Remote Keyless Entry

1. Lock/Arm

- Press to lock all doors and trunk and activate the security alarm.
- If any of the doors or the trunk are not fully closed, an electronic chirp will sound and the hazard lights will flash to alert you that the doors or the trunk are not properly closed.
- To activate the vehicle finder function, press three times (within five seconds). If you are within 30 feet of the vehicle, the horn will sound one time and the hazard lights will flash three times.

2. Unlock/Disarm

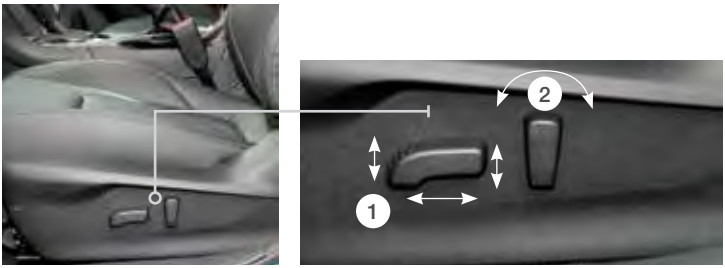
- Press once to unlock the driver's door.
- Press twice (within five seconds) to unlock all doors.
- When the "Unlock/Disarm" button is pressed, the dome and map lights will illuminate if the dome light switch is in the middle position.

3. Opening the Trunk Lid

- Press to unlock the trunk lid. An electronic chirp will sound twice and the hazard lights will flash twice.

4. Panic Alarm

- Press once and the horn will sound and the hazard lights will flash.
- Press any button on the remote to deactivate.



Keyless Access and Push Button Start (if equipped)

By simply carrying the access key in your pocket, you can lock and unlock doors, open the trunk and start your car without having to take the key fob out of your pocket.

Seating

Power Driver's Seat (if equipped)

1. **Forward/Backward, Angle and Height**
   Move the switch toward the front or rear to move the seat forward or backward. Pull the switch up or push down on the front of the switch to adjust the angle of the seat cushion. Pulling the switch straight up or pushing the switch straight down will adjust the height of the entire seat cushion.
2. **Seatback**
   Move the switch in the corresponding direction to adjust the angle of the seatback.

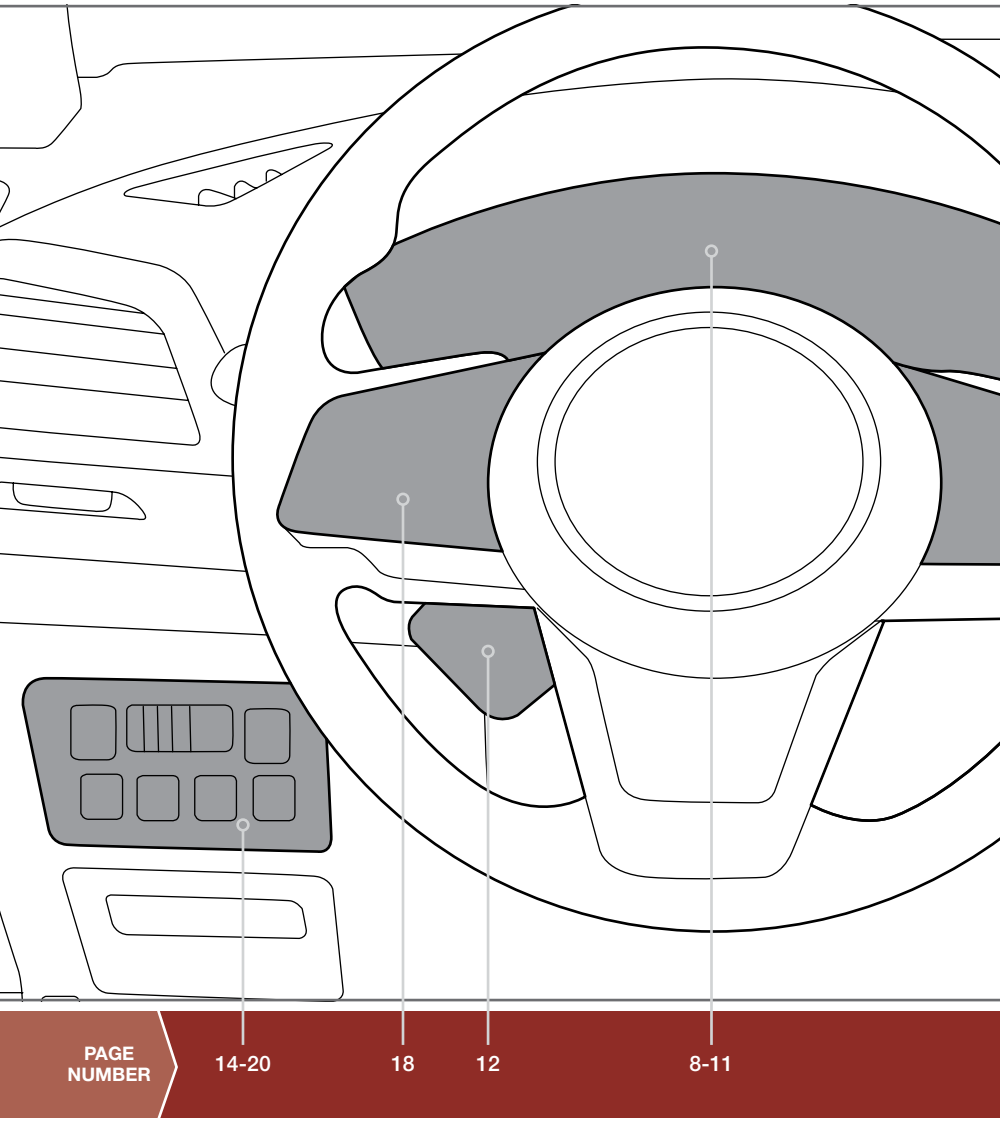
Seating

Seat Controls

1. Forward/Backward
   Pull up on the lever below the front of the driver's seat to move the seat forward or backward.
2. Raise/Lower Seat Cushion
   To adjust the height of the driver's seat, pull up or push down the seat height adjustment lever, located on the lower left side front of the seat.
3. Recline Seatback
   To adjust the seatback to the desired position, pull up on the recline lever, located on the lower left rear of the driver's seat or lower right rear of the passenger's seat. Do not adjust seats while driving.

Heated Seats (if equipped)

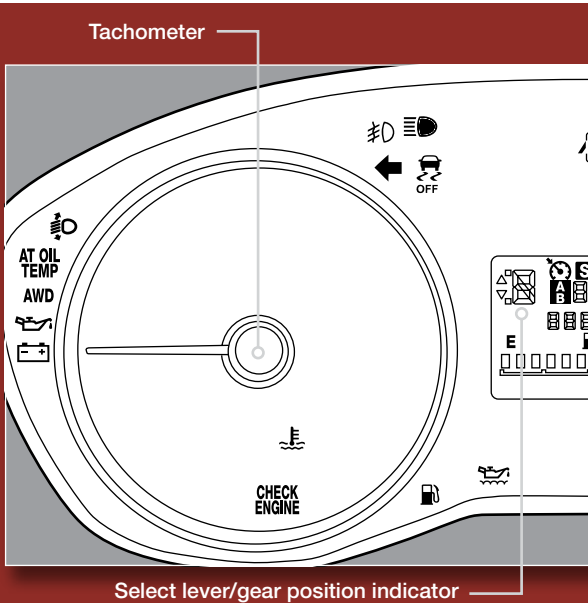
Switches are located on the center console between the driver's and passenger's seats; choose low (bottom of switch) for normal heating or high (top of switch) for rapid heating. Choose the center position to turn off the seat heaters.



Folding the Rear Seat

Lower the headrests. Pull up on the release knob on the seat side that you want to fold down. To return the seatback to its original position, raise the seatback until it locks into place, making sure that it is securely locked.

Instrument Panel



Clock

Press the “+” button to advance the time or the “–” button to reverse the time. Vehicles with a navigation system, please refer to the separate “Operating Instructions for Navigation System.”

Personalize

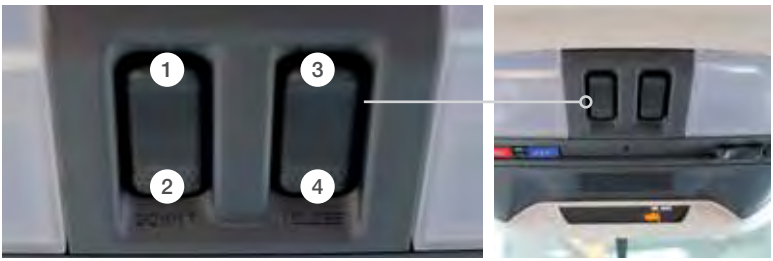
Tilt and Telescopic Steering Column

Push the lever down firmly to adjust the height and lengthwise position of the column; firmly push the lever back up to lock the column in place. Do not adjust while driving.

Power Exterior Mirrors

Turn the knob to the “L” side to adjust the left-hand mirror or to the “R” side to adjust the right-hand mirror. Move the knob in the direction you want to move the mirror. Then return the knob to the neutral/center position.

Combination Meter Display Controls (if equipped)



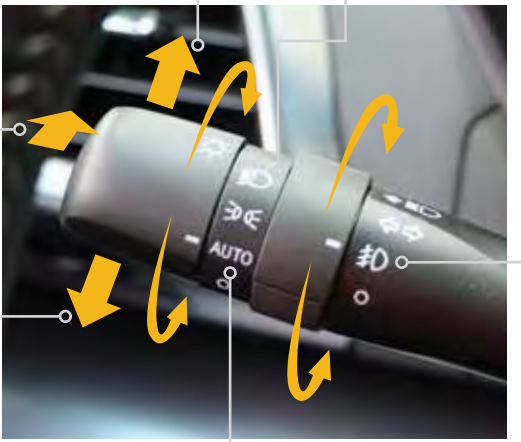
Use the controls to display and switch selected items in the combination meter display. Please refer to your Owner’s Manual for details on these controls.

Power Moonroof (if equipped)

With the moonroof in the fully closed position, press the switch ① to tilt the rear of the moonroof up. Press and hold the switch ② to lower the moonroof. Press the switch ③ to fully open the moonroof. Press the switch ④ to close the moonroof. To stop the moonroof in a midway position while opening or closing, momentarily press the switch to the ③ side or ④ side.

HomeLink® 5 Accessory Mirror (if equipped)

The HomeLink 5 accessory mirror provides three buttons to replace up to three hand-held radio frequency remotes used to activate devices such as garage door openers, gate openers, entry door locks, security systems and home lighting. Please see your Owner's Manual for programming instructions or visit **www.subaru.com/homelink** to view a how-to video.



Controls

Light Controls

Push forward to change from low beam to high beam. Pull the lever back to center to return to low beam.

Push up for right turn signal.

Turns on headlights, instrument panel illumination, parking lights, tail lights and license plate lights.

Push down for left turn signal.

Turns on fog lights (if equipped).

AUTO: The vehicle's lights are automatically on or off depending on the level of the outside light.

While the light switch is on, rotate the dial downward to dim the instrument panel illumination. Rotate the dial upward to make the illumination brighter. When the dial is fully rotated upward, the instrument panel illumination becomes full bright.

Windshield Wipers

To turn on the wipers, press the wiper control lever down one level for intermittent, two levels for low, or three levels for high speed. Return the lever to the "OFF" position to stop the wipers. For a single wipe, move the lever up. To spray washer fluid, pull and hold the lever toward you.

Rear Wiper (5-door only)

To operate the rear wiper, rotate the end of the knob upward to the intermittent, continuous, or wash position. When the rear wiper is off, rotate the knob downward to wash and wipe the rear window.

Daytime Running Lights

Daytime running lights are standard on your vehicle. Only a reduced brightness high beam will be automatically turned on when the engine has started, the parking brake is fully released and the light switch is in the "OFF" or "" position. The brightness of the illumination of the high beam headlights is reduced by the daytime running light system. You must always switch on your headlights when it is dark outside by turning the light switch to the "" position.

Controls

Manual Climate Control System

1. Air Flow Control Dial

The air flow control dial allows you to choose the direction of air flow. Rotate the dial for the desired air flow position.

Defrost/Defog

To clear the windshield and front door windows of fog or frost, rotate the air flow control dial to the defrost position, set the temperature control to the red position, and set the fan speed control to the fastest speed.

2. Rear Window Defogger Button

Press the rear window defogger button to turn on the defogger. The defogger will automatically shut off after about 15 minutes. If the window clears before that time, you can press the button again to turn it off. This button also turns the heated mirrors on and off, if equipped.

3. Fan Speed Control Dial

Rotate the fan speed control dial to select the desired fan speed.

4. Recirculated/Outside Air Button

Press the air inlet selection button to prevent outside air from being drawn into the passenger compartment. If the button is pushed in, press it again to draw outside air into the compartment. TO PREVENT WINDSHIELD FOGGING, DO NOT REMAIN IN THE RECIRCULATED MODE FOR AN EXTENDED PERIOD OF TIME.

5. Temperature Control Dial

Rotate the temperature control dial from blue for cool, to red for warm.

6. Air Conditioning Button

Press the “A/C” button to activate the air conditioning. Press it again to turn off the air conditioning.

Located in the multi-function display; top center of dash

Automatic Climate Control System (if equipped)

1. Automatic On and Off
This system automatically controls outlet air temperature, fan speed, air flow distribution, air inlet control, and air conditioner compressor operation. Press "AUTO" to activate. Press "OFF" to turn off the system.

2. Temperature Control Dial
Rotate the dial clockwise to increase the temperature or rotate the dial counterclockwise to decrease the temperature and maintain a comfortable climate within the driver and passenger compartment. The temperature is displayed digitally on the screen.

Operation in Manual Mode

3. Recirculated/Outside Air Button
Press the air inlet selection button to prevent outside air from being drawn into the passenger compartment. Press the button again to allow outside air into the compartment. TO PREVENT WINDSHIELD FOGGING, DO NOT REMAIN IN THE RECIRCULATED MODE FOR AN EXTENDED PERIOD OF TIME.

4. Fan Speed Control Knob
Rotate the fan speed control knob to select one of seven different fan speed positions.

5. Air Flow Mode Selection Dial
Turn the "MODE" dial to select the desired air flow mode. The selected air flow mode – either ventilation, bi-level, heat or heat-defrost – is shown on the display.

6. Air Conditioner Button
Press the "A/C" button to activate the air conditioning. Press it again to turn off the air conditioning.

7. Defroster Button
Press the button to defrost or dehumidify the windshield and front door windows.

8. Rear Window Defogger Button
Press the button to turn on the defogger. It will automatically shut off after about 15 minutes. If the window clears before that time, you can press the button again to turn it off.

9. Maximum Air Conditioner Button
For quicker cooling, press the "MAX A/C" button.

Controls

Steering Wheel Audio Controls (if equipped)

With any of the radio modes selected, press the left or right arrow button to skip through your presets. In CD mode, press the buttons to skip forward or back a track.

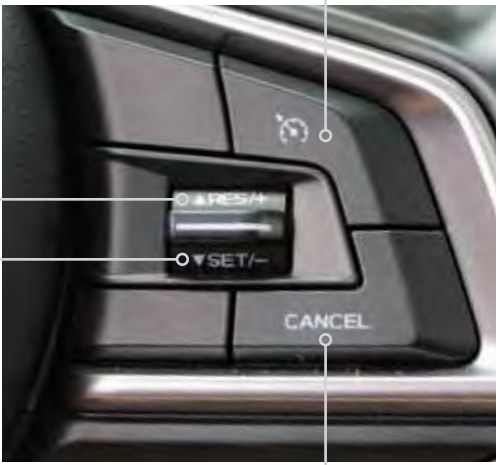
Push the switch up (+) to increase volume or down (–) to decrease volume.

Press the button to select the desired audio mode – FM, AM, SAT, CD, AUX, MEDIA.

Talk switch; please refer to the “Bluetooth audio” section in your Owner’s Manual.

USB Port

The USB port is located in the front of the center console. You can connect a portable music player to the USB port and hear the music stored on it through the vehicle speakers. Press the “SOURCE” button located on the audio system repeatedly until the USB mode is selected.



Auxiliary Input Jack

The 3.5mm auxiliary input jack is located in the front of the center console. You can connect a portable music player to the auxiliary jack and hear the music stored on it through the vehicle speakers. Press the “SOURCE” button located on the audio system to select the auxiliary mode.

Cruise Control

To activate the cruise control, press the "" button. The indicator light on the instrument panel will turn on. To deactivate cruise control, press the "" button again.

To resume your speed after canceling, push the switch to the "RES" side.

Press the accelerator pedal until your vehicle reaches the desired speed. Push the switch to the "SET" side and release. Ease off the accelerator pedal. Your vehicle will maintain the desired speed.

To cancel the cruise control, push the brake pedal or press the "CANCEL" button. If you have a manual transmission, you can push in the clutch pedal.

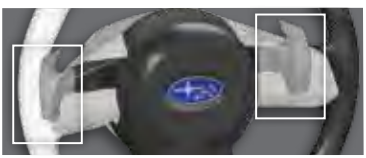
Increase Speed

Push up the "RES/SET" switch to the "RES" side; hold until your vehicle reaches the desired speed and release. To increase speed using the accelerator pedal, press the pedal until you reach the desired speed. Push down the "RES/SET" switch to the "SET" side to set the speed.

Decrease Speed

Push down the "RES/SET" switch to the "SET" side; hold until your vehicle slows to the desired speed and release. To decrease the speed using the brake pedal, press the pedal to release cruise control temporarily. When the speed decreases to the desired speed, push down the "RES/SET" switch to the "SET" side to set the speed.

While Operating



Instrument Panel Switches (lower left)

Please refer to your Owner's Manual for details on these switches.

1. **Steering Responsive Headlights OFF switch** (if equipped)
2. **Traction Mode / Vehicle Dynamics Control OFF switch**
3. **Blind Spot Detection / Rear Cross Traffic Alert OFF switch** (if equipped)

Paddle Shift Control Switches (if equipped)

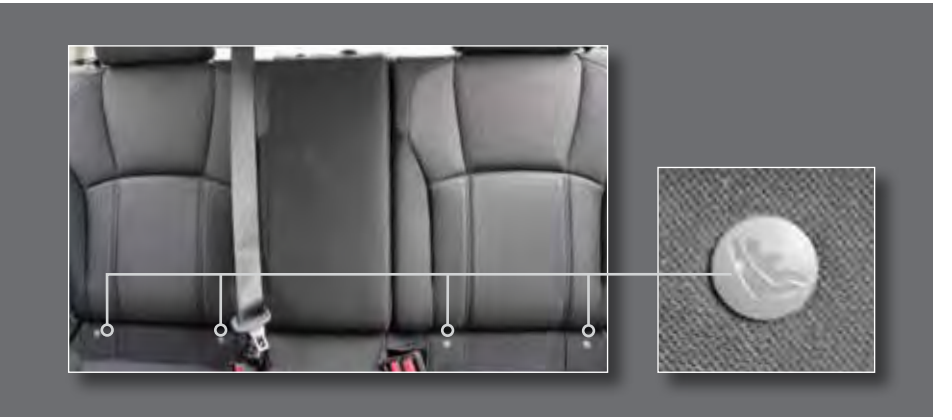
- Temporary use: Even when the selector is in the "D" (Drive) position, you can temporarily shift the gear by pulling the "+" or "–" paddle shift control switch. The transmission will automatically switch back to Normal Mode.
- When the selector lever is in Manual Mode, shift to the next higher gear by pulling the "+" paddle shift control switch on the steering wheel. Pull the "–" paddle shift control switch to shift into the next lower gear.

Manual Shifting Operation

- Arrow-shaped lights in the center of the instrument panel show whether an upshift is possible and whether a downshift is possible.

Automatic Transmission Shift Mode

The automatic transmission gives you ultimate control with two different driving modes: Normal Mode and Manual Mode.



Normal Mode

When the selector lever is in the “D” (Drive) position, the transmission is in Normal shift mode. The shift position indicator on the instrument panel shows “D” and the transmission automatically shifts into a suitable forward gear.

Manual Mode

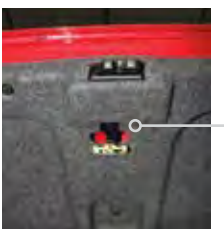
In Manual Mode, you select the desired gear position to obtain necessary acceleration and engine braking. Moving the selector lever left into the manual gate (1) from the “D” (Drive) position causes the transmission to change into Manual Mode. To shift, use the paddle shift control switches. The shift position indicator shows the selected gear position.

Safety/In Case of Emergency

Child Restraint System

For maximum safety, first carefully read the LATCH system instructions from the device manufacturer, as well as the installation instructions in your Owner's Manual, to properly install the LATCH compatible restraint system. Use the appropriate seatbelts or anchorages provided in your vehicle. Children age 12 and under must properly occupy the rear seat at all times.

Child Safety Locks



The child safety locks are located on the inside edges of the rear doors. In the locked position, the rear doors can only be opened from the outside.

Internal Child Safety Trunk Release with Self-Illuminating Handle (4-Door only)

In the event that children or adults become locked inside the trunk, this luminescent handle allows them to open the lid from inside the trunk. To open, simply pull the yellow handle downward as indicated by the arrow on the handle, and then push up on the lid.

4-Door:

5-Door:

Location of Spare Tire and Jack

A jack handle is stored under the floor of the trunk (4-door) or the cargo area (5-door). A jack and a towing hook are stored in the tool bucket in the center of the spare tire. Also, a tool bag that contains a wheel nut wrench and a screwdriver is equipped with the vehicle.

Emergency Towing Your All-Wheel Drive Vehicle

Since Subaru Symmetrical All-Wheel Drive distributes engine power to all four wheels, improper towing will severely damage your AWD system. A flatbed truck is the only recommended way to properly transport your AWD vehicle. If towing is necessary, it is best done by your Subaru retailer or a commercial towing service.

Subaru Roadside Assistance

Subaru Roadside Assistance is free and standard on every 2017 Subaru vehicle. Coverage is automatic; there are no forms to complete. Subaru Roadside Assistance is available anytime during the 3-year/36,000-mile Subaru Limited Warranty, whichever comes first.* A Subaru Roadside Assistance decal has been affixed to the driver's door window.

Subaru Roadside Assistance:
1-800-261-2155

Exclusions

Specifically excluded from Subaru Roadside Assistance coverage are service requests or claims resulting from: accidents, vandalism, acts of God, violation of any laws, misuse and abuse, or vehicle modifications not recommended by the manufacturer.

*See your retailer for details.

Additional Information

Fuel

Use regular unleaded gasoline with an octane rating of 87 AKI or higher. Consult the Owner's Manual for more detailed information.

Fuel Capacity

- 13.2 US gal (50 liters, 11.0 Imp gal)
- When the low fuel indicator light is displayed on the instrument panel, approximately 2 US gal (7.5 liters, 1.65 Imp gal) of fuel remain.
- If you have recently fueled your vehicle, the check engine light on the instrument panel may stay on due to a missing or loose fuel filler cap (the cap should be tightened until a click is heard).

Fuel Filler Lid Release

The fuel filler lid release is located on the floor to the left of the driver's seat. To open the fuel filler lid, pull the fuel filler lever up and release.

Engine Oil

Use only the following oils:

- ILSAC GF-5, which can be identified with the ILSAC certification mark (Starburst mark).
- Or API classification SN with the words “RESOURCE CONSERVING.”

  - Use 0W-20 synthetic, replacement intervals 6,000 miles under normal driving conditions. No requirement at the first 3,000 miles.

Engine Oil Capacity

- 4.7 US qt (4.4 liters, 3.9 Imp qt)

Engine Compartment

Please refer to your Owner's Manual for more information.

2.0i Engine

1. Brake Fluid Reservoir
2. Main Fuse Box
3. Battery
4. Windshield Washer Tank
5. Radiator Cap
6. Engine Oil Filler Cap
7. Engine Coolant Reservoir
8. Engine Oil Filter
9. Engine Oil Dipstick
10. Air Cleaner Element

PRECAUTION

PC

1. Precaution

CAUTION

Please clearly understand and adhere to the following general precautions for environmental protection and to avoid minor or serious injury to the person doing the work or people in the area.

1. VEHICLE DYNAMICS CONTROL (VDC)

Handle the VDC as a total system. Do not disassemble or attempt to repair individual parts. Follow the directions in this manual when performing maintenance on the VDCCM&H/U. When parts other than those specified are disassembled, it is possible that the VDC system will not operate when needed or cause it to operate incorrectly and result in injury.

2. BRAKE FLUID

If brake fluid gets in your eyes or on your skin, do the following:

- Wash eyes and seek immediate medical attention.
- Wash your skin with soap and then rinse thoroughly with water.

3. RADIATOR FAN

The radiator fan may rotate without warning, even when the engine is not ON. Do not place your hand, cloth, tools or other items near the fan at any time.

4. ACTIVE GRILLE SHUTTER

The active grille shutter may open and close without warning, even when the engine is not ON. Do not place your hand, cloth, tools or other items nearby at any time.
To prevent unexpected deployment, turn the ignition switch to OFF and disconnect the ground cable from battery, then wait at least 30 seconds before starting work. Also, wait at least 30 seconds before starting work after connecting the battery.

5. ROAD TEST

Always conduct road tests in accordance with traffic rules and regulations to avoid bodily injury and interrupting traffic.

6. AIRBAG

To prevent bodily injury from unexpected deployment of airbags and unnecessary maintenance, follow the instructions in this manual when performing maintenance on the airbag components and nearby, around front of the vehicle (radiator panel, front wheel apron, front side frame, front bumper, front hood panel, front fender panel), around side of the vehicle (front door panel, rear door panel, center pillar, rear fender panel, side sill, rear wheel apron), around rear of the vehicle (the rear seat cushion, rear floor pan, rear sub frame assembly) and the airbag wiring harnesses and nearby.
To prevent unexpected deployment, turn the ignition switch to OFF and disconnect the ground cable from battery, then wait at least 60 seconds to discharge electricity before starting work. Removing or installing the components or the connectors with the ignition switch ON will electrically impair them.

7. AIRBAG AND SEAT BELT PRETENSIONER DISPOSAL

To prevent bodily injury from unexpected airbag deployment, do not dispose the airbag modules or seat belt pretensioner in the same way as other waste. Follow all government regulations concerning disposal of refuse.

8. AIRBAG MODULE

Adhere to the following when handing and storing the airbag module to prevent bodily injury from unexpected deployment:

- Do not hold the harnesses or connectors to carry the module.
- Do not face the bag in the direction that it opens towards yourself or other people.
- Do not face the bag in the direction that it opens towards the floor or walls.

9. AIRBAG SPECIAL TOOL

To prevent unexpected deployment, always use special tools for the area where the operation with special tools are required.

10. WINDOW

Always wear protective goggles when working around any glass to prevent glass fragments from damaging your eyes.

11. WINDOW ADHESIVE

Always use the recommended or equivalent adhesive when attaching glass to prevent it from falling off, resulting in accidents and injury.

12. OIL

When handling oil, adhere to the following to prevent unexpected accident.

- Prepare a container and cloth to prevent scattering of oil when performing work where oil can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

13. FUEL

When handling and storing fuel, adhere to the following to prevent from unexpected accident.

- The fuel is flammable. Do not put it close to a fire or spark.
- Prepare a container and cloth to prevent scattering of fuels when performing work where fuels can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

14. ENGINE COOLANT

When handling engine coolant, adhere to the following to prevent from unexpected accident.

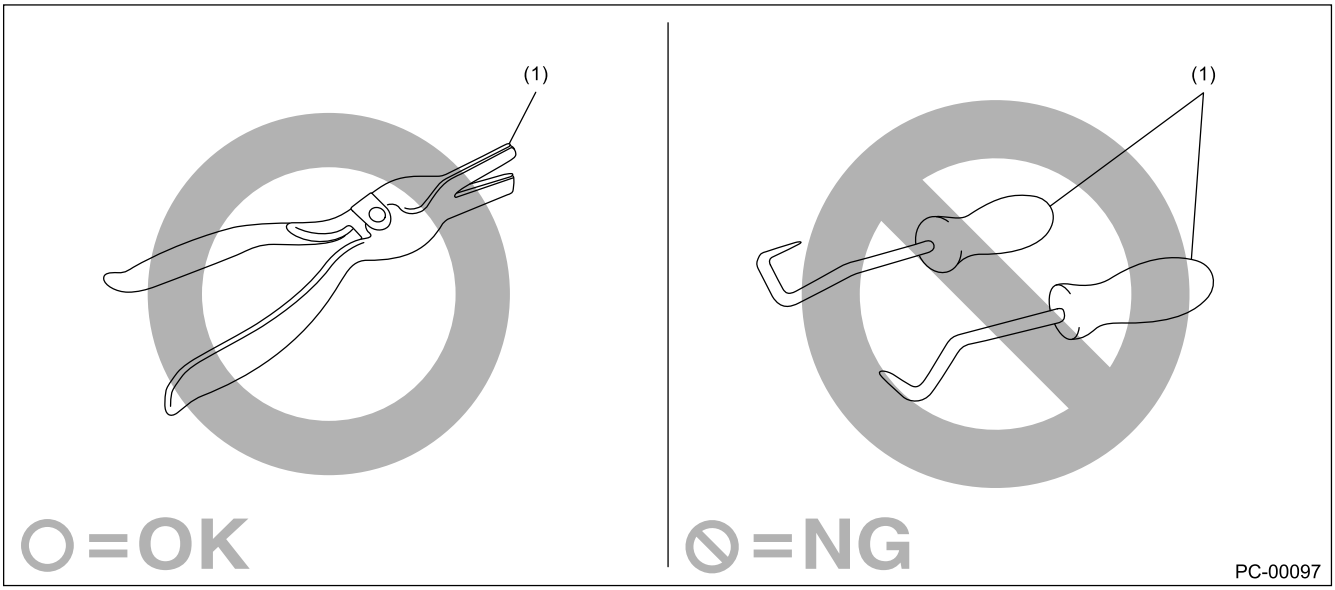
- Never remove the radiator cap since engine coolant may blow out when the engine is hot.
- Prepare a container and cloth to prevent scattering of engine coolant when performing work where engine coolant can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

15. AIR CONDITIONER REFRIGERANT

In order to prevent from global warming, avoid releasing air conditioner refrigerant into the atmosphere. Using a refrigerant recovery system, discharge and recycle it.

16. REMOVAL AND INSTALLATION OPERATION OF HOSES, ETC

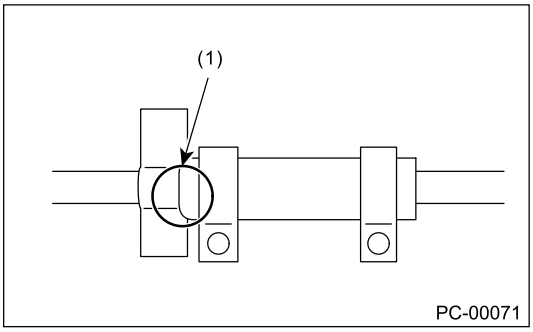
1. BEFORE THE REMOVAL AND INSTALLATION OPERATION OF HOSES, ETC.



- If you keep using the damaged or deformed hose, it results bleeds or leakage of the fat adheres or disconnection of the hose. Be careful not to spill fat adheres on exhaust pipes, etc. during

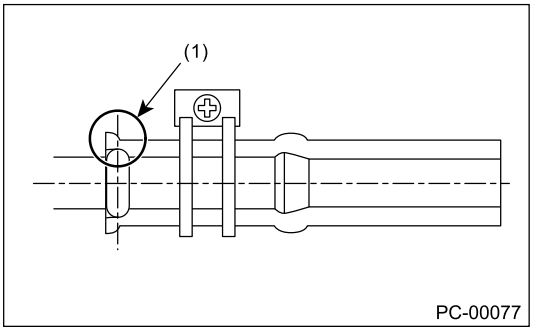
maintenance to prevent emitting smoke or causing fires.

- Perform the operation with the hose removed. If the operation is performed without removing the hose, it may damage inner surface of the hose.



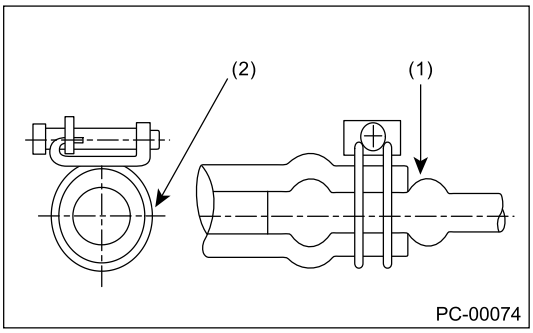
2. REMOVAL AND INSTALLATION OPERATION OF HOSES, ETC. DURING THE INSPECTION

- **Follow the instructions below when removing hose.**
  - When removing the hose, do not use a pointed hose remover (hose plucker). Inner portion of the hose can be damaged.

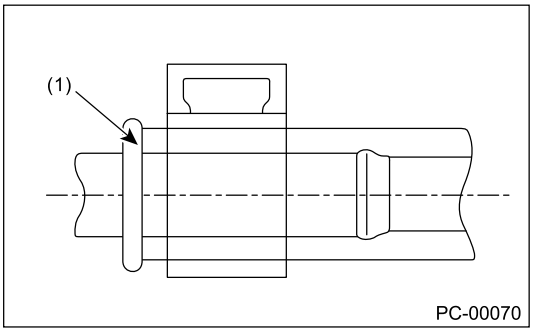


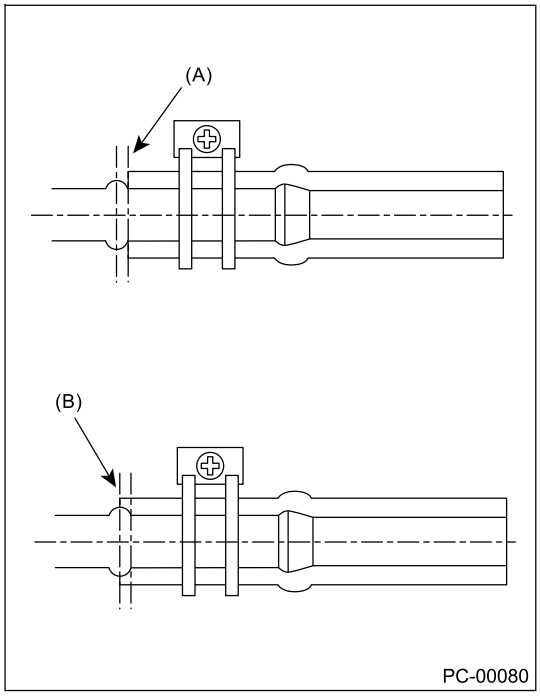
(1) Hose remover

  - When removing the hose using pliers, be sure to cover the hose with cloth and rotate the hose slightly to extract straight.
- **If you keep using the hose, perform the inspection below and replace the hose with a new part if faulty.**
  - Replace the hose with a new part if it rides over the stay or the top of spool.



(1) Hose rides over the stay





(1) Hose rides over the top of spool

- Check if the surface and the inner surface of the hose are damaged, cracked, bend, hardened, softened, swelled, peeled or deformed due to the adherence or the entry of the foreign matter by bending the hose. Replace with the new part if faulty.

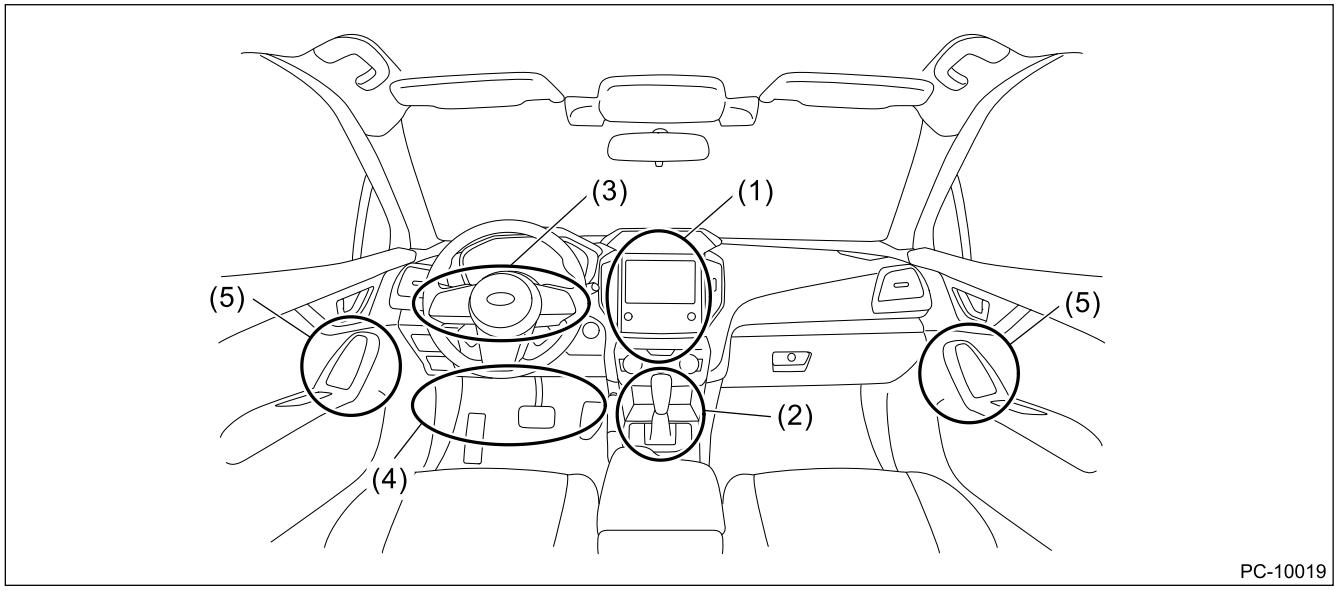
- **Follow the instructions below during installation.**
  - Check carefully for assembling position.
  - Never use lubricants.
  - Insert the hose to the specified position (stopper or spool) securely. (The hose should stop at the position between the spool top and root.)

(1) Push against the spool. (Insert the hose and prevent it from becoming wrinkled.)

(2) Tighten the hose cramp completely.

(A) OK position (bottom of spool)

(B) OK position (top of spool)



- Check if the position, direction and hose layout of the hose clamp are correct. (Check if the position, direction, length and the gap around are correct, or if it is different from the condition before the work)
- After the installation, check that the hose is installed securely and there is no leakage. (Check if it is fixed securely with the clamp)

- **For hose clips and hose clamps, perform the inspection below and replace them with a new part if faulty.**
  - Check for deformation, rust, damage or foreign matters.
  - For hose clip, check if it works and has clamping force.
  - For hose clamp, check if it can tighten screw, not ovalized or the screw is not damaged.
- **For hose pipes, perform the inspection below and replace with a new part if faulty.**
  Check if the pipe is not damaged, rusted, peeled (peeled plates included), covered with foreign matter, bent, compressed or cracked.
- **For the parts below, replaces with a new part when the hose is removed or the installation position is changed.**
  CVTF oil cooler hose, fuel hose (delivery) (except for those with quick connector)

17. HANDLING PRECAUTIONS FOR SILICON-CONTAINING SPRAY

When a silicon-containing lubricant is used, rust inhibitor or glazing agent adheres to the electrical contact of the relay or switch, which may produce silica dioxide (SiO_2). This may cause poor connection.

- Never spray directly to the electrical equipment.
- When using the spray close to the electrical equipment, always put the cover on it. Special care must be exercised especially when using the spray to the locations shown in the figure below and their surrounding areas.

(1) Audio, heater control switch
(2) Shift/select lever switch, parking switch
(3) Combination switch, steering switch, paddle shift switch
(4) Stop light switch, clutch switch, clutch start switch
(5) Power window switch

- If the residual silicon remains in the vicinity of the electrical equipment after the spray has been used, the vaporized silicon stands around the electrical equipment and it may adhere to electrical contact. After using the spray, be sure to wipe the silicon off with a cloth.

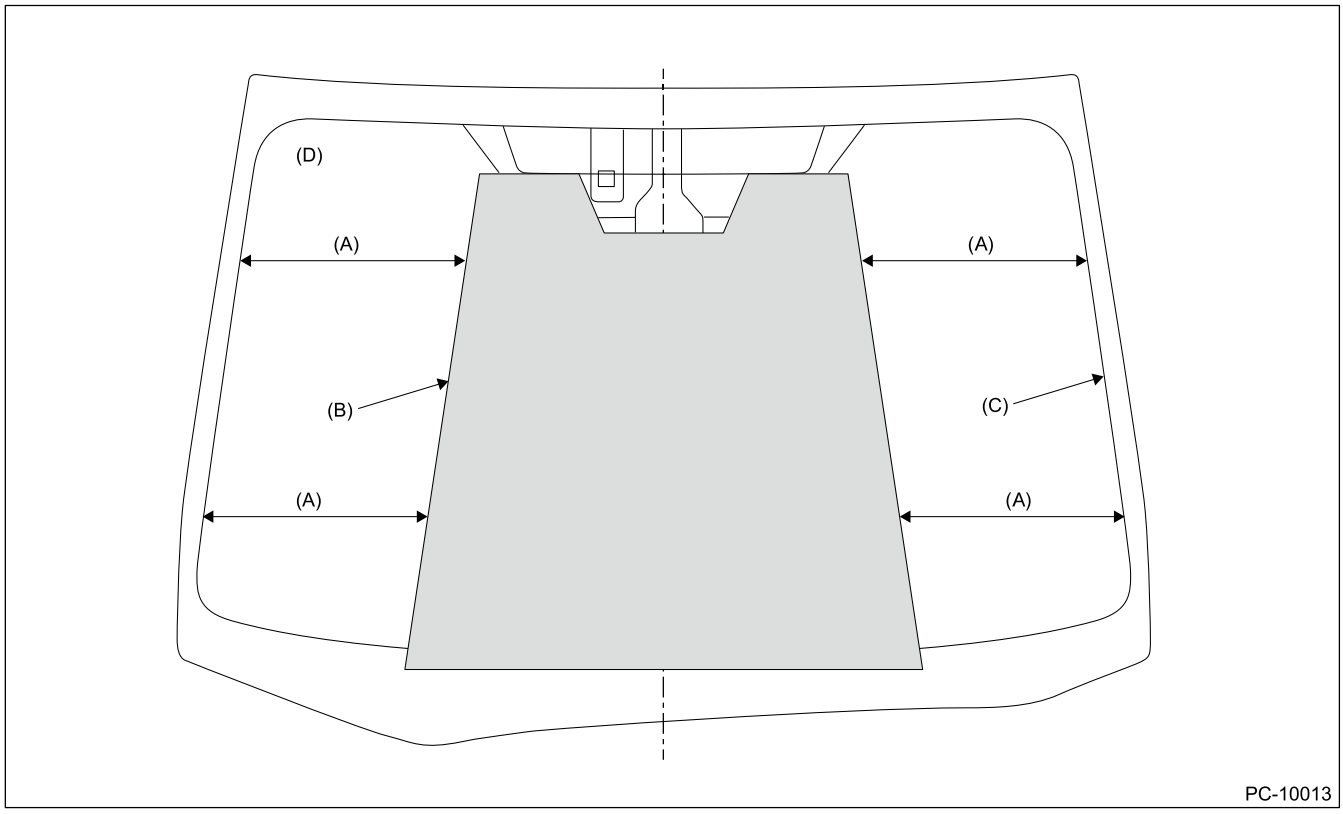
- Even when using the spray to the place away from the electrical equipment, the droplet of the spray may be splashed to the periphery. Use as small amount of spray as possible, and take care not to splash the silicon to the periphery.

Note:

The “silicon” used in this section refers to “silicone”, that is, silicon polymer.

18. CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EYESIGHT

1. PROHIBITED AREA FOR STICKER ATTACHMENT AND INSPECTION



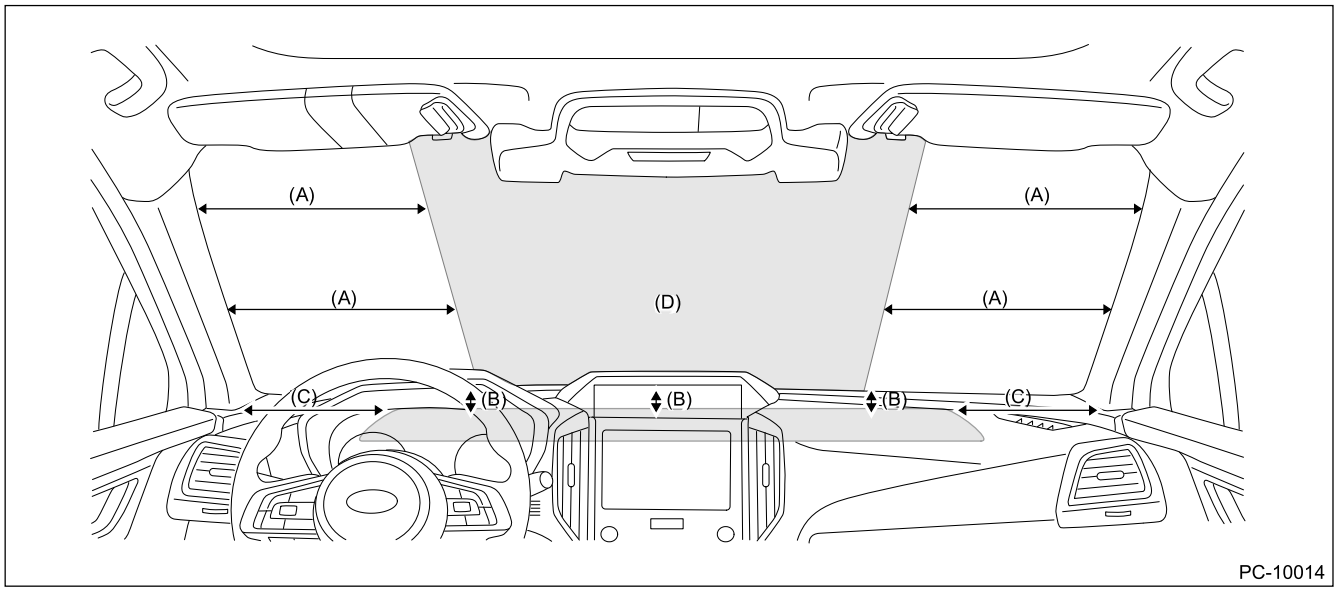
Do not attach stickers in the prohibited area on the windshield as follows. In addition, there must be no oil film, dirt or scratch in the prohibited area that obstructs the visibility of each stereo camera. Clean the windshield glass if oil film, dirt or fogging is found on the glass, and repair or replace if the windshield is scratched. The vehicle inspection label that is required to be attached on the windshield should be attached on the specified position. If stickers or windshield-related issues adversely affect the visibility of the camera, the functions of HBA and EyeSight may not work properly.

Note:

- **Clean the windshield glass if dirt or fogging is found on the glass. Repair or replace the glass if damage is found.**
- **Be careful not to leave scratch or anything else on the lens.**
- **Do not attach any foreign matter such as oil and fluid.**
- **When cleaning the inner side of the windshield glass, be careful not to touch the lens of the stereo camera. Take care so that the glass cleaner is not applied to the lens. Before starting the operation, cover the camera cover opening with dust-free paper such as copy paper to avoid interference with the camera lens, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. If touched, replace the stereo camera.**
- **When replacing the windshield glass, be sure to replace the part for the EyeSight.**
- **If the glass is removed or replaced, always perform the stereo camera adjustment and inspection.**

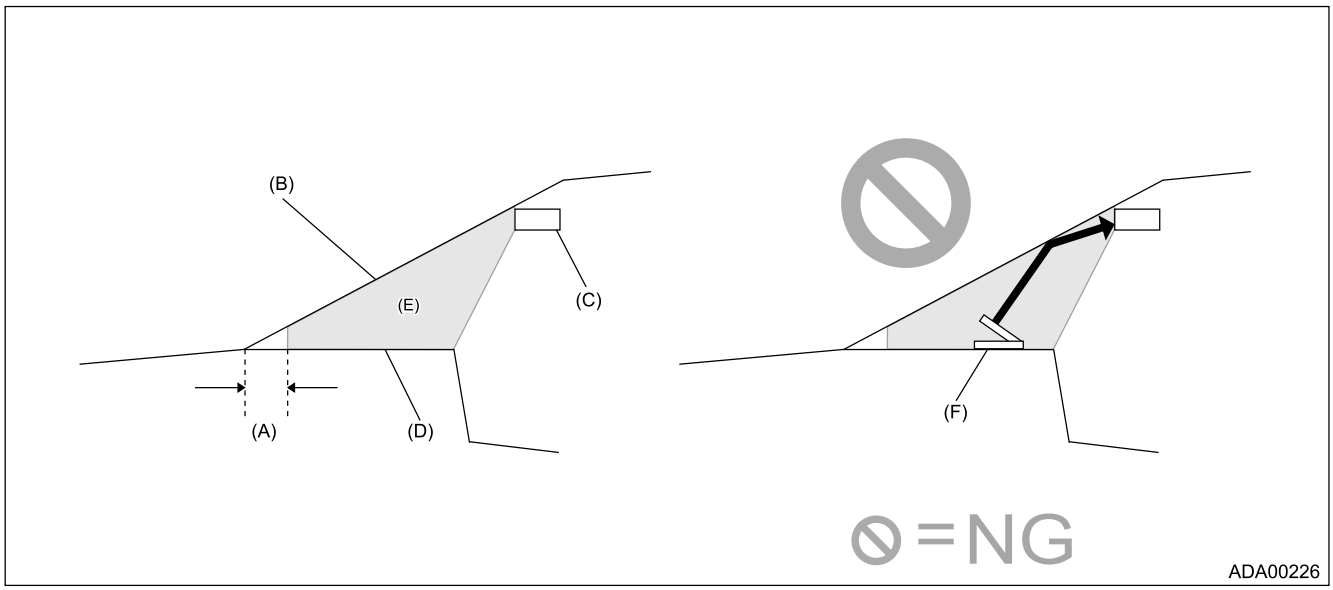
Prohibited area for model with EyeSight (including with HBA)

The illustration below shows from the passenger compartment.



(A) 335 mm (13.2 in)
(B) Prohibited area
(C) Ceramic line
(D) Vehicle inspection label

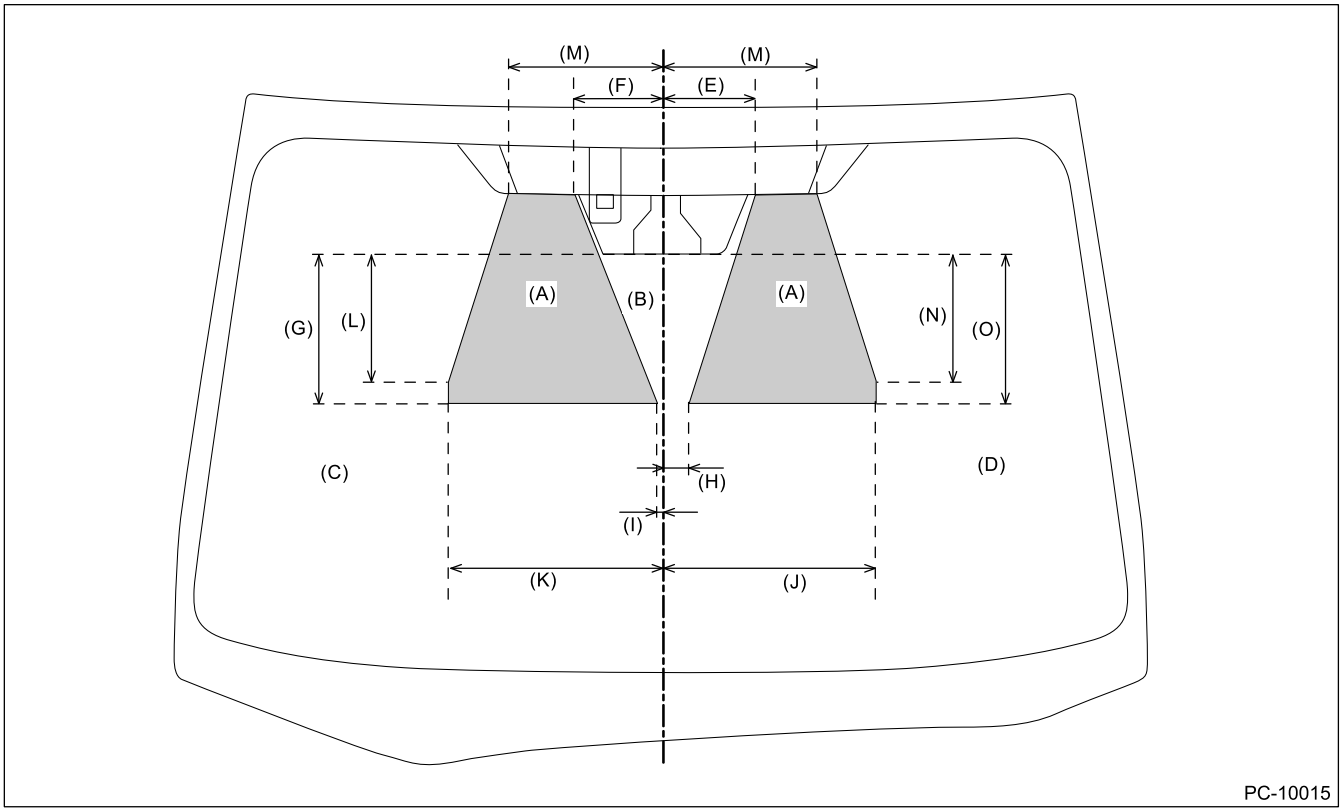
2. PROHIBITED AREA OF DASHBOARD AND INSPECTION



There must be no oil film, dirt, scratch or fogging that obstructs the forward visibility of the stereo camera. Do not stick or attach the aftermarket parts on the prohibited area (E) shown as follows. If abnormality of the function occurs due to light reflection or glass reflection, even though placed outside the prohibited area, change the attachment position or installation position. Attaching a sticker or antenna or installing a wide type mirror will affect the visibility of the stereo camera, causing the function not to operate correctly. In addition, placing a navigation system, ETC device or an object on the dashboard will cause reflection on the windshield glass, affecting the recognition of the stereo camera, thus causing the function not to operate correctly.

- Front view

(A) 335 mm (13.2 in)
(B) 139 mm (5.5 in)
(C) 243 mm (9.6 in)
(D) Prohibited area of windshield



- Side view

(A) 139 mm (5.5 in)
(B) Windshield glass
(C) Stereo camera cover
(D) Dashboard
(E) Prohibited area
(F) External monitor etc.

3. PROHIBITED AREA FOR REPAIR AND INSPECTION

The illustration below shows from the passenger compartment.
If the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

(A) Glass repair prohibited area
(F) 128.7 mm (5.1 in)
(K) 313.7 mm (12.4 in)

(B) Glass repairable area

(C) Glass repairable area (LH side)

(D) Glass repairable area (RH side)

(E) 133.8 mm (5.3 in)

(G) 226 mm (8.9 in)

(H) 38 mm (1.5 in)

(I) 6.7 mm (0.3 in)

(J) 311.7 mm (12.3 in)

(L) 192.8 mm (7.6 in)

(M) 225.3 mm (8.9 in)

(N) 193.3 mm (7.6 in)

(O) 225.5 mm (8.9 in)

FOREWORD

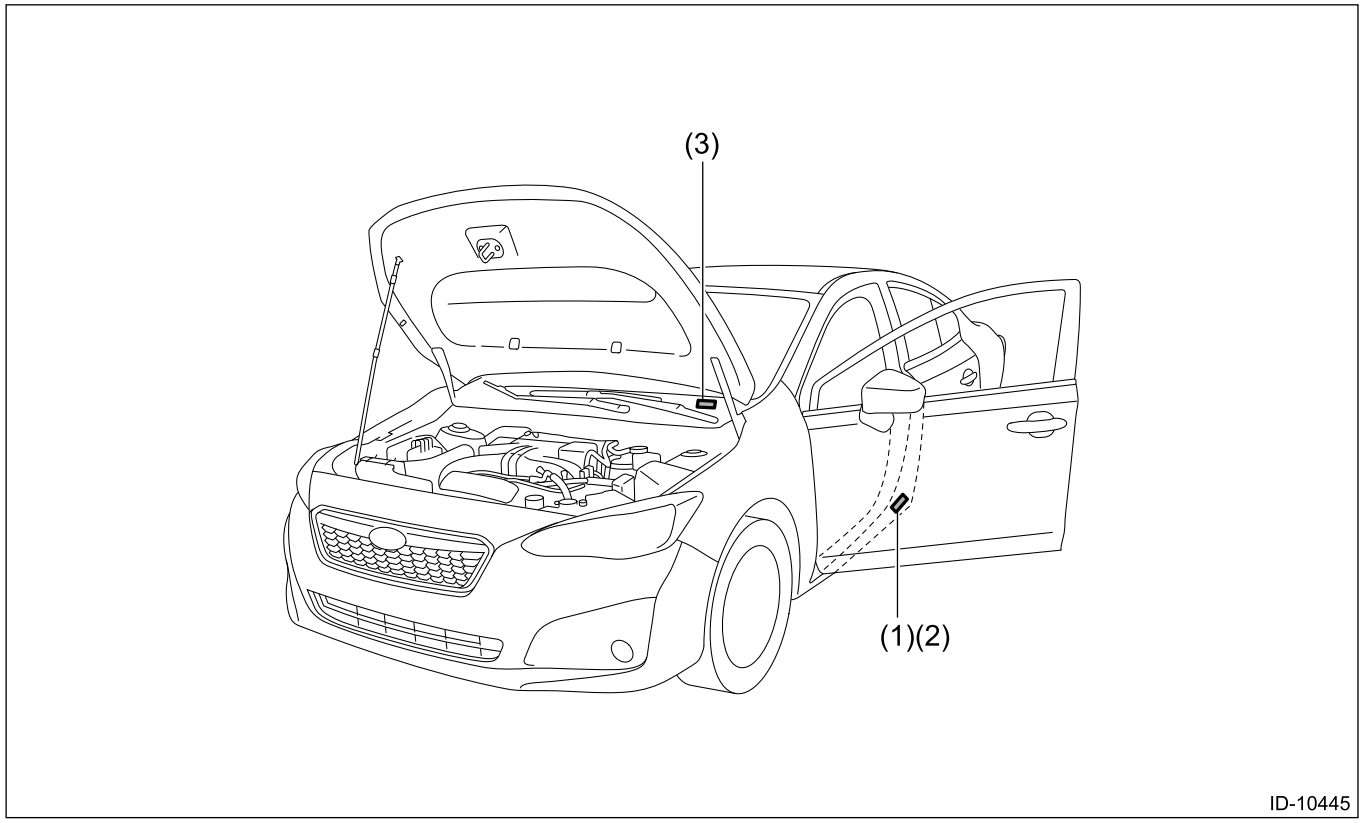
FW

1. Foreword

FOREWORD

These manuals are used when performing maintenance, repair or diagnosis of Subaru IMPREZA.
Applicable model:
2017 MY GK*****, GT*****
The manuals contain the latest information at the time of publication. Changes in the specifications, methods, etc. may be made without notice.
Refer to HELP for how to use this manual.

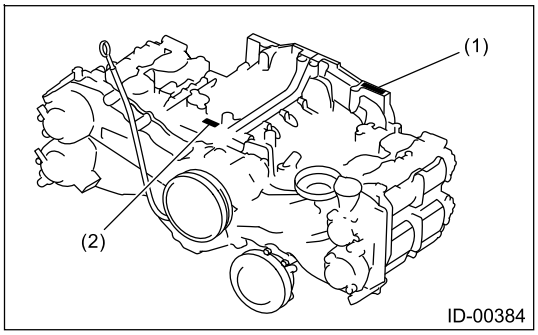
IDENTIFICATION



ID

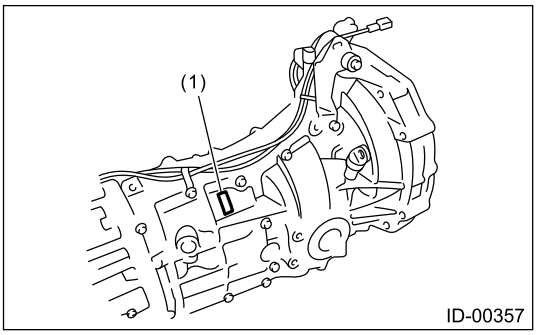
1. Identification

1. IDENTIFICATION NUMBER & LABEL LOCATIONS



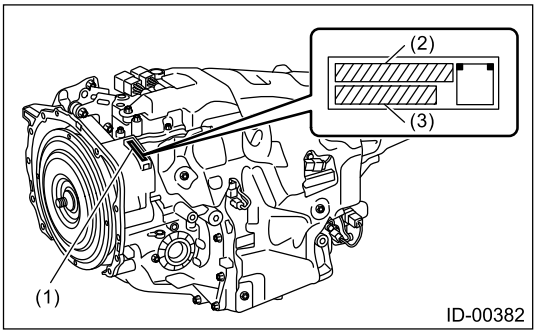
The V.I.N. (Vehicle Identification Numbers) is used to classify the vehicle.

- **Positioning of the label for identification**



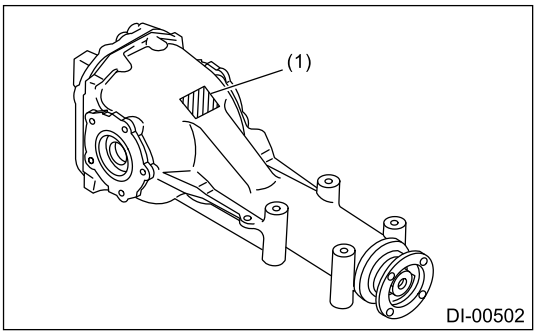
(1) FMVSS and CMVSS label (2) Model number label (attached to right side of vehicle) (3) VIN plate

- **Engine**



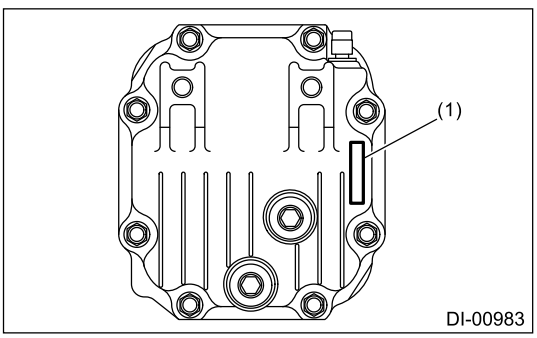
(1) Engine serial number (punch mark)
(2) Engine type (casting) crankcase upper side

- **Manual transmission**
  5MT



(1) MT type and transmission serial number label

- **Automatic transmission**
  CVT

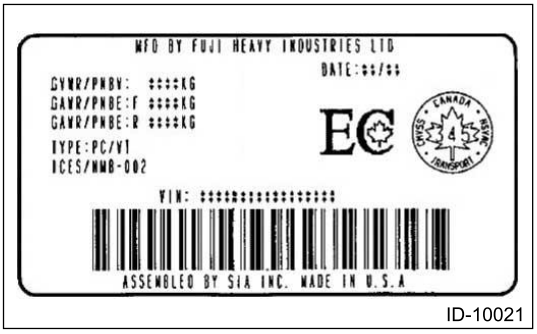


(1) Label
(2) CVT type label
(3) Transmission serial No. label

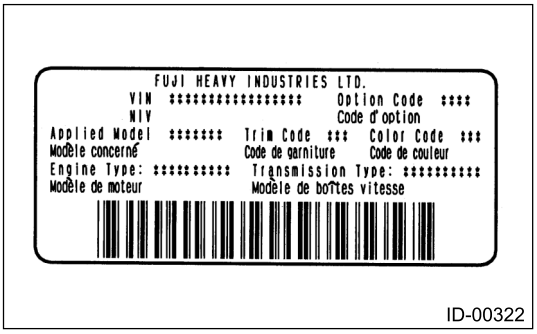
- **Rear differential**
  T-type

(1) Identification (white paint)

VA1-type



(1) Type (label)



- **FMVSS label**
  For U.S.A.

- **CMVSS label**
  For Canada

- **Model number label**

2. MEANING OF V.I.N

The meaning of the V.I.N. is as follows:

]4S3GKAK6XHG600001[

The starting and ending brackets ( ] [ ) are stop marks.

Digits	Code	Meaning	Details
1 — 3	4S3	Manufacturer body area	4S3: 4 door • 5 door for U.S., Canada
4	G	Car line	G: IMPREZA
5	K	Body type	K: 4 door T: 5 door
6	A	Displacement class	A: 2.0 L non-turbo

Digits	Code	Meaning	Details
7	K	Grade	A: Base B: Premium D: Premium +EyeSight +Blind Spot Detection E: Premium N F: Premium P +Blind Spot Detection G: Premium P +Navi +Blind Spot Detection H: Premium P +EyeSight +Blind Spot Detection J: Premium P +Navi +EyeSight +Blind Spot Detection K: Sport L: Sport +Harman/Kardon +Blind Spot Detection M: Sport +Harman/Kardon +EyeSight +Blind Spot Detection N: Limited P: Limited +Navi R: Limited +Blind Spot Detection S: Limited +Navi +Blind Spot Detection T: Limited +EyeSight +Blind Spot Detection U: Limited +Navi +EyeSight +Blind Spot Detection V: Limited N +Blind Spot Detection W: Limited N +Navi +Blind Spot Detection Y: Limited N +EyeSight +Blind Spot Detection Z: Limited N +Navi +EyeSight +Blind Spot Detection
8	6	Restraint	6: Manual belts, dual airbag, side airbag for seat back, curtain airbag for roof, driver’s knee airbag
9	X	Check digit	0 — 9 & X
10	H	Model year	H: 2017MY
11	G	Transmission type	1: Full-time AWD single range 5 speed MT 3: Full-time AWD CVT
12 — 17	600001	Serial number	600001 — 699999: 4 door 700001 — 899999: 5 door

3. MODEL NUMBER LABEL

The model number label indicates: the applied model, the option code, the trim code, the engine type, the transmission type, and the exterior color code. This information is helpful when placing orders for parts.

GK7AY1E

Digits	Code	Meaning	Details
1	G	Series	G: IMPREZA
2	K	Body type	K: 4 door T: 5 door
3	7	Total engine displacement / drive system	7: 2.0L AWD
4	A	Model year	A: 2017MY

Digits	Code	Meaning	Details
5	Y	Destination	Y: U.S., Canada and Mexico
6	1	Grade	1: 2.0i 2: 2.0 i-Premium 3: 2.0 i-NP 4: 2.0 i-Premium+ 5: 2.0 i-Sport 6: 2.0 i-Limited 7: 2.0 i-NL B: 2.0 i-Premium EyeSight D: 2.0 i-Premium+EyeSight E: 2.0 i-Limited EyeSight F: 2.0 i-NL EyeSight G: 2.0 Sport EyeSight
7	E	Fuel feed system / transmission	E: DI DOHC non-turbo single range 5MT L: DI DOHC non-turbo CVT

The engine and transmission type are as follows.

ENGINE

FB20DXZAKA

Digits	Code	Meaning	Details
1 and 2	FB	Engine type symbol	FB: 4 cylinder gasoline
3 and 4	20	Displacement	20: 2.0 L
5	D	Valve train/fuel supply system/steering	D: DOHC DI non-turbo (LH)
6	X	Exhaust regulations	X: U.S., Canada and Mexico
7	Z	Intake/exhaust system	Z: Intake AVCS, exhaust AVCS, TGV, EGR
8	A	Mounted transmission	A: 5MT H: CVT
9 and 10	KA	Detailed specifications	Used when ordering parts. For details, refer to the parts catalog.

TRANSMISSION (MT)

TY758VDJCA

Digits	Code	Meaning	Details
1	T	Transmission	T: Transmission
2	Y	Transmission system	Y: Full-time AWD MT center differential
3 and 4	75	Distance between gear center	75: Between main shaft and drive pinion
5	8	Classification	8: 5MT
6	V	Transmission basic specifications	V: Full-time AWD single range 5MT with viscous coupling center differential

Digits	Code	Meaning	Details
7	D	Mounted engine	D: 2.0 L DOHC non-turbo
8 — 10	JCA	Detailed specifications	Used when ordering parts. For details, refer to the parts catalog.

TRANSMISSION (CVT)

TR580GDJAB

Digits	Code	Meaning	Details
1	T	Transmission	T: Transmission
2	R	Transmission system	R: Full-time AWD CVT
3 and 4	58	Distance between pulley centers	58: Between pulley centers
5	0	Classification	0: CVT
6	G	Transmission specifications	G: Without Auto Start Stop, with CVTF cooler (with warmer feature), without CVTF cooler (air cooler)
7	D	Mounted engine	D: 2.0 L DOHC non-turbo
8 — 10	JAB	Detailed specifications	Used when ordering parts. For details, refer to the parts catalog.

REAR DIFFERENTIAL

Identification	Reduction gear ratio	LSD
42	3.700	None
T2	4.111	None

4. IMMOBILIZER REGISTRATION TYPE

- Model without keyless access with push button start
  Refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
- Model with keyless access with push button start
  Refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

PERIODIC MAINTENANCE SERVICES

PM

1. General Description
2. Schedule
3. Engine Oil
4. Engine Oil Filter
5. Spark Plug
6. V-belt
7. Fuel Line
8. Fuel Filter
9. Air Cleaner Element
10. Cooling System
11. Engine Coolant
12. Clutch System
13. Transmission Gear Oil
14. CVTF
15. Front & Rear Differential Gear Oil
16. Brake Line
17. Brake Fluid
18. Disc Brake Pad and Disc
19. Parking Brake
20. Suspension
21. Wheel Bearing
22. Axle Boots & Joints
23. Tire Inspection and Rotation
24. Steering System (Power Steering)
25. A/C Filter

GENERAL DESCRIPTION

Be sure to perform periodic maintenance in order to maintain vehicle performance and find problems before they occur.

MAINTENANCE SCHEDULE

1. MODEL WITH US SPECIFICATION

Maintenance item		Maintenance interval [Number of months or km (miles), whichever occurs first]													
	Months	3	6	12	18	24	30	36	42	48	54	60	66	To be continued to the next table.	Remarks
	×1,000 km	4.8	9.6	19.2	28.8	38.4	48	57.6	67.2	76.8	86.4	96	105.6		
	×1,000miles	3	6	12	18	24	30	36	42	48	54	60	66		
1	Engine oil		R	R	R	R	R	R	R	R	R	R	R		Note 1.
2	Engine oil filter		R	R	R	R	R	R	R	R	R	R	R		Note 1.
3	Spark plug											R			
4	V-belt						I					I			
5	Fuel line						I					I			Note 4. Note 5.
6	Fuel filter														Note 2. Note 5.
7	Air cleaner element						R					R			Note 6.
8	Cooling system						I					I			Note 8.
9	Engine coolant	Replace after the first 11 years or 220,000 km (137,500 miles), and every six years or 120,000 km (75,000 miles) thereafter													Note 8.
10	Clutch system			I		I		I		I		I			
11	Transmission gear oil						I					I			
12	CVTF						I					I			
13	Front & rear differential gear oil						I					I			
14	Brake line			I		I		I		I		I			Note 4.

Maintenance item		Maintenance interval [Number of months or km (miles), whichever occurs first]													
15	Brake fluid / clutch fluid (MT model only)						R					R			Note 3.
16	Disc brake pad and disc			I		I		I		I		I			Note 4.
17	Parking brake			I		I		I		I		I			Note 4.
18	Suspension			I		I		I		I		I			Note 4.
19	Wheel bearing											I			
20	Axle boots and joints			I		I		I		I		I			Note 4.
21	Tire rotation		P	P	P	P	P	P	P	P	P	P	P		Note 7.
22	Steering system (Power steering)			I		I		I		I		I			Note 4.
23	A/C filter	Replace every 12 months or 19,200 km (12,000 miles)													Note 6.

Maintenance item		Maintenance interval [Number of months or km (miles), whichever occurs first]												
	Months	Continued from previous table	72	78	84	90	96	102	108	114	120	126	132	Remarks
	×1,000 km		115.2	124.8	134.4	144	153.6	163.2	172.8	182.4	192	201.6	211.2	
	×1,000miles		72	78	84	90	96	102	108	114	120	126	132	
1	Engine oil		R	R	R	R	R	R	R	R	R	R	R	Note 1.
2	Engine oil filter		R	R	R	R	R	R	R	R	R	R	R	Note 1.

4	V-belt					I					I			
5	Fuel line					I					I			Note 4. Note 5.
6	Fuel filter		R											Note 2. Note 5.
7	Air cleaner element					R					R			Note 6.
8	Cooling system					I					I			Note 8.
9	Engine coolant	Replace after the first 11 years or 220,000 km (137,500 miles), and every six years or 120,000 km (75,000 miles) thereafter												Note 8.
10	Clutch system		I		I		I		I		I		I	
11	Transmission gear oil					I					I			
12	CVTF					I					I			
13	Front & rear differential gear oil					I					I			
14	Brake line		I		I		I		I		I		I	Note 4.
15	Brake fluid / clutch fluid (MT model only)					R					R			Note 3.
16	Disc brake pad and disc		I		I		I		I		I		I	Note 4.
17	Parking brake		I		I		I		I		I		I	Note 4.

Maintenance item		Maintenance interval [Number of months or km (miles), whichever occurs first]												
18	Suspension		I		I		I		I		I		I	Note 4.
19	Wheel bearing										I			
20	Axle boots and joints		I		I		I		I		I		I	Note 4.
21	Tire rotation		P	P	P	P	P	P	P	P	P	P	P	Note 7.
22	Steering system (Power steering)		I		I		I		I		I		I	Note 4.
23	A/C filter	Replace every 12 months or 19,200 km (12,000 miles)												Note 6.

Symbol

R: Replace

I: Inspection

P: Perform

Note:

1. **When the vehicle is used under severe conditions, replace the engine oil and engine oil filter every 3 months or 4,800 km (3,000 miles).**
2. **When the vehicle is used under extremely low or high temperature conditions, the fuel filter may become dirty. Therefore, it should be replaced frequently.**
3. **When the vehicle is used in high humidity area or mountain area, replace the brake fluid every 15 months or 24,000 km (15,000 miles).**
4. **When the vehicle is used under severe conditions, check every 6 months or 9,600 km (6,000 miles).**
5. **This inspection is not required to maintain emission warranty eligibility and it does not affect the manufacturer's obligations under EPA's in-use compliance program.**
6. **When the vehicle is used under extremely dusty conditions, the air cleaner element and A/C filter should be replaced more often.**
7. **A tire should be replaced when the tread wear indicator appears as a solid band across the tread. The indicators appear when the remaining tread has been worn to 1.6 mm (0.063 in) or less.**
8. **To prevent cooling system leakage, be sure to add SUBARU genuine cooling system conditioner when replacing coolant.**

EXAMPLES OF SEVERE CONDITIONS

a. Drive repeatedly at short distance. (Maintenance items 1 and 2)
b. Drive repeatedly on bumpy muddy road. (Maintenance items 14, 15 and 17)
c. Drive repeatedly in dusty conditions. (Maintenance items 7 and 23)
d. Drive in extremely cold weather. (Maintenance items 1, 2, 16, 18, 20 and 22)
e. Area where salt or other corrosive used. (Maintenance items 5, 14, 15, 16, 17 and 20)
f. Coastal area. (Maintenance item 5)

PERIODIC MAINTENANCE SERVICES > Engine Oil

INSPECTION

Refer to “LUBRICATION (H4DO)” section for engine oil inspection. Ref. to LUBRICATION(H4DO)>Engine Oil>INSPECTION.

PERIODIC MAINTENANCE SERVICES > Engine Oil

REPLACEMENT

Refer to “LUBRICATION (H4DO)” section for engine oil replacement. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.

REPLACEMENT

Refer to “LUBRICATION (H4DO)” section for engine oil filter replacement. Ref. to LUBRICATION(H4DO)>Oil Filter.

REPLACEMENT

Refer to “IGNITION (H4DO)” section for spark plug replacement. Ref. to IGNITION(H4DO)>Spark Plug.

PERIODIC MAINTENANCE SERVICES > V-belt

INSPECTION

Refer to “MECHANICAL (H4DO)” section for V-belt inspection. Ref. to MECHANICAL(H4DO)>V-belt>INSPECTION.

PERIODIC MAINTENANCE SERVICES > V-belt

REPLACEMENT

Refer to “MECHANICAL (H4DO)” section for V-belt replacement. Ref. to MECHANICAL(H4DO)>V-belt.

INSPECTION

The fuel line is located mostly internally, so check pipes, areas near pipes, and engine compartment piping for rust, hose and tube damage, loose band, etc. If faulty parts are found, repair or replace them. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSPECTION.

PERIODIC MAINTENANCE SERVICES > Fuel Filter

REPLACEMENT

For fuel filter replacement procedure, refer to “FUEL INJECTION (FUEL SYSTEMS) (H4DO)”. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Filter.

PERIODIC MAINTENANCE SERVICES > Fuel Filter

INSPECTION

If the filter is clogged, or if the replacement interval has been reached, replace it.

REPLACEMENT

Refer to “INTAKE (INDUCTION) (H4DO)” section for air cleaner element replacement. Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner Element.

INSPECTION

1. RADIATOR

Check that there are no engine coolant leaks from the hose connections. Refer to “COOLING (H4DO)” section for radiator inspection. Ref. to COOLING(H4DO)>Radiator>INSPECTION.

2. RADIATOR CAP

Refer to “COOLING (H4DO)” section for radiator cap inspection. Ref. to COOLING(H4DO)>Radiator Cap>INSPECTION.

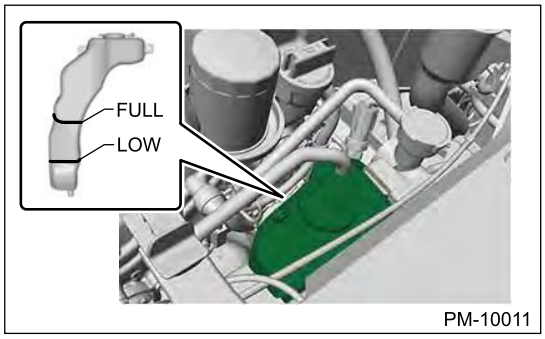
3. COOLING FAN

Refer to “COOLING (H4DO)” section for cooling fan inspection. Ref. to COOLING(H4DO)>Radiator Fan System>INSPECTION.

4. COOLING SYSTEM

Start the engine, and then inspect that it does not overheat or it is not cooled excessively. If it overheats or it is cooled excessively, check the cooling system.

INSPECTION



Caution:

- **Do not use water instead of coolant.**
- **Refer to "RECOMMENDED MATERIALS" section for recommended engine coolant.** **Ref. to RECOMMENDED MATERIALS > ENGINE COOLANT.**

1. Park the vehicle on a level surface.
2. Make sure the engine coolant level in the reservoir tank is between "FULL" and "LOW" when the engine is cold.

   Note:

   If the engine coolant level drops, make sure that there are no engine coolant leakage, and add engine coolant to the "FULL" line.

3. Remove the radiator cap and make sure that the radiator is filled with engine coolant up to the filler neck position.

REPLACEMENT

Refer to "COOLING (H4DO)" section for engine coolant replacement. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT.

INSPECTION AND ADJUSTMENT

Refer to “CLUTCH SYSTEM” section for inspection and adjustment of clutch system. Ref. to CLUTCH SYSTEM>Clutch Pedal>INSPECTION. Ref. to CLUTCH SYSTEM>Clutch Pedal>ADJUSTMENT.

PERIODIC MAINTENANCE SERVICES > Transmission Gear Oil

INSPECTION

For transmission gear oil inspection, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL (5MT)” section. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil>INSPECTION.

PERIODIC MAINTENANCE SERVICES > Transmission Gear Oil

REPLACEMENT

For transmission gear oil replacement, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL (5MT)” section. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil>REPLACEMENT.

PERIODIC MAINTENANCE SERVICES > CVTF

INSPECTION

For CVTF inspection, refer to “CONTINUOUSLY VARIABLE TRANSMISSION (TR580)” section. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>INSPECTION.

PERIODIC MAINTENANCE SERVICES > CVTF

REPLACEMENT

For CVTF replacement, refer to “CONTINUOUSLY VARIABLE TRANSMISSION (TR580)” section. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>REPLACEMENT.

INSPECTION

1. FRONT DIFFERENTIAL (MT model)

Front differential gear oil of MT model lubricates the transmission and differential together. For inspection, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL (5MT)” section. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil>INSPECTION.

2. FRONT DIFFERENTIAL (CVT MODEL)

For inspection of CVT model front differential gear oil, refer to “CONTINUOUSLY VARIABLE TRANSMISSION (TR580)” section. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Gear Oil>INSPECTION.

3. REAR DIFFERENTIAL

Refer to “DIFFERENTIALS” section for rear differential gear oil inspection. Ref. to DIFFERENTIALS>Differential Gear Oil>INSPECTION.

REPLACEMENT

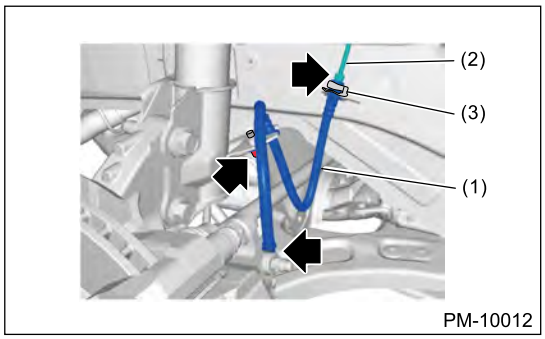
1. FRONT DIFFERENTIAL (MT model)

Front differential gear oil of MT model lubricates the transmission and differential together. For replacement, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL (5MT)” section. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil>REPLACEMENT.

2. FRONT DIFFERENTIAL (CVT MODEL)

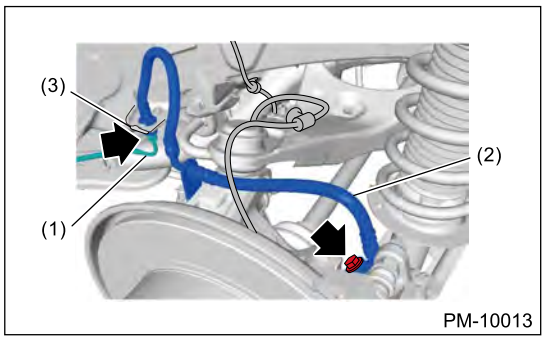
For replacement of front differential gear oil, refer to “CONTINUOUSLY VARIABLE TRANSMISSION (TR580)” section. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Gear Oil>REPLACEMENT.

3. REAR DIFFERENTIAL



Refer to “DIFFERENTIALS” section for rear differential gear oil replacement. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.

INSPECTION



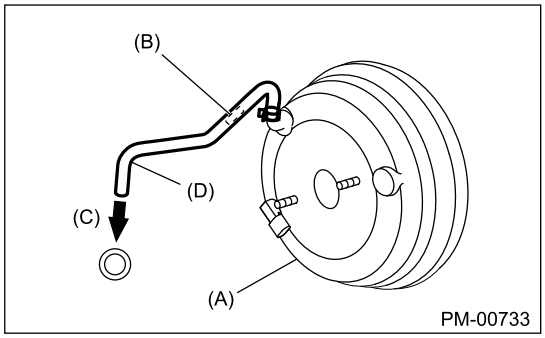
1. BRAKE LINE

1. Check for scratches, swelling, corrosion, traces of fluid leakage on the brake hoses or pipe joints.
2. Make sure that brake pipes/hoses do not interfere with adjacent parts and there is no loose connector/clamp during driving.
3. Check any trace of fluid leakage, scratches, etc. on master cylinder, wheel cylinder and hydraulic unit.

   Note:
   - **When the brake fluid level in the reservoir tank is lower than specified limit, the brake warning light on the combination meter will illuminate.**
   - **Visually check the brake hose for damage. (Use a mirror where it is difficult to see)**

(1) Front brake hose
(2) Front brake pipe
(3) Clamp

(1) Brake pipe
(2) Rear brake hose
(3) Clamp



2. SERVICE BRAKE

Refer to "BRAKE" section for foot brake inspection. Ref. to BRAKE>Brake Pedal>INSPECTION.

3. BRAKE SERVO SYSTEM

1. With the engine off, depress the brake pedal several times applying the same pedal force. Check that the travel distance should not change.
2. With the brake pedal depressed, start the engine. Check that the pedal moves slightly toward the floor.

3. With the brake pedal depressed, stop the engine and keep the pedal depressed for 30 seconds. Check that the pedal height does not change.
4. A check valve is built into the brake booster nipple. Disconnect the vacuum hose to inspect function of check valve.
   Check that check valve ventilates from booster side to engine side. Also, check that there is no ventilation from engine side to booster side.

(A) Brake booster
(B) Check valve
(C) Engine side
(D) Vacuum hose

5. Check the vacuum hose for cracks or other damage.
   Caution:
   When installing the vacuum hose on the engine and brake booster, do not use soapy water or lubricating oil on their connections.
6. Check that the vacuum hose is securely tightened.

PERIODIC MAINTENANCE SERVICES > Brake Fluid

INSPECTION

Refer to “BRAKE” section for brake fluid inspection. Ref. to BRAKE>Brake Fluid>INSPECTION.

PERIODIC MAINTENANCE SERVICES > Brake Fluid

REPLACEMENT

Refer to “BRAKE” section for brake fluid replacement. Ref. to BRAKE>Brake Fluid>REPLACEMENT.

INSPECTION

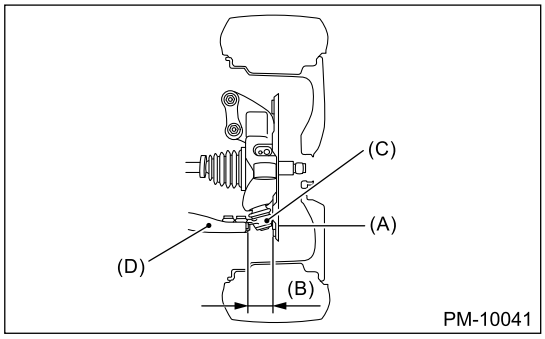
Refer to “BRAKE” section for disc brake pad and disc inspection. Ref. to BRAKE>Front Brake Pad>INSPECTION. Ref. to BRAKE>Rear Brake Pad>INSPECTION. Ref. to BRAKE>Front Disc Rotor>INSPECTION. Ref. to BRAKE>Rear Disc Rotor>INSPECTION.

PERIODIC MAINTENANCE SERVICES > Parking Brake

INSPECTION

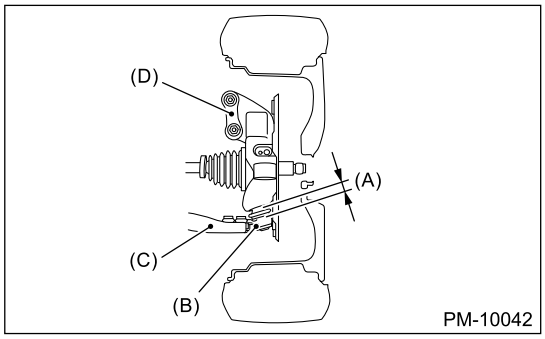
Refer to “PARKING BRAKE” for parking brake inspection. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>INSPECTION.

PERIODIC MAINTENANCE SERVICES > Parking Brake



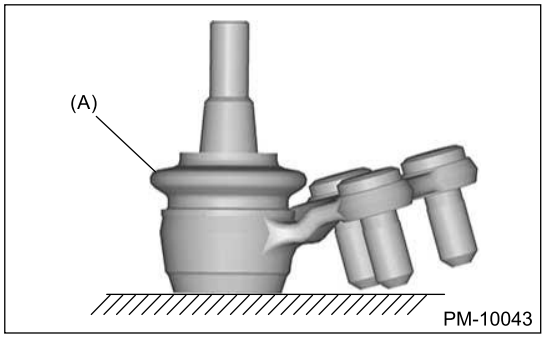
ADJUSTMENT

Refer to “PARKING BRAKE” for parking brake adjustment. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT.



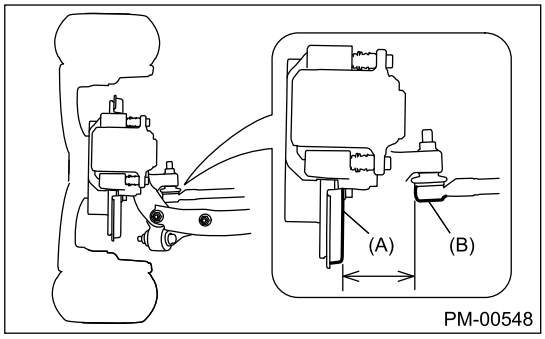
INSPECTION

1. FRONT SUSPENSION BALL JOINT

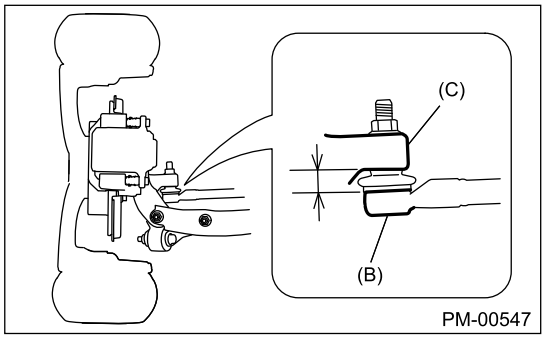


1. Lift up the vehicle until front wheels are off ground.
2. Grasp the bottom of tire and move it in and out in axial direction. If movement (B) is observed between the brake disc cover (A) and end of front arm (D), ball joint (C) may be excessively worn.

3. Next, grasp the end of front arm (C) and move it up and down. If movement (A) between the housing (D) and front arm (C) boss is observed, ball joint (B) may be excessively worn.

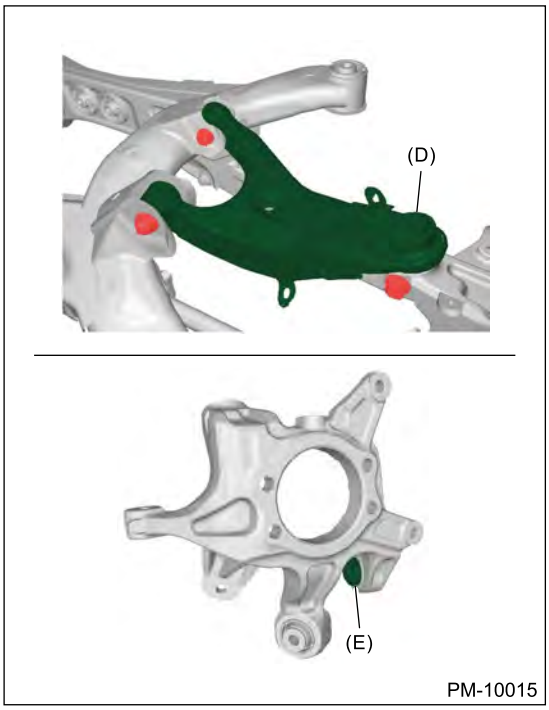


4. If the relative movement is observed in the preceding two steps, remove and inspect the ball joint. If the free play exceeds standard value, replace the ball joint. Ref. to FRONT SUSPENSION>Ball Joint.
5. Damage of dust boots
   Visually inspect the ball joint dust boots. Replace if ball joint is damaged.
   Note:
   When the front arm ball joint is removed or replaced, check the toe-in of front wheel. If it is not within the specified value, adjust the toe-in. Ref. to FRONT SUSPENSION>Wheel Alignment.



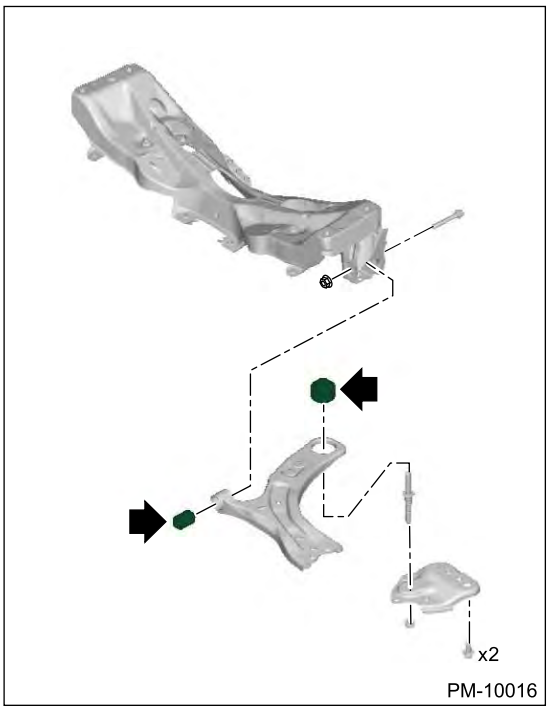
(A) Dust boots

2. REAR SUSPENSION BALL JOINT

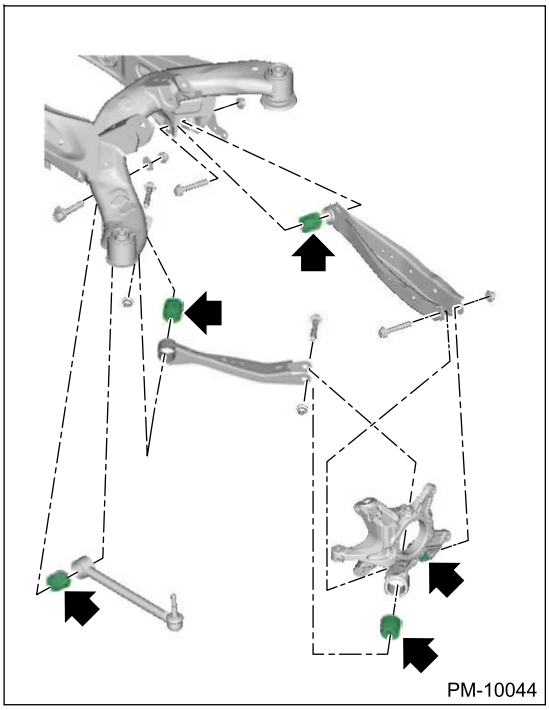


1. Lift up the vehicle until rear wheels are off ground.
2. Grasp the bottom of tire and move it in and out in axial direction.
3. If movement is observed between the brake disc cover (A) and end of rear lateral link assembly - front (B), ball joint may be excessively worn.

4. Grasp the end of rear lateral link assembly - front (B) and move it up and down. If movement is observed between the housing (C) and rear lateral link assembly - front (B) boss, ball joint may be excessively worn.



5. If the movement related to the previous two steps is observed, replace the rear lateral link assembly - front. Ref. to REAR SUSPENSION>Rear Lateral Link (front).
6. Damage of dust boots
   Visually inspect the ball joint dust boots. Replace if rear lateral link assembly - front is damaged.
7. Check the upper arm ball joint (D) and the pillow ball bushing (E) of housing in the same manner.



3. FRONT, REAR SUSPENSION BUSHING

Apply pressure with tire lever etc, and inspect the bushing for excessive wear or damage. If defective, replace the bushing.

- Front suspension bushing

- Rear suspension bushing

4. SUSPENSION HEIGHT

Refer to “FRONT SUSPENSION” section for suspension height inspection. Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > SUSPENSION HEIGHT.

5. WHEEL ALIGNMENT

Measure and adjust the front and rear wheel alignment at a time. Refer to “Front Suspension” section for measurement and adjustment of wheel alignment. Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.

6. OIL LEAKAGE OF STRUT AND SHOCK ABSORBER

Visually inspect the front strut and rear shock absorber for oil leakage. Replace the front strut and rear shock absorber if oil leaks excessively.

7. TIGHTNESS OF BOLTS AND NUTS

Check the bolts and nuts for looseness. Retighten the bolts and nuts to specified torque. If the self-locking nuts and bolts are removed, replace them with new parts. Ref. to FRONT SUSPENSION>General Description. Ref. to REAR SUSPENSION>General Description.

8. DAMAGE TO SUSPENSION PARTS

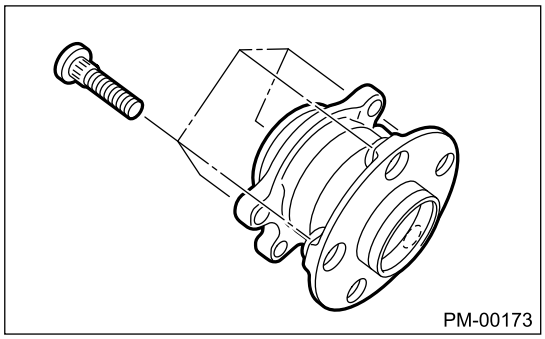
Check the following parts and the fastening portion of the vehicle body for deformation or excessive rusting which impairs the suspension. Thoroughly remove the deposits of the lower spring seat of strut where dust or mud are likely piled up. If necessary, replace the damaged parts with new parts. If minor rust formation, pitting, etc. are noted, remove the rust and take rust prevention measure.

- Front suspension
  - Front arm
  - Crossmember
  - Strut
- Rear suspension
  - Sub frame

  - Rear lateral link assembly - front
  - Rear lateral link
  - Upper arm
  - Trailing link
  - Shock absorber
- In the area where salt is sprayed to melt snow on a road in winter, check suspension parts for damage caused by rust every 12 months after lapse of 60 months. Take rust prevention measures as required.

INSPECTION

1. FRONT WHEEL BEARING

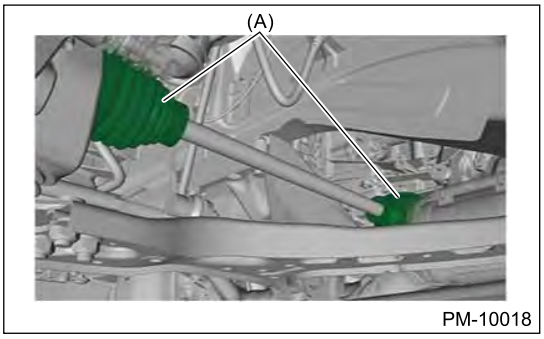


Note:
Inspect the condition of front wheel bearing grease.

1. Jack-up the front side of vehicle.
2. While holding the front wheel by hand, swing it in and out to check bearing free play.
3. Loosen the wheel nuts, and remove the front wheel.
4. If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.
   Service limit:
   Straight-ahead position within 0.05 mm (0.0020 in)
5. Remove the bolts and self-locking nuts, and extract the front arm from front crossmember.
6. Remove the joint of front drive shaft from transmission. Ref. to DRIVE SHAFT SYSTEM>Front Axle.
7. While supporting the front drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
   If the hub is noisy or binds, replace the front axle.

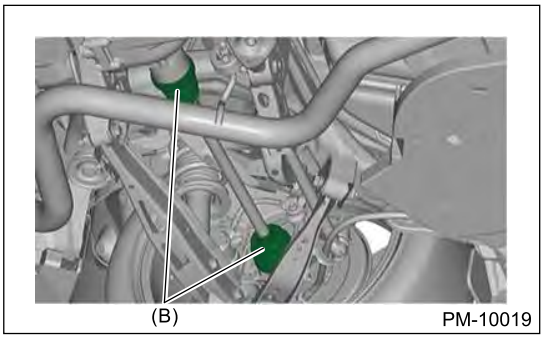
2. REAR WHEEL BEARING

1. Jack-up the rear side of vehicle.
2. While holding the rear wheel by hand, swing it in and out to check bearing free play.
3. Loosen the wheel nuts, and remove the rear wheel.
4. If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.
   Service limit:
   Straight-ahead position within 0.05 mm (0.0020 in)
5. Remove the joint of rear drive shaft from rear differential. Ref. to DRIVE SHAFT SYSTEM>Rear Drive Shaft.
6. While supporting rear drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
   If the hub is noisy or binds, replace the rear axle.



PM-00173

INSPECTION



1. FRONT AND REAR AXLE BOOTS

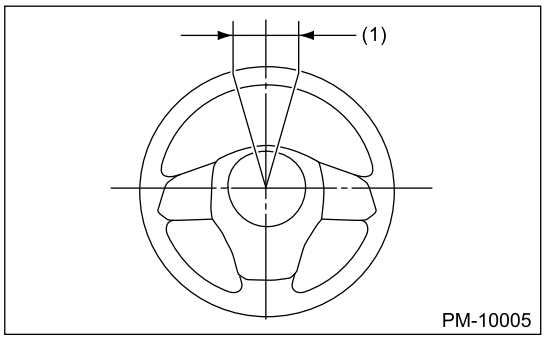
Inspect the front axle boots (A) and rear axle boots (B) for deformation, damage or failure. If faulty, replace with new part. Ref. to DRIVE SHAFT SYSTEM>Front Drive Shaft. Ref. to DRIVE SHAFT SYSTEM>Rear Drive Shaft.

- Front

- Rear

2. PROPELLER SHAFT

Inspect the propeller shaft for damage or failure. If faulty, replace with new part. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft.



INSPECTION

Refer to “WHEEL AND TIRE SYSTEM” section for tire inspection and rotation. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSPECTION.

INSPECTION

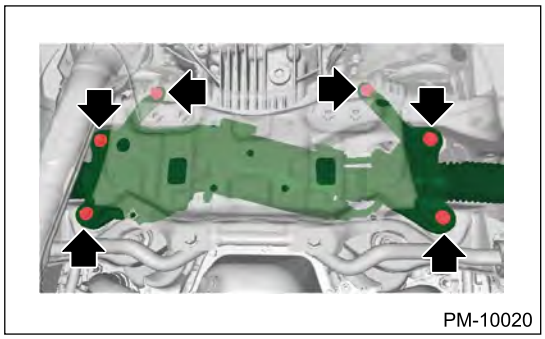
1. STEERING WHEEL

1. Set the steering wheel in a straight-ahead position, and check the wheel spokes to make sure they are correctly set in their specified positions.
2. Lightly turn the steering wheel to the left and right to determine the point where front wheels start to move.
   Measure the distance of the movement of steering wheel (periphery).
   Steering wheel free play:
   0 — 17 mm (0 — 0.67 in)

(1) Steering wheel free play

   Move the steering wheel toward the shaft to check if there is play in the direction.
   Play limit:
   0.5 mm (0.020 in)
3. Drive the vehicle and check the following items.
   (1) Steering force:
   The effort required for steering should be smooth and even at all points, and should not vary.
   (2) Pulled to one side:
   Steering wheel should not be pulled to one side while driving on a level surface.
   (3) Wheel runout:
   Steering wheel should not show any sign of runout.
   (4) Return status:
   Steering wheel should return to its original position after it has been turned and then released.

2. STEERING SHAFT JOINT

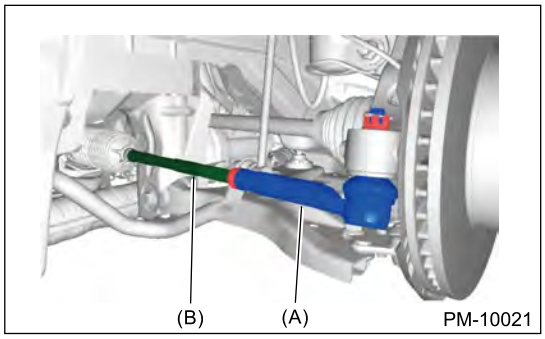


If steering wheel play is excessive, disconnect the universal joint of steering shaft and then check the play where the joints cross and yawing torque. Also, check the seal for damage or serrations for wear. If the joint is loose, retighten the mounting bolts to the specified torque. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint.

Tightening torque:
24 N·m (2.4 kgf-m, 17.4 ft-lb)

3. GEARBOX

1. Set the steering wheel in the straight position, then rotate it 90° in both the left and right directions.
   While steering wheel is being rotated, check the looseness of the gearbox.
   Tightening torque:

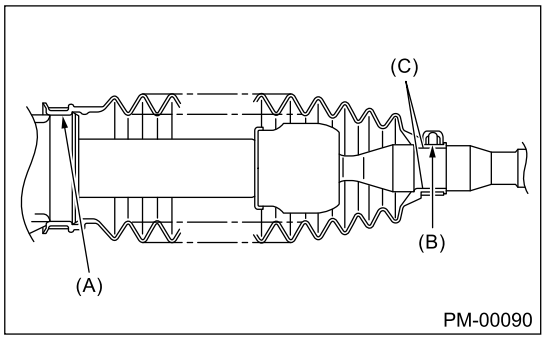


60 N·m (6.1 kgf-m, 44.3 ft-lb)

2. Check the boot for damage, cracks or deterioration.
3. With the vehicle stopped on a level surface, quickly turn the steering wheel to the left and right. While steering wheel is being rotated, check the gear backlash. If any noise is noticed, adjust the gear backlash. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox>ADJUSTMENT > GEARBOX BACKLASH ADJUSTMENT.

4. TIE-ROD

1. Check the tie-rod and tie-rod end for bend, cracks or other damages.



(A) Tie-rod end
(B) Tie-rod

2. Confirm that the connections of knuckle ball joints for play, and then check for damage on dust boots and free play of ball studs. If castle nut is loose, retighten it to the specified torque, then tighten further up to a maximum of 60° until the cotter pin hole is aligned.
   Tightening torque:
   27 N·m (2.75 kgf-m, 19.9 ft-lb)
3. Check the tightening of tie-rod end lock nut. If it is loose, tighten it to the specified torque.
   Tightening torque:
   85 N·m (8.7 kgf-m, 62.7 ft-lb)

5. GEARBOX BOOTS

Inspect both sides of the gearbox boot as follows, and correct the defects if necessary.

1. The (A) and (B) positions of the gearbox boot are fitted in (A) and (C) grooves of gearbox and the rod.
2. Clips are fitted onto the boot grooves to the positions (A) and (B) of the boot.
3. Check that there is no cracks or holes in the boot.
   Note:
   Rotate (B) position of gearbox boot against the torsion produced by the adjustment of toe-in etc. Apply grease to the groove (C).

6. MOUNTING BOLT

Inspect the bracket mounting bolts for looseness, and retighten them if necessary.

7. CHECK HARNESS

Check the harness of the electric power steering for cracks or damages.
Replace the harness or electric power steering gear box with a new part if necessary.

8. CHECK POWER STEERING CONTROL MODULE

Check for the electric power steering diagnostic trouble codes. If the diagnostic trouble code is detected, perform the diagnosis. Ref. to POWER STEERING (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
Replace the electric power steering gear box with a new part if necessary.

REPLACEMENT

Refer to “AIR CONDITIONER” section for A/C filter replacement. Ref. to AIR CONDITIONER>A/C Filter>REPLACEMENT.

PRE-DELIVERY INSPECTION

PI

1. Pre-delivery Inspection

GENERAL DESCRIPTION

The purposes of the pre-delivery inspection (PDI) are as follows.

- Remove the vehicle protective parts for transportation.
- Check that the vehicle or parts before delivery are not damaged during transportation or storage.
- Check that the vehicle after repair is normal.
- Make sure to provide a complete vehicle to customer.

For above reasons, SOA service centers must carry out the PDIs before delivery of vehicle.
Besides, all SOA service center and PDI center check the condition of all vehicles to make sure to take responsibility.

PRE-DELIVERY INSPECTION

PRE-DELIVERY INSPECTION (PDI) PROCEDURE

Perform the procedures indicated in the table below.

Static checks just after vehicle receipt

Item	Check point
1. Appearance	1. If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents. If the protective coating has been removed, visually check the painted body surfaces in detail for damage or rust. 2. Visually check the glass and light lenses for any damage, cracks or excessive gaps between body sheet metal. 3. Visually check the plated parts for any damage. 4. Check the instrument panel, console and trim for stains or dirt.
2. Tire	1. Check the tires for damage, defective, and dents on wheels. 2. Check the tire air pressure.
3. Fuse installation	If the vehicle is about to be delivered to customer, attach a back-up fuse.
4. Door lock/unlock and open/close operations	1. Using the key, check the door can be locked or unlocked normally. 2. Open and close all doors to check that there are no problems. 3. Operate the power door lock switch to check that all doors and the rear gate lock and unlock normally.
5. Child safety lock	Check the child safety lock system operates normally.
6. Trunk lid open/close operations	1. Operate the trunk lock release lever to check that the trunk lid opens normally. 2. Open and close the trunk lid to check that there are no problems.

Item	Check point
7. Rear gate lock/unlock and open/close operation	1. Check if the rear gate can be unlocked normally through the emergency hole. 2. Open and close the rear gate to check that there are no problems. 3. Operate the power door lock switch to check that all doors and the rear gate lock and unlock normally.
8. Operation check of trunk lid release lever	Operate the trunk lid release lever to check that the trunk lock is unlocked normally.
9. Fuel lid opener lock release lever	Operate the fuel lid opener to check that the fuel filler lid can be unlocked normally.
10. Accessory	Check that the following accessories are equipped. • Owner’s manual • Warranty booklet • Maintenance note • Spare key • Key No. plate • Jack • Tool set • Spare tire or puncture repair kit • Towing hook
11. Front hood lock release	Operate the front hood lock release lever to check that the front hood opens normally.
12. Battery	Check the battery for any abnormal conditions such as rust or traces of battery fluid leaks.
13. Brake fluid	Check the brake fluid amount.
14. Engine oil	Check the engine oil amount.
15. Transmission gear oil	Check that the transmission gear oil level is normal.
16. CVTF	Check for leakage of CVTF.
17. CVT front differential oil	Check for leakage of CVT front differential oil.
18. Rear differential gear oil	Check for leakage of gear oil from the rear differential.
19. Engine coolant	Check the engine coolant level.
20. Clutch fluid	Check the clutch fluid amount.
21. Window washer fluid	Check the window washer fluid amount.
22. Front hood latch	Check that the front hood is closed normally and locked securely.
23. Keyless entry system	Check that the keyless entry system operates normally.
24. Keyless access system	Check that the keyless access system operates normally.
25. Alarm system	Check that the alarm system operates normally.
26. Seat	1. Check the seat surfaces for stains or dirt. 2. Check the seat installation conditions and functionality.
27. Seat belt	1. Check the seat belt installation conditions and functionality. 2. Check the seat belt warning system operates normally.

Item	Check point
28. TPMS (U.S. model)	If the display of TPMS warning light does not operate normally, perform the diagnosis by referring to TPMS (Diagnosis).

Checks with the engine running

Item	Check point
29. Grommet installation	Install the grommet provided in the SPACER CTR or HOLDER ASSY JACK to the tie-down hole. (When equipped)
30. Delivery (test) mode	Turn the ignition switch to ON and check that the malfunction indicator light starts blinking.
31. Immobilizer system	1. Check that the engine starts with all keys that are equipped on vehicle. 2. Check that the security indicator light operates normally.
32. Push button start	Using the access key that is equipped on vehicle, operate the push button start function to check engine start and stop operations.
33. Starting condition	Start the engine and check that the engine starts smoothly.
34. Exhaust system	Check that the exhaust noise is normal and no leaks are found.
35. Indicator and warning lights	Check that all indicator lights and warning lights are operating correctly.
36. Heater & ventilation	Check that the heater & ventilation system operates normally.
37. Air conditioner	Check that the air conditioner operates normally.
38. Multi-function display (MFD)	Check that the Multi-Function Display (MFD) function operates normally.
39. Audio	Check the radio and AUX operate normally.
40. Navigation	Check the navigation and AUX operate normally.
41. Telematics system	Check that the indicator light on the overhead console or on the stereo camera cover assembly goes off.
42. Accessory power supply socket	Check that the accessory power supply socket operates normally.
43. Lighting system	Check that the lighting system operates normally.
44. Illumination control	Check that the illumination control operates normally.
45. Window washer system	Check that the window washer system operates normally.
46. Wiper system	Check that the wiper system operates normally.
47. Wiper deicer	Check that the wiper deicer operates normally.
48. Power window	Check that the power window operates normally.
49. Sunroof	Check that the sunroof operates normally.
50. Rear defogger system	Check that the rear defogger system operates normally.
51. Door mirror	Check that the remote control mirror and heated mirror operate normally.
52. Room mirror	Check that the automatic anti-glare function operates normally.

Item	Check point
53. Steering heater	Check that the steering heater operates normally.
54. Blind Spot Detection / Rear Cross Traffic Alert (BSD/RCTA)	1. Press the BSD/RCTA OFF switch several times to check that the system is activated and deactivated correctly. 2. Check the rear bumper around the sensor for dirt, scratch, affixed stickers and poor paint coating.
55. Reverse Automatic Braking (RAB)	1. Check that the RAB system is activated and deactivated correctly. 2. Check the sonar sensor installed on the rear bumper for parts missing, dirt, scratch, foreign objects, etc.
56. Diagnostic trouble code (DTC) check	Check that the diagnostic trouble code (DTC) is not detected.

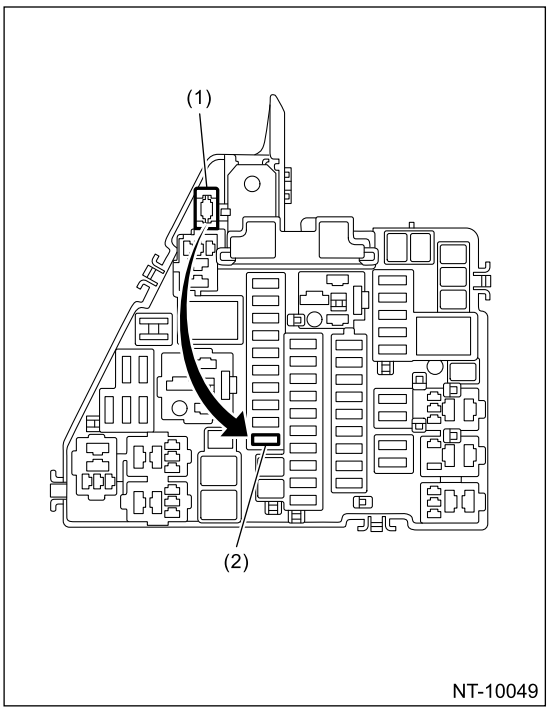
Dynamic test with the vehicle running

Item	Check point
57. Brake test	Check the foot brake for normal operations.
58. Parking brake	Check that the parking brake operates normally.
59. Shift control	Check that the shift patterns are correct.
60. Cruise control	Check that the cruise control system operates normally.
61. Subaru EyeSight	Check that the Subaru EyeSight operates normally.

Checks after dynamic test

Item	Check point
62. Power steering system (electric power steering model)	Check the steering warning light operation.
63. Fluid leakage	Check for fluid/oil leaks.
64. Water leak test	Spray the vehicle with water and check for water leaks.
65. Appearance 2	1. Remove the protective coating (if equipped). 2. Check the body paints for damage and stain. 3. Check the plated parts for damage and rust.

1. APPEARANCE

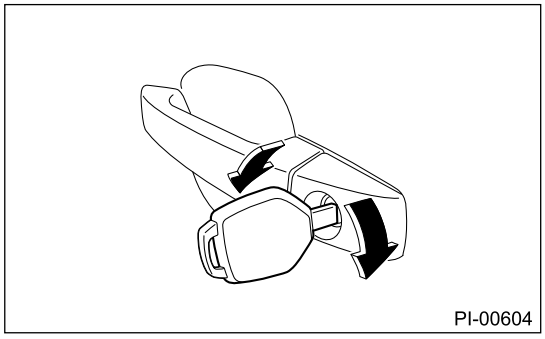


- If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents.
- When there is no protective coating, check the body paints for damage or stains in detail and repair as necessary.
- Check the window glass, door glass, and lights for any cracks or damage, and replace as necessary.
- Visually check the plated parts, such as the grilles and door knobs, for damage or loss of gloss and replace the parts as necessary.
- Check the instrument panel, console and trim for stains or dirt.
- Check the keyless key or access key for dirt, and wipe off if necessary.

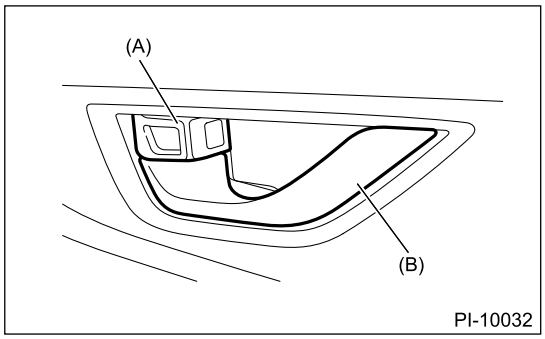
2. TIRES

- Check the tires for damage, defective, and dents on wheels.
- Check the tire size, spare tire and tire air pressure described on the tire air pressure label (driver’s side).

3. FUSE INSTALLATION



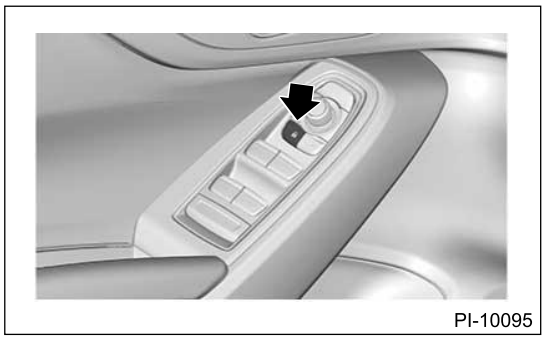
Backup fuse (30 A) remains removed to prevent the battery consumption when vehicles are delivered. Install the backup fuse by following the illustration. Besides, removing the backup fuse from the fuse holder deactivates the control during shipping (delivery mode).



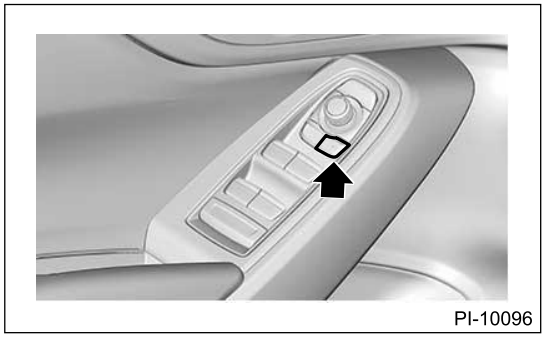
(1) Backup fuse holder
(2) Backup fuse inlet

4. LOCK/UNLOCK AND OPEN/CLOSE OPERATION OF DOORS

1. Using the key, lock and unlock the door several times to check for normal operation. Open and close the door several times for smooth movement.

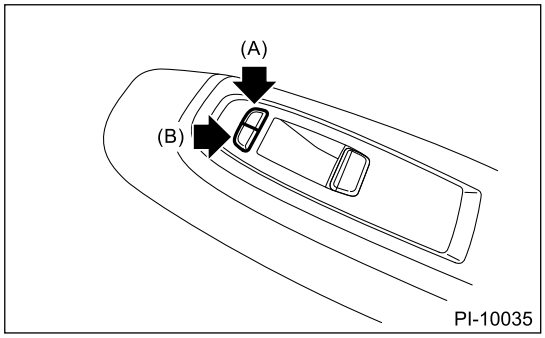


2. Completely close the driver's door, and then check the smooth movement with operating door lock knob from lock to unlock several times. Set the door lock knob (A) to lock position. Then pull the inner remote (B) to ensure that doors will not open.
   For other doors, place the door lock knob (A) to lock position and then pull the inner remote (B) to ensure that doors will not open.



(A) Door lock knob

(B) Inner remote

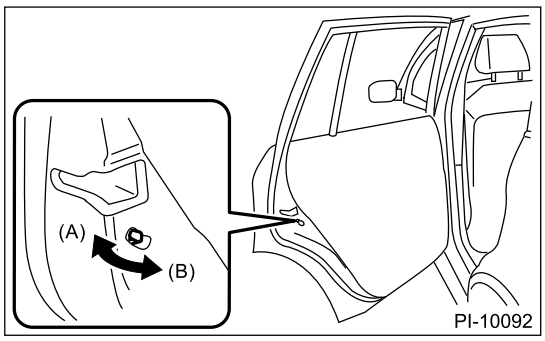


3. Close all the doors, and then press the lock on power door lock switch at driver's side. Check that all doors (including the rear gate) lock.

4. Press the driver's side power door lock switch to unlock side. Check that all doors including rear gate are unlocked.

5. Check that the passenger's power door lock switch locks and unlocks normally in the same manner.

(A) Lock



(B) Unlock

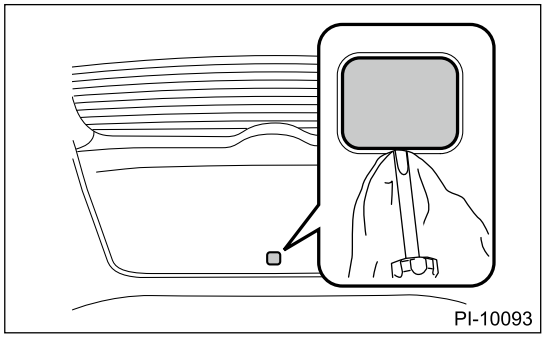
6. Insert the key to ignition switch, and open the driver's side door. Press lock on power door lock.

Check that the door is not locked.

5. CHILD SAFETY LOCK

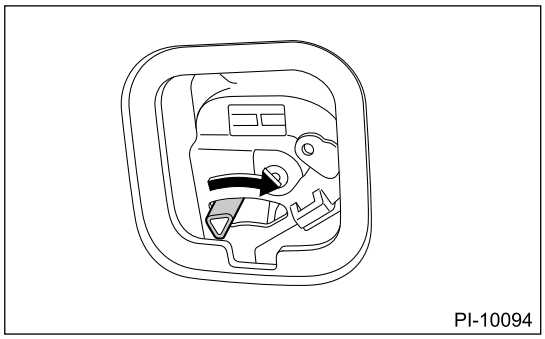
1. Set the child safety lock lever on both rear doors to the lock position.
2. Close the rear doors completely.
3. Check that the lock levers of the rear doors are in the unlock position. Then, pull inner remote of rear doors to ensure that doors will not open.
4. Pull the outer handles of rear doors to ensure that doors will open.

(A) Unlock



(B) Lock

6. TRUNK LID OPEN/CLOSE OPERATIONS

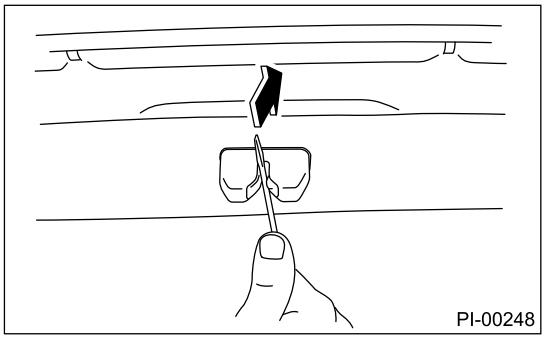


1. Operate the trunk lock release lever to check that the trunk lid opens.
2. Open and close the trunk lid several times for smooth movement.

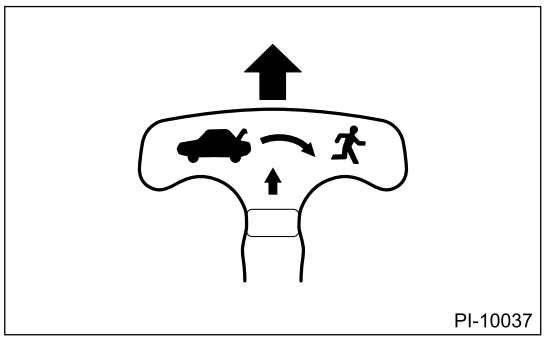
7. REAR GATE LOCK/UNLOCK AND OPEN/CLOSE OPERATIONS

1. Open and close the rear gate several times for smooth movement.
2. Operate the rear gate emergency release lever to check that the rear gate can be locked and unlocked properly.
   (1) Remove the cover inside the rear gate.

(2) Operate the lever using a tool such as a screwdriver to check that the rear gate is unlocked normally.



8. OPERATION CHECK OF TRUNK LID RELEASE HANDLE



Caution:

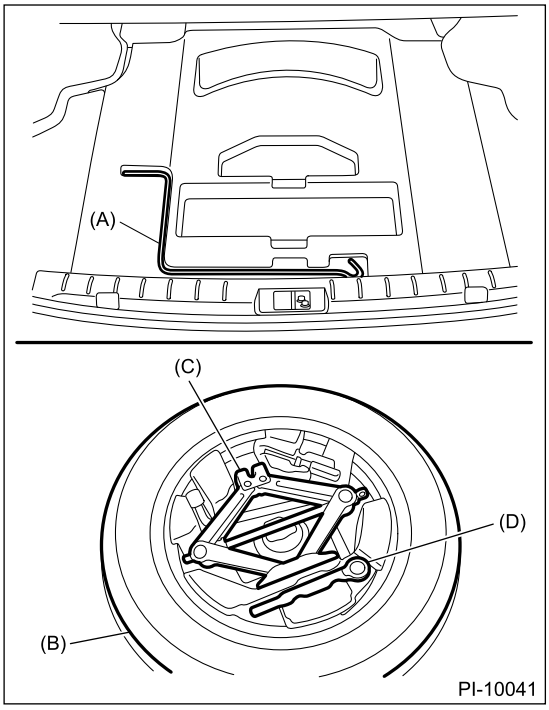
Do not check the trunk lid release handle when in the trunk. If the trunk lid release handle is defective, you may be trapped in.

1. Use a flat tip screwdriver. Slide the screwdriver blade from the slit aperture of the lock assembly fully to the end until you hear a click. This places the latch in the locked position.

2. Make sure the latch is released by pulling the yellow trunk lid release handle in the direction of arrow.

9. FUEL LID OPENER LOCK RELEASE LEVER

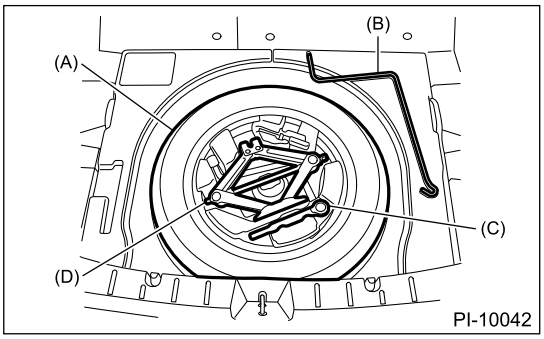
Operate the fuel lid lock release lever to check that the fuel lid is unlocked normally. Check that the filler cap is securely closed.



10. ACCESSORY

Check that the following accessories are provided.

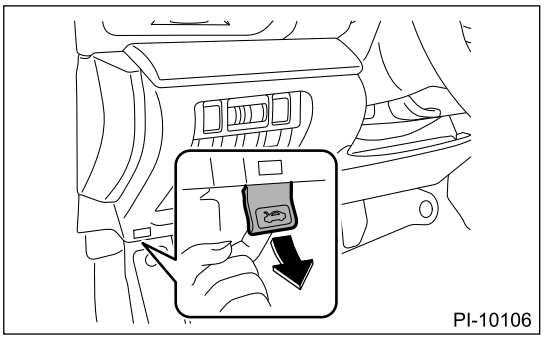
- Owner’s manual
- Warranty booklet
- Maintenance note
- Spare key
- Key No. plate



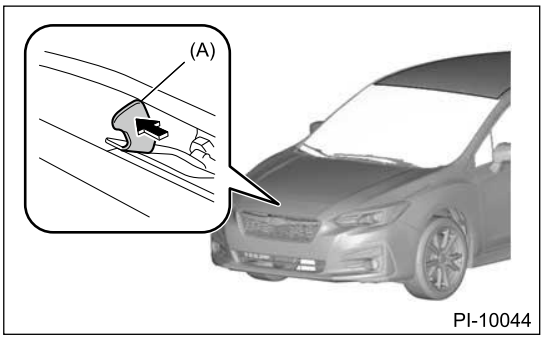
- Jack
- Tool set
- Spare tire or puncture repair kit
- Towing hook (eyebolt)

4 door

(A) Jack handle
(B) Spare tire
(C) Jack
(D) Towing hook (eyebolt)



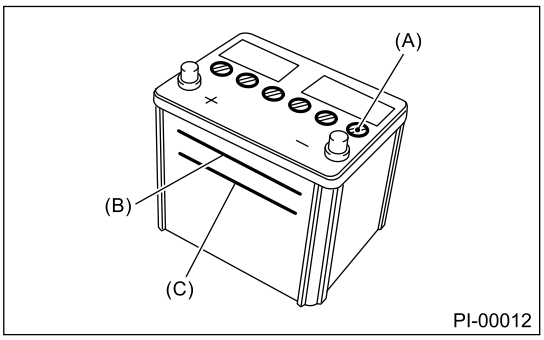
5 door



(A) Spare tire
(B) Jack handle
(C) Towing hook (eyebolt)
(D) Jack

11. FRONT HOOD LOCK RELEASE

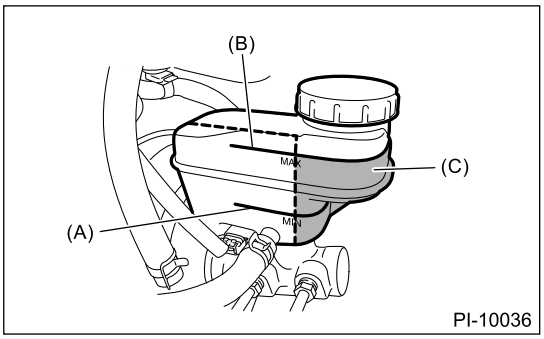
Operate the front hood release lever to check that the front hood is unlocked normally.



Operate the lever (A) and check that the front hood is opened normally.

12. BATTERY

Check the battery terminals to make sure that there are no rust or corrosion due to fluid leaks. Check that the battery caps are securely tightened.



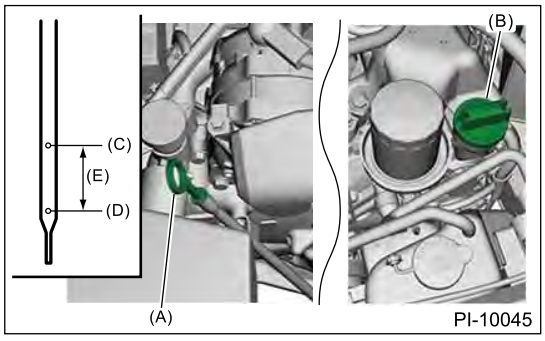
(A) Cap
(B) Upper level
(C) Lower level

13. BRAKE FLUID

Caution:

- **If the brake fluid is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.**
- **Always check the level using the specified direction because there is a partition in the reservoir tank.**

Check that the brake fluid level is normal from a straight view or within 90° to the right and left forward. If the amount is insufficient, carry out a brake line test to identify brake fluid leaks and check the brake operation. After that, refill the brake fluid tank with the specified type of fluid.



(A) MIN. level
(B) MAX. level
(C) Brake fluid

14. ENGINE OIL

1. Park the vehicle on a level surface.
2. Remove the oil level gauge and wipe away the oil.
3. Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted and properly orientated.
4. Pull out the oil level gauge again, and check both sides of the oil level gauge. Use a lower side to determine the engine oil level. If the engine oil level is below "L" line, add oil to bring the level up to "F" line.
5. Start the engine, and spread the oil in engine room.
6. After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the oil level.

Note:

To prevent overfilling of engine oil, do not add oil above "F" line when the engine is cold.

(A) Engine oil level gauge
(B) Engine oil filler cap
(C) "F" line
(D) "L" line
(E) Approx. 1 L (1.1 US qt, 0.9 Imp qt)

15. TRANSMISSION GEAR OIL

Check the transmission gear oil amount. If the amount of gear oil is insufficient, check for leaks. Then, add the necessary amount of the specified gear oil. For transmission gear oil inspection, refer to "MANUAL TRANSMISSION AND DIFFERENTIAL (5MT)" section. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil>INSPECTION.

16. CVTF

Check for leakage of CVTF.

Caution:

If the CVTF is spilt over exhaust pipe, wipe it off completely with cloth to avoid emitting smoke or causing a fire.

17. CVT FRONT DIFFERENTIAL OIL

Check for leakage of CVT front differential gear oil.

Caution:

If gear oil is spilt over the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.

18. REAR DIFFERENTIAL GEAR OIL

Check for leakage of gear oil from the rear differential.

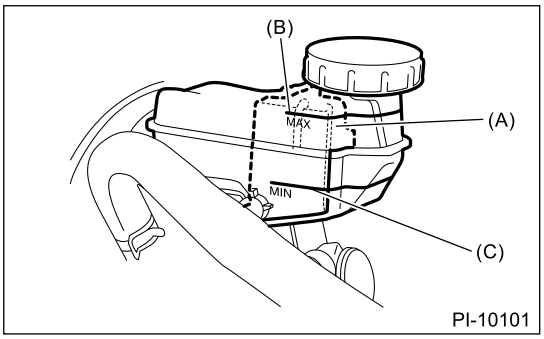
Caution:

If the rear differential gear oil is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

19. ENGINE COOLANT

Check the coolant amount on the reservoir. If the amount of engine coolant is insufficient, check that no leaks are found. Then, add the necessary amount of coolant with the specified concentration.

Caution:



If the coolant is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

20. CLUTCH FLUID

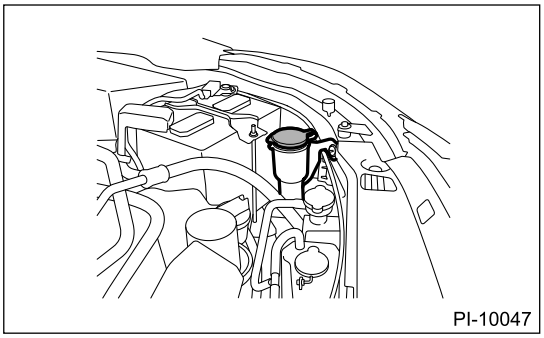
Caution:

- **If any clutch fluid is spilt on the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.**
- **This reservoir tank has the brake fluid chamber and the clutch fluid chamber. When checking the fluid level, always check the fluid from the clutch fluid chamber side where the tank hose is connected.**

Check that the clutch fluid level is normal. If the amount of fluid is insufficient, check that no leaks are found. Then, add the necessary amount of specified fluid.

(A) Clutch fluid chamber

(B) MAX. level



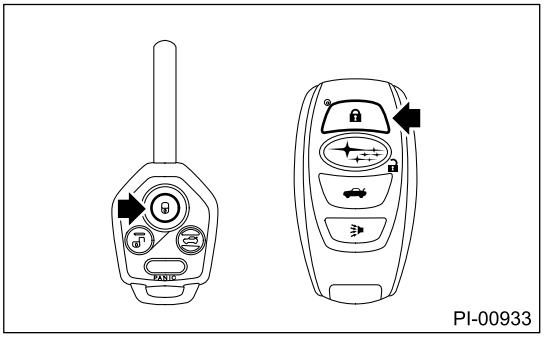
(C) MIN. level

21. WINDOW WASHER FLUID

Check the window washer fluid amount. If the amount of washer fluid is insufficient, check that no leaks are found. Then, add the necessary amount of washer fluid.

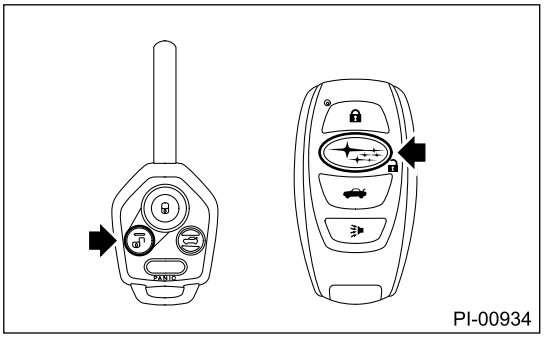
Note:

If there is the vibration, water comes into the layer of air in the washer tank and the water level may drop. This is not a malfunction.



22. FRONT HOOD LATCH

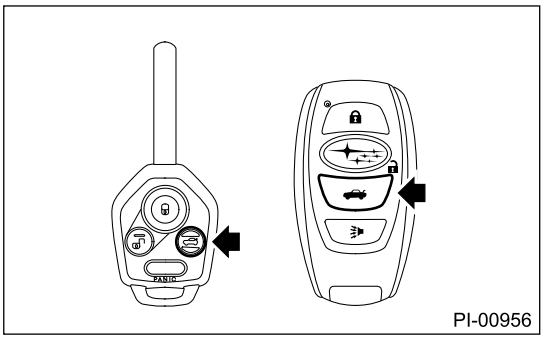
Close the front hood. Check that the front hood is completely latched.



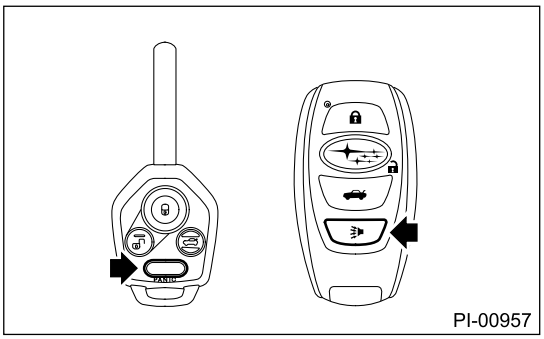
23. KEYLESS ENTRY SYSTEM

Check the keyless entry system operations as follows:

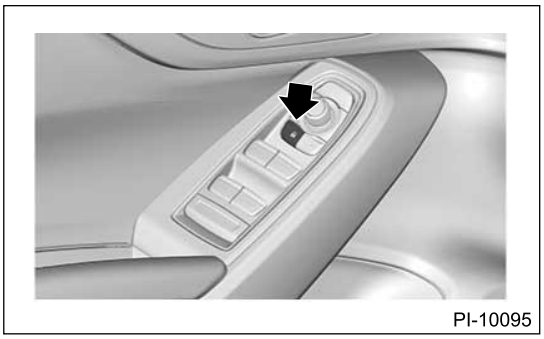
- Fully open all the door windows.
- Remove the key from the ignition switch and close all the doors including rear gate.
- Press the “LOCK” button momentarily on the keyless transmitter. Check that all the doors become locked, the buzzer sounds once, and the hazard lights flash once.



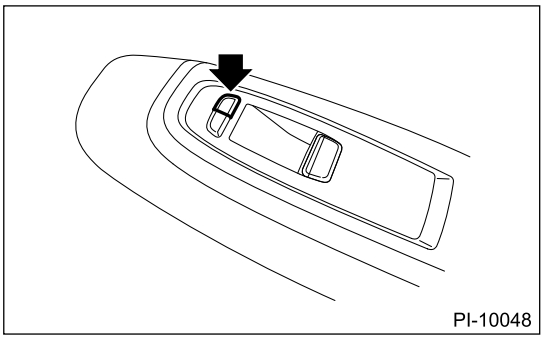
- Press the “UNLOCK” button momentarily on the keyless transmitter. Check that the driver’s door is unlocked, the buzzer sounds twice, and the hazard lights flash twice.
- Within 5 seconds, press the “UNLOCK” button momentarily on the keyless transmitter. Check that all doors (including rear gate) are unlocked, the buzzer sounds twice, and the hazard lights flash twice.



- Lock all the doors including rear gate. Check that the buzzer sounds twice, and the hazard lights flash twice, when the trunk open button is pressed to unlock the rear gate. Press the rear gate



opener button and check that the rear gate opens. (Wagon model)
- Check that the buzzer sounds twice, and the hazard lights flash twice, when the trunk open button is held down to unlock the trunk lid. (Sedan model)



- Press the “PANIC” button of the keyless transmitter. Check that the panic mode (the horn keeps sounding) is initiated. Also, check that this condition continues for 30 seconds or until when any of the buttons on the keyless transmitter are pressed.

- Press the “LOCK” button momentarily on the keyless transmitter with one of the doors (including the rear gate) open. Check that the buzzer sounds 5 times, and the hazard light flashes 5 times to notify the door not being fully closed. Next, close all the doors including rear gate. Check if all doors are locked and buzzer sounds once and the hazard light flashes once.
- With one of the doors open (including the rear gate), press the “LOCK” side of the power door lock switch. Next, close all the doors including rear gate. Check if all doors are locked and buzzer sounds once and the hazard light flashes once.
  - Driver’s side

  - Passenger’s side

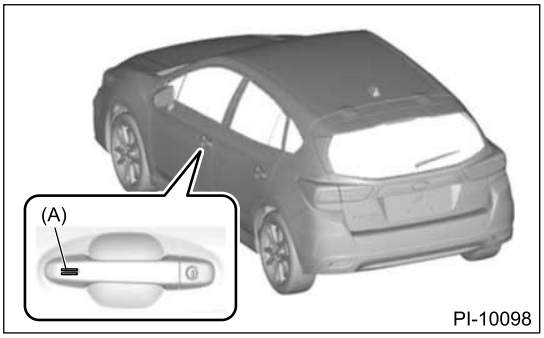
Alarm sound operational check

- The system uses the buzzer and sounds the alarm when the door is locked or unlocked. The alarm sound can be turned OFF. To turn the alarm sound from ON to OFF, close all doors, (with the key not inserted in the key cylinder), hold down the “UNLOCK” side of the power door lock switch and insert the key in the key cylinder. Within 10 seconds, insert and take out the key for 5 times or more, and within 10 seconds after that, open and close the driver’s door. With the door closed, the hazard light will flash 3 times, indicating that the alarm sound has been turned OFF. To turn the alarm sound from OFF to ON, perform this procedure again. The hazard light will flash 3 times, indicating that the alarm has been turned ON.

24. KEYLESS ACCESS SYSTEM

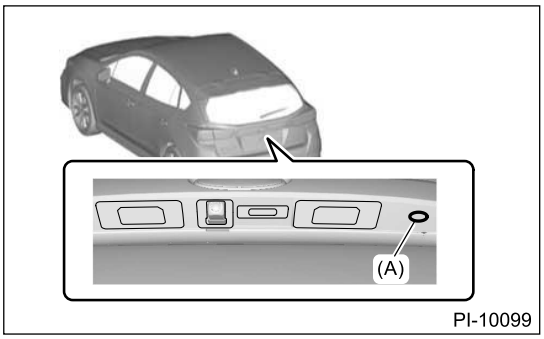
Caution:

- **When performing the check, check one access key at a time, separating individual keys.**
- **Do not leave any separated access keys in the vehicle.**



Note:

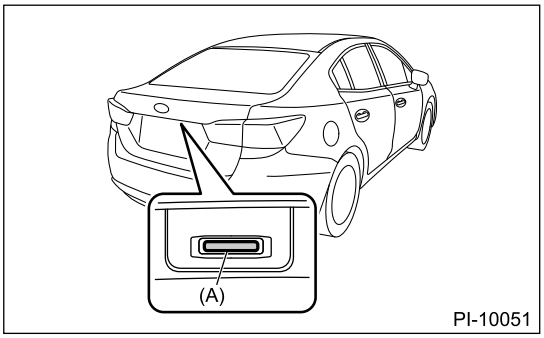
The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>LIST.



- While carrying the access key, check that the room light illuminates when you move close to the front door handles of the vehicle whose doors are all locked.
- While carrying the access key, check that all doors and the rear gate are locked, and the hazard lights flash when you touch the touch sensor (lock) of the front door or press the rear lock button of the rear gate.

  Note:

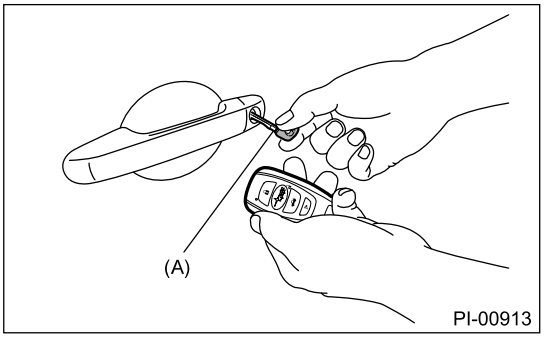
  - **The hazard lights flash twice when unlocking.**
  - **The hazard lights flash once when locking.**



(A) Touch sensor (lock)

(A) Rear lock button

- While carrying the access key, check that the trunk unlocks and the hazard lights flash twice when you press the trunk opener button.



(A) Trunk opener button

- Manually operate the access key button to check the lock/unlock of doors and rear gate, and the flashing of hazard lights.
- Check the mechanical key attached to the access key can be used for locking/unlocking.

Caution:

The mechanical key is a single groove type. Insert the mechanical key with the groove side facing the front side of the vehicle.

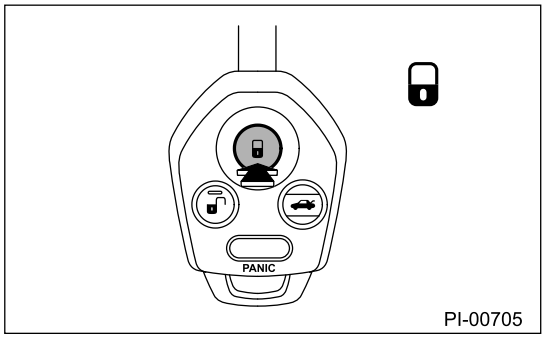
(A) Mechanical key

- Check that the warning buzzer sounds and the door-lock does not operate, when the doors are closed with the access key left in the vehicle and the touch sensor (lock) on door is touched, or the rear lock button on rear gate is pressed.

Caution:

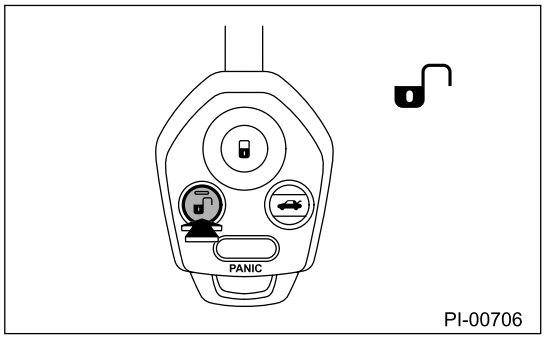
Remove the mechanical key from the access key and hold the mechanical key.

- With the access key in the trunk, check that the warning buzzer sounds and the trunk unlocks when you press the trunk opener button.



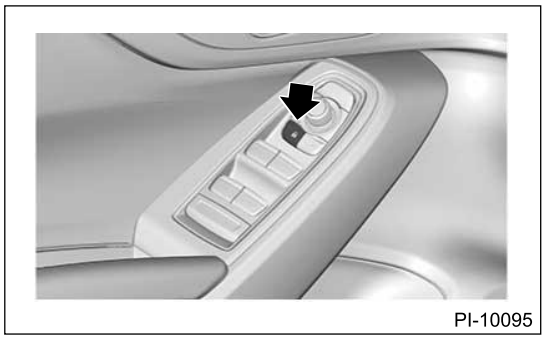
25. ALARM SYSTEM

MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

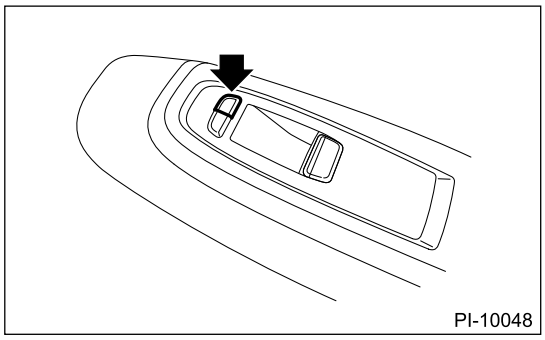


Note:

The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit>OPERATION.



1. Fully open all the door windows.
2. Remove the key from the ignition switch and close all the doors including trunk and rear gate.
3. Press the "LOCK" button momentarily on the keyless transmitter. All doors are locked, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.

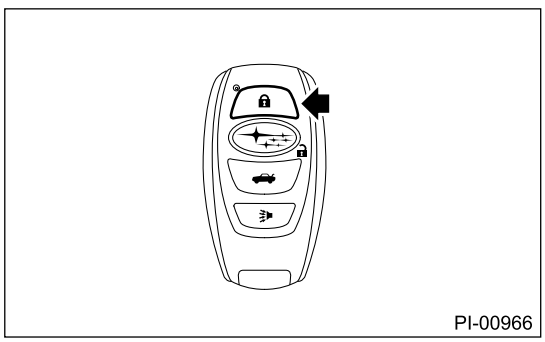


4. Press the "UNLOCK" button momentarily on the keyless transmitter. The door of the driver's seat is unlocked, the security indicator light blinks, and the alarm system is disarmed.

5. Press the "LOCK" button once on the keyless transmitter with one of the doors (including the rear gate) open. Check that the buzzer sounds 5 times to give the door not fully closed warning. However, when the "LOCK" button on the keyless transmitter is pressed with the trunk open, the door not fully closed warning with the buzzer sounds 5 times is not performed. The doors are locked when all doors (including the trunk and rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.
6. Press the "UNLOCK" button momentarily on the keyless transmitter. The door of the driver's seat is unlocked, the security indicator blinks, and the alarm system is disarmed.
7. With one of the doors open (including the trunk and rear gate), press the "LOCK" side of the power door lock switch. The doors are locked when all doors (including the trunk and rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.
   - Driver's side

PI-10095

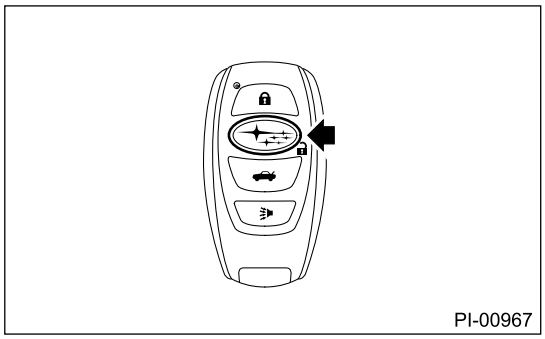
- Passenger’s side



PI-10048

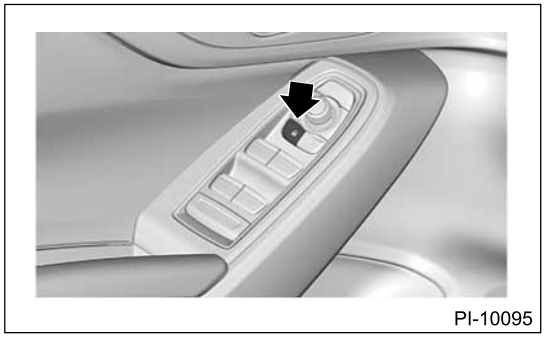
8. Unlock a door using the inner lock knob or the key and open the door while the security system is in the set mode. Check if the alarm condition occurs (horn sounds continuously, hazard light blinks, security indicator light illuminates). Check if this condition lasts until any button of the keyless transmitter is pressed or until the ignition switch is turned to IGN ON after inserting the key into the ignition switch.
   Note:
   The alarm sounds for three minutes with the door open.
9. When none of above is applicable, perform troubleshooting for the security system.

MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START



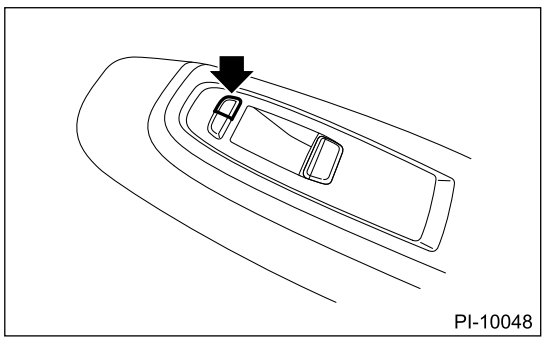
Note:
The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit>OPERATION.

1. Fully open all the door windows.
2. Close all the doors and rear gate.
3. Press the “LOCK” button momentarily on the access key. All doors are locked, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.



PI-00966

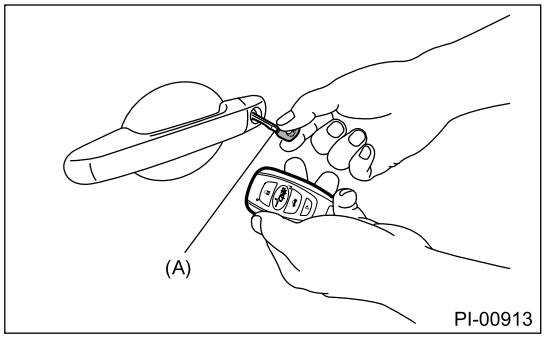
4. Press the “UNLOCK” button momentarily on the access key. The door of the driver’s seat is



unlocked, the security indicator light blinks, and the alarm system is disarmed.

5. Press the “LOCK” button once on the access key with one of the doors (including the rear gate) open. Check that the buzzer sounds 5 times to give the door not fully closed warning. However, when the “LOCK” button on the keyless transmitter is pressed with the trunk open, the door not fully closed warning with the buzzer sounds 5 times is not performed. The doors are locked when all doors (including the trunk and rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.
6. Press the “UNLOCK” button momentarily on the access key. The door of the driver’s seat is unlocked, the security indicator blinks, and the alarm system is disarmed.
7. With one of the doors open (including the trunk and rear gate), press the “LOCK” side of the power door lock switch. The doors are locked when all doors (including the trunk and rear gate) are closed, and the security indicator light blinks faster for 30 seconds and blinks slowly twice repeatedly, then the alarm system is in set condition.
   - Driver’s side

   - Passenger’s side



8. Unlock a door using the mechanical key and open the door while the security system is in the set mode. Check if the alarm condition occurs (horn sounds continuously, hazard light blinks, security indicator light illuminates). Check if this condition lasts until any button on the access key is pressed or until the ignition switch is turned to ACC.

Caution:

The mechanical key is a single groove type. Insert the mechanical key with the groove side facing the front side of the vehicle.

Note:

The alarm sounds for three minutes with the door open.

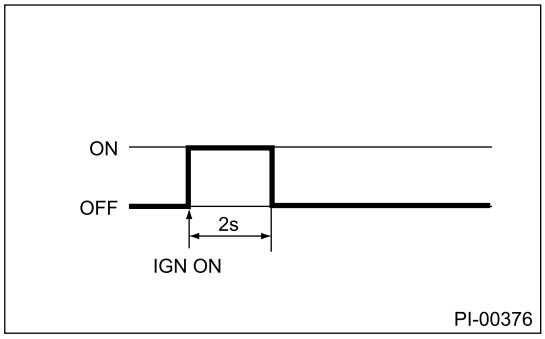
(A) Mechanical key

9. When none of above is applicable, perform troubleshooting for the security system.

26. SEAT

1. Check the seat surfaces for stains or dirt.
2. Check that each seat provides full functionality in sliding, reclining, and lifter. Check all available functions of the rear seat such as backrest tilt knob.
3. Check the passenger's seat occupant detection system.
   (1) Empty the passenger's seat and turn the ignition switch to ON.
   (2) Check that the passenger airbag ON/OFF indicator lights both turn on simultaneously for approximately six seconds, and after turning off for two seconds, only the OFF light illuminates.

4. With a person weighing approximately 70 kg (155 lb) or more sitting in the passenger's seat, check whether the ON light of the passenger's airbag ON/OFF indicator illuminates or not.
5. Have the passenger get out of the passenger's seat, and check whether the OFF light of the passenger side airbag ON/OFF indicator illuminates.



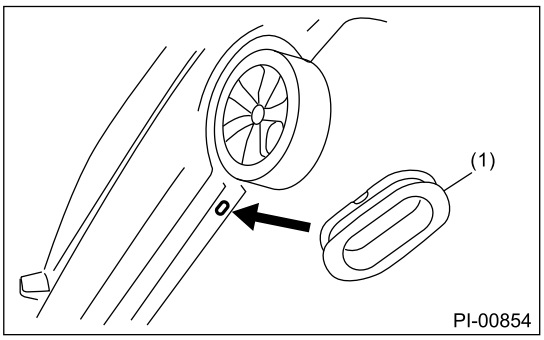
27. SEAT BELT

1. Check installation condition of seat belt.
2. Pull out the seat belt and then release it. Check that the belt retracts smoothly.
3. Check seat belt warning function.
   (1) Turn the ignition switch to ON with the driver's and passenger's seat belt detached.
   (2) Check the driver's and passenger's seat belt warning light blink for approx. 6 seconds and the buzzer sounds intermittently.
   (3) Then, check the seat belt warning light illuminates and blinks repeatedly at a cycle of approx.

15 seconds. (If no passenger is on the passenger's seat, the seat belt warning light on passenger's seat does not operate.)

28. TPMS (U.S. MODEL)

1. Turn the ignition switch to ON, and check TPMS warning light for normal operation.
   - Normal operation (IG ON (light check))



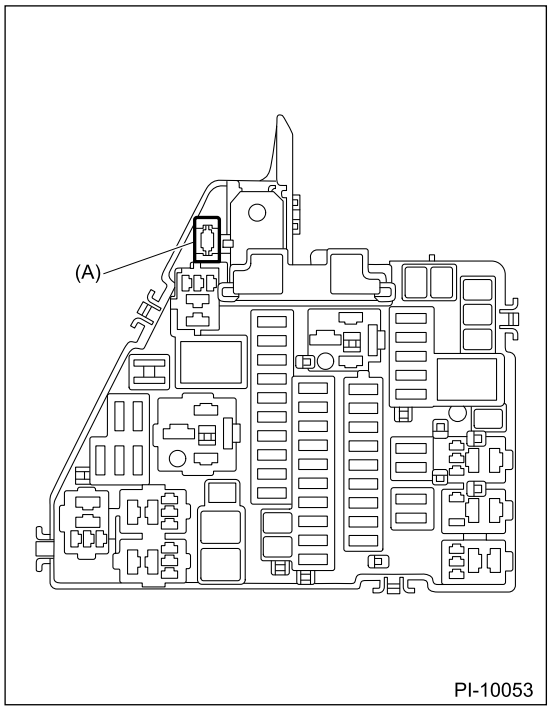
2. If the TPMS warning light display does not operate normally, check and repair the system. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Basic Diagnostic Procedure.

29. GROMMET INSTALLATION

Install the grommet provided in the SPACER CTR or HOLDER ASSY JACK to the tie-down hole.

Caution:

Make sure that the tie-down hole is firmly plugged with the grommet. Otherwise, dust, smell, etc. may come into the passenger compartment indirectly from the rear quarter, via the side sill from the tie-down hole.



(1) Grommet

30. DELIVERY (TEST) MODE

1. Install the delivery (test) mode fuse with ignition switch to OFF.

   Caution:

   Do not use any fuses that are installed on the vehicle.

(A) DELIVERY (TEST) MODE FUSE

2. Turn the ignition switch to ON and check that the malfunction indicator light starts blinking.
3. If the malfunction indicator light blinks, return the ignition key to LOCK.
4. Remove the delivery (test) mode fuse and attach it to the spare fuse holder provided on the fuse box cover.
5. Then, turn the ignition key to ON again.
6. Make sure that the malfunction indicator light is off. If the malfunction indicator light blinks, carry out an engine diagnosis.

31. IMMOBILIZER SYSTEM

1. Check that the engine starts with all keys that are equipped on vehicle.
2. Check that the security indicator light blinks in 60 seconds after turning the ignition switch from ON to ACC or to OFF, and immediately after removing the key. (Models without the keyless access with push button start)
3. Immediately after turning ignition switch from ON to OFF, and immediately after opening/closing a door while the ignition switch is in ON or ACC with the engine stopped and the access key is outside the vehicle, check that the security indicator light is blinking. (Model with keyless access with push button start)

   Note:

   If malfunctions occur, refer to "IMMOBILIZER (DIAGNOSTICS)". **Ref. to IMMOBILIZER (DIAGNOSTICS)>Basic Diagnostic Procedure.**

32. PUSH BUTTON START FUNCTION

1. Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal OFF, and check that it cycles through ACC → IGN ON → IGN OFF every time the push button ignition switch is pressed, and that the indicator light for the push button ignition switch is illuminated in orange when the ignition switch is in the ACC and IGN ON positions.
2. Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal ON, check that the indicator light for the push button ignition switch is illuminated in green.

Note:

While the select lever button is being pressed, the indicator light of the push button ignition switch does not illuminate in green even if the shift position is in the P range.

3. Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal ON, check that the engine starts when you press the push button ignition switch.
4. With the vehicle stopped, the engine running and in P range, check that the engine stops when you press the push button ignition switch.
5. With the vehicle stopped, the engine running and in N range, check that the engine stops when you press the push button ignition switch, and cycles through ACC → IGN ON each time you press the push button ignition switch.

33. STARTING CONDITION

Start the engine and check that the engine starts smoothly. If the battery voltage is low, recharge or replace the battery. If any noises are observed, immediately stop the engine and check and repair the abnormal components.

34. EXHAUST

Listen to the exhaust noise to see if no noises are observed. Check that no leaks are found.

35. INDICATOR AND WARNING LIGHTS

Check that all indicator lights and warning lights are operating correctly.

36. HEATER & VENTILATION

Operate the heater & ventilation system to check for normal airflow outlet control, air inlet control, airflow capacity and heating performance.

37. AIR CONDITIONER

Operate the air conditioner. Check that the A/C compressor operates normally and enough cooling is provided.

Note:

To prevent the insufficient lubrication of the air conditioner, operate the air conditioner for five minutes at idling.

38. MULTI FUNCTION DISPLAY (MFD)

Check that the Multi-Function Display (MFD) function operates normally.

39. AUDIO

1. Check if the AM/FM radio broadcasting can be heard.
2. Check that all the radio functions work properly and the noise level is normal.
3. Check the CD and AUX for normal operation.
4. Check that the AUX is installed into the console without looseness.
5. Check that the rearview camera operates normally.

40. NAVIGATION SYSTEM

1. Check all display functions for normal operation. (Refer to the operation manual.)
2. Check that the navigation system operates normally.
3. Check the radio, CD (DVD) player and AUX for normal operation.
4. Check that the AUX is installed into the console without looseness.

5. Check that the rearview camera operates normally.

41. TELEMATICS SYSTEM

Check that the indicator light on the overhead console or on the stereo camera cover assembly goes off.

42. ACCESSORY POWER SUPPLY SOCKET

- Check the operation of the front accessory power supply socket.
- Check operation of the accessory power supply socket in console box.

43. LIGHTING

1. Check the headlight operations. When pulling out the key, check if the headlight illuminates by turning the headlight switch from OFF to ON.
2. Check the stop light operation.
3. Check other lights for normal operations.

44. ILLUMINATION CONTROL

Check that the illumination control operates normally.

45. WINDOW WASHER SYSTEM

Check that the window washer system injects washer fluid to the specified area of the windshield and rear window glass. Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose>ADJUSTMENT > NOZZLE - WINDSHIELD WASHER. Ref. to WIPER AND WASHER SYSTEMS>Rear Washer>INSPECTION > INSPECTING THE SPRAY POSITION.

46. WIPER SYSTEM

Check the front and rear wipers for normal operations.

47. WIPER DEICER

Check that the wiper deicer operates normally.

Note:

When an ambient temperature is 5°C or more, wiper deicer operation is cancelled. Press the switch for 3 seconds or more to perform the compulsory operation.

48. POWER WINDOW

- Operate the power window switches one by one to check that each of the power windows goes up and down without noises.
- Check AUTO UP/AUTO DOWN operate properly by operating the power window switch on driver's and passenger's seat sides.

Caution:

If battery has been removed, AUTO UP does not operate properly because initialized. In this case, perform the initial setting (reset A) and check AUTO UP operates properly.

Note:

Check the power window if the door glass of the driver's seat does not open/close automatically. Ref. to POWER WINDOW(DIAGNOSTICS) >Basic Diagnostic Procedure.

49. SUNROOF

Check that the sunroof operates normally.

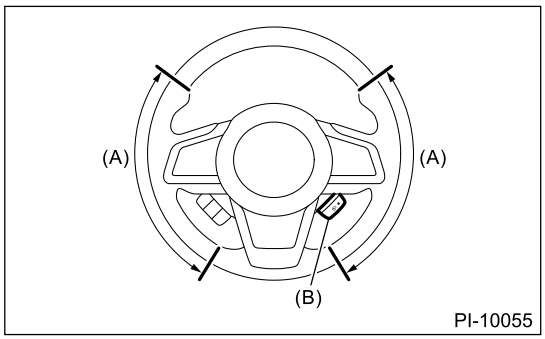
50. REAR DEFOGGER SYSTEM

Press the rear defogger switch and check that the light inside the switch is activated for approx. 15 minutes and the rear defogger automatically turns to OFF.

51. DOOR MIRROR

- Check that the remote control mirror operates normally.
- Check that the heated mirror operates normally.

52. ROOM MIRROR



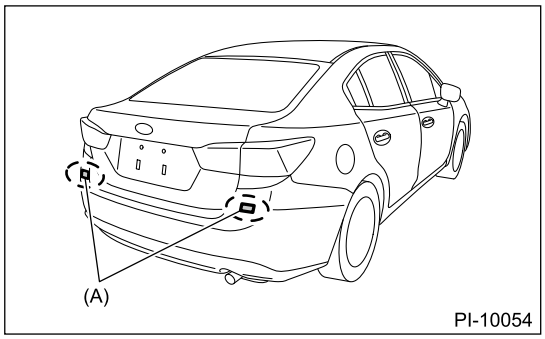
Check that the automatic anti-glare function operates normally.

53. STEERING HEATER

Note:

Perform the inspection when the temperature around the steering wheel is 40°C or less.

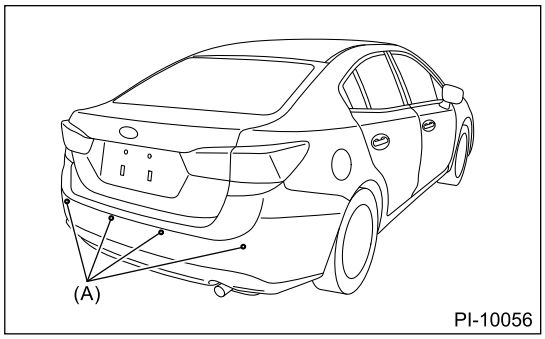
1. Turn the heater switch to ON, and check that the indicator light illuminates.
2. Check if the heater area of the steering wheel becomes warm.
   The heater may not operate if the temperature of the steering wheel or in its peripheral area is approx. 40°C or more. This is because of a temperature control function, and therefore is not a malfunction.



(A) Heater area

(B) Heater switch

54. BLIND SPOT DETECTION / REAR CROSS TRAFFIC ALERT (BSD/RCTA)



1. Check that the BSD/RCTA system is activated and deactivated correctly.
   (1) Press the BSD/RCTA OFF switch to check that "BSD/RCTA OFF" is displayed in the combination meter.
   (2) Press the BSD/RCTA OFF switch again to check that the indicators of the right and left side door mirrors illuminate → go off and "BSD/RCTA OFF" is displayed in the combination meter.
   (3) Check that the BSD/RCTA error message is not displayed.
2. Check the rear bumper around the radar sensor for dirt, scratch, affixed stickers and poor paint coating.
   - If any dirt is found, clean it off so that the rear bumper is not damaged.
   - If any stickers are affixed, remove it so that the rear bumper is not damaged.
   - If the bumper is damaged or has poor paint coating, refer to "CAUTION" in "Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)". Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>General Description>CAUTION.

(A) Radar sensor

55. REVERSE AUTOMATIC BRAKING (RAB)

1. Check that the RAB system is activated and deactivated correctly.
   (1) Start the engine and let the engine idle for 6 seconds or more, and then shift the select lever to "R" range.
   (2) Check that "RAB" and "RAB OFF" turn off in the combination meter.
   (3) Check that the RAB warning is displayed on the rearview camera screen of the navigation system and "RAB" and "P△" indicators illuminate in green.
   (4) Select "RAB" displayed on the screen, and check that "RAB OFF" is displayed in the combination meter when "RAB OFF/ON" is switched and "RAB OFF" is conducted.
   (5) Select "P△" displayed on the screen, and check that "P△ OFF/ON" can be switched.
2. Check the sonar sensor installed on the rear bumper for parts missing, dirt, scratch, foreign objects, etc.
   - The sensor surface must not stick out or sink in at 0.5 mm or more from the rear bumper surface.
     If the sensor surface largely sinks in, the sensor may not engaged in the holder behind the bumper. In this case, check the installation condition of the sensor after removing the bumper.
   - Make sure that there are no foreign objects (tape, stickers, dust or dirt) on the sonar sensor surface.
     If there is a layer of foreign objects on the sensor surface, remove completely so that no residue remains.

(A) Sonar sensor

56. DIAGNOSTIC TROUBLE CODE (DTC) CHECK

Read the diagnostic trouble code and check that the diagnostic trouble code is not detected.
If any diagnostic trouble code is detected, clear all.

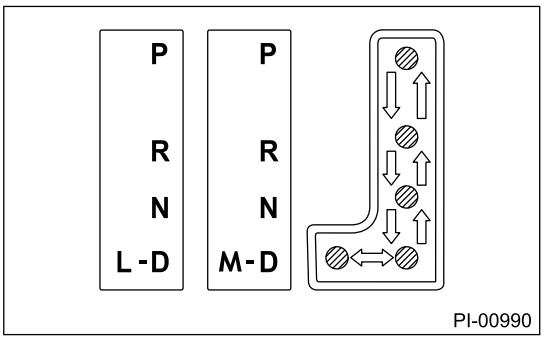
1. Read Diagnostic Trouble Code

Note:
For detailed operation procedures, refer to "Application help".

2. Clear Memory Mode

Note:
For detailed operation procedures, refer to "Application help".

57. BRAKE TEST



Check the foot brake for normal operations.

58. PARKING BRAKE

Check that the parking brake operates normally. When pulling the parking brake lever with a force of 200 N (20 kgf, 45 lb), check that the lever stroke of parking brake lever is 7 to 8 notches.

59. SHIFT CONTROL

- **CVT MODEL**
  1. Turn the ignition switch to ON.
  2. While brake pedal is not depressed, check if the select lever does not move from "P" range.
  3. While brake pedal is depressed, check if the select lever moves from "P" range.
  4. Set the select lever to other than "P" range.
  5. When the ignition switch is turned to OFF, check if the ignition key switch cannot be removed.
  6. Set the selector lever to each gear position and check the shifting while driving the vehicle. Operate the paddle shift at manual mode and check the shifting while driving the vehicle.

Selector position	Gear position						
	1st	2nd	3rd	4th	5th	6th	7th
D	Continuously variable speed change						
Manual mode	OK	OK	OK	OK	OK	OK	OK

  7. Set the select lever to other than "P" range. (Models without the keyless access with push button start)
  8. When the ignition switch is turned to OFF, check if the ignition key switch cannot be removed. (Models without the keyless access with push button start)

- **MT model**
  Check for smooth operation to each position.

60. CRUISE CONTROL

Operate the cruise control system. Check that the system is activated and deactivated correctly. (In the delivery mode, the cruise control does not operate, even when the cruise control switch is pressed.)

61. SUBARU EYESIGHT

- Operate the EyeSight system. Check that the system is activated and deactivated correctly.
- Check the stereo camera cover opening for foreign matter.
- Check the glass in front of stereo camera for dirt and stickers.
- Check the lens and filter of the stereo camera for dirt such as fingerprints.
- Check the filter at lens portion of stereo camera for damage.
- According to the "CAUTION" section, check the windshield glass and dashboard in front of stereo camera to make sure that no aftermarket part is adhered or attached in the prohibited area. Ref. to CAUTION > CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EYESIGHT.
- When delivering the vehicle, explain to the customer to make sure not to touch the filter at lens portion of the stereo camera.

62. POWER STEERING SYSTEM (ELECTRIC POWER STEERING MODEL)

Check that the electric power steering warning light illuminates when the ignition switch is turned to ON, and that the electric power steering warning light goes off after the engine is started.

63. FLUID LEAKAGE

Check entire areas of the vehicle for any trace of engine coolant/engine oil/transmission fluid leaks.

64. WATER LEAK TEST

Spray the vehicle with water using a hose and check that no water enters the passenger compartment.

- Before performing the water leakage test, remove anything that may obstruct the operation or which must be kept dry.
- Close all the windows and doors securely. Close the front hood, trunk lid and rear gate before starting the test.
- Connect a hose to a tap, and spray water on the vehicle. The rate of water spray must be approx. 20 — 25 L (5.3 — 6.6 US gal, 4.4 — 5.5 Imp gal) per minute.
  When spraying water on areas adjacent to the floor and wheel house, increase the pressure. When spraying water on areas other than the floor and wheel house, decrease the pressure. But the force of water must be made strong occasionally by pressing the end of the hose.
  Note:
  Be sure to keep the hose at least 10 cm (3.9 in) away from vehicle.

Check the following areas.

- Front window and body framework mating portion
- Door mating portions
- Glass mating portions
- Rear quarter window mating portions
- Rear window and body framework mating portion
- Around roof drips

If any dampness in the compartments is discovered after the water has been applied, carefully check all the areas that may have possibly contributed to the leak.

65. APPEARANCE 2

1. If protective coating (wrap guard) is applied, remove it.

Note:

- **When removing the wrap guard, using steam will make it easier to remove.**
- **Vehicle left for a extended periods or at low temperatures, spray the vehicle with water heated 50 — 60°C (122 — 140°F) to raise the surface temperature before peeling off the wrap guard. Do not use the water heated to over 60°C (140°F).**
- **If the adhesive remains exist on the coated surface, soak a flannel rag, etc. with a small amount of coating wax or solvent such as oil benzene and IPA, put the soaked cloth on the remains lightly, and then wipe them off with a flannel rag etc.**
- **Keep solvent from touching the resin or rubber parts. Do not use coating wax or solvents while the component surface temperature is hot due to hot weather etc.**
- **If the coated surface is swollen out due to seams or moisture, expose the vehicle to the sunlight for a few hours or heat the seam and swollen portions using a dryer etc.**
- **Dispose of the peeled wrap guard as burnable industrial garbage.**

2. Check the whole vehicle body for flaking paint, damage by transportation, corrosion, dirt, cracks or blisters.

   Note:

   - **It is better to determine an inspection pattern in order to avoid missing an area, since the total inspection area is wide.**
   - **Do not repair the body paint unless absolutely necessary. Also, if the vehicle is in need of repair to remove scratches or corroded paint, the repair area must be limited to the minimum. Re-painting and spray painting must be avoided as much as possible.**

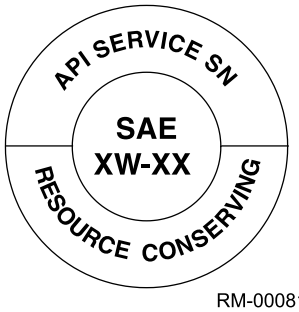
3. Check each window glass for scratches carefully. Slight damage may be removed by polishing with cerium oxide. (Fill a cup half with cerium oxide, and add warm water to it. Then agitate the content until it turns to wax. Apply this wax to a soft cloth, and polish the glass with it.)
4. Check each portion of the vehicle body and underside components for the formation of rust. If rust is discovered, remove it with sandpaper of #80 to #180 and treat the surface with rust preventive. After this treatment is completed, flush the portion thoroughly, and prepare the surface for repair painting.
5. Check each portion of body and all of the exterior parts for deformation or distortion. Also, check each light lens for cracks.
6. Peel the protective tape, vinyl wrapping and identification seal attached to the following places.
   - Seat
   - Door trim
   - Floor carpet
   - Side sill
   - Rear shelf
   - Aluminum pedal
   - Rear wiper
   - Door mirror
   - Handle - door outer
   - Cover - handle outer
   - Fuel opener lever
   - Instrument panel
   - Fog light

RECOMMENDED MATERIALS

RM

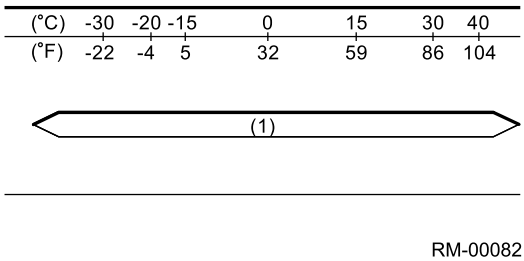
1. Recommended Materials

1. GENERAL



To insure the best performance, always use the specified oil, gasoline, adhesive, sealant, etc. or a substitute of equivalent quality.

2. FUEL

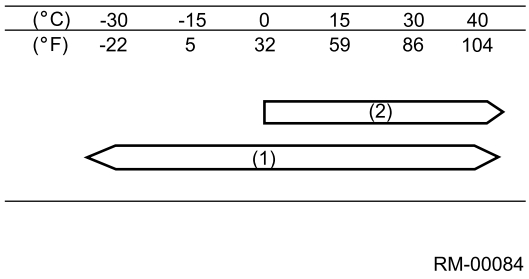


- Use unleaded gasoline because using leaded gasoline may cause a malfunction.
- Do not use the low quality gasoline, or improper fuel such as diesel fuel, fuel alcohol, or gasoline additive because they will adversely affect on engine components and fuel system components.
- Always use gasoline that is equivalent to that prescribed in the owner's manual or that of high octane value. There is the possibility of damaging or improper operation of the engine and fuel injection system if the specifications are not observed. Use the prescribed gasoline type to maintain proper vehicle performance.

3. LUBRICANT

Use the lubricants shown in the table below, or equivalent. See the table below to choose the correct SAE viscosity.

<table>
<tr><th rowspan="2">Lubricant</th><th colspan="2">Recommended materials</th></tr>
<tr><th colspan="2">Engine oil standard</th></tr>
<tr><td>Engine oil
Choose oil suitable for the standard from the right.</td><td>



RM-00081
Those with SN "Resource Conserving" logo in case of API standard.</td><td>or

RM-00002
Those with GF-5 "starburst mark" displayed on top of the container in case of ILSAC standard.</td></tr>
<tr><td colspan="3">SAE viscosity No. and applicable temperature</td></tr>
<tr><td colspan="3">

RM-00082
(1) 0W-20 (synthetic oil) Specified</td></tr>
</table>

Lubricant	Recommended materials
	API standard

Lubricant	Recommended materials
	API standard
Rear differential gear oil (T type)*	GL-5
SAE viscosity No. and applicable temperature	

(1) 75W-90 (recommended)
(2) 90

*

Caution:

Do not mix two different kinds or makes of gear oil.

4. FLUID

Use the fluids specified in the table below. Do not mix two different kinds or makes of fluid.

Caution:

- **Be sure to use the recommended CVTF. Using material except recommended one would cause trouble.**
- **If an alternative transmission gear oil is used, you may not have expected functionality and performance.**

Fluid	Recommended materials	Item number	Alternative
Transmission fluid	SUBARU CVT FLUID LINEARTRONIC II	K0425Y0711	—
Transmission gear oil	SUBARU GEAR OIL EXTRA MT	—	GL-5 (75W-90)
CVT front differential gear oil	SUBARU GEAR OIL EXTRA MT	—	GL-5 (75W-90)
Rear differential gear oil (VA type)	SUBARU GEAR OIL EXTRA MT	—	GL-5 (75W-90)
Brake fluid and clutch fluid	FMVSS No. 116 DOT3 or DOT4	—	—

5. ENGINE COOLANT

Use genuine engine coolant to protect the engine.

Engine coolant	Recommended materials	Item number	Alternative
Coolant	SUBARU SUPER COOLANT (Concentrated type)	—	—

Engine coolant	Recommended materials	Item number	Alternative
	SUBARU SUPER COOLANT (Diluted type)	K0670Y0001	
Water for dilution	Distilled water	—	Soft water or tap water
Cooling system protective agent	Cooling system conditioner	SOA345001	—

6. REFRIGERANT

Standard air conditioners installed on this vehicle uses HFC134a refrigerant. Do not mix it with other refrigerants. Also, do not use air conditioner compressor oil other than ND-OIL8.

Air Conditioner	Recommended materials	Item number	Alternative
Refrigerant	HFC134a	—	—
Compressor oil	ND-OIL8	—	—

7. GREASE

Use grease and supplementary lubricants shown in the table below.

Grease	Application point	Application point	Recommended materials (item No.)	Alternative
Supplementary lubricants	Exhaust	Oxygen sensor	Spray type lubricant (004301003)	—
Grease	MT	MT main shaft (spline parts)	NICHIMOLY N-130	—
		MT main shaft (oil seal lip)		
		Transfer driven gear (front roller bearing, rear roller bearing)		
		Clutch operating cylinder		
		Clutch release bearing (inner circumference)

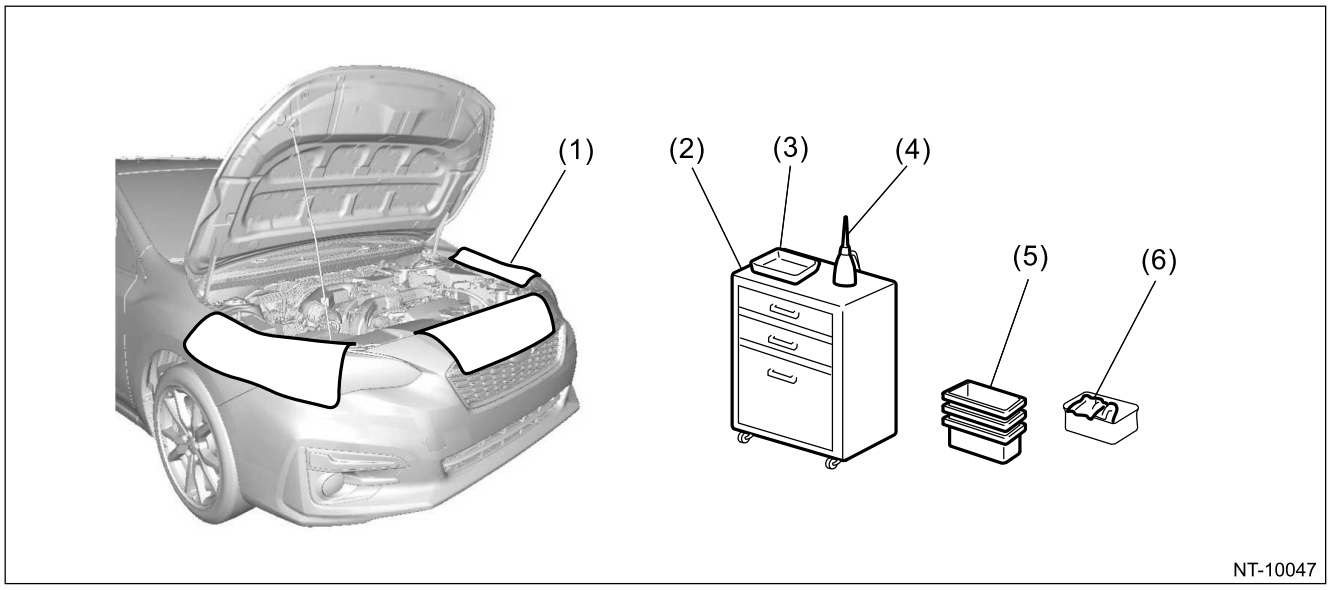
REPAIR CONTENTS

RC

1. Repair Contents

NOTE



This section describes basic points that the service operator must understand before performing the service operation.

1. APPEARANCE

- Always wear clean work clothing.
- Wear a cap and protective shoes.

2. PROTECTION OF VEHICLE UNDER MAINTENANCE AND PREPARATION OF TOOLS/EQUIPMENT

- Before work, cover the vehicle body. (Ex. grille cover, fender cover, seat cover and floor mat cover)
- Before performing the service operation, prepare tools, equipment, container box, grease and cloth etc.

(1) Fender cover
(2) Tools/equipment case
(3) Tray
(4) Oil
(5) Container box
(6) Cloth

3. SAFETY

- Before work, set the wheel stoppers to secure the vehicle.
- When performing work by multiple workers, call to each other to make sure that service operation is performed safely.
- Ventilate the room when starting the engine.
- When performing the service operation of high-temperature parts like muffler, or rotating parts like fan and other movable parts, be careful not to get burned or injured.
- For the jack-up and lift up, set the tool to the proper location to support the vehicle correctly. And use the safety device properly when lifting up.

4. SERVICE OPERATION

- By identifying the vehicle problems thoroughly before work, service operation will be performed effectively.
- Before removing parts, confirm the installation condition or the damage of the parts.
- To reinstall parts properly, leave a note of the condition before work as necessary.
- For a part which needs positioning, take appropriate action such as putting alignment marks.

- For a removed part, clean it as necessary and check for damage and defect before installation. If a part is damaged or does not work properly, replace it with a new part.
- Removing or installing the components or the connectors with the ignition switch ON will electrically impair them.
- Reconnect the harness connectors for each control module one or more minutes after disconnecting them.
- For installation of the bolt, nut, and screws, use tools suitable for each dimension, and use them vertically and securely.

5. SERVICE PARTS

- A removed part must be organized to avoid mixing up with similar parts. When same parts are used in multiple locations, such as pistons in engine, manage the parts by using labels with cylinder No. so that the parts are not installed to the wrong location.
- Always replace nonreusable parts such as gasket and O-ring with new parts.
- After work, have a customer confirm the replaced part.
- Use genuine parts for maximum performance and maintenance when conducting repairs. Subaru/FHI will not be responsible for poor performance resulting from the use of parts except for genuine parts.

6. SETTING OPERATION FOR PARTS REPLACEMENT, REMOVAL/INSTALLATION

Operation list

Main replacement part / operation	Necessary operation	Phenomenon when not performed / disabled function	Reference
• TCM • Transmission assembly • Control valve body assembly	1. Transmission learning value initialization 2. Transmission learning operation	• Abrupt engine increase • Excessive shift shock	Ref. to TRANSMISSION (DIAGNOSTICS)>Learning Control>PROCEDURE.
• VDC control module and hydraulic control unit (VDCCM&H/U) • Steering angle sensor • Steering column assembly • Steering gearbox assembly • Steering wheel assembly • Universal joint assembly • Front wheel alignment adjustment • For others, refer to the operation instructions for each part.	1. VDC sensor midpoint setting 2. Parameter selection and registration (when replacing VDCCM&H/U)	• VDC system does not operate normally (Warning light illuminates) • Difference of steering effort between right and left • EyeSight does not operate normally	Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE.

Main replacement part / operation	Necessary operation	Phenomenon when not performed / disabled function	Reference
• Rear vehicle height sensor • Auto headlight beam leveler CM	1. Auto headlight beam leveler system initialization/reinitialization	• AUTO HEADLIGHT BEAM LEVELER SYSTEM	Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.
• Regulator & motor assembly - front (RH, LH) • Glass assembly - front door (RH, LH), sash assembly - partition (RH, LH) or sash assembly lower (RH, LH) • Weather strip body side flange front (RH, LH)	1. Power window system initialization	• Door glass automatic open/close function • Auto-reverse function • Operation after key OFF (IG OFF)	Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION.

Note:

For settings or other procedures for immobilizer related part, refer to "REGISTRATION MANUAL FOR IMMOBILIZER".

7. BATTERY

- **ACTIONS TO TAKE AFTER REMOVING BATTERY OR DISCONNECTING GROUND TERMINAL**

  When removing the battery or disconnecting the battery terminal, always be sure to turn the ignition switch to OFF and disconnect the battery ground terminal first.

  When removing the battery or disconnecting the battery terminal, power supply is cut off and the information stored in the computer memory is volatilized. Therefore, setting information of some devices is initialized to the factory default. The device and functions initialized by removing battery are as follows.

No.	Item	Job contents when connecting battery
1	Clock	Set the clock to the current time.
2	MFD	Set to the contents checked before disconnecting the battery.
3	Audio (settings that the customer set)	Set to the contents checked before disconnecting the battery.
4	Navigation system (settings that the customer set)	• Time setting is not necessary because the time information is received via GPS. • Set the sound and other settings (items that were set in the selection) to the contents checked before disconnecting the battery.
5	Temperature setting of fully automatic air conditioner (settings that the customer set)	Set to the contents checked before disconnecting the battery.

No.	Item	Job contents when connecting battery
6	Steering lock system (model with keyless access with push button start)	If the engine does not start, initialize the steering lock system. For the initialization procedure, refer to "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ENGINE DOES NOT START.
7	EyeSight (model with EyeSight)	Set to the contents checked before disconnecting the battery.
8	Electronic throttle system	Turn the ignition switch to ON, wait for 10 seconds or more, and start the engine.
9	Engine control system	• Let the engine run at idle until it fully warms up (the radiator fan turns 2 times or more) under no electrical load condition. • After the battery ground terminal is connected, wait for 10 seconds or more to turn the ignition switch to ON.
10	Past trouble history (memory code)	—

- **GROUND TERMINAL REMOVAL OR INSTALLATION**

1. Disconnect the ground cable from battery.

Note:

Open the trunk or rear gate as necessary before disconnecting the ground terminal from the battery.

2. Connect the battery ground terminal.

Note:

- **Install the battery sensor while holding it by hand to prevent rotating.**
- **Clean the battery cable terminals and apply grease to retard the formation of corrosion.**
- **Connect the positive (+) terminal, and then connect the negative (-) terminal of the battery.**
- **Since DTCs may be detected, after the battery ground terminal is connected, wait for 10 seconds or more to turn the ignition switch to ON.**
- **After the battery is installed, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.**
- **For battery replacement procedures, refer to "STARTING/CHARGING SYSTEMS (H4DO)" section. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.**

Tightening torque:

5 N·m (0.5 kgf-m, 3.7 ft-lb)

8. OTHER ADJUSTMENT OPERATIONS BEFORE DELIVERING THE VEHICLE TO CUSTOMER

Due to service and parts replacement convenience, perform the following operations before delivering the vehicle to the customer.

No.	Item	Check operation	Adjustment operation	Additional adjustment operations when replacing parts
1	Positions of devices • Steering • Room mirror • Door mirror • Seat • Air conditioner vent grille	Is the device set to the same position when the vehicle was received from the customer?	Adjust the device to the similar position when the vehicle was received from the customer.	When removing/installing each device • Meter, instrument panel, steering column, etc. • Room mirror, roof trim, sunroof assembly, etc. • Door mirror, door panel, etc. • Seat, floor carpet, etc. • Vent grille, instrument panel, console box, etc.
2	Positions of switches • Wiper, light (AUTO or OFF) • Headlight beam leveler • Illumination control • Room light • Seat heater, etc.	Is the switch set to the same position when the vehicle was received from the customer?	Set the switch to the same position when the vehicle was received from the customer.	When removing/installing each switch
3	Position of antenna	Is the antenna set to the same position when the vehicle was received from the customer?	Adjust the position of antenna.	When removing/installing the antenna and washing the vehicle

9. PARTS CLEANING

Caution:

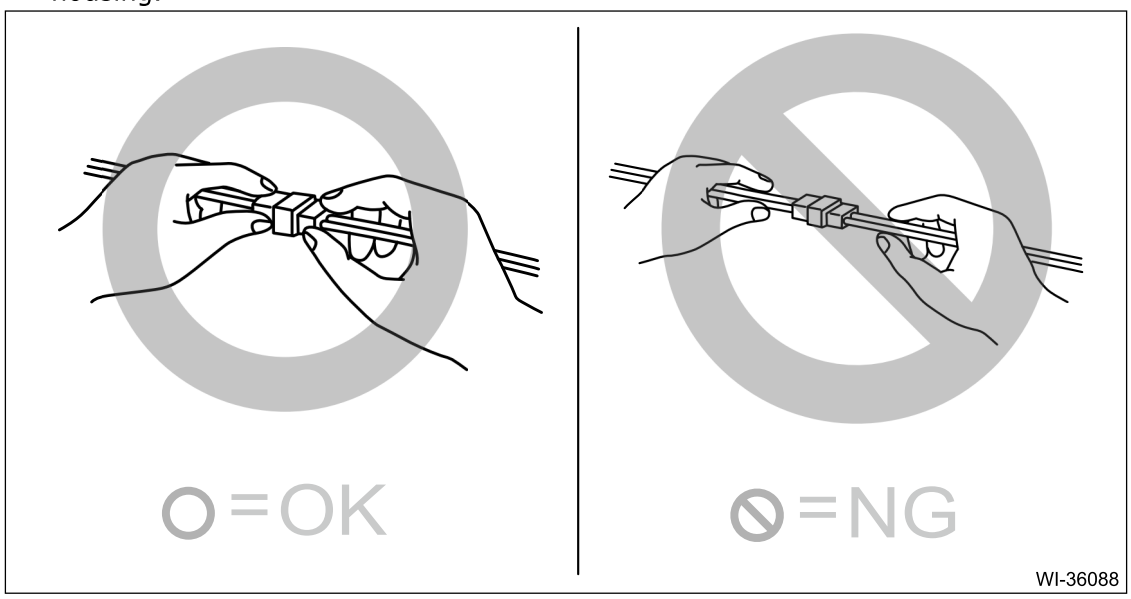
Do not spray parts cleaner directly to rubber parts such as bushing or other resin parts.

- Perform the operation in a clean location and use extra caution in dust proofing.
- Clean the items (except for assembly components) with steam, etc. before disassembly. During steam cleaning, wrap the air breather, oil level gauge, connectors, etc. with vinyl tape to prevent steam from entering inside the parts.
- Use an appropriate cleaning solvent.
- Do not clean rubber parts such as O-ring, gasket and oil seal with cleaning solution.

10. FASTENERS NOTICE

Fasteners must be tightened to the specified torque.
Do not apply paint, lubricant, rust retardant or other substance to the surface around bolts, nuts, etc. Doing so will make it difficult to obtain the correct torque and result in looseness and other problem.

11. ABOUT SCREWS

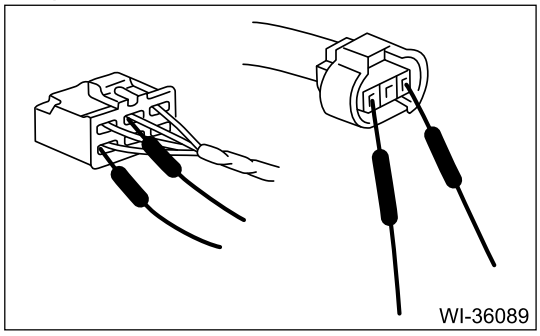


Use an appropriate sized tool. Insert a screw vertically into the hole. Check for any loose screws after installation.
If improper tools are used or screws are inserted obliquely to the hole, the screws cannot be installed correctly, which may result in insufficient tightening force or damage on the hole.

12. STATIC ELECTRICITY DAMAGE

Do not touch the control modules, connectors, logic boards and other such parts when there is a risk of static electricity. Always use a static electricity prevention cord or touch grounded metal for the elimination of static electricity before conducting work.

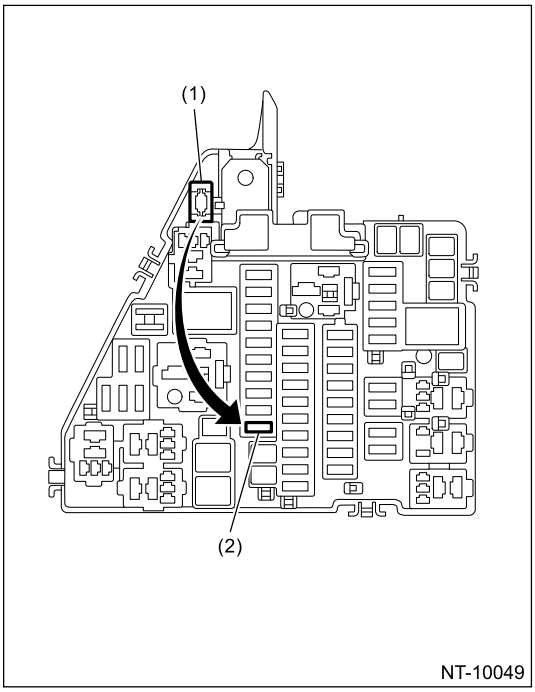
13. TROUBLESHOOTING OF ELECTRICAL SYSTEM



1. Always refer to "CAUTION" of "General Description" in the same models service manual before starting the diagnostics and repair.
2. Always refer to the cautions of each section when diagnosing and repairing each system and component.
3. The battery cable must be disconnected from the negative terminal after the ignition switch is set to the OFF position, unless otherwise required by the diagnostics.
4. When disconnecting a connector, do not pull the harness, but pull while holding the connector housing.

