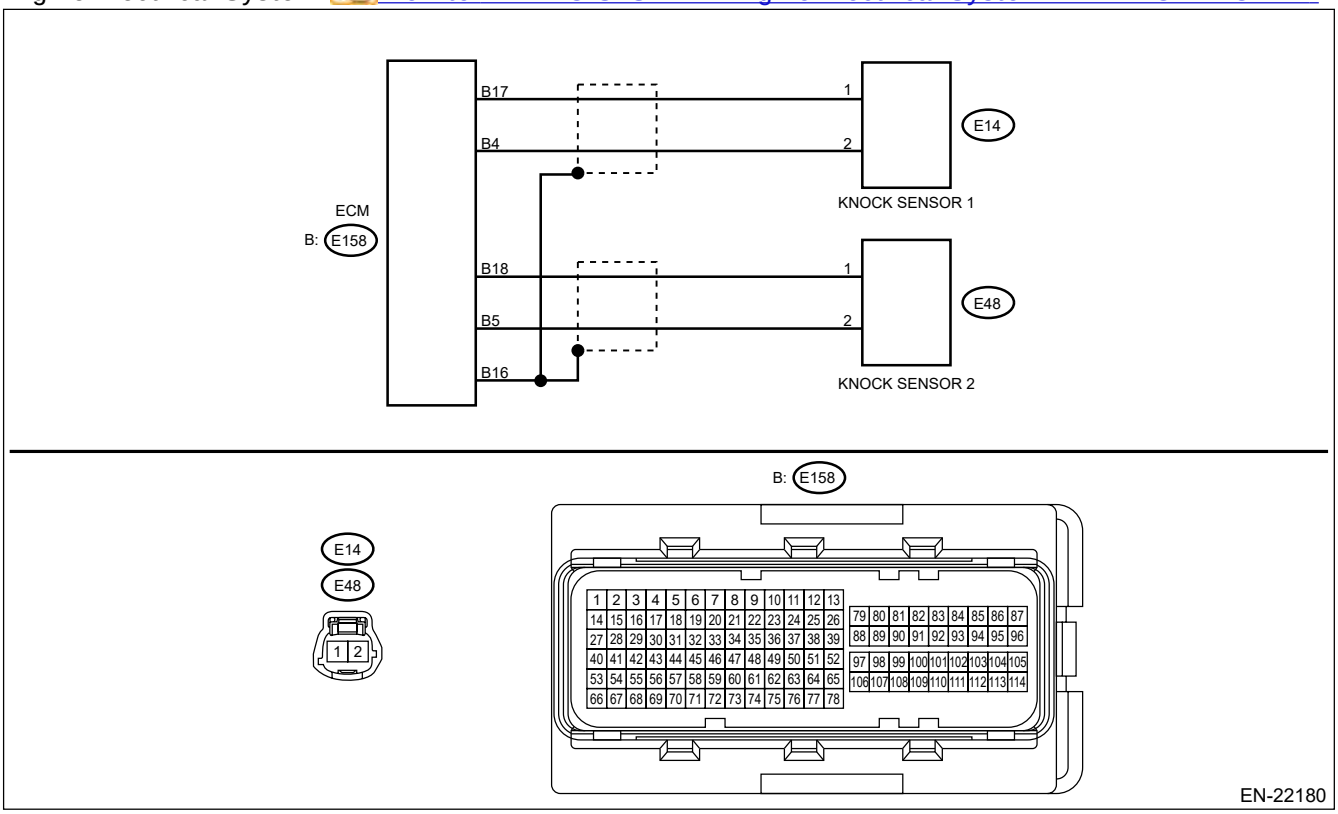
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Poor driving performance
- Knocking occurs

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 17 — (E158) No. 4:

Is the resistance less than 500 kΩ?

Yes	Go to 2.
No	Go to 3.

2. CHECK KNOCK SENSOR.

1. Disconnect the connector from the knock sensor.
2. Measure the resistance between knock sensor terminals.
   Terminals
   No. 1 — No. 2:

Is the resistance less than 500 kΩ?

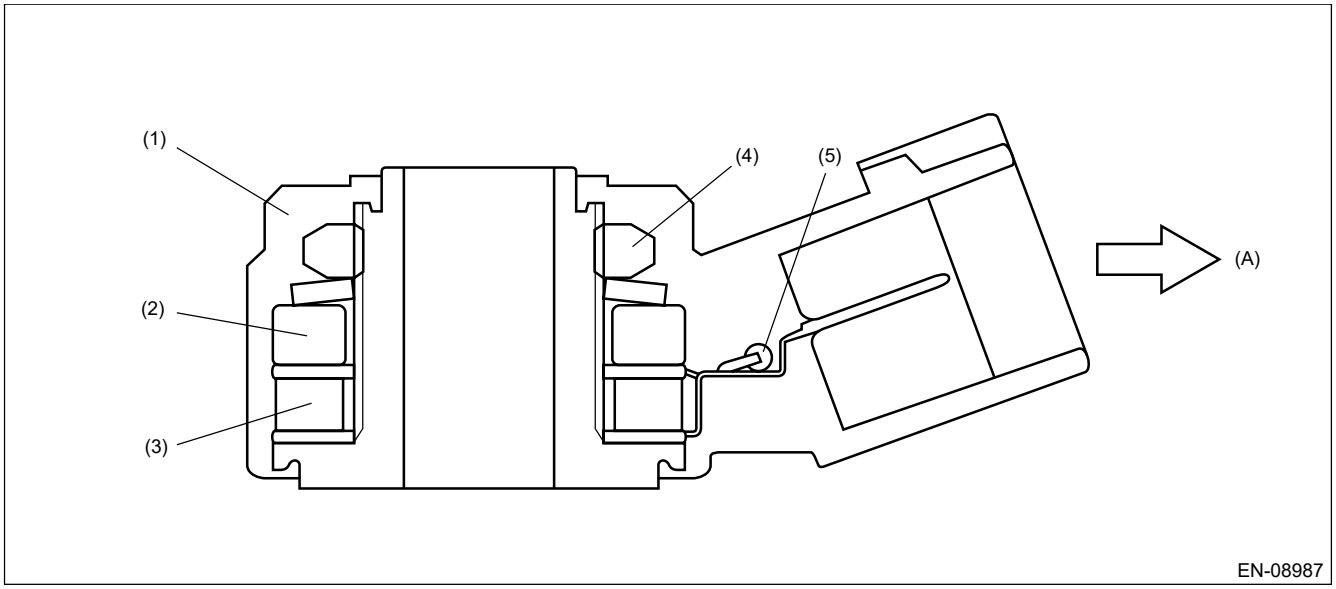
Yes	Replace the knock sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Knock Sensor.
No	Repair the short circuit between lines in the harness between the ECM connector and knock sensor connector. **Note:** **The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.**

3. CHECK INPUT SIGNAL OF ECM.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 4 (+) — Chassis ground (−):



Is the voltage 2 V or more?

Yes	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Repair the short circuit to ground in harness between ECM connector and knock sensor connector. **Note:** **The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.**

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) To knock sensor harness

(1) Case
(2) Weight
(3) Piezoelectric element
(4) Nut
(5) Resistance

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.248V

Time needed for diagnosis: 1000ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0328 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT HIGH BANK 1 OR SINGLE SENSOR

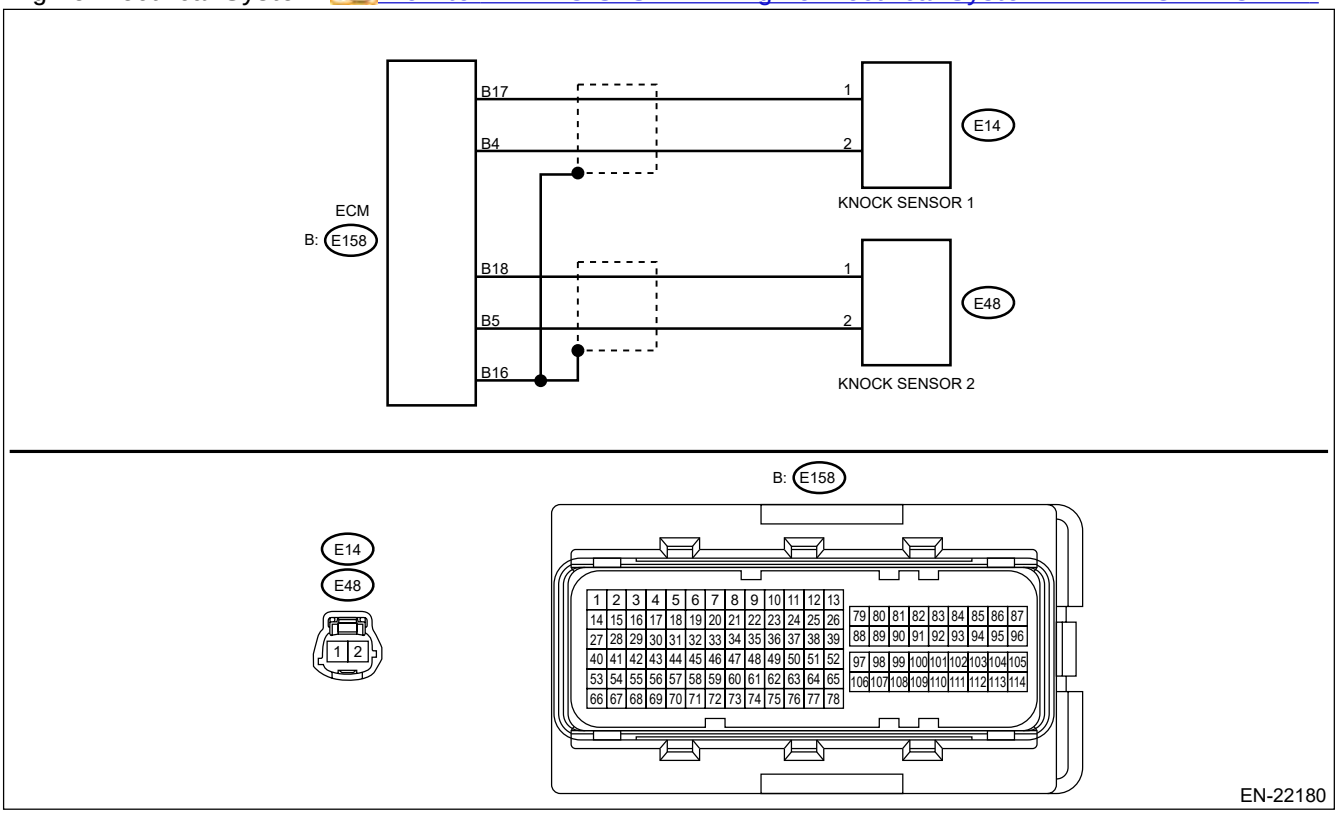
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Poor driving performance
- Knocking occurs

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR CONNECTOR.

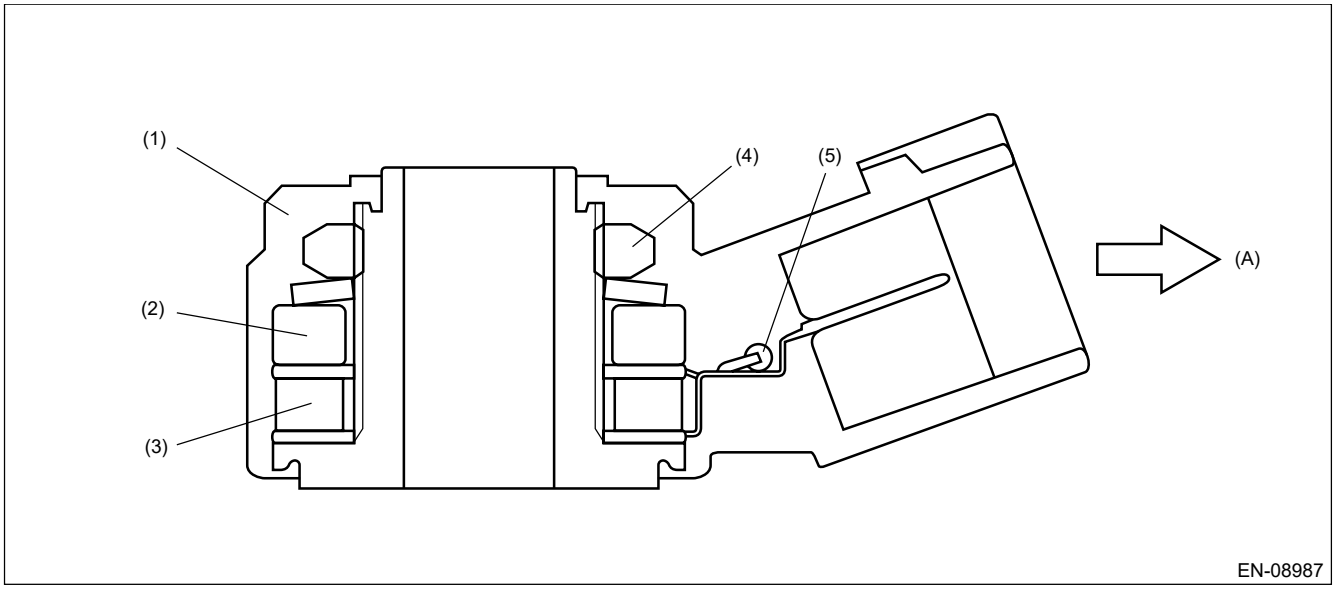
1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 17 — (E158) No. 4:

Is the resistance 600 kΩ or more?

Yes	Go to 2.
No	Repair the poor contact of ECM connector.

2. CHECK KNOCK SENSOR.

1. Disconnect the connector from the knock sensor.
2. Measure the resistance between knock sensor terminals.
   Terminals
   No. 1 — No. 2:



Is the resistance 600 kΩ or more?

Yes	Replace the knock sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Knock Sensor.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and knock sensor connector** • **Poor contact of knock sensor connector** • **Poor contact of coupling connector**

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(A) To knock sensor harness

(1) Case
(2) Weight
(3) Piezoelectric element
(4) Nut
(5) Resistance

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.664V or more

Time needed for diagnosis: 1000ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0332 KNOCK/COMBUSTION VIBRATION SENSOR 2 CIRCUIT LOW BANK 2

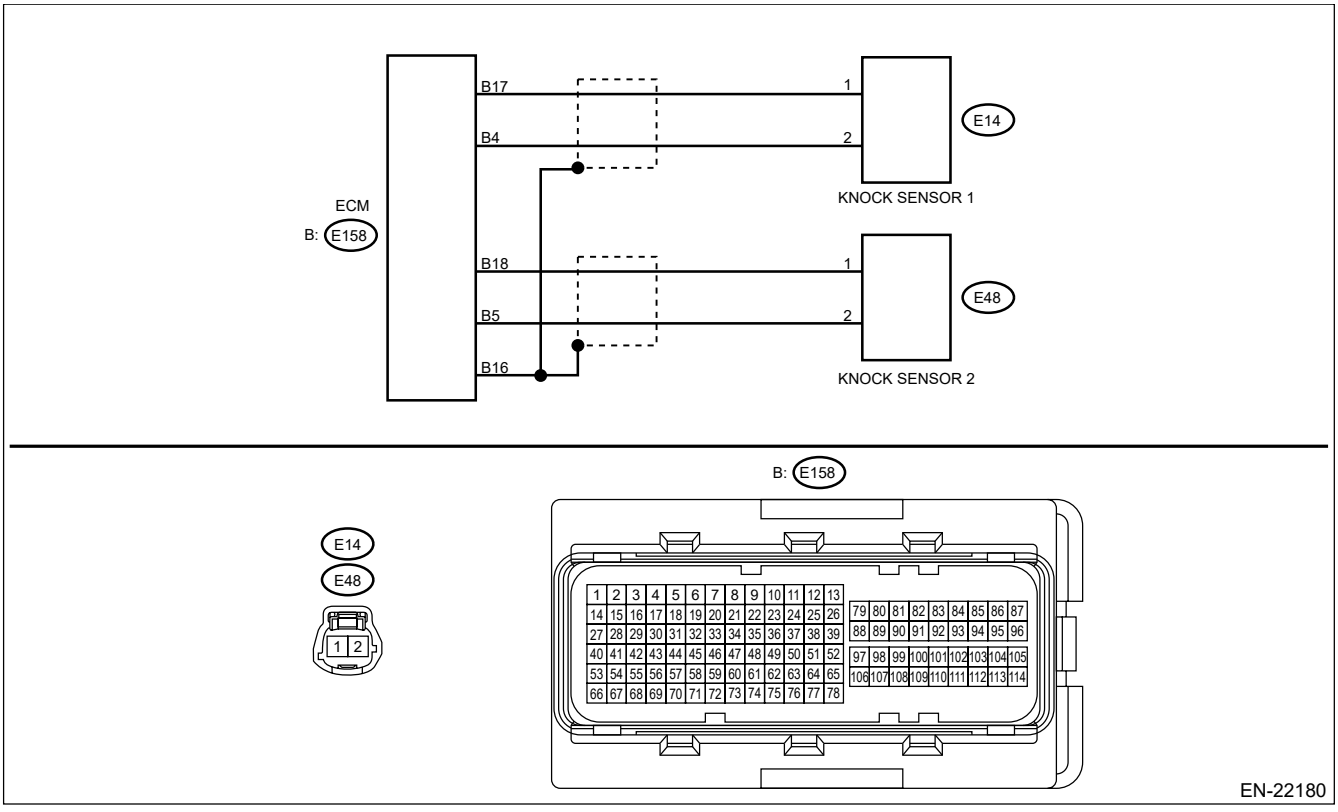
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Driving performance problem
- Knocking occurs

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 18 — (E158) No. 5:

Is the resistance less than 500 kΩ?

Yes	Go to 2.
No	Go to 3.

2. CHECK KNOCK SENSOR.

1. Disconnect the connector from the knock sensor.
2. Measure the resistance between knock sensor terminals.
   Terminals
   No. 1 — No. 2:

Is the resistance less than 500 kΩ?

Yes	Replace the knock sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Knock Sensor.
No	Repair the short circuit between lines in the harness between the ECM connector and knock sensor connector. **Note:** **The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.**

3. CHECK INPUT SIGNAL OF ECM.

1. Connect the ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 5 (+) — Chassis ground (−):

Is the voltage 2 V or more?

Yes	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Repair the short circuit to ground in harness between ECM connector and knock sensor connector. **Note:** **The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.**

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0327. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0327 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT LOW BANK 1 OR SINGLE SENSOR.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0333 KNOCK/COMBUSTION VIBRATION SENSOR 2 CIRCUIT HIGH BANK 2

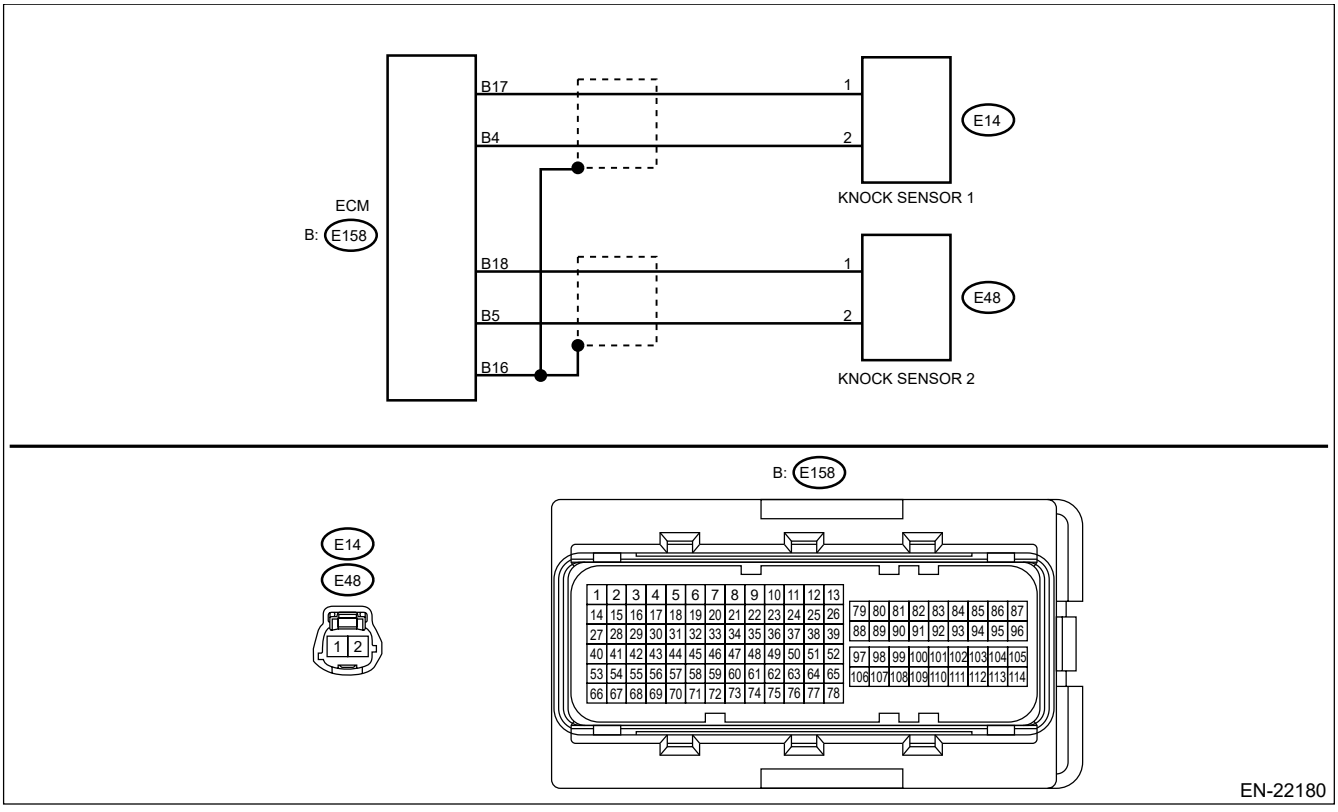
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Driving performance problem
- Knocking occurs

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 18 — (E158) No. 5:

Is the resistance 600 kΩ or more?

Yes	Go to 2.
No	Repair the poor contact of ECM connector.

2. CHECK KNOCK SENSOR.

1. Disconnect the connector from the knock sensor.
2. Measure the resistance between knock sensor terminals.
   Terminals
   No. 1 — No. 2:

Is the resistance 600 kΩ or more?

Yes	Replace the knock sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Knock Sensor.
No	Repair the open circuit in harness between ECM connector and knock sensor connector.

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P0328. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0328 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT HIGH BANK 1 OR SINGLE SENSOR.

DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT

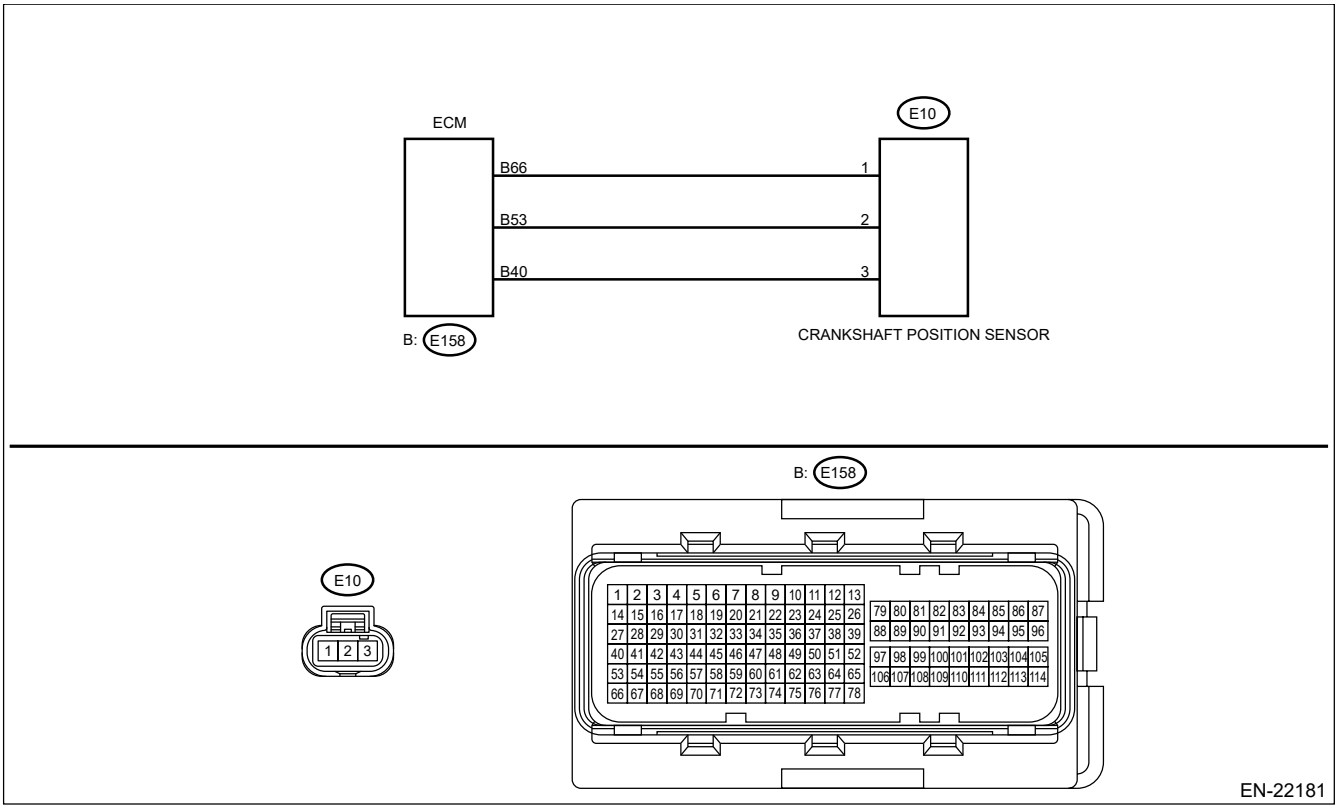
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Engine stall
- Failure of engine to start

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Check the installation condition of crankshaft position sensor.

Is the crankshaft position sensor installation bolt tightened securely?

Yes	Go to 2.
No	Tighten the crankshaft position sensor installation bolt securely. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.

2. CHECK CRANKSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Remove the crankshaft position sensor.
3. Measure the resistance between terminals of crankshaft position sensor.
   Terminals
   No. 1 — No. 2:

Is the resistance between 1 and 4 kΩ?

Yes	Go to 3.
No	Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.

3. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (OPEN).

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and crankshaft position sensor connector.

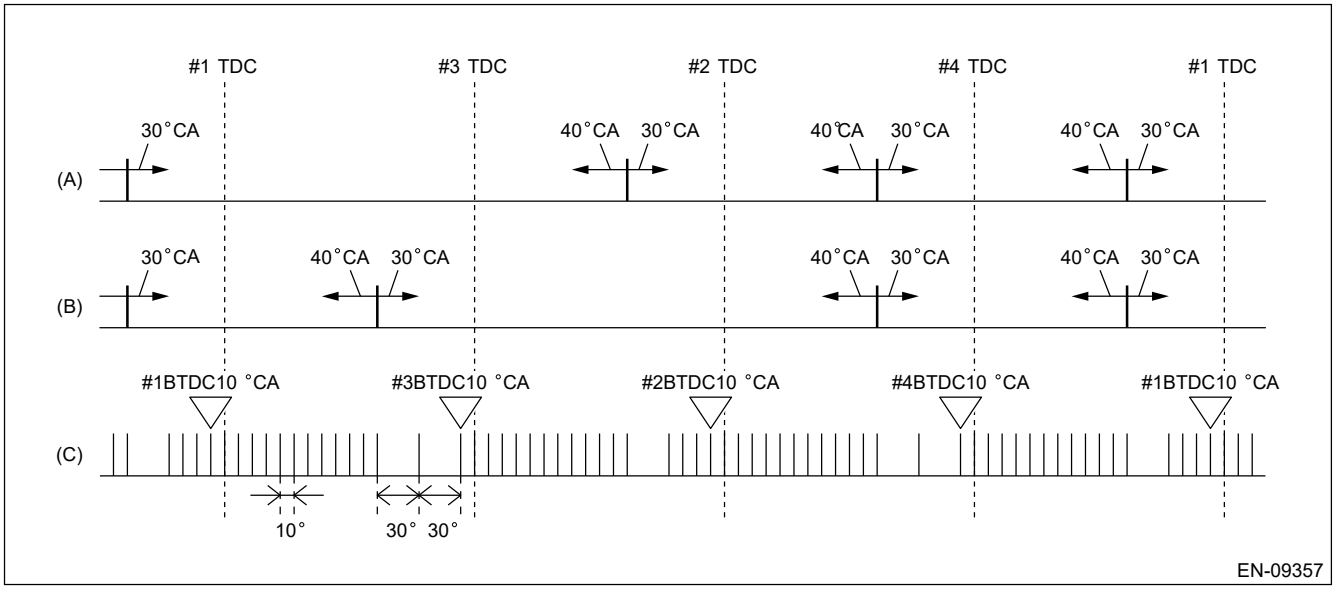
Connector & terminal

(E158) No. 66 — (E10) No. 1:
(E158) No. 53 — (E10) No. 2:
(E158) No. 40 — (E10) No. 3:

Is the resistance less than 1 Ω?

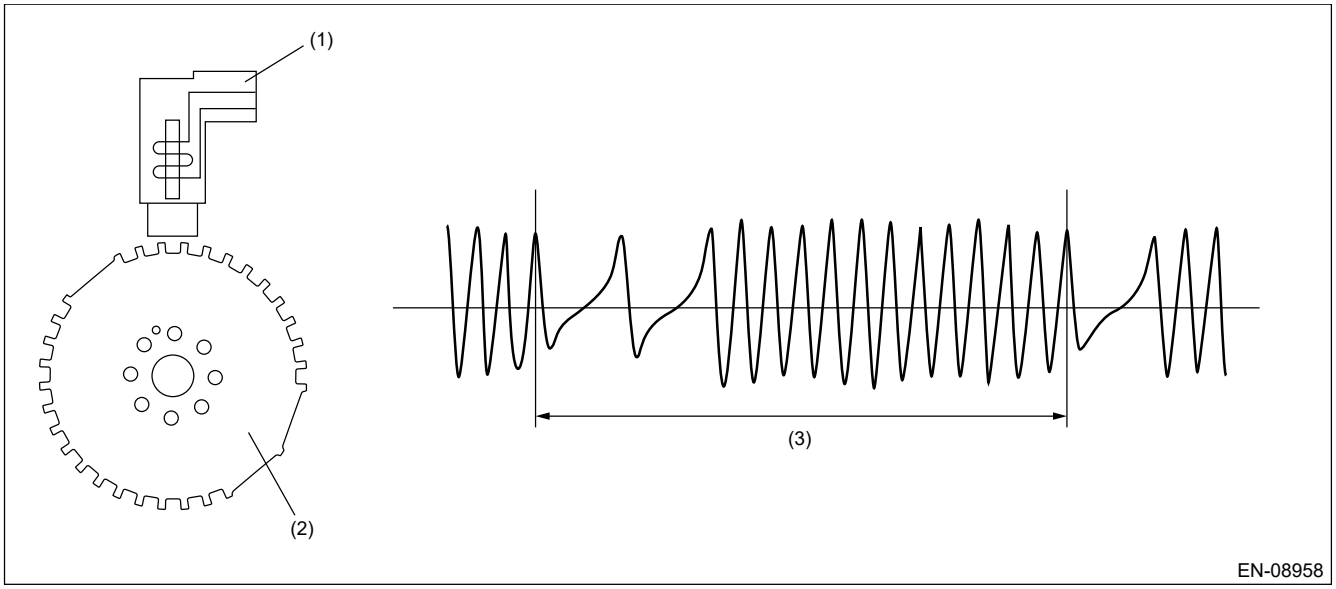
Yes	Repair the poor contact of ECM and crankshaft position sensor connector.
No	Repair the harness and connector.

Note:



In this case, repair the following item:

- **Open circuit in harness between ECM connector and crankshaft position sensor connector**
- **Poor contact of coupling connector**



1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the crankshaft position sensor.
Judge as NG when the crank signal is not input even though the starter was rotated.

2. COMPONENT DESCRIPTION

(A) Camshaft signal (RH) (B) Camshaft signal (LH) (C) Crankshaft signal

(1) Crankshaft position sensor (2) Crankshaft position sensor plate (3) One crankshaft rotation

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	8V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of crankshaft position sensor signals during cranking	Equal to 0

Time needed for diagnosis: 3000ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Failure of engine to start

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK CONDITION OF CRANKSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Check the installation condition of crankshaft position sensor.

Is the crankshaft position sensor installation bolt tightened securely?

Yes	Go to 2.
No	Tighten the crankshaft position sensor installation bolt securely. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.

2. CHECK CRANKSHAFT POSITION SENSOR PLATE.

Check the crankshaft position sensor plate.

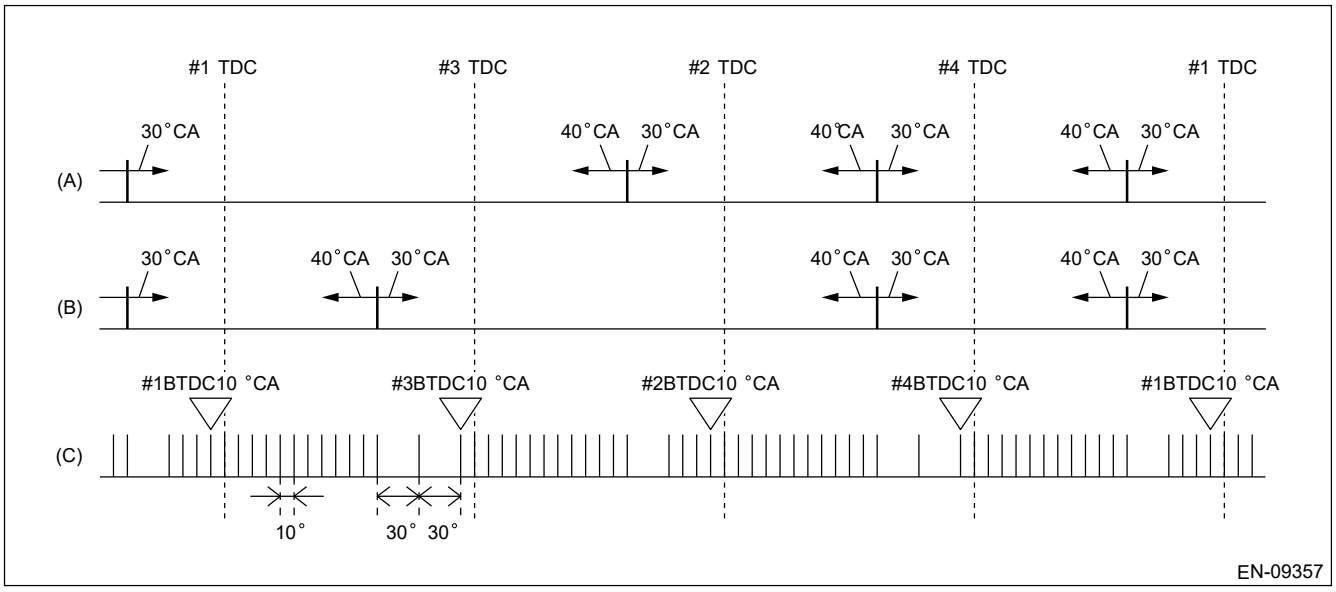
Is there crack or damage in the crankshaft position sensor plate teeth?

Yes	Replace the crankshaft position sensor plate. Ref. to MECHANICAL(H4DO)>Cylinder Block.
No	Go to 3.

3. CHECK INSTALLATION CONDITION OF TIMING CHAIN.

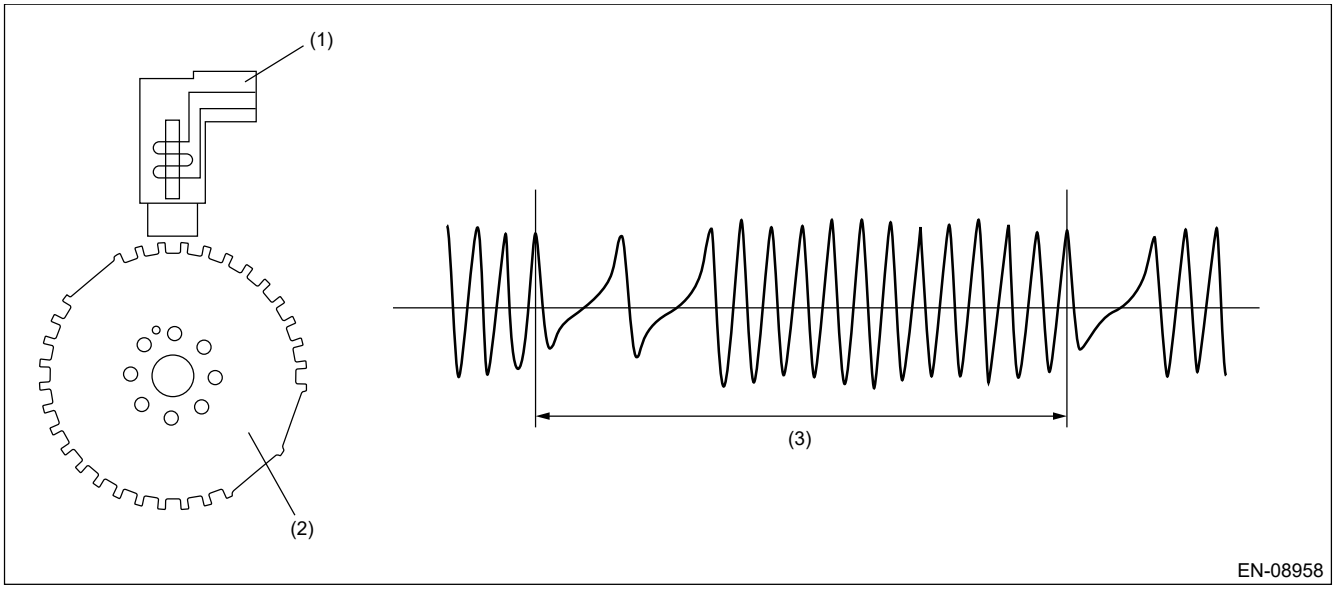
Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block.

ST 18252AA000 CRANKSHAFT SOCKET



Is the timing chain dislocated from its proper position?

Yes	Correct the installation condition of timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly.
No	Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.



1. OUTLINE OF DIAGNOSIS

Detect for faults in crankshaft position sensor output properties.
Judge as NG when there is a problem in the number of crankshaft signals for every revolution of crankshaft.

2. COMPONENT DESCRIPTION

(A) Camshaft signal (RH) (B) Camshaft signal (LH) (C) Crankshaft signal

(1) Crankshaft position sensor (2) Crankshaft position sensor plate (3) One crankshaft rotation

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	8V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Amount of crank sensor signal during 1 rev of crankshaft	Not equal to 30

Time needed for diagnosis: Engine speed 10engine revs.

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR

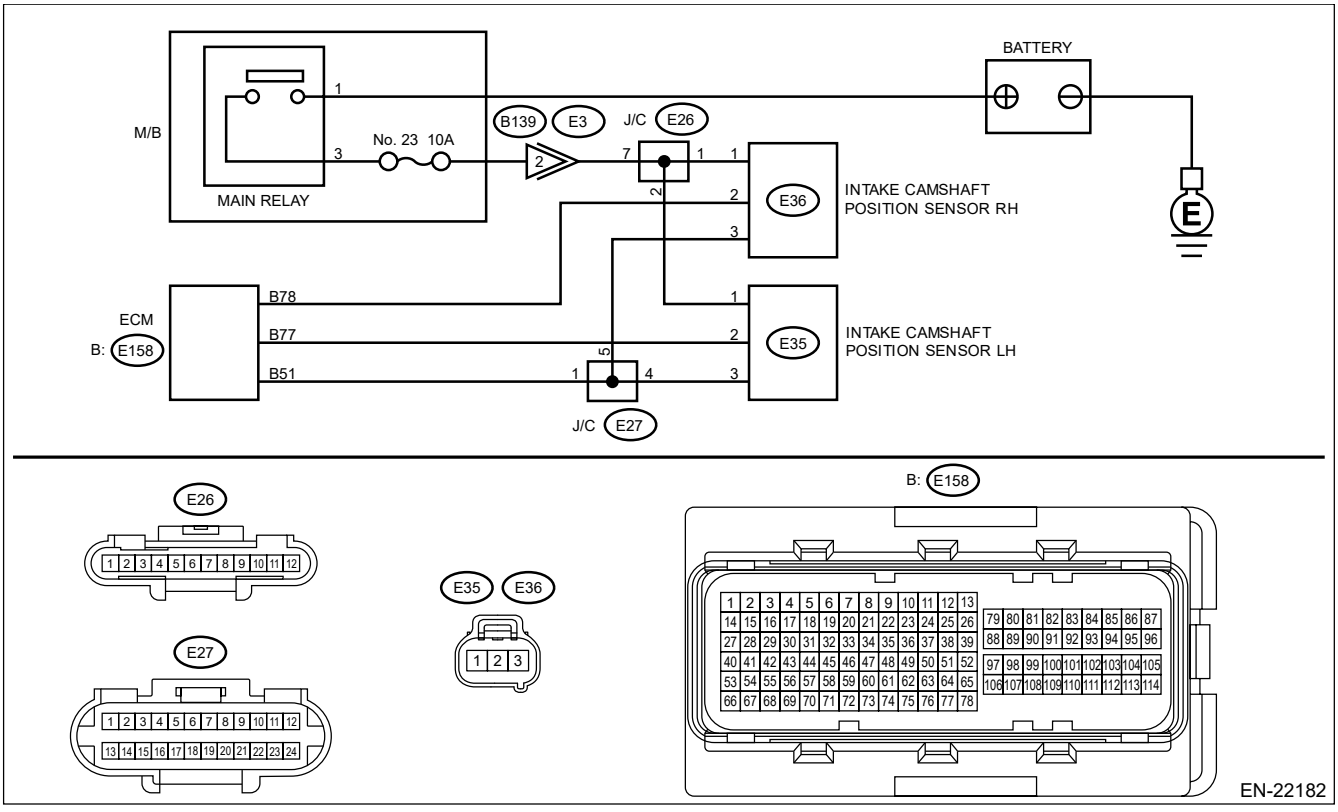
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Engine stall
- Failure of engine to start

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from camshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between camshaft position sensor connector and engine ground.

Connector & terminal

(E36) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor connector** • **Poor contact of coupling connector**

2. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and camshaft position sensor connector.

Connector & terminal

(E158) No. 78 — (E36) No. 2:

(E158) No. 51 — (E36) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit in the harness between the ECM connector and camshaft position sensor connector.

3. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between camshaft position sensor connector and engine ground.

Connector & terminal

(E36) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair short circuit to ground in harness between ECM connector and camshaft position sensor connector.

4. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR (SHORT TO POWER SUPPLY).

Measure the voltage between camshaft position sensor connector and engine ground.

Connector & terminal

(E36) No. 2 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and camshaft position sensor connector.
No	Go to 5.

5. CHECK CONDITION OF CAMSHAFT POSITION SENSOR.

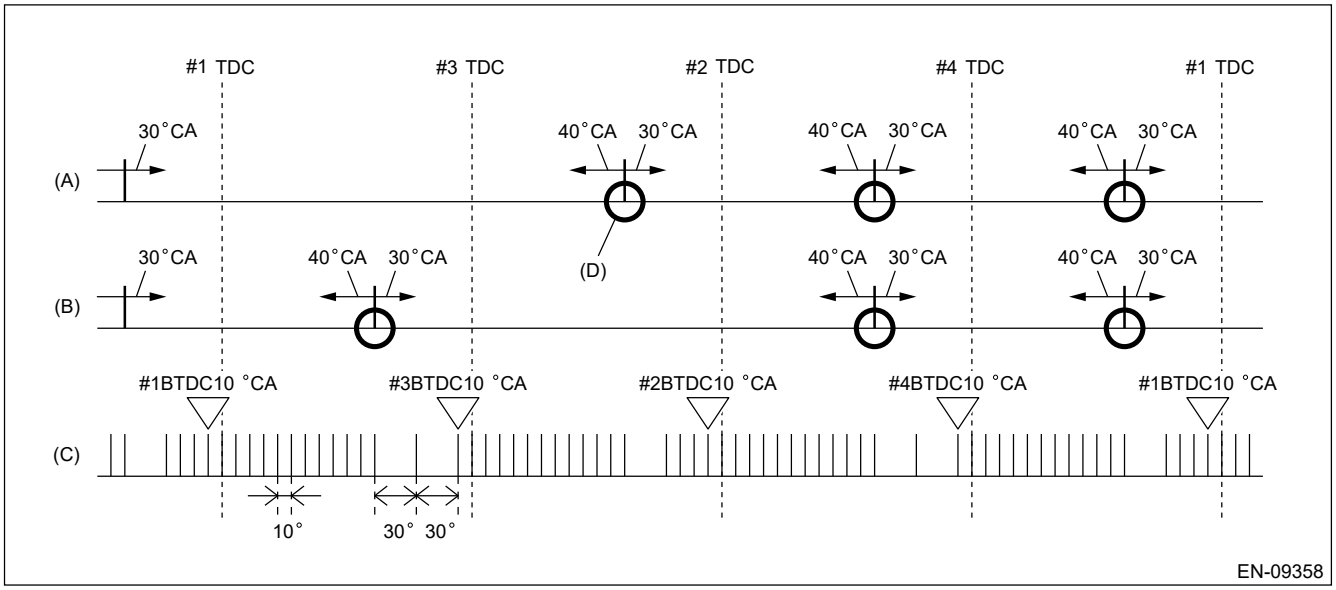
1. Turn the ignition switch to OFF.
2. Check the installation condition of camshaft position sensor.

Is the camshaft position sensor installation bolt tightened securely?

Yes	Go to 6.
No	Tighten the camshaft position sensor installation bolt securely. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION.

6. CHECK CAMSHAFT POSITION SENSOR.

Check the waveform of the camshaft position sensor. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Control Module I/O Signal.



Is there any abnormality in waveform?

Yes	Replace the camshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Camshaft Position Sensor.
No	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.
When there is no camshaft position signal input continuously, judge as NG.

2. COMPONENT DESCRIPTION

(A) Camshaft signal (RH)
(B) Camshaft signal (LH)
(C) Crankshaft signal
(D) Camshaft position signal:
When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	8V or more

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage Elapsed time after starting the engine	8V or more 200ms or more

4. GENERAL DRIVING CYCLE

Diagnosis 1: Perform the diagnosis only once.
Diagnosis 2: Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of camshaft position sensor signals during cranking	Equal to 0

Time needed for diagnosis: 3000ms

Diagnosis 2

Judge as NG if there is no input signal from the camshaft position sensor for 4 ((10time(s)+2)/3) engine revs.

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 0.5 revs of crankshaft	Equal to 0

Time needed for diagnosis:

Diagnosis 1

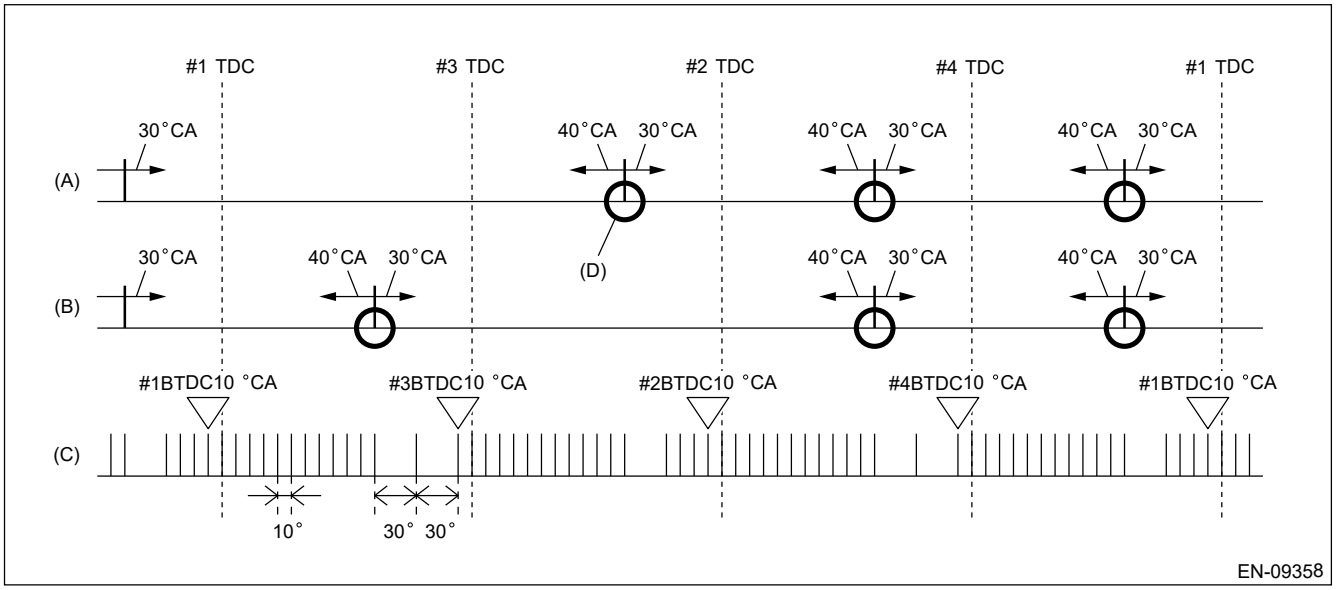
3000ms

Diagnosis 2

Engine speed 6 engine revs,

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR



Note:

For the diagnostic procedure, refer to DTC P0340. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor property.
Judge as NG when the number of camshaft signals remains abnormal.

2. COMPONENT DESCRIPTION

(A) Camshaft signal (RH)
(B) Camshaft signal (LH)
(C) Crankshaft signal
(D) Camshaft position signal: When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	8V or more
Elapsed time after starting the engine	200ms or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the status continues where the number of camshaft position sensor signals in two crankshaft revolutions is other than 3time(s).

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	Not equal to 3time(s)

Time needed for diagnosis: 8 engine revs.

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2

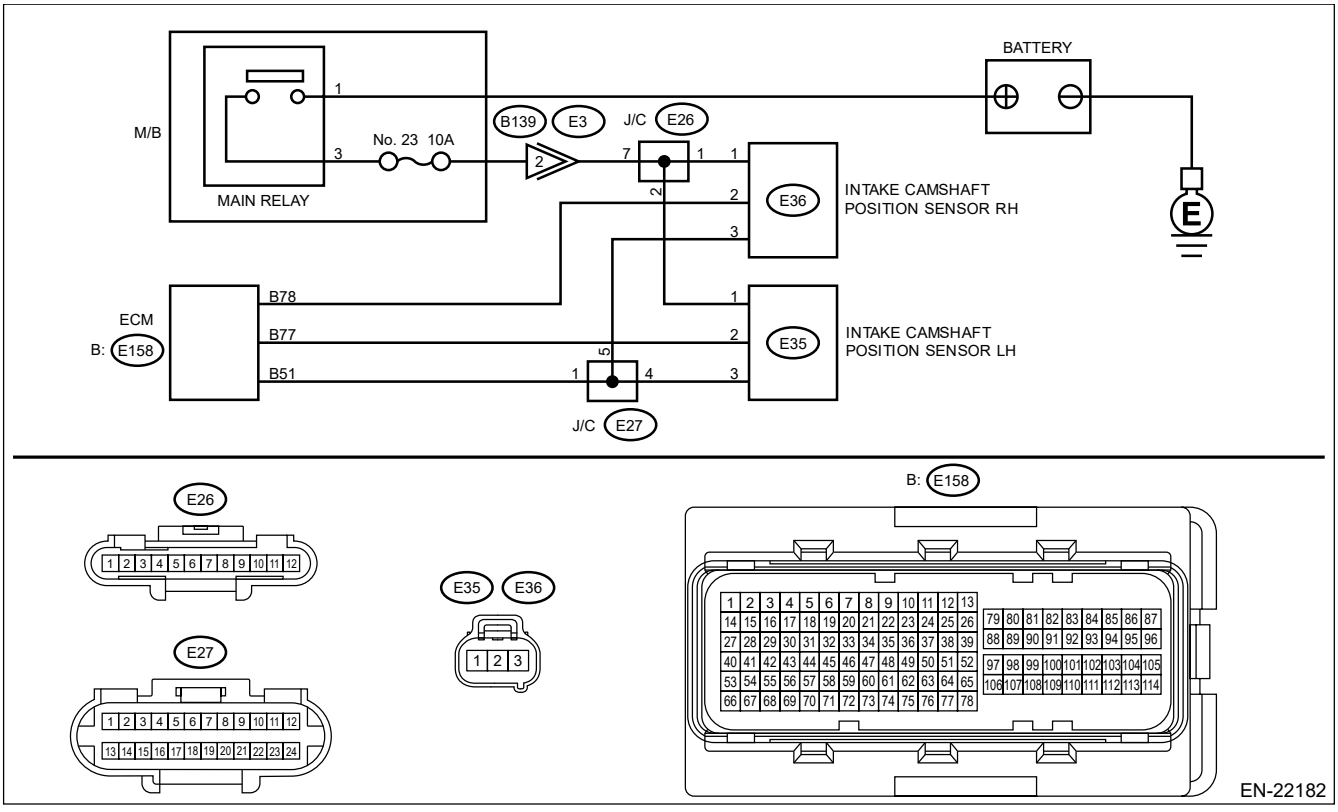
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Engine stall
- Failure of engine to start

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from camshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between camshaft position sensor connector and engine ground.
   Connector & terminal
   (E35) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor connector** • **Poor contact of coupling connector**

2. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and camshaft position sensor connector.
   Connector & terminal
   (E158) No. 77 — (E35) No. 2:
   (E158) No. 51 — (E35) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit in the harness between the ECM connector and camshaft position sensor connector.

3. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR (SHORT TO GROUND).

Measure the resistance between camshaft position sensor connector and engine ground.

Connector & terminal

(E35) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair short circuit to ground in harness between ECM connector and camshaft position sensor connector.

4. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR (SHORT TO POWER SUPPLY).

Measure the voltage between camshaft position sensor connector and engine ground.

Connector & terminal

(E35) No. 2 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and camshaft position sensor connector.
No	Go to 5.

5. CHECK CONDITION OF CAMSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Check the installation condition of camshaft position sensor.

Is the camshaft position sensor installation bolt tightened securely?

Yes	Go to 6.
No	Tighten the camshaft position sensor installation bolt securely. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION.

6. CHECK CAMSHAFT POSITION SENSOR.

Check the waveform of the camshaft position sensor. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Control Module I/O Signal.

Is there any abnormality in waveform?

Yes	Replace the camshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Camshaft Position Sensor.
No	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0340. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR.

DTC P0346 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 2

Note:

For the diagnostic procedure, refer to DTC P0345. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0341. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR.

DTC P0351 IGNITION COIL "A" PRIMARY CONTROL CIRCUIT/OPEN

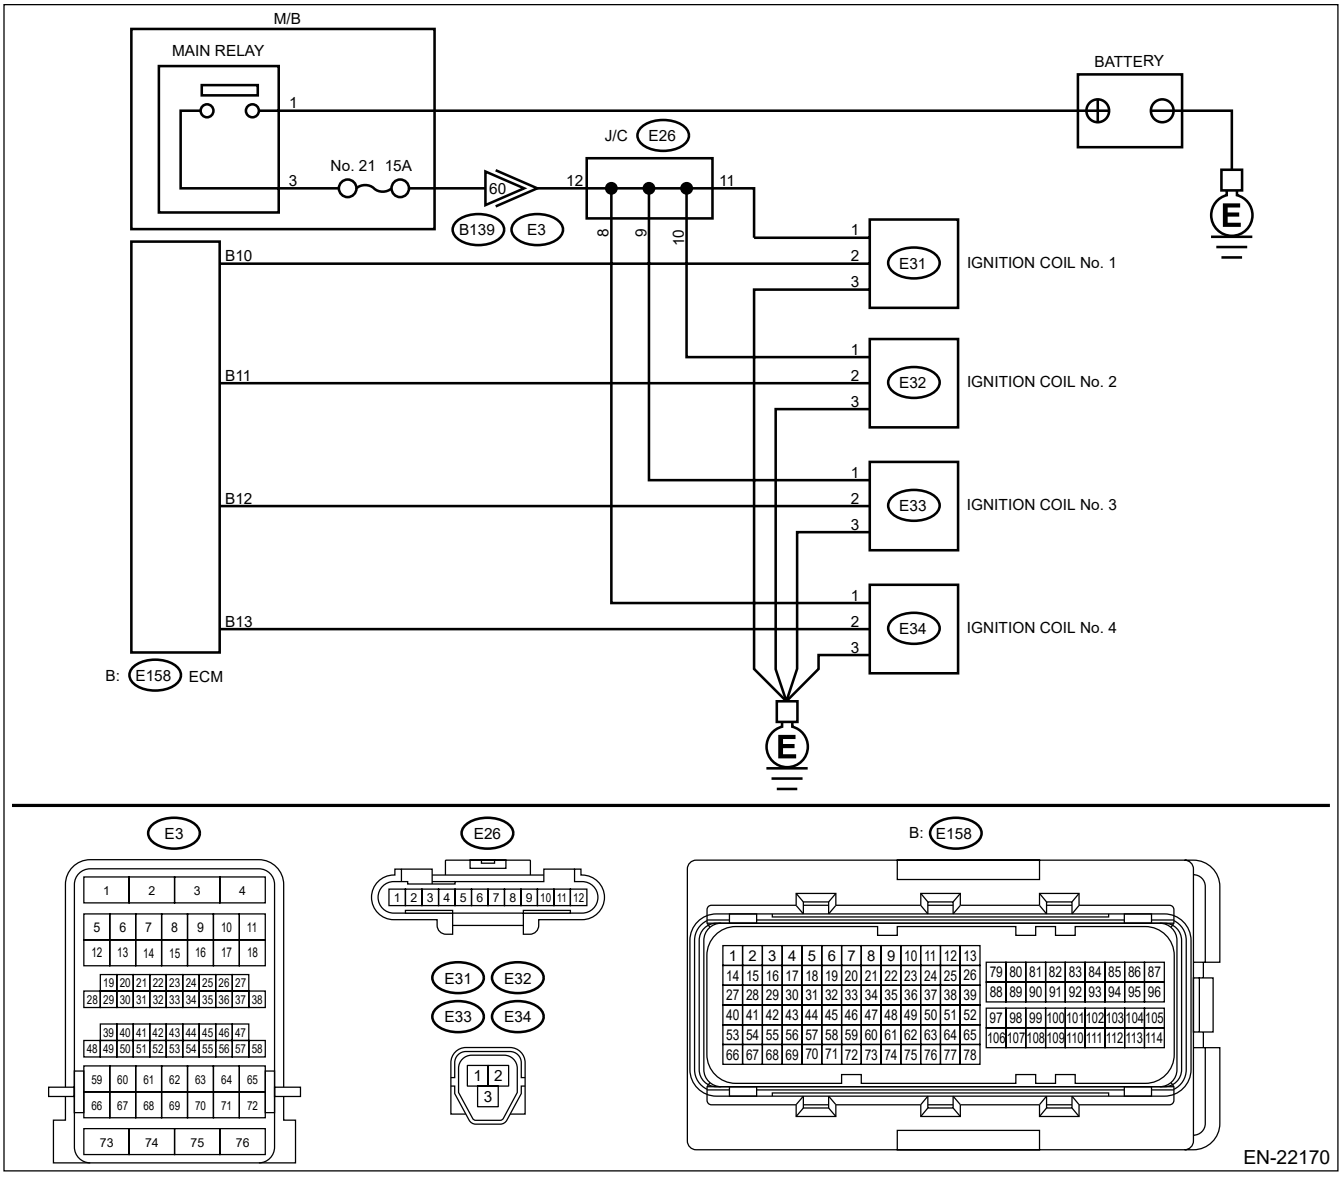
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK IGNITION COIL POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ignition coil.
3. Turn the ignition switch to ON.
4. Measure the voltage between ignition coil connector and engine ground.

Connector & terminal

DTC P0351; (E31) No. 1 (+) — Engine ground (−):
DTC P0352; (E32) No. 1 (+) — Engine ground (−):
DTC P0353; (E33) No. 1 (+) — Engine ground (−):
DTC P0354; (E34) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open or short to ground in harness of power supply circuit** • **Blown out of fuse** • **Poor contact of IG relay connector** • **Poor contact of coupling connector** • **Faulty IG relay**

2. CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT (OPEN).

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between ignition coil connector and engine ground.

Connector & terminal

DTC P0351; (E31) No. 3 — Engine ground:
DTC P0352; (E32) No. 3 — Engine ground:
DTC P0353; (E33) No. 3 — Engine ground:
DTC P0354; (E34) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 3.
No	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.

3. CHECK HARNESS BETWEEN ECM AND IGNITION COIL (SHORT TO GROUND).

1. Disconnect the connector from ECM.
2. Measure the resistance between ignition coil connector and engine ground.

Connector & terminal

DTC P0351; (E31) No. 2 — Engine ground:
DTC P0352; (E32) No. 2 — Engine ground:
DTC P0353; (E33) No. 2 — Engine ground:
DTC P0354; (E34) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the ground short circuit of harness between ECM connector and ignition coil connector.

4. CHECK HARNESS BETWEEN ECM AND IGNITION COIL (OPEN).

Measure the resistance of harness between ECM connector and ignition coil connector.

Connector & terminal

DTC P0351; (E158) No. 10 — (E31) No. 2:
DTC P0352; (E158) No. 11 — (E32) No. 2:
DTC P0353; (E158) No. 12 — (E33) No. 2:
DTC P0354; (E158) No. 13 — (E34) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the open circuit in harness between ECM connector and ignition coil connector.

5. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Go to 6.

6. CHECK SPARK PLUG CONDITION.

1. Remove the spark plug of the corresponding cylinder. Ref. to IGNITION(H4DO)>Spark Plug>REMOVAL.
2. Check the spark plug condition. Ref. to IGNITION(H4DO)>Spark Plug>INSPECTION.

Is the check result OK?

Yes	Replace the ignition coil. Ref. to IGNITION(H4DO)>Ignition Coil.
No	Replace the spark plug. Ref. to IGNITION(H4DO)>Spark Plug.

1. OUTLINE OF DIAGNOSIS

Based on the self-diagnostic result of the ignition coil driving IC, judge the ignition coil driving circuit as normal or abnormal.
The ignition coil driving IC detects “no ignition” status as a malfunction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Elapsed time after starting the engine	More than 1 s
Engine speed	500 rpm or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.
Judgment value

Malfunction Criteria	Threshold Value
Ignition driving IC information	Trouble

Time needed for diagnosis: 2.56s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0352 IGNITION COIL "B" PRIMARY CONTROL CIRCUIT/OPEN

Note:
For the diagnostic procedure, refer to DTC P0351. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0351 IGNITION COIL "A" PRIMARY CONTROL CIRCUIT/OPEN.

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P0351. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0351 IGNITION COIL "A" PRIMARY CONTROL CIRCUIT/OPEN.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P0351. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0351 IGNITION COIL "A" PRIMARY CONTROL CIRCUIT/OPEN.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1

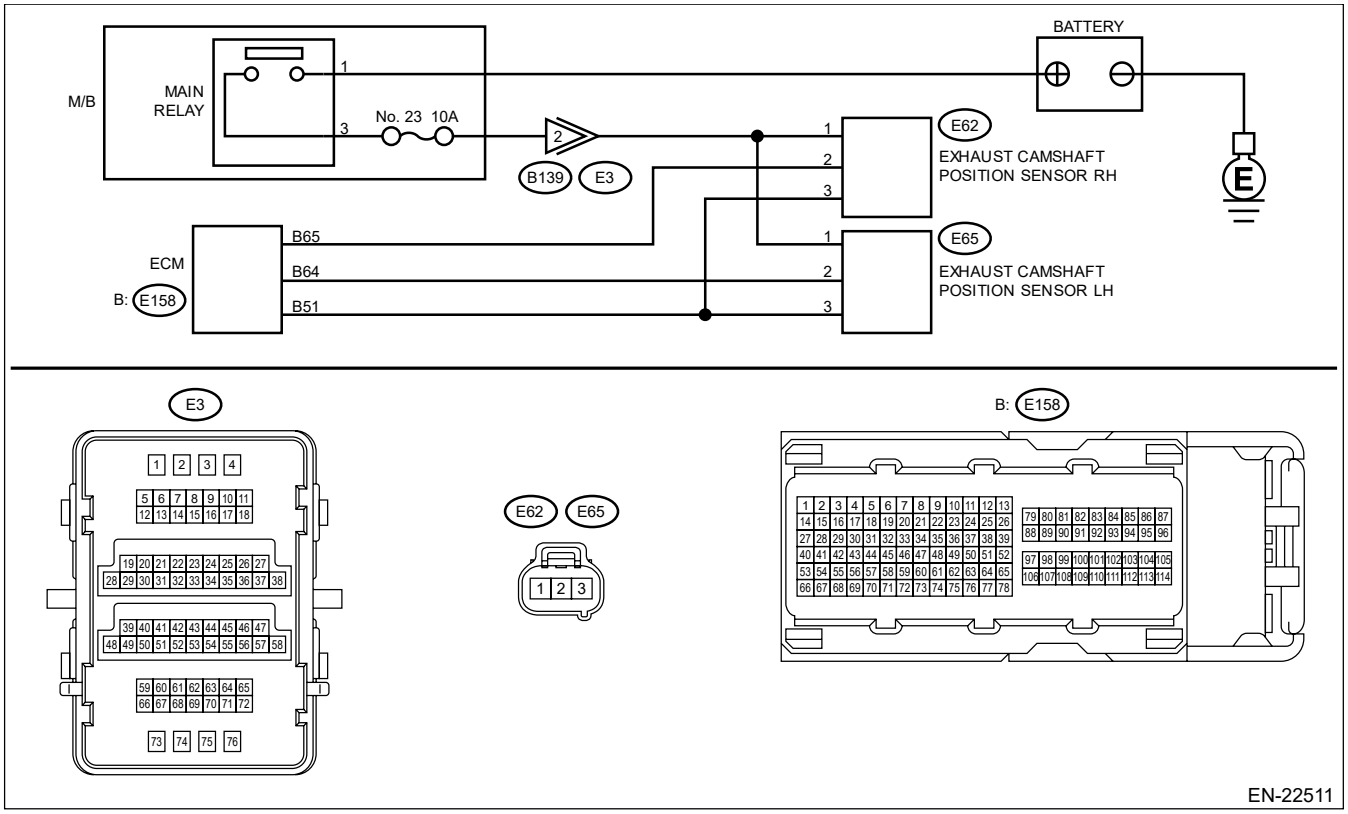
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Engine stall
- Failure of engine to start

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from camshaft position sensor RH.
3. Turn the ignition switch to ON.
4. Measure the voltage between camshaft position sensor RH connector and engine ground.
   Connector & terminal
   (E62) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor RH connector** • **Poor contact of coupling connector**

2. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and camshaft position sensor RH connector.
   Connector & terminal
   (E158) No. 65 — (E62) No. 2:
   (E158) No. 51 — (E62) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit in the harness between the ECM connector and camshaft position sensor RH connector.

3. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH (SHORT TO GROUND).

Measure the resistance between camshaft position sensor RH connector and engine ground.

Connector & terminal

(E62) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair short circuit to ground in harness between ECM connector and camshaft position sensor RH connector.

4. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH (SHORT TO POWER SUPPLY).

Measure the voltage between camshaft position sensor RH connector and engine ground.

Connector & terminal

(E62) No. 2 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and camshaft position sensor RH connector.
No	Go to 5.

5. CHECK CONDITION OF CAMSHAFT POSITION SENSOR RH.

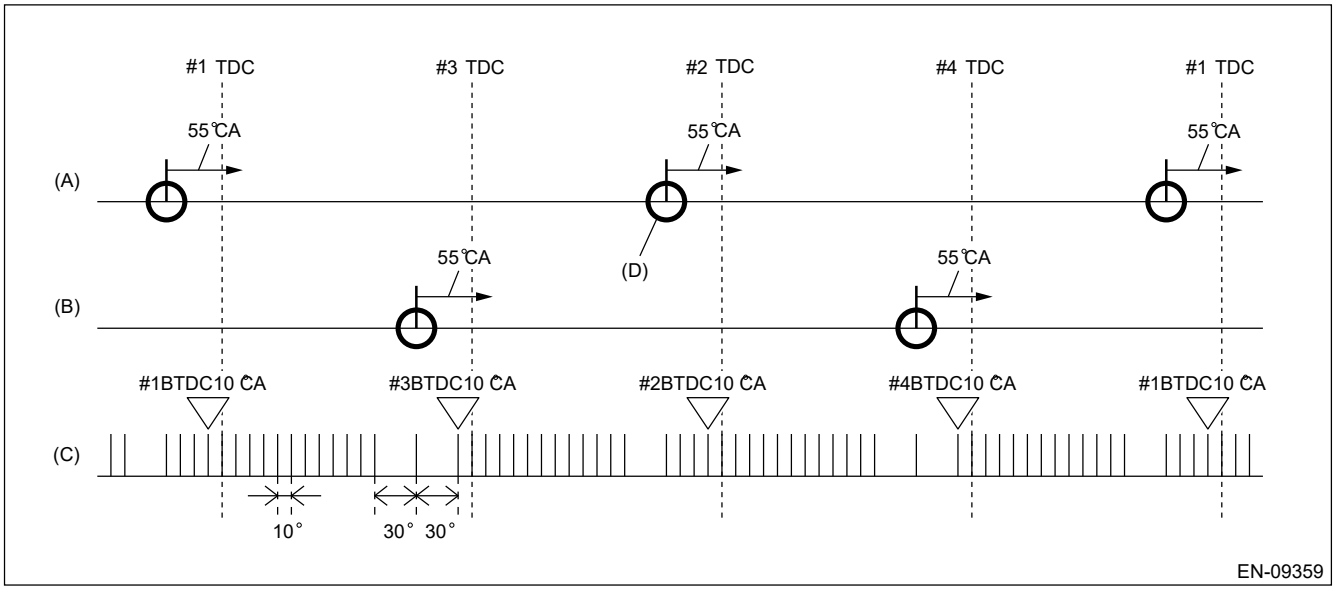
Check the installation condition of camshaft position sensor RH.

Is the camshaft position sensor RH installation bolt tightened securely?

Yes	Go to 6.
No	Tighten the camshaft position sensor RH installation bolt securely. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION.

6. CHECK CAMSHAFT POSITION SENSOR RH.

Check the waveform of the camshaft position sensor RH. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Control Module I/O Signal.



Is there any abnormality in waveform?

Yes	Replace the camshaft position sensor RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor.
No	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor RH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.
When there is no camshaft position signal input continuously, judge as NG.

2. COMPONENT DESCRIPTION

(A) Camshaft signal (RH)
(B) Camshaft signal (LH)
(C) Crankshaft signal
(D) Camshaft position signal:
When normal, there will be 2 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage Elapsed time after starting the engine	10.9 V or more 200ms or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

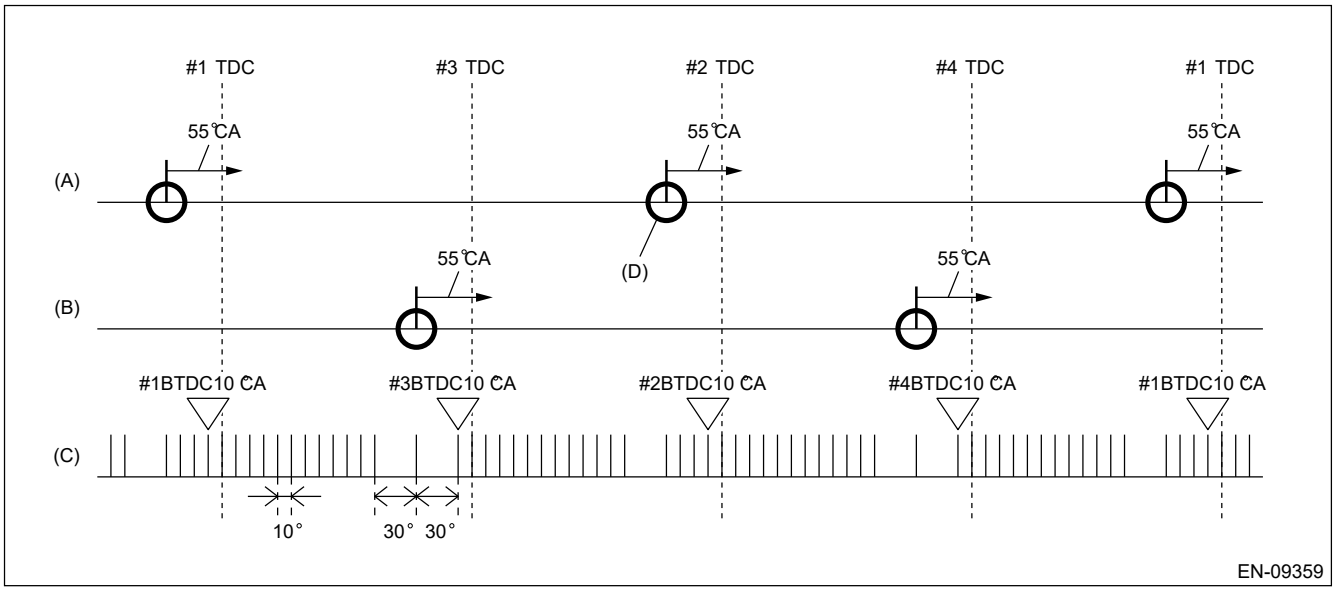
When there is no camshaft position sensor signal input in TDC for 10time(s), judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of exhaust camshaft position sensor pulse during 0.5 crankshaft rev.	Equal to 0

Time needed for diagnosis: Engine speed 6 engine revs,
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0366 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1



Note:

For the diagnostic procedure, refer to DTC P0365. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor property.
Judge as NG when the number of camshaft signals remains abnormal.

2. COMPONENT DESCRIPTION

(A) Camshaft signal (RH)
(B) Camshaft signal (LH)
(C) Crankshaft signal
(D) Camshaft position signal:
When normal, there will be 2 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Elapsed time after starting the engine	200ms or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the status continues where the number of camshaft position sensor signals in two crankshaft revolutions is other than 2time(s).

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	Not equal to 2time(s)

Time needed for diagnosis: Engine speed 8 engine revs,
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2

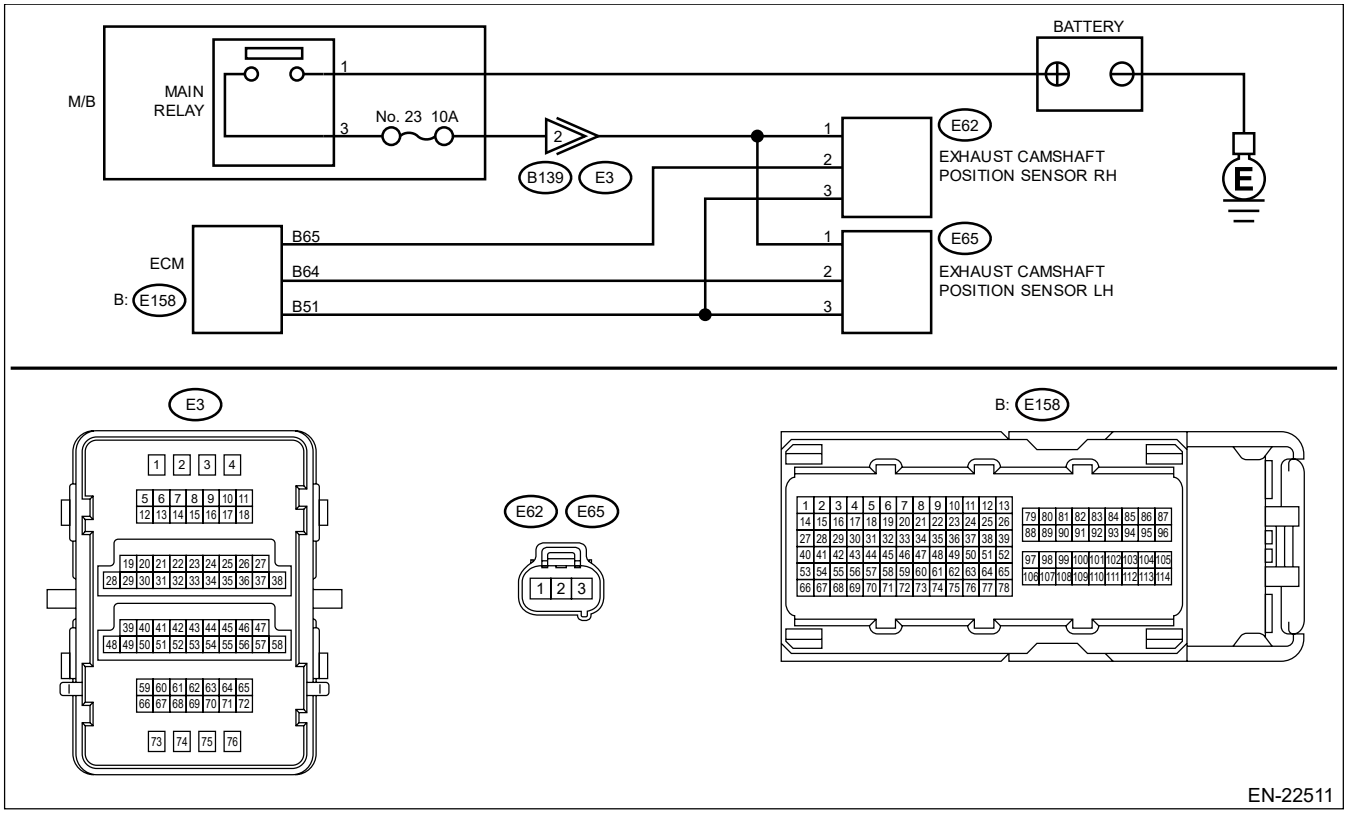
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Engine stall
- Failure of engine to start

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from camshaft position sensor LH.
3. Turn the ignition switch to ON.
4. Measure the voltage between camshaft position sensor LH connector and engine ground.
   Connector & terminal
   (E65) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor LH connector** • **Poor contact of coupling connector**

2. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and camshaft position sensor LH connector.
   Connector & terminal
   (E158) No. 64 — (E65) No. 2:
   (E158) No. 51 — (E65) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit in the harness between the ECM connector and camshaft position sensor LH connector.

3. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH (SHORT TO GROUND).

Measure the resistance between camshaft position sensor LH connector and engine ground.

Connector & terminal

(E65) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair short circuit to ground in harness between ECM connector and camshaft position sensor LH connector.

4. CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH (SHORT TO POWER SUPPLY).

Measure the voltage between camshaft position sensor LH connector and engine ground.

Connector & terminal

(E65) No. 2 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and camshaft position sensor LH connector.
No	Go to 5.

5. CHECK CONDITION OF CAMSHAFT POSITION SENSOR LH.

Check the installation condition of camshaft position sensor LH.

Is the camshaft position sensor LH installation bolt tightened securely?

Yes	Go to 6.
No	Tighten the camshaft position sensor LH installation bolt securely. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION.

6. CHECK CAMSHAFT POSITION SENSOR LH.

Check the waveform of the camshaft position sensor LH. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Control Module I/O Signal.

Is there any abnormality in waveform?

Yes	Replace the camshaft position sensor LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor.
No	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor LH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0365. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1.

DTC P0391 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 2

Note:

For the diagnostic procedure, refer to DTC P0390. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0366. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0366 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1.

DTC P0400 EGR "A" FLOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Movement performance problem when engine is low speed
- Improper idling
- Movement performance problem

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Mani. Absolute Pressure].

Data Monitor

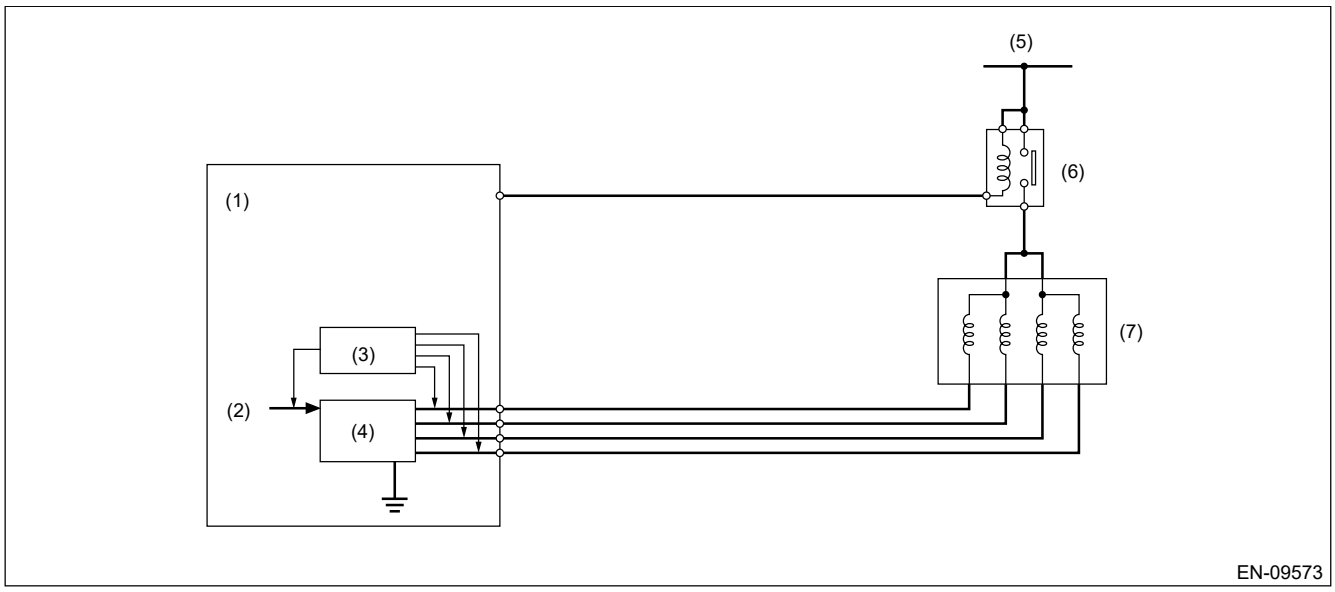
Note:
- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Mani. Absolute Pressure] 53.3 kPa (400 mmHg, 15.75 inHg) or more?

Yes	Make sure that the EGR control valve, manifold absolute pressure sensor and throttle body are installed securely.
No	Go to 2.

2. CHECK EGR CONTROL VALVE.

Remove the EGR control valve.



Are there any holes, clogged lines or foreign matters in the EGR system?

Yes	Repair the EGR system.
No	Replace EGR control valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Control Valve.

1. OUTLINE OF DIAGNOSIS

Detect EGR system malfunction.
Intake manifold pressure (negative pressure) is constant because the throttle valve is fully closed during deceleration fuel cut. At this time, when the EGR valve is opened/closed, the intake manifold pressure will change. EGR System OK/NG is judged by the range of this change.

2. COMPONENT DESCRIPTION

(1) Engine control module (ECM)
(2) Computer unit (CPU)
(3) Detecting circuit
(4) Switch circuit
(5) Battery voltage
(6) Main relay
(7) EGR control valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa (563mmHg, 22.2inHg) or more
Intake air temperature	0°C (32°F) or more

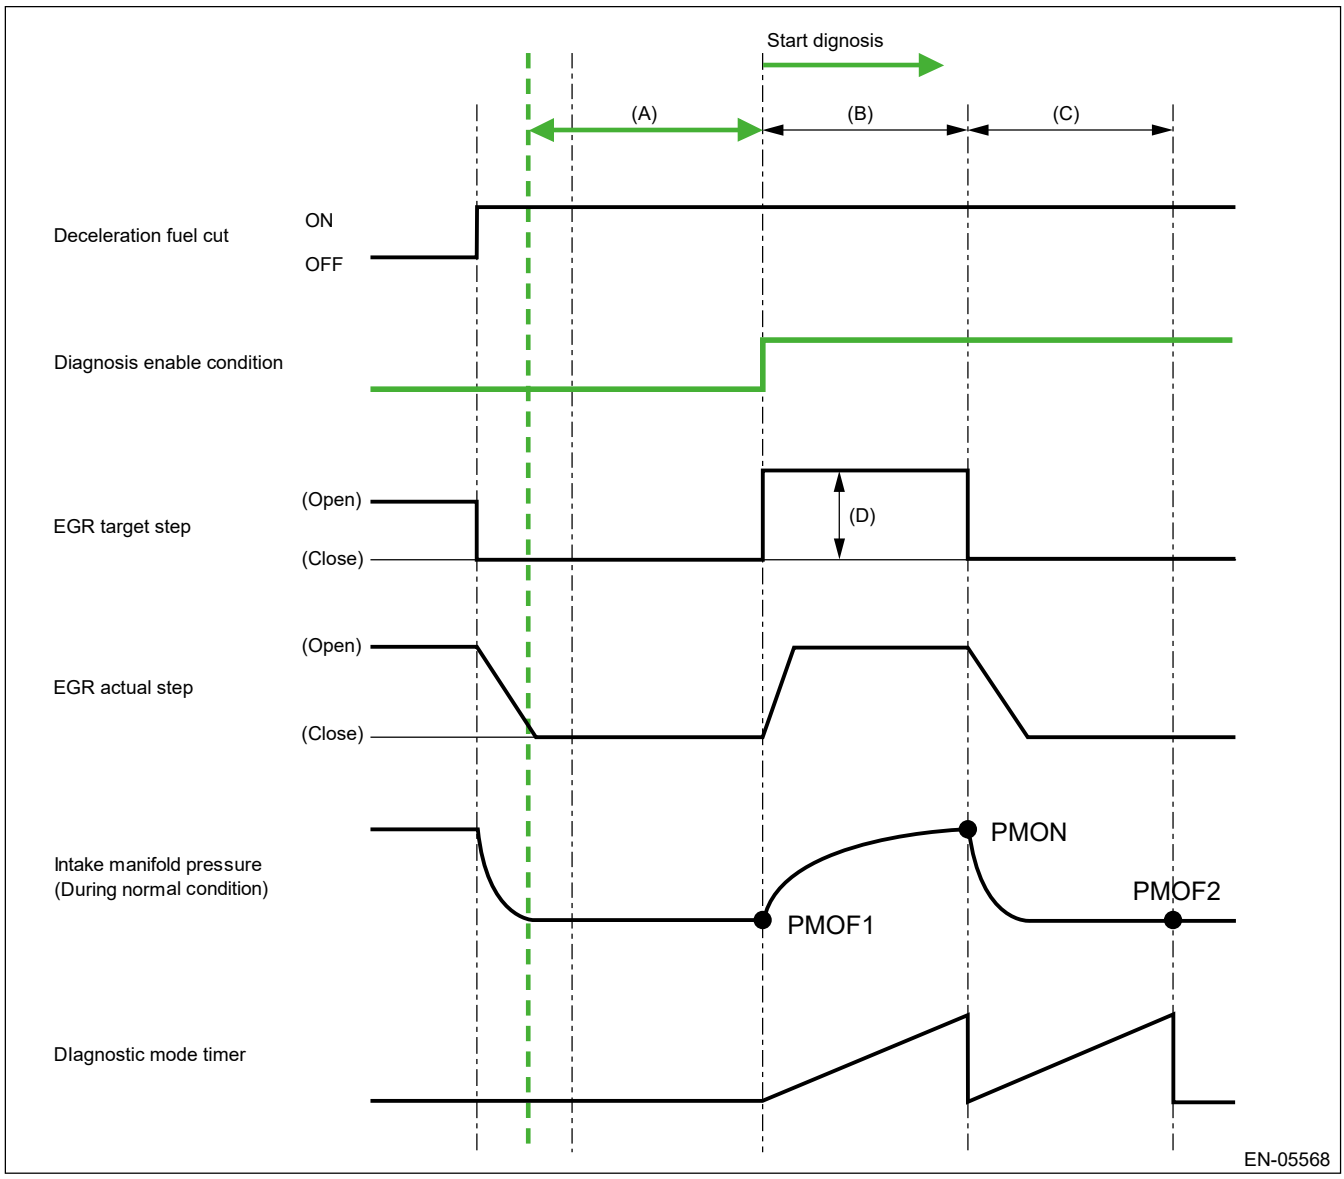
Secondary parameters	Execution condition
Engine speed	
(CVT model)	1200 rpm or more and 2500 rpm or less
(MT model)	1400 rpm or more and 5000 rpm or less
Vehicle speed	40km/h (24.9MPH) or more
Fuel cut elapsed time	3000ms or more
Neutral switch	OFF

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once during deceleration fuel cut from a vehicle speed of 40km/h (24.9MPH) or more.
Be careful of vehicle speed and engine speed. (Diagnosis will not be completed if the vehicle speed and engine speed conditions become out of specification due to deceleration.)

5. DIAGNOSTIC METHOD

Measure the pressure values when the enable conditions are established, and perform diagnosis by calculating those results.



1. Label the intake manifold pressure value as PMOF1, which is observed when enable conditions are established, and set the EGR target step to 15 steps (for CVT model) or 33 steps (for MT model) (open status).
2. Label the intake manifold pressure value as PMON, which is observed after 1000ms have passed since EGR target step was set to 15 steps (for CVT model) or 33 steps (for MT model) (when the enable conditions were established), and set the EGR target step to 0.
3. Label the intake manifold pressure as PMOF2, which is observed after 1000ms has passed since EGR target step was set to 0 (after (1000ms + 1000ms) have passed since the enable conditions were established).

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
PMON − (PMOF1 + PMOF2)/2	Less than 2.5kPa (18.63mm Hg, 0.7inHg)

Time needed for diagnosis: 1000ms × 2
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

(A) 3000ms (B) 1000ms (C) 1000ms

(D) CVT model: 15 steps
MT model: 33 steps

DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1

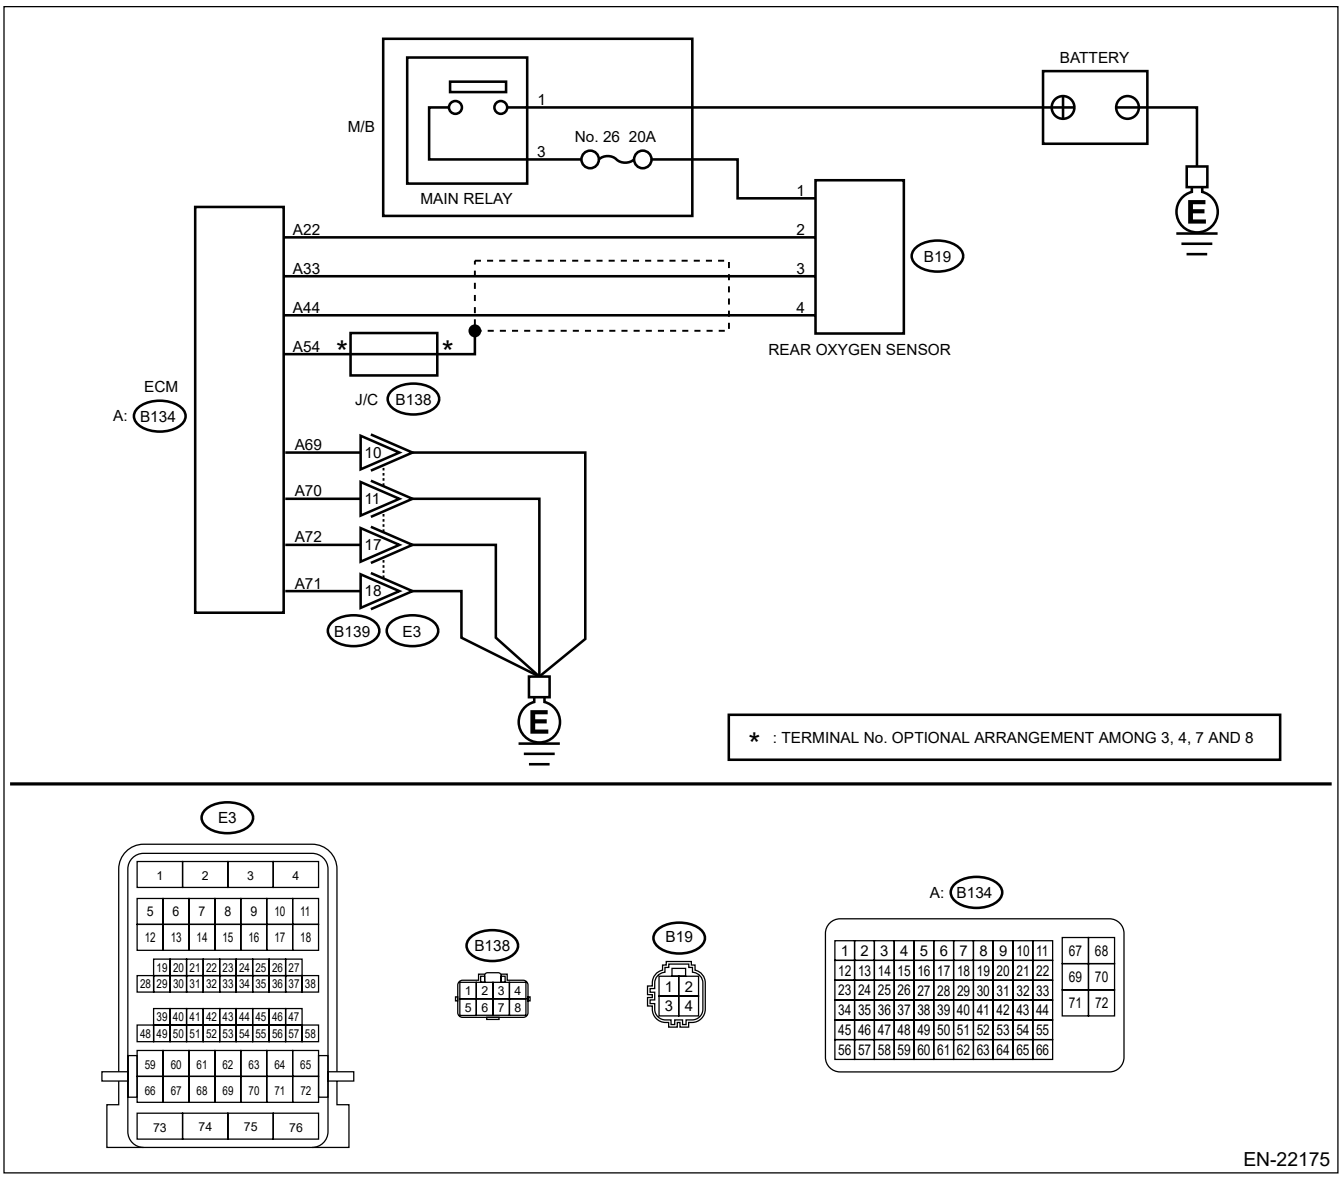
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Engine stall
- Idle mixture is out of specifications.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC AND FREEZE FRAME DATA.

1. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
2. Read the freeze frame data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool.
3. Save the displayed DTC and freeze frame data.

Is DTC other than P0420 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Go to 2.

2. CHECK ENGINE OIL CONSUMPTION.

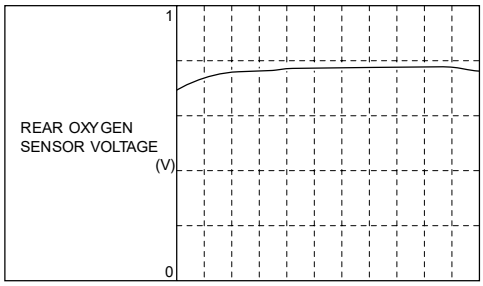
Check the engine oil amount. Ref. to LUBRICATION(H4DO)>Engine Oil.

Is white smoke emitted from the muffler?

Yes	Check the engine, and repair the defective part. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION. After repairing the engine, replace all catalytic converters. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Front Catalytic Converter. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Rear Catalytic Converter.
No	Go to 3.

3. CHECK EXHAUST SYSTEM.

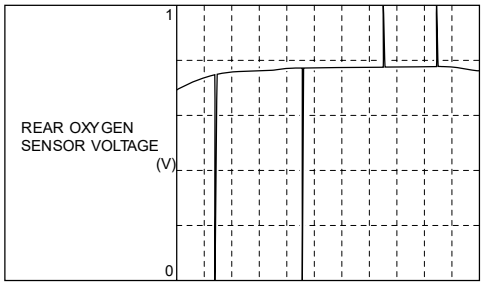
Check the following items regarding exhaust system.



- Loose or detached nut and bolt
- Exhaust gas leakage
- Air suction
- Hole on exhaust pipe

Is there any trouble?

Yes	Repair or replace the exhaust system. Ref. to EXHAUST(H4DO)>General Description.
No	Go to 4.



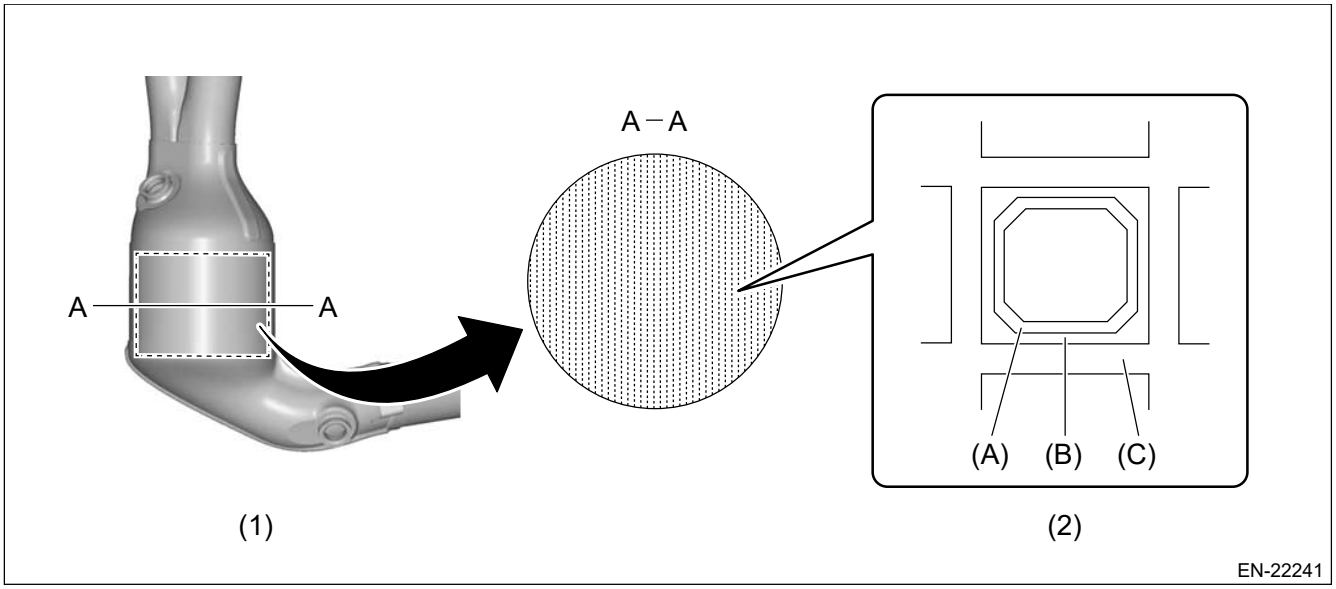
4. CHECK CATALYTIC CONVERTER.

1. Start the engine and warm up completely.
2. Read the waveform data of rear oxygen sensor during idling using Subaru Select Monitor.
3. Check the waveform by waggling the connector between ECM and rear oxygen sensor.
   - At normal condition

EN-06668

   - At abnormal condition (noise input)

EN-06670



Is an abnormal waveform displayed?

Yes	Connect the connector after checking the following items, and check the waveform again while waggling. • Check the contact point of the connector that caused disturbed waveform. If faulty, repair or replace it. • If any problem is not found, It is possible that a temporary poor contact occurs in the connector.
No	Replace all the catalytic converter. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Front Catalytic Converter. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Rear Catalytic Converter.

1. OUTLINE OF DIAGNOSIS

To confirm the performance of Three-way Catalytic Converter (TWC), measure Oxygen Storage Capacity (OSC) using A/F sensor and rear oxygen sensor.

2. COMPONENT DESCRIPTION

(1) External view of catalytic converter
(2) Enlarged view of catalyst honeycomb cell
(A) Catalyst layer 1
(B) Catalyst layer 2
(C) Carrier

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa (563mmHg, 22.2inHg) or more
Amount of intake air	Less than 8g/s (0.28oz/s)
Accelerator pedal position	While idling
Rear oxygen output voltage after fuel cut	Less than 0.15V
Estimated catalyst temperature	500°C (932°F) or more
(Integrated intake air amount during fuel cut	18g (0.63oz) or more
Fuel shut-off function thereafter)	Not in operation
Estimated temperature of the rear oxygen sensor element	500°C (932°F) or more

4. GENERAL DRIVING CYCLE

When the TWC, the A/F sensor, and the rear oxygen sensor are fully warmed up, perform diagnosis if the following operations are experienced once respectively: a 10-second idling after the deceleration fuel cut for the predetermined time or longer, and a 10-second driving with the accelerator ON after the deceleration fuel cut for the predetermined time or longer.

5. DIAGNOSTIC METHOD

When TWC performance degrade, OSC performance also degrades. A malfunction is detected by diagnosis that estimates OSC performance based on the time and air volume required from the deceleration fuel cut

for the predetermined time or longer until the start of increase in the rear oxygen sensor voltage.

Judgment value

Malfunction Criteria	Threshold Value
Oxygen Storage Capacity (OSC) of Catalytic	Less than 0.15g

Time needed for diagnosis: Less than 1 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0441 EVAP SYSTEM (CPC) INCORRECT PURGE FLOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling
Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0441 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK PURGE CONTROL SOLENOID VALVE.

Operate the purge control solenoid valve using the Subaru Select Monitor.
Note:
For detailed operation procedures, refer to the “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.

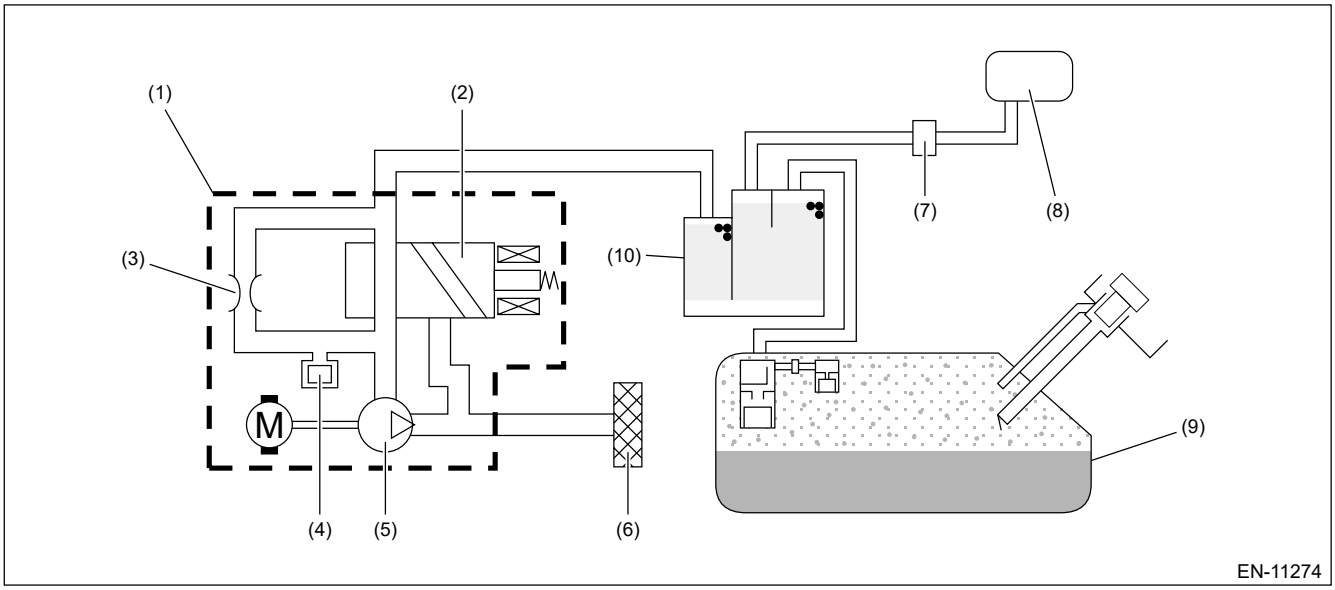
Does the purge control solenoid valve operate?

Yes	Go to 3.
No	Replace the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve.

3. CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.

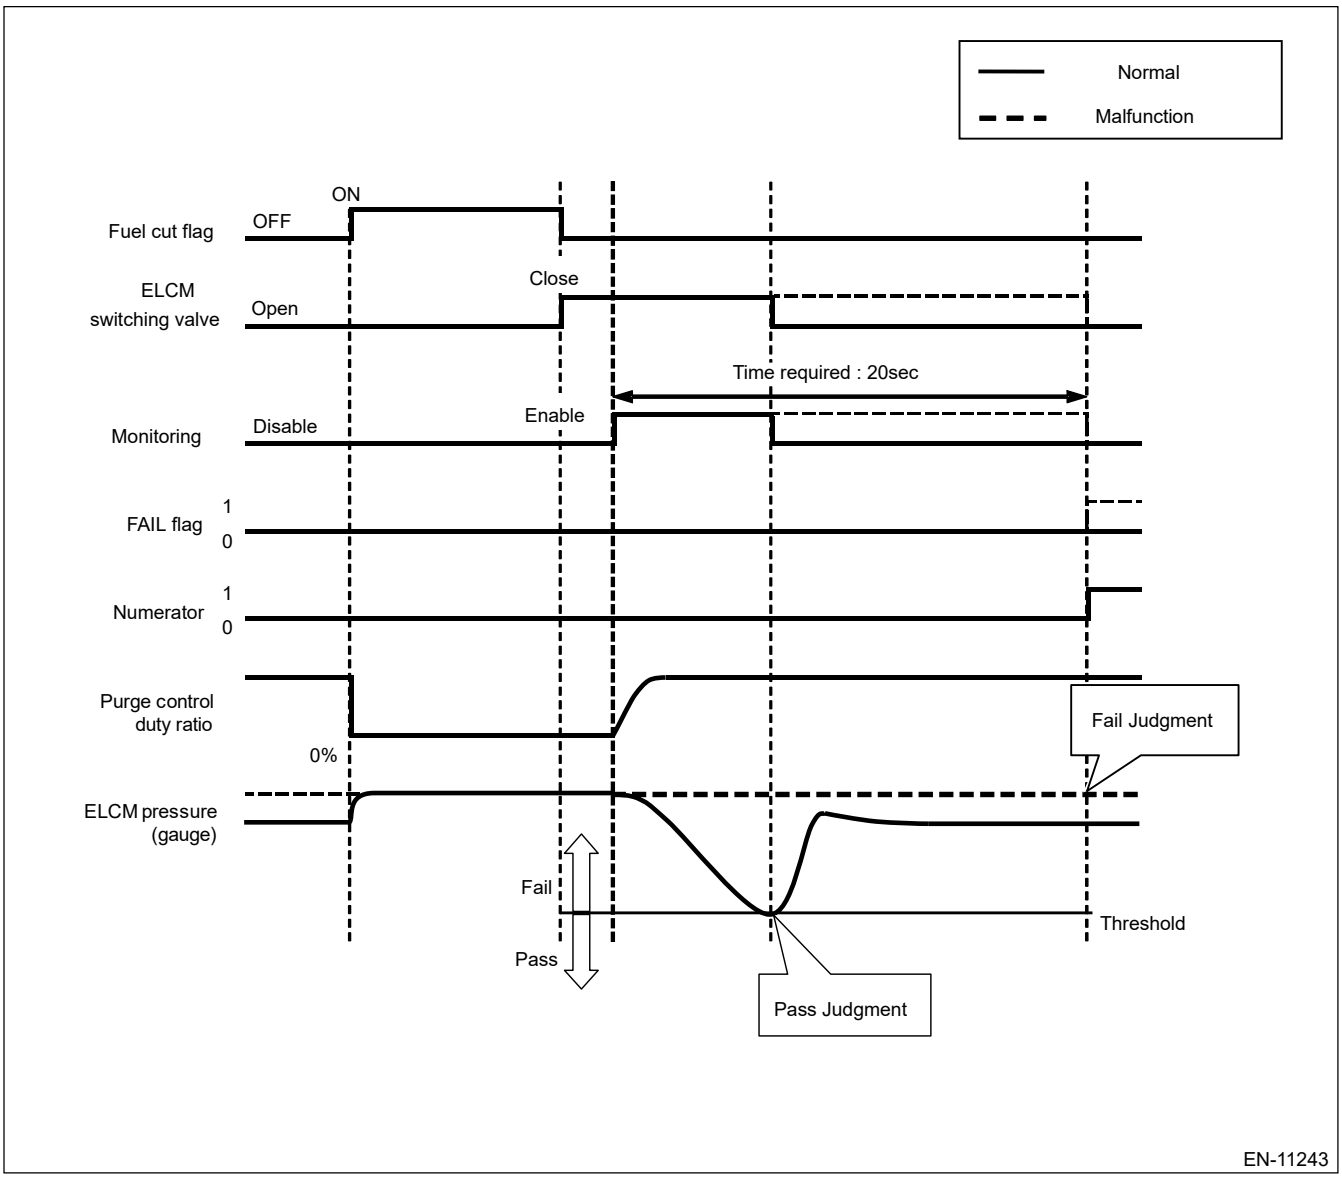
Check the evaporative emission control system line.

Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?



Yes	Repair or replace the hoses or pipes.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS



This monitor intrusively performs a functional check to detect incorrect purge flow.The monitor seals the EVAP system (i.e. isolate from atmosphere) by closing the Evaporative Leak Check Module switching valve intrusively after recovering from a fuel cut event. In the case of normal condition, and the commanded purge control duty ratio is more than 0%, Evaporative Leak Check Module pressure (gauge) will decrease due to engine vacuum and reach to the threshold value. However, in the case of malfunction condition (e.g. fuel cap open, purge valve stuck closed, purge line disconnected or blocked), if the Evaporative Leak Check Module pressure (gauge) does not reach the threshold within a predetermined time, the monitor determines a malfunction and stores a fault code.

MALFUNCTION CRITERIA

Evaporative Leak Check Module pressure (gauge) > Threshold

(1) Leak check valve ASSY
(2) Switching valve (closed)
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Time when Evaporative Leak Check Module switching valve is closed	Less than 120000ms
Purge control duty ratio	More than 0%
Preconditions (Condition: Close the intrusive Evaporative Leak Check Module switching valve)	
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa(563mmHg,22.2inHg) or more

Secondary parameters	Execution condition
Cumulative value of purge air amount calculated from engine start	Value of Map or more*
Atmospheric pressure − Intake manifold absolute pressure	6.7kPa(50mmHg, 2inHg) or more
(Elapsed time after fuel cut	1000ms or more
Fuel shut-off function thereafter)	Not in operation
Ambient temperature	−25°C(−13°F) or more

*It takes approximately 2 min at 40 MPH

Map

Ambient temperature °C (°F)	0 (32)	10 (50)	20 (68)	30 (86)	40 (104)	50 (122)
Cumulative value of purge air amount calculated from engine start g (oz)	50 (1.76)	50 (1.76)	50 (1.76)	50 (1.76)	50 (1.76)	50 (1.76)

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once during ordinary driving.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Evaporative Leak Check Module pressure	More than 666.6Pa× −1 (5mmHg×−1,0.2inHg ×−1)

Time needed for diagnosis: 11000ms− 1000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0451 EVAP SYSTEM (CPC) PRESSURE SENSOR/SWITCH CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0451 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

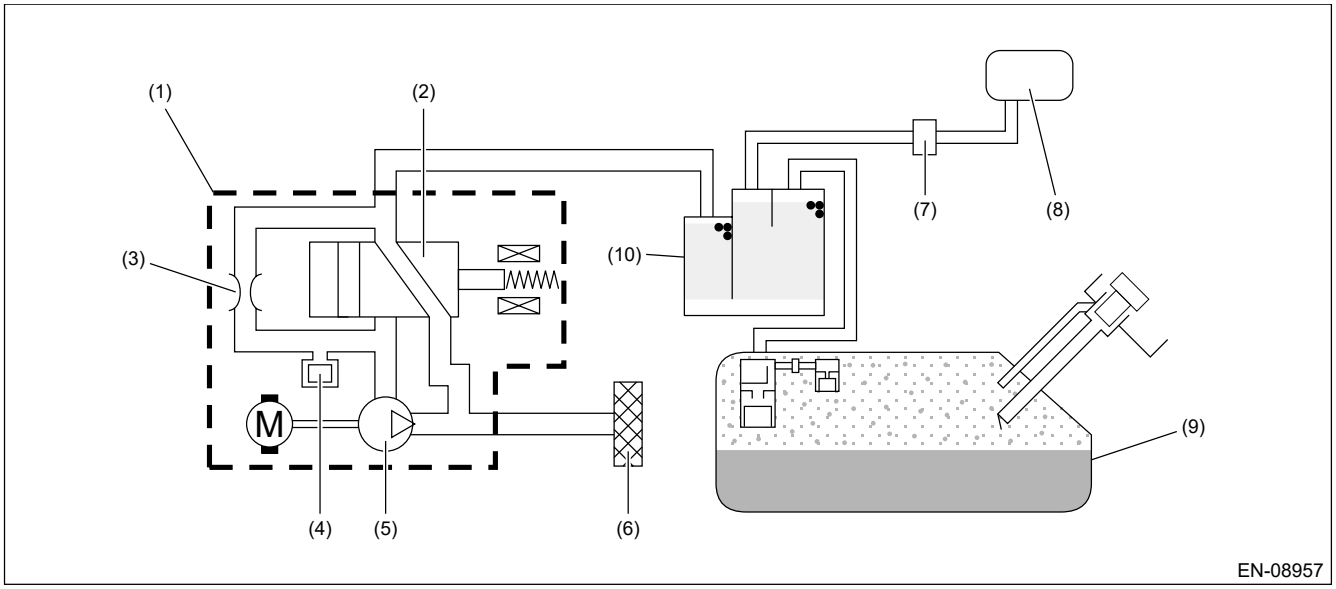
2. CHECK DATA MONITOR.

1. Turn the ignition switch to ON (engine OFF).
2. Using the Subaru Select Monitor or a general scan tool, read the values of [Evap System Vapor Pressure] and [Intake Manifold Absolute Pressure] to compare with actual atmospheric pressure.

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.
- **To read the actual atmospheric pressure, connect the Subaru Select Monitor or general scan tool to the other known good vehicle.**



Is the difference with the actual atmospheric pressure 2.53 kPa (18.98 mmHg, 0.75 inHg) or more?

Yes	Replace the part that showed larger deviation from the actual atmospheric pressure than the other. • If deviations in value for [Absolute Evap Sys. Pressure] is larger: Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly. • If deviations in value for [Mani. Absolute Pressure] is larger: Replace the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

1. OUTLINE OF DIAGNOSIS

Detect the output characteristics malfunction of Evaporative Leak Check Module pressure sensor.
Judge as NG when the Evaporative Leak Check Module pressure sensor output value is largely different from the intake manifold pressure when the ignition switch is ON.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition switch to OFF	500ms or more and Less than 60000ms
Soaking time	60s or more
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open
Purge control	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis once at ignition ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Evaporative Leak Check Module	More than

Malfunction Criteria	Threshold Value
pressure sensor output value – intake manifold pressure (absolute pressure) when ignition switch is ON|	5.1kPa (37.9mmHg, 1.5inHg)

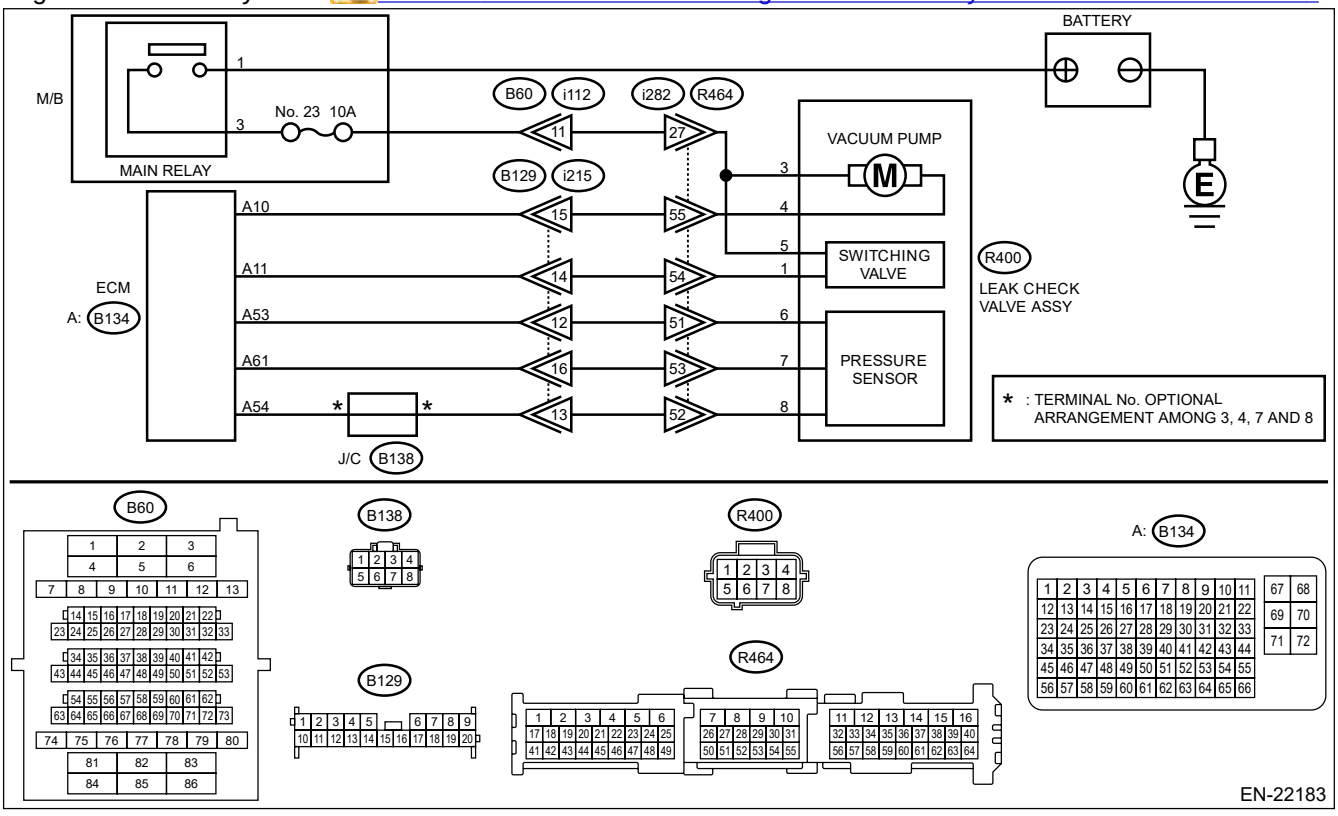
Time needed for diagnosis: 320ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0452 EVAP SYSTEM (CPC) PRESSURE SENSOR/SWITCH CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Barometric Pressure].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value in [Barometric Pressure] 34 kPa (255 mmHg, 10 inHg) or less?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the leak check valve assembly.
3. Turn the ignition switch to ON.
4. Measure the voltage between the leak check valve assembly connector and chassis ground.
   Connector & terminal
   (R400) No. 6 (+) — Chassis ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the leak check valve assembly connector** • **Poor contact of ECM connector** • **Poor contact of coupling connector**

3. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (SHORT TO GROUND).

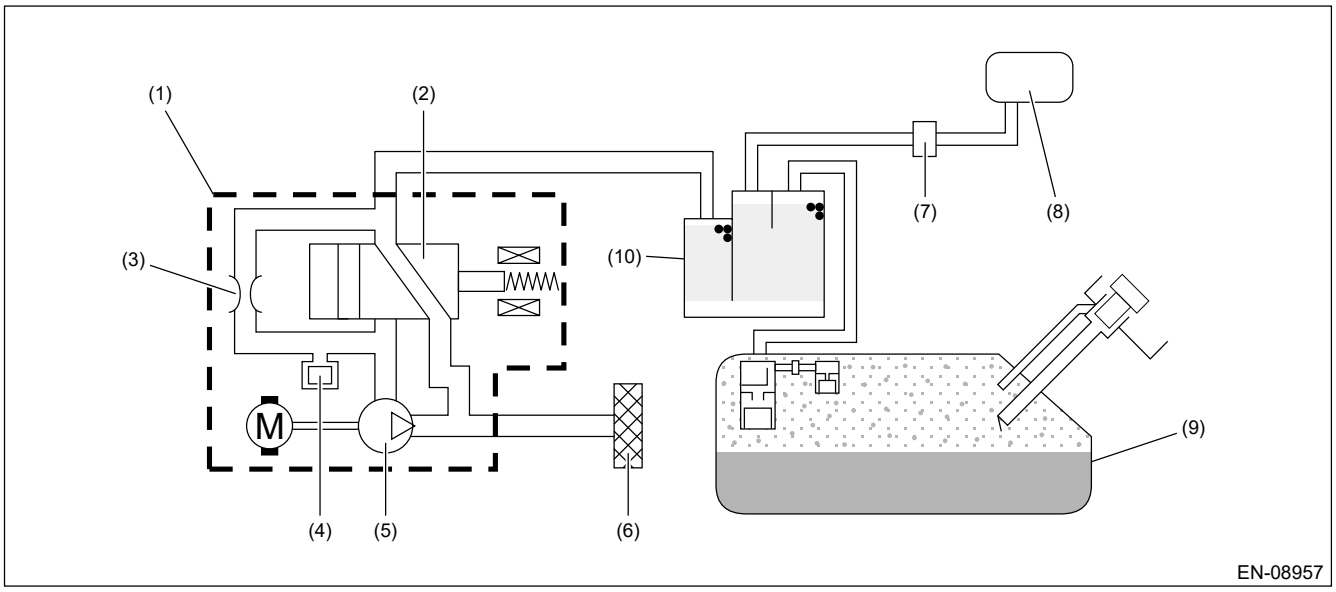
1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 61 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

4. CHECK FOR POOR CONTACT.

Check for poor contact of leak check valve assembly connector.



Is there poor contact in the leak check valve assembly connector?

Yes	Repair the poor contact in the leak check valve assembly connector.
No	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch or ECM	ON Powered-on by

Secondary parameters	Execution condition
	Soak timer IC
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.967V

Time needed for diagnosis: 1000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

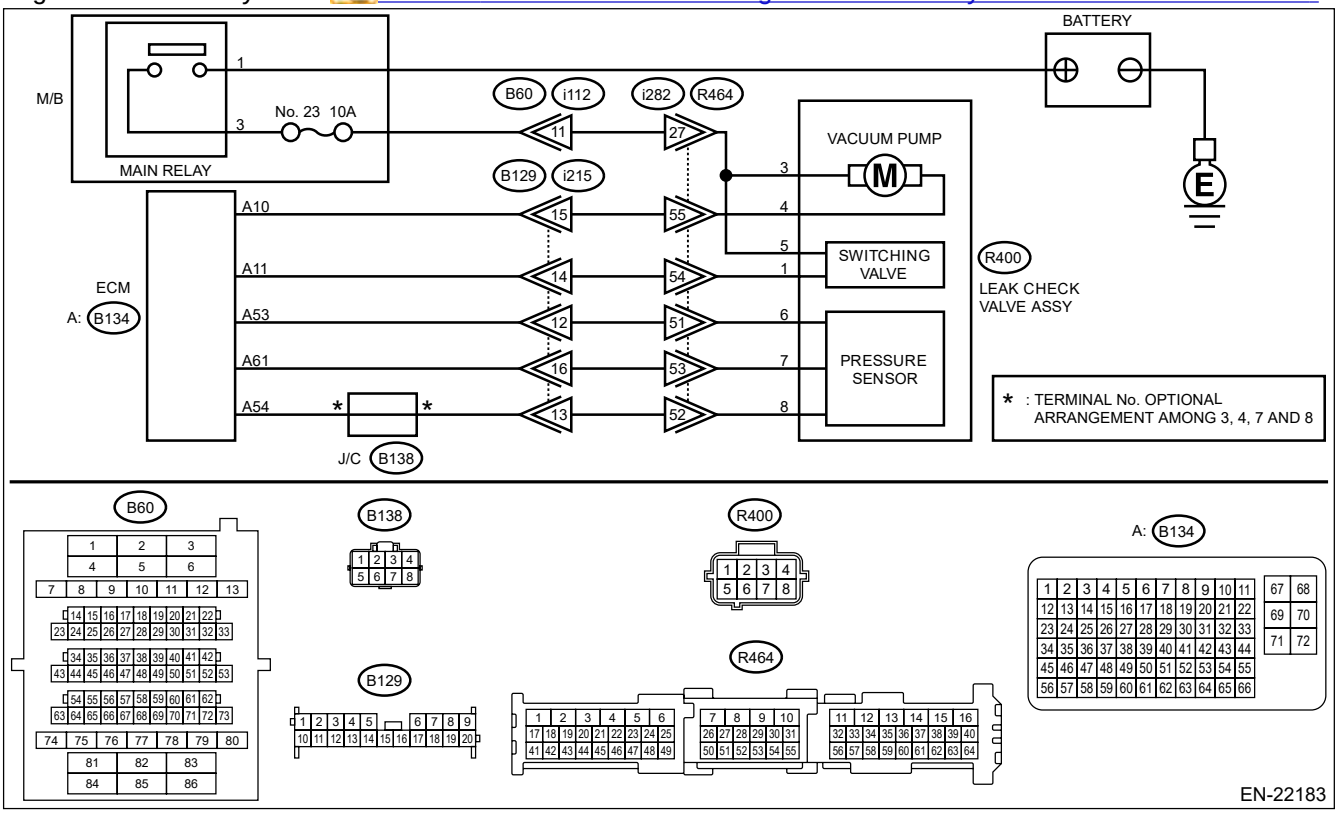
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0453 EVAP SYSTEM (CPC) PRESSURE SENSOR/SWITCH CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Barometric Pressure].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Barometric Pressure] 125 kPa (938 mmHg, 36.9 inHg) or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the leak check valve assembly.
4. Measure the resistance of harness between ECM connector and the leak check valve assembly connector.

   Connector & terminal

   (B134) No. 61 — (R400) No. 7:

   (B134) No. 54 — (R400) No. 8:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the leak check valve assembly connector** • **Poor contact of coupling connector** • **Poor contact of joint connector**

3. CHECK FOR POOR CONTACT.

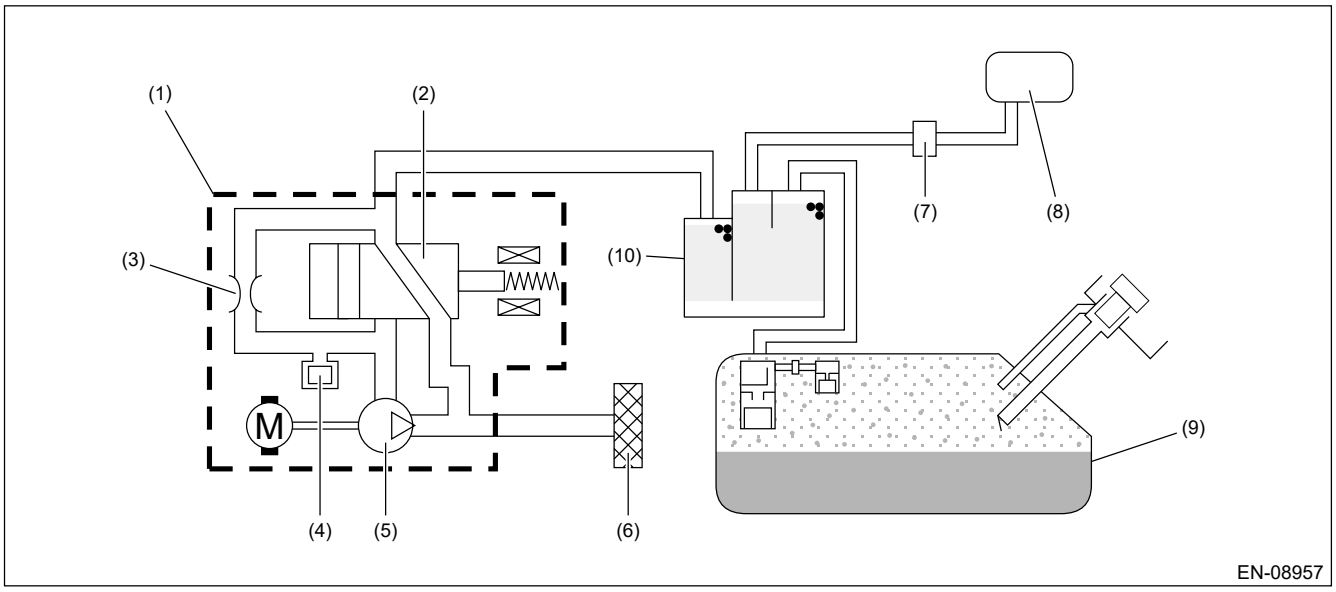
Check for poor contact of ECM and the leak check valve assembly connector.

Is there poor contact in ECM and the leak check valve assembly connector?

Yes	Repair the poor contact of ECM and the leak check valve assembly connector.
No	Go to 4.

4. CHECK LEAK CHECK VALVE ASSEMBLY.

Check the pressure sensor of the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly>INSPECTION > CHECK PRESSURE SENSOR.



Is the check result OK?

Yes	Repair the short circuit to power in harness between ECM connector and leak check valve assembly connector.
No	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition

Secondary parameters	Execution condition
Ignition switch or ECM	ON Powered-on by Soak timer IC
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.128V or more

Time needed for diagnosis: 1000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

- Fuel odor
- There is a hole of more than 1.0 mm (0.04 in) dia. in evaporation system or fuel tank.
- Fuel filler cap loose or lost

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK FUEL FILLER CAP.

1. Turn the ignition switch to OFF.
2. Check the installation condition of fuel filler cap.

   Note:

   The DTC is stored in memory if fuel filler cap is or was loose or if the cap chain has caught while tightening.

Is the fuel filler cap tightened securely?

Yes	Go to 2.
No	Tighten fuel filler cap securely.

2. CHECK FUEL FILLER CAP.

Check the fuel filler cap.

Is the fuel filler cap genuine?

Yes	Go to 3.
No	Replace with a genuine fuel filler cap.

3. CHECK FUEL FILLER CAP.

Check the gasket of fuel filler cap.

Does the gasket of fuel filler cap has any damage?

Yes	Replace the fuel filler cap. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Filler Pipe.
No	Go to 4.

4. CHECK PURGE CONTROL SOLENOID VALVE.

Check air-tightness of the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve>INSPECTION.

Is the check result OK?

Yes	Go to 5.
No	Replace the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve.

5. CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.

Check the evaporative emission control system line.

Are there holes on the evaporation line?

Yes	Repair or replace the evaporation line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines.
No	Go to 6.

6. CHECK CANISTER.

Check the canister.

Are there holes on the canister?

Yes	Replace the canister. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Canister.
No	Go to 7.

7. CHECK LEAK CHECK VALVE ASSEMBLY.

Check the leak check valve assembly.

Are there damage or holes on the leak check valve assembly?

Yes	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.
No	Go to 8.

8. CHECK FUEL TANK.

Remove the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank.

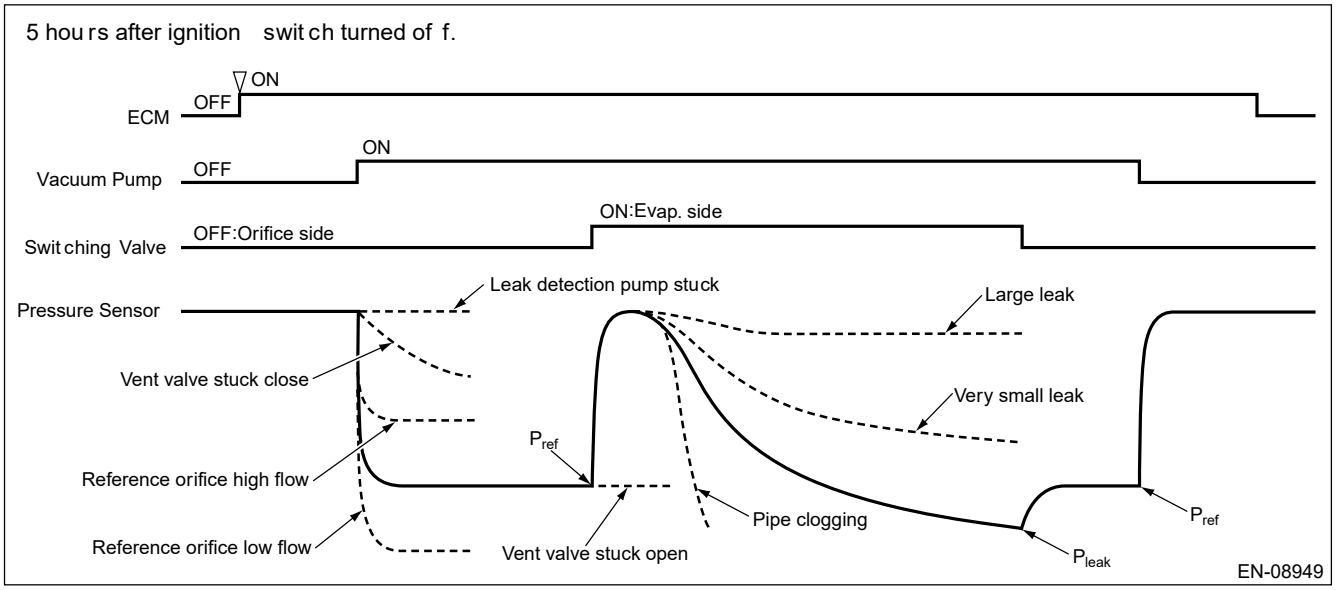
Are there damage or holes on the fuel tank?

Yes	Repair or replace the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank.
No	Go to 9.

9. CHECK ANY OTHER MECHANICAL TROUBLE IN EVAPORATIVE EMISSION CONTROL SYSTEM.

Check the evaporative emission control system.

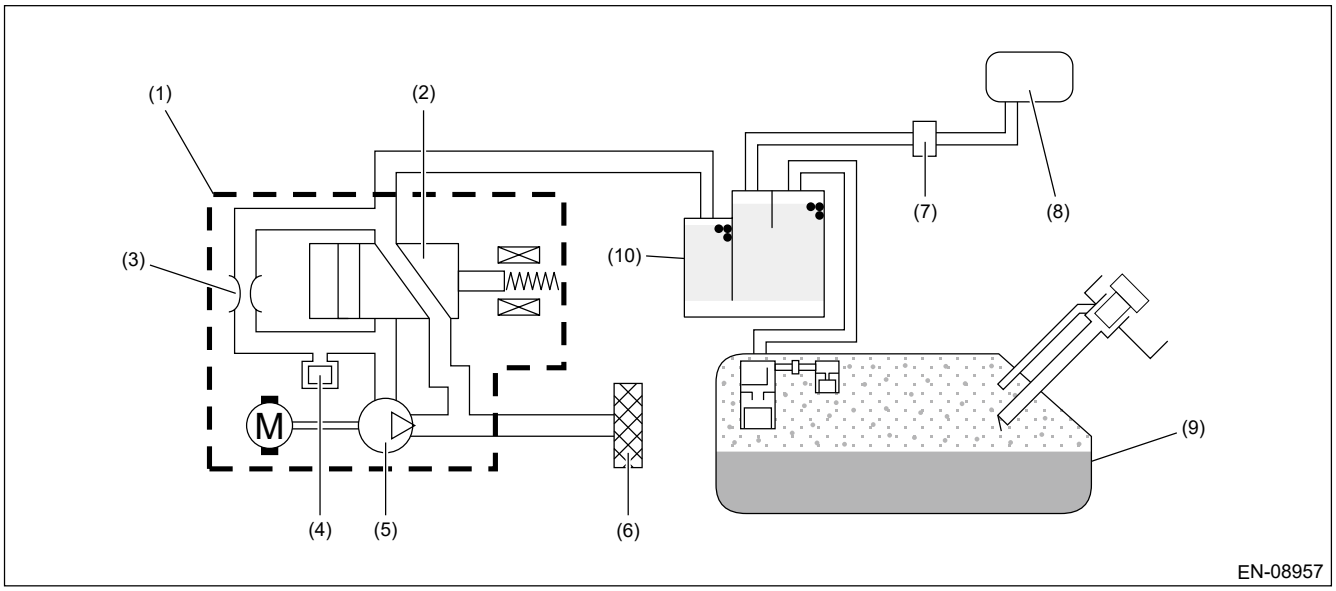
Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?



Yes	Repair or replace the hoses or pipes.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

This diagnosis judges whether the Evaporative Leak Check Module operation is normal or not, and whether the evaporative emission system has leak and clogging or not.
To purge the canister, after driving, perform the five hours soaking after ignition switch OFF in order to stabilize the evaporative gas status.* After 5 or 7 or 9.5 hours passed, ECM is activated by soaking timer, and the leak check is started.
Judges whether the Evaporative Leak Check Module operation is normal or not, by measuring the reference pressure status via reference orifice (0.02 inch orifice). Judge as malfunction if the reference pressure is out of specified range. Then, judge whether there is a leak or not, by comparing the pressure (leak pressure) when the reference pressure and the evaporative emission system are in negative pressure condition. Judge as system leak in the evaporative emission system if the leak pressure is higher than reference pressure. Judge as clogging of pipe if the leak pressure becomes lower than the reference pressure within the specified amount of time.
0.02 inch leak and 0.04 inch leak can be distinguished by measuring the leak pressure.
The diagnosis results are stored inside ECM until the engine is started again.
*: When the test conditions are not met in 5 hours, perform diagnosis at elapsed time of 7 hours. When the test conditions are not met in 7 hours, perform diagnosis at elapsed time of 9.5 hours.



Diagnostic item	
Evaporative Leak Check Module system (leak check valve assembly main body)	Vacuum pump stuck Switching valve stuck to open Switching valve stuck to close Reference orifice flow large Reference orifice flow small
Leak check	Large leak • 0.04 inch leak • Fuel cap loose • Fuel cap off • System malfunction
	Very small leak • 0.02 inch leak
Clogging of pipe	—

OUTLINE OF DIAGNOSIS

2. COMPONENT DESCRIPTION

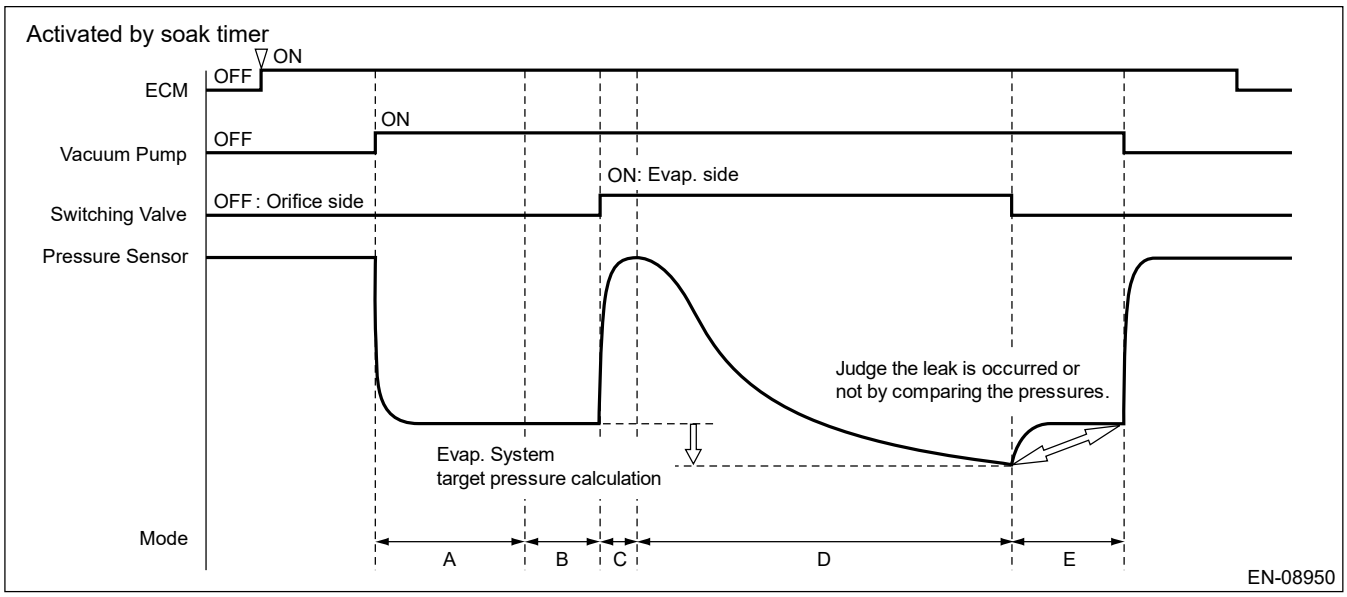
Evaporative Leak Check Module consists of the pressure sensor, the reference orifice (diameter of 0.02 inch), the vacuum pump which introduces the negative pressure into evaporative emission system, and the switching valve which switches the passage to introduce the negative pressure.

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

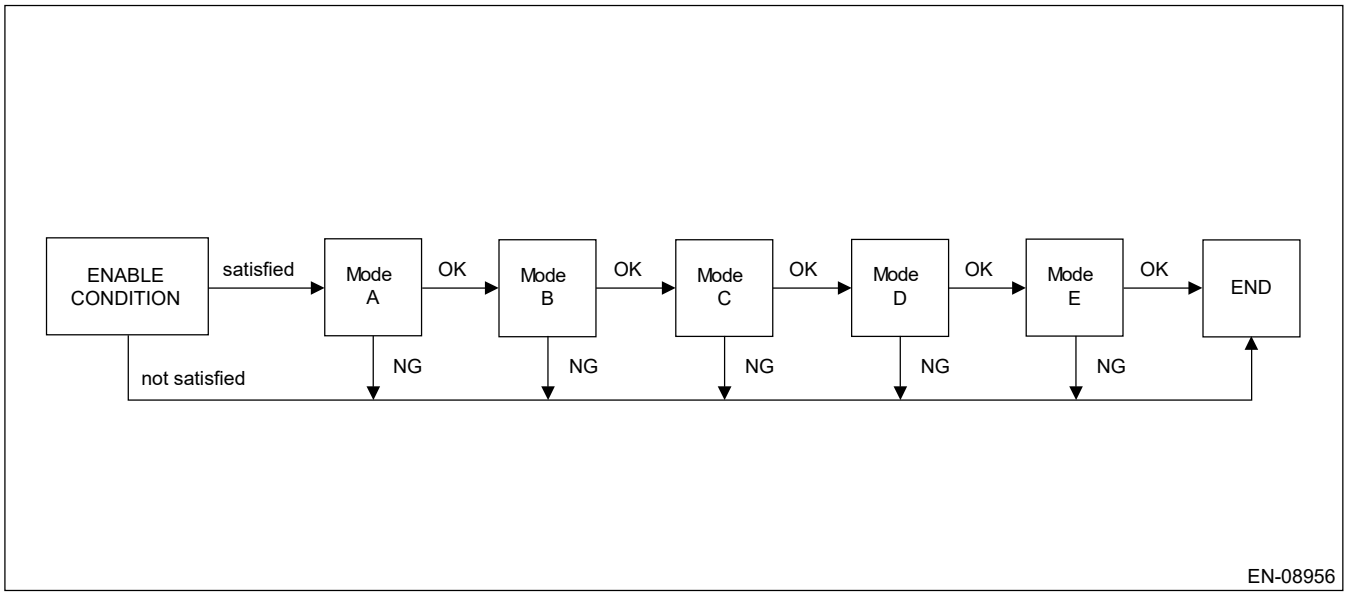
Secondary parameters	Execution condition

Secondary parameters	Execution condition
Battery voltage	10.9V or more
Barometric pressure	75.1kPa(563mmHg, 22.2inHg) or more
Activation of soaking timer	Completed
Intake air temperature	4.4°C(39.9°F) or more
Engine oil temperature	4.4°C(39.9°F) or more
Engine coolant temperature	4.4°C(39.9°F) or more and Less than 45°C(113°F)
Accumulated purge amount during previous driving cycle	Value of Map 1 or more



Map 1

Engine coolant temperature °C (°F)	0 (32)	30 (86)	35 (95)	40 (104)	45 (113)
Accumulated purge amount during previous driving cycle g (oz)	45 (1.59)	45 (1.59)	110 (3.88)	165 (5.82)	215 (7.58)



4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when 5 or 7 or 9.5 hours has passed after ignition switch is OFF. For more detail, refer to “OUTLINE OF DIAGNOSIS”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK) > OUTLINE OF DIAGNOSIS.

5. DIAGNOSTIC METHOD

Mode	Explanation of Mode	Diagnosis Period
A	Vacuum pump operation confirmation and characteristics stability	7 s or less & 300 s
B	Measurement of reference pressure for setting the target negative pressure	40 s or less
C	Switching valve operation confirmation	12 s or less
D	Clogging of pipe diagnosis and leak pressure measurement	900 s or less
E	Reference pressure measurement for judgment	40 s or less

MODE A (VACUUM PUMP OPERATION CONFIRMATION AND CHARACTERISTICS STABILITY)

Purpose: Detect the vacuum pump operation trouble.

Judge as NG when the following conditions are established.

Judge as OK if the following conditions are not established, and warm up for five minutes to stabilize the vacuum pump characteristics.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value	More than −224Pa(−1.68mmHg, −0.1inHg)	P2404

MODE B (MEASUREMENT OF REFERENCE PRESSURE FOR SETTING THE TARGET NEGATIVE PRESSURE)

Judgment 1

Purpose: Judge the reference pressure stability.

Judge as NG when the following conditions are established.

Judgment 2

Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump and orifice malfunctions.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Judgment 1 |Pressure sensor maximum output value − Pressure sensor minimum output value| or Judgment 2	More than 314Pa(2.355mmHg, 0.1inHg)	P2404
Reference pressure for setting the target negative pressure	Less than value of Map 2 or More than value of Map 3	P2404

Map 2

Barometric pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for setting the target negative pressure kPa (mmHg, inHg)	−4 (−29.79, −1.2)	−4.1 (−30.593,−1.2)	−4.2 (−31.395,−1.2)	−4.3 (−32.19, −1.3)

Map 3

Barometric pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for judgment kPa (mmHg, inHg)	−0.9 (−7.065, −0.3)	−1 (−7.86, −0.3)	−1.2 (−8.663, −0.3)	−1.3 (−9.465, −0.4)

MODE C (SWITCHING VALVE OPERATION CONFIRMATION)

Purpose: Measure the pressure increase when switching valve is changed from open to close, and detect the stuck to open/close malfunctions of the switching valve.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value − Reference pressure for setting the target negative pressure	Less than 224Pa(1.68mmHg, 0.1inHg)	P2404

MODE D (CLOGGING OF PIPE DIAGNOSIS AND LEAK PRESSURE MEASUREMENT)

1. Clogging of pipe

Purpose: Measure the time required for the evaporative emission system to reach the target negative pressure by the vacuum pump, and detect the clogging of pipe trouble.

Judge as clogging of pipe malfunction if the evaporative emission system reaches to the target negative pressure within the specified time.

2. Leak pressure measurement

Purpose: Measure the pressure (leak pressure) when the evaporative emission system becomes the negative pressure by the vacuum pump.

Store the pressure as a leak pressure while the following conditions are met.

Phase D

Judgment value

Malfunction Criteria	Threshold Value	DTC
Time required to reach to the target negative pressure	25216ms or less	P1451
<Large leak (0.04 inch)>		P0455
Leak pressure	Value of Map 6 or more	
<Very small leak (0.02 inch)>		P0456
Leak pressure	More than 0.018 inch reference pressure (Pa) and Less than value of Map 6	

Map 6

Reference pressure for judgment (Pa)	-4856	-4000	-2750	-1500	-824
Threshold Value (Pa)	-1785	-1463	-991	-520	-265

Formula for threshold value = Reference pressure ×0.377 −0.341

MODE E (MEASUREMENT OF REFERENCE PRESSURE FOR JUDGMENT)

Judgment 1

Purpose: Judge the reference pressure stability.

Judge as NG when the following conditions are established.

Judgment 2

Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump

and orifice malfunctions. Judge the vacuum pump performance stability.
Judge as NG when the following conditions are established.
Judgment 3
Purpose: Judge the presence of evaporative emission system leak.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Judgment 1 |Pressure sensor maximum output value − Pressure sensor minimum output value| or Judgment 2 Reference pressure for judgment or Judgment 3 |Reference pressure for setting the target negative pressure − Reference pressure for judgment|	More than 314Pa (2.355mmHg, 0.1inHg) Less than value of Map 4 or More than value of Map 5 More than 0.9kPa (7.058mmHg, 0.3inHg)	P2404 P2404 P2404

Map 4

Barometric pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for judgment kPa (mmHg, inHg)	−4.5 (−34.02, −1.3)	−4.6 (−34.815, −1.4)	−4.7 (−35.618, −1.4)	−4.9 (−36.42, −1.4)

Map 5

Barometric pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for judgment kPa (mmHg, inHg)	−0.9 (−6.18, −0.2)	−0.9 (−6.983, −0.3)	−1 (−7.785, −0.3)	−1.1 (−8.58, −0.3)

Time needed for diagnosis: 23 min
At next engine start, confirm whether the enable conditions are satisfied even though refueling has been done during soaking, and determine the malfunction.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0456 EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)

Note:

For the diagnostic procedure, refer to DTC P0455. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK).

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0455. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK).

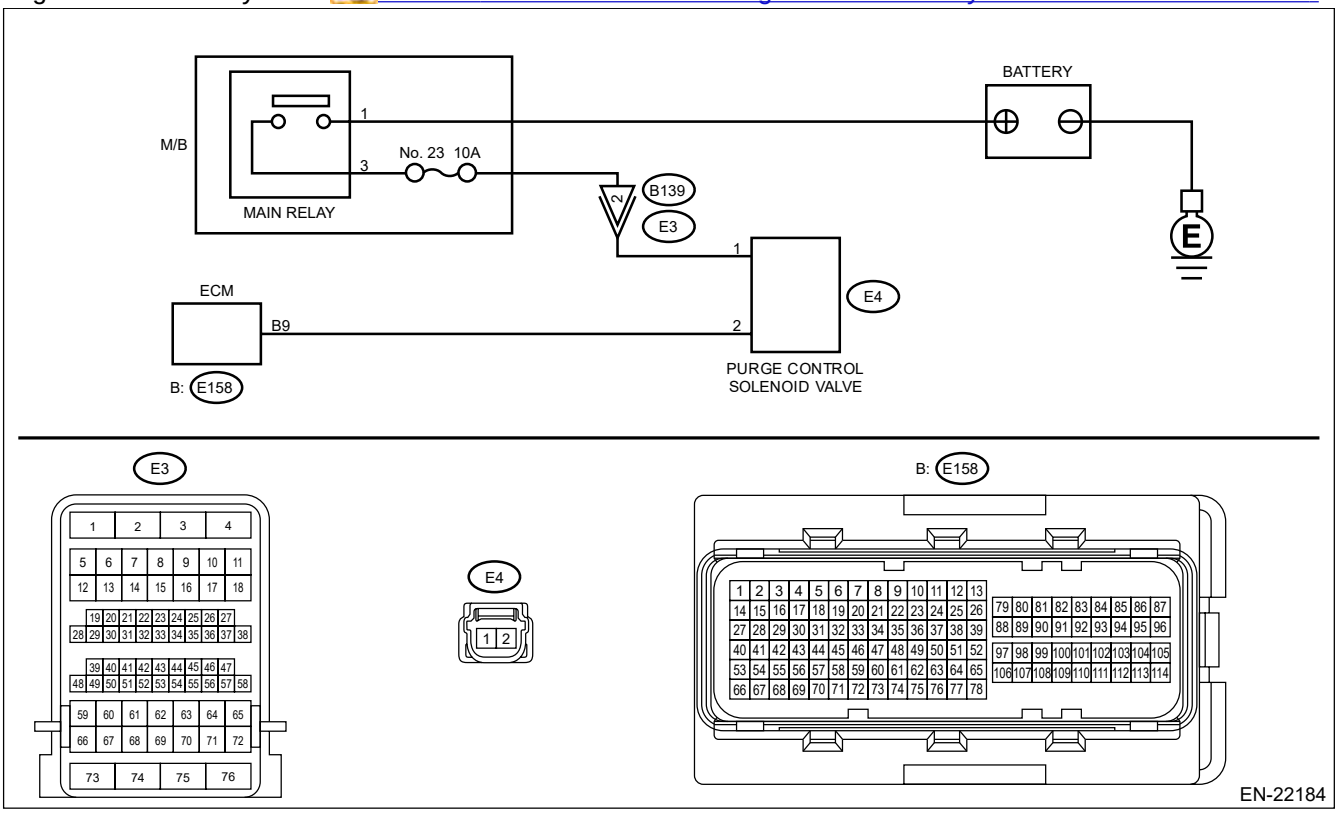
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0458 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT LOW

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



Improper idling

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK OUTPUT SIGNAL OF ECM (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 9 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Go to 3.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.**

3. CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE (OPEN).

Measure the voltage between purge control solenoid valve connector and engine ground.
Connector & terminal
(E4) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the purge control solenoid valve.
4. Measure the resistance between the purge control solenoid valve connector and engine ground.
   Connector & terminal
   (E4) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and purge control solenoid valve connector.

5. CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE (OPEN).

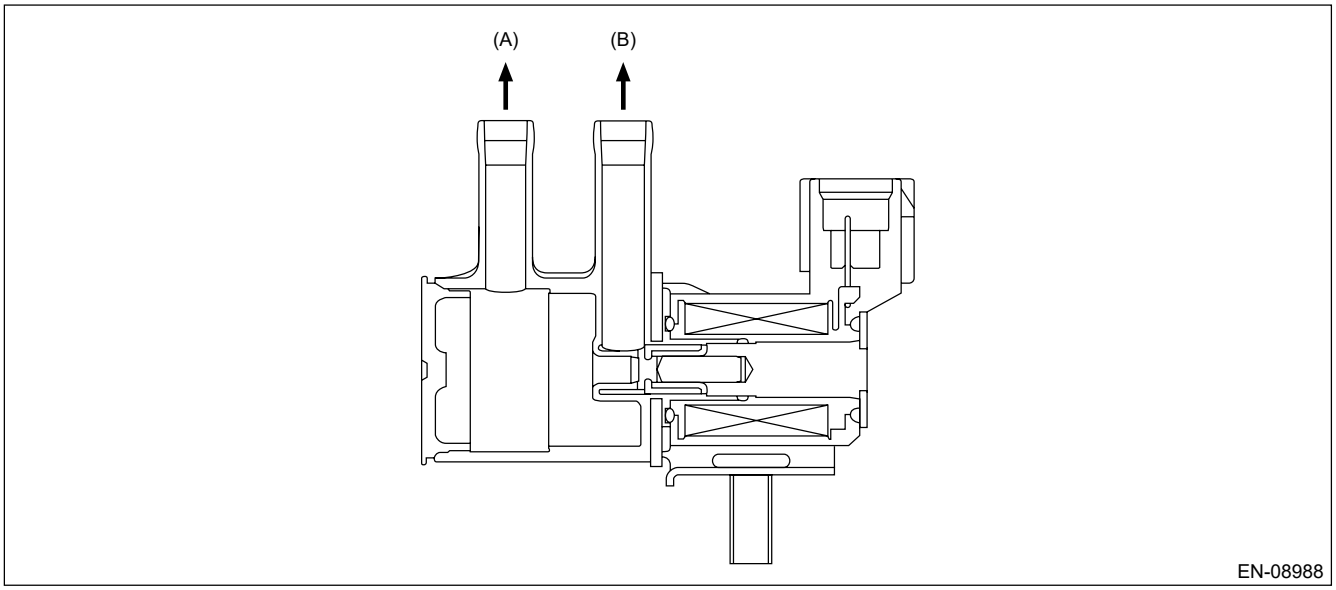
Measure the resistance of harness between ECM connector and purge control solenoid valve.
Connector & terminal
(E158) No. 9 — (E4) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit in harness between ECM connector and purge control solenoid valve connector.

6. CHECK PURGE CONTROL SOLENOID VALVE.

1. Remove the purge control solenoid valve.
2. Measure the resistance between purge control solenoid valve terminals.
   Terminals
   No. 1 — No. 2:



Is the resistance 10 — 100 Ω?

Yes	Repair the poor contact of purge control solenoid valve connector.
No	Replace the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve.
Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION

(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Purge control solenoid valve control duty	Less than 75%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Terminal output voltage	Battery voltage ×0.47 or less

Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

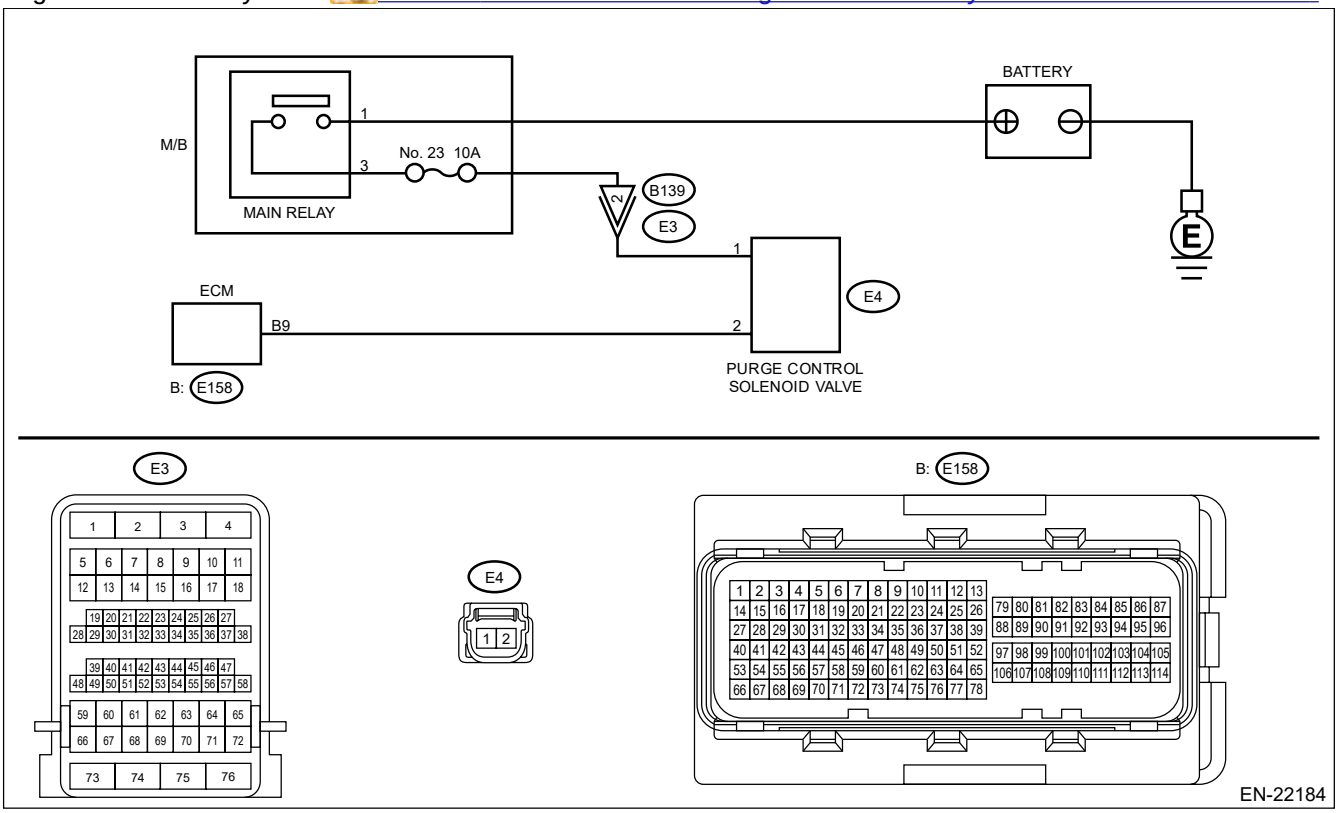
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0459 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT HIGH

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



Improper idling

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE (SHORT TO POWER SUPPLY).

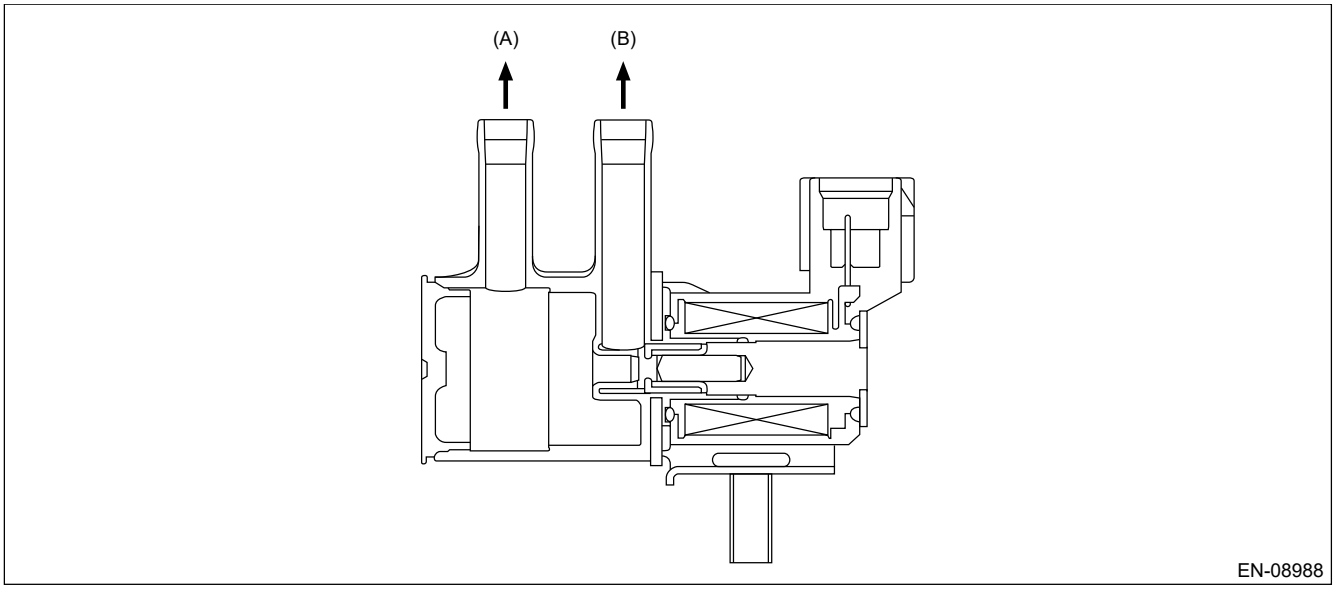
1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the purge control solenoid valve.
4. Turn the ignition switch to ON.
5. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 9 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and purge control solenoid valve connector.
No	Go to 2.

2. CHECK PURGE CONTROL SOLENOID VALVE.

1. Turn the ignition switch to OFF.
2. Measure the resistance between purge control solenoid valve terminals.
   Terminals
   No. 1 — No. 2:



Is the resistance less than 1 Ω?

Yes	Replace the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve.
Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION

(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Purge control solenoid valve control duty	25% or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Terminal output current	Battery voltage ×0.13 or more

Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC OF VDC.

Read the DTC of VDC using the Subaru Select Monitor or a general scan tool.

Is DTC for VDC displayed? (Current malfunction)

Yes	Perform the diagnosis of corresponding DTC using “Diagnostic Trouble Code (DTC)”. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when outside of the judgment value.
Judge NG when the received data from VDCCM&H/U is abnormal vehicle speed, and the vehicle speed data is impossible.

2. COMPONENT DESCRIPTION

Vehicle speed signals are taken in to the VDC control module and hydraulic control unit, and normal/erroneous data of the ABS wheel speed sensor is received by CAN communication from the VDC control module and hydraulic control unit.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Speed of the front wheels received from VDC control module & hydraulic control unit	300km/h (186.4MPH) or more

Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Hard to start the engine.
- Engine does not start.
- Improper idling
- Engine stall

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P0506 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK AIR CLEANER ELEMENT.

1. Turn the ignition switch to OFF.
2. Check the air cleaner element.

Is there excessive clogging on air cleaner element?

Yes	Replace the air cleaner element. Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner Element.
No	Go to 3.

3. CHECK ELECTRONIC THROTTLE CONTROL.

1. Remove the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body>REMOVAL.
2. Check the electronic throttle control.

Are foreign matter found inside electronic throttle control?

Yes	Remove foreign matter from electronic throttle control.
No	Perform the diagnosis of DTC P2101. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa (563mmHg, 22.2inHg) or more
Lambda value (left and right)	0.85 or more and Less than 1.151
Vehicle speed	0 km/h (0 MPH)
Elapsed time after starting the engine	10s or more
Accelerator pedal position	0%
Elapsed time after gear position change (P ←→ D or N ←→ D)	More than 5s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed − Targeted engine speed	Less than −100rpm

Time needed for diagnosis: 15s ×1time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Engine keeps running at higher speed than specified idle speed.
Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P0507 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK AIR INTAKE SYSTEM.

1. Start and idle the engine.
2. Check the following items.
   - Loose installation of intake manifold and throttle body
   - Cracks of intake manifold gasket and throttle body gasket
   - Disconnection of vacuum hoses

Is there any fault in air intake system?

Yes	Repair air suction and leaks.
No	Go to 3.

3. CHECK ELECTRONIC THROTTLE CONTROL.

1. Turn the ignition switch to OFF.
2. Remove the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body>REMOVAL.
3. Check the electronic throttle control.

Are foreign matter found inside electronic throttle control?

Yes	Remove foreign matter from electronic throttle control.
No	Perform the diagnosis of DTC P2101. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa (563mmHg, 22.2inHg) or more
Lambda value (left and right)	0.85 or more and Less than 1.151
Vehicle speed	0 km/h (0 MPH)
Elapsed time after starting the engine	10s or more
Accelerator pedal position	0%
Elapsed time after gear position change (P ←→ D or N ←→ D)	More than 5s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Targeted engine speed	More than 200rpm

Time needed for diagnosis: 15s×1time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE

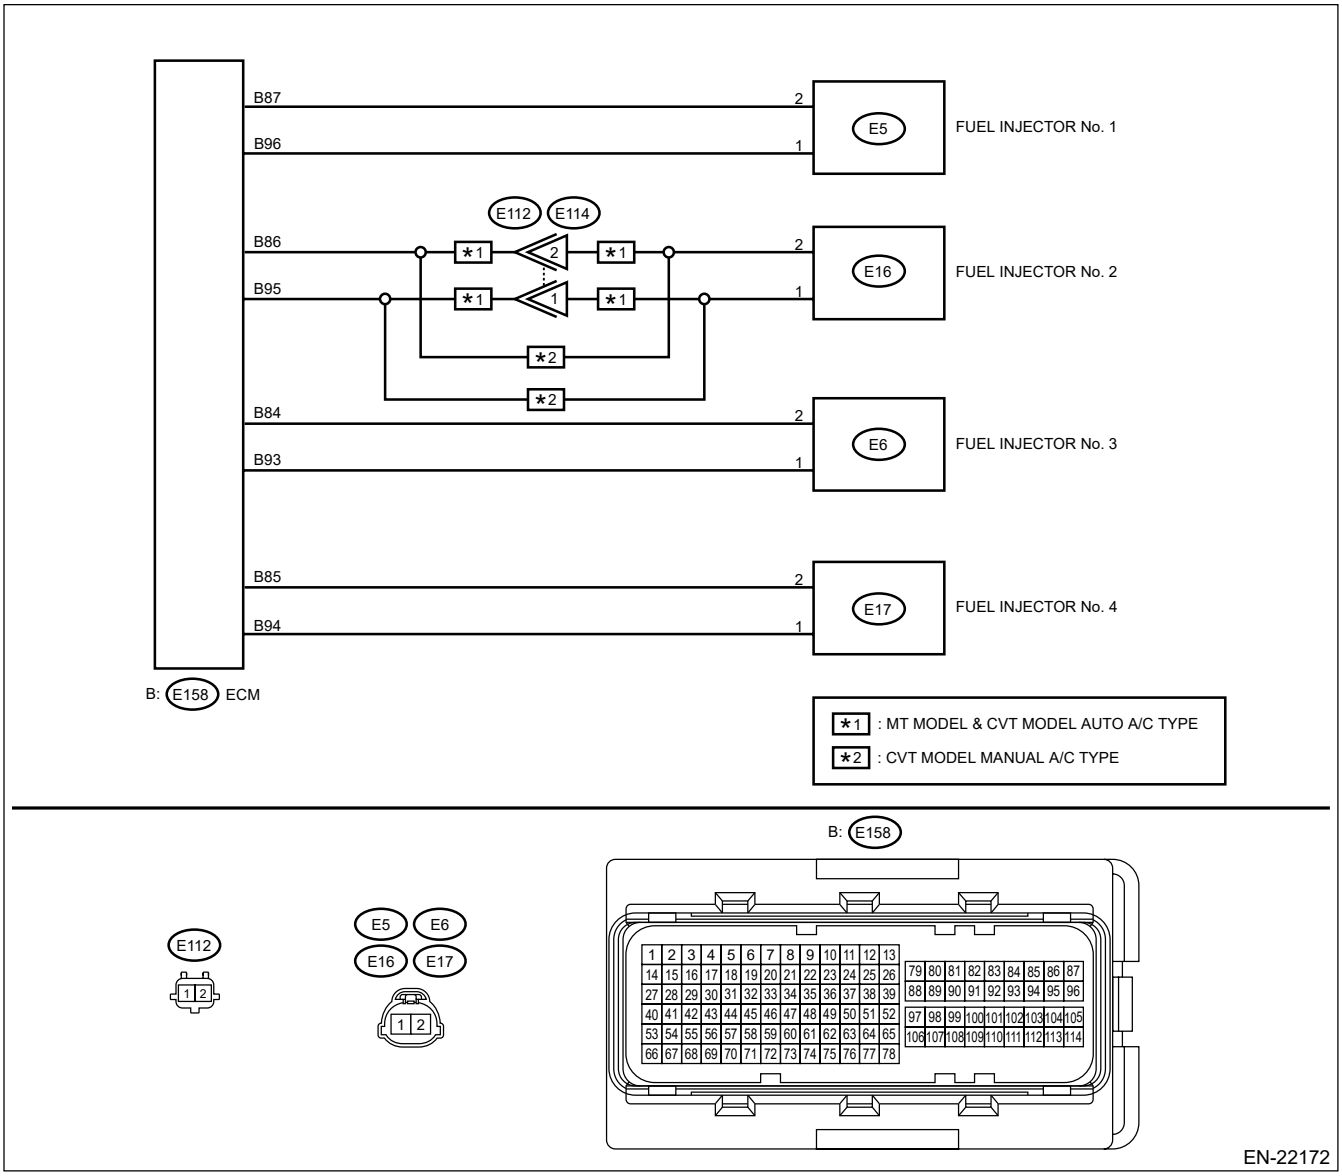
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

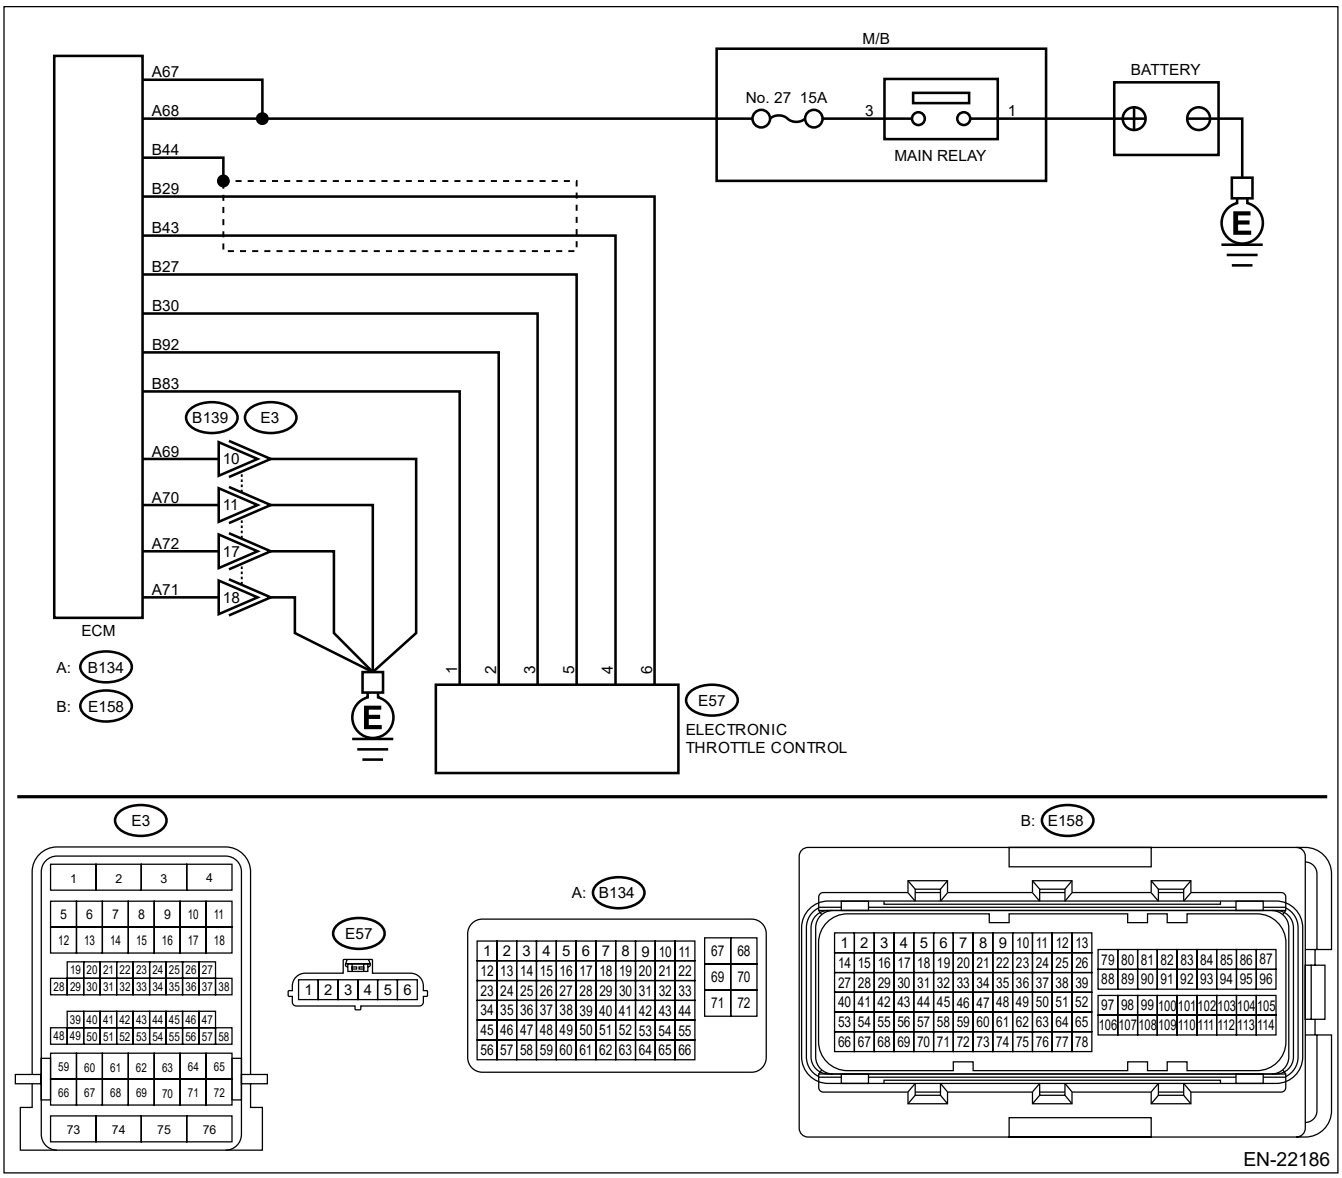
Trouble symptom:

- Engine keeps running at higher speed than specified idle speed.
- Engine keeps running at a lower speed than the specified idle speed.
- Engine stall

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

EN-22172

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P050A displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK ENGINE OIL.

Check the engine oil amount.

Is there a proper amount of engine oil?

Yes	Go to 3.
No	Replace engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.

3. CHECK EXHAUST SYSTEM.

Check exhaust system parts.

Are there holes or loose bolts on exhaust system?

Yes	Repair the exhaust system.
No	Go to 4.

4. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system.
No	Go to 5.

5. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Release fuel pressure before removing the fuel pressure gauge.

Is the measured value 350 — 450 kPa (3.5—4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 6.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

6. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

Data Monitor

Note:
- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.] 75°C (167°F) or more?

Yes	Go to 7.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

7. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Using the Subaru Select Monitor or a general scan tool, read the value of [Air Flow Rate from Mass Air Flow Sensor].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Air Flow Rate from Mass Air Flow Sensor]2.0—5.0 g/s (0.26—0.66 lb/m)?

Yes	Go to 8.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

8. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Open the front hood.
6. Measure the ambient temperature.
7. Using the Subaru Select Monitor or a general scan tool, read the value of [Intake Air Temp.].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Subtract ambient temperature from [Intake Air Temp.]. Is the obtained value −10 — 50°C (−18 — 90°F)?

Yes	Go to 9.
No	Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

9. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from fuel injector on faulty cylinders.
4. Measure the resistance between fuel injector connector and engine ground on faulty cylinders.

Connector & terminal

#1 (E5) No. 1 — Engine ground:
#1 (E5) No. 2 — Engine ground:
#2 (E16) No. 1 — Engine ground:
#2 (E16) No. 2 — Engine ground:
#3 (E6) No. 1 — Engine ground:
#3 (E6) No. 2 — Engine ground:
#4 (E17) No. 1 — Engine ground:
#4 (E17) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 10.
No	Repair the short circuit to ground in harness between ECM and fuel injector connector.

10. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

Measure the resistance of harness between ECM and fuel injector connector on faulty cylinders.

Connector & terminal

#1 (E158) No. 96 — (E5) No. 1:
#1 (E158) No. 87 — (E5) No. 2:
#2 (E158) No. 95 — (E16) No. 1:
#2 (E158) No. 86 — (E16) No. 2:
#3 (E158) No. 93 — (E6) No. 1:
#3 (E158) No. 84 — (E6) No. 2:
#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 11.
No	Repair the open circuit of the harness between the ECM and fuel injector connector.

11. CHECK FUEL INJECTOR.

Check the fuel injector on faulty cylinder. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 12.
No	Replace the faulty fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

12. CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR AND CRANKSHAFT POSITION SENSOR.

Check the installation condition of the camshaft position sensor and crankshaft position sensor.

Is the camshaft position sensor or crankshaft position sensor loosely installed?

Yes	Tighten the camshaft position sensor or crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.
No	Go to 13.

13. CHECK CRANKSHAFT POSITION SENSOR PLATE.

Check the crankshaft position sensor plate.

Is the crankshaft position sensor plate rusted or does it have broken teeth?

Yes	Replace the crankshaft position sensor plate. Ref. to MECHANICAL(H4DO)>Cylinder Block.
No	Go to 14.

14. CHECK INSTALLATION CONDITION OF TIMING CHAIN.

Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block.

ST 18252AA000 CRANKSHAFT SOCKET

Is the timing chain dislocated from its proper position?

Yes	Correct the installation condition of timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly.
No	Go to 15.

15. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 27 — Chassis ground:
(E158) No. 29 — Chassis ground:
(E158) No. 29 — (E158) No. 44:
(E158) No. 43 — Chassis ground:
(E158) No. 43 — (E158) No. 44:

Is the resistance 1 MΩ or more?

Yes	Go to 16.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

16. CHECK SHORT CIRCUIT INSIDE THE ECM.

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 6 — Engine ground:
   (E57) No. 4 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 17.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

17. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and electronic throttle control connector.
   Connector & terminal
   (E158) No. 29 — (E57) No. 6:
   (E158) No. 43 — (E57) No. 4:
   (E158) No. 30 — (E57) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 18.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and electronic throttle control connector** • **Poor contact of coupling connector**

18. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 19.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Poor contact of ECM connector**

19. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 6 (+) — Engine ground (−):
   (E57) No. 4 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
No	Go to 20.

20. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT BETWEEN LINES).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.

Connector & terminal

(E158) No. 27 — (E158) No. 29:

(E158) No. 27 — (E158) No. 43:

Is the resistance 1 MΩ or more?

Yes	Go to 21.
No	Repair the short circuit between lines in harness between ECM connector and electronic throttle control connector.

21. CHECK SENSOR OUTPUT.

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Using the Subaru Select Monitor, read the value in [Main-Throttle Sensor].

Data Monitor

Note:

For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Main-Throttle Sensor]0.81—0.87 V?

Yes	Go to 22.
No	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

22. CHECK SENSOR OUTPUT.

Using the Subaru Select Monitor, read the value in [Sub-Throttle Sensor].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Sub-Throttle Sensor]1.64—1.70 V?

Yes	Go to 23.
No	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

23. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance between ECM connector and electronic throttle control connector.
   Connector & terminal
   (E158) No. 90 — (E57) No. 31:
   (E158) No. 1 — (E57) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 24.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

24. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO POWER SUPPLY).

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 2 (+) — Engine ground (−):
   (E57) No. 1 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
No	Go to 25.

25. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 2 — Engine ground:
   (E57) No. 1 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 26.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

26. CHECK HARNESS BETWEEN ELECTRONIC THROTTLE CONTROL CONNECTOR (SHORT BETWEEN LINES).

Measure the resistance between electronic throttle control connectors.

Connector & terminal

(E57) No. 2 — (E57) No. 1:

Is the resistance 1 MΩ or more?

Yes	Go to 27.
No	Repair the short circuit in harness between ECM connector and electronic throttle control connector.

27. CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT (OPEN).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 — Chassis ground:
(B134) No. 70 — Chassis ground:
(B134) No. 71 — Chassis ground:
(B134) No. 72 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Go to 28.
No	Repair the open circuit in harness between ECM connector and engine ground.

28. CHECK ELECTRONIC THROTTLE CONTROL.

Measure the resistance between electronic throttle control terminals.

Terminals

No. 2 —No. 1:

Is the resistance 50 Ω or less?

Yes	Go to 29.
No	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

29. CHECK ELECTRONIC THROTTLE CONTROL.

Move the throttle valve to the fully opened and fully closed positions with fingers.
Check that the valve returns to the specified position when releasing fingers.

Does the valve return to the specified position? Standard value: 3 mm (0.12 in) from fully closed position

Yes	Repair the poor contact of ECM connector.
No	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

1. OUTLINE OF DIAGNOSIS

- **When cold, the abnormality in the control of target engine speed increase is detected. (P050A)**
  - Idle speed diagnosis
    Judge as NG when actual engine speed is not close to target engine speed at cold start.
- **Detect malfunctions of the catalyst advanced idling retard angle control. (P050B)**
  Judge as NG when ECM is not controlling the angle properly during catalyst advanced idling retard angle control.
  - Final ignition timing diagnosis
    Judge as NG when actual retard amount is under the specified value at cold start.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
<Idle speed diagnosis>	
Battery voltage	10.9 V or more

Secondary parameters	Execution condition
Barometric pressure	75.1kPa (563mmHg,22.2in Hg) or more
Vehicle speed	2km/h (1.2MPH) or less
Throttle position	Less than 0.37°
Integrated value of intake air amount	Less than value of Map 1
Elapsed time after gear position change (P ←→ D or N ←→ D)	2000ms or more
Elapsed time after starting the engine	2000ms or more
<Final ignition timing diagnosis>	
• Idle diagnosis	
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa (563mmHg,22.2in Hg) or more
Vehicle speed	2km/h (1.2MPH) or less
Integrated value of intake air amount	Less than value of Map 2
Elapsed time after gear position change (P ←→ D or N ←→ D)	2000ms or more
Target retard amount in CSERS	Value of Map 3 or less (before top dead center)
• Non-idle diagnosis	
Battery voltage	10.9 V or more
Barometric pressure	75.1kPa (563mmHg,22.2in Hg) or more
Integrated value of intake air amount	Less than value of Map 2
Elapsed time after gear position change (P ←→ D or N ←→ D)	0ms or more
Retard amount	Value of Map 4 or more

Map 1

Engine coolant temperature at engine starting °C (°F)	−40 (−40)	−30 (−22)	−20 (−4)	−10 (14)	0(32)	10(50)	20(68)	30(86)
Integrated value of intake air amount g (oz)	1000 (35.26)	961 (33.9)	923 (32.54)	884 (31.18)	845 (29.82)	807 (28.46)	768 (27.1)	730 (25.74)

3. GENERAL DRIVING CYCLE

Perform the diagnosis at cold start.

4. DIAGNOSTIC METHOD

- **Idle speed diagnosis**

  Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Actual engine speed − Target engine speed	Less than −230rpm	P050A

Time needed for diagnosis: 7000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

- **Final ignition timing diagnosis**

  Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC

Malfunction Criteria	Threshold Value	DTC
Final ignition timing − ignition timing during CSERS* *: • CSERS (Cold Start Emission Reduction Strategy) • Intermediate ignition timing = Base ignition timing − Retard amount	More than value of Map 5	P050B

Map 5

Engine coolant temperature at engine starting °C (°F)	**−40(−40)**	**−30(−22)**	**−20(−4)**	**−10(14)**	**0(32)**	**10(50)**	**20(68)**	**30(86)**	**40(104)**	**50(122)**	**60(140)**
Threshold value (CVT model) (°CA)	6.5	6.5	6.5	6.5	6.5	6.5	6.5	6.5	6.5	6.5	6.5
Threshold value (MT model) (°CA)	7	7	7	7	7	7	7	7	7	7	7

Time needed for diagnosis:7000ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P050B COLD START IGNITION TIMING PERFORMANCE

Note:
For the diagnostic procedure, refer to DTC P050A. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE.

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P050A. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE.

DTC P0512 STARTER (SWITCH) REQUEST CIRCUIT

DTC detecting condition:

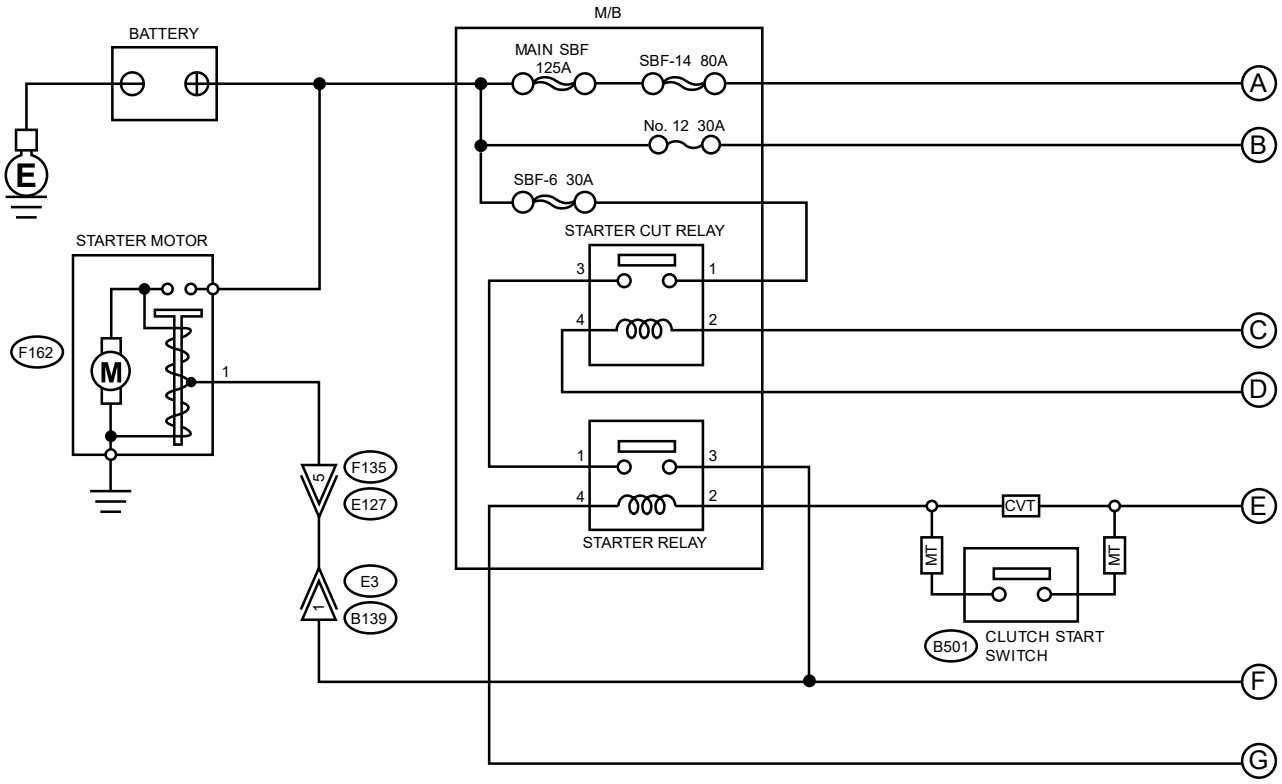
Immediately at fault recognition

Trouble symptom:

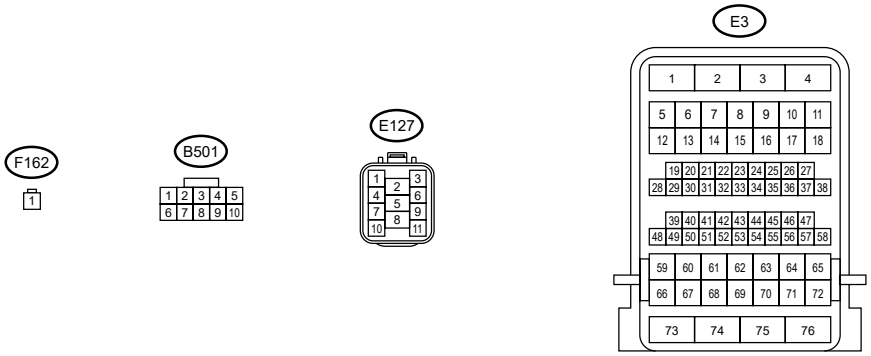
Failure of engine to start

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

- Model without push button start

1. CHECK DTC.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Start and idle the engine for three minutes or more.
3. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

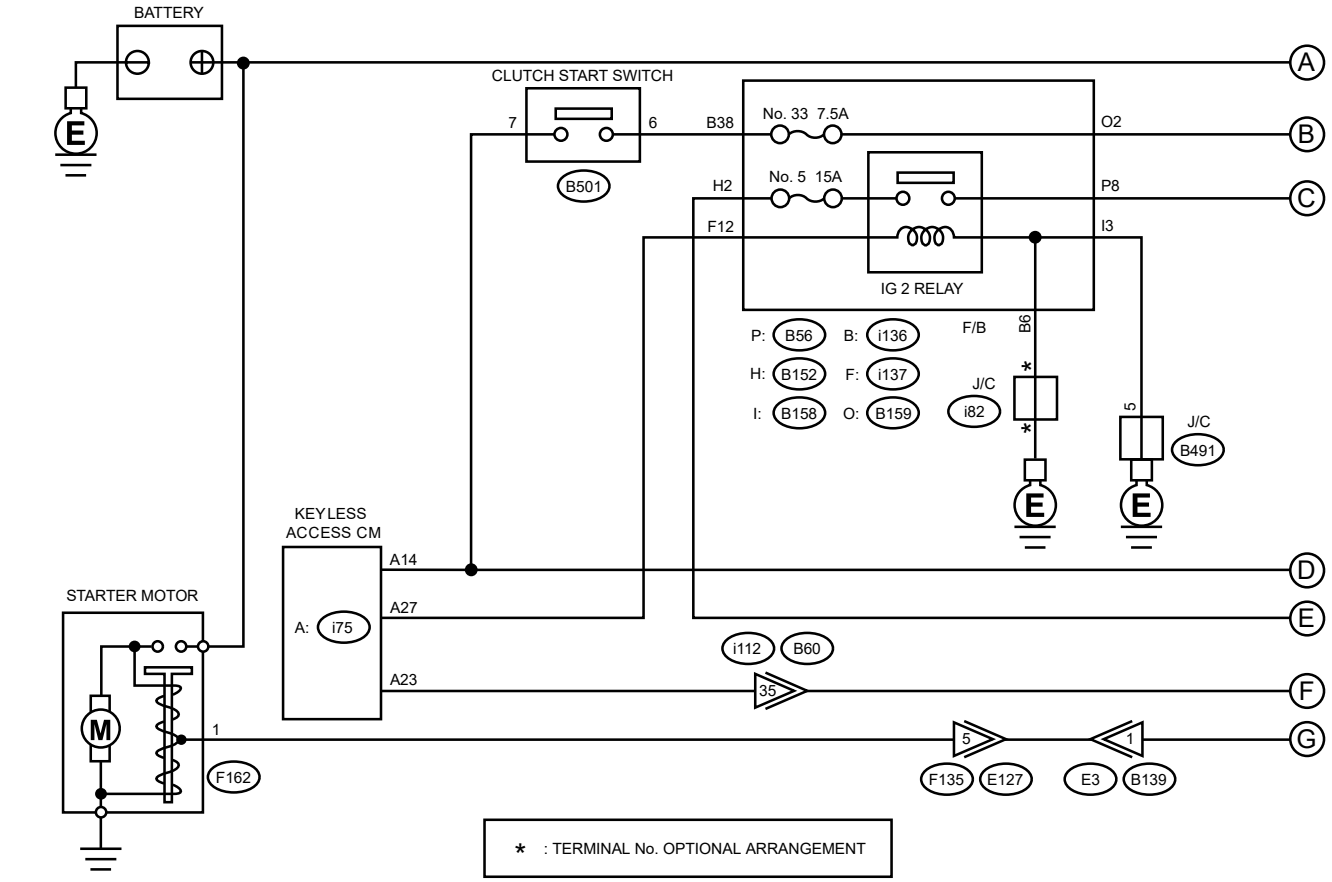
Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0512 displayed? (Current malfunction)

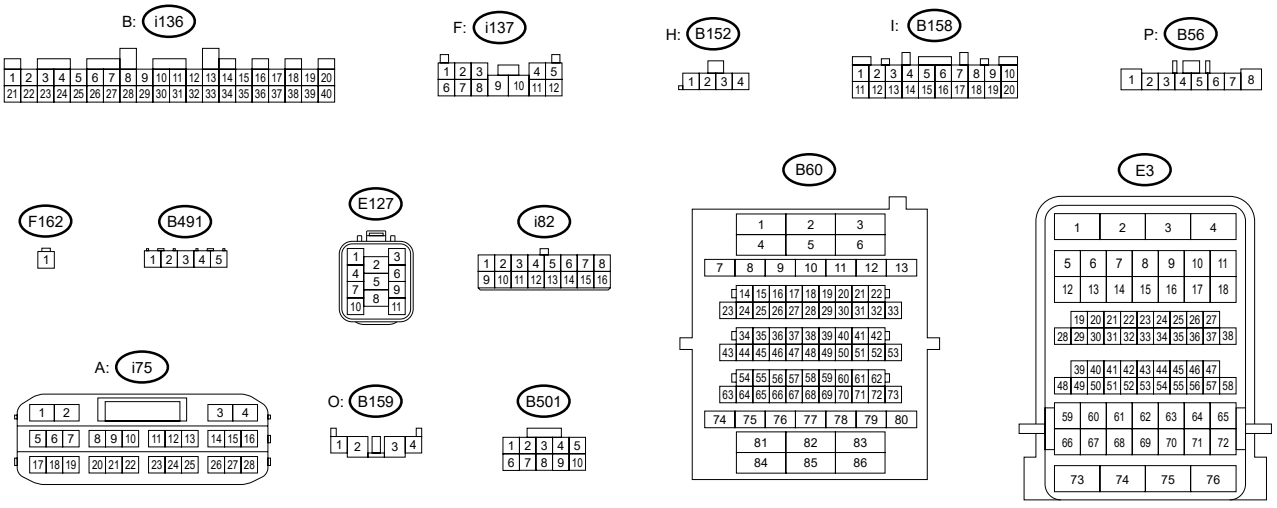
Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, a malfunction may be detected by continuously holding the ignition key at START position.

2. CHECK HARNESS BETWEEN ECM AND STARTER SWITCH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Turn the ignition switch to ON.
4. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 25 (+) — Chassis ground (−):



Is the voltage 10 V or more?



Yes	Repair the short circuit to power supply in harness between ECM connector and starter switch.
No	Repair the poor contact of ECM connector.

- Model with push button start

EN-22168

1. CHECK PUSH BUTTON IGNITION SWITCH.

Check the push button ignition switch. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.

Is the check result OK?

Yes	Go to 2.
No	Replace the push button ignition switch. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.

2. CHECK DTC.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Start and idle the engine for three minutes or more.
3. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0512 displayed? (Current malfunction)

Yes	Go to 3.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

3. CHECK HARNESS BETWEEN ECM AND STARTER RELAY CONNECTOR (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Turn the ignition switch to ON.
4. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 27 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and starter relay connector.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW1.
Judge as ON NG when the starter SW 1 signal remains ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	8V or more
Engine speed	500 rpm or more

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW 1 signal	4 V or more

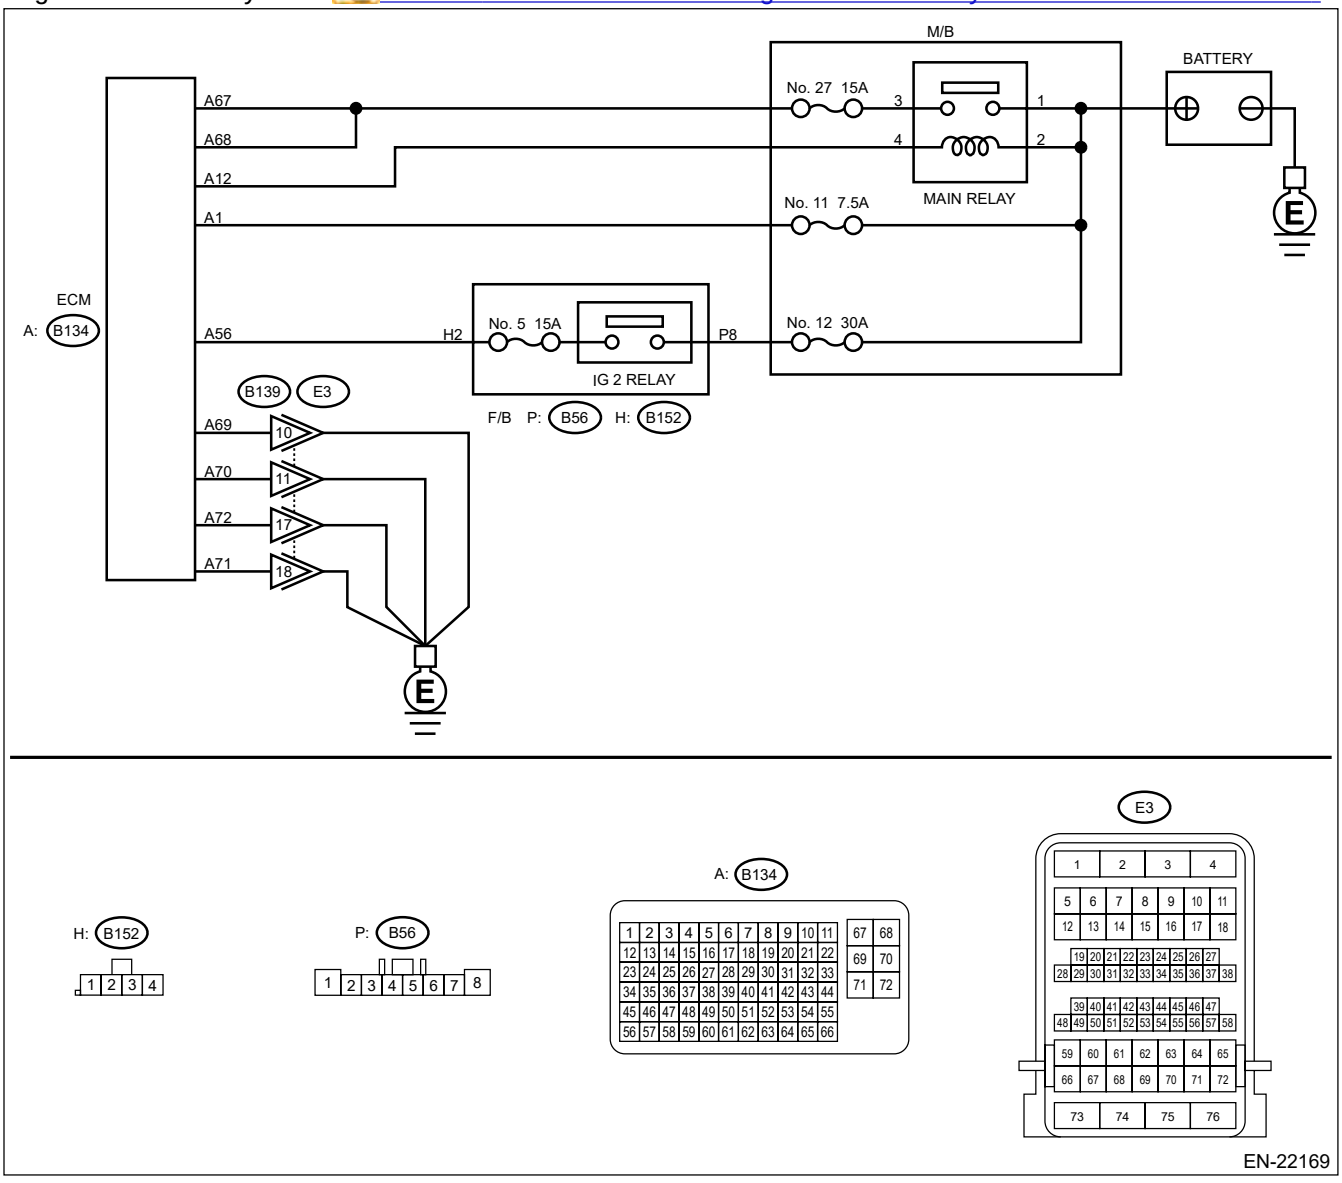
Time needed for diagnosis: 30000ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0560 SYSTEM VOLTAGE

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK INPUT SIGNAL OF ECM.

1. Turn the ignition switch to OFF.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the poor contact of ECM connector.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND MAIN FUSE BOX (SHORT TO GROUND).

1. Disconnect the connector from ECM.
2. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 1 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit to ground in harness between ECM connector and battery terminal.

3. CHECK FUSE NO. 11 (MAIN FUSE BOX).

Check the fuse No. 11.

Is the fuse blown out?

Yes	Replace the fuse.
No	Repair the harness and connector.

Note:

In this case, repair the following item:

- **Open circuit in harness between ECM connector and battery**
- **Poor contact of ECM connector**
- **Poor contact of battery terminal**

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of back-up power supply circuit.
Judge as NG when the backup power voltage is low.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Voltage of back-up power supply	1.4 V or less

Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0562 SYSTEM VOLTAGE LOW

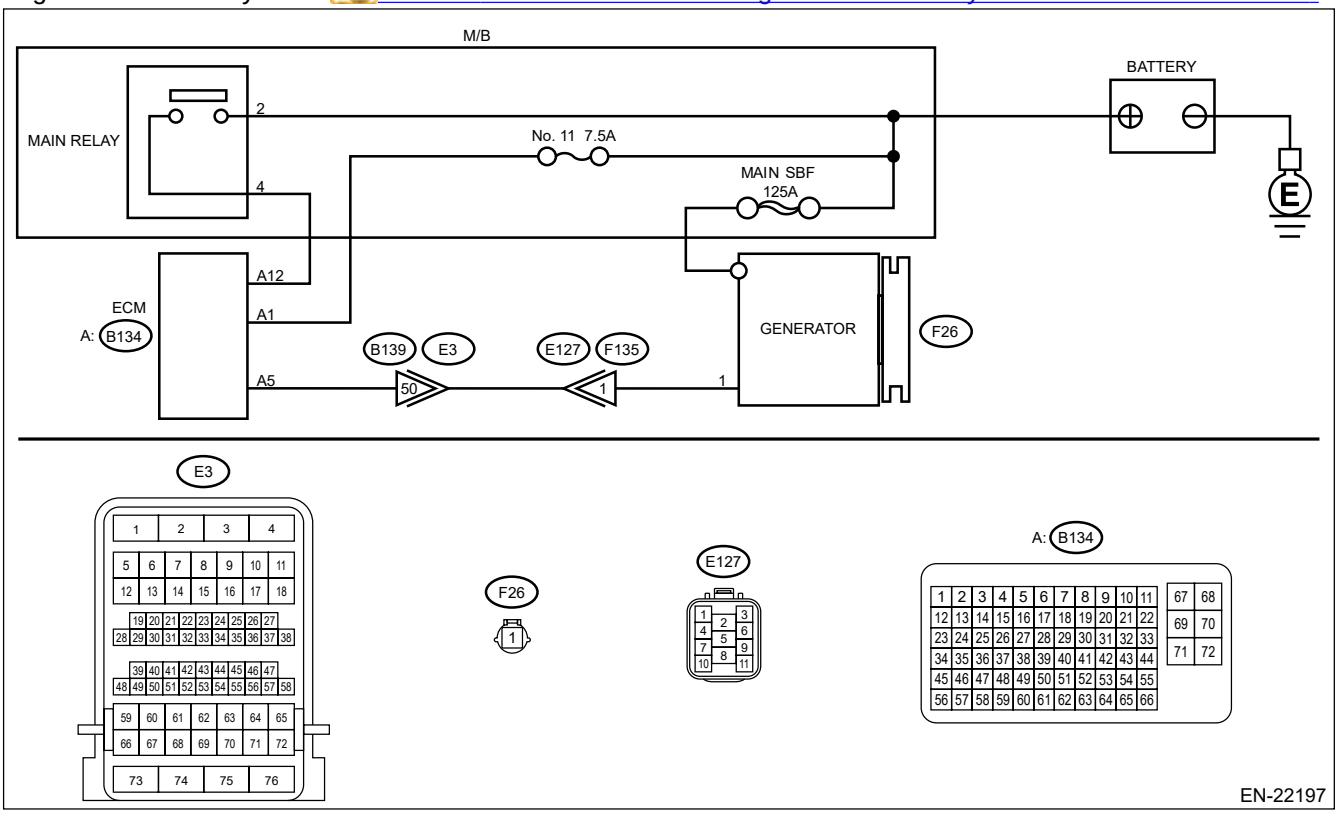
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Charge warning light illuminates.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK GENERATOR.

1. Start the engine.
2. Run the engine at idle after warming up.
3. Measure the voltage between generator terminal B and chassis ground.

Connector & terminal

Generator terminal B (+) — Chassis ground (−):

Is the voltage 10.8 V or more?

Yes	Go to 2.
No	Repair the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.

2. CHECK GENERATOR.

1. Run the engine at 3,000 rpm.
2. Measure the voltage between generator terminal B and chassis ground.

Connector & terminal

Generator terminal B (+) — Chassis ground (−):

Is the voltage 10.8 V or more?

Yes	Go to 3.
No	Repair the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.

3. CHECK BATTERY TERMINAL.

Turn the ignition switch to OFF.

Are the positive and negative battery terminals installed tightly?

Yes	Go to 4.
No	Tighten the clamp of terminal.

4. CHECK INPUT VOLTAGE OF ECM.

1. Run the engine at idle.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 1 (+) — Chassis ground (-):

Is the voltage 10.8 V or more?

Yes	Go to 5.
No	Repair the harness between ECM, battery and main relay.

5. CHECK POOR CONTACT OF CONNECTORS.

Check for a poor contact of connectors between ECM, generator or battery.

Is there poor contact of connectors between ECM, generator or battery?

Yes	Repair the connector.
No	Go to 6.

6. CHECK ECM.

1. Connect all connectors.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the Inspection Mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is the same DTC as current diagnosis still output?

Yes	Replace the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.
No	Go to 7.

7. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0562 displayed? (Current malfunction)

Yes	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the generator output terminal.
Judge as NG if the battery voltage is out of specification.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Engine speed Final output duty of generator power generation control	1500 rpm or more 50 % or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Battery voltage	Less than 9.8 V

Time needed for diagnosis: 30 seconds

Malfunction indicator light illumination: Does not illuminate even when malfunction occurs. (Charge warning light illuminates.)

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0563 SYSTEM VOLTAGE HIGH

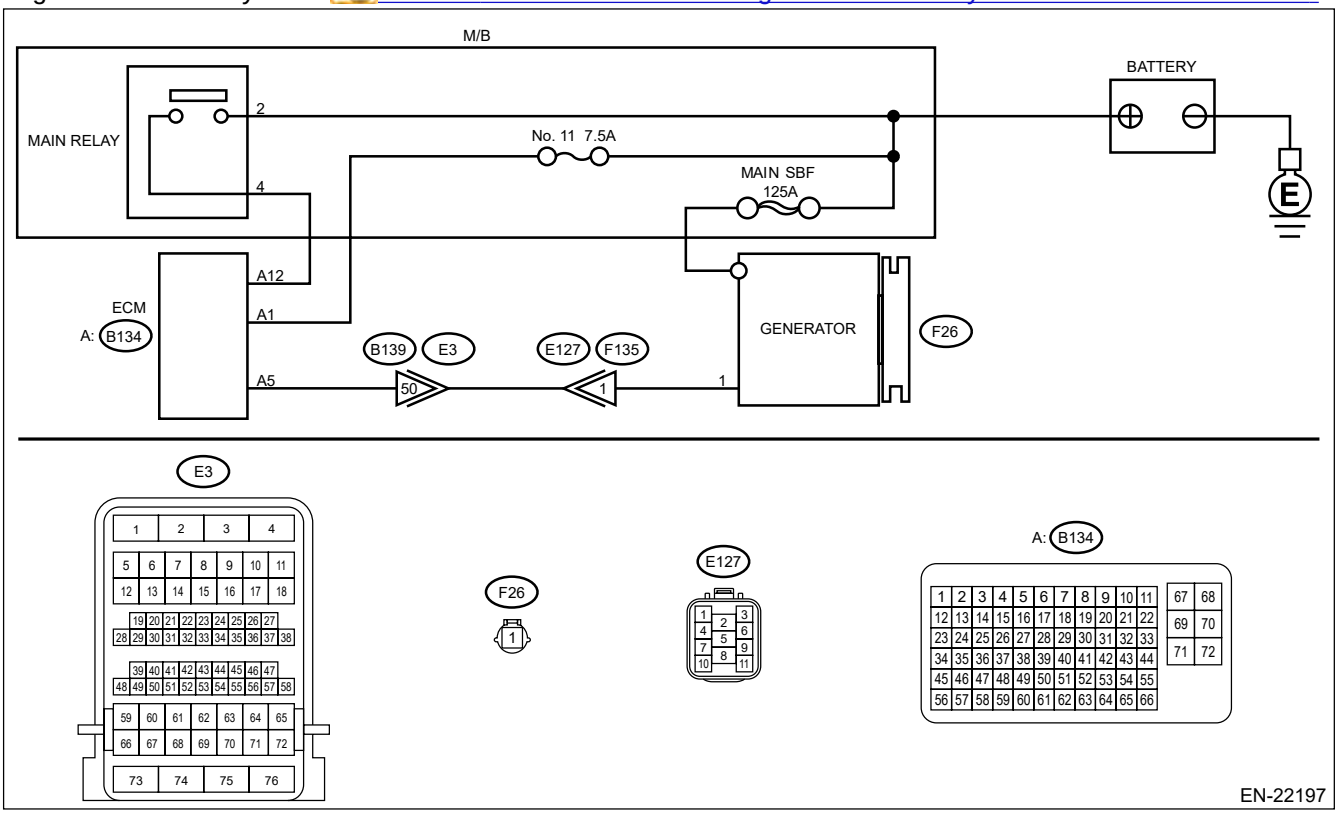
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Charge warning light illuminates.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK GENERATOR.

1. Start the engine.
2. Run the engine at idle after warming up.
3. Measure the voltage between generator terminal B and chassis ground.

Connector & terminal

Generator terminal B (+) — Chassis ground (−):

Is the voltage less than 16.2 V?

Yes	Go to 2.
No	Repair the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.

2. CHECK GENERATOR.

1. Run the engine at 3,000 rpm.
2. Measure the voltage between generator terminal B and chassis ground.

Connector & terminal

Generator terminal B (+) — Chassis ground (−):

Is the voltage less than 16.2 V?

Yes	Go to 3.
No	Repair the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.

3. CHECK BATTERY TERMINAL.

Turn the ignition switch to OFF.

Are the positive and negative battery terminals installed tightly?

Yes	Go to 4.
No	Tighten the clamp of terminal.

4. CHECK INPUT VOLTAGE OF ECM.

1. Run the engine at idle.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 1 (+) — Chassis ground (-):

Is the voltage less than 16.2 V?

Yes	Go to 5.
No	Repair the harness between ECM, battery and main relay.

5. CHECK POOR CONTACT OF CONNECTORS.

Check for a poor contact of connectors between ECM, generator or battery.

Is there poor contact of connectors between ECM, generator or battery?

Yes	Repair the connector.
No	Go to 6.

6. CHECK ECM.

1. Connect all connectors.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Perform the Inspection Mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is the same DTC as current diagnosis still output?

Yes	Replace the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.
No	Go to 7.

7. CHECK DTC DISPLAY.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P0563 displayed? (Current malfunction)

Yes	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the generator output terminal.
Judge as NG if the battery voltage is out of specification.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Engine speed Final output duty of generator power generation control	1500 rpm or more 50% or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Battery voltage	16.2 V or more

Time needed for diagnosis: 30 seconds

Malfunction indicator light illumination: Does not illuminate even when malfunction occurs. (Charge warning light illuminates)

DTC P059A ACTIVE GRILLE AIR SHUTTER "A" POSITION SENSOR CIRCUIT

DTC detecting condition:

Immediately at fault recognition

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK ACTIVE GRILLE SHUTTER.

Check the area around the active grille shutter louver, louver link and actuator.

Is there any abnormality such as a foreign matter adhered or pinched and a frost?

Yes	Remove the foreign matter from the active grille shutter and go to the next step. Go to 2.
No	Go to 2.

2. CHECK ACTIVE GRILLE SHUTTER.

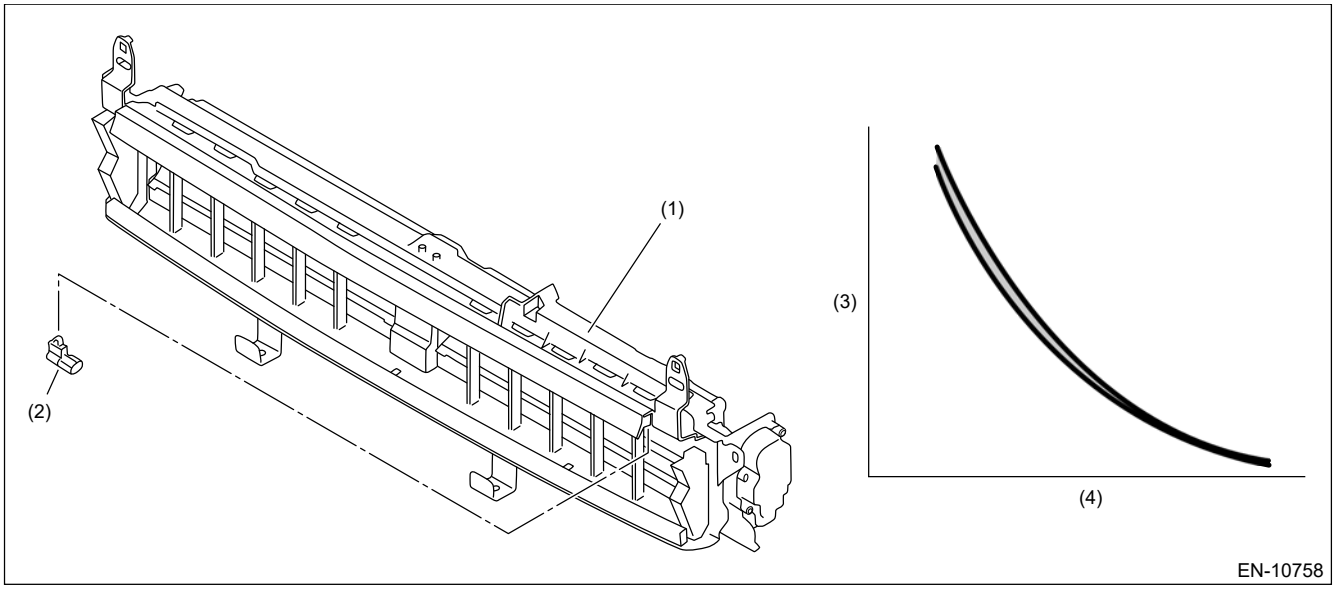
1. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Check the area around the active grille shutter louver, louver link and actuator.

Is there any damage in each part of the active grille shutter?

Yes	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.
No	Go to 3.

3. CHECK ACTIVE GRILLE SHUTTER.

1. Turn the ignition switch to OFF, and wait for approx. 30 seconds.
2. Turn the ignition switch to ON.
   Note:
   Make sure that the ambient temperature is equal to or higher than 3°C (37.4°F).
3. Start the engine.
4. Three minutes after starting the engine, perform the operation check for the active grille shutter using the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to the "Active Test". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.



Does the open/close operation finish correctly?

Yes	Even if DTC is detected, it has returned to a normal condition at this time. **Note:** **In this case, it is assumed that the active grille shutter may have temporarily had a foreign matter adhered/pinched or a frost.**
No	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of active grille shutter position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Active grille shutter

(2) Ambient sensor

(3) Resistance value (kΩ)

(4) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage Command to active grille shutter	10.9 V or more Open or Closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Input pulse of the active grille shutter position sensor	Equal to 0

Time needed for diagnosis: 2500 ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P059F ACTIVE GRILLE AIR SHUTTER "A" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P059F displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, it is assumed that the active grille shutter may have temporarily had a foreign matter adhered/pinched or a frost.**

2. CHECK ACTIVE GRILLE SHUTTER.

Check the area around the active grille shutter louver, louver link and actuator.

Is there any abnormality such as a foreign matter adhered or pinched and a frost?

Yes	Remove the foreign matter from the active grille shutter and go to the next step. Go to 3.
No	Go to 3.

3. CHECK ACTIVE GRILLE SHUTTER.

1. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Check the area around the active grille shutter louver, louver link and actuator.

Is there any damage in each part of the active grille shutter?

Yes	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.
No	Go to 4.

4. CHECK ACTIVE GRILLE SHUTTER.

1. Turn the ignition switch to ON (engine OFF).
2. Using the Subaru Select Monitor, perform the operation check of the active grille shutter to measure time needed for open or close operation.
   Note:
   For detailed operation procedures, refer to the “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.

Is the time less than 15 seconds?

Yes	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.
No	Go to 5.

5. CHECK DATA MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, read the value in [Active Grille Shutter Voltage Error Status].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is [Normal] displayed?

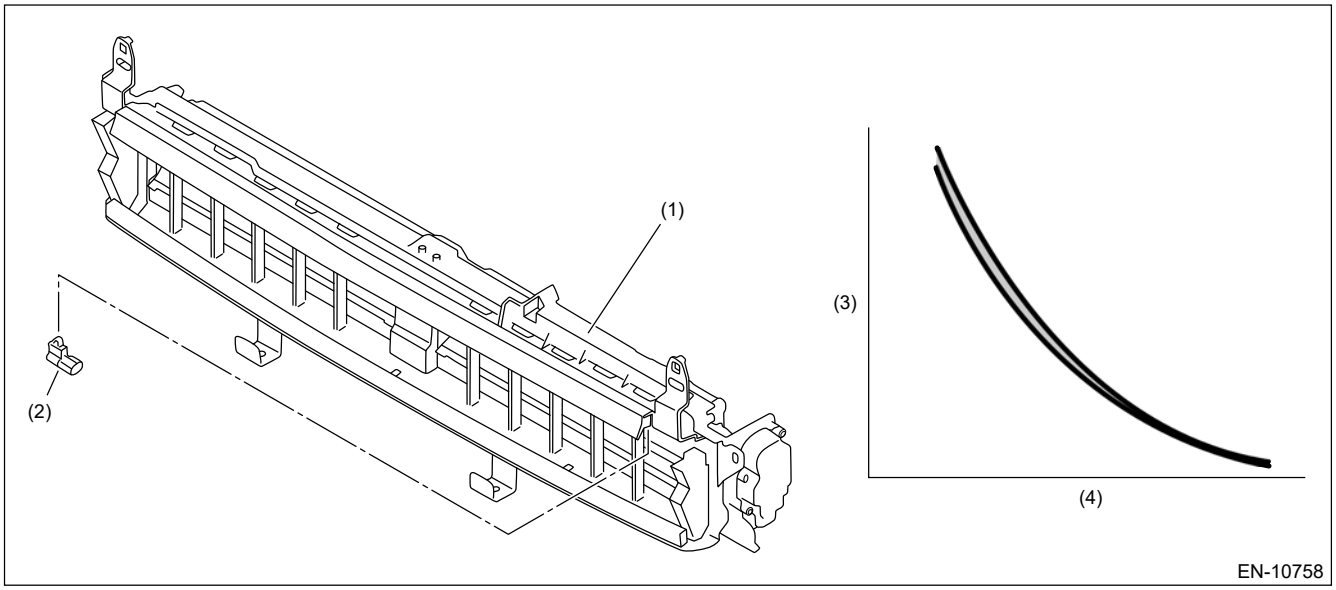
Yes	Go to 6.
No	Check the power supply circuit. If the power supply circuit is normal. replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.

6. CHECK DATA MONITOR.

1. Turn the ignition switch to OFF, and cool down the engine enough.
   Note:
   Cool down the engine unit until it can be easily touched by hand.
2. Turn the ignition switch to ON.
3. Using the Subaru Select Monitor, read the value in [Active Grille Shutter Temperature Error Status].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.



Is [Normal] displayed?

Yes	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.
No	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the response to open/close request for the active grille shutter.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Active grille shutter

(2) Ambient sensor

(3) Resistance value (kΩ)

(4) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Active grille shutter drive	Yes

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Changing rate of the active grille shutter in 15000ms	Less than 94%

Time needed for diagnosis: 15000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P05A0 ACTIVE GRILLE AIR SHUTTER "A" STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK ACTIVE GRILLE SHUTTER.

Check the area around the active grille shutter louver, louver link and actuator.

Is there any abnormality such as a foreign matter adhered or pinched and a frost?

Yes	Remove the foreign matter from the active grille shutter and go to the next step. Go to 2.
No	Go to 2.

2. CHECK ACTIVE GRILLE SHUTTER.

1. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Check the area around the active grille shutter louver, louver link and actuator.

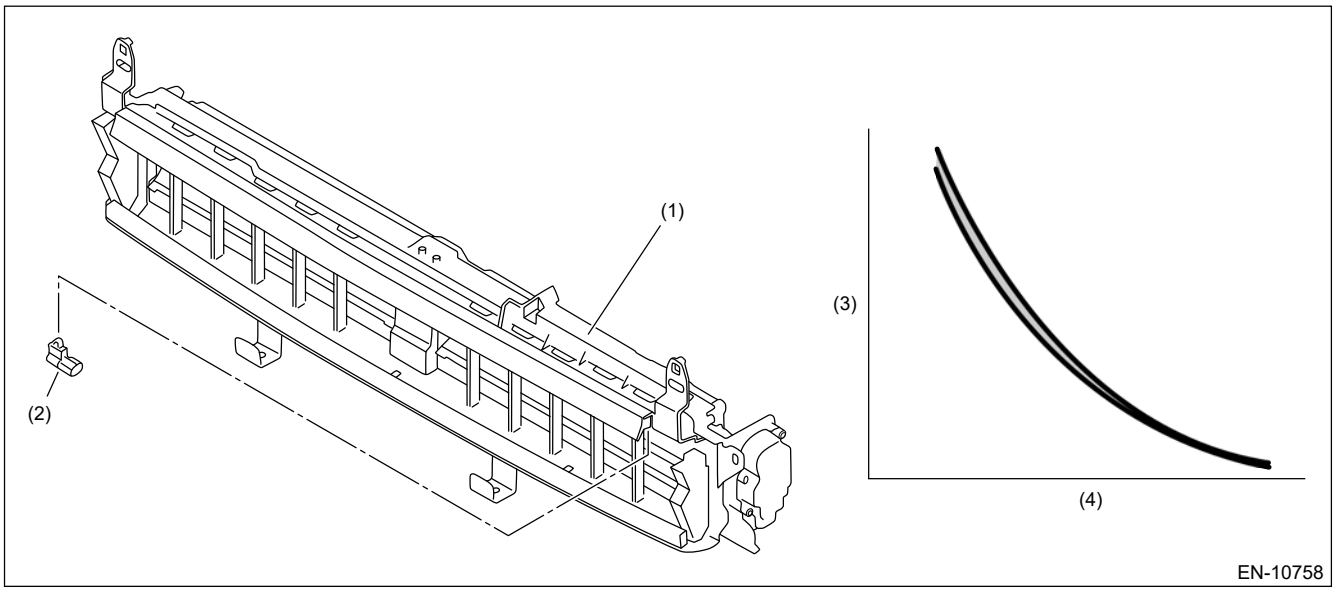
Is there any damage in each part of the active grille shutter?

Yes	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.
No	Go to 3.

3. CHECK ACTIVE GRILLE SHUTTER.

1. Turn the ignition switch to OFF, and wait for approx. 30 seconds.
2. Turn the ignition switch to ON.
3. Perform operation check for the active grille shutter using the Subaru Select Monitor.

Note:
For detailed operation procedures, refer to the “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.



Does the open/close operation finish correctly?

Yes	Even if DTC is detected, it has returned to a normal condition at this time. **Note:** **In this case, it is assumed that the active grille shutter may have temporarily had a foreign matter adhered/pinched or a frost.**
No	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.

1. OUTLINE OF DIAGNOSIS

Detect that open/close operation of the active grille shutter is disabled due to a foreign matter pinched in or other defects.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Active grille shutter
(2) Ambient sensor
(3) Resistance value (kΩ)
(4) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage Command to active grille shutter	10.9 V or more Open or Closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Max value of the active grille shutter position sensor (when controlled at power supply ON)	Less than 70 deg

Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P05A1 ACTIVE GRILLE AIR SHUTTER "A" POSITION SENSOR MINIMUM/MAXIMUM STOP PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK ACTIVE GRILLE SHUTTER.

Check the area around the active grille shutter louver, louver link and actuator.

Is there any abnormality such as a foreign matter adhered or pinched and a frost?

Yes	Remove the foreign matter from the active grille shutter and go to the next step. Go to 2.
No	Go to 2.

2. CHECK ACTIVE GRILLE SHUTTER.

1. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Check the area around the active grille shutter louver, louver link and actuator.

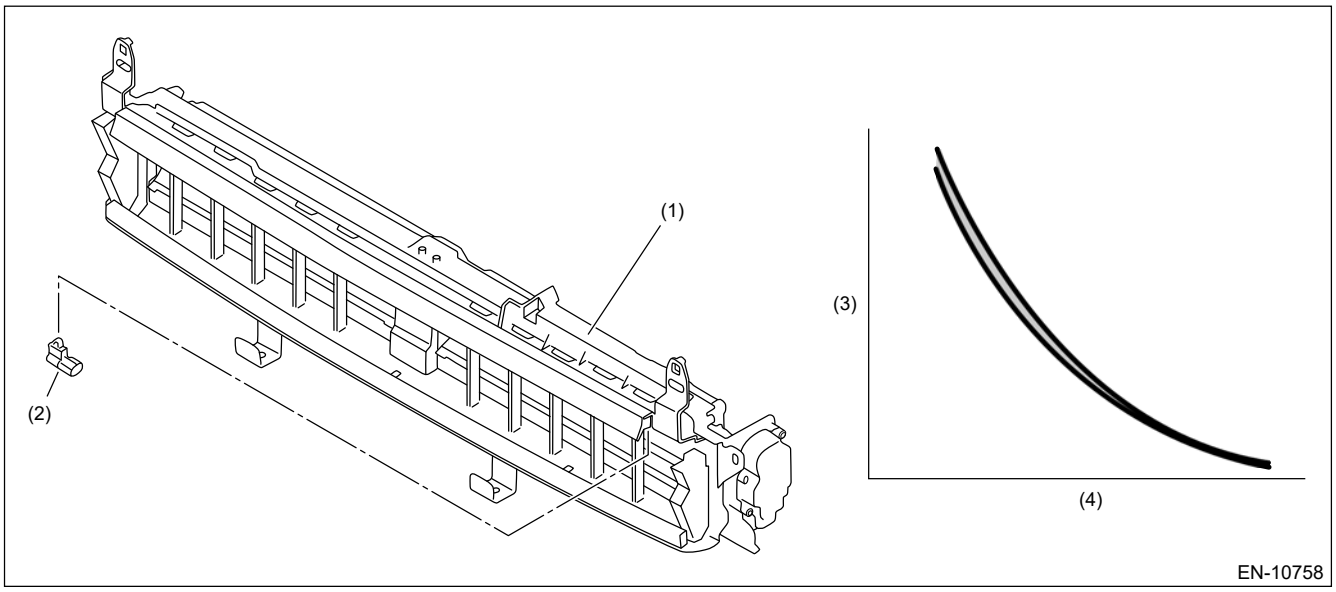
Is there any damage in each part of the active grille shutter?

Yes	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.
No	Go to 3.

3. CHECK ACTIVE GRILLE SHUTTER.

1. Turn the ignition switch to OFF, and wait for approx. 30 seconds.
2. Turn the ignition switch to ON.
3. Perform operation check for the active grille shutter using the Subaru Select Monitor.

Note:
For detailed operation procedures, refer to the “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.



Does the open/close operation finish correctly?

Yes	Even if DTC is detected, it has returned to a normal condition at this time. **Note:** **In this case, it is assumed that the active grille shutter may have temporarily had a foreign matter adhered/pinched or a frost.**
No	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.

1. OUTLINE OF DIAGNOSIS

Detect that the revolution angle goes beyond the defined angle due to the malfunction of the active grille shutter.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Active grille shutter
(2) Ambient sensor
(3) Resistance value (kΩ)
(4) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage Command to active grille shutter	10.9 V or more Open or Closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Max value of the active grille shutter position sensor (when controlled at power supply ON)	More than 155 deg

Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P05A2 ACTIVE GRILLE AIR SHUTTER "A" CONTROL CIRCUIT/OPEN

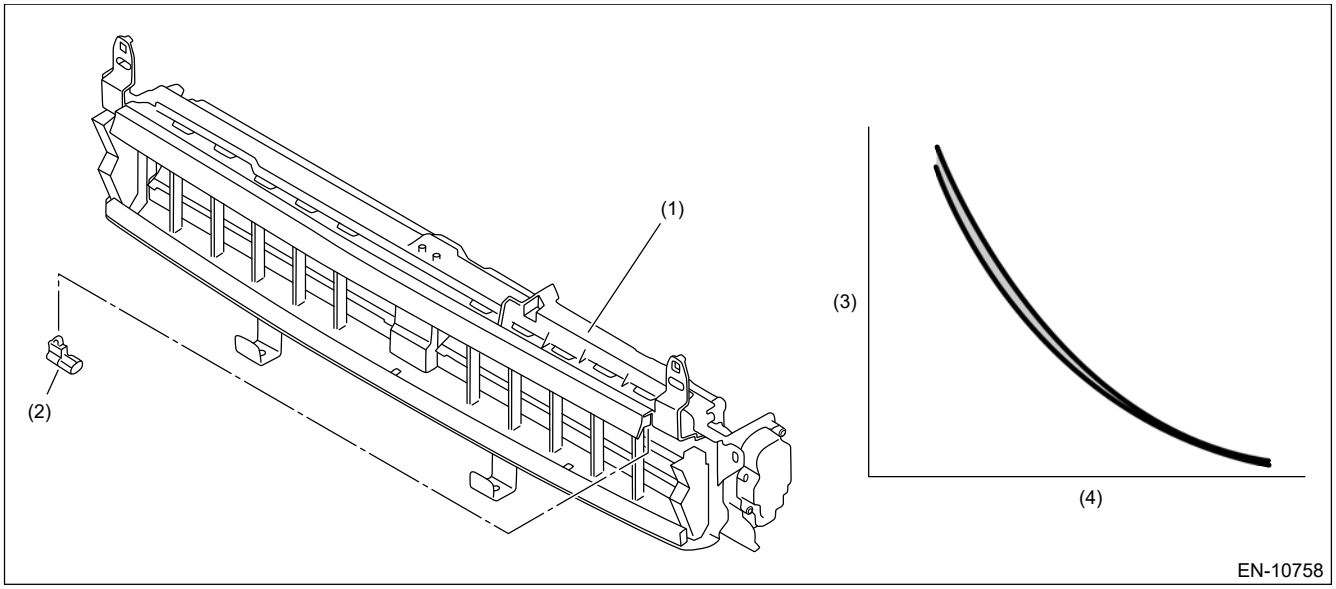
DTC detecting condition:
Immediately at fault recognition

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF, and wait for approx. 30 seconds.
3. Turn the ignition switch to ON.
4. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).



Is DTC P05A2 displayed? (Current malfunction)

Yes	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.
No	Using the Subaru Select Monitor, perform the operation check for the active grille shutter to make sure that its open and close operation can be completed properly. **Note:** **For detailed operation procedures, refer to the “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.**

1. OUTLINE OF DIAGNOSIS

Detect for the malfunction of active grille shutter motor circuit.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Active grille shutter

(2) Ambient sensor

(3) Resistance value (kΩ)

(4) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage Command to active grille shutter	10.9 V or more Open or Closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Diagnosis 1

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Current in the motor circuit during open/close command to the active grille shutter	More than 650 mA

Time needed for diagnosis: 2500ms

Diagnosis 2

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Current in the motor circuit during open/close command to the active grille shutter	Less than 10 mA

Time needed for diagnosis: 2500ms

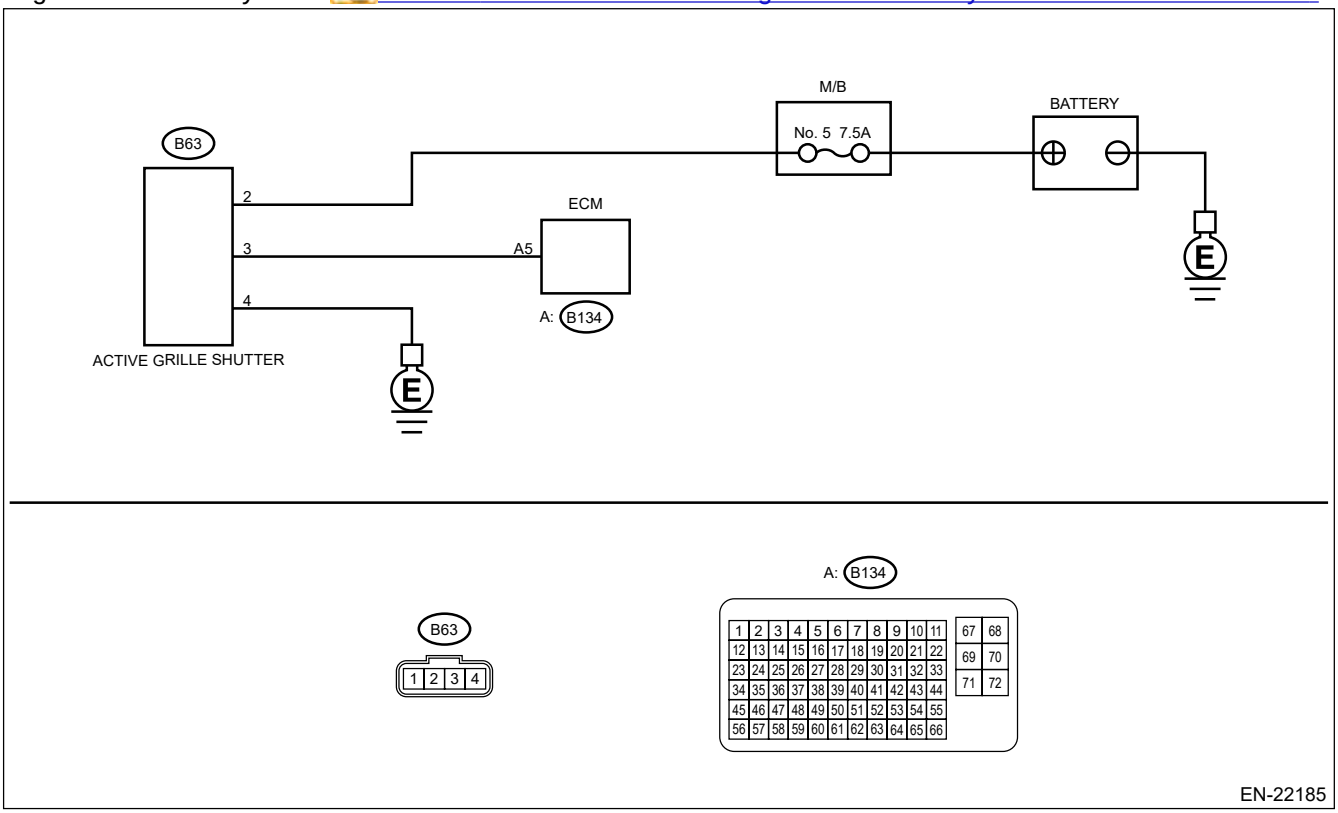
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P05A6 ACTIVE GRILLE AIR SHUTTER "A" SUPPLY VOLTAGE CIRCUIT/OPEN

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

1. Turn the ignition switch to OFF, and wait for approx. 30 seconds.
2. Turn the ignition switch to ON.
3. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P05A6 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, a temporary drop of battery voltage, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK BATTERY.

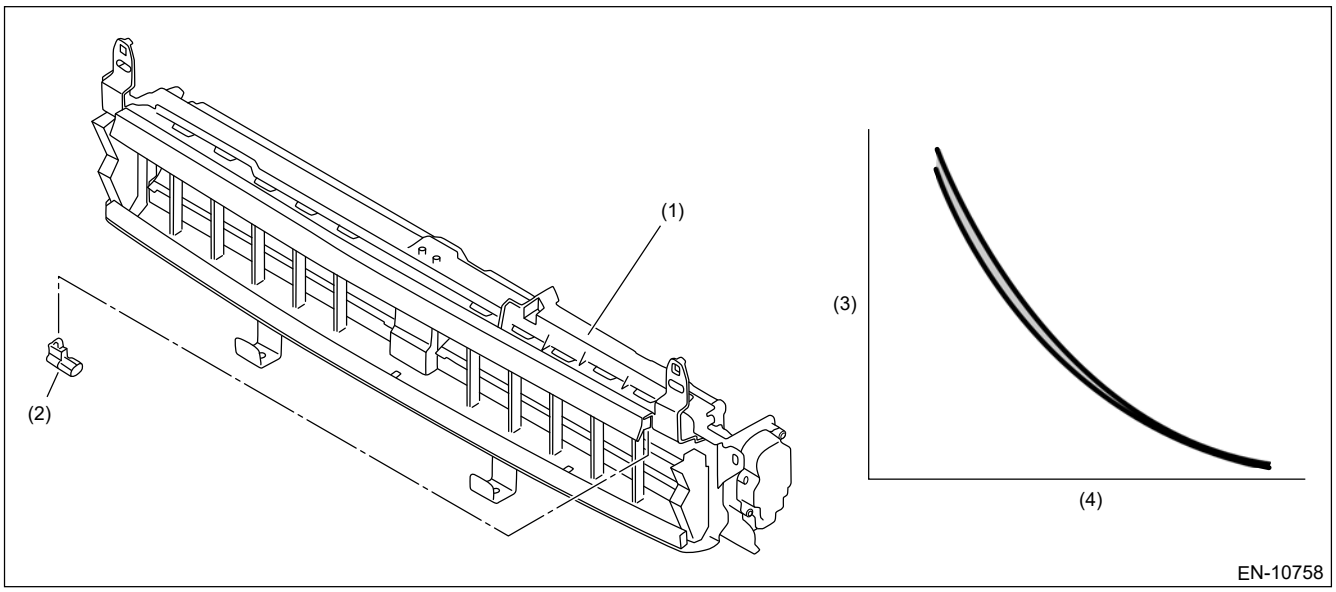
Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

Is the check result OK?

Yes	Go to 3.
No	Charge or replace the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

3. CHECK ACTIVE GRILLE SHUTTER POWER SUPPLY.

1. Turn the ignition switch to OFF.
2. Disconnect the battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Disconnect the connector from the active grille shutter.
4. Measure the voltage between active grille shutter connector and chassis ground.
   Connector & terminal
   (B63) No. 2 (+) — Chassis ground (−):



Is the voltage 9 V or more?

Yes	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.
No	Repair the power supply circuit.

1. OUTLINE OF DIAGNOSIS

Detect the abnormal voltage of active grille shutter power supply.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Active grille shutter
(2) Ambient sensor
(3) Resistance value (kΩ)
(4) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Malfunction judgment flag	1

Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Does not illuminate.

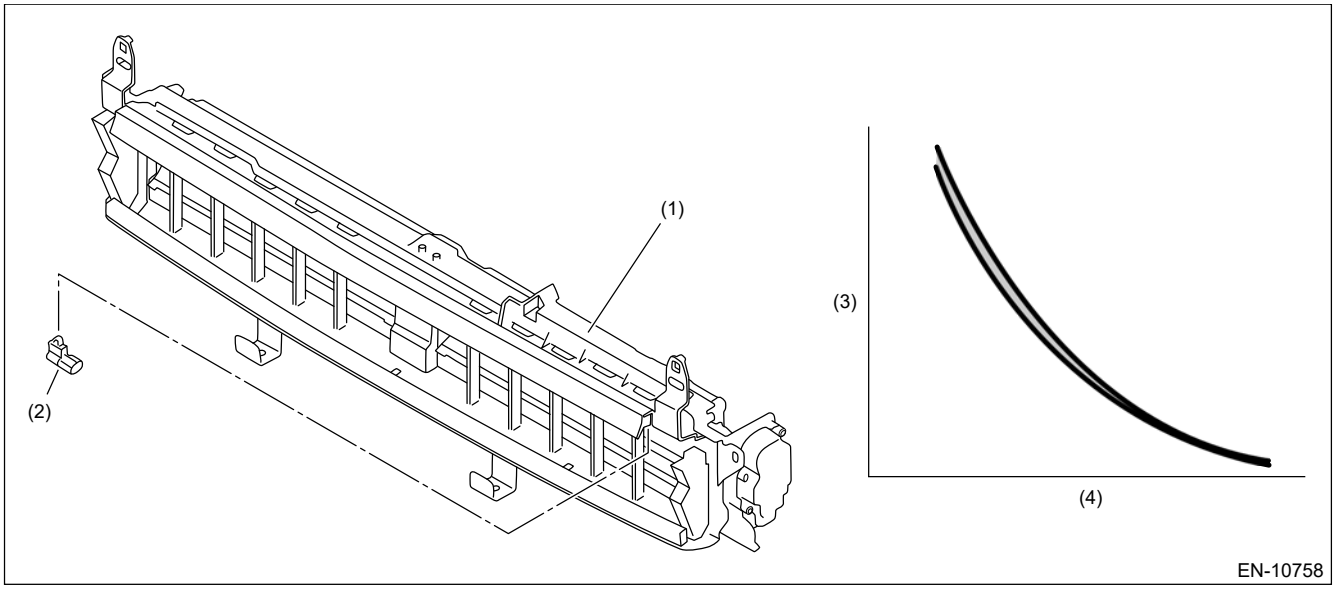
DTC P05C0 ACTIVE GRILLE AIR SHUTTER MODULE "A" OVER TEMPERATURE

DTC detecting condition:
Immediately at fault recognition

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

1. Turn the ignition switch to OFF, and cool down the engine enough.
   Note:
   Cool down the engine unit until it can be easily touched by hand.
2. Turn the ignition switch to ON.
3. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).



Is DTC P05C0 displayed? (Current malfunction)

Yes	Replace the active grille shutter. Ref. to COOLING(H4DO)>Active Grille Shutter.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. **Note:** **In this case, there may have been a temporary rise of the temperature in the engine compartment.**

1. OUTLINE OF DIAGNOSIS

Detect the abnormal temperature inside the active grille shutter.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Active grille shutter

(2) Ambient sensor

(3) Resistance value (kΩ)

(4) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Malfunction judgment flag	1

Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Does not illuminate.

DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine does not start.
- Engine stall

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P0604 displayed? (Current malfunction)

Yes	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer (RAM).
When there is a problem in the CPU normal RAM, judge as NG.
If it is possible to write data to the whole area of RAM in the initial routine, and is possible to read the same data, it is judged as OK, and if not, NG.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Judgment 1 ECM initialization	RUN
Judgment 2 Ignition switch	ON

Diagnosis with the initial routine.

3. GENERAL DRIVING CYCLE

Perform the diagnosis immediately after IG SW ON.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Judgment 1: Write and read test	
Written value to RAM	Not equal to the reading value
Judgment 2: Correcting Code (ECC) check	
Correction error code of check error	Detected

Time needed for diagnosis: 2 times
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

Note:

For the diagnostic procedure, refer to DTC P0606. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0606 CONTROL MODULE PROCESSOR.

1. OUTLINE OF DIAGNOSIS

Judge as NG when SUM value of ROM is outside the standard value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Judgment 1: Checksum ECM initialization	RUN
Judgment 2: Error Correcting Code (ECC) check	
Ignition switch	ON

Diagnosis with the initial routine.

3. GENERAL DRIVING CYCLE

Perform the diagnosis immediately after IG SW ON.

4. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.

Judgment value

Malfunction Criteria	Threshold Value
Judgment 1: Checksum SUM value of ROM	Malfunction
Judgment 2: Error Correcting Code (ECC) check Error correcting code check	Malfunction

Time needed for diagnosis: When detected 2 times in row

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0606 CONTROL MODULE PROCESSOR

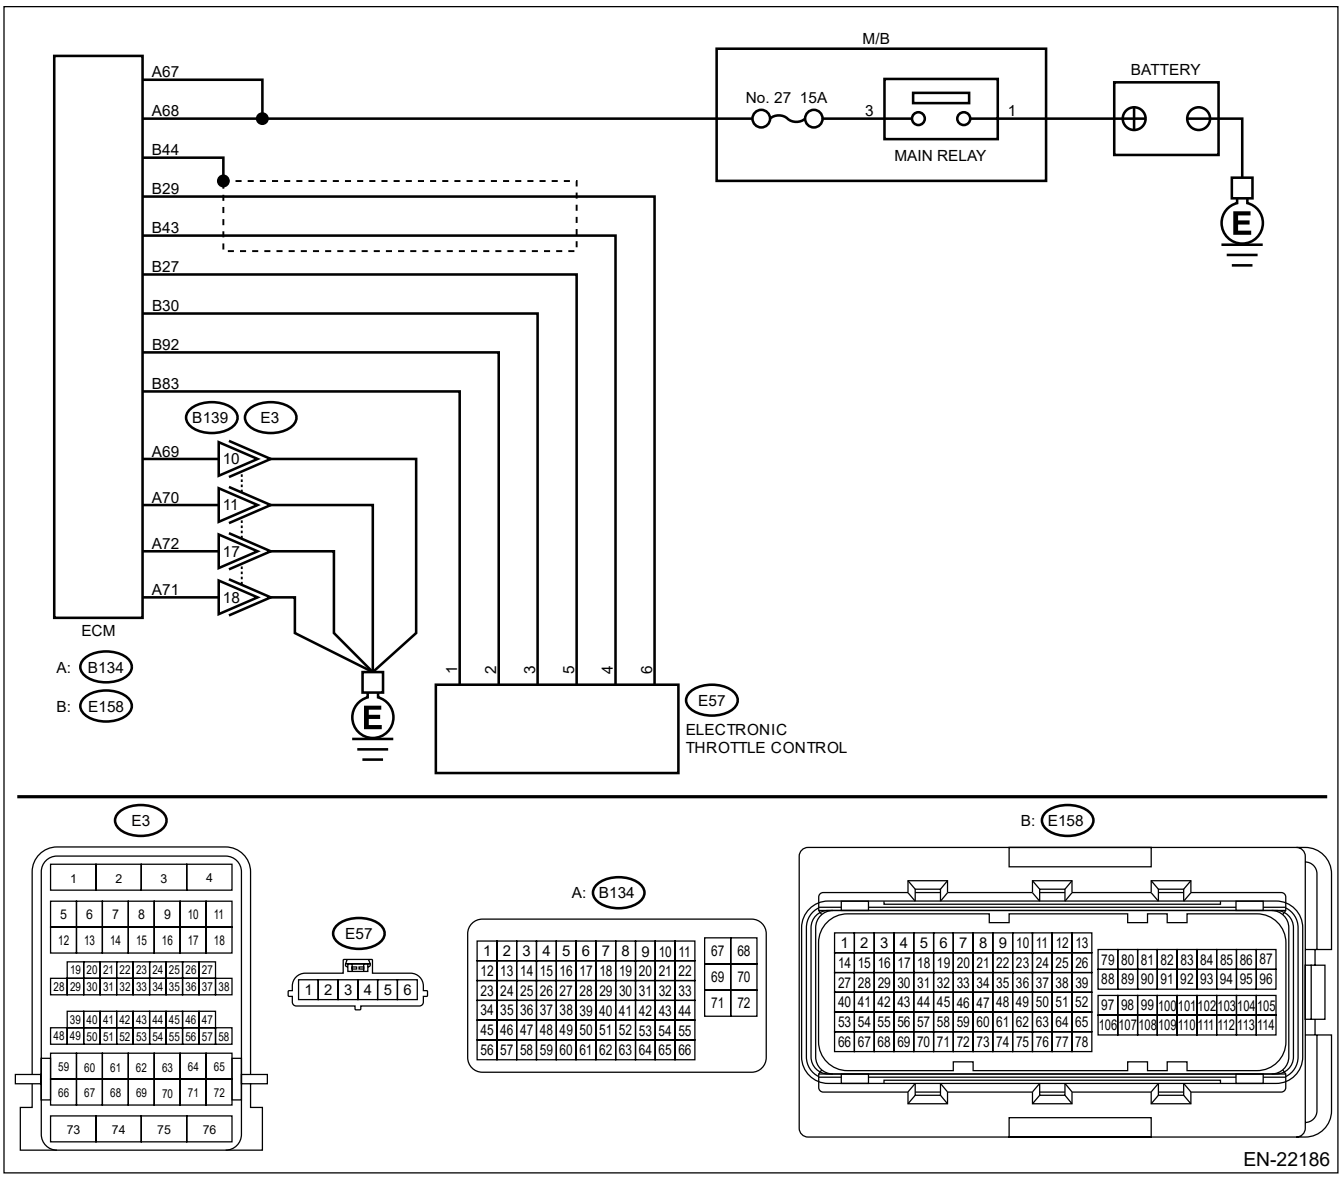
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK INPUT VOLTAGE OF ECM (OPEN).

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 67 (+) — Chassis ground (−):

(B134) No. 68 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 2.
No	Repair the open or short to ground in the power supply circuit.

2. CHECK INPUT VOLTAGE OF ECM (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 67 (+) — Chassis ground (−):

(B134) No. 68 (+) — Chassis ground (−):

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short to ground in the power supply circuit.

3. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance of harness between ECM connector and electronic throttle control connector.

Connector & terminal

(E158) No. 27 — (E57) No. 5:

(E158) No. 30 — (E57) No. 3:

Is the resistance less than 1 Ω?

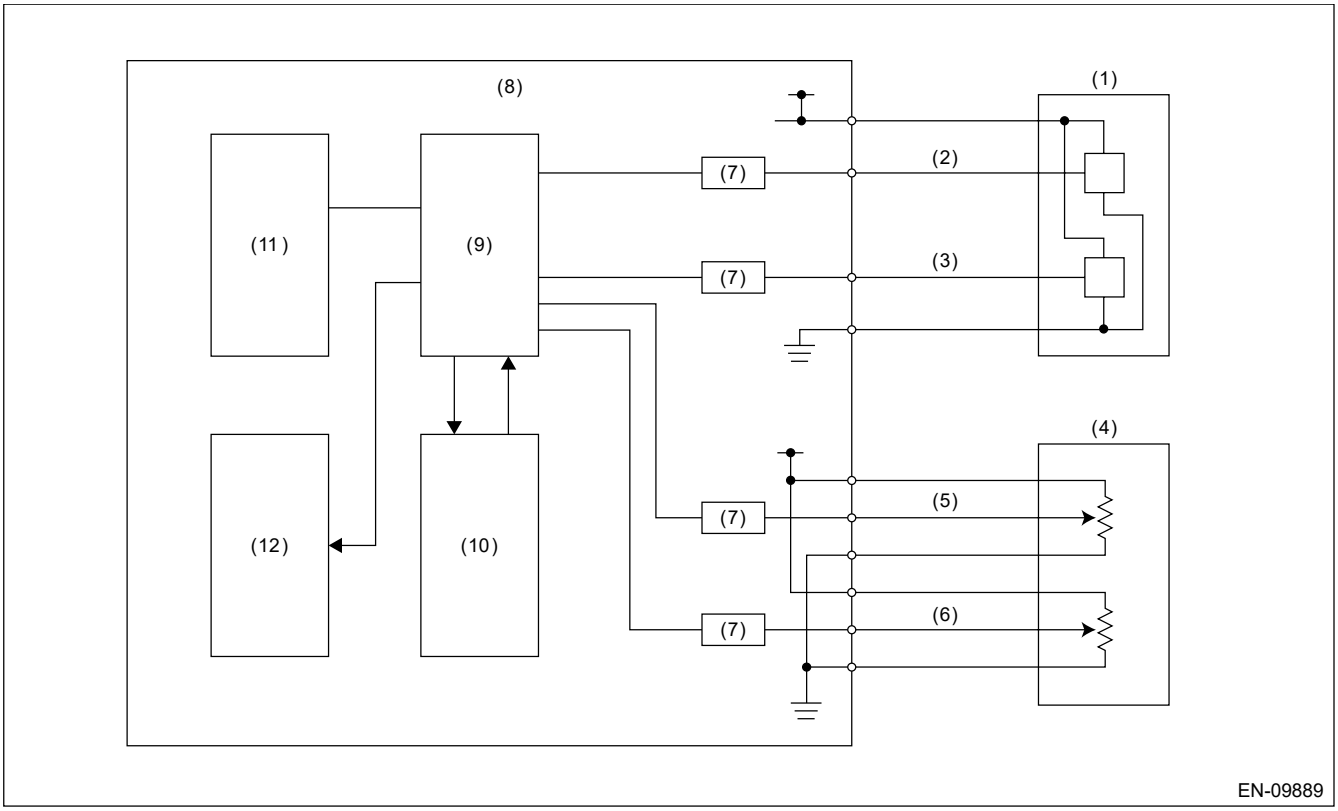
Yes	Go to 4.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

4. CHECK ECM GROUND HARNESS (OPEN).

1. Connect all connectors.
2. Turn the ignition to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 (+) — Chassis ground (−):
(B134) No. 70 (+) — Chassis ground (−):
(B134) No. 71 (+) — Chassis ground (−):
(B134) No. 72 (+) — Chassis ground (−):



Is the voltage less than 1 V?

Yes	Check the connector for poor contact and check the harness. Replace the ECM if no fault is found. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in ground circuit** • **Loose engine ground terminal**

1. OUTLINE OF DIAGNOSIS

Judge as NG when the CPU operation is abnormal.
(1) Instruction check
(2) Software flow check
(3) Software monitor check
(4) If the output IC operation is abnormal
(5) CAN register check
(6) Disable control module function
(7) self check
(8) Register monitoring
(9) Power monitor

2. COMPONENT DESCRIPTION

(1) Throttle position sensor
(2) Throttle position sensor 1
(3) Throttle position sensor 2
(4) Accelerator pedal position sensor
(5) Accelerator pedal position sensor 1
(6) Accelerator pedal position sensor 2
(7) I/F circuit
(8) Engine control module (ECM)
(9) CPU
(10) Monitoring IC
(11) EEPROM
(12) Output IC

3. EXECUTION CONDITION

Secondary parameters	Execution condition
(1) — 1 Initial routine	ON
(1) — 2 Ignition switch	ON
(2) Ignition switch	ON
(3) Ignition switch	ON
(3) Battery voltage	6 V or more
(3) Electronic throttle control MOSFET	ON
(4) Ignition switch	ON
(5) Initial routine	ON
(6) Battery voltage	6V or more
(6) CPU intentionally sends a motor cut-off command	ON
(7) ECM initialization	RUN

Secondary parameters	Execution condition
(8) Ignition switch	ON
(9) Time elapsed after engine start	1 s or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

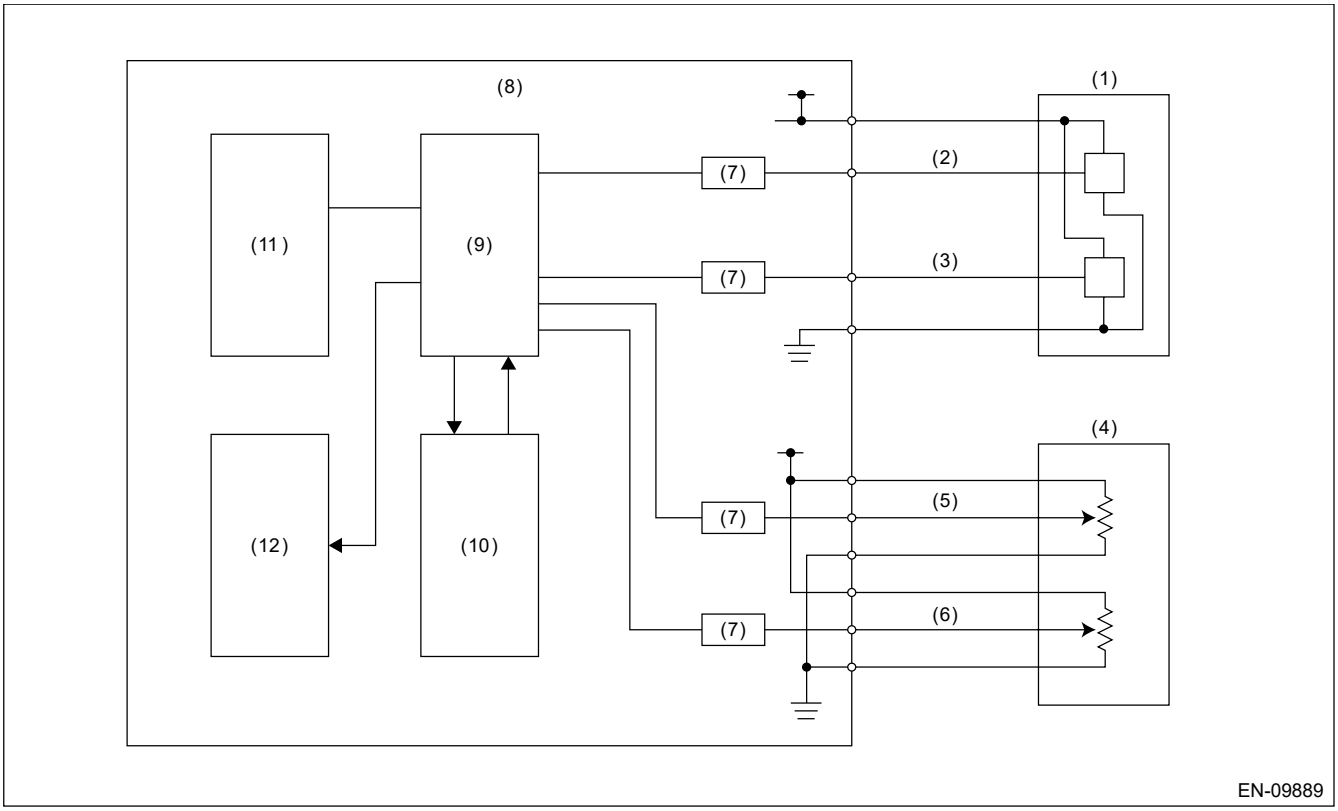
Malfunction Criteria	Threshold Value
(1) Instruction value	Different from expected value
(2) Process flow result	The result and expected value do not match.
(3) High integrated IC motor continuity cut demand	ON
(4) Communication between output driver ICs	Communication failure
(5) Writing value to CAN register	Not equal to the reading value
(6) Absolute throttle position - Absolute throttle position memory when monitoring	1.6 % or more
(7) Data written in CPU	Not equal to expected value
(8) Data written in register	Not equal to the reading value
(9) Diagnostic value Formula when sampling time is 8 ms DV = Σ[(Actual engine power - target engine power) - Map]	1900 kw or more

Map

Vehicle speed km/h (MPH)	0(0)	10 (6.25)	20 (12.5)	30 (18.75)	40(25)	50 (31.25)	60 (37.5)	70.4 (43.75)	80.5(50)	91 (56.25)	101 (62.5)
Engine output (kw)	26	26	26	26	30	40	60	85	120	160	200

Time needed for diagnosis:
(1) — 1: 2 times
(1) — 2:8time(s)
(2): 504ms
(3): 48ms
(4): 2500ms
(5): Less than 1 s
(6): 24ms
(7) 2 times
(8) 64time(s)
(9) Less than 1 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC P060A INTERNAL CONTROL MODULE MONITORING PROCESSOR PERFORMANCE

Note:
For the diagnostic procedure, refer to DTC P0606. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0606 CONTROL MODULE PROCESSOR.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the monitoring IC operation is abnormal.
(1) Monitoring IC Disable (motor continuity cut demand) diagnosis
(2) Monitoring IC register diagnosis
(3) Self test

2. COMPONENT DESCRIPTION

(1) Throttle position sensor
(2) Throttle position sensor 1
(3) Throttle position sensor 2
(4) Accelerator pedal position sensor
(5) Accelerator pedal position sensor 1
(6) Accelerator pedal position sensor 2
(7) I/F circuit
(8) Engine control module (ECM)
(9) CPU
(10) Monitoring IC
(11) EEPROM
(12) Output IC

3. EXECUTION CONDITION

Secondary parameters	Execution condition
(1) Battery voltage	6V or more
(1) When CPU intentionally sends motor continuity cut demand	
(2) Battery voltage	6V or more
(3) ECM initialization	RUN

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

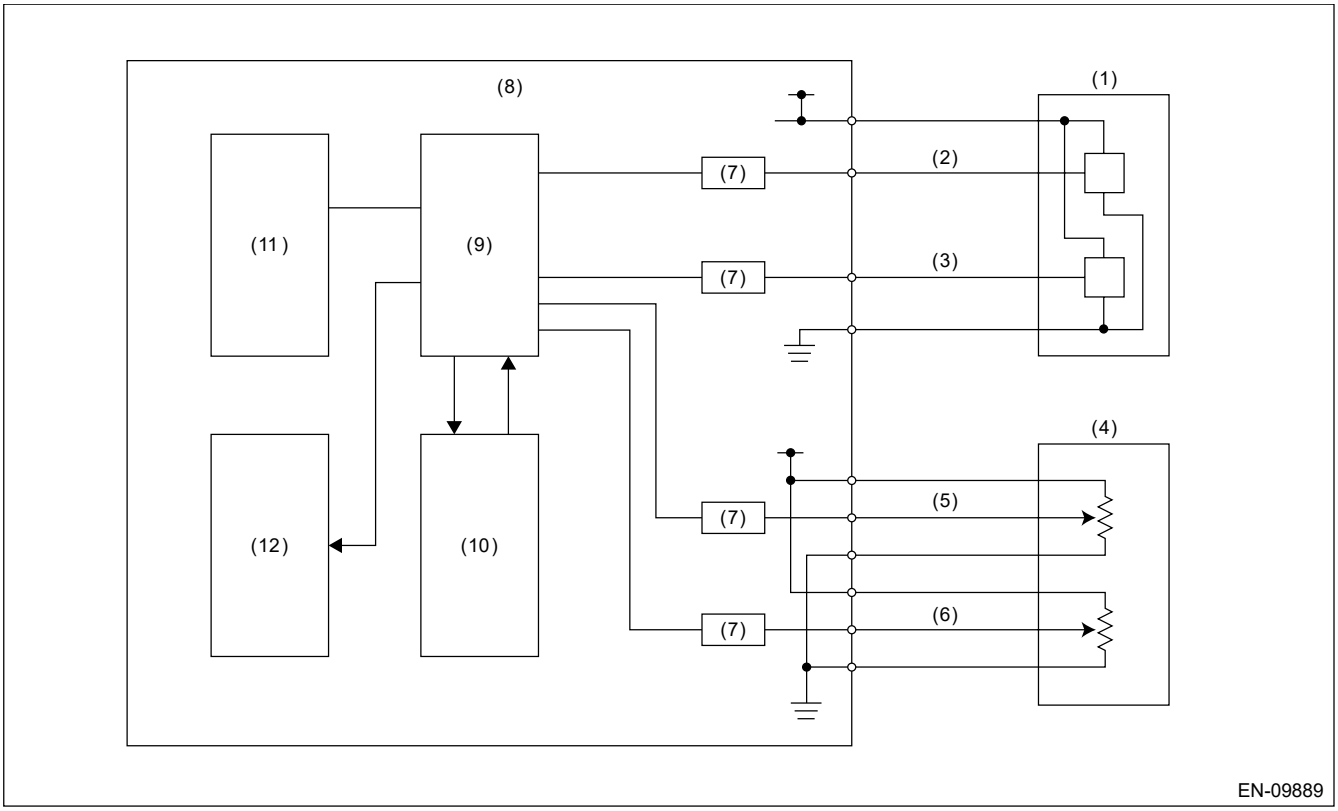
Judge as NG when one of the following conditions is established.

Judgment value

Malfunction Criteria	Threshold Value
(1) Main throttle opening angle – Main throttle opening angle at monitoring start	1.6% or more
(2) Monitoring IC register writing value	Not equal to the reading value
(3) Self test	Detect

Time needed for diagnosis:
(1): 24ms
(2): 200 ms
(3): 2 times
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC P060B INTERNAL CONTROL MODULE A/D PROCESSING PERFORMANCE

Note:
For the diagnostic procedure, refer to DTC P0606. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0606 CONTROL MODULE PROCESSOR.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the AD converter operation is abnormal.
(1) Low voltage input test
(2) High voltage input test
(3) Middle voltage input test
(4) Inner power supply voltage check

2. COMPONENT DESCRIPTION

(1) Throttle position sensor
(2) Throttle position sensor 1
(3) Throttle position sensor 2
(4) Accelerator pedal position sensor
(5) Accelerator pedal position sensor 1
(6) Accelerator pedal position sensor 2
(7) I/F circuit
(8) Engine control module (ECM)
(9) CPU
(10) Monitoring IC
(11) EEPROM
(12) Output IC

3. EXECUTION CONDITION

Secondary parameters	Execution condition
(1) Battery voltage	6V or more
(1) Target A/D voltage	Equal to 0 V
(2) Battery voltage	6V or more
(2) Target A/D voltage	Equal to 5 V
(3) Battery voltage	6V or more
(3) Target A/D voltage	Equal to 1.2 V
(4) Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
(1) Monitoring A/D voltage	More than 0.02 V
(2) Monitoring A/D voltage	Less than 4.98 V
(3) Monitoring A/D voltage	Less than 1.1 V or More than 1.4 V
(4) Inner power supply voltage/2	Less than 1.819 V or More than 3 V

Time needed for diagnosis:

(1): 200ms

(2): 200ms

(3): 200ms

(4): 200ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

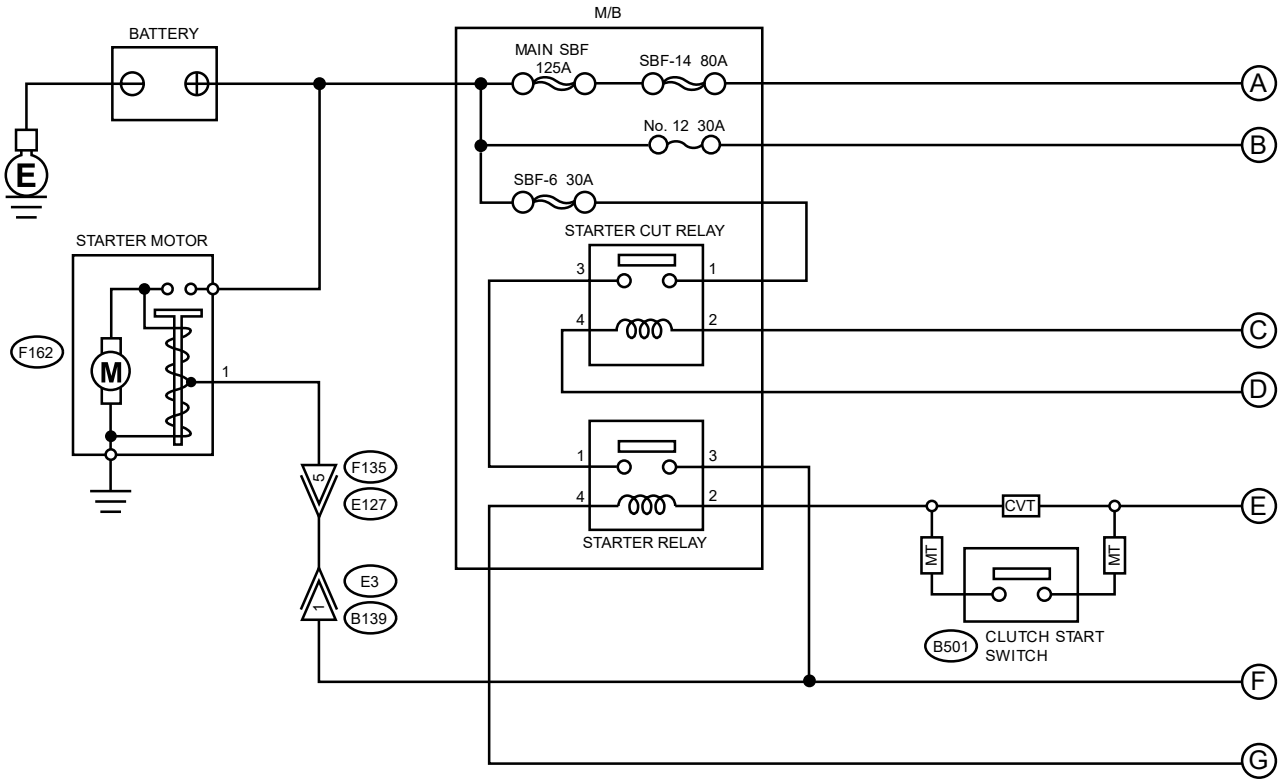
DTC P0616 STARTER RELAY "A" CIRCUIT LOW

DTC detecting condition:

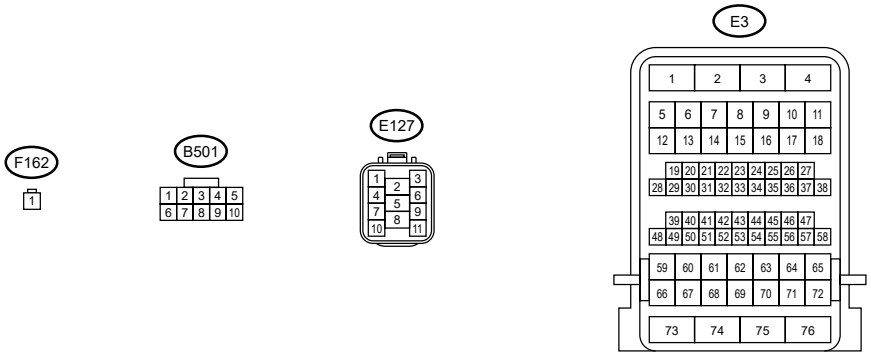
Immediately at fault recognition

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

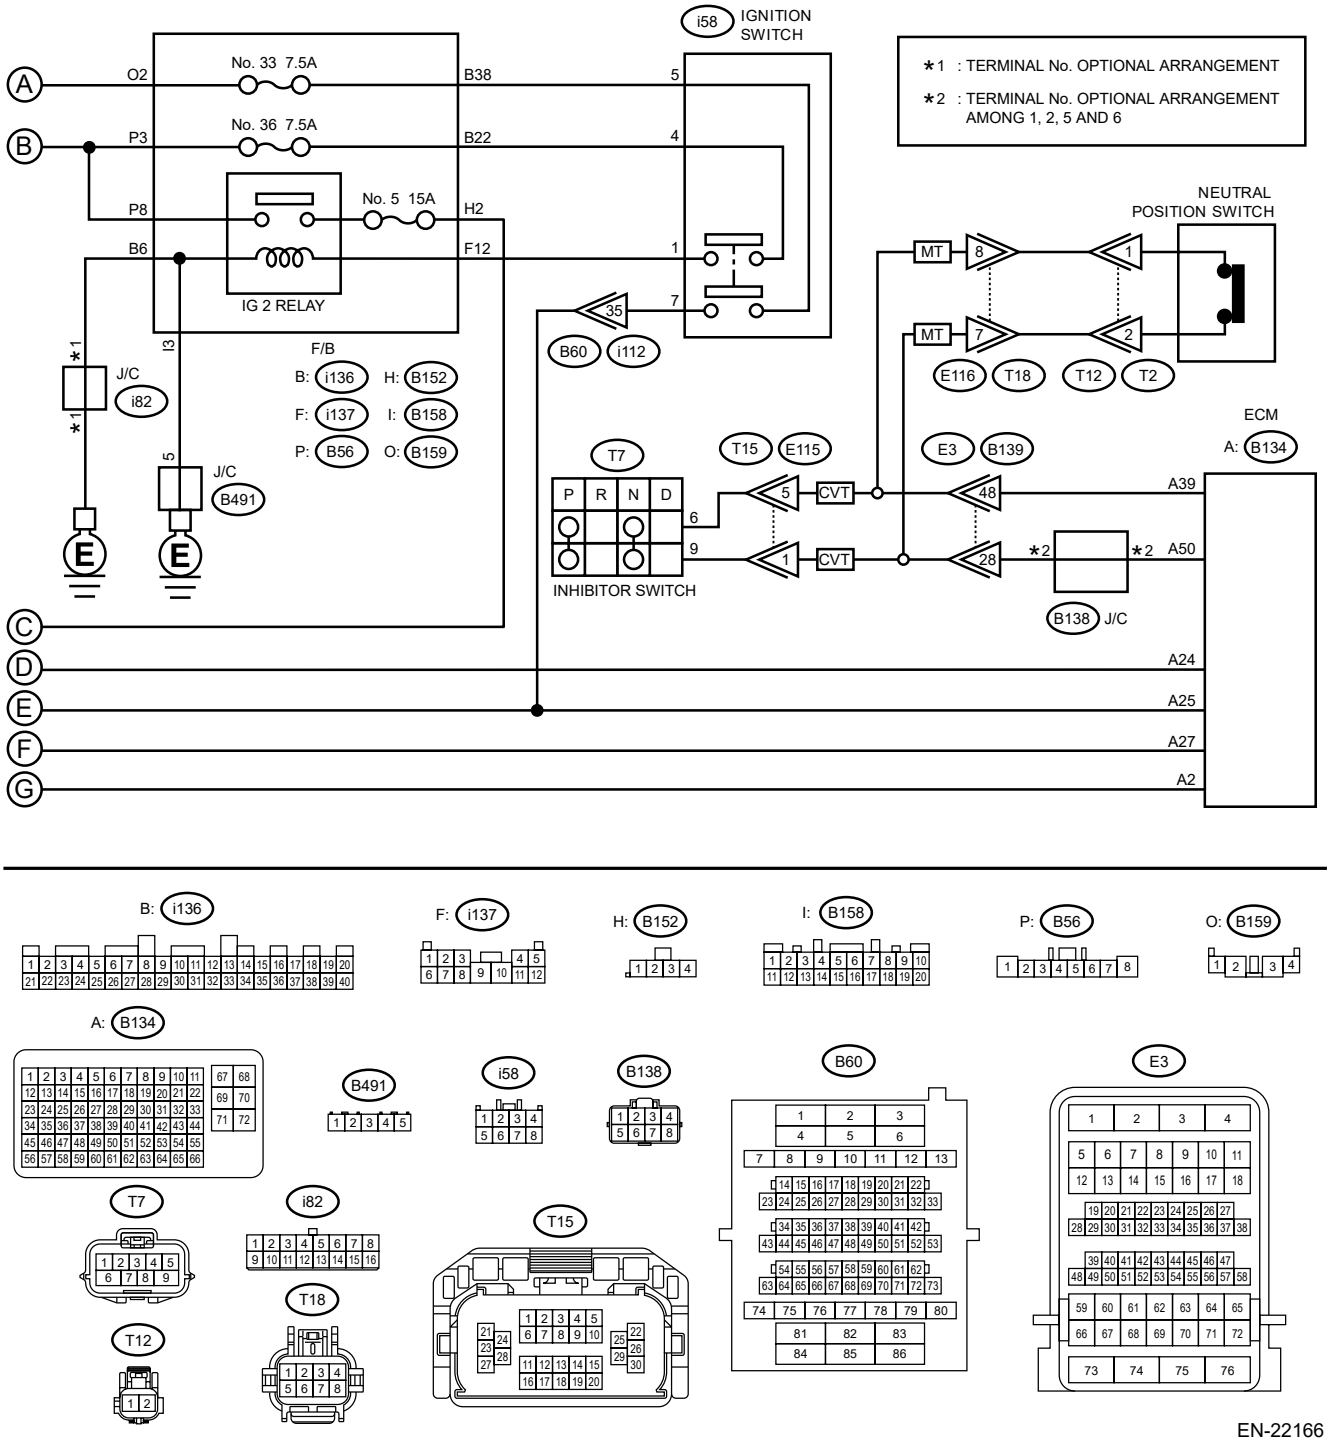


Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:



Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND STARTER RELAY (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Remove the starter relay.
4. Measure the resistance of harness between ECM connector and starter relay connector.
   Connector & terminal
   (B134) No. 27 — M/B No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness between ECM connector and starter relay connector.

2. CHECK HARNESS BETWEEN ECM AND STARTER RELAY (SHORT TO GROUND).

1. Disconnect the connector from starter motor.
2. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 27 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Repair the poor contact of ECM connector.
No	Repair the short circuit to ground in harness between ECM connector and starter relay connector.

1. OUTLINE OF DIAGNOSIS

- Model without push button start
  Detect abnormal continuity in the starter SW1.
  Judge as OFF NG when the starter SW 1 signal remains OFF.
- Model with push button start
  Detect abnormal continuity in the starter SW 2.
  Judge as OFF NG when the starter SW 2 signal remains OFF.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	8V or more

Secondary parameters	Execution condition
Engine speed	Increases from 0 rpm to 500 rpm or more
Vehicle speed	Less than 1km/h (0.6MPH)
Starter relay command	ON

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

4. DIAGNOSTIC METHOD

Judge as OFF NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW signal of 4 V or more	Not detected

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0617 STARTER RELAY "A" CIRCUIT HIGH

DTC detecting condition:

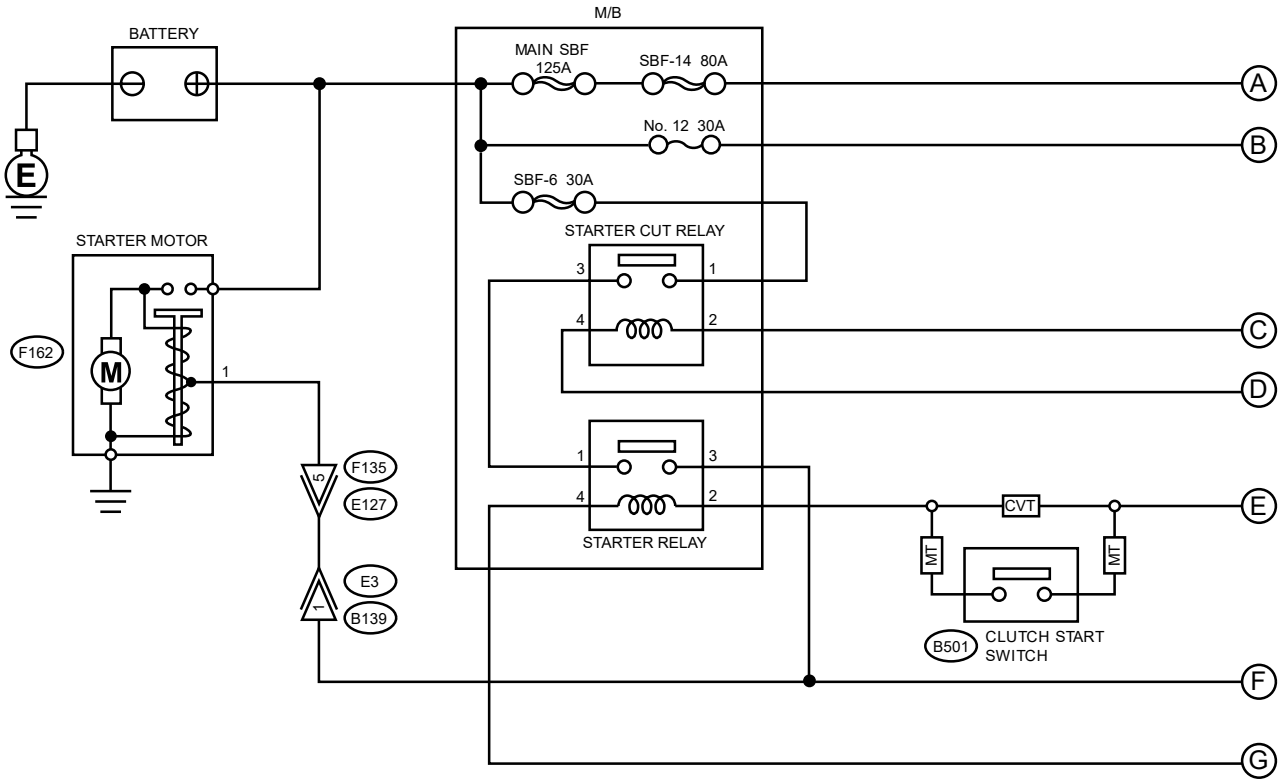
Immediately at fault recognition

Trouble symptom:

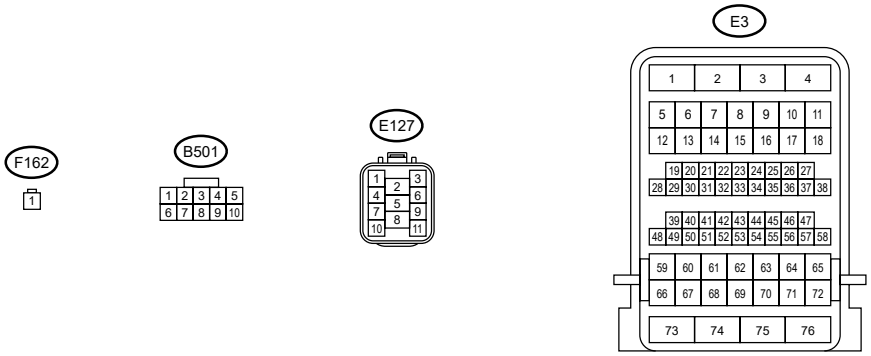
Failure of engine to start

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Read the DTC of engine using the Subaru Select Monitor or a general scan tool. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC other than P0617 displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND STARTER RELAY (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Turn the ignition switch to ON.
4. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 27 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and starter relay connector.
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

- Model without push button start
  Detect abnormal continuity in the starter SW1.
  Judge as ON NG when the starter SW 1 signal remains ON.
- Model with push button start
  Detect abnormal continuity in the starter SW 2.
  Judge as ON NG when the starter SW 2 signal remains ON.

2. EXECUTION CONDITION

Secondary parameters	Execution

	condition
Battery voltage	8V or more
Engine speed	More than 500 rpm
Starter relay command	OFF

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW signal	4 V or more

Time needed for diagnosis: 30000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P062D FUEL INJECTOR DRIVER CIRCUIT PERFORMANCE BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine does not start.
- Engine stall

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P062D displayed?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel injector circuit function.
Judge as NG when ECM with two fuel injectors or more detects any malfunction in the diagnostic items listed below.

Diagnostic item	Malfunction Criteria
Overcurrent	Fuel injector current is high.
Low current	Fuel injector current is low.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

Secondary parameters	Execution condition
Elapsed time after starting the engine	0.1 s or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

CHARGE INCOMPLETE MALFUNCTION

Judgment value

Malfunction Criteria	Threshold Value
Monitoring value of charge voltage inside direct injection drive IC	18 V or less

OVER-CHARGE MALFUNCTION

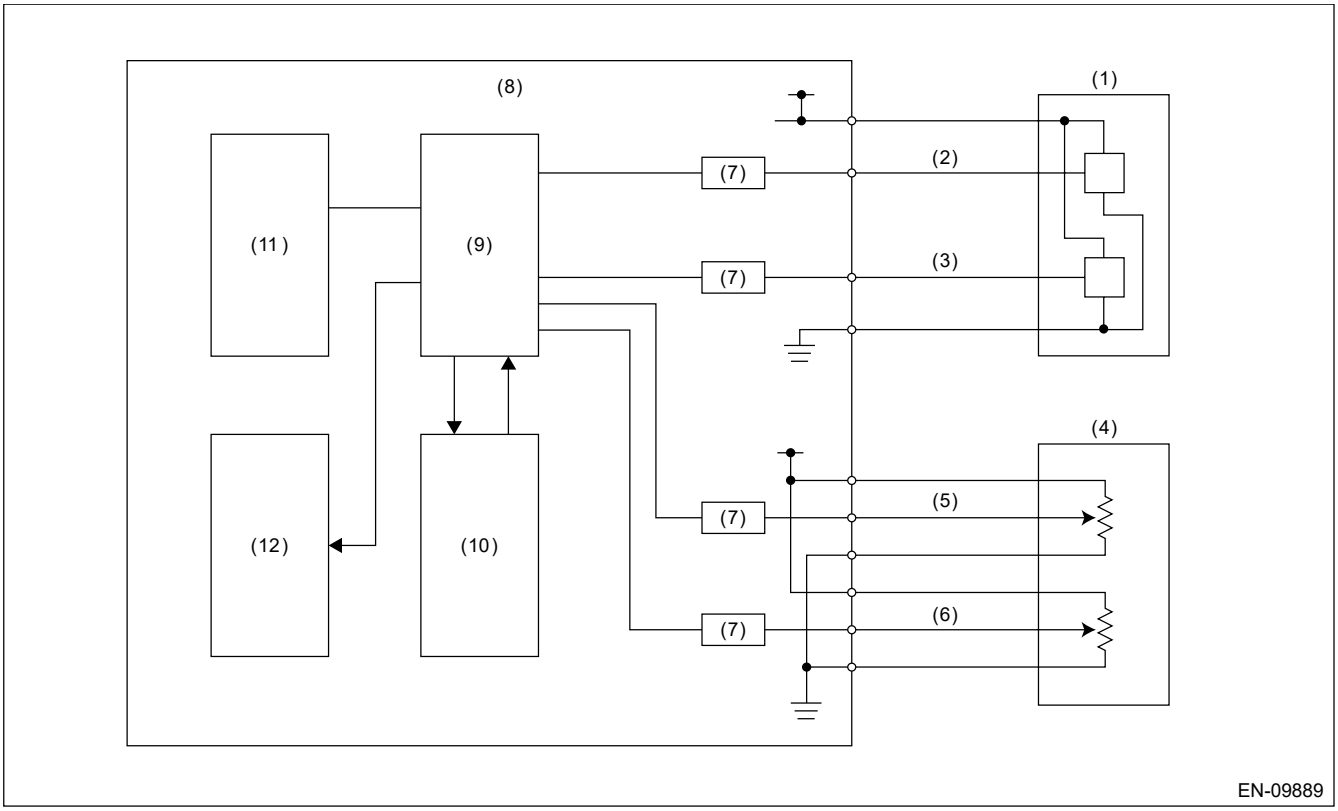
Judgment value

Malfunction Criteria	Threshold Value
Monitoring value of charge voltage inside direct injection drive IC	80 V or more

Time needed for diagnosis: 0.04 s or more (depending on engine speed)
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR



Note:

For the diagnostic procedure, refer to DTC P0606. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0606 CONTROL MODULE PROCESSOR.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the EEPROM operation is abnormal.

2. COMPONENT DESCRIPTION

(1) Throttle position sensor
(2) Throttle position sensor 1
(3) Throttle position sensor 2
(4) Accelerator pedal position sensor
(5) Accelerator pedal position sensor 1
(6) Accelerator pedal position sensor 2
(7) I/F circuit
(8) Engine control module (ECM)
(9) CPU
(10) Monitoring IC
(11) EEPROM
(12) Output IC

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Perform the diagnosis during self shut.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Writing result to EEPROM	Malfunction

Time needed for diagnosis: When detected 2 times

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P065A GENERATOR/ALTERNATOR SYSTEM PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Charge warning light illuminates.
Caution:
Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.
Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK V-BELT.

Check the V-belt. Ref. to MECHANICAL(H4DO)>V-belt>INSPECTION.

Is the V-belt free from any breakage?

Yes	Replace the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.
No	Replace the V-belt. Ref. to MECHANICAL(H4DO)>V-belt.

1. OUTLINE OF DIAGNOSIS

Judge as NG when detecting no rotation of the generator (mechanical malfunction such as belt breakage), or internal electrical malfunction.

2. COMPONENT DESCRIPTION

To secure the vehicle power supply, the generator varies the generation amount according to EGI command.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1 LIN communication schedule in progress (mechanical malfunction warning) Diagnosis 2	$01

Secondary parameters	Execution condition
LIN communication schedule in progress (electrical malfunction warning)	$01

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1−1	
Internal malfunction flag of generator (mechanical malfunction warning)	ON
Diagnosis 1−2	
Threshold of engine speed in misjudgment mask at IG ON	More than 1550 rpm
Diagnosis 2	
Internal malfunction flag of generator (electrical malfunction warning)	ON

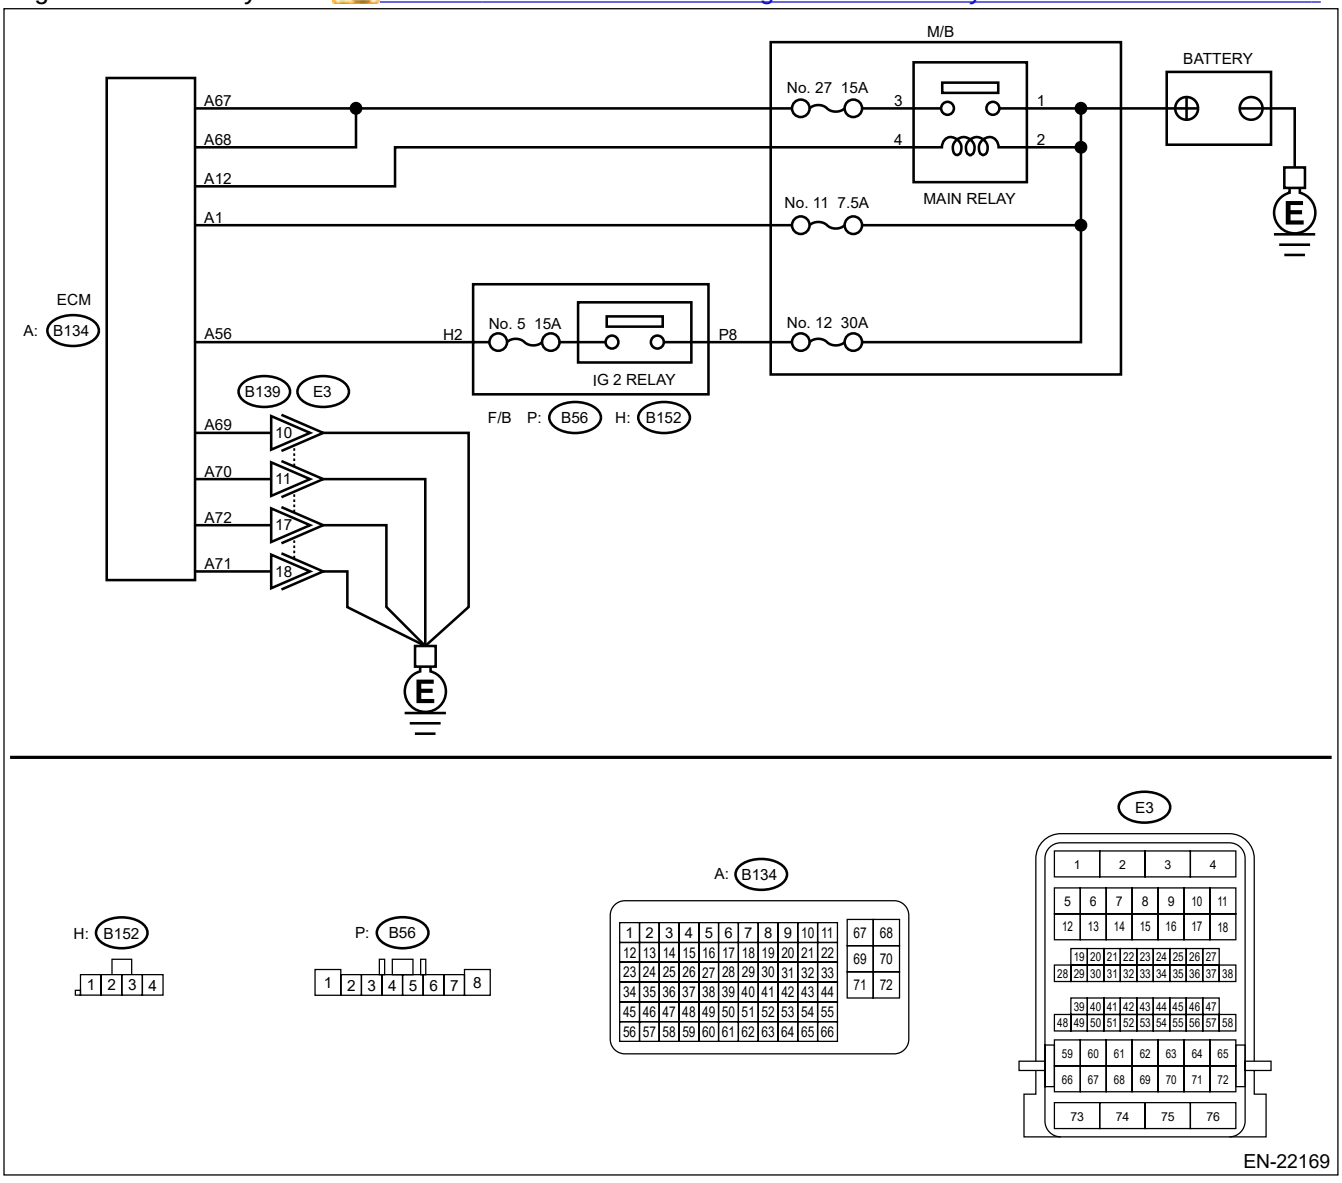
Time needed for diagnosis: 0ms or more (diagnosis 1−1)
Time needed for diagnosis: 512ms or more (diagnosis 1−2)
Time needed for diagnosis: 0ms or more (diagnosis 2 (with 2000 ms delay inside generator))
Malfunction indicator light illumination: Does not illuminate even when malfunction occurs. (Charge light illuminates)

DTC P0685 ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 2.
No	Connect the ECM connector correctly.

2. CHECK HARNESS BETWEEN ECM AND MAIN RELAY (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and engine ground.

Connector & terminal

(B134) No. 67 (+) — Engine ground (−):

(B134) No. 68 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Short circuit to power supply in harness between ECM connector and main relay connector** • **Defective main relay**
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND MAIN RELAY (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Remove the main relay.
3. Disconnect the connector from ECM.
4. Measure the resistance between the ECM connector and engine ground.

Connector & terminal

(B134) No. 12 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Repair the poor contact of ECM connector.
No	Repair the short circuit to ground in harness between ECM connector and main relay connector.

1. OUTLINE OF DIAGNOSIS

Detect the main relay stuck to ON.
Judge as NG when ECM keeps operating for more than predetermined time although the main relay does not turn to OFF after ignition switch is turned to OFF.

2. COMPONENT DESCRIPTION

The main relay controls the current in the coil section to switch ON/OFF the ECM by receiving instructions from the ignition switch and Evaporative Leak Check Module.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Main relay	OFF instruction

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the enable conditions are established with the ignition switch OFF → ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ECM status	In operation

Time needed for diagnosis: 2500ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST)

Note:

For the diagnostic procedure, refer to AT section. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Judge as NG when there is CAN communication with the TCM and there is a MIL lighting request.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
MIL lighting request from TCM	Yes

Time needed for diagnosis: 128ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

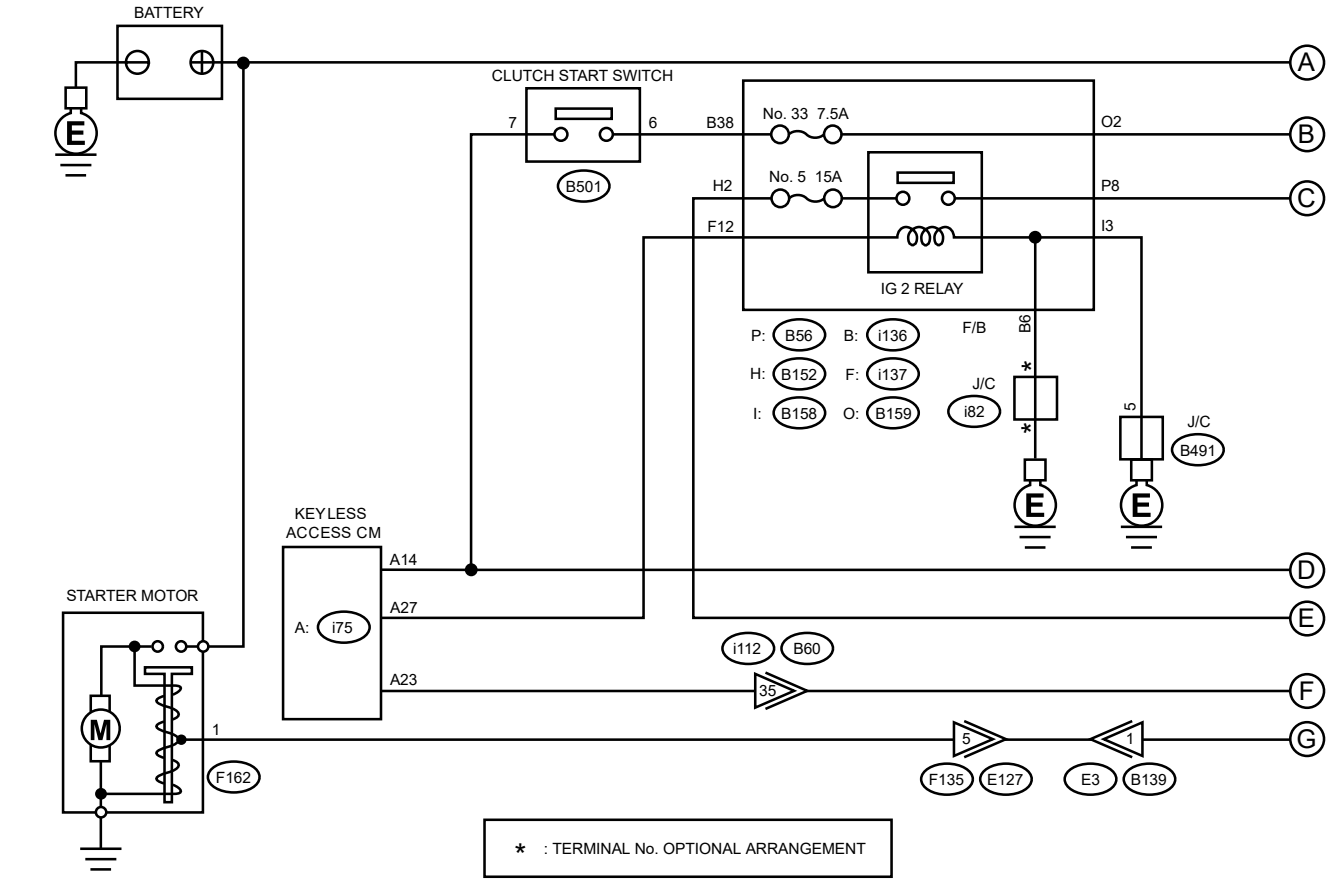
DTC P081A STARTER DISABLE CIRCUIT LOW

Immediately at fault recognition

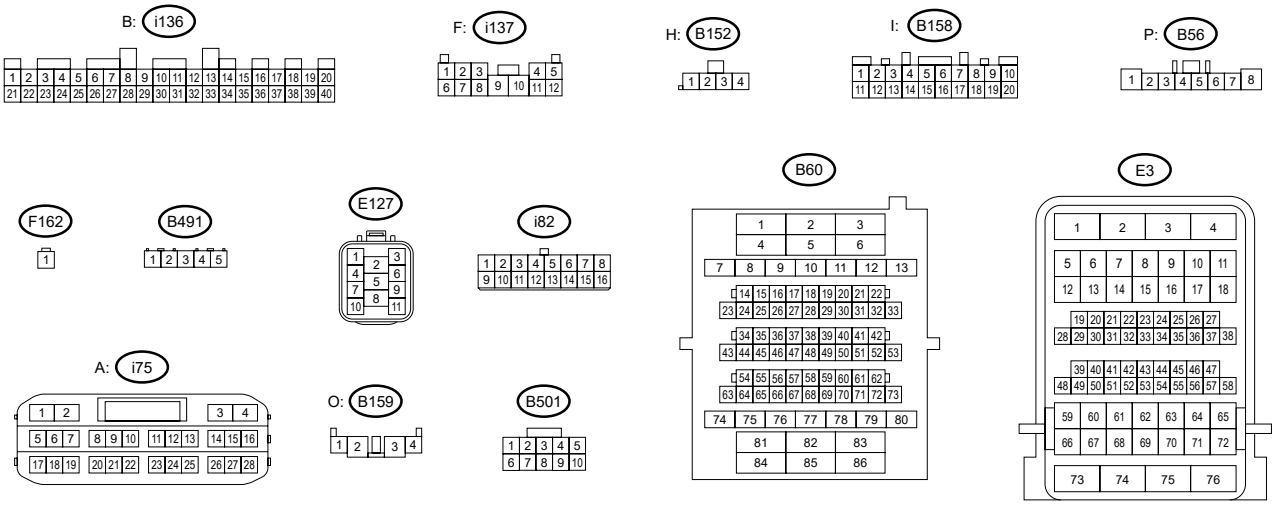
Trouble symptom:

Failure of engine to start

Caution:

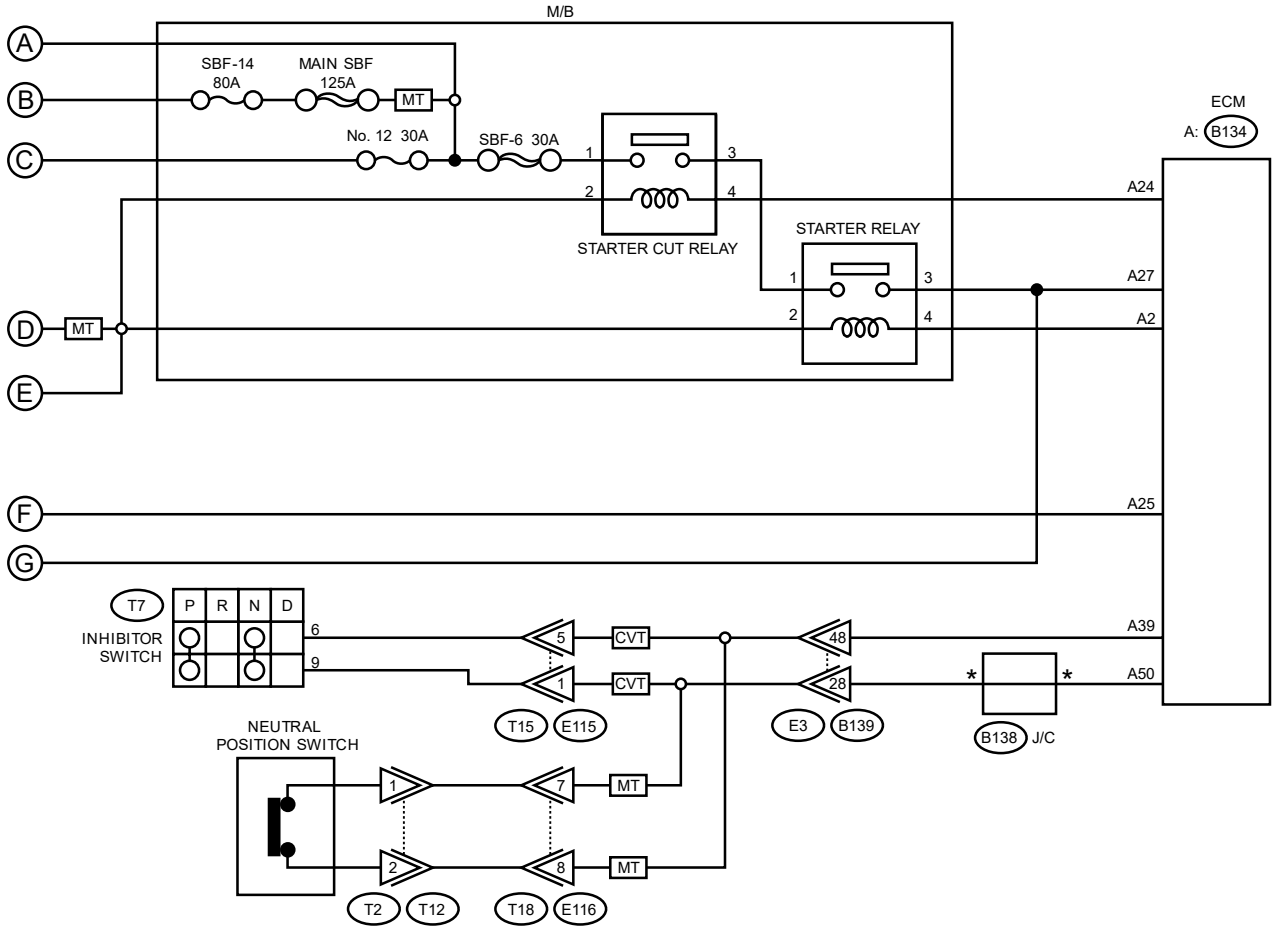


Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.



Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM CONNECTOR AND STARTER CUT RELAY (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Remove the starter cut relay.
4. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 24 — Chassis ground:

Is the resistance less than 1 MΩ?

Yes	Go to 2.
No	Repair the short circuit to ground in harness between ECM connector and starter cut relay connector.

2. CHECK HARNESS BETWEEN ECM CONNECTOR AND STARTER CUT RELAY (OPEN).

Measure the resistance of harness between ECM connector and starter cut relay connector.
Connector & terminal
(B134) No. 24 — M/B No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between ECM connector and starter cut relay connector.

3. CHECK STARTER CUT RELAY.

Check the starter cut relay. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Repair the poor contact of ECM connector.
No	Replace the starter cut relay. Ref. to SECURITY AND LOCKS>Relay and Fuse>LOCATION.

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter cut relay.
Judge as NG when the starter cut relay output line is open.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	8V or more
Starter cut relay command	OFF

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Starter cut relay control voltage	1.7 V or less

Time needed for diagnosis: 2.5 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0851 PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW

DTC detecting condition:

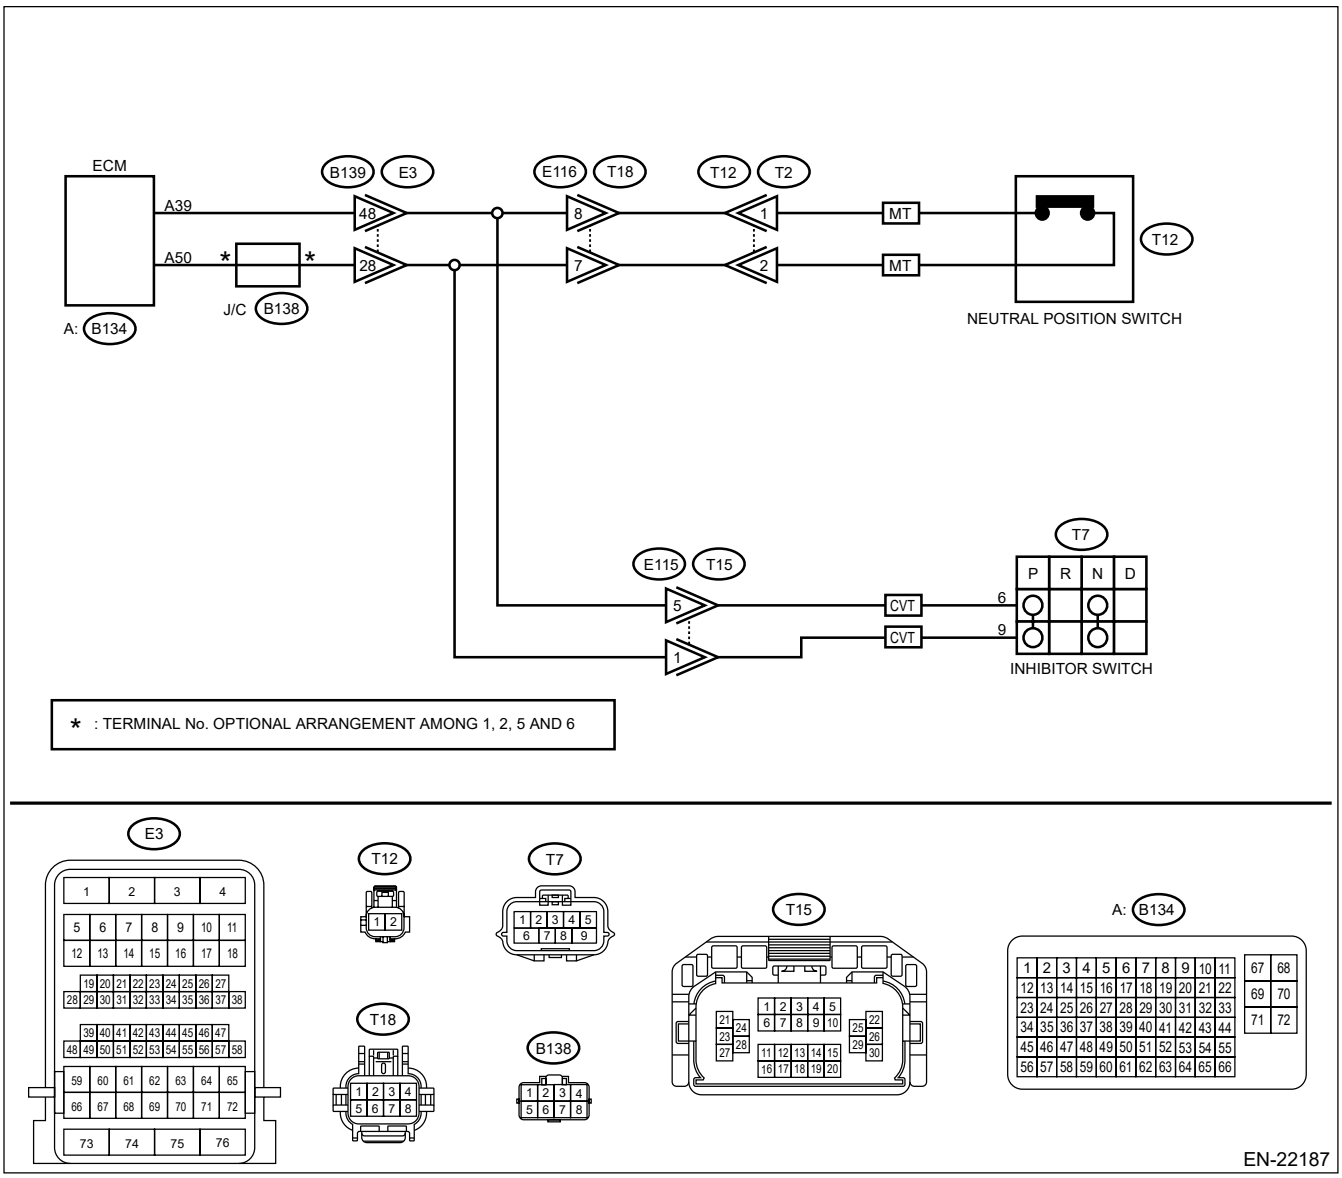
Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Improper idling

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CVT MODEL

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK SELECT CABLE.

Check the select cable.

Is there any fault in select cable?

Yes	Repair or adjust the select cable. Ref. to CONTROL SYSTEMS>Select Cable.
No	Go to 2.

2. CHECK INPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Place the select lever in other than “P” range and “N” range.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 39 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the poor contact of ECM connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND TRANSMISSION HARNESS CONNECTOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from inhibitor switch.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 39 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Replace the inhibitor switch.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Short circuit to ground in harness between ECM connector and inhibitor switch connector** • **Poor contact of coupling connector**

2. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.
Judge as NG when the ECM neutral terminal input differs from the reception data from TCM.

3. EXECUTION CONDITION

Secondary parameters	Execution condition

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Starter relay feedback voltage	Less than 1.6 V
Data received from TCM	Not equal to “P” range/“N” range

4. GENERAL DRIVING CYCLE

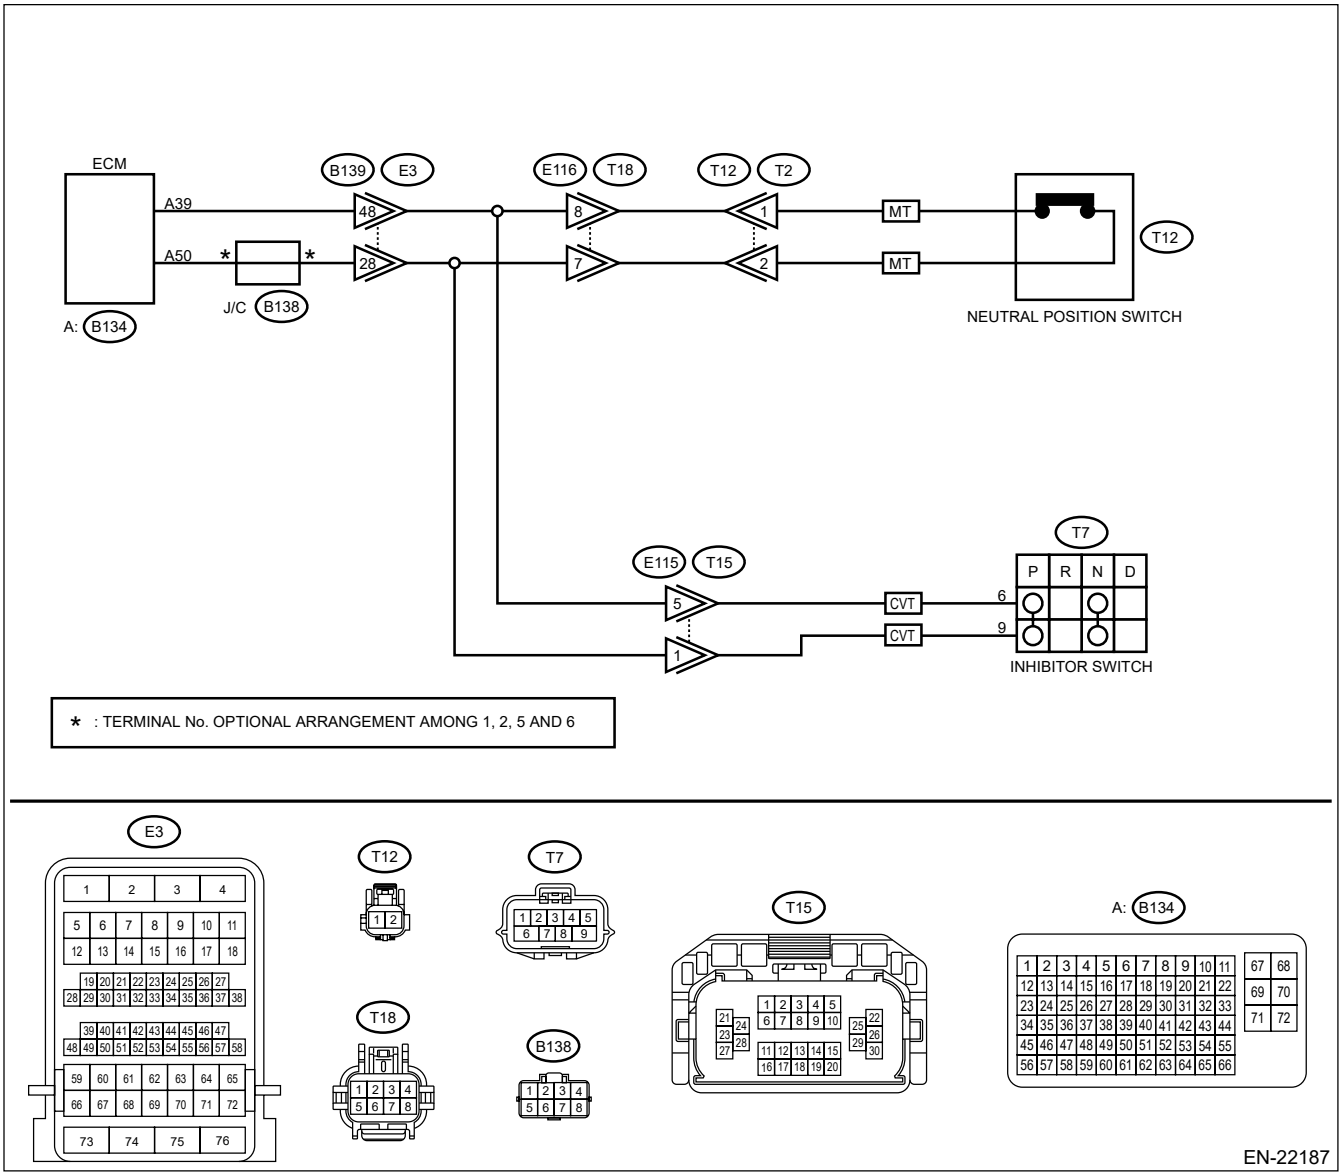
Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Voltage of the neutral position switch signal	1.2 V or less



Time needed for diagnosis: 6.4 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. MT model

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK INPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Place the shift lever in a position other than neutral.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 39 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the poor contact of ECM connector.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the neutral position switch.
4. Measure the resistance between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 39 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Replace the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.
No	Repair the short circuit to ground in harness between ECM connector and neutral position switch 1 connector.

7. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.
Judge as NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

8. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
The number of changes from driving condition a) to b)	Equal to 3time(s)
a)	
Vehicle speed	0km/h (0MPH) or less
and	
Engine speed	550rpm or more and 850rpm or less
b)	
Vehicle speed	64km/h (39.8MPH) or more
and	
Engine speed	1550rpm or more and

Secondary parameters	Execution condition
	2100rpm or less

9. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

10. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	Battery voltage × 0.19 V or less

Time needed for diagnosis: 3time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0852 PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH

DTC detecting condition:

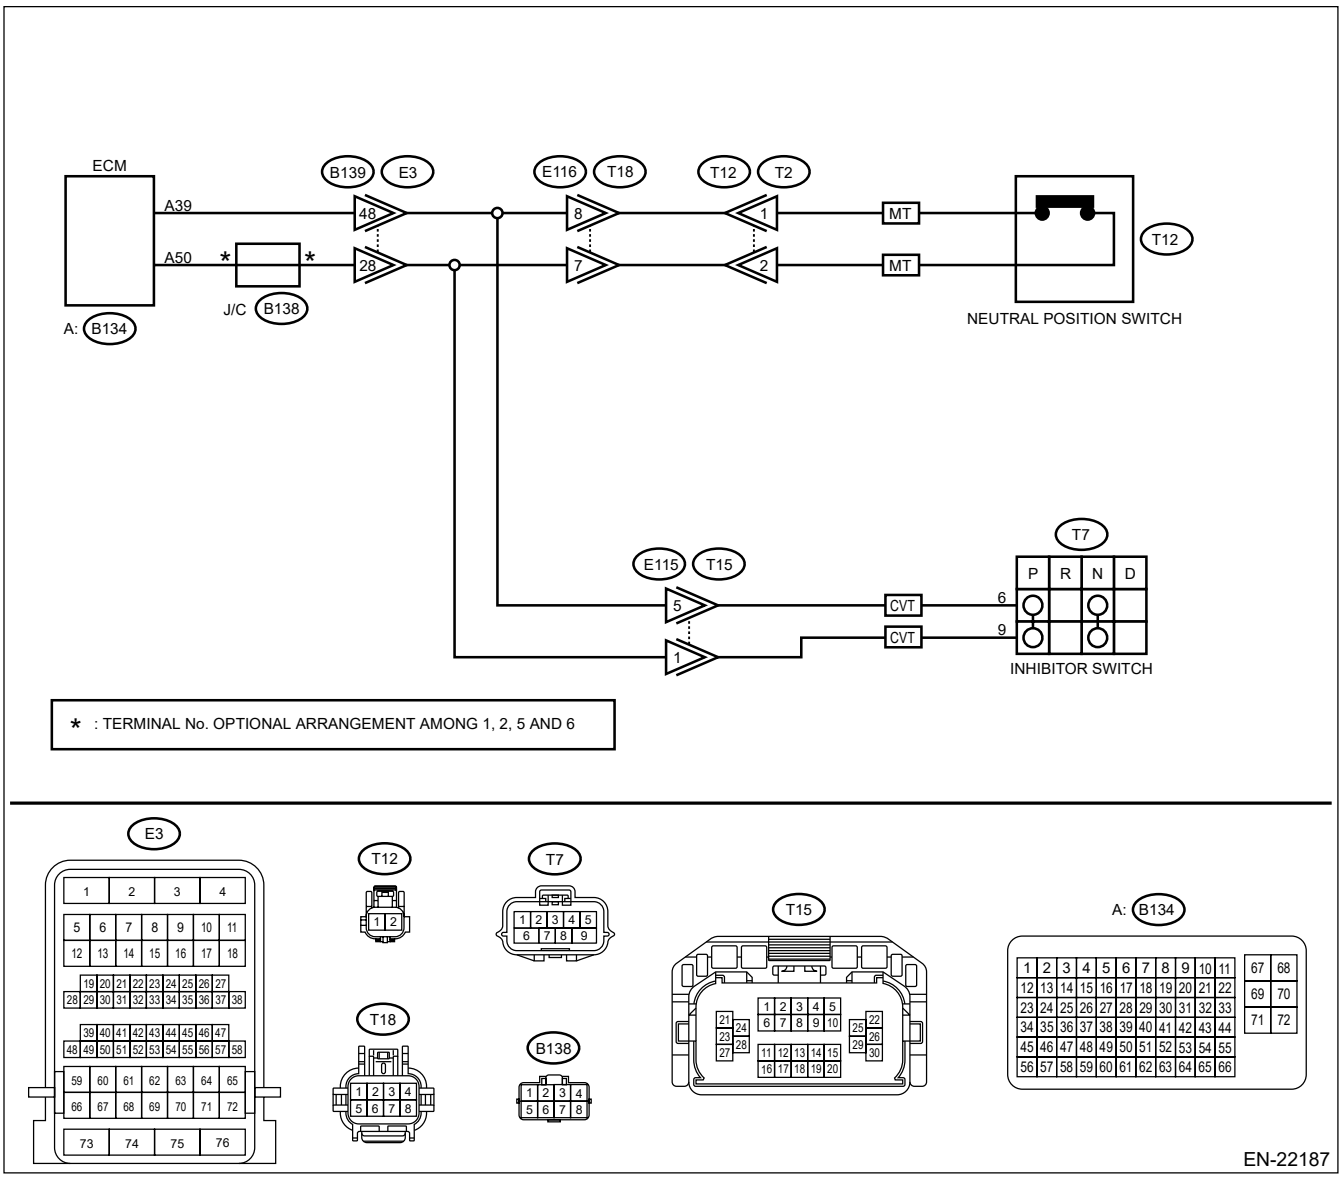
Detected when two consecutive driving cycles with fault occur.

Trouble symptom:

Improper idling

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CVT MODEL

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK SELECT CABLE.

Check the select cable.

Is there any fault in select cable?

Yes	Repair or adjust the select cable. Ref. to CONTROL SYSTEMS>Select Cable.
No	Go to 2.

2. CHECK INPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM and chassis ground with select lever at “P” range and “N” range.
   Connector & terminal
   (B134) No. 39 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Repair the poor contact of ECM connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from inhibitor switch.
4. Measure the resistance of harness between ECM connector and inhibitor switch connector.
   Connector & terminal
   (B134) No. 39 — (T7) No. 6:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and inhibitor switch connector** • **Poor contact of coupling connector**

4. CHECK INHIBITOR SWITCH GROUND LINE (OPEN).

Measure the resistance of harness between inhibitor switch connector and engine ground.

Connector & terminal

(T7) No. 9 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Replace the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.
No	Repair the harness and connector.

Note:

In this case, repair the following item:

- **Open circuit of harness between inhibitor switch connector and starter motor ground line**
- **Poor contact of coupling connector**
- **Poor contact of starter motor connector**
- **Poor contact of starter motor ground**
- **Starter motor**

2. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.
Judge as NG when the ECM neutral terminal input differs from the reception data from TCM.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Starter relay feedback voltage	Less than 1.6 V
Data received from TCM	Equal to “P” range/“N” range

4. GENERAL DRIVING CYCLE

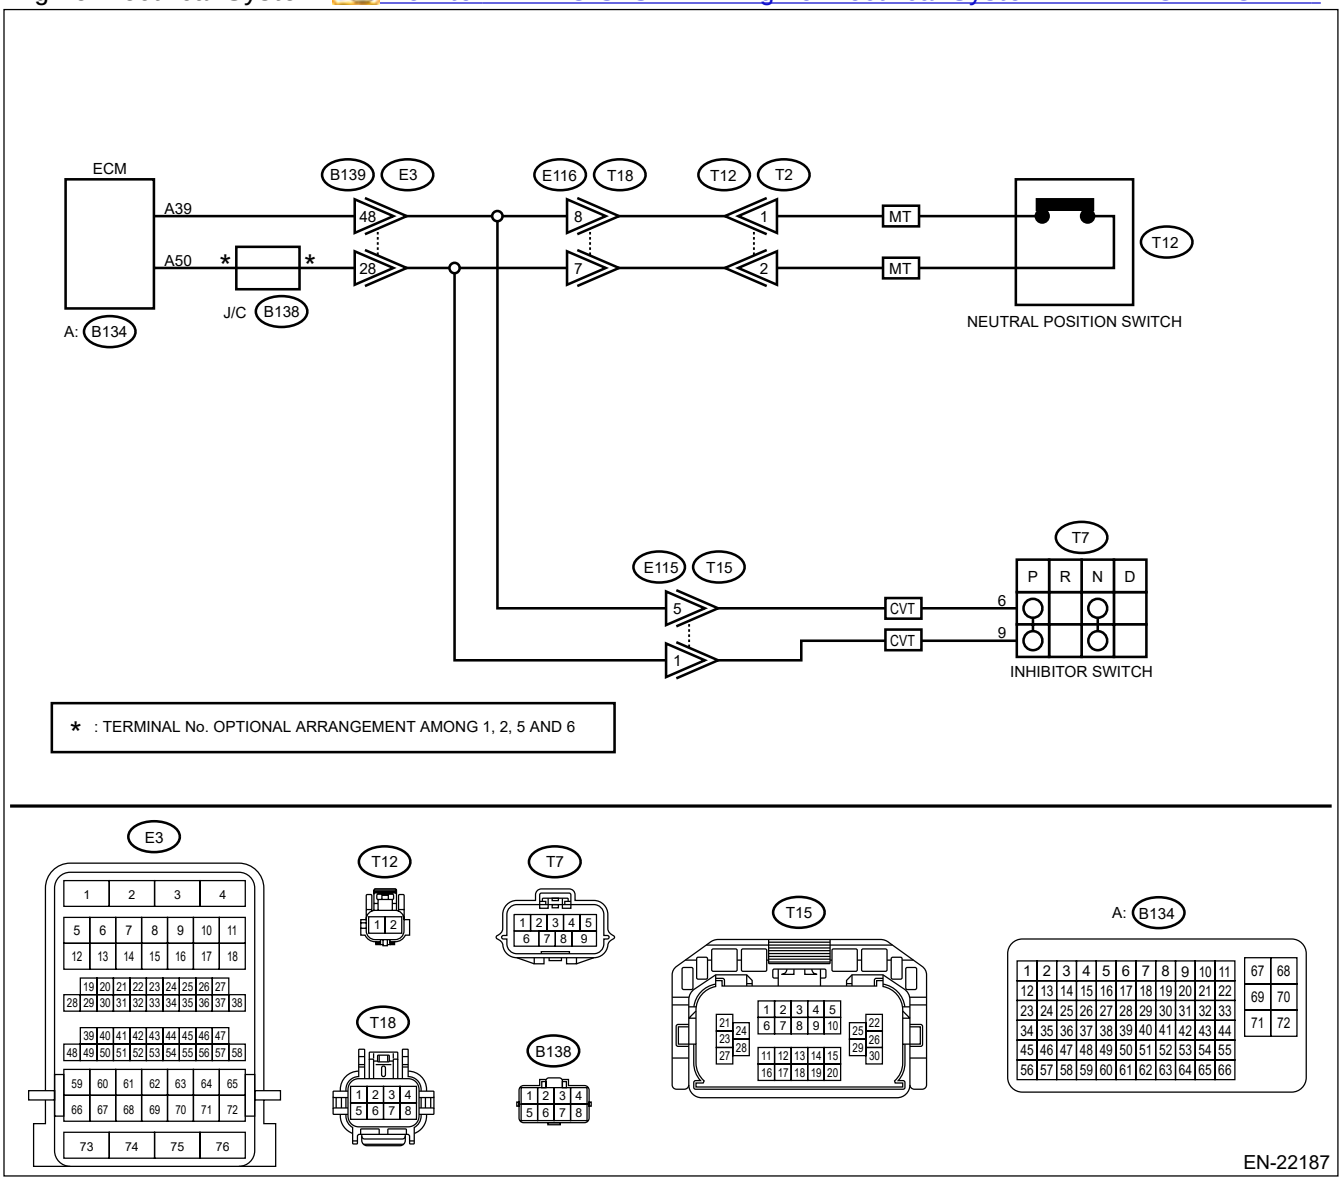
Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Voltage of the neutral position switch signal	4.5 V or more



Time needed for diagnosis: 6.4 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. MT model

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK INPUT SIGNAL OF ECM.

1. Turn the ignition switch to ON.
2. Place the shift lever in neutral.
3. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 5 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Repair the poor contact of ECM connector.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the neutral position switch.
4. Measure the resistance of harness between ECM connector and neutral position switch connector.
   Connector & terminal
   (B134) No. 39 — (T12) No. 1:
   (B134) No. 50 — (T12) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and neutral position switch connector** • **Poor contact of coupling connector**

3. CHECK NEUTRAL POSITION SWITCH.

1. Place the shift lever in neutral.
2. Measure the resistance between neutral position switch terminals.
   Terminals
   No. 1 — No. 2:

Is the resistance less than 1 Ω?

Yes	Repair the poor contact of neutral position switch connector.
No	Replace the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.

7. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.
Judge as NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

8. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
The number of changes from driving condition a) to b)	Equal to 3time(s)
a)	
Vehicle speed	0km/h (0MPH) or less
and	
Engine speed	550rpm or more and 850rpm or less
b)	
Vehicle speed	64km/h (39.8MPH) or more
and	
Engine speed	1550rpm or more and 2100rpm or less

9. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

10. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	Battery voltage × 0.6 V or more

Time needed for diagnosis: 3time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0A3B GENERATOR/ALTERNATOR OVER TEMPERATURE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Charge warning light illuminates.
Caution:
Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.
Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK GENERATOR.

Check the generator vent window. Ref. to MECHANICAL(H4DO)>V-belt>INSPECTION.

Is there clogging with foreign objects?

Yes	Eliminate the foreign objects and leave the generator main body intact approx. 20 minutes to cool down.
No	Go to 2.

2. CHECK CHARGE WARNING LIGHT.

1. Turn the ignition switch to OFF and wait for 20 minutes.
2. Start the engine and check the charge warning light.

Does the charge warning light remain on?

Yes	Replace the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.
No	This is a temporarily overheating of the generator. It is now back to normal state. Check for clogging with foreign objects in the proximate area such as the generator vent window.

1. OUTLINE OF DIAGNOSIS

The overheating detection sensor is integrated as protection of the generator internal parts. If a malfunction is detected, DTCs will be output.

Charge warning light illuminates.

2. COMPONENT DESCRIPTION

To secure the vehicle power supply, the generator varies the generation amount according to EGI command.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
LIN communication schedule in progress	$01

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

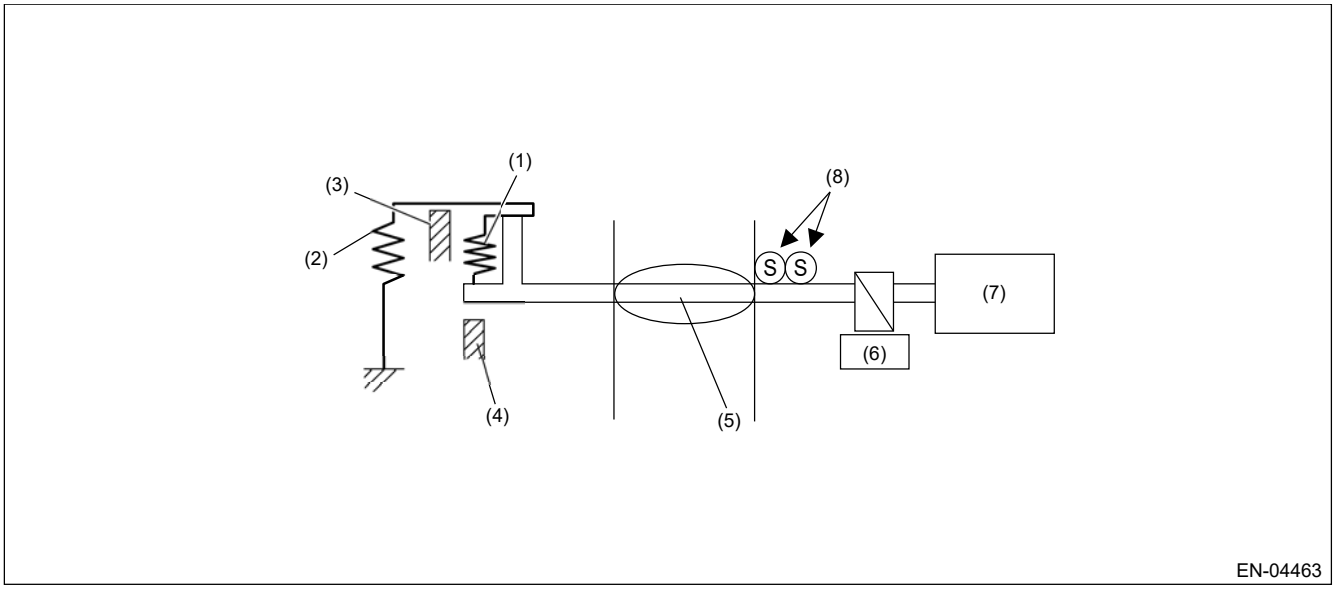
Secondary parameters	Execution condition
Internal malfunction flag of generator (high temperature malfunction warning)	ON
Monitor value of generator internal temperature	More than 196°C

Time needed for diagnosis: 1024ms

Malfunction indicator light illumination: Does not illuminate even when malfunction occurs. (Charge light illuminates)

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1160 THROTTLE RETURN SPRING



Note:

For the diagnostic procedure, refer to DTC P2101. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the valve is opened more than the default opening angle, but does not move to the close direction with the motor power stopped.

2. COMPONENT DESCRIPTION

(1) Opener spring
(2) Return spring
(3) Intermediate stopper
(4) Full closed stopper
(5) Throttle valve
(6) Gear
(7) DC motor
(8) Main and sub throttle position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch	OFF
Battery voltage	6V or more
Elapsed time after motor continuity OFF	Equal to 1.6 s

4. GENERAL DRIVING CYCLE

- Ignition switch ON → OFF
- Ignition switch OFF → ON (Only after clearing memory)

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Change of the opening angle after the motor current is cut OFF Actual throttle position (Main Sensor) at power supply off - Actual throttle position (Main Sensor)	Less than 1.6%

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1192 FUEL RAIL PRESSURE SENSOR "B" CIRCUIT LOW

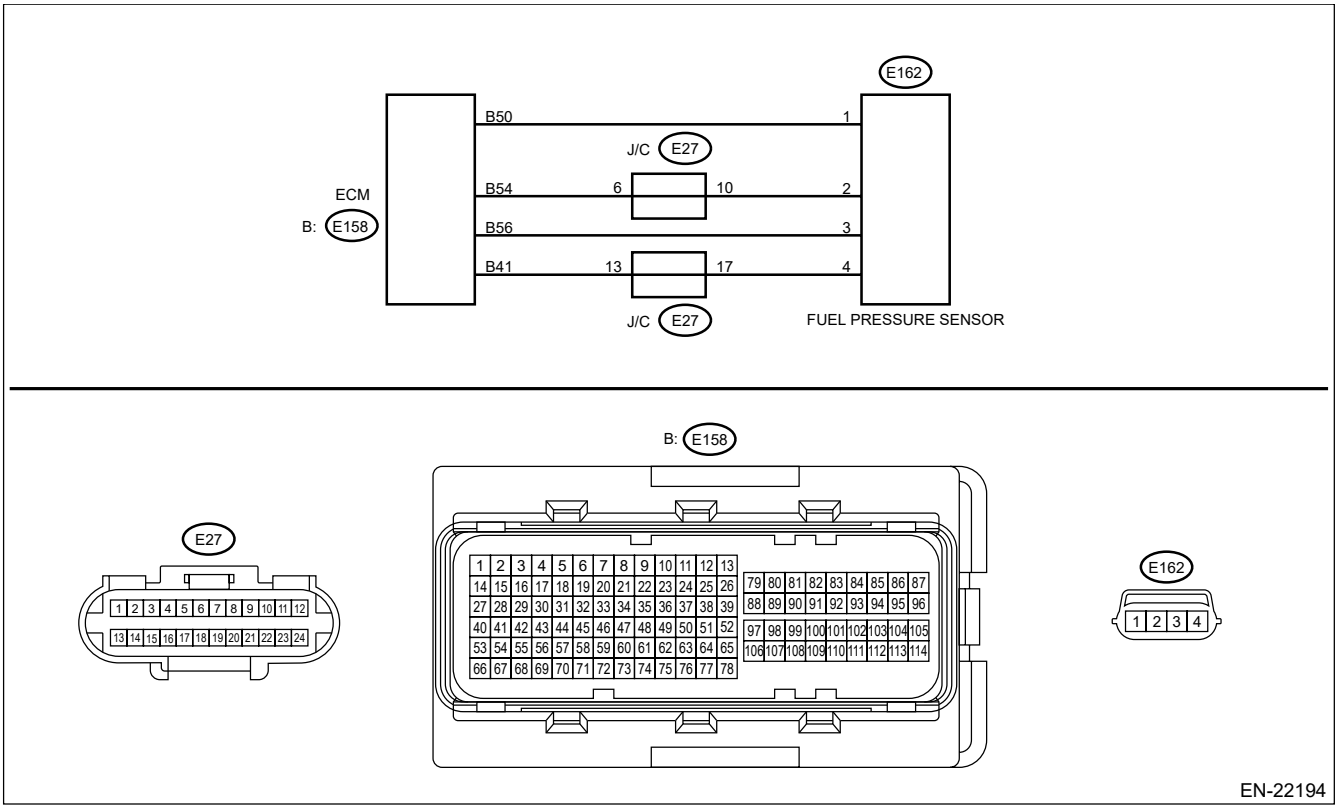
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Clear the memory. Ref. to COMMON(diag)>Clear memory.
2. Turn the ignition to OFF.
3. Start the engine.
4. Using the Subaru Select Monitor or a general scan tool, read the value of [Fuel Rail Pressure B].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Fuel Rail Pressure B] 0 kPa (0 kg/cm^2, 0 psi) or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the fuel pressure sensor.
4. Measure the voltage between ECM connector and engine ground.
   Connector & terminal
   (E158) No. 50 — Chassis ground:
   (E162) No. 1 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Replace the fuel pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pressure Sensor.
No	Repair or replace the wiring harness or connector.

1. OUTLINE OF DIAGNOSIS

Detect the signal stuck of the fuel pressure sensor.
Judge as NG when the voltage change amount per unit time of the fuel pressure sensor does not exceed the threshold value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.634 V

Time needed for diagnosis:2400ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1193 FUEL RAIL PRESSURE SENSOR "B" CIRCUIT HIGH

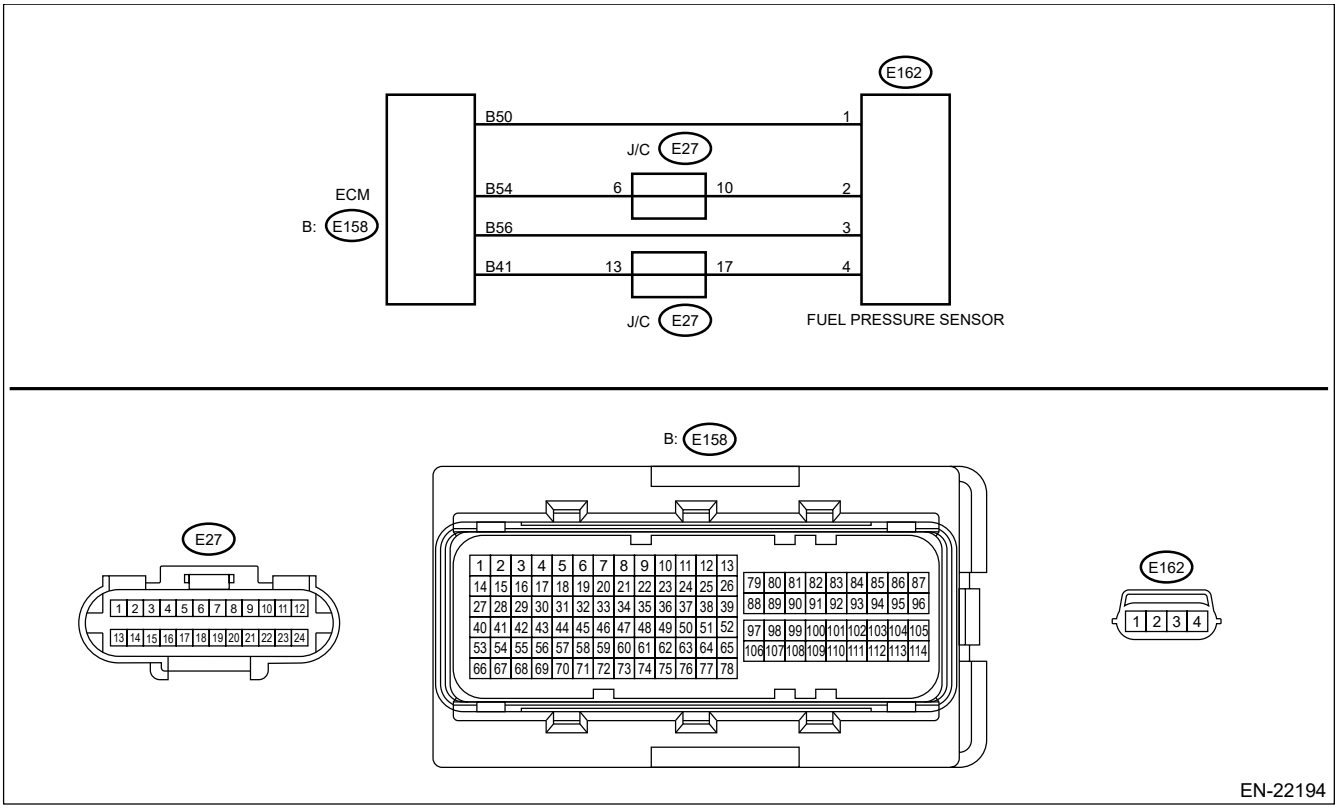
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Fuel Rail Pressure B].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Fuel Rail Pressure B] 25 MPa (254.9 kg/cm^2, 3625 psi) or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK FUEL PRESSURE SENSOR POWER SUPPLY.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the fuel pressure sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between fuel pressure sensor connector and engine ground.
   Connector & terminal
   (E162) No. 4 (+) — Chassis ground (−):

Is the voltage 4.5 V to 5.5 V?

Yes	Go to 3.
No	Go to 5.

3. CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the fuel pressure sensor.
4. Measure the resistance of harness between ECM connector and fuel pressure sensor connector.
   Connector & terminal
   (E158) No. 50 — (E162) No. 1:
   (E158) No. 54 — (E162) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.

4. CHECK ECM AND FUEL PRESSURE SENSOR POWER SUPPLY (SHORT TO POWER SUPPLY).

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 50(+) — Chassis ground (-):
   (E162) No. 1(+) — Chassis ground (-):

Is the resistance 5 V or more?

Yes	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.
No	Replace the fuel pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Fuel Pressure Sensor.

5. CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the fuel pressure sensor.
4. Measure the resistance of harness between ECM connector and manifold absolute pressure sensor connector.
   Connector & terminal
   (E158) No. 41 — (E162) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.

6. CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR (SHORT TO GROUND).

1. Disconnect the connector from ECM.
2. Disconnect the connector from the fuel pressure sensor.
3. Measure the resistance between ECM connector and the fuel pressure sensor connector and chassis ground.
   Connector & terminal
   (E158) No. 41 (+) — Chassis ground (-):
   (E162) No. 4 (+) — Chassis ground (-):

Is the resistance 1 MΩ or more?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the ground short circuit of harness between ECM connector and fuel pressure sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the signal stuck of the fuel pressure sensor.
Judge as NG when the voltage change amount per unit time of the fuel pressure sensor does not exceed the threshold value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.472 V or more

Time needed for diagnosis:2400ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1235 HIGH PRESSURE FUEL PUMP CIRCUIT

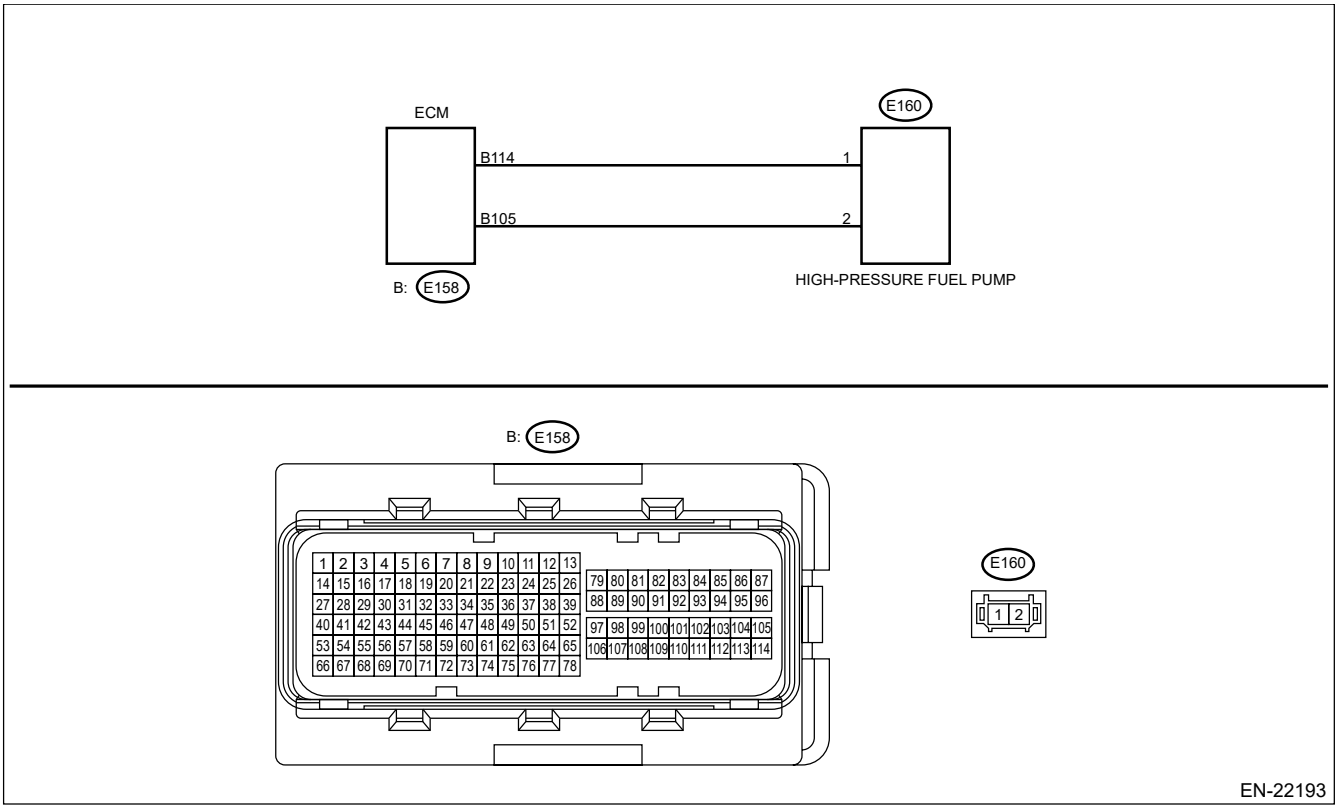
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HIGH-PRESSURE FUEL PUMP.

Check the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Replace the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump.

2. CHECK HARNESS BETWEEN ECM AND HIGH-PRESSURE FUEL PUMP (OPEN).

1. Disconnect the connector from ECM.
2. Disconnect the connector from high-pressure fuel pump.
3. Measure the resistance of harness between ECM connector and high-pressure fuel pump connector.

Connector & terminal

(E158) No. 114 — (E160) No. 1:

(E158) No. 105 — (E160) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit in harness between ECM connector and high-pressure fuel pump connector.

3. CHECK HARNESS BETWEEN ECM AND HIGH-PRESSURE FUEL PUMP (SHORT TO GROUND).

Measure the resistance of harness between ECM connector and high-pressure fuel pump connector.

Connector & terminal

(E158) No. 114 — (E160) No. 1:

(E158) No. 105 — (E160) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit to ground in harness between ECM connector and high-pressure fuel pump connector.

4. CHECK HARNESS BETWEEN ECM AND HIGH-PRESSURE FUEL PUMP (SHORT TO POWER SUPPLY).

Measure the voltage between high-pressure fuel pump connector and engine ground.

Connector & terminal

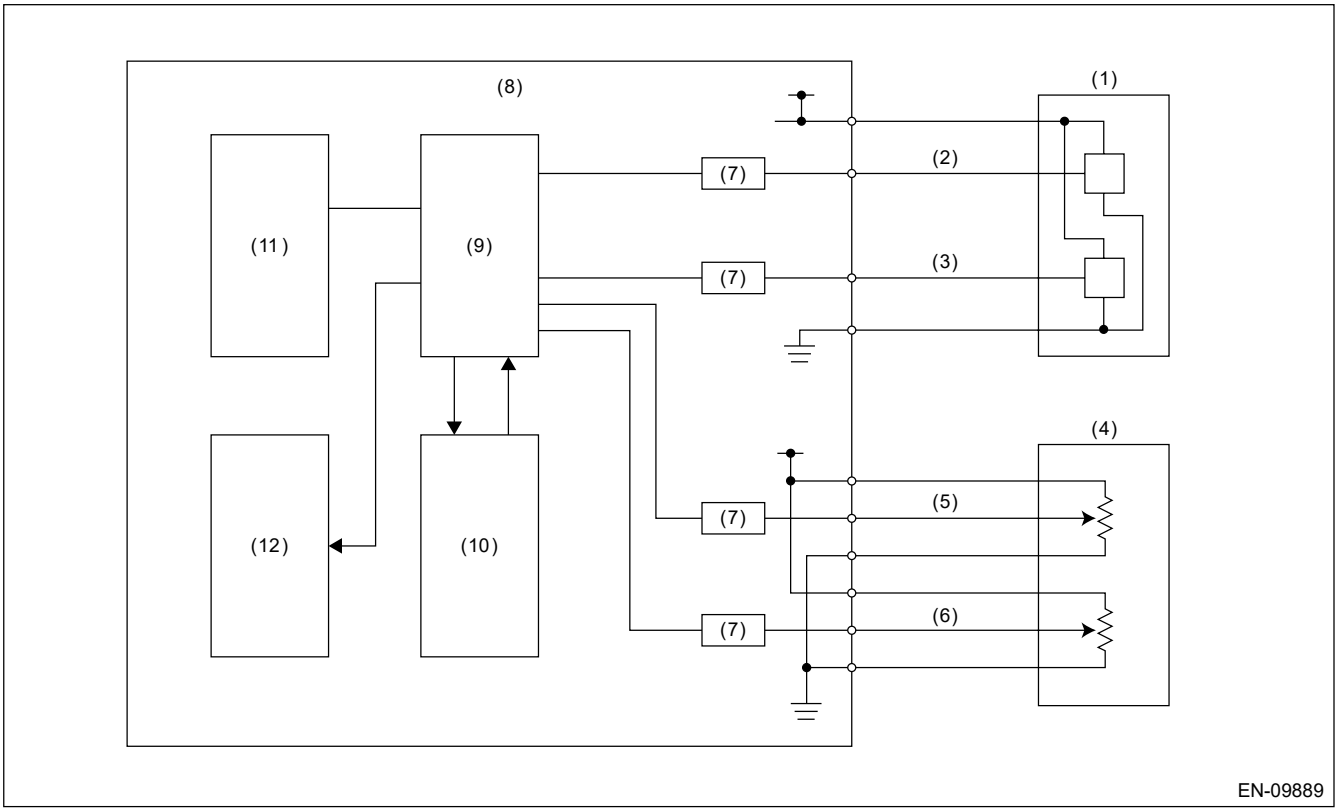
(E160) No. 1 — Engine ground:

Is the voltage 10 V or more?

Yes	Repair the short circuit to power supply in harness between ECM connector and high-pressure fuel pump connector.
No	Go to 5.

5. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.



Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Replace the engine control computer. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Engine Control Module (ECM)>REMOVAL.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the CPU operation is abnormal.
(1) Instruction check
(2) Software flow check
(3) Software monitor check
(4) If the output IC operation is abnormal
(5) CAN register check
(6) Control module function check
(7) Software check

2. COMPONENT DESCRIPTION

(1) Throttle position sensor
(2) Throttle position sensor 1
(3) Throttle position sensor 2
(4) Accelerator pedal position sensor
(5) Accelerator pedal position sensor 1
(6) Accelerator pedal position sensor 2
(7) I/F circuit
(8) Engine control module (ECM)
(9) CPU
(10) Monitoring IC
(11) EEPROM
(12) Output IC

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Judgment 1, 2, 5: Battery voltage	10.9 V or more

Secondary parameters	Execution condition
Elapsed time after ignition state is crank or run	0.1 s or more
Fuel pump command	ON
Judgment 3, 4, 6:	
Battery voltage	10.9 V or more
Elapsed time after ignition state is crank or run	0.1 s or more
Fuel pump command	OFF

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

JUDGMENT 1: DIAGNOSIS FOR OPEN CIRCUIT

Judgment value

Malfunction Criteria	Threshold Value
High-pressure pump wrong operation signal (0.2A or less)	ON

JUDGMENT 2: DIAGNOSIS FOR OVERCURRENT

Judgment value

Malfunction Criteria	Threshold Value
High-pressure pump wrong operation signal (14.2A or more)	ON

JUDGMENT 3: DIAGNOSIS FOR GROUND SHORT

Judgment value

Malfunction Criteria	Threshold Value
High-pressure pump wrong operation signal (1 V or less)	ON

JUDGMENT 4: DIAGNOSIS FOR POWER SUPPLY SHORT

Judgment value

Malfunction Criteria	Threshold Value
High-pressure pump wrong operation signal (5 V or more)	ON

JUDGMENT 5: DIAGNOSIS FOR SHORT CIRCUIT

Judgment value

Malfunction Criteria	Threshold Value
High-pressure fuel pump control	Less than 3.92 V

Malfunction Criteria	Threshold Value
voltage	

JUDGMENT 6: DIAGNOSIS FOR POWER SUPPLY SHORT CIRCUIT

Judgment value

Malfunction Criteria	Threshold Value
High-pressure fuel pump control voltage	3.92 V or more

Time needed for diagnosis:

Judgment 1, 2, 5: 0.08 s

Judgment 3, 4, 6: 0.04 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

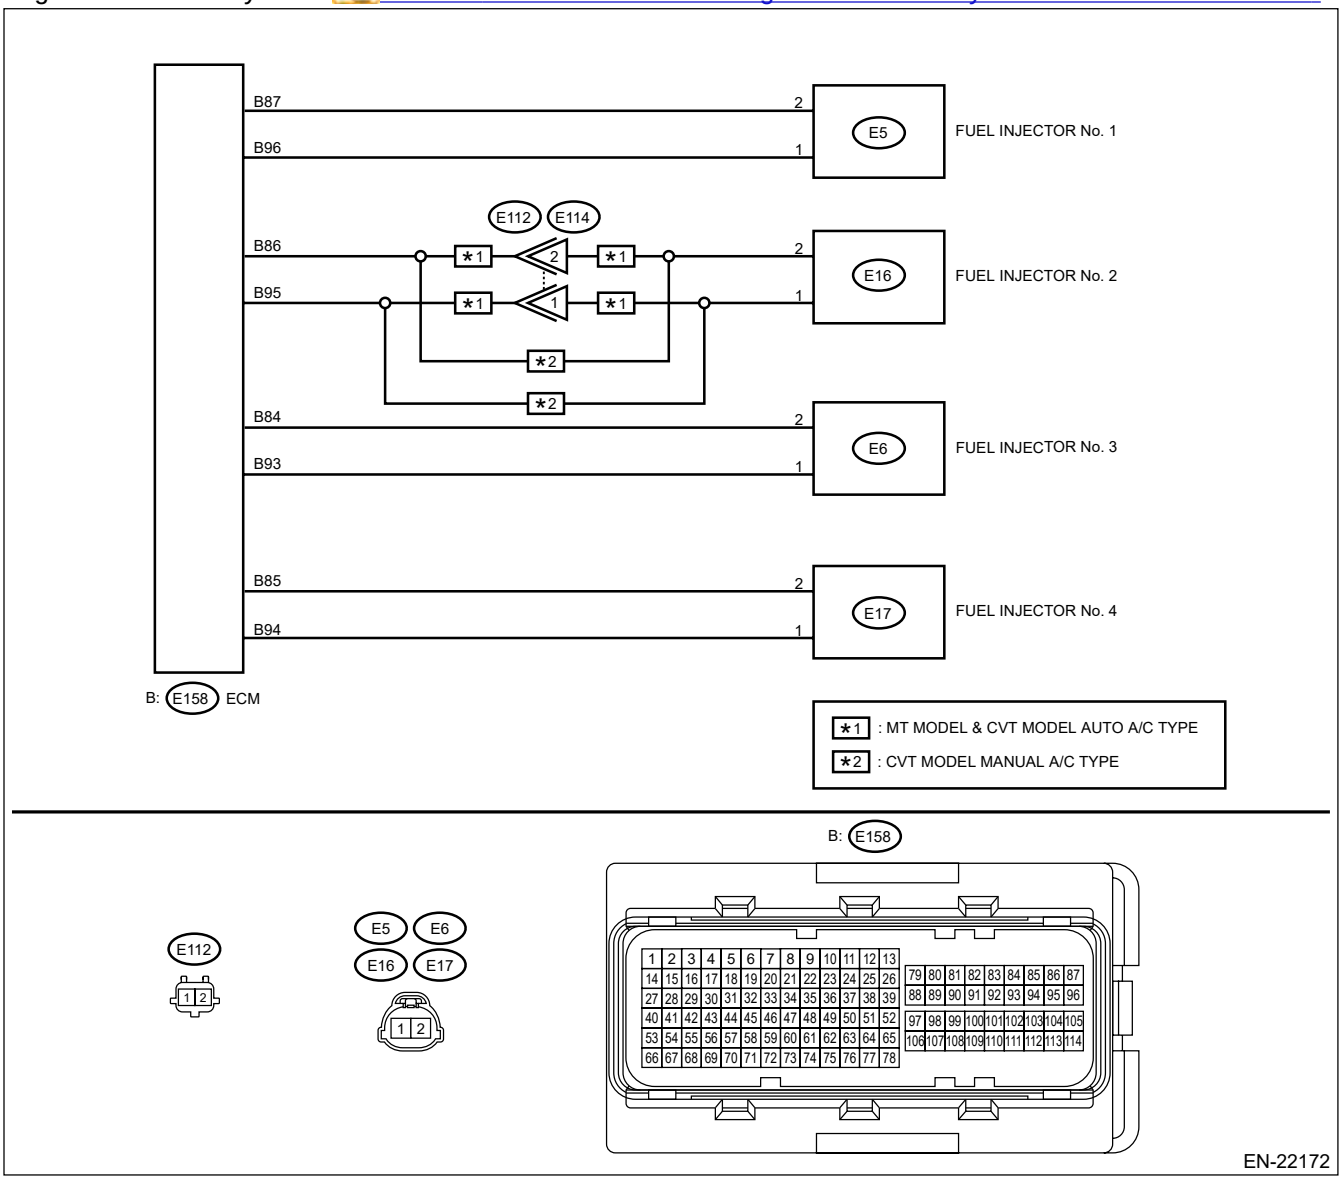
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM terminals on faulty fuel injectors.

Connector & terminal

#1 (E158) No. 87 — (E158) No. 96:
#2 (E158) No. 86 — (E158) No. 95:
#3 (E158) No. 84 — (E158) No. 93:
#4 (E158) No. 85 — (E158) No. 94:

Is the resistance 1.74 — 2.04 Ω (at 20°C (68°F))?

Yes	Go to 2.
No	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

2. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

Measure the resistance between ECM and engine ground on faulty injectors.

Connector & terminal

#1 (E158) No. 87 — Engine ground:
#1 (E158) No. 96 — Engine ground:
#2 (E158) No. 86 — Engine ground:
#2 (E158) No. 95 — Engine ground:
#3 (E158) No. 84 — Engine ground:
#3 (E158) No. 93 — Engine ground:
#4 (E158) No. 85 — Engine ground:
#4 (E158) No. 94 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

3. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR.

1. Check the harness between the ECM connector and fuel injector connector.
2. Measure the voltage between ECM connector and engine ground on defective fuel injectors.
   Connector & terminal
   #1 (E158) No. 87 — Engine ground:
   #2 (E158) No. 86 — Engine ground:
   #3 (E158) No. 84 — Engine ground:
   #4 (E158) No. 85 — Engine ground:

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.
No	Go to 4.

4. CHECK FUEL INJECTOR.

Check the fuel injector on faulty cylinder. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 5.
No	Replace the faulty fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>REMOVAL.

5. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel injector circuit function.
Judge as NG when ECM detects any malfunction in the diagnostic items listed below.

Diagnostic item	Malfunction Criteria
Power supply short	ECM low side terminal voltage of the fuel injector circuit is high.
Ground short	ECM low side terminal voltage of the fuel injector circuit is low.
Open circuit	Fuel injector current is low.
Overcurrent	Fuel injector current is high.
Short circuit	The time when the fuel injector current reaches the target current is short.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Judgment 1, 2, 5	
Battery voltage	10.9 V or more
Elapsed time after ignition state is run or crank	100 ms or more
Fuel injector command	ON
Judgment 3, 4, 6	
Battery voltage	10.9 V or more
Elapsed time after ignition state is run or crank	100 ms or more
Fuel injector command	OFF

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

JUDGMENT 1: DIAGNOSIS FOR OPEN CIRCUIT

Judgment value

Malfunction Criteria	Threshold Value
Operating current	0.2 A or less

JUDGMENT 2: DIAGNOSIS FOR OVERCURRENT

Judgment value

Malfunction Criteria	Threshold Value
Operating current	32.4 A or more

JUDGMENT 3: DIAGNOSIS FOR GROUND SHORT

Judgment value

Malfunction Criteria	Threshold Value
Terminal voltage	1 V or less

JUDGMENT 4: DIAGNOSIS FOR POWER SUPPLY SHORT

Judgment value

Malfunction Criteria	Threshold Value
Terminal voltage	5 V or more

JUDGMENT 5: SHORT CIRCUIT TO GROUND (BETWEEN ECM AND INJECTOR DRIVER)

Judgment value

Malfunction Criteria	Threshold Value
Injector control voltage	Less than 3.92 V

JUDGMENT 6: SHORT CIRCUIT TO POWER SUPPLY (BETWEEN ECM AND INJECTOR DRIVER)

Judgment value

Malfunction Criteria	Threshold Value
Injector control voltage	3.92 V or more

Time needed for diagnosis:
Judgment 1, 2, 5: 0.3 s
Judgment 3, 4, 6: 0.04 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1262 CYLINDER 2 DIRECT FUEL INJECTOR CIRCUIT/OPEN

Note:
For the diagnostic procedure, refer to DTC P1261. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN.

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P1261. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1263 CYLINDER 3 DIRECT FUEL INJECTOR CIRCUIT/OPEN

Note:
For the diagnostic procedure, refer to DTC P1261. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P1261. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1264 CYLINDER 4 DIRECT FUEL INJECTOR CIRCUIT/OPEN

Note:

For the diagnostic procedure, refer to DTC P1261. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P1261. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN.

DTC P1449 EVAP SYSTEM CLOG DETECTED (AIR FILTER)

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P1449 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK CANISTER TUBE ASSEMBLY AND DRAIN TUBE ASSEMBLY BETWEEN CANISTER AND DRAIN FILTER.

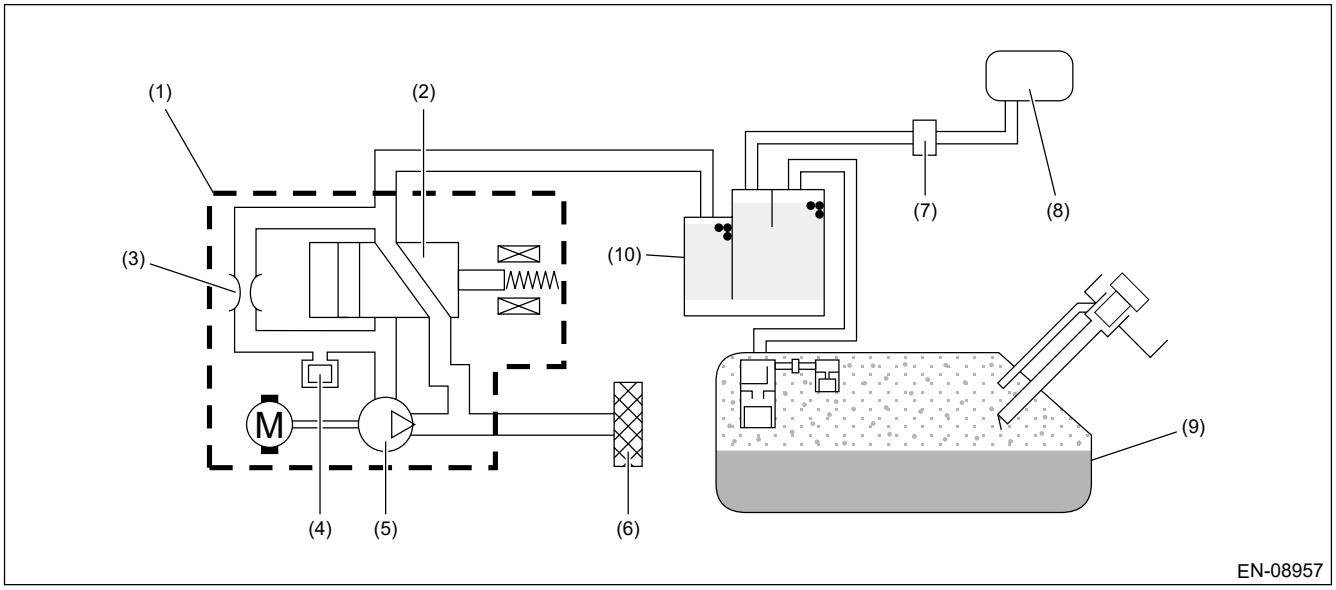
Check the canister tube assembly and drain tube assembly between canister and drain filter.

Is the canister tube assembly and/or the drain tube assembly clogged between canister and drain filter?

Yes	Replace the canister tube assembly and/or the drain tube assembly between canister and drain filter. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Canister. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Drain Filter.
No	Go to 3.

3. CHECK DRAIN FILTER.

Check the drain filter.



Is the drain filter clogged?

Yes	Replace the drain filter. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Drain Filter.
No	Replace the canister. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Canister.

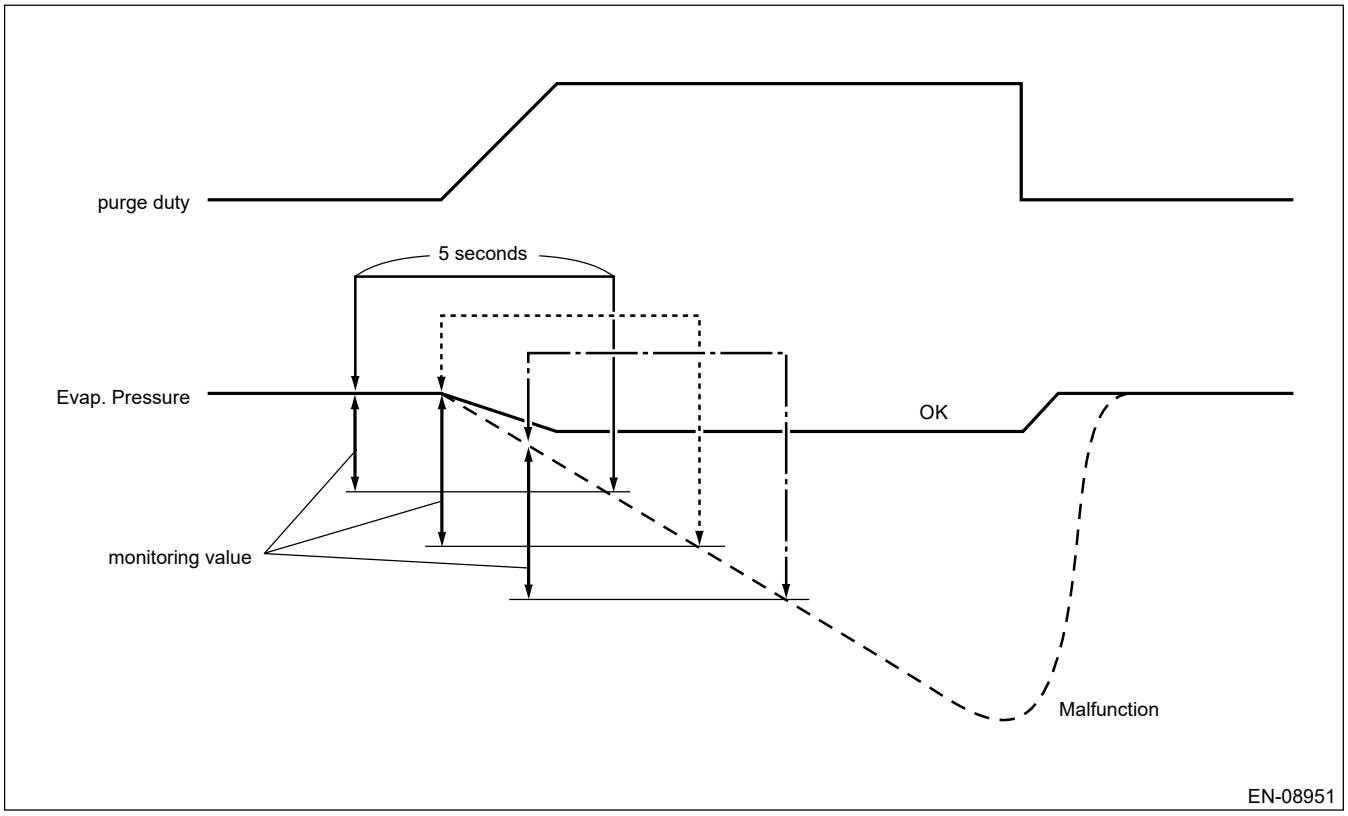
1. OUTLINE OF DIAGNOSIS

Detect the drain filter clogging by the pressure change during purge introduction.
Judge as drain filter clogging malfunction if the pressure in the evaporative emission system piping suddenly decreases by the purging.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION



Secondary parameters	Execution condition
Battery voltage	10.9 V or more

Secondary parameters	Execution condition
Elapsed time after starting the engine	20000ms or more
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when purging is performed after 20000ms have passed since the engine started.

5. DIAGNOSTIC METHOD

Calculate the difference between the Evaporative Leak Check Module pressure sensor output value of 5 seconds ago and the value at the present moment, and if the value is greater than the judgment value, detect as filter clogging trouble and judge as malfunction.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
|Pressure sensor output value as of 5 seconds ago – Current pressure sensor output value|	More than value of Map

Map

Vehicle speed km/h (MPH)	**0 0**	**20 (12.4)**	**40 (24.9)**	**60 (37.3)**	**80 (49.7)**	**100 (62.1)**	**120 (74.6)**	**300 (186. 4)**
|Pressure sensor output value as of 5 seconds ago − Current pressure sensor output value| Pa (mmHg, inHg)	957.8 (7.184 ,0.3)	957.8 (7.184 , 0.3)	957.8 (7.184 ,0.3)	957.8 (7.184 , 0.3)	957.8 (7.184 , 0.3)	1076. 4(8.07 , 0.3)	1195. 6(8.97 , 0.4)	2253. 3(16.9 0 ,0.7)

Time needed for diagnosis: 1 (2time(s) ×0.512) s
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P1451 EVAP SYSTEM CLOG DETECTED (PIPE)

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DRAIN TUBE BETWEEN CANISTER AND LEAK CHECK VALVE ASSEMBLY.

Check the drain tube between the canister and leak check valve assembly.

Is the drain tube between canister and leak check valve assembly clogged?

Yes	Replace the drain tube between the canister and leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Canister.
No	Go to 2.

2. CHECK HOSE AND TUBE BETWEEN CANISTER AND FUEL TANK.

Check the hose and tube between the canister and fuel tank.

Are the hose and tube between the canister and fuel tank clogged?

Yes	Replace the hose or tube between the canister and fuel tank. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Canister. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank.
No	Replace the canister. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Canister. After the operation is complete, go to the next step. Go to 3.

3. CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.

Perform the Inspection Mode I. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode>PROCEDURE > INSPECTION MODE I.

Is DTC P1451 displayed? (Current malfunction)

Yes	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.
No	End.

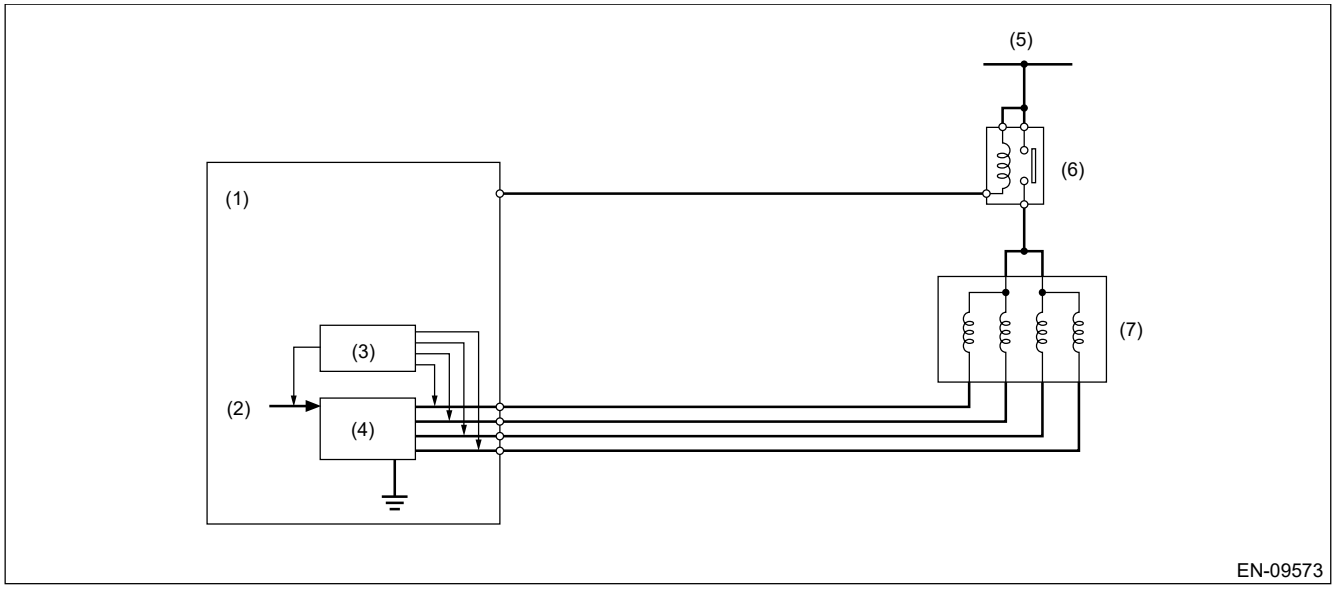
1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0455. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK).

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1492 COIL 1 EGR "A" CONTROL CIRCUIT LOW



Note:

For the diagnostic procedure, refer to DTC P1498. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW.

1. OUTLINE OF DIAGNOSIS

- Detects open or short circuit of EGR.
- Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION

(1) Engine control module (ECM)
(2) Computer unit (CPU)
(3) Detecting circuit
(4) Switch circuit
(5) Battery voltage
(6) Main relay
(7) EGR control valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
EGR drive signal	OFF

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

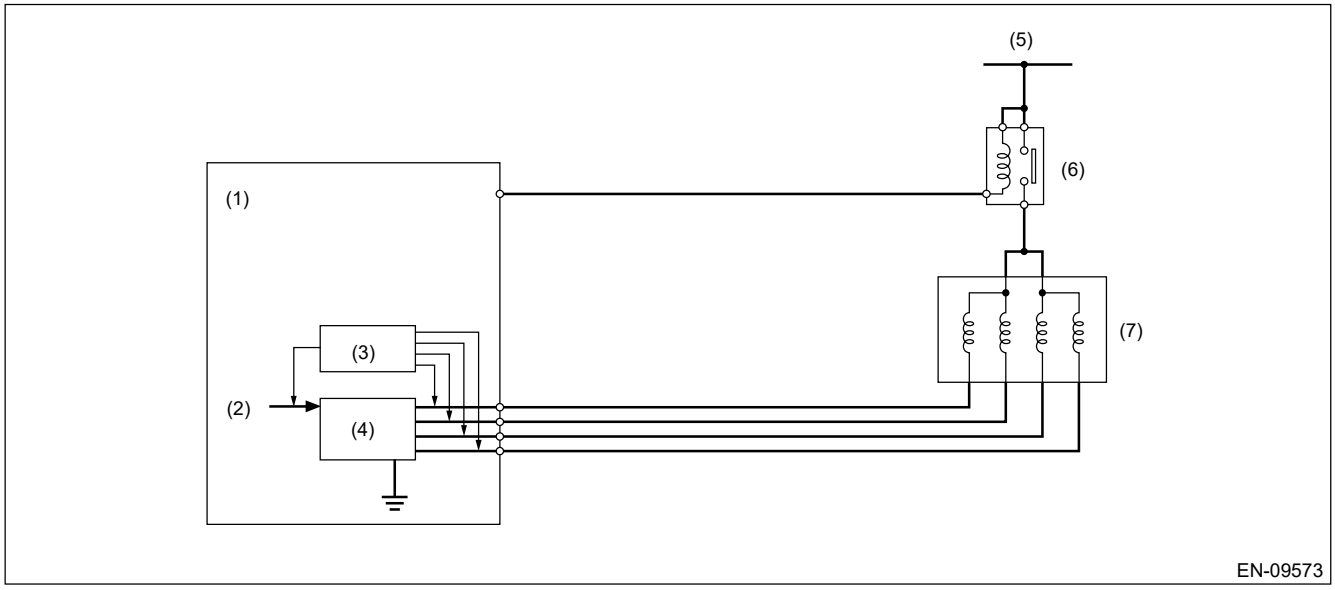
Judgment value

Malfunction Criteria	Threshold Value
EGR terminal voltage	Battery voltage × 0.66 or less

Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1493 COIL 1 EGR "A" CONTROL CIRCUIT HIGH



Note:

For the diagnostic procedure, refer to DTC P1499. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH.

1. OUTLINE OF DIAGNOSIS

- Detects open or short circuit of EGR.
- Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION

(1) Engine control module (ECM)
(2) Computer unit (CPU)
(3) Detecting circuit
(4) Switch circuit
(5) Battery voltage
(6) Main relay
(7) EGR control valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
EGR drive signal	ON

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
EGR terminal voltage	Battery voltage ×

Malfunction Criteria	Threshold Value
	0.13 or more

Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1494 COIL 2 EGR "A" CONTROL CIRCUIT LOW

Note:
For the diagnostic procedure, refer to DTC P1498. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW.

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P1492. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1492 COIL 1 EGR "A" CONTROL CIRCUIT LOW.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1495 COIL 2 EGR "A" CONTROL CIRCUIT HIGH

Note:
For the diagnostic procedure, refer to DTC P1499. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH.

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P1493. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1493 COIL 1 EGR "A" CONTROL CIRCUIT HIGH.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1496 COIL 3 EGR "A" CONTROL CIRCUIT LOW

Note:
For the diagnostic procedure, refer to DTC P1498. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW.

1. OUTLINE OF DIAGNOSIS

Note:
For the detection standard, refer to DTC P1492. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1492 COIL 1 EGR "A" CONTROL CIRCUIT LOW.

DTC P1497 COIL 3 EGR "A" CONTROL CIRCUIT HIGH

Note:

For the diagnostic procedure, refer to DTC P1499. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P1493. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1493 COIL 1 EGR "A" CONTROL CIRCUIT HIGH.

DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW

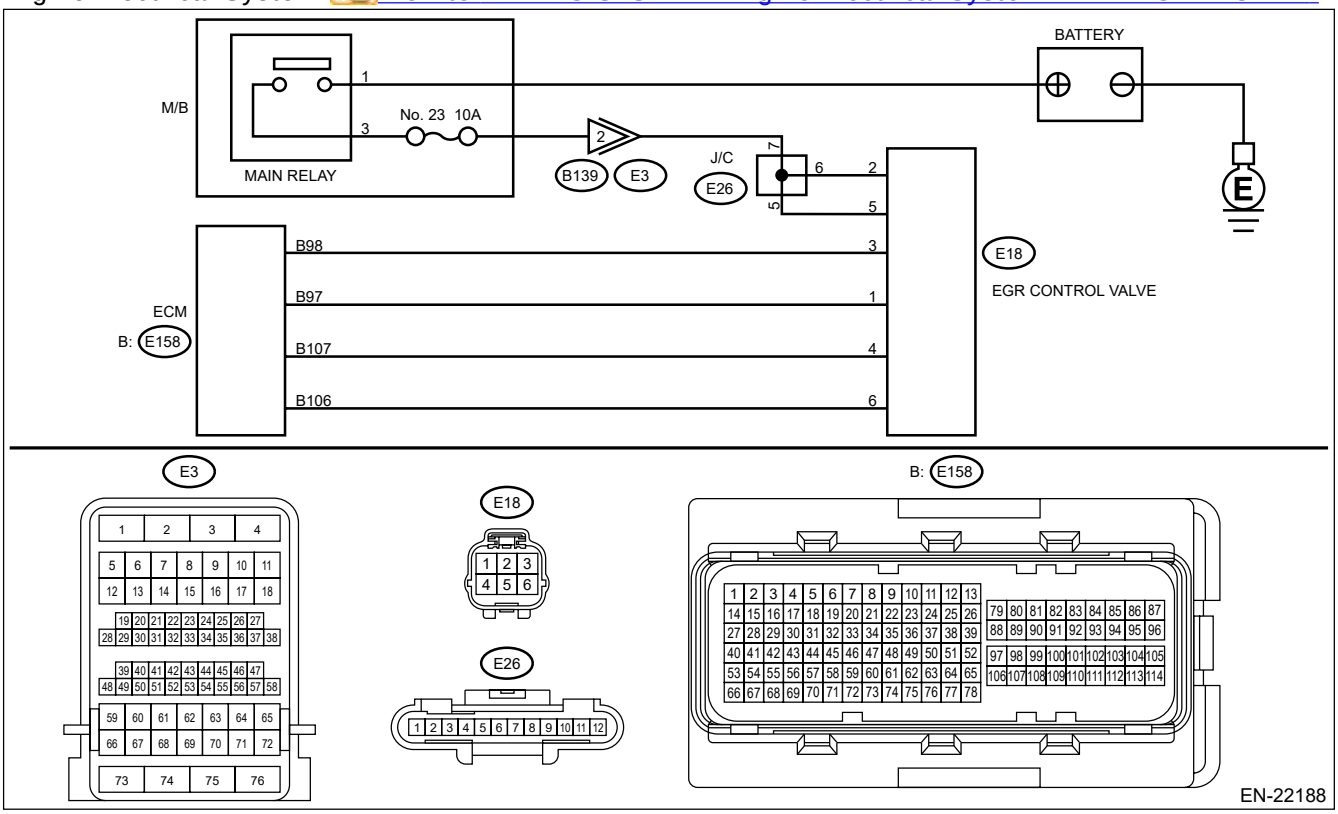
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance
- Engine breathing

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY TO EGR CONTROL VALVE.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the EGR control valve.
3. Turn the ignition switch to ON.
4. Measure the voltage between EGR control valve connector and engine ground.

Connector & terminal

(E18) No. 2 (+) — Engine ground (−):

(E18) No. 5 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between EGR control valve and main relay connector** • **Poor contact of coupling connector**

2. CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and EGR control valve connector.

Connector & terminal

DTC P1492; (E158) No. 98 — (E18) No. 3:

DTC P1494; (E158) No. 97 — (E18) No. 1:

DTC P1496; (E158) No. 107 — (E18) No. 4:

DTC P1498; (E158) No. 106 — (E18) No. 6:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between the ECM connector and EGR control valve connector.

3. CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE (SHORT TO GROUND).

1. Disconnect the connector from ECM.
2. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

DTC P1492; (E158) No. 98 — Chassis ground:
DTC P1494; (E158) No. 97 — Chassis ground:
DTC P1496; (E158) No. 107 — Chassis ground:
DTC P1498; (E158) No. 106 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair ground short circuit of harness between ECM connector and EGR control valve connector.

4. CHECK FOR POOR CONTACT.

Check for poor contact between ECM connector and EGR control valve connector.

Is there poor contact in ECM or EGR control valve connector?

Yes	Repair the poor contact of ECM or EGR control valve connector.
No	Replace EGR control valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Control Valve.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P1492. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1492 COIL 1 EGR "A" CONTROL CIRCUIT LOW.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH

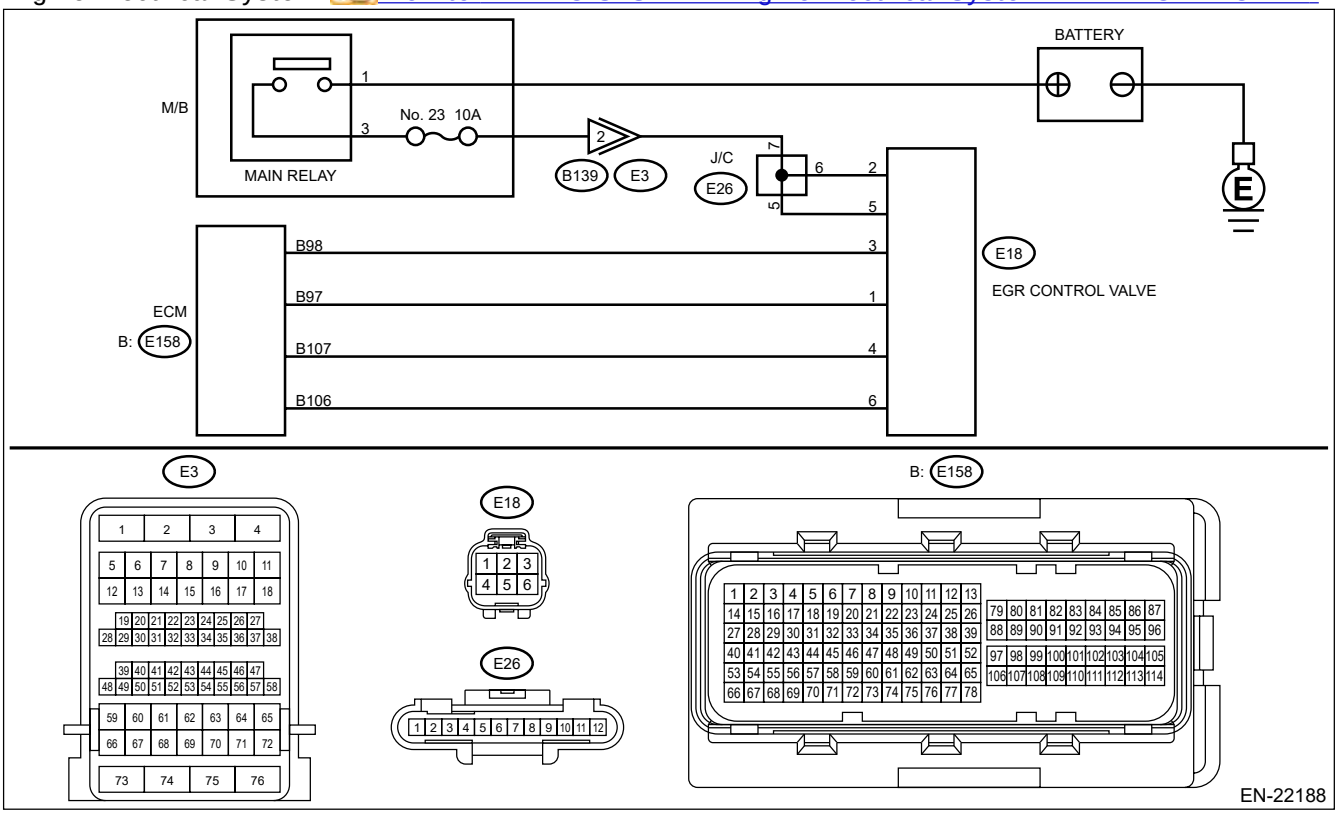
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance
- Engine breathing

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the EGR control valve.
4. Turn the ignition switch to ON.
5. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

DTC P1493; (E158) No. 98 (+) — Chassis ground (−):
DTC P1495; (E158) No. 97 (+) — Chassis ground (−):
DTC P1497; (E158) No. 107 (+) — Chassis ground (−):
DTC P1499; (E158) No. 106 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power supply in the harness between the ECM connector and EGR control valve connector.
No	Go to 2.

2. CHECK EGR CONTROL VALVE.

Measure the resistance between EGR control valve terminals.

Terminals

DTC P1493; No. 2 — No. 3:
DTC P1495; No. 2 — No. 1:
DTC P1497; No. 5 — No. 4:
DTC P1499; No. 5 — No. 6:

Is the resistance 20 Ω or more?

Yes	Repair the poor contact of ECM connector.
No	Replace EGR control valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Control Valve.

1. OUTLINE OF DIAGNOSIS

Note:

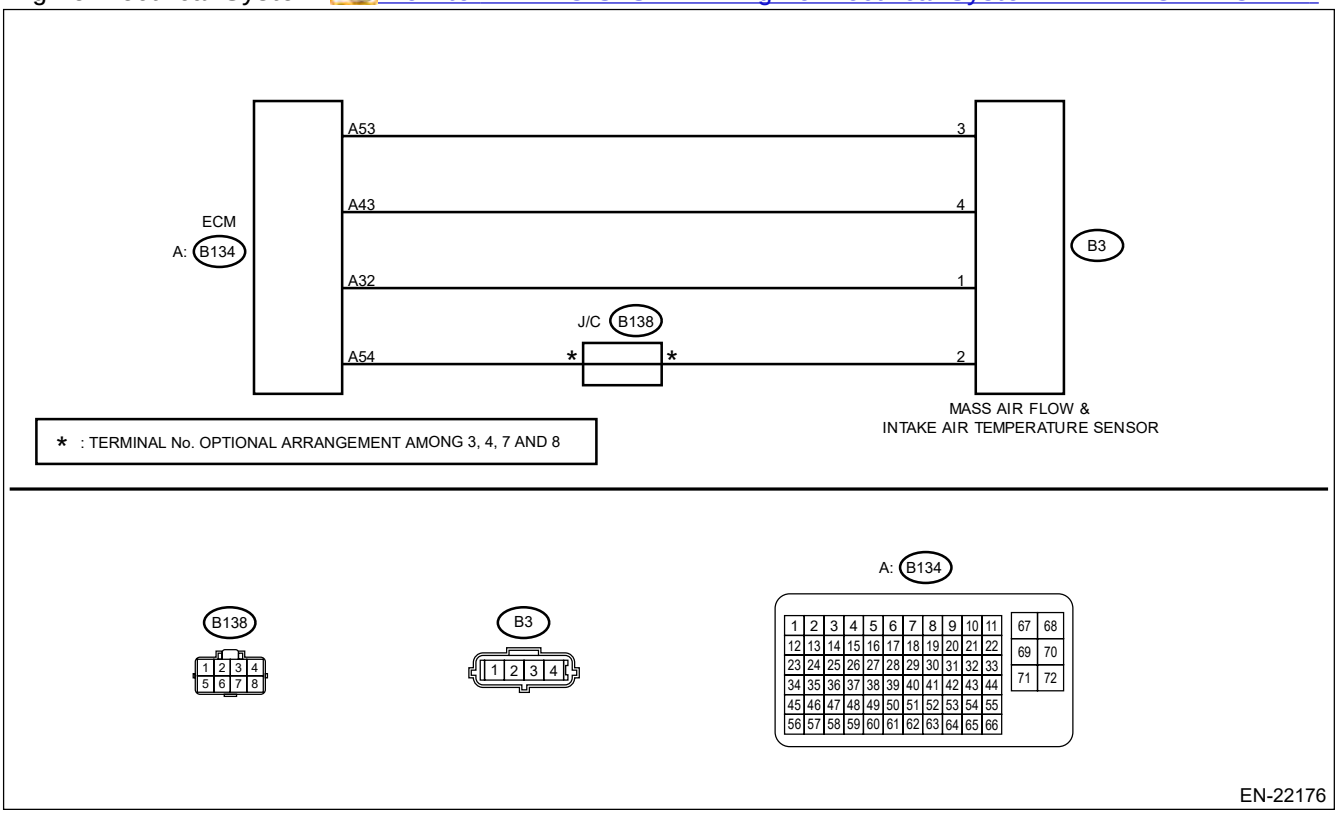
For the detection standard, refer to DTC P1493. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1493 COIL 1 EGR "A" CONTROL CIRCUIT HIGH.

DTC P1603 ENGINE STALL HISTORY

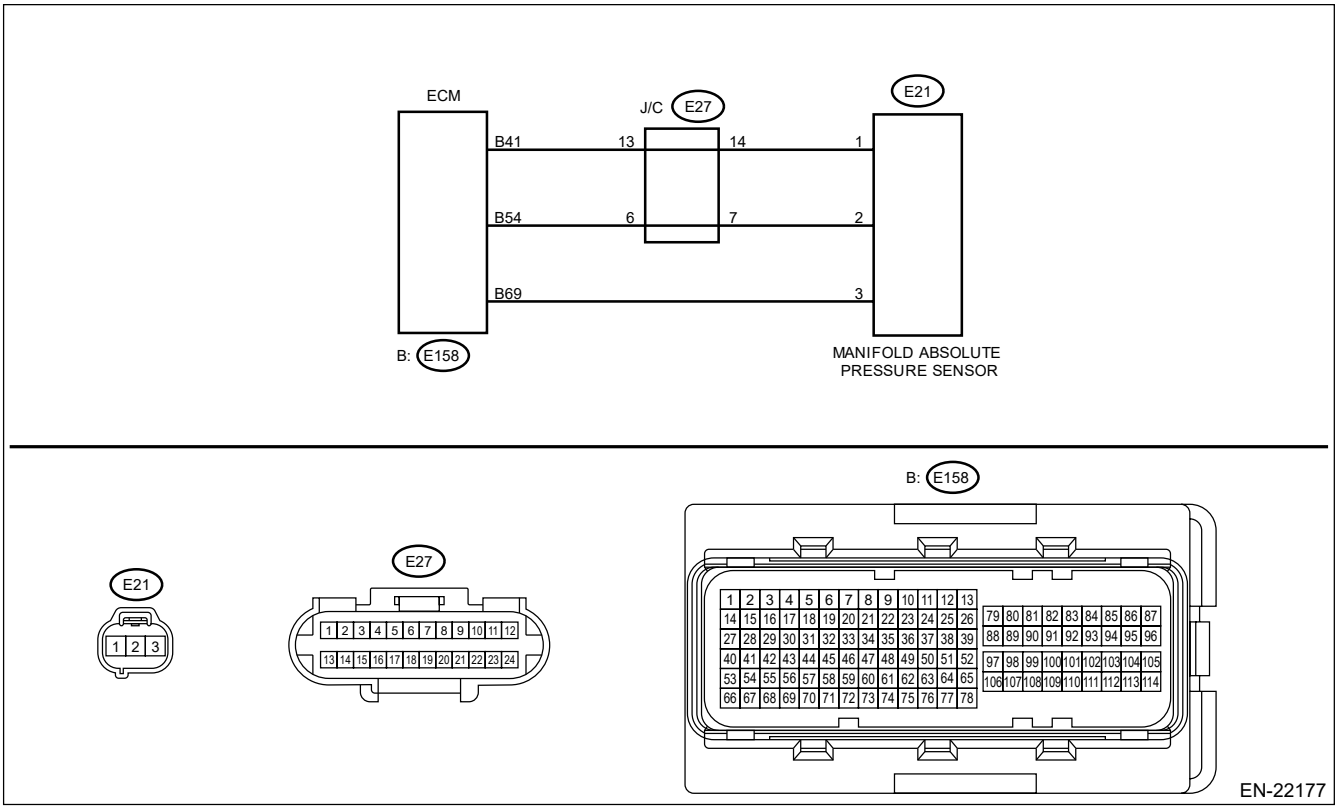
DTC detecting condition:

Immediately at fault recognition

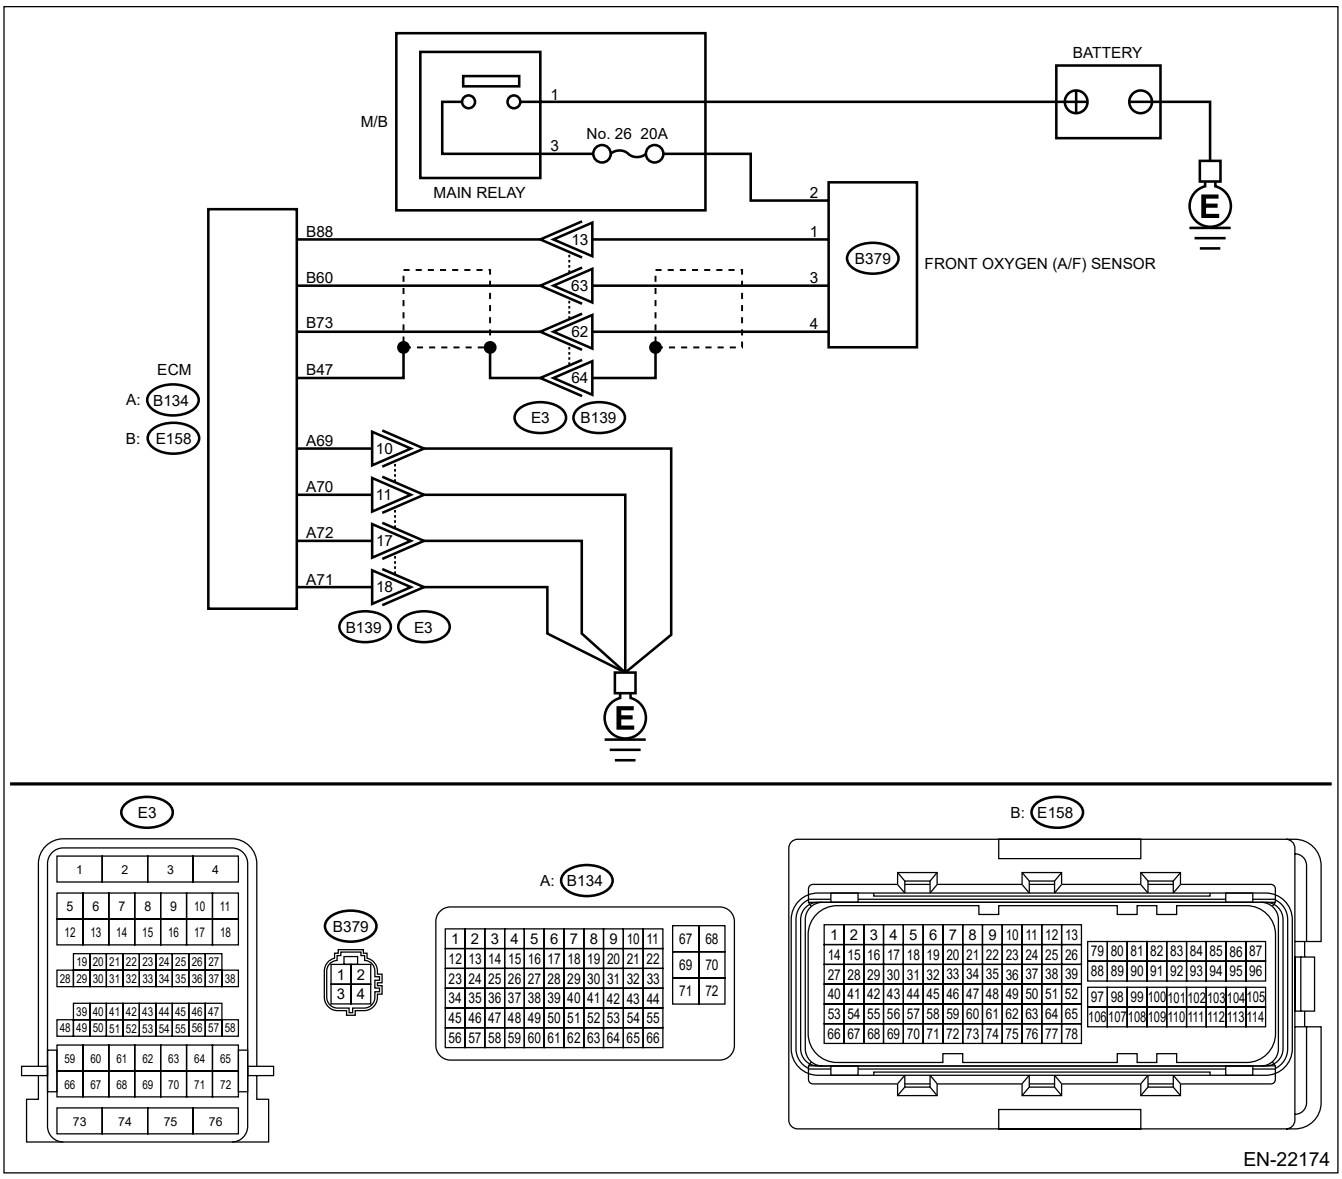
Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:



This DTC may be detected even if fault does not occur in the vehicle. If the customer does not ask for inspection, clear memory instead of inspection and return the vehicle to the user.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Note:
For detailed operation procedures, refer to “Diagnostic Trouble Code (DTC)”. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Is DTC P1603 displayed? (Current malfunction)

Yes	Go to 2.
No	Check DTC using “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [Fuel Level Input].

Note:
For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Fuel Level Input]16.4% or more?

Yes	Go to 3.
No	Fuel may be run out. If the fault occurs after refueling, continue the diagnosis. Go to 3.

3. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [Control module voltage].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Control module voltage] 11 V or more?

Yes	Go to 4.
No	Check the battery and generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator>INSPECTION.

4. CHECK FOR MALFUNCTION OCCURRENCE.

Check for the condition of fault occurrence.

Did you ask the customer about the driving condition and engine speed status when the fault occurred?

Yes	• The engine speed dropped slowly and then the engine stalled during idling or deceleration: Go to 5. • The engine speed dropped rapidly and then the engine stalled during idling or deceleration: Go to 78. • The engine stalled during standing start, acceleration, or constant speed driving: Go to 85.
No	Ask the customer about the driving condition and engine speed status when fault occurred.

5. CHECK FREEZE FRAME DATA.

1. Using the Subaru Select Monitor, read the values in [Short Term Fuel Trim (B1)] and [Long Term Fuel Trim (B1)].
   Note:
   For detailed operation procedures, refer to "Freeze Frame Data". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.
2. Obtain the sum values of [Short Term Fuel Trim (B1)] and [Long Term Fuel Trim (B1)] in each freeze frame data.

Is the sum value of [Short Term Fuel Trim (B1)] and [Long Term Fuel Trim (B1)] within ±15% in each freeze frame data?

Yes	Go to 52.
No	• More than 15% in each freeze frame data: Go to 6. • Less than −15% in any one of freeze frame data: Go to 36.

6. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system. Ref. to INTAKE (INDUCTION)(H4DO)>General Description.
No	Go to 7.

7. CHECK PURGE CONTROL SOLENOID VALVE.

Check the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve>INSPECTION.

Is the check result OK?

Yes	Go to 8.
No	Replace the faulty purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve.

8. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [Stop Light Switch].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Stop Light Switch] OFF in all freeze frame data?

Yes	Go to 11.
No	Go to 9.

9. CHECK DATA MONITOR.

1. Start the engine and warm up completely.
2. Read the value of [Short Term Fuel Trim-Bank1] both when the brake pedal is released and depressed using Subaru Select Monitor.

   Data Monitor

   Note:

   For detailed procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Does the value of [Short Term Fuel Trim (B1)] with the brake pedal depressed increase by 10% or more compared to when the pedal is released?

Yes	Replace the brake booster. Ref. to BRAKE>Brake Booster.
No	Go to 10.

10. CHECK DATA MONITOR.

1. Start the engine and warm up completely.
2. While reproducing the faulty condition of the vehicle, read the values of [Short Term Fuel Trim-Bank1] and [Long Term Fuel Trim (B1)] using the Subaru Select Monitor.

   Data Monitor

   Note:
   For detailed procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
3. Obtain the sum values of [Short Term Fuel Trim (B1)] and [Long Term Fuel Trim (B1)].

Is the sum value of [Short Term Fuel Trim (B1)] and [Long Term Fuel Trim (B1)] within ±15%?

Yes	Go to 11.
No	Replace the brake booster. Ref. to BRAKE>Brake Booster.

11. CHECK IGNITION SYSTEM.

Check the ignition system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

Is the check result OK?

Yes	Go to 12.
No	Repair the ignition system. Ref. to IGNITION(H4DO)>General Description.

12. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [A/F Sensor #1].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [A/F Sensor #1]1.00 or more?

Yes	Go to 17.
No	Go to 13.

13. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 14.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

14. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR, AND ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect connectors from ECM, air flow & intake air temperature sensor, and manifold absolute pressure sensor.
3. Measure the resistance of harness between ECM connector and air flow & intake air temperature sensor connector, and between ECM connector and manifold absolute pressure sensor.

   Connector & terminal

   (B134) No. 53 — (B3) No. 3:

   (B134) No. 54 — (B3) No. 2:

   (B134) No. 32 — (B3) No. 1:

   (B134) No. 43 — (B3) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 15.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector** • **Open circuit of harness between ECM connector and manifold absolute pressure sensor** • **Coupling connector**

15. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR AND MANIFOLD ABSOLUTE PRESSURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(B134) No. 32 — Engine ground:

(B134) No. 43 — Engine ground:

(B134) No. 53 — Engine ground:

(B134) No. 54 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 16.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Ground short circuit of harness between ECM connector and the air flow & intake air temperature sensor connector** • **Ground short circuit of harness between ECM connector and manifold absolute pressure sensor**

16. CHECK DATA MONITOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor, read the load value, then compare it with the load value listed in “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Note:

- **The value of Calculated load value change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance.**
- **For detailed procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**

Does the load value falls between 90 — 110% of the value described in the list?

Yes	Go to 21.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

17. CHECK FRONT OXYGEN (A/F) SENSOR DATA.

1. Start the engine and warm up completely.
2. Raise the engine speed up to 2,500rpm and maintain it for approx. three minutes.
3. Release the accelerator pedal and idle the engine.
4. Using “Injection Quantity Control” in “Active Test” items, read the value of [A/F Sensor #1] at the increase rate of both 12% and −12%.

Note:

- **Perform the operation immediately after the engine comes into idling condition, otherwise the front oxygen (A/F) sensor will be cooled.**
- **For detailed procedures, refer to “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.**

Does the value of [A/F Sensor #1] change to less than 0.88 at the increase rate of 12%, and to 1.12 or more at the rate of −12%?

Yes	Go to 21.
No	Go to 18.

18. CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from front oxygen (A/F) sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between front oxygen (A/F) sensor connector and engine ground.

Connector & terminal

(B379) No. 2 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 19.
No	Repair the power supply line.

Note:

In this case, repair the following item:

- **Open circuit in harness between A/F, oxygen sensor relay and front oxygen (A/F) sensor connector**
- **Poor contact of A/F, oxygen sensor relay connector**
- **Poor contact of coupling connector**
- **Malfunction of A/F, oxygen sensor relay**

19. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

Connector & terminal

(E158) No. 88 — (B379) No. 1:
(E158) No. 60 — (B379) No. 3:
(E158) No. 73 — (B379) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 20.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector** • **Coupling connector**

20. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E158) No. 88 — Engine ground:
(E158) No. 60 — Engine ground:
(E158) No. 73 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 21.
No	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

21. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Engine Coolant Temperature] and [Ambient air temperature].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Coolant Temp.] 120°C (24°F) or more? Or is the value of [Coolant Temp.] 15°C (27°F) or more lower than that of [Ambient Temperature]?

Yes	Go to 22.
No	Go to 25.

22. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

Check the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor>INSPECTION.

Is the engine coolant temperature sensor normal?

Yes	Go to 23.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

23. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and engine coolant temperature sensor.
3. Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector.

Connector & terminal

(E158) No. 54 — (E8) No. 1:

(E158) No. 45 — (E8) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 24.
No	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.

24. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E158) No. 45 — Engine ground:

(E158) No. 54 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 25.
No	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.

25. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [Evap Purge Flow].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Evap Purge Flow] 0% in all freeze frame data?

Yes	Go to 31.
No	Go to 26.

26. CHECK PURGE CONTROL SOLENOID VALVE.

1. On “Active Test” item, select [CPC Solenoid Valve].

   Note:

   For detailed procedures, refer to “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.
2. Check if the ventilation changes according to ON/OFF switching operation.

Does the ventilation of purge control solenoid valve change correctly?

Yes	Go to 30.
No	Go to 27.

27. CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the purge control solenoid valve.
3. Turn the ignition switch to ON.
4. Measure the voltage between purge control solenoid valve connector and engine ground.
   Connector & terminal
   (E4) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 28.
No	Repair the power supply circuit.

28. CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and purge control solenoid valve connector.
   Connector & terminal
   (E158) No. 9 — (E4) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 29.
No	Repair the open circuit in harness between ECM connector and purge control solenoid valve connector.

29. CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE (SHORT TO GROUND).

Measure the resistance between the purge control solenoid valve connector and engine ground.