5. Confirm the locking shape completely before disconnecting a connector. In addition, firmly push in

the connector until a click sounds when connecting a connector.



6. When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the harness side.
   If the probe is too thick to gain access to the terminal, do not push it in forcibly but use a mini test lead.
7. When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.
   Caution:
   If a taper pin or the like has been inserted into the connector terminal, replace the connector.
8. To check water-proof connectors (which are not measurable from the harness side), touch tester probes on the terminal side and be very careful not to bend or damage the terminals.

9. Securely fasten the harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
10. When installing a harness and a component, be careful not to catch them on the harness.
11. Sensors, relays, units, etc., are sensitive to strong impacts. Handle them with extra care so that they are not dropped or mishandled.
12. When inspecting the airbag system, in order to avoid malfunction, always refer to “CAUTION” of “General Description” of the airbag system in the same model’s service manual.

14. FUSE

Backup fuse (30 A) remains removed to prevent the battery consumption when vehicles are delivered. Install the backup fuse by following the illustration. Besides, removing the backup fuse from the fuse holder deactivates the control during shipping (delivery mode).

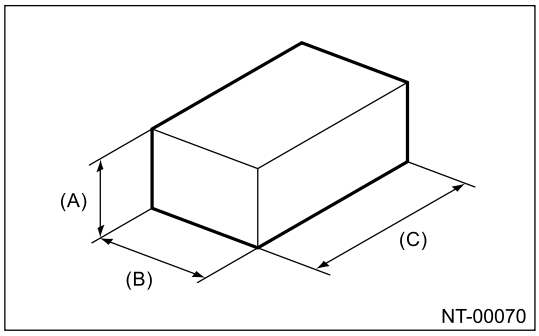
(1) Backup fuse holder

(2) Backup fuse inlet

15. IMMOBILIZER RELATED PART

- Do not replace the immobilizer related parts with the parts from other vehicle.
- Registration of the immobilizer is necessary when a immobilizer-related control module has been replaced. For detailed operation procedure, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

16. LIFT AND JACK



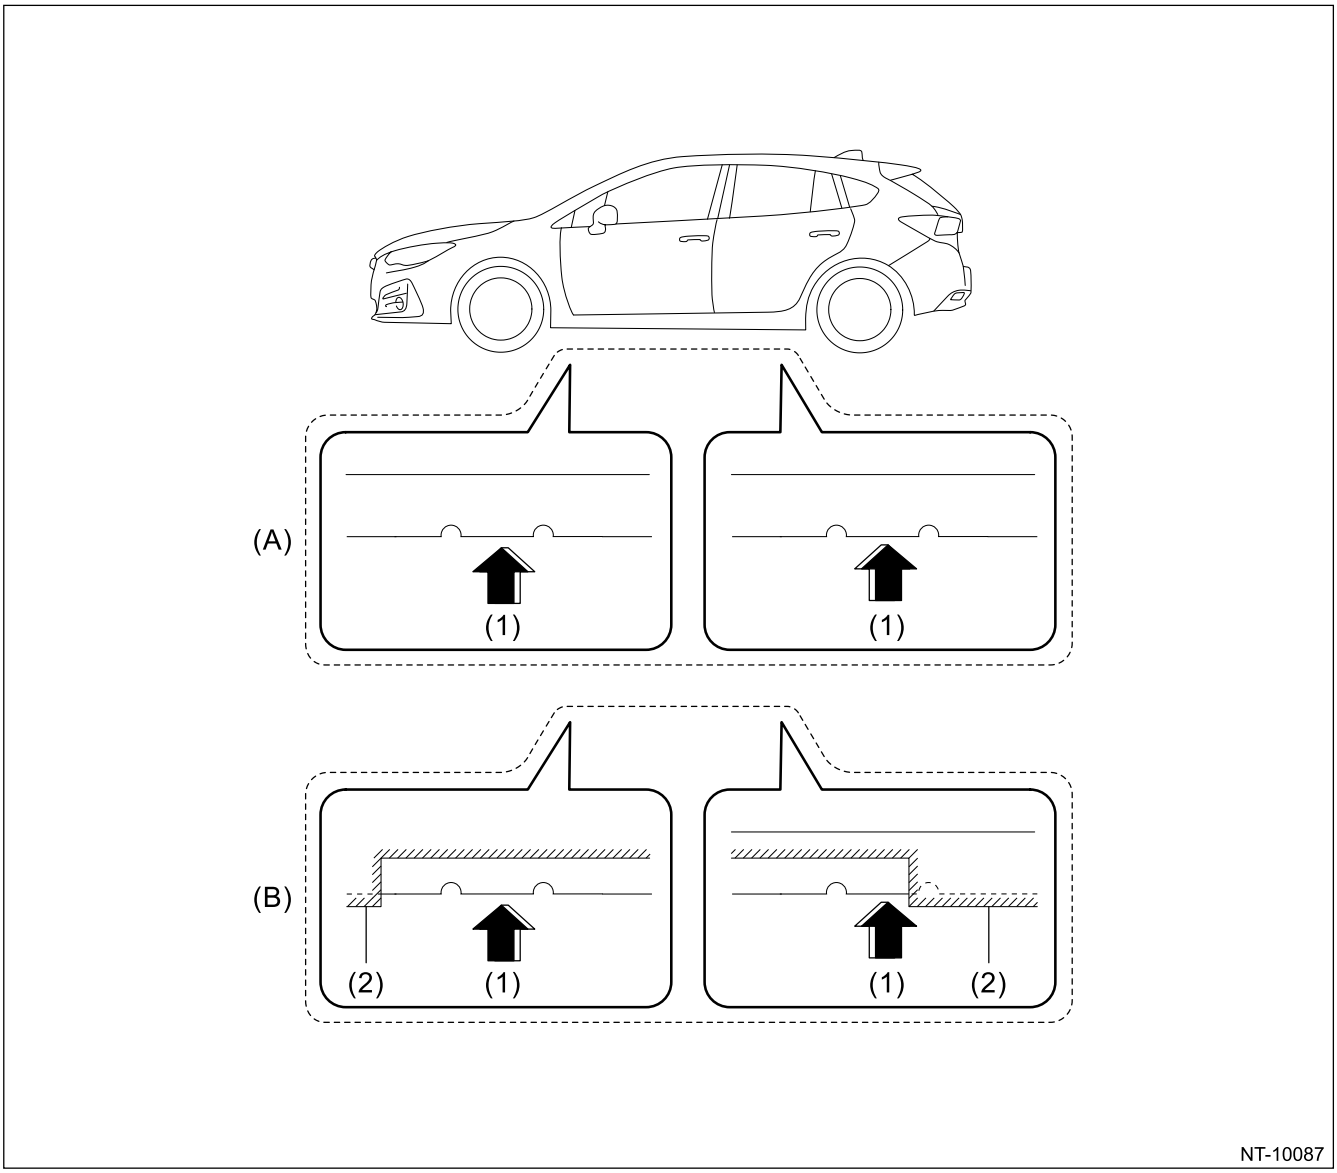
When using a lift or shop jack to raise a vehicle or using rigid rack to support a vehicle, always follow instructions concerning jack-up points and weight limits to prevent the vehicle from falling, which could result in injury. Be especially careful that the vehicle is balanced before raising it. Be sure to set the wheel stoppers when jacking-up only the front or rear side of the vehicle.

Caution:

Select the lift attachment so that the side sill does not contact the lift arm.

Note:

- **When using a lift, follow its operation manual.**
- **When the side sill cover contacts the lift arm, use a lift attachment.**
- **Do not work or leave unattended while the vehicle is supported with jack, support it with rigid racks.**
- **Be sure to use the rigid racks with rubber attached to cradle to support the vehicle.**
- **When using a lift, use an attachment or something similar.**
- **When using a plate lift, use a rubber attachment. Place the attachment to the specified position of the vehicle, by adjusting front/rear and left/right sides accordingly.**



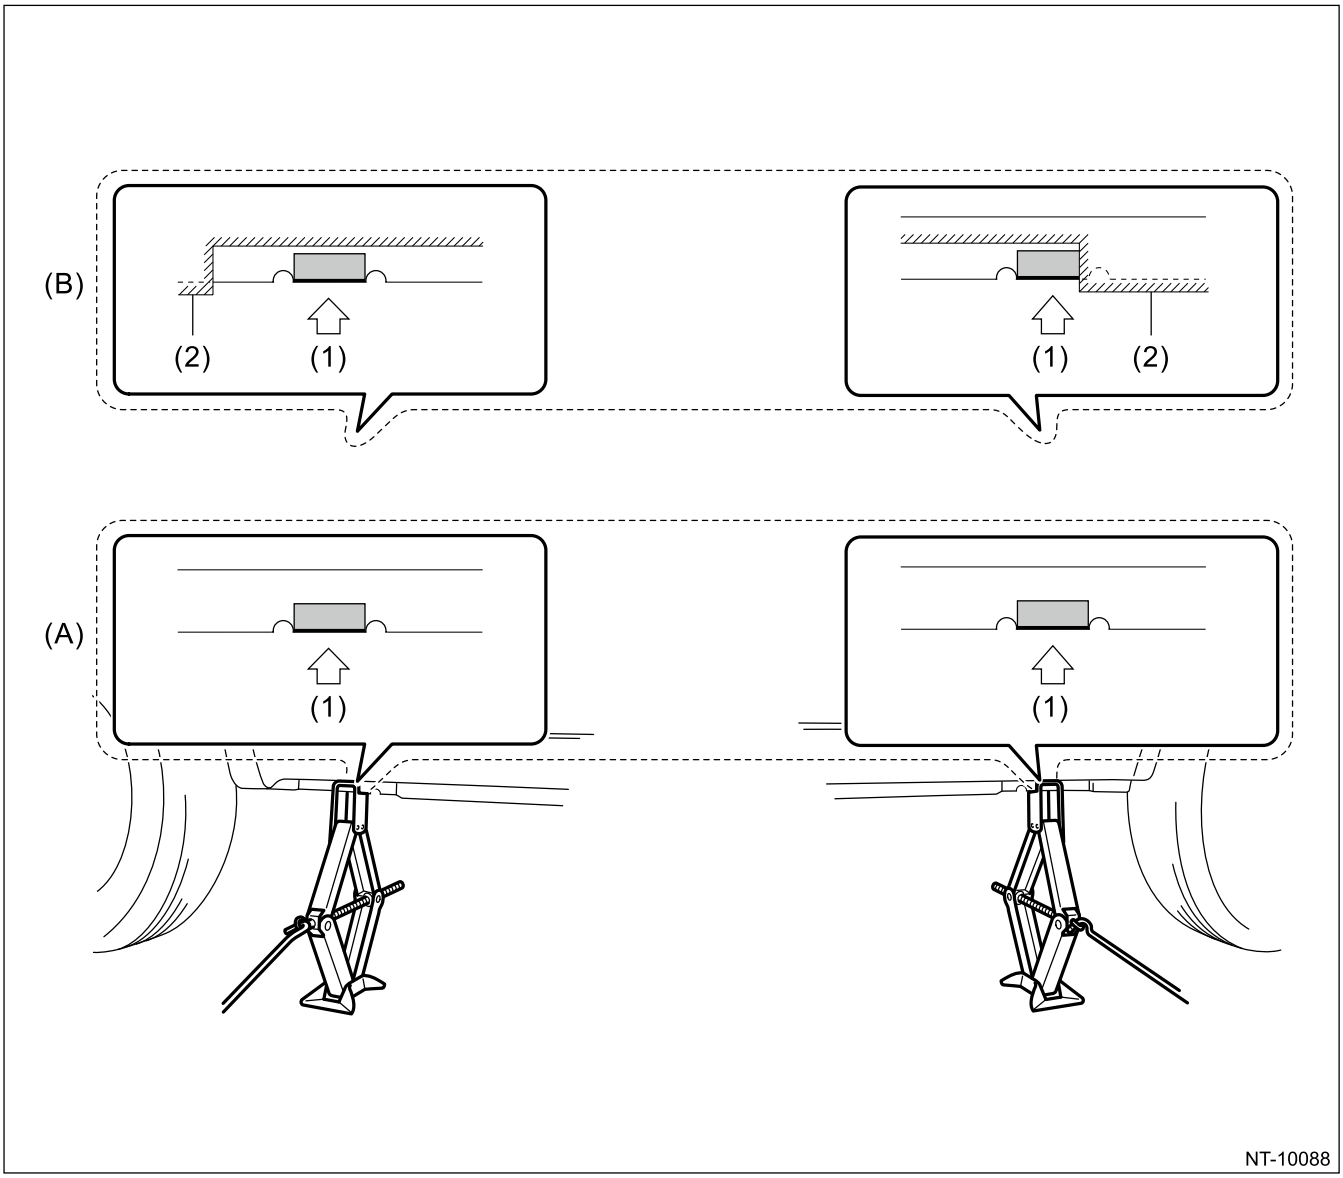
(A) 80 mm (3.1 in) or more

(B) 80 — 100 mm (3.15 — 3.94 in)

(C) 120 — 200 mm (4.72 — 7.87 in)

- **Align the cushion rubber center part of plate lift with the center part of rubber attachment.**
- **Do not use the plate lift whose attachment does not reach the supporting locations.**

- **SUPPORT LOCATIONS**



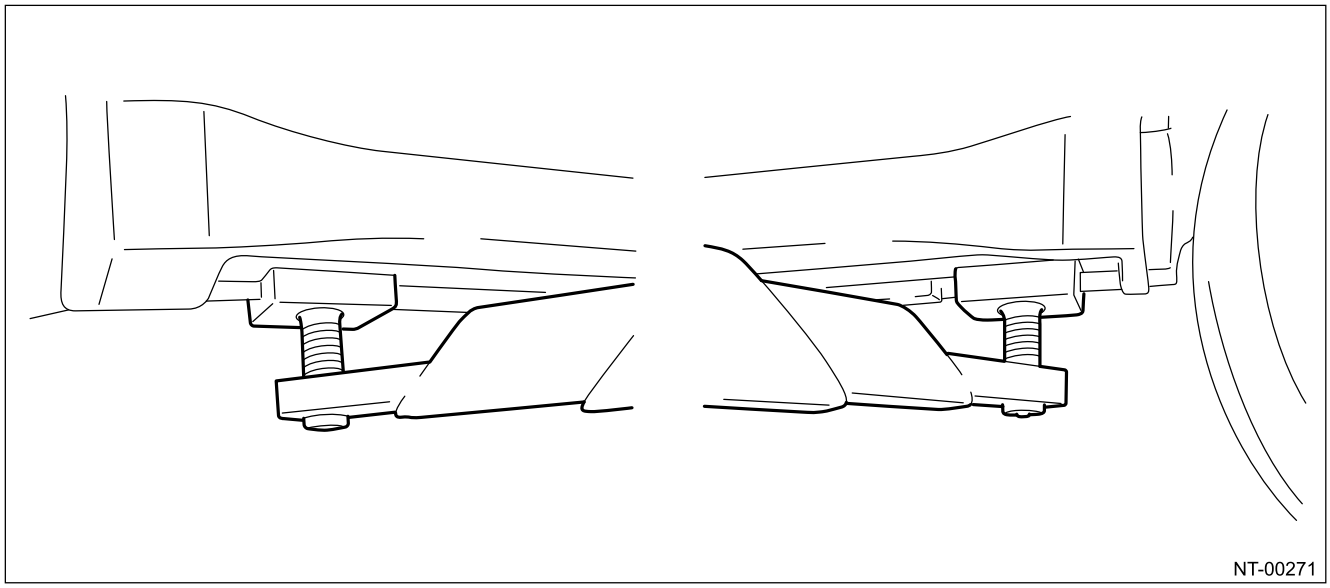
(A) Model without side spoiler

(B) Model with side spoiler

(1) Jack-up point

(2) Side spoiler

- **PANTOGRAPH JACK**

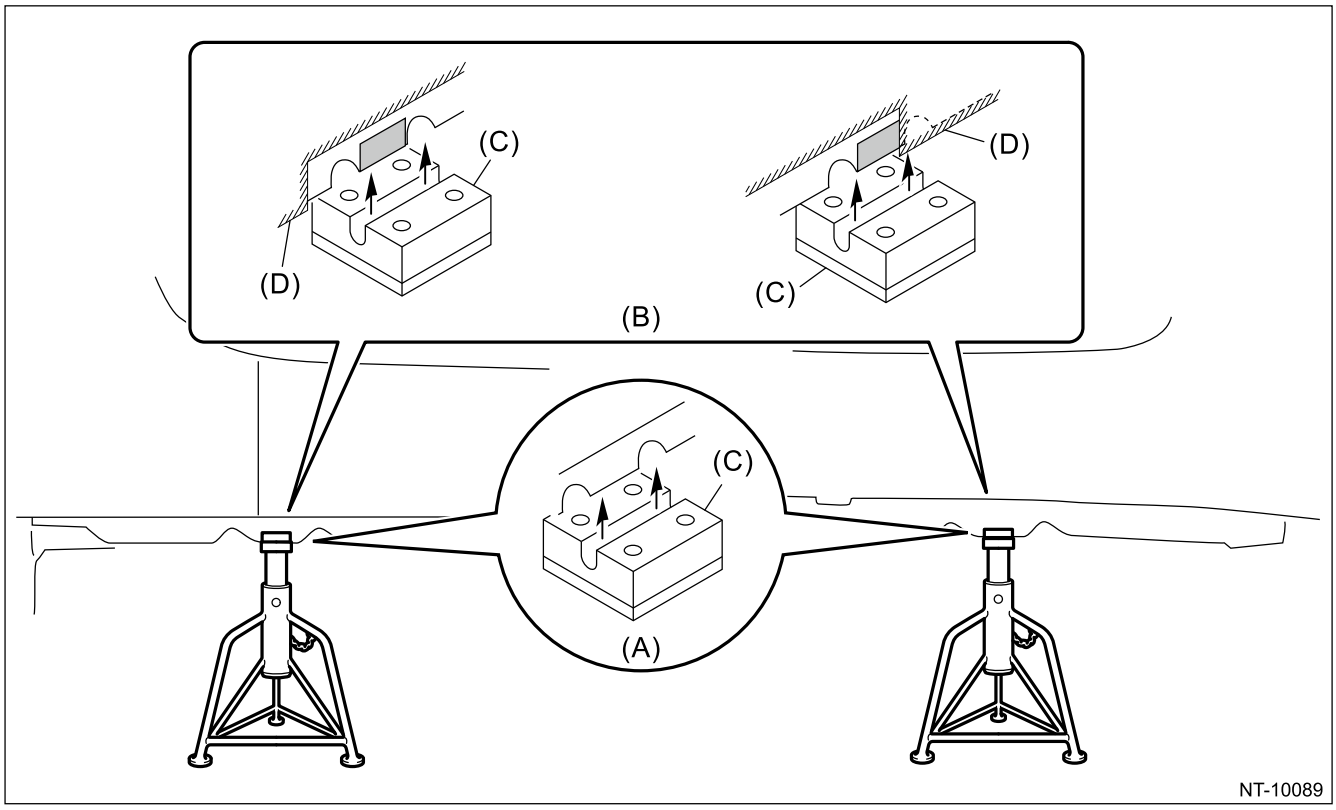


(A) Model without side spoiler

(B) Model with side spoiler

(1) Jack-up point

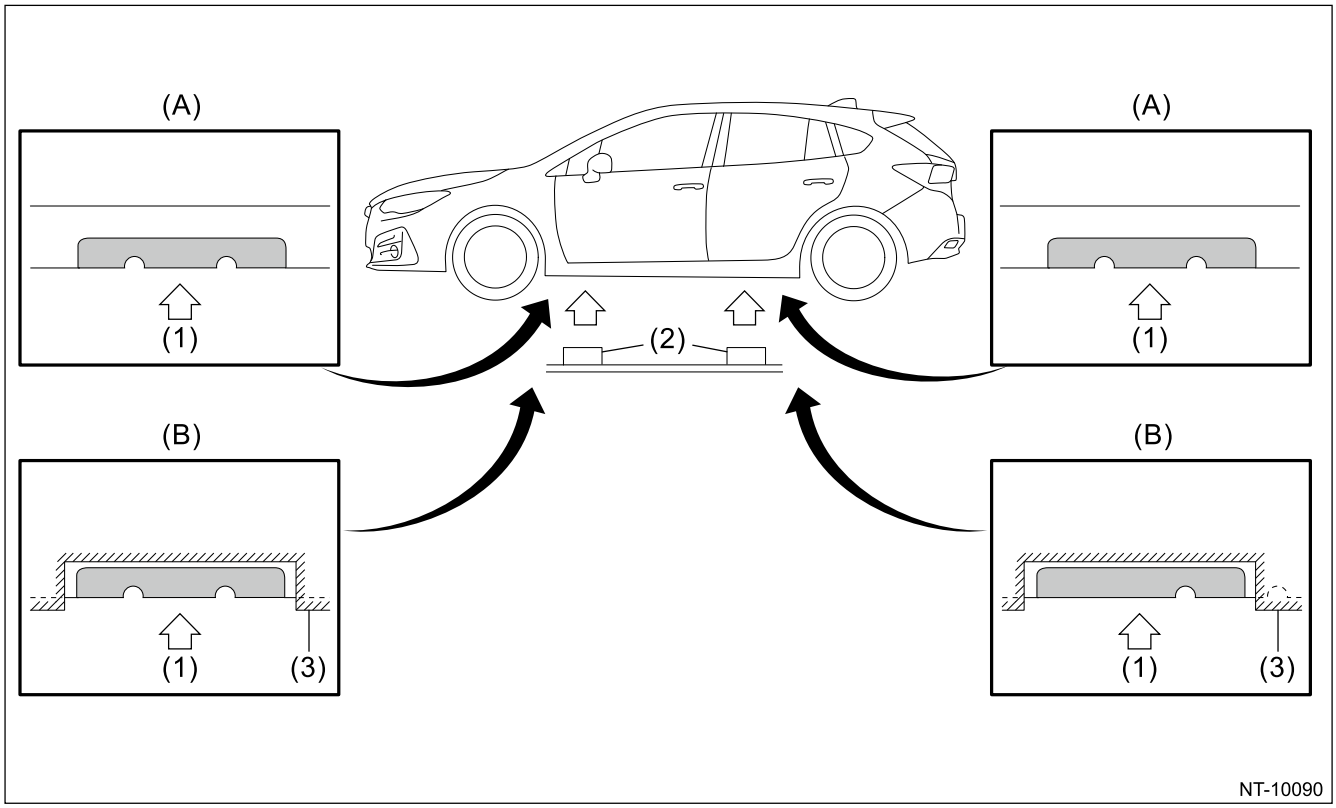
(2) Side spoiler



- **LIFT**

Caution:

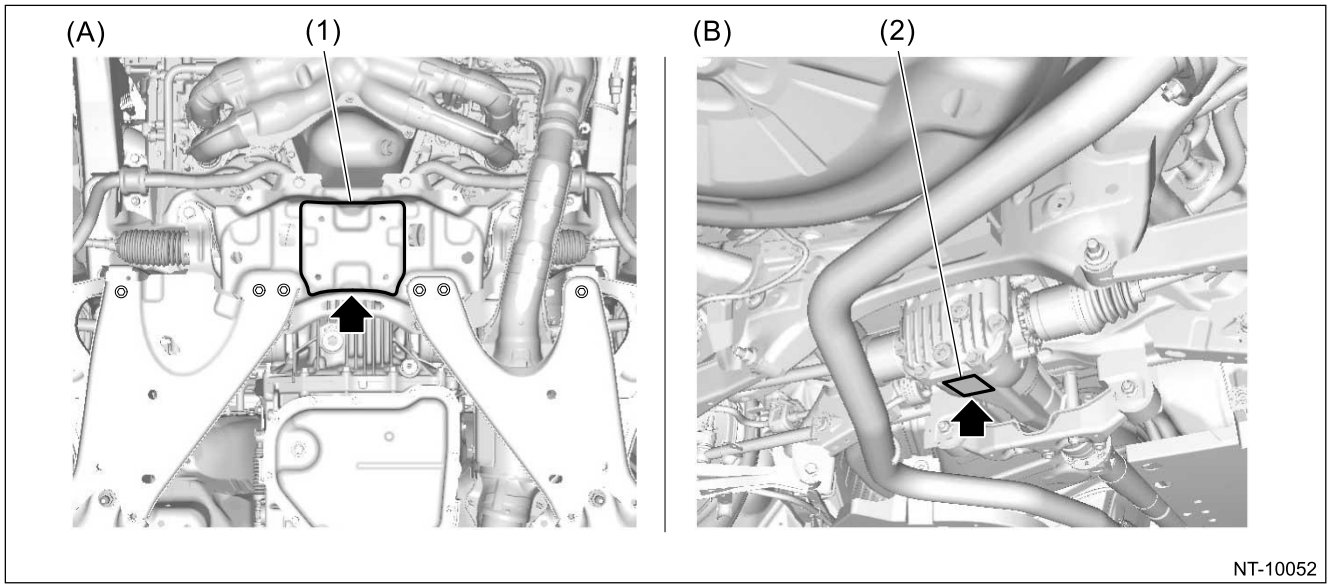
For models with spoiler garnish, use a spacer or an attachment to lift up the vehicle securely at jack up point without the side garnish contacting the lift.



- **RIGID RACK**

(A) Model without side spoiler (B) Model with side spoiler (C) Attachment

(D) Side spoiler



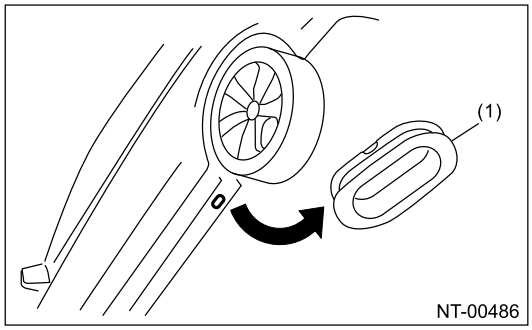
- **PLATE LIFT**

(A) Model without side spoiler (B) Model with side spoiler

(1) Jack-up point (2) Attachment (3) Side spoiler

- **JACK-UP POINT (WHEN USING A GARAGE JACK)**

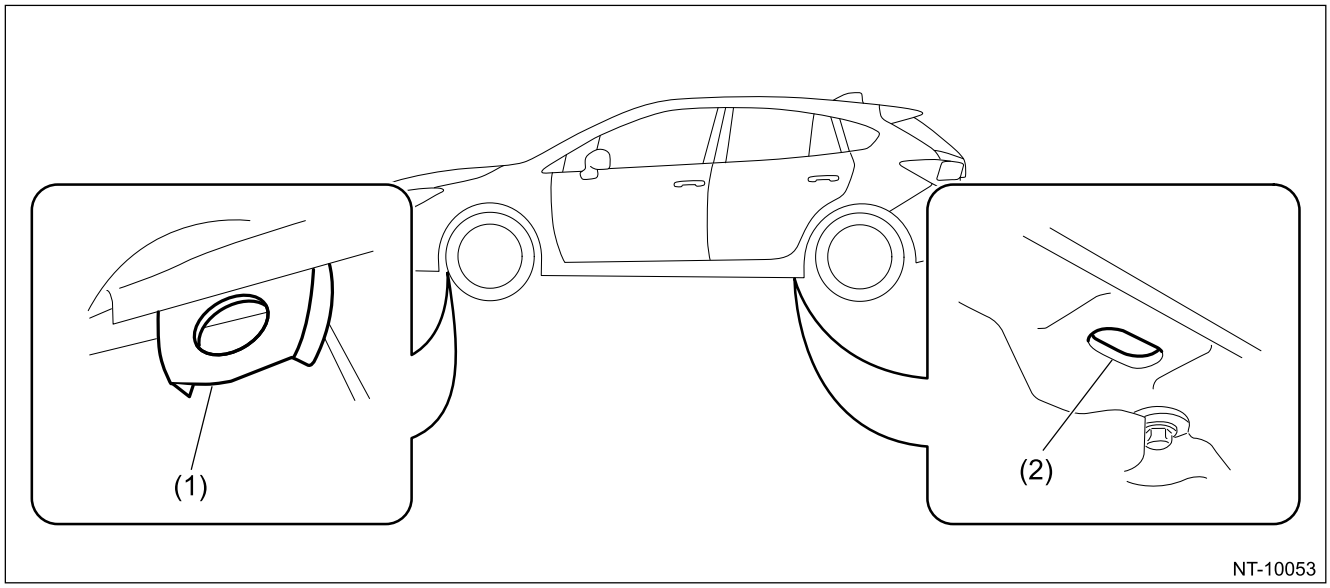
(A) Front (B) Rear



(1) Crossmember support - front (2) Rear differential

Caution:

If jacking up the front side of the vehicle, make sure that the jack is attached at the center of the jack-up plate not at the sides.

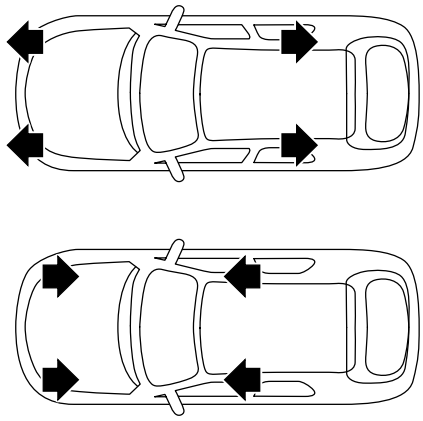


17. TIE-DOWNS

Tie-downs are used when transporting vehicles and when using the chassis dynamo. Remove the grommet of the tie-down hole and install the tie-down only to the specified locations on the vehicle.

(1) Grommet

- **TIE-DOWN LOCATION**



(1) Hook for tie-down (2) Tie-down hole

- **CHAIN DIRECTION AT TIE-DOWN CONDITION**

Caution:

- **Pull the front and rear of the vehicle in the opposite direction, and pull the left and right of the vehicle in the same direction.**
- **Patterns except for the followings (recommended) are not allowed.**

	Recommended

	Recommended
Tie-down direction	 NT-00214

- **TIE-DOWN RANGE**

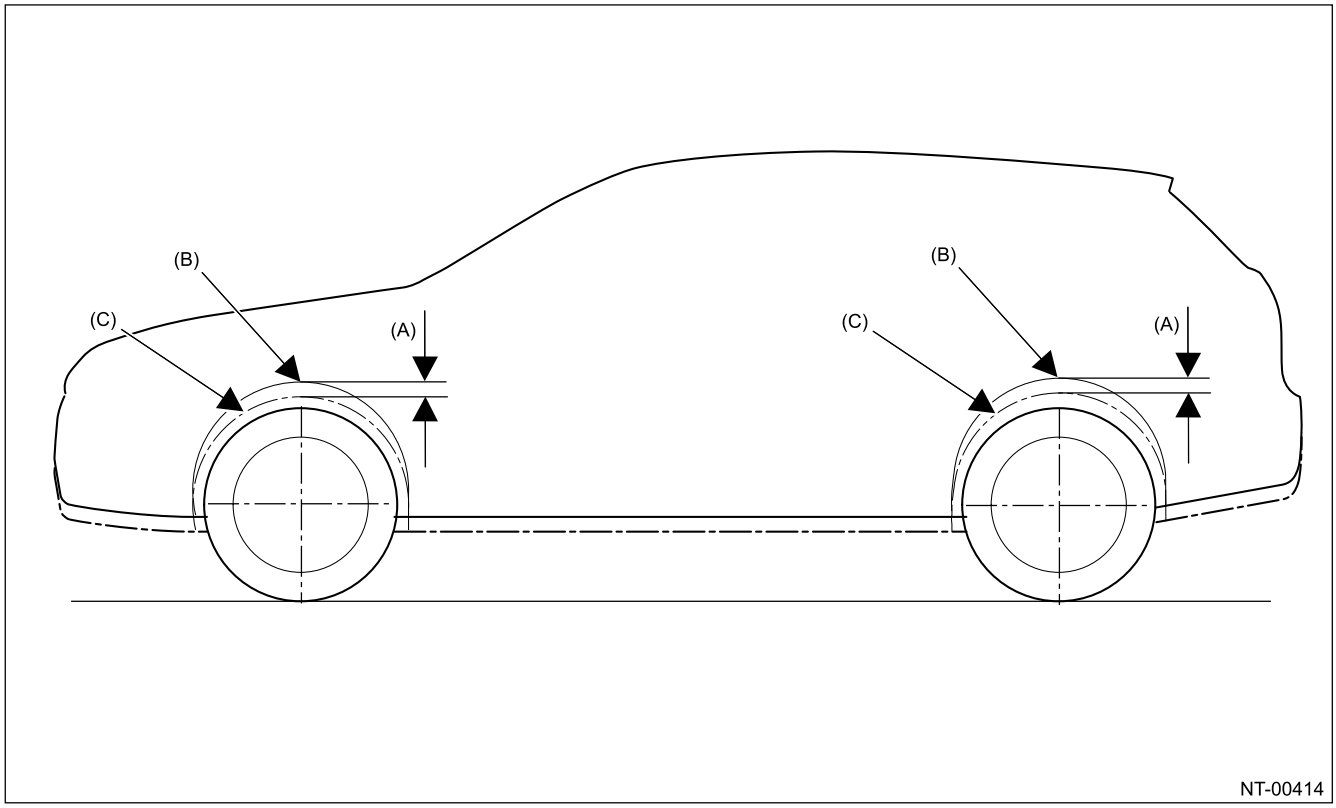
  For ground transportation

  Caution:

  When the vehicle is tied down from vehicle inside, hook the hooks of tie-down chain on the rear tie-down holes from vehicle inside. When the vehicle is tied down from vehicle outside, hook the hooks of tie-down chain on the rear tie-down hooks from vehicle outside.

(A) Front tie-down hook (B) Rear tie-down hole (C) Chain pulling range at tie-

down condition



- **VEHICLE SINKING VOLUME AT TIE-DOWN CONDITION**

Caution:

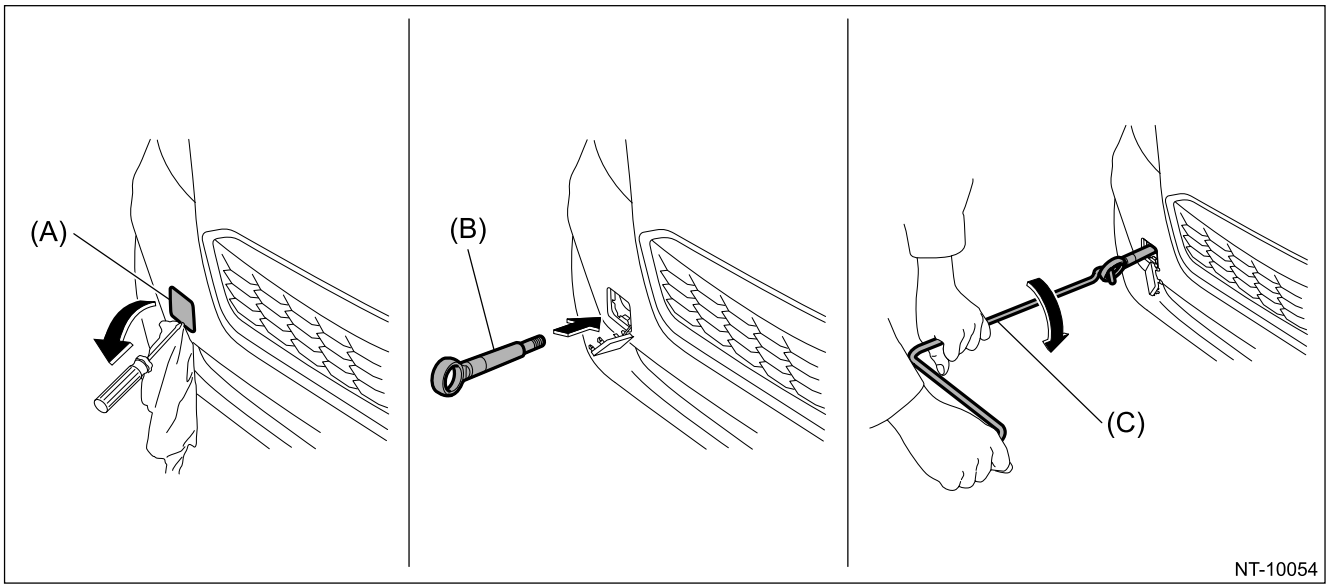
Sinking amount of the vehicle at tie-down condition should be less than 50 mm (1.97 in) and make sure to fix the vehicle securely.

Check to see if the tensions of chains or belts at tie-down condition are appropriate in the following procedures.

1. Before tie-down, measure the distance between the highest tire point and highest arch point at the center of wheel.
2. After tie-down, measure the distance between the highest tire point and highest arch point at the center of wheel.
3. If the distance (A) between the measured value of 1) and 2) above is less than 50 mm (1.97 in), it is judged as OK. If the distance is 50 mm (1.97 in) or more, it is judged as NG because the tension is too high.

(B) Arch position before tie-down (C) Arch position after tie-down

NOTES FOR THE USE OF TIE-DOWN HOOK



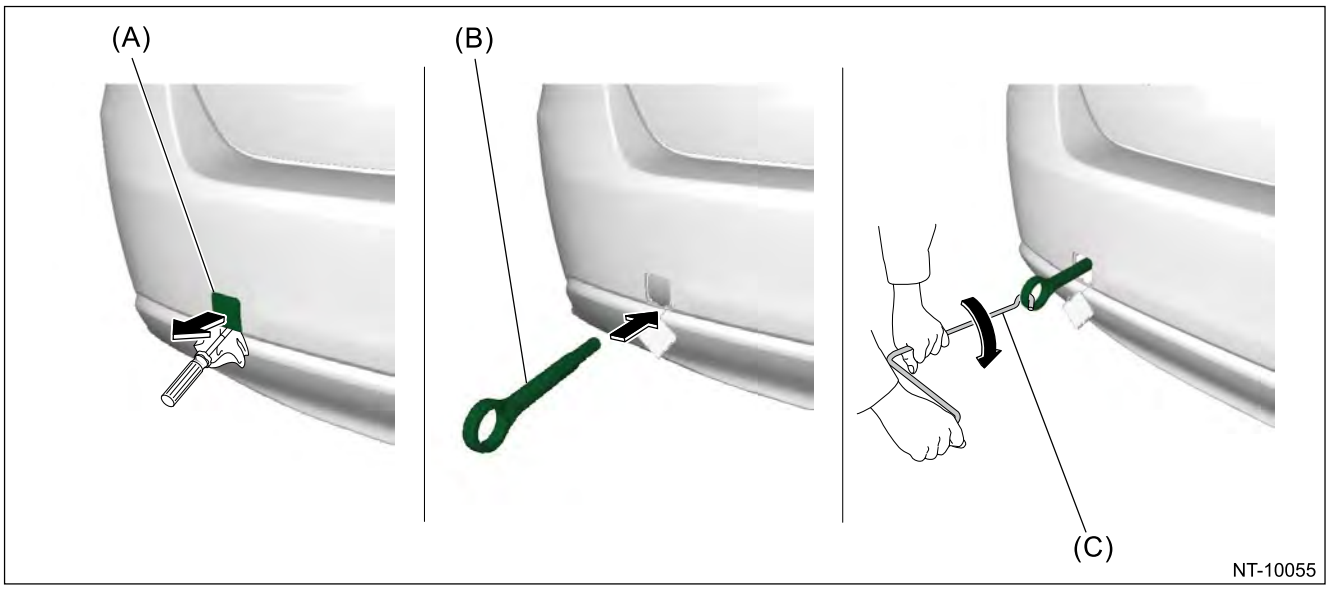
When the vehicle is tied down from vehicle inside, hook the hooks of tie-down chain from vehicle inside, and when the vehicle is tied down from vehicle outside, hook the hooks of tie-down chain from vehicle outside.

For front tie-down hook, use S hook and J hook, and for rear tie-down hole, use S hook, J hook and T hook. T hook can be used only for rear tie-down hole.

18. TOWING

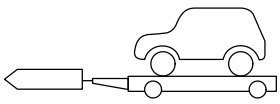
Avoid towing vehicles except when the vehicle cannot be driven. For models with AWD, CVT or VTD, use a loader instead of towing. When towing other vehicles, pay attention to the following to prevent hook or vehicle damage resulting from excessive weight.

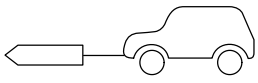
- Do not tow other vehicles with a front tie-down hook.
- Make sure the vehicle towing is heavier than the vehicle being towed.
- When towing the vehicle equipped with Subaru EyeSight, be sure to hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake function. (Check that the pre-collision brake OFF indicator light in the meter lights up.)
- Front
  Remove the hook cover, and install the towing hook (eyebolt).
  Caution:
  Make sure to detach the towing hook (eyebolt) after towing. If the hook remains attached, airbag may not operate properly when receiving a shock from front side. And it may also affect the crash performance of the vehicle.



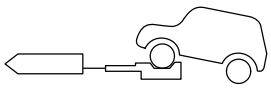
(A) Hook cover (B) Towing hook (eyebolt) (C) Jack handle

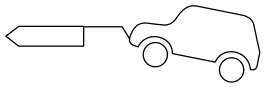
- Rear
  Remove the hook cover, and install the towing hook (eyebolt).





Caution:





Make sure to detach the towing hook (eyebolt) after towing. If the hook remains attached, the fuel leakage control function of the fuel pump may not operate properly when receiving a shock from rear side. And it may also affect the crash performance of the vehicle.

(A) Hook cover (B) Towing hook (eyebolt) (C) Jack handle

- Precautions

Towing	Precautions	MT	CVT
Lifting up four wheels (on a trailer)  NT-00023	Towing the vehicle after lifting up all four wheels is a basic rule for AWD model.	○	○
Rope  NT-00024	• Check if both front and rear wheels are rotated normally. • CVT model driving conditions: Driving speed of 30 km/h (19 MPH) or less Driving distance of 50 km (31 miles) or less	○	▲

Towing	Precautions	MT	CVT
Raising the front wheels  NT-00025	Prohibited for full-time AWD model.	×	×
Lifting up the front wheels  NT-00026	• Prohibited, due to damage on bumper, front grille, etc. • Do not raise the vehicle with bumper.	×	×

○Marked: OK, Marked ×: Prohibited, Marked ▲: Conditionally OK

Caution:

- **Place the shift lever in "N" position during towing.**
- **Do not lift up the rear wheels to avoid unsteady rotation.**
- **Turn the ignition key to "ACC", then check the steering wheel moves freely. (Models without the keyless access with push button start)**
- **Turn the ignition switch to "ACC" or "ON" position, and check that the steering wheel moves freely. (Model with keyless access with push button start)**
- **Release the parking brake to avoid tire dragging.**
- **Since the power steering does not work, be careful for the heavy steering effort. (When engine is stopped)**
- **Since the servo brake does not work, be careful that the brake is not applied effectively. (When engine is stopped)**
- **In case of the malfunction of internal transmission or drive system, lift up four wheels (on a trailer) for towing.**
- **Do not use towing hook (eyebolt) except when towing.**
- **While being towed with all four wheels on the ground, turn the engine switch to ON but do not start the engine.**
- **If the ignition switch is ON while being towed with a rope, the pedestrian alert system may sound. (This is not a malfunction.)**

19. CARRIER CAR

Before lowering the vehicle from the carrier car, perform the following operations.

Caution:

Always perform the following operations before lowering the vehicle from the carrier car. Otherwise, the power unit will rotate reversely, which may cause the damage to the engine, vacuum pump, and transmission.

1. Start the engine.
2. Set the transmission shift position into driving direction of the vehicle. (When the vehicle drives forward, do not shift the transmission in R range. When the vehicle drives rearward, do not set the transmission to 1 — 5 speed, or to D range.)

   Caution:

   Be sure to perform 2) mentioned above even if the engine cannot be started in some reasons.

20. FRONT HOOD STAY

1. Always attach the stay to the normal position when performing works such as inspections and general maintenance.

   Caution:

   - **During the inspection and general maintenance, always be sure to turn the ignition switch to OFF.**
   - **At the inspection and general maintenance, do not detach the stay.**

NT-10056

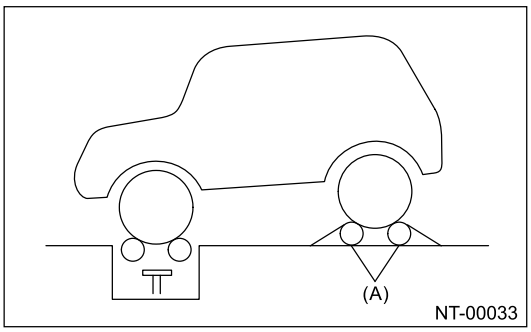
(1) Normal attached position

2. When wider front hood opening is necessary, set the stay to the lower position (hood hinge) as shown in the figure.

NT-10057

(1) Normal attached position
(2) Installation position at full open

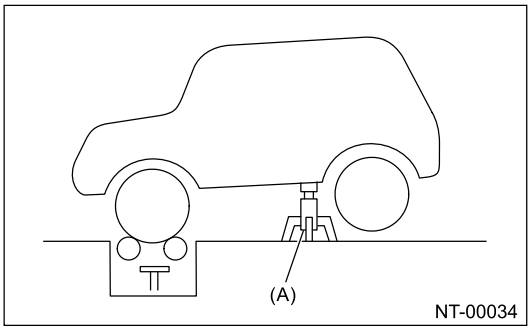
21. GENERAL SCAN TOOL



Using general scan tools will greatly improve the efficiency of repairing engine electronic controls. Subaru Select Monitor can be used to diagnose the engine, VDC, air conditioner and other electrically controlled parts.

22. AWD CIRCUIT MEASURES

1. Full-time AWD MT model
   Since viscous coupling (limited slip differential) is used in the center differential, cut-off of AWD circuit cannot be carried out.
2. Full-time AWD CVT model
   Since electronically controlled MP-T hydraulic multi-plate clutch is adapted for center differential, switch to FWD by using Subaru Select Monitor.



23. SPEEDOMETER TEST

1. Rear wheel free roller system
   (1) Set the free roller on the floor of rear wheel side securely according to the wheel base and rear tread of the vehicle.
   (2) Let the vehicle ride on the tester and free roller gently.
   Caution:
   Fix the vehicle using a pulling metal (chain or wire) to the front and rear towing hooks or tie-down hook to prevent the lateral runout of front wheels and springing out of vehicle.

(A) Free roller

   (3) Set the speedometer tester.
   (4) Conduct the speedometer test work.
   Caution:
   Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.
2. Rear wheel jack-up system
   (1) Set the vehicle on speedometer tester.
   Caution:
   Fix the vehicle using a pulling metal (chain or wire) to the front and rear towing hooks or tie-down hook to prevent the lateral runout of front wheels and springing out of vehicle.
   (2) Jack up the rear wheels and set the rigid racks to the specified locations of side sill.

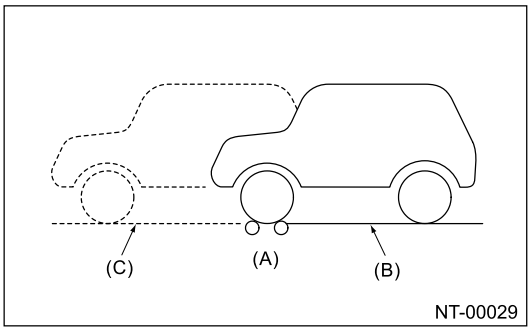
(A) Rigid rack

(3) Conduct the speedometer test work.

Caution:

Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.

24. BRAKE TEST



1. Full-time AWD MT model

(1) Perform this test after driving the vehicle for 2 — 3 km (1.24 — 1.86 miles) on road in order to stabilize the viscous torque of viscous coupling.

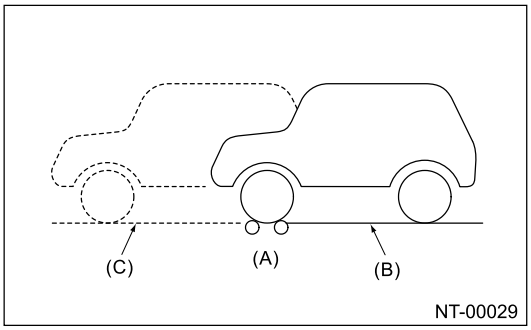
(2) Keep the front or rear wheels on the ground for this test.

Note:

Effect of the viscous torque on braking force will be added approx. 25 kg compared with FWD model.

(A) Brake tester

(B) Position for measuring front wheel



(C) Position for measuring rear wheel

(3) When the brake dragging force is large.

- Check the dragging of brake pad or brake shoe.
- Since it may be affected by the viscosity of viscous coupling, jack up either of the front or rear two wheels to check the each wheel rotation condition with the viscous coupling affection removed.

2. Full-time AWD CVT model

(1) Keep the front or rear wheels on the ground during measurement.

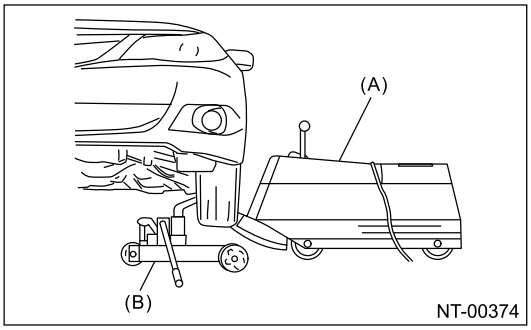
(A) Brake tester
(B) Position for measuring front wheel
(C) Position for measuring rear wheel

(2) When the brake dragging force is large.

- Check the dragging of brake pad or brake shoe.

Specifications:

	Braking force
Rear wheel total	10% or more of load on front or rear wheels
Difference between right and left wheels	8% or less of load on front or rear wheels
Grand total	50% or more of vehicle weight at the time of test



- When measurement is difficult to carry out because both of front wheels are locked, brake force measurement in this condition conforms to standard grand total.

25. ON THE CAR WHEEL BALANCING

Caution:

- **Carry out the procedures after measuring the balance of each single tire.**
- **Set the vehicle so that the front and rear wheels are the same height.**
- **Make sure that the VDC is deactivated.**
- **Release the parking brake during measurement.**
- **Rotate each wheel by hands, and make sure it rotates without dragging.**
- **Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.**
- **When an error is indicated during engine drive, do not use the motor drive together.**

1. Set the rigid rack to the specified locations of side sill, jack up the front or rear two wheels of non-measuring side and set the pickup stands to two wheels of measuring side.

(A) Balancer body

(B) Pickup stand (left and right)

2. For drive wheel, drive the tires with engine for measurement.
3. For non-drive wheel, drive the tires from the on the car wheel balancer for measurement.

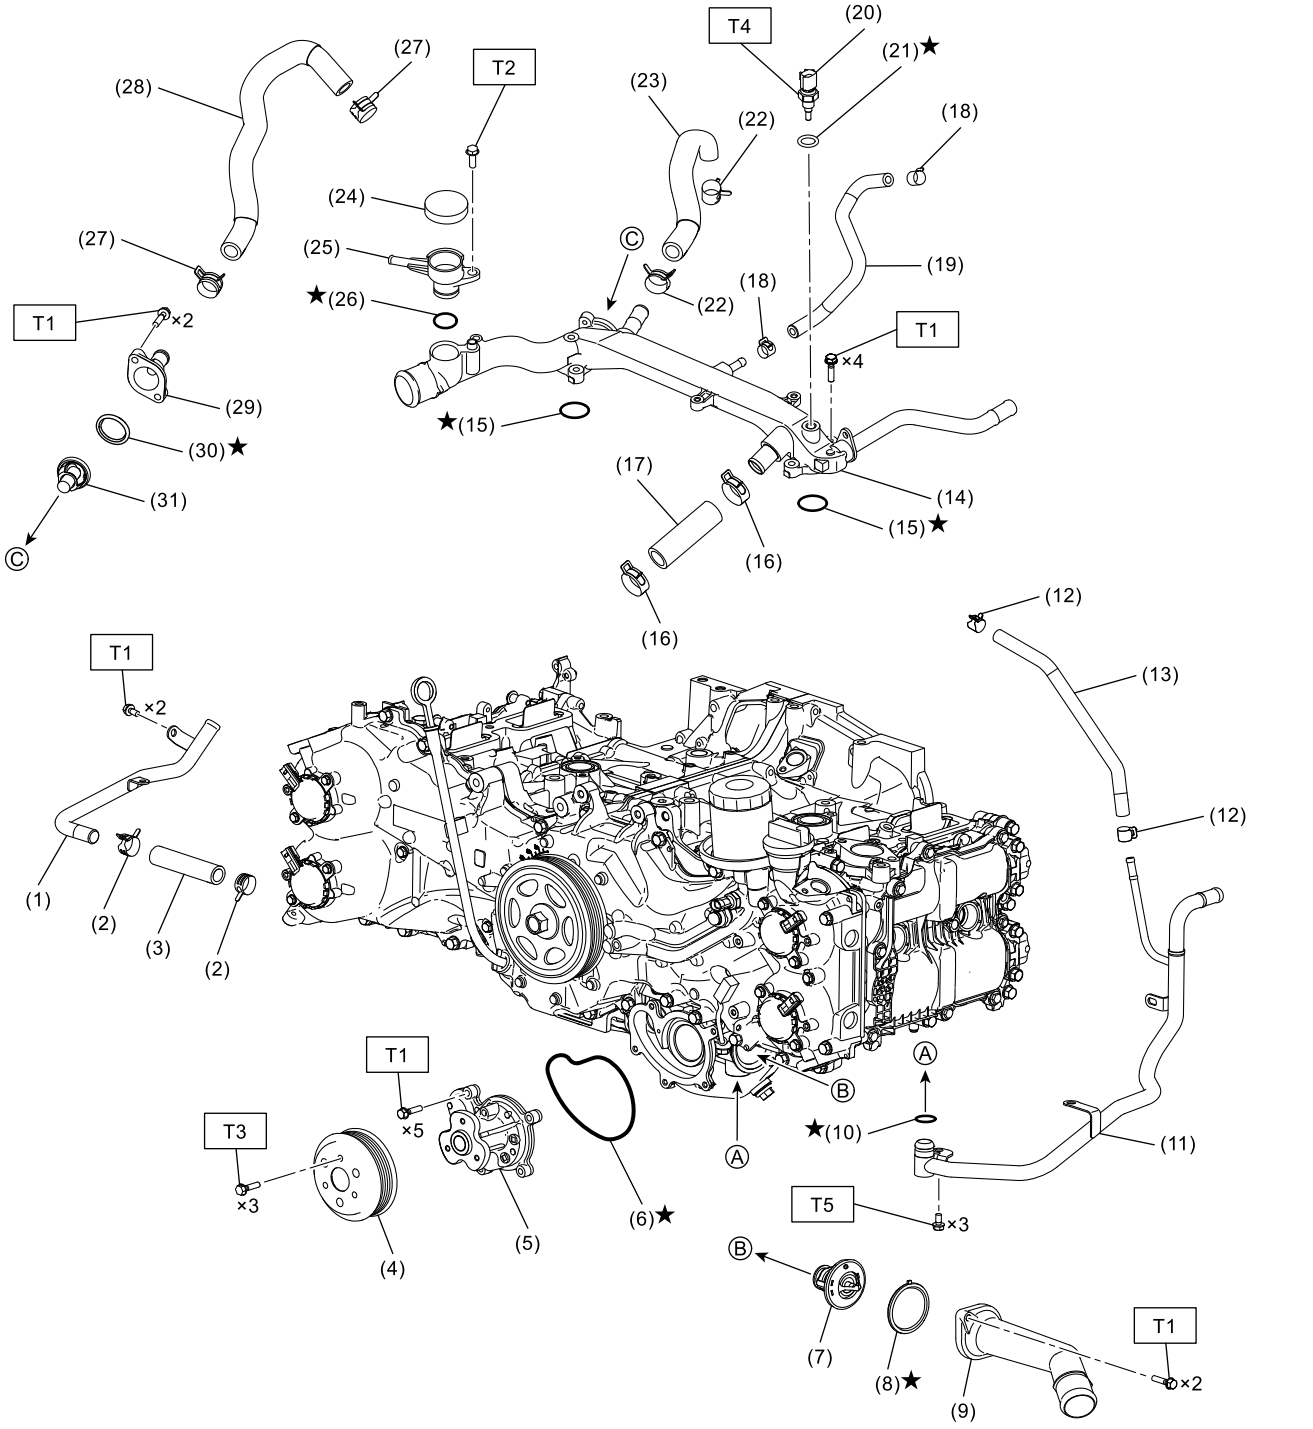
SPECIFICATION



Cooling system				Electric fan + Forced engine coolant circulation system
Total engine coolant capacity L (US qt, Imp qt)			CVT model	Approx. 7.8 (8.2, 6.9)
			MT model	Approx. 7.6 (8.0, 6.7)
Water pump	Type			Centrifugal impeller type
	Discharge performance	Discharge rate L (US gal, Imp gal)/min		214 (56.5, 47.1)
		Pump speed — Discharge pressure		8,580 r/min — 88 kPa (8.9 mAq)
		Engine coolant temperature		80°C (176°F)
	Impeller diameter mm (in)			56 (2.20)
	Number of impeller vanes			7
	Pump pulley effective diameter mm (in)			100 (3.94)
Thermostat	Type			Wax pellet type
	Starting temperature to open		Engine side	90 — 94°C (194 — 201°F)
			Water tank pipe side	48 — 52°C (118 — 126°F)
	Fully opens		Engine side	100°C (212°F)
			Water tank pipe side	63°C (145°F)
	Valve lift mm (in)		Engine side	8.0 (0.315) or more
			Water tank pipe side	6.0 (0.236) or more
	Valve opening size mm (in)		Engine side	32 (1.26)
			Water tank pipe side	22 (0.87)
Radiator fan	Motor input	Main fan W		120
		Sub fan W		120
	Fan diameter / Blade	Main fan		300 mm (11.8 in) /9
		Sub fan		300 mm (11.8 in) /11
Radiator	Type			Side flow, pressure type
	Core dimensions	Width × Height × Thickness mm (in)		660 × 373.3 × 12.1 (25.98 × 14.70 × 0.48)
	Pressure range in which cap valve is open kPa (kg/cm^2, psi)		Positive pressure side Standard	93 — 123 (0.95 — 1.25, 14 — 18)
			Positive pressure side Limit	83 (0.85, 12)
			Negative pressure side Standard	−1.0 — −4.9 or less (−0.01 — −0.05, −0.1 — −0.7)

	Fins				Corrugated fin type
Water tank pipe	Pressure range in which cap valve is open	kPa (kg/cm^2, psi)	Positive pressure side	Standard	122 — 152 (1.24 — 1.55, 18 — 22)
				Limit	112 (1.14, 16)
Reservoir tank	Capacity			L (US qt, Imp qt)	0.45 (0.48, 0.40)

	Recommended materials	Item number	Alternative
Engine coolant	SUBARU SUPER COOLANT (concentrated type)	—	—
	SUBARU SUPER COOLANT (diluted type)	K0670Y0001	
Water for dilution	Distilled water	—	Soft water or tap water
Cooling system protective agent	Cooling system conditioner	SOA345001	—

COMPONENT

1. ENGINE COOLING SYSTEM

CO-10096

(1) Water pipe RH

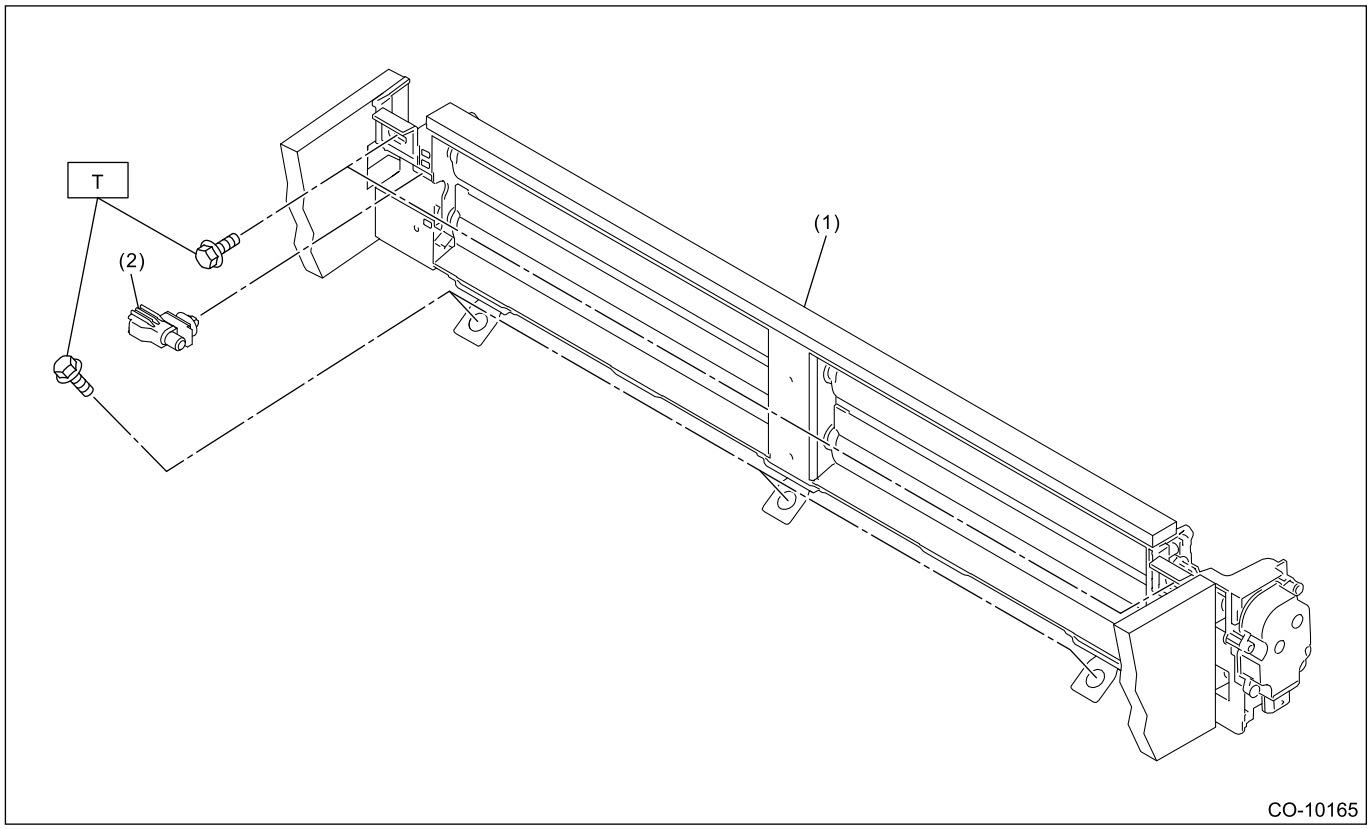
T4: 16 (1.6, 11.8)
T5: Ref. to COOLING(H4DO)>Water Pipe>INSTALLATION > WATER PIPE LH.

2. RADIATOR & RADIATOR FAN



(1) Radiator lower cushion
(2) Radiator
(3) Radiator cap
(4) O-ring
(5) Radiator drain plug
(6) Radiator inlet hose
(7) Clip
(8) Radiator outlet hose
(9) Radiator sub fan
(10) Radiator main fan
(11) Radiator fan shroud
(12) Reservoir tank
(13) Reservoir tank cap
(14) Over flow hose
(15) Over flow pipe
(16) Over flow hose
(17) Clip
(18) Sub fan motor
(19) Main fan motor
(20) Radiator upper frame
(21) Cushion
(22) Hood stay bracket
(23) Radiator gasket

Tightening torque: N·m (kgf-m, ft-lb)

T1: 3.43 (0.35, 2.53)
T2: 4.41 (0.45, 3.25)
T3: 18 (1.8, 13.3)

3. ACTIVE GRILLE SHUTTER

(1) Active grille shutter (2) Ambient sensor

Tightening torque: N·m (kgf-m, ft-lb)

T1: 7.5 (0.8, 5.5)

COOLING(H4DO) > General Description

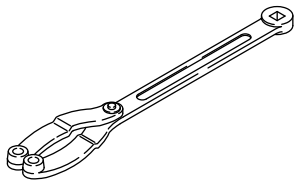
CAUTION

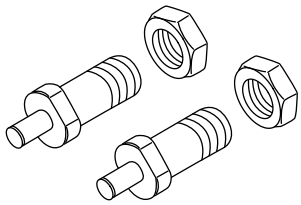
- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Prepare a container and cloth to prevent scattering of engine coolant when performing work where engine coolant can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.

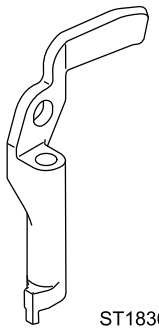
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Follow all government and local regulations concerning disposal of refuse when disposing engine coolant.
- If the engine coolant splashes, completely remove and clean it.

PREPARATION TOOL

1. SPECIAL TOOL







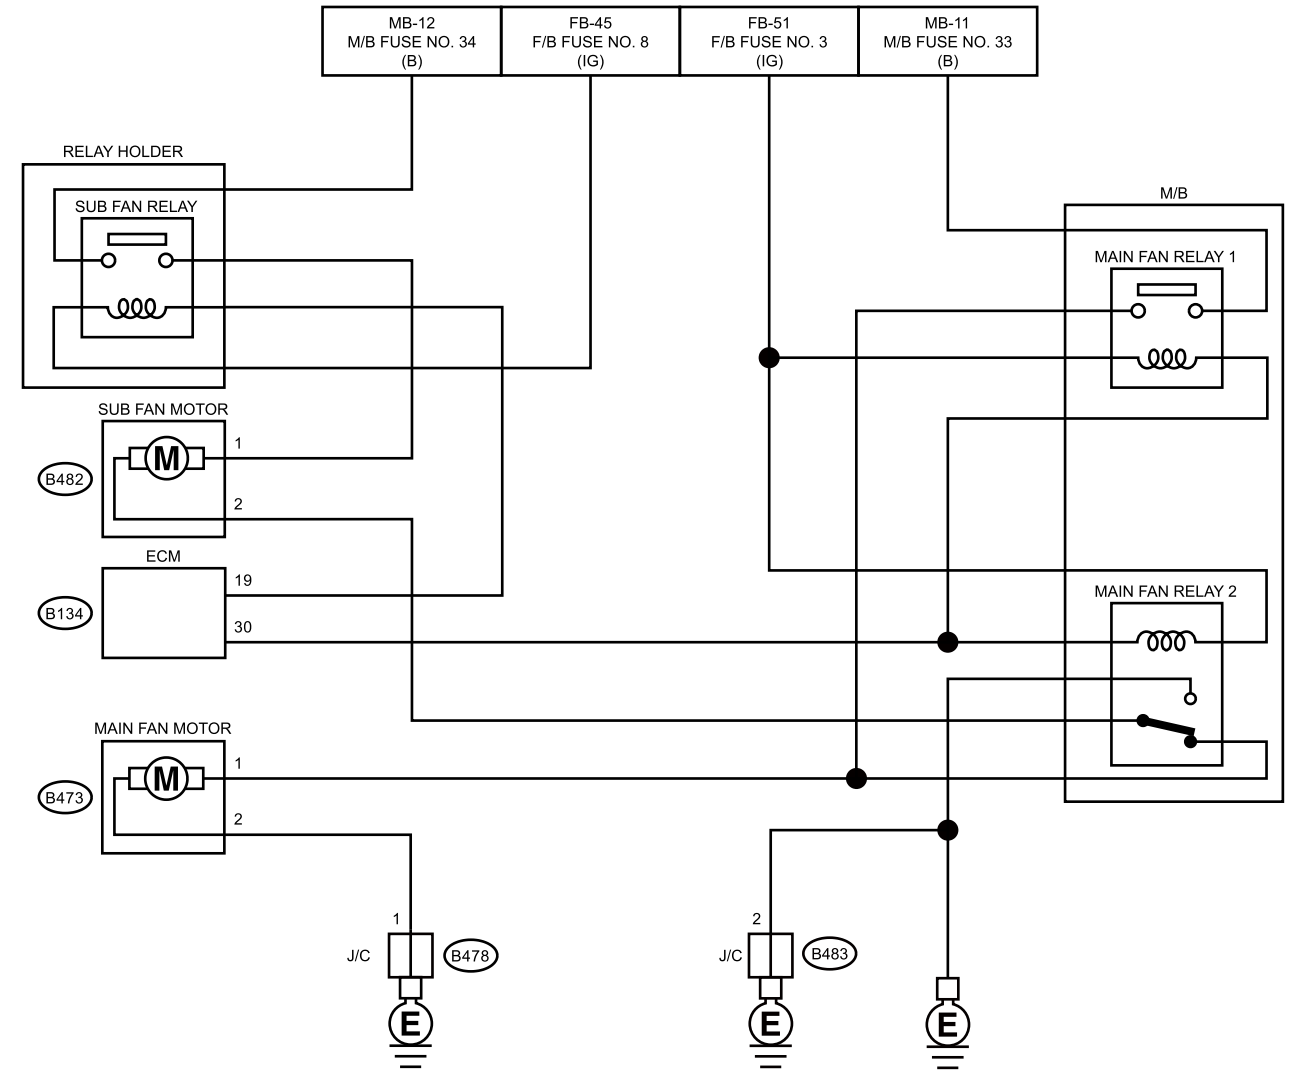


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18355AA000	18355AA000	PULLEY WRENCH	• Used for removing and installing water pump pulley. • Used with PULLEY WRENCH PIN SET (18334AA020).
 ST18334AA020	18334AA020	PULLEY WRENCH PIN SET	• Used for removing and installing water pump pulley. • Used together with PULLEY WRENCH (18355AA000).
 ST18360AA040	18360AA040	HANGER	• Used for removing and installing the water pipe assembly LH. • Used together with BOLT (1836AA050).
 ST18363AA050	18363AA050	BOLT	• Used for removing and installing the water pipe assembly LH. • Used together with HANGER (18360AA040).

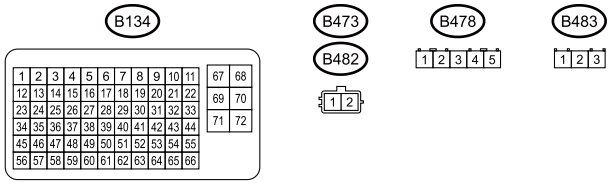

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Radiator cap tester	Used for checking radiator and radiator cap.
DST-i	Used together with Subaru Select Monitor 4.

INSPECTION

Caution:

- **Be careful not to let your hands or other objects get caught in the rotating parts.**
- **Since some of the power supply circuits are shared with other system, check such system other than the radiator fan system for faulty conditions before proceeding any further.**
- **Since more than one faulty conditions may occur simultaneously, once work is done perform "Basic Inspection of Radiator Fan System" to confirm that the system is working properly.**
- **Since battery discharge may occur, charge the battery as necessary.** **Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>CHARGE.**

Operating condition:

Vehicle speed	A/C compressor load	Engine coolant temperature		
		Increase: 98°C (208°F) or less Decrease: 96°C (205°F) or less	Increase: 99 — 104°C (210 — 219°F) Decrease: 97 — 102°C (207 — 216°F)	Increase: 105°C (221°F) or more Decrease: 103°C (217°F) or more
		Radiator fan operation	Radiator fan operation	Radiator fan operation
During acceleration: 19 km/h (12 MPH) or less During deceleration: 10 km/h (6 MPH) or less	OFF	OFF	Low-Speed	High-Speed
	Low	Low-Speed	Low-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed

1. BASIC INSPECTION OF RADIATOR FAN SYSTEM

1. CHECK DTC.

Read the DTC using the Subaru Select Monitor 4.

Note:

For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

Is DTC detected?

Yes

(1) Repair the corresponding system.

(2) Go to 2.

No

Go to 2.

2. RADIATOR FAN SYSTEM OPERATION CHECK.

Note:

If the radiator fans are always running, go to "INSPECTION WHEN RADIATOR FANS DO NOT STOP". Ref. to COOLING(H4DO)>Radiator Fan System>INSPECTION > INSPECTION WHEN RADIATOR FANS DO NOT STOP.

1. Install the test mode fuse.
2. Turn to IG ON.
3. Check the radiator fan operation.

Do the radiator main fan and sub fan rotate in the order of "OFF → Low speed revolution → High speed revolution"?

Yes	System is normal. Restore the vehicle to its original state.
No	Inspect corresponding malfunction using "Table for Diagnostics Procedure with Phenomenon".

Table for Diagnostics Procedure with Phenomenon

Note:

If phenomenon does not match with any of the phenomenon described below, inspect fuse, relay and ground contacts for failure.

	Sub fan	Main fan	Sub fan	Main fan	Sub fan	Main fan	Sub fan	Main fan
Stop control	Stop	Stop	Stop	Stop	Stop	Stop	Stop	Stop
Low speed control	Stop	Stop	At high speed	Stop	At low speed	At low speed	At low speed	At low speed
High speed control	Stop or high speed	Stop or high speed	At high speed	Stop or high speed	At high speed	Stop	Stop	At high speed
Reference	Inspection when radiator fans do not rotate (A) Ref. to COOLING(H4DO)>Radiator Fan System>INSPECTION>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (A).		Inspection when radiator fans do not rotate (B) Ref. to COOLING(H4DO)>Radiator Fan System>INSPECTION>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (B).		Inspection when radiator fans do not rotate (C) Ref. to COOLING(H4DO)>Radiator Fan System>INSPECTION>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (C).		Inspection when radiator fans do not rotate (D) Ref. to COOLING(H4DO)>Radiator Fan System>INSPECTION>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE>INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (D).	

2. INSPECTION WHEN RADIATOR FANS DO NOT ROTATE

- **INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (A)**

1. CHECK SUB FAN FUSE.

1. Disconnect the ground cable from battery.
2. Remove the sub fan fuse.
3. Check sub fan fuse.

Is the sub fan fuse OK?

Yes — Go to 2.

No — Go to 13.

2. CHECK SUB FAN RELAY.

1. Remove the sub fan relay.
2. Perform unit check for the sub fan relay.

Is the sub fan relay OK?

Yes — Go to 3.

No

(1) Replace the sub fan relay.
(2) Restore the vehicle to its original state.

3. CHECK MAIN FAN RELAY 2.

1. Remove the main fan relay 2.
2. Perform unit check for the main fan relay 2.

Is the main fan relay 2 OK?

Yes — Go to 4.

No

(1) Replace the main fan relay 2.
(2) Restore the vehicle to its original state.

4. CHECK SUB FAN MOTOR.

1. Disconnect the connector from the sub fan motor.
2. Connect the battery terminal to the sub fan motor.

Does the sub fan motor rotate properly?

Yes	Go to 5.
No	(1) Replace the sub fan motor. (2) Restore the vehicle to its original state.

5. CHECK MAIN FAN MOTOR.

1. Disconnect the connector from the main fan motor.
2. Connect the battery terminal to the main fan motor.

Does the main fan motor rotate properly?

Yes	Go to 6.
No	(1) Replace the main fan motor. (2) Restore the vehicle to its original state.

6. CONTINUITY CHECK OF HARNESS BETWEEN MAIN FAN MOTOR AND CHASSIS GROUND.

Check continuity of harness between the main fan motor and chassis ground.

Is there continuity?

Yes	Go to 7.
No	(1) Repair the harness between the main fan motor and chassis ground. (2) Restore the vehicle to its original state.

7. CONTINUITY CHECK OF HARNESS BETWEEN MAIN FAN RELAY 2 AND MAIN FAN MOTOR.

Check continuity of harness between main fan relay 2 and the main fan motor.

Is there continuity?

Yes — Go to 8.

No — (1) Repair the harness between main fan relay 2 and the main fan motor.
(2) Restore the vehicle to its original state.

8. CONTINUITY CHECK OF HARNESS BETWEEN SUB FAN MOTOR AND MAIN FAN RELAY 2.

Check continuity of harness between the sub fan motor and the main fan relay 2.

Is there continuity?

Yes — Go to 9.

No — (1) Repair the harness between the sub fan motor and the main fan relay 2.
(2) Restore the vehicle to its original state.

9. CONTINUITY CHECK OF HARNESS BETWEEN SUB FAN RELAY AND SUB FAN MOTOR.

Check continuity of harness between sub fan relay and sub fan motor.

Is there continuity?

Yes — Go to 10.

No — (1) Repair the harness between sub fan relay and sub fan motor.
(2) Restore the vehicle to its original state.

10. CONTINUITY CHECK OF HARNESS BETWEEN SUB FAN FUSE AND SUB FAN RELAY.

Check continuity of harness between sub fan fuse and sub fan relay.

Is there continuity?

Yes — Go to 11.

No — (1) Repair the harness between sub fan fuse and sub fan relay.
(2) Restore the vehicle to its original state.

11. CONTINUITY CHECK OF HARNESS BETWEEN A/C IG FUSE AND SUB FAN RELAY.

Check continuity of harness between A/C IG fuse and sub fan relay.

Is there continuity?

Yes — Go to 12.

No — (1) Repair the harness between A/C IG fuse and sub fan relay.
(2) Restore the vehicle to its original state.

12. CONTINUITY CHECK OF HARNESS BETWEEN SUB FAN RELAY AND ECM.

Check continuity of harness between sub fan relay and ECM.

Is there continuity?

Yes — (1) Check for poor contact of the connectors due to wear damage of connector pins. If they are OK, replace the ECM.
(2) Restore the vehicle to its original state.

No — (1) Repair the harness between sub fan relay and ECM.
(2) Restore the vehicle to its original state.

13. CHECK SUB FAN RELAY.

1. Remove the sub fan relay.
2. Perform unit check for the sub fan relay.

Is the sub fan relay OK?

Yes — Go to 14.

No
(1) Replace the sub fan relay.
(2) Replace the sub fan fuse.
(3) Restore the vehicle to its original state.

14. INSULATION CHECK OF HARNESS BETWEEN SUB FAN FUSE AND SUB FAN RELAY.

Check insulation of harness and chassis ground between sub fan fuse and sub fan relay.

Are they insulated?

Yes
(1) Replace the sub fan fuse.
(2) Restore the vehicle to its original state.

No
(1) Repair the harness between sub fuse and sub fan relay.
(2) Replace the sub fan fuse.
(3) Restore the vehicle to its original state.

• INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (B)

1. CHECK MAIN FAN RELAY 2.

1. Disconnect the ground cable from battery.
2. Remove the main fan relay 2.
3. Perform unit check for the main fan relay 2.

Is the main fan relay 2 OK?

Yes — Go to 2.

No
(1) Replace the main fan relay 2.
(2) Restore the vehicle to its original state.

2. CHECK MAIN FAN RELAY 1.

1. Remove the main fan relay 1.
2. Perform unit check for the main fan relay 1.

Is the main fan relay 1 OK?

Yes	Go to 3.
No	(1) Replace the main fan relay 1. (2) Restore the vehicle to its original state.

3. INSULATION CHECK OF HARNESS BETWEEN SUB FAN MOTOR AND MAIN FAN RELAY 2.

1. Disconnect the connector from the sub fan motor.
2. Check insulation of harness and chassis ground between the sub fan motor and the main fan relay 2.

Are they insulated?

Yes	Go to 4.
No	(1) Repair the harness between the sub motor and the main fan relay 2. (2) Restore the vehicle to its original state.

4. INSULATION CHECK OF HARNESS BETWEEN MAIN FAN RELAY 2 AND MAIN FAN MOTOR.

1. Disconnect the connector from the main fan motor.
2. Check insulation of harness and chassis ground between main fan relay 2 and the main fan motor.

Are they insulated?

Yes	(1) Replace the main fan motor. (2) Restore the vehicle to its original state.
No	(1) Repair the harness between main fan relay 2 and the main fan motor. (2) Restore the vehicle to its original state.

- **INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (C)**

1. CHECK MAIN FAN FUSE.

1. Disconnect the ground cable from battery.
2. Remove the main fan fuse.
3. Check the main fan fuse.

Is the fuse OK?

Yes — Go to 2.

No — Go to 3.

2. CHECK MAIN FAN RELAY 1.

1. Remove the main fan relay 1.
2. Perform unit check for the main fan relay 1.

Is the main fan relay 1 OK?

Yes
(1) Repair the harness between the main fan fuse and the main fan relay 1.
(2) Restore the vehicle to its original state.

No
(1) Replace the main fan relay 1.
(2) Restore the vehicle to its original state.

3. CHECK MAIN FAN RELAY 1.

1. Remove the main fan relay 1.
2. Perform unit check for the main fan relay 1.

Is the main fan relay 1 OK?

Yes — Go to 4.

No
(1) Replace the main fan relay 1.
(2) Replace the main fan fuse.
(3) Restore the vehicle to its original state.

4. INSULATION CHECK OF HARNESS BETWEEN MAIN FAN FUSE AND MAIN FAN RELAY 1.

Check insulation of harness and chassis ground between the main fan fuse and the main fan relay 1.

Are they insulated?

Yes

(1) Replace the main fan fuse.
(2) Restore the vehicle to its original state.

No

(1) Repair the harness between the main fan fuse and the main fan relay 1.
(2) Replace the main fan fuse.
(3) Restore the vehicle to its original state.

- **INSPECTION WHEN RADIATOR FANS DO NOT ROTATE (D)**

1. CHECK MAIN FAN RELAY 2.

1. Disconnect the ground cable from battery.
2. Remove the main fan relay 2.
3. Perform unit check for the main fan relay 2.

Is the main fan relay 2 OK?

Yes

Go to 2.

No

(1) Replace the main fan relay 2.
(2) Restore the vehicle to its original state.

2. CONTINUITY CHECK OF HARNESS BETWEEN MAIN FAN RELAY 1 AND MAIN FAN RELAY 2.

1. Remove the main fan relay 1.
2. Check continuity of harness between the main fan relay 1 and the main fan relay 2.

Is there continuity?

Yes

(1) Repair the harness between the main fan relay 2 and the chassis ground.
(2) Restore the vehicle to its original state.

No

(1) Repair the harness between the main fan relay 1 and the main fan relay 2.
(2) Restore the vehicle to its original state.

3. INSPECTION WHEN RADIATOR FANS DO NOT STOP

- **INSPECTION WHEN MAIN FAN AND SUB FAN DO NOT STOP**

1. CHECK SUB FAN RELAY.

1. Disconnect the ground cable from battery.
2. Remove the sub fan relay.
3. Perform unit check for the sub fan relay.

Is the sub fan relay OK?

Yes	Go to 2.
No	(1) Replace the sub fan relay. (2) Restore the vehicle to its original state.

2. INSULATION CHECK OF HARNESS BETWEEN SUB FAN RELAY AND SUB FAN MOTOR.

1. Connect the battery ground terminal.
   Note:
   Sub fan relay is removed.
2. Turn to IG ON.
3. Check the radiator fan operation.

Do the sub fan motor and the main fan motor rotate?

Yes	(1) Repair the harness between sub fan relay and sub fan motor. (2) Restore the vehicle to its original state.
No	Go to 3.

3. INSULATION CHECK OF HARNESS BETWEEN SUB FAN RELAY AND ECM.

1. Disconnect the ground cable from battery.
2. Disconnect the ECM connector.
3. Check insulation of harness and chassis ground between sub fan relay and ECM.

Are they insulated?

Yes	(1) Replace the ECM. (2) Restore the vehicle to its original state.
No	(1) Repair the harness between sub fan relay and ECM. (2) Restore the vehicle to its original state.

- **INSPECTION WHEN ONLY MAIN FAN DOES NOT STOP**

1. CHECK MAIN FAN RELAY 1.

1. Disconnect the ground cable from battery.
2. Remove the main fan relay 1.
3. Perform unit check for the main fan relay 1.

Is the main fan relay 1 OK?

Yes	Go to 2.
No	(1) Replace the main fan relay 1. (2) Restore the vehicle to its original state.

2. INSULATION CHECK OF HARNESS BETWEEN MAIN FAN MOTOR AND SUB FAN MOTOR.

1. Connect the battery ground terminal.

   Note:

   Main fan relay 1 is removed.
2. Turn to IG ON.
3. Check the radiator fan operation.

Does the main fan motor rotate?

Yes	(1) Repair the harness between the main fan motor and the sub fan motor. (2) Restore the vehicle to its original state.
No	(1) Replace the ECM. (2) Restore the vehicle to its original state.

INSPECTION

Caution:

- **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
- **If the engine coolant splashes, completely remove and clean it.**

Recommended engine coolant:

Refer to "SPECIFICATION" for recommended engine coolant. Ref. to COOLING(H4DO)>General Description>SPECIFICATION.

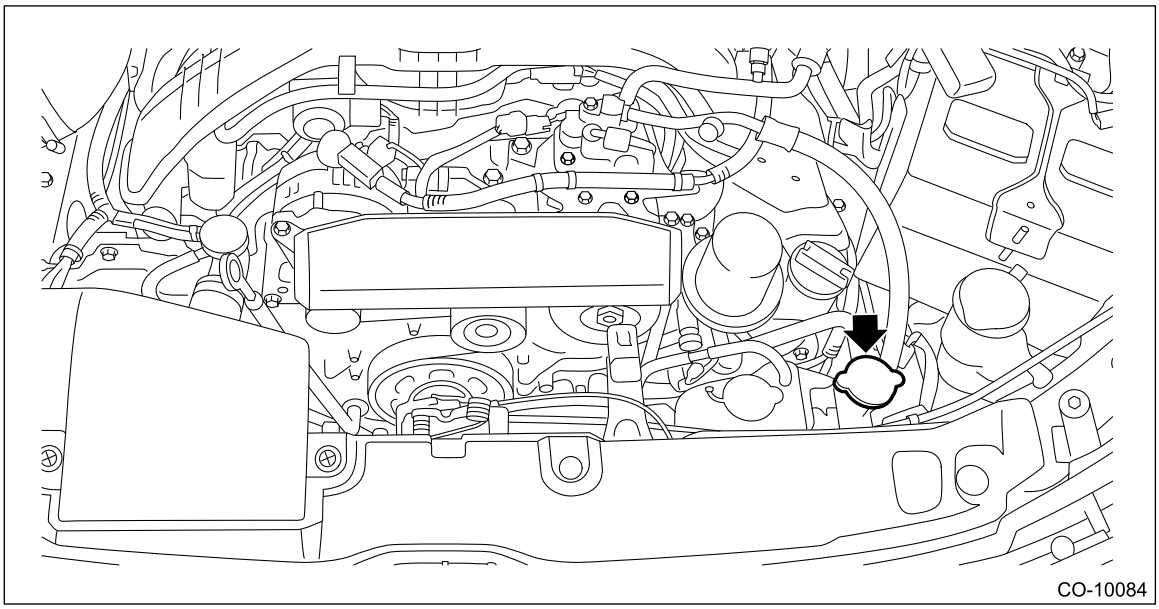
Engine coolant concentration:

Refer to "ADJUSTMENT" for the recommended engine coolant concentration. Ref. to COOLING(H4DO)>Engine Coolant>ADJUSTMENT.

Note:

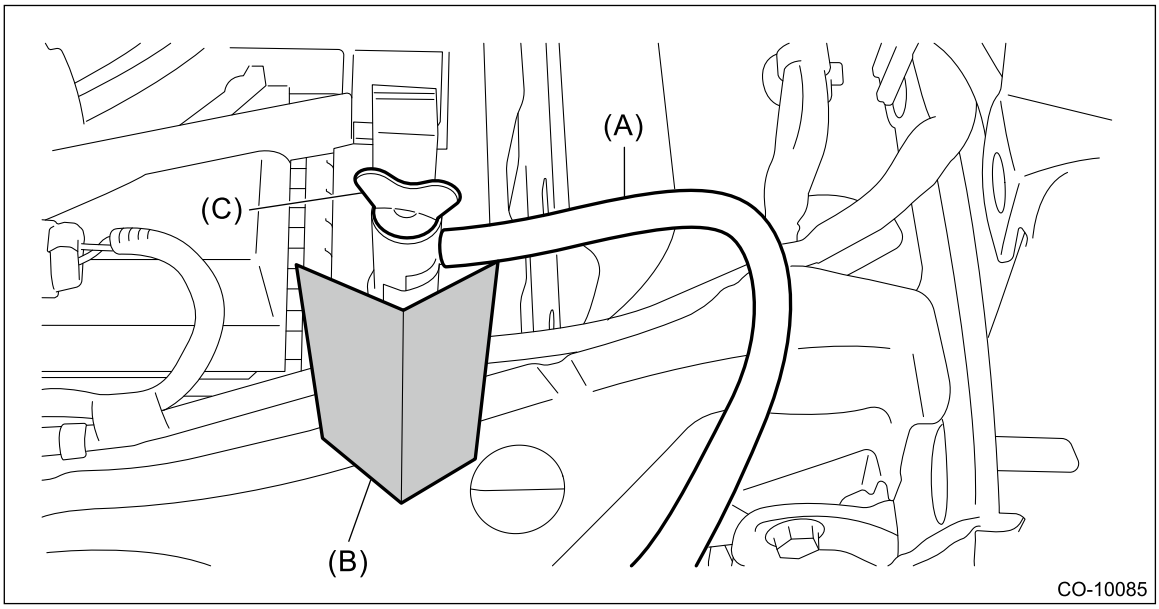
The SUBARU Super Coolant contains anti-freeze and anti-rust agents, and is especially made for Subaru engines with an aluminum cylinder block. Be sure to use SUBARU Super Coolant, since other coolant may cause corrosion.

1. Park the vehicle on a level surface.
2. Check the engine coolant amount, and add the engine coolant if the coolant level is low.
   Note:
   If it is necessary to add the coolant, make sure that there are no engine coolant leaks.
   (1) Make sure the engine coolant level in the reservoir tank is between "FULL" and "LOW" with the engine in a cold condition.
   (2) Open the radiator cap and make sure that the radiator is filled with the engine coolant up to its filler neck position.



REPLACEMENT

1. DRAINING OF ENGINE COOLANT



Caution:

- **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
- **If the engine coolant splashes, completely remove and clean it.**

1. Remove the radiator cap.

2. Remove the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
3. Connect hose (A) to the drain pipe of the radiator.
   Note:
   Use a hose with an inner diameter of 8.0 mm (0.315 in).
4. Place a vinyl cover (B) at the neck of the radiator drain plug.
   Caution:
   This is necessary to prevent splash of the engine coolant.
5. Loosen the radiator drain plug (C) to drain engine coolant.

6. After draining the engine coolant, remove the radiator drain plug.
7. Install the radiator drain plug with a new O-ring.
8. Remove hoses and the vinyl cover.
9. Install the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>INSTALLATION.
10. Drain the coolant from reservoir tank.

2. FILLING OF ENGINE COOLANT

Caution:

- **For CVT models, set the select lever to "P" or "N" range (for MT models, the shift lever in neutral) during work, and do not shift the lever.**
- **If the engine coolant splashes, completely remove and clean it.**

Recommended engine coolant:

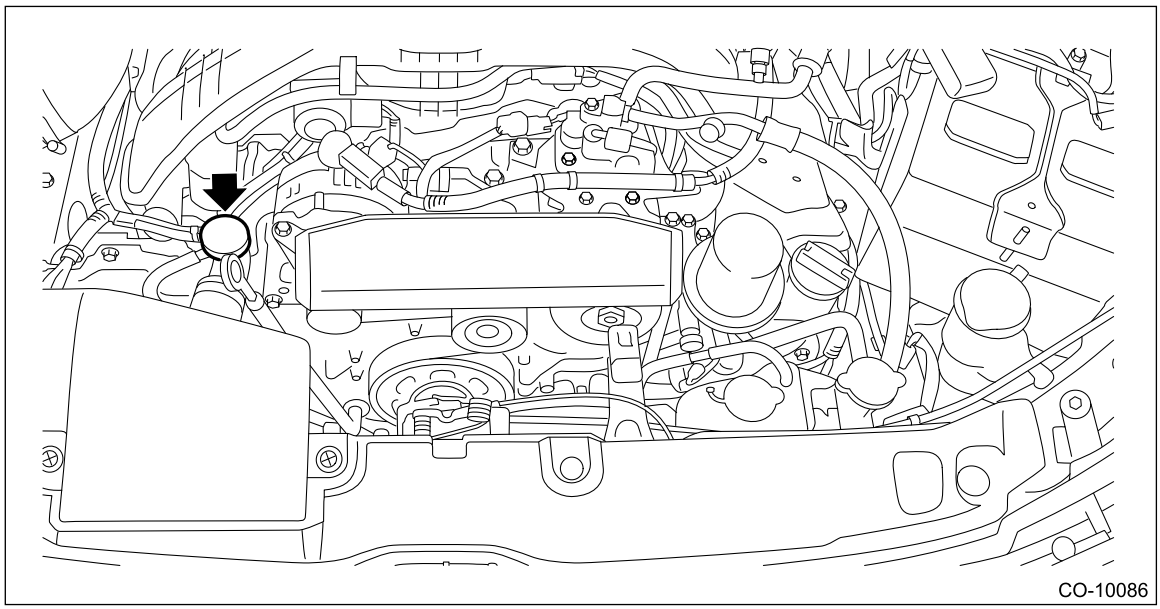
Refer to "SPECIFICATION" for recommended engine coolant. Ref. to COOLING(H4DO)>General Description>SPECIFICATION.

Engine coolant concentration:

Refer to "ADJUSTMENT" for the recommended engine coolant concentration. Ref. to COOLING(H4DO)>Engine Coolant>ADJUSTMENT.

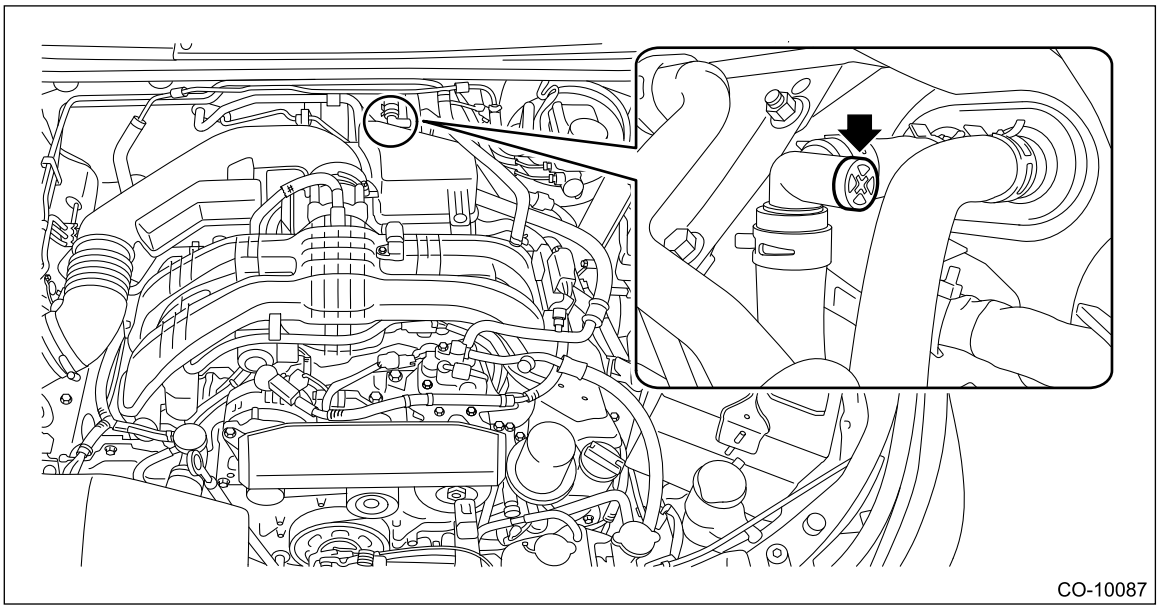
Engine coolant level:

Refer to "SPECIFICATION" for engine coolant level. Ref. to COOLING(H4DO)>General Description>SPECIFICATION.



Cooling system protective agent:

Refer to "SPECIFICATION" for cooling system protective agent. Ref. to COOLING(H4DO)>General Description>SPECIFICATION.



Note:

The SUBARU Super Coolant contains anti-freeze and anti-rust agents, and is especially made for Subaru engines with an aluminum cylinder block. Be sure to use SUBARU Super Coolant, since other coolant may cause corrosion.

1. Remove the water tank pipe cap.

2. Loosen the air bleed plug on the heater outlet hose.

3. Pour in cooling system conditioner.
   Note:
   Pour it from the radiator side.
4. Pour engine coolant into the radiator and top off to the opening of the water tank pipe cap.
   Note:
   Pour it from the radiator side.
5. Install the water tank pipe cap.
   Caution:
   Always use the water tank pipe cap, since its function is different from the radiator cap.
6. After pouring in the engine coolant, close the air bleeding plug when the engine coolant comes out of the air bleeding plug on the heater outlet hose.
7. Pour engine coolant into the radiator up to the filler neck position.
8. Fill engine coolant into the reservoir tank up to "FULL" level.
9. Install the reservoir tank cap.
10. Install the radiator cap.
11. Start the engine, and race 5 to 6 times at 3,000 r/min or less, then stop the engine.
    Note:
    Complete this operation within 40 seconds.
12. After stopping the engine, wait for at least 1 minute and then remove the radiator cap. If the engine coolant level drops, add engine coolant into radiator up to the filler neck position.
    Note:
    Do not remove the water tank pipe cap, or the engine coolant may over flow.
13. Perform the procedures 10), 11) and 12) again.
14. Install the radiator cap.
15. Start the engine and operate the heater at maximum hot position and the blower speed setting at "LO", and the A/C switch at "OFF".
16. Run the engine at 3,000 r/min or less until the radiator fan starts and then stops.
    Caution:
    Frequently check the engine coolant temperature in order to avoid overheat.
17. Stop the engine and wait until the engine coolant temperature lowers to 30°C (86°F) or less.
18. Remove the radiator cap. If the engine coolant level drops, add engine coolant into the radiator up to the filler neck position and the reservoir tank to "FULL" level.
19. Attach the radiator cap and reservoir tank cap properly.

20. Set the heater setting to maximum hot position, the blower speed setting to “LO”, and the A/C switch to “OFF”, and start the engine. Perform racing at 3,000 r/min or less. If the flowing sound is heard from the heater core, repeat the procedures from step 16).

ADJUSTMENT

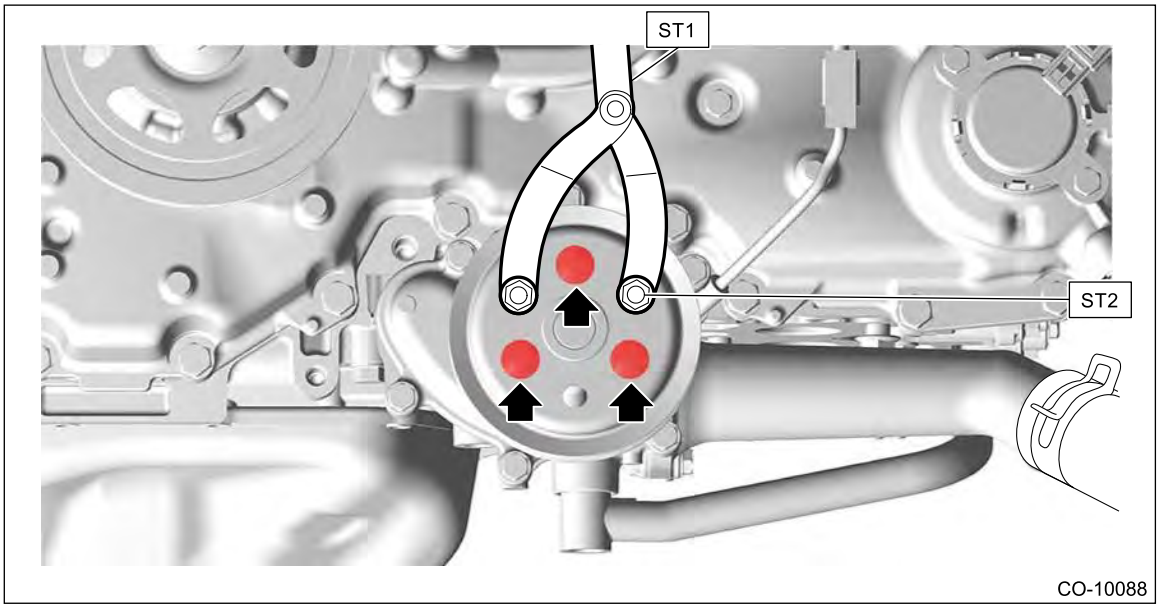
1. PROCEDURE TO ADJUST THE SUBARU SUPER COOLANT CONCENTRATION

Caution:

Use the SUBARU Super Coolant with a 50 — 60% concentration in order to obtain maximum anti-freeze and anti-rust performance.

Engine coolant and diluting water:

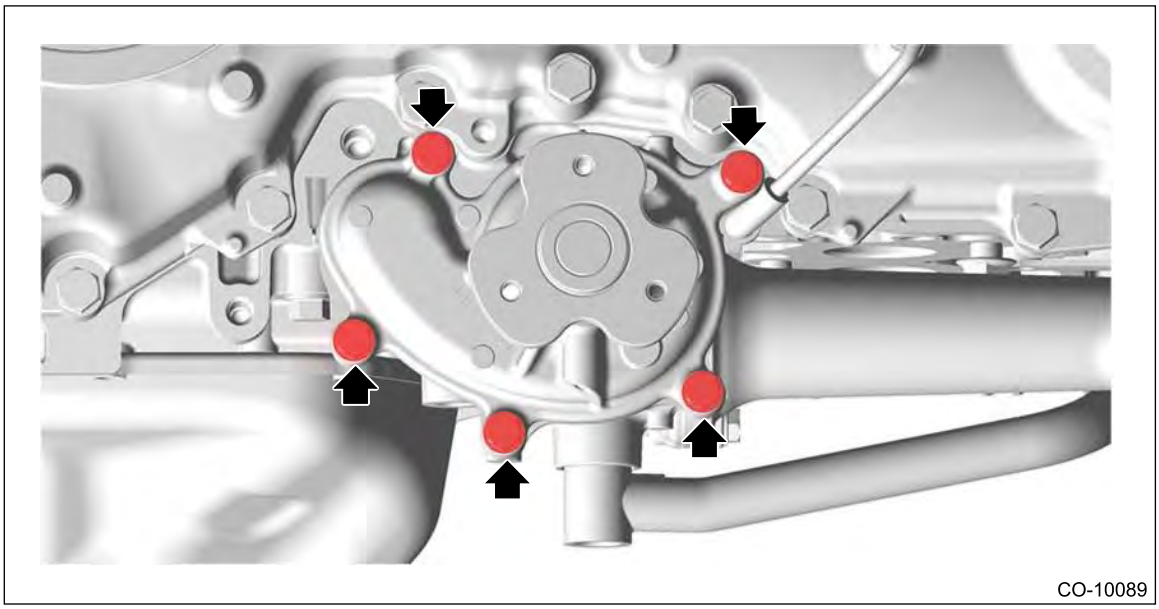
Refer to “SPECIFICATION” for recommended engine coolant and diluting water. Ref. to COOLING(H4DO)>General Description>SPECIFICATION.



To adjust the concentration of SUBARU Super Coolant according to temperature, find the proper SUBARU Super Coolant concentration in the table, and add dilution water to the SUBARU Super Coolant (concentrated type) until it reaches the proper dilution.

Relationship of SUBARU Super Coolant concentration and freezing temperature			
SUBARU Super Coolant concentration	50%	55%	60%
Freezing temperature	−36°C (−33°F)	−41°C (−42°F)	−50°C (−58°F)

REMOVAL



1. WATER PUMP PULLEY

1. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL > V-BELT.
2. Using the ST1 and ST2, remove the water pump pulley.
   Preparation tool:
   ST1: PULLEY WRENCH (18355AA000)
   ST2: PULLEY WRENCH PIN SET (18334AA020)

2. WATER PUMP

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the water pump pulley. Ref. to COOLING(H4DO)>Water Pump>REMOVAL > WATER PUMP PULLEY.
3. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
4. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
5. Remove the water pump.

COOLING(H4DO) > Water Pump

INSTALLATION

1. WATER PUMP PULLEY

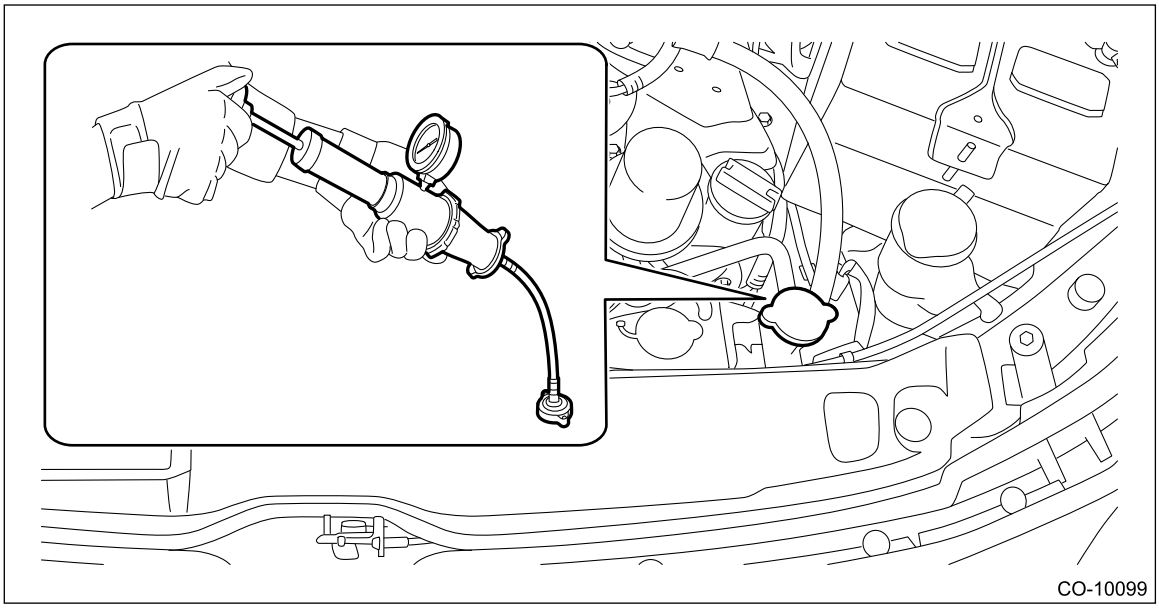
1. Using the ST1 and ST2, install the water pump pulley.
   Preparation tool:
   ST1: PULLEY WRENCH (18355AA000)
   ST2: PULLEY WRENCH PIN SET (18334AA020)
   Tightening torque:
   14 N·m (1.4 kgf-m, 10.3 ft-lb)
2. Install the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION > V-BELT.

2. WATER PUMP

1. Set a new gasket, and install the water pump.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
3. Install the water pump pulley. Ref. to COOLING(H4DO)>Water Pump>INSTALLATION > WATER PUMP PULLEY.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

COOLING(H4DO) > Water Pump

INSPECTION



1. Check for leaks.
   Caution:
   - **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
   - **If the engine coolant splashes, completely remove and clean it.**

   (1) Remove the radiator cap.

(2) Fill the radiator with engine coolant, and then install the radiator cap tester to the filler neck of radiator.

Caution:

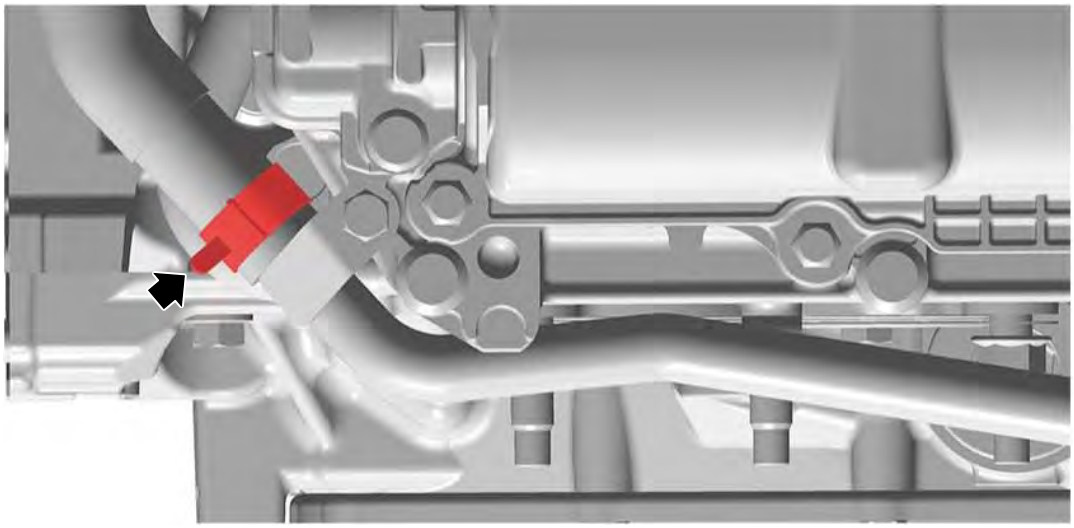
Be careful not to deform the filler neck of radiator when installing and removing the radiator cap tester.

(3) Apply a pressure of 157 kPa (1.6 kg/cm^2, 23 psi) to the radiator and check the following points:

- Leakage from the flow path of the engine coolant or its vicinity
- Significant pressure drop

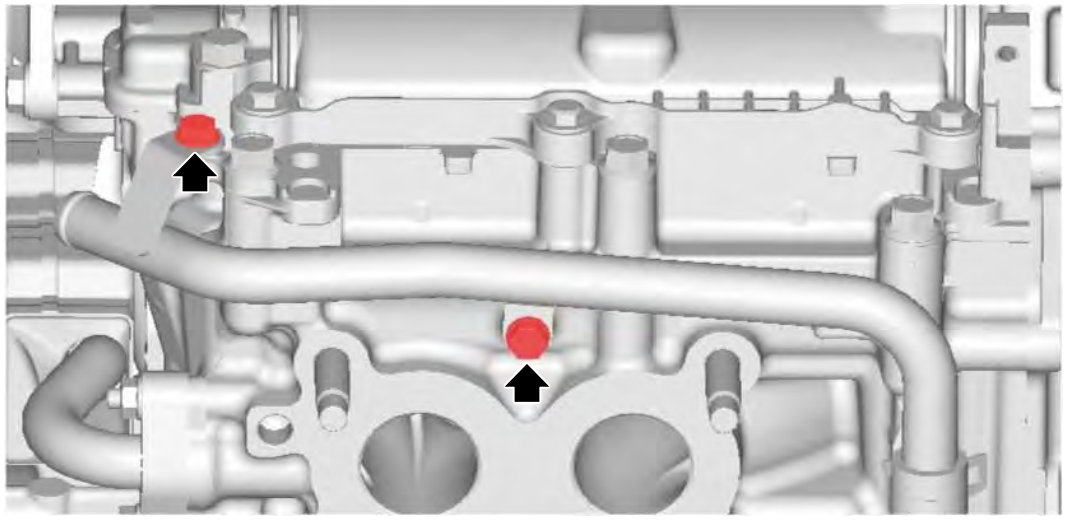
Caution:

Be careful of engine coolant from spurting out when removing the radiator cap tester.



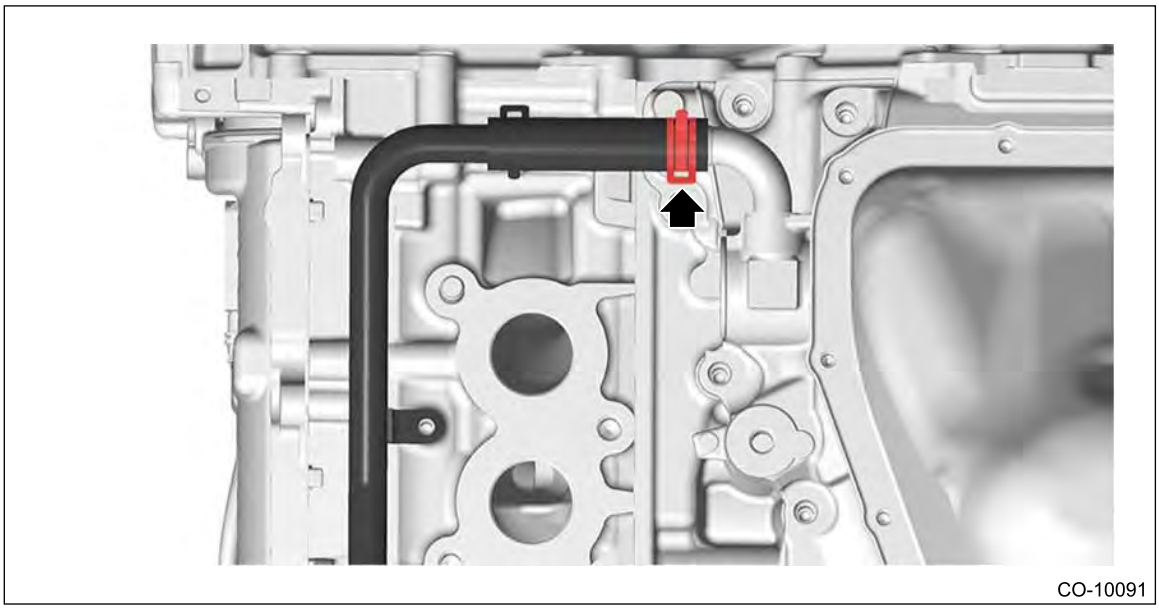
2. Check that there is no deformation, cracks or other damages.

3. Check the water pump bearing for smooth rotation.



REMOVAL

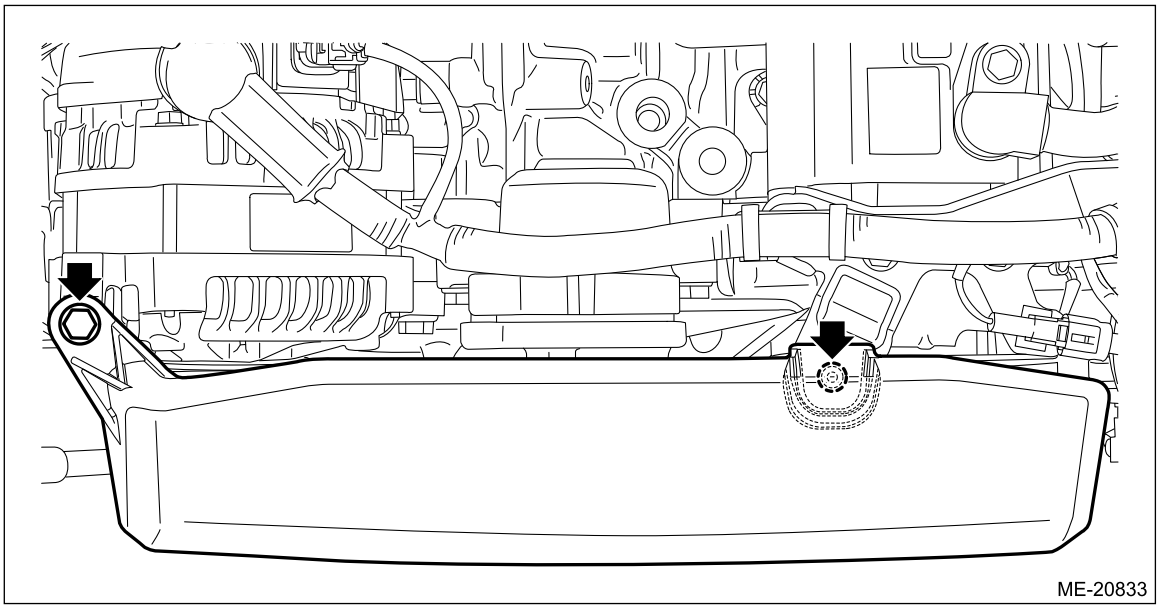
1. WATER PIPE RH



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
3. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
4. Disconnect the water hoses (rear side).

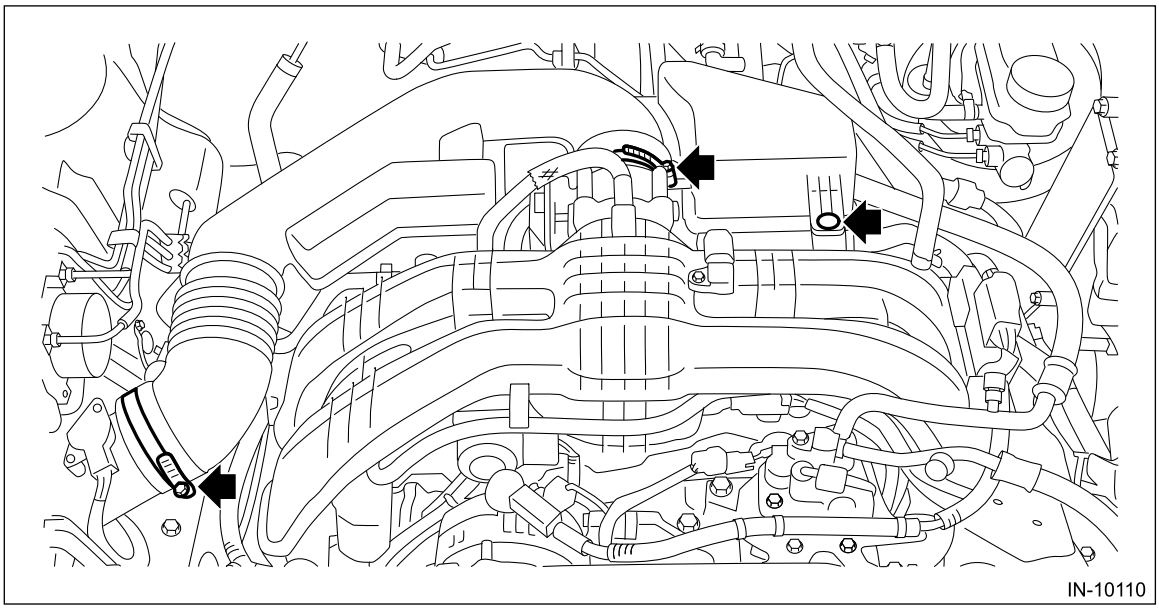
CO-10090

5. Remove the bolts securing the water pipe RH.



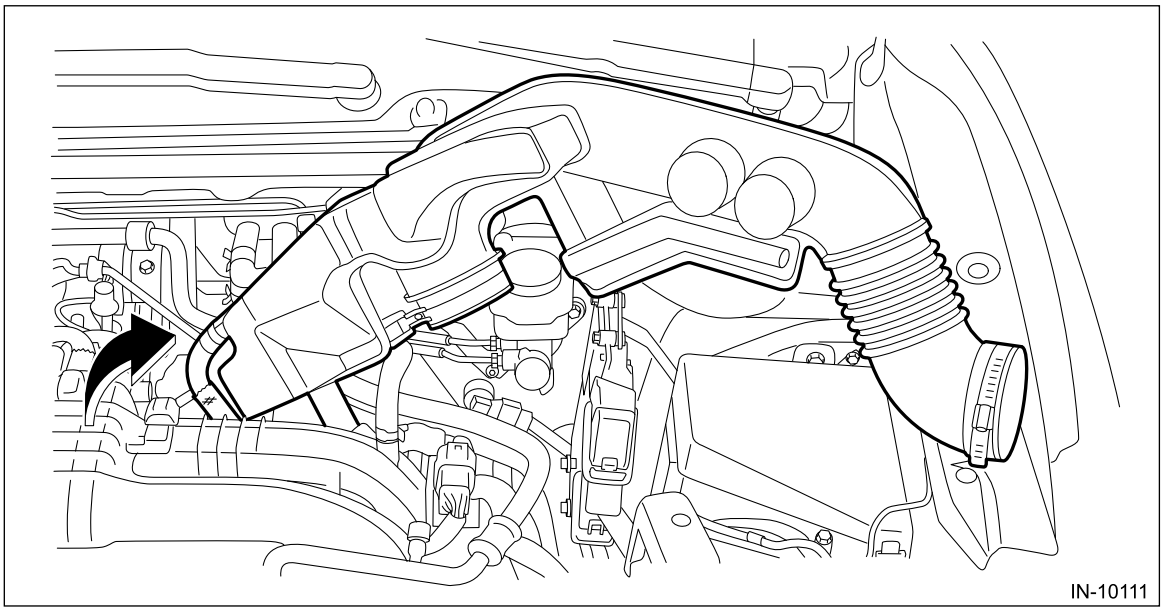
CO-10128

6. Remove the water hose (front side) and the water pipe RH as an assembly.

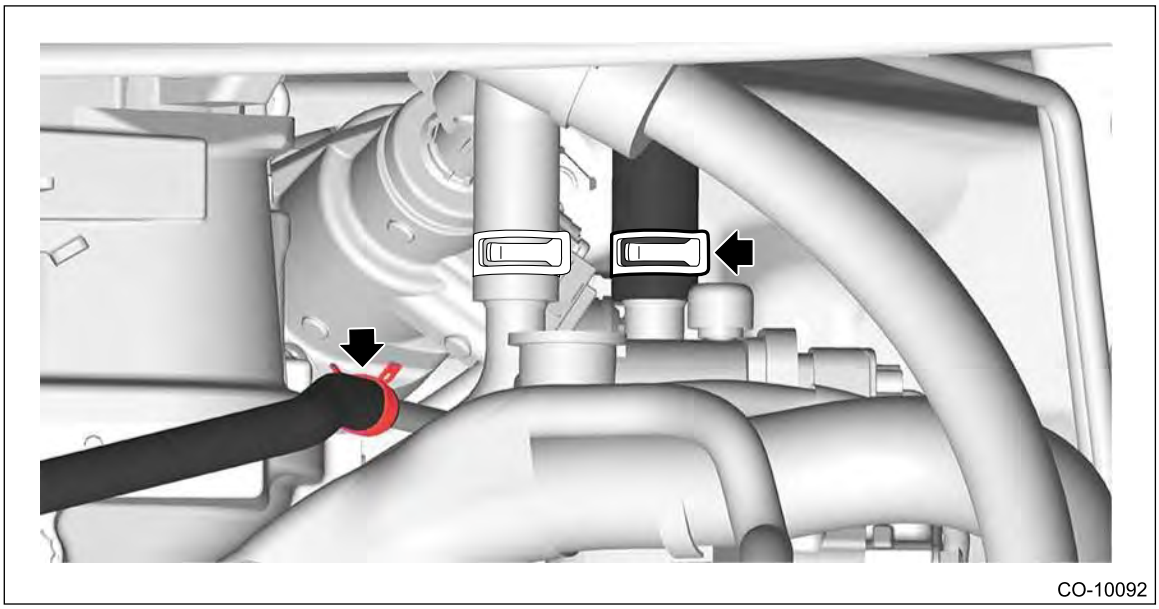


2. WATER PIPE LH

1. Remove the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>DISASSEMBLY.
2. Fully open the front hood. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Remove the V-belt covers.

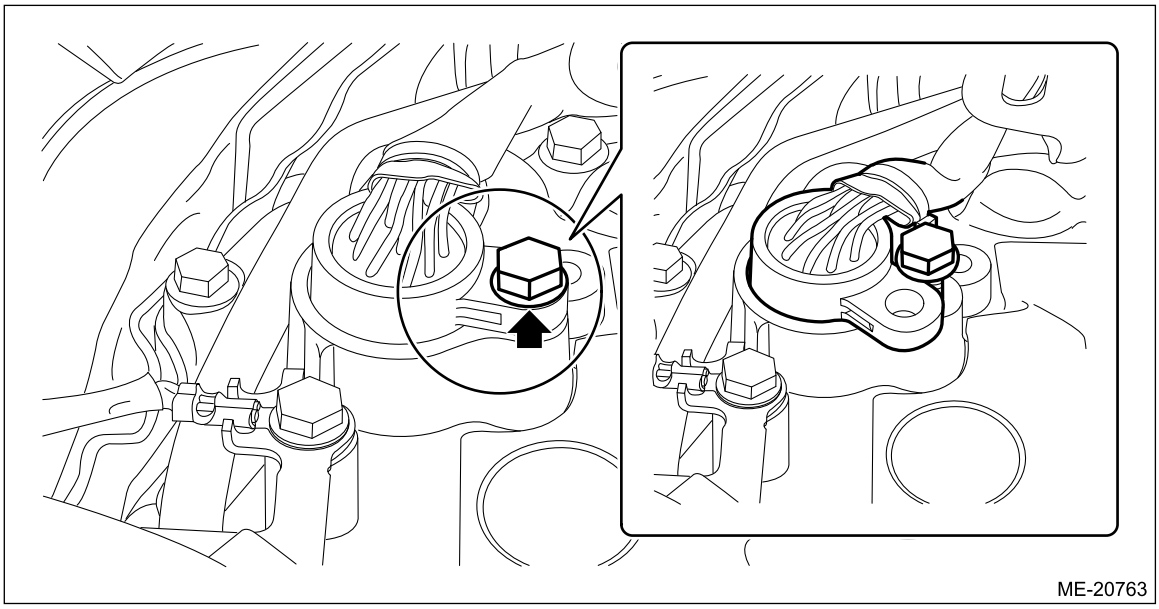


5. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
6. Remove the clip from the air intake boot, and loosen the clamp.

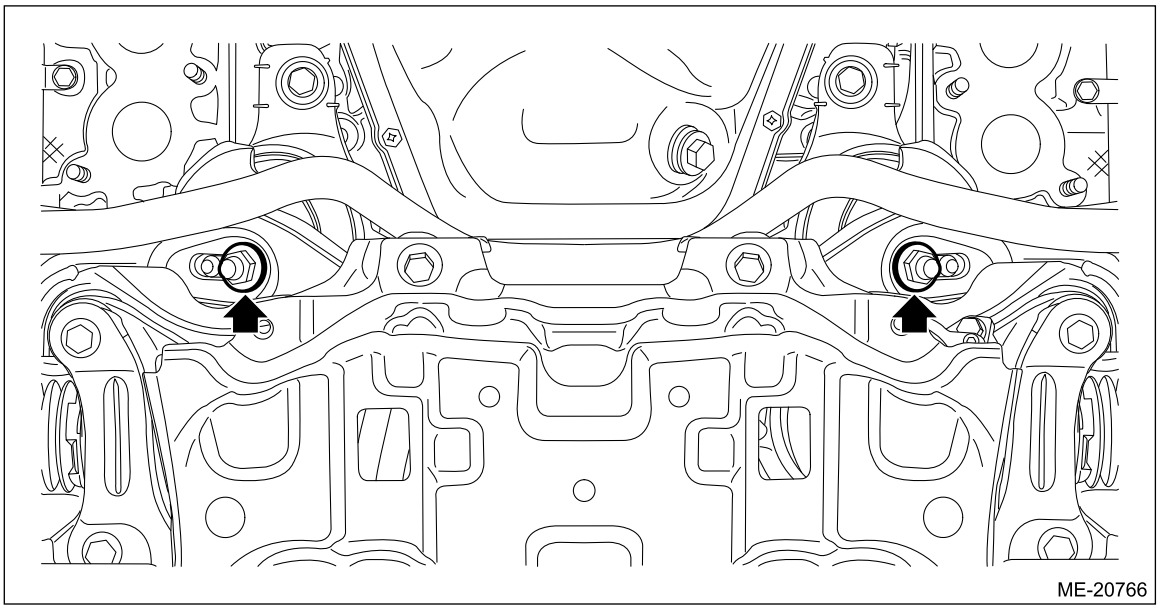


7. Remove the air intake boot, and place it aside so that it does not interfere with the work.

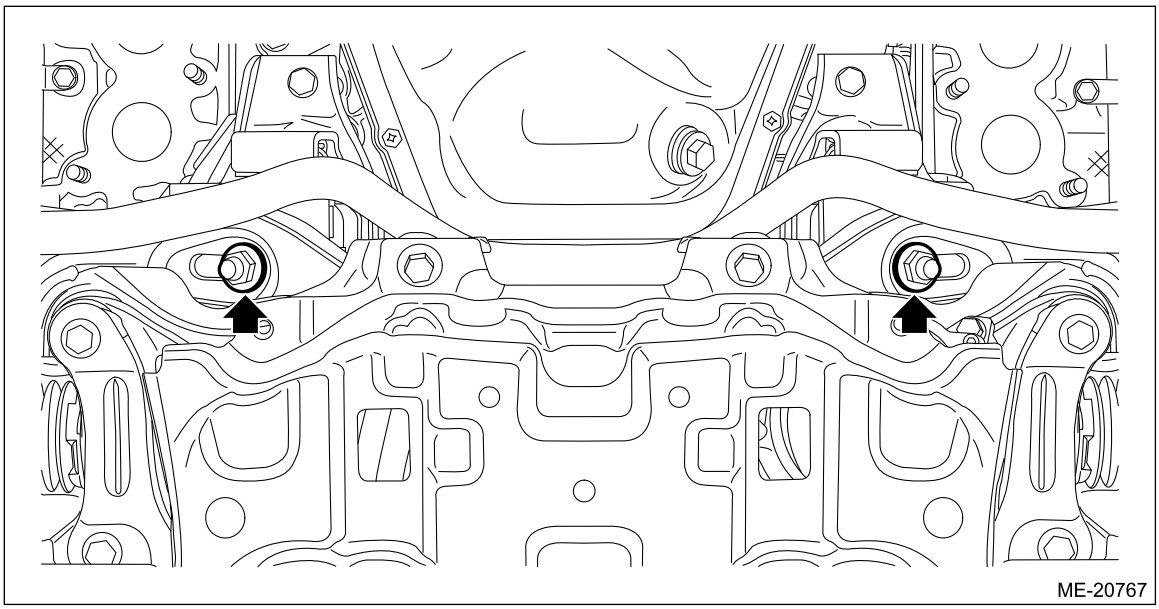
Caution:



Be careful not to pull out the PCV hose.



8. Disconnect the preheater hose and the heater outlet hose from the water pipe LH.

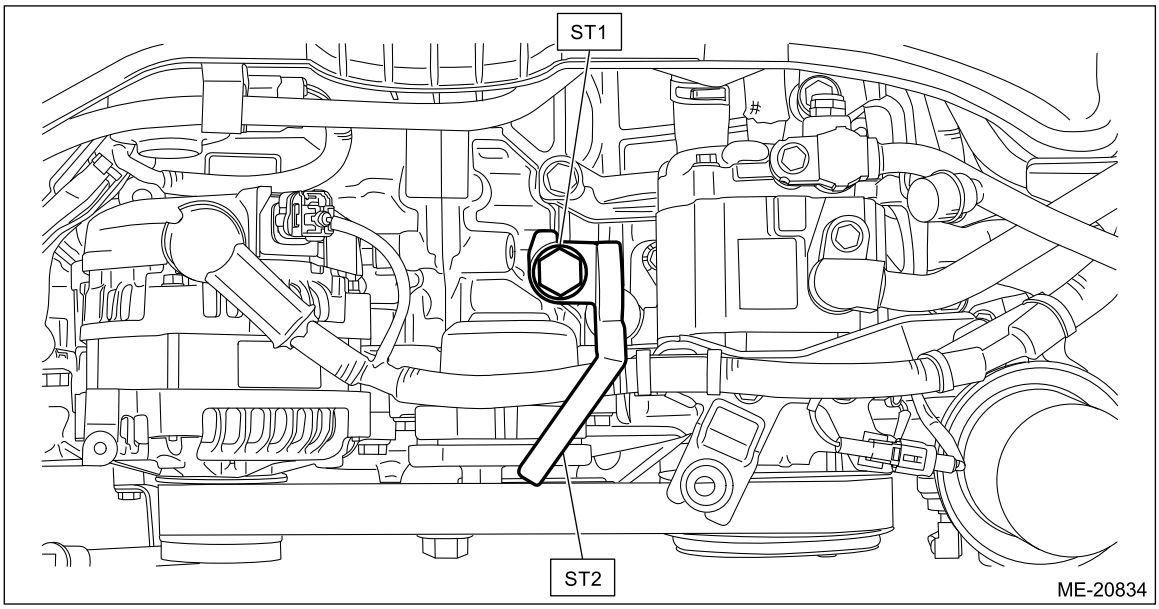


9. Remove the TCM. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>REMOVAL.
10. Turn the valve cover clockwise till the bolt hole can be seen as shown in the figure, and temporary tighten it with a bolt to prevent it from rotating. (CVT model)

11. Remove the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>REMOVAL > PITCHING STOPPER.
12. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
13. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
14. Remove the nuts which secure the engine mounting to the crossmember. (CVT model)

15. Remove the nuts which secure the engine mounting to the crossmember. (MT model)

16. Attach the ST1 and ST2.

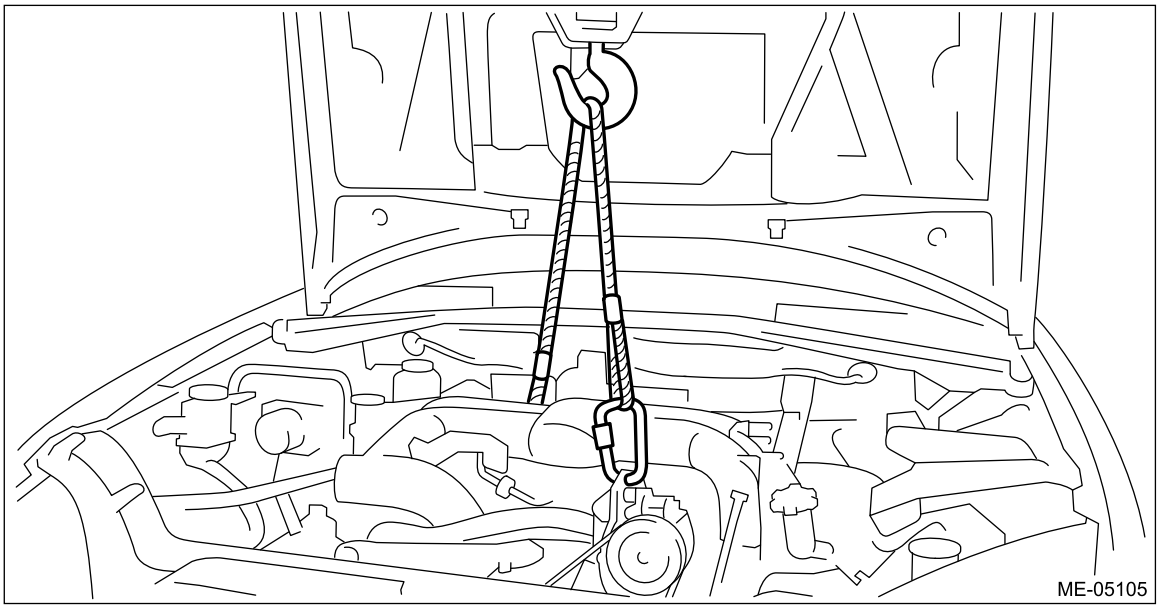


Preparation tool:

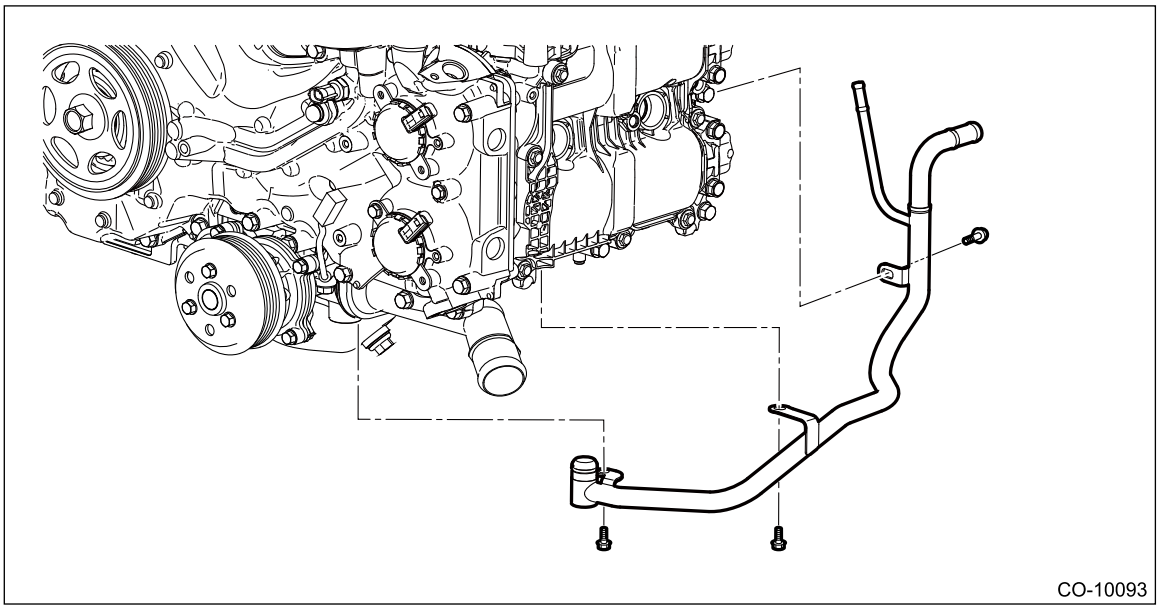
ST1: BOLT (18363AA050)

ST2: HANGER (18363AA040)

Tightening torque:



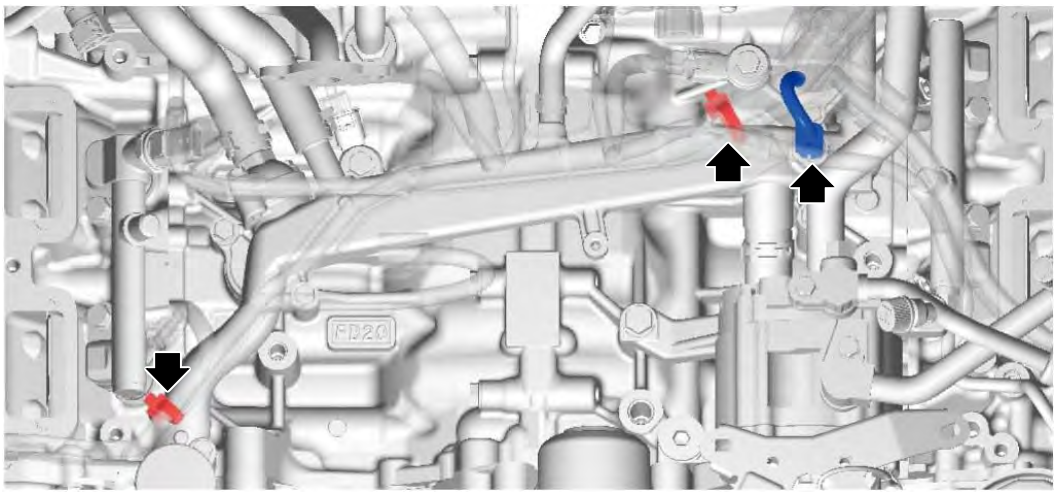
43 N·m (4.4 kgf-m, 31.7 ft-lb)



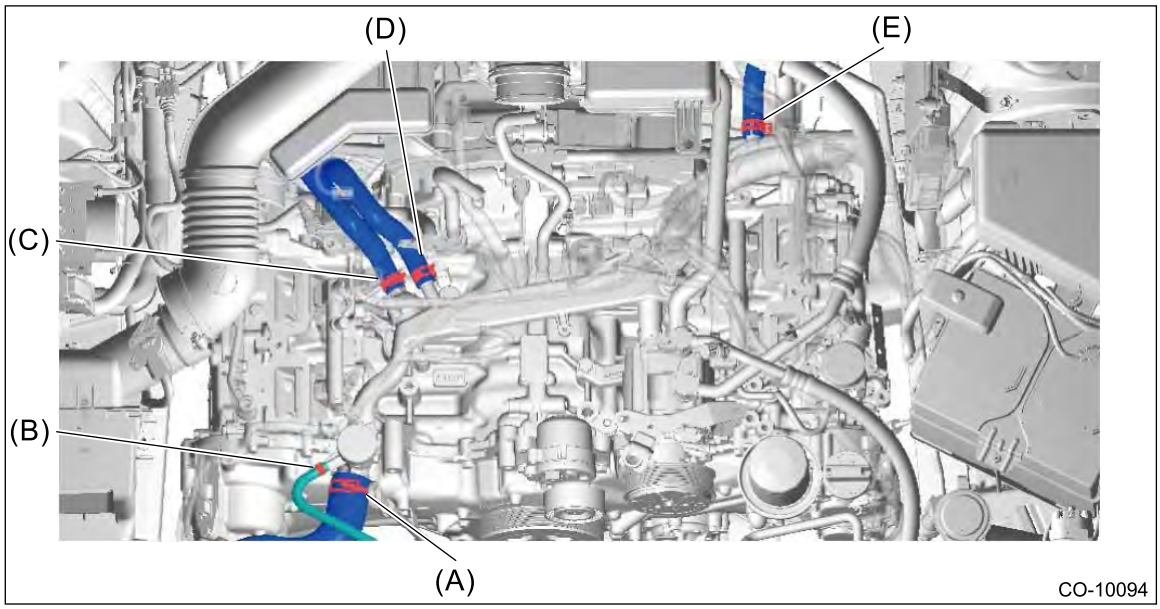
17. Lift up the engine with a lifting device and wire ropes.

Caution:

When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

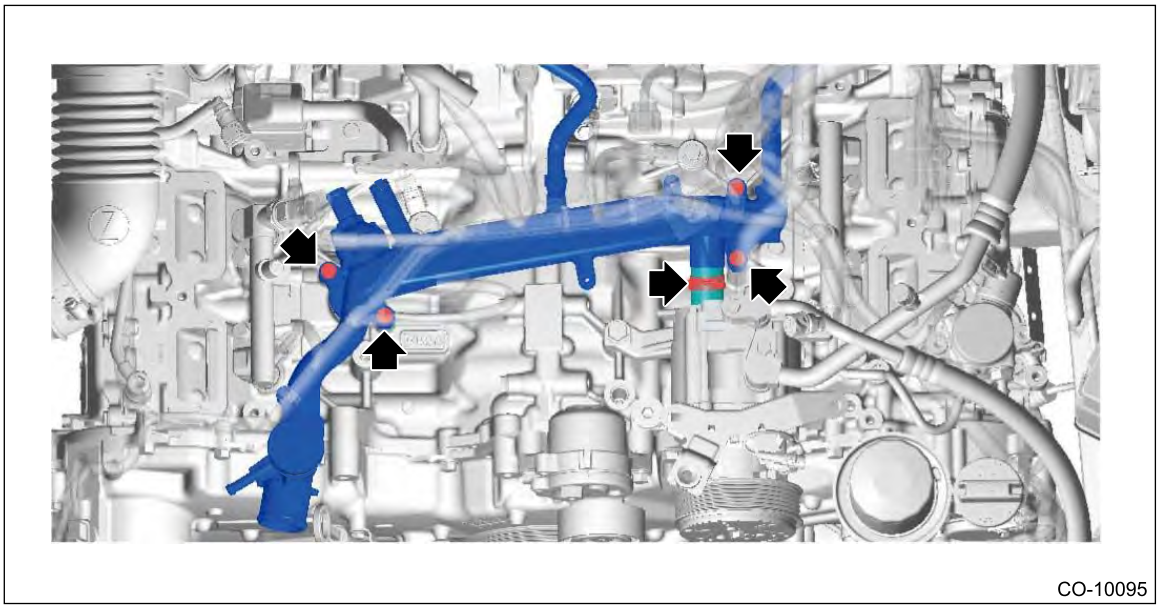


18. Remove the water pipe LH.



3. WATER TANK PIPE ASSY

1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
4. Remove the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator>REMOVAL.
5. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
6. Remove the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.
7. Disconnect the connector from the engine coolant temperature sensor, and remove the engine wiring harness from the water tank pipe.



8. Disconnect each hose shown in the figure.

(A) Radiator inlet hose
(B) Over flow hose
(C) Water hose (CVT model)
(D) Water hose
(E) Heater inlet hose

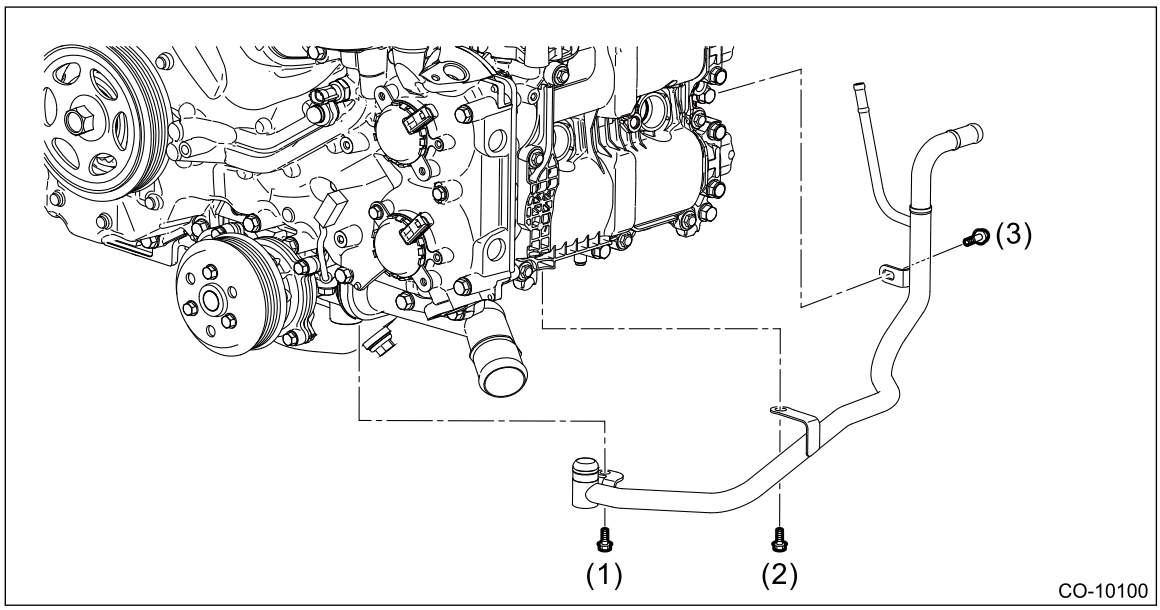
9. Remove the bolts securing the water tank pipe assembly, and disconnect the water hose (front side) to remove the water pipe assembly.

COOLING(H4DO) > Water Pipe

INSTALLATION

1. WATER PIPE RH

1. Set the water hose (front side) and the water pipe RH as an assembly.
2. Install the bolts securing the water pipe RH.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
3. Connect the water hose (rear side).
4. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



6. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

2. WATER PIPE LH

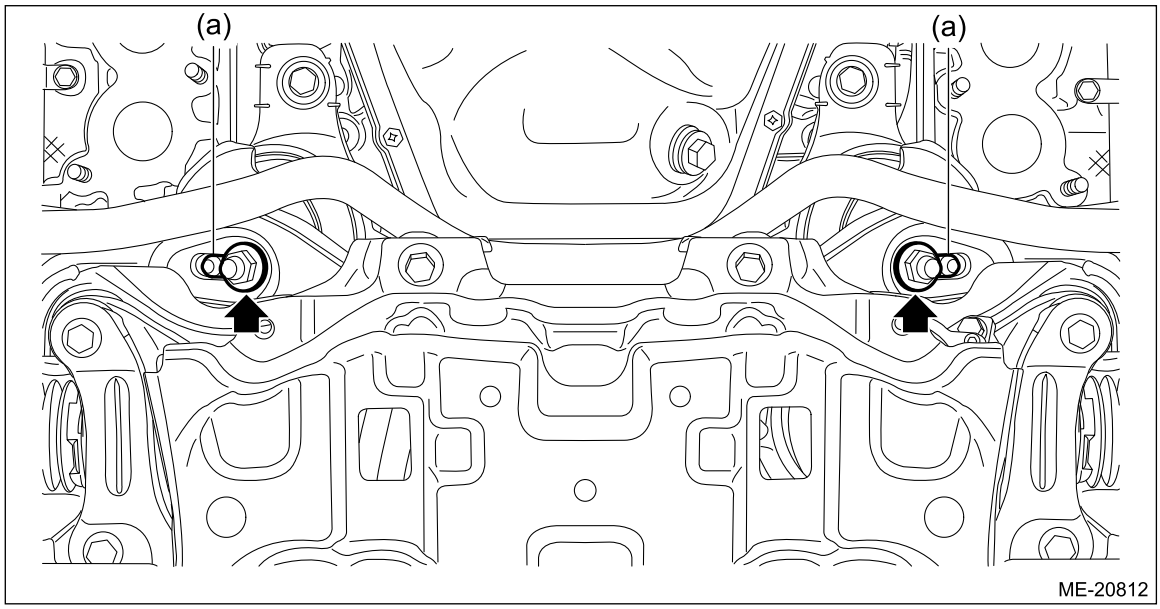
1. Temporarily install the water pipe LH with a new O-ring.
2. Tighten the bolts in the numerical order as shown in the figure.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3. Lower the engine and remove the lifting device and wire ropes.
4. Remove the ST.
5. Install the nuts which hold the engine mounting to the crossmember. (CVT model)

Caution:

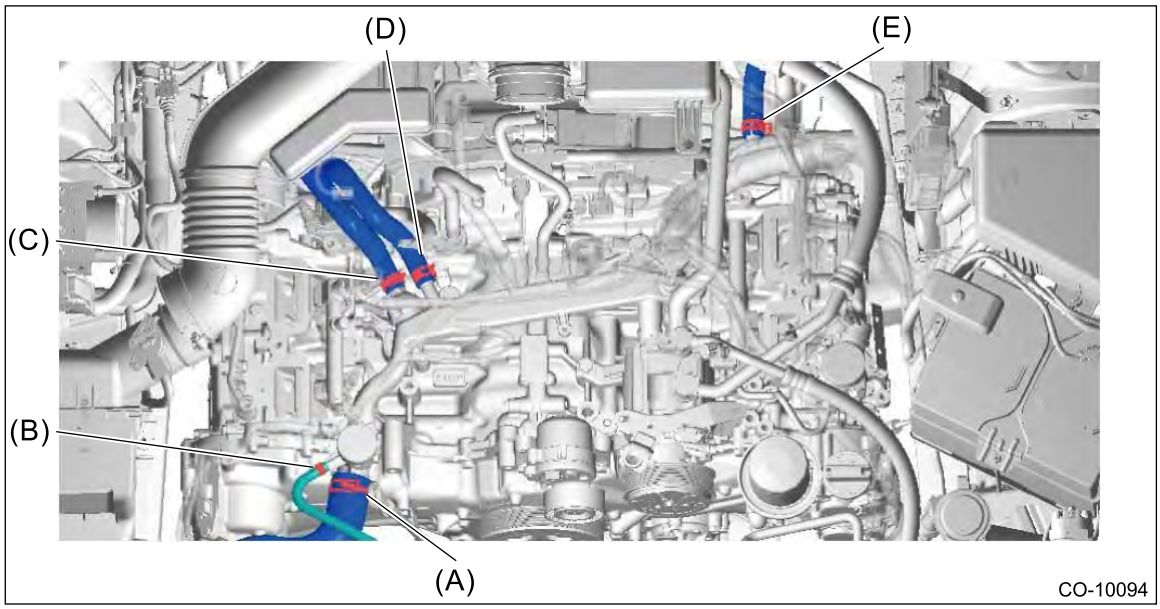


Use new nuts.

Note:

Make sure that locators (a) of the engine mounting are securely inserted.

Tightening torque:



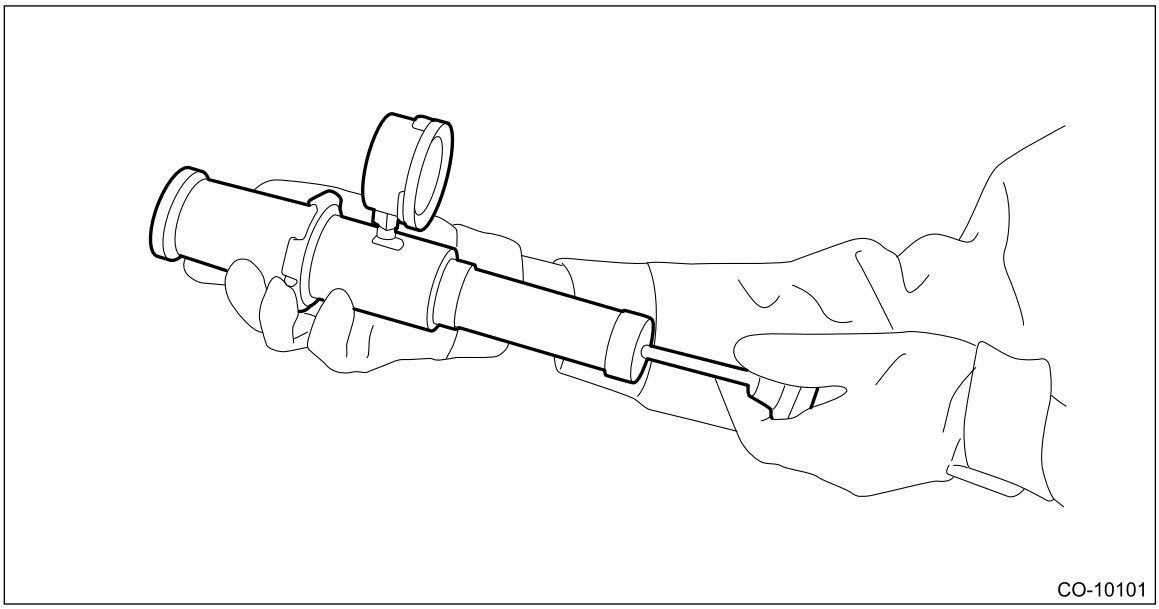
90 N·m (9.2 kgf-m, 66.4 ft-lb)

6. Install the nuts which hold the engine mounting to the crossmember. (MT model)
   Caution:
   Use new nuts.
   Tightening torque:
   90 N·m (9.2 kgf-m, 66.4 ft-lb)
7. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
8. Install the valve cover in original position. (CVT model)
   Tightening torque:
   7 N·m (0.7 kgf-m, 5.2 ft-lb)
9. Install the TCM. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>INSTALLATION.
10. Install the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>INSTALLATION > PITCHING STOPPER.
11. Connect the preheater hose and the heater outlet hose to the water pipe LH.
12. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
13. Install the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.
14. Install the V-belt cover.
    Tightening torque:
    7 N·m (0.7 kgf-m, 5.2 ft-lb)
15. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
16. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.
17. Set the front hood to the normal position. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.
18. Install the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>ASSEMBLY.

3. WATER TANK PIPE ASSY

1. Set a new O-ring and the water tank pipe assembly, and then connect the water hose (front side).
2. Install the bolts securing the water tank pipe assembly.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
3. Connect each hose shown in the figure.

(A) Radiator inlet hose
(B) Over flow hose
(C) Water hose (CVT model)
(D) Water hose
(E) Heater inlet hose



4. Connect the connector to the engine coolant temperature sensor, and install the engine wiring harness to the water tank pipe assembly.
5. Install the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.
6. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.
7. Install the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator>INSTALLATION.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
9. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

COOLING(H4DO) > Water Pipe

INSPECTION

1. WATER TANK PIPE CAP

1. Check that there is no deformation, cracks or other damages.
2. Check the opening pressure of the water tank pipe cap.
   (1) Remove the water tank pipe cap.
   Caution:
   - **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
   - **If the engine coolant splashes, completely remove and clean it.**
   (2) Attach the radiator cap tester to the water tank pipe cap.

(3) Increase pressure until the radiator cap tester gauge needle stops. The water tank pipe cap is functioning properly if it holds the service limit pressure for 5 — 6 seconds. Replace the water tank pipe cap if it opens under pressure at or less than the service limit value.

Caution:

Be sure to remove foreign matter and rust in advance. Otherwise, results of pressure test will be incorrect.

Specification:

122 — 152 kPa (1.24 — 1.55 kg/cm^2, 18 — 22 psi)

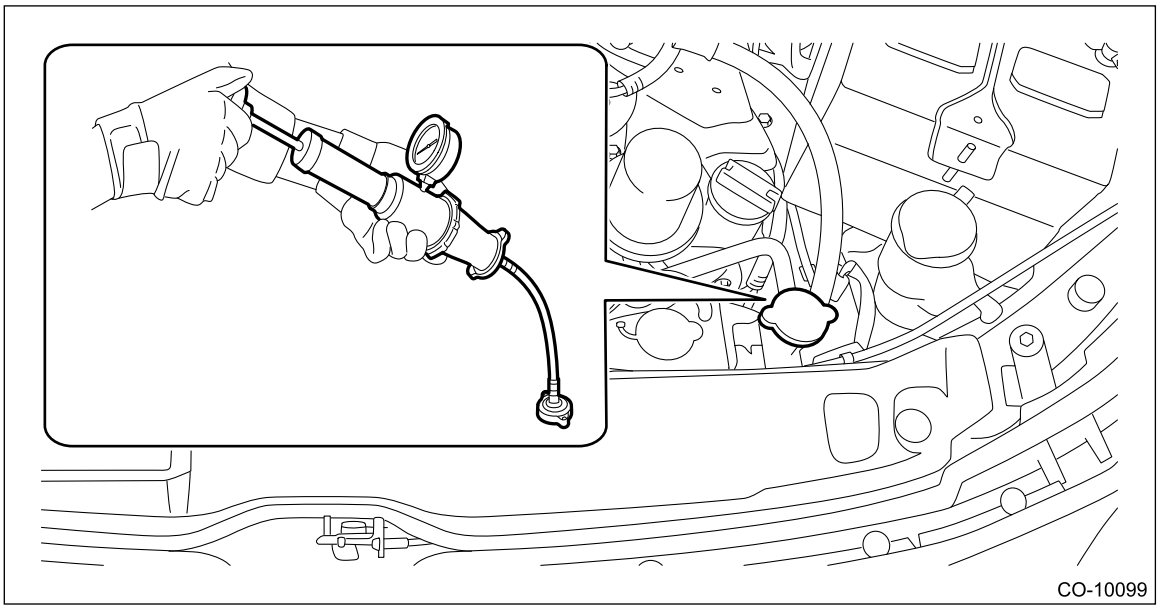
Service limit:

112 kPa (1.14 kg/cm^2, 16 psi)

2. OTHER INSPECTIONS

1. Check for leaks.

Caution:



- **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
- **If the engine coolant splashes, completely remove and clean it.**

(1) Remove the radiator cap.

(2) Fill the radiator with engine coolant, and then install the radiator cap tester to the filler neck of radiator.

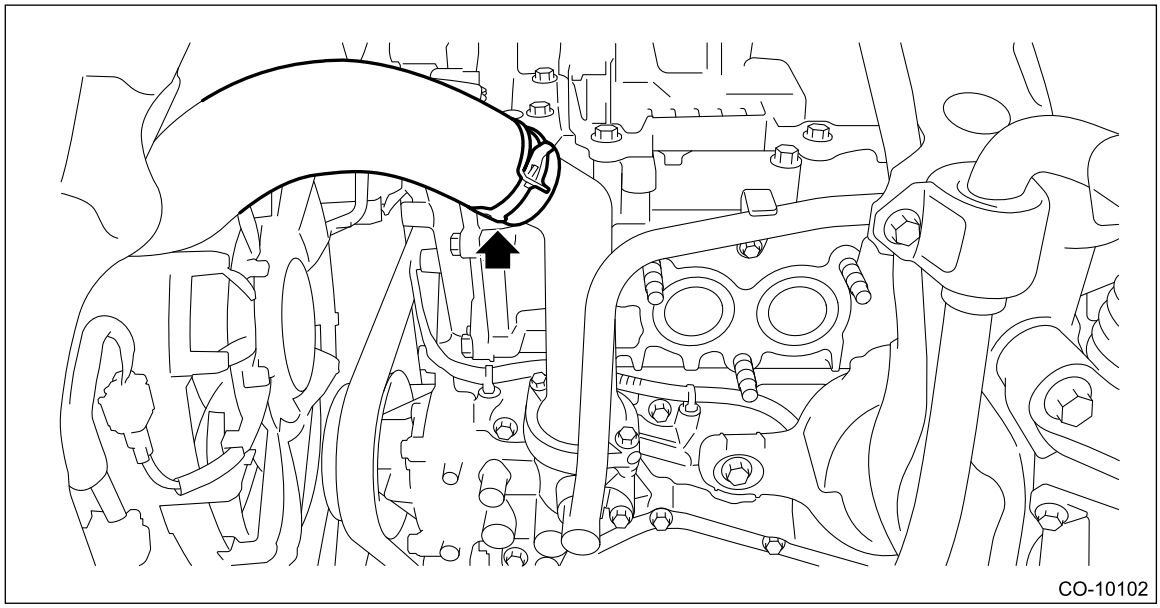
Caution:

Be careful not to deform the filler neck of radiator when installing and removing the radiator cap tester.

(3) Apply a pressure of 157 kPa (1.6 kg/cm^2, 23 psi) to the radiator and check the following points:

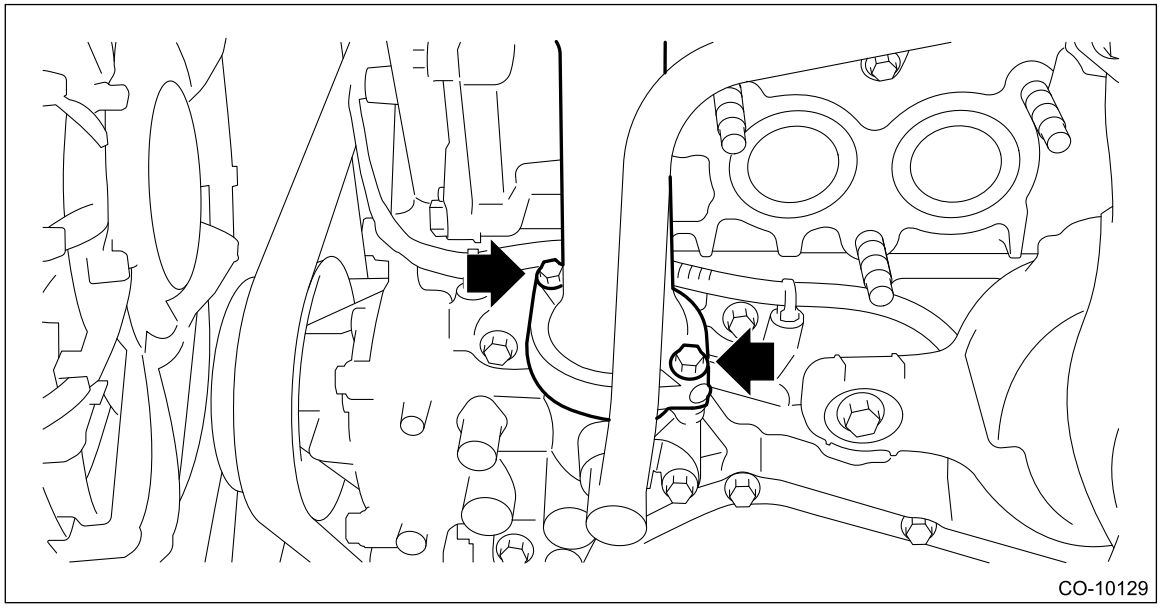
- Leakage from the flow path of the engine coolant or its vicinity
- Significant pressure drop

Caution:



Be careful of engine coolant from spurting out when removing the radiator cap tester.

2. Check that there is no deformation, cracks or other damages.



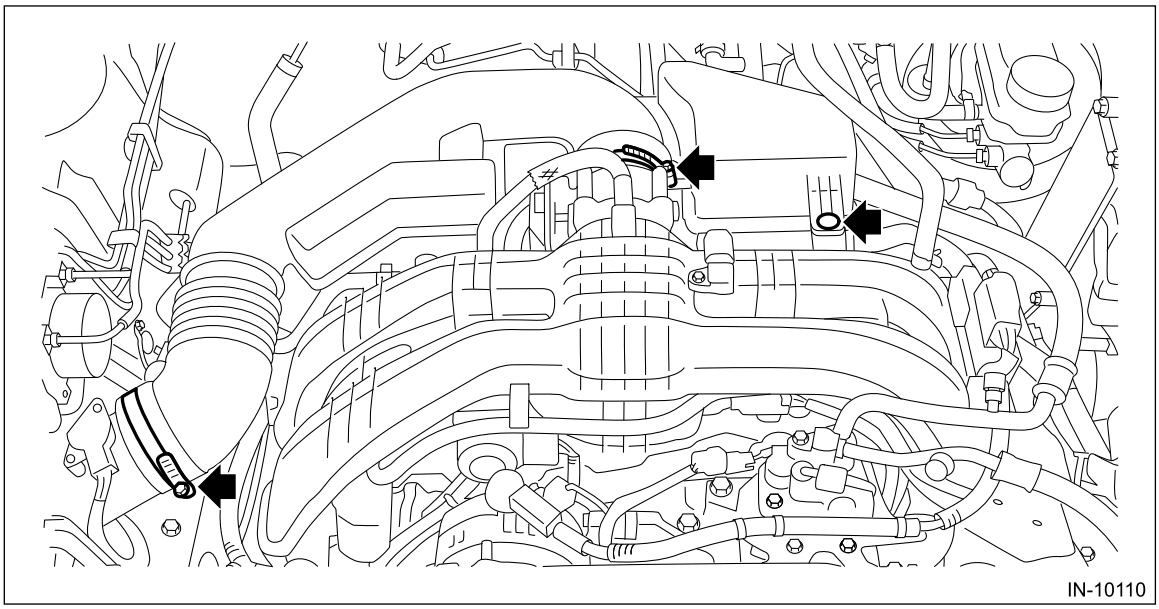
REMOVAL

1. ENGINE SIDE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
3. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
4. Disconnect radiator outlet hose.

5. Remove the thermostat cover, and then remove the thermostat.

6. Remove the gasket from thermostat.

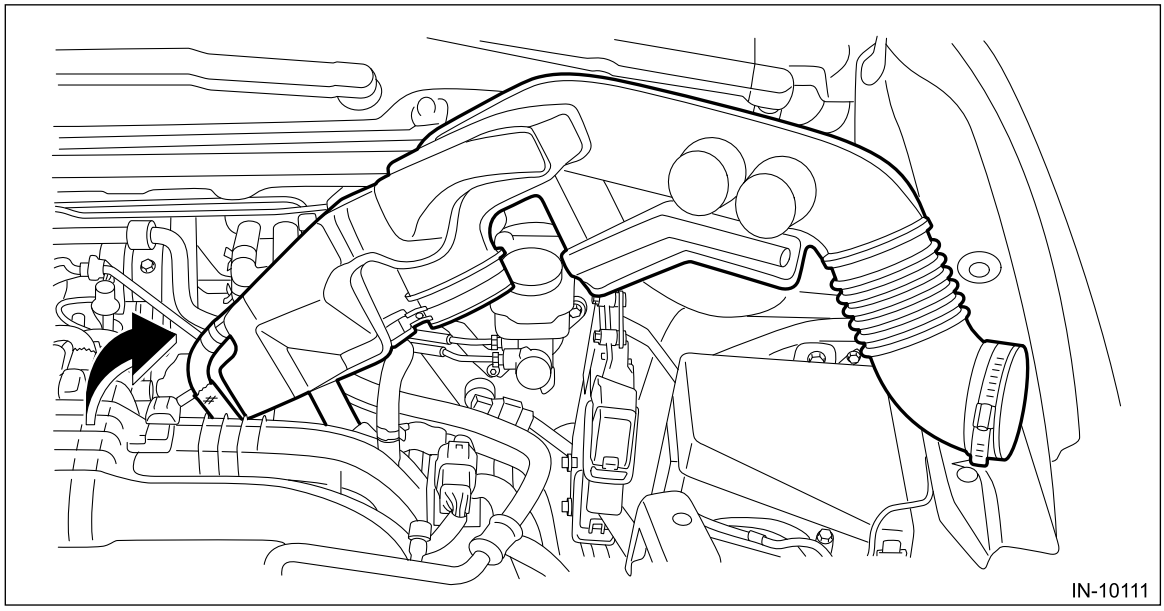


2. WATER TANK PIPE SIDE

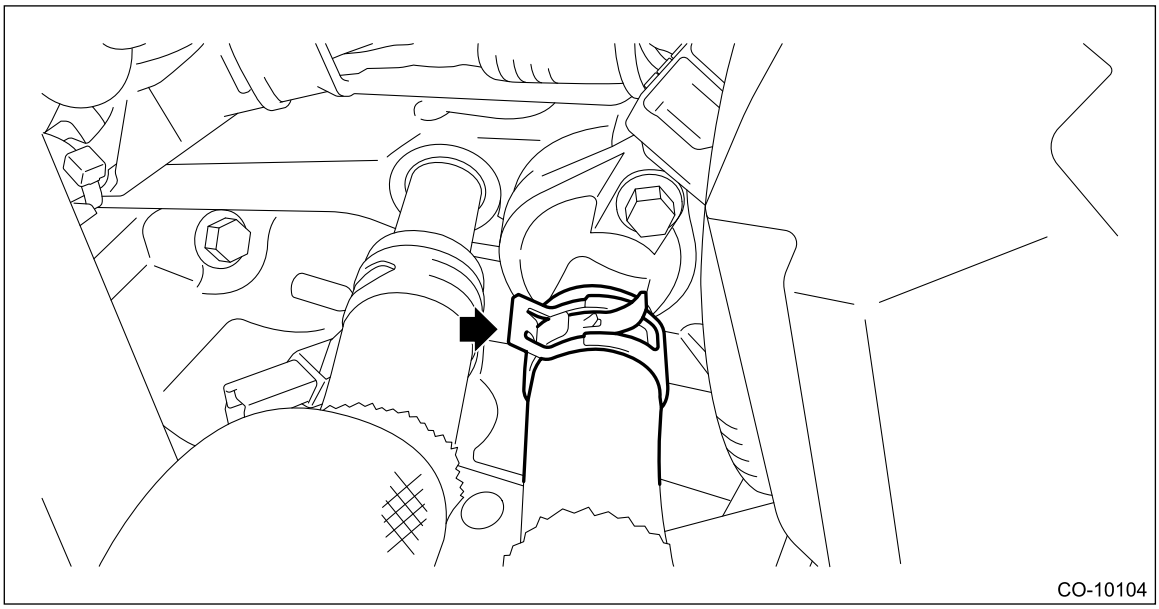
Note:
Thermostat on the water tank pipe side is featured on CVT models only.

1. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING

OF ENGINE COOLANT.

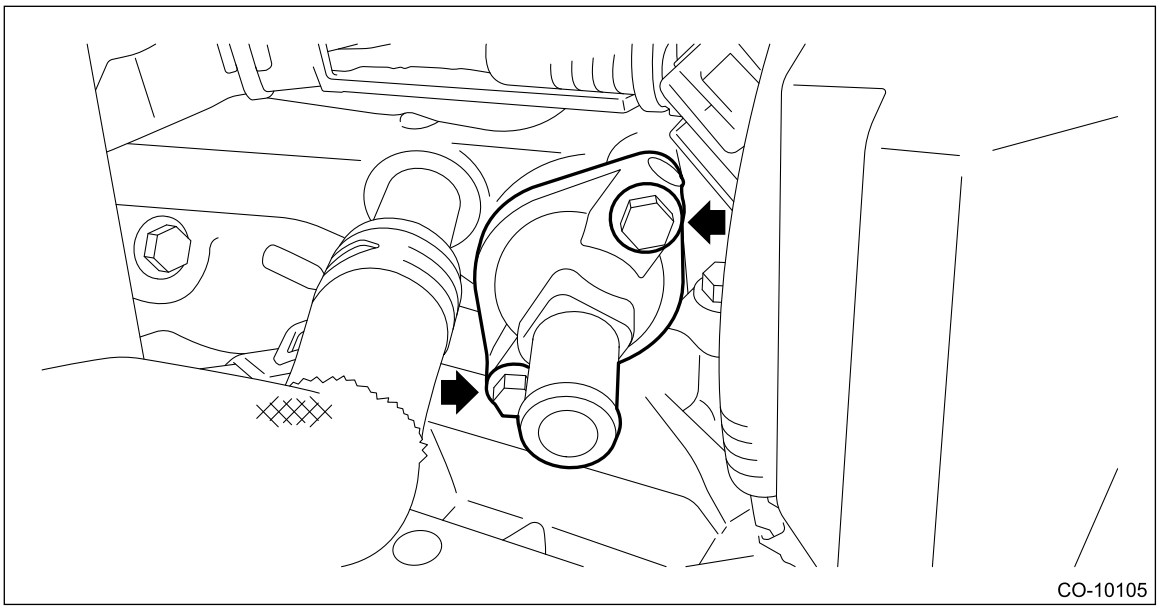


2. Remove the clip from the air intake boot, and loosen the clamp.



3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:



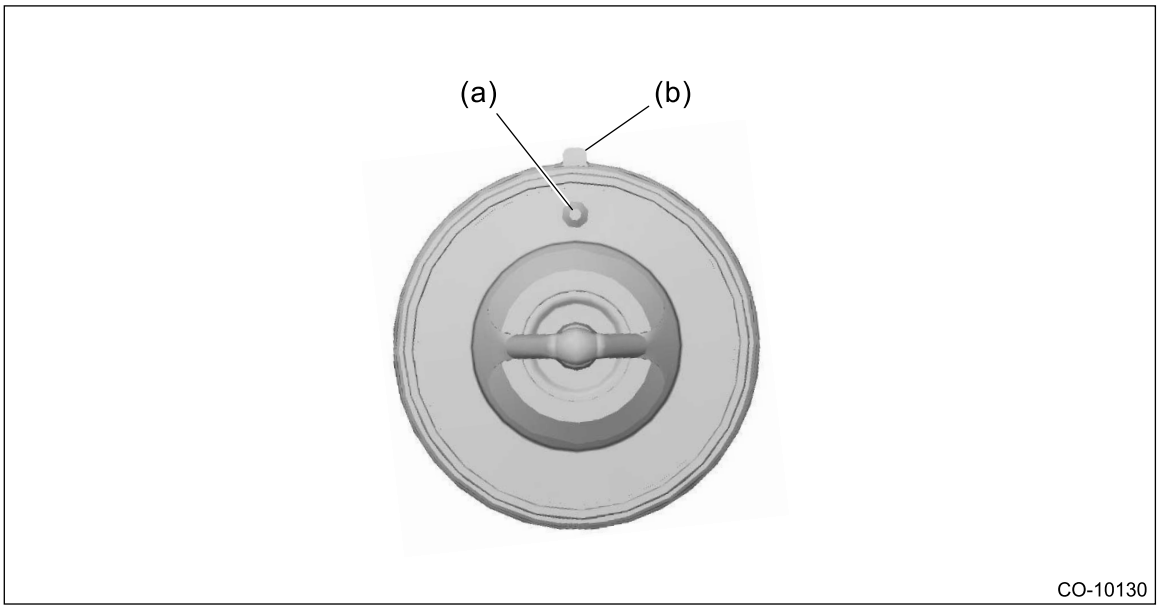
Be careful not to pull out the PCV hose.

4. Disconnect the water hoses.

5. Remove the thermostat cover, and then remove the thermostat.

6. Remove the gasket from thermostat.

COOLING(H4DO) > Thermostat

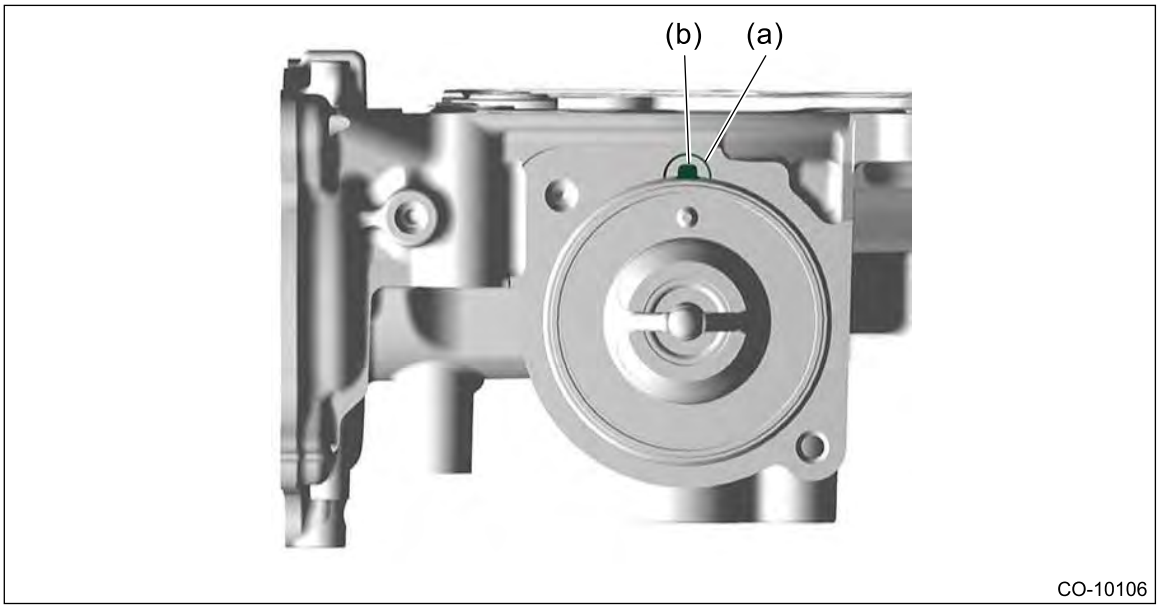


INSTALLATION

1. ENGINE SIDE

1. Install a new gasket to the thermostat.

Note:



Align the positions of the jiggle pin (a) and the positioning rib (b) of the gasket.

2. Install the thermostat and thermostat cover.

Note:

Align the positions of groove (a) of the oil pan upper and the positioning rib (b) of the gasket.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3. Connect the radiator outlet hose.
4. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
6. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

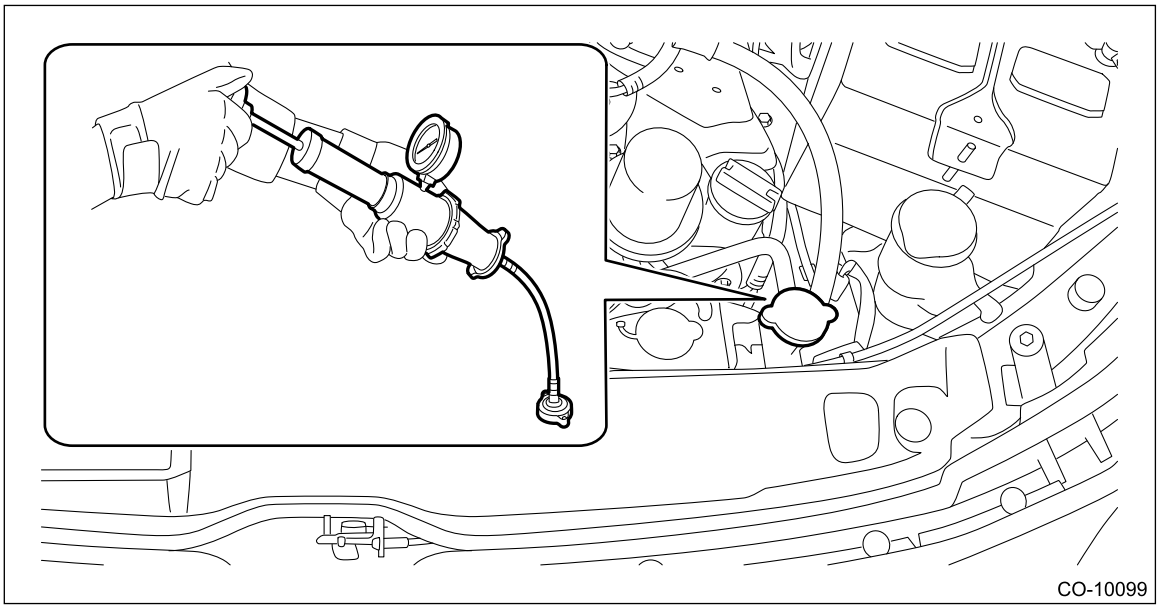
2. WATER TANK PIPE SIDE

1. Install a new gasket to the thermostat.
2. Install the thermostat and thermostat cover.

Note:

When installed, the air vent hole should face upward.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



3. Connect the water hose.
4. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
5. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

COOLING(H4DO) > Thermostat

INSPECTION

1. Check for leaks.
   Caution:
   - **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
   - **If the engine coolant splashes, completely remove and clean it.**

   (1) Remove the radiator cap.
   (2) Fill the radiator with engine coolant, and then install the radiator cap tester to the filler neck of radiator.
   Caution:
   Be careful not to deform the filler neck of radiator when installing and removing the radiator cap tester.

   (3) Apply a pressure of 157 kPa (1.6 kg/cm^2, 23 psi) to the radiator and check the following points:
   - Leakage from the flow path of the engine coolant or its vicinity
   - Significant pressure drop

   Caution:
   Be careful of engine coolant from spurting out when removing the radiator cap tester.
2. Check that there is no deformation, cracks or other damages.
3. Check that the thermostat valve closes completely at an ambient temperature.
4. Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and check the temperature and the valve lift amount when the valve begins to open and when the valve

is fully opened. Replace the thermostat if faulty.

Note:

- **During the test, agitate the water for even temperature distribution.**
- **Leave the thermostat in the boiling water for five minutes or more before measuring the valve lift.**
- **Hold the thermostat with a wire or the like to avoid contacting with container bottom.**

Starting temperature to open:

Engine side

90 — 94°C (194 — 201°F)

Water tank pipe side

48 — 52°C (118 — 126°F)

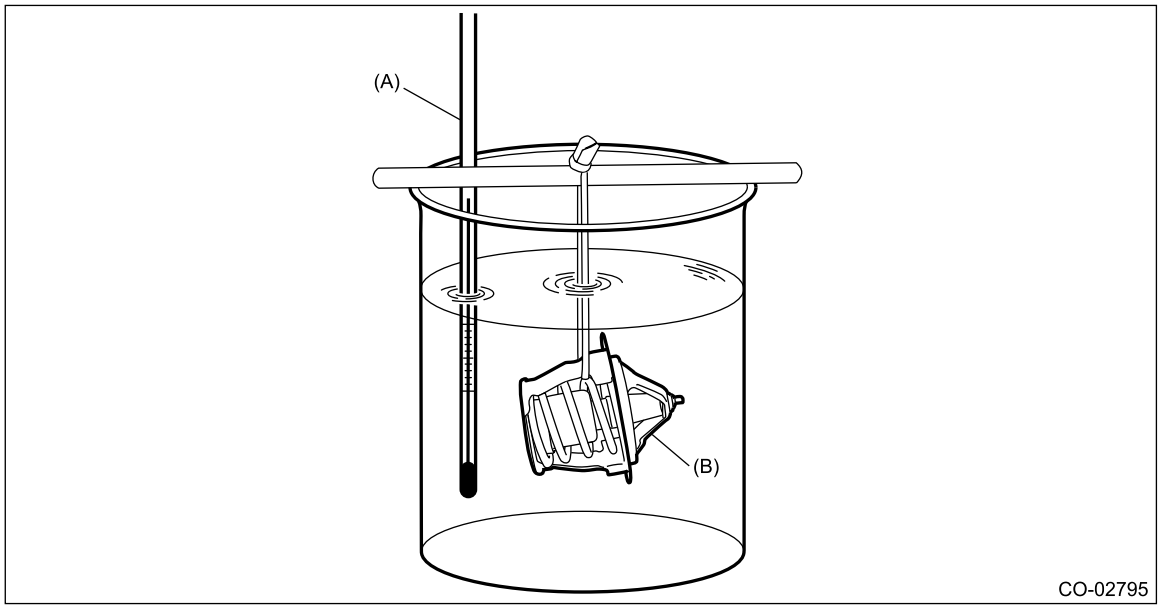
Full open temperature:

Engine side

100°C (212°F)

Water tank pipe side

63°C (145°F)

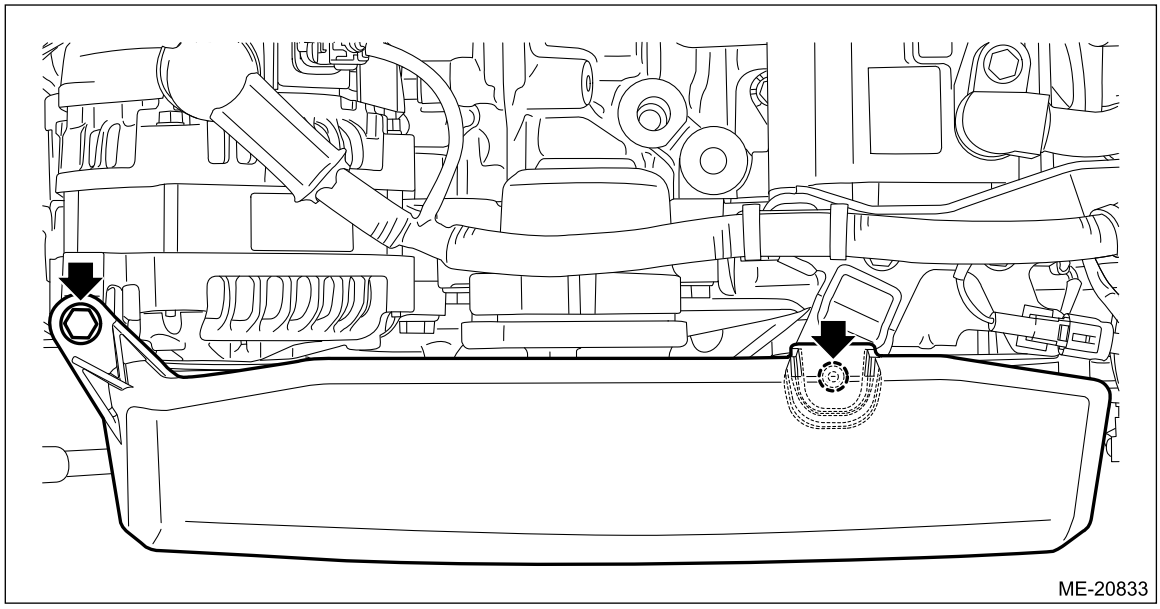


Total valve lift:

Engine side

8.0 mm (0.315 in) or more

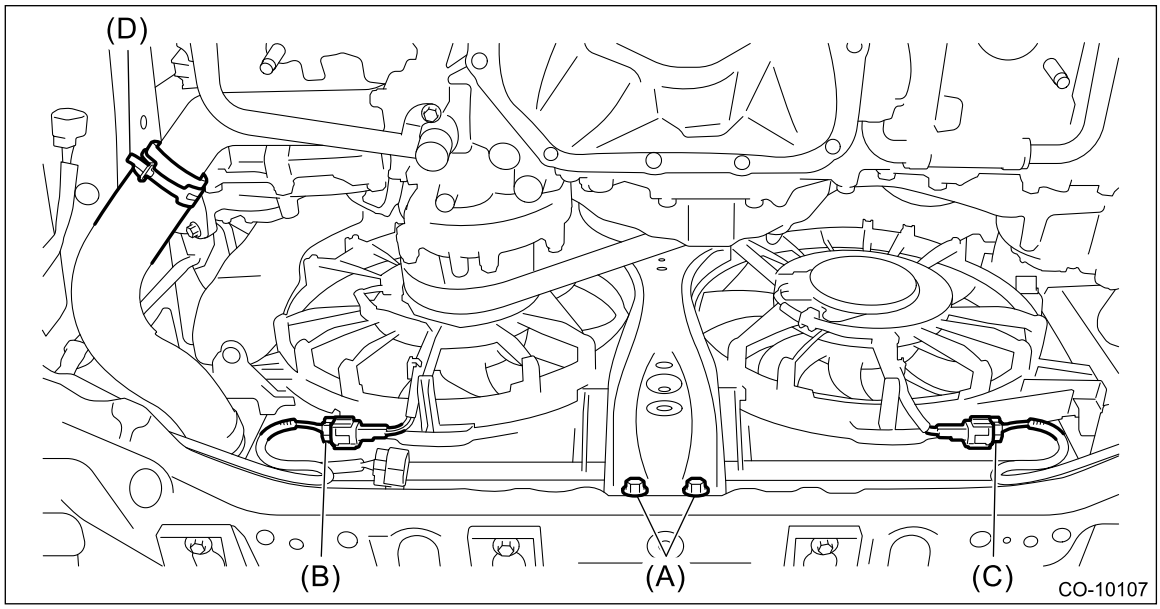
Water tank pipe side



6.0 mm (0.236 in) or more

(A) Thermometer (B) Thermostat

REMOVAL

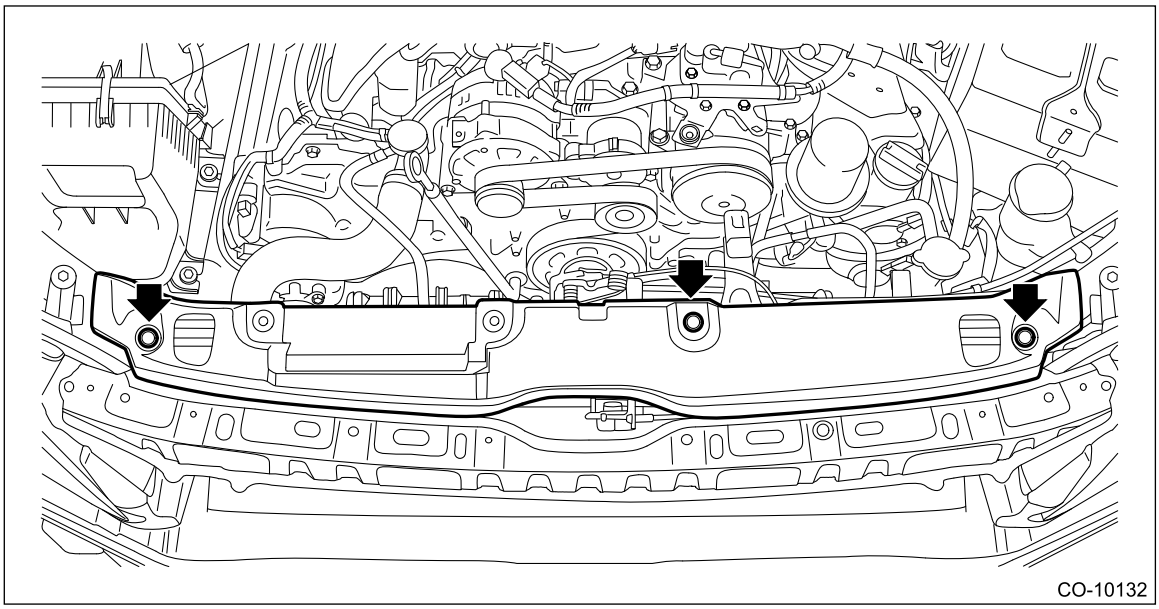


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the V-belt covers.

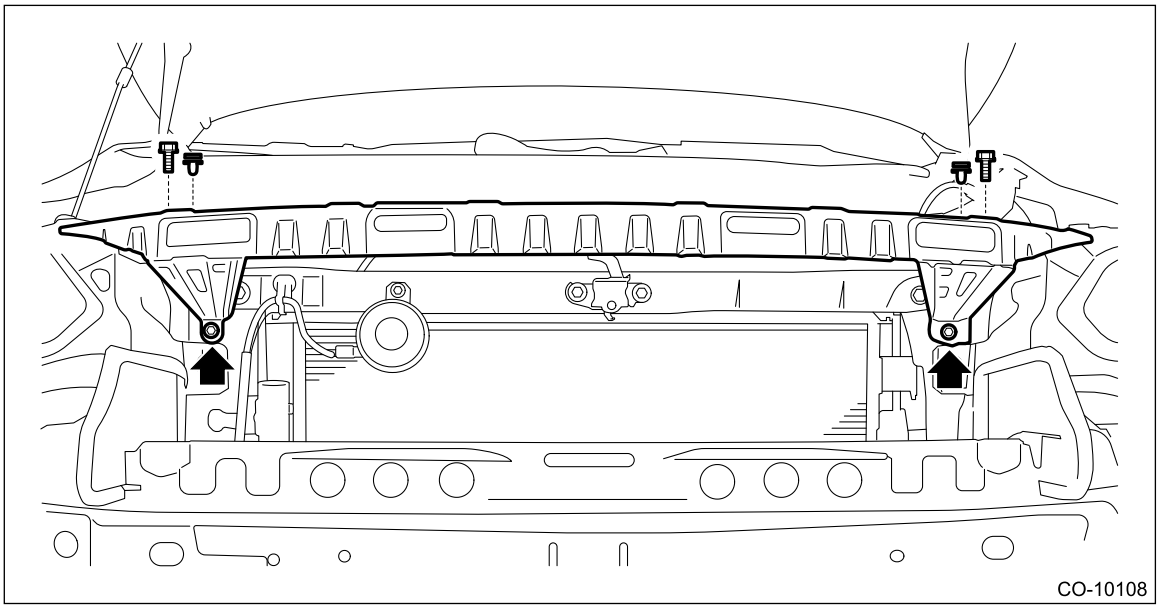
3. Collect the refrigerant from A/C system. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure.

   Note:

   This step is necessary only if the radiator and the condenser are removed as an assembly.
4. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
5. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
6. Remove the lower side bolts (A) securing the radiator upper frame.
7. Disconnect main fan motor connector (B) and sub fan motor connector (C).
8. Disconnect radiator outlet hose (D).



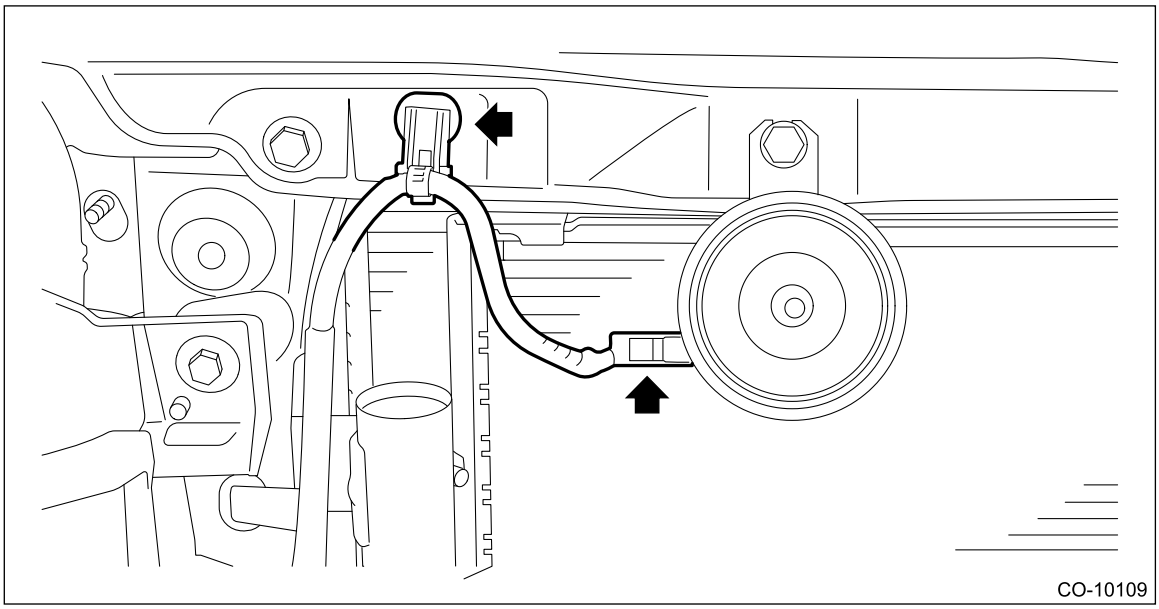
9. Remove the reservoir tank. Ref. to COOLING(H4DO)>Reservoir Tank>REMOVAL.