Connector & terminal

(E4) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 30.
No	Repair the short circuit to ground in harness between ECM connector and purge control solenoid valve connector.

30. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

31. CHECK OF FUEL PUMP.

1. On “Active Test” item, select [Fuel Pump Relay].

   Note:

   For detailed procedures, refer to “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.
2. Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.

Does the fuel pump emit operating sound?

Yes	Go to 33.
No	Go to 32.

32. CHECK OF FUEL PUMP.

Check fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Check fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.
No	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.

33. CHECK FUEL TANK.

Check if any foreign matters such as iron powder exist in the fuel tank.

Is there any foreign matter in the fuel tank?

Yes	Remove foreign matter from the fuel tank.
No	Go to 34.

34. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.

Is the measured value 350 — 450 kPa (3.5—4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 35.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

35. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Fuel Rail Pressure A] and [Commanded Fuel Rail Pressure A].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value in [Fuel Rail Pressure A] synchronized with the one in [Commanded Fuel Rail Pressure A] in all freeze frame data?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Check the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>INSPECTION.

36. CHECK IGNITION SYSTEM.

Check the ignition system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

Is the check result OK?

Yes	Go to 37.
No	Repair the ignition system. Ref. to IGNITION(H4DO)>General Description.

37. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the load value, then compare it with the load value listed in "Freeze Frame Data". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Note:

- **The value of Calculated load value change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance.**
- **For detailed operation procedures, refer to "Freeze Frame Data". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.**

Is the value of Calculated load value 110% or more of the value described in the list?

Yes	Go to 39.
No	Go to 38.

38. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [A/F Sensor #1].

Note:

For detailed operation procedures, refer to "Freeze Frame Data". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value in [A/F Sensor #1] less than 1.00?

Yes	Go to 43.
No	Go to 48.

39. CHECK AIR FLOW & INTAKE AIR TEMPERATURE SENSOR AND MANIFOLD ABSOLUTE PRESSURE SENSOR.

Check the air flow & intake air temperature sensor and manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor>INSPECTION.

Does the air flow & intake air temperature sensor and manifold absolute pressure sensor operate normally?

Yes	Go to 40.
No	Replace air flow & intake air temperature sensor or manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor.

40. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR AND MANIFOLD ABSOLUTE PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect connectors from ECM, air flow & intake air temperature sensor, and manifold absolute pressure sensor.
3. Measure the resistance of harness between ECM connector and air flow & intake air temperature sensor connector, and between ECM connector and manifold absolute pressure sensor.

   Connector & terminal

   (B134) No. 53 — (B3) No. 3:

   (B134) No. 54 — (B3) No. 2:

   (B134) No. 43 — (B3) No. 4:

   (B134) No. 32 — (B3) No. 1:

Is the resistance 1 MΩ or more?

Yes	Go to 41.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector** • **Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector** • **Coupling connector**

41. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR AND MANIFOLD ABSOLUTE PRESSURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(B134) No. 53 — Engine ground:

(B134) No. 54 — Engine ground:

(B134) No. 32 — Engine ground:

(B134) No. 43 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 42.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Ground short circuit of harness between ECM connector and the air flow & intake air temperature sensor connector** • **Short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector**

42. CHECK DATA MONITOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor, read the load value, then compare it with the load value listed in “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Note:

- **The value of Calculated load value change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance.**
- **For detailed procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**

Does the load value falls between 90 — 110% of the value described in the list?

Yes	Go to 43.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

43. CHECK DATA MONITOR.

1. Start the engine and warm up completely.
2. Raise the engine speed up to 2,500rpm and maintain it for approx. three minutes.
3. Release the accelerator pedal and idle the engine.
4. Using “Injection Quantity Control” in “Active Test” items, read the value of [A/F Sensor #1] at the increase rate of both 12% and −12%.

Note:

- **Perform the operation immediately after the engine comes into idling condition, otherwise the front oxygen (A/F) sensor will be cooled.**
- **For detailed procedures, refer to “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.**

Does the value of [A/F Sensor #1] change to less than 0.88 at the increase rate of 12%, and to 1.12 or more at the rate of −12%?

Yes	Go to 48.
No	Go to 44.

44. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [A/F Sensor #1 Resistance].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [A/F Sensor #1 Resistance] 500 Ω or more?

Yes	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Front Oxygen (A/F) Sensor.
No	Go to 45.

45. CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from front oxygen (A/F) sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between front oxygen (A/F) sensor connector and engine ground.

Connector & terminal

(B379) No. 2 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 46.
No	Repair the power supply line. **Note:** **In this case, repair the following item:** • **Open circuit in harness between A/F, oxygen sensor relay and front oxygen (A/F) sensor connector** • **Poor contact of A/F, oxygen sensor relay connector** • **Poor contact of coupling connector** • **Malfunction of A/F, oxygen sensor relay**

46. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

Connector & terminal

(E158) No. 88 — (B379) No. 1:
(E158) No. 60 — (B379) No. 3:
(E158) No. 73 — (B379) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 47.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector** • **Coupling connector**

47. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E158) No. 88 — Engine ground:
(E158) No. 60 — Engine ground:
(E158) No. 73 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 48.
No	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

48. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Engine Coolant Temperature] and [Ambient air temperature].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Engine Coolant Temperature] 120°C (248°F) or more? Or is the value of [Engine Coolant Temperature] 15°C (27°F) or more lower than that of [Ambient air temperature]?

Yes	Go to 49.
No	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.

49. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

Check the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 50.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

50. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and engine coolant temperature sensor.
3. Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector.

Connector & terminal

(E158) No. 54 — (E8) No. 1:

(E158) No. 45 — (E8) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 51.
No	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.

51. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E158) No. 45 — Engine ground:

(E158) No. 54 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.

52. CHECK IGNITION SYSTEM.

Check the ignition system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

Is the check result OK?

Yes	Go to 53.
No	Repair the ignition system. Ref. to IGNITION(H4DO)>General Description.

53. CHECK FREEZE FRAME DATA.

1. Using the Subaru Select Monitor, read the values of the Freeze Frame Data in [Idle Mass Air Flow Feedback correct], [ISC Learning Value] and [Idle dirty throttle correct].
   Note:
   For detailed operation procedures, refer to "Freeze Frame Data". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.
2. Obtain the sum values of [Idle Mass Air Flow Feedback correct], [ISC Learning Value] and [Idle dirty throttle correct].
3. Start the engine and warm up completely.
4. Using the Subaru Select Monitor, read the values of [Idle Mass Air Flow Feedback correct], [ISC Learning Value] and [Idle dirty throttle correct] in current data at normal idling.

   Data Monitor

   Note:
   For detailed procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
5. Obtain the sum values of [Idle Mass Air Flow Feedback correct], [ISC Learning Value] and [Idle dirty throttle correct].

Is the sum value of freeze frame data less than 80% of the sum value of current data?

Yes	Go to 54.
No	Go to 56.

54. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system. Ref. to INTAKE (INDUCTION)(H4DO)>General Description.
No	Go to 55.

55. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

- Brake booster: Ref. to BRAKE>Brake Booster>INSPECTION.
- Mass air flow and intake air temperature sensor: Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor>INSPECTION.
- PCV connector: Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Connector>INSPECTION.
- PCV hose: Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Hose>INSPECTION.
- PCV hose assembly: Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Hose>INSPECTION.
- PCV valve: Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Valve>INSPECTION.
- Purge control solenoid valve: Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve>INSPECTION.

Is the check result OK?

Yes	Go to 73.
No	Replace the parts if defective.

56. CHECK FREEZE FRAME DATA.

1. Using the Subaru Select Monitor, read the values in [VVT Adv. Ang. Amount R], [VVT Advance Target Angle Amount R], [VVT Adv. Ang. Amount L], [VVT Advance Target Angle Amount L], [Exh. VVT Retard Ang. R], [Ex VVT Retard Target Angle R], [Exh. VVT Retard Ang. L] and [Ex VVT Retard Target Angle L].
   Note:
   For detailed operation procedures, refer to "Freeze Frame Data". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.
2. Using the Subaru Select Monitor, compare the respective values between the followings: [VVT Adv. Ang. Amount R] and [VVT Advance Target Angle Amount R], [VVT Adv. Ang. Amount L] and [VVT Advance Target Angle Amount L], [Exh. VVT Retard Ang. R] and [Ex VVT Retard Target Angle R], [Exh. VVT Retard Ang. L] and [Ex VVT Retard Target Angle L].

Does all of the advance angle amount and retard angle amount synchronize with their target values?

Yes	Go to 73.
No	Diagnose the part that does not synchronize. • Intake RH: Go to 57. • Intake LH: Go to 61. • Exhaust RH: Go to 65. • Exhaust LH: Go to 69.

57. CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the intake oil control solenoid RH.
3. Turn the ignition switch to ON.
4. Measure the voltage between intake oil control solenoid RH connector and engine ground.
   Connector & terminal
   (E38) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 58.
No	Repair the power supply circuit.

58. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and intake oil control solenoid RH connector.

Connector & terminal

(E158) No. 99 — (E38) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 59.
No	Repair the open circuit in harness between ECM connector and intake oil control solenoid RH connector.

59. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (SHORT TO GROUND).

Measure the resistance between intake oil control solenoid RH connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E38) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 60.
No	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid RH connector.

60. CHECK INTAKE OIL CONTROL SOLENOID RH.

Check the intake oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the intake cam sprocket RH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the intake oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

61. CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the intake oil control solenoid LH.
3. Turn the ignition switch to ON.
4. Measure the voltage between intake oil control solenoid LH connector and engine ground.
   Connector & terminal
   (E37) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 62.
No	Repair the power supply circuit.

62. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and intake oil control solenoid LH connector.

Connector & terminal

(E158) No. 100 — (E37) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 63.
No	Repair the open circuit in harness between ECM connector and intake oil control solenoid LH connector.

63. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH (SHORT TO GROUND).

Measure the resistance between intake oil control solenoid LH connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E37) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 64.
No	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid LH connector.

64. CHECK INTAKE OIL CONTROL SOLENOID LH.

Check the intake oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the intake cam sprocket LH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the intake oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

65. CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the exhaust oil control solenoid RH.
3. Turn the ignition switch to ON.
4. Measure the voltage between exhaust oil control solenoid RH connector and engine ground.
   Connector & terminal
   (E63) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 66.
No	Repair the power supply circuit.

66. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH connector.

Connector & terminal

(E158) No. 109 — (E63) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 67.
No	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid RH connector.

67. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (SHORT TO GROUND).

Measure the resistance between exhaust oil control solenoid RH connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E63) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 68.
No	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid RH connector.

68. CHECK EXHAUST OIL CONTROL SOLENOID RH.

Check the exhaust oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the exhaust cam sprocket RH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the exhaust oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

69. CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the exhaust oil control solenoid LH.
3. Turn the ignition switch to ON.
4. Measure the voltage between exhaust oil control solenoid LH connector and engine ground.

Connector & terminal

(E66) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 70.
No	Repair the power supply circuit.

70. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH connector.

Connector & terminal

(E158) No. 108 — (E66) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 71.
No	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid LH connector.

71. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH (SHORT TO GROUND).

Measure the resistance between exhaust oil control solenoid LH connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E66) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 72.
No	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid LH connector.

72. CHECK EXHAUST OIL CONTROL SOLENOID LH.

Check the exhaust oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the exhaust cam sprocket LH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the exhaust oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

73. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

Check the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 74.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

74. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and engine coolant temperature sensor.
3. Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector.

Connector & terminal

(E158) No. 54 — (E8) No. 1:

(E158) No. 45 — (E8) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 75.
No	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.

75. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E158) No. 45 — Engine ground:

(E158) No. 54 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 76.
No	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.

76. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 77.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

77. CHECK MANIFOLD ABSOLUTE PRESSURE SENSOR.

Check the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor>INSPECTION.

Is the check result OK?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Check the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor.

78. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and fuel injectors.
3. Measure the resistance of harness between ECM connector and fuel injector connector.

Connector & terminal

#1 (E158) No. 96 — (E5) No. 1:
#1 (E158) No. 87 — (E5) No. 2:
#2 (E158) No. 95 — (E16) No. 1:
#2 (E158) No. 86 — (E16) No. 2:
#3 (E158) No. 93 — (E6) No. 1:
#3 (E158) No. 84 — (E6) No. 2:
#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 79.
No	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

79. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

#1 (E158) No. 96 — Engine ground:
#1 (E158) No. 87 — Engine ground:
#2 (E158) No. 95 — Engine ground:
#2 (E158) No. 86 — Engine ground:
#3 (E158) No. 93 — Engine ground:
#3 (E158) No. 84 — Engine ground:
#4 (E158) No. 94 — Engine ground:
#4 (E158) No. 85 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 80.
No	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

80. CHECK IGNITION SYSTEM.

Check the ignition system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

Is the check result OK?

Yes	Go to 81.
No	Repair the ignition system. Ref. to IGNITION(H4DO)>General Description.

81. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [A/C Compressor Signal] and [Idle A/C load correct].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Does the value of [A/C Compressor Signal] indicate ON output, and does the value of [Idle A/C load correct] increase?

Yes	Check the air conditioner. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon.
No	Go to 82.

82. CHECK FREEZE FRAME DATA.

1. Using the Subaru Select Monitor, read the value in [Electric Load Feedback Val].

   Note:

   For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

2. Compare the value of [Electric Load Feedback Val] with that of [Idle Mass Air Flow], listed under the data monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

   Data Monitor

   Note:

   For detailed procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Electric Load Feedback Val] 20% or more to the value of [Idle Mass Air Flow]?

Yes	Check the generator and power assisted system. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator>INSPECTION.
No	Go to 83.

83. CHECK FREEZE FRAME DATA.

1. Using the Subaru Select Monitor, read the values in [Vehicle Speed Sensor], [Engine Speed] and [AT turbine speed].
   Note:
   For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is there any freeze frame data indicating that the value of [Vehicle Speed Sensor] is less than 30 km/h (18.6 MPH), and that the difference in values between [Engine Speed] and [AT turbine speed] is less than 100 rpm?

Yes	Repair the CVT. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>General Description.
No	Go to 84.

84. CHECK DTC.

Read all DTCs using the Subaru Select Monitor or a general scan tool.

DTC Check

Note:
For detailed operation procedures, refer to the “Subaru Select Monitor”. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Is DTC of CVT displayed? (Current malfunction)

Yes	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

85. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Calculated LOAD Value] and [Relative Throttle Position].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Calculated LOAD Value] decreasing while that of [Relative Throttle Position] is increasing?

Yes	Go to 86.
No	Go to 90.

86. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 87.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

87. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM and the mass air flow and intake air temperature sensor.
3. Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

Connector & terminal

(B134) No. 53 — (B3) No. 3:

(B134) No. 54 — (B3) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 88.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the open circuit and poor contact in the following items.** • **Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector** • **Coupling connector**

88. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(B134) No. 53 — Engine ground:

(B134) No. 54 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 89.
No	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

89. CHECK DATA MONITOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor, read the value of [Calculated LOAD Value], then compare it with the load value listed in “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Note:

- **The value of Calculated load value change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance.**
- **For detailed procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**

Does the load value falls between 90 — 110% of the value described in the list?

Yes	Go to 90.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

90. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and fuel injectors.
3. Measure the resistance of harness between ECM connector and fuel injector connector.

Connector & terminal

#1 (E158) No. 96 — (E5) No. 1:
#1 (E158) No. 87 — (E5) No. 2:
#2 (E158) No. 95 — (E16) No. 1:
#2 (E158) No. 86 — (E16) No. 2:
#3 (E158) No. 93 — (E6) No. 1:
#3 (E158) No. 84 — (E6) No. 2:
#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 91.
No	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

91. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

#1 (E158) No. 96 — Engine ground:
#1 (E158) No. 87 — Engine ground:
#2 (E158) No. 95 — Engine ground:
#2 (E158) No. 86 — Engine ground:
#3 (E158) No. 93 — Engine ground:
#3 (E158) No. 84 — Engine ground:
#4 (E158) No. 94 — Engine ground:
#4 (E158) No. 85 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 92.
No	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

92. CHECK IGNITION SYSTEM.

Check the ignition system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

Is the check result OK?

Yes	Go to 93.
No	Repair the ignition system. Ref. to IGNITION(H4DO)>General Description.

93. CHECK OF FUEL PUMP.

1. On “Active Test” item, select [Fuel Pump Relay] and perform ON/OFF drive operation.
   Note:
   For detailed procedures, refer to “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.
2. Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.

Does the fuel pump emit operating sound?

Yes	Go to 95.
No	Go to 94.

94. CHECK OF FUEL PUMP.

Check fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Check fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.
No	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.

95. CHECK FUEL TANK.

Check if any foreign matters such as iron powder exist in the fuel tank.

Is there any foreign matter in the fuel tank?

Yes	Remove foreign matter from the fuel tank.
No	Go to 96.

96. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.

Is the measured value 350 — 450 kPa (3.5—4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 97.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

97. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in Fuel Rail Pressure A and Commanded Fuel Rail Pressure A.
Note:
For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value in Fuel Rail Pressure A synchronized with the one in Commanded Fuel Rail Pressure A in all freeze frame data?

Yes	Go to 98.
No	Check the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>INSPECTION.

98. CHECK ENGINE RUNNING CONDITION.

Check the engine running condition using “Roughness monitor” in the Subaru Select Monitor.
Note:
For detailed operation procedures, refer to “Application help”.

Is there a large difference in the speed between each cylinder?

Yes	It is possible that the compression pressure of the engine is not sufficient. Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.
No	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the engine stops except by operating the ignition switch after starting the engine.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Engine condition	After engine starting

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine speed	300 rpm or less

Time needed for diagnosis: 48ms
Malfunction indicator light illumination: Does not illuminate.

DTC P1604 STARTABILITY MALFUNCTION

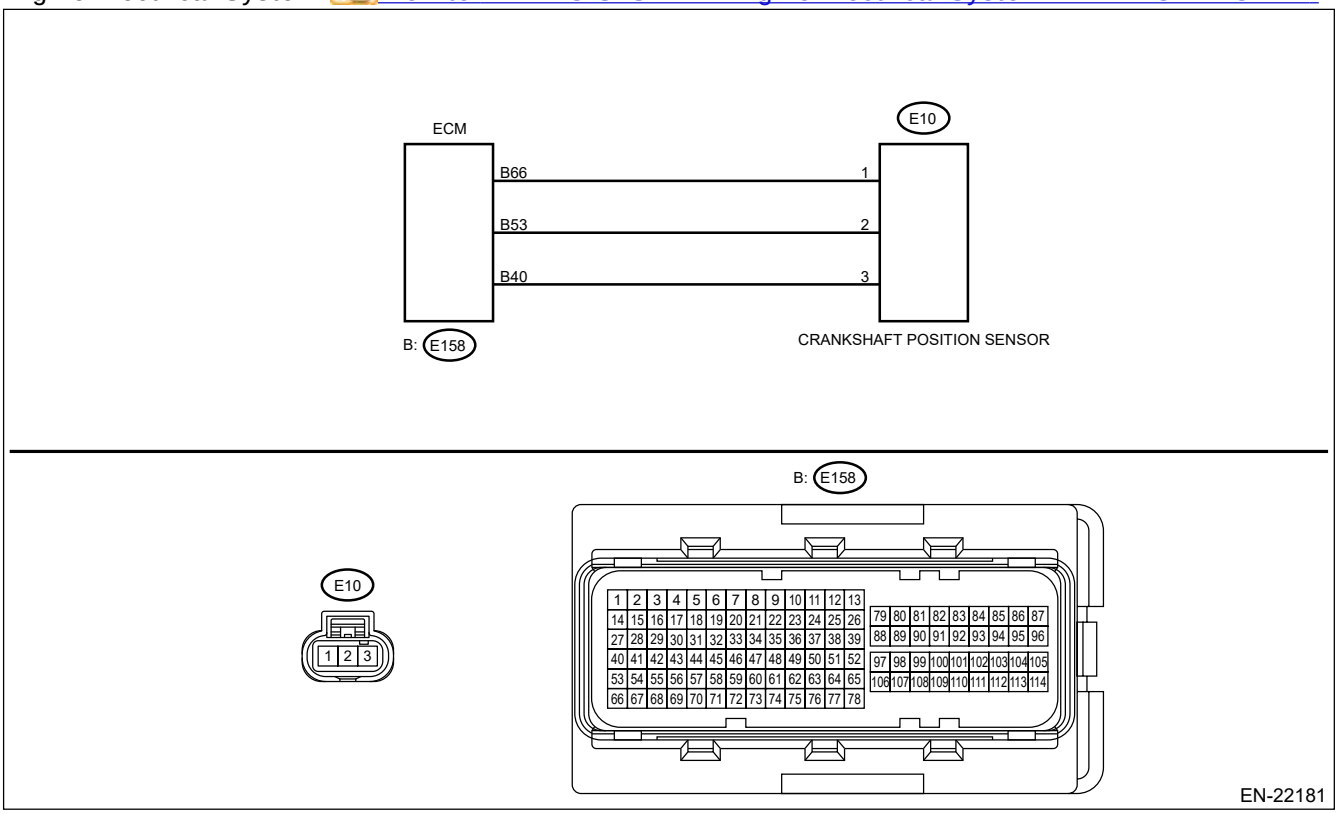
DTC detecting condition:

Immediately at fault recognition

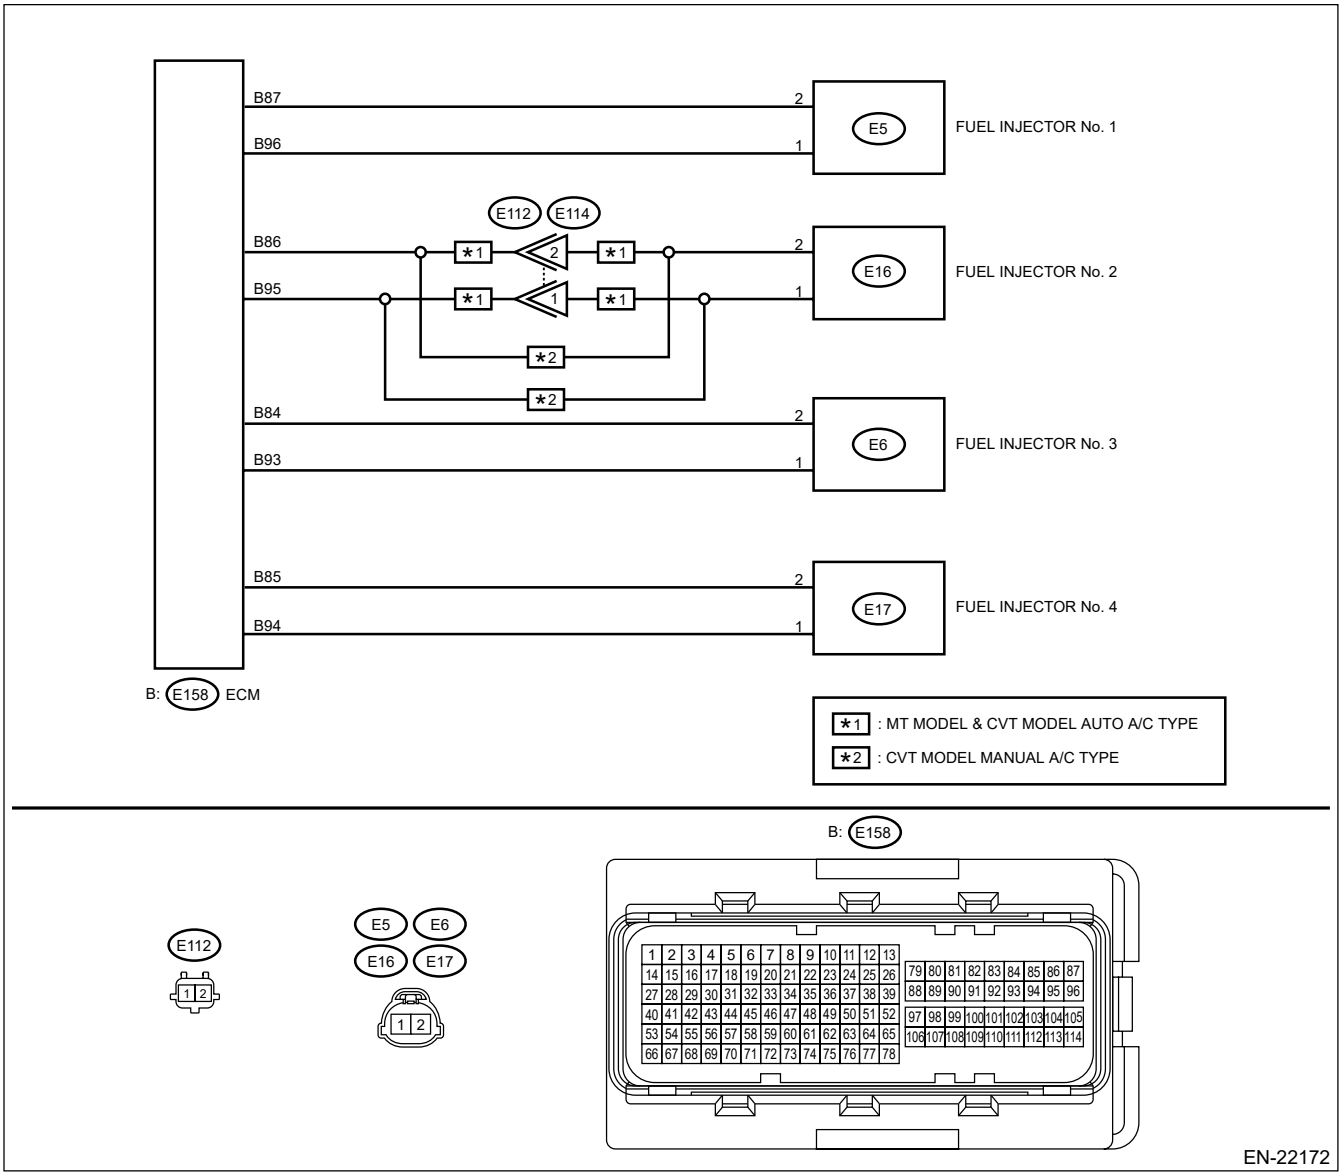
Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

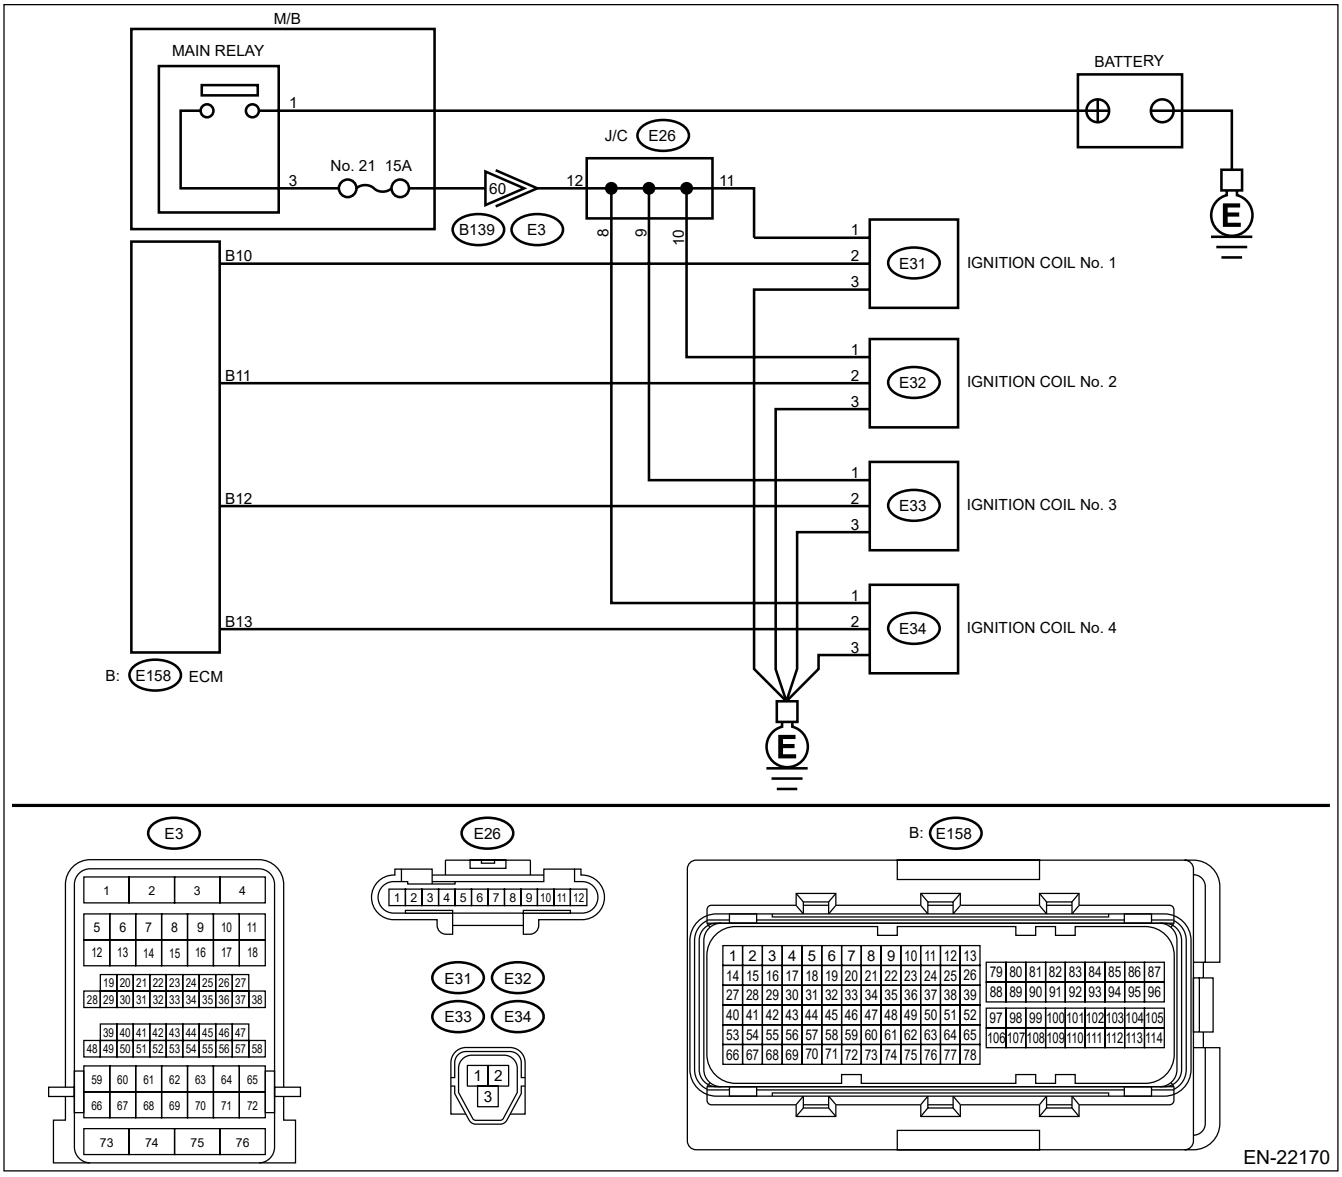
Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.



Note:



This DTC may be detected even if fault does not occur in the vehicle. If the customer does not ask for inspection, clear memory instead of inspection and return the vehicle to the user. Ref. to COMMON(diag)>Clear memory.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Note:

For detailed operation procedures, refer to the “Subaru Select Monitor”. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Is DTC P1604 displayed? (Current malfunction)

Yes	Go to 2.
No	Check DTC using “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK IMMOBILIZER.

Check the immobilizer. Ref. to IMMOBILIZER (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the immobilizer normal?

Yes	Go to 3.
No	Repair the immobilizer. Ref. to IMMOBILIZER (DIAGNOSTICS)>Basic Diagnostic Procedure.

3. CHECK FOR MALFUNCTION OCCURRENCE.

Check for the condition of fault occurrence.

Is it possible to reproduce the faulty phenomenon or to identify the faulty condition?

Yes	Go to 30.
No	Go to 4.

4. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Engine Speed] and [Control module voltage].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Engine Speed] 0 rpm?

Yes	• When the value of [Control module voltage] is less than 5 V: Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION. • When the value of [Control module voltage] is 5 V or more: Go to 5.
No	• When the value of [Engine Speed] is less than 250 rpm: Go to 12. • When the value of [Engine Speed] is 250 rpm or more: Go to 20.

5. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [Control module voltage].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Control module voltage] less than 9 V?

Yes	It is possible that the engine friction is too large. Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.
No	• When the value of [Control module voltage] changes in any one of freeze frame data: Go to 6. • When the value of [Control module voltage] does not change in all freeze frame data: Check the starter motor circuit. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>STARTER MOTOR CIRCUIT.

6. CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.

Check the installation condition of crankshaft position sensor.

Is the crankshaft position sensor installed correctly?

Yes	Go to 7.
No	Install the crankshaft position sensor correctly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.

7. CHECK CRANKSHAFT POSITION SENSOR.

Check the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 8.
No	Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.

8. CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the crankshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between crankshaft position sensor connector and engine ground.
   Connector & terminal
   (E10) No. 3 (+) — Engine ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 9.
No	Repair the power supply circuit.

9. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and crankshaft position sensor connector.
   Connector & terminal
   (E158) No. 53 — (E10) No. 2:
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.

10. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between crankshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E10) No. 1 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 11.
No	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.

11. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

12. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Coolant Temp.], [Ambient air temperature] and [Fuel Pump Duty].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Coolant Temp.] 120°C (248°F) or more? Or is the value of [Coolant Temp.] 15°C (27°F) or more lower than that of [Ambient air temperature]?

Yes	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.
No	• When the value of [Fuel Pump Duty] is 60% or more: Go to 13. • When the value of [Fuel Pump Duty] is less than 60%: Check the fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.

13. CHECK OF FUEL PUMP.

1. On “Active Test” item, select [Fuel Pump Relay] and perform ON/OFF drive operation.
   Note:
   For detailed procedures, refer to “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.
2. Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.

Does the fuel pump emit operating sound?

Yes	Go to 15.
No	Go to 14.

14. CHECK OF FUEL PUMP.

Check fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Check fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.
No	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.

15. CHECK FUEL TANK.

Check if any foreign matters such as iron powder exist in the fuel tank.

Is there any foreign matter in the fuel tank?

Yes	Remove foreign matter from the fuel tank.
No	Go to 16.

16. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.

Is the measured value 350 — 450 kPa (3.5 —4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 17.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

17. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Fuel Rail Pressure A] and [Commanded Fuel Rail Pressure A].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value in [Fuel Rail Pressure A] synchronized with the one in [Commanded Fuel Rail Pressure A] in all freeze frame data?

Yes	Go to 18.
No	Check the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>INSPECTION.

18. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and fuel injectors.
3. Measure the resistance of harness between ECM connector and fuel injector connector.

Connector & terminal

#1 (E158) No. 96 — (E5) No. 1:
#1 (E158) No. 87 — (E5) No. 2:
#2 (E158) No. 95 — (E16) No. 1:
#2 (E158) No. 86 — (E16) No. 2:
#3 (E158) No. 93 — (E6) No. 1:
#3 (E158) No. 84 — (E6) No. 2:
#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 19.
No	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

19. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

#1 (E158) No. 96 — Engine ground:
#1 (E158) No. 87 — Engine ground:
#2 (E158) No. 95 — Engine ground:
#2 (E158) No. 86 — Engine ground:
#3 (E158) No. 93 — Engine ground:
#3 (E158) No. 84 — Engine ground:
#4 (E158) No. 94 — Engine ground:
#4 (E158) No. 85 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 29.
No	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

20. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Coolant Temp.], [Ambient air temperature] and [Engine Speed].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Coolant Temp.] 120°C (248°F) or more? Or is the value of [Coolant Temp.] 15°C (27°F) or more lower than that of [Ambient air temperature]?

Yes	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.
No	• When the minimum value of [Engine Speed] is less than 300 rpm: Go to 21. • When the minimum value of [Engine Speed] is 300 rpm or more: It is possible that the engine compression pressure is not sufficient. Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.

21. CHECK FUEL INJECTOR.

Check fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is there any deposit in the fuel injectors?

Yes	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.
No	Go to 22.

22. CHECK FUEL TANK.

Check if any foreign matters such as iron powder exist in the fuel tank.

Is there any foreign matter in the fuel tank?

Yes	Remove foreign matter from the fuel tank.
No	Go to 23.

23. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the value in [Coolant Temp.].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value of [Coolant Temp.] 40 — 90°C (104 — 194°F)?

Yes	Go to 25.
No	Go to 24.

24. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure five minutes after the engine is stopped. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.
Note:
If the engine does not start, measure the fuel pressure five minutes after cranking is completed.

Is the measured value 147 kPa (1.5 kg/cm^2, 21 psi) or more?

Yes	Go to 29.
No	Replace the pressure regulator. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Filter.

25. CHECK FUEL INJECTOR.

1. After the engine is stopped, scavenge inside of the intake manifold by applying compressed air.
2. Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.
   Note:
   Remove the vacuum hose D between intake manifold and purge solenoid valve B and perform measurement. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > FUEL PIPE.

Is the HC concentration less than 4,000 ppm?

Yes	Go to 27.
No	Go to 26.

26. CHECK FUEL INJECTOR.

Check fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 27.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

27. CHECK THROTTLE BODY.

Check throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>INSPECTION.

Is there any deposit in the throttle body?

Yes	Replace the throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.
No	Go to 28.

28. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system. Ref. to INTAKE (INDUCTION)(H4DO)>General Description.
No	Go to 29.

29. CHECK FOR MALFUNCTION OCCURRENCE.

Check for the condition of fault occurrence.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Go to 30.

30. CHECK FOR MALFUNCTION OCCURRENCE.

Check for the condition of fault occurrence.

Does cranking occur?

Yes	• When the engine speed is abnormal during cranking: Go to 37. • When an initial combustion does not occur: Go to 40. • When the engine stalls immediately after engine start: Go to 57. • When the engine takes time to start: Go to 80.
No	Go to 31.

31. CHECK FOR MALFUNCTION OCCURRENCE.

Does the sound occur by a protruding starter pinion gear during cranking?

Yes	• When the starter motor does not rotate: Go to 32. • When the starter motor rotates but does not engage: Go to 34.
No	Go to 35.

32. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 33.
No	Charge or replace the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

33. CHECK ENGINE MAIN BODY.

Using the ST, rotate the crankshaft.

ST 18252AA000 CRANKSHAFT SOCKET

Does the crankshaft rotate smoothly?

Yes	Check the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>INSPECTION. **Note:** **It is possible that the engine friction increased temporarily. Check if any foreign matter is mixed in engine oil. If a foreign matter is found, check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.**
No	It is possible that the engine friction is too large. Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.

34. CHECK STARTER MOTOR.

Check the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>INSPECTION.

Is there any wear or damage in the starter pinion gear?

Yes	Repair the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter.
No	CVT model: Replace the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly. MT model: Replace the flexible flywheel. Ref. to CLUTCH SYSTEM>Flywheel.

35. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 36.
No	Charge or replace the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

36. CHECK STARTER MOTOR.

Check the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>INSPECTION.

Is the check result OK?

Yes	Check the starter motor circuit. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>STARTER MOTOR CIRCUIT.
No	Repair the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter.

37. CHECK DATA MONITOR.

Using the Subaru Select Monitor, read the value of [Engine Speed] during cranking.

Data Monitor

Note:
For detailed procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Engine Speed] 300 rpm or more?

Yes	It is possible that the compression pressure of the engine is not sufficient. Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.
No	Go to 38.

38. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 39.
No	Charge or replace the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

39. CHECK ENGINE MAIN BODY.

Using the ST, rotate the crankshaft.

ST 18252AA000 CRANKSHAFT SOCKET

Does the crankshaft rotate smoothly?

Yes	Check the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>INSPECTION. **Note:** **It is possible that the engine friction increased temporarily. Check if any foreign matter is mixed in engine oil. If a foreign matter is found, check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.**
No	It is possible that the engine friction is too large. Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.

40. CHECK OPERATION OF EACH FUEL INJECTOR.

Using a sound scope, check each fuel injector for operation sound during cranking.

Does the fuel injector emit operating sound?

Yes	Go to 41.
No	Go to 54.

41. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.

Is the measured value 350 — 450 kPa (3.5 —4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 42.
No	Go to 52.

42. CHECK IGNITION CONDITION.

Check the ignition condition. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

Is the check result OK?

Yes	Go to 43.
No	Go to 46.

43. CHECK FOR MALFUNCTION OCCURRENCE.

Check for the condition of fault occurrence.

Does the fault occur only within approx. 15 to 120 minutes after the engine is stopped?

Yes	Go to 45.
No	• When the fault occurs in two or three minutes or a long time after the engine is stopped: Go to 44. • When the fault occurrence pattern is inconsistent: Go to 94.

44. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure five minutes after the engine is stopped. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.
Note:
If the engine does not start, measure the fuel pressure five minutes after cranking is completed.

Is the measured value 147 kPa (1.5 kg/cm^2, 21 psi) or more?

Yes	Go to 94.
No	Replace the pressure regulator. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Filter.

45. CHECK FUEL INJECTOR.

1. After the engine is stopped, scavenge inside of the intake manifold by applying compressed air.
2. Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.
   Note:
   Remove the vacuum hose D between intake manifold and purge solenoid valve B and perform measurement. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > FUEL PIPE.

Is the HC concentration less than 4,000 ppm?

Yes	Go to 94.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

46. CHECK SPARK PLUG.

Check the spark plug. Ref. to IGNITION(H4DO)>Spark Plug>INSPECTION.

Is the check result OK?

Yes	Go to 47.
No	Replace all spark plugs on all cylinders. Ref. to IGNITION(H4DO)>Spark Plug.

47. CHECK DATA MONITOR.

Using the Subaru Select Monitor, record the value of [Engine Speed] during cranking.

Data Monitor

Note:
For detailed procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Data Monitor.

Does the recorded value of [Engine Speed] contain data of 0 rpm?

Yes	It is possible that temporary fault occurs in the crankshaft position sensor circuit. Check the crankshaft position sensor circuit. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT.
No	Go to 48.

48. CHECK IGNITION COIL POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ignition coil.
3. Turn the ignition switch to ON.
4. Measure the voltage between ignition coil connector and engine ground.

Connector & terminal

(E31) No. 1 (+) — Engine ground (−):
(E32) No. 1 (+) — Engine ground (−):
(E33) No. 1 (+) — Engine ground (−):
(E34) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 49.
No	Check the harness and connector. **Note:** **In this case, repair the following item:** • **Open or short to ground in power supply circuit** • **Poor contact of coupling connector** • **Blown out of fuse**

49. CHECK HARNESS BETWEEN ECM AND IGNITION COIL (OPEN).

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and ignition coil connector.

Connector & terminal

(E158) No. 10 — (E31) No. 2:
(E158) No. 11 — (E32) No. 2:
(E158) No. 12 — (E33) No. 2:
(E158) No. 13 — (E34) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 50.
No	Repair the open circuit in harness between ECM connector and ignition coil connector.

50. CHECK HARNESS BETWEEN ECM AND IGNITION COIL (SHORT TO GROUND).

Measure the resistance of harness between ECM connector and engine ground.

Connector & terminal

(E158) No. 10 — Engine ground:
(E158) No. 11 — Engine ground:
(E158) No. 12 — Engine ground:
(E158) No. 13 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 51.
No	Repair the ground short circuit of harness between ECM connector and ignition coil connector.

51. CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT (OPEN).

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between ignition coil connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E31) No. 3 — Engine ground:
(E32) No. 3 — Engine ground:
(E33) No. 3 — Engine ground:
(E34) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Replace the ignition coil. Ref. to IGNITION(H4DO)>Ignition Coil. If the fault occurs after servicing, continue the diagnosis.
No	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.

52. CHECK OF FUEL PUMP.

1. On “Active Test” item, select [Fuel Pump Relay] and perform ON/OFF drive operation.
   Note:
   For detailed procedures, refer to “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.
2. Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.

Does the fuel pump emit operating sound?

Yes	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.
No	Go to 53.

53. CHECK OF FUEL PUMP.

Check fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Check fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT. If the fault occurs after servicing, continue the diagnosis. Go to 94.
No	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.

54. CHECK DATA MONITOR.

Using the Subaru Select Monitor, record the value of [Engine Speed] during cranking.

Data Monitor

Note:
For detailed procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Data Monitor.

Does the recorded value of [Engine Speed] contain data of 0 rpm?

Yes	It is possible that temporary fault occurs in the crankshaft position sensor circuit. Check the crankshaft position sensor circuit. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT.
No	Go to 55.

55. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and fuel injectors.
3. Measure the resistance of harness between ECM connector and fuel injector connector.

Connector & terminal

#1 (E158) No. 96 — (E5) No. 1:
#1 (E158) No. 87 — (E5) No. 2:
#2 (E158) No. 95 — (E16) No. 1:
#2 (E158) No. 86 — (E16) No. 2:
#3 (E158) No. 93 — (E6) No. 1:
#3 (E158) No. 84 — (E6) No. 2:
#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 56.
No	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

56. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

#1 (E158) No. 96 — Engine ground:
#1 (E158) No. 87 — Engine ground:
#2 (E158) No. 95 — Engine ground:
#2 (E158) No. 86 — Engine ground:
#3 (E158) No. 93 — Engine ground:
#3 (E158) No. 84 — Engine ground:
#4 (E158) No. 94 — Engine ground:
#4 (E158) No. 85 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

57. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 58.
No	Go to 78.

58. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system. Ref. to INTAKE (INDUCTION)(H4DO)>General Description.
No	Go to 59.

59. CHECK THROTTLE BODY.

1. Disconnect the ground cable from battery.
2. Disconnect the connector from the throttle body.
3. Check throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>INSPECTION.

Is the check result OK?

Yes	Go to 60.
No	Replace the throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.

60. CHECK THROTTLE BODY.

Check throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>INSPECTION.

Is there any deposit in the throttle body?

Yes	Replace the throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.
No	Go to 61.

61. CHECK FREEZE FRAME DATA.

1. Using the Subaru Select Monitor, read the values in [VVT Adv. Ang. Amount R], [VVT Advance Target Angle Amount R], [VVT Adv. Ang. Amount L], [VVT Advance Target Angle Amount L], [Exh. VVT Retard Ang. R], [Ex VVT Retard Target Angle R], [Exh. VVT Retard Ang. L] and [Ex VVT Retard Target Angle L].
   Note:
   For detailed operation procedures, refer to "Freeze Frame Data". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.
2. Using the Subaru Select Monitor, compare the respective values between the followings: [VVT Adv. Ang. Amount R] and [VVT Advance Target Angle Amount R], [VVT Adv. Ang. Amount L] and [VVT Advance Target Angle Amount L], [Exh. VVT Retard Ang. R] and [Ex VVT Retard Target Angle R], [Exh. VVT Retard Ang. L] and [Ex VVT Retard Target Angle L].

Does all of the advance angle amount and retard angle amount synchronize with their target values?

Yes	Go to 112.
No	Diagnose the part where there is difference of 10 deg or more. • Intake RH: Go to 62. • Intake LH: Go to 66. • Exhaust RH: Go to 70. • Exhaust LH: Go to 74.

62. CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the intake oil control solenoid RH.
3. Turn the ignition switch to ON.
4. Measure the voltage between intake oil control solenoid RH connector and engine ground.
   Connector & terminal
   (E38) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 63.
No	Repair the power supply circuit.

63. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and intake oil control solenoid RH connector.

Connector & terminal

(E158) No. 99 — (E38) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 64.
No	Repair the open circuit in harness between ECM connector and intake oil control solenoid RH connector.

64. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (SHORT TO GROUND).

Measure the resistance between intake oil control solenoid RH connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E38) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 65.
No	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid RH connector.

65. CHECK INTAKE OIL CONTROL SOLENOID RH.

Check the intake oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the intake cam sprocket RH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the intake oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

66. CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the intake oil control solenoid LH.
3. Turn the ignition switch to ON.
4. Measure the voltage between intake oil control solenoid LH connector and engine ground.
   Connector & terminal
   (E37) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 67.
No	Repair the power supply circuit.

67. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and intake oil control solenoid LH.
   Connector & terminal
   (E158) No. 100 — (E37) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 68.
No	Repair the open circuit in harness between ECM connector and intake oil control solenoid LH connector.

68. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH (SHORT TO GROUND).

Measure the resistance between intake oil control solenoid LH connector and engine ground.

Note:
Connect all connectors after measurement.

Connector & terminal
(E37) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 69.
No	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid LH connector.

69. CHECK INTAKE OIL CONTROL SOLENOID LH.

Check the intake oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the intake cam sprocket LH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the intake oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

70. CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the exhaust oil control solenoid RH.
3. Turn the ignition switch to ON.
4. Measure the voltage between exhaust oil control solenoid RH connector and engine ground.
   Connector & terminal
   (E63) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 71.
No	Repair the power supply circuit.

71. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH connector.

Connector & terminal

(E158) No. 109 — (E63) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 72.
No	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid RH connector.

72. CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH (SHORT TO GROUND).

Measure the resistance between exhaust oil control solenoid RH connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E63) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 73.
No	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid RH connector.

73. CHECK INTAKE OIL CONTROL SOLENOID RH.

Check the exhaust oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the exhaust cam sprocket RH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the exhaust oil control solenoid RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

74. CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the exhaust oil control solenoid LH.
3. Turn the ignition switch to ON.
4. Measure the voltage between exhaust oil control solenoid LH connector and engine ground.

Connector & terminal

(E66) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 75.
No	Repair the power supply circuit.

75. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH connector.

Connector & terminal

(E158) No. 108 — (E66) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 76.
No	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid LH connector.

76. CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH (SHORT TO GROUND).

Measure the resistance between exhaust oil control solenoid LH connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E66) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 77.
No	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid LH connector.

77. CHECK EXHAUST OIL CONTROL SOLENOID LH.

Check the exhaust oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSPECTION.

Is the check result OK?

Yes	Replace the exhaust cam sprocket LH. Ref. to MECHANICAL(H4DO)>Cam Sprocket.
No	Replace the exhaust oil control solenoid LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid.

78. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR, AND ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect connectors from ECM, air flow & intake air temperature sensor, and manifold absolute pressure sensor.
3. Measure the resistance of harness between ECM connector and air flow & intake air temperature sensor connector, and between ECM connector and manifold absolute pressure sensor.

Connector & terminal

(B134) No. 53 — (B3) No. 3:
(B134) No. 54 — (B3) No. 2:
(B134) No. 43 — (B3) No. 4:
(B134) No. 32 — (B3) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 79.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector** • **Open circuit of harness between ECM connector and manifold absolute pressure sensor**

79. CHECK HARNESS BETWEEN ECM AND AIR FLOW & INTAKE AIR TEMPERATURE SENSOR AND MANIFOLD ABSOLUTE PRESSURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(B134) No. 53 — Engine ground:

(B134) No. 54 — Engine ground:

(E158) No. 32 — Engine ground:

(E159) No. 43 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Replace air flow & intake air temperature sensor or manifold absolute pressure sensor. If the fault occurs after servicing (s165020), continue the diagnosis. Go to 112.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Ground short circuit of harness between ECM connector and the air flow & intake air temperature sensor connector** • **Ground short circuit of harness between ECM connector and manifold absolute pressure sensor**

80. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

Check the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 81.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor. If the fault occurs after servicing, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM). If the fault still occurs after replacing the ECM, continue the diagnosis. Go to 123.

81. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and engine coolant temperature sensor.
3. Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector.

Connector & terminal

(E158) No. 54 — (E8) No. 1:

(E158) No. 45 — (E8) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 82.
No	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector. If the fault occurs after servicing, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM). If the fault still occurs after replacing the ECM, continue the diagnosis. Go to 123.

82. CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E158) No. 45 — Engine ground:

(E158) No. 54 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 83.
No	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector. If the fault occurs after servicing, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM). If the fault still occurs after replacing the ECM, continue the diagnosis. Go to 123.

83. CHECK DATA MONITOR.

1. Turn the ignition switch to ON. (Engine OFF)
2. Using the Subaru Select Monitor, read the values in [Long Term Fuel Trim (B1)] and [Barometric Pressure].

Note:
For detailed operation procedures, refer to “Current Data Display For Engine”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Long Term Fuel Trim (B1)]−25 — 25%? And is the value of [Barometric Pressure] 80 kPa (600 mmHg, 23.6 inHg) or more?

Yes	Go to 86.
No	Go to 84.

84. CHECK FOR MALFUNCTION OCCURRENCE.

1. Clear the memory in engine using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Clear memory.

2. Start the engine.

Does the engine start?

Yes	Go to 85.
No	Go to 86.

85. CHECK IDLE SPEED.

Check the idle speed.

Is the idle speed stable?

Yes	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor. If the fault occurs after servicing, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM). If the fault still occurs after replacing the ECM, continue the diagnosis. Go to 123.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector. If the fault occurs after servicing, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM). If the fault still occurs after replacing the ECM, continue the diagnosis. Go to 123.

86. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.

Is the measured value 350 — 450 kPa (3.5 —4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 87.
No	Go to 93.

87. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, read the values in [Fuel Rail Pressure A] and [Commanded Fuel Rail Pressure A].

Note:

For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

Is the value in [Fuel Rail Pressure A] synchronized with the one in [Commanded Fuel Rail Pressure A] in all freeze frame data?

Yes	Go to 88.
No	Check the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>INSPECTION.

88. CHECK SPARK PLUG.

Check the spark plug. Ref. to IGNITION(H4DO)>Spark Plug>INSPECTION.

Are all spark plug in all cylinders normal?

Yes	Go to 89.
No	• When spark plugs in some cylinders are faulty: Replace the faulty spark plugs of the cylinders, then check the ignition system and fuel system in the faulty cylinders. Ref. to IGNITION(H4DO)>Spark Plug. If the fault occurs after servicing, continue the diagnosis. Go to 123. • When all spark plugs in all cylinders are faulty: Replace faulty spark plugs in all cylinders. Ref. to IGNITION(H4DO)>Spark Plug. If the fault occurs after servicing, continue the diagnosis. Go to 123.

89. CHECK FOR MALFUNCTION OCCURRENCE.

Check for the condition of fault occurrence.

Does the fault occur only within approx. 15 to 120 minutes after the engine is stopped?

Yes	Go to 91.
No	• When the fault occurs in two or three minutes or a long time after the engine is stopped: Go to 90. • When the fault occurrence pattern is inconsistent: Go to 123.

90. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.
Measure the fuel pressure five minutes after the engine is stopped. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
Caution:
Before attaching/detaching a fuel pressure gauge, release the fuel pressure.
Note:
If the engine does not start, measure the fuel pressure five minutes after cranking is completed.

Is the measured value 147 kPa (1.5 kg/cm^2, 21 psi) or more?

Yes	Go to 123.
No	Replace the pressure regulator. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Filter.

91. CHECK PURGE CONTROL SOLENOID VALVE.

Check the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve>INSPECTION.

Is the check result OK?

Yes	Go to 92.
No	Replace the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve.

92. CHECK FUEL INJECTOR.

1. After the engine is stopped, scavenge inside of the intake manifold by applying compressed air.
2. Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.

Is the HC concentration less than 4,000 ppm?

Yes	Go to 123.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

93. CHECK OF FUEL PUMP.

Check fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Check fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT. If the fault occurs after servicing, continue the diagnosis. Go to 123.
No	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.

94. CHECK FUEL INJECTOR.

Check fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 95.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

95. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connectors from ECM and fuel injectors.
3. Measure the resistance of harness between ECM connector and fuel injector connector.

Connector & terminal

#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 96.
No	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

96. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

#1 (E158) No. 96 — Engine ground:
#1 (E158) No. 87 — Engine ground:
#2 (E158) No. 95 — Engine ground:
#2 (E158) No. 86 — Engine ground:
#3 (E158) No. 93 — Engine ground:
#3 (E158) No. 84 — Engine ground:
#4 (E158) No. 94 — Engine ground:
#4 (E158) No. 85 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 97.
No	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

97. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Go to 98.

98. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the camshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

99. CHECK CRANKSHAFT POSITION SENSOR.

Check the installation condition of crankshaft position sensor.

Is the crankshaft position sensor installed correctly?

Yes	Go to 100.
No	Install the crankshaft position sensor correctly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.

100. CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR.

Check the installation condition of camshaft position sensor.

Is the camshaft position sensor installed correctly?

Yes	Go to 101.
No	Install the camshaft position sensor correctly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION.

101. CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the crankshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between crankshaft position sensor connector and engine ground.
   Connector & terminal
   (E10) No. 3 (+) — Engine ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 102.
No	Repair the power supply circuit.

102. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and crankshaft position sensor connector.
   Connector & terminal
   (E158) No. 53 — (E10) No. 2:
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 103.
No	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.

103. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between crankshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E10) No. 1 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 104.
No	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.

104. CHECK POWER SUPPLY OF INTAKE CAMSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the intake camshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between intake camshaft position sensor connector and engine ground.

Connector & terminal

(E35) No. 1 (+) — Engine ground (−):

(E36) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 105.
No	Repair the harness and connector. **Note:** • **Open circuit or short circuit to ground in harness between main relay connector and intake camshaft position sensor connector** • **Poor contact of coupling connector**

105. CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and intake camshaft position sensor connector.

Connector & terminal

(E158) No. 77 — (E35) No. 2:
(E158) No. 51 — (E35) No. 3:
(E158) No. 78 — (E36) No. 2:
(E158) No. 51 — (E36) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 106.
No	Repair the open circuit in the harness between ECM connector and intake camshaft position sensor connector.

106. CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between intake camshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E35) No. 2 — Engine ground:
(E36) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 107.
No	Repair short circuit to ground in the harness between ECM connector and intake camshaft position sensor connector.

107. CHECK POWER SUPPLY OF EXHAUST CAMSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the exhaust camshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between exhaust camshaft position sensor connector and engine ground.
   Connector & terminal
   (E62) No. 1 (+) — Engine ground (−):
   (E65) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 108.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between main relay and exhaust camshaft position sensor connector** • **Poor contact of coupling connector**

108. CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and exhaust camshaft position sensor connector.
   Connector & terminal
   (E158) No. 65 — (E62) No. 2:
   (E158) No. 51 — (E62) No. 3:
   (E158) No. 64 — (E65) No. 2:
   (E158) No. 51 — (E65) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 109.
No	Repair the open circuit in the harness between ECM connector and exhaust camshaft position sensor connector.

109. CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between exhaust camshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E62) No. 2 — Engine ground:

(E65) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 110.
No	Repair short circuit to ground in the harness between ECM connector and exhaust camshaft position sensor connector.

110. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Go to 111.

111. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the camshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

112. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

Check the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 113.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

113. CHECK FUEL PRESSURE.

1. Using the Subaru Select Monitor, read the value of [Fuel Rail Pressure A] during cranking.

   Data Monitor

   Note:
   For detailed procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
2. Measure the fuel pressure five minutes after the engine is stopped. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.

Is the value of [Fuel Rail Pressure A] during cranking 325 — 450 kPa (3.3—4.6 kg/cm^2, 47 — 66 psi), and is the fuel pressure five minutes after engine stop 147 kPa (1.5 kg/cm^2, 21 psipsi) or more?

Yes	Go to 114.
No	Go to 122.

114. CHECK DATA MONITOR.

1. Turn the ignition switch to ON. (Engine OFF)
2. Using the Subaru Select Monitor, read the value in [Long Term Fuel Trim (B1)].

Data Monitor

Note:
For detailed procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Data Monitor.

Does the value of [Long Term Fuel Trim (B1)] fall within a range of −15 — 15%?

Yes	Go to 115.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

115. CHECK FOR MALFUNCTION OCCURRENCE.

Start the engine and check the idling speed.

Is the idling speed stable all time?

Yes	It is possible that the fault comes from fuel. Replace fuel.
No	Go to 116.

116. CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.

Check the installation condition of crankshaft position sensor.

Is the crankshaft position sensor installed correctly?

Yes	Go to 117.
No	Install the crankshaft position sensor correctly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.

117. CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the crankshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between crankshaft position sensor connector and engine ground.
   Connector & terminal
   (E10) No. 3 (+) — Engine ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 118.
No	Repair the power supply circuit.

118. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and crankshaft position sensor connector.
   Connector & terminal
   (E158) No. 53 — (E10) No. 2:
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 119.
No	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.

119. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between crankshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E10) No. 1 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 120.
No	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.

120. CHECK COMPRESSION PRESSURE.

Check the compression pressure. Ref. to MECHANICAL(H4DO)>Compression>INSPECTION.

Is the compression pressure normal?

Yes	Go to 121.
No	Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.

121. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Check the valve timing. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly. When the valve timing is normal, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

122. CHECK OF FUEL PUMP.

Check fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Check fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.
No	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.

123. CHECK FUEL PRESSURE.

1. Using the Subaru Select Monitor, read the value of [Fuel Rail Pressure A] during cranking.

   Data Monitor

   Note:
   For detailed procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
2. Measure the fuel pressure five minutes after the engine is stopped. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.

Is the value of [Fuel Rail Pressure A] during cranking 325 — 450 kPa (3.3—4.6 kg/cm^2, 47 — 66 psi), and is the fuel pressure five minutes after engine stop 147 kPa (1.5 kg/cm^2, 21 psi) or more?

Yes	Go to 124.
No	Go to 131.

124. CHECK DATA MONITOR.

1. Turn the ignition switch to ON. (Engine OFF)
2. Using the Subaru Select Monitor, read the value in [Long Term Fuel Trim-Bank1].

Data Monitor

Note:
For detailed procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Data Monitor.

Does the value of [Long Term Fuel Trim-Bank1] fall within a range of −15 — 15%?

Yes	Go to 125.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

125. CHECK FOR MALFUNCTION OCCURRENCE.

Start the engine and check the idling speed.

Is the idling speed stable all time?

Yes	It is possible that the fault comes from fuel. Replace fuel.
No	Go to 126.

126. CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.

Check the installation condition of crankshaft position sensor.

Is the crankshaft position sensor installed correctly?

Yes	Go to 127.
No	Install the crankshaft position sensor correctly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.

127. CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the crankshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between crankshaft position sensor connector and engine ground.
   Connector & terminal
   (E10) No. 3 (+) — Engine ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 128.
No	Repair the power supply circuit.

128. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and crankshaft position sensor connector.
   Connector & terminal
   (E158) No. 53 — (E10) No. 2:
   (E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 129.
No	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.

129. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between crankshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E10) No. 1 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 130.
No	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.

130. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

131. CHECK OF FUEL PUMP.

Check fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION.

Is the check result OK?

Yes	Go to 132.
No	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.

132. CHECK FUEL PUMP SYSTEM.

Check fuel pump circuit. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.

Is the check result OK?

Yes	Go to 133.
No	Repair the fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.

133. CHECK PURGE CONTROL SOLENOID VALVE.

Check the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve>INSPECTION.

Is the check result OK?

Yes	Go to 134.
No	Replace the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve.

134. CHECK FUEL INJECTOR.

1. After the engine is stopped, scavenge inside of the intake manifold by applying compressed air.
2. Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.

Is the HC concentration less than 4,000 ppm?

Yes	Go to 135.
No	Replace the fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

135. CHECK INTAKE VALVE.

Check the intake valve. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION.

Is there any deposit in the intake valve?

Yes	Clean the intake valve. Ref. to MECHANICAL(H4DO)>Cylinder Head.
No	Go to 136.

136. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

Check the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 137.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

137. CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.

Check the installation condition of crankshaft position sensor.

Is the crankshaft position sensor installed correctly?

Yes	Go to 138.
No	Install the crankshaft position sensor correctly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.

138. CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR.

Check the installation condition of camshaft position sensor.

Is the camshaft position sensor installed correctly?

Yes	Go to 139.
No	Install the camshaft position sensor correctly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION.

139. CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the crankshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between crankshaft position sensor connector and engine ground.
   Connector & terminal
   (E10) No. 3 (+) — Engine ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 140.
No	Repair the power supply circuit.

140. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and crankshaft position sensor connector.

Connector & terminal

(E158) No. 53 — (E10) No. 2:

(E158) No. 66 — (E10) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 141.
No	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.

141. CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between crankshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E10) No. 1 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 142.
No	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.

142. CHECK POWER SUPPLY TO INTAKE CAMSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the intake camshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between intake camshaft position sensor connector and engine ground.
   Connector & terminal
   (E35) No. 1 (+) — Engine ground (−):
   (E36) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 143.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit or short circuit to ground in harness between main relay connector and intake camshaft position sensor connector** • **Poor contact of coupling connector**

143. CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and intake camshaft position sensor connector.
   Connector & terminal
   (E158) No. 77 — (E35) No. 2:
   (E158) No. 51 — (E35) No. 3:
   (E158) No. 78 — (E36) No. 2:
   (E158) No. 51 — (E36) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 144.
No	Repair the open circuit in the harness between ECM connector and intake camshaft position sensor connector.

144. CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between intake camshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E35) No. 2 — Engine ground:

(E36) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 145.
No	Repair short circuit to ground in the harness between ECM connector and intake camshaft position sensor connector.

145. CHECK POWER SUPPLY OF EXHAUST CAMSHAFT POSITION SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the exhaust camshaft position sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between exhaust camshaft position sensor connector and engine ground.

   Connector & terminal

   (E62) No. 1 (+) — Engine ground (−):

   (E65) No. 1 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 146.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between main relay and exhaust camshaft position sensor connector** • **Poor contact of coupling connector**

146. CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and exhaust camshaft position sensor connector.

Connector & terminal

(E158) No. 65 — (E62) No. 2:
(E158) No. 51 — (E62) No. 3:
(E158) No. 64 — (E65) No. 2:
(E158) No. 51 — (E65) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 147.
No	Repair the open circuit in the harness between ECM connector and exhaust camshaft position sensor connector.

147. CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR (SHORT TO GROUND).

Measure the resistance between exhaust camshaft position sensor connector and engine ground.

Note:

Connect all connectors after measurement.

Connector & terminal

(E62) No. 2 — Engine ground:
(E65) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 148.
No	Repair short circuit to ground in the harness between ECM connector and exhaust camshaft position sensor connector.

148. CHECK COMPRESSION PRESSURE.

Check the compression pressure. Ref. to MECHANICAL(H4DO)>Compression>INSPECTION.

Is the compression pressure normal?

Yes	Go to 149.
No	Check the engine. Ref. to MECHANICAL(H4DO)>Symptoms and causes>INSPECTION.

149. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Go to 150.

150. CHECK FOR MALFUNCTION OCCURRENCE.

1. Replace the camshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor.
2. Check that the fault is removed.

Is the fault removed?

Yes	Clear the memory to complete. Ref. to COMMON(diag)>Clear memory.
No	Check the valve timing. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly. When the valve timing is normal, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Judge as NG when the status enters into any one of the followings.

- Although starter signal input is present in ECM, the engine does not start (diagnosis 1)
- Although starter signal input is present in ECM, starting takes more time than it should (diagnosis 1)

- The engine stops immediately after starting except by operating the ignition switch (diagnosis 2)

2. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Starter signal	ON

Diagnosis 2

Secondary parameters	Execution condition
Elapsed time after starting the engine	2 s or less

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

4. DIAGNOSTIC METHOD

Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine speed	Less than 500 rpm

Time needed for diagnosis: 2 — 26 seconds

Diagnosis 2

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Engine speed	Less than 300 rpm

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Does not illuminate.

DTC P162A STARTER INTERLOCK INTERNAL CIRCUIT

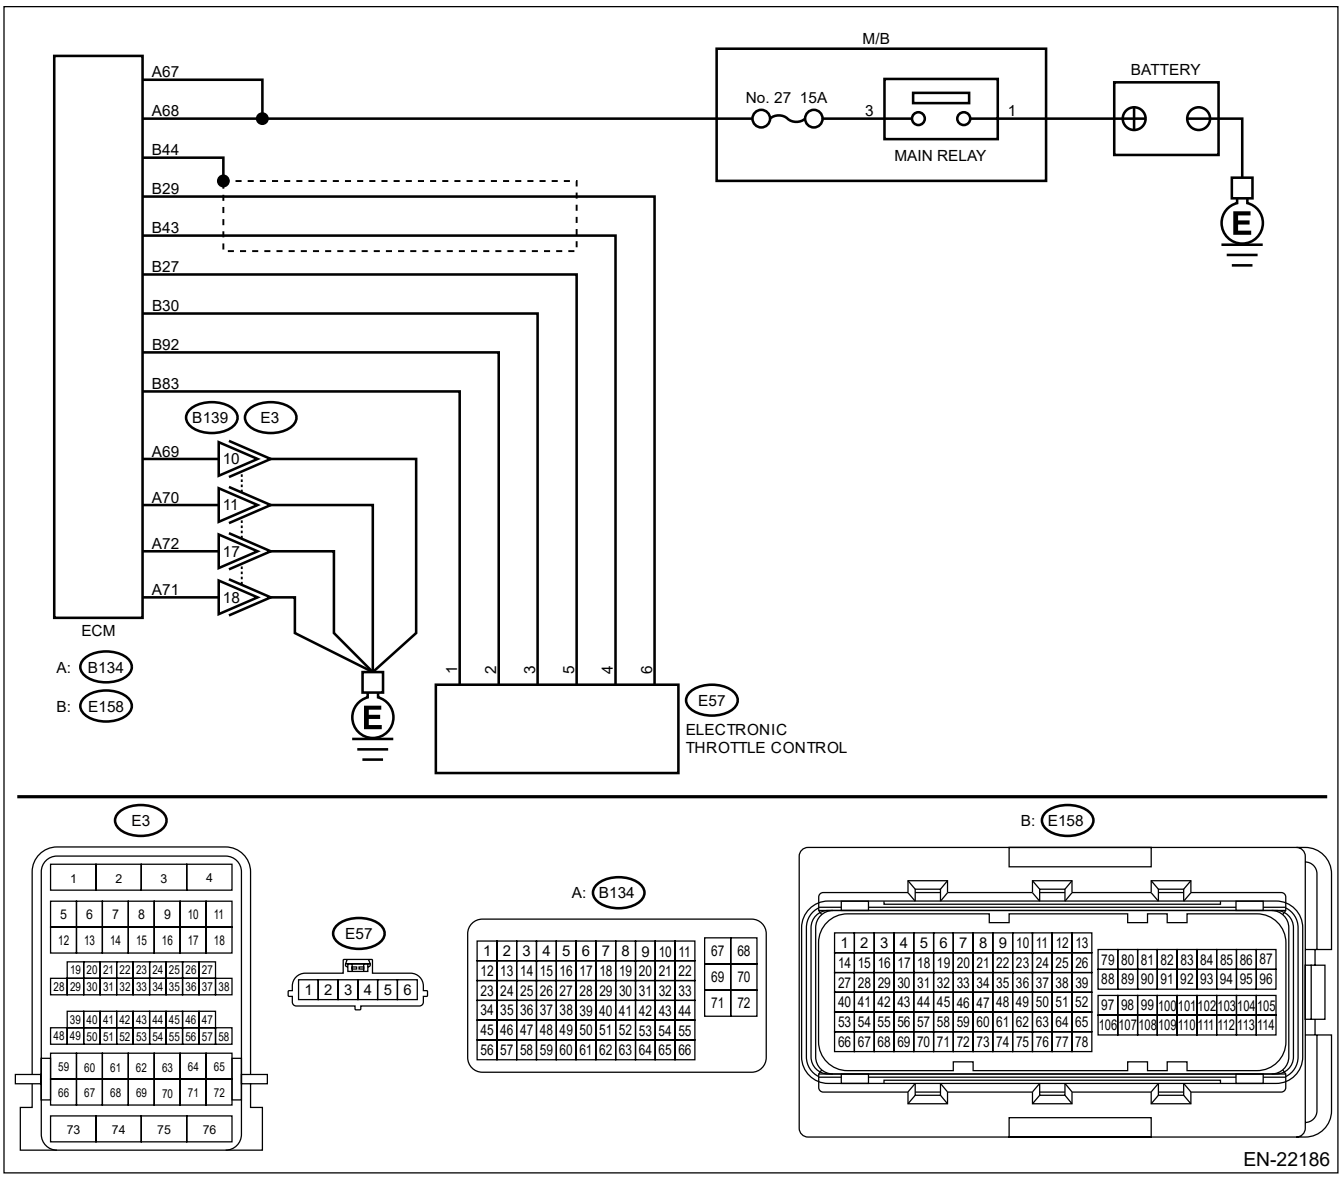
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK INPUT VOLTAGE OF ECM.

1. Disconnect the connector from ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 67 (+) — Chassis ground (−):
(B134) No. 68 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes — Go to 2.

No — Repair the power supply line.

Note:

In this case, repair the following item:

- Open circuit in harness between ECM connector and battery terminal
- Blown out of fuse
- Replace main relay
- Replace M/B

2. CHECK ECM GROUND HARNESS.

1. Connect all connectors.
2. Turn the ignition to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 (+) — Chassis ground (−):
(B134) No. 70 (+) — Chassis ground (−):
(B134) No. 71 (+) — Chassis ground (−):
(B134) No. 72 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes — Go to 3.

No — Repair the harness and connector.

Note:

In this case, repair the following item:

- Open circuit in ground circuit
- Loose engine ground terminal

3. CHECK DTC.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Perform inspection mode using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.

Is DTC P162A displayed as a readiness code?

Yes	Check the connector for poor contact and check the harness. Replace the ECM if no fault is found. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the monitor value of the starter interlock inner circuit does not correspond to the expected value.

2. COMPONENT DESCRIPTION

Inner circuit to inhibit starter drive operation in drive range

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch	ON
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Interlock inner circuit monitor value	Different from expected value

Time needed for diagnosis: 320 ms

Malfunction indicator light illumination: Does not illuminate even when malfunction occurs.

DTC P1C00 BATTERY MONITOR MODULE "A" PERFORMANCE

DTC detecting condition:
Immediately at fault recognition

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P1C00 displayed? (Current malfunction)

Yes	Replace the battery sensor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery Sensor.
No	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

1. OUTLINE OF DIAGNOSIS

Judge as NG when faulty signal of each part is sent from the battery sensor.

2. COMPONENT DESCRIPTION

The battery sensor monitors the data of battery voltage, current, temperature, etc. ECM receives these data via LIN communication with the battery sensor.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch	ON

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value

Malfunction Criteria	Threshold Value
Receives pulse discharge malfunction	ON
or	
Receives voltage measurement malfunction	ON
or	
Receives current measurement malfunction	ON

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Does not illuminate.

DTC P2004 TGV CONTROL STUCK OPEN BANK 1

DTC detecting condition:
Immediately at fault recognition

Caution:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P2004 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK TUMBLE GENERATOR VALVE RH.

1. Remove the tumble generator valve assembly RH.
2. Check the tumble generator valve.

Is there any dirt or clogging with foreign objects in the tumble generator valve?

Yes	Clean the tumble generator valve.
No	Replace the tumble generator valve RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

2. EXECUTION CONDITION

Secondary parameters	Execution

	condition
Battery voltage	10.9 V or more
Tumble generator valve “close” signal output time	1600ms or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	71.4° or more

Time needed for diagnosis: 3000ms or more

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2005 TGV CONTROL STUCK OPEN BANK 2

DTC detecting condition:
Immediately at fault recognition

Caution:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P2005 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK TUMBLE GENERATOR VALVE LH.

1. Remove the tumble generator valve assembly LH.
2. Check the tumble generator valve.

Is there any dirt or clogging with foreign objects in the tumble generator valve?

Yes	Clean the tumble generator valve.
No	Replace the tumble generator valve LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

2. EXECUTION CONDITION

Secondary parameters	Execution condition

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Tumble generator valve “close” signal output time	1600ms or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	71.4° or more

Time needed for diagnosis: 3000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2006 TGV CONTROL STUCK CLOSED BANK 1

DTC detecting condition:
Immediately at fault recognition

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P2006 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK TUMBLE GENERATOR VALVE RH.

1. Remove the tumble generator valve assembly RH.
2. Check the tumble generator valve.

Is there any dirt or clogging with foreign objects in the tumble generator valve?

Yes	Clean the tumble generator valve.
No	Replace the tumble generator valve RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

2. EXECUTION CONDITION

Secondary parameters	Execution

	condition
Battery voltage	10.9 V or more
Tumble generator valve “open” signal output time	1600ms or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	Less than 71.4°

Time needed for diagnosis: 3000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2007 TGV CONTROL STUCK CLOSED BANK 2

DTC detecting condition:
Immediately at fault recognition

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P2007 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK TUMBLE GENERATOR VALVE LH.

1. Remove the tumble generator valve assembly LH.
2. Check the tumble generator valve.

Is there any dirt or clogging with foreign objects in the tumble generator valve?

Yes	Clean the tumble generator valve.
No	Replace the tumble generator valve LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

2. EXECUTION CONDITION

Secondary parameters	Execution

	condition
Battery voltage	10.9 V or more
Tumble generator valve “open” signal output time	1600ms or more

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	Less than 71.4°

Time needed for diagnosis: 3000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

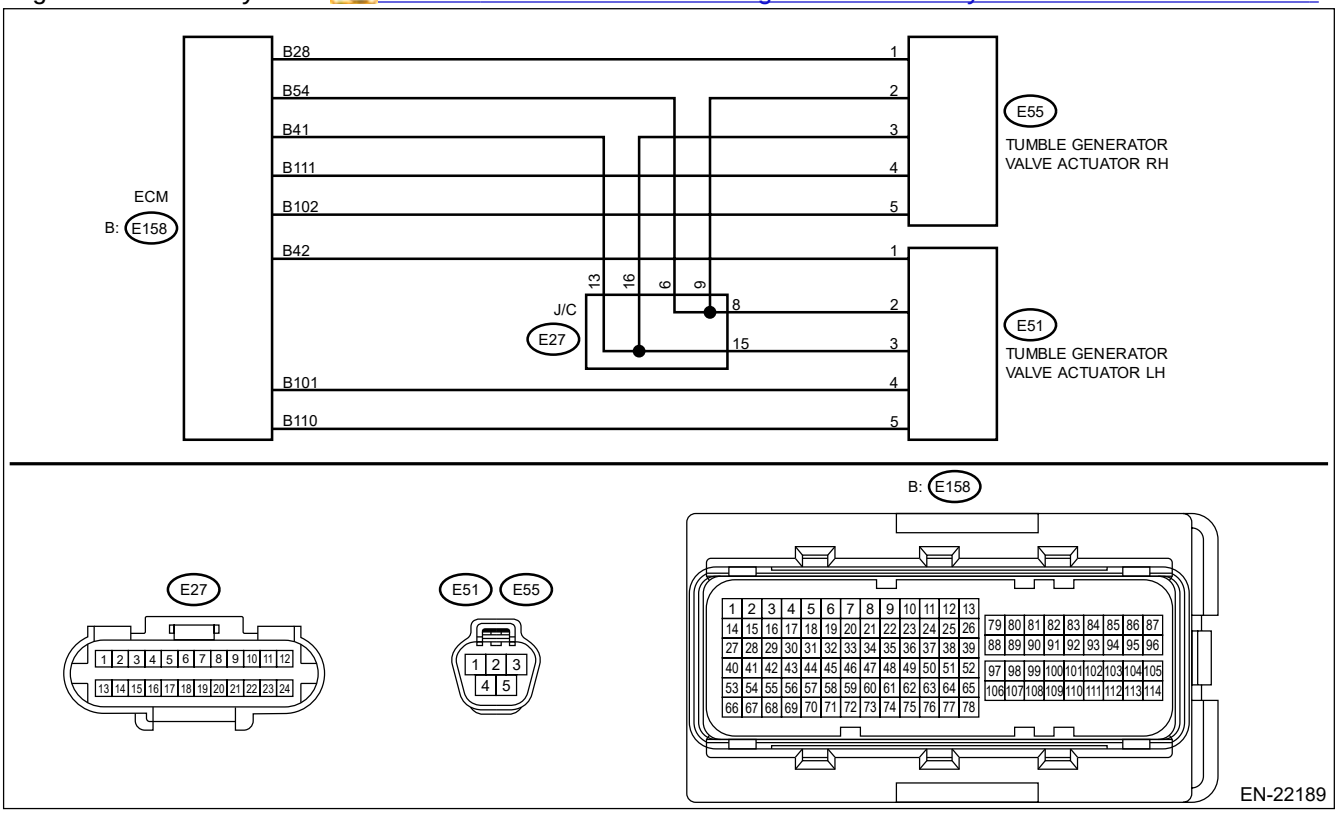
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2008 TGV CONTROL CIRCUIT/OPEN BANK 1

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY RH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from tumble generator valve assembly RH.
4. Measure the resistance of harness between ECM connector and tumble generator valve assembly RH connector.

Connector & terminal

(E158) No. 102 — (E55) No. 5:

(E158) No. 111 — (E55) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and tumble generator valve assembly RH connector** • **Poor contact of coupling connector**

2. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY RH (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 102 — Chassis ground:

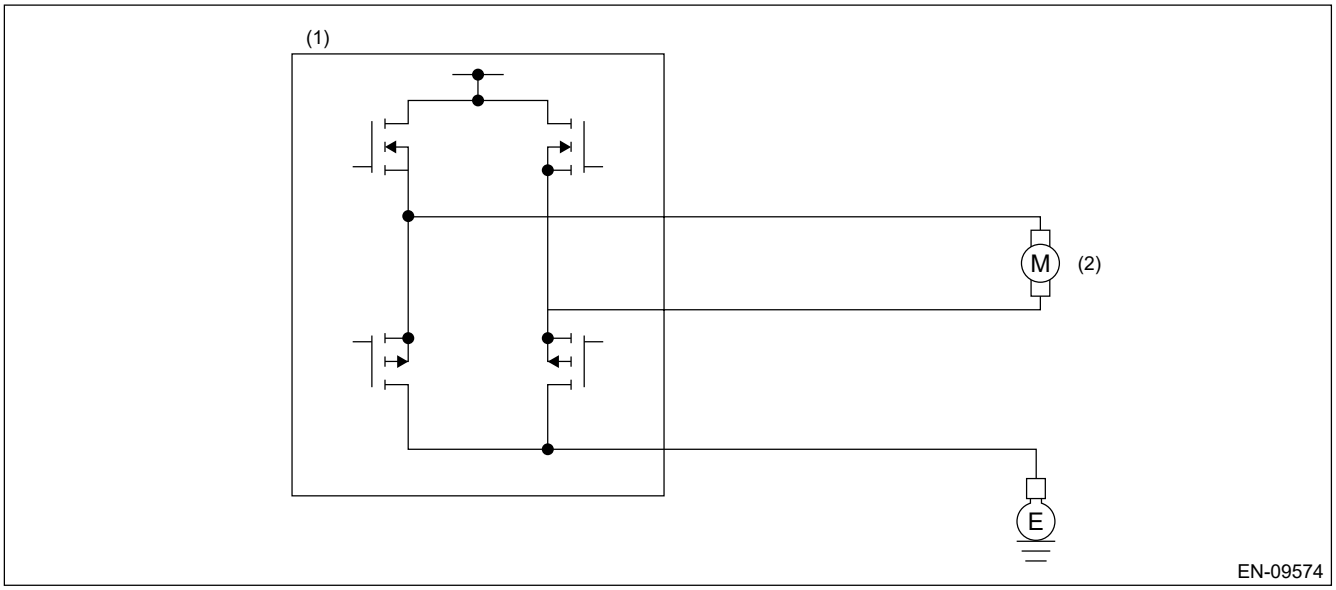
(E158) No. 111 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit to ground in harness between ECM connector and tumble generator valve assembly RH connector.

3. CHECK FOR POOR CONTACT.

Check for poor contact of tumble generator valve assembly RH connector.



Is there poor contact of the tumble generator valve assembly RH connector?

Yes	Repair the poor contact of tumble generator valve assembly RH connector.
No	Replace the tumble generator valve assembly RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of tumble generator valve motor.
Judge as NG when the output voltage remains high when the tumble generator valve motor is not energized.

2. COMPONENT DESCRIPTION

(1) Engine control module (ECM) (2) Tumble generator valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Tumble generator valve drive duty	79.17% or less

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	More than battery voltage × 0.55

Time needed for diagnosis: 1.92s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

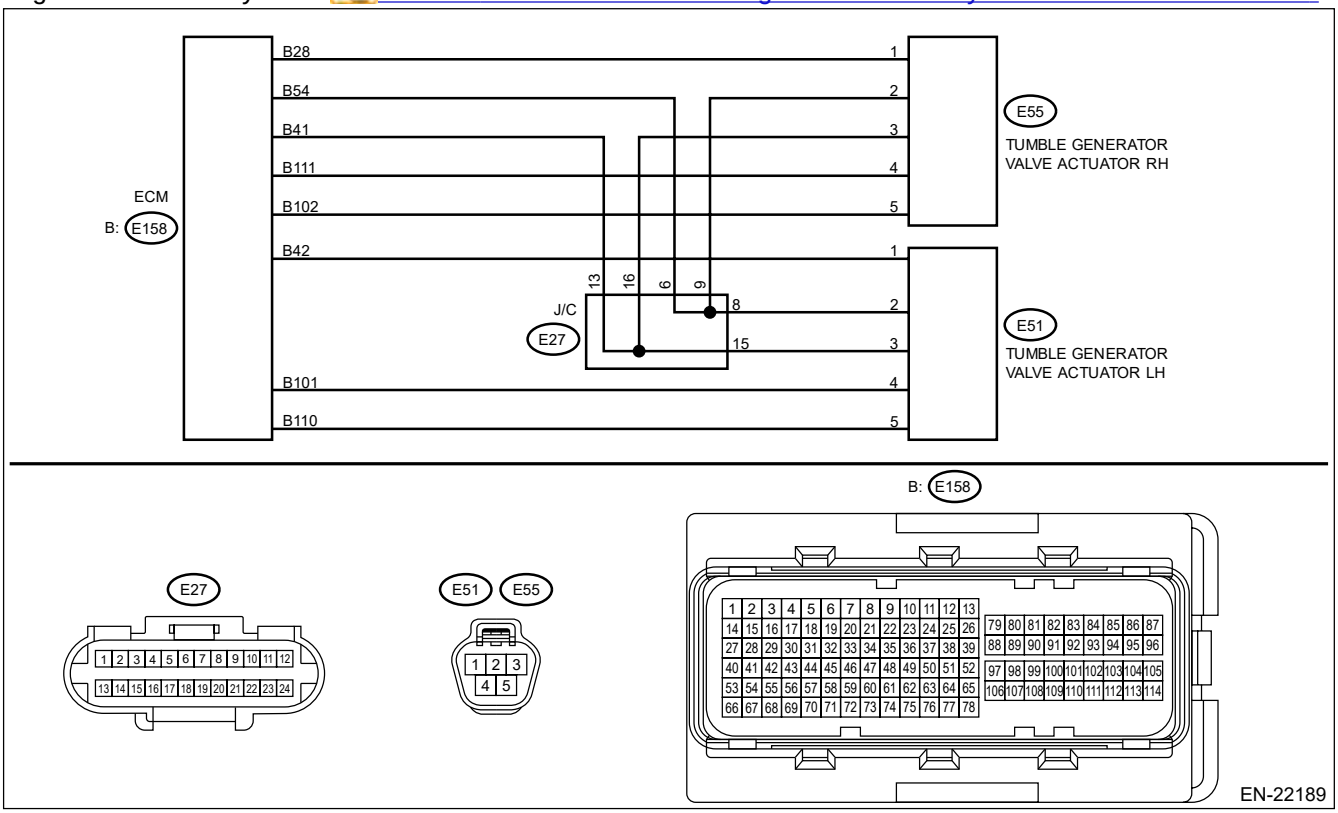
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2009 TGV CONTROL CIRCUIT LOW BANK 1

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

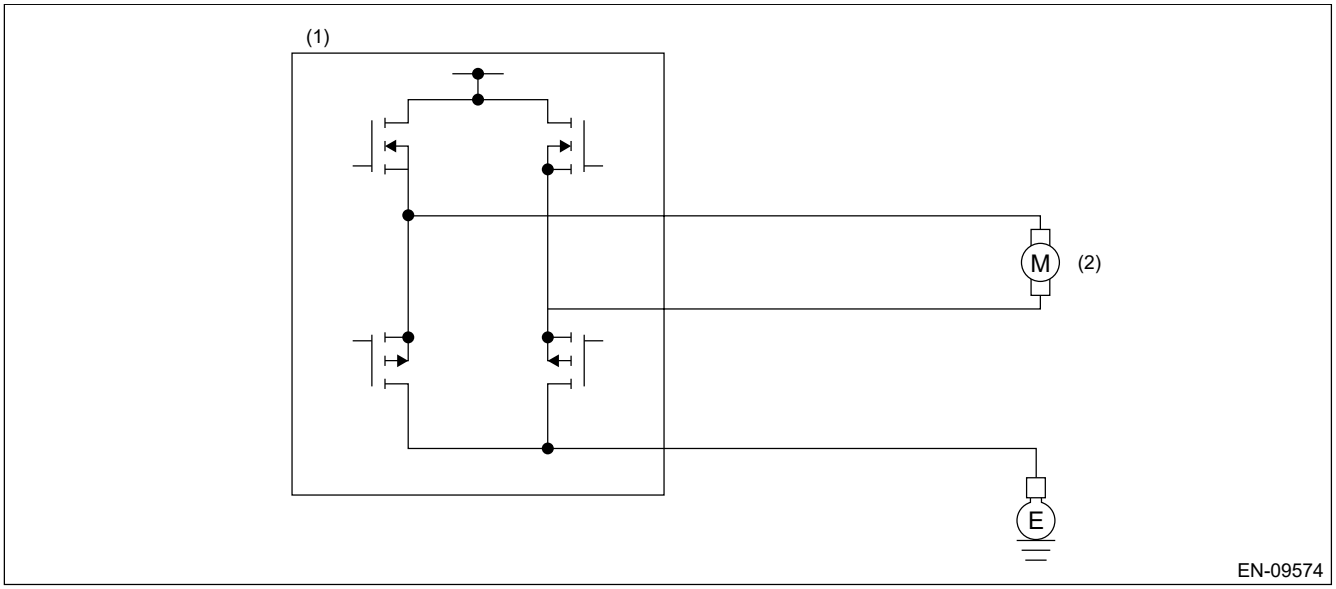
1. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 111 (+) — Chassis ground (−):

(E158) No. 102 (+) — Chassis ground (−):



Is the voltage 5 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator RH connector.
No	Replace the tumble generator valve actuator RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve Actuator.

1. OUTLINE OF DIAGNOSIS

Detect the short circuit of tumble generator valve motor.
Judge as NG when the overcurrent signal is sent from IC after tumble generator valve driving IC diagnosis.

2. COMPONENT DESCRIPTION

(1) Engine control module (ECM) (2) Tumble generator valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Tumble generator valve driving signal	Open or Closed

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Overcurrent signal from tumble generator valve drive IC	ON

Time needed for diagnosis: 0.96 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

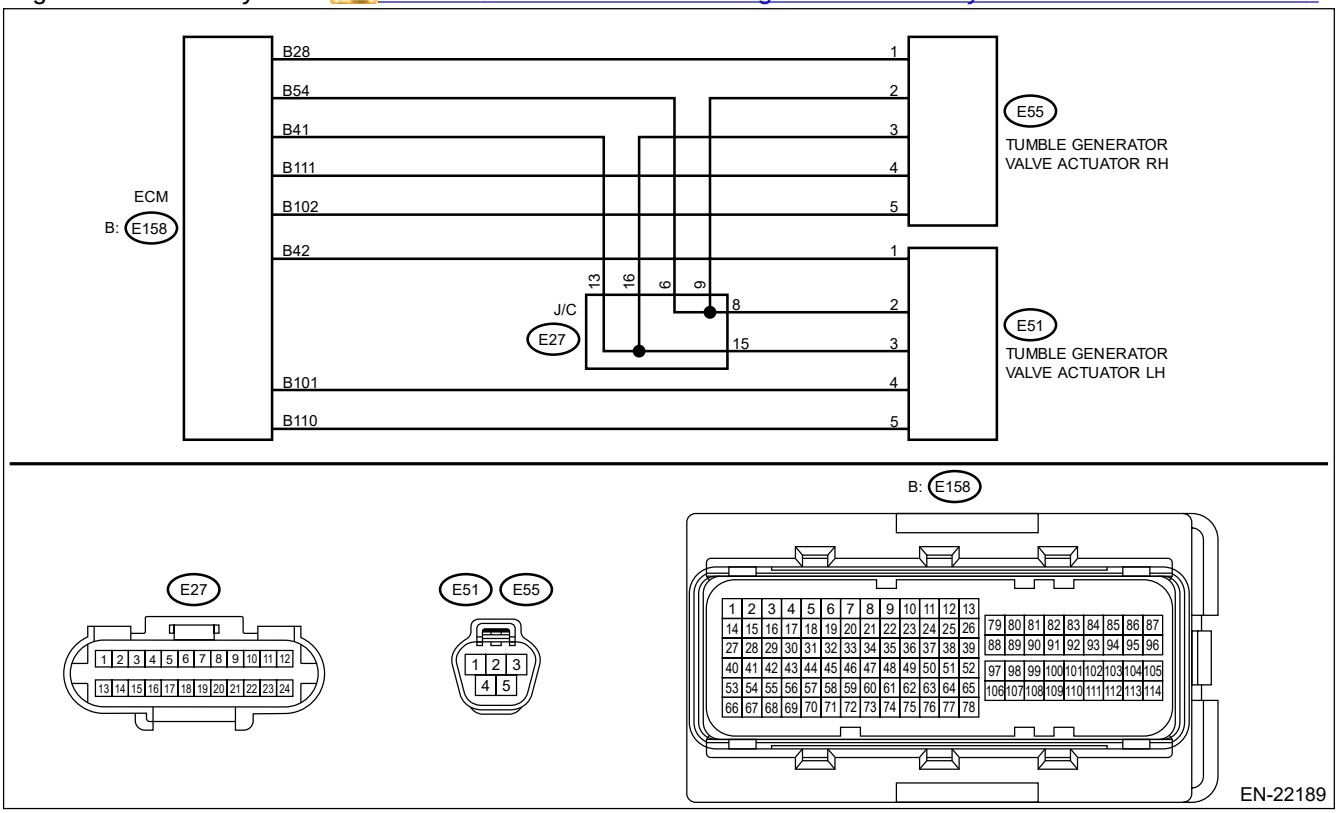
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2011 TGV CONTROL CIRCUIT/OPEN BANK 2

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY LH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from tumble generator valve assembly LH.
4. Measure the resistance of harness between ECM connector and tumble generator valve assembly LH connector.

Connector & terminal

(E158) No. 110 — (E51) No. 5:

(E158) No. 101 — (E51) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and tumble generator valve assembly LH connector** • **Poor contact of coupling connector**

2. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY LH (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 110 — Chassis ground:

(E158) No. 101 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit to ground in harness between ECM connector and tumble generator valve assembly LH connector.

3. CHECK FOR POOR CONTACT.

Check for poor contact of tumble generator valve assembly LH connector.

Is there poor contact of the tumble generator valve assembly LH connector?

Yes	Repair the poor contact of tumble generator valve assembly LH connector.
No	Replace the tumble generator valve assembly LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Note:

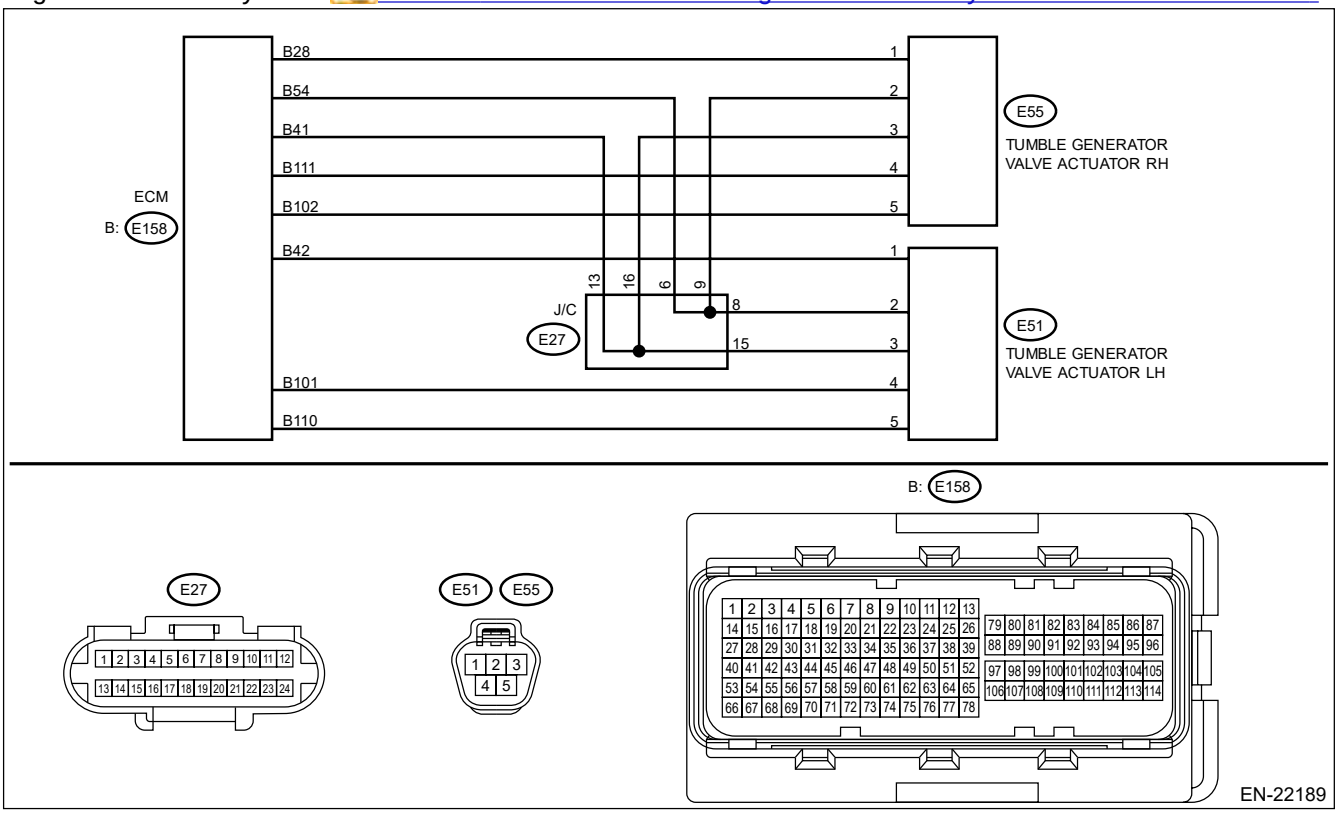
For the detection standard, refer to DTC P2008. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2008 TGV CONTROL CIRCUIT/OPEN BANK 1.

DTC P2012 TGV CONTROL CIRCUIT LOW BANK 2

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E158) No. 101 (+) — Chassis ground (−):
   (E158) No. 110 (+) — Chassis ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator LH connector.
No	Replace the tumble generator valve actuator LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve Actuator.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P2009. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2009 TGV CONTROL CIRCUIT LOW BANK 1.

DTC P2016 TGV POSITION SENSOR/SWITCH CIRCUIT LOW BANK 1

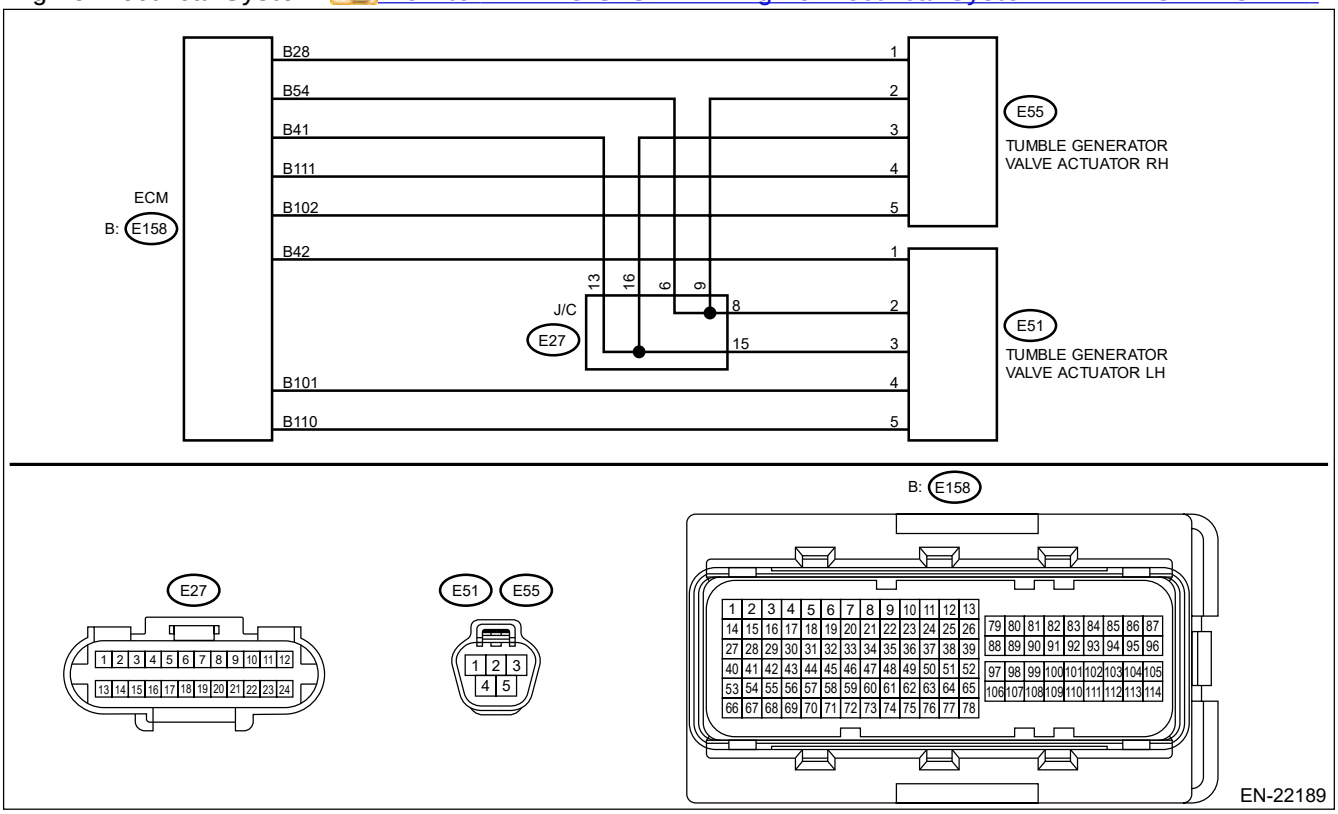
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [TGV Position Sensor R].

Data Monitor

Note:
For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [TGV Position Sensor R] less than 0.2 V?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK POWER SUPPLY OF TUMBLE GENERATOR VALVE ACTUATOR RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from tumble generator valve actuator RH.
3. Turn the ignition switch to ON.
4. Measure the voltage between tumble generator valve actuator RH connector and engine ground.
   Connector & terminal
   (E55) No. 3 (+) — Engine ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and tumble generator valve actuator RH connector** • **Poor contact of ECM connector**

3. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and tumble generator valve actuator RH connector.

Connector & terminal

(E158) No. 28 — (E55) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit in harness between ECM connector and tumble generator valve actuator RH connector.

4. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH.

Measure the resistance between the ECM connector and engine ground.

Connector & terminal

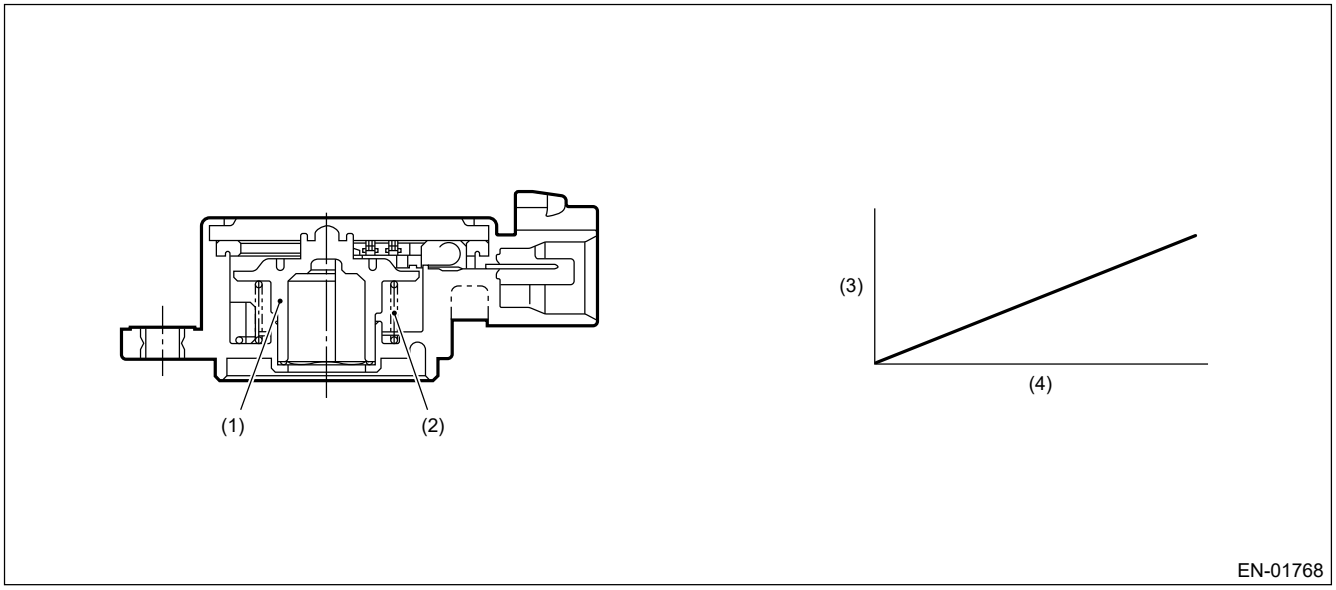
(E158) No. 28 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and tumble generator valve actuator RH connector.

5. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and tumble generator valve actuator RH connector.



Is there poor contact of ECM or the tumble generator valve actuator RH connector?

Yes	Repair the poor contact of ECM or tumble generator valve actuator RH connector.
No	Replace the tumble generator valve actuator RH.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of tumble generator valve position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Rotor
(2) Return spring
(3) Voltage (V)
(4) Tumble generator valve opening angle (°)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	Less than 0.211 V

Time needed for diagnosis: 500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2017 TGV POSITION SENSOR/SWITCH CIRCUIT HIGH BANK 1

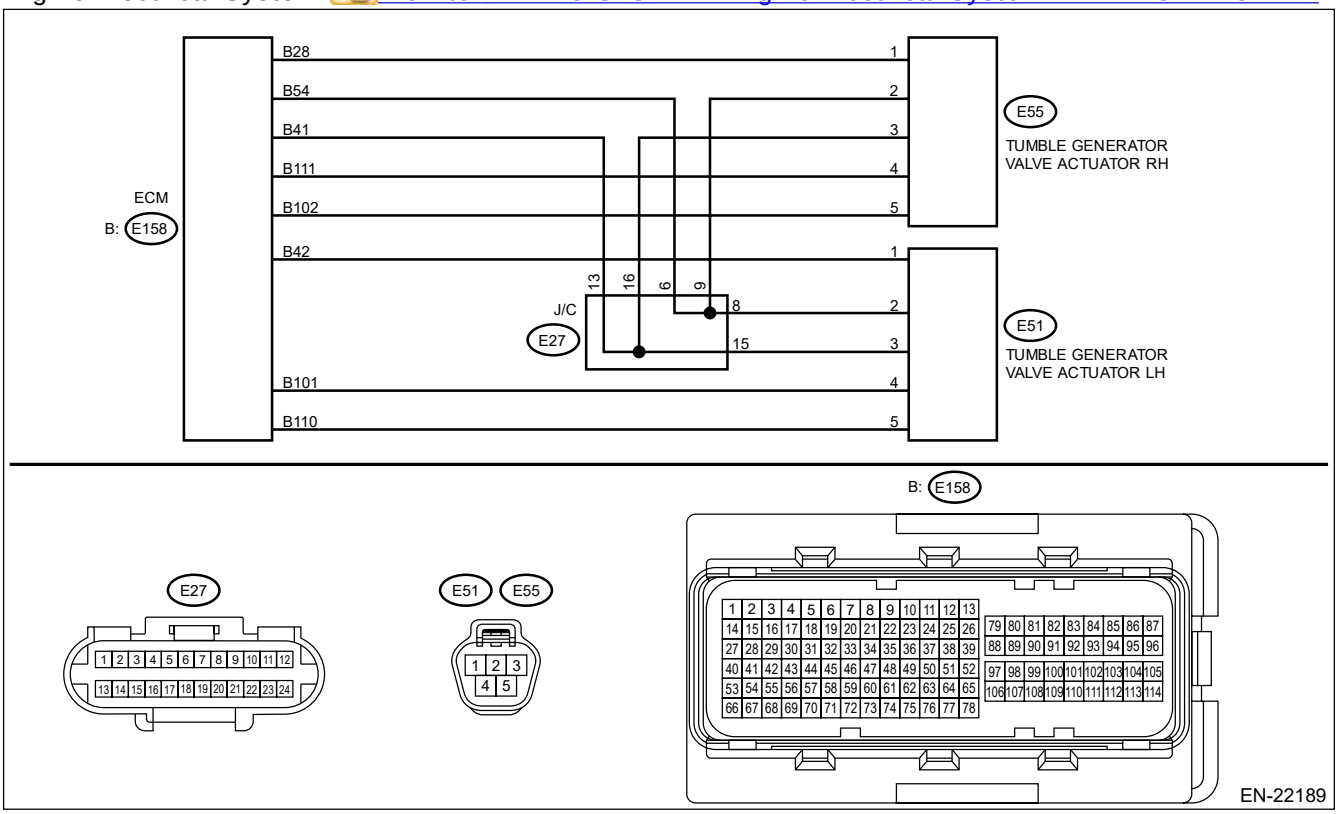
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [TGV Position Sensor R].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [TGV Position Sensor R] 5 V or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from tumble generator valve actuator RH.
3. Start the engine.
4. Using the Subaru Select Monitor, read the value in [TGV Position Sensor R].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [TGV Position Sensor R] 5 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator RH connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH (OPEN).

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between tumble generator valve actuator RH connector and engine ground.

Connector & terminal

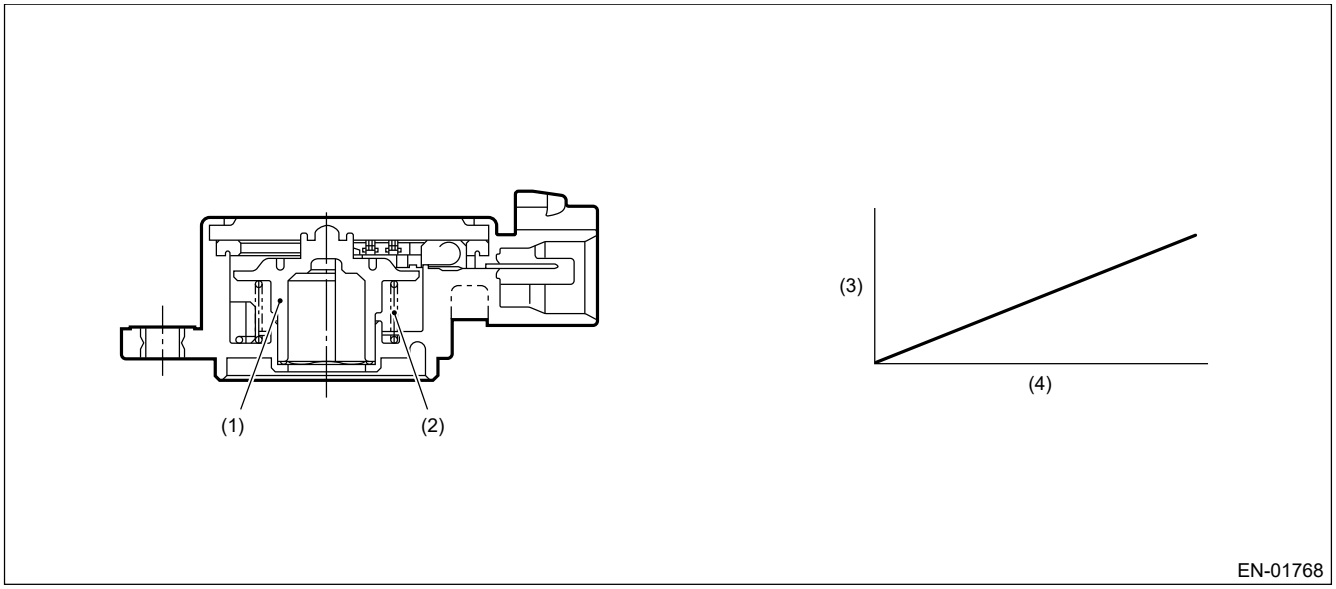
(E55) No. 2 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and tumble generator valve actuator RH connector** • **Poor contact of ECM connector**

4. CHECK FOR POOR CONTACT.

Check for poor contact of tumble generator valve actuator RH connector.



Is there poor contact of the tumble generator valve actuator RH connector?

Yes	Repair the poor contact of tumble generator valve actuator RH connector.
No	Replace the tumble generator valve actuator RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve Actuator.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of tumble generator valve position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Rotor
(2) Return spring
(3) Voltage (V)
(4) Tumble generator valve opening angle (°)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	4.76V or more

Time needed for diagnosis: 500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2021 TGV POSITION SENSOR/SWITCH CIRCUIT LOW BANK 2

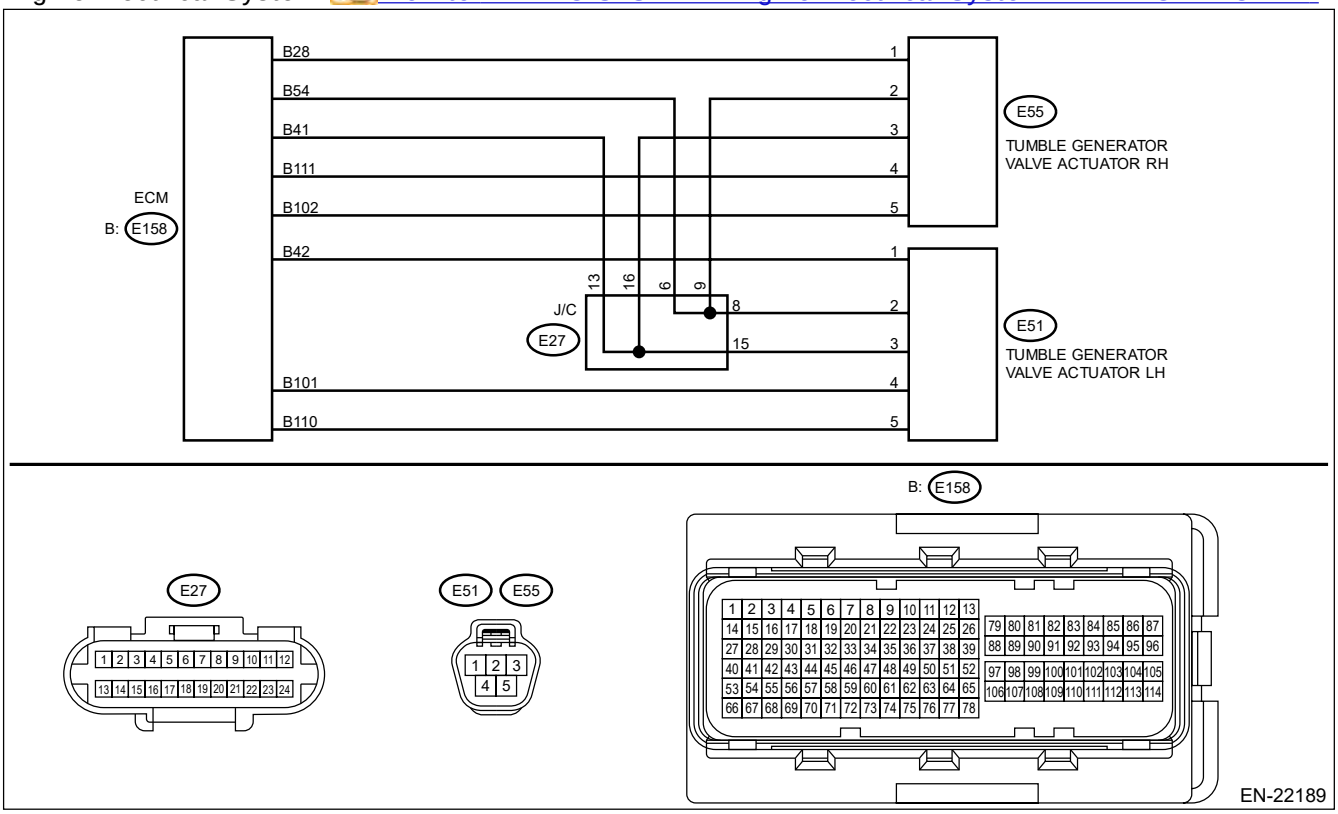
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [TGV Position Sensor L].

Note:
For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [TGV Position Sensor L] less than 0.2 V?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK POWER SUPPLY OF TUMBLE GENERATOR VALVE ACTUATOR LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from tumble generator valve actuator LH.
3. Turn the ignition switch to ON.
4. Measure the voltage between tumble generator valve actuator LH connector and engine ground.
   Connector & terminal
   (E51) No. 3 (+) — Engine ground (-):

Is the voltage 4.5 V or more?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and tumble generator valve actuator LH connector** • **Poor contact of ECM connector**

3. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and tumble generator valve actuator LH connector.

Connector & terminal

(E158) No. 42 — (E51) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit in harness between ECM connector and tumble generator valve actuator LH connector.

4. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH (SHORT TO GROUND).

Measure the resistance between the ECM connector and engine ground.

Connector & terminal

(E158) No. 42 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and tumble generator valve actuator LH connector.

5. CHECK FOR POOR CONTACT.

Check for poor contact of ECM and tumble generator valve actuator LH connector.

Is there poor contact of ECM or the tumble generator valve actuator LH connector?

Yes	Repair the poor contact of ECM or tumble generator valve actuator LH connector.
No	Replace the tumble generator valve actuator LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P2016. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2016 TGV POSITION SENSOR/SWITCH CIRCUIT LOW BANK 1.

DTC P2022 TGV POSITION SENSOR/SWITCH CIRCUIT HIGH BANK 2

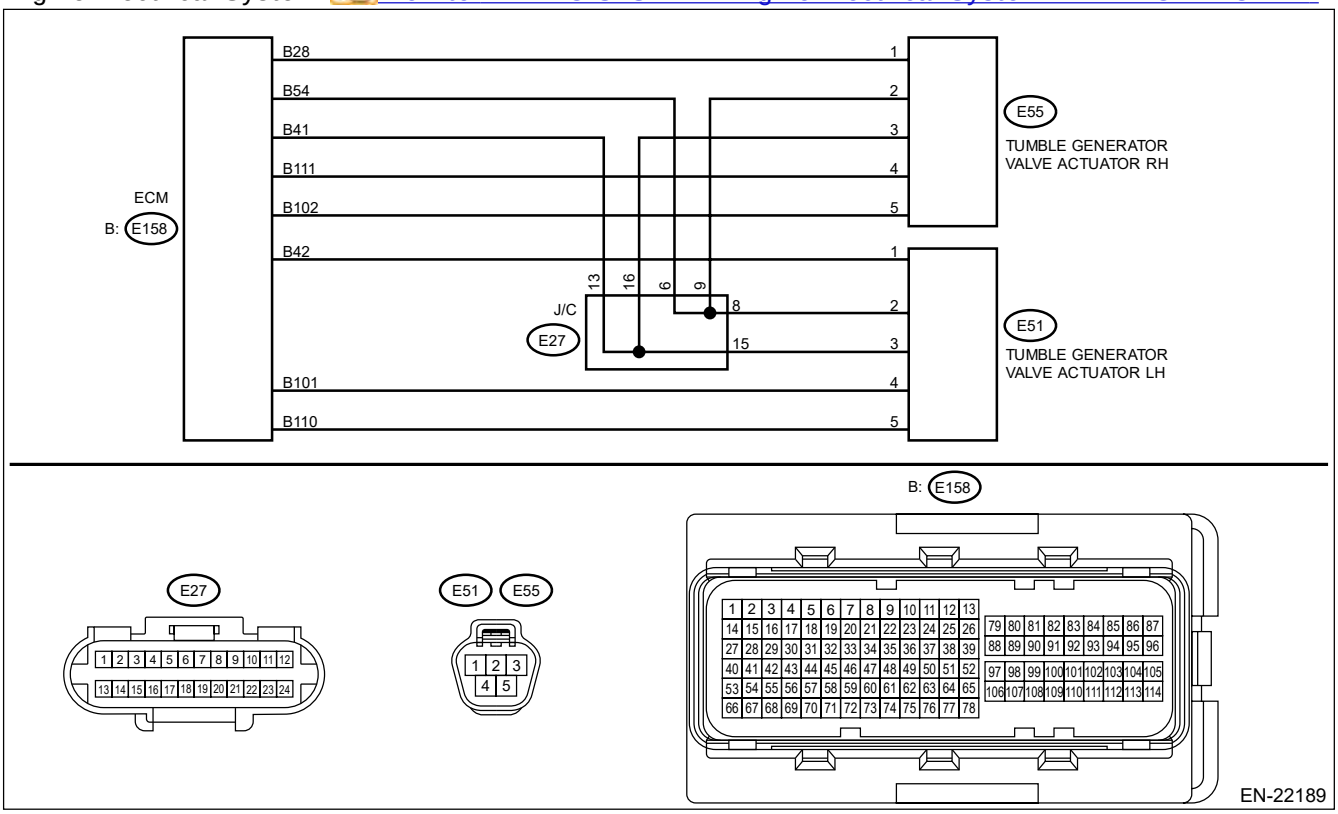
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Engine stall
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

1. Start the engine.
2. Using the Subaru Select Monitor, read the value in [TGV Position Sensor L].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [TGV Position Sensor L] 5 V or more?

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from tumble generator valve actuator LH.
3. Start the engine.
4. Using the Subaru Select Monitor, read the value in [TGV Position Sensor L].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [TGV Position Sensor L] 5 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator LH connector.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH (OPEN).

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between tumble generator valve actuator LH connector and engine ground.

Connector & terminal

(E51) No. 2 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and tumble generator valve actuator LH connector** • **Poor contact of ECM connector**

4. CHECK FOR POOR CONTACT.

Check for poor contact of tumble generator valve actuator LH connector.

Is there poor contact of the tumble generator valve actuator LH connector?

Yes	Repair the poor contact of tumble generator valve actuator LH connector.
No	Replace the tumble generator valve actuator LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Tumble Generator Valve.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P2017. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2017 TGV POSITION SENSOR/SWITCH CIRCUIT HIGH BANK 1.

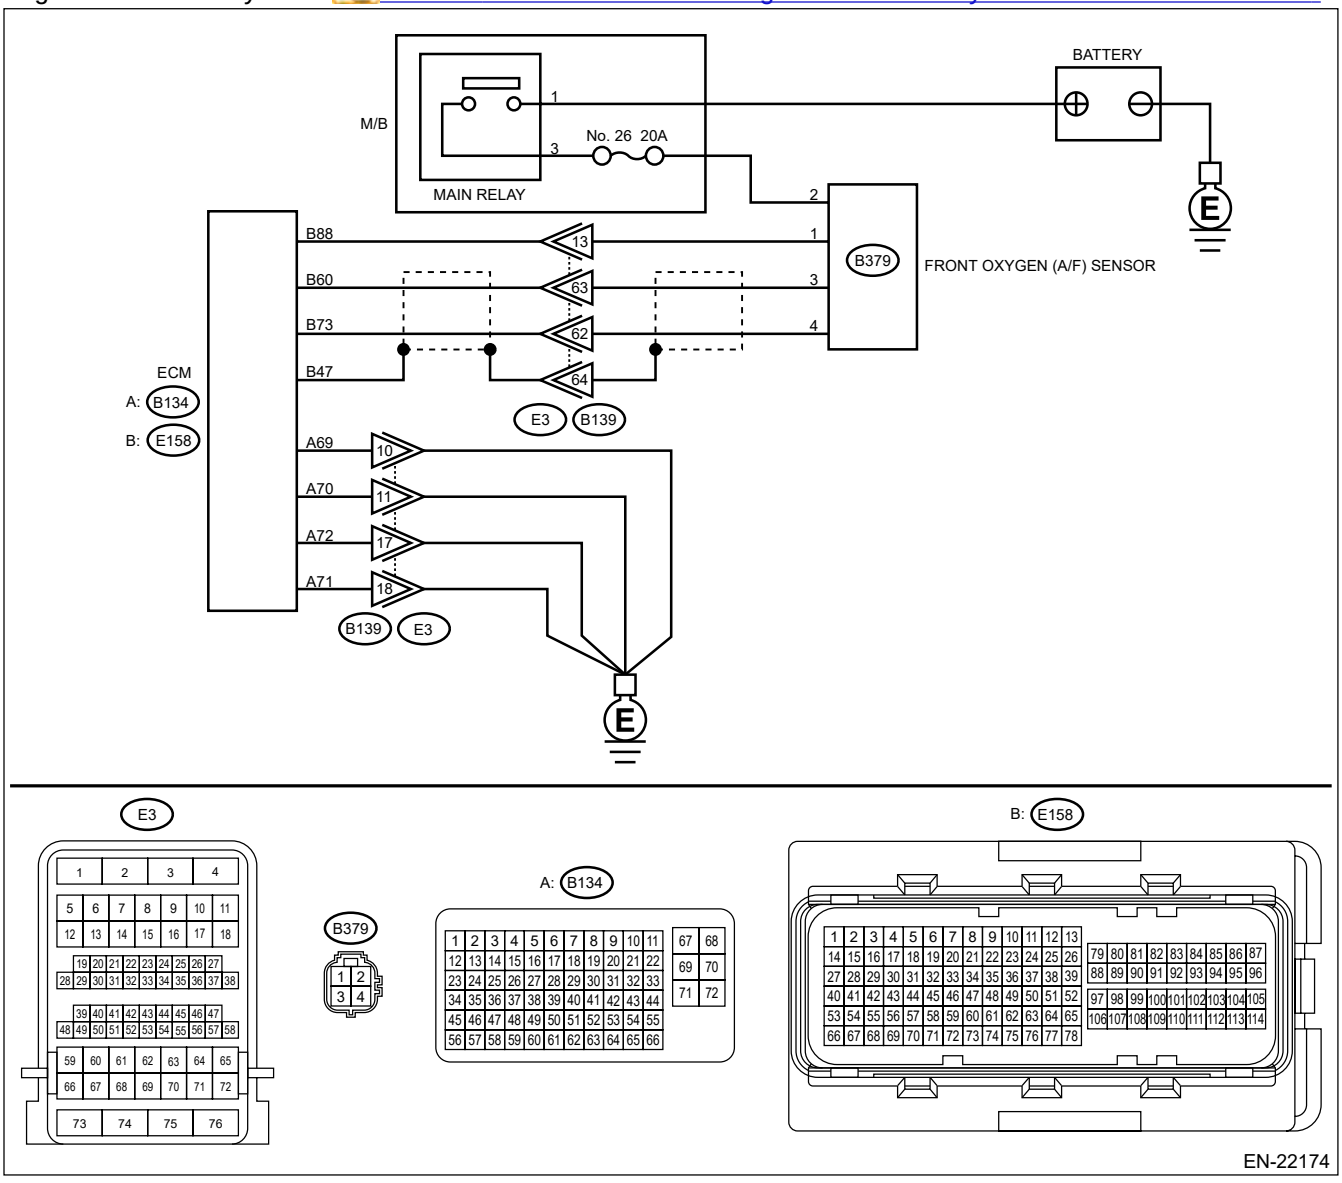
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2096 POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1

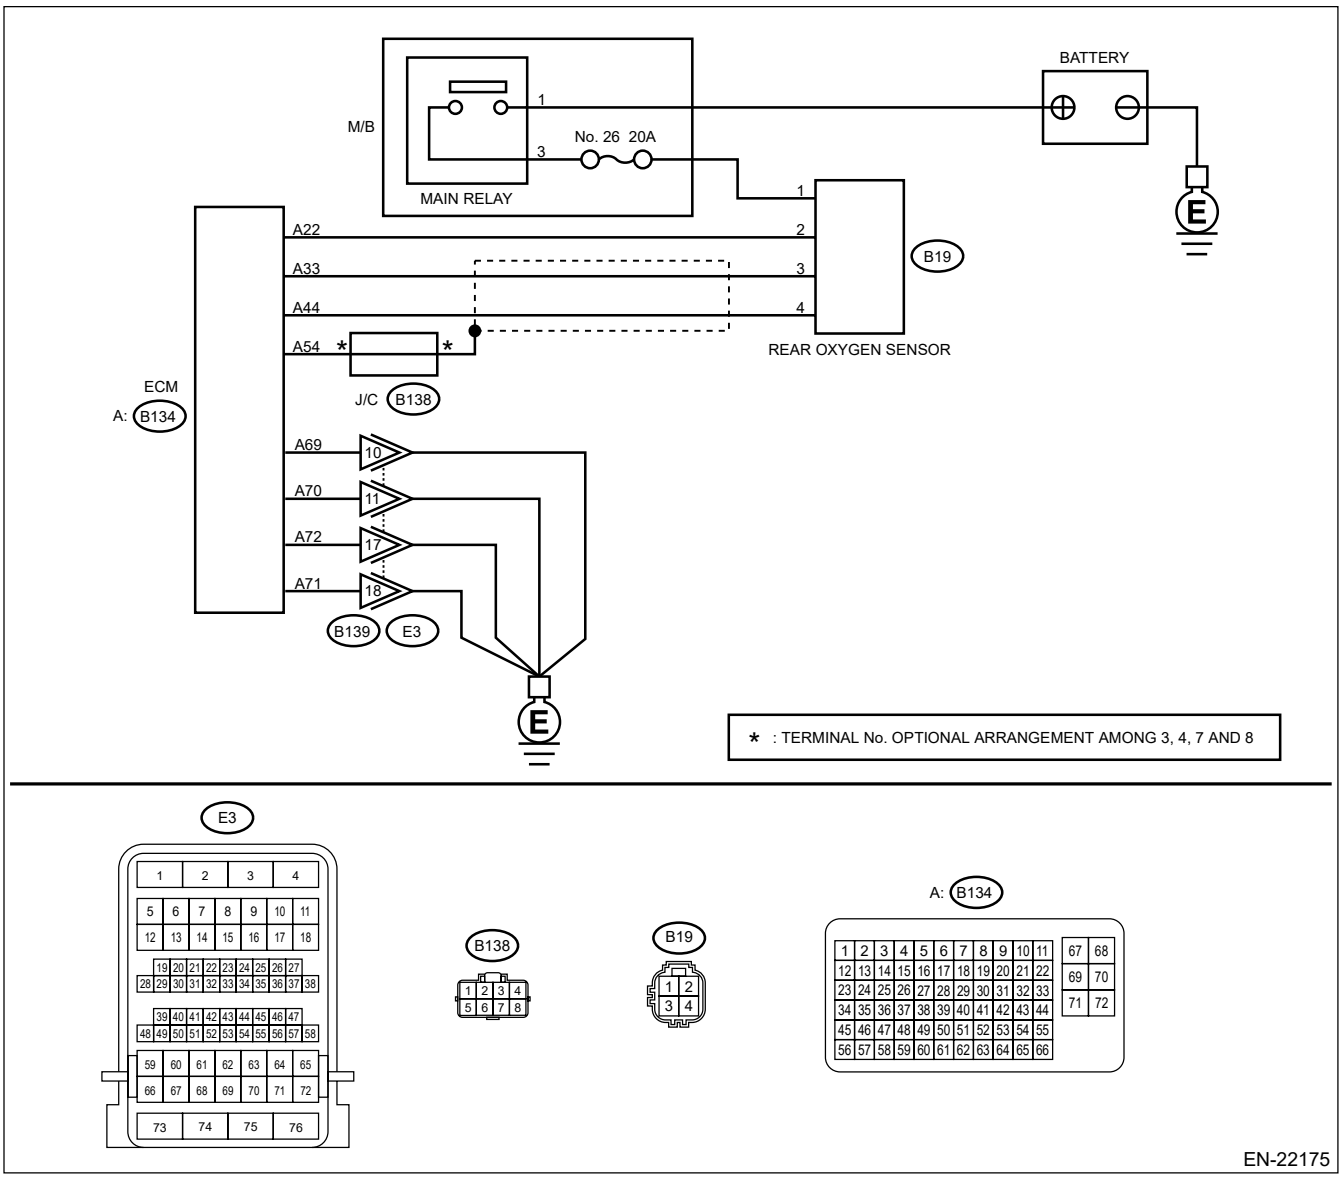
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P2096 displayed? (Current malfunction)

Yes	Go to 2.
No	Check DTC using “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the front oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from front oxygen (A/F) sensor.
4. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

   Connector & terminal

   (E158) No. 60 — (B379) No. 3:

   (E158) No. 73 — (B379) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.

4. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 — Chassis ground:

(E158) No. 73 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

5. CHECK OUTPUT SIGNAL FOR ECM.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.

   Connector & terminal

   (B379) No. 3 (+) — Chassis ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 7.
No	Go to 6.

6. CHECK OUTPUT SIGNAL FOR ECM.

Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.

Connector & terminal

(B379) No. 4 (+) — Chassis ground (−):

Is the voltage 4.95 V or more?

Yes	Go to 7.
No	Go to 8.

7. CHECK OUTPUT SIGNAL FOR ECM (SHORT TO POWER SUPPLY).

Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.

Connector & terminal

(B379) No. 3 (+) — Chassis ground (−):

(B379) No. 4 (+) — Chassis ground (−):

Is the voltage 8 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the poor contact of ECM connector.

8. CHECK EXHAUST SYSTEM.

Check exhaust system parts.

Are there holes or loose bolts on exhaust system?

Yes	Repair the exhaust system.
No	Go to 9.

9. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system.
No	Go to 10.

10. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.

1. Connect the front oxygen (A/F) sensor connector.
2. Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
   Caution:
   Before attaching/detaching a fuel pressure gauge, release the fuel pressure.

Is the measured value 350 — 450 kPa (3.5—4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 11.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

11. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.] 75°C (167°F) or more?

Yes	Go to 12.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

12. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Using the Subaru Select Monitor or a general scan tool, read the value of [Mass Air Flow].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of intake air amount 2.0—5.0 g/s (0.26—0.66 lb/m)?

Yes	Go to 13.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

13. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Open the front hood.
6. Measure the ambient temperature.
7. Using the Subaru Select Monitor or a general scan tool, read the value of [Intake Air Temp.].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Subtract ambient temperature from [Intake Air Temp.]. Is the obtained value −10 — 50°C (−18 — 90°F)?

Yes	Go to 14.
No	Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

14. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum)
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **Depress the clutch pedal. (MT model)**
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.490 V or more?

Yes	Go to 15.
No	Go to 16.

15. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **Depress the clutch pedal. (MT model)**
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.250 V or less?

Yes	Go to 17.
No	Go to 16.

16. CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the rear oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 18.

17. CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12] kept at 0.250 V or less for 5 minutes or more?

Yes	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Front Oxygen (A/F) Sensor.
No	Go to 18.

18. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

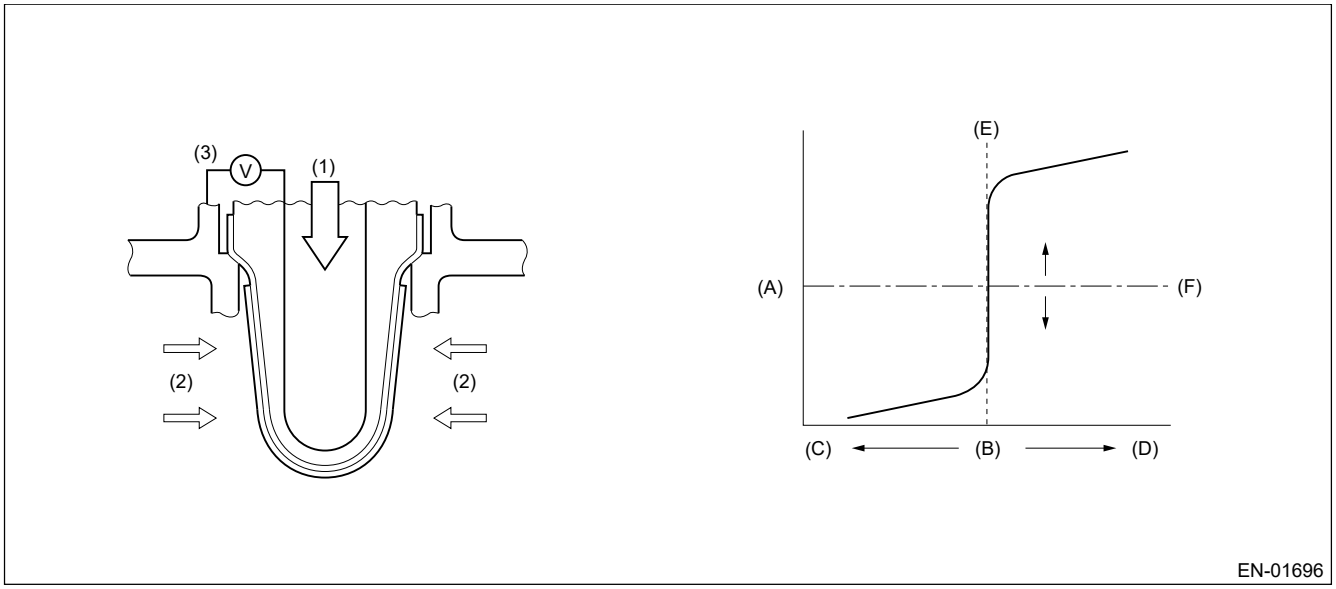
1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from rear oxygen sensor.
4. Measure the resistance of harness between ECM connector and rear oxygen sensor connector.
   Connector & terminal
   (B134) No. 33 — (B19) No. 3:
   (B134) No. 44 — (B19) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 19.
No	Measure the resistance of harness between ECM connector and rear oxygen sensor connector.

19. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between rear oxygen sensor connector and chassis ground.
   Connector & terminal
   (B19) No. 3 (+) — Chassis ground (−):



Is the voltage 0.2—0.5 V?

Yes	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and rear oxygen sensor connector** • **Poor contact of ECM connector**

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.
Control the sub feedback learning and judge as NG when the learning value is in the lean zone.

2. COMPONENT DESCRIPTION

(A) Electromotive force
(B) Air fuel ratio
(C) Lean
(D) Rich
(E) Theoretical air fuel ratio
(F) Comparative voltage
(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Amount of intake air	10g/s (0.35oz/s) or more
Load change every 0.5 engine revs.	Less than 0.02g/rev (0oz/rev)
Estimated temperature of the rear oxygen sensor element	500°C (932°F) or more
Stoichiometric integrated intake air amount	320g (11.29oz) or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value (Except for PZEV model)	Less than −0.038 (CVT model) Less than −0.0415 (MT model)
Sub feedback learning value (PZEV model)	Less than −0.038

Time needed for diagnosis: 1s × 1time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

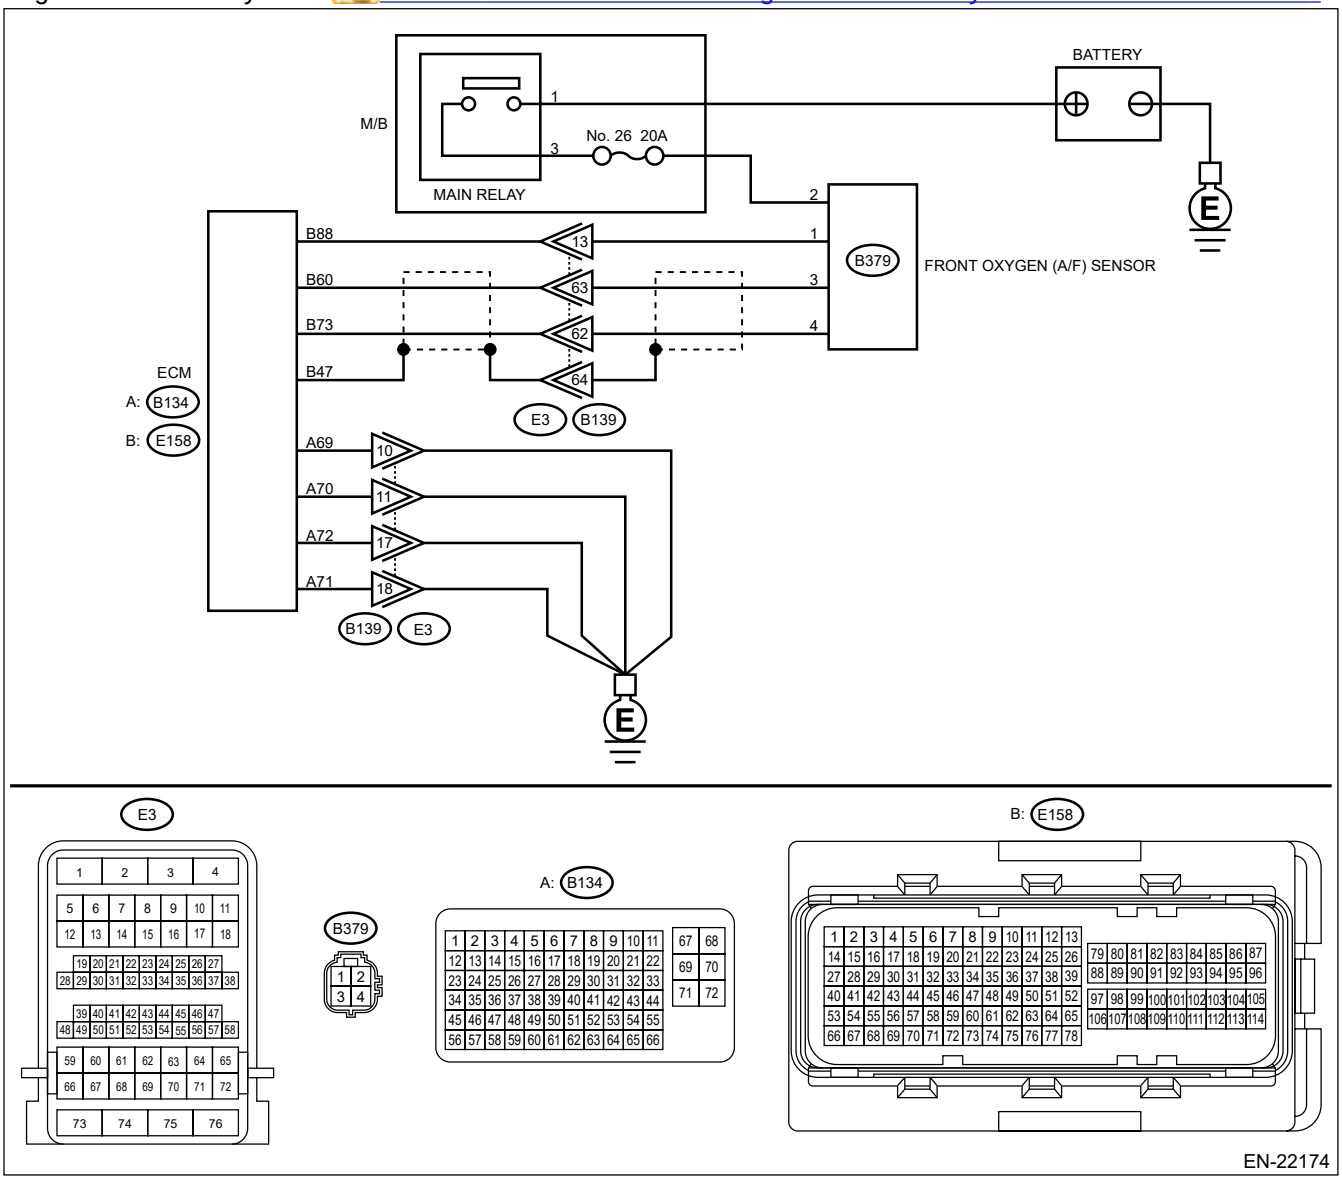
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1

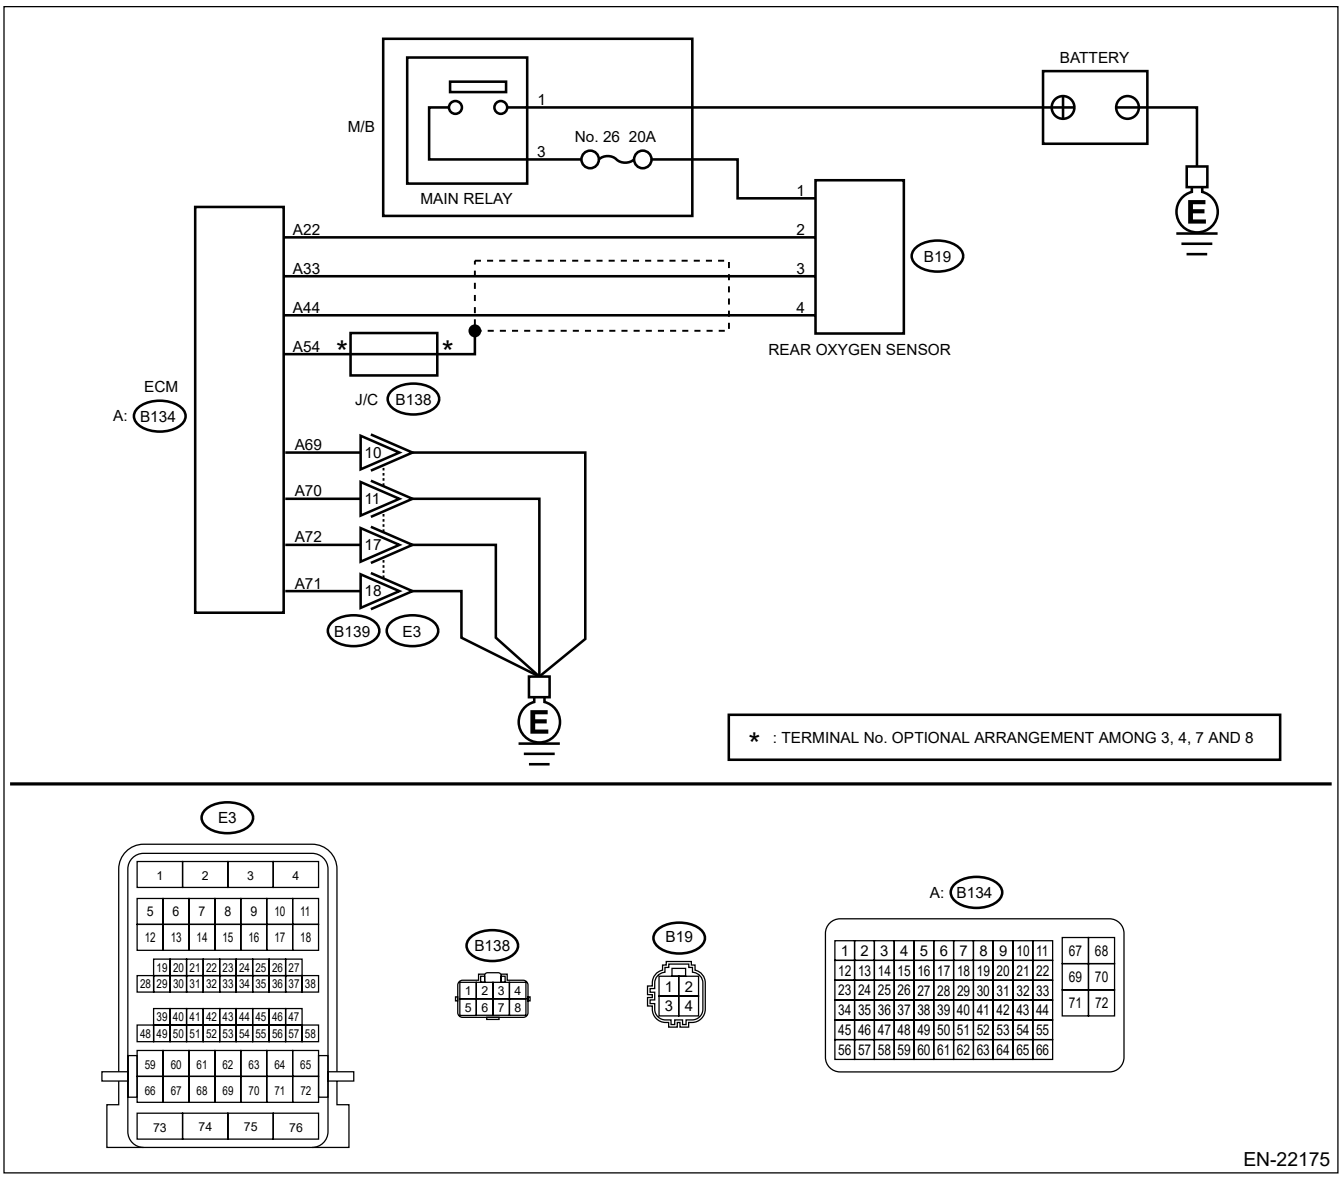
DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P2097 displayed? (Current malfunction)

Yes	Go to 2.
No	Check DTC using “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the front oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from front oxygen (A/F) sensor.
4. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

   Connector & terminal

   (E158) No. 60 — (B379) No. 3:

   (E158) No. 73 — (B379) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.

4. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 — Chassis ground:

(E158) No. 73 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

5. CHECK OUTPUT SIGNAL FOR ECM.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.

   Connector & terminal

   (B379) No. 3 (+) — Chassis ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 7.
No	Go to 6.

6. CHECK OUTPUT SIGNAL FOR ECM.

Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.

Connector & terminal

(B379) No. 4 (+) — Chassis ground (−):

Is the voltage 4.95 V or more?

Yes	Go to 7.
No	Go to 8.

7. CHECK OUTPUT SIGNAL FOR ECM.

Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.

Connector & terminal

(B379) No. 3 (+) — Chassis ground (−):

(B379) No. 4 (+) — Chassis ground (−):

Is the voltage 8 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the poor contact of ECM connector.

8. CHECK EXHAUST SYSTEM.

Check exhaust system parts.

Are there holes or loose bolts on exhaust system?

Yes	Repair the exhaust system.
No	Go to 9.

9. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system.
No	Go to 10.

10. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.

1. Connect the front oxygen (A/F) sensor connector.
2. Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
   Caution:
   Release fuel pressure before removing the fuel pressure gauge.

Is the measured value 350 — 450 kPa (3.5—4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 11.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

11. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.] 75°C (167°F) or more?

Yes	Go to 12.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

12. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Using the Subaru Select Monitor or a general scan tool, read the value of [Mass Air Flow].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Mass Air Flow]2.0—5.0 g/s (0.26—0.66 lb/m)?

Yes	Go to 13.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

13. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Open the front hood.
6. Measure the ambient temperature.
7. Using the Subaru Select Monitor or a general scan tool, read the value of [Intake Air Temp.].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Subtract ambient temperature from [Intake Air Temp.]. Is the obtained value −10 — 50°C (−18 — 90°F)?

Yes	Go to 14.
No	Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

14. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum)
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **Depress the clutch pedal. (MT model)**
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.490 V or more?

Yes	Go to 15.
No	Go to 16.

15. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **Depress the clutch pedal. (MT model)**
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.250 V or less?

Yes	Go to 17.
No	Go to 16.

16. CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the rear oxygen sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 18.

17. CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the voltage of [Oxygen sensor #12] kept at 0.8 V or more for 5 minutes or more?

Yes	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Front Oxygen (A/F) Sensor.
No	Go to 18.

18. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

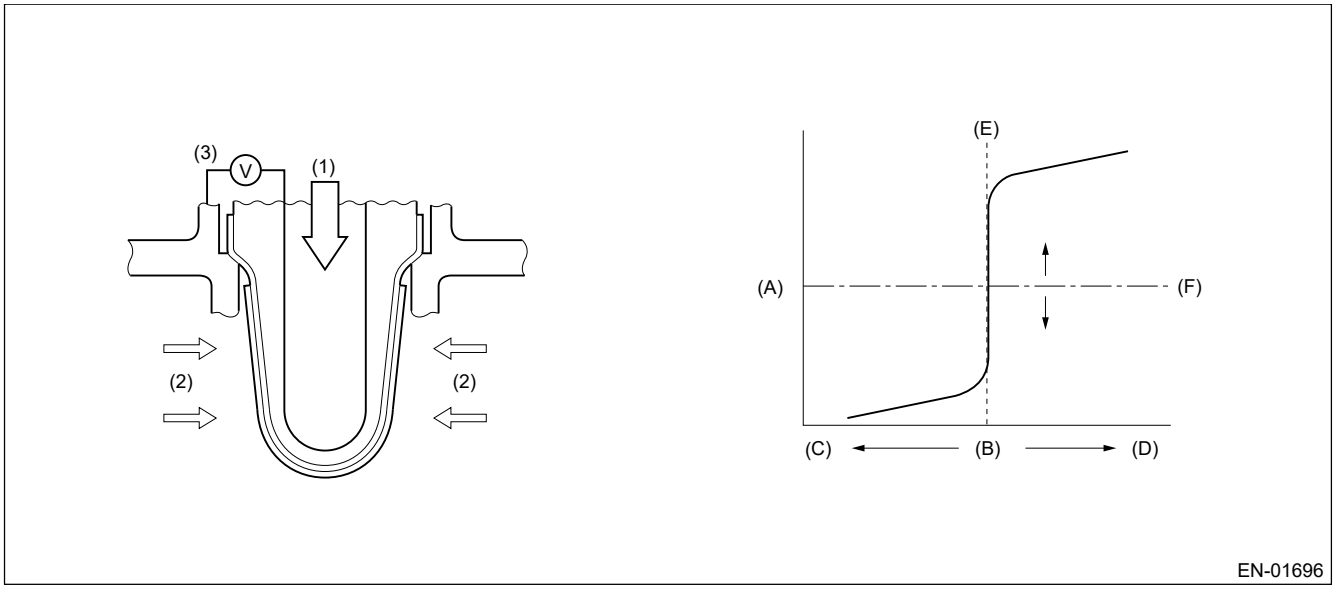
1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from rear oxygen sensor.
4. Measure the resistance of harness between ECM connector and rear oxygen sensor connector.
   Connector & terminal
   (B134) No. 33 — (B19) No. 3:
   (B134) No. 44 — (B19) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 19.
No	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.

19. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between rear oxygen sensor connector and chassis ground.
   Connector & terminal
   (B19) No. 3 (+) — Chassis ground (−):



Is the voltage 0.2—0.5 V?

Yes	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and rear oxygen sensor connector** • **Poor contact of ECM connector**

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.
Sub feedback learning is being performed. When the learning value goes to the rich side, judge as NG.

2. COMPONENT DESCRIPTION

(A) Electromotive force
(B) Air fuel ratio
(C) Lean
(D) Rich
(E) Theoretical air fuel ratio
(F) Comparative voltage
(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Amount of intake air	10g/s (0.35oz/s) or more
Load change every 0.5 engine revs.	Less than 0.02g/rev (0oz/rev)
Estimated temperature of the rear oxygen sensor element	500°C (932°F) or more
Stoichiometric integrated intake air amount	320g (11.29oz) or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value (Except for PZEV model)	0.033 or more (CVT model) 0.032 or more (MT model)
Sub feedback learning value (PZEV model)	0.033 or more

Time needed for diagnosis: 1s× 1time(s)

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE

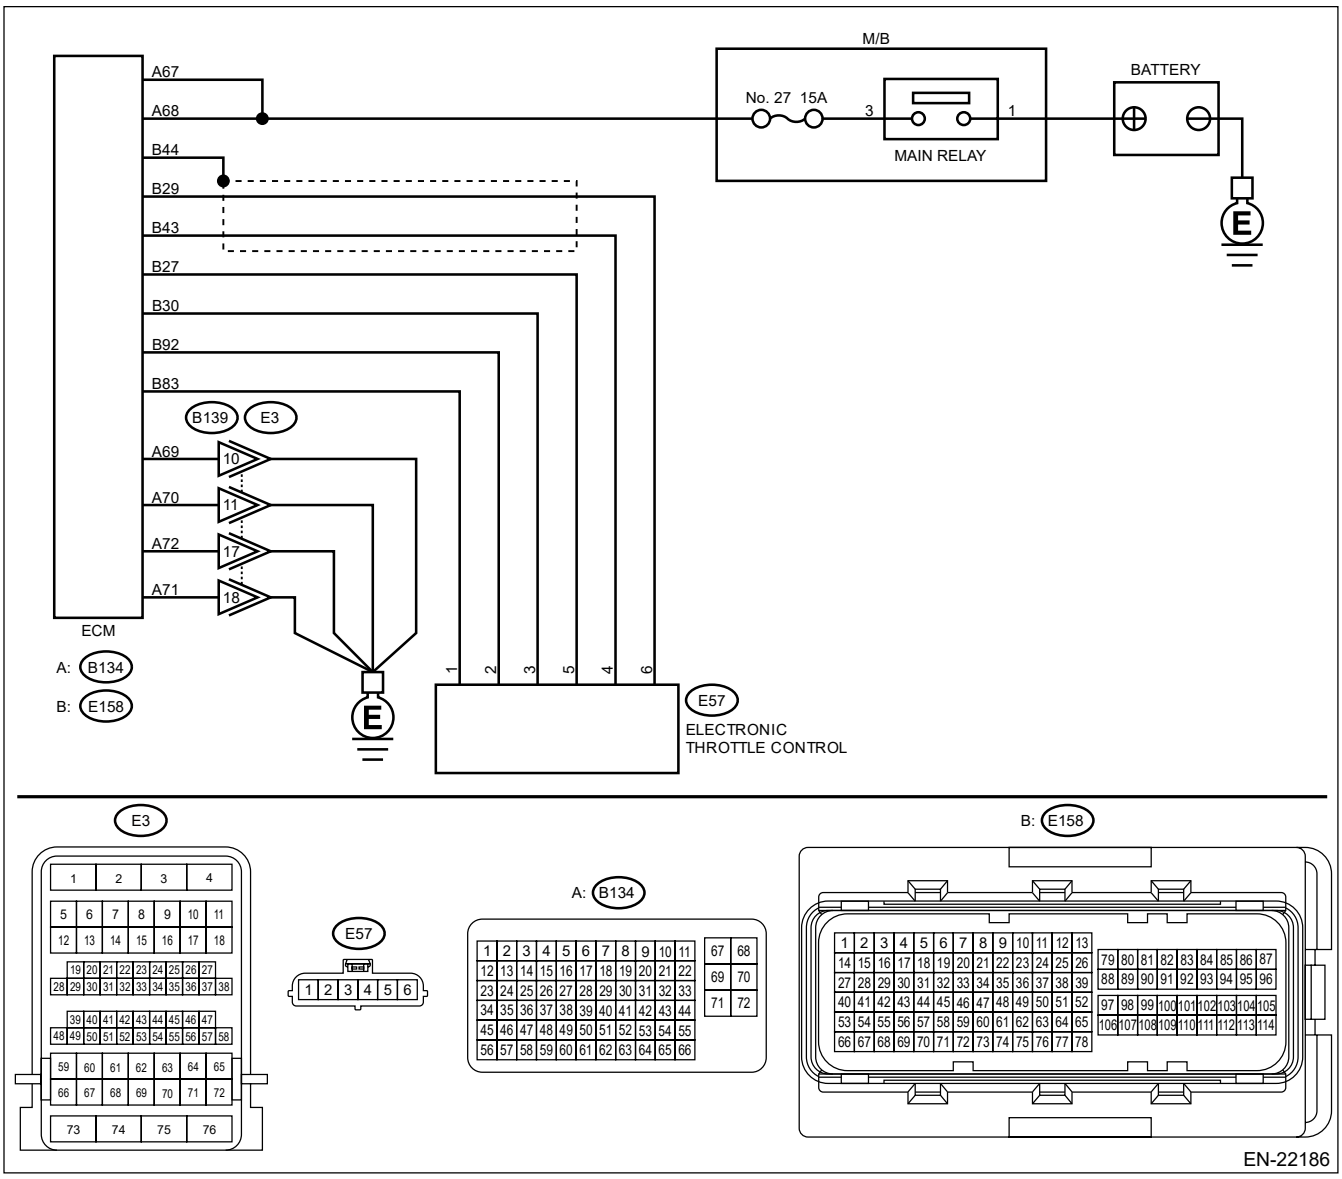
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance
- Engine stall

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 27 — Chassis ground:
(E158) No. 29 — Chassis ground:
(E158) No. 29 — (E158) No. 44:
(E158) No. 43 — Chassis ground:
(E158) No. 43 — (E158) No. 44:

Is the resistance 1 MΩ or more?

Yes	Go to 2.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

2. CHECK THE SHORT CIRCUIT INSIDE ECM (SHORT TO GROUND).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 6 — Engine ground:
(E57) No. 4 — Engine ground:

Is the resistance 200 kΩ or more?

Yes	Go to 3.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

3. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and electronic throttle control connector.

Connector & terminal

(E158) No. 29 — (E57) No. 6:

(E158) No. 43 — (E57) No. 4:

(E158) No. 30 — (E57) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

4. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 5.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground** • **Poor contact of ECM connector**

5. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 6 (+) — Engine ground (−):
   (E57) No. 4 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
No	Go to 6.

6. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT BETWEEN LINES).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 27 — (E158) No. 29:
   (E158) No. 27 — (E158) No. 43:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Repair the short circuit between lines in harness between ECM connector and electronic throttle control connector.

7. CHECK SENSOR OUTPUT.

1. Connect all connectors.
2. Start the engine and warm up completely.
3. Stop the engine, and then turn the ignition switch to ON (engine OFF).
4. Using the Subaru Select Monitor, read the value in [Main-Throttle Sensor].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Main-Throttle Sensor] 0.81 — 0.87 V?

Yes	Go to 8.
No	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

8. CHECK SENSOR OUTPUT.

Using the Subaru Select Monitor, read the value in [Sub-Throttle Sensor].

Data Monitor

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Sub-Throttle Sensor] 1.64 — 1.70 V?

Yes	Go to 9.
No	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

9. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from electronic throttle control.
4. Measure the resistance between ECM connector and electronic throttle control connector.
   Connector & terminal
   (E158) No. 92 — (E57) No. 2:
   (E158) No. 83 — (E57) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

10. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO POWER SUPPLY).

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 2 (+) — Engine ground (−):
   (E57) No. 1 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
No	Go to 11.

11. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 2 — Engine ground:

(E57) No. 1 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 12.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

12. CHECK HARNESS FOR ELECTRONIC THROTTLE CONTROL CONNECTOR (SHORT BETWEEN LINES).

Measure the resistance between electronic throttle control connectors.

Connector & terminal

(E57) No. 2 — (E57) No. 1:

Is the resistance 1 MΩ or more?

Yes	Go to 13.
No	Repair the short circuit in harness between ECM connector and electronic throttle control connector.

13. CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT (OPEN).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 — Chassis ground:
(B134) No. 70 — Chassis ground:
(B134) No. 71 — Chassis ground:
(B134) No. 72 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Go to 14.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

14. CHECK ELECTRONIC THROTTLE CONTROL.

Measure the resistance between electronic throttle control terminals.

Terminals

No. 2 — No. 1:

Is the resistance 50 Ω or less?

Yes	Go to 15.
No	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

15. CHECK ELECTRONIC THROTTLE CONTROL.

Move the throttle valve to the fully opened and fully closed positions with fingers.
Check that the valve returns to the specified position when releasing fingers.

Does the valve return to the specified position? Standard value: 3 mm (0.12 in) from fully closed position

Yes	Repair the poor contact of ECM connector.
No	Replace the electronic throttle control. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the motor current becomes large or drive circuit is heated.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage Electronic throttle control MOSFET output	6.2V or more ON

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Overcurrent signal from the electronic throttle control drive IC	ON

Time needed for diagnosis: 512ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2102 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stall

Caution:
Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P2102 displayed? (Current malfunction)

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Judge as NG when the electronic throttle control power is not supplied even when ECM sets the electric throttle control throttle power supply SW (MOSFET) to ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	11V or more
Electronic throttle control MOSSFET output	ON

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Motor power voltage	5V or less

Time needed for diagnosis: 352ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2103 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC P2103 displayed? (Current malfunction)

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS

Judge as NG when the electronic throttle control power is supplied even when ECM sets the electric throttle control power supply SW (MOSFET) to OFF.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more
Electronic throttle control MOSFET output	OFF

3. GENERAL DRIVING CYCLE

- When ignition switch ON → OFF
- Ignition switch OFF → ON (only after clearing memory)

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

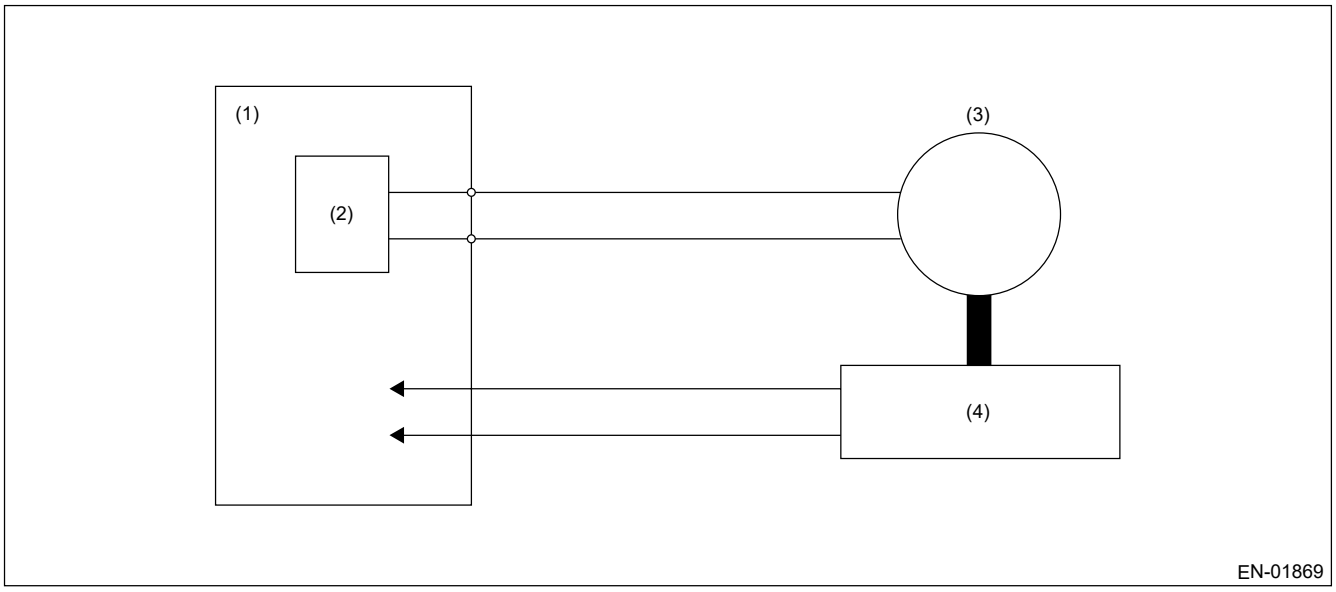
Judgment value

Malfunction Criteria	Threshold Value
Motor power voltage	5V or more

Time needed for diagnosis: 600ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2109 THROTTLE/PEDAL POSITION SENSOR "A" MINIMUM STOP PERFORMANCE



Note:

For the diagnostic procedure, refer to DTC P2101. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE.

1. OUTLINE OF DIAGNOSIS

Judge as NG when full close point learning cannot conducted or abnormal value is detected.

2. COMPONENT DESCRIPTION

(1) Engine control module (ECM) (3) Motor (4) Throttle position sensor
(2) Drive circuit

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis at full closed point learning.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

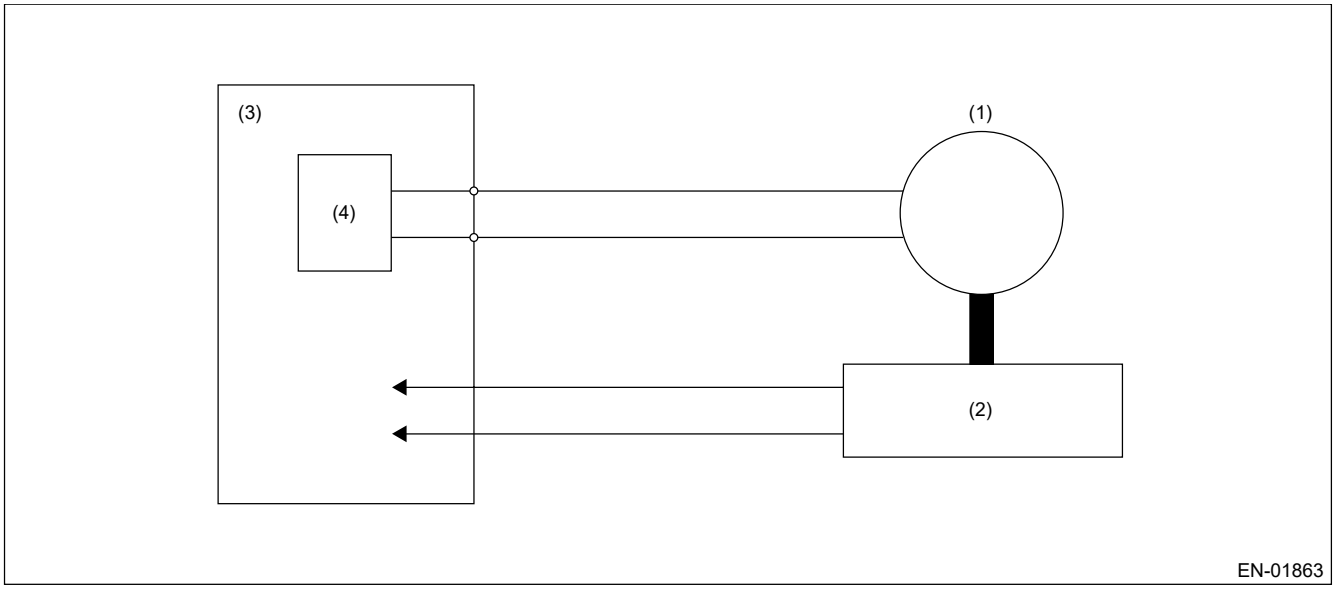
Judgment value

Malfunction Criteria	Threshold Value
Minimum stop position or Throttle opening angle when the ignition switch is ON – Throttle minimum stop position	Less than 10.036° or More than 19.964° Less than 1.07°

Time needed for diagnosis: 8ms — 80ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2119 THROTTLE ACTUATOR "A" CONTROL THROTTLE BODY RANGE/PERFORMANCE



Note:

For the diagnostic procedure, refer to DTC P2101. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the target opening angle and actual opening angle is mismatched or the current to motor is the specified duty or more for specified time continuously.

2. COMPONENT DESCRIPTION

(1) Motor
(2) Throttle position sensor
(3) Engine control module (ECM)
(4) Drive circuit

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6.2V or more
Electronic throttle control MOSFET output	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously when the electronic throttle control is operating.

5. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.

Diagnosis 1

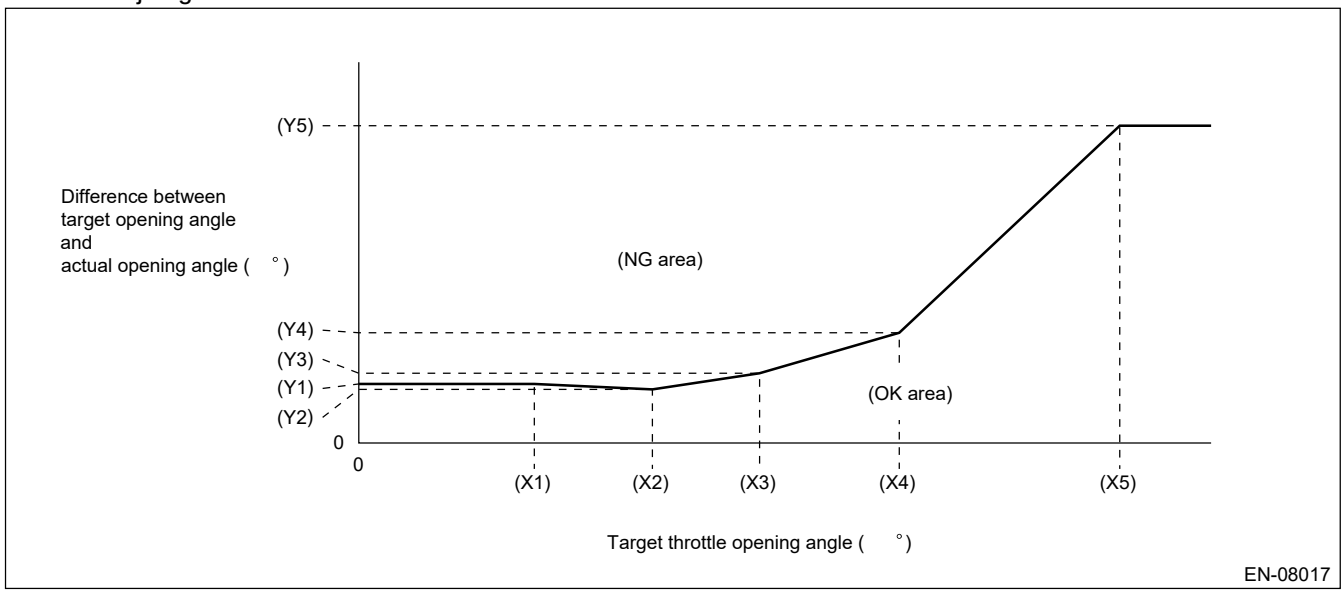
Judgment value

Malfunction Criteria	Threshold Value
Output duty to drive circuit	95% or more

Time needed for diagnosis:

- Engine speed ≥ 500rpm: 2000ms
- Engine speed < 500rpm: 5000ms

Diagnosis 2



Judgment value

Malfunction Criteria	Threshold Value
Difference between target opening angle and actual opening angle	Within NG range of **Details of judgment value**

Time needed for diagnosis:

- Engine speed ≥ 500rpm: Refer to **Details of judgment time**
- Engine speed < 500rpm: 5000ms

Details of judgment value

(X1) 6.915°
(X2) 11.565°
(X3) 15.785°
(X4) 21.285°
(X5) 29.965°
(Y1) 4.65°
(Y2) 4.22°
(Y3) 5.5°
(Y4) 8.68°
(Y5) 25°

Details of Judgment time

(X1) 8.049999237°
(X2) 9.5°
(X3) 14.5°
(X4) 23.5°
(Y1) 1000ms
(Y2) 400ms
(Y3) 304ms
(Y4) 248ms

Note:

Judgment time when actual opening angle < target opening angle is always 1000 milliseconds.

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT LOW

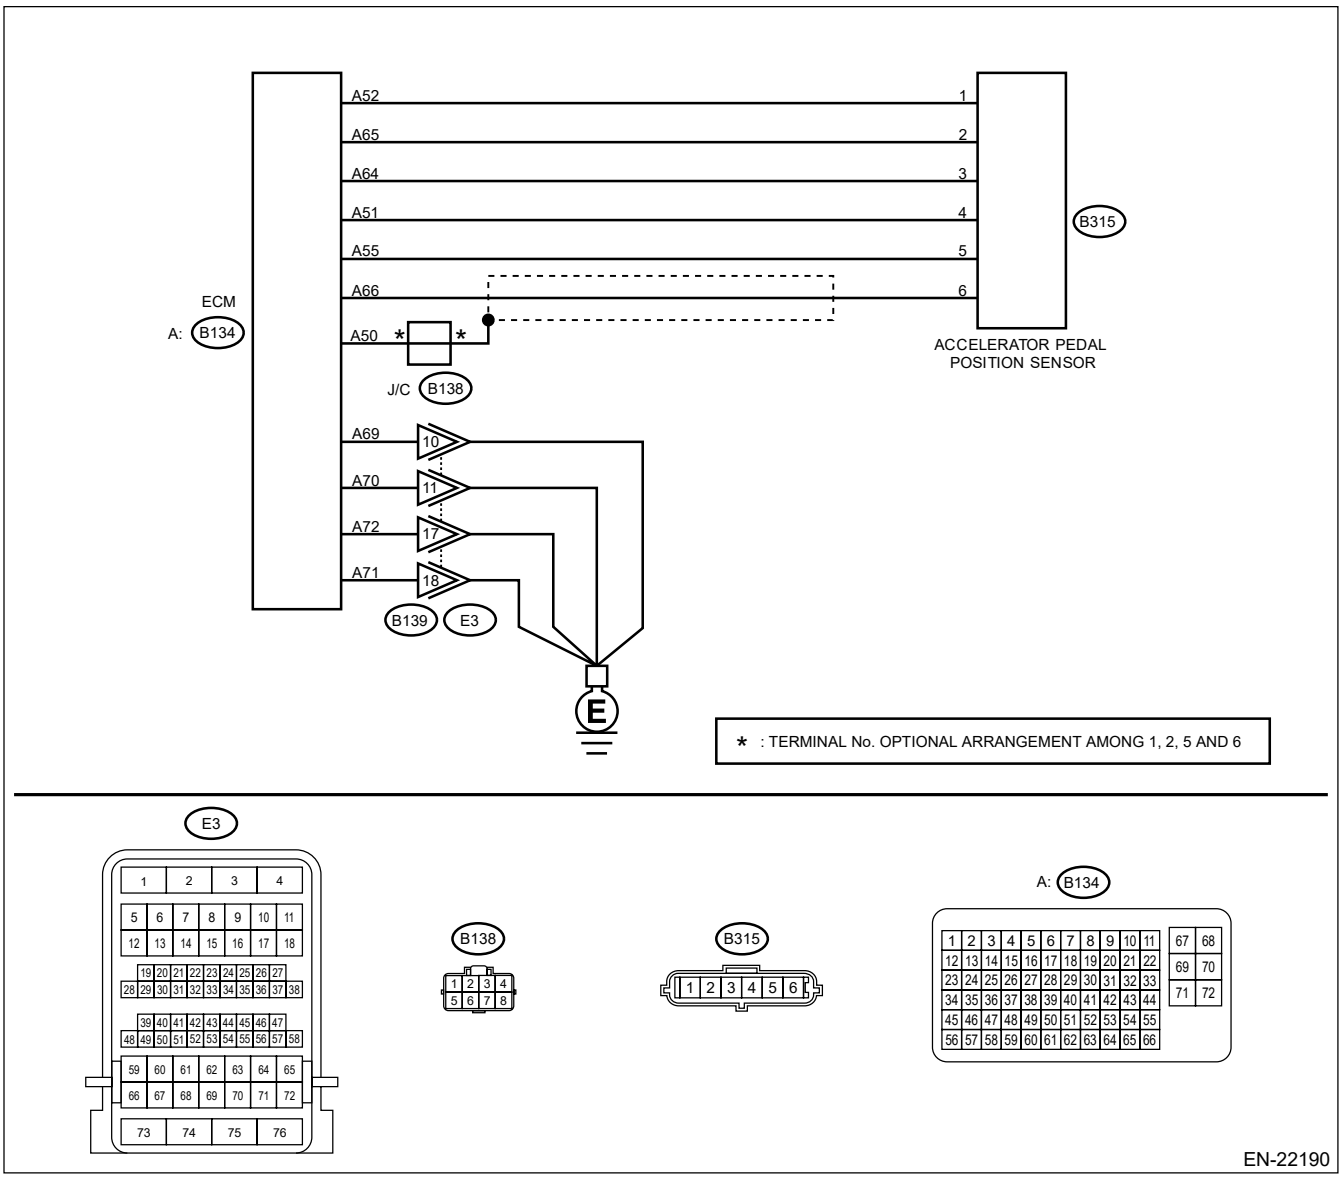
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the accelerator pedal position sensor.
4. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 51 — Chassis ground:
(B134) No. 66 — Chassis ground:
(B134) No. 66 — (B134) No. 50:

Is the resistance 1 MΩ or more?

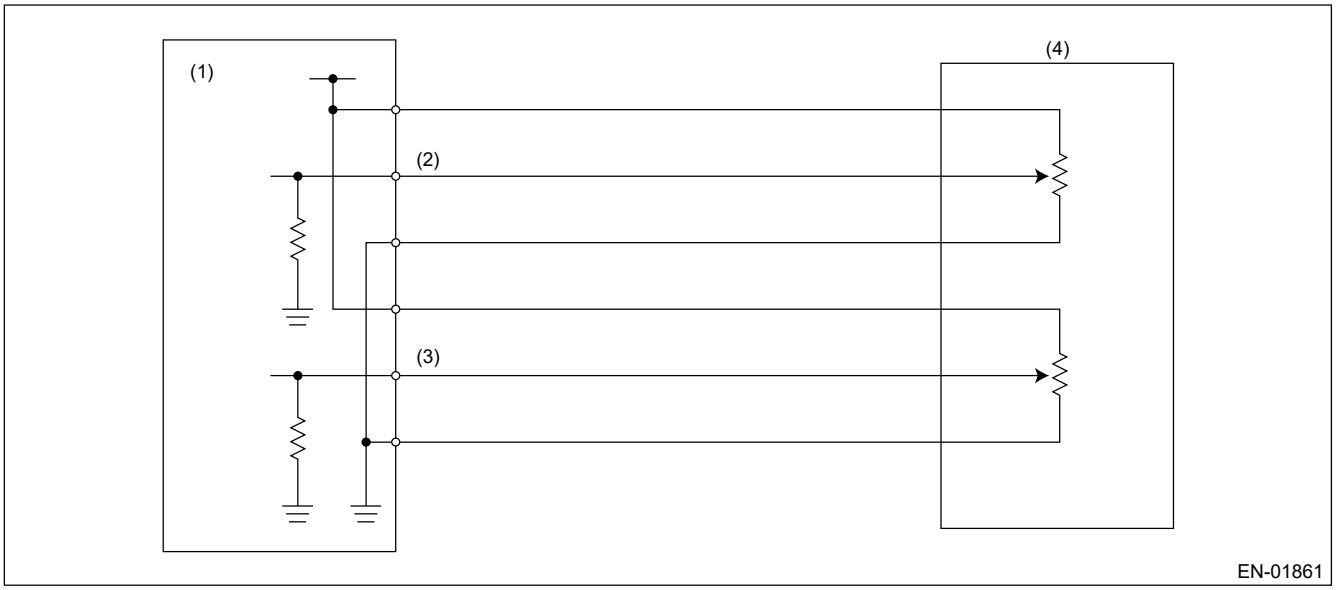
Yes	Go to 2.
No	Repair the short circuit to ground in harness between ECM connector and accelerator pedal position sensor connector. **Note:** **In this case, repair the following item:** • Short circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector

2. CHECK SHORT CIRCUIT INSIDE THE ECM.

1. Connect the connector to ECM.
2. Measure the resistance between accelerator pedal position sensor connector and chassis ground.

Connector & terminal

(B315) No. 6 — Chassis ground:



Is the resistance 1 MΩ or more?

Yes	Replace the accelerator pedal. Ref. to SPEED CONTROL SYSTEMS(H4DO)>Accelerator Pedal.
No	Repair the short circuit to ground in harness between ECM connector and accelerator pedal position sensor connector. Replace the ECM if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Engine control module (ECM)
(2) Accelerator pedal position sensor 1 signal
(3) Accelerator pedal position sensor 2 signal
(4) Accelerator pedal position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	Less than 0.306V

Time needed for diagnosis: 100ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

2. CHECK THE SHORT CIRCUIT INSIDE ECM (SHORT TO GROUND).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 6 — Engine ground:
(E57) No. 4 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

3. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR (OPEN).

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and electronic throttle control connector.

Connector & terminal

(E158) No. 29 — (E57) No. 6:

(E158) No. 43 — (E57) No. 4:

(E158) No. 30 — (E57) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between ECM connector and electronic throttle control connector.

4. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR (OPEN).

1. Connect the connector to ECM.
2. Measure the resistance between electronic throttle control connector and engine ground.

Connector & terminal

(E57) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 5.
No	Repair the open circuit in harness between ECM connector and engine ground.

5. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR (SHORT TO POWER SUPPLY).

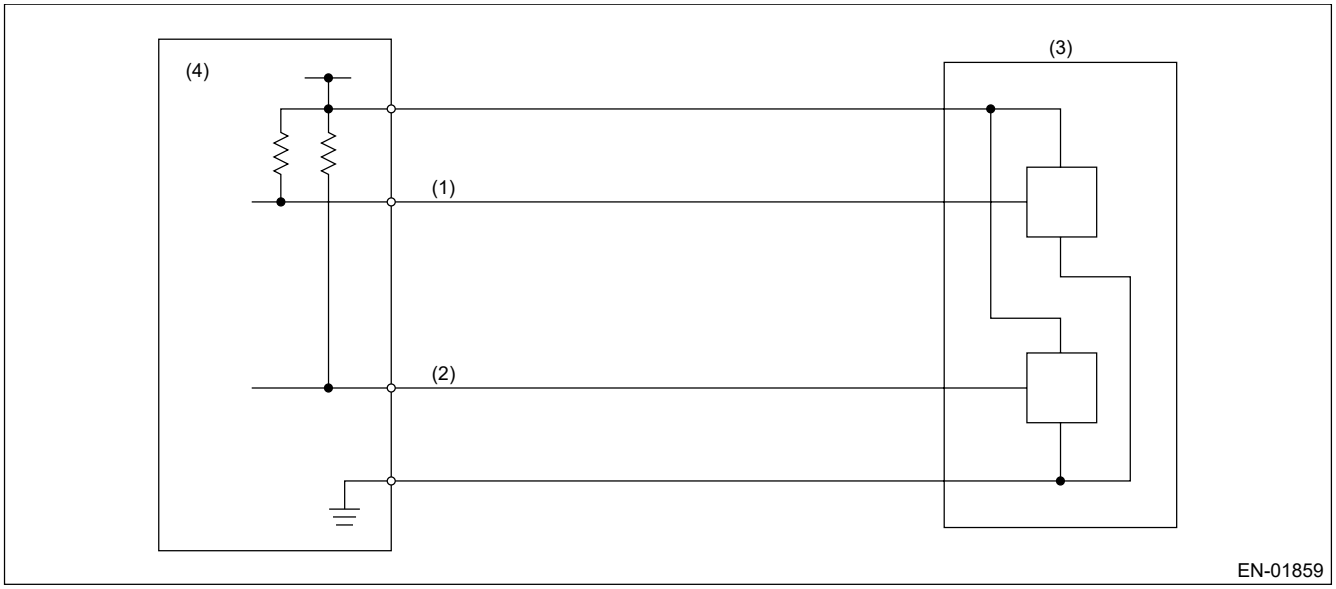
1. Turn the ignition switch to ON.
2. Measure the voltage between electronic throttle control connector and engine ground.
   Connector & terminal
   (E57) No. 6 (+) — Engine ground (−):
   (E57) No. 4 (+) — Engine ground (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
No	Go to 6.

6. CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR (SHORT BETWEEN LINES).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors.
   Connector & terminal
   (E158) No. 27 — (E158) No. 29:
   (E158) No. 27 — (E158) No. 43:



Is the resistance 1 MΩ or more?

Yes	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Throttle Body.
No	Repair the short circuit between lines in harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the signal level of throttle position sensor 1 is different from the throttle position sensor 2.

2. COMPONENT DESCRIPTION

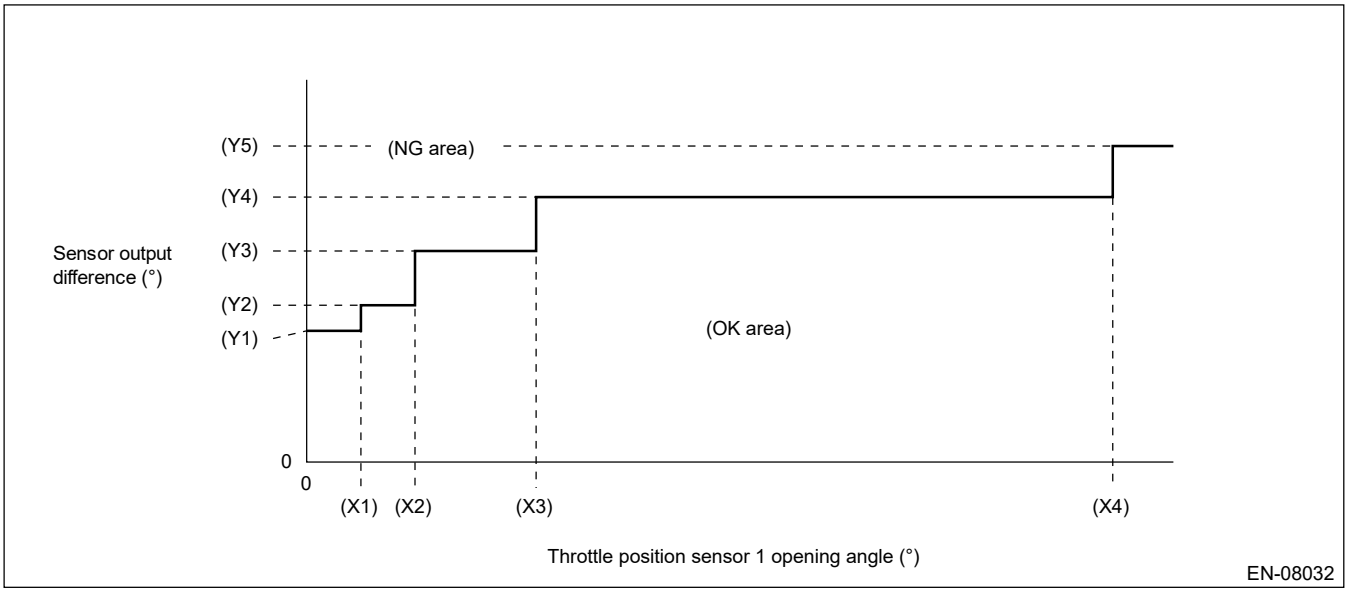
(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.



5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal difference between two sensors	Within NG range of **Details of judgment value**

Details of judgment value

(X1) 2.125°
(X2) 4.25°
(X3) 9°
(X4) 31.625°
(Y1) 4.461°
(Y2) 5.461°
(Y3) 7.586°
(Y4) 9.711°
(Y5) 11.711°

Time needed for diagnosis: 212ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D"/"E" VOLTAGE CORRELATION

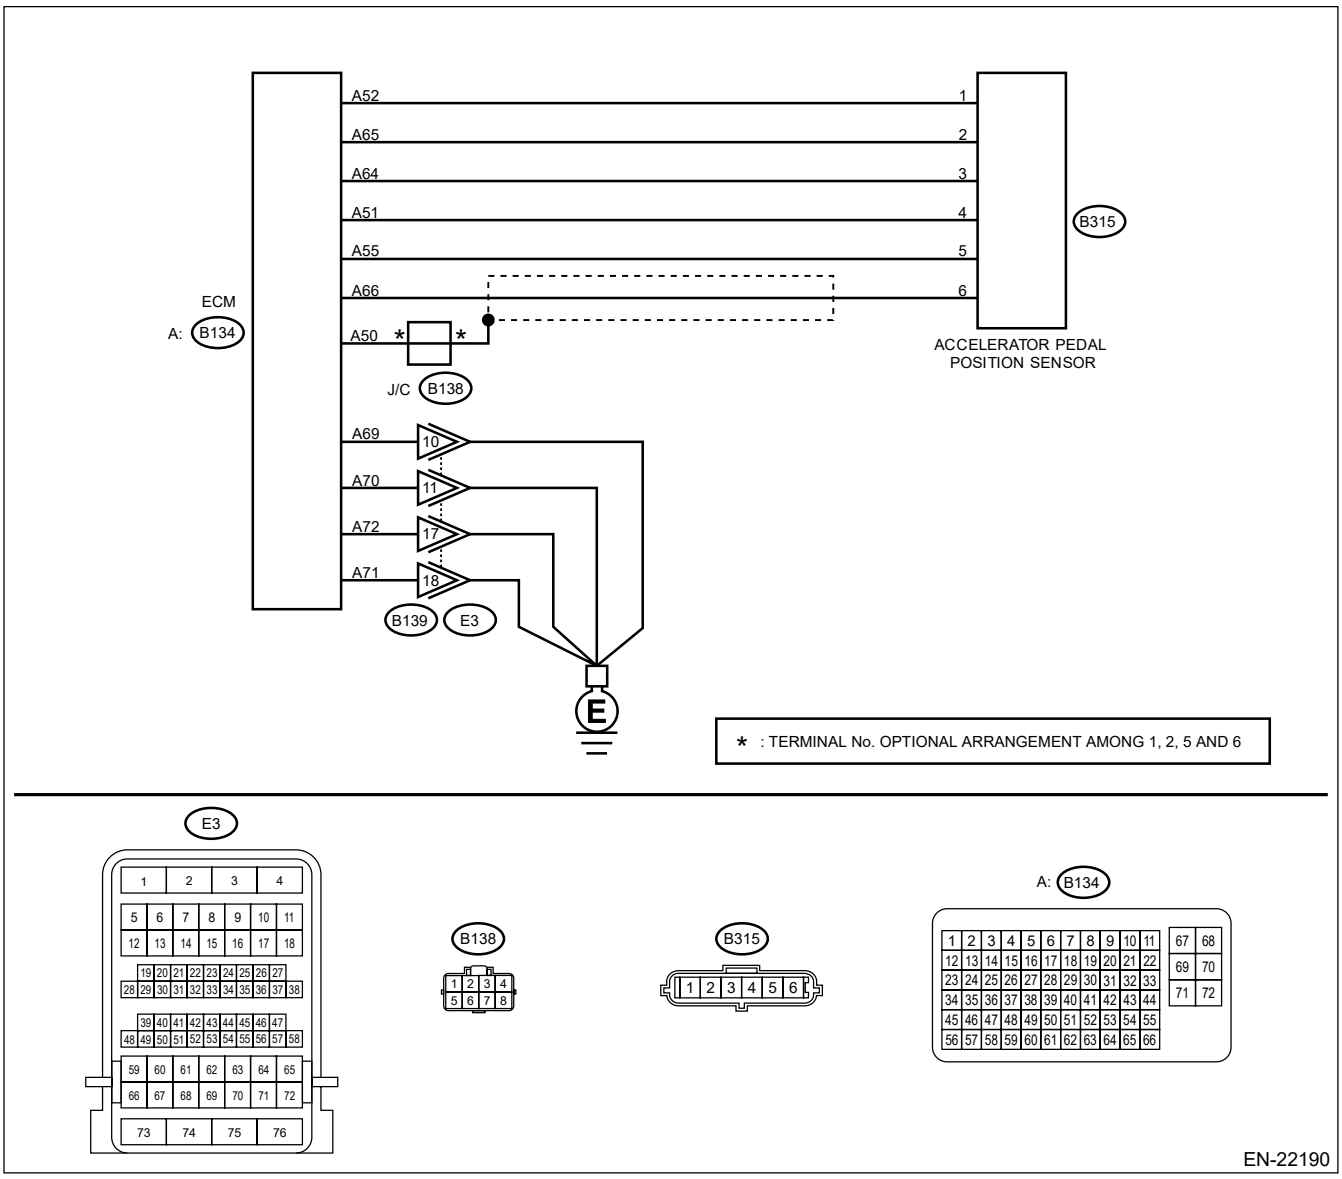
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Improper idling
- Poor driving performance

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK ACCELERATOR PEDAL POSITION SENSOR OUTPUT.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   Main accelerator pedal position sensor signal
   (B134) No. 66 (+) — Chassis ground (−):
   Sub accelerator pedal position sensor signal
   (B134) No. 64 (+) — Chassis ground (−):

Is the difference in measured values for the main accelerator pedal position sensor signal and the sub accelerator pedal position sensor signal 0 V?

Yes	Go to 3.
No	Go to 2.

2. CHECK ACCELERATOR PEDAL POSITION SENSOR OUTPUT.

1. Measure the voltage between accelerator pedal position sensor connector and chassis ground.
   Connector & terminal
   (B315) No. 6 (+) — Chassis ground (−):
   (B315) No. 3 (+) — Chassis ground (−):

Is the difference in measured values for the main accelerator pedal position sensor signal and the sub accelerator pedal position sensor signal 0 V?

Yes	Replace the accelerator pedal. Ref. to SPEED CONTROL SYSTEMS(H4DO)>Accelerator Pedal.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and accelerator pedal position sensor connector** • **Short circuit to ground in harness between ECM connector and accelerator pedal position sensor connector**

3. CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR (OPEN).

Measure the resistance of harness between accelerator pedal position sensor connector and chassis ground.

Connector & terminal

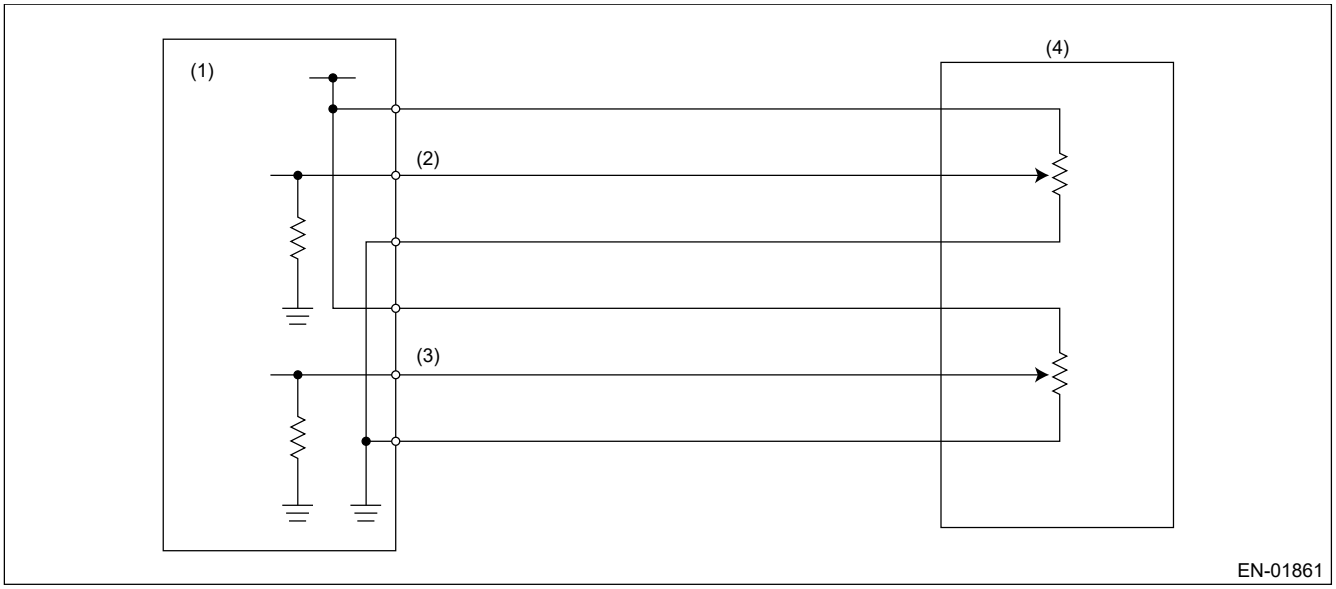
(B315) No. 5 — Chassis ground:

(B315) No. 2 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Repair the poor contact of ECM connector.
No	Repair the harness and connector.

Note:



In this case, repair the following item:

- **Open circuit of harness between ECM connector and accelerator pedal position sensor connector**
- **Open circuit of harness between ECM connector and engine ground**
- **Poor contact of ECM connector**
- **Poor contact of joint connector**

1. OUTLINE OF DIAGNOSIS

Judge as NG when the signal level of accelerator pedal position sensor 1 is different from the accelerator pedal position sensor 2.

2. COMPONENT DESCRIPTION

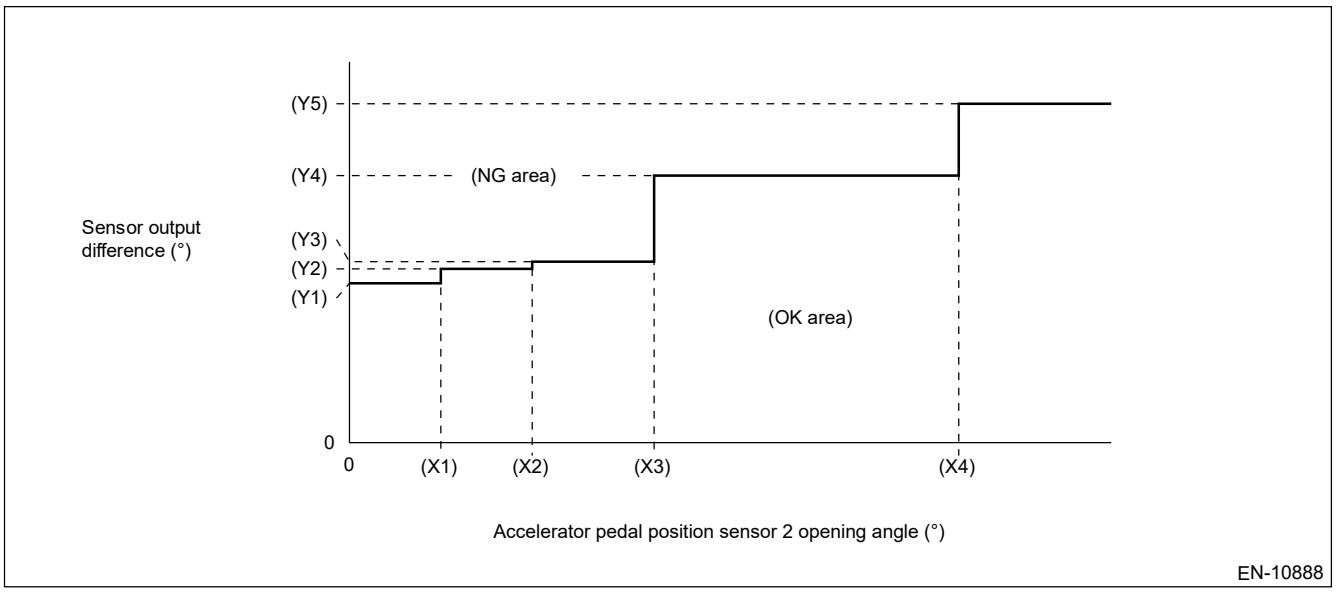
(1) Engine control module (ECM)
(2) Accelerator pedal position sensor 1 signal
(3) Accelerator pedal position sensor 2 signal
(4) Accelerator pedal position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	6V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.