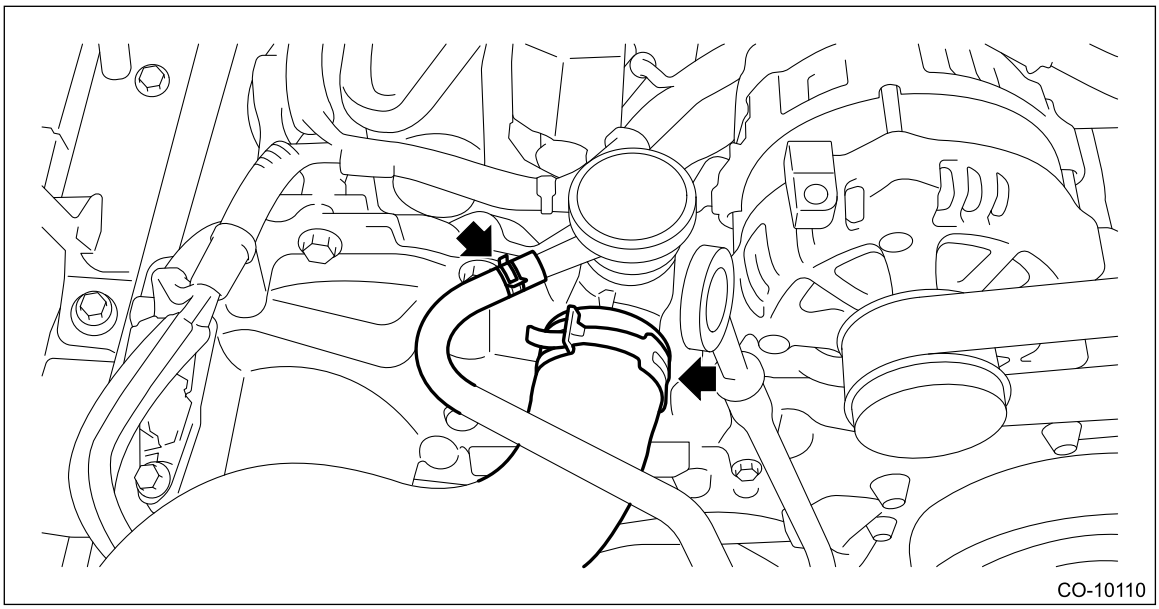
10. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.

11. Remove the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.

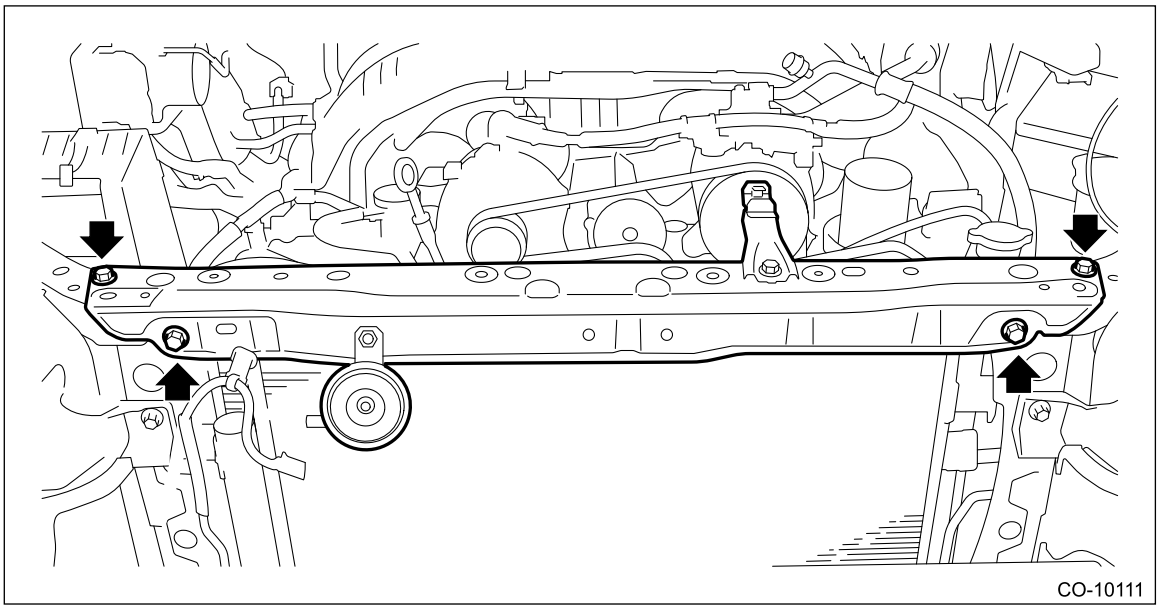
12. Remove the cover UPR - front.



13. Remove the bracket - bumper UPR.



14. Remove the front hood lock assembly. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>REMOVAL.



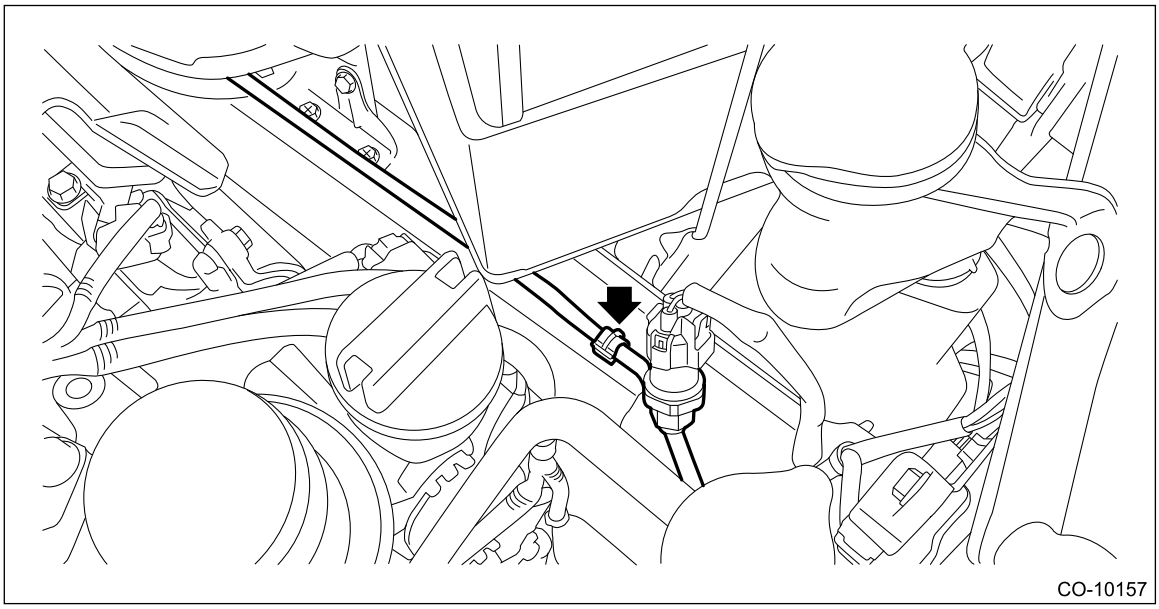
15. Disconnect the connector from the horn, and remove the clip.

16. Disconnect the radiator inlet hoses and over flow hose.

17. Remove the upper side bolts securing the radiator upper frame, and remove the radiator upper frame.

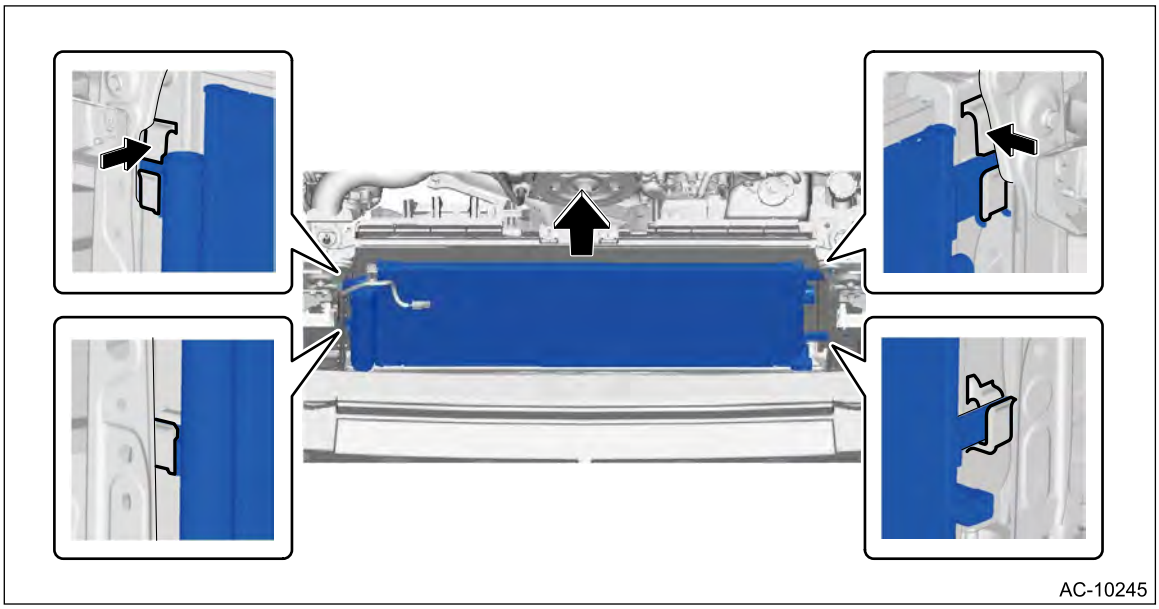
18. When removing the condenser together

(1) Detach the hose - pressure discharge and the pipe - evaporator cooling. Ref. to AIR CONDITIONER>Condenser>REMOVAL.



(2) Remove the radiator, radiator fan & fan motor assembly, and the condenser as an assembly.

(3) Remove the condenser. Ref. to AIR CONDITIONER>Condenser>REMOVAL.



(4) Remove the radiator fan and fan motor assembly. Ref. to COOLING(H4DO)>Radiator Fan and Fan Motor Assembly>REMOVAL.

19. When condenser is not removed

(1) Remove the pipe - evaporator cooling from the clip.

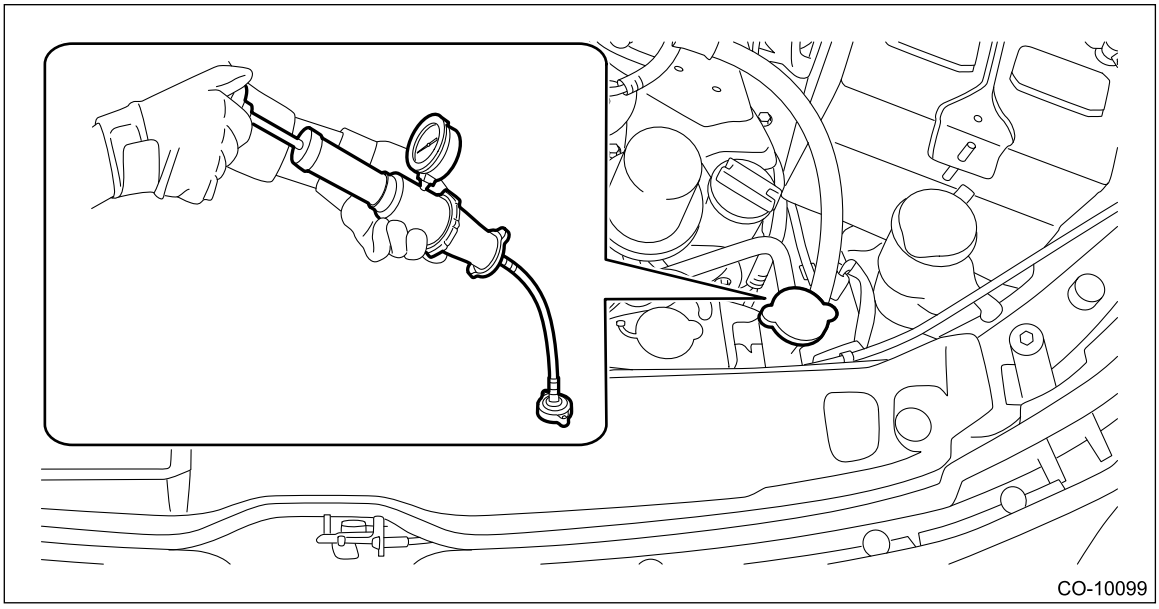
(2) Disengage the claws, and separate the radiator and the condenser a part.

(3) Remove the radiator and the radiator fan & fan motor assembly as an assembly.
(4) Remove the radiator fan and fan motor assembly. Ref. to COOLING(H4DO)>Radiator Fan and Fan Motor Assembly>REMOVAL.

COOLING(H4DO) > Radiator

INSTALLATION

1. When assembled together with condenser
   (1) Assemble the radiator fan & fan motor assembly. Ref. to COOLING(H4DO)>Radiator Fan and Fan Motor Assembly>INSTALLATION.
   (2) Assemble the condenser. Ref. to AIR CONDITIONER>Condenser>INSTALLATION.
   (3) Install the radiator, radiator fan & fan motor assembly, and the condenser as an assembly.
   (4) Connect the hose - pressure discharge and the pipe - evaporator cooling. Ref. to AIR CONDITIONER>Condenser>INSTALLATION.
2. When condenser is not removed
   (1) Install the radiator fan and fan motor assembly. Ref. to COOLING(H4DO)>Radiator Fan and Fan Motor Assembly>INSTALLATION.
   (2) Install the radiator and the radiator fan & fan motor assembly as an assembly.
   (3) Install the condenser to the radiator.
   (4) Install the pipe - evaporator cooling to the clip.
3. Set the radiator upper frame, and install the upper side bolts securing the radiator upper frame.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
4. Connect the radiator inlet hoses and over flow hose.
5. Connect the horn connector and install the clip.
6. Install the front hood lock assembly. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>INSTALLATION.
7. Install the bracket - bumper UPR.
   Tightening torque:
   7.5N·m (0.8 kgf-m, 5.5 ft-lb)
8. Install the cover UPR - front.
9. Install the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
10. Install the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.



11. Install the reservoir tank. Ref. to COOLING(H4DO)>Reservoir Tank>INSTALLATION.
12. Connect the radiator outlet hose.
13. Connect the main fan motor connector and the sub fan motor connector.
14. Install the lower side bolts securing the radiator upper frame.
    Tightening torque:
    18 N·m (1.8 kgf-m, 13.3 ft-lb)
15. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
16. Install the V-belt cover.
    Tightening torque:
    7 N·m (0.7 kgf-m, 5.2 ft-lb)
17. Charge the A/C system with refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure.
    Note:
    This step is necessary only if the condenser has been removed.
18. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
19. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

COOLING(H4DO) > Radiator

INSPECTION

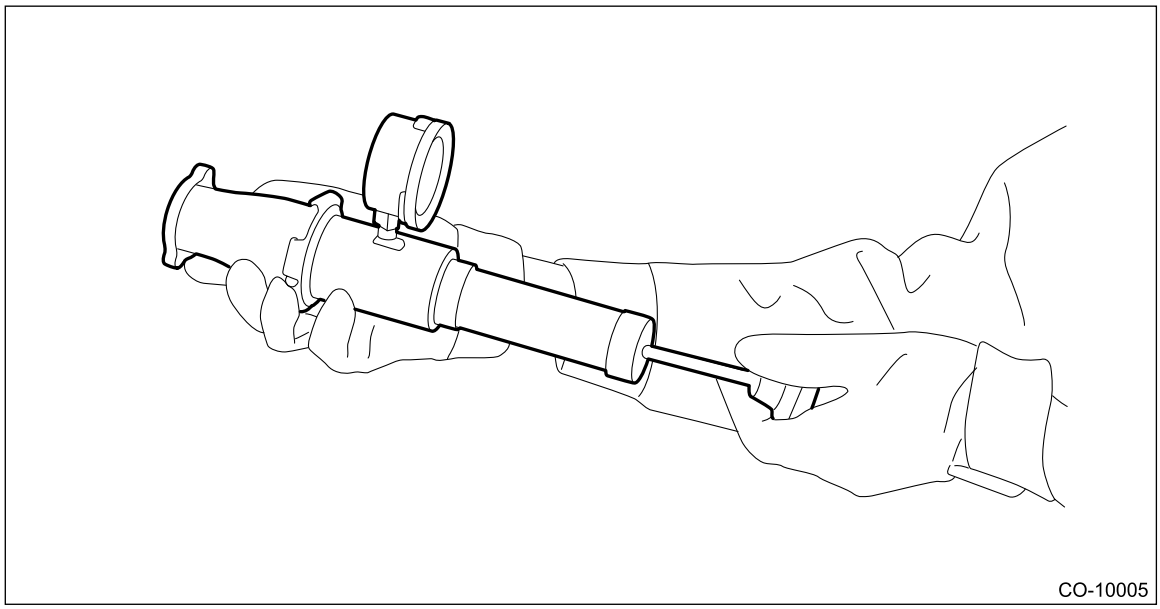
1. Check for leaks.
   Caution:
   - **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
   - **If the engine coolant splashes, completely remove and clean it.**

   (1) Remove the radiator cap.
   (2) Fill the radiator with engine coolant, and then install the radiator cap tester to the filler neck of radiator.
   Caution:
   Be careful not to deform the filler neck of radiator when installing and removing the radiator cap tester.

(3) Apply a pressure of 157 kPa (1.6 kg/cm^2, 23 psi) to the radiator and check the following

points:

- Leakage from the flow path of the engine coolant or its vicinity
- Significant pressure drop

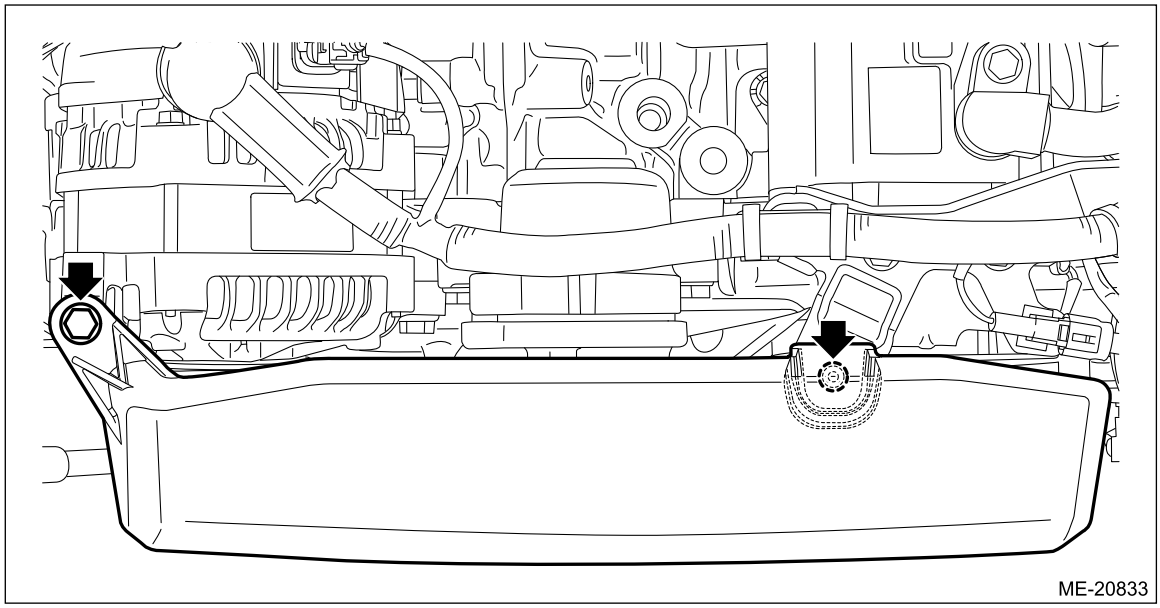


Caution:

Be careful of engine coolant from spurting out when removing the radiator cap tester.

2. Check that there is no deformation, cracks or other damages.
3. Check the radiator fins for clogging.

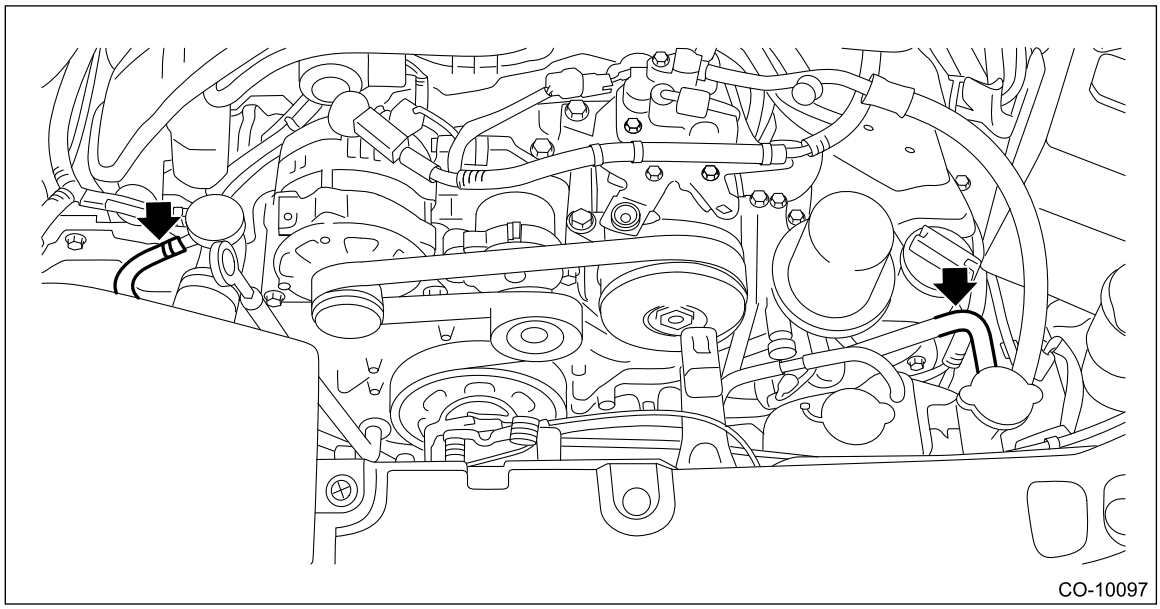
INSPECTION



1. Check that there is no deformation, cracks or other damages.
2. Check the opening pressure of the radiator cap.
   (1) Remove the radiator cap.
   Caution:
   - **The engine coolant is pressurized when it is hot. Wait until engine coolant cools down before proceeding the work.**
   - **If the engine coolant splashes, completely remove and clean it.**
   (2) Attach radiator cap tester.

   (3) Increase pressure until the radiator cap tester gauge needle stops. Radiator cap is functioning properly if it holds the service limit pressure for 5 — 6 seconds. Replace the radiator cap if its valve opens at less than the service limit.
   Caution:
   Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.
   Specification:
   93 — 123 kPa (0.95 — 1.25 kg/cm^2, 14 — 18 psi)
   Service limit:
   83 kPa (0.85 kg/cm^2, 12 psi)

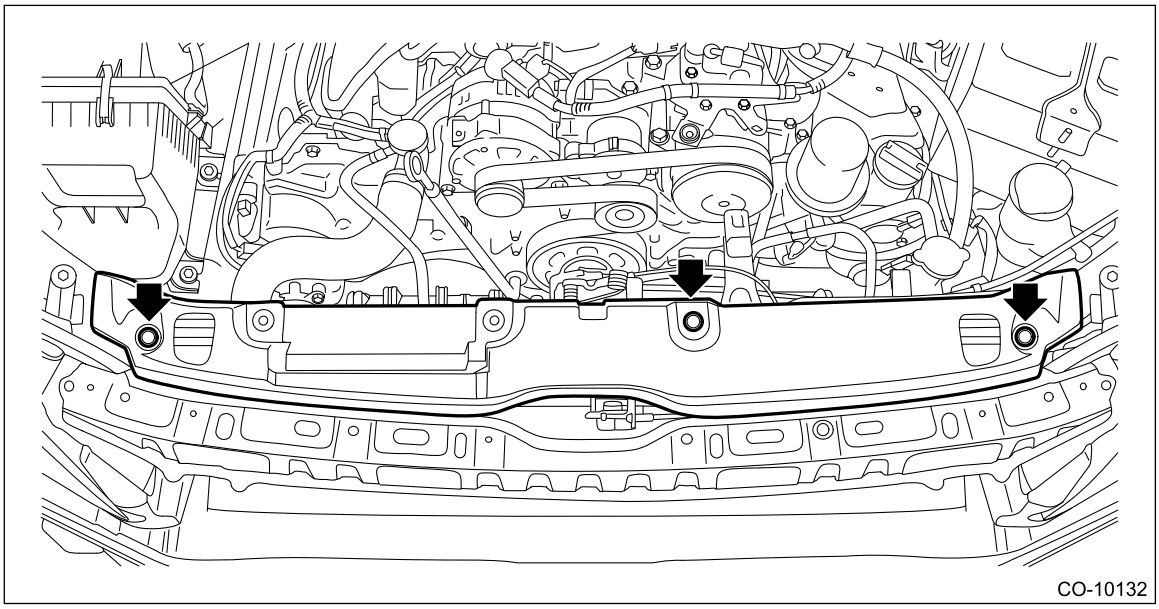
REMOVAL



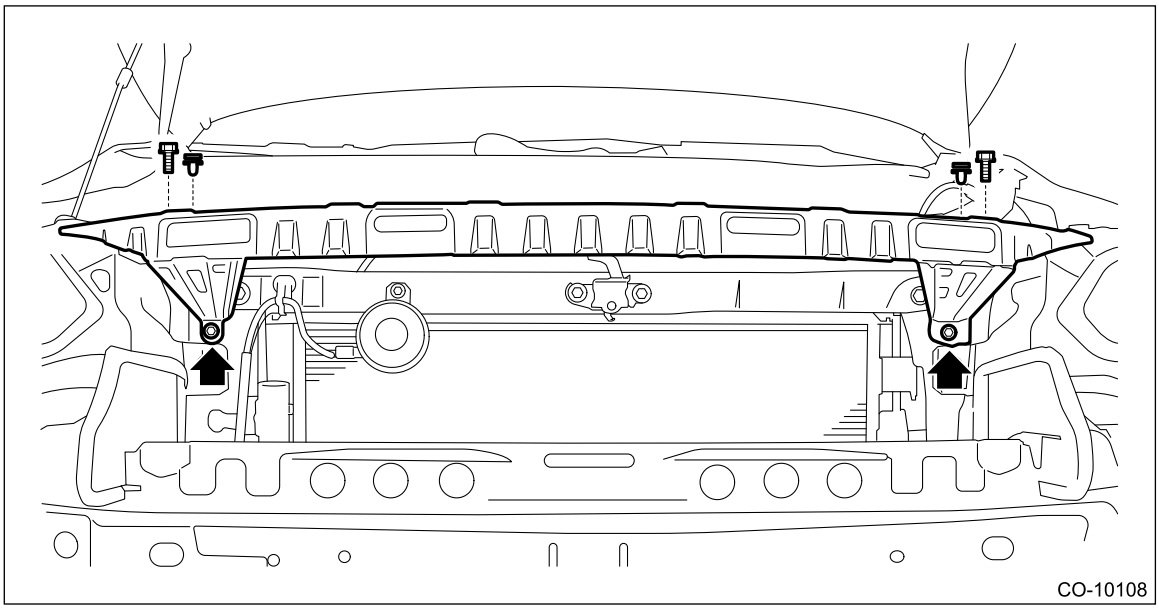
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the V-belt covers.

3. Remove the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the lower side bolts (A) securing the radiator upper frame.
5. Disconnect main fan motor connector (B) and sub fan motor connector (C).

6. Disconnect the over flow hose.



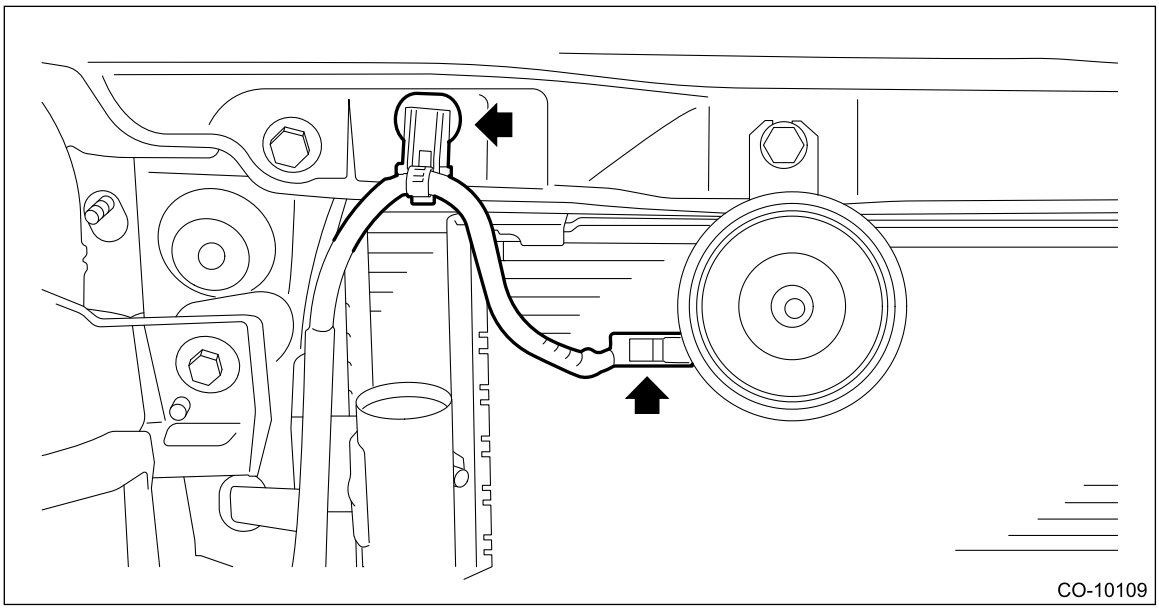
7. Remove the reservoir tank. Ref. to COOLING(H4DO)>Reservoir Tank>REMOVAL.



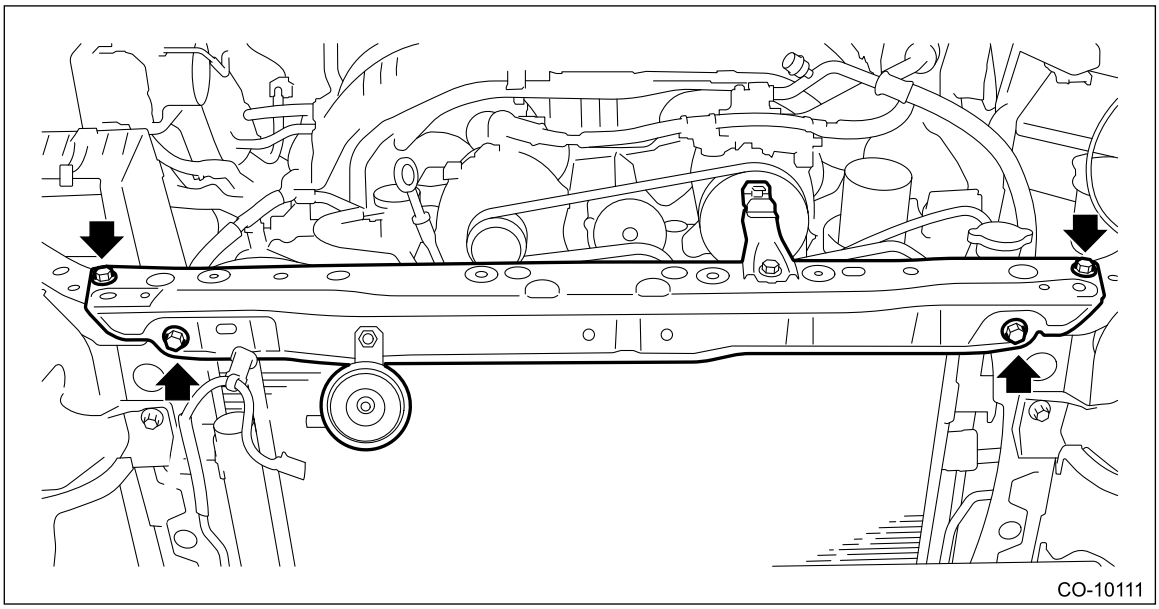
8. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.

9. Remove the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.

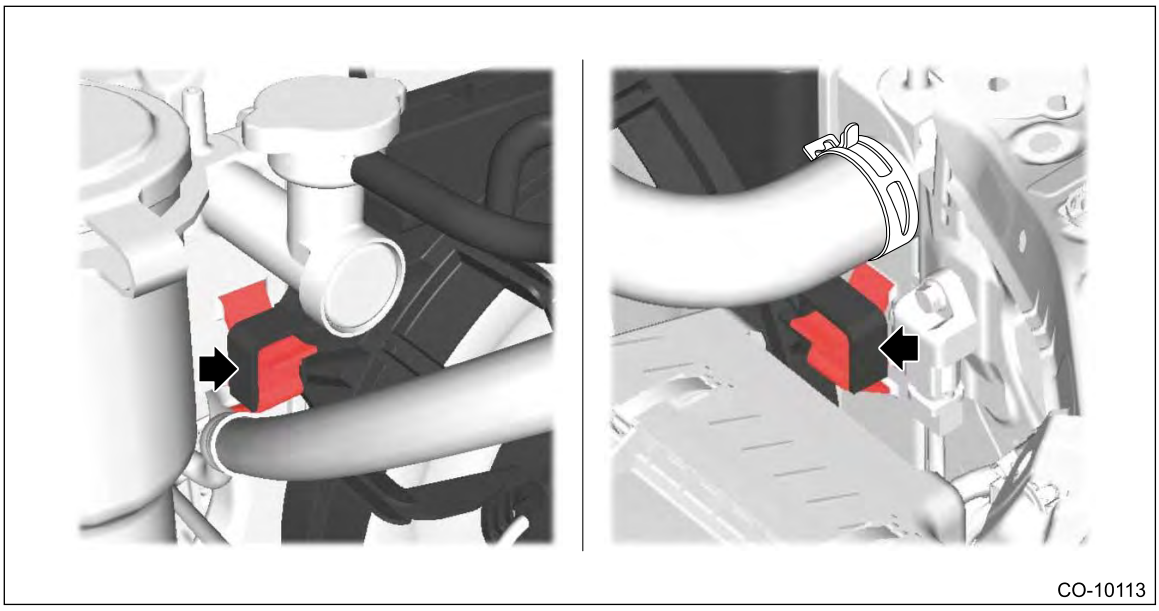
10. Remove the cover UPR - front.



11. Remove the bracket - bumper UPR.



12. Remove the front hood lock assembly. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>REMOVAL.



13. Disconnect the connector from the horn, and remove the clip.

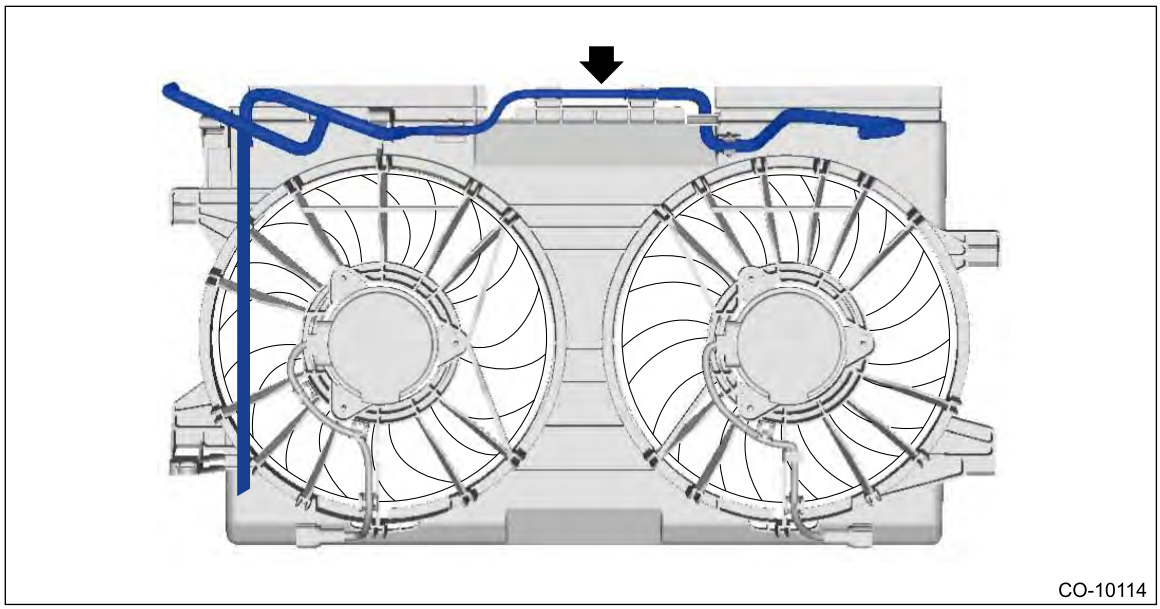
14. Remove the upper side bolts securing the radiator upper frame, and remove the radiator upper frame.

15. Disengage the claws and remove the radiator fan and fan motor assembly.

COOLING(H4DO) > Radiator Fan and Fan Motor Assembly

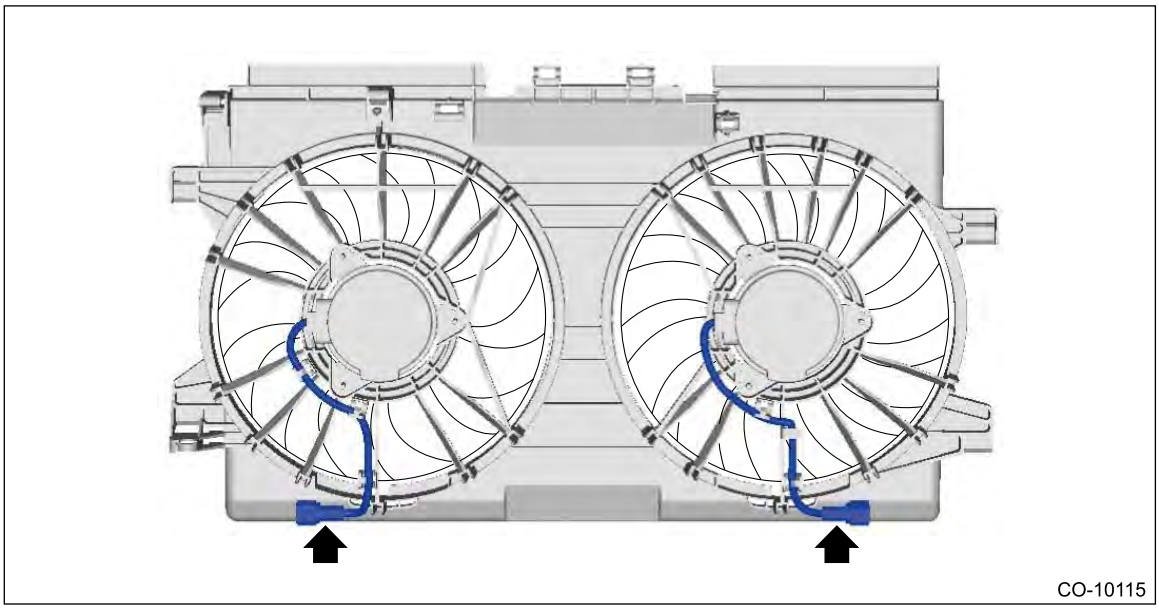
INSTALLATION

1. Install the radiator fan and fan motor assembly.
2. Set the radiator upper frame, and install the upper side bolts securing the radiator upper frame.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
3. Connect the horn connector and install the clip.
4. Install the front hood lock assembly. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>INSTALLATION.
5. Install the bracket - bumper UPR.
   Tightening torque:
   7.5 N·m (0.8 kfg-m, 5.5 ft-lb)
6. Install the cover UPR - front.
7. Install the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
8. Install the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake



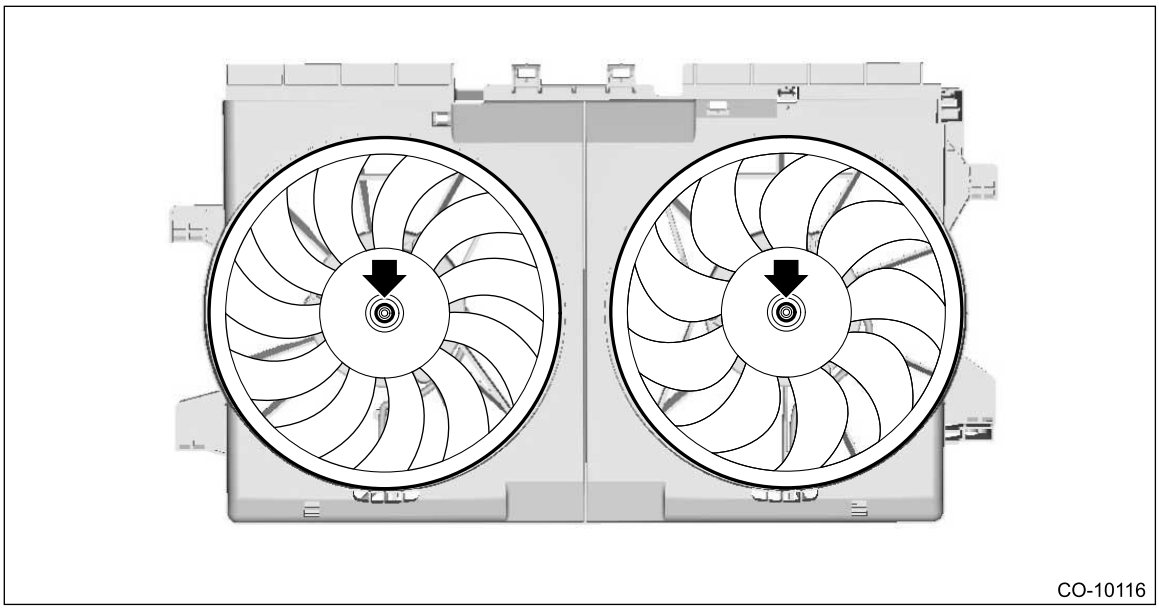
Duct>INSTALLATION.

9. Install the reservoir tank. Ref. to COOLING(H4DO)>Reservoir Tank>INSTALLATION.
10. Connect the over flow hose.
11. Connect the main fan motor connector and the sub fan motor connector.
12. Install the lower side bolts securing the radiator upper frame.
    Tightening torque:
    18 N·m (1.8 kgf-m, 13.3 ft-lb)
13. Install the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>INSTALLATION.
14. Install the V-belt cover.
    Tightening torque:
    7 N·m (0.7 kgf-m, 5.2 ft-lb)
15. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

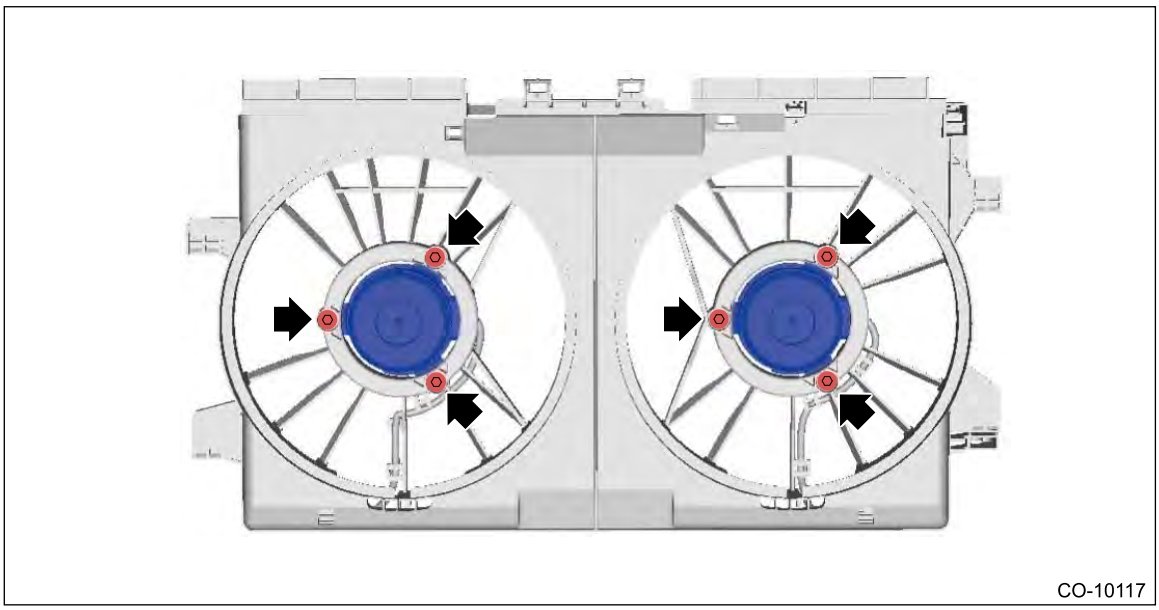


COOLING(H4DO) > Radiator Fan and Fan Motor Assembly

DISASSEMBLY



1. Remove the over flow hose and the over flow pipe.



2. Remove the main fan motor harness and the sub fan motor harness.

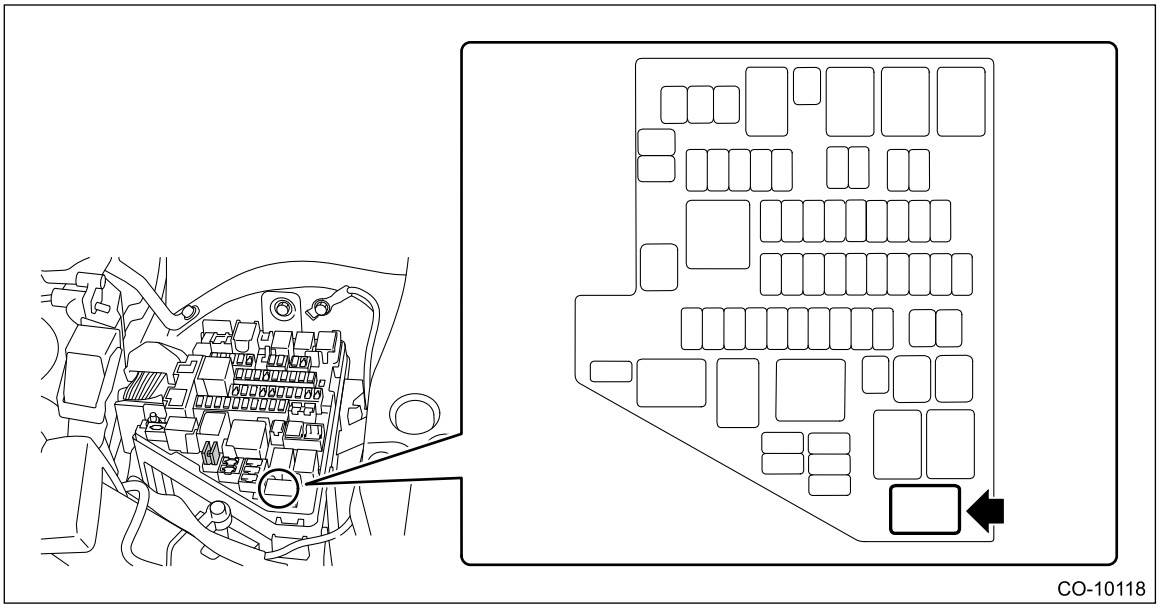
3. Remove the radiator main fan and radiator sub fan.

4. Remove the main fan motor and the sub fan motor.

ASSEMBLY

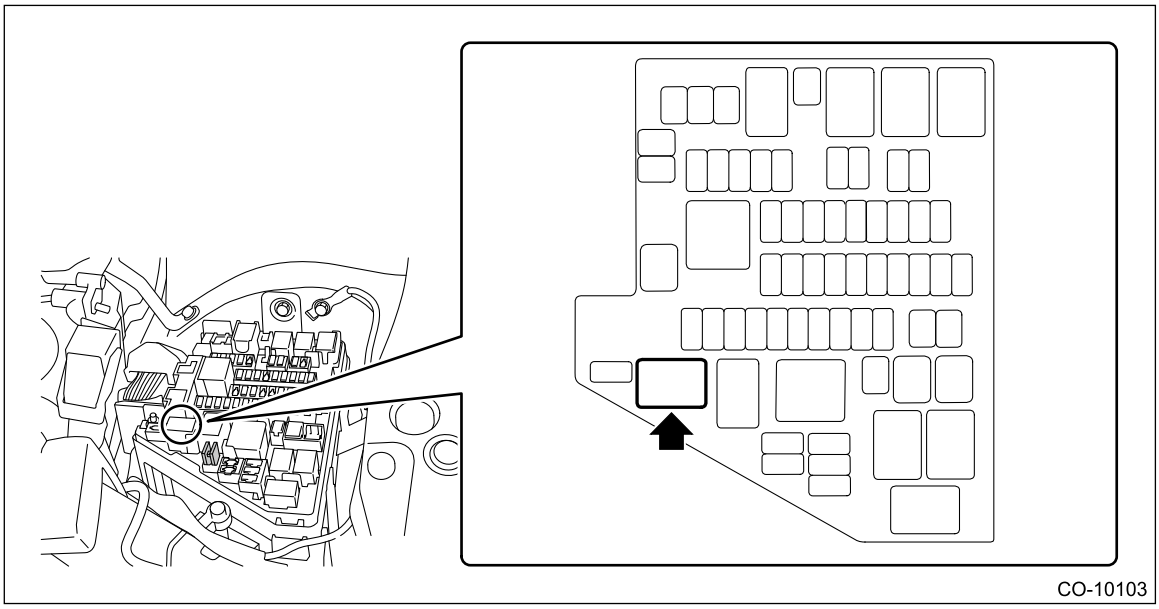
1. Install the main fan motor and the sub fan motor.
   Tightening torque:
   4.41 N·m (0.45 kgf-m, 3.25 ft-lb)
2. Install the radiator main fan and the radiator sub fan.
   Tightening torque:
   3.43 N·m (0.3 kgf-m, 2.5 ft-lb)
3. Install the main fan motor harness and the sub fan motor harness.
4. Install the over flow hose and the over flow pipe.

INSPECTION



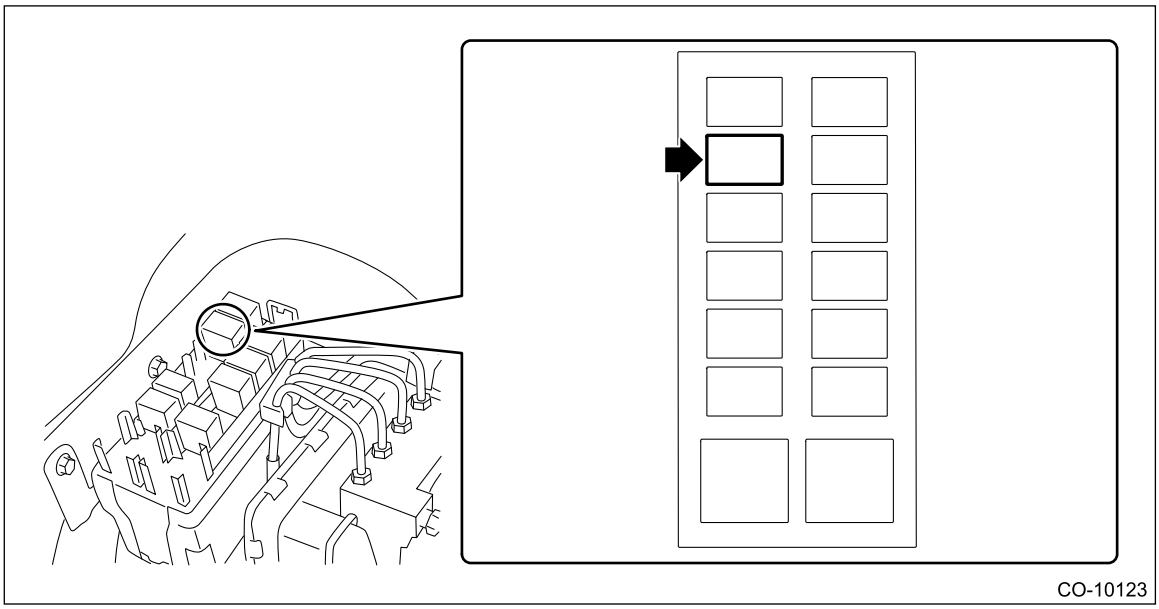
Check that there is no deformation, cracks or other damages.

Note:



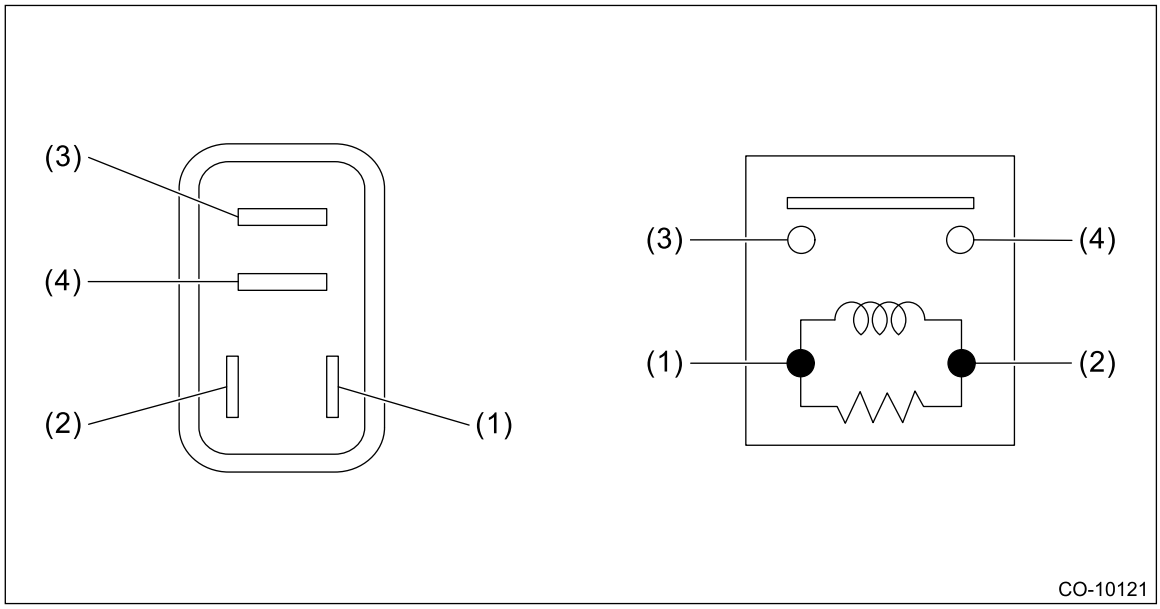
For information about operation confirmation, refer to the radiator fan system. **Ref. to COOLING(H4DO)>Radiator Fan System>INSPECTION.**

LOCATION



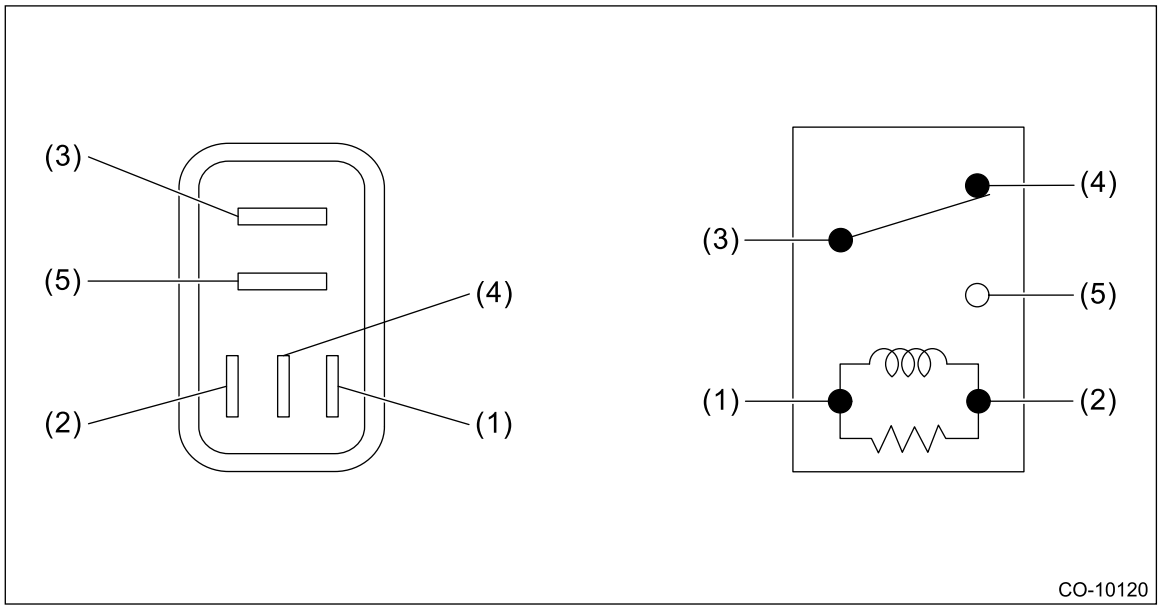
- Main fan relay 1

- Main fan relay 2



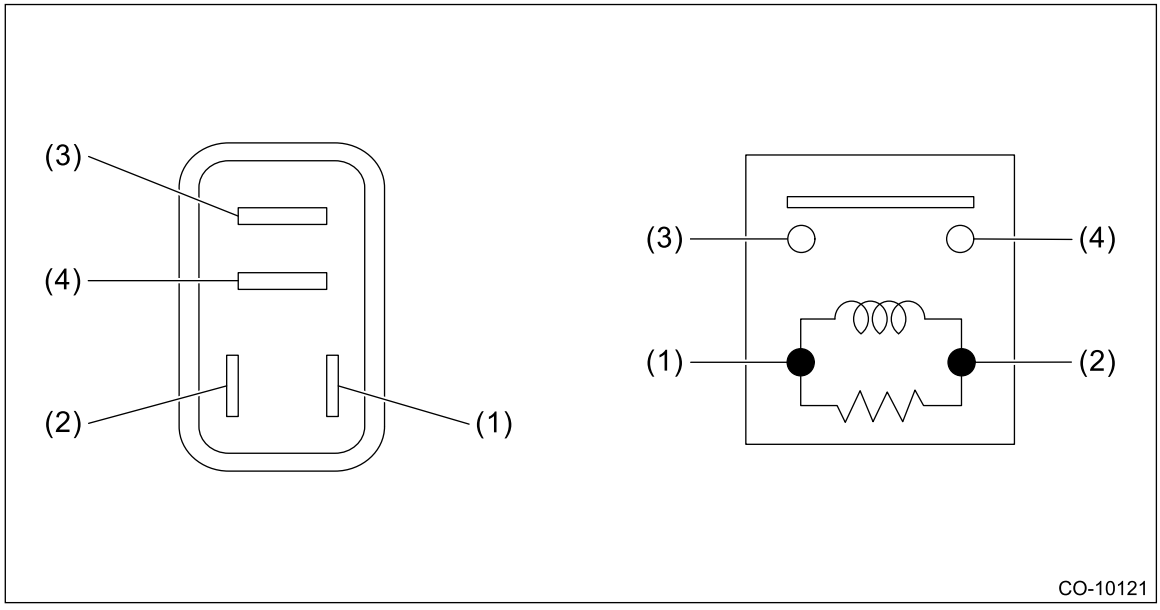
- Sub fan relay

COOLING(H4DO) > Radiator Fan Relay



INSPECTION

1. Check that there is no deformation, cracks or other damages.
2. Check the resistance between terminals. Replace the relay if it is faulty.
   - Main fan relay 1

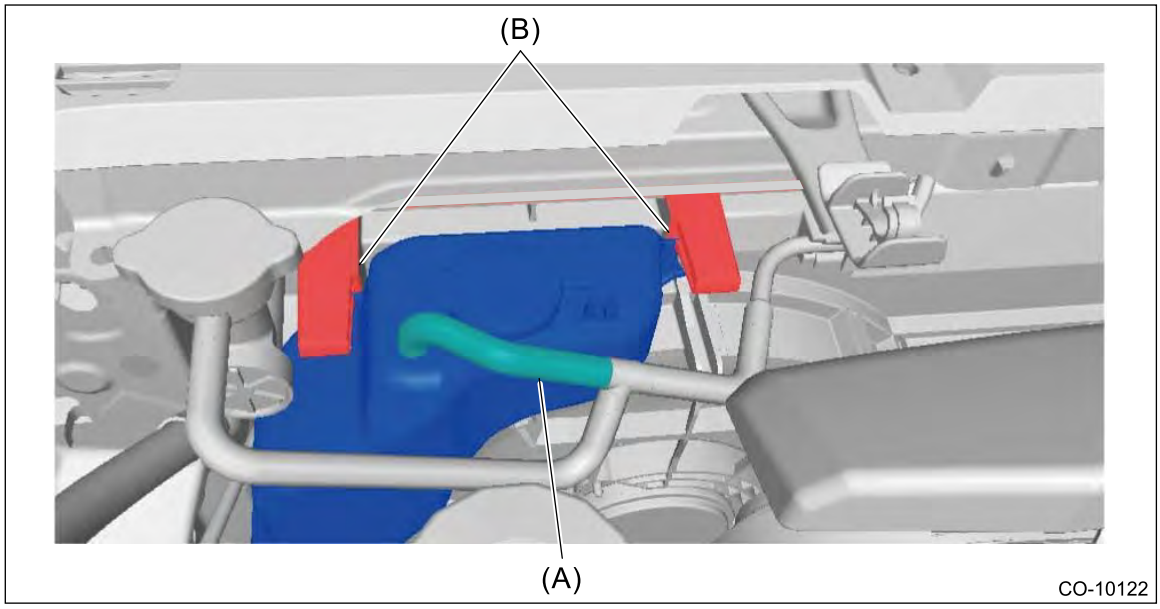


Terminal No.	Inspection conditions	Standard
3 — 4	Always	1 MΩ or more
3 — 4	Apply battery voltage between terminals 1 and 2.	Less than 1 Ω

   - Main fan relay 2

Terminal No.	Inspection conditions	Standard
3 — 4	Always	Less than 1 Ω
3 — 5	Always	1 MΩ or more
3 — 4	Apply battery voltage between terminals 1 and 2.	1 MΩ or more
3 — 5	Apply battery voltage between terminals 1 and 2.	Less than 1 Ω

- Sub fan relay



Terminal No.	Inspection conditions	Standard
3 — 4	Always	1 MΩ or more
3 — 4	Apply battery voltage between terminals 1 and 2.	Less than 1 Ω

COOLING(H4DO) > Reservoir Tank

REMOVAL

1. Pull out the over flow hose (A) from the reservoir tank.
2. Disengage the claw (B) and remove the reservoir tank.

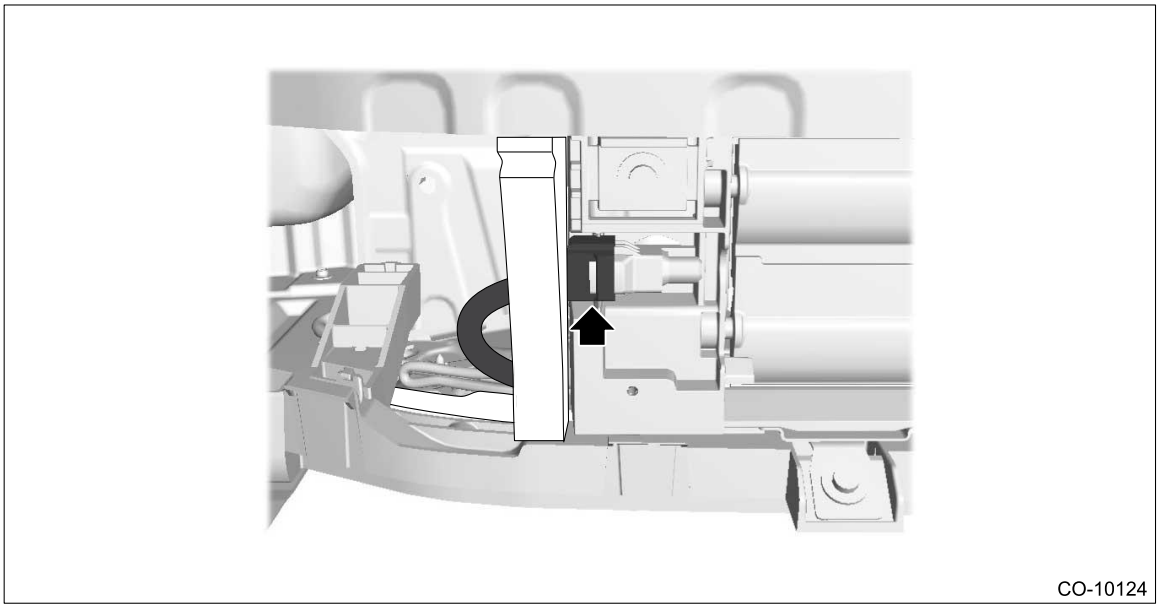
COOLING(H4DO) > Reservoir Tank

INSTALLATION

1. Install the reservoir tank.
2. Install the over flow hose.

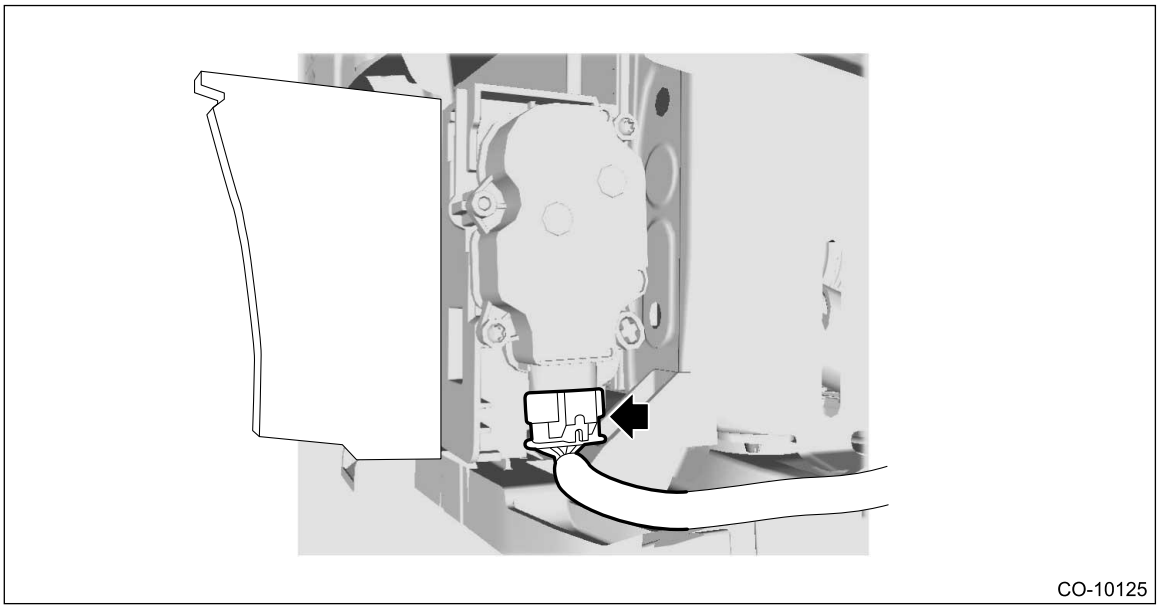
COOLING(H4DO) > Reservoir Tank

INSPECTION



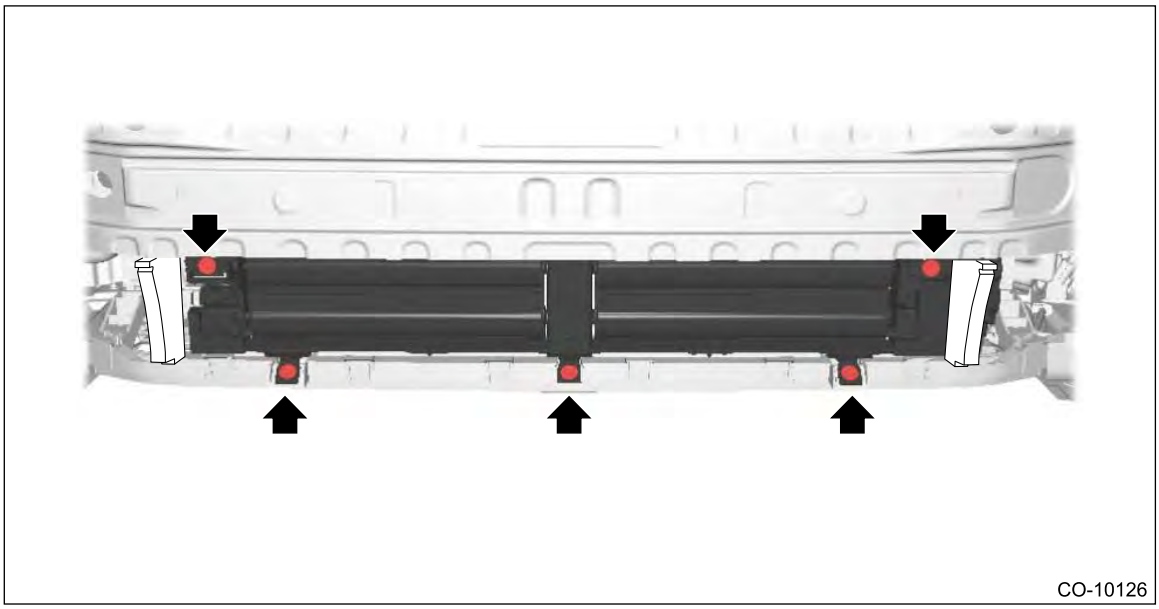
Check that there is no deformation, cracks or other damages.

REMOVAL

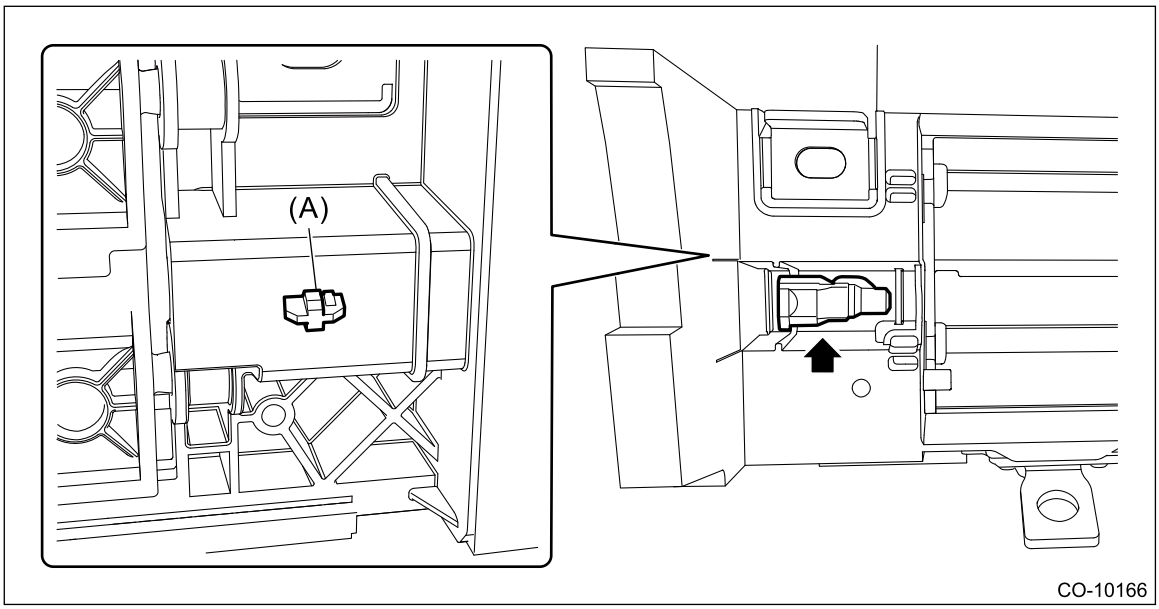


Note:

Active grille shutter is installed on only some models.



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Disconnect the connector from ambient sensor.



4. Disconnect the connector from the active grille shutter actuator.

5. Remove the active grille shutter.

6. Remove the clip (A) to remove the ambient sensor.

COOLING(H4DO) > Active Grille Shutter

INSTALLATION

1. Install the ambient sensor.
2. Install the active grille shutter.
   Tightening torque:
   7.5 N·m (0.8 gf-m, 5.5 ft-lb)
3. Connect the connector to the active grille shutter actuator.
4. Connect the connector to the ambient sensor.
5. Install the front bumper. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
7. When the active grille shutter has been replaced, perform the calibration (execute the system operation check for ACTGS control). Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test>OPERATION.

COOLING(H4DO) > Active Grille Shutter

INSPECTION

Check that there is no deformation, cracks or other damages.

INSPECTION

Trouble	Possible cause	Corrective action
Over-heating	a. Engine coolant leaks, insufficient engine coolant	Check for coolant leaks, and repair or replace faulty parts if necessary. If no faulty parts are found, fill engine coolant.
	b. Clogged engine coolant passage	Clean or replace faulty parts.
	c. Defective radiator cap	Replace the radiator cap.
	d. Malfunction of thermostat	Replace the thermostat.
	e. Malfunction of water pump	Replace water pump.
	f. Clogged radiator fin	Clean the radiator fin. If it is not possible to clean, repair or replace the radiator.
	g. Radiator fan system malfunction	Check the radiator fan system, and repair or replace faulty parts.
	h. Excessive back pressure in exhaust system	Clean or replace faulty parts.
	i. Engine oil leaking into engine coolant	Repair or replace the faulty parts, clean the engine coolant passage, and then fill engine coolant.
Over cooling	a. Ambient temperature extremely low	Warm-up the engine sufficiently.
	b. Defective thermostat	Replace the thermostat.
Engine coolant leaks	a. Leakage from water pump	Replace water pump.
	b. Leakage from water hose	Repair or replace faulty parts.
	c. Leakage from water pipe	Repair or replace faulty parts.
	d. Leakage from cylinder head gasket	Replace the cylinder head gasket.
	e. Cracked or damaged cylinder head or cylinder block	Replace faulty parts.
	f. Cracked or damaged thermostat cover	Replace the thermostat cover.
	g. Leakage from radiator	Repair or replace the radiator.
	h. Leakage from heater core	Replace the heater core.
Noise	a. Air mixed in the engine coolant passage	Bleed air from the engine coolant.
	b. Malfunction of water pump	Replace water pump.
	c. Malfunction of radiator fan or fan motor	Replace the radiator fan or fan motor.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > General Description

CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.

- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
TORX® E8	Used for removing and installing EGR control valve stud bolts.
Circuit tester	Used for measuring resistance, voltage and current.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Front Catalytic Converter

REMOVAL

The front catalytic converter is integrated into the front exhaust pipe; therefore, refer to "Front Exhaust Pipe" for the removal procedure. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Front Catalytic Converter

INSTALLATION

The front catalytic converter is integrated into the front exhaust pipe; therefore, refer to "Front Exhaust Pipe" for the installation procedure. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Front Catalytic Converter

INSPECTION

The front catalytic converter is integrated into the front exhaust pipe; therefore, refer to "Front Exhaust Pipe" for the inspection procedure. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSPECTION.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Rear Catalytic Converter

REMOVAL

The rear catalytic converter is integrated into the front exhaust pipe; therefore, refer to “Front Exhaust Pipe” for the removal procedure. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Rear Catalytic Converter

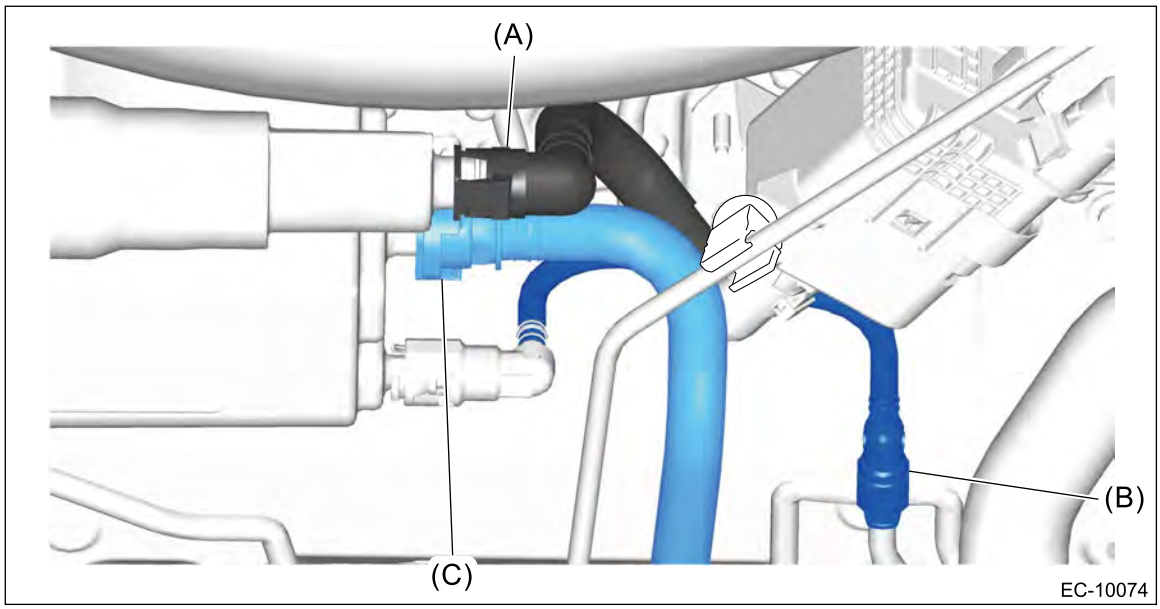
INSTALLATION

The rear catalytic converter is integrated into the front exhaust pipe; therefore, refer to “Front Exhaust Pipe” for the installation procedure. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Rear Catalytic Converter

INSPECTION

The rear catalytic converter is integrated into the front exhaust pipe; therefore, refer to “Front Exhaust Pipe” for the inspection procedure. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSPECTION.



REMOVAL

1. Remove the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>REMOVAL.

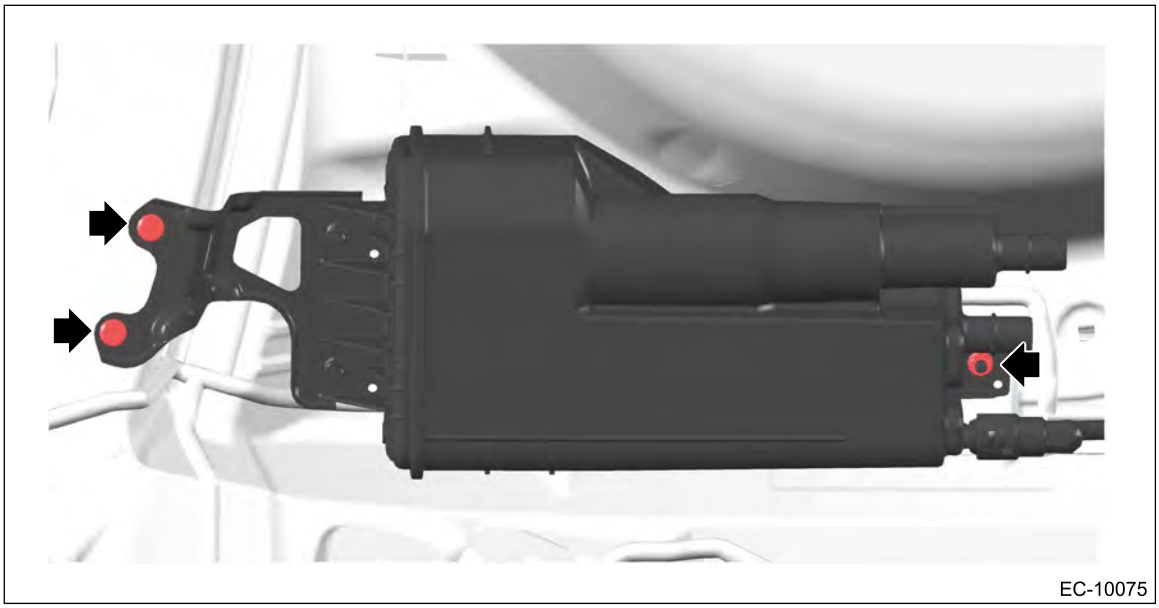
   Note:

   This operation procedure would be possible by simply lowering the rear differential to the position that the work is possible. In that case, it is not necessary to pull out the drive shaft from the rear differential.

2. Disconnect the drain tube (A) and purge tube (B). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE E). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE G).
3. Disconnect the vent tube (C). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE F).

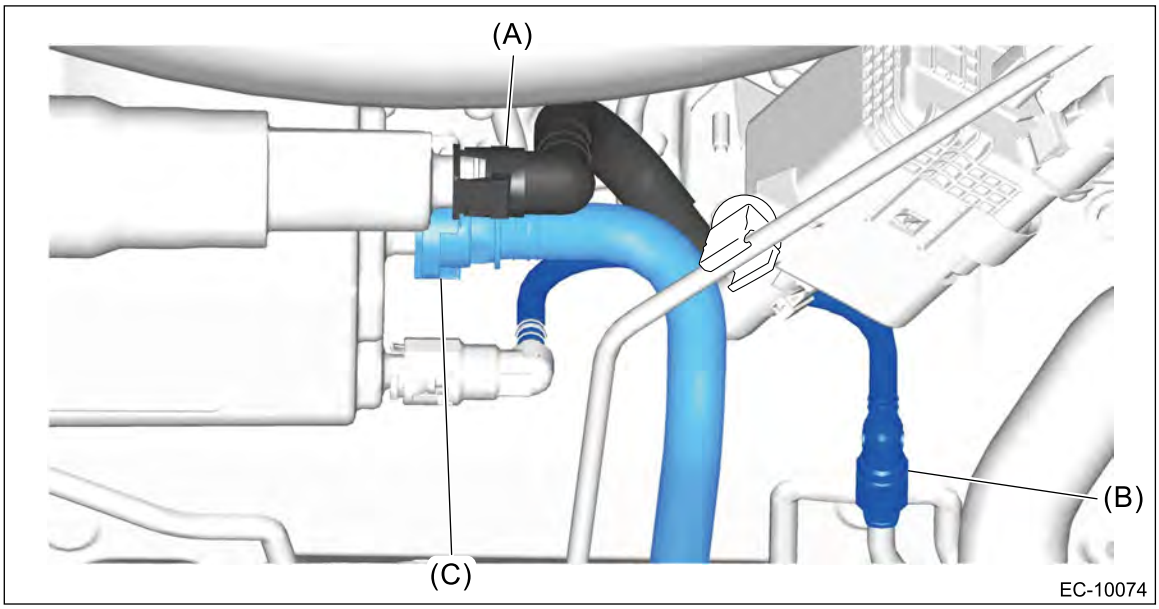
4. Remove the canister.

5. Disconnect the purge tube from the canister. Ref. to FUEL INJECTION (FUEL SYSTEMS)



(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE D).

6. Remove the canister bracket.



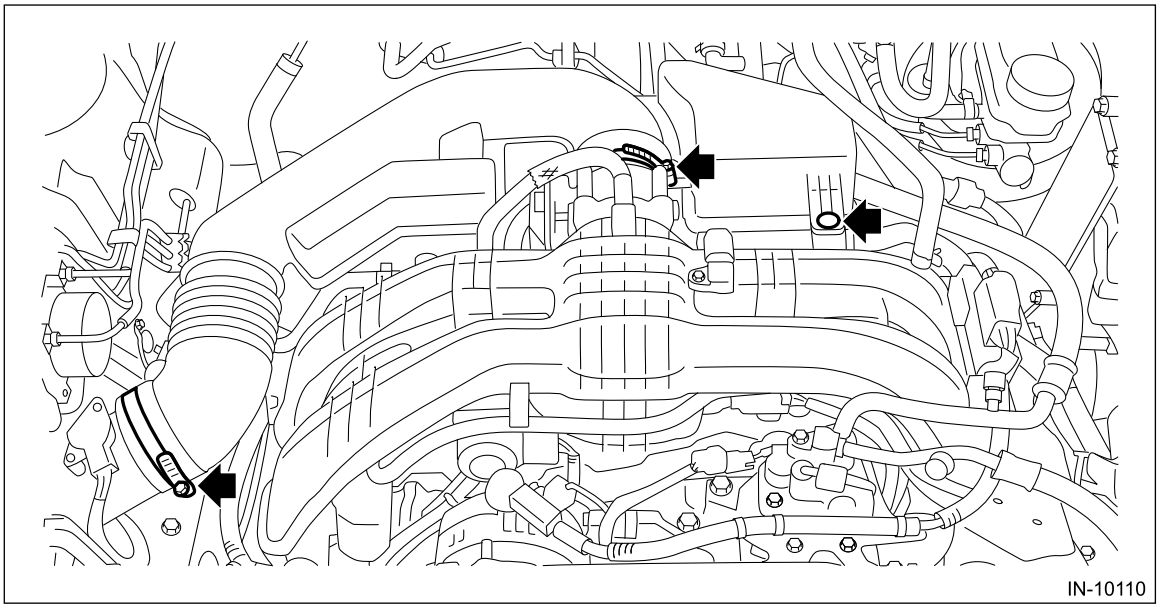
EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Canister

INSTALLATION

1. Install the canister bracket.
   Tightening torque:
   8 N·m (0.8 kgf-m, 5.9 ft-lb)
2. Connect the purge tube to the canister. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE D).
3. Install the canister.
   Tightening torque:
   8 N·m (0.8 kgf-m, 5.9 ft-lb)

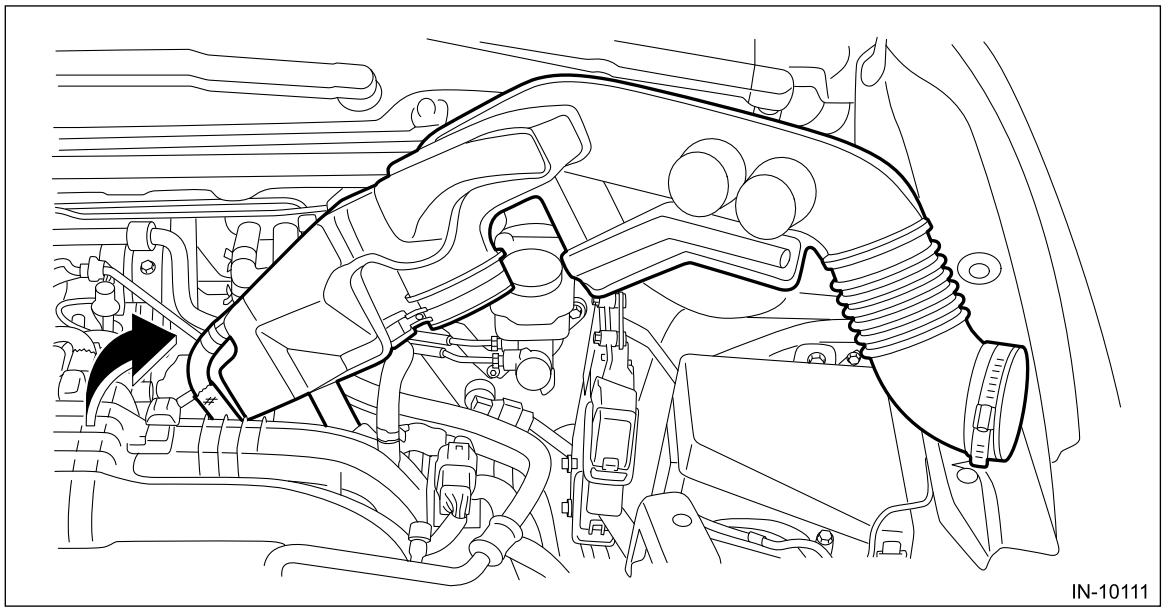
4. Connect the drain tube (A) and purge tube (B). Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE E). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE G).
5. Connect the vent tube (C). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE F).

6. Install the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>INSTALLATION.



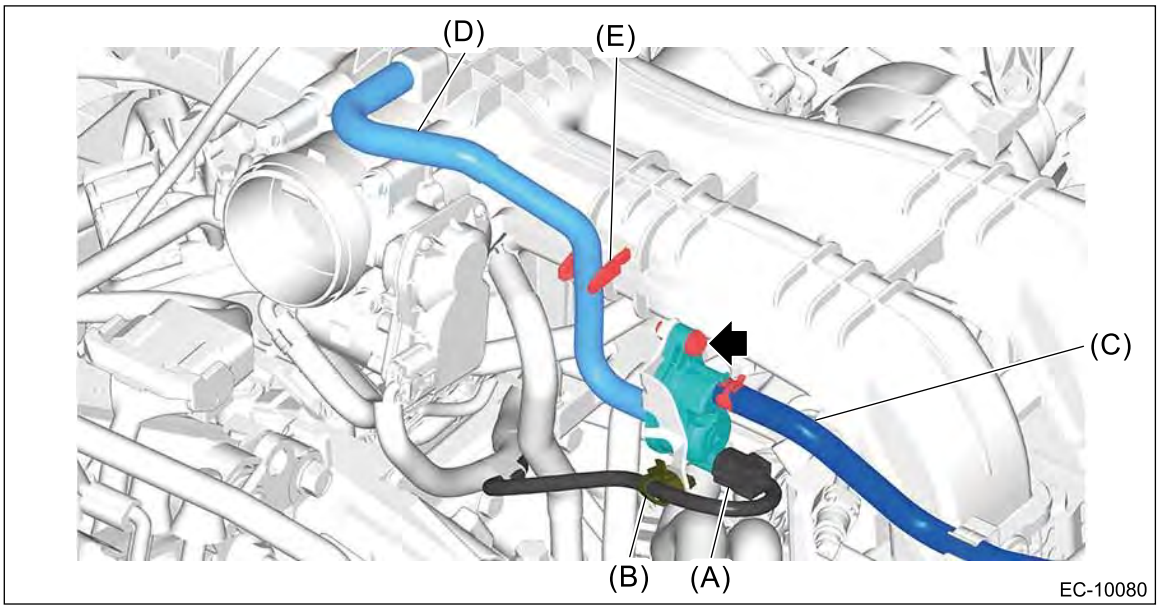
EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Canister

INSPECTION

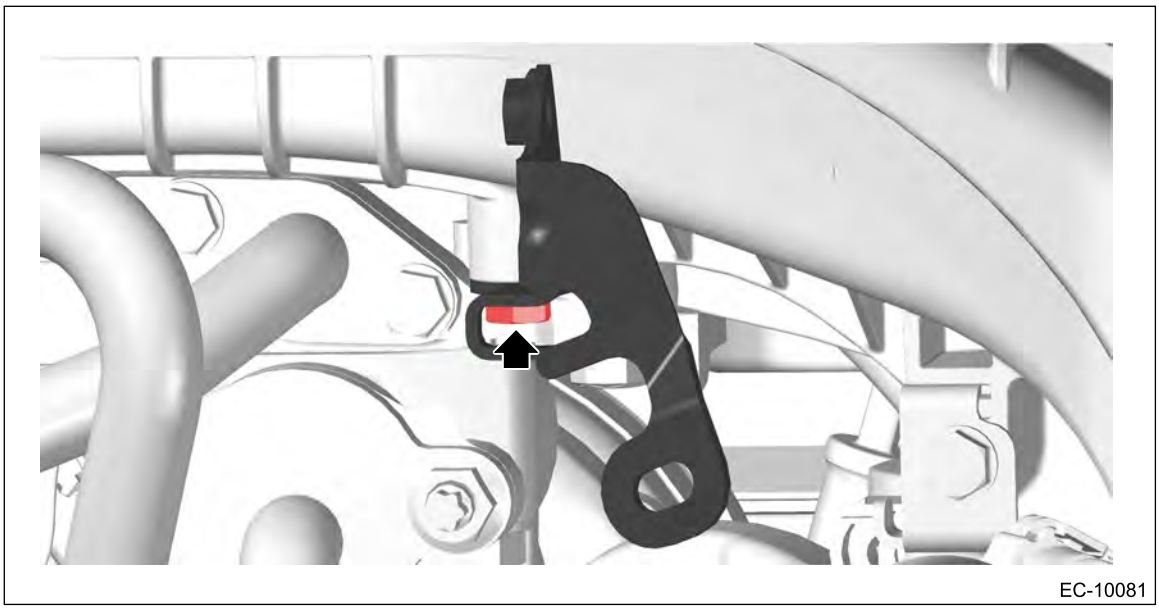


1. Check that the canister has no deformation, cracks or other damages.
2. Check that the tube has no cracks, damage or loose part.

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.

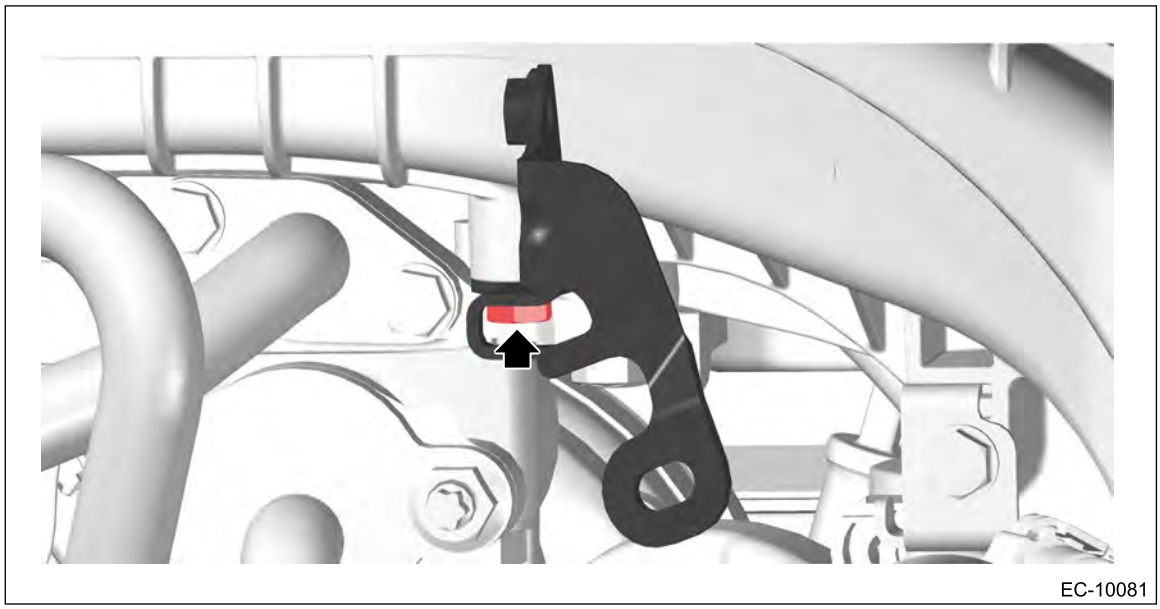


3. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.

4. Disconnect the connector (A), and disconnect the clip (B) which secures the engine wiring harness from the purge control solenoid valve bracket.
5. Disconnect the purge hose (C).
6. Disconnect the vacuum hose (D) from the intake manifold assembly, and remove the vacuum hose (D) from the clip (E).
7. Remove the bolt securing the purge control solenoid valve, and remove the purge control solenoid valve.

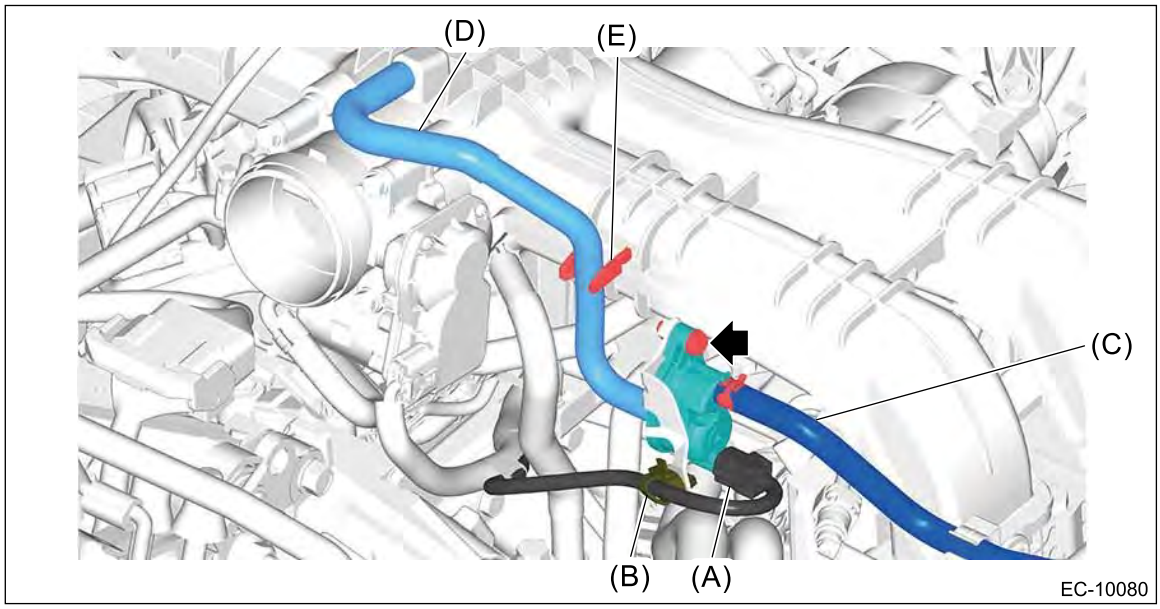
8. Remove the purge control solenoid valve bracket.

9. Remove the vacuum hose from the purge control solenoid valve.



EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Purge Control Solenoid Valve

INSTALLATION



1. Connect the vacuum hose to the purge control solenoid valve.
2. Install the purge control solenoid valve bracket.

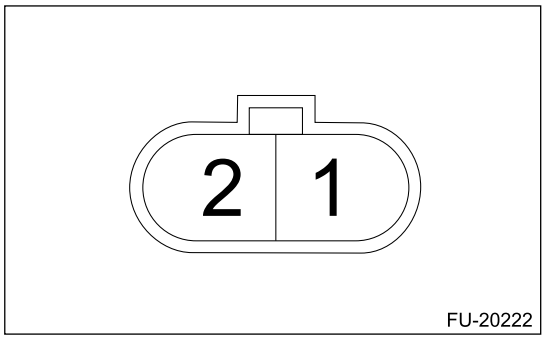
Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

EC-10081

3. Install the purge control solenoid valve.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
4. Connect the vacuum hose (D) to the intake manifold assembly, and install the vacuum hose (D) to the clip (E).
5. Connect the purge hose (C).
6. Connect the clip (B) which secures the engine wiring harness to the purge control solenoid valve bracket, and connect the connector (A).

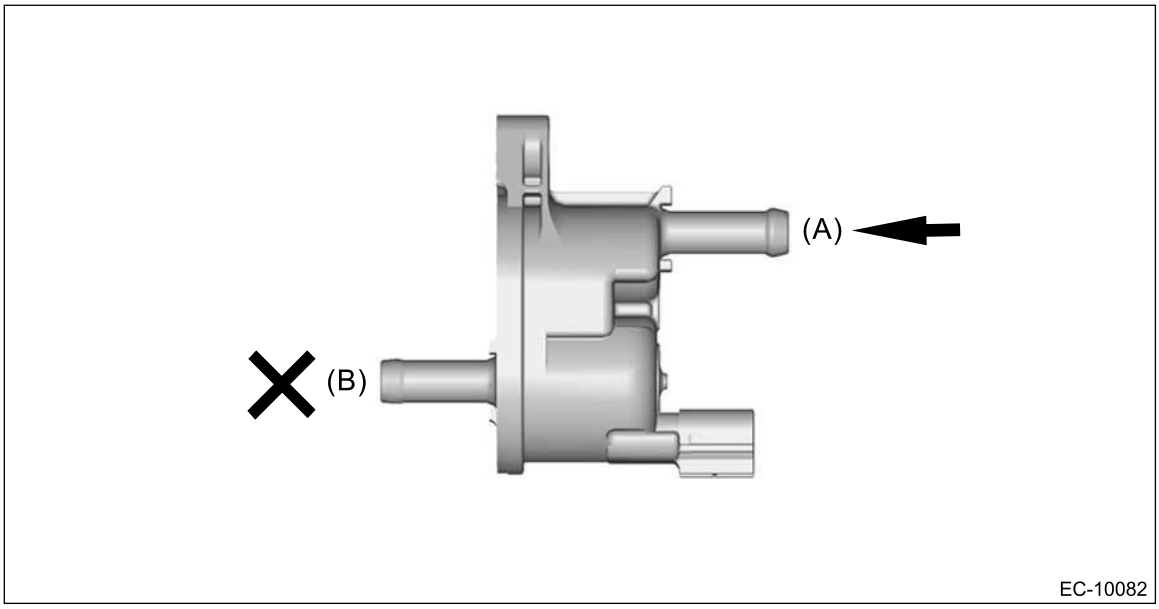
EC-10080



7. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

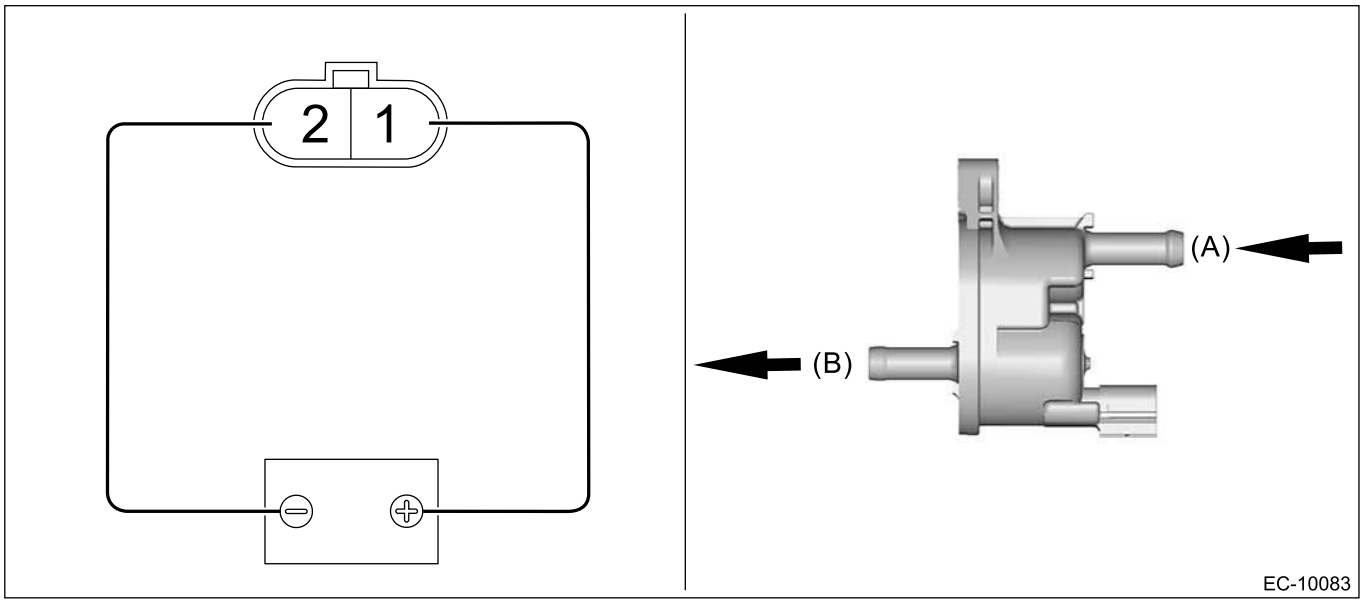
EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Purge Control Solenoid Valve

INSPECTION



1. PURGE CONTROL SOLENOID VALVE

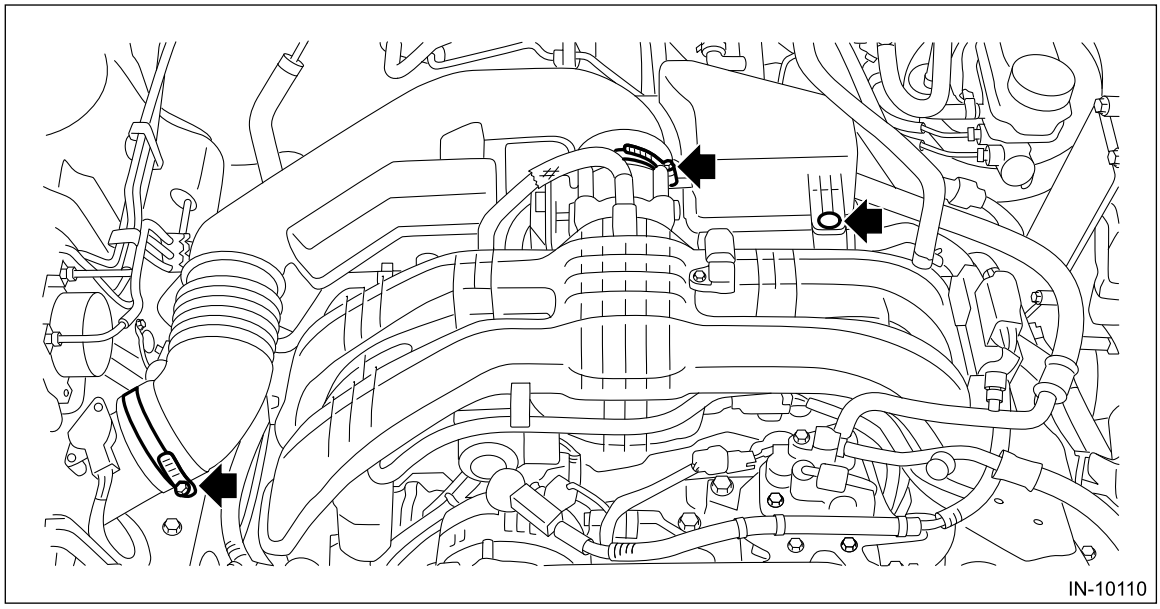
1. Check that the purge control solenoid valve has no deformation, cracks or other damages.
2. Measure the resistance between the purge control solenoid valve terminals.



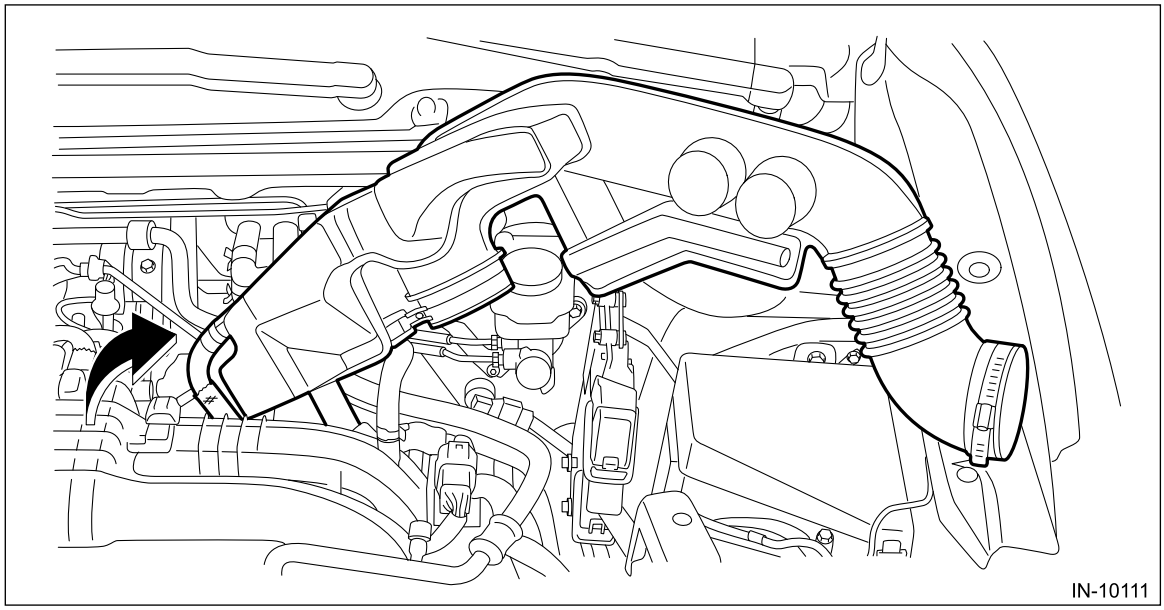
Terminal No.	Standard
1 and 2	24.5±1.5 Ω (when 20°C (68°F))

3. Check that air does not come out from (B) when air is blown into (A).

4. Connect the battery positive terminal to the terminal No. 1 and the battery negative terminal to the terminal No. 2. Check that air is discharged from (B), when supplying air to (A).

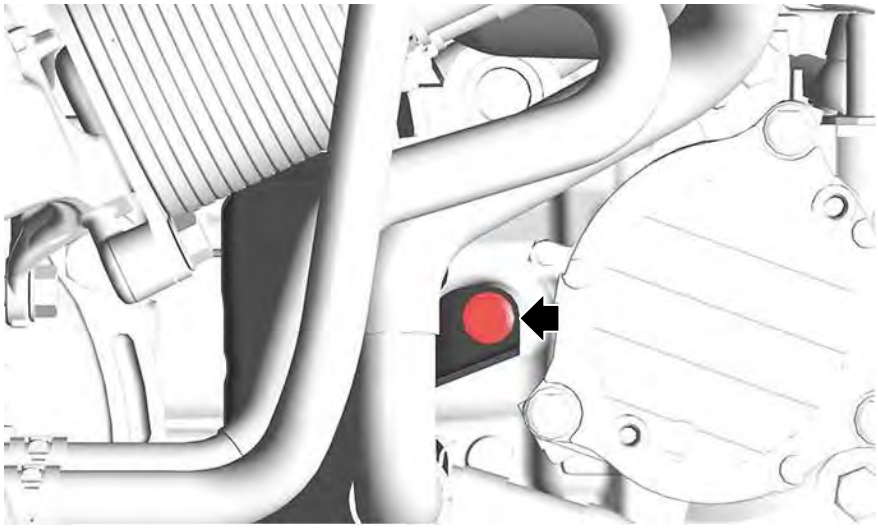


2. OTHER INSPECTIONS

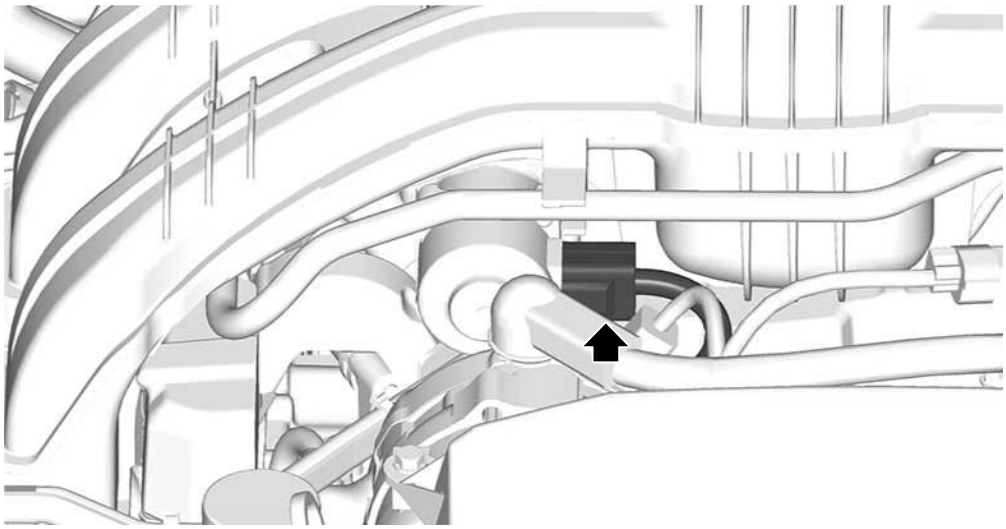


Check the vacuum hose for cracks, damage or looseness.

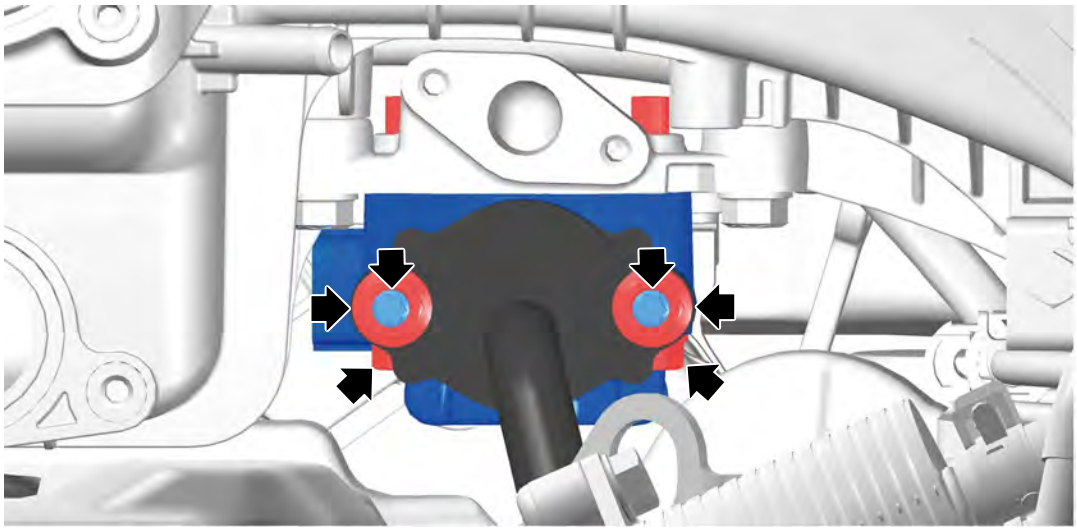
REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.

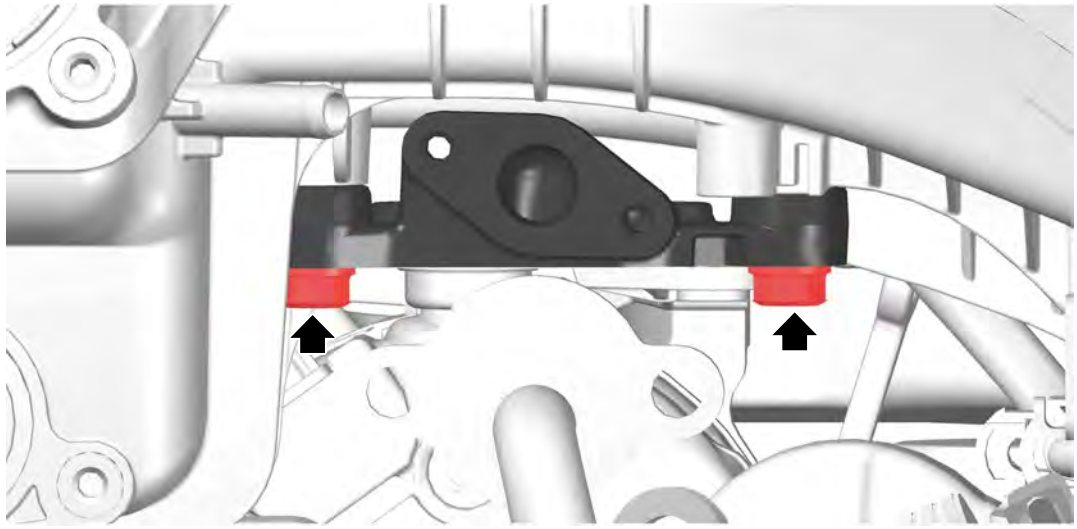


3. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.



4. Loosen the bolts holding the EGR cooler to the cylinder head RH.

EC-10088



5. Remove the EGR pipe. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>EGR Pipe>REMOVAL.
6. Remove the PCV hose A. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>PCV Hose>REMOVAL.
7. Disconnect the connector.

EC-10087

8. Remove the nuts securing the EGR cooler, and remove the stud bolts using TORX®E8.
9. Remove the EGR control valve from the EGR pipe adapter.

EC-10086

10. Remove the EGR pipe adapter from the intake manifold assembly.

EC-10098

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > EGR Control Valve

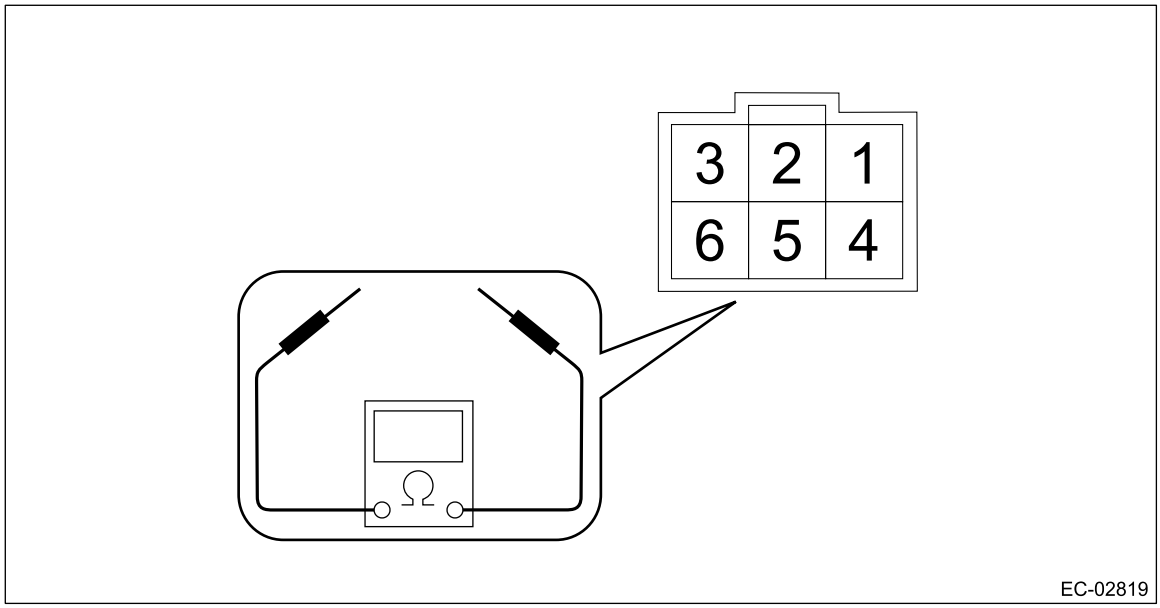
INSTALLATION

1. Install the EGR pipe adapter to the intake manifold assembly.
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

2. Set a new gasket and install the EGR control valve to the EGR pipe adapter.
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

3. Set a new gasket, and install the stud bolts using TORX®E8.
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

4. Install the nuts securing the EGR cooler.
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

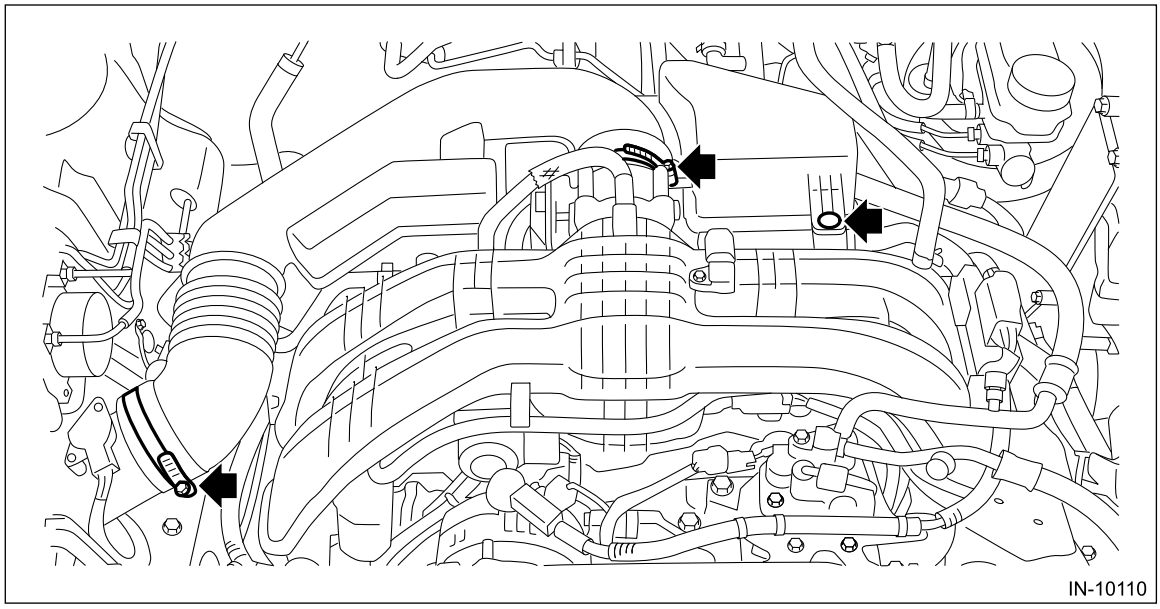


5. Connect the connector.

6. Install the PCV hose A. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>PCV Hose>INSTALLATION.
7. Install the EGR pipe. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>EGR Pipe>INSTALLATION.
8. Tighten the bolts holding the EGR cooler to the cylinder head RH.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
9. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > EGR Control Valve

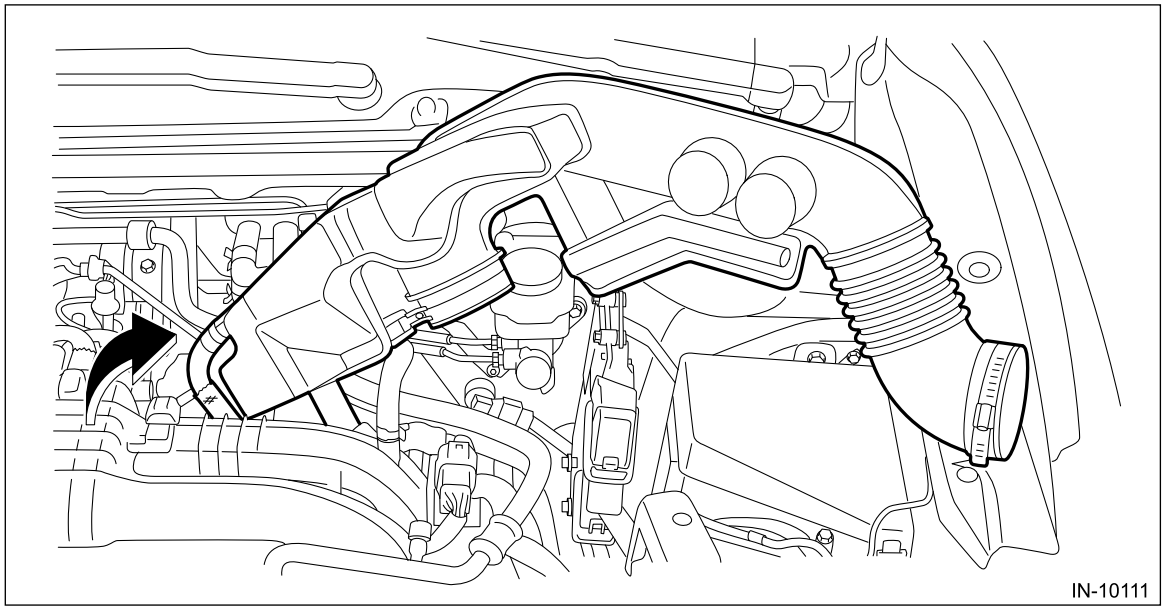
INSPECTION



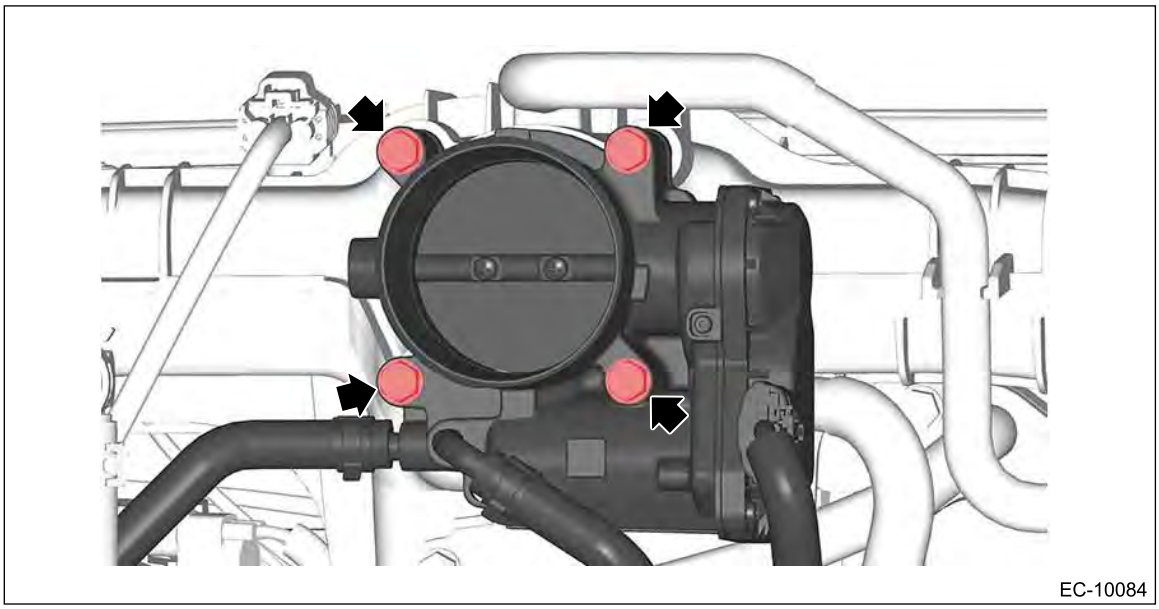
1. Check that the EGR control valve has no deformation, cracks or other damages.
2. Measure the resistance between EGR control valve terminals.

Terminal No.	Standard
2 and 1	15±2 Ω
2 and 3	15±2 Ω
5 and 4	15±2 Ω
5 and 6	15±2 Ω

REMOVAL

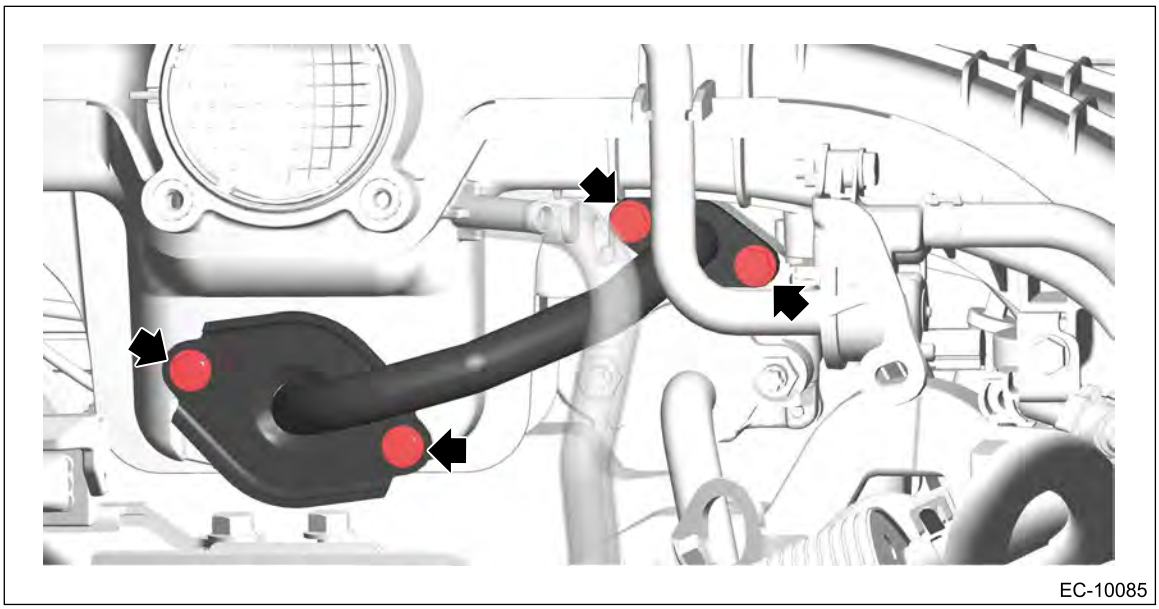


1. Remove the clip from the air intake boot, and loosen the clamp.



2. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:



Be careful not to pull out the PCV hose.

3. Remove the bolts securing the throttle body to the intake manifold assembly, and tilt the throttle body to the rear side of vehicle.

EC-10084

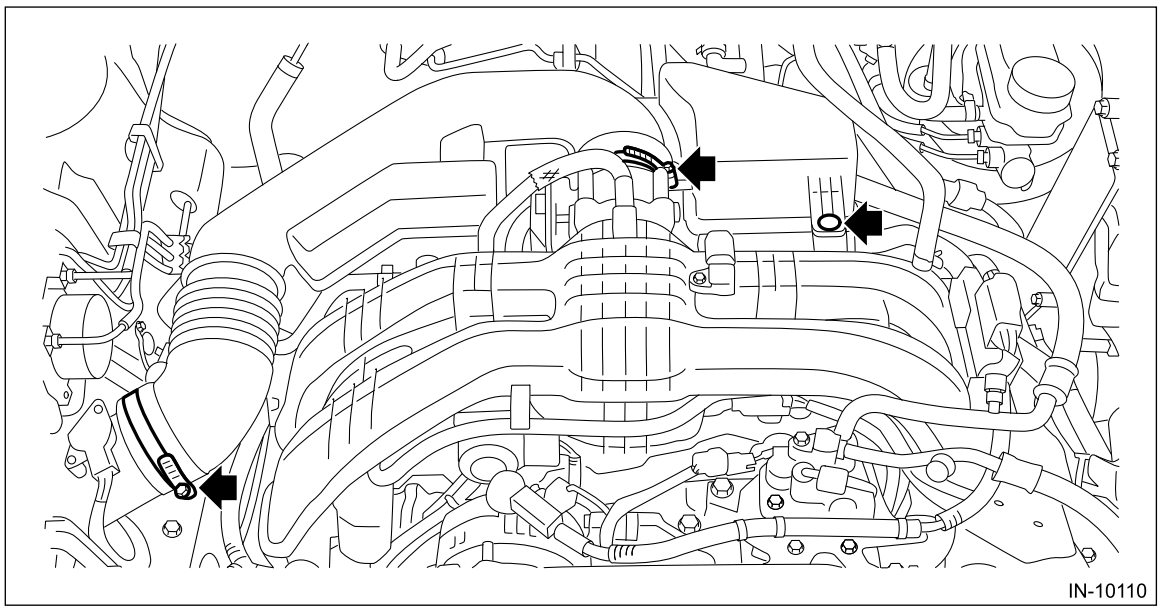
4. Remove the bolts securing the EGR pipe to the intake manifold assembly and EGR control valve, and remove the EGR pipe.

EC-10085

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > EGR Pipe

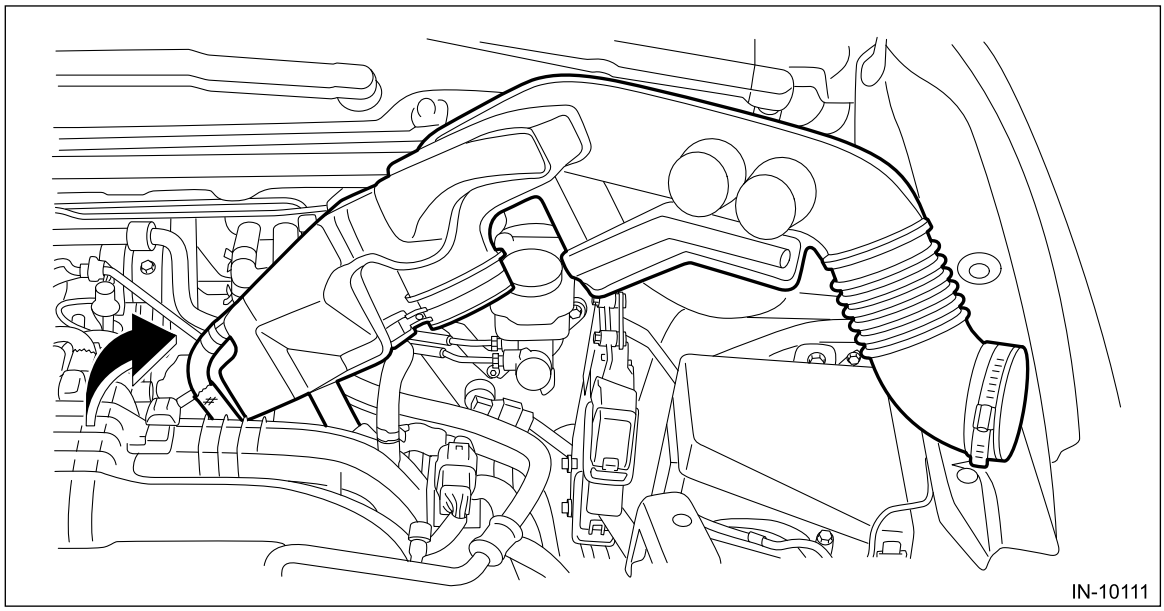
INSTALLATION

1. Use a new gasket and install the EGR pipe to the intake manifold assembly and EGR control valve.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Install the throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>INSTALLATION.
3. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.



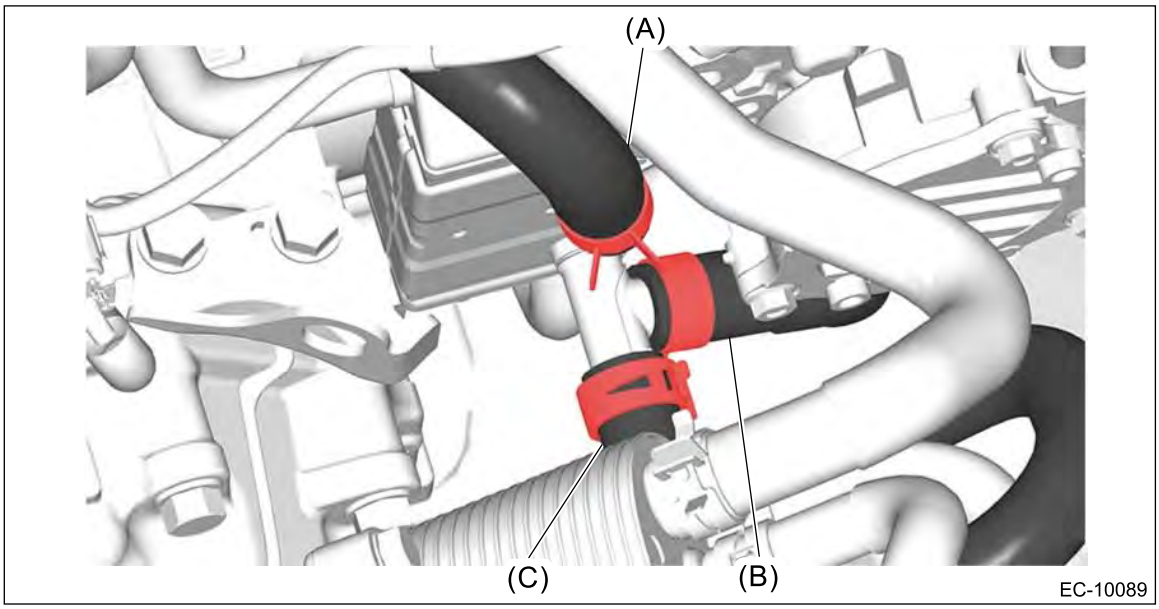
EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > EGR Pipe

INSPECTION

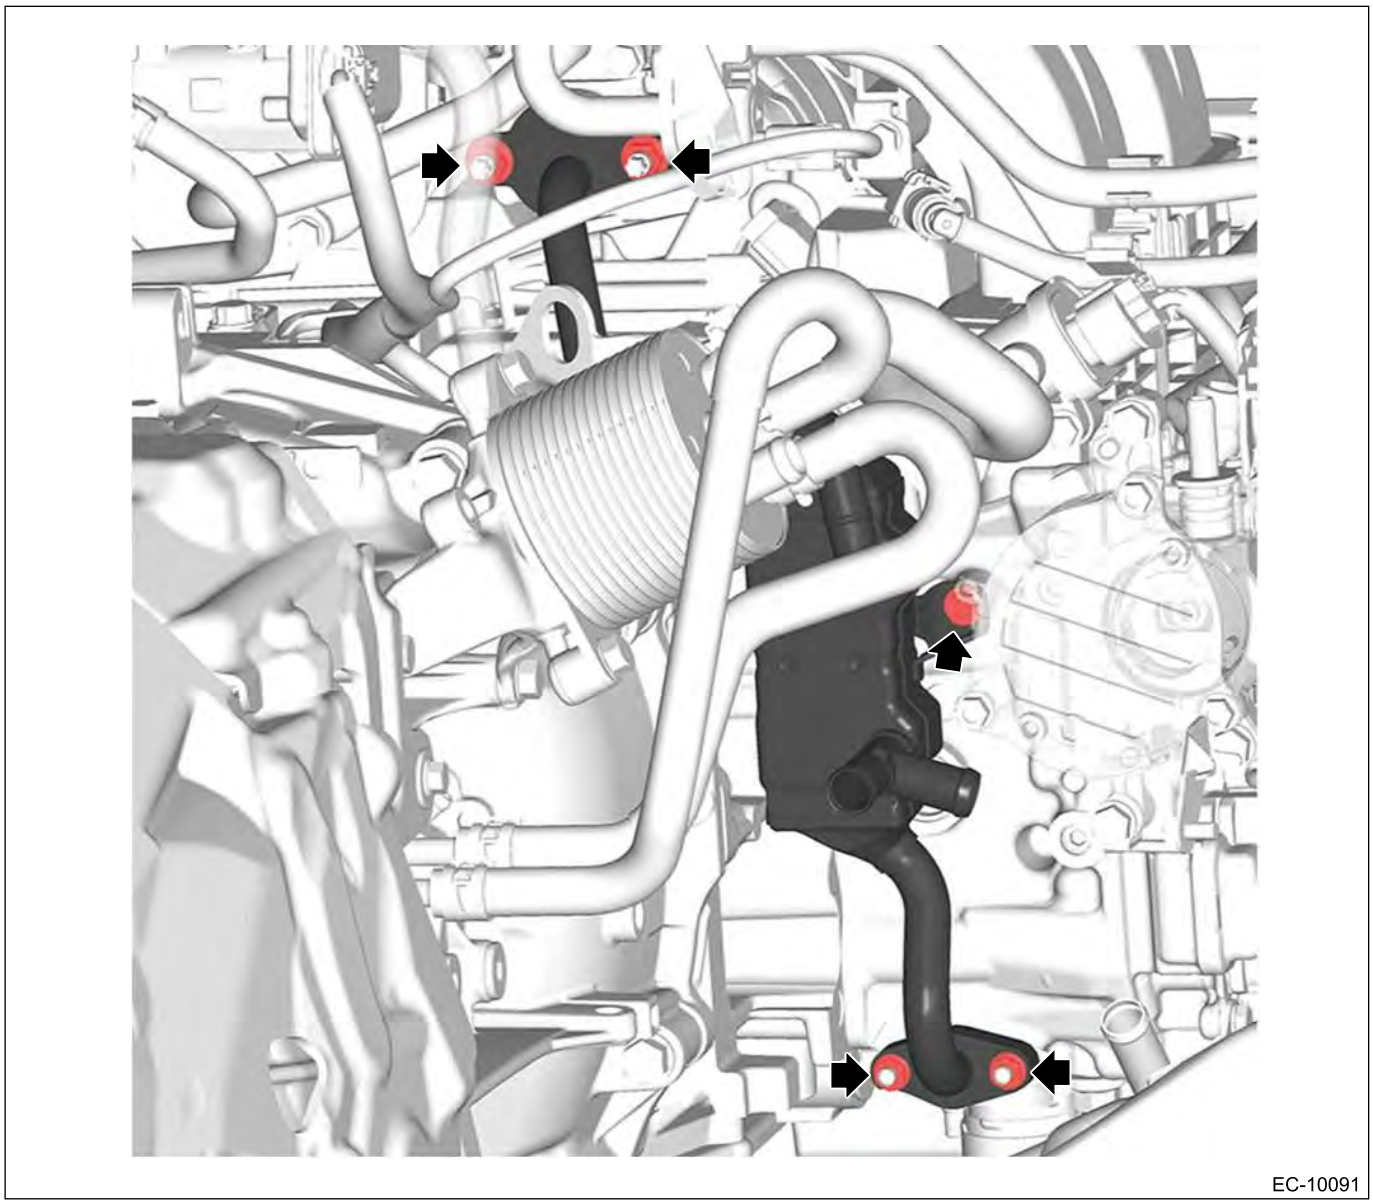


Check that the EGR pipe has no deformation, cracks or other damages.

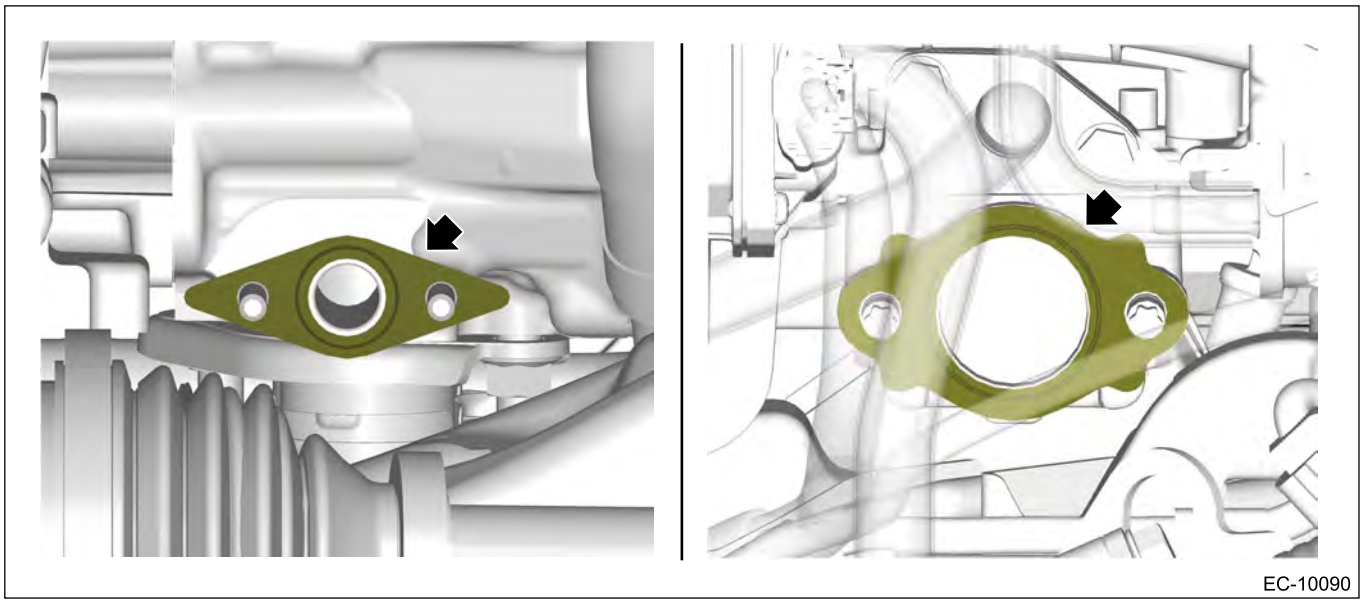
REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
3. Remove the clip from the air intake boot, and loosen the clamp.

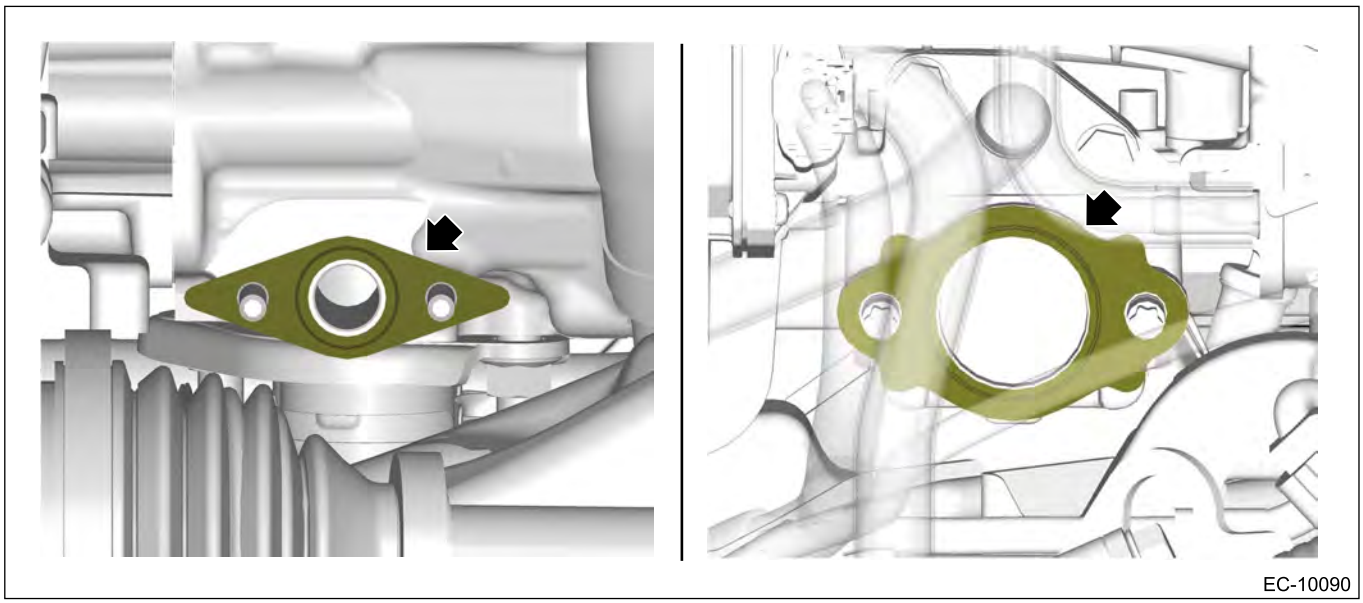


4. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.

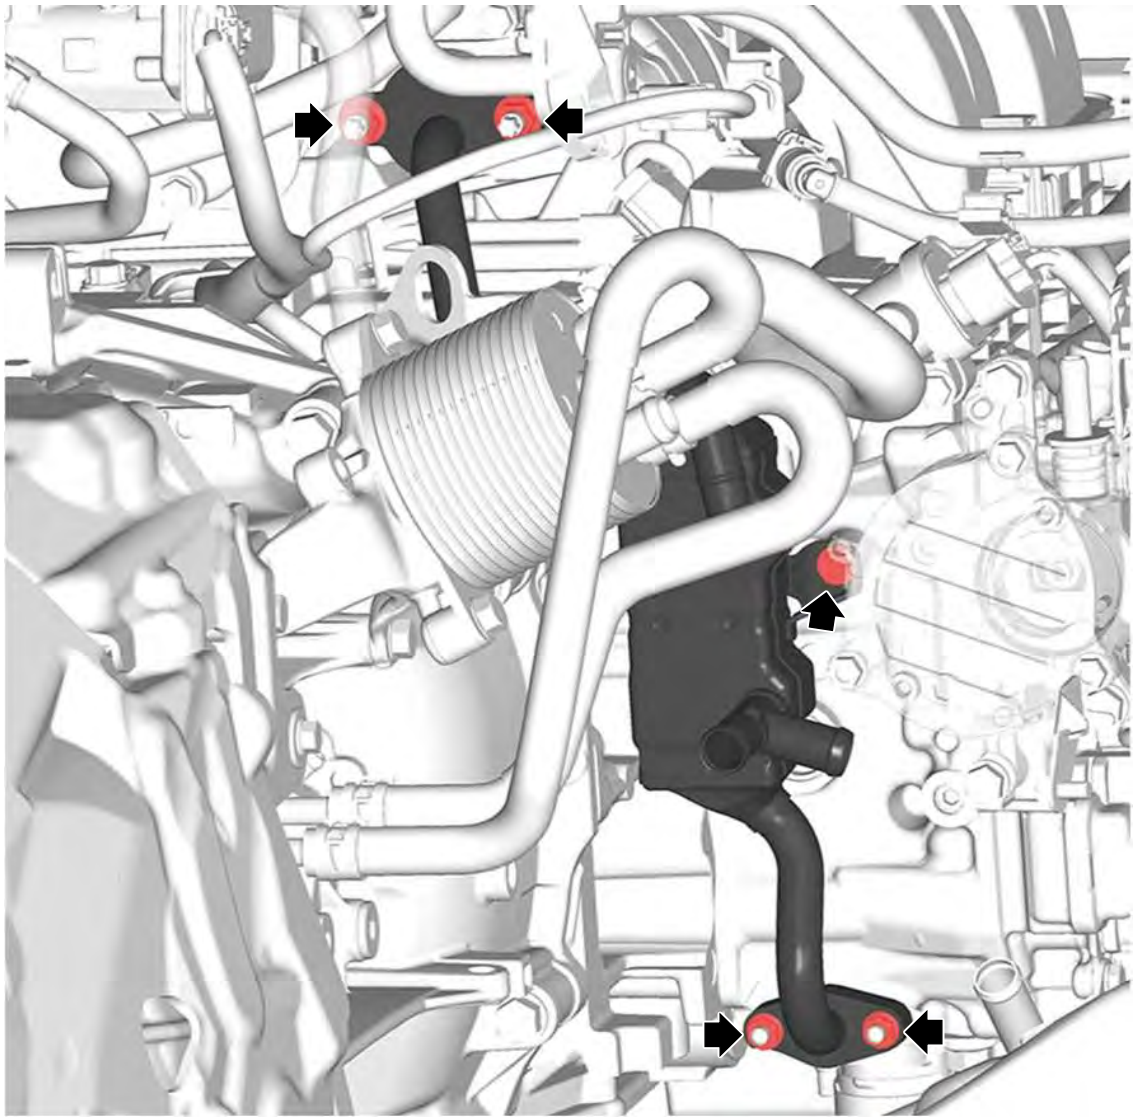


5. Disconnect the water hose (A), water hose (B) and the water hose (C).
   Note:
   Disconnecting the water hose (C) is only for the CVT model.

6. Remove the nuts and bolts which secure the EGR cooler to the EGR control valve and cylinder head RH, and remove the EGR cooler.



7. Remove the gasket from the stud bolt.



EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > EGR Cooler

INSTALLATION

1. Set new gasket to the stud bolt.

2. Set the EGR cooler, and temporarily tighten the nuts and bolts securing the EGR cooler to the EGR control valve and cylinder head RH.

EC-10091

3. Tighten the nuts and bolts securing the EGR cooler in the numerical order shown in the figure.

(1) Tighten the nuts securing the EGR cooler to the cylinder head RH.

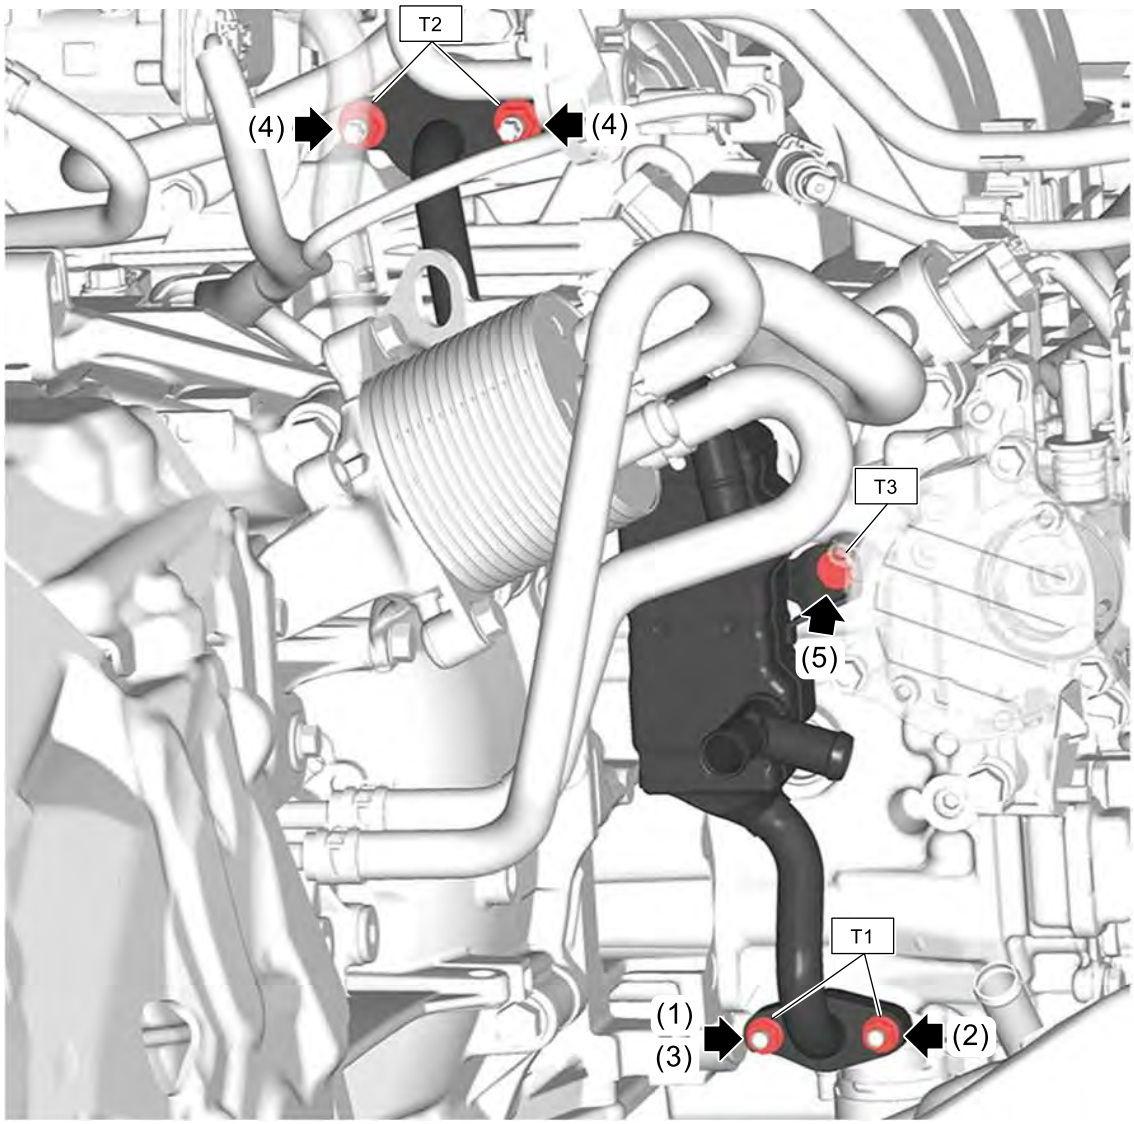
Note:

Tighten in the numerical order as shown in the figure left ➡ right ➡ left.

Tightening torque:

T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)

(2) Tighten the nuts securing the EGR cooler to the EGR control valve.



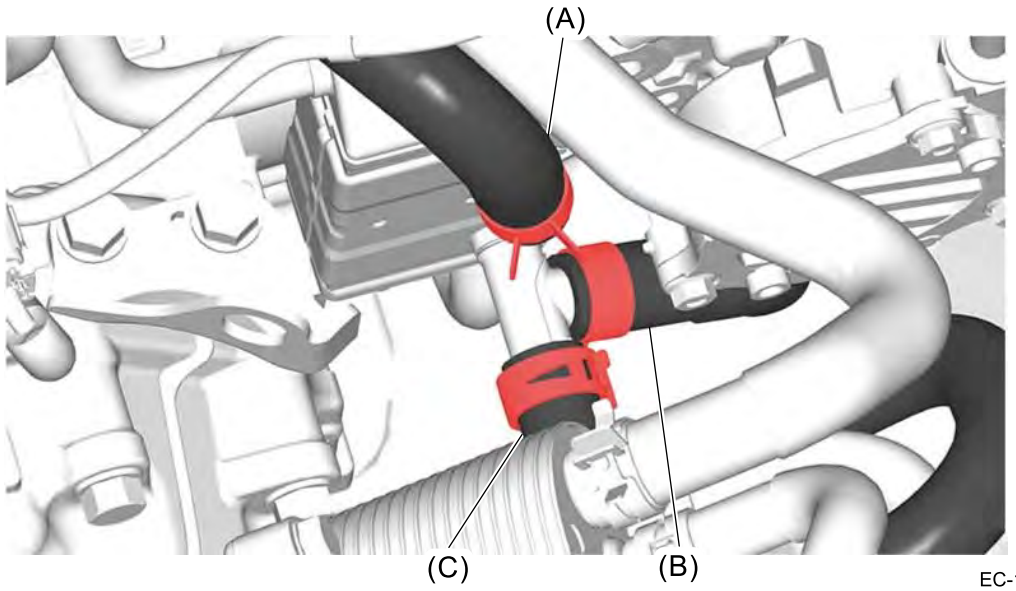
Tightening torque:

T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)

(3) Tighten the bolts holding the EGR cooler to the cylinder head RH.

Tightening torque:

T3: 6.4N·m (0.7 kgf-m, 4.7 ft-lb)



EC-10092

4. Connect the water hose (A), water hose (B) and the water hose (C).

Note:

Connecting the water hose (C) is only for the CVT model.

EC-10089

5. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
7. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > EGR Cooler

INSPECTION

1. Check that the EGR cooler has no deformation, cracks or other damages.
2. Check that the hose has no cracks, damage or loose part.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Fuel Level Sensor

REMOVAL

For removal procedures, refer to the "FU(H4DO)" section. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor>REMOVAL.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Fuel Level Sensor

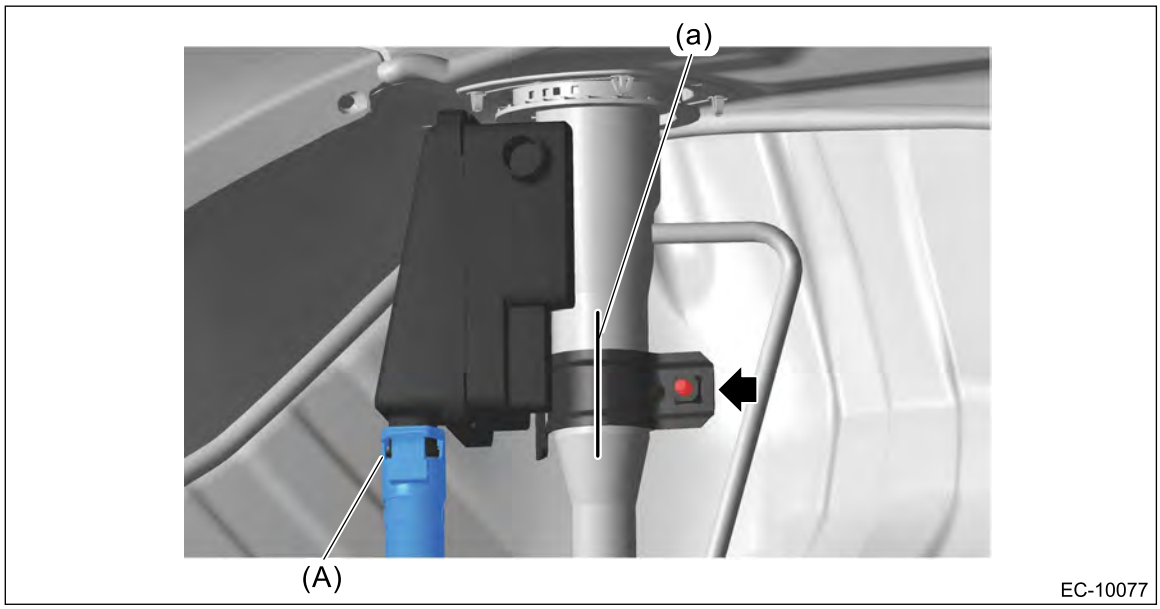
INSTALLATION

For installation procedures, refer to the "FU(H4DO)" section. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor>INSTALLATION.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Fuel Level Sensor

INSPECTION

For inspection procedures, refer to the "FU(H4DO)" section. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor>INSPECTION.



EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Drain Filter

REMOVAL

1. Remove the rear wheel RH. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.
2. Lift up the vehicle.
3. Remove the rear mud guard RH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>REMOVAL.
4. Disconnect the drain tube (A).
5. Remove the bolts which hold the drain filter bracket, and remove the drain filter.

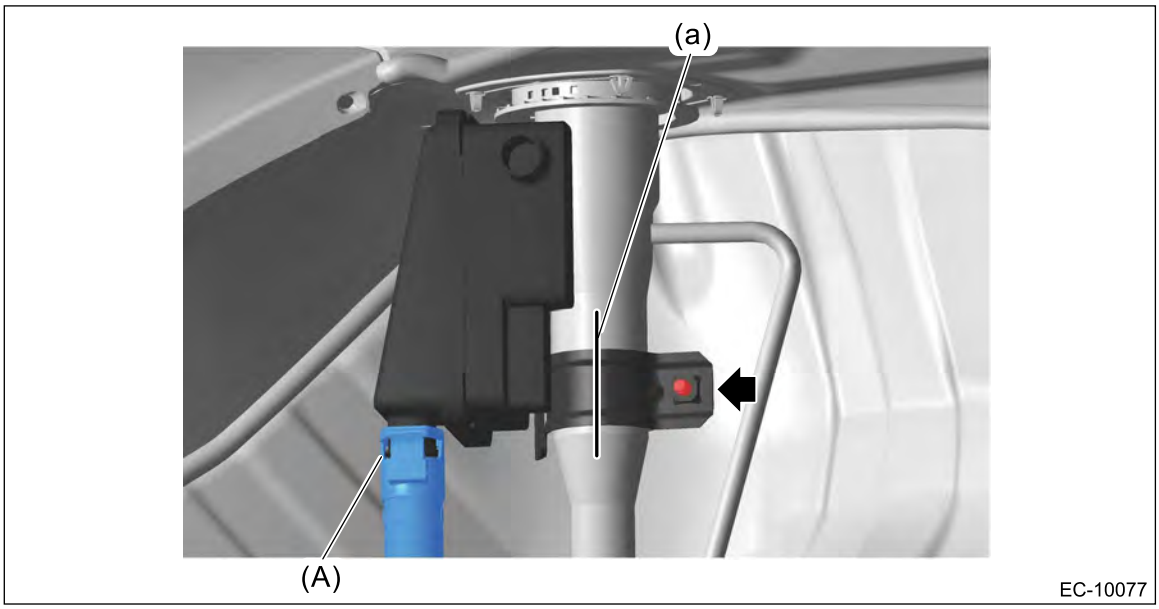
Note:

Using a marker pen, make alignment marks (a) on the fuel filler pipe and the drain filter bracket.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Drain Filter

INSTALLATION

1. Install the bolts which hold the drain filter bracket to install the drain filter.



Note:

Install the drain filter bracket to the fuel filler pipe by aligning the alignment mark (a).

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

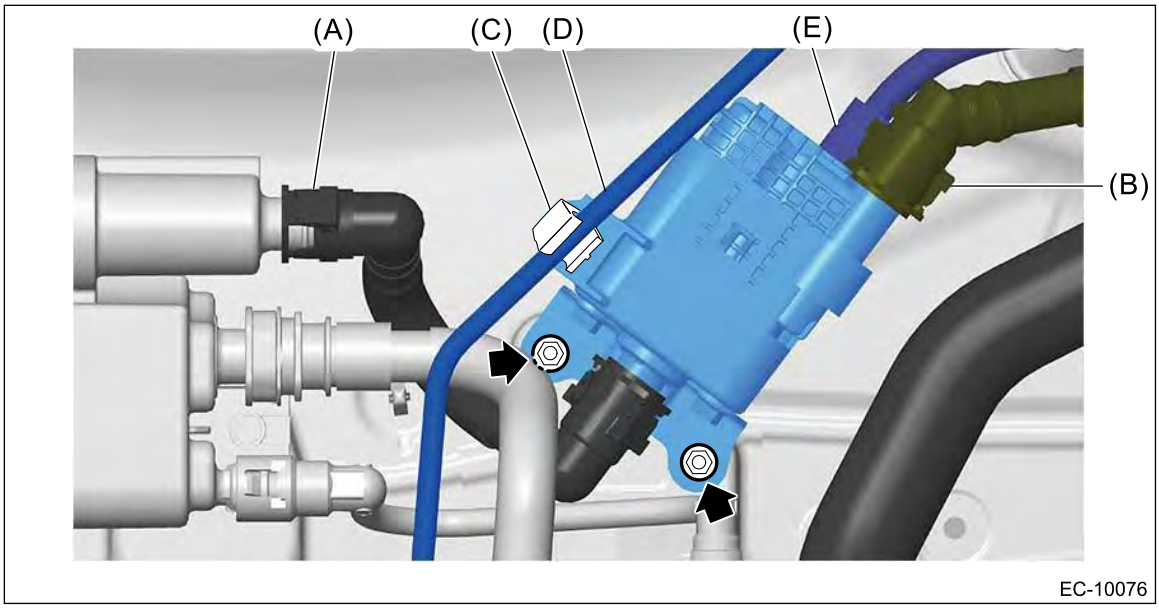
2. Connect the drain tube (A). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE E).

3. Install the rear mud guard RH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>INSTALLATION.
4. Lower the vehicle.
5. Install the rear wheel RH. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Drain Filter

INSPECTION

1. Check that the drain filter and drain tube have no deformation, cracks or other damages.
2. Check that no foreign substances are clogged in the drain filter.



EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Leak Check Valve Assembly

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>REMOVAL.

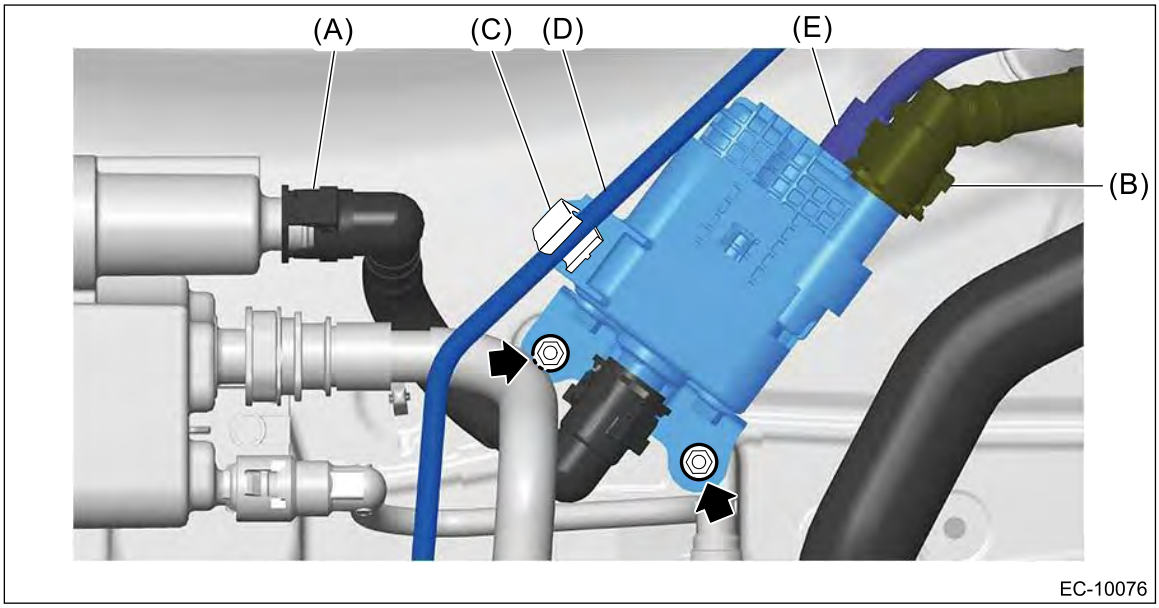
   Note:

   This operation procedure would be possible by simply lowering the rear differential to the position that the work is possible. In that case, it is not necessary to pull out the drive shaft from the rear differential.
3. Disconnect drain tube A (A) and drain tube B (B). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE E).
4. Remove the circulate tube (D) from the clip (C).
5. Disconnect the connector (E).
6. Remove the leak check valve assembly.

7. Disconnect the drain tube A from the leak check valve assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE E).
8. Remove the leak check valve assembly bracket.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Leak Check Valve Assembly

INSTALLATION



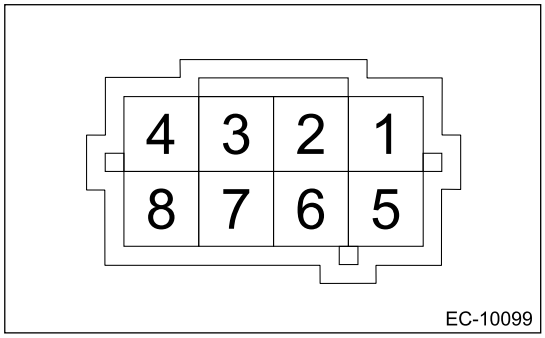
1. Install the leak check valve assembly bracket.

   Tightening torque:

   8 N·m (0.8 kgf-m, 5.9 ft-lb)
2. Connect the drain tube A to the leak check valve assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE E).
3. Install the leak check valve assembly.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

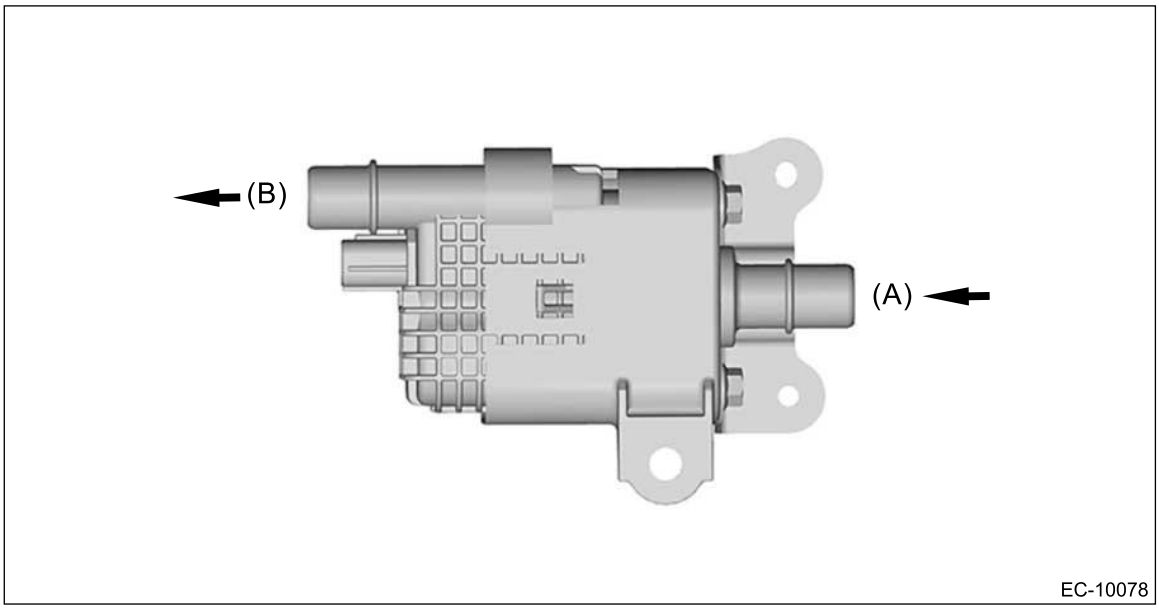
4. Connect the connector (E).
5. Install the circulate tube (D) to the clip (C).
6. Connect drain tube A (A) and drain tube B (B). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE E).



7. Install the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>INSTALLATION.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > Leak Check Valve Assembly

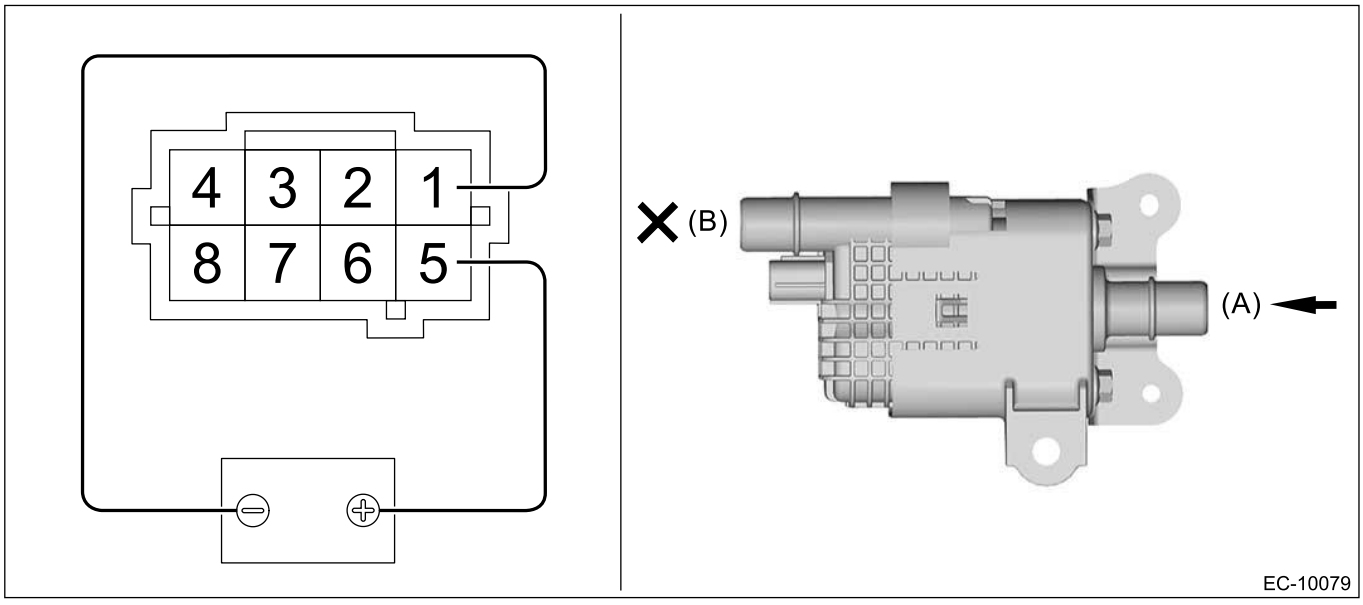
INSPECTION



1. CHECK SWITCHING VALVE

1. Check the resistance between switching valve terminals.

Terminal No.	Standard
1 and 5	27^{+3}_{-2} Ω (when 20°C (68°F))
	31±4 Ω (60°C (when 140°F))

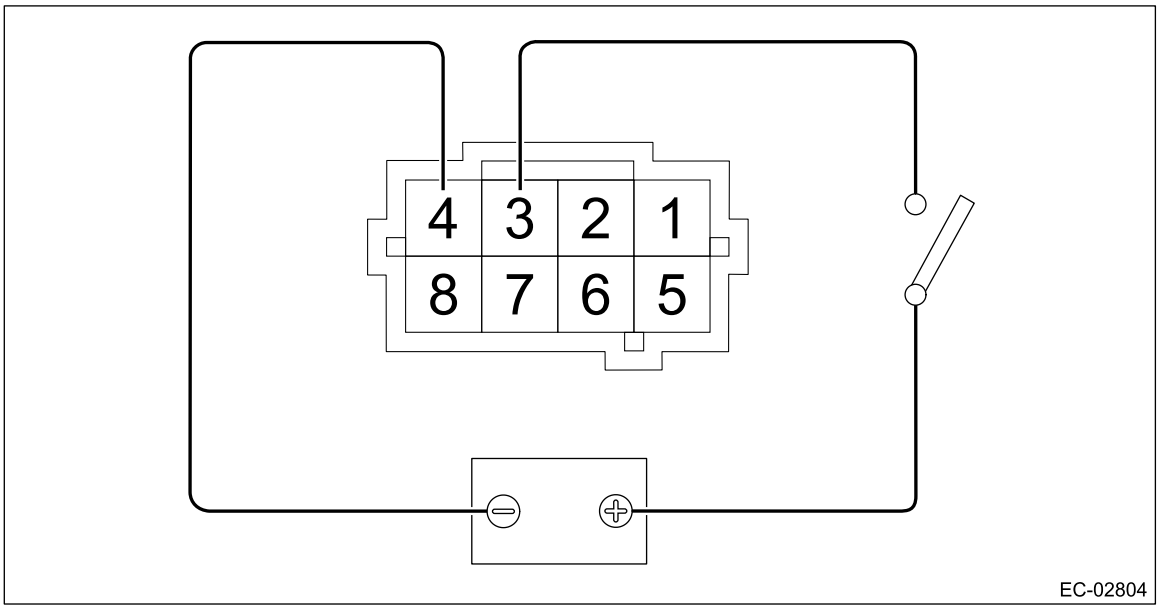


2. Check that air is discharged from (B) when air is blown into (A).

3. Connect the battery positive terminal to the terminal No. 5 and the battery negative terminal to the terminal No. 1. Check that air is not discharged from (B), when supplying air to (A).

Note:

The purpose of this inspection is to check the valve movement, and it would be success if a large change of flow can be checked resulting from valve opening/closing. Therefore, it does not indicate a malfunction if a small amount of flow from (B) is detected when the valve is opened.

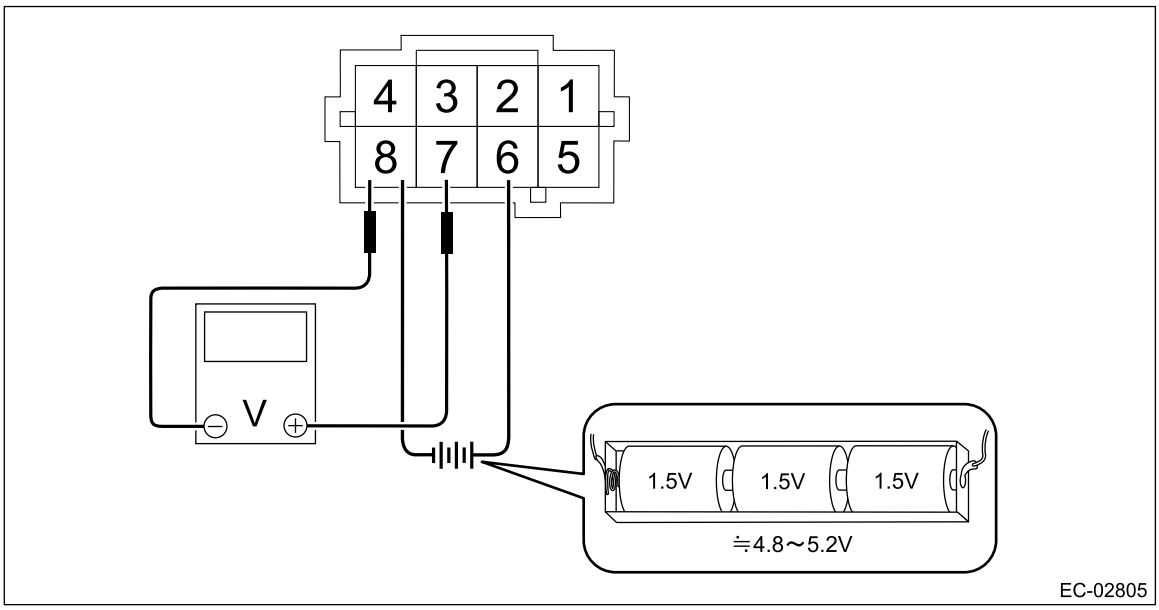


2. CHECK VACUUM PUMP

1. Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and inspect the vacuum pump operation.

Caution:

Do not operate the vacuum pump for 5 minutes or more.

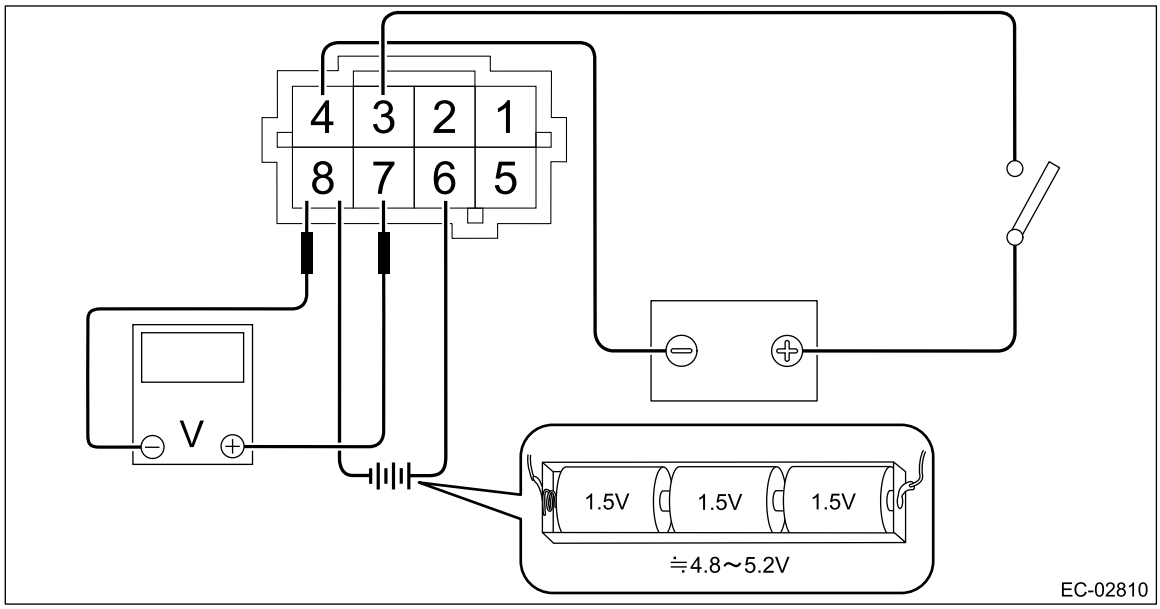


3. CHECK PRESSURE SENSOR

1. Use a new dry-cell battery, and connect dry-cell battery positive terminal to terminal No. 6 and dry-cell battery ground terminal to terminal No. 8, circuit tester positive side to terminal No. 7 and the circuit tester ground side to terminal No. 8.

Note:

- **Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 — 5.2 V.**
- **For power supply, 5 V DC constant voltage power source can also be used.**



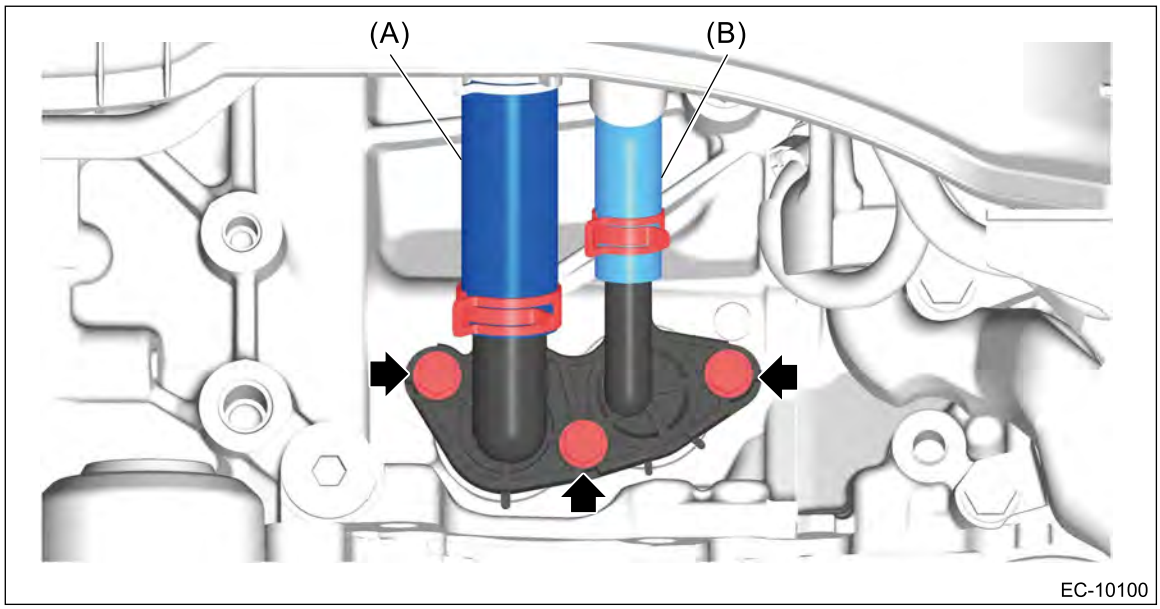
2. Check the voltage at a normal atmospheric pressure.

Note:

The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
7 (+) and 8 (−)	Approx. 3.5 V (when 25°C (77°F))

3. Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and check that there is a voltage drop from the voltage measured in step 2) when the vacuum pump is operated.



4. OTHER INSPECTIONS

Check that the leak check valve assembly has no deformation, cracks or other damages.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > PCV Connector

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
3. Remove the A/C compressor. Ref. to AIR CONDITIONER>Compressor>REMOVAL.
   Note:
   This operation procedure would be possible by simply moving aside the A/C compressor to the position that it does not interfere with the work. In that case, it is not necessary to disconnect the hose - pressure suction and the hose - pressure discharge from the A/C compressor.
4. Disconnect the water hose (A) and PCV hose (B) from the PCV connector, and remove the PCV connector.

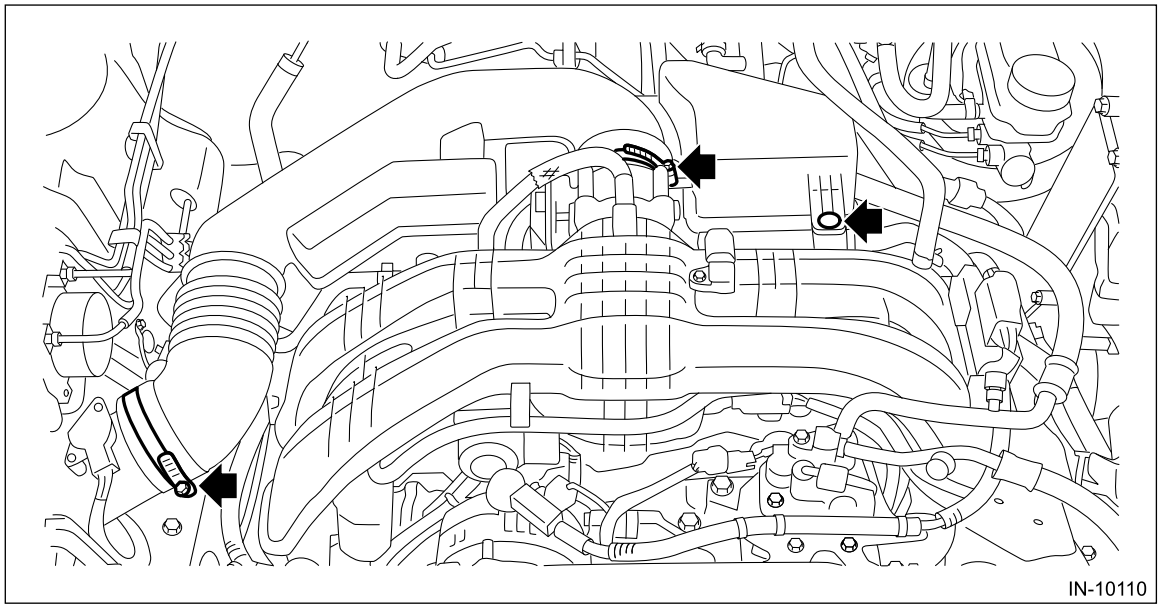
EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > PCV Connector

INSTALLATION

1. By using new O-rings, install the PCV connector, and connect water hose and PCV hose to the PCV connector.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Install the A/C compressor. Ref. to AIR CONDITIONER>Compressor>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > PCV Connector

INSPECTION

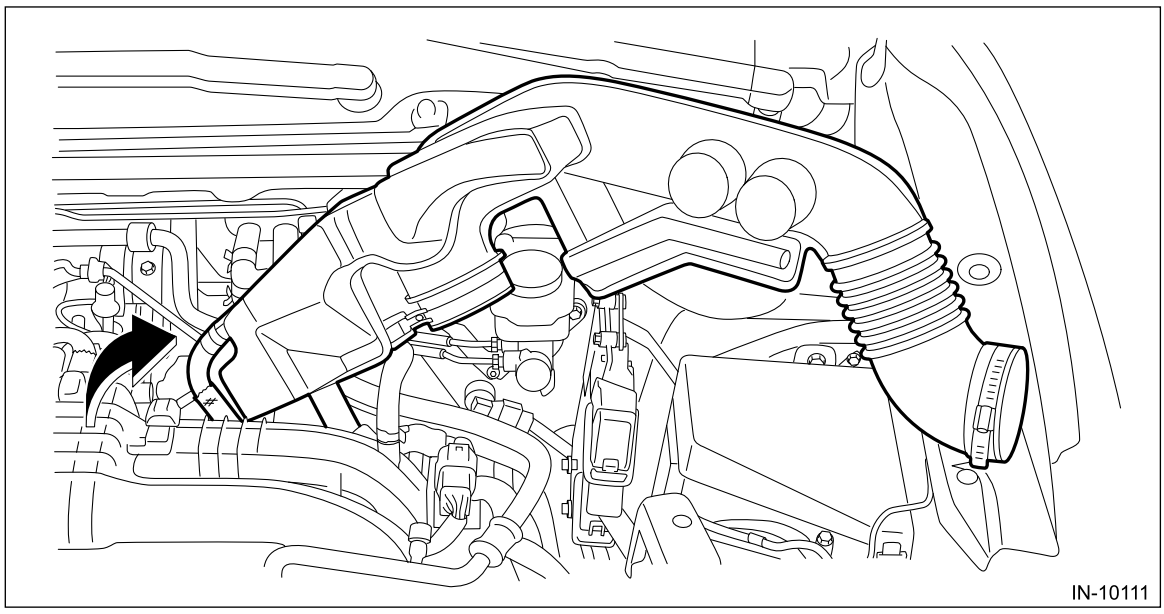


Check that the PCV connector has no deformation, cracks or other damages.

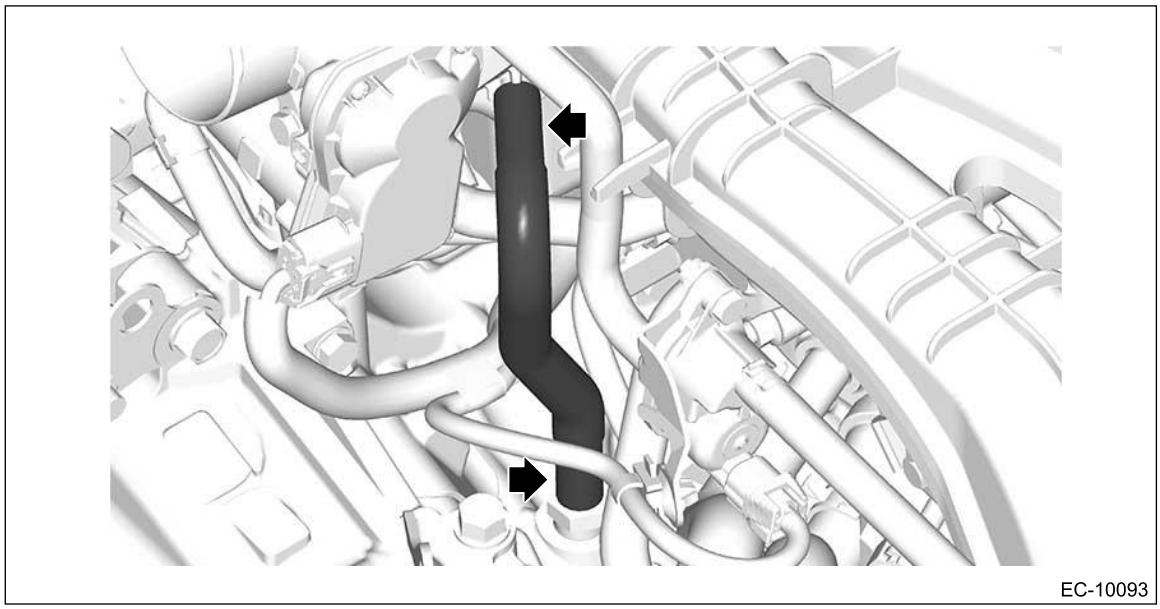
REMOVAL

Caution:

Do not remove except when the PCV hose is broken.

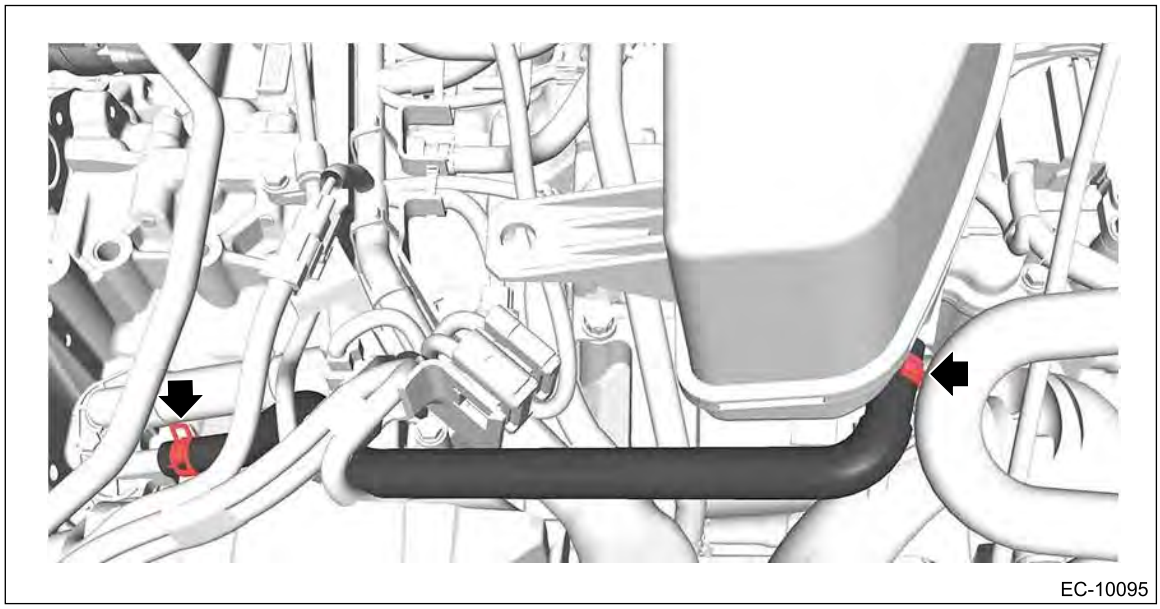


1. Remove the clip from the air intake boot, and loosen the clamp.



2. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:



Be careful not to pull out the PCV hose.

3. Remove the PCV hose A from the intake manifold assembly and the PCV valve.

4. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Intake Manifold Assembly>REMOVAL.
5. Remove the A/C compressor. Ref. to AIR CONDITIONER>Compressor>REMOVAL.
   Note:
   This operation procedure would be possible by simply moving aside the A/C compressor to the position that it does not interfere with the work. In that case, it is not necessary to disconnect the hose - pressure suction and the hose - pressure discharge from the A/C compressor.
6. Remove the PCV hose B from the PCV connector and the air intake boot.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > PCV Hose

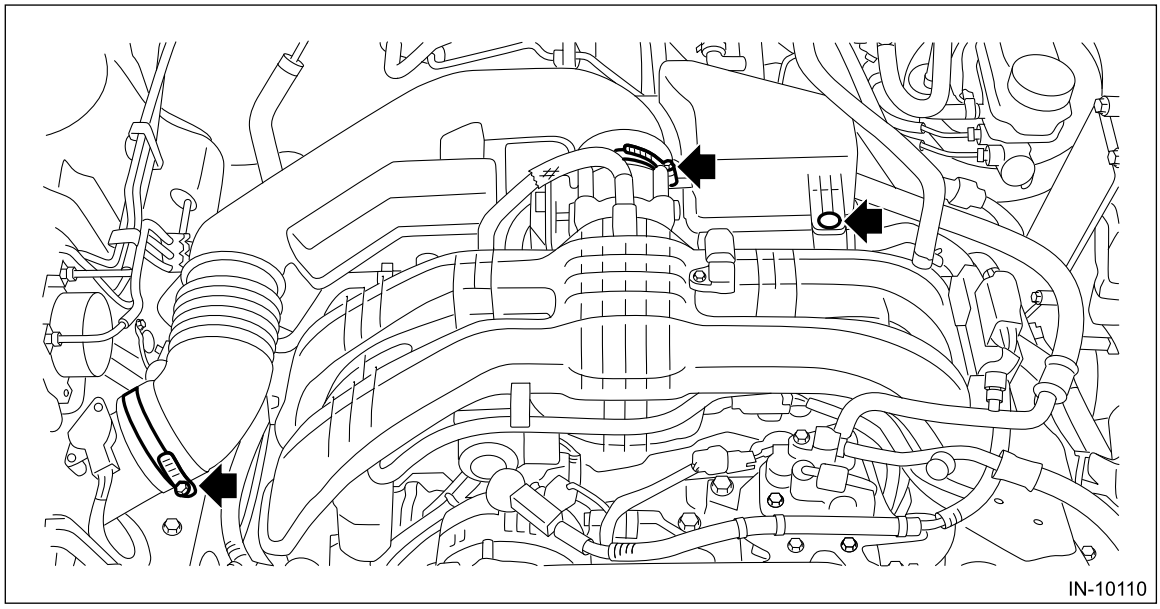
INSTALLATION

1. Attach the PCV hose B to the PCV connector and the air intake boot.
2. Install the A/C compressor. Ref. to AIR CONDITIONER>Compressor>INSTALLATION.
3. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Intake Manifold Assembly>INSTALLATION.
4. Connect the PCV hose A to the intake manifold assembly and the PCV valve.

5. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > PCV Hose

INSPECTION

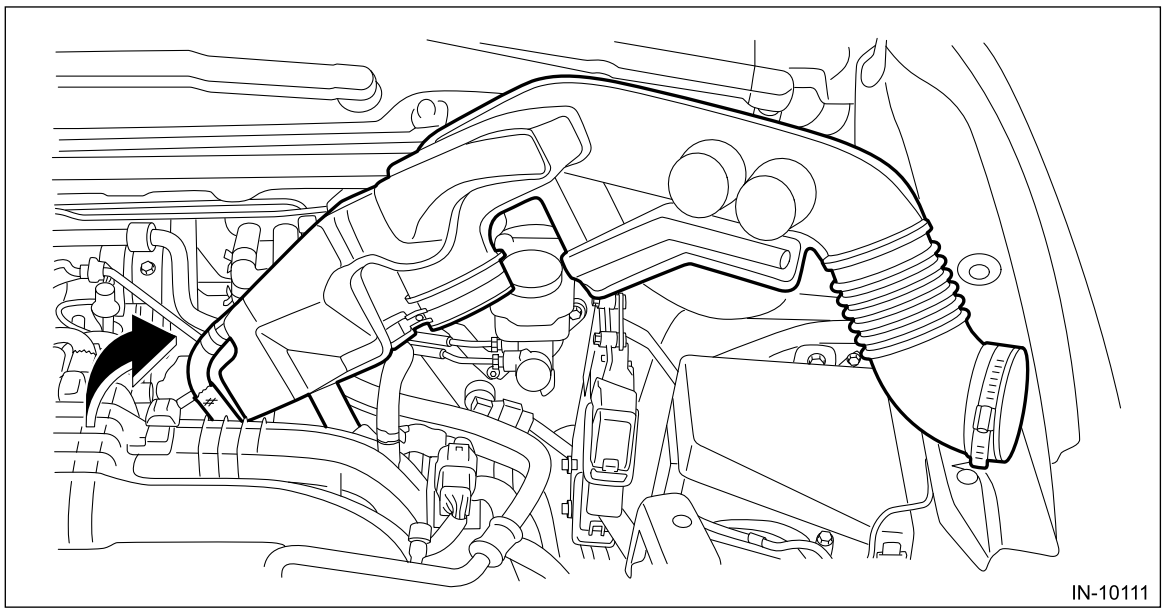


Check that the PCV hose has no cracks, damage or loose part.

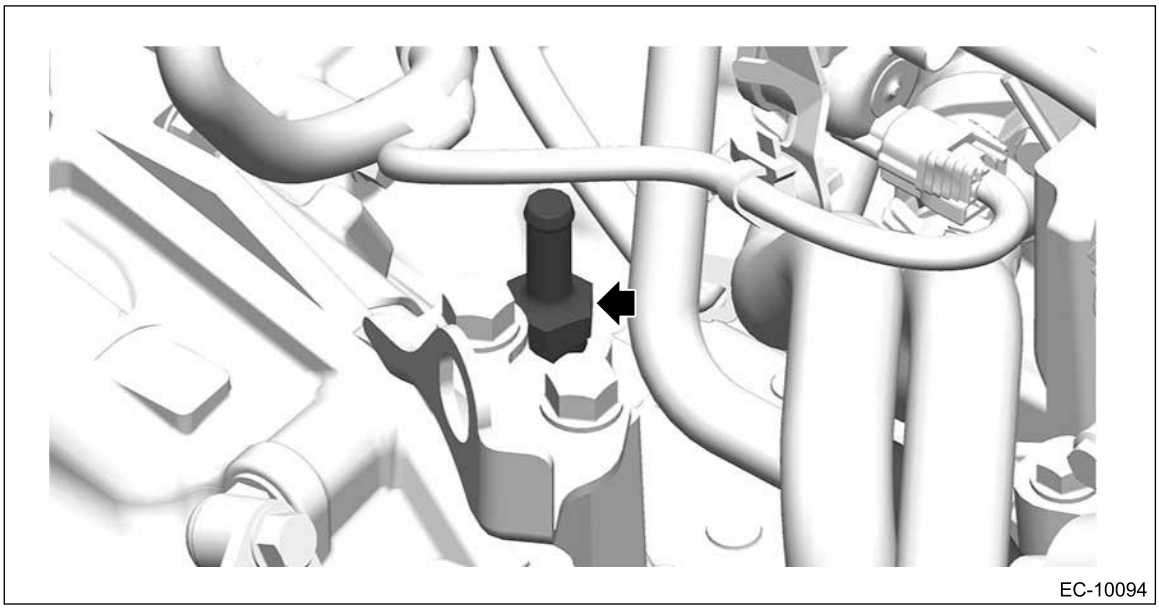
REMOVAL

Caution:

Do not remove unless the PCV valve is broken.



1. Remove the clip from the air intake boot, and loosen the clamp.



2. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:

Be careful not to pull out the PCV hose.

3. Remove the PCV hose A. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Hose>REMOVAL.
4. Remove the PCV valve from the cylinder block RH.

5. Remove seal material from the PCV valve and the mating surface of the cylinder block RH.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > PCV Valve

INSTALLATION

1. Apply seal material to the bolt threads of PCV valve, and install the PCV valve onto the cylinder block RH.

   Note:

   Before applying the seal material, degrease bolt threads of PCV valve and the mating surface of the cylinder block RH.

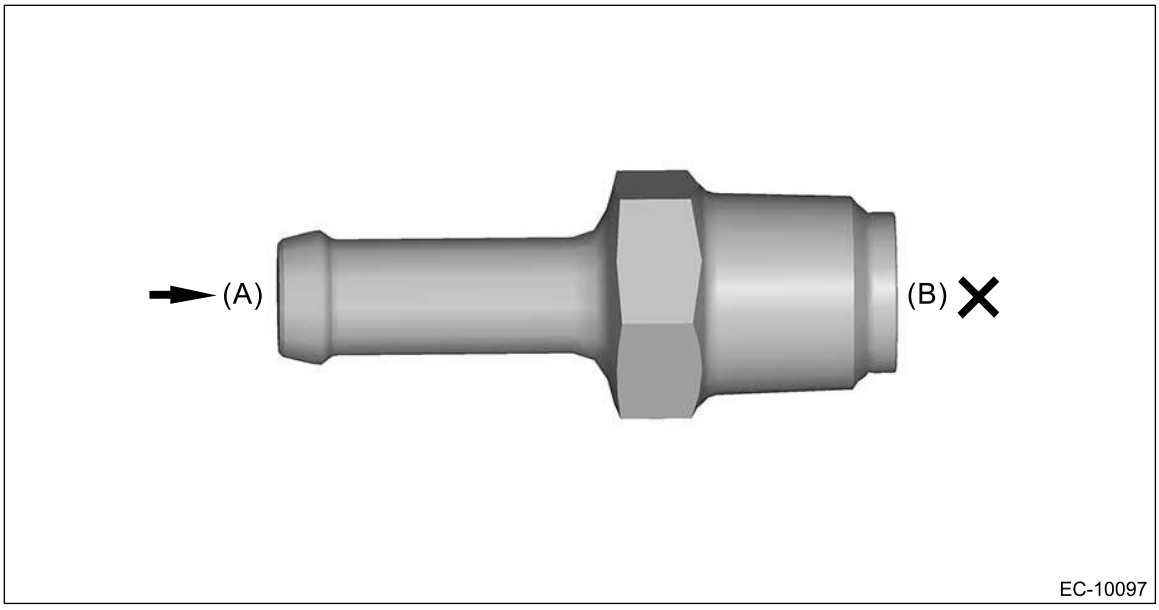
   Seal material:

   THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

   Tightening torque:

   23 N·m (2.3 kgf-m, 17.0 ft-lb)
2. Connect the PCV hose A. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>PCV Hose>INSTALLATION.
3. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO) > PCV Valve



INSPECTION

1. PCV VALVE

1. Check that the PCV valve has no deformation, cracks or other damages.
2. Check that air is discharged from (B) when air is blown into (A).

3. Check that air does not come out from (B) when air is blown into (A).

2. OTHER INSPECTIONS

Check that the PCV hose has no cracks, damage or loose part.

		T2: 18 (1.8, 13.3)

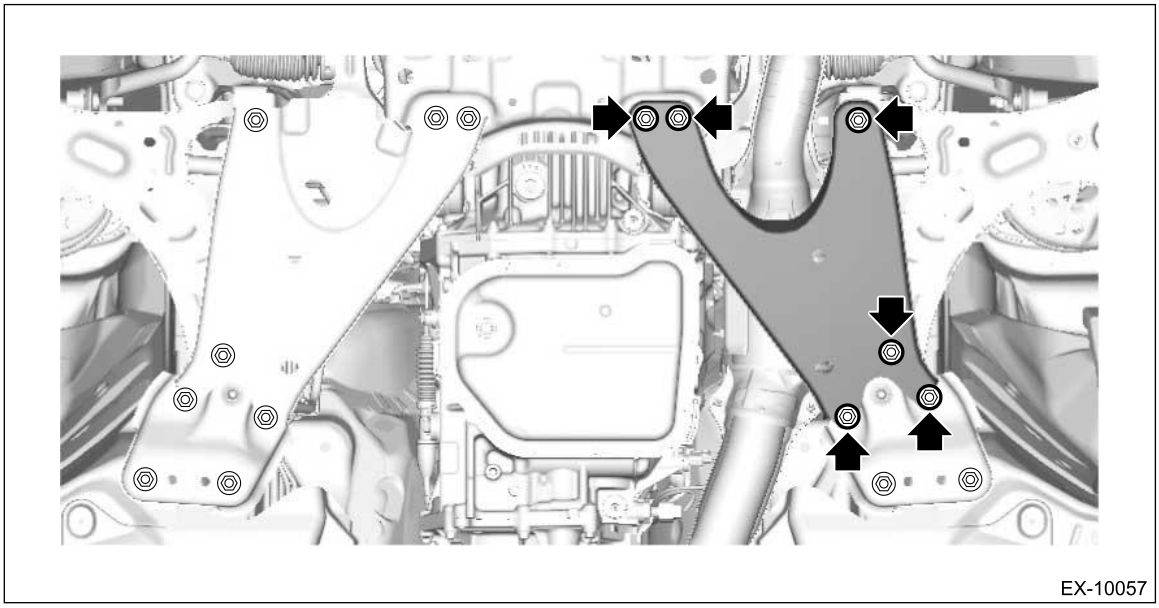
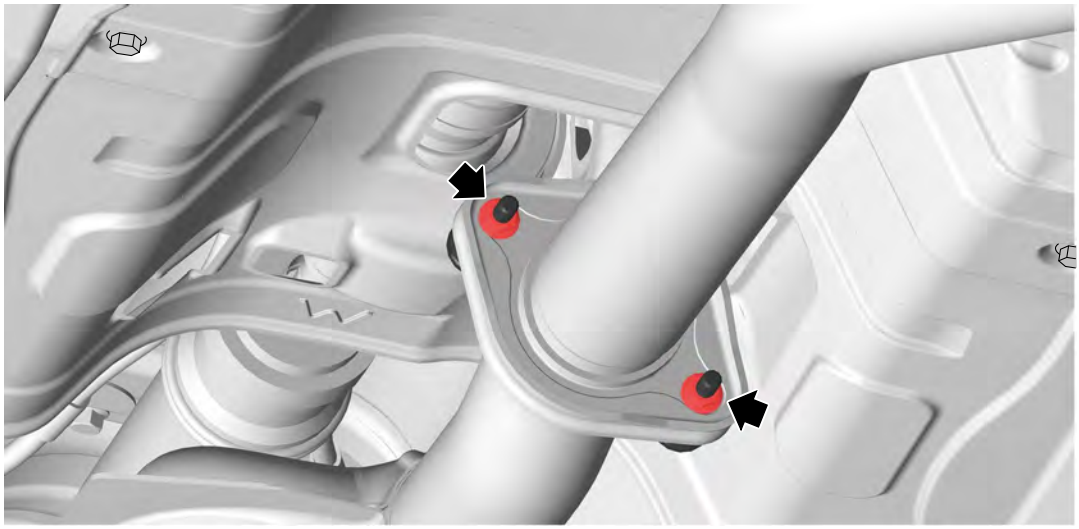
CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If any grease and oil adheres to the exhaust pipe, completely wipe it off to avoid emitting smoke or causing a fire.



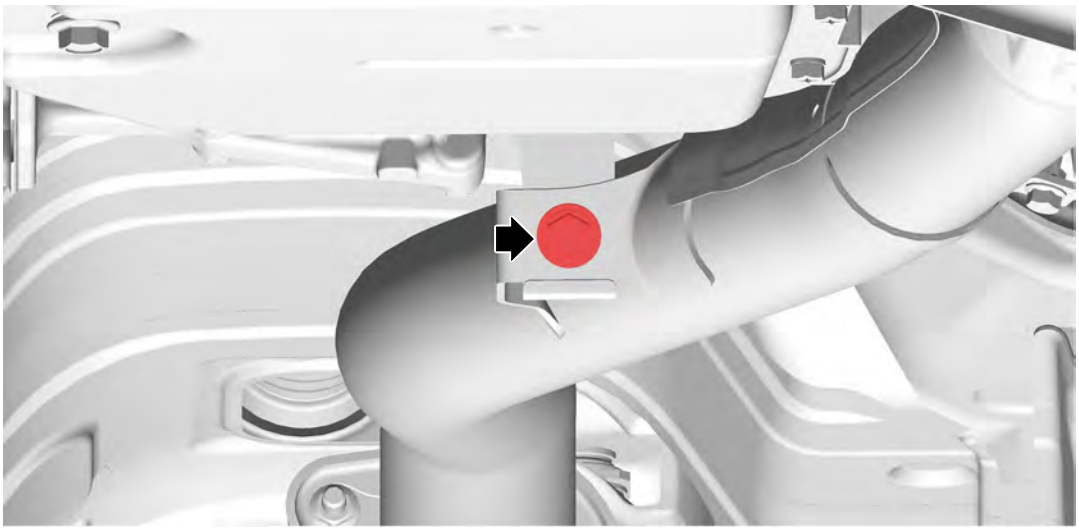
REMOVAL

Caution:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
3. Disconnect the front oxygen (A/F) sensor connector, rear oxygen sensor connector and the ground cord.

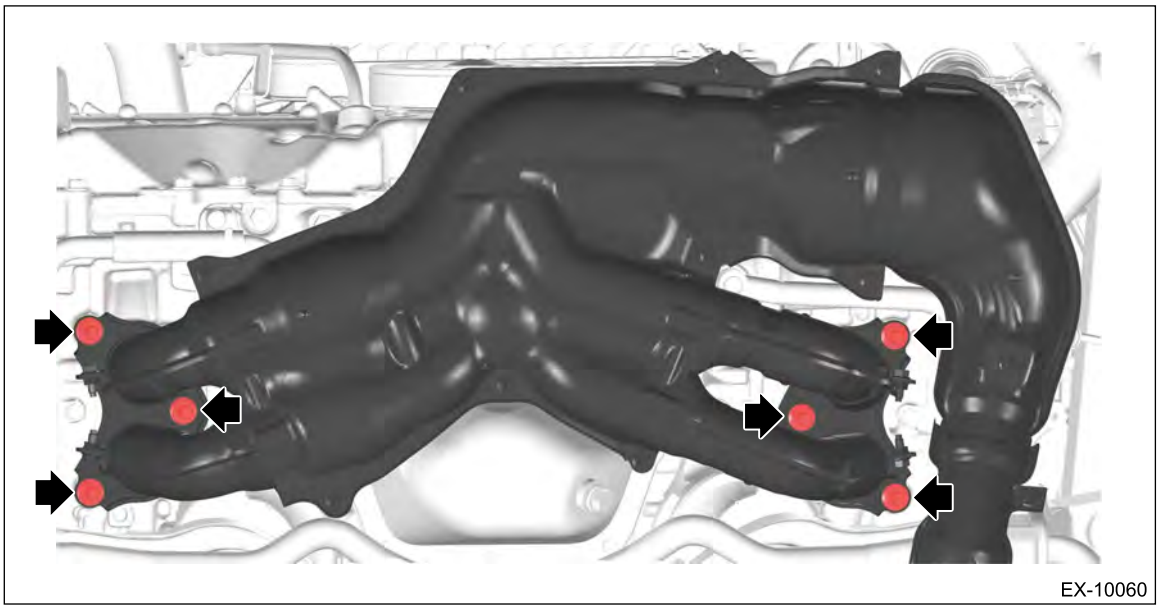
4. Remove the crossmember support - rear LH.



5. Separate the front exhaust pipe and rear exhaust pipe.

EX-10058

6. Remove the bolt which holds front exhaust pipe to hanger bracket.



EX-10059

7. Remove the front exhaust pipe.

Caution:

The front exhaust pipe is very heavy. Be careful not to drop it when removing.

EXHAUST(H4DO) > Front Exhaust Pipe

INSTALLATION

1. Set new gasket to the rear exhaust pipe.
2. Set a new gasket, and temporarily install the front exhaust pipe.
3. Install the bolts which secure front exhaust pipe to hanger bracket.
   Tightening torque:
   35 N·m (3.6 kgf-m, 25.8 ft-lb)
4. Tighten the nuts which hold the front exhaust pipe.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
5. Connect the front exhaust pipe and rear exhaust pipe.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
6. Install the crossmember support - rear LH.
   Tightening torque:
   70 N·m (7.1 kgf-m, 51.6 ft-lb)
7. Connect the front oxygen (A/F) sensor connector, rear oxygen sensor connector and the ground cord.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8. Install the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>INSTALLATION.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EXHAUST(H4DO) > Front Exhaust Pipe

DISASSEMBLY

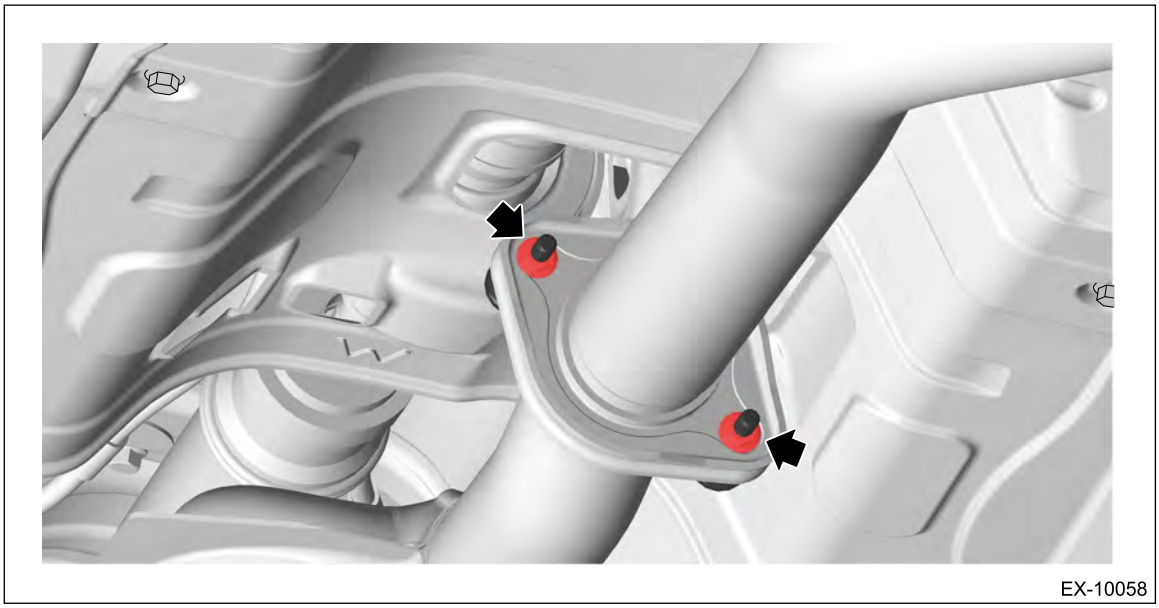
1. Remove the front oxygen (A/F) sensor and rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Front Oxygen (A/F) Sensor>REMOVAL. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Rear Oxygen Sensor>REMOVAL.
2. Remove each exhaust cover.

EXHAUST(H4DO) > Front Exhaust Pipe

ASSEMBLY

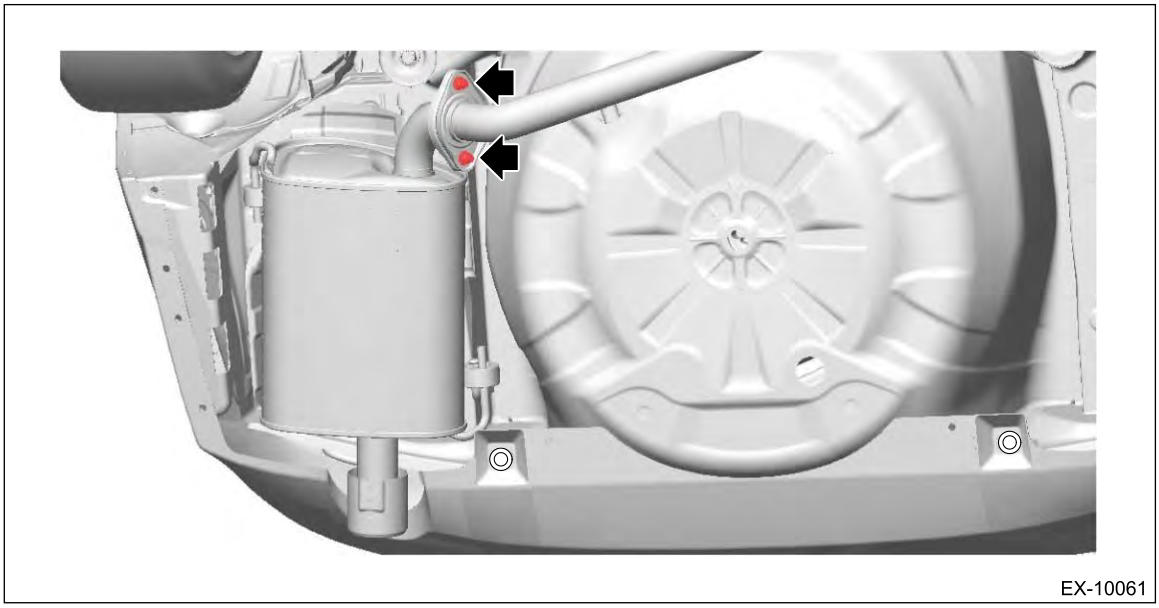
1. Install each exhaust cover.
   Tightening torque:
   13 N·m (1.3 kgf-m, 9.6 ft-lb)
2. Install the front oxygen (A/F) sensor and rear oxygen sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Front Oxygen (A/F) Sensor>INSTALLATION. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Rear Oxygen Sensor>INSTALLATION.

EXHAUST(H4DO) > Front Exhaust Pipe



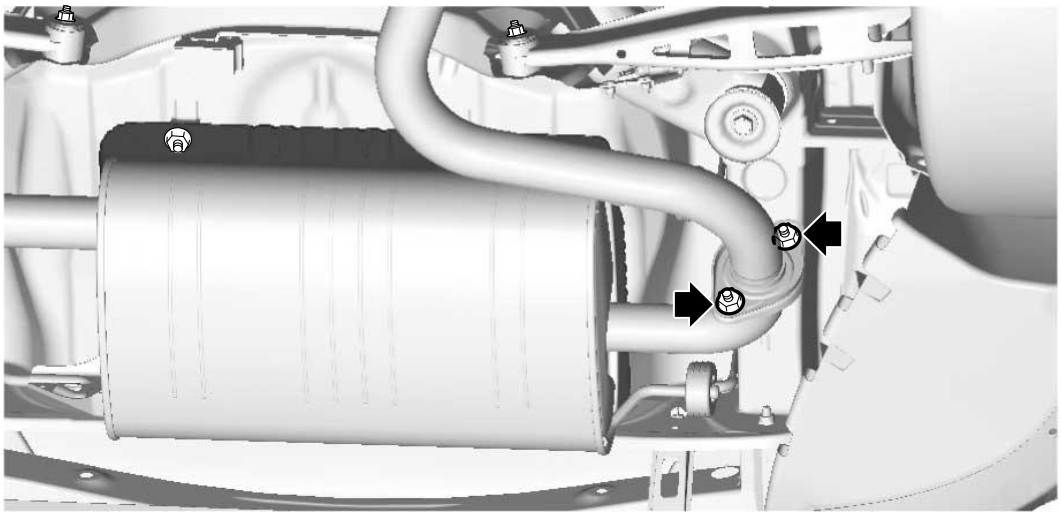
INSPECTION

1. Check that no leaks are found.
2. Check for deformation, damage, or excessive rusting.
3. Check for any foreign matter adhered.
4. Check for clogging.



REMOVAL

Caution:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.



1. Separate the front exhaust pipe and rear exhaust pipe.
   Caution:
   Be careful not to let the muffler contact the rear bumper.

2. Disconnect the rear exhaust pipe and muffler.
   Caution:
   Be careful not to drop the rear exhaust pipe.
   - 4 door model

   - 5 door model

EX-10062

3. Apply a coat of spray type lubricant to the mating area of cushion rubber.
4. Remove the rear exhaust pipe.

EX-10063

EXHAUST(H4DO) > Rear Exhaust Pipe

INSTALLATION

1. Set new gasket to the rear exhaust pipe. (Front side)
2. Apply a coat of spray type lubricant to the mating area of cushion rubber.
3. Install the rear exhaust pipe.

   Note:

   After installation, degrease the cushion rubber.
4. Set a new gasket, and connect the rear exhaust pipe and muffler.

   Caution:

   Be sure to use a new self-locking nut.

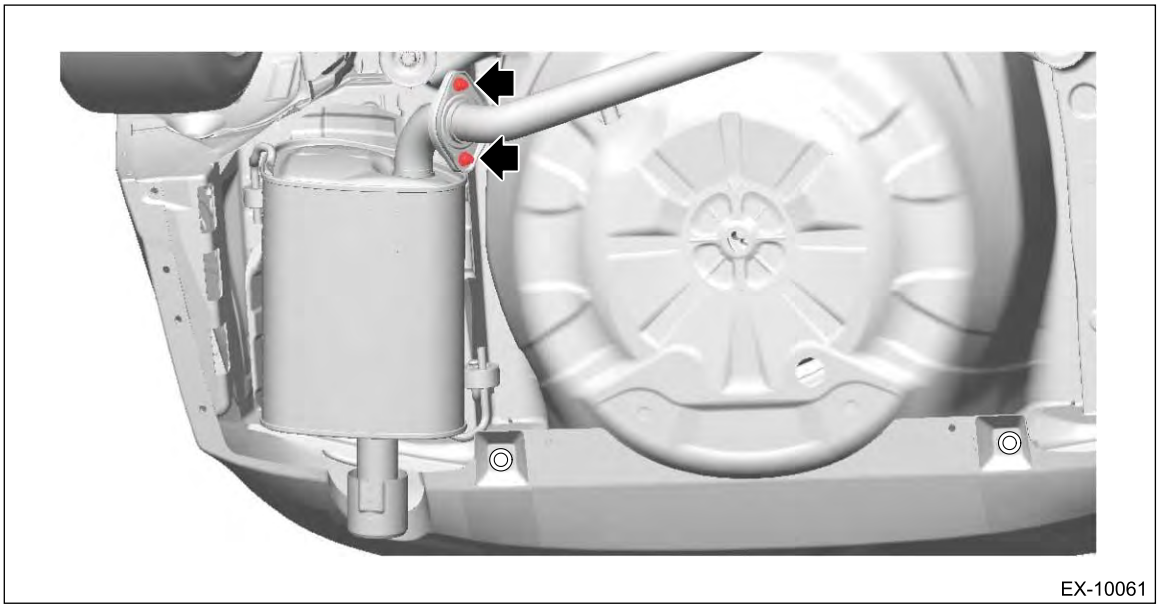
   Tightening torque:

   48 N·m (4.9 kgf-m, 35.4 ft-lb)
5. Connect the front exhaust pipe and rear exhaust pipe.

   Tightening torque:

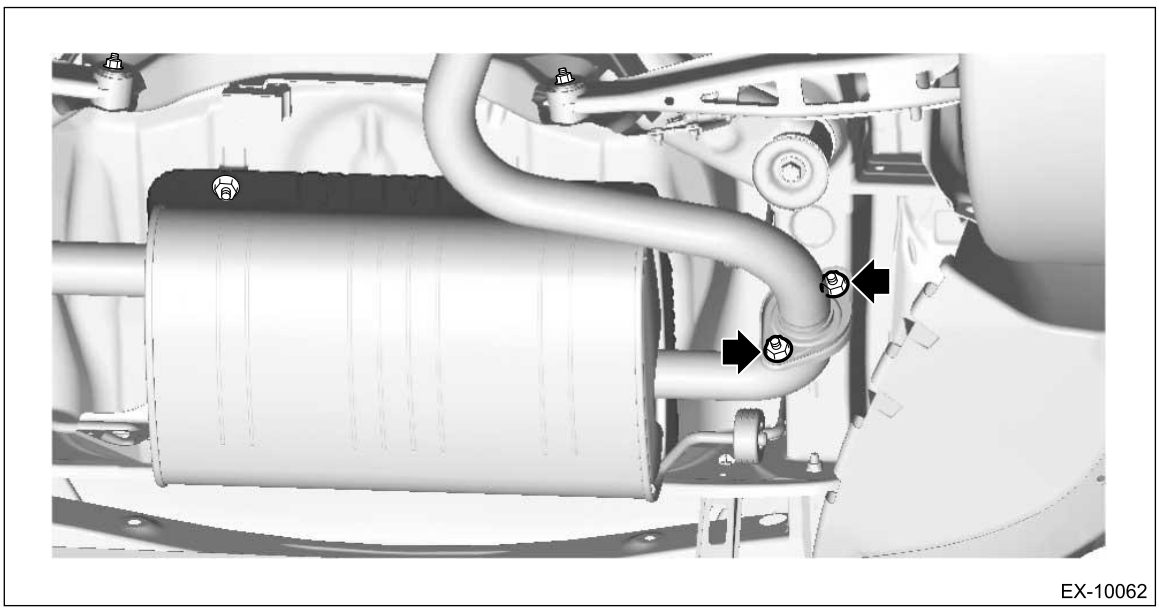
18 N·m (1.8 kgf-m, 13.3 ft-lb)

EXHAUST(H4DO) > Rear Exhaust Pipe



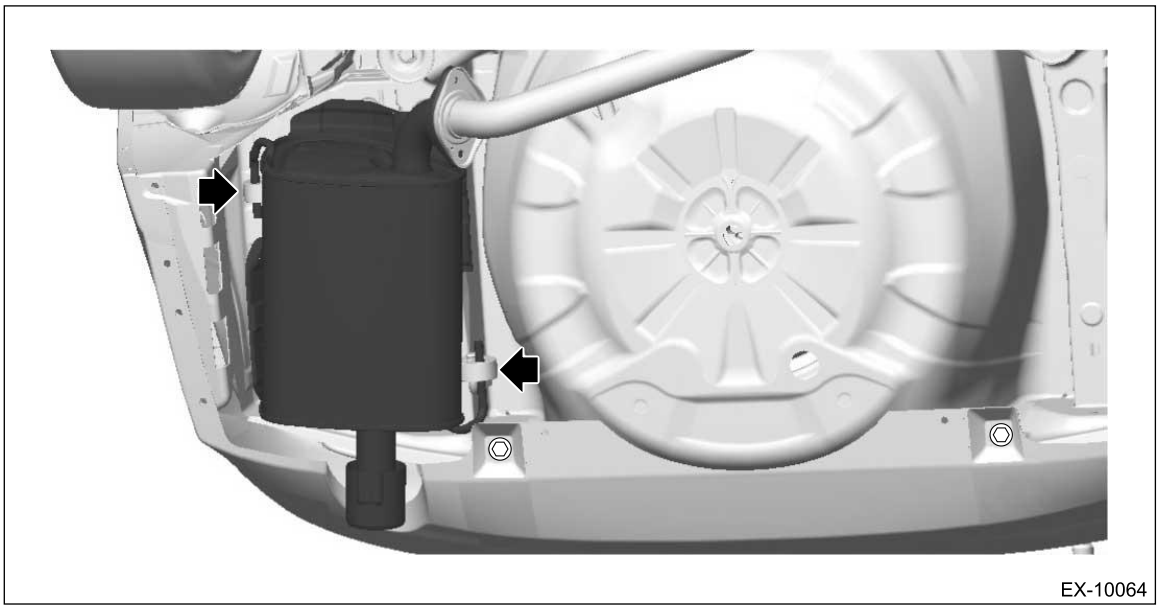
INSPECTION

1. Check that no leaks are found.
2. Check for deformation, damage, or excessive rusting.
3. Check for any foreign matter adhered.
4. Check for clogging.
5. Check the cushion rubber for wear or crack.



REMOVAL

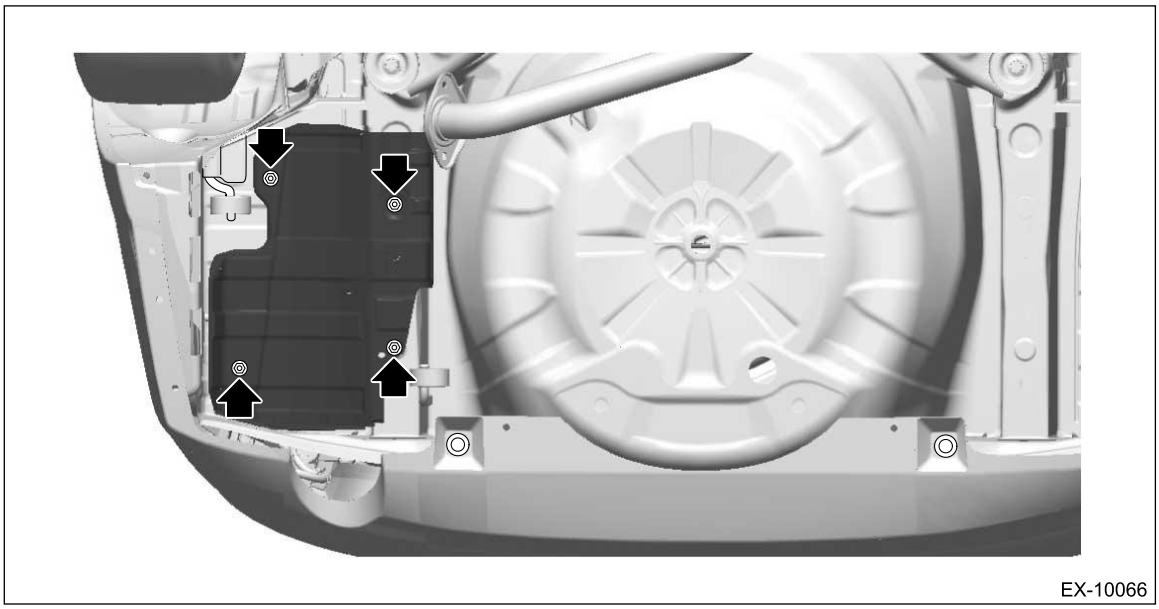
Caution:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.



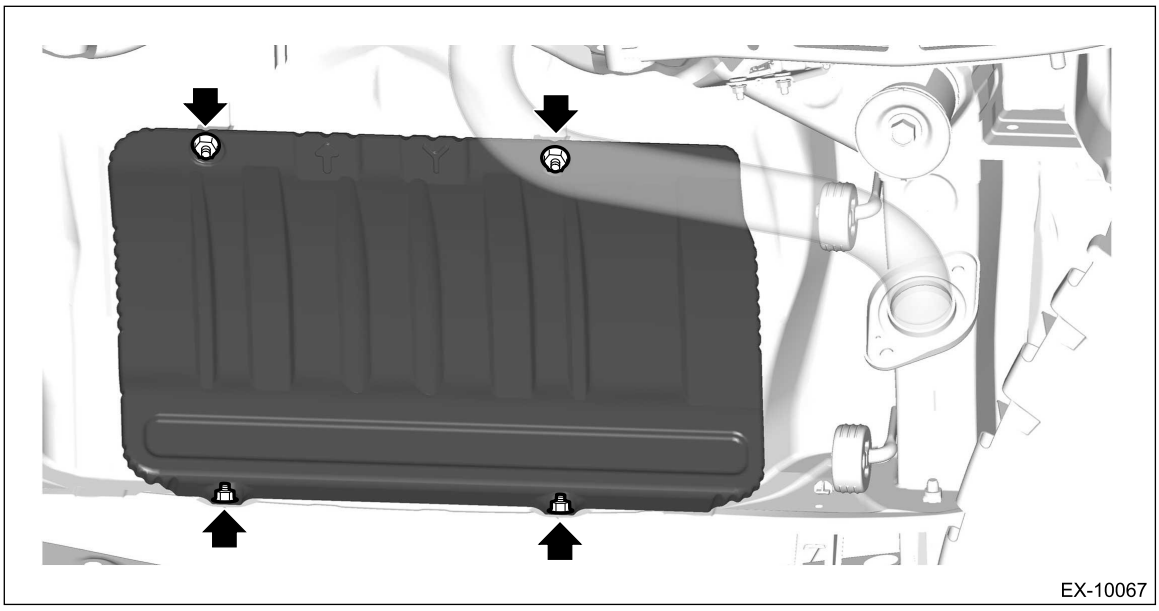
1. Disconnect the rear exhaust pipe and muffler.
   - 4 door model

   - 5 door model

2. Apply a coat of spray type lubricant to the mating area of cushion rubber.
3. Remove the muffler.
   Caution:
   Be careful not to let the muffler contact the rear bumper.
   - 4 door model



- 5 door model



4. Remove the heat shield cover.

- 4 door model

- 5 door model

EXHAUST(H4DO) > Muffler

INSTALLATION

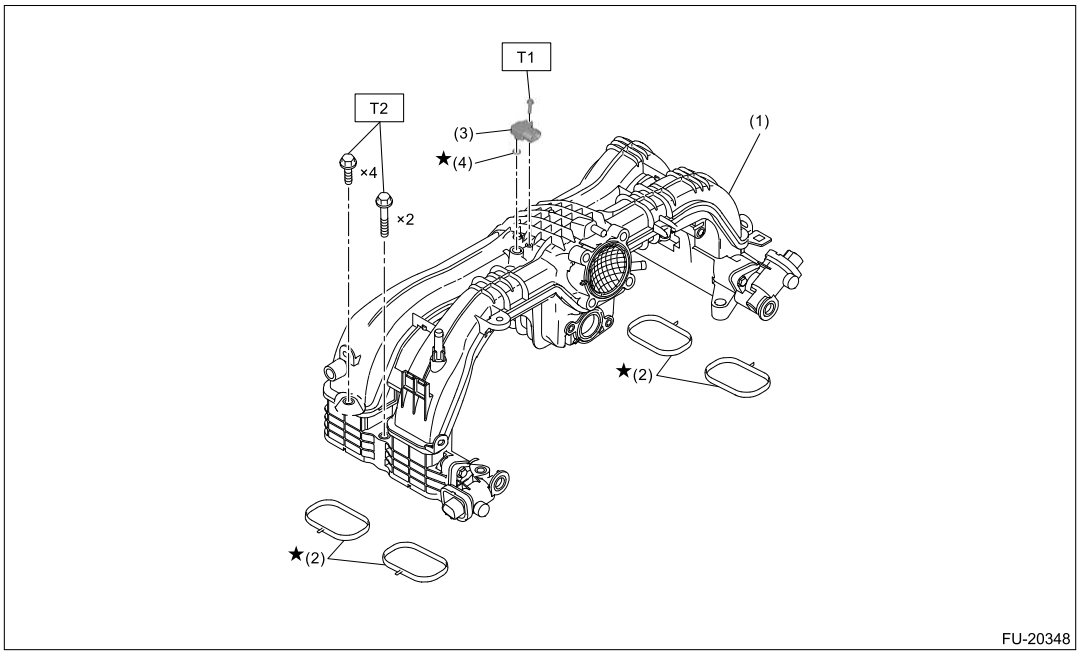
1. Install the heat shield cover.
   Tightening torque:
   10 N·m (1.0 kgf-m, 7.4 ft-lb)
2. Apply a coat of spray type lubricant to the mating area of cushion rubber.
3. Install the muffler.
   Note:
   After installation, degrease the cushion rubber.
4. Set a new gasket, and connect the rear exhaust pipe and muffler.
   Caution:
   Be sure to use a new self-locking nut.
   Tightening torque:
   48 N·m (4.9 kgf-m, 35.4 ft-lb)

INSPECTION

1. Check that no leaks are found.
2. Check for deformation, damage, or excessive rusting.
3. Check for any foreign matter adhered.
4. Check for clogging.
5. Check the cushion rubber for wear or crack.

FUEL INJECTION (FUEL SYSTEMS)(H4DO)

FU(H4DO)



1. General Description
2. Throttle Body
3. Intake Manifold Assembly
4. Tumble Generator Valve
5. Tumble Generator Valve Actuator
6. Fuel Insulator
7. Fuel Injector
8. Fuel Pressure Sensor
9. High Pressure Fuel Pump
10. High Pressure Fuel Delivery Pipe
11. Engine Wiring Harness
12. Engine Coolant Temperature Sensor
13. Engine Oil Temperature Sensor
14. Crankshaft Position Sensor
15. Crankshaft Position Sensor Plate
16. Camshaft Position Sensor
17. Oil Control Solenoid

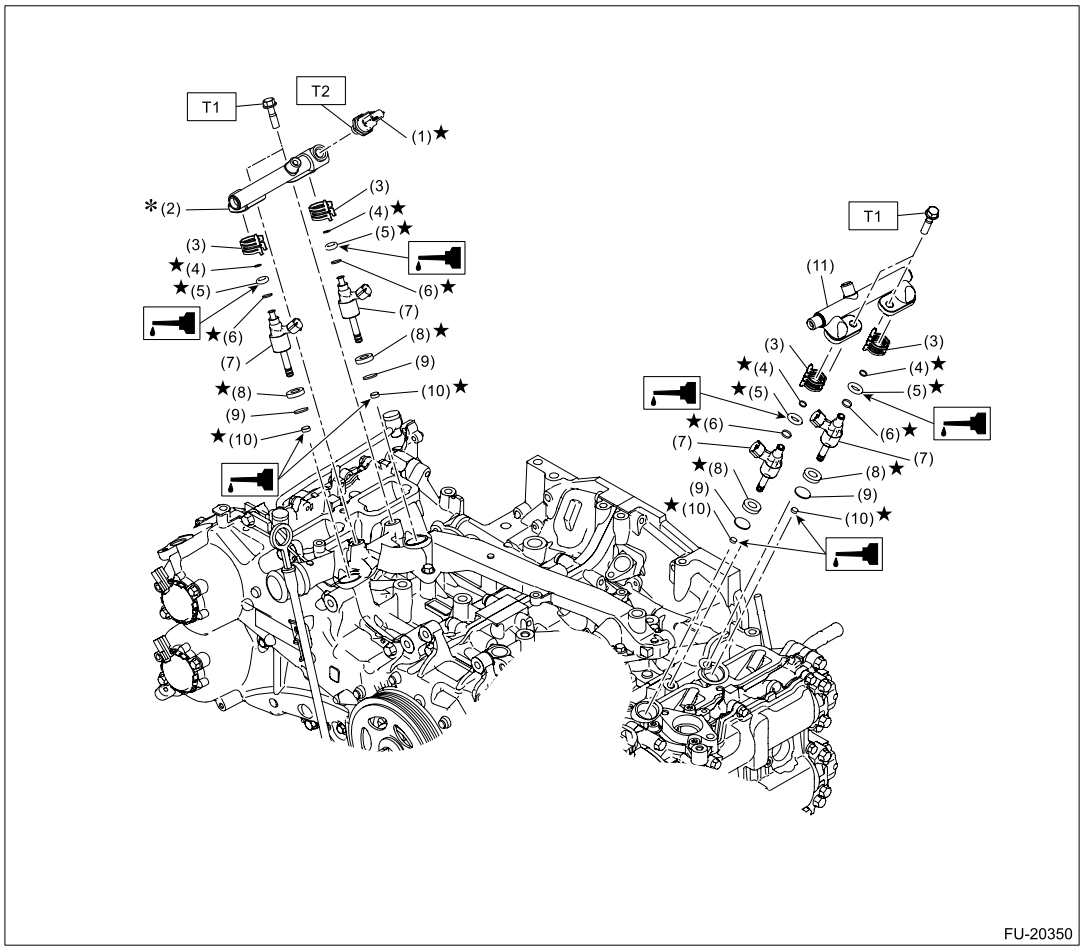
26. Fuel Pump Relay
27. Fuel
28. Fuel Tank Protector
29. Fuel Tank
30. Fuel Filler Pipe
31. Fuel Pump
32. Fuel Level Sensor
33. Fuel Filter
34. Fuel Delivery and Evaporation Lines
35. Fuel System Trouble in General

SPECIFICATION

Fuel tank	Capacity	50 L (13.2 US gal, 11.0 Imp gal)
	Location	Under rear seat
Fuel pump	Type	Impeller
	Shutoff discharge pressure	830 kPa (8.46 kg/cm^2, 120.3 psi) or less
	Discharge rate	70 L (18.5 US gal, 15.4 Imp gal)/h or more [12.5 V at 400 kPa (4.1 kg/cm^2, 58.0 psi)]
Fuel filter		In-tank type

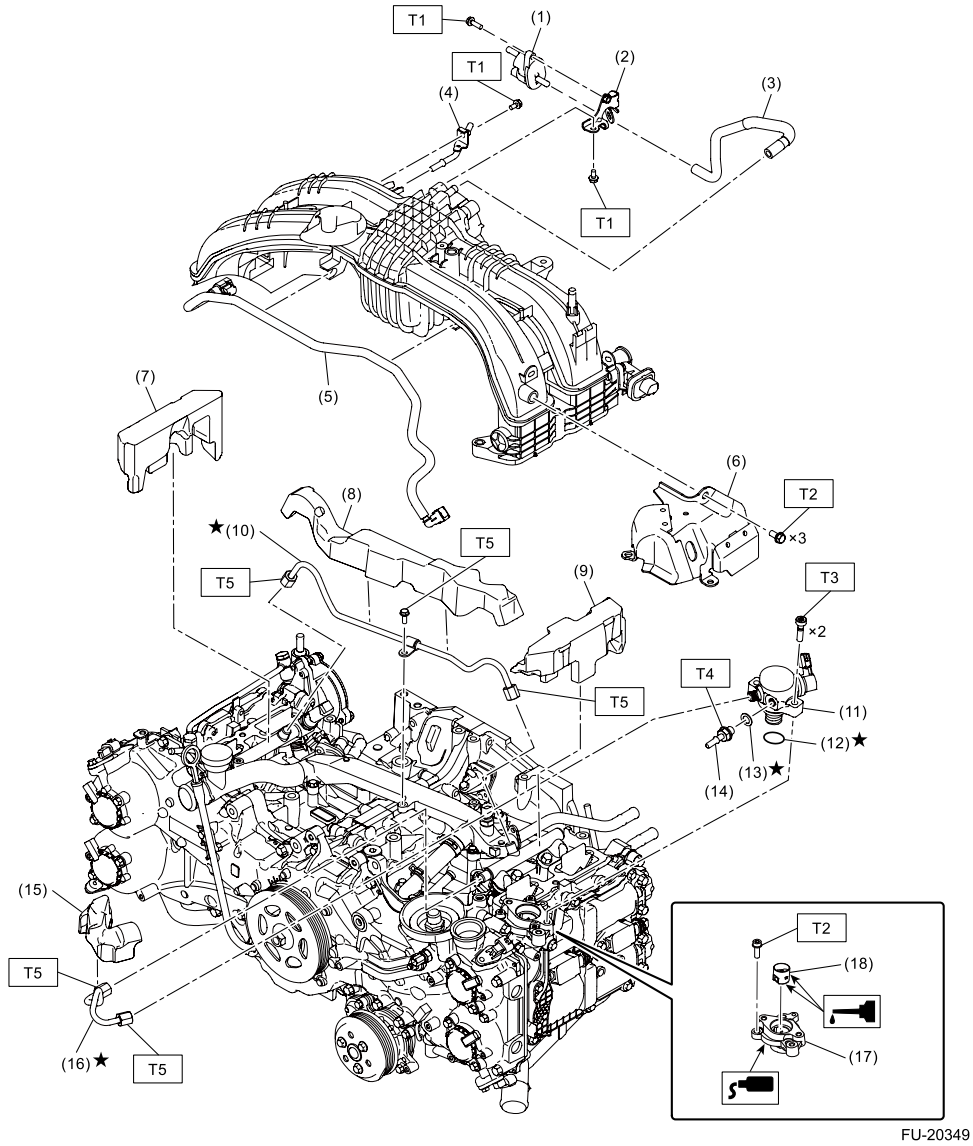
COMPONENT



1. INTAKE MANIFOLD ASSY

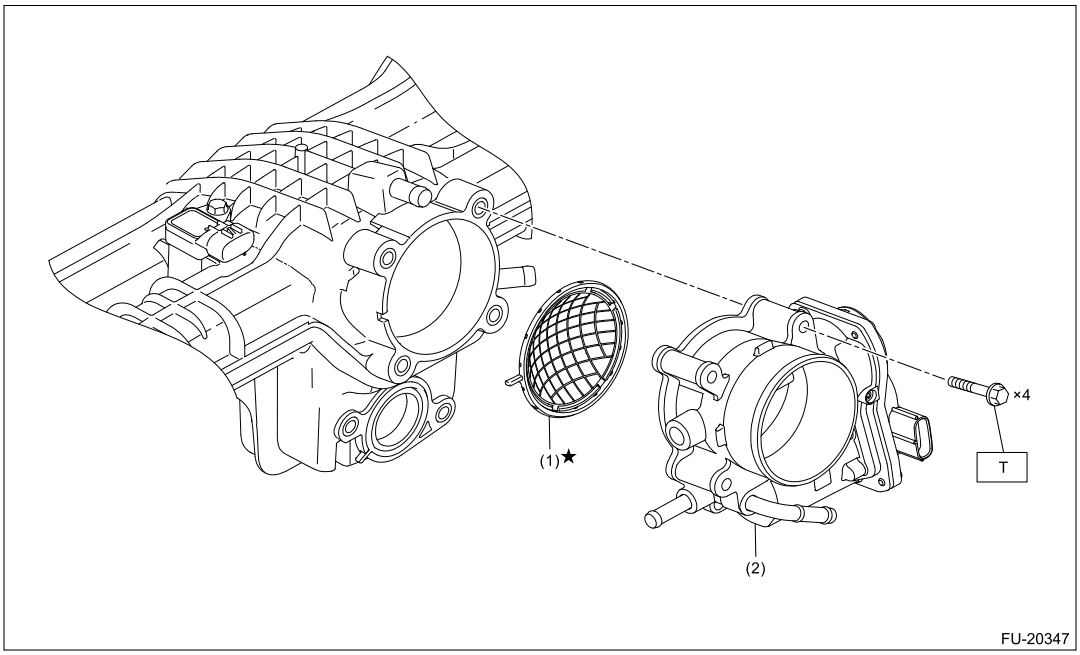
(1) Intake manifold ASSY
(2) Gasket
(3) Manifold absolute pressure sensor
(4) O-ring

Tightening torque: N·m (kgf-m, ft-lb)
T1: 3.4 (0.3, 2.5)
T2: 25 (2.5, 18.4)



2. FUEL INJECTOR

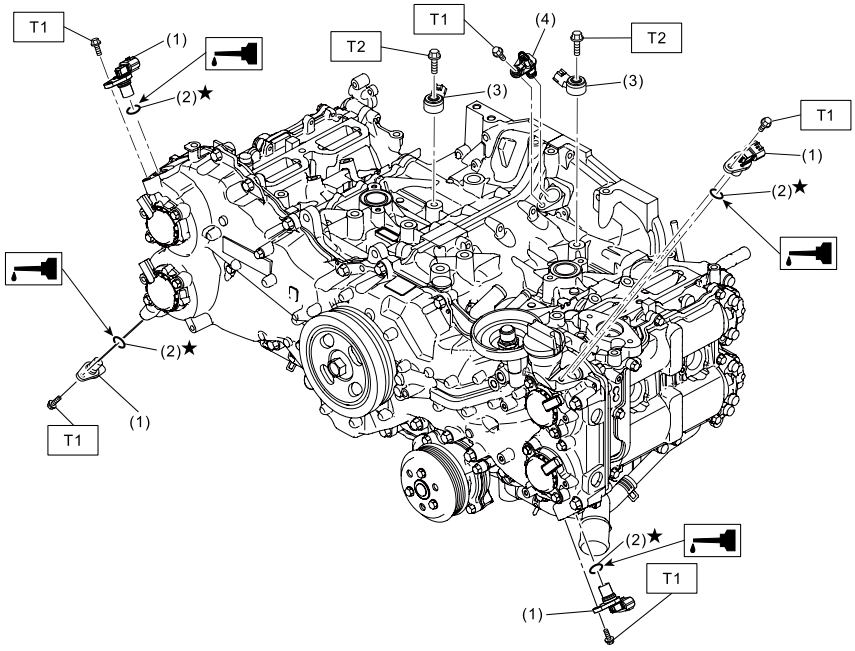
(1) Fuel pressure sensor	(6) Back-up ring	(11) Fuel injector pipe LH
(2) Fuel injector pipe RH	(7) Fuel injector	
(3) Fuel injector holder	(8) Slider washer	***Tightening torque: N·m (kgf-m, ft-lb)***
(4) Stopper ring	(9) C-ring	***T1: 19 (1.9, 14.0)***
(5) O-ring seal	(10) Fuel injector seal	***T2: 46 (4.7, 33.9)***



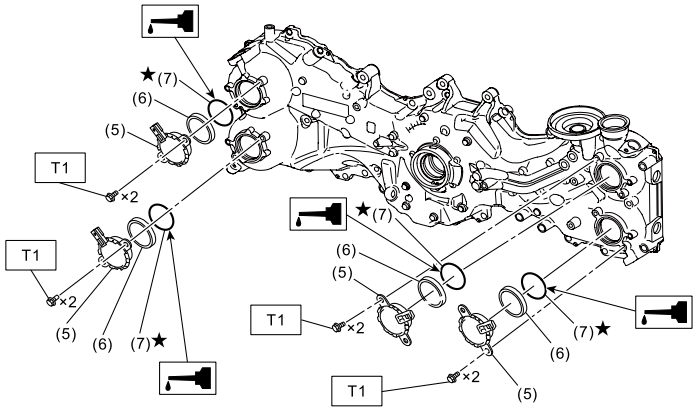
* When removing the fuel pressure sensor from the fuel injector pipe RH, replace it with a new one.

3. FUEL PIPE

(1) Purge control solenoid valve	(10) High-pressure fuel delivery pipe assembly	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Purge control solenoid valve bracket	(11) High-pressure fuel pump	***T1: 6.4 (0.7, 4.7)***
(3) Vacuum hose	(12) O-ring	***T2: 19 (1.9, 14.0)***
(4) Fuel pipe	(13) Gasket	***T3: 21 (2.1, 15.5)***
(5) Fuel delivery pipe A	(14) Fuel delivery pipe B	***T4: 48 (4.9, 35.4)***
(6) Fuel pipe protector	(15) Fuel pipe insulator No. 4	***T5: Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION.***
(7) Fuel pipe insulator No. 1	(16) High-pressure fuel delivery pipe	
(8) Fuel pipe insulator No. 2	(17) High-pressure fuel pump case	
(9) Fuel pipe insulator No. 3	(18) Fuel pump lifter	



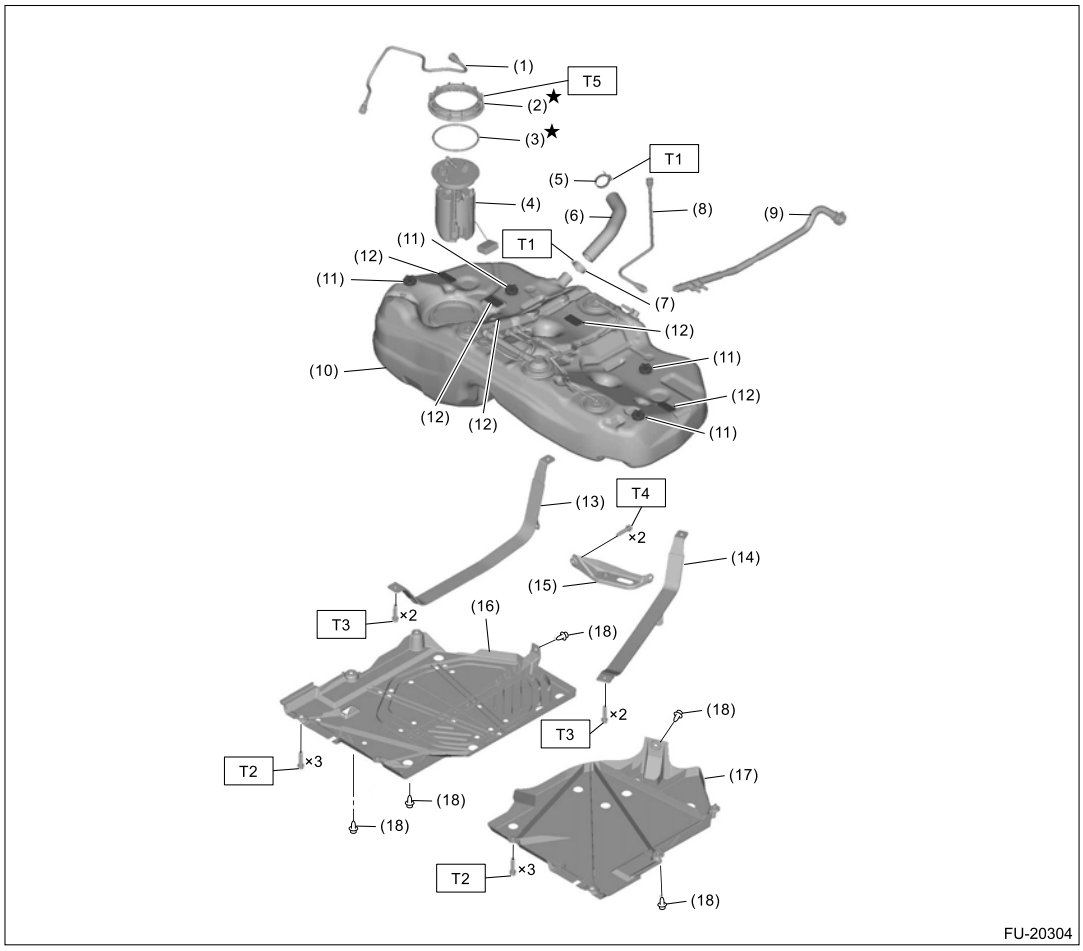
4. THROTTLE BODY



(1) Gasket
(2) Throttle body

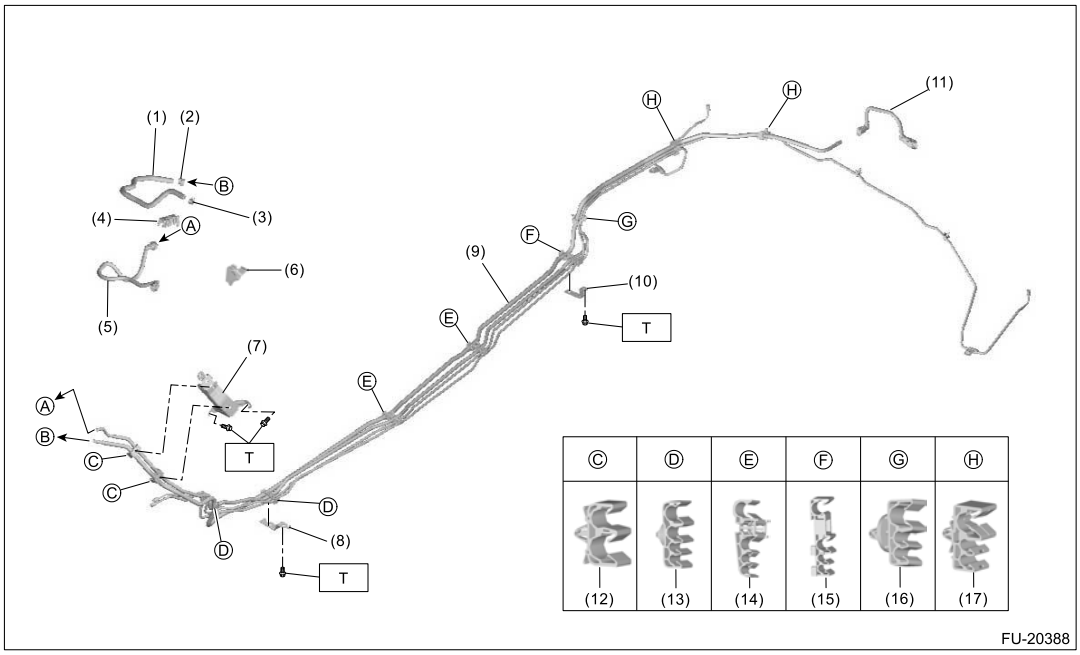
Tightening torque: N·m (kgf-m, ft-lb)
T: 8 (0.8, 5.9)

5. CRANKSHAFT POSITION SENSOR, CAMSHAFT POSITION SENSOR, KNOCK SENSOR AND OIL CONTROL SOLENOID



FU-20392

(1) Camshaft position sensor	(5) Oil control solenoid	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) O-ring	(6) Back-up ring	***T1: 6.4 (0.7, 4.7)***
(3) Knock sensor	(7) O-ring	***T2: 25 (2.5, 18.4)***
(4) Crankshaft position sensor		

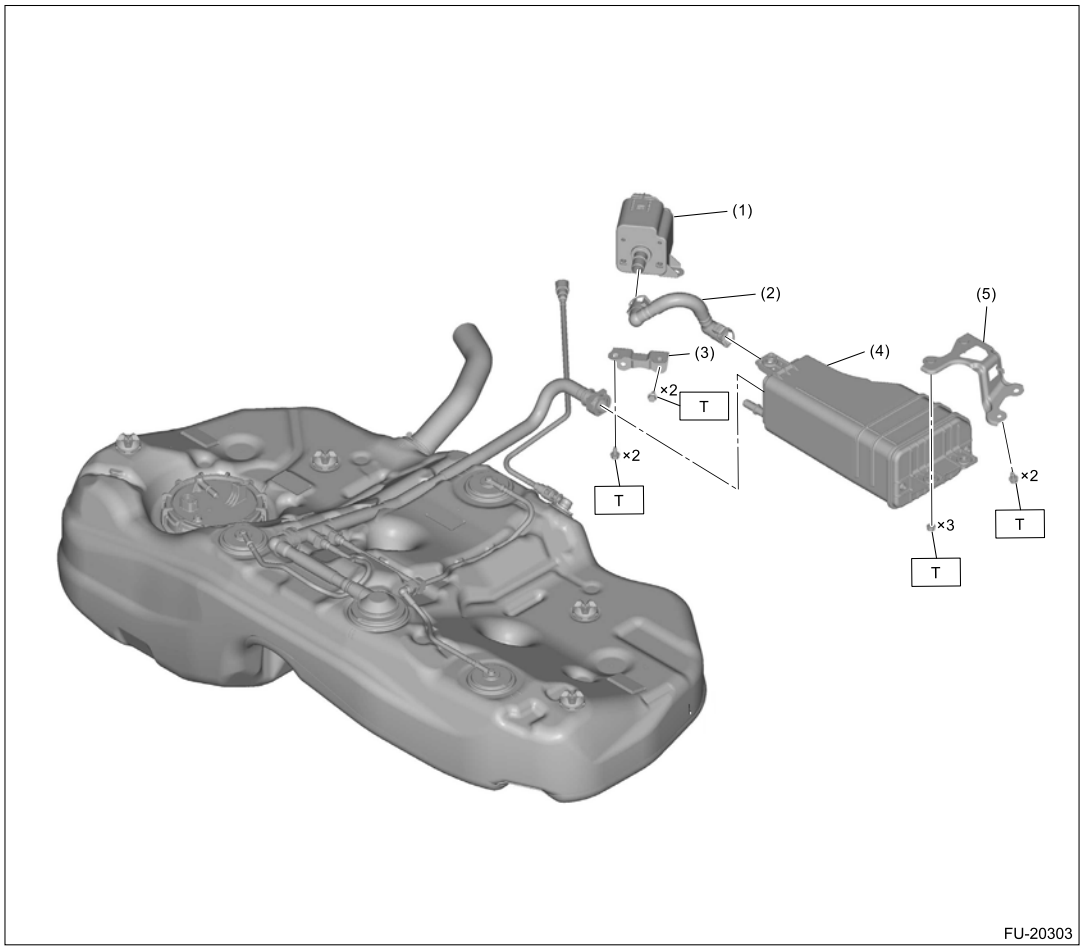


6. FUEL TANK

(1) Fuel delivery tube	(10) Fuel tank	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Ring nut	(11) Cushion	***T1: 2.5 (0.3, 1.8)***
(3) Fuel pump gasket	(12) Cushion	***T2: 18 (1.8, 13.3)***
(4) Fuel pump assembly	(13) Fuel tank band RH	***T3: 33 (3.4, 24.3)***
(5) Clamp	(14) Fuel tank band LH	***T4: 37 (3.8, 27.3)***
(6) Fuel filler hose	(15) Fuel tank band bracket	***T5: 130 (13.3, 95.9)***
(7) Clamp	(16) Fuel tank protector RH	
(8) Circulate tube	(17) Fuel tank protector LH	
(9) Vent tube	(18) Clip	

7. FUEL LINE

- Fuel line 1



(1) Purge hose
(2) Clip
(3) Clip
(4) Fuel delivery tube clamp
(5) Fuel delivery tube
(6) Tube and hose clamp
(7) Fuel pipe bracket A
(8) Fuel pipe bracket B
(9) Fuel pipe ASSY
(10) Fuel pipe bracket C
(11) Purge tube
(12) Pipe clamp
(13) Pipe clamp
(14) Pipe clamp
(15) Pipe clamp
(16) Pipe clamp
(17) Pipe clamp

Tightening torque: N·m (kgf-m, ft-lb)

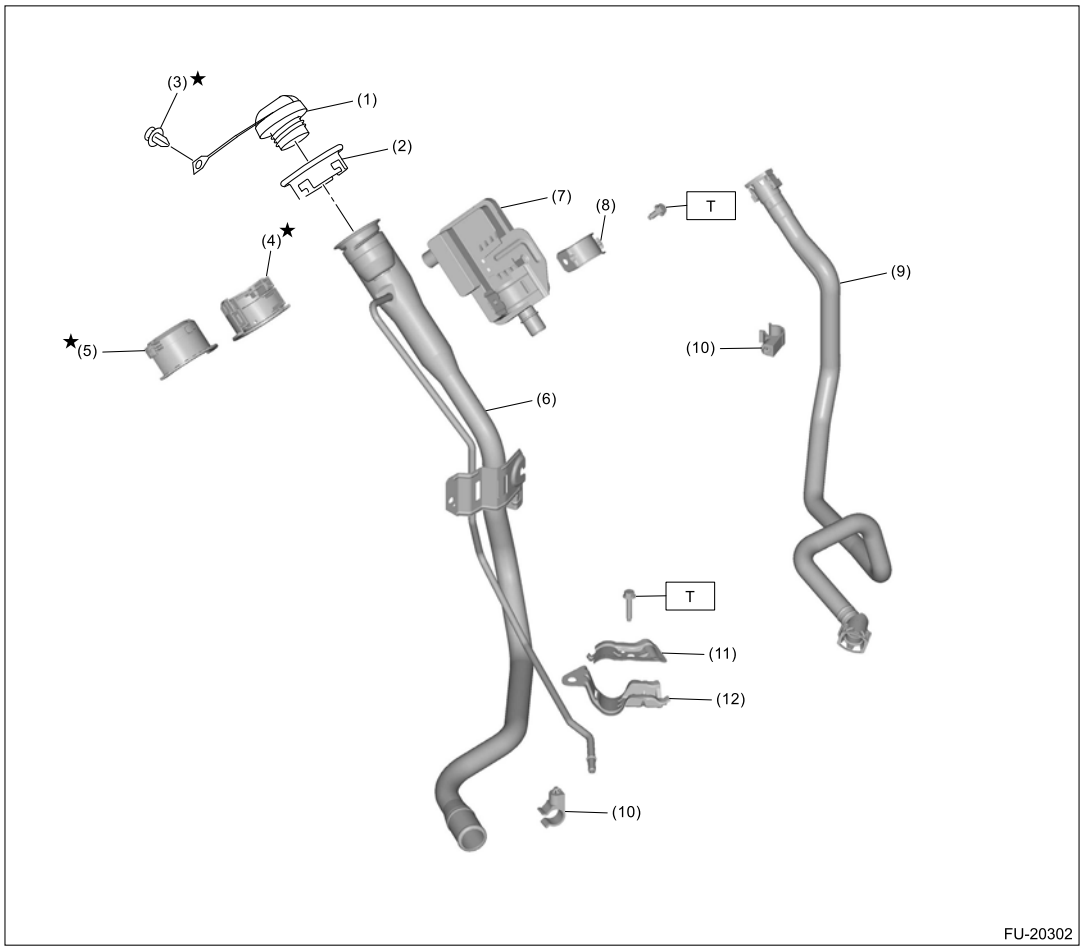
T: 18 (1.8, 13.3)

- Fuel line 2

(1) Leak check valve ASSY

(2) Drain tube

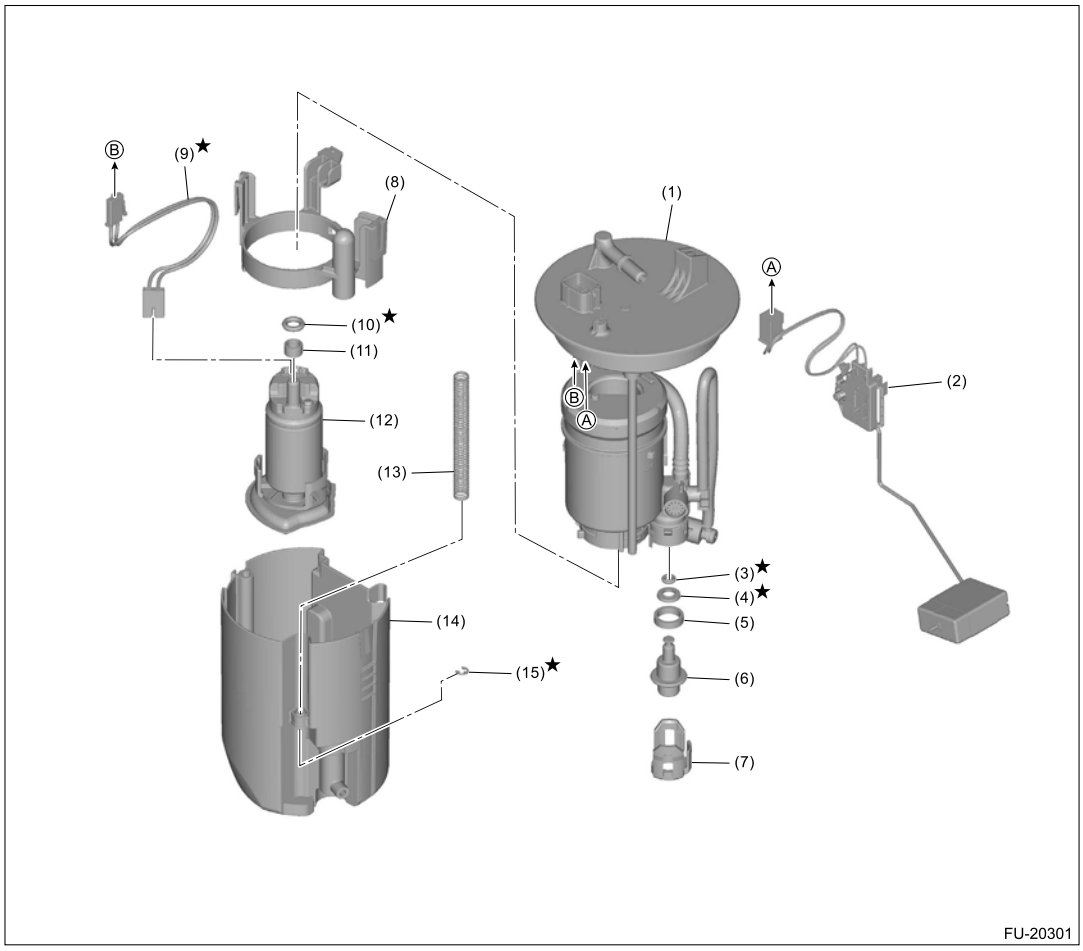
(3) Leak check valve ASSY bracket



(4) Canister

(5) Canister bracket

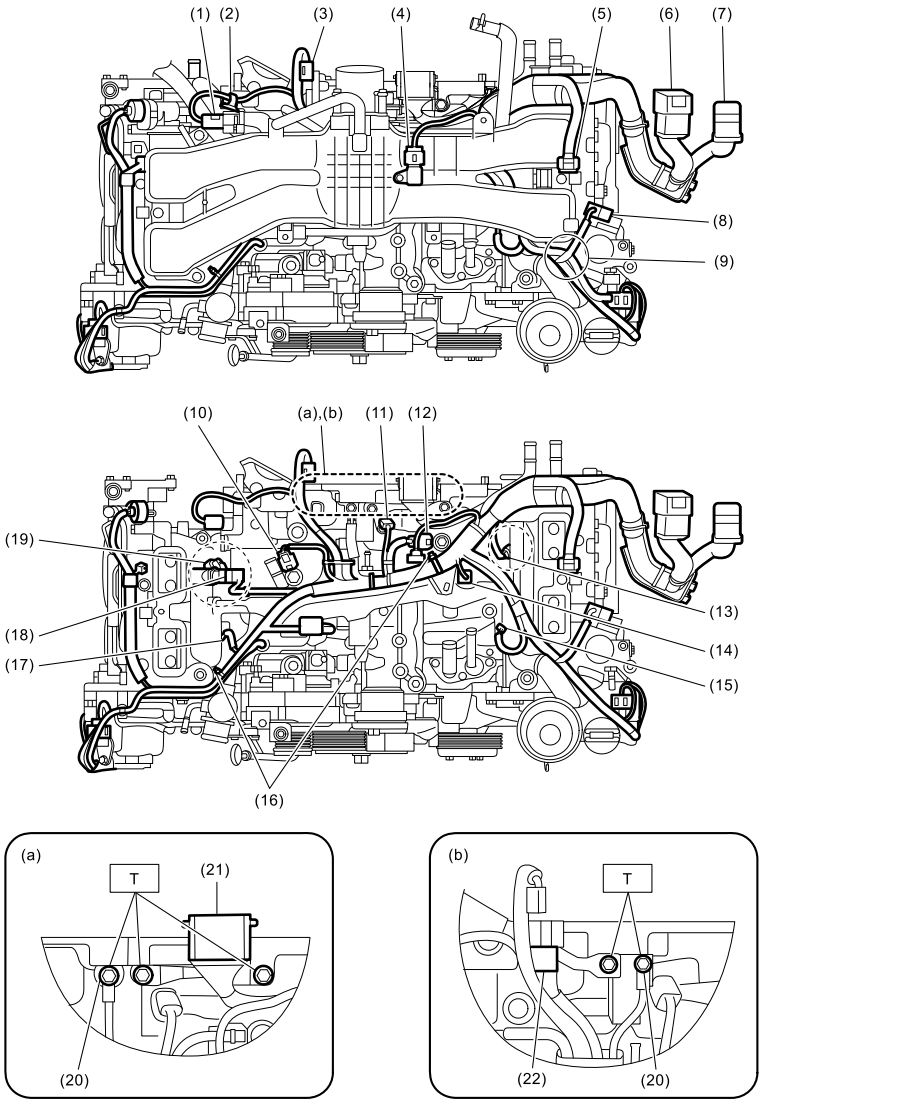
Tightening torque: N·m (kgf-m, ft-lb)



T: 8 (0.8, 5.9)

8. FUEL FILLER PIPE

(1) Fuel filler cap	(6) Fuel filler pipe	(11) Upper bracket
(2) Fuel filler pipe protector	(7) Drain filter assembly	(12) Lower bracket
(3) Clip	(8) Drain filter bracket	
(4) Neck holder A	(9) Drain tube	***Tightening torque: N·m (kgf-m, ft-lb)***
(5) Neck holder B	(10) Tube clamp	***T: 7.5 (0.8, 5.5)***

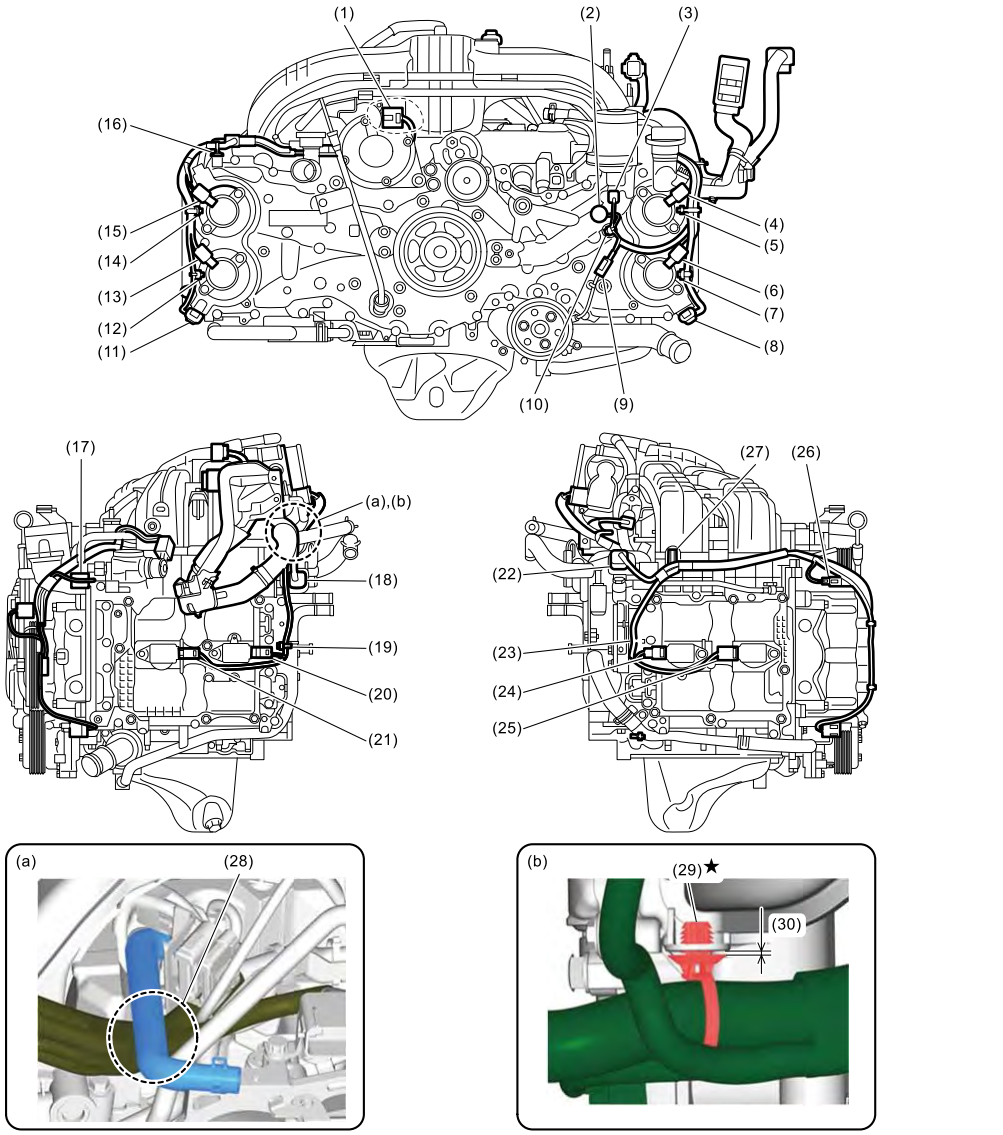


9. FUEL PUMP

(1) Fuel filter ASSY	(6) Pressure regulator	(11) Spacer
(2) Fuel level sensor	(7) Pressure regulator cap	(12) Fuel pump
(3) O-ring	(8) Fuel pump holder	(13) Spring
(4) O-ring	(9) Connector cable	(14) Fuel chamber ASSY
(5) Back-up ring	(10) O-ring	(15) Clip

10. ENGINE WIRING HARNESS

- Structural diagram 1



FU-20351

(27) Secure a clip to the intake manifold assembly.
(28) Route the PCV hose to upper side, and route the engine wiring harness to under side.
(29) Clip
(30) The gap after the stopper is inserted must be 3 mm (0.12 in) or less.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > General Description

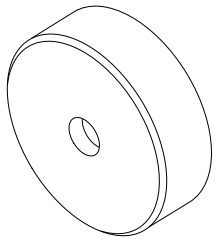
CAUTION

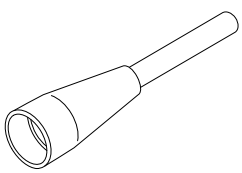
- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Place "NO OPEN FLAMES" signs near the working area.
- Always ventilate sufficiently after removing/installing the fuel system components.
- Prepare a container and cloth to prevent scattering of fuels when performing work where fuels can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Always inspect for fuel leaks after removing/installing the fuel system components.
- Follow all government and local regulations concerning disposal of refuse when disposing fuel.
- Always use new application oil during work.

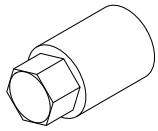
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > General Description

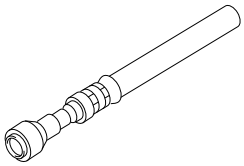
PREPARATION TOOL

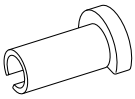
1. SPECIAL TOOL

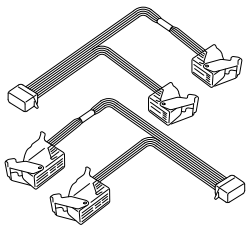












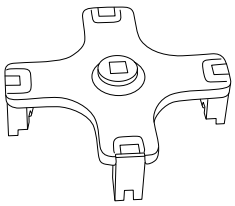


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
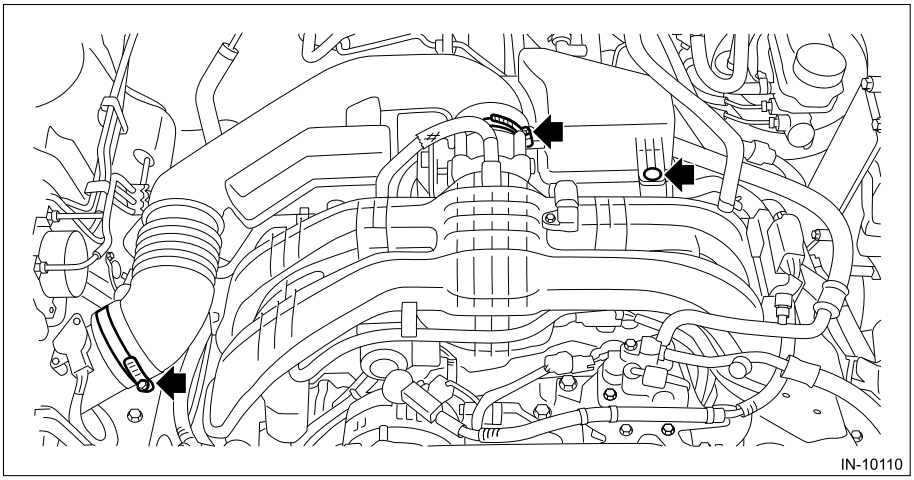
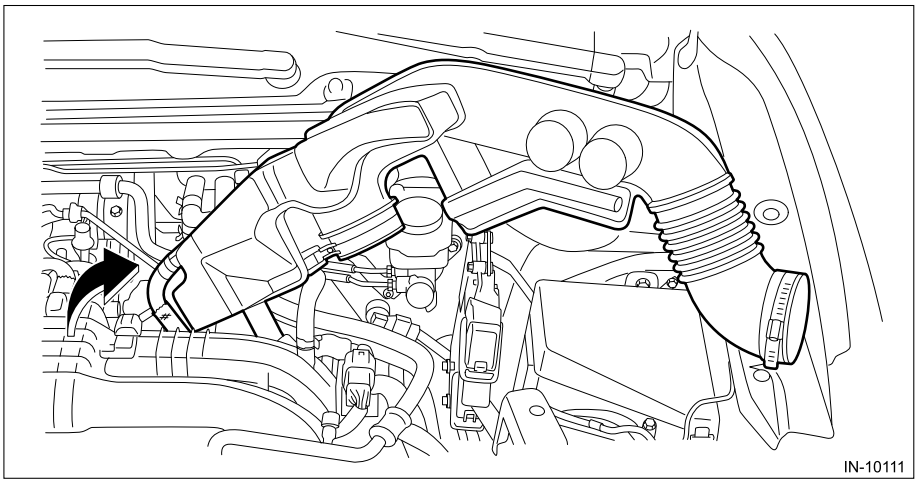
 ST18271AA020	18271AA020 (Newly adopted tool)	ADJUSTER	Used for installing the fuel injector seal.
 ST18671AA050	18671AA050 (Newly adopted tool)	GUIDE	Used for installing the fuel injector seal.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	Used for removing and installing the engine coolant temperature sensor and engine oil temperature sensor. **Note:** **STRUT MOUNT SOCKET (20099PA000) can also be used.**
 ST42075AG690	42075AG690	FUEL HOSE	Used for draining fuel. **Note:** **This is the SUBARU genuine part.**
 ST42099AE000	42099AE000	QUICK CONNECTOR RELEASE	Used for removing the quick connector on the fuel hose.
 ST18460AA120	18460AA120 (Newly adopted tool)	CHECK BOARD	Used for measuring voltage and resistance of ECM terminals.
 ST42099FL000	42099FL000 (Newly adopted tool)	ST FUEL PUMP	Used for removing and installing the fuel pump.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



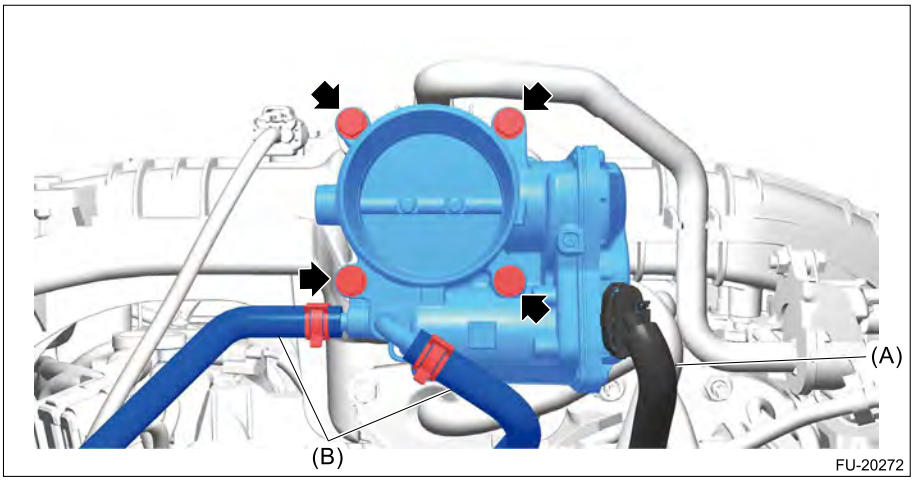
2. GENERAL TOOL

TOOL NAME	REMARKS



TOOL NAME	REMARKS
TORX® E8	Used for removing and installing EGR control valve stud bolts.
TORX PLUS® 40IP	Used for removing and installing high-pressure fuel pump.
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for inspecting the waveform of each sensor.
Mighty Vac	Used for inspecting the manifold absolute pressure sensor.
DST-i	Used together with Subaru Select Monitor 4.

REMOVAL



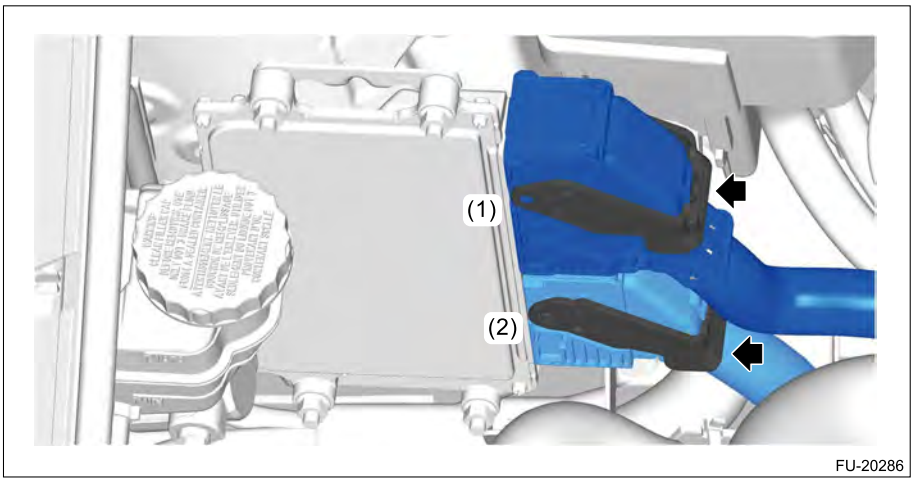
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
3. Remove the clip from the air intake boot, and loosen the clamp.

4. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.

5. Disconnect the connectors (A) from the throttle position sensor.
6. Disconnect the preheater hose (B) from the throttle body.
7. Remove the throttle body from the intake manifold assembly.

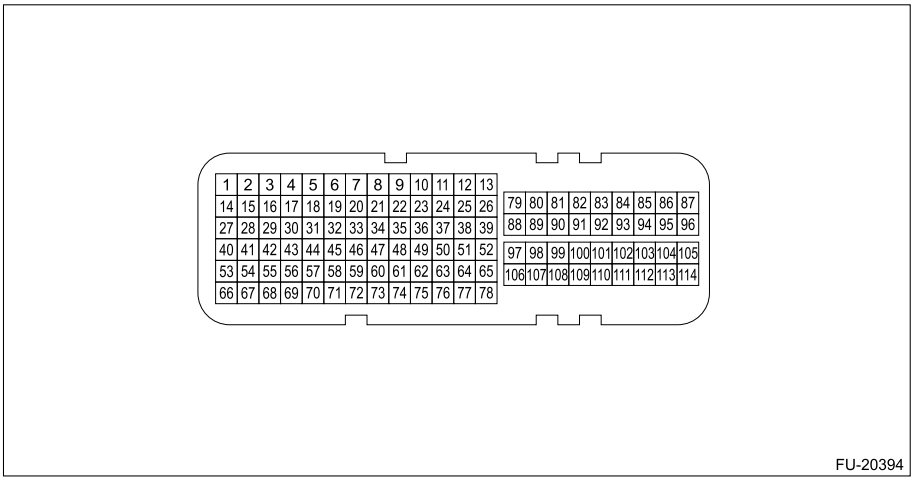
INSTALLATION

1. Set a new gasket and install the throttle body to the intake manifold assembly.
   Tightening torque:
   8 N·m (0.8 kgf-m, 5.9 ft-lb)
2. Connect the connector to the throttle position sensor.
3. Connect the preheater hoses to the throttle body.
4. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
5. Connect the ground terminal to battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
6. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.



FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Throttle Body

INSPECTION



1. THROTTLE SENSOR (METHOD WITH CIRCUIT TESTER)

Note:
Individual difference of the accelerator pedal may not be corrected sufficiently on the ECM side after DTCs were cleared or the battery was removed and installed on the vehicle. Therefore, when the reference voltage is not reached after following the procedure, repeat the ignition switch ON (engine OFF) and ignition switch OFF operations 40 times at intervals of three seconds or more, and then measure the voltage again.

1. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the connector from ECM in numerical order as shown in the figure.

3. Attach the ST between the ECM, engine wiring harness and the bulkhead wiring harness. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.
   Special Tool:
   CHECK BOARD (18460AA120)
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Turn the ignition switch to ON. (Engine OFF)
6. Measure the voltage between ECM connector terminals.

Throttle sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	29 (+) and 30 (−)	Approx. 0.6 — 1.2 V
	Depressed (full opened)		Approx. 3.8 — 4.4 V
Sub	Not depressed (full closed)	43 (+) and 30 (−)	Approx. 1.4 — 2.0 V
	Depressed (full opened)		Approx. 4.0 — 4.6 V

7. After inspection, install the related parts in the reverse order of removal.

Note:

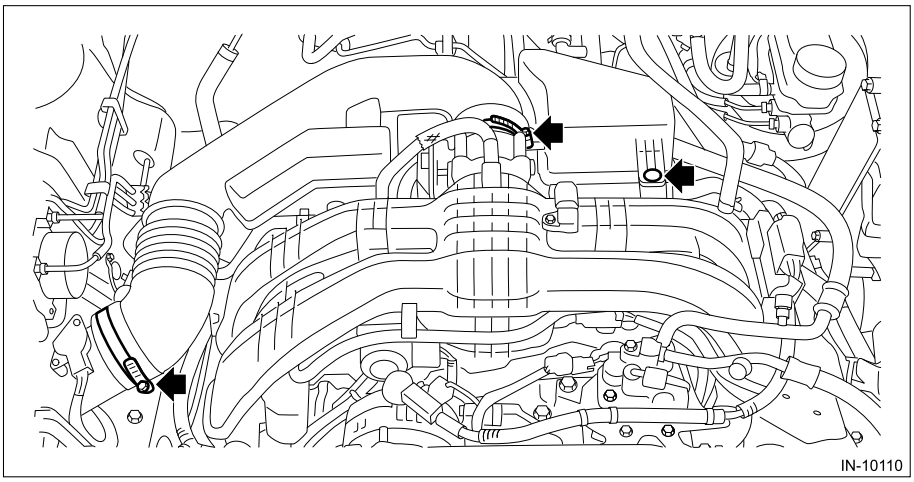
For installation procedures of ECM connectors, refer to Engine Control Module (ECM). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSTALLATION.

2. THROTTLE SENSOR (METHOD WITH SUBARU SELECT MONITOR)

Note:

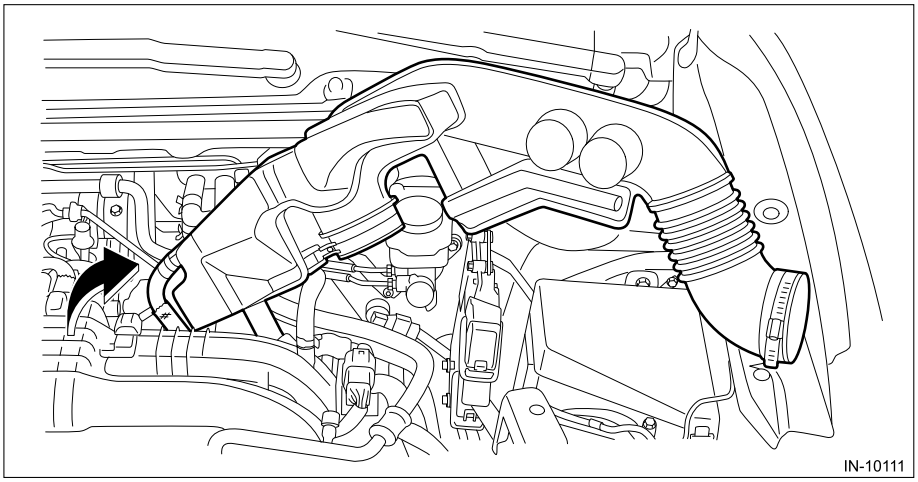
- **Individual difference of the accelerator pedal may not be corrected sufficiently on the ECM side after DTCs were cleared or the battery was removed and installed on the vehicle. Therefore, using the Subaru Select Monitor, check that the accelerator opening angle signal indicates 100%, when the accelerator pedal is fully depressed, and then perform the inspection.**
- **If the accelerator opening angle signal does not indicate 100%, check the accelerator pedal. Ref. to SPEED CONTROL SYSTEMS(H4DO)>Accelerator Pedal>INSPECTION.**

1. Turn the ignition switch to ON. (Engine OFF)
2. While reading the accelerator opening angle signal and throttle sensor voltage using Subaru Select Monitor, depress the accelerator pedal to fully open and fully closed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.



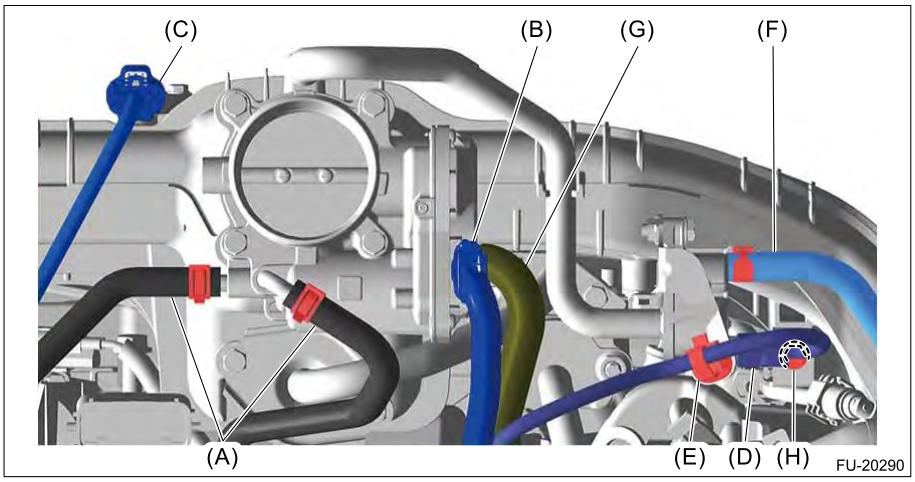
Throttle sensor	Acceleration opening angle signal	Standard
Main	0.0%	Approx. 0.6 — 1.2 V
	100.0%	Approx. 3.8 — 4.4 V
Sub	0.0%	Approx. 1.4 — 2.0 V
	100.0%	Approx. 4.0 — 4.6 V

3. OTHER INSPECTIONS

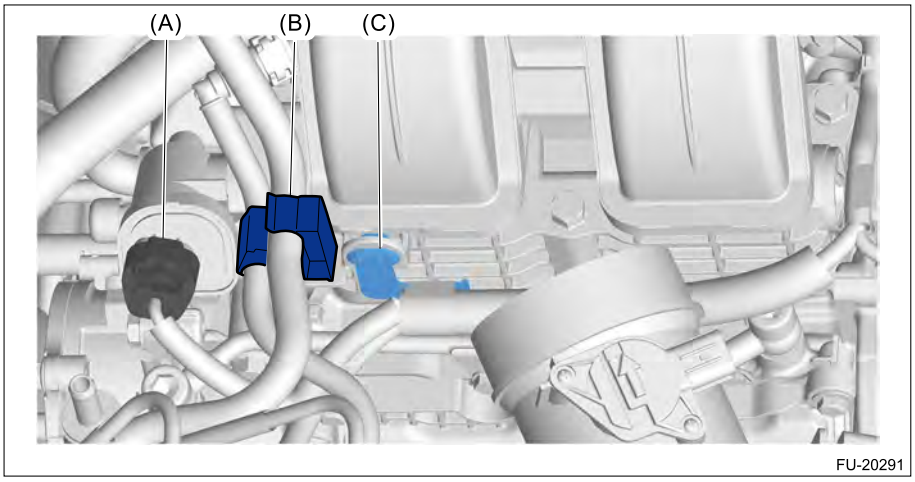


1. Check that the throttle body has no deformation, cracks or other damages.
2. Check that the preheater hose has no cracks, damage or loose part.

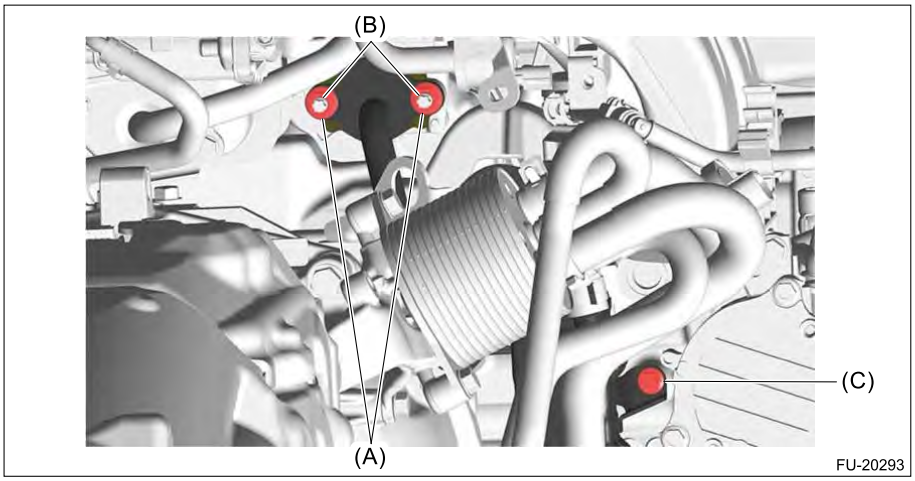
REMOVAL



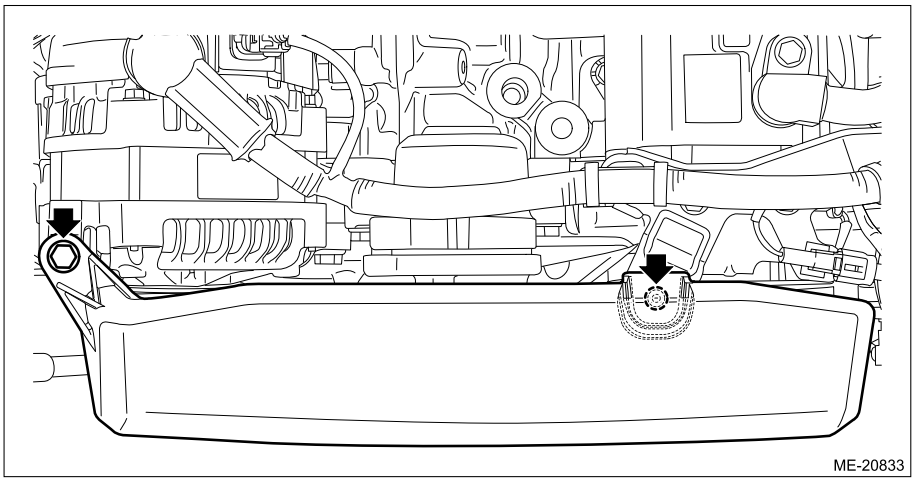
1. If the fuel delivery tube is disconnected after removing the intake manifold assembly, perform the following work.
   (1) Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
   (2) Open the fuel filler lid and remove the fuel filler cap.
   Note:
   This operation is required to release the inner pressure of the fuel tank.
2. Remove the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>REMOVAL.
3. Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
4. Remove the clip from the air intake boot, and loosen the clamp.



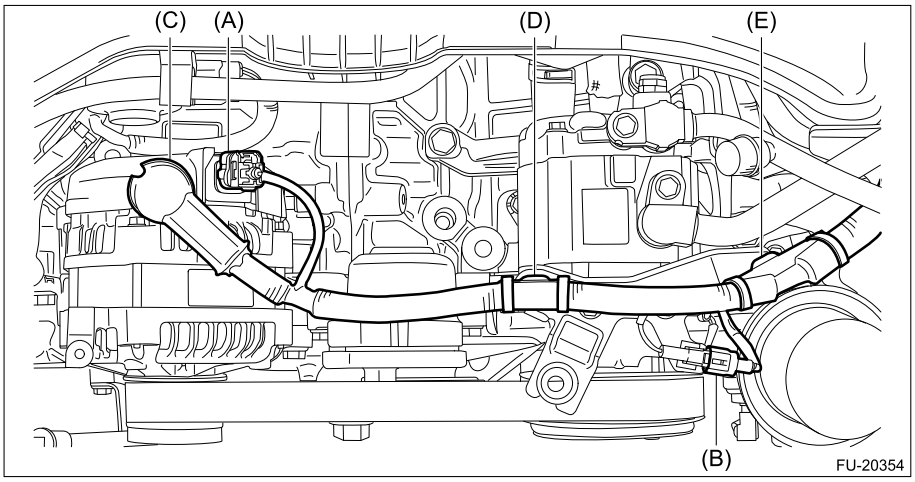
5. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.



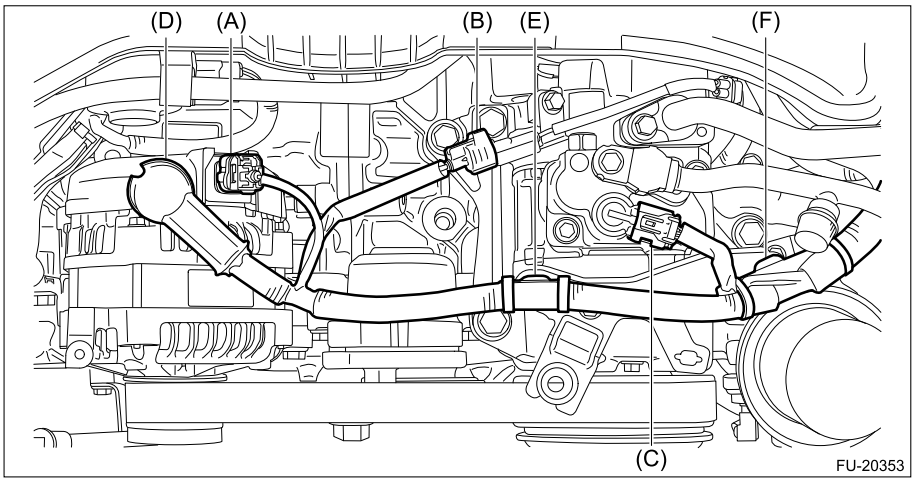
6. Disconnect the preheater hose (A) from the throttle body, and disconnect the connector (B).
7. Disconnect the connector (C) from manifold absolute pressure sensor.
8. Disconnect the connector (D) from the purge control solenoid valve, and remove clip (E).
9. Disconnect the evaporation hose (F) from the purge control solenoid valve.
10. Disconnect the PCV hose (G).
11. Remove the bolt (H) securing the fuel pipe.



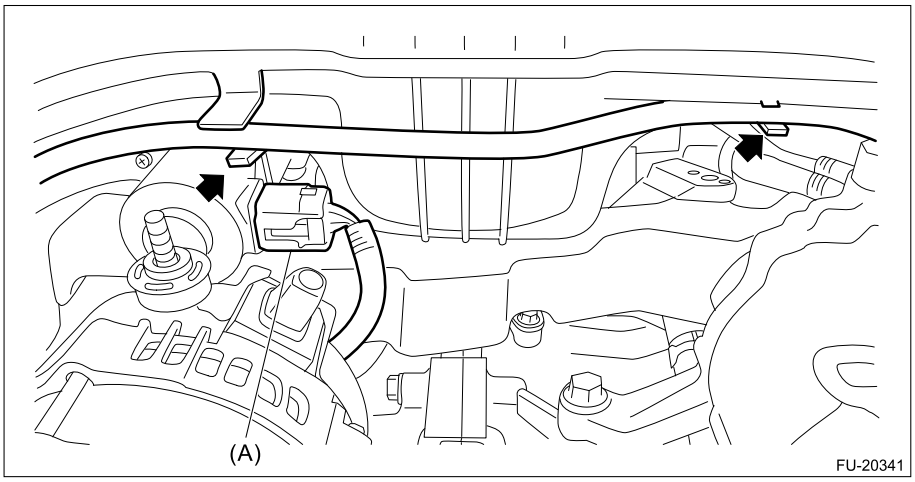
12. Disconnect the connector (A) from the tumble generator valve RH.
13. Remove the fuel delivery tube clamp (B).
14. Remove clip (C) securing the engine wiring harness.



15. Remove nut (A) securing the EGR cooler to the EGR control valve.
16. Remove stud bolt (B) using TORX® E8.
17. Loosen bolts (C) securing the EGR cooler to the cylinder head RH.

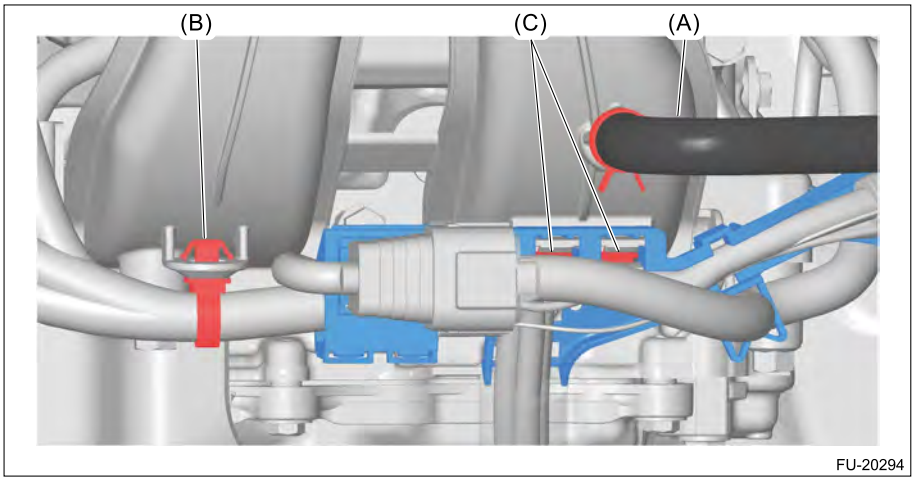


18. Remove the V-belt covers.



19. Disconnect the connector (A), connector (B) and terminal (C). (Fixed capacity A/C model)
20. Remove the clip (D) and clip (E) that secure the battery cable. (Fixed capacity A/C model)

21. Disconnect the connector (A), connector (B), connector (C) and terminal (D). (Variable capacity A/C model)
22. Remove the clip (E) and clip (F) that secure the battery cable. (Variable capacity A/C model)

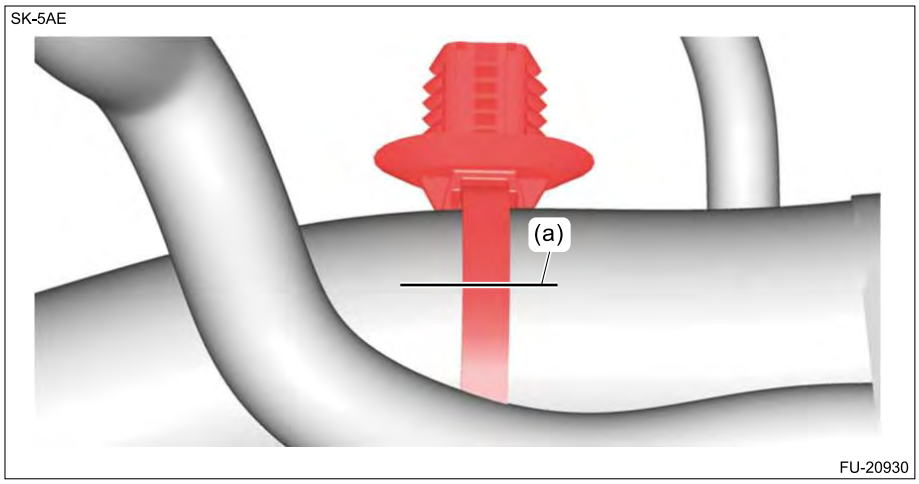


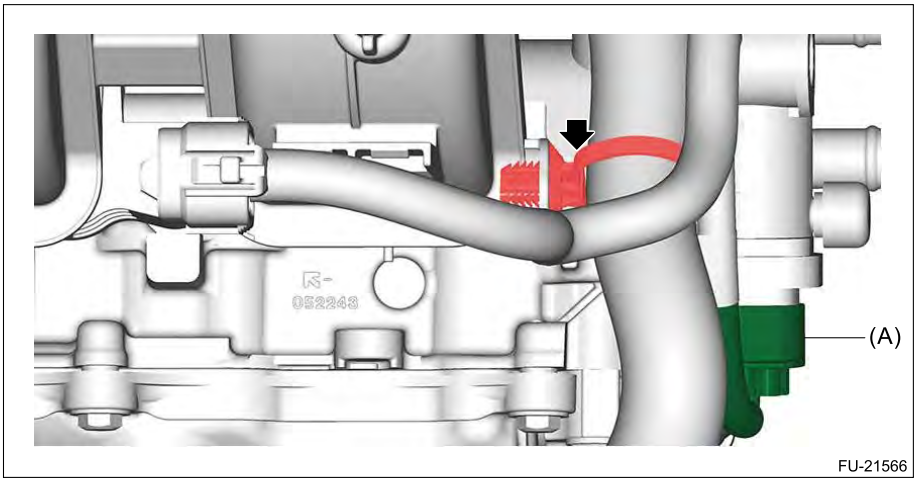
23. Disconnect the connector (A) from the EGR control valve.
24. Remove the fuel delivery tube.

25. Disconnect the brake booster vacuum hose (A).

26. Remove clip (B) securing battery cable.

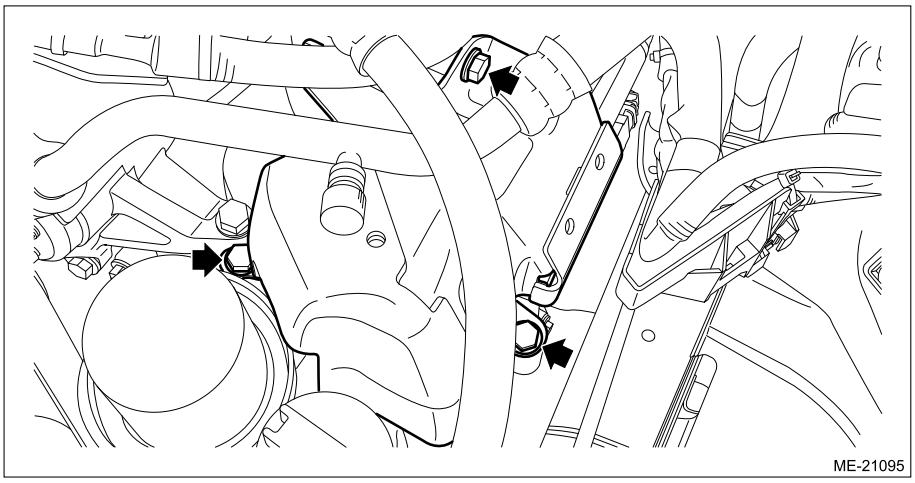
27. Disengage 2 claws (C) and remove the harness protector.





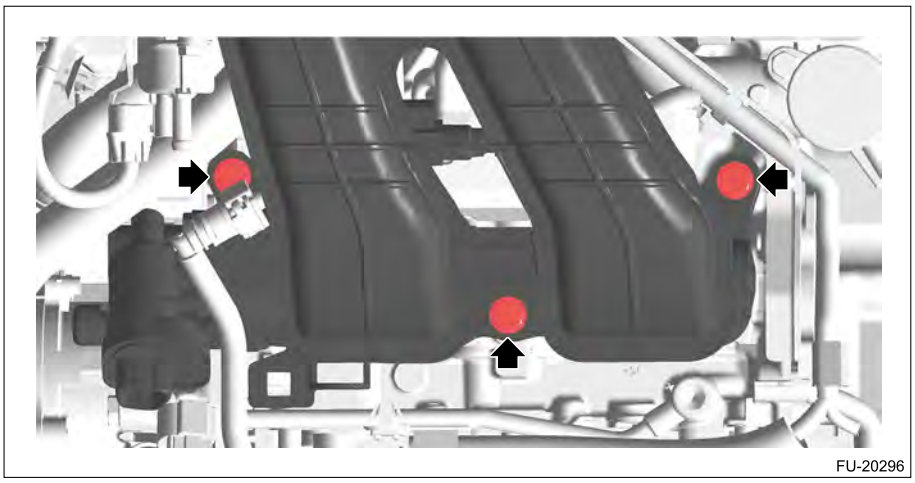
28. Disconnect the connector (A) from the tumble generator valve LH.

29. Use a pair of nippers to cut off the clip securing the engine wiring harness, and remove the clip from the intake manifold assembly.

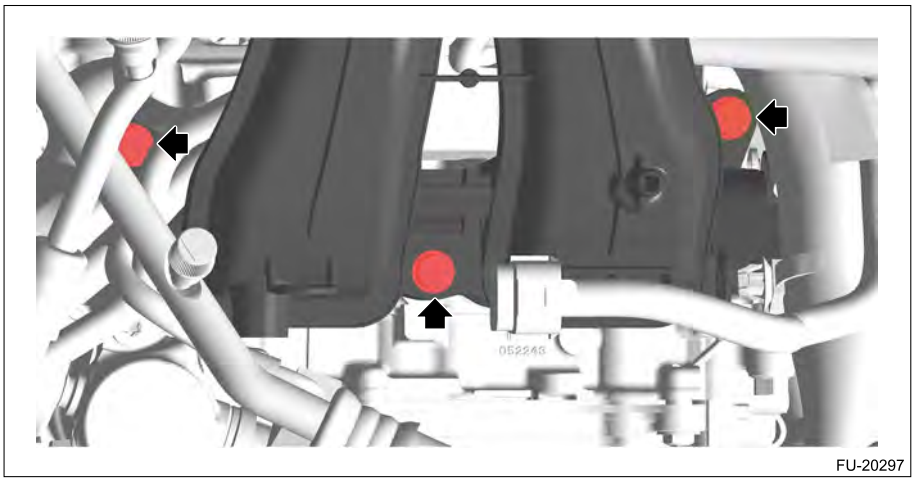


Note:

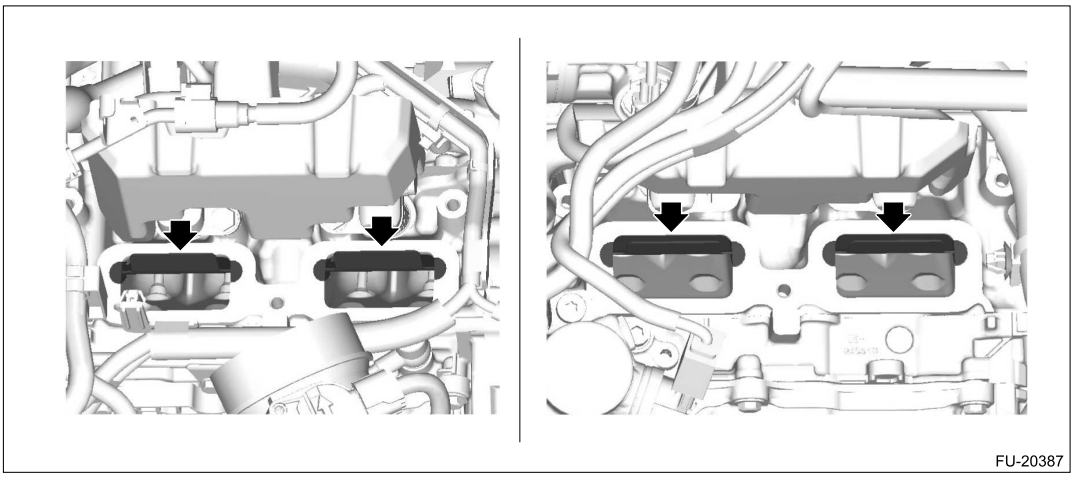
Put alignment marks (a) on the clip and the engine wiring harness.



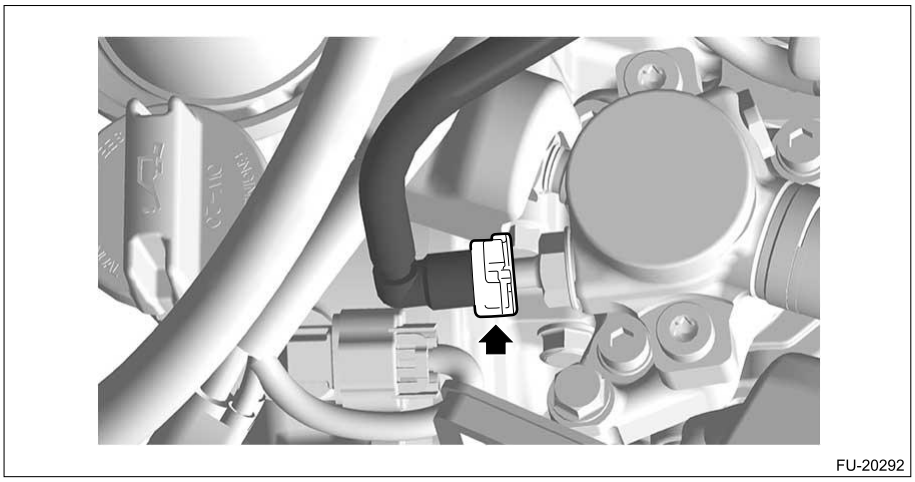
30. Remove the fuel pipe protector.



31. Remove the intake manifold assembly.

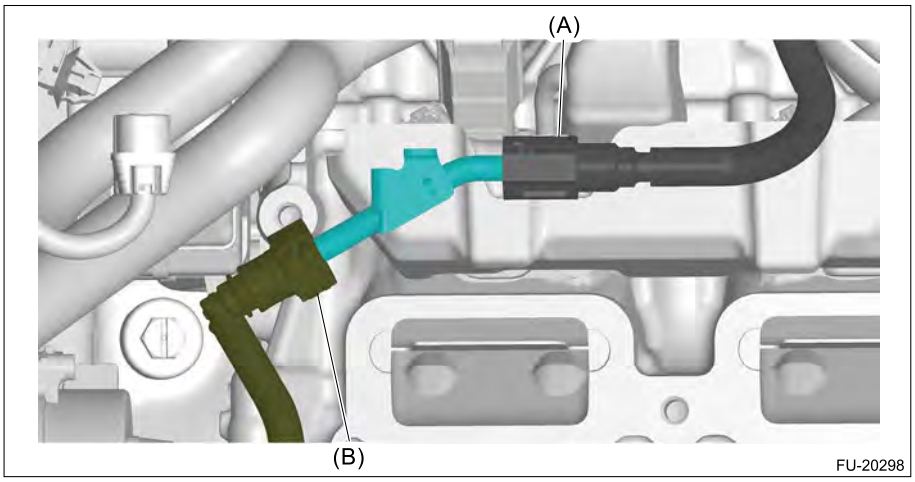


- RH side



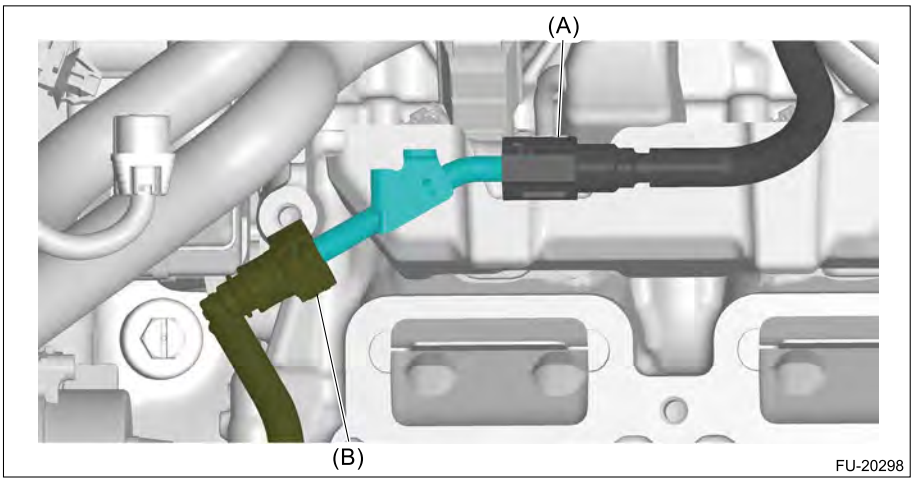
- LH side

32. Remove the cylinder head plate from cylinder head.

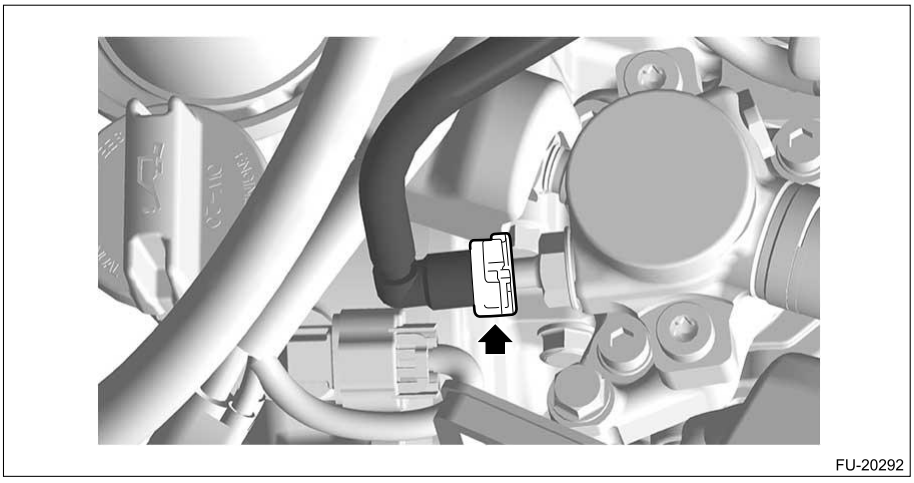


33. Disconnect the fuel delivery pipe from the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE C).

34. Disconnect the fuel delivery pipe (A) from the fuel pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE B).

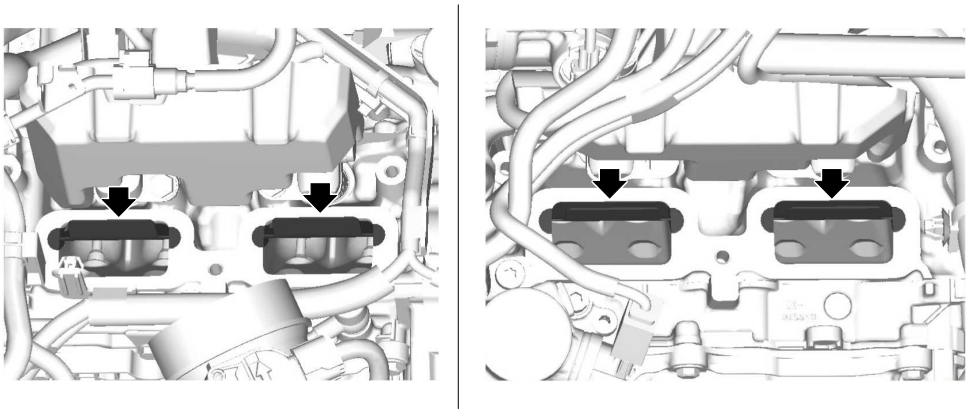


35. Disconnect the fuel delivery cube (B) from the fuel pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE A).



FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Intake Manifold Assembly

INSTALLATION



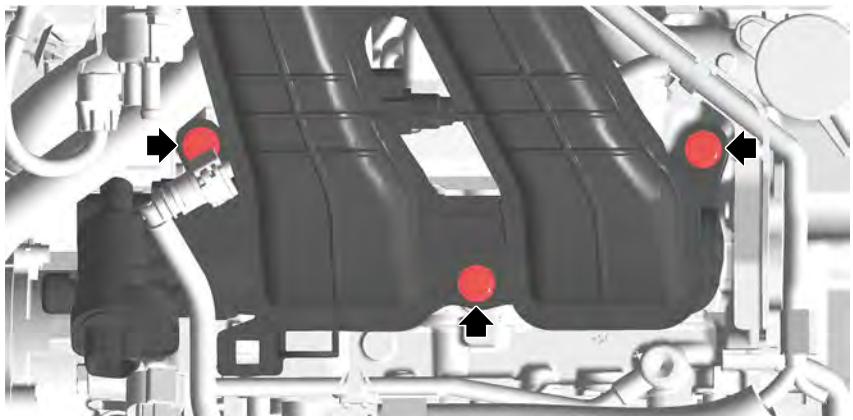
1. Connect the fuel delivery tube (B) to the fuel pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE A).
2. Connect the fuel delivery pipe (A) to the fuel pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE B).

3. Connect the fuel delivery pipe to the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE C).

4. Install the cylinder head plate to the cylinder head.

FU-20387

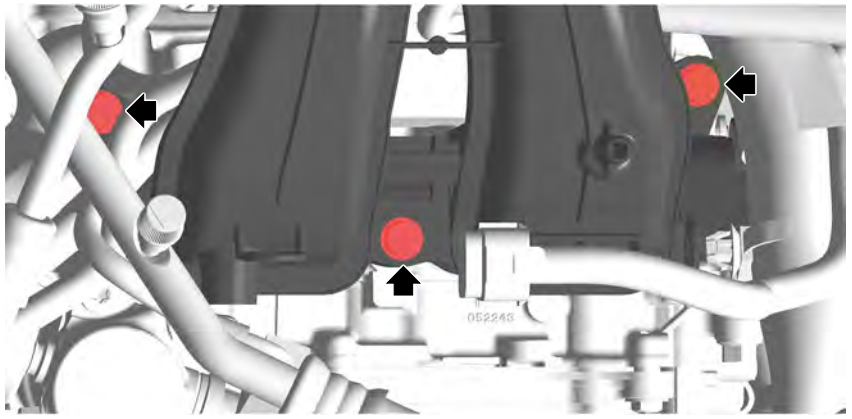
5. Set a new gasket and install the intake manifold assembly.



Note:

Be careful not to let the engine wiring harness be caught by the parts.

Tightening torque:

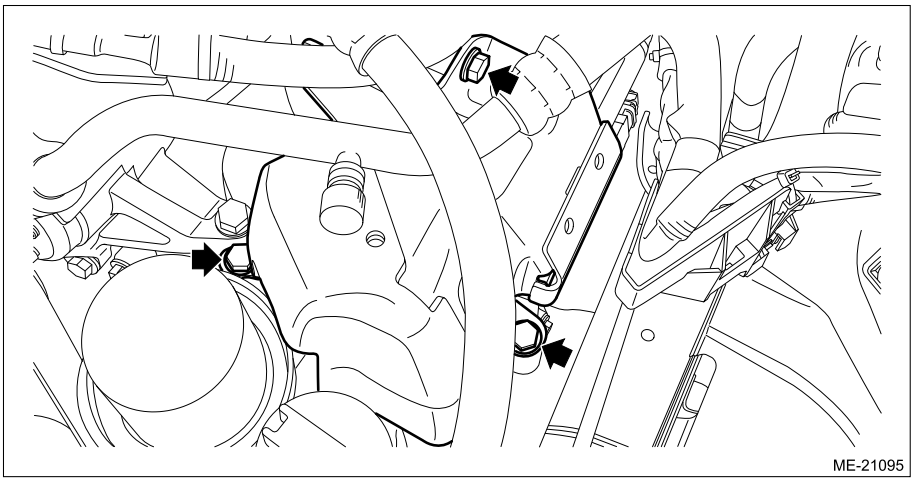


25 N·m (2.5 kgf-m, 18.4 ft-lb)

- RH side

FU-20296

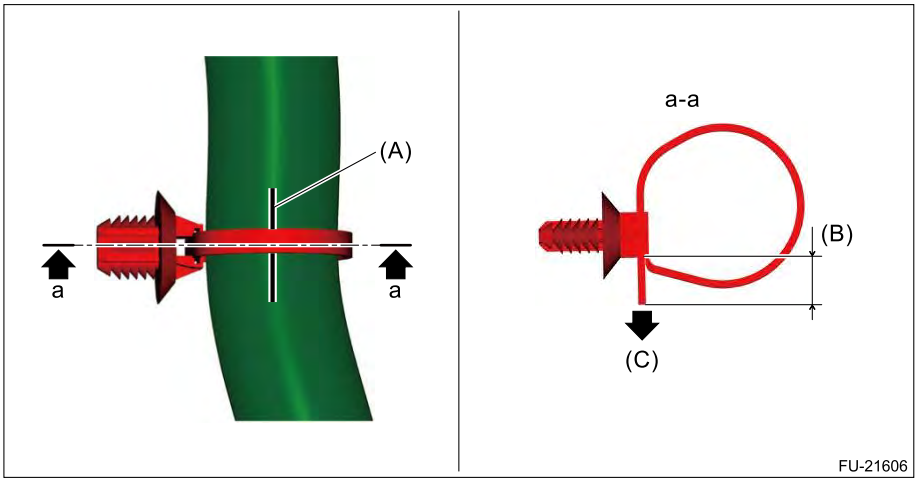
- LH side



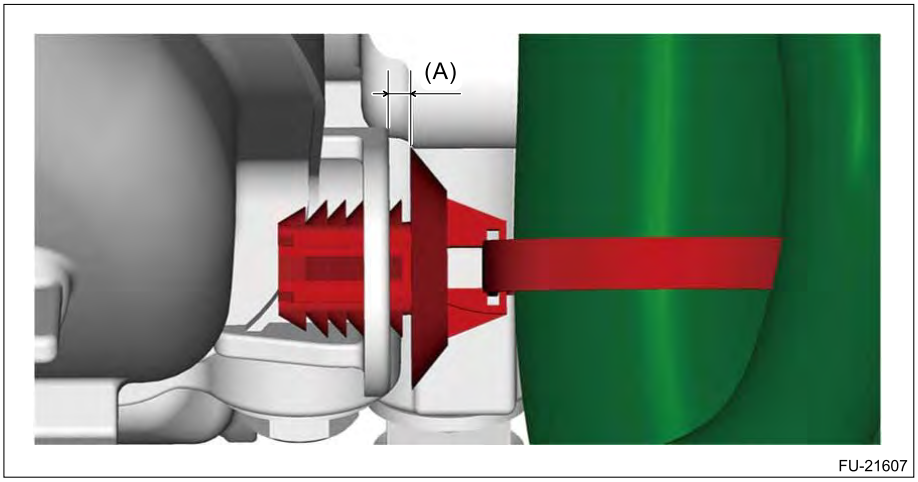
FU-20297

6. Install the fuel pipe protector.

Tightening torque:

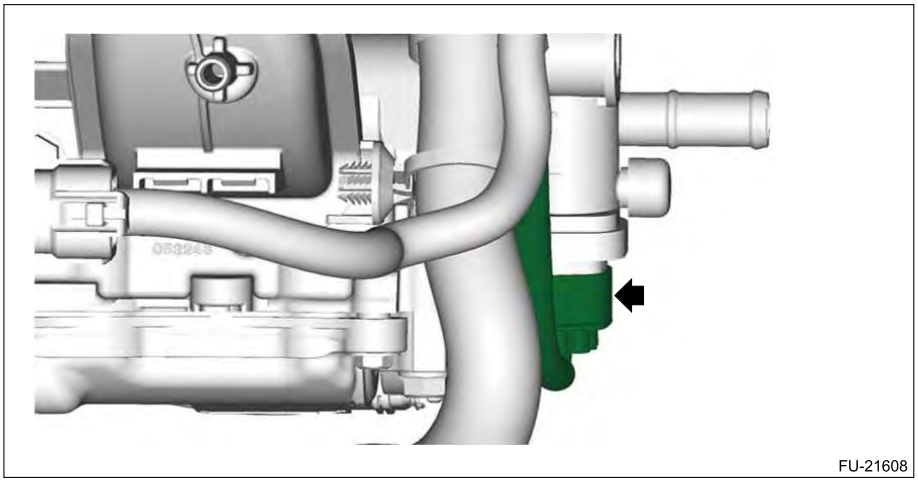


19 N·m (1.9 kgf-m, 14.0 ft-lb)



7. Hold the engine wiring harness with a new clip.

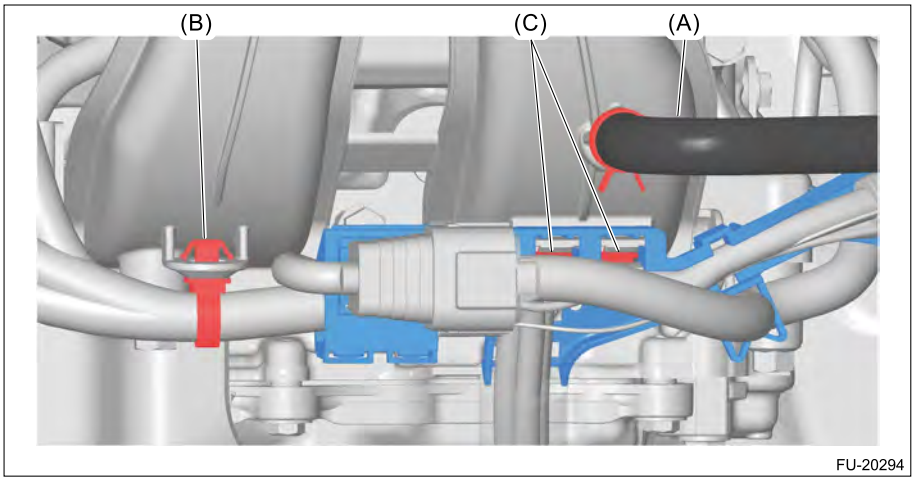
(1) Install the clip while aligning the alignment mark (A) of the engine wiring harness so that the band exposed length (B) comes on the vehicle lower side (C).



(2) Cut so that the band exposed length (B) becomes 5 mm (0.2 in) or less.

(3) Insert the clip all the way to the end and install so that the gap after inserting (A) becomes 3 mm (0.12 in) or less.

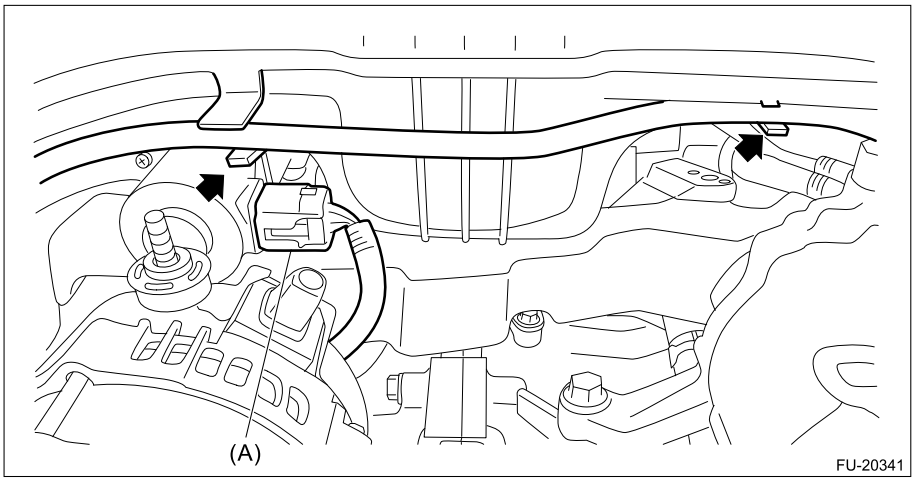
8. Connect the connector to the tumble generator valve LH.



9. Install the harness protector.

Note:

Make sure 2 claws (C) are securely engaged in each position.

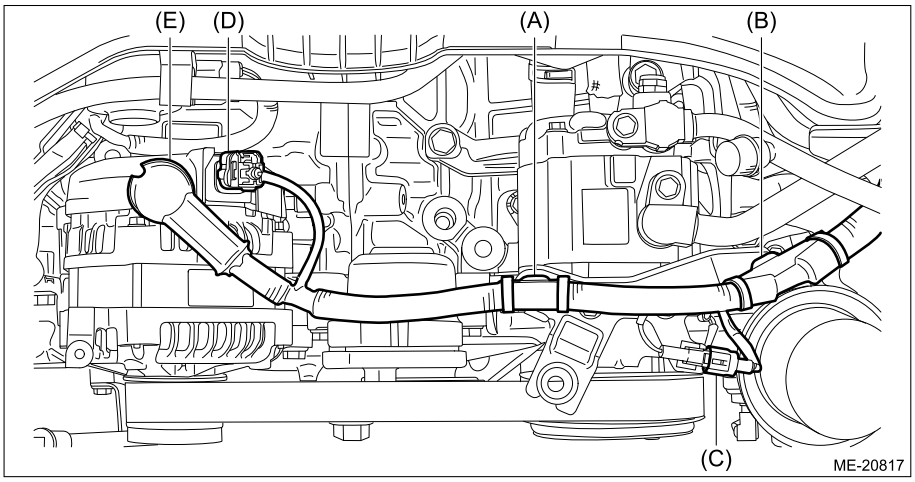


10. Install the clip (B) securing the battery cables.

11. Connect the brake booster vacuum hose (A).

12. Connect the connector (A) to the EGR control valve.

13. Install the fuel delivery tube.

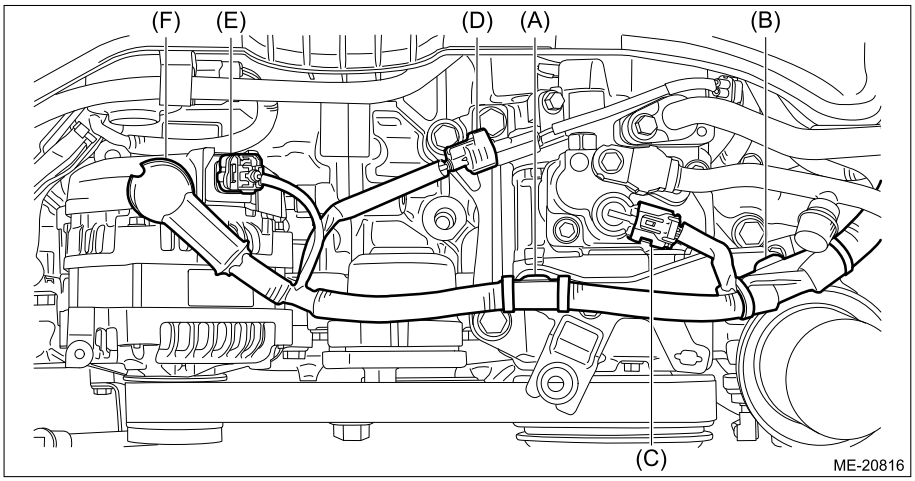


14. Secure the battery cable with the clip (A) and clip (B) in place. (Fixed capacity A/C model)

15. Connect the connector (C), connector (D), and the terminal (E). (Fixed capacity A/C model)

Tightening torque:

15.5 N·m (1.6 kfg-m, 11.4 ft-lb)



16. Secure the battery cable with the clip (A) and clip (B) in place. (Variable capacity A/C model)

17. Connect the connector (C), connector (D), connector (E), and the terminal (F). (Variable capacity A/C model)

Tightening torque:

15.5 N·m (1.6 kfg-m, 11.4 ft-lb)

18. Install the V-belt cover.

Tightening torque:

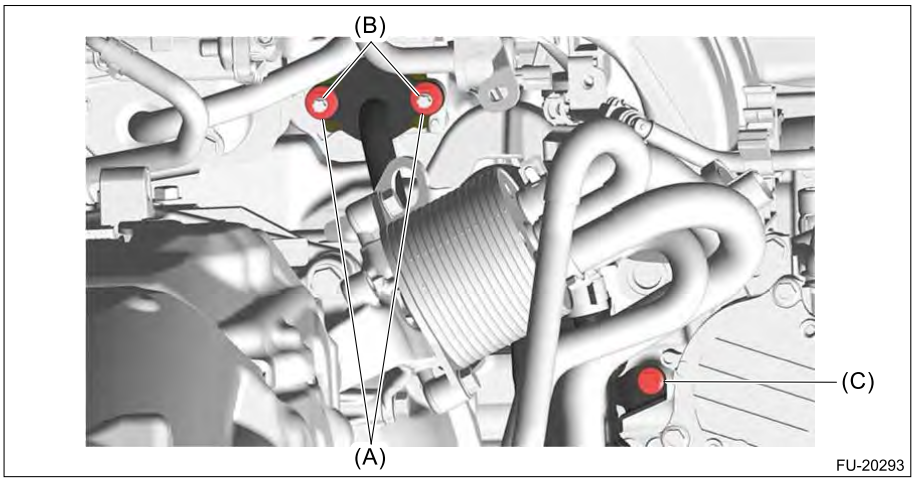
7 N·m (0.7 kgf-m, 5.2 ft-lb)

19. Set a new gasket, and stud bolt (B) using TORX® E8.

Tightening torque:

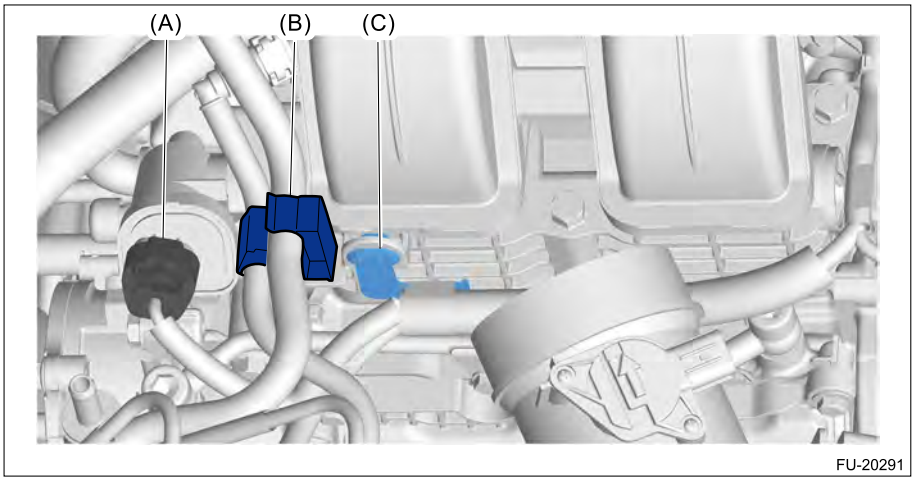
5 N·m (0.5 kgf-m, 3.7 ft-lb)

20. Install the nut (A) securing the EGR cooler to the EGR control valve.



Tightening torque:

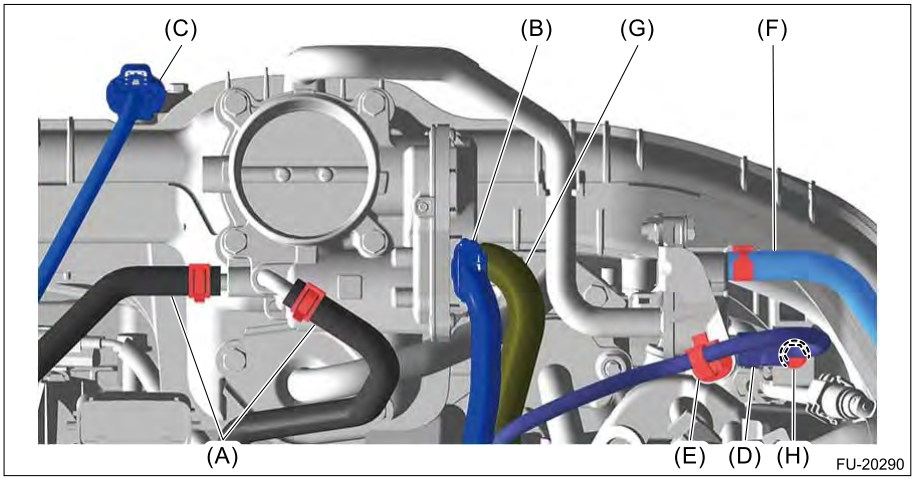
19 N·m (1.9 kgf-m, 14.0 ft-lb)



21. Tighten the bolt (C) which secures the EGR cooler to the cylinder head RH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



22. Connect the connector (A) to the tumble generator valve RH.
23. Install the fuel delivery tube clamp (B).
24. Install the clip (C) securing the engine wiring harness.

25. Connect the preheater hose (A) to the throttle body, and connect the connector (B).
26. Connect the connector (C) to the manifold absolute pressure sensor.
27. Connect the connector (D) to the purge control solenoid valve, and install clip (E).
28. Connect the evaporation hose (F) to the purge control solenoid valve.
29. Connect the PCV hose (G).
30. Install the bolt (H) securing the fuel pipe.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

31. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
32. Install the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSTALLATION.
33. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Intake Manifold Assembly

DISASSEMBLY

1. Remove the throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>REMOVAL.
2. Remove the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve>REMOVAL.
3. Remove the EGR pipe. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Pipe>REMOVAL.
4. Remove the EGR control valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Control Valve>REMOVAL.
5. Remove the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor>REMOVAL.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Intake Manifold Assembly

ASSEMBLY

1. Install the manifold absolute pressure sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Manifold Absolute Pressure Sensor>INSTALLATION.
2. Install the EGR control valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Control Valve>INSTALLATION.
3. Install the EGR pipe. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Pipe>INSTALLATION.
4. Install the purge control solenoid valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Purge Control Solenoid Valve>INSTALLATION.
5. Install the throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>INSTALLATION.

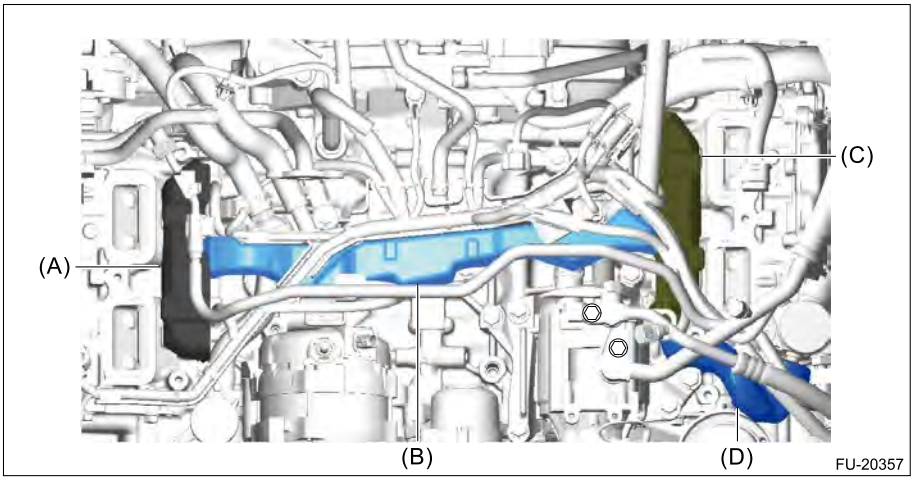
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Intake Manifold Assembly

INSPECTION

1. Check that the intake manifold assembly and the fuel pipe have no deformation, cracks and other damages.
2. Check that the hose has no cracks, damage or loose part.
3. Check tumble generator valve for contamination or clogging.

SPECIFICATION

The tumble generator valve is integrated in the intake manifold assembly.
Refer to “Intake Manifold Assembly” for removal and installation. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.



SPECIFICATION

The tumble generator valve actuator must not be removed from the intake manifold assembly since it is integrated in the intake manifold assembly.
Refer to "Intake Manifold Assembly" for removal and installation. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Insulator

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
3. Remove the fuel insulator.

(A) Fuel insulator No. 1 (B) Fuel insulator No. 2 (C) Fuel insulator No. 3
(D) Fuel insulator No. 4

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Insulator

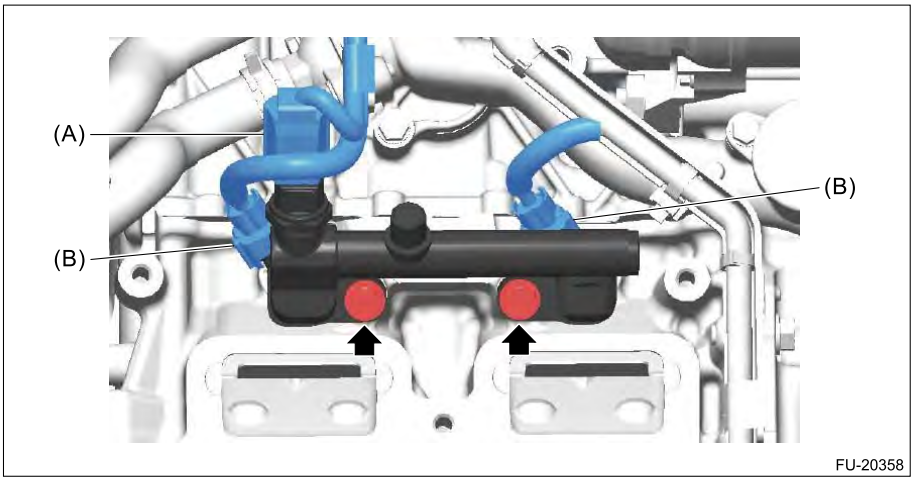
INSTALLATION

1. Install the fuel insulator.
   Caution:
   - **If substantial amount of fuel or parts cleaner come into contact with the fuel insulator, replace it with a new one.**
   - **If only small amount of fuel comes into contact with the fuel insulator, wait for the fuel evaporate before installing it.**
2. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Insulator

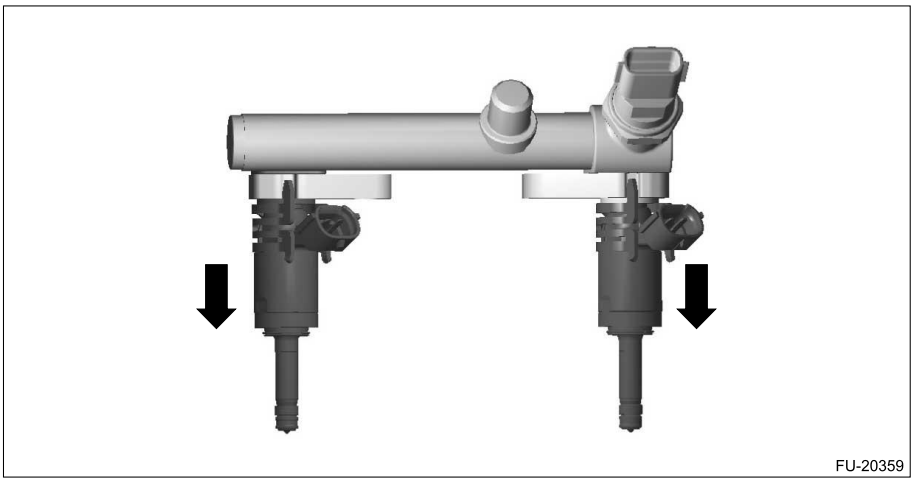
INSPECTION

Check that the fuel insulator has no deformation, cracks or other damages.



REMOVAL

1. FUEL INJECTOR RH



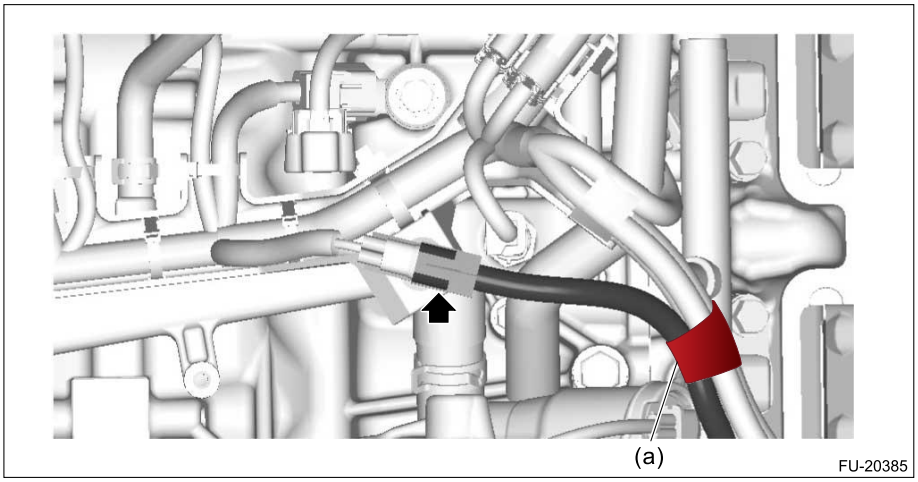
Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.
3. Disconnect the connector (A) from the fuel pressure sensor, and disconnect the connector (B) from the fuel injector.
4. Remove the bolts securing the fuel injector pipe RH, and remove the fuel injector and the fuel injector pipe RH as an assembly.

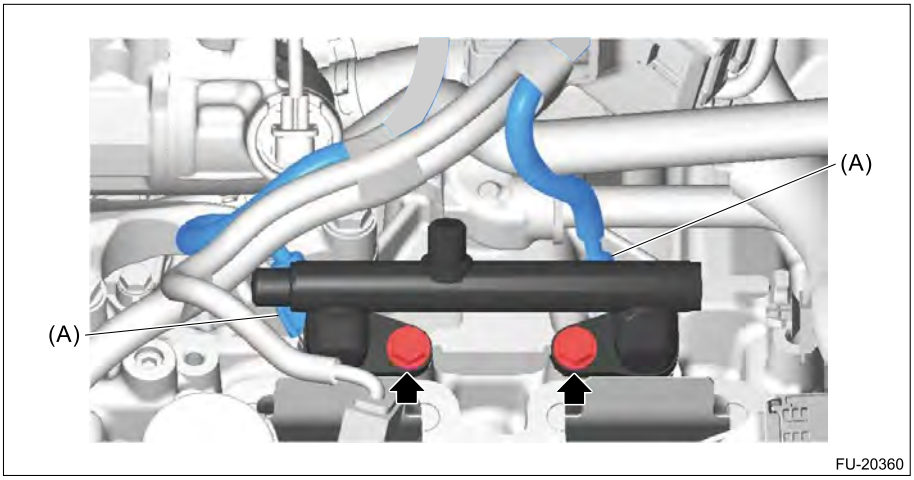
5. Remove the fuel injectors from the fuel injector pipe RH.

2. FUEL INJECTOR LH



Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.
3. Remove the high-pressure fuel delivery pipes. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE.
4. Disconnect the connectors (A) from fuel injector.

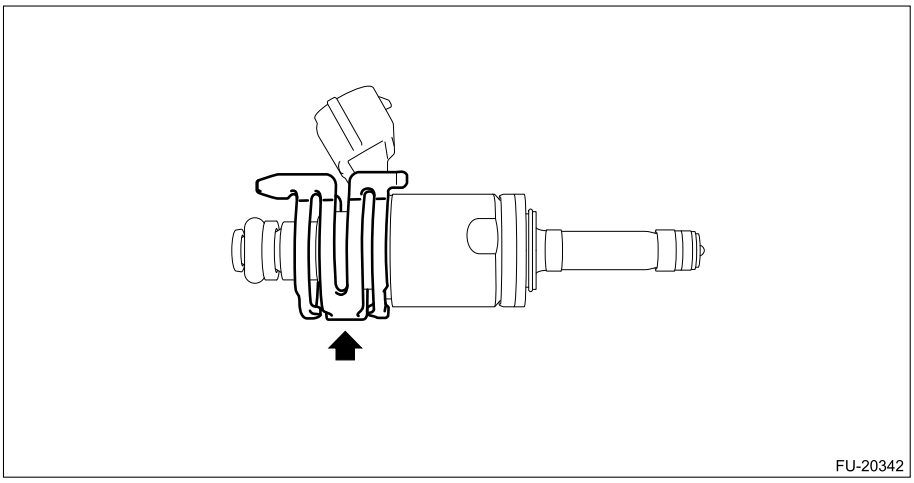
   Note:

   Disconnect the fuel injector #2 connector of the variable capacity A/C model at the intermediate harness side, and remove the tape (a).

5. Remove the bolts securing the fuel injector pipe LH, and remove the fuel injector and the fuel injector pipe LH as an assembly.

6. Remove the fuel injectors from the fuel injector pipe LH.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Injector

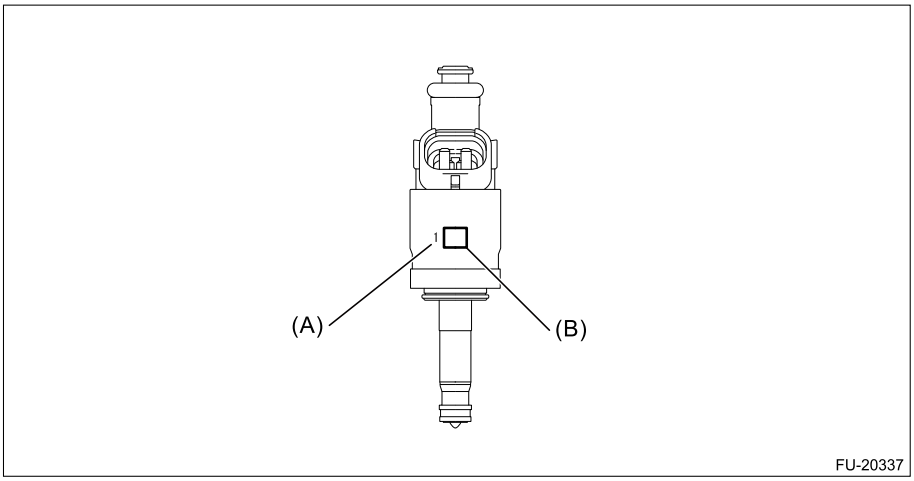


INSTALLATION

1. FUEL INJECTOR RH

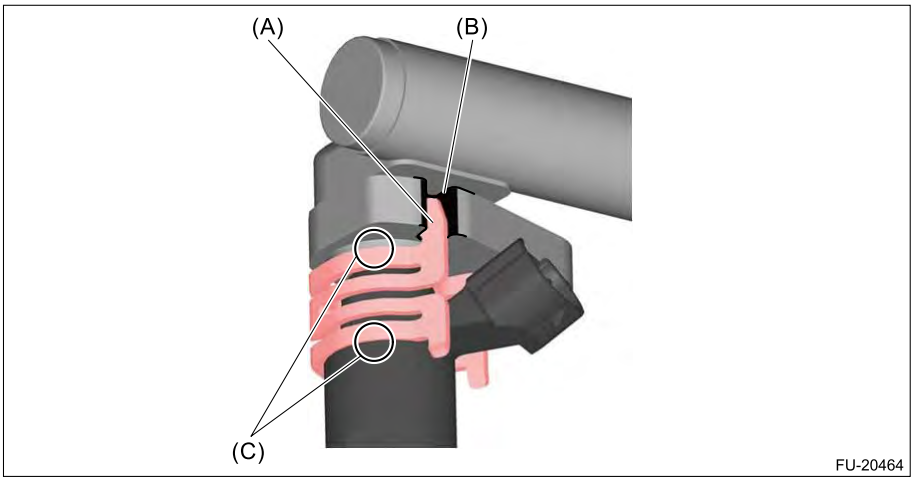
1. Replace the following parts with new ones. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>REPLACEMENT.

- Fuel injector seal
- Slider washer
- Back-up ring
- O-ring seal
- Stopper ring



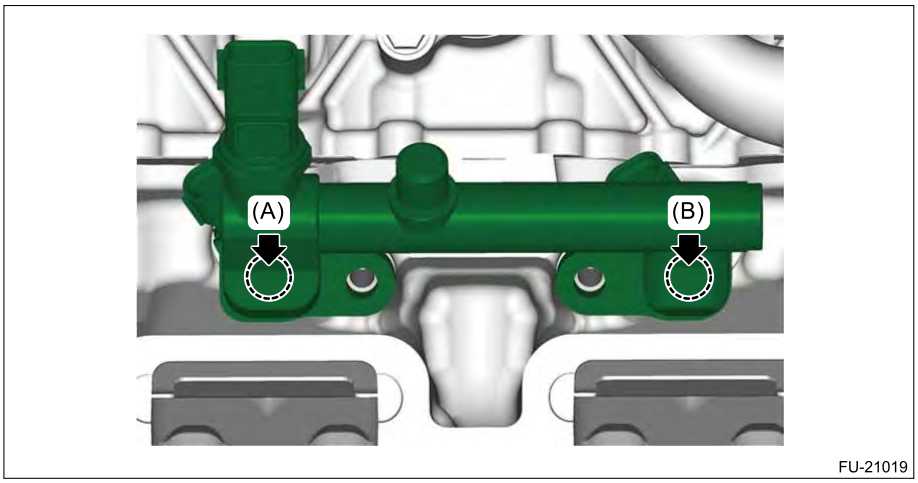
2. Install the fuel injector holder to the fuel injector assembly.

3. Align the protrusion of the fuel injector holder to the anti-rotation slot of the fuel injector pipe RH, and install the fuel injector straight to the fuel injector pipe RH.



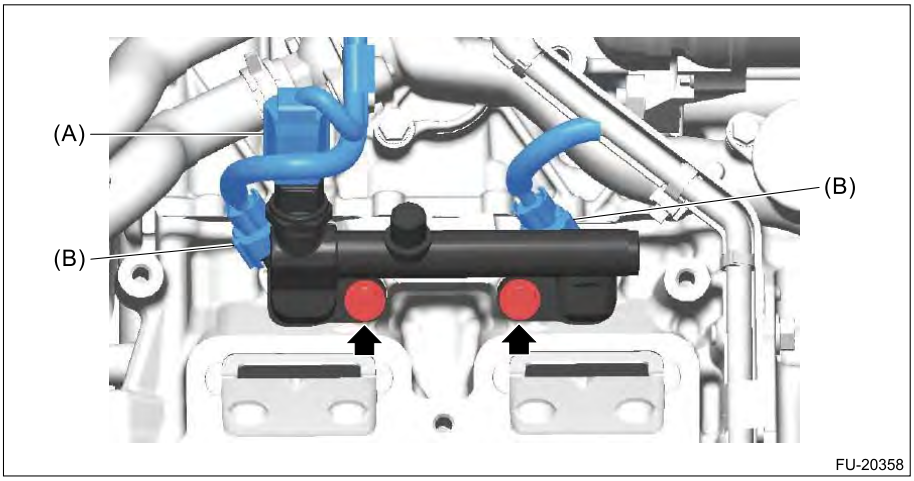
Caution:

- **Degrease inside of the fuel injector insertion hole of the fuel injector pipe.**
- **Check the inside of the fuel injector insertion hole of the fuel injector pipe for foreign materials or damage.**
- **Be careful not to allow gasoline to contact with the fuel injector seal and the inside of the mounting hole.**
- **Apply liquid paraffin to the O-ring seal and install it.**
- **In order to prevent damaging the O-ring seal, do not install the fuel injector to the fuel injector pipe by tilting or twisting it.**
- **Make sure there is no gap between the fuel injector pipe and the fuel injector holder.**
- **When replacing the fuel injector assembly, select the assembly with the same flow rate stratification number.**



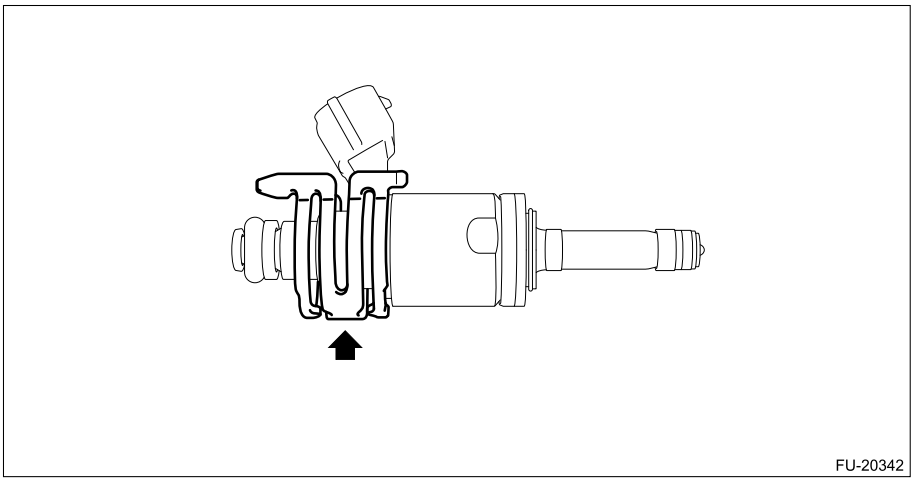
(A) Flow rate stratification number

(B) QR code



(A) Protrusion portion (B) Anti-rotation slot (C) No gap allowed.

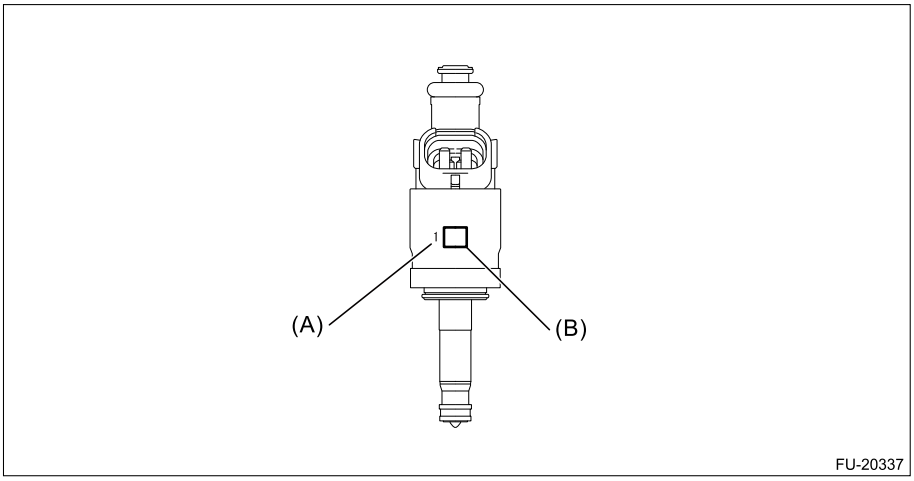
4. Insert the fuel injector pipe RH and fuel injector as a single unit into the cylinder head, and align their positions. Then, evenly press the sections (A) and (B).
   Caution:
   - **When installing, apply liquid paraffin to the fuel injector seal.**
   - **In order to prevent damaging the O-ring seal, do not install the fuel injector pipe and fuel injector by tilting them toward the cylinder head.**



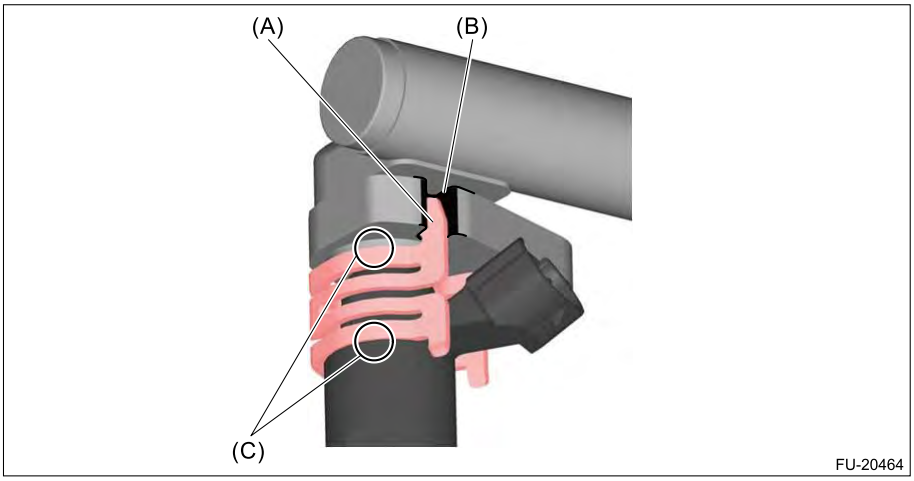
5. Tighten the bolts which hold the fuel injector pipe RH.
   Tightening torque:
   19 N·m (1.9 kgf-m, 14.0 ft-lb)
6. Connect connector (B) to the fuel injector, and connect connector (A) to the fuel pressure sensor.

7. Install the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. FUEL INJECTOR LH



1. Replace the following parts with new ones. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>REPLACEMENT.
   - Fuel injector seal
   - Slider washer
   - Back-up ring
   - O-ring seal
   - Stopper ring
2. Install the fuel injector holder to the fuel injector assembly.

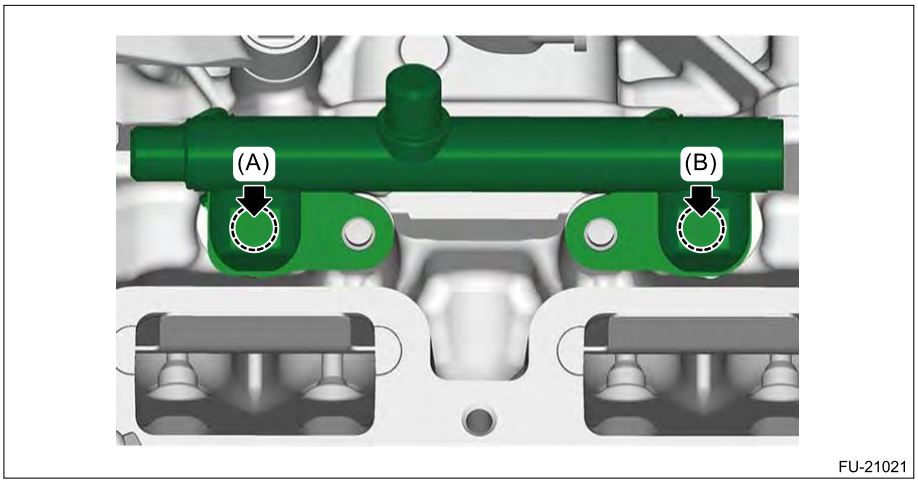


3. Align the protrusion of the fuel injector holder to the anti-rotation slot of the fuel injector pipe LH, and install the fuel injector straight to the fuel injector pipe LH.

Caution:

- **Degrease inside of the fuel injector insertion hole of the fuel injector pipe.**
- **Check the inside of the fuel injector insertion hole of the fuel injector pipe for foreign materials or damage.**
- **Be careful not to allow gasoline to contact with the fuel injector seal and the inside of the mounting hole.**
- **Apply liquid paraffin to the O-ring seal and install it.**
- **In order to prevent damaging the O-ring seal, do not install the fuel injector to the fuel injector pipe by tilting or twisting it.**
- **Make sure there is no gap between the fuel injector pipe and the fuel injector holder.**
- **When replacing the fuel injector assembly, select the assembly with the same flow rate stratification number.**

(A) Flow rate stratification number (B) QR code

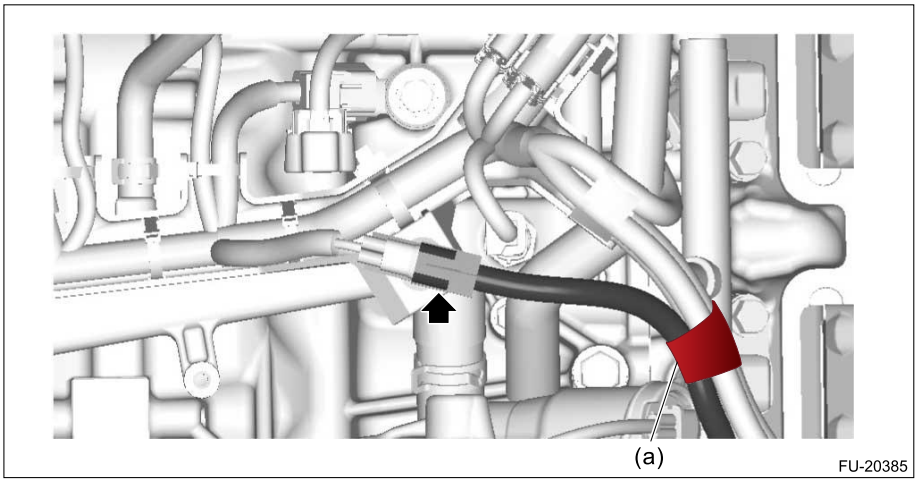


(A) Protrusion portion (B) Anti-rotation slot (C) No gap allowed.

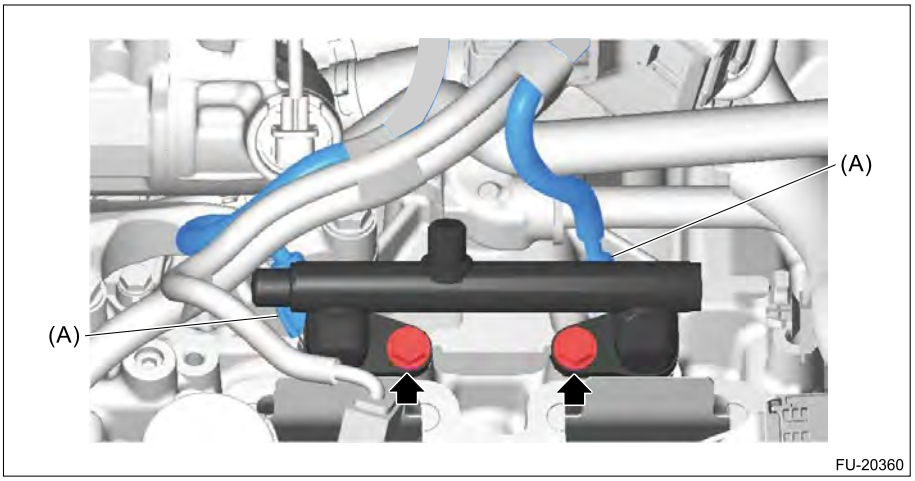
4. Insert the fuel injector pipe LH and fuel injector as a single unit into the cylinder head, and align their positions. Then, evenly press the sections (A) and (B).

Caution:

- **When installing, apply liquid paraffin to the fuel injector seal.**
- **In order to prevent damaging the O-ring seal, do not install the fuel injector pipe and fuel injector by tilting them toward the cylinder head.**



5. Tighten the bolts which hold the fuel injector pipe LH, and connect the connector (A).



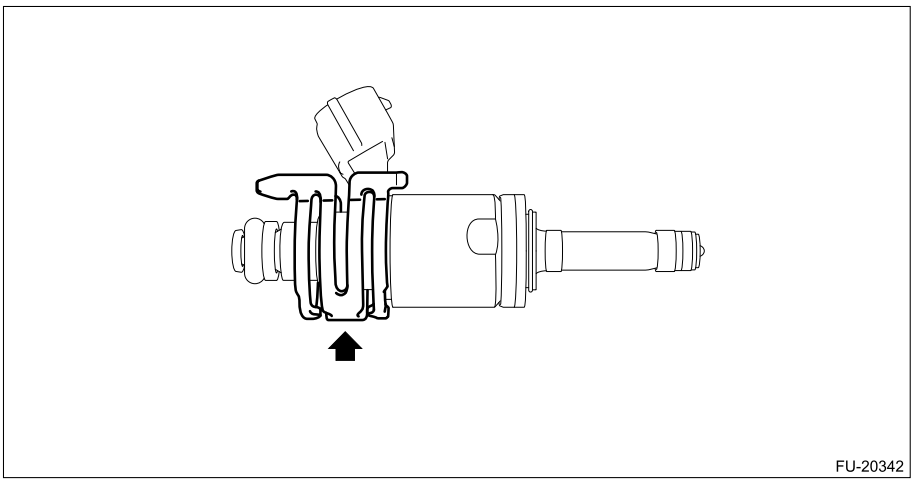
Tightening torque:

19 N·m (1.9 kgf-m, 14.0 ft-lb)

Note:

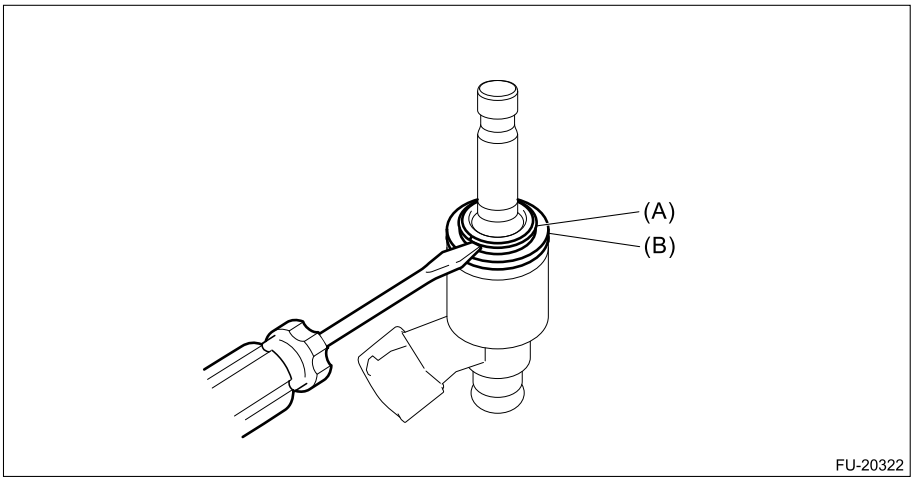
Connect the fuel injector #2 connector of the variable capacity A/C model at the intermediate harness side and secure with tape (a).

6. Install the high-pressure fuel delivery pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE.
7. Install the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure



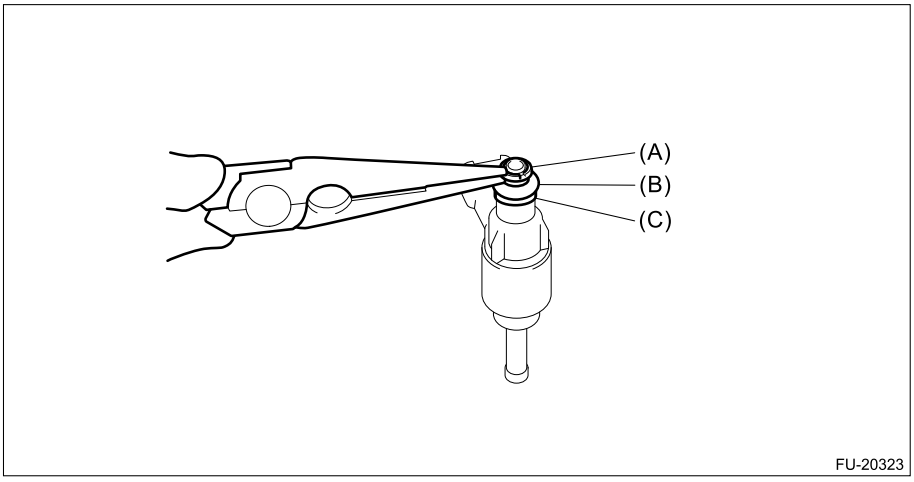
Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.

8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



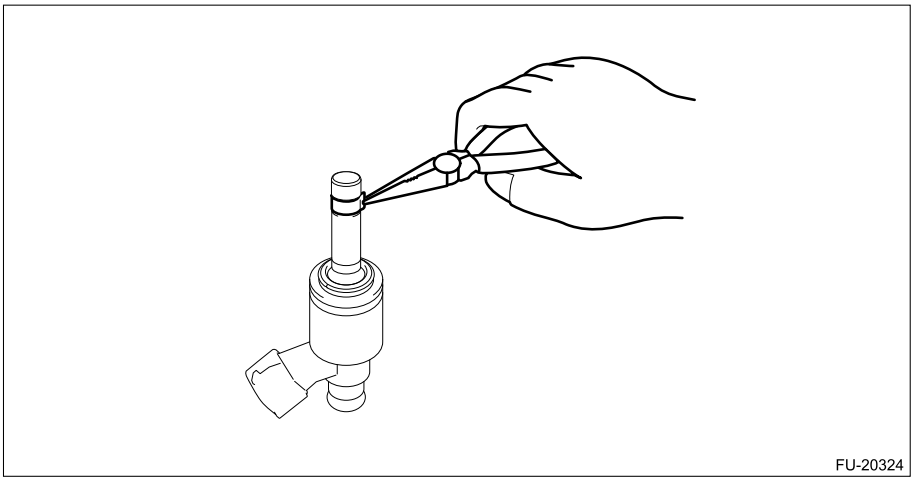
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Injector

REPLACEMENT



1. Remove the fuel injector holder.

2. Remove the circlip (A) and slider washer (B).

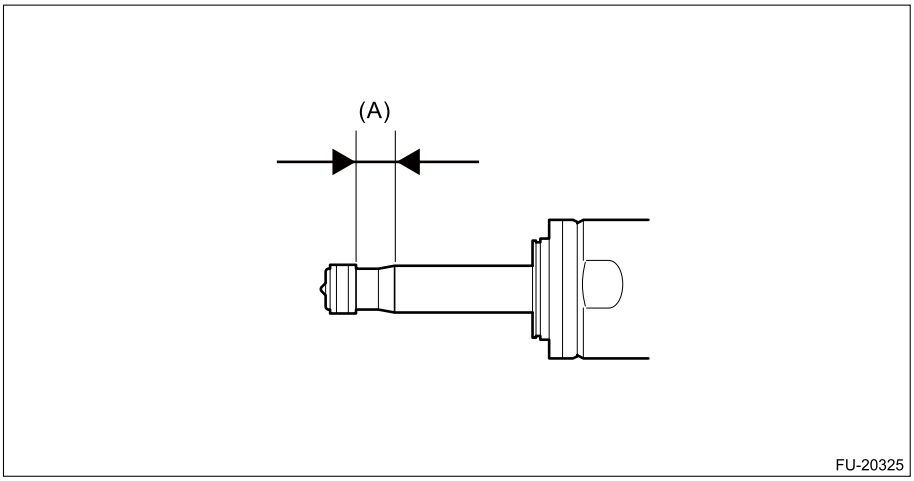


3. Remove the stopper ring (A).
4. Remove the O-ring (B) and backup ring (C).

5. Gradually expand the fuel injector seal and remove the fuel injector seal.

Caution:

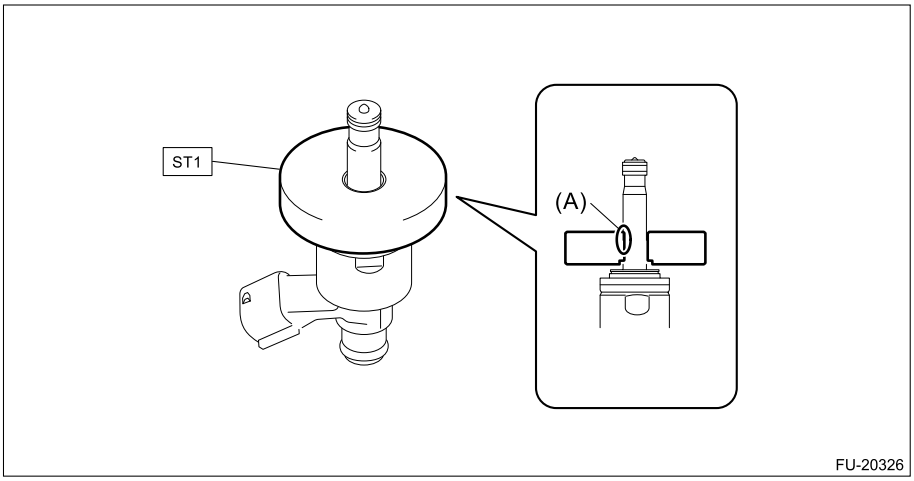
- **Be careful not to apply too much force when pinching the fuel injector seal, or the fuel injector groove may be damaged.**
- **If the tip of the fuel injector assembly is hit or the assembly is dropped, replace the fuel injector assembly with a new one.**



6. Install the fuel injector seal.

(1) Remove carbon from area (A) shown in the following figure (sides of fuel injector and the groove for seal).

Caution:



- **Do not attempt to clean the tip.**
- **Do not use a wire-brush.**
- **If the tip of the fuel injector assembly is hit or the assembly is dropped, replace the fuel injector assembly with a new one.**

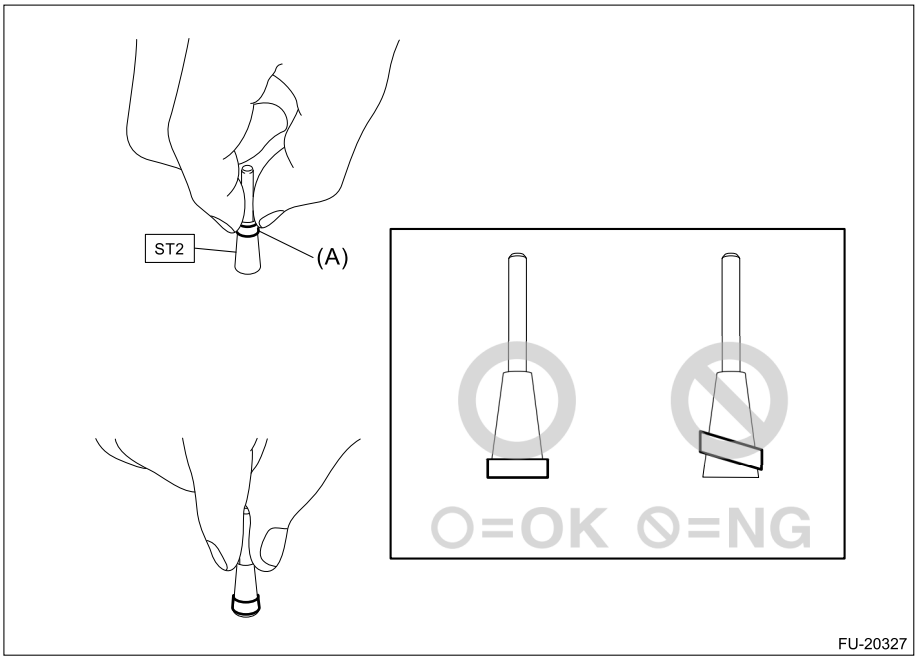
(2) Set ST1 on a fuel injector, with the tapered side (A) and the ST number facing toward the tip of the fuel injector.

Preparation tool:

ST1: ADJUSTER (18271AA020)

(3) Install new fuel injector seal (A) on ST2.

Caution:



When setting the fuel injector seal on the ST2, be careful not to set it obliquely, or the seal is stretched and become hard to be fixed.

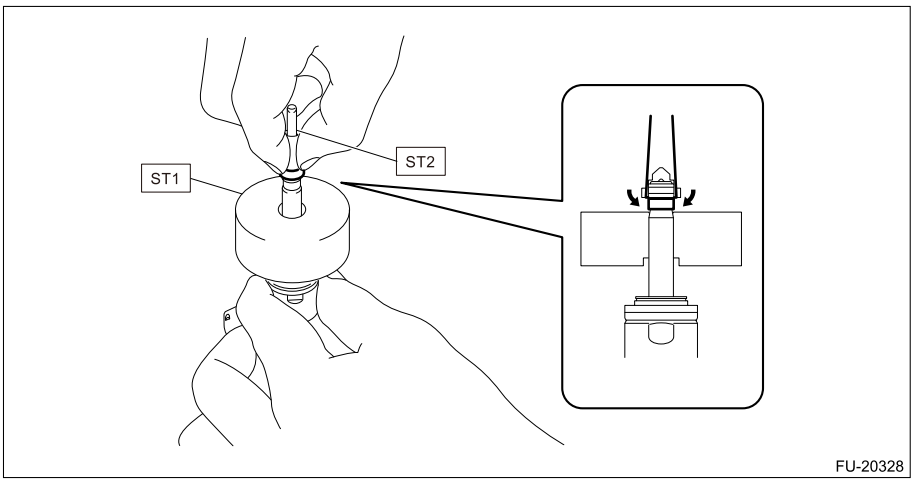
Note:

Apply liquid paraffin to the fuel injector seal.

Preparation tool:

ST2: GUIDE (18671AA050)

(4) Set the ST2 with the fuel injector seal installed on the tip of the fuel injector, and push down on the fuel injector seal with fingers and install to the fuel injector groove as shown in the figure.



Caution:

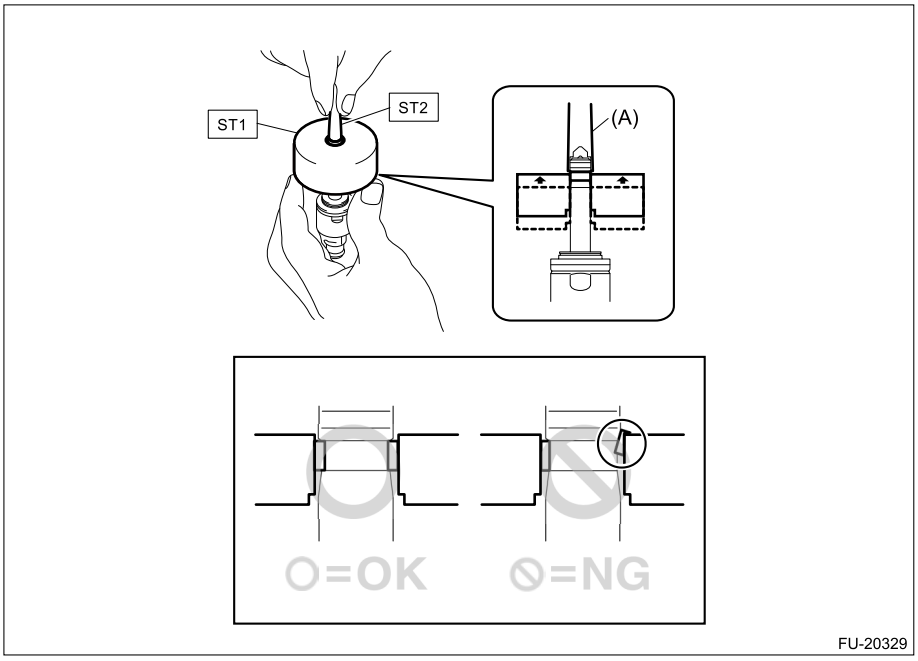
Make sure that the entire perimeter of the fuel injector seal fit in the groove.

Preparation tool:

ST1: ADJUSTER (18271AA020)

ST2: GUIDE (18671AA050)

(5) Slowly pull up the ST1 toward the tip side of fuel injector while lightly pressing down the fuel injector seal with the ST2 to make the fuel injector seal rest in the fuel injector groove.



Caution:

Be careful not to let the fuel injector seal get caught in the ST1 and the fuel injector groove. If it get caught, replace the seal with a new one.

Preparation tool:

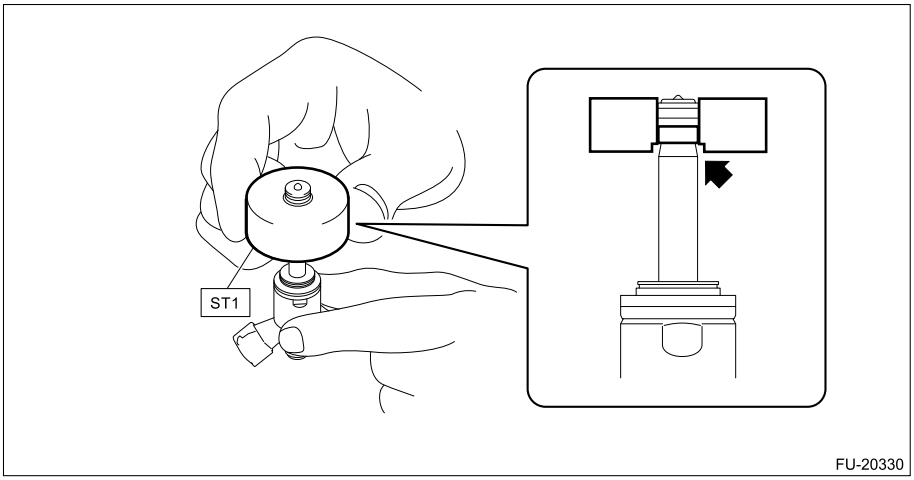
ST1: ADJUSTER (18271AA020)

ST2: GUIDE (18671AA050)

(A) Hold

(6) Slowly pull up the ST1 toward the tip side of fuel injector, and hold in position for at least 5 seconds when the fuel injector seal of the connector side reaches to the straight section of the ST1, and fix the condition of the fuel injector seal.