5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal difference between two sensors	Within NG range of **Details of judgment value**

Details of judgment value

(X1) 0.6° (X2) 1.2° (X3) 2°

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

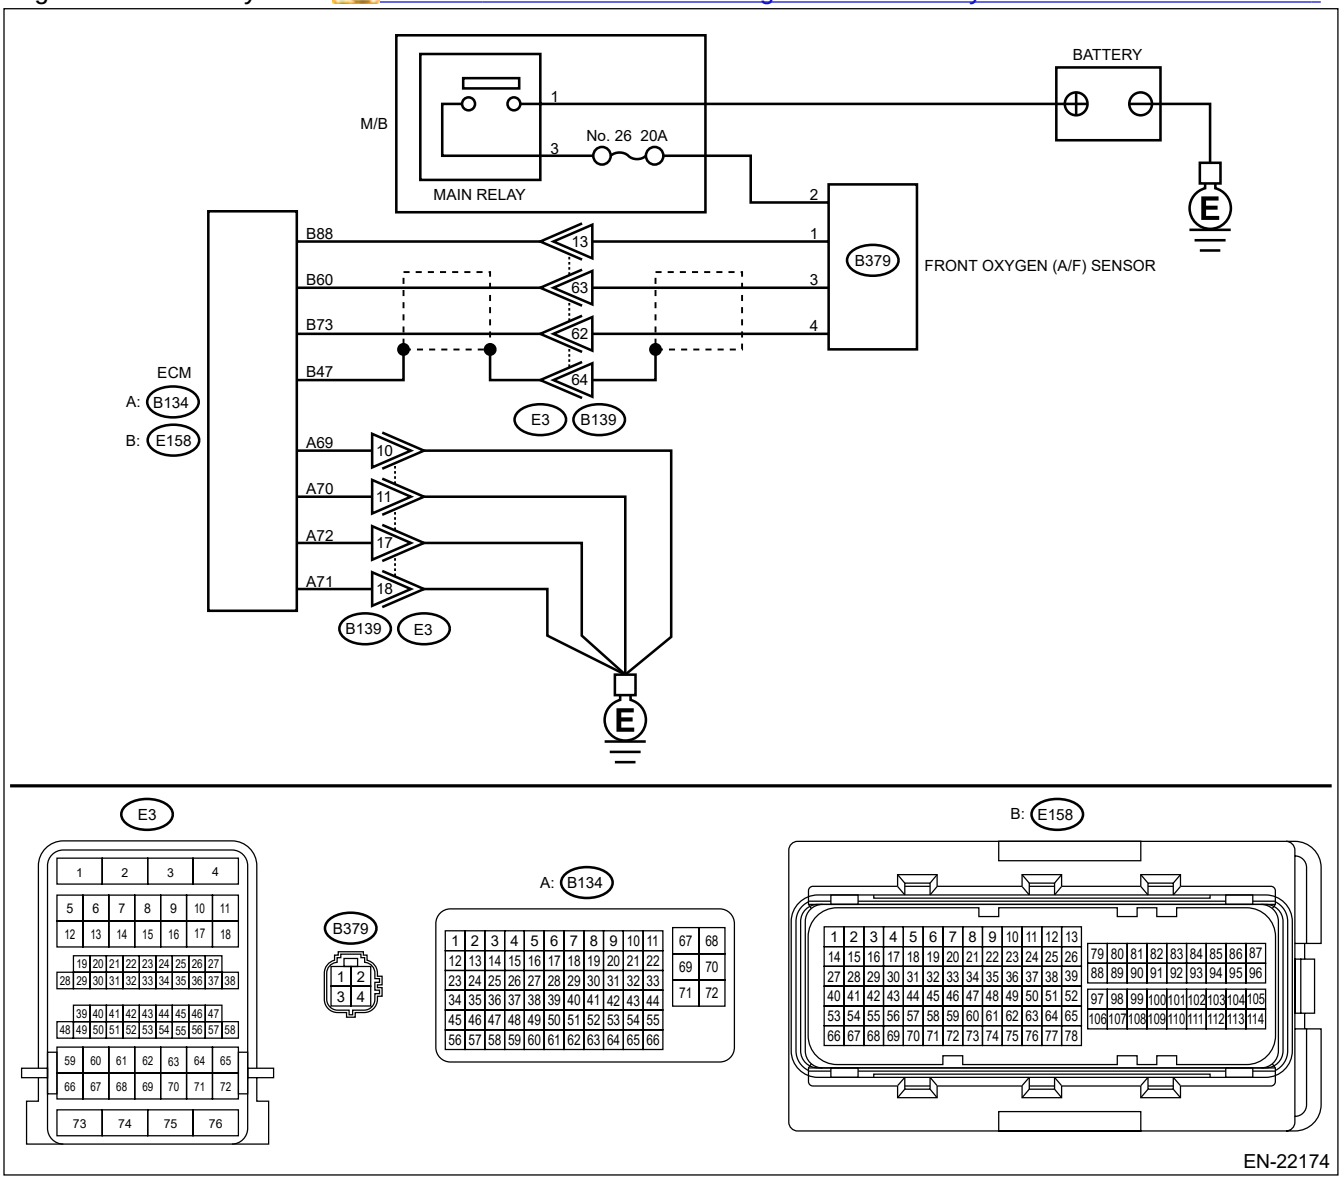
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2195 A/F /O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the front oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from front oxygen (A/F) sensor.
4. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

   Connector & terminal

   (E158) No. 60 — (B379) No. 3:

   (E158) No. 73 — (B379) No. 4:

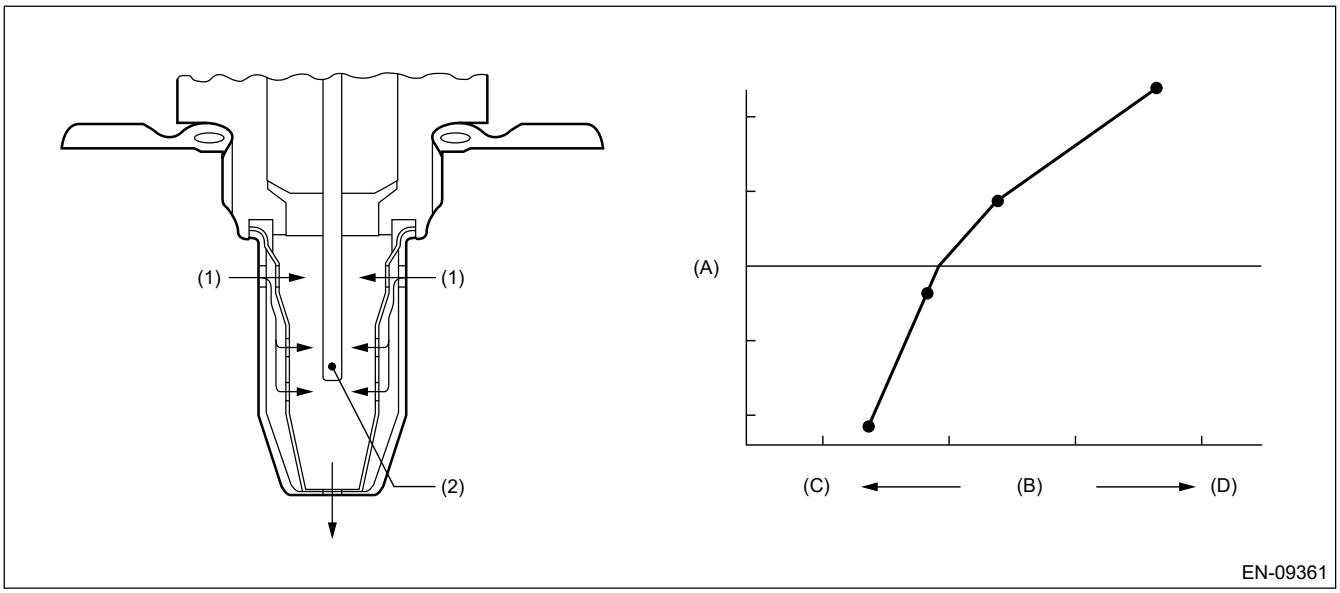
Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.

3. CHECK FOR POOR CONTACT.

Check for poor contact of the front oxygen (A/F) sensor connector.

Is there poor contact of front oxygen (A/F) sensor connector?



Yes	Repair the poor contact of front oxygen (A/F) sensor connector.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

1. OUTLINE OF DIAGNOSIS

Detect that λ value remains low.
Judge as NG if the lambda value can be determined as abnormal in accordance with driving conditions such as vehicle speed, intake air amount, and rear oxygen sensor voltage as well as front oxygen (A/F) sensor λ value.

λ value = Actual air fuel ratio/Theoretical air fuel ratio
λ > 1: Lean
λ < 1: Rich

2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean
(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	More than 75060.3Pa (563mmHg,22.2inHg)
Main feedback	In operation
Amount of intake air	6g/s (0.21oz/s) or more
Estimated temperature of the rear oxygen sensor element	500°C (932°F) or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
λ value	More than 1.15
Output voltage value of rear oxygen sensor	More than 0.7V

Time needed for diagnosis: 10000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

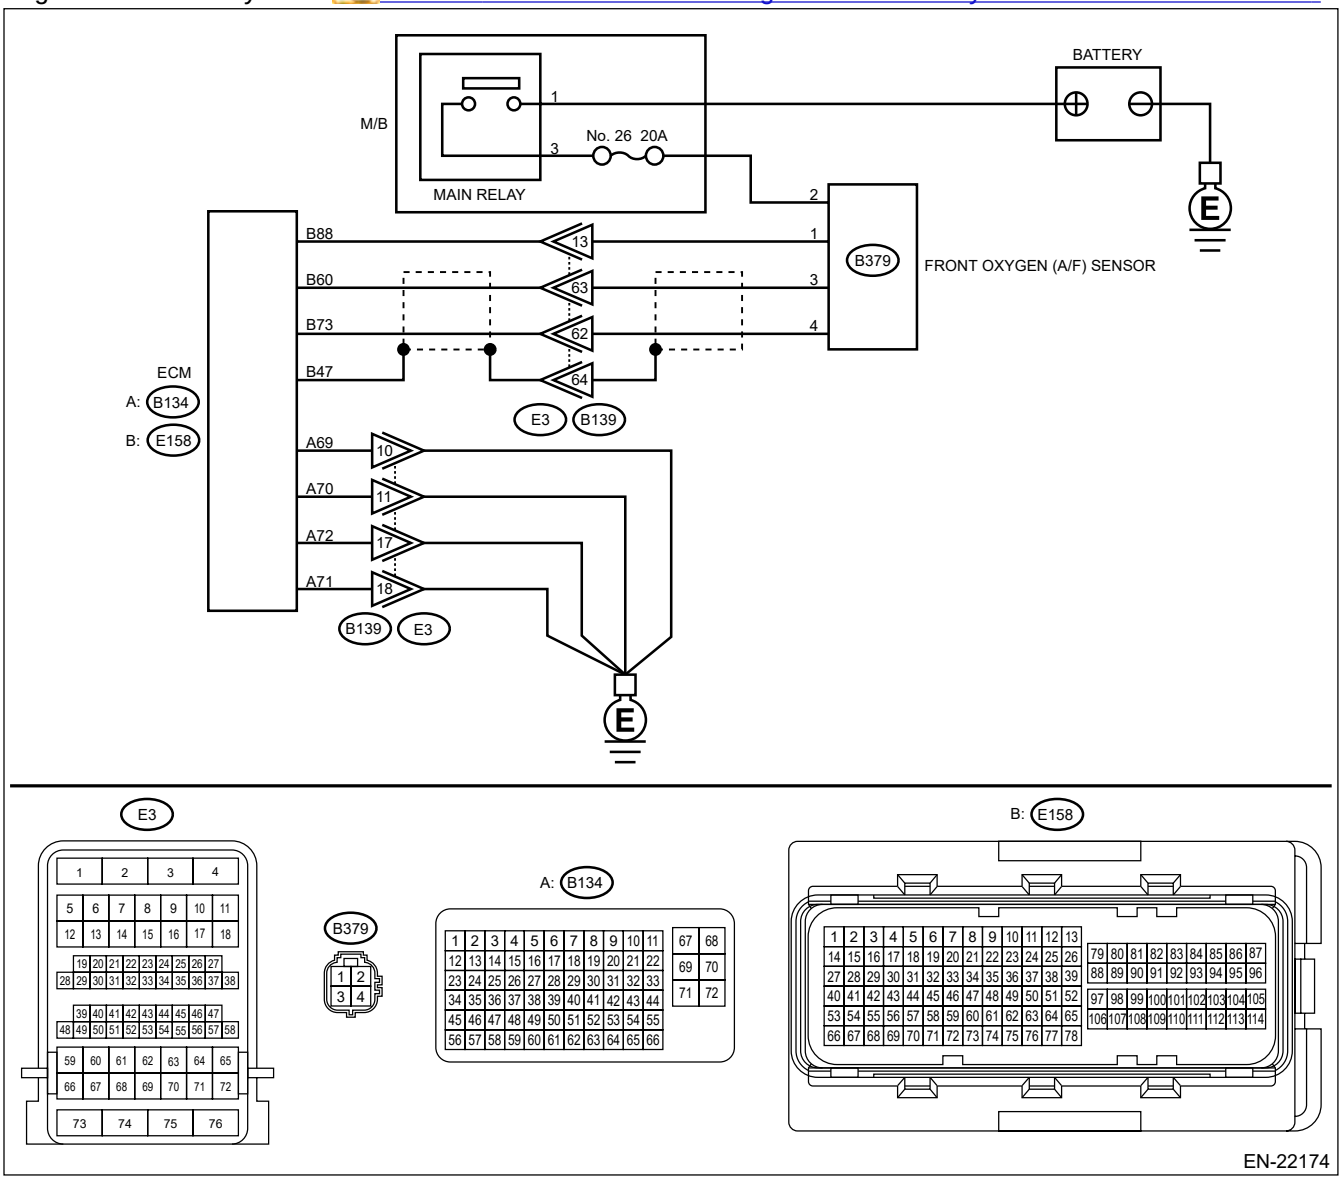
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2196 A/F /O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 1

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the front oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 — Chassis ground:

(E158) No. 73 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

3. CHECK OUTPUT SIGNAL FOR ECM.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 (+) — Chassis ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK OUTPUT SIGNAL FOR ECM.

Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 73 (+) — Chassis ground (−):

Is the voltage 4.95 V or more?

Yes	Go to 5.
No	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.

5. CHECK OUTPUT SIGNAL FOR ECM.

Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 (+) — Chassis ground (−):

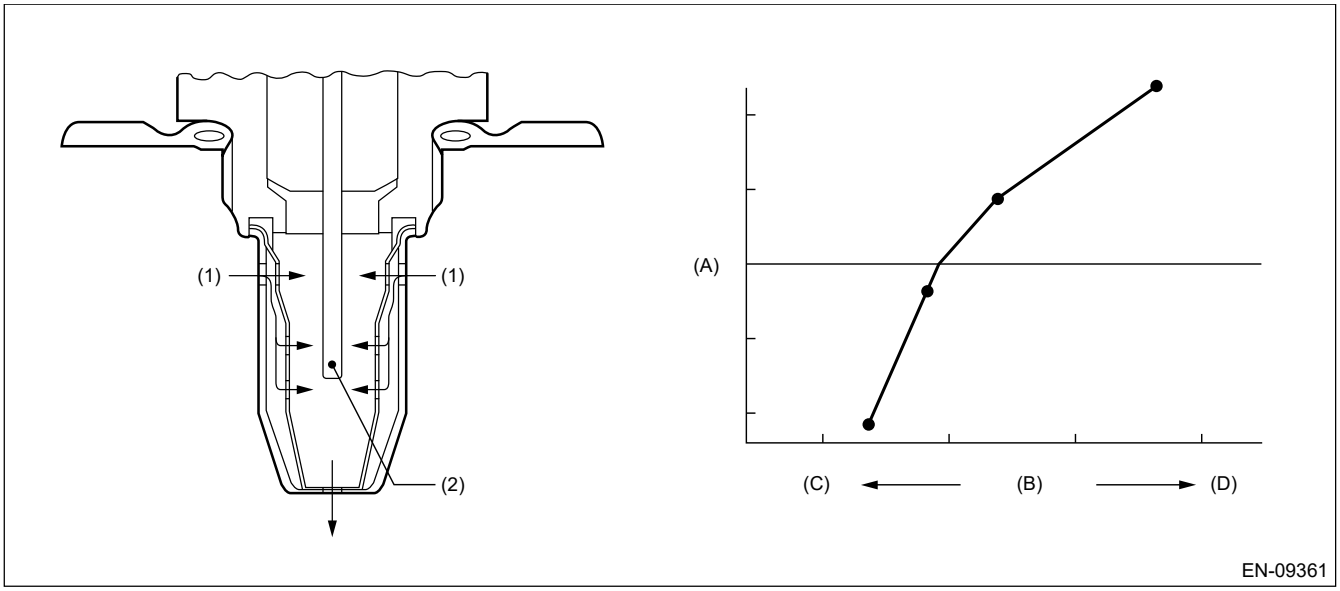
(E158) No. 73 (+) — Chassis ground (−):

Is the voltage 8 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect that λ value remains high.



Judge as NG if the lambda value can be determined as abnormal in accordance with driving conditions such as vehicle speed, intake air amount, and rear oxygen sensor voltage as well as front oxygen (A/F) sensor λ value.

λ value = Actual air fuel ratio/Theoretical air fuel ratio

λ > 1: Lean

λ < 1: Rich

2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Rich

(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more
Barometric pressure	More than 75060.3Pa (563mmHg,22.2inHg)
Main feedback	In operation
Amount of intake air	6g/s (0.21oz/s) or more
Estimated temperature of the rear oxygen sensor element	500°C (932°F) or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
λ value	Less than 0.85
Output voltage value of rear oxygen sensor	Less than 0.2V

Time needed for diagnosis: 10000ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P219C CYLINDER 1 AIR-FUEL RATIO IMBALANCE

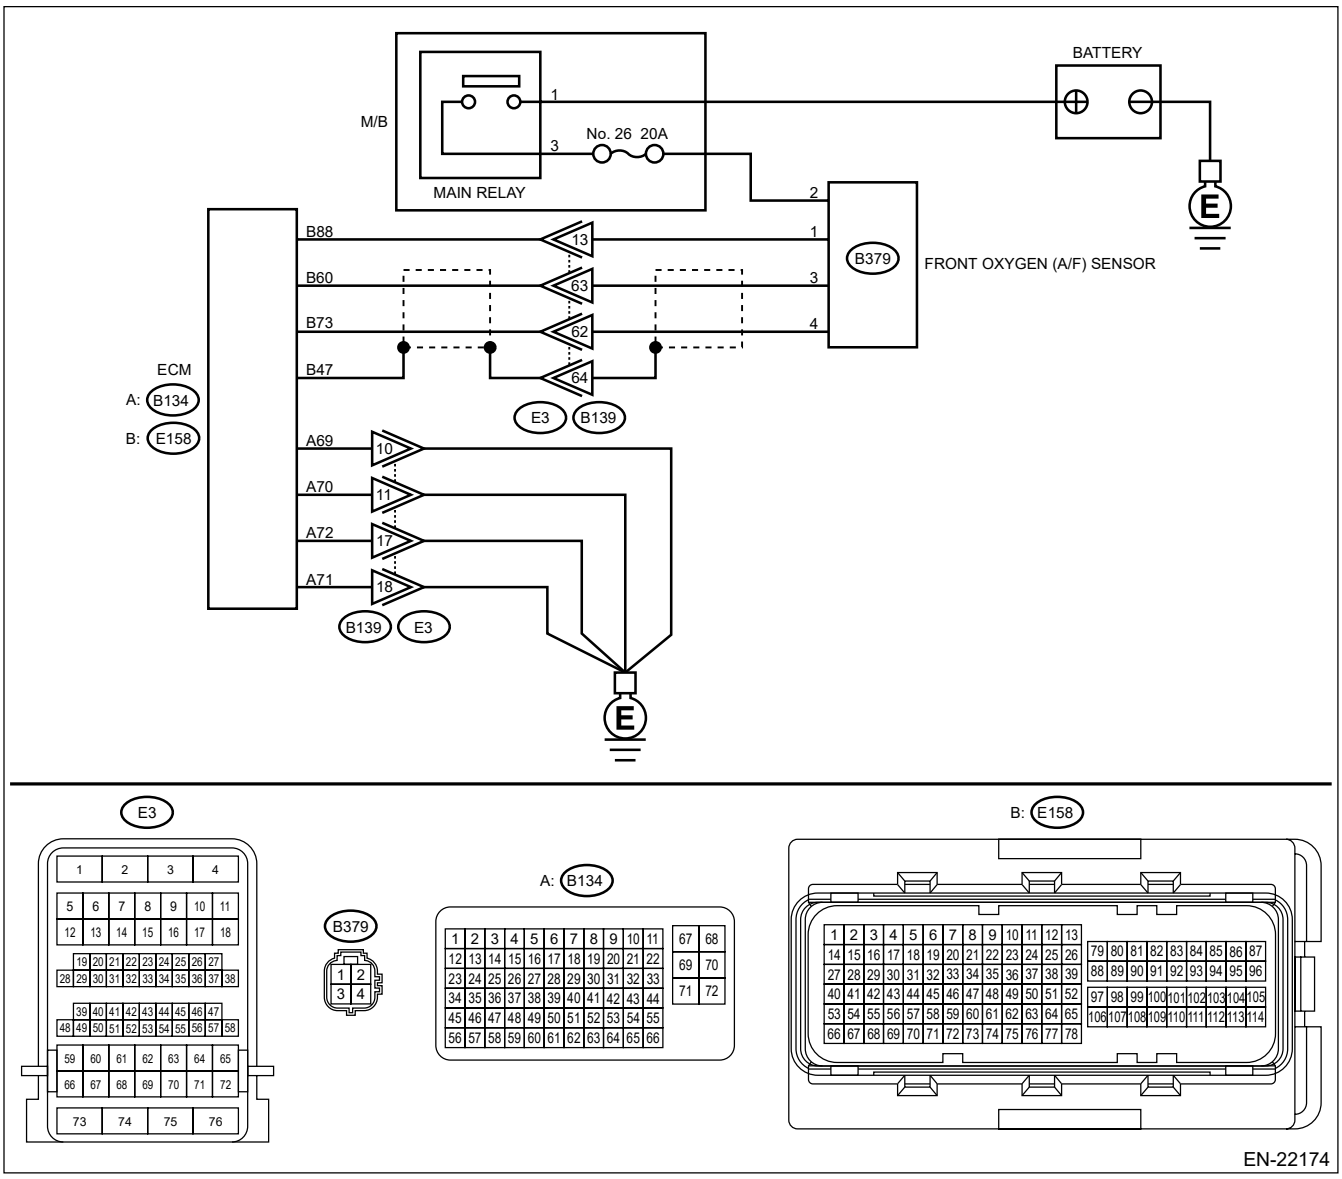
DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.

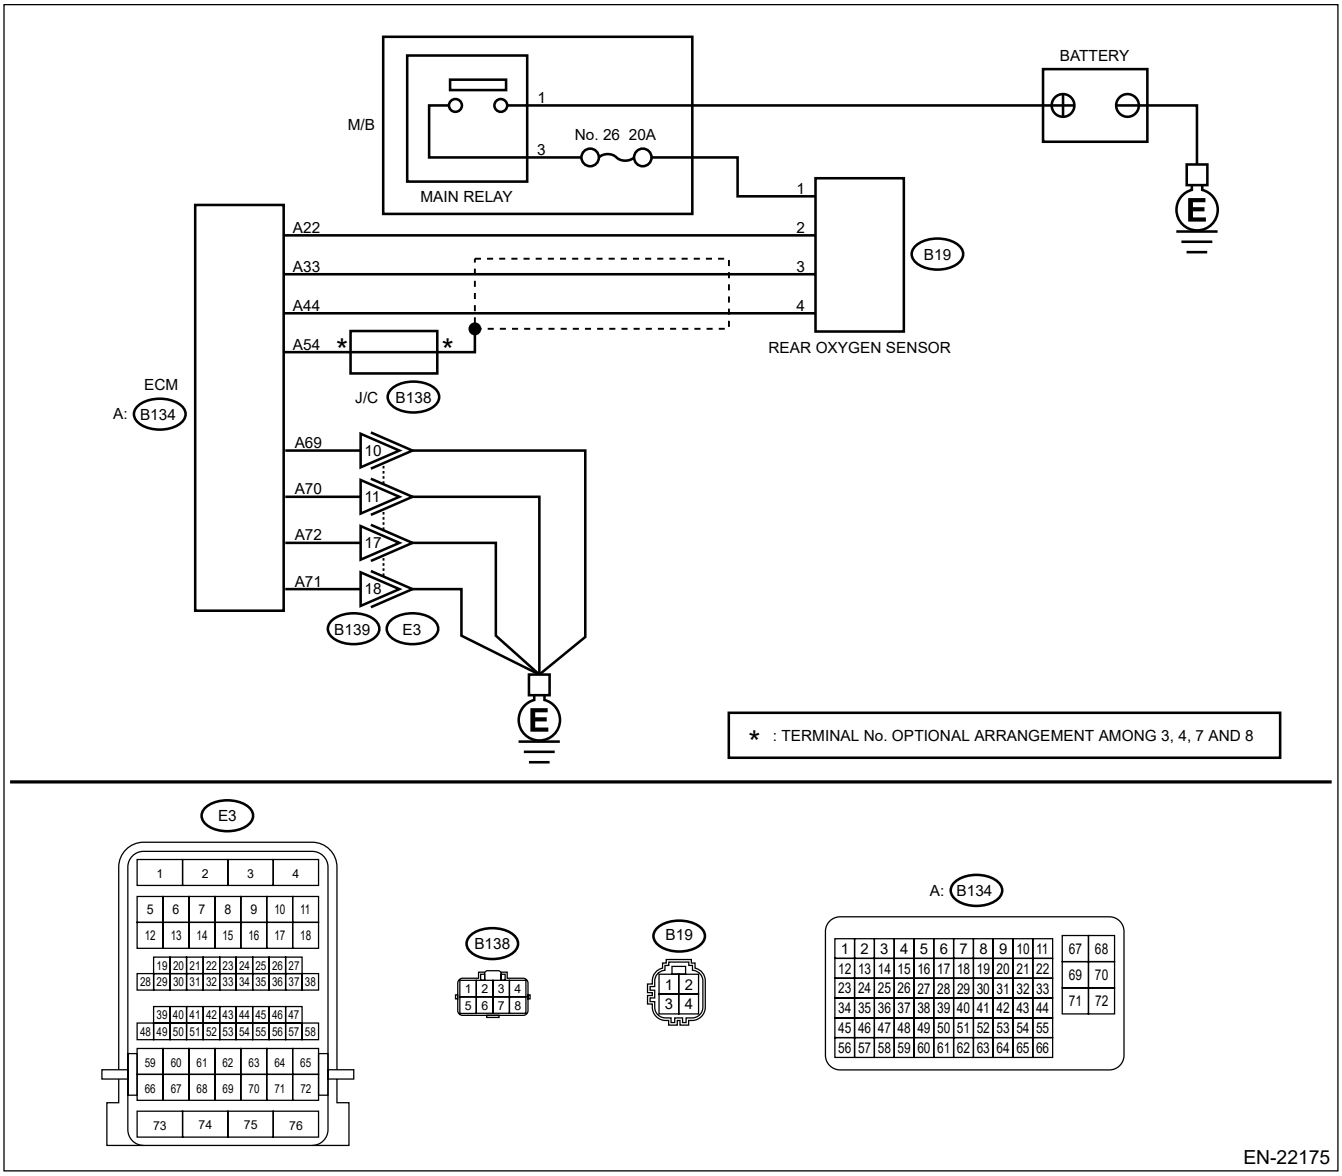
Trouble symptom:

- Engine stall
- Improper idling

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.



Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the front oxygen (A/F) sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connectors from front oxygen (A/F) sensor.
4. Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector.

Connector & terminal

(E158) No. 60 — (B379) No. 3:

(E158) No. 73 — (B379) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.

3. CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(E158) No. 60 — Chassis ground:

(E158) No. 73 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

4. CHECK OUTPUT SIGNAL FOR ECM.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.
   Connector & terminal
   (B379) No. 3 (+) — Chassis ground (−):

Is the voltage 4.5 V or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK OUTPUT SIGNAL FOR ECM.

Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.
Connector & terminal
(B379) No. 4 (+) — Chassis ground (−):

Is the voltage 4.95 V or more?

Yes	Go to 6.
No	Go to 7.

6. CHECK OUTPUT SIGNAL FOR ECM.

Measure the voltage between front oxygen (A/F) sensor connector and chassis ground.
Connector & terminal
(B379) No. 3 (+) — Chassis ground (−):
(B379) No. 4 (+) — Chassis ground (−):

Is the voltage 8 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the poor contact of ECM connector.

7. CHECK EXHAUST SYSTEM.

Check exhaust system parts.

Are there holes or loose bolts on exhaust system?

Yes	Repair the exhaust system.
No	Go to 8.

8. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Are there holes, loose bolts or disconnection of hose on air intake system?

Yes	Repair the air intake system.
No	Go to 9.

9. CHECK FUEL PRESSURE.

Warning:
Place “NO OPEN FLAMES” signs near the working area.
Caution:
Be careful not to spill fuel.

1. Connect the front oxygen (A/F) sensor connector.
2. Measure the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
   Caution:
   Before attaching/detaching a fuel pressure gauge, release the fuel pressure.

Is the measured value 350 — 450 kPa (3.5—4.6 kg/cm^2, 50 — 66 psi)?

Yes	Go to 10.
No	Check the fuel pump and fuel delivery line. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSPECTION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

10. CHECK ENGINE COOLANT TEMPERATURE SENSOR.

1. Start the engine and warm up completely.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Coolant Temp.].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Coolant Temp.] 75°C (167°F) or more?

Yes	Go to 11.
No	Replace the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.

11. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Using the Subaru Select Monitor or a general scan tool, read the value of [Mass Air Flow].

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Mass Air Flow]2.0—5.0 g/s (0.26—0.66 lb/m)?

Yes	Go to 12.
No	Replace the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

12. CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.

1. Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F).
2. For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the shift lever in the neutral position.
3. Turn the A/C switch to OFF.
4. Turn all the accessory switches to OFF.
5. Open the front hood.
6. Measure the ambient temperature.
7. Using the Subaru Select Monitor or a general scan tool, read the value of [Intake Air Temp.].

Data Monitor

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Subtract ambient temperature from [Intake Air Temp.]. Is the obtained value −10 — 50°C (−18 — 90°F)?

Yes	Go to 13.
No	Check the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor.

13. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum)
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **Depress the clutch pedal (MT model)**
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.490 V or more?

Yes	Go to 14.
No	Go to 15.

14. CHECK REAR OXYGEN SENSOR DATA.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **Depress the clutch pedal (MT model)**
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12]0.250 V or less?

Yes	Go to 16.
No	Go to 15.

15. CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.

Check the rear oxygen sensor connector and coupling connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 17.

16. CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.

1. Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more.
2. Using the Subaru Select Monitor or a general scan tool, read the value of [Oxygen sensor #12].

   Data Monitor

   Note:
   - **SUBARU SELECT MONITOR**
     For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
   - **General scan tool**
     For detailed operation procedures, refer to the general scan tool operation manual.

Is the value of [Oxygen sensor #12] kept at 0.250 V or less for 5 minutes or more?

Yes	Replace the front oxygen (A/F) sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Front Oxygen (A/F) Sensor.
No	Go to 17.

17. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from rear oxygen sensor.
4. Measure the resistance of harness between ECM connector and rear oxygen sensor connector.
   Connector & terminal

   (B134) No. 44 — (B19) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 18.
No	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.

18. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR.

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between rear oxygen sensor connector and chassis ground.
   Connector & terminal
   (B19) No. 3 (+) — Chassis ground (−):

Is the voltage 0.2—0.5 V?

Yes	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Front Oxygen (A/F) Sensor.
No	Go to 19.

19. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from fuel injector on faulty cylinders.
4. Measure the resistance between fuel injector connector and engine ground on faulty cylinders.

Connector & terminal

#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 21.
No	Repair the open circuit of the harness between the ECM and fuel injector connector.

21. CHECK FUEL INJECTOR.

Check the fuel injector on faulty cylinder. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 22.
No	Replace the faulty fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

22. CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR AND CRANKSHAFT POSITION SENSOR.

Check the installation condition of the camshaft position sensor and crankshaft position sensor.

Is the camshaft position sensor or crankshaft position sensor loosely installed?

Yes	Tighten the camshaft position sensor or crankshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Crankshaft Position Sensor>INSTALLATION.
No	Go to 23.

23. CHECK CRANKSHAFT POSITION SENSOR PLATE.

Check the crankshaft position sensor plate.

Is the crankshaft position sensor plate rusted or does it have broken teeth?

Yes	Replace the crankshaft position sensor plate. Ref. to MECHANICAL(H4DO)>Cylinder Block.
No	Go to 24.

24. CHECK INSTALLATION CONDITION OF TIMING CHAIN.

Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block.

ST 18252AA000 CRANKSHAFT SOCKET

Is the timing chain dislocated from its proper position?

Yes	Correct the installation condition of timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly.
No	Go to 25.

25. CHECK FUEL LEVEL.

Check the fuel gauge display.

Is the fuel meter indication higher than the “Lower” level?

Yes	Go to 26.
No	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to 26.

26. CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.

1. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

2. Start the engine, and drive the vehicle 10 minutes or more.

Does the malfunction indicator light illuminate or blink?

Yes	Repair the poor contact of connector. **Note:** **In this case, repair the following item:** • **Poor contact of ignition coil connector** • **Poor contact of fuel injector connector on faulty cylinders** • **Poor contact of ECM connector** • **Poor contact of coupling connector**
No	Go to 27.

27. CHECK AIR INTAKE SYSTEM.

Check the installing condition of the air intake system.

Is there any fault in air intake system?

Yes	Repair the air intake system. **Note:** **Check the following items.** • **Are there air leaks or air suction caused by loose or dislocated nuts and bolts?** • **Are there cracks or any disconnection of hoses?**
No	Go to 28.

28. CHECK MISFIRE SYMPTOM.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is there only one DTC displayed? (Current malfunction)

Yes	Go to 31.
No	Go to 29.

29. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Are DTCs P0301 and P0303 displayed? (Current malfunction)

Yes	Go to 32.
No	Go to 30.

30. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Are DTCs P0302 and P0304 displayed? (Current malfunction)

Yes	Go to 33.
No	Go to 34.

31. ONLY ONE CYLINDER.

Check the following items for only one cylinder.
- Spark plug
- Ignition coil
- Fuel injector
- Compression

Is there any fault in the cylinder?

Yes	Repair or replace faulty parts. **Note:** **Check the following items.** • **Spark plug** • **Ignition coil** • **Fuel injector** • **Compression**
No	Go to DTC P0171. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0171 SYSTEM TOO LEAN BANK 1.

32. GROUP OF #1 AND #3 CYLINDERS.

Check the following items for the bank RH (cylinder #1, #3).
- Spark plug
- Ignition coil
- Fuel injector
- Compression
- Skipping timing chain teeth

Are there any faults in #1 and #3 cylinders?

Yes	Repair or replace faulty parts. **Note:** **Check the following items.** • **Spark plug** • **Ignition coil** • **Fuel injector** • **Compression** • **Skipping timing chain teeth**
No	Go to DTC P0171. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0171 SYSTEM TOO LEAN BANK 1.

33. GROUP OF #2 AND #4 CYLINDERS.

Check the following items for the bank LH (cylinder #2, #4).
- Spark plug
- Ignition coil
- Fuel injector
- Compression
- Skipping timing chain teeth

Are there any faults in #2 and #4 cylinders?

Yes	Repair or replace faulty parts. **Note:** **Check the following items.** • **Spark plug** • **Ignition coil** • **Fuel injector** • **Compression** • **Skipping timing chain teeth**
No	Go to DTC P0171. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0171 SYSTEM TOO LEAN BANK 1.

34. CYLINDER AT RANDOM.

1. Start the engine.
2. Check the idling condition.

Is the engine idle rough?

Yes	Go to DTC P0171. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0171 SYSTEM TOO LEAN BANK 1.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.**

1. OUTLINE OF DIAGNOSIS

To detect malfunctions, the diagnostic uses a predictive model, individual cylinder fuel control, and the primary oxygen sensor measurement. The diagnostic does not directly attempt to separate the primary oxygen sensor measurement into individual cylinder contributions, but uses a predictive model to do so.

Individual cylinders STFT are independently adjusted to obtain the moving 720 degree average lambda of all four cylinders using feedback from primary oxygen sensor. If any individual cylinder's STFT is different than the average of the other cylinder's STFT by a calibratable amount, that cylinder will be identified as failing.

MONITOR METHOD

This diagnostic monitor performs a functional check of the fuel system to determine an air-fuel ratio cylinder imbalance, as required by the regulations in Section (e)(6.2.1)(c). This method uses a parameter called "imbalance value" which is calculated for each cylinder. The "imbalance value" is the difference between the individual STFT of the specific cylinder and the average value of the individual STFT of the other three cylinders. These imbalance values are compared to each other in order to determine the "imbalanced cylinder", which is the cylinder with the maximum "imbalance value". A diagnostic value is calculated for the "imbalanced cylinder". When this diagnostic value is more than the predetermined threshold (lean malfunction) or less than the predetermined threshold (rich malfunction), a DTC for the most imbalanced cylinder is determined.

DTC for "Imbalanced cylinder" is following.

P219C: Cylinder 1 Air-Fuel Ratio Imbalance

P219D: Cylinder 2 Air-Fuel Ratio Imbalance

P219E: Cylinder 3 Air-Fuel Ratio Imbalance

P219F: Cylinder 4 Air-Fuel Ratio Imbalance

MALFUNCTION CRITERIA

Rich malfunction (negative) Diagnostic value < Threshold

or

Lean malfunction (positive) Diagnostic value > Threshold

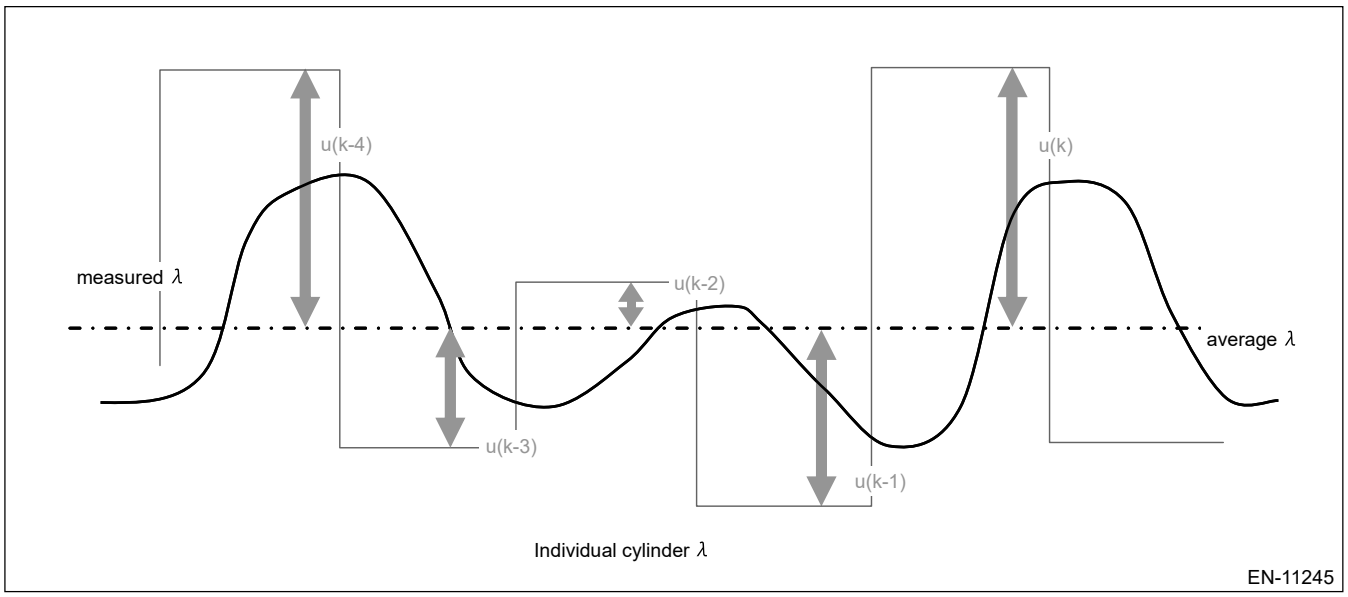
Diagnostic value = "Imbalance value n" of the "Imbalanced cylinder"

(n: Cylinder number (#1 or #2 or #3 or #4))

- Imbalance value n = iSTFTn — Average (other 3 iSTFTs)
  For example: Imbalance value #1 = iSTFT # 1 — (iSTFT # 2+ iSTFT # 3 + iSTFT # 4) /3.
- Imbalanced cylinder: The cylinder with maximum (ABS (Imbalance value #1, #2, #3, #4)) is selected
- iSTFT: Individual cylinder STFT (Refer to the following about the detail)

Individual Cylinder STFT (iSTFT n (k))

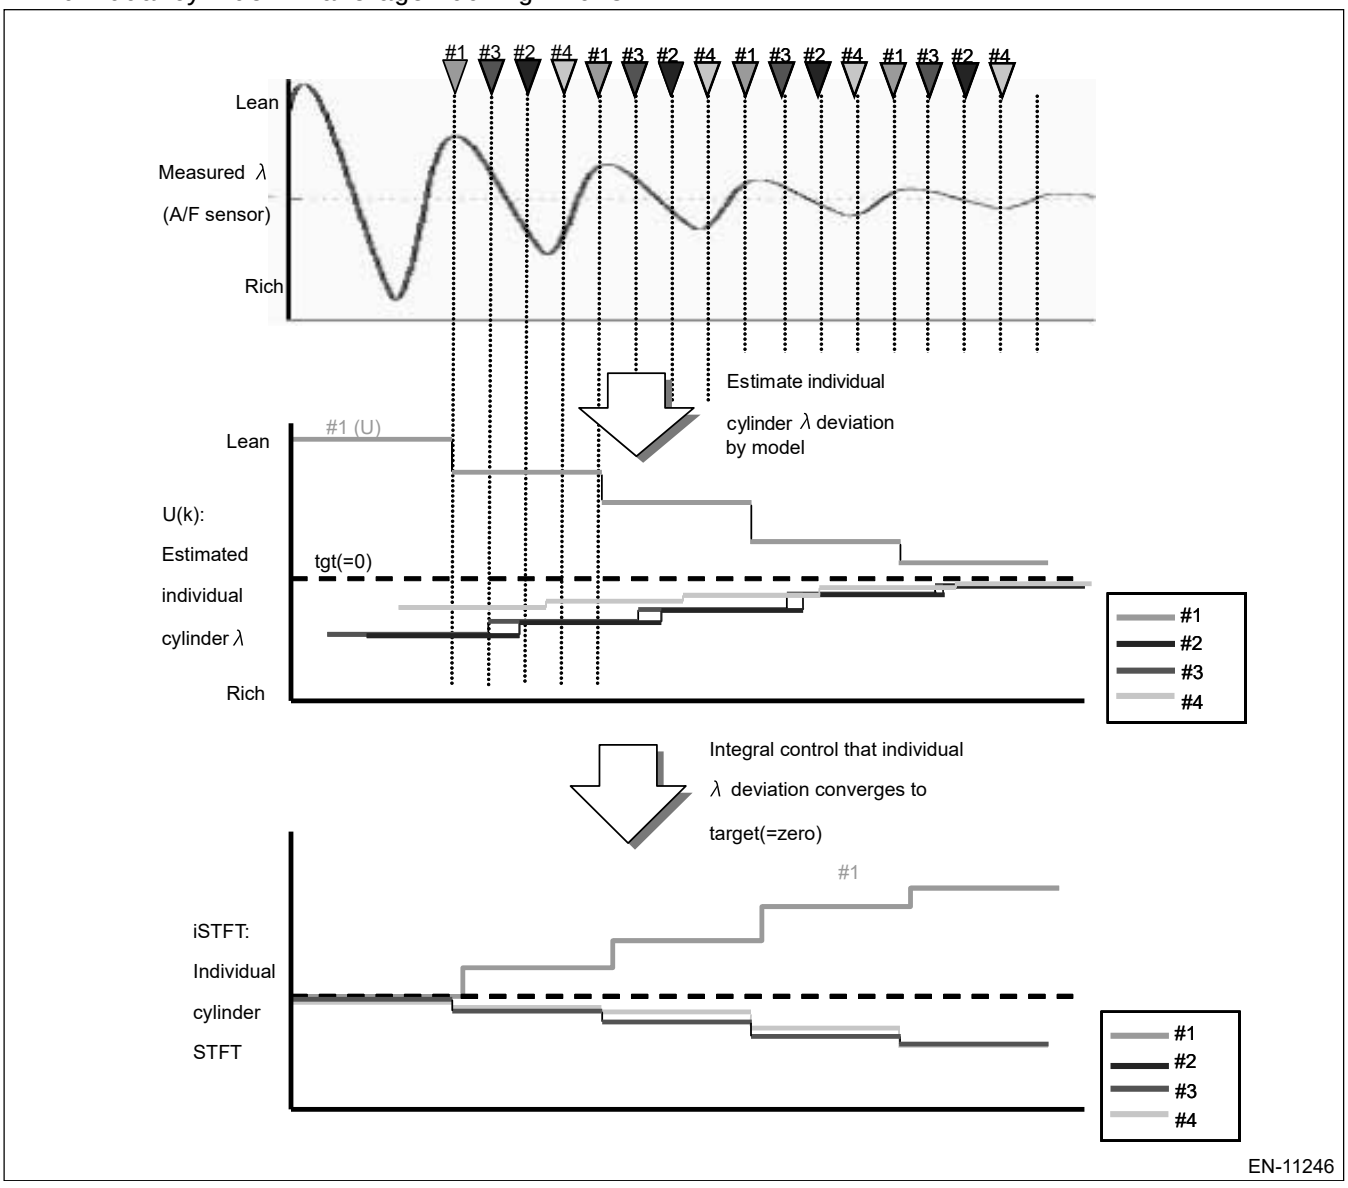
Individual cylinder STFT (= iSTFT n (k)) are calculated by integral control and individual cylinder λ deviation u(k) converges to target (no deviation).



iSTFT n (k) = iSTFT n (k-1) + C(tgt−u(k))

iSTFT n (k) = Individual cylinder STFT

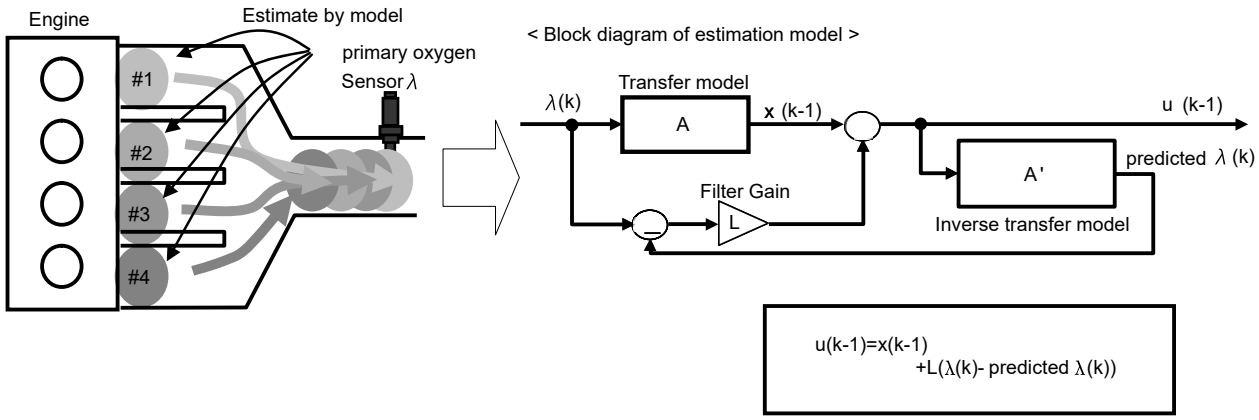
u(k): Estimated individual cylinder λ deviation*



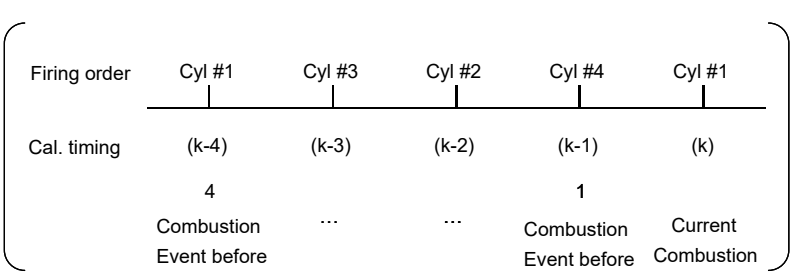
tgt: Target (No deviation = zero)

C: Control gain (negative value)

*individual cylinder λ deviation: u(k)



= Individual cylinderλ - averageλ during 720°CA



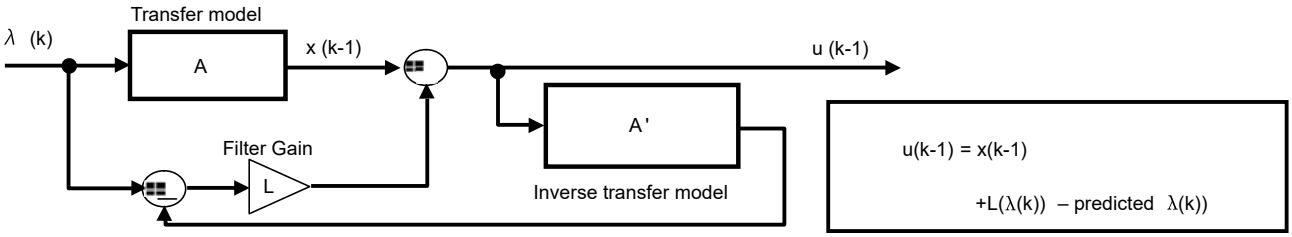
Estimated individual cylinder λ deviation “u(k)” is calculated by model (as described below).

Estimation Model for individual cylinder λ deviation (u(k))

Subaru developed a model for estimating individual cylinder λ deviation* by the output signal of the primary oxygen sensor (mounted on the collector section of the exhaust manifold). This estimation model makes it possible to control cylinder A/F individually. The estimation model is designed as follows.

λ(k) : Measured λ

u(k-1) : Estimated individual cylinder λ deviation (after filter)



x(k-1) : Estimated individual cylinder λ deviation (before filter)

predicted λ(k): Estimated λ

EN-11247

Model equations for individual cylinder λ deviation (u(k))

“u(k-1)”: Estimated individual cylinder λ deviation is calculated by the following model.

< Model equations >

Transfer model "" A — Measured λ (A/F sensor) → Individual cylinder λ

$$x(k-1) = \frac{(\lambda(k) - a_1\lambda(k-1) - a_2\lambda(k-2) - a_3\lambda(k-3) - a_4\lambda(k-4)}{b_1} - \frac{(b_2x(k-2) + b_3x(k-3) + b_4x(k-4)}{b_1}$$

Inverse transfer model "" A' — Individual cylinder λ → Measured λ (A/F sensor)

$$\text{predicted } \lambda(k) = -(a_1\text{predicted } \lambda(k-1) + a_2\text{predicted } \lambda(k-2) + a_3\text{predicted } \lambda(k-3) + a_4\text{predicted } \lambda(k-4)) + (b_1u(k-1) + b_2u(k-2) + b_3u(k-3) + b_4u(k-4))$$

EN-11248

a1~4, b1~4: Model parameters calibrated by primary oxygen sensor output λ and 'measured' individual cylinder λ.
(These parameters are calibrated and fixed prior to production. However these models are calculating the predicted λ of each cylinder during real world driving.)

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Compensation value status for each cylinder = Integrated time after starting operation* (Refer to Table) * Time is calculated cumulatively (If the secondary parameters are not satisfied for the compensation value status of	400time(s) (12.8 s) or more

Secondary parameters	Execution condition
each cylinder, the integrated time will not be reset)	

Table: Status of each cylinder correction value

Secondary parameters	Execution condition
Main feedback	In operation
Engine speed	1000rpm or more and 4000rpm or less
The following condition of (A) or (B) is established	
•Condition A:	
Engine load	0.7g/rev (0.02oz/rev) or more
and	
Amount of intake air	10g/s (0.35oz/s) or more
•Condition B:	
Engine load	0.6g/rev (0.02oz/rev) or more
and	
Amount of intake air	25g/s (0.88oz/s) or more

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Imbalance value n for imbalance cylinder	More than 0.2 or Less than −0.5 (CVT model) More than 0.2 or Less than −0.5 (MT model)
Imbalance value n = i correction value n - average value (i correction value n of other three cylinders) i compensation value n = Compensation value for each cylinder Imbalance cylinder: Maximum value of cylinder (absolute value (imbalance value n)) (n: Any of cylinder numbers (#1, #2, #3, #4)	

Time needed for diagnosis: 300time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

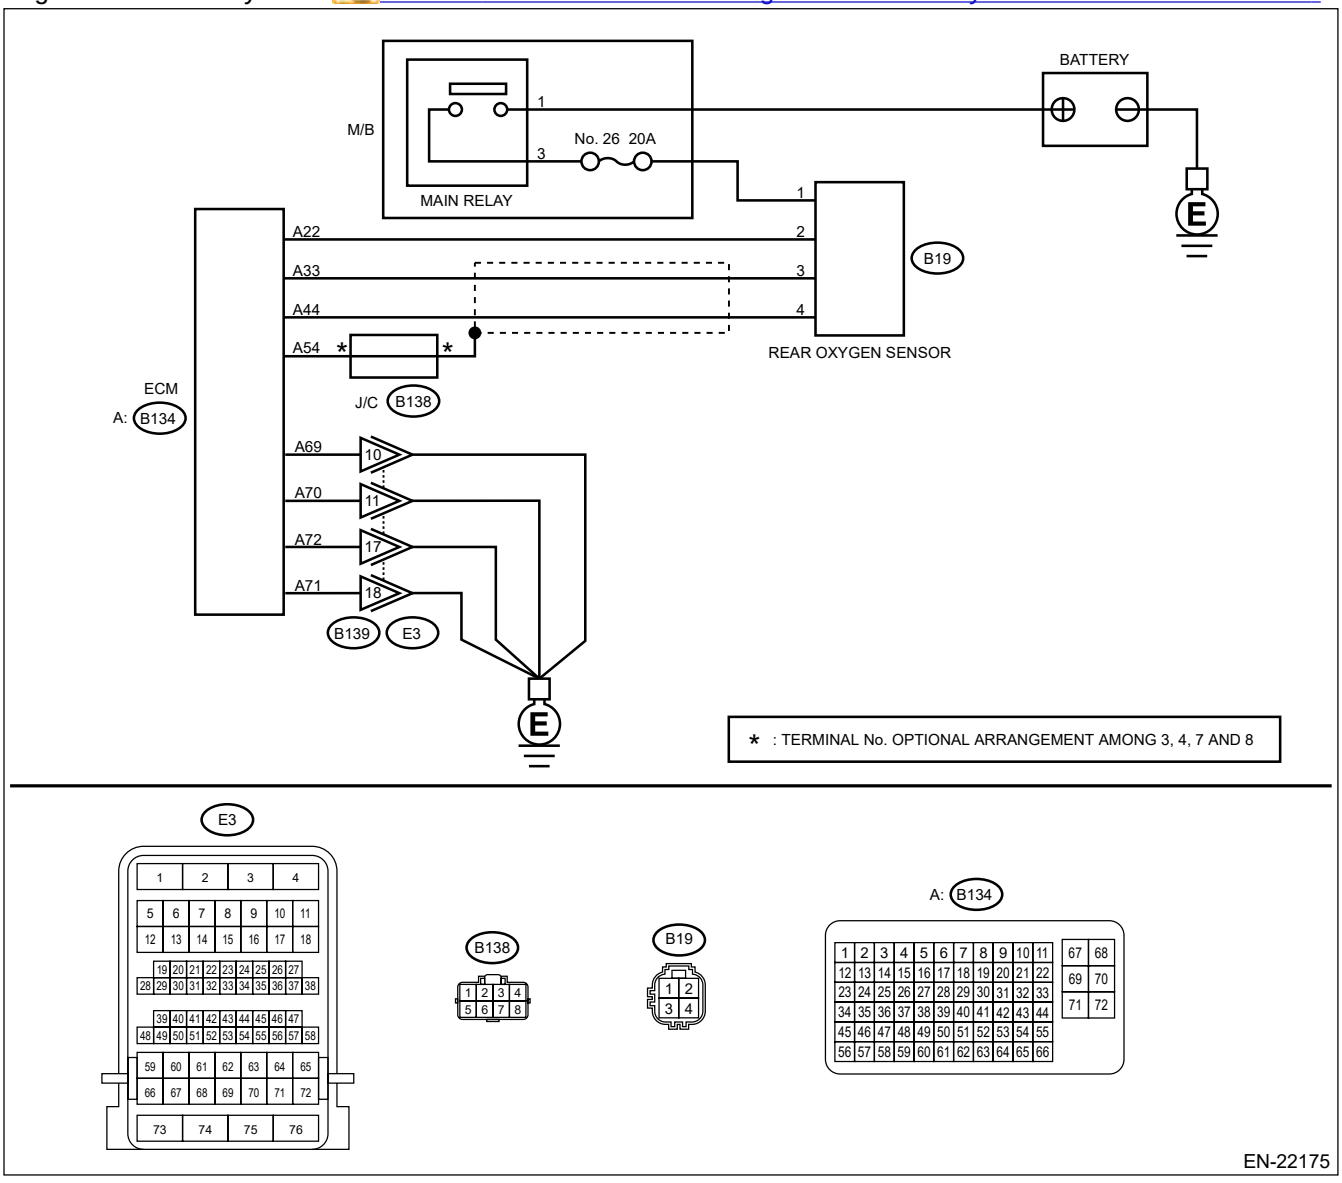
DTC P2270 O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK REAR OXYGEN SENSOR CONNECTOR.

Check the rear oxygen sensor connector.

Has water entered the connector?

Yes	Completely remove any water inside.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from rear oxygen sensor.
4. Measure the resistance of harness between ECM connector and rear oxygen sensor connector.
   Connector & terminal
   (B134) No. 44 — (B19) No. 4:
   (B134) No. 33 — (B19) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.

3. CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR (SHORT TO POWER SUPPLY).

1. Connect the connector to ECM.
2. Turn the ignition switch to ON.
3. Measure the voltage between rear oxygen sensor connector and chassis ground.
   Connector & terminal
   (B19) No. 3 (+) — Chassis ground (−):

Is the voltage 0.15 V or more?

Yes	Repair the short circuit to power in the harness between ECM connector and rear oxygen sensor connector.
No	Go to 4.

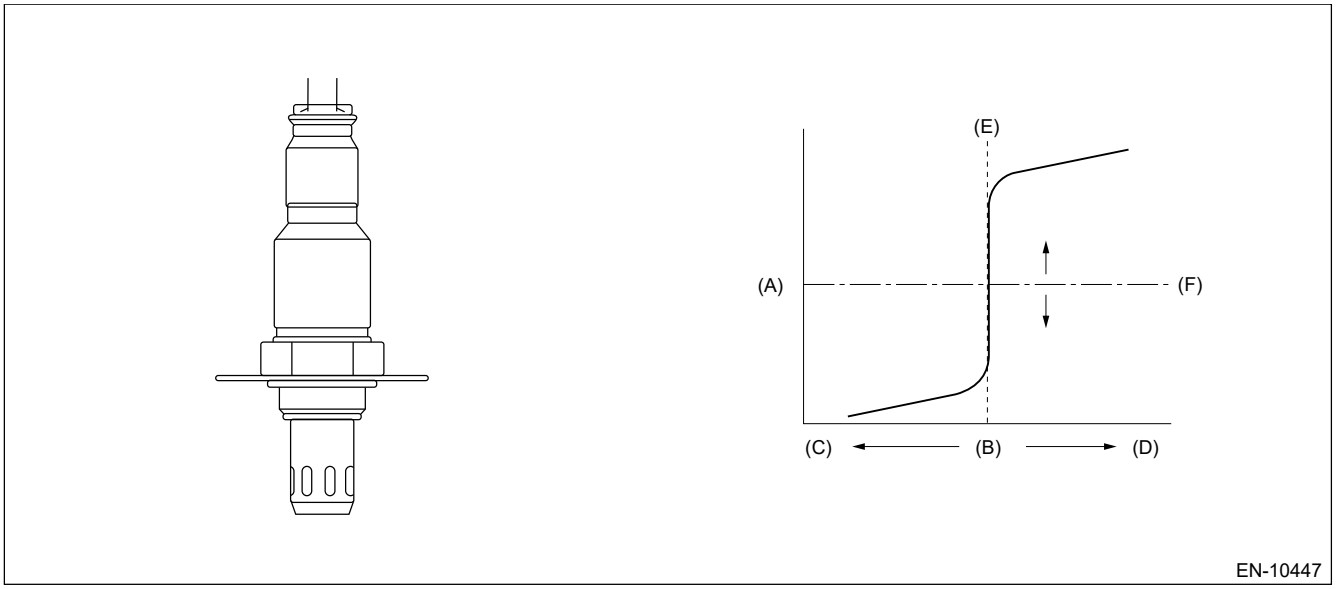
4. CHECK EXHAUST SYSTEM.

Check exhaust system parts.

Note:

Check the following items.

- **Looseness and improper fitting of exhaust system parts**
- **Damage (crack, hole etc.) of parts**
- **Damage (crack, hole etc.) between front oxygen (A/F) sensor and rear oxygen sensor**



Is there any fault in exhaust system?

Yes	Repair or replace faulty parts.
No	Replace the rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Rear Oxygen Sensor.

1. OUTLINE OF DIAGNOSIS

Detect the stuck of rear oxygen sensor voltage in lean state.
When rear oxygen sensor voltage remains below the threshold value for predetermined time, diagnosis interrupts target air fuel ratio for control and raises output voltage.
Judge as NG detecting the stuck in lean state when rear oxygen sensor voltage remains below the threshold value even after the interrupt control.

2. COMPONENT DESCRIPTION

(A) Electromotive force (B) Air fuel ratio (C) Lean
(D) Rich (E) Theoretical air fuel ratio (F) Comparative voltage

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V
Sub feedback	In operation
Amount of intake air	10g/s (0.35oz/s) or more
Estimated temperature of the rear oxygen sensor element	500°C (932°F) or more
Enable conditions at interrupt control are as follows	
Continuous time when rear oxygen sensor output voltage is less than 0.55V	50g / 10g/s or more
Air fuel ratio reduced from target air fuel ratio	Equal to Value of Map

Map

Output voltage of rear oxygen sensor V	**0.0**	**0.2**	**0.2**	**0.4**	**0.6**
Air fuel ratio reduced from target air fuel ratio %	8	8	4	4	4

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage of rear oxygen sensor	Less than 0.55V

Time needed for diagnosis: 10g/s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

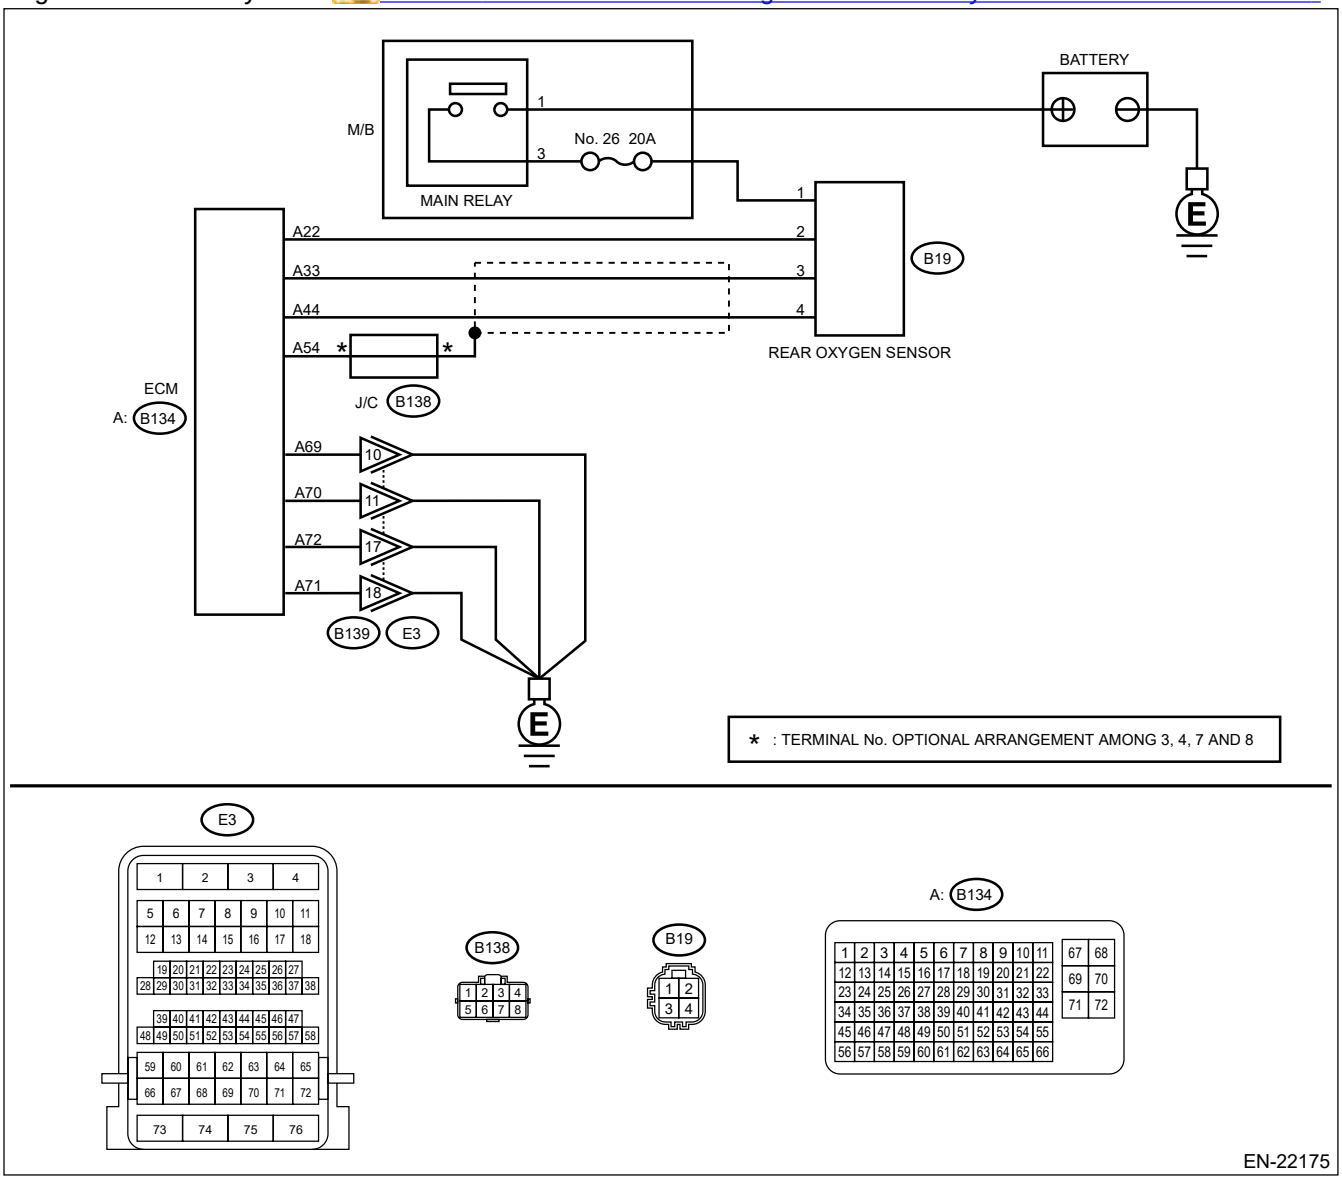
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2271 O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 2

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

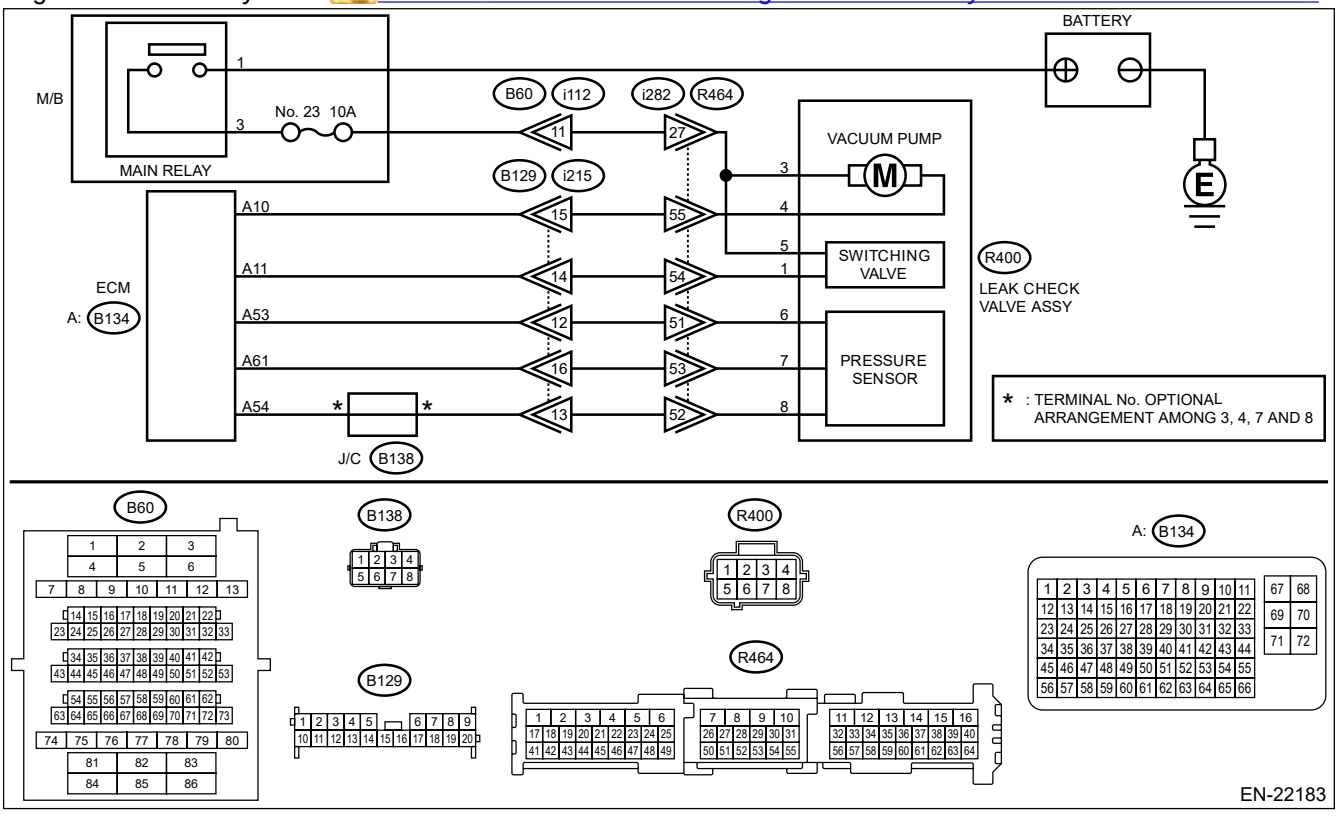
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2401 EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (E134) No. 10 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Go to 3.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.**

3. CHECK POWER SUPPLY TO LEAK CHECK VALVE ASSEMBLY.

Measure the voltage between the leak check valve assembly connector and engine ground.
Connector & terminal
(R400) No. 3 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the leak check valve assembly.
4. Measure the resistance between leak check valve assembly and chassis ground.
   Connector & terminal
   (R400) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

5. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (OPEN).

Measure the resistance of harness between ECM connector and the leak check valve assembly connector.

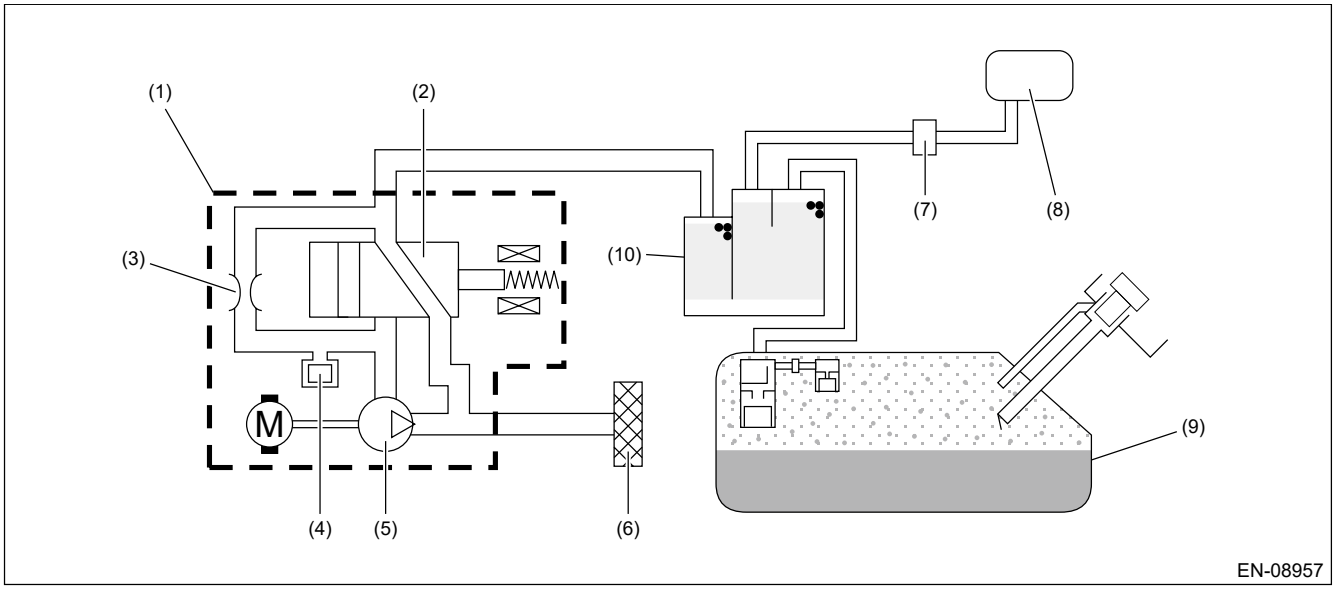
Connector & terminal
(B134) No. 10 — (R400) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the leak check valve assembly connector** • **Poor contact of coupling connector**

6. CHECK LEAK CHECK VALVE ASSEMBLY.

Check the vacuum pump of the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly>INSPECTION > CHECK VACUUM PUMP.



Is the check result OK?

Yes	Repair the poor contact in the leak check valve assembly connector.
No	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module vacuum pump.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter

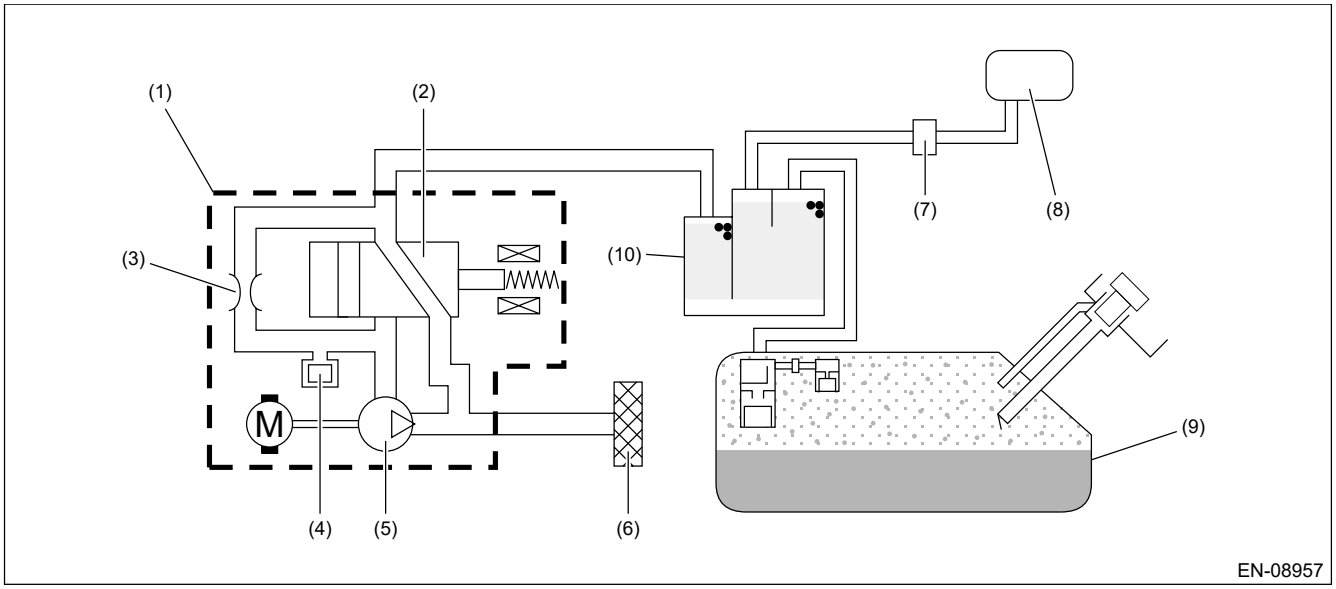
No	Go to 2.

2. CHECK LEAK CHECK VALVE ASSEMBLY.

1. Turn the ignition switch to OFF.
2. Check the vacuum pump of the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly>INSPECTION > CHECK VACUUM PUMP.



Is the check result OK?

Yes	Repair the poor contact in the leak check valve assembly connector.
No	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module vacuum pump.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch or	ON
Soak timer	ON
Battery voltage	10.9 V or more
Evaporative Leak Check Module vacuum pump drive signal	ON

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured EVAP system leak detection pump current	6 A or more

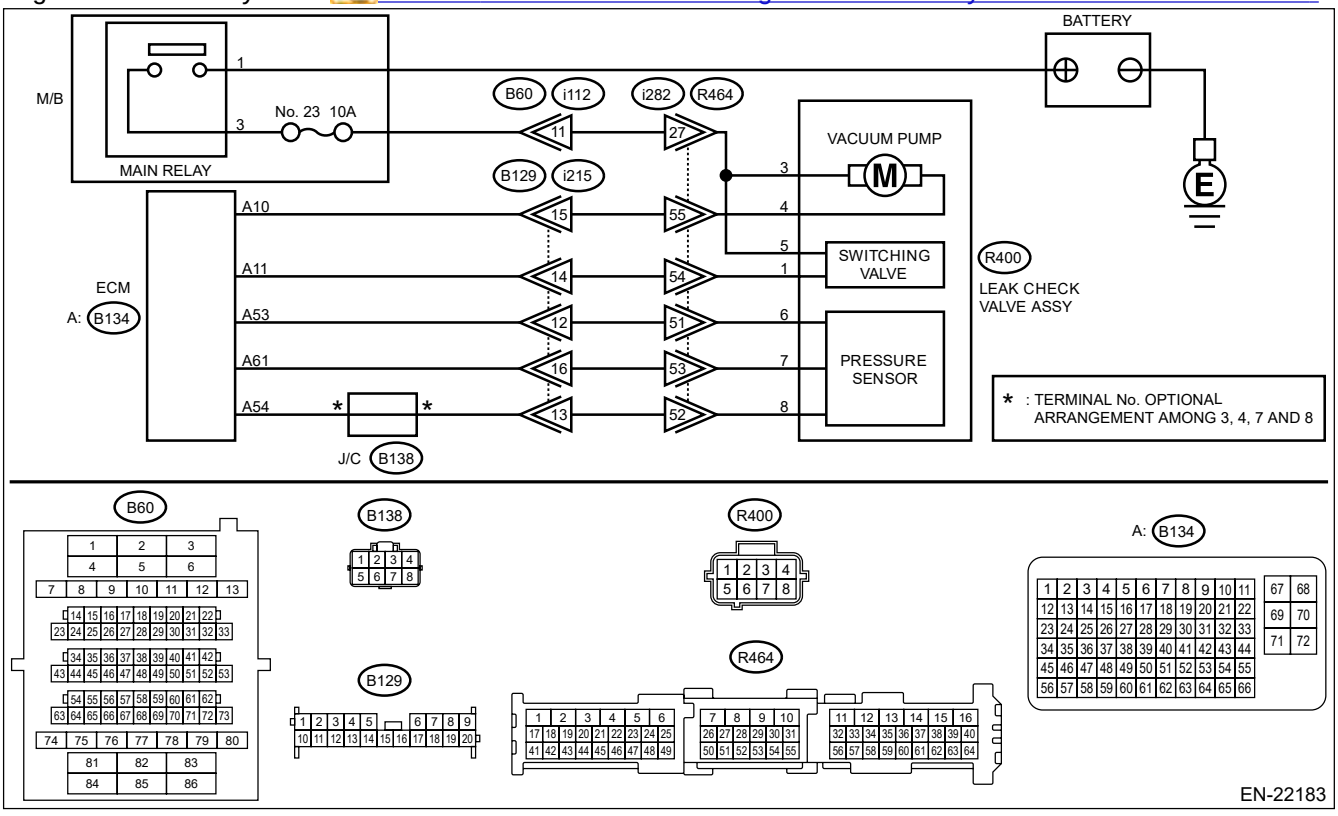
Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2404 EVAP SYSTEM LEAK DETECTION PUMP SENSE CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC P2404 displayed? (Current malfunction)

Yes	Go to 2.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. CHECK LEAK CHECK VALVE ASSEMBLY PUMP.

Using the Subaru Select Monitor, operate the leak check valve assembly pump.

Note:

For detailed operation procedures, refer to the Active Test. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.

Does the leak check valve assembly pump operate?

Yes	Go to 6.
No	Go to 3.

3. CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the leak check valve assembly.
3. Turn the ignition switch to ON.
4. Measure the voltage between the leak check valve assembly connector and chassis ground.
   Connector & terminal
   (R400) No. 3 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between the main relay and the leak check valve assembly connector** • **Poor contact of main relay connector** • **Poor contact of coupling connector**

4. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and the leak check valve assembly connector.
   Connector & terminal
   (B134) No. 10 — (R400) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the leak check valve assembly connector** • **Poor contact of coupling connector**

5. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (SHORT TO GROUND).

1. Measure the resistance of harness between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 10 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.
No	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

6. CHECK LEAK CHECK VALVE ASSEMBLY SWITCHING VALVE.

Using the Subaru Select Monitor, operate the leak check valve assembly switching valve.

Note:
For detailed operation procedures, refer to the “Active Test”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test.

Does the leak check valve assembly switching valve operate?

Yes	Go to 10.
No	Go to 7.

7. CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the leak check valve assembly.
3. Turn the ignition switch to ON.
4. Measure the voltage between the leak check valve assembly connector and chassis ground.
   Connector & terminal
   (R400) No. 5 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 8.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between the main relay and the leak check valve assembly connector** • **Poor contact of main relay connector** • **Poor contact of coupling connector**

8. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the resistance of harness between ECM connector and the leak check valve assembly connector.
   Connector & terminal
   (B134) No. 11 — (R400) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the leak check valve assembly connector** • **Poor contact of coupling connector**

9. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (SHORT TO GROUND).

1. Measure the resistance of harness between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 11 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.
No	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

10. CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.

Perform the Inspection Mode I. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode>PROCEDURE > INSPECTION MODE I.

Is DTC P2404 displayed? (Current malfunction)

Yes	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC P0455. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK).

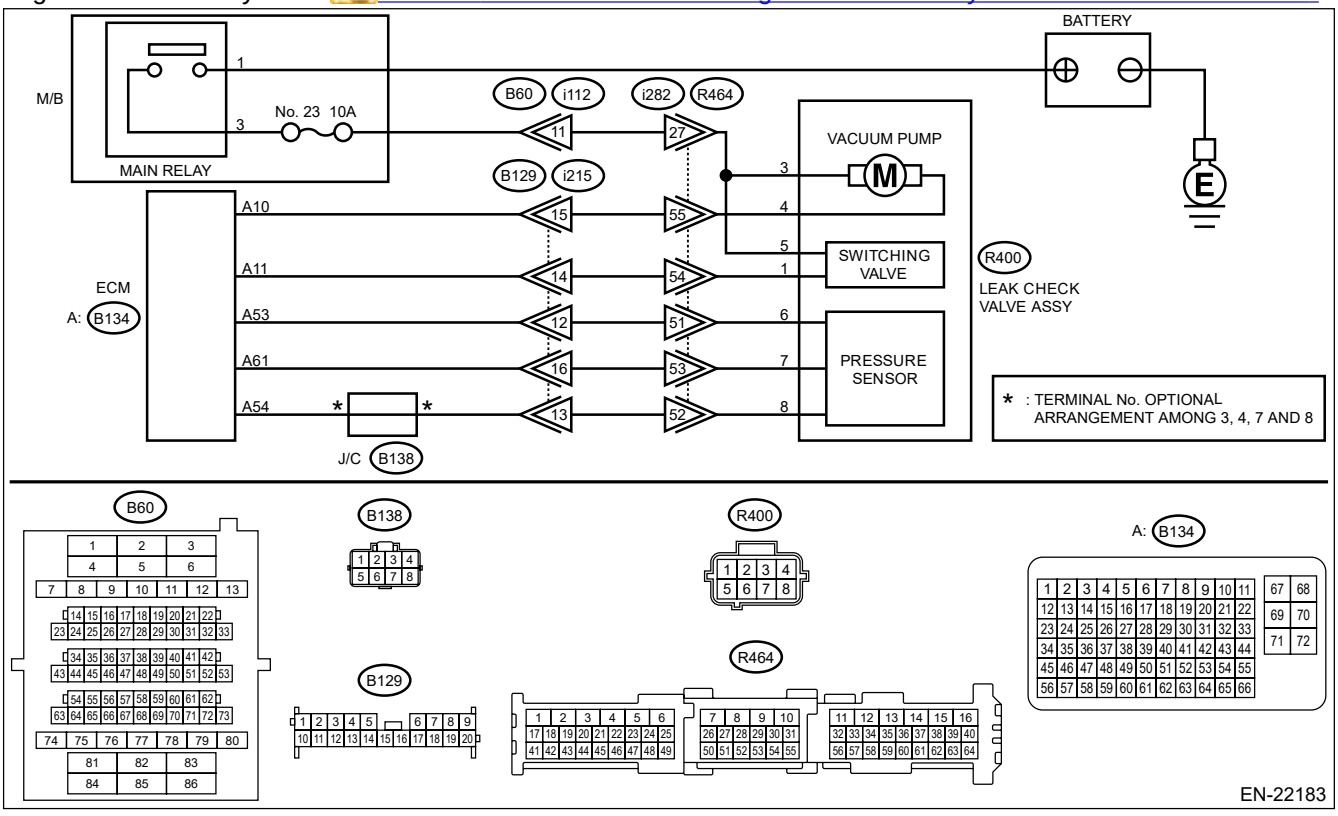
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2419 EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 10 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Go to 3.

2. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.**

3. CHECK POWER SUPPLY TO LEAK CHECK VALVE ASSEMBLY.

Measure the voltage between the leak check valve assembly connector and engine ground.
Connector & terminal
(R400) No. 5 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the leak check valve assembly.
4. Measure the resistance between leak check valve assembly and chassis ground.
   Connector & terminal
   (R400) No. 1 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

5. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (OPEN).

Measure the resistance of harness between ECM connector and the leak check valve assembly connector.

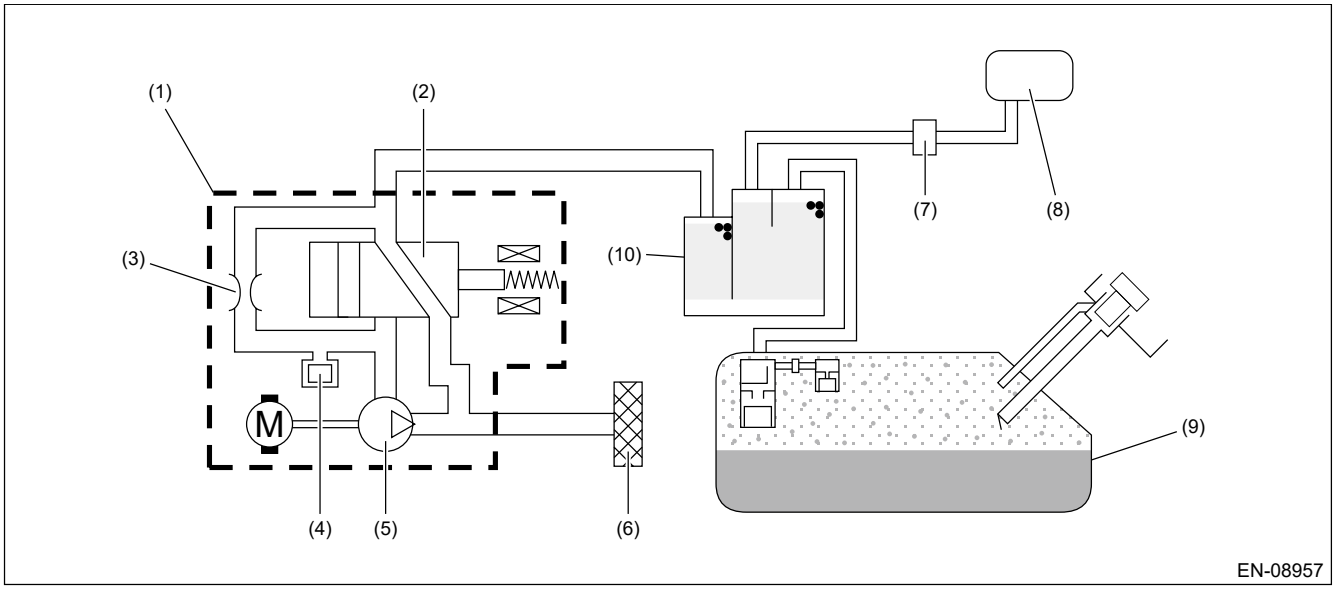
Connector & terminal
(B134) No. 11 — (R400) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and the leak check valve assembly connector** • **Poor contact of coupling connector**

6. CHECK LEAK CHECK VALVE ASSEMBLY.

Check the switching valve of the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly>INSPECTION > CHECK SWITCHING VALVE.



Is the check result OK?

Yes	Repair the poor contact in the leak check valve assembly connector.
No	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module switching valve.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch	ON

Secondary parameters	Execution condition
or	
Soak timer	ON
Battery voltage	10.9 or more
Evaporative Leak Check Module switching valve drive signal	OFF

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured EVAP system leak detection pump voltage	3 V or less

Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

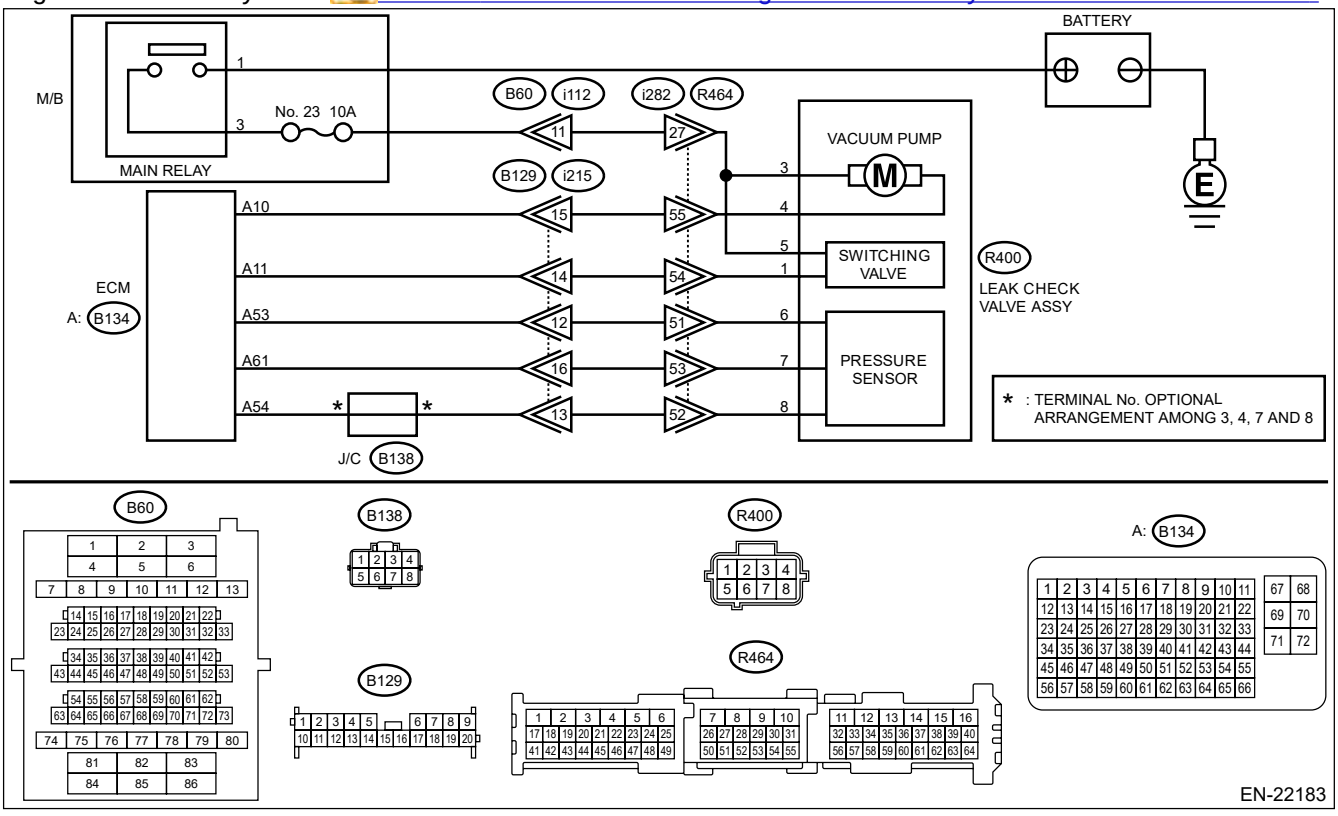
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2420 EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY (SHORT TO POWER SUPPLY).

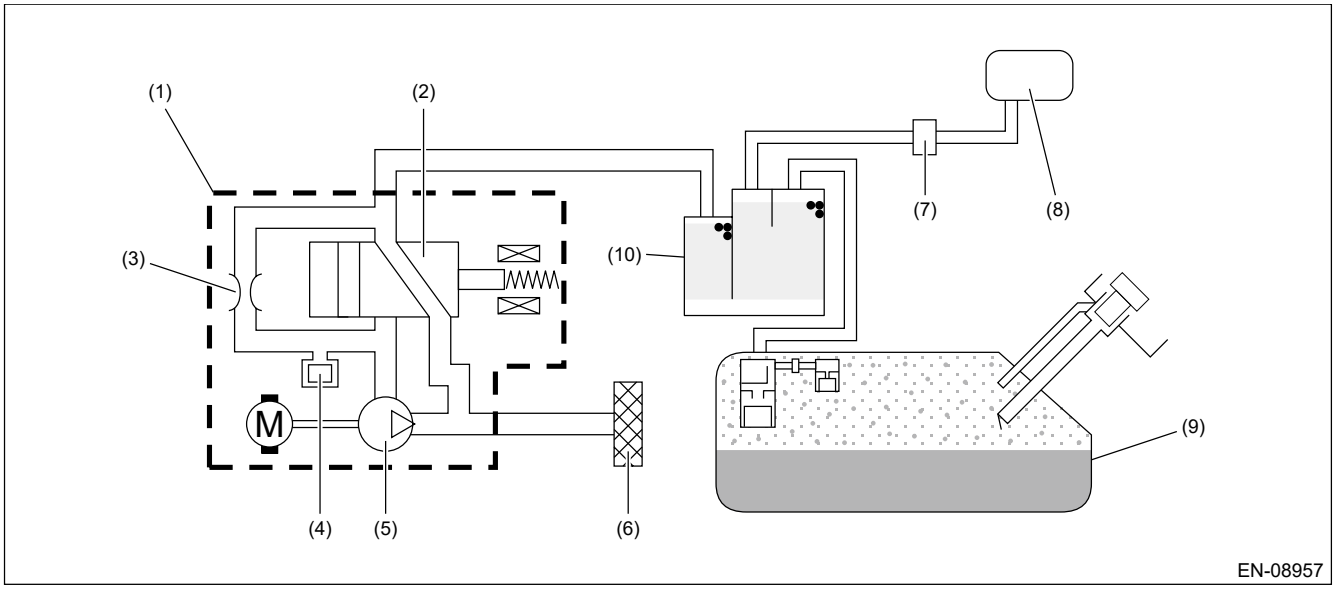
1. Turn the ignition switch to OFF.
2. Disconnect the connector from the leak check valve assembly.
3. Turn the ignition switch to ON.
4. Measure the voltage between leak check valve assembly and chassis ground.
   Connector & terminal
   (R400) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit to power in harness between ECM connector and leak check valve assembly connector.
No	Go to 2.

2. CHECK LEAK CHECK VALVE ASSEMBLY.

1. Turn the ignition switch to OFF.
2. Check the switching valve of the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly>INSPECTION > CHECK SWITCHING VALVE.



Is the check result OK?

Yes	Repair the poor contact in the leak check valve assembly connector.
No	Replace the leak check valve assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Leak Check Valve Assembly.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module switching valve.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch or	ON
Soak timer	ON
Battery voltage	10.9 V or more
Evaporative Leak Check Module switching valve drive signal	ON

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured EVAP system leak detection pump current	6 A or more

Time needed for diagnosis: 2500ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

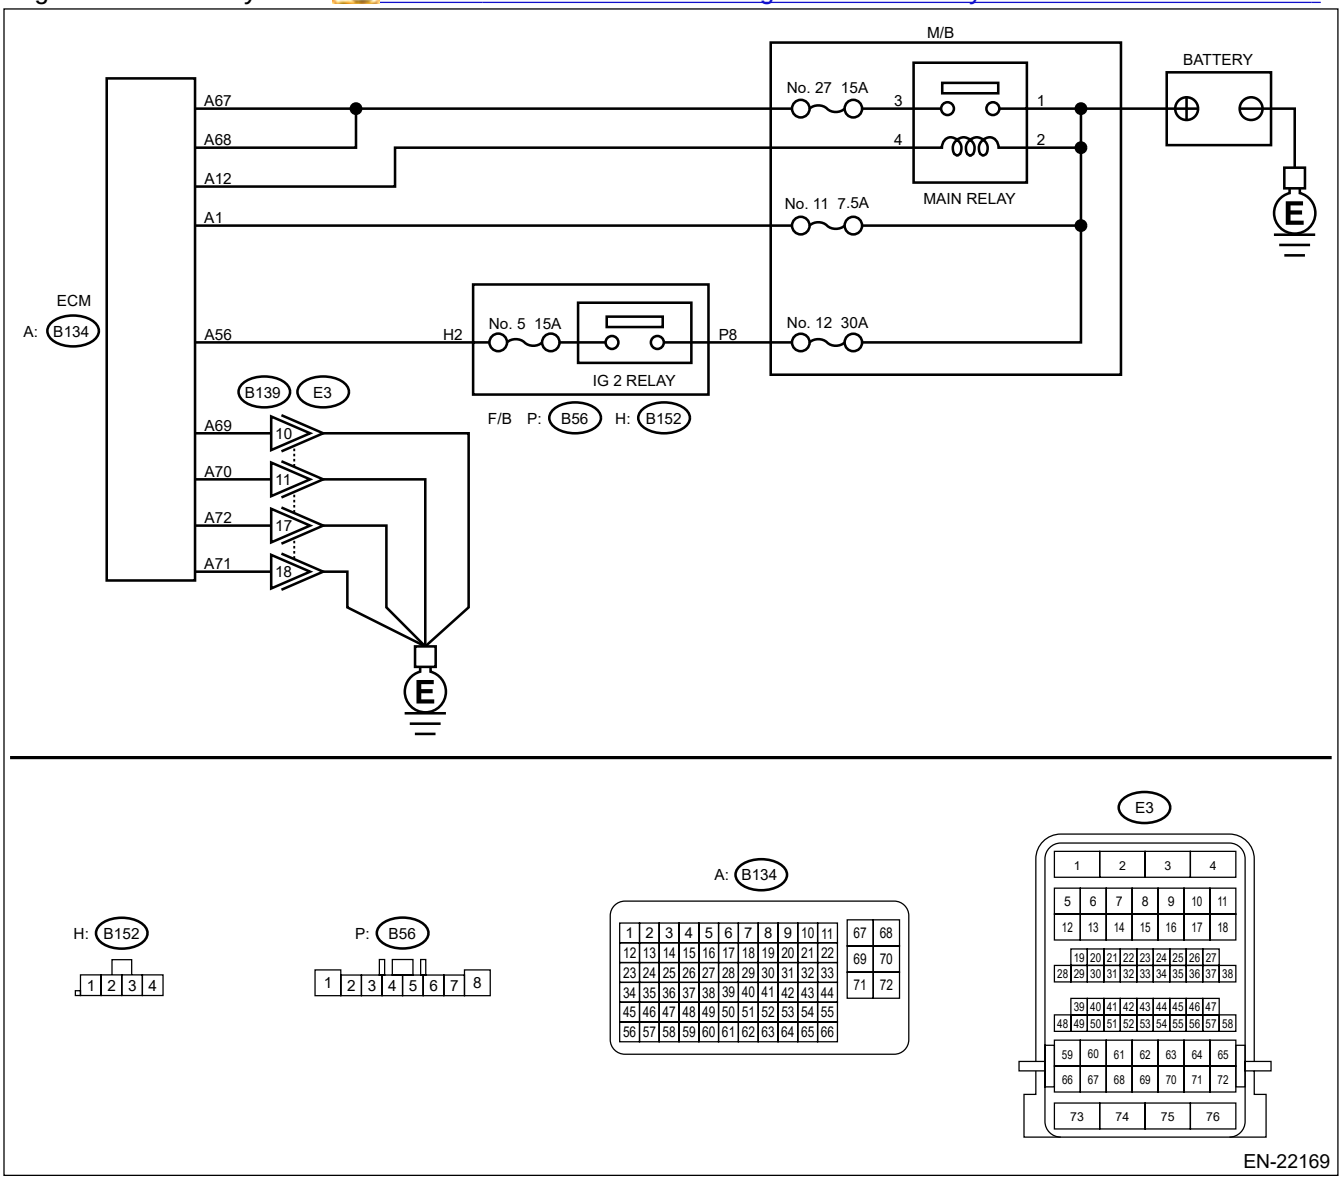
DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper idling

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 2.
No	Connect the ECM connector correctly.

2. CHECK INPUT VOLTAGE OF ECM.

1. Turn the ignition switch to ON.
2. Connect the check board.

ST 18460AA050 CHECK BOARD

3. Measure the voltage between ECM connector and engine ground while wiggling the harness between ECM connector and F/B connector.

Connector & terminal

(B134) No. 24 (+) — Engine ground (−):

Is the voltage 8 V or more all the time?

Yes	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, the following items may be the cause of fault.** • **Poor contact of fuse (F/B No. 5)** • **Poor contact of IG2 relay connector** • **Poor contact of IG2 relay**
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Poor contact of fuse (F/B No. 5)** • **Poor contact of IG2 relay connector** • **Poor contact of IG2 relay**

1. OUTLINE OF DIAGNOSIS

Detect instantaneous open in ignition switch input circuit to ECM.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

ECM monitors the voltage of the ignition switch input circuit. Judge as ignition switch ON when the voltage is the specified value or more.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9V or more
Engine speed	500rpm or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
Number of instantaneous opens in ignition switch input circuit	5time(s) or more

Time needed for diagnosis: 5000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P2610 ECM/PCM ENGINE OFF TIMER PERFORMANCE

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Note:

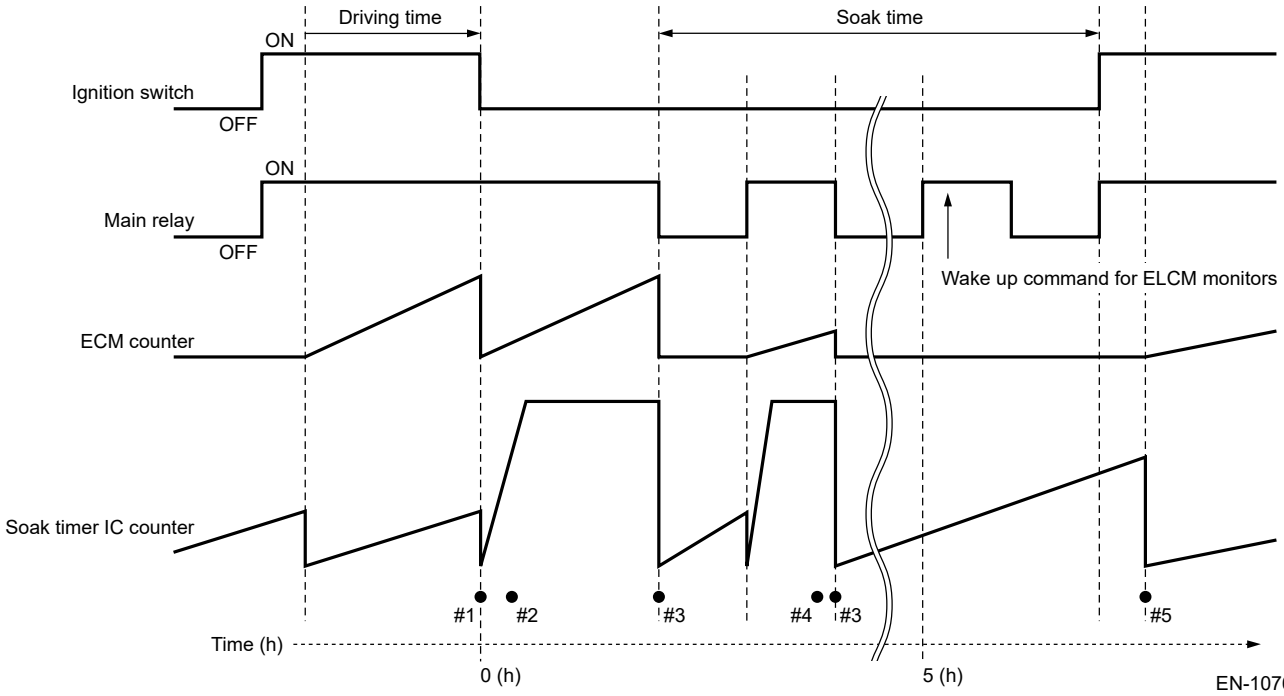
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

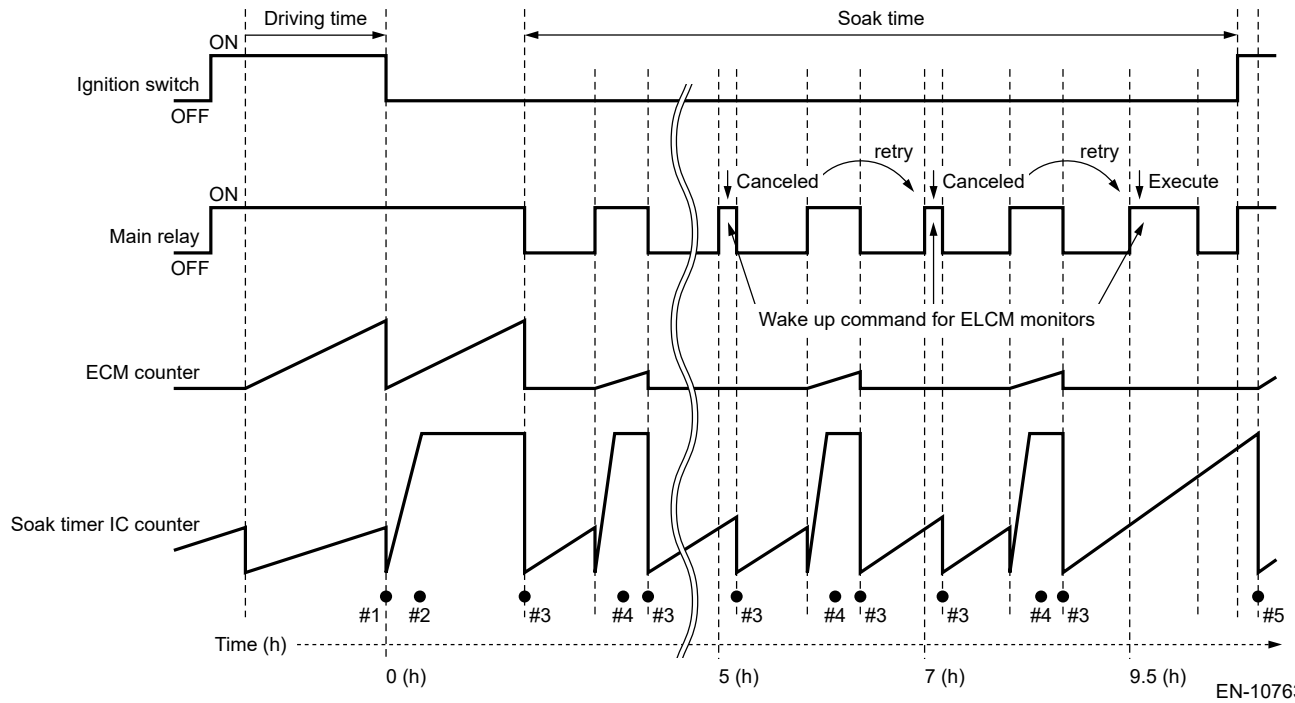
DTC Check

Is DTC P2610 displayed? (Current malfunction)



Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM). **Note:** **The soak timer IC is built into the ECM.**
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

1. OUTLINE OF DIAGNOSIS



Detect malfunction of soaking timer IC by the five diagnoses below.

Monitor Number	Explanation	Time required for diagnosis
Monitor #1 <Timer diagnosis>	Perform diagnosis of the soaking timer IC accuracy	128 ms
Monitor #2 <Full count diagnosis>	Perform diagnosis of the soaking timer IC counter function	128 ms
Monitor #3 <Soaking timer IC setting diagnosis>	Perform diagnosis of communication between ECM and soaking timer IC	128 ms
Monitor #4 <Timer diagnosis (during soaking)>	Perform diagnosis of the soaking timer IC accuracy during soaking	None
Monitor #5 <Wake-up diagnosis>	Perform diagnosis of wake-up function	None

This is an example of ELCM monitor execution at soak time of 5 hours.

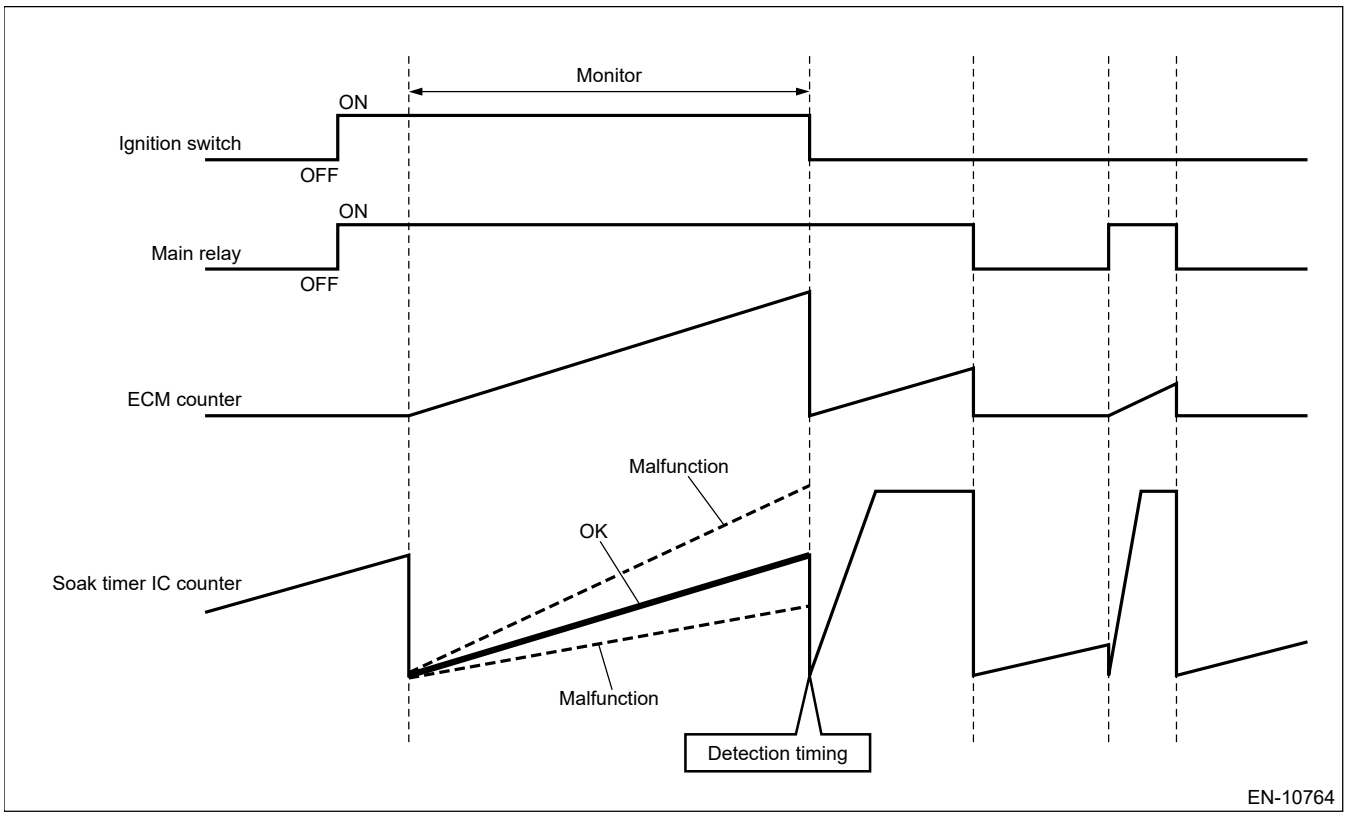
This is an example of ELCM monitor execution at soak time of 9.5 hours.

2. COMPONENT DESCRIPTION

The soak timer IC is built into the ECM.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Monitor#1<Timer diagnosis>	
Battery voltage Ignition switch Elapsed time after starting the engine	10.9 V or more OFF More than 19 s and Less than 61439 seconds
Monitor#2<Full count diagnosis>	
Battery voltage Ignition switch Counter in ECM	10.9 V or more OFF 4 s or more
Monitor#3<Soak timer IC setting diagnosis>	
Battery voltage Ignition switch	10.9 V or more OFF
Monitor#4<Timer diagnosis (during soaking)>	
Battery voltage Ignition switch	10.9 V or more OFF
Monitor#5<Wake-up diagnosis>	
Ignition switch Time in the soaking timer IC	ON More than 3600s



4. GENERAL DRIVING CYCLE

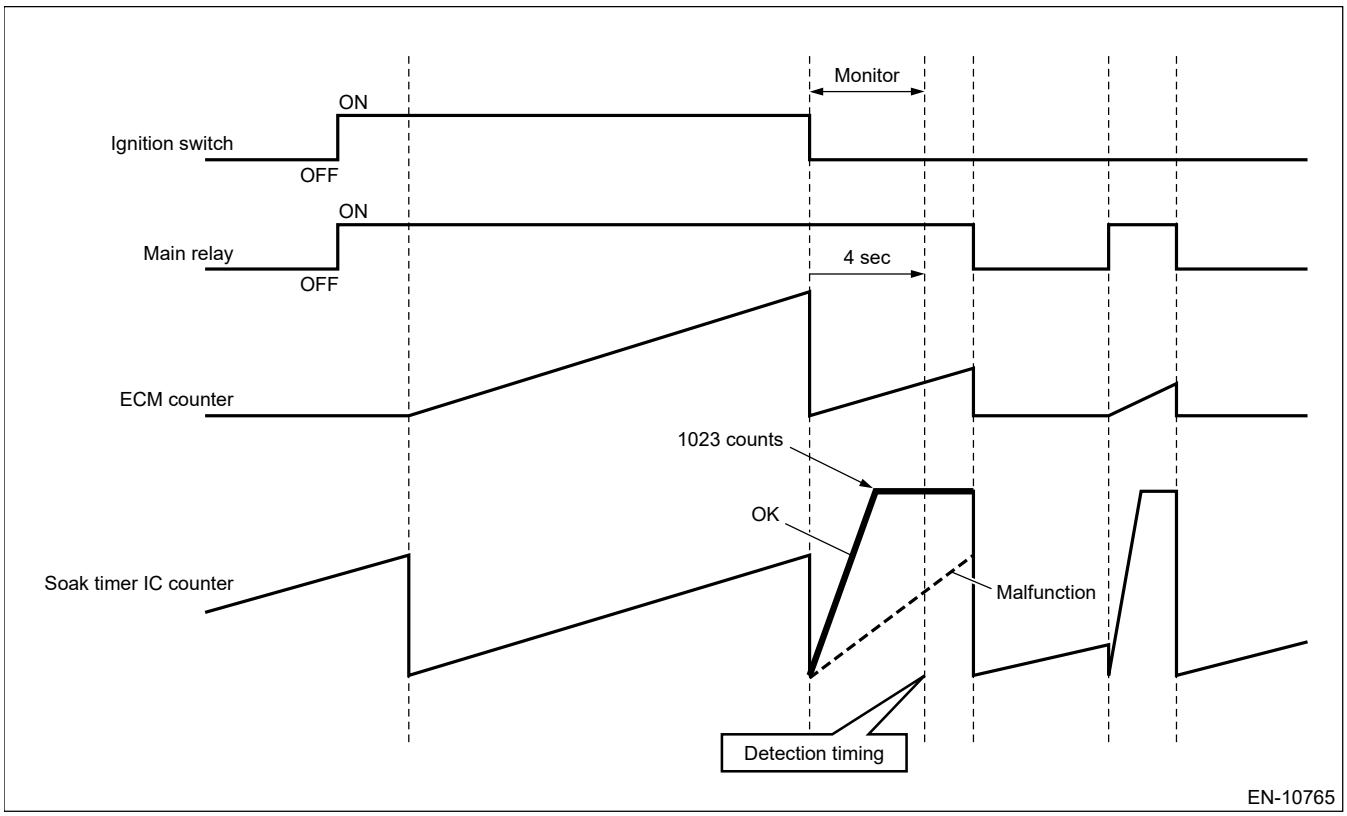
Perform the diagnosis only once when the ignition switch is OFF and when the ignition switch is ON after the soaking of one hour or more.

5. DIAGNOSTIC METHOD

MONITOR#1<TIMER DIAGNOSIS>

Start the count up operation of counters in ECM and in soaking timer IC when the engine is started.
Judge as timer malfunction if the difference between the counter in ECM and counter in soaking timer IC exceeds the allowable limit when the ignition switch is OFF.

Judge as NG when the following conditions are established.



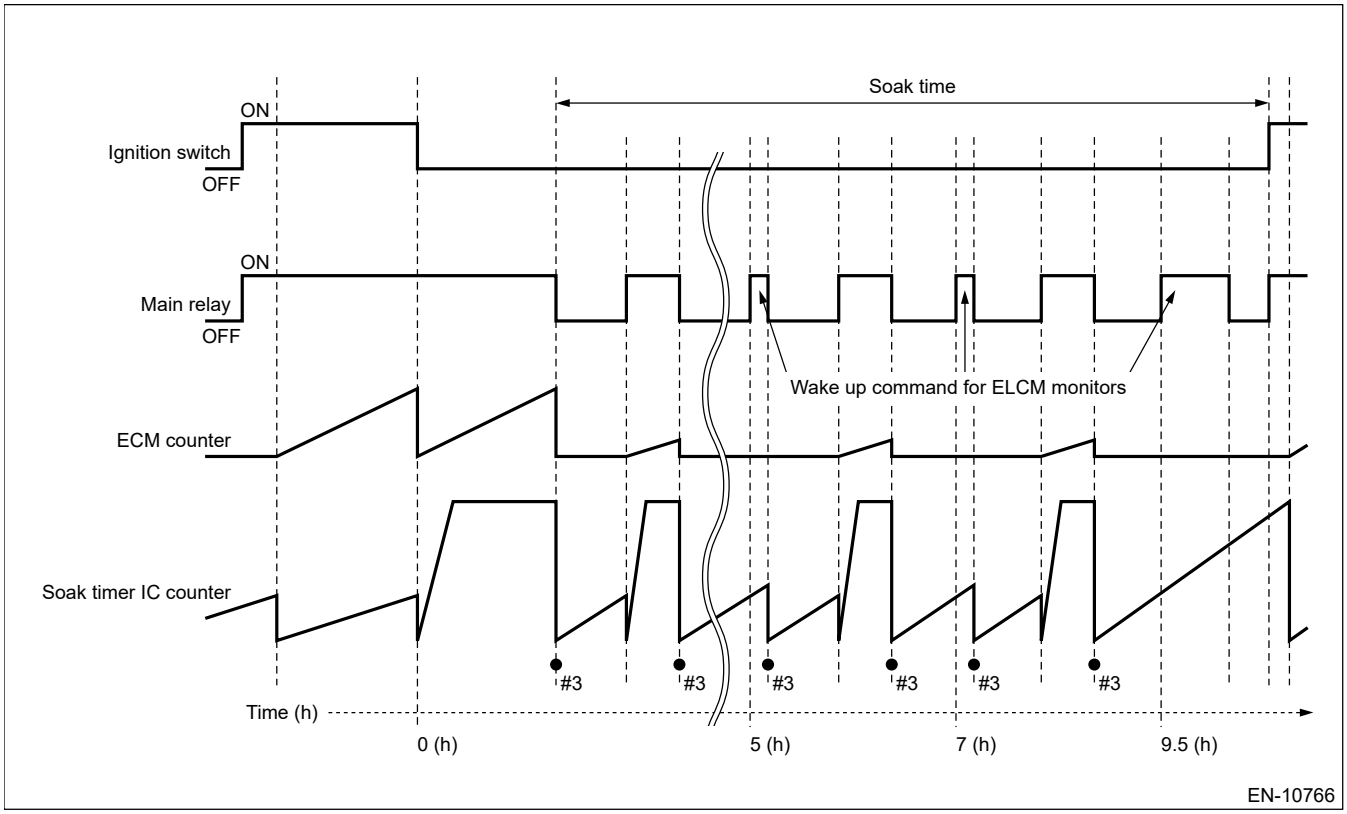
Judgment value

Malfunction Criteria	Threshold Value
|osoaktimcpu – osoaktimic| / osoaktimcpu osoaktimcpu = Counter in ECM osoaktimic = Counter in soaking timer IC	More than 0.24

MONITOR#2<FULL COUNT DIAGNOSIS>

Reset the counter in soaking timer IC and start the count up operation.

Judge as full count diagnosis malfunction if counter in soaking timer IC is not $3FF (1023 count) after 4 seconds.



Judge as NG when the following conditions are established.

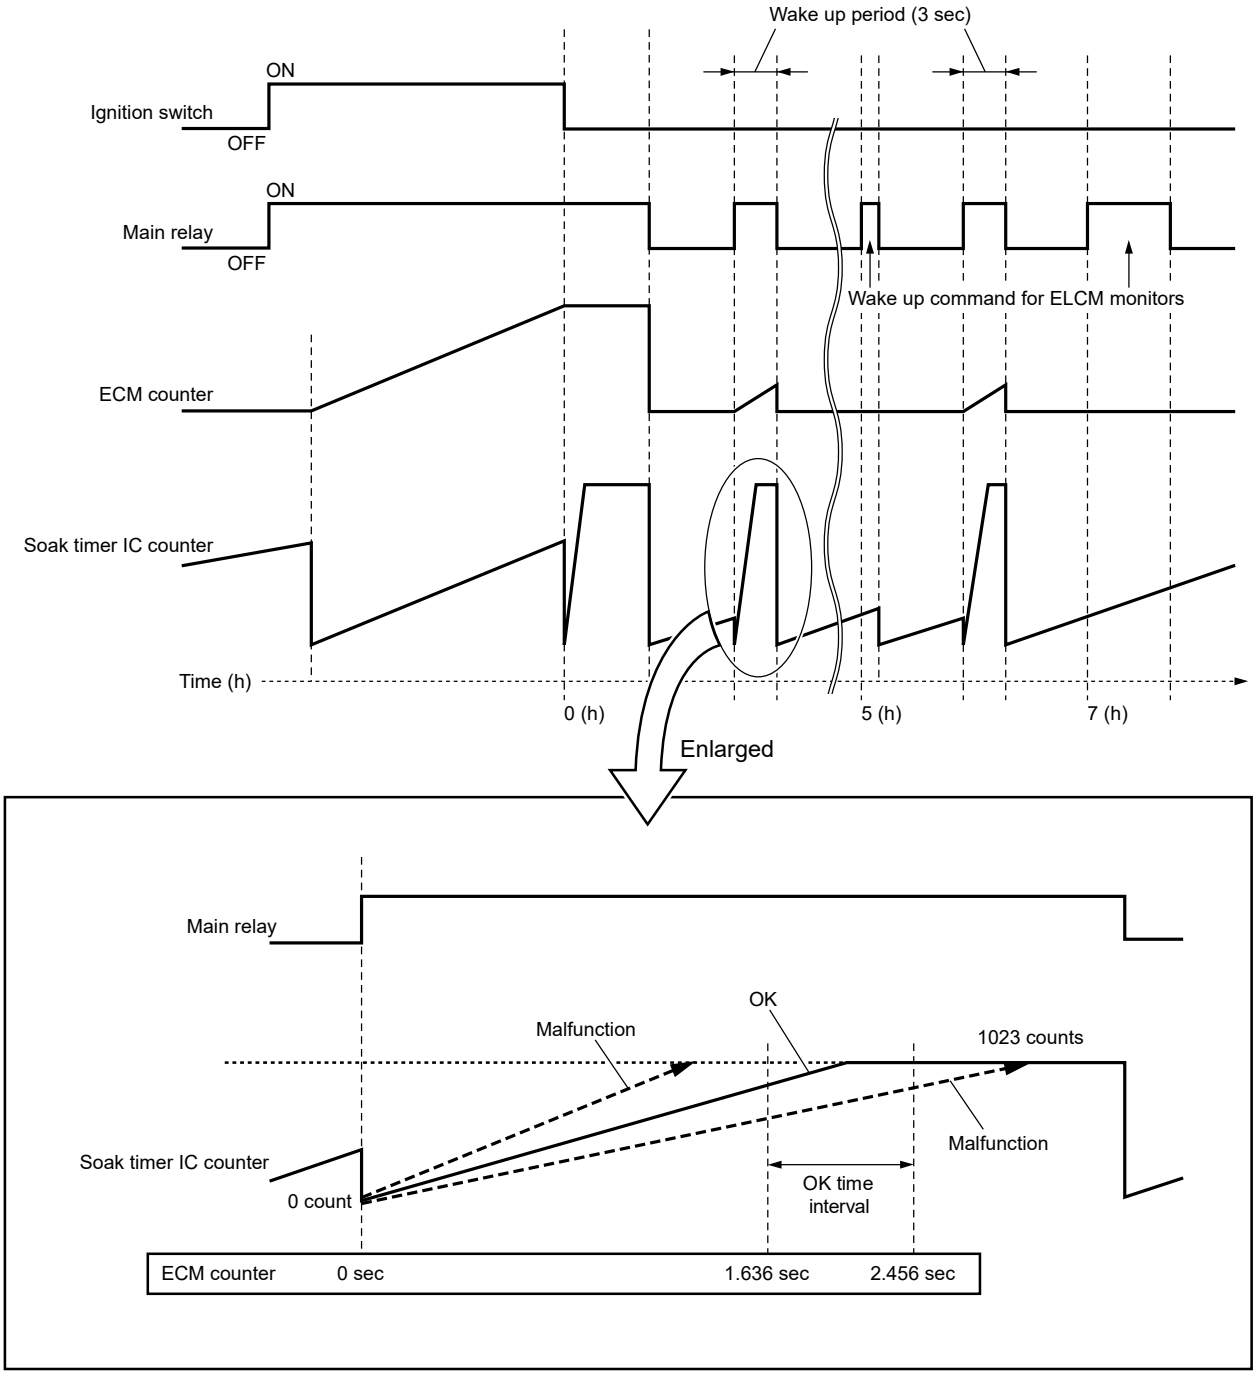
Judgment value

Malfunction Criteria	Threshold Value
osoakfcntic osoakfcntic = Counter in soaking timer IC	Not equal to $3FF (65535 count)

MONITOR#3<SOAK TIMER IC SETTING DIAGNOSIS>

When setting the activation setting time to soaking timer IC, compare the writing value to soaking timer IC with read out value. Judge as malfunction if the values do not match 3 times in a row.

Judge as NG when the following conditions are established.



Judgment value

Malfunction Criteria	Threshold Value
Writing value and read out value when setting the soaking timer	Unmatch

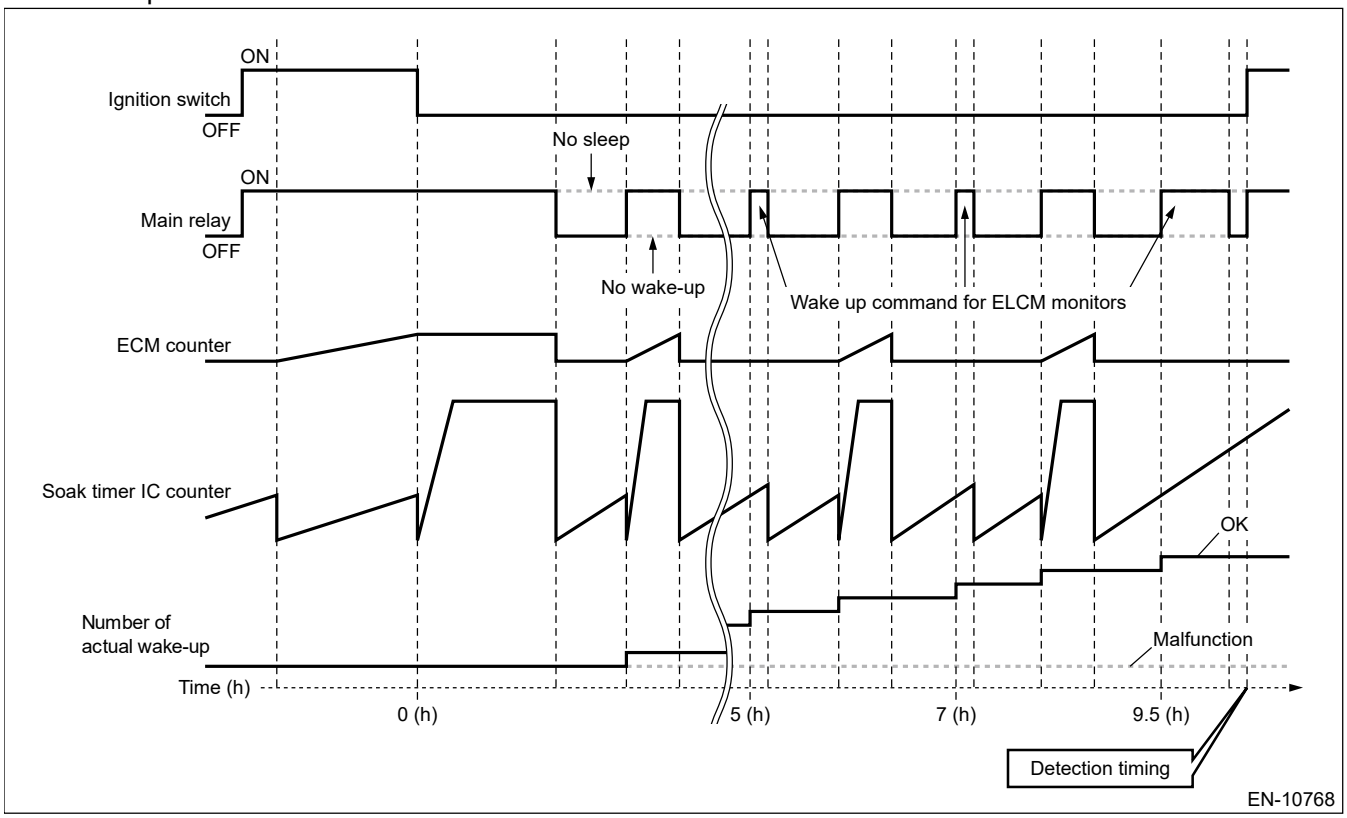
MONITOR#4<TIMER DIAGNOSIS (DURING SOAKING)>

Wake-up at the predetermined interval until 5, 7 or 9.5 hours have passed after the ignition switch is OFF, and compare the counter in soaking timer IC with the counter in ECM.

Judge as malfunction if the counter in soaking timer IC is counted up to maximum value (1023 count) when the counter in ECM is 1636 ms, or if the counter in soaking timer IC is not counted up to maximum value (1023 count) when the counter in ECM is 2456 ms.

EN-10767

Judge as NG when the following conditions are established.



Judgment value

Malfunction Criteria	Threshold Value
When any one of the followings is established:	
• All of the following conditions are established. Counter in ECM	1636 ms or less
Counter in soaking timer IC	Equal to $3FF (65535 count)

Malfunction Criteria	Threshold Value
• All of the following conditions are established.	
Counter in ECM	2456 ms or more
Counter in soaking timer IC	Not equal to $3FF (65535 count)

MONITOR#5<WAKE-UP DIAGNOSIS>

Store the number of wake-up activation when the ECM wakes up by the soaking timer IC.
Next time when the ignition switch is ON, if the number of wake-up activation does not reach the predetermined value even though the counter in soaking timer IC operates 1 hour or more, judge as wake-up malfunction.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Number of wake-up	Not equal to wake-up indication count

Time needed for diagnosis:

Monitor#1: 0.128 s
Monitor#2: 0.128 s
Monitor#3: 0.128 s
Monitor#4: 1 s
Monitor#5: 1 s

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving

cycles.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Note:

For the diagnostic procedure, refer to LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when CAN communication failure has occurred.

2. COMPONENT DESCRIPTION

(Common Specifications)

CAN Protocol 2.0B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
CAN bus condition	Equal to Bus off

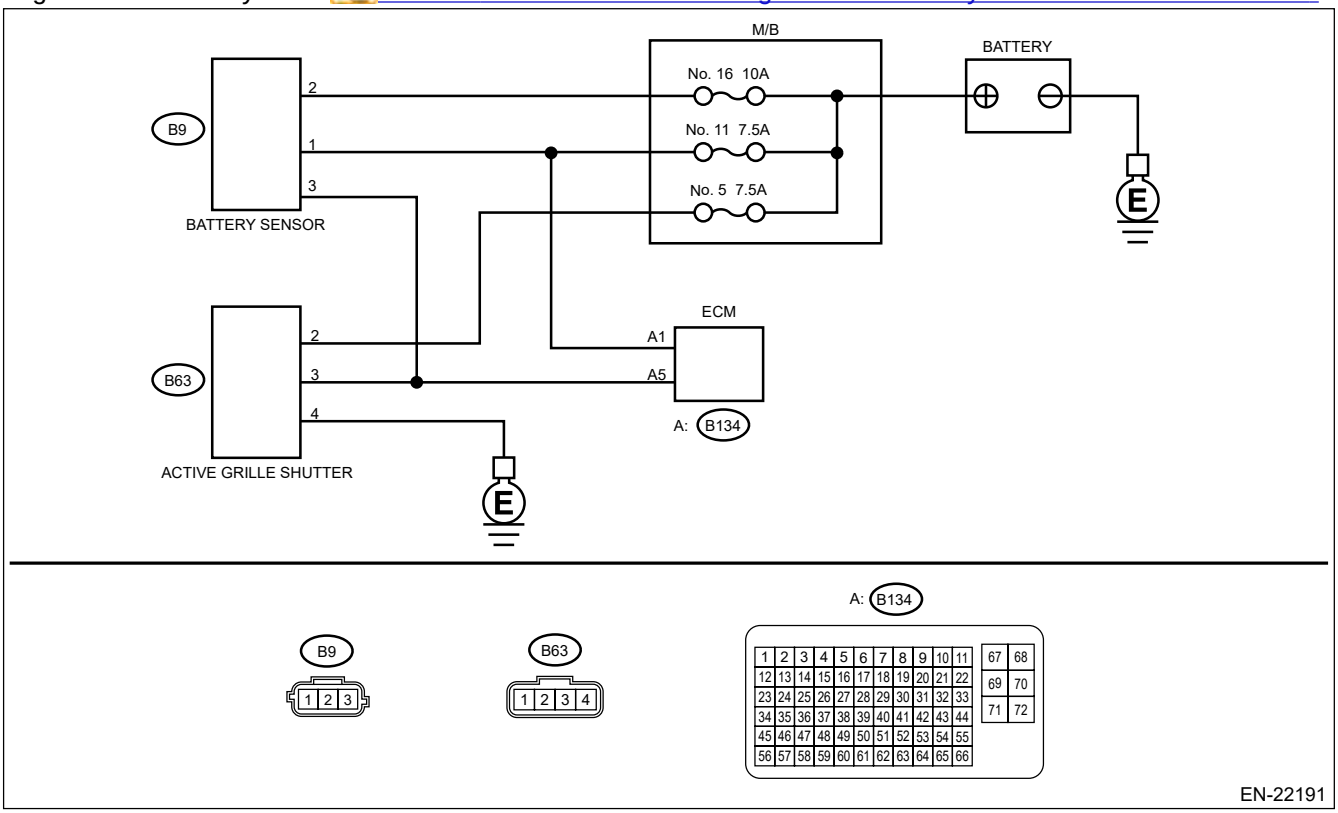
Time needed for diagnosis: 1 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC U0077 LIN COMMUNICATION BUS "ECM/PCM" OFF

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC U0077 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. Clear the memory using the Subaru Select Monitor or general scan tool. **Note:** • **SUBARU SELECT MONITOR** **For detailed procedures, refer to "Clear memory". Ref. to COMMON(diag)>Clear memory.** • **General scan tool** **For detailed operation procedures, refer to the general scan tool operation manual.**

2. CHECK BETWEEN ECM AND BATTERY SENSOR, AND BETWEEN ECM AND ACTIVE GRILLE SHUTTER (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Disconnect the battery sensor connector.
4. Disconnect the connector of the active grille shutter.
5. Measure the resistance of terminals between ECM connector and battery sensor connector, as well as ECM connector and active grille shutter connector.

   Connector & terminal

   (B134) No. 5 — (B9) No. 3:

   (B134) No. 5 — (B63) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and battery sensor connector, and between ECM connector and active grille shutter connector** • **Poor contact of coupling connector**

3. CHECK WIRING HARNESS BETWEEN ECM AND BATTERY SENSOR, AND BETWEEN ECM AND ACTIVE GRILLE SHUTTER (SHORT TO GROUND).

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 5 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit to ground in harness between ECM connector and battery sensor connector, as well as ECM connector and active grille shutter connector.

4. CHECK WIRING HARNESS BETWEEN ECM AND BATTERY SENSOR, AND BETWEEN ECM AND ACTIVE GRILLE SHUTTER (SHORT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 5 — Chassis ground:

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the short circuit to power supply in harness between ECM connector and battery sensor connector, as well as ECM connector and active grille shutter connector.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Connect the battery sensor connector and ECM connector.
3. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine].
   Ref. to COMMON(diag)>Clear memory.

4. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC U0077 displayed? (Current malfunction)

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause. Clear the memory using the Subaru Select Monitor or general scan tool.** • SUBARU SELECT MONITOR For detailed procedures, refer to “Clear memory”. Ref. to COMMON(diag)>Clear memory. • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.

1. OUTLINE OF DIAGNOSIS

Detect malfunction of LIN communication.
Judge as NG when the data sent/received via LIN communication is abnormal.

2. COMPONENT DESCRIPTION

LIN communication is used to send/receive data between ECM, battery sensor and active grille shutter.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Data sent/received with control modules connected to LIN	No change or Checksum error

Time needed for diagnosis: 1.28 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

Note:

For the diagnostic procedure, refer to LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS) >Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when CAN communication failure between TCM, VDC CM and combination meter has occurred.

2. COMPONENT DESCRIPTION

(Common Specifications)

CAN Protocol 2.0B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
ID received from control module	None

Malfunction Criteria	Threshold Value
connected to CAN	

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Note:
For the diagnostic procedure, refer to LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

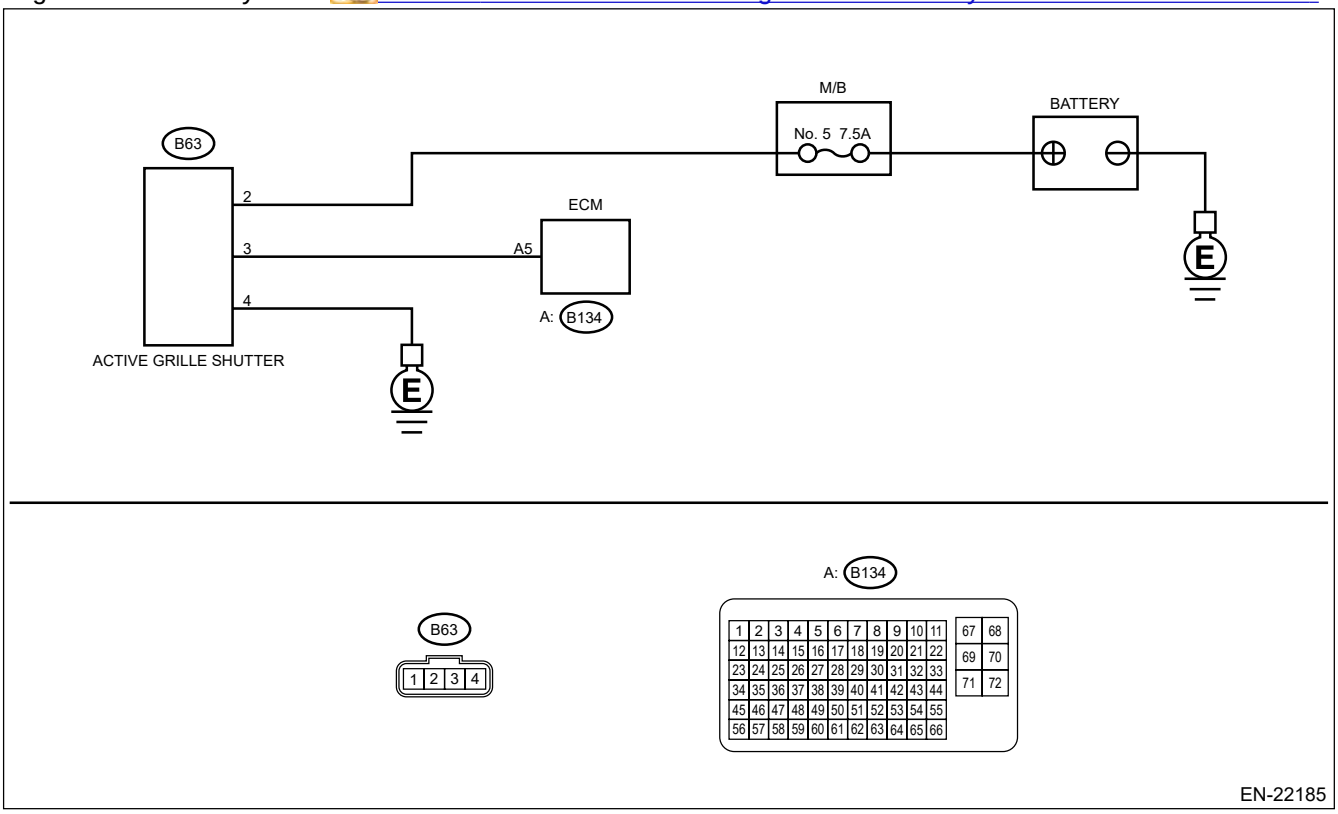
Note:
For the detection standard, refer to DTC U0101. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0101 LOST COMMUNICATION WITH TCM.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Note:
For the diagnostic procedure, refer to LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS



Note:
For the detection standard, refer to DTC U0101. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0101 LOST COMMUNICATION WITH TCM.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0284 LOST COMMUNICATION WITH ACTIVE GRILLE SHUTTER MODULE "A"

DTC detecting condition:
Immediately at fault recognition
Caution:
Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.
Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.
Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC U0284 displayed? (Current malfunction)

Yes	Go to 2.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC for engine displayed?

Yes	Go to 3.
No	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

3. CHECK HARNESS BETWEEN ECM AND ACTIVE GRILLE SHUTTER (SHORT TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the battery.
3. Disconnect the connector from ECM.
4. Disconnect the connector from the active grille shutter.
5. Measure the resistance between active grille shutter connector and chassis ground.
   Connector & terminal
   (B63) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit to ground in harness between ECM and active grille shutter connector.

4. CHECK HARNESS BETWEEN ECM AND ACTIVE GRILLE SHUTTER (OPEN).

Measure the resistance of harness between ECM and active grille shutter connector.

Connector & terminal

(B134) No. 5 — (B63) No. 3:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM and active grille shutter connector** • **Poor contact of coupling connector**

5. CHECK ACTIVE GRILLE SHUTTER POWER SUPPLY.

1. Connect the battery.
2. Measure the voltage between active grille shutter connector and chassis ground.

Connector & terminal

(B63) No. 2 (+) — Chassis ground (−):

Is the voltage 9 V or more?

Yes	Go to 6.
No	Repair the power supply circuit.

6. CHECK HARNESS BETWEEN ACTIVE GRILLE SHUTTER AND CHASSIS GROUND.

Measure the resistance of harness between active grille shutter connector and chassis ground.

Connector & terminal

(B63) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Replace the active grille shutter.
No	Repair the harness and connector.

Note:

In this case, repair the following item:

- **Open circuit of harness between active grille shutter connector and chassis ground**
- **Poor contact of coupling connector**

1. OUTLINE OF DIAGNOSIS

Detect malfunction of LIN communication.
Judge as NG if LIN communication failure has occurred with the active grille shutter.

2. COMPONENT DESCRIPTION

(Common Specifications)

Communication protocol: LIN 2.0
Communication speed: 19.20 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Data from control modules connected to LIN	None

Time needed for diagnosis: 3000ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0402 INVALID DATA RECEIVED FROM TCM

Note:

For the diagnostic procedure, refer to LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when data received from TCM, VDC CM and combination meter is not normal.

2. COMPONENT DESCRIPTION

(Common Specifications)

CAN Protocol 2.0B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Data from control modules connected to CAN	No change

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Note:

For the diagnostic procedure, refer to LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC U0402. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0402 INVALID DATA RECEIVED FROM TCM.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Note:

For the diagnostic procedure, refer to LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Note:

For the detection standard, refer to DTC U0402. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0402 INVALID DATA RECEIVED FROM TCM.

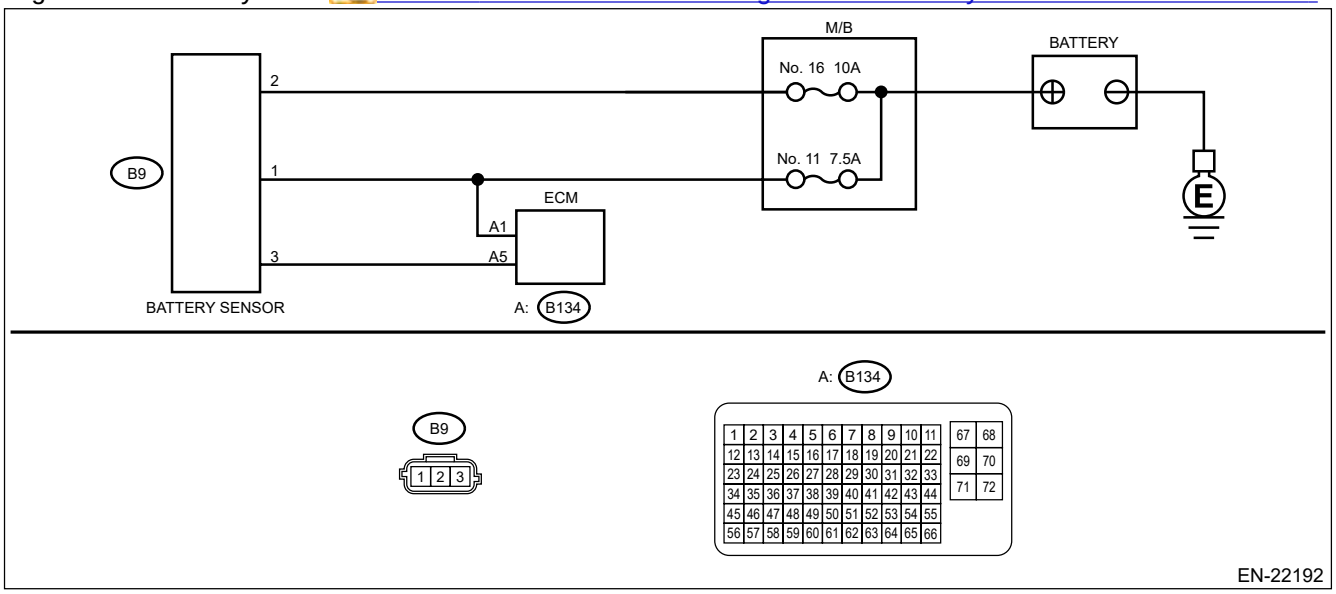
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1712 LOST LIN COMMUNICATION WITH BATTERY "1" MONITOR MODULE

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC U1712 displayed? (Current malfunction)

Yes	Go to 2.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

2. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 3.
No	Connect the ECM connector correctly.

3. CHECK HARNESS BETWEEN BATTERY AND BATTERY SENSOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Disconnect the connector from battery sensor.
4. Disconnect the positive terminal of battery.
5. Measure the resistance of the harness between battery positive cable terminal and battery sensor connector.

   Connector & terminal

   Positive cable terminal — (B9) No. 1:

   Positive cable terminal — (B9) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit in harness between battery positive cable terminal and battery sensor connector.

4. CHECK HARNESS BETWEEN ECM AND BATTERY SENSOR (OPEN).

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and battery sensor connector.
   Connector & terminal
   (B9) No. 3 — (B134) No. 5:

Is the resistance less than 1 Ω?

Yes	Repair the poor contact of ECM connector or battery sensor connector.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between ECM connector and battery sensor connector** • **Poor contact of coupling connector**

1. OUTLINE OF DIAGNOSIS

Detect malfunction of LIN communication.
Judge as NG when LIN communication failure has occurred with the battery sensor.

2. COMPONENT DESCRIPTION

(Common Specifications)
Communication protocol: LIN 2.0
Communication speed: 19.20 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Data received from control modules connected to LIN	No change or Checksum error

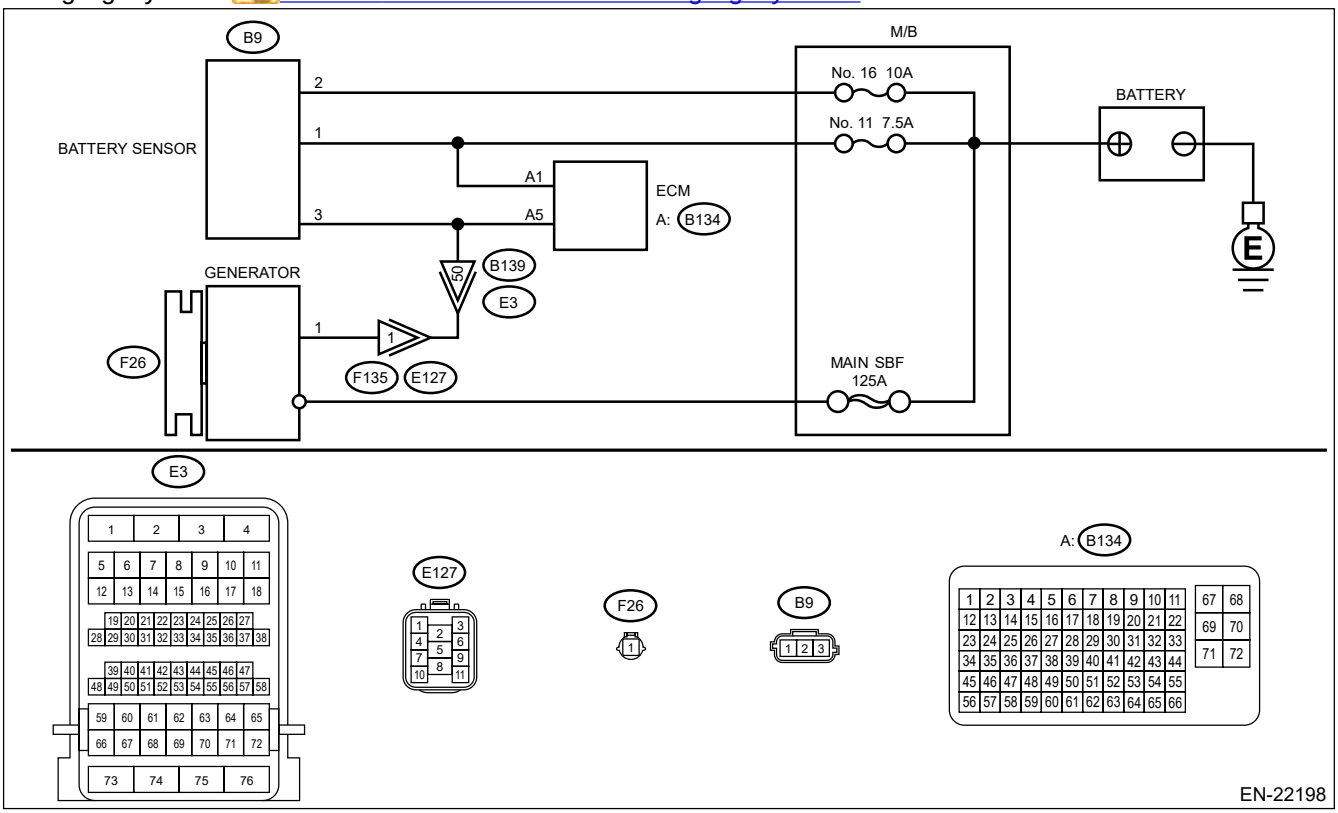
Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

DTC U171F LOST LIN COMMUNICATION WITH GENERATOR

DTC detecting condition:

Immediately at fault recognition

Caution:



Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Wiring diagram:

Charging System Ref. to WIRING SYSTEM>Charging System.

1. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC U171F displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

2. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 3.
No	Connect the ECM connector correctly.

3. CHECK VOLTAGE OF GENERATOR B TERMINAL.

1. Turn the ignition switch to OFF.
2. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Measure the voltage of the generator B terminal.
   Connector & terminal
   Generator B terminal — Engine ground:

Is it battery voltage?

Yes	Go to 4.
No	Check the generator B terminal harness and fuse.

4. CHECK HARNESS BETWEEN ECM AND GENERATOR (OPEN).

1. Disconnect the connector from ECM.
2. Disconnect the LIN communication connector from the generator.
3. Measure the resistance of harness between ECM and generator LIN communication connector.
   Connector & terminal
   (B134) No. 5 — (F26) No. 1:

Is the resistance less than 1 Ω?

Yes	Check the connector for poor contact and check the harness again. If no fault is found, replace the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and generator** • **Poor contact of coupling connector**

1. OUTLINE OF DIAGNOSIS

Detect malfunction of LIN communication.
Judge as NG if LIN communication failure has occurred with the generator.

2. COMPONENT DESCRIPTION

LIN communication is a network used for sending/receiving data between the control modules connected by LIN communication system.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	10.9 V or more

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Data received from control modules connected to LIN	No change or Checksum error

Time needed for diagnosis: 2 seconds

Malfunction indicator light illumination: Does not illuminate.

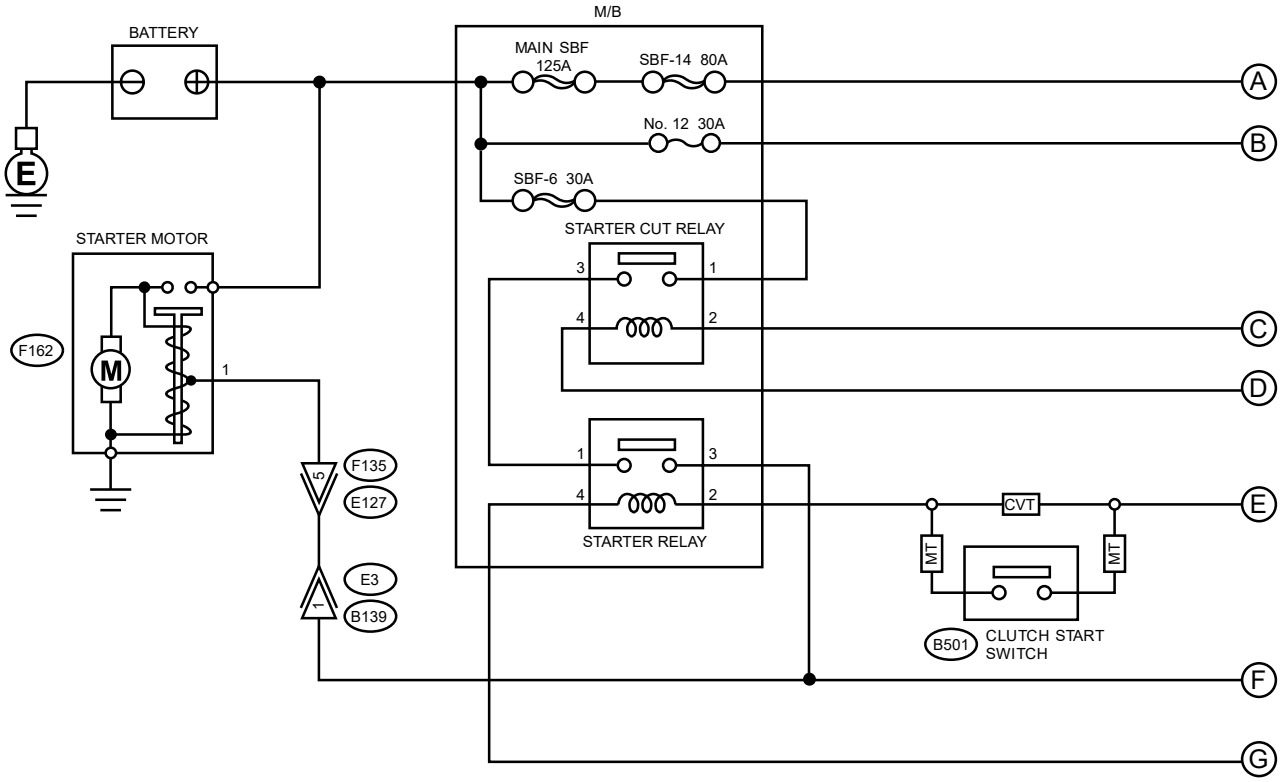
ENGINE (DIAGNOSTICS)(H4DO) > Diagnostics with Phenomenon

LIST

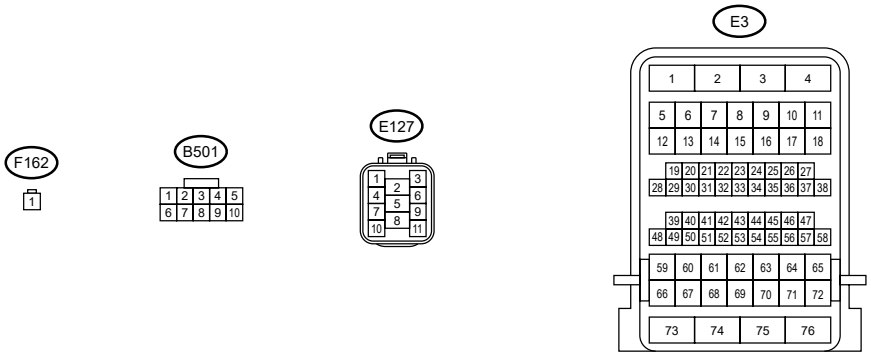
Note:

Malfunction of parts other than those listed is also possible. Ref. to MECHANICAL(H4DO)>Symptoms and causes.

Item		Reference
Engine does not start **Note:** **Perform the diagnosis in the numerical order on the right.**	1 Check fuel level	Check the fuel level.
	2. Inspection of starter motor circuit	Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon>STARTER MOTOR CIRCUIT.
	3. Inspection of ECM power supply and ground line	Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon>CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM).
	4. Inspection of ignition control system	Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.
	5. Inspection of fuel pump circuit	Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.
	6. Inspection of fuel injector circuit	Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon>FUEL INJECTOR CIRCUIT.
Brake override		Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon>CHECK BRAKE OVERRIDE SYSTEM.

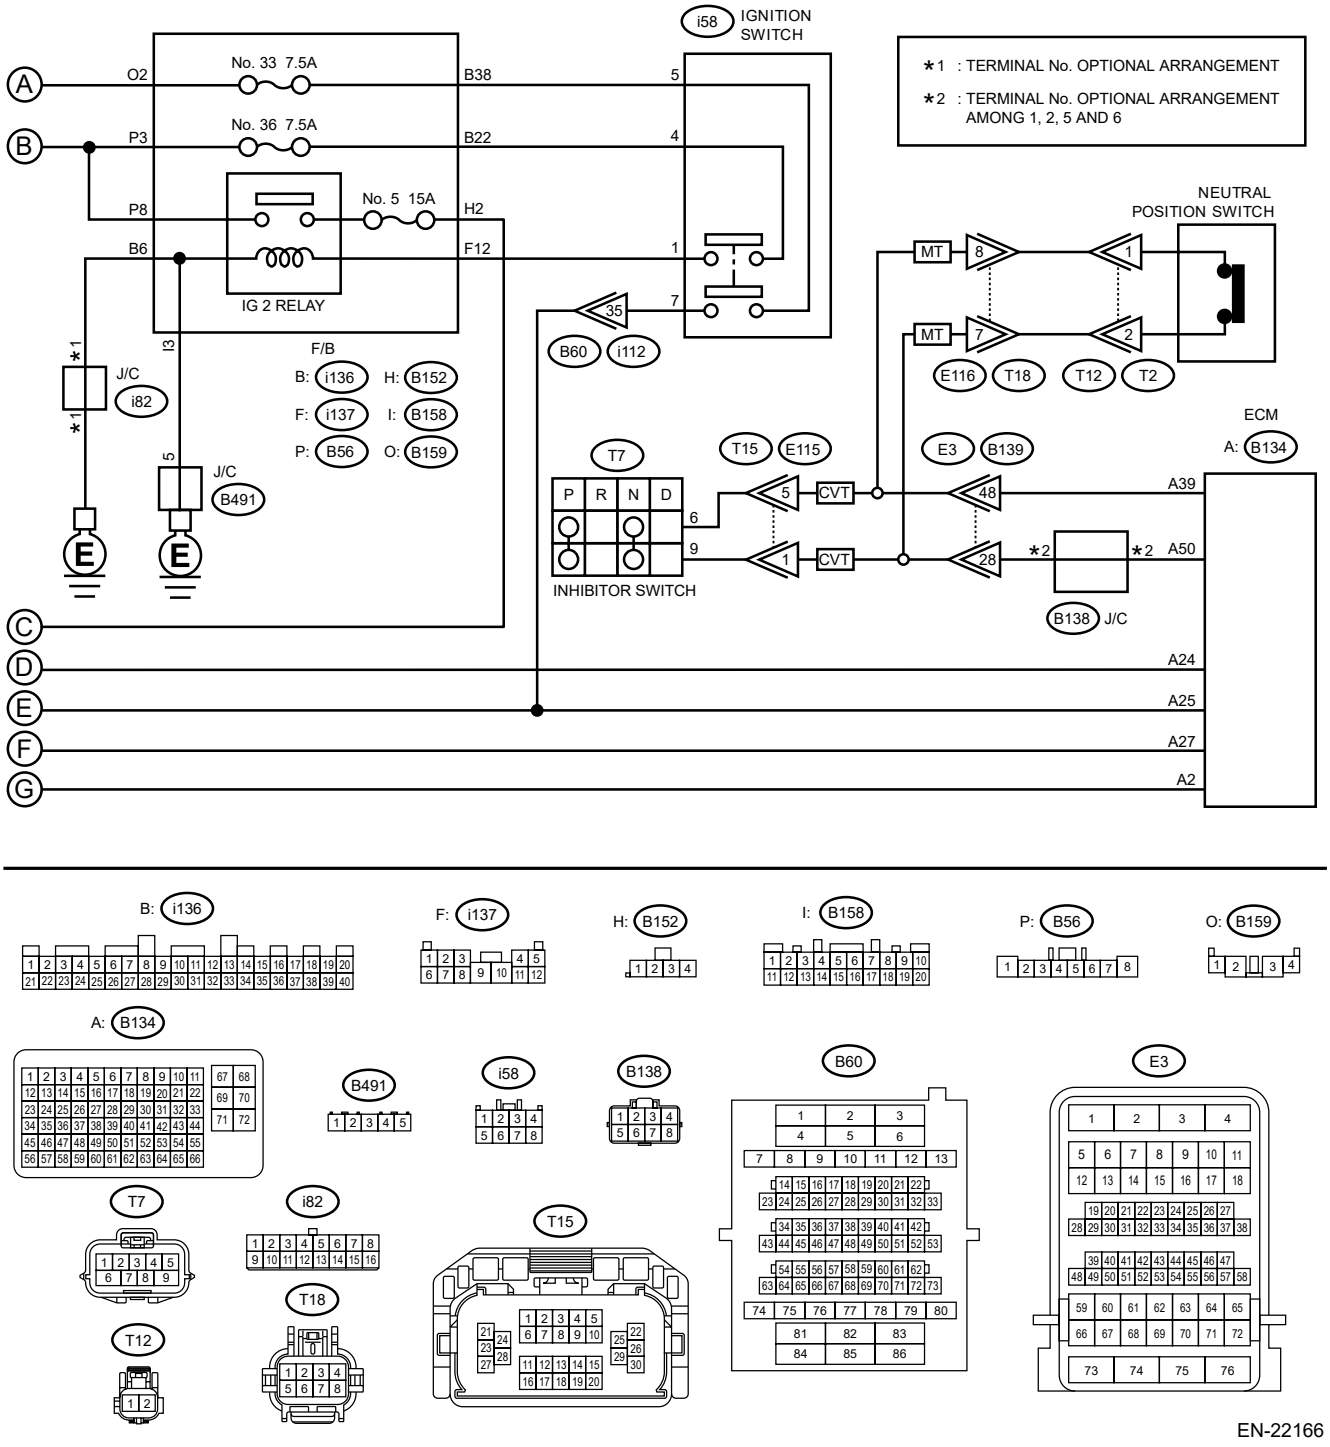


ENGINE (DIAGNOSTICS)(H4DO) > Diagnostics with Phenomenon



STARTER MOTOR CIRCUIT

1. MODEL WITHOUT PUSH BUTTON START



Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

EN-22165

EN-22166

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

1. CHECK BATTERY.	no →	Perform the instructed procedures.

yes

2. CHECK OPERATION OF STARTER MOTOR.

no → Go to 4.

yes

3. CHECK DTC.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

4. CHECK INPUT SIGNAL FOR STARTER MOTOR.

yes → Perform the instructed procedures.

no → Go to 5.

5. CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR.

no → Perform the instructed procedures.

yes

6. CHECK IGNITION SWITCH.

no → Perform the instructed procedures.

yes

7. CHECK INPUT VOLTAGE OF F/B (IG2 RELAY).

no → Perform the instructed procedures.

yes

8. CHECK F/B (IG2 RELAY).

no → Perform the instructed procedures.

yes

9. CHECK VOLTAGE OF F/B (IG2 RELAY) CONNECTOR. → no → Perform the instructed procedures.

yes

10. CHECK M/B (STARTER CUT RELAY). → no → Perform the instructed procedures.

yes

11. CHECK HARNESS BETWEEN ECM AND M/B (STARTER CUT RELAY) CONNECTOR. → no → Perform the instructed procedures.

yes

12. CHECK M/B (STARTER RELAY). → no → Perform the instructed procedures.

yes

13. CHECK INPUT VOLTAGE OF M/B (STARTER RELAY). → no → Perform the instructed procedures.

yes

14. CHECK VOLTAGE OF M/B (STARTER RELAY) CONNECTOR. → no → Perform the instructed procedures.

yes

15. CHECK HARNESS BETWEEN ECM AND M/B (STARTER RELAY) CONNECTOR. → no → Perform the instructed procedures.

yes

16. CHECK TRANSMISSION TYPE.

no → Go to 20.

yes

17. CHECK INHIBITOR SWITCH.

no → Perform the instructed procedures.

yes

18. CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR.

no → Perform the instructed procedures.

yes

19. CHECK NEUTRAL POSITION SWITCH SIGNAL.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

20. CHECK HARNESS BETWEEN STARTER RELAY AND STARTER MOTOR.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

Is the check result OK?

Yes	Go to 2.
No	Charge or replace the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

2. CHECK OPERATION OF STARTER MOTOR.

Check the starter motor operation.

Does the starter motor operate?

Yes	Go to 3.
No	Go to 4.

3. CHECK DTC.

Read the DTC of engine using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Check ignition control system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

4. CHECK INPUT SIGNAL FOR STARTER MOTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from starter motor.
3. Turn the ignition switch to START.
4. Measure the voltage between the starter motor connector and the engine ground.

Connector & terminal

(F162) No. 1 (+) — Engine ground (–):

Note:

- **For CVT model, place the select lever in "P" range or "N" range.**
- **For MT model, depress the clutch pedal.**

Is the voltage 10 V or more?

Yes	Check the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter.
No	Go to 5.

5. CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ignition switch.
3. Measure the power supply voltage between ignition switch connector and chassis ground.

Connector & terminal

(i136) No. 38 (+) — Chassis ground (–):

(i136) No. 22 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 6.
No	Check the harnesses and connectors, and repair or replace them if necessary. **Note:** **In this case, repair the following item:** • **Open circuit of harness between battery and ignition switch connector** • **Blown out of fuse** • **Replacement of F/B** • **Replace M/B**

6. CHECK IGNITION SWITCH.

Measure the resistance between ignition switch terminals after turning the ignition switch to START position.

Terminals

No. 4 —No. 1:

No. 5 —No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Replace the ignition switch. Ref. to SECURITY AND LOCKS>Ignition Key Lock>REPLACEMENT.

7. CHECK INPUT VOLTAGE OF F/B (IG2 RELAY).

1. Turn the ignition switch to OFF.
2. Remove the F/B (IG2 relay).
3. Connect the connector to ignition switch.
4. Turn the ignition switch to START position, and measure the voltage between F/B (IG2 relay) connector and chassis ground.

   Connector & terminal

   (i137) No. 12 (+) — Chassis ground (–):

   (B56) No. 8 (+) — Chassis ground (–):

   Note:

   For MT model, depress the clutch pedal.

Is the voltage 10 V or more?

Yes	Go to 8.
No	Check the following item and repair if necessary. • Blown out of fuse • Open circuit or short circuit to ground in harness between F/B (IG2 relay) and ignition switch connector • Poor contact of the clutch start switch connector (MT model) • Clutch start switch trouble (MT model)

8. CHECK F/B (IG2 RELAY).

Check the F/B (IG2 relay). Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION > CHECK RELAY.

Is the check result OK?

Yes	Go to 9.
No	Replace the F/B (IG2 relay).

9. CHECK VOLTAGE OF F/B (IG2 RELAY) CONNECTOR.

1. Turn the ignition switch to START.
2. Measure the voltage between F/B (IG2 relay) connector and engine ground.

Connector & terminal

(B152) No. 2 (+) — Chassis ground (–):

Note:

- **For CVT model, place the select lever in "P" range or "N" range.**
- **For MT model, depress the clutch pedal.**

Is the voltage 10 V or more?

Yes	Go to 10.
No	Check the following item and repair if necessary. • Blown out of fuse • Replacement of F/B

10. CHECK M/B (STARTER CUT RELAY).

Measure the resistance between starter cut relay terminals.

Terminals

No. 1 —No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 11.
No	Replace the starter cut relay.

11. CHECK HARNESS BETWEEN ECM AND M/B (STARTER CUT RELAY) CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Turn the ignition switch to START.
4. Measure the voltage of harness between ECM connector and engine ground.

Connector & terminal

(B134) No. 24 (+) — Engine ground (–):

Is the voltage 10 V or more?

Yes	Go to 12.
No	Repair or replace the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between M/B (starter relay) and ECM** • **Replace M/B**

12. CHECK M/B (STARTER RELAY).

Check the M/B (starter relay). Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION > CHECK RELAY.

Is the check result OK?

Yes	Go to 13.
No	Replace the F/B (IG2 relay).

13. CHECK INPUT VOLTAGE OF M/B (STARTER RELAY).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Measure the voltage between ECM connector and chassis ground after turning the ignition switch to START position.

Connector & terminal

(B134) No. 2 (+) — Chassis ground (–):

Note:

- **For CVT model, place the select lever in "P" range or "N" range.**
- **For MT model, depress the clutch pedal.**

Is the voltage 10 V or more?

Yes	Go to 14.
No	Check the following item and repair if necessary. • Blown out of fuse • Open circuit or short circuit to ground in harness between M/B (starter relay) and ignition switch connector • Poor contact of the clutch start switch connector (MT model) • Clutch start switch trouble (MT model)

14. CHECK VOLTAGE OF M/B (STARTER RELAY) CONNECTOR.

1. Connect the connector to ECM.
2. Turn the ignition switch to START.
3. Measure the voltage between ECM connector and chassis ground.

Connector & terminal

(B134) No. 27 (+) — Chassis ground (–):

Note:

- **For CVT model, place the select lever in "P" range or "N" range.**
- **For MT model, depress the clutch pedal.**

Is the voltage 10 V or more?

Yes	Go to 15.
No	Check the following item and repair if necessary. • Open circuit or short circuit to ground in harness between M/B (starter relay) and ECM • Replace M/B

15. CHECK HARNESS BETWEEN ECM AND M/B (STARTER RELAY) CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Remove the M/B (starter relay).
4. Disconnect the connector from starter motor.
5. Measure the resistance of harness between ECM connector and M/B (starter relay) connector and chassis ground.

Connector & terminal

(B134) No. 2 — Chassis ground:

(B134) No. 27 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 16.
No	Repair the short circuit to ground of harness between ECM connector, starter relay connector and starter motor connector.

16. CHECK TRANSMISSION TYPE.

Check the transmission type.

Is the transmission type CVT?

Yes	Go to 17.
No	Go to 20.

17. CHECK INHIBITOR SWITCH.

1. Place the select lever in “P” range and “N” range.
2. Measure the resistance between inhibitor switch terminals.

Terminals

No. 6 —No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 18.
No	Replace the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.

18. CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR.

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and inhibitor switch connector.

Connector & terminal

(B134) No. 39 — (T7) No. 6:

(B134) No. 50 — (T7) No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 19.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and keyless access CM connector** • **Poor contact of coupling connector**

19. CHECK NEUTRAL POSITION SWITCH SIGNAL.

1. Connect all relays and connectors to their proper positions.
2. Using the Subaru Select Monitor, read the value in [Neutral switch].

Note:
For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

3. Turn the ignition to ON.
4. Place the select lever in “P” range or “N” range.

Is [Neutral switch] displayed?

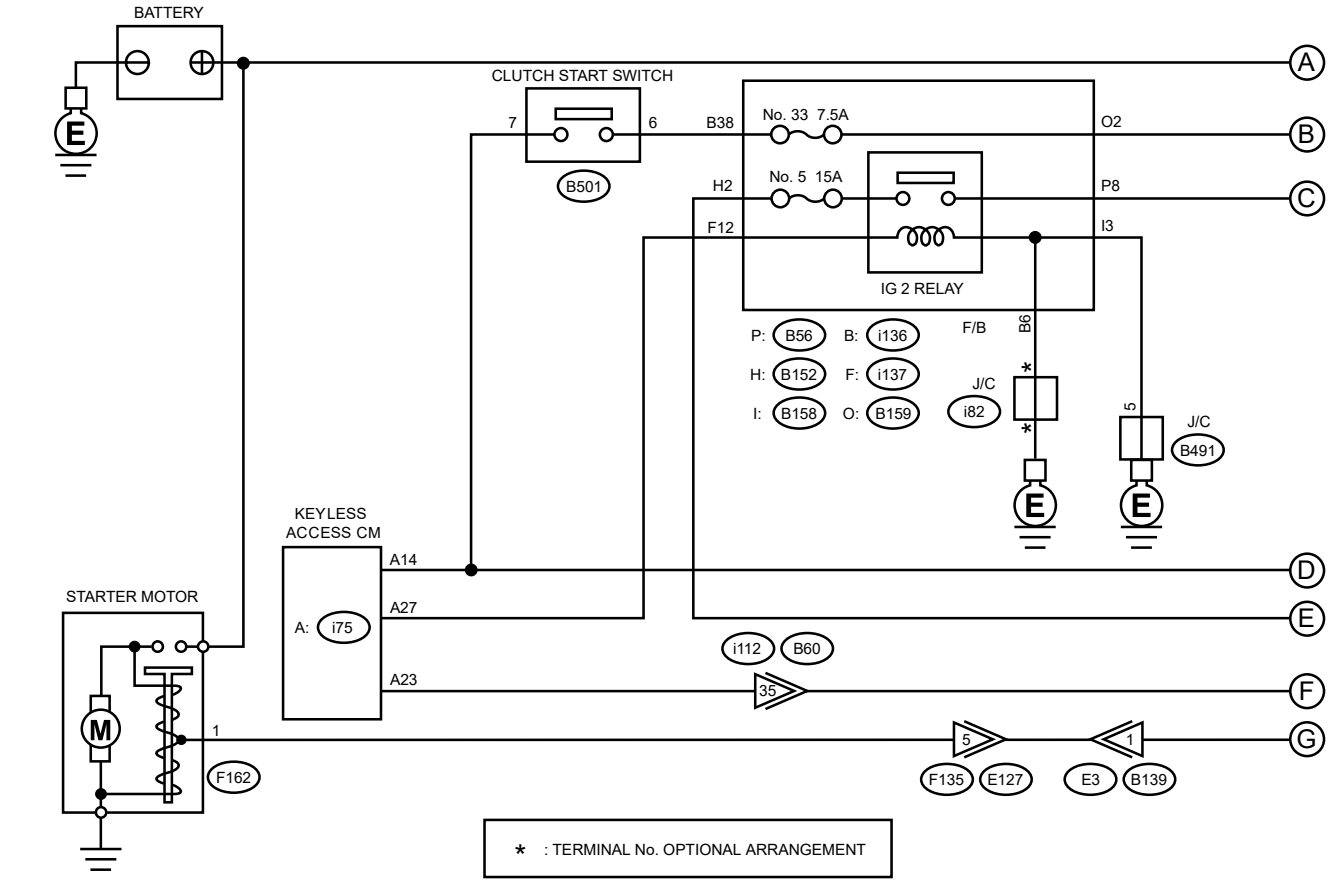
Yes	Check the engine control module (ECM) power supply and ground line. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM).
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between inhibitor switch connector and starter motor connector** • **Poor contact of coupling connector**

20. CHECK HARNESS BETWEEN STARTER RELAY AND STARTER MOTOR.

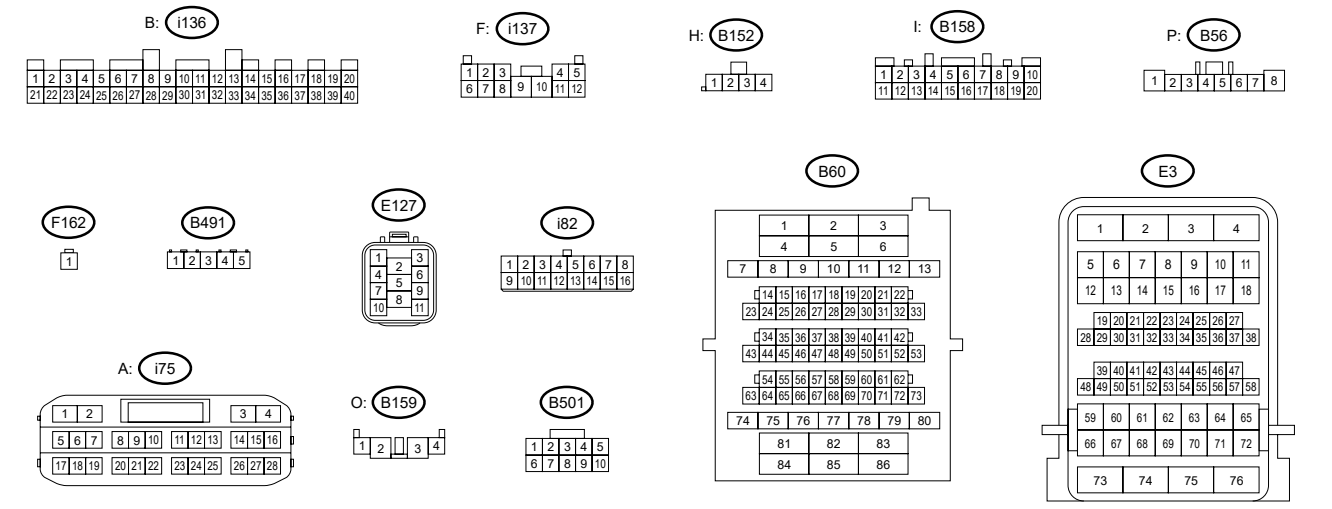
1. Measure the resistance of harness between M/B (starter relay) connector and starter motor.
Connector & terminal
(F162) No. 1 — M/B (starter relay) No. 3:

Is the resistance less than 1 Ω?

Yes	Check the engine control module (ECM) power supply and ground line. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM).
No	Repair the open circuit of harness between F/B (starter relay) connector and starter motor.

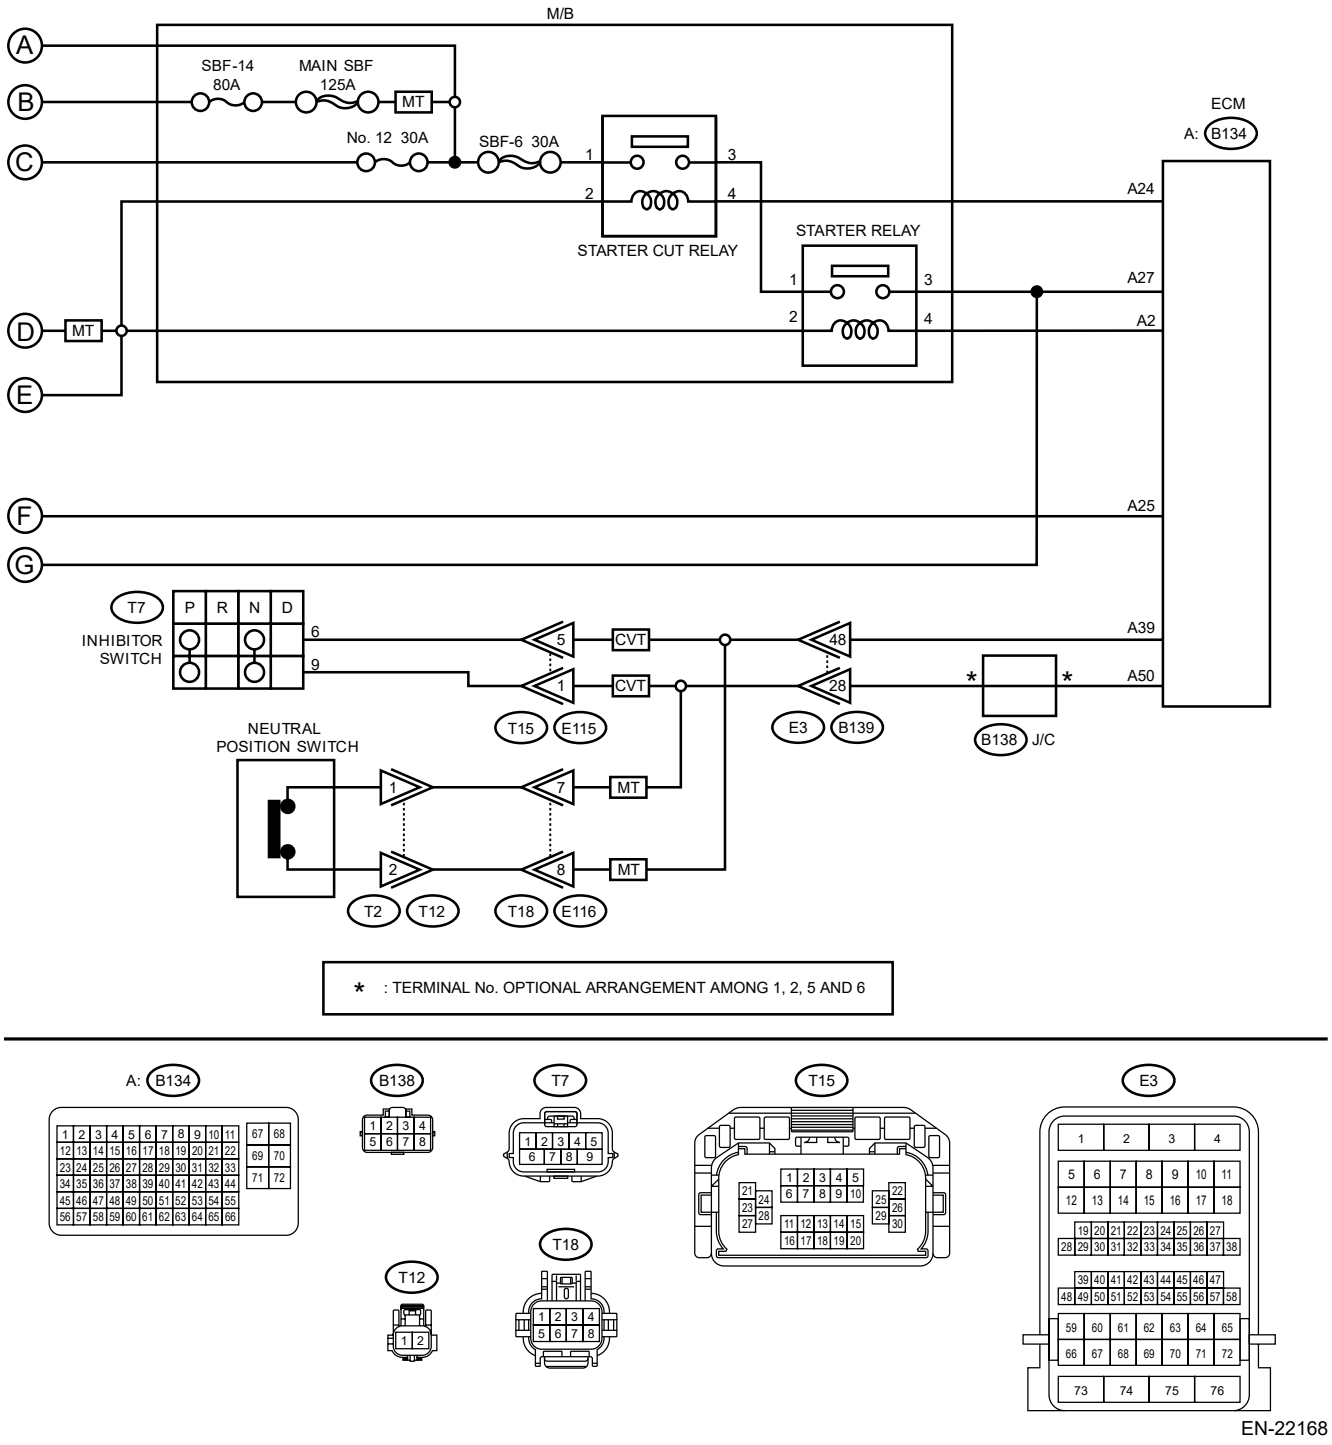


Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

2. MODEL WITH PUSH BUTTON START



Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

EN-22167

EN-22168

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

1. CHECK BATTERY.	no →	Perform the instructed procedures.

yes

2. CHECK OPERATION OF STARTER MOTOR.

no → Go to 4.

yes

3. CHECK DTC.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

4. CHECK PUSH BUTTON IGNITION SWITCH.

no → Perform the instructed procedures.

yes

5. CHECK PUSH BUTTON IGNITION SWITCH.

no → Perform the instructed procedures.

yes

6. CHECK START SWITCH SIGNAL.

yes → Go to 10.

no → Go to 7.

7. CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.

no → Perform the instructed procedures.

yes

8. CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.

no → Perform the instructed procedures.

yes

9. CHECK START SWITCH SIGNAL.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

10. CHECK INPUT SIGNAL FOR STARTER MOTOR.

yes → Perform the instructed procedures.

no → Go to 11.

11. CHECK POWER SUPPLY OF IG2 RELAY.

no → Perform the instructed procedures.

yes

12. CHECK F/B (IG2 RELAY).

no → Perform the instructed procedures.

yes

13. CHECK POWER SUPPLY OF F/B (IG2 RELAY) CONNECTOR.

no → Perform the instructed procedures.

yes

14. CHECK HARNESS BETWEEN F/B (IG2 RELAY) TERMINAL AND CHASSIS GROUND.

no → Perform the instructed procedures.

yes

15. CHECK POWER SUPPLY FOR M/B (STARTER CUT RELAY).
no → Perform the instructed procedures.

20. CHECK INHIBITOR SWITCH.
no → Perform the instructed procedures.

yes ↓

21. CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR.
no → Perform the instructed procedures.

yes

22. CHECK NEUTRAL POSITION SWITCH SIGNAL.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

Is the check result OK?

Yes	Go to 2.
No	Charge or replace the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

2. CHECK OPERATION OF STARTER MOTOR.

Does the starter motor operate?

Yes	Go to 3.
No	Go to 4.

3. CHECK DTC.

Read the DTC of engine using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Check ignition control system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

4. CHECK PUSH BUTTON IGNITION SWITCH.

Press the push button ignition switch twice with the ignition OFF (ACC OFF).

Note:

Release the brake pedal.

Does the ignition turn to ON?

Yes	Go to 5.
No	Check the push button start system. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch>INSPECTION.

5. CHECK PUSH BUTTON IGNITION SWITCH.

1. Depress the brake pedal.

   Note:

   Shift the select lever to “P” range.
2. Check the push button ignition switch indicator.

Does the indicator turn to green?

Yes	Go to 6.
No	Check the push button start system. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch>INSPECTION.

6. CHECK START SWITCH SIGNAL.

1. Using the Subaru Select Monitor, read the waveform in [Starter Switch].

   Data Monitor

   Note:
   For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
2. Press the push button ignition switch once with the brake pedal depressed.

Does a waveform occur in [Starter Switch]?

Yes	Go to 10.
No	Go to 7.

7. CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from the keyless access CM.
4. Measure the resistance of harness between ECM connector and keyless access CM.
   Connector & terminal
   (B134) No. 25 — (i75) No. 23:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and keyless access CM connector** • **Poor contact of coupling connector**

8. CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.

Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 25 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 9.
No	Repair the short circuit to ground in harness between ECM connector and keyless access CM connector.

9. CHECK START SWITCH SIGNAL.

1. Connect the connector to ECM and keyless access CM.
2. Read the waveform of start switch signal using an oscilloscope.
3. Press the push button ignition switch once with the brake pedal depressed.

Connector & terminal

(B134) No. 25 (+) — Chassis ground (–):

Does waveform of the start switch signal occur?

Yes	Repair the poor contact of ECM connector.
No	Repair the poor contact of keyless access CM connector.

10. CHECK INPUT SIGNAL FOR STARTER MOTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from starter motor.
3. Place the select lever in “P” range or “N” range.
4. Press the push button ignition switch once with the brake pedal depressed.
5. Measure the voltage between the starter motor connector and the engine ground.

Connector & terminal

(F162) No. 1 (+) — Engine ground (–):

Is the voltage 10 V or more?

Yes	Check the starter motor. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter.
No	Go to 11.

11. CHECK POWER SUPPLY OF IG2 RELAY.

1. Remove the IG2 relay.
2. Turn the ignition switch to START.
3. Measure the voltage between F/B (IG2 relay) terminal and chassis ground.

Connector & terminal

(B56) No. 8 (+) — Chassis ground (–):

(i137) No. 12 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 12.
No	Check the following item and repair or replace if necessary. • Blown out of fuse (F/B No. 26) • Open circuit or short circuit to ground in harness between F/B (IG2 relay) terminal and power supply circuit • Open circuit or short circuit to ground in harness between F/B (IG2 relay) terminal and keyless access CM • Poor contact of coupling connector • Blown out of fuse

12. CHECK F/B (IG2 RELAY).

1. Remove the F/B (IG2 relay).
2. Check the F/B (IG2 relay). Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION > CHECK RELAY.

Is the resistance less than 1 Ω?

Yes	Go to 13.
No	Replace the IG2 relay. Ref. to SECURITY AND LOCKS>Relay and Fuse.

13. CHECK POWER SUPPLY OF F/B (IG2 RELAY) CONNECTOR.

1. Install the F/B (IG2 relay).
2. Remove the F/B (IG2 relay) connectors (B158) and (i136).
3. Measure the voltage between F/B (IG2 relay) terminal and chassis ground.

Connector & terminal

(B158) No. 3 (+) — Chassis ground (–):

(i136) No. 6 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 14.
No	Replace the F/B unit. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

14. CHECK HARNESS BETWEEN F/B (IG2 RELAY) TERMINAL AND CHASSIS GROUND.

1. Turn the ignition to OFF.
2. Measure the resistance of harness between the F/B (IG2 relay) connectors (B158) and (i136) and the chassis ground.
   Connector & terminal
   (B158) No. 3 — Chassis ground:
   (i136) No. 6 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Go to 15.
No	Repair the open circuit of the harness between F/B (IG2 relay) connector and chassis ground.

15. CHECK POWER SUPPLY FOR M/B (STARTER CUT RELAY).

1. Remove the M/B (starter cut relay).
2. Turn the ignition switch to START.
3. Measure the voltage between M/B (starter cut relay) terminal No. 1 and No. 2 and chassis ground.
   Terminals
   No. 1 (+) — Chassis ground (–):
   No. 2 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 16.
No	Check the following item and repair or replace if necessary. • Blown out of fuse • Open circuit or short circuit to ground in harness between M/B (starter cut relay) connector and F/B connector • Open circuit or short circuit to ground in harness between M/B (starter cut relay) connector and battery

16. CHECK HARNESS BETWEEN ECM AND STARTER CUT RELAY CONNECTOR.

1. Disconnect the connector from ECM.
2. Remove the starter cut relay.
3. Measure the resistance between ECM connector and chassis ground.

Connector & terminal

(B134) No. 24 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 17.
No	Repair the short circuit to ground in harness between ECM connector and starter cut relay connector.

17. CHECK STARTER CUT RELAY.

Measure the resistance between starter cut relay terminals.

Terminals

No. 1 —No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 18.
No	Replace the starter cut relay. Ref. to SECURITY AND LOCKS>Relay and Fuse.

18. CHECK M/B (STARTER RELAY).

1. Remove the M/B (starter relay).
2. Check the M/B (starter relay).

Is the resistance less than 1 Ω?

Yes	Go to 19.
No	Replace the M/B (starter relay). Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter Relay>INSPECTION.

19. CHECK HARNESS BETWEEN ECM AND M/B (STARTER RELAY) CONNECTOR.

1. Remove the M/B (starter relay).
2. Disconnect the connector from ECM.
3. Measure the resistance between ECM connectors (B158) and (B159).
   Connector & terminal
   (B134) No. 27 — M/B (starter relay) No. 3:
   (B158) No. 2 — M/B (starter relay) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 20.
No	Repair the open circuit of harness between ECM connector and M/B (starter relay) connector.

20. CHECK INHIBITOR SWITCH.

1. Place the select lever in “P” range or “N” range.
2. Measure the resistance between inhibitor switch terminals.
   Terminals
   No. 6 —No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 21.
No	Replace the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.

21. CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR.

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and inhibitor switch connector.

Connector & terminal

(B134) No. 39 — (T7) No. 6:

(B134) No. 50 — (T7) No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 22.
No	Repair the harness and connector.

Note:

In this case, repair the following item:

- **Open circuit of harness between ECM connector and keyless access CM connector**
- **Poor contact of coupling connector**

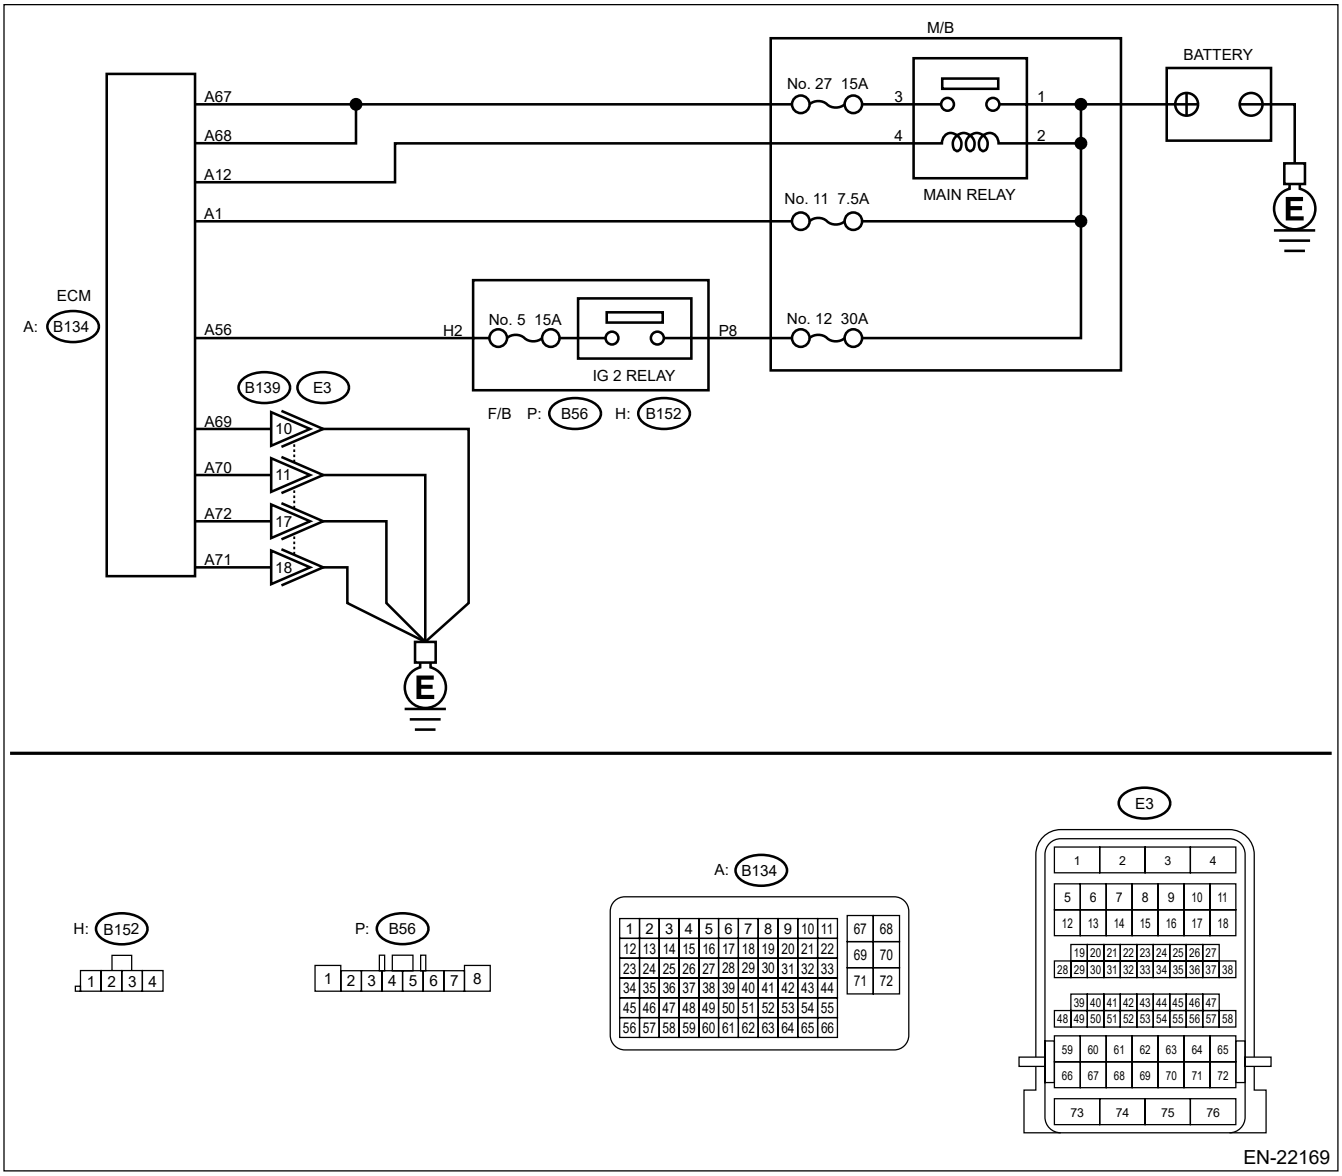
22. CHECK NEUTRAL POSITION SWITCH SIGNAL.

1. Connect all relays and connectors to their proper positions.
2. Using the Subaru Select Monitor, read the value in [Neutral switch].

   Data Monitor

   Note:
   For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
3. Turn the ignition to ON.
4. Place the select lever in “P” range or “N” range.

Is [Neutral switch] displayed?



Yes	Check the engine control module (ECM) power supply and ground line. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM).
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between inhibitor switch connector and starter motor connector** • **Poor contact of coupling connector**

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostics with Phenomenon

CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM)

Wiring diagram:
Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

1. CHECK M/B (MAIN RELAY).

1. Turn the ignition switch to OFF.
2. Remove the M/B (main relay).
3. Connect the battery to M/B (main relay) terminals No. 2 and No. 4.
4. Measure the resistance between M/B (main relay) terminals.

Terminals

No. 1 — No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Replace the M/B (main relay). Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Main Relay.

2. CHECK GROUND CIRCUIT FOR ECM.

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and chassis ground.

Connector & terminal

(B134) No. 69 — Chassis ground:

(B134) No. 70 — Chassis ground:

(B134) No. 71 — Chassis ground:

(B134) No. 72 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Go to 3.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and engine ground terminal** • **Poor contact of coupling connector**

3. CHECK INPUT VOLTAGE OF ECM.

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 1 (+) — Chassis ground (–):
   (B134) No. 56 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the open or ground short in the harness of power supply circuit.

4. CHECK M/B (MAIN RELAY) INPUT VOLTAGE.

Measure the voltage between M/B (main relay) terminal and chassis ground.
Terminals
No. 1 (+) — Chassis ground (–):
No. 2 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 5.
No	Repair the open or ground short in the harness of power supply circuit.

5. CHECK INPUT VOLTAGE OF ECM.

1. Turn the ignition switch to OFF.
2. Install the M/B (main relay).
3. Turn the ignition switch to ON.
4. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 12 (+) — Chassis ground (–):

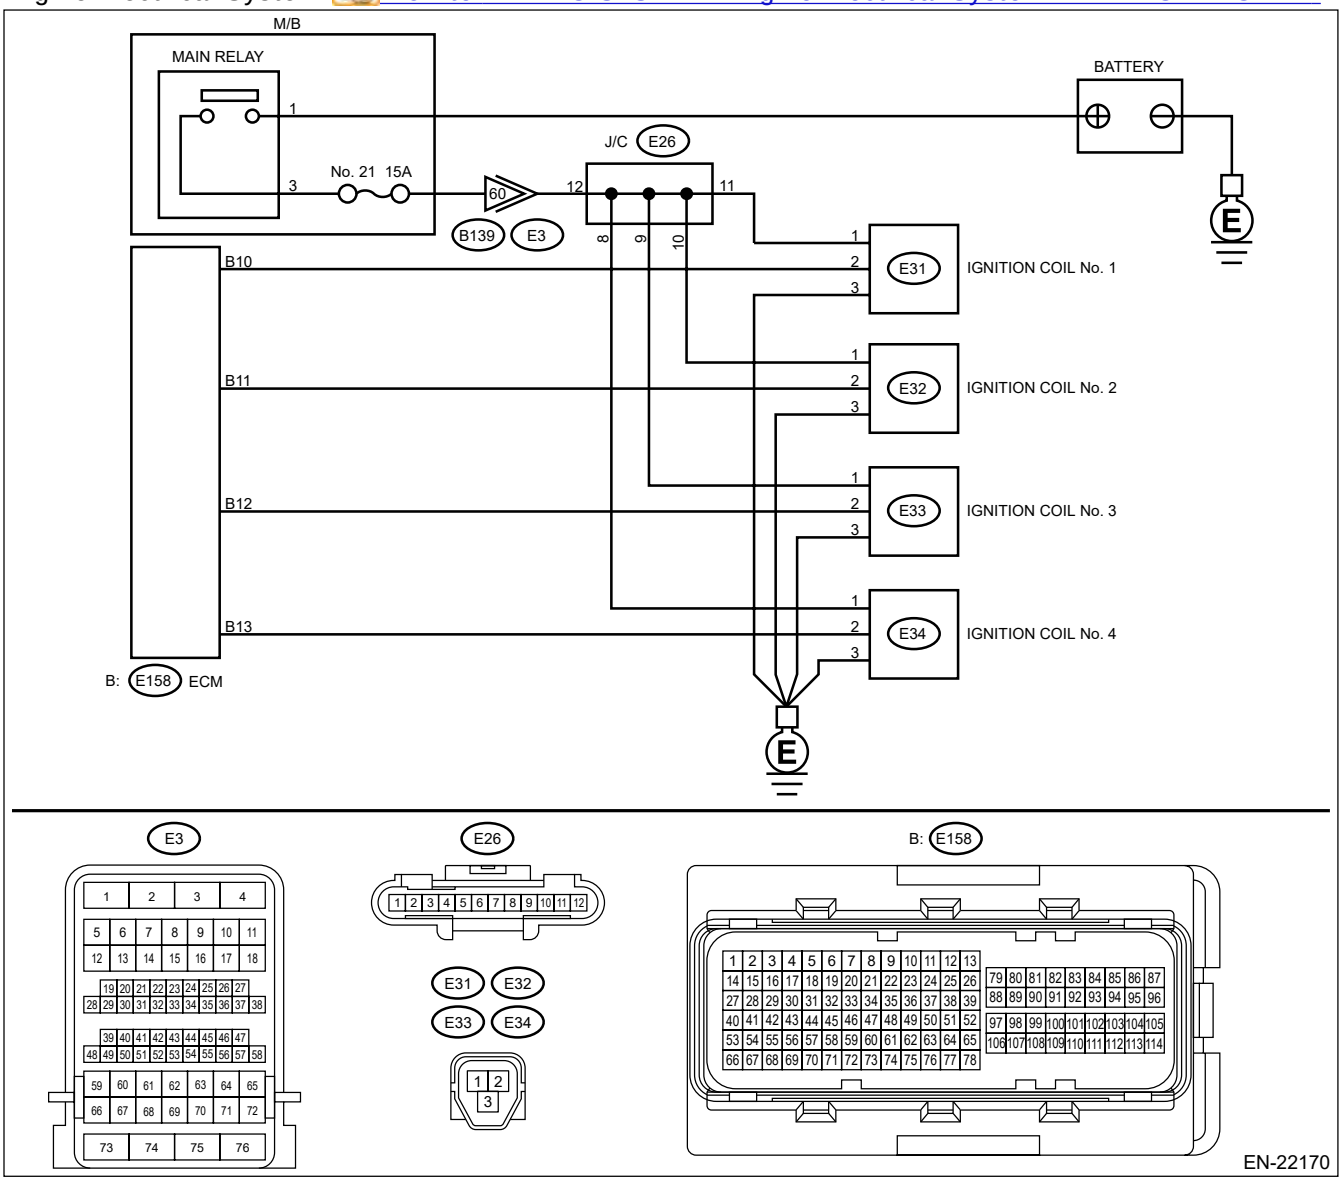
Is the voltage 10 V or more?

Yes	Go to 6.
No	Repair the open circuit of harness between ECM connector and M/B (main relay) terminal.

6. CHECK INPUT VOLTAGE OF ECM.

1. Turn the ignition switch to OFF.
2. Connect the connector to ECM.
3. Turn the ignition switch to ON.
4. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 67 (+) — Chassis ground (–):
   (B134) No. 68 (+) — Chassis ground (–):

Is the voltage 10 V or more?



Yes	Check ignition control system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit of harness between ECM connector and M/B (main relay) connector** • **Poor contact of M/B (main relay) connector** • **Poor contact of ECM connector**

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

IGNITION CONTROL SYSTEM

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

1. CHECK SPARK PLUG CONDITION.

1. Remove the spark plug. Ref. to IGNITION(H4DO)>Spark Plug>REMOVAL.
2. Check the spark plug condition. Ref. to IGNITION(H4DO)>Spark Plug>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Replace the spark plug. Ref. to IGNITION(H4DO)>Spark Plug.

2. CHECK IGNITION SYSTEM FOR SPARKS.

1. Connect the spark plug to ignition coil.
2. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
3. Contact the spark plug thread portion to engine.
4. While opening the throttle valve fully, crank the engine to check that spark occurs at each cylinder.

Does spark occur at each cylinder?

Yes	Check fuel pump system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>FUEL PUMP CIRCUIT.
No	Go to 3.