Caution:

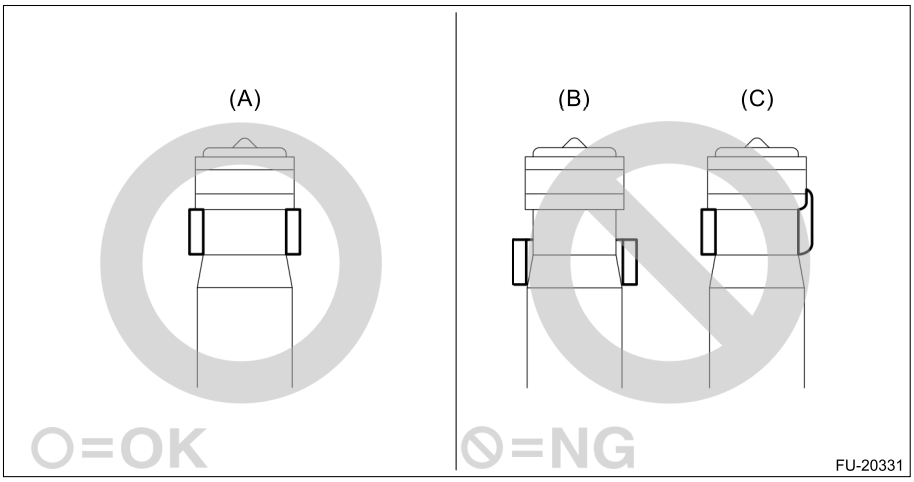


Be careful not to let the fuel injector seal get caught in the ST1 and the fuel injector groove. If it get caught, replace the seal with a new one.

Note:

- **The straight section is where the bottom end of the fuel injector seal and the bottom end of the ST1 meet.**
- **If it is hard to lift up the ST1, try to slowly lift the ST1 by shaking it side to side.**

Preparation tool:



ST1: ADJUSTER (18271AA020)

(7) After installing the fuel injector seal, check the seal for scratches, crushed area, or dislocation from the groove.

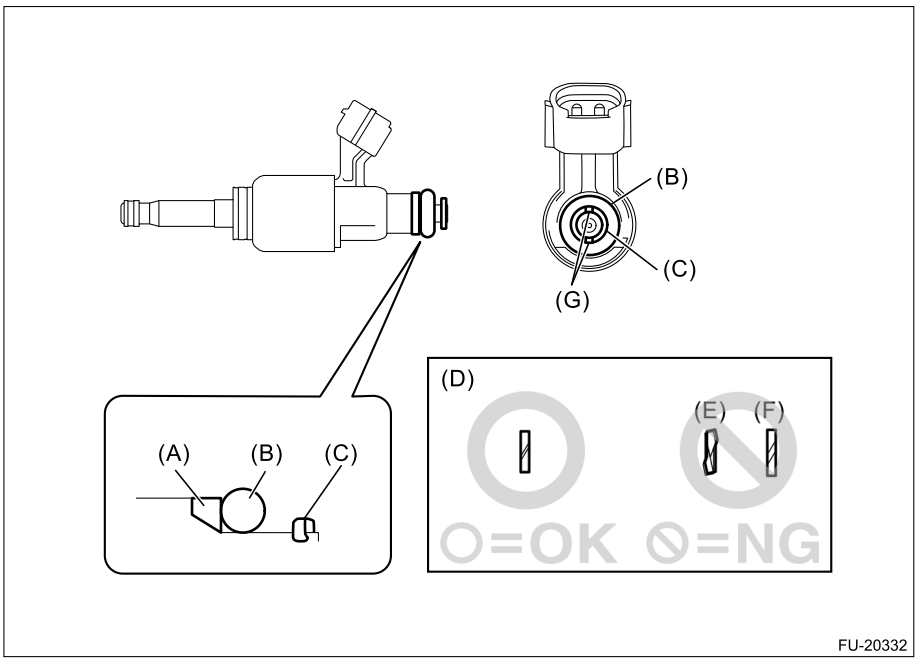
Caution:

If scratches, crushed area, or dislocation from the groove is found, replace the fuel injector seal with a new one.

7. Install the fuel injector assembly.

Caution:

If the tip of the fuel injector assembly is hit or the assembly is dropped, replace the fuel injector assembly with a new one.



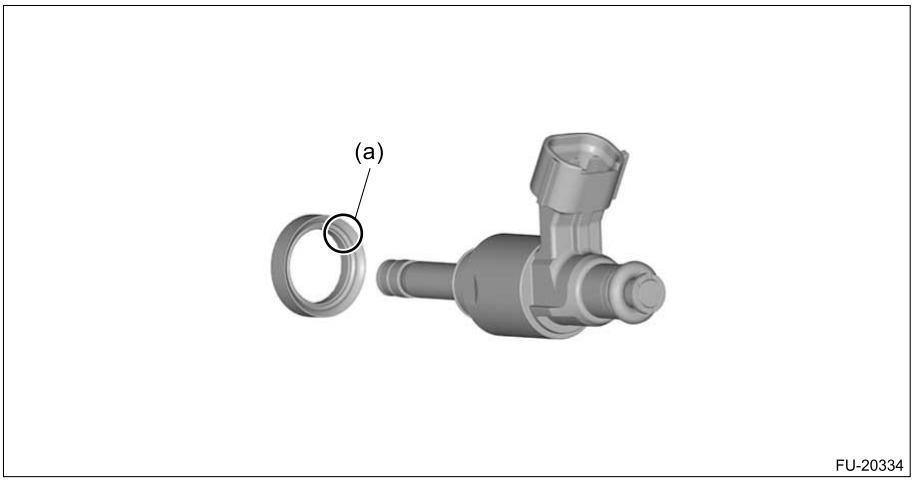
(1) Install new backup ring, new O-ring seal and new stopper ring as shown in the figure.

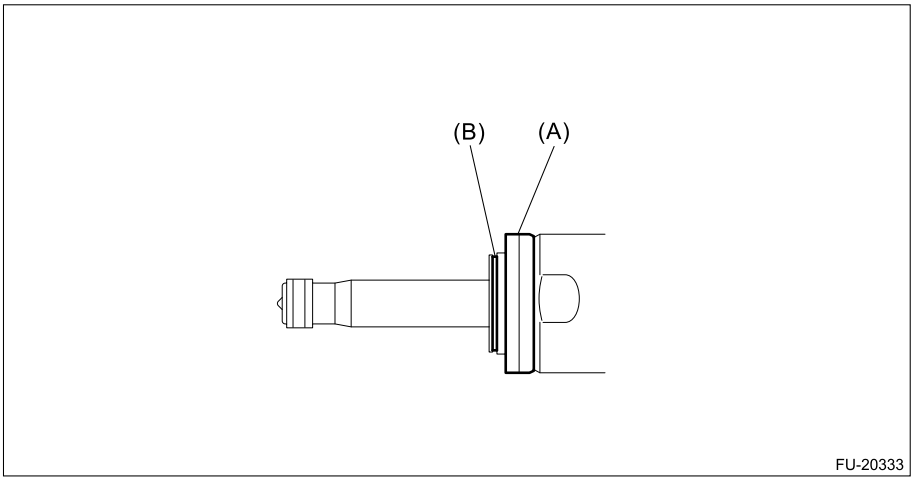
Caution:

- **Check the O-ring seal groove of the fuel injector for foreign materials or damage.**
- **Make sure that the orientation of the back-up ring is correct.**
- **When installing the stopper ring, the groove should face toward the fuel injector pipe.**
- **Make sure that the installation order of the backup ring and O-ring seal is correct.**
- **There should be no expansion or ride over at the backup ring gap.**
- **After assembling the parts, there should be no foreign materials or damage on the fuel injector seal.**

Note:

Apply liquid paraffin to the O-ring seal.



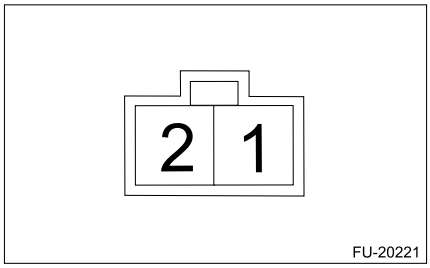


(A) Back-up ring
(B) O-ring seal
(C) Stopper ring
(D) Back-up ring gap
(E) Ride over
(F) Expansion
(G) Groove

(2) Install a circlip and new slider washer.

Caution:

When installing the slider washer, the groove side (a) should face toward the fuel injector.



(A) C-ring (B) Slider washer

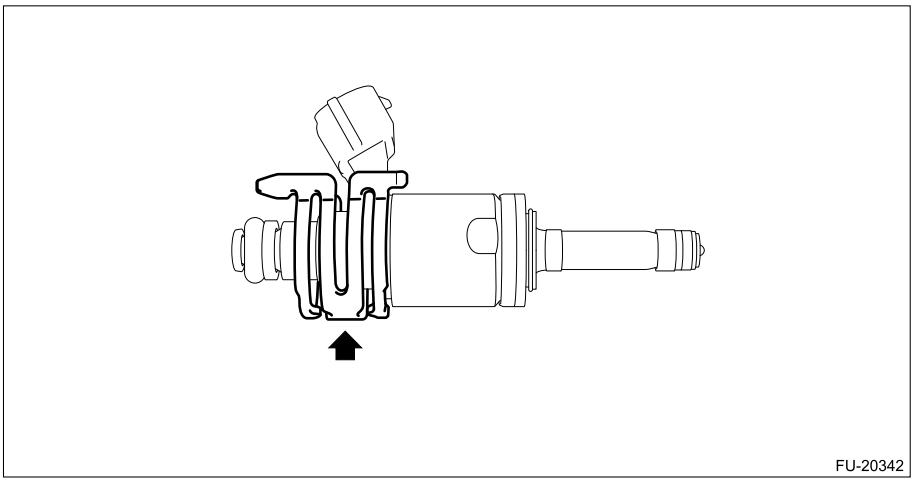
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Injector

INSPECTION

1. Check that the fuel injector has no deformation, cracks or other damages.
2. Measure the resistance between fuel injector terminals.

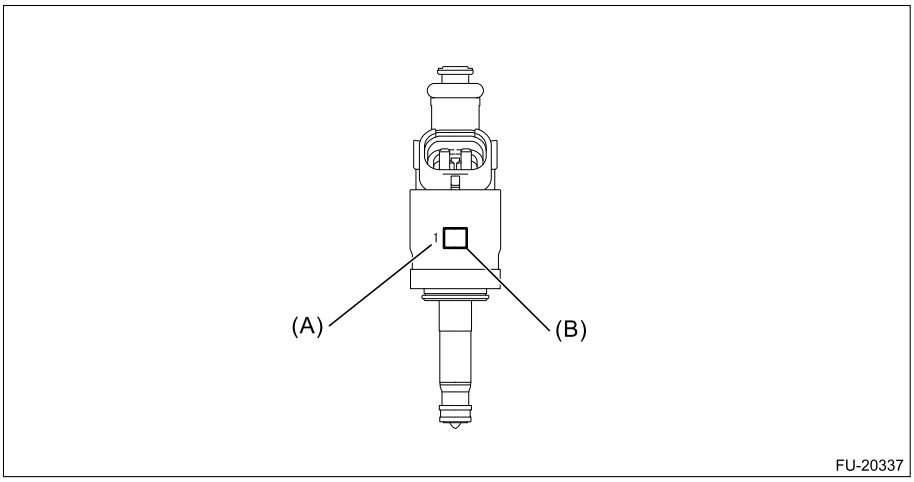
Terminal No.	Standard
1 and 2	Approx.1.9Ω (when 20°C (68°F))

REMOVAL



Caution:

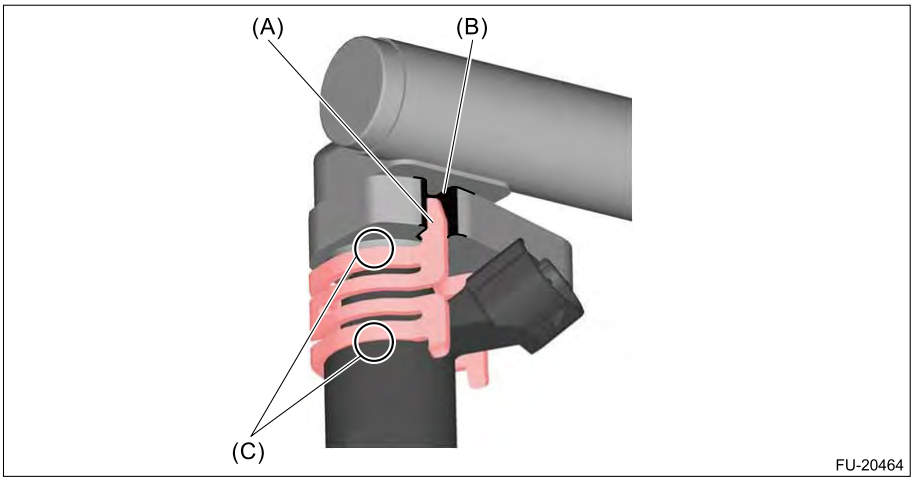
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
3. Remove the fuel injector RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>REMOVAL > FUEL INJECTOR RH.

INSTALLATION

1. Replace the following parts with new ones. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>REPLACEMENT.
   - Fuel injector seal
   - Slider washer
   - Back-up ring
   - O-ring seal
   - Stopper ring
2. Install the fuel injector holder to the fuel injector assembly.

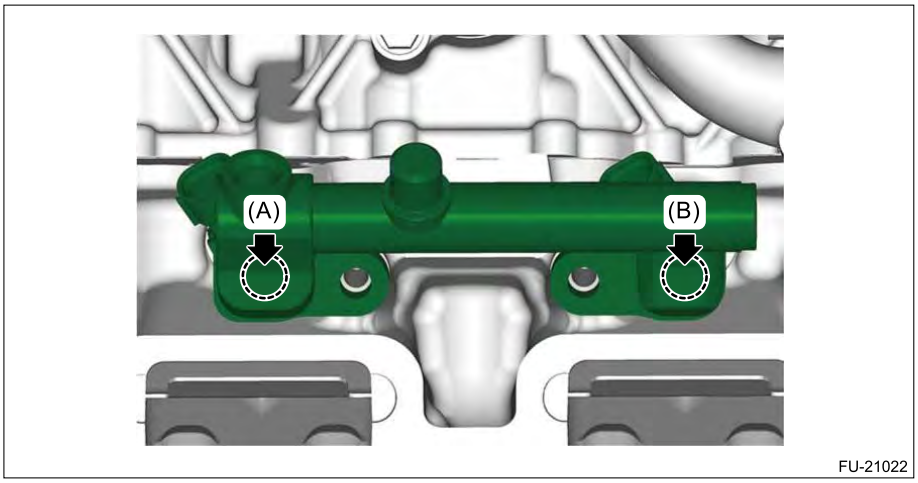


3. Align the protrusion of the fuel injector holder to the anti-rotation slot of the fuel injector pipe RH, and install the fuel injector straight to the fuel injector pipe RH.
   Caution:
   - **Always use a new fuel injector pipe RH.**
   - **Check the inside of the fuel injector insertion hole of the fuel injector pipe for foreign materials or damage.**
   - **Be careful not to allow gasoline to contact with the fuel injector seal and the inside of the mounting hole.**
   - **Apply liquid paraffin to the O-ring seal and install it.**
   - **In order to prevent damaging the O-ring seal, do not install the fuel injector to the fuel injector pipe by tilting or twisting it.**
   - **Make sure there is no gap between the fuel injector pipe and the fuel injector holder.**
   - **When replacing the fuel injector assembly, select the assembly with the same flow rate stratification number.**

(A) Flow rate stratification number

(B) QR code

(A) Protrusion portion

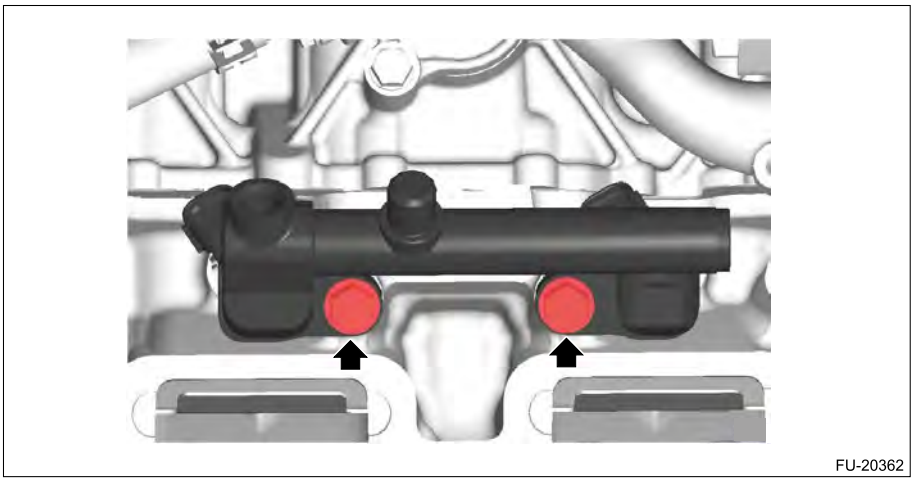


(B) Anti-rotation slot

(C) No gap allowed.

4. Insert the fuel injector pipe RH and fuel injector as a single unit into the cylinder head, and align their positions. Then, evenly press the sections (A) and (B).

Caution:



- **When installing, apply liquid paraffin to the fuel injector seal.**
- **In order to prevent damaging the O-ring seal, do not install the fuel injector pipe and fuel injector by tilting them toward the cylinder head.**

5. Tighten the bolts which hold the fuel injector pipe RH.

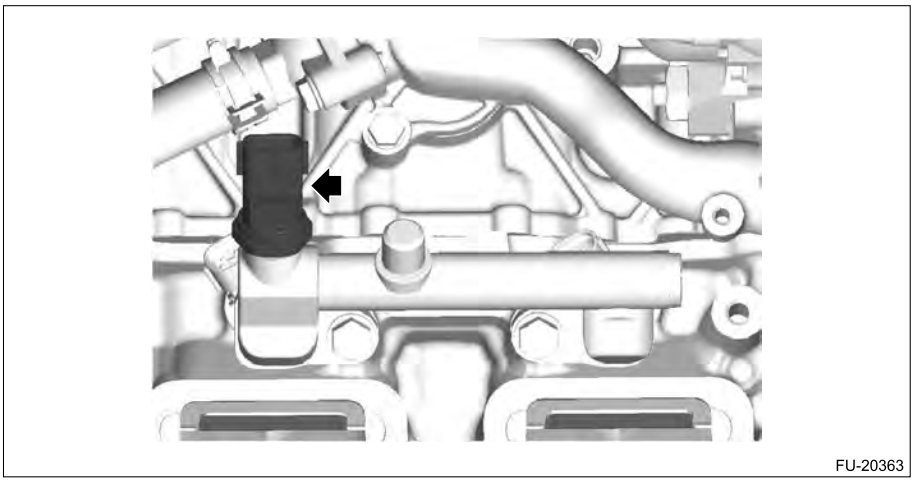
Tightening torque:

19 N·m (1.9 kgf-m, 14.0 ft-lb)

6. Temporarily tighten the fuel pressure sensor to the fuel injector pipe RH until it cannot be turned by hand.

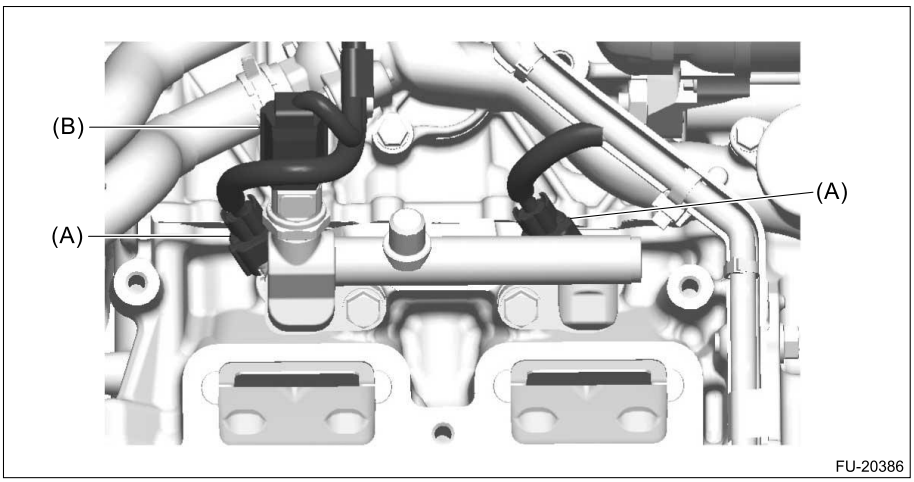
Caution:

Always use a new fuel pressure sensor.



7. Tighten the fuel pressure sensor.

Caution:



- **Be careful not to spill oil on the screw sections of the fuel pressure sensor and the fuel injector pipe RH.**
- **Be careful not to let foreign matter enter into the fuel pressure sensor during installation.**
- **The sensor should be installed perpendicularly to the fuel pressure sensor's threaded hole of the fuel injector pipe RH, and tightened to the specified torque.**
- **Do not recheck the tightening torque after tightening the fuel pressure sensor with specified torque.**

Tightening torque:

46 N·m (4.7 kgf-m, 33.9 ft-lb)

8. Connect connector (A) to the fuel injector, and connect connector (B) to the fuel pressure sensor.

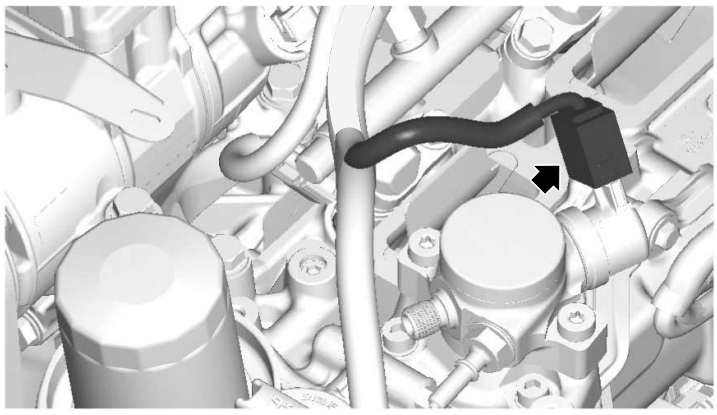
9. Install the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.

10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Pressure Sensor

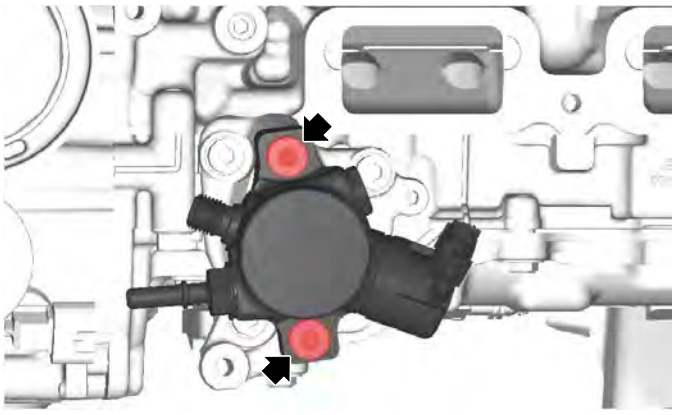
INSPECTION

Check that the fuel pressure sensor has no deformation, cracks or other damages.



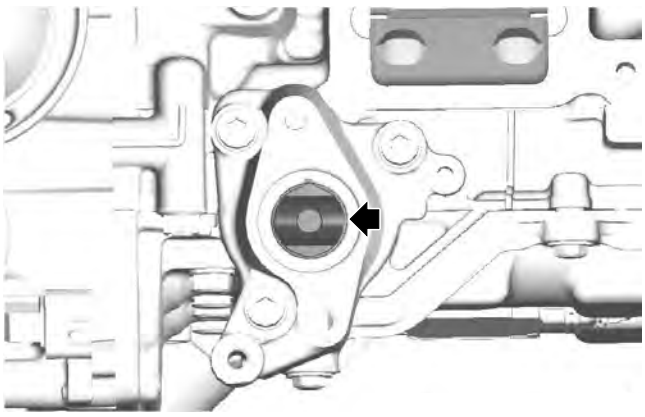
REMOVAL

1. HIGH-PRESSURE FUEL PUMP



Caution:

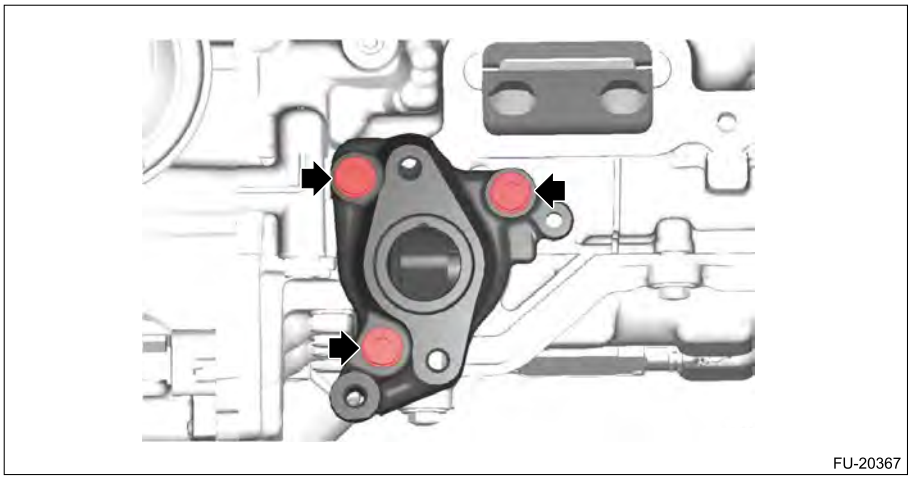
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the high-pressure fuel delivery pipes. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE.
3. Disconnect the connector from high-pressure fuel pump.

FU-20364

4. Using TORX PLUS® 40IP, remove the high-pressure fuel pump.

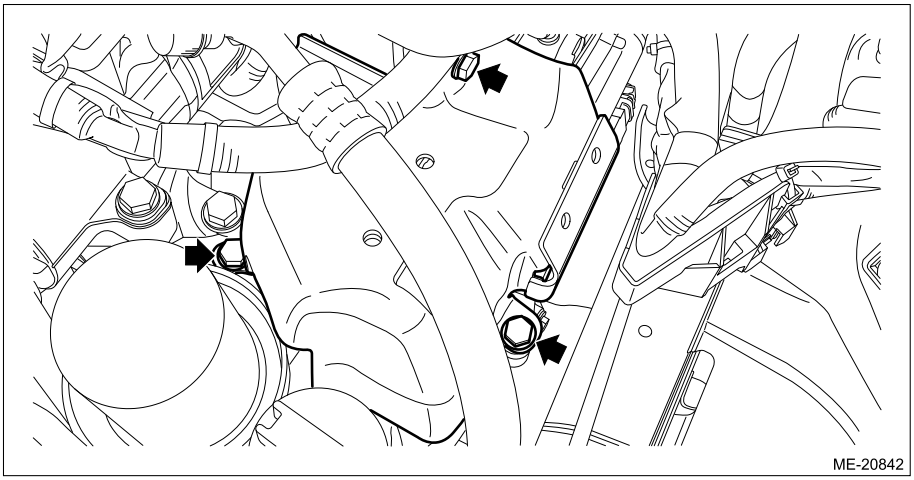


FU-20365

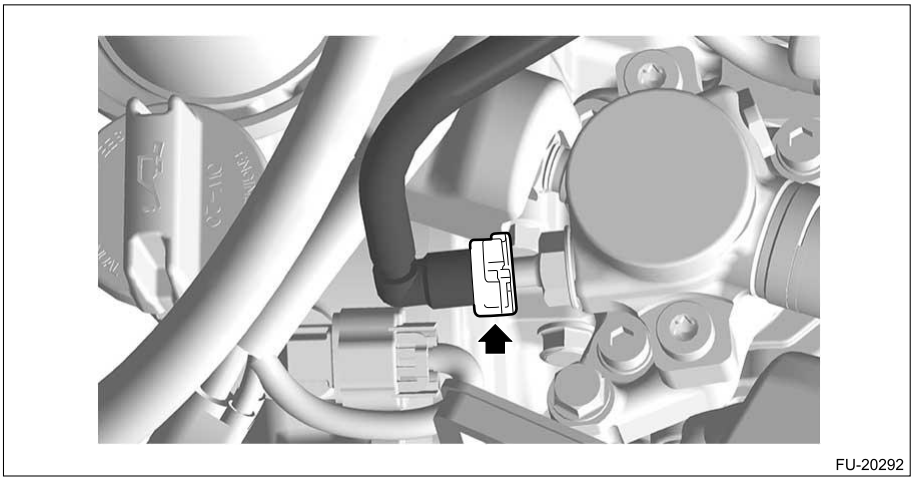
5. Remove the fuel pump lifter from the fuel pump case.

FU-20366

2. HIGH-PRESSURE FUEL PUMP CASE

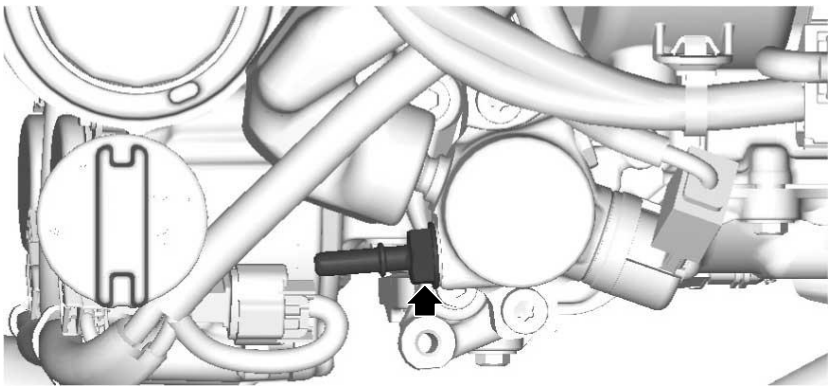


1. Remove the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>REMOVAL > HIGH-PRESSURE FUEL PUMP.
2. Remove the high-pressure fuel pump case from the cam carrier assembly LH.



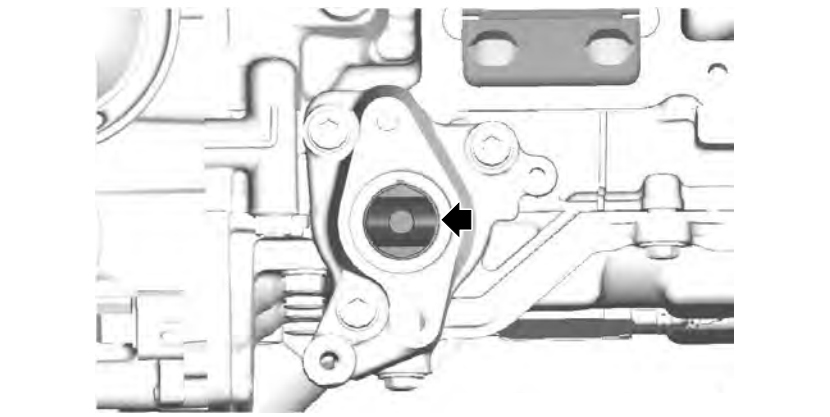
3. Remove liquid gasket from the high-pressure fuel pump case and the cam carrier assembly LH.

3. FUEL DELIVERY PIPE



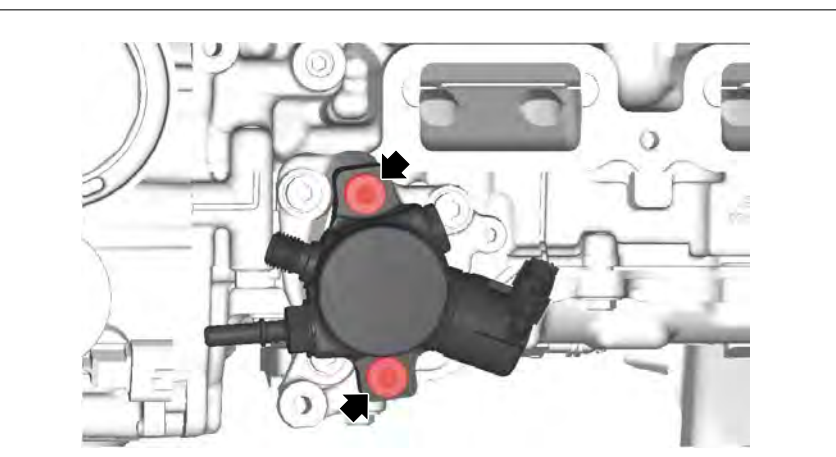
1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Remove the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>REMOVAL.
3. Remove the fuel pipe protector.

4. Disconnect the fuel delivery pipe A from the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE C).



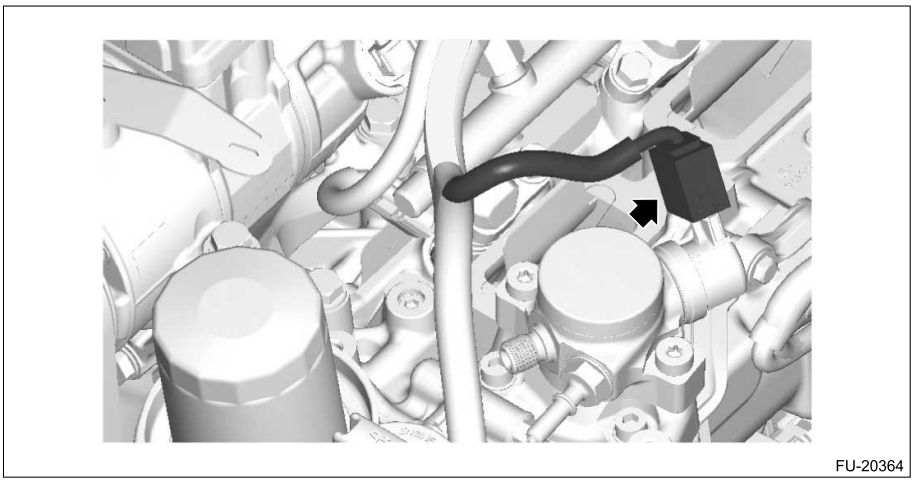
5. Remove the fuel delivery pipe B from the high-pressure fuel pump.

FU-20395



INSTALLATION

1. HIGH-PRESSURE FUEL PUMP



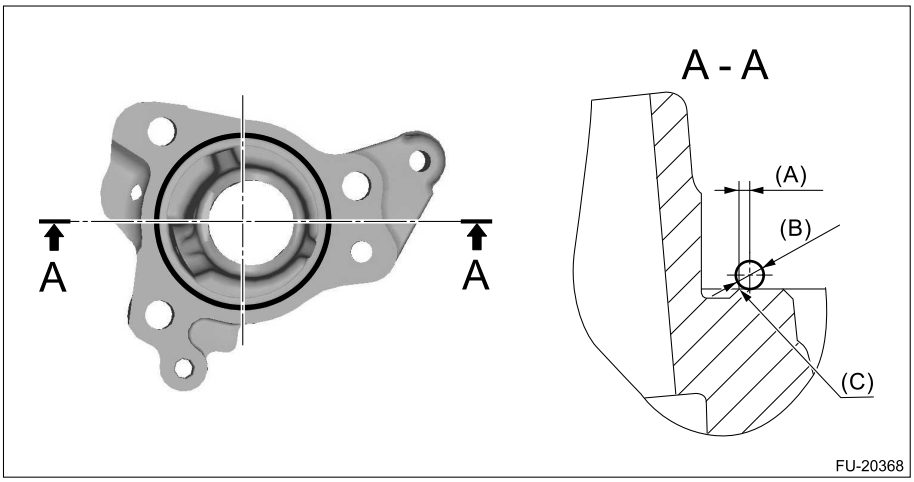
1. Install the fuel pump lifter to the high-pressure fuel pump case.
   Note:
   - **Apply engine oil to the side of the high-pressure fuel pump case and to the bottom surface of the fuel pump lifter.**
   - **After installing the fuel pump lifter, rotate the crankshaft in order to set the fuel pump lifter comes to the lowest position.**

FU-20366

2. Set a new O-ring, using TORX PLUS® 40IP, install the high-pressure fuel pump.
   Tightening torque:
   21 N·m (2.1 kgf-m, 15.5 ft-lb)

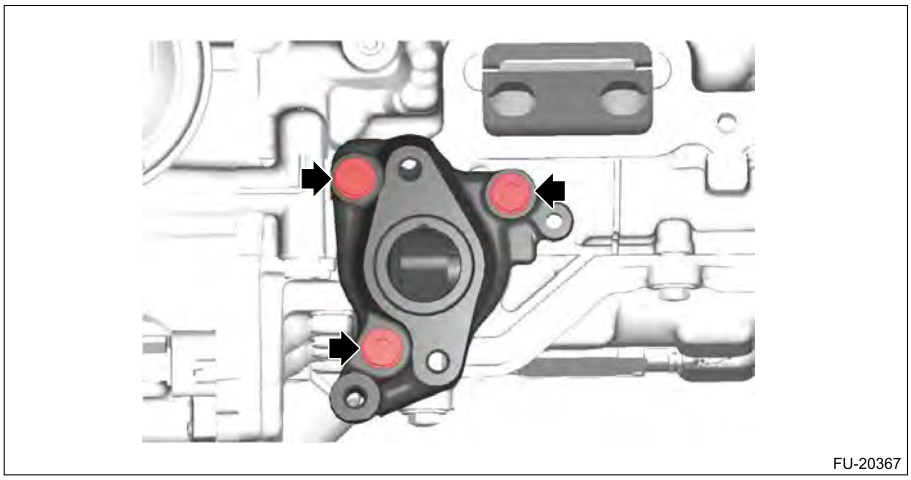
FU-20365

3. Connect the connector to the high-pressure fuel pump.



4. Install the high-pressure fuel delivery pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

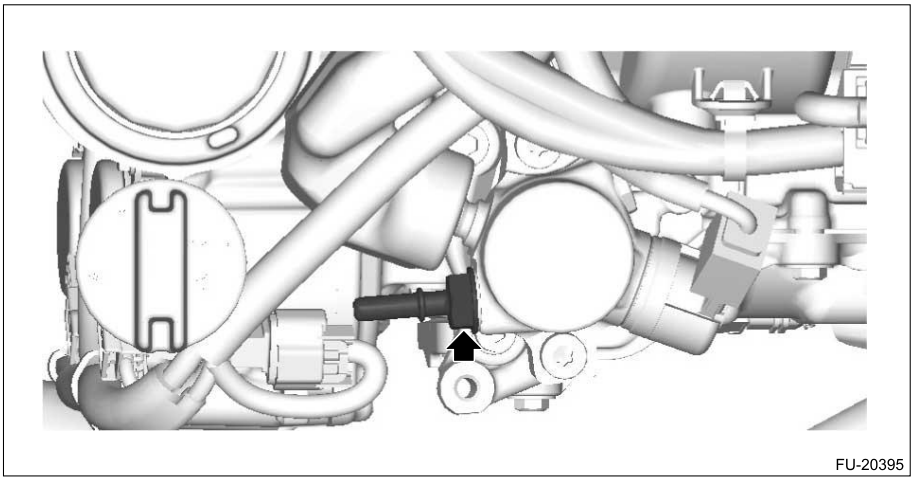
2. HIGH-PRESSURE FUEL PUMP CASE



1. Apply liquid gasket to the mating surfaces of fuel pump case, and install the high-pressure fuel pump case.
   Note:
   - **Before applying liquid gasket, degrease the old liquid gasket seal surface of the high-pressure fuel pump case and the cam carrier assembly LH.**
   - **Install within 5 min. after applying liquid gasket.**

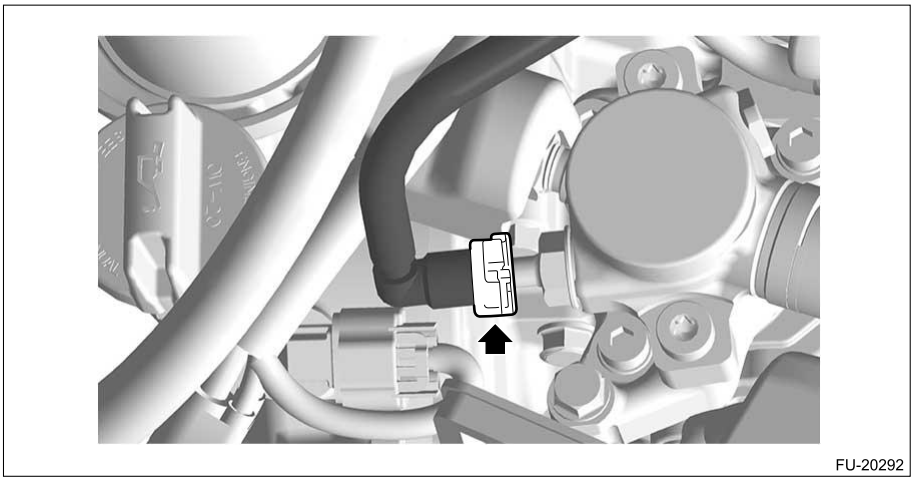
   Liquid gasket:
   THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent
   Liquid gasket applying diameter:
   3.5±1 mm (0.1181±0.0394 in)

(A) Within 1 mm (within 0.0394 in) (B) 3.5 mm (0.1181 in) (C) Chamfer edge



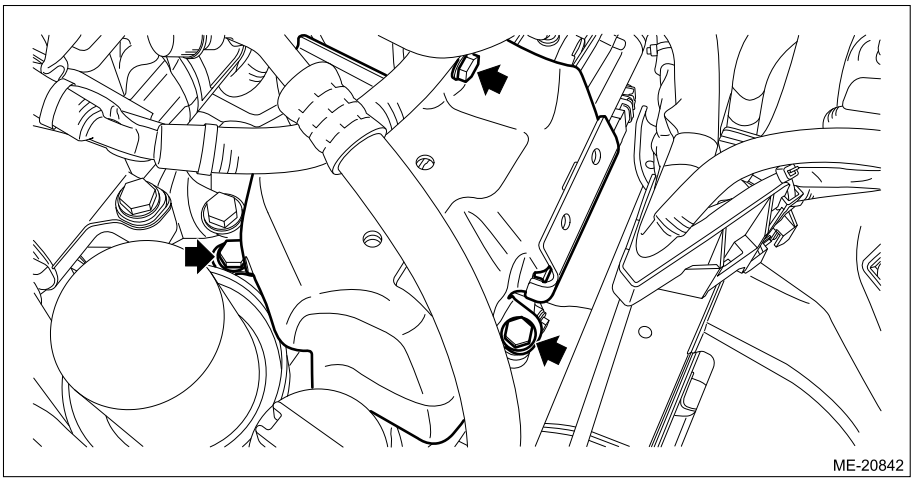
2. Install the high-pressure fuel pump case to the cam carrier assembly LH.
   Tightening torque:
   19 N·m (1.9 kgf-m, 14.0 ft-lb)

FU-20367



3. Install the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>INSTALLATION > HIGH-PRESSURE FUEL PUMP.

3. FUEL DELIVERY PIPE



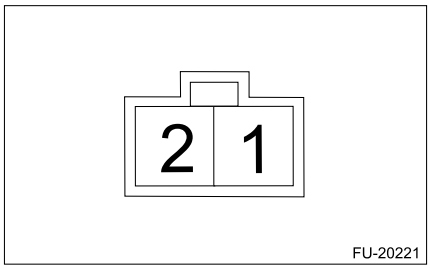
1. Using a new gasket, install the fuel delivery pipe B to the high-pressure fuel pump.
   Tightening torque:
   48 N·m (4.9 kgf-m, 35.4 ft-lb)

FU-20395

2. Connect the fuel delivery pipe A to the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE C).

FU-20292

3. Install the fuel pipe protector.
   Tightening torque:
   19 N·m (1.9 kgf-m, 14.0 ft-lb)



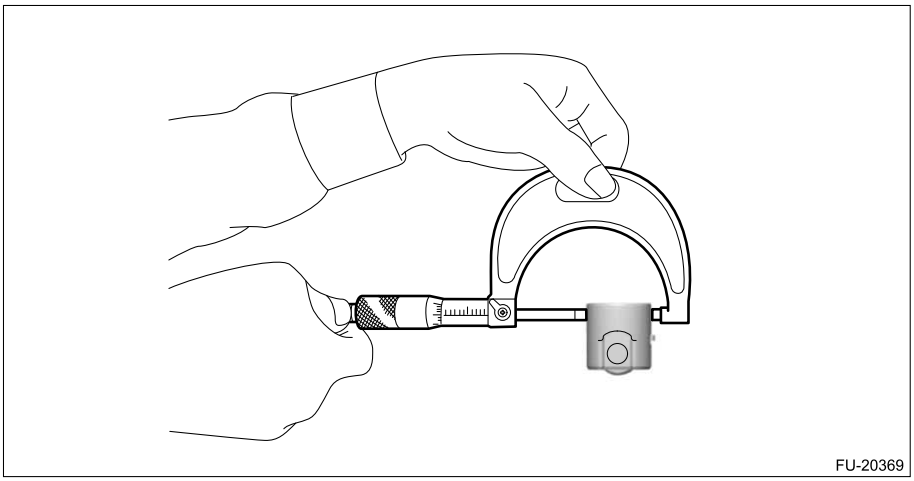
4. Install the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSTALLATION.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > High Pressure Fuel Pump

INSPECTION

1. CHECK HIGH-PRESSURE FUEL PUMP

1. Check that the high-pressure fuel pump has no deformation, cracks or other damages.
2. Measure the resistance between high-pressure fuel pump terminals.

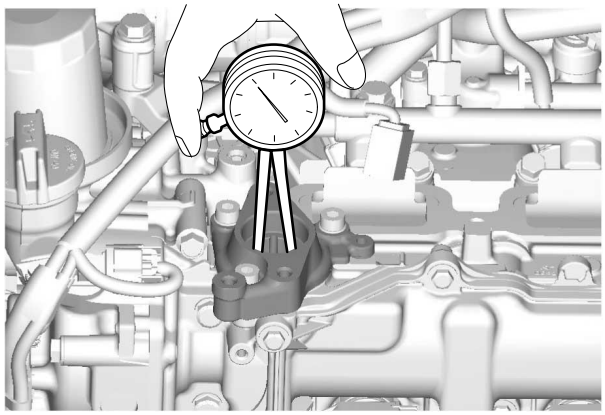


Terminal No.	Standard
1 and 2	0.5Ω (when 20°C (68°F))

2. CHECK THE HIGH-PRESSURE FUEL PUMP CASE AND FUEL PUMP LIFTER

1. Check that the high-pressure fuel pump case and the fuel pump lifter have no deformation, cracks or other damages.
2. Check the clearance between the fuel pump lifter and high-pressure fuel pump case bore. Check the clearance between fuel pump lifter and high-pressure fuel pump case bore by measuring the outer diameter of fuel pump lifter and the inner diameter of high-pressure fuel pump case bore respectively.
   (1) Measure the outer diameter of fuel pump lifter with a micrometer.

Note:



- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure at several points, and take notes of the value of most worn location.**

(2) Using a caliper gauge, measure the inner diameter of high-pressure fuel pump case bore.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure at several points, and take notes of the value of most worn location.**

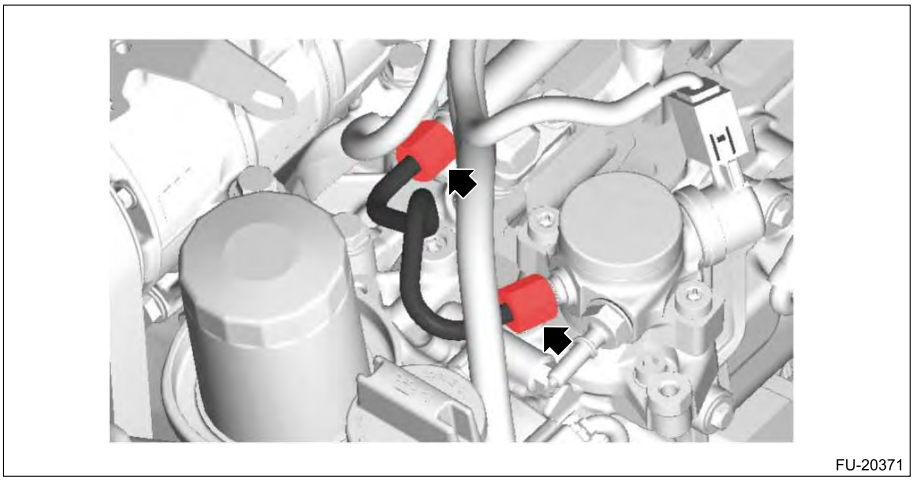
FU-20370

(3) Calculate the clearance between the fuel pump lifter and high-pressure fuel pump case bore. If it is not within the standard, replace the fuel pump lifter and high-pressure fuel pump case as a set.

Clearance between fuel pump lifter and high-pressure fuel pump case bore:

Standard

0.055 — 0.108 mm (0.0022 — 0.0043 in)



REMOVAL

1. HIGH-PRESSURE FUEL DELIVERY PIPE

Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
3. Remove the fuel pipe insulator No. 3 and fuel pipe insulator No. 4. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Insulator>REMOVAL.
4. Remove the high-pressure fuel delivery pipes.

2. HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY

Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

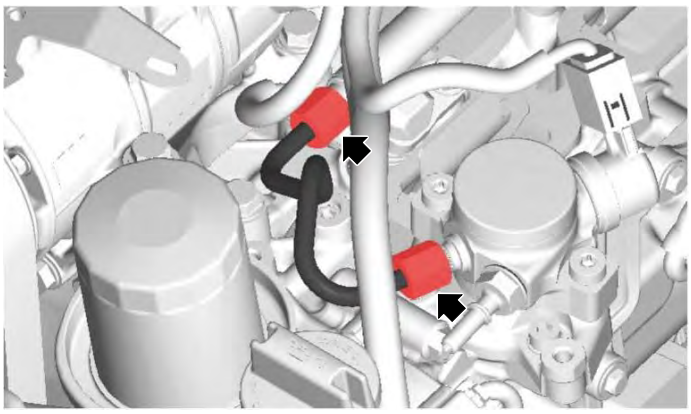
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
3. Remove the fuel pipe insulator No. 1, fuel pipe insulator No. 2 and fuel pipe insulator No. 3. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Insulator>REMOVAL.
4. Remove the flare nut (A) and bolt (B), and then remove the high-pressure fuel delivery pipe assembly.

代替画像1

この画像は代替画像です

INSTALLATION

1. HIGH-PRESSURE FUEL DELIVERY PIPE



1. Temporarily tighten the flare nut of the high-pressure fuel delivery pipe by hand until it seats, and tighten the flare nuts on both ends.

Caution:

- **Always use a new high-pressure fuel delivery pipe.**
- **Check that the seal surface of the fuel injector pipe LH and the high-pressure fuel pump have no deformation, cracks or other damages.**
- **Check that the seal surface of the fuel injector pipe LH and the high-pressure fuel pump have no foreign materials.**

Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

2. Install the fuel pipe insulator No. 3 and fuel pipe insulator No. 4. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Insulator>INSTALLATION.
3. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

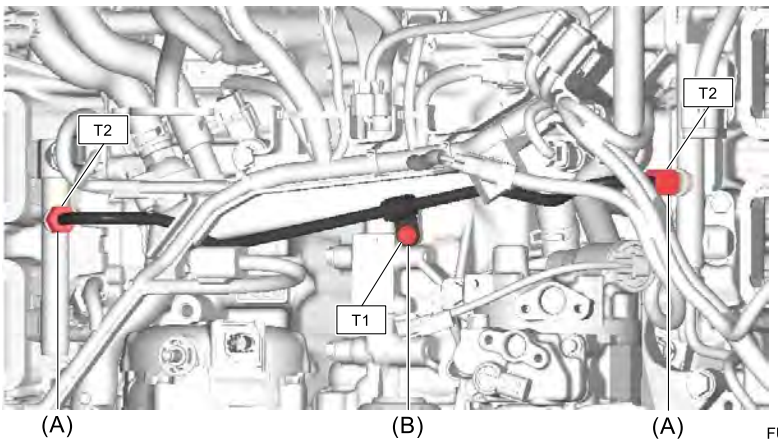
2. HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY

1. Install the high-pressure fuel delivery pipe assembly.

Caution:

- **Always use a new high-pressure fuel delivery pipe assembly.**
- **Check that the seal surface of the fuel injector pipe have no deformation, cracks or other damages.**
- **Check that the seal surface of the fuel injector pipe have no foreign materials.**

(1) Temporarily tighten the flare nut (A) to the fuel injector pipe by hand until it is seated, and secure the high-pressure fuel delivery pipe assembly to the water pipe assembly using bolts (B).



Tightening torque:

T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

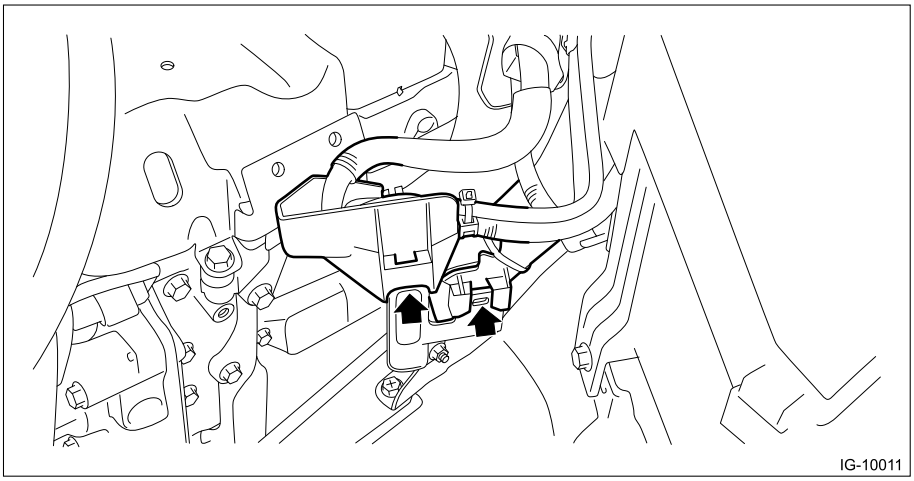
(2) Tighten the flare nuts (A).

Tightening torque:

T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

2. Install the fuel pipe insulator No. 1, fuel pipe insulator No. 2 and fuel pipe insulator No. 3. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Insulator>INSTALLATION.
3. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > High Pressure Fuel Delivery Pipe



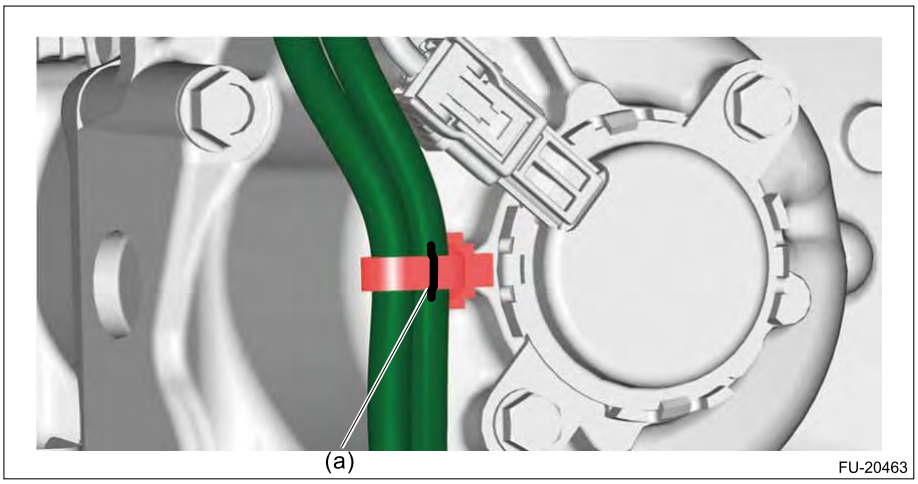
INSPECTION

Check that the high-pressure fuel delivery pipe and the high-pressure fuel delivery pipe assembly have no deformation, cracks and other damages.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Wiring Harness

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
3. Remove the fuel insulator. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Insulator>REMOVAL.
4. Remove the engine wiring harness and the battery cables from the bracket.



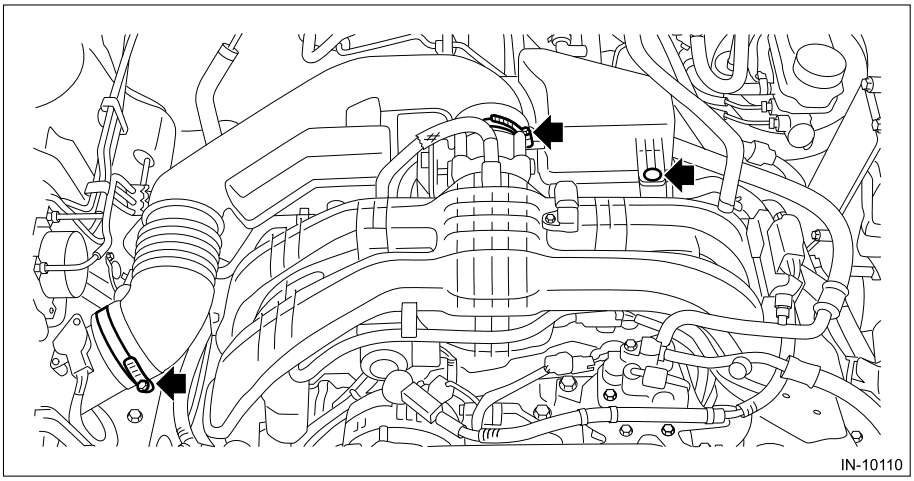
5. Disconnect each connector to remove the engine wiring harness. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > ENGINE WIRING HARNESS.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Wiring Harness

INSTALLATION

1. Set the engine wiring harness to the engine, and connect each connector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > ENGINE WIRING HARNESS.
   Note:
   - **If the clip is damaged, replace it with a new part.**
   - **Before replacing the clip, put an alignment mark (a) on both engine wiring harness and clip to remove the clip, and then align to the alignment mark (a) to attach a new clip to the engine wiring harness.**

2. Install the fuel insulator. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Insulator>INSTALLATION.
3. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

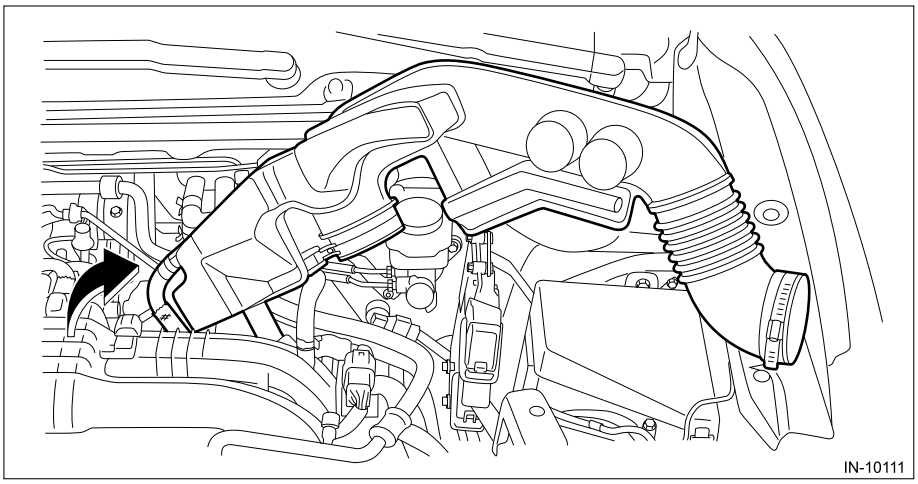


FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Wiring Harness

INSPECTION

Check that the engine wiring harness does not have deformation, cracks and any other damage.

REMOVAL

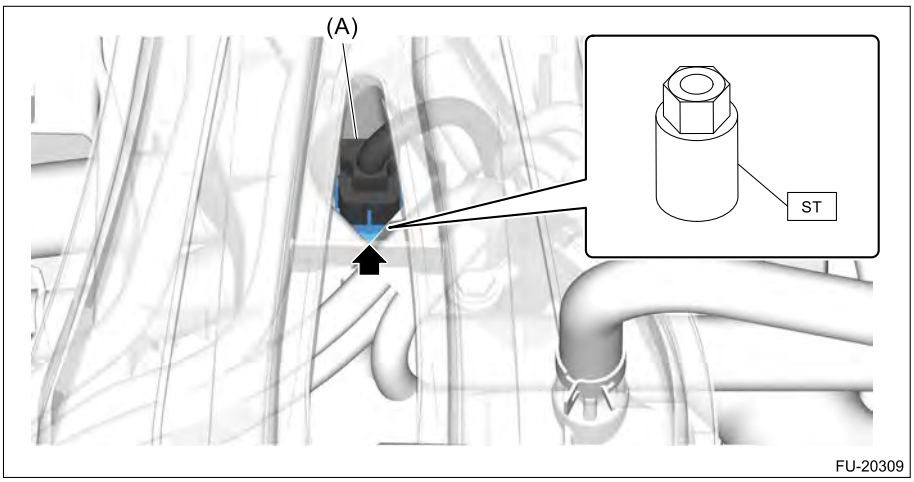


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
3. Remove the clip from the air intake boot, and loosen the clamp.

4. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:

Be careful not to pull out the PCV hose.



5. Disconnect the connector (A) from the engine coolant temperature sensor, and remove the engine coolant temperature sensor using the ST.

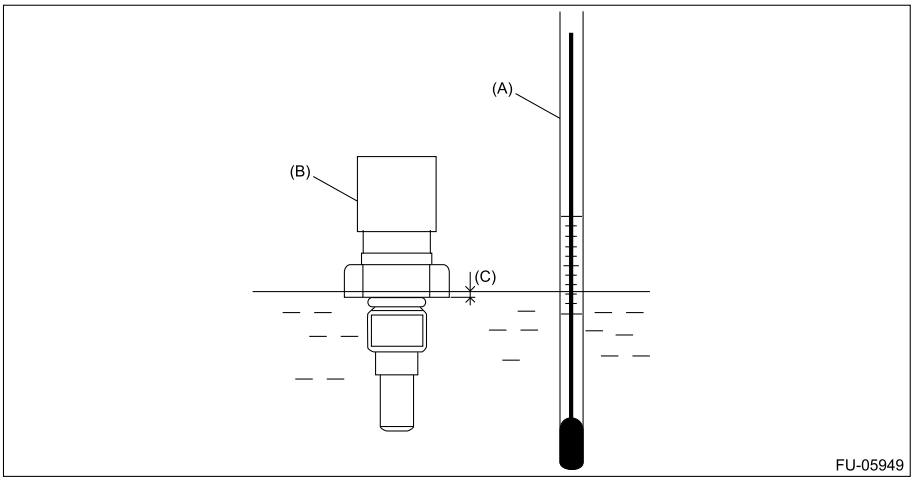
Note:

STRUT MOUNT SOCKET (20099PA000) can also be used.

Preparation tool:

ST: STRUT MOUNT SOCKET (20399AG000)

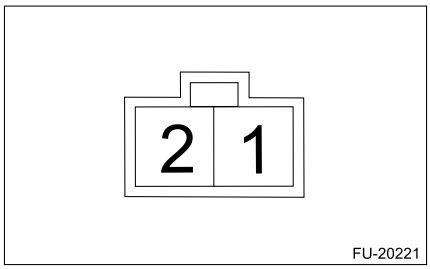
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Coolant Temperature Sensor



INSTALLATION

1. Set a new gasket, install the engine coolant temperature sensor using the ST.
   Note:
   STRUT MOUNT SOCKET (20099PA000) can also be used.
   Preparation tool:
   ST: STRUT MOUNT SOCKET (20399AG000)
   Tightening torque:
   16 N·m (1.6 kgf-m, 11.8 ft-lb)
2. Connect the connector to engine coolant temperature sensor.
3. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Coolant Temperature Sensor

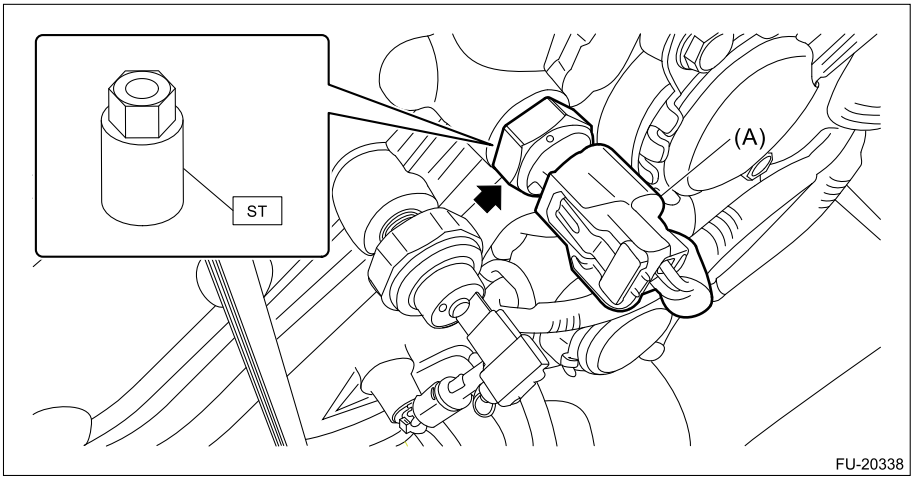


INSPECTION

1. Check that the engine coolant temperature sensor has no deformation, cracks or other damages.
2. Immerse the engine coolant temperature sensor and a thermometer in water.
   Caution:
   Take care not to allow water to get into the engine coolant temperature sensor connector. Completely remove any water inside.

(A) Thermometer (B) Engine coolant temperature sensor (C) Hexagonal part height: To approx. $^{1}/_{3}$

3. Raise water temperature gradually, measure the resistance between the engine coolant temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).
   Note:
   Agitate the water for even temperature distribution.



Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	Approx. 2.45±0.2 kΩ
80°C (176°F)		Approx. 0.318±0.013 kΩ

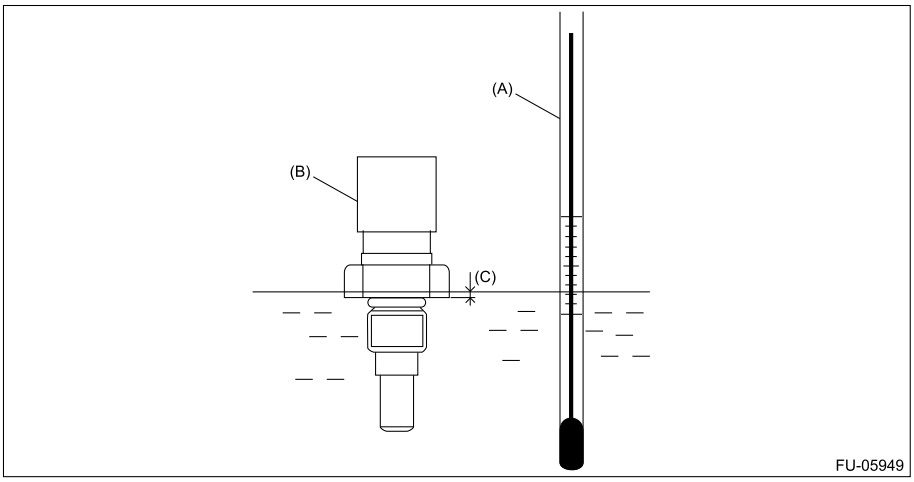
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Oil Temperature Sensor

REMOVAL

Caution:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the connector (A) from the engine oil temperature sensor, and remove the engine oil temperature sensor from the chain cover using the ST.
   Note:
   STRUT MOUNT SOCKET (20099PA000) can also be used.
   Preparation tool:
   ST: STRUT MOUNT SOCKET (20399AG000)

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Oil Temperature Sensor



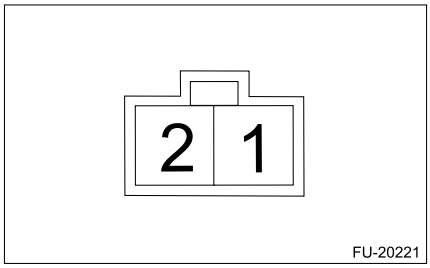
INSTALLATION

1. Set a new gasket, install the engine oil temperature sensor to the chain cover using the ST.
   Note:
   STRUT MOUNT SOCKET (20099PA000) can also be used.
   Preparation tool:
   ST: STRUT MOUNT SOCKET (20399AG000)
   Tightening torque:
   16 N·m (1.6 kgf-m, 11.8 ft-lb)
2. Connect the connector to the engine oil temperature sensor.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Oil Temperature Sensor

INSPECTION

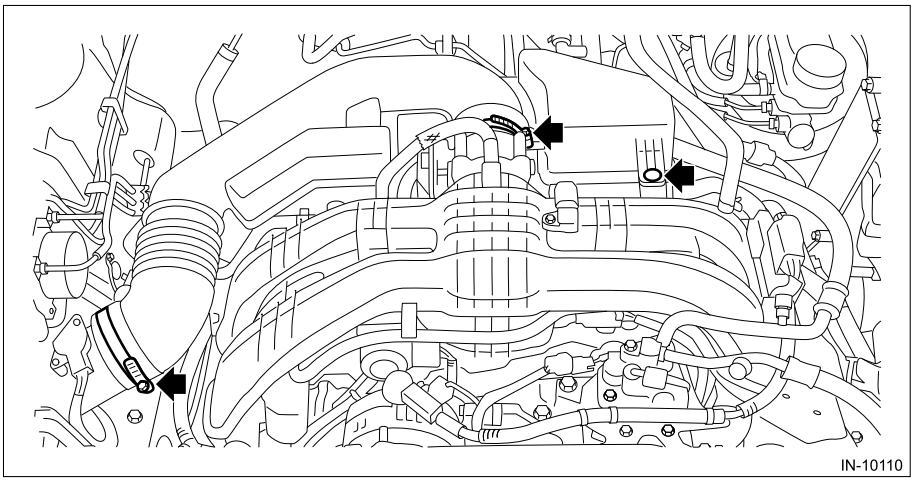
1. Check that the engine oil temperature sensor has no deformation, cracks or other damages.
2. Immerse the engine oil temperature sensor and a thermometer in water.
   Caution:
   Take care not to allow water to get into the engine oil temperature sensor connector. Completely remove any water inside.



(A) Thermometer (B) Engine oil temperature sensor (C) Hexagonal part height: To approx. $^{1}/_{3}$

3. Raise water temperature gradually, measure the resistance between the engine oil temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

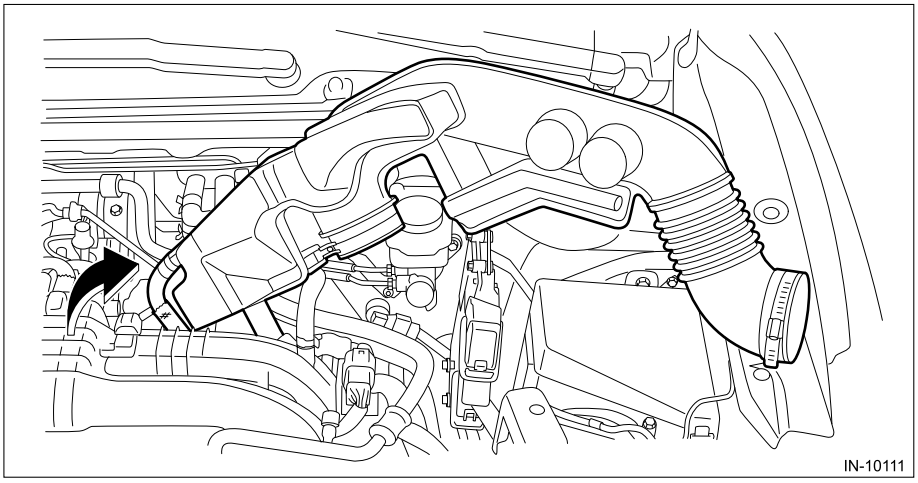
Note:



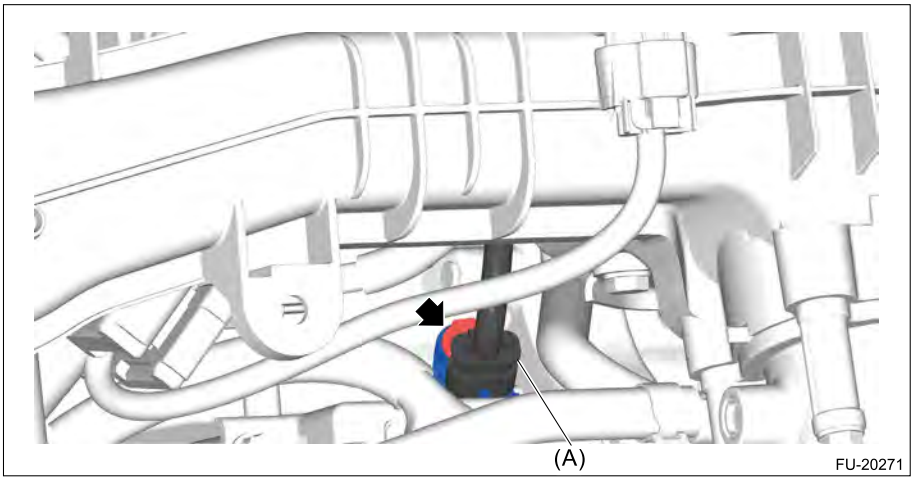
Agitate the water for even temperature distribution.

Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	Approx. 2.45±0.2 kΩ
80°C (176°F)		Approx. 0.318±0.013 kΩ

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.



3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:

Be careful not to pull out the PCV hose.

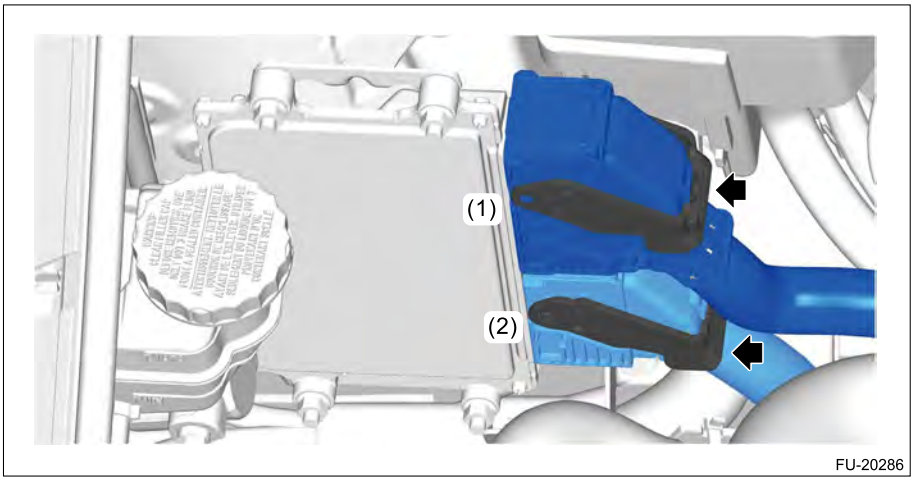
4. Disconnect the connector (A) from the crankshaft position sensor, and remove the crankshaft position sensor from the cylinder block.

INSTALLATION

1. Install the crankshaft position sensor to the cylinder block, and connect the connector to the crankshaft position sensor.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



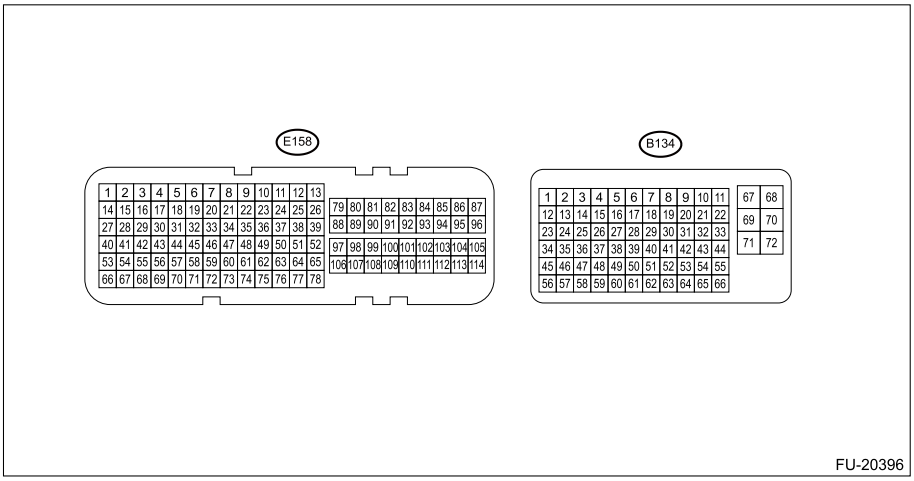
2. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
3. Connect the ground terminal to battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Crankshaft Position Sensor

INSPECTION

1. CRANKSHAFT POSITION SENSOR

1. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Prepare an oscilloscope.
3. Disconnect the connector from ECM in numerical order as shown in the figure.



4. Attach the ST between the ECM, engine wiring harness and the bulkhead wiring harness. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.

Special Tool:

CHECK BOARD (18460AA120)

5. Connect the probe to ST.

Terminal No.	Probe
(E158) No. 66	+
(B134) No. 69	–

6. Start the engine and let it idle.
7. Check the waveforms and voltage.

Note:

For waveform and voltage, refer to "Control Module (ECM) I/O Signal". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

8. After inspection, install the related parts in the reverse order of removal.

Note:

For installation procedures of ECM connectors, refer to Engine Control Module (ECM). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSTALLATION.

2. OTHER INSPECTIONS

Check that the crankshaft position sensor has no deformation, cracks or other damages.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Crankshaft Position Sensor Plate

REMOVAL

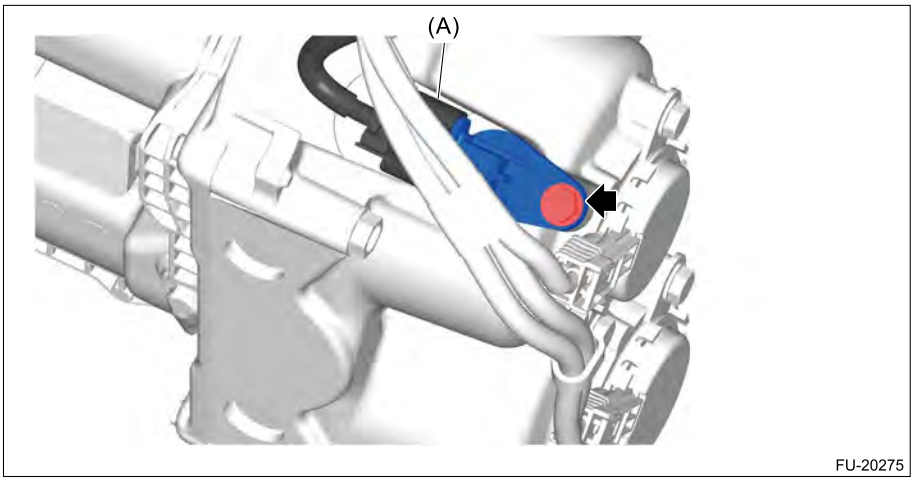
The crankshaft position sensor plate is tightened together with the drive plate or flywheel; therefore, refer to “Drive Plate” or “Flywheel” for removal procedure. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Plate>REMOVAL. Ref. to CLUTCH SYSTEM>Flywheel>REMOVAL.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Crankshaft Position Sensor Plate

INSTALLATION

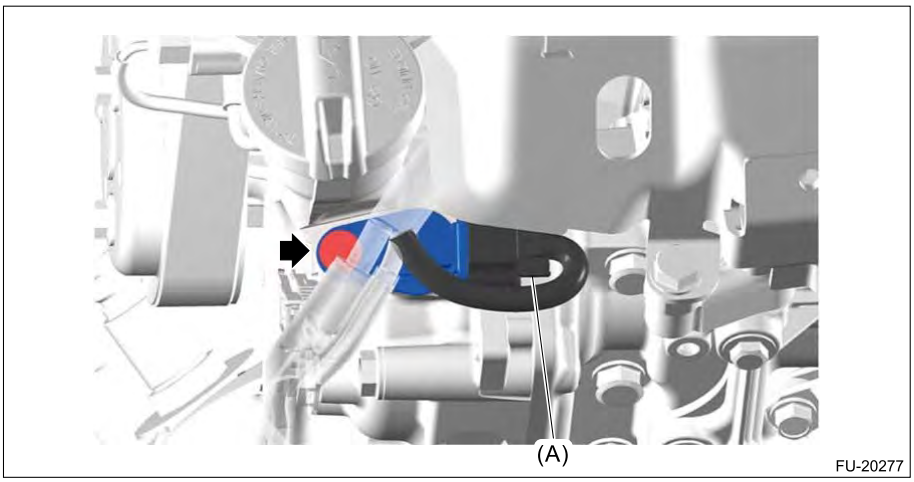
The crankshaft position sensor plate is tightened together with the drive plate or flywheel; therefore, refer to “Drive Plate” or “Flywheel” for installation procedure. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Plate>INSTALLATION. Ref. to CLUTCH SYSTEM>Flywheel>INSTALLATION.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Crankshaft Position Sensor Plate



INSPECTION

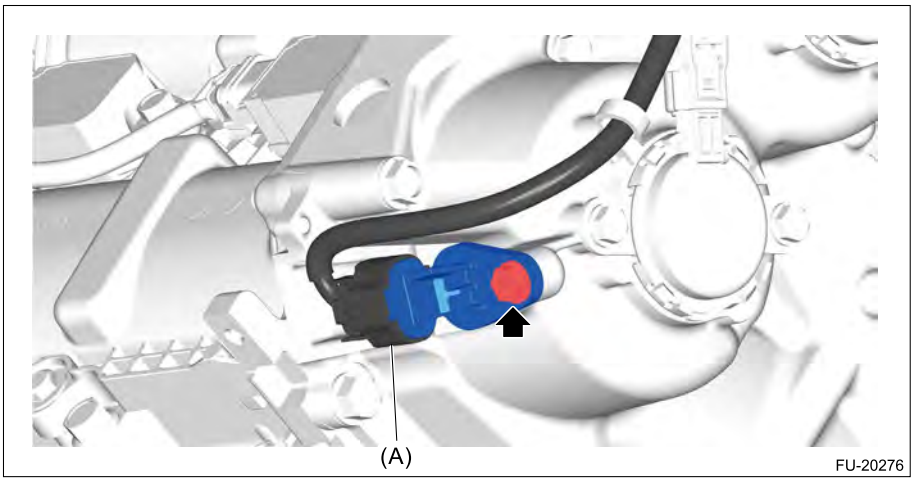
Check that the crankshaft position sensor plate has no deformation, cracks or other damages.



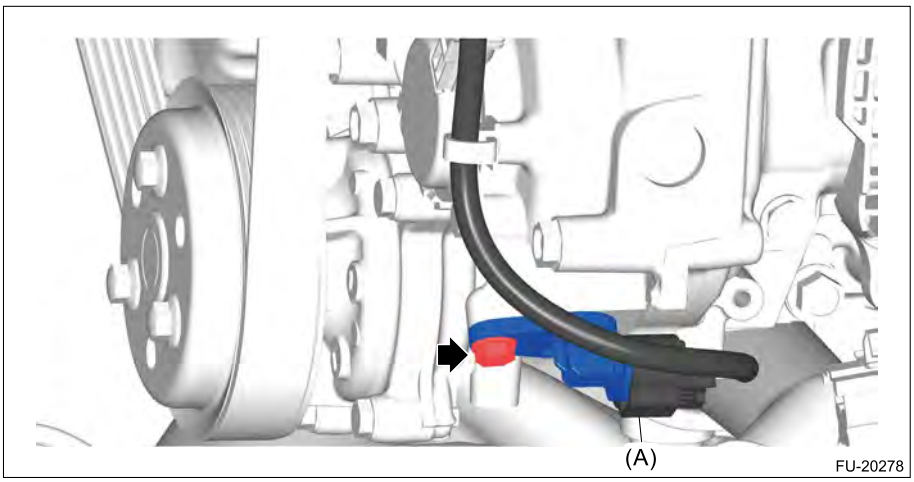
REMOVAL

1. INTAKE SIDE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the air intake duct. (RH side only) Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
3. Disconnect the connector (A) from the camshaft position sensor, and remove the camshaft position sensor from the chain cover.
   - RH side



- LH side



2. EXHAUST SIDE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Disconnect the connector (A) from the camshaft position sensor, and remove the camshaft position sensor from the chain cover.
   - RH side

- LH side

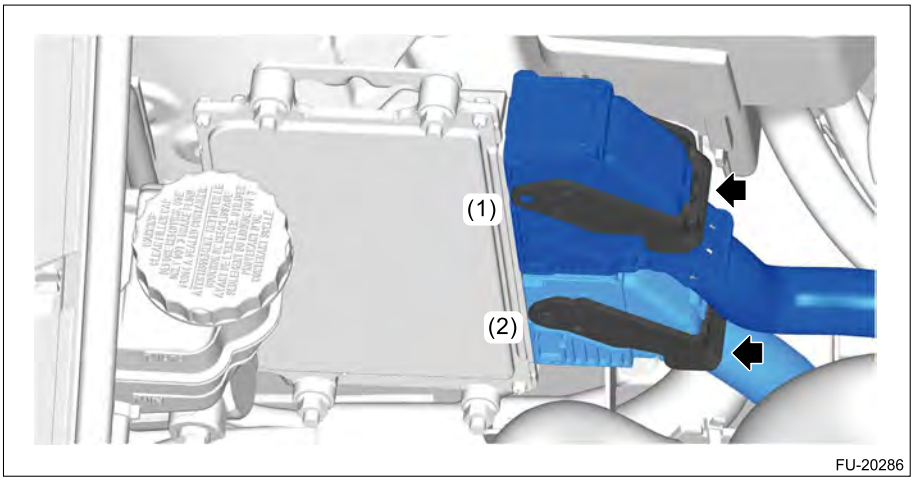
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Camshaft Position Sensor

INSTALLATION

1. INTAKE SIDE

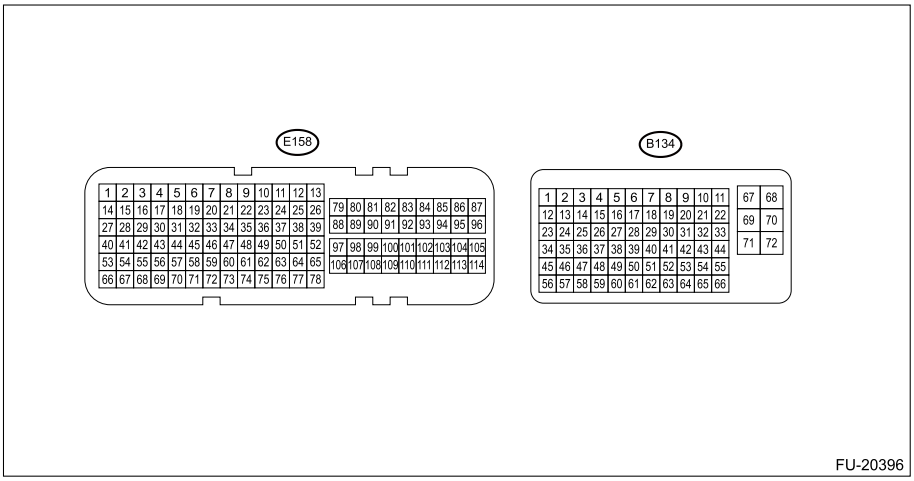
1. Install the camshaft position sensor to the chain cover with new O-ring.
   Note:
   Apply engine oil to O-ring.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Connect the connectors to camshaft position sensor.
3. Install the air intake duct. (RH side only) Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. EXHAUST SIDE



1. Install the camshaft position sensor to the chain cover with new O-ring.
   Note:
   Apply engine oil to O-ring.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Connect the connectors to camshaft position sensor.
3. Install the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>INSTALLATION.
4. Lower the vehicle.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Camshaft Position Sensor



INSPECTION

1. CAMSHAFT POSITION SENSOR

1. Disconnect the ground terminal from battery sensor. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Prepare an oscilloscope.
3. Disconnect the connector from ECM in numerical order as shown in the figure.

4. Attach the ST between the ECM, engine harness and the bulkhead wiring harness. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL > HOW TO USE CHECK BOARD.
   Special Tool:
   CHECK BOARD (18460AA120)
5. Connect the probe to ST.

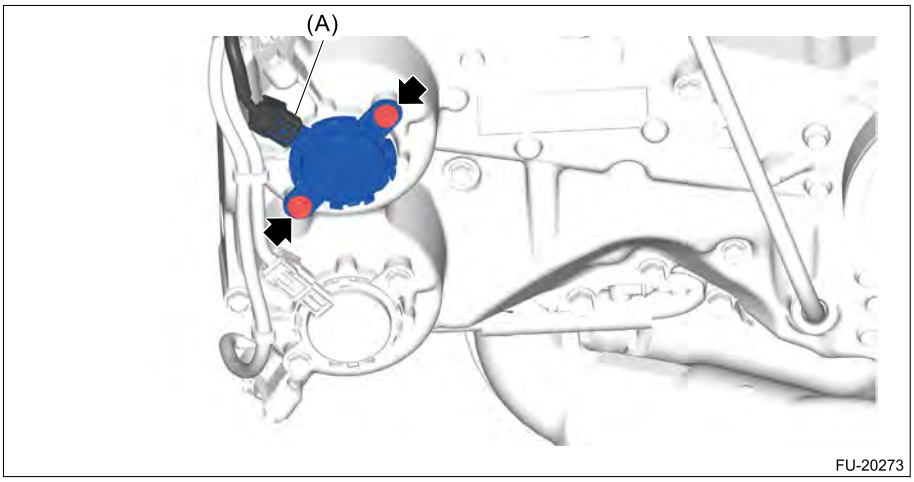
Camshaft position sensor		Terminal No.	Probe
Intake	RH	(E158) No. 78	+
	LH	(E158) No. 77	+
Exhaust	RH	(E158) No. 65	+
	LH	(E158) No. 64	+
RH and LH		(B134) No. 69	–

6. Start the engine and let it idle.
7. Check the waveforms and voltage.
   Note:
   For waveform and voltage, refer to "Control Module (ECM) I/O Signal". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.
8. After inspection, install the related parts in the reverse order of removal.

Note:
For installation procedures of ECM connectors, refer to Engine Control Module (ECM). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSTALLATION.

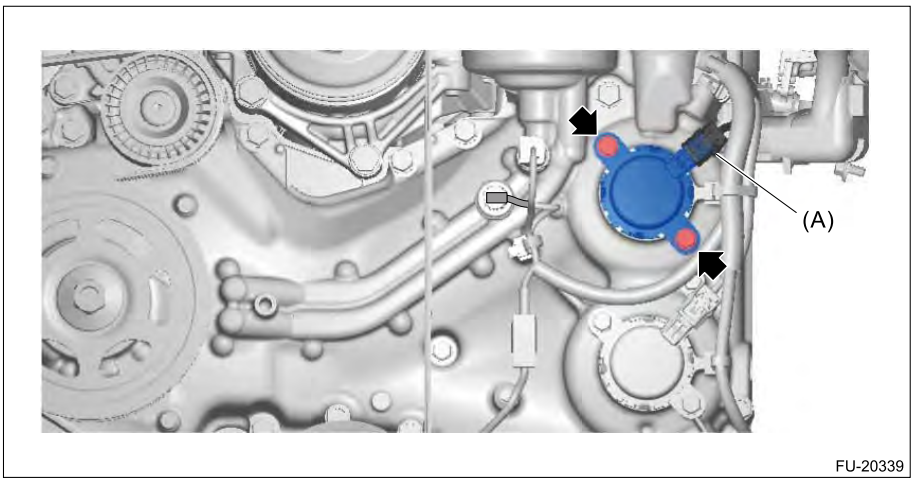
2. OTHER INSPECTIONS

Check that the camshaft position sensor has no deformation, cracks or other damages.



REMOVAL

Caution:

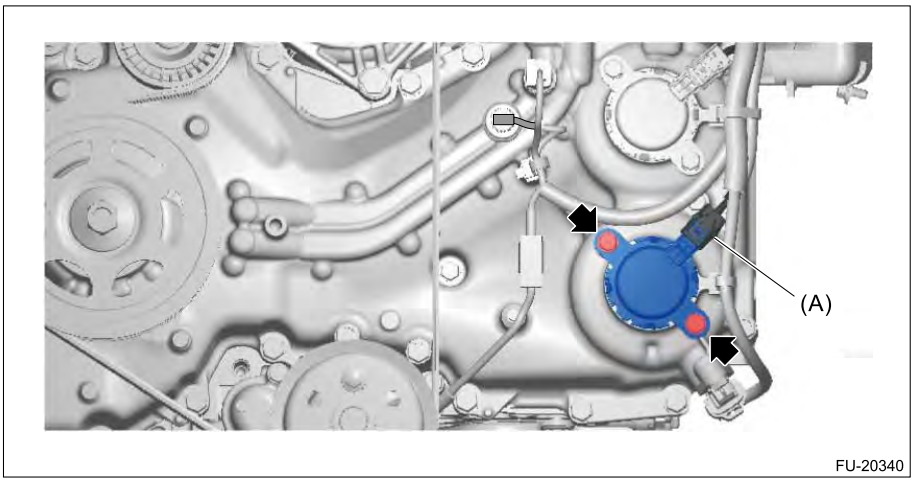


If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1. INTAKE SIDE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the air intake duct. (RH side only) Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
3. Disconnect the connector (A) from the oil control solenoid, and remove the oil control solenoid from the chain cover.
   - RH side

   - LH side



2. EXHAUST SIDE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the air intake duct. (RH side only) Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
3. Disconnect the connector (A) from the oil control solenoid, and remove the oil control solenoid from the chain cover.
   - RH side

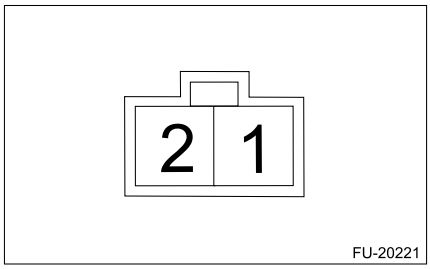
- LH side

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Oil Control Solenoid

INSTALLATION

1. INTAKE SIDE

1. Using a new O-ring, install the intake oil control solenoid to the chain cover.
   Note:
   Apply engine oil to O-ring.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Connect the connector to the intake oil control solenoid.
3. Install the air intake duct. (RH side only) Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

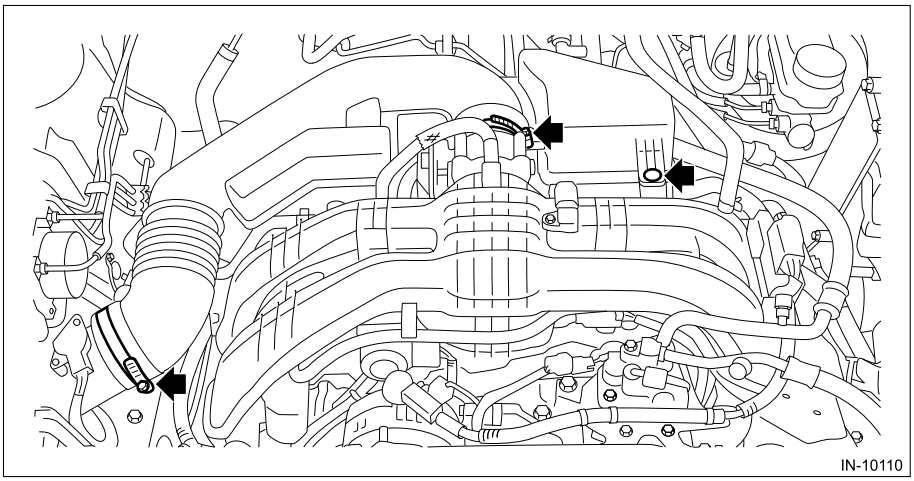


2. EXHAUST SIDE

1. Using a new O-ring, install the intake oil control solenoid to the chain cover.
   Note:
   Apply engine oil to O-ring.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Connect the connector to the intake oil control solenoid.
3. Install the air intake duct. (RH side only) Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Oil Control Solenoid

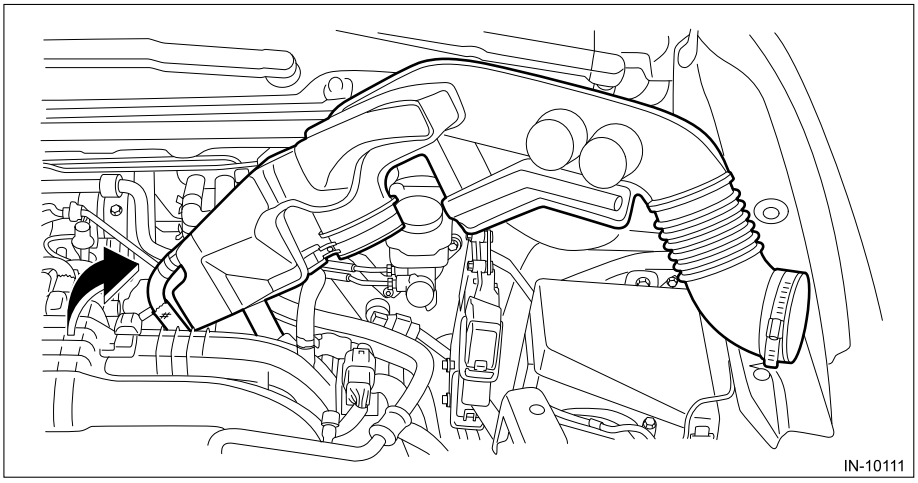
INSPECTION



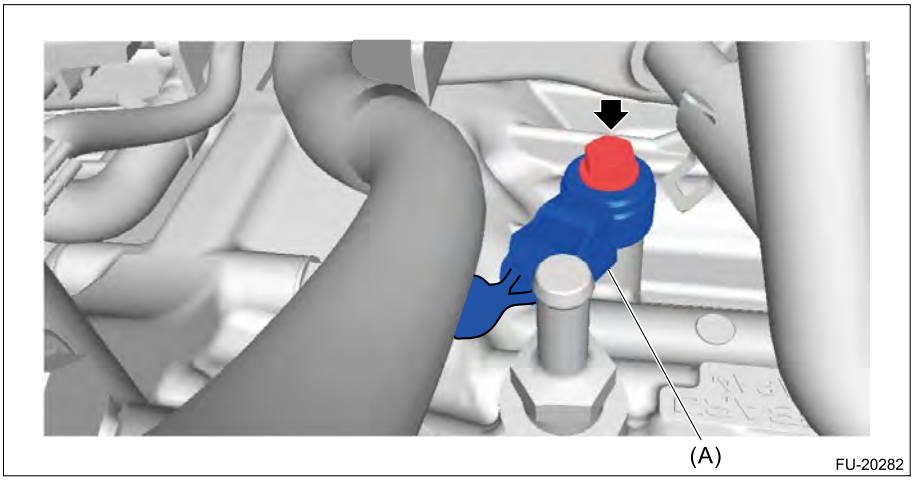
1. Check that the oil control solenoid has no deformation, cracks or other damages.
2. Measure the resistance between the oil control solenoid terminals.

Terminal No.	Standard
1 and 2	7.25±0.4Ω (when 20°C (68°F))

REMOVAL

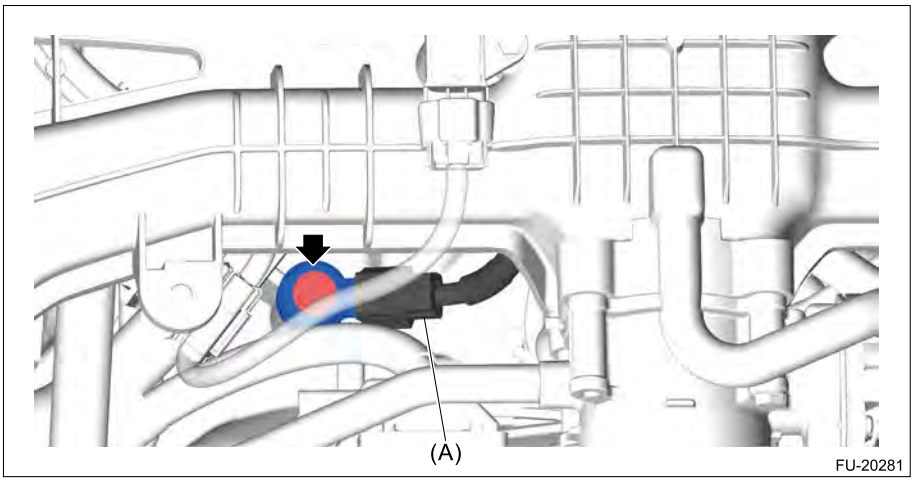


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.



3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

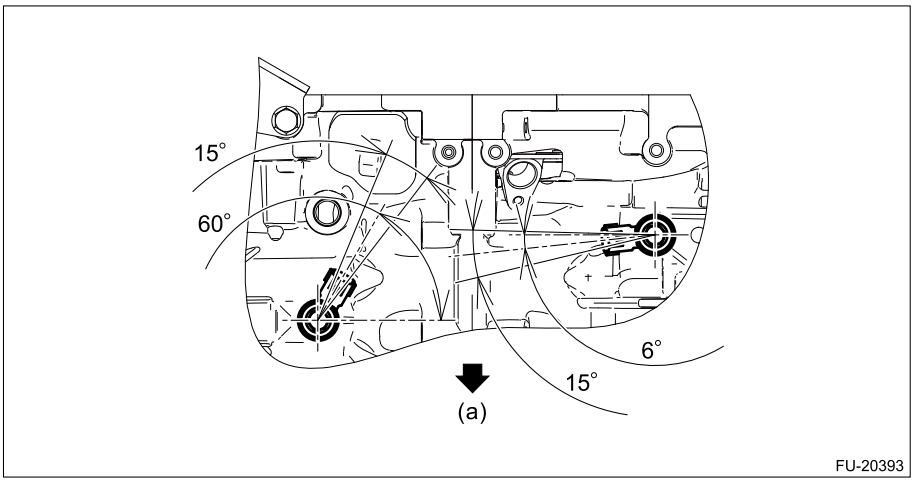
Caution:



Be careful not to pull out the PCV hose.

4. Disconnect the connector (A) from the knock sensor, and remove the knock sensor from the cylinder block.
   - RH side

   - LH side

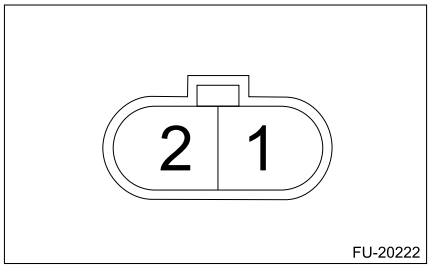


FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Knock Sensor

INSTALLATION

1. Install the knock sensor to the cylinder block, and connect the connector to the knock sensor.
   Note:
   - **Knock sensor must be positioned so that the connector center comes within the range shown in the figure.**
   - **Make sure that the knock sensor and its connector do not touch the adjacent parts.**

   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Front of engine

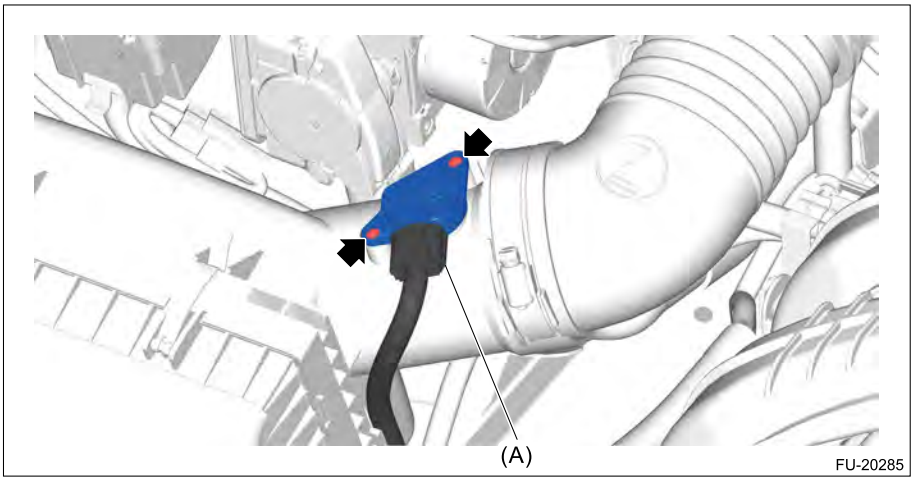
2. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Knock Sensor

INSPECTION

1. Check that the knock sensor has no deformation, cracks or other damages.
2. Measure the resistance between knock sensor terminals.

Terminal No.	Standard
1 and 2	560±28 kΩ



SPECIFICATION

Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body.
Refer to “Throttle Body” for removal and installation procedure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>REMOVAL. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>INSTALLATION.

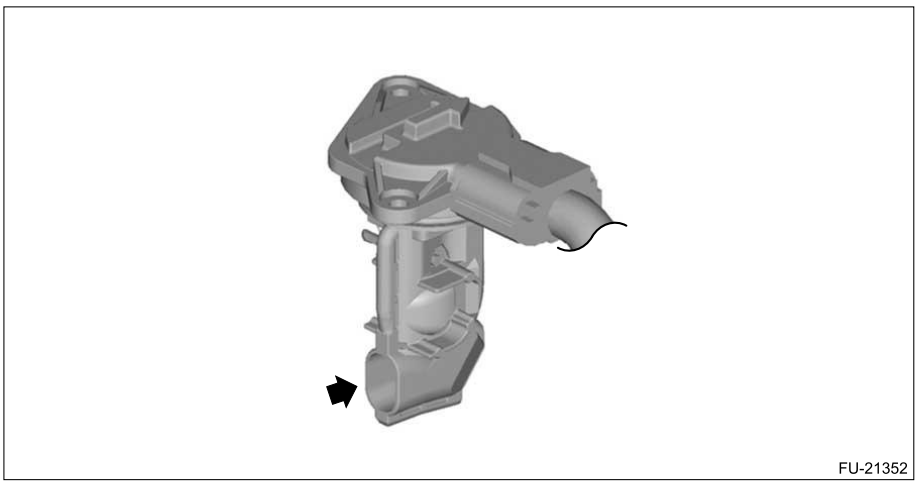
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Mass Air Flow and Intake Air Temperature Sensor

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the mass air flow and intake air temperature sensor.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Mass Air Flow and Intake Air Temperature Sensor

INSTALLATION

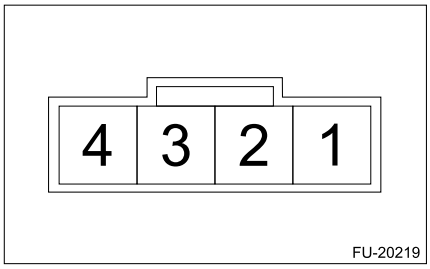


1. Install the mass air flow and intake air temperature sensor, and connect the connector to the mass air flow and intake air temperature sensor.
   Tightening torque:
   1 N·m (0.1 kgf-m, 0.7 ft-lb)
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Mass Air Flow and Intake Air Temperature Sensor

INSPECTION

1. CHECK THE MASS AIR FLOW SENSOR UNIT



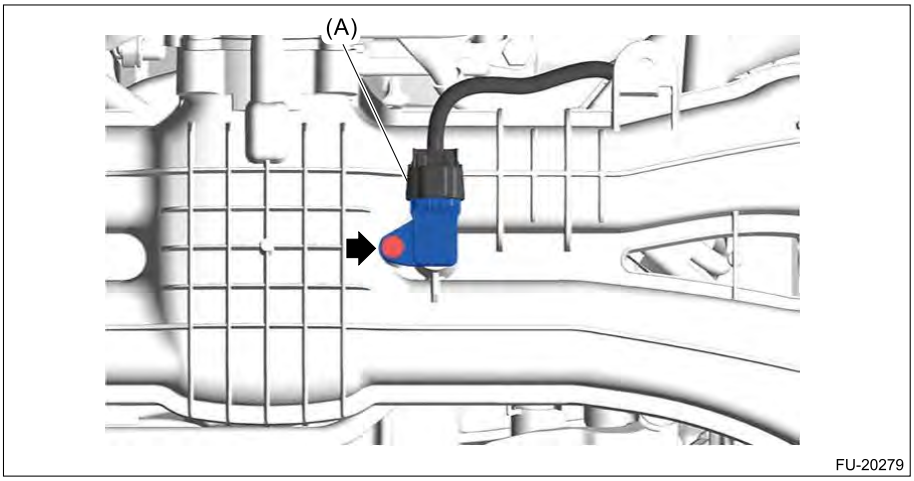
1. Remove the mass air flow and intake air temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Mass Air Flow and Intake Air Temperature Sensor>REMOVAL.
   Note:
   Do not disconnect the connector.
2. Turn the ignition switch to ON. (Engine OFF)
3. Using the Subaru Select Monitor, read the intake air amount. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
4. Check that the intake air amount changes when air is blown to the mass air flow sensor unit in the arrow direction.
   Caution:
   Be careful that no dust enter inside the unit when air is blown.

5. After inspection, install the related parts in the reverse order of removal.

2. CHECK THE INTAKE AIR TEMPERATURE SENSOR UNIT

Measure the resistance between intake air temperature sensor terminals.

Temperature	Terminal No.	Standard
−20°C (−4°F)	2 and 4	16.0±2.4 kΩ
20°C (68°F)		2.45±0.24 kΩ
60°C (140°F)		0.58±0.087 kΩ



3. OTHER INSPECTIONS

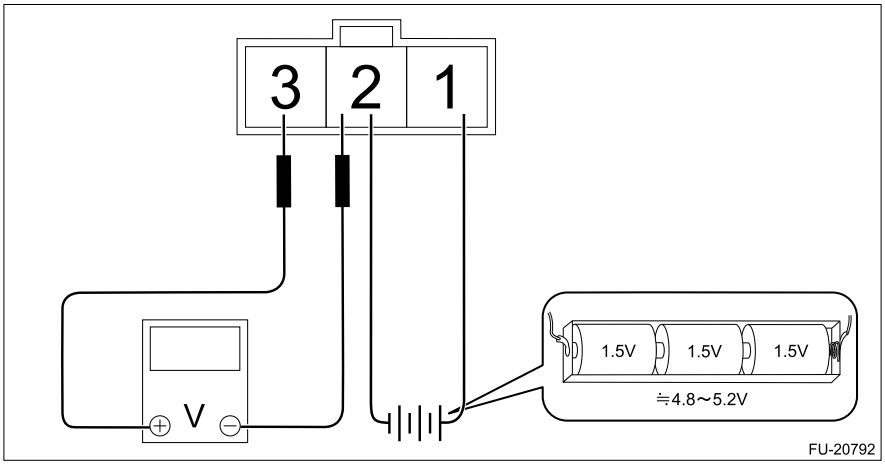
1. Check that the mass air flow and intake air temperature sensor has no deformation, cracks or other damages.
2. Check that the mass air flow and intake air temperature sensor has no dirt.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Manifold Absolute Pressure Sensor

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the connector (A) from the manifold absolute pressure sensor, and remove the manifold absolute pressure sensor from intake manifold assembly.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Manifold Absolute Pressure Sensor

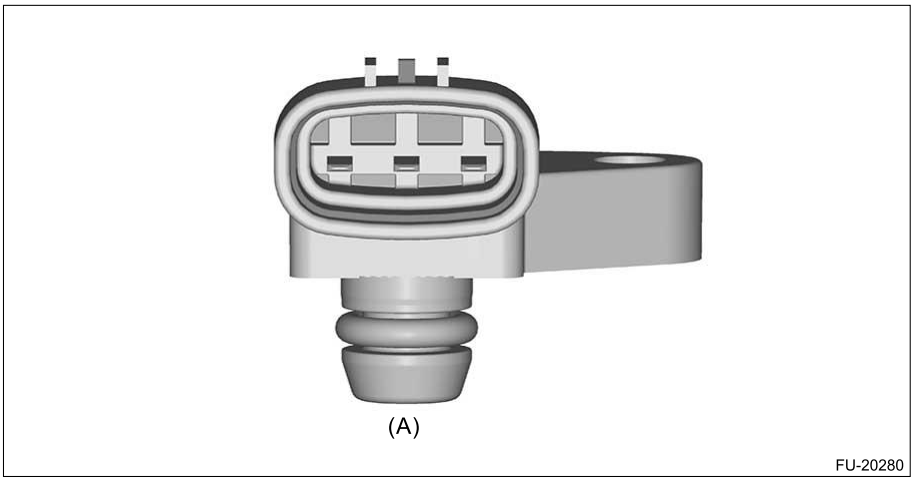


INSTALLATION

1. Using a new O-ring, install the manifold absolute pressure sensor to the intake manifold assembly.
   Tightening torque:
   3.4 N·m (0.3 kgf-m, 2.5 ft-lb)
2. Connect the connector to the manifold absolute pressure sensor.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Manifold Absolute Pressure Sensor

INSPECTION



1. Check that the manifold absolute pressure sensor has no deformation, cracks or other damages.
2. Using new dry cell batteries, connect the battery positive terminal to terminal No. 1 and the battery ground terminal to terminal No. 2, and connect the circuit tester positive terminal to terminal No. 3 and the circuit tester ground terminal to terminal No. 2.
   Note:
   - **Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8—5.2 V.**
   - **For power supply, 5 V DC constant voltage power source can also be used.**

3. Check the voltage at a normal atmospheric pressure.
   Note:
   The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
3 (+) and 2 (−)	Approx. 4.65 V (when 25°C (77°F))

4. Connect the Mighty Vac to the pressure port (A) of manifold absolute pressure sensor.

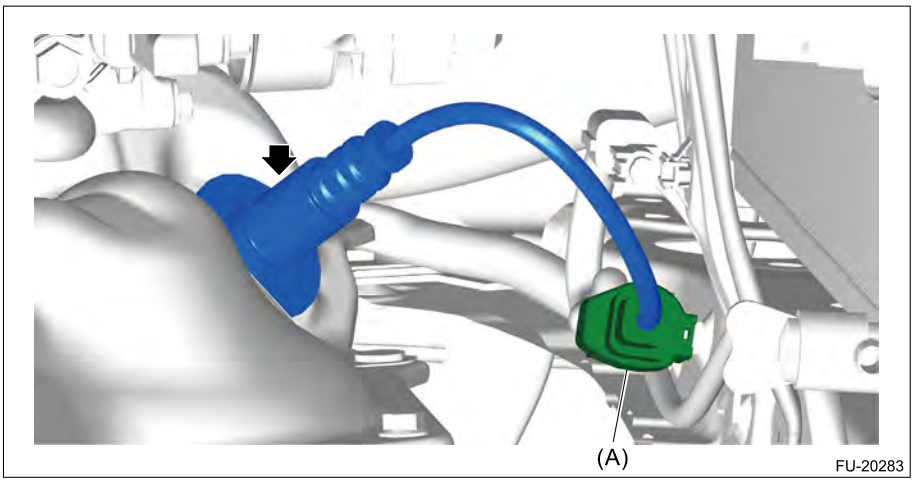
5. Check the voltage when generating vacuum using Mighty Vac.

Caution:

Do not apply a vacuum that exceeds −105 kPa (−1.07 kg/cm^2, −15.2 psi). Doing so may damage the manifold absolute pressure sensor.

Note:

When vacuum occurs at the pressure port of manifold absolute pressure sensor, the voltage will drop from the value as in step 3).



Pressure	Terminal No.	Standard
−105 kPa (−1.07 kg/cm^2, −15.2 psi)	3 (+) and 2 (−)	Approx. 0.4 V (when 25°C (77°F))

REMOVAL

Caution:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Apply spray-type lubricant (004301003) or equivalent to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
5. Disconnect the front O_2 (A/F) sensor connector (A), and remove the front O_2 (A/F) sensor.

   Caution:
   When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

INSTALLATION

Caution:
If lubricant is spilt over the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

1. Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

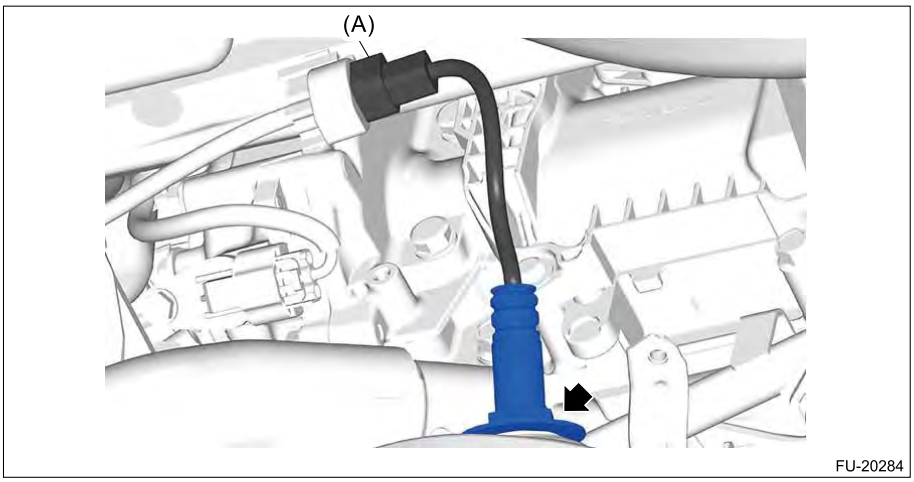
   Caution:
   Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.

   Anti-seize compound:
   NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent
2. Install the front O_2 (A/F) sensor, and connect the front O_2 (A/F) sensor connector.

   Tightening torque:
   21 N·m (2.1 kgf-m, 15.5 ft-lb)
3. Install the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>INSTALLATION.
4. Lower the vehicle.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

INSPECTION

1. Check that the front oxygen (A/F) sensor has no deformation, cracks or other damages.
2. Measure the resistance between front oxygen (A/F) sensor terminals.



Terminal No.	Standard
1 and 2	2.0±0.2Ω (when 20°C (68°F))

REMOVAL

Caution:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Apply spray-type lubricant (004301003) or equivalent to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
5. Disconnect the rear O_2 sensor connector (A), and remove the rear O_2 sensor.

   Caution:
   When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

INSTALLATION

Caution:
If lubricant is spilt over the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

1. Before installing rear oxygen sensor, apply the anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

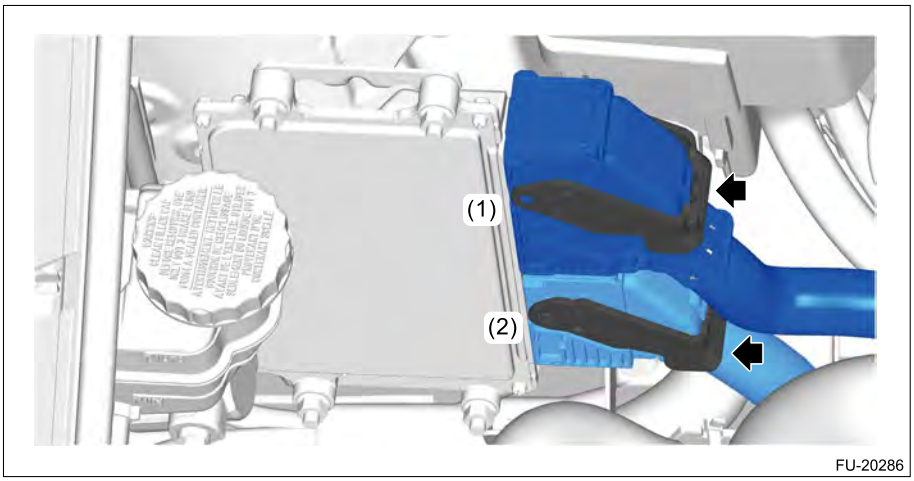
   Caution:
   Never apply anti-seize compound to the protector of rear oxygen sensor.

   Anti-seize compound:
   NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent
2. Install the rear O_2 sensor, and connect the rear O_2 sensor connector.

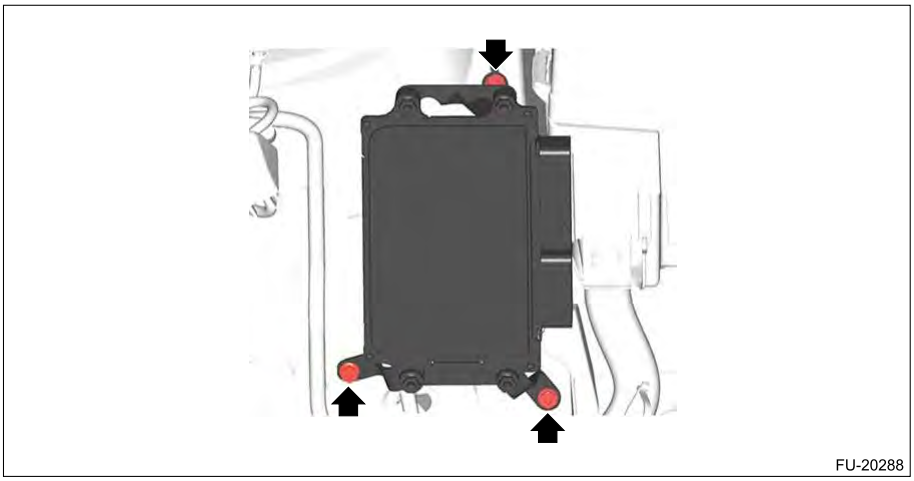
   Caution:
   Do not cross the rear O2 sensor harness with the ground cord during installation.

   Tightening torque:
   21 N·m (2.1 kgf-m, 15.5 ft-lb)
3. Install the under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>INSTALLATION.
4. Lower the vehicle.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

INSPECTION



1. Check that the rear oxygen sensor has no deformation, cracks or other damages.
2. Measure the resistance between rear oxygen sensor terminals.



Terminal No.	Standard
1 and 2	$5.6^{+0.8}_{-0.6}$ Ω (when 20°C (68°F))

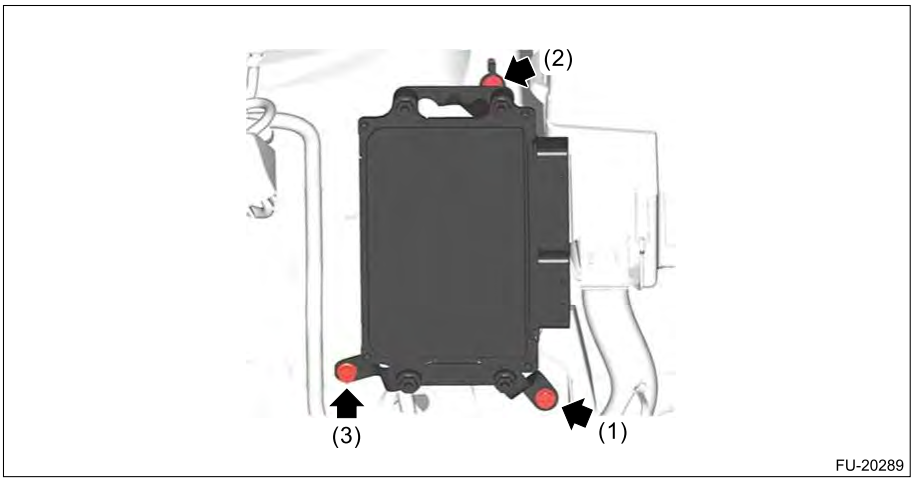
REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the connector in numerical order as shown in the figure.

3. Remove the ECM from vehicle.

4. Remove the ECM bracket.

INSTALLATION

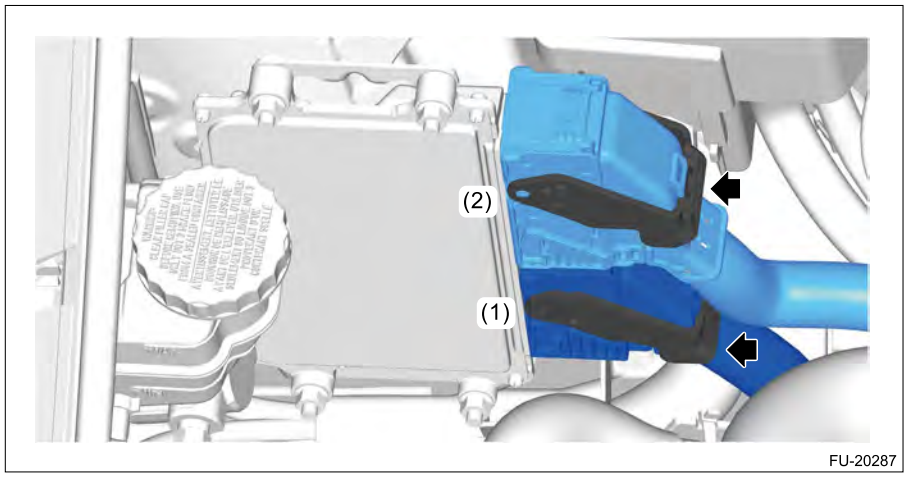


Caution:

- **When the ECM of model with immobilizer has been replaced, be sure to perform the registration of immobilizer system. (Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".)**
  - **For model without keyless access with push button start, refer to the Type B in "REGISTRATION MANUAL FOR IMMOBILIZER".**
  - **For model with keyless access with push button start, refer to the Type D in "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **When the ECM has been replaced, be sure to perform the registration of VIN. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Work Support.**

Note:

When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.



1. Install the ECM bracket.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Temporarily install the ECM to the vehicle, tighten the fasteners in numerical order as shown in the figure.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

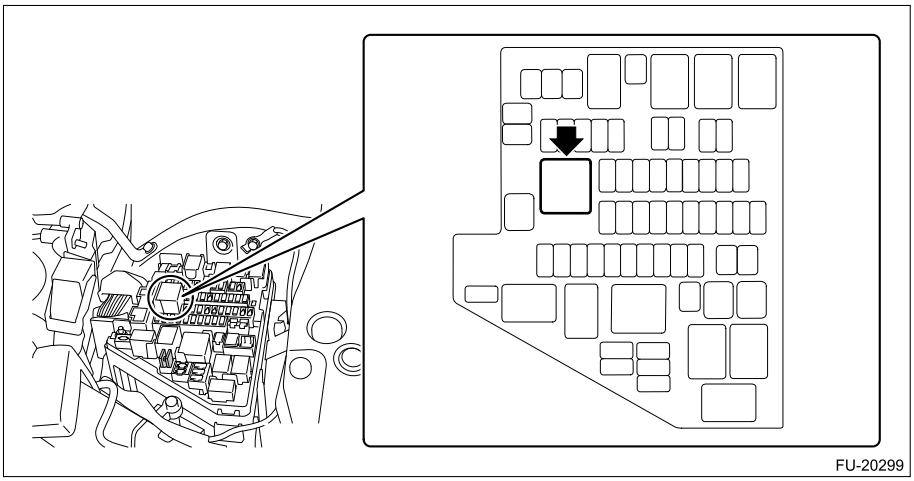
3. Connect the connector in numerical order as shown in the figure.

Caution:

To prevent damage to the connector, when connecting the connector, insert the connector straight in until it stops, and while maintaining the position, lock the lever.

4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Engine Control Module (ECM)



INSPECTION

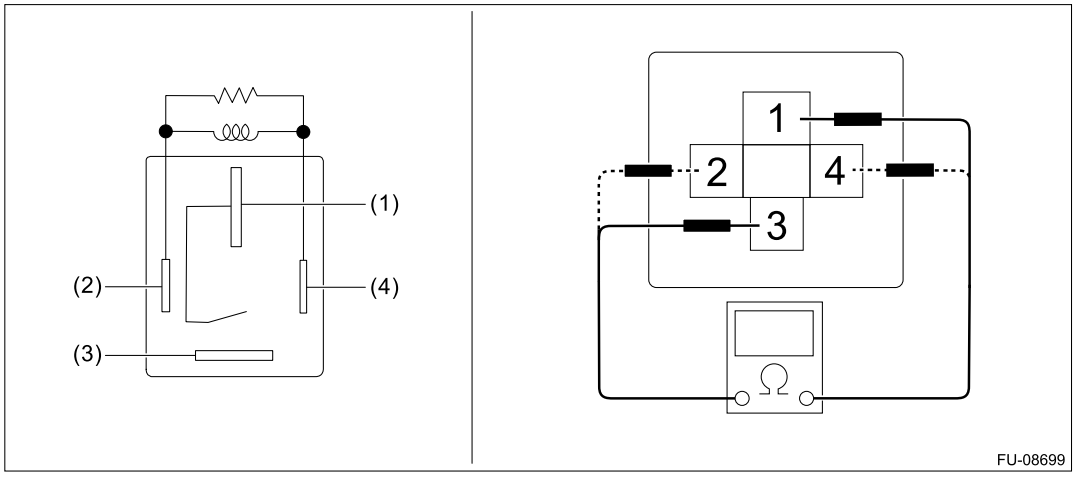
Check that the ECM has no deformation, cracks or other damages.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Main Relay

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the main relay from main fuse box.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Main Relay



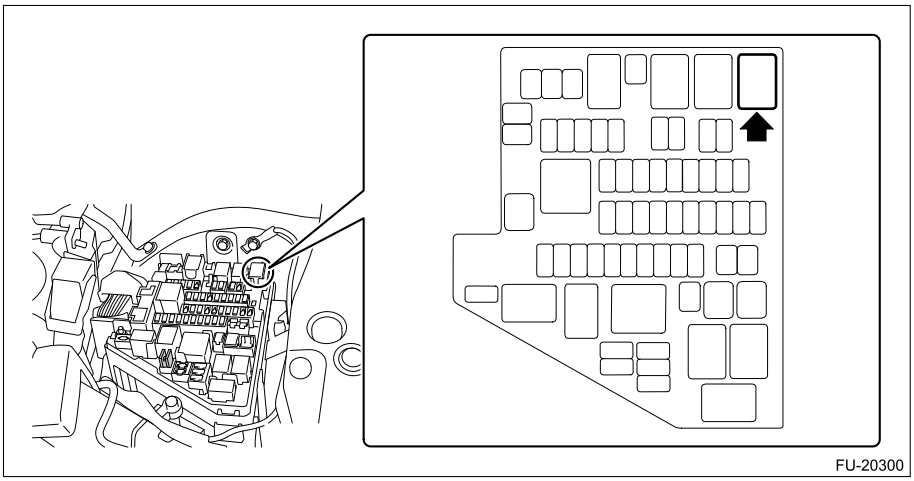
INSTALLATION

1. Install the main relay to the main fuse box.
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Main Relay

INSPECTION

1. Check that the main relay has no deformation, cracks or other damages.
2. Measure the resistance between main relay terminals.



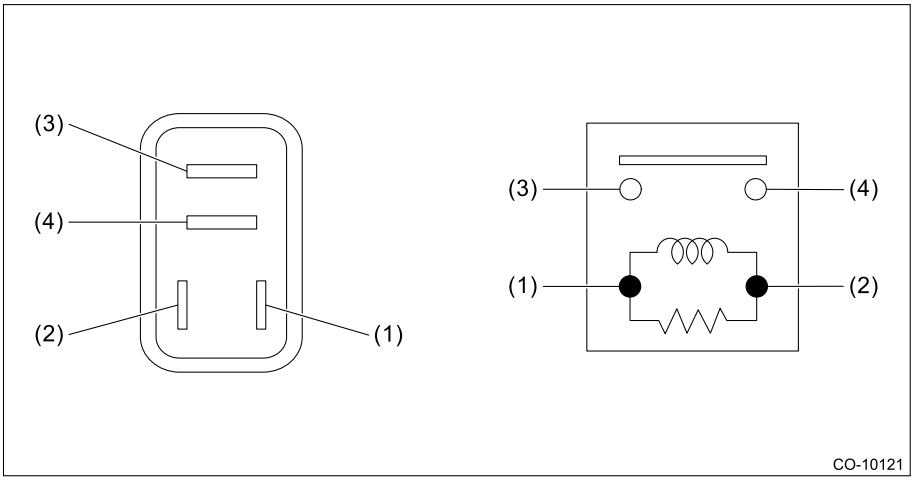
Terminal No.	Inspection conditions	Standard
3 — 4	Always	1 MΩ or more
3 — 4	Apply battery voltage between terminals 1 and 2.	Less than 1 Ω

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Pump Relay

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the fuel pump relay from the main fuse box.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Pump Relay



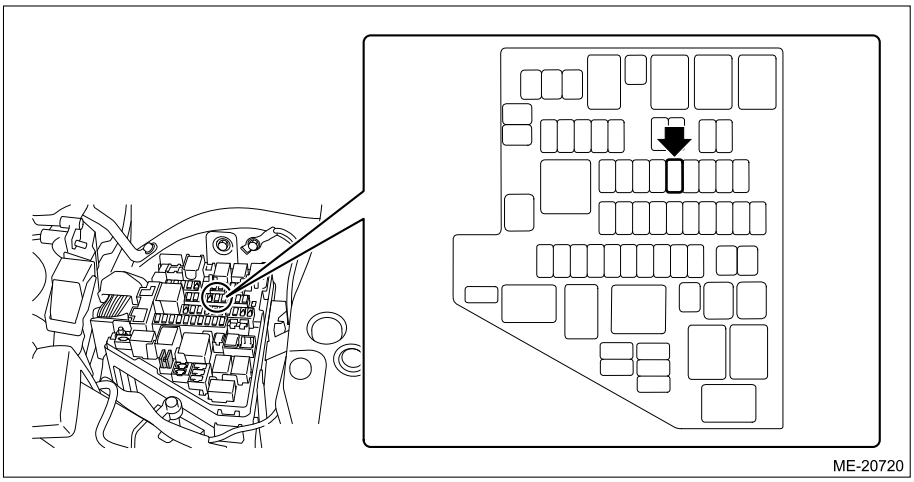
INSTALLATION

1. Install the fuel pump relay to the main fuse box.
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Pump Relay

INSPECTION

1. Check that the fuel pump relay has no deformation, cracks or other damages.
2. Measure the resistance between fuel pump relay terminals.



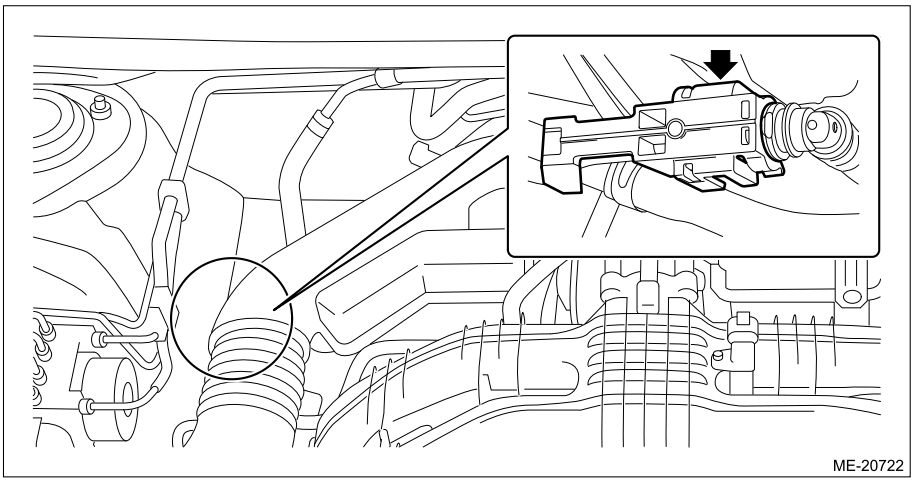
Terminal No.	Inspection conditions	Standard
3 — 4	Always	1 MΩ or more
3 — 4	Apply battery voltage between terminals 1 and 2.	Less than 1 Ω

PROCEDURE

1. RELEASING OF FUEL PRESSURE

Warning:
Place "NO OPEN FLAMES" signs near the working area.
Caution:
Be careful not to spill fuel.

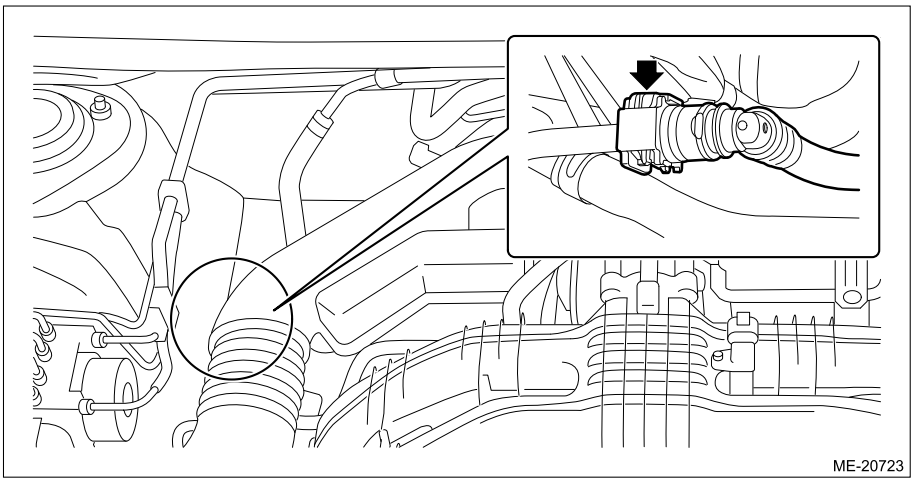
1. Remove the fuse of fuel pump from main fuse box.



2. Start the engine and run it until it stalls.
3. After the engine stalls, crank it for five more seconds.
4. Turn the ignition switch to OFF.
5. Install the fuse of fuel pump to the main fuse box.

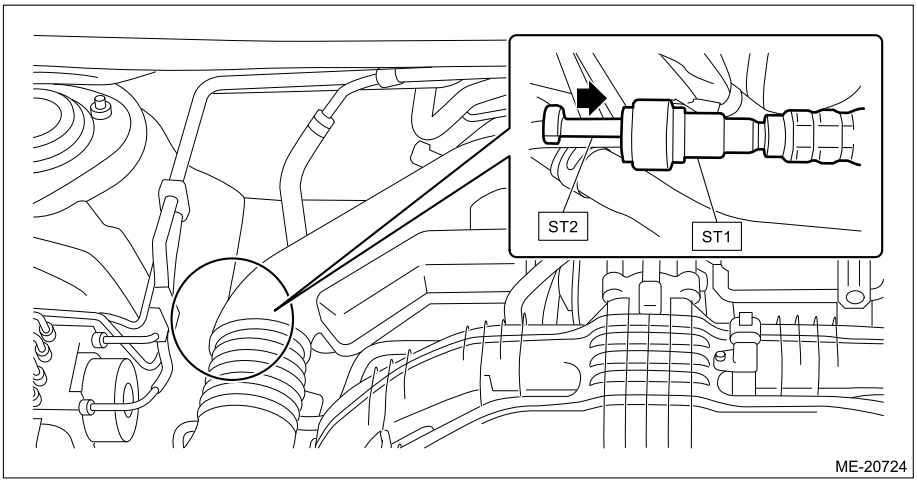
2. DRAINING FUEL (WITH SUBARU SELECT MONITOR)

Warning:
Place "NO OPEN FLAMES" signs near the working area.
Caution:
Be careful not to spill fuel.
Note:



- **If the fuel pump cannot be driven, refer to the procedures for draining from the fuel filler hose. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > DRAINING FUEL (THROUGH THE FUEL FILLER HOSE).**
- **Be careful not to let the battery run-out.**
- **Be aware that the fuel may remain in the fuel tank after draining the fuel.**

1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Remove the fuel delivery tube clamp from the fuel delivery tube.



3. Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly. Ref. to FUEL INJECTION (FUEL

SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE A).

4. Connect the ST to the fuel pipe assembly.
   Note:
   The ST is a SUBARU genuine part.
   Special Tool:
   FUEL HOSE (42075AG690)
5. Connect the gasoline proof hose to ST and put the end of the hose in the container.
6. Drive the fuel pump and drain the fuel using Subaru Select Monitor.
   Caution:
   Be careful not to spill fuel.
   Note:
   For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".
7. Install the related parts in the reverse order after draining the fuel.
   Caution:
   - **Be careful not to spill fuel.**
   - **Catch the fuel from the tubes using a container or cloth.**
   - **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
   - **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
   - **When it is difficult to lock the slider, check that the connector is fully inserted.**
   - **After locking the slider, check again that the quick connector is securely connected.**

   Note:
   - **When disconnecting the ST1, install the ST2 to the fuel pipe assembly, and press the ST2 in the direction of arrow to disconnect the quick connector on the ST1.**
     Preparation tool:
     ST1: FUEL HOSE (42075AG690)
     ST2: QUICK CONNECTOR RELEASE (42099AE000)

- **For information about connecting the quick connector on the fuel delivery tube, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE A).**

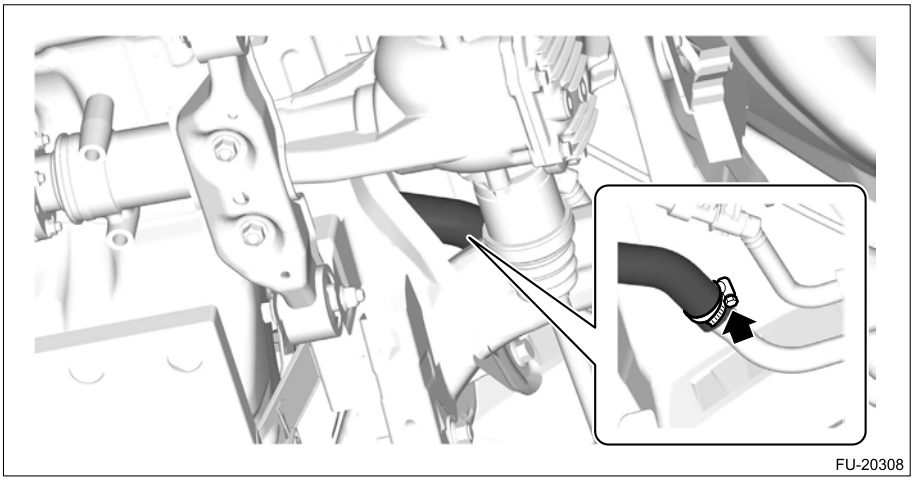
3. DRAINING FUEL (THROUGH THE FUEL FILLER HOSE)

Warning:

Place "NO OPEN FLAMES" signs near the working area.

Caution:

- **Be careful not to spill fuel.**
- **Fuel may remain in the fuel filler pipe. Drain the fuel from the fuel filler pipe through the fill opening using the gasoline proof pump and the gasoline proof hose (⌀10 or less) before the operation.**



Note:

Be aware that the fuel may remain in the fuel tank after draining the fuel.

1. Lift up the vehicle.
2. Remove the rear exhaust pipe and muffler. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL. Ref. to EXHAUST(H4DO)>Muffler>REMOVAL.
3. Open the fuel filler lid and remove the fuel filler cap.
4. Drain the fuel from the fuel filler pipe through the filler opening using the gasoline proof pump and the gasoline proof hose (⌀10 or less).
5. Disconnect the fuel filler hose from the fuel filler pipe assembly.

   Caution:

   - **Be careful not to spill fuel.**
   - **Catch the fuel from hoses using a container or cloth.**

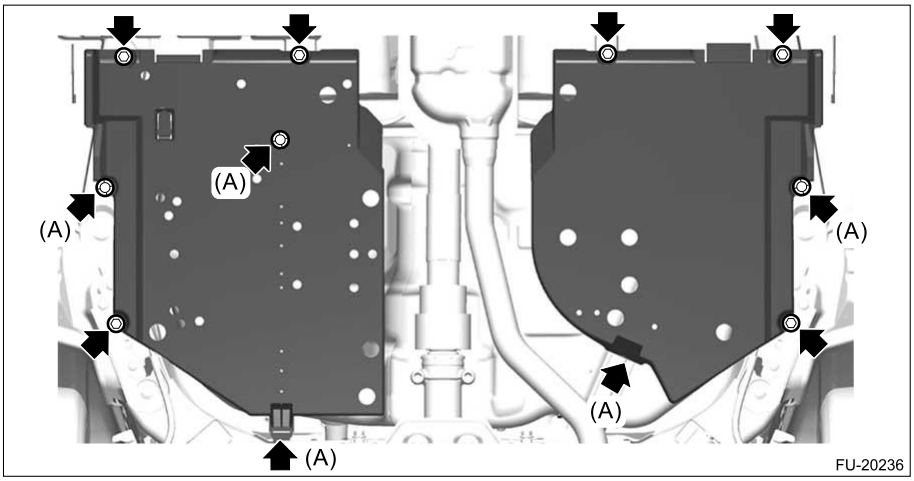
6. Set the container under the vehicle and insert the gasoline proof hose (⌀10 or less) into the fuel filler hose to drain the fuel.

   Caution:

   Be careful not to spill fuel.
7. Install the related parts in the reverse order after draining the fuel.

   Note:

   For information about connecting fuel filler hose, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > FUEL FILLER HOSE CONNECTION.



FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Tank Protector

REMOVAL

Note:

The fuel tank protector LH is installed on only some models.

1. Lift up the vehicle.
2. Remove the bolt and clip (A) and remove the fuel tank protector.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Tank Protector

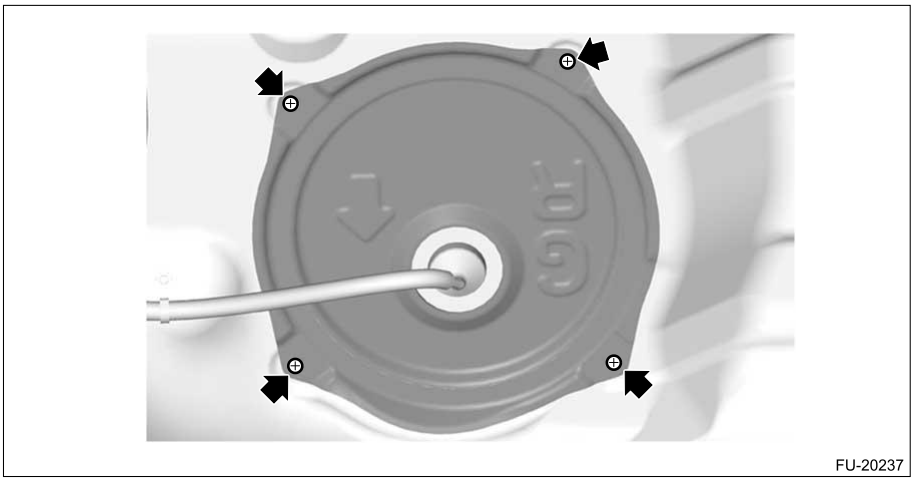
INSTALLATION

1. Install the fuel tank protector.

   Tightening torque:

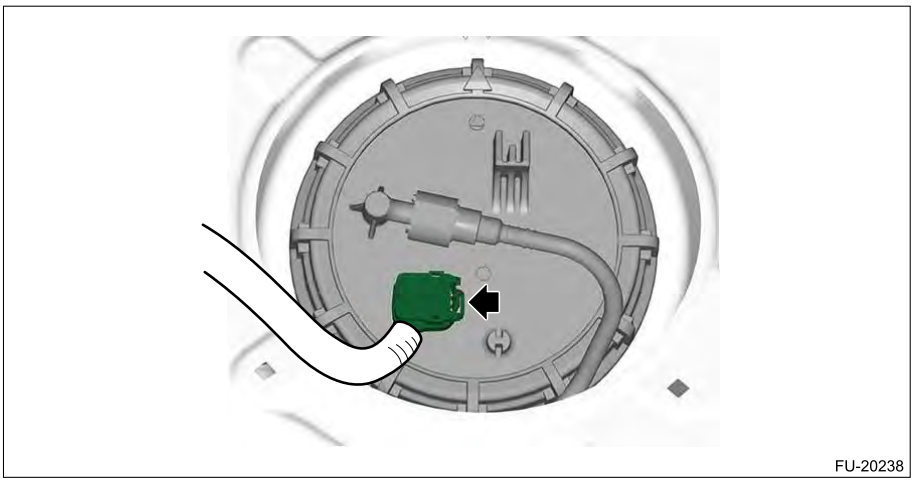
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
2. Lower the vehicle.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Tank Protector



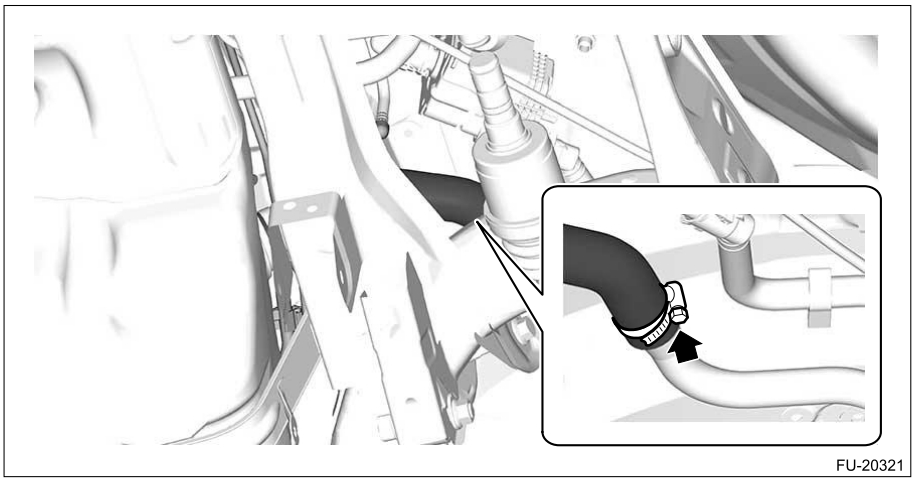
INSPECTION

Check that the fuel tank protector has no deformation, cracks or other damages.



REMOVAL

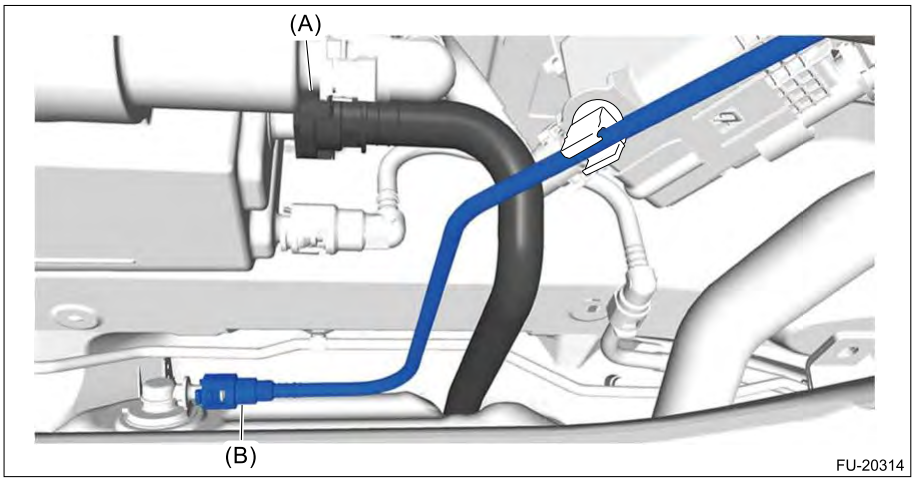
Warning:
Place "NO OPEN FLAMES" signs near the working area.
Caution:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**



1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Drain fuel. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > DRAINING FUEL (WITH SUBARU SELECT MONITOR).
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Remove the rear seat cushion. Ref. to SEATS>Rear Seat>REMOVAL.
5. Remove the service hole cover of fuel pump.

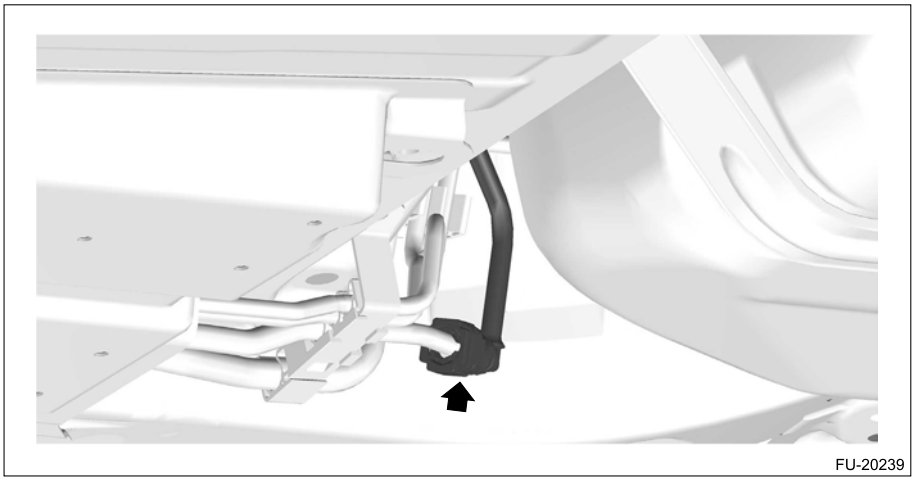
FU-20237

6. Disconnect the connector from fuel pump.



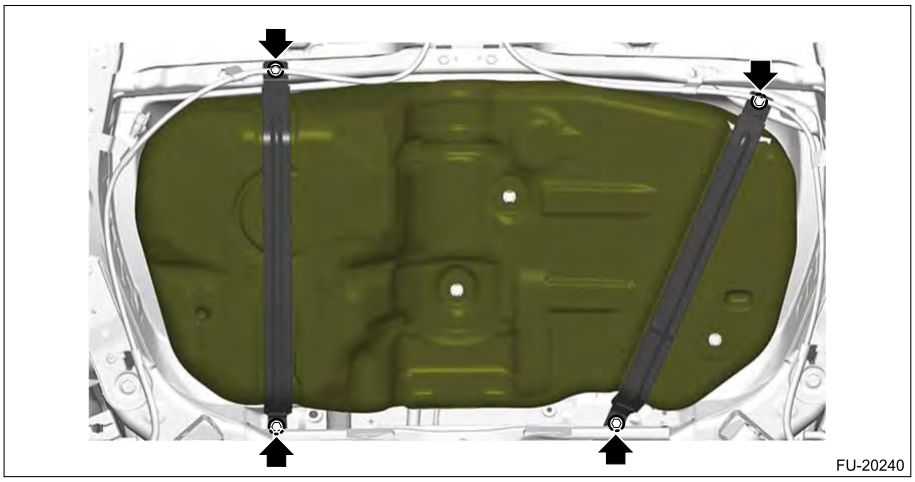
FU-20238

7. Lift up the vehicle.
8. Remove the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>REMOVAL.
9. Remove the rear exhaust pipe and muffler. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL. Ref. to EXHAUST(H4DO)>Muffler>REMOVAL.
10. Remove the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>REMOVAL.
11. Disconnect the fuel filler hose from the fuel filler pipe assembly.

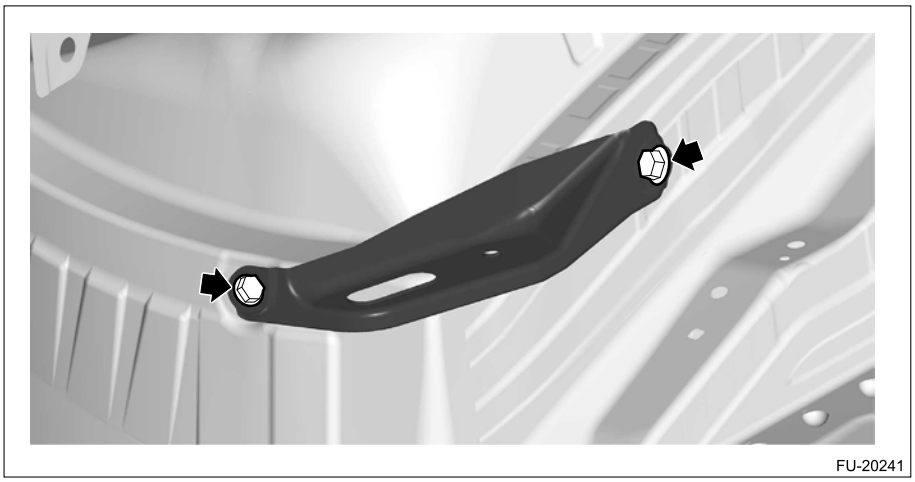


12. Disconnect the vent tube (A) from the canister. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE F).

13. Disconnect the circulate tube (B) from the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE D).



14. Disconnect the fuel delivery tube from the fuel delivery pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE A).



15. Support the fuel tank with a transmission jack, remove the bolts from the fuel tank band, and remove the fuel tank from the vehicle.

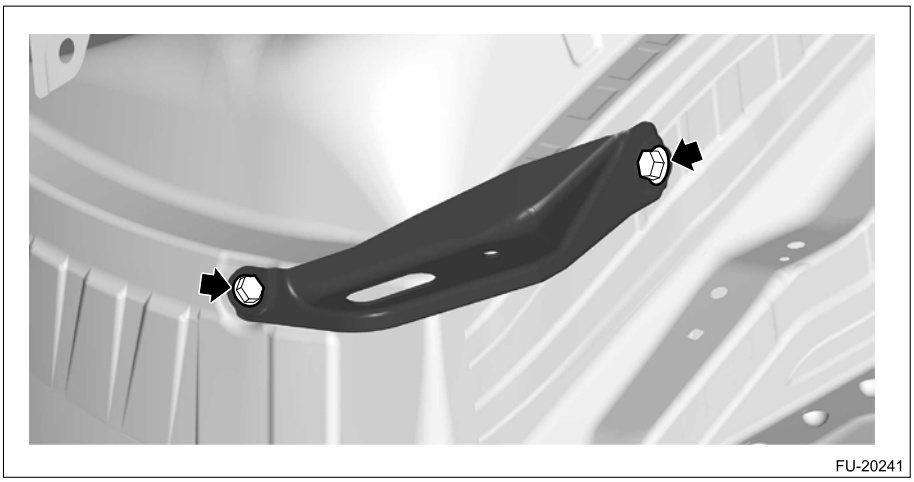
Caution:

- **A helper is required to perform this work.**
- **Since one side of the fuel tank is heavier than the other side, be careful not to drop it.**

FU-20240

16. Remove the fuel tank band bracket.

FU-20241

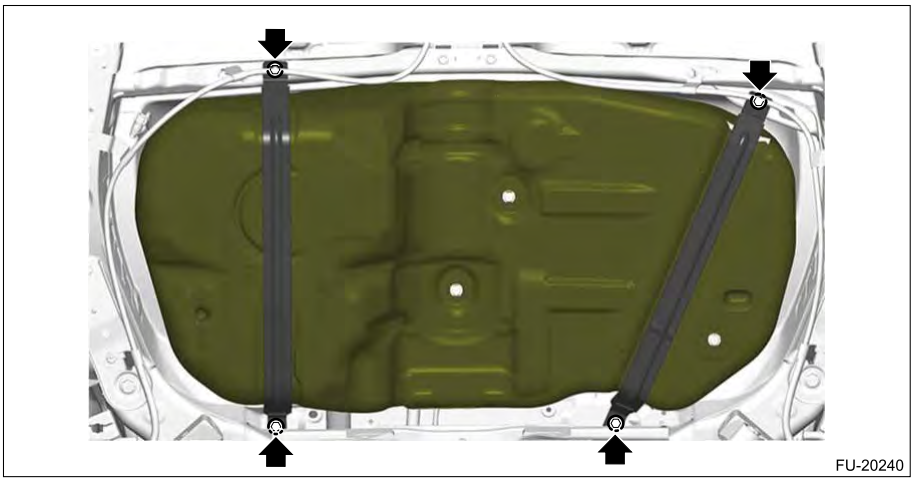


FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Tank

INSTALLATION

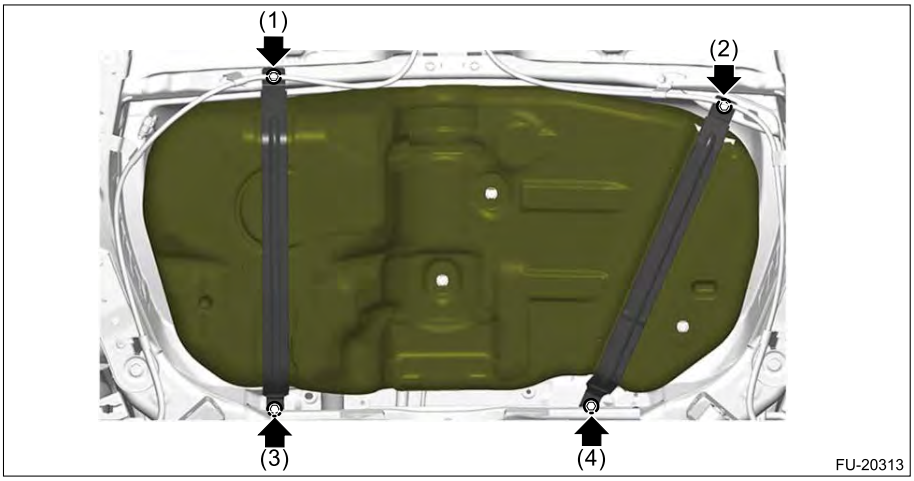
1. Install the fuel tank band bracket.

Tightening torque:



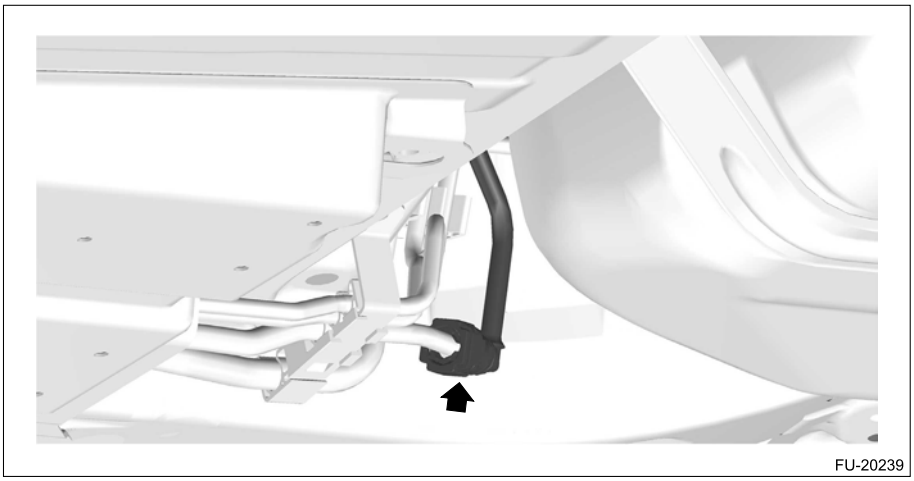
37 N·m (3.8 kgf-m, 27.3 ft-lb)

FU-20241



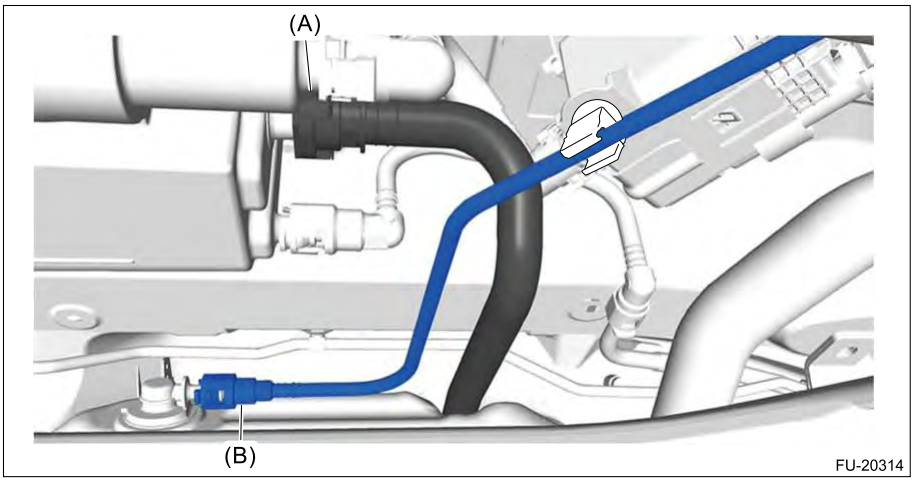
2. Support the fuel tank with a transmission jack, set the fuel tank in place, and temporarily tighten the bolts of the fuel tank band.

Warning:

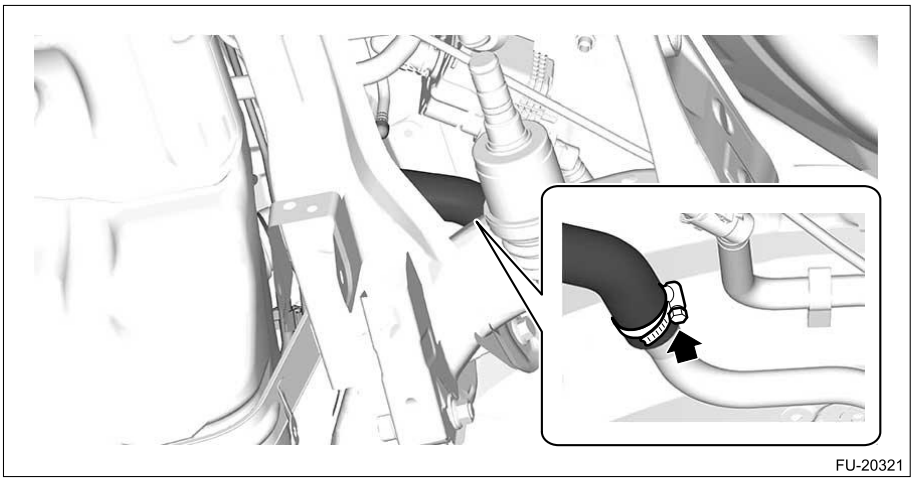


A helper is required to perform this work.

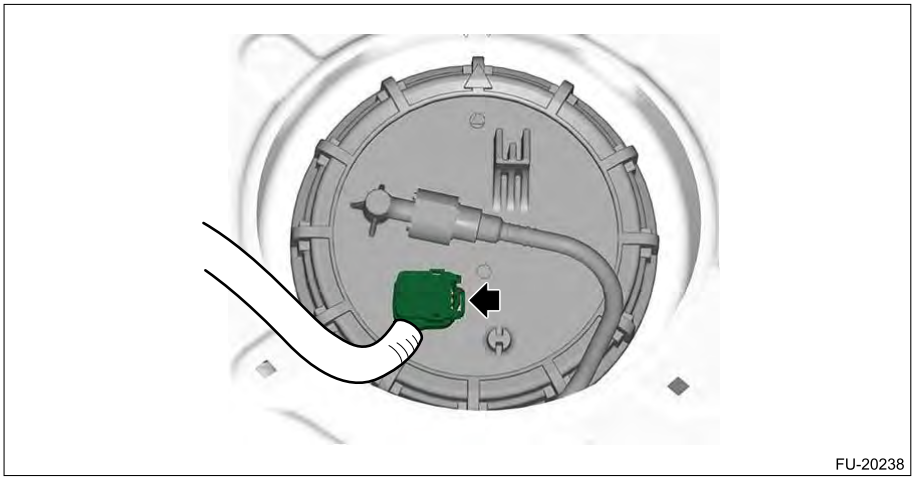
3. Tighten the bolts of the fuel tank band in the order shown in the figure.
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



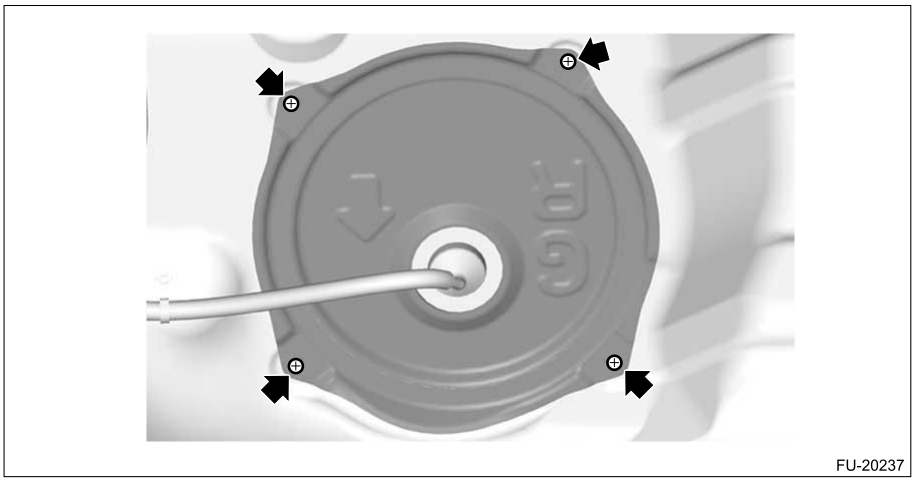
4. Connect the fuel delivery tube to the fuel delivery pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE A).



5. Connect the vent tube (A) to the canister. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE F).



6. Connect the circulate tube (B) to the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE D).



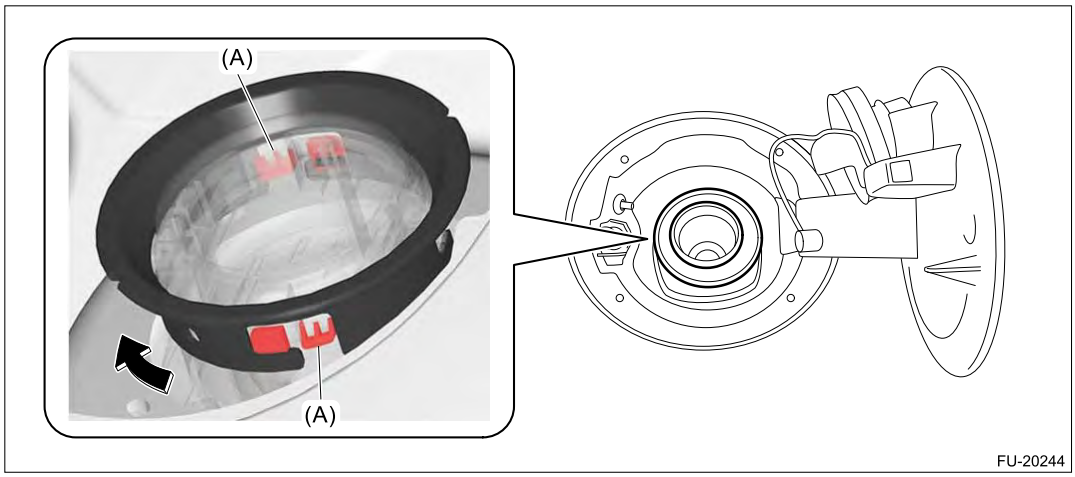
7. Connect the fuel filler hose to the fuel filler pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > FUEL FILLER HOSE CONNECTION.

8. Install the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>INSTALLATION.
9. Install the rear exhaust pipe and muffler. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION. Ref. to EXHAUST(H4DO)>Muffler>INSTALLATION.
10. Install the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>INSTALLATION.
11. Lower the vehicle.
12. Connect the connector to the fuel pump.

13. Install the service hole cover of fuel pump.

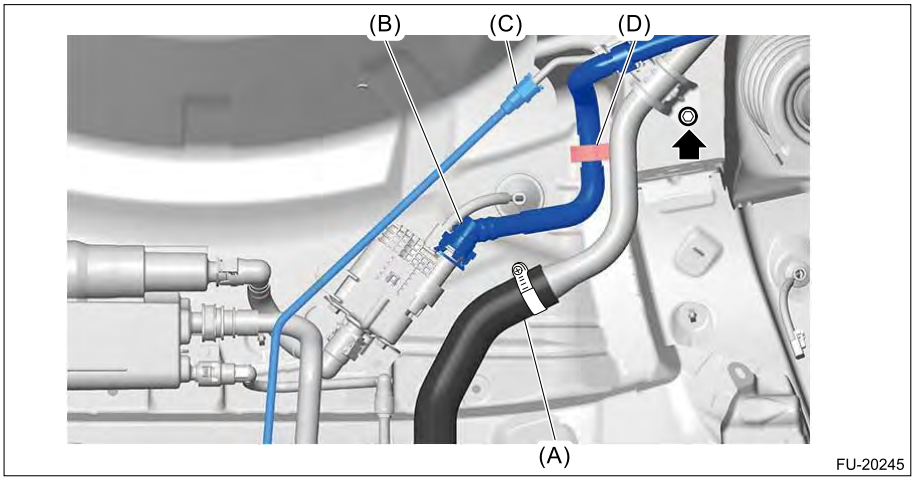
14. Install the rear seat cushion. Ref. to SEATS>Rear Seat>INSTALLATION.
15. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Tank



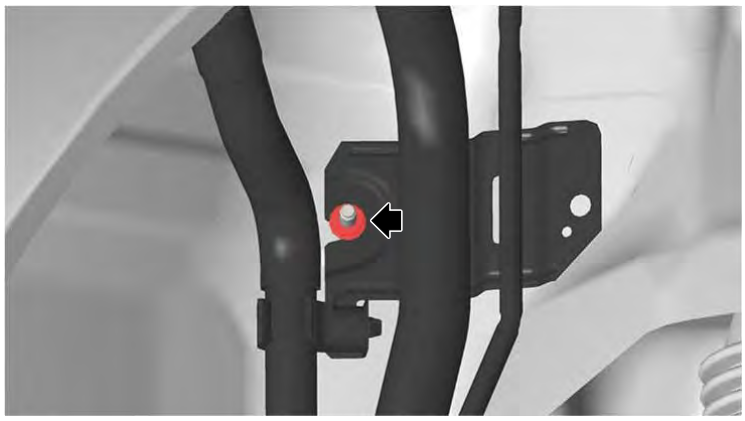
INSPECTION

1. Check that the fuel tank and fuel pipe have no deformation, cracks and other damages.
2. Check that the fuel hose and tube have no cracks, damage or loose part.



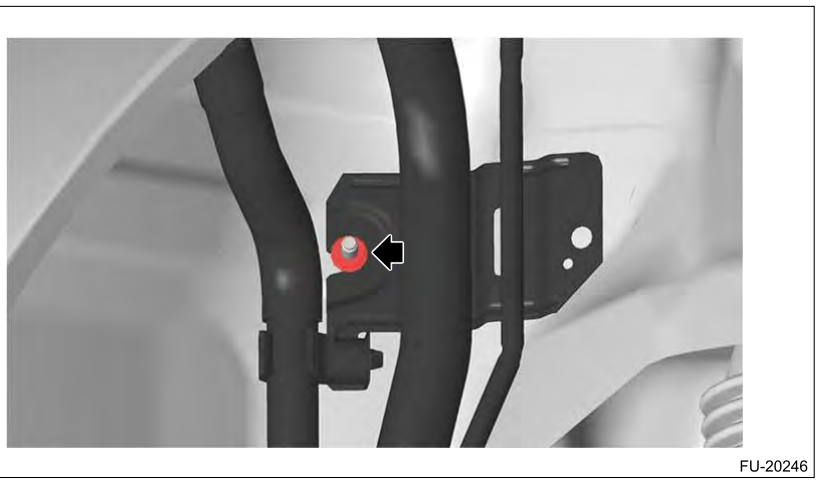
REMOVAL

Warning:
Place "NO OPEN FLAMES" signs near the working area.
Caution:
Be careful not to spill fuel.



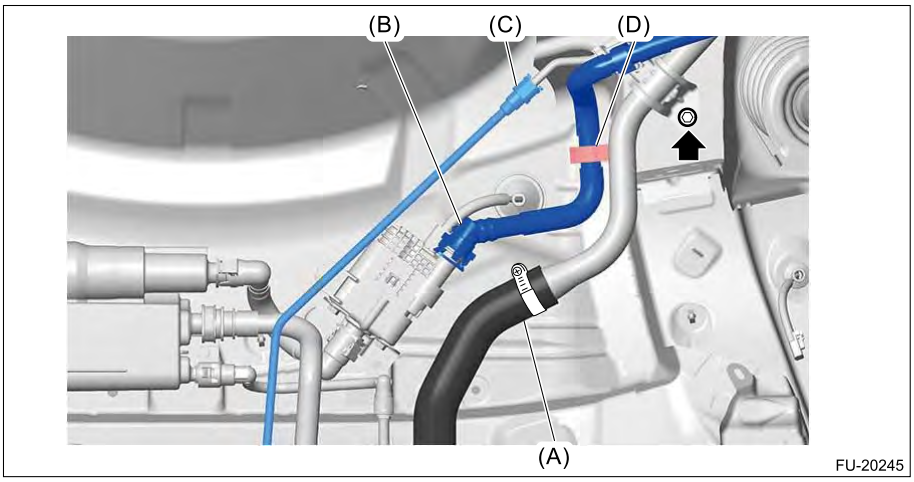
1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Drain fuel. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > DRAINING FUEL (WITH SUBARU SELECT MONITOR).
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Open the fuel filler lid and remove the fuel filler cap.
5. Turn the fuel filler pipe protector in the direction of the arrow to unlock while pressing in the claw (A), and remove it.

6. Remove the rear sub frame assembly. Ref. to REAR SUSPENSION>Sub Frame>REMOVAL.
7. Remove the rear mud guard RH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>REMOVAL.
8. Disconnect the fuel filler hose (A), drain tube (B) and circulate tube (C) from the fuel filler pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE E). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE D).
9. Remove the drain tube from clip (D).
10. Remove the bolts which secure the fuel filler pipe assembly.



11. Remove the nuts which secure the fuel filler pipe assembly, and remove the fuel filler pipe assembly from underneath of the vehicle.

FU-20246



FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Filler Pipe

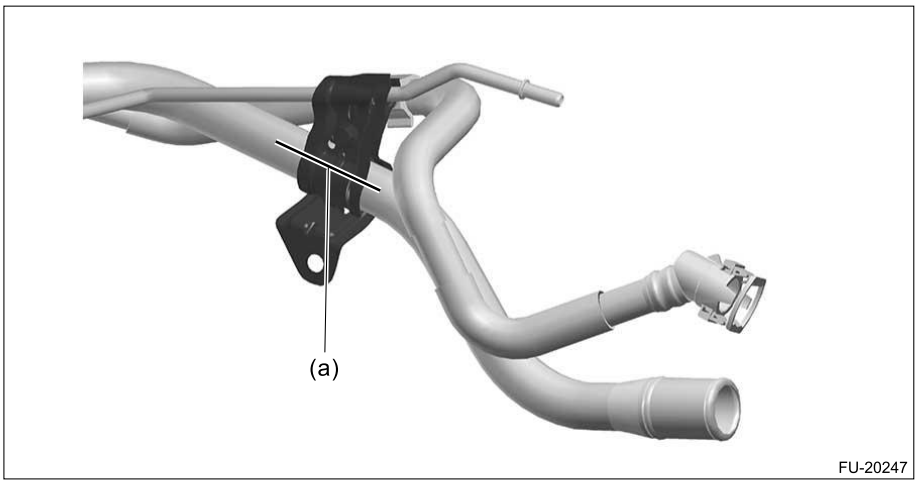
INSTALLATION

1. Open the fuel filler lid.
2. Insert the fuel filler pipe assembly into the ring clip from inside of the rear fender.
3. Install the nuts securing the fuel filler pipe assembly.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

FU-20246

4. Install the bolts securing the fuel filler pipe assembly.
5. Install the drain tube to clip (D).
6. Connect the fuel filler hose (A), drain tube (B) and circulate tube (C) to the fuel filler pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE D). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE E). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > FUEL FILLER HOSE CONNECTION.

7. Install the rear mud guard RH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>INSTALLATION.
8. Install the rear sub frame assembly. Ref. to REAR SUSPENSION>Sub Frame>INSTALLATION.
9. Install the fuel filler pipe protector.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



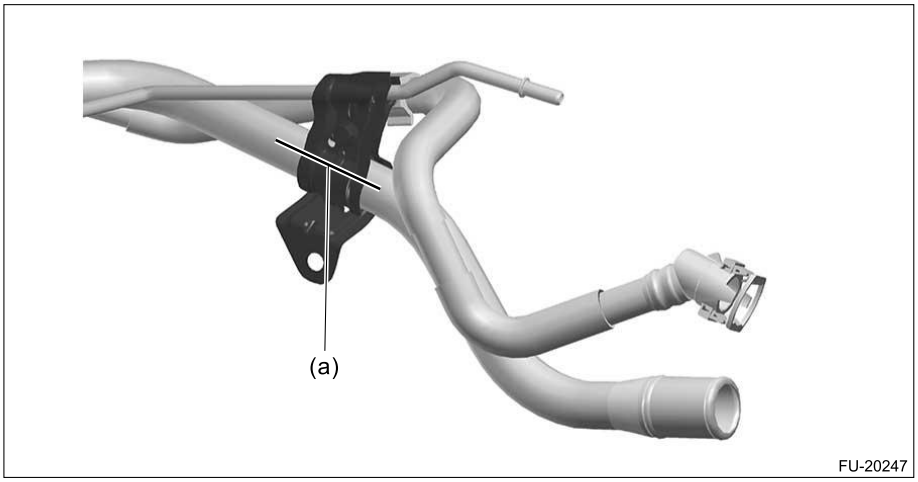
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Filler Pipe

DISASSEMBLY

1. Remove the drain filter. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Drain Filter>REMOVAL.
2. Disassemble the fuel filler pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > FUEL FILLER PIPE.

Note:

Using a marker pen, make alignment marks (a) to use for positioning brackets during assembly.



FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Filler Pipe

ASSEMBLY

1. Assemble the fuel filler pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > FUEL FILLER PIPE.

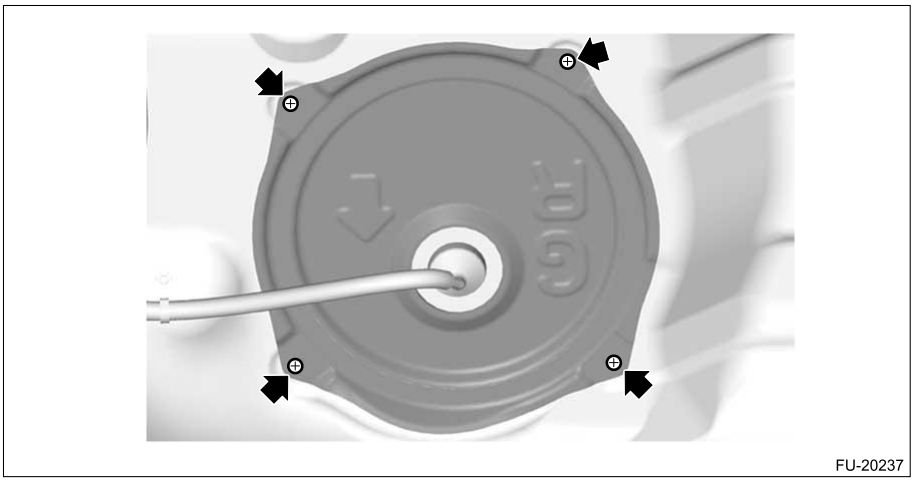
Note:

Install the fuel filler pipe bracket to the fuel filler pipe by aligning the alignment marks (a).

2. Install the drain filter. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Drain Filter>INSTALLATION.

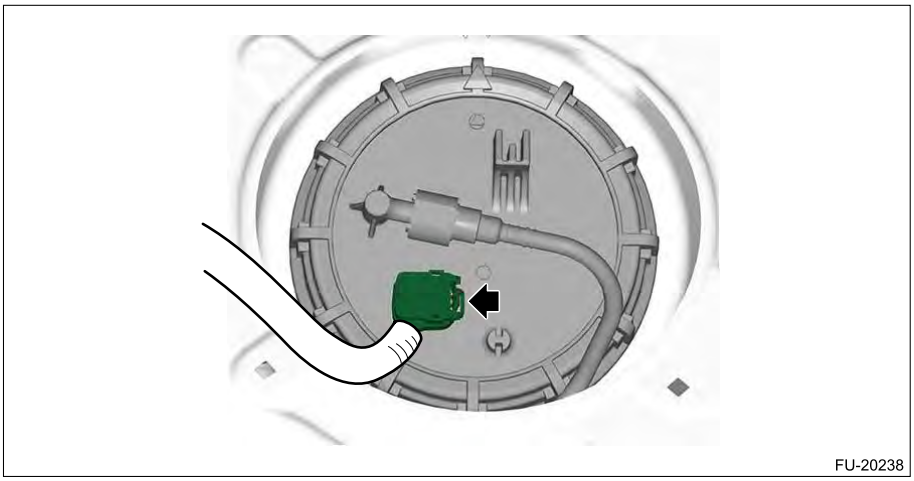
FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Filler Pipe

INSPECTION



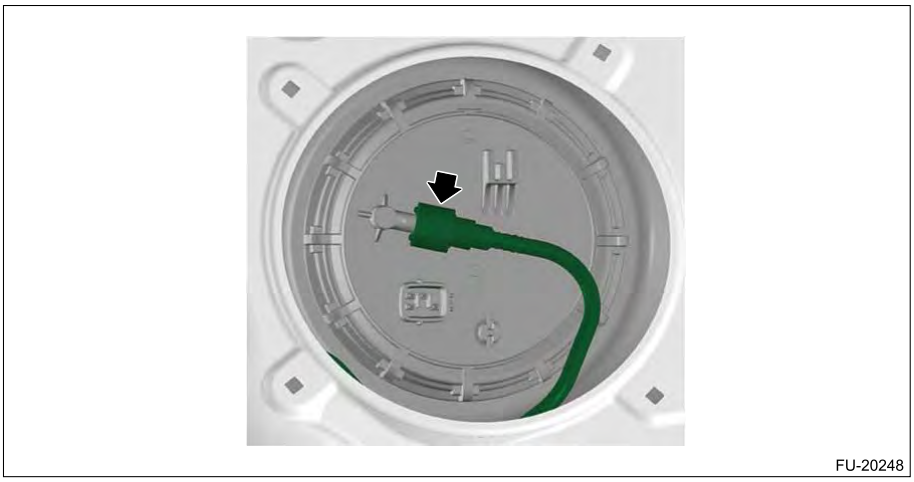
1. Check that the fuel filler pipe assembly has no deformation, cracks or other damages.
2. Check that the fuel hose has no cracks, damage or loose part.

REMOVAL



Warning:
Place "NO OPEN FLAMES" signs near the working area.
Caution:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

Note:
Fuel pump assembly consists of fuel pump, fuel filter and fuel level sensor.



1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Drain fuel. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > DRAINING FUEL (WITH SUBARU SELECT MONITOR).
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Remove the rear seat cushion. Ref. to SEATS>Rear Seat>REMOVAL.
5. Remove the service hole cover of fuel pump.

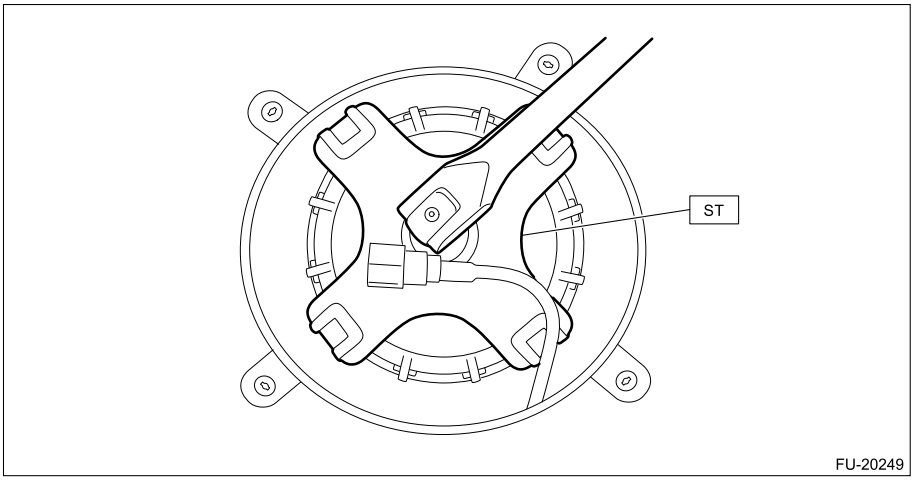
FU-20237

6. Disconnect the connector from fuel pump.

FU-20238

7. Disconnect the fuel delivery tube. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE D).

FU-20248



8. Remove the ring nut using the ST.

Caution:

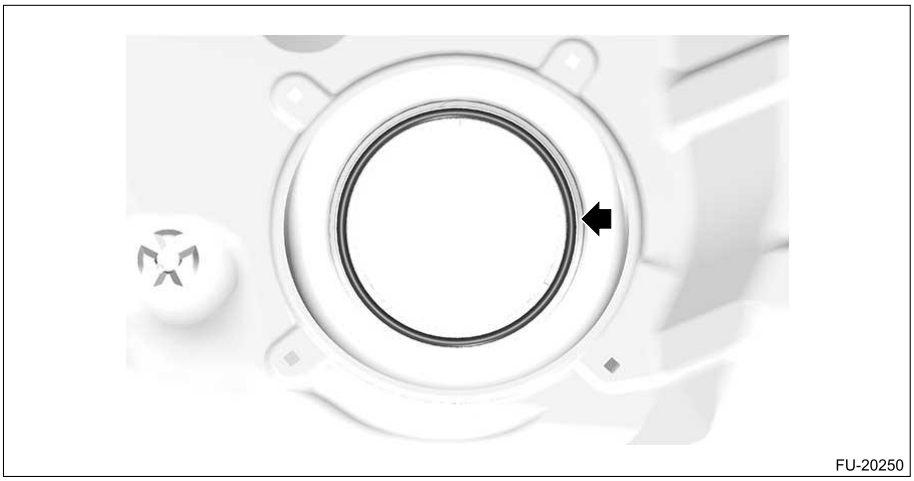
- **Be careful not to damage the tube with the ST.**
- **Before setting the ST, move the tube above the ST.**

Preparation tool:

ST: ST FUEL PUMP (42099FL000)

FU-20249

9. Remove the fuel pump assembly from the fuel tank.

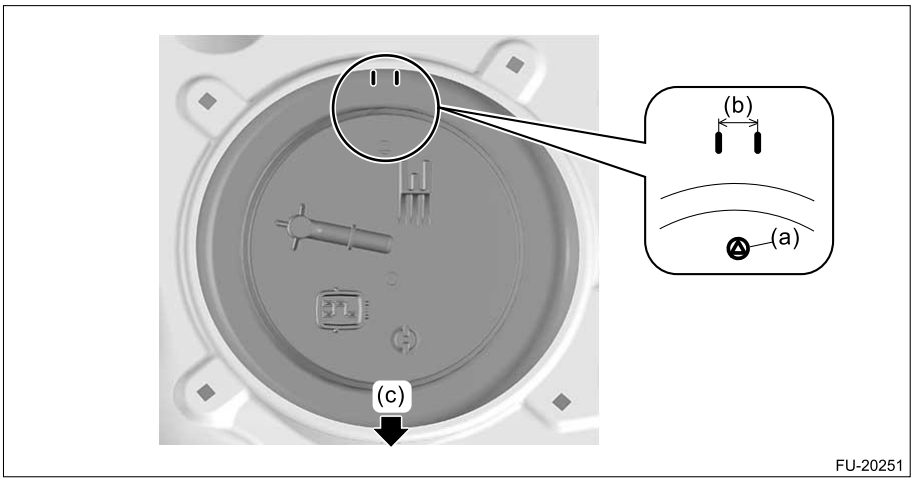


Caution:

Be careful not to let the arm and float of fuel level sensor contact the fuel tank.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Pump

INSTALLATION



1. Install a new gasket to the fuel tank.

FU-20250

2. Set the fuel pump to the position shown in the figure.

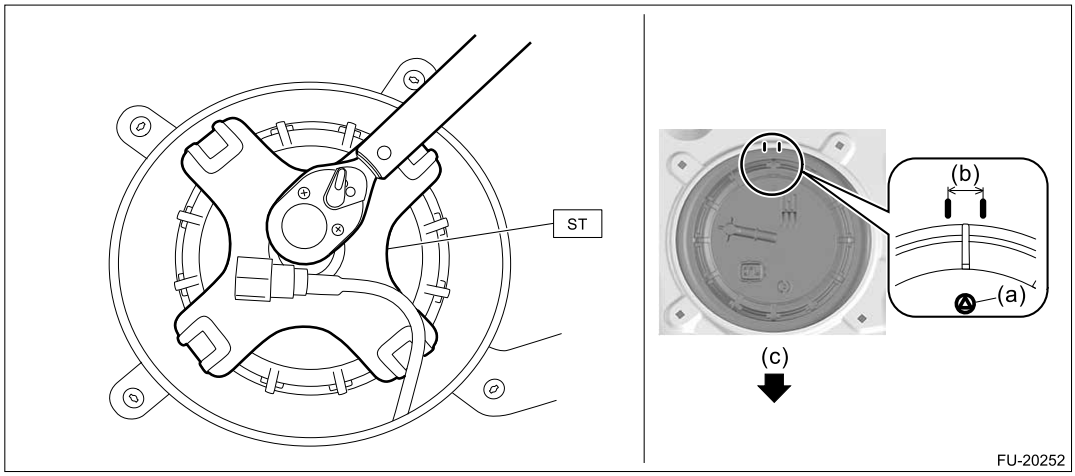
Caution:

- **Be careful not to spill any fuel over the gasket. If any fuel is spilled onto the gasket, wipe it off completely.**
- **Set the arm and float of the fuel level sensor while paying attention to prevent them from contacting the fuel tank. If the arm of the fuel level sensor is bent, the fuel gauge may not read correctly.**

(a) Position mark (fuel pump) (b) Installation position range mark (fuel tank) (c) Front side of vehicle

3. Use a new ring nut, temporarily tighten the ring nut.
4. Using the ST, tighten the ring nut.

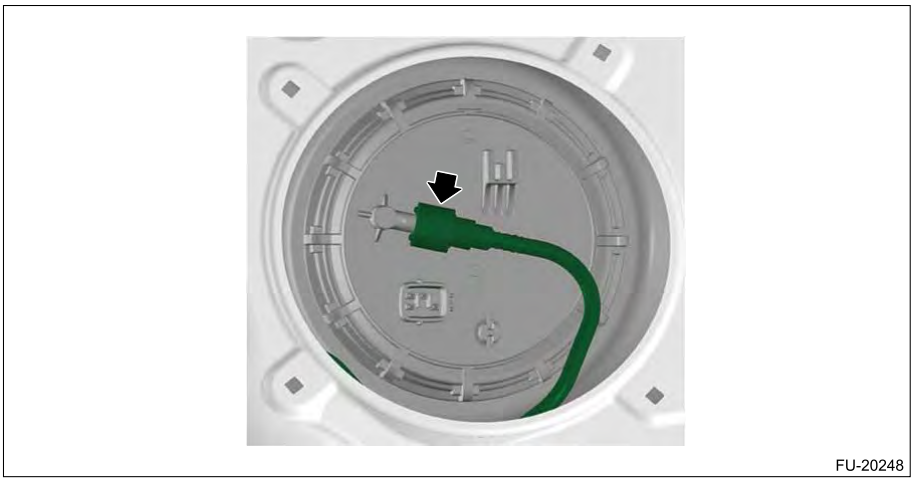
Caution:



- **Be careful not to damage the tube with the ST.**
- **Before setting the ST, move the tube above the ST.**
- **Be sure to tighten firmly to the specified torque in order to avoid looseness.**
- **Make sure that the position mark on the fuel pump is located within the installation position range mark on the fuel tank as shown in the figure.**

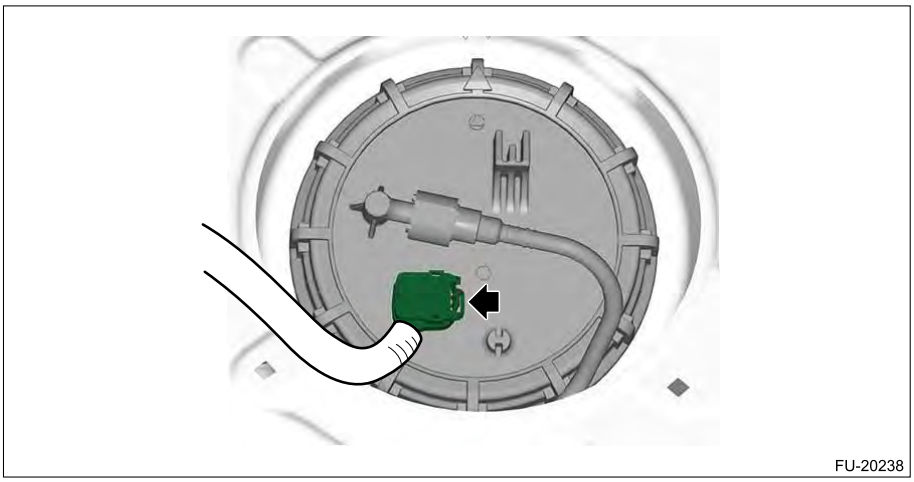
Preparation tool:

ST: ST FUEL PUMP (42099FL000)

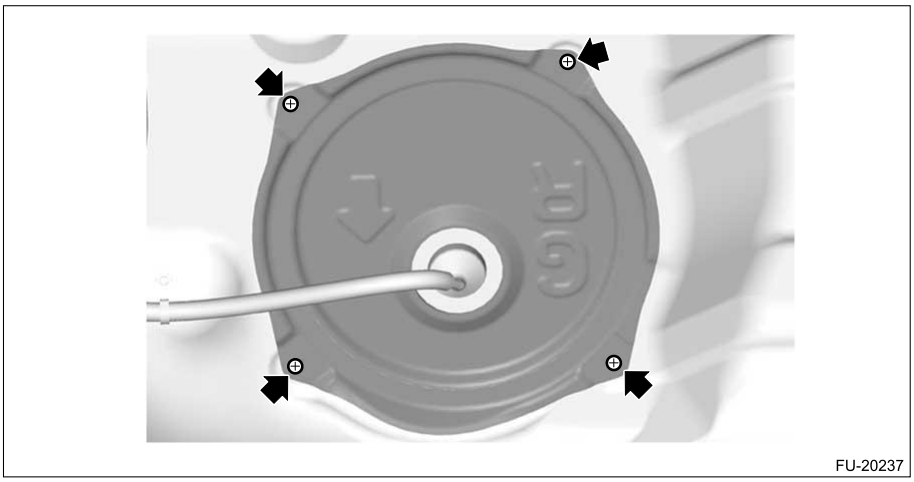


Tightening torque:

130 N·m (13.3 kgf-m, 95.9 ft-lb)



(a) Position mark (fuel pump) (b) Installation position range mark (fuel tank) (c) Front side of vehicle



5. Connect the fuel delivery tube. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE D).

FU-20248

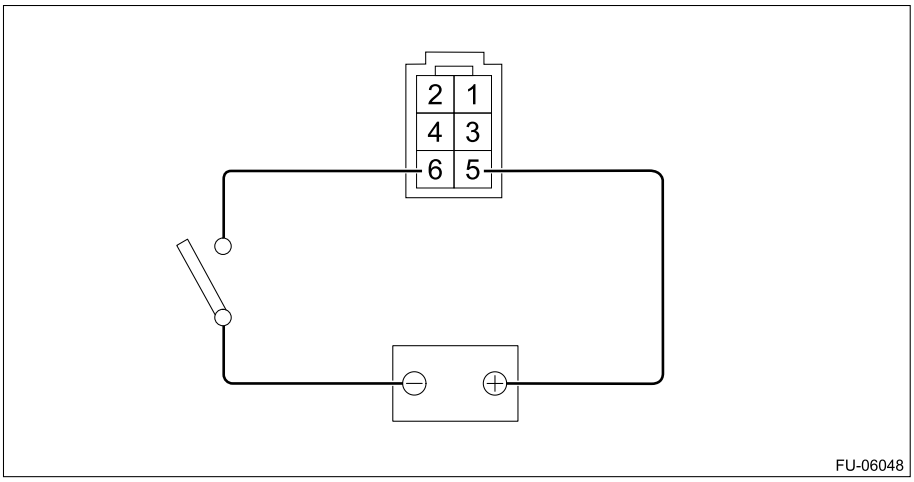
6. Connect the connector to the fuel pump.

FU-20238

7. Install the service hole cover of fuel pump.

FU-20237

8. Install the rear seat cushion. Ref. to SEATS>Rear Seat>INSTALLATION.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Pump

INSPECTION

1. Check that the fuel pump has no deformation, cracks or other damages.
2. Connect the battery positive terminal to terminal No. 5 and the battery ground terminal to terminal No. 6, and inspect the fuel pump operation.

Warning:

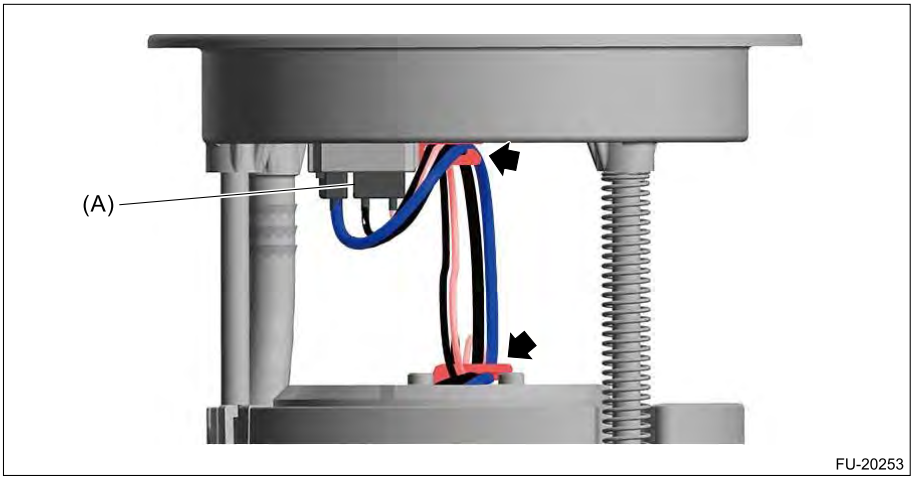
- **Wipe off fuel completely.**
- **Keep the battery as far apart from fuel pump as possible.**
- **Do not run the fuel pump for a long time under non-load condition.**

2 1
4 3
6 5
FU-06048

REMOVAL

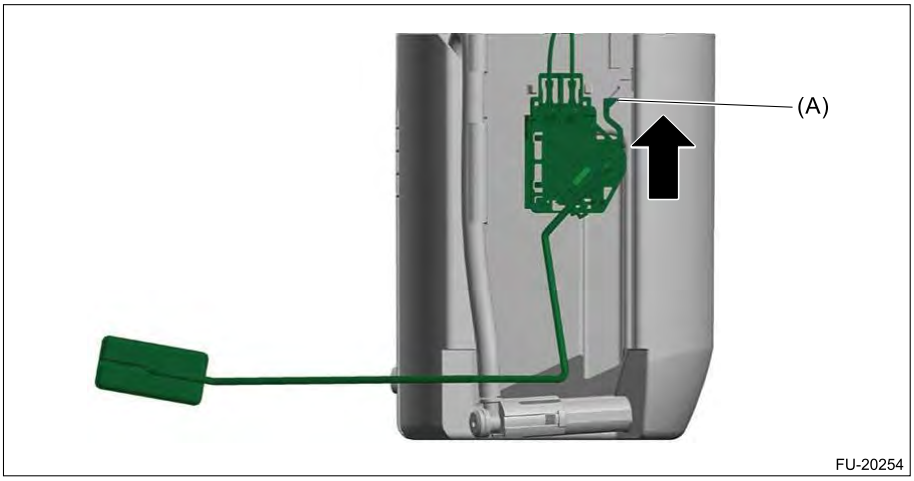
Warning:

Place "NO OPEN FLAMES" signs near the working area.



Caution:

- **Be careful not to spill fuel.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

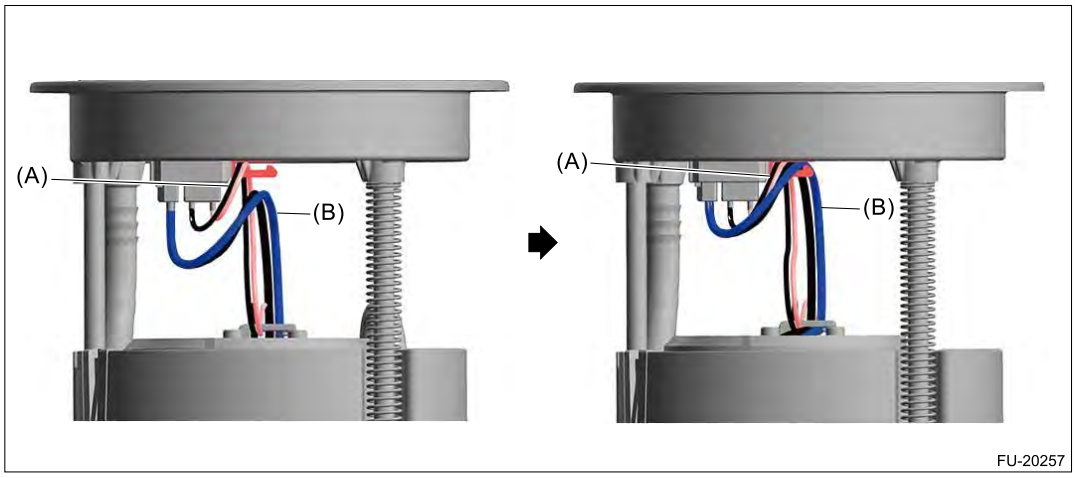


Note:

The fuel level sensor is built in fuel pump assembly.

1. Remove the fuel pump assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>REMOVAL.
2. Disconnect the fuel level sensor connector (A), and pull out the connector cable and fuel level sensor harness from the clip.

3. While pressing the claw (A) of the fuel level sensor, slide the fuel level sensor in the direction of the arrow, and remove the fuel level sensor.



INSTALLATION

1. Install the fuel level sensor to the fuel pump assembly.

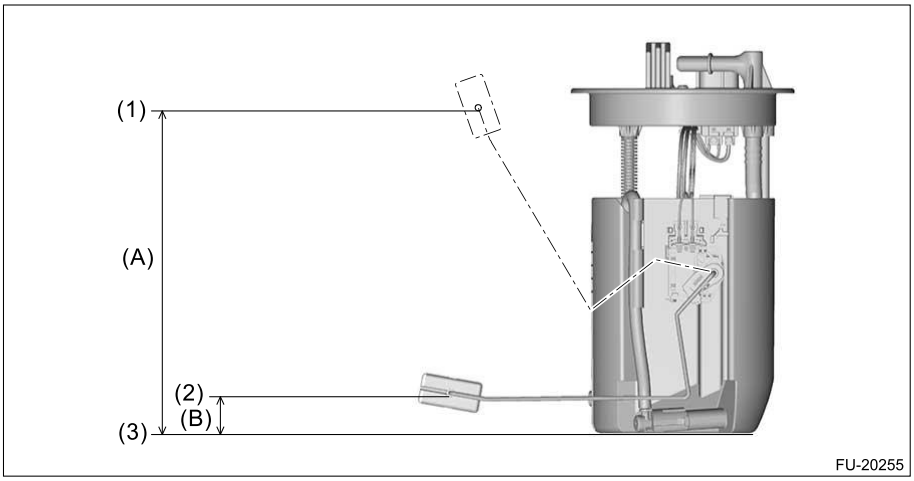
   Caution:

   Be sure to install the fuel level sensor harness to the clip first, then install the connector cable. Otherwise, malfunction may occur.

(A) Fuel level sensor harness (B) Connector cable

2. Install the fuel pump assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSTALLATION.

FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Level Sensor

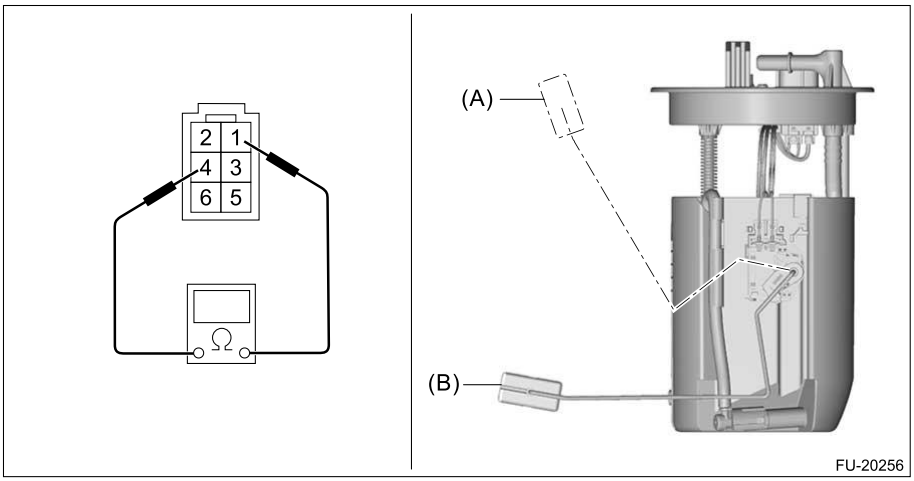


INSPECTION

1. Check that the fuel level sensor has no damage.

2. Measure the fuel level sensor float position.

Note:



When inspecting the fuel level sensor, perform the work with the sensor installed to the fuel pump.

(1) FULL (2) EMPTY (3) Fuel tank seating surface

Float position	Standard
FULL — Fuel tank seating surface (A)	198.9 ± 3.5 mm (7.831 ± 0.157 in)
EMPTY — Fuel tank seating surface (B)	23.2 ± 3.5 mm (0.913 ± 0.157 in)

3. Check the resistance between fuel level sensor terminals by the connector on top of the fuel pump.

Float position	Terminal No.	Standard
FULL (A)	1 and 2	17.4±2.0Ω
EMPTY (B)		410.0±4.5Ω

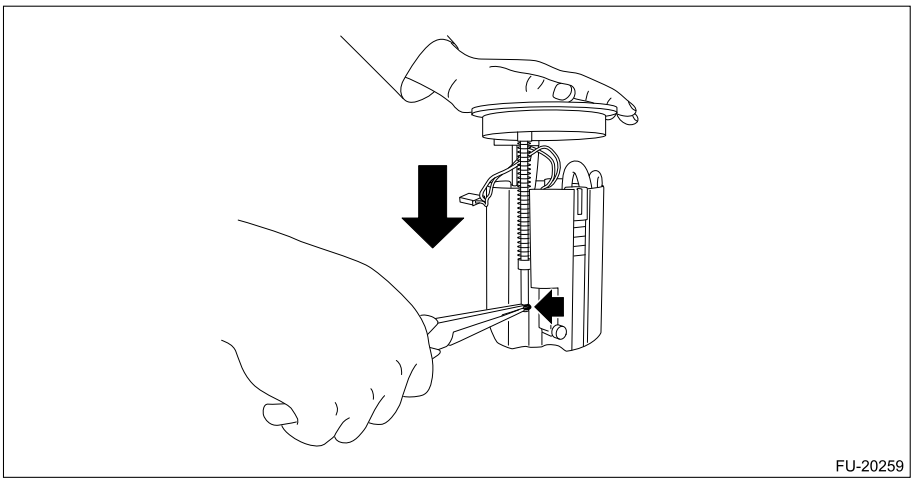
REMOVAL

Warning:

Place "NO OPEN FLAMES" signs near the working area.

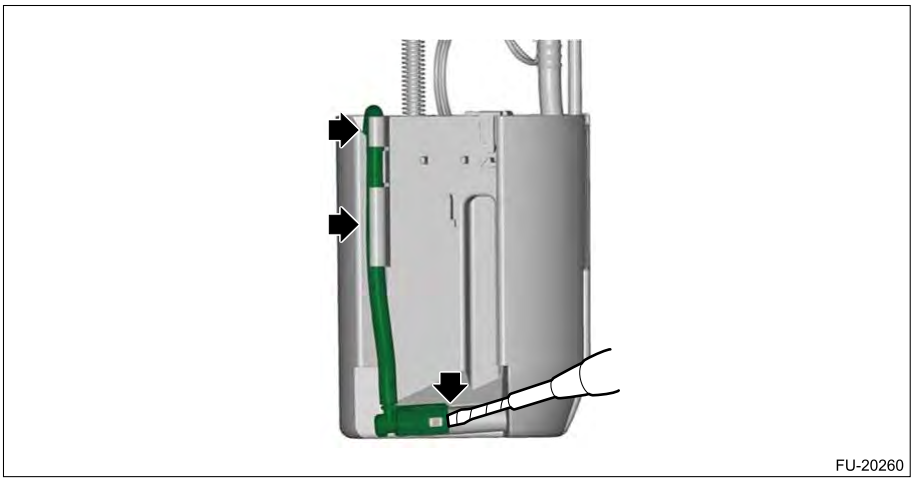
Caution:

- **Be careful not to spill fuel.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**
- **Be careful not to drop or apply any impact to the fuel pump during work. This may deteriorate its performance.**



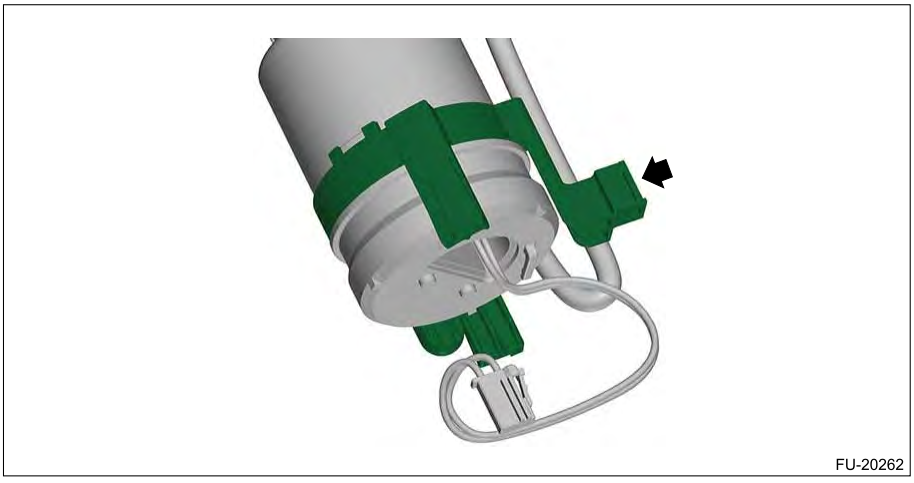
Note:

The fuel filter is built in fuel pump assembly.

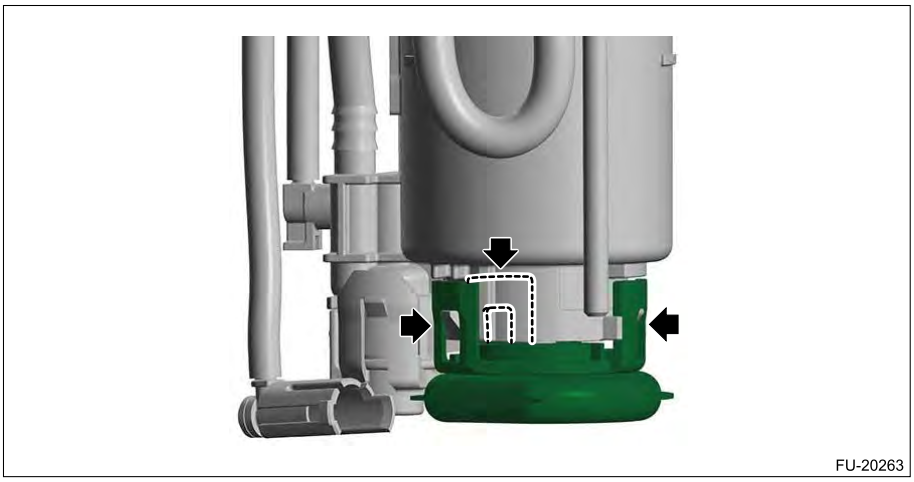


1. Remove the fuel pump assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>REMOVAL.
2. Remove the fuel level sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor>REMOVAL.
3. Disconnect the connector cable.

4. Push the fuel filter assembly in the direction of the arrow to compress, and detach the connecting clip.

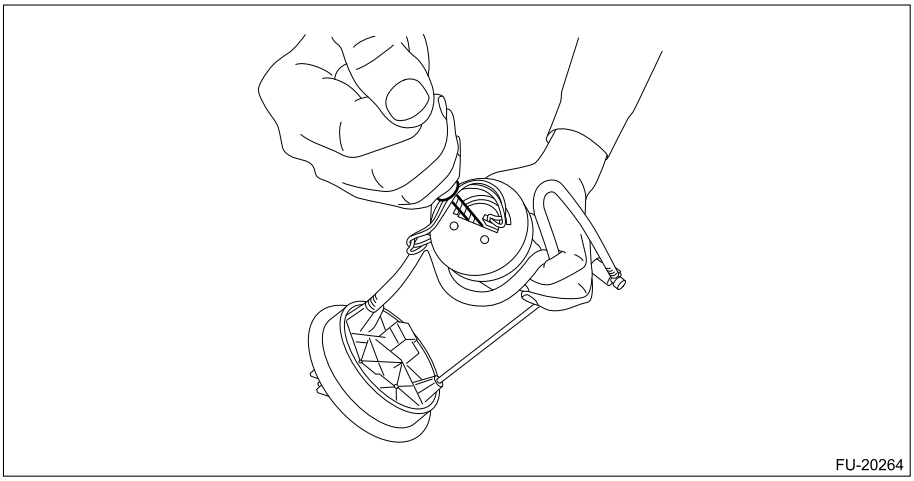


5. Release the claw using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the tube assembly from the fuel chamber assembly.

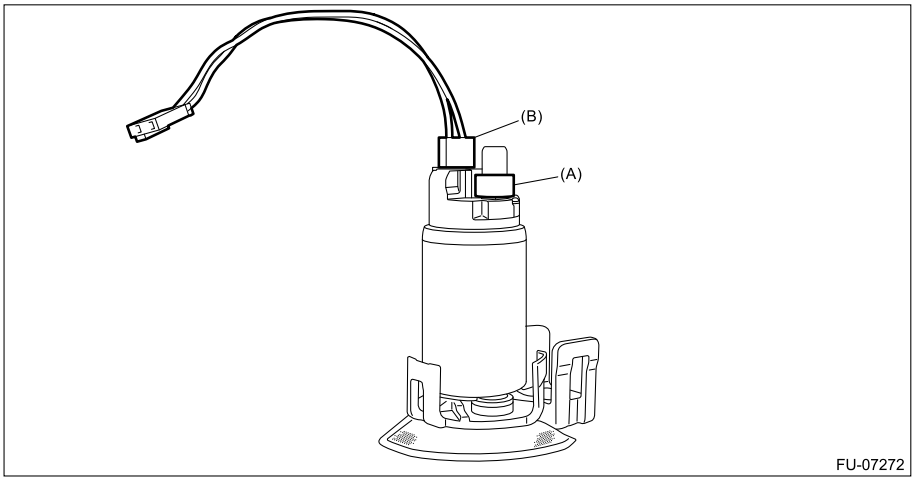


6. Disengage three claws on the fuel pump holder from the fuel chamber assembly, and remove the fuel filter assembly.

7. Remove the fuel pump holder.

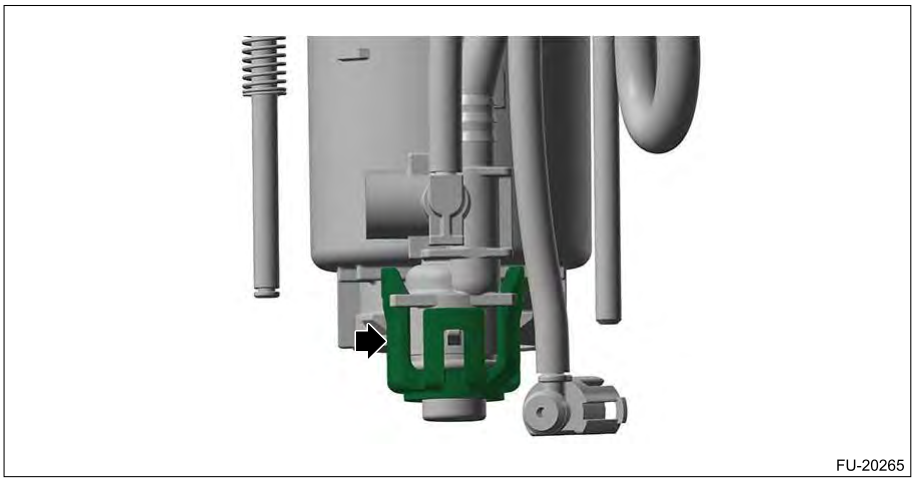


8. Disengage three claws on the fuel pump.

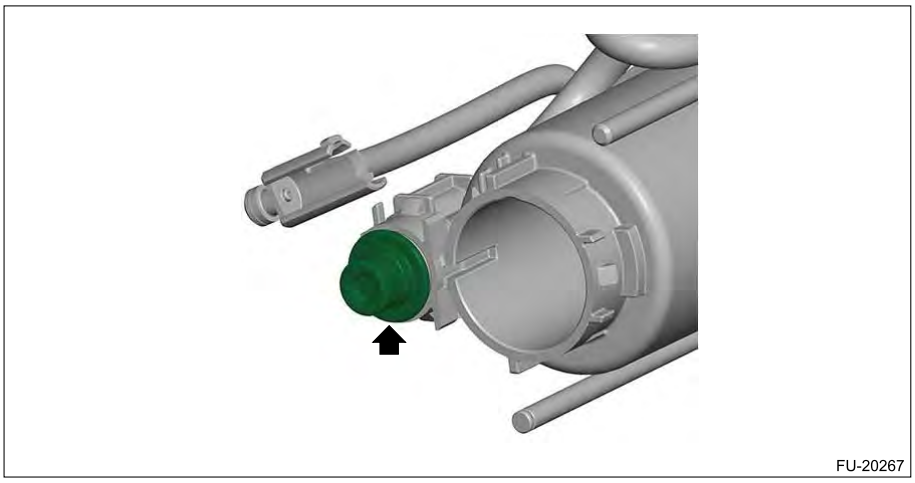


9. Using a flat tip screwdriver or similar tool wrapped with a protection tape, press on the fuel pump and remove the fuel pump from the fuel filter assembly.

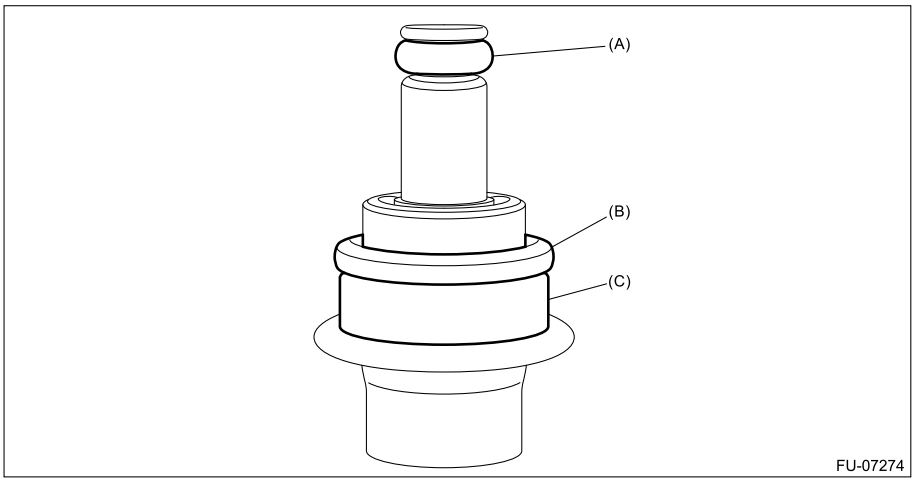
Caution:



If O-rings remain on the fuel filter assembly side, they must be carefully removed using a precision screwdriver or similar tool wrapped with a protection tape.



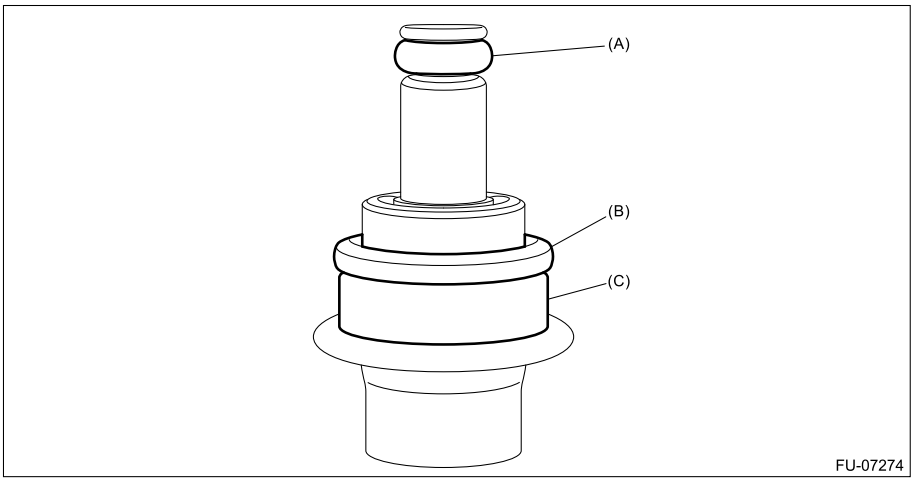
10. Remove the spacer (A) and connector cable (B) from the fuel pump.



11. Remove the pressure regulator cap.

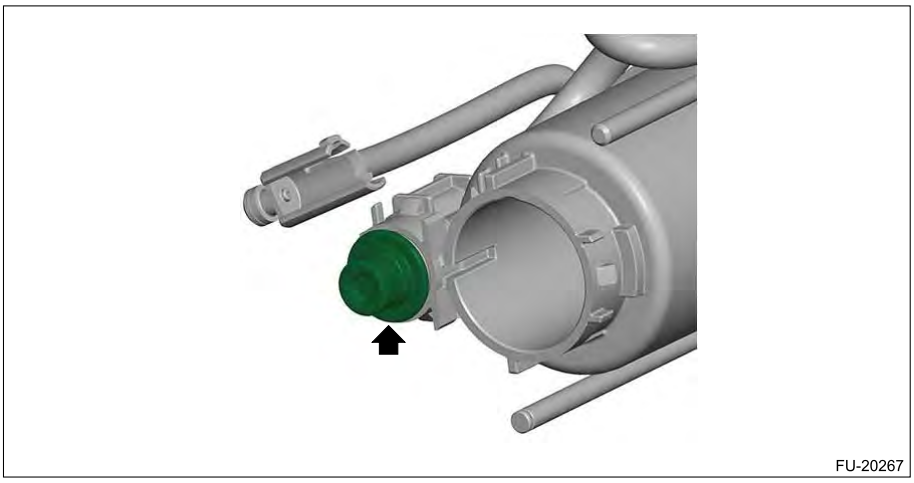
12. Remove the pressure regulator from the fuel filter assembly.

13. Remove O-ring (A), O-ring (B), and backup ring (C) from the pressure regulator.



FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Filter

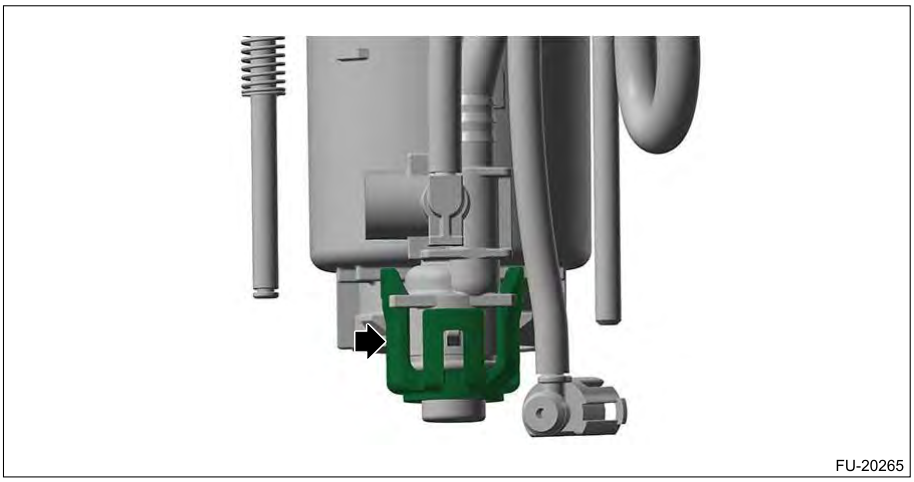
INSTALLATION



1. Install O-ring (A), new O-ring (B), and backup ring (C) to the pressure regulator.

Note:

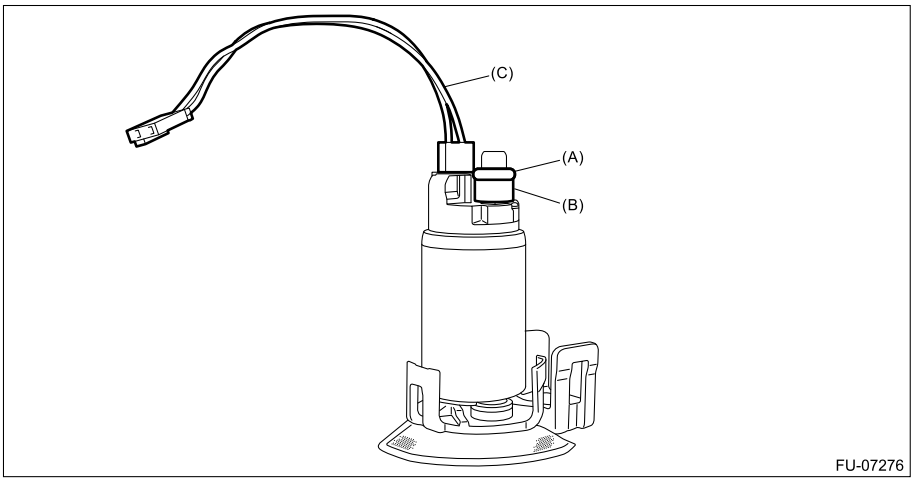
Apply gasoline to the O-ring and backup ring.



2. Install the pressure regulator to the fuel filter assembly.

3. Install the pressure regulator cap.

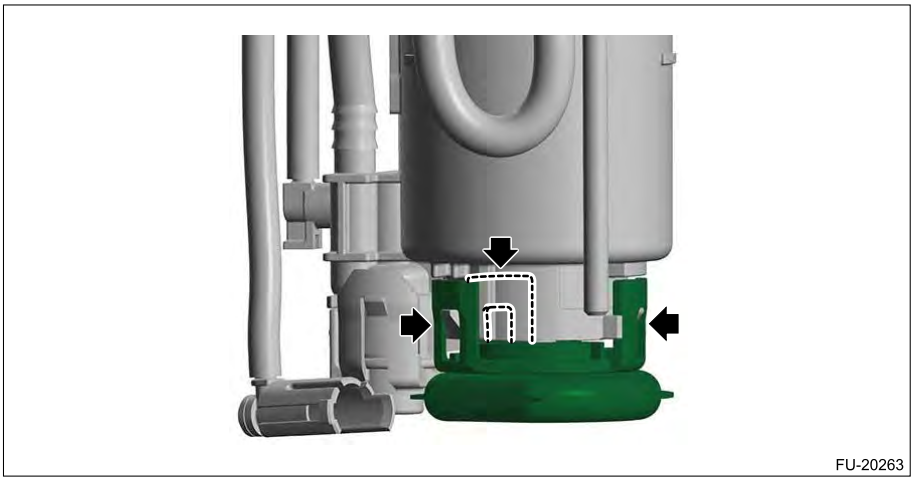
Note:



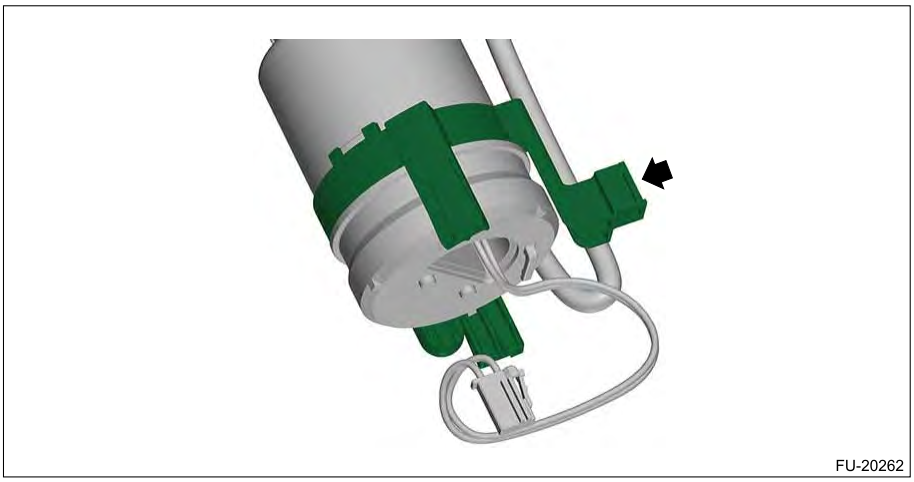
After installation, make sure 3 claws are securely engaged in each position.

4. Install new O-ring (A), spacer (B), and new connector cable (C) to the fuel pump.

Note:



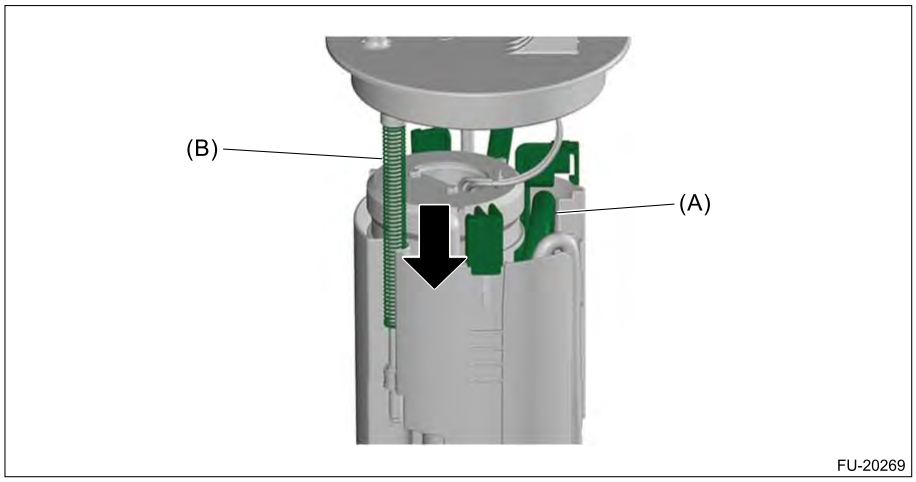
Apply gasoline to the O-rings and the spacer.



5. Install the fuel pump to the fuel filter assembly.

Note:

After installation, make sure 3 claws are securely engaged in each position.

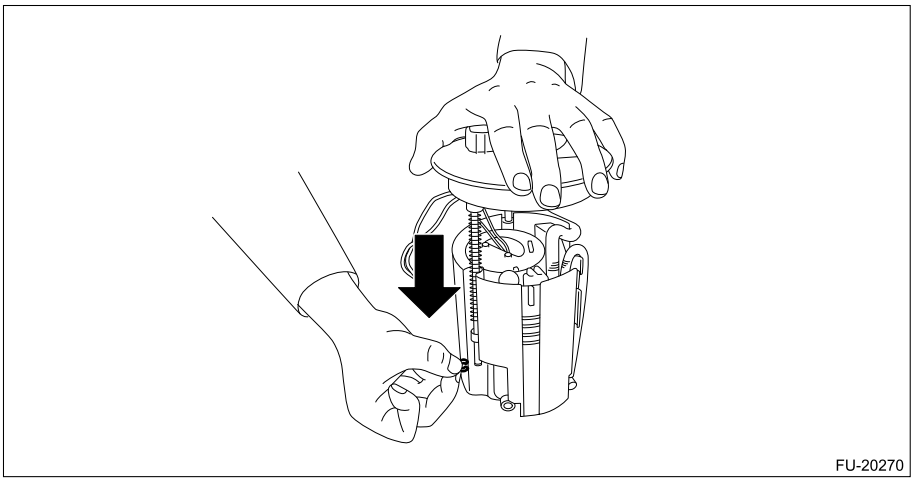


6. Install the fuel pump holder.

7. Install the fuel filter assembly to the fuel chamber assembly.

Note:

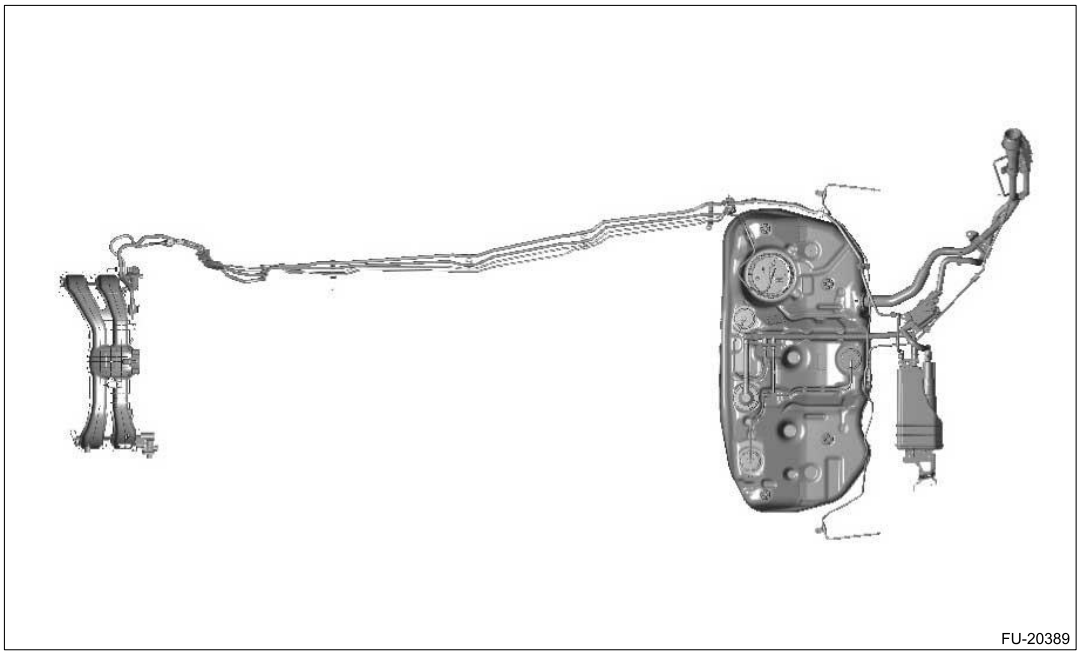
- **Set the tube (A) and spring (B) for the fuel filter assembly as shown in the figure.**



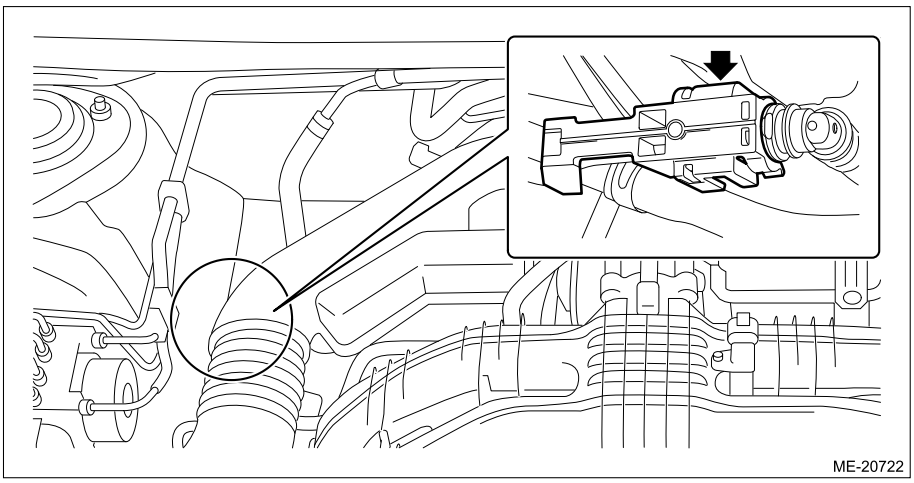
- **Check that the claws fastening the fuel camber assembly and the fuel filter assembly are securely engaged.**

8. Connect the tube assembly to the fuel chamber assembly.

9. Push the fuel filter assembly in the direction of the arrow to compress, and attach new clip.

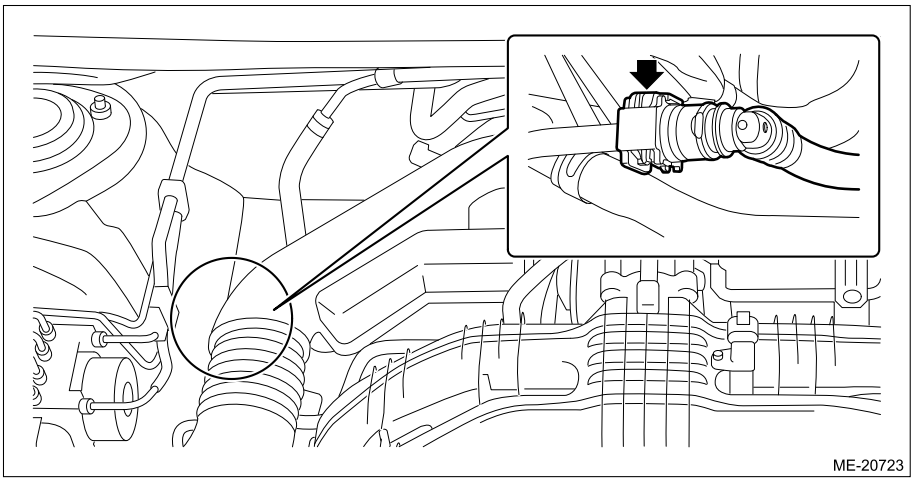


10. Connect the connector cable.

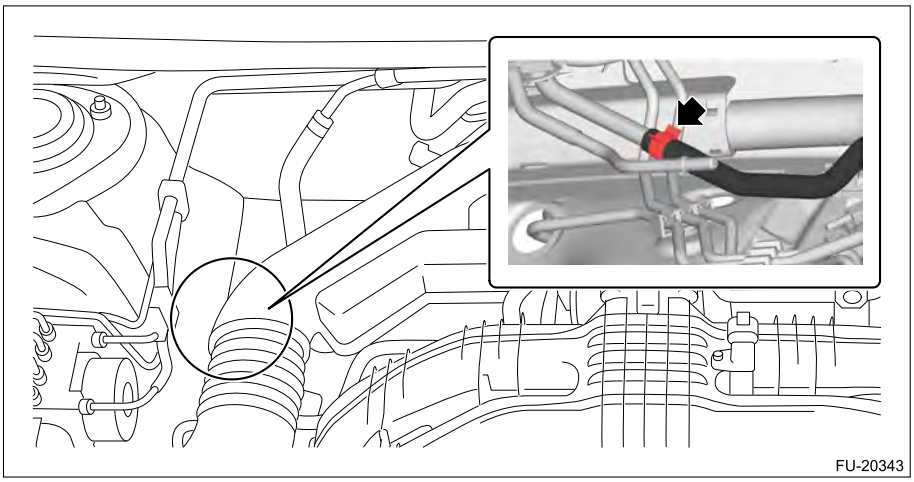


11. Install the fuel level sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor>INSTALLATION.
12. Inspect the fuel level sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor>INSPECTION.
13. Install the fuel pump assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Pump>INSTALLATION.

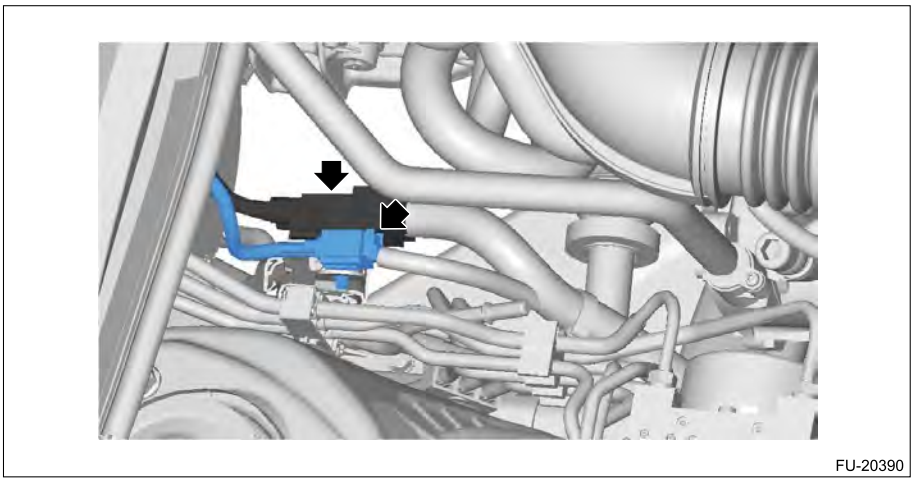
REMOVAL



Warning:
Place "NO OPEN FLAMES" signs near the working area.
Caution:
Be careful not to spill fuel.

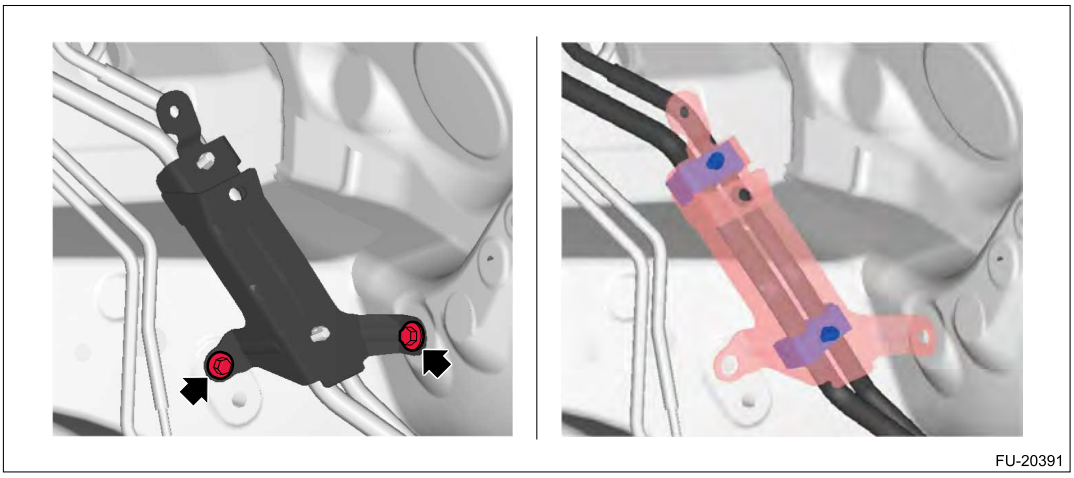


1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Drain fuel. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > DRAINING FUEL (WITH SUBARU SELECT MONITOR).
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Open the fuel filler lid and remove the fuel filler cap.
   Note:
   This operation is required to release the inner pressure of the fuel tank.
5. Remove the fuel delivery tube clamp from the fuel delivery tube.



6. Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE A).

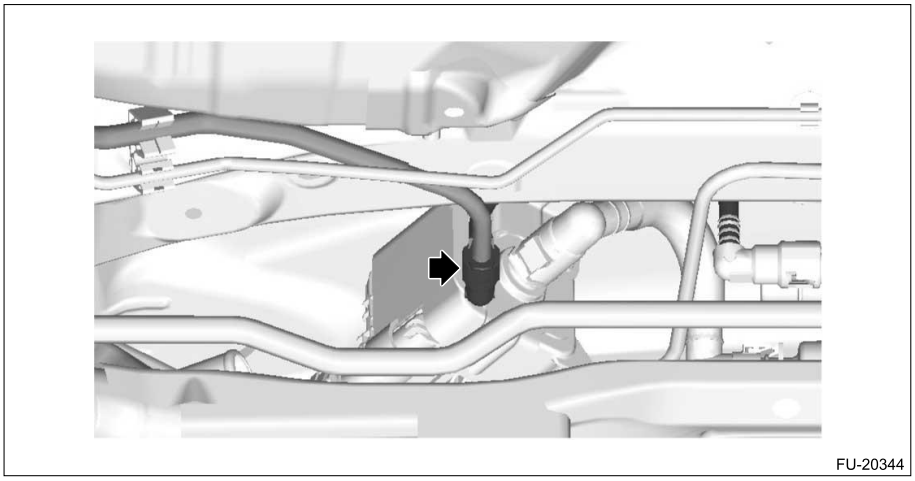
7. Disconnect the evaporation hose from the fuel pipe assembly.



8. Remove the connector from the fuel pipe bracket A.

9. Lift up the vehicle.

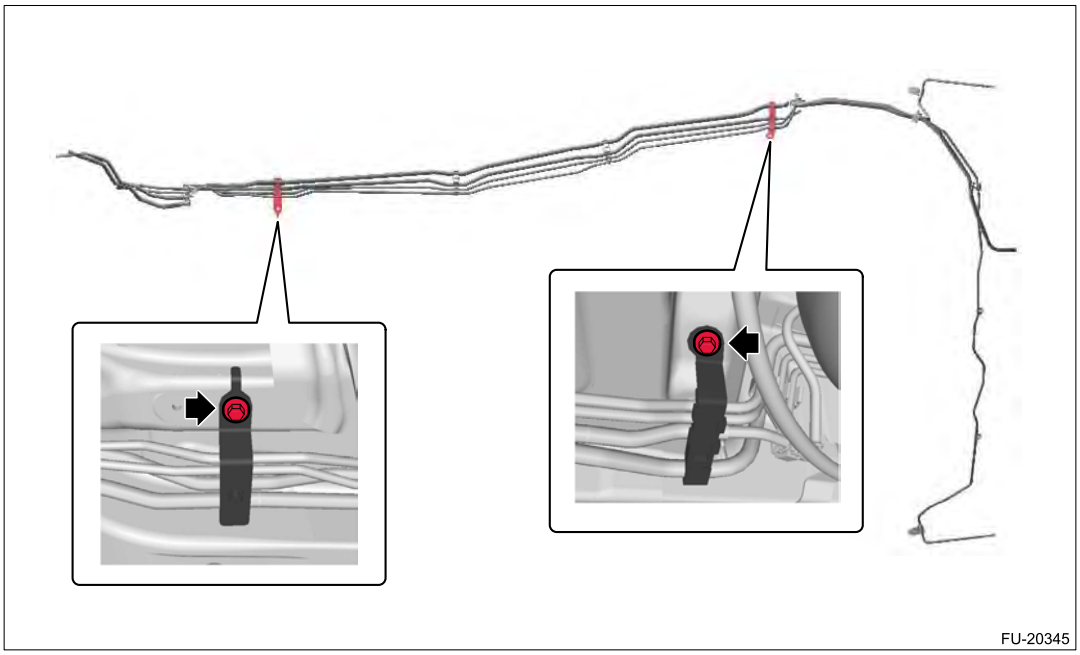
10. Remove the bolts securing the fuel bracket A, and remove the pipe clamp from the fuel pipe assembly.



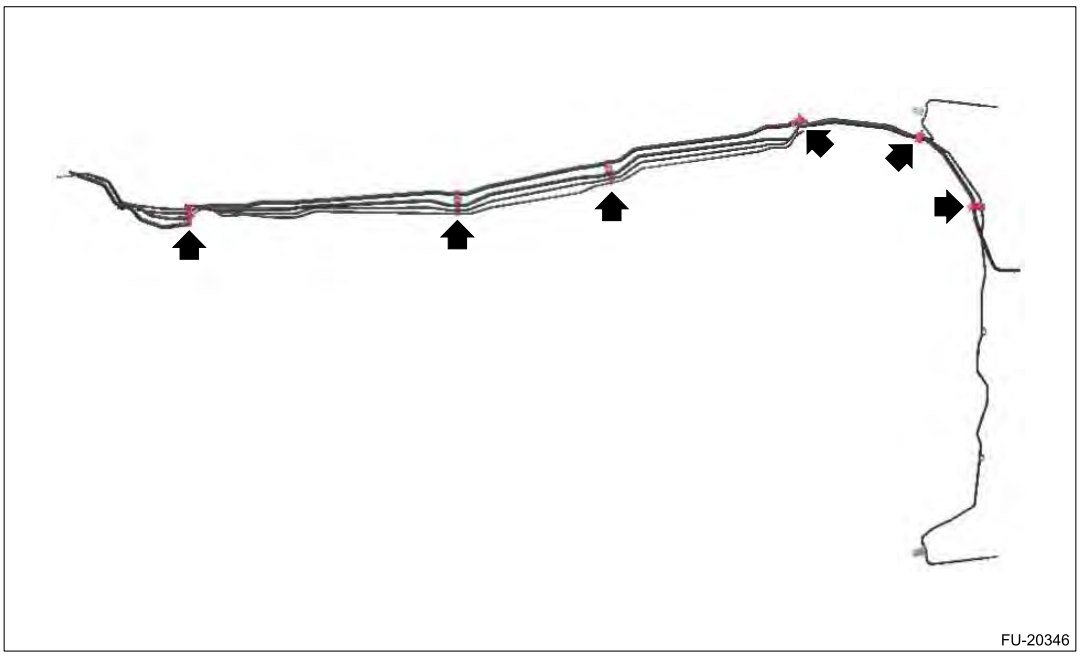
11. Remove the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank>REMOVAL.

12. Remove individual tubes and hoses from the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > FUEL TANK.

- For information about disconnecting fuel delivery tube, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE D).
- For information about disconnecting the circulate tube, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE G).
- For information about disconnecting the vent tube, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE F). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE H).



13. Disconnect the purge tube from the fuel pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>REMOVAL > QUICK CONNECTOR DISCONNECTION (TYPE G).

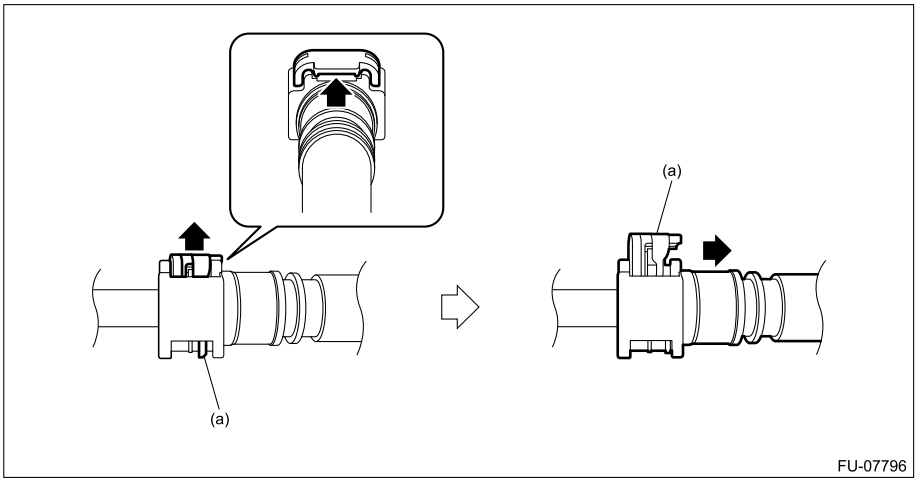


14. Remove the floor under protector RH. Ref. to EXTERIOR/INTERIOR TRIM>Floor Under Protector>REMOVAL.

15. Disconnect the brake pipe. Ref. to BRAKE>Brake Hose>REMOVAL > FRONT BRAKE HOSE. Ref. to BRAKE>Brake Pipe>REMOVAL > CENTER AND REAR BRAKE PIPE.

16. Remove the bolts securing the fuel pipe bracket B and the fuel pipe bracket C, and remove the pipe clamp from the fuel pipe assembly.

17. Remove the fuel pipe assembly from the pipe clamp.

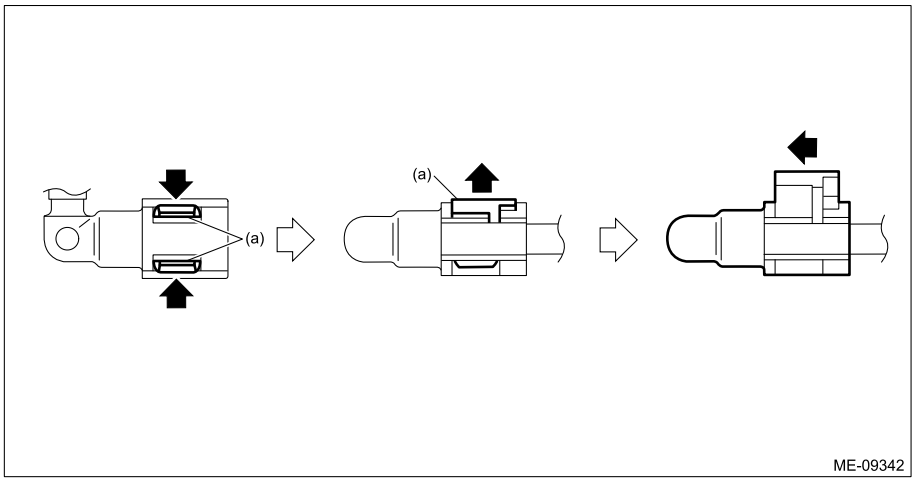


1. QUICK CONNECTOR DISCONNECTION (TYPE A)

Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

Disconnect the quick connector as shown in the figure.



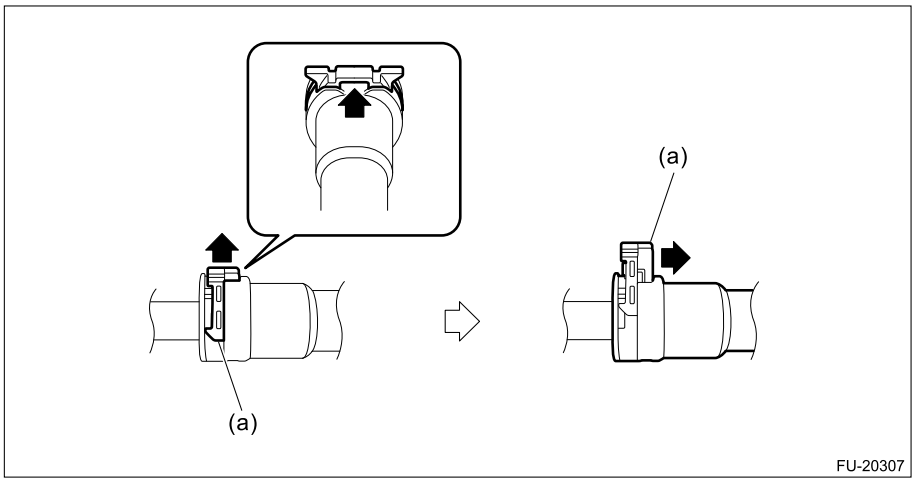
(a) Slider

2. QUICK CONNECTOR DISCONNECTION (TYPE B)

Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

Disconnect the quick connector as shown in the figure.



(a) Slider

3. QUICK CONNECTOR DISCONNECTION (TYPE C)

Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

Disconnect the quick connector as shown in the figure.

(a) Slider

4. QUICK CONNECTOR DISCONNECTION (TYPE D)

- When using ST
  1. Attach the ST to the pipe and push the ST in the direction of arrow mark to disconnect the quick connector.

     Preparation tool:

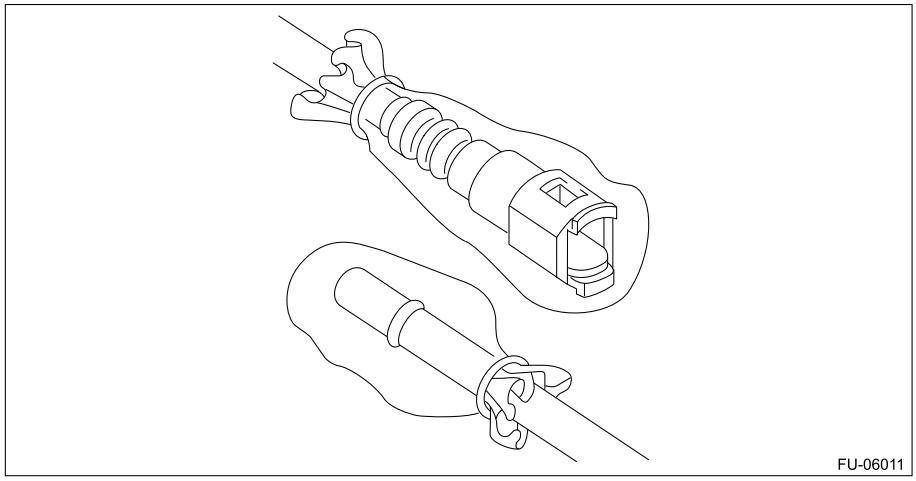
     ST: QUICK CONNECTOR RELEASE (42099AE000)

     Caution:

     - **Be careful not to spill fuel.**
     - **Catch the fuel from hoses using a container or cloth.**
     - **Holding the portion (c) shown in the figure, pull the connector in axial direction.**
     - **If the connector and pipe are sticking to each other, push and pull the connector with the ST pushed, and then pull the connector after it starts moving freely.**
     - **When disconnecting the connector, do not bend or twist the tube forcibly. If the tube is bent, replace with a new part.**

     Note:

     Clean the pipe and quick connector, if they are covered with dust.

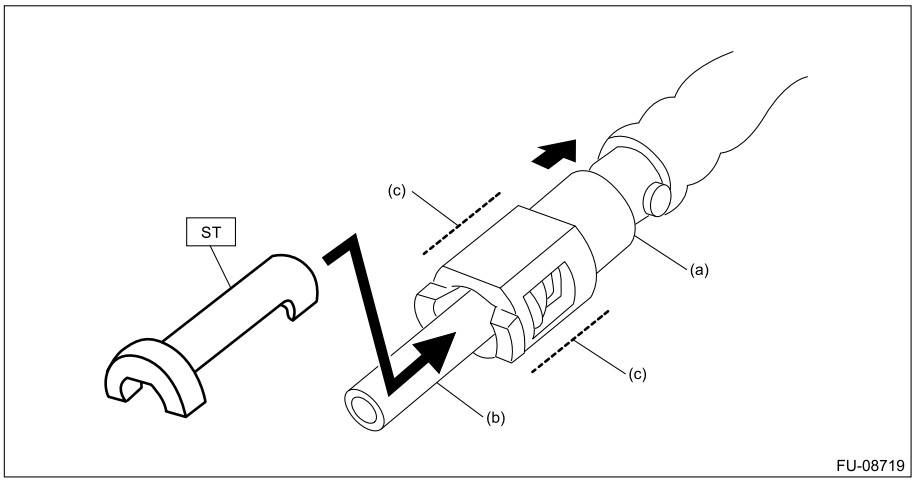


(a) Quick connector (b) Pipe (c) Connector holding position

  2. To prevent from damaging or entering foreign matter, wrap the pipes and quick connectors with plastic bag etc.

     Caution:

     When reusing the retainer, do not disconnect the retainer from the connector.



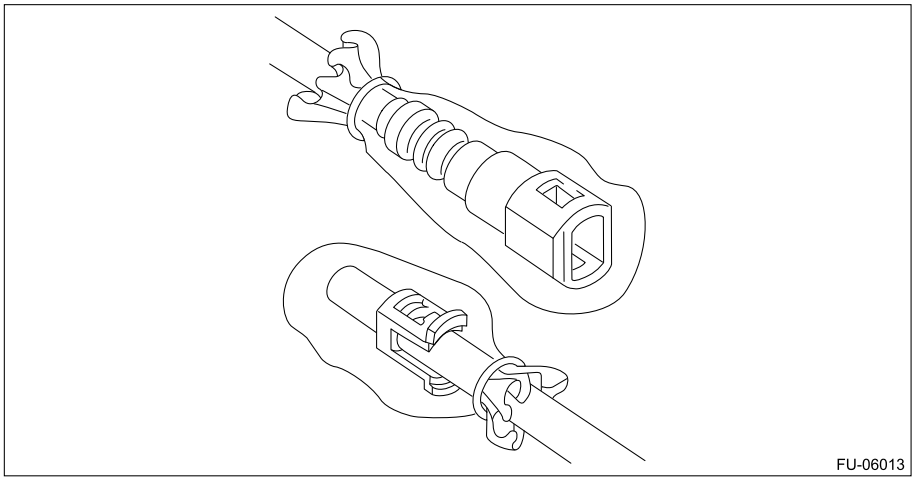
- When not using ST
  1. Push the retainer in the direction of the arrow, disconnect the quick connector from pipe.

Caution:

- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**
- **Holding the portion (d) shown in the figure, pull the connector in axial direction.**
- **If the connector and pipe are sticking to each other, push and pull the connector with the retainer pushed in the direction of the arrow, and then pull the connector after it starts moving freely.**
- **When disconnecting the connector, do not bend or twist the tube forcibly. If the tube is bent, replace with a new part.**

Note:

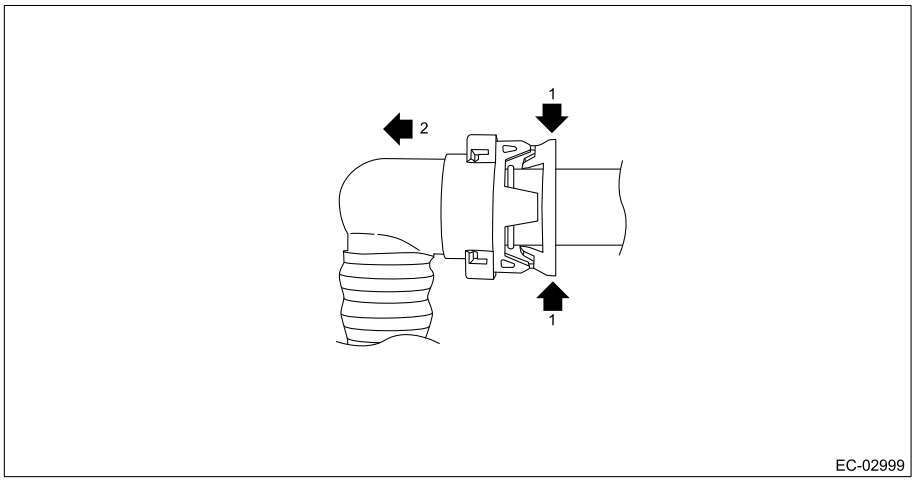
Clean the pipe and quick connector, if they are covered with dust.



(a) Quick connector (c) Pipe (d) Connector holding position

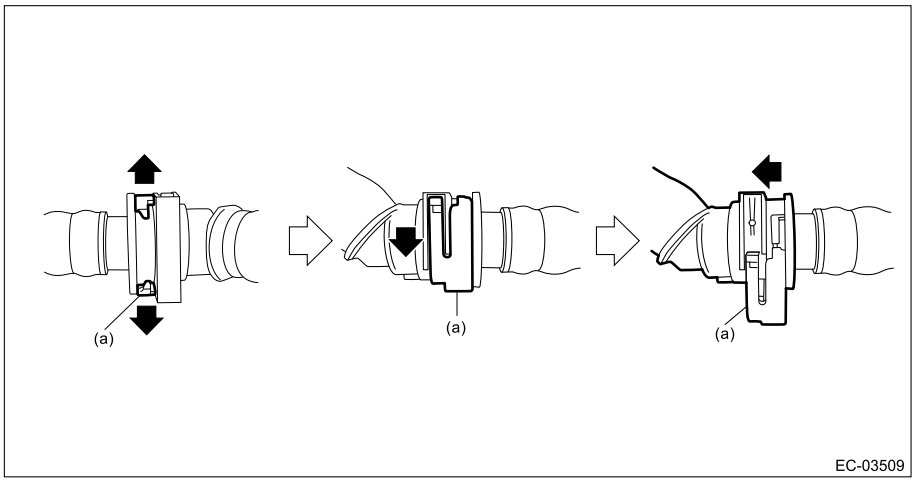
(b) Retainer

2. To prevent from damaging or entering foreign matter, wrap the pipes and quick connectors with plastic bag etc.



Caution:

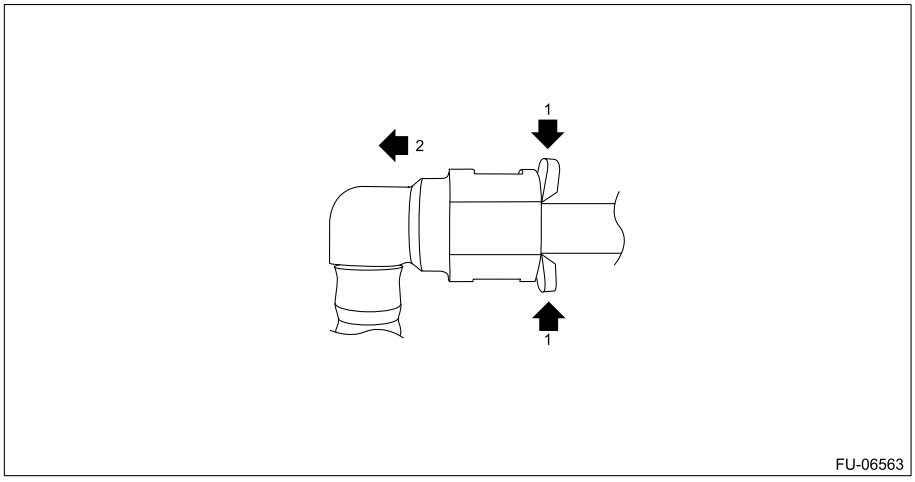
When reusing the retainer, do not disconnect the retainer from the pipe.



5. QUICK CONNECTOR DISCONNECTION (TYPE E)

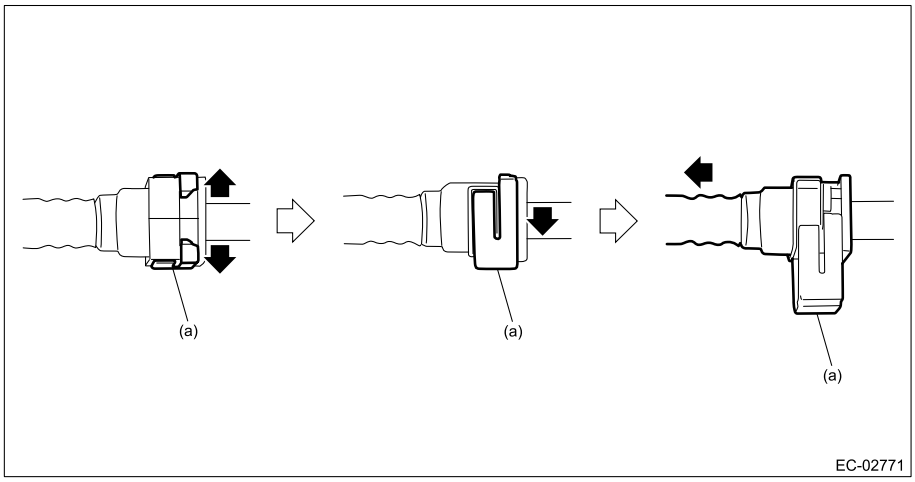
Disconnect the quick connector as shown in the figure.

6. QUICK CONNECTOR DISCONNECTION (TYPE F)



Disconnect the quick connector as shown in the figure.

(a) Slider

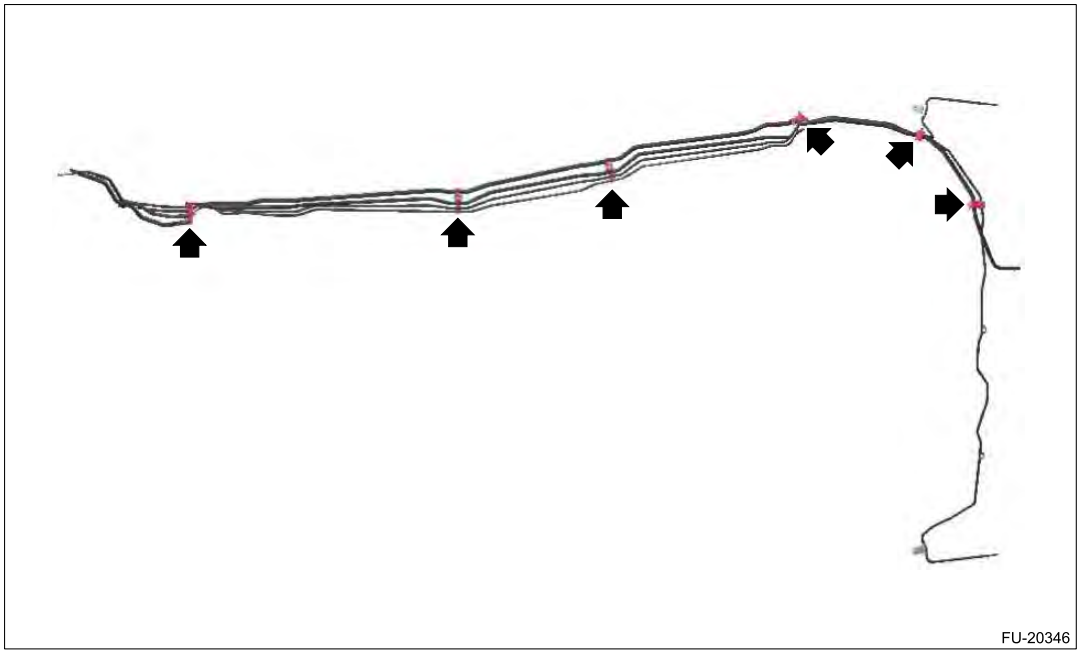


7. QUICK CONNECTOR DISCONNECTION (TYPE G)

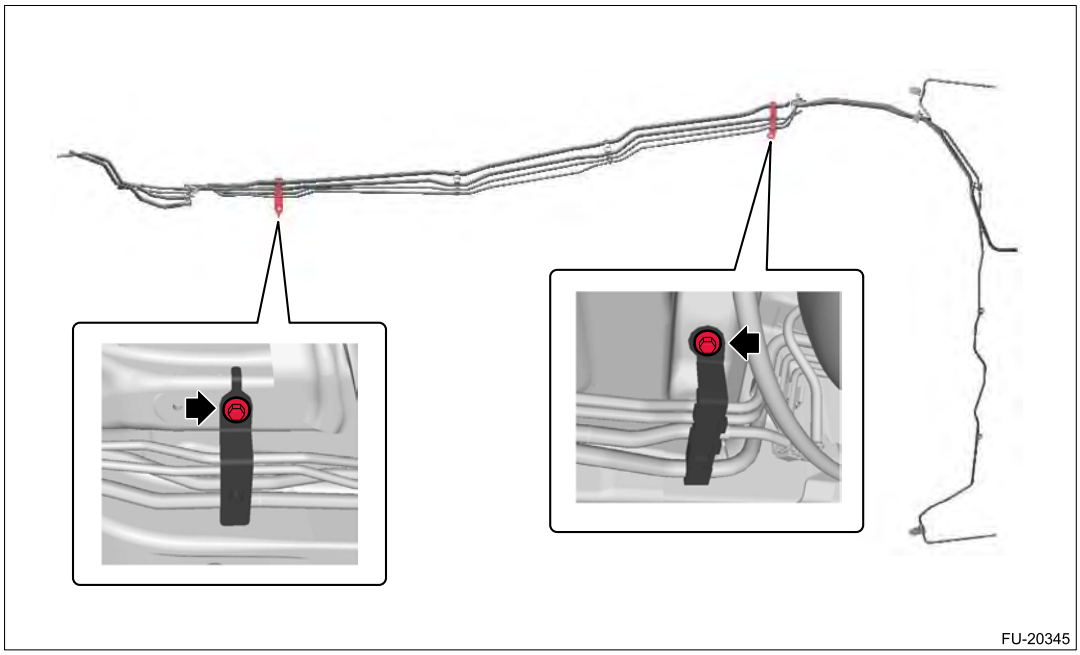
Disconnect the quick connector as shown in the figure.

8. QUICK CONNECTOR DISCONNECTION (TYPE H)

Disconnect the quick connector as shown in the figure.

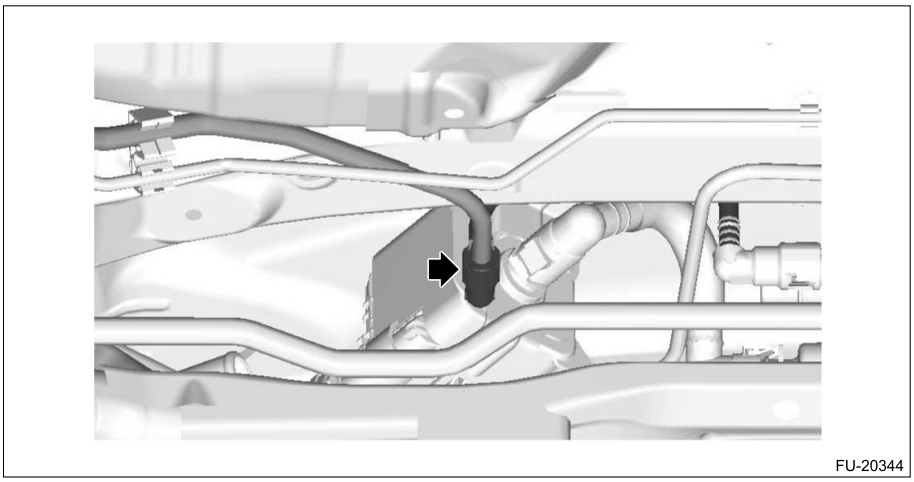


(a) Slider

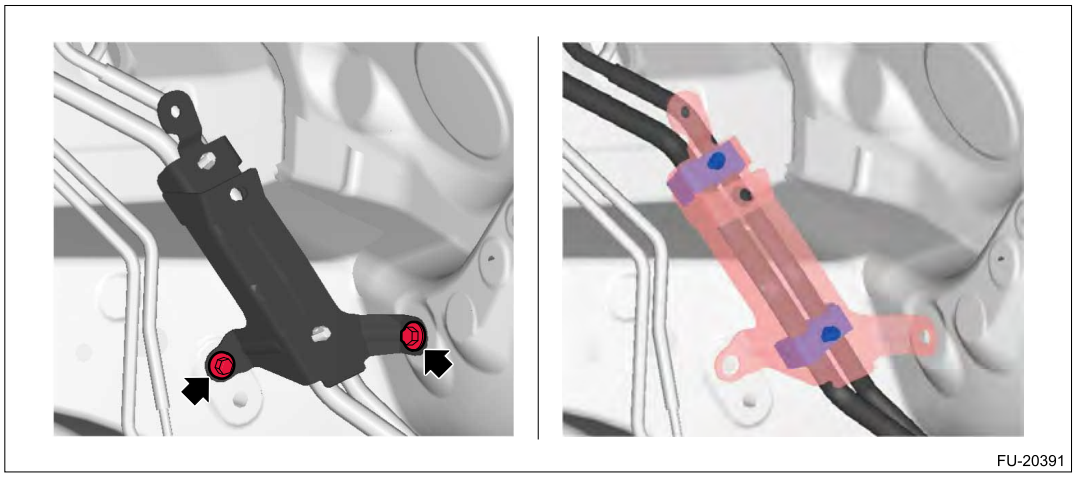


FUEL INJECTION (FUEL SYSTEMS)(H4DO) > Fuel Delivery and Evaporation Lines

INSTALLATION

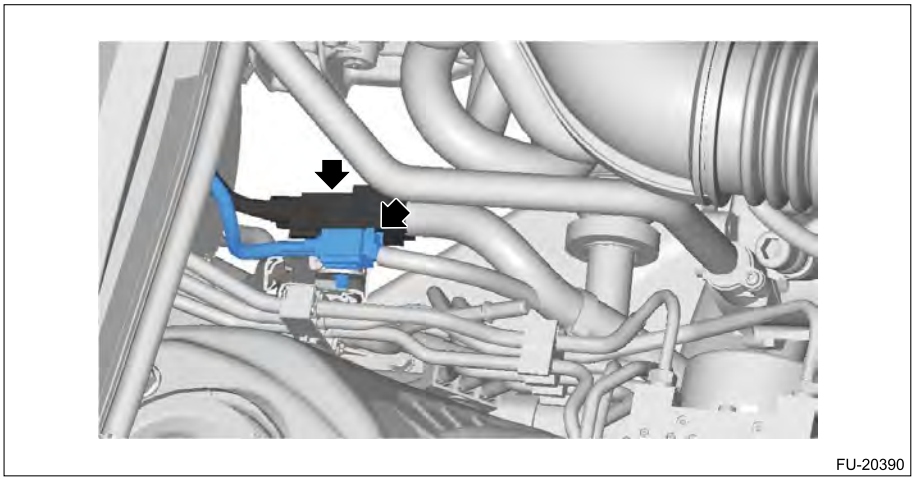


1. Install the fuel pipe assembly to the pipe clamp.

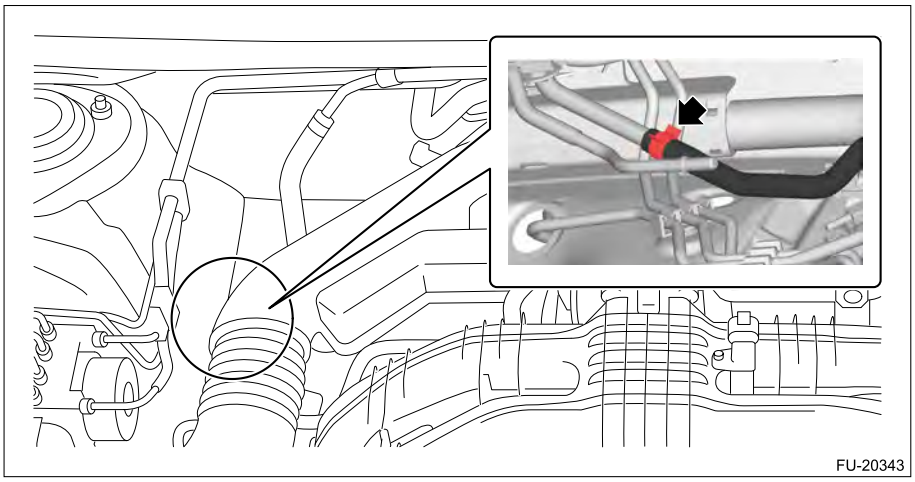


2. Install the pipe clamp to the fuel pipe assembly, and then install the fuel pipe bracket B and fuel pipe bracket C.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)

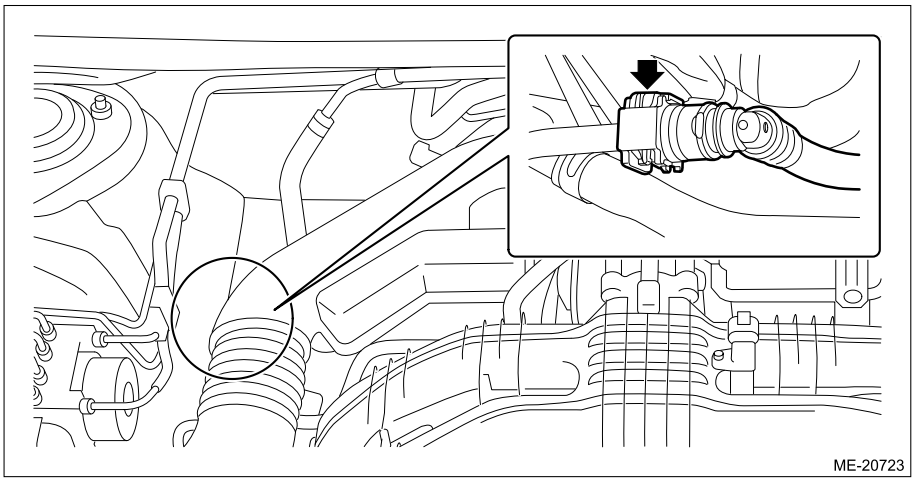
3. Connect the brake pipes. Ref. to BRAKE>Brake Hose>INSTALLATION > REAR BRAKE HOSE. Ref. to BRAKE>Brake Pipe>INSTALLATION > CENTER AND REAR BRAKE PIPE.
4. Install the floor under protector RH. Ref. to EXTERIOR/INTERIOR TRIM>Floor Under Protector>INSTALLATION.
5. Connect the purge tube to the fuel pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE G).



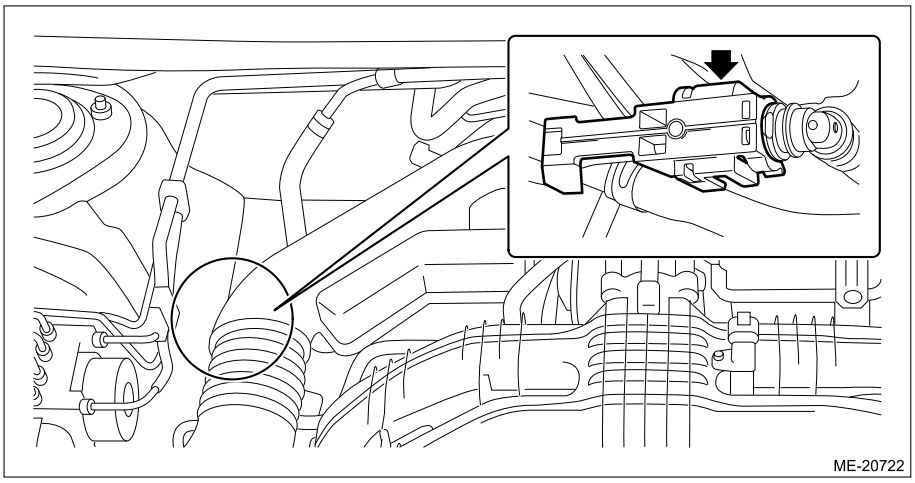
6. Connect individual tubes and hoses to the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>General Description>COMPONENT > FUEL TANK.
   - For information about connecting fuel delivery tube, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE D).
   - For information about connecting the circulate tube, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE G).
   - For information about connecting the vent tube, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE F). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE H).
   - For information about connecting fuel filler hose, refer to "Fuel Delivery and Evaporation Lines". Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > FUEL FILLER HOSE CONNECTION.
7. Install the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank>INSTALLATION.
8. Install the pipe clamp to the fuel pipe assembly, and then install the fuel pipe bracket A.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)



9. Lower the vehicle.



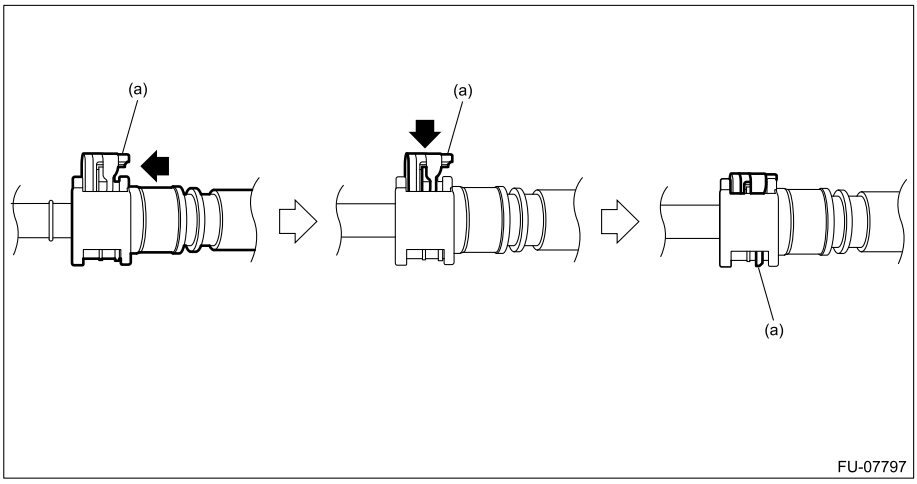
10. Install the connector to the fuel pipe bracket A.



11. Connect the evaporation hose to fuel pipe assembly.

12. Connect the quick connector on the fuel delivery tube to the fuel pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Fuel Delivery and Evaporation Lines>INSTALLATION > QUICK CONNECTOR CONNECTION (TYPE A).

13. Install the fuel delivery tube clamp to the fuel delivery tube.



1. QUICK CONNECTOR CONNECTION (TYPE A)

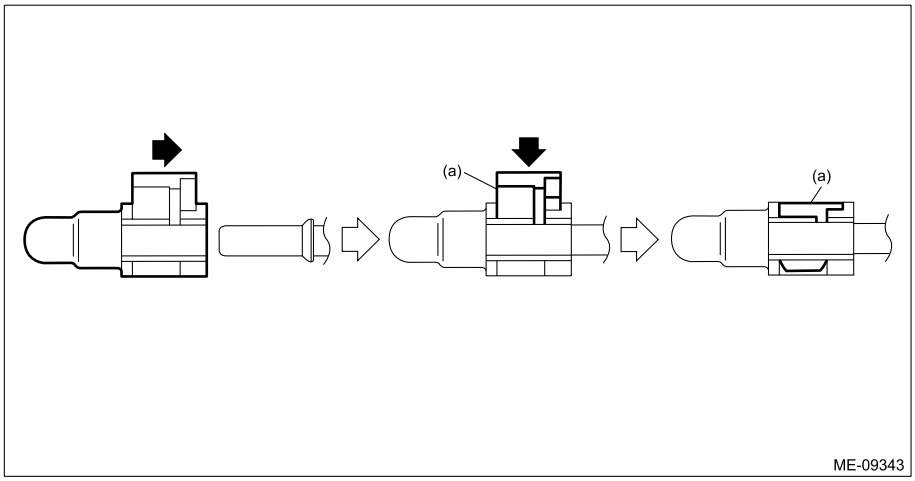
Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check again that the quick connector is securely connected.**

Note:

Connect the quick connector as shown in the figure.

(a) Slider



2. QUICK CONNECTOR CONNECTION (TYPE B)

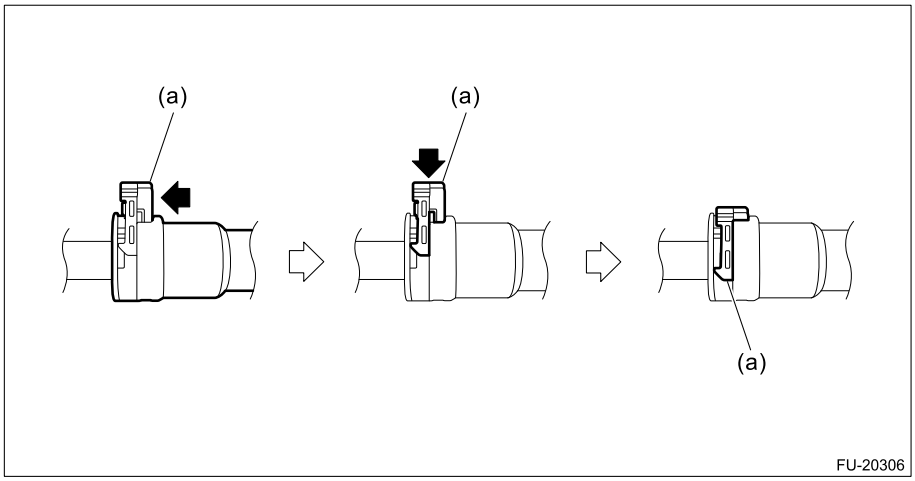
Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check again that the quick connector is securely connected.**

Note:

Connect the quick connector as shown in the figure.

(a) Slider



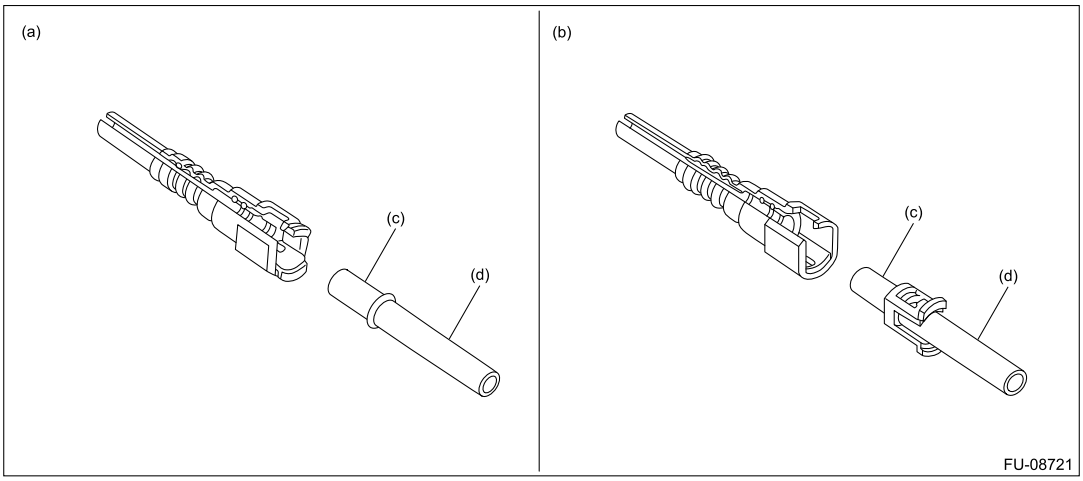
3. QUICK CONNECTOR CONNECTION (TYPE C)

Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check again that the quick connector is securely connected.**

Note:

Connect the quick connector as shown in the figure.



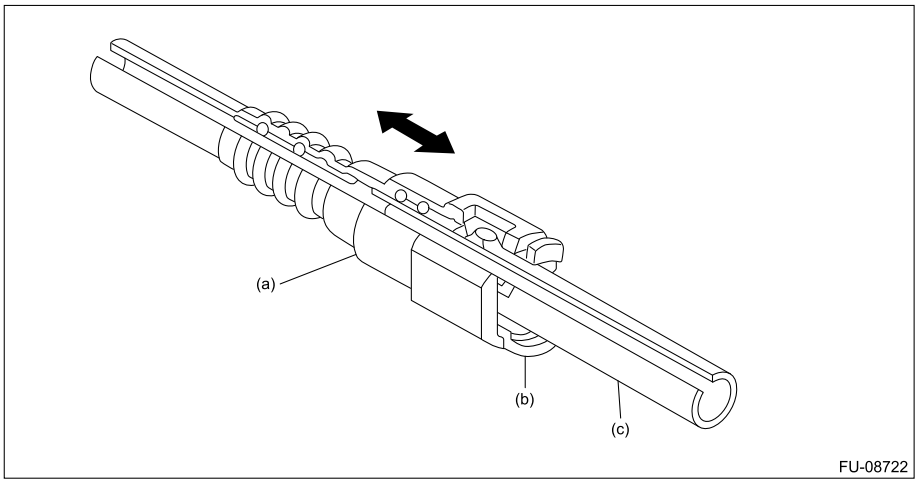
(a) Slider

4. QUICK CONNECTOR CONNECTION (TYPE D)

Caution:

- **Make sure there are no damage or dust on connections. If necessary, clean seal surface of pipe.**

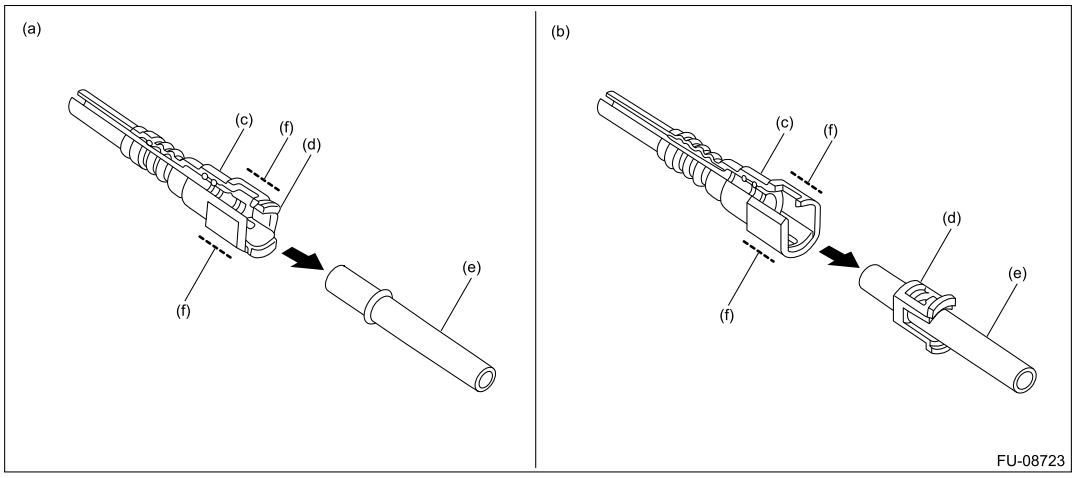
(a) When removed using the ST (c) Seal surface (d) Pipe



(b) When removed without using the ST

- **When reusing the retainer, make sure that neither scratches nor deformation exist on the retainer. If it is faulty, use a new part.**

Connect the quick connector.



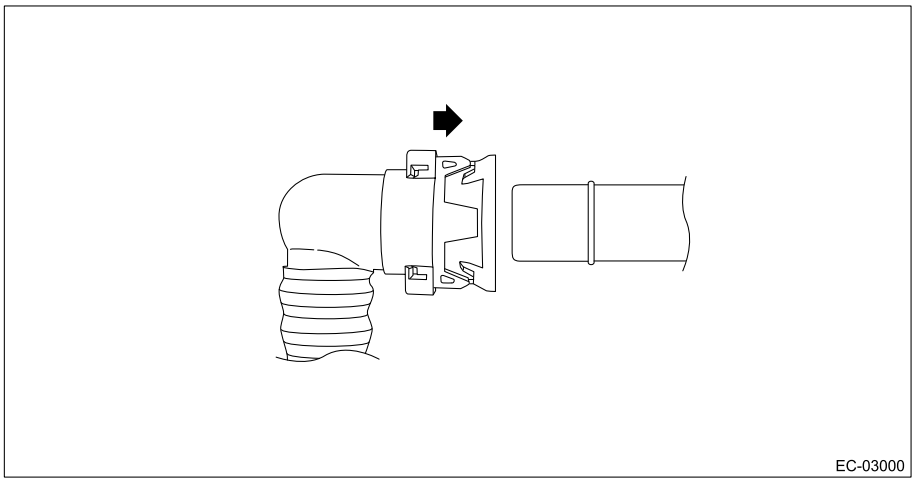
Caution:

- **Make sure that the quick connector is securely connected.**

(a) Quick connector (b) Retainer (c) Pipe

- **Make sure the two retainer pawls are engaged in their mating positions in the quick connector.**
- **Be sure to inspect tubes and their connections for any leakage of fuel.**
- **Holding the portion (f) shown in the figure, push in the connector in axial direction.**
- **When connecting the connector, do not bend or twist the tube forcibly. If the tube is bent, replace with a new part.**

(a) When removed using the ST
(b) When removed without using the ST
(c) Quick connector
(d) Retainer
(e) Pipe
(f) Connector holding position



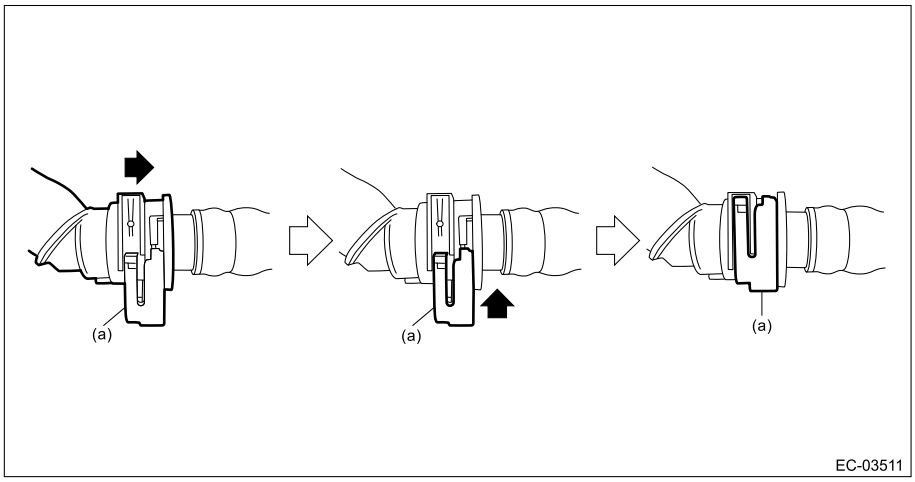
5. QUICK CONNECTOR CONNECTION (TYPE E)

Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **Make sure that the quick connector is securely connected.**

Note:

Connect the quick connector as shown in the figure.



6. QUICK CONNECTOR CONNECTION (TYPE F)

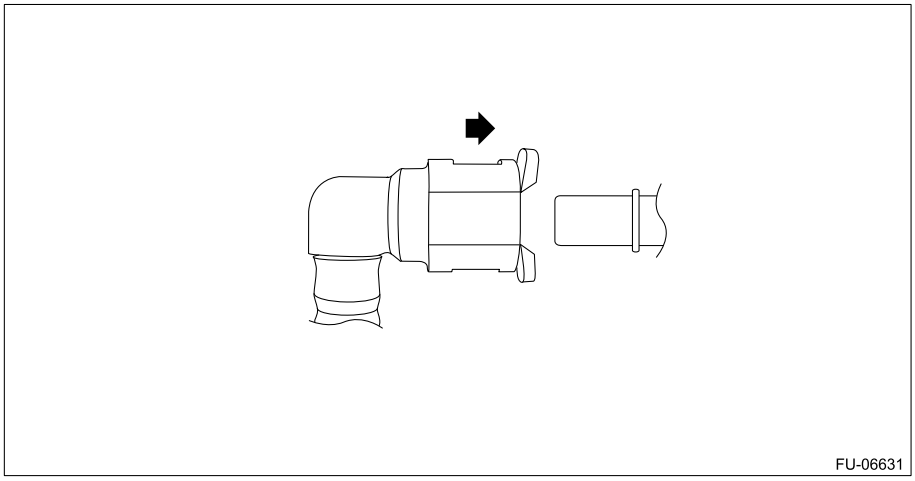
Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check again that the quick connector is securely connected.**

Note:

Connect the quick connector as shown in the figure.

(a) Slider



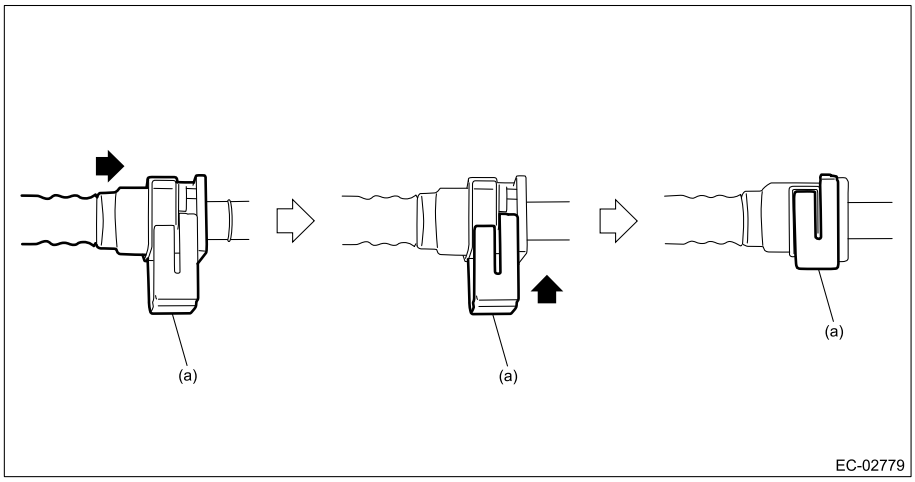
7. QUICK CONNECTOR CONNECTION (TYPE G)

Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **Make sure that the quick connector is securely connected.**

Note:

Connect the quick connector as shown in the figure.

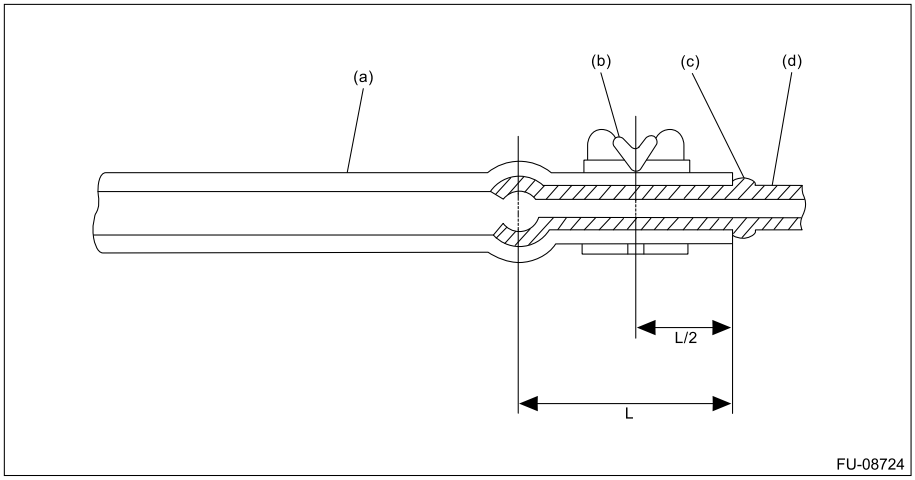


8. QUICK CONNECTOR CONNECTION (TYPE H)

Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check again that the quick connector is securely connected.**

Note:

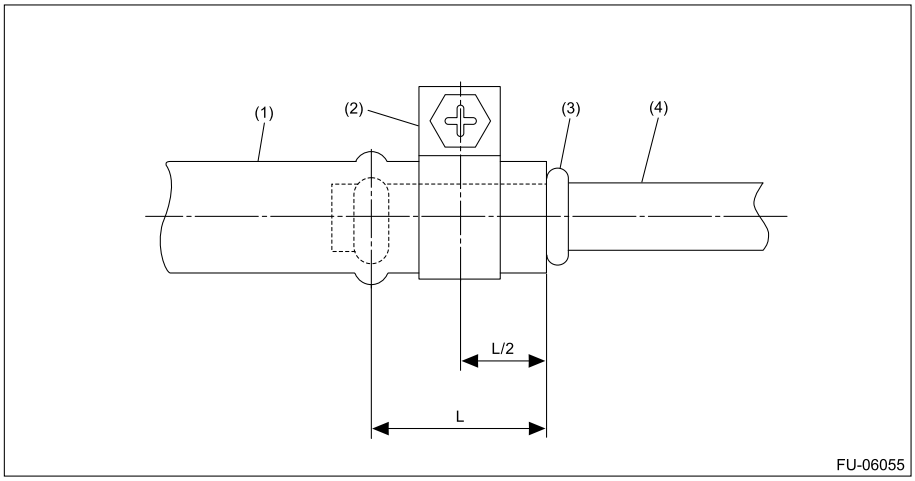


Connect the quick connector as shown in the figure.

(a) Slider

9. EVAPORATION HOSE CONNECTION

Connect by inserting it to the pipe until it reaches the spool or bump.



(a) Hose
(b) Clip
(c) Spool or bump
(d) Pipe

10. FUEL FILLER HOSE CONNECTION

Securely insert the hose to the spool, and then install the clamp as shown in the figure.

Tightening torque:

2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

(1) Fuel filler hose
(2) Clamp
(3) Spool
(4) Fuel filler pipe

INSPECTION

1. Check that the fuel pipe has no deformation, cracks or other damages.
2. Check that the hose and tube have no cracks, damage or loose part.

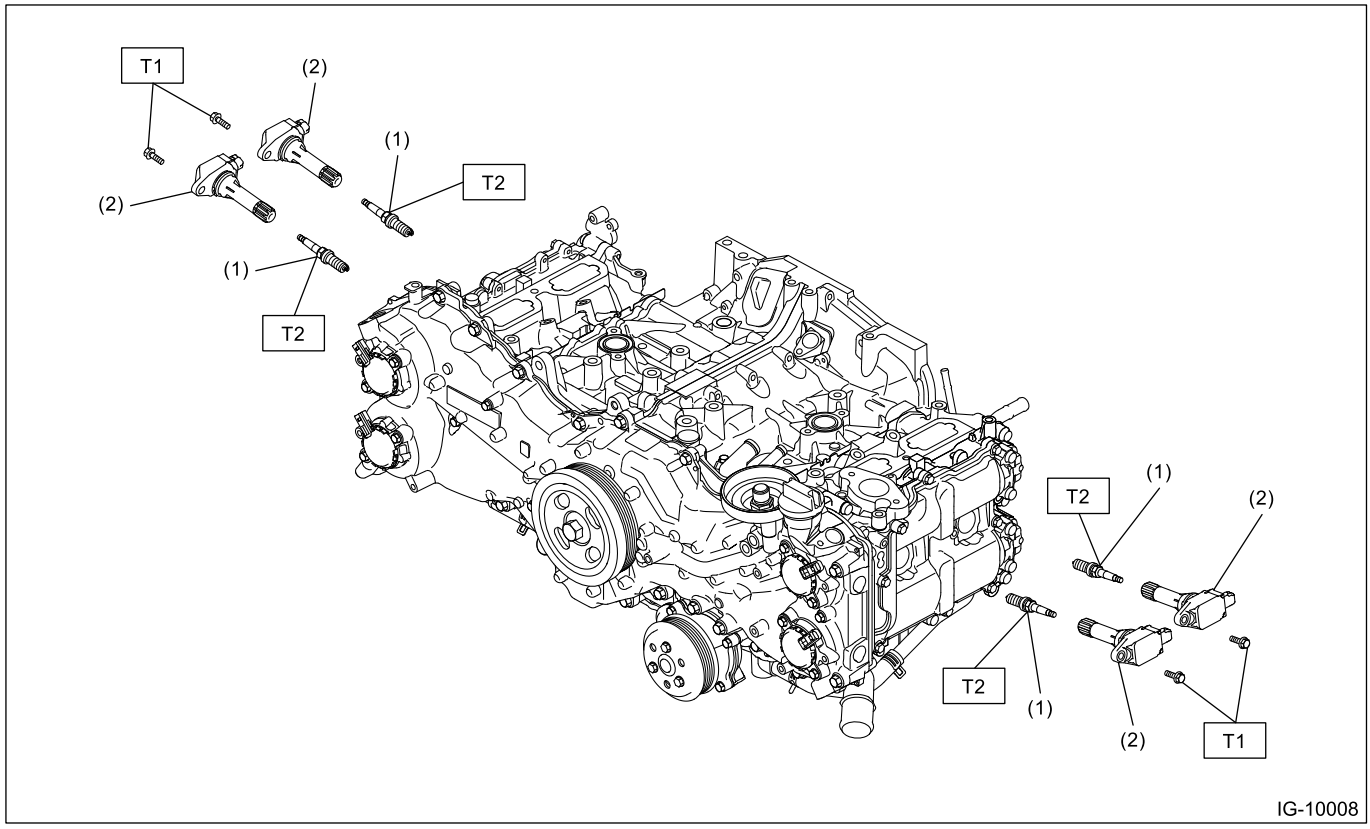
INSPECTION

Trouble	Possible cause	Corrective action
Insufficient fuel supply to fuel injector	a. Fuel pump does not operate.	
	❍Defective terminal contact	Inspect contact, especially ground, and tighten it securely.
	❍Trouble in electromagnetic or electronic circuit parts	Replace the faulty parts.
	b. Decline of fuel pump function	Replace the fuel pump.
	c. Clogged fuel filter	Replace the fuel filter. Clean or replace the fuel tank if necessary.
	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
	e. Air is mixed in fuel system.	Check the fuel line connections, correct or replace the defective part.
	f. Damaged diaphragm of pressure regulator	Replace the fuel filter assembly.
Leakage or blow out of fuel	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Cracked fuel line pipe, hose or tube	Replace the fuel line pipe, hose or tube.
	c. Cracked fuel tank or defective welded part	Replace the fuel tank.
	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
Gasoline smell inside of compartment	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Defective ring clip or fuel filler pipe assembly gasket	Correct or replace the gasket.
	c. Defective canister	Replace the canister.
Defective fuel gauge	a. Defective operation of fuel level sensor	Replace the fuel level sensor.
	b. Defective operation of combination meter Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.	Replace the combination meter.
Noise	a. Large operation noise or vibration of fuel pump	Replace the fuel pump.

Note:

- **When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent the problem.**
- **In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop to 0°C (32°F) or less throughout the winter season, use a water removing agent in the fuel system to prevent freezing fuel system and accumulating water.**
- **When water is accumulated in fuel filter, fill the water removing agent in the fuel tank.**
- **Before using water removing agent, follow the cautions noted on the bottle.**

IG(H4DO)



1. General Description
2. Spark Plug
3. Ignition Coil

SPECIFICATION

Item			Specifications
Ignition coil	Manufacturer and type		Hitachi: EIC-3330
	Ignition system		Independent ignition coil
Spark plug	Manufacturer and type		NGK: DILKAR7B8
	Thread size (diameter, pitch, length) mm		12, 1.25, 26.5
	Spark plug gap mm (in)	Standard	0.8 (0.031)
	Electrode		Center electrode: Iridium Ground electrode: Platinum

IGNITION(H4DO) > General Description

COMPONENT

(1) Spark plug

(2) Ignition coil

Tightening torque: N·m (kgf-m, ft-lb)

T1: 8.0 (0.8, 5.9)

T2: 18 (1.8, 13.3)

IGNITION(H4DO) > General Description

CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.

- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

REMOVAL

1. RH SIDE

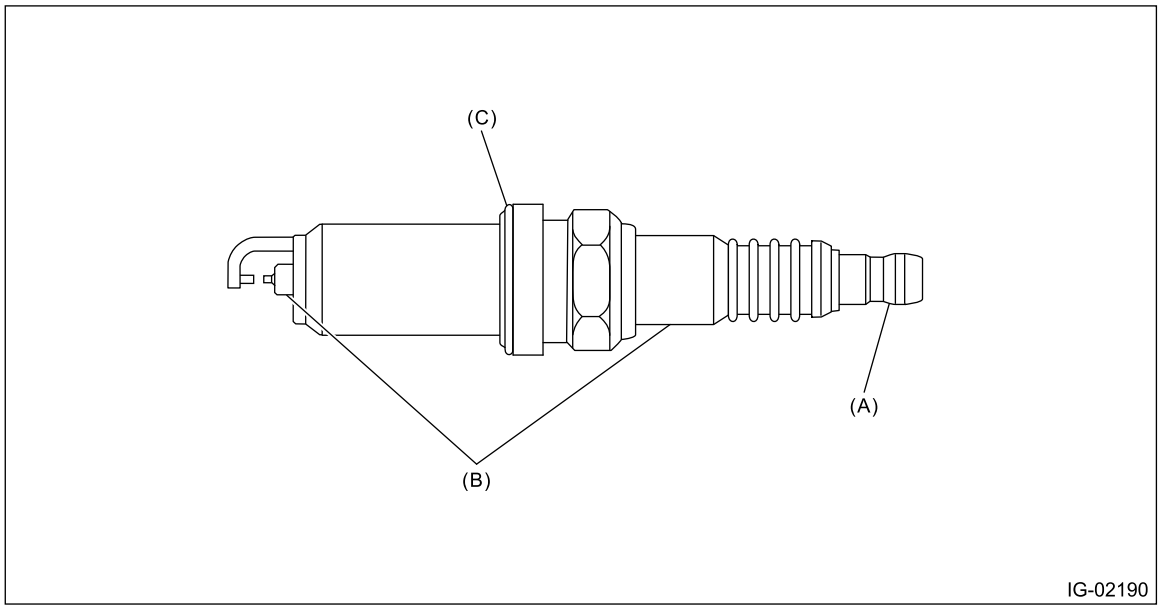
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the ignition coil (RH side). Ref. to IGNITION(H4DO)>Ignition Coil>REMOVAL > RH SIDE.
3. Remove the spark plug.

2. LH SIDE

1. Remove the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>REMOVAL.
2. Remove the ignition coil (LH side). Ref. to IGNITION(H4DO)>Ignition Coil>REMOVAL > LH SIDE.
3. Remove the spark plug.

INSTALLATION

1. RH SIDE



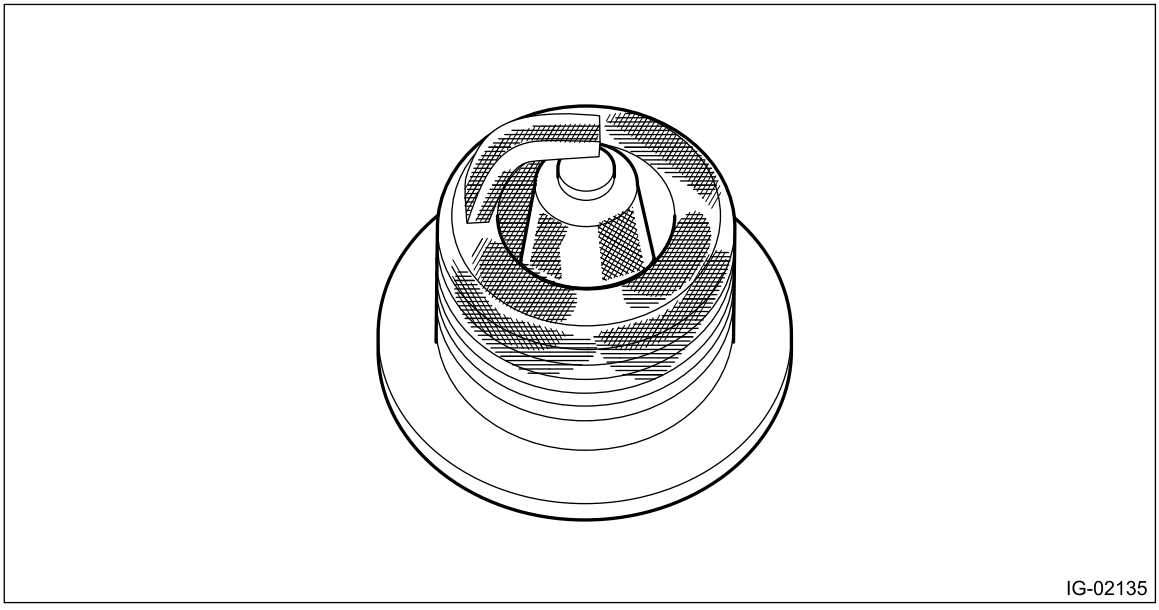
1. Install the spark plug.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
2. Install the ignition coil (RH side). Ref. to IGNITION(H4DO)>Ignition Coil>INSTALLATION > RH SIDE.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. LH SIDE

1. Install the spark plug.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
2. Install the ignition coil (LH side). Ref. to IGNITION(H4DO)>Ignition Coil>INSTALLATION > LH SIDE.
3. Install the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSTALLATION.

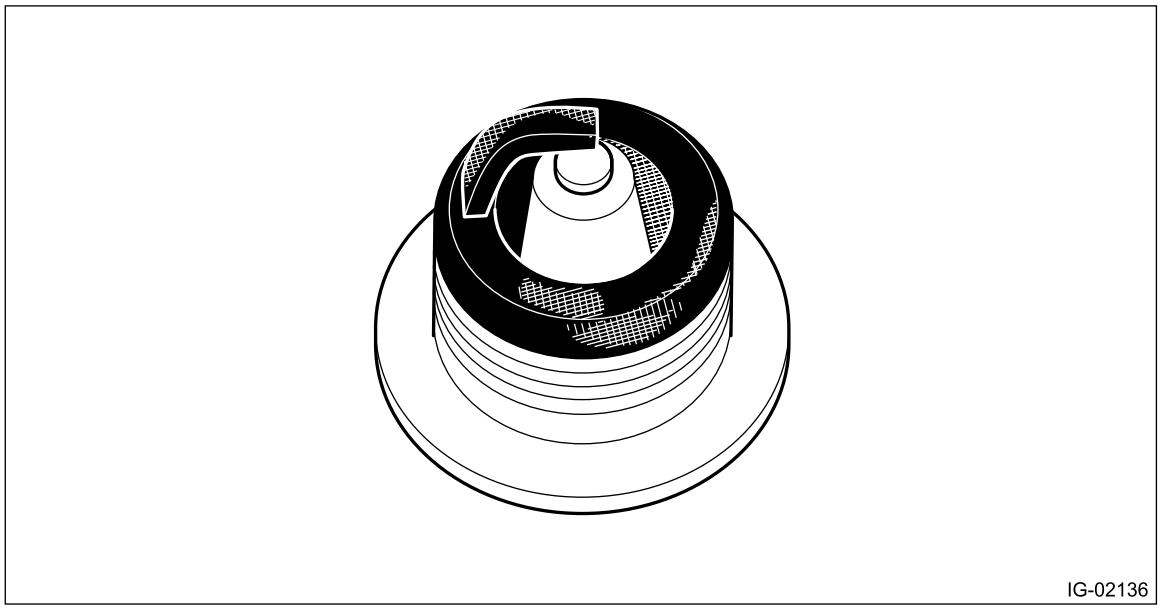
INSPECTION

1. Check the spark plug for damage. If defective, replace the spark plug.



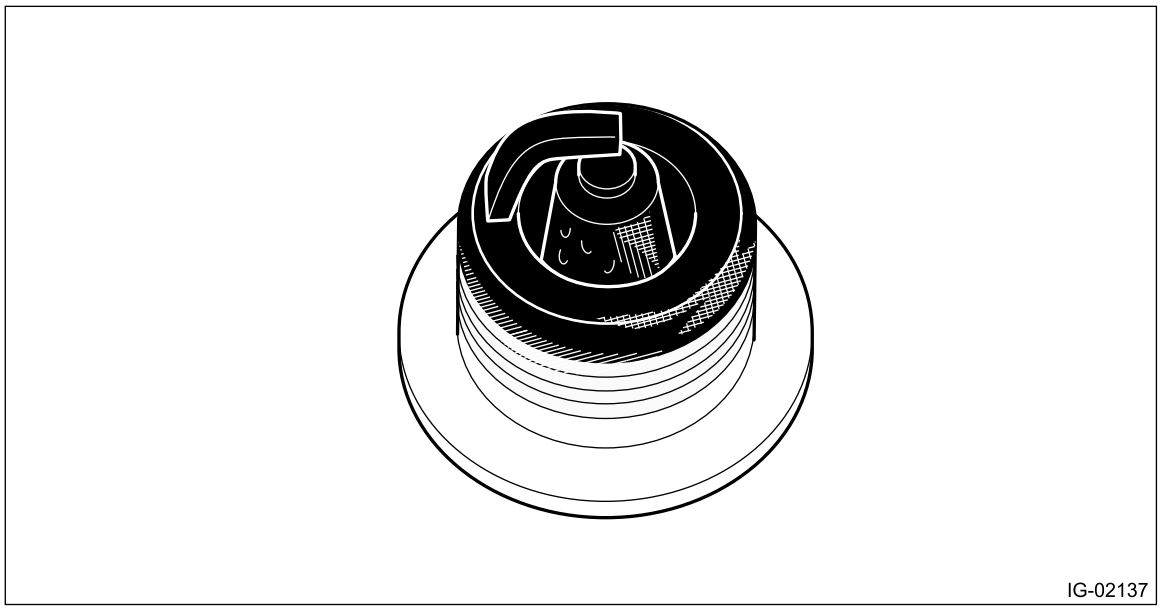
(A) Terminal damage or looseness (B) Crack or damage in insulator (C) Damaged gasket

2. Check the spark plug electrode and condition of the insulator. If abnormal, check and repair the cause and replace the spark plug.



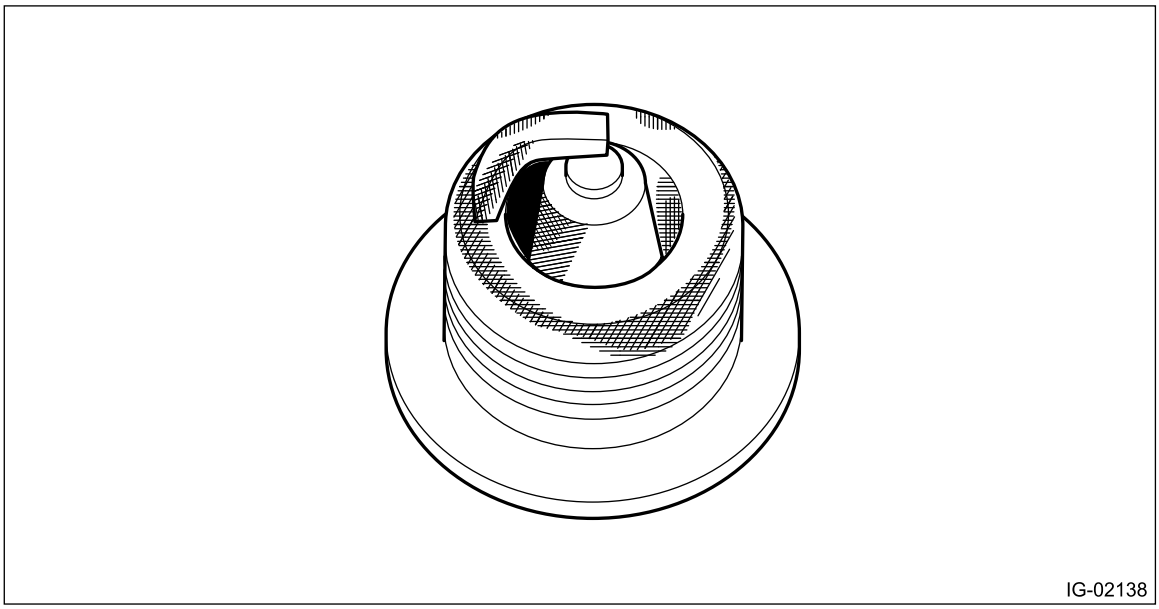
(1) Normal:

Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.



(2) Carbon fouled:

Dry fluffy carbon deposits on the insulator and electrode are mostly caused by slow-speed driving in town, weak ignition, too rich fuel mixture, etc.



(3) Oil fouled:

Wet black deposits show oil entrance into combustion chamber through worn piston rings or increased clearance between valve guides and valve stems.

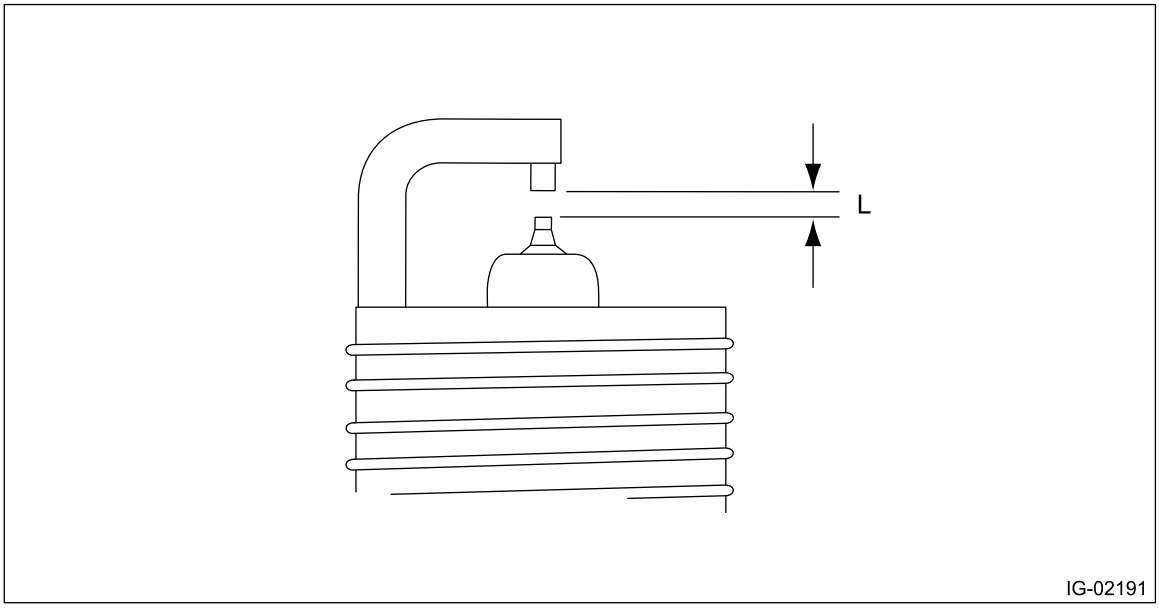
(4) Overheating:

A white or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating, wrong selection of fuel, or loose spark plugs.

3. Using a nylon brush, etc., clean and remove the carbon or oxide deposits from the spark plug. If deposits are too stubborn, replace the spark plugs.

   Note:

   - **Never use a plug cleaner.**
   - **Do not use a metal brush as it may damage the electrode area.**



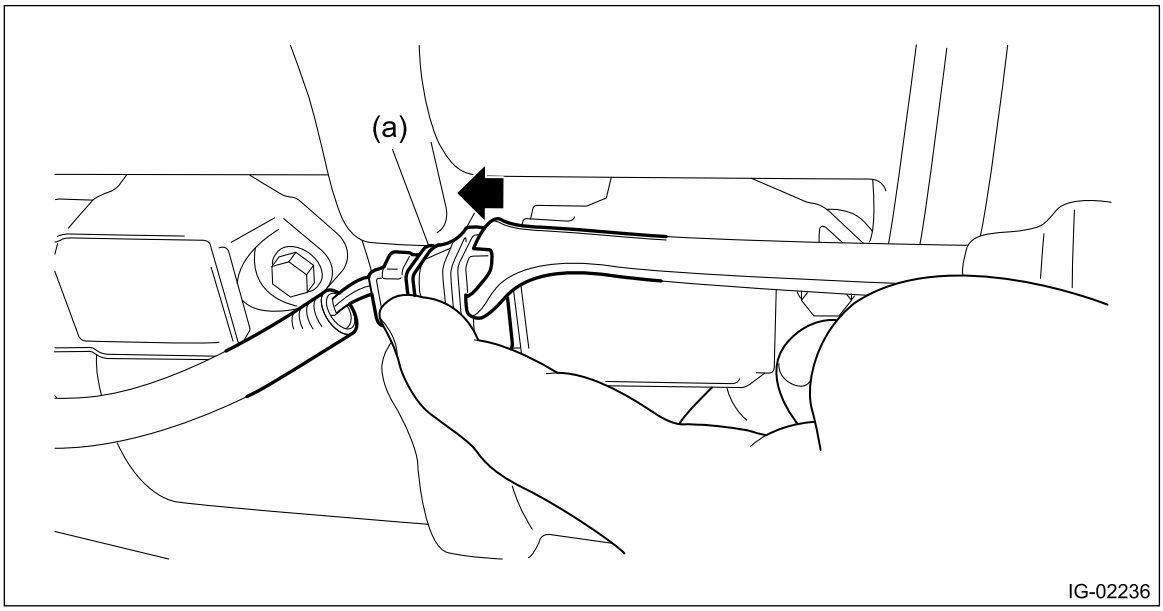
4. Check the spark plug gap "L" using a gap gauge. If it is not within the standard, replace the spark plug.

   Caution:

   Do not adjust the gap, because the iridium plug is used.

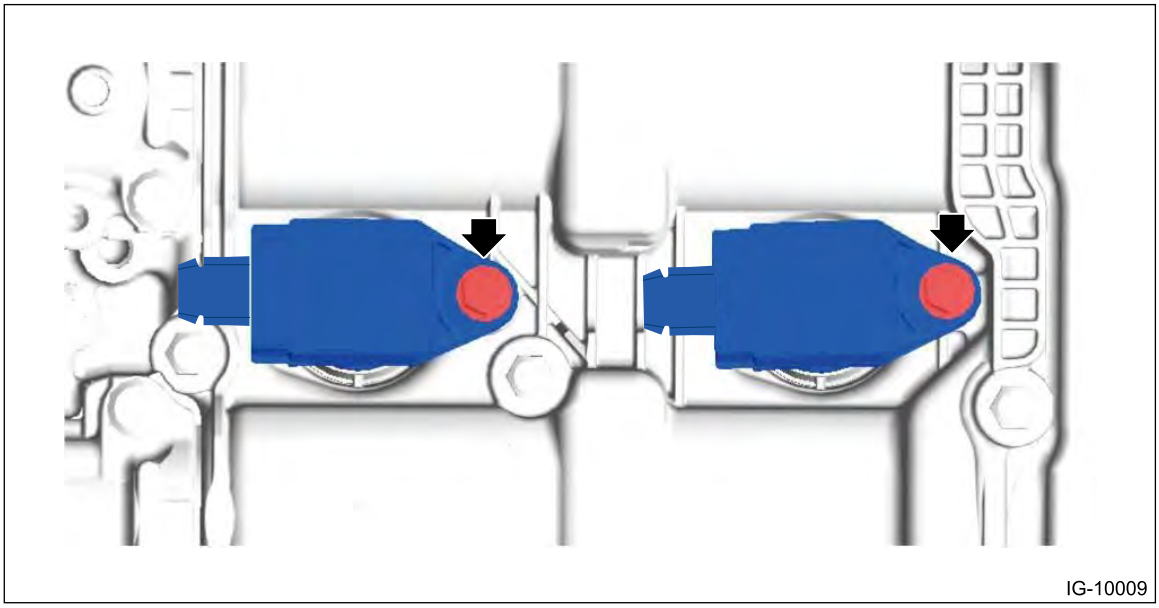
   Standard

   0.8 mm (0.031 in)



REMOVAL

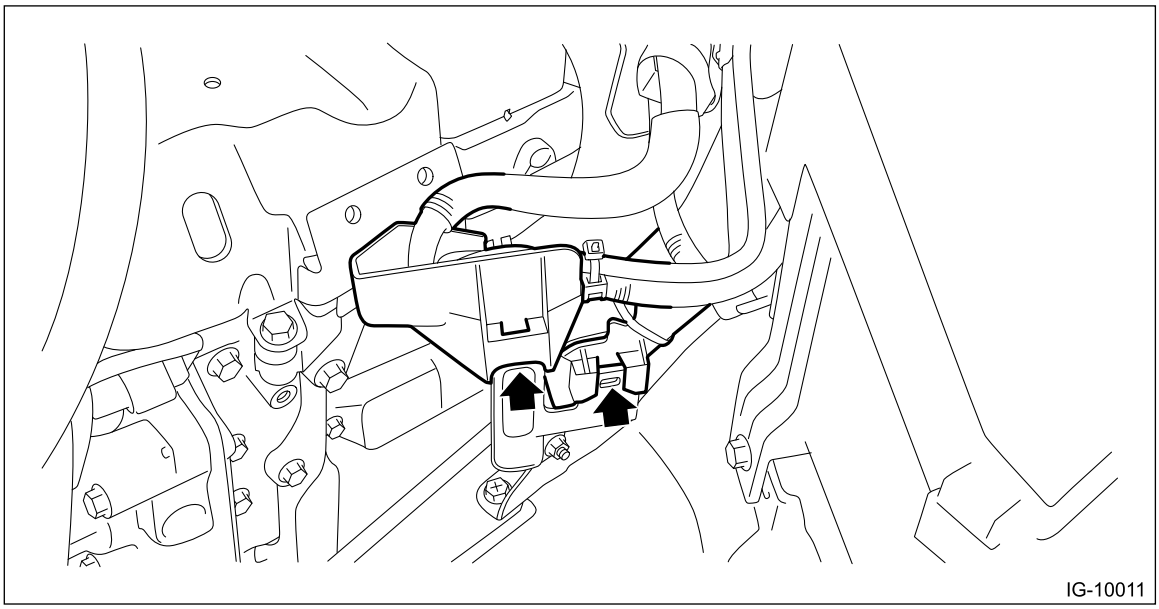
1. RH SIDE



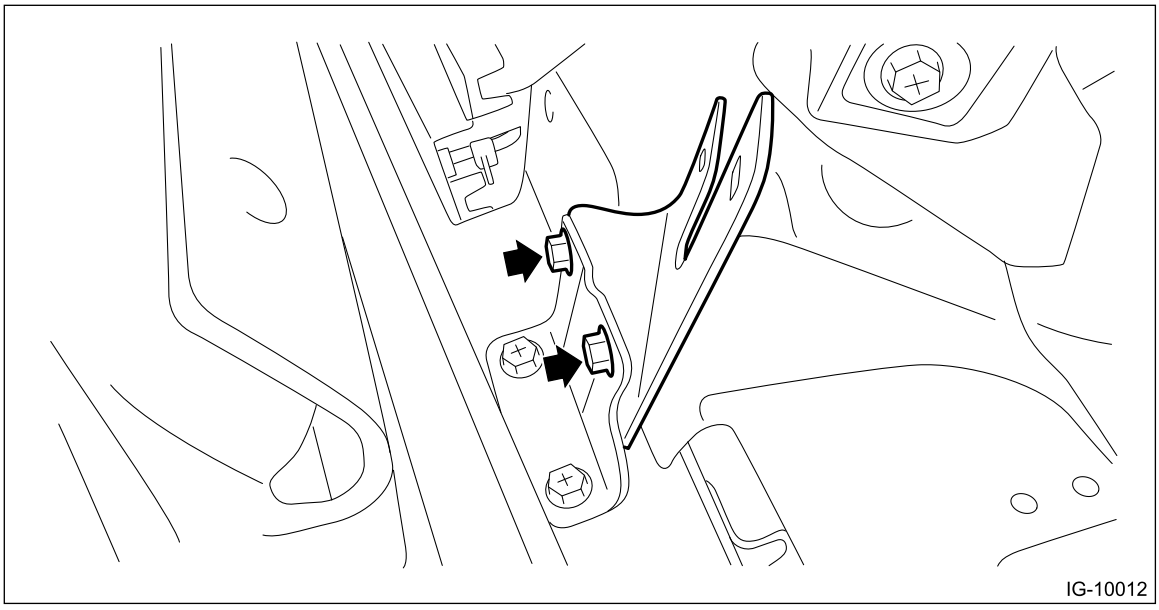
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the air cleaner case. Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner Case>REMOVAL.
3. Disconnect the connector from ignition coil.

   Note:

   While pressing the spring (a) shown in the figure, slide it in the direction of the arrow with a clip remover.

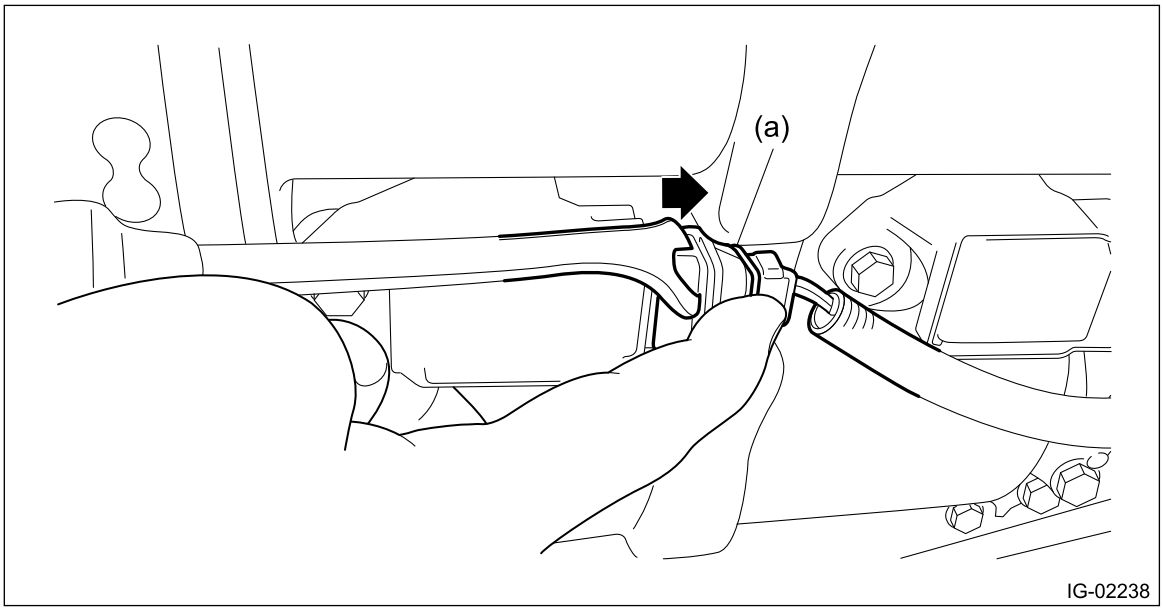


4. Remove the ignition coil.

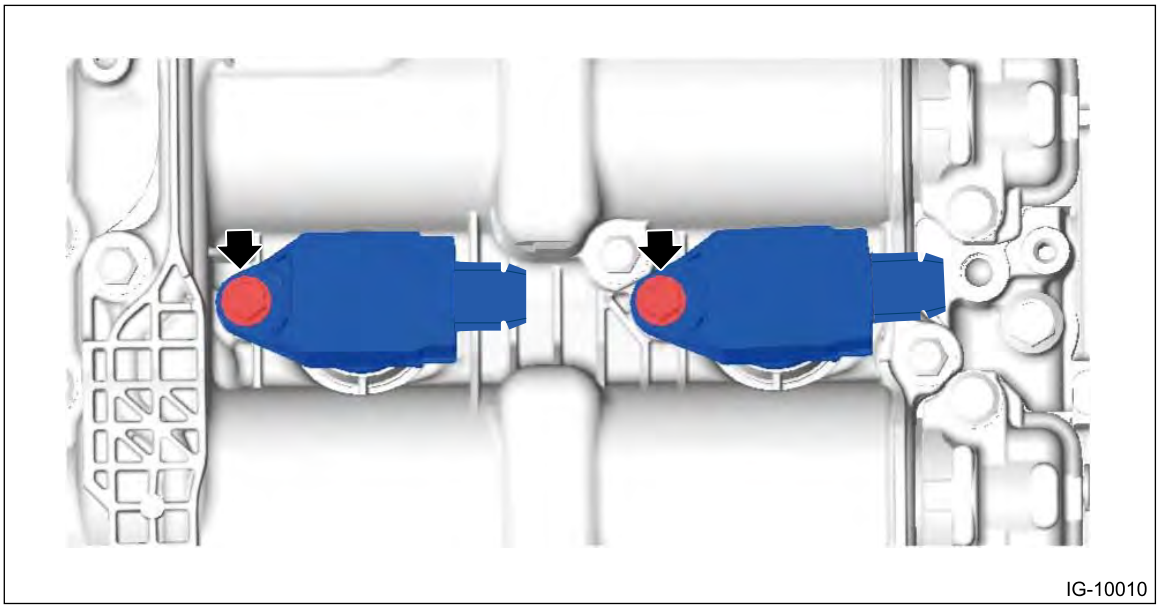


2. LH SIDE

1. Remove the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>REMOVAL.
2. Remove the engine wiring harness and the battery cables from the bracket.



3. Separate the bracket.



4. Disconnect the connector from ignition coil.

Note:

While pressing the spring (a) shown in the figure, slide it in the direction of the arrow with a clip remover.

5. Remove the ignition coil.

IGNITION(H4DO) > Ignition Coil

INSTALLATION

1. RH SIDE

1. Install the ignition coil.

Caution:

Degrease the mounting bolts, rocker cover installation portion and ignition coil installation hole.

Tightening torque:

8.0 N·m (0.8 kgf-m, 5.9 ft-lb)

2. Connect the connector to the ignition coil.

3. Install the air cleaner case. Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner

Case>INSTALLATION.

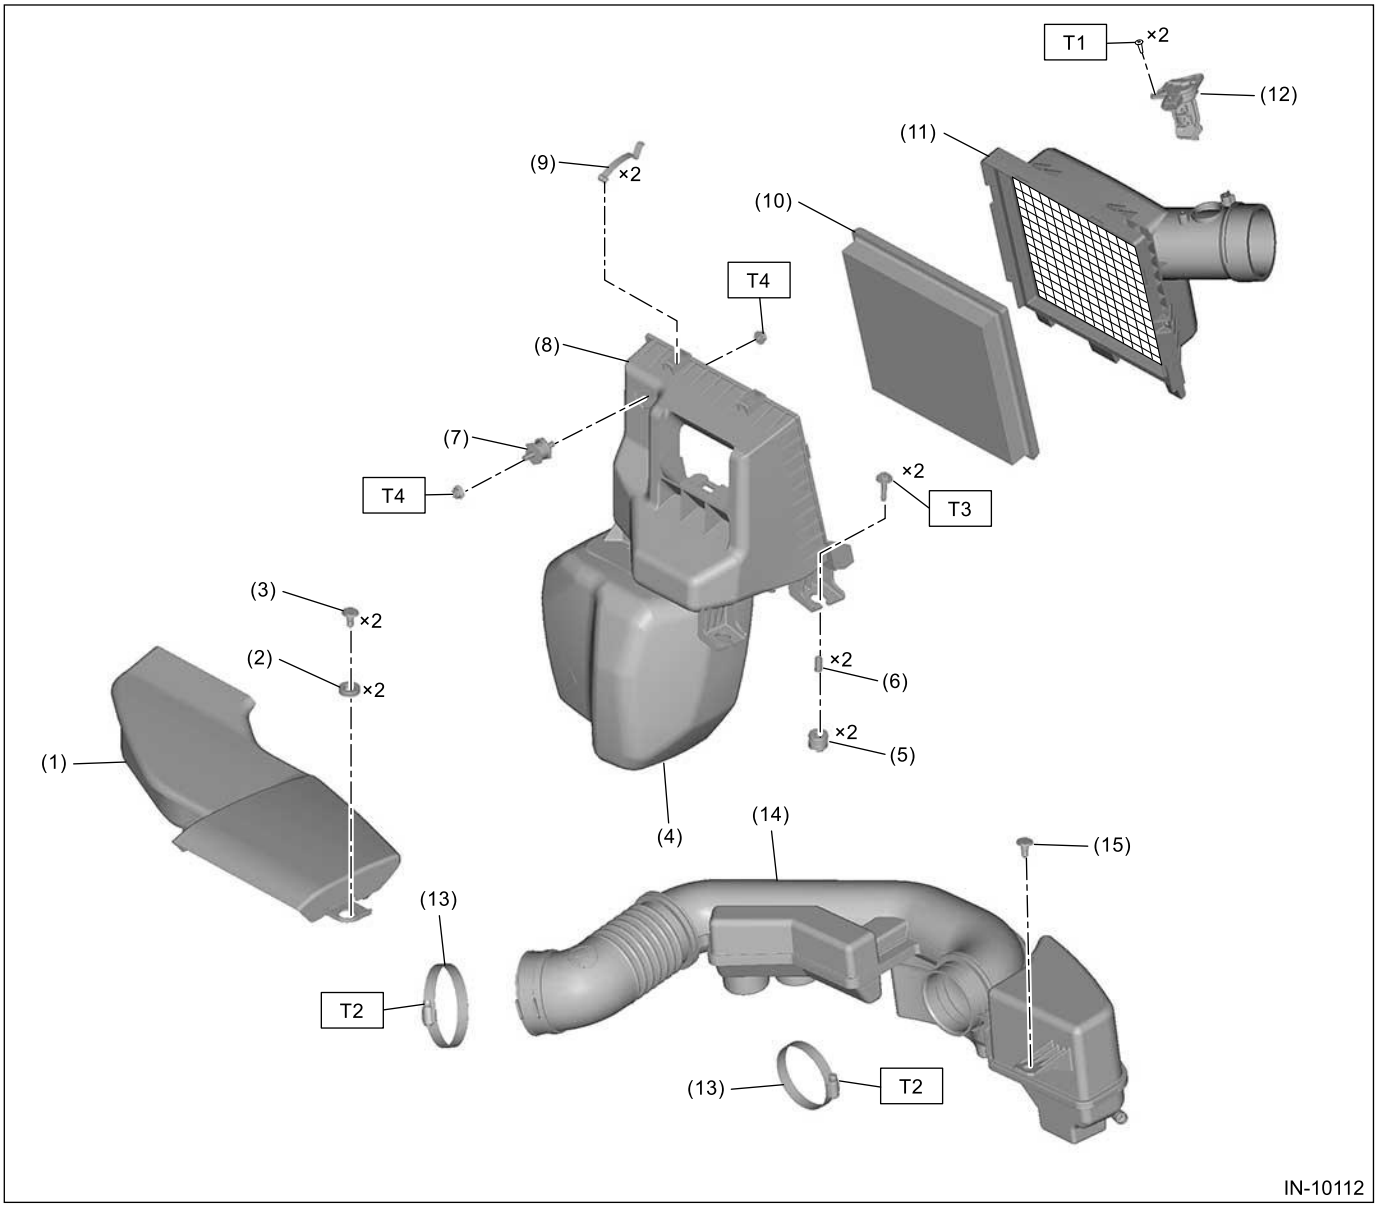
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. LH SIDE

1. Install the ignition coil.
   Caution:
   Degrease the mounting bolts, rocker cover installation portion and ignition coil installation hole.
   Tightening torque:
   8.0 N·m (0.8 kgf-m, 5.9 ft-lb)
2. Connect the connector to the ignition coil.
3. Connect the bracket.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4. Install the engine wiring harness and the battery cable to the bracket.
5. Install the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSTALLATION.

IGNITION(H4DO) > Ignition Coil

INSPECTION



1. Check that there is no deformation, cracks or other damages.
2. Check that there is no electric leakage from other than the center tip.
3. For inspection procedure of ignition control system, refer to “Diagnostics for Engine Starting Failure”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon>IGNITION CONTROL SYSTEM.

INTAKE (INDUCTION)(H4DO)

IN(H4DO)

1. General Description
2. Air Cleaner Element
3. Air Intake Duct
4. Air Cleaner Case
5. Air Intake Boot

COMPONENT

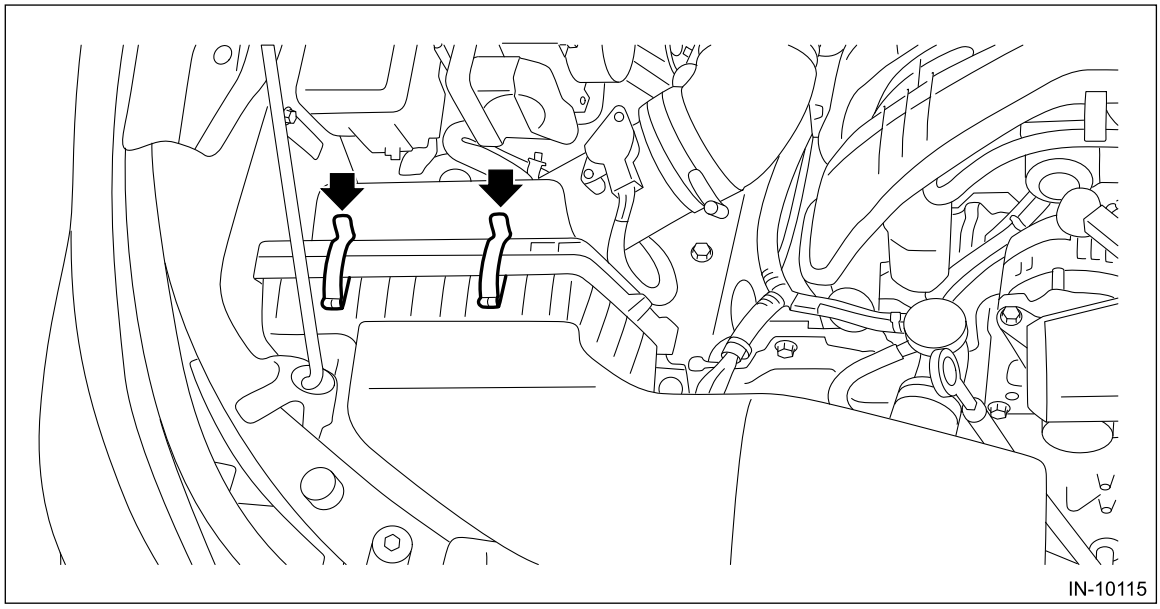
(1) Air intake duct	(8) Air cleaner case (front)	(15) Clip
(2) Cushion	(9) Clip	
(3) Clip	(10) Air cleaner element	***Tightening torque: N·m (kgf-m, ft-lb)***
(4) Resonator chamber	(11) Air cleaner case (rear)	***T1: 1 (0.1, 0.7)***
(5) Cushion	(12) Mass air flow and intake air temperature sensor	***T2: 3 (0.3, 2.2)***
(6) Spacer	(13) Clamp	***T3: 6 (0.6, 4.4)***
(7) Cushion	(14) Air intake boot	***T4: 7.5 (0.8, 5.5)***

CAUTION

- Prior to starting work, pay special attention to the following:

1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
2. Protect the vehicle using a seat cover, fender cover, etc.
3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.

- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.



INTAKE (INDUCTION)(H4DO) > Air Cleaner Element

REMOVAL

1. Disengage the clip, and remove the air cleaner element.

Caution:

Be sure to lift up the air cleaner case (rear) before releasing the claws on the bottom of the air cleaner case. Otherwise the air cleaner element may be damaged.

INTAKE (INDUCTION)(H4DO) > Air Cleaner Element

INSTALLATION

1. Set the air cleaner element and install the air cleaner case (rear).

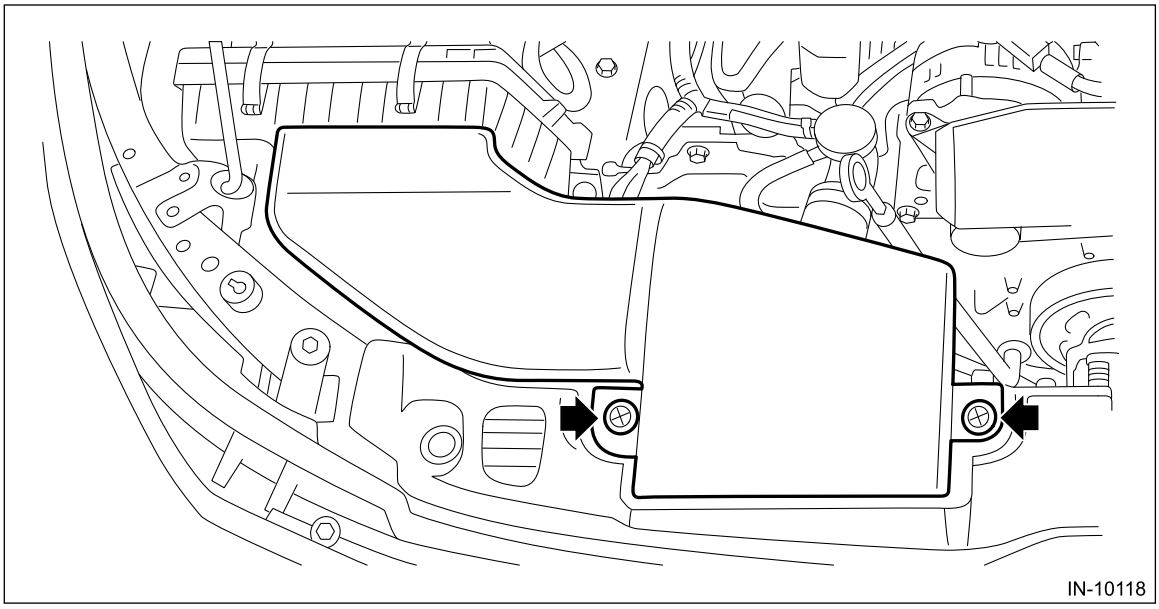
Caution:

- **Be sure to use SUBARU genuine air cleaner element suitable to the engine type. Otherwise the engine performance may decrease.**
- **Install the air cleaner element so that the printed surface is on the upper side.**

Note:

- **If any foreign matter is found in the air cleaner case, clean it.**
- **Install by aligning the claws located on the bottom of the air cleaner case.**

INTAKE (INDUCTION)(H4DO) > Air Cleaner Element



INSPECTION

1. Check that there is no deformation, cracks or other damages.
2. Check for excessive dirt.
3. Replace the air cleaner case (rear) if the HC absorption filter is damaged.

INTAKE (INDUCTION)(H4DO) > Air Intake Duct

REMOVAL

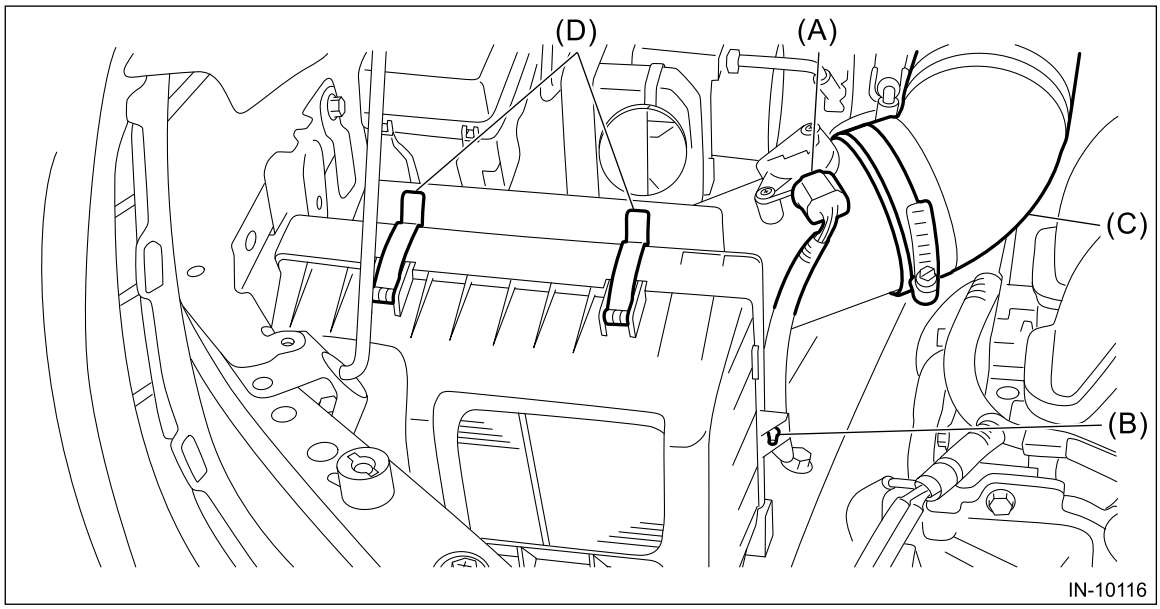
Remove the clips and remove the air intake duct.

INTAKE (INDUCTION)(H4DO) > Air Intake Duct

INSTALLATION

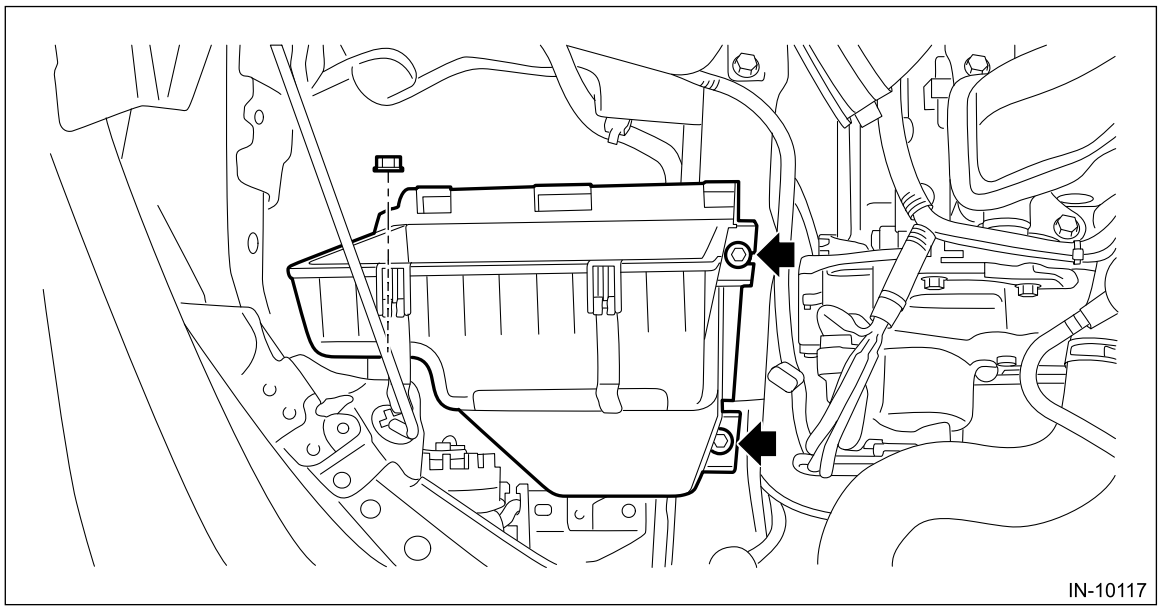
Install the air intake duct.

INTAKE (INDUCTION)(H4DO) > Air Intake Duct



INSPECTION

1. Check that there is no deformation, cracks or other damages.
2. Check inside for foreign matter.



INTAKE (INDUCTION)(H4DO) > Air Cleaner Case

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
3. Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the clip (B).
4. Disconnect the air intake boot (C), remove the clip (D), and remove the air cleaner case (rear) and air cleaner element.

5. Remove the air cleaner case (front).

INTAKE (INDUCTION)(H4DO) > Air Cleaner Case

INSTALLATION

1. Install the air cleaner case (front).
   Tightening torque:
   Bolt
   6 N·m (0.6 kgf-m, 4.4 ft-lb)

Nut

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2. Set the air cleaner element and install the air cleaner case (rear).

Caution:

Install the air cleaner element so that the printed surface is on the upper side.

Note:

- **If any foreign matter is found in the air cleaner case, clean it.**
- **Install by aligning the claws located on the bottom of the air cleaner case.**

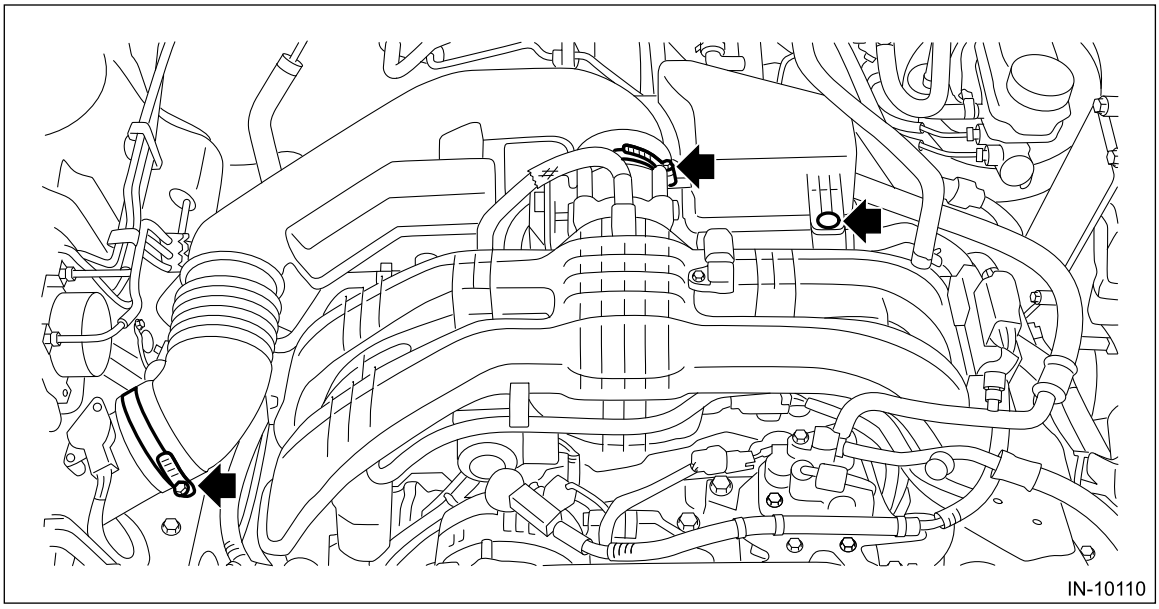
3. Connect the air intake boot.

Tightening torque:

3 N·m (0.3 kgf-m, 2.2 ft-lb)

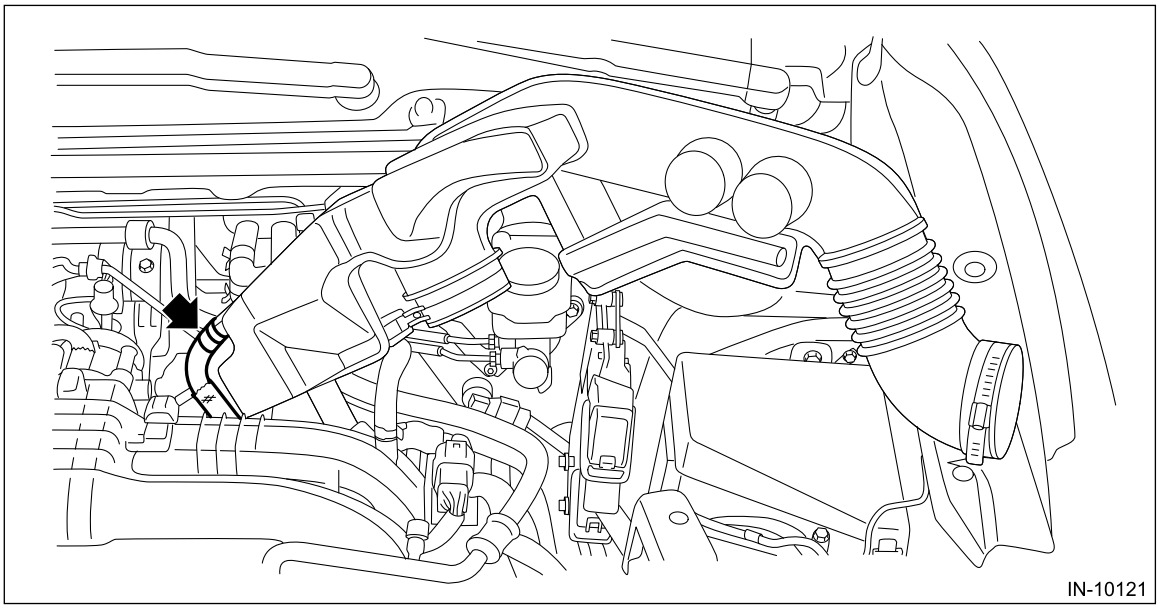
4. Connect the connector to the mass air flow and intake air temperature sensor, and secure the harness with clip.
5. Install the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

INTAKE (INDUCTION)(H4DO) > Air Cleaner Case



INSPECTION

1. Check that there is no deformation, cracks or other damages.
2. Check inside for foreign matter.
3. Replace the air cleaner case (rear) if the HC absorption filter is damaged.



INTAKE (INDUCTION)(H4DO) > Air Intake Boot

REMOVAL

1. Remove the clips, and loosen the clamps.

2. Disconnect the PCV hose and remove the air intake boot.

INTAKE (INDUCTION)(H4DO) > Air Intake Boot

INSTALLATION

1. Connect the PCV hose and set the air intake boot.
2. Install the clips, and tighten the clamps.

   Tightening torque:

   3 N·m (0.3 kgf-m, 2.2 ft-lb)

INTAKE (INDUCTION)(H4DO) > Air Intake Boot

INSPECTION

1. Check that there is no deformation, cracks or other damages.

2. Check inside for foreign matter.

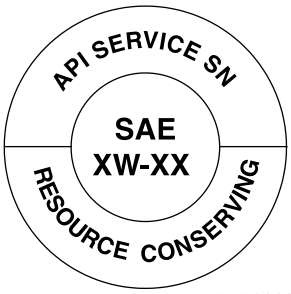
3. Engine Oil
4. Oil Pump
5. Oil Pan
6. Oil Pressure Switch
7. Oil Pipe
8. Oil Filter
9. Oil Level Switch
10. Engine Lubrication System Trouble in General

SPECIFICATION

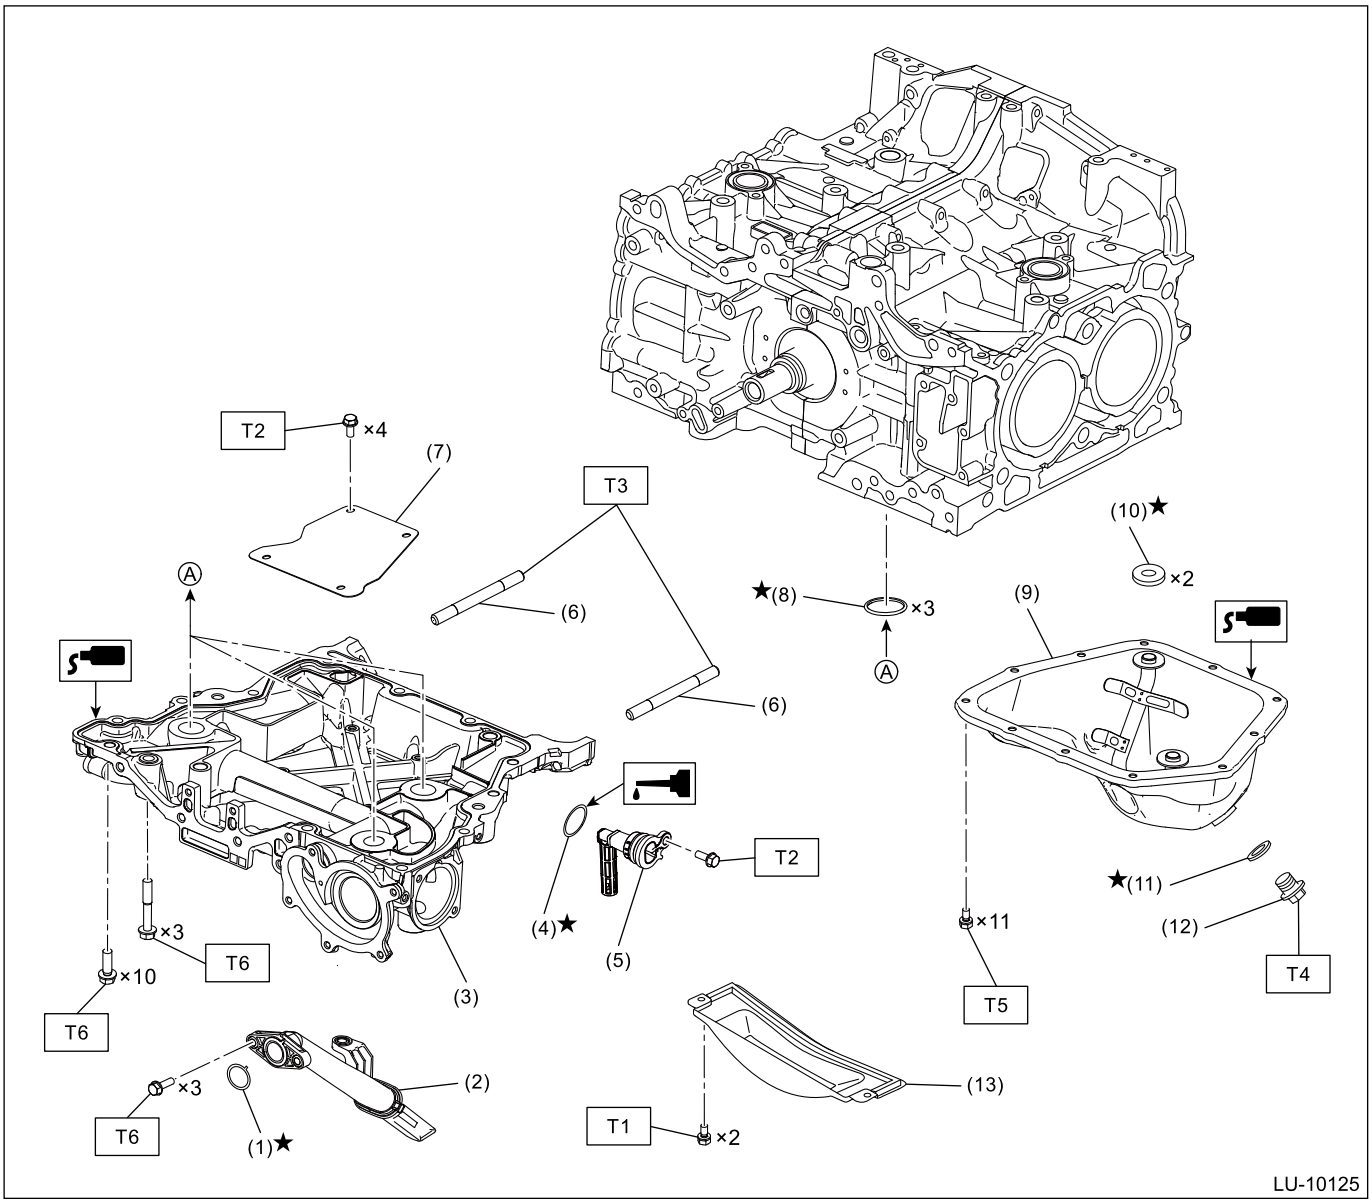
Lubrication method					Forced lubrication
Oil pump	Pump type				Trochoid type
	Number of teeth	Inner rotor			10
		Outer rotor			11
	Outer rotor diameter × Thickness			mm (in)	71.4 × 14 (2.81 × 0.55)
	Performance (Oil temperature 120°C (248°F))	600 r/min	Discharge pressure	kPa (kg/cm^2, psi)	34 (0.3, 4.9)
			Discharge rate	L (US qt, Imp qt)/min	5.8 (6.1, 5.1) or more
		6,000 r/min	Discharge pressure	kPa (kg/cm^2, psi)	298 (3.0, 43.2)
			Discharge rate	L (US qt, Imp qt)/min	46.6 (49.3, 41.0) or more
	Relief valve working pressure (2-step relief)	1st opening pressure		kPa (kg/cm^2, psi)	150 (1.5, 21.7)
		Main opening pressure		kPa (kg/cm^2, psi)	700 (7.1, 101.5)
Oil filter	Filter type				Full-flow filter type
	Filtration area			cm^2 (sq in)	867 (134.3)
	By-pass valve opening pressure			kPa (kg/cm^2, psi)	160 (1.6, 23.2)
	Outer diameter × Width			mm (in)	67.4×87.1 (2.65 × 3.43)
	Installation screw specifications				M 20 ×1.5
Oil pressure switch	Type				Immersed contact point type
	Operating voltage				12 V
	Warning light operating pressure			kPa (kg/cm^2, psi)	14.7 (0.1, 2.1)
	Proof pressure			kPa (kg/cm^2, psi)	981 (10, 142.2)
Engine oil	Total capacity (at overhaul)			L (US qt, Imp qt)	5.3 (5.6, 4.7)
	When replacing engine oil and oil filter			L (US qt, Imp qt)	4.4 (4.7, 3.9)
	When replacing engine oil only			L (US qt, Imp qt)	4.2 (4.4, 3.7)



Specified engine oil:

Caution:

- **Use 0W-20 (synthetic oil).**
- **It is acceptable to fill with an engine oil of another brand, but make sure to use the following engine oil specified by Subaru.**



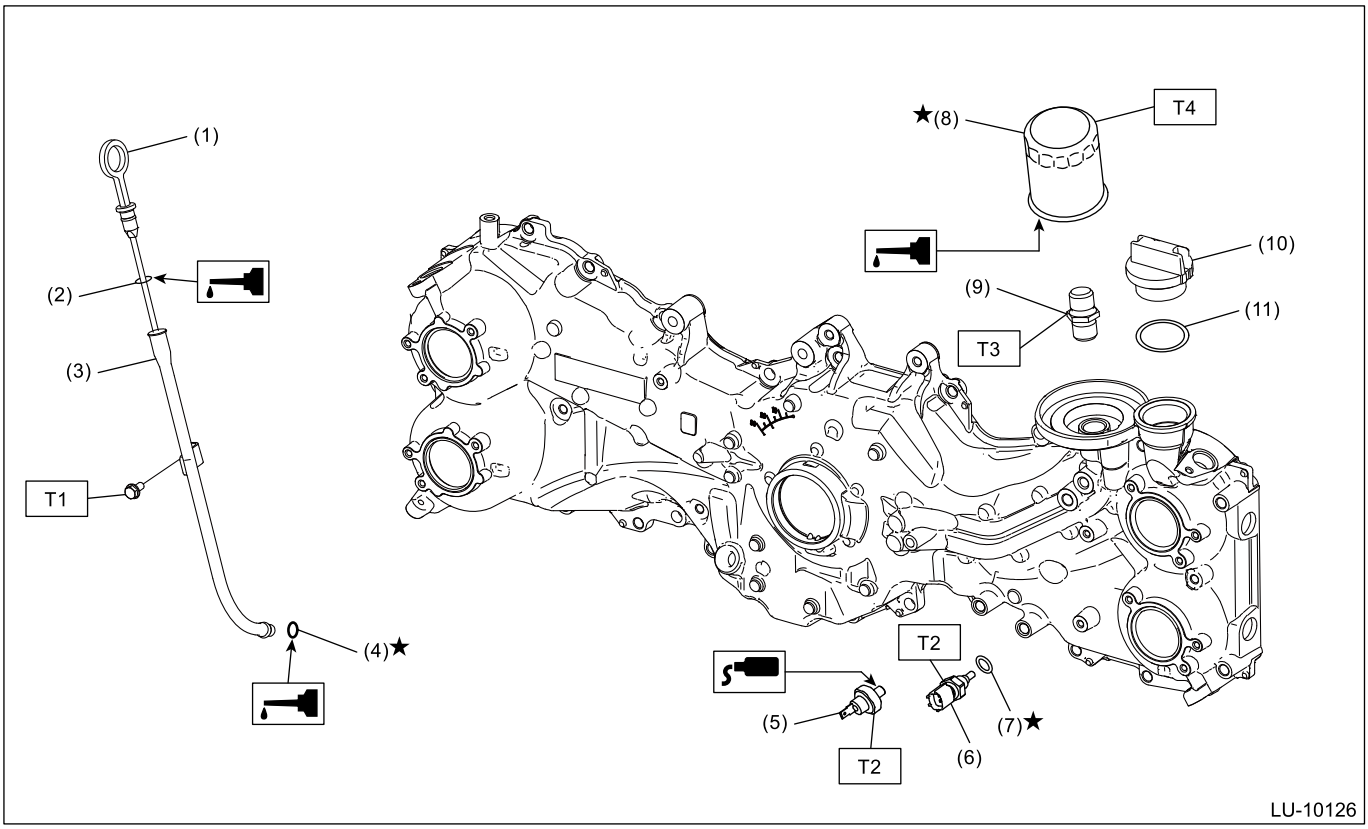
Note:

Engine oil with proper viscosity helps the engine maintain its ideal temperature, and the cranking speed is increased when the oil is heated due to a reduction of viscosity friction.

Engine oil standard		SAE viscosity No.
 RM-00081 Those with SN "Resource Conserving" logo in case of API standard.	or	 RM-00002 Those with GF-5 "starburst mark" displayed on top of the container in case of ILSAC standard.	0W-20 (synthetic oil)

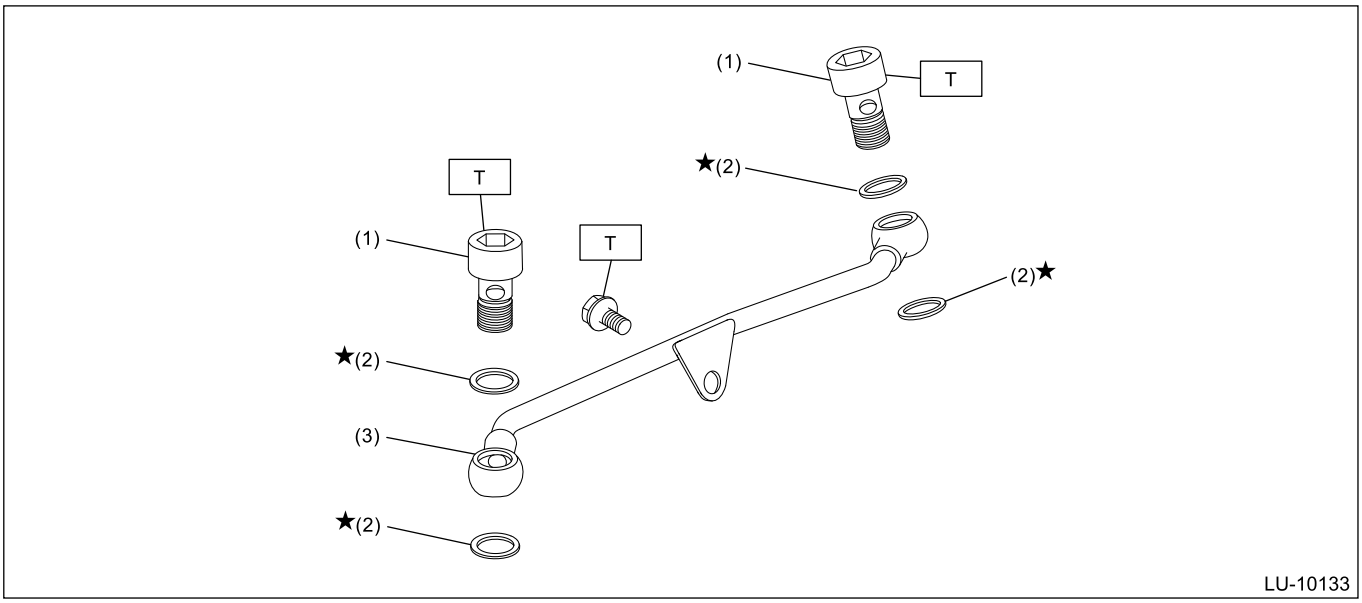
COMPONENT

1. OIL PAN



(1) O-ring
(2) Oil strainer
(3) Oil pan upper
(4) O-ring
(5) Oil level switch
(6) Stud bolt
(7) Baffle plate
(8) O-ring
(9) Oil pan
(10) Gasket
(11) Gasket
(12) Drain plug
(13) Clutch housing cover (MT model)

Tightening torque: N·m (kgf-m, ft-lb)



T1: 5 (0.5, 3.7)
T2: 6.4 (0.7, 4.7)
T3: 10 (1.0, 7.4)
T4: 41.7 (4.3, 30.8)
T5: Ref. to LUBRICATION(H4DO)>Oil Pan>INSTALLATION > OIL PAN.
T6: Ref. to LUBRICATION(H4DO)>Oil Pan>INSTALLATION > OIL PAN UPPER.

2. OIL FILTER AND OIL LEVEL GAUGE

(1) Oil level gauge	(7) Gasket	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) O-ring	(8) Oil filter	***T1: 6.4 (0.7, 4.7)***
(3) Oil level gauge guide	(9) Oil pump union	***T2: 18 (1.8, 13.3)***
(4) O-ring	(10) Oil filler cap	***T3: 45 (4.6, 33.2)***
(5) Oil pressure switch	(11) Gasket	***T4:*** Ref. to LUBRICATION(H4DO)>Oil Filter>INSTALLATION > OIL FILTER.
(6) Engine oil temperature sensor		

3. OIL PIPE

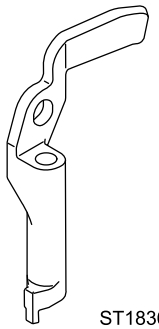
(1) Union bolt

(2) Gasket

(3) Oil pipe

Tightening torque: N·m (kgf-m, ft-lb)

T: Ref. to LUBRICATION(H4DO)>Oil Pipe>INSTALLATION.

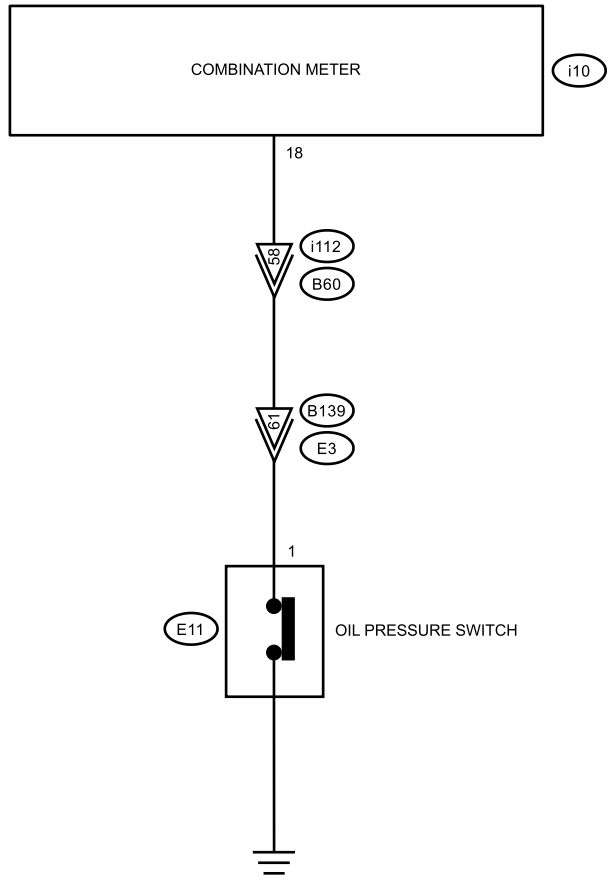


LUBRICATION(H4DO) > General Description

CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Prepare a container and cloth when performing work which oil possibly spills. If oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.
- Follow all government and local regulations concerning disposal of refuse when disposing of oil.
- Always use new application oil during work.

PREPARATION TOOL



1. SPECIAL TOOL

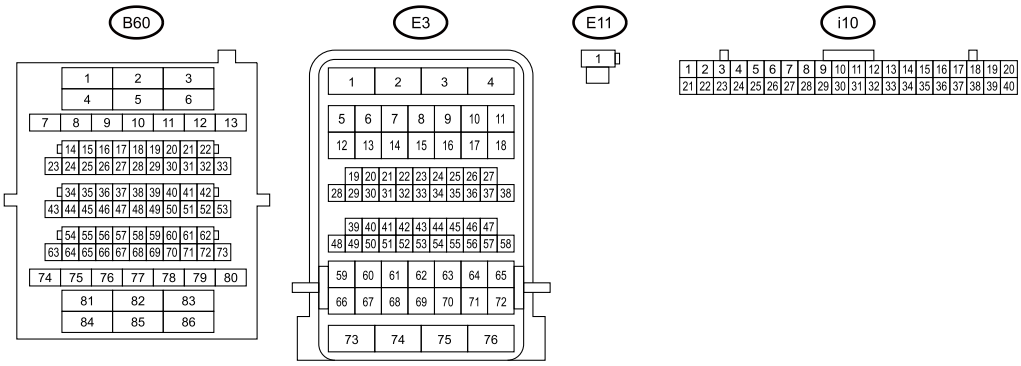


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18360AA040	18360AA040	HANGER	• Used for removing and installing oil level switch. • Used together with BOLT (18363AA050).
 ST18363AA050	18363AA050	BOLT	• Used for removing and installing oil level switch. • Used together with HANGER (18360AA040).
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Oil filter wrench (65/67 mm 14 Flutes)	Used for removing and installing oil filter.
Oil pan seal cutter	Used for removing oil pan.
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

WIRING DIAGRAM

LU-10127

INSPECTION

INSPECTION WHEN OIL PRESSURE WARNING LIGHT IS ILLUMINATED

1. CHECK DTC.

Read the DTC using the Subaru Select Monitor 4.

Note:

For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

Is DTC detected?

Yes

(1) Repair the corresponding system.
(2) Go to 2.

No

Go to 2.

2. CHECK ENGINE OIL LEVEL.

Check the engine oil level.

Is engine oil level normal?

Yes

Go to 3.

No

(1) Adjust the engine oil level to a proper amount.
(2) Go to 3.

3. CHECK OIL PRESSURE WARNING LIGHT.

Start the engine, and check if the oil pressure warning light goes off.

Does the oil pressure warning light go off?

Yes

System is normal.
Restore the vehicle to its original state.

No

Go to 4.

4. CHECK OIL PRESSURE SWITCH.

1. Turn the ignition to OFF.
2. Disconnect the ground cable from battery.
3. Disconnect the terminal from oil pressure switch, and wrap the terminal with vinyl tape for insulation.
4. Connect the battery ground terminal.
5. Start the engine.
6. Check if the oil pressure warning light goes off.

Does the oil pressure warning light go off?

Yes — Go to 6.

No — Go to 5.

5. CHECK INSULATION OF HARNESS BETWEEN COMBINATION METER AND OIL PRESSURE SWITCH.

1. Turn the ignition to OFF.
2. Disconnect the ground cable from battery.
3. Disconnect the connector from the combination meter.
4. Check insulation of harness and chassis ground between combination meter and oil pressure switch.

Are they insulated?

Yes
(1) Replace the combination meter.
(2) Restore the vehicle to its original state.

No
(1) Repair the harness between combination meter and oil pressure switch.
(2) Restore the vehicle to its original state.

6. CHECK OIL PRESSURE.

Check the oil pressure by using the oil pressure gauge.

Is the oil pressure is normal?

Yes
(1) Replace the oil pressure switch.
(2) Restore the vehicle to its original state.

No
Repair the engine assembly.

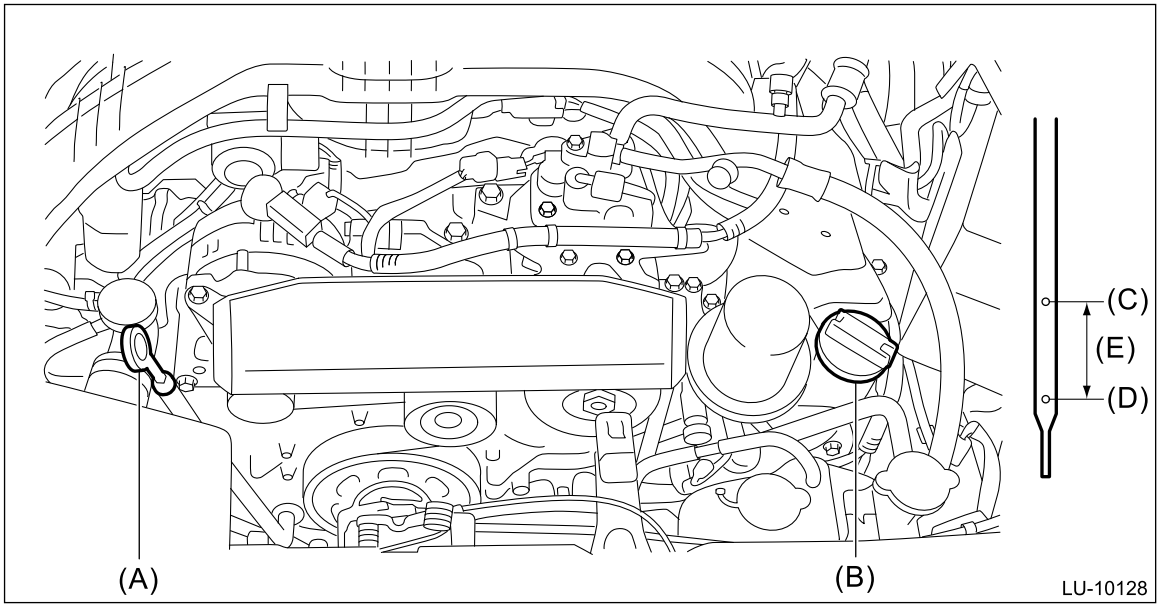
INSPECTION

Caution:

If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.

Recommended engine oil:

Refer to "SPECIFICATION" for recommended engine oil. Ref. to LUBRICATION(H4DO)>General Description>SPECIFICATION.



1. Park the vehicle on a level surface.
2. Pull out the oil level gauge, and wipe away the oil.
3. Insert the oil level gauge all the way.