3. CHECK IGNITION COIL POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ignition coil.
3. Turn the ignition switch to ON.
4. Measure the voltage between ignition coil connector and engine ground.

Connector & terminal

(E31) No. 1 (+) — Engine ground (–):
(E32) No. 1 (+) — Engine ground (–):
(E33) No. 1 (+) — Engine ground (–):
(E34) No. 1 (+) — Engine ground (–):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open or short to ground in harness of power supply circuit** • **Poor contact of coupling connector** • **Blown out of fuse**

4. CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT.

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between ignition coil connector and engine ground.

Connector & terminal

(E31) No. 3 — Engine ground:
(E32) No. 3 — Engine ground:
(E33) No. 3 — Engine ground:
(E34) No. 3 — Engine ground:

Is the resistance less than 5 Ω?

Yes	Go to 5.
No	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.

5. CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and ignition coil connector.

Connector & terminal

(E158) No. 10 — (E31) No. 2:
(E158) No. 11 — (E32) No. 2:
(E158) No. 12 — (E33) No. 2:
(E158) No. 13 — (E34) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit in harness between ECM connector and ignition coil connector.

6. CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.

Measure the resistance of harness between ECM connector and engine ground.

Connector & terminal

(E158) No. 10 — Engine ground:
(E158) No. 11 — Engine ground:
(E158) No. 12 — Engine ground:
(E158) No. 13 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Repair the ground short circuit of harness between ECM connector and ignition coil connector.

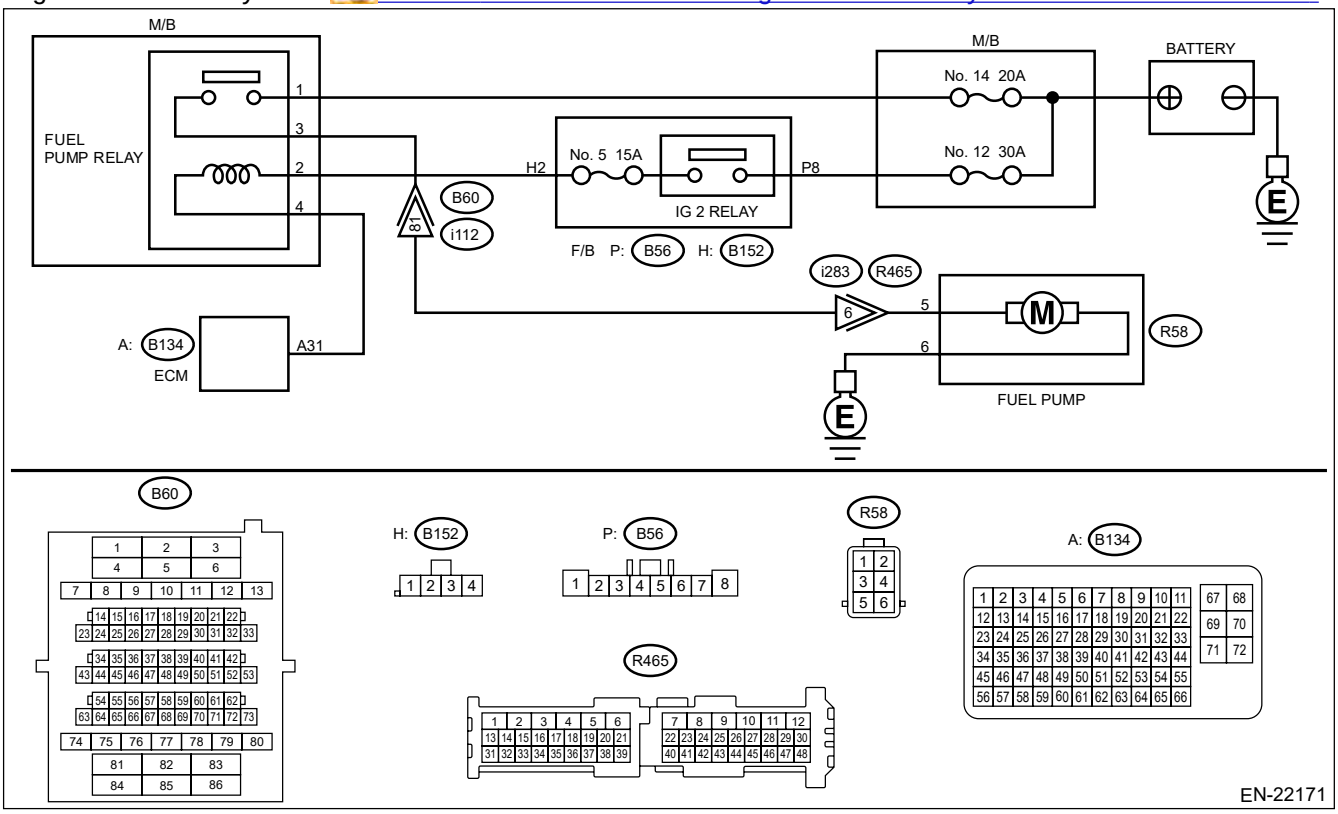
7. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Replace the ignition coil. Ref. to IGNITION(H4DO)>Ignition Coil.

Note:



After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostics with Phenomenon

FUEL PUMP CIRCUIT

Wiring diagram:

Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

Caution:

Use the check board when measuring the ECM terminal voltage and resistance. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

1. CHECK OPERATING SOUND OF FUEL PUMP.

Check if the fuel pump operates for two seconds when turning the ignition switch to ON.

Note:

Fuel pump operation can be executed using the Subaru Select Monitor. Refer to "Active Test" for the procedures. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Active Test.

Does the fuel pump emit operating sound?

Yes	Check the fuel injector circuit. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon>FUEL INJECTOR CIRCUIT.
No	Go to 2.

2. CHECK GROUND CIRCUIT OF FUEL PUMP.

1. Turn the ignition switch to OFF.
2. Remove the fuel pump access hole lid.
3. Disconnect the connector from fuel pump.
4. Measure the resistance of harness between fuel pump and chassis ground.

Connector & terminal

(R58) No. 6 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Go to 3.
No	Repair the open circuit in harness between fuel pump connector and chassis ground terminal.

3. CHECK POWER SUPPLY TO FUEL PUMP.

1. Turn the ignition switch to ON.
2. Measure the voltage of power supply circuit between fuel pump connector and chassis ground.
   Connector & terminal
   (R58) No. 5 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Replace the fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump.
No	Go to 4.

4. CHECK HARNESS BETWEEN FUEL PUMP AND FUEL PUMP RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between fuel pump connector and fuel pump relay connector.
   Connector & terminal
   (R58) No. 5 — M/B (fuel pump relay) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Open circuit in harness between fuel pump connector and fuel pump relay connector** • **Poor contact of coupling connector**

5. CHECK HARNESS BETWEEN FUEL PUMP AND FUEL PUMP RELAY CONNECTOR.

Measure the resistance of harness between fuel pump connector and fuel pump relay connector.

Connector & terminal

(R58) No. 5 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair the short circuit to ground in harness between fuel pump connector and fuel pump relay connector.

6. CHECK FUEL PUMP RELAY.

1. Remove the fuel pump relay.
2. Connect the battery to the fuel pump relay terminals No. 2 and No. 4.
3. Measure the resistance between fuel pump relay terminals.

Terminals

No. 1 — No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Replace the fuel pump relay. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Fuel Pump Relay.

7. CHECK HARNESS BETWEEN ECM AND FUEL PUMP RELAY CONNECTOR.

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM connector and fuel pump relay connector.
   Connector & terminal
   (B134) No. 31 — M/B (fuel pump relay) No. 4:

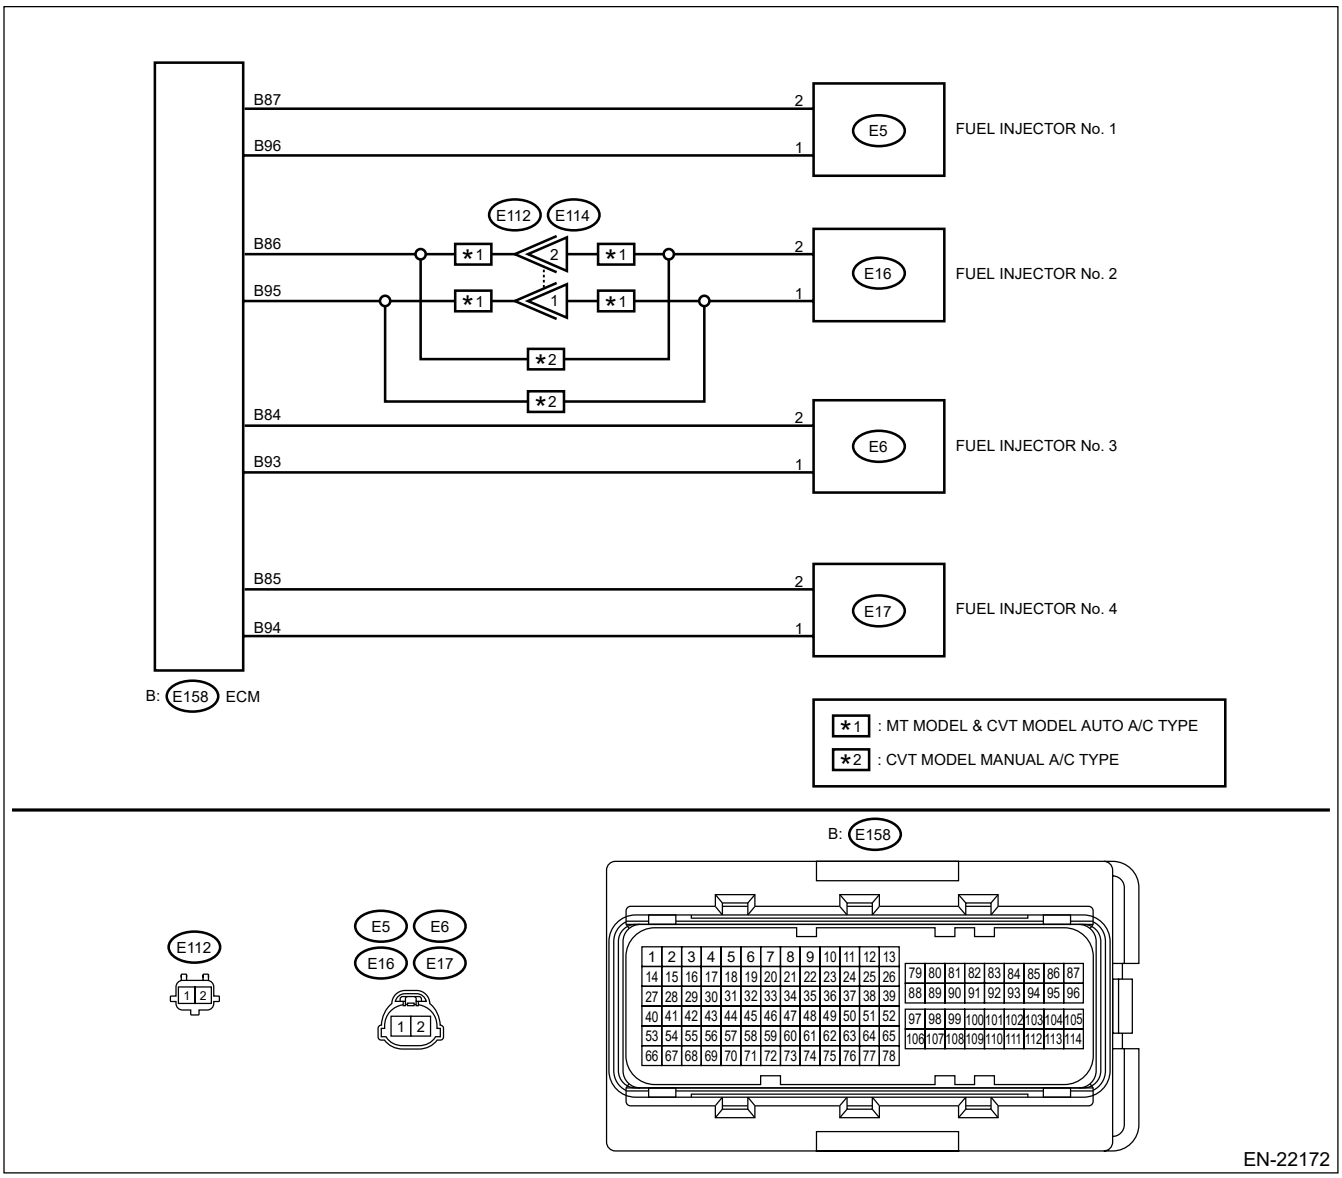
Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair the open circuit of harness between ECM connector and fuel pump relay connector.

8. CHECK POWER SUPPLY OF FUEL PUMP RELAY.

1. Turn the ignition switch to ON.
2. Measure the voltage between fuel pump relay connector and chassis ground.
   Connector & terminal
   M/B (fuel pump relay) No. 1 (+) — Chassis ground (–):
   M/B (fuel pump relay) No. 3 (+) — Chassis ground (–):

Is the voltage 10 V or more?



Yes	Repair the poor contact of ECM connector.
No	Repair the open or ground short in the harness of power supply circuit.

Note:
After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostics with Phenomenon

FUEL INJECTOR CIRCUIT

Wiring diagram:
Engine Electrical System Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

Caution:

- **Check or repair only faulty parts.**
- **Use the check board when measuring the ECM terminal voltage and resistance.** **Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.**

1. CHECK OPERATION OF EACH FUEL INJECTOR.

While cranking the engine, check each fuel injector emits operating sound. Use a sound scope or attach a screwdriver to the injector to listen to sounds for this check.

Does the fuel injector emit operating sound?

Yes	Check the fuel pressure. Ref. to MECHANICAL(H4DO)>Fuel Pressure>INSPECTION.
No	Go to 2.

2. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (OPEN).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from fuel injector.
4. Measure the resistance of harness between ECM and fuel injector connector.

Connector & terminal

#1 (E158) No. 96 — (E5) No. 1:
#1 (E158) No. 87 — (E5) No. 2:
#2 (E158) No. 95 — (E16) No. 1:
#2 (E158) No. 86 — (E16) No. 2:
#3 (E158) No. 93 — (E6) No. 1:
#3 (E158) No. 84 — (E6) No. 2:
#4 (E158) No. 94 — (E17) No. 1:
#4 (E158) No. 85 — (E17) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between the ECM and fuel injector connector.

3. CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR (SHORT TO GROUND).

Measure the resistance between fuel injector connector and engine ground.

Connector & terminal

#1 (E5) No. 1 — Engine ground:
#1 (E5) No. 2 — Engine ground:
#2 (E16) No. 1 — Engine ground:
#2 (E16) No. 2 — Engine ground:
#3 (E6) No. 1 — Engine ground:
#3 (E6) No. 2 — Engine ground:
#4 (E17) No. 1 — Engine ground:
#4 (E17) No. 2 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit to ground in harness between ECM and fuel injector connector.

4. CHECK EACH FUEL INJECTOR.

Check each fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSPECTION.

Is the check result OK?

Yes	Go to 5.
No	Replace the faulty fuel injector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector.

5. CHECK FOR POOR CONTACT.

Check for poor contact of ECM connector.

Is there poor contact of ECM connector?

Yes	Repair the poor contact of ECM connector.
No	Check using “Diagnostics with Phenomenon”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon.

Note:

After the faulty parts are repaired or replaced, perform the final check in Basic Diagnostic Procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

ENGINE (DIAGNOSTICS)(H4DO) > Diagnostics with Phenomenon

CHECK BRAKE OVERRIDE SYSTEM

Caution:

Perform this test in a location where the driving can be checked safely, while paying sufficient attention to the vicinity. While driving, the traffic laws and regulations such as speed limit must always be observed.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector.
3. Turn the ignition switch to ON.
4. Turn the Subaru Select Monitor 4 to ON.
5. Check the DTCs of the system that may be output.

Note:

Read the DTC using Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is there any DTC output?

Yes	Check DTC using “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
No	Go to 2.

2. READ DATA MONITOR.

Using the Subaru Select Monitor, read the value in [Stop Light Switch].

Note:
For detailed operation procedures, refer to the “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Is the value of [Stop Light Switch] changed to ON/OFF on the data monitor?

Yes	Go to 3.
No	Check the stop light circuit.

3. CHECK BRAKE PEDAL.

Check the brake pedal. Ref. to BRAKE>Brake Pedal>INSPECTION.

Is the brake pedal OK?

Yes	Go to 4.
No	Adjust or replace the brake pedal. Ref. to BRAKE>Brake Pedal.

4. READ DATA MONITOR.

Using the Subaru Select Monitor, read the values in [Accelerator Pedal Pos.#1] and [Accelerator Pedal Pos.#2] when operating the accelerator pedal from fully closed to fully open.

Data Monitor

Note:

For detailed operation procedures, refer to the “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Does the values of [Accelerator Pedal Pos.#1] and [Accelerator Pedal Pos.#2] continuously change?

Yes	Go to 5.
No	Replace the throttle opening angle sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body.

5. READ DATA MONITOR.

Using Subaru Select Monitor, read the value of [Vehicle Speed] when driving at a constant speed of 16.1 Km/h (10 MPH) or 64.4 Km/h (40 MPH).

Data Monitor

Caution:

During the driving test, the traffic laws and regulations such as speed limit must always be observed.

Note:

Use of the data storage function of Subaru Select Monitor allows the data during driving to be stored. The stored data can be checked after the driving.

Does the value of [Vehicle Speed] change widely?

Yes	Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Note:

- **The value of [Accel. Opening Angle] on the data monitor normally changes according to the value of accelerator sensor No. 1 voltage ratio. (The values do not become the same. For values, refer to Data monitor.)**
- **Even if the voltage difference between [Accel. Opening Angle] and the accelerator sensor No. 1 is large and the value of [Accel. Opening Angle] is not consistent, the corresponding control can be considered to be activated if the value of the accelerator sensor No. 1 voltage ratio is consistent. (Use of the data storage function of Subaru Select Monitor 4 allows the data during driving to be stored. The stored data can be checked after the driving.)**
- **When the customer complains of deceleration feeling when he/she intentionally depresses both the accelerator pedal and the brake pedal, advise them not to depress both pedals. (Example: operating the brake pedal with the left foot while operating the accelerator pedal)**

OPERATION

1. HOW TO USE GENERAL SCAN TOOL

1. Prepare a scan tool (general scan tool) required by SAE J1978.
2. Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver's side). Ref. to COMMON(diag)>Data Link Connector.
3. Using the general scan tool, call up each data. General scan tool functions consist of:
   (1) MODE $01: Current powertrain diagnostic data
   (2) MODE $02: Powertrain freeze frame data
   (3) MODE $03: Emission-related powertrain DTC
   (4) MODE $04: Clear/Reset emission-related diagnostic information
   (5) MODE $06: Request on-board monitoring test results for intermittently monitored systems
   (6) MODE $07: Initial emission-related powertrain DTC
   (7) MODE $08: Request control for on-board system, test, and component
   (8) MODE $09: Request vehicle information
   (9) MODE $0A Emission-related DTC (with Permanent Status)
4. Read out the data according to repair procedures. (For detailed operation procedures, refer to the general scan tool operation manual.)

Note:

For details concerning DTC, refer to Diagnostic Trouble Code (DTC). Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

2. MODE $01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
$01	Number of emission-related powertrain DTC, and malfunction indicator light status and diagnosis support information	—
$03	Fuel system control status	—
$04	Calculated engine load value	%
$05	Engine coolant temperature	Celsius
$06	Short term fuel trim	%
$07	Long term fuel trim	%
$0B	Intake manifold absolute pressure	kPa
$0C	Engine speed	rpm
$0D	Vehicle speed	MPH
$0E	Ignition timing advance	°
$0F	Intake air temperature	Celsius
$10	Intake air amount	g/s
$11	Throttle valve opening angle	%
$13	Air fuel ratio sensor	—
$15	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor (bank 1 sensor 2)	V and %
$1C	Supporting OBD system	—
$1F	Elapsed time after starting the engine	sec
$21	Travel distance after the malfunction indicator light illuminates	miles
$24	A/F value and A/F sensor output voltage (bank 1 sensor 1)	— and V
$2C	Target EGR	%
$2D	EGR deviation	%
$2E	Evaporative purge	%
$2F	Fuel level	%
$30	Number of warm ups after DTC clear	Time
$31	Travel distance after DTC clear	miles
$33	Barometric pressure	kPa
$34	A/F value and A/F sensor current (bank 1 sensor 1)	— and mA
$3C	Catalyst temperature #1	Celsius
$41	Diagnostic monitor of each drive cycle	—
$42	ECM power voltage	V
$43	Absolute load	%
$44	A/F target lambda	—
$45	Relative throttle opening angle	%

PID	Data	Unit of measure
$46	Ambient temperature	Celsius
$47	Absolute throttle opening angle 2	%
$49	Absolute accelerator opening angle 1	%
$4A	Absolute accelerator opening angle 2	%
$4C	Target throttle opening angle	%
$4D	Engine operating time while malfunction indicator lit	min
$4E	Elapsed time after DTC clear	min
$51	Fuel used	—
$53	ELCM pressure	kPa
$56	Learning value of sub feedback compensation level	—
$5A	Relative accelerator opening angle	%
$5C	Engine oil temperature	Celsius
$65	Neutral status	—

Note:

Refer to general scan tool manufacturer's operation manual to access current powertrain diagnostic data (MODE $01).

3. MODE $02 (POWERTRAIN FREEZE FRAME DATA)

Refer to data denoting the operating condition when trouble is detected by on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
$02	DTC that caused freeze frame data to be stored	—
$03	Fuel system control status	—
$04	Calculated engine load value	%
$05	Engine coolant temperature	Celsius
$06	Short term fuel trim (bank 1 sensor 1)	%
$07	Long term fuel trim (bank 1 sensor 1)	%
$0B	Intake manifold absolute pressure	kPa
$0C	Engine speed	rpm
$0D	Vehicle speed	MPH
$0E	Ignition timing advance	°
$0F	Intake air temperature	Celsius
$10	Intake air amount	g/s
$11	Throttle valve opening angle	%
$13	Air fuel ratio sensor	—
$15	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor (bank 1 sensor 2)	V and %
$1C	Supporting OBD system	—

PID	Data	Unit of measure
$1F	Elapsed time after starting the engine	sec
$2C	Target EGR	%
$2D	EGR deviation	%
$2E	Evaporative purge	%
$2F	Fuel level	%
$33	Barometric pressure	kPa
$42	ECM power voltage	V
$43	Absolute load	%
$44	A/F target lambda	—
$45	Relative throttle opening angle	%
$46	Ambient temperature	Celsius
$47	Absolute throttle opening angle 2	%
$49	Absolute accelerator opening angle 1	%
$4A	Absolute accelerator opening angle 2	%
$4C	Target throttle opening angle	%
$51	Applicable fuel	—
$65	Neutral status	—

Note:

Refer to general scan tool manufacturer's operation manual to access freeze frame data (MODE $02).

4. MODE $03 (EMISSION-RELATED POWERTRAIN DTC)

Refer to "Diagnostic Trouble Code (DTC)" for information about data denoting emission-related powertrain DTC. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

5. MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refer to the mode used to clear or reset emission-related diagnostic information.

Note:

- **Refer to the manufacturer's operation manual for the general scan tool to clear the emission-related diagnostic information (MODE $04).**
- **Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.**

6. MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR INTERMITTENTLY MONITORED SYSTEMS)

OPERATION

1. On [Start] display, select [OBD requirements to which vehicle or engine is certified].
2. On [Main Menu] display, select [Each System] and then [Enter].
3. On [Select System] display, select [ECM-Engine Control] and then select [Enter].
4. On [Select Function] display, select [On-board monitor test result].

Refer to diagnostic value of troubleshooting and data of test limit indicated on the support data bit

sequence table. A list of the support data is shown in the table 1.

Note:

- **Subaru Select Monitor**
  For detailed operation procedures, refer to “Application help”.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.
- **Some items are not displayed according to the specifications.**
- **List of measurement items for each DTC of “VVT monitor bank 1” and “VVT monitor bank 2”**
  A list of the measurement items is shown in the table 2. (This is used for a check of on-board monitor test result of DTC P000A, P000B, P000C, P000D, P0011, P0014, P0016, P0017, P0018, P0019, P0021 and P0024).

Table 1

OBDMID	TID	SID	Diagnostic item
$01	$84	$1E	A/F sensor range failure (Bank 1 Sensor 1)

	$8E	$9D	–		

7. MODE $07 (INITIAL EMISSION-RELATED POWERTRAIN DTC)

Refer to the data of DTC (pending code) for troubleshooting result about emission in the first time.

8. MODE $08 (REQUEST CONTROL FOR ON-BOARD SYSTEM, TEST, AND COMPONENT)

Perform “Active Test” of the on-board system.

9. MODE $09 (REQUEST VEHICLE INFORMATION)

Refer to the data of the vehicle specification.

10. MODE $0A (EMISSION-RELATED DTC (WITH PERMANENT STATUS))

Refer to “Diagnostic Trouble Code (DTC)” for information about data denoting emission-related DTC. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

TRANSMISSION (DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. CHECK PRE-INSPECTION.

1. Ask the customer when and how the trouble occurred using the interview check list. Ref. to TRANSMISSION (DIAGNOSTICS)>Check List for Interview.
2. Before performing diagnostics, check the following items which might affect CVT problems.
   - General inspection Ref. to TRANSMISSION (DIAGNOSTICS)>General Description>INSPECTION.
   - Disconnection of harness connector
   - Visual check for harness damage
   - Oil leakage
   - Stall speed test Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Stall Test.
   - Secondary pressure test Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure (Line Pressure) Test.
   - Transfer clutch pressure test Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch Pressure Test.
   - Time lag test Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Time Lag Test.
   - Road test Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Road Test.
   - Inhibitor switch Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.

Is the check result OK?

Yes	Go to 2.
No	Repair the items which may be affecting the CVT trouble.

2. CHECK AT OIL TEMP LIGHT.

Turn the ignition switch to ON and wait for at least 2 seconds.

Does the AT OIL TEMP light illuminate?

Yes	Go to 3.
No	Check the AT OIL TEMP light.

3. CHECK AT OIL TEMP LIGHT.

Start the engine and wait for 2 seconds or more.

Does the AT OIL TEMP light blink?

Yes	Go to 4.
No	Go to 5.

4. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication>COMMUNICATION FOR INITIALIZING IMPOSSIBLE.

Are any DTCs displayed?

Yes	Record the DTC, time stamp and freeze frame data. Go to 6.
No	Go to 5.

5. PERFORM GENERAL DIAGNOSTICS.

1. Inspect using “Diagnostic Procedure without Diagnostic Trouble Code (DTC)”. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure without Diagnostic Trouble Code (DTC).
2. Inspect using “Diagnostics with Phenomenon”. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostics with Phenomenon.
3. Perform the road test. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Road Test.
4. Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Go to 6.
No	Finish the diagnosis.

6. PERFORM DIAGNOSIS.

1. Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC).
   Note:
   For the DTC table, refer to “Diagnostic Trouble Code (DTC)”. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair the trouble cause.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.
5. Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC).
No	Finish the diagnosis.

TRANSMISSION (DIAGNOSTICS) > Check List for Interview

CHECK

Check the following items when a problem has occurred.

Note:

Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	Chassis number	
Odometer reading	km (miles)		
Frequency	❑ Continuous ❑ Intermittent (times/day)		
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others ( )		
Place	❑ Highland ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road ❑ Others ( )		
Ambient air temperature	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Vehicle speed	km/h (MPH)		
AT OIL TEMP light	❑ Blinks continuously	❑ Does not blink	
Select lever position	❑ P ❑ R ❑ N ❑ D ❑ Manual mode		
Driving condition	❑ Not affected ❑ At racing ❑ While decelerating	❑ At starting ❑ While accelerating ❑ While turning (❑ RH / ❑ LH)	❑ While idling ❑ When cruising (Vehicle speed km/h) ❑ Immediately after starting the engine
Manual mode	❑ ON ❑ OFF		
Symptoms	❑ Vehicle does not move (❑ Any position ❑ Particular position)		
	❑ Vehicle does not move (no load racing condition as in N range)		
	❑ Vehicle does not move (engine speed does not increase, felt as stall condition)		
	❑ Noise or vibration (Specifically:)		
	❑ Shock felt at N → D selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shock felt at N → R selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shifting is wrong (Specifically:)		
	❑ Shock or judder during driving		

- ❑ Fails to accelerate
- ❑ Engine speed increases abruptly during driving
- ❑ Shock or judder during standing start
- ❑ Select lever does not move
- ❑ Others

TRANSMISSION (DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG SYSTEM

Caution:

- **Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.**
- **Be careful not to damage the airbag system wiring harness.**

2. CONTROL MODULE

1. The TCM connector is waterproof. When measuring the TCM connector terminal voltage, or the resistance between the terminals, use the check board.
2. When measuring the voltage or resistance of individual sensors, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal because it deforms inside which may lead to malfunction.

   Caution:

   If a taper pin or the like has been inserted into the connector terminal, replace the connector.

TRANSMISSION (DIAGNOSTICS) > General Description

INSPECTION

1. BATTERY

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

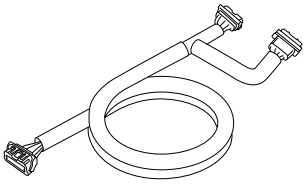
2. TRANSMISSION GROUND

Make sure that the ground terminal bolt is tightened securely.

3. OPERATION OF SELECT LEVER

Make sure there is no noise, dragging or contact pattern in each select lever range.

Warning:



Stop the engine while checking operation of the select lever.

TRANSMISSION (DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. PREPARATION FOR THE INSPECTION MODE

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2. After performing the diagnostics and clearing memory, check that no DTC remains.

Note:

Perform the inspection mode after warming up the engine except when the ATF temperature at engine start is specified.

2. INSPECTION MODE A

DTC	Item	Condition
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	—
P0605	INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR	—
P0613	TCM PROCESSOR	—
P062F	INTERNAL CONTROL MODULE EEPROM ERROR	Perform inspection mode A twice
P0712	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW	—
P0842	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT LOW	—
P0843	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT HIGH	—
P0890	TCM POWER RELAY SENSE CIRCUIT LOW	—
P0962	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW	—
P0963	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH	—
P0966	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW	—
P0967	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH	—
P2530	IGNITION SWITCH RUN POSITION CIRCUIT	—
P2763	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH	After inspection mode A is done, perform inspection mode C

Diagnostic procedure:

1. Start the engine.
2. Depress the brake pedal and move the select lever to each range at an interval of five seconds.

Note:

Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”.

3. INSPECTION MODE B

DTC	Item	Condition
P0711	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—

Diagnostic procedure:

1. Start the engine under condition that ATF temperature is at 20°C (68°F) or below.
2. Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

Note:

Repeat two or more driving cycles in this driving pattern.

4. INSPECTION MODE C

DTC	Item	Condition
P0500	VEHICLE SPEED SENSOR "A" CIRCUIT	—
P0716	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—
P0717	INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL	—
P0970	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW	—
P0971	PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH	—
P0973	SHIFT SOLENOID "A" CONTROL CIRCUIT LOW	—
P0974	SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH	—
P0976	SHIFT SOLENOID "B" CONTROL CIRCUIT LOW	—
P0977	SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH	—
P2746	INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/PERFORMANCE	—
P2747	INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL	—
P2750	INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT RANGE/PERFORMANCE	—

DTC	Item	Condition
P2751	INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL	—
P2763	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH	After inspection mode A is done, perform inspection mode C
P2764	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT LOW	—

Diagnostic procedure:

1. Start the engine.
2. Accelerate slowly to a legal speed, and then decelerate slowly to a stop.

5. INSPECTION MODE D

DTC	Item	Condition
P0713	TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH	—
P0730	INCORRECT GEAR RATIO	—
P0746	PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF	Perform inspection mode D twice
P0747	PRESSURE CONTROL SOLENOID "A" STUCK ON	Perform inspection mode D twice
P0751	SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF	Perform inspection mode D twice
P0752	SHIFT SOLENOID "A" STUCK ON	Perform inspection mode D twice
P0756	SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF	Perform inspection mode D twice
P0757	SHIFT SOLENOID "B" STUCK ON	Perform inspection mode D twice
P0776	PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF	Perform inspection mode D twice
P0841	TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE	—
P0961	PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE	—
P0965	PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE	—
P2757	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF	Perform inspection mode D twice
P2758	TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT	Perform inspection mode D twice

DTC	Item	Condition
	STUCK ON	

Diagnostic procedure:

1. Start the engine.
2. Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

6. INSPECTION MODE E

DTC	Item	Condition
P0801	REVERSE INHIBIT CONTROL CIRCUIT/OPEN	—
P162B	WARNING INDICATOR REQUEST	—
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	—
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	—
U1235	LOST COMMUNICATION WITH EyeSight	—
U1433	INVALID DATA RECEIVED FROM EyeSight	—

Diagnostic procedure:

1. Start the engine.

7. INSPECTION MODE F

DTC	Item	Condition
P0705	TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)	—

Diagnostic procedure:

1. Start the engine.
2. Depress the brake pedal and move the select lever to each range at an interval of five seconds.
   Note:
   Move the select lever in the following order: “P” → “R” → “N” → “D”.
3. Maintain the engine speed to 2,000 rpm for five seconds or more.

8. INSPECTION MODE G

DTC	Item	Condition
P0708	TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH	—

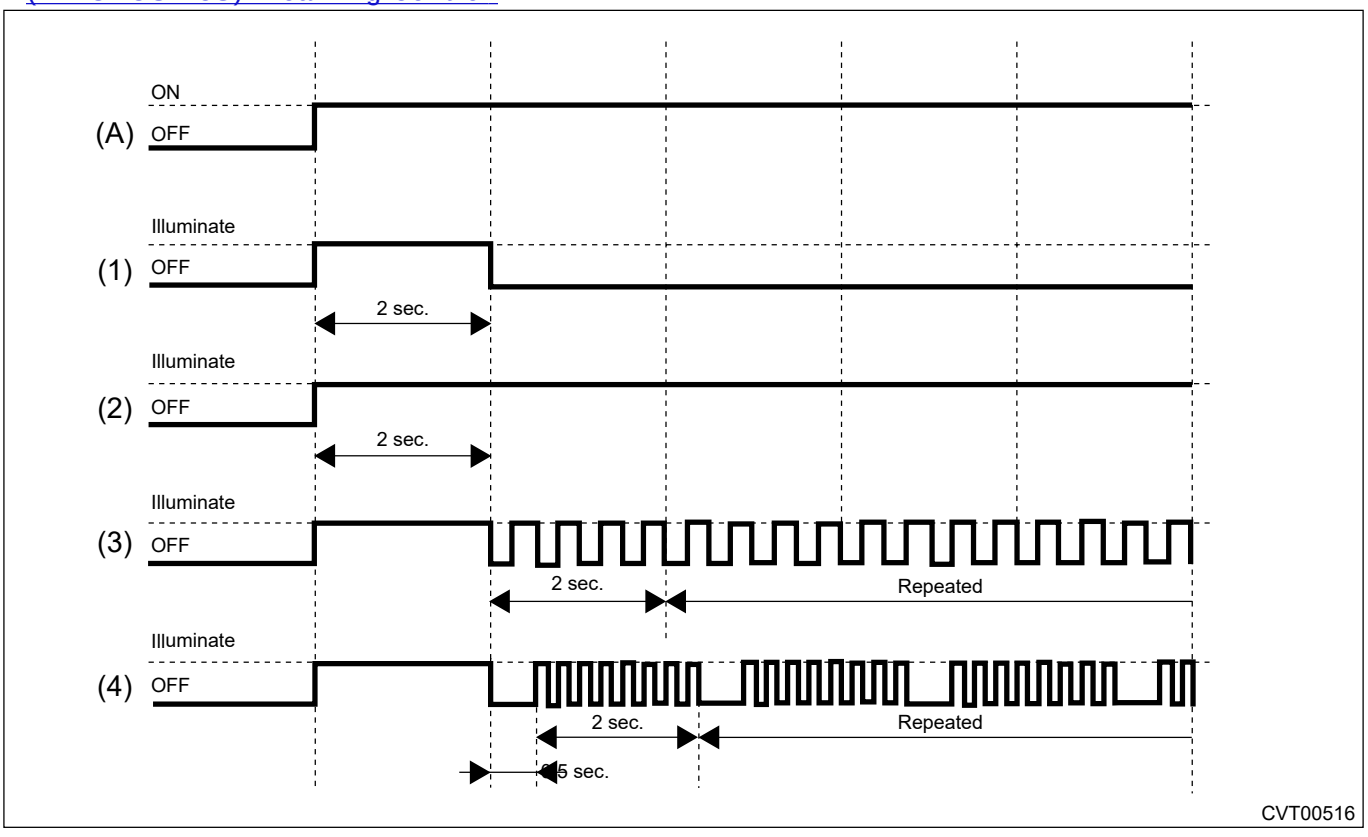
Diagnostic procedure:

1. Start the engine.
2. Drive for three seconds at 16 km/h (10 MPH).
   Note:
   Drive in “D” range and “R” range.

9. INSPECTION MODE H

DTC	Item	Condition
P0719	BRAKE SWITCH "B" CIRCUIT LOW	—
P0724	BRAKE SWITCH "B" CIRCUIT HIGH	—
P0951	AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE	—
P1603	ENGINE STALL HISTORY	—
P170A	L-RANGE SWITCH	—

Diagnostic procedure:



1. Start the engine.
2. Operate the stop light switch or the manual mode switch.
   Note:
   Drive in “D” range and “R” range.
3. Read the data of the stop light switch or the manual mode switch using the Subaru Select Monitor. Or measure the terminal voltage.

TRANSMISSION (DIAGNOSTICS) > AT OIL TEMP Warning Light Display

OPERATION

The AT OIL TEMP light illuminates or blinks, when the ATF temperature is high and malfunction occurs in CVT.

- At normal condition
  After turning the ignition switch to ON, illuminates for 2 seconds then goes off.
- When ATF temperature is high
  AT OIL TEMP light illuminates when the ATF temperature is abnormally high with the ignition switch ON.
- When malfunction is detected
  AT OIL TEMP light blinks at 2 Hz when the TCM detects the malfunction of CVT with the ignition switch ON. In this case, inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC).
- When AT learning is not finished
  AT OIL TEMP light repeats “Blinking at 4 Hz → Turning OFF” when the AT learning is not completed with the ignition switch ON. In this case, perform the “Learning”. Ref. to TRANSMISSION (DIAGNOSTICS)>Learning Control.

(A) Ignition switch condition

(1) At normal condition

(2) When ATF temperature is high

(3) When malfunction is detected

(4) When AT learning is not finished

If the AT OIL TEMP light does not illuminate, or illumination patterns are not as above, check the AT OIL TEMP light circuit. Ref. to TRANSMISSION (DIAGNOSTICS)>AT OIL TEMP Warning Light

Display > INSPECTION.

TRANSMISSION (DIAGNOSTICS) > AT OIL TEMP Warning Light Display

INSPECTION

Diagnosis:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in special control mode.
- AT learning is not finished.

Trouble symptom:

- When the ignition switch is turned to ON, the AT OIL TEMP light does not illuminate.
- AT OIL TEMP light remains lit after engine start.

1. CHECK DTC.

Read the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC U0155 or U0423 displayed?

Yes	Perform the self-diagnosis of combination meter.
No	Go to 2.

2. CHECK DTC.

Check the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are DTCs other than U0155 and U0423 displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK COMBINATION METER.

Using the Subaru Select Monitor, read DTC of combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK AT OIL TEMP LIGHT.

Turn the ignition switch to ON.

Does AT OIL TEMP light illuminate and then go off in 2 seconds?

Yes	Go to 5.
No	Perform the self-diagnosis of combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

5. CHECK AT OIL TEMP LIGHT.

Start the engine.

Does the AT OIL TEMP light go off?

Yes	Current condition is normal. Go back to Basic Diagnostic Procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 6.

6. CHECK DTC.

Read the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 7.

7. CHECK TCM.

Read the data of [ATF Temperature Lamp] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is “ON” displayed?

Yes	Go to 8.
No	Perform the self-diagnosis of combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

8. CHECK TCM.

Read the data of [ATF Temp.] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

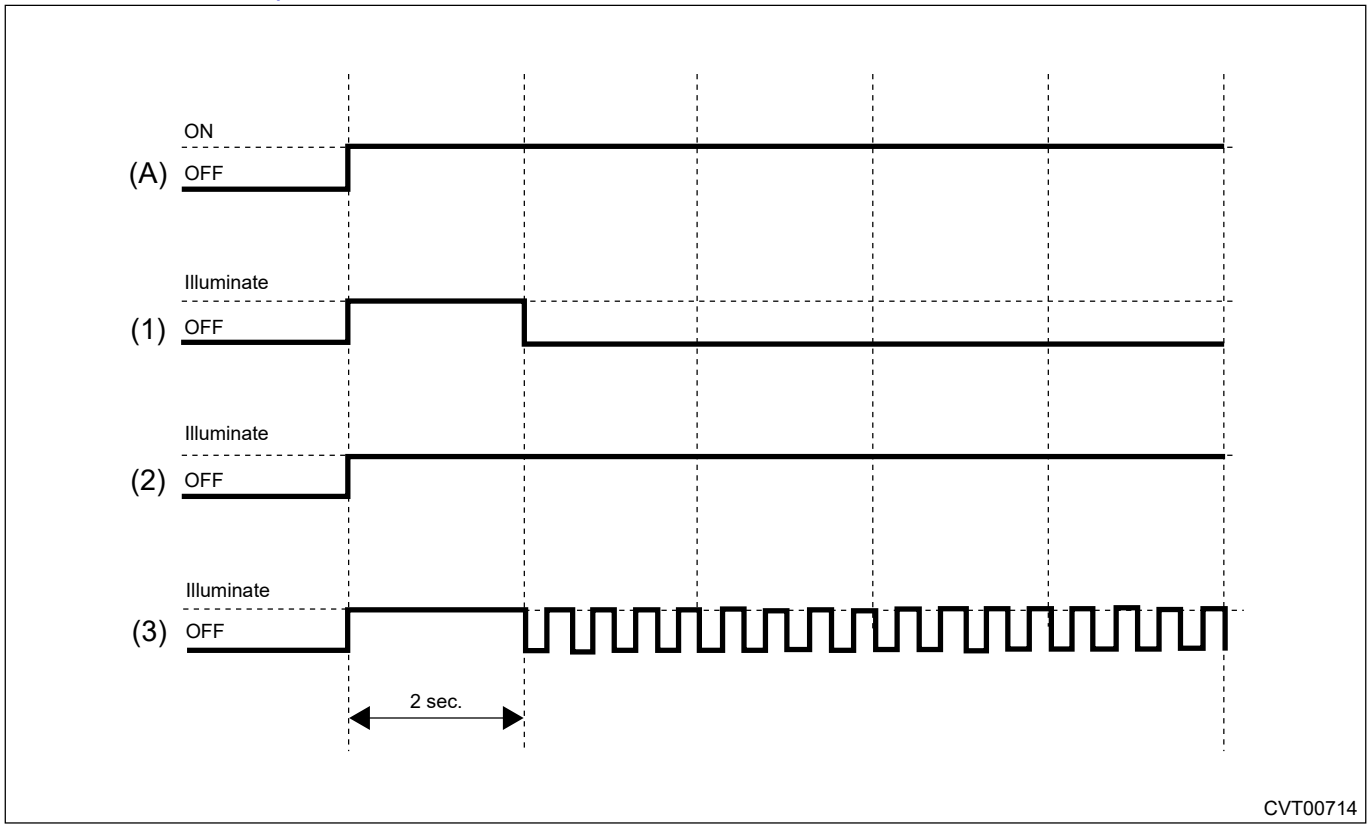
Is the display 130°C or more?

Yes	Go to 9.
No	Check the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

9. CHECK ATF TEMPERATURE.

Check the real fluid temperature from the transmission case surface temperature.

Does it clearly differ from the [ATF Temp.] displayed on Subaru Select Monitor?



Yes	Perform the diagnosis according to DTC P0712. If there is no problem, perform the diagnosis according to DTC P0713.
No	When ATF temperature can be judged as actually high, perform the diagnosis again after the ATF temperature lowers.

TRANSMISSION (DIAGNOSTICS) > AWD Warning Light Display

OPERATION

AWD light illuminates or blinks, when the AWD is in special control condition and AWD has malfunction.

- At normal condition
  After turning the ignition switch to ON, illuminates for 2 seconds then goes off.
- When FF mode is selected
  AWD light illuminates when the AWD ON/OFF switching function is set to “FF mode” with the ignition switch ON.
- When malfunction is detected
  AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.
  1. When tire with different diameter is installed, or air pressure of any of four wheels is excessively low.
  2. When “Rear differential inspection mode” is judged as NG Ref. to DIFFERENTIALS>Rear Differential Inspection Mode.

(A) Ignition switch condition

(1) At normal condition (2) When FF mode is selected (3) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. Ref. to TRANSMISSION (DIAGNOSTICS)>AWD Warning Light Display>INSPECTION.

TRANSMISSION (DIAGNOSTICS) > AWD Warning Light Display

INSPECTION

Diagnosis:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in AWD special control mode.

Trouble symptom:

- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light remains lit after engine start.
- AWD light is blinking immediately after engine start.

1. CHECK TCM.

Check the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0155 or U0423 displayed?

Yes	Perform the self-diagnosis of combination meter.
No	Go to 2.

2. CHECK TCM.

Check the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are DTCs other than U0155 and U0423 displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK COMBINATION METER.

Using the Subaru Select Monitor, read DTC of combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK AWD LIGHT.

Turn the ignition switch to ON.

Does AWD light illuminate and then go off in 2 seconds?

Yes	Go to 5.
No	Perform the self-diagnosis of combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

5. CHECK AWD LIGHT.

Start the engine.

Does the AWD light go off?

Yes	Current condition is normal. Go back to Basic Diagnostic Procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 6.

6. CHECK DTC.

Read the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 7.

7. CHECK AWD LIGHT.

Check the display of AWD light after engine start.

Is AWD light illuminating?

Yes	Go to 9.
No	Go to 8.

8. CHECK AWD LIGHT.

Check the display of AWD light after engine start.

Is AWD light blinking at 2 Hz?

Yes	Go to 10.
No	Go to 11.

9. CHECK AWD ON/OFF SWITCHING FUNCTION.

Using the Subaru Select Monitor, select [AWD ON/OFF switching mode] on the [Work Support] display, and check the current mode. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>AWD ON/OFF Switching Mode.

Is the message [At present, the vehicle is in AWD. Switch to FF?] displayed?

Yes	Go to 11.
No	If the message [At present, the vehicle is in FF. Switch to AWD?] is displayed, select “OK”, and switch to AWD mode.

10. CHECK REAR DIFFERENTIAL.

Using the Subaru Select Monitor, select and check [Rear differential inspection mode] on the [Work Support] display. Ref. to DIFFERENTIALS>Rear Differential Inspection Mode.

Does AWD light go off after inspection is finished normally?

Yes	Current condition is normal. Go back to Basic Diagnostic Procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 11.

11. CHECK COMBINATION METER.

Perform the self-diagnosis of combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

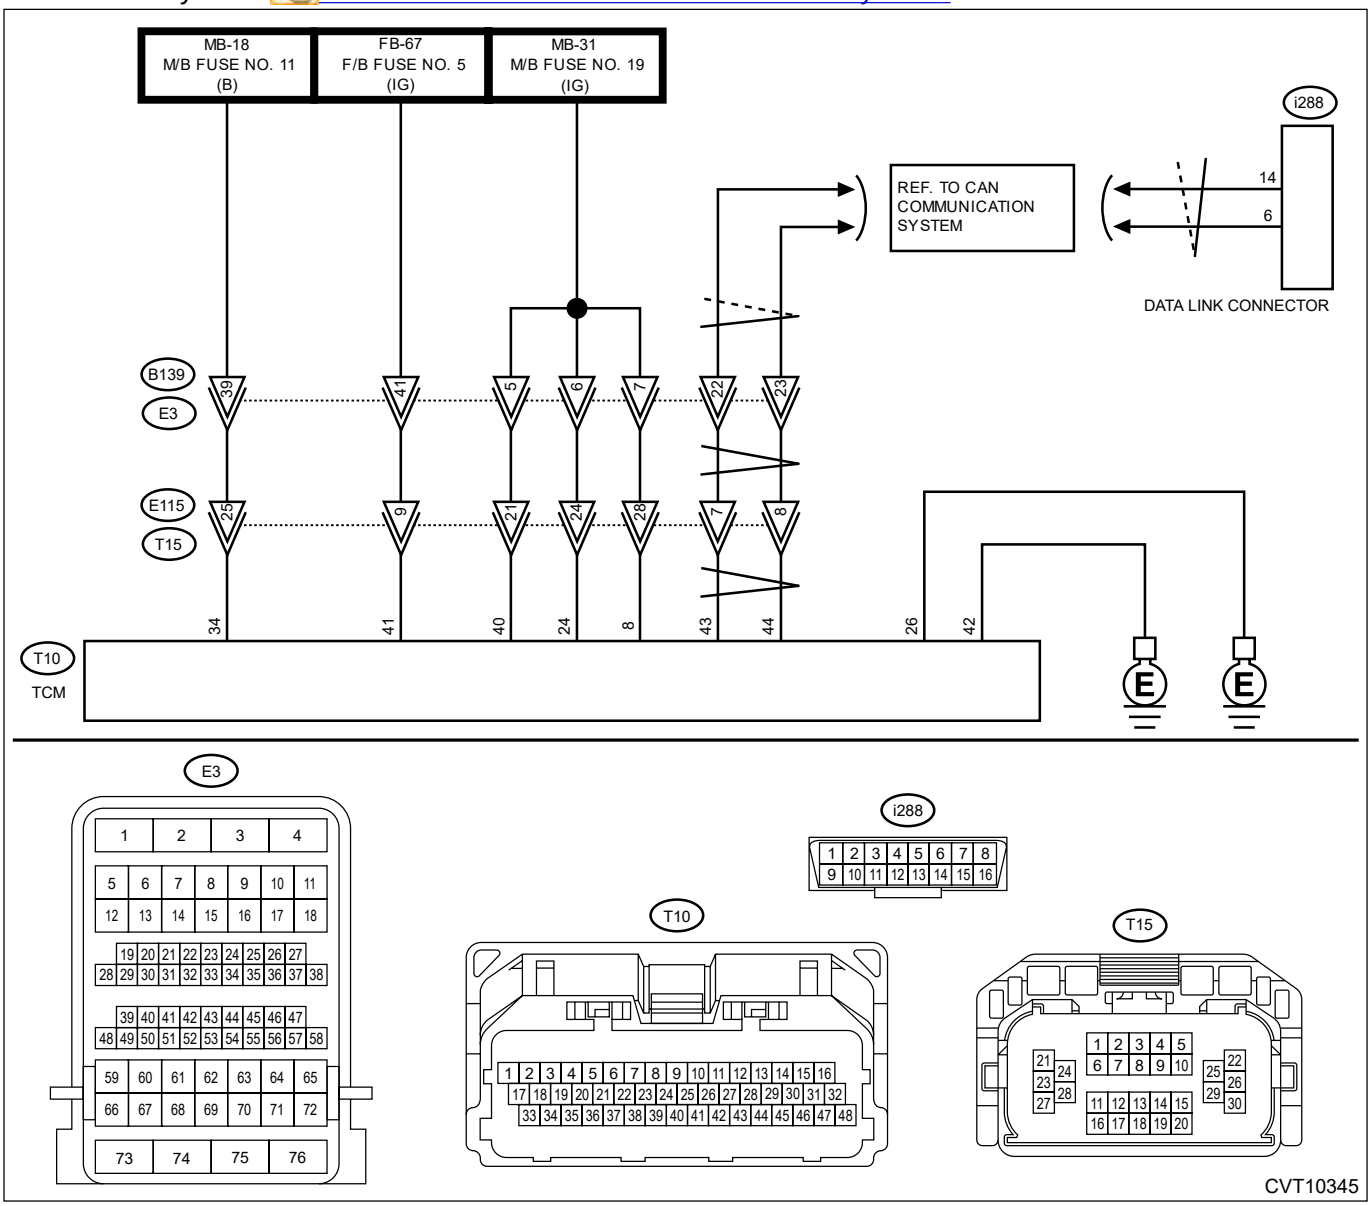
Is there any trouble with the combination meter?

Yes	Repair the combination meter.
No	Check the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:



Defective harness connector

Trouble symptom:

Subaru Select Monitor communication failure

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

Caution:

Use the check board when measuring the TCM terminal voltage and resistance.

1. CHECK IGNITION SWITCH.

Is the ignition switch ON?

Yes	Go to 2.
No	Turn the ignition switch to ON, and select the transmission using the Subaru Select Monitor.

2. CHECK BATTERY.

1. Turn the ignition switch to OFF.
2. Measure the battery voltage.

Is the voltage 11 V or more?

Yes	Go to 3.
No	Charge or replace the battery.

3. CHECK BATTERY TERMINAL.

Is there poor contact at battery terminal?

Yes	Replace or tighten the battery terminal.
No	Go to 4.

4. CHECK INSTALLATION OF TCM CONNECTOR.

Turn the ignition switch to OFF.

Is the TCM connector inserted into the TCM until the clamp locks?

Yes	Go to 5.
No	Insert the TCM connector to TCM.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Check whether communication to transmission system can be executed normally.

Is the [Select Function] screen displayed?

Yes	Check DTC of TCM. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Go to 7.

7. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Turn the ignition switch to ON. (Engine OFF)
4. Measure the ignition power supply voltage between TCM connector and chassis ground.

Connector & terminal

(T10) No. 8 (+) — Chassis ground (−):
(T10) No. 24 (+) — Chassis ground (−):
(T10) No. 34 (+) — Chassis ground (−):
(T10) No. 40 (+) — Chassis ground (−):
(T10) No. 41 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 8.
No	Repair the open circuit of harness between TCM and battery.

8. CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.

1. Turn the ignition switch to OFF.
2. Measure the resistance of harness between TCM connector and chassis ground.

Connector & terminal

(T10) No. 26 — Chassis ground:
(T10) No. 42 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 9.
No	Repair the open circuit of the TCM ground circuit and poor contact of connector.

9. CHECK POOR CONTACT OF CONNECTOR.

Is there poor contact of control module power supply, ground circuit and data link connector?

Yes	Repair the connector.
No	Check the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

TRANSMISSION (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to “COMMON (diag)”. Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor>LIST.**

TRANSMISSION (DIAGNOSTICS) > Data Monitor

LIST

Item	Remarks	Unit of measure
Engine Speed	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signal. TCM input value.	rpm
Turbine Revolution Speed	Turbine rotation speed calculated by the TCM using signals from the turbine speed sensor.	rpm
Accel. Opening Angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the secondary axis rotation speed.	km/h or MPH
ATF Temperature	Value calculated from the ATF temperature sensor output value. ATF temperature of the control valve section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Pulley Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Stop Light Switch	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF

Item	Remarks	Unit of measure
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
Commanded Forward & Reverse Linear Solenoid Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
Actual Forward & Reverse Linear Solenoid Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
Control Module Voltage	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%
P Range Signal	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range Signal	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF
L-range	L range signal. Set to ON when the select lever is in the L range gate. TCM input value.	ON or OFF
Shift step in Manu. mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (−) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF

Item	Remarks	Unit of measure
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. ATF temperature warning light illuminates. TCM output value.	ON or OFF
AT learning	AT initial learning completion status. AT oil temperature warning light blinks at 4 Hz when the learning is not completed. TCM output value.	Completed or not completed
Ignition SW ON Count	Number of times the ignition is turned ON since the vehicle was manufactured.	time
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

TRANSMISSION (DIAGNOSTICS) > Learning Control

GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- When the following work is performed, perform learning work for the transmission.
  Replacement of TCM/Replacement or disassembly of transmission assembly/Replacement of control valve body/Clearing AT leaning value is executed.

TRANSMISSION (DIAGNOSTICS) > Learning Control

PROCEDURE

1. PREPARATION FOR LEARNING

1. Warm up or cool down until the ATF temperature displayed on the Subaru Select Monitor is 40 — 65°C (104 — 149°F).
2. After stopping the vehicle, shift the select lever to “P” range.
3. Fully apply the parking brake.
4. Lift up the vehicle.
   Caution:
   While working, be sure to keep the lower edge of the tires 30 cm or more above the ground as vehicle will vibrate.
5. Connect the Subaru Select Monitor to data link connector.
6. Turn the ignition switch to ON.
7. Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger, etc.

2. SIMPLE LEARNING

Note:
Simple learning is performed with the vehicle lifted, without actually running the vehicle.
Caution:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, enter vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Transmission].
5. On [Select Function] display, select [Work Support].
6. On [Work Support] display, select [AT learning mode].
7. Follow the messages displayed on the screen when working.
8. When [AT learning normally ended.] is displayed, simple AT learning is completed.

Note:

- **If communication error occurs during learning, retry the “AT learning mode” from the beginning.**
- **If the message [Execute AT learning again after fixing troubles of the vehicle] is displayed during learning, select [OK] and display the DTC list. After repairing the locations indicated by the DTC, start the “AT learning mode” over from the beginning.**
- **When communication error occurs during learning, select lever does not shift occasionally. If select lever does not shift, turn the ignition switch to OFF before operating the select lever.**
- **If the message [AT learning ended abnormally. Try again from the beginning.] is displayed, start the “AT learning mode” over from the beginning.**

Display	Main causes for abnormal termination
[AT learning ended abnormally. Try again from the beginning.]	• Fault is detected during AT learning. • The accelerator pedal is depressed during AT learning. • An unspecified operation was performed during AT learning • ATF temperature becomes out of specification during AT learning. • Battery voltage is low. • The malfunction indicator light is lit. • Parking brake not applied strongly enough. • Brake pedal is not fully depressed. • Abnormal idle speed increase, etc.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

U1433	INVALID DATA RECEIVED FROM EyeSight	Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U1433 INVALID DATA RECEIVED FROM EyeSight.

DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
VDC does not operate.
Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

Read the DTC of VDC system using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10.9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Vehicle speed (front wheel) from vehicle dynamics control (VDC) module	186.4 MPH or more

Malfunction Criteria	Threshold Value
Note: **The vehicle dynamics control detects malfunction if either of front wheel speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH**	

Time needed for diagnosis: 2.5 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
TCM RAM is faulty.
Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P0604 displayed?

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in RAM area of the TCM.
- Judge as NG when the consistency in the RAM area is lost.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value

Malfunction Criteria	Threshold Value
Error Correcting Code (ECC) check error	Detect

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
TCM ROM is faulty.
Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P0605 displayed?

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in ROM area of the TCM.
- Judge as NG when the consistency in the RAM area is lost.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value

Malfunction Criteria	Threshold Value
Error Correcting Code (ECC) check error	Detect

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0613 TCM PROCESSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
TCM processor error
Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P0613 displayed?

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- TCM processor error is detected.
- Judge as NG when control failure is caused by TCM processor error.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value

Malfunction Criteria	Threshold Value
TCM Processor error	Detect

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
TCM EEPROM is faulty.
Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P062F displayed?

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction in EEPROM area of the TCM.
- Judge as NG if an attempt to write to EEPROM area failed.

Diagnosis 2
- Detect the malfunction in EEPROM area of the TCM.
- Judge as NG when the consistency in the EEPROM area is lost.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1 12 V battery system voltage	9 V or more
Diagnosis 2 12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1 Writing-check (EEPROM)	Error
Diagnosis 2 Checksum (EEPROM)	Error

Time needed for diagnosis: Immediately

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

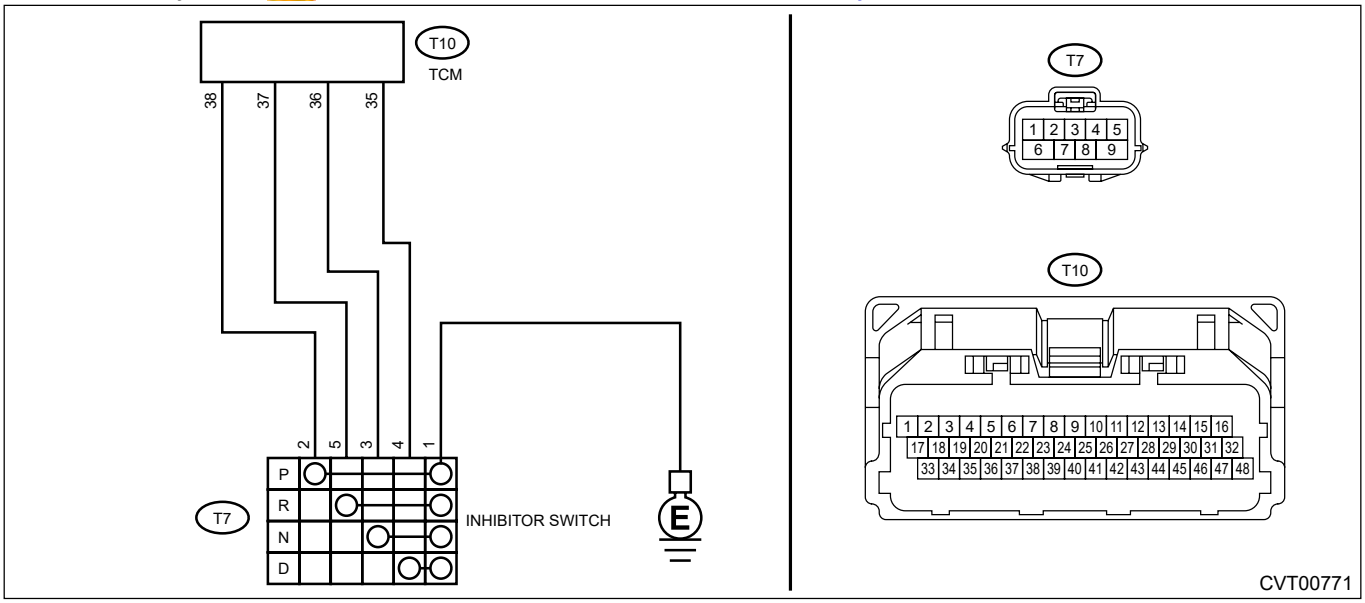
DTC P0705 TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.



Caution:

Use CHECK BOARD when measuring the TCM terminal voltage and resistance.

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. **Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. Turn the ignition switch to ON.
2. Move the select lever to each range, read the data of [P Range], [R Range Signal], [N Range] and [D Range Signal] using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is display “OFF” for the range other than corresponding range?

Yes	Go to 4.
No	Go to 2.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the inhibitor switch connector.
4. Measure the resistance between TCM connector and chassis ground.

Connector & terminal

(T10) No. 38 — Chassis ground:
(T10) No. 37 — Chassis ground:
(T10) No. 36 — Chassis ground:
(T10) No. 35 — Chassis ground:

Is each resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit of transmission harness.

3. CHECK INHIBITOR SWITCH.

Move the select lever to each range, and measure the resistance between inhibitor switch terminals.

Terminals

No. 2 — No. 1:
No. 5 — No. 1:
No. 3 — No. 1:
No. 4 — No. 1:

Is the resistance other than corresponding range 1 MΩ or more?

Yes	Go to 4.
No	Replace the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.

4. CHECK FOR POOR CONTACT.

Is there poor contact between TCM, inhibitor switch, transmission ground?

Yes	Repair the poor contact.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if more than one input of Range Switch are detected.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	400 rpm or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value

Malfunction Criteria	Threshold Value
Two or more transmission range switches ON	True

Note:

“Transmission range switch ON” is defined as transmission range switch input voltage 1.7 V or less.

Time needed for diagnosis: 3 seconds

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

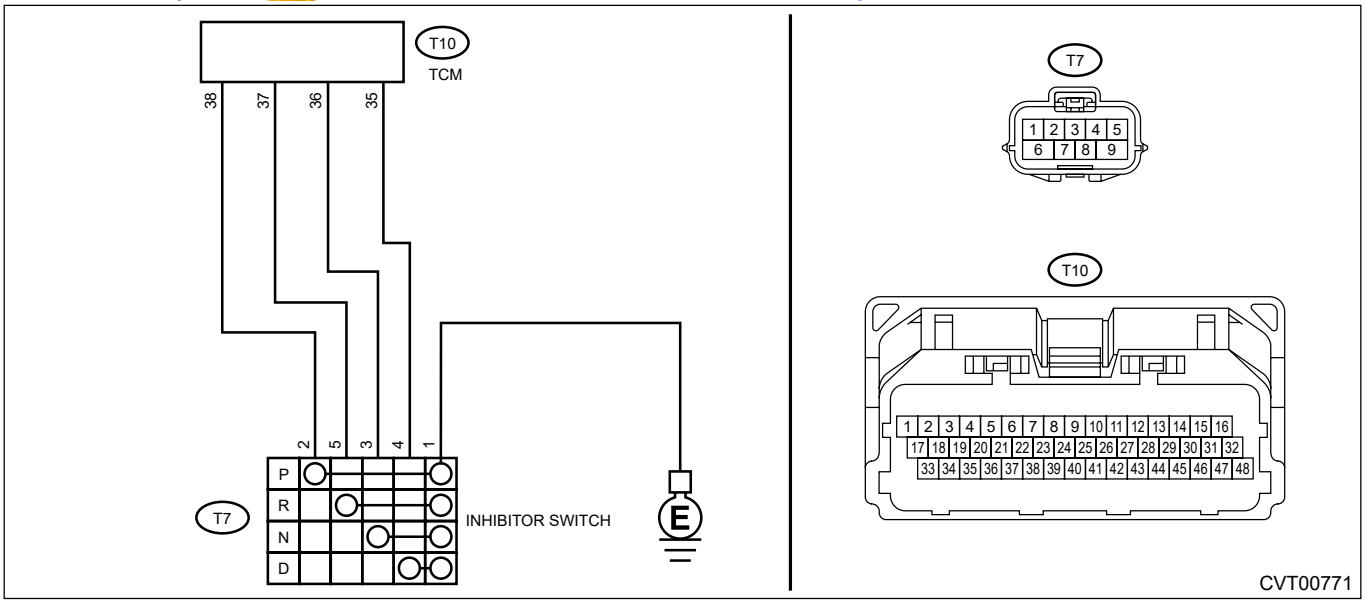
DTC P0708 TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.



Caution:

Use CHECK BOARD when measuring the TCM terminal voltage and resistance.

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. **Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. Turn the ignition switch to ON.
2. Move the select lever to each range, read the data of [P Range], [R Range Signal], [N Range] and [D Range Signal] using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is the display of the corresponding range “ON”?

Yes	Go to 6.
No	Go to 2.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the inhibitor switch connector.
4. Measure the resistance of the harness between TCM connector and inhibitor switch connector.
   Connector & terminal
   (T10) No. 38 — (T7) No. 2:
   (T10) No. 37 — (T7) No. 5:
   (T10) No. 36 — (T7) No. 3:
   (T10) No. 35 — (T7) No. 4:

Is each resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of transmission harness.

3. CHECK HARNESS.

Measure the resistance of harness between inhibitor switch connector and transmission ground.

Connector & terminal

(T7) No. 1 — Transmission ground:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness.

4. CHECK INHIBITOR SWITCH.

Move the select lever to each range, and measure the resistance between inhibitor switch terminals.

Connector & terminal

No. 2 — No. 1:
No. 5 — No. 1:
No. 3 — No. 1:
No. 4 — No. 1:

Is the resistance of the corresponding range less than 1 MΩ?

Yes	Go to 5.
No	Replace the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.

5. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between inhibitor switch connector and chassis ground.

Connector & terminal

(T7) No. 2 (+) — Chassis ground (−):
(T7) No. 5 (+) — Chassis ground (−):
(T7) No. 3 (+) — Chassis ground (−):
(T7) No. 4 (+) — Chassis ground (−):

Is each voltage less than 1 V?

Yes	Go to 6.
No	Repair the harness which outputs 1 V or more.

6. CHECK FOR POOR CONTACT.

Is there poor contact between TCM, inhibitor switch, transmission ground?

Yes	Repair the poor contact.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if there is no input from all Range Switches.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Vehicle speed (calculated from secondary pulley shaft speed)	6 MPH or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
All transmission range switches OFF	True

Malfunction Criteria	Threshold Value

Note:
“Transmission range switch OFF” is defined as transmission range switch input voltage 3.4 V or more.

Time needed for diagnosis: 3 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0711 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Excessive shift shock
- Shift characteristics malfunction

Note:
For the diagnostic procedure, perform the diagnosis according to DTC P0712 and P0713.
Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW.
Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH.

Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Judge the malfunction of oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2
- Judge the malfunction of oil temperature sensor characteristics (stuck to high temperature side).
- Judge as malfunction when the difference between engine coolant temperature and CVT oil temperature is equal to or more than specified value at starting.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage (The timer is held when the following conditions are not satisfied.)	10 V or more
Transmission range	Drive
Vehicle speed (calculated from secondary pulley shaft speed)	21.7 MPH or more

Secondary parameters	Execution condition
Diagnosis 2	
12 V battery system voltage	10 V or more
Soak time (received from ECM)	21600 s or more
(Engine speed	400 rpm or more
for time)	300 s or more

Note:

The monitor detects TFT sensor stuck high after the elapse of 300 seconds required for ECT sensor diagnosis. It is necessary to avoid misdiagnosis of P0711 caused by a malfunctioning ECT sensor.

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1 Absolute change of measured Transmission fluid temperature sensor input voltage Transmission fluid temperature	 Less than 0.049 V Less than 20 degC
Diagnosis 2 Transmission fluid temperature at engine start − Engine coolant temperature at engine start	 Exceeds 18 degC

Time needed for diagnosis:

- **Diagnosis 1:** 600 s
- **Diagnosis 2:** Immediately

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

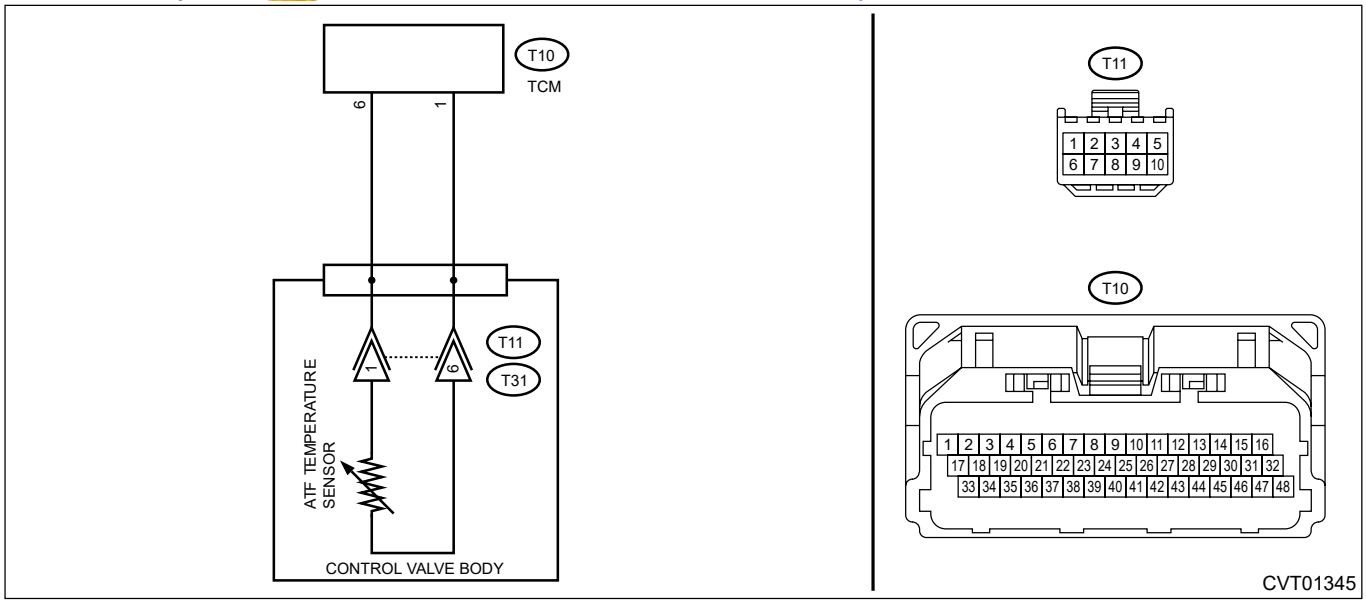
DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Excessive shift shock
- Shift characteristics malfunction



Caution:

Use CHECK BOARD when measuring the TCM terminal voltage and resistance.

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. **Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance of harness between TCM connector and chassis ground.

Connector & terminal

(T10) No. 1 — Chassis ground:

(T10) No. 6 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Go to 2.

2. CHECK HARNESS INSIDE TRANSMISSION.

Caution:

Start work after ATF cools down.

1. Remove the transmission valve cover.
2. Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Go to 3.

3. CHECK ATF TEMPERATURE SENSOR.

Measure the resistance between TCM connectors.

Connector & terminal

(T10) No. 1 — No. 6:

Note:

Perform the measurements using multiple oil temperatures.

Is resistance as follows?

Fluid temperature 0°C → Approx. 6.0 kΩ

Fluid temperature 20°C → Approx. 2.5 kΩ

Fluid temperature 80°C → Approx. 330 Ω

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of oil temperature sensor.
- Judge as NG if the voltage detected by the oil temperature sensor is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	Less than 0.117 V (Exceeds 146 degC)

Time needed for diagnosis: 1 second

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

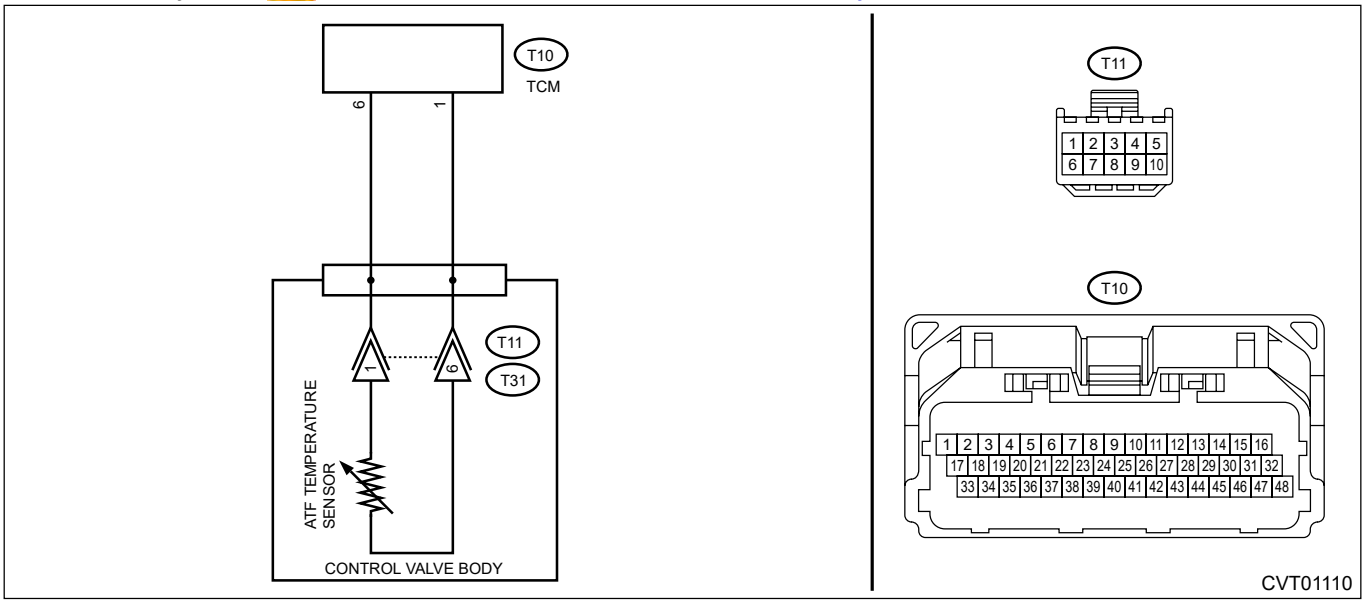
DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Excessive shift shock
- Shift characteristics malfunction



Caution:

Use CHECK BOARD when measuring the TCM terminal voltage and resistance.

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. **Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between TCM connectors.
   Connector & terminal
   (T10) No. 6 (+) — (T10) No. 1 (−):

Is the voltage 5 V or more?

Yes	Repair the short circuit of harness.
No	Go to 2.

2. CHECK ATF TEMPERATURE SENSOR.

1. Turn the ignition switch to OFF.
2. Measure the resistance between TCM connector terminals.
   Connector & terminal
   (T10) No. 1 — No. 6:

Is the resistance 1 MΩ or more?

Yes	Repair the open circuit of transmission harness.
No	Go to 3.

3. CHECK ATF TEMPERATURE SENSOR.

1. Connect the connector to TCM.
2. Start the engine.
3. Warm up until the ATF temperature exceeds 50°C (122°F).
4. Turn the ignition switch to OFF.
5. Disconnect the TCM connector.
6. Measure the resistance between TCM connector terminals.

Connector & terminal

(T10) No. 1 — No. 6:

Is the resistance 650 — 990 Ω?

Yes	Go to 4.
No	Go to 6.

4. CHECK ATF TEMPERATURE SENSOR.

Measure the resistance between TCM connector terminals.

Connector & terminal

(T10) No. 1 — No. 6:

Does the resistance value increase gradually while the ATF temperature decreases?

Yes	Go to 5.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

5. CHECK INPUT SIGNAL FOR TCM.

1. Connect the connector to TCM.
2. Turn the ignition switch to ON. (Do not start engine.)
3. Read the data of [ATF Temp.] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Does the ATF temperature gradually decrease?

Yes	Check for poor contact of the ATF temperature sensor and TCM connector harness, and repair the defective part.
No	Go to 6.

6. CHECK FOR POOR CONTACT.

Is there poor contact of ATF temperature sensor circuit?

Yes	Repair the poor contact.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the oil temperature sensor 5 V system.
- Judge as NG if the voltage detected by the oil temperature sensor is higher than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Vehicle speed (calculated from secondary pulley speed)	6.3 MPH or more
Above condition satisfied for	50 s or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	More than 4.507 V (Less than − 52 degC)

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0716 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- No lock-up occurs.
- Shock occurs when selecting shift position.
- Shift control malfunction

Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Besides DTC P0716, is DTC U0122 or U0416 displayed?

Yes	Perform the diagnosis according to DTCs other than P0716. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Perform the diagnosis according to DTC P0717. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0717 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of turbine speed sensor signal characteristics.
- Judge as NG if the turbine speed against the engine speed is outside the possible range considering the hardware capabilities.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	400 rpm or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	**Threshold Value**
Measured turbine shaft speed	Less than rpm values in Table 1

Table 1

Engine speed (rpm)	3700	3227	2755	2282	1856	1519	1213	956
Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	786	713	651	601	569	544	520
Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

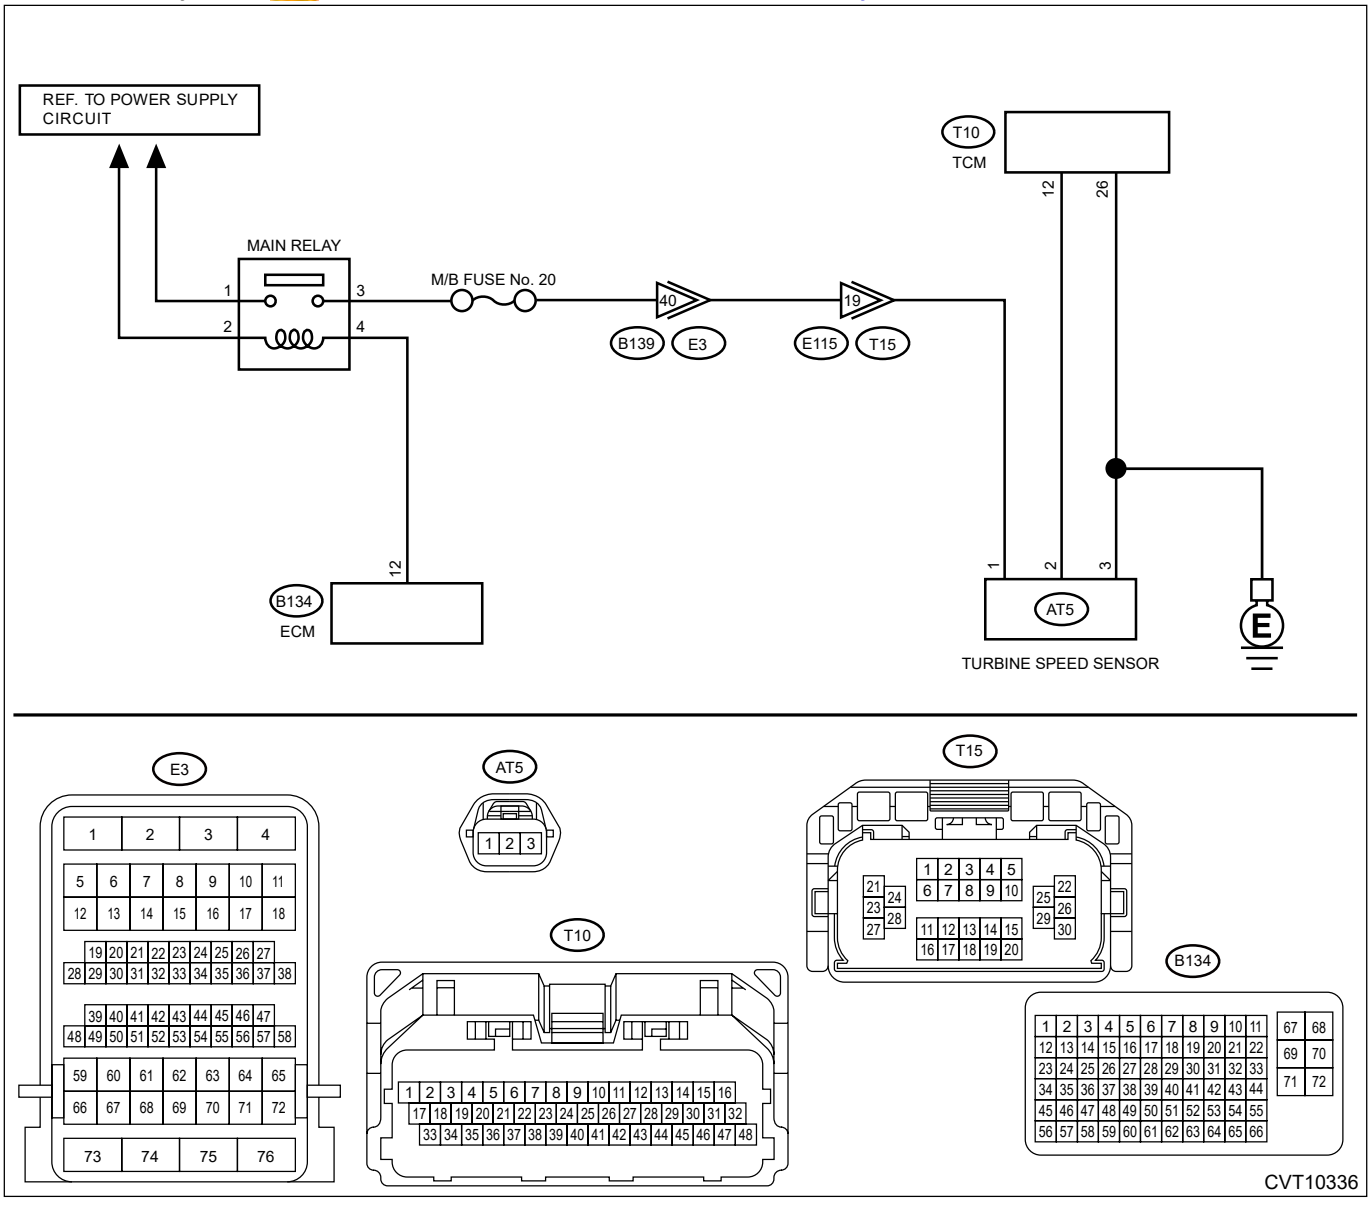
Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0717 INPUT/TURBINE SHAFT SPEED SENSOR "A" CIRCUIT NO SIGNAL

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

Caution:

- **Use the check board when measuring the TCM/ECM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the M/B fuse No. 20.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.

2. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 3.
No	Connect the ECM connector correctly.

3. CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Measure the voltage between transmission connector and chassis ground.
   Connector & terminal
   (T15) No. 19 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Short circuit to power supply of harness between transmission connector and main relay connector** • **Defective main relay**
No	Go to 4.

4. CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Remove the main relay.
3. Disconnect the ECM connector.
4. Measure the resistance between the ECM connector and engine ground.

Connector & terminal

(B134) No. 12 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and main relay connector.

5. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the turbine speed sensor connector.
4. Measure the resistance between TCM connector and turbine speed sensor connector.

Connector & terminal

(T10) No. 12 — (AT5) No. 2:

(T10) No. 26 — (AT5) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit of harness.

6. CHECK HARNESS.

Measure the resistance between TCM connector and chassis ground.

Connector & terminal

(T10) No. 12 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Repair the short circuit of harness.

7. CHECK TRANSMISSION HARNESS.

1. Install the fuse.
2. Connect the TCM connector.
3. Disconnect the transmission connector. (E115, T15)
4. Turn the ignition switch to ON.
5. Measure the voltage between transmission connector and chassis ground.

   Connector & terminal

   (E115) No. 19 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 8.
No	Repair the open circuit of harness or poor contact of connector.

8. CHECK INPUT SIGNAL FOR TCM.

1. Turn the ignition switch to OFF.
2. Connect all connectors.
3. Lift up the vehicle.
4. Start the engine.
5. Read the data of [Turbine Revolution Speed] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Does the value of [Turbine Revolution Speed] change according to the engine speed?

Yes	Current condition is normal. Repair the poor contacts of harnesses of turbine speed sensor and transmission connector.
No	Go to 9.

9. CHECK TRANSMISSION HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the transmission connector.
3. Disconnect the turbine speed sensor connector.
4. Measure the resistance between transmission connector and turbine speed sensor connector.
   Connector & terminal
   (T15) No. 19 — (AT5) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Replace the transmission harness.

10. CHECK TURBINE SPEED SENSOR.

1. Turn the ignition switch to OFF.
2. Replace the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P0717 displayed?

Yes	Go to 11.
No	The original turbine speed sensor is defective.

11. CHECK MAIN RELAY.

1. Turn the ignition switch to OFF.
2. Replace the main relay.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P0717 displayed?

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	The original main relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the turbine speed sensor.
- Judge as NG if there is no input signal from the turbine speed sensor, while the primary speed sensor on the same shaft has the input signal with the forward/reverse clutch engaged.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	400 rpm or more
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	500 rpm or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured turbine shaft speed	0 rpm

Time needed for diagnosis: 0.6 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

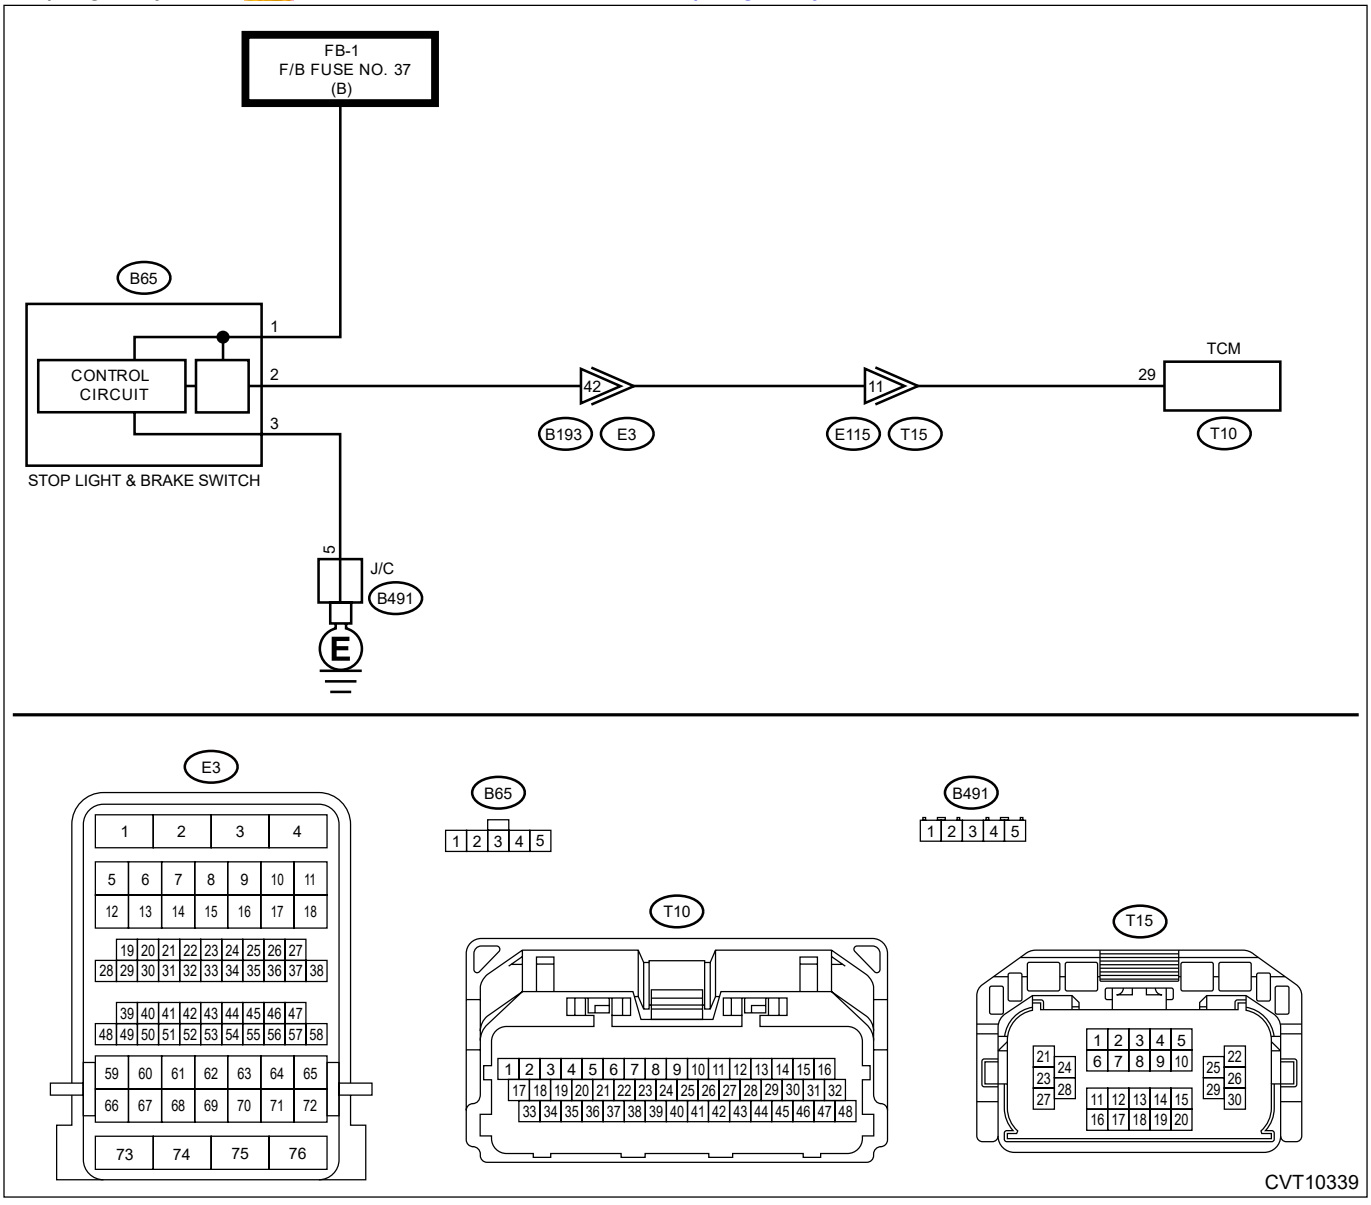
DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not shifted down when climbing a hill or driving down a hill.



Caution:

Use CHECK BOARD when measuring the TCM terminal voltage and resistance.

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. **Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

Stop light system Ref. to WIRING SYSTEM>Stop Light System.

1. CHECK FUSE (NO. 37).

1. Turn the ignition switch to OFF.
2. Remove the fuse (No. 37).
3. Check the fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse (No. 37). If the new fuse (No. 37) has blown out easily, repair the short circuit of harness between the fuse (No. 37) and stop light switch.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the stop light switch connector.
4. Measure the resistance between TCM connector and stop light switch connector.
   Connector & terminal
   (T10) No. 29 — (B65) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness.

3. CHECK HARNESS.

Measure the resistance between the stop light switch connector and fuse (No. 37).
Connector & terminal
(B65) No. 1 — fuse (No. 37):

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness.

4. CHECK INPUT SIGNAL FOR TCM.

1. Install the fuse (No. 37).
2. Connect the stop light switch connector.
3. Depress the brake pedal.
4. Measure the voltage between TCM connector and chassis ground.
   Connector & terminal
   (T10) No. 29 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 5.
No	Replace the stop light switch. Ref. to BRAKE>Stop Light Switch.

5. CHECK INPUT SIGNAL FOR TCM.

1. Connect the TCM connector.
2. With brake pedal depressed, read the data of [Stop Light Switch] using Subaru Select Monitor.
   Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is “ON” displayed?

Yes	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.
No	Go to 6.

6. CHECK FOR POOR CONTACT.

Is there poor contact in the stop light switch input signal circuit?

Yes	Repair the poor contact.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect no input from the brake signal.
- Judge as NG if a predetermined number of deceleration occurs while the cruise control is set to OFF and the brake is OFF.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 30 km/h to 1 km/h while the brake SW is OFF	Exceeds 10 counts.

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

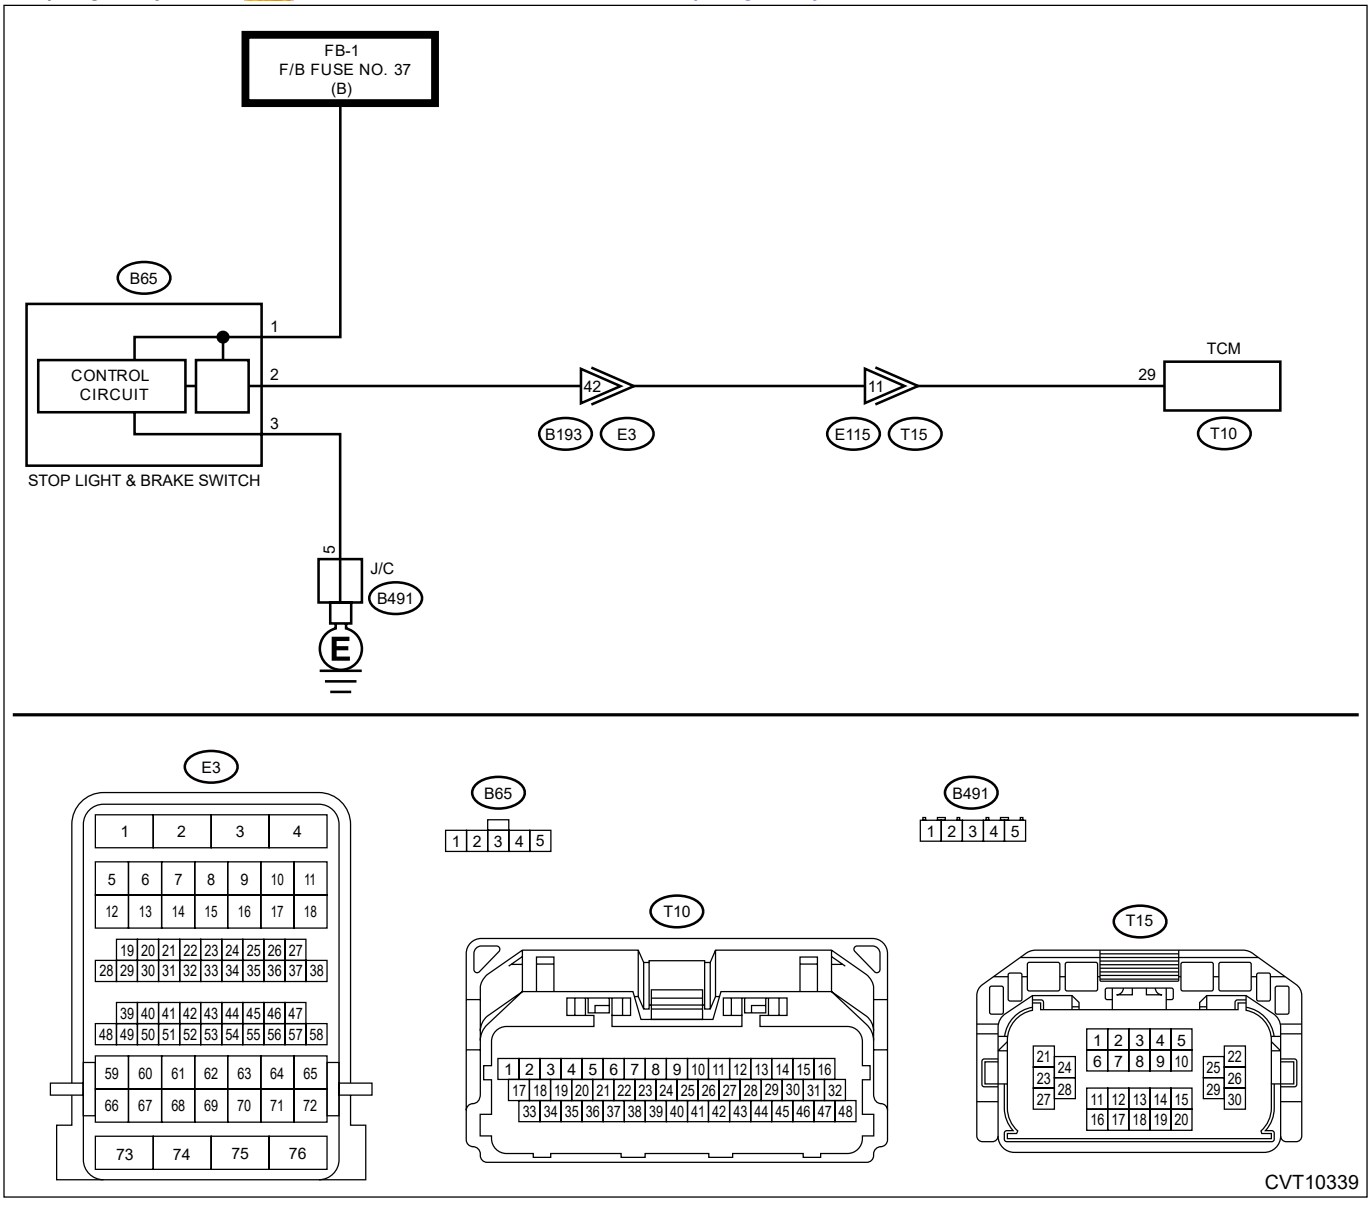
DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Gear is not shifted down when climbing a hill or driving down a hill.



Caution:

Use CHECK BOARD when measuring the TCM terminal voltage and resistance.

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. **Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

Stop light system Ref. to WIRING SYSTEM>Stop Light System.

1. CHECK STOP LIGHT SWITCH.

1. Turn the ignition switch to OFF.
2. Disconnect the stop light switch connector.
3. Measure the resistance between stop light switch.

Connector & terminal

(B65) No. 1 — No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 2.
No	Replace the stop light switch. Ref. to BRAKE>Stop Light Switch.

2. CHECK HARNESS.

1. Disconnect the TCM connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between TCM connector and chassis ground.

Connector & terminal

(T10) No. 29 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the short circuit of harness.
No	Go to 3.

3. CHECK INPUT SIGNAL FOR TCM.

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Read the data of [Stop Light Switch] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is “OFF” displayed?

Yes	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.
No	Go to 4.

4. CHECK FOR POOR CONTACT.

Is there poor contact in the stop light switch input signal circuit?

Yes	Repair the poor contact.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect the brake signal stuck to ON.
- Judge as NG if a predetermined number of acceleration occurs while the cruise control is set to OFF and the brake is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 1 km/h to 30	Exceeds 10 counts.

Malfunction Criteria	Threshold Value
km/h while the brake SW is ON	

Time needed for diagnosis Immediately
Malfunction indicator light illumination: Does not illuminate.

DTC P0730 INCORRECT GEAR RATIO

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK TRANSMISSION FLUID.

Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 2.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

2. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 3.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

3. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 4.
No	Perform the diagnosis according to DTC P0841. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE.

4. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Release the brake pedal to stabilize the engine speed and front wheel speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 1.5 — 2.6?

Yes	Go to 5.
No	Go to 6.

5. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 0.5 — 0.9?

Yes	Go to 6.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

6. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0730 displayed?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the abnormality in transmission gear ratio control function.
- Judge as NG if a discrepancy between the transmission target gear ratio (as internal data) and the actual gear ratio becomes the specified value or more. (Compare the value of “Gear Ratio Target × Secondary pulley speed ≈ Target primary speed equivalent value” with the value of primary pulley speed sensor.)

2. EXECUTION CONDITION

Secondary parameters	Execution condition

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	400 rpm or more
Transmission range	Drive

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS* (Target primary pulley shaft speed – Measured primary pulley shaft speed)	600 rpm or more
(Commanded duty of shift up pressure control solenoid valve	90% or more
or	
Commanded duty of shift down pressure control solenoid valve)	90% or more

* ABS: Absolute value

Time needed for diagnosis: 5 seconds

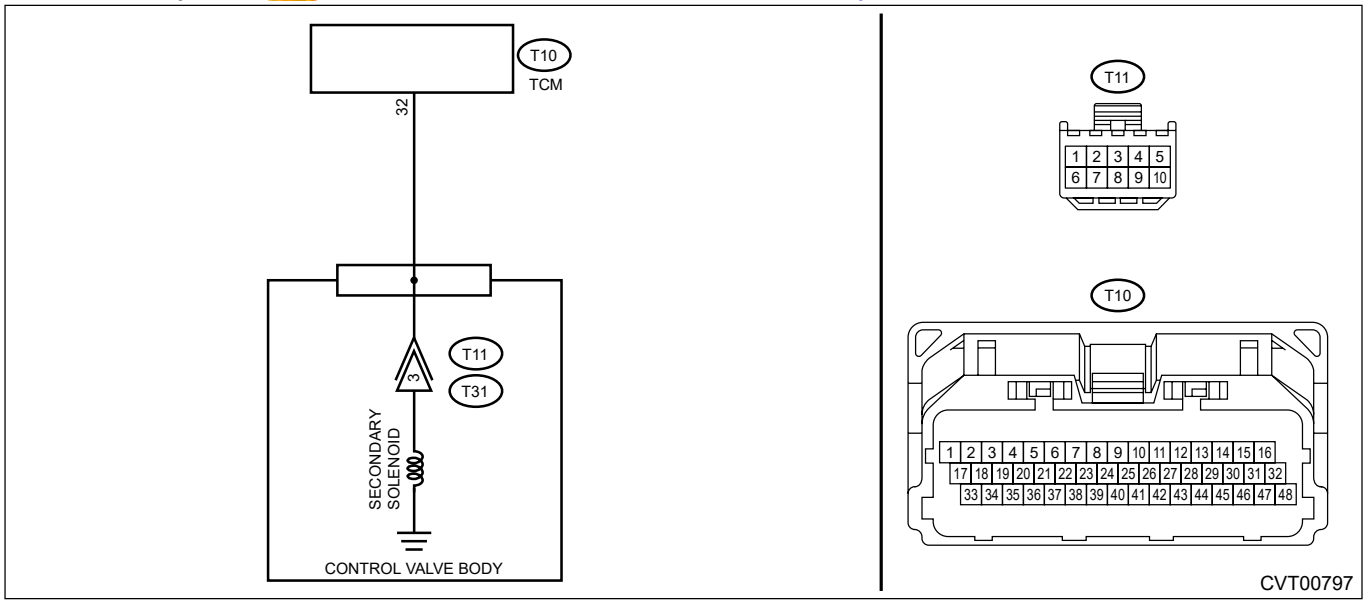
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



- Shift control malfunction
- CVT chain slippage

Caution:

- **Use the check board when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?

Yes	Perform the diagnosis according to DTCs other than P0746. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK SECONDARY SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?

Yes	Go to 5.
No	Go to 3.

3. CHECK SECONDARY SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 32 — Transmission body:

Is the resistance approximately 5 — 7 Ω? (when cold)

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS.

Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)

Is the check result OK?

Yes	Go to 7.
No	Repair the harness.

5. CHECK TRANSMISSION FLUID.

1. Connect the TCM connector.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

6. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 7.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

7. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Data Monitor

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 8.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

8. CHECK INPUT SIGNAL FOR TCM.

1. Keep the engine speed at 3,000 rpm.
2. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Data Monitor

Is [Actual Secondary Pressure] higher than that of step 7? Does the value change according to the engine speed? And is the value 1.5 — 2.5 MPa?

Yes	Go to 9.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

9. CHECK TCM INPUT SIGNAL (STALL TEST).

1. Apply the parking brake.
2. Set the select lever to “D” range.
3. Depress the brake pedal firmly.
4. Slowly open the accelerator fully, and stabilize the engine speed.
5. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Caution:
Do not perform a stall test for over 5 seconds at a time.

Is [Actual Secondary Pressure] higher than that of step 8? Does the value change according to the engine speed? And is the value 4.5 — 6.0 MPa?

Yes	Go to 10.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

10. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0746 displayed?

Yes	Perform the secondary pressure test. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure (Line Pressure) Test.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to low pressure side).
- Judge as NG if the target line pressure − actual line pressure becomes the predetermined value or more, while the actual line pressure is equal to or more than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Measured line pressure control solenoid valve current	0.78 A or less

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured line pressure	Less than Map1 kPa

Map 1

Time needed for diagnosis: 5 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving

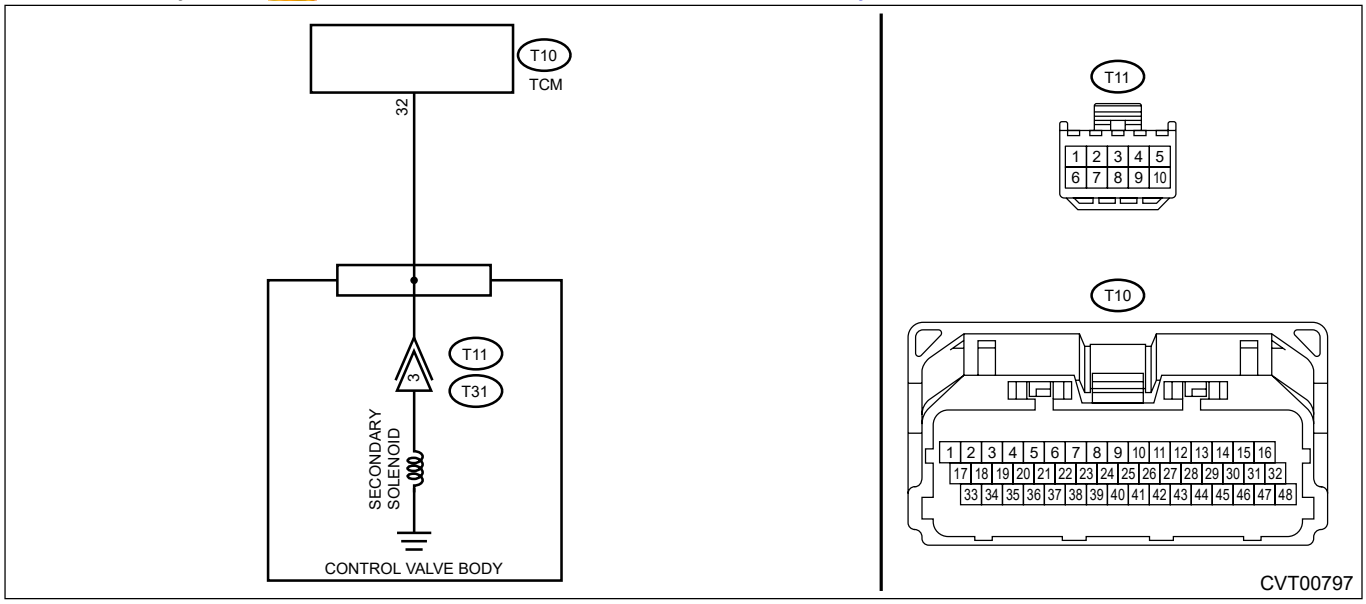
cycles.

DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



- Acceleration is poor during standing start.
- Shift control malfunction

Caution:

- **Use the check board when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?

Yes	Perform the diagnosis according to DTCs other than P0747. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK SECONDARY SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?

Yes	Go to 5.
No	Go to 3.

3. CHECK SECONDARY SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 32 — Transmission body:

Is the resistance approximately 5 — 7 Ω? (when cold)

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS.

Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)

Is the check result OK?

Yes	Go to 7.
No	Repair the harness.

5. CHECK TRANSMISSION FLUID.

1. Connect the TCM connector.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

6. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 7.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

7. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Data Monitor

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 8.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

8. CHECK INPUT SIGNAL FOR TCM.

1. Keep the engine speed at 3,000 rpm.
2. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Data Monitor

Is [Actual Secondary Pressure] higher than that of step 7? Does the value change according to the engine speed? And is the value 1.5 — 2.5 MPa?

Yes	Go to 9.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

9. CHECK TCM INPUT SIGNAL (STALL TEST).

1. Apply the parking brake.
2. Set the select lever to “D” range.
3. Depress the brake pedal firmly.
4. Slowly open the accelerator fully, and stabilize the engine speed.
5. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Caution:
Do not perform a stall test for over 5 seconds at a time.

Is [Actual Secondary Pressure] higher than that of step 8? Does the value change according to the engine speed? And is the value 4.5 — 6.0 MPa?

Yes	Go to 10.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

10. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0747 displayed?

Yes	Perform the secondary pressure test. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure (Line Pressure) Test.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to high pressure side).
- Judge as NG if “Target line pressure − Actual line pressure” becomes the predetermined value or less, while the actual line pressure is equal to or more than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Measured line pressure control solenoid valve current	0.5 A or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured line pressure	Exceeds Map1 kPa.

Map 1

		Engine speed (rpm)

Time needed for diagnosis: 5 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving

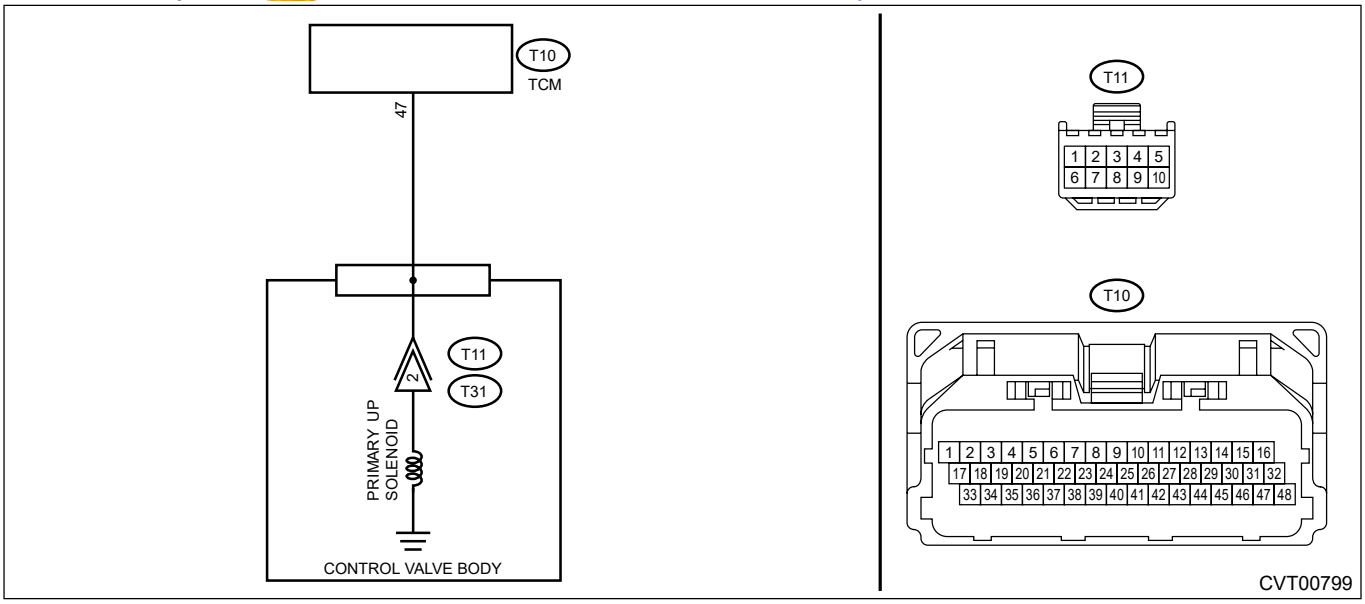
cycles.

DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



- Shift control malfunction
- Engine speed increases abruptly.

Caution:

- **Use the check board when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?

Yes	Perform the diagnosis according to DTCs other than P0751. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK PRIMARY UP SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?

Yes	Go to 5.
No	Go to 3.

3. CHECK PRIMARY UP SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 47 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS.

Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)

Is the check result OK?

Yes	Go to 7.
No	Repair the harness.

5. CHECK TRANSMISSION FLUID.

1. Connect the TCM connector.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

6. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 7.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

7. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

   Data Monitor

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 8.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

8. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Release the brake pedal to stabilize the engine speed and front wheel speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 1.5 — 2.6?

Yes	Go to 9.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

9. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 0.5 — 0.9?

Yes	Go to 10.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

10. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Perform a drive check based on the “Inspection Mode”. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0751 displayed?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to low pressure side).
- Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	Exceeds 1 1.5 and Less than 2.684

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed*

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	Exceeds −0.08
Commanded duty of shift up pressure control solenoid	90% or more

Time needed for diagnosis: 1 second

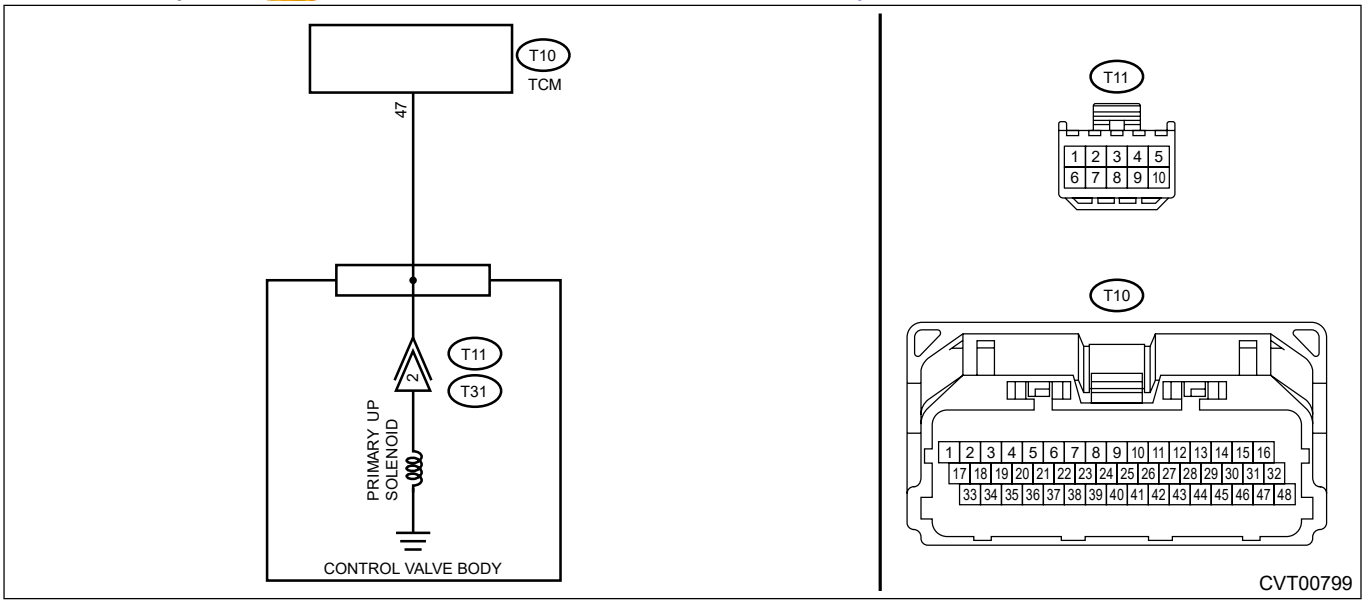
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0752 SHIFT SOLENOID "A" STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



- Acceleration is poor during standing start.
- Shift control malfunction

Caution:

- **Use the check board when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?

Yes	Perform the diagnosis according to DTCs other than P0752. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK PRIMARY UP SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?

Yes	Go to 5.
No	Go to 3.

3. CHECK PRIMARY UP SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 47 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS.

Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)

Is the check result OK?

Yes	Go to 7.
No	Repair the harness.

5. CHECK TRANSMISSION FLUID.

1. Connect the TCM connector.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

6. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 7.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

7. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   Data Monitor

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 8.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

8. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Release the brake pedal to stabilize the engine speed and front wheel speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Data Monitor

Is [Actual Gear Ratio] 1.5 — 2.6?

Yes	Go to 9.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

9. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Data Monitor

Is the [Actual Gear Ratio] 0.5 — 0.9?

Yes	Go to 10.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

10. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0752 displayed?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to high pressure side).
- Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio*	Less than 0.5

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	Exceeds −0.08 and Less than 0.08
Commanded duty of shift down pressure control solenoid	Exceeds 80%.

Time needed for diagnosis: 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving

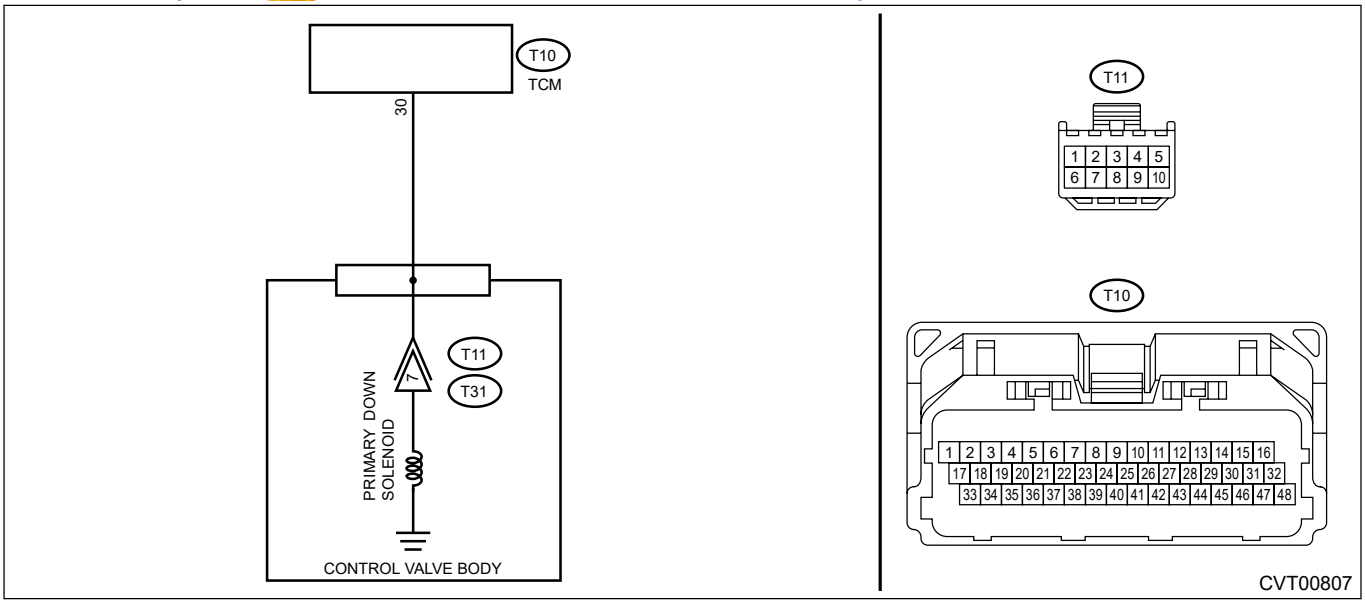
cycles.

DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



- Acceleration is poor during standing start.
- Shift control malfunction

Caution:

- **Use the check board when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Besides DTC P0756, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?

Yes	Perform the diagnosis according to DTCs other than P0756. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?

Yes	Go to 5.
No	Go to 3.

3. CHECK PRIMARY DOWN SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 30 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS.

Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)

Is the check result OK?

Yes	Go to 7.
No	Repair the harness.

5. CHECK TRANSMISSION FLUID.

1. Connect the TCM connector.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

6. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 7.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

7. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

   Data Monitor

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 8.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

8. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Release the brake pedal to stabilize the engine speed and front wheel speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 1.5 — 2.6?

Yes	Go to 9.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

9. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 0.5 — 0.9?

Yes	Go to 10.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

10. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0756 displayed?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift-down fluid pressure control solenoid and hydraulic circuit characteristics (stuck to low pressure side).
- Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio*	0.382 or more and 2.683 or less

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	Exceeds −0.08 and Less than 0.08
Commanded duty of shift down pressure control solenoid	Exceeds 80%.

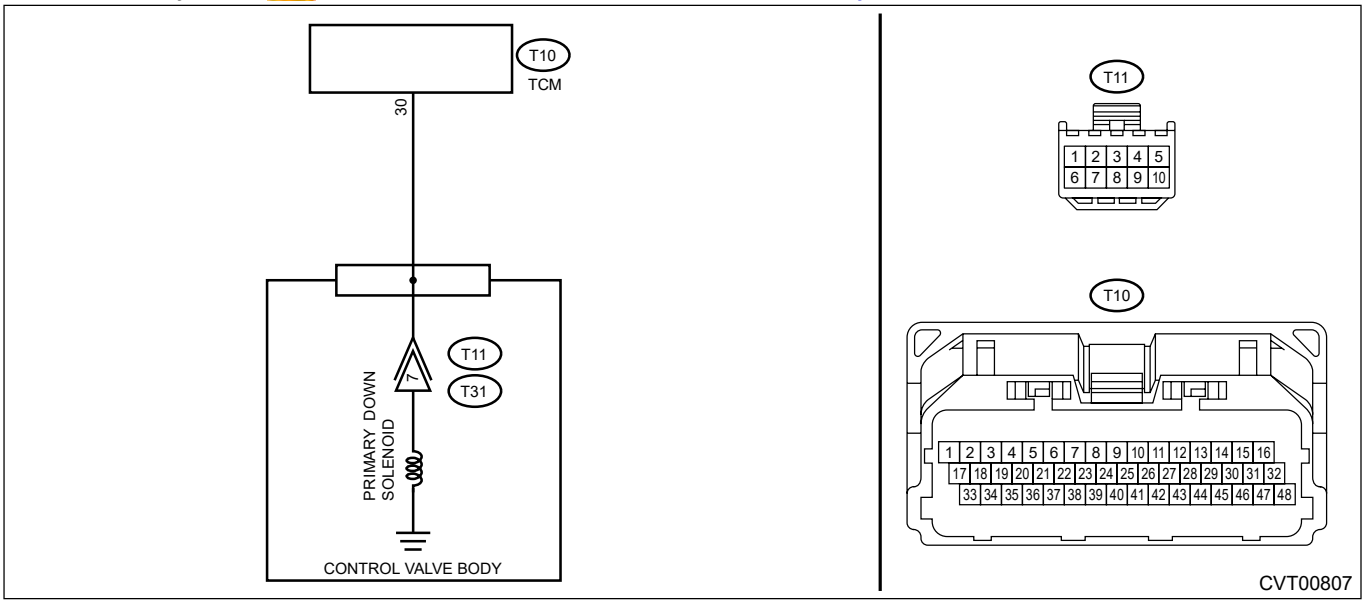
Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P0757 SHIFT SOLENOID "B" STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



- Vibration occurs at shift change.
- Shift control malfunction

Caution:

- **Use the check board when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?

Yes	Perform the diagnosis according to DTCs other than P0757. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?

Yes	Go to 5.
No	Go to 3.

3. CHECK PRIMARY DOWN SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 30 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS.

Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)

Is the check result OK?

Yes	Go to 7.
No	Repair the harness.

5. CHECK TRANSMISSION FLUID.

1. Connect the TCM connector.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

6. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 7.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

7. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

   Data Monitor

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 8.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

8. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Release the brake pedal to stabilize the engine speed and front wheel speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 1.5 — 2.6?

Yes	Go to 9.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

9. CHECK INPUT SIGNAL FOR TCM.

1. Set the select lever to “D” range.
2. Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed.
3. Read the data of [Actual Gear Ratio] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Gear Ratio] 0.5 — 0.9?

Yes	Go to 10.
No	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

10. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0757 displayed?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift-down fluid pressure control solenoid and hydraulic circuit characteristics (stuck to high pressure side).
- Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	0.382 or more and 2.683 or less

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio change for 1 second	Exceeds 0.04
Commanded duty of shift up pressure control solenoid	Exceeds 50%.

Time needed for diagnosis: 1 s × 10 times

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving

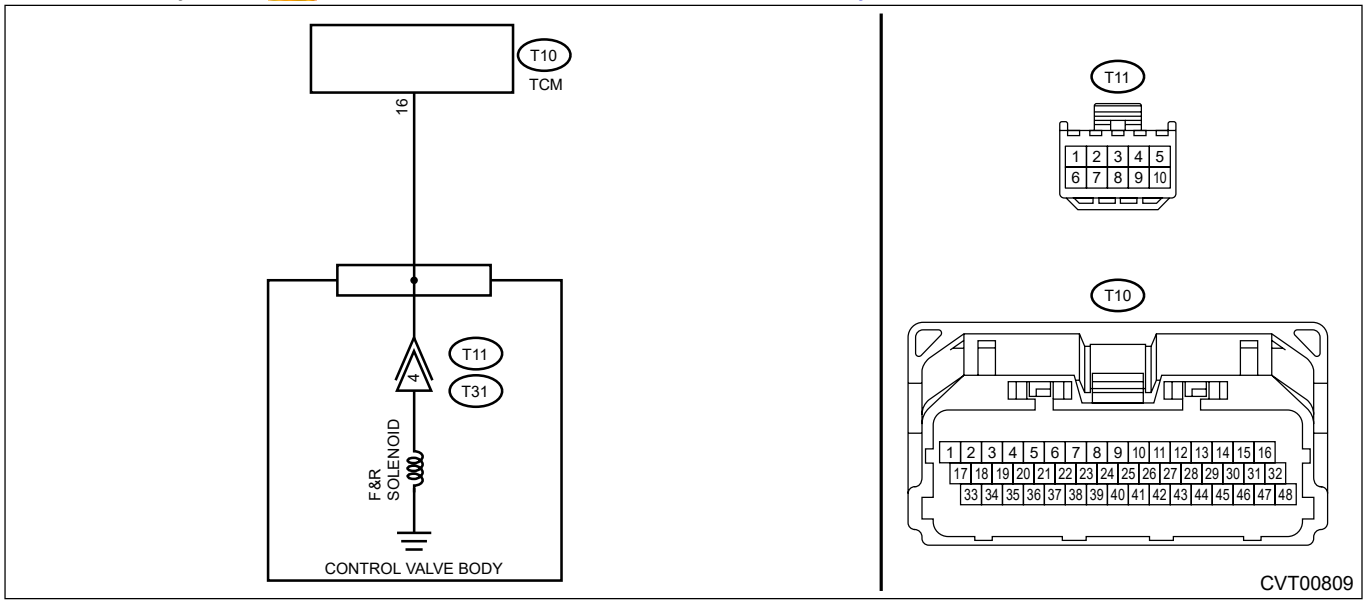
cycles.

DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

Caution:

- **Use the check board when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Besides DTC P0776, is any of the DTC P0717, P0966, P0967 or P2747 displayed?

Yes	Perform the diagnosis according to DTCs other than P0776. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK F&R SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?

Yes	Go to 5.
No	Go to 3.

3. CHECK F&R SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 16 — Transmission body:

Is the resistance approximately 4 — 6 Ω? (when cold)

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS.

Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)

Is the check result OK?

Yes	Go to 7.
No	Repair the harness.

5. CHECK TRANSMISSION FLUID.

1. Connect the TCM connector.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

6. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 7.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

7. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 8.
No	Perform the diagnosis according to DTC P0841. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE.

8. STALL TEST.

Perform the stall test. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Stall Test.

Is the result of the stall test OK?

Yes	Go to 9.
No	Replace the transmission assembly if the stall speed is higher than the standard value of the stall test. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.

9. DRIVING CHECK BY INSPECTION MODE.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to TRANSMISSION (DIAGNOSTICS)>Inspection Mode.

Does the AT OIL TEMP light blink and is DTC P0776 displayed?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
- Judge as NG if the value calculated by “turbine speed – primary pulley speed” becomes the predetermined value or more, even though the forward/reverse clutch is engaged.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	10 V or more
Transmission range	Drive
Measured turbine shaft speed	100 rpm or more
Measured primary pulley shaft speed	100 rpm or more
Commanded forward & reverse clutch pressure control solenoid current	Less than 0.9 A
Engine speed	400 rpm or more
Diagnosis 2	
12 V battery system voltage	10 V or more
Transmission range	Drive
Measured primary pulley shaft speed	Less than 100 rpm
Commanded forward & reverse clutch pressure control solenoid current	Less than 0.9 A
Accelerator pedal position (from ECM)	Exceeds 6%.
Engine speed	400 rpm or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as

NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS* (Measured turbine shaft speed – Measured primary pulley shaft speed)	Exceeds rpm values in Table 1
Diagnosis 2 Measured turbine shaft speed	Exceeds 2000 rpm

*ABS: Absolute value

Table 1

Vehicle speed (MPH)	0	13	25	38	50	63	75
ABS (Measured turbine shaft speed – Measured primary pulley shaft speed) (rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
ABS (Measured turbine shaft speed – Measured primary pulley shaft speed) (rpm)	100	100	100	100	100	100	100

Time needed for diagnosis: 5 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT/OPEN

DTC detecting condition:

Immediately at fault recognition

Note:

For diagnostic procedures, refer to “BODY CONTROL SYSTEM (DIAGNOSTICS)”. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1016 SHIFT LOCK CIRCUIT.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift lock solenoid or circuit.
- Judge as NG if abnormal signal from the integrated unit is received, when bus off is not detected and there is no trouble in CAN between the integrated unit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Shift lock solenoid system circuit abnormal (received from BIU)	ON

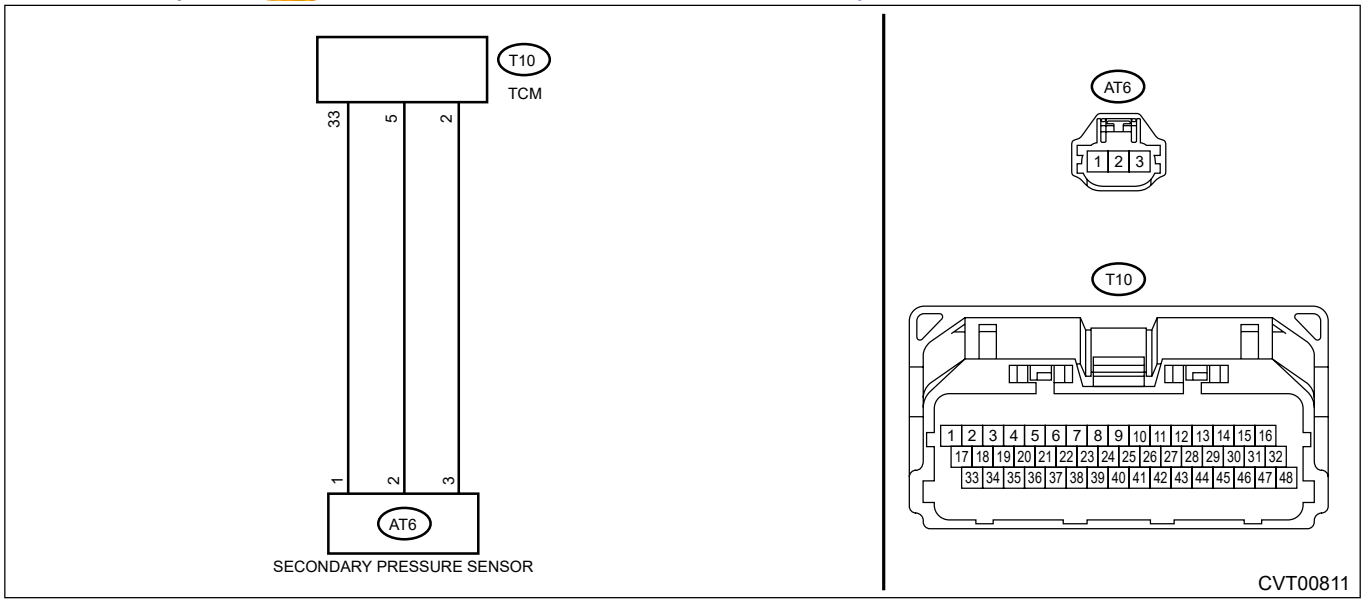
Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Does not illuminate.

DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

Caution:

- **Before performing diagnosis, record the freeze frame data.**
- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are DTCs other than P0841 displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to 2.
No	Go to 2.

2. CHECK INPUT SIGNAL FOR TCM.

1. Turn the ignition switch to ON.
2. Read the data of [secondary pressure sensor voltage.] using Subaru Select Monitor. (While shaking the secondary pressure sensor harness) Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is the value of [secondary pressure sensor voltage.] 0.39 — 0.61 V?

Yes	Go to 10.
No	Go to 3.

3. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the secondary pressure sensor connector.
4. Measure the resistance between TCM connector and secondary pressure sensor connector.

Connector & terminal

(T10) No. 2 — (AT6) No. 3:
(T10) No. 5 — (AT6) No. 2:
(T10) No. 33 — (AT6) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness.

4. CHECK HARNESS.

Measure the resistance between TCM connectors.

Connector & terminal

(T10) No. 2 — (T10) No. 33:
(T10) No. 5 — (T10) No. 2:
(T10) No. 33 — (T10) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit of harness.

5. CHECK HARNESS.

Measure the resistance between TCM connector and transmission body.

Connector & terminal

(T10) No. 2 — Transmission body:

(T10) No. 5 — Transmission body:

(T10) No. 33 — Transmission body:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair the short circuit of harness.

6. CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.

1. Turn the ignition switch to ON.
2. Measure the voltage between TCM connectors.

Connector & terminal

(T10) No. 33 (+) — (T10) No. 2 (−):

Is the voltage 4.6 — 5.4 V?

Yes	Go to 7.
No	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

7. CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.

1. Turn the ignition switch to OFF.
2. Connect the secondary pressure sensor connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between TCM connectors.
   Connector & terminal
   (T10) No. 33 (+) — (T10) No. 2 (−):

Is the voltage 4.6 — 5.4 V?

Yes	Go to 8.
No	Replace the secondary pressure sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure Sensor.

8. CHECK SECONDARY PRESSURE SENSOR OUTPUT.

Measure the voltage between TCM connectors.
Connector & terminal
(T10) No. 5 (+) — (T10) No. 2 (−):

Is the voltage 0.39 — 0.61 V?

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 9.

9. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the secondary pressure sensor connector.
4. Check the TCM connector (T10) and the secondary pressure sensor connector (AT6).

Is there any fault in the TCM connector or the secondary pressure connector?

Yes	Repair the connector, or replace harness.
No	Go to 10.

10. CHECK TRANSMISSION FLUID.

1. Connect all connectors.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 11.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT. Go to 11.

11. CHECK INPUT SIGNAL FOR TCM.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal and move the select lever to each range at an interval of five seconds.

   Note:

   Move the select lever in the following order: "P" → "R" → "N" → "D" → "N" → "R" → "P".
5. Stabilize the engine speed at idle.
6. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Go to 12.
No	Replace the secondary pressure sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure Sensor.

12. CHECK INPUT SIGNAL FOR TCM.

1. Shift the select lever to “P” range.
2. Keep the engine speed at 3,000 rpm.
3. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 1.5 — 2.5 MPa? And is the difference between the actual oil pressure and the value measured in Step 11 0.2 MPa or more?

Yes	Go to 13.
No	Replace the secondary pressure sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure Sensor.

13. CHECK FREEZE FRAME DATA.

1. Turn the ignition switch to OFF.
2. Check the recorded freeze frame data.

Was the detected symptom low-voltage malfunction? Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE > CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA.

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Go to 14.

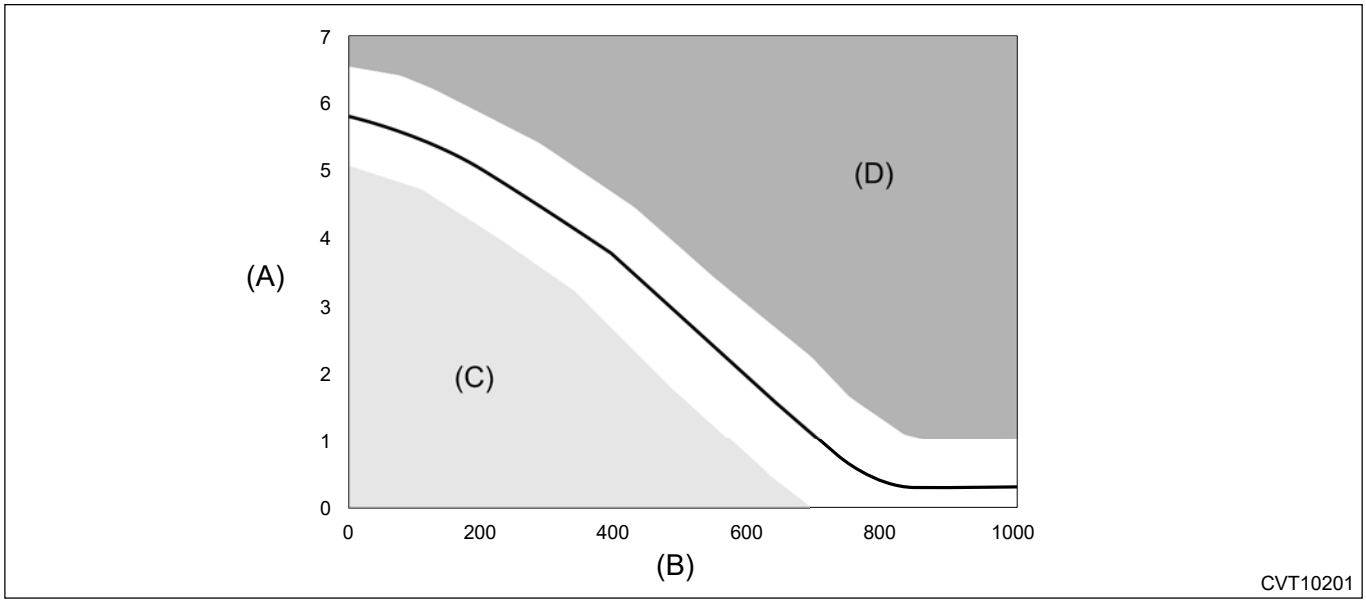
14. CHECK TCM INPUT SIGNAL (STALL TEST).

1. Lift up the vehicle.
2. Start the engine.
3. Apply the parking brake.
4. Set the select lever to “D” range.
5. Depress the brake pedal firmly.
6. Slowly open the accelerator fully, and stabilize the engine speed.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 4.5 — 6.0 MPa?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Go to 15.

15. CHECK INPUT SIGNAL FOR TCM.



Check the [Actual Secondary Pressure] in step 14.

Is the value of [Actual Secondary Pressure] 4.5 MPa or less?

Yes	Replace the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of [Actual Secondary Pressure] and [Secondary Actual Current] recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.

(A) Actual secondary pressure (MPa)

(B) Secondary actual current (mA)

(C) Low-voltage malfunction

(D) High-voltage malfunction

Note:

Symptom that the DTC P0841 illuminates can be classified into 2 patterns.

- **Low-voltage malfunction: detected due to insufficient oil pressure**
- **High-voltage malfunction: detected due to excessive oil pressure**

2. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure control function.
- Judge as NG if a discrepancy between the target secondary oil pressure (as internal data) and the detected value of the secondary oil pressure sensor becomes the specified value or more.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	At or more than rpm values in Table 1

Table 1

Target line pressure (kPa)	0	500	1000	1500	2000	3000	4000	5000	6000
Engine speed (rpm)	140	720	979	1125	1235	1450	1670	1929	2100

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS* (Target line pressure − Measured line pressure)	500 kPa or more

*ABS * Absolute value

Time needed for diagnosis: 5 seconds

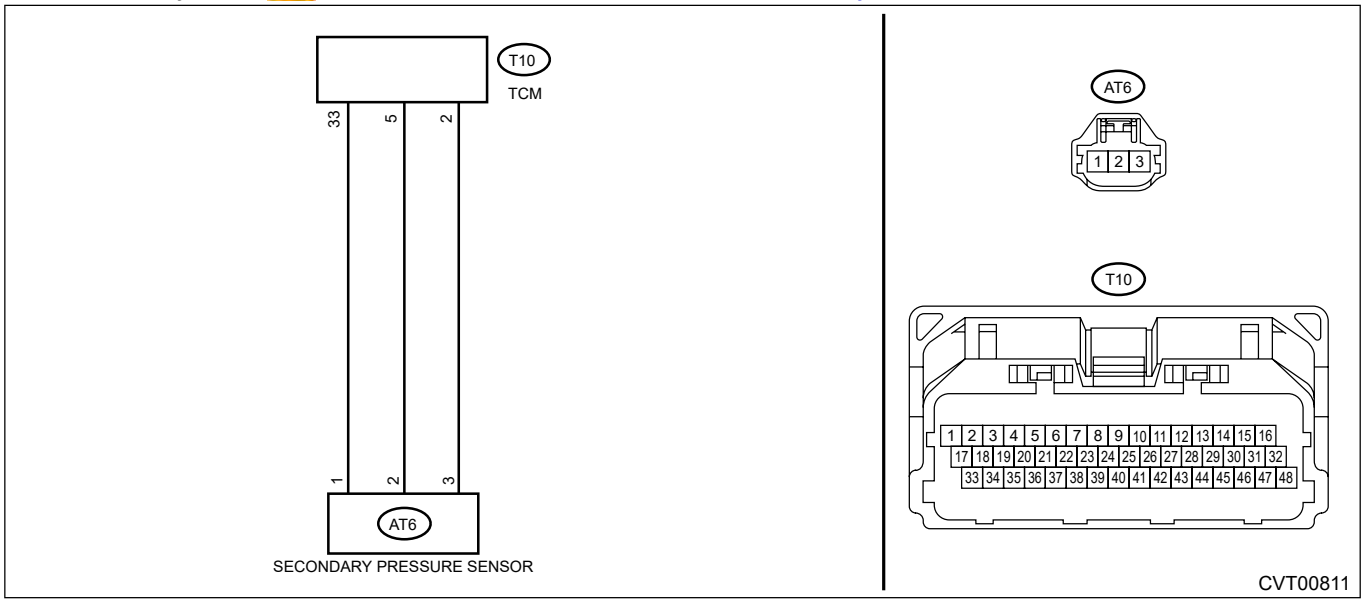
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0842 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Shift characteristics malfunction

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. Start the engine.
2. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
3. Depress the brake pedal, and shift the select lever to “D” range.
4. Shift the select lever to “P” range.
5. Stabilize the engine speed at idle.
6. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Check for poor contact of connector.
No	Go to 2.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the transmission connector.
4. Measure the resistance between TCM connector and transmission connectors.

Connector & terminal

(T10) No. 2 — (AT6) No. 3:
(T10) No. 5 — (AT6) No. 2:
(T10) No. 33 — (AT6) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness.

3. CHECK HARNESS.

Measure the resistance between TCM connector and chassis ground.

Connector & terminal

(T10) No. 5 — Chassis ground:

(T10) No. 33 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit of harness.

4. CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.

1. Connect the TCM connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between secondary pressure sensor connector terminals.

   Connector & terminal

   (AT6) No. 1 (+) — (AT6) No. 3 (−):

Is the voltage 4.5 V or more?

Yes	Replace the secondary pressure sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure Sensor. If the replacement of the sensor do not eliminate the malfunction, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of the transmission line pressure sensor.
- Judge as NG if the voltage detected by the transmission line pressure sensor is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	Less than 0.195 V (Less than − 574 kPa)

Time needed for diagnosis: 0.5 s

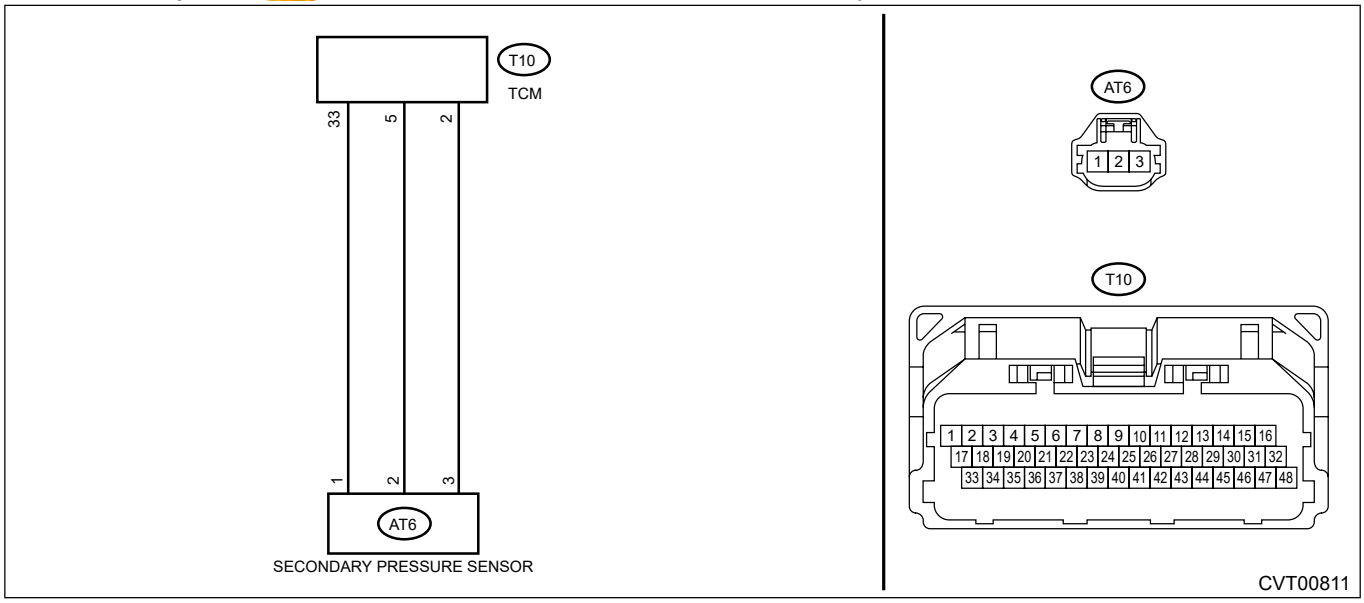
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0843 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Shift characteristics malfunction

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. Start the engine.
2. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
3. Depress the brake pedal, and shift the select lever to “D” range.
4. Shift the select lever to “P” range.
5. Stabilize the engine speed at idle.
6. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Check for poor contact of connector.
No	Go to 2.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the secondary pressure sensor connector.
4. Turn the ignition switch to ON.
5. Measure the voltage between TCM connector and chassis ground.

   Connector & terminal

   (T10) No. 5 (+) — Chassis ground (−):

   (T10) No. 33 (+) — Chassis ground (−):

Is the voltage approx. 0 V?

Yes	Go to 3.
No	Repair the short circuit of harness.

3. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Measure the resistance between TCM connector terminals.
   Connector & terminal
   (T10) No. 5 — (T10) No. 33:

Is the resistance less than 1 Ω?

Yes	Repair the short circuit of harness.
No	Go to 4.

4. CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.

1. Connect the TCM connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between secondary pressure sensor connector terminals.
   Connector & terminal
   (AT6) No. 1 (+) — (AT6) No. 3 (−):

Is the voltage 4.5 V or more?

Yes	Replace the secondary pressure sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure Sensor. If the replacement of the sensor do not eliminate the malfunction, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure sensor 5 V system.
- Judge as NG if the voltage detected by the transmission line pressure sensor is higher than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	More than 4.883 V (Exceeds 8200 kPa)

Time needed for diagnosis: 1.5 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

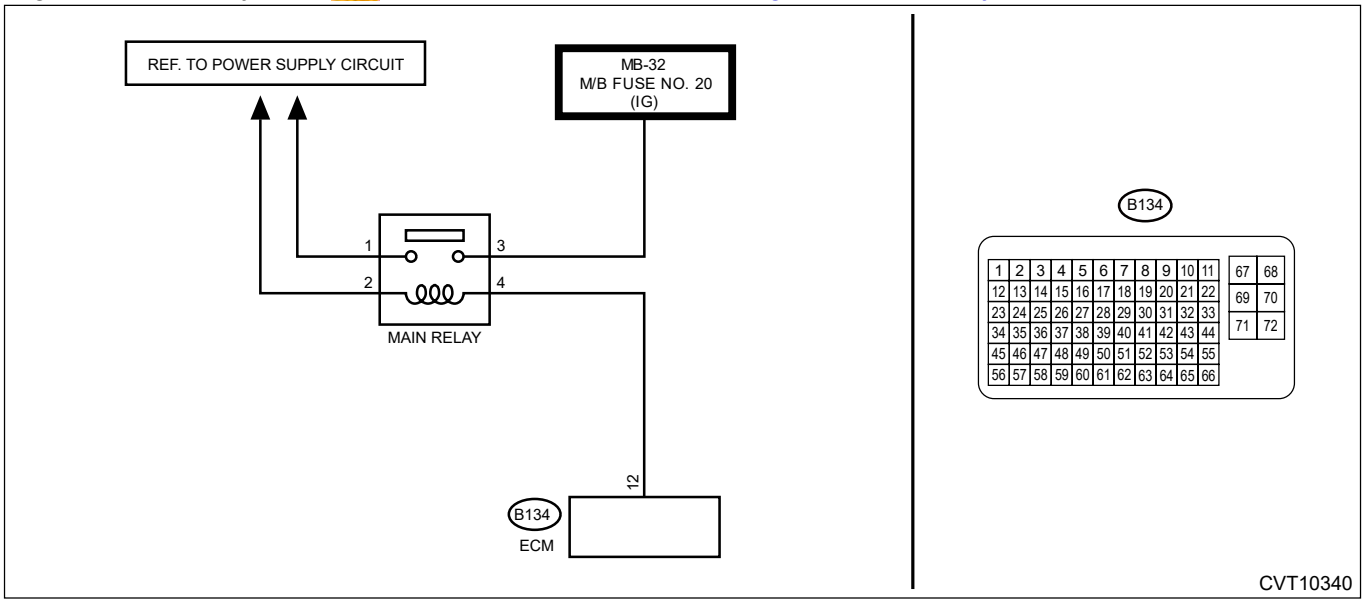
DTC P0890 TCM POWER RELAY SENSE CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:

Improper gear shifting



Caution:

- **Use CHECK BOARD when measuring the ECM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

Power supply circuit Ref. to WIRING SYSTEM>Power Supply Circuit>WIRING DIAGRAM.

Engine electrical system Ref. to WIRING SYSTEM>Engine Electrical System>WIRING DIAGRAM.

1. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 2.
No	Connect the ECM connector correctly.

2. CHECK HARNESS BETWEEN M/B FUSE AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Measure the voltage between M/B fuse and engine ground.
   Connector & terminal
   (M/B fuse) No. 20 (+) — Engine ground (−):

Is the voltage 10 V or more?

Yes	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Short circuit to power supply of harness between M/B fuse and main relay connector** • **Defective main relay**
No	Go to 3.

3. CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Remove the main relay.
3. Disconnect the ECM connector.
4. Measure the resistance between the ECM connector and engine ground.
   Connector & terminal
   (B134) No. 12 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Repair the poor contact of ECM connector.
No	Repair the short circuit to ground in harness between ECM connector and main relay connector.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure solenoid drive power supply relay circuit.
- Judge as NG if the transmission fluid pressure solenoid drive power supply voltage is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Ignition state	Run or Crank

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured TCM input voltage which is supplied from 12 V battery system through the TCM Power Relay	Less than 2 V

Time needed for diagnosis: 0.5 s

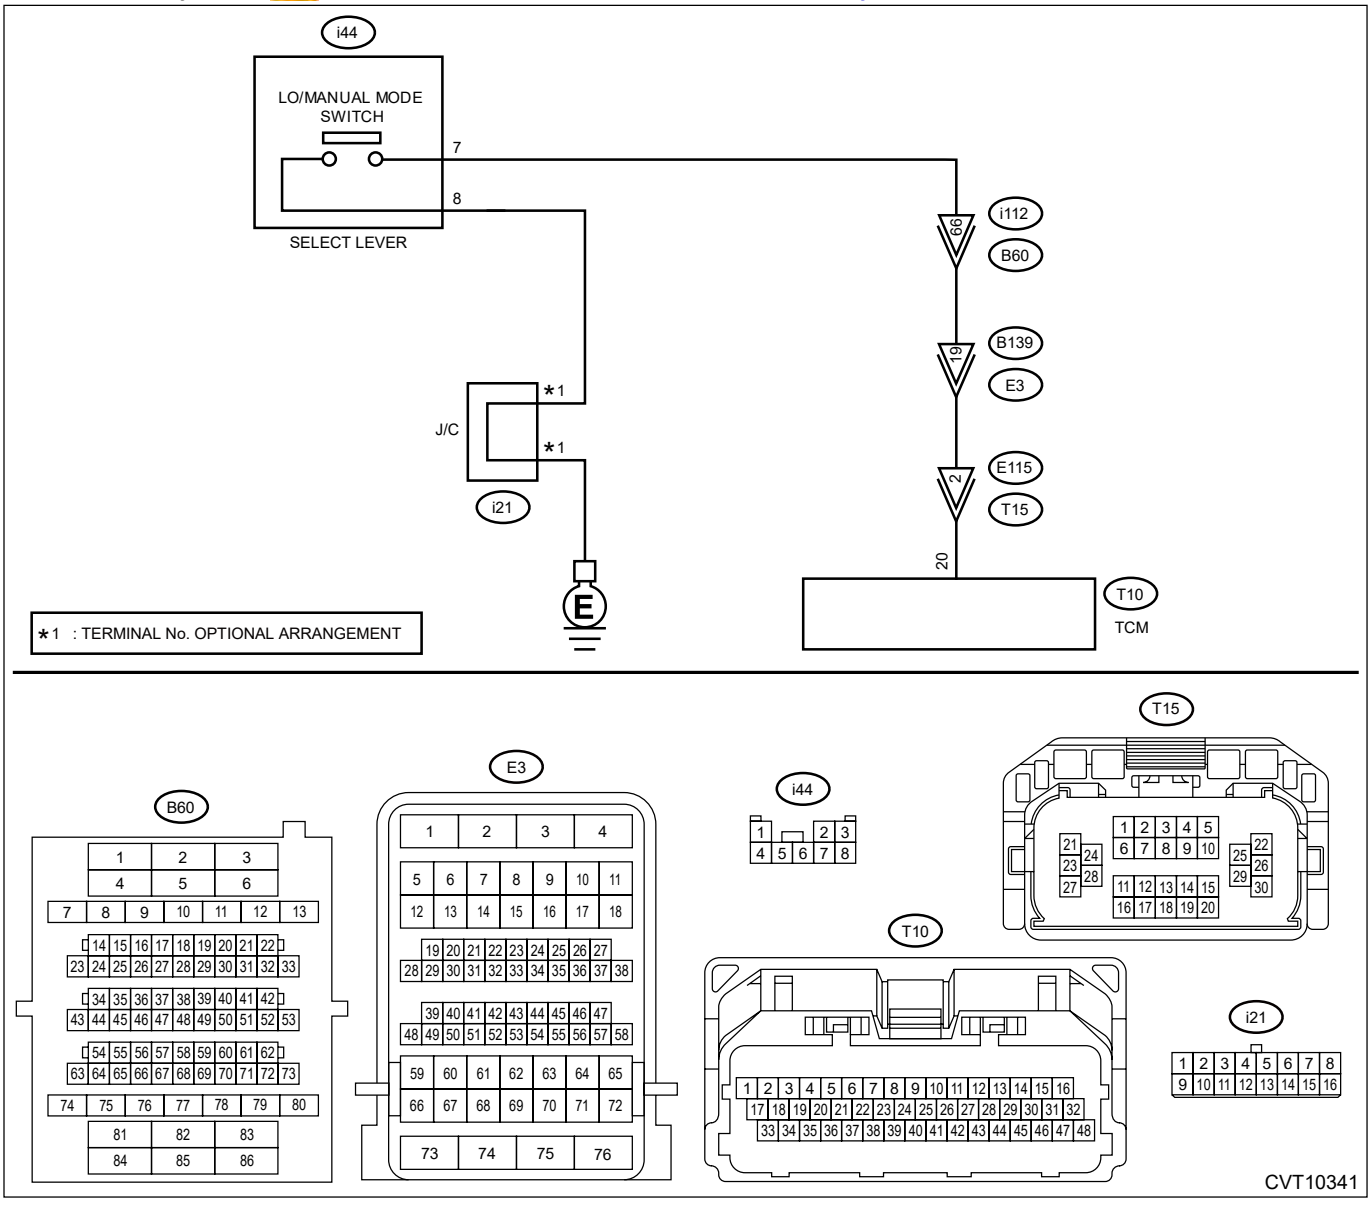
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Manual mode can not be set.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure.** **Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the manual mode switch connector.
3. Measure the resistance between manual mode switch connector and chassis ground.
   Connector & terminal
   (i44) No. 8 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness.

2. CHECK MANUAL MODE SWITCH.

Measure the resistance between manual mode switch terminals.
Terminals
No. 7 — No. 8:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the select lever assembly. Ref. to CONTROL SYSTEMS>Select Lever.

3. CHECK MANUAL MODE SWITCH.

1. Shift the select lever to manual mode.
2. Measure the resistance between manual mode switch terminals.
   Terminals
   No. 7 — No. 8:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Replace the select lever assembly. Ref. to CONTROL SYSTEMS>Select Lever.

4. CHECK HARNESS.

1. Disconnect the TCM connector.
2. Measure the resistance between TCM connector and manual mode switch connector.
   Connector & terminal
   (T10) No. 20 — (i44) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the open circuit of harness or poor contact of connector.

5. CHECK HARNESS.

Measure the resistance between manual mode switch connector and chassis ground.
Connector & terminal
(i44) No. 7 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair the short circuit of harness.

6. CHECK INPUT SIGNAL FOR TCM.

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Set the select lever to “D” range.
4. Read the data of [Tiptronic Mode Switch] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Does [Tiptronic Mode Switch] display “ON” with select lever in manual mode, and “OFF” with select lever in other than manual mode?

Yes	Current condition is normal.
No	Go to 7.

7. CHECK FOR POOR CONTACT.

Is there poor contact of the manual mode switch circuit?

Yes	Repair the poor contact.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short (ground-fault) in manual SW circuit.
- Judge as NG if the manual SW is ON in P, R or N range.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
D range SW	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Manual SW	ON

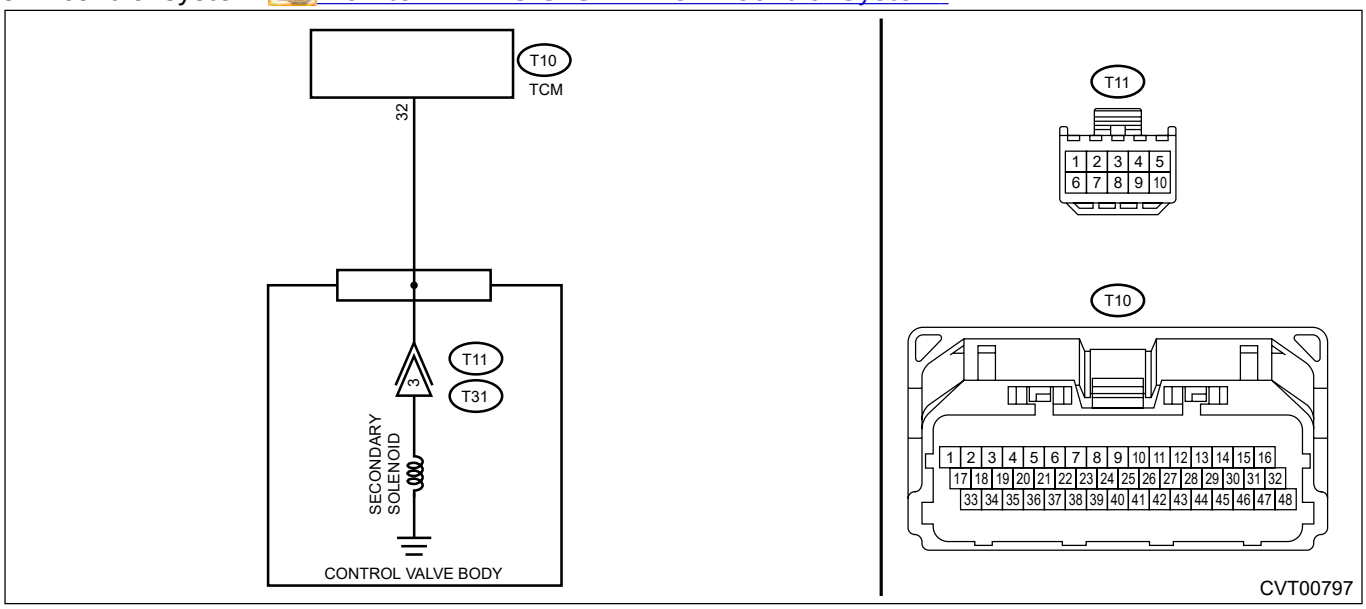
Time needed for diagnosis: 5 s
Malfunction indicator light illumination: Does not illuminate.

DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Besides DTC P0961, is DTC P0962 or P0963 displayed?

Yes	Perform the diagnosis according to DTCs other than P0961. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK SECONDARY SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Is 300 → 500 → 700 mA indicated at forced operation, and does [Secondary Actual Current] follow [Secondary Set Current]?

Yes	Go to 3.
No	Go to 4.

3. CHECK FOR POOR CONTACT.

Check for poor contact of harness and connector between TCM and secondary solenoid.

Is there poor contact?

Yes	Repair the poor contact of harness and connector.
No	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

4. CHECK SECONDARY SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the transmission connector.
3. Measure the resistance between transmission connector and transmission body.
   Connector & terminal
   (T10) No. 32 — Transmission body:

Is the resistance approximately 5 — 7 Ω? (when cold)

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.
No	Repair or replace the harness.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid drive circuit.
- Judge as NG when the deviation between target current and actual current of the transmission line pressure solenoid becomes equal to or larger than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS* (Target line pressure control solenoid valve current − Measured line pressure control solenoid valve current)	Exceeds 0.2 A
Measured line pressure control solenoid valve current	Exceeds 1.05 A and 1.6 A or less

* ABS: Absolute value

Time needed for diagnosis: 1.2 s

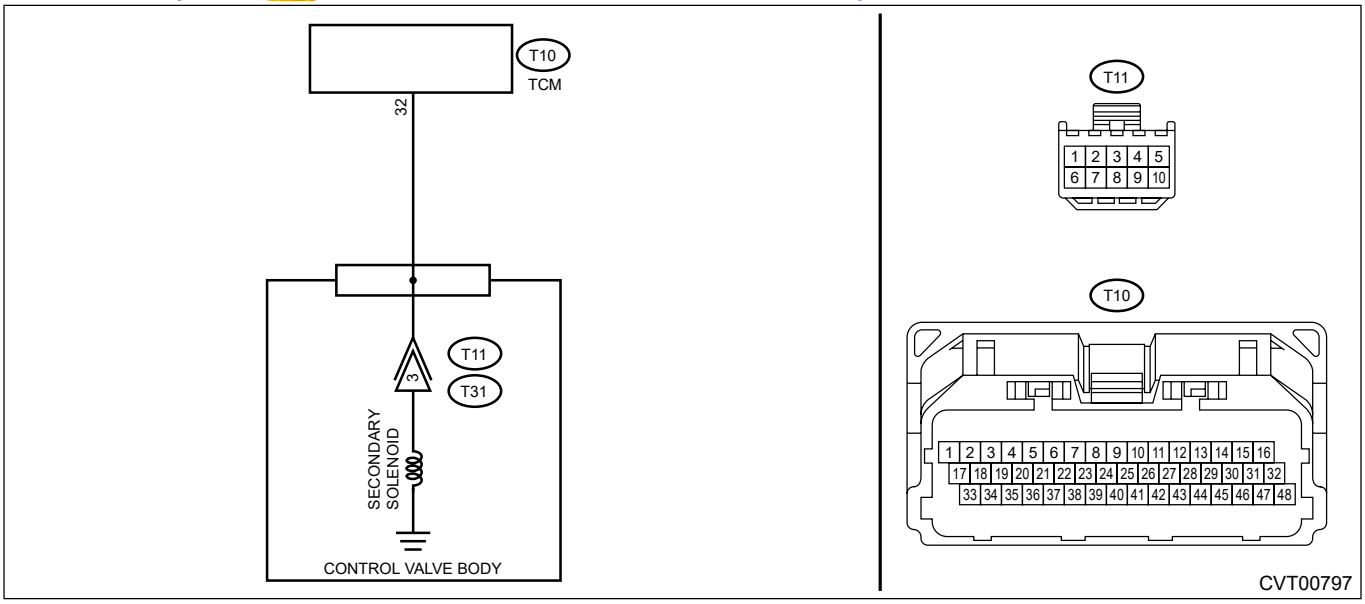
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0962 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. After driving with warm up condition, park the vehicle while depressing the brake pedal at “N” range.
2. Using Subaru Select Monitor, read the data of [Secondary Set Current] and [Secondary Actual Current]. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Do [Secondary Set Current] and [Secondary Actual Current] almost match?

Yes	Check for poor contact of connector.
No	Go to 2.

2. CHECK HARNESS.

Caution:
Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and chassis ground.
   Connector & terminal
   (T10) No. 32 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit of harness.

3. CHECK SECONDARY SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 32 — Transmission body:

Is the resistance approximately 5 — 7 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 4.

4. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission line pressure solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON

Malfunction Criteria	Threshold Value
As defined by: Measured line pressure control solenoid valve current is 1.6 A or more	

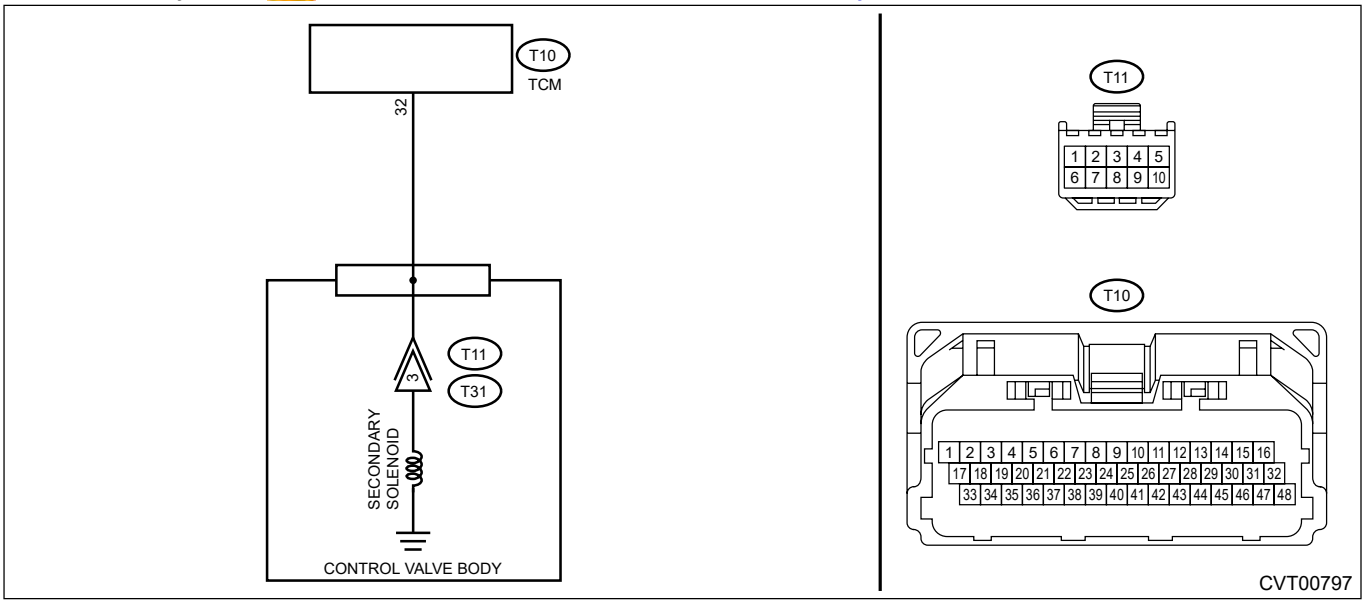
Time needed for diagnosis: 0.5 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0963 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. After driving with warm up condition, park the vehicle while depressing the brake pedal at “N” range.
2. Using Subaru Select Monitor, read the data of [Secondary Set Current] and [Secondary Actual Current]. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Do [Secondary Set Current] and [Secondary Actual Current] almost match?

Yes	Check for poor contact of connector.
No	Go to 2.

2. CHECK HARNESS.

Caution:
Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and transmission connectors.
   Connector & terminal
   (T10) No. 32 — (T11) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between TCM connector and chassis ground.
   Connector & terminal
   (T10) No. 32 (+) — Chassis ground (−):

Is the voltage approx. 0 V?

Yes	Go to 4.
No	Repair the short circuit of harness.

4. CHECK SECONDARY SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 32 — Transmission body:

Is the resistance approximately 5 — 7 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 5.

5. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission line pressure solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Commanded line pressure control solenoid valve current	0.2 A or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured line pressure control solenoid valve current is less than 5.9 mA	ON

Time needed for diagnosis: 0.5 s

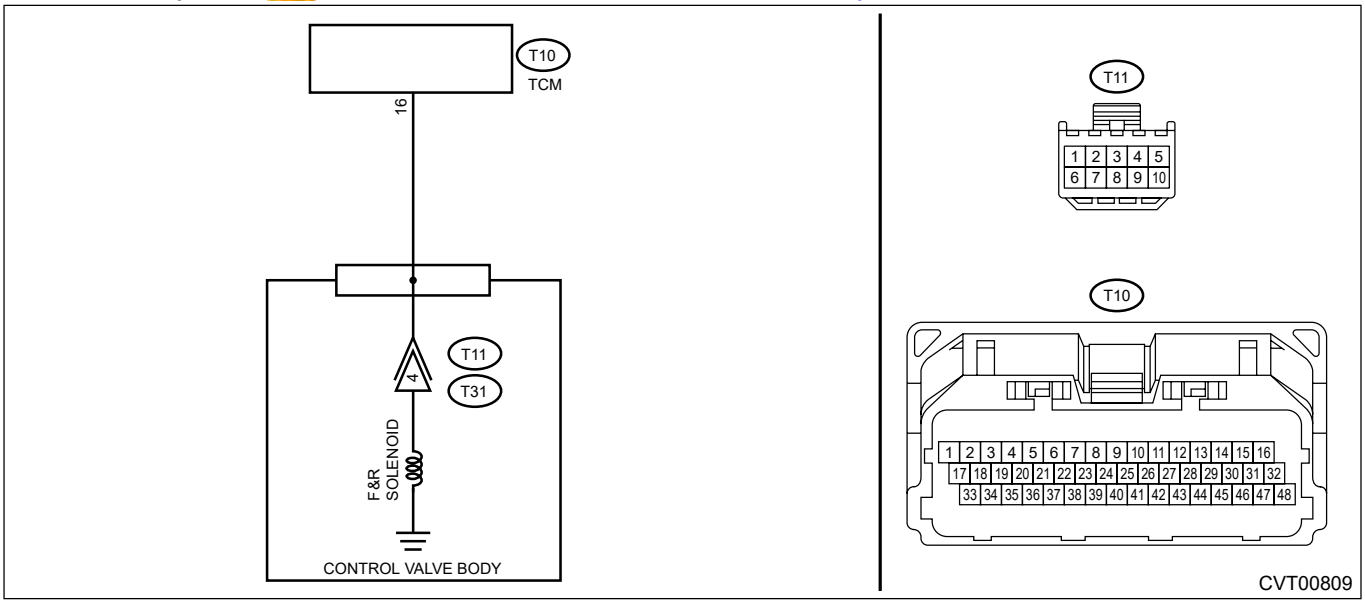
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0965 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Besides DTC P0965, is any of the DTC P0717, P0966, P0967 or P2747 displayed?

Yes	Perform the diagnosis according to DTCs other than P0965. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK F&R SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Is 300 → 500 → 700 mA indicated at forced operation, and does [Actual Forward & Reverse Linear Solenoid Current] follow [Commanded Forward & Reverse Linear Solenoid Current]?

Yes	Go to 3.
No	Go to 4.

3. CHECK FOR POOR CONTACT.

Check for poor contact of harness and connector between TCM and F&R solenoid.

Is there poor contact?

Yes	Repair the poor contact of harness and connector.
No	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

4. CHECK F&R SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 16 — Transmission body:

Is the resistance approximately 4 — 6 Ω? (when cold)

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.
No	Repair or replace the harness.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1

- Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
- Judge as NG when the deviation between set current and actual current of the transmission forward/reverse clutch pressure solenoid drive circuit becomes equal to or larger than the predetermined value.

Diagnosis 2

- Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
- Judge as NG when the transmission forward/reverse clutch pressure solenoid drive current is within the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1 12 V battery system voltage	9 V or more
Diagnosis 2 12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1 ABS* (Target forward & reverse clutch pressure control solenoid	Exceeds 0.2 A

Malfunction Criteria	Threshold Value
current – Measured forward & reverse clutch pressure control solenoid current)	
Diagnosis 2	
Measured forward & reverse clutch pressure control solenoid current	Exceeds 1.08 A and 1.6 A or less

* ABS: Absolute value

Time needed for diagnosis: 1.2 s

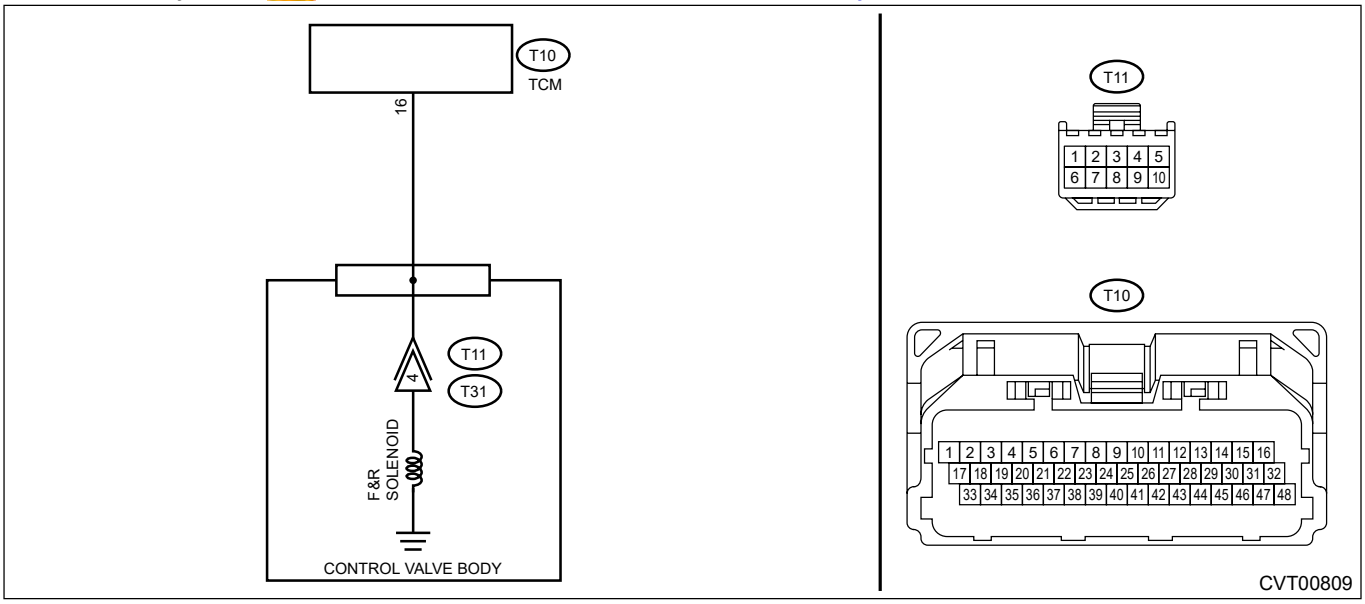
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0966 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Excessive shift shock

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. After driving with warm up condition, park the vehicle while depressing the brake pedal at “D” range.
2. Using Subaru Select Monitor, read the data of [Commanded Forward & Reverse Linear Solenoid Current] and [Actual Forward & Reverse Linear Solenoid Current]. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Do [Commanded Forward & Reverse Linear Solenoid Current] and [Actual Forward & Reverse Linear Solenoid Current] almost match?

Yes	Check for poor contact of connector.
No	Go to 2.

2. CHECK HARNESS.

Caution:
Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and chassis ground.
   Connector & terminal
   (T10) No. 16 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair the short circuit of harness.

3. CHECK F&R SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 16 — Transmission body:

Is the resistance approximately 4 — 6 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 4.

4. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect the short circuit to ground in transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission forward/reverse clutch pressure solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON

Malfunction Criteria	Threshold Value
As defined by: Measured forward & reverse clutch pressure control solenoid current exceeds 1.6 A	

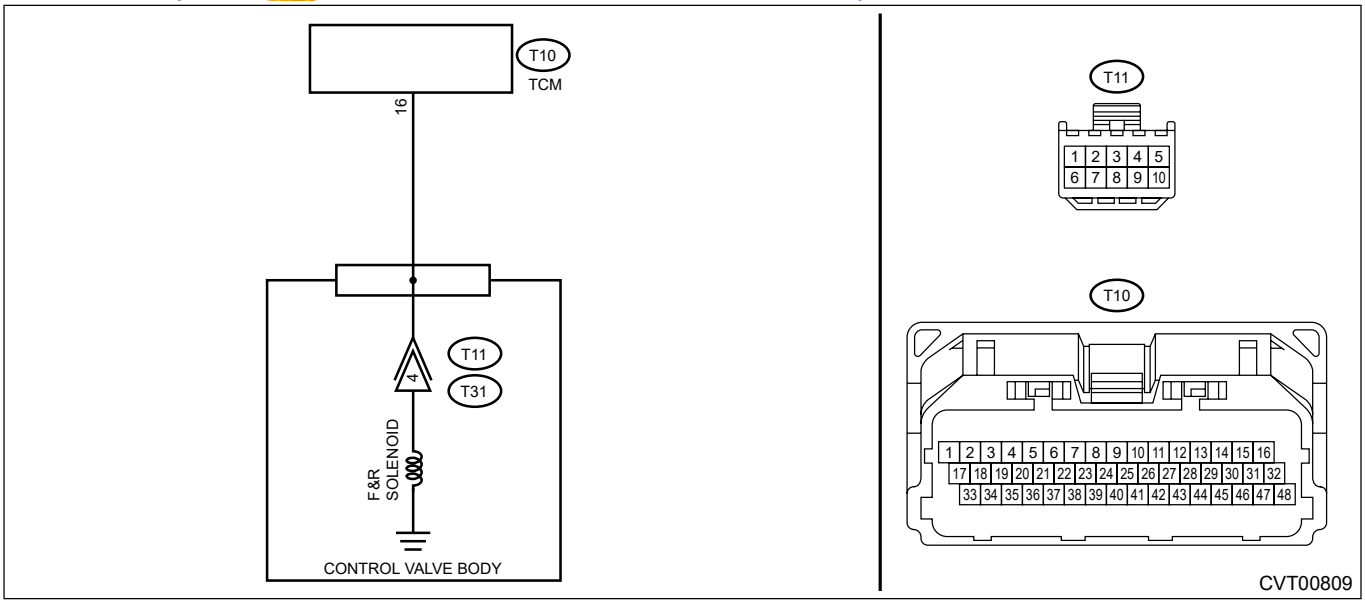
Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0967 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Engine speed increases abruptly, and can not start.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK INPUT SIGNAL FOR TCM.

1. After driving with warm up condition, park the vehicle while depressing the brake pedal at “D” range.
2. Using Subaru Select Monitor, read the data of [Commanded Forward & Reverse Linear Solenoid Current] and [Actual Forward & Reverse Linear Solenoid Current]. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Do [Commanded Forward & Reverse Linear Solenoid Current] and [Actual Forward & Reverse Linear Solenoid Current] almost match?

Yes	Check for poor contact of connector.
No	Go to 2.

2. CHECK HARNESS.

Caution:
Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and control valve body connector.
   Connector & terminal
   (T10) No. 16 — (T11) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between TCM connector and chassis ground.
   Connector & terminal
   (T10) No. 16 (+) — Chassis ground (−):

Is the voltage approx. 0 V?

Yes	Go to 4.
No	Repair the short circuit of harness.

4. CHECK F&R SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 16 — Transmission body:

Is the resistance approximately 4 — 6 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 5.

5. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG if the transmission forward/reverse clutch pressure solenoid drive current is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Target forward & reverse clutch pressure control solenoid current	0.1 A or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current less than 5.9 mA	ON

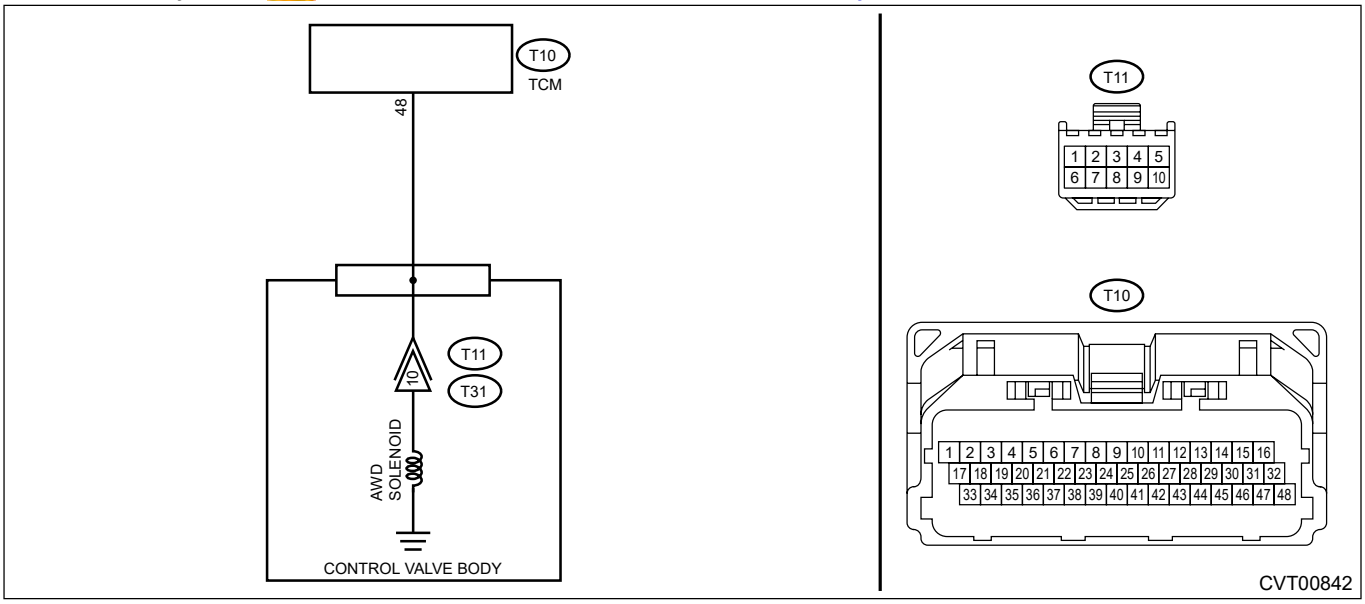
Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0970 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Drivability getting worse.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:
Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and chassis ground.
   Connector & terminal
   (T10) No. 48 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 2.
No	Repair the short circuit of harness.

2. CHECK AWD SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 48 — Transmission body:

Is the resistance approximately 2 — 4.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 3.

3. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short in transfer solenoid circuit.
- Judge as NG if a ground short circuit is detected more than 10 times via the detection circuit for the transfer solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Target duty cycle	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	10 counts or more

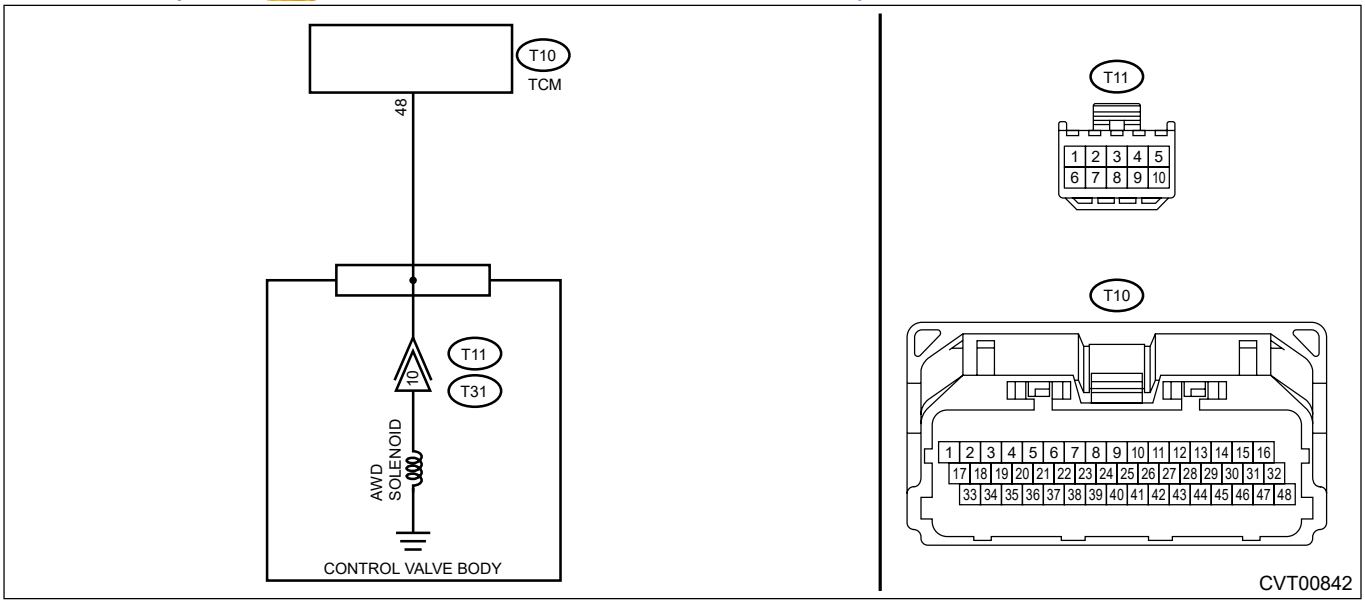
Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

DTC P0971 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Tight corner braking phenomenon occurs.
- Drivability getting worse.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and control valve body connector.

   Connector & terminal

   (T10) No. 48 — (T11) No. 10:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness.

2. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between TCM connector and chassis ground.

   Connector & terminal

   (T10) No. 48 (+) — Chassis ground (−):

Is the voltage approx. 0 V?

Yes	Go to 3.
No	Repair the short circuit of harness.

3. CHECK AWD SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 48 — Transmission body:

Is the resistance approximately 2 — 4.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 4.

4. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the transfer solenoid circuit.
- Judge as NG if an open circuit or a short circuit to ground is detected more than 10 times via the detection circuit in the transfer solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Target duty cycle	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	10 counts or more

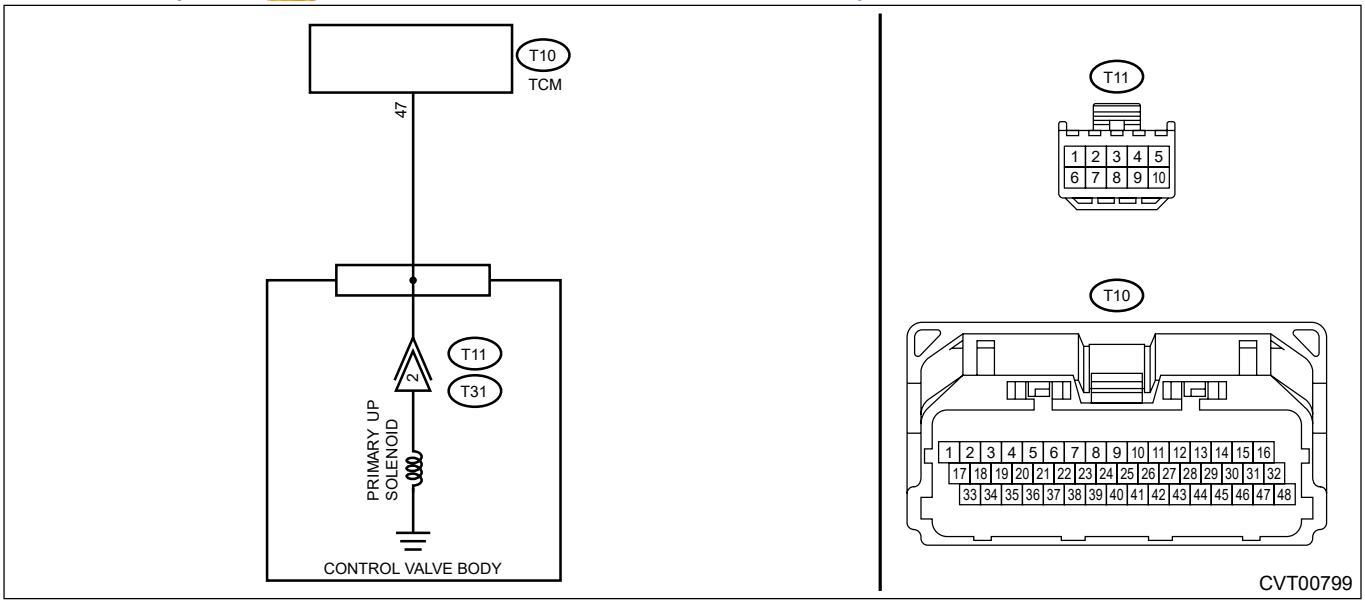
Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

DTC P0973 SHIFT SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Gear is not changed. (No up-shift)

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and chassis ground.

   Connector & terminal

   (T10) No. 47 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 2.
No	Repair the short circuit of harness.

2. CHECK PRIMARY UP SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.

   Connector & terminal

   (T10) No. 47 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 3.

3. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-up fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Commanded duty of shift up pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage 0.8 V or less	ON

Time needed for diagnosis: 0.2 s

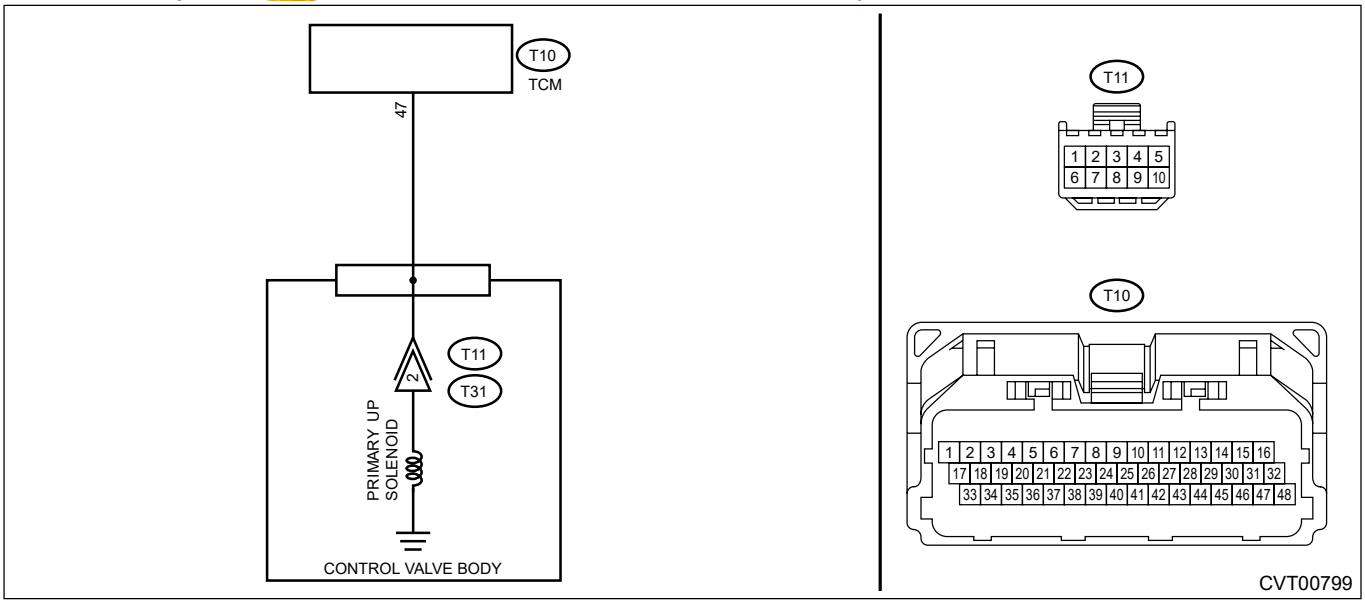
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0974 SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Gear is not changed. (No up-shift)

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and control valve body connector.

   Connector & terminal

   (T10) No. 47 — (T11) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness.

2. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between TCM connector and chassis ground.

   Connector & terminal

   (T10) No. 47 (+) — Chassis ground (−):

Is the voltage approx. 0 V?

Yes	Go to 3.
No	Repair the short circuit of harness.

3. CHECK PRIMARY UP SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 47 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 4.

4. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the shift-up fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Commanded duty of shift up pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage 2.5 V or more	ON

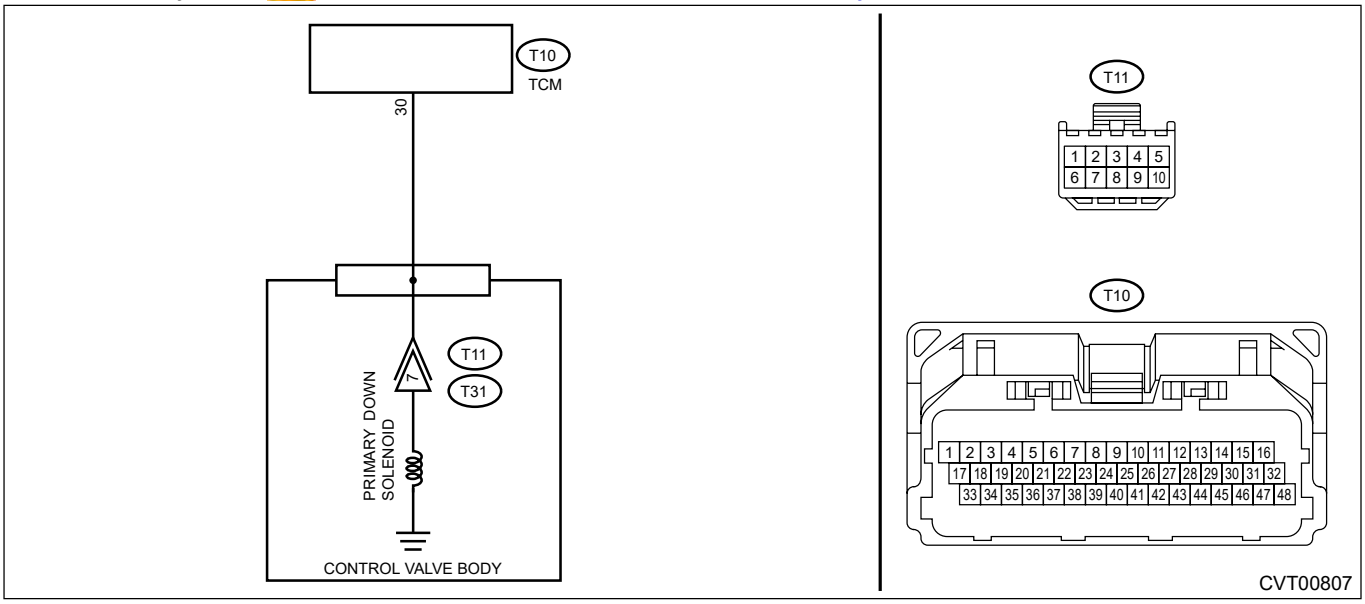
Time needed for diagnosis: 0.2 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0976 SHIFT SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Gear is not changed. (No down-shift)

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and chassis ground.

   Connector & terminal

   (T10) No. 30 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 2.
No	Repair the short circuit of harness.

2. CHECK PRIMARY DOWN SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.

   Connector & terminal

   (T10) No. 30 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 3.

3. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-down fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Commanded duty of shift down pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage 0.8 V or less	ON

Time needed for diagnosis: 0.2 s

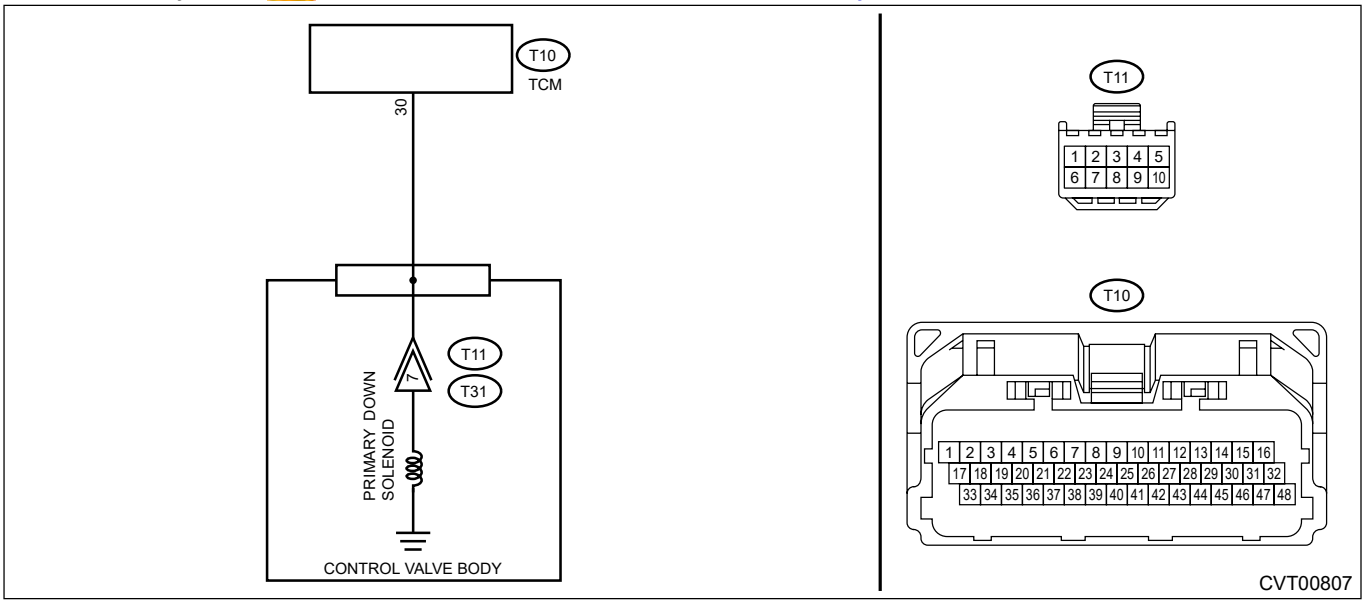
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P0977 SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Gear is not changed. (No down-shift)

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and control valve body connector.

   Connector & terminal

   (T10) No. 30 — (T11) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness.

2. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between TCM connector and chassis ground.

   Connector & terminal

   (T10) No. 30 (+) — Chassis ground (−):

Is the voltage approx. 0 V?

Yes	Go to 3.
No	Repair the short circuit of harness.

3. CHECK PRIMARY DOWN SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 30 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 4.

4. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the shift-down fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Commanded duty of shift down pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage 2.5 V or more	ON

Time needed for diagnosis: 0.2 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P1603 ENGINE STALL HISTORY

Note:
Refer to "ENGINE (DIAGNOSTICS)" for diagnostic procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P1603 ENGINE STALL HISTORY.

Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the engine stops except by operating the ignition switch after starting the engine.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Engine condition	After engine starting

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine speed	Less than 300 rpm

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P162B WARNING INDICATOR REQUEST

Note:

Refer to “ENGINE (DIAGNOSTICS)” for diagnostic procedure. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P162A STARTER INTERLOCK INTERNAL CIRCUIT.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

Judge as NG when an abnormal signal is received from the engine.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Request for malfunction indicator light illumination from engine	ON

Time needed for diagnosis: 1 s

Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC P170A L-RANGE SWITCH

Note:

Refer to “DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE” for diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short (ground-fault) in manual SW circuit.
- Judge as NG if the manual SW is ON in P, R or N range.

2. EXECUTION CONDITION

Secondary parameters	Execution condition

Secondary parameters	Execution condition
D range SW	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
L range SW	ON

Time needed for diagnosis: 5 s

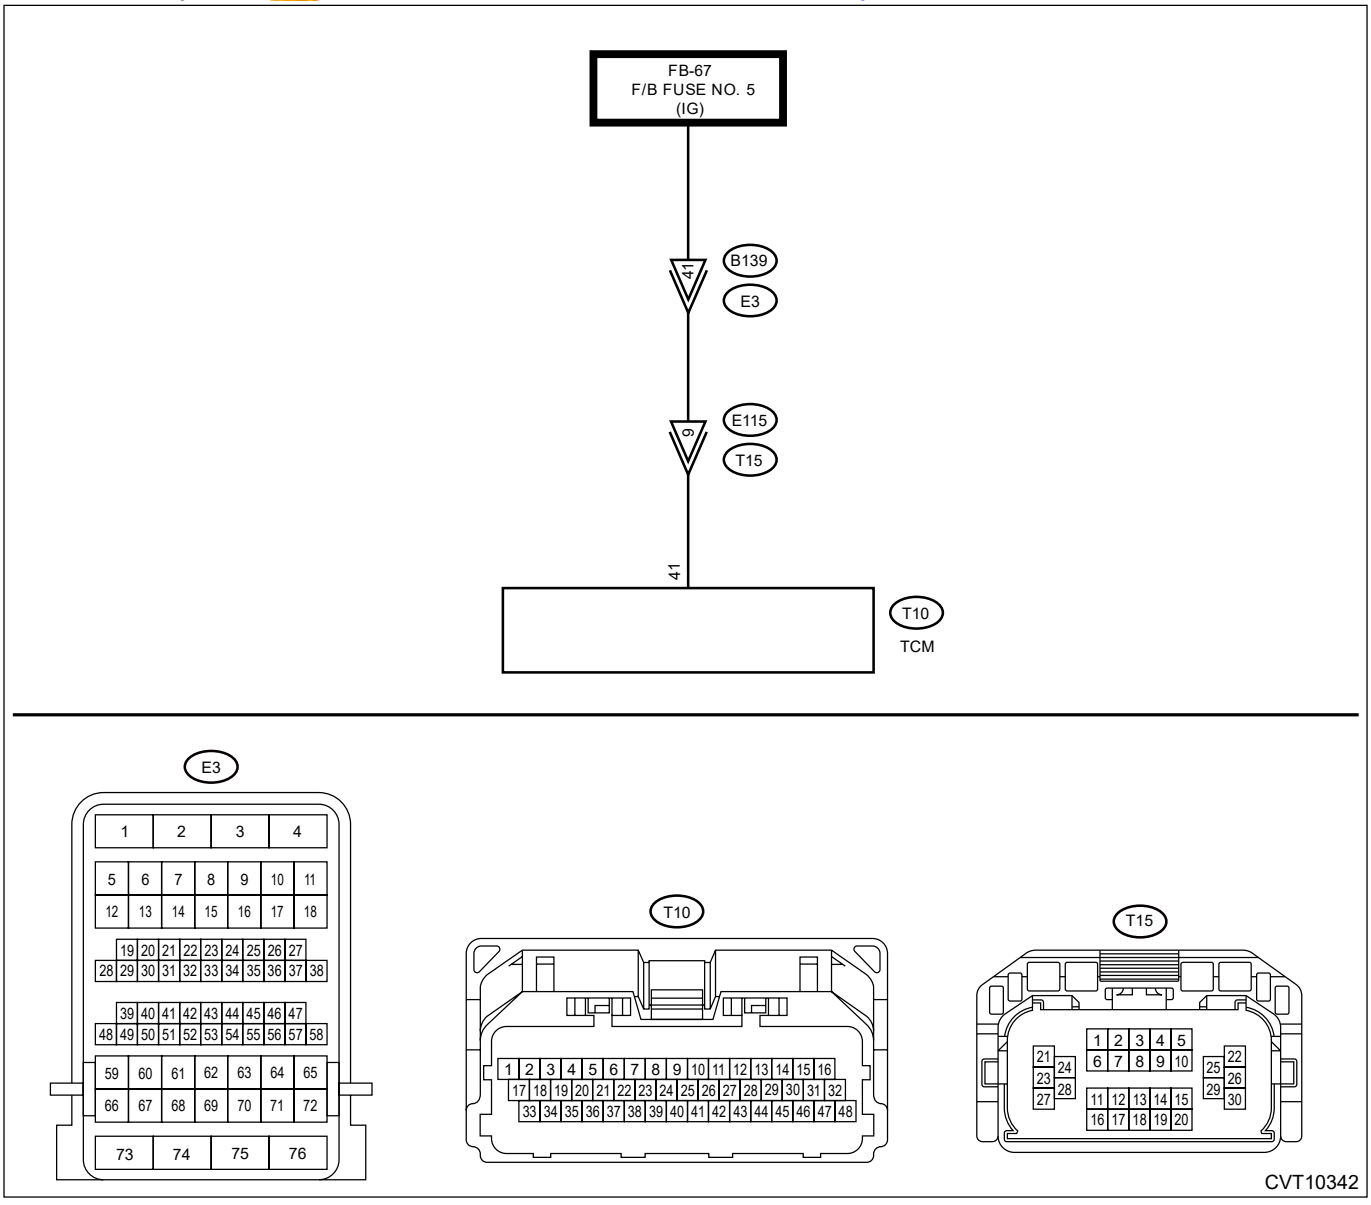
Malfunction indicator light illumination: Does not illuminate.

DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



Faulty TCM operation

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK CONNECTOR.

Check the installing condition of TCM connector.

Is the TCM connector installed properly?

Yes	Go to 2.
No	Install the TCM connector.

2. CHECK INPUT VOLTAGE OF TCM.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between TCM connector and chassis ground. (While wiggling the harness)

Connector & terminal

(T10) No. 41 (+) — Chassis ground (−):

Is the voltage 8 V or more?

Yes	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, the following items may be the cause of fault.** • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)
No	Repair the harness and connector. **Note:** **In this case, repair the following item:** • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of ignition SW circuit.

- Judge as NG if the ignition SW signals are lost 5 times or more even though the engine is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10.9 V or more
Engine speed	400 rpm or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Count of temporarily discontinuous input of ignition switch	5 counts or more

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2746 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Besides DTC P2746, is DTC P2747 or P2751 displayed?

Yes	Perform the diagnosis according to DTCs other than P2746. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Perform the diagnosis according to DTC P2747. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed, compared with the speeds of other parts, is outside the possible range considering the hardware capabilities.

Diagnosis 2
- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the primary speed exceeds the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	9 V or more
Transmission range	Drive or Reverse

Secondary parameters	Execution condition
(Measured turbine shaft speed / Measured secondary pulley shaft speed)	0.38 or more and 2.68 or less
Diagnosis 2	
12 V battery system voltage	9 V or more
Transmission range	Drive or Reverse
(Measured turbine shaft speed / Measured secondary pulley shaft speed)	0.38 or more and 2.68 or less

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1 (Measured primary pulley shaft speed / Measured secondary pulley shaft speed)	Less than 0.34 or Exceeds 2.95
Diagnosis 2 Measured primary pulley shaft speed	Exceeds 7140 rpm

Time needed for diagnosis: 5 seconds

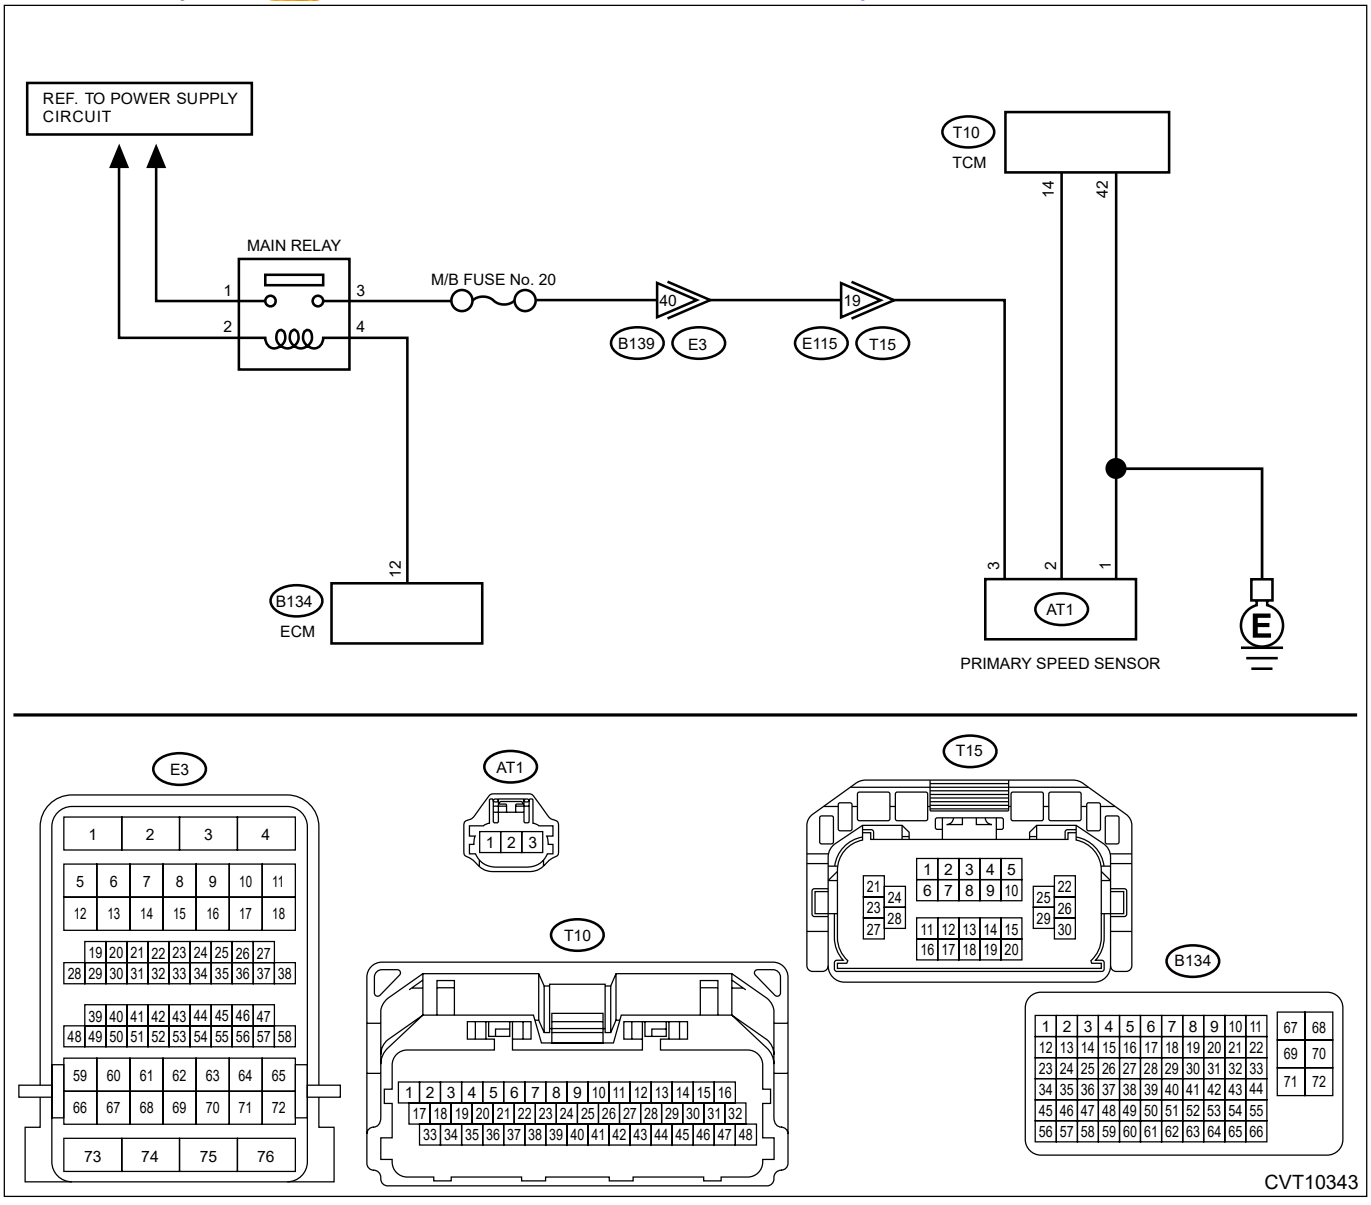
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

Caution:

- **Use CHECK BOARD when measuring the TCM•ECM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the M/B fuse No. 20.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.

2. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 3.
No	Connect the ECM connector correctly.

3. CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Measure the voltage between transmission connector and chassis ground.
   Connector & terminal
   (T15) No. 19 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Short circuit to power supply of harness between transmission connector and main relay connector** • **Defective main relay**
No	Go to 4.

4. CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Remove the main relay.
3. Disconnect the ECM connector.
4. Measure the resistance between the ECM connector and engine ground.

Connector & terminal

(B134) No. 12 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and main relay connector.

5. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the primary speed sensor connector.
4. Measure the resistance between TCM connector and the primary speed sensor connector.

Connector & terminal

(T10) No. 14 — (AT1) No. 2:

(T10) No. 42 — (AT1) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit of harness.

6. CHECK HARNESS.

Measure the resistance between TCM connector and chassis ground.

Connector & terminal

(T10) No. 14 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Repair the short circuit of harness.

7. CHECK TRANSMISSION HARNESS.

1. Install the fuse.
2. Connect the TCM connector.
3. Disconnect the transmission connector. (E115, T15)
4. Turn the ignition switch to ON.
5. Measure the voltage between transmission connector terminals.

   Connector & terminal

   (E115) No. 19 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 8.
No	Repair the open circuit of harness or poor contact of connector.

8. CHECK INPUT SIGNAL FOR TCM.

1. Turn the ignition switch to OFF.
2. Connect all connectors.
3. Lift up the vehicle.
4. Start the engine.
5. Set the select lever to “D” range.
6. Read the data of [Primary Rev Speed] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Does the value of [Primary Rev Speed] change according to the [Turbine Revolution Speed]?

Yes	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.
No	Go to 9.

9. CHECK TRANSMISSION HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the transmission connector.
3. Disconnect the primary speed sensor connector.
4. Measure the resistance between transmission connector and primary speed sensor connector.
   Connector & terminal
   (T15) No. 19 — (AT1) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Replace the transmission harness.

10. CHECK PRIMARY SPEED SENSOR.

1. Turn the ignition switch to OFF.
2. Replace the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P2747 displayed?

Yes	Go to 11.
No	The original primary speed sensor is defective.

11. CHECK MAIN RELAY.

1. Turn the ignition switch to OFF.
2. Replace the main relay.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P2747 displayed?

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	The original main relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect no input signal from the primary speed sensor.
- Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Measured secondary pulley shaft speed	500 rpm or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time needed for diagnosis: 0.5 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2750 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Besides DTC P2750, is any of the DTC P2751, U0122 or U0416 displayed?

Yes	Perform the diagnosis according to DTCs other than P2750. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Perform the diagnosis according to DTC P2751. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of the secondary speed sensor characteristics.
- Judge as NG if the deviation of vehicle speed between VDC and the secondary speed sensor becomes the predetermined value or more.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Vehicle speed (calculated from wheel speed sensor)	5 MPH or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS* (Vehicle speed (calculated from secondary pulley shaft speed) − Vehicle speed (calculated from wheel speed sensor))	Exceeds 10 MPH

* ABS: Absolute value

Time needed for diagnosis: 5 seconds

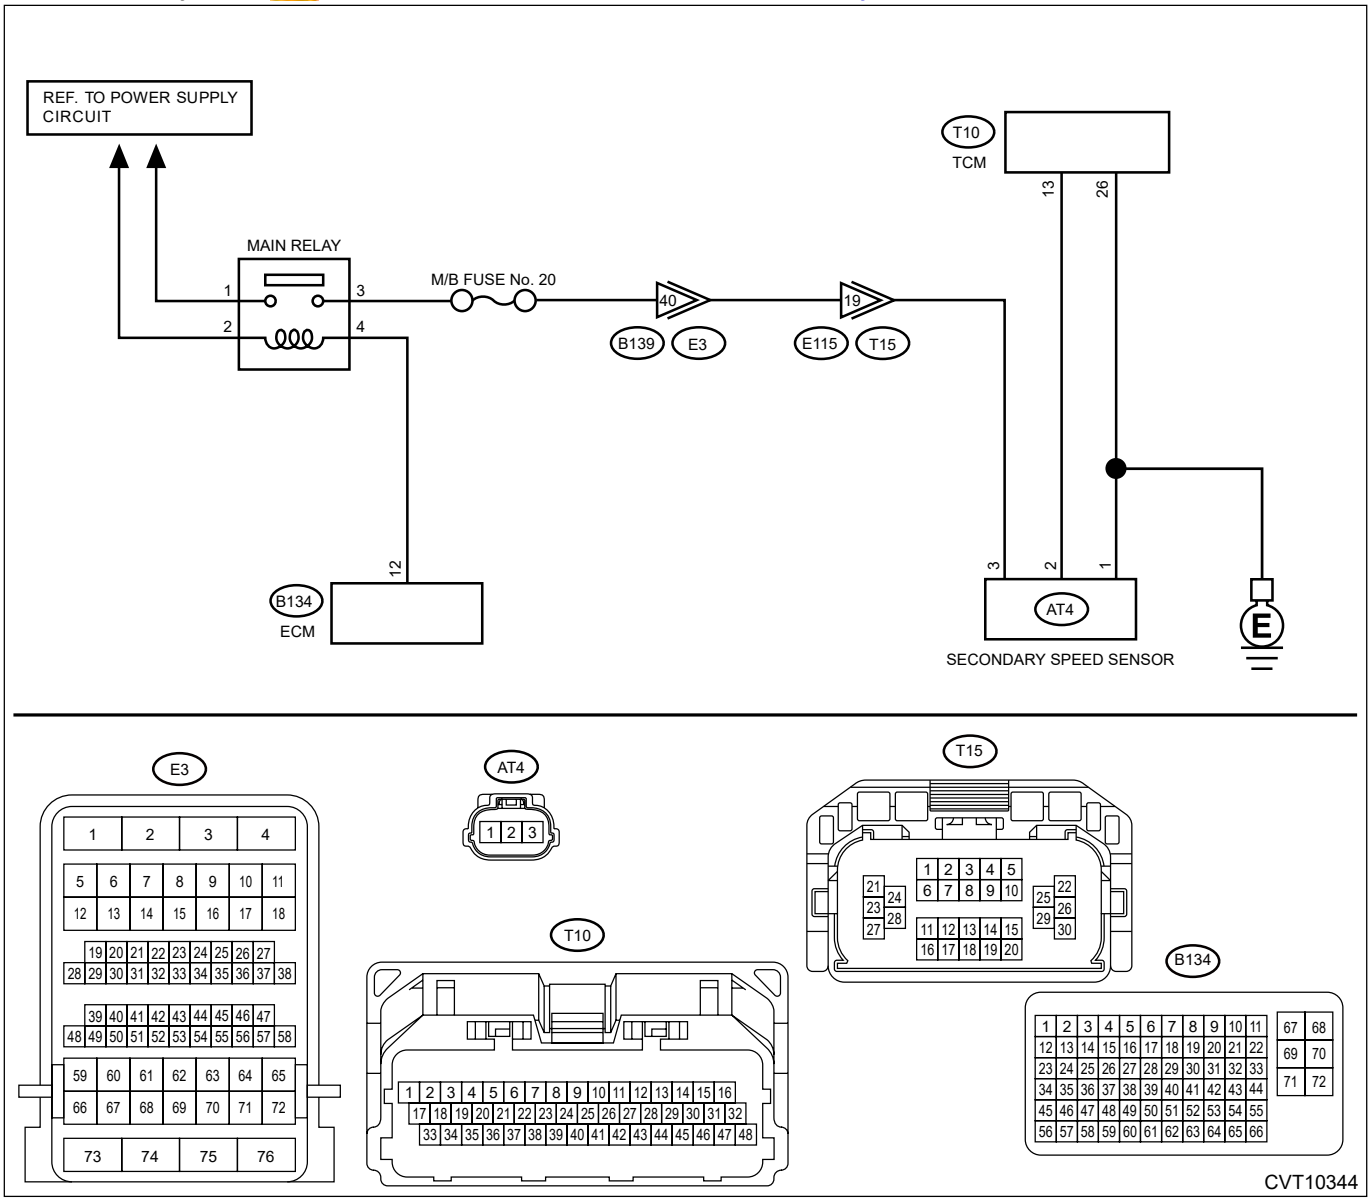
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

Caution:

- **Use CHECK BOARD when measuring the TCM•ECM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the M/B fuse No. 20.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.

2. CHECK ECM CONNECTOR.

Check the connecting condition of ECM connector.

Is the ECM connector correctly connected?

Yes	Go to 3.
No	Connect the ECM connector correctly.

3. CHECK HARNESS BETWEEN TRANSMISSION CONNECTOR AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Measure the voltage between transmission connector and chassis ground.
   Connector & terminal
   (T15) No. 19 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair the harness and connector. **Note:** **In this case, repair the following item:** • **Short circuit to power supply of harness between transmission connector and main relay connector** • **Defective main relay**
No	Go to 4.

4. CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.

1. Turn the ignition switch to OFF.
2. Remove the main relay.
3. Disconnect the ECM connector.
4. Measure the resistance between the ECM connector and engine ground.

Connector & terminal

(B134) No. 12 — Engine ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short circuit to ground in harness between ECM connector and main relay connector.

5. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Disconnect the secondary speed sensor connector.
4. Measure the resistance between TCM connector and the secondary speed sensor connector.

Connector & terminal

(T10) No. 13 — (AT4) No. 2:

(T10) No. 26 — (AT4) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit of harness.

6. HARNESS AND INSPECTION.

Measure the resistance between TCM connector and chassis ground.

Connector & terminal

(T10) No. 13 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Repair the short circuit of harness.

7. CHECK TRANSMISSION HARNESS.

1. Install the fuse.
2. Connect the TCM connector.
3. Disconnect the transmission connector. (E115, T15)
4. Turn the ignition switch to ON.
5. Measure the voltage between transmission connector terminals.

   Connector & terminal

   (E115) No. 19 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 8.
No	Repair the open circuit of harness or poor contact of connector.

8. CHECK INPUT SIGNAL FOR TCM.

1. Turn the ignition switch to OFF.
2. Connect all connectors.
3. Lift up the vehicle.
4. Start the engine.
5. Set the select lever to “D” range.
6. Read the data of [Secondary Rev Speed] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

   Data Monitor

Does the value of [Secondary Rev Speed] change according to the [Front Wheel Speed]?

Yes	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.
No	Go to 9.

9. CHECK TRANSMISSION HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the transmission connector.
3. Disconnect the secondary speed sensor connector.
4. Measure the resistance between transmission connector and secondary speed sensor connector.

   Connector & terminal

   (T15) No. 19 — (AT4) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Replace the transmission harness.

10. CHECK SECONDARY SPEED SENSOR.

1. Turn the ignition switch to OFF.
2. Replace the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P2751 displayed?

Yes	Go to 11.
No	The original secondary speed sensor is defective.

11. CHECK MAIN RELAY.

1. Turn the ignition switch to OFF.
2. Replace the main relay.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC P2751 displayed?

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	The original main relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the secondary speed sensor.
- Judge as NG if there is no input signal from the secondary pulley speed sensor, while the primary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	1000 rpm or more

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured secondary pulley shaft speed	0 rpm

Time needed for diagnosis: 0.5 s

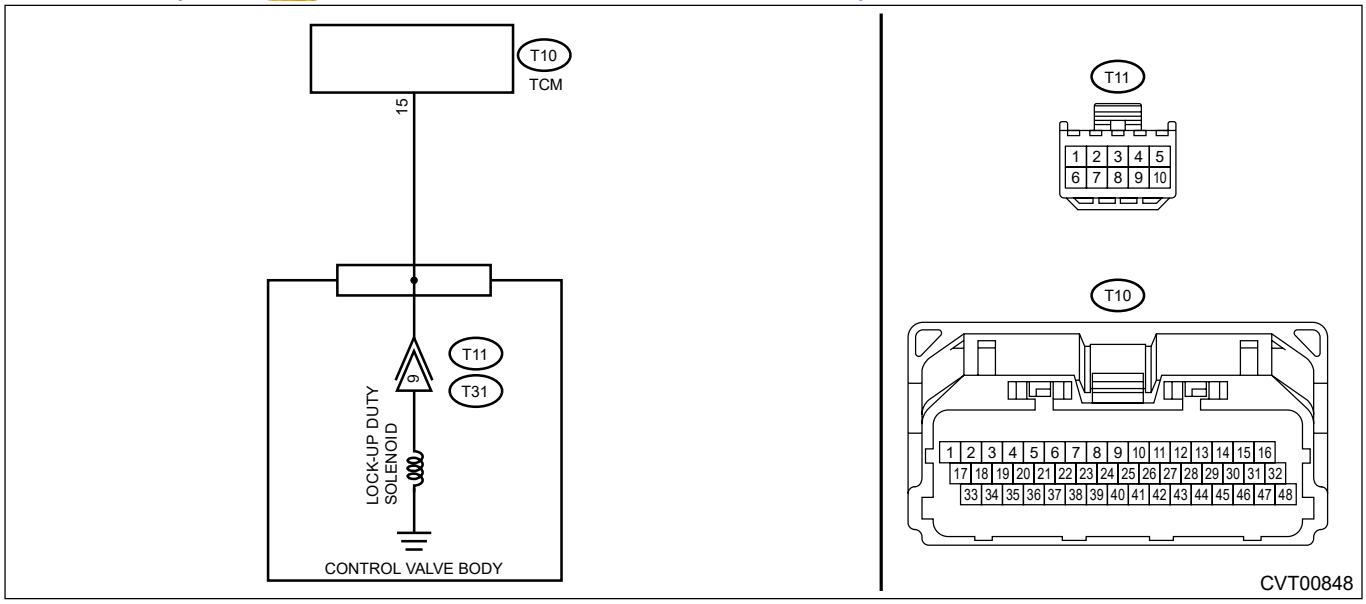
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



No lock-up occurs.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is a DTC other than DTC P2757 displayed?

Yes	Perform the diagnosis according to DTCs other than P2757. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?

Yes	Go to 6.
No	Go to 3.

3. CHECK LOCK-UP DUTY SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 15 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.
No	Go to 4.

4. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Remove the transmission valve cover.
2. Disconnect the control valve body connector.
3. Measure the resistance between TCM connector and control valve body connector.

Connector & terminal

(T10) No. 15 — (T11) No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the open circuit of harness.

5. CHECK HARNESS.

Measure the resistance between TCM connector and transmission body.

Connector & terminal

(T10) No. 15 — Control valve body:

Is the resistance 1 MΩ or more?

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.
No	Repair the short circuit of harness.

6. CHECK TRANSMISSION FLUID.

1. Connect all connectors.
2. Check the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 7.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

7. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

Is the check result OK?

Yes	Go to 8.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.

8. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body. Go to 9.
No	Perform the diagnosis according to DTC P0841. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE.

9. DRIVING CHECK FOR LOCK-UP CONDITION.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Start the engine.
4. Warm up until the ATF temperature exceeds 50°C.
5. Drive the vehicle for one minute or more while keeping such constant speed that [Lock Up Duty Ratio] is 70% or more, and [Front Wheel Speed] is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor.
6. Turn the ignition switch to OFF.
7. Start the engine.
8. Perform the procedure in step 5) again.
9. Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Does the AT OIL TEMP light blink and is DTC P2757 displayed?

Yes	Replace the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
- Judge as NG if the deviation between engine speed and turbine speed becomes equal to or larger than the predetermined value, even though the lock-up command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	95% or more
Measured turbine shaft speed	Exceeds rpm values in Table 1

Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured turbine shaft speed (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured turbine shaft speed (rpm)	4000	4500	5000	5500	6000	6500	7000

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	**Threshold Value**
ABS* (Engine speed – Measured turbine shaft speed)	Exceeds rpm values in Table 2

* ABS: Absolute value

Table 2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
ABS (Engine speed – Measured turbine shaft speed) (rpm)	200	200	200	200	200	200	200	200

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
ABS (Engine speed – Measured turbine shaft speed) (rpm)	200	200	200	200	200	200	200

Time needed for diagnosis: 10 seconds

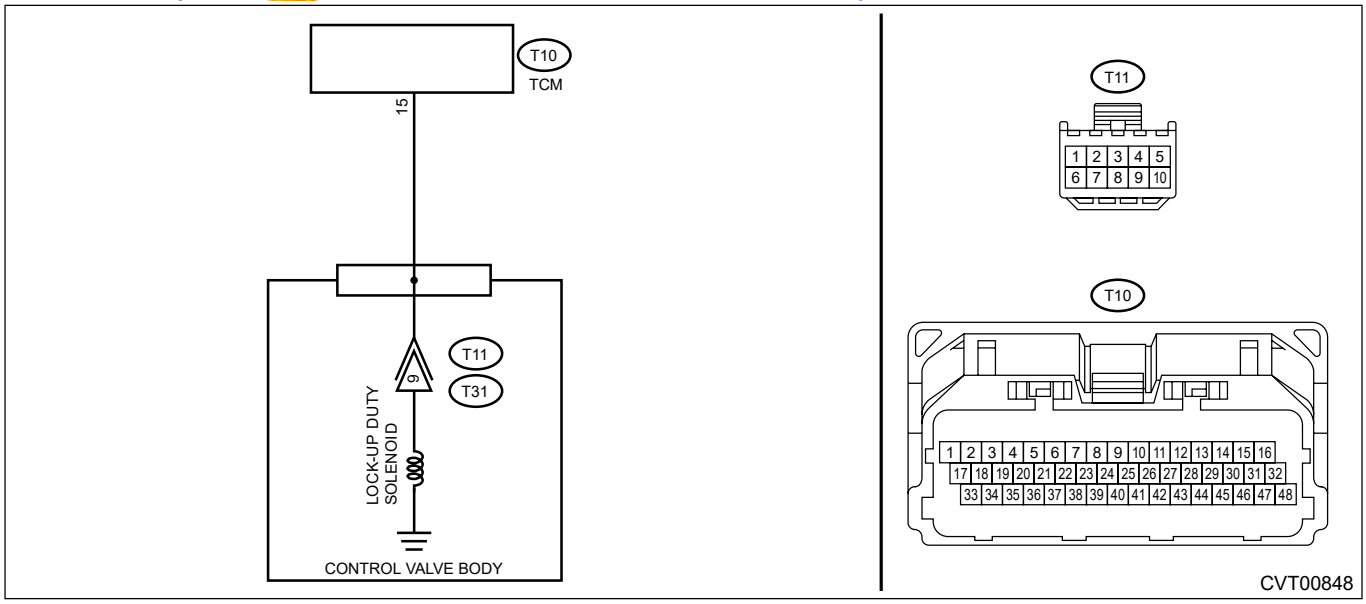
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

DTC detecting condition:

Detected when two consecutive driving cycles with fault occur.

Trouble symptom:



The engine stalls when the vehicle is stopped.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is a DTC other than DTC P2758 displayed?

Yes	Perform the diagnosis according to DTCs other than P2758. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?

Yes	Go to 6.
No	Go to 3.

3. CHECK LOCK-UP DUTY SOLENOID.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 15 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.
No	Go to 4.

4. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Remove the transmission valve cover.
2. Disconnect the control valve body connector.
3. Measure the resistance between TCM connector and control valve body connector.

Connector & terminal

(T10) No. 15 — (T11) No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the open circuit of harness.

5. CHECK HARNESS.

Measure the resistance between TCM connector and transmission body.

Connector & terminal

(T10) No. 15 — Control valve body:

Is the resistance 1 MΩ or more?

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.
No	Repair the short circuit of harness.

6. CHECK TRANSMISSION FLUID.

1. Connect all connectors.
2. Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

Is the check result OK?

Yes	Go to 7.
No	Adjust the amount of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

7. CHECK TRANSMISSION FLUID.

Check the condition of ATF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF.

Is the check result OK?

Yes	Go to 8.
No	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF.

8. CHECK INPUT SIGNAL FOR TCM.

1. Lift up the vehicle.
2. Start the engine.
3. Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F).
4. Depress the brake pedal, and shift the select lever to “D” range.
5. Shift the select lever to “P” range.
6. Stabilize the engine speed at idle.
7. Read the data of [Actual Secondary Pressure] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is [Actual Secondary Pressure] 0.5 — 1.5 MPa?

Yes	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body. Go to 9.
No	Perform the diagnosis according to DTC P0841. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE.

9. DRIVING CHECK FOR LOCK-UP CONDITION.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Start the engine.
4. Warm up until the ATF temperature exceeds 50°C.
5. Drive the vehicle for one minute or more while keeping such constant speed that [Lock Up Duty Ratio] is 0%, and [Front Wheel Speed] is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor.
6. Turn the ignition switch to OFF.
7. Start the engine.
8. Perform the procedure in step 5) again.
9. Read the DTC using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?

Yes	Replace the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly.
No	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
- Judge as NG if the deviation between engine speed and turbine speed becomes equal to or smaller than the predetermined value, even though the lock-up release command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Engine speed	1000 rpm or more
Transmission range	Drive
Engine torque	Exceeds N•m values in Table 1
Commanded duty of torque converter clutch pressure control solenoid	0%

Table 1

		Engine coolant temperature (degC)							
		– 40	– 20	0	20	40	60	80	100
Vehicle speed (calculated from measured secondary pulley shaft speed sensor) (MPH)	0	144	130	116	102	88	74	74	74
	13	150	141	127	113	99	85	84	84
	25	150	150	143	129	115	101	101	101
	38	150	150	150	150	144	130	130	130
	50	150	150	150	150	150	150	150	150

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	**Threshold Value**
ABS* (Engine speed – Measured turbine shaft speed)	Less than rpm values in Table 2

* ABS: Absolute value

Table 2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
ABS* (Engine speed – Measured turbine shaft speed) (rpm)	0	0	50	50	50	50	50	50

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
ABS* (Engine speed – Measured turbine shaft speed) (rpm)	50	50	50	50	50	50	50

Time needed for diagnosis: 10 seconds

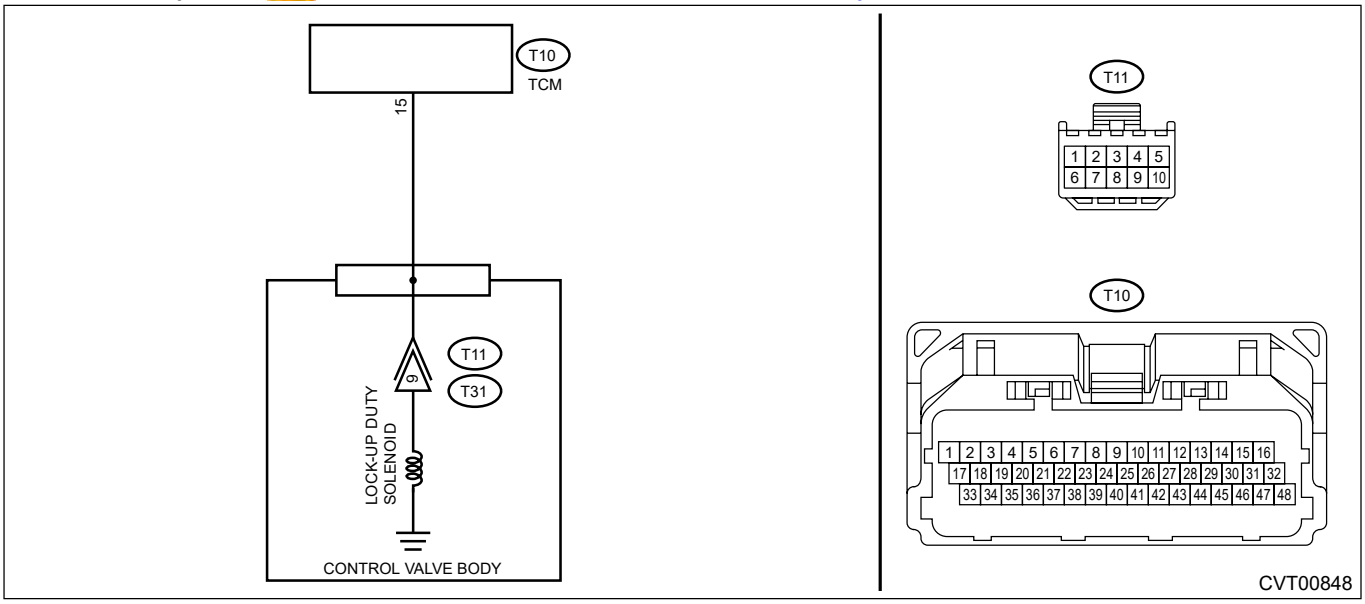
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DTC P2763 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



- No lock-up occurs.
- Engine stalls.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and control valve body connector.

Connector & terminal

(T10) No. 15 — (T11) No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair the open circuit of harness.

2. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between TCM connector and chassis ground.

Connector & terminal

(T10) No. 15 (+) — Chassis ground (−):

Is the voltage approx. 0 V?

Yes	Go to 3.
No	Repair the short circuit of harness.

3. CHECK LOCK-UP DUTY SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.
   Connector & terminal
   (T10) No. 15 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 4.

4. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the lock-up clutch pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	9 V or more
Commanded duty of torque converter clutch pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage 2.5 V or more	ON

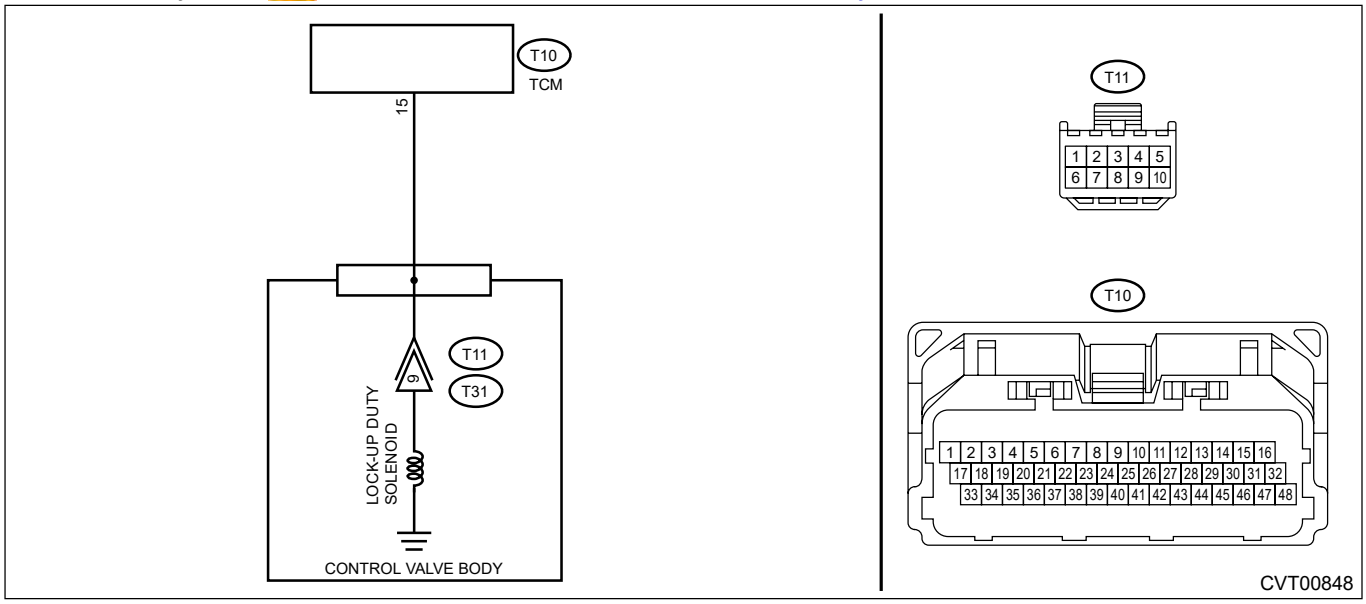
Time needed for diagnosis: 0.2 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC P2764 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT LOW

DTC detecting condition:

Immediately at fault recognition

Trouble symptom:



No lock-up occurs.

Caution:

- **Use CHECK BOARD when measuring the TCM terminal voltage and resistance.**
- **After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.**

Wiring diagram:

CVT control system Ref. to WIRING SYSTEM>CVT Control System.

1. CHECK HARNESS.

Caution:

Start work after ATF cools down.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Remove the transmission valve cover.
4. Disconnect the control valve body connector.
5. Measure the resistance between TCM connector and chassis ground.

   Connector & terminal

   (T10) No. 15 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 2.
No	Repair the short circuit of harness.

2. CHECK LOCK-UP DUTY SOLENOID.

1. Connect the connector for control valve body.
2. Measure the resistance between TCM connector and transmission body.

   Connector & terminal

   (T10) No. 15 — Transmission body:

Is the resistance approximately 10 — 13.5 Ω? (when cold)

Yes	Check for poor contact of connector, and if no fault is found, replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Go to 3.

3. CHECK HARNESS INSIDE TRANSMISSION.

Check for the harness pinch, damage.

Is there any fault in the harness?

Yes	Replace the transmission harness.
No	Replace the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage Commanded duty of torque converter clutch pressure control solenoid	9 V or more 100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage 0.8 V or less	ON

Time needed for diagnosis: 0.2 s

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time needed for diagnosis: 2 seconds

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.

- Judge as NG when CAN communication failure occurs with the ECM.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time needed for diagnosis: 0.5 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Note:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the VDC CM.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time needed for diagnosis: 0.5 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Note:
Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the body integrated unit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from BIU	Lost

Time needed for diagnosis: 4 seconds
Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the combination meter.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Lost

Time needed for diagnosis: 4 seconds

Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the A/C control panel.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Lost

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Note:
Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from VDC CM is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Note:
Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
Caution:
After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the body integrated unit is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from BIU	Freeze

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the combination meter is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Freeze

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the A/C control panel is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Freeze

Time needed for diagnosis: 2.5 s
Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1235 LOST COMMUNICATION WITH EYESIGHT

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the stereo camera.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Lost

Time needed for diagnosis: 2 seconds

Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1433 INVALID DATA RECEIVED FROM EYESIGHT

Note:

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Caution:

After servicing or replacing faulty parts, perform the last step of the basic diagnostic procedure. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the stereo camera is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	10 V or more
Measured turbine shaft speed	Exceeds 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Freeze

Time needed for diagnosis: 2.5 s

Malfunction indicator light illumination: Does not illuminate.

TRANSMISSION (DIAGNOSTICS) > Diagnostic Procedure without Diagnostic Trouble Code (DTC)

CHECK SHIFT INDICATOR

Diagnosis:

- CAN communication is abnormal with the combination meter.
- Combination meter malfunction

Trouble symptom:

- Shift indicator does not display or remains displayed.
- Shift indicator display does not change.

1. CHECK DTC.

Read the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC U0423 or U0155 displayed?

Yes	Perform the self-diagnosis of combination meter.
No	Go to 2.

2. CHECK DTC.

Read the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are DTCs other than U0155 and U0423 displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK COMBINATION METER.

Using the Subaru Select Monitor, read DTC of combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK TCM.

1. Operate the + side of the paddle shift switch.
2. Read the data of [Up Switch] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Does it change between ON and OFF according to the operation?

Yes	Go to 5.
No	Check for poor contact between TCM and paddle shift UP switch, and repair the defective part.

5. CHECK TCM.

1. Operate the – side of the paddle shift switch.
2. Read the data of [Down Switch] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Data Monitor

Does it change between ON and OFF according to the operation?

Yes	Go to 6.
No	Check for poor contact between TCM and paddle shift down switch, and repair the defective part.

6. CHECK TCM.

1. Turn the ignition switch OFF, then turn it ON again.
2. Shift the select lever to manual mode.
3. Read the data of [Shift step in Manu. mode] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Data Monitor

Is “1” displayed?

Yes	Go to 7.
No	Perform the diagnosis according to DTC P0951. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE.

7. CHECK TCM.

1. Shift up the select lever.
2. Read the data of [Shift step in Manu. mode] using Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor.

Is “2” displayed?

Yes	Current condition is normal.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

INSPECTION

Symptoms	Faulty parts
Engine stalls when driving in “D” or “R” range, or selecting “N” → “D”, “N” → “R”.	• Control valve • Engine control system
While driving in “D” range, vibration occurs immediately before the stop or engine stalls.	• Control valve • Torque converter
Vehicle cannot shift while driving in “D” range.	• Control valve • TCM • Shift mechanism • Power supply system
Excessive shock when selecting “N” → “D”, and “N” → “R”.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Excessive shock at standing start in “D” range.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Engine speed increases abruptly during driving in “D” or “R” range.	• Control valve • Secondary pressure sensor • F&R clutch pack • ATF deterioration or lack
Vehicle can not start when depressing the accelerator pedal in “D” or “R” range, or acceleration is very poor. (without abrupt engine increase)	• Control valve • F&R clutch pack • Shift mechanism • Parking mechanism • Engine control system • Power supply system
Shift indicator in combination meter displays the position which differs from select lever position.	• Inhibitor switch • Select cable related • Combination meter
Manual mode enters even though the select lever and paddle shift switch is not operated.	• Manual mode switch • Paddle shift switch • Select lever • TCM
Engine speed increases abruptly in “D” or “R” range, vehicle can not start.	• F&R clutch pack • Select cable related
Manual mode can not be set	• Select lever • TCM

OPERATION

1. HOW TO USE GENERAL SCAN TOOL

1. Prepare a scan tool (general scan tool) required by SAE J1978.
2. Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver's side). Ref. to COMMON(diag)>Data Link Connector.
3. Using the general scan tool, call up each data. General scan tool functions consist of:
   (1) MODE $01: Current powertrain diagnostic data
   (2) MODE $02: Powertrain freeze frame data
   (3) MODE $03: Emission-related powertrain DTC
   (4) MODE $04: Clear/Reset emission-related diagnostic information
   (5) MODE $07: Initial emission-related powertrain DTC
   (6) MODE $09: Request vehicle information
   (7) MODE $0A: Emission-related DTC
4. Read out the data according to repair procedures. (For detailed operation procedures, refer to the general scan tool operation manual.)

Note:

For details concerning DTC, refer to "Diagnostic Trouble Code (DTC)". Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

2. MODE $01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output or the powertrain system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
$01	Number of emission-related powertrain DTC, and malfunction indicator light status and diagnosis support information	—
$21	Travel distance after the malfunction indicator light illuminates	km/miles

Note:

Refer to general scan tool manufacturer's operation manual to access the present powertrain diagnostic data (MODE $01).

3. MODE $02 (POWERTRAIN FREEZE FRAME DATA)

Refer to data denoting the operating condition when trouble is detected by on-board diagnosis system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
$02	DTC that caused freeze frame data to be stored	—
$05	Engine coolant temperature	Celsius
$0C	Engine speed	rpm
$0D	Vehicle speed	km/h or MPH

Note:

Refer to general scan tool manufacturer's operation manual to access freeze frame data (MODE $02).

4. MODE $03 (EMISSION-RELATED POWERTRAIN DTC)

Refer to "Diagnostic Trouble Code (DTC)" for information about data denoting emission-related powertrain DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

5. MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refer to the mode used to clear or reset emission-related diagnostic information.

Note:

- **Refer to the manufacturer's operation manual for the general scan tool to clear the emission-related diagnostic information (MODE $04).**
- **Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.**

6. MODE $07 (INITIAL EMISSION-RELATED POWERTRAIN DTC)

Refer to the data of DTC (pending code) for troubleshooting result about emission in the first time.

7. MODE $09 (REQUEST VEHICLE INFORMATION)

Refer to the data of the vehicle specification.

8. MODE $0A (EMISSION-RELATED DTC)

Refer to "Diagnostic Trouble Code (DTC)" for information about data denoting emission-related DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

BRAKE CONTROL (DIAGNOSTICS)

BC(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Control Module I/O Signal
6. Inspection Mode
7. Warning Light Illumination Pattern
8. Diagnostic Procedure for Subaru Select Monitor Communication
9. Data Monitor
10. Freeze Frame Data
11. Work Support
12. Diagnostic Trouble Code (DTC)
13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
14. General Diagnostic Table

BRAKE CONTROL (DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:
Remove foreign matter (dust, water, oil etc.) from the VDCCM&H/U connector during removal and installation.

1. CHECK PRE-INSPECTION.

1. Ask the customer when and how the trouble occurred using the interview check list. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Check List for Interview.
2. Before performing diagnostics, check the component which might affect VDC or parking brake system problems. Ref. to BRAKE CONTROL (DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Repair or replace each component.

2. CHECK INDICATION OF DTC.

1. Turn the ignition switch to ON.
2. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:
If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication>INSPECTION > COMMUNICATION FOR INITIALIZING IMPOSSIBLE.

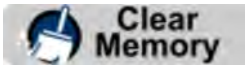
Are any DTCs displayed?

Yes	Record the DTC, time stamp and freeze frame data. Go to 4.
No	Go to 3.

3. PERFORM GENERAL DIAGNOSTICS.

1. Perform the inspection by referring to "General Diagnostic Table". Ref. to BRAKE CONTROL (DIAGNOSTICS)>General Diagnostic Table>INSPECTION.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



5. Check that the DTC is not displayed.

Do the VDC warning light & VDC indicator light, VDC OFF indicator light and ABS warning light go off after starting the engine?

Yes	Finish the diagnosis.
No	Check the combination meter circuit. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>ABS WARNING LIGHT DOES NOT GO OFF. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>VDC OFF INDICATOR LIGHT DOES NOT GO OFF.

4. PERFORM DIAGNOSIS.

1. Refer to "Diagnostic Trouble Code (DTC)".
   Note:
   For the DTC list, refer to "Diagnostic Trouble Code (DTC)". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Correct the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
5. Check that the DTC is not displayed.

Is DTC displayed?

Yes	Repeat step 4 until DTC is not shown.
No	Finish the diagnosis.

BRAKE CONTROL (DIAGNOSTICS) > Check List for Interview

CHECK

Check the following item about the vehicle’s state.

1. STATE OF ABS WARNING LIGHT

<table>
<tr><td>ABS warning light illuminates.</td><td colspan="3">❑ Always
❑ Sometimes
❑ Only once
❑ Does not illuminate
• When/How long does it illuminate?</td></tr>
<tr><td>Ignition key position</td><td colspan="3">❑ LOCK
❑ ACC
❑ ON (before starting engine)
❑ START
❑ ON (after starting engine, engine is running)
❑ ON (after starting engine, engine is at a standstill)</td></tr>
<tr><td rowspan="11">Timing</td><td colspan="3">❑ Immediately after turning the ignition switch to ON
❑ Immediately after turning the ignition switch to START</td></tr>
<tr><td rowspan="2">❑ While accelerating</td><td colspan="2">—</td><td>km/h</td></tr>
<tr><td colspan="2">—</td><td>MPH</td></tr>
<tr><td>❑ While driving at a constant speed</td><td>km/h</td><td>MPH</td></tr>
<tr><td rowspan="2">❑ While decelerating</td><td colspan="2">—</td><td>km/h</td></tr>
<tr><td colspan="2">—</td><td>MPH</td></tr>

BRAKE CONTROL (DIAGNOSTICS) > General Description

CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

Caution:

- **Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.**
- **Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.**

BRAKE CONTROL (DIAGNOSTICS) > General Description

INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

2. GROUND

Check the installation of the ground bolt for VDC.

3. BRAKE FLUID

1. Check the brake fluid level.
2. Check the brake fluid for leaks.

4. HYDRAULIC UNIT

Check the hydraulic unit.

- When using the brake tester Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>INSPECTION > CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER.
- When not using the brake tester Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>INSPECTION > CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE.

5. BRAKE DRAG

Check for brake drag.

6. BRAKE PAD AND ROTOR

Check the brake pad and rotor.

- Front Ref. to BRAKE>Front Brake Pad>INSPECTION. Ref. to BRAKE>Front Disc Rotor>INSPECTION.
- Rear Ref. to BRAKE>Rear Brake Pad>INSPECTION. Ref. to BRAKE>Rear Disc Rotor>INSPECTION.

7. PARKING BRAKE ASSEMBLY

Check the parking brake assembly. Ref. to PARKING BRAKE>General Description>COMPONENT.

8. TIRES

Check the tire specifications, tire wear and air pressure. Ref. to WHEEL AND TIRE SYSTEM>General Description>SPECIFICATION.

BRAKE CONTROL (DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

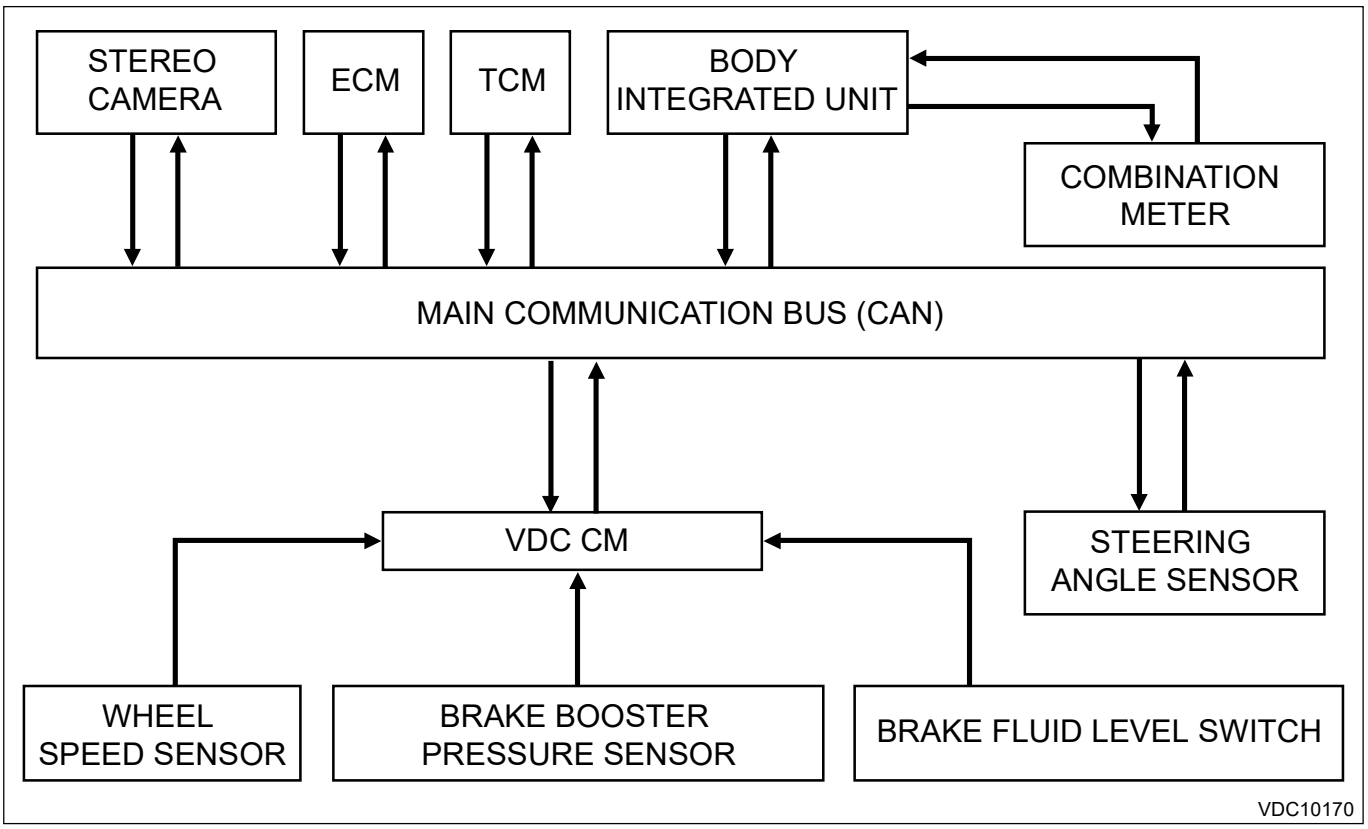

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

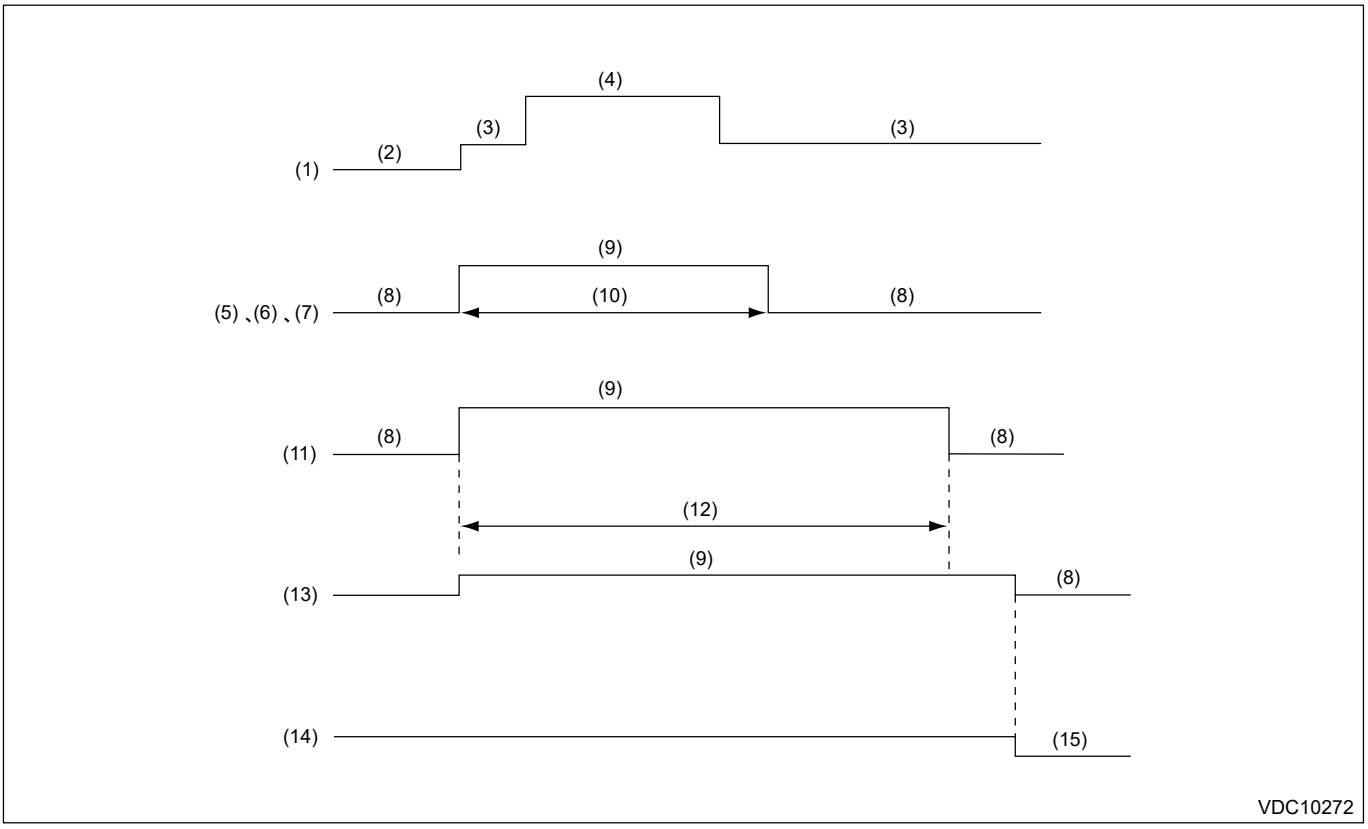
BRAKE CONTROL (DIAGNOSTICS) > Inspection Mode

PROCEDURE



1. Reproduce the malfunction occurrence condition as much as possible.
2. Drive the vehicle at least ten minutes.

Note:

Make sure the vehicle is not dragged to one side under usual driving condition.

BRAKE CONTROL (DIAGNOSTICS) > Warning Light Illumination Pattern

INSPECTION

(1) Ignition switch	(6) VDC OFF indicator light	(11) VDC warning light & VDC indicator light
(2) OFF	(7) Hill start assist warning light	(12) 2 seconds or more
(3) ON	(8) Light OFF	(13) Brake warning light (EBD warning light)
(4) Engine start	(9) Light ON	(14) Parking brake
(5) ABS warning light	(10) 2 seconds	(15) Released

Note:

Hill start assist warning light always illuminates when the hill start assist is in the OFF mode.

1. When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2. When the warning lights or indicator lights remain constantly OFF, check the combination meter circuit. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>HILL START ASSIST WARNING LIGHT DOES NOT COME ON.
3. When the ABS warning light, VDC OFF indicator light, VDC warning light & VDC indicator light, and hill start assist warning light do not go off, check the combination meter circuit or CAN communication circuit. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination

Pattern>ABS WARNING LIGHT DOES NOT GO OFF. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>VDC OFF INDICATOR LIGHT DOES NOT GO OFF. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern>HILL START ASSIST WARNING LIGHT DOES NOT GO OFF.

Note:

- **Even when the ABS warning light and the VDC warning light & VDC indicator light do not go off in 2 seconds after illuminating, the ABS and VDC functions are normal if the warning lights go off while the vehicle is driven. However, while these lights are on, the functions with their warning lights illuminated do not operate.**
- **It may take several minutes before the VDC warning light & VDC indicator light goes off, if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature. Perform the Clear Memory Mode because DTC may be recorded at this time. Ref. to COMMON(diag)>Clear memory.**
- **With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, and VDC warning light & VDC indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensor or longitudinal G sensor. In this case, this is not a malfunction. Clear the memory. Ref. to COMMON(diag)>Clear memory.**

BRAKE CONTROL (DIAGNOSTICS) > Warning Light Illumination Pattern

EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON (engine OFF), brake warning light (EBD warning light), ABS warning light, VDC OFF indicator light, and VDC warning light & VDC indicator light do not illuminate.
Note:
When pressing the VDC OFF switch for 30 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

1. CHECK OTHER INDICATOR LIGHT.

Turn the ignition switch to ON.

Immediately after the ignition switch is turned to ON, do all the indicator lights for VDC system and others illuminate?

Yes	Go to 2.
No	Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

2. CHECK VDCCM.

Connect the Subaru Select Monitor, and display the data monitor of VDCCM with the engine stopped. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Data Monitor

Immediately after the ignition switch is turned to ON, is the [EBD Warning Light] ON?

Yes	Go to 3.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

3. CHECK VDCCM.

Connect the Subaru Select Monitor, and display the data monitor of VDCCM with the engine stopped. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Data Monitor

Immediately after the ignition switch is turned to ON, is the [ABS Warning Lamp] ON?

Yes	Go to 4.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

4. CHECK VDCCM.

Connect the Subaru Select Monitor, and display the data monitor of VDCCM with the engine stopped. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Data Monitor

Immediately after the ignition switch is turned to ON, is the [VDC-OFF Light] ON?

Yes	Go to 5.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

5. CHECK VDCCM.

Connect the Subaru Select Monitor, and display the data monitor of VDCCM with the engine stopped. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Immediately after the ignition switch is turned to ON, is the [VDC Warning Lamp] ON?

Yes	Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

BRAKE CONTROL (DIAGNOSTICS) > Warning Light Illumination Pattern

HILL START ASSIST WARNING LIGHT DOES NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON (engine OFF), hill start assist warning light does not illuminate.

1. CHECK OTHER INDICATOR LIGHT.

Turn the ignition switch to ON. (Engine OFF)

Do other indicator lights illuminate?

Yes	Go to 2.
No	Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

2. READ DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

Is the check result OK?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

ABS WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective engine
- Defective CAN communication

Trouble symptom:

ABS warning light does not go off when starting the engine.

1. READ DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK VDCCM.

Display the data monitor of VDCCM using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Is [ABS Warning Lamp] ON?

Yes	Go to 3.
No	Go to 5.

3. CHECK WARNING LIGHT.

1. Save the freeze frame data. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Freeze Frame Data.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

Does the ABS warning light go off?

Yes	Normal. Perform the Inspection Mode to check that the light does not turn ON again.
No	Go to 4.

4. READ DTC.

After driving the vehicle at 40 km/h (25 MPH) or more, read DTCs using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 5.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>LIST.
No	Go to 6.

6. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

Is the check result OK?

Yes	Replace the VDCCM&H/U.
No	Replace the VDCCM&H/U. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

BRAKE CONTROL (DIAGNOSTICS) > Warning Light Illumination Pattern

VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective engine
- Defective CAN communication

Trouble symptom:

VDC warning light and VDC indicator light do not go off when starting the engine.

1. READ DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK VDCCM.

Display the data monitor of VDCCM using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Data Monitor

Is [VDC Warning Lamp] ON?

Yes	Go to 3.
No	Go to 5.

3. CHECK WARNING LIGHT.

1. Save the freeze frame data. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Freeze Frame Data.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

Does the VDC warning light & VDC operation indicator light go off?

Yes	Normal. Perform the Inspection Mode to check that the light does not turn ON again.
No	Go to 4.

4. READ DTC.

After driving the vehicle at 40 km/h (25 MPH) or more, read DTCs using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 5.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Replace the VDCCM only. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

Is the check result OK?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

HILL START ASSIST WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective CAN communication

Trouble symptom:

Hill start assist warning light does not go off when starting the engine.

1. CHECK HILL START ASSIST MODE.

Check hill start assist mode.

Is the hill start assist OFF?

Yes	Normal.
No	Go to 2.

2. READ DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

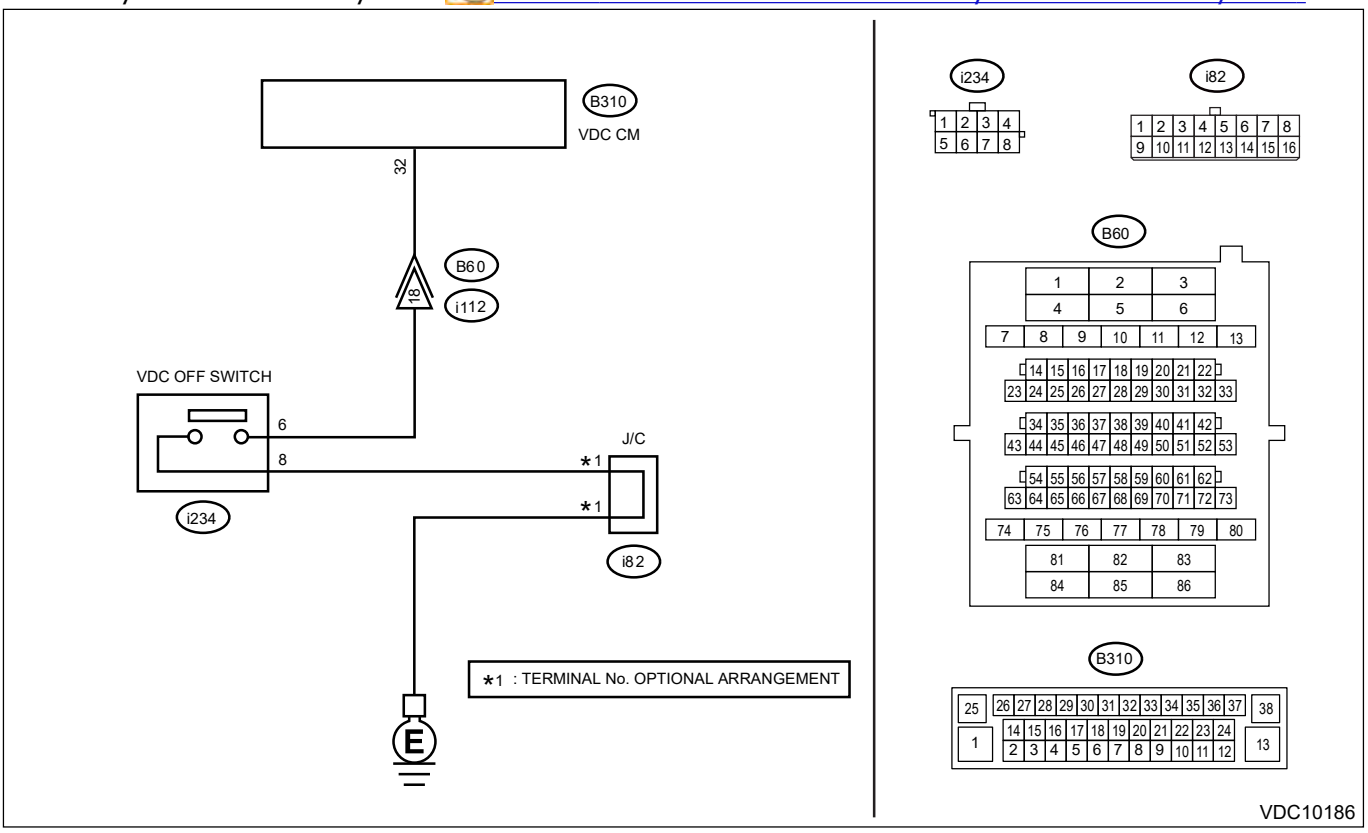
Is the check result OK?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

BRAKE CONTROL (DIAGNOSTICS) > Warning Light Illumination Pattern

VDC OFF INDICATOR LIGHT DOES NOT GO OFF

Detecting condition:



- Defective combination meter
- Defective CAN communication
- VDC OFF switch is shorted.

Trouble symptom:

VDC OFF indicator light does not go off when starting the engine.

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. READ DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK VDC OFF SWITCH.

Connect the Subaru Select Monitor, and display the data monitor of VDCCM with the engine started. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Does [OFF SW Signal] change according to operation of VDC OFF switch?

Yes	Go to 5.
No	Go to 3.

3. CHECK VDC OFF SWITCH.

Remove and check VDC OFF switch. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC OFF Switch.

Is the check result OK?

Yes	Go to 4.
No	Replace the VDC OFF switch.

4. CHECK VDC OFF SWITCH CIRCUIT.

1. Disconnect the connector from the VDCCM&H/U.
2. Measure the resistance between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 32 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Check the VDC OFF switch circuit.
No	Go to 5.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

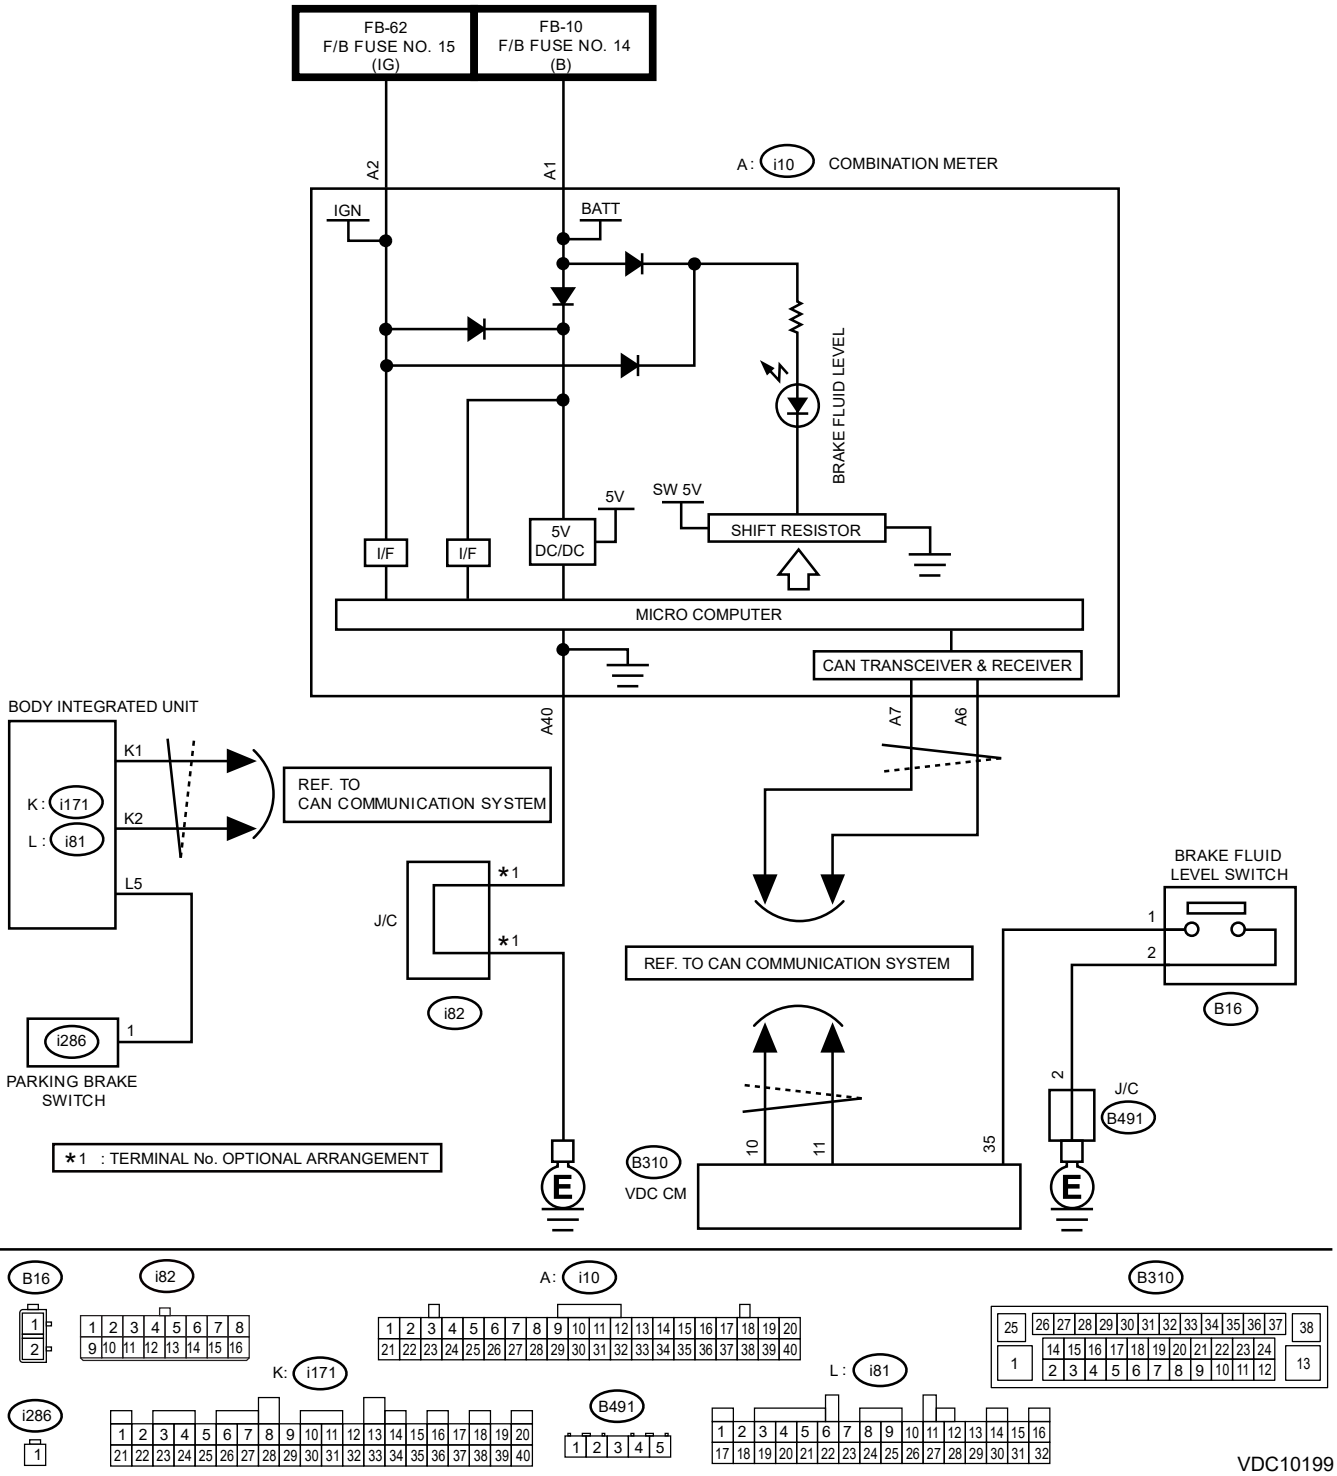
Is the check result OK?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

BRAKE CONTROL (DIAGNOSTICS) > Warning Light Illumination Pattern

BRAKE WARNING LIGHT DOES NOT GO OFF

Detecting condition:



- Brake warning light circuit is shorted.
- Defective sensor/connector
- Defective CAN communication

Trouble symptom:

Brake warning light does not go off after starting the engine.

Wiring diagram:

Parking brake / brake fluid level warning light system Ref. to WIRING SYSTEM>Parking Brake / Brake Fluid Level Warning Light System.

1. CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.

1. Turn the ignition switch to OFF.
2. Check that the VDCCM&H/U connector is inserted until it is locked by clamp.

Is the connector firmly inserted?

Yes	Go to 2.
No	Insert the VDCCM&H/U connector until it is locked by clamp.

2. READ DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK BRAKE FLUID AMOUNT.

Check the amount of brake fluid in the reservoir tank of master cylinder.

Does the level of the brake fluid amount fall between the lines of “MAX” and “MIN”?

Yes	Go to 5.
No	Replenish brake fluid to the specified value.

5. CHECK BRAKE FLUID LEVEL SWITCH.

1. Turn the ignition switch to OFF.
2. Disconnect the level switch connector (B16) from master cylinder.
3. Measure the resistance between master cylinder terminals.

Terminals

No. 1 — No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Replace the master cylinder. Ref. to BRAKE>Master Cylinder.

6. CHECK GROUND SHORT OF HARNESS.

1. Disconnect the connector from VDCCM.
2. Measure the resistance between VDCCM connector and chassis ground.

Connector & terminal

(B310) No. 35 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Repair the harness between VDCCM and brake fluid level switch.

7. CHECK PARKING BRAKE SWITCH.

1. Disconnect the connector (i286) from parking brake switch.
2. Release the parking brake.
3. Measure the resistance between parking brake switch terminal and chassis ground.

Is the resistance 1 MΩ or more?

Yes	Go to 8.
No	Replace the parking brake switch.

8. CHECK GROUND SHORT OF HARNESS.

1. Disconnect the connector (i81) from body integrated unit.
2. Measure the resistance between body integrated unit connector and chassis ground.
   Connector & terminal
   (i81) No. 5 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 9.
No	Repair the harness between body integrated unit and parking brake switch.

9. CHECK POOR CONTACT OF CONNECTOR.

Check for poor contact of all connectors.

Is there poor contact?

Yes	Repair the connector.
No	Go to 10.

10. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

Is the check result OK?

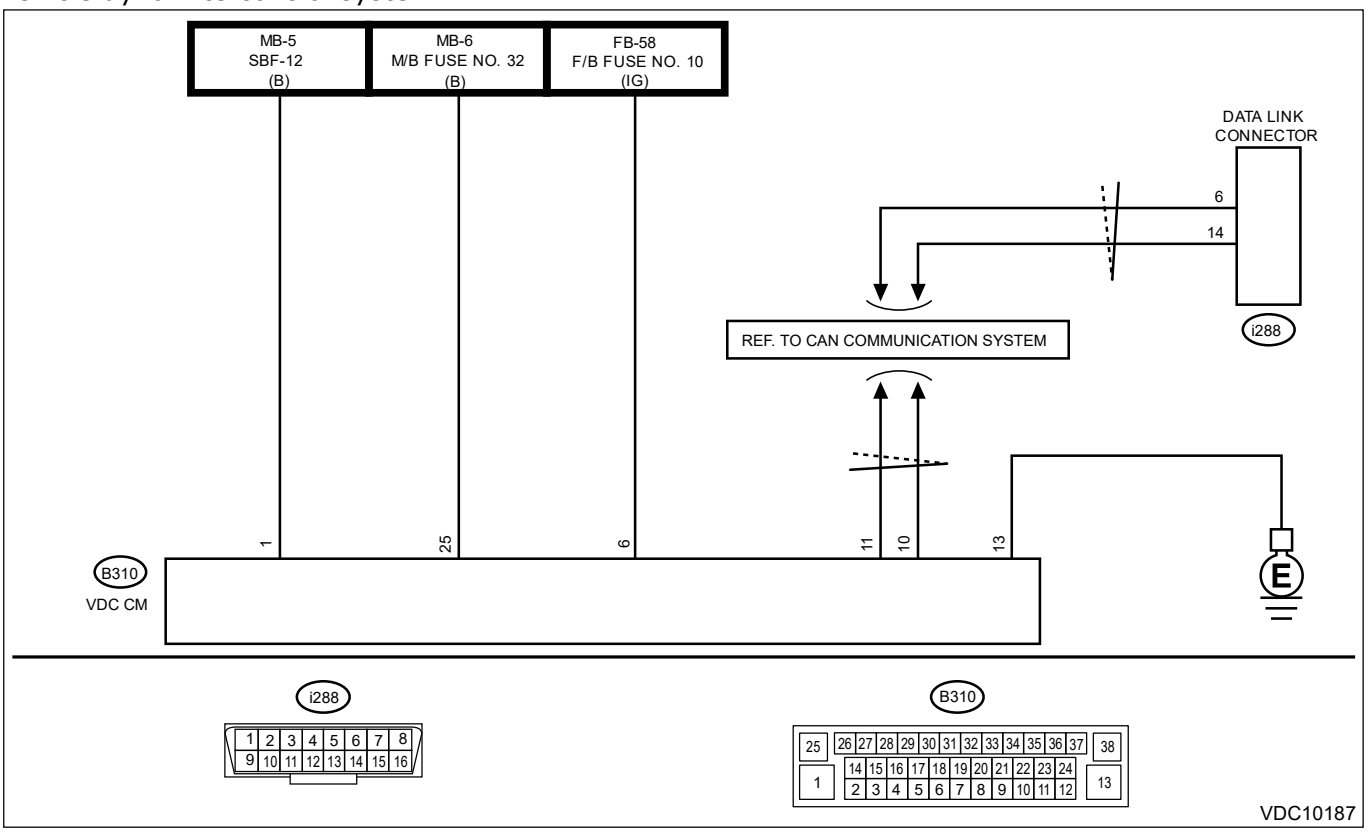
Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:



Defective harness connector

Trouble symptom:

Communication is impossible between VDC and Subaru Select Monitor.

WIRING DIAGRAM:

Vehicle dynamics control system

1. CHECK IGNITION SWITCH.	no →	Perform the instructed procedures.
yes ↓		
2. CHECK BATTERY.	no →	Perform the instructed procedures.
yes ↓		

3. CHECK BATTERY TERMINAL.

yes → Perform the instructed procedures.

no → Go to 4.

4. CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.

no → Perform the instructed procedures.

yes ↓

5. CHECK LAN SYSTEM.

yes → Perform the instructed procedures.

no → Go to 6.

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.

yes → Perform the instructed procedures.

no → Go to 7.

7. CHECK SUBARU SELECT MONITOR COMMUNICATION.

no → Perform the instructed procedures.

yes ↓

8. CHECK POWER SUPPLY CIRCUIT.

no → Perform the instructed procedures.

yes ↓

9. CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.

no → Perform the instructed procedures.

yes ↓

10. CHECK POOR CONTACT OF CONNECTOR.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK IGNITION SWITCH.

Is the ignition switch ON?

Yes	Go to 2.
No	Turn the ignition switch to ON, and select Brake Control using the Subaru Select Monitor.

2. CHECK BATTERY.

1. Turn the ignition switch to OFF.
2. Measure the battery voltage.

Is the voltage 11 V or more?

Yes	Go to 3.
No	Charge or replace the battery.

3. CHECK BATTERY TERMINAL.

Is there poor contact at battery terminal?

Yes	Replace or tighten the battery terminal.
No	Go to 4.

4. CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.

Turn the ignition switch to OFF.

Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?

Yes	Go to 5.
No	Insert VDCCM&H/U connector into VDCCM&H/U.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Check whether communication to VDC system can be executed normally.

Is the [Select Function] screen displayed?

Yes	Check the DTC in VDC system. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Go to 7.

7. CHECK SUBARU SELECT MONITOR COMMUNICATION.

Connect the Subaru Select Monitor to another vehicle to check whether the communication for initializing can be executed normally.

Does the Subaru Select Monitor communicate normally?

Yes	Go to 8.
No	Repair or replace the Subaru Select Monitor.

8. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON. (Engine OFF)
2. Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 1 (+) — Chassis ground (−):
   (B310) No. 6 (+) — Chassis ground (−):
   (B310) No. 25 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 9.
No	Repair open circuit in harness between VDCCM&H/U and battery.

9. CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the VDCCM&H/U.
3. Measure the resistance of harness between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 13 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 10.
No	Repair the open circuit of VDCCM&H/U ground circuit and poor contact of connector.

10. CHECK POOR CONTACT OF CONNECTOR.

Is there poor contact of control module power supply, ground circuit and data link connector?

Yes	Repair the connector.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

BRAKE CONTROL (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

Vehicle Speed	Vehicle speed	km/h	—
Steering Angle Sensor	Steering angle detected by steering angle sensor	deg	—
Yaw Rate Sensor	Angle of the vehicle detected by yaw rate sensor	deg/s	—
Pressure Sensor Output	Brake fluid pressure detected by pressure sensor	MPa	—
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor	m/s^2	—
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor	m/s^2	—
Power Supply Voltage	Voltage supplied to VDCCM&H/U	V	—
Acceleration Pedal Position	Accelerator pedal opening angle	%	—
Engine Speed	Engine speed	rpm	—
FL wheel cylinder pressure sensor output	FL wheel cylinder brake fluid pressure detected by pressure sensor (model with EyeSight)	MPa	—

Item	Remarks	Standard/Unit	Note
FR wheel cylinder pressure sensor output	FR wheel cylinder brake fluid pressure detected by pressure sensor (model with EyeSight)	MPa	—
Eyesight Request Pressure	Requested fluid pressure when braking command is sent from EyeSight to VDC	MPa	—
Brake Booster Gauge Sensor Output	Vacuum pressure value inside brake booster measured by VDC (difference from atmospheric pressure)	kPa	—
Steering Angle Flag	Absolute angle status of steering angle sensor	Recognition in progress or failed	—
EBD Control Flag	Flag of EBD control activation status	ON or OFF	—
ABS Control Flag	Flag of ABS control activation status	ON or OFF	—
TCS Control Flag	Flag of TCS control activation status	ON or OFF	—
VDC Control Flag	Flag of VDC control activation status	ON or OFF	—
E/G Torque Down Control Stop Flag	Flag of engine control command signal	1 or 0	—
Stop-lamp relay drive signal	Brake light relay drive signal	ON or OFF	—
E/G torques up Control Stop Flag	Flag of engine control command signal	1 or 0	—
Brake Negative Pressure Warning	Signal for illuminating warning light for brake vacuum pressure fault	1 or 0	—
OHB Control Flag	Flag of OHB* control activation status	1 or 0	—
OHB Operation Number	Number of OHB* control activation time	time	—
VDC Normality Checking Flag	Flag of pre-collision function OFF status during VDC normality confirmation	1 or 0	—
Hill Descent Control State	HDC control activation status (model with HDC)	OFF or Standby, or Active or Unstable	—
Vectoring control flag	Activation status flag of brake-based torque vectoring control	ON or OFF	—
Brake Fluid Level Warning Lamp	Signal for illuminating brake fluid level warning light	ON or OFF	—
HSA OFF Lamp	Signal for illuminating indicator at HSA OFF	ON or OFF	—
OFF Switch Detection	Operation status of VDC OFF switch	ON or OFF	—
Brake Light Switch	Brake ON/OFF status	ON or OFF	—
Clutch switch	Clutch ON/OFF status (MT model)	ON or OFF	—
Reverse Signal	Reverse gear ON/OFF status	ON or OFF	—

Item	Remarks	Standard/Unit	Note
Detailed DTC(s)	Further categorization of diagnosis code	—	—
Clutch stroke sensor	Pedal stroke amount detected by the clutch stroke sensor (MT model)	%	—
Clutch engagement point	Meet position of the clutch stroke sensor (MT model)	%	—
Actual Engine Torque	Engine torque	N·m	—
Ambient Temp Sensor	Ambient temperature	°C	—

*: OHB = Optimized Hydraulic Brake (brake assist function when vacuum pressure drops)

BRAKE CONTROL (DIAGNOSTICS) > Work Support

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, enter vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Brake Control].
5. On [Select Function] display, select [Work Support].

BRAKE CONTROL (DIAGNOSTICS) > Work Support

LIST

Work support item	Remarks	Reference
ABS Sequence Control Mode	Operate the valve and pump motor continuously to perform the ABS sequence control.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>ABS Sequence Control.
VDC Function Check Mode	Operate the valve and pump motor continuously to perform the VDC sequence control.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Sequence Control.
Brake Lamp Lighting Operation	Forcibly activate the brake light relay to illuminate the brake light.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Brake Lamp Relay>OPERATION > BRAKE LAMP LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR.
VSC(VDC) Centering Mode	Set the steering angle sensor neutral position, and the lateral G sensor and longitudinal G sensor 0 (zero) point.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.
Reading of parameter: ECM to SSM	Read VDCCM parameter data.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM

Work support item	Remarks	Reference
		PARAMETER READING.
Writing of parameter: SSM to ECM	Write the parameter data to the VDCCM.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER WRITING.
Selection of Parameter	Select and register parameters in the VDCCM.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER SELECTION.
Confirm on parameter	Parameters registered in the VDCCM are displayed.	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER CHECK.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1211 FRONT RIGHT ABS SENSOR CIRCUIT

Note:

For the diagnostic procedure, refer to "DTC C1241 REAR LEFT ABS SENSOR CIRCUIT". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1241 REAR LEFT ABS SENSOR CIRCUIT.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1221 FRONT LEFT ABS SENSOR CIRCUIT

Note:

For the diagnostic procedure, refer to "DTC C1241 REAR LEFT ABS SENSOR CIRCUIT". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1241 REAR LEFT ABS SENSOR CIRCUIT.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1231 REAR RIGHT ABS SENSOR CIRCUIT

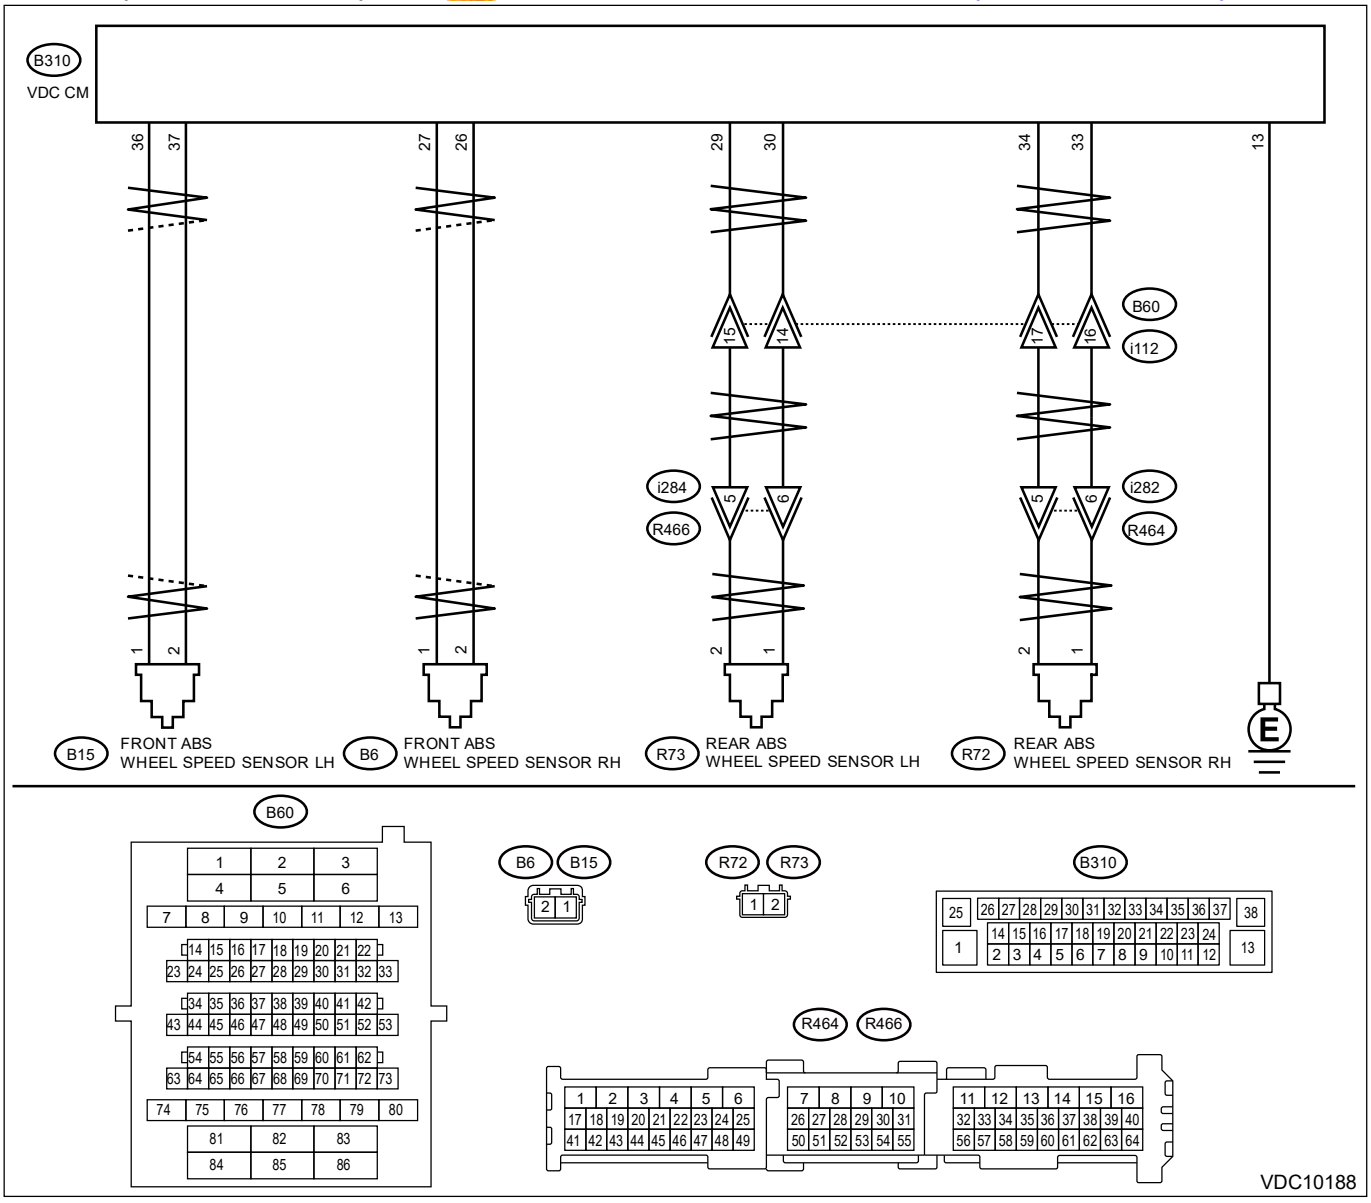
Note:

For the diagnostic procedure, refer to "DTC C1241 REAR LEFT ABS SENSOR CIRCUIT". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1241 REAR LEFT ABS SENSOR CIRCUIT.

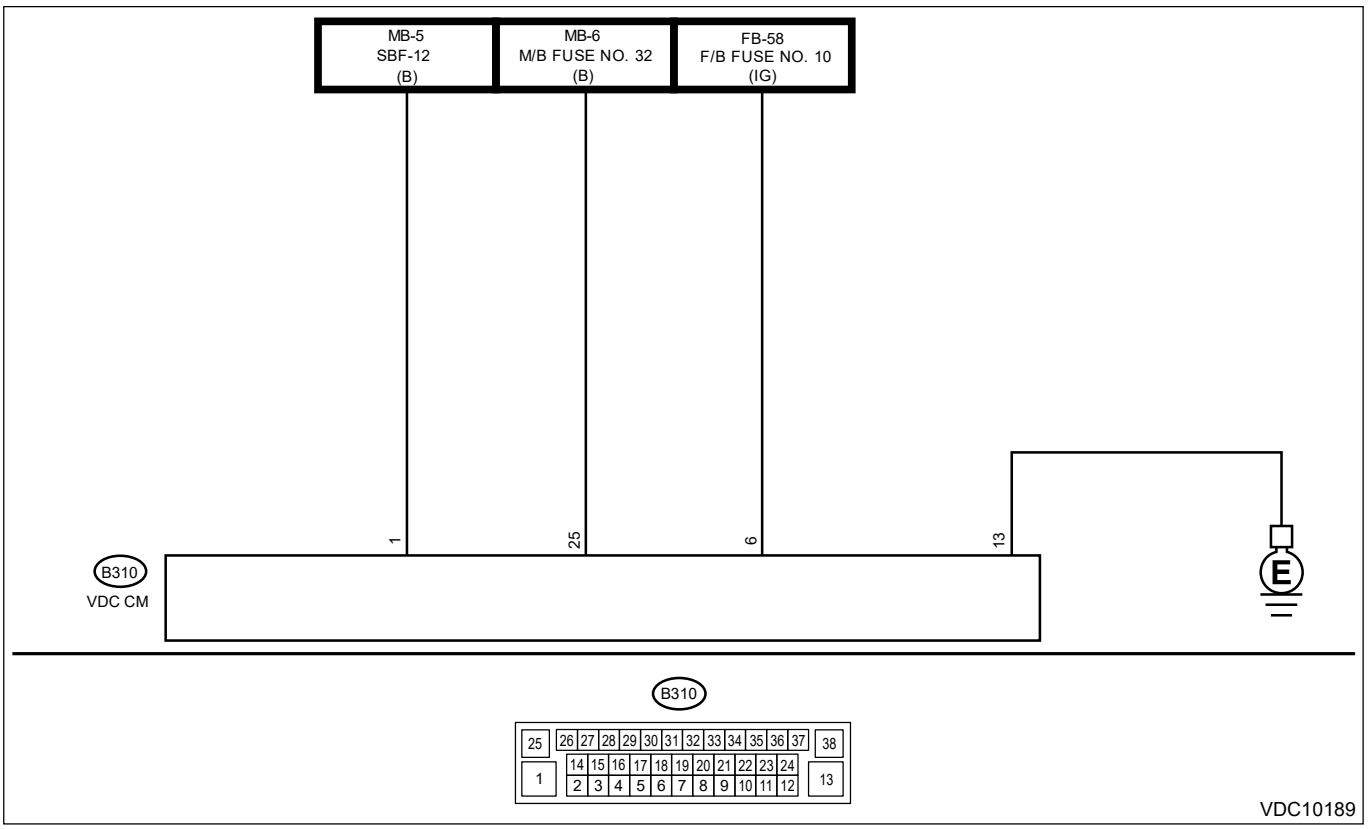
BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1241 REAR LEFT ABS SENSOR CIRCUIT

DTC detecting condition:



Judge as malfunction when the current value of the wheel speed sensor is out of normal range for a predetermined time or more.



Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

Note:

This DTC may be stored when the wheel speed sensor connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. Ref. to COMMON(diag)>Clear memory.

1. CHECK POOR CONTACT OF CONNECTOR.

Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.

Is there poor contact?

Yes	Repair the connector.
No	Go to 2.

2. CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR (CHECK FOR OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the connector (B310) from the VDCCM&H/U.
3. Disconnect the connector from ABS wheel speed sensor.
4. Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector.

Connector & terminal

DTC C1211

(B310) No. 30 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.

4. CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.

1. Connect the VDCCM&H/U connector.
2. Connect the ABS wheel speed sensor connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between ABS wheel speed sensor connector and chassis ground.

Connector & terminal

(R73) No. 2 (+) — Chassis ground (−):

Is the voltage 5 — 16 V?

Yes	Go to 6.
No	Go to 5.

5. CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the VDCCM&H/U connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between VDCCM&H/U connector terminals.
   Connector & terminal
   (B310) No. 1 (+) — (B310) No. 13 (−):
   (B310) No. 6 (+) — (B310) No. 13 (−):
   (B310) No. 25 (+) — (B310) No. 13 (−):

Is the voltage 10 — 15 V?

Yes	Go to 6.
No	Check the generator, battery and VDCCM&H/U power supply circuit.

6. CHECK ABS WHEEL SPEED SENSOR SIGNAL.

1. Prepare an oscilloscope.
2. Check the ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor>INSPECTION > CHECK ABS WHEEL SPEED SENSOR UNIT. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Rear ABS Wheel Speed Sensor>INSPECTION > CHECK ABS WHEEL SPEED SENSOR UNIT.

Is the pattern the same waveform as shown in the figure?

Yes	Go to 7.
No	Replace the ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Rear ABS Wheel Speed Sensor.

7. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 8.

8. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1212 FRONT RIGHT ABS SENSOR SIGNAL

Note:

For the diagnostic procedure, refer to "DTC C1242 REAR LEFT ABS SENSOR SIGNAL". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1242 REAR LEFT ABS SENSOR SIGNAL.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1222 FRONT LEFT ABS SENSOR SIGNAL

Note:

For the diagnostic procedure, refer to "DTC C1242 REAR LEFT ABS SENSOR SIGNAL". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1242 REAR LEFT ABS SENSOR SIGNAL.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1232 REAR RIGHT ABS SENSOR SIGNAL

Note:

For the diagnostic procedure, refer to "DTC C1242 REAR LEFT ABS SENSOR SIGNAL". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1242 REAR LEFT ABS SENSOR SIGNAL.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1242 REAR LEFT ABS SENSOR SIGNAL

DTC detecting condition:

- A fault is detected if the time of decompression or hold exceeds the predetermined time.
- A fault is detected if noise of the wheel speed sensor signal is detected.
- A fault is detected if the wheel speed sensor signal is lost, or the wheel speed sensor signal continuously indicates significantly low speed by calculating the difference between maximum speed and minimum speed among the four wheels.
- A fault is detected if the wheel speed sensor signal continuously indicates excessively high or low speed.
- A fault is detected if the wheel speed sensor signal changes irregularly.
- A fault is detected if the wheel speed sensor signal drops cyclically.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Note:

This DTC may be stored when the wheel speed sensor connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. **Ref. to COMMON(diag)>Clear memory.**

1. CHECK ABS WHEEL SPEED SENSOR AND FREEZE FRAME DATA USING SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, check the freeze frame data when DTC is detected. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Freeze Frame Data.
2. Compare [FR Wheel Speed], [FL Wheel Speed], [RR Wheel Speed] and [RL Wheel Speed] to determine a sensor that is not indicating the same value.
3. Check the data monitor of the wheel speed sensor that is not indicating the same value. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.

Does the speed indicated on the current data change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position? And, are the values on the freeze frame data of the vehicle speed from the four wheels indicated as almost identical?

Yes	Go to 2.
No	Go to 7.

2. CHECK POOR CONTACT OF CONNECTOR.

1. Turn the ignition switch to OFF.
2. Check for poor contact of the connector between VDCCM&H/U and ABS wheel speed sensor.

Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?

Yes	Repair the connector.
No	Go to 3.

3. CHECK CAUSE OF SIGNAL NOISE.

Make sure the radio wave devices and electronic components are installed correctly.

Are the radio wave devices and electronic components installed correctly?

Yes	Go to 4.
No	Install the radio wave devices and electronic components properly.

4. CHECK CAUSE OF SIGNAL NOISE.

Check if the noise sources (such as an antenna) are installed near the sensor harness.

Are noise sources installed?

Yes	Install the noise sources apart from sensor harness.
No	Go to 5.

5. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 6.

6. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

7. CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.

Are the ABS wheel speed sensor installation bolts tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?

Yes	Go to 8.
No	Tighten the ABS wheel speed sensor installation bolts.

8. CHECK ABS WHEEL SPEED SENSOR SIGNAL.

1. Prepare an oscilloscope.
2. Check the ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor>INSPECTION > CHECK ABS WHEEL SPEED SENSOR UNIT. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Rear ABS Wheel Speed Sensor>INSPECTION > CHECK ABS WHEEL SPEED SENSOR UNIT.

Does the oscilloscope indicate the waveform pattern as shown in the figure when the tires are turning? Or does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?

Yes	Go to 10.
No	Go to 9.

9. CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.

Are there foreign matters adhered to the tip of ABS wheel speed sensor or magnetic encoder? Or is there any breakage or damage?

Yes	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.
No	Go to 10.

10. CHECK CAUSE OF SIGNAL NOISE.

Make sure the radio wave devices and electronic components are installed correctly.

Are the radio wave devices and electronic components installed correctly?

Yes	Go to 11.
No	Install the radio wave devices and electronic components properly.

11. CHECK CAUSE OF SIGNAL NOISE.

Check if the noise sources (such as an antenna) are installed near the sensor harness.

Are noise sources installed?

Yes	Install the noise sources apart from sensor harness.
No	Go to 12.

12. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Go to 13.
No	Go to 14.

13. CHECK FREEZE FRAME DATA OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select Freeze frame data. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Freeze Frame Data.
2. Read the ABS wheel speed sensor output.

Is the ABS wheel speed sensor output different compared with other wheels?

Yes	Replace the ABS wheel speed sensor which has a difference. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Rear ABS Wheel Speed Sensor.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

14. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference. **Note:** **Though the ABS warning light may remain on at this time, this is normal. Drive the vehicle at 40 km/h (25 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.**

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

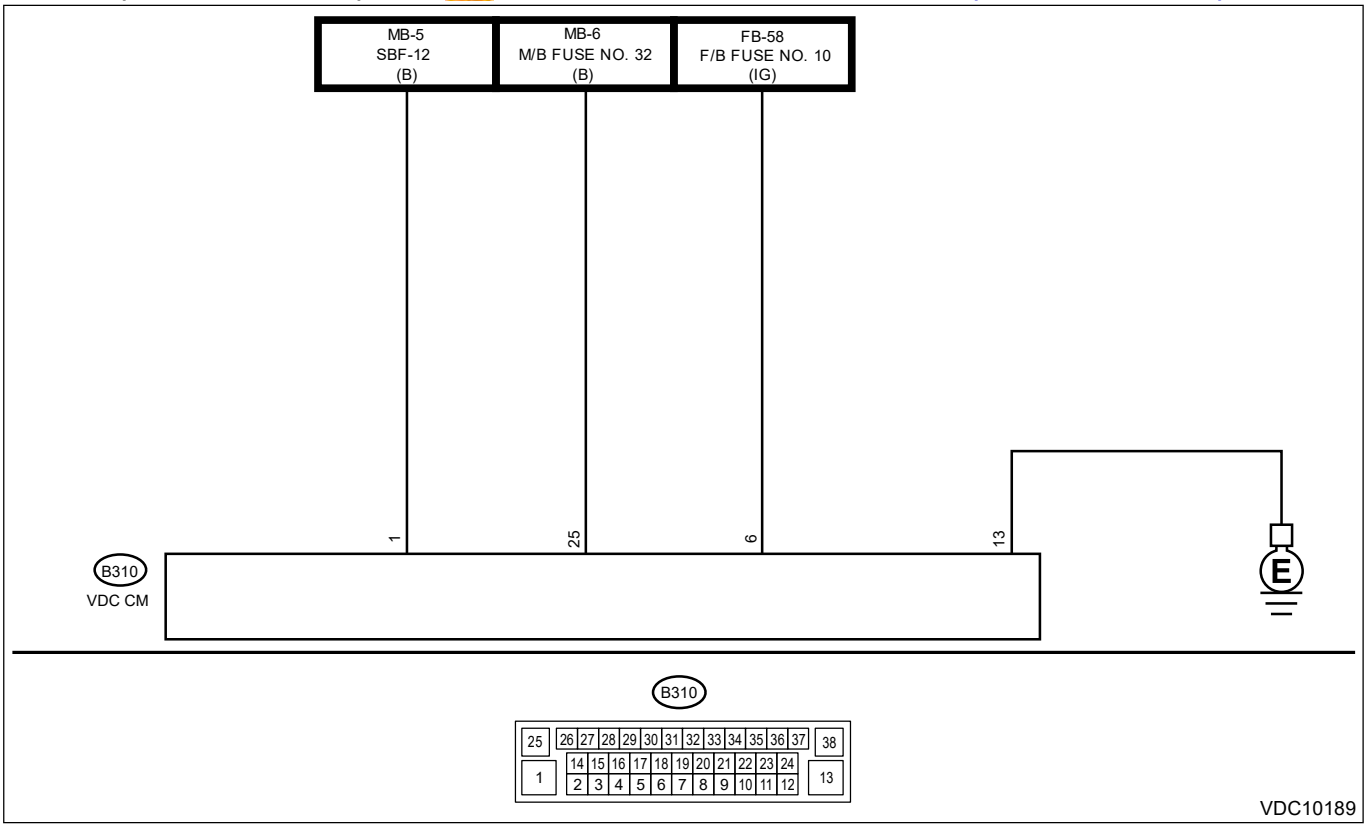
DTC C1362 NORMAL CLOSING VALVE 2

DTC detecting condition:



A fault is detected if electrical malfunction judgment is generated for VDCH/U solenoid valve.

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK VDCCM&H/U INPUT VOLTAGE.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the VDCCM&H/U.
3. Run the engine at idle.
4. Measure the voltage between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 1 (+) — Chassis ground (−):
   (B310) No. 6 (+) — Chassis ground (−):
   (B310) No. 25 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 2.
No	Repair the power supply circuit including the battery.

2. CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Measure the resistance between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 13 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair the VDCCM&H/U ground harness.

3. CHECK POOR CONTACT OF CONNECTORS.

Is there poor contact of connector between generator, battery and VDCCM&H/U?

Yes	Repair the connector.
No	Go to 4.

4. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 5.

5. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

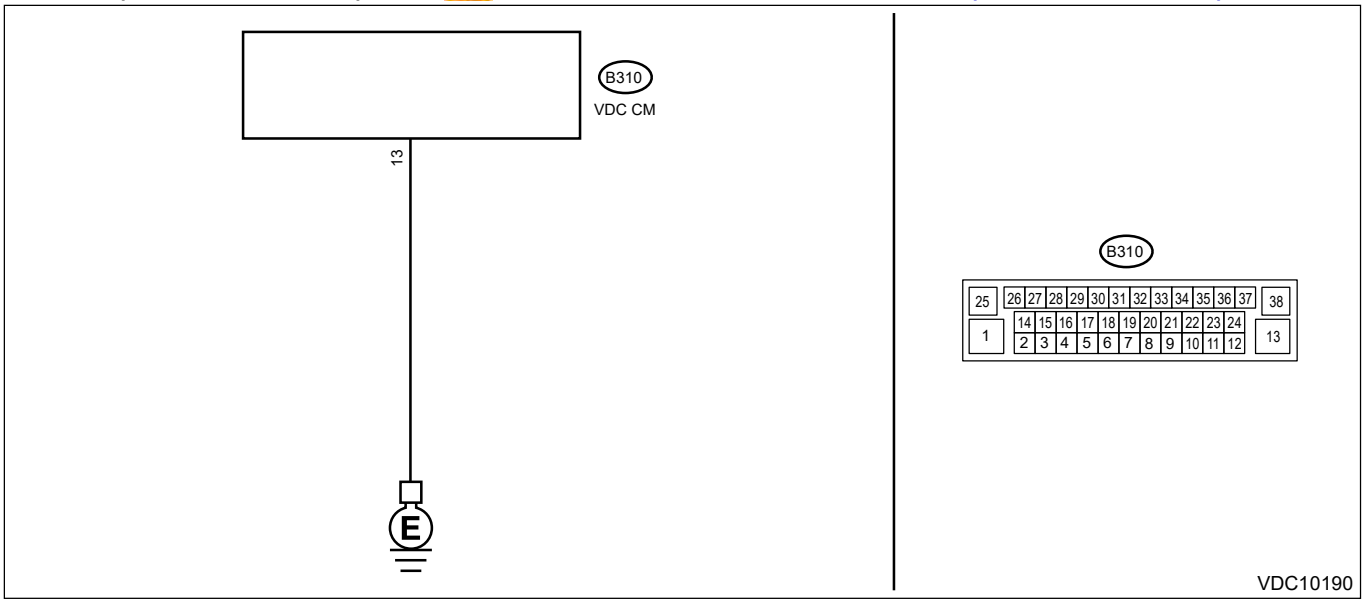
Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1411 ELECTRICAL CONTROL MODULE

DTC detecting condition:



Judge as malfunction when ECM internal malfunction is detected.

Trouble symptom:

- ABS does not operate sometimes.
- EBD does not operate sometimes.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the VDCCM&H/U.
3. Measure the resistance between VDCCM&H/U and chassis ground.
   Connector & terminal
   (B310) No. 13 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 2.
No	Repair the VDCCM&H/U ground harness.

2. CHECK POOR CONTACT OF CONNECTORS.

Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?

Yes	Repair the connector.
No	Go to 3.

3. CHECK CAUSE OF SIGNAL NOISE.

Are the radio wave devices and electronic components installed correctly?

Yes	Go to 4.
No	Install the radio wave devices and electronic components properly.

4. CHECK CAUSE OF SIGNAL NOISE.

Is there a noise source (such as an antenna) installed near the sensor harness and VDCCM?

Yes	Install the noise sources apart from sensor harness and VDCCM.
No	Go to 5.

5. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 6.

6. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1412 SELECTED PARAMETER

DTC detecting condition:

- A fault is detected if abnormal set value is found on the vehicle model that were given some parameters.
- A fault is detected if 0 point setting compensation of the sensor is not yet performed.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Note:

When the VDCCM&H/U is replaced, this DTC may be stored.

1. CHECK VDCCM&H/U IDENTIFICATION SYMBOL.

Check the identification symbol attached on the H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>SPECIFICATION.

Is the identification symbol correct?

Yes	Go to 2.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

2. CHECK PARAMETER SELECTED IN VDCCM.

Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER CHECK.

Does the parameter registered in the VDCCM match the relevant vehicle?

Yes	Go to 3.
No	Select and register the correct parameter. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER SELECTION.

3. CHECK SPECIFICATIONS OF OTHER CONTROL MODULES.

Check the specifications of ECM and TCM.

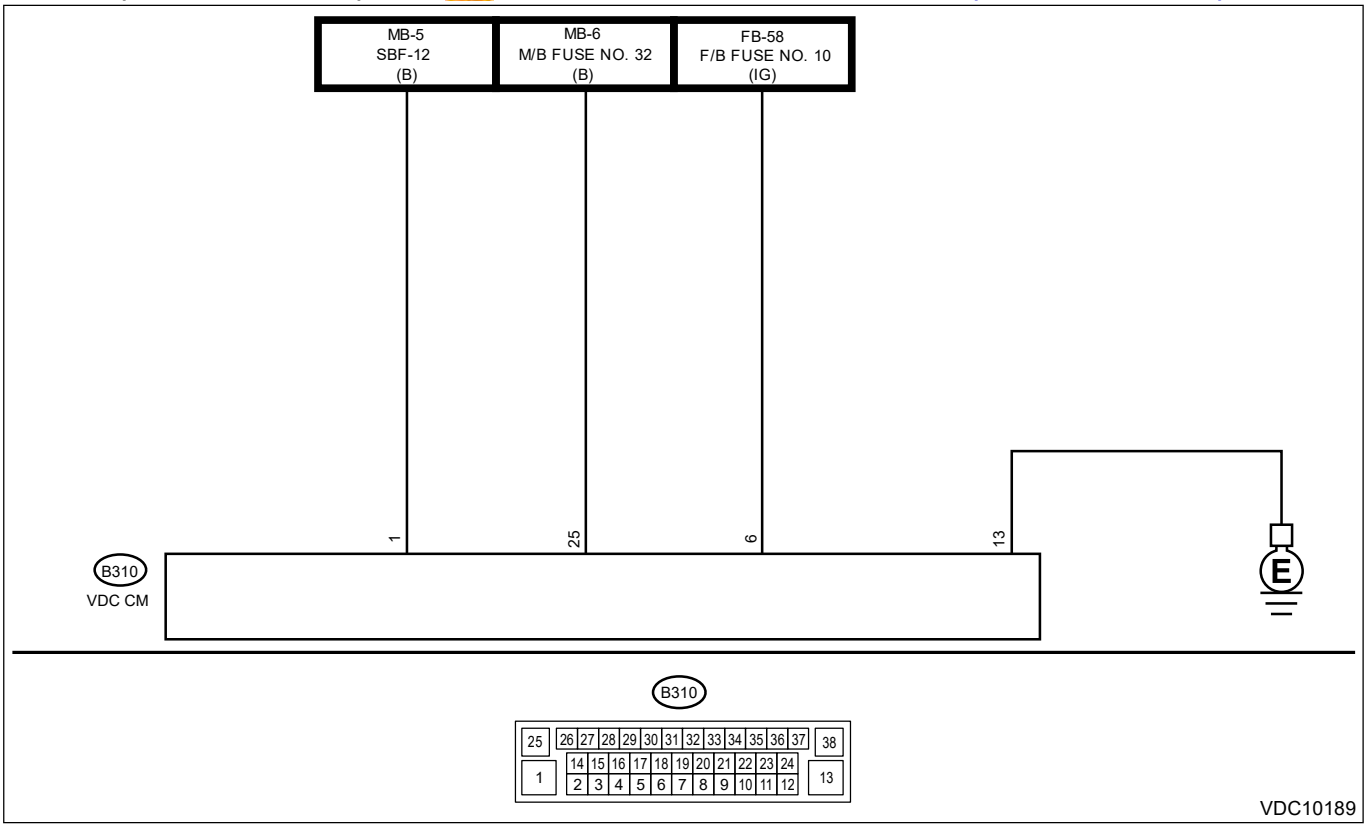
Are the specifications of ECM and TCM the same as vehicle specification?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the ECM and TCM. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Engine Control Module (ECM). Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1413 POWER SUPPLY VOLTAGE

DTC detecting condition:



A fault is detected if the power supply voltage is out of normal range for a predetermined time or more.

Trouble symptom:

- ABS does not operate.
- EBD may not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

Note:

Warning lights go off if voltage returns.

1. CHECK GENERATOR.

1. Start the engine.
2. Run the engine at idle after warming up.
3. Measure the voltage between generator terminal B and chassis ground.

Terminals

Generator terminal B (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 2.
No	Repair the generator.

2. CHECK BATTERY TERMINAL.

Turn the ignition switch to OFF.

Are the positive and negative battery terminals clamped tightly?

Yes	Go to 3.
No	Install the battery terminal correctly.

3. CHECK VDCCM&H/U INPUT VOLTAGE.

1. Disconnect the connector from the VDCCM&H/U.
2. Run the engine at idle.
3. Operate devices such as headlights, air conditioner, rear defogger, etc. which produce an electrical load.
4. Measure the voltage between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 1 (+) — Chassis ground (−):
   (B310) No. 6 (+) — Chassis ground (−):
   (B310) No. 25 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Measure the resistance between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 13 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair the VDCCM&H/U ground harness circuit.

5. CHECK POOR CONTACT OF CONNECTORS.

Is there poor contact of connector between generator, battery and VDCCM&H/U?

Yes	Repair the connector.
No	Go to 6.

6. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 7.

7. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE

DTC detecting condition:
A fault is detected if engine control prohibition flag from ECM is received.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.

Note:

The warning light goes off if the engine control prohibition flag from ECM returns normally.

1. CHECK COOPERATION CONTROL FEASIBILITY OF ECM USING SUBARU SELECT MONITOR.

1. Start the engine, and run the engine at idle approximately 5 minutes.
2. Using the Subaru Select Monitor, select Data monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
3. Check [E/G Torque Down Control Stop Flag] on the display screen.

Is "1" displayed in [E/G Torque Down Control Stop Flag]?

Yes	Go to 4.
No	Go to 2.

2. CHECK WARNING LIGHT.

Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h (6 MPH) or more.

Does the VDC warning light illuminate?

Yes	Go to 3.
No	VDC is normal. Clear the memory. Ref. to COMMON(diag)>Clear memory. **Note:** **DTC may be recorded if cranking is performed during driving.**

3. CHECK POOR CONTACT OF CONNECTORS.

Is there poor contact of ECM connector?

Yes	Repair the connector.
No	Go to 4.

4. CHECK DTC OF ECM.

Read the DTC relating the ECM using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 5.

5. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 6.

6. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1423 DIFFERENT ECU SPECIFICATIONS

DTC detecting condition:

A fault is detected if the vehicle type information obtained from ECM via communication is different from the parameter setting information.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Note:

When parameter selection for VDCCM is improper, this DTC may be memorized.

1. CHECK VDCCM&H/U IDENTIFICATION SYMBOL.

Check the identification symbol attached on the H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>SPECIFICATION.

Is the identification symbol correct?

Yes	Go to 2.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

2. CHECK PARAMETER SELECTED IN VDCCM.

Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER CHECK.

Does the parameter registered in the VDCCM match the relevant vehicle?

Yes	CVT model: Go to 3. MT model: Go to 5.
No	Select and register the correct parameter. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER SELECTION.

3. CHECK TCM SPECIFICATION.

Check the TCM specification.

Is the specification of TCM same as vehicle specification?

Yes	Go to 4.
No	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

4. CHECK CVT SYSTEM.

1. Start the engine.
2. Using the Subaru Select Monitor, read DTC of CVT system. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC of CVT system displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 5.

5. CHECK ECM SPECIFICATION.

Check the ECM specification.

Is the specification of ECM same as vehicle specification?

Yes	Go to 6.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

6. CHECK ENGINE SYSTEM.

1. Start the engine.
2. Read the DTC of engine system using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is engine system DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 7.

7. CHECK VDCCM&H/U.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 8.

8. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1424 ECM

DTC detecting condition:
A fault is detected if malfunction judgment flag for the engine system is received from ECM for a predetermined time or more.
Trouble symptom:
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

1. CHECK ECM.

1. Start the engine.
2. Read the DTC relating the ECM using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK VDCCM&H/U.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 3.

3. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1431 AT

DTC detecting condition:

A fault is detected if malfunction flag is received from TCM.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

1. CHECK TCM.

1. Start the engine.
2. Read the DTC relating the TCM using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK VDCCM&H/U.

1. Turn the ignition switch to OFF.
2. After turning the ignition switch to ON for approx. 10 seconds, turn it to OFF.
3. Turn the ignition switch to ON again.
4. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
6. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 3.

3. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1432 DIFFERENT ECU SPECIFICATIONS

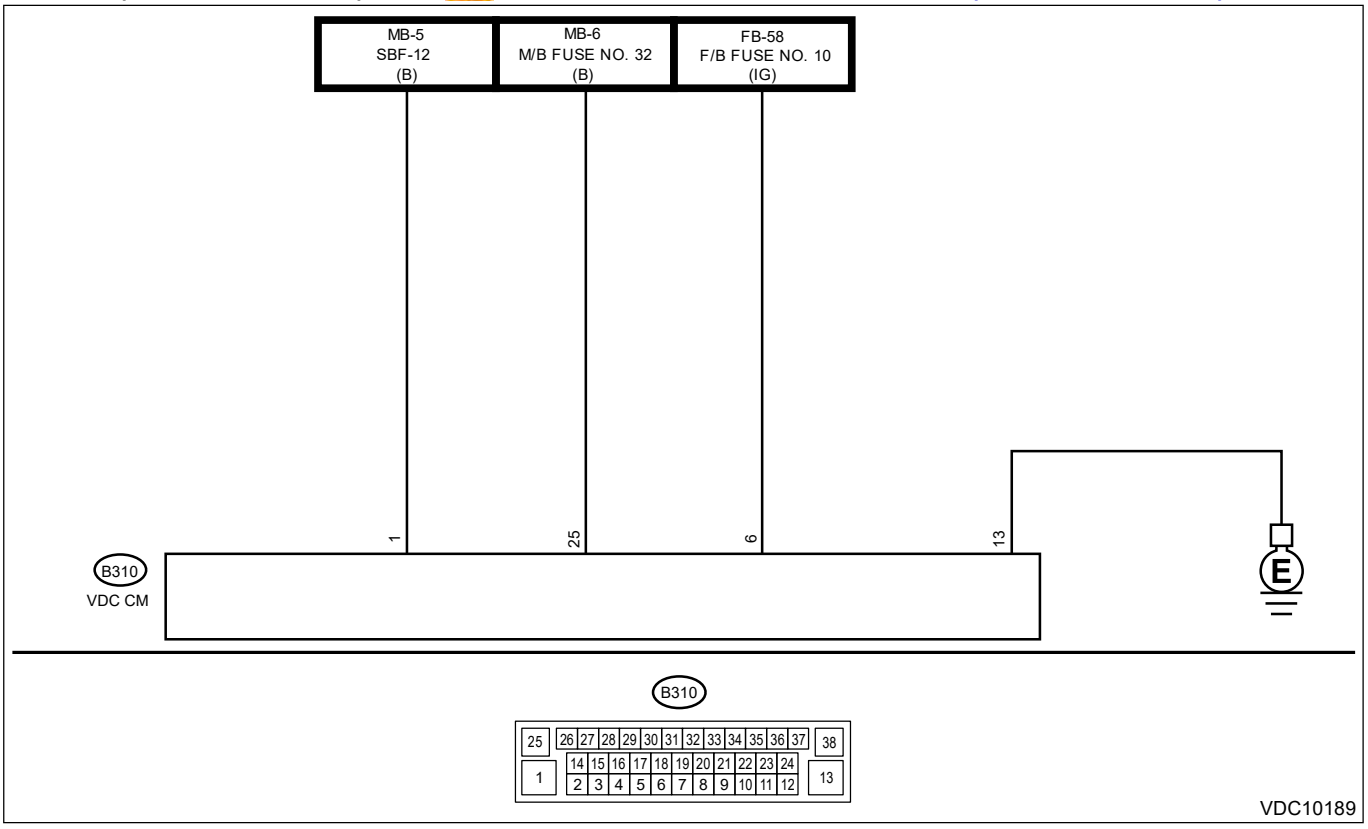
Note:

For the diagnostic procedure, refer to "DTC C1423 DIFFERENT ECU SPECIFICATIONS". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1423 DIFFERENT ECU SPECIFICATIONS.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1511 VALVE RELAY

DTC detecting condition:



A fault is detected if valve relay drive voltage failure is detected.

Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK VDCCM&H/U INPUT VOLTAGE.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the VDCCM&H/U.
3. Run the engine at idle.
4. Measure the voltage between VDCCM&H/U connector and chassis ground.

Connector & terminal

(B310) No. 6 (+) — Chassis ground (−):

(B310) No. 25 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 2.
No	Repair the power supply circuit.

2. CHECK VDCCM&H/U INPUT VOLTAGE.

Calculate the voltage difference measured in step 1.
A: (B310) No. 6 (+) — Chassis ground (−):
B: (B310) No. 25 (+) — Chassis ground (−):

Is the voltage difference between A and B 2 V or more?

Yes	Repair the power supply circuit.
No	Go to 3.

3. CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Measure the resistance between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 13 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Repair the VDCCM&H/U ground harness.

4. CHECK POOR CONTACT OF CONNECTORS.

Is there poor contact of connector between generator, battery and VDCCM&H/U?

Yes	Repair the connector.
No	Go to 5.

5. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 6.

6. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

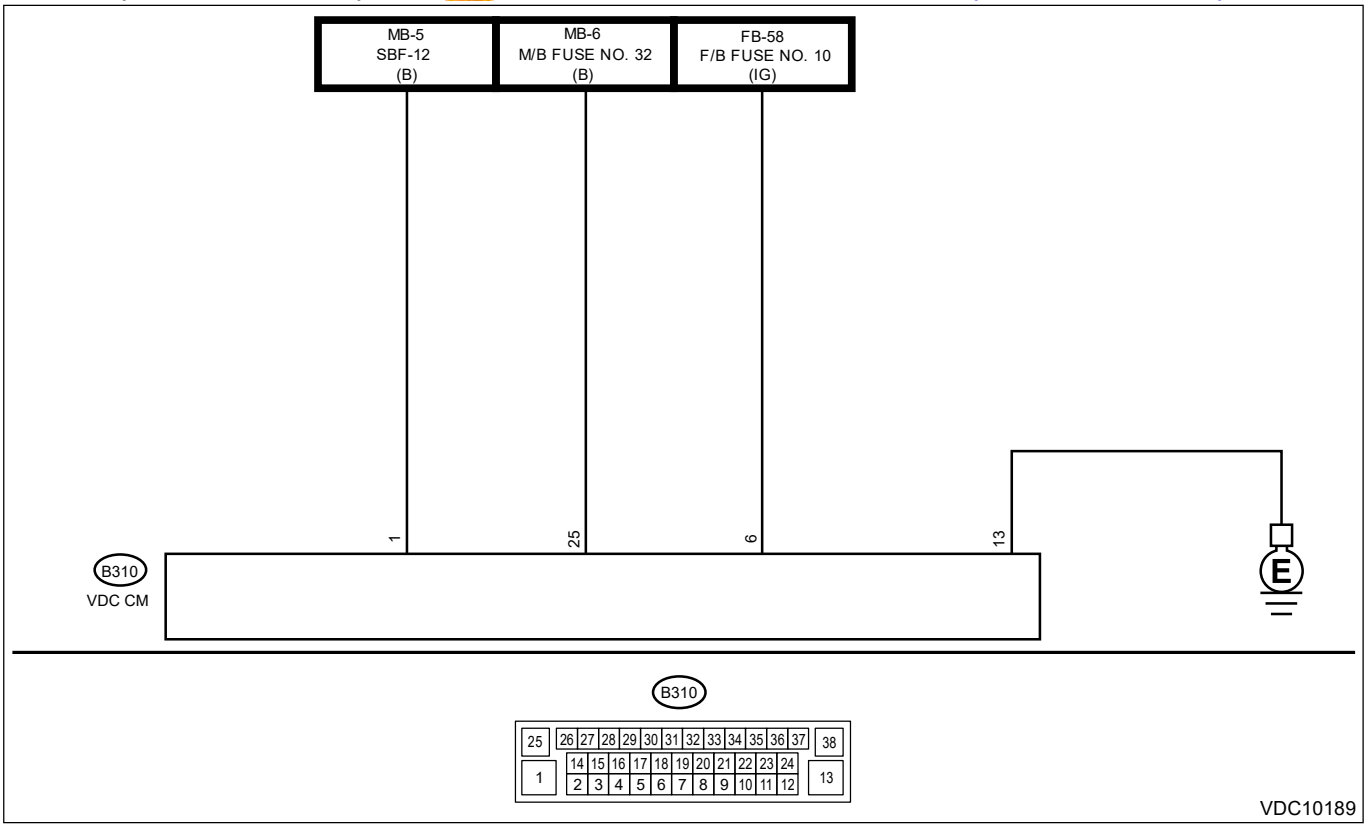
Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1521 MOTOR RELAY

DTC detecting condition:



A fault is detected if the pump motor supply voltage becomes significantly low when the pump motor is not driven.

Trouble symptom:

- ABS does not operate sometimes.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK VDCCM&H/U INPUT VOLTAGE.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the VDCCM&H/U.
3. Turn the ignition switch to ON.
4. Measure the voltage between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 1 (+) — Chassis ground (−):
   (B310) No. 6 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 2.
No	Repair the VDCCM&H/U power supply circuit.

2. CHECK VDCCM&H/U INPUT VOLTAGE.

Calculate the voltage difference measured in step 1.
A: (B310) No. 1 (+) — Chassis ground (−):
B: (B310) No. 6 (+) — Chassis ground (−):

Is the voltage difference between A and B 2 V or more?

Yes	Repair the power supply circuit.
No	Go to 3.

3. CHECK INSTALLATION OF VDCCM&H/U GROUND.

Is the VDCCM&H/U ground terminal installation bolt installed correctly?

Yes	Go to 4.
No	Install the VDCCM&H/U ground terminal installation bolt correctly.

4. CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Measure the resistance between VDCCM&H/U connector and chassis ground.
   Connector & terminal
   (B310) No. 13 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair the VDCCM&H/U ground harness.

5. CHECK VDCCM&H/U MOTOR RELAY.

Measure the resistance between VDCCM&H/U terminals.
Terminals
No. 1 — No. 13:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

6. CHECK POOR CONTACT OF CONNECTORS.

Turn the ignition switch to OFF.

Is there poor contact of connector between generator, battery and VDCCM&H/U?

Yes	Repair the connector.
No	Go to 7.

7. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 8.

8. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

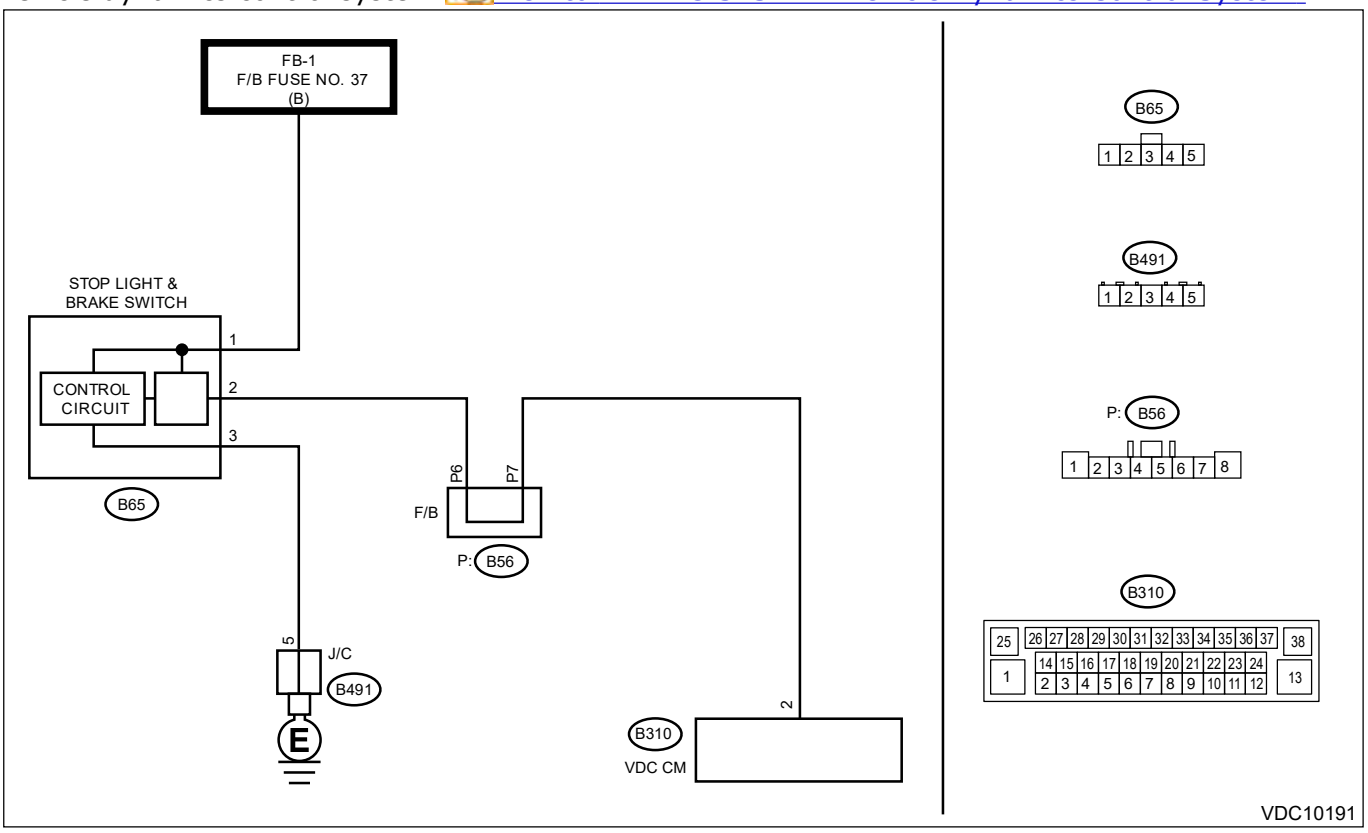
Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1531 BLS OFF STUCK

1. MODELS WITHOUT EYESIGHT

DTC detecting condition:



A fault is detected if stop light switch signal is OFF for a predetermined time or more with the pressure signal of the pressure sensor high.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK INSTALLATION POSITION OF STOP LIGHT SWITCH.	no →	Perform the instructed procedures.
yes ↓		
2. CHECK STOP LIGHT SWITCH UNIT.	no →	Perform the instructed procedures.

yes

3. CHECK STOP LIGHT POWER SUPPLY.

no → Perform the instructed procedures.

yes

4. CHECK STOP LIGHT SWITCH HARNESS.

no → Perform the instructed procedures.

yes

5. CHECK POOR CONTACT OF CONNECTORS.

yes → Perform the instructed procedures.

no → Go to 6.

6. CHECK VDCCM&H/U.

yes → Perform the instructed procedures.

no → Go to 7.

7. CHECK DETECTION OF OTHER DTCS FOR VDC.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK INSTALLATION POSITION OF STOP LIGHT SWITCH.

Check the installation position of the stop light switch. Ref. to BRAKE>Stop Light Switch>INSPECTION > INSPECT THE SPECIFIED POSITION.

Is the check result OK?

Yes	Go to 2.
No	Adjust the installation position of the stop light switch. Ref. to BRAKE>Stop Light Switch>INSTALLATION.

2. CHECK STOP LIGHT SWITCH UNIT.

Perform the inspection of stop light switch unit. Ref. to BRAKE>Stop Light Switch>INSPECTION > CHECK OUTPUT.

Is the check result OK?

Yes	Go to 3.
No	Replace the stop light switch. Ref. to BRAKE>Stop Light Switch.

3. CHECK STOP LIGHT POWER SUPPLY.

Measure the voltage between stop light switch terminal and chassis ground.

Connector & terminal

(B65) No. 1 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 4.
No	Repair the stop light power supply circuit.

4. CHECK STOP LIGHT SWITCH HARNESS.

1. Disconnect the connector from the VDCCM&H/U.
2. Measure the resistance between VDCCM&H/U and stop light switch.
   Connector & terminal
   (B65) No. 2 — (B310) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the stop light switch circuit.

5. CHECK POOR CONTACT OF CONNECTORS.

Is there poor contact of connector between stop light switch and VDCCM&H/U?

Yes	Repair the connector.
No	Go to 6.

6. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 7.

7. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

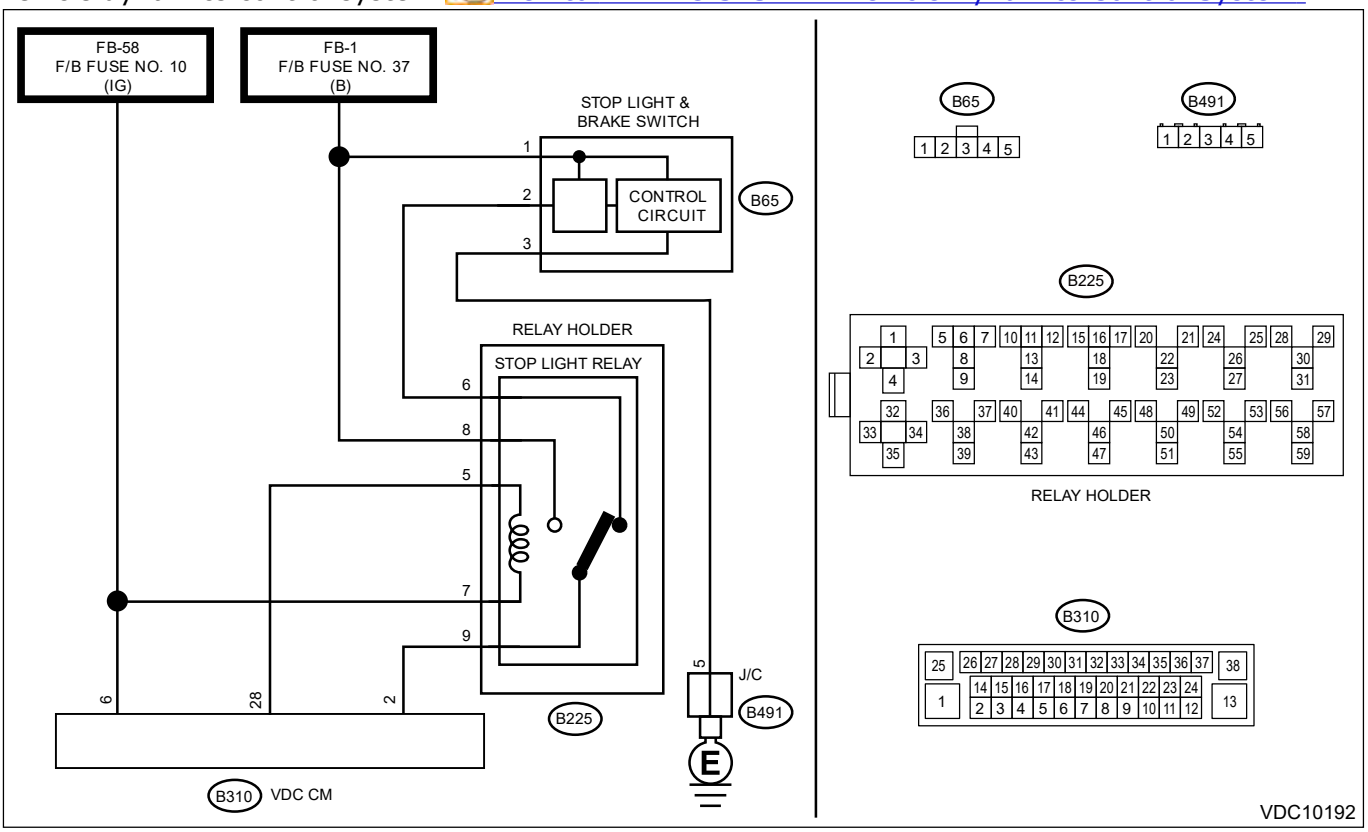
Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

2. MODELS WITH EYESIGHT

DTC detecting condition:

A fault is detected if stop light switch signal is OFF for a predetermined time or more with the pressure signal of the pressure sensor high.



Trouble symptom:

- VDC does not operate.

- Hill start assist does not operate.
- EyeSight does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK INSTALLATION POSITION OF STOP LIGHT SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓

2. CHECK STOP LIGHT SWITCH UNIT.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK STOP LIGHT RELAY.
   - no → Perform the instructed procedures.
   - yes ↓

4. CHECK VDCCM&H/U CONNECTOR.

yes → Perform the instructed procedures.

no → Go to 5.

5. CHECK STOP LIGHT SWITCH CIRCUIT (CHECK FOR OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

6. CHECK STOP LIGHT SWITCH CIRCUIT.

no → Perform the instructed procedures.

yes ↓

7. CHECK VDCCM&H/U.

yes → Perform the instructed procedures.

no → Go to 8.

8. CHECK DETECTION OF OTHER DTCS FOR VDC.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK INSTALLATION POSITION OF STOP LIGHT SWITCH.

1. Check the installation position of the stop light switch. Ref. to BRAKE>Stop Light Switch>INSPECTION > INSPECT THE SPECIFIED POSITION.

Is the check result OK?

Yes	Go to 2.
No	Adjust the installation position of the stop light switch. Ref. to BRAKE>Stop Light Switch>INSTALLATION.

2. CHECK STOP LIGHT SWITCH UNIT.

Perform the inspection of stop light switch unit. Ref. to BRAKE>Stop Light Switch>INSPECTION > CHECK OUTPUT.

Is the check result OK?

Yes	Go to 3.
No	Replace the stop light switch. Ref. to BRAKE>Stop Light Switch.

3. CHECK STOP LIGHT RELAY.

Measure the resistance of stop light relay terminals.

Terminals

No. 6 — No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Replace the stop light relay. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Relay and Fuse.

4. CHECK VDCCM&H/U CONNECTOR.

Disconnect the connector from the VDCCM&H/U.

Is there poor contact or damage of the VDCCM&H/U connector?

Yes	Repair the VDCCM&H/U connector.
No	Go to 5.

5. CHECK STOP LIGHT SWITCH CIRCUIT (CHECK FOR OPEN CIRCUIT).

Measure the resistance of stop light switch circuit.

Connector & terminal

(B310) No. 2 — (B225) No. 9:

(B65) No. 2 — (B225) No. 6:

(B65) No. 1 — (F/B fuse) No. 37:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the stop light switch circuit.

6. CHECK STOP LIGHT SWITCH CIRCUIT.

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Measure the voltage between brake light relay and chassis ground.

   Connector & terminal

   (B225) No. 9 (+) — Chassis ground (−):

Is the voltage 10 V or more when the stop light switch is ON (when pedal is depressed)?

Yes	Go to 7.
No	Repair the stop light switch circuit.

7. CHECK VDCCM&H/U.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 8.

8. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

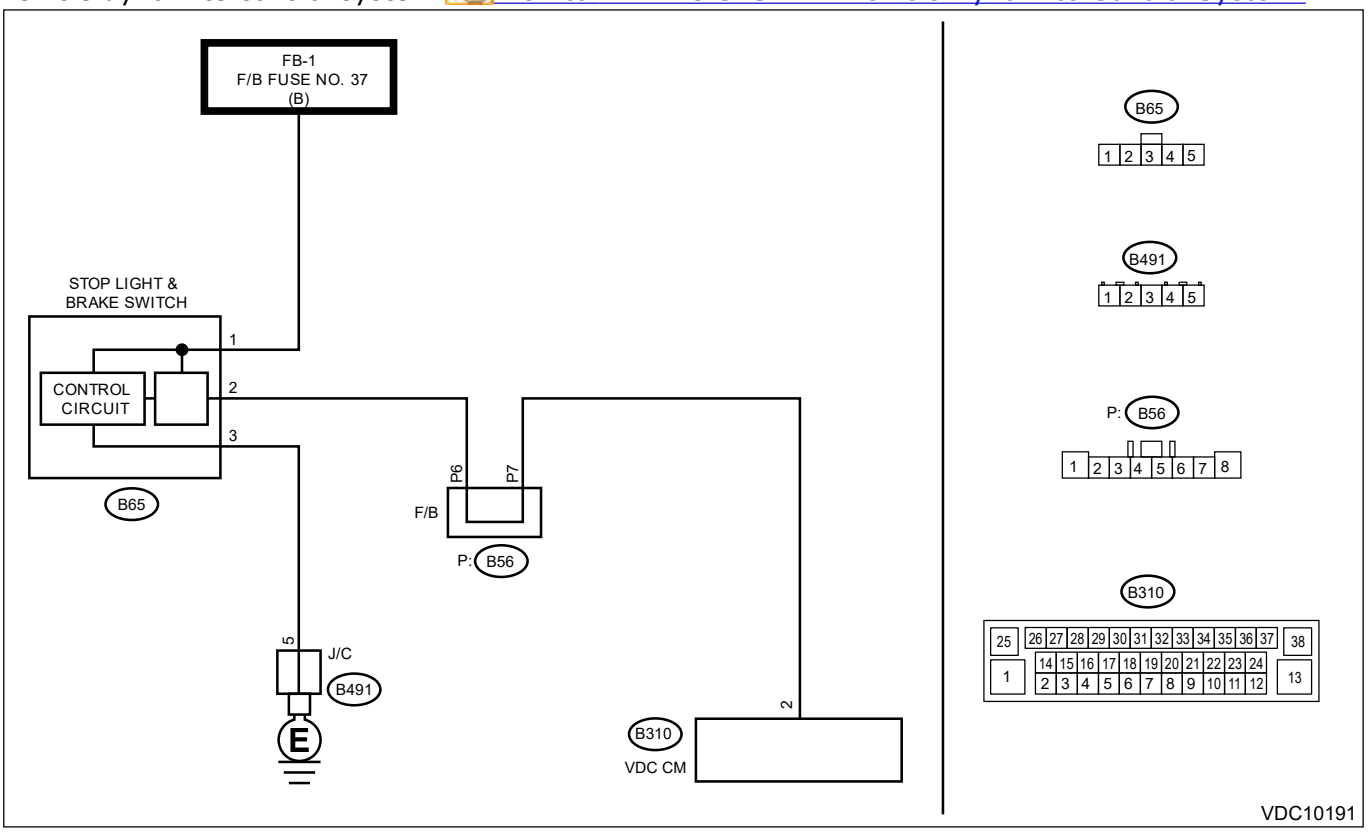
Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1532 BLS ON STUCK

1. MODELS WITHOUT EYESIGHT

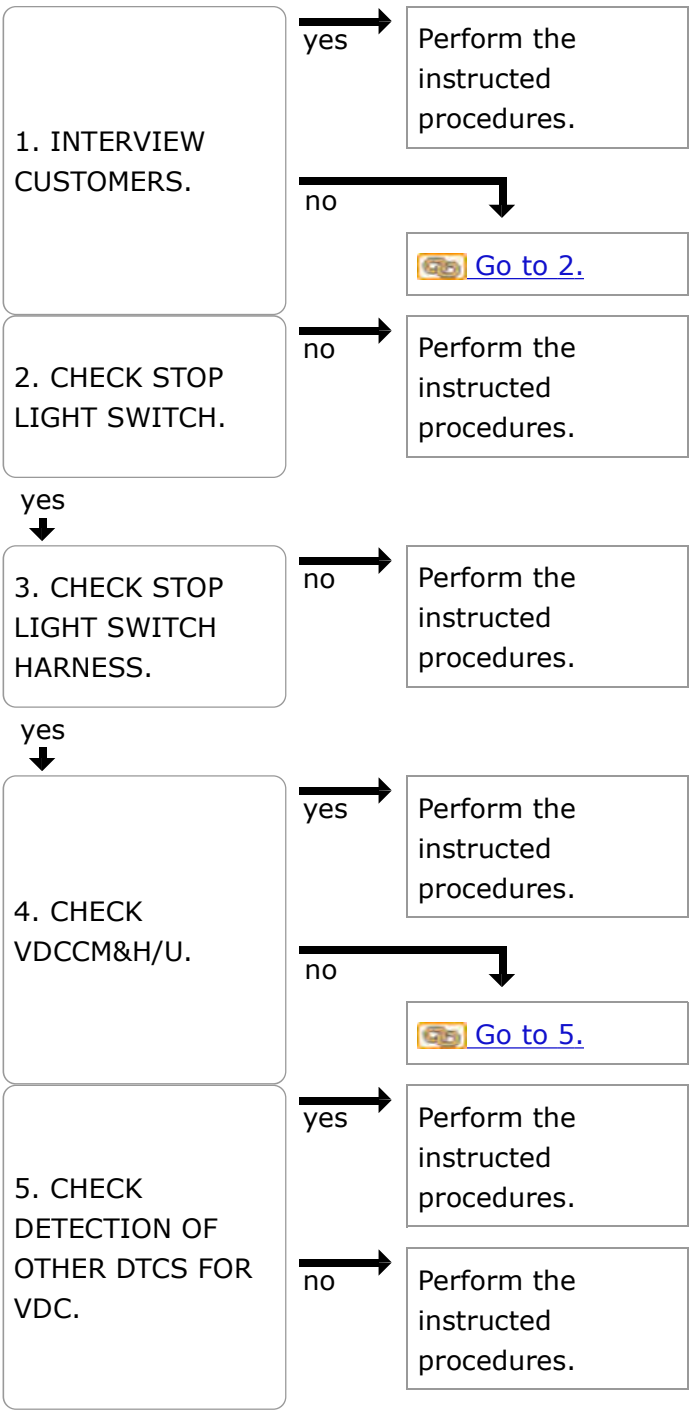
DTC detecting condition:



- A fault is detected if a change of the vehicle speed from high to low occurs for a predetermined number of times or more, while a change of the stop light switch from OFF to ON is not detected.
- A fault is detected if stop light switch ON status continues for long time while the vehicle speed is at the predetermined speed or higher.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.



WIRING DIAGRAM:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

Note:

If the pressure sensor is defective, this DTC may probably be stored in addition to pressure sensor malfunction.

1. INTERVIEW CUSTOMERS.
yes
Perform the instructed procedures.
no
Go to 2.
2. CHECK STOP LIGHT SWITCH.
no
Perform the instructed procedures.
yes
3. CHECK STOP LIGHT SWITCH HARNESS.
no
Perform the instructed procedures.
yes
4. CHECK VDCCM&H/U.
yes
Perform the instructed procedures.
no
Go to 5.
5. CHECK DETECTION OF OTHER DTCS FOR VDC.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. INTERVIEW CUSTOMERS.

Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).

Were the acceleration pedal and brake pedal depressed simultaneously?

Yes	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)
No	Go to 2.

2. CHECK STOP LIGHT SWITCH.

1. Turn the ignition switch to OFF.
2. Disconnect the stop light switch connector.
3. Measure the resistance of stop light switch terminals.

Terminals

No. 1 — No. 2:

Is the resistance 1 MΩ or more when stop light switch is OFF (when pedal is not depressed)?

Yes	Go to 3.
No	Replace the stop light switch. Ref. to BRAKE>Stop Light Switch.

3. CHECK STOP LIGHT SWITCH HARNESS.

1. Disconnect the connector from the VDCCM&H/U.
2. Measure the resistance between VDCCM&H/U connector and chassis ground.

Connector & terminal

(B310) No. 2 — Chassis ground:

Is the resistance less than 1 MΩ?

Yes	Go to 4.
No	Repair the stop light switch circuit.

4. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 5.

5. CHECK DETECTION OF OTHER DTCS FOR VDC.

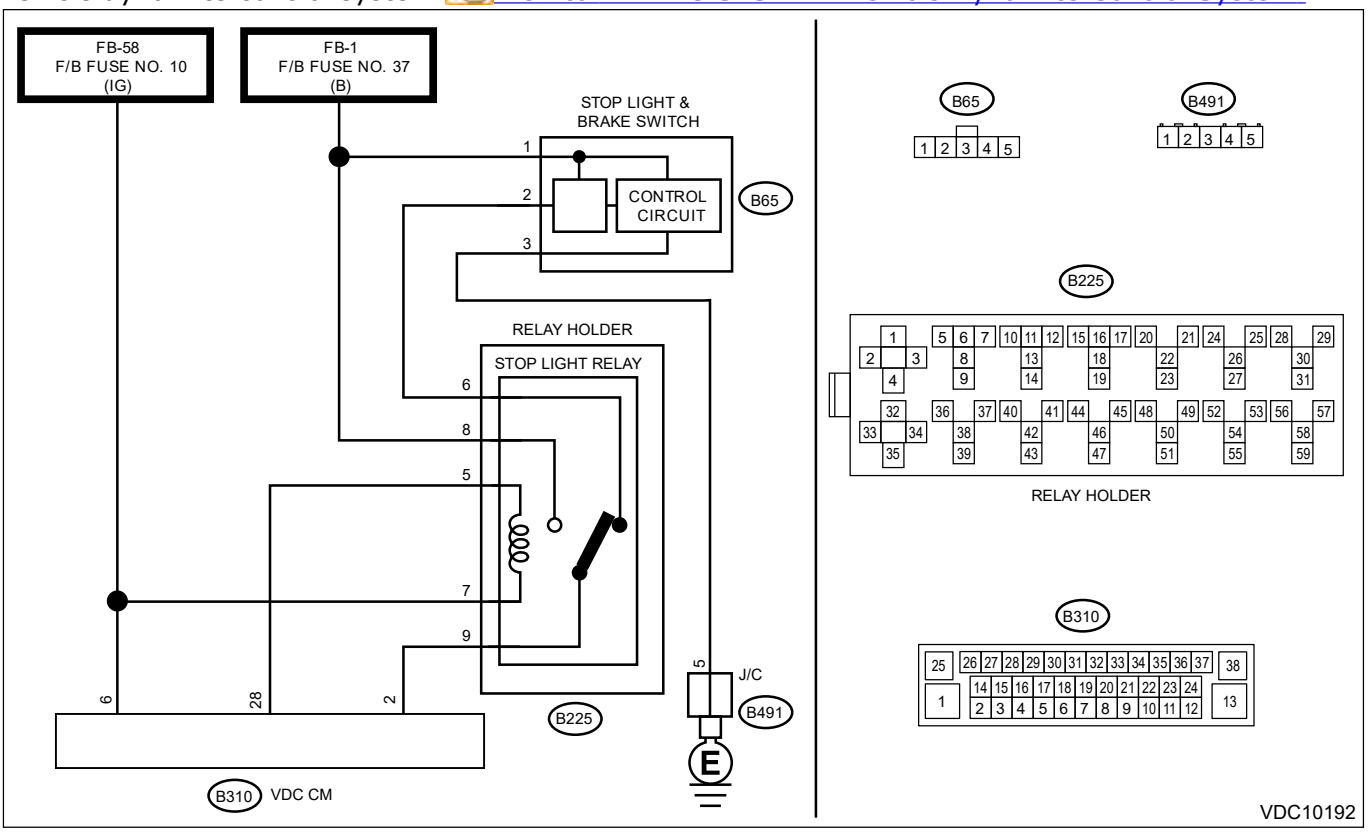
Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

2. MODELS WITH EYESIGHT

DTC detecting condition:



- A fault is detected if a change of the vehicle speed from high to low occurs for a predetermined number of times or more, while a change of the stop light switch from OFF to ON is not detected.
- A fault is detected if stop light switch ON status continues for long time while the vehicle speed is at the predetermined speed or higher.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

Note:

If the pressure sensor is defective, this DTC may probably be stored in addition to pressure sensor malfunction.

1. INTERVIEW CUSTOMERS.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK STOP LIGHT RELAY.	yes →	Perform the instructed procedures.
	no →	Go to 3.

3. CHECK VDCCM&H/U CONNECTOR.	yes →	Perform the instructed procedures.
	no →	Go to 4.
4. CHECK STOP LIGHT SWITCH CIRCUIT.	yes →	Perform the instructed procedures.
	no →	Go to 5.
5. CHECK VDCCM&H/U.	yes →	Perform the instructed procedures.
	no →	Go to 6.
6. CHECK DETECTION OF OTHER DTCS FOR VDC.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. INTERVIEW CUSTOMERS.

Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).

Were the acceleration pedal and brake pedal depressed simultaneously?

Yes	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)
No	Go to 2.

2. CHECK STOP LIGHT RELAY.

1. Turn the ignition switch to OFF.
2. Measure the resistance of stop light relay terminals.
   Terminals
   No. 8 — No. 9:

Is the resistance less than 1 Ω?

Yes	Replace the stop light relay. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Relay and Fuse.
No	Go to 3.

3. CHECK VDCCM&H/U CONNECTOR.

Disconnect the connector from the VDCCM&H/U.

Is there poor contact or damage of the VDCCM&H/U connector?

Yes	Repair the VDCCM&H/U connector.
No	Go to 4.

4. CHECK STOP LIGHT SWITCH CIRCUIT.

1. Turn the ignition switch to ON.
2. Measure the voltage between stop light relay and chassis ground.
   Connector & terminal
   (B225) No. 9 (+) — Chassis ground (−):

Is the voltage 10 V or more when the stop light switch is OFF (when pedal is not depressed)?

Yes	Repair the stop light switch circuit.
No	Go to 5.

5. CHECK VDCCM&H/U.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 6.

6. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

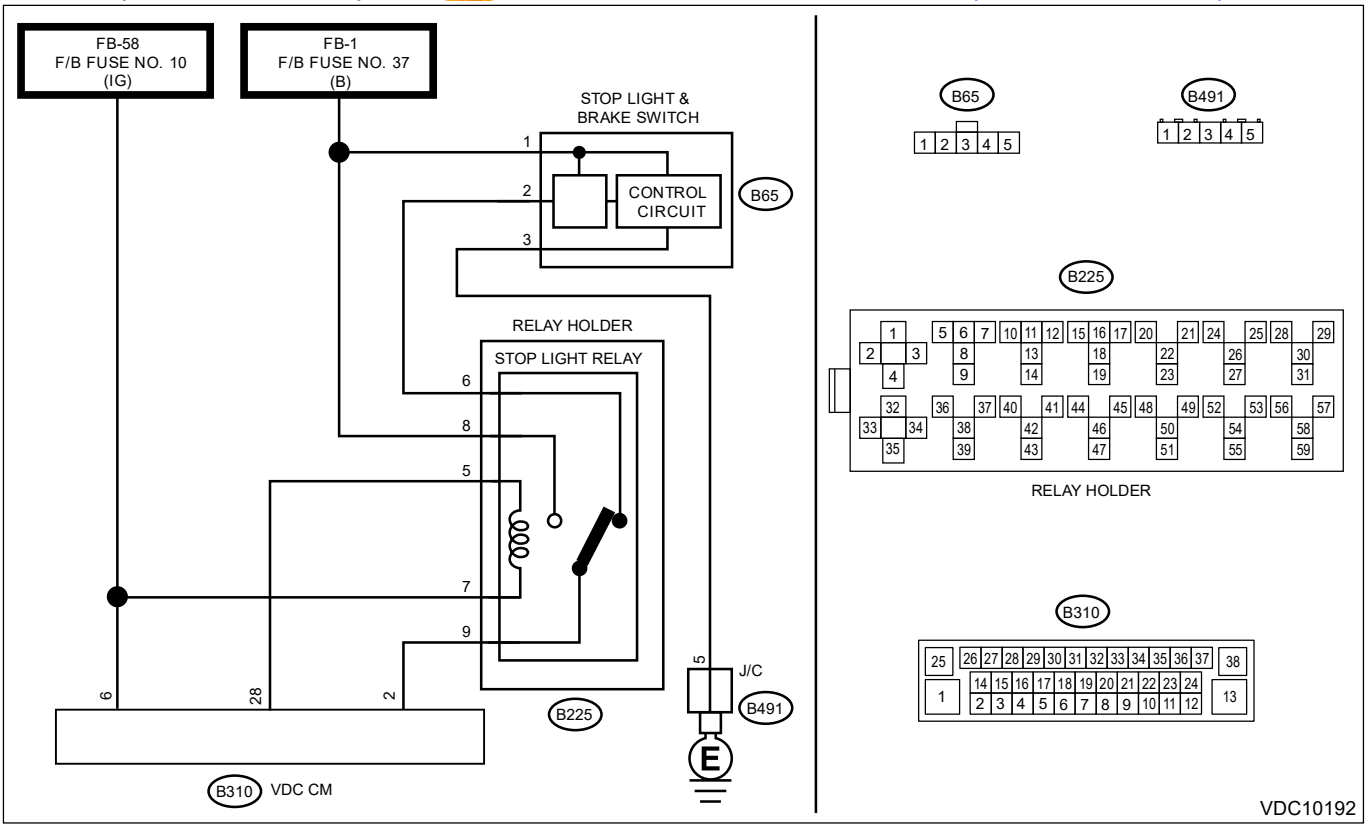
Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1571 BRAKE LAMP RELAY OFF STUCK

DTC detecting condition:

A fault is detected if the stop light relay operation request were compared with the feedback signal and detected as follows:



- The feedback signal is OFF.
- The stop light relay operation request is ON.

Trouble symptom:

- EyeSight does not operate. (Models with EyeSight)
- Brake lights do not illuminate sometimes.

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs related to the stop light switch displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK STOP LIGHT RELAY.

1. Turn the ignition switch to OFF.
2. Remove the stop light relay.
3. Measure the resistance between stop light relay terminals No. 5 — No. 7 when the battery voltage is applied.
   Terminals
   No. 8 — No. 9:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Replace the stop light relay. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Relay and Fuse.

3. CHECK VDCCM&H/U CONNECTOR.

Disconnect the connector from the VDCCM&H/U.

Is there poor contact or damage of the VDCCM&H/U connector?

Yes	Repair the VDCCM&H/U connector.
No	Go to 4.

4. CHECK STOP LIGHT SWITCH CIRCUIT.

Measure the resistance between the stop light relay and the fuse.

Connector & terminal

(B225) No. 8 — (F/B fuse) No. 37:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit in the power supply circuit including the fuse.

5. CHECK STOP LIGHT SWITCH CIRCUIT.

1. Connect all connectors.
2. Turn the ignition switch to ON.
3. Measure the voltage between stop light relay and chassis ground.

   Connector & terminal

   (B225) No. 8 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 6.
No	Repair or replace the open circuit in the power supply circuit including the fuse.

6. CHECK STOP LIGHT RELAY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Remove the stop light relay.
3. Turn the ignition switch to ON.
4. Measure the voltage between stop light relay and chassis ground.

Connector & terminal

(B225) No. 5 (+) — Chassis ground (−):

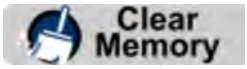
Is the voltage 10 V or more?

Yes	Repair the stop light relay circuit.
No	Go to 7.

7. CHECK STOP LIGHT RELAY CIRCUIT.

Measure the voltage between stop light relay and chassis ground.

Connector & terminal



(B225) No. 7 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 8.
No	Repair the ignition power supply circuit.

8. CHECK VDCCM&H/U.

1. Turn the ignition switch to OFF.
2. Connect all connectors and relays.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 9.

9. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1581 BRAKE BOOST NEGATIVE PRESSURE ABNORMAL

DTC detecting condition:
This malfunction is stored if vacuum pressure value inside brake booster drops below the normal pressure and stays for a specific period of time.
Trouble symptom:
Brake pedal becomes heavier. (Brake assist function is activated when vacuum pressure drops.)

1. CHECK DTC.

1. Start the engine.
2. Warm up for at least three minutes.
3. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC C1581 a current malfunction?

Yes	Go to 2.
No	Currently, it is normal. It results from a temporary vacuum pressure drop.

2. CHECK OUTPUT OF BRAKE BOOSTER PRESSURE SENSOR WITH SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
2. Read [Brake Booster Gauge Sensor Output] indicated on the display screen.

Is [Brake Booster Gauge Sensor Output] −20 kPa or more?

Yes	Go to 3.
No	Currently, it is normal. It results from a temporary vacuum pressure drop.

3. CHECK OUTPUT OF BRAKE BOOSTER PRESSURE SENSOR WITH SUBARU SELECT MONITOR.

Using Subaru Select Monitor, read [Brake Booster Gauge Sensor Output] while depressing the brake pedal several times.

Data Monitor

Does the value of [Brake Booster Gauge Sensor Output] change along with the operation?

Yes	Currently, it is normal. It results from a temporary vacuum pressure drop.
No	Go to 4.

4. CHECK BRAKE VACUUM SYSTEM.

1. Check for connections and air tightness of brake vacuum system (between brake booster and intake manifold).
2. Check for connections and air tightness of brake vacuum system (between brake booster and brake vacuum pump).

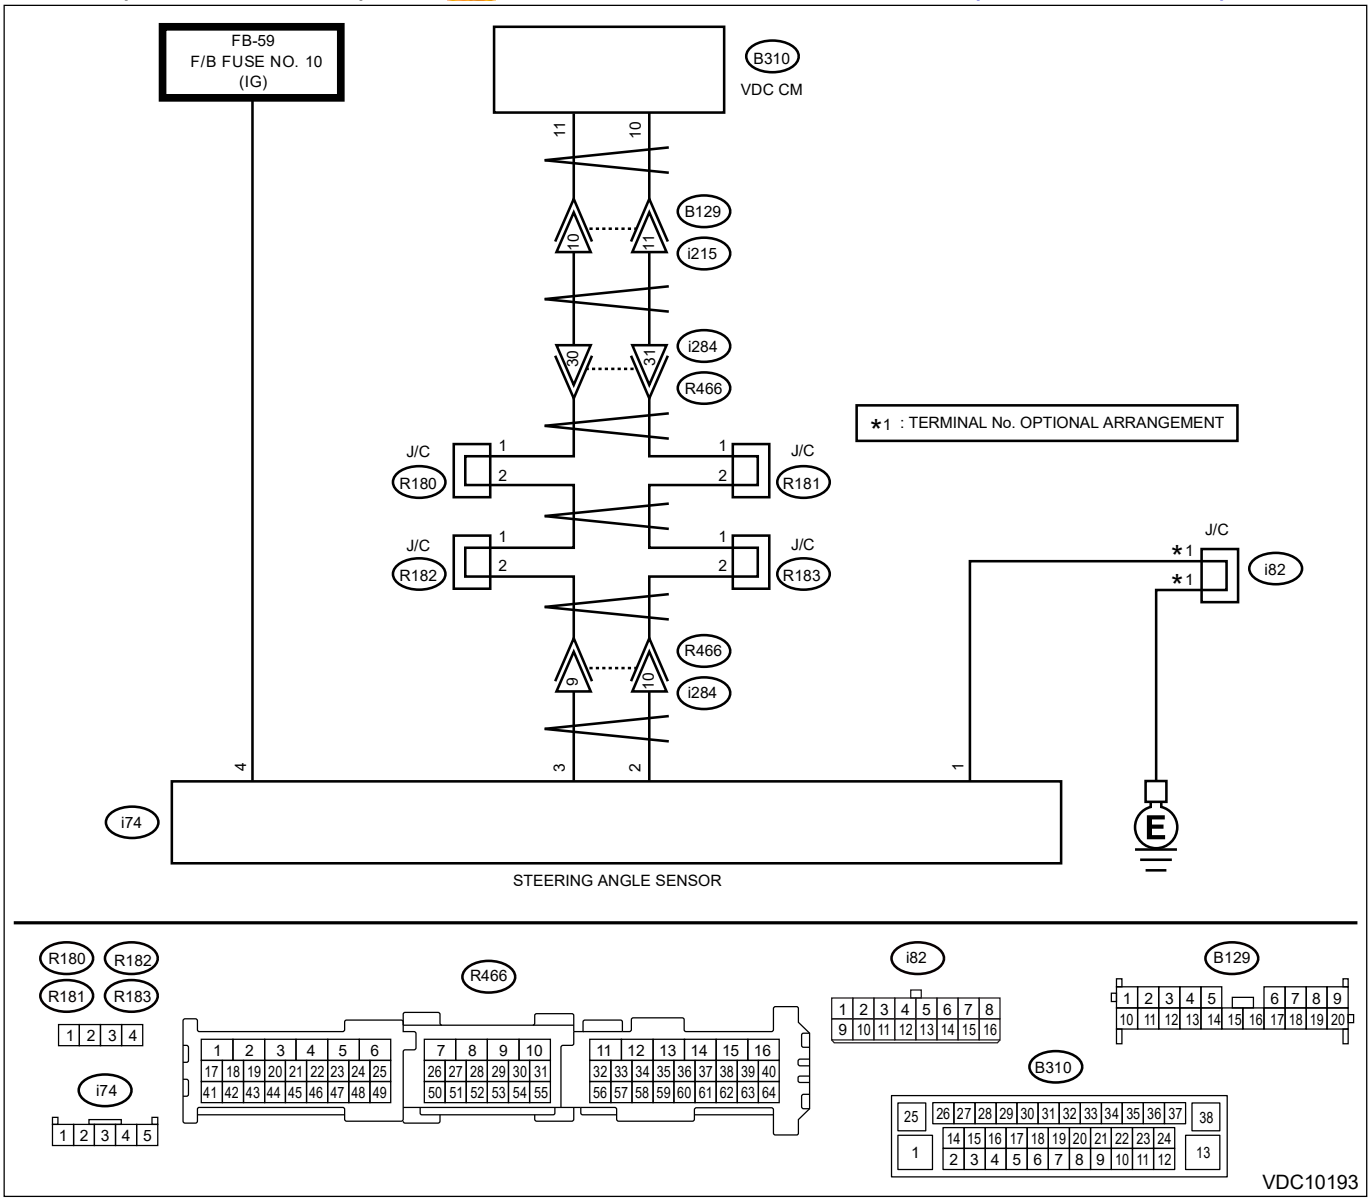
Are there any air leaks in the brake vacuum system?

Yes	Repair the air leak in the brake vacuum system.
No	Replace the brake booster. Ref. to BRAKE>Brake Booster.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1711 STEERING ANGLE SENSOR

DTC detecting condition:



- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the yaw rate sensor signal / lateral G sensor signal change while the sensor signal of steering angle sensor indicates a constant value.
- A fault is detected if the communication status of steering angle sensor is abnormal.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from steering angle sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between steering angle sensor and chassis ground.
   Connector & terminal
   (i74) No. 4 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 2.
No	Repair the steering angle sensor power supply circuit including the fuse.

2. CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR (CHECK FOR OPEN CIRCUIT).

Measure the resistance between steering angle sensor and chassis ground.
Connector & terminal
(i74) No. 1 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair ground circuit in the steering angle sensor.

3. CHECK STEERING ANGLE SENSOR HARNESS (CHECK FOR OPEN CIRCUIT).

1. Disconnect the connector from the VDCCM&H/U.
2. Measure the resistance between VDCCM&H/U and steering angel sensor.

Connector & terminal

(i74) No. 2 — (B310) No. 10:

(i74) No. 3 — (B310) No. 11:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the harness between the steering angle sensor and VDCCM&H/U.

4. CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS.

Measure the resistance between steering angle sensor and chassis ground.

Connector & terminal

(i74) No. 2 — Chassis ground:

(i74) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the harness between the steering angle sensor and VDCCM&H/U.

5. CHECK STEERING WHEEL.

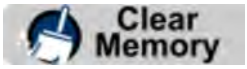
1. Drive the vehicle on a flat road.
2. Park the vehicle straight.
3. Check the steering wheel for deviation from center.

Is the deviation from the center of steering wheel less than 5°?

Yes	Go to 6.
No	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

6. CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.

1. Adjust steering wheel to the center position.
2. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
3. Read [Steering Angle Sensor] indicated on the display screen.



Is the value of [Steering Angle Sensor] −10° — 10°?

Yes	Perform the VDC sensor midpoint setting mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE. Go to 7.
No	Check the installation of the steering wheel and steering angle sensor.

7. CHECK STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.

1. Turn the ignition switch to OFF.
2. Connect all connectors.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
5. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the steering angle sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Steering Angle Sensor.
No	Go to 8.

8. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1721 YAW RATE SENSOR

DTC detecting condition:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / lateral G sensor signal change while the yaw rate sensor signal indicates a constant value.
- A fault is detected if the communication status of yaw rate sensor is abnormal.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

1. INTERVIEW CUSTOMERS.

Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).

Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?

Yes	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).
No	Go to 2.

2. CHECK INSTALLATION OF VDCCM&H/U.

Is VDCCM&H/U installed properly without being tilted?
Is the bracket deformation-free?
Are the VDCCM&H/U installation bolts installed without missing or getting loose?

Yes	Go to 3.
No	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>COMPONENT > VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U). Go to 3.

3. CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR.

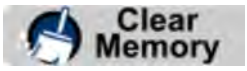
1. Drive the vehicle on a flat road.
2. Park the vehicle straight.
3. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
4. Read [Yaw Rate Sensor] indicated on the display screen.

Is the reading of [Yaw Rate Sensor] −4 — 4 deg/s?

Yes	Go to 4.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

4. CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.

1. Drive the vehicle on a flat road.
2. Park the vehicle straight.
3. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
4. Read [Steering Angle Sensor] indicated on the display screen.



Is the value of [Steering Angle Sensor] −10 — 10°?

Yes	Go to 5.
No	Perform the centering adjustment of steering wheel.

5. CHECK VDCCM&H/U.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 6.

6. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1732 LATERAL G SENSOR

DTC detecting condition:

- A fault is detected if the sensor signal value is not correct.

- A fault is detected if the steering angle sensor signal / yaw rate sensor signal change while the lateral G sensor signal indicates a constant value.
- A fault is detected if the communication status of lateral G sensor is abnormal.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

1. CHECK INSTALLATION OF VDCCM&H/U.

Is VDCCM&H/U installed properly without being tilted?
Is the bracket deformation-free?
Are the VDCCM&H/U installation bolts installed without missing or getting loose?

Yes	Go to 2.
No	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>COMPONENT > VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U). Go to 2.

2. CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.

1. Park the vehicle straight on a level surface.
2. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
3. Read [Steering Angle Sensor] indicated on the display screen.

Is the value of [Steering Angle Sensor] −10 — 10°?

Yes	Go to 3.
No	Check the installation of steering angle sensor.

3. CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.

1. Park the vehicle straight on a level surface.
2. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
3. Read [Lateral G Sensor] and [Longitudinal G Sensor] indicated on the display screen.

Are the values of [Lateral G Sensor] and [Longitudinal G Sensor] −2 — 2 m/s^2?

Yes	Go to 4.
No	Recheck from step 1, and if the problem is not solved, Go to 7.

4. SET 0 POINT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select "Work Support". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Work Support.
2. Perform the VDC sensor midpoint setting mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

Is 0 point setting successful?

Yes	Go to 5.
No	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

5. PERFORM DRIVING TEST.

Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.

Does the ABS warning light or VDC warning light illuminate during driving?
Does ABS or VDC operate abnormally?

Yes	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 6.

6. CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.

1. Park the vehicle on a level surface.
2. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
3. Read [Lateral G Sensor] and [Longitudinal G Sensor] indicated on the display screen.

Are the values of [Lateral G Sensor] and [Longitudinal G Sensor] −1.5 — 1.5 m/s^2?

Yes	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.
No	Recheck from step 1, and if the problem is not solved, replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

7. CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.

1. Remove the VDCCM&H/U installation bolt and bracket.
2. Keep VDCCM&H/U in a horizontal position.
3. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
4. Read [Lateral G Sensor] and [Longitudinal G Sensor] indicated on the display screen.

When the VDCCM & H/U is in a horizontal position, are the values of [Lateral G Sensor] and [Longitudinal G Sensor] −1.5 — 1.5 m/s^2?

Yes	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1733 LONGITUDINAL G SENSOR

DTC detecting condition:

- A fault is detected if the communication status of longitudinal G sensor is abnormal.
- A fault is detected if malfunction judgment is generated by self-diagnosis test of the longitudinal G sensor.
- A fault is detected if the longitudinal G sensor signal is out of normal range.
- A fault is detected if the longitudinal G sensor compensation value is out of normal range.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

Note:

For the diagnostic procedure, refer to "DTC C1732 LATERAL G SENSOR". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C1732 LATERAL G SENSOR.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1741 PRESSURE SENSOR

DTC detecting condition:

- A fault is detected if the fluid pressure signal in master cylinder are out of normal range.
- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

1. CHECK STOP LIGHT SWITCH CIRCUIT AND INSTALLATION CONDITION.

Check the stop light switch circuit and the installation condition.

Is the check result OK?

Yes	Go to 2.
No	Repair the stop light switch circuit or correct the installation condition. **Note:** **If there is malfunction in the stop light circuit, DTC may be recorded in the memory.**

2. CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
2. Read [Pressure Sensor] indicated on the display screen.

With the brake pedal released, is the value of [Pressure Sensor] 0 — 11 bar?

Yes	Go to 3.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

3. CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
2. Read [Pressure Sensor] indicated on the display screen.

When the brake pedal is operated, do the value of [Pressure Sensor] change in accordance with the brake pedal?

Yes	Go to 4.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

4. CHECK VDCCM&H/U.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 5.

5. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1742 WHEEL CYLINDER PRESSURE SENSOR

DTC detecting condition:

- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.
- A fault is detected if a difference between fluid pressures for the wheels exceeds a predetermined judgment value.
- A fault is detected if master cylinder pressure and fluid pressures for the wheels exceed predetermined judgment values.

Trouble symptom:

EyeSight does not operate. (Models with EyeSight)

1. CHECK STOP LIGHT SWITCH CIRCUIT AND INSTALLATION CONDITION.

Check the stop light switch circuit and the installation condition.

Is the check result OK?

Yes	Go to 2.
No	Repair the stop light switch circuit or correct the installation condition.

2. CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
2. Read [FL Wheel Cylinder Pressure Sensor Output] and [FR Wheel Cylinder Pressure Sensor Output] indicated on the display screen.

With the brake pedal released, are the values of [FL Wheel Cylinder Pressure Sensor Output] and [FR Wheel Cylinder Pressure Sensor Output] 0 — 11 bar?

Yes	Go to 3.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

3. CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
2. Read [FL Wheel Cylinder Pressure Sensor Output] and [FR Wheel Cylinder Pressure Sensor Output] indicated on the display screen.

When the brake pedal is operated, do the values of [FL Wheel Cylinder Pressure Sensor Output] and [FR Wheel Cylinder Pressure Sensor Output] change in accordance with the brake pedal? In addition, is the difference between [FL Wheel Cylinder Pressure Sensor Output] and [FR Wheel Cylinder Pressure Sensor Output] values less than 10 bar?

Yes	Go to 4.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

4. CHECK VDCCM&H/U.

1. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the same DTC displayed?

Yes	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 5.

5. CHECK DETECTION OF OTHER DTCS FOR VDC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

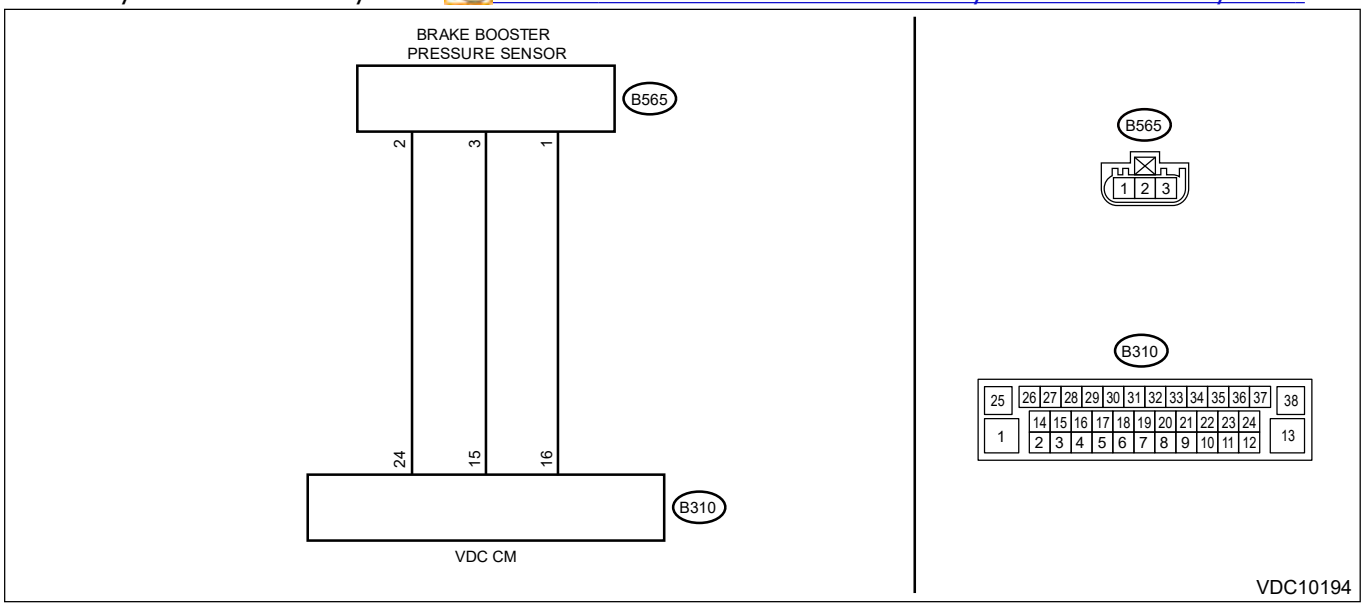
Is any other DTC displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1751 BRAKE BOOST GAUGE SENSOR

DTC detecting condition:



- A fault is detected if the power supply to the brake vacuum pressure sensor is abnormal.
- A fault is detected if the communication signal from the brake vacuum pressure sensor is abnormal.

Trouble symptom:

Brake assist function is not activated when vacuum pressure drops.

Wiring diagram:

Vehicle dynamics control system Ref. to WIRING SYSTEM>Vehicle Dynamics Control System.

1. CHECK BRAKE BOOSTER PRESSURE SENSOR POWER SUPPLY.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the brake booster pressure sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between brake booster pressure sensor connector terminals.

Connector & terminal

(B565) No. 1 (+) — (B565) No. 2 (−):

Is the voltage 4.9 — 5.1 V?

Yes — Go to 3.

No — Go to 2.

2. CHECK BRAKE BOOSTER PRESSURE SENSOR POWER SUPPLY SYSTEM.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the VDCCM&H/U.
3. Measure the resistance between the VDCCM&H/U and the brake booster pressure sensor connector.

Connector & terminal

(B310) No. 16 — (B565) No. 1:
(B310) No. 24 — (B565) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the harness connector between the VDCCM&H/U and the brake booster pressure sensor.

3. CHECK BRAKE BOOSTER PRESSURE SENSOR SIGNAL SYSTEM.

Measure the resistance between the VDCCM&H/U connector and the brake booster pressure sensor.

Connector & terminal

(B310) No. 15 — (B565) No. 3:

Is the resistance less than 1 Ω?

Yes	Replace the brake booster. Ref. to BRAKE>Brake Booster.
No	Repair the harness connector between the VDCCM&H/U and the brake booster pressure sensor.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1811 SYSTEM

DTC detecting condition:

A fault is detected if VDC control status continues for 15 seconds or more.

Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate.
- EyeSight does not operate. (Models with EyeSight)

1. CHECK INSTALLATION OF VDCCM&H/U.

Is VDCCM&H/U installed properly without being tilted?
Is the bracket deformation-free?
Are the VDCCM&H/U installation bolts installed without missing or getting loose?

Yes	Go to 2.
No	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>COMPONENT > VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U). Go to 2.

2. CHECK STEERING WHEEL.

1. Drive the vehicle on a flat road.
2. Park the vehicle straight.
3. Check the steering wheel for deviation from center.

Is the deviation from the center of steering wheel less than 5°?

Yes	Go to 3.
No	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE. Go to 3.

3. CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.

1. Adjust steering wheel to the center position.
2. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
3. Read [Steering Angle Sensor] indicated on the display screen.

Is the value of [Steering Angle Sensor] −10° — 10°?

Yes	Go to 4.
No	Check the installation of the steering wheel and steering angle sensor, and correct the installation if it is improper. If the installation condition is correct, replace the sensor.

4. CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.

1. Drive the vehicle on a flat road.
2. Park the vehicle straight.
3. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
4. Read [Lateral G Sensor], [Longitudinal G Sensor], and [Yaw Rate Sensor] indicated on the display screen.

Is the reading of each sensor following value?
[Lateral G Sensor]: −2 — 2 m/s^2
[Longitudinal G Sensor]: −2 — 2 m/s^2
[Yaw Rate Sensor]: −4 — 4 deg/s

Yes	Go to 5.
No	Recheck from step 1, and if the problem is not solved, Go to 8.

5. SET 0 POINT SETTING OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR.

1. Using the Subaru Select Monitor, select "Work Support". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Work Support.
2. Perform the VDC sensor midpoint setting mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

Is 0 point setting successful?

Yes	Go to 6.
No	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U and steering angle sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U). Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Steering Angle Sensor.

6. PERFORM DRIVING TEST.

Ref. to BRAKE CONTROL (DIAGNOSTICS)>Inspection Mode.

Does the ABS warning light or VDC warning light illuminate during driving?
Does ABS or VDC operate abnormally?

Yes	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Go to 7.

7. CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.

1. Park the vehicle on a level surface.
2. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
3. Read [Lateral G Sensor], [Longitudinal G Sensor], and [Yaw Rate Sensor] indicated on the display screen.

Is the reading of each sensor following value?
[Lateral G Sensor]: −2 — 2 m/s^2
[Longitudinal G Sensor]: −2 — 2 m/s^2
[Yaw Rate Sensor]: −4 — 4 deg/s

Yes	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

8. CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.

1. Remove the VDCCM&H/U installation bolt and bracket.
2. Keep VDCCM&H/U in a horizontal position.
3. Using the Subaru Select Monitor, select "Data monitor". Ref. to BRAKE CONTROL (DIAGNOSTICS)>Data Monitor.
4. Read [Lateral G Sensor], [Longitudinal G Sensor], and [Yaw Rate Sensor] indicated on the display screen.

When VDCCM&H/U is in a horizontal position, is the reading of each sensor following value?
[Lateral G Sensor]: −1.5 — 1.5 m/s^2
[Longitudinal G Sensor]: −1.5 — 1.5 m/s^2
[Yaw Rate Sensor]: −4 — 4 deg/s

Yes	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.
No	Replace the VDCCM&H/U. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C1821 BRAKE TEMPERATURE ABNORMAL

DTC detecting condition:
This code is recorded if the conditions for control intervention are met when estimated value of temperature under braking is above certain threshold.
Trouble symptom:
- Traction control does not operate.
- Active torque vectoring does not operate.

1. CHECK DTC.

Read the DTC using Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC C1821 a current malfunction?

Yes	Stop the vehicle and turn off the engine until the DTC becomes a past malfunction.
No	It results from a temporal increase in brake temperature. Check the brake pads, disc rotors, and brake fluid.

BRAKE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BRAKE CONTROL (DIAGNOSTICS) > General Diagnostic Table

INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/stopping distance	• VDCCM&H/U • Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Wheel lock	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Incorrect wiring or piping connections	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pipe
	Brake drag	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Axle and wheels • Brake pedal play	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• VDCCM&H/U • Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Vehicle vertical pitching	• VDCCM&H/U • Road surface (uneven) • Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
Poor brake performance	Unstable or uneven braking	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Brake caliper	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position

Symptoms		Main probable cause	Other probable cause
		• Brake pad • Road surface (uneven) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Disc rotor • Brake pipe • Axle and wheels • Road with crowns or banks • Suspension play or fatigue (reduced damping)
Vibration or noise • When braking suddenly	Excessive brake pedal vibration	• Road surface (uneven) • Incorrect wiring or piping connections	• VDCCM&H/U • Brake booster • Suspension play or fatigue (reduced damping)
• When acceleratin g suddenly	Noise from VDCH/U	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Brake pipe	• VDCCM&H/U • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
• While driving on a slippery road	Noise from the front side of vehicle	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Brake pad • Disc rotor • Brake pipe • Brake booster • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
	Noise from the rear side of vehicle	• Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Disc rotor • Parking brake • Brake pipe • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
Engine does not accelerate or goes into a stall when accelerating suddenly or driving on a slippery surface.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe

Symptoms		Main probable cause	Other probable cause
		• Incorrect wiring or piping	
Poor change-direction-operation stability of TCS	Deviation to right or left direction	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pad • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Disc rotor • Brake pipe • Axle and wheels • Suspension play or fatigue (reduced damping)
	Vehicle spin	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Brake caliper • Brake pipe
Steering wheel drag while driving		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Incorrect wiring or piping connections	• Brake caliper • Brake pad • Disc rotor • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures

Symptoms	Main probable cause	Other probable cause
VDC operates while driving normally.	• Power steering system • VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Power steering system	
VDC OFF indicator light does not illuminate when the VDC OFF switch is depressed. **Note:** **When pressing VDC OFF switch for 30 seconds or more, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the previous status is restored.**	• Harness • Combination meter • VDC OFF switch

POWER STEERING (DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:

- **The power steering control module continues to operate after the engine stops and calculate the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.**
- **Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the power steering control module connector.**
- **Be sure to record the malfunction information obtained via DTC check.**
- **Do not perform the clear memory until the repair or replacement of faulty parts is completed.**
- **If a problem (connector terminal with foreign matter, etc.) is found, record the faulty part (take a photo • store the foreign matter, etc.).**

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to POWER STEERING (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. BASIC INSPECTION.

Perform basic inspection. Ref. to POWER STEERING (DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK WARNING LIGHT.

Check the lighting condition of STEERING warning light in the combination meter.

Does the STEERING warning light illuminate?

Yes	Go to 4.
No	Currently, it is normal.

4. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Power Steering System].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 5.
No	Check the communication circuit. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

5. CHECK DTC.

Read the DTC of [Power Steering System] using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are DTC, time stamp and freeze frame data displayed?

Yes	Record the DTC, time stamp and freeze frame data. Go to 7.
No	Go to 6.

6. PERFORM GENERAL DIAGNOSTICS.

1. Execute the inspection mode. Ref. to POWER STEERING (DIAGNOSTICS)>Inspection Mode.
2. Read the DTC using Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

3. Check that the DTC is not displayed.

Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?

Yes	Finish the diagnosis.
No	Ref. to POWER STEERING (DIAGNOSTICS)>Warning Light Illumination Pattern>STEERING WARNING LIGHT DOES NOT GO OFF.

7. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs.
2. Repair or replace the faulty parts.
3. Execute the inspection mode. Ref. to POWER STEERING (DIAGNOSTICS)>Inspection Mode.
4. Read the DTC using Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed in current malfunction?

Yes	Repeat step 7 until DTC is not shown.
No	Clear the memory to complete the diagnosis. Ref. to COMMON(diag)>Clear memory.

POWER STEERING (DIAGNOSTICS) > Check List for Interview

CHECK

Check the following items regarding condition of the vehicle.

1. TROUBLE STATUS

Phenomenon of the vehicle	❑ Steering is heavy ❑ Steering is not smooth ❑ Steering is unstable (wondering) ❑ Steering does not return to center ❑ Steering is not straight
	❑ Steering force required is not the same for right and left turn ❑ Steering force required is not even ❑ Steering is too light
	❑ Noise ❑ Vibration ❑ STEERING warning light illuminates ❑ Others
Frequency	❑ Always ❑ Sometimes ❑ Immediately after starting the engine ❑ Only once ❑ Others
	❑Recovers after leaving it for minutes
Steering wheel operation	❑ Dry steering ❑ When turning ❑ Quick steering ❑ Slow steering ❑ Returning the steering wheel ❑ End abutting
	❑ Releasing the steering wheel ❑ Only supporting the steering wheel by hand ❑ Repetitive dry steering ❑ Beginning of steering
Steering wheel status / direction	❑ Around center position ❑ Near end of lock to lock
	❑ When turning the steering to right ❑ When turning the steering to left ❑ Both to right and to left ❑ (1) Steering angle: degrees ❑ (2) Maneuvering time: minutes
	❑ Slow steering ❑ Quick steering ❑ While holding the steering

	❑ When repeating the dry wheel operation
Vehicle speed	❑ Stall 0 km/h (0 MPH) ❑ Very low speed — 20 km/h (— 12 MPH) ❑ Low speed — 40 km/h (— 25 MPH) ❑ Medium speed — 80 km/h (— 50 MPH) ❑ High speed — 80 km/h or more (— 50 MPH or more)
	❑ At starting ❑ While accelerating ❑ While decelerating ❑ When accelerating rapidly ❑ When decelerating rapidly
	❑ Others
Engine speed	❑ Idling ❑ (1) Near rpm ❑ (2) rpm — rpm ❑ (3) rpm or more • less

2. STATE OF STEERING WARNING LIGHT

STEERING warning light illuminates	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate ❑ Others
Ignition key position	❑ LOCK ❑ ACC ❑ ON (when starting engine) ❑ START ❑ ON (when starting engine, while engine is running) ❑ ON (when starting engine, when engine is at a standstill)
Timing	❑ Immediately after turning the ignition ON ❑ Immediately after turning the ignition to START
	❑ While idling ❑ While Auto Start Stop ❑ When reversing ❑ While accelerating ❑ While decelerating ❑ When cruising at — km/h (MPH)
	❑ When other electronic parts are in operation (part name: operation condition:)

3. ENVIRONMENT

a) Weather	❑ Fine ❑ Cloudy ❑ Rainy

	❑ Snowy ❑ Others:
b) Outside temperature	❑ °C (°F)
c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Alley way ❑ Private road ❑ Parking lot ❑ Mountain road ❑ Paved road ❑ Unpaved road ❑ Gravel road ❑ Sandy place ❑ Muddy road ❑ Concrete road ❑ Stone pavement ❑ Racetrack ❑ Others:
d) Road surface	❑ Dry ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Others:
e) Tire	❑ Tire chain ❑ Studless tire ❑ T-type tire (front RH, front LH, rear RH, rear LH)
f) Tire inflation pressure	Front RH: kPa Front LH: kPa Rear RH: kPa Rear LH: kPa
g) Degree of wear	Front RH: mm (in) Front LH: mm (in) Rear RH: mm (in) Rear LH: mm (in)
h) Genuine part	❑ Yes ❑ No Record after-market parts if any. (Steering wheel, audio, tires, and similar parts)
i) Condition of suspension alignment	
j) Electrical load conditions	❑ Audio ❑ Air conditioner ❑ Others
k) Loaded state	Condition:

l) Repair parts ❑ None
❑ Provided
Contents:

m) Others

POWER STEERING (DIAGNOSTICS) > General Description

CAUTION

1. SRS AIRBAG SYSTEM

Caution:

- **Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.**
- **Be careful not to damage the airbag system wiring harness.**

POWER STEERING (DIAGNOSTICS) > General Description

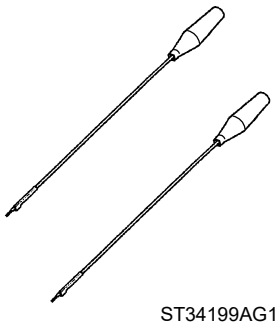
INSPECTION

Before performing diagnosis, check the following items which might be affecting the power steering problem.

1. BATTERY

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

2. TIRES



Check the tire specifications, tire wear and air pressure. Ref. to WHEEL AND TIRE SYSTEM>General Description>SPECIFICATION.

POWER STEERING (DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

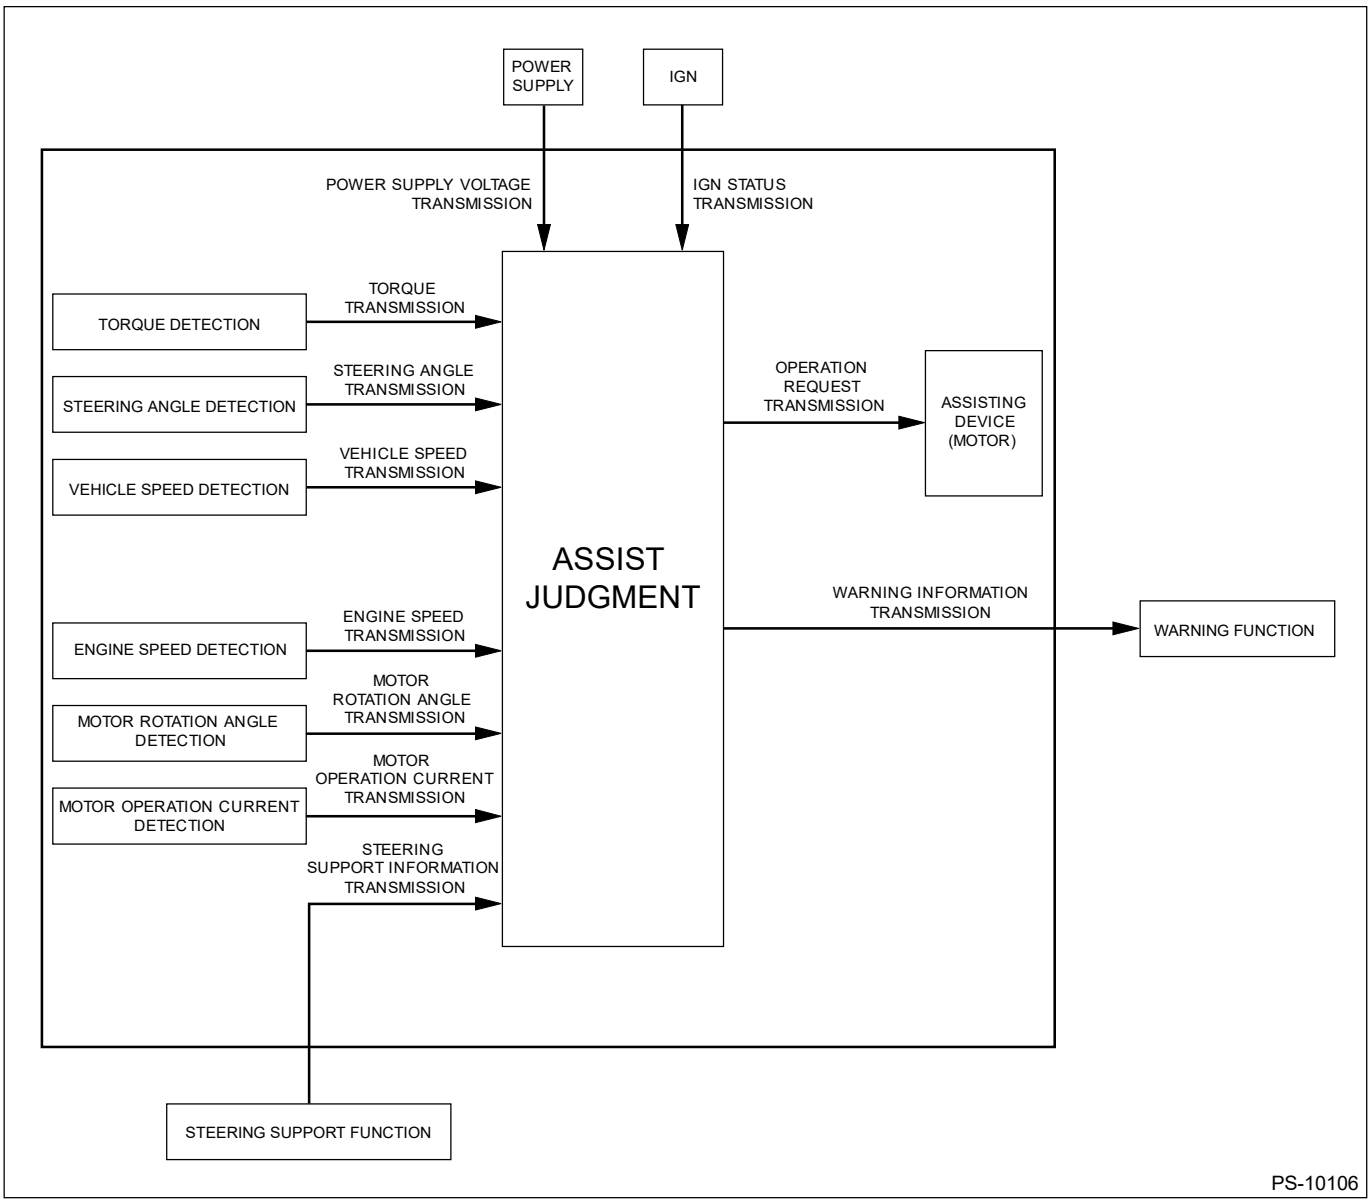


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AG100	34199AG100	SPECIAL TOOL HARNESS	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

(1) Steering gearbox (including power steering control module)
(2) STEERING warning light

POWER STEERING (DIAGNOSTICS) > Control Module I/O Signal

ELECTRICAL SPECIFICATION

Connector No.	Terminal No.	Contents	Measuring condition	Standard
B450	1	Ignition power supply	Ignition SW: ON Measurement between (B450) No. 1 — (B452) No. 1	9 — 16 V
B450	6	CAN communication	Digital signal; can not be measured	—
B450	7	CAN communication	Digital signal; can not be measured	—
B452	1	Ground	Always Measurement between (B452) No. 1 — (B452) No. 2	10 — 16 V
B452	2	Battery power supply		

POWER STEERING (DIAGNOSTICS) > Inspection Mode

PROCEDURE

1. Turn the ignition switch to OFF for 5 seconds or more.
2. Start the engine.
3. Idle the engine for five seconds or more.
4. Operate the steering wheel from side to side.
5. Reproduce the malfunction occurrence condition as much as possible.

POWER STEERING (DIAGNOSTICS) > Warning Light Illumination Pattern

INSPECTION

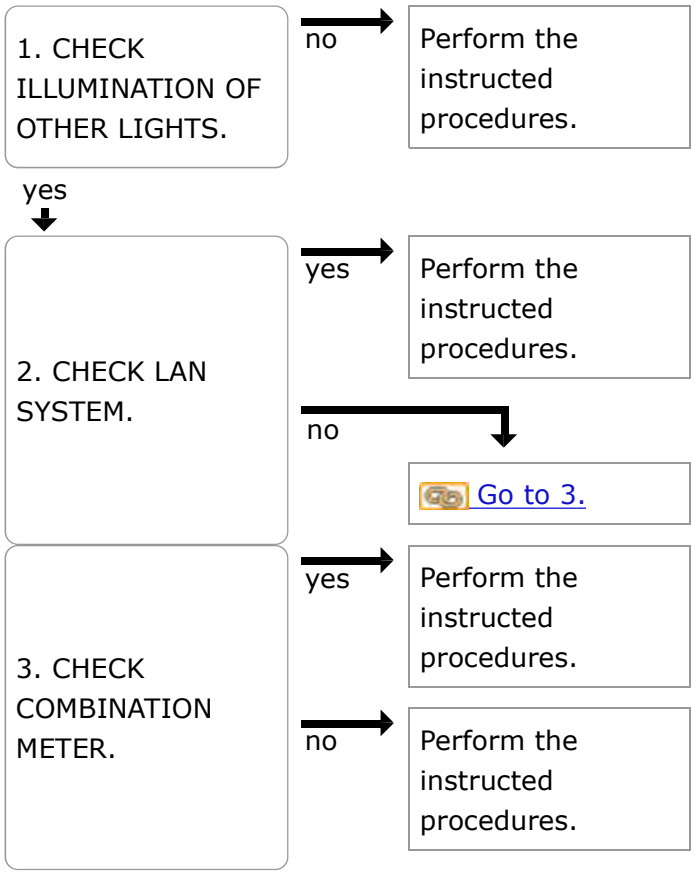
- When the ignition switch is turned to ON (engine OFF), the STEERING warning light illuminates.
- After starting the engine, the STEERING warning light goes out. If it does not go off, a malfunction occurs in electric power steering • combination meter.

POWER STEERING (DIAGNOSTICS) > Warning Light Illumination Pattern

STEERING WARNING LIGHT DOES NOT COME ON

1. POWER STEERING ASSIST ENABLED

Detecting condition:



- Defective combination meter
- Defective harness

Trouble symptom:

When the ignition switch is turned to ON (engine OFF), the STEERING warning light does not illuminate.

Note:

It is operating normally if the warning light illuminates when the ignition switch is turned to ON (engine OFF), and turns off approximately two seconds after engine start.

1. CHECK ILLUMINATION OF OTHER LIGHTS.

Turn the ignition switch to ON. (Engine OFF)

Do other warning lights illuminate?

Yes	Go to 2.
No	Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>INSPECTION.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

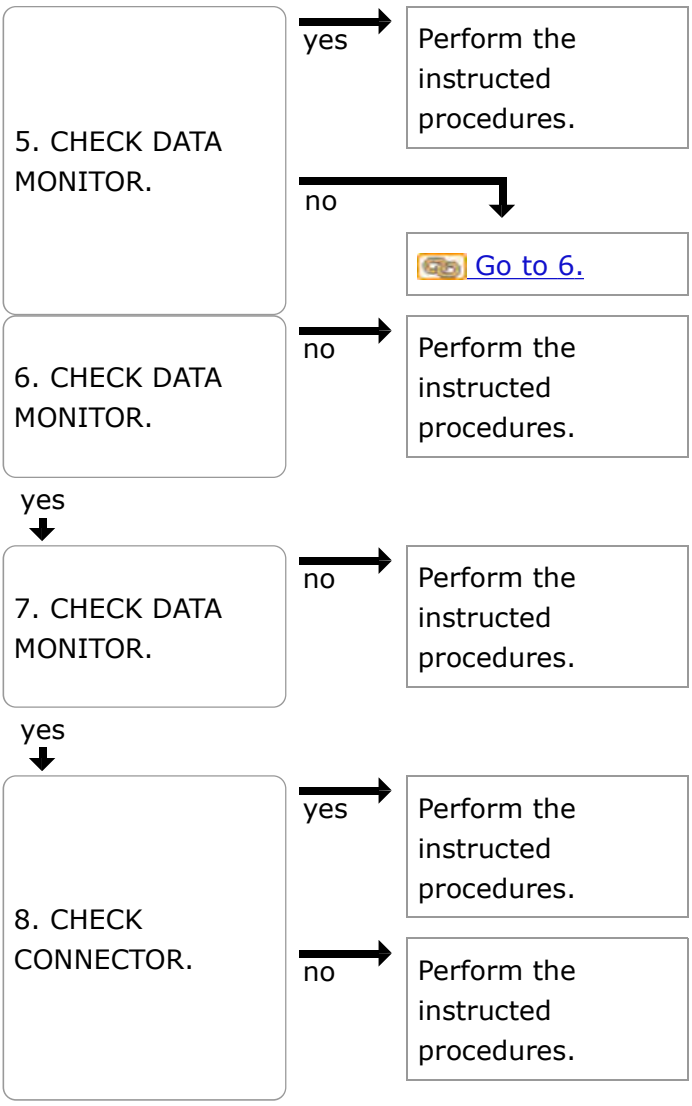
3. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

Is the check result OK?

Yes	Current condition is normal.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

2. POWER STEERING ASSIST DISABLED



Detecting condition:
CAN communication error (engine rpm signal not received)
Trouble symptom:
- Not assisted due to power supply voltage failure.

- The STEERING warning light is normal but there is no power steering assist (steering feels heavy).

Note:

- **During driving, the assist system will not be activated when the ignition voltage drops.**
- **Power steering assist is not started unless both of the ignition switch ON signal and the engine speed signal are input.**
- **In any of the following cases, the power steering assist is limited and steering wheel operation may become heavy.**
  If the steering wheel is held to an end for a long time, or the steering wheel turning to right and left at slow speed is repeated during parking, the assist limitation (overheat protection control) may operate to prevent failures by overheat.
  In this case, by stopping the engine for approx. 30 minutes for cooling, the assist will start operating. While assist limitation (overheat protection control) is in active, [Limited Assist] is displayed in [EPS Status] in the Subaru Select Monitor "Data Monitor".
- **History can be confirmed on [ECU Overheat Protection] or [IGN count from overheating protection (most recent)] of "Data Monitor".**
- **The overheat protection control system is normal operation, therefore, the STEERING warning light will not come on and there will be no DTC displayed.**
- **If the power steering system connector is disconnected while cooling under the overheat protection control, different DTC may be recorded. If there is no DTC and assist limitation is in active, stop the engine for approx. 10 minutes for cooling.**

1. CHECK BATTERY.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK BATTERY TERMINAL AND FUSE.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 4.
4. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Charge or replace the battery.

2. CHECK BATTERY TERMINAL AND FUSE.

Check the battery terminals and the fuse.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace faulty parts.

3. CHECK DTC.

Read the DTC of VDC system using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC related to VDC system or ignition power supply system displayed?

Yes	Perform the diagnosis according to DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK DATA MONITOR.

1. Start the engine.
2. Display the data monitor [Engine Speed] of the power steering control module using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Data Monitor.

Is [Engine Speed] the same as that in the combination meter?

Yes	Go to 5.
No	Check the CAN communication. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

5. CHECK DATA MONITOR.

Display the data monitor [EPS Status] of the power steering control module using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Data Monitor.

Data Monitor

Is [Assist limitation] displayed?

Yes	It is possible that temporary assist limitation has occurred due to overheat protection. Stop the engine for approx. 30 minutes, and check again.
No	Go to 6.

6. CHECK DATA MONITOR.

1. Display the data monitor [Torque sensor main output] and [Torque sensor sub output] of the power steering control module using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Data Monitor.

   Data Monitor

2. Move the steering wheel to the left and right.

Do the values of [Torque sensor main output] and [Torque sensor sub output] change along with the operation?

Yes	Go to 7.
No	Check for poor contact of the torque sensor connector.

7. CHECK DATA MONITOR.

Display the data monitor [IG voltage] of the power steering control module using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Data Monitor.