   Note:

   Be sure that the oil level gauge is correctly inserted and properly orientated.
4. Pull out the oil level gauge, and check both sides of the oil level gauge. Use a lower side to determine the engine oil level. If the engine oil level is below the "L" line, check for oil leakage from engine, and add oil up to the "F" line.
5. Start the engine, and confirm that the oil pressure warning light goes off.
6. After turning off the engine, wait a few minutes until the engine oil returns back to the oil pan, then check the oil level.

   Note:

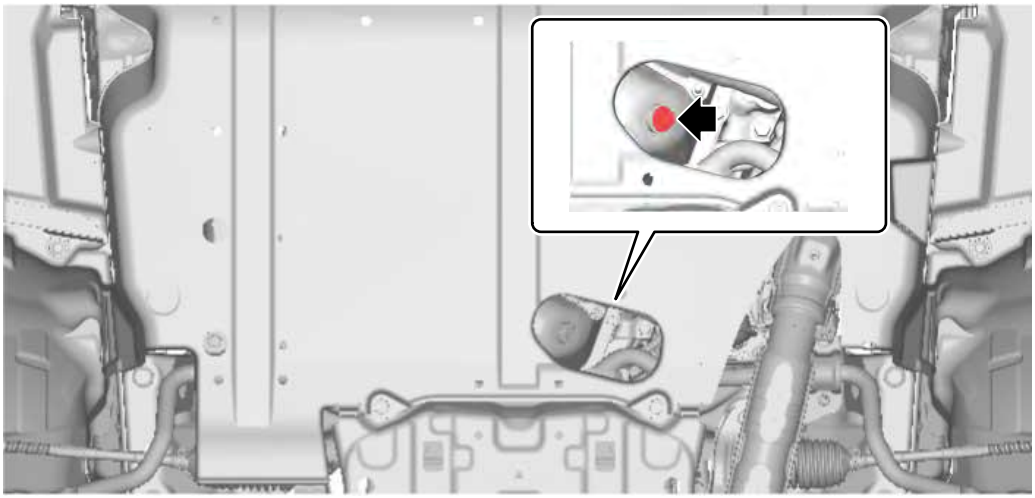
   - **Be careful not to add oil above the "F" line when the engine is cold.**
   - **As the oil level gauge is used for daily inspection, standard of "F" line and "L" line of the oil level gauge is set for the condition that engine is cold.**

(A) Oil level gauge
(B) Oil filler cap
(C) "F" line
(D) "L" line
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)

REPLACEMENT

Caution:

If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.



Recommended engine oil:

Refer to "SPECIFICATION" for recommended engine oil. Ref. to LUBRICATION(H4DO)>General Description>SPECIFICATION.

Engine oil capacity:

Refer to "SPECIFICATION" for engine oil capacity. Ref. to LUBRICATION(H4DO)>General Description>SPECIFICATION.

1. Remove the oil filler cap.
2. Drain engine oil by loosening the drain plug.

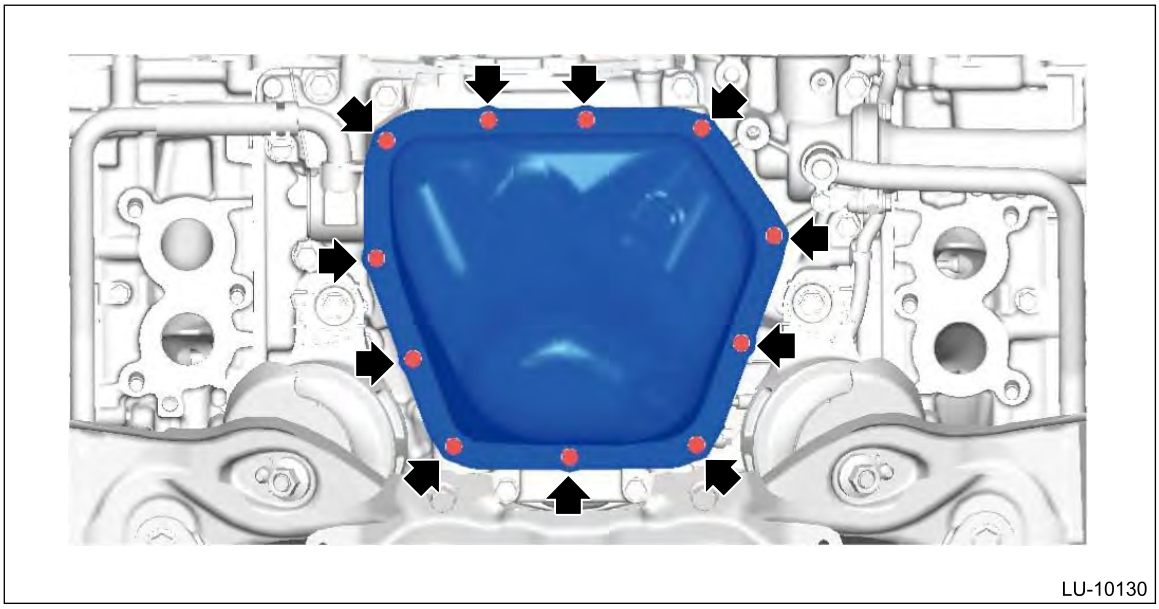
LU-10129

3. Using a new gasket to install the drain plug.

   Tightening torque:

   41.7 N·m (4.3 kgf-m, 30.8 ft-lb)
4. Add engine oil up to the "F" line on oil level gauge.
5. Install the oil filler cap.
6. Check the engine oil level. Ref. to LUBRICATION(H4DO)>Engine Oil>INSPECTION.

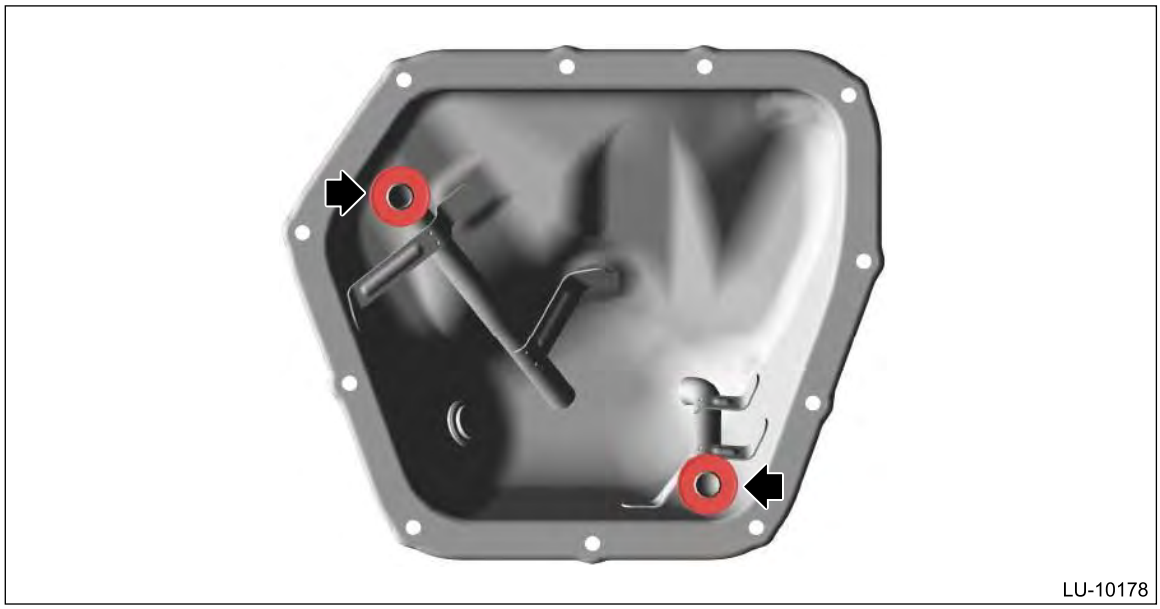
SPECIFICATION



The oil pump cannot be disassembled.
Refer to “Chain Cover” for removal and installation procedures. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

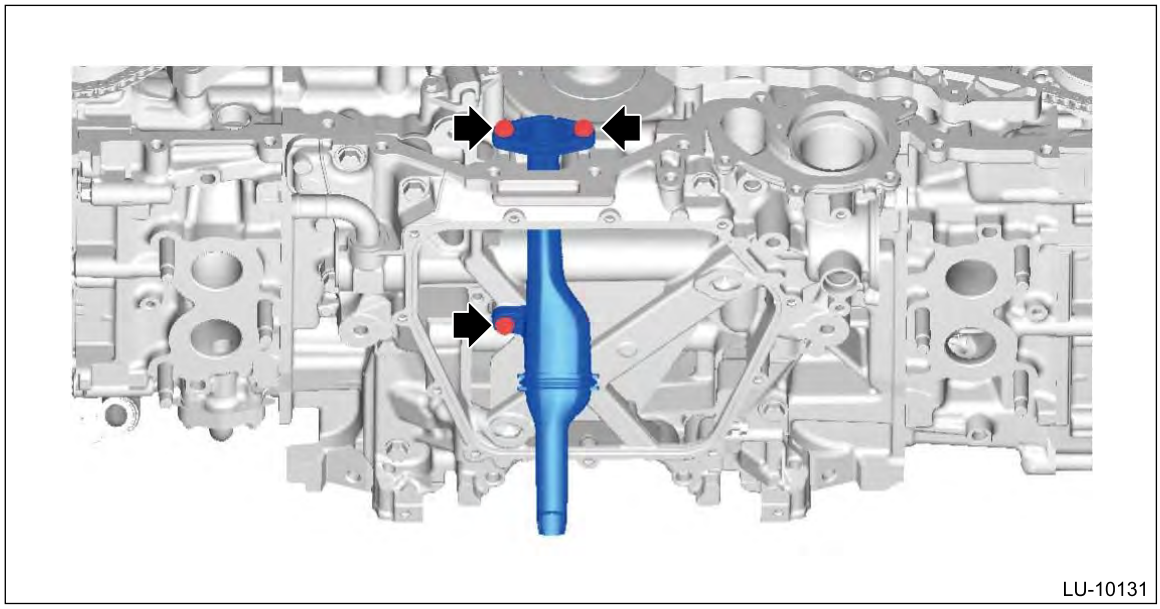
REMOVAL

Caution:
If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.



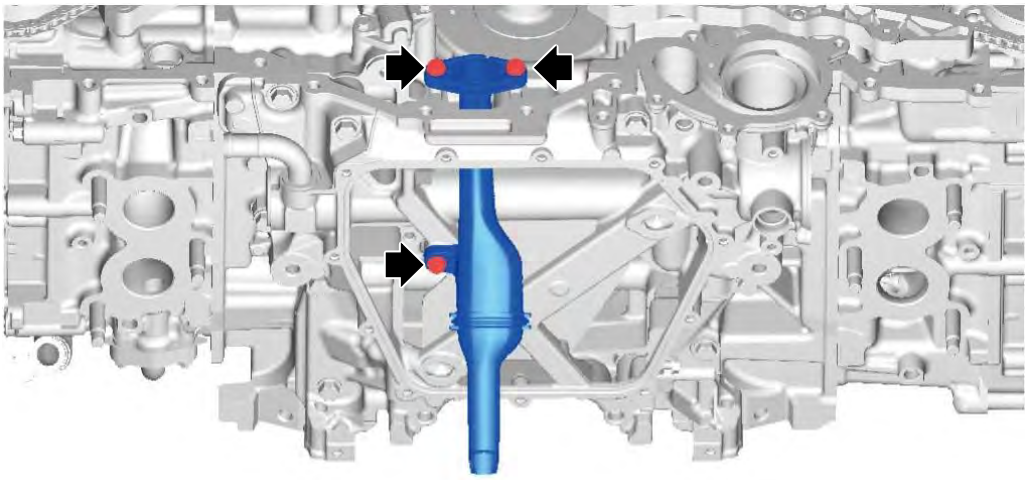
1. OIL PAN

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Drain the engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.
3. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
4. Remove the stabilizers. Ref. to FRONT SUSPENSION>Stabilizer>REMOVAL.
5. Remove the bolts which hold the oil pan.

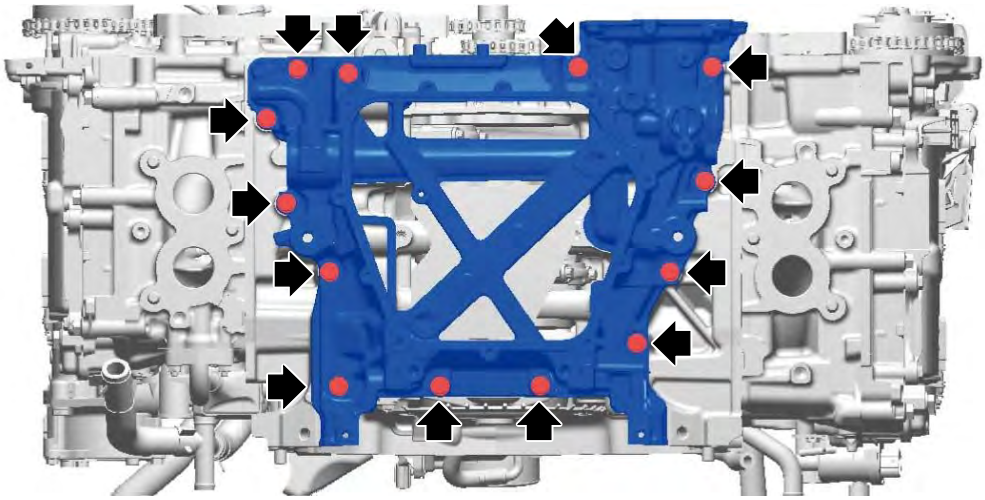


6. Insert an oil pan seal cutter into the gap between oil pan and oil pan upper, and remove the oil pan.
   Caution:
   - **Do not use the tools other than the oil pan seal cutter, in order to prevent damaging the oil pan and oil pan upper.**
   - **Do not twist with excessive force. The oil pan may be deformed.**

   Note:
   When removing, open the front side of the oil pan first, in order to avoid the interference with the oil strainer.
7. Remove the gasket from the oil pan.

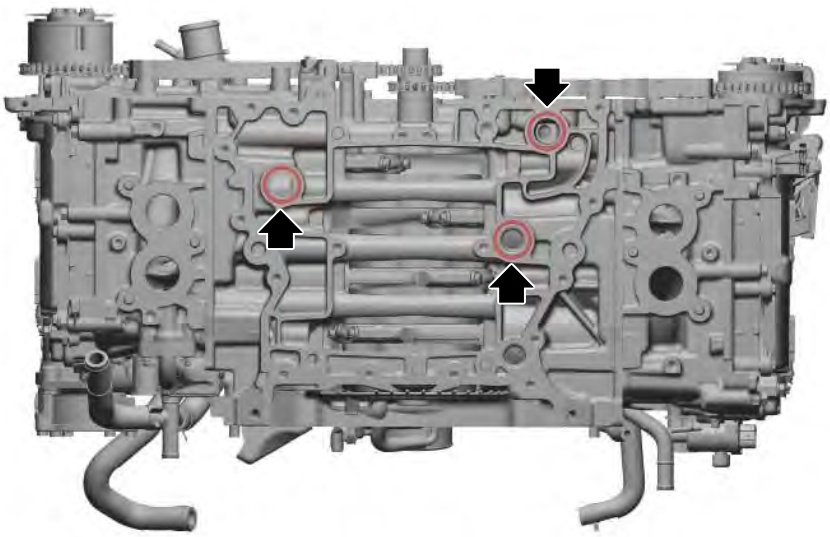


8. Remove the liquid gasket from the oil pan and the oil pan upper.
9. When removing the oil strainer
   (1) Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
   (2) Remove the oil strainer.



2. OIL PAN UPPER

1. Remove the engine assembly. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Remove the water pump. Ref. to COOLING(H4DO)>Water Pump>REMOVAL.
3. Remove the thermostat cover. Ref. to COOLING(H4DO)>Thermostat>REMOVAL.
4. Remove the water pipe RH. Ref. to COOLING(H4DO)>Water Pipe>REMOVAL > WATER PIPE RH.
5. Remove the water pipe LH. Ref. to COOLING(H4DO)>Water Pipe>REMOVAL > WATER PIPE LH.
6. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
7. Remove the oil level switch. Ref. to LUBRICATION(H4DO)>Oil Level Switch>REMOVAL.
8. Remove the oil pan. Ref. to LUBRICATION(H4DO)>Oil Pan>REMOVAL > OIL PAN.
9. Remove the oil strainer.



LU-10131

10. Remove the oil pan upper.

LU-10132

11. Remove the O-ring from the cylinder block.

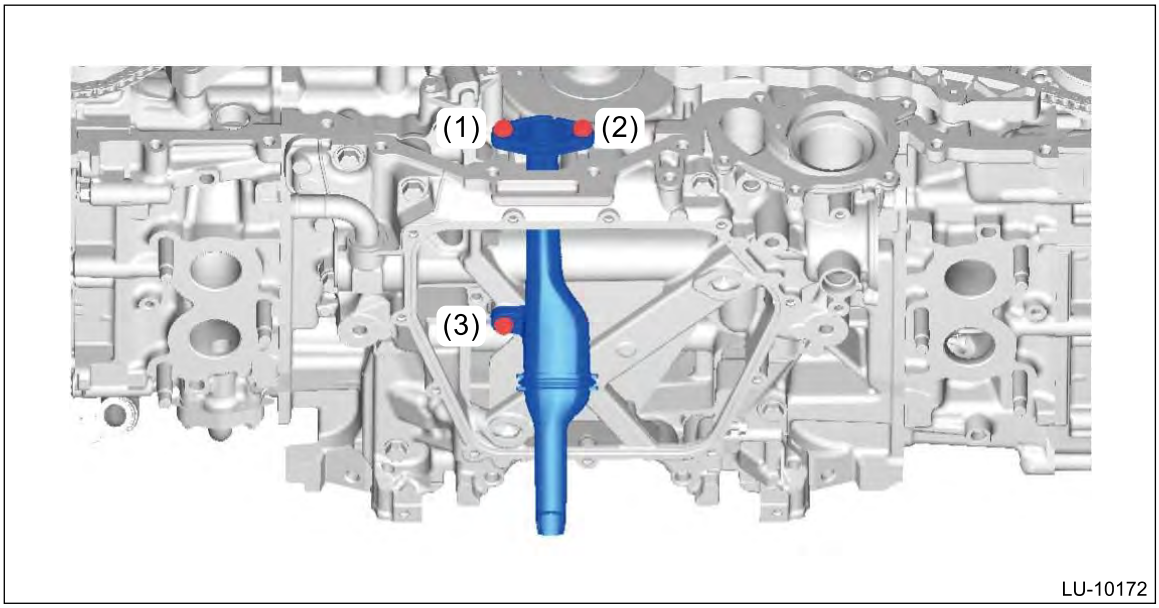
LU-10179

12. Remove the liquid gasket from oil pan upper and cylinder block.

LUBRICATION(H4DO) > Oil Pan

INSTALLATION

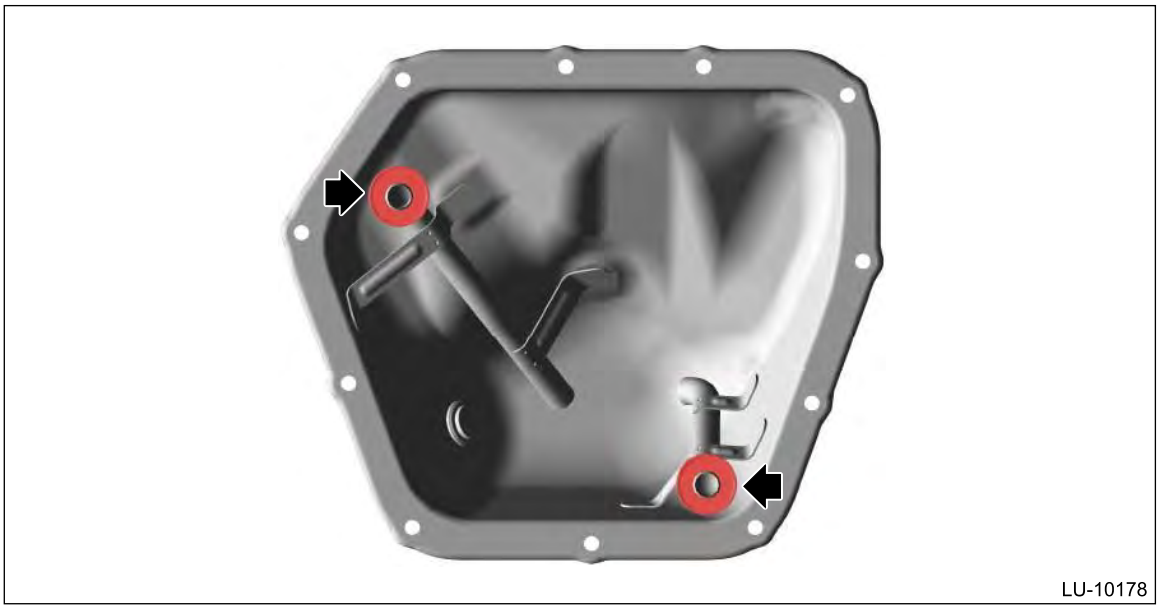
1. OIL PAN



1. When removing the oil strainer

(1) Temporarily install the oil strainer.

(2) Tighten the bolts in the numerical order as shown in the figure.



Tightening torque:

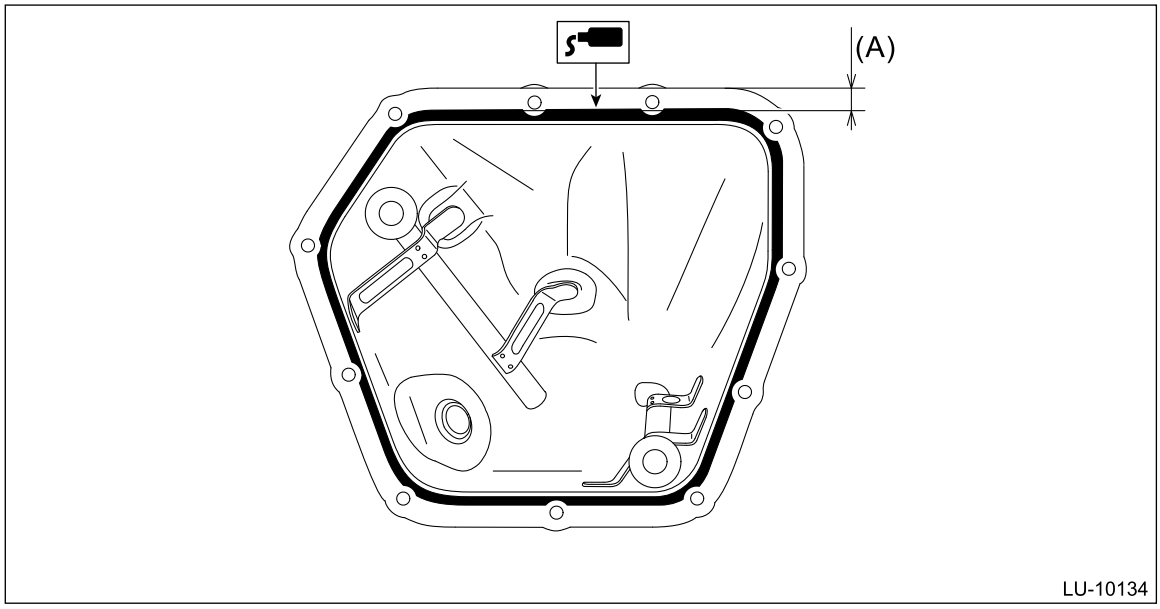
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

(3) Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

2. Install a new gasket to the oil pan.

3. Apply liquid gasket to the mating surface of the oil pan as shown in the figure, and install the oil pan.

Note:



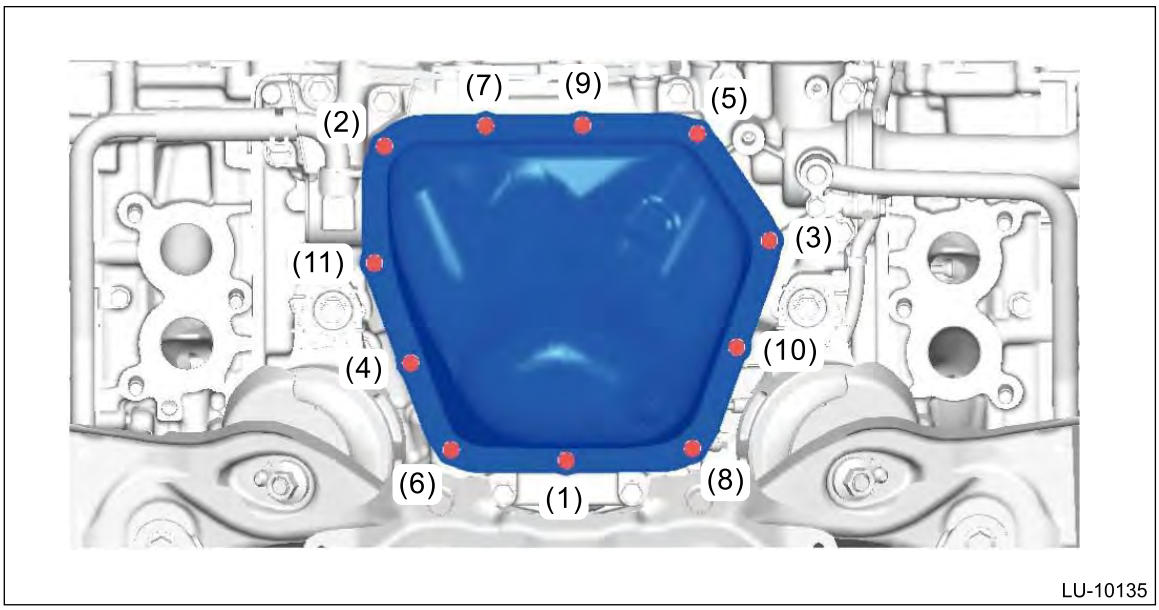
- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the oil pan and the oil pan upper.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

4.5 ± 0.5 mm (0.1772 ± 0.0197 in)



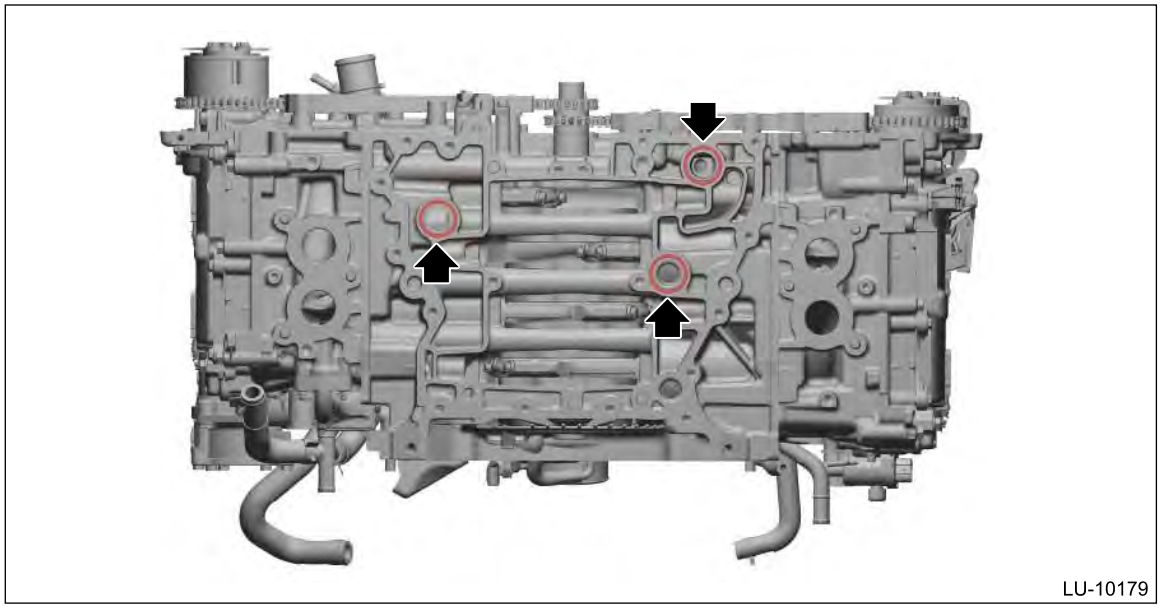
(A) 12.0 mm (0.4724 in) or more, 13.0 mm (0.5118 in) or less

4. Tighten the bolts in the numerical order as shown in the figure.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

5. Install the stabilizer. Ref. to FRONT SUSPENSION>Stabilizer>INSTALLATION.



6. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.

7. Refill the engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.

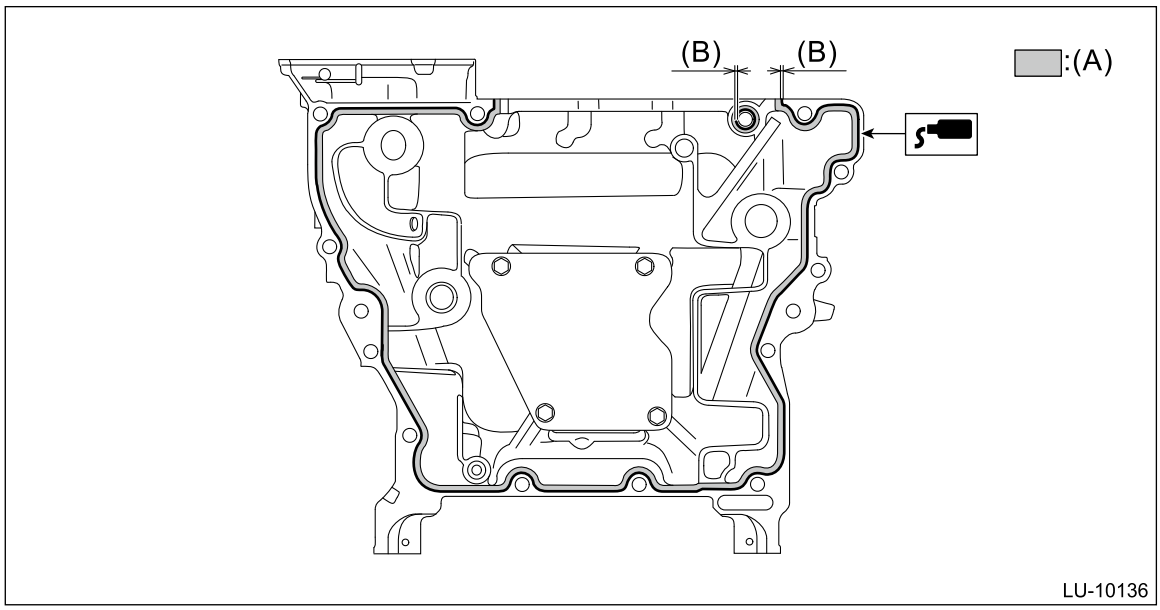
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. OIL PAN UPPER

1. Install a new O-ring to the cylinder block.

2. Apply liquid gasket to the mating surface of the oil pan upper as shown in the figure, and install the oil pan upper to the cylinder block.

Note:



- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the oil pan upper and the cylinder block.**
- **Install within 5 min. after applying liquid gasket.**
- **Application of liquid gasket on the chamfer surface around the bolt hole is allowed.**

Liquid gasket:

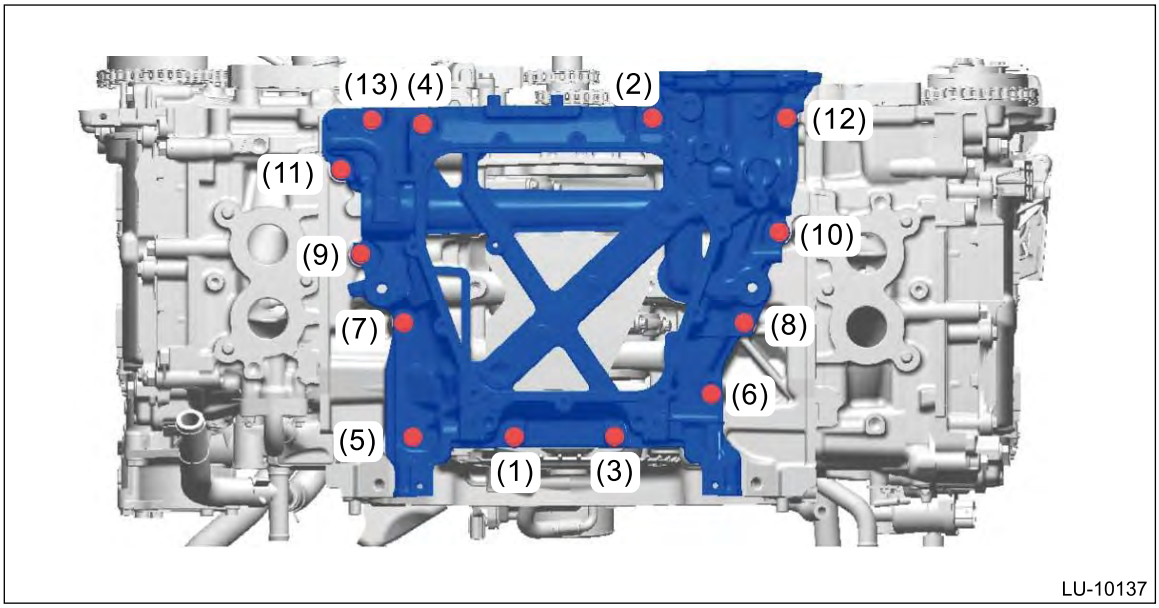
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

4±0.5 mm (0.1575±0.0197 in)

(A) Chamfer surface

(B) 0 mm (0 in) or more, 2.0 mm (0.0787 in) or less

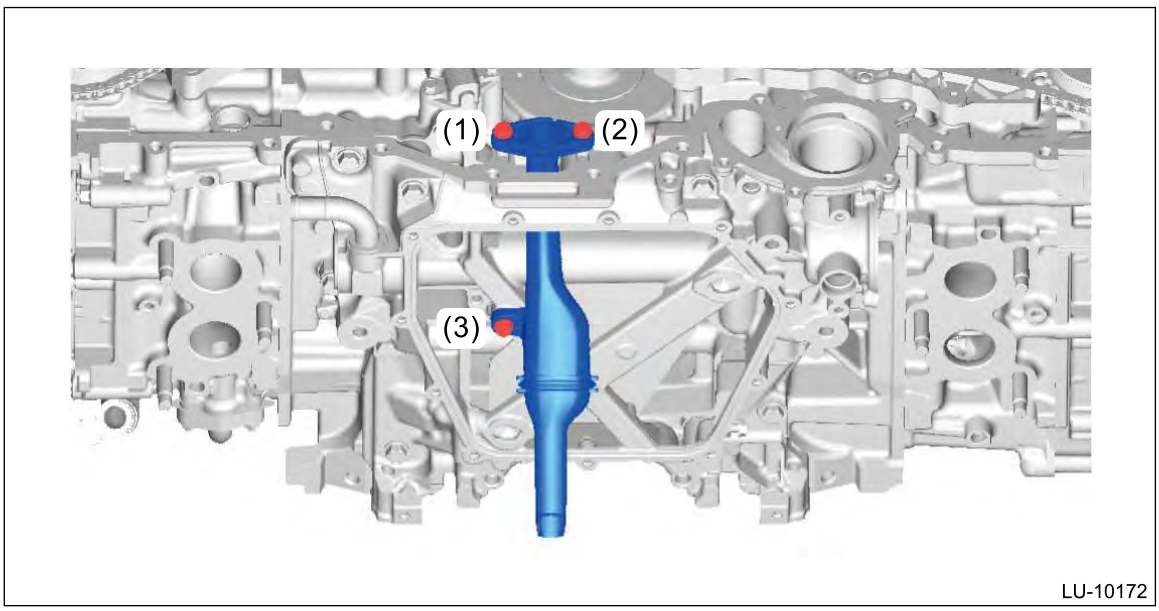


3. Tighten the bolts in the numerical order as shown in the figure.

Note:

After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

Tightening torque:



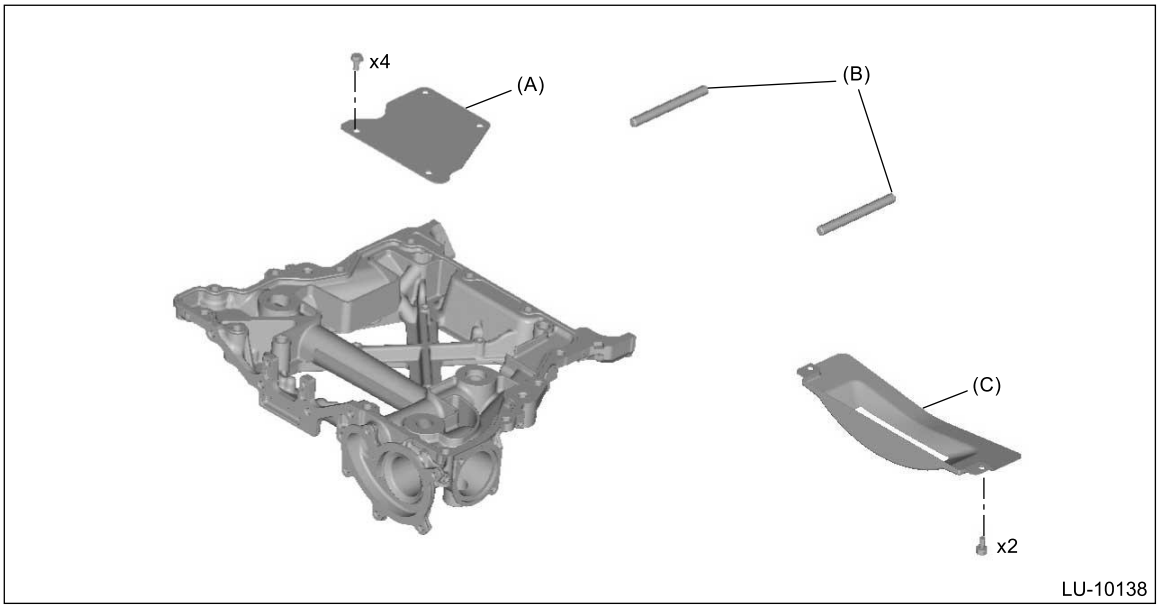
18 N·m (1.8 kgf-m, 13.3 ft-lb)

4. Temporarily install the oil strainer.
5. Tighten the bolts in the numerical order as shown in the figure.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

6. Install the oil pan. Ref. to LUBRICATION(H4DO)>Oil Pan>INSTALLATION > OIL PAN.
7. Install the oil level switch. Ref. to LUBRICATION(H4DO)>Oil Level Switch>INSTALLATION.
8. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.
9. Install the water pipe LH. Ref. to COOLING(H4DO)>Water Pipe>INSTALLATION > WATER PIPE LH.
10. Install the water pipe RH. Ref. to COOLING(H4DO)>Water Pipe>INSTALLATION > WATER PIPE RH.
11. Install the thermostat cover. Ref. to COOLING(H4DO)>Thermostat>INSTALLATION.



12. Install the water pump. Ref. to COOLING(H4DO)>Water Pump>INSTALLATION.
13. Install the engine. Ref. to MECHANICAL(H4DO)>Engine Assembly>INSTALLATION.
14. Refill the engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.
15. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
16. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.

LUBRICATION(H4DO) > Oil Pan

DISASSEMBLY

1. OIL PAN UPPER

1. Remove the baffle plate (A).
2. Remove the stud bolt (B).
3. Remove the clutch housing cover (C). (MT model)

LUBRICATION(H4DO) > Oil Pan

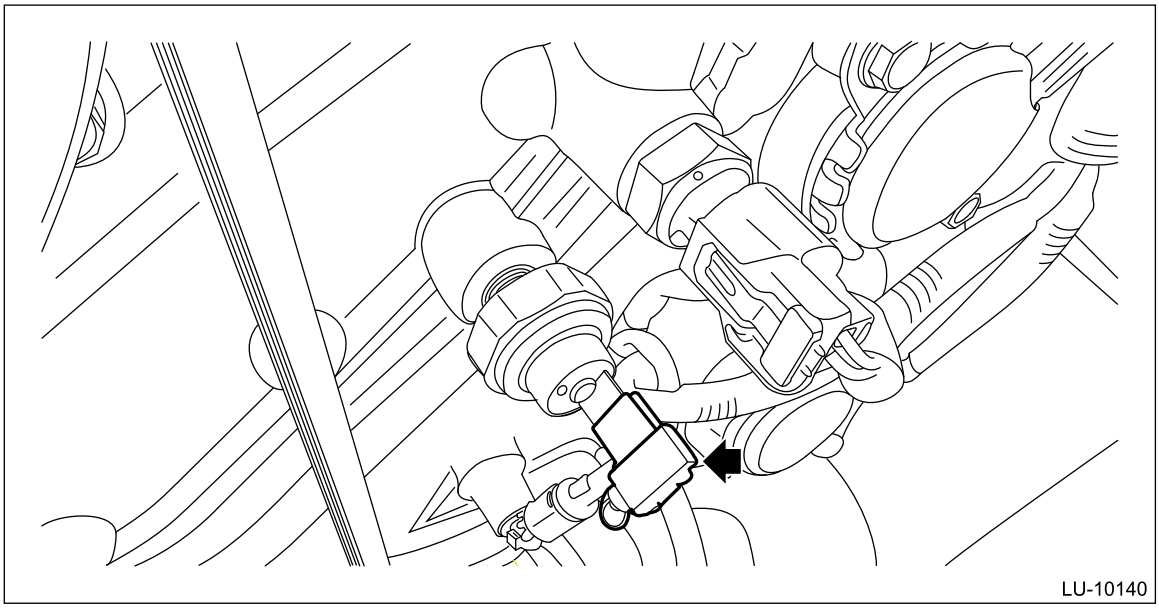
ASSEMBLY

1. OIL PAN UPPER

1. Install the clutch housing cover. (MT model)
   Tightening torque:
   5 N·m (0.5 kgf-m, 3.7 ft-lb)
2. Install the stud bolt.
   Tightening torque:
   10 N·m (1.0 kgf-m, 7.4 ft-lb)
3. Install the baffle plate.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

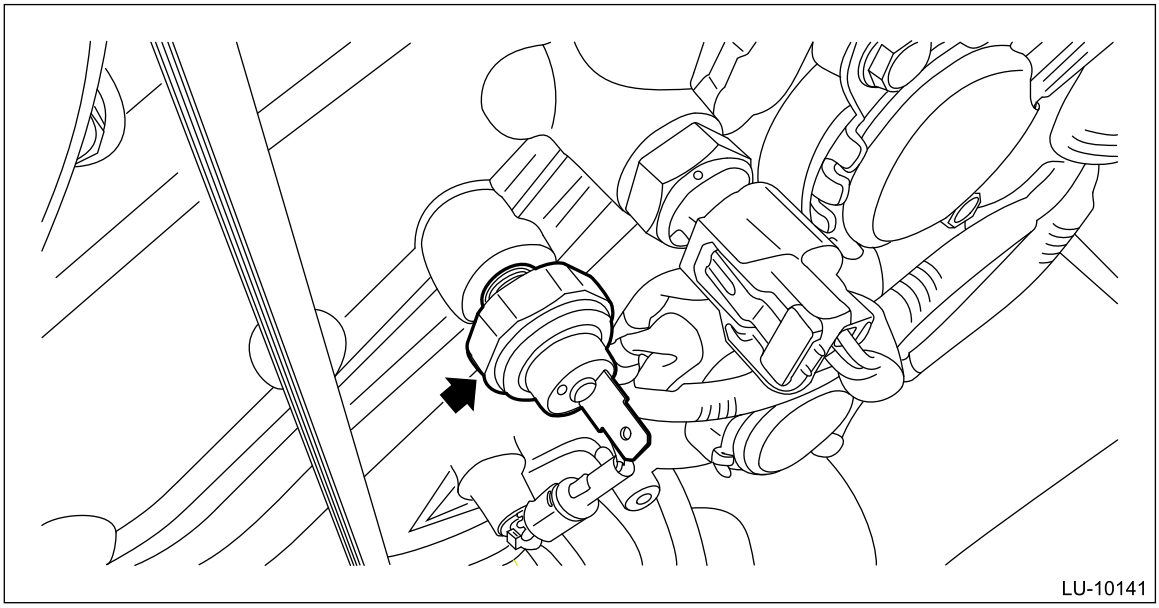
LUBRICATION(H4DO) > Oil Pan

INSPECTION



1. Check for oil leaks.
2. Check that there is no deformation, cracks or other damages.
3. Check the oil passages for clogging.

LUBRICATION(H4DO) > Oil Pressure Switch



REMOVAL

Caution:
If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the connector from oil pressure switch.

3. Remove the oil pressure switch.
   Caution:
   Catch the engine oil using cloth to prevent it from splashing.

4. Remove seal material from the oil pressure switch and the thread portions of the chain cover.

LUBRICATION(H4DO) > Oil Pressure Switch

INSTALLATION

1. Apply seal material to the bolt threads of oil pressure switch, and install the oil pressure switch.

Note:

Before applying the seal material, degrease the oil pressure switch and the thread portions of the chain cover.

Seal material:

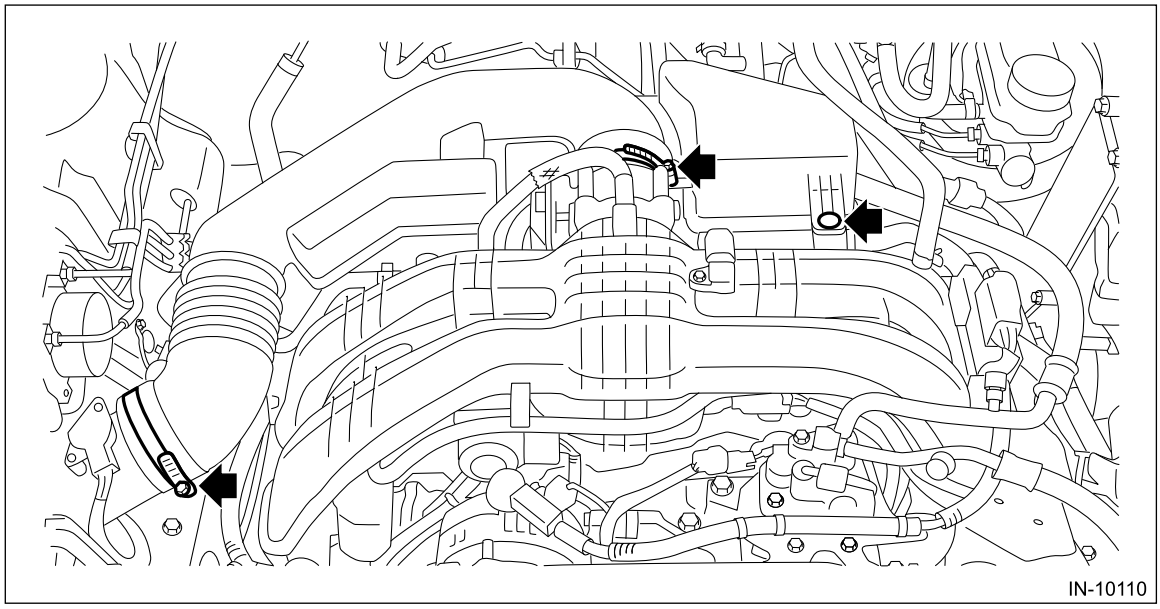
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

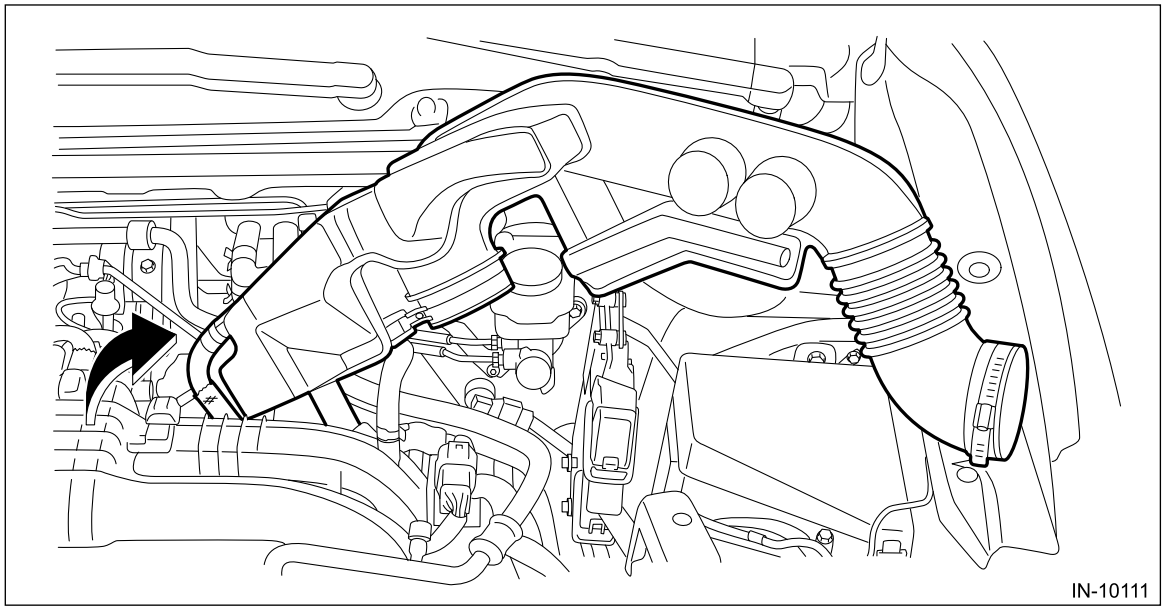
2. Connect the connector to the oil pressure switch.
3. Check the engine oil level and replenish the engine oil if necessary. Ref. to LUBRICATION(H4DO)>Engine Oil>INSPECTION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LUBRICATION(H4DO) > Oil Pressure Switch



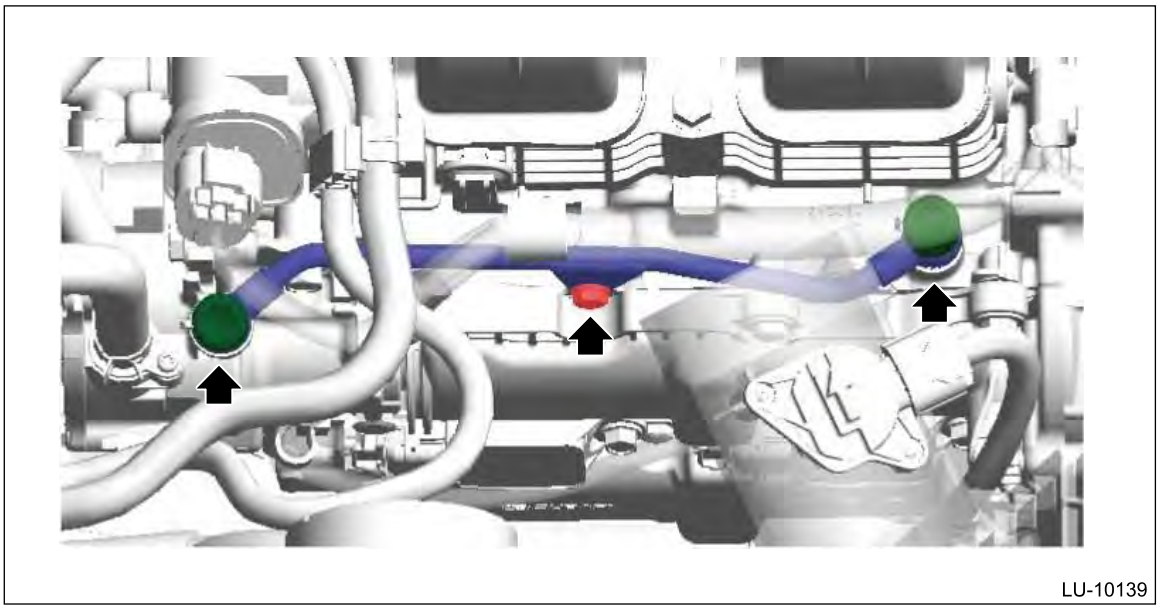
INSPECTION

1. Check for oil leaks.
2. Check that there is no deformation, cracks or other damages.



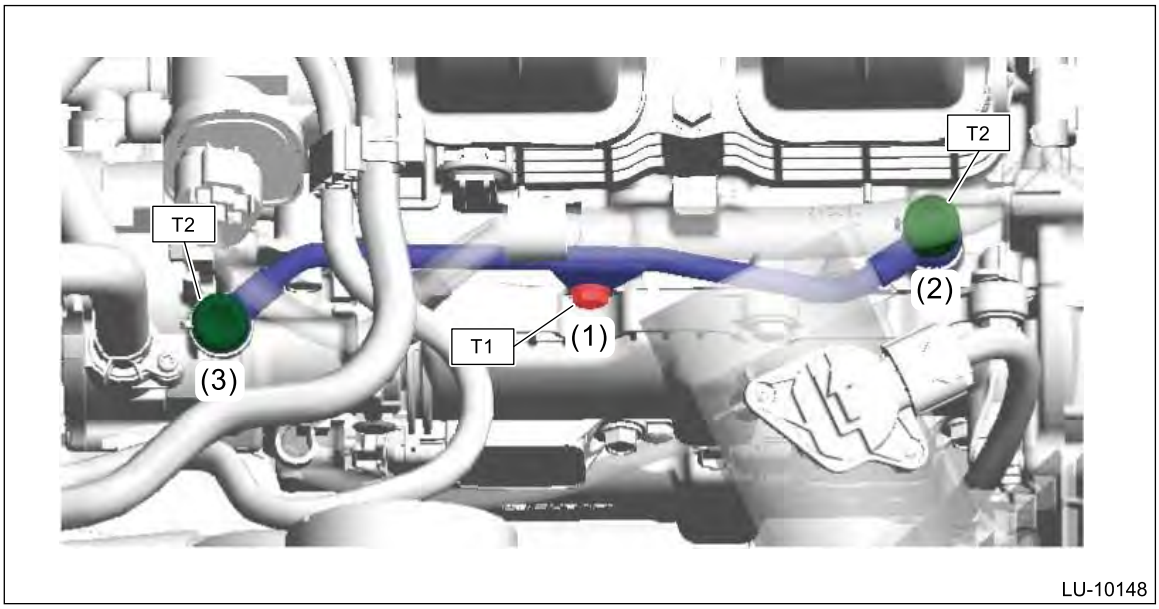
REMOVAL

Caution:
If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.



1. Remove the clip from the air intake boot, and loosen the clamp.

2. Remove the air intake boot, and place it aside so that it does not interfere with the work.
Caution:
Be careful not to pull out the PCV hose.



3. Remove the oil pipe.
Caution:
Catch the engine oil using cloth to prevent it from splashing.

LU-10139

LUBRICATION(H4DO) > Oil Pipe

INSTALLATION

1. Apply engine oil to the threaded portion for mounting the union bolt on the vacuum pump and cam carrier.
2. Use a new gasket to temporarily attach the oil pipe.
3. Tighten the union bolts and bolt in the numerical order as shown in the figure.
   Tightening torque:
   T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
   T2: 20 N·m (2.0 kgf-m, 14.8 ft-lb)

LU-10148

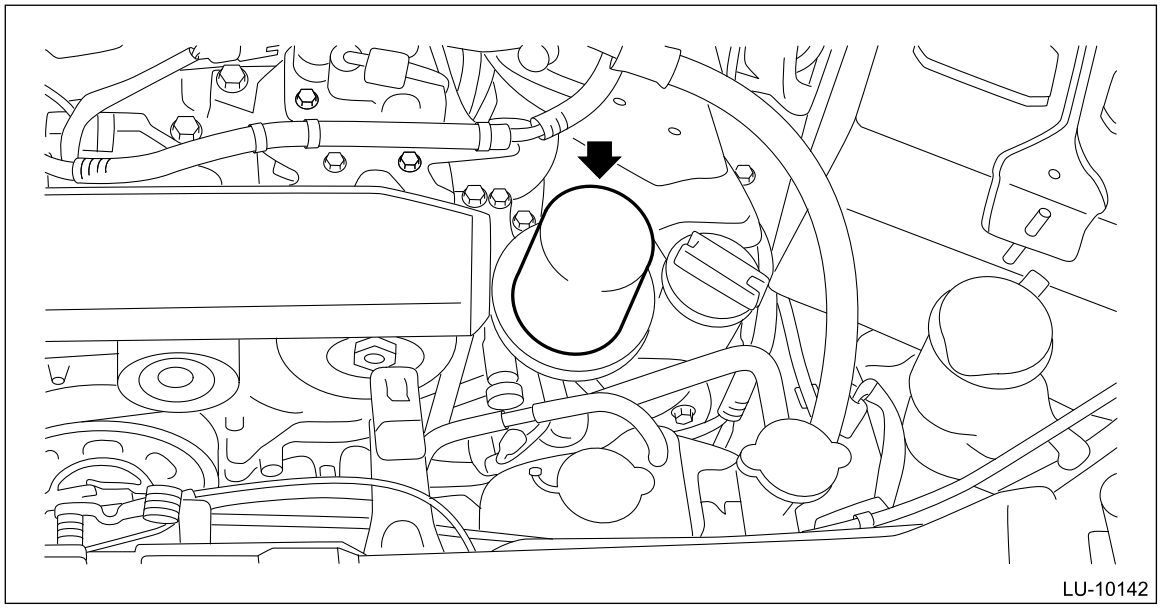
4. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
5. Check the engine oil level and replenish the engine oil if necessary. Ref. to LUBRICATION(H4DO)>Engine Oil>INSPECTION.

LUBRICATION(H4DO) > Oil Pipe

INSPECTION

1. Check for oil leaks.
2. Check that there is no deformation, cracks or other damages.
3. Check the oil passages for clogging.

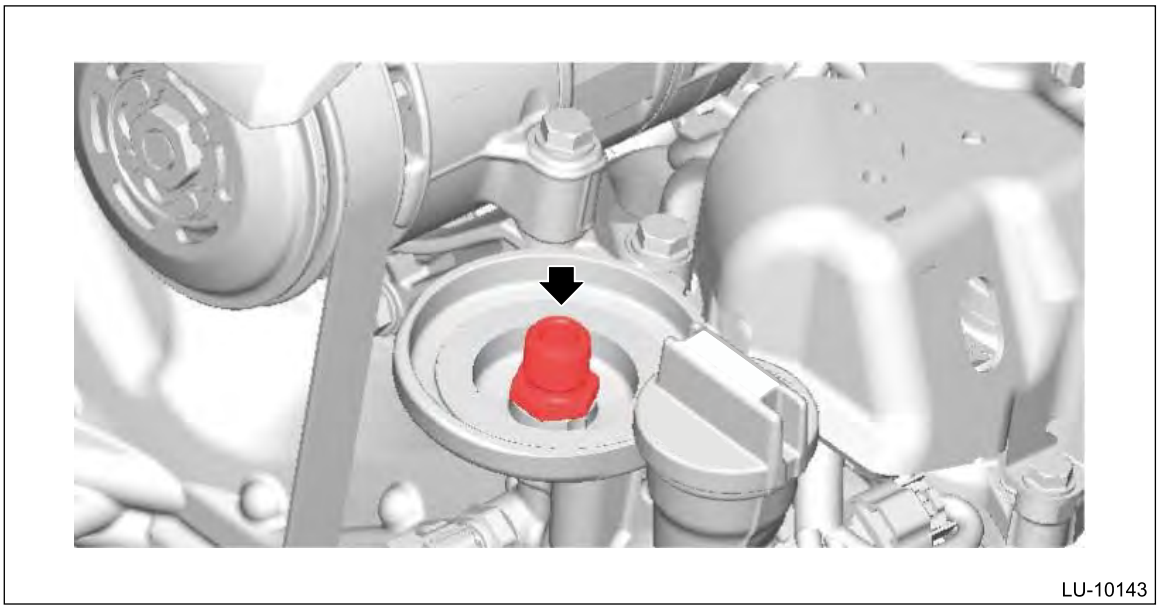
REMOVAL



Caution:
If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.

1. OIL FILTER

1. Remove the oil filter.



Note:
If there is water or dust on the oil filter installation portion, clean it before removing the oil filter.

Preparation tool:
Oil filter wrench (65/67 mm 14 Flutes)

2. OIL PUMP UNION

1. Remove the oil filter. Ref. to LUBRICATION(H4DO)>Oil Filter>REMOVAL > OIL FILTER.
2. Remove the oil pump union.

LUBRICATION(H4DO) > Oil Filter

INSTALLATION

1. OIL FILTER

Caution:

Do not tighten excessively, or engine oil may leak.

1. Clean the oil filter installation surface.
2. Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
3. Install the oil filter by turning it by hand, being careful not to damage the seal rubber of the oil filter.
4. Tighten further (approx. 7/8 turn) after the seal rubber of the oil filter contacts the chain cover. When using a torque wrench, tighten to 12 N·m (1.2 kgf-m, 8.9 ft-lb).

   Preparation tool:

   Oil filter wrench (65/67 mm 14 Flutes)
5. Check the engine oil level and replenish the engine oil if necessary. Ref. to LUBRICATION(H4DO)>Engine Oil>INSPECTION.

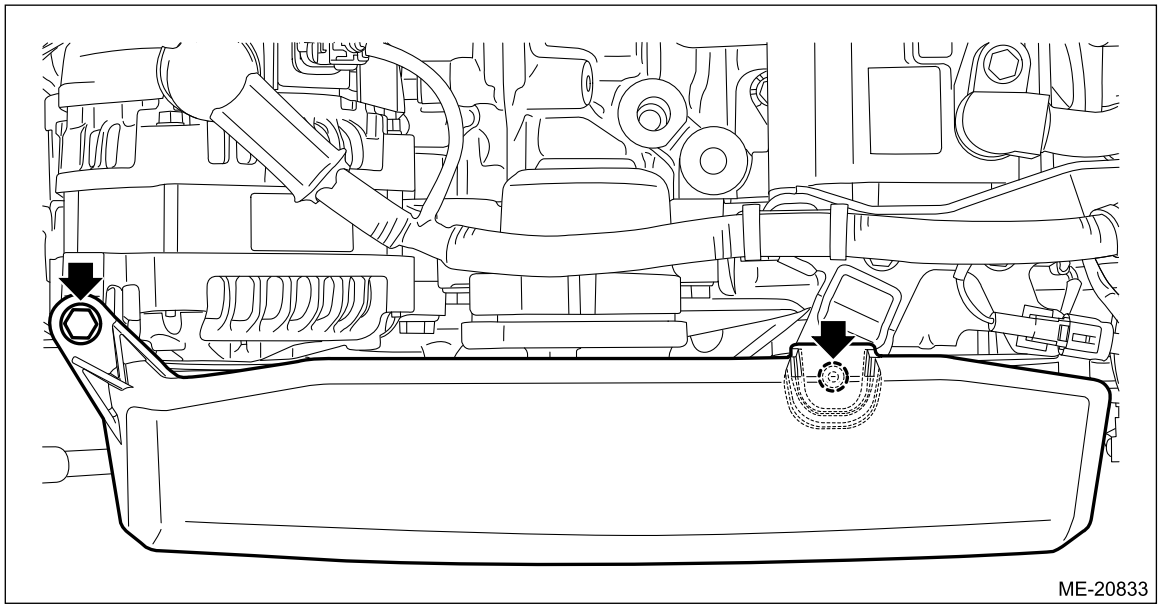
2. OIL PUMP UNION

1. Install the oil pump union.

   Tightening torque:

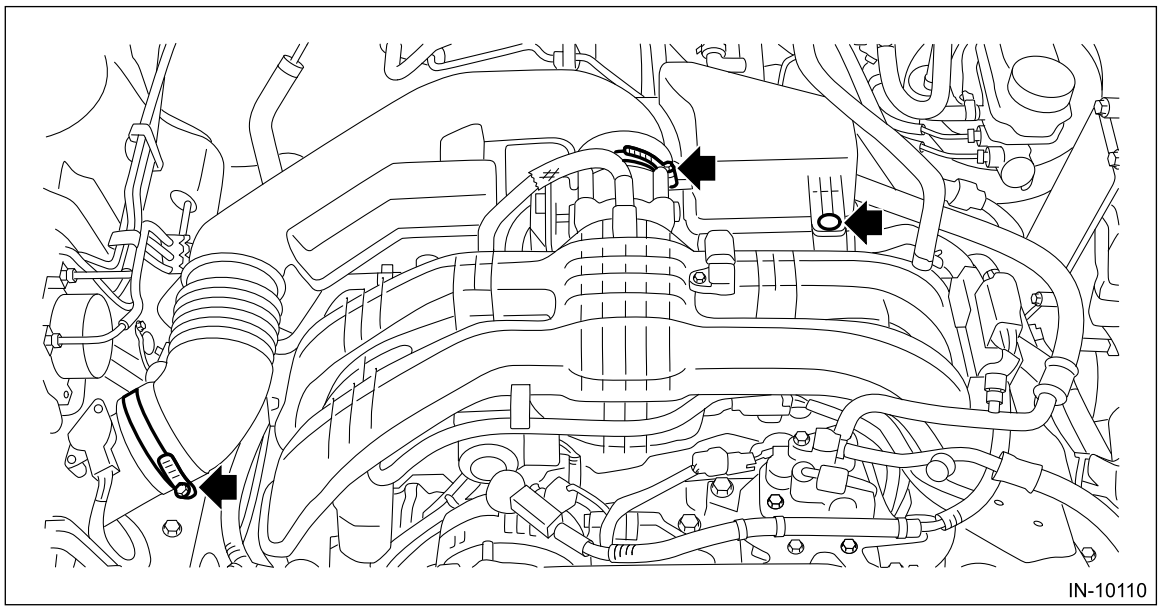
   45 N·m (4.6 kgf-m, 33.2 ft-lb)
2. Install the oil filter. Ref. to LUBRICATION(H4DO)>Oil Filter>INSTALLATION > OIL FILTER.

LUBRICATION(H4DO) > Oil Filter



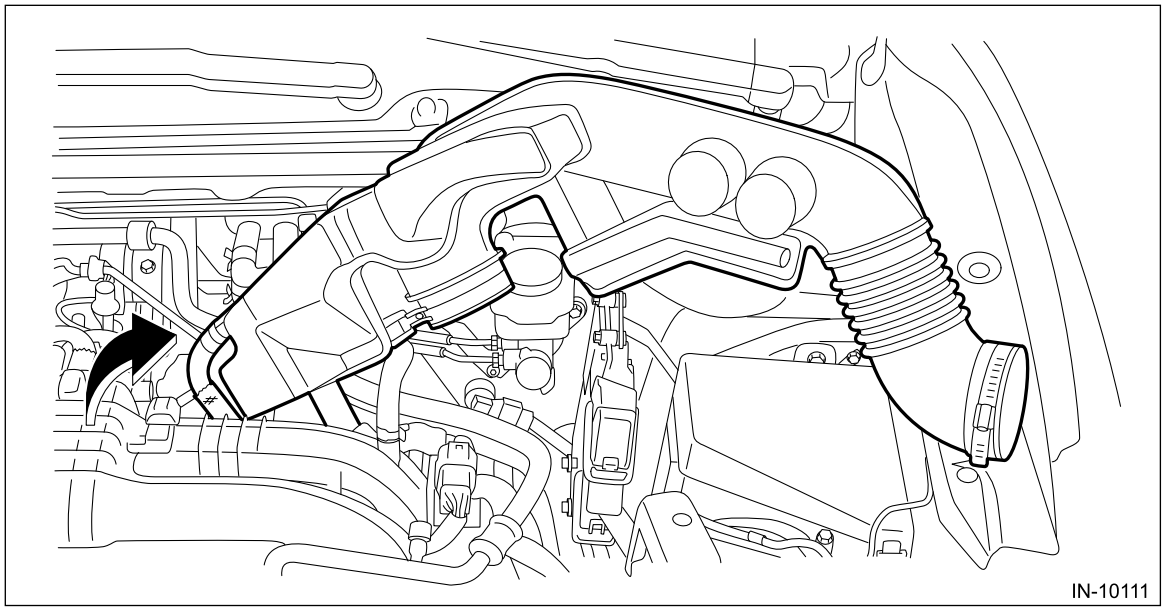
INSPECTION

1. Check for oil leaks.
2. Check that there is no deformation, cracks or other damages.
3. Check the oil passages for clogging.

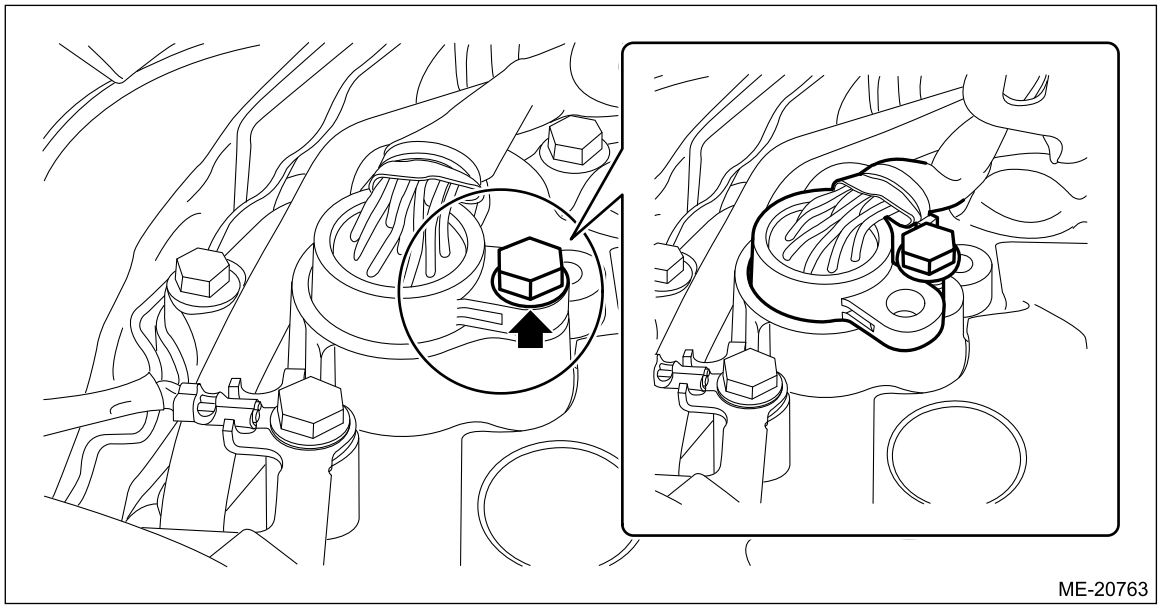


REMOVAL

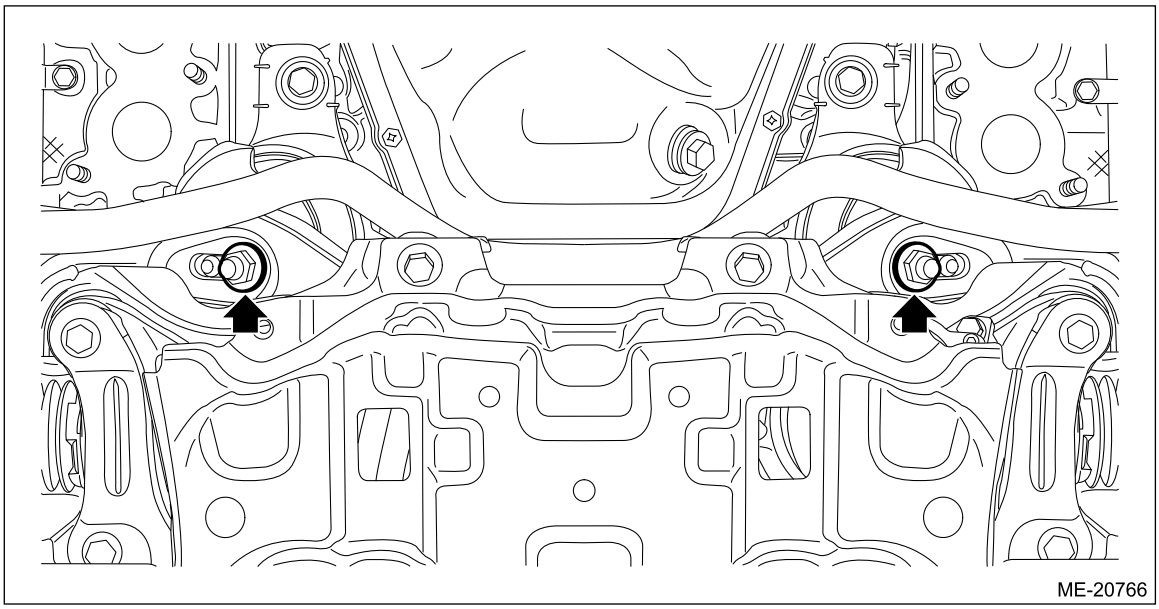
Caution:
If the engine oil is spilt over the engine, exhaust pipe or the under cover, completely wipe it off to avoid emission of smoke or causing a fire.



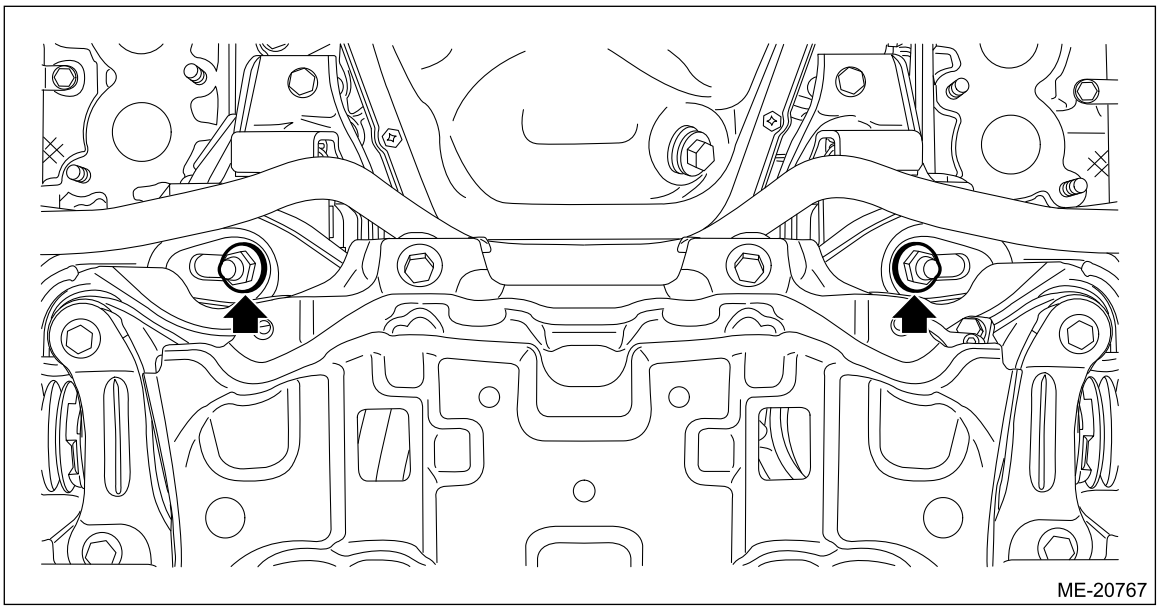
1. Remove the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>DISASSEMBLY.
2. Fully open the front hood. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Remove the V-belt covers.



5. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
6. Remove the clip from the air intake boot, and loosen the clamp.



7. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.



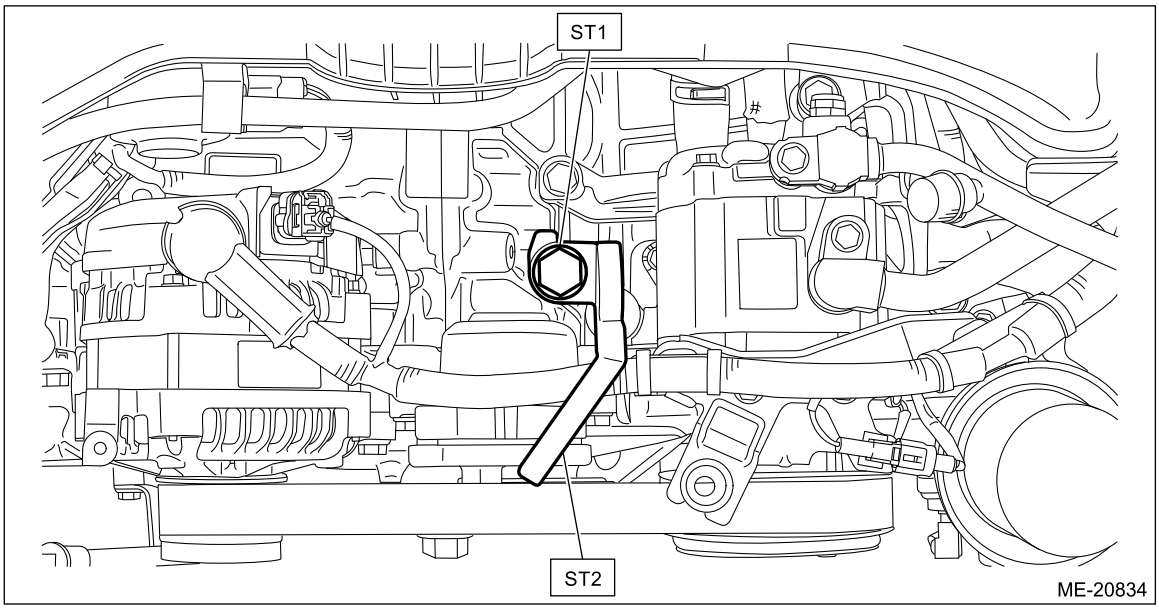
8. Remove the TCM. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>REMOVAL.
9. Turn the valve cover clockwise till the bolt hole can be seen as shown in the figure, and temporary tighten it with a bolt to prevent it from rotating. (CVT model)

10. Remove the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>REMOVAL > PITCHING STOPPER.
11. Drain the engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.
12. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
13. Remove the nuts which secure the engine mounting to the crossmember. (CVT model)

14. Remove the nuts which secure the engine mounting to the crossmember. (MT model)

15. Remove the electric power steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox>REMOVAL.

16. Attach the ST1 and ST2.

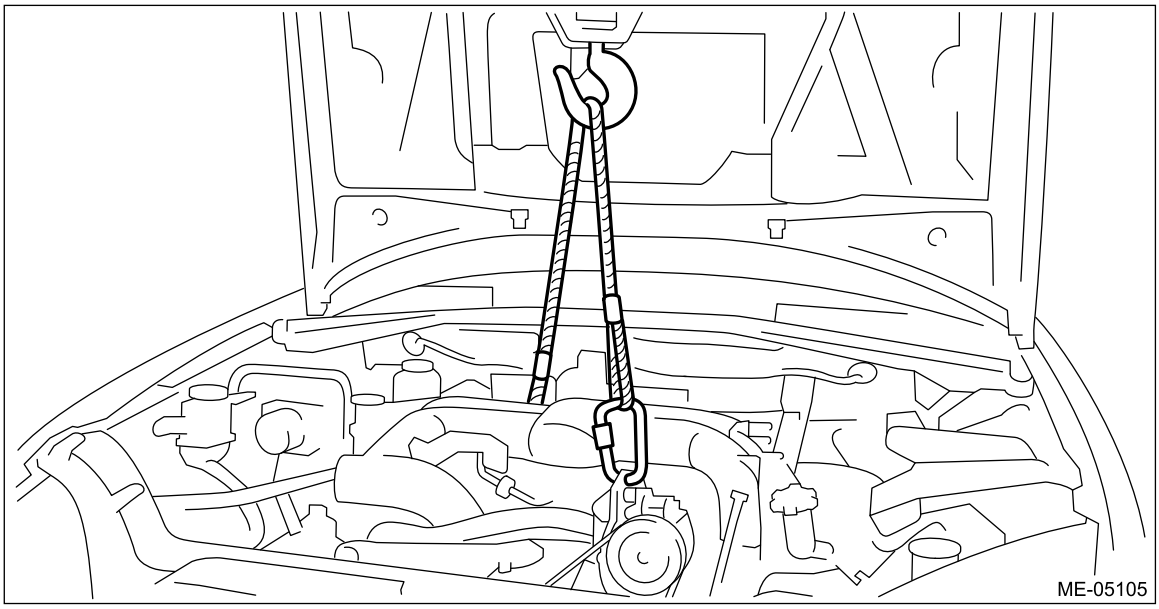


Preparation tool:

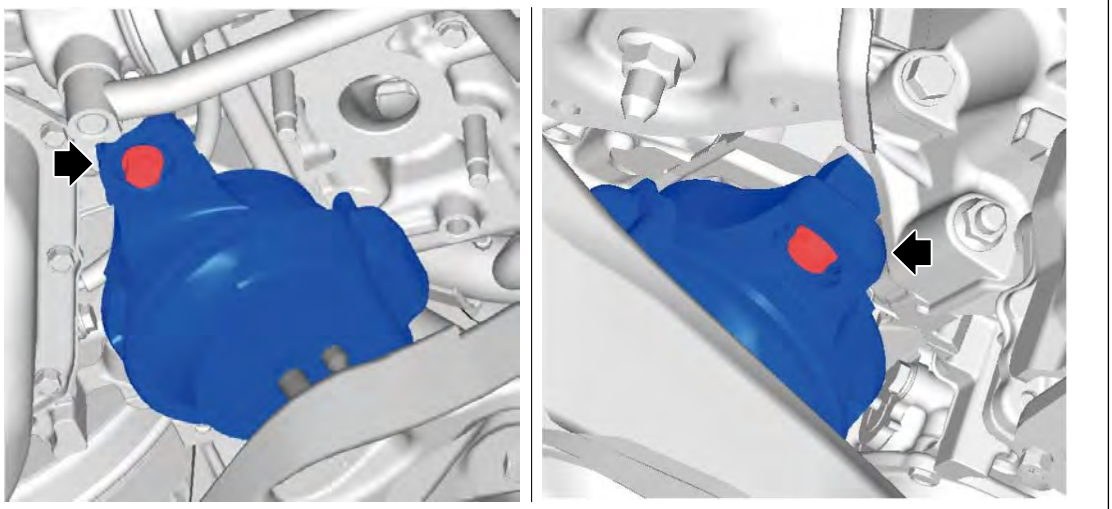
ST1: BOLT (18363AA050)

ST2: HANGER (18360AA040)

Tightening torque:



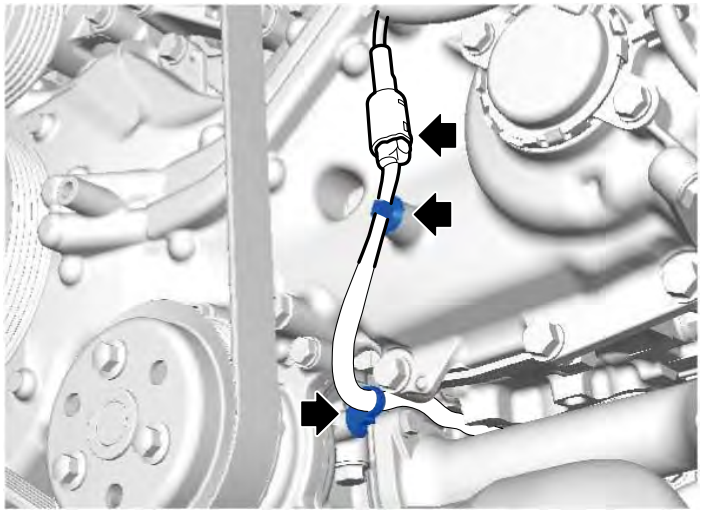
43N·m (4.4 kgf-m, 31.7 ft-lb)



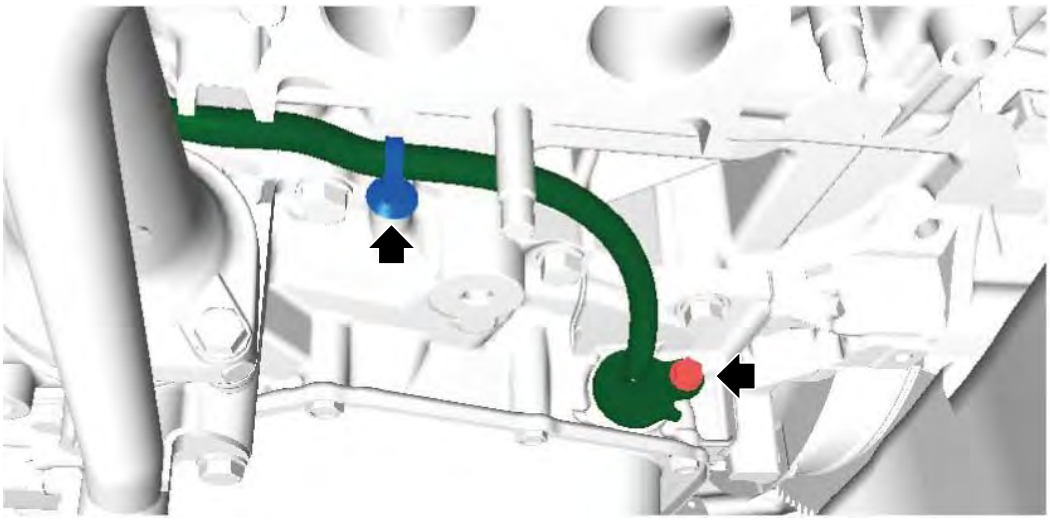
17. Lift up the engine with a lifting device and wire ropes.

Caution:

When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.



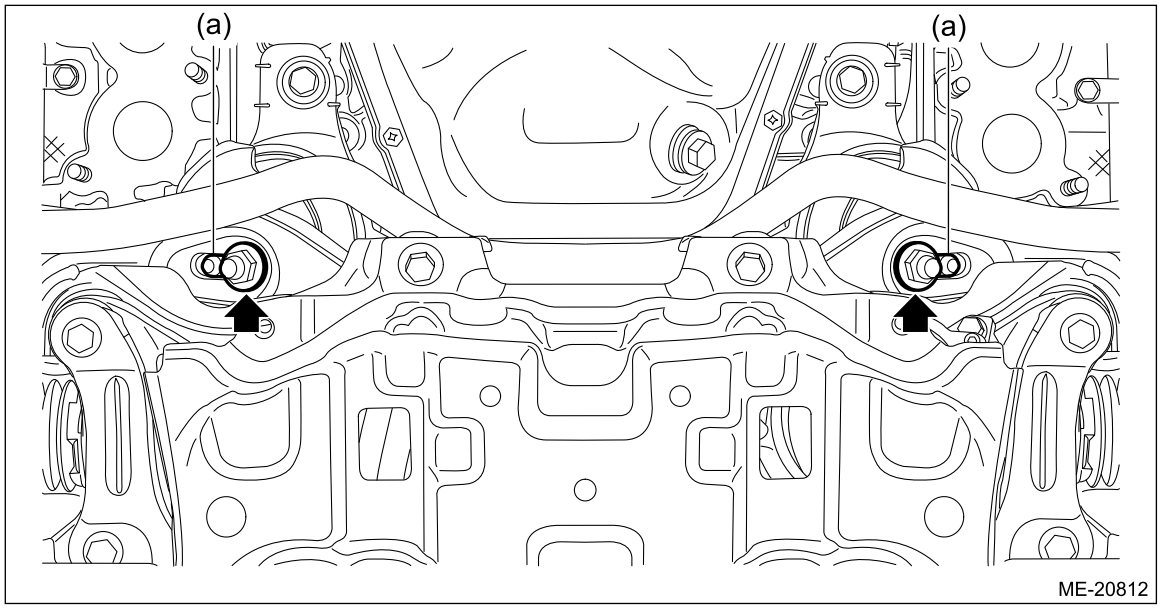
18. Remove the engine mounting LH.



LU-10144

19. Disconnect the connector and remove the clips.

LU-10145

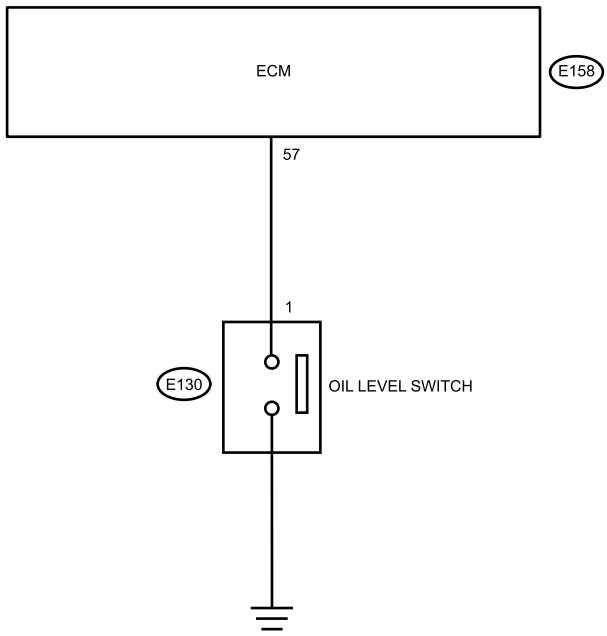


20. Remove the clip to remove the oil level switch.

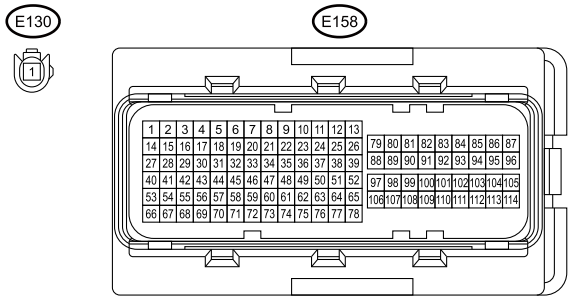
LU-10146

INSTALLATION

1. Install the oil level switch, and install the clip.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
2. Connect the connector and install the clip.
3. Install the engine mounting LH.
   Tightening torque:
   35 N·m (3.6 kgf-m, 25.8 ft-lb)
4. Lower the engine and remove the lifting device and wire ropes.
5. Remove the ST.
6. Install the nuts which hold the engine mounting to the crossmember. (CVT model)
   Caution:
   Use new nuts.
   Note:
   Make sure that locators (a) of the engine mounting are securely inserted.
   Tightening torque:
   90 N·m (9.2 kgf-m, 66.4 ft-lb)



7. Install the nuts which hold the engine mounting to the crossmember. (MT model)
   Caution:
   Use new nuts.
   Tightening torque:
   90 N·m (9.2 kgf-m, 66.4 ft-lb)
8. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
9. Install the valve cover in original position. (CVT model)
   Tightening torque:
   7 N·m (0.7 kgf-m, 5.2 ft-lb)
10. Install the TCM. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>INSTALLATION.
11. Install the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>INSTALLATION > PITCHING STOPPER.
12. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake



Boot>INSTALLATION.

13. Install the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.
14. Install the V-belt cover.
    Tightening torque:
    7 N·m (0.7 kgf-m, 5.2 ft-lb)
15. Refill the engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.
16. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
17. Set the front hood to the normal position. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.
18. Install the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>ASSEMBLY.

LU-10147

INSPECTION

1. INSPECTION WHEN ENGINE OIL LEVEL WARNING LIGHT IS ON

1. CHECK DTC.

Read the DTC using the Subaru Select Monitor 4.

Note:

For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

Is DTC detected?

Yes — (1) Repair the corresponding system.
(2) Go to 2.

No — Go to 2.

2. CHECK ENGINE OIL LEVEL.

Check the engine oil level.

Is engine oil level normal?

Yes — Go to 3.

No — (1) Adjust the engine oil level to a proper amount.
(2) Go to 3.

3. CHECK ENGINE OIL LEVEL WARNING LIGHT.

1. Turn to IG ON.
2. Check if engine oil level warning light goes off.

Does the engine oil level warning light go off?

Yes — System is normal.
Restore the vehicle to its original state.

No — Go to 4.

4. CHECK OIL LEVEL SWITCH.

1. Turn the ignition to OFF.
2. Disconnect the ground cable from battery.
3. Disconnect the oil level switch connector.
4. Check continuity between the oil level switch terminal and chassis ground.

Is there continuity?

Yes — Go to 5.

No — Replace the oil level switch.
Restore the vehicle to its original state.

5. CHECK CONTINUITY OF ENGINE HARNESS.

1. Disconnect the engine harness and the bulkhead harness.
2. Check continuity between the connector on the engine harness oil pressure switch side and the connector on the engine harness bulkhead side.

Is there continuity?

Yes — Go to 6.

No — (1) Repair the engine harness.
(2) Restore the vehicle to its original state.

6. CHECK CONTINUITY OF BULKHEAD HARNESS.

1. Disconnect the ECM connector.
2. Check continuity between the bulkhead harness connector on the engine harness side and the bulkhead harness connector on the ECM side.

Is there continuity?

Yes — Go to 7.

No — (1) Repair the bulkhead harness.
(2) Restore the vehicle to its original state.

7. CHECK COMBINATION METER.

1. Restore the vehicle to its original state.
2. Perform the self-diagnosis display mode of combination meter.

Is combination meter OK?

Yes	(1) Check for poor contact due to the wear of connector pin etc., and if no fault is found, replace the ECM. (2) Restore the vehicle to its original state.
No	(1) Replace the combination meter. (2) Restore the vehicle to its original state.

2. OTHER INSPECTIONS

1. Check for oil leaks.
2. Check that there is no deformation, cracks or other damages.

INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

Trouble	Possible cause	Corrective action
The oil pressure warning light illuminates.	a. Oil pressure switch failure	Replace the oil pressure switch.
	b. Low oil pressure	
	❍ Clogging of oil filter	Replace the oil filter.
	❍ Clogged or broken oil strainer	Clean or replace the oil strainer.
	❍ Clogged oil passage	Clean or replace faulty parts.
	❍ Defective oil pump	Replace the chain cover.
	❍ Insufficient engine oil (degradation, etc.)	Replace engine oil.
	c. Short circuit of the harness	Repair the harness.
The oil pressure warning light does not illuminate.	a. Malfunction of combination meter	Replace the combination meter.
	b. Oil pressure switch failure	Replace the oil pressure switch.
	c. Open circuit of harness	Repair the harness.

SPECIFICATION

Engine	Model			2.0 L
	Cylinder arrangement			Horizontally opposed, liquid cooled, 4-cylinder, 4-stroke gasoline engine
	Valve system mechanism			Chain driven, double overhead camshaft, 4-valve/cylinder
	Bore × Stroke mm (in)			84.0 × 90.0 (3.31 × 3.54)
	Displacement cm^3 (cu in)			1,995 (121.7)
	Compression ratio			12.5
	Compression pressure (at 200 — 300 r/min) kPa (kg/cm^2, psi)		Standard	1,050 — 1,400 (11 — 14, 152 — 203)
	Number of piston rings			Compression ring: 2 Oil ring: 1
	Intake valve timing	Open	Max. retard	ATDC 37°
			Min. advance	BTDC 41°
		Close	Max. retard	ABDC 103°
			Min. advance	ABDC 25°
	Exhaust valve timing	Open	Max. retard	ABDC 3°
			Min. advance	BBDC 52°
		Close	Max. retard	ATDC 47°
			Min. advance	BTDC 8°
	Cam clearance mm (in)	Intake	Standard	$0.13^{+0.02}_{-0.04}$ $(0.0051^{+0.0008}_{-0.0016})$
		Exhaust	Standard	$0.22^{+0.02}_{-0.04}$

				$(0.0087^{+0.0008}_{-0.0016})$
	Idle speed (For CVT model, select lever in "P" or "N" range. For MT model, gear shift lever in neutral position.) r/min	No load	Standard	CVT model: 775±100
				MT model: 700±100
		A/C ON	Standard	800 — 900±50
	Ignition order			1 → 3 → 2 → 4
	Ignition timing BTDC/{r/min}		Standard	CVT model: 6°±10°/775
				MT model: 6°±10°/700

Note:

OS: Oversize US: Undersize

Camshaft	Bending mm (in)			Limit	0.020 (0.0008)
	Cam lobe height mm (in)	Intake	Valve drive section	Standard	40.34 — 40.44 (1.5882 — 1.5921)
			Fuel pump drive section	Standard	44.35 — 44.45 (1.7461 — 1.7500)
		Exhaust		Standard	39.66 — 39.76 (1.5614 — 1.5654)
	Cam base circle diameter mm (in)			Standard	34.0 (1.3386)
	Journal outer diameter mm (in)			Standard	25.946 — 25.963 (1.0215 — 1.0222)
	Thrust clearance mm (in)			Standard	0.068 — 0.116 (0.0027 — 0.0047)
	Oil clearance mm (in)			Standard	0.037 — 0.072 (0.0015 — 0.0028)
Cylinder head	Warpage (mating surface with cylinder block) mm (in)			Limit	0.020 (0.0008)
	Grinding limit mm (in)				98.45 (3.8760) or less
	Height mm (in)			Standard	98.5 (3.8779)
Valve & valve guide	Valve overall length mm (in)			Intake	104.95 (4.1319)
				Exhaust	96.5 (3.7992)
	Valve head edge thickness mm (in)		Intake	Standard	0.8 — 1.2 (0.0315 — 0.0472)
			Exhaust	Standard	1.0 — 1.4 (0.0394 — 0.0551)
	Valve stem outer diameter mm (in)		Intake	Standard	5.455 — 5.470 (0.2148 — 0.2154)
			Exhaust	Standard	5.445 — 5.460 (0.2144 — 0.2150)
	Valve guide inner diameter mm (in)			Standard	5.500 — 5.512 (0.2165 — 0.2170)
	Clearance between valve and valve guide mm (in)		Intake	Standard	0.030 — 0.057 (0.0012 — 0.0022)

		Exhaust	Standard	0.040 — 0.067 (0.0016 — 0.0026)
	Valve guide protrusion amount mm (in)		Standard	11.4 — 11.8 (0.4488 — 0.4646)
Valve & valve shim	Valve stem end outer diameter mm (in)	Intake	Standard	5.455 — 5.470 (0.2148 — 0.2154)
		Exhaust	Standard	5.445 — 5.460 (0.2144 — 0.2150)
	Valve shim inner diameter mm (in)		Standard	5.500 — 5.560 (0.2165 — 0.2189)
	Clearance between valve and valve shim mm (in)	Intake	Standard	0.030 — 0.105 (0.0012 — 0.0041)
		Exhaust	Standard	0.040 — 0.115 (0.0016 — 0.0045)
Valve seat	Seating width between valve and valve seat mm (in)	Intake	Standard	0.8 — 1.6 (0.0315 — 0.0630)
		Exhaust	Standard	1.1 — 1.7 (0.0433 — 0.0669)
	Seating angle between valve and valve seat			45°
	Seating position between valve and valve seat			Valve face center
Valve spring	Free length (Reference) mm (in)		Standard	42.64 (1.6787)
	Tension/spring height N (kgf, lb)/mm (in)	Set	Standard	182 — 210 (18.56 — 21.41, 40.92 — 47.22)/33.0 (1.2992)
		Lift	Standard	475 — 525 (48.43 — 53.53, 106.80 — 118.04)/22.0 (0.8661)
	Squareness (at height of 30 mm (1.1811 in))		Standard	2.5°, 1.4 mm (0.0551 in) or less
Cylinder block & piston	Cylinder block warpage (Mating surface with cylinder head) mm (in)		Limit	0.025 (0.0010)
	Grinding limit of cylinder block mm (in)			204.95 (8.0689) or less
	Height of cylinder block mm (in)		Standard	205.0 (8.0709)
	Inner diameter of cylinder liner mm (in)	Cylinder bore size mark A	Standard	84.005 — 84.015 (3.3073 — 3.3077)
		Cylinder bore size mark B	Standard	83.995 — 84.005 (3.3069 — 3.3073)
	Cylindricality of cylinder liner mm (in)		Limit	0.030 (0.0012)
	Out-of-roundness of cylinder liner mm (in)		Limit	0.030 (0.0012)
	Piston grade point mm (in)			38.0 (1.4961)

	Piston outer diameter mm (in)	Standard Size	Grade A	Standard	83.995 — 84.005 (3.3069 — 3.3073)
			Grade B	Standard	83.985 — 83.995 (3.3065 — 3.3069)
		0.25 (0.0098) OS		Standard	84.235 — 84.255 (3.3163 — 3.3171)
		0.50 (0.0197) OS		Standard	84.485 — 84.505 (3.3262 — 3.3270)
	Clearance between cylinder liner and piston mm (in)			Standard	0.000 — 0.020 (0.0000 — 0.0008)
	Inner diameter of cylinder liner boring limit (diameter) mm (in)				84.505 (3.3270) or less
Piston and piston pin	Degree of fit				Piston pin must be fitted into position with thumb at 20°C (68°F).
	Clearance between piston and piston pin mm (in)			Standard	0.004 — 0.008 (0.0002 — 0.0003)
Piston ring	Closed gap mm (in)	Compression ring	Top ring	Standard	0.20 — 0.25 (0.0079 — 0.0098)
			Second ring	Standard	0.40 — 0.50 (0.0157 — 0.0197)
		Oil ring (Upper rail and lower rail)		Standard	0.10 — 0.35 (0.0039 — 0.0138)
	Clearance between compression ring and piston mm (in)		Top ring	Standard	0.040 — 0.080 (0.0016 — 0.0031)
			Second ring	Standard	0.030 — 0.070 (0.0012 — 0.0028)
Connecting rod and connecting rod bearing	Bend or twist per 100 mm (3.9370 in) in length mm (in)			Limit	0.10 (0.0039)
	Thrust clearance mm (in)			Standard	0.070 — 0.330 (0.0028 — 0.0130)
	Connecting rod bearing thickness (at center) mm (in)		Standard size	Standard	1.492 — 1.508 (0.0587 — 0.0594)
			0.03 (0.0012) US	Standard	1.511 — 1.515 (0.0595 — 0.0596)

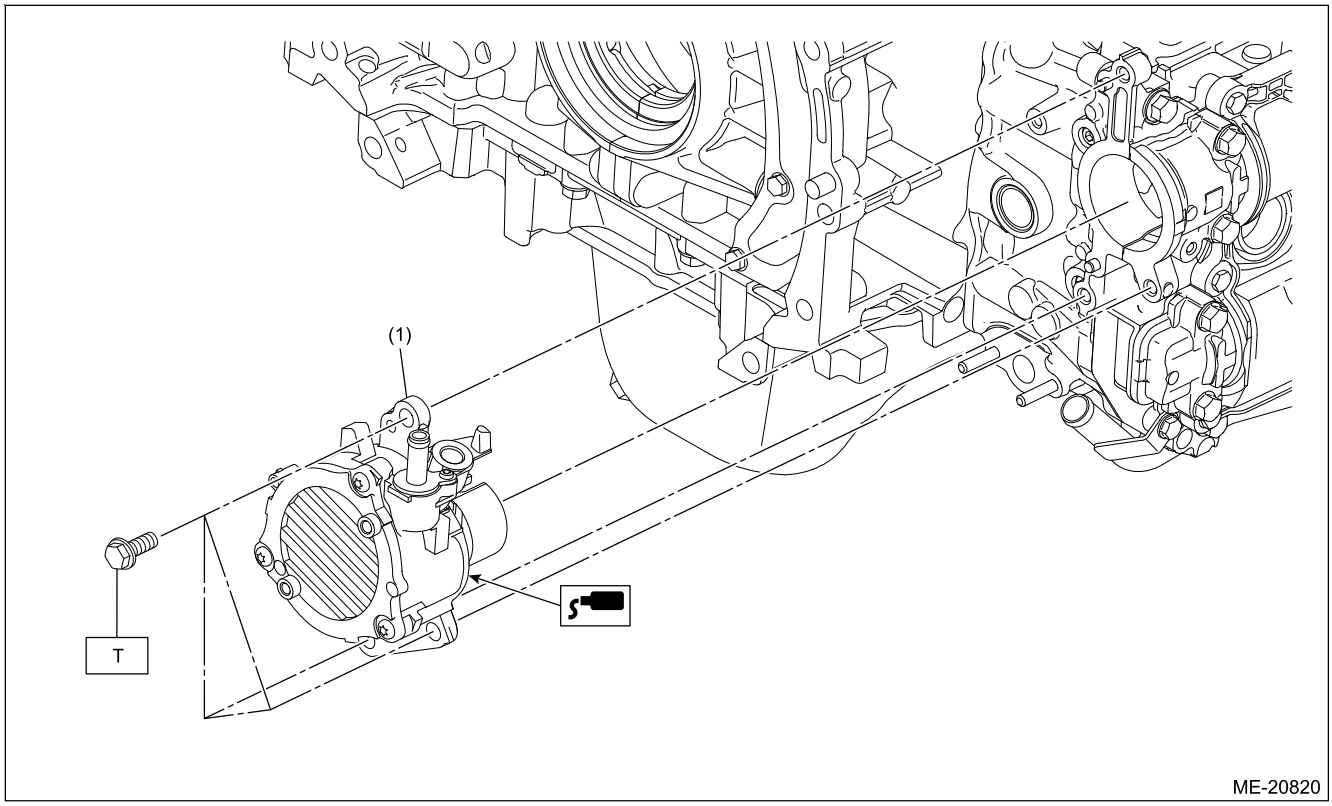
MECHANICAL(H4DO) > General Description

COMPONENT

1. V-BELT AND V-BELT TENSIONER



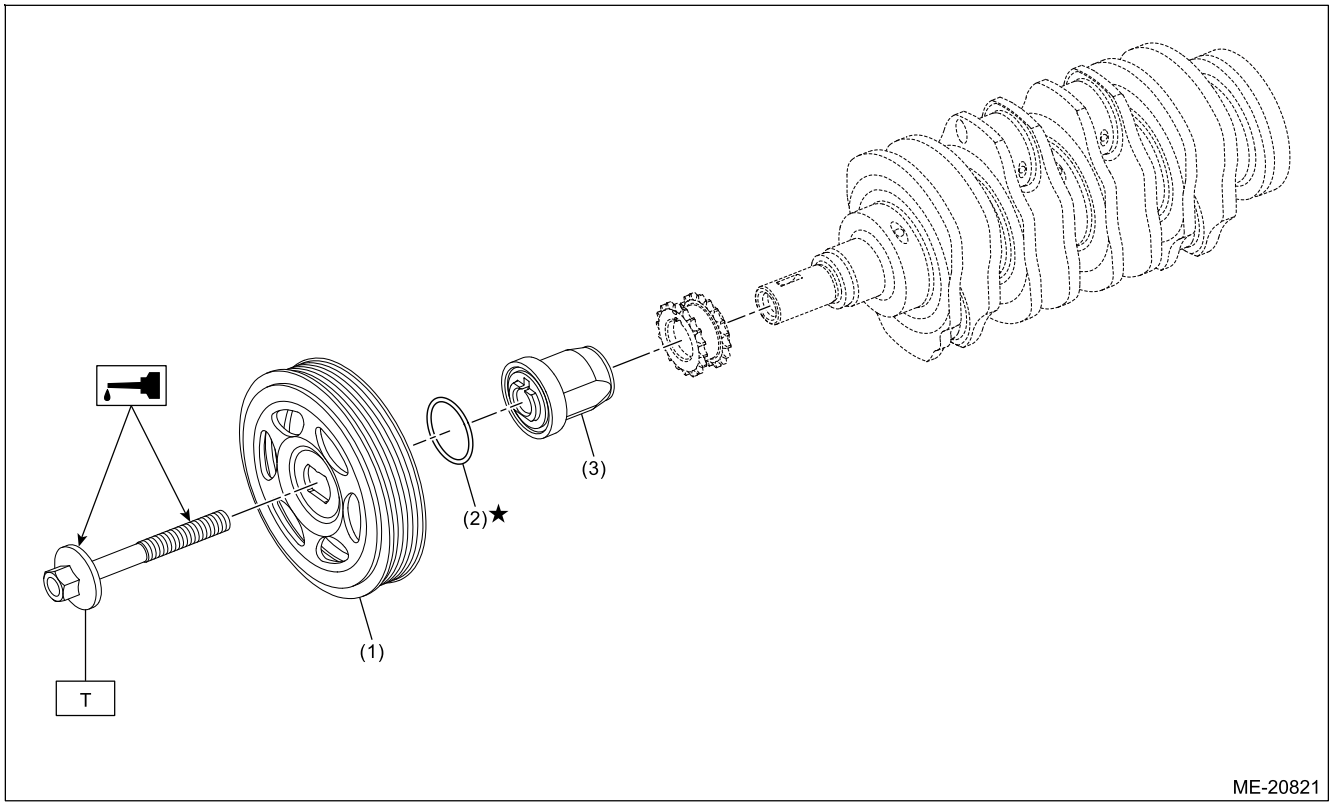
(1) V-belt

(2) V-belt tensioner

Tightening torque: N·m (kgf-m, ft-lb)

T: 19 (1.9, 14.0)

2. VACUUM PUMP



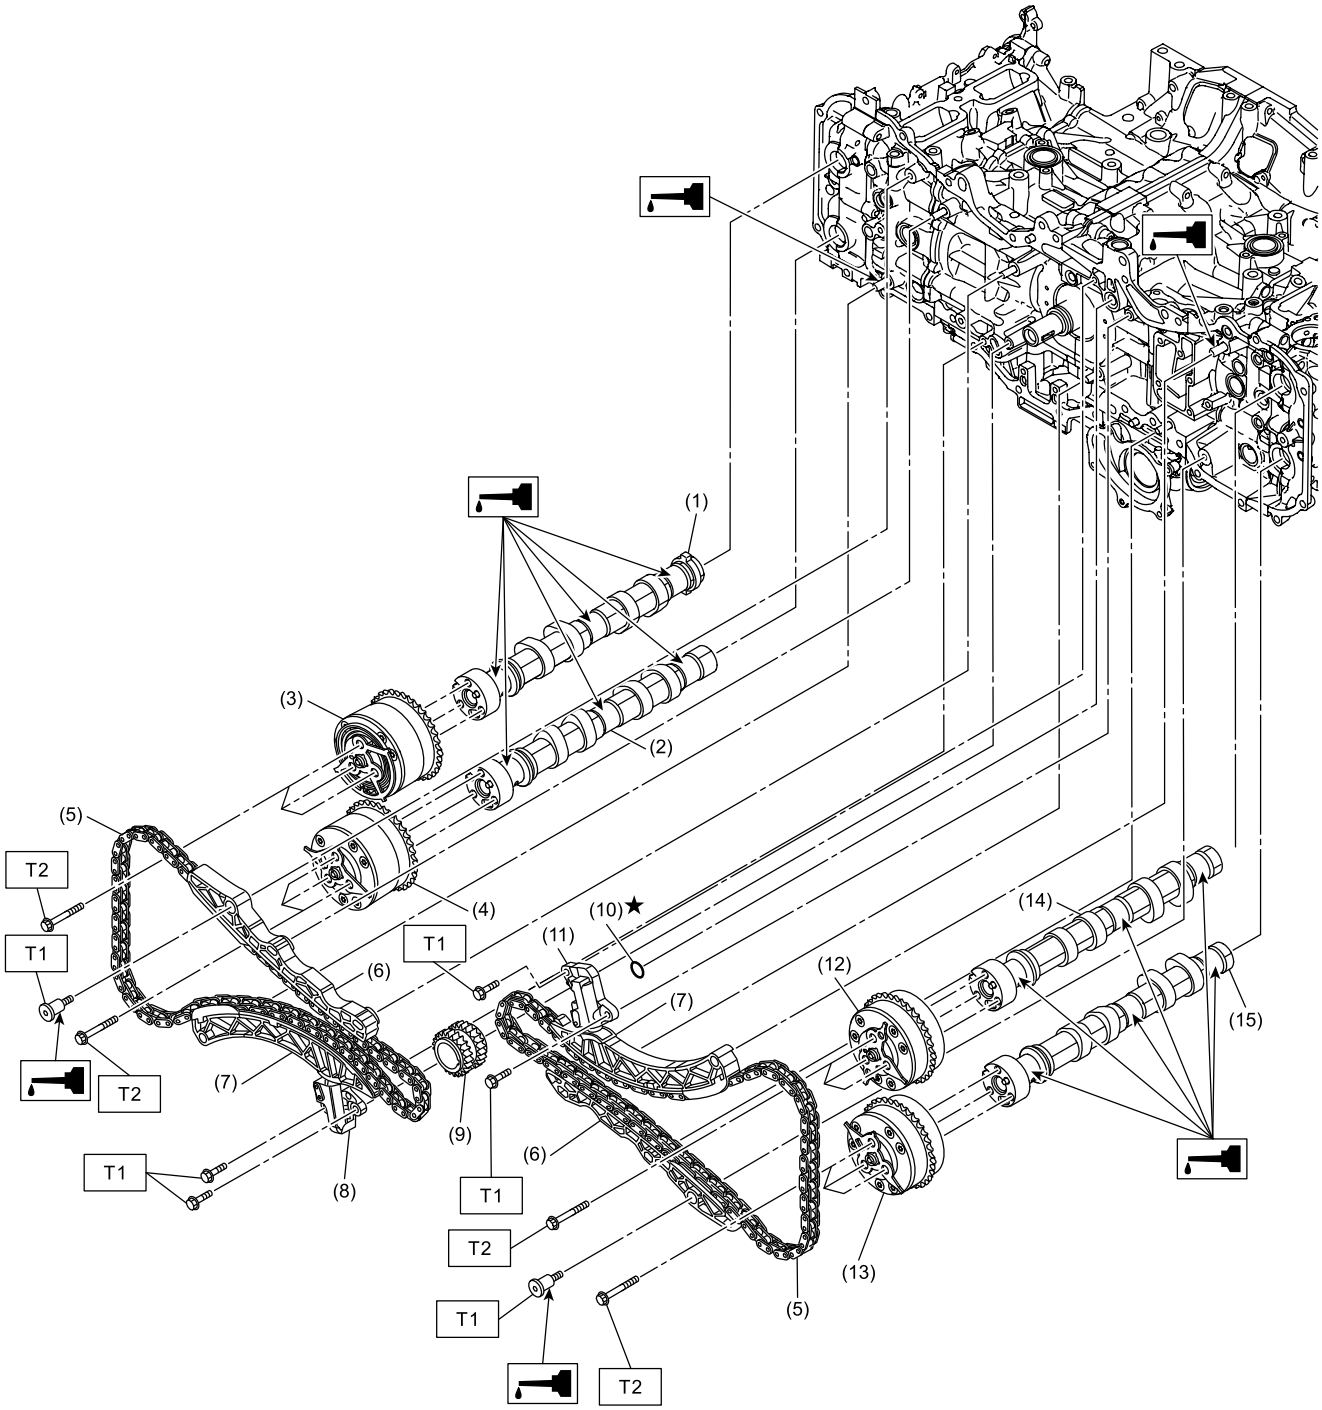
(1) Vacuum pump

Tightening torque: N·m (kgf-m, ft-lb)

T: 16 (1.6, 11.8)

3. CRANK PULLEY

(1) Crank pulley



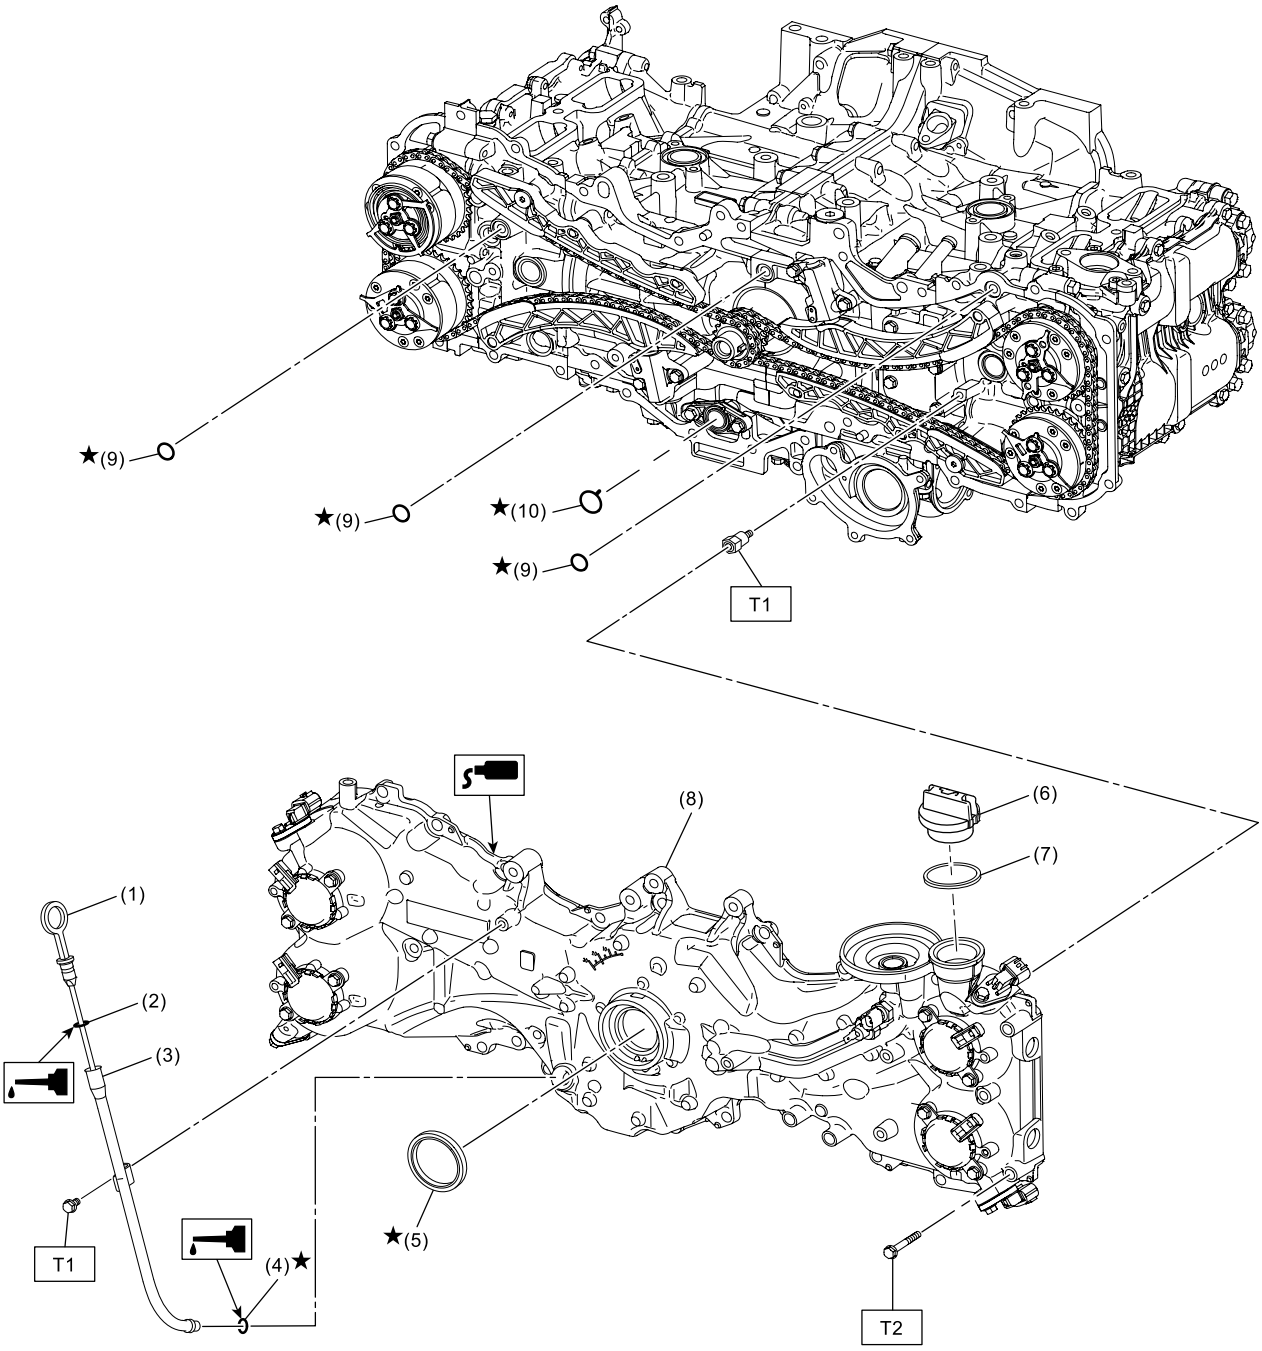
(2) O-ring

(3) Crank pulley boss

Tightening torque: N·m (kgf-m, ft-lb)

T: Ref. to MECHANICAL(H4DO)>Crank Pulley>INSTALLATION.

4. TIMING CHAIN & CAMSHAFT



ME-20822

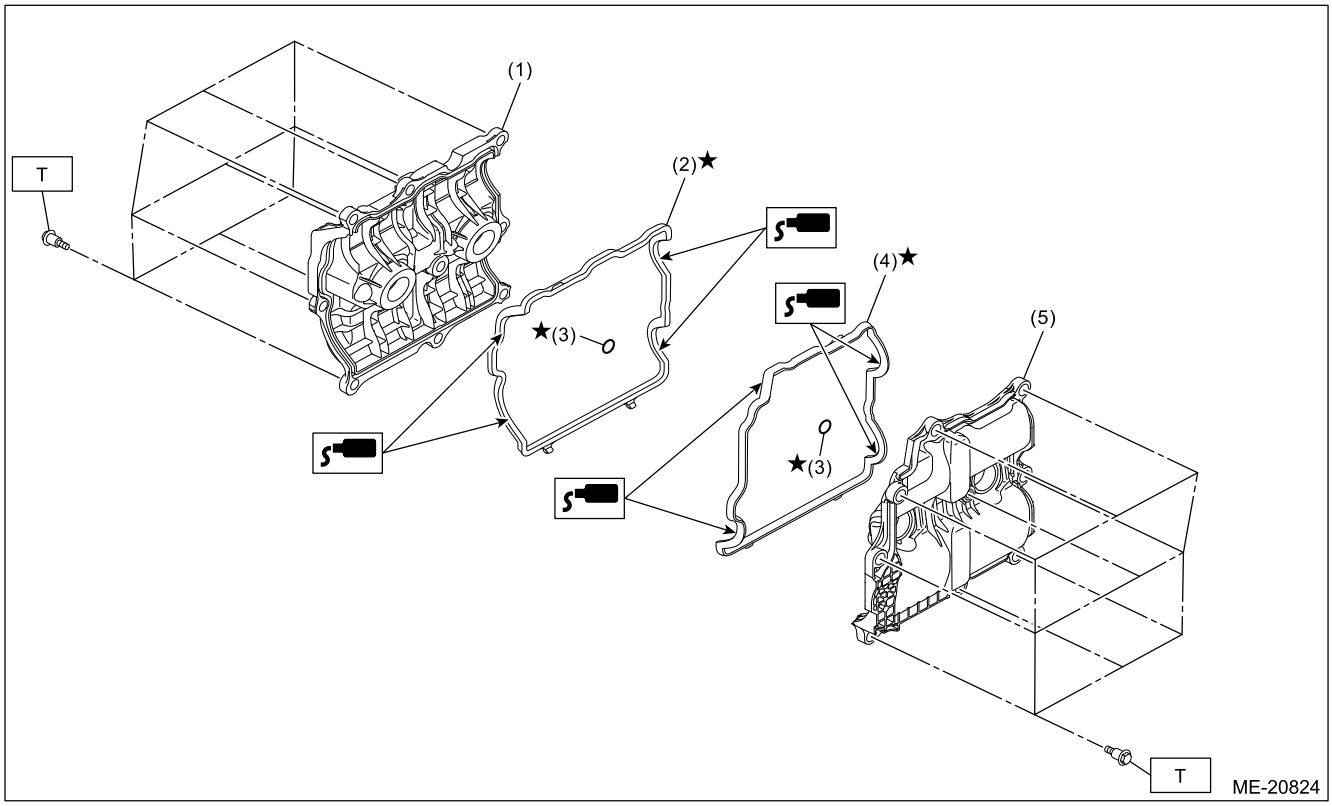
(1) Intake camshaft RH
(2) Exhaust camshaft RH
(3) Intake cam sprocket RH
(4) Exhaust cam sprocket RH
(5) Timing chain
(6) Chain guide
(7) Chain tension lever
(8) Chain tensioner RH
(9) Crank sprocket
(10) O-ring
(11) Chain tensioner LH
(12) Intake cam sprocket LH
(13) Exhaust cam sprocket LH
(14) Intake camshaft LH
(15) Exhaust camshaft LH

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6.4 (0.7, 4.7)
T2: 18 (1.8, 13.3)

5. CHAIN COVER

ME-20823



(1) Oil level gauge
(2) O-ring
(3) Oil level gauge guide
(4) O-ring
(5) Front oil seal
(6) Oil filler cap
(7) Gasket
(8) Chain cover
(9) O-ring
(10) O-ring

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6.4 (0.7, 4.7)

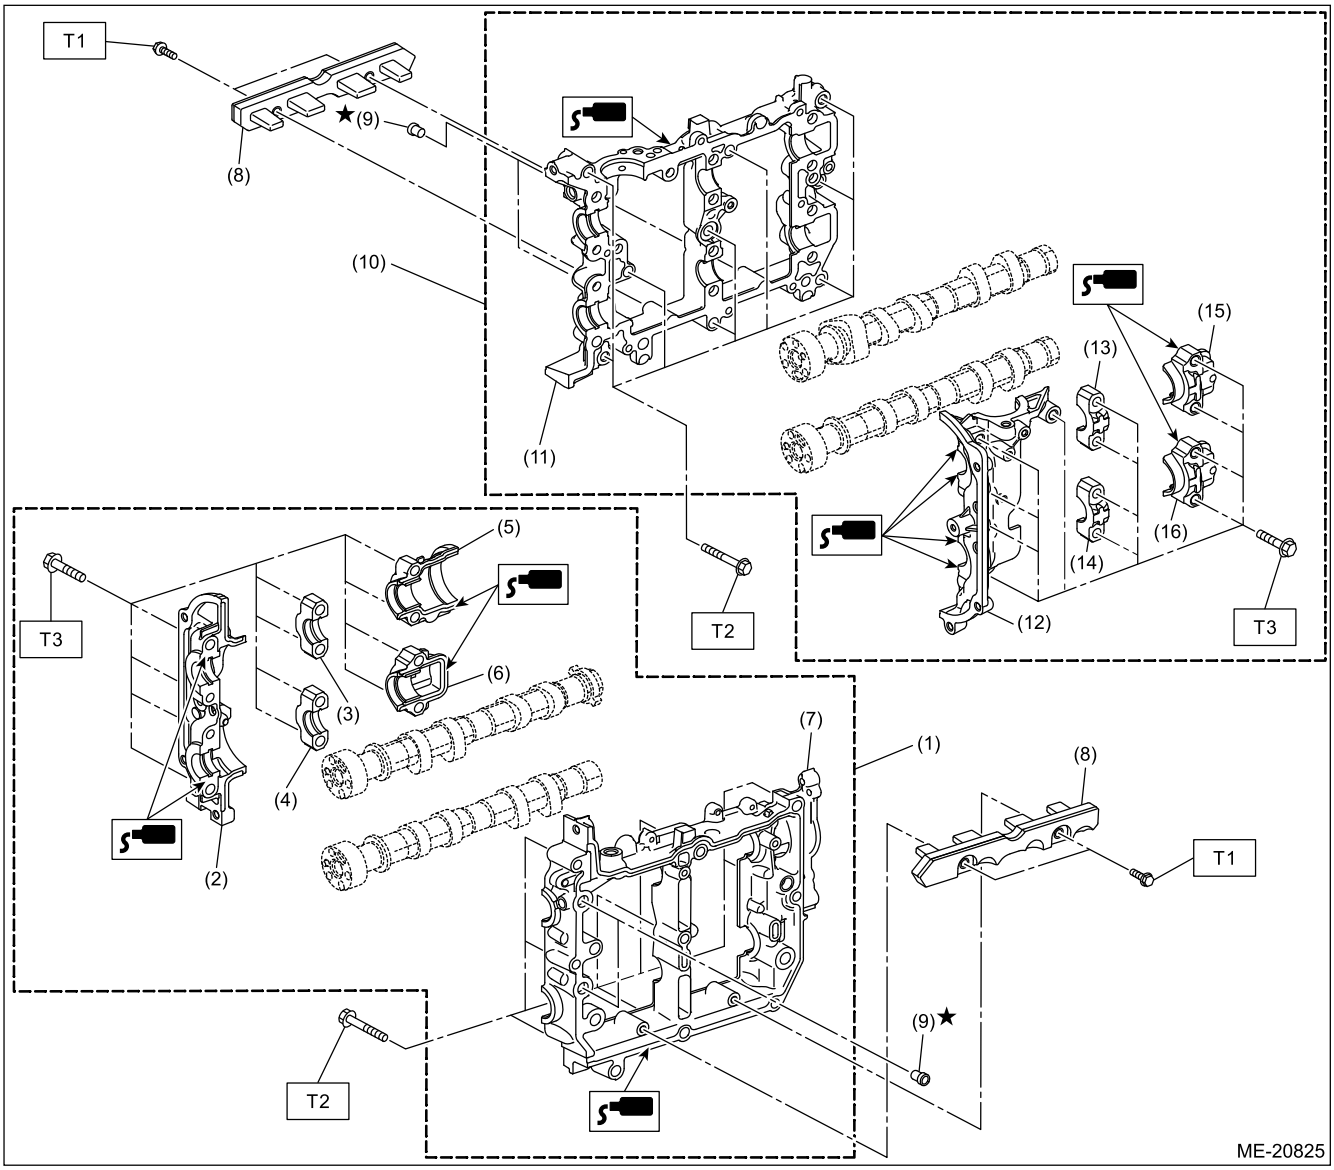
T2: Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

6. ROCKER COVER

(1) Rocker cover RH

(2) Rocker cover gasket RH

(3) Rocker cover gasket



(4) Rocker cover gasket LH

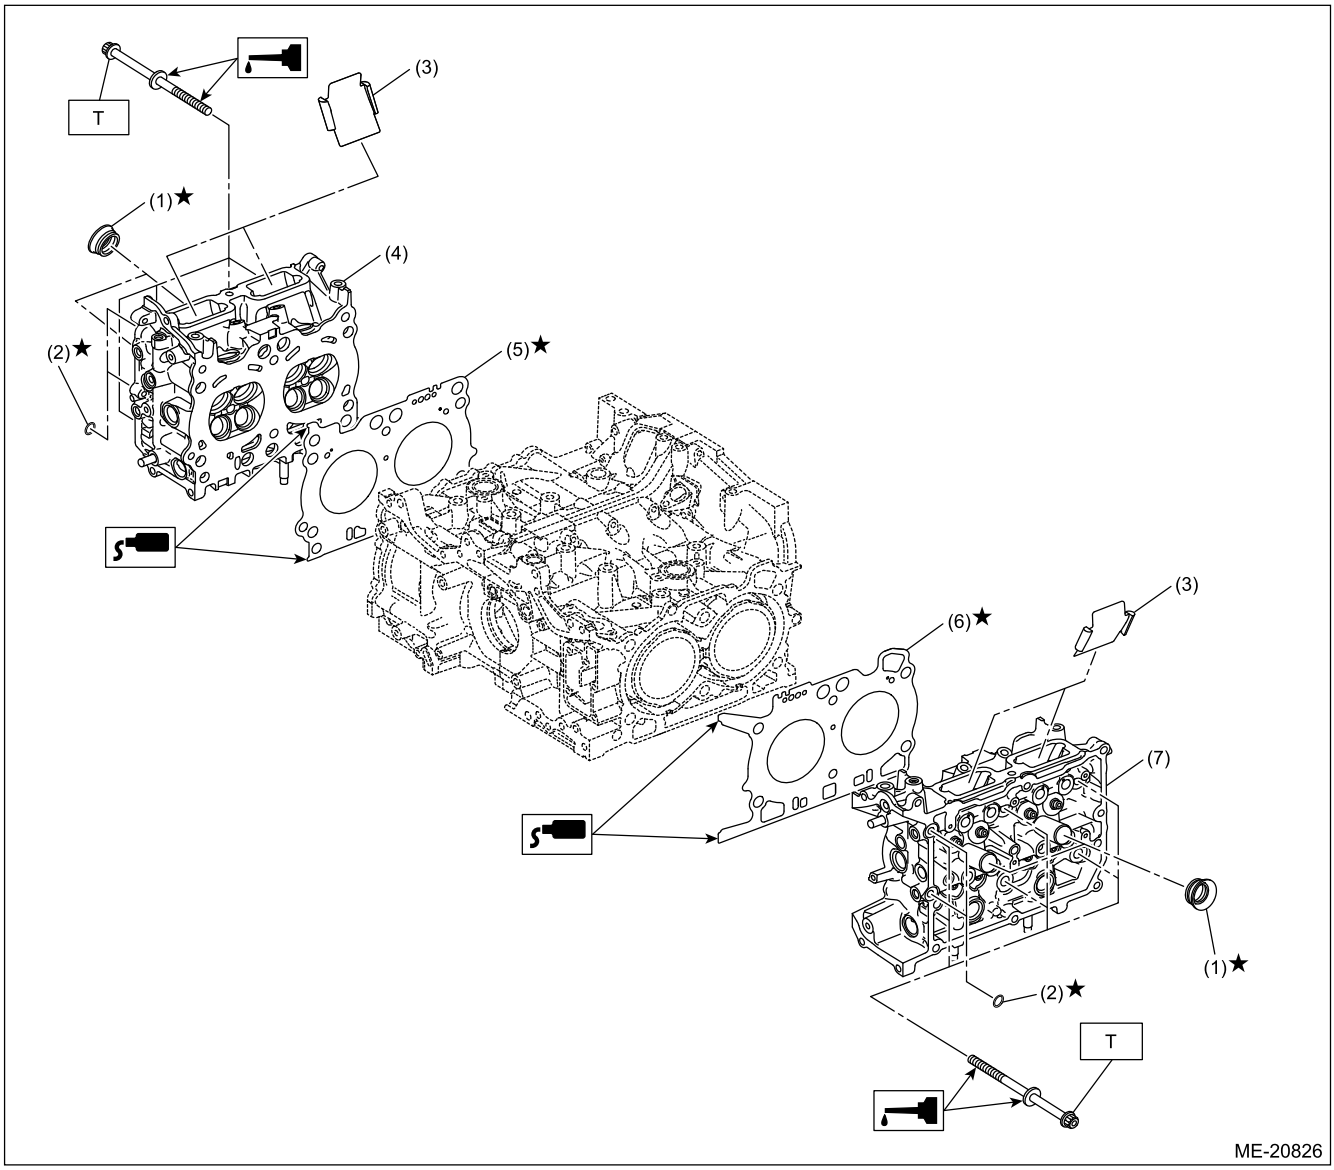
(5) Rocker cover LH

Tightening torque: N·m (kgf-m, ft-lb)

T: Ref. to MECHANICAL(H4DO)>Rocker Cover>INSTALLATION.

7. CAM CARRIER

(1) Cam carrier ASSY RH
(2) Front camshaft cap RH
(3) Intake center camshaft cap RH
(4) Exhaust center camshaft cap RH
(5) Intake rear camshaft cap RH
(6) Exhaust rear camshaft cap RH
(7) Cam carrier RH
(8) Oil spacer
(9) Filter
(10) Cam carrier ASSY LH
(11) Cam carrier LH
(12) Front camshaft cap LH
(13) Intake center camshaft cap LH
(14) Exhaust center camshaft cap LH
(15) Intake rear camshaft cap LH
(16) Exhaust rear camshaft cap LH



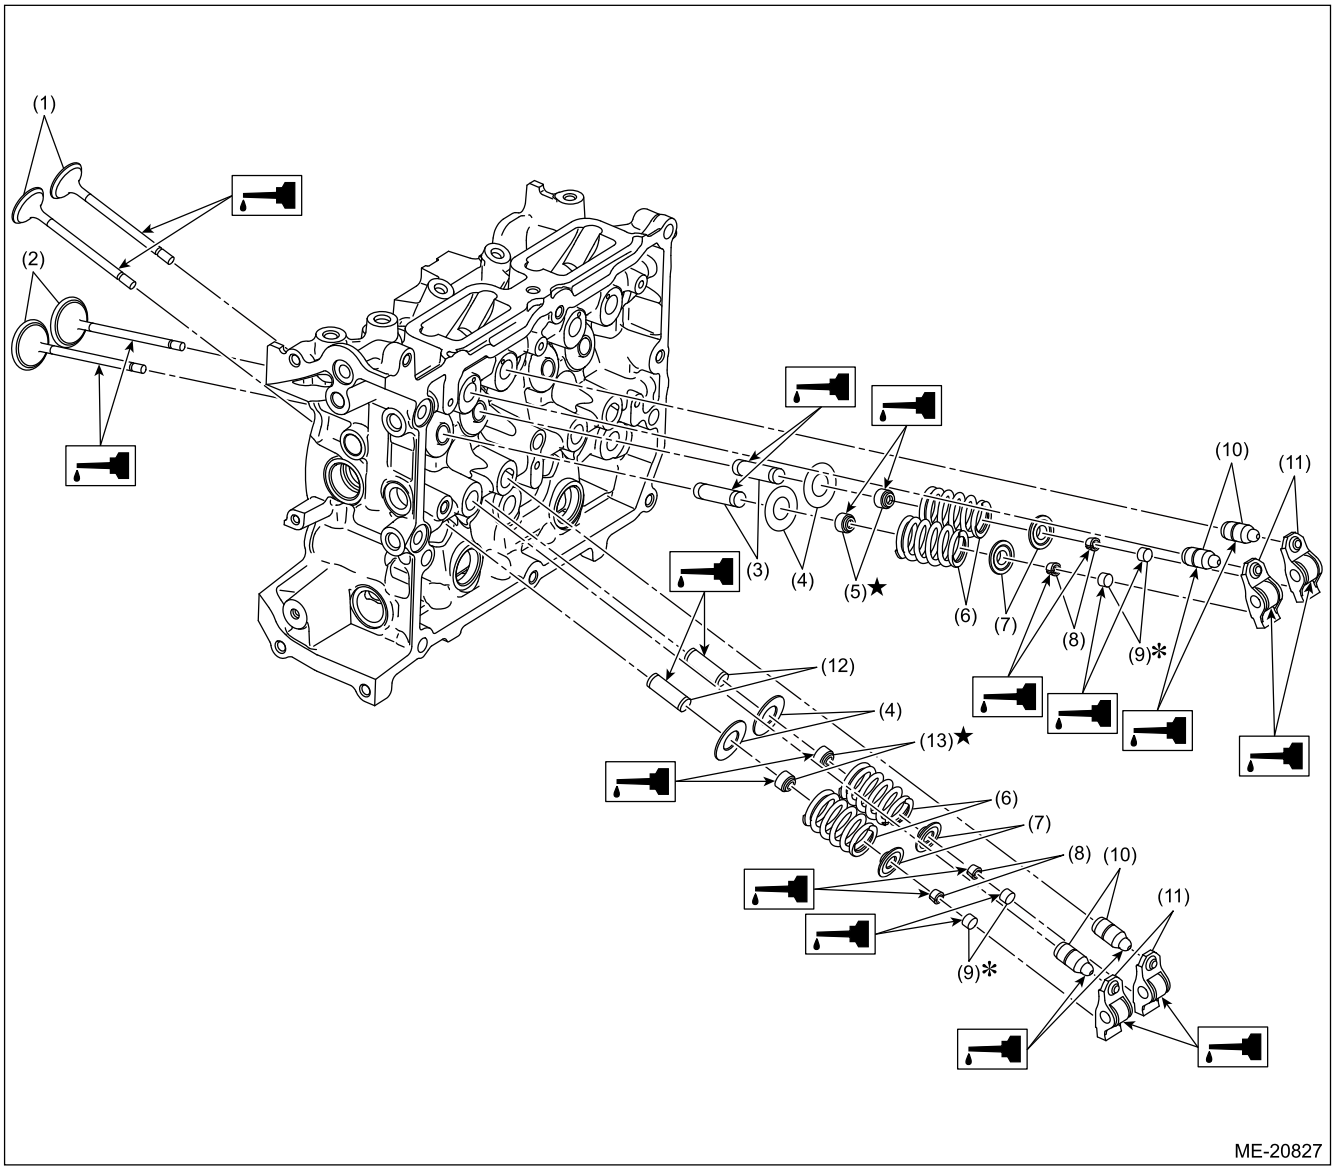
Tightening torque: N·m (kgf-m, ft-lb)

T1: 6.4 (0.7, 4.7)

T2: Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION.

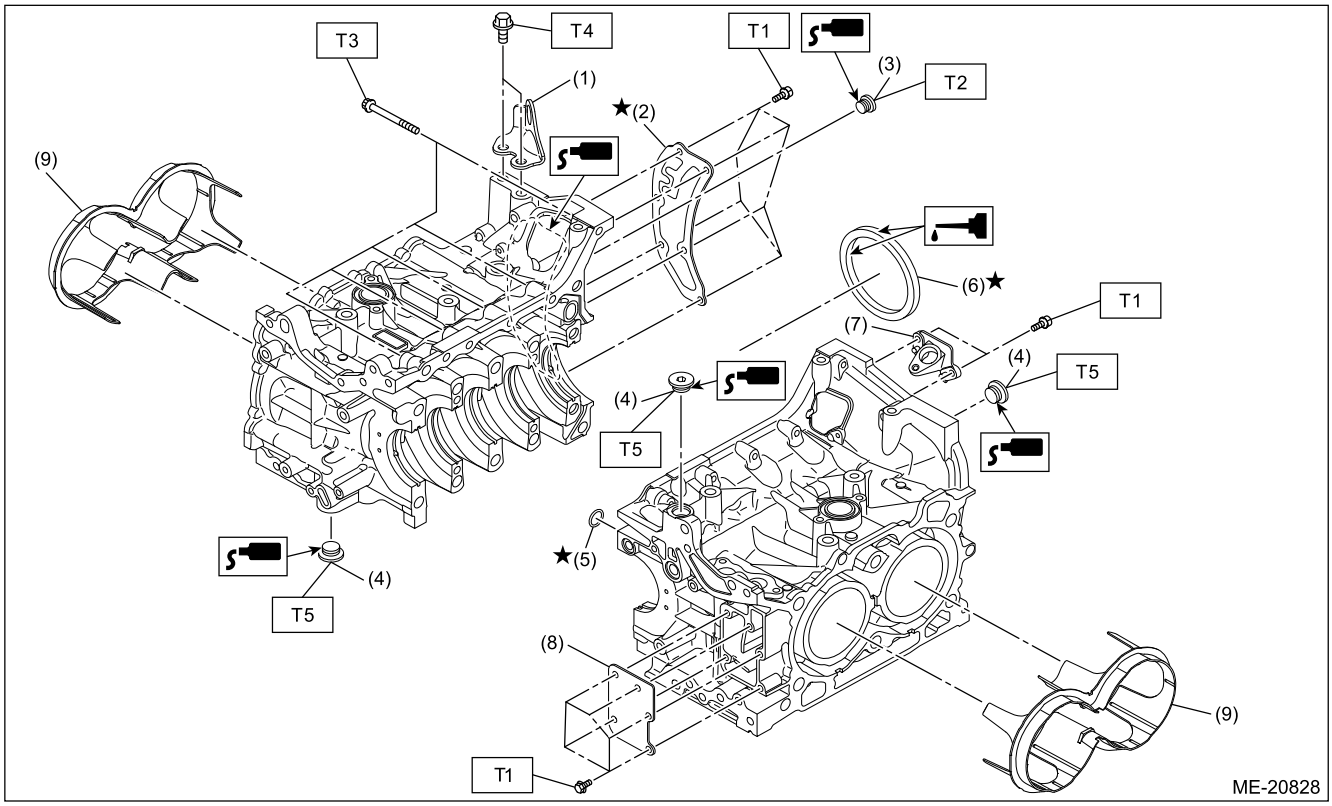
T3: Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY.

8. CYLINDER HEAD



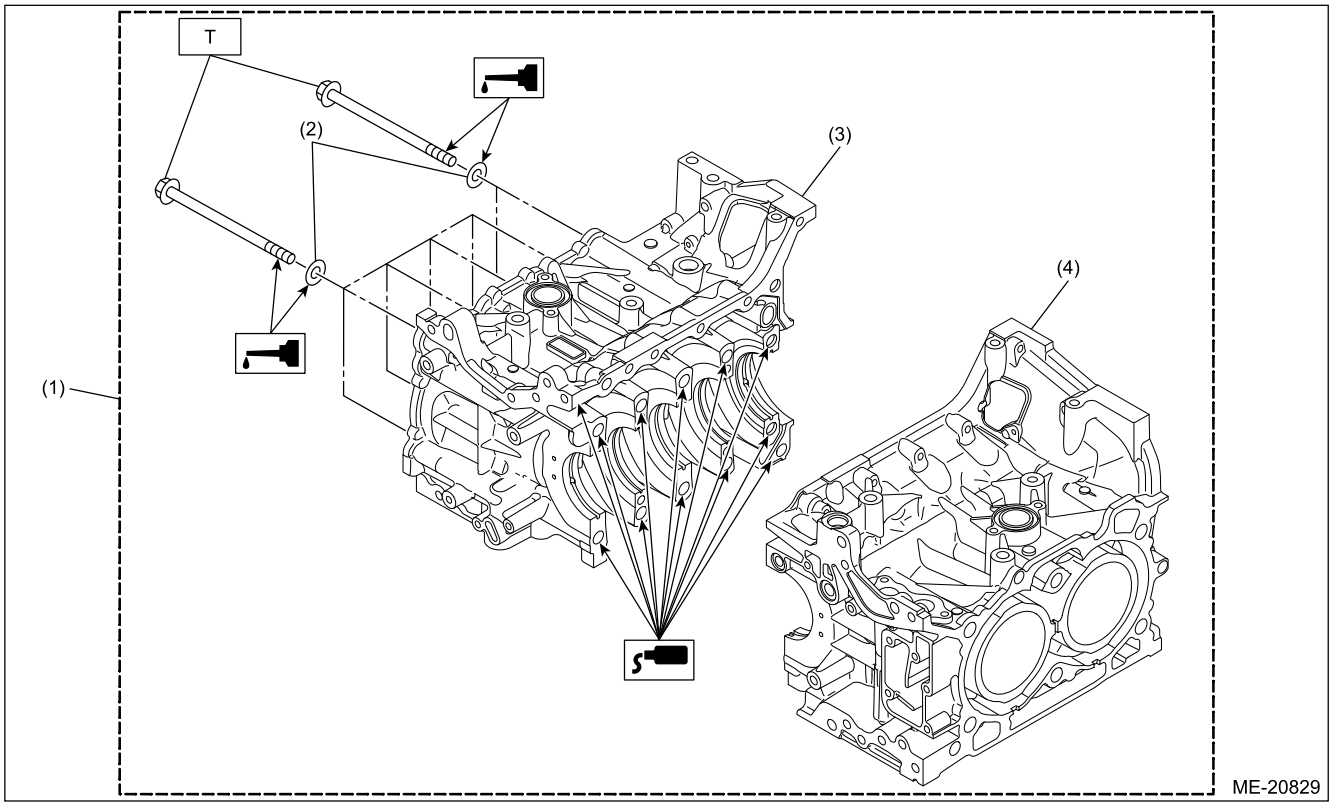
(1) Spark plug pipe gasket
(2) O-ring
(3) Cylinder head plate
(4) Cylinder head RH
(5) Cylinder head gasket RH
(6) Cylinder head gasket LH
(7) Cylinder head LH

Tightening torque: N·m (kgf-m, ft-lb)



T: Ref. to MECHANICAL(H4DO)>Cylinder Head>INSTALLATION.

9. VALVE ASSEMBLY



(1) Exhaust valve
(2) Intake valve
(3) Intake valve guide
(4) Valve spring seat
(5) Intake valve oil seal
(6) Valve spring
(7) Valve spring retainer
(8) Valve collet
(9) Valve shim
(10) Roller rocker arm pivot
(11) Roller rocker arm
(12) Exhaust valve guide
(13) Exhaust valve oil seal

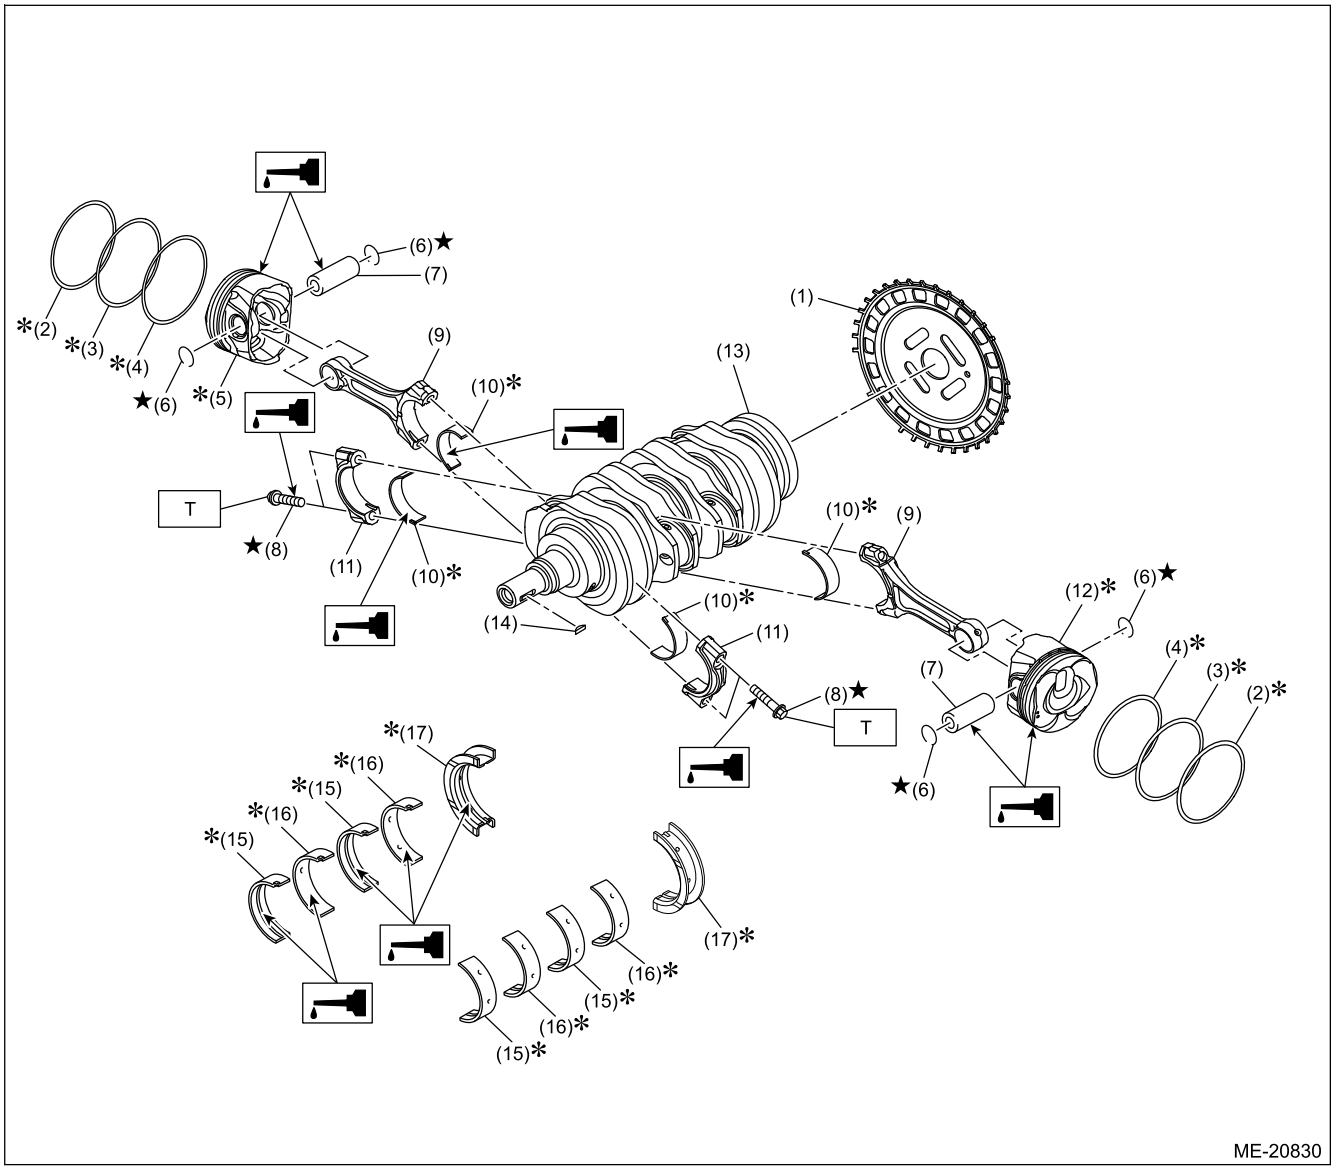
10. CYLINDER BLOCK 1

(1) Engine rear hanger	(6) Rear oil seal	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Oil separator cover	(7) Crankshaft position sensor holder	***T1: 6.4 (0.7, 4.7)***
(3) Cylinder block plug	(8) Cylinder block plate	***T2: 16 (1.6, 11.8)***
(4) Main gallery plug	(9) Water jacket spacer	***T3: 25 (2.5, 18.4)***
(5) O-ring		***T4: 36 (3.7, 26.6)***
		T5: Ref. to MECHANICAL(H4DO)>Cylinder Block>ASSEMBLY > CYLINDER BLOCK.

11. CYLINDER BLOCK 2

(1) Cylinder block ASSY

(2) Washer



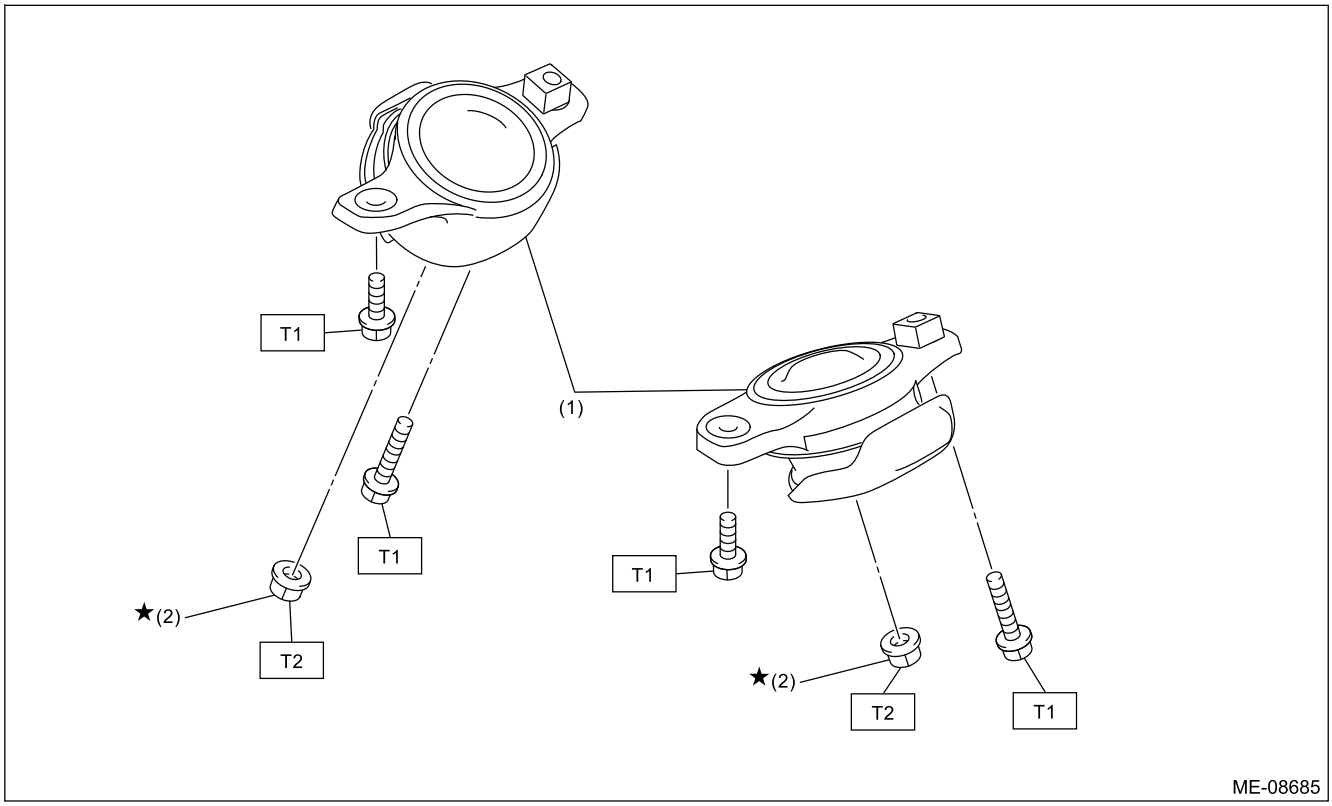
(3) Cylinder block RH

(4) Cylinder block LH

Tightening torque: N·m (kgf-m, ft-lb)

T: Ref. to MECHANICAL(H4DO)>Cylinder Block>INSTALLATION.

12. CRANKSHAFT AND PISTON



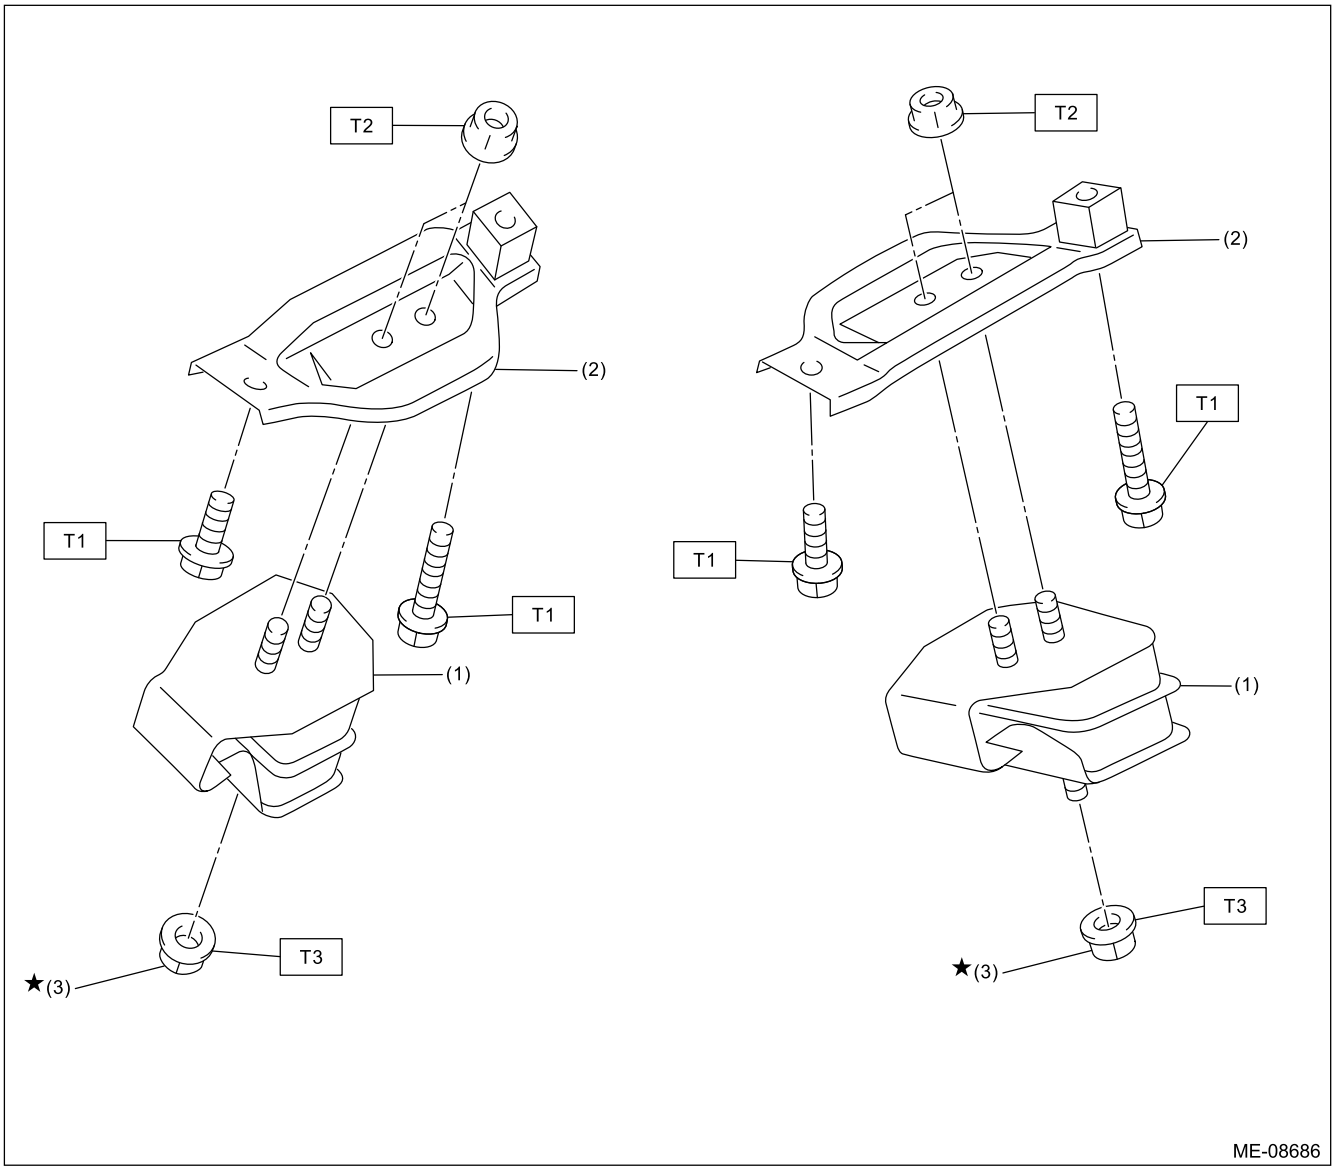
(1) Crankshaft position sensor plate
(2) Top ring
(3) Second ring
(4) Oil ring
(5) Piston RH
(6) Circlip
(7) Piston pin
(8) Connecting rod cap bolt
(9) Connecting rod
(10) Connecting rod bearing
(11) Connecting rod cap
(12) Piston LH
(13) Crankshaft
(14) Woodruff key
(15) Crankshaft bearing #1, #3
(16) Crankshaft bearing #2, #4
(17) Crankshaft bearing #5

Tightening torque: N·m (kgf-m, ft-lb)

T: Ref. to MECHANICAL(H4DO)>Cylinder Block>INSTALLATION.

13. ENGINE MOUNTING

- CVT model



(1) Front cushion rubber (2) Nut

Tightening torque: N·m (kgf-m, ft-lb)

T1: 35 (3.6, 25.8)

T2: 90 (9.2, 66.4)

- MT model

(1) Front cushion rubber	(3) Nut	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Front engine mounting bracket		***T1: 35 (3.6, 25.8)***
		T2: 42 (4.3, 31.0)
		T3: 90 (9.2, 66.4)

MECHANICAL(H4DO) > General Description

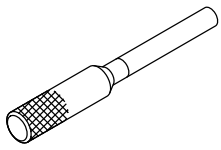
CAUTION

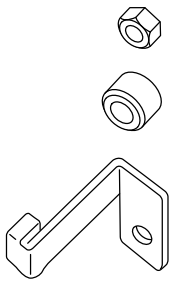
- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use. When lifting up the vehicle, make sure to support the vehicle at the jack-up points.
- Be careful not to let any oil or grease contact the clutch disc or flywheel.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil when being assembled.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Always use new application oil during work.

PREPARATION TOOL

1. SPECIAL TOOL





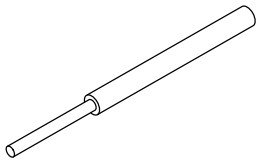


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
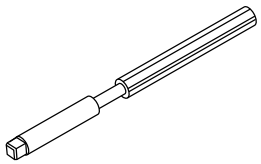
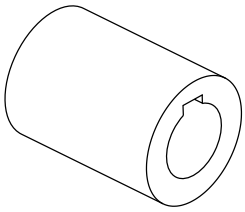
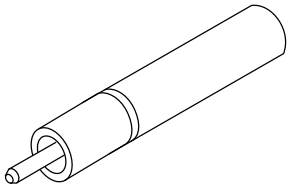
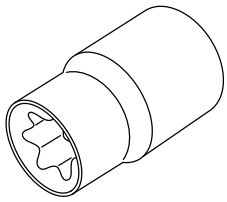
 ST-499267300	499267300	STOPPER PIN	Used for removing and installing the V-belt tensioner assembly.
 ST-498277200	498277200	STOPPER SET	Used for preventing the torque converter from falling when removing and installing the engine. (CVT model)
 ST-499765700	499765700	VALVE GUIDE REMOVER AND INSTALLER	Used for removing and installing valve guide.









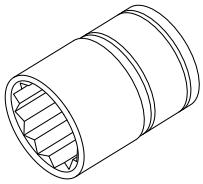


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
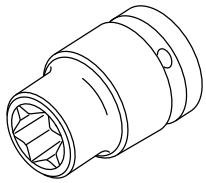
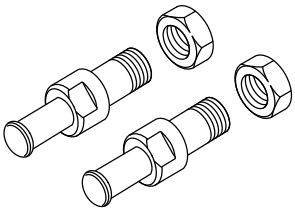
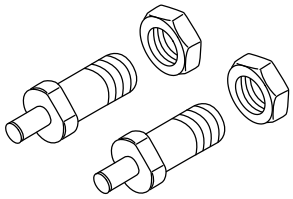
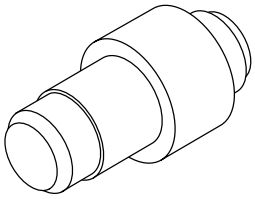
 ST-499765900	499765900	VALVE GUIDE REAMER	Used for reaming valve guides.
 ST18252AA000	18252AA000	CRANKSHAFT SOCKET	Used for rotating crankshaft.
 ST18261AA010	18261AA010	VALVE OIL SEAL GUIDE	Used for press-fitting of intake valve oil seals and exhaust valve oil seals.
 ST18270AA020	18270AA020	SOCKET	Used for removing and installing connecting rod.
 ST18270AA050	18270AA050 (Newly adopted tool)	SOCKET	Used for installing the drive plate mounting bolt. **Note:** • **This tool is made by KYOTO TOOL CO., LTD. (KTC). Item number: B3-14W** • **To make it easier to obtain, it has been specified as a special tool.**









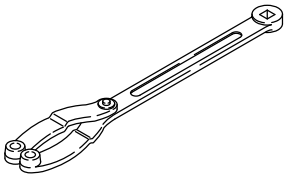


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
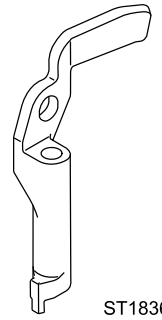
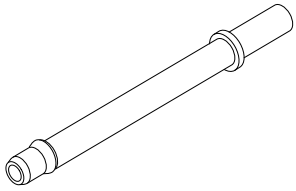
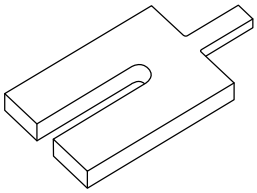
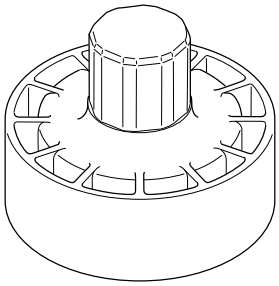
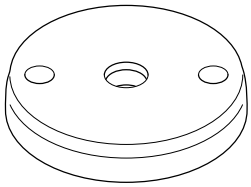
 ST18270KA010	18270KA010	SOCKET	Used for installing and removing cam sprocket.
 ST18334AA000	18334AA000	PULLEY WRENCH PIN SET	• Used for removing and installing the crank pulley. • Used together with PULLEY WRENCH (18355AA000).
 ST18334AA020	18334AA020	PULLEY WRENCH PIN SET	• Used for rotating the intake cam sprocket LH. • Used together with PULLEY WRENCH (18355AA000).
 ST18350AA000	18350AA000	CONNECTING ROD BUSHING REMOVER AND INSTALLER	Used for removing and installing the connecting rod bushing at connecting rod small end.
 ST18355AA000	18355AA000	PULLEY WRENCH	• Used for removing and installing the crank pulley. • Used for rotating the intake cam sprocket LH. • Used together with PULLEY WRENCH PIN SET (18334AA000) or PULLEY WRENCH PIN SET (18334AA020).

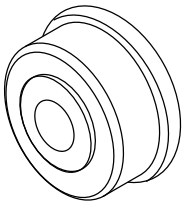


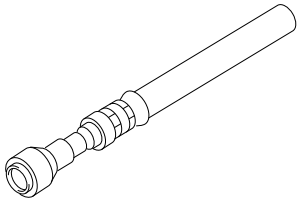












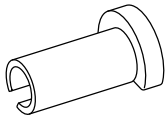


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
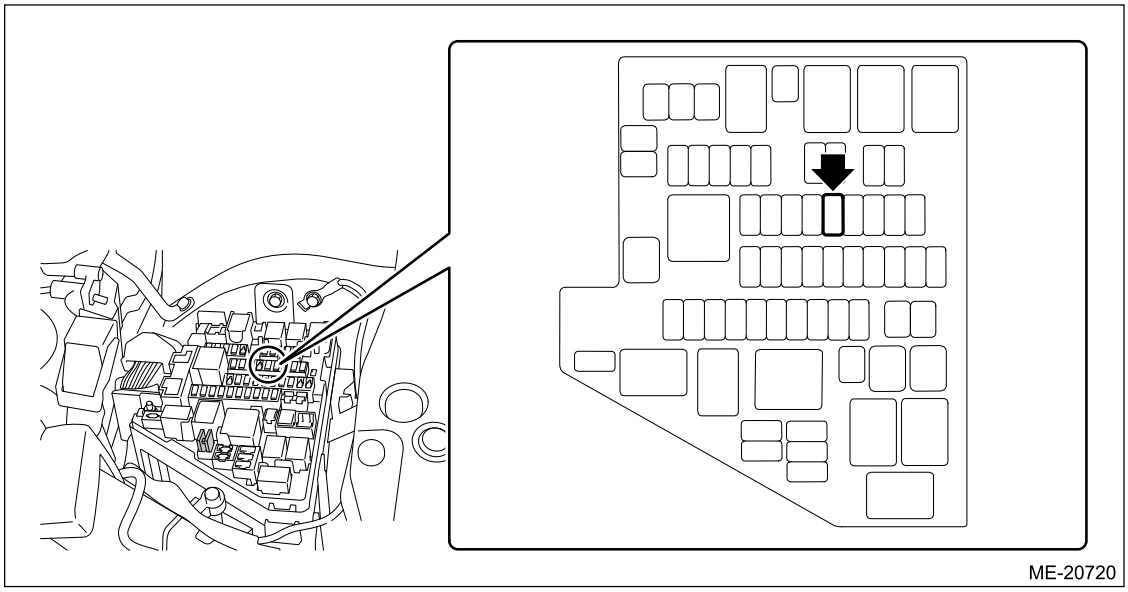
 ST18360AA040	18360AA040	HANGER	• Used for removing and installing engine. • Used for removing and installing rocker cover. • Used together with BOLT (18363AA050).
 ST18363AA050	18363AA050	BOLT	• Used for removing and installing engine. • Used for removing and installing rocker cover. • Used together with HANGER (18360AA040).
 ST18471AA000	18471AA000	FUEL PIPE ADAPTER	Used for inspecting the fuel pressure.
 ST18632AA030	18632AA030	STAND ASSY	Used for removing and installing rocker cover.
 ST18657AA030	18657AA030	OIL SEAL INSTALLER	• Used for installing the rear oil seal of engine. • Used together with OIL SEAL GUIDE (18671AA020).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18671AA020	18671AA020	OIL SEAL GUIDE	• Used for installing the rear oil seal of engine. • Used together with OIL SEAL INSTALLER (18657AA030).
 ST41399FG020	41399FG020	SPECIAL TOOL B	Used for installing the front oil seal of engine.
 ST42075AG690	42075AG690	FUEL HOSE	Used for inspecting the fuel pressure. **Note:** **This is the SUBARU genuine part.**
 ST42099AE000	42099AE000	QUICK CONNECTOR RELEASE	Used for removing FUEL HOSE (42075AG690). **Note:** **FUEL HOSE (42075AG690) is used for checking the fuel pressure.**
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Compression gauge	Used for measuring compression.
Vacuum gauge	Used for measuring intake manifold vacuum.
Oil pressure gauge	Used for measuring engine oil pressure.
Fuel pressure gauge	Used for measuring fuel pressure.
Thickness gauge	Used for various inspections.
Engine stand	Used for disassembling and assembling engine.
Angle gauge	Used for angle tightening.
Valve spring compressor	Used for removing and installing valve spring.
Piston ring compressor	Used for installing the piston into the cylinder block.
DST-i	Used together with Subaru Select Monitor 4.

INSPECTION

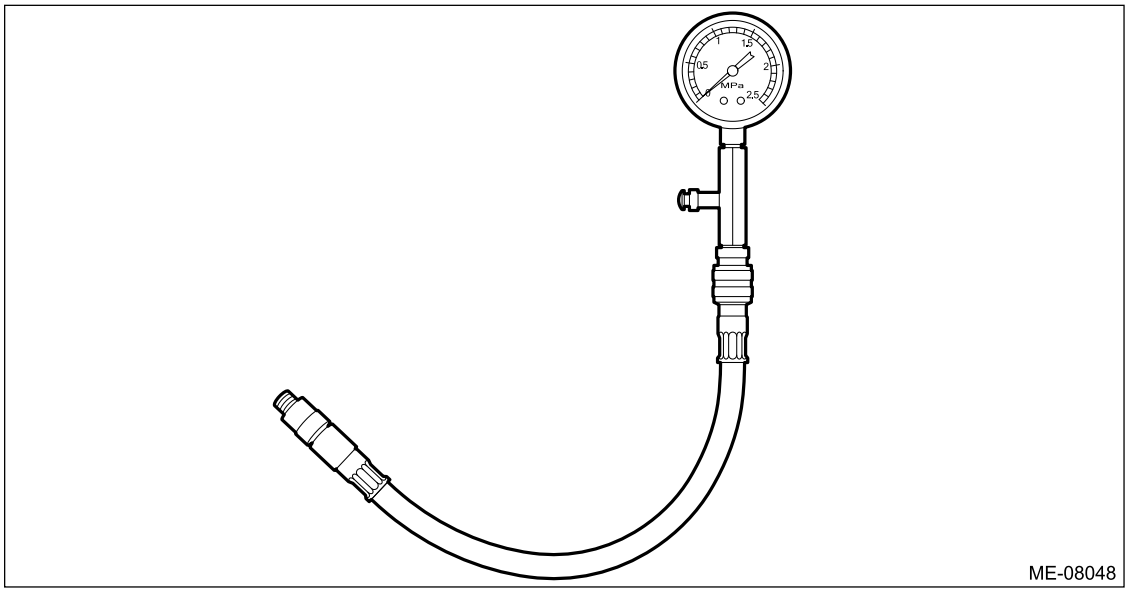


Caution:

After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

Note:

- **Before checking the compression pressure, the compression condition of each cylinder can be confirmed as a guide by using the compression measurement mode in Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Active Test>OPERATION.**
- **In the compression measurement mode, the compression condition is judged by each cylinder speed. The high speed cylinder has low compression pressure and low speed cylinder has high compression pressure.**



1. After warming-up the engine, turn the ignition switch to OFF.
2. Make sure that the battery is fully charged.
3. Check the starter motor for satisfactory performance and operation.
4. Remove the fuse of fuel pump from main fuse box.

5. Start the engine and run it until it stalls.
6. After the engine stalls, crank it for five more seconds.
7. Turn the ignition switch to OFF.
8. Remove all spark plugs. Ref. to IGNITION(H4DO)>Spark Plug>REMOVAL.
9. Install the compression gauge to the spark plug hole.

   Note:

   When using a screw-in type compression gauge, the screw should be less than 25 mm (0.98 in) long.

10. Install the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSTALLATION.

11. Turn the ignition switch to ON.

12. Depress the accelerator pedal to full throttle.

13. Crank the engine by starter motor and read the value when the needle of the compression gauge becomes stable.

Note:

- **Perform at least two measurements per cylinder, and make sure that the values are correct.**
- **If the compression pressure is out of the standard value, check or adjust the pistons, valves and cylinders.**

Compression pressure (at 200 — 300 r/min):

Standard

1,050 — 1,400 kPa (11 — 14 kg/cm^2, 152 — 203 psi)

Difference between cylinders

100 kPa (1 kg/cm^2, 14 psi) or less

14. After inspection, install the related parts in the reverse order of removal.

Note:

When compression pressure is checked, the malfunction indicator light illuminates and DTCs may be stored in ECM. When the malfunction indicator light has illuminated, perform the Clear Memory Mode. Ref. to COMMON (DIAGNOSTICS)>Clear memory>OPERATION.

INSPECTION

1. Before checking the idle speed, check the following item:
   (1) Check the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
   (2) Check the malfunction indicator light does not illuminate.
2. Warm up the engine.
3. Read the engine idle speed using Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor>OPERATION.

   Note:
   - **Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted.**
   - **If idle speed is out of the standard value, refer to the General Diagnosis Table under "Engine Control System". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure.**

   (1) Check the idle speed when no-loaded. (Headlight, blower fan, rear defroster, radiator fan, A/C A/C and etc. are OFF)

   Idle speed (No load, and for CVT model, select lever in "P" or "N" range. For MT model, gear shift lever in neutral position.)

   Standard

   775±100 r/min (CVT model)
   700±100 r/min (MT model)

   (2) Check the idle speed when loaded. (Turn the A/C switch to ON and operate the compressor for at least one minute before measurement.)

   Idle speed (A/C on, and for CVT model, select lever in "P" or "N" range. For MT model, gear shift lever in neutral position.)

   Standard

   800 — 900±50 r/min

INSPECTION

Caution:
After warming-up, engine becomes very hot. Be careful not to burn yourself at measurement.

1. Before checking the ignition timing, check the following item:
   (1) Check the air cleaner element is free from clogging, spark plugs are in good condition, and hoses are connected properly.
   (2) Check the malfunction indicator light does not illuminate.
2. Warm up the engine.
3. Read the ignition timing using Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor>OPERATION.

   Note:
   If ignition timing is out of the standard value, check the ignition control system. Refer to "Engine Control System". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure.

   Ignition timing [BTDC/{r/min}]:
   Standard
   6°±10°/775 (CVT model)
   6°±10°/700 (MT model)

INSPECTION

1. Warm up the engine.
2. Disconnect the brake booster vacuum hose from the intake manifold assembly.

3. Connect the vacuum gauge to the installation area for the brake booster vacuum hose of the intake manifold assembly.

4. Keep the engine at idle speed and read the vacuum gauge indication.

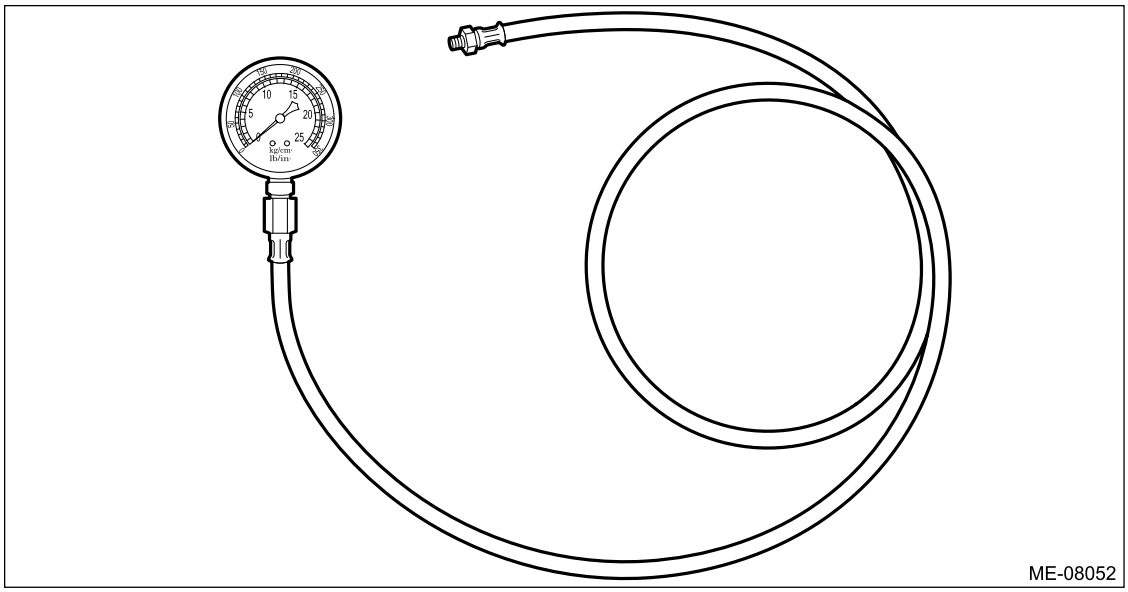
Note:

Condition of engine inside can be diagnosed by observing the behavior of the vacuum gauge needle as described in table below.

Intake manifold vacuum (A/C is at idling, A/C OFF):

Standard

−60.0 kPa (−450 mmHg, −17.72inHg) or more



Diagnosis of engine condition by inspection of intake manifold vacuum	
Vacuum gauge needle behavior	**Possible engine condition**

Diagnosis of engine condition by inspection of intake manifold vacuum	
Vacuum gauge needle behavior	**Possible engine condition**
1. Needle is steady but lower than standard value. This tendency becomes more evident as engine temperature rises.	Leakage around intake manifold gasket, disconnection or damage of vacuum hose
2. Needle intermittently drops below the standard value.	Leakage around cylinder
3. Needle drops suddenly and intermittently from the standard value.	Sticky valve
4. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases.	Weak or broken valve springs
5. Needle vibrates above and below the standard value in narrow range.	Defective ignition system

5. After inspection, install the related parts in the reverse order of removal.

INSPECTION

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the oil pressure switch. Ref. to LUBRICATION(H4DO)>Oil Pressure Switch>REMOVAL.
3. Install the oil pressure gauge to the installation area for the oil pressure switch of the chain cover.

4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Start the engine, and check the oil pressure.

Note:

- **Standard value is based on an engine oil temperature of 80°C (176°F).**
- **If the oil pressure is out of the specification, check oil pump, oil filter and lubrication line. Ref. to LUBRICATION(H4DO)>Engine Lubrication System Trouble in General>INSPECTION.**
- **If the oil pressure warning light is ON and oil pressure is within standard, check the oil pressure switch. Ref. to LUBRICATION(H4DO)>Engine Lubrication System Trouble in General>INSPECTION.**

Engine oil pressure:

CVT model

While idling (no load and select lever in "P" or "N" range)

Standard

56 kPa (0.6 kg/cm^2, 8 psi) or more

At 3,000 r/min

Standard

230 kPa (2.3 kg/cm^2, 33 psi) or more

MT model

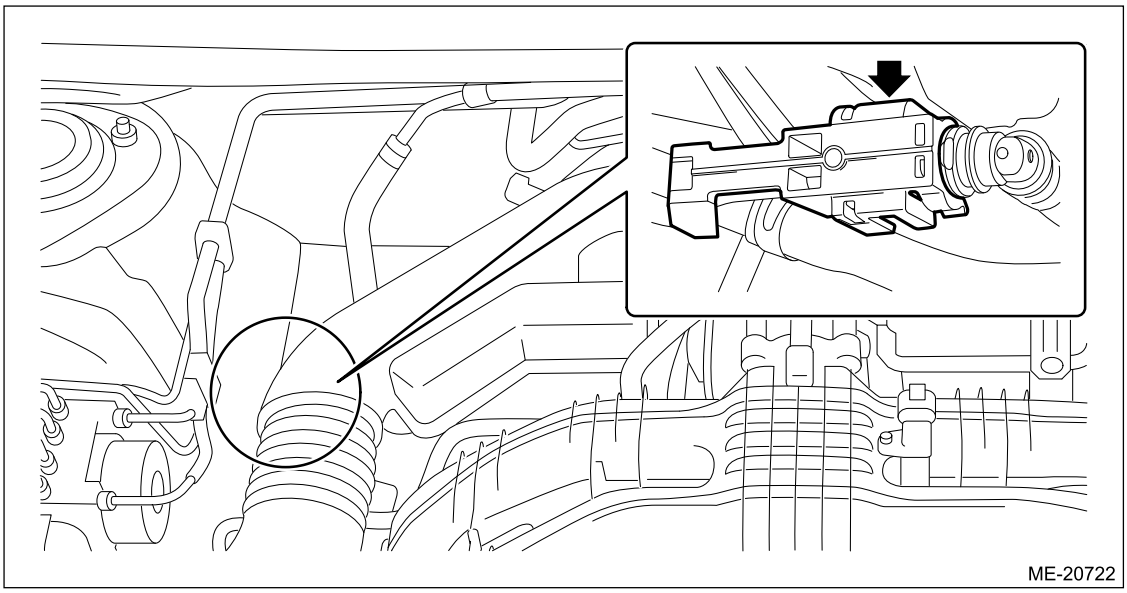
While idling (no load and gear shift lever in neutral position)

Standard

48 kPa (0.5 kg/cm^2, 7 psi) or more

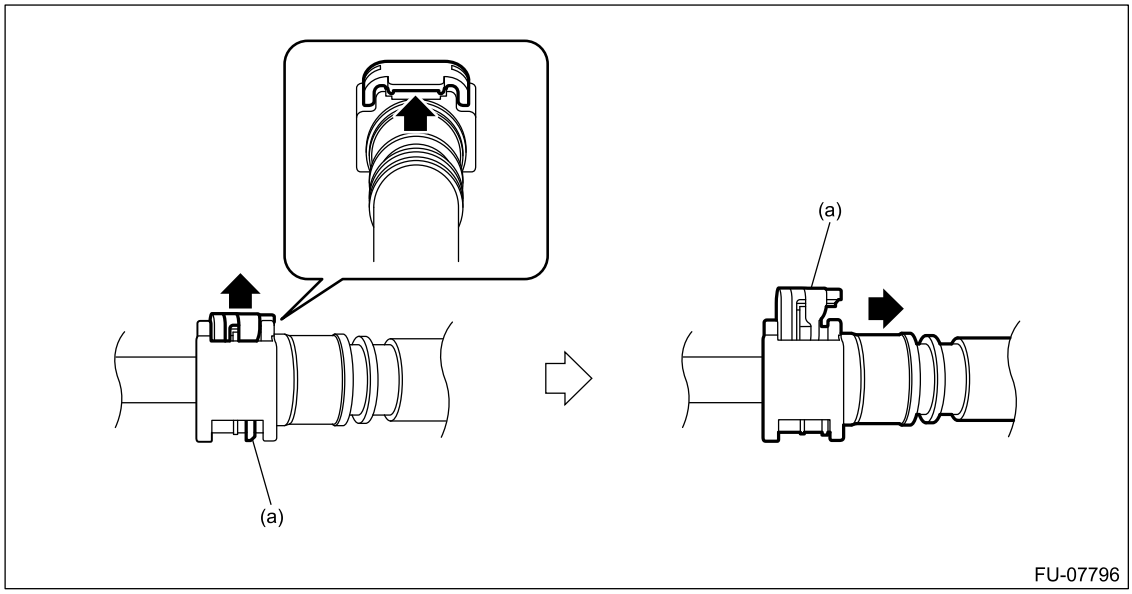
At 3,000 r/min

Standard



230 kPa (2.3 kg/cm^2, 33 psi) or more

6. After inspection, install the related parts in the reverse order of removal.



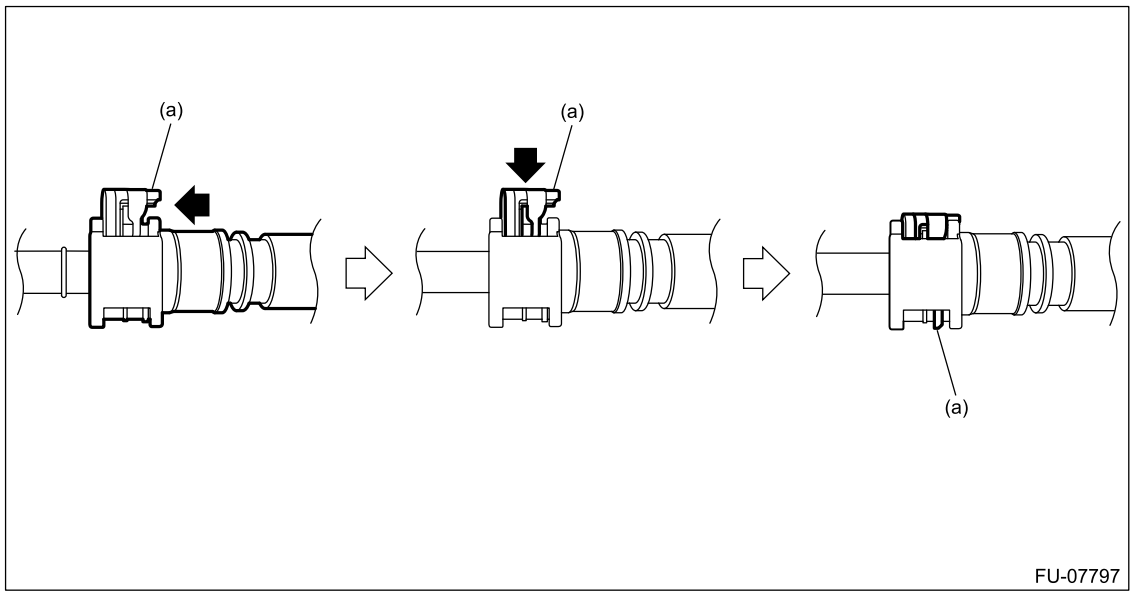
INSPECTION

1. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
2. Open the fuel filler lid and remove the fuel filler cap.
   Note:
   This operation is required to release the inner pressure of the fuel tank.
3. Disconnect the fuel delivery tube from the fuel pipe assembly, and connect the fuel pressure gauge.
   Caution:
   - **Be careful not to spill fuel.**
   - **Catch the fuel from the tubes using a container or cloth.**

   (1) Remove the fuel delivery tube clamp from the fuel delivery tube.

   (2) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly.
   Note:
   Disconnect the quick connector as shown in the figure.

(a) Slider



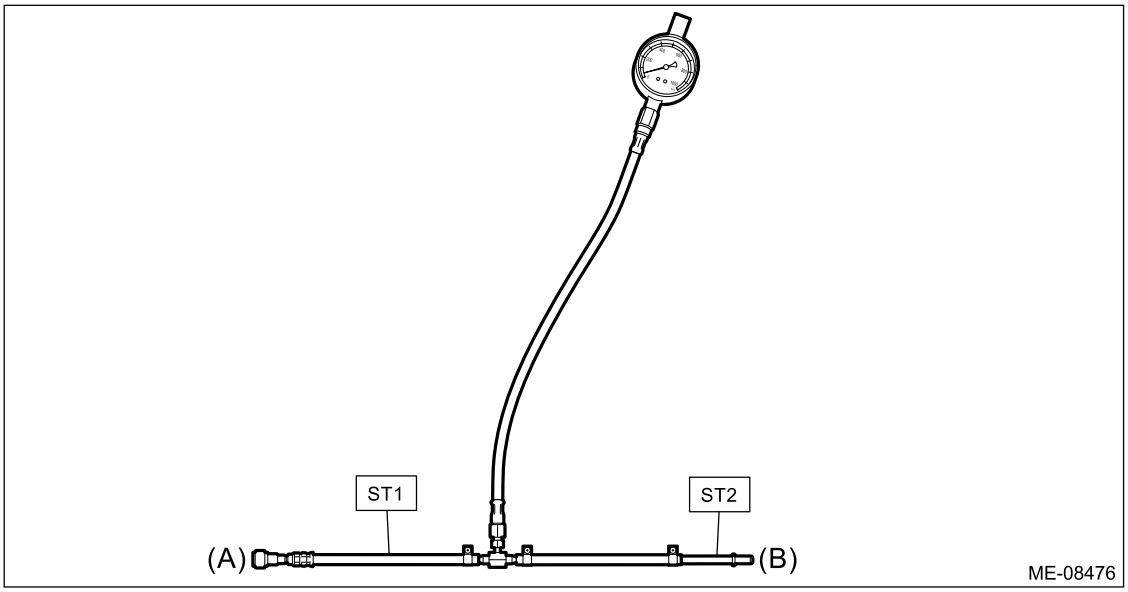
(3)Connect the fuel pressure gauge with ST1 and ST2.

Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector with slider, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check that the quick connector is securely connected.**

Note:

- **ST1 is a SUBARU genuine part.**
- **When connecting the ST2 to the quick connector on the fuel delivery tube, connect it as shown in the figure.**



(a) Slider

Preparation tool:

ST1: FUEL HOSE (42075AG690)

ST2: FUEL PIPE ADAPTER (18471AA000)

(A) Fuel pipe ASSY side (B) Fuel delivery tube side

4. Start the engine.
5. Check the fuel pressure after warming up the engine.

Note:

- **The fuel pressure gauge readings becomes 10 — 20 kPa (0.1 — 0.2 kg/cm^2, 1 — 3 psi) higher than standard values during high-altitude operations.**
- **Check or replace the fuel pump and fuel delivery line if the fuel pressure is out of the standard.**

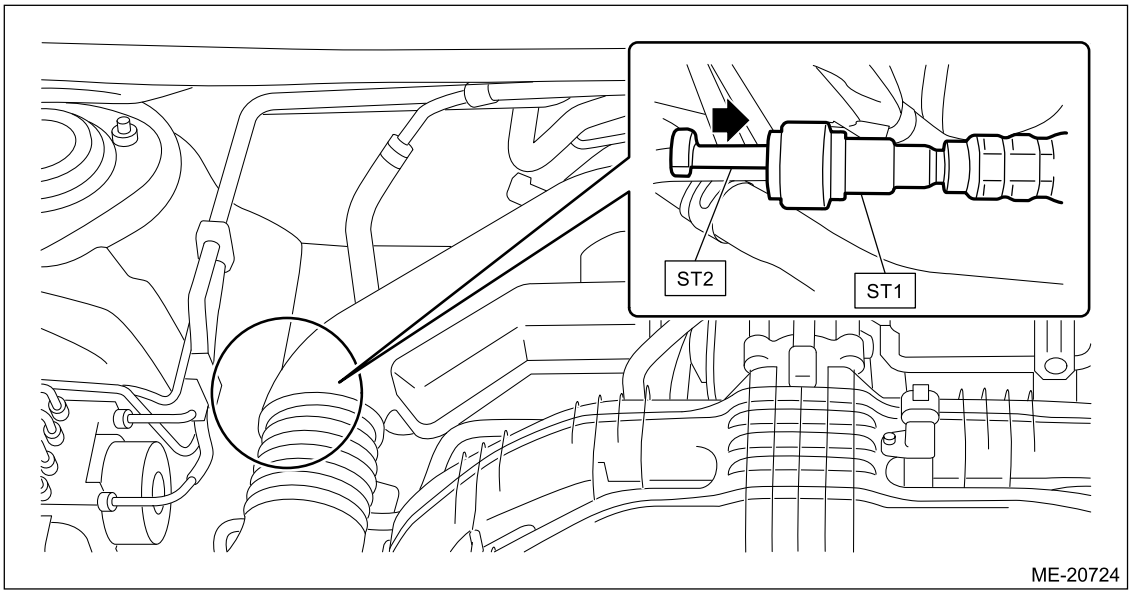
Fuel pressure:

Standard

350 — 450 kPa (3.5 — 4.6 kg/cm^2, 50 — 66 psi)

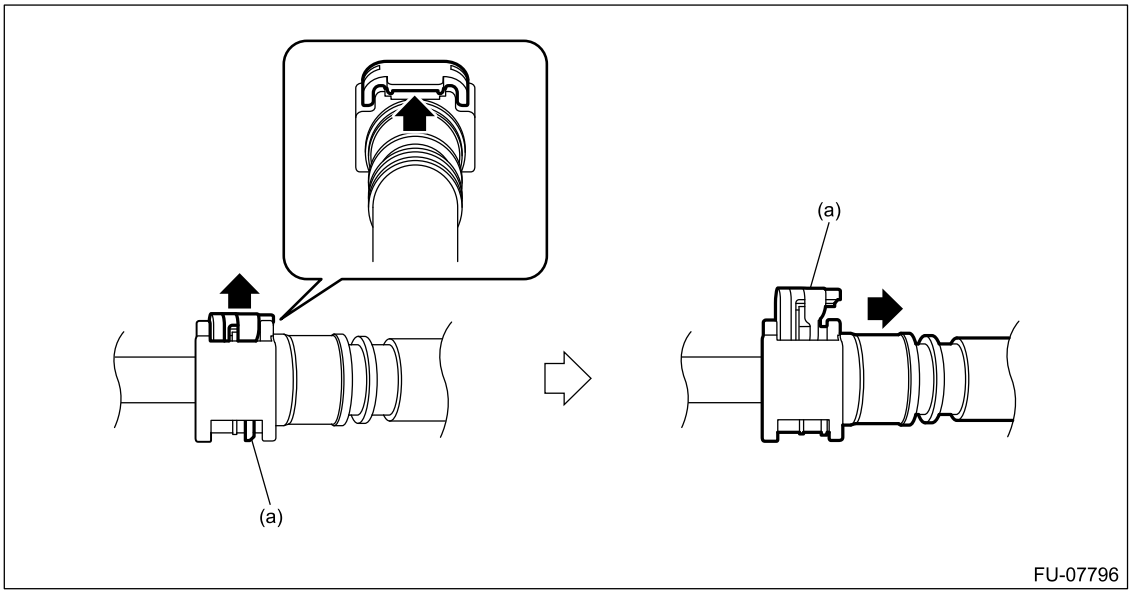
6. After inspection, install the related parts in the reverse order of removal.