Is [IG voltage] stable? (While wiggling the harness)

Yes	Go to 8.
No	Check the ignition switch and IG voltage harness, and repair the defective part.

8. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector (B204).

Are there any damages to terminal or other parts either on the power steering control module side or on the connector side?

Yes	Repair the terminal.
No	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Warning Light Illumination Pattern

STEERING WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Open circuit of harness

Trouble symptom:

When starting the engine, the STEERING warning light continues to illuminate.

1. CHECK DTC.

Read the DTC of the power steering control module using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis according to DTC. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK COMBINATION METER.

Check the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

Is the check result OK?

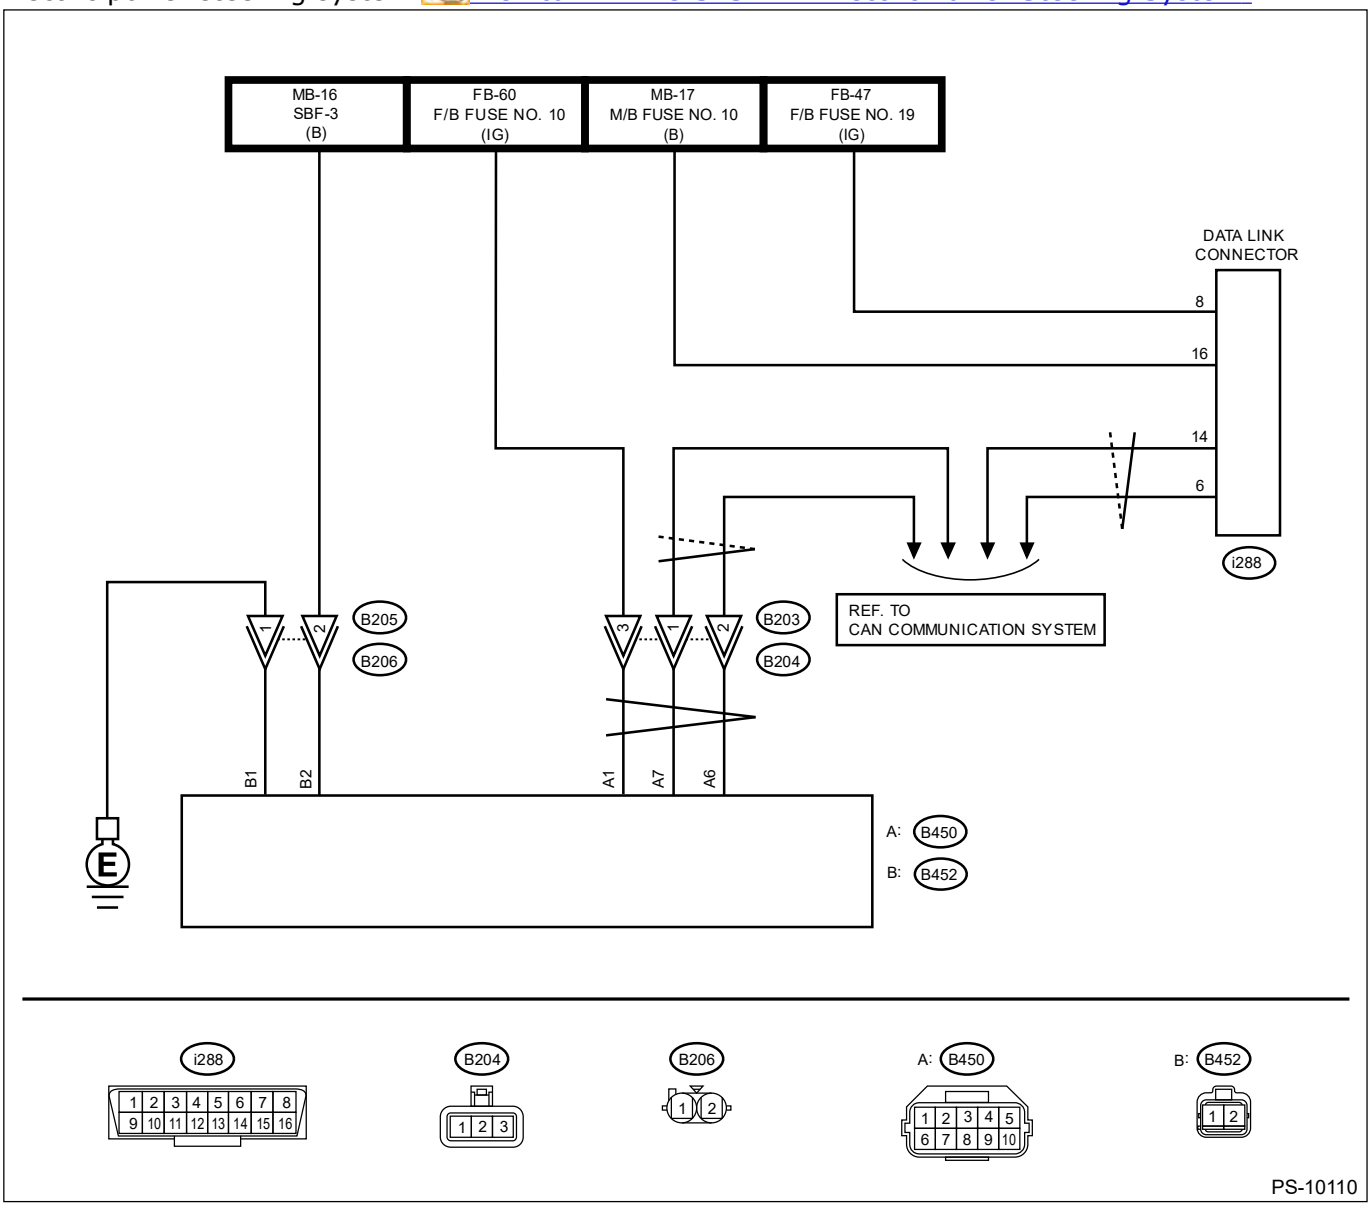
Yes	Replace the steering box. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:



- Defective harness connector
- Defective power steering control module

Trouble symptom:

- Communication is impossible between the power steering control module and Subaru Select Monitor.
- After starting the engine, the STEERING warning light does not illuminate but steering effort is heavy.

Wiring diagram:

Electric power steering system Ref. to WIRING SYSTEM>Electric Power Steering System.

1. CHECK IGNITION SWITCH.
no → Perform the instructed procedures.
yes ↓

2. CHECK BATTERY.
no → Perform the instructed procedures.
yes ↓

3. CHECK BATTERY TERMINAL.
yes → Perform the instructed procedures.
no → Go to 4.

4. CHECK POWER STEERING CONTROL MODULE CONNECTOR INSTALLATION.
no → Perform the instructed procedures.
yes ↓

5. CHECK LAN SYSTEM.
yes → Perform the instructed procedures.
no → Go to 6.

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.
yes → Perform the instructed procedures.
no → Go to 7.

7. CHECK SUBARU SELECT MONITOR COMMUNICATION.
no → Perform the instructed procedures.

yes

8. CHECK POWER SUPPLY CIRCUIT.

no → Perform the instructed procedures.

yes

9. CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND CHASSIS GROUND.

no → Perform the instructed procedures.

yes

10. CHECK POOR CONTACT OF CONNECTOR.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK IGNITION SWITCH.

Is the ignition switch ON?

Yes	Go to 2.
No	Turn the ignition switch to ON, and select the power steering using the Subaru Select Monitor.

2. CHECK BATTERY.

1. Turn the ignition switch to OFF.
2. Measure the battery voltage.

Is the voltage 11 V or more?

Yes	Go to 3.
No	Charge or replace the battery.

3. CHECK BATTERY TERMINAL.

Is there poor contact at battery terminal?

Yes	Replace or tighten the battery terminal.
No	Go to 4.

4. CHECK POWER STEERING CONTROL MODULE CONNECTOR INSTALLATION.

Turn the ignition switch to OFF.

Is the power steering control module connector inserted into the power steering control module until the clamp locks?

Yes	Go to 5.
No	Insert the power steering control module connector into the power steering control module.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is there any fault in LAN system?

Yes	Perform the diagnosis according to DTC for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Check whether communication to electric power steering system can be executed normally.

Is the [Select Function] screen displayed?

Yes	Check DTC of electric power steering system. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 7.

7. CHECK SUBARU SELECT MONITOR COMMUNICATION.

Connect the Subaru Select Monitor to another vehicle to check whether the communication for initializing can be executed normally.

Does the Subaru Select Monitor communicate normally?

Yes	Go to 8.
No	Repair or replace the Subaru Select Monitor.

8. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON. (Engine OFF)
2. Measure the ignition power supply voltage between the power steering control module connector and chassis ground.
   Connector & terminal
   (B204) No. 3 (+) — Chassis ground (−):
   (B206) No. 2 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 9.
No	Repair the open circuit in the harness between the power steering control module and the battery.

9. CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND CHASSIS GROUND.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from the power steering control module.
3. Measure the resistance of harness between power steering control module connector and chassis ground.
   Connector & terminal
   (B206) No. 1 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 10.
No	Repair the open circuit of the power steering control module ground circuit and the poor contact of connector.

10. CHECK POOR CONTACT OF CONNECTOR.

Is there poor contact of power steering control module power supply, ground circuit and data link connector?

Yes	Repair the connector.
No	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to POWER STEERING (DIAGNOSTICS)>Data Monitor>LIST.**

POWER STEERING (DIAGNOSTICS) > Data Monitor

LIST

Item	Contents	Standard/Unit	Note
Power current	Primary current recognized by power steering CM	−128 — 127 A	-
Vehicle Speed	Vehicle speed	0 — 255 km/h	-
Engine Speed	Engine speed	0 — 12750 rpm	-
CU Sensing Current(q)	q axis current recognized by power steering CM	−128 — 127 A	-
Motor Current(U)	U axis current recognized by power steering CM	−128 — 127 A	-
Motor Current(V)	V axis current recognized by power steering CM	−128 — 127 A	-
Motor angular speed	Motor rotational speed (rpm)	−4096 — 4064 rpm	-
ECM Temperature	Power steering CM inner temperature	−50 — 205 °C	-
Power Supply Voltage	Voltage supplied to power steering CM	0 — 25.5 V	-
Torque Sensor Power Supply	Voltage supplied to torque sensor	0 — 10.2 V	-
IG Voltage	IGN voltage recognized by power steering CM	0 — 25.5 V	-
CAN bus status	CAN bus status	Active/Passive/Bus Off	-
EPS operating condition	EPS assist status	Normal/Assist Stop/Assist Restricted	-
CU Target current(q)	q axis indicator current from power steering CM to motor	−128 — 127 A	-
Assist Map	Assist MAP specification used for control	MAP1/MAP2/MAP3	-
Overheating protection intervention history	Number of interventions to the overheat protection control	0 — 250 times	-
IG Count after ECU Overheat Protection(latest)	IGN SW ON number at the last intervention to overheat protection control	0 — 65000 times	-

IG Count after ECU Overheat Protection(Previous)	IGN SW ON number at the second last intervention to overheat protection control	0 — 65000 times	-
IG Count after ECU Overheat Protection(Before Previous)	IGN SW ON number at the third last intervention to overheat protection control	0 — 65000 times	-
Assist restriction history (voltage malfunction)	Number of the intervention of assist restriction control due to voltage failure	0 — 250 times	-
IG OFF Number while Driving	IGN SW OFF number while driving	0 — 250 times	-
Torque sensor main output	Torque sensor (main) output value	−15.36 — 15.24 N·m	-
Torque sensor sub output	Torque sensor (sub) output value	−15.36 — 15.24 N·m	-
Steering Angle	Steering wheel rotational angle	−640 — 640 deg	-

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2511 TORQUE SENSOR MAIN

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2512 TORQUE SENSOR SUB

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2513 TORQUE SENSOR MUCH TOLERANCE

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2514 TORQUE SENSOR POWER SUPPLY

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2521 MOTOR MALFUNCTION

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2522 RESOLVER SENSOR

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2531 CONTROL MODULE CPU

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2532 CONTROL MODULE PERIPHERAL CIRCUIT

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2533 CONTROL MODULE BOARD TEMPERATURE SENSOR

Caution:

Do not perform the clear memory after checking DTCs.

Note:

When this code is displayed, replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2541 VEHICLE DYNAMICS CONTROL MODULE VEHICLE SPEED SENSOR

DTC detecting condition:
When VDCCM reception failure (related to vehicle speed sensor) is detected after the ignition switch is ON.

Trouble symptom:
The steering wheel operation feels heavy.

1. CHECK DTC.

Read the DTC of VDC system using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is a DTC related to VDC system or vehicle speed signal system displayed?

Yes	Perform the diagnosis according to the DTC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to the DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK VEHICLE SPEED SIGNAL.

1. Display the data monitor [Vehicle Speed] of the power steering control module using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Data Monitor.

   Data Monitor

2. Lift up the vehicle (so that the wheels turn freely), start the engine, and raise engine speed in gear.
   Caution:
   Be careful that no one is near the spinning tires and nothing gets caught in them.
3. Check for whether the data changes according to vehicle speed.

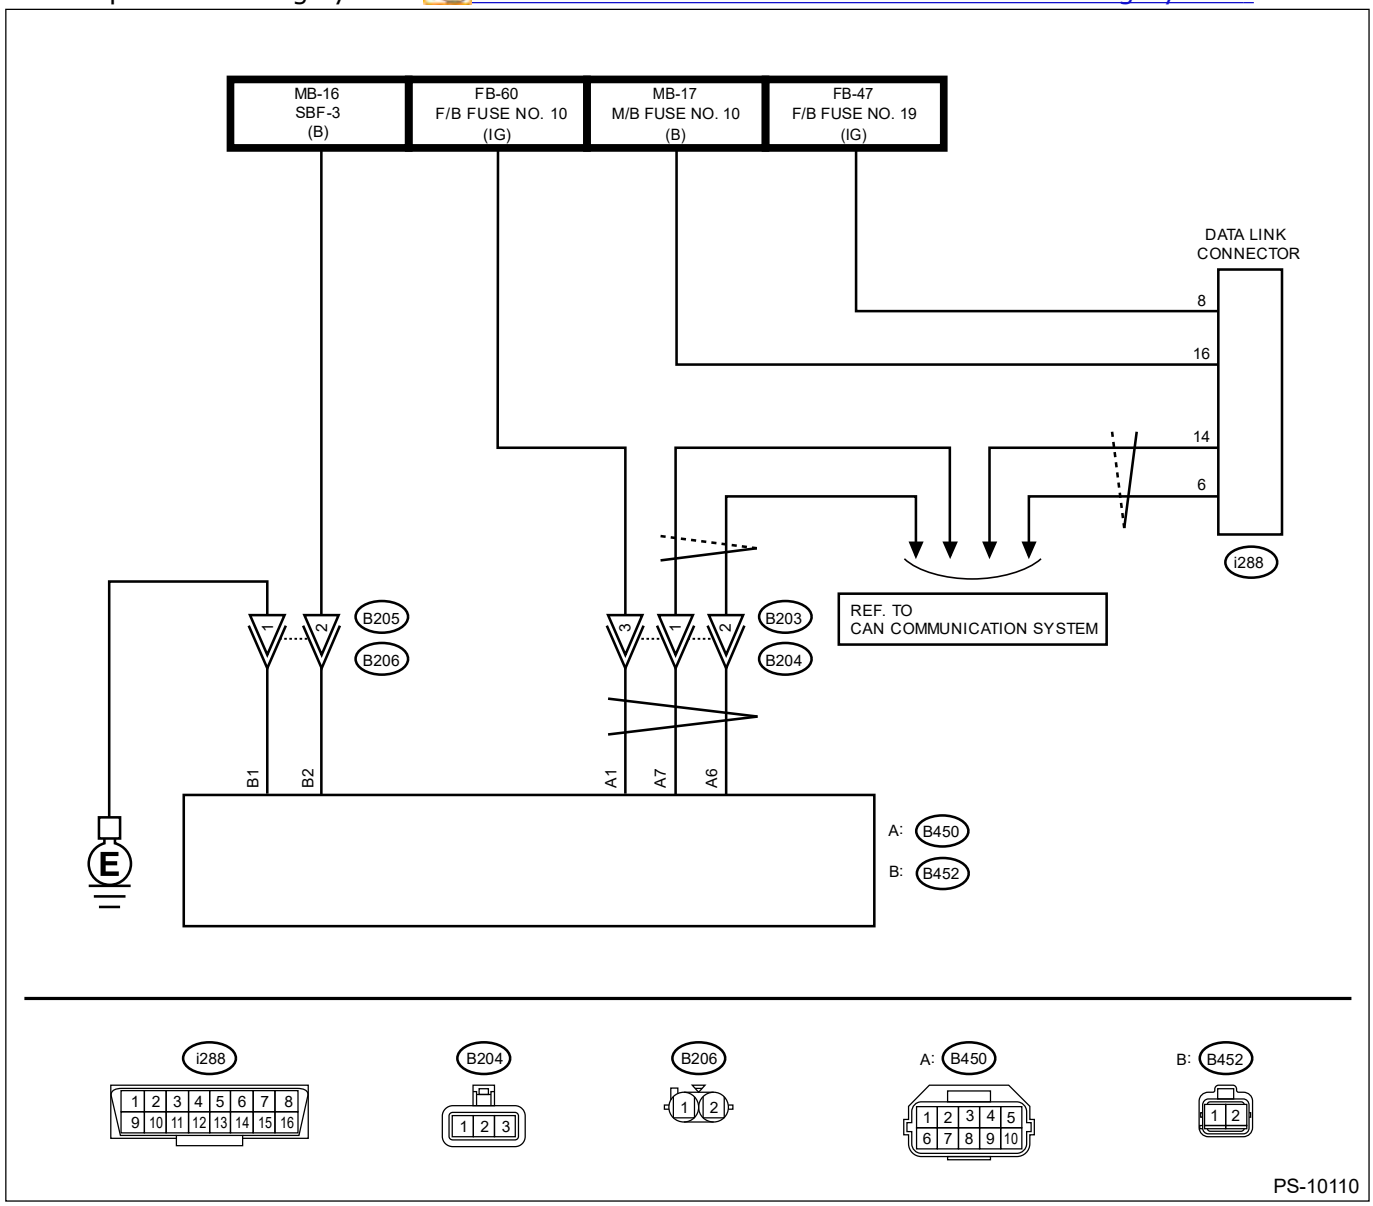
Is the data in sync with the vehicle speed?

Yes	It is possible that temporary poor communication occurs. Clear the memory. Ref. to COMMON(diag)>Clear memory.
No	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2543 ERROR PASSIVE

DTC detecting condition:



When send/receive failure of CAN communication is detected after the ignition switch is ON.

Trouble symptom:

The steering wheel operation feels heavy.

Wiring diagram:

Electric power steering system Ref. to WIRING SYSTEM>Electric Power Steering System.

1. CHECK PERIPHERALS.

Check the data link connector.

Is any other electrical part connected to the data link connector or harness?

Yes	Disconnect the connection of electrical parts and perform inspection again.
No	Go to 2.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to the DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK DTC.

Read the DTC of the power steering control module using the Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC C2543 displayed in current malfunction?

Yes	Go to 4.
No	System is normal. Temporary interference from noise is a possible cause. Clear the memory to complete the diagnosis. Ref. to COMMON(diag)>Clear memory.

4. CHECK CONNECTOR.

Check the connecting condition of connector.

Is the connector firmly installed?

Yes	Go to 5.
No	Install the connector, and check again.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector (B204).

Is there crimped or spread portion in connector terminal on vehicle harness side and power steering control module side?

Yes	Repair or replace faulty parts.
No	Go to 6.

6. CHECK HARNESS.

Check the harness related to CAN communication system.

Is there any fault in the harness?

Yes	Repair or replace the harness.
No	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2544 AUTO START STOP SYSTEM

DTC detecting condition:

- When a failure of CAN communication is detected after the ignition switch is ON.
- When the power steering control module has a detection error after the ignition switch is ON.

Trouble symptom:
DTC C2544 is stored in the power steering control module.

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK POWER STEERING CONTROL MODULE.

1. Execute the inspection mode. Ref. to POWER STEERING (DIAGNOSTICS)>Inspection Mode.
2. Read the DTC using Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC C2544 displayed in current malfunction?

Yes	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.
No	It results from a temporary noise interference. Clear the memory to complete the diagnosis. Ref. to COMMON(diag)>Clear memory.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2545 EYESIGHT SYSTEM

DTC detecting condition:
When the EyeSight system fail flag from stereo camera is received after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

1. CHECK POOR CONTACT OF CONNECTOR.

Is there poor contact of the stereo camera connector?

Yes	Repair the poor contact of connector.
No	Go to 2.

2. CHECK DTC.

Using the Subaru Select Monitor, read DTC of the EyeSight system. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC of EyeSight system displayed?

Yes	Perform the diagnosis according to the DTC. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK POWER STEERING CONTROL MODULE.

1. Connect all connectors.
2. Execute the inspection mode. Ref. to POWER STEERING (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC C2545 displayed in current malfunction?

Yes	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.
No	It results from a temporary noise interference. Clear the memory to complete the diagnosis. Ref. to COMMON(diag)>Clear memory.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2546 EYESIGHT VALUE

DTC detecting condition:
When the steering support indication value from stereo camera is out of range after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

1. CHECK POOR CONTACT OF CONNECTOR.

Is there poor contact of the stereo camera connector?

Yes	Repair the poor contact of connector.
No	Go to 2.

2. CHECK DTC.

Using the Subaru Select Monitor, read DTC of the EyeSight system. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC of EyeSight system displayed?

Yes	Perform the diagnosis according to the DTC. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK POWER STEERING CONTROL MODULE.

1. Connect all connectors.
2. Execute the inspection mode. Ref. to POWER STEERING (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC C2546 displayed in current malfunction?

Yes	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.
No	It results from a temporary noise interference. Clear the memory to complete the diagnosis. Ref. to COMMON(diag)>Clear memory.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2547 EYESIGHT CHECK SUM

DTC detecting condition:
When check sum error of EyeSight transmission data is detected after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

1. CHECK POOR CONTACT OF CONNECTOR.

Is there poor contact of the stereo camera connector?

Yes	Repair the poor contact of connector.
No	Go to 2.

2. CHECK DTC.

Using the Subaru Select Monitor, read DTC of the EyeSight system. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC of EyeSight system displayed?

Yes	Perform the diagnosis according to the DTC. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system using the Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is DTC of CAN communication displayed?

Yes	Perform the diagnosis according to DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK POWER STEERING CONTROL MODULE.

1. Connect all connectors.
2. Execute the inspection mode. Ref. to POWER STEERING (DIAGNOSTICS)>Inspection Mode.
3. Read the DTC using Subaru Select Monitor. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

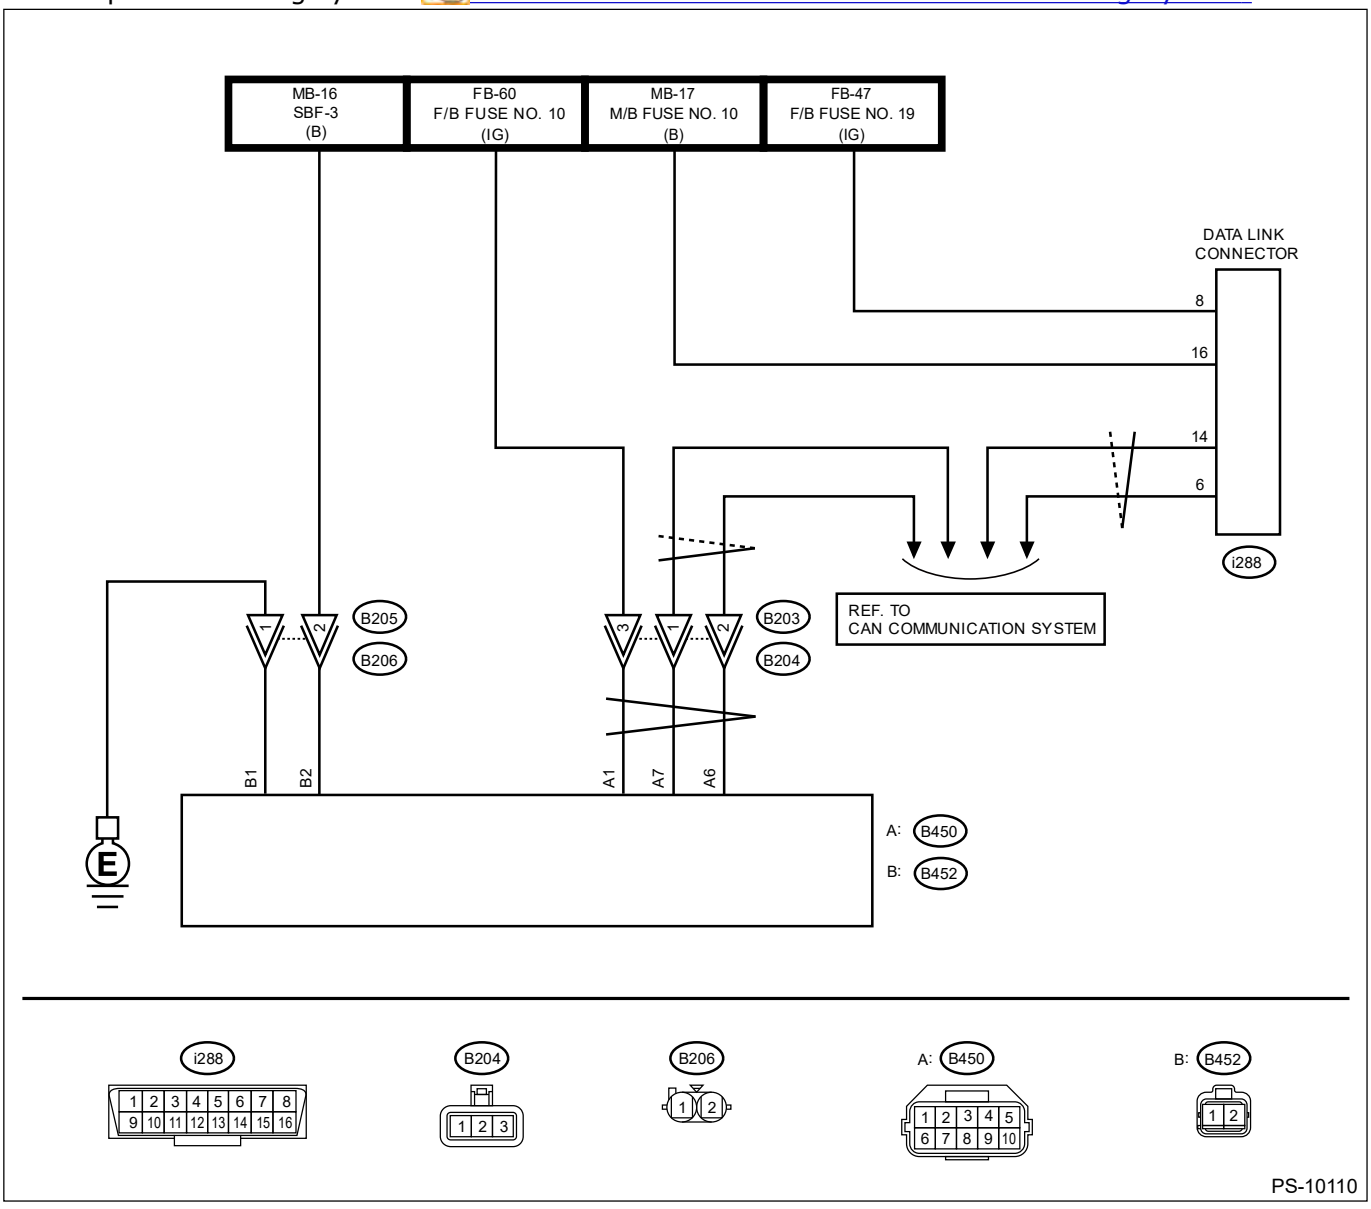
Is DTC C2547 displayed in current malfunction?

Yes	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.
No	It results from a temporary noise interference. Clear the memory to complete the diagnosis. Ref. to COMMON(diag)>Clear memory.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2551 POWER SUPPLY RELAY

DTC detecting condition:



- When short malfunction of power supply relay is detected at initial check.
- When power supply voltage failure is detected after the ignition switch is ON.
- When power supply voltage drop is detected with 500 rpm engine speed reception.

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

Wiring diagram:

Electric power steering system Ref. to WIRING SYSTEM>Electric Power Steering System.

Note:

If power supply voltage failure exists at the vehicle side, the warning light goes off if the normal voltage returns.

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Charge or replace the battery.

2. CHECK BATTERY TERMINAL AND FUSE.

Check the battery terminals and the fuse.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace faulty parts.

3. CHECK WIRING HARNESS.

1. Disconnect the connector. (B205, B206)
2. Turn the ignition switch to ON.
3. Using a tester and special tool harness, check the voltage between terminals.
   Connector & terminal
   (B205) No. 2 (+) — Chassis ground (−):

Is the voltage 12 V or more?

Yes	Go to 4.
No	Repair the open circuit of harness or the poor contact of connector between the power steering control module and the battery.

4. CHECK GROUND CIRCUIT.

1. Turn the ignition switch to OFF.
2. Using a tester and special tool harness, check the resistance between terminals.
   Connector & terminal
   (B205) No. 1 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the open circuit or poor contact of the harness between the power steering control module and chassis ground.

5. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the power steering control module connector (B452).
3. Using a tester and special tool harness, check the resistance between harness terminals.
   Connector & terminal
   (B206) No. 1 — (B452) No. 1:
   (B206) No. 2 — (B452) No. 2:

Is the resistance less than 1 Ω?

Yes	Replace the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.
No	Repair or replace the harness.

POWER STEERING (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

10. Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern
11. Diagnostic Trouble Code (DTC)
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:

Remove foreign matter (dust, water, oil, etc.) from the TPMS & keyless entry CM connector or TPMS CM connector during removal and installation.

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. BASIC INSPECTION.

Perform basic inspection. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Tire Pressure Monitor].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, and Go to 5.
No	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.**

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis according to the displayed DTC. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Tire Pressure Monitor]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown.
No	Finish the diagnosis.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle’s state.

<table>

TIRE PRESSURE MONITOR(DIAGNOSTICS) > General Description

CAUTION

1. SRS AIRBAG SYSTEM

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

2. TPMS & KEYLESS ENTRY CM OR TPMS CM

- If the transmitter is replaced, ID registration for the transmitter is required. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID)>OPERATION.
- When adjusting tire pressure indoors in winter, there is a big temperature difference between the indoor facilities and outside. Once the car is outside where the temperature is lower, the air pressure in the tires will drop, causing the tire pressure warning light to illuminate, even if the pressure in the tires was adjusted to standard values indoors. To avoid this, it is necessary to adjust the tire pressure to the high side in consideration of the difference in temperature between inside and outside according to the following table.
- P205/55R16

Temperature °C (°F)	**Indoor temperature**	**15.5 (60)**		
	Ambient air temperature	**−1 (30)**	**−12 (10)**	**−23 (−10)**
Air pressure kPa (psi)	Front	230 (33)	245 (35)	260 (37)
	Rear	220 (32)	235 (34)	250 (36)

- 205/50R17

Temperature °C (°F)	**Indoor temperature**	**15.5 (60)**		
	Ambient air temperature	**−1 (30)**	**−12 (10)**	**−23 (−10)**
Air pressure kPa (psi)	Front	230 (33)	245 (35)	260 (37)
	Rear	220 (32)	235 (34)	250 (36)

- P225/40R18

Temperature °C (°F)	**Indoor temperature**	**15.5 (60)**		
	Ambient air temperature	**−1 (30)**	**−12 (10)**	**−23 (−10)**
Air pressure kPa (psi)	Front	230 (33)	245 (35)	260 (37)
	Rear	220 (32)	235 (34)	260 (36)

TIRE PRESSURE MONITOR(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following item which might affect the quality of the tire pressure monitoring system.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the fuse condition. Ref. to SECURITY AND LOCKS>Relay and Fuse.
   Make sure that ampere of the fuse is setting value, and it is not blown out.
3. Inspect that the tire pressure is within the specification while the tire is cool. (Refer to Tire Caution Label.)
4. Check the tires for damage or the insertion of foreign matters.
5. Check the connecting condition of harness and harness connector.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Inspection Mode

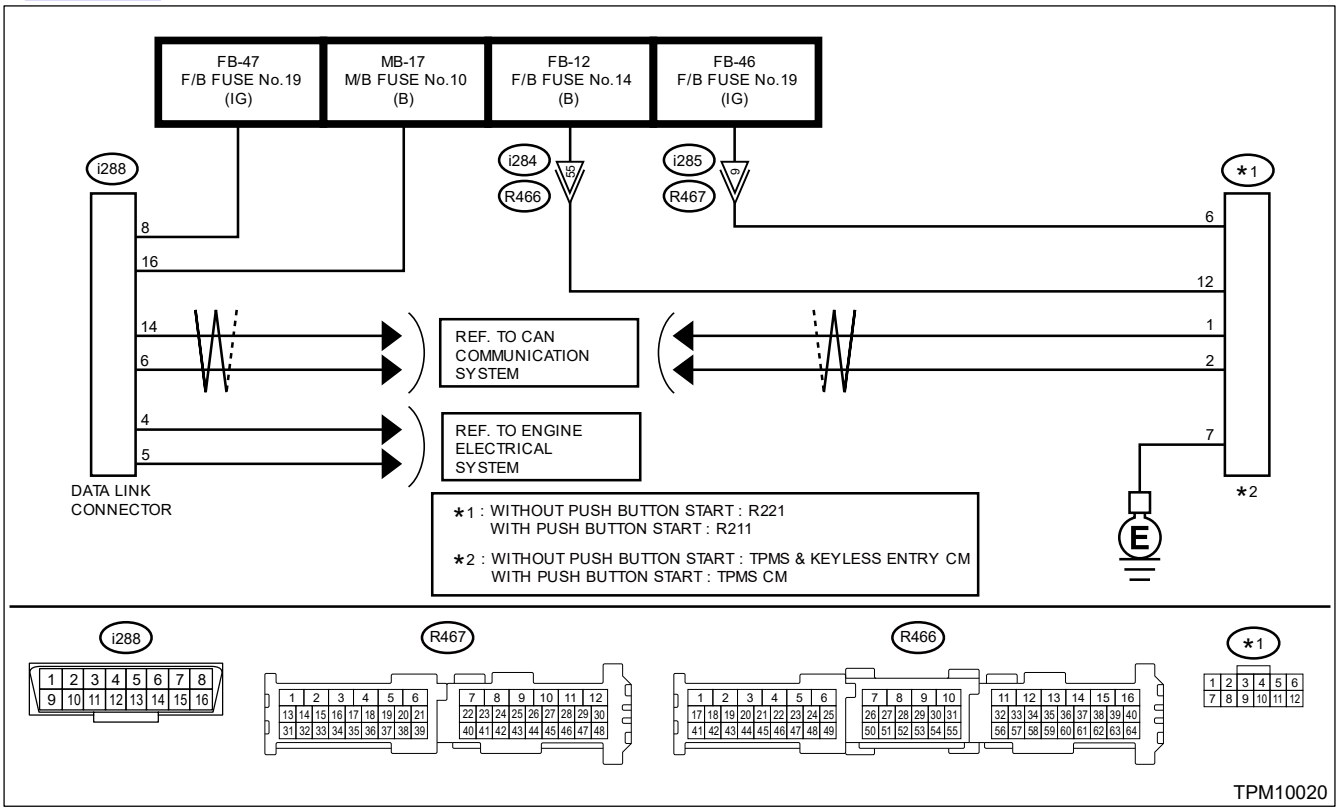
PROCEDURE

Reproduce the malfunction occurrence condition as much as possible. Drive the vehicle at 40 km/h (25 MPH) or faster for at least ten minutes.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Defective TPMS & keyless entry CM or TPMS CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

- TPMS system Ref. to WIRING SYSTEM>Keyless Entry System.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY CIRCUIT.

Connect DST-i to data link connector.

Does DST-i turn ON?

Yes	Go to 4.
No	Go to 2.

2. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 8 (+) — Chassis ground (−):
   (i288) No. 16 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the power supply circuit. **Note:** **In this case, repair the following item:** • **Open or ground short circuit of harness between battery and data link connector** • **Blown out of fuse**

3. CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).

1. Turn the ignition switch to OFF.
2. Using the tester, measure the resistance between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 4 — Chassis ground:
   (i288) No. 5 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found, go to 4.
No	Repair the harness and connector.

4. CHECK SUBARU SELECT MONITOR.

1. Connect the Subaru Select Monitor to a normal vehicle.
2. Start the engine and establish communication between the Subaru Select Monitor and vehicle.

Is communication possible?

Yes	Go to 5.
No	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is LAN system OK?

Yes	Go to 6.
No	Perform the inspection according to the diagnosis for LAN system.

6. CHECK CONNECTOR.

Check for poor contact of TPMS & keyless entry CM or TPMS CM connector, data link connector, or intermediate connector.

Is the connector OK?

Yes	Go to 7.
No	Repair the connector.

7. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Remove a fuse from the fuse box.
3. Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the fuse OK?

Yes	Go to 8.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the TPMS & keyless entry CM or TPMS CM connector and fuse.

8. CHECK TPMS & KEYLESS ENTRY CM OR TPMS CM CONNECTOR POWER SUPPLY CIRCUIT (OPEN).

1. Disconnect the connector of the TPMS & keyless entry CM or TPMS CM.
2. Turn the ignition switch to ON.
3. Measure the voltage between TPMS & keyless entry CM or TPMS CM connector and chassis ground.

Connector & terminal

Without keyless access with push button start system

(R221) No. 6 (+) — Chassis ground (−):

(R221) No. 12 (+) — Chassis ground (−):

With keyless access with push button start system

(R211) No. 6 (+) — Chassis ground (−):

(R211) No. 12 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 9.
No	Check for open or short circuit in the harness between TPMS & keyless entry CM or TPMS CM connector and fuse.

9. CHECK TPMS & KEYLESS ENTRY CM OR TPMS CM GROUND CIRCUIT (OPEN).

Measure the resistance of harness between TPMS & keyless entry CM or TPMS CM connector and chassis ground.

Connector & terminal

Without keyless access with push button start system

(R221) No. 7 — Chassis ground:

With keyless access with push button start system

(R211) No. 7 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Check the connection between the data link connector and Subaru Select Monitor.
No	Repair the harness for ground line.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

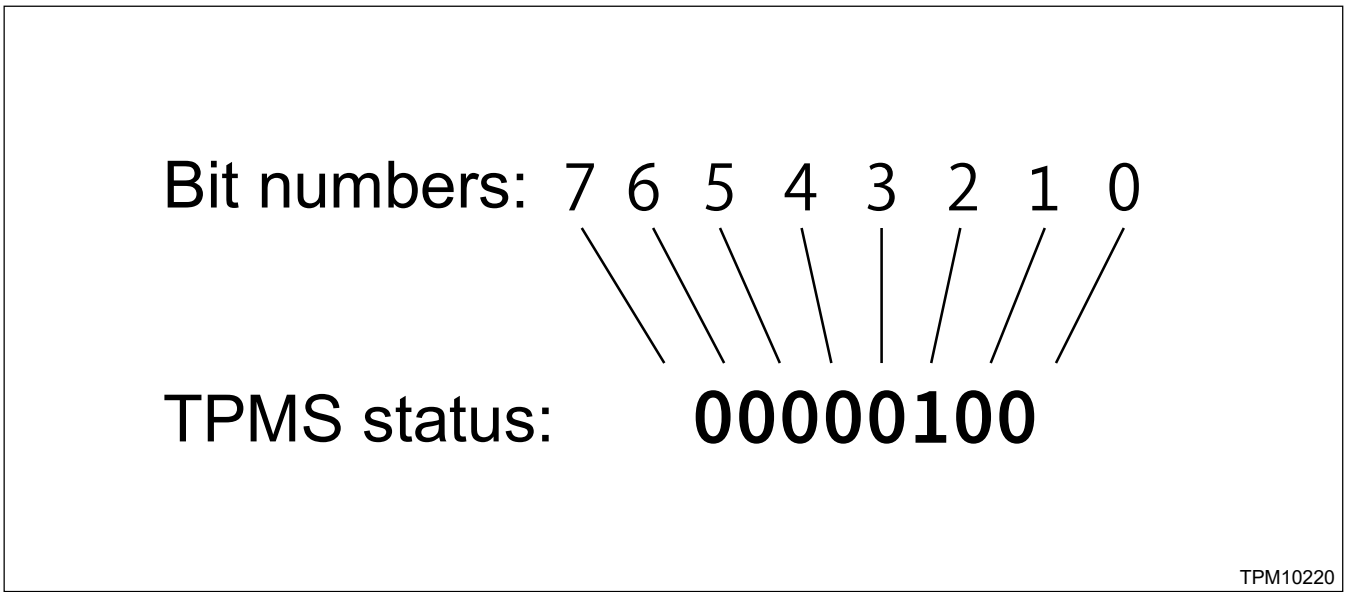
- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor>LIST.**

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Data Monitor

LIST

Item	Content / display range	Standard	Note
FL Tire status	Status of the front left transmitter	00000000 — 11111111	For details, refer to the Notes in the margin.
FR Tire status	Status of the front right transmitter		
RR Tire status	Status of the rear right transmitter		
RL Tire status	Status of the rear left transmitter		
FL Tire air pressure	Value converted to tire pressure from data delivered from transmitter is displayed. (The figure may differ from the actual measured values.)	0 — 351.645 kPa	—
FR Tire air pressure		0 — 351.645 kPa	—
RR Tire air pressure		0 — 351.645 kPa	—
RL Tire air pressure		0 — 351.645 kPa	—
Vehicle Speed Sensor	Vehicle speed signal which is input in control module	0 — 255 km/h	—
Pressure warning	Threshold where tire pressure warning light illuminates	0 — 351.645 kPa	—
Return pressure	Threshold where tire pressure warning light goes out	0 — 351.645 kPa	—
Transmitter power supply	Transmitter power supply status	ON MODE/OFF	—
INDICATOR LAMP	Status of tire pressure warning light	ON/OFF	—
FL Registered ID	ID of the front left transmitter	0 — 16777215	
FR Registered ID	ID of the front right transmitter	0 — 16777215	
RR Registered ID	ID of the rear right transmitter	0 — 16777215	
RL Registered ID	ID of the rear left transmitter	0 — 16777215	

Item	Content / display range	Standard	Note
Latest reception ID	Previous reception ID	0 — 16777215	**Note:** **During ID registration such as when replacing valves, valve IDs displayed on the unit body in hexadecimal format are converted into decimal number and displayed in the data monitor.**
Reception ID one ahead	Second latest reception ID	0 — 16777215	
Before reception ID2	Third latest reception ID	0 — 16777215	
Before reception ID3	Fourth latest reception ID	0 — 16777215	



Note:

BIt	Data	Condition	
7	Low Battery	Shows the remaining battery level.	0: Normal 1: Low level
6	Sensor Fail	Shows the malfunction of TPMS.	0: Normal 1: Malfunctioning
5	LF Response	Shows the responding transmission to the LF signal.	0: Transmission for other than LF response 1: Transmission for LF response
4	PAL Condition	Shows the status of position information.	0: Position detection finished 1: Position detection in progress
3	Rolling Detection	Shows the status of tire rotation detection.	0: Tire stop status detected 1: Tire rotation status detected
2-0	Status code	Shows the status in valve transmission.	0: Responding to the LF signal “Learn LF” 1: Detecting the change in tire pressure 2: — 3: Responding to the LF signal “Entering off LF” 4: Position detection is in progress (transmission timing is synchronized with tire rotation) 5: Position detection is in progress (transmission timing is not synchronized with tire rotation) 6: Normal driving status (position detection mode is ended) 7: Detecting the completion of change in tire pressure

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Register Transmitter (ID)

OPERATION

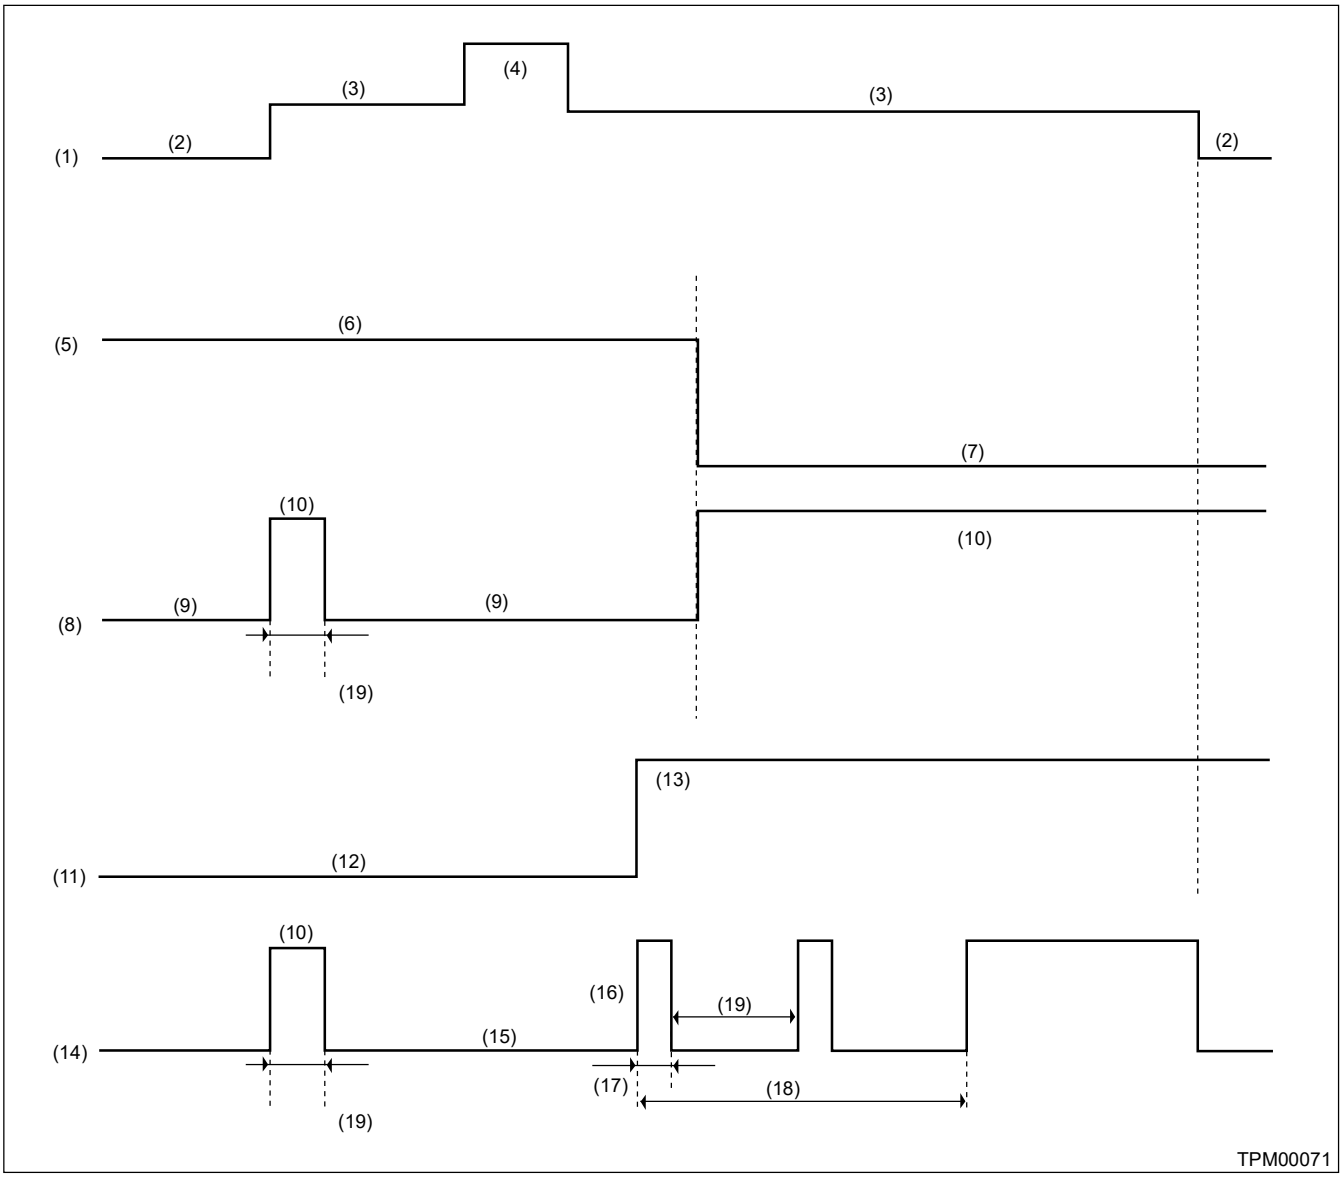
Perform the registration procedure of the transmitter in the following cases:
- Transmitter is replaced.
- TPMS & keyless entry CM or TPMS CM is replaced.

Note:
- **If registration of the transmitter ID is not possible after two attempts, replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.**
- **During the registration, turn the ignition switch to OFF and end the Subaru Select Monitor. Or if the registration is not performed for 5 minutes or more, the registration mode is cancelled.**
- **When rotating tires, there is no affect on the performance or functions of the tire pressure monitoring control module even if the transmitter (ID) is not registered, however, the tire position displayed on the Subaru Select Monitor will be incorrect.**

1. Adjust all tire pressures to the specifications.
2. Connect the Subaru Select Monitor and select [Diagnosis] on [Start] display.
3. On [Vehicle selection] display, input the target vehicle information and select [OK].
4. On [Main Menu] display, select [Each System].
5. On [Select System] display, select [Tire Pressure Monitor], and then select [Enter].
6. On [Select Function] display, select [Work Support].
7. On [Work Support] display, select [ID registration].
8. When [ID registration mode When execute Registered ID is deleted Continue?] is displayed, select [OK].
9. Contact the transmitter registration tool to the side wall area near the air valve on the front left tire, and press the switch. The transmitter ID is sent to the TPMS & keyless entry CM or TPMS CM. (At this time, the tire pressure warning light blinks to confirm that the registration has started.)

(1) Air valve (transmitter)
(2) Transmitter registration tool

Note:



- **The registration order of transmitter ID is not specified.**
- **The transmitter registration tool is used by touching the side wall area near the transmitter.**
- **When registration of each tire is completed, [ID registration completed] is displayed on the Select Monitor screen.**
- **If registration procedure stop in the halfway (turning ignition switch to OFF, wrong registration order, etc), proceed from step 5).**

10. When ID registration is completed, the tire pressure warning light remains lit for approximately 2 seconds, to end the registration. Switch the screen to [Data Monitor] of Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

11. Check the transmitter ID that was registered, then perform a driving test. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Inspection Mode.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

INSPECTION

(1) Ignition switch
(2) OFF
(3) ON
(4) Start
(5) Tire inflation pressure condition
(6) Meet the specification
(7) Less than standard value (For the pressure warning level, refer to "Data monitor".
(8) Tire inflation pressure warning light (pressure condition)
(9) Light OFF
(10) Light ON
(11) System status
(12) Normal
(13) Malfunction
(14) Tire inflation pressure warning light (system condition)
(15) Light OFF
(16) Blink
(17) 1 second
(18) Blinks 25 times
(19) 2 seconds

Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.)

1. When the tire pressure warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2. If the tire pressure warning light does not go off, check the TPMS & keyless entry CM or TPMS CM/warning light circuit and the combination meter circuit. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern>TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF.

Note:

If the problem is fixed while driving at approximately 40 km/h (25 MPH) after the tire pressure warning light blinks/lights, the warning light goes out and the tire pressure monitor system operates normally. (If there is a decrease in tire pressure, or a malfunction of the system, the malfunction history is displayed.)

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

TIRE PRESSURE WARNING LIGHT DOES NOT COME ON

Detecting condition:

Defective combination meter

Trouble symptom:

When the ignition switch is turned to ON, the tire pressure warning light does not turn on (for approx. 2 seconds).

1. CHECK DTC.

Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK COMBINATION METER.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [TPMS warning]

Does the tire pressure warning light illuminate?

Yes	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF

Detecting condition:

- Defective combination meter
- Tires pressure drop
- Transmitter ID not registered

Trouble symptom:

Tire pressure warning light remains illuminating after engine starts.

1. CHECK DTC.

Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK TRANSMITTER (ID).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Tire Pressure Monitor]. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

- [FL Registered ID]
- [FR Registered ID]
- [RR Registered ID]
- [RL Registered ID]

Is the transmitter ID registered?

Yes	Go to 3.
No	Register the transmitter ID. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID)>OPERATION.

3. CHECK TRANSMITTER DATA OUTPUT.

1. Start the engine.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Tire Pressure Monitor]. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

- [INDICATOR LAMP]
- [FR Registered ID]
- [RR Registered ID]
- [RL Registered ID]

Is [ON] displayed?

Yes	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

TIRE PRESSURE WARNING LIGHT IS 25 TIMES BLINKING AND TURN ON

Detecting condition:

- Defective TPMS & keyless entry CM or TPMS CM
- Defective harness
- Transmitter is faulty.

Trouble symptom:

Every time the engine starts, tire pressure warning light blinks 25 times and then illuminates.

1. CHECK DTC.

Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK LAN COMMUNICATION.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Perform the inspection according to the diagnosis for LAN system.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**
- **For details on DTCs, refer to the list. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.**

Note:

Refer to DTC C2024 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2024 RL TIRE AIR PRESSURE DECREASE NORMAL MODE.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2024 RL TIRE AIR PRESSURE DECREASE NORMAL MODE

DTC DETECTING CONDITION:

Inflation pressure of tires dropped below the specified value.

Note:

For the specifications, refer to [Data monitor]. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

Trouble symptom:

Tire pressure warning light illuminates.

Caution:

When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

1. CHECK TIRES.

Lift up the vehicle and check for damage in the tires.

Are there cracks or damage?

Yes	Replace the tire.
No	Go to 2.

2. CHECK TIRES.

Check the tire air pressure.

Is the tire pressure in the specifications?

Yes	Go to 3.
No	Adjust the air pressure.

3. CHECK TRANSMITTER DATA.

1. Drive at 40 km/h (25 MPH) or more.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Tire Pressure Monitor]. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

- [FL Tire air pressure]
- [FR Tire air pressure]
- [RR Tire air pressure]
- [RL Tire air pressure]

Is there a transmitter with different display?

Yes	Replace the transmitter (tire pressure sensor) with different display. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Go to 4.

4. PERFORM DRIVING TEST.

1. Using the Subaru Select Monitor, perform the clear memory of [Tire Pressure Monitor]. Ref. to COMMON(diag)>Clear memory.

2. Perform a driving test. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Inspection Mode>PROCEDURE.
3. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is C2021, C2022, C2023 or C2024 displayed? (Current malfunction)

Yes	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Even if the DTC is displayed, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2121 FL TRANSMITTER NO DATA

Note:

Refer to DTC C2124 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2124 RL TRANSMITTER NO DATA.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2122 FR TRANSMITTER NO DATA

Note:

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2123 RR TRANSMITTER NO DATA

Note:

Refer to DTC C2124 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2124 RL TRANSMITTER NO DATA.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2124 RL TRANSMITTER NO DATA

DTC DETECTING CONDITION:

Detected when no data is received from each transmitter for 8 minutes or more at a vehicle speed of 40 km/h (25 MPH) or more. (Timer is not cleared when the vehicle speed becomes lower than 40 km/h halfway.)

Trouble symptom:

Tire pressure warning light blinks 25 times and then illuminates.

Caution:

When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

1. REPRODUCTION OF FAILURE.

1. Perform the drive test.
   Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.
2. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed as current malfunction?

Yes	Go to 2.
No	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.**

2. START FRONT LEFT TRANSMITTER.

1. Connect the Subaru Select Monitor and then turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Tire Pressure Monitor]. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

3. Use the transmitter registration tool and transmit the ID from the front left transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 3.
No	Replace the front left transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

3. CHECK FRONT LEFT TRANSMITTER ID.

Compare the ID on the latest ID display with [FL Registered ID].

Are the two IDs same?

Yes	Go to 4.
No	Record [Latest reception ID] as the front left. Go to 4.

4. START FRONT RIGHT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the front right transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 5.
No	Replace the front right transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

5. CHECK FRONT RIGHT TRANSMITTER ID.

Compare the ID on the latest ID display with [FR Registered ID].

Are the two IDs same?

Yes	Go to 6.
No	Record [Latest reception ID] as the front right. Go to 6.

6. START REAR RIGHT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the rear right transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 7.
No	Replace the rear right transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

7. CHECK REAR RIGHT TRANSMITTER ID.

Compare the ID on the latest ID display with [RR Registered ID].

Are the two IDs same?

Yes	Go to 8.
No	Record [Latest reception ID] as the rear right. Go to 8.

8. START REAR LEFT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the rear left transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 9.
No	Replace the rear left transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

9. CHECK REAR LEFT TRANSMITTER ID.

Compare the ID on the latest ID display with [RL Registered ID].

Are the two IDs same?

Yes	Go to 10.
No	Record [Latest reception ID] as the rear left. Go to 10.

10. CHECK MALFUNCTION TRANSMITTER.

Is ID recorded by this procedure?

Yes	Go to 11.
No	Go to 2.

11. CHECK MALFUNCTION TRANSMITTER.

Check the registered ID of the transmitter indicated by DTC.

Is there checked ID in the record?

Yes	Replace the transmitter of the recorded position. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Replace the transmitter showing the latest ID that is not included in the registered IDs. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2221 FL TRANSMITTER PRESSURE DATA ABNORMAL

Note:

Refer to DTC C2224 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2222 FR TRANSMITTER PRESSURE DATA ABNORMAL

Note:

Refer to DTC C2224 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2223 RR TRANSMITTER PRESSURE DATA ABNORMAL

Note:

Refer to DTC C2224 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2224 RL TRANSMITTER PRESSURE DATA ABNORMAL

DTC DETECTING CONDITION:

Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.

- When comparing the data from each transmitter to the previous data, the change is large.
- The pressure exceeds what the transmitter can measure. (Excessive pressure)

Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

1. REPRODUCTION OF FAILURE.

1. Perform the drive test.
   Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.
2. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed as current malfunction?

Yes	Go to 2.
No	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.**

2. START FRONT LEFT TRANSMITTER.

1. Connect the Subaru Select Monitor and then turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Tire Pressure Monitor]. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

3. Use the transmitter registration tool and transmit the ID from the front left transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 3.
No	Replace the front left transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

3. CHECK FRONT LEFT TRANSMITTER ID.

Compare the ID on the latest ID display with [FL Registered ID].

Are the two IDs same?

Yes	Go to 4.
No	Record [Latest reception ID] as the front left. Go to 4.

4. START FRONT RIGHT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the front right transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 5.
No	Replace the front right transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

5. CHECK FRONT RIGHT TRANSMITTER ID.

Compare the ID on the latest ID display with [FR Registered ID].

Are the two IDs same?

Yes	Go to 6.
No	Record [Latest reception ID] as the front right. Go to 6.

6. START REAR RIGHT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the rear right transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 7.
No	Replace the rear right transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

7. CHECK REAR RIGHT TRANSMITTER ID.

Compare the ID on the latest ID display with [RR Registered ID].

Are the two IDs same?

Yes	Go to 8.
No	Record [Latest reception ID] as the rear right. Go to 8.

8. START REAR LEFT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the rear left transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 9.
No	Replace the rear left transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

9. CHECK REAR LEFT TRANSMITTER ID.

Compare the ID on the latest ID display with [RL Registered ID].

Are the two IDs same?

Yes	Go to 10.
No	Record [Latest reception ID] as the rear left. Go to 10.

10. CHECK MALFUNCTION TRANSMITTER.

Is ID recorded by this procedure?

Yes	Go to 11.
No	Go to 2.

11. CHECK MALFUNCTION TRANSMITTER.

Check the registered ID of the transmitter indicated by DTC.

Is there checked ID in the record?

Yes	Replace the transmitter of the recorded position. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Replace the transmitter showing the latest ID that is not included in the registered IDs. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2321 FL TRANSMITTER STATUS ABNORMAL

Note:

Refer to DTC C2324 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2324 RL TRANSMITTER STATUS ABNORMAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2322 FR TRANSMITTER STATUS ABNORMAL

Note:

Refer to DTC C2324 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2324 RL TRANSMITTER STATUS ABNORMAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2323 RR TRANSMITTER STATUS ABNORMAL

Note:

Refer to DTC C2324 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2324 RL TRANSMITTER STATUS ABNORMAL.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2324 RL TRANSMITTER STATUS ABNORMAL

Detected when error data is received from each transmitter at a vehicle speed of 40 km/h (25 MPH) or more.

DTC DETECTING CONDITION:

Unexpected function codes received from each transmitter.

Trouble symptom:

Tire pressure warning light blinks 25 times and then illuminates.

1. REPRODUCTION OF FAILURE.

1. Perform the drive test.
   Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.
2. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed as current malfunction?

Yes	Go to 2.
No	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.**

2. START FRONT LEFT TRANSMITTER.

1. Connect the Subaru Select Monitor and then turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check [Data monitor] of [Tire Pressure Monitor]. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Data Monitor.

3. Use the transmitter registration tool and transmit the ID from the front left transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 3.
No	Replace the front left transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

3. CHECK FRONT LEFT TRANSMITTER ID.

Compare the ID on the latest ID display with [FL Registered ID].

Are the two IDs same?

Yes	Go to 4.
No	Record [Latest reception ID] as the front left. Go to 4.

4. START FRONT RIGHT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the front right transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 5.
No	Replace the front right transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

5. CHECK FRONT RIGHT TRANSMITTER ID.

Compare the ID on the latest ID display with [FR Registered ID].

Are the two IDs same?

Yes	Go to 6.
No	Record [Latest reception ID] as the front right. Go to 6.

6. START REAR RIGHT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the rear right transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 7.
No	Replace the rear right transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

7. CHECK REAR RIGHT TRANSMITTER ID.

Compare the ID on the latest ID display with [RR Registered ID].

Are the two IDs same?

Yes	Go to 8.
No	Record [Latest reception ID] as the rear right. Go to 8.

8. START REAR LEFT TRANSMITTER.

Use the transmitter registration tool and transmit the ID from the rear left transmitter to check [Latest reception ID].

Is [Latest reception ID] updated?

Yes	Go to 9.
No	Replace the rear left transmitter. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

9. CHECK REAR LEFT TRANSMITTER ID.

Compare the ID on the latest ID display with [RL Registered ID].

Are the two IDs same?

Yes	Go to 10.
No	Record [Latest reception ID] as the rear left. Go to 10.

10. CHECK MALFUNCTION TRANSMITTER.

Is ID recorded by this procedure?

Yes	Go to 11.
No	Replace the transmitter indicated by DTC. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

11. CHECK MALFUNCTION TRANSMITTER.

Check the registered ID of the transmitter indicated by DTC.

Is there checked ID in the record?

Yes	Replace the transmitter of the recorded position. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Replace the transmitter indicated by DTC. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2421 FL TRANSMITTER BATTERY VOLTAGE DECREASE

Note:

Refer to DTC C2424 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2422 FR TRANSMITTER BATTERY VOLTAGE DECREASE

Note:

Refer to DTC C2424 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2423 RR TRANSMITTER BATTERY VOLTAGE DECREASE

Note:

Refer to DTC C2424 for diagnostic procedure. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2424 RL TRANSMITTER BATTERY VOLTAGE DECREASE

DTC DETECTING CONDITION:

Detected when power supply voltage failure signal is received from each transmitter.

Trouble symptom:

Tire pressure warning light blinks 25 times and then illuminates.

1. REPRODUCTION OF FAILURE.

1. Perform the drive test.
   Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.
2. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed as current malfunction?

Yes	Go to 2.
No	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.**

2. CHECK TRANSMITTER.

1. Replace all transmitters and register their IDs. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID)>OPERATION.
2. Using the Subaru Select Monitor, perform the clear memory of [Tire Pressure Monitor]. Ref. to COMMON(diag)>Clear memory.

3. Perform the Inspection Mode. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Inspection Mode.

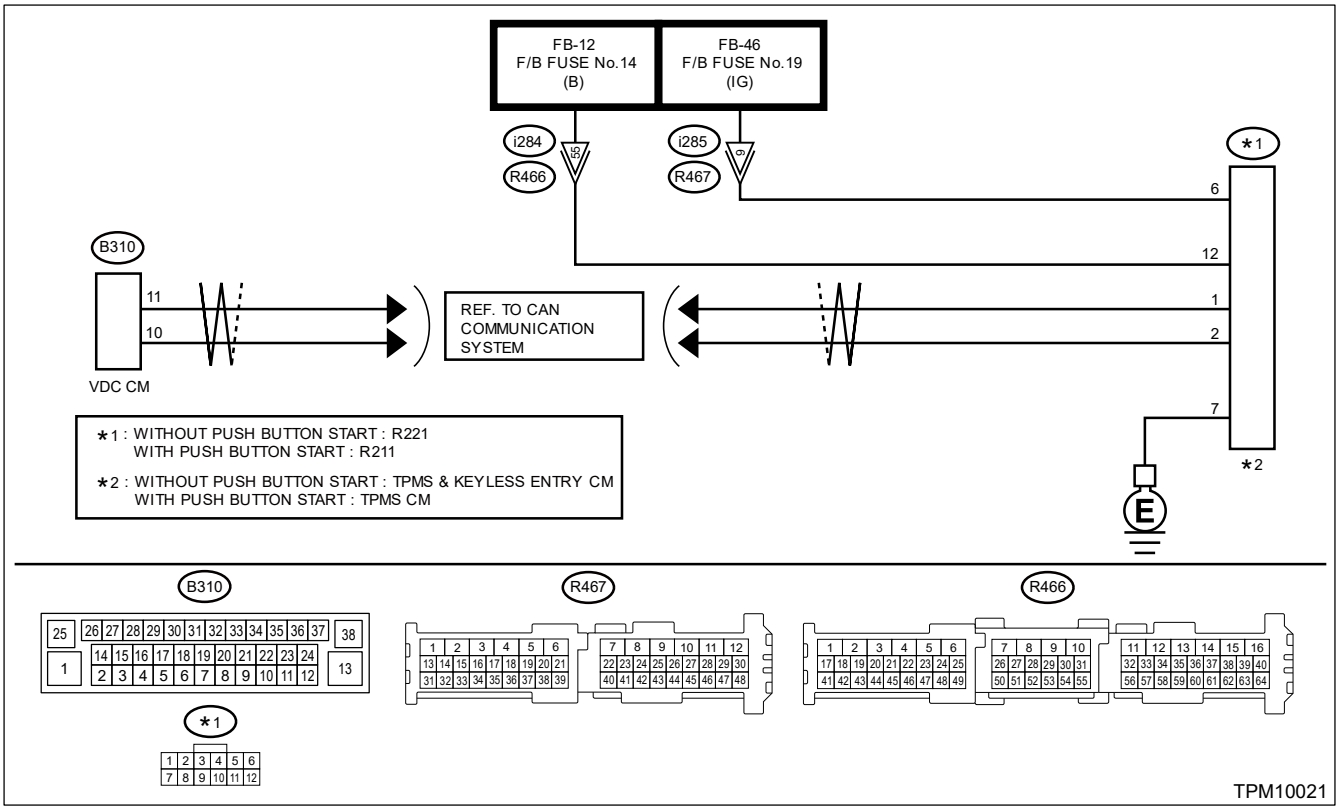
Is the fault eliminated?

Yes	Internal battery of the transmitter had worn out.
No	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2521 SPEED ABNORMAL

DTC DETECTING CONDITION:



Detected when transmitter normal signal is received at a vehicle speed of less than 6 km/h (4 MPH).

Trouble symptom:

Tire pressure warning light blinks 25 times and then illuminates.

Wiring diagram:

Tire Pressure Monitoring System Ref. to WIRING SYSTEM>Tire Pressure Monitoring System>WIRING DIAGRAM.

1. CHECK LAN COMMUNICATION.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK VDC.

Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is the check result OK?

Yes	Go to 3.
No	Perform the inspection according to the VDC diagnosis.

3. CHECK CONNECTOR.

Check each connector.

Is there poor contact or any other faults?

Yes	Repair the connector.
No	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2821 WHEEL POSITION SENSING ABNORMAL

DTC DETECTING CONDITION:
When the position detection does not finish and fails 10 times in a row.
Trouble symptom:
Pressure monitor display of the combination meter indicates "—".

1. REPRODUCTION OF FAILURE.

1. Perform the drive test.
   Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.
2. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed as current malfunction?

Yes	Go to 2.
No	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.**

2. CHECK DTC.

Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any DTC other than DTC C2821 displayed as current malfunction?

Yes	Perform the diagnosis for DTCs other than the displayed DTC C2821. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK VDC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC displayed as current malfunction?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK TCM.

Read the DTC of [Transmission] using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 5.

5. CHECK CONNECTOR.

Check each connector.

Is there poor contact or any other faults?

Yes	Repair the connector.
No	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

TIRE PRESSURE MONITOR(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC C2921 ID REGISTRATION ERROR

DTC detecting condition:
When the ID registration failed.
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is any of DTCs other than DTC C2921 displayed as "Current malfunction" or "Past malfunction"?

Yes	Perform the diagnosis for the displayed DTCs other than DTC C2921. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST. **Note:** **When any of DTCs C2121 — C2124 is displayed as past malfunction, perform from step 2 of the diagnosis for DTCs C2121 — C2124.**
No	Go to 2.

2. REPRODUCTION OF FAILURE.

1. Perform the drive test.
   Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes.
   Note:
   Drive until the tire status Bit 4 (PAL Condition) becomes "0".
2. Read the DTC of [Tire Pressure Monitor] using the Subaru Select Monitor. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed as "Current malfunction"?

Yes	Go to 3.
No	When DTC is displayed as "Past malfunction", the system has returned to a normal condition at this time. **Note:** **In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.**

3. ID REGISTRATION.

Register the ID. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID).

Can the ID be registered?

Yes	Go to 2.
No	Replace the TPMS & keyless entry CM or TPMS CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.

AIR CONDITIONER(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Note:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as sensor having an open circuit. Always perform the inspection in direct sunlight.

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection. Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Air Conditioner].

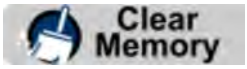
Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Perform diagnosis according to the procedures in the diagnostics with phenomenon. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Air Conditioner]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown. Go to 5.
No	Finish the diagnosis.

AIR CONDITIONER(DIAGNOSTICS) > Check List for Interview

AIR CONDITIONER(DIAGNOSTICS) > General Description

CAUTION

1. AIR CONDITIONER

- Do not disconnect the battery cables while the engine is running.
  A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as A/C control panel etc.
- Before disconnecting the connectors of sensors and the A/C control panel, be sure to turn off the ignition switch.
  A/C control module may be damaged.
- A/C-related parts are precision parts, so do not let them fall.
- When removing A/C related parts, refer to Cautions for A/Cs. Ref. to AIR CONDITIONER>General Description>CAUTION.

2. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

AIR CONDITIONER(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the A/C problems.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.
2. Check the main and other fuses, harnesses and connectors. Also check grounding.
3. Check the refrigerant pressure. Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set.

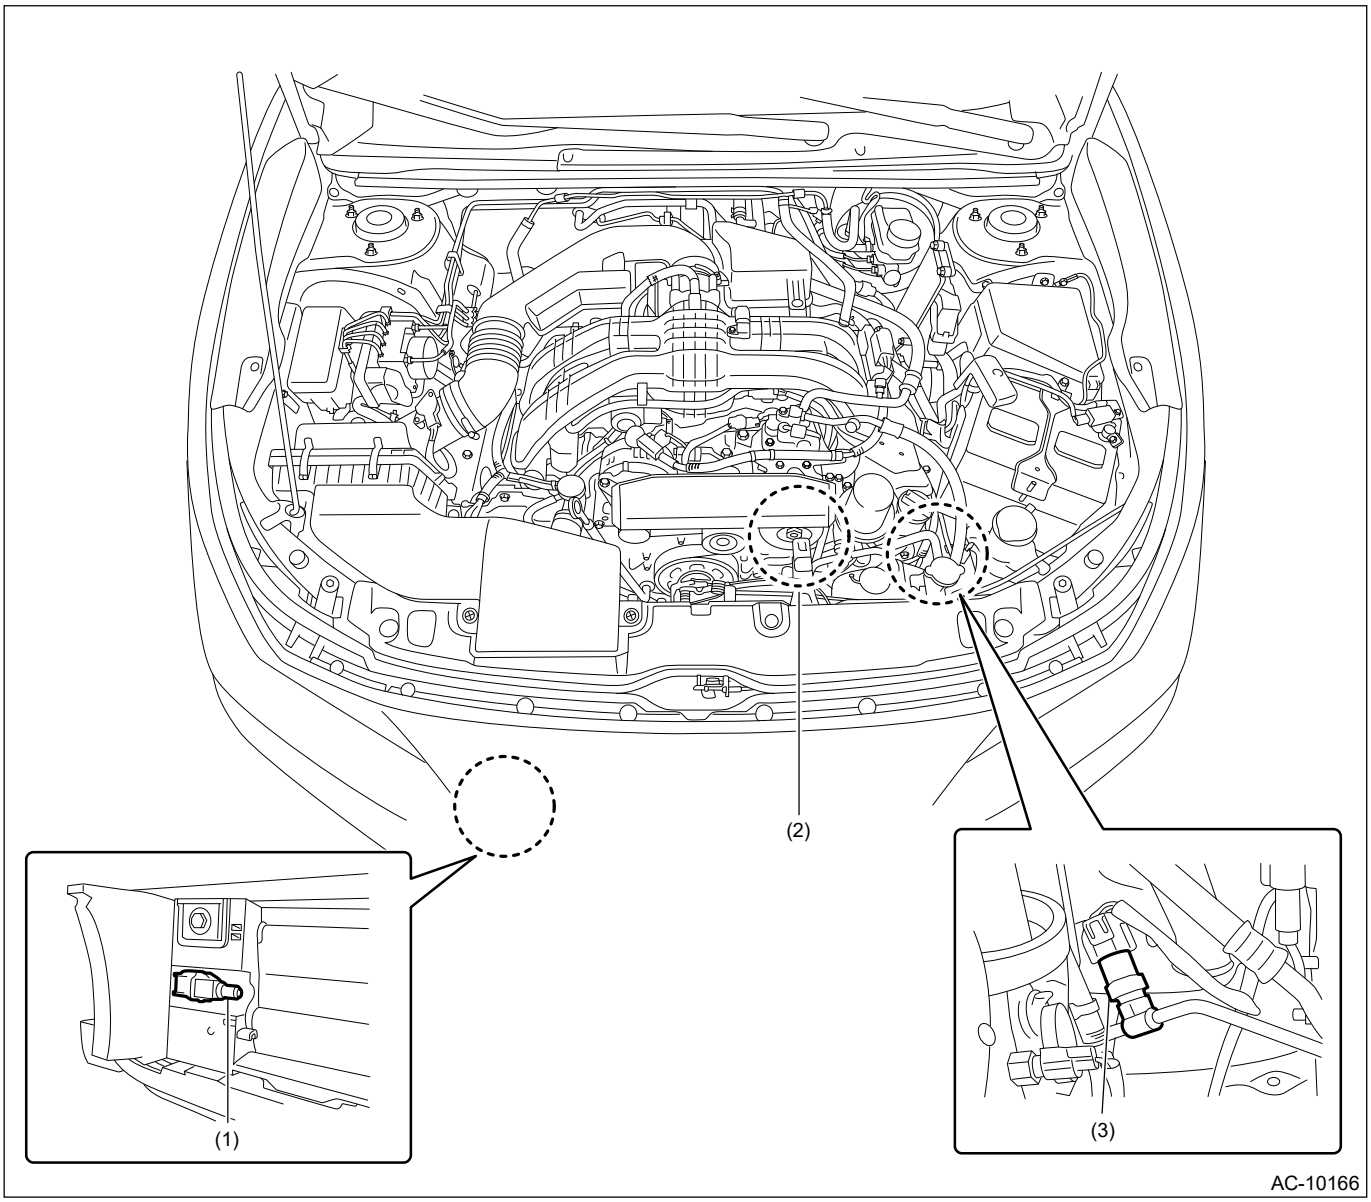
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

AIR CONDITIONER(DIAGNOSTICS) > General Description

SYSTEM BLOCK DIAGRAM



- A/C control & status display
  Using the CAN communication, perform A/C control from vehicle information and each sensor value to actuate the A/C system device. Also display A/C status on MFD by CAN output of A/C status.
- Hazard is ON
  Output hazard switch signals to body integrated unit. The control of hazard illumination is carried out via body integrated unit.
- Illumination
  Adjust the A/C control panel lighting according to input (body integrated unit & combination meter).
- Engine control
  Transmit the A/C status via CAN for engine control.
- Rear defogger operation
  Output switch signals to body integrated unit. The control of rear defogger operation is carried out via body integrated unit.
- Mirror heater operation
  Output switch signals to body integrated unit. The control of mirror heater operation is carried out via body integrated unit.
- Voice recognition
  Change the A/C setting according to voice input in combination with AVN.

*2: Without left/right independent air conditioning function

AIR CONDITIONER(DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1430	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN	—
B1431	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B1432	AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)	—
B1433	AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)	—
B1434	EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN	—
B1435	EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B1436	AIR MIX DOOR ACTUATOR CIRCUIT OPEN (PASSENGER)	—
B1437	AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (PASSENGER)	—
B1438	MODE DOOR ACTUATOR CIRCUIT OPEN	—
B1439	MODE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT	—
B1440	AIR MIX DOOR ACTUATOR CIRCUIT OPEN (DRIVER)	—
B1441	AIR MIX DOOR ACTUATOR CIRCUIT STUCK (PASSENGER)	—
B1442	AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (DRIVER)	—
B1443	MODE DOOR ACTUATOR CIRCUIT STUCK	—
B1446	AIR MIX DOOR ACTUATOR CIRCUIT STUCK (DRIVER)	—
B14B1	SEAT HEATER THERMISTOR CIRCUIT OPEN (DRIVER)	—
B14B2	SEAT HEATER THERMISTOR CIRCUIT SHORT-CIRCUIT (DRIVER)	—

DTC	Item	Note
B14B3	SEAT HEATER THERMISTOR CIRCUIT OPEN (PASSENGER)	—
B14B4	SEAT HEATER THERMISTOR CIRCUIT SHORT-CIRCUIT (PASSENGER'S)	—
B14E9	INTAKE DOOR ACTUATOR CIRCUIT OPEN	—
B14EA	INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT	—
B14EB	INTAKE DOOR ACTUATOR STUCK	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Air Conditioner]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Air Conditioner] to check that there is no DTC displayed. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Turn the ignition switch to ON and then leave it for 20 seconds or more.
4. Using the Subaru Select Monitor, read the DTC of [Air Conditioner] to check that there is no DTC displayed. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B14A1	SUNLOAD SENSOR CIRCUIT LOW/OPEN	—
B14A2	SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Air Conditioner]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Air Conditioner] to check that there is no DTC displayed. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Park the vehicle in the place subjected to direct sunlight.
4. Turn the ignition switch to ON and then leave it for 1 second or more.
5. Using the Subaru Select Monitor, read the DTC of [Air Conditioner] to check that there is no DTC displayed. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

DTC	Item	Note
B14A3	REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN	—
B14A4	REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B14A5	REFRIGERANT FLOW SENSOR CIRCUIT OPEN	—
B14A6	REFRIGERANT FLOW SENSOR CIRCUIT SHORT-CIRCUIT	—
B14A7	VARIABLE SOLENOID VALVE CIRCUIT	—
B14A8	COMPRESSOR BREAK-IN MALFUNCTION LOW REFRIGERANT	—

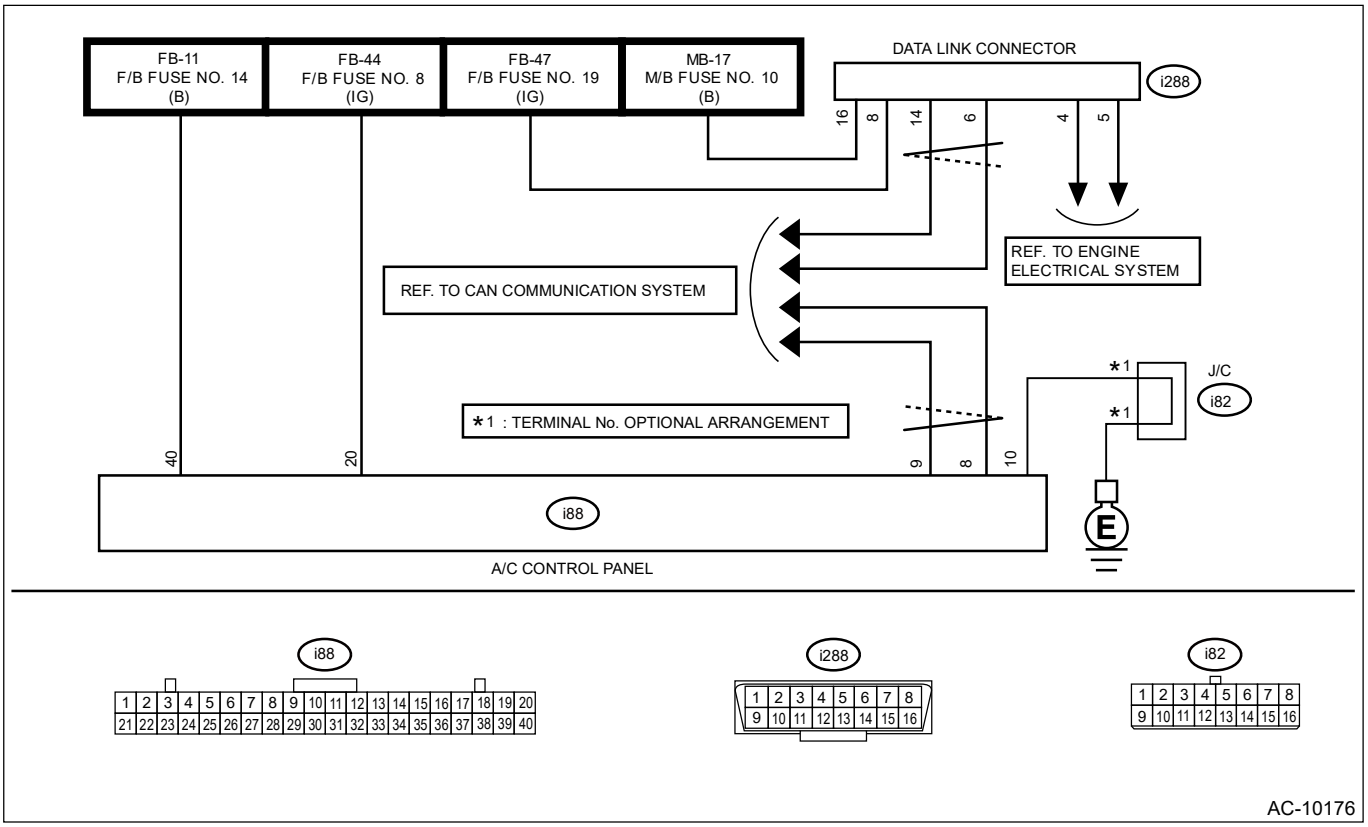
Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Air Conditioner]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Air Conditioner] to check that there is no DTC displayed. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Perform [Variable compressor break-in drive]. Ref. to AIR CONDITIONER>Compressor.
4. Using the Subaru Select Monitor, read the DTC of [Air Conditioner] to check that there is no DTC displayed. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Trouble symptom:



Cannot communicate with [Air Conditioner].

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

WIRING DIAGRAM:

- Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY CIRCUIT.

Connect DST-i to data link connector.

Does DST-i turn ON?

Yes	Go to 4.
No	Go to 2.

2. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 8 (+) — Chassis ground (−):
   (i288) No. 16 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the power supply circuit. **Note:** **In this case, repair the following item:** • **Open or ground short circuit of harness between battery and data link connector** • **Blown out of fuse (M/B No. 10, F/B No. 19)**

3. CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).

1. Turn the ignition switch to OFF.
2. Using the tester, measure the resistance between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 4 — Chassis ground:
   (i288) No. 5 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found, go to 4.
No	Repair the harness and connector.

4. CHECK SUBARU SELECT MONITOR.

1. Connect the Subaru Select Monitor to a normal vehicle.
2. Start the engine and perform communication between the Subaru Select Monitor and vehicle.

Is communication possible?

Yes	Go to 5.
No	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.

5. CHECK LAN SYSTEM.

Check the LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 6.
No	Repair it according to the diagnosis for LAN system.

6. CHECK CONNECTOR.

Check poor contact of A/C control panel connector and data link connector.

Is the check result OK?

Yes	Go to 7.
No	Repair the connector.

7. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Remove the fuses No. 8 and No. 14 from main fuse box.
3. Check the fuse.

Is the check result OK?

Yes	Go to 8.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the A/C control panel and fuse.

8. CHECK A/C CONTROL PANEL POWER SUPPLY CIRCUIT (OPEN).

1. Disconnect the A/C control panel connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between A/C control panel connector and chassis ground.

Connector & terminal

(i88) No. 20 (+) — Chassis ground (−):

(i88) No. 40 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 9.
No	Check for open or short circuit in the harness between A/C control panel and fuse.

9. CHECK A/C CONTROL PANEL GROUND CIRCUIT (OPEN).

Measure the resistance of harness between A/C control panel and chassis ground.

Connector & terminal

(i88) No. 10 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Check the connection between the data link connector and Subaru Select Monitor.
No	Repair the harness for ground line.

AIR CONDITIONER(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor>LIST.**

AIR CONDITIONER(DIAGNOSTICS) > Data Monitor

LIST

Item	Contents	Standard/Unit	Note
In-vehicle Sensor Temperature	Display the in-vehicle sensor value.	-72.47 — 193.82 °C	—
Refrigerant Pressure	Display the pressure sensor value.	0 — 3.29 Mpa	With variable compressor
Refrigerant Flow	Display the flow sensor value.	0 — 327.67 kg/h	With variable compressor
Quantity of Sunload	Display the sunload sensor value.	0 — 4448 W/m^2	—
Heater Water Temperature	Display the engine coolant temperature. (CAN information)	−40.00 — 214 °C	—
Heater Control Panel Setting Value (Driver's)	Display the set temperature of the A/C control panel on driver's seat side.	15 — 90	—
Heater Control Panel Setting Value (Passenger's)	Display the set temperature of the A/C control panel on passenger's seat side.	15 — 90	With left/right independent air conditioning function
Blower outlet request temperature (Driver's)	Display the inner set value of the A/C control panel.	−327.68 — 327.67 °C	—
Blower outlet request temperature (Passenger's)	Display the inner set value of the A/C control panel.	−327.68 — 327.67 °C	With left/right independent air conditioning function
Air mix door actuator position (driver's side)	Display the driver's seat air mix door actuator position information.	−32.68 — 133.33 %	—
Air mix door actuator position (passenger's side)	Display the passenger's seat air mix door actuator position information.	−32.68 — 133.33 %	With left/right independent air conditioning function

Item	Contents	Standard/Unit	Note
Mode Door Actuator Position	Display the mode door actuator position information.	−32.68 — 133.33 %	—
Fresh/Recircle Air Door Actuator Position	Display the intake door actuator position information.	−32.68 — 133.33 %	—
Target air mix door actuator position (driver's side)	Display the driver’s seat air mix door actuator target position information.	−32.68 — 133.33 %	—
Target air mix door actuator position (passenger's side)	Display the passenger’s seat air mix door actuator position information.	−32.68 — 133.33 %	With left/right independent air conditioning function
Mode Door Actuator Position Target	Display the mode door actuator target position information.	−32.68 — 133.33 %	—
Fresh/Recircle Air Door Actuator Position Target	Display the intake door actuator target position information.	−32.68 — 133.33 %	—
Blower Fan Level	Display the blower fan motor speed level.	0 — 255	—
Ambient Air Temperature	Display the ambient sensor value. (CAN information)	-40 — 80 °C	—
Compressor operation status	Display the operation status of the compressor.	OFF / ON	—
Blower Fan Operating Condition	Display the operation status of the blower fan.	MANU/AUTO	—
A/C Operating Condition	Display the operation status of the compressor.	MANU/AUTO	—
Fresh/Recircle Air Operating Condition	Display the operation status of the FRESH/RECIRC.	MANU/AUTO	—
Mode Operating Condition	Display the operation status of the blow vents.	MANU/AUTO	—
Rear Defogger	Display the operation status of the rear defogger switch.	OFF / ON	—

Item	Contents	Standard/Unit	Note
Engine Speed	Display the engine speed. (CAN information)	0 — 32767 rpm	—
Vehicle Speed Sensor	Display the vehicle speed. (CAN information)	0 — 300 km/h	—
Evaporator Temperature	Display the evaporator sensor value.	−82.48 — 153.55 °C	—
Evaporator Temperature Target	Display the evaporator target temperature.	0 — 20 °C	—
Variable Flow Change Solenoid Duty	Display Duty value of the variable flow change solenoid valve.	0 — 100%	With variable compressor
Variable Load Compressor Torque Value	Display the estimated load torque value of the variable compressor.	0 — 100 Nm	With variable compressor
Blower outlet Door Request Temperature	Display the blow vents target temperature.	−327.68 — 327.67 °C	—
Accelerator Pedal Angle	Display the acceleration opening angle. (CAN information)	0 — 100%	—
[Request Compressor Speed during Idling]	Display the request compressor rotational speed at idling.	650 — 1425 rpm	—
Request engine speed	Display the request engine speed.	0: No Demand 1: Cooler H 2: Heater H 3: Cooler L 4: Heater L 5: Heater M 6: Heater LL	—
Discharge pressure	Display the discharging pressure from the compressor.	0 — 5 MPa	With variable compressor
Intake pressure	Display the suction pressure from the compressor.	−0.1 — 1.5 MPa	With variable compressor

AIR CONDITIONER(DIAGNOSTICS) > Active Test

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Air Conditioner], and then select [Enter].
5. On [Select Function] display, select [Active Test].

Note:

- **For detailed operation procedures, refer to "Application help".**
- **For details on active tests, refer to the list.** **Ref. to AIR CONDITIONER(DIAGNOSTICS)>Active Test>LIST.**

AIR CONDITIONER(DIAGNOSTICS) > Active Test

LIST

Note:

If not equipped (based on area or condition), some items are not displayed.

Active test items	Range	Contents	Execution condition
In-vehicle Air Temperature setting	−72.47 — 193.82 °C	Set in-vehicle sensor readings. Adjusting the in-vehicle sensor value to use for A/C control is useful for reproduction test in faulty events.	Ignition switch ON **Note:** **Engine ON is recommended.**
Ambient Air Temperature Setting	-40 — 80 °C	Set ambient sensor readings. Adjusting the ambient sensor value to use for A/C control is useful for reproduction test in faulty events.	Ignition switch ON **Note:** **Engine ON is recommended.**
Quantity of Sunload Setting	0 — 4448 W/m^2	Set sunload sensor readings. Adjusting the sunload sensor value to use for A/C control is useful for reproduction test in faulty events.	Ignition switch ON **Note:** **Engine ON is recommended.**
Heater Water Temperature Setting	-40 — 214 °C	Set coolant temperature sensor readings. Adjusting the coolant temperature sensor value to use for A/C control is useful for reproduction test in faulty events.	Engine ON

Active test items	Range	Contents	Execution condition
AUTO switch mode setting	ON	Transmit ON signal of AUTO switch contact. By operating A/C with the signal, it is possible to judge whether the control is faulty or the switch (A/C control panel) is faulty.	Ignition switch ON **Note:** **Engine ON is recommended.**
Air mix door actuator target open (driver's side)	0 — 100%	Set the driver's seat air mix door actuator opening angle. Useful for reproduction test in faulty events.	Ignition switch ON **Note:** **Engine ON is recommended.**
Air mix door actuator target open (passenger's side)	0 — 100%	Set the passenger's seat air mix door actuator opening angle. Useful for reproduction test in faulty events.	Ignition switch ON **Note:** **Engine ON is recommended.**
Fresh/Rec Air Dr Act Trgt Open Angle	0 — 100%	Set the intake door actuator opening angle. Useful for reproduction test in faulty events.	Ignition switch ON **Note:** **Engine ON is recommended.**
Mode Door Actuator Opening Angle Target	0 — 100%	Set the mode door actuator opening angle. Useful for reproduction test in faulty events.	Ignition switch ON **Note:** **Engine ON is recommended.**
Blower Fan Level Setting	0 — 100 **Note:** **Input up to 255 is possible, but 100 — 255 is the same.**	Set the blower fan level. Useful for reproduction test in faulty events.	Ignition switch ON **Note:** • **Engine ON is recommended.** • **Compressor OFF is needed to set the level to 0.**
A/C Change Setting	ON/OFF	Set the compressor operation request. Useful for reproduction test in faulty events. **Note:** **Active test error may occur for the protection control of the engine or compressor.**	• Engine ON • Blower ON

Active test items	Range	Contents	Execution condition
Rear Defogger Setting	ON/OFF	Transmit the rear defogger switch contact signal. By operating A/C with the signal, it is possible to judge whether the control is faulty or the switch (A/C control panel) is faulty.	Ignition switch ON **Note:** **Engine ON is recommended.**
Variable Flow Change Solenoid Duty	0 — 100%	Set Duty value of variable flow change solenoid valve. Useful for reproduction test in faulty events.	• Engine ON • Compressor ON • Blower ON

AIR CONDITIONER(DIAGNOSTICS) > Customize

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Air Conditioner], and then select [Enter].
5. On [Select Function] display, select [Customize].

Note:

- **For detailed operation procedures, refer to "Application help".**
- **For details on customization, refer to the list.** **Ref. to AIR CONDITIONER(DIAGNOSTICS)>Customize>LIST.**

AIR CONDITIONER(DIAGNOSTICS) > Customize

LIST

Item	Initial setting value	Setting value	Note
Fresh/Recircle Air Door Auto Mode	AUTO	AUTO	When AUTO mode is actuated, inlet switching is also automatically operated.
		MANU	Even when AUTO mode is actuated, inlet switching is not automatically operated. (Switching can only be manually operated)
Compressor auto mode	AUTO	AUTO	When AUTO mode is actuated, compressor is also automatically operated.
		MANU	Even when AUTO mode is actuated, compressor is not automatically operated. (Switching can only be manually operated)
Setting temperature shift	0	-3	Adjust the A/C target value relative to the set temperature.
		-2	
		-1	
		0	
		+1	
		+2	
		+3	
Mode/VentII	ON	ON	When AUTO mode is operated, VENT II mode (upper wind: large, lower wind: small) is present.
		OFF	When AUTO mode is operated, VENT II mode (upper wind: large, lower wind: small) is absent.

Item	Initial setting value	Setting value	Note
Mode/All Flow	ON	ON	When AUTO mode is operated, all-flow mode (wind comes from all blower vents) is present.
		OFF	When AUTO mode is operated, all-flow mode (wind comes from all blower vents) is absent.
Mode/HeatIII	ON	ON	When AUTO mode is operated, HEAT III mode (footwell/DEF ratio is different) is present.
		OFF	When AUTO mode is operated, HEAT III mode (footwell/DEF ratio is different) is absent.
Release Max A/C by Mode Sw	ON	ON	When the mode switch is operated in MAX A/C status, MAX A/C status is deactivated.
		OFF	Even when the mode switch is operated in MAX A/C status, MAX A/C status is not deactivated.

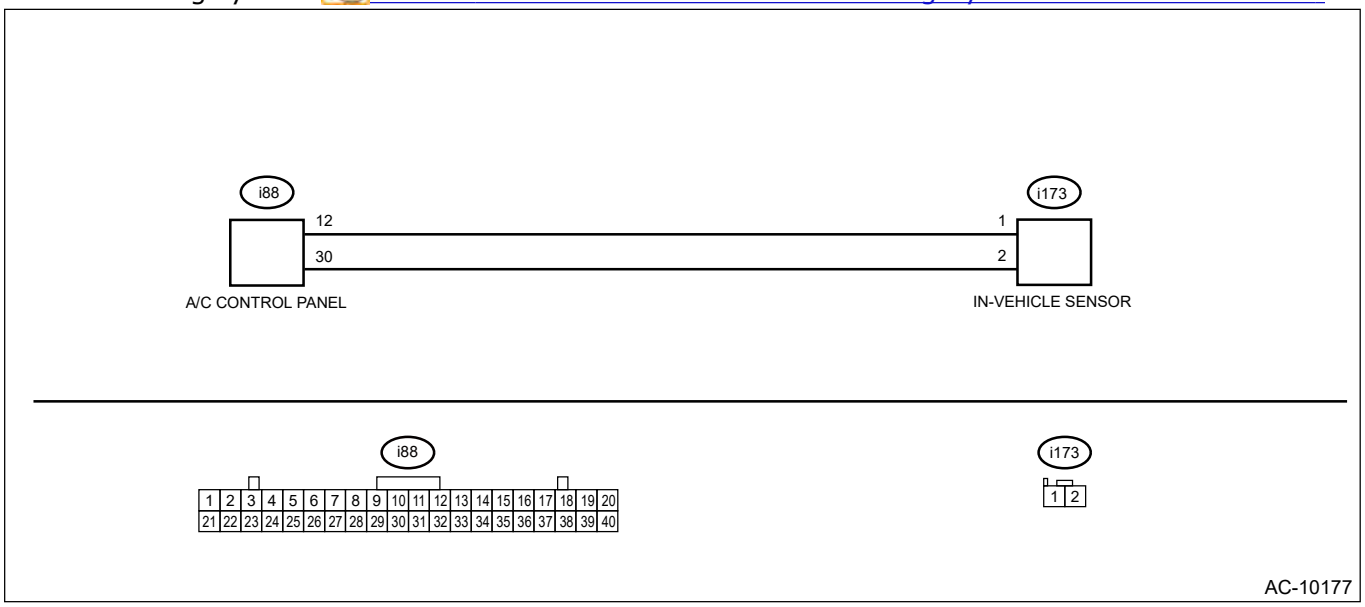
AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1430 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:



In-vehicle sensor circuit is open.

Trouble symptom:

In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and in-vehicle sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1430 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK IN-VEHICLE SENSOR.

1. Disconnect the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).
2. Short the connector i173.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1431 displayed? (Current malfunction)

Yes	Replace the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).
No	Go to 3.

3. CHECK HARNESS.

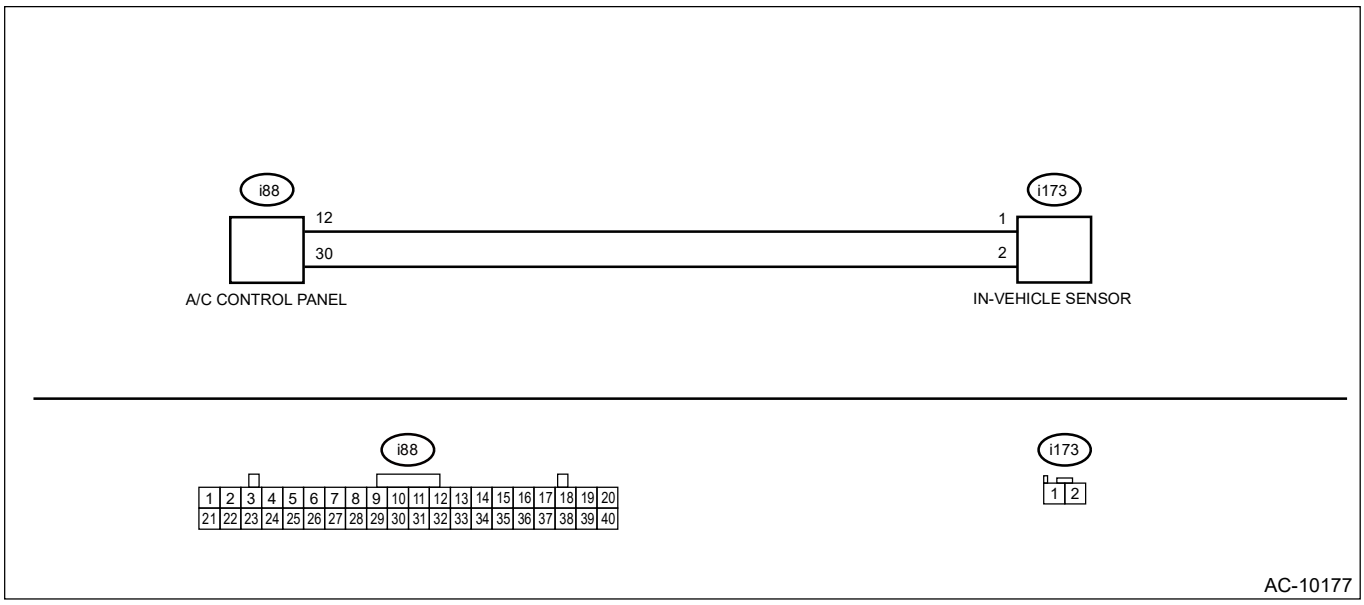
1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between terminals in-vehicle sensor connector.
   Connector & terminal
   (i173) No. 1 (+) — (i173) No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between the A/C control panel connector and in-vehicle sensor connector.
   Connector & terminal
   (i173) No. 1 — (i88) No. 12:
   (i173) No. 2 — (i88) No. 30:



Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1431 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
In-vehicle sensor circuit is shorted.
Trouble symptom:
In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel and in-vehicle sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1431 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK IN-VEHICLE SENSOR.

1. Disconnect the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1430 displayed? (Current malfunction)

Yes	Replace the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).
No	Go to 3.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between terminals in in-vehicle sensor connector.
   Connector & terminal
   (i173) No. 1 (+) — (i173) No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (SHORTED BETWEEN LINES).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between terminals in in-vehicle sensor connector.
   Connector & terminal
   (i173) No. 1 — (i173) No. 2:

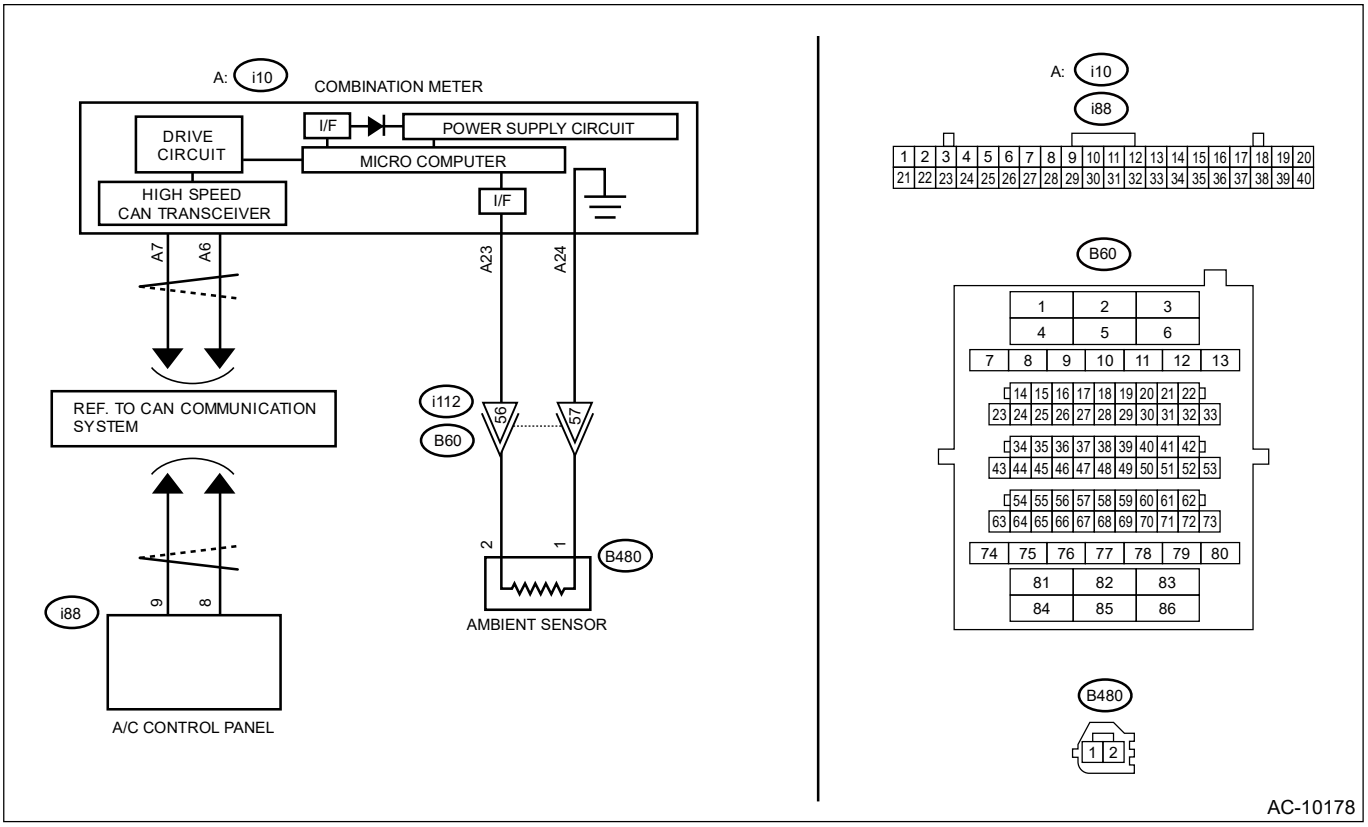
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1432 AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)

DTC detecting condition:



- Ambient sensor to combination meter circuit is open.
- Data to be received from the combination meter via CAN communication do not arrive.

Trouble symptom:

- Defective ambient temperature display
- Ambient temperature is falsely recognized as 25°C, (77F) and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check the connecting conditions of combination meter connector and ambient sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1432 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK AMBIENT SENSOR.

1. Disconnect the ambient sensor.
2. Short the connector B480.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1433 displayed? (Current malfunction)

Yes	Replace the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between terminals in ambient sensor connector.
   Connector & terminal
   (B480) No. 1 (+) — No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the combination meter.
2. Using a tester, check the continuity between combination meter connector and ambient sensor connector.

   Connector & terminal

   (B480) No. 1 — (i10) No. 24:

   (B480) No. 2 — (i10) No. 23:

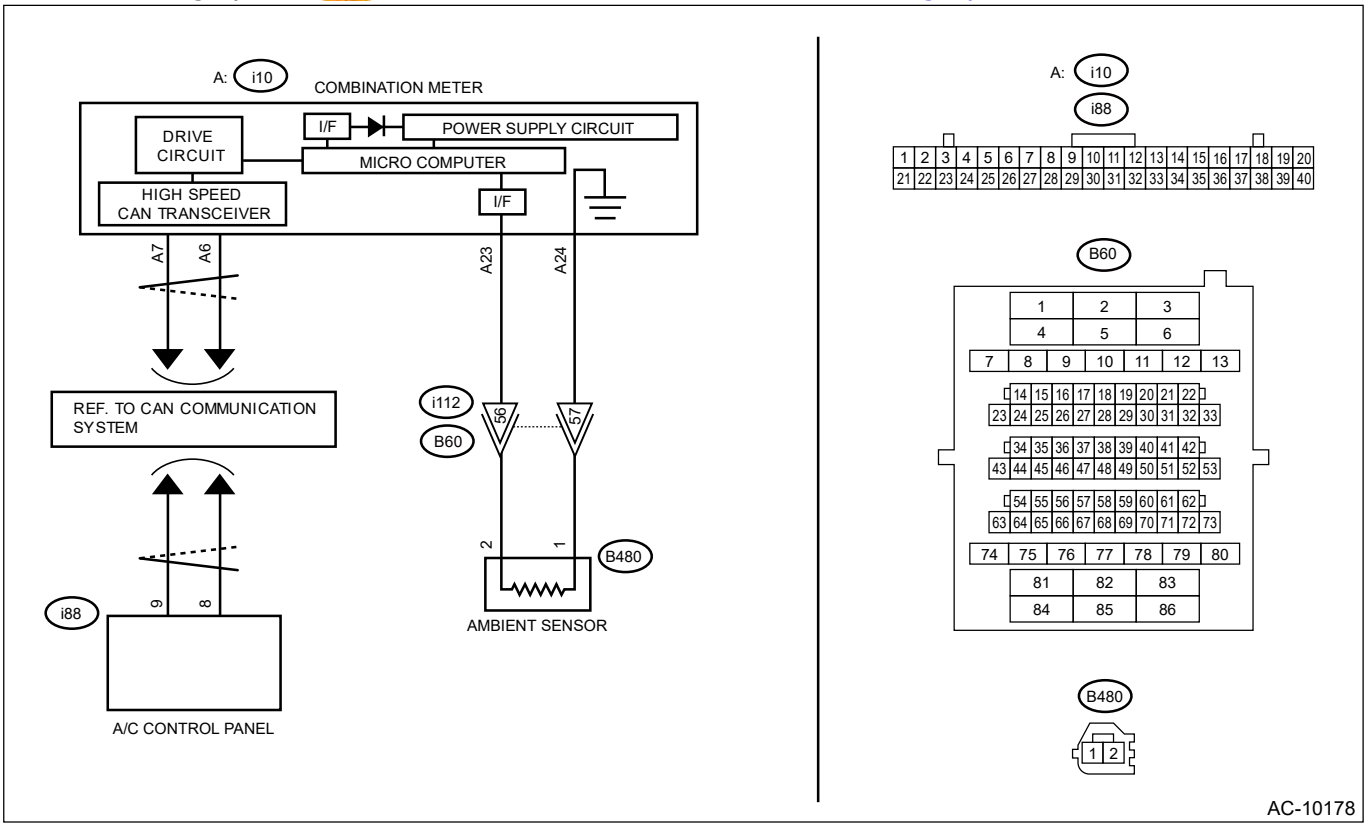
Is there continuity?

Yes	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1433 AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)

DTC detecting condition:



- Ambient sensor to combination meter circuit is shorted.
- Data to be received from the combination meter via CAN communication do not arrive.

Trouble symptom:

- Defective ambient temperature display
- Ambient temperature is falsely recognized as 25°C, (77F) and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check the connecting conditions of combination meter connector and ambient sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1433 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK AMBIENT SENSOR.

1. Disconnect the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1432 displayed? (Current malfunction)

Yes	Replace the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.
No	Go to 3.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between terminals in ambient sensor connector.
   Connector & terminal
   (B480) No. 1 (+) — (B480) No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (SHORTED BETWEEN LINES).

1. Disconnect the connector from the combination meter.
2. Using a tester, check the continuity between terminals in ambient sensor connector.
   Connector & terminal
   (B480) No. 1 — (B480) No. 2:

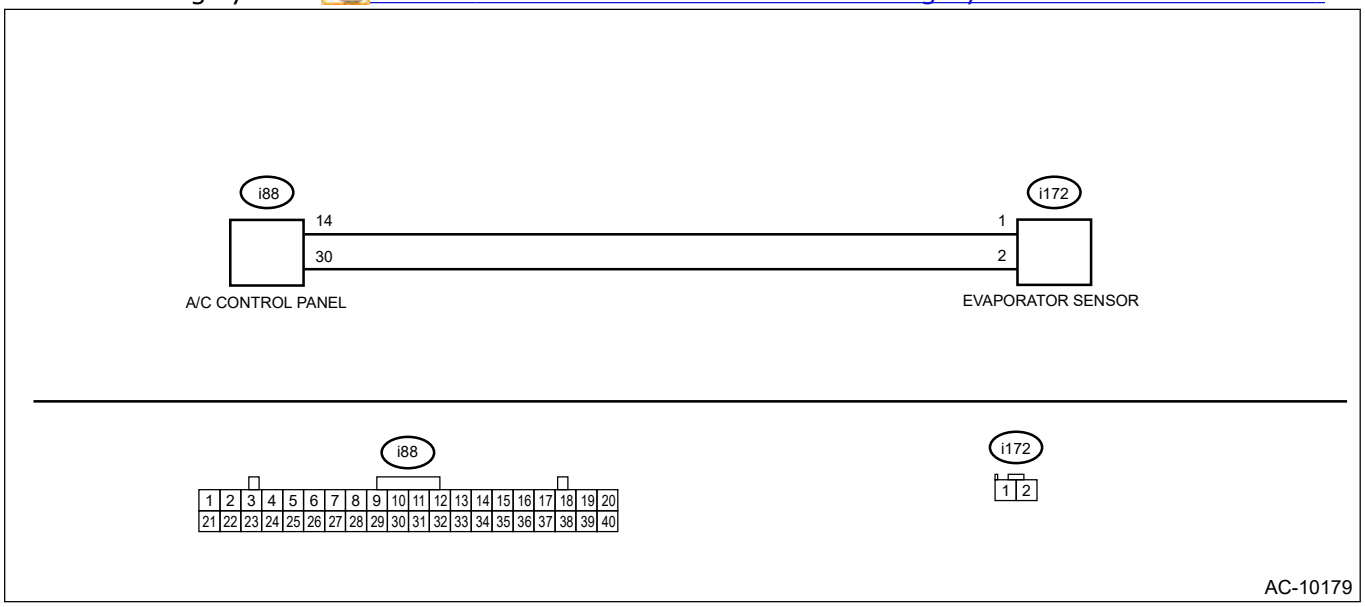
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1434 EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:



Evaporator sensor circuit is open.

Trouble symptom:

- Compressor does not operate.
- Evaporator temperature is falsely recognized as low, and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and evaporator sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1434 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK EVAPORATOR SENSOR.

1. Disconnect the evaporator sensor.
2. Short the i172 connector.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1435 displayed? (Current malfunction)

Yes	Replace the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor.
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between terminals in evaporator sensor connector.
   Connector & terminal
   (i172) No. 1 (+) — (i172) No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and evaporator sensor connector terminals.
   Connector & terminal
   (i172) No. 1 — (i88) No. 14:
   (I172) No. 2 — (i88) No. 30:

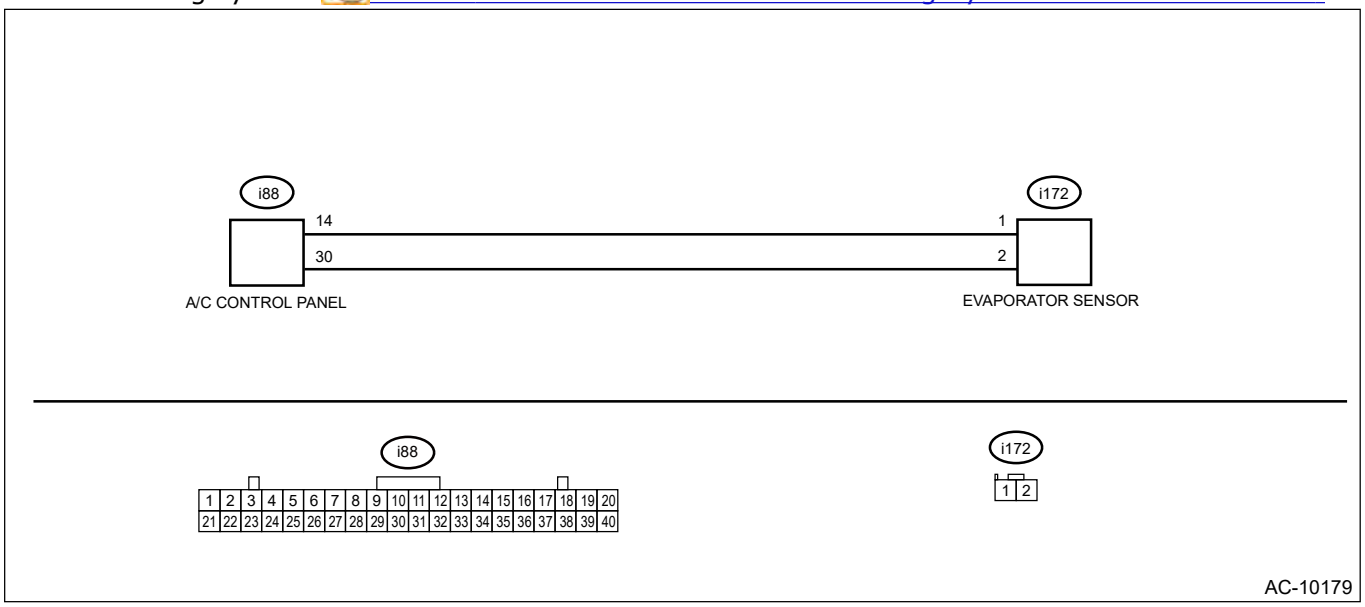
Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1435 EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:



Evaporator sensor circuit is shorted.

Trouble symptom:

- Compressor does not operate. (Variable compressor)
- Evaporator temperature is falsely recognized as low, and the compartment temperature is adjusted.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and evaporator sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1435 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK EVAPORATOR SENSOR.

1. Disconnect the evaporator sensor.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1434 displayed? (Current malfunction)

Yes	Replace the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor.
No	Go to 3.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between terminals in evaporator sensor connector.
   Connector & terminal
   (i172) No. 1 (+) — (i172) No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (SHORTED BETWEEN LINES).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between terminals in evaporator sensor connector.
   Connector & terminal
   (i172) No. 1 — (i172) No. 2:

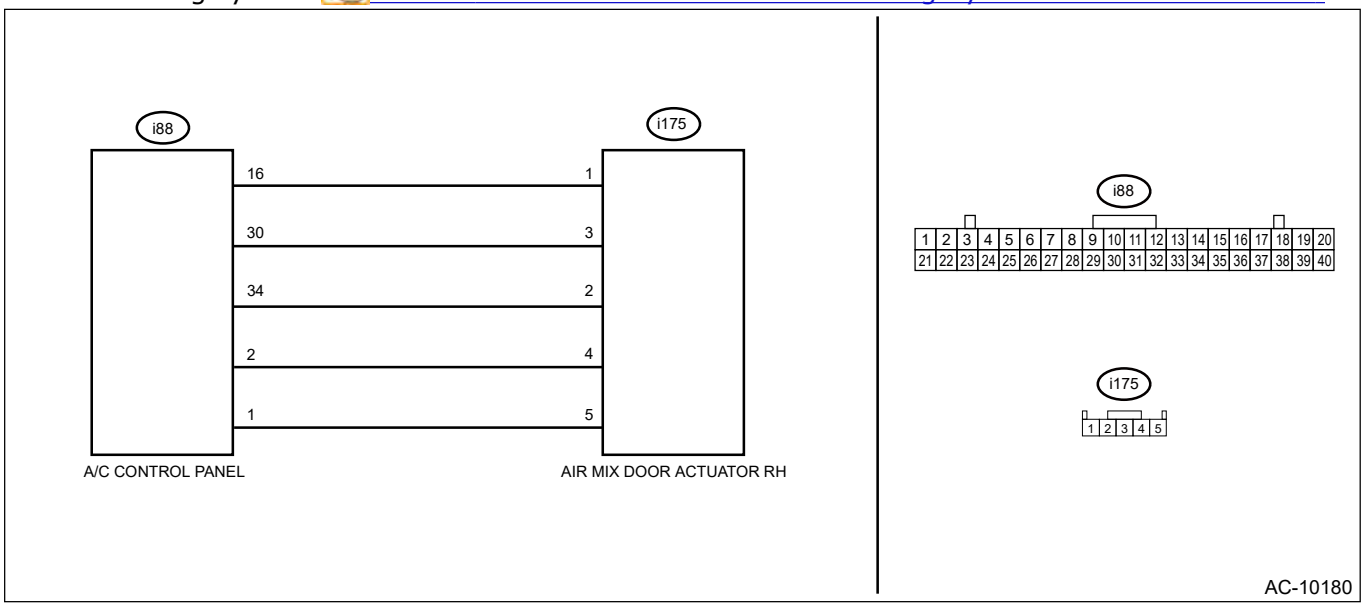
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1436 AIR MIX DOOR ACTUATOR CIRCUIT OPEN (PASSENGER)

DTC detecting condition:



Air mix door actuator potentiometer circuit is open.

Trouble symptom:

Temperature of the passenger’s side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and air mix door actuator RH connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1436 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

1. Disconnect the air mix door actuator RH.
2. Short No. 2 and No. 3 of connector i175.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1437 displayed? (Current malfunction)

Yes	Replace the air mix door actuator RH. Ref. to AIR CONDITIONER>Air Mix Door Actuator.
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Measure the voltage between air mix door actuator RH connector terminals using a tester.
   Connector & terminal
   (i175) No. 1 (+) — (i175) No. 3 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and air mix door actuator RH connector terminals.
   Connector & terminal
   (i175) No. 1 — (i88) No. 16:
   (i175) No. 2 — (i88) No. 34:
   (i175) No. 3 — (i88) No. 30:

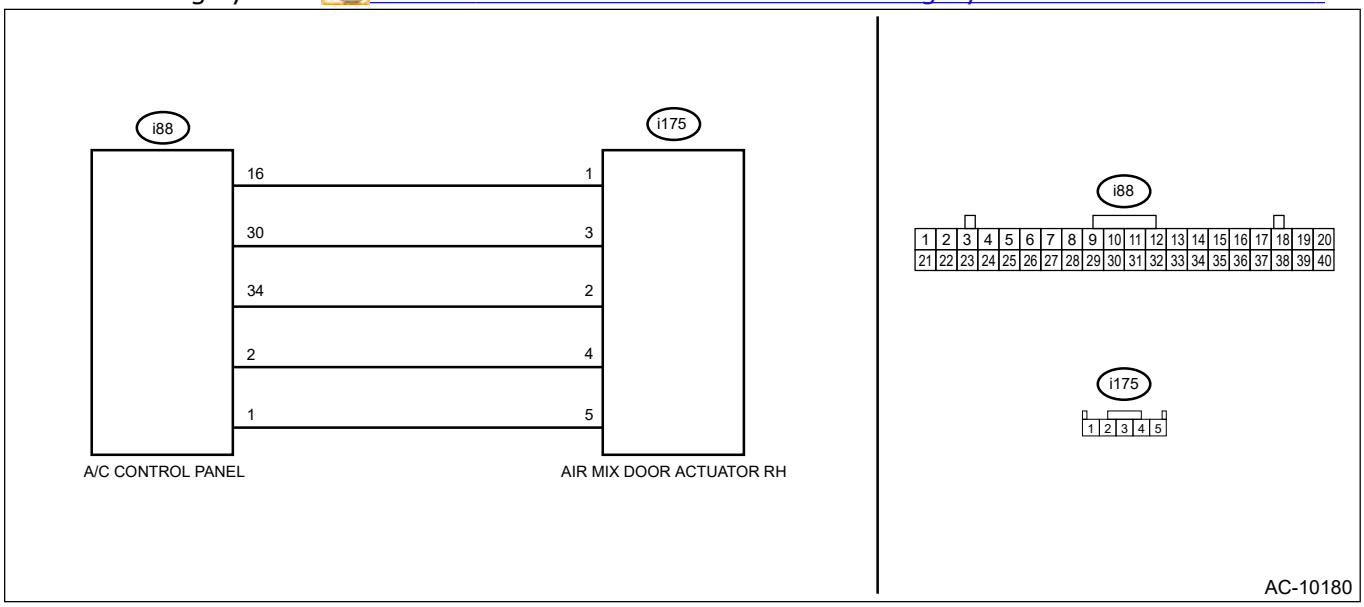
Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1437 AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (PASSENGER)

DTC detecting condition:



Air mix door actuator potentiometer circuit is shorted.

Trouble symptom:

Temperature of the passenger’s side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and air mix door actuator RH connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1437 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

1. Disconnect the air mix door actuator RH.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1436 displayed? (Current malfunction)

Yes	Replace the air mix door actuator RH. Ref. to AIR CONDITIONER>Air Mix Door Actuator.
No	Go to 3.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between air mix door actuator RH connector terminals using a tester.
   Connector & terminal
   (i175) No. 1 (+) — (i175) No. 3 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between terminals in air mix door actuator RH connector and between air mix door actuator RH connector and chassis ground.
   Connector & terminal
   (i175) No. 2 — (i175) No. 3:
   (i175) No. 2 — Chassis ground:

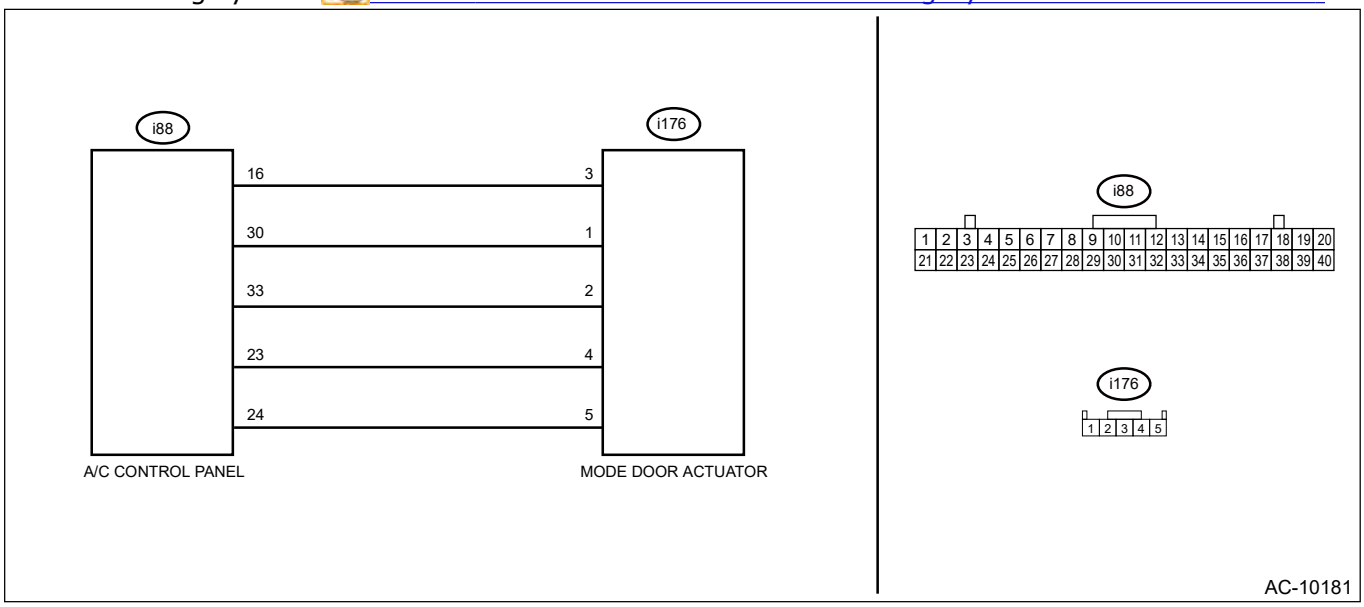
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1438 MODE DOOR ACTUATOR CIRCUIT OPEN

DTC detecting condition:



Mode door actuator potentiometer circuit is open.

Trouble symptom:

Vent does not change.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and mode door actuator connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1438 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

1. Disconnect the mode door actuator.
2. Short No. 1 and No. 2 of (i176) connector.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1439 displayed? (Current malfunction)

Yes	Replace the mode door actuator. Ref. to AIR CONDITIONER>Mode Door Actuator.
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Measure the voltage between mode door actuator connector terminals using a tester.
   Connector & terminal
   (i176) No. 3 (+) — (i176) No. 1 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and mode door actuator connector terminals.
   Connector & terminal
   (i176) No. 1 — (i88) No. 30:
   (i176) No. 2 — (i88) No. 33:
   (i176) No. 3 — (i88) No. 16

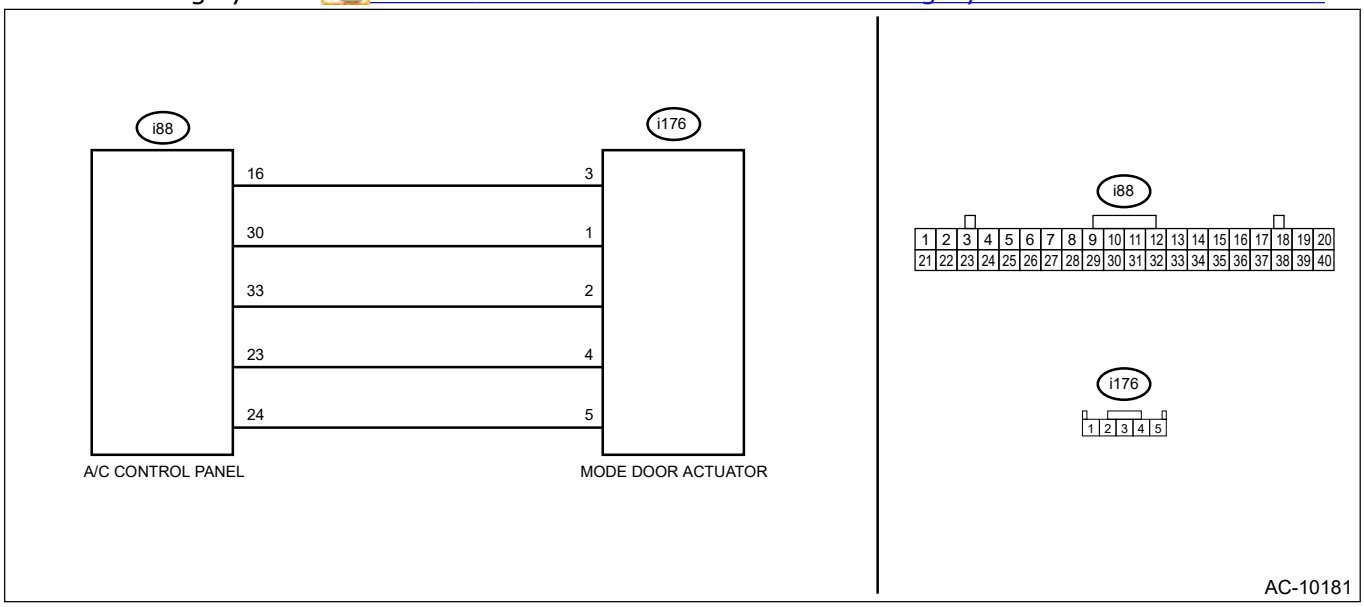
Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1439 MODE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:



Mode door actuator potentiometer circuit is shorted.

Trouble symptom:

Vent does not change.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and mode door actuator connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1439 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

1. Disconnect the connector from the mode door actuator.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1438 displayed? (Current malfunction)

Yes	Replace the mode door actuator. Ref. to AIR CONDITIONER>Mode Door Actuator.
No	Go to 3.

3. CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between terminals in mode door actuator connector and between mode door actuator connector and chassis ground.

Connector & terminal

(i176) No. 2 — (i176) No. 1:

(i176) No. 2 — Chassis ground:

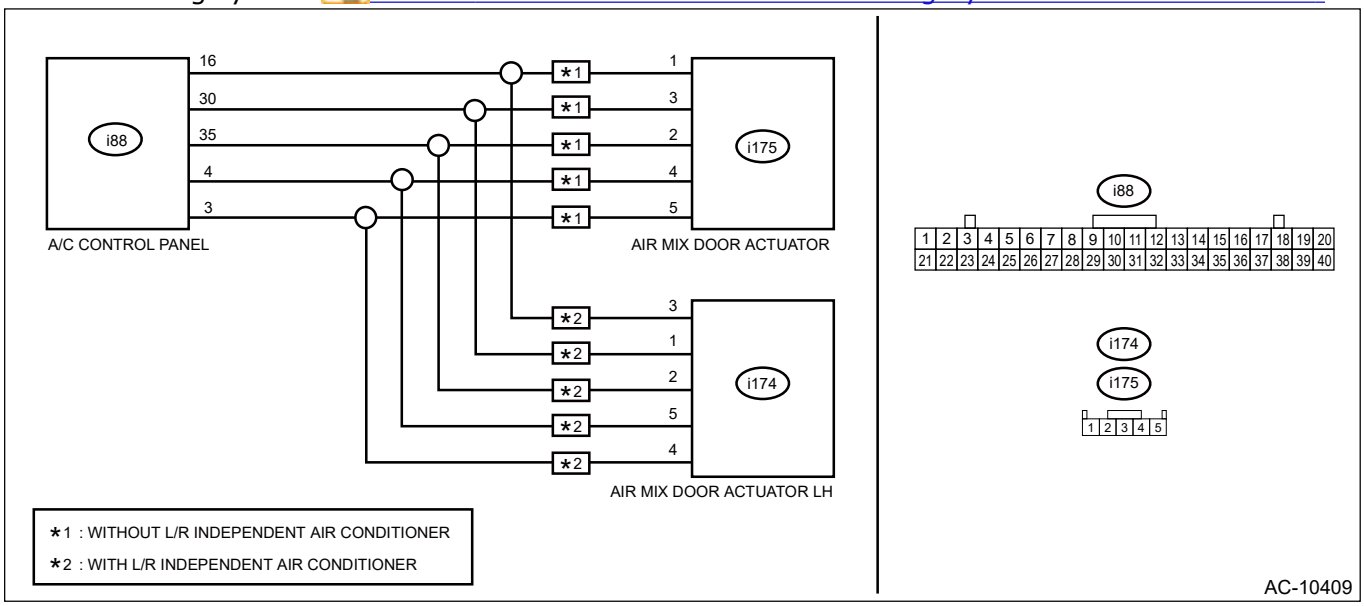
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1440 AIR MIX DOOR ACTUATOR CIRCUIT OPEN (DRIVER)

DTC detecting condition:



Air mix door actuator potentiometer circuit is open.

Trouble symptom:

- Temperature cannot be adjusted for model without left/right independent air conditioner.
- Temperature of the driver's side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and air mix door actuator LH connector (with left/right independent air conditioner) or air mix door actuator connector (without left/right independent air conditioner).
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

1. Disconnect the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function).
2. For model with left/right independent air conditioner, short No. 2 and No. 1 of connector i174. For model without left/right independent air conditioner, short No. 2 and No. 3 of connector i175.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1442 displayed? (Current malfunction)

Yes	Replace the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function). Ref. to AIR CONDITIONER>Air Mix Door Actuator.
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between terminals in the air mix door actuator LH connector (with left/right independent air conditioning function) or air mix door actuator connector (without left/right independent air conditioning function).
   Connector & terminal
   With left/right independent air conditioning function
   (i174) No. 3 (+) — (i174) No. 1 (−):
   Without left/right independent air conditioning function
   (i175) No. 1 (+) — (i175) No. 3 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator connector (without left/right independent air conditioning function) terminals.
   Connector & terminal
   With left/right independent air conditioning function
   (i174) No. 3 — (i88) No. 16:
   (i174) No. 1 — (i88) No. 30:
   (i174) No. 2 — (i88) No. 35:
   Without left/right independent air conditioning function
   (i175) No. 1 — (i88) No. 16:
   (i175) No. 3 — (i88) No. 30:
   (i175) No. 2 — (i88) No. 35:

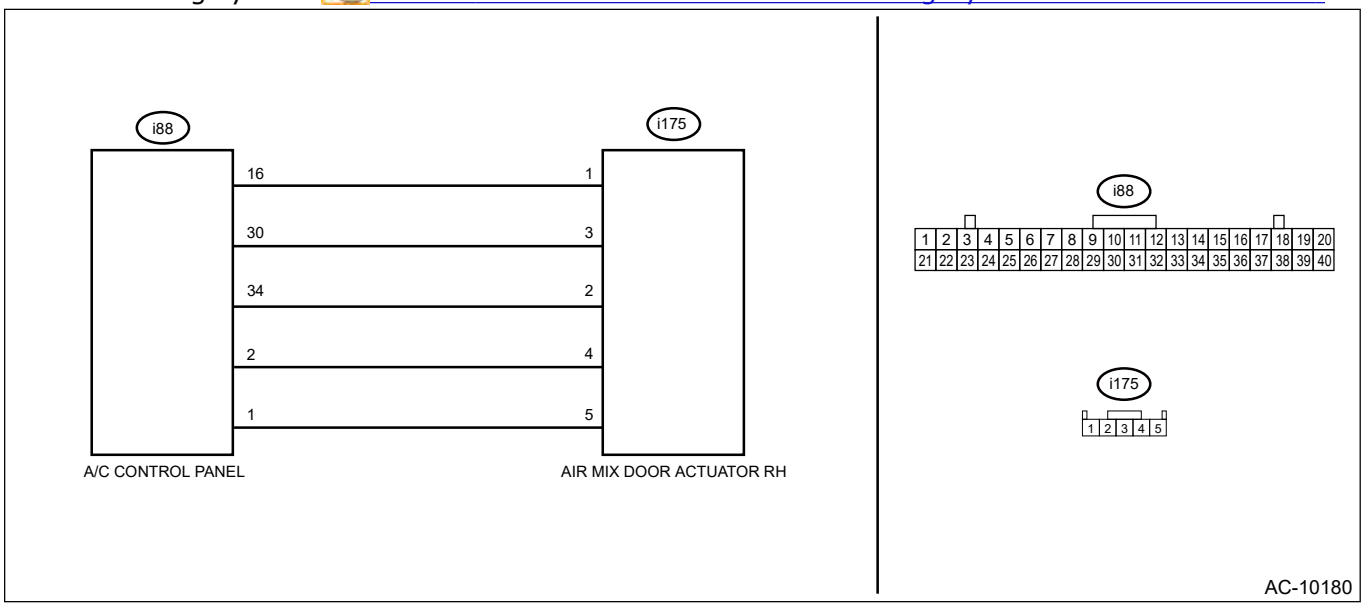
Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1441 AIR MIX DOOR ACTUATOR CIRCUIT STUCK (PASSENGER)

DTC detecting condition:



Air mix door actuator is locked.

Trouble symptom:

Temperature of the passenger’s side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and air mix door actuator RH connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1441 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Active Test.

- [Air mix door actuator target open (passenger's side)]

Did the actuator move to the specified target opening angle?

Yes	Air mix door actuator circuit is normal.
No	Go to 3.

3. CHECK HARNESS.

1. Disconnect the air mix door actuator RH connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between air mix door actuator RH connector terminals using a tester.
   Connector & terminal
   (i175) No. 1 (+) — (i175) No. 3 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open, short circuit of the harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and air mix door actuator RH connector terminals.
   Connector & terminal
   (i175) No. 1 — (i88) No. 16:
   (i175) No. 3 — (i88) No. 30:
   (i175) No. 2 — (i88) No. 34:
   (i175) No. 4 — (i88) No. 2:
   (i175) No. 5 — (i88) No. 1:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK AIR MIX DOOR ACTUATOR RH.

Check the air mix door actuator RH parts. Ref. to AIR CONDITIONER>Air Mix Door Actuator.

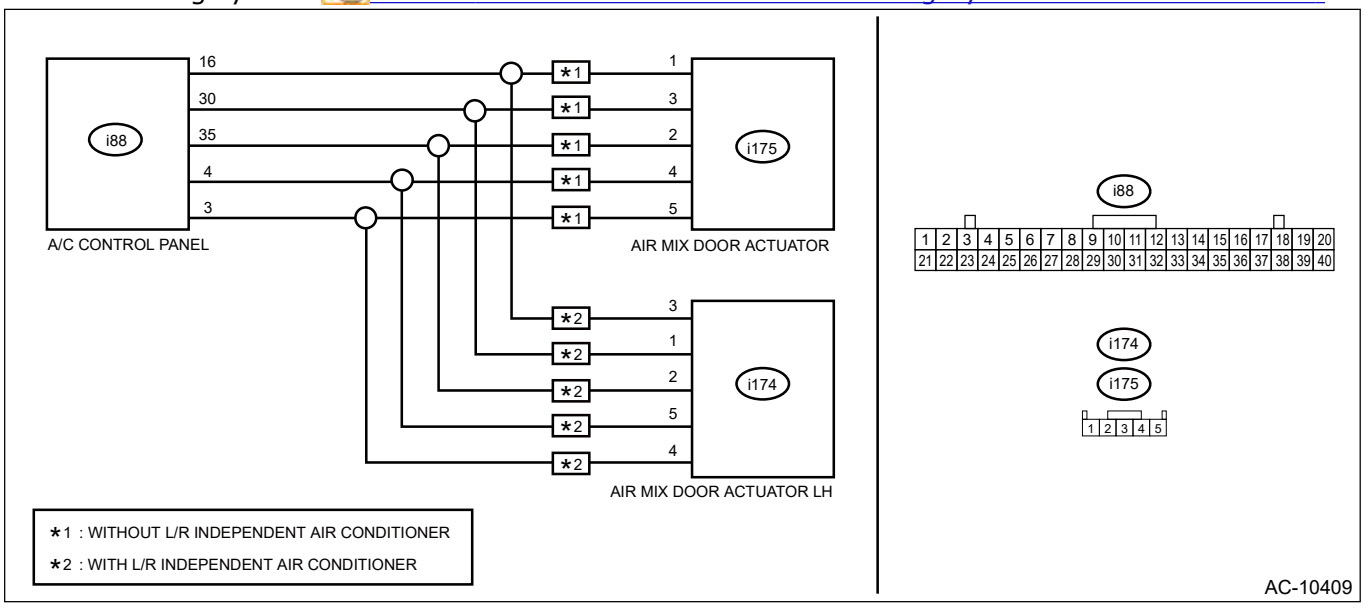
Is the air mix door actuator RH normal?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Replace the air mix door actuator RH. Ref. to AIR CONDITIONER>Air Mix Door Actuator.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1442 AIR MIX DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT (DRIVER)

DTC detecting condition:



Air mix door actuator potentiometer circuit is shorted.

Trouble symptom:

- Temperature cannot be adjusted for model without left/right independent air conditioner.
- Temperature of the driver’s side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and air mix door actuator LH connector (with left/right independent air conditioner) or air mix door actuator connector (without left/right independent air conditioner).
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1442 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK AIR MIX DOOR ACTUATOR LH.

1. Disconnect the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function).
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440 displayed? (Current malfunction)

Yes	Replace the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function). Ref. to AIR CONDITIONER>Air Mix Door Actuator.
No	Go to 3.

3. CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

1. Disconnect the connector from the A/C control panel.
2. For model with left/right independent air conditioner, check the continuity between terminals in air mix door actuator LH connector and between air mix door actuator LH connector and chassis ground using a tester. For model without left/right independent air conditioner, check the continuity between terminals in air mix door actuator connector and between air mix door actuator connector and chassis ground.

Connector & terminal

With left/right independent air conditioning function

(i174) No. 2 — (i174) No. 1:

(i174) No. 2 — Chassis ground:

Without left/right independent air conditioning function

(i175) No. 2 — (i175) No. 3:

(i175) No. 2 — Chassis ground:

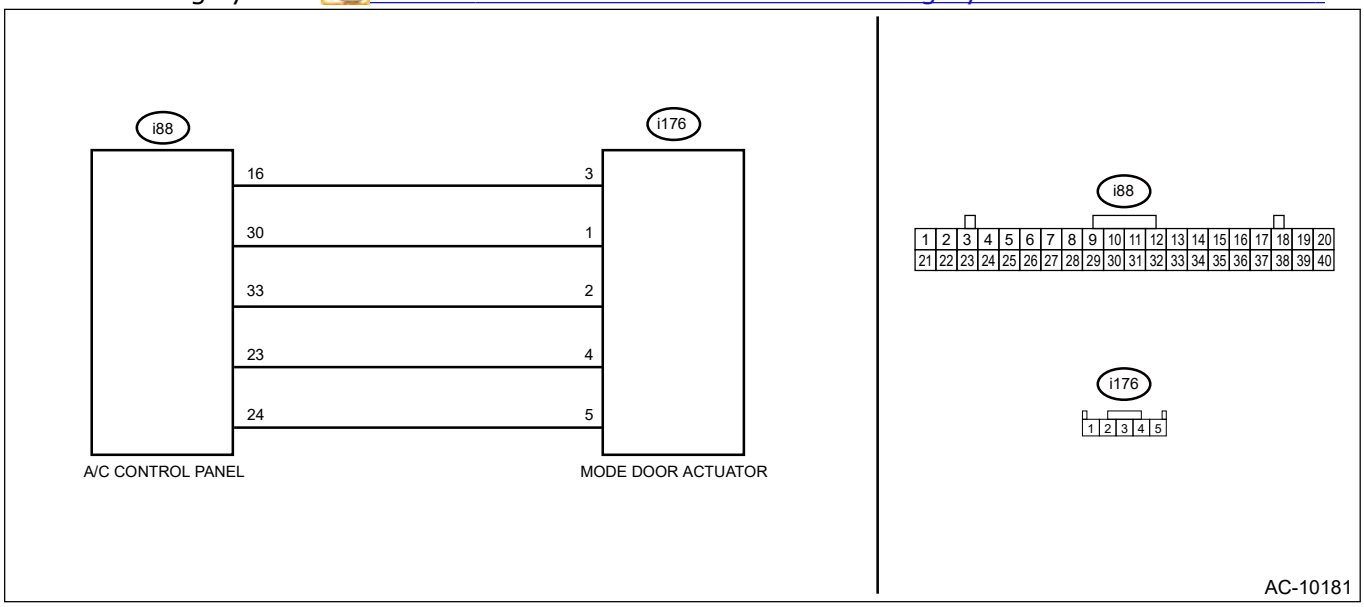
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1443 MODE DOOR ACTUATOR CIRCUIT STUCK

DTC detecting condition:



Mode door actuator is locked.

Trouble symptom:

Vent does not change.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and mode door actuator connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1443 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Active Test.

- [Mode Door Actuator Opening Angle Target]

Did the mode door actuator move to the specified target opening angle?

Yes	Mode door actuator circuit is normal.
No	Go to 3.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between mode door actuator connector terminals using a tester.
   Connector & terminal
   (i176) No. 3 (+) — (i176) No. 1 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open, short circuit of the harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and mode door actuator connector terminals.
   Connector & terminal
   (i176) No. 3 — (i88) No. 16:
   (i176) No. 1 — (i88) No. 30:
   (i176) No. 2 — (i88) No. 33:
   (i176) No. 4 — (i88) No. 23:
   (i176) No. 5 — (i88) No. 24:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK MODE DOOR ACTUATOR.

Check the mode door actuator parts. Ref. to AIR CONDITIONER>Mode Door Actuator.

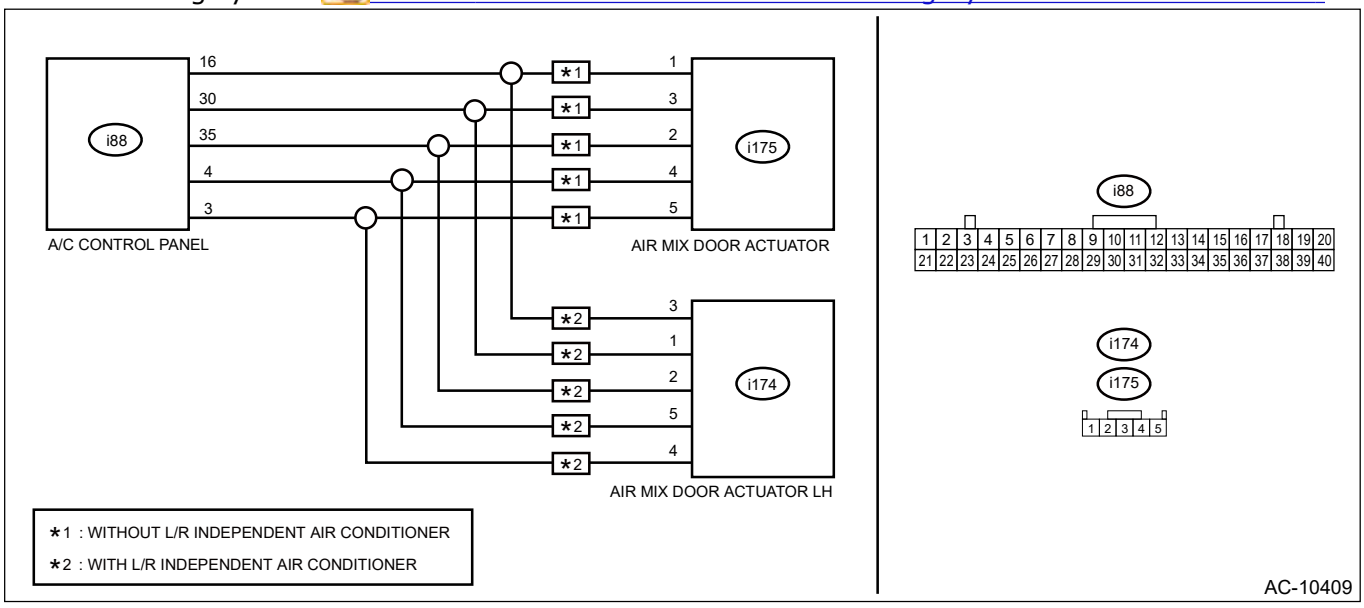
Is the mode door actuator OK?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Replace the mode door actuator. Ref. to AIR CONDITIONER>Mode Door Actuator.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1446 AIR MIX DOOR ACTUATOR CIRCUIT STUCK (DRIVER)

DTC detecting condition:



- Air mix door actuator is locked.
- The potentiometer value of the actuator does not change.

Trouble symptom:

- Temperature cannot be adjusted for model without left/right independent air conditioner.
- Temperature of the driver’s side cannot be adjusted for model with left/right independent air conditioner.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and air mix door actuator LH connector (with left/right independent air conditioner) or air mix door actuator connector (without left/right independent air conditioner).
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1446 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Active Test.

- [Air mix door actuator target open (driver's side)]

Does the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function) move to the set target opening angle?

Yes	The circuit of the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function) is normal.
No	Go to 3.

3. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between terminals in the air mix door actuator LH connector (with left/right independent air conditioning function) or air mix door actuator connector (without left/right independent air conditioning function).

Connector & terminal

With left/right independent air conditioning function

(i174) No. 3 (+) — (i174) No. 1 (−):

Without left/right independent air conditioning function

(i175) No. 1 (+) — (i175) No. 3 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open, short circuit of the harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator connector (without left/right independent air conditioning function) terminals.

Connector & terminal

With left/right independent air conditioning function

(i174) No. 3 — (i88) No. 16:
(i174) No. 1 — (i88) No. 30:
(i174) No. 2 — (i88) No. 35:
(i174) No. 5 — (i88) No. 4:
(i174) No. 4 — (i88) No. 3:

Without left/right independent air conditioning function

(i175) No. 1 — (i88) No. 16:
(i175) No. 3 — (i88) No. 30:
(i175) No. 2 — (i88) No. 35:
(i175) No. 4 — (i88) No. 4:
(i175) No. 5 — (i88) No. 3:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK AIR MIX DOOR ACTUATOR LH.

Check the parts of the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function). Ref. to AIR CONDITIONER>Air Mix Door Actuator.

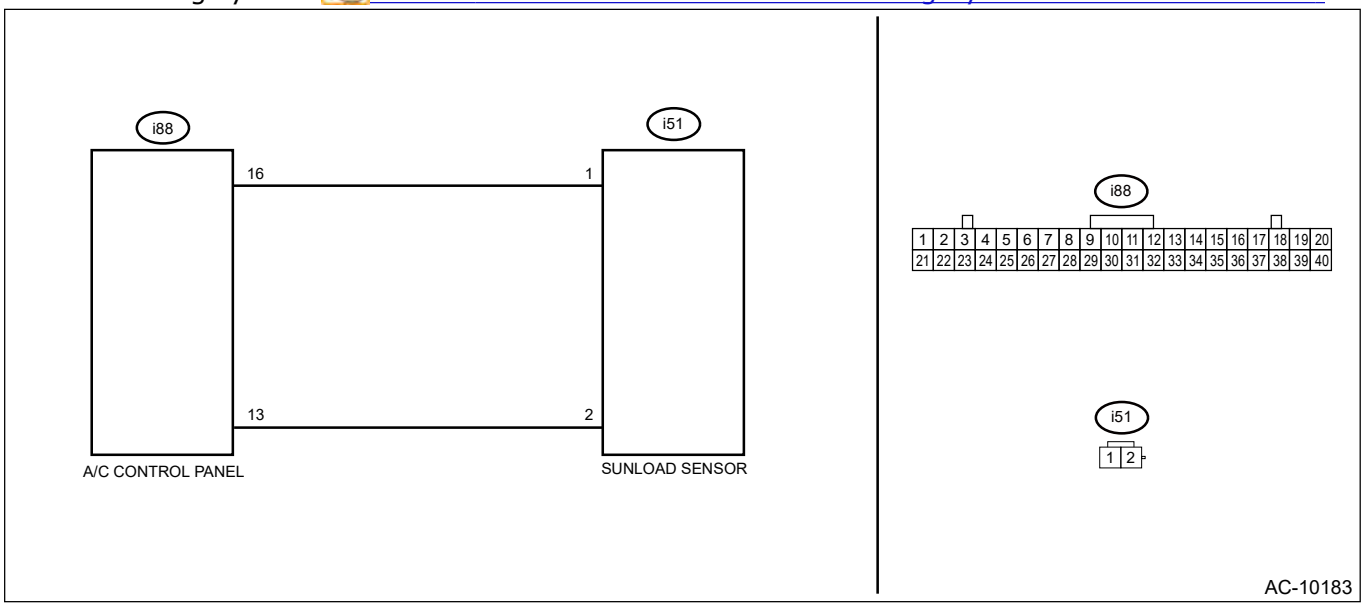
Is the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function) normal?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Replace the air mix door actuator LH (with left/right independent air conditioning function) or air mix door actuator (without left/right independent air conditioning function). Ref. to AIR CONDITIONER>Air Mix Door Actuator.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A1 SUNLOAD SENSOR CIRCUIT LOW/OPEN

DTC detecting condition:



Open circuit in the sunload sensor is detected for 3 seconds or more. (Displayed for current malfunction)

Trouble symptom:

Operation is performed as no sunload.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

Note:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and sunload sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A1 displayed?

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK SUNLOAD SENSOR.

1. Disconnect the sunload sensor.
2. Short the connector.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A2 displayed?

Yes	Replace the sunload sensor. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between terminals in sunload sensor connector.
   Connector & terminal
   (i51) No. 1 (+) — No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between sunload sensor and A/C control panel connector terminals.
   Connector & terminal
   (i51) No. 1 — (i88) No. 16:
   (i51) No. 2 — (i88) No. 13:

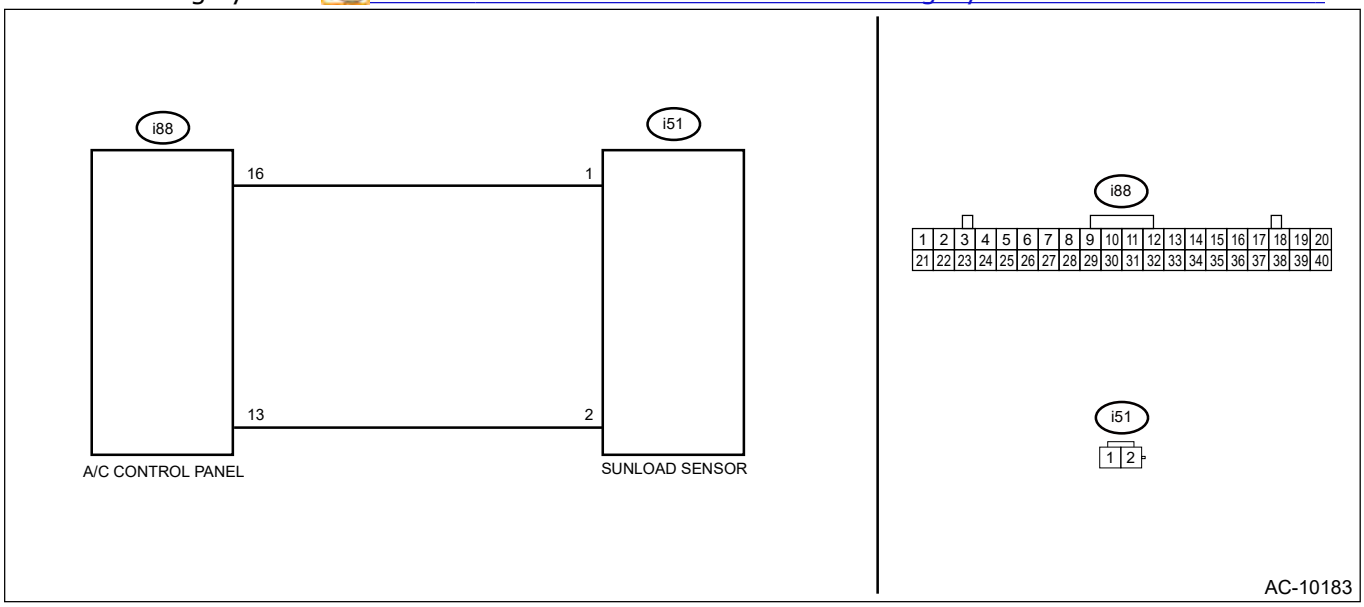
Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A2 SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:



Short circuit in the sunload sensor is detected for 3 seconds or more.

Trouble symptom:

Operation is performed as no sunload.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and sunload sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B14A2 displayed?

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK SUNLOAD SENSOR.

1. Disconnect the sunload sensor.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A1 displayed?

Yes	Replace the sunload sensor. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).
No	Go to 3.

3. CHECK HARNESS.

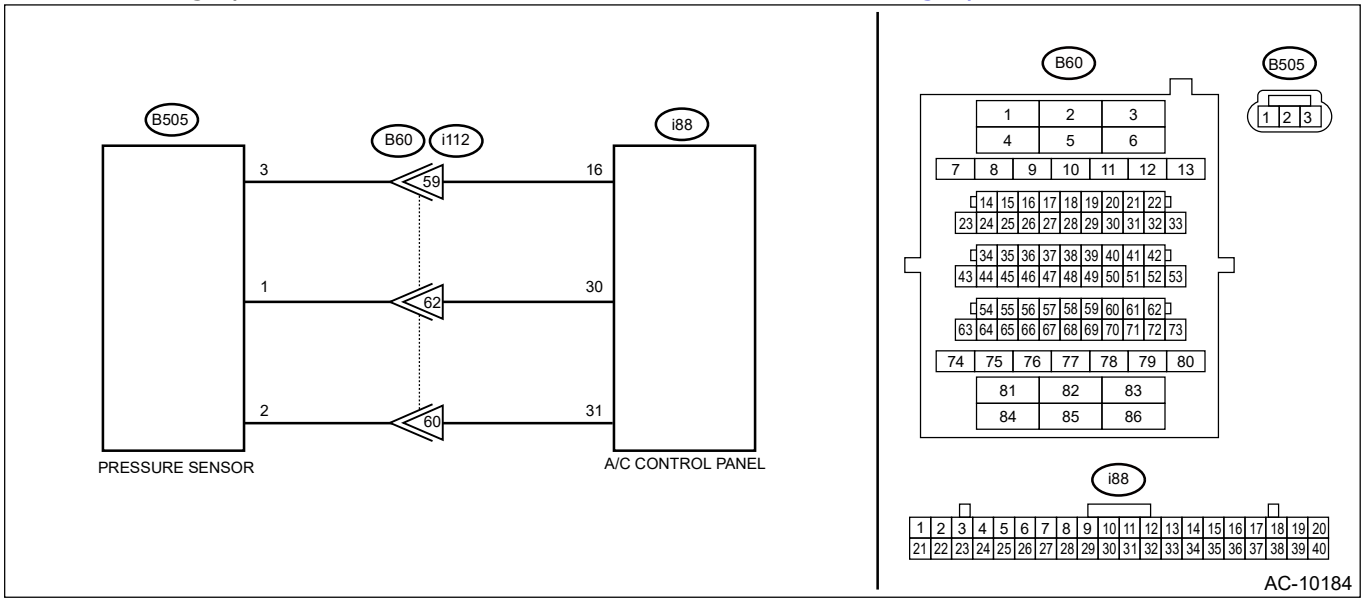
1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between terminals in sunload sensor connector.
   Connector & terminal
   (i51) No. 1 (+) — (i51) No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Check the connection of the sunload sensor circuit.
No	Go to 4.

4. CHECK HARNESS (SHORTED BETWEEN LINES).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between terminals in sunload sensor connector.
   Connector & terminal
   (i51) No. 1 — (i51) No. 2:



Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A3 REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN

DTC detecting condition:
Refrigerant pressure sensor circuit is open.
Trouble symptom:
Compressor does not operate. (Variable compressor)
Wiring diagram:
Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector, refrigerant pressure sensor connector and coupling connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A3 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK PRESSURE SENSOR.

1. Disconnect the refrigerant pressure sensor.
2. Short No. 1 and No. 2 of connector B505.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A4 displayed? (Current malfunction)

Yes	Replace the refrigerant pressure sensor. Ref. to AIR CONDITIONER>Pressure Sensor.
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between terminals in refrigerant pressure sensor connector.

Connector & terminal

(B505) No. 3 (+) — (B505) No. 1 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and refrigerant pressure sensor connector terminals.

Connector & terminal

(B505) No. 1 — (i88) No. 30:
(B505) No. 2 — (i88) No. 31:
(B505) No. 3 — (i88) No. 16:

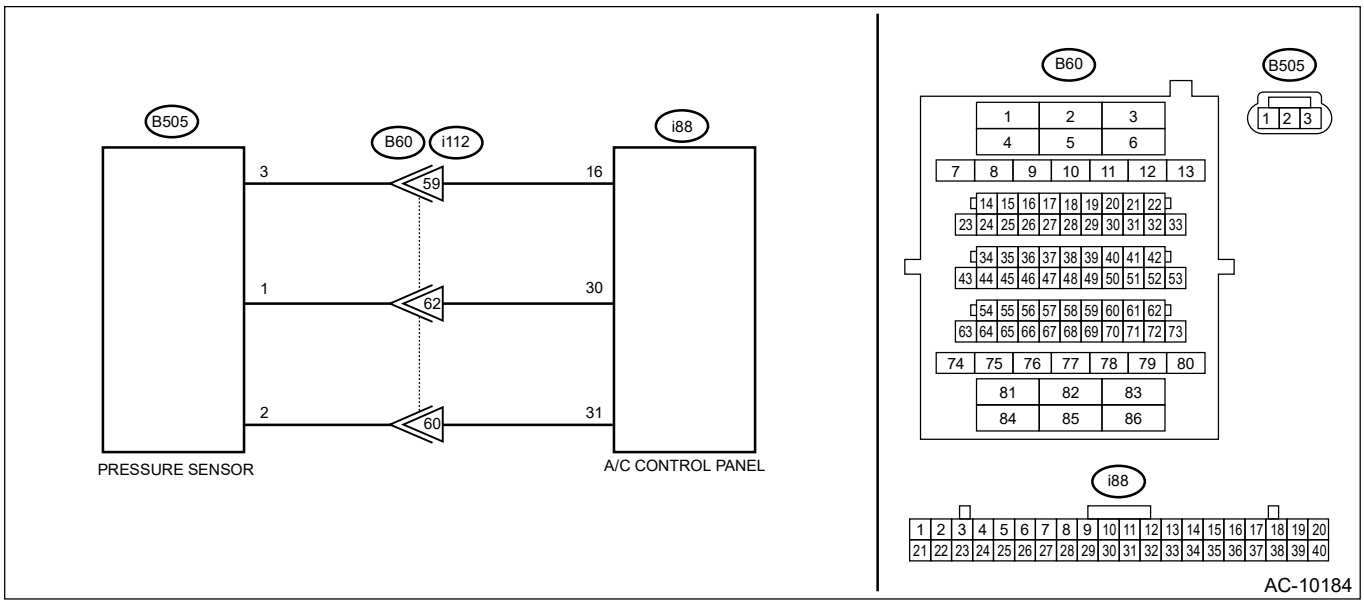
Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A4 REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:



Refrigerant pressure sensor circuit is shorted.

Trouble symptom:

Compressor does not operate. (Variable compressor)

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector, refrigerant pressure sensor connector and coupling connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B14A4 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK REFRIGERANT PRESSURE SENSOR.

1. Disconnect the refrigerant pressure sensor.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A3 displayed? (Current malfunction)

Yes	Replace the refrigerant pressure sensor. Ref. to AIR CONDITIONER>Pressure Sensor.
No	Go to 3.

3. CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between the terminals in refrigerant pressure sensor connector and between refrigerant pressure sensor connector and chassis ground.
   Connector & terminal
   (B505) No. 1 — (B505) No. 2:
   (B505) No. 2 — Chassis ground:

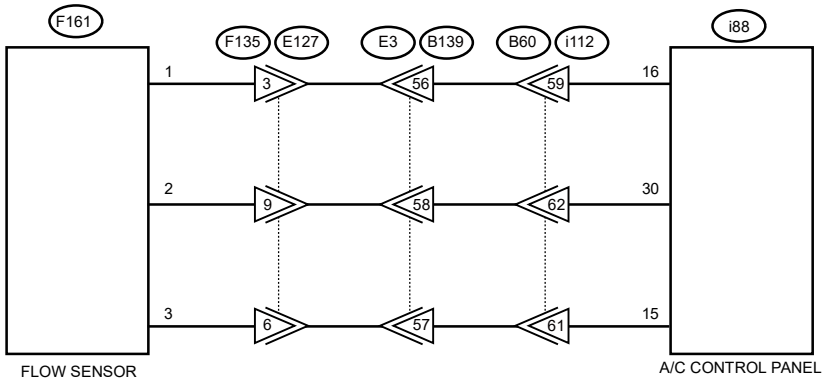
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

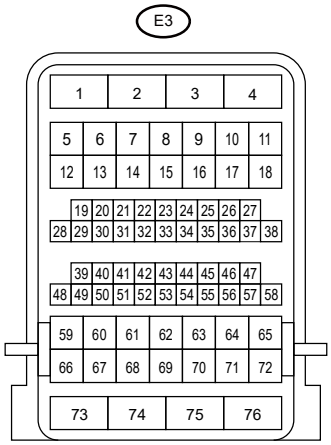
AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A5 REFRIGERANT FLOW SENSOR CIRCUIT OPEN

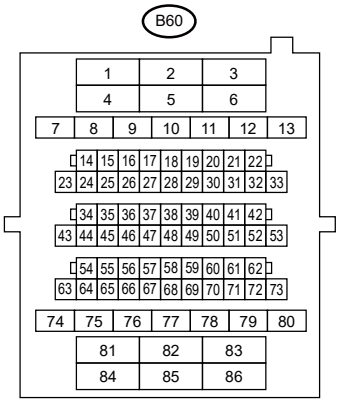
DTC detecting condition:



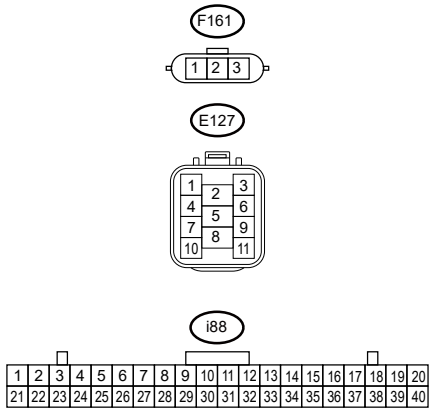
- The voltage of the refrigerant flow sensor signal line becomes 4.7 V or more.
- Open circuit in refrigerant flow sensor



Trouble symptom:



A/C does not function because refrigerant flow amount cannot be measured.



Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

AC-10185

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector, refrigerant flow sensor connector and coupling connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A5 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK REFRIGERANT FLOW SENSOR.

1. Disconnect the refrigerant flow sensor connector.
2. Short No. 2 and No. 3 of the refrigerant flow sensor connector (F161).
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A6 displayed? (Current malfunction)

Yes	Replace the compressor. Ref. to AIR CONDITIONER>Compressor.
No	Go to 3.

3. CHECK HARNESS.

1. Restore the temporary shorted lines made in step 2.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between terminals in refrigerant flow sensor connector.
   Connector & terminal
   (F161) No. 1 (+) — (F161) No. 2 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the A/C control panel connector.
2. Using a tester, check the continuity between A/C control panel connector and refrigerant flow sensor connector terminals.
   Connector & terminal
   (F161) No. 3 — (i88) No. 26:
   (F161) No. 2 — (i88) No. 18:
   (F161) No. 1 — (i88) No. 12:

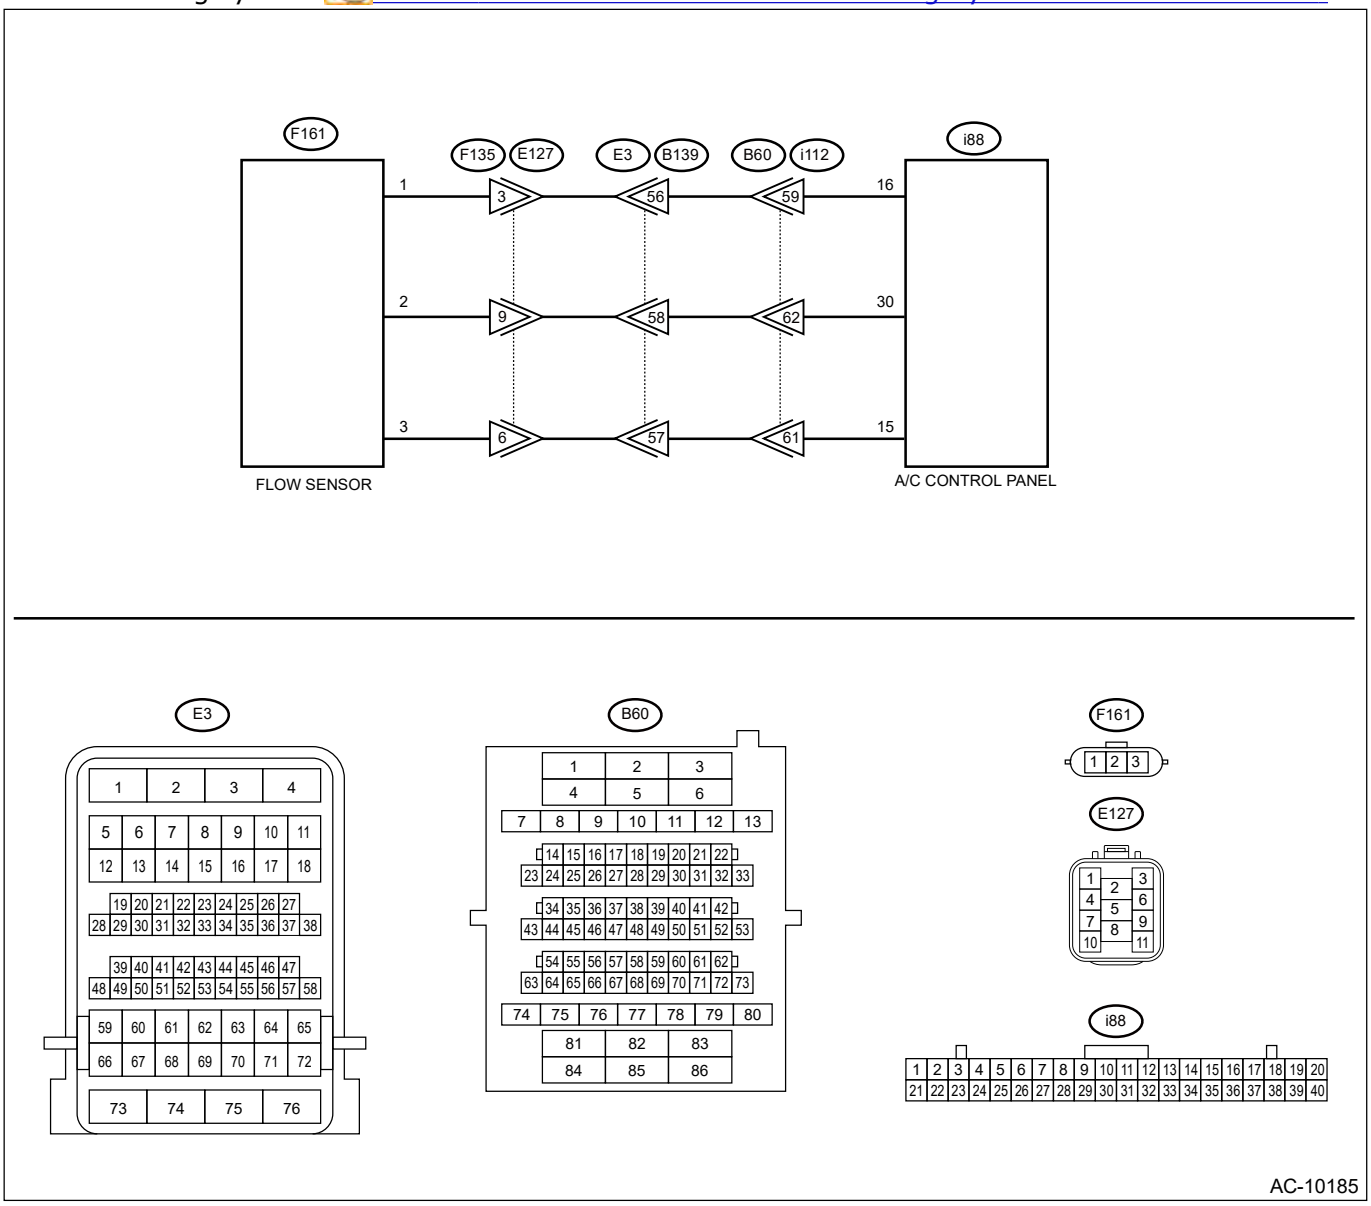
Is there continuity?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A6 REFRIGERANT FLOW SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:



- The voltage of the refrigerant flow sensor signal line becomes 0.3 V or less.
- Short-circuit in refrigerant flow sensor

Trouble symptom:

A/C does not function because refrigerant flow amount cannot be measured.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector, refrigerant flow sensor connector and coupling connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A6 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK REFRIGERANT FLOW SENSOR.

1. Disconnect the refrigerant flow sensor connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A5 displayed? (Current malfunction)

Yes	Replace the compressor. Ref. to AIR CONDITIONER>Compressor.
No	Go to 3.

3. CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

1. Disconnect the A/C control panel connector.
2. Using a tester, check the continuity between the terminals in refrigerant flow sensor connector and between refrigerant flow sensor connector and chassis ground.

   Connector & terminal

   (F161) No. 2 — (F161) No. 3:

   (F161) No. 3 — Chassis ground:

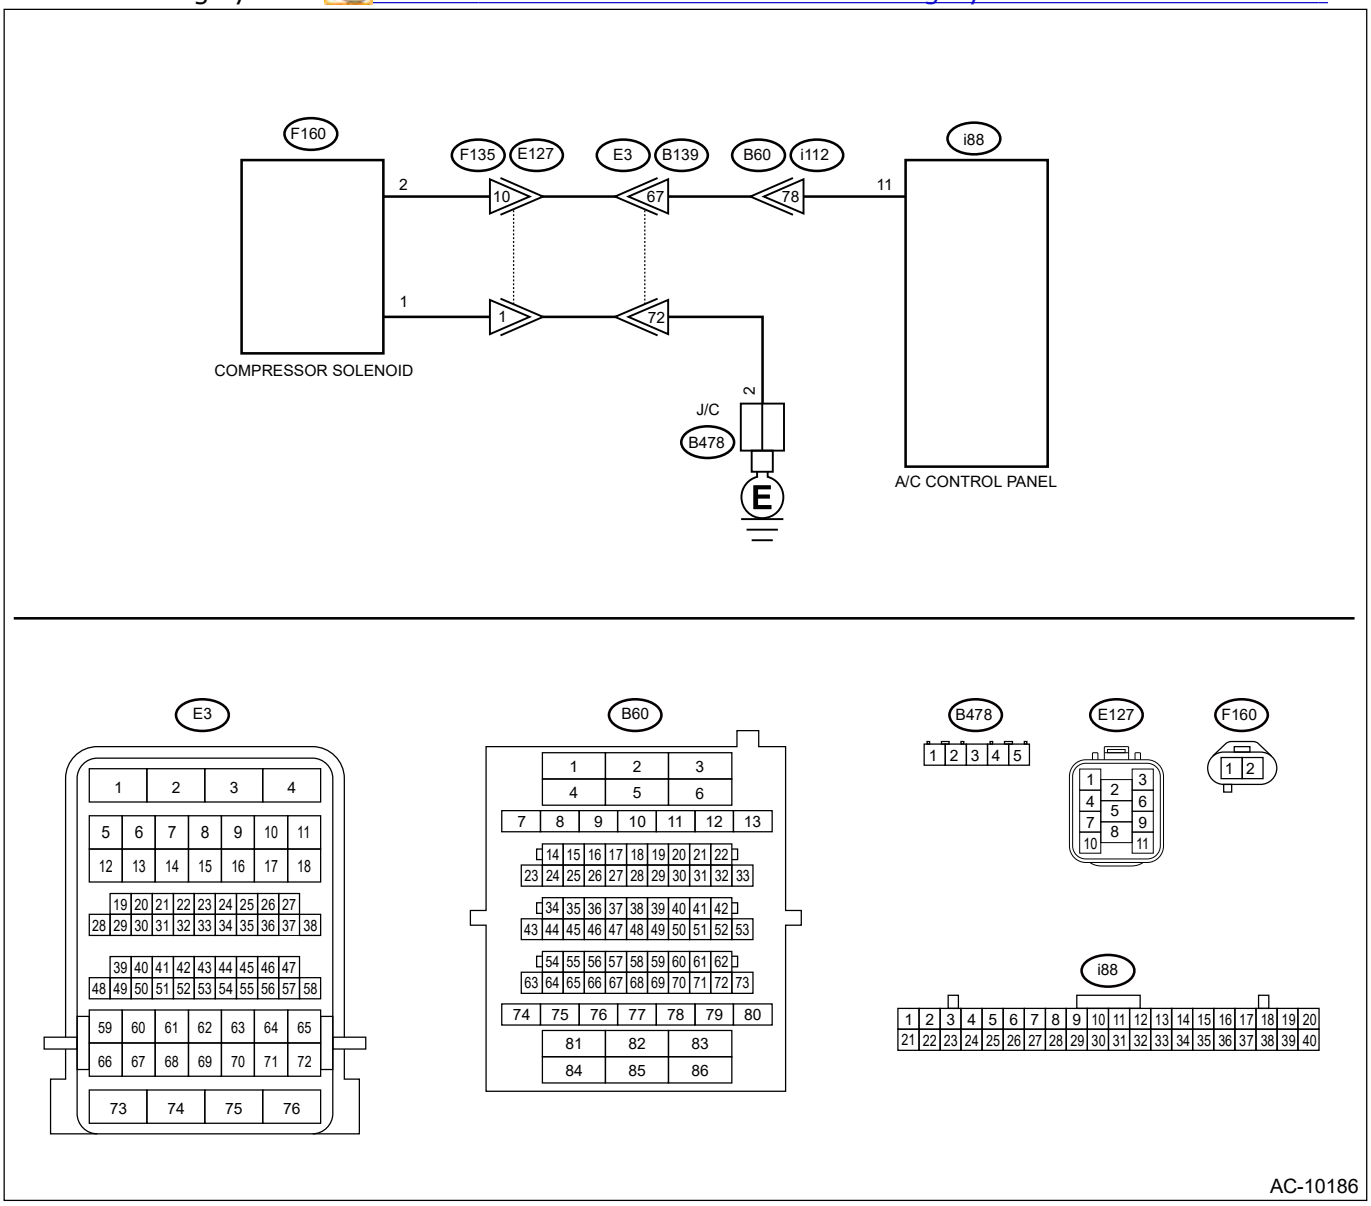
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A7 VARIABLE SOLENOID VALVE CIRCUIT

DTC detecting condition:



Variable flow change solenoid valve circuit is open or shorted.

Trouble symptom:

Refrigerant pressure cannot be changed.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel connector and variable flow change solenoid connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14A7 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. ACTIVE TEST.

1. Attach the manifold gauge.
2. Using the Subaru Select Monitor, check the following items in the [Active Test] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Active Test.
   - Variable Flow Change Sol Duty Setting

Did the variable flow change solenoid operate to the specified target, and the pressure change?

Yes	Variable flow change solenoid circuit is normal.
No	Go to 3.

3. CHECK VARIABLE FLOW CHANGE SOLENOID.

1. Disconnect the variable flow change solenoid connector.
2. Using a tester, measure the resistance between terminals of the solenoid.
   Terminals
   (Compressor solenoid side) No. 1 — No. 2:

Is the resistance 10 — 12 Ω?

Yes	Go to 4.
No	Replace the compressor. Ref. to AIR CONDITIONER>Compressor.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the A/C control panel connector.
2. Using a tester, check for continuity between the harness terminals.
   Connector & terminal
   (F160) No. 2 — (i88) No. 11:
   (F160) No. 1 — Chassis ground:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Using a tester, check for continuity between the harness terminals.

Connector & terminal

(F160) No. 2 — Chassis ground:

(F160) No. 1 — (F160) No. 2:

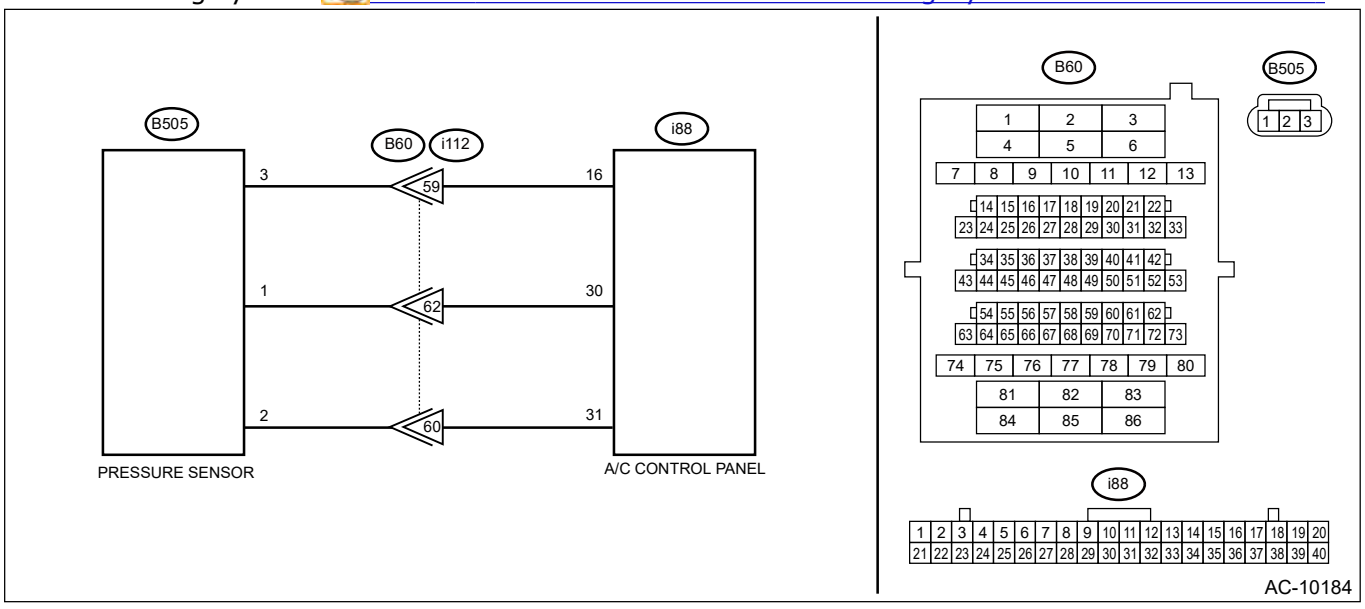
Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14A8 COMPRESSOR BREAK-IN MALFUNCTION LOW REFRIGERANT

DTC detecting condition:



- Compressor was operated while refrigerant was low.
- Compressor was operated while refrigerant pressure was extremely low.
- Judgment is made only when the delivery mode fuse is installed.

Trouble symptom:

A/C does not operate.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK AMOUNT OF REFRIGERANT.

Check the refrigerant pressure and filling amount. Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set.

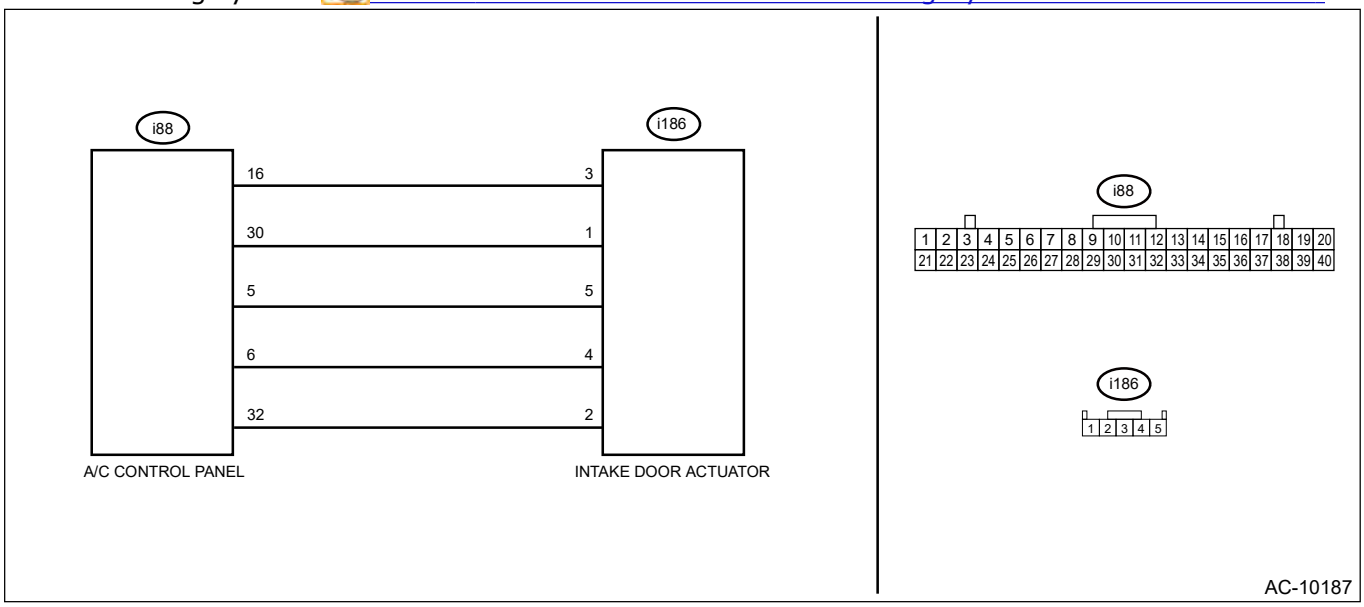
Is the filling amount a standard value?

Yes	Check that DTC B14A3 (open circuit malfunction) or B14A4 (short circuit malfunction) is recorded, and if either one of these DTCs is recorded, perform the diagnosis according to the DTC. If nothing is recorded, replace the compressor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14A3 REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14A4 REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT-CIRCUIT . Ref. to AIR CONDITIONER>Compressor.
No	Replace the compressor. Ref. to AIR CONDITIONER>Compressor.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN

DTC detecting condition:



Intake door actuator potentiometer circuit is open.

Trouble symptom:

FRESH/RECIRC does not operate.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel and intake door actuator connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B14E9 displayed?

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Measure the voltage between intake door actuator connector terminals using a tester.
   Connector & terminal
   (i186) No. 3 (+) — (i186) No. 1 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Check the continuity between terminals in intake door actuator connector using a tester.
   Connector & terminal
   (i186) No. 3 — (i88) No. 16:
   (i186) No. 1 — (i88) No. 30:
   (i186) No. 5 — (i88) No. 5:
   (i186) No. 4 — (i88) No. 6:
   (i186) No. 2 — (i88) No. 32:

Is there continuity?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK ACTUATOR.

1. Turn the ignition switch to ON.
2. Measure the voltage between intake door actuator connector terminals using a tester.
   Connector & terminal
   (i186) No. 2 (+) — (i186) No. 1 (−):

Is the voltage 0.5 — 4.5 V?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Go to 5.

5. CHECK HARNESS (SHORTED BETWEEN LINES).

1. Turn the ignition switch to OFF.
2. Measure the resistance between intake door actuator connector terminals using a tester.
   Connector & terminal
   (i186) No. 2 — (i186) No. 3:

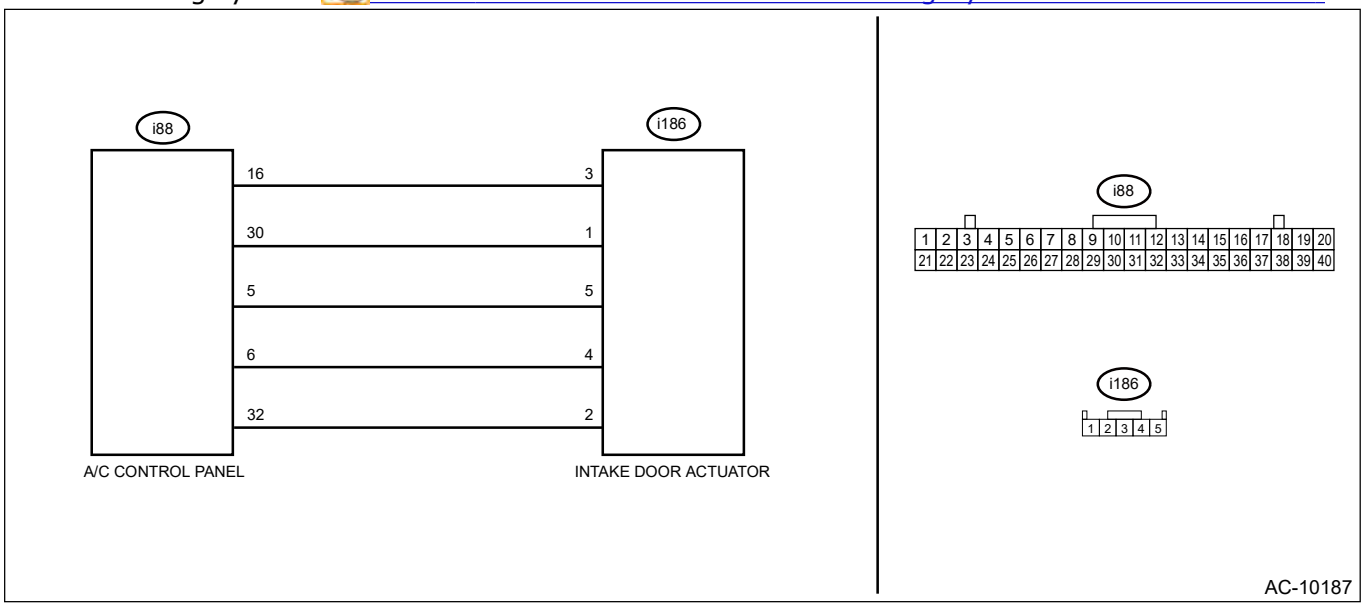
Is the resistance less than 1 Ω?

Yes	Repair or replace the short circuit of the harness.
No	Replace the intake door actuator. Ref. to AIR CONDITIONER>FRESH/RECIRC Door Actuator.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:



Intake door actuator potentiometer circuit is shorted.

Trouble symptom:

FRESH/RECIRC does not operate.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel and intake door actuator connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B14EA displayed?

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK ACTUATOR.

1. Turn the ignition switch to ON.
2. Measure the voltage between intake door actuator connector terminals using a tester.
   Connector & terminal
   (i186) No. 3 (+) — (i186) No. 1 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Check the continuity between terminals in intake door actuator connector using a tester.
   Connector & terminal
   (i186) No. 1 — (i88) No. 30:
   (i186) No. 2 — (i88) No. 32:
   (i186) No. 3 — (i88) No. 16:

Is there continuity?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK ACTUATOR.

1. Turn the ignition switch to ON.
2. Measure the voltage between intake door actuator connector terminals using a tester.
   Connector & terminal
   (i186) No. 2 (+) — (i186) No. 1 (−):

Is the voltage 0.5 — 4.5 V?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Go to 5.

5. CHECK HARNESS (SHORTED BETWEEN LINES).

1. Turn the ignition switch to OFF.
2. Measure the resistance between intake door actuator connector terminals using a tester.
   Connector & terminal
   (i186) No. 2 — (i186) No. 1:

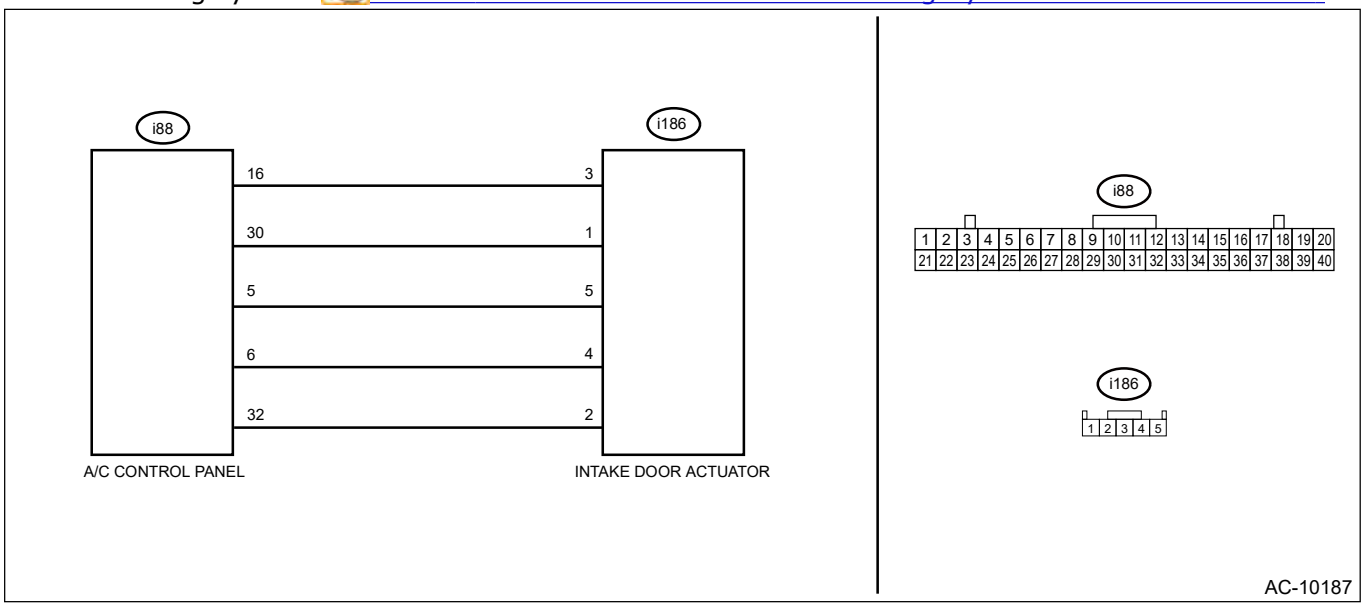
Is the resistance less than 1 Ω?

Yes	Repair or replace the short circuit of the harness.
No	Replace the intake door actuator. Ref. to AIR CONDITIONER>FRESH/RECIRC Door Actuator.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B14EB INTAKE DOOR ACTUATOR STUCK

DTC detecting condition:



- Intake door actuator is locked.
- The potentiometer value of the intake door actuator does not change.

Trouble symptom:

FRESH/RECIRC does not operate.

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK CONNECTOR.

1. Check connecting condition of the A/C control panel and intake door actuator connector.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14EB displayed?

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Active Test.

- [Fresh/Rec Air Dr Act Trgt Open Angle]

Did the actuator move to the specified target opening angle?

Yes	Intake door actuator circuit is normal.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to ON.
2. Measure the voltage between intake door actuator connector terminals using a tester.
   Connector & terminal
   (i186) No. 3 (+) — (i186) No. 1 (−):

Is the voltage 4.5 — 5.0 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the connector from the A/C control panel.
2. Using a tester, check the continuity between A/C control panel connector and intake door actuator connector terminals.
   Connector & terminal
   (i186) No. 1 — (i88) No. 30:
   (i186) No. 2 — (i88) No. 32:
   (i186) No. 3 — (i88) No. 16:
   (i186) No. 4 — (i88) No. 6:
   (i186) No. 5 — (i88) No. 5:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK INTAKE DOOR ACTUATOR.

Check the intake door actuator parts. Ref. to AIR CONDITIONER>FRESH/RECIRC Door Actuator.

Is the actuator normal?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Replace the intake door actuator. Ref. to AIR CONDITIONER>FRESH/RECIRC Door Actuator.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when malfunction occurs in CAN line. (Bus off)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

No CAN data is received from ECM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

No CAN data is received from TCM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

No CAN data is received from VDC CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

No CAN data is received from body integrated unit.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

No CAN data is received from combination meter.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Received error CAN data from ECM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0402 INVALID DATA RECEIVED FROM TCM

Received error CAN data from TCM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Received error CAN data from VDC CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Error CAN data is received from body integrated unit.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Received error CAN data from combination meter.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIR CONDITIONER(DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

1. Perform diagnosis according to the diagnosis procedure for the corresponding symptom listed in the symptom table.
2. If there are multiple symptoms, perform the diagnosis in the symptom sequence (1 → 2 → ... → 13).

1. SYMPTOM TABLE

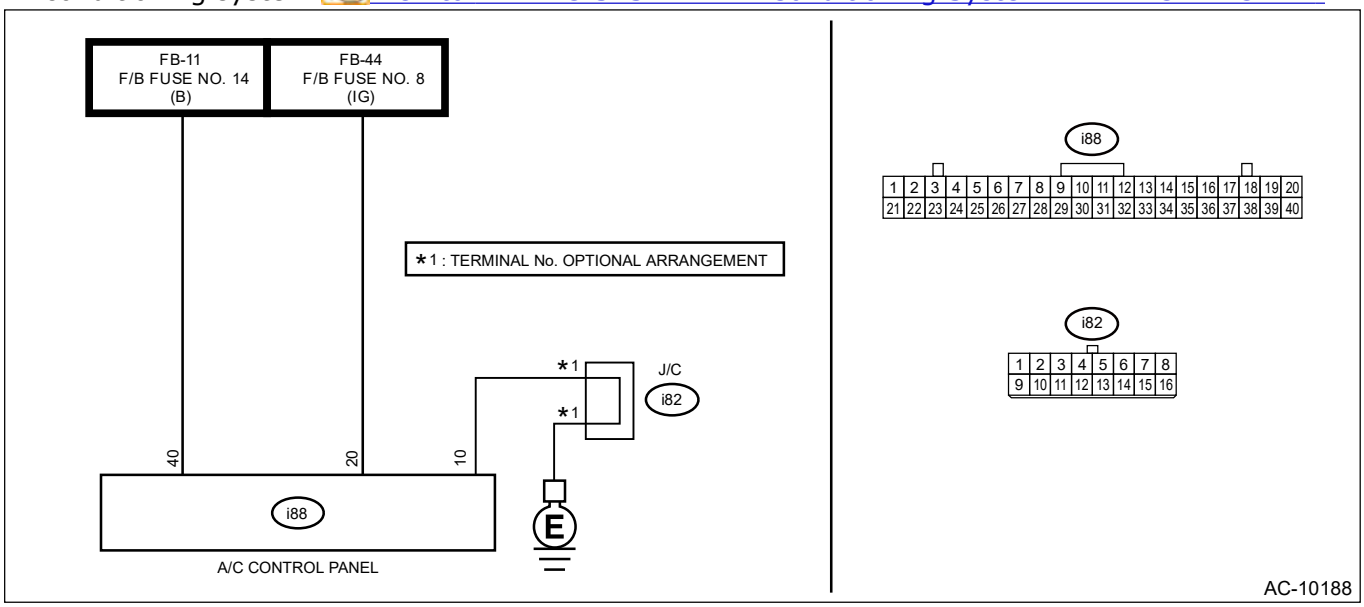
Symptoms		Diagnosis procedure
1	Nothing is displayed on the screen or indicators do not illuminate.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE.
2	Air conditioner does not stop even when the OFF switch is pressed.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED.
3	The windshield glass is not cleared even when the DEF switch is pressed.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED.
4	Cold air not emitted.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COLD AIR NOT EMITTED.
5	Warm air not emitted.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > WARM AIR NOT EMITTED.
6	Compartment temperature is excessively lower than setting temperature.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE.
7	Compartment temperature is excessively higher than setting temperature.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE.
8	Air does not come out, or airflow capacity is insufficient. (Blower motor does not rotate.)	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with

	Symptoms	Diagnosis procedure
		Phenomenon>INSPECTION > AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT.
9	Air goes out of control. (Blower motor rotates at high speed.)	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AIR GOES OUT OF CONTROL.
10	Cold air does not come out even when the A/C switch is pressed. The glass cannot be defogged. (Compressor does not operate.)	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)).
11	Unable to switch suction vents.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH SUCTION VENTS.
12	Unable to switch blow vents.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH VENTS.
13	Illumination does not come on, or cannot dim.	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ILLUMINATION DOES NOT COME ON OR CANNOT DIM.

INSPECTION

1. NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE

Trouble symptom:



- When the AUTO button is pressed with IGN ON, nothing is displayed on the screen or indicators do not illuminate.
- Self diagnosis using A/C control panel does not operate.

Trouble causes:

- A/C control panel power supply circuit failure
- CAN communication failure

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK FUSE.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK CONNECTOR.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK A/C CONTROL PANEL POWER SUPPLY CIRCUIT (OPEN OR SHORT).
→ no → Perform the instructed procedures.

yes ↓

4. CHECK A/C CONTROL PANEL GROUND CIRCUIT (OPEN).
→ no → Perform the instructed procedures.

yes ↓

5. CHECK FOR POOR CONTACT.
→ yes → Perform the instructed procedures.
→ no → Perform the instructed procedures.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Remove the fuses No. 8 and 14 from fuse & relay box.
3. Check the condition of fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — A/C control panel.

2. CHECK CONNECTOR.

Check poor contact of A/C control panel connector and coupling connector.

Is the check result OK?

Yes	Go to 3.
No	Repair the connector.

3. CHECK A/C CONTROL PANEL POWER SUPPLY CIRCUIT (OPEN OR SHORT).

1. Remove the A/C control panel.
2. Disconnect the A/C control panel connector.
3. Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON.

Connector & terminal

(i88) No. 20 (+) — Chassis ground (−):

(i88) No. 40 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Check for open or short circuit in the harness between A/C control panel and fuse.

4. CHECK A/C CONTROL PANEL GROUND CIRCUIT (OPEN).

Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF.

Connector & terminal

(i88) No. 10 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair the harness for ground line.

5. CHECK FOR POOR CONTACT.

Check poor contact of A/C control panel connector.

Is the check result OK?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair the connector.

2. AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED

Trouble symptom:

Even when the OFF switch is pressed, the blower fan does not turn off, the inlet opening remains in FRESH mode, and the compressor does not turn off.

Trouble causes:

- CAN communication failure
- A/C control panel failure
- Blower motor failure
- Intake door actuator failure
- Compressor failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK BLOWER MOTOR.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK INTAKE DOOR ACTUATOR.
   - no → Perform the instructed procedures.
   - yes ↓

4. CHECK COMPRESSOR.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK A/C CONTROL PANEL.

1. Turn the ignition switch to ON.
2. Press the OFF switch of the A/C control panel.
3. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Blower Fan Level]
- [Variable Flow Change Solenoid Duty] (variable A/C model)
- [Fresh/Recircle Air Door Actuator Position Target]

Does [Blower Fan Level] indicate 0, [Variable Flow Change Solenoid Duty] indicate 0%, and [Fresh/Recircle Air Door Actuator Position Target] indicate 100%?

Yes	Go to 2.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

2. CHECK BLOWER MOTOR.

With the OFF switch pressed, check the blower motor operation.

Is the blower motor stopped?

Yes	Go to 3.
No	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AIR GOES OUT OF CONTROL.

3. CHECK INTAKE DOOR ACTUATOR.

With the OFF switch pressed, check the FRESH/RECIRC door operation.

Does the FRESH/RECIRC door set to FRESH?

Yes	Go to 4.
No	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH SUCTION VENTS.

4. CHECK COMPRESSOR.

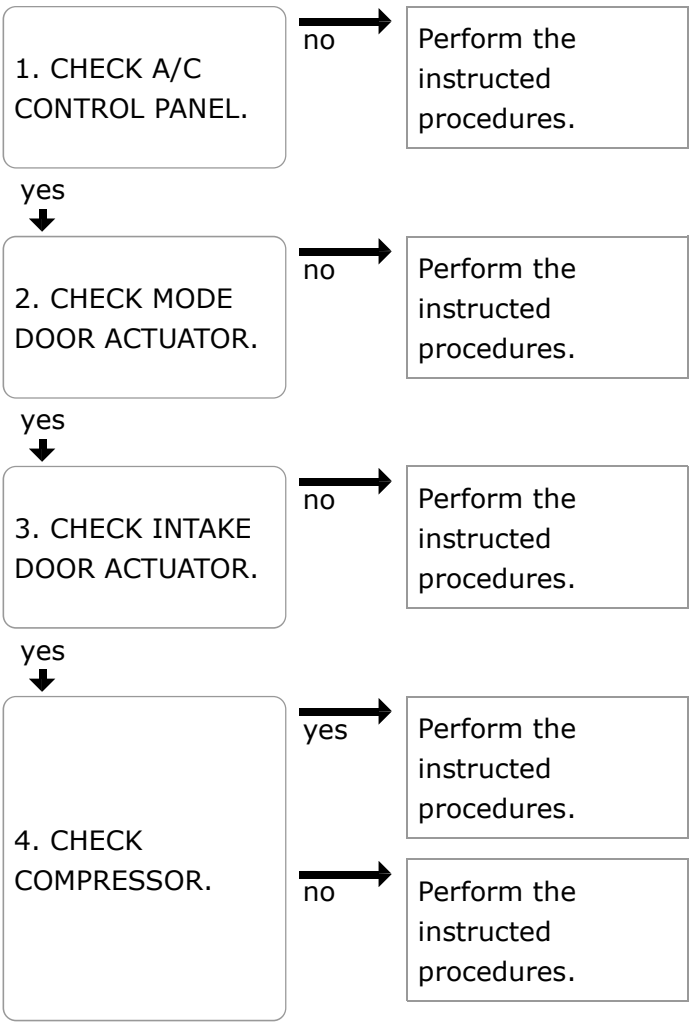
With the OFF switch pressed, check the compressor operation.

Is the compressor stopped?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)).

3. THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED

Trouble symptom:



Defroster indicator does not illuminate, outlet opening does not switch to DEF, compressor does not switch to ON, and inlet opening does not switch to FRESH, when pressing the DEF switch.

Trouble causes:

- CAN communication failure
- A/C control panel failure
- Mode door actuator failure
- Compressor failure
- Intake door actuator failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK A/C CONTROL PANEL.
no
Perform the instructed procedures.
yes
2. CHECK MODE DOOR ACTUATOR.
no
Perform the instructed procedures.
yes
3. CHECK INTAKE DOOR ACTUATOR.
no
Perform the instructed procedures.
yes
4. CHECK COMPRESSOR.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK A/C CONTROL PANEL.

1. Turn the ignition switch to ON.
2. Press the DEF switch of the A/C control panel.
3. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Mode Door Actuator Position Target]
- [Variable Flow Change Solenoid Duty] (variable A/C model)
- [Fresh/Recircle Air Door Actuator Position Target]

Does [Mode Door Actuator Position Target] indicate 100%, [Variable Flow Change Solenoid Duty] indicate 0% or more, and [Fresh/Recircle Air Door Actuator Position Target] indicate 100%?

Yes	Go to 2.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

2. CHECK MODE DOOR ACTUATOR.

With the DEF switch ON, check the mode door operation.

Does the air come out from the DEF outlet opening?

Yes	Go to 3.
No	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH VENTS.

3. CHECK INTAKE DOOR ACTUATOR.

With the DEF switch ON, check the FRESH/RECIRC door operation.

Is FRESH/RECIRC switch turned to “FRESH”?

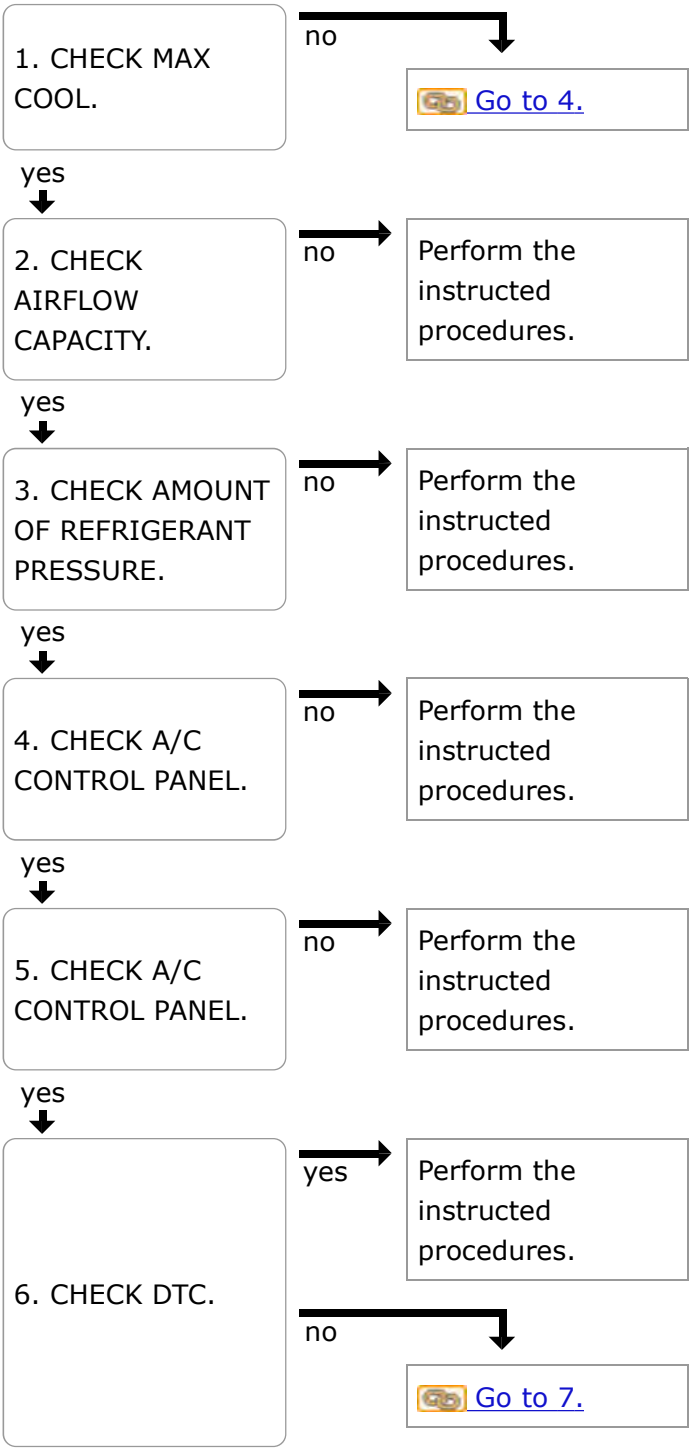
Yes	Go to 4.
No	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH SUCTION VENTS.

4. CHECK COMPRESSOR.

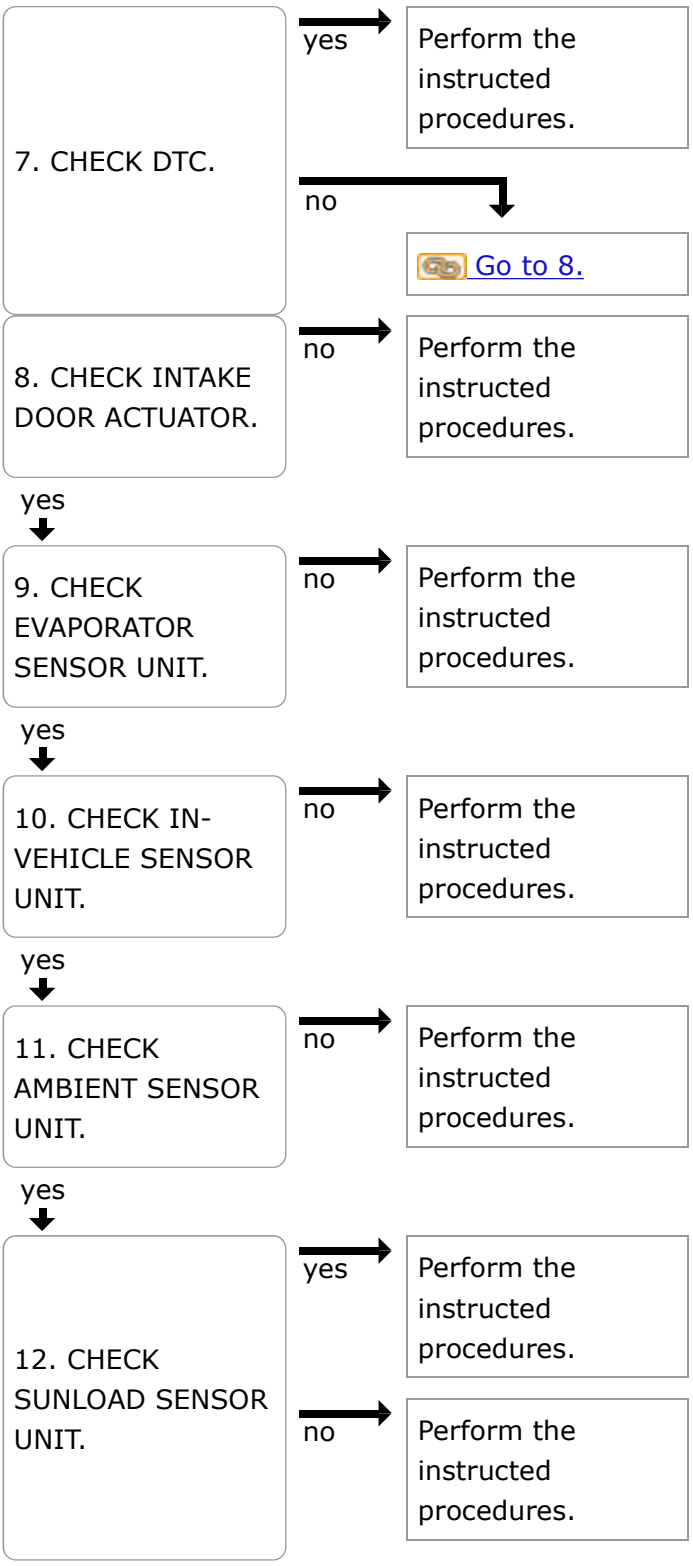
With the DEF switch ON, check the compressor operation.

Does the compressor operate?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)).



4. COLD AIR NOT EMITTED



Trouble symptom:
Cold air not emitted.
Trouble causes:
- Airflow capacity failure
- Refrigerant pressure failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure

- Sunload sensor failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

7. CHECK DTC.
yes
Perform the instructed procedures.
no
Go to 8.
8. CHECK INTAKE DOOR ACTUATOR.
no
Perform the instructed procedures.
yes
9. CHECK EVAPORATOR SENSOR UNIT.
no
Perform the instructed procedures.
yes
10. CHECK IN-VEHICLE SENSOR UNIT.
no
Perform the instructed procedures.
yes
11. CHECK AMBIENT SENSOR UNIT.
no
Perform the instructed procedures.
yes
12. CHECK SUNLOAD SENSOR UNIT.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK MAX COOL.

Set the A/C control panel dials as follows.
Temperature control dial: MAX COOL
FRESH/RECIRC switch: RECIRC
Mode switch or mode dial: VENT
A/C switch: ON

Does it fail to blow the cold air?

Yes	Go to 2.
No	Go to 4.

2. CHECK AIRFLOW CAPACITY.

Check the airflow capacity. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT.

Is the check result OK?

Yes	Go to 3.
No	Perform repair according to inspection procedure.

3. CHECK AMOUNT OF REFRIGERANT PRESSURE.

Check the refrigerant pressure. Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set.

Is the check result OK?

Yes	Go to 4.
No	Perform repair according to refrigerant pressure inspection.

4. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "60"*1?
(*1: For the 72°F center specification. For the 25°C center specification, the value is 18)

Yes	Go to 5.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

5. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "85"*2?
(*2: For the 72°F center specification. For the 25°C center specification, the value is 32)

Yes	Go to 6.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

6. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 7.

7. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 8.

8. CHECK INTAKE DOOR ACTUATOR.

Visually check the intake door actuator operation.

Is the check result OK?

Yes	Go to 9.
No	Check the intake door actuator. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH SUCTION VENTS.

9. CHECK EVAPORATOR SENSOR UNIT.

Perform the inspection of evaporator sensor unit. Ref. to AIR CONDITIONER>Evaporator Sensor.

Is the check result OK?

Yes	Go to 10.
No	Replace the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor.

10. CHECK IN-VEHICLE SENSOR UNIT.

Check in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

Is the check result OK?

Yes	Go to 11.
No	Replace the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

11. CHECK AMBIENT SENSOR UNIT.

Check the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

Is the check result OK?

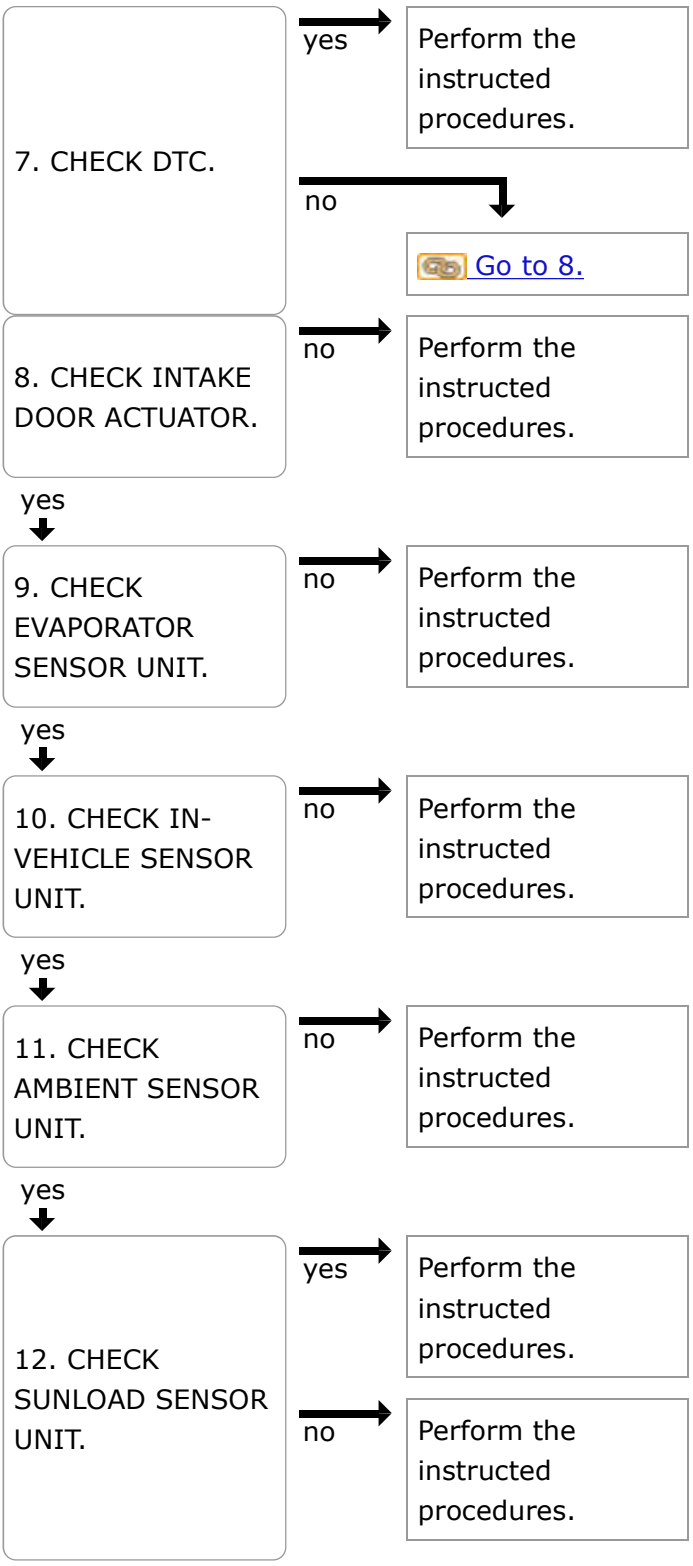
Yes	Go to 12.
No	Replace the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

12. CHECK SUNLOAD SENSOR UNIT.

Check the sunload sensor unit. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the sunload sensor. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).



5. WARM AIR NOT EMITTED

Trouble symptom:
Warm air not emitted.
Trouble causes:
- Airflow capacity failure
- Coolant level failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK MAX HOT.
   - no → Go to 4.
   - yes ↓
2. CHECK AIRFLOW CAPACITY.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK ENGINE COOLANT.
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
5. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
6. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 7.

7. CHECK DTC.
yes
Perform the instructed procedures.
no
Go to 8.
8. CHECK INTAKE DOOR ACTUATOR.
no
Perform the instructed procedures.
yes
9. CHECK EVAPORATOR SENSOR UNIT.
no
Perform the instructed procedures.
yes
10. CHECK IN-VEHICLE SENSOR UNIT.
no
Perform the instructed procedures.
yes
11. CHECK AMBIENT SENSOR UNIT.
no
Perform the instructed procedures.
yes
12. CHECK SUNLOAD SENSOR UNIT.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK MAX HOT.

Set the A/C control panel dials as follows.
Temperature control dial: MAX HOT
FRESH/RECIRC switch: FRESH
Mode switch or mode dial: HEAT
A/C switch: OFF

Does it fail to blow the hot air?

Yes	Go to 2.
No	Go to 4.

2. CHECK AIRFLOW CAPACITY.

Check the airflow capacity. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT.

Is the check result OK?

Yes	Go to 3.
No	Perform repair according to inspection procedure.

3. CHECK ENGINE COOLANT.

Check engine coolant amount.

Is the engine coolant level within the specification?

Yes	Go to 4.
No	Fill engine coolant. If there is coolant leakage, repair the leaks according to Engine Cooling System Trouble in General. Ref. to COOLING(H4DO)>Engine Cooling System Trouble in General.

4. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "60"*1?
(*1: For the 72°F center specification. For the 25°C center specification, the value is 18)

Yes	Go to 5.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

5. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "85"*2?
(*2: For the 72°F center specification. For the 25°C center specification, the value is 32)

Yes	Go to 6.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

6. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 7.

7. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 8.

8. CHECK INTAKE DOOR ACTUATOR.

Visually check the intake door actuator operation.

Is the check result OK?

Yes	Go to 9.
No	Check the intake door actuator. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH SUCTION VENTS.

9. CHECK EVAPORATOR SENSOR UNIT.

Perform the inspection of evaporator sensor unit. Ref. to AIR CONDITIONER>Evaporator Sensor.

Is the check result OK?

Yes	Go to 10.
No	Replace the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor.

10. CHECK IN-VEHICLE SENSOR UNIT.

Check in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

Is the check result OK?

Yes	Go to 11.
No	Replace the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

11. CHECK AMBIENT SENSOR UNIT.

Check the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

Is the check result OK?

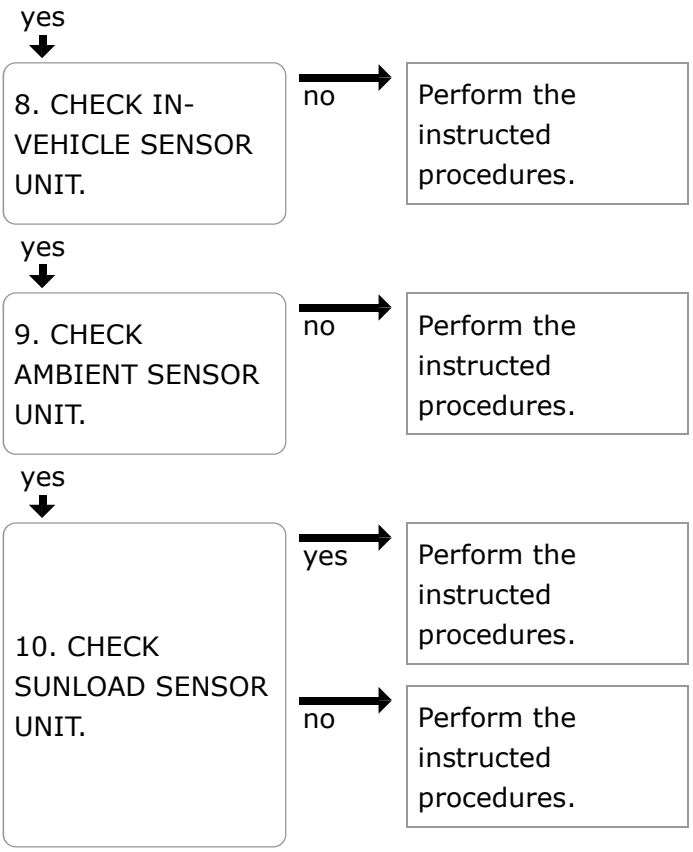
Yes	Go to 12.
No	Replace the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

12. CHECK SUNLOAD SENSOR UNIT.

Check the sunload sensor unit. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the sunload sensor. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).



6. COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE

Trouble symptom:
Compartment temperature is excessively lower than setting temperature.
Trouble causes:
- Large airflow capacity
- Refrigerant pressure failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK AIRFLOW CAPACITY.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK AMOUNT OF REFRIGERANT PRESSURE.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
5. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 6.
6. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 7.
7. CHECK EVAPORATOR SENSOR UNIT.
   - no → Perform the instructed procedures.

1. CHECK AIRFLOW CAPACITY.

Check the airflow capacity. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AIR GOES OUT OF CONTROL.

Is the check result OK?

Yes	Go to 2.
No	Perform repair according to inspection procedure.

2. CHECK AMOUNT OF REFRIGERANT PRESSURE.

Check the refrigerant pressure. Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set.

Is the check result OK?

Yes	Go to 3.
No	Perform repair according to refrigerant pressure inspection.

3. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "60"*1?
(*1: For the 72°F center specification. For the 25°C center specification, the value is 18)

Yes	Go to 4.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

4. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "85"*2?
(*2: For the 72°F center specification. For the 25°C center specification, the value is 32)

Yes	Go to 5.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

5. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 6.

6. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 7.

7. CHECK EVAPORATOR SENSOR UNIT.

Perform the inspection of evaporator sensor unit. Ref. to AIR CONDITIONER>Evaporator Sensor.

Is the check result OK?

Yes	Go to 8.
No	Replace the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator.

8. CHECK IN-VEHICLE SENSOR UNIT.

Check in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

Is the check result OK?

Yes	Go to 9.
No	Replace the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

9. CHECK AMBIENT SENSOR UNIT.

Check the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

Is the check result OK?

Yes	Go to 10.
No	Replace the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

10. CHECK SUNLOAD SENSOR UNIT.

Check the sunload sensor unit. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).

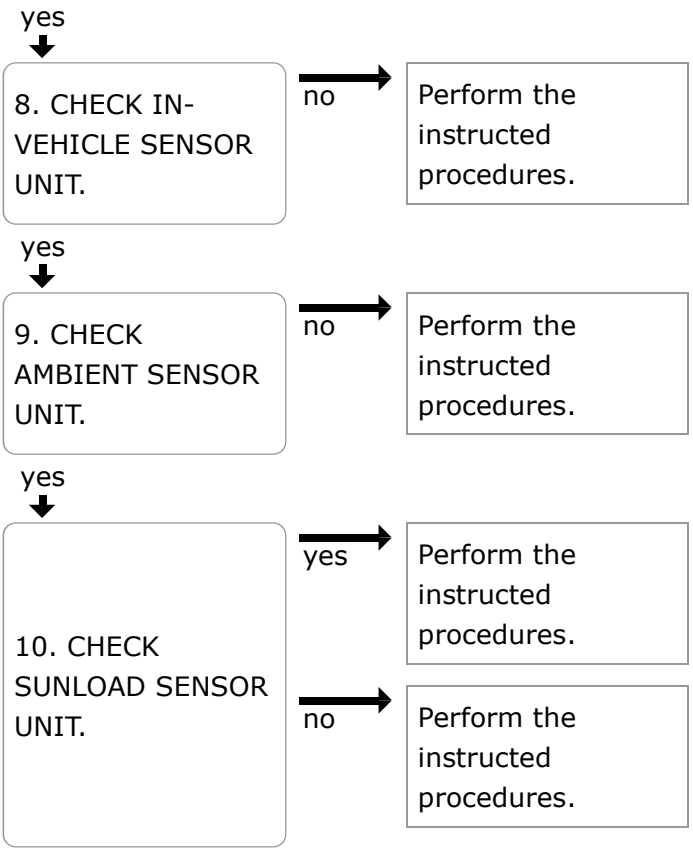
Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the sunload sensor. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).

7. COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE

Trouble symptom:

Compartment temperature is excessively higher than setting temperature.



Trouble causes:

- Large airflow capacity
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK AIRFLOW CAPACITY.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 5.
5. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 6.
6. CHECK INTAKE DOOR ACTUATOR.
   - no → Perform the instructed procedures.
   - yes ↓
7. CHECK EVAPORATOR SENSOR UNIT.
   - no → Perform the instructed procedures.

1. CHECK AIRFLOW CAPACITY.

Check the airflow capacity. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AIR GOES OUT OF CONTROL.

Is the check result OK?

Yes	Go to 2.
No	Perform repair according to inspection procedure.

2. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "60"*1?
(*1: For the 72°F center specification. For the 25°C center specification, the value is 18)

Yes	Go to 3.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

3. CHECK A/C CONTROL PANEL.

1. Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Heater Control Panel Setting Value (Driver's)]
- [Heater Control Panel Setting Value (Passenger's)]

Do [Heater Control Panel Setting Value (Driver's)] and [Heater Control Panel Setting Value (Passenger's)] indicate "85"*2?
(*2: For the 72°F center specification. For the 25°C center specification, the value is 32)

Yes	Go to 4.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

4. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 5.

5. CHECK DTC.

1. Turn the ignition switch to ON.
2. Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.)
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1440, B1442, B1446, B1436, B1437, B1441, B1448, B1449 or B144A.
No	Go to 6.

6. CHECK INTAKE DOOR ACTUATOR.

Visually check the intake door actuator operation.

Is the check result OK?

Yes	Go to 7.
No	Check the intake door actuator. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > UNABLE TO SWITCH SUCTION VENTS.

7. CHECK EVAPORATOR SENSOR UNIT.

Perform the inspection of evaporator sensor unit. Ref. to AIR CONDITIONER>Evaporator Sensor.

Is the check result OK?

Yes	Go to 8.
No	Replace the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor.

8. CHECK IN-VEHICLE SENSOR UNIT.

Check in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

Is the check result OK?

Yes	Go to 9.
No	Replace the in-vehicle sensor. Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).

9. CHECK AMBIENT SENSOR UNIT.

Check the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

Is the check result OK?

Yes	Go to 10.
No	Replace the ambient sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

10. CHECK SUNLOAD SENSOR UNIT.

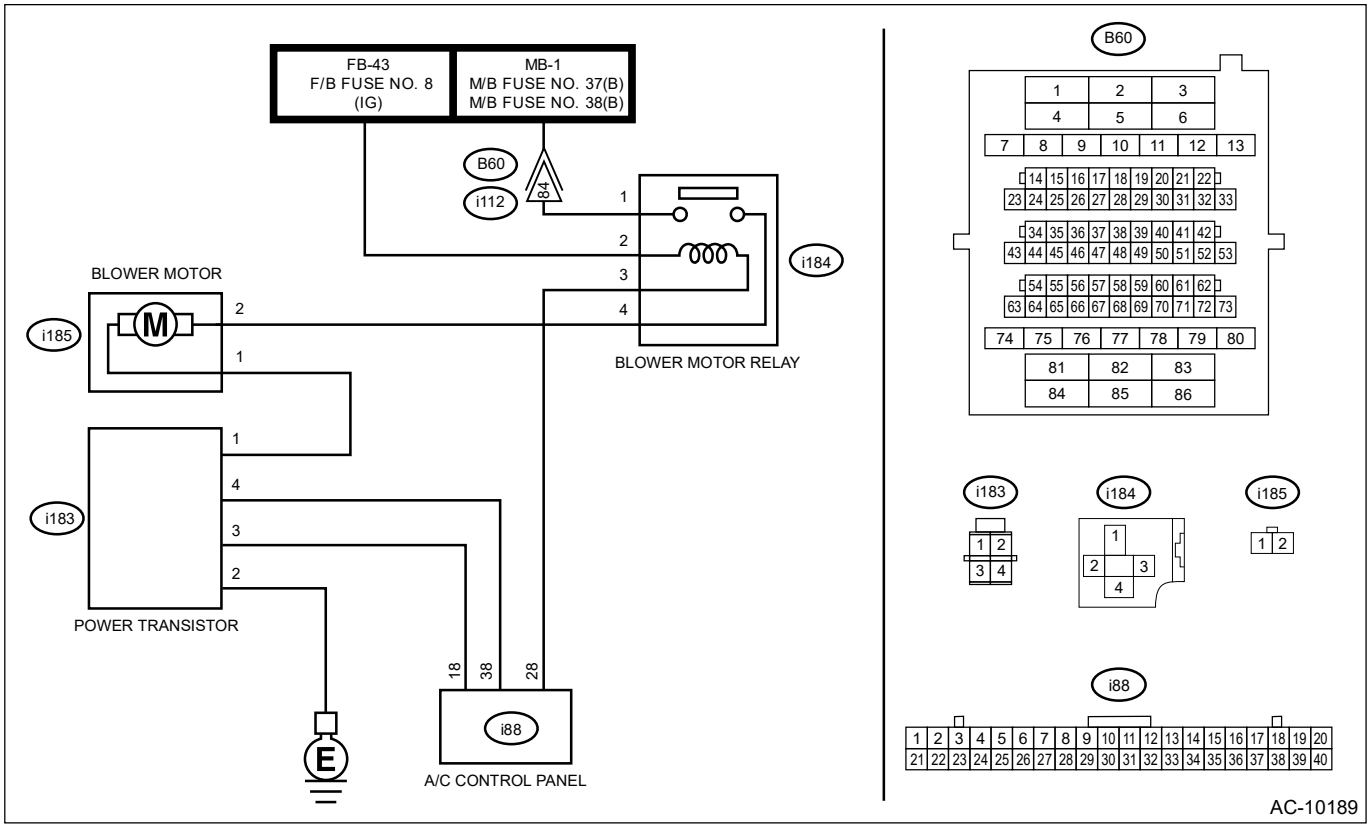
Check the sunload sensor unit. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the sunload sensor. Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).

8. AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT

Trouble symptom:



- Airflow capacity is insufficient.
- Air does not come out when operating the fan dial.

Trouble causes:

- Airflow capacity failure
- CAN communication failure
- A/C control panel failure
- Blower motor failure

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK A/C CONTROL PANEL.
   - no → Go to 5.
   - yes ↓
2. CHECK AIRFLOW CAPACITY.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK A/C FILTER.
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK EACH DUCT.
   - no → Perform the instructed procedures.

yes

5. CHECK A/C CONTROL PANEL. → no → Perform the instructed procedures.

yes

6. CHECK A/C CONTROL PANEL. → no → Perform the instructed procedures.

yes

7. CHECK CONNECTOR. → no → Perform the instructed procedures.

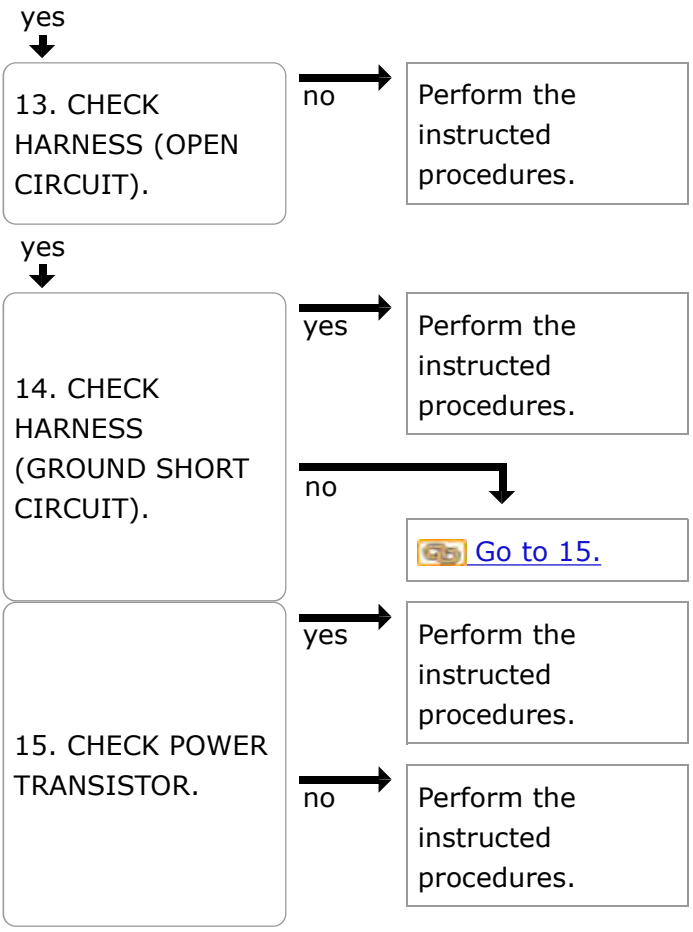
yes

8. CHECK FUSE. → no → Perform the instructed procedures.

yes

9. CHECK BLOWER MOTOR RELAY ON SIGNAL. → no → Perform the instructed procedures.

yes



10. CHECK BLOWER MOTOR RELAY ON SIGNAL. → no → Perform the instructed procedures.

yes

11. CHECK BLOWER MOTOR POWER SUPPLY CIRCUIT. → no → Perform the instructed procedures.

yes

12. CHECK BLOWER MOTOR UNIT. → no → Perform the instructed procedures.

yes
13. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
14. CHECK HARNESS (GROUND SHORT CIRCUIT).
yes
Perform the instructed procedures.
no
Go to 15.
15. CHECK POWER TRANSISTOR.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK A/C CONTROL PANEL.

1. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Air mix door actuator position (driver's side)]
   - [Air mix door actuator position (passenger's side)]
   - [Blower Fan Level]
2. Turn the temperature control dial at MAX COOL and increase and decrease the A/C control panel fan dial. (For vehicles with left/right independent air conditioner, perform setting on both sides.)

Do [Air mix door actuator position (driver's side)] and [Air mix door actuator position (passenger's side)] indicate "0%"? Also, does [Blower Fan Level] increase or decrease in accordance with the fan dial operation?

Yes	Go to 2.
No	Go to 5.

2. CHECK AIRFLOW CAPACITY.

Turn the temperature control dial to LO (both dials for the models equipped with left/right independent air conditioning function), A/C control panel fan dial to MAX and FRESH/RECIRC switch to RECIRC.

Is the airflow capacity insufficient for the same model?

Yes	Go to 3.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK A/C FILTER.

Check the A/C filter. Ref. to AIR CONDITIONER>A/C Filter.

Is the check result OK?

Yes	Go to 4.
No	Clean or replace the A/C filter. Ref. to AIR CONDITIONER>A/C Filter.

4. CHECK EACH DUCT.

Check each duct joint for disconnection or clogging.

Is the check result OK?

Yes	Go to 5.
No	Repair the faulty duct.

5. CHECK A/C CONTROL PANEL.

1. Turn the ignition switch to ON.
2. Turn the fan dial to the maximum position.
3. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Blower Fan Level]

Does [Blower Fan Level] indicate “7”?

Yes	Go to 6.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

6. CHECK A/C CONTROL PANEL.

1. Turn the fan dial to the minimum position.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Blower Fan Level]

Does [Blower Fan Level] indicate "1"?

Yes	Go to 7.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

7. CHECK CONNECTOR.

Check for poor contact of connector.

Is the check result OK?

Yes	Go to 8.
No	Repair the connector.

8. CHECK FUSE.

1. Remove the fuse No. 8 from fuse & relay box and the fuses No. 37 and No. 38 from the main fuse box.
2. Check the condition of fuse.

Is the check result OK?

Yes	Go to 9.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the pressure switch and fuse.

9. CHECK BLOWER MOTOR RELAY ON SIGNAL.

1. Stop the engine.
2. Turn the fan dial OFF.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the A/C control panel connector (i88) and chassis ground.
   Connector & terminal
   (i88) No. 28 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 10.
No	• Check for open or short circuit in the harness between fuse and ECM. • Check the blower relay connector and relay unit. Ref. to AIR CONDITIONER>Relay and Fuse.

10. CHECK BLOWER MOTOR RELAY ON SIGNAL.

1. Start the engine.
2. Turn the fan dial to ON.
3. Using a tester, measure the voltage between the A/C control panel connector (i88) and chassis ground.
   Connector & terminal
   (i88) No. 28 (+) — Chassis ground (−):

Is the voltage 0 V?

Yes	Go to 11.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

11. CHECK BLOWER MOTOR POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Turn the fan dial to ON.
3. Use a tester to measure the voltage between the blower motor connector (i185) and chassis ground.

Connector & terminal

(i185) No. 2 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 12.
No	• Check the blower motor power supply line harness for open circuit or connector disconnection. • Check the blower relay connector and relay unit. Ref. to AIR CONDITIONER>Relay and Fuse.

12. CHECK BLOWER MOTOR UNIT.

Check the blower motor. Ref. to AIR CONDITIONER>Blower Motor.

Is the check result of the blower motor OK?

Yes	Go to 13.
No	Replace the blower motor. Ref. to AIR CONDITIONER>Blower Motor.

13. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power transistor and A/C control panel connector.
2. Using a tester, measure the resistance between harness terminals.

Connector & terminal

(i183) No. 1 — (i185) No. 1:
(i183) No. 4 — (i88) No. 38:
(i183) No. 3 — (i88) No. 18:
(i183) No. 2 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 14.
No	Repair or replace the open circuit of harness.

14. CHECK HARNESS (GROUND SHORT CIRCUIT).

Use a tester to measure the harness resistance between the power transistor connector and chassis ground.

Connector & terminal

(i183) No. 4 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Repair or replace the short circuit of the harness.
No	Go to 15.

15. CHECK POWER TRANSISTOR.

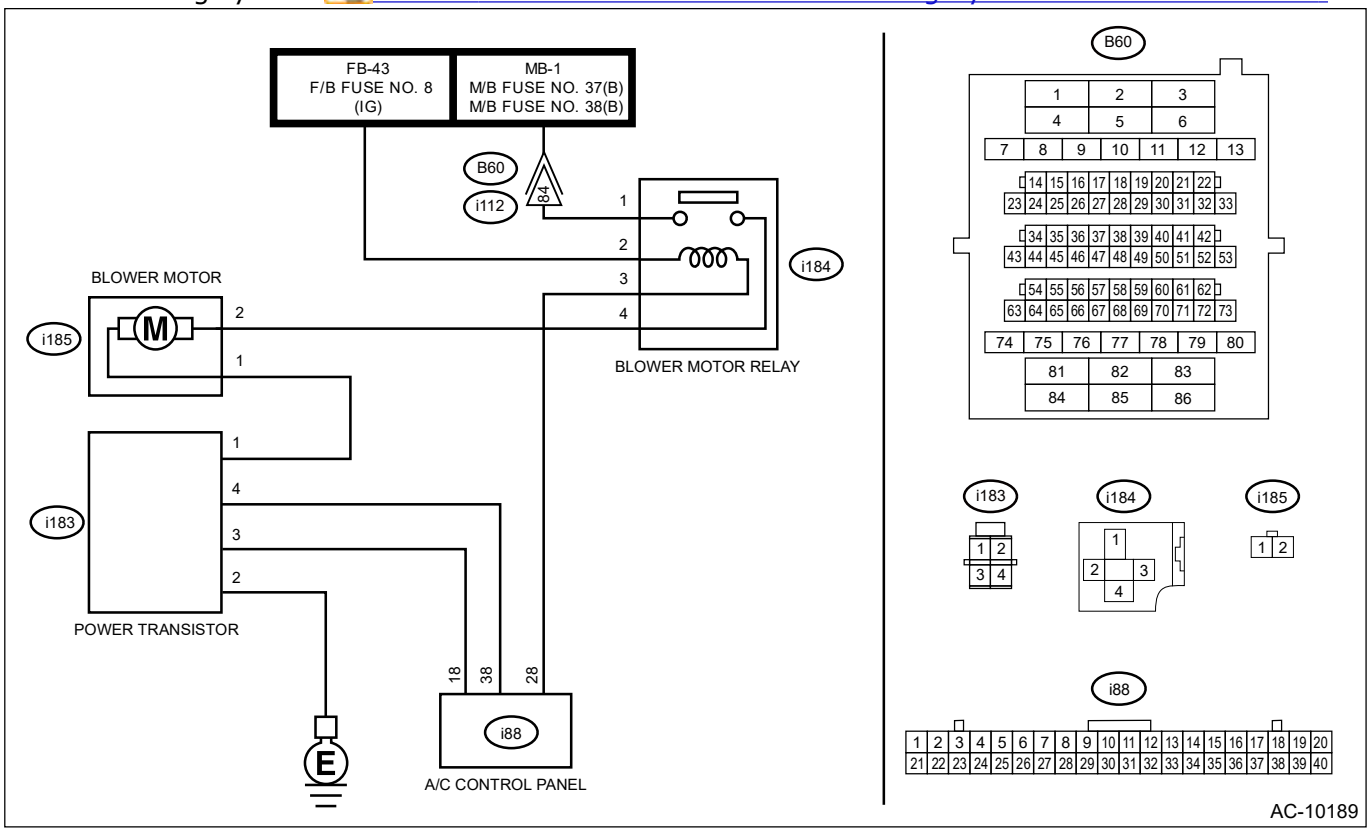
Replace the power transistor with a properly functioning part.

Does the blower motor rotate?

Yes	Replace the power transistor. Ref. to AIR CONDITIONER>Power Transistor.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

9. AIR GOES OUT OF CONTROL

Trouble symptom:



- The blower rotates even though the blower switch is not turned on.
- The blower motor continues to rotate at high speed. (Not adjustable.)

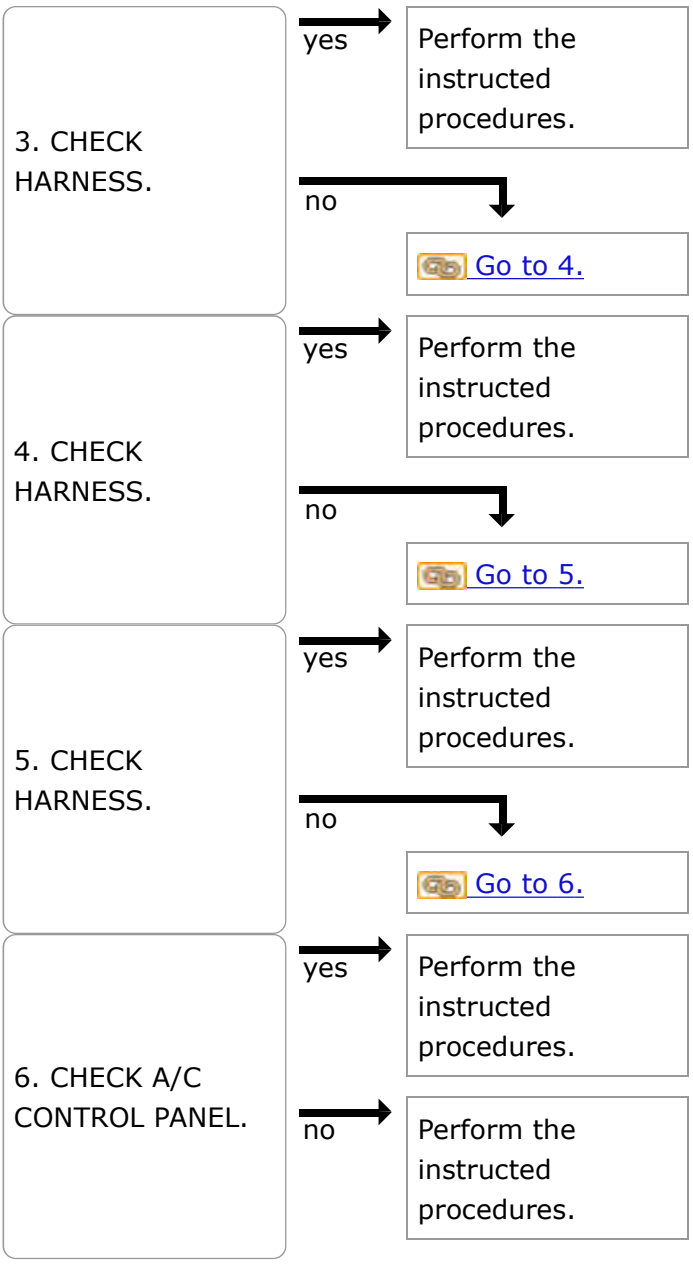
Trouble causes:

- Airflow capacity failure
- CAN communication failure
- A/C control panel failure
- Blower motor failure

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

Caution:



Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK A/C CONTROL PANEL.	no →	Perform the instructed procedures.

yes ↓

2. CHECK A/C CONTROL PANEL.	no →	Perform the instructed procedures.

yes ↓

3. CHECK HARNESS.
yes
Perform the instructed procedures.
no
Go to 4.
4. CHECK HARNESS.
yes
Perform the instructed procedures.
no
Go to 5.
5. CHECK HARNESS.
yes
Perform the instructed procedures.
no
Go to 6.
6. CHECK A/C CONTROL PANEL.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK A/C CONTROL PANEL.

1. Turn the ignition switch to ON.
2. Turn the fan dial to the maximum position.
3. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Blower Fan Level]

Does [Blower Fan Level] indicate “7”?

Yes	Go to 2.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

2. CHECK A/C CONTROL PANEL.

1. Turn the fan dial to the minimum position.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Blower Fan Level]

Does [Blower Fan Level] indicate “1”?

Yes	Go to 3.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

3. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the power transistor connector.
3. Use a tester to measure the resistance between the power transistor connector and chassis ground.

Connector & terminal

(i183) No. 1 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Repair or replace the short circuit of the harness between blower motor and power transistor.
No	Go to 4.

4. CHECK HARNESS.

1. Remove the A/C control panel.
2. Turn the ignition switch to ON.
3. Use a tester to measure the resistance between the power transistor connector and chassis ground.

Connector & terminal

(i183) No. 4 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Repair or replace the short circuit of the harness between A/C control panel and power transistor.
No	Go to 5.

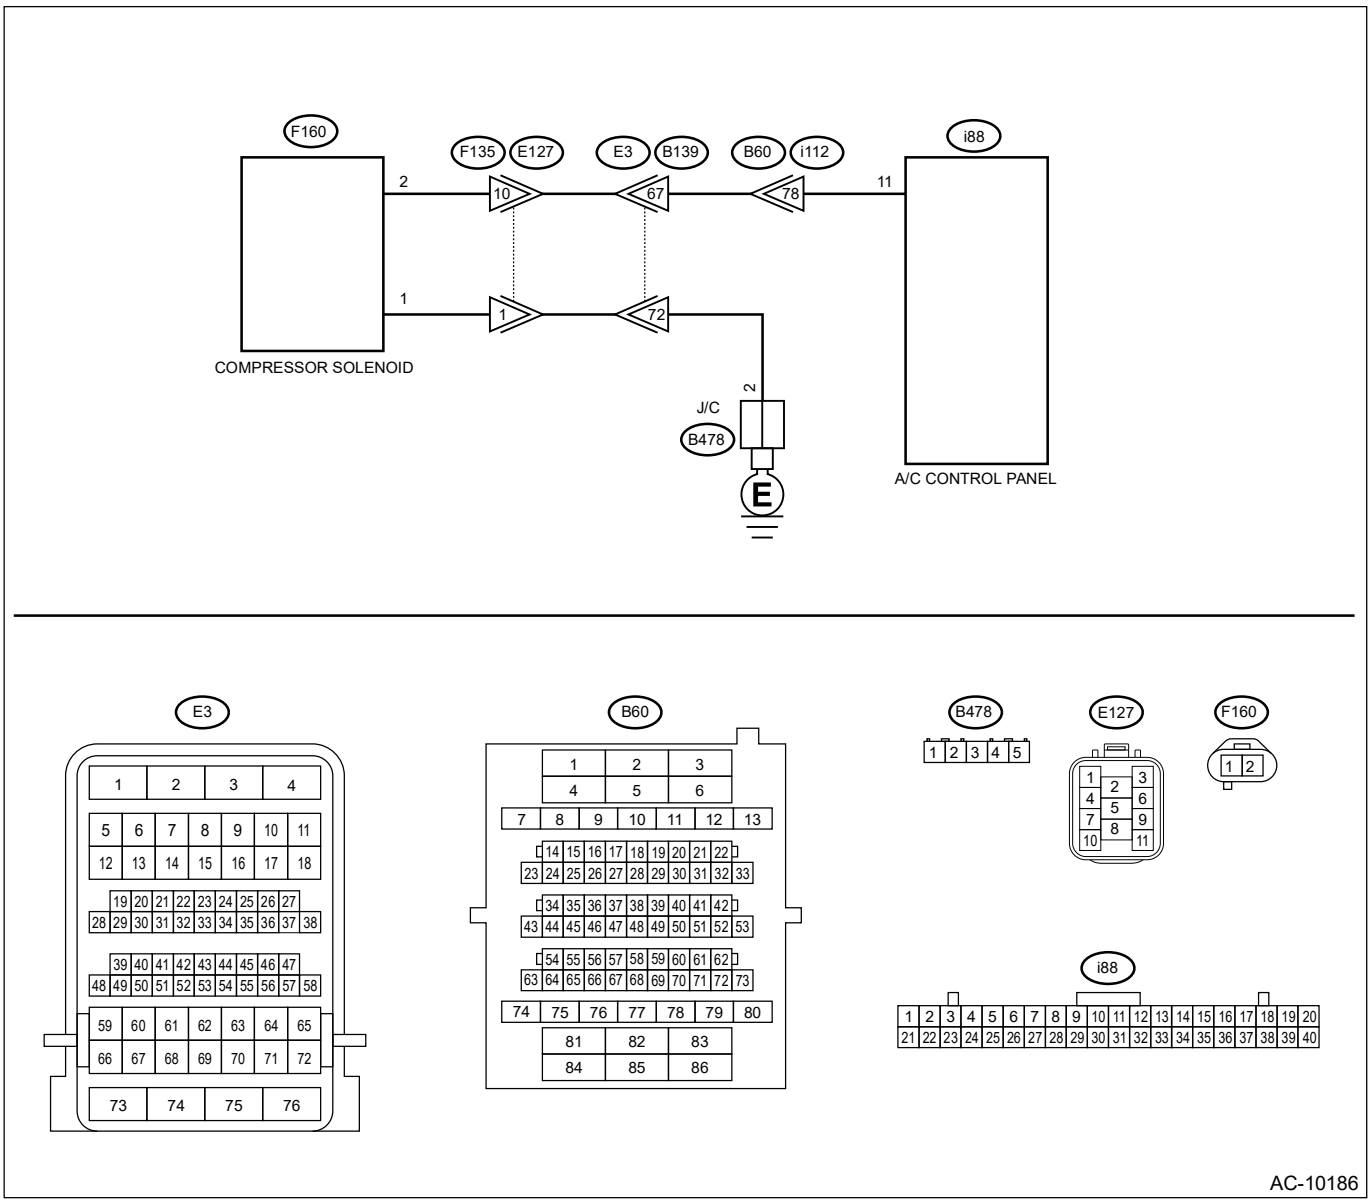
5. CHECK HARNESS.

1. Connect the disconnected connectors.
2. Turn the ignition switch to ON.
3. Use a tester to measure the voltage between the power transistor connector and chassis ground.
   Connector & terminal
   (i183) No. 4 (+) — Chassis ground (−):

Is the voltage approx. 9.6 V when fan dial in 1st, and approx. 2.7 V when fan dial in 6th?

Yes	Replace the power transistor. Ref. to AIR CONDITIONER>Power Transistor.
No	Go to 6.

6. CHECK A/C CONTROL PANEL.

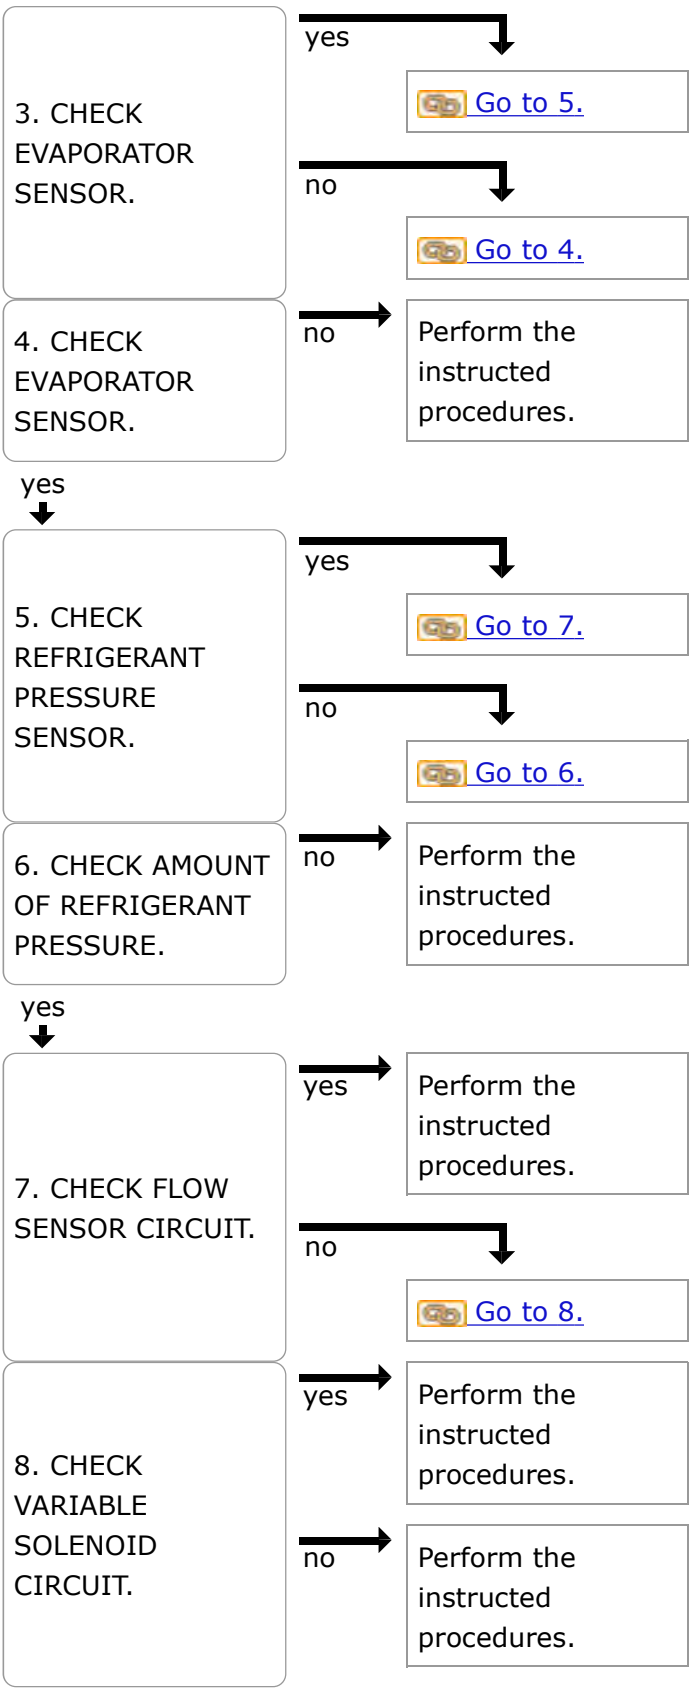


1. Turn the fan dial OFF.
2. Disconnect the power transistor connector.
3. Use a tester to measure the resistance between the power transistor connector and chassis ground.
   Connector & terminal
   (i183) No. 4 — Chassis ground:

When the fan dial is OFF and other than OFF, does the resistance change?

Yes	Replace the power transistor. Ref. to AIR CONDITIONER>Power Transistor.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

10. COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE))



Trouble symptom:
Compressor does not operate even when the A/C switch is turned on and the fan switch is set to LO — HI.
Trouble causes:
Compressor failure
Wiring diagram:
Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK VARIABLE FLOW CHANGE SOLENOID DUTY VALUE.
   - yes → Go to 7.
   - no → Go to 3.

3. CHECK EVAPORATOR SENSOR.
yes
Go to 5.
no
Go to 4.
4. CHECK EVAPORATOR SENSOR.
no
Perform the instructed procedures.
yes
5. CHECK REFRIGERANT PRESSURE SENSOR.
yes
Go to 7.
no
Go to 6.
6. CHECK AMOUNT OF REFRIGERANT PRESSURE.
no
Perform the instructed procedures.
yes
7. CHECK FLOW SENSOR CIRCUIT.
yes
Perform the instructed procedures.
no
Go to 8.
8. CHECK VARIABLE SOLENOID CIRCUIT.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK A/C CONTROL PANEL.

1. Leave the vehicle under the condition at ambient temperature of 15°C (59°F) or more.
2. Turn the ignition switch to ON.
3. Set the fan switch to maximum position.
4. Press the A/C switch.

Is A/C indicator displayed on the A/C control panel? (Current malfunction)

Yes	Go to 2.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

2. CHECK VARIABLE FLOW CHANGE SOLENOID DUTY VALUE.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Variable Flow Change Solenoid Duty]

Does the display indicate the value greater than zero?

Yes	Go to 7.
No	Go to 3.

3. CHECK EVAPORATOR SENSOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Evaporator Temperature]

Does the display indicate −0.5 degree or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK EVAPORATOR SENSOR.

Check the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor.

Is the check result OK?

Yes	Go to 5.
No	Replace the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor.

5. CHECK REFRIGERANT PRESSURE SENSOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Refrigerant Pressure]

Does the display indicate 0.21 Mpa — 3.03 Mpa?

Yes	Go to 7.
No	Go to 6.

6. CHECK AMOUNT OF REFRIGERANT PRESSURE.

Check the refrigerant pressure. Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set.

Is the check result OK?

Yes	Go to 7.
No	Perform repair according to refrigerant pressure inspection.

7. CHECK FLOW SENSOR CIRCUIT.

1. Turn the ignition switch to ON.
2. Wait at least 1 second.
3. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

Is DTC B14A5 or B14A6 displayed? (Current malfunction)?

Yes	Perform the diagnosis for the displayed DTC B14A5 or B14A6. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14A5 REFRIGERANT FLOW SENSOR CIRCUIT OPEN. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14A6 REFRIGERANT FLOW SENSOR CIRCUIT SHORT-CIRCUIT .
No	Go to 8.

8. CHECK VARIABLE SOLENOID CIRCUIT.

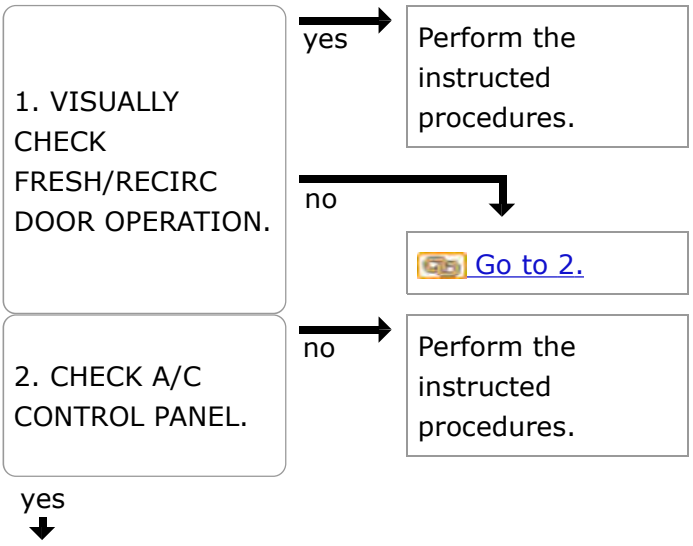
1. Start the engine.
2. Turn the A/C switch to ON.
3. Set the fan switch to maximum position.
4. Set the temperature control switch to LO, and wait for 30 seconds or more.
5. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

Is DTC B14A7 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B14A7.
No	Replace the compressor. Ref. to AIR CONDITIONER>Compressor.

11. UNABLE TO SWITCH SUCTION VENTS

Trouble symptom:



Even when the FRESH/RECIRC switch is pressed, the inlet opening does not switch to RECIRC → FRESH or FRESH → RECIRC.

Trouble causes:

Intake door actuator failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

3. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 4.
4. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. VISUALLY CHECK FRESH/RECIRC DOOR OPERATION.

1. Remove the glove box. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
2. Operate the FRESH/RECIRC switch, and visually check the intake door operation.

Does the intake door operate normally? Is the position between the intake door and intake door case sealed completely?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK A/C CONTROL PANEL.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Fresh/Recircle Air Door Actuator Position Target]

3. Operate the FRESH/RECIRC switch.

Does [Fresh/Recircle Air Door Actuator Position Target] indicate 0 ←→ 100?

Yes	Go to 3.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

3. CHECK DTC.

1. Turn the FRESH/RECIRC switch to RECIRC, and leave for 16 seconds or more.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14E9, B14EA or B14EB displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B14E9, B14EA, or B14EB. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14EB INTAKE DOOR ACTUATOR STUCK.
No	Go to 4.

4. CHECK DTC.

1. Turn the FRESH/RECIRC switch to FRESH, and leave for 16 seconds or more.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B14E9, B14EA or B14EB displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B14E9, B14EA, or B14EB. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14EB INTAKE DOOR ACTUATOR STUCK.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

12. UNABLE TO SWITCH VENTS

Trouble symptom:

- Unable to switch blow vents.
- Outlet opening does not switch in the sequence of FACE → B/L → FOOT → F/D after operating the mode switch or mode dial.

Trouble causes:

Mode actuator failure

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK A/C CONTROL PANEL.
   - no → Perform the instructed procedures.
   - yes ↓

2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK A/C CONTROL PANEL.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Air Conditioner]. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Data Monitor.

- [Mode Door Actuator Position Target]

3. Operate the mode change switch.

Does the value of [Mode Door Actuator Position Target] change along with the operation?

Yes	Go to 2.
No	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.

2. CHECK DTC.

1. Set the mode change switch to DEF, and wait for 16 seconds or more.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1438 or B1439 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1438 or B1439. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1438 MODE DOOR ACTUATOR CIRCUIT OPEN. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1439 MODE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT.
No	Go to 3.

3. CHECK DTC.

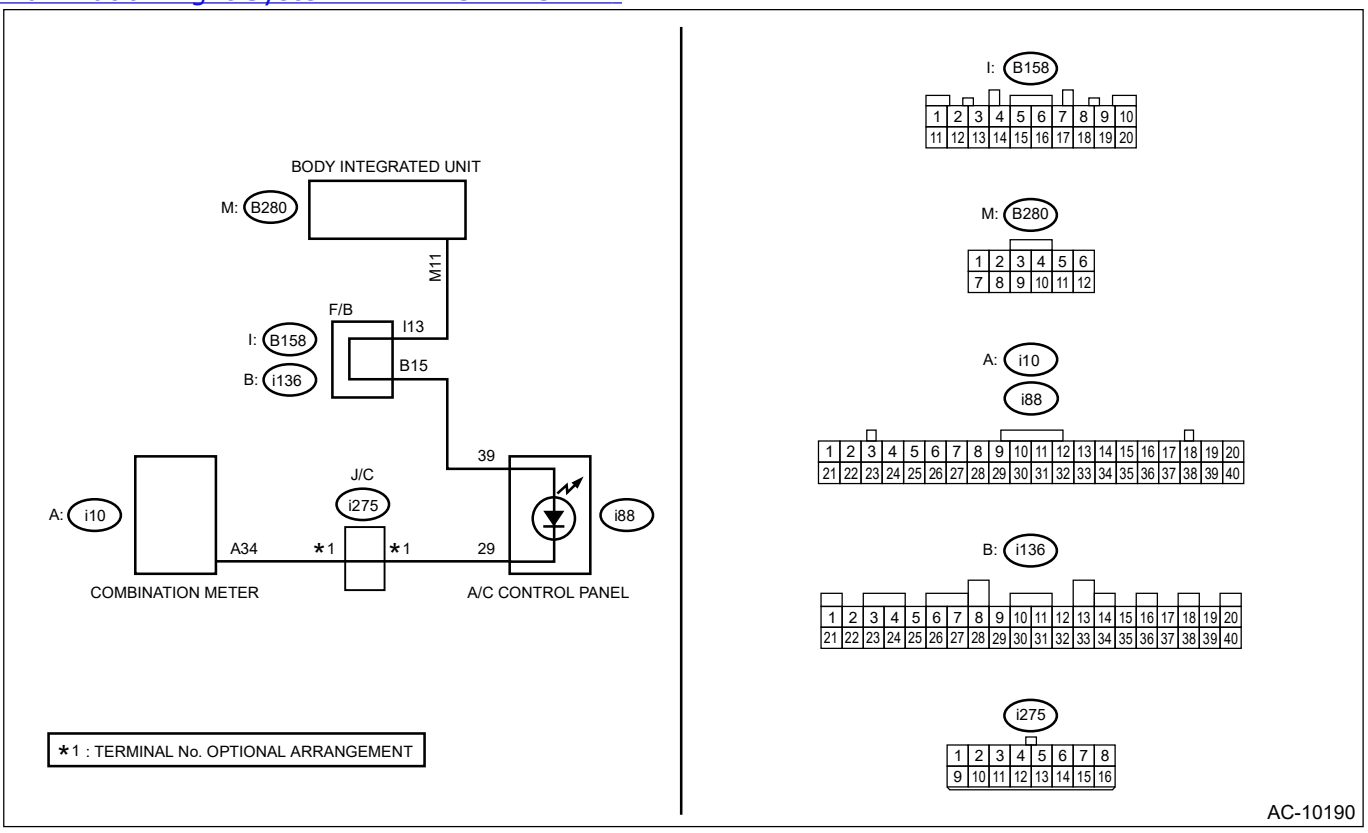
1. Set the mode change switch to VENT, and wait for 16 seconds or more.
2. Read the DTC of [Air Conditioner] using the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1438 or B1439 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1438 or B1439. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1438 MODE DOOR ACTUATOR CIRCUIT OPEN. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1439 MODE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

13. ILLUMINATION DOES NOT COME ON OR CANNOT DIM

Trouble symptom:



Even when the lighting switch is operated, the illumination does not come on. Even when the illumination control is operated, the illumination does not dim.

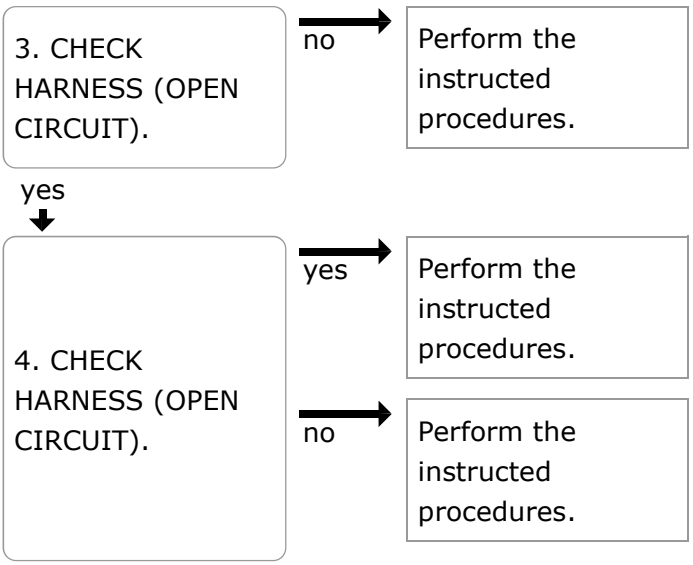
Trouble symptom:

Open circuit in illumination circuit

Wiring diagram:

Clearance Light and Illumination Light System Ref. to WIRING SYSTEM>Clearance Light and Illumination Light System>WIRING DIAGRAM.

Caution:



Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIR CONDITIONER(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK ILLUMINATION.	no →	Perform the instructed procedures.

yes ↓

2. CHECK CONNECTOR.	no →	Perform the instructed procedures.

yes ↓

1. CHECK ILLUMINATION.

Make sure that all illuminations except A/C come on.

Do other illuminations come on?

Yes	Go to 2.
No	Check the illumination circuit. Ref. to LIGHTING SYSTEM>Clearance Light and Illumination Light System>INSPECTION.

2. CHECK CONNECTOR.

Check for poor contact of connector.

Is the check result OK?

Yes	Go to 3.
No	Repair the connector.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the lighting switch to ON.
2. Using a tester, measure the voltage between the A/C control panel connector and chassis ground.
   Connector & terminal
   (i88) No. 39 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the lighting switch to OFF.
2. Measure the resistance between A/C control panel connector and combination meter connector.
   Connector & terminal
   (i88) No. 29 — (i10) No. 34:

Is the resistance less than 10 Ω?

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Repair or replace the open circuit of harness.

11. Event Record Data
12. Batch save of Event record data
13. Diagnostic Trouble Code (DTC)
14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AIRBAG(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to AIRBAG(DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. CHECK WARNING LIGHT.

Check whether the airbag warning light in the combination meter is lit.

Does the airbag warning light illuminate?

Yes	Go to 3.
No	Check the illuminating pattern of the airbag warning light. If no fault is found, it is normal at present. Ref. to AIRBAG(DIAGNOSTICS)>Warning Light Illumination Pattern.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Airbag].

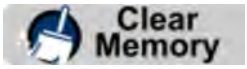
Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Currently, it is normal.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

AIRBAG(DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG SYSTEM

Before performing diagnosis, refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

AIRBAG(DIAGNOSTICS) > General Description

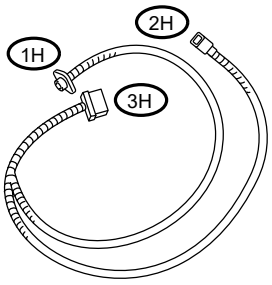
INSPECTION

Before performing diagnostics, check the following item which might affect airbag system problems.

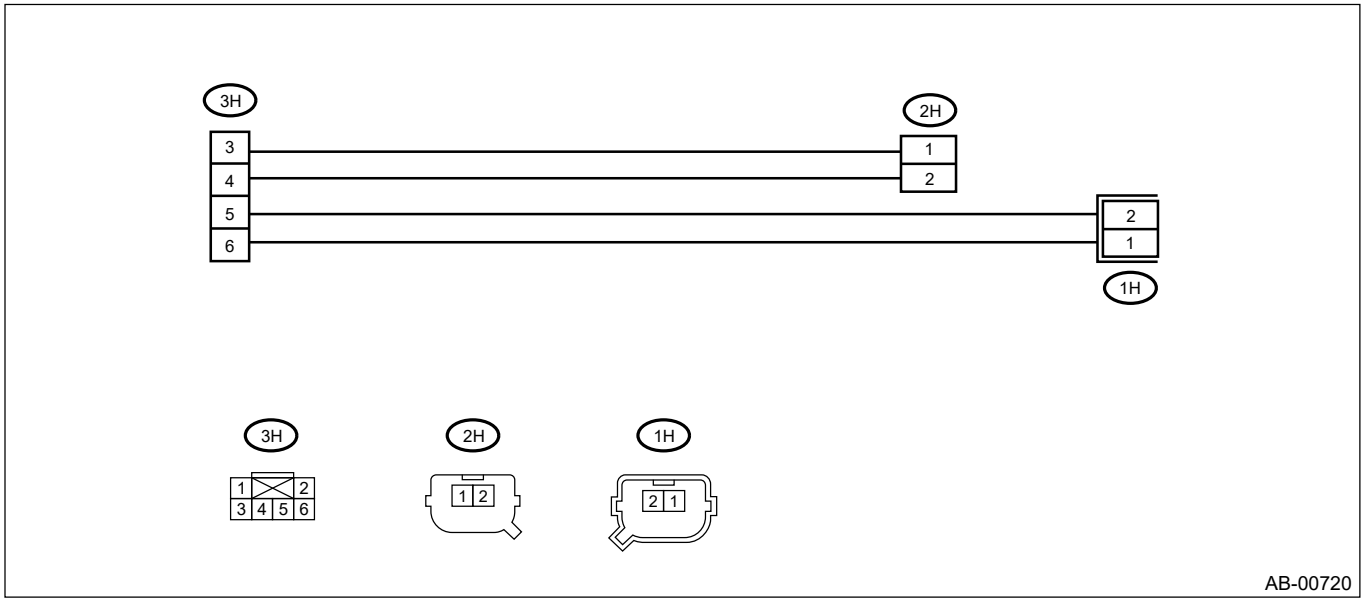
1. BASIC INSPECTION

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the main and other fuses, harnesses and connectors. Also check grounding.

PREPARATION TOOL



Caution:
To measure the voltage and resistance of airbag system component, be sure to use the specified test harness.



1. SPECIAL TOOL

- Subaru Select Monitor

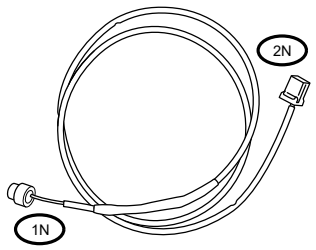


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
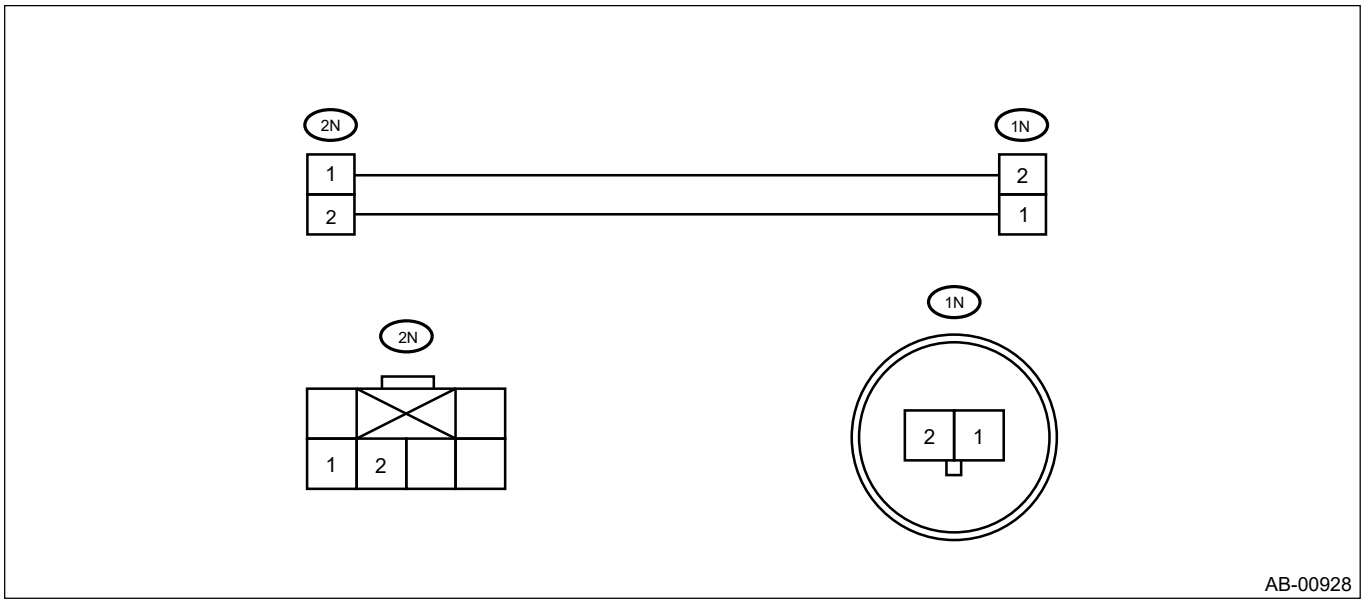
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



- TEST HARNESS H

• TEST HARNESS V

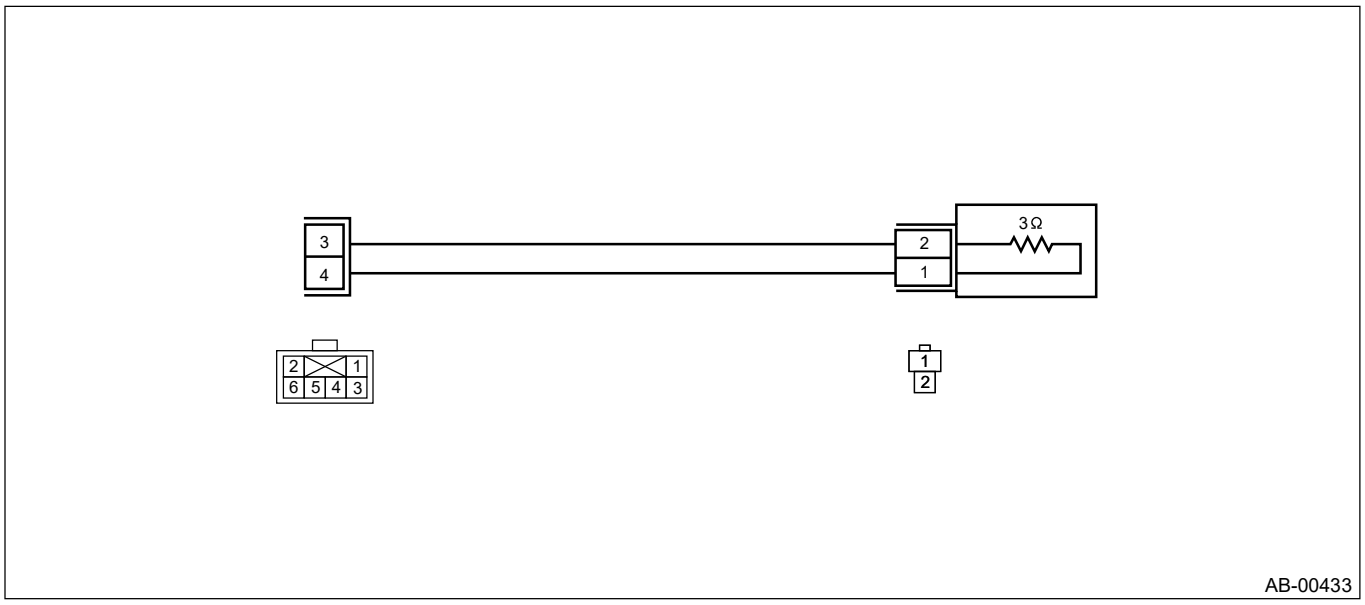

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
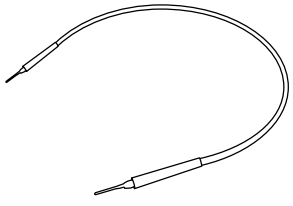
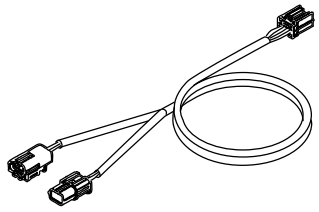
 ST98299AG010	98299AG010	TEST HARNESS V	Used when measuring voltage and resistance of side airbag sensor and curtain airbag sensor.

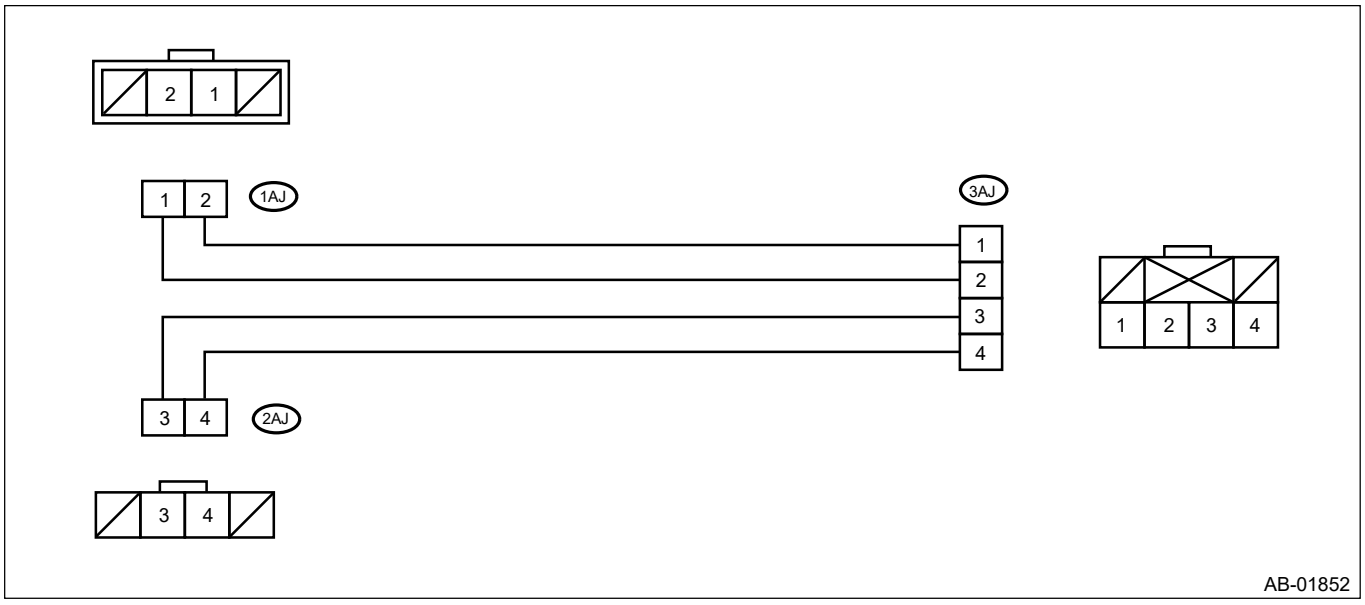


• AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

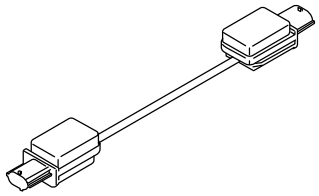
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module. Two STs are required for diagnosis of two-stage inflator type airbag module.





- TEST HARNESS AT

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299CA020	98299CA020	TEST HARNESS AT	Used when measuring power supply and resistance of side airbag harness. Two sets may be required.



- TEST HARNESS AJ

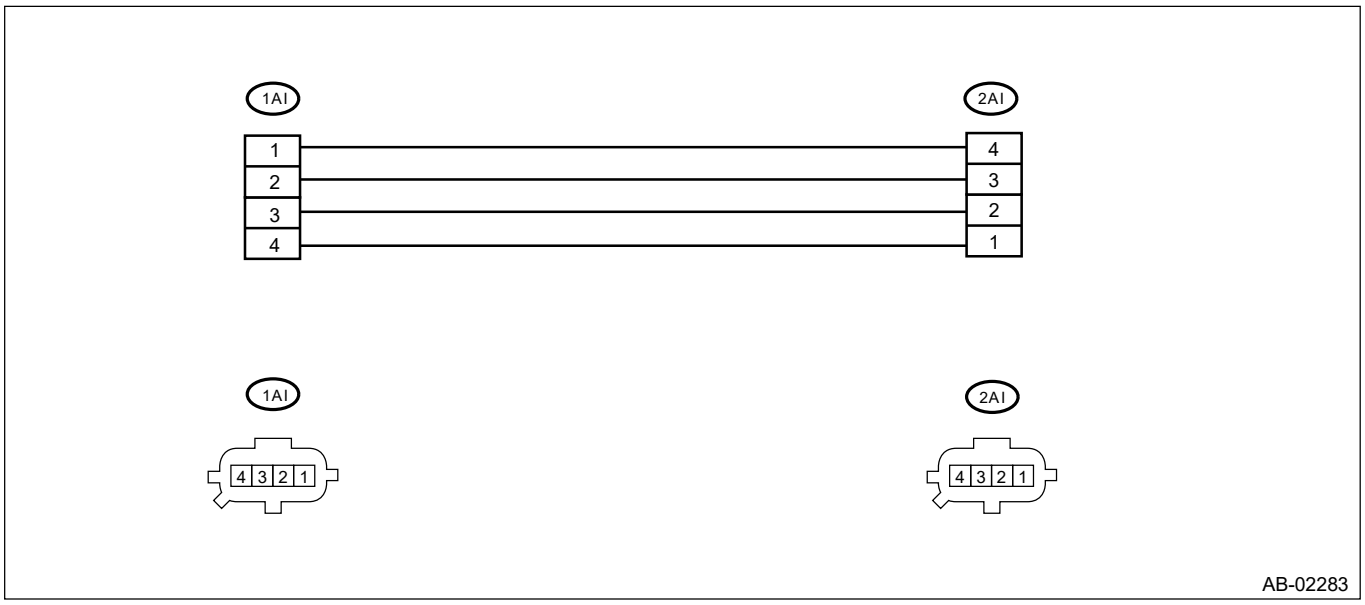


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
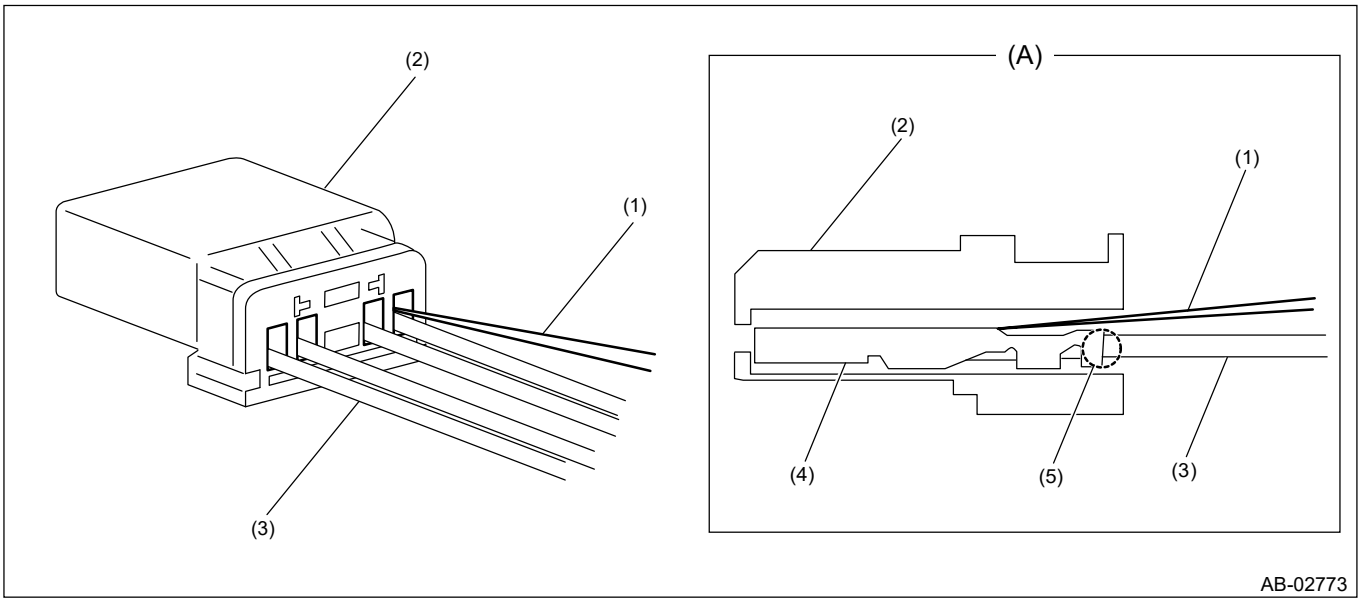
 ST98299FG000	98299FG000	TEST HARNESS AJ	Used when measuring power supply and resistance of side airbag harness.

- TEST HARNESS AI

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG090	98299AG090	TEST HARNESS AI	• Used for diagnoses of side airbag sensor and curtain airbag sensor. • Used together with test harness V.



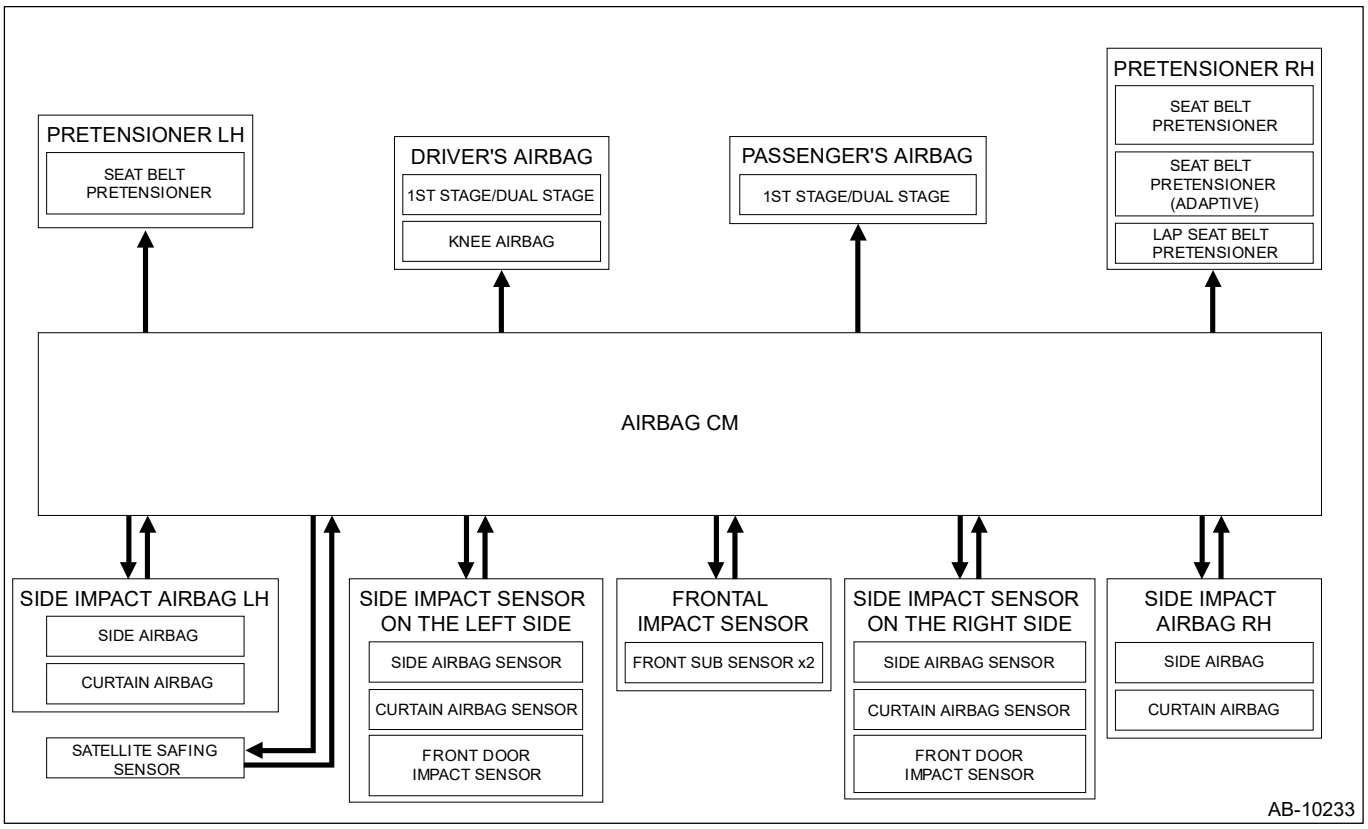
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Probe	Used when measuring voltage and resistance of passenger’s airbag module.
DST-i	Used together with Subaru Select Monitor 4.

3. HOW TO USE PROBE

Insert the probe into the harness hole, and contact it with the terminal.

(A) Cross section



(1) Probe
(2) Connector (housing)
(3) Harness
(4) Terminal
(5) Connection

Caution:

- **Do not insert the probe forcibly.**
- **Be careful not to contact it to the connection (5) between the terminal and harness. (Harness will come off easily from connector if doing so.)**

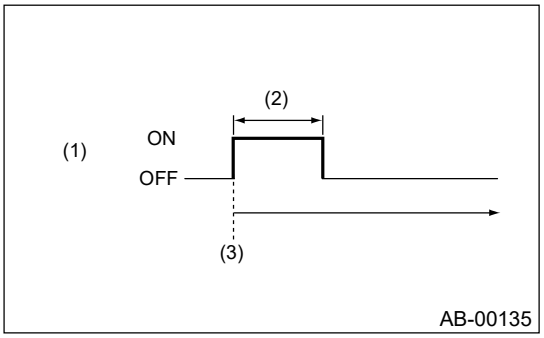
AIRBAG(DIAGNOSTICS) > Inspection Mode



PROCEDURE

Turn the ignition switch to ON, and wait for 6 seconds or more.

AIRBAG(DIAGNOSTICS) > Warning Light Illumination Pattern

INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

(1) Airbag warning light
(2) Approx. 6 seconds
(3) Ignition switch ON

AIRBAG(DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT DOES NOT ILLUMINATE

Detecting condition:

- Airbag warning light is faulty.
- Airbag control module to combination meter circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connector connection is improper.
- Connections of (AB6, AB17, AB18) to airbag control module are improper.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK FOR POOR CONTACT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Check the connection status of airbag CM connector.

Is there poor contact of connector?

Yes	Reconnect the connector. Or repair the connector.
No	Go to 3.

3. CHECK COMBINATION METER.

Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.

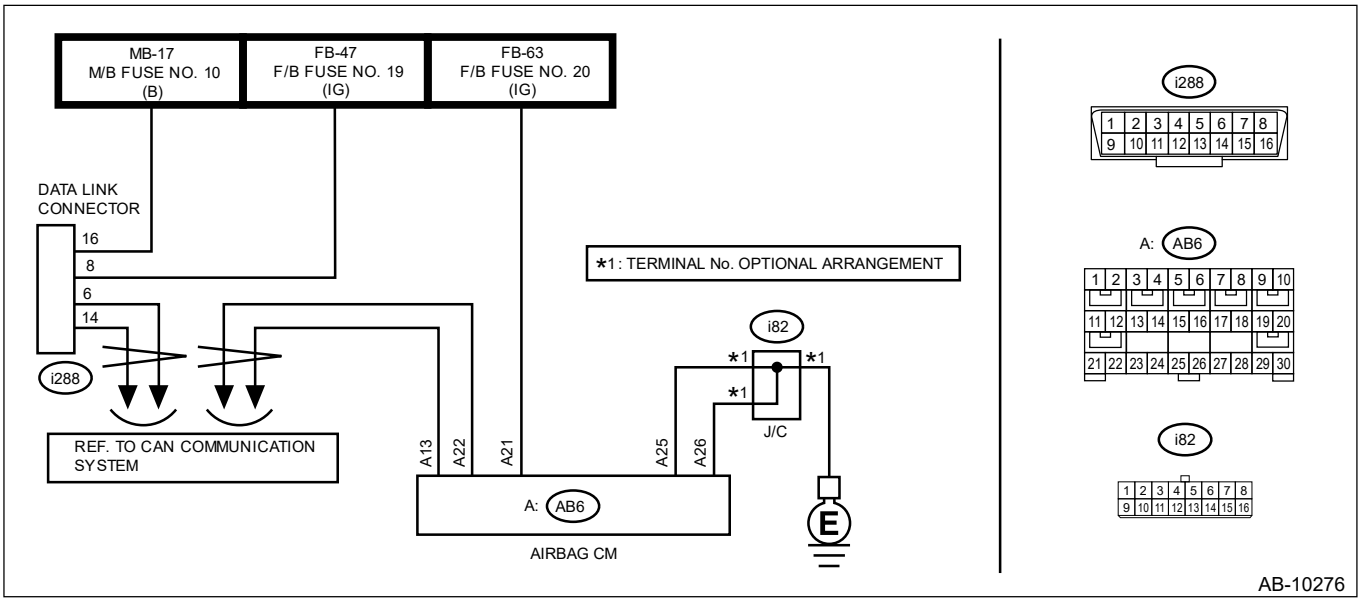
Is the check result OK?

Yes	Replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Repair it according to COMBINATION METER (DIAGNOSTICS). Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.

AIRBAG(DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT REMAINS ON

Note:



For the diagnostic procedures, refer to "WARNING LIGHT DOES NOT COME ON". Ref. to AIRBAG(DIAGNOSTICS)>Warning Light Illumination Pattern>WARNING LIGHT DOES NOT ILLUMINATE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Trouble symptom:
Cannot communicate with [Airbag].
DTC detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

WIRING DIAGRAM:
- Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK BODY INTEGRATED UNIT AND SUBARU SELECT MONITOR COMMUNICATION.

Connect the Subaru Select Monitor, and check for the communication with [Body Control].

Is the check result OK?

Yes	Go to 5.
No	Go to 2.

2. CHECK SUBARU SELECT MONITOR.

Connect the Subaru Select Monitor to another vehicle, and check for the communication.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the Subaru Select Monitor.

3. CHECK DATA LINK CONNECTOR.

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 16 (+) — Chassis ground (−):
   (i288) No. 8 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Inspect the body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 4.

4. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Remove a fuse in the data link connector and visually check the fuse.

Is the check result OK?

Yes	Repair the harness between the battery and the data link connector.
No	Replace the fuse. If the fuse is blown out again, check the power supply circuit.

5. CHECK AIRBAG CONTROL MODULE CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.

Is the check result OK?

Yes	Go to 6.
No	Connect the connector of the airbag control module.

6. CHECK FUSE.

Remove fuse No. 20 from the fuse & relay box, and perform visual inspection.

Is the check result OK?

Yes	Go to 7.
No	Replace the fuse. If the fuse is blown out again, check the power supply circuit.

7. CHECK AIRBAG CM POWER SUPPLY CIRCUIT.

1. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
2. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
3. Turn the ignition switch to ON.
4. Measure the voltage between connector (2AG) in the test harness AG and chassis ground.
   Connector & terminal
   (2AG) No. 4 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 8.
No	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.

8. CHECK BETWEEN AIRBAG CONTROL MODULE AND CHASSIS GROUND (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Measure the resistance between connector (2AG) in the test harness AG and chassis ground.
   Connector & terminal
   (2AG) No. 4 — Chassis ground:
   (2AG) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 9.
No	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.

9. CHECK POOR CONTACT OF CONNECTOR.

Is there poor contact of control module power supply, ground line and data link connector?

Yes	Repair the connector. (Replace the harness without repairing the airbag system connector.)
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to AIRBAG(DIAGNOSTICS)>Data Monitor>LIST.**

AIRBAG(DIAGNOSTICS) > Data Monitor

LIST

Item	Contents	Standard/Unit	Note
Trip Count	Record • display the number of turning the ignition switch to ON.	time	—
Count	—	—	—
Time Count	Record • display the time elapsed after turning the ignition switch to ON.	ms	—
Belt Buckle Switch RH	Display the status of passenger's seat buckle switch.	When passenger's seat belt is worn: OFF When passenger's seat belt is not worn: Not Buckled	—
Passenger Occupant Status	Display the status of passenger seat's occupant.	When occupant is adult: Adult When occupant is child: Child When unoccupied or child restraint seat is installed: Empty or CRS	—
Passenger Airbag Status	Display the status of passenger seat's airbag.	Ignition possible: ON Ignition impossible: OFF	—

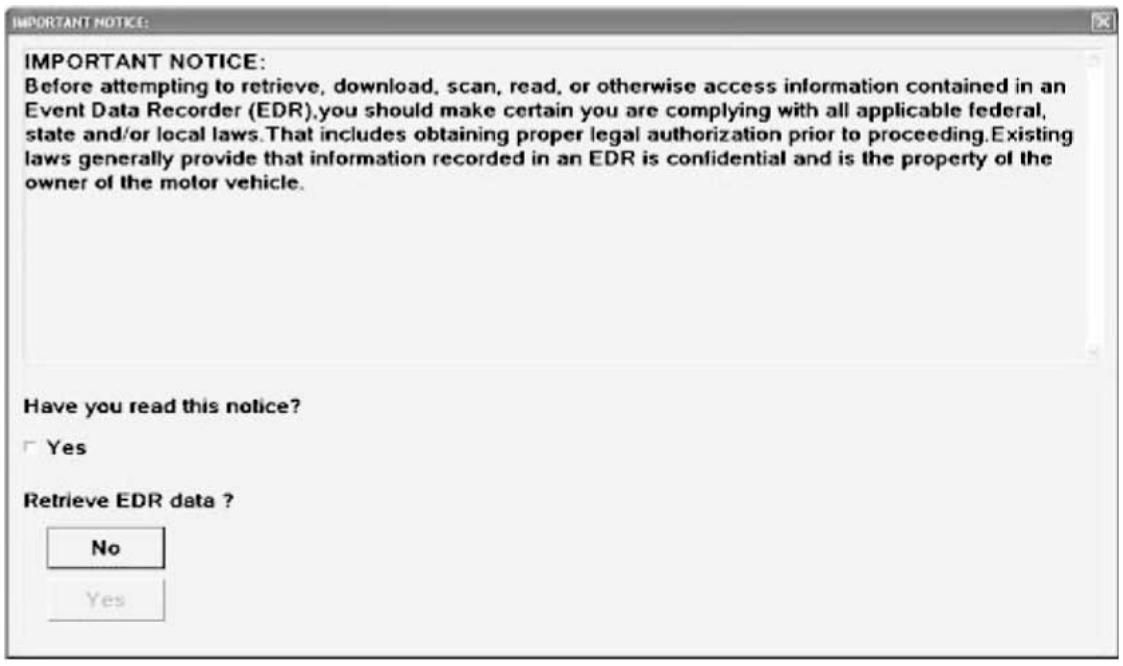
AIRBAG(DIAGNOSTICS) > Freeze Frame Data

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Freeze Frame Data.**
- **For details on freeze frame data, refer to the list. Ref. to AIRBAG(DIAGNOSTICS)>Freeze Frame Data>LIST.**

AIRBAG(DIAGNOSTICS) > Freeze Frame Data



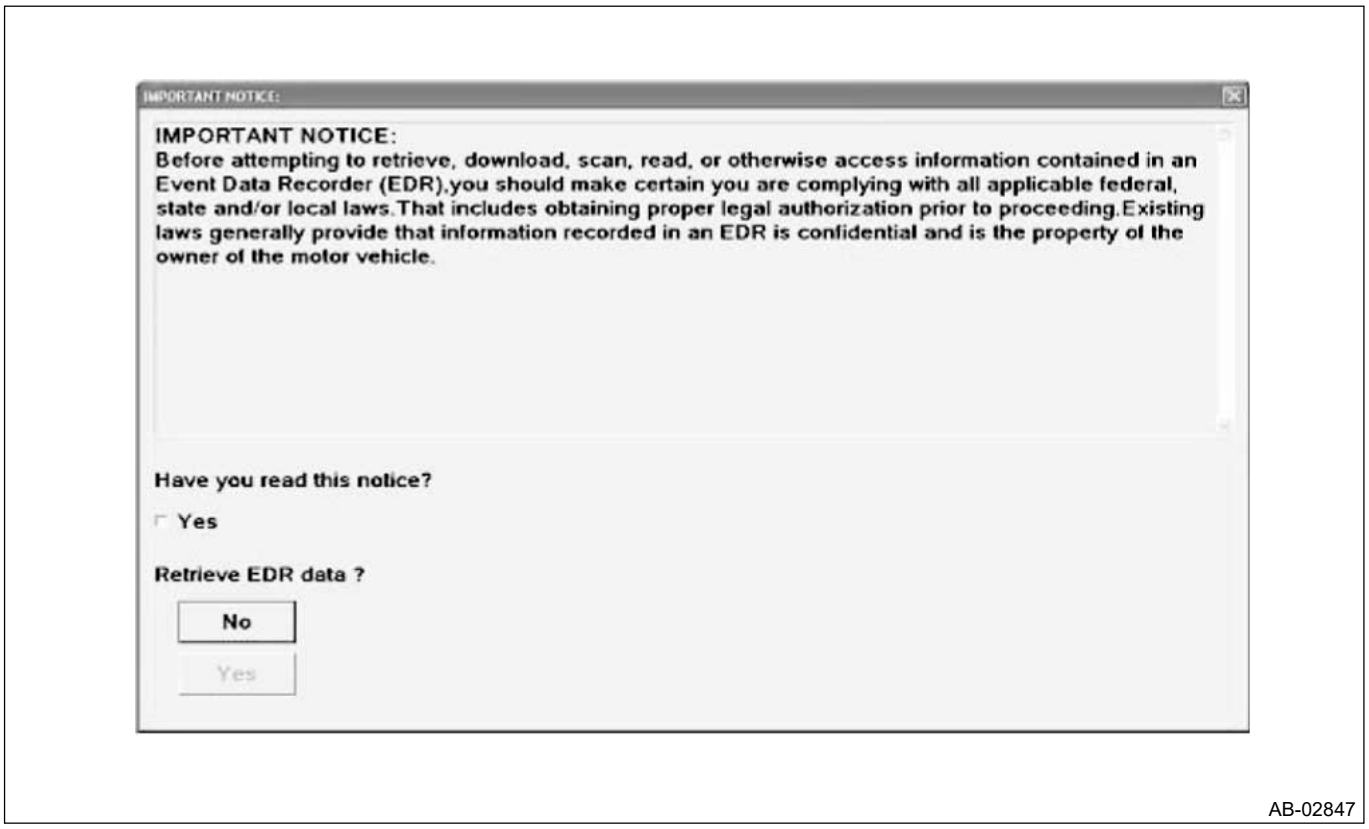
LIST

Item	Contents	Standard/Unit	Note
Trip Count	Record • display the number of turning the ignition switch to ON.	time	—
Count	—	—	—
Time Count	Record • display the time elapsed after turning the ignition switch to ON.	ms	—

AIRBAG(DIAGNOSTICS) > Event Record Data

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Airbag], and then select [Enter].
5. On [Airbag] display, select [Work Support].
6. On [[Work Support item]] display, select [Event Record Data]. After it is selected, [IMPORTANT NOTICE] screen is displayed.
7. After checking the content of [IMPORTANT NOTICE], click the checkbox for “Yes”.
8. If the applicable law is not violated, click the [Yes] button to display the EDR data.



9. Select the items to be checked from each event record data.
10. Select the record data to be checked from each record data.
11. The selected record data is displayed. When no EDR data is recorded, [Event Record Data is not recorded] will be displayed.
12. Select [Exit] to return to each event record data screen.

AIRBAG(DIAGNOSTICS) > Batch save of Event record data

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Airbag], and then select [Enter].
5. On [Airbag] display, select [Work Support].
6. On [[Work Support item]] display, select [Batch save of Event record data]. After it is selected, [IMPORTANT NOTICE] screen is displayed.
7. After checking the content of [IMPORTANT NOTICE], click the checkbox for “Yes”.
8. If the applicable law is not violated, click the [Yes] button to display the EDR data.

9. Specify the destination for the event record data to save the data there.
10. After saving the file, click the [OK] button to return the menu screen.

AIRBAG(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1000 AIRBAG ECU MALFUNCTION

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Airbag ECM inner circuit malfunction
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any of B1000, B1003, B1105, B1106, B1115, B1116, B1117, B1118, B1120, B1121, B1125, B1126, B1145, B1146, B1170, B1185, B1195, B1196 or B1199 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B11E0 ROLLOVER DEPLOYMENT HISTORY

Diagnosis start condition:

When the ignition voltage is 10 V — 16 V

DTC detecting condition:

This DTC is indicated when the curtain airbag module and the seat belt pretensioner are deployed.

Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module Ref. to AIRBAG SYSTEM>Airbag Control Module.
- Curtain airbag module Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
- Front outer seat belt with pretensioner Ref. to SEAT BELT SYSTEM>Front Seat Belt.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B11F0 DISPOSAL PROCESS COMPLETE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Airbag disposal is completed with ISO collective disposal tool.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B11F0 displayed? (Current malfunction)

Yes	Replace the airbag control module.
No	Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B11F2 FRONT IMPACT DEPLOYMENT

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
This DTC is indicated when the front airbag module and the pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module Ref. to AIRBAG SYSTEM>Airbag Control Module.
- Driver's airbag module Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
- Passenger's airbag module Ref. to AIRBAG SYSTEM>Passenger's Airbag Module.
- Driver's knee airbag module Ref. to AIRBAG SYSTEM>Knee Airbag Module.
- Front sub sensor of both sides Ref. to AIRBAG SYSTEM>Front Sub Sensor.
- Front outer seat belt with pretensioner of both sides Ref. to SEAT BELT SYSTEM>Front Seat Belt.
- Steering roll connector Ref. to AIRBAG SYSTEM>Roll Connector.
- Occupant detection system (passenger's seat cushion & frame assembly) Ref. to SEATS>Front Seat.
- Curtain airbag module on both sides (when activated) Ref. to AIRBAG SYSTEM>Curtain Airbag Module.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B11F3 FRONT IMPACT DEPLOYMENT

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
This DTC is indicated when the front airbag module and the pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module Ref. to AIRBAG SYSTEM>Airbag Control Module.
- Driver's airbag module Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
- Passenger's airbag module Ref. to AIRBAG SYSTEM>Passenger's Airbag Module.
- Driver's knee airbag module Ref. to AIRBAG SYSTEM>Knee Airbag Module.
- Front sub sensor of both sides Ref. to AIRBAG SYSTEM>Front Sub Sensor.
- Front outer seat belt with pretensioner of both sides Ref. to SEAT BELT SYSTEM>Front Seat Belt.
- Steering roll connector Ref. to AIRBAG SYSTEM>Roll Connector.
- Occupant detection system (passenger's seat cushion & frame assembly) Ref. to SEATS>Front Seat.
- Curtain airbag module on both sides (when activated) Ref. to AIRBAG SYSTEM>Curtain Airbag Module.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B11F4 FRONT IMPACT DEPLOYMENT

Note:
For details on DTC B11F4, refer to DTC B11F3. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B11F3 FRONT IMPACT DEPLOYMENT.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B11F5 FRONT IMPACT DEPLOYMENT

Note:
For details on DTC B11F5, refer to DTC B11F3. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B11F3 FRONT IMPACT DEPLOYMENT.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B11F7 SIDE IMPACT DEPLOYMENT

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
This DTC is displayed when the side airbag module and curtain airbag module are deployed.
Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.

- Airbag control module Ref. to AIRBAG SYSTEM>Airbag Control Module.
- Side airbag module (operating side) Ref. to AIRBAG SYSTEM>Side Airbag Module.
- Side airbag sensor (operating side) Ref. to AIRBAG SYSTEM>Side Airbag Sensor.
- Curtain airbag module (operating side) Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
- Curtain airbag sensor (operating side) Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor.
- Satellite safing sensor Ref. to AIRBAG SYSTEM>Satellite Safing Sensor.

- Front door impact sensor (operating side) Ref. to AIRBAG SYSTEM>Front Door Impact Sensor.
- Front outer seat belt with pretensioner on the collision side (when activated) Ref. to SEAT BELT SYSTEM>Front Seat Belt.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1610 FRONT SUB SENSOR RH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Front sub sensor RH is faulty.
If DTC B1610 is displayed, the circuit within the front sub sensor RH is faulty.
Replace the front sub sensor RH. Ref. to AIRBAG SYSTEM>Front Sub Sensor.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1612 FRONT SUB SENSOR RH LOST COMMUNICATION

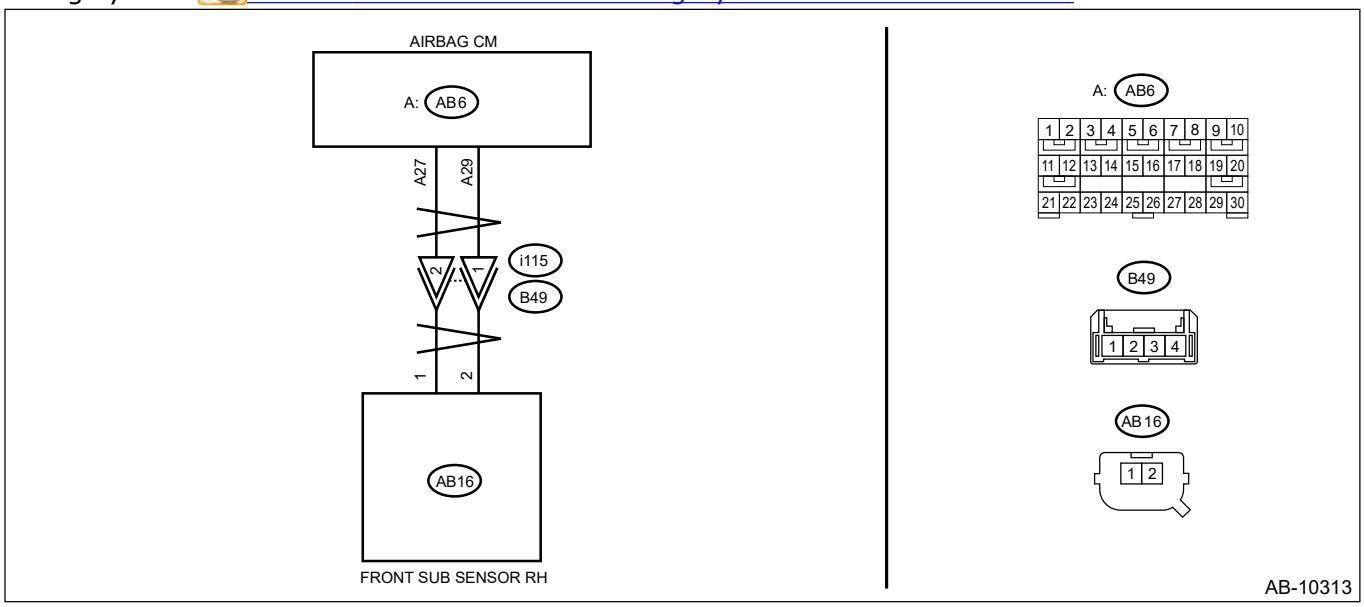
Note:

For details on DTC B1612, refer to DTC B1613. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of front sensor bus RH
- Front sub sensor RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors (AB6, AB16) between the airbag control module and the front sub sensor RH.

Is there poor contact?

Yes	Replace the airbag main harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2).
3. Remove the console front panel and disconnect the connector (AB9).
4. Disconnect the connector (AB66) from knee airbag module.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Disconnect the connector (AB16) from the front sub sensor RH, and then connect the connector (1H) in the test harness H to connector (AB16).
8. Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H.

   Connector & terminal

   (4AG) No. 14 — (3H) No. 5:

   (4AG) No. 12 — (3H) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).

Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG.

Connector & terminal

(4AG) No. 12 — Chassis ground:

(4AG) No. 14 — Chassis ground:

(4AG) No. 12 — (4AG) No. 14:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag main harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1613 displayed? (Current malfunction)

Yes	Replace the front sub sensor RH. Ref. to AIRBAG SYSTEM>Front Sub Sensor>REMOVAL. Replace the airbag control module if not operating normally even after replacing the sensor. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1615 FRONT SUB SENSOR LH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V

DTC detecting condition:

Front sub sensor LH is faulty.

If DTC B1615 is displayed, the circuit within the front sub sensor LH is faulty.

Replace the front sub sensor LH. Ref. to AIRBAG SYSTEM>Front Sub Sensor.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

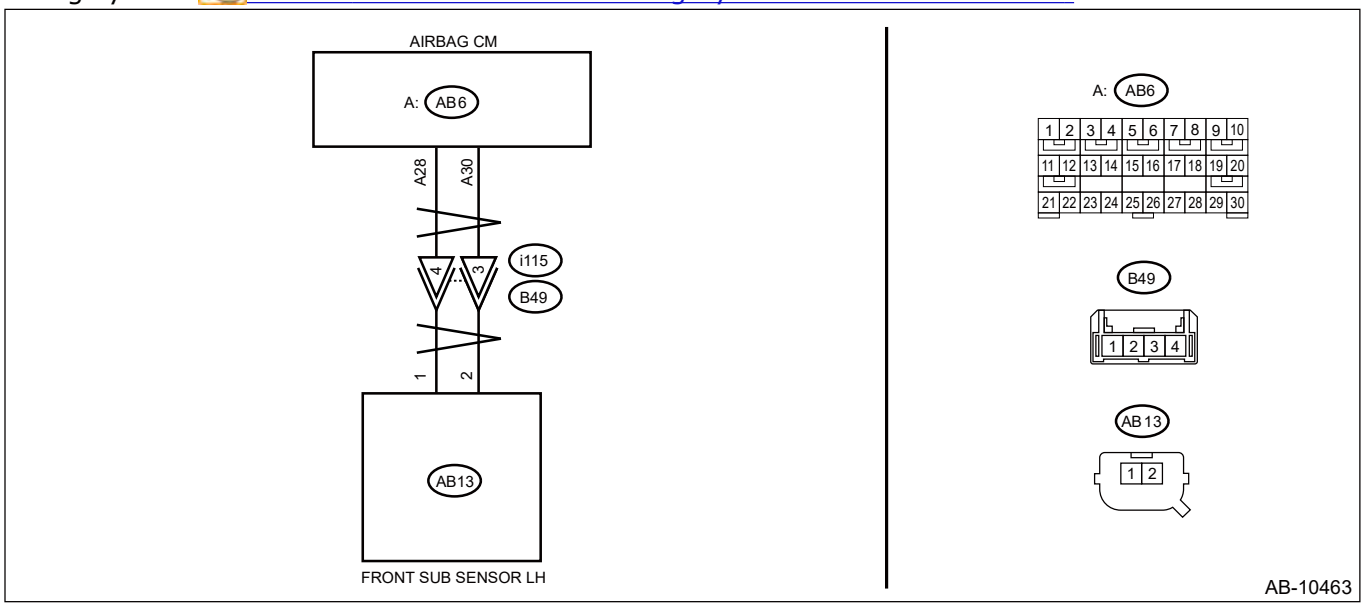
DTC B1617 FRONT SUB SENSOR LH LOST COMMUNICATION

Note:

For details on DTC B1617, refer to DTC B1618. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR.

DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of front sensor bus LH
- Front sub sensor LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor LH.

Is there poor contact?

Yes	Replace the airbag main harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2).
3. Remove the console front panel and disconnect the connector (AB9).
4. Disconnect the connector (AB66) from knee airbag module.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Disconnect the connector (AB13) from the front sub sensor LH, and then connect the connector (1H) in the test harness H to connector (AB13).
8. Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H.

   Connector & terminal

   (4AG) No. 7 — (3H) No. 5:

   (4AG) No. 9 — (3H) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).

Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG.

Connector & terminal

(4AG) No. 7 — Chassis ground:

(4AG) No. 9 — Chassis ground:

(4AG) No. 7 — (4AG) No. 9:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag main harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1618 displayed? (Current malfunction)

Yes	Replace the front sub sensor RH. Ref. to AIRBAG SYSTEM>Front Sub Sensor>REMOVAL. Replace the airbag control module if not operating normally even after replacing the sensor. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1620 SIDE AIRBAG SENSOR RH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V

DTC detecting condition:

Side airbag sensor RH is faulty.

When DTC B1620 is displayed, the circuit within the side airbag sensor RH is faulty.

Replace the side airbag sensor RH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION

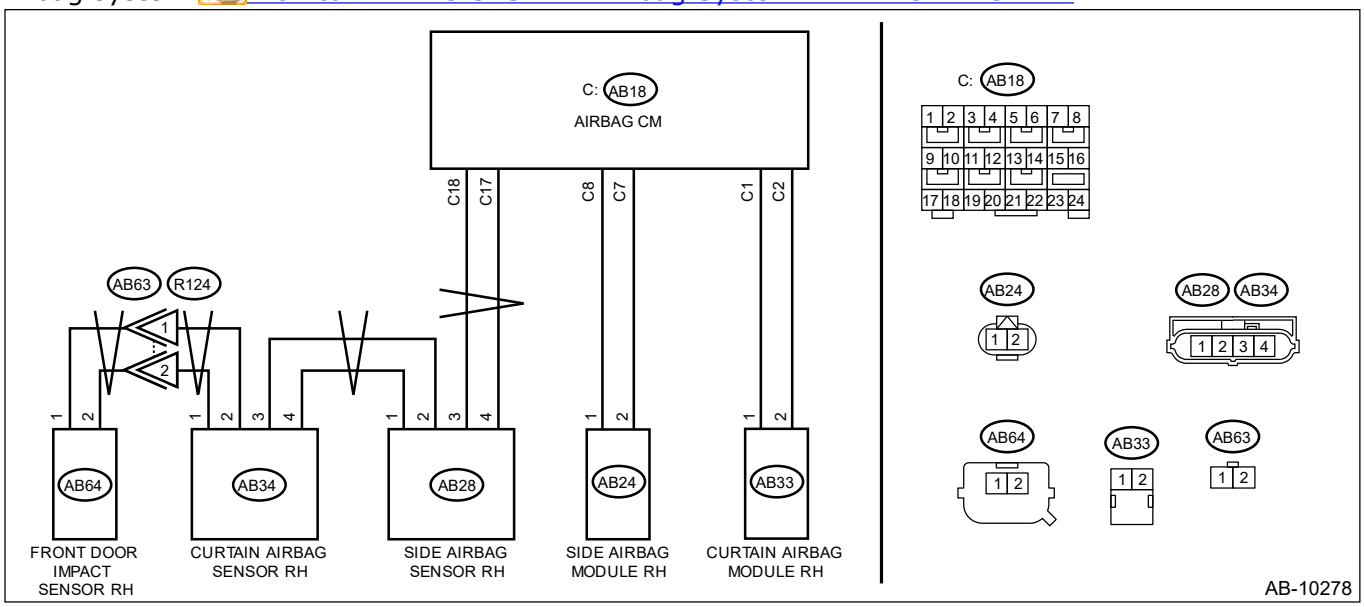
Note:

For details on DTC B1622, refer to DTC B1623. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of side sensor bus RH.
- Side airbag sensor RH and curtain airbag sensor RH are faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB33) from curtain airbag module RH.
4. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
5. Disconnect the connector (AB24) of side airbag module RH.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Disconnect the connector (AB28) from side airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB28).
9. Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V.

   Connector & terminal

   (5AG) No. 14 — (3V) No. 1:

   (5AG) No. 16 — (3V) No. 2:

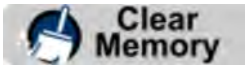
Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal



(3V) No. 1 — Chassis ground:
(3V) No. 2 — Chassis ground:
(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1623 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor RH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1623 displayed? (Current malfunction)

Yes	Replace the curtain airbag sensor RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL. Replace the airbag control module if not operating normally even after replacing the sensor. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

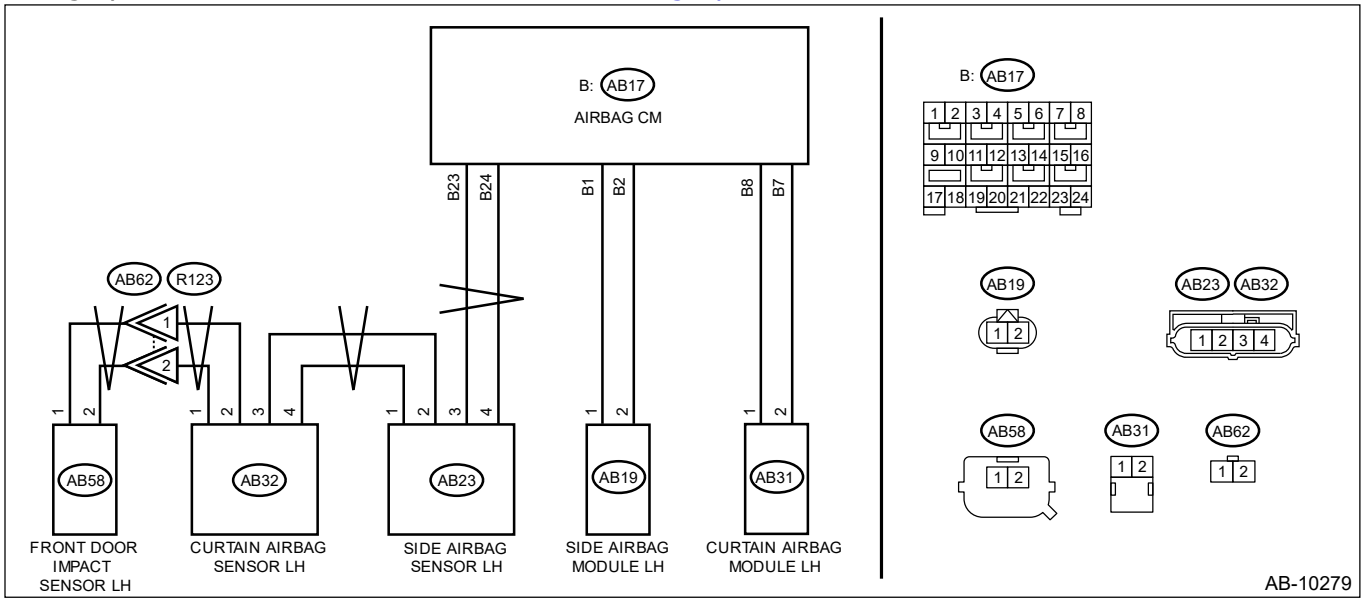
AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1625 SIDE AIRBAG SENSOR LH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Side airbag sensor LH is faulty.
When DTC B1625 is displayed, the circuit within the side airbag sensor LH is faulty.
Replace the side airbag sensor LH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION



Note:
For details on DTC B1627, refer to DTC B1628. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Open or short circuit in harness of side sensor bus LH.
- Side airbag sensor LH and curtain airbag sensor LH are faulty.
- Airbag control module is faulty.

Wiring diagram:
Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB31) from curtain airbag module LH.
4. Disconnect the connector (AB19) of the side airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Disconnect the connector (AB23) from side airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB23).
8. Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V.

   Connector & terminal

   (5AG) No. 8 — (3V) No. 2:

   (5AG) No. 10 — (3V) No. 1:

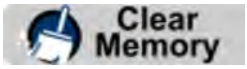
Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal



(3V) No. 1 — Chassis ground:
(3V) No. 2 — Chassis ground:
(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1628 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor LH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1628 displayed? (Current malfunction)

Yes	Replace the curtain airbag sensor LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL. Replace the airbag control module if not operating normally even after replacing the sensor. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

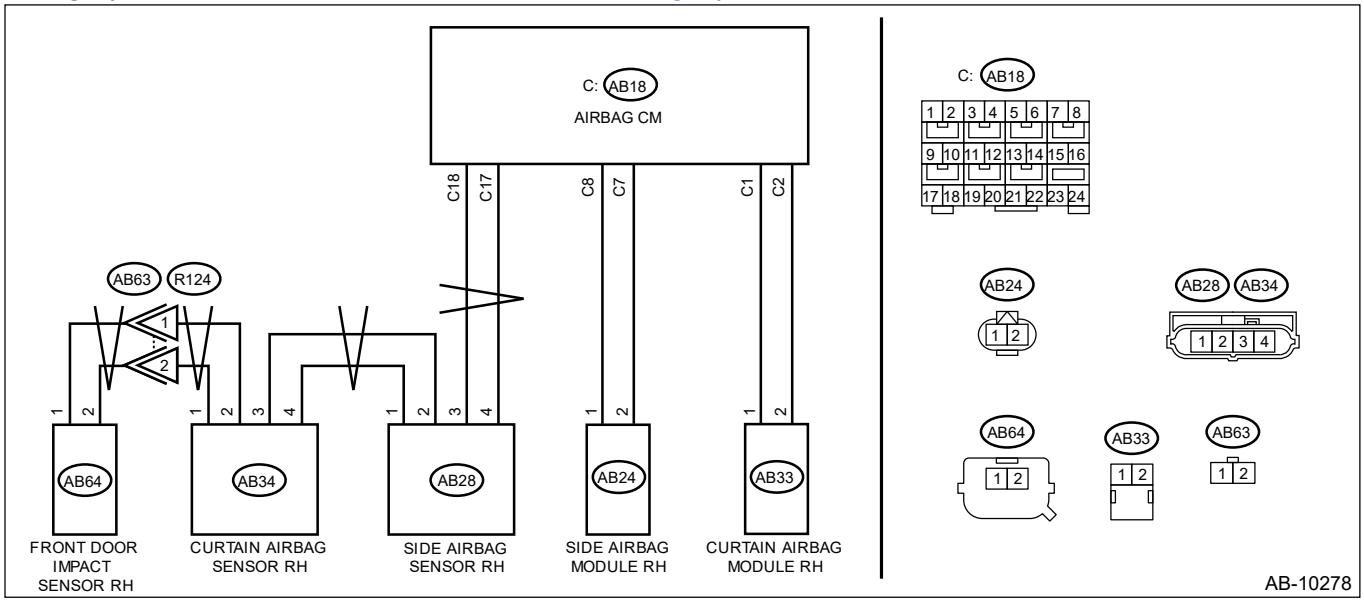
DTC B1630 CURTAIN AIRBAG SENSOR RH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Curtain airbag sensor RH is faulty.
If DTC B1630 is displayed, the circuit within the curtain airbag sensor RH is faulty.
Replace the curtain airbag sensor RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION

Note:



For details on DTC B1632, refer to DTC B1633. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Open or short circuit in harness of side sensor bus RH.
- Side airbag sensor RH and curtain airbag sensor RH are faulty.
- Airbag control module is faulty.

Wiring diagram:
Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1622 or B1623 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1622 or B1623. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the door sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness and the door harness.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connector (AB24) of side airbag module RH.
6. Disconnect the connector (AB28) of side airbag sensor RH.
7. Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI.
8. Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V.
9. Disconnect the connector (AB34) from curtain airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB34).
10. Measure the resistance between connector (3V) terminals in the test harness V.

Connector & terminal

(3V) No. 2 — (3V) No. 6:

(3V) No. 1 — (3V) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

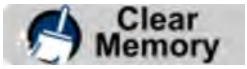
4. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V.

Connector & terminal

(3V) No. 2 — Chassis ground:

(3V) No. 1 — Chassis ground:



(3V) No. 2 — (3V) No. 1:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Replace the airbag rear harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor.

Is DTC B1633 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 8.

6. REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1633 displayed? (Current malfunction)

Yes	Go to 7.
No	Go to 8.

7. REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor RH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1633 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 8.

8. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

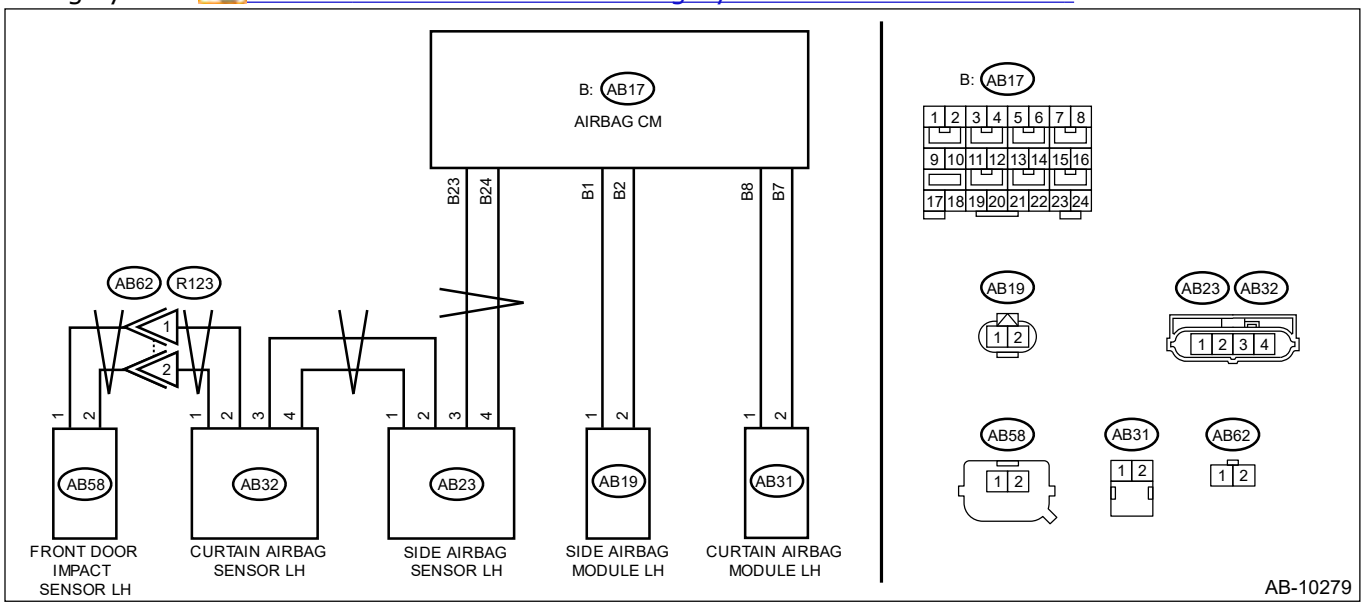
Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1635 CURTAIN AIRBAG SENSOR LH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Curtain airbag sensor LH is faulty.
If DTC B1635 is displayed, the circuit within the curtain airbag sensor LH is faulty.
Replace the curtain airbag sensor LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION



Note:
For details on DTC B1637, refer to DTC B1638. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Open or short circuit in harness of side sensor bus LH.
- Side airbag sensor LH and curtain airbag sensor LH are faulty.
- Airbag control module is faulty.

Wiring diagram:
Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1627 or B1628 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1627 or B1628. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the door sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness and the door harness.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB31) from curtain airbag module LH.
4. Disconnect the connector (AB19) of the side airbag module LH.
5. Disconnect the connector (AB23) in the side airbag sensor LH.
6. Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI.
7. Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V.
8. Disconnect the connector (AB32) from curtain airbag sensor LH, and connect to the connector (2V) in test harness V.
9. Measure the resistance between connector (3V) terminals in the test harness V.

Connector & terminal

(3V) No. 2 — (3V) No. 6:

(3V) No. 1 — (3V) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V.

Connector & terminal

(3V) No. 1 — Chassis ground:

(3V) No. 2 — Chassis ground:

(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Replace the airbag rear harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1638 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 8.

6. REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1638 displayed? (Current malfunction)

Yes	Go to 7.
No	Go to 8.

7. REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor LH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1638 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 8.

8. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

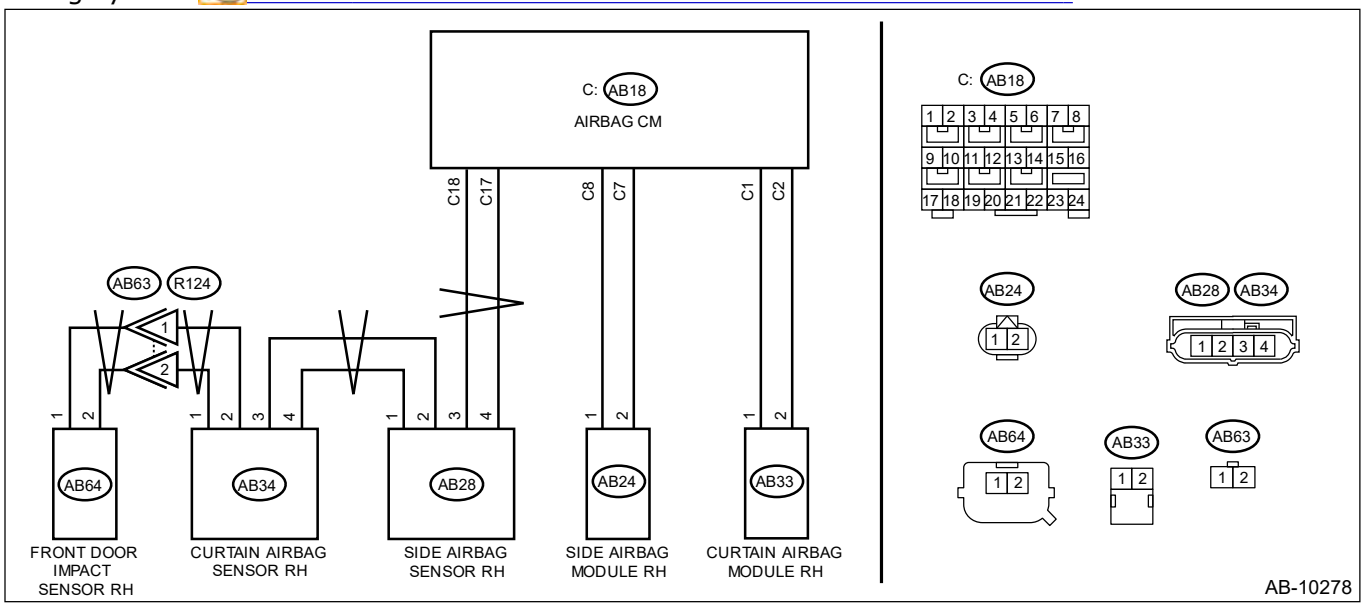
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1642 SIDE SATELLITE SENSOR BUS RH LOST COMMUNICATION

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of side sensor bus RH.
- Side airbag sensor RH is faulty.
- Curtain airbag sensor RH is faulty.
- Front door impact sensor RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Ground Circuit>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1622 or B1623 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1622 or B1623. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1632 or B1633 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1632 or B1633. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1692 or B1693 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1692 or B1693. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE.
No	Go to 4.

4. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness and the door harness.
No	Go to 5.

5. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connector (AB24) of side airbag module RH.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Disconnect the connector (AB28) from side airbag sensor RH.
9. Connect the connector (2V) in the test harness V to the connector (AB28).
10. Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V.

Connector & terminal

(5AG) No. 14 — (3V) No. 1:

(5AG) No. 16 — (3V) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Replace the airbag rear harness along with body harness.

6. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals.

Connector & terminal

(3V) No. 1 — Chassis ground:

(3V) No. 2 — Chassis ground:

(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Replace the airbag rear harness along with body harness.

7. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).

1. Disconnect the connector (2V) in the test harness V from the connector (AB28) of side airbag sensor RH.
2. Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI.
3. Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V.
4. Disconnect the connector (AB34) from curtain airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB34).
5. Measure the resistance between connector (3V) terminals in the test harness V.

Connector & terminal

(3V) No. 2 — (3V) No. 6:

(3V) No. 1 — (3V) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 8.
No	Replace the airbag rear harness along with body harness.

8. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 2 — Chassis ground:

(3V) No. 1 — Chassis ground:

(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 9.
No	Replace the airbag rear harness along with body harness.

9. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).

1. Disconnect the connector (AB64) from the front door impact sensor RH, and connect the connector (1H) in the test harness H to connector (AB64).
2. Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H.

Connector & terminal

(3V) No. 4 — (3H) No. 5:
(3V) No. 5 — (3H) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 10.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

10. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 4 — Chassis ground:
(3V) No. 5 — Chassis ground:
(3V) No. 4 — (3V) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 11.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

11. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 12.
No	Go to 15.

12. REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor RH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 13.
No	Go to 15.

13. REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 14.
No	Go to 15.

14. REPLACE FRONT DOOR IMPACT SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front door impact sensor RH. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 15.

15. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

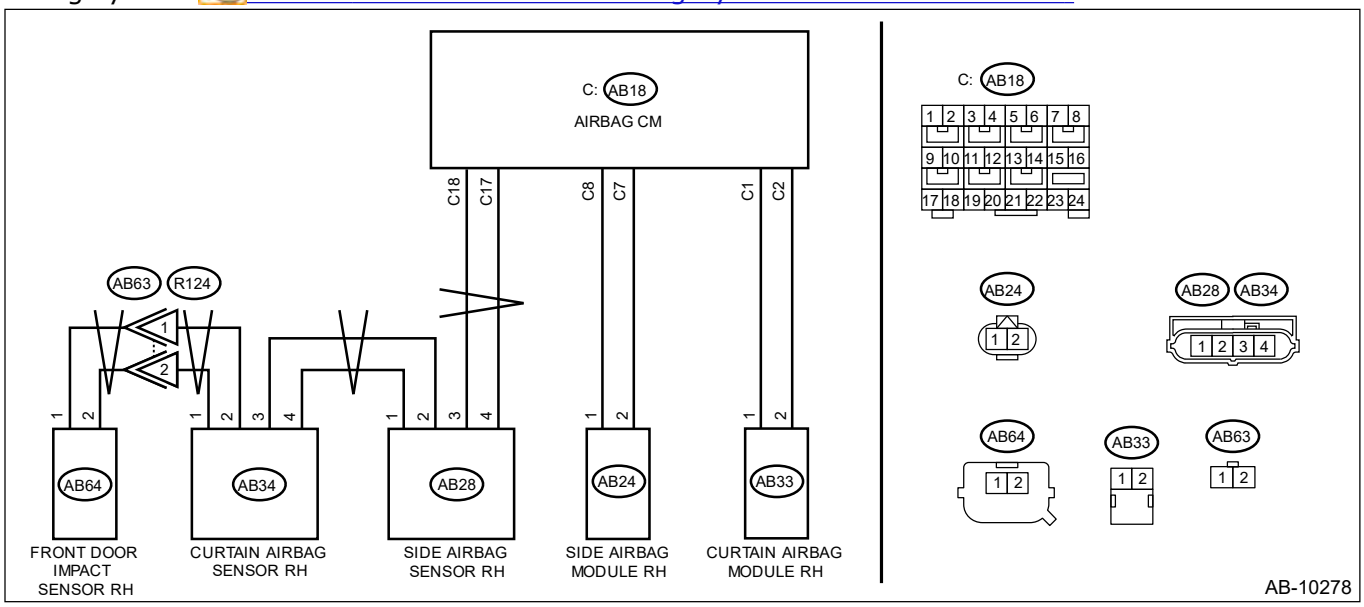
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1643 SIDE SATELLITE SENSOR BUS RH INITIALIZATION ERROR

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag sensor harness RH short • GND short • BATT short.
- Curtain airbag sensor harness RH short • GND short • BATT short.
- Airbag door sensor harness RH short • GND short • BATT short.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1622 or B1623 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1622 or B1623. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1632 or B1633 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1632 or B1633. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1692 or B1693 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1692 or B1693. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE.
No	Go to 4.

4. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness and the door harness.
No	Go to 5.

5. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connector (AB24) of side airbag module RH.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Disconnect the connector (AB28) from side airbag sensor RH.
9. Connect the connector (2V) in the test harness V to the connector (AB28).
10. Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals.

Connector & terminal

(3V) No. 1 — Chassis ground:
(3V) No. 2 — Chassis ground:
(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Replace the airbag rear harness along with body harness.

6. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).

Measure the voltage between connector (3V) in the test harness V and chassis ground.

Connector & terminal

(3V) No. 1 (+) — Chassis ground (−):
(3V) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 7.
No	Replace the airbag rear harness along with body harness.

7. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).

1. Disconnect the connector (2V) in the test harness V from the connector (AB28) of side airbag sensor RH.
2. Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI.
3. Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V.
4. Disconnect the connector (AB34) from curtain airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB34).
5. Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

   Connector & terminal

   (3V) No. 1 — Chassis ground:

   (3V) No. 2 — Chassis ground:

   (3V) No. 1 — (3V) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 8.
No	Replace the airbag rear harness along with body harness.

8. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).

Measure the voltage between connector (3V) in the test harness V and chassis ground.

Connector & terminal

(3V) No. 1 (+) — Chassis ground (−):

(3V) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 9.
No	Replace the airbag rear harness along with body harness.

9. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 4 — Chassis ground:

(3V) No. 5 — Chassis ground:

(3V) No. 4 — (3V) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 10.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

10. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).

Measure the voltage between connector (3V) in the test harness V and chassis ground.

Connector & terminal

(3V) No. 4 (+) — Chassis ground (−):

(3V) No. 5 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 11.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

11. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 12.
No	Go to 15.

12. REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor RH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 13.
No	Go to 15.

13. REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 14.
No	Go to 15.

14. REPLACE FRONT DOOR IMPACT SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front door impact sensor RH. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 15.

15. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

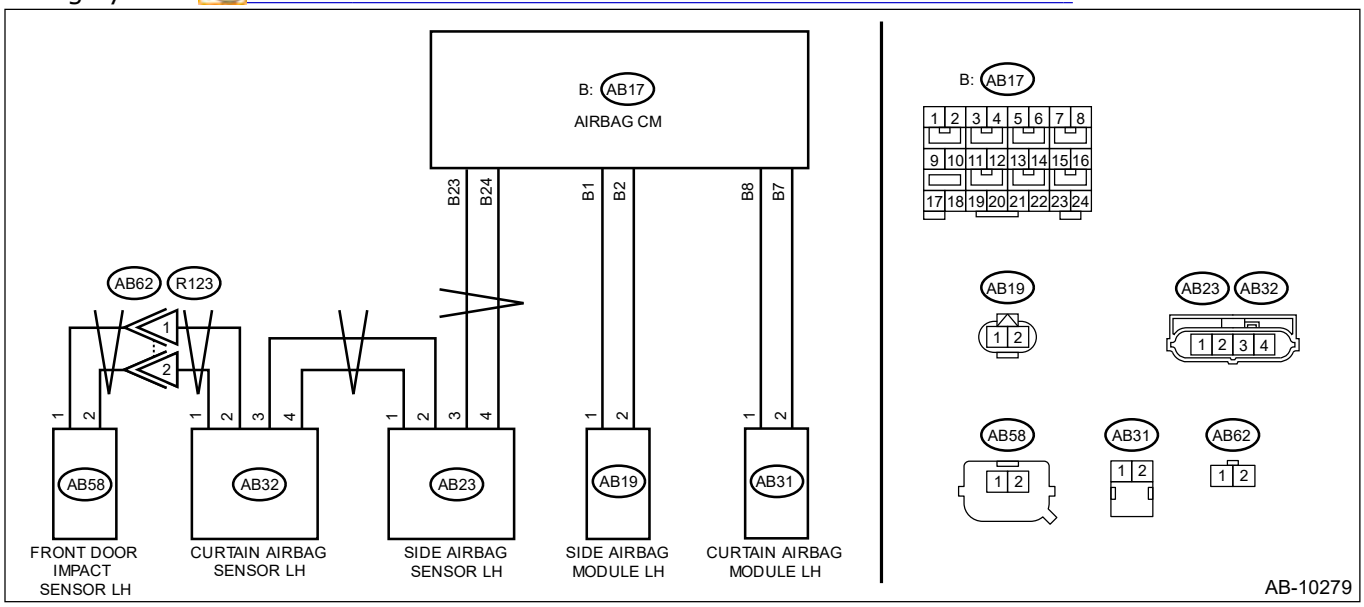
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1647 SIDE SATELLITE SENSOR BUS LH LOST COMMUNICATION

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of side sensor bus LH.
- Side airbag sensor LH is faulty.
- Curtain airbag sensor LH is faulty.
- Front door impact sensor LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Ground Circuit>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1627 or B1628 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1627 or B1628. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1637 or B1638 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1637 or B1638. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1697 or B1698 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1697 or B1698. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE.
No	Go to 4.

4. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness and the door harness.
No	Go to 5.

5. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB31) from curtain airbag module LH.
4. Disconnect the connector (AB19) of the side airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Disconnect the connector (AB23) from the side airbag sensor LH.
8. Connect the connector (2V) in the test harness V to the connector (AB23).
9. Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V.

   Connector & terminal

   (5AG) No. 10 — (3V) No. 1:

   (5AG) No. 8 — (3V) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Replace the airbag rear harness along with body harness.

6. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals.

Connector & terminal

(3V) No. 1 — Chassis ground:

(3V) No. 2 — Chassis ground:

(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Replace the airbag rear harness along with body harness.

7. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).

1. Disconnect the connector (2V) in the test harness V from the connector (AB23) of side airbag sensor LH.
2. Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI.
3. Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V.
4. Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32).
5. Measure the resistance between connector (3V) terminals in the test harness V.

Connector & terminal

(3V) No. 2 — (3V) No. 6:

(3V) No. 1 — (3V) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 8.
No	Replace the airbag rear harness along with body harness.

8. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 2 — Chassis ground:

(3V) No. 1 — Chassis ground:

(3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 9.
No	Replace the airbag rear harness along with body harness.

9. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH).

1. Disconnect the connector (AB58) from the front door impact sensor LH, and connect the connector (1H) in the test harness H to connector (AB58).
2. Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H.

Connector & terminal

(3V) No. 4 — (3H) No. 5:
(3V) No. 5 — (3H) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 10.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

10. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 4 — Chassis ground:
(3V) No. 5 — Chassis ground:
(3V) No. 4 — (3V) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 11.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

11. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1647 displayed? (Current malfunction)

Yes	Go to 12.
No	Go to 15.

12. REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor LH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1647 displayed? (Current malfunction)

Yes	Go to 13.
No	Go to 15.

13. REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1647 displayed? (Current malfunction)

Yes	Go to 14.
No	Go to 15.

14. REPLACE FRONT DOOR IMPACT SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front door impact sensor LH. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1647 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 15.

15. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

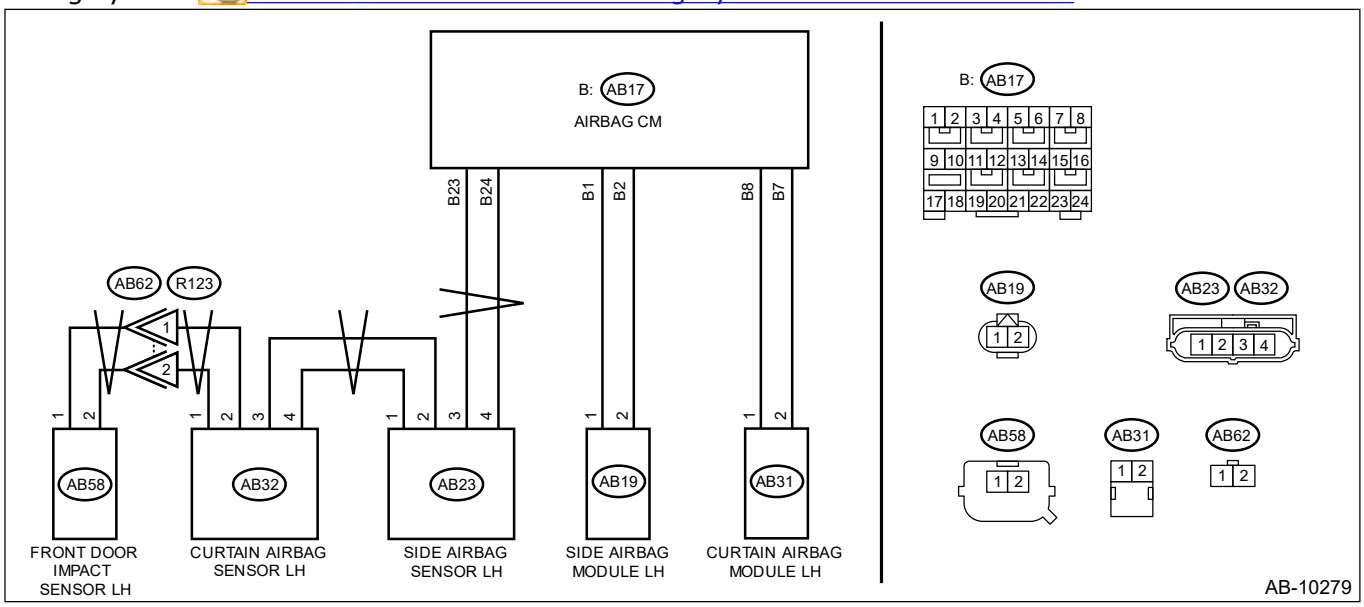
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1648 SIDE SATELLITE SENSOR BUS LH INITIALIZATION ERROR

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag sensor harness LH short • GND short • BATT short.
- Curtain airbag sensor harness LH short • GND short • BATT short.
- Front door impact sensor harness LH short • GND short • BATT short.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1627 or B1628 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1627 or B1628. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1637 or B1638 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1637 or B1638. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1697 or B1698 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1697 or B1698. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE.
No	Go to 4.

4. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness and the door harness.
No	Go to 5.

5. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB31) from curtain airbag module LH.
4. Disconnect the connector (AB19) of the side airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Disconnect the connector (AB23) from the side airbag sensor LH.
8. Connect the connector (2V) in the test harness V to the connector (AB23).
9. Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals.

   Connector & terminal

   (3V) No. 1 — Chassis ground:

   (3V) No. 2 — Chassis ground:

   (3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Replace the airbag rear harness along with body harness.

6. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).

Measure the voltage between connector (3V) in the test harness V and chassis ground.

Connector & terminal

(3V) No. 1 (+) — Chassis ground (−):

(3V) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 7.
No	Replace the airbag rear harness along with body harness.

7. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).

1. Disconnect the connector (2V) in the test harness V from the connector (AB23) of side airbag sensor LH.
2. Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI.
3. Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V.
4. Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32).
5. Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

   Connector & terminal

   (3V) No. 1 — Chassis ground:

   (3V) No. 2 — Chassis ground:

   (3V) No. 1 — (3V) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 8.
No	Replace the airbag rear harness along with body harness.

8. CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).

Measure the voltage between connector (3V) in the test harness V and chassis ground.

Connector & terminal

(3V) No. 1 (+) — Chassis ground (−):

(3V) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 9.
No	Replace the airbag rear harness along with body harness.

9. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 4 — Chassis ground:

(3V) No. 5 — Chassis ground:

(3V) No. 4 — (3V) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 10.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

10. CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).

Measure the voltage between connector (3V) in the test harness V and chassis ground.

Connector & terminal

(3V) No. 4 (+) — Chassis ground (−):

(3V) No. 5 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 11.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

11. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 12.
No	Go to 15.

12. REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor LH. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 13.
No	Go to 15.

13. REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Go to 14.
No	Go to 15.

14. REPLACE FRONT DOOR IMPACT SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front door impact sensor LH. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.
3. Connect all connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1642 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 15.

15. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION

Note:

Refer to "Occupant Detection System" for details on DTC B1650. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1655 FRONT BUCKLE SWITCH RH FAILURE

Note:

Refer to "Occupant Detection System" for details on DTC B1655. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1655 FRONT BUCKLE SWITCH RH FAILURE.

DTC B1661 PASSENGER'S AIRBAG ON/OFF INDICATOR FAILURE

Diagnosis start condition:

When the ignition voltage is 10 V — 16 V

DTC detecting condition:

Passenger’s airbag indicator failure received (CAN signal from combination meter)

Note:

Perform the diagnosis for combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1675 SATELLITE SAFING SENSOR FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Satellite safing sensor is faulty.
- Airbag control module is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE SATELLITE SAFING SENSOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the satellite safing sensor with a genuine sensor. Ref. to AIRBAG SYSTEM>Satellite Safing Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

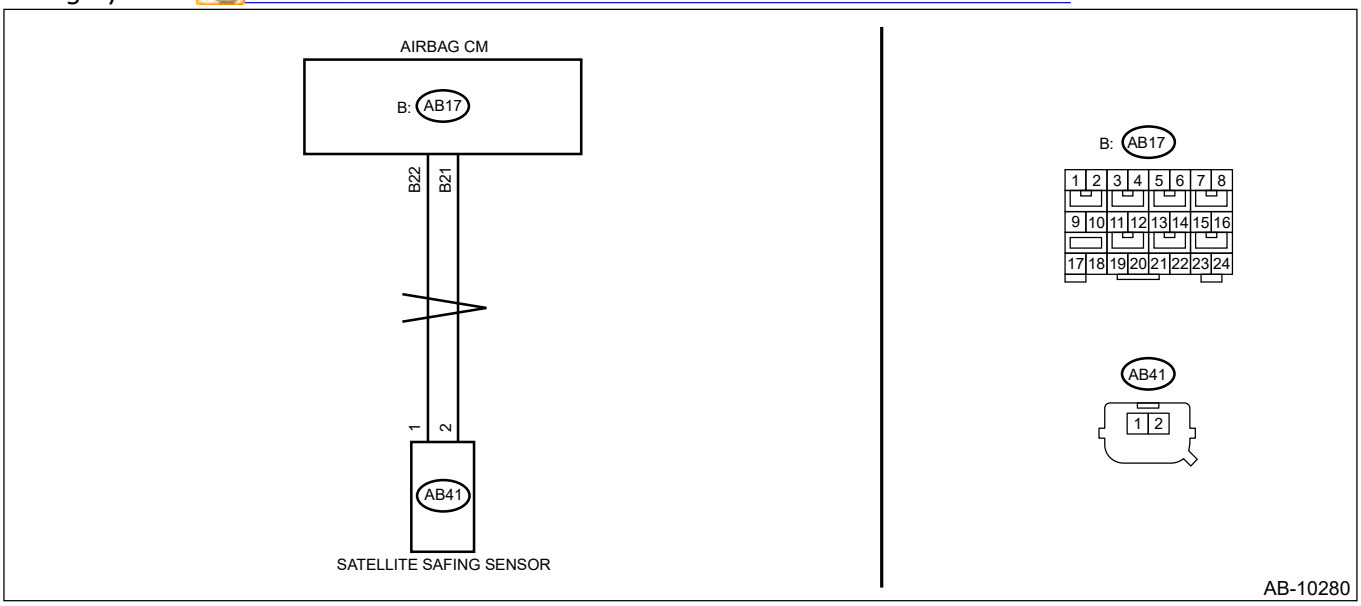
DTC B1676 LOST COMMUNICATION WITH SATELLITE SAFING SENSOR

Note:
For details on DTC B1676, refer to DTC B1677. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1677 SATELLITE SAFING SENSOR INITIALIZATION INCOMPLETE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1677 SATELLITE SAFING SENSOR INITIALIZATION INCOMPLETE

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of satellite safing sensor
- Satellite safing sensor is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Ground Circuit>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors (AB18, AB41) between the airbag control module and the satellite safing sensor.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SATELLITE SAFING SENSOR).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connectors (AB21, AB26) from seat belt pretensioner.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connectors (AB31, AB33) from curtain airbag module.
5. Disconnect connectors (AB19) and (AB24) from the side airbag module.
6. Disconnect the connectors (AB17, AB6, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Disconnect the connector (AB41) from the satellite safing sensor and connect to the test harness H connector (1H).
9. Measure the resistance between connector in the test harness AG and connector in the test harness H.

   Connector & terminal

   (5AG) No. 15 — (3H) No. 5:

   (6AG) No. 14 — (3H) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SATELLITE SAFING SENSOR).

Measure the resistance between connectors (5AG) and (6AG) in the test harness AG and chassis ground, and the resistance between the connectors (5AG) and (6AG) in the test harness AG.

Connector & terminal

(5AG) No. 15 — Chassis ground:

(6AG) No. 14 — Chassis ground:

(5AG) No. 15 — (6AG) No. 14:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1677 displayed? (Current malfunction)

Yes	Replace the satellite safing sensor. Ref. to AIRBAG SYSTEM>Satellite Safing Sensor>REMOVAL. Replace the airbag control module if not operating normally even after replacing the sensor. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1690 DOOR SENSOR RH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V

DTC detecting condition:

Front door impact sensor RH is faulty.

If DTC B1690 is displayed, the circuit within the front door impact sensor RH is faulty.

Replace the front door impact sensor RH. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH

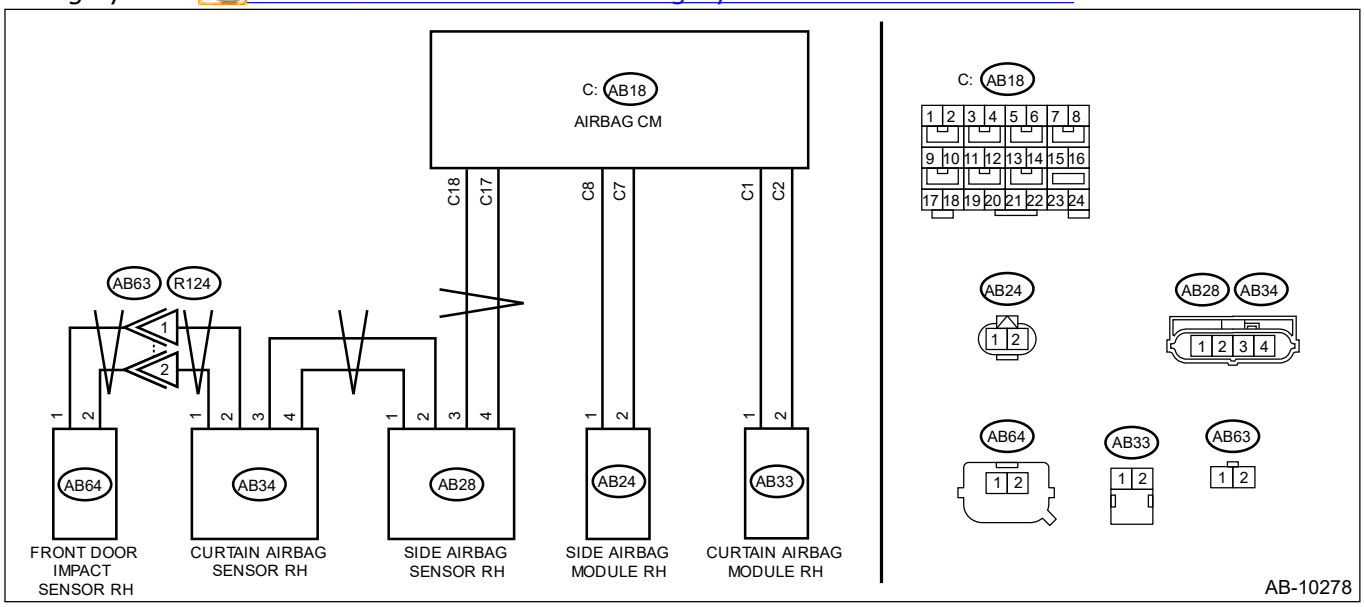
Note:

For details on DTC B1692, refer to DTC B1693. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of side sensor bus RH.
- Front door impact sensor RH is faulty.
- Curtain airbag sensor RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1622 or B1623 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1622 or B1623. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor.

Is DTC B1632 or B1633 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1632 or B1633. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is [AIRBAG ECU MALFUNCTION] or B1690 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed [AIRBAG ECU MALFUNCTION] or B1690. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1000 AIRBAG ECU MALFUNCTION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1690 DOOR SENSOR RH FAILURE.
No	Go to 4.

4. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness.
No	Go to 5.

5. CHECK AIRBAG REAR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connector (AB24) from side airbag module RH.
6. Disconnect the connector (AB34) from curtain airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB34).
7. Disconnect the connector (AB64) from the front door impact sensor RH, and connect the connector (1H) in the test harness H to connector (AB64).
8. Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H.

   Connector & terminal

   (3V) No. 4 — (3H) No. 5:

   (3V) No. 5 — (3H) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Replace the airbag rear harness along with body harness.

6. CHECK AIRBAG REAR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 4 — Chassis ground:

(3V) No. 5 — Chassis ground:

(3V) No. 4 — (3V) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

7. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1692 or B1693 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 8.

8. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1695 DOOR SENSOR LH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Front door impact sensor LH is faulty.

If DTC B1695 is displayed, the circuit within the front door impact sensor LH is faulty.
Replace the front door impact sensor LH. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH

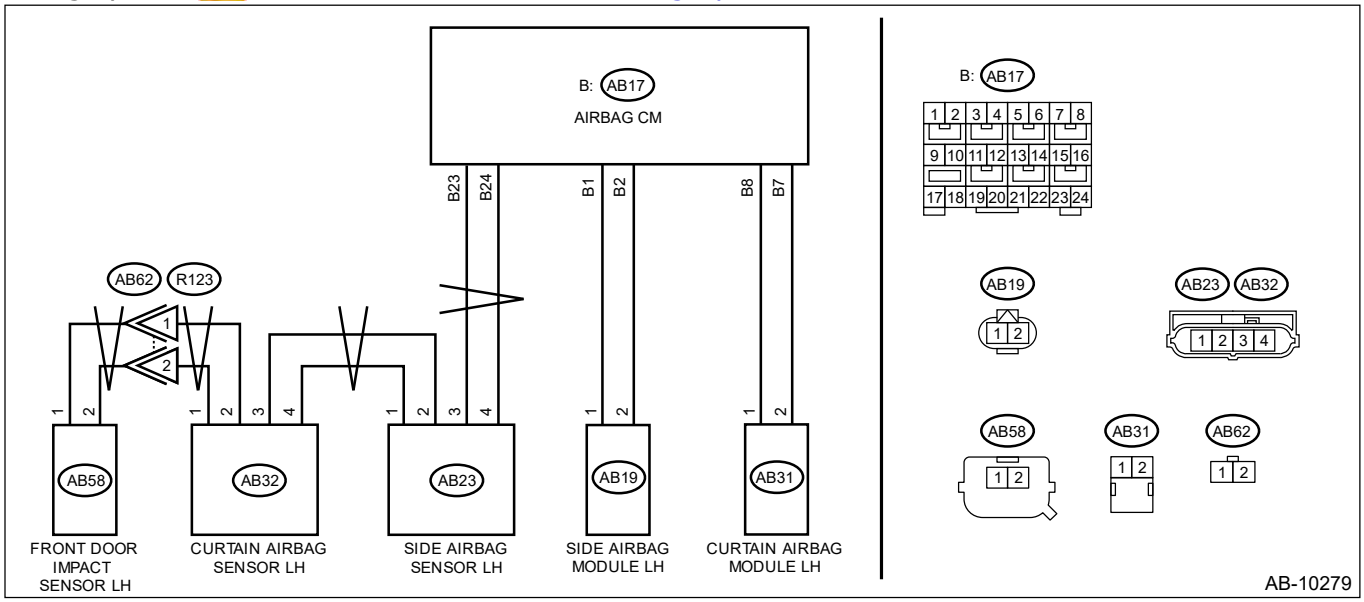
Note:

For details on DTC B1697, refer to DTC B1698. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Open or short circuit in harness of side sensor bus LH.
- Front door impact sensor LH is faulty.
- Curtain airbag sensor LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1627 or B1628 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1627 or B1628. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1637 or B1638 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1637 or B1638. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is [AIRBAG ECU MALFUNCTION] or B1690 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed [AIRBAG ECU MALFUNCTION] or B1695. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1000 AIRBAG ECU MALFUNCTION. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1695 DOOR SENSOR LH FAILURE.
No	Go to 4.

4. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness.
No	Go to 5.

5. CHECK AIRBAG REAR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB31) from curtain airbag module LH.
4. Disconnect the connector (AB19) from side airbag module LH.
5. Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32).
6. Disconnect the connector (AB58) from the front door impact sensor LH, and connect the connector (1H) in the test harness H to connector (AB58).
7. Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H.

   Connector & terminal

   (3V) No. 4 — (3H) No. 5:

   (3V) No. 5 — (3H) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Replace the airbag rear harness along with body harness.

6. CHECK AIRBAG REAR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).

Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V.

Connector & terminal

(3V) No. 4 — Chassis ground:

(3V) No. 5 — Chassis ground:

(3V) No. 4 — (3V) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Replace the airbag rear harness along with body harness.

7. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1697 or B1698 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 8.

8. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16F2 FRONT SUB SENSOR RH RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Front sub sensor RH is wrongly installed.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE FRONT SUB SENSOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front sub sensor RH with a genuine sensor. Ref. to AIRBAG SYSTEM>Front Sub Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16F3 FRONT SUB SENSOR LH RECOGNITION ERROR

Diagnosis start condition:

When the ignition voltage is 10 V — 16 V

DTC detecting condition:

Front sub sensor LH is wrongly installed.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE FRONT SUB SENSOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front sub sensor LH with a genuine sensor. Ref. to AIRBAG SYSTEM>Front Sub Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16F4 SIDE AIRBAG SENSOR RH RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Side airbag sensor RH is misinstalled.
- Airbag CM is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE SIDE AIRBAG SENSOR RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Replace the side airbag sensor RH with a genuine sensor. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16F5 SIDE AIRBAG SENSOR LH RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Side airbag sensor LH is misinstalled.
- Airbag CM is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE SIDE AIRBAG SENSOR LH.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the side airbag sensor LH with a genuine sensor. Ref. to AIRBAG SYSTEM>Side Airbag Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16F6 CURTAIN AIRBAG SENSOR RH RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Curtain airbag sensor RH is misinstalled.
- Airbag CM is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE CURTAIN AIRBAG SENSOR RH.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor RH with a genuine sensor. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16F7 CURTAIN AIRBAG SENSOR LH RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Curtain airbag sensor LH is misinstalled.
- Airbag CM is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE CURTAIN AIRBAG SENSOR LH.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the curtain airbag sensor LH with a genuine sensor. Ref. to AIRBAG SYSTEM>Curtain Airbag Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

DTC B16F8 SATELLITE SAFING SENSOR RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Satellite safing sensor is misinstalled.
- Airbag control module is faulty.

1. REPLACE SATELLITE SAFING SENSOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the satellite safing sensor with a genuine sensor. Ref. to AIRBAG SYSTEM>Satellite Safing Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16F9 DOOR SENSOR RH RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Front door impact sensor RH is misinstalled.
- Airbag control module is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE FRONT DOOR IMPACT SENSOR RH.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front door impact sensor RH with a genuine sensor. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.

Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B16FA DOOR SENSOR LH RECOGNITION ERROR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Front door impact sensor LH is misinstalled.
- Airbag control module is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. REPLACE FRONT DOOR IMPACT SENSOR LH.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Replace the front door impact sensor LH with a genuine sensor. Ref. to AIRBAG SYSTEM>Front Door Impact Sensor>REMOVAL.

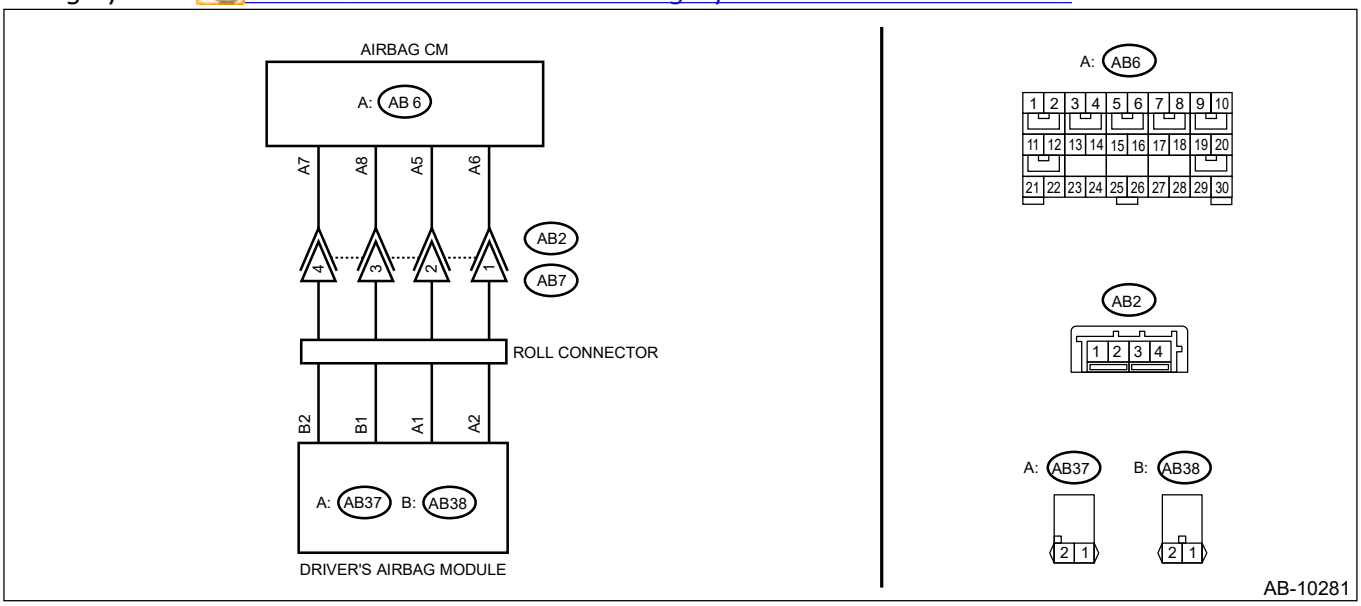
Does the warning light go off?

Yes	Finish the diagnosis.
No	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1800 SHORT IN DRIVER'S AIRBAG

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness (driver's side) circuit is shorted.
- Roll connector circuit is shorted.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the console front panel and disconnect the connector (AB9).
3. Disconnect the driver's knee airbag module connector (AB66).
4. Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (2Q) terminals in test harness Q.
   Connector & terminal
   (2Q) No. 1 — (2Q) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
2. Measure the resistance between connector (3AG) terminals in test harness AG.
   Connector & terminal
   (3AG) No. 1 — (3AG) No. 3:

Is the resistance 1 MΩ or more?

Yes	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.
No	Replace the airbag main harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1800 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

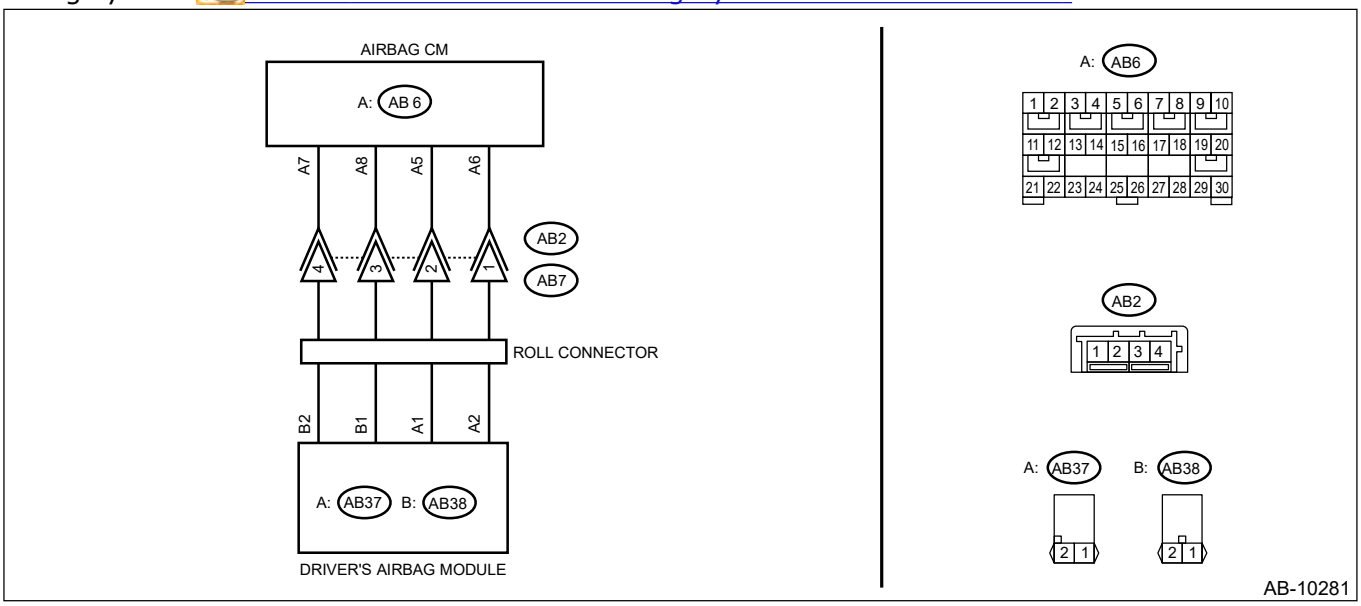
Is any other DTC displayed?

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1801 OPEN IN DRIVER'S AIRBAG

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is open.
- Airbag module harness (driver's side) circuit is open.
- Roll connector is open.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the console front panel and disconnect the connector (AB9).
3. Disconnect the driver's knee airbag module connector (AB66).
4. Disconnect the airbag resistor from the connector (2N) in test harness N.
5. Disconnect the airbag resistor from the connector (2Q) of test harness Q.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Measure the resistance between connector (2Q) terminals in test harness Q.
   Connector & terminal
   (2Q) No. 1 — (2Q) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Go to 4.

4. CHECK ROLL CONNECTOR.

1. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
2. Measure the resistance between connector (2Q) terminals in test harness Q.
   Connector & terminal
   (2Q) No. 1 — (2Q) No. 2:

Is the resistance less than 10 Ω?

Yes	Replace the airbag main harness along with body harness.
No	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1801 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

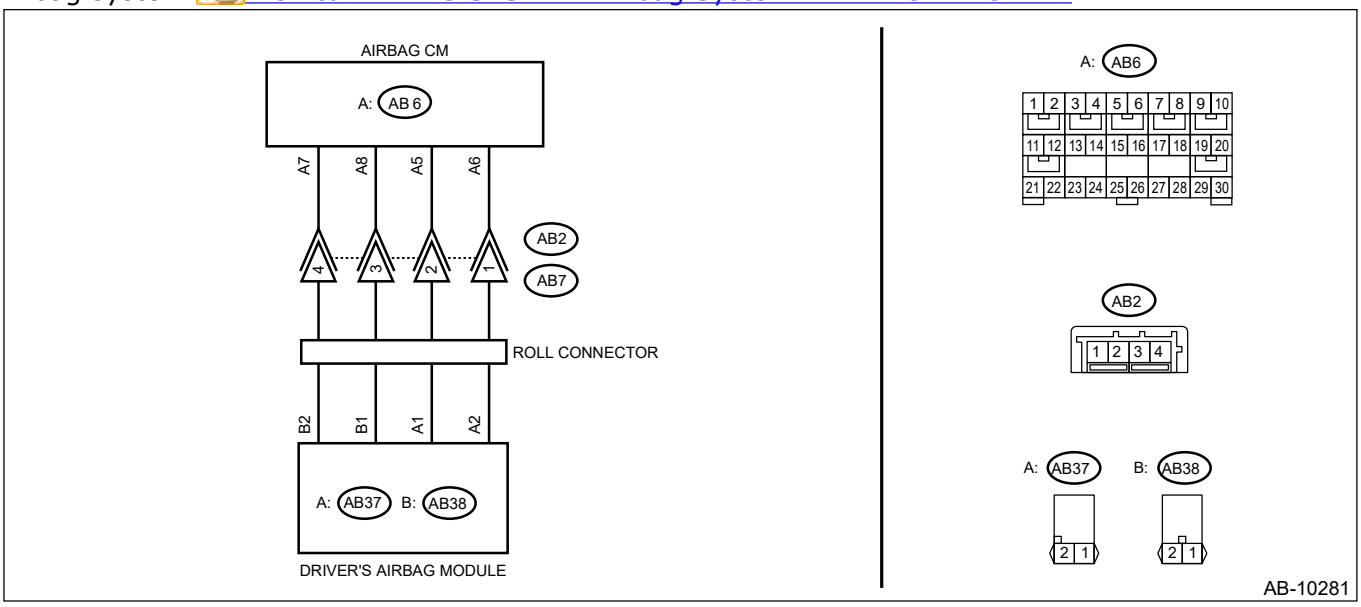
6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC B1802 SHORT IN DRIVER'S AIRBAG (TO GROUND)

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Airbag main harness circuit is shorted to ground.

- Airbag module harness (driver’s side) circuit is shorted to ground.
- Roll connector circuit is shorted to ground.
- Driver’s airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to “CAUTION” in “General Description”. Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver’s airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
3. Disconnect the driver's knee airbag module connector (AB66).
4. Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q.
5. Measure the resistance between connector (2Q) in the test harness Q and chassis ground.
   Connector & terminal
   (2Q) No. 1 — Chassis ground:
   (2Q) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

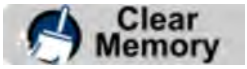
Yes	Go to 4.
No	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.

4. CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Disconnect the test harness N from connector (AB38).
2. Disconnect the test harness Q from connector (AB37).
3. Remove the console front panel and disconnect the connector (AB9).
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
6. Measure the resistance between connector (3AG) in the test harness AG and chassis ground.

Connector & terminal

(3AG) No. 1 — Chassis ground:



(3AG) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Replace the airbag main harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1802 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

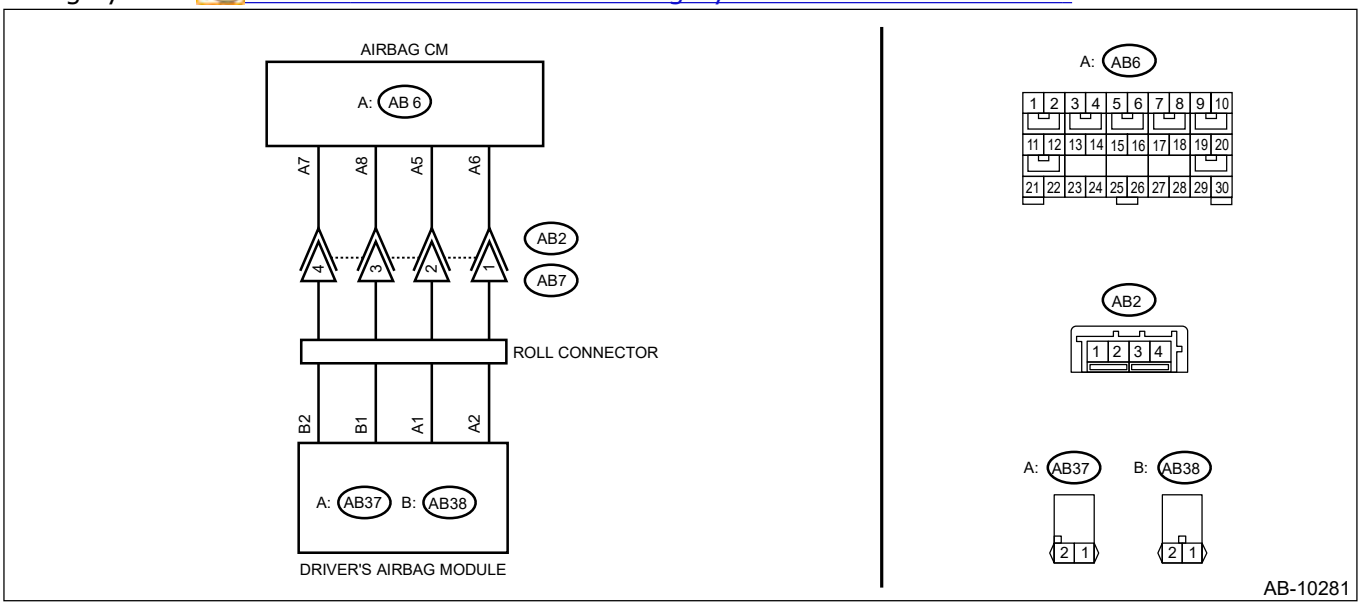
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1803 SHORT IN DRIVER'S AIRBAG (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (driver's side) circuit is shorted to power supply.
- Roll connector circuit is shorted to power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
3. Disconnect the driver's knee airbag module connector (AB66).
4. Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q.
5. Measure the voltage between connector (2Q) in the test harness Q and chassis ground.
   Connector & terminal
   (2Q) No. 1 (+) — Chassis ground (−):
   (2Q) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.

4. CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Disconnect the test harness N from connector (AB38).
2. Disconnect the test harness Q from connector (AB37).
3. Remove the console front panel and disconnect the connector (AB9).
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
6. Connect the battery ground terminal and turn the ignition switch to ON.
7. Measure the voltage between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 1 (+) — Chassis ground (−):
   (3AG) No. 3 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Replace the airbag main harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1803 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

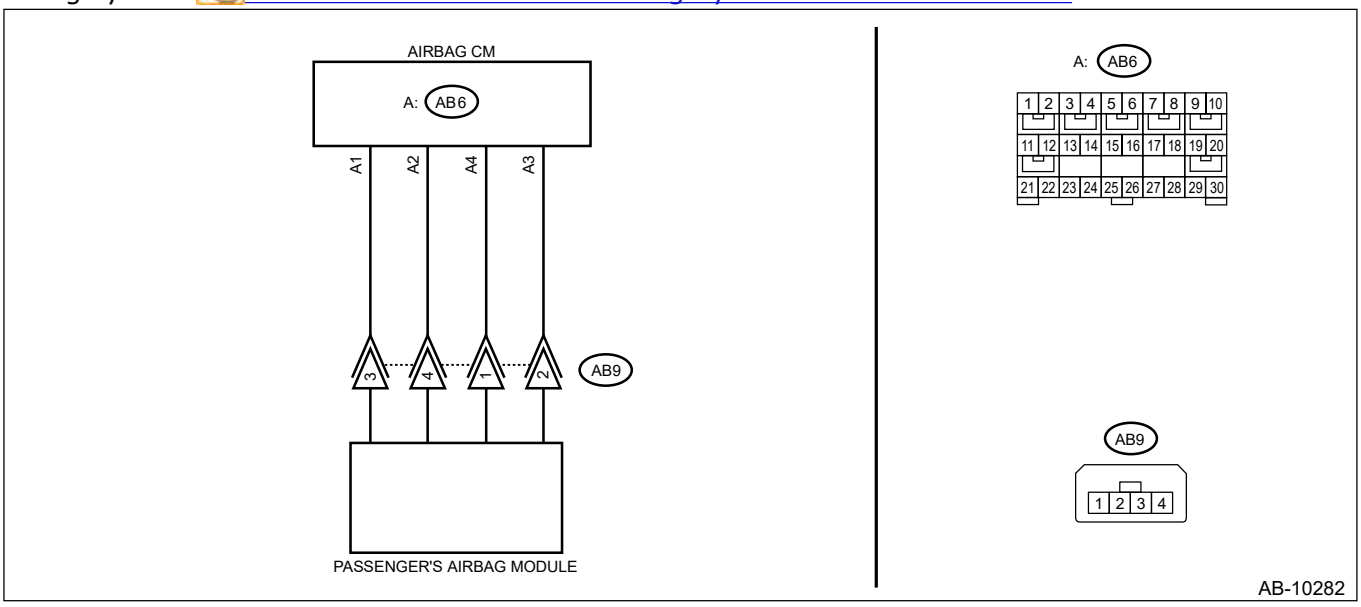
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1805 SHORT IN PASSENGER'S AIRBAG

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness circuit (passenger's side) is shorted.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Connect the connectors (AB6, AB17, AB18) to the connector (1AG) in the test harness AG, and disengage the short mechanism of the connectors (AB6, AB17, AB18).
6. Disconnect the passenger's airbag module connector (AB9).
7. Using a probe, measure the resistance between the terminals of connector (AB9). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 1 — (AB9) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Disconnect the test harness AG from the connectors (AB6, AB17, AB18).
2. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
3. Connect the connectors (AB7) and (AB2).
4. Connect the connector (AB66) to the driver's knee airbag module.
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1805 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1805 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

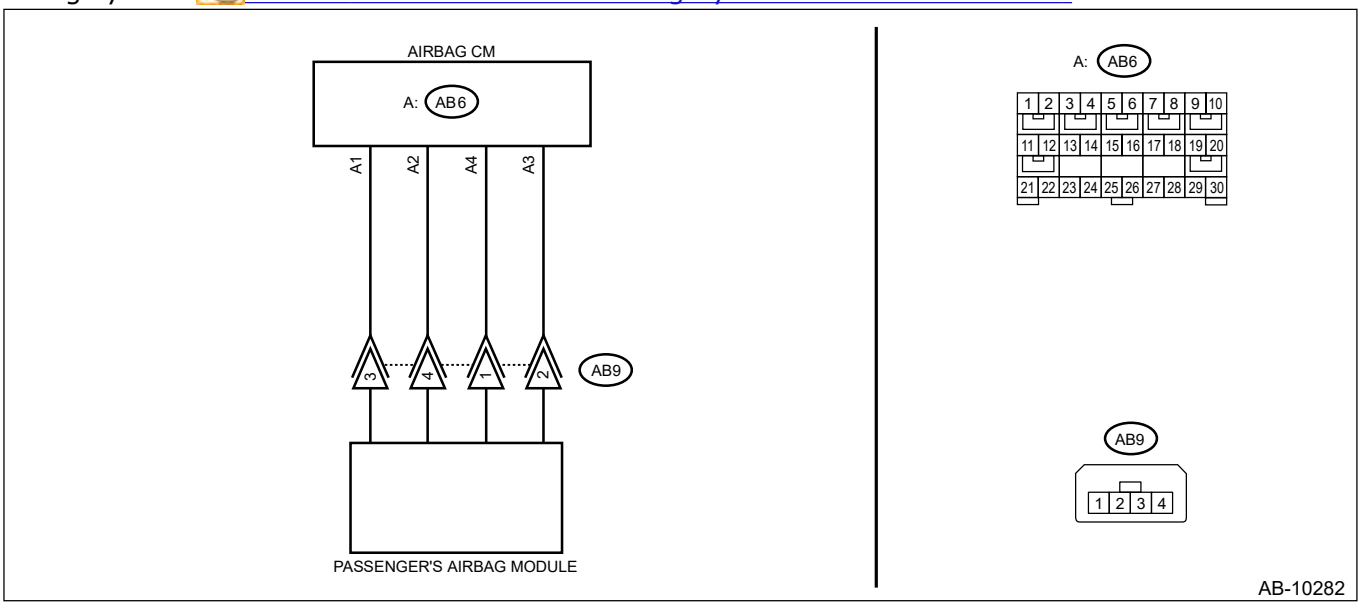
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1806 OPEN IN PASSENGER'S AIRBAG

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is open.
- Airbag module harness (passenger's side) circuit is open.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Disconnect the passenger's airbag module connector (AB9).
6. Using a probe, measure the resistance between the terminals of connector (AB9). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 1 — (AB9) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
2. Connect the connectors (AB7) and (AB2).
3. Connect the connector (AB66) to the driver's knee airbag module.
4. Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 1 — (AB9) No. 2:
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1806 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the ground cable to battery.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1806 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

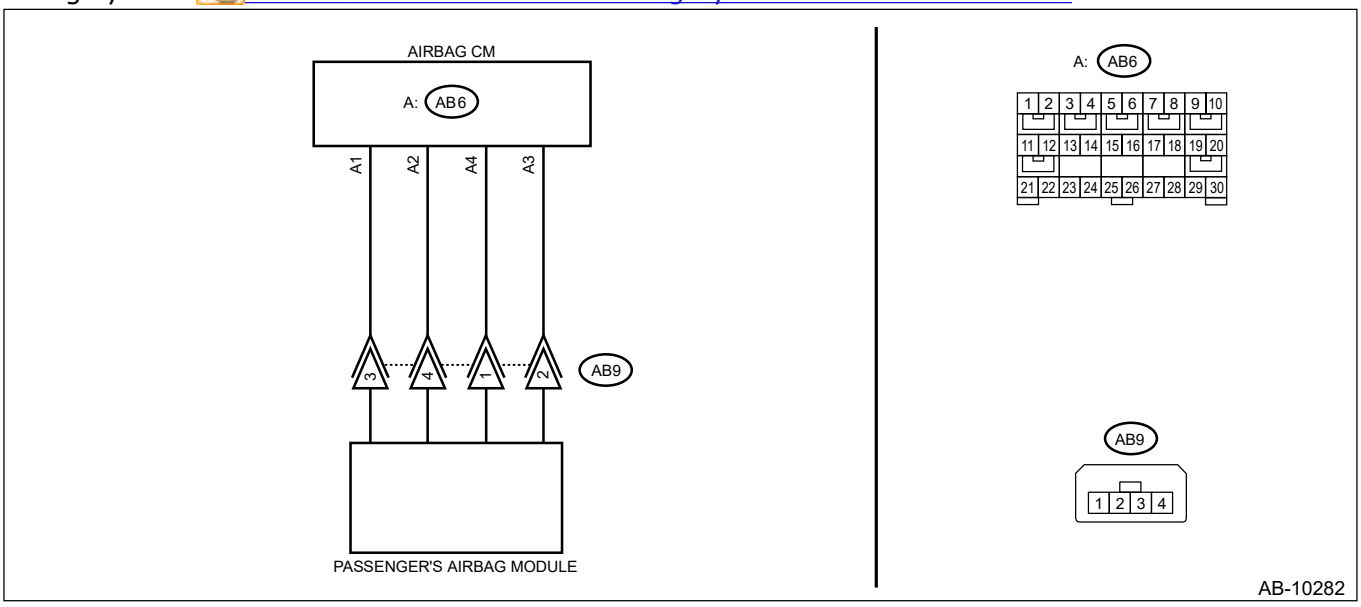
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1807 SHORT IN PASSENGER'S AIRBAG (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to ground.
- Airbag module harness (passenger's side) circuit is shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Disconnect the passenger's airbag module connector (AB9).
6. Using a probe, measure the resistance between the connector (AB9) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 1 — Chassis ground:

   (AB9) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
2. Connect the connectors (AB7) and (AB2).
3. Connect the connector (AB66) to the driver's knee airbag module.
4. Connect the battery ground terminal and turn the ignition switch to ON.
5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1807 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1807 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

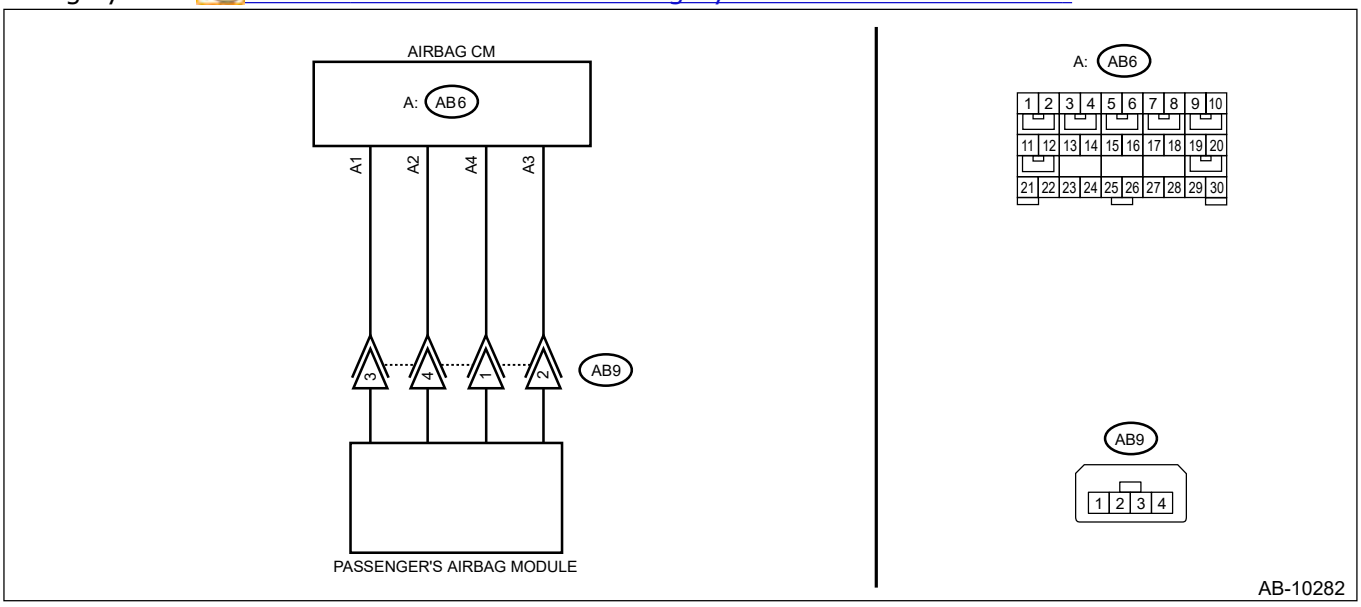
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1808 SHORT IN PASSENGER'S AIRBAG (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (passenger's side) circuit is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Disconnect the passenger's airbag module connector (AB9).
6. Using a probe, measure the voltage between the connector (AB9) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 1 (+) — Chassis ground (−):

   (AB9) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
3. Connect the connectors (AB7) and (AB2).
4. Connect the connector (AB66) to the driver's knee airbag module.
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1808 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1808 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

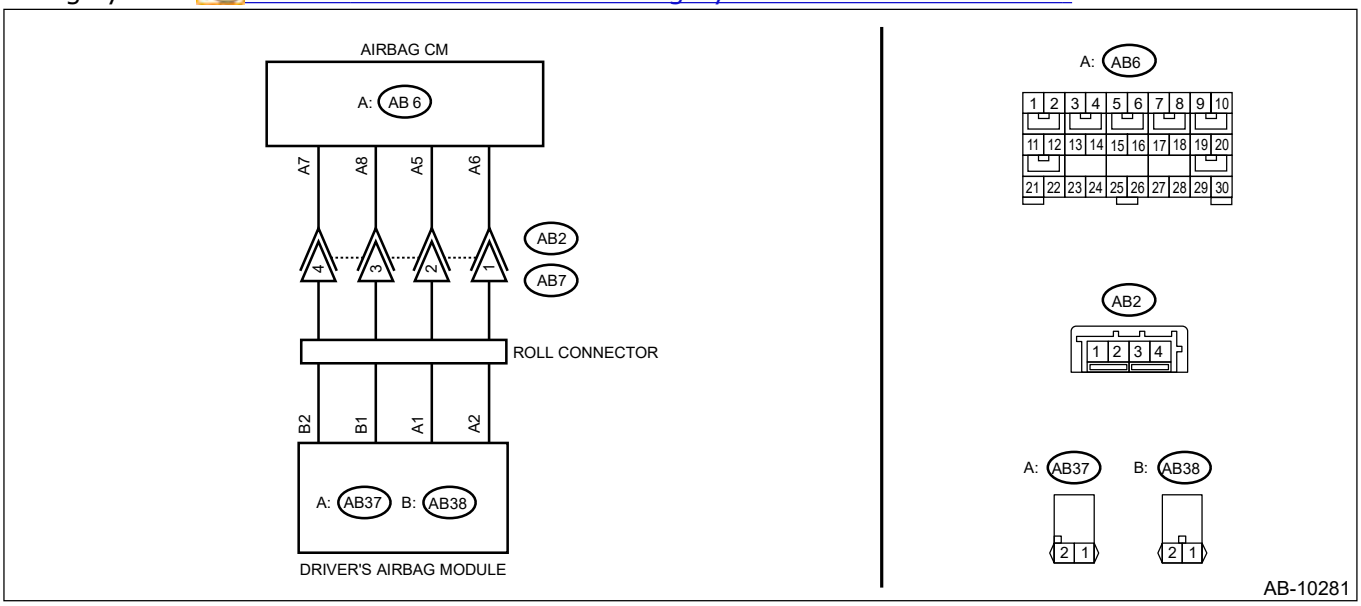
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1810 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness (driver's side) circuit is shorted.
- Roll connector circuit is shorted.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the console front panel and disconnect the connector (AB9).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (2N) terminals in test harness N.
   Connector & terminal
   (2N) No. 1 — (2N) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
2. Disconnect the test harness Q from connector (AB37).
3. Measure the resistance between connector (3AG) terminals in test harness AG.
   Connector & terminal
   (3AG) No. 2 — (3AG) No. 4:

Is the resistance 1 MΩ or more?

Yes	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.
No	Replace the airbag main harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1810 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

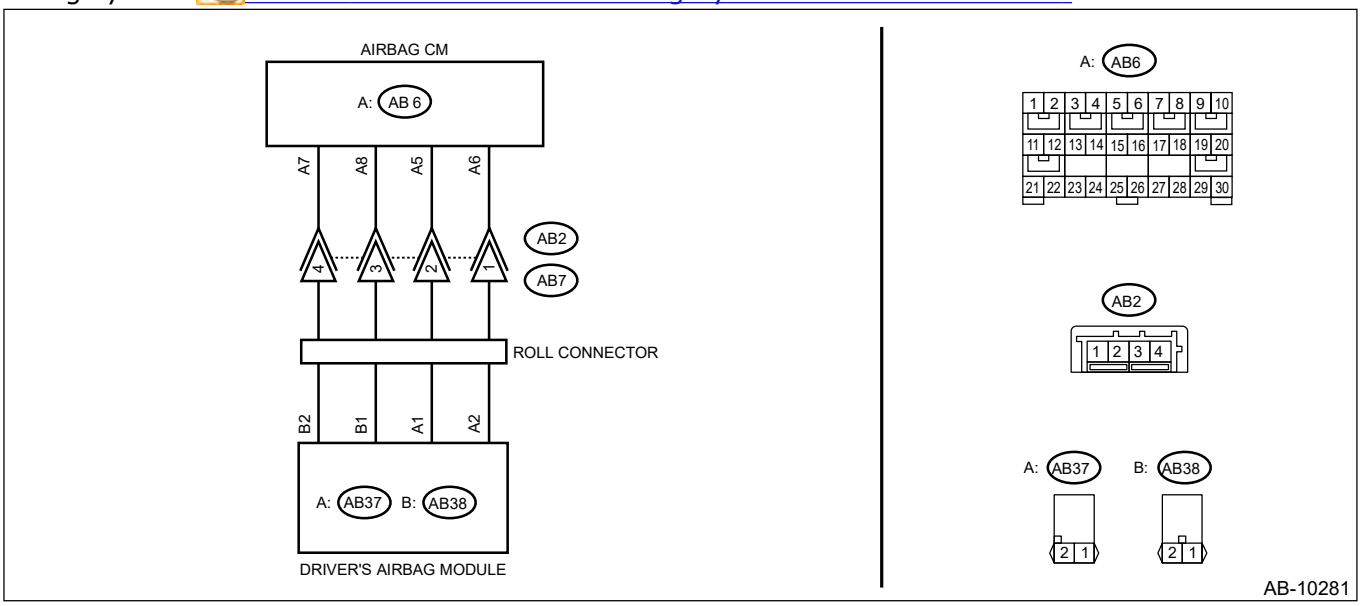
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1811 OPEN IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is open.
- Airbag module harness (driver's side) circuit is open.
- Roll connector circuit is open.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the console front panel and disconnect the connector (AB9).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the airbag resistor from the connector (2N) in test harness N.
5. Disconnect the airbag resistor from the connector (2Q) of test harness Q.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Measure the resistance between connector (2N) terminals in test harness N.
   Connector & terminal
   (2N) No. 1 — (2N) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Go to 4.

4. CHECK ROLL CONNECTOR.

1. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
2. Measure the resistance between connector (2N) terminals in test harness N.
   Connector & terminal
   (2N) No. 1 — (2N) No. 2:

Is the resistance less than 10 Ω?

Yes	Replace the airbag main harness along with body harness.
No	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1811 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

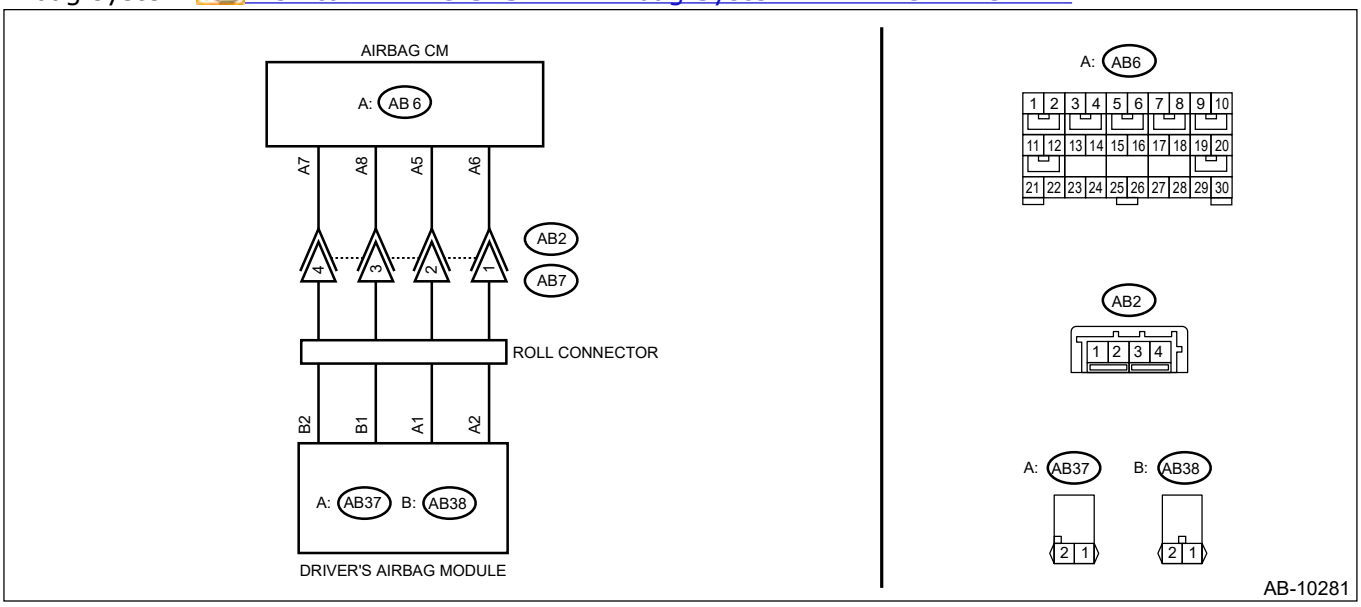
6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC B1812 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Airbag main harness circuit is shorted to ground.

- Airbag module harness (driver’s side) circuit is shorted to ground.
- Roll connector circuit is shorted to ground.
- Driver’s airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to “CAUTION” in “General Description”. Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver’s airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q.
5. Measure the resistance between connector (2N) in the test harness N and chassis ground.
   Connector & terminal
   (2N) No. 1 — Chassis ground:
   (2N) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

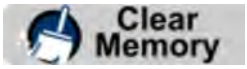
Yes	Go to 4.
No	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.

4. CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Disconnect the test harness N from connector (AB38).
2. Disconnect the test harness Q from connector (AB37).
3. Remove the console front panel and disconnect the connector (AB9).
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
6. Measure the resistance between connector (3AG) in the test harness AG and chassis ground.

Connector & terminal

(3AG) No. 2 — Chassis ground:



(3AG) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Replace the airbag main harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1812 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

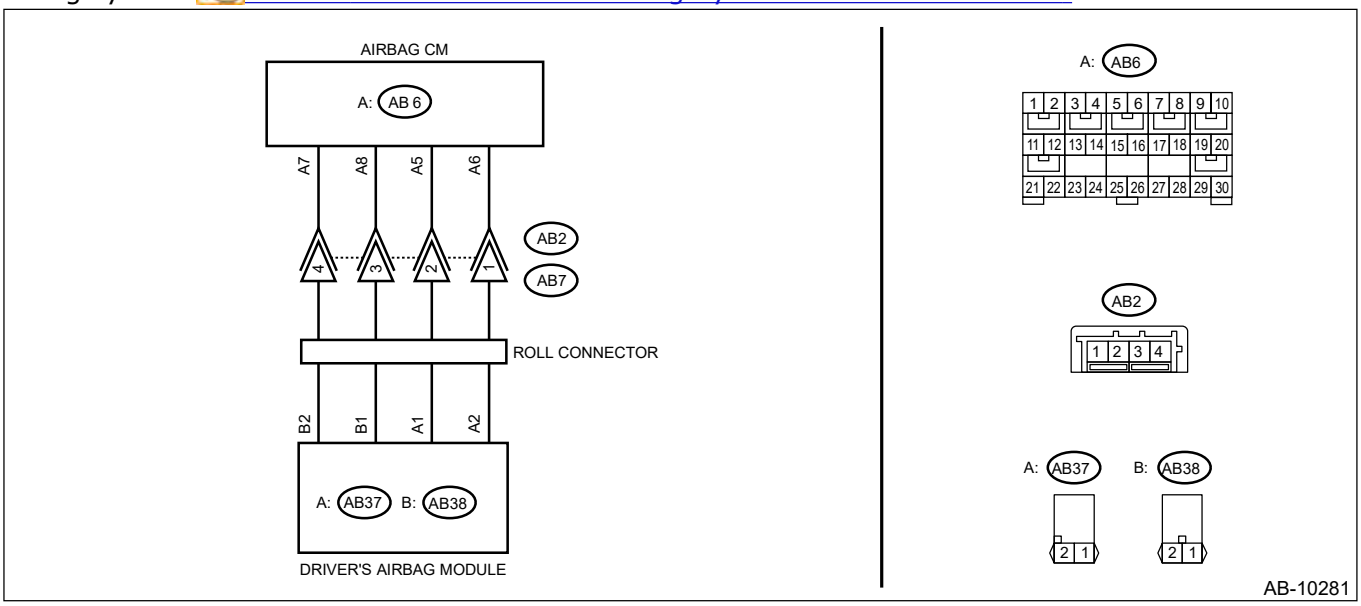
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1813 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (driver's side) circuit is shorted to power supply.
- Roll connector is shorted to power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the driver's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK DRIVER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the driver's airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB38).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the connector (1Q) in the test harness Q to connector (AB37).
6. Connect the airbag resistor to the connector (2Q) in the test harness Q.
7. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module.
No	Go to 3.

3. CHECK ROLL CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q.
5. Measure the voltage between connector (2N) in the test harness N and chassis ground.
   Connector & terminal
   (2N) No. 1 (+) — Chassis ground (−):
   (2N) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Replace the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.

4. CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).

1. Disconnect the test harness N from connector (AB38).
2. Disconnect the test harness Q from connector (AB37).