Caution:



- **Before removing the fuel pressure gauge, release the fuel pressure.**
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses and tubes using a container or cloth.**
- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector with slider, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check that the quick connector is securely connected.**

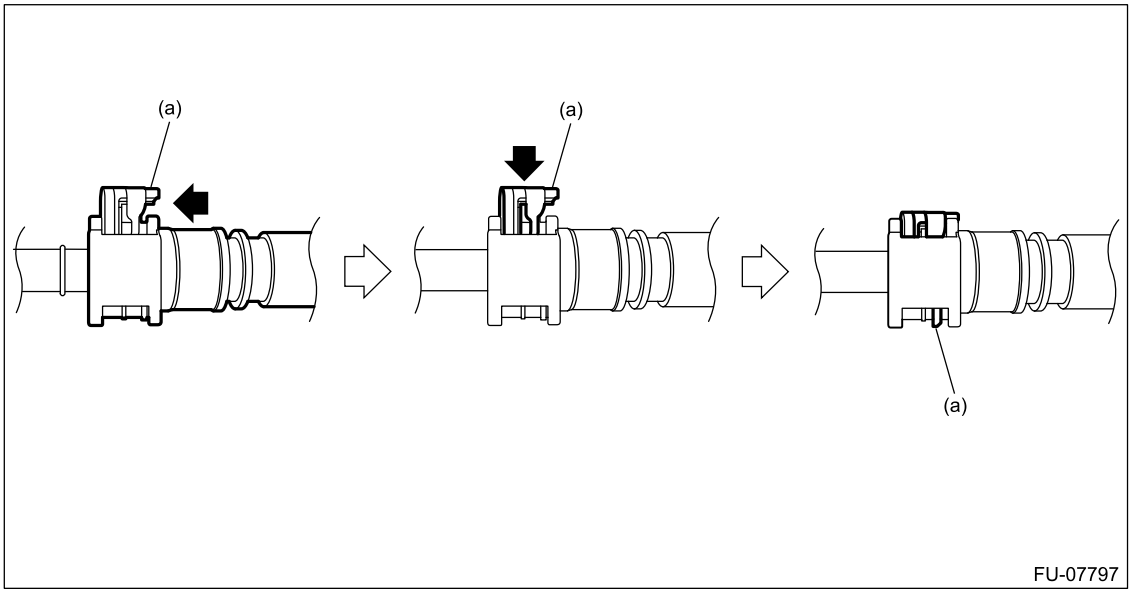
Note:



- **When disconnecting the ST1, install the ST2 to the fuel pipe assembly, and press the ST2 in the direction of arrow to disconnect the quick connector on the ST1.**

  Preparation tool:

  ST2: QUICK CONNECTOR RELEASE (42099AE000)



- **Disconnect the quick connector on the fuel delivery tube as shown in the figure.**

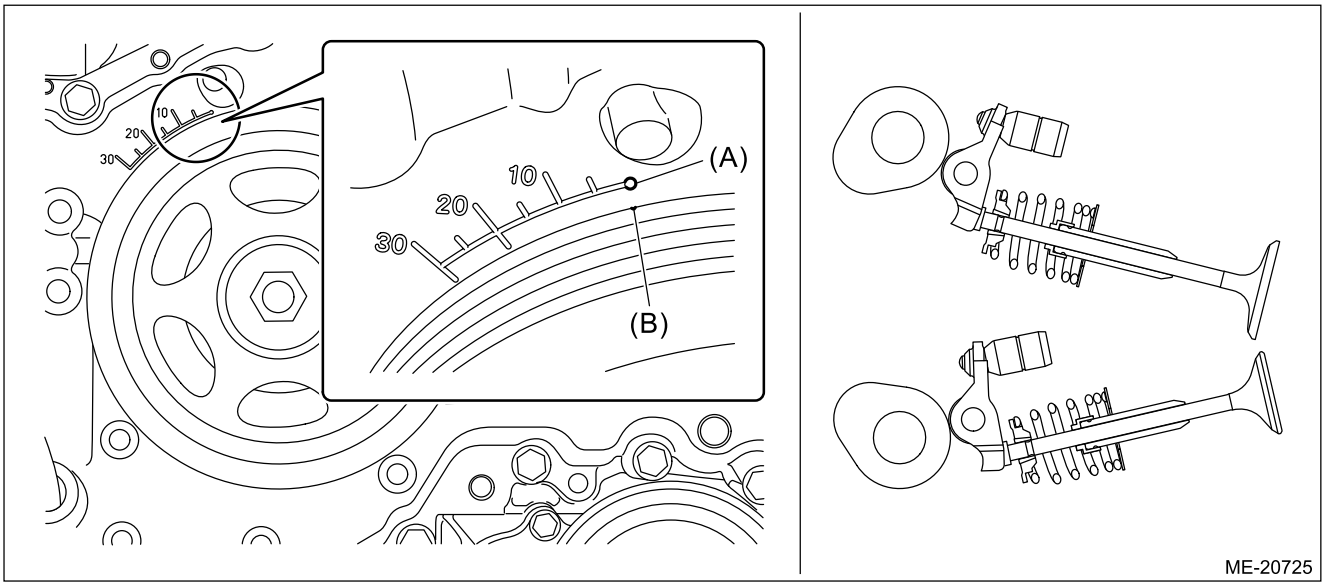
(a) Slider

- **Connect the quick connector on the fuel delivery tube as shown in the figure.**

(a) Slider

INSPECTION

1. WHEN TIMING CHAIN ASSEMBLY IS NOT REMOVED



Caution:

When working on the vehicle, if engine oil is spilt onto the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

Note:

- **Inspection of cam clearance should be performed while engine is cold.**
- **If the engine is removed from vehicle, performing the steps 1) to 2) is not necessary.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
3. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL.
4. When inspecting #1 and #3 cylinders
   (1) Remove the rocker cover RH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL > ROCKER COVER RH.
   Note:
   When working on the vehicle, place a suitable container under the vehicle.
   (2) Set #1 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.
   Note:
   When the timing mark (B) on crank pulley is aligned to the 0° in timing gauge (A) on chain cover as shown in the figure, the #1 cylinder piston is located at TDC of compression stroke if the intake camshaft and exhaust camshaft does not depress the #1 cylinder intake side roller rocker arm (intake valve) and exhaust side roller rocker arm (exhaust valve). If roller rocker arm (valve) is depressed, turn the crank pulley by 360° in order to make #1 cylinder piston at TDC of compression stroke.

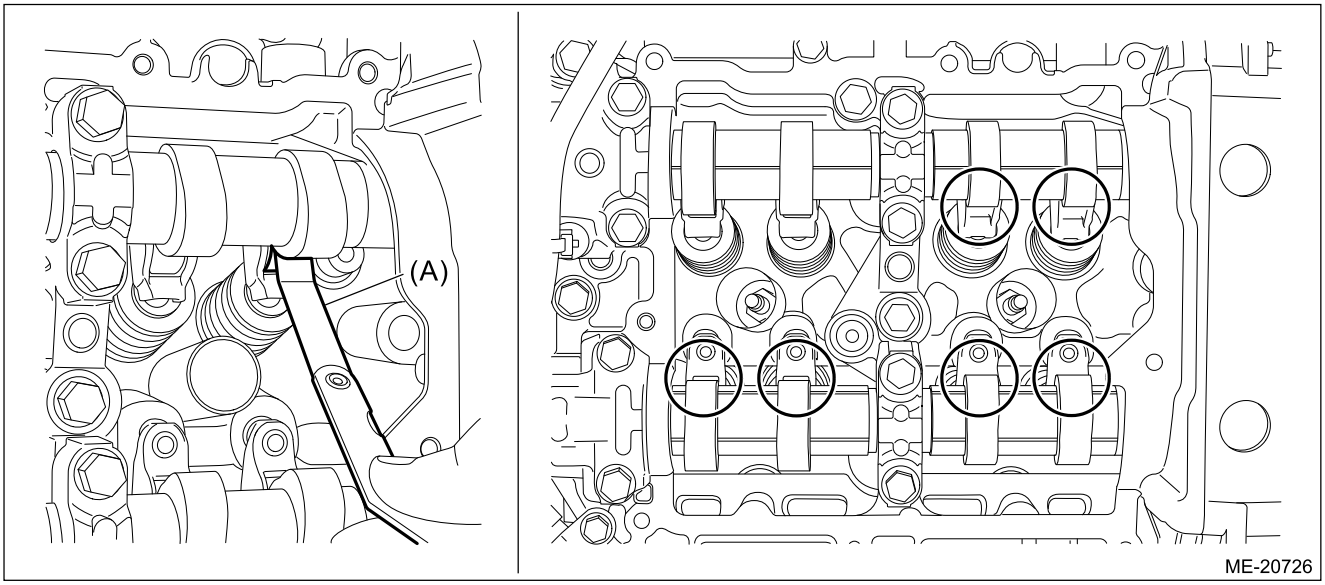
(3) Check the cam clearance for #1 cylinder intake, #1 cylinder exhaust and #3 cylinder exhaust.

Note:

- **Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).**
- **If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.**

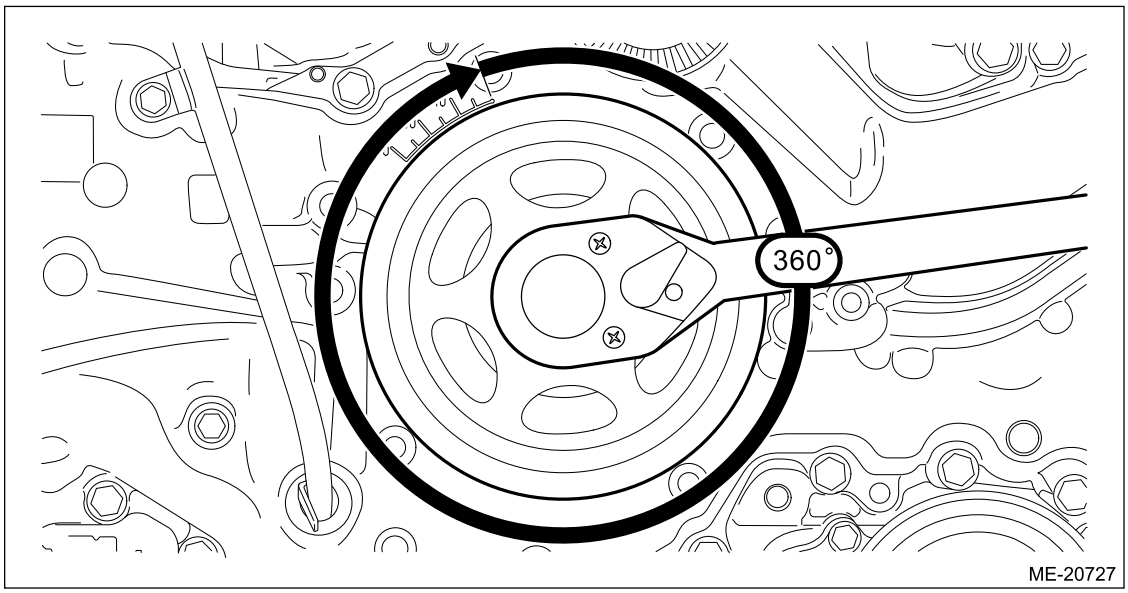
Cam clearance:

Intake



Standard

$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)



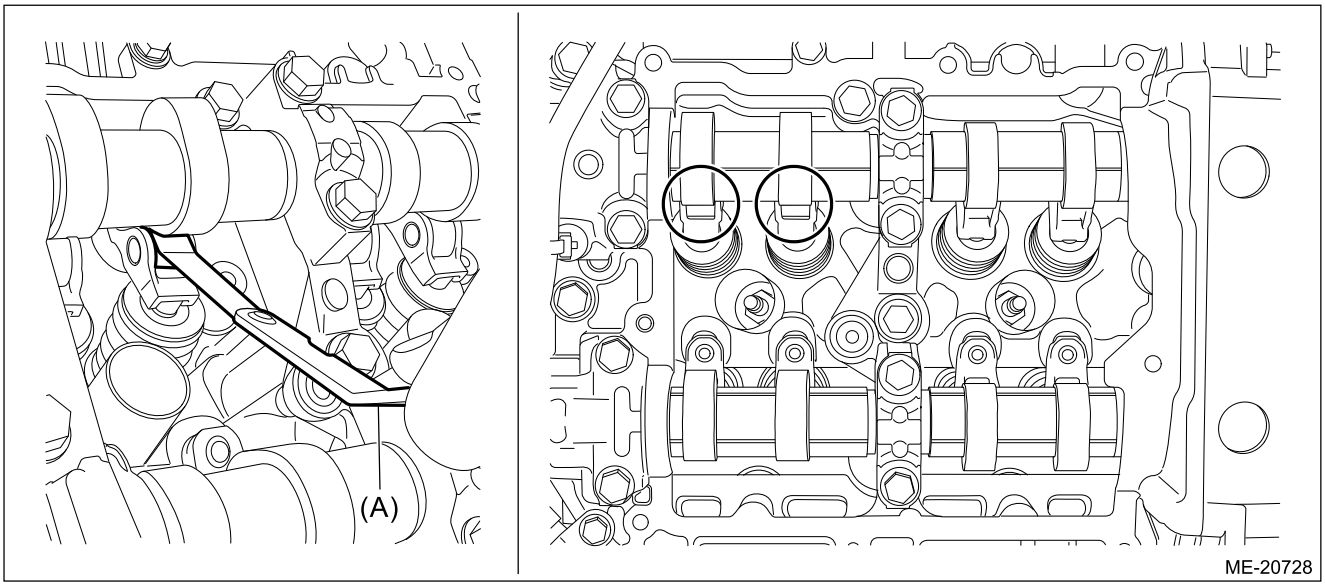
Exhaust

Standard

$0.22^{+0.02}_{-0.04}$ mm ($0.0087^{+0.0008}_{-0.0016}$ in)

(4) Turn the crank pulley by 360°.

(5) Check the cam clearance of #3 cylinder intake.



Note:

- **Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).**
- **If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.**

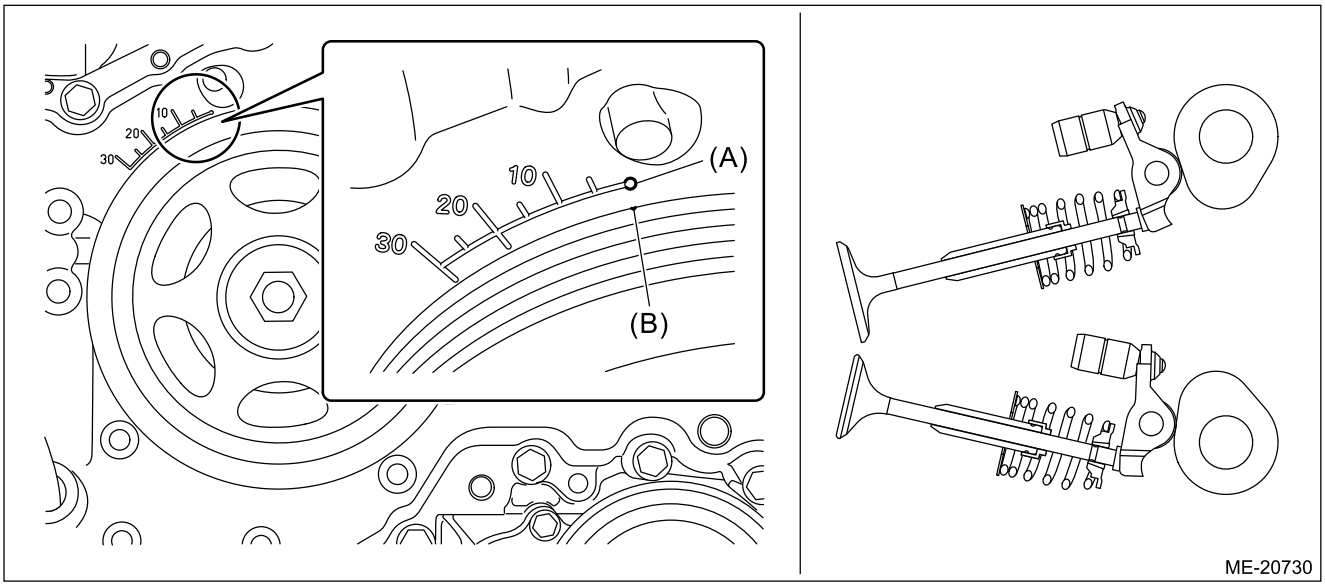
Cam clearance:

Standard

$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)

5. When inspecting #2 and #4 cylinders

(1) Remove the rocker cover LH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL > ROCKER COVER LH.



Note:

When working on the vehicle, place a suitable container under the vehicle.

(2) Set #2 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

Note:

When the timing mark (B) on crank pulley is aligned to the 0° in timing gauge (A) on chain cover as shown in the figure, the #2 cylinder piston is located at TDC of compression stroke if the intake camshaft and exhaust camshaft does not depress the #2 cylinder intake side roller rocker arm (intake valve) and exhaust side roller rocker arm (exhaust valve). If roller rocker arm (valve) is depressed, turn the crank pulley by 360° in order to make #2 cylinder piston at TDC of compression stroke.

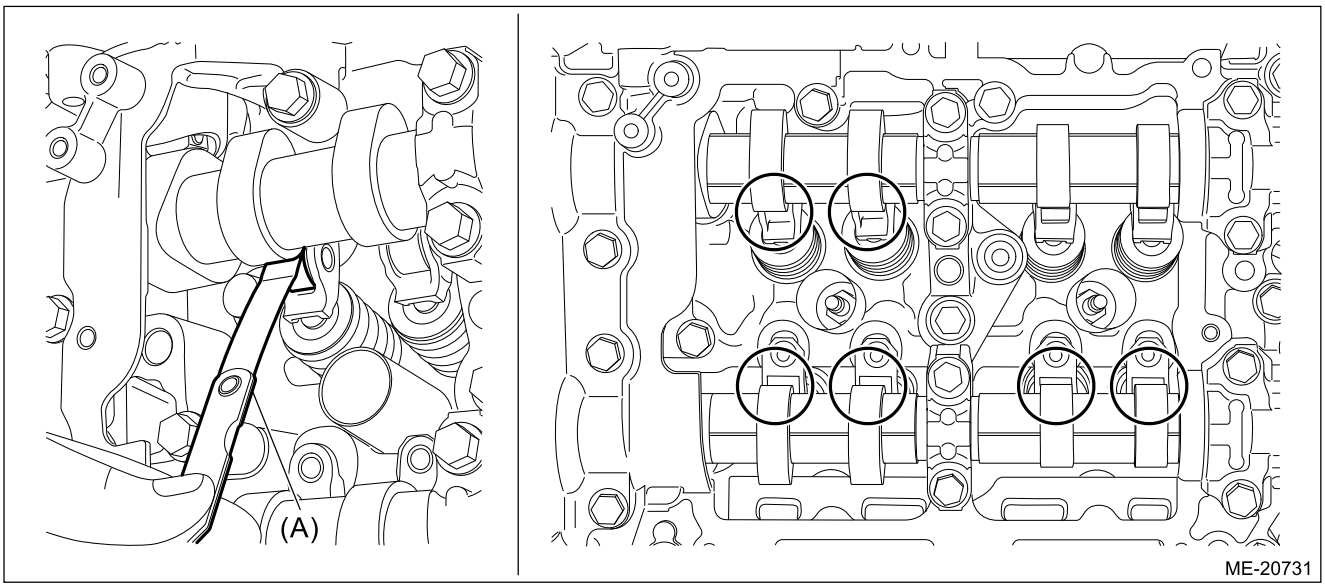
(3) Check the cam clearance for #2 cylinder intake, #2 cylinder exhaust and #4 cylinder exhaust.

Note:

- **Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).**
- **If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.**

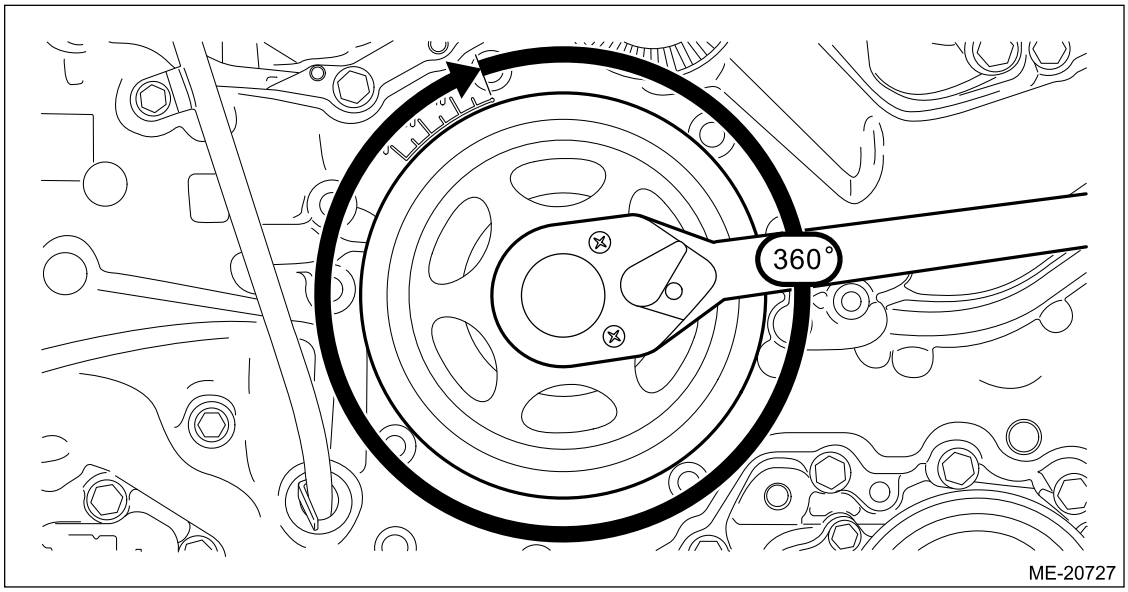
Cam clearance:

Intake



Standard

$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)



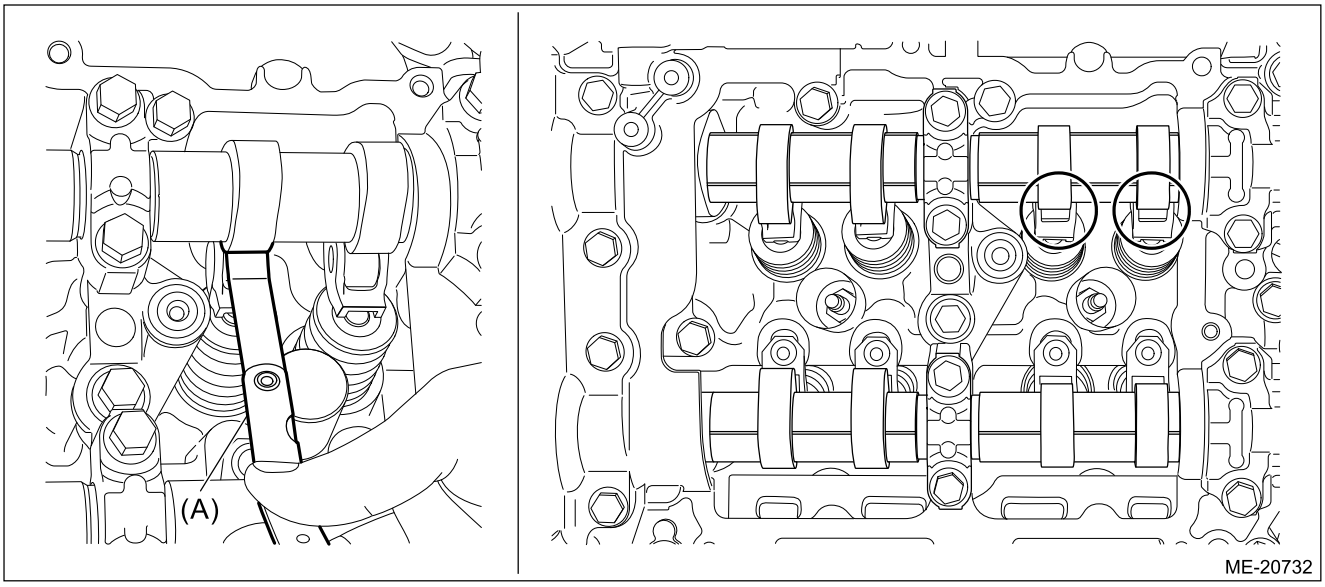
Exhaust

Standard

$0.22^{+0.02}_{-0.04}$ mm ($0.0087^{+0.0008}_{-0.0016}$ in)

(4) Turn the crank pulley by 360°.

(5) Check the cam clearance of #4 cylinder intake.



Note:

- **Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).**
- **If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.**

Cam clearance:

Standard

$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)

6. If necessary, adjust the cam clearance. Ref. to MECHANICAL(H4DO)>Cam Clearance>ADJUSTMENT.

7. After inspection, install the related parts in the reverse order of removal.

2. WHEN TIMING CHAIN ASSEMBLY IS REMOVED

Note:

Inspection of cam clearance should be performed while engine is cold.

1. When inspecting #1 and #3 cylinders

(1) Remove the rocker cover RH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL >

ROCKER COVER RH.

Note:

When working on the vehicle, place a suitable container under the vehicle.

(2) Check the #1 and #3 cylinder cam clearance.

Caution:

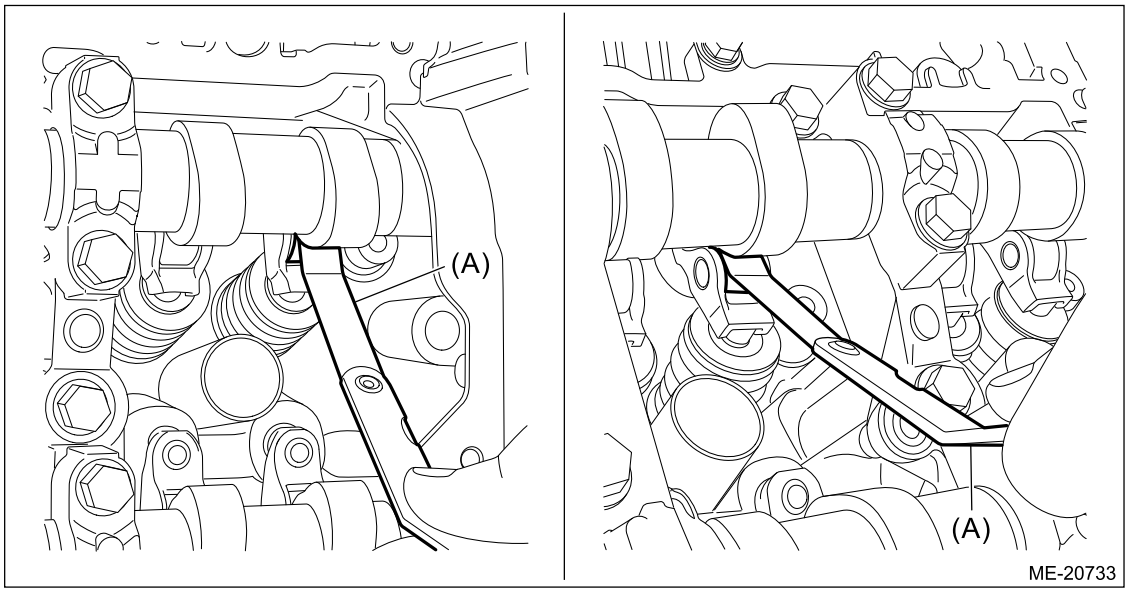
Intake and exhaust camshafts can be independently rotated with the timing chain removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero lift (cam base circle position) (in range where it can be turned lightly by hand).

Note:

- **For cam clearance inspection, adjust the cam base circle position so that the thickness gauge (A) can be inserted easily by hand turning the camshaft (cam sprocket) to be measured.**
- **Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).**
- **If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.**

Cam clearance:

Intake



Standard

$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)

Exhaust

Standard

$0.22^{+0.02}_{-0.04}$ mm ($0.0087^{+0.0008}_{-0.0016}$ in)

2. When inspecting #2 and #4 cylinders

(1) Remove the rocker cover LH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL > ROCKER COVER LH.

Note:

When working on the vehicle, place a suitable container under the vehicle.

(2) Check the #2 and #4 cylinder cam clearance.

Caution:

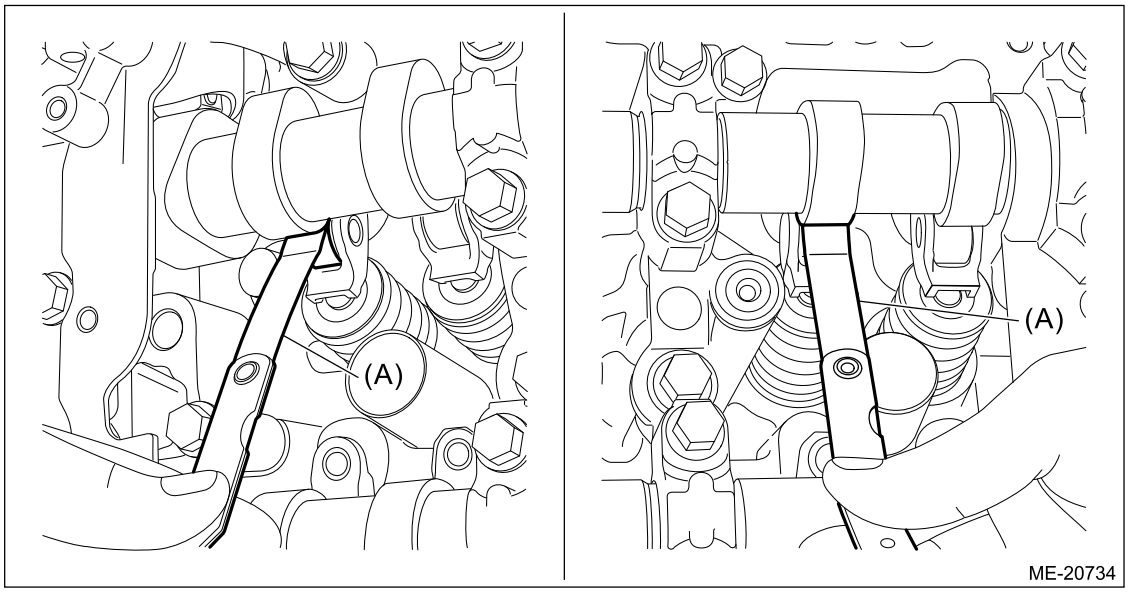
Intake and exhaust camshafts can be independently rotated with the timing chain removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero lift (cam base circle position) (in range where it can be turned lightly by hand).

Note:

- **Because the intake camshaft is pressurized by the high-pressure fuel pump, it is almost impossible to turn the intake camshaft lightly by hand. Since the zero-lift position is adjusted at the removal of the timing chain LH, measure the cam clearance at that position.**
- **For cam clearance inspection on exhaust side, adjust the cam base circle position so that the thickness gauge (A) can be inserted easily by hand turning the exhaust camshaft (cam sprocket).**
- **Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).**
- **If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.**

Cam clearance:

Intake



Standard

$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)

Exhaust

Standard

$0.22^{+0.02}_{-0.04}$ mm ($0.0087^{+0.0008}_{-0.0016}$ in)

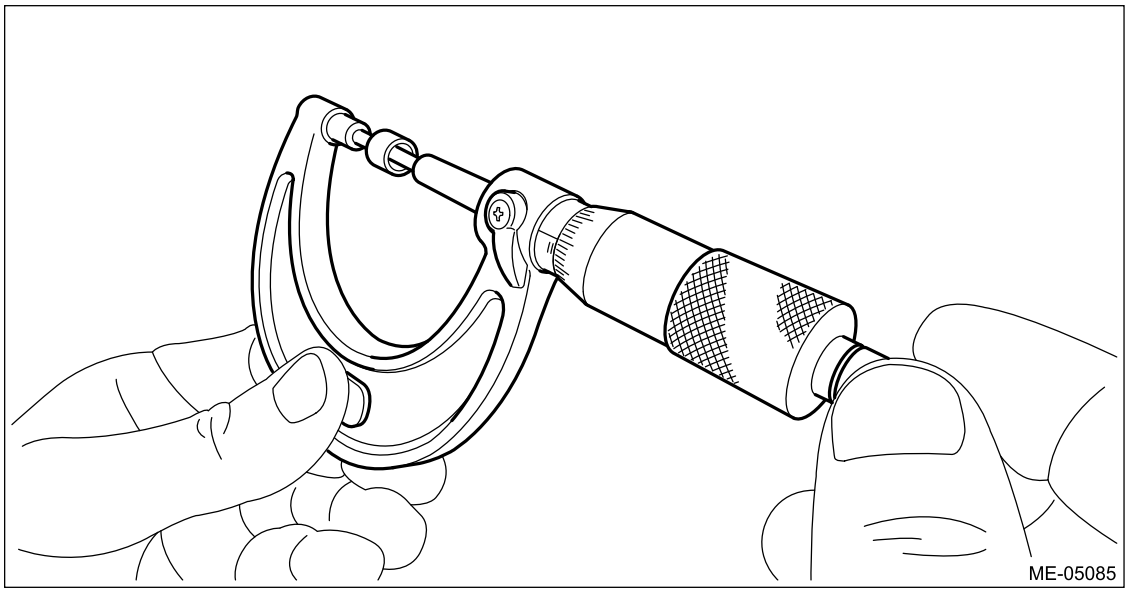
3. If necessary, adjust the cam clearance. Ref. to MECHANICAL(H4DO)>Cam Clearance>ADJUSTMENT.
4. After inspection, install the related parts in the reverse order of removal.

MECHANICAL(H4DO) > Cam Clearance

ADJUSTMENT

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.

3. When adjusting #1 and #3 cylinders



(1) Remove the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN RH.

(2) Remove the cam carrier RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL > CAM CARRIER RH.

(3) Measure the thickness of valve shim using micrometer.

Note:

Measurement should be performed at a temperature of 20°C (68°F).

(4) Select a valve shim of suitable thickness using the measured cam clearance and valve shim thickness.

Note:

Use a new valve shim.

Intake side: S = T+1.69 × (V−0.13 mm (0.0051 in)) Exhaust side: S = T+1.87 × (V−0.22 mm (0.0087 in))
S: Valve shim thickness required V: Measured cam clearance T: Current valve shim thickness

(5) Install the cam carrier RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION > CAM CARRIER RH.

(6) Check all the cam clearance of RH side at this time. If the cam clearance is not within the standard value, repeat the procedure over again from step (2).

Note:

When the removing/installing of cam carrier RH has been performed, cam clearance may be outside the standard value. Checking of all cam clearance of RH side is necessary. Refer to INSPECTION of "Cam Clearance" for the cam clearance inspection. Ref. to MECHANICAL(H4DO)>Cam Clearance>INSPECTION > WHEN TIMING CHAIN ASSEMBLY IS REMOVED.

Cam clearance:

Intake

Standard

$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)

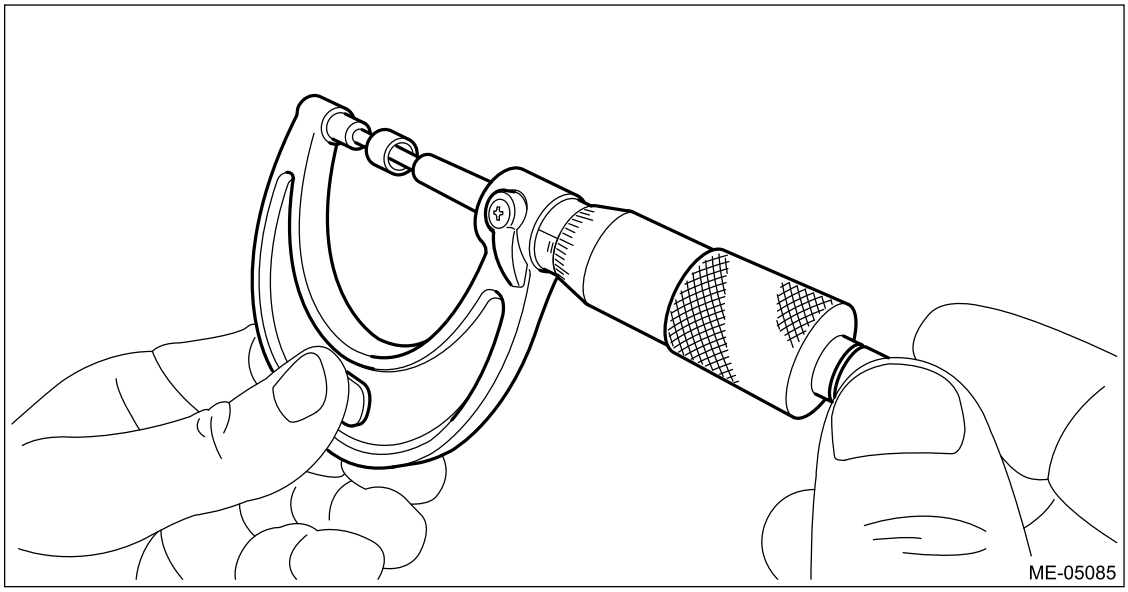
Exhaust

Standard

$0.22^{+0.02}_{-0.04}$ mm ($0.0087^{+0.0008}_{-0.0016}$ in)

4. When adjusting #2 and #4 cylinders

(1) Remove the timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN LH.



(2) Remove the intake manifold. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.

(3) Remove the cam carrier LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL > CAM CARRIER LH.

(4) Measure the thickness of valve shim using micrometer.

Note:

Measurement should be performed at a temperature of 20°C (68°F).

(5) Select a valve shim of suitable thickness using the measured cam clearance and valve shim thickness.

Note:

Use a new valve shim.

Intake side: S = T+1.69 × (V−0.13 mm (0.0051 in))
Exhaust side: S = T+1.87 × (V−0.22 mm (0.0087 in))
S: Valve shim thickness required
V: Measured cam clearance
T: Current valve shim thickness

(6) Install the cam carrier LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION > CAM CARRIER LH.

(7) Check all the cam clearance of LH side at this time. If the cam clearance is not within the standard value, repeat the procedure over again from step (3).

Note:

When the removing/installing of cam carrier LH has been performed, cam clearance may be outside the standard value. Checking of all cam clearance of LH side is necessary. Refer to INSPECTION of "Cam Clearance" for the cam clearance inspection. Ref. to MECHANICAL(H4DO)>Cam Clearance>INSPECTION > WHEN TIMING CHAIN ASSEMBLY IS REMOVED.

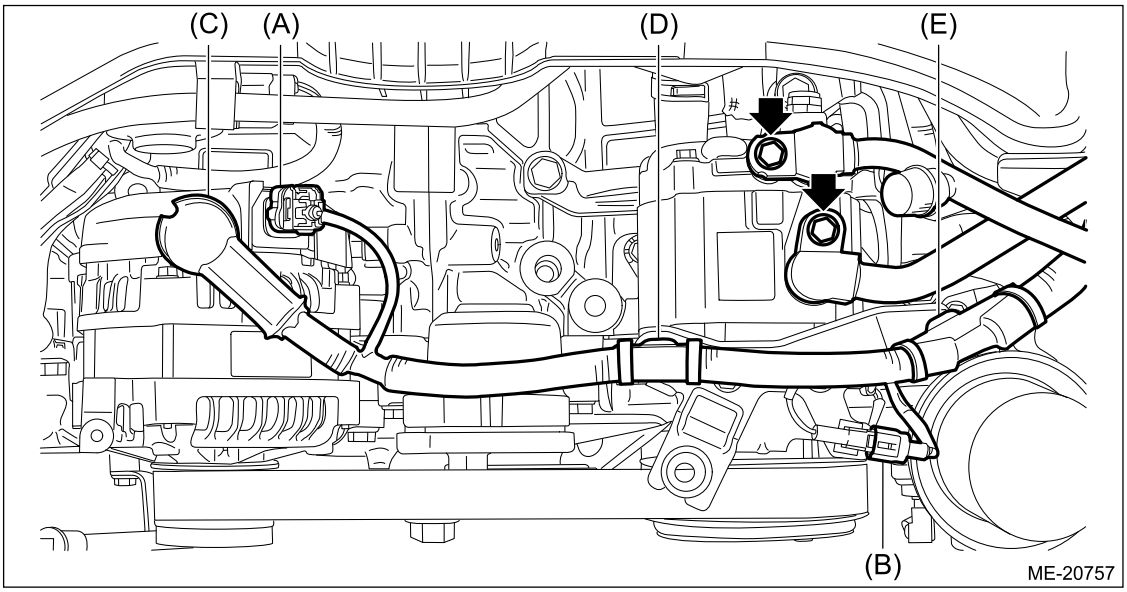
Cam clearance:

Intake

Standard

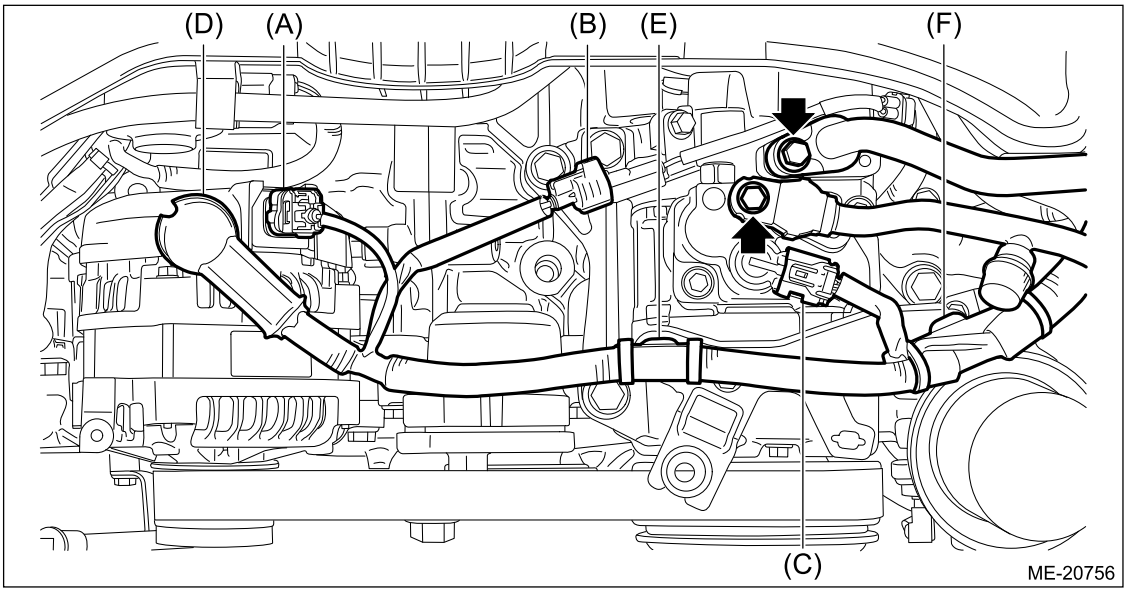
$0.13^{+0.02}_{-0.04}$ mm ($0.0051^{+0.0008}_{-0.0016}$ in)

Exhaust



Standard

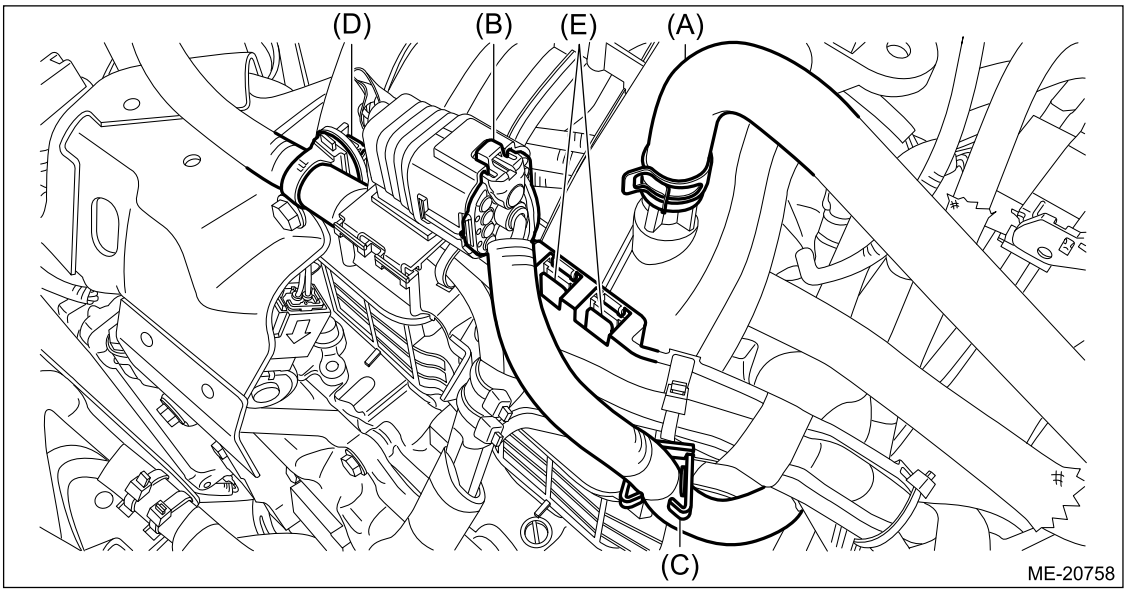
$0.22^{+0.02}_{-0.04}$ mm ($0.0087^{+0.0008}_{-0.0016}$ in)



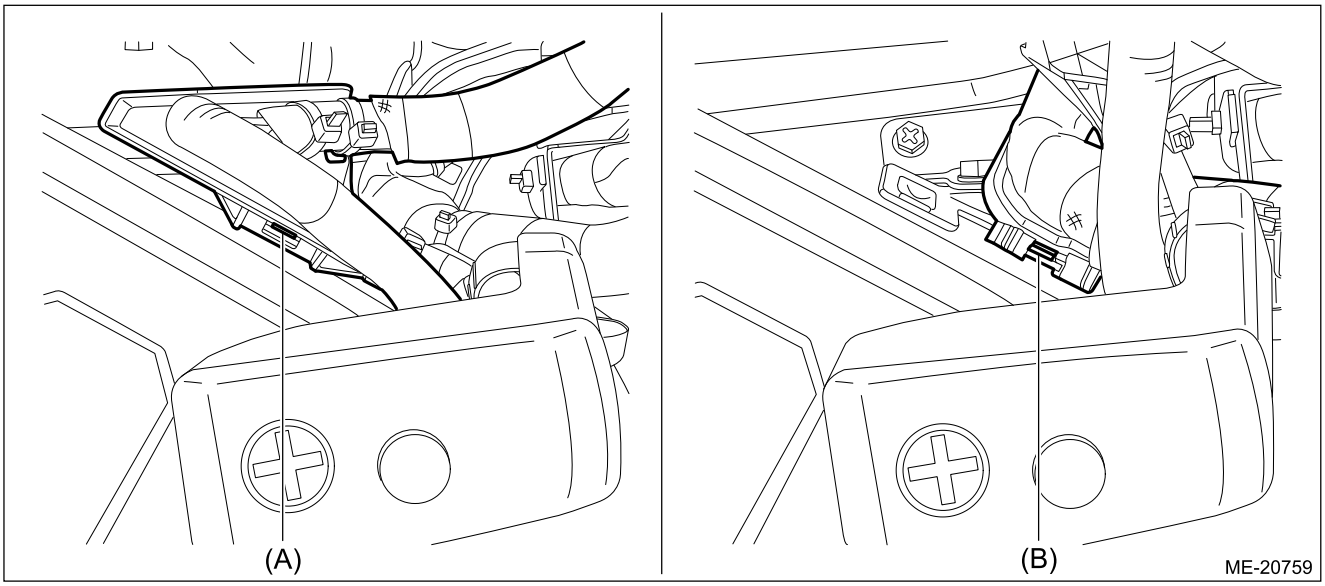
5. After adjustment, install the related parts in the reverse order of removal.

REMOVAL

1. Remove the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>DISASSEMBLY.
2. Fully open the front hood. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.
3. Collect the refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
4. Release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
5. Open the fuel filler lid and remove the fuel filler cap.
   Note:
   This operation is required to release the inner pressure of the fuel tank.
6. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
7. Remove the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>REMOVAL.
8. Remove the air cleaner case (rear). Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner Case>REMOVAL.
9. Remove the radiator. Ref. to COOLING(H4DO)>Radiator>REMOVAL.
10. Disconnect the connector (A), connector (B) and terminal (C). (Fixed capacity A/C model)
11. Remove the clip (D) and clip (E) that secure the battery cable. (Fixed capacity A/C model)
12. Disconnect the hose-pressure suction and the hose-pressure discharge from the A/C compressor. (Fixed capacity A/C model) Ref. to AIR CONDITIONER>Hose and Pipe>REMOVAL.



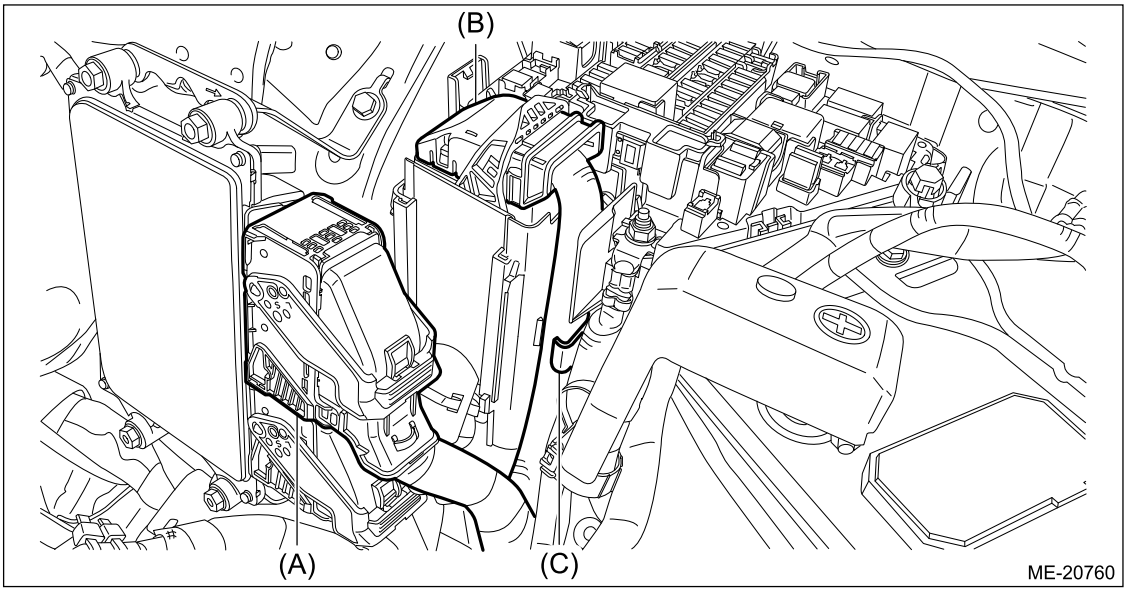
13. Disconnect the connector (A), connector (B), connector (C) and terminal (D). (Variable capacity A/C model)
14. Remove the clip (E) and clip (F) that secure the battery cable. (Variable capacity A/C model)
15. Disconnect the hose-pressure suction and the hose-pressure discharge from the A/C compressor. (Variable capacity A/C model) Ref. to AIR CONDITIONER>Hose and Pipe>REMOVAL.



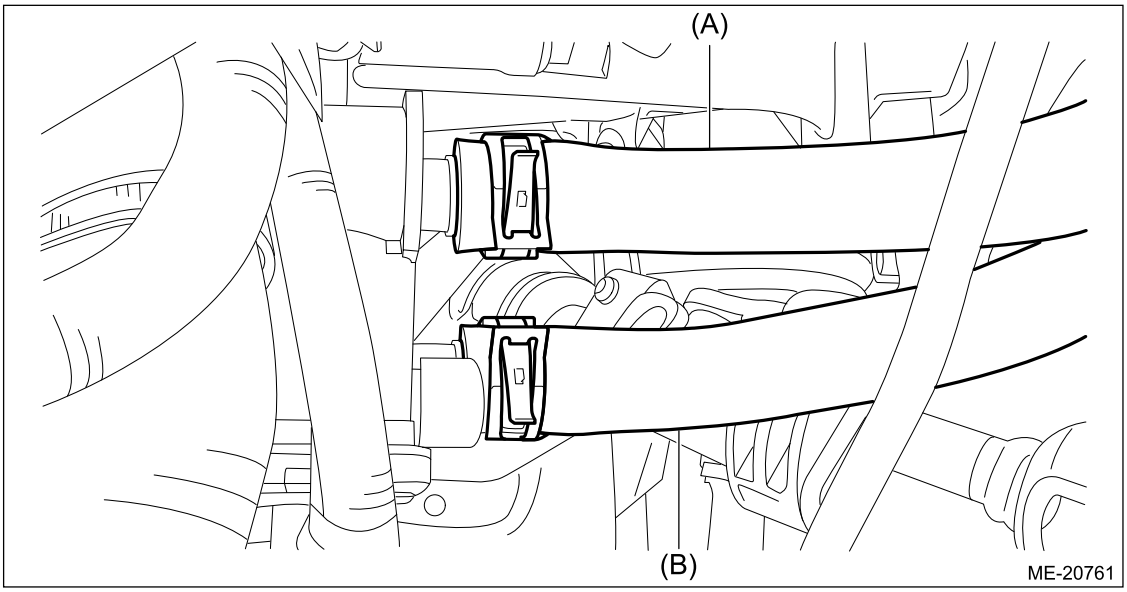
16. Disconnect the brake booster vacuum hose (A).

17. Disconnect the connector (B), and remove the engine wiring harness from the clip (C).

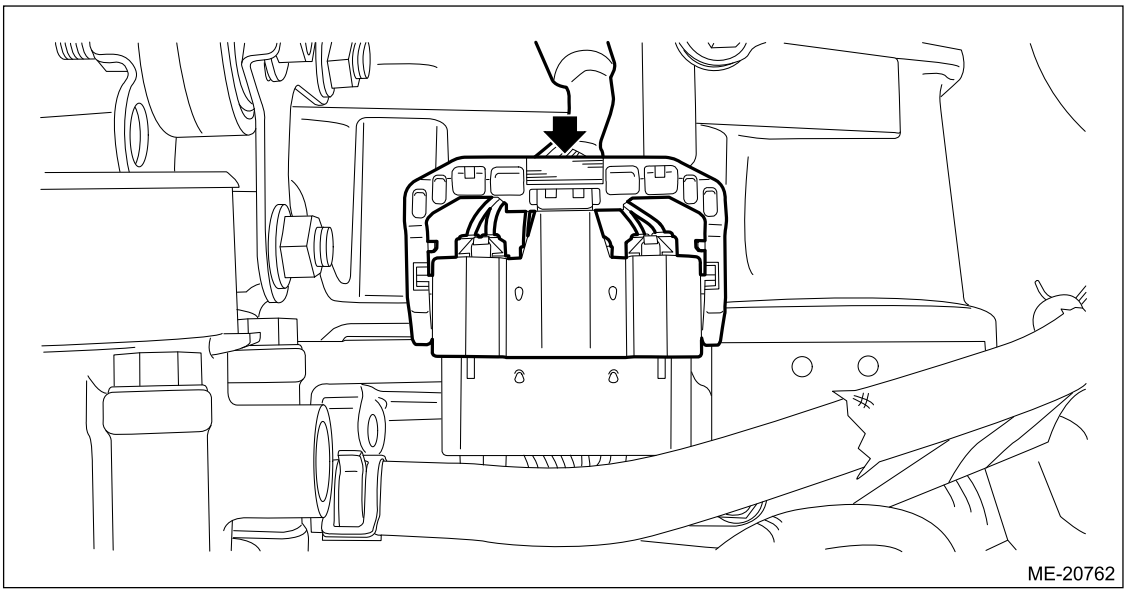
18. Remove the clip (D) and clip (E) from the intake manifold assembly.



19. Disengage the claw (A) which holds the battery cable to the bracket, and disengage the claw (B) which holds the engine wiring harness.



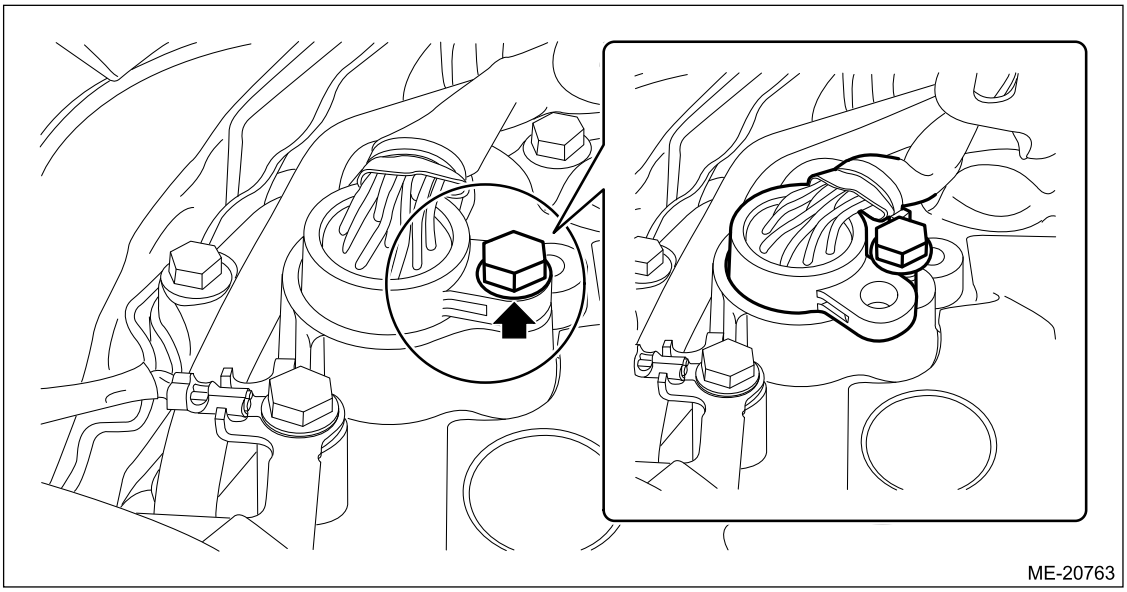
20. Disconnect the connector (A) from the ECM, and disconnect the connector (B) from the main fuse box.



21. Remove the engine wiring harness from the clip (C), and place it aside so that it does not interfere with work.

22. Disconnect the heater inlet hose (A) and the heater outlet hose (B).

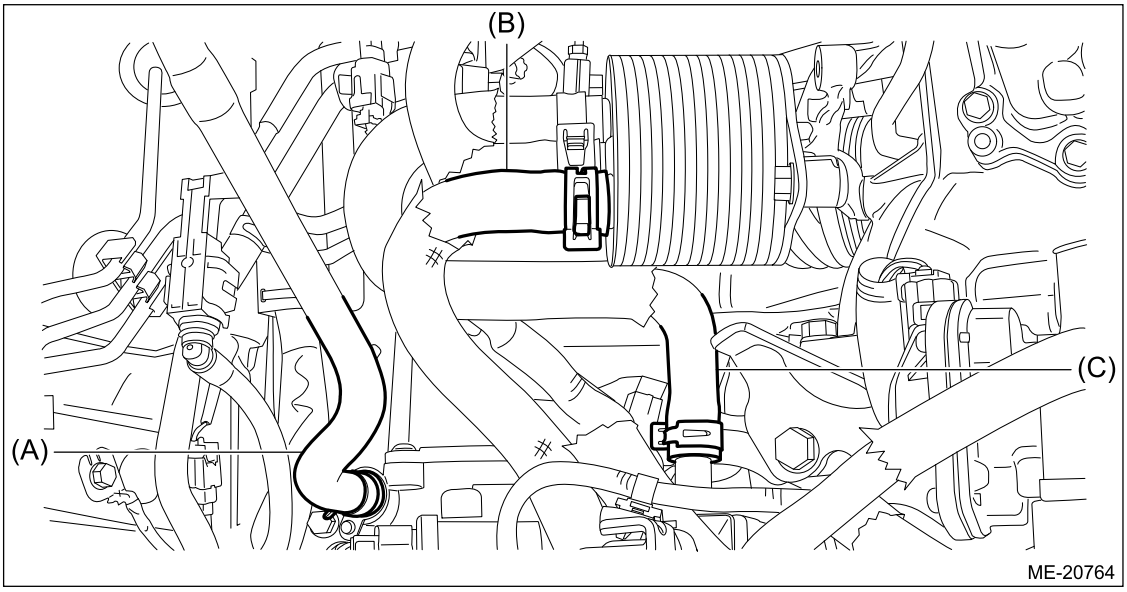
23. Disconnect the transmission harness connector from the engine wiring harness. (CVT model)



24. Remove the TCM. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>REMOVAL.

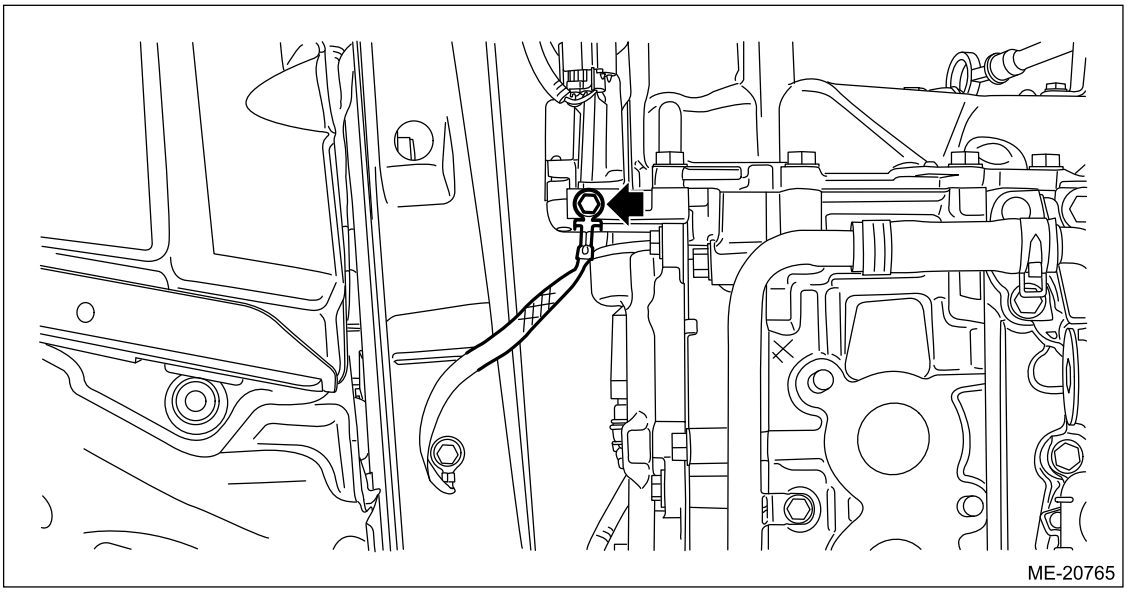
25. Remove the bolt which holds the transmission harness to the valve cover, and turn the transmission harness clockwise till the bolt hole can be seen as shown in the figure, and tighten the bolt to temporary lock the harness. (CVT model)

Note:



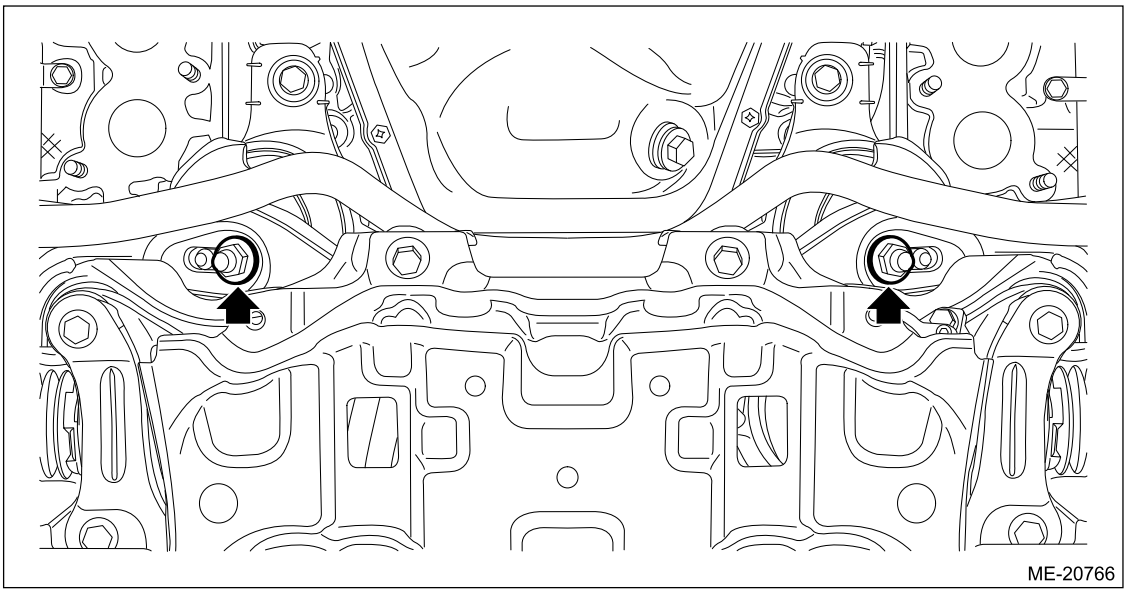
This procedure is required to prevent the transmission harness from touching the vehicle body during engine removal/installation.

26. Remove the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>REMOVAL > PITCHING STOPPER.

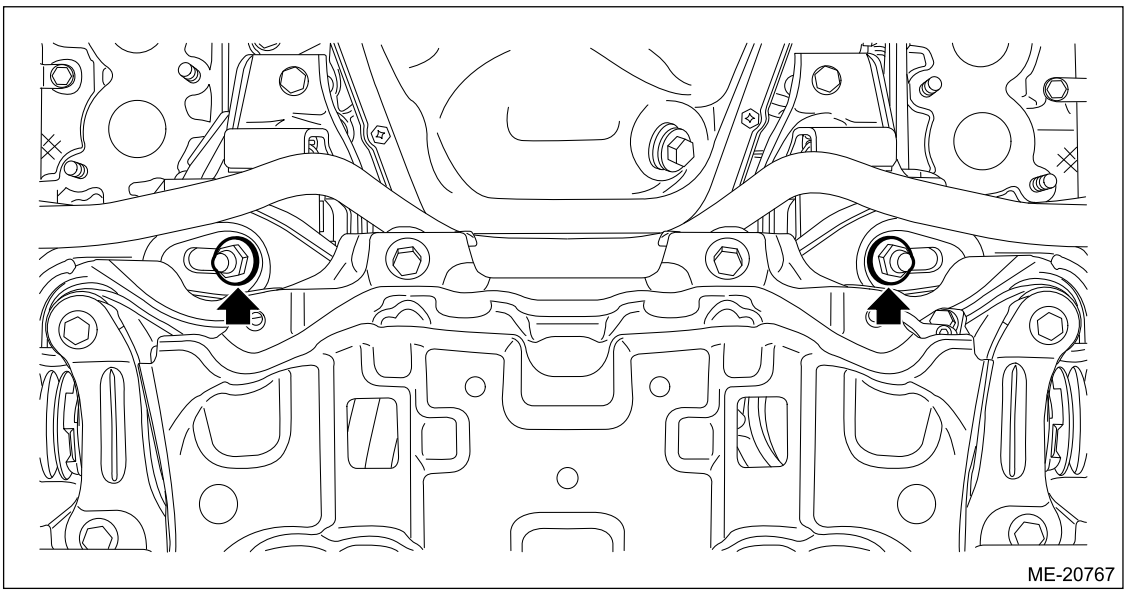


27. Disconnect the brake booster vacuum hose (A) from the brake vacuum pump.

28. Disconnect the water hose (B) and water hose (C) from the CVTF cooler (with warmer feature) and the EGR cooler. (CVT model)



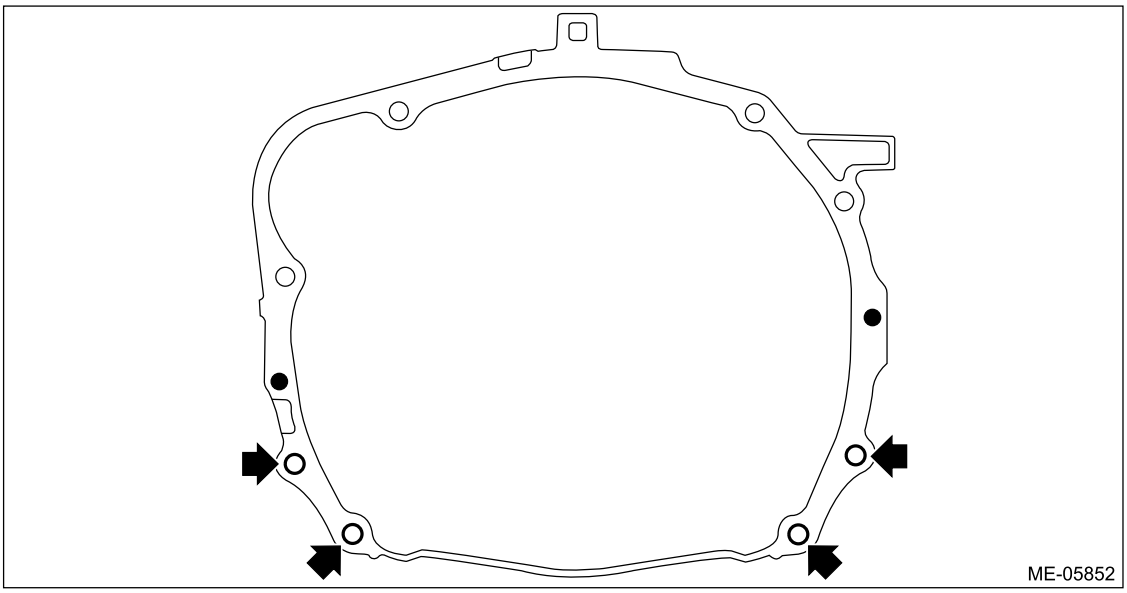
29. Lift up the vehicle.



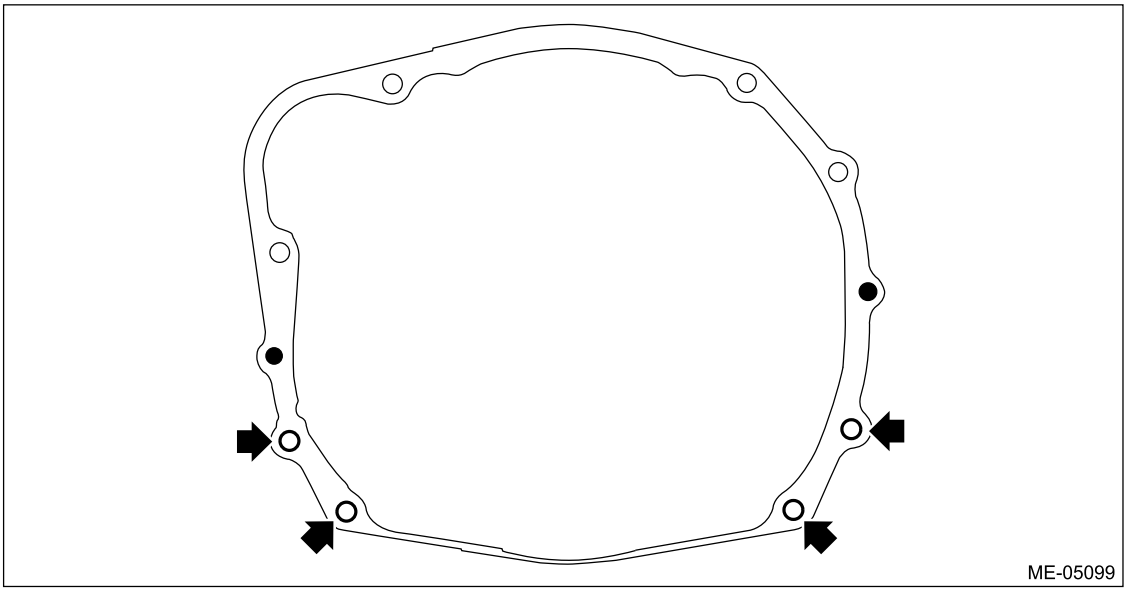
30. Disconnect the ground cord on the engine side.

31. Remove the nuts which secure the engine mounting to the crossmember. (CVT model)

32. Remove the nuts which secure the engine mounting to the crossmember. (MT model)



33. Remove the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember



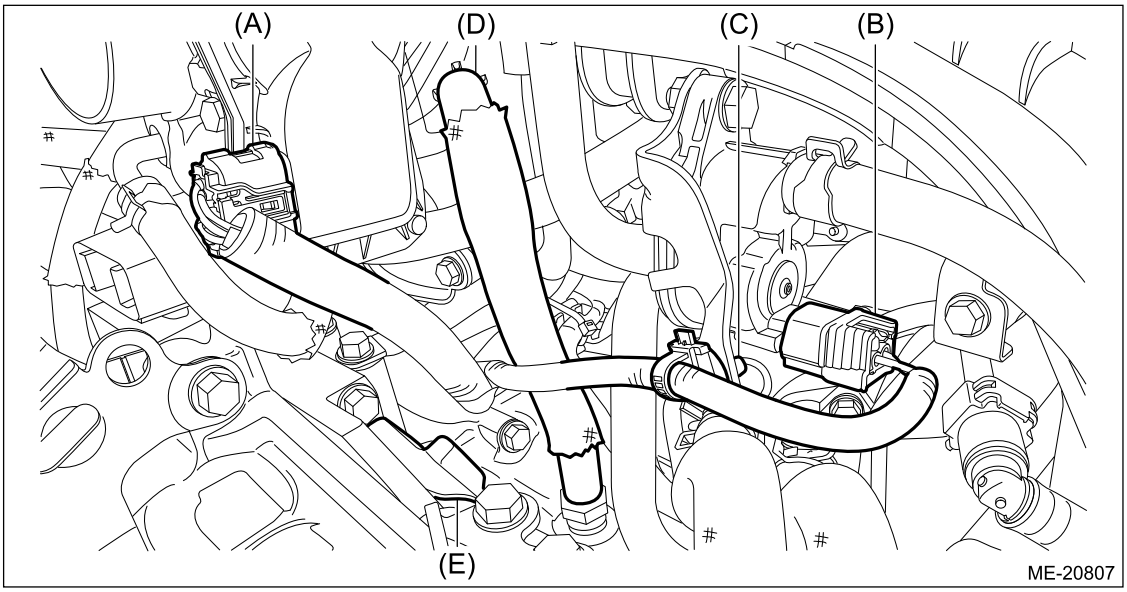
Support>REMOVAL.

34. Remove the bolts and nuts which hold the lower side of transmission to the engine.

- CVT model

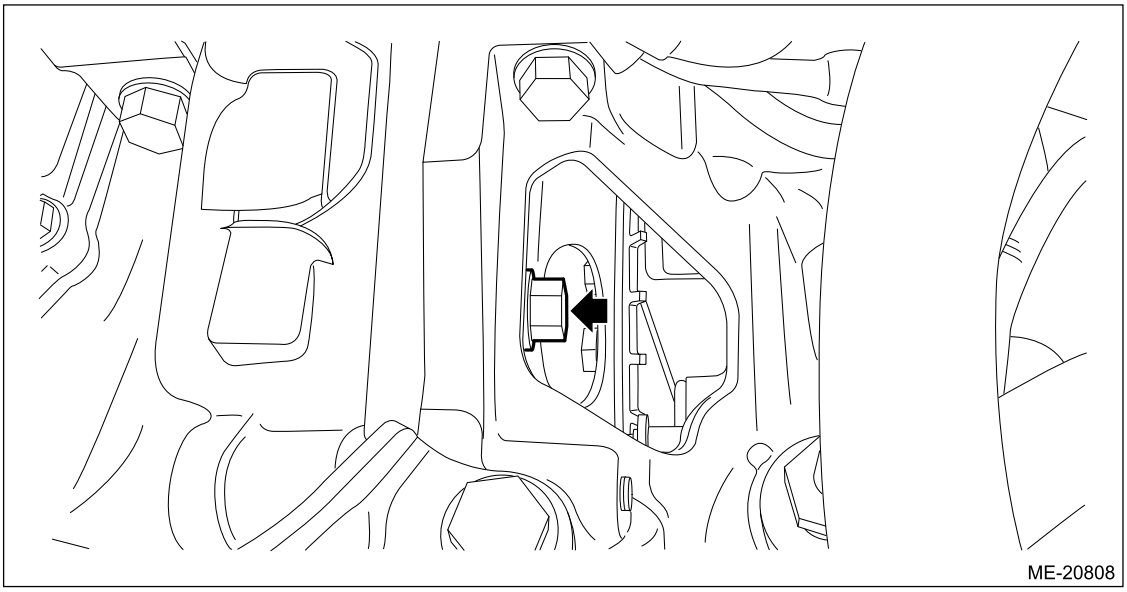
- MT model

35. Lower the vehicle.



36. Remove the starter. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>REMOVAL.

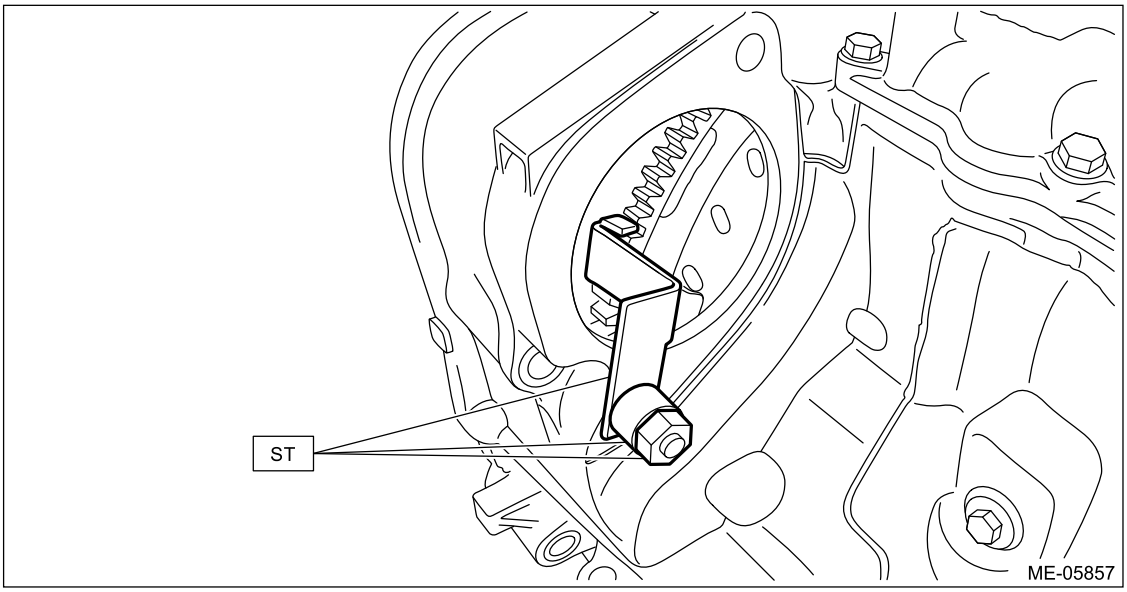
37. Separate the torque converter assembly from drive plate. (CVT model)



(1) Disconnect the connector (A) and connector (B), and remove the clip (C) from the bracket.

(2) Disconnect the PCV hose (D) from the intake manifold assembly and the PCV valve, and then remove the PCV hose (D).

(3) Remove the plug (E) from the service hole.



(4) Insert the wrench into the crank pulley bolt, and rotate the crank pulley to remove the bolts (6 places) securing the torque converter assembly to the drive plate.

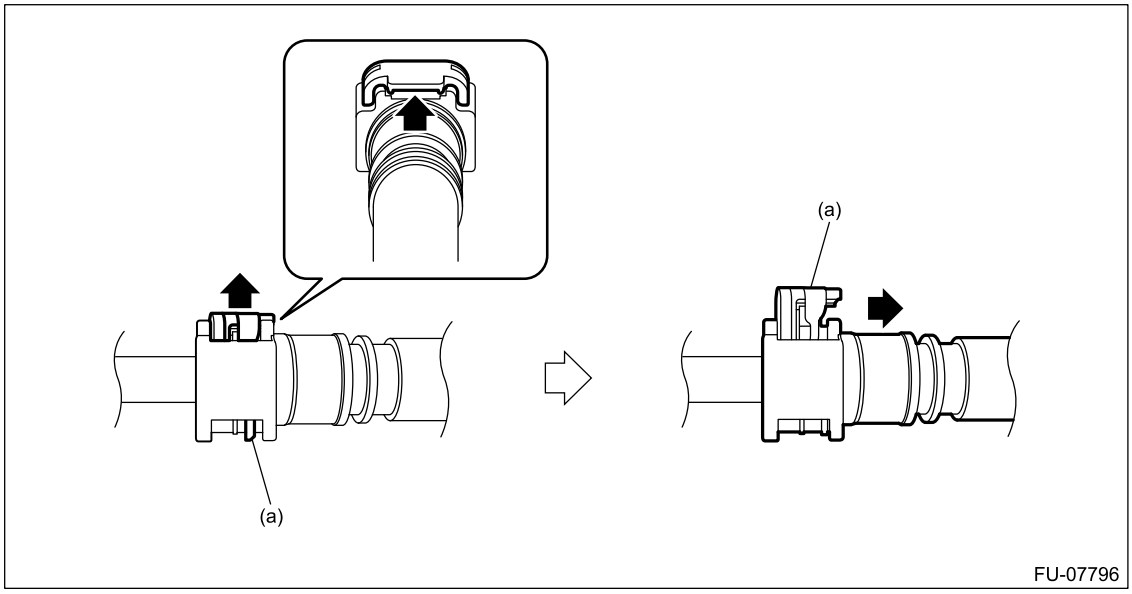
(5) Attach the ST to the converter case.

Preparation tool:

ST: STOPPER SET (498277200)

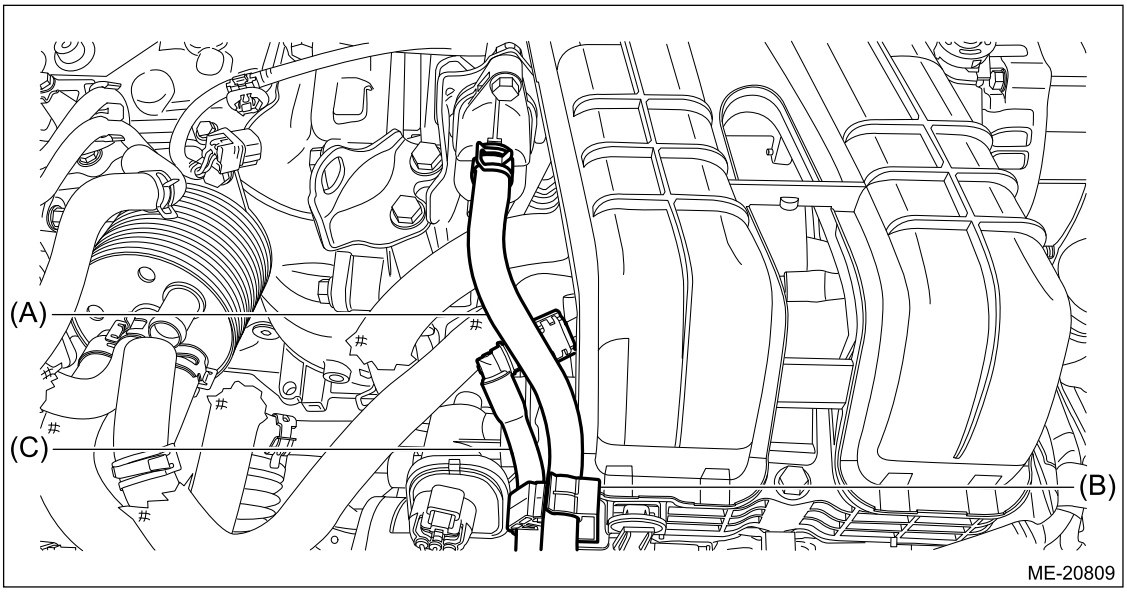
38. Disconnect the fuel delivery tube and evaporation hose.

Caution:



- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

(1) Disconnect the evaporation hose (A) from the purge control solenoid valve, and remove the evaporation hose (A) from the clip (B).



(2) Remove the clip (B) from the intake manifold assembly, and disconnect the quick connector of the fuel delivery tube (C) from the fuel pipe.

Note:

Disconnect the quick connector as shown in the figure.

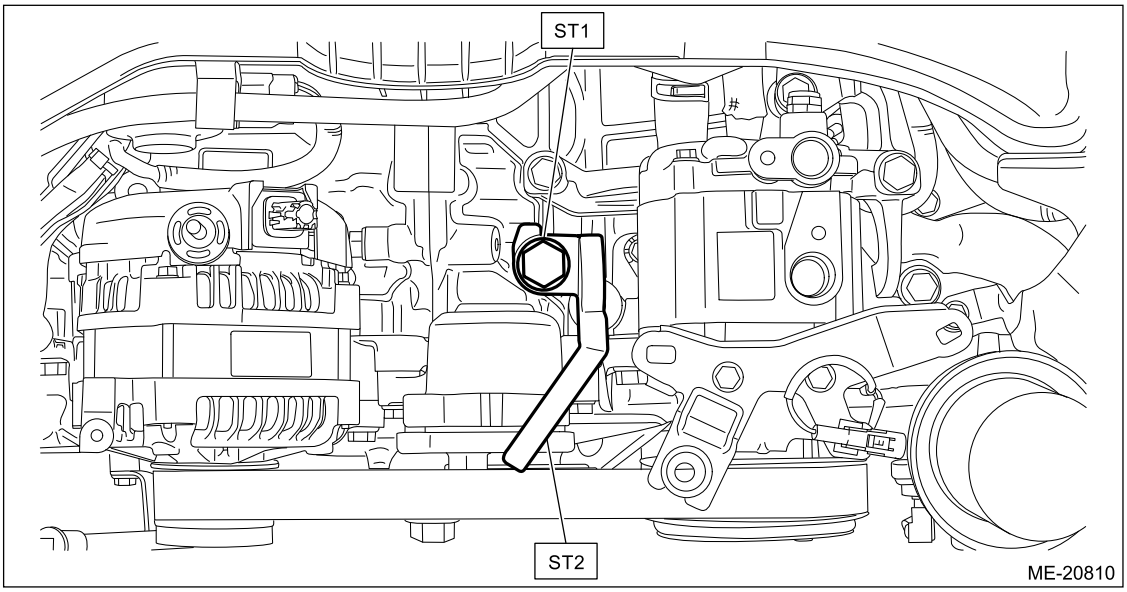
(a) Slider

39. Separate the engine and transmission.

Caution:

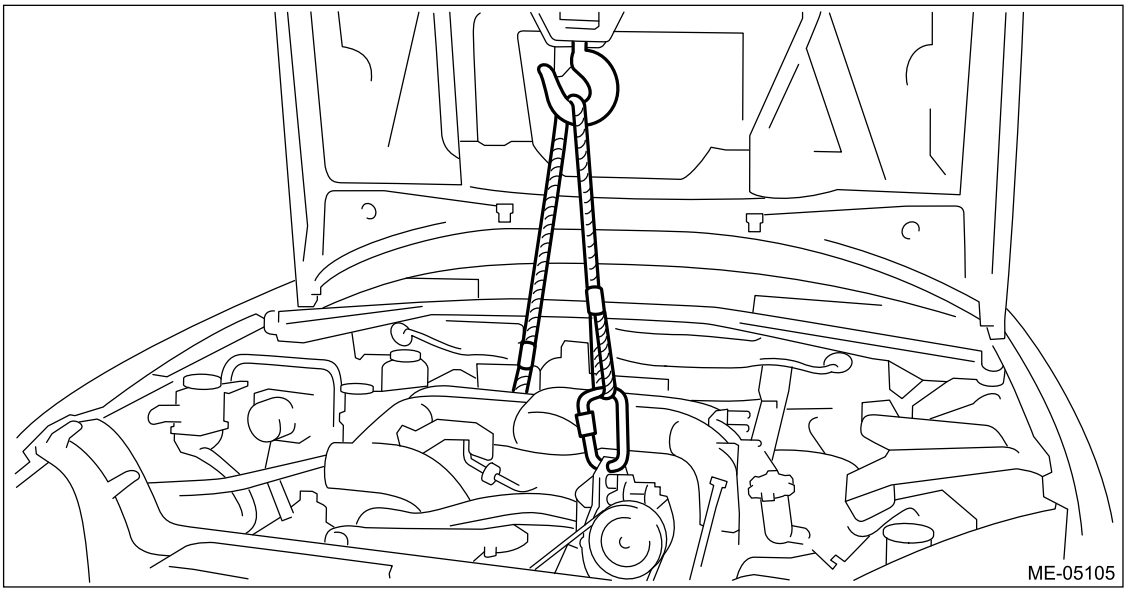
Before removing the engine away from transmission, check to be sure no work has been overlooked.

(1) Using the ST1, install the ST2 to the engine unit.



Preparation tool:

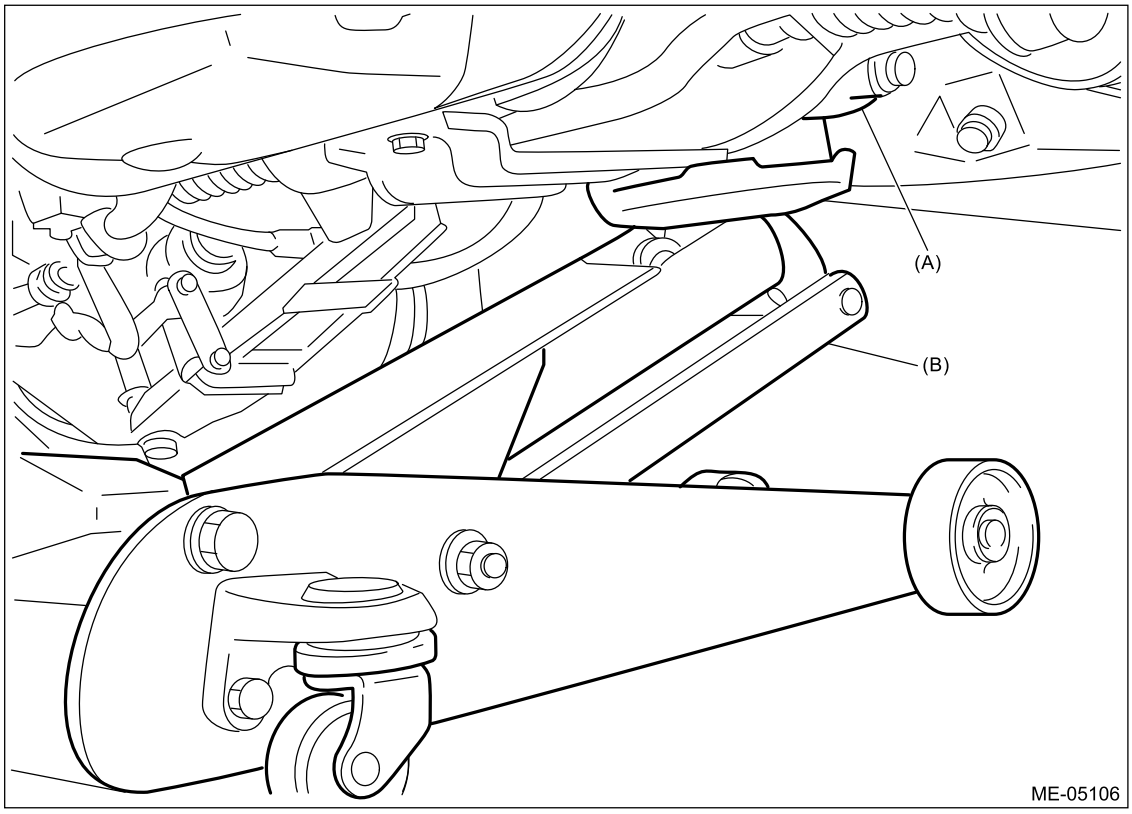
ST1: BOLT (18363AA050)



ST2: HANGER (18360AA040)

Tightening torque:

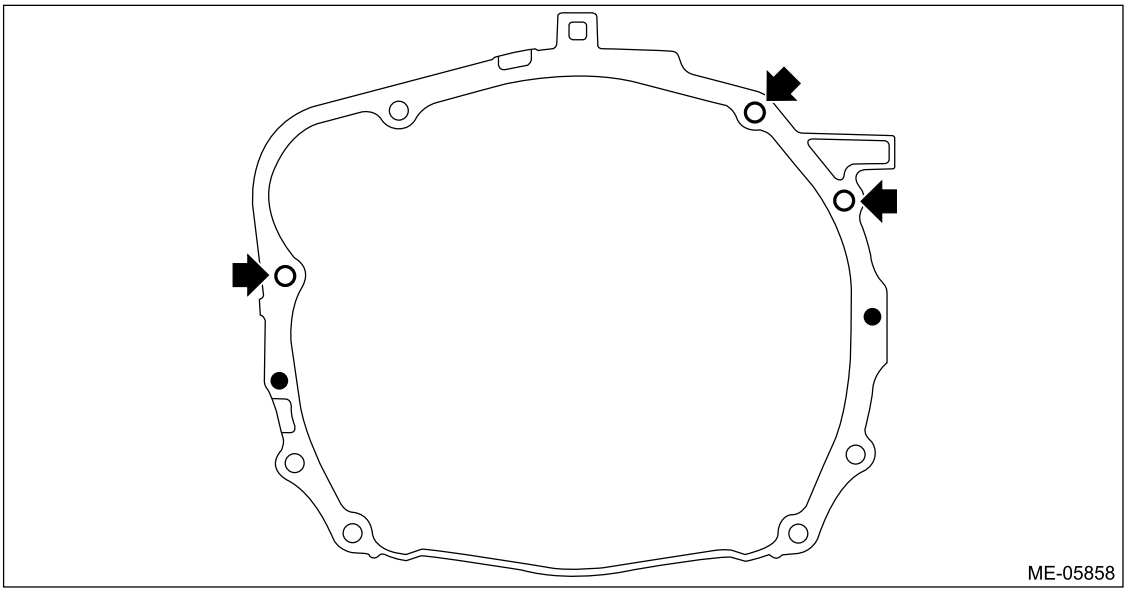
43 N·m (4.4kgf-m, 31.7 ft-lb)



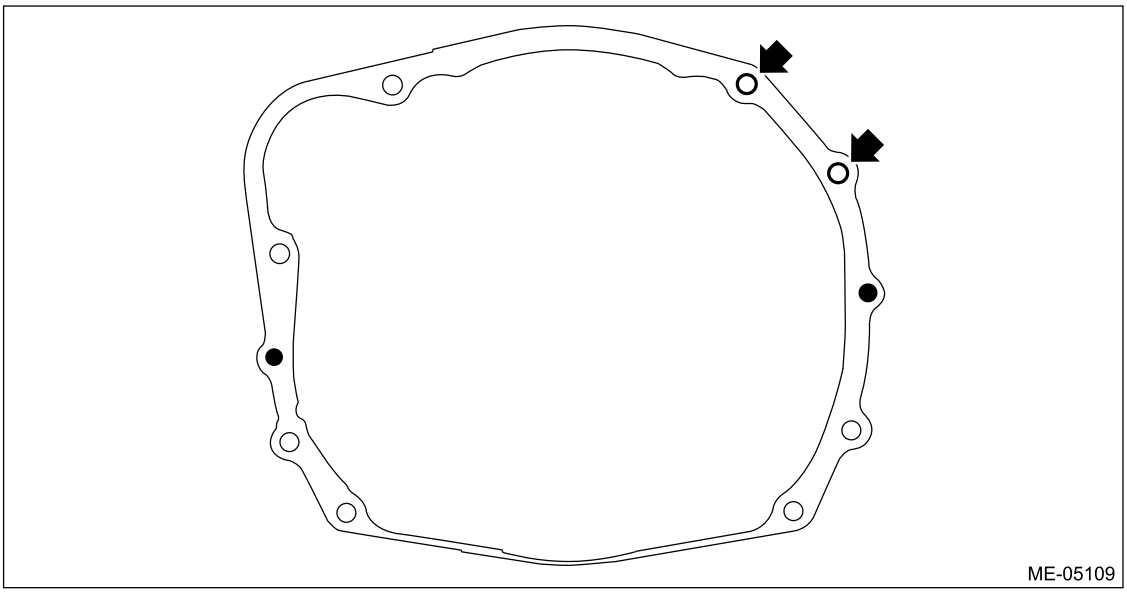
(2) Support the engine with a lifting device and wire ropes.

(3) Support the transmission with a garage jack.

Caution:



Be sure to perform this procedure to prevent the transmission from lowering by its own weight.



(A) Transmission (B) Garage jack

(4) Remove the bolts which hold the upper side of the transmission to the engine.

- CVT model

- MT model

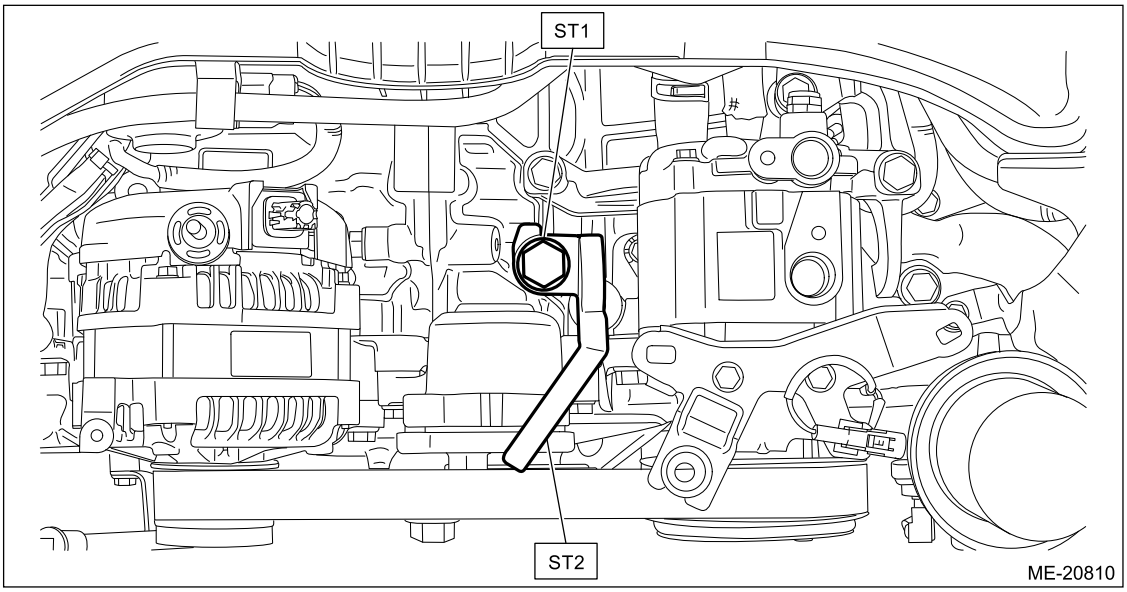
40. Remove the engine from the vehicle.

Note:

Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

(1) Slightly raise the engine.

(2) Raise the transmission with garage jack.

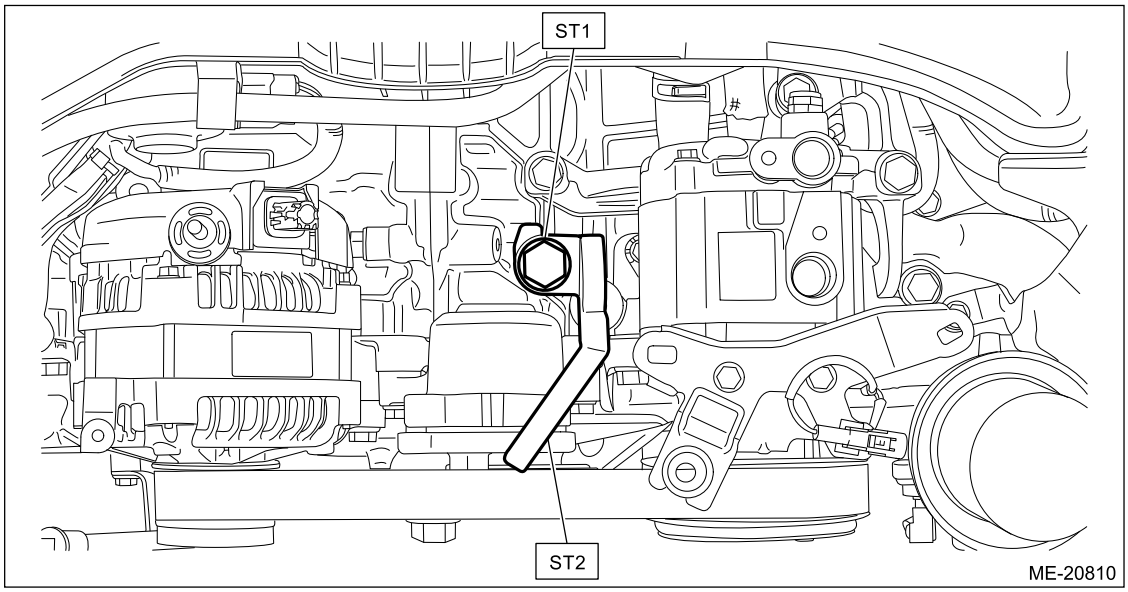


(3) Move the engine horizontally until engine is withdrawn from transmission. (CVT model)

(4) Move the engine horizontally until main shaft is withdrawn from clutch cover. (MT model)

(5) Slowly move the engine away from engine compartment.

41. Remove the engine mounting from the engine.



42. Remove the ST1 and ST2 from the engine unit.

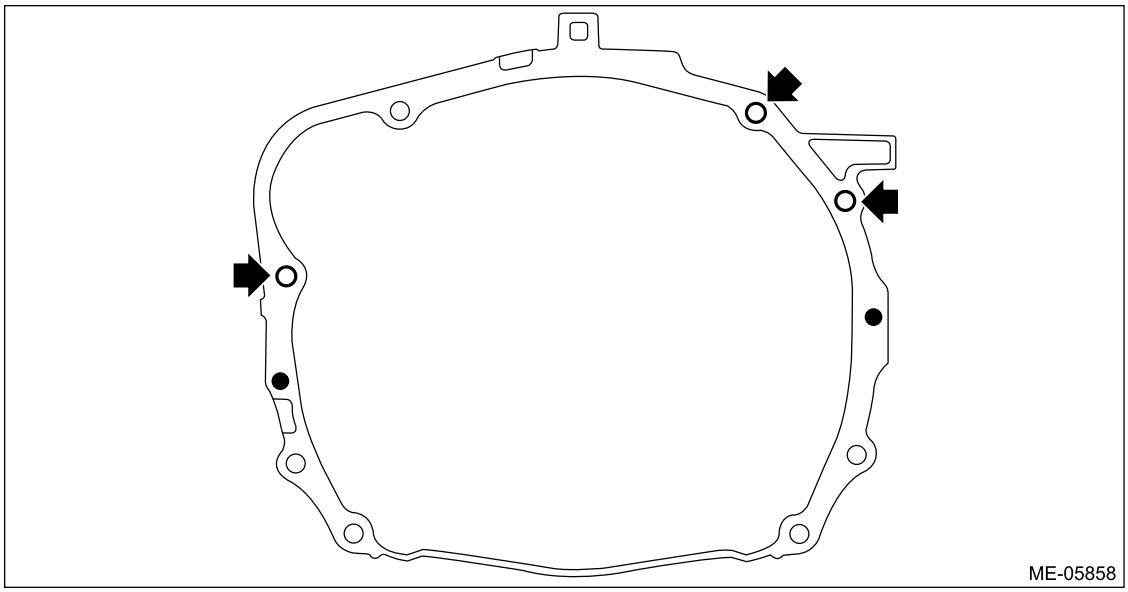
MECHANICAL(H4DO) > Engine Assembly

INSTALLATION

1. Using the ST1, install the ST2 to the engine unit.
   Preparation tool:
   ST1: BOLT (18363AA050)
   ST2: HANGER (18360AA040)
   Tightening torque:
   43 N·m (4.4 kgf-m, 31.7 ft-lb)

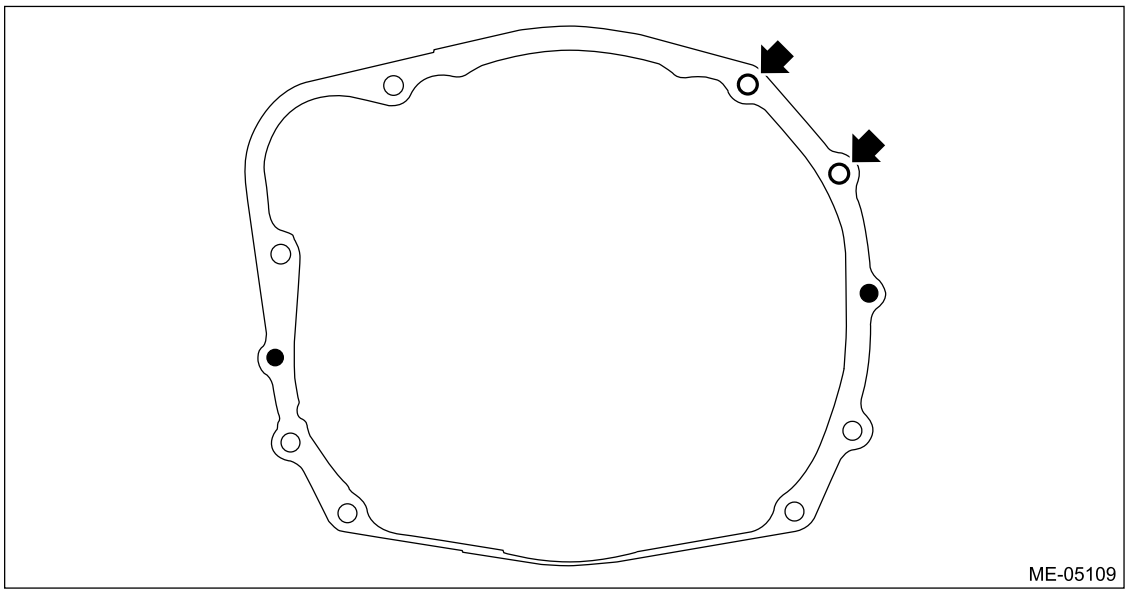
2. Install the engine mounting onto the engine.
   Tightening torque:
   35 N·m (3.6 kgf-m, 25.8 ft-lb)
3. Apply a small amount of grease to splines of main shaft. (MT model)
   Grease:
   NICHIMOLY N-130 or equivalent
4. Position the engine in engine compartment and align it with transmission.

Note:



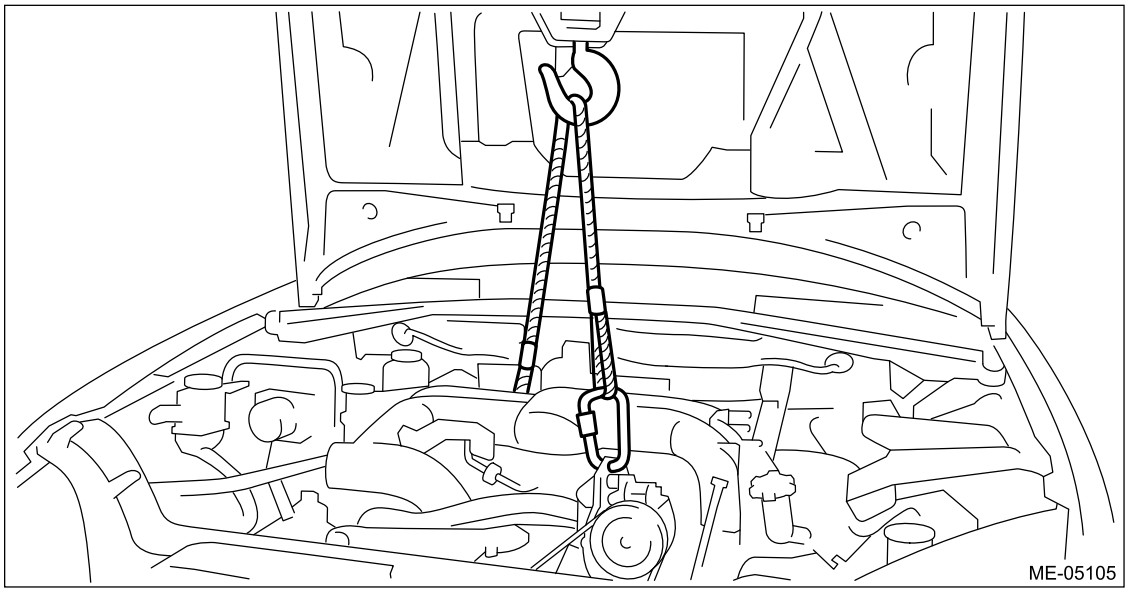
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

5. With a lifting device and a garage jack, slowly lower the engine.
6. Install the bolts which hold upper side of transmission to engine.

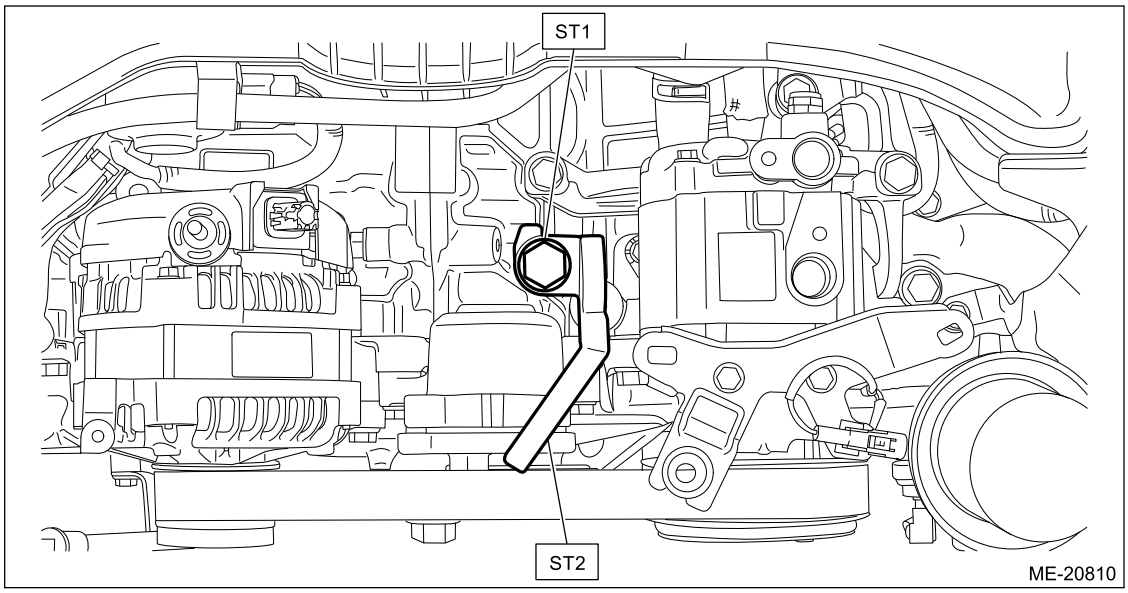


Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)



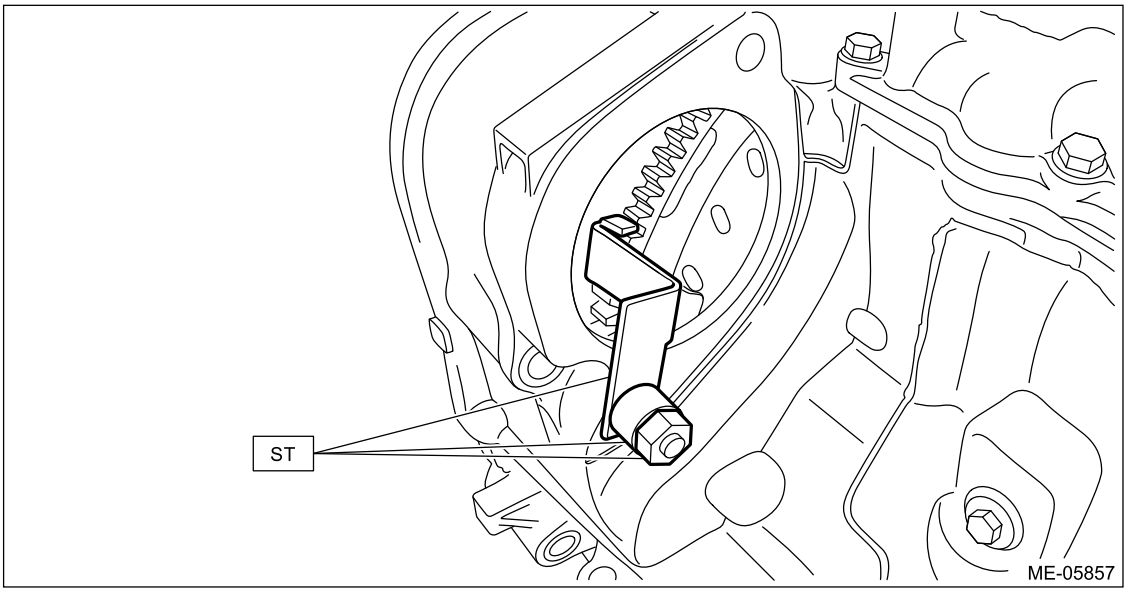
- CVT model



- MT model

7. Remove the garage jack.
8. Remove the lifting device and wire ropes.

9. Remove the ST1 and ST2 from the engine unit.



10. Install the torque converter assembly to the drive plate. (CVT model)

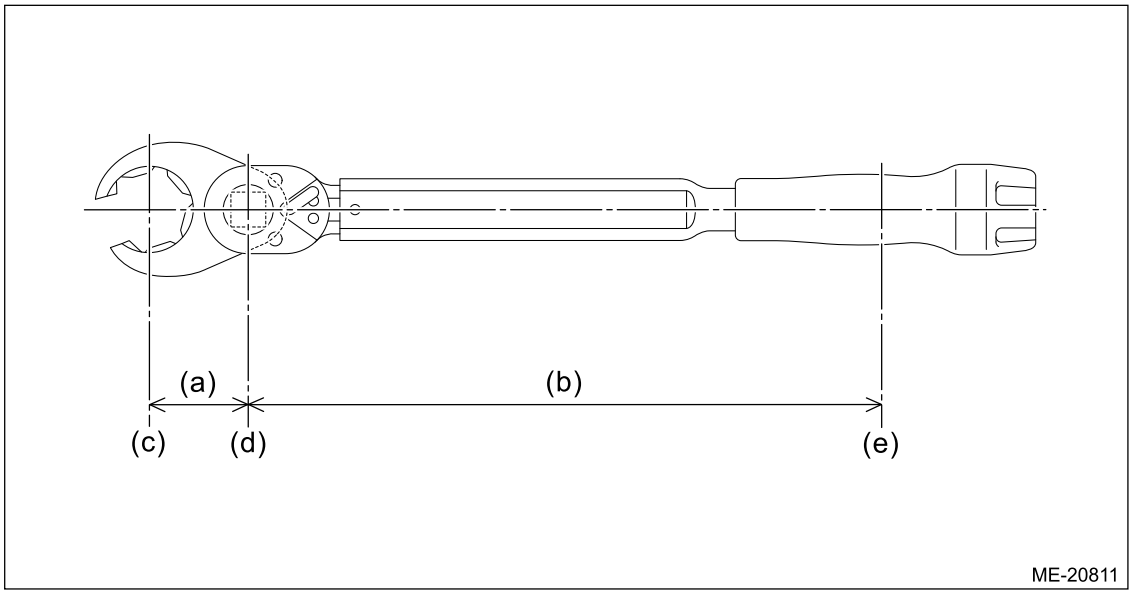
(1) Remove the ST from converter case.

Note:

Be careful not to drop the ST into the converter case when removing the ST.

(2) Insert the wrench into the crank pulley bolt, and rotate the crank pulley to install the bolts (6 places) which hold the torque converter assembly to the drive plate using the ST.

Note:



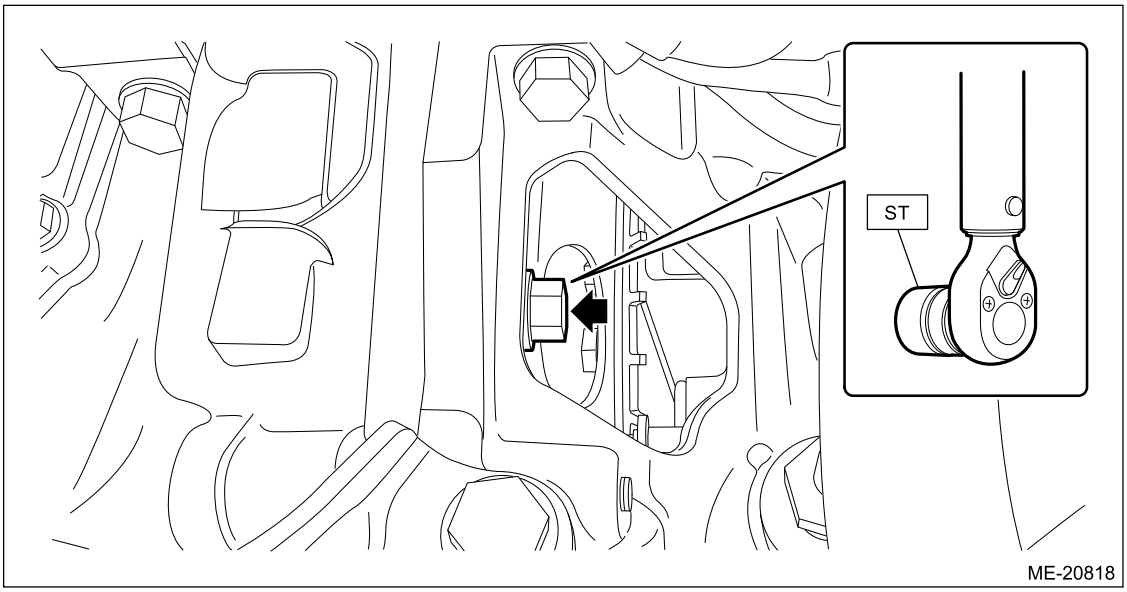
- **Be careful not to drop bolts into the converter housing.**
- **When not using the ST, use a crowfoot wrench for tightening.**
- **Use the following formula to calculate the reading of a torque wrench when tightening with a crowfoot wrench.**

Calculation formula
T= 25 N·m (2.5 kgf-m, 18.4ft-lb) × L1/ (L1+L2)

T: Reading of the torque wrench
L1: Effective length of the torque wrench
L2: Effective length of the crowfoot wrench

Note:

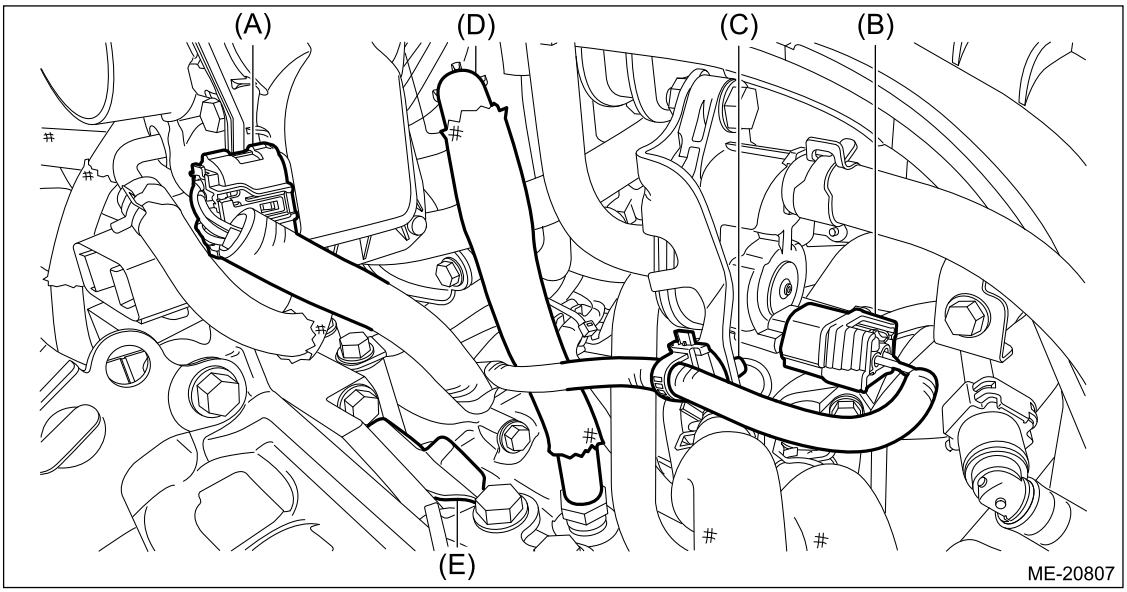
If the effective length of the tool used is unknown, consult the manufacturer of the tool.



(a) Effective length of the crowfoot wrench
(b) Effective length of the torque wrench
(c) Center of the open end of crowfoot wrench
(d) Center of drive angle of the torque wrench
(e) Center of the position where a force is applied by hand

Preparation tool:

ST: SOCKET (18270AA050)



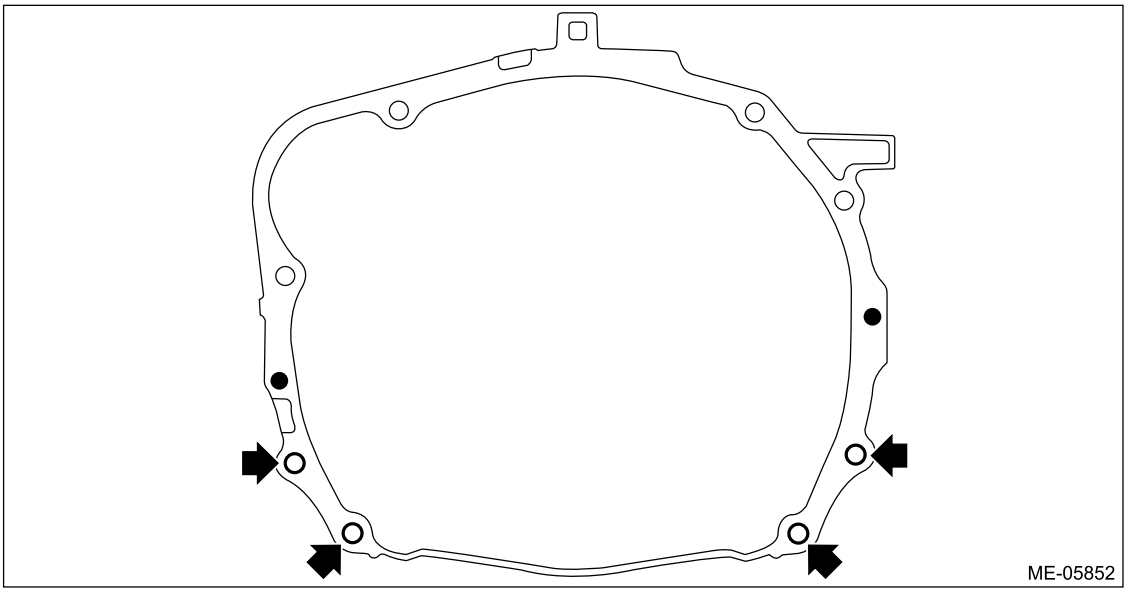
Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

(3) Install plug (E) to the service hole, and connect the PCV hose (D) to the intake manifold assembly and the PCV valve.

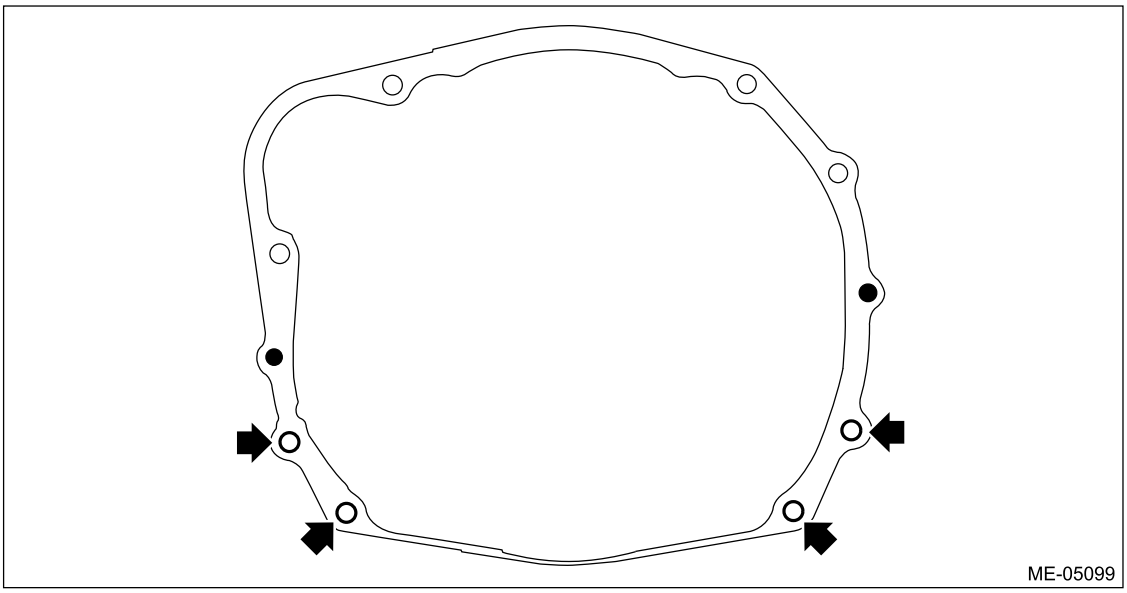
(4) Install the clip (C) to the bracket, and connect connector (B) and connector (A).

11. Install the starter. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>INSTALLATION.



12. Lift up the vehicle.

13. Install the bolts and nuts which hold lower side of the transmission to engine.



Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

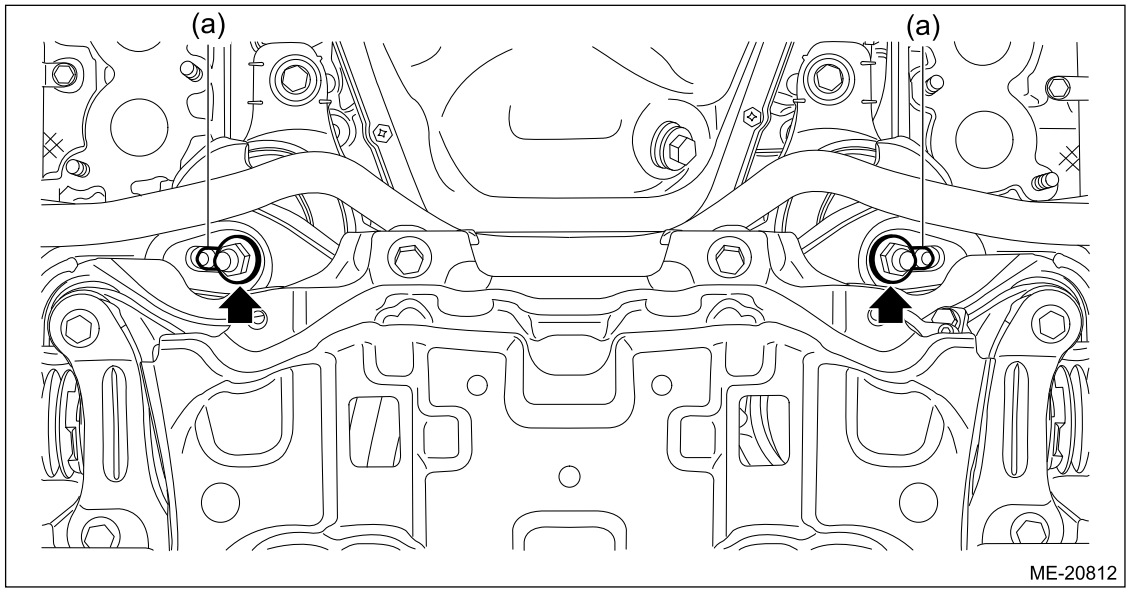
- CVT model

- MT model

14. Install the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.

15. Install the nuts which hold the engine mounting to the crossmember. (CVT model)

Caution:



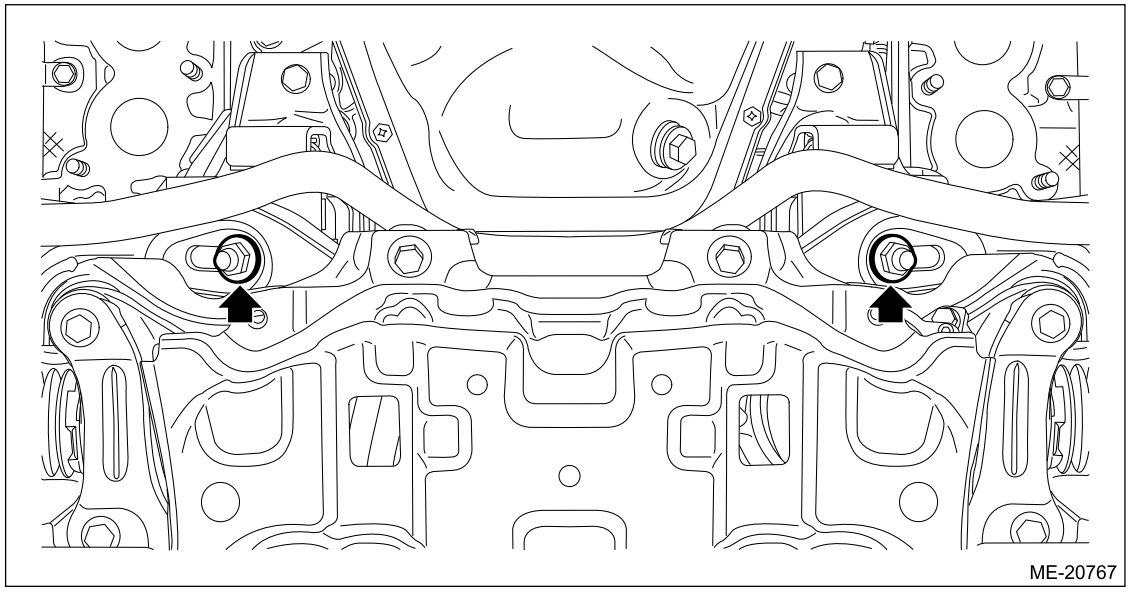
Use new nuts.

Note:

Make sure that locators (a) of the engine mounting are securely inserted.

Tightening torque:

90 N·m (9.2 kgf-m, 66.4 ft-lb)

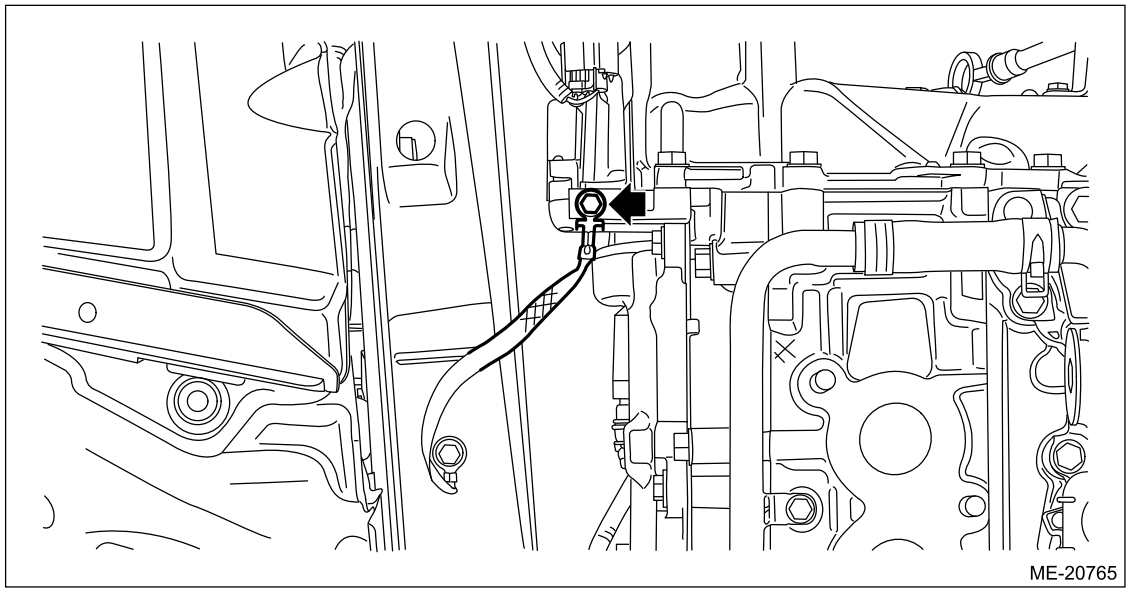


16. Install the nuts which hold the engine mounting to the crossmember. (MT model)

Caution:

Use new nuts.

Tightening torque:



90 N·m (9.2 kgf-m, 66.4 ft-lb)

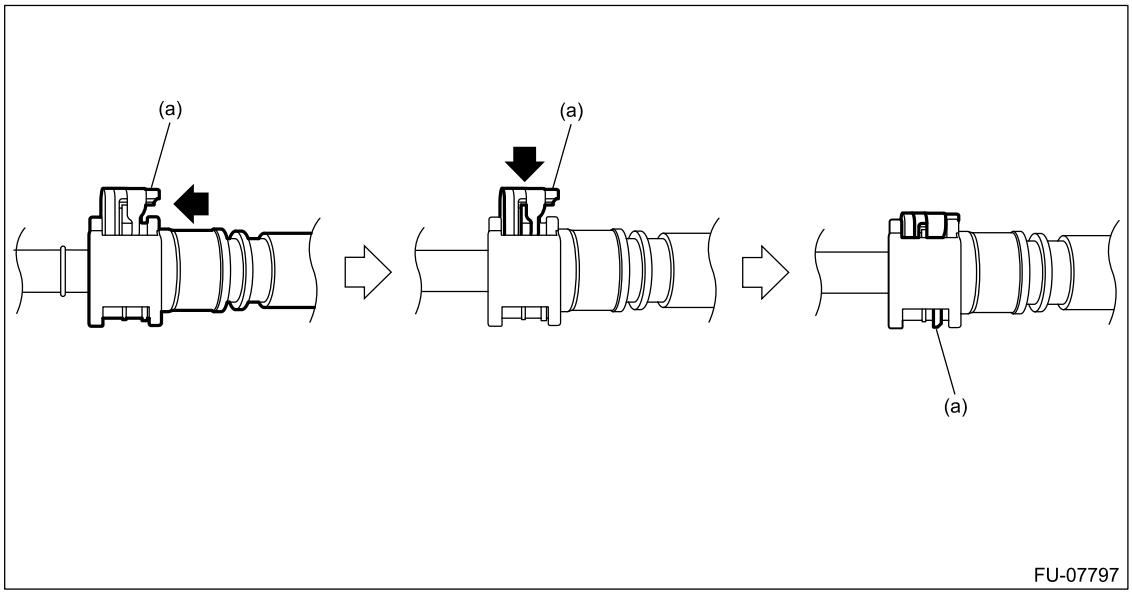
17. Connect the ground cord.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

18. Lower the vehicle.

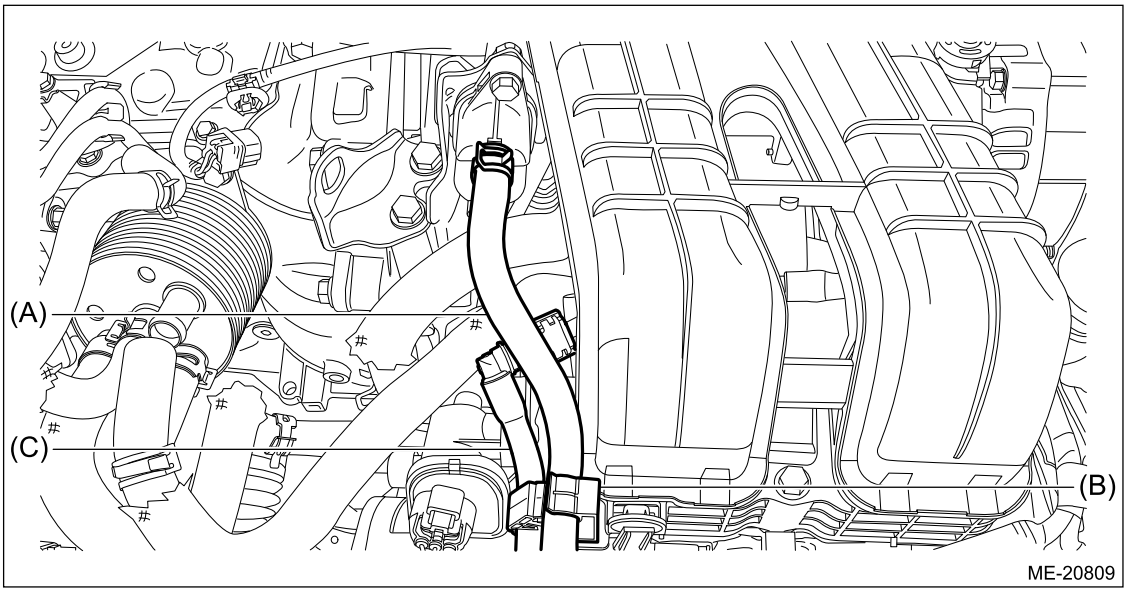
19. Connect the fuel delivery tube and evaporation hose.



(1) Connect the quick connector on the fuel delivery tube (C) to the fuel pipe, and install clip (B) to the intake manifold assembly.

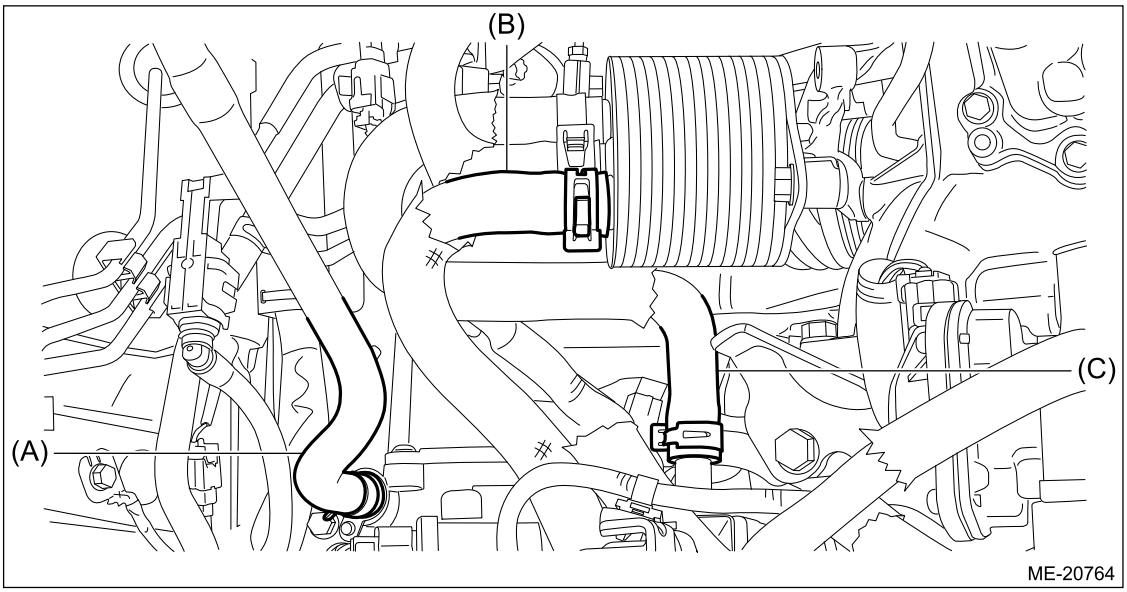
Caution:

- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, check that the quick connector is securely connected.**



Note:

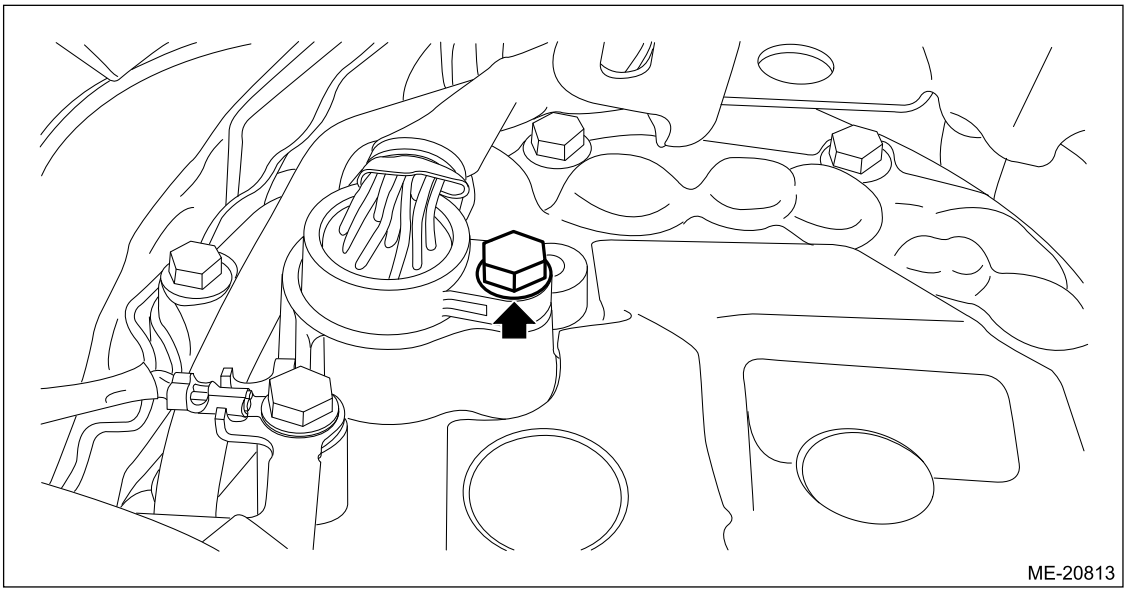
Connect the quick connector as shown in the figure.



(a) Slider

(2) Connect the evaporation hose (A) to clip (B), and connect evaporation hose (A) to purge control solenoid valve.

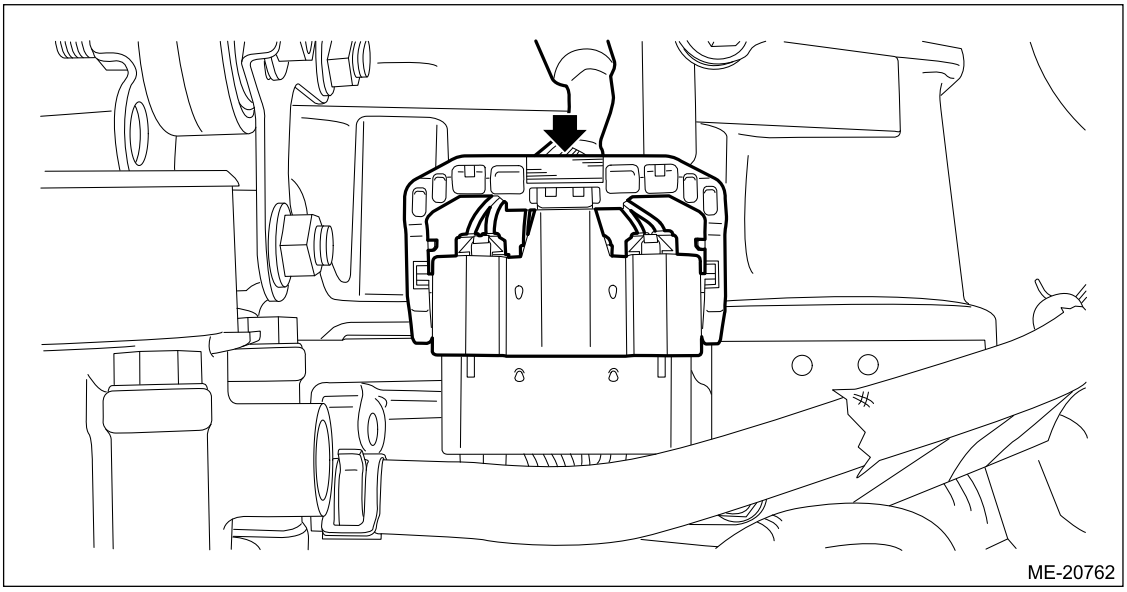
20. Connect the water hose (C) and water hose (B) to the CVTF cooler (with warmer feature) and the EGR cooler. (CVT model)



21. Connect the brake booster vacuum hose (A) to the brake vacuum pump.

22. Remove the bolt and turn the transmission harness counterclockwise to install the transmission harness to the valve cover. (CVT model)

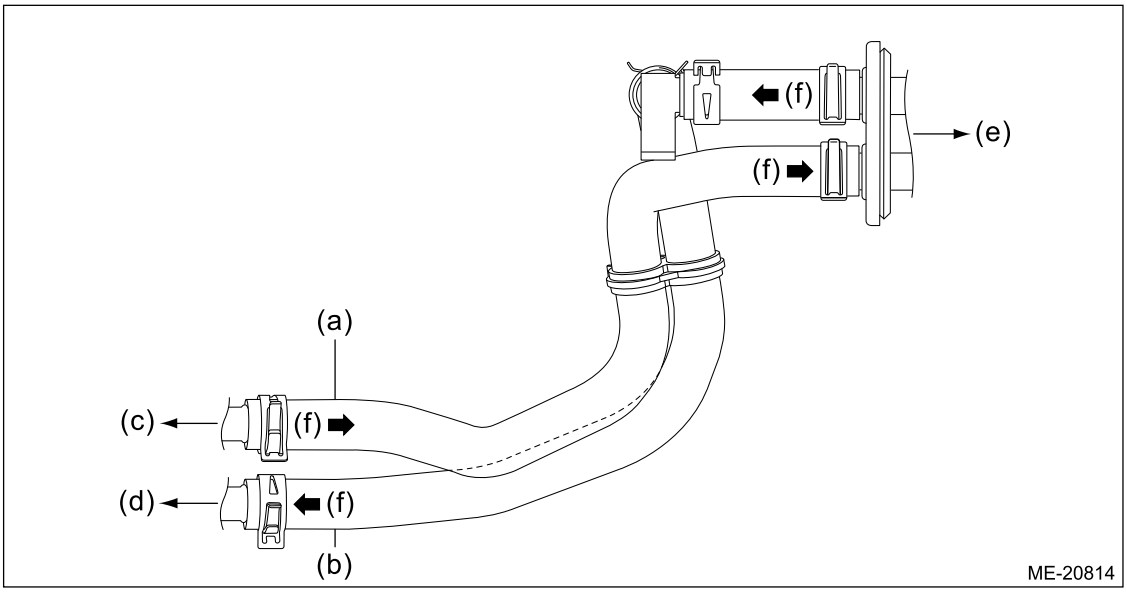
Tightening torque:



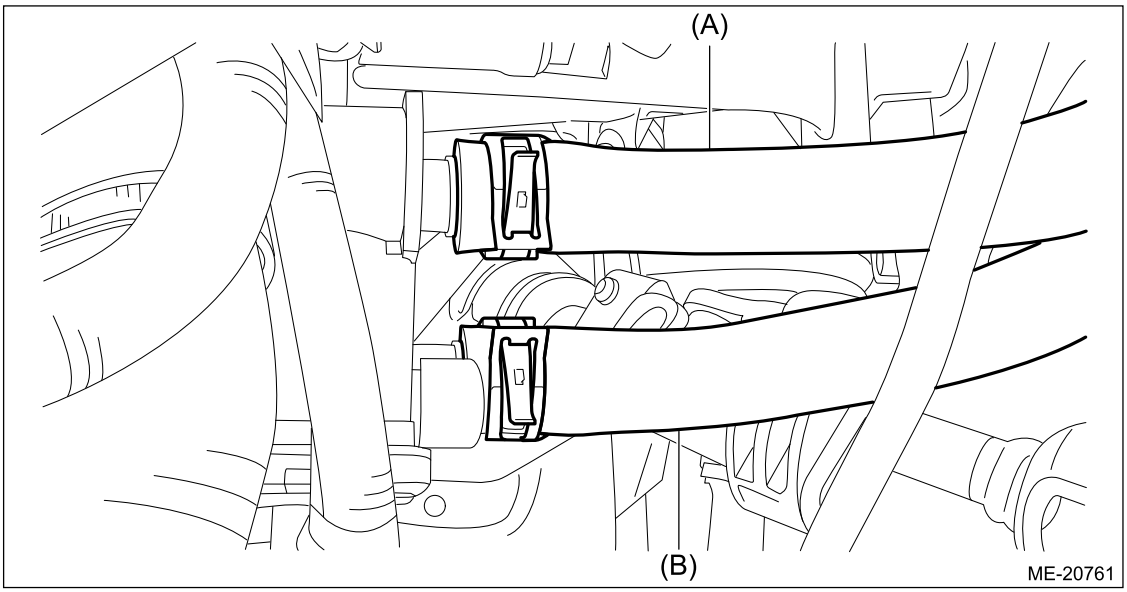
7 N·m (0.7 kgf-m, 5.2 ft-lb)

23. Install the TCM. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>INSTALLATION.

24. Install the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>INSTALLATION > PITCHING STOPPER.



25. Connect the transmission harness connector to the engine wiring harness. (CVT model)

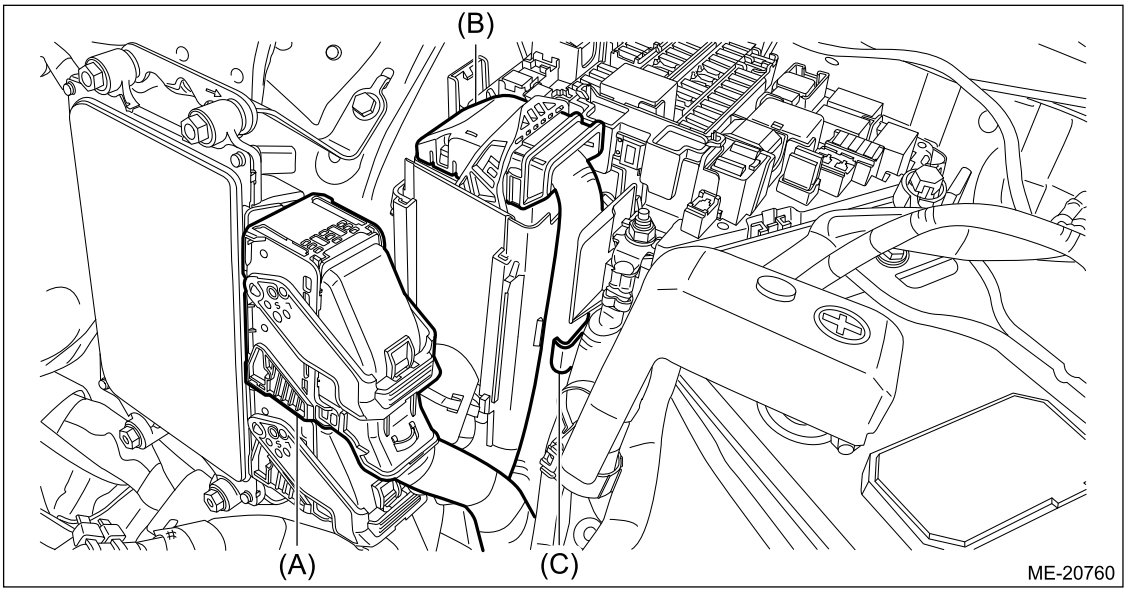


26. Connect the heater inlet hose (A) and the heater outlet hose (B).

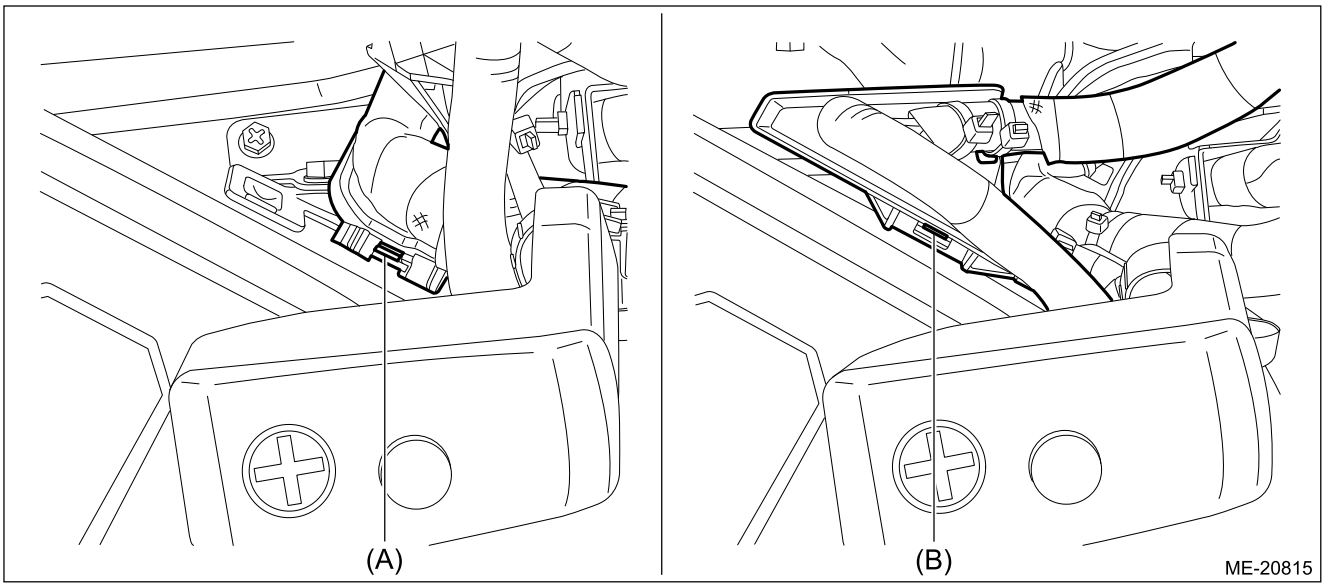
Note:

Be careful not to mix up the heater inlet hose and the heater outlet hose when connecting them.

(a) Heater inlet hose
(b) Heater outlet hose
(c) To water pipe ASSY
(d) To water pipe LH
(e) To heater core ASSY
(f) Engine coolant flow



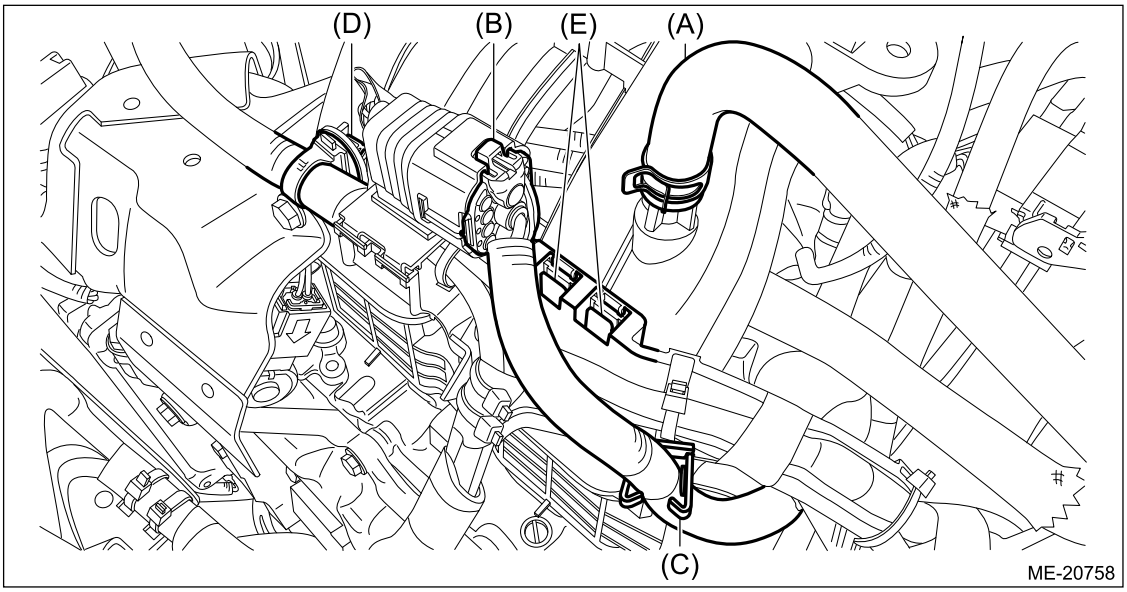
27. Place the engine wiring harness and attach the engine wiring harness to the clip (C).



28. Connect the connector (B) to the main fuse box, and connect the connector (A) to the ECM.

Caution:

To prevent damage to the connector (A), when connecting the connector (A), insert the connector (A) straight in until it stops, and while maintaining the position, lock the lever.

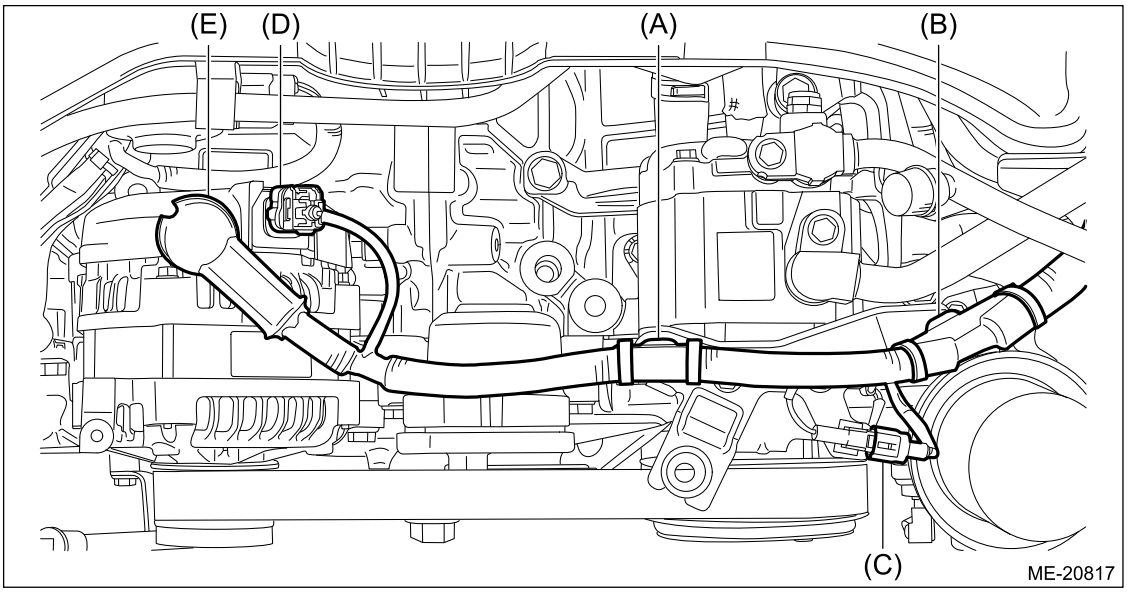


29. Secure the engine wiring harness (A) to the bracket, and secure the battery cable (B) in place.

30. Install the clip (E) and clip (D) to the intake manifold assembly.

31. Install the engine wiring harness to the clip (C), and connect the connector (B).

32. Connect the brake booster vacuum hose (A).



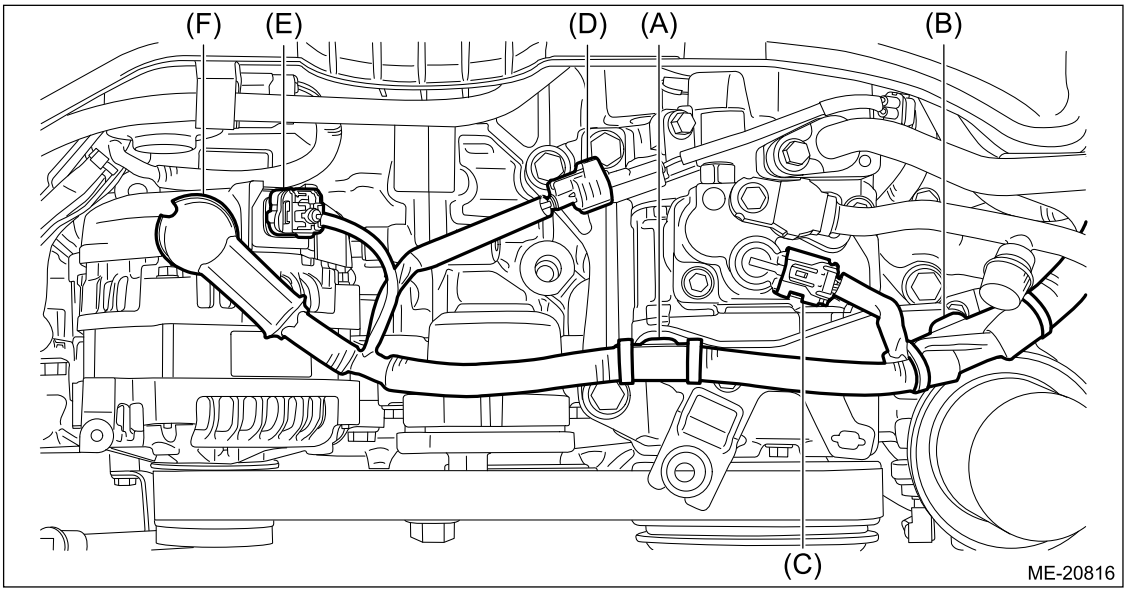
33. Connect the hose - pressure suction and the hose - pressure discharge to the A/C compressor. (Fixed capacity A/C model) Ref. to AIR CONDITIONER>Hose and Pipe>INSTALLATION.

34. Secure the battery cable with the clip (A) and clip (B) in place. (Fixed capacity A/C model)

35. Connect the connector (C), connector (D), and the terminal (E). (Fixed capacity A/C model)

Tightening torque:

15.5 N·m (1.6 kgf-m, 11.4 ft-lb)



36. Connect the hose-pressure suction and the hose-pressure discharge to the A/C compressor. (Variable capacity A/C model) Ref. to AIR CONDITIONER>Hose and Pipe>INSTALLATION.

37. Secure the battery cable with the clip (A) and clip (B) in place. (Variable capacity A/C model)

38. Connect the connector (C), connector (D), connector (E), and the terminal (F). (Variable capacity A/C model)

Tightening torque:

15.5 N·m (1.6 kgf-m, 11.4 ft-lb)

39. Install the radiator. Ref. to COOLING(H4DO)>Radiator>INSTALLATION.
40. Install the air intake case (rear). Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner Case>INSTALLATION.
41. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
42. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
43. Install the fuel filler cap, and close the fuel filler lid.
44. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.
45. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > FILLING OF ENGINE COOLANT.
46. Set the front hood to the normal position. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.
47. Install the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>ASSEMBLY.
48. Close the front hood.

MECHANICAL(H4DO) > Engine Assembly

INSPECTION

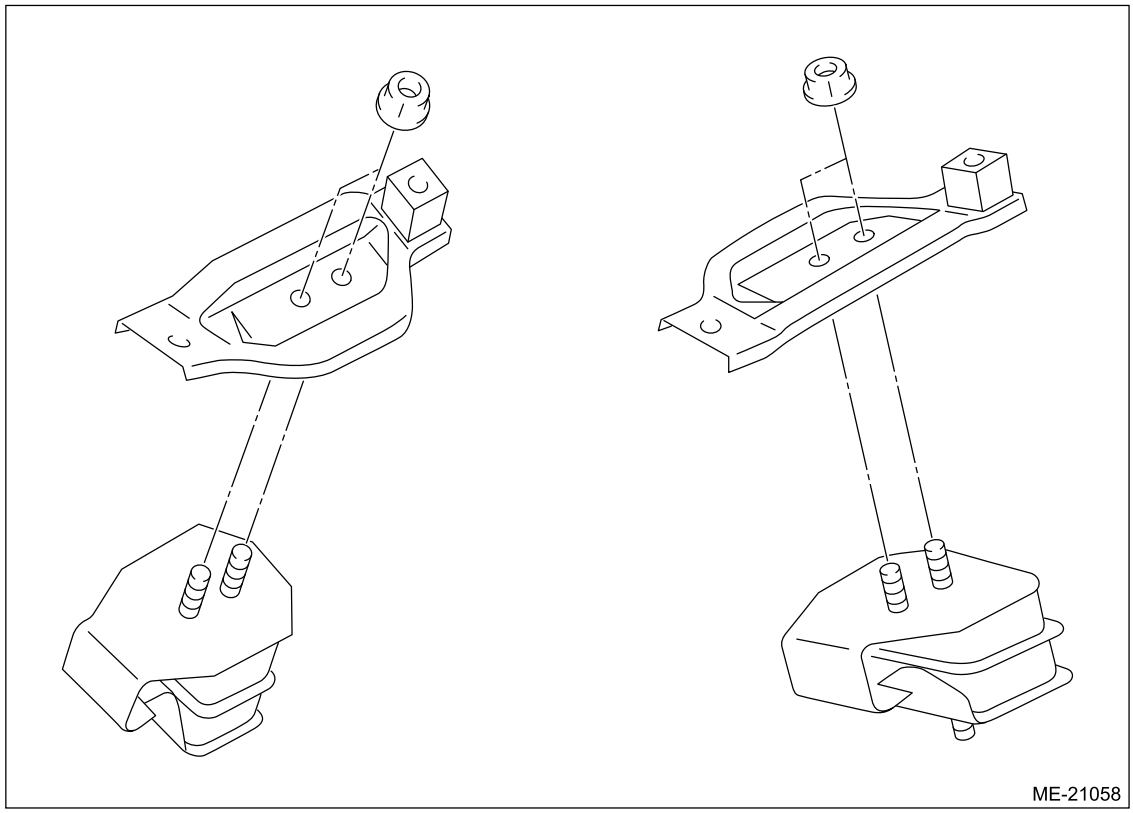
1. Check that pipes, hoses, connectors and clamps are installed firmly.
2. Check the engine coolant is at specified level.
3. Start the engine and check for exhaust gas, engine coolant, leaks of fuel, etc. Also check for noise and vibrations.

MECHANICAL(H4DO) > Engine Mounting

REMOVAL

1. Remove the crossmember. Ref. to FRONT SUSPENSION>Crossmember>REMOVAL.
2. Remove the engine mounting from the engine.

MECHANICAL(H4DO) > Engine Mounting



INSTALLATION

1. Install the engine mounting onto the engine.
   Tightening torque:
   35 N·m (3.6 kgf-m, 25.8 ft-lb)
2. Install the crossmember. Ref. to FRONT SUSPENSION>Crossmember>INSTALLATION.

MECHANICAL(H4DO) > Engine Mounting

DISASSEMBLY

Remove the front cushion rubber from the front engine mounting bracket. (MT model)

MECHANICAL(H4DO) > Engine Mounting

ASSEMBLY

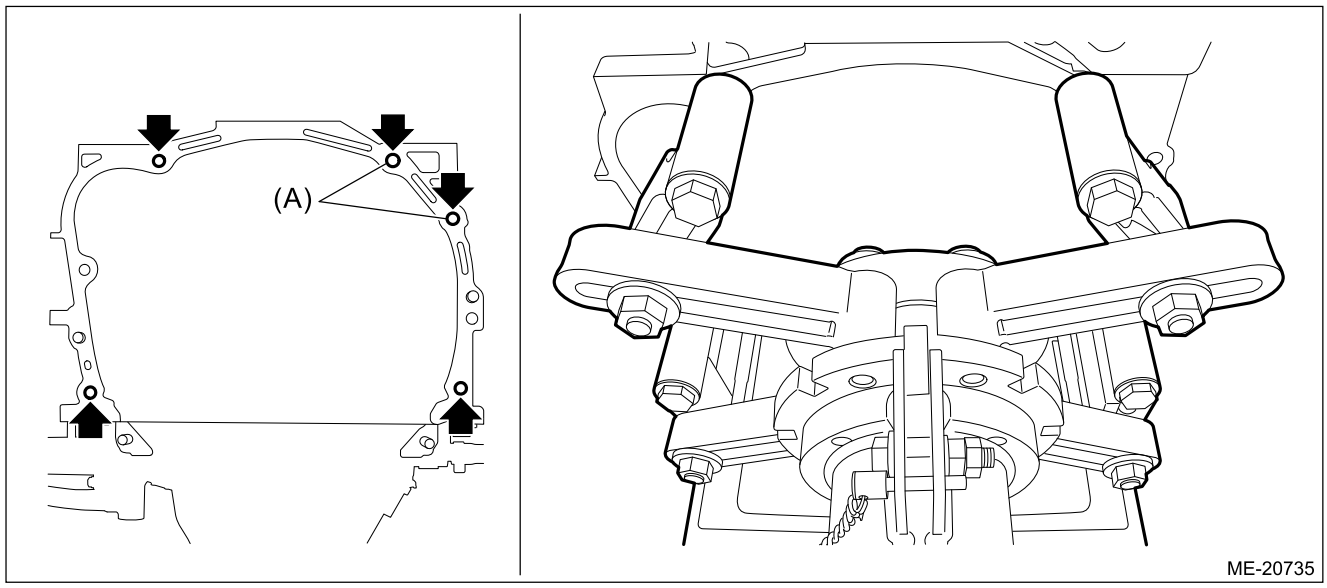
Install the front cushion rubber to the front engine mounting bracket. (MT model)
Tightening torque:
42 N·m (4.3kgf-m, 31.0 ft-lb)

MECHANICAL(H4DO) > Engine Mounting

INSPECTION

Make sure that there are no cracks or other damages.

PROCEDURE



1. After engine has been removed from the vehicle, mount the engine to the engine stand while being careful of the following.
   (1) When mounting the engine stand, follow the instructions of engine stand used.
   (2) When disassembling the cylinder block, remove the following parts first, and then mount the engine stand.
      1. Remove the crankshaft position sensor plate with drive plate. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Plate>REMOVAL.
      2. Remove the clutch disc and cover. (MT model) Ref. to CLUTCH SYSTEM>Clutch Disc and Cover>REMOVAL.
      3. Remove the crankshaft position sensor plate with flywheel. (MT model) Ref. to CLUTCH SYSTEM>Flywheel>REMOVAL.
   (3) Mount the engine stand using the points shown by the arrows in the figure.

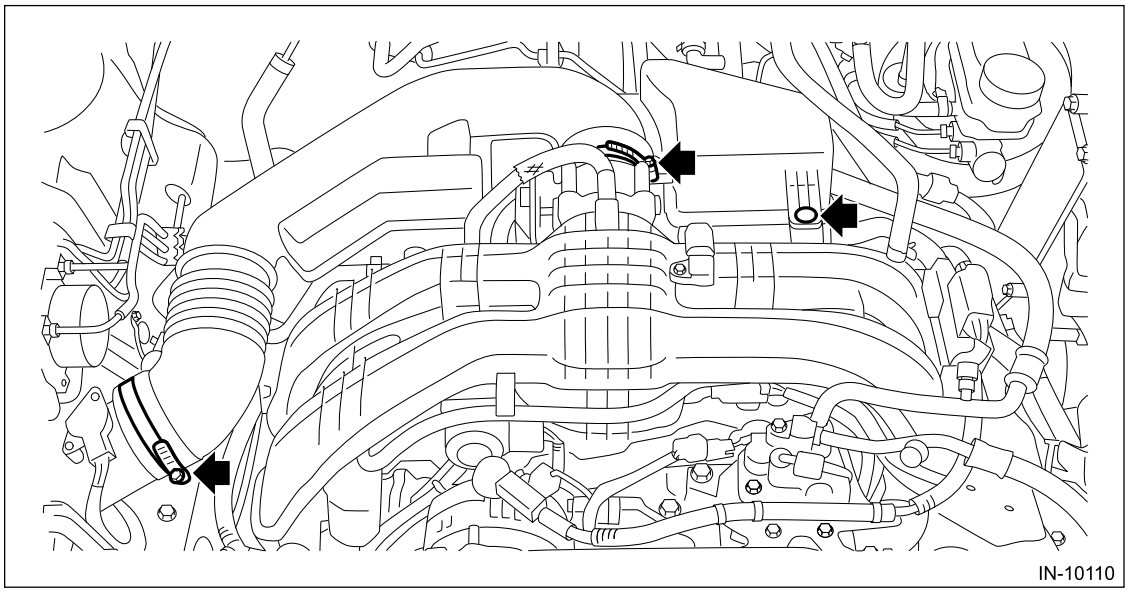
   Caution:

   Be sure to mount the engine stand at four points. Otherwise, the engine damage may occur.

   Note:

   - **For points (A), either of them can be used for mounting the engine stand.**
   - **The engine stand shown in the figure is just for reference.**

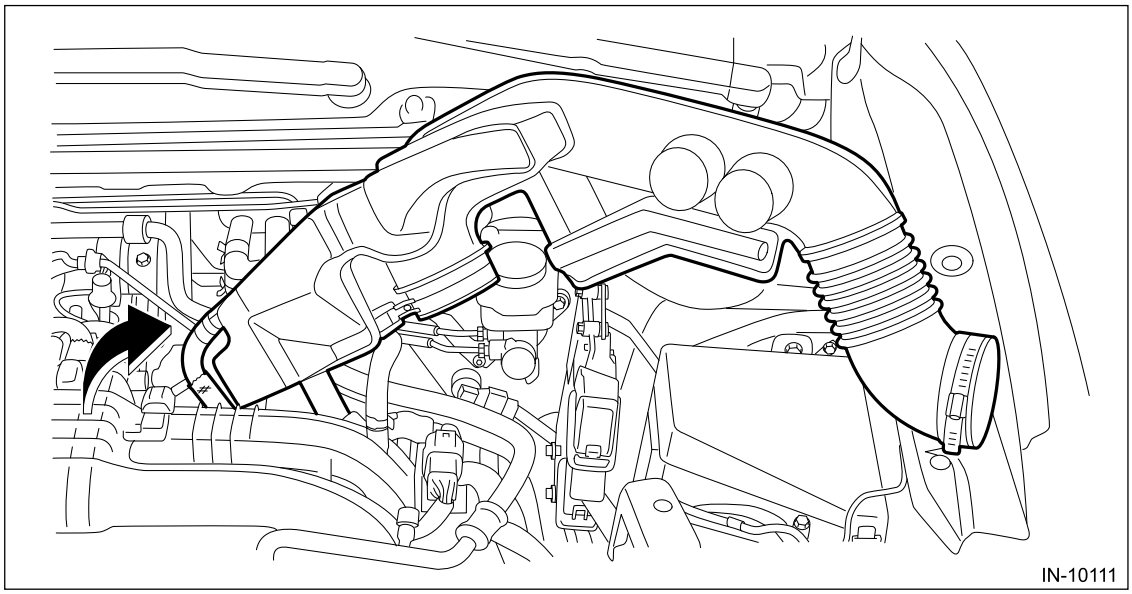
2. In this section the procedures described under each index are all connected and stated in order. The procedure for overhauling of the engine will be completed when you go through all steps in the process.
   Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.



REMOVAL

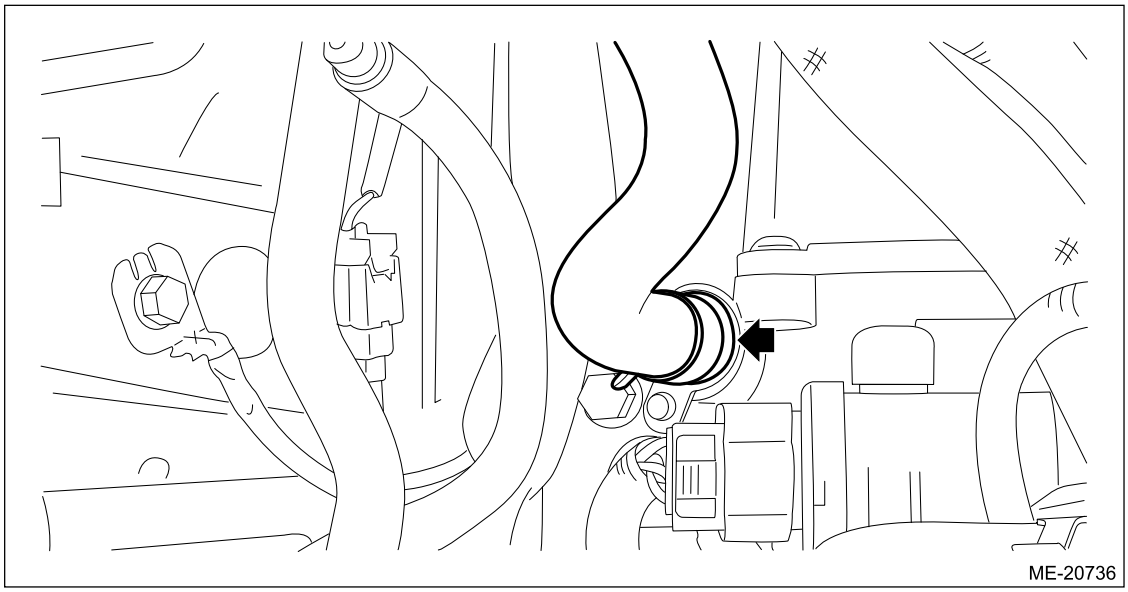
Note:
When replacing a single part, perform the work with the engine assembly installed to body.

1. When working on the vehicle



Note:
When working on the vehicle, perform the following steps also.

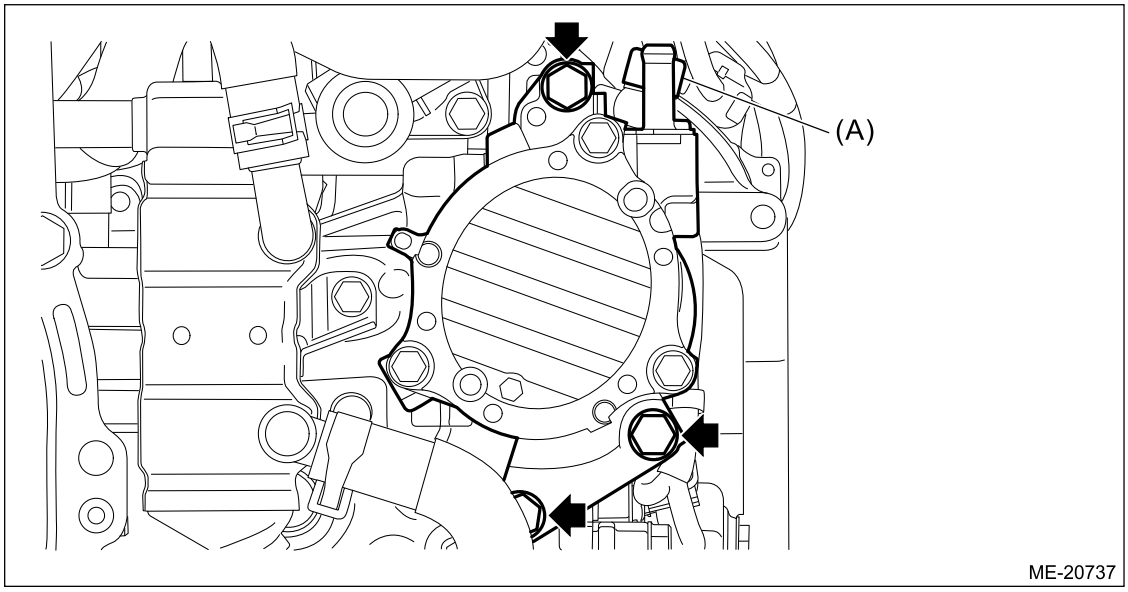
(1) Remove the clip from the air intake boot, and loosen the clamp.



(2) Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:
Be careful not to pull out the PCV hose.

(3) Disconnect the brake booster vacuum hose from the vacuum pump.



(4) Remove the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.

2. Remove the bolts (A) securing the oil pipe, and remove the vacuum pump.

Note:

The vacuum pump cannot be disassembled.

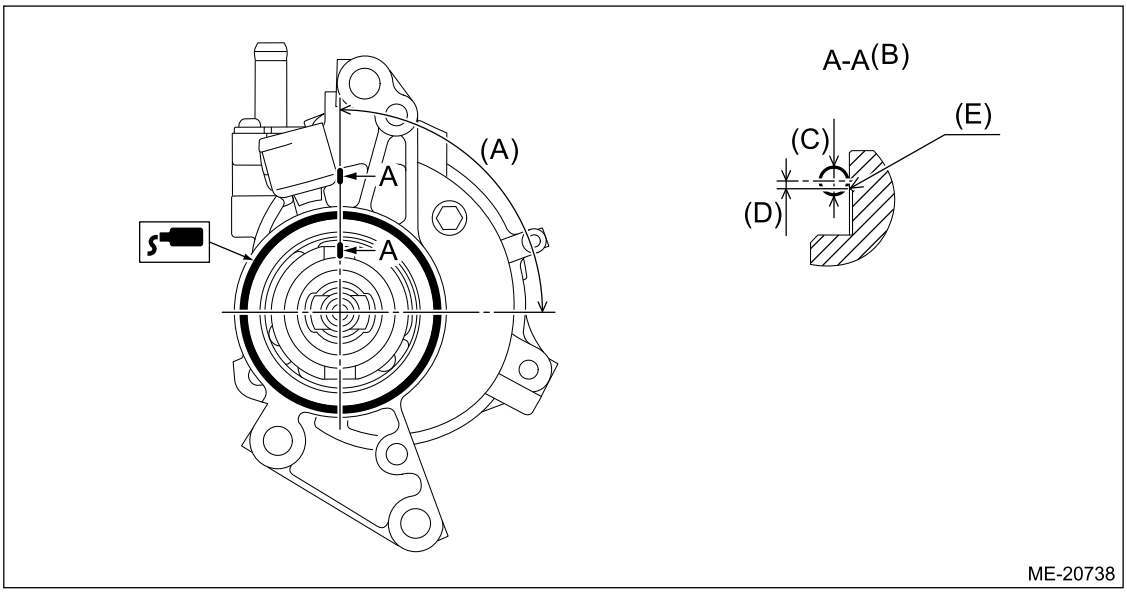
3. Remove liquid gasket from the vacuum pump mounting surface of the engine, and the surface of the vacuum pump.

MECHANICAL(H4DO) > Vacuum Pump

INSTALLATION

1. Apply liquid gasket to the vacuum pump as shown in the figure.

Note:



- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine where the vacuum pump is mounted on, and the surface of the vacuum pump.**
- **When applying liquid gasket, the start and the end of application should cross at the point within the range A shown in the figure.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

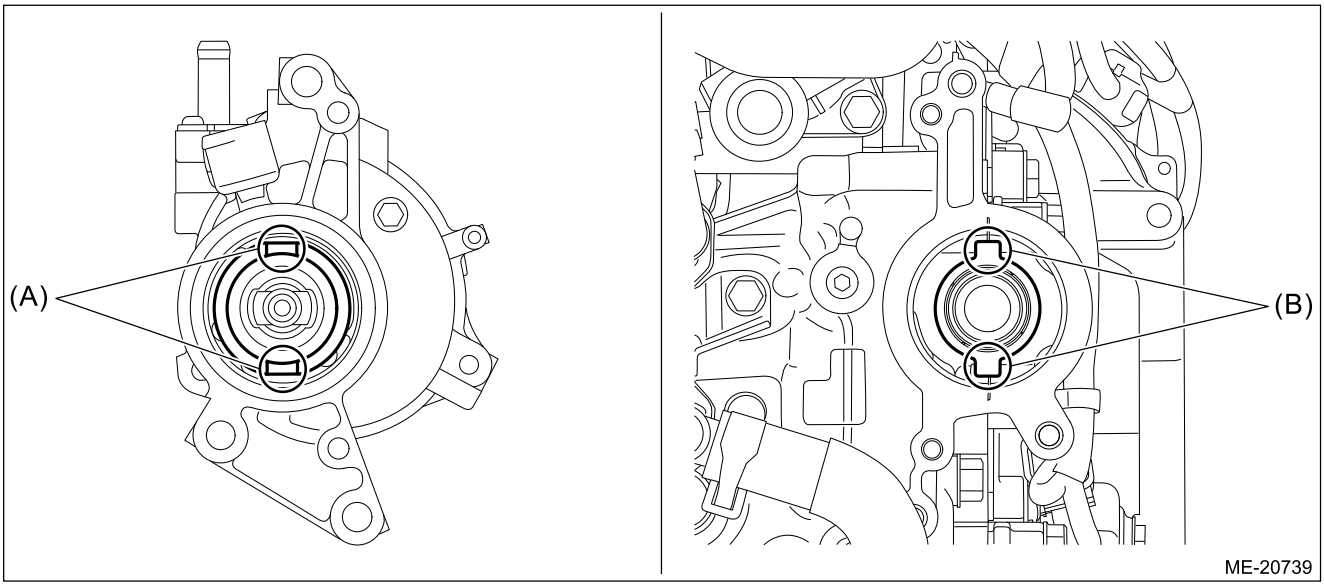
Liquid gasket applying diameter:

3±1 mm (0.1181±0.0394 in)

(A) Range A (range where application can start)

(B) Liquid gasket applying position of mating surface

(C) ⌀3±1 mm (0.1181±0.0394 in)



(D) Within 1 mm (0.0394 in)

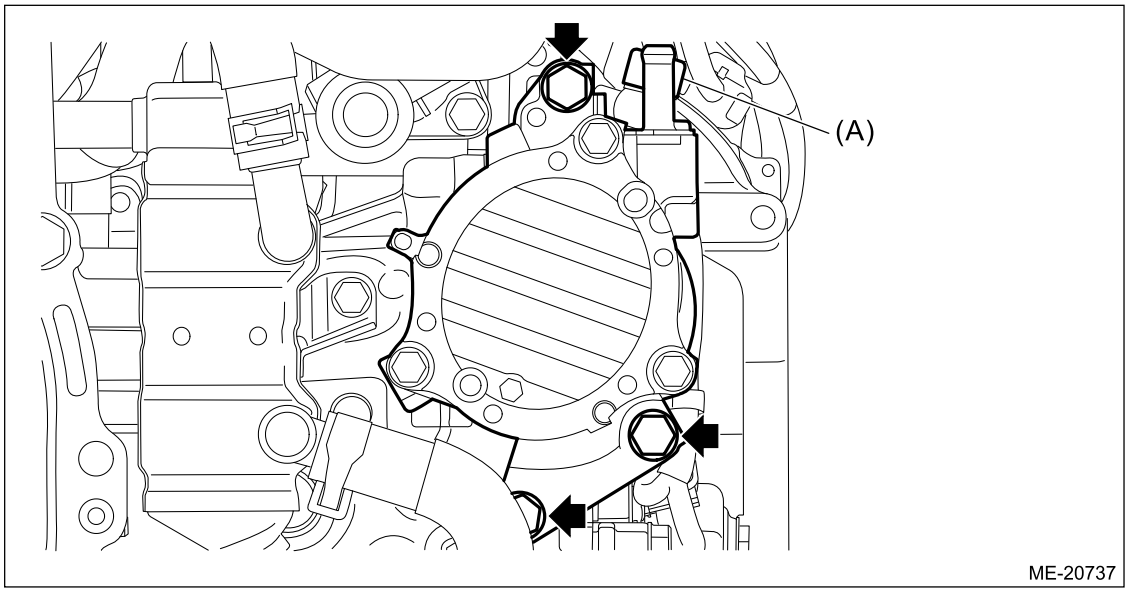
(E) Chamfer edge

2. Install the vacuum pump.

Note:

When installing the vacuum pump, align the slot on the vacuum pump shaft (A) with the protrusion on the intake camshaft RH (B).

Tightening torque:



16 N·m (1.6 kgf-m, 11.8 ft-lb)

3. Apply engine oil to the threaded portion for the vacuum pump union bolt.

4. Set a new gasket on the oil pipe, and secure the oil pipe with the union bolt (A).

Tightening torque:

20 N·m (2.0 kgf-m, 14.8 ft-lb)

5. When working on the vehicle

Note:

When working on the vehicle, perform the following steps also.

(1) Install the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.

(2) Connect the brake booster vacuum hose to the vacuum pump.

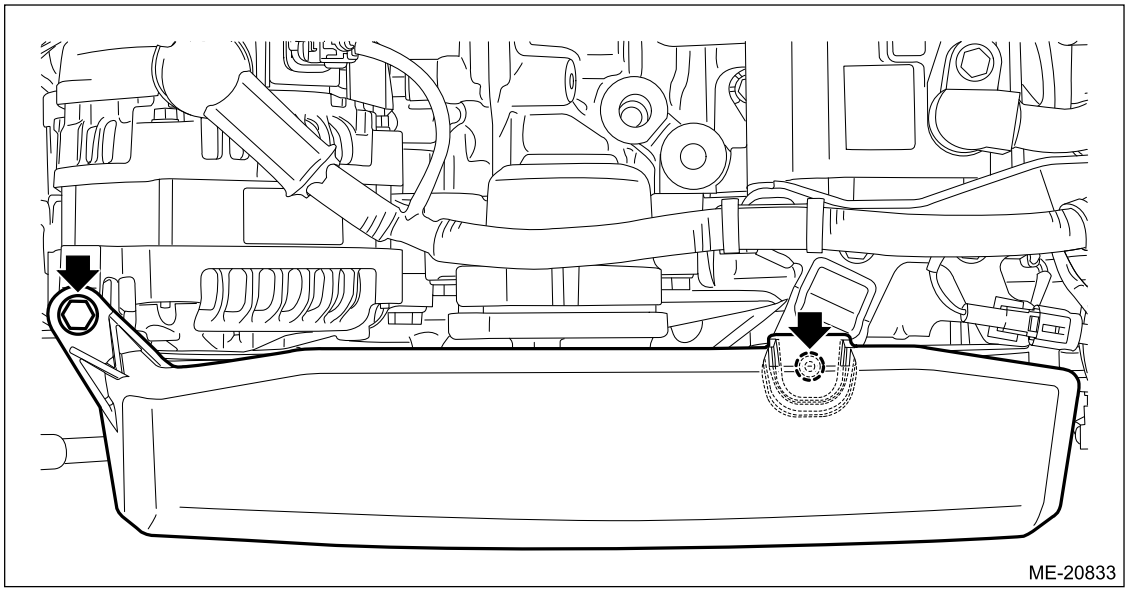
(3) Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

MECHANICAL(H4DO) > Vacuum Pump

INSPECTION

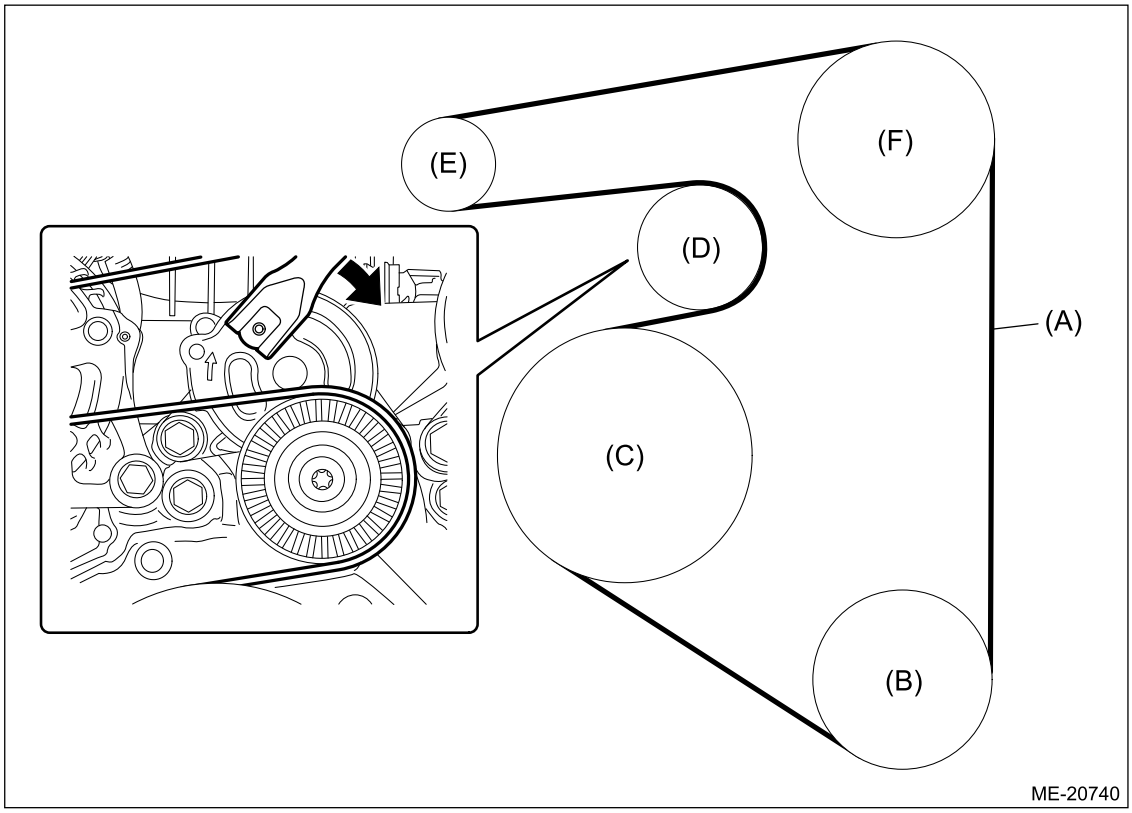
Check that the vacuum pump has no deformation, cracks or other damages.

REMOVAL



Note:
When replacing a single part, perform the work with the engine assembly installed to body.

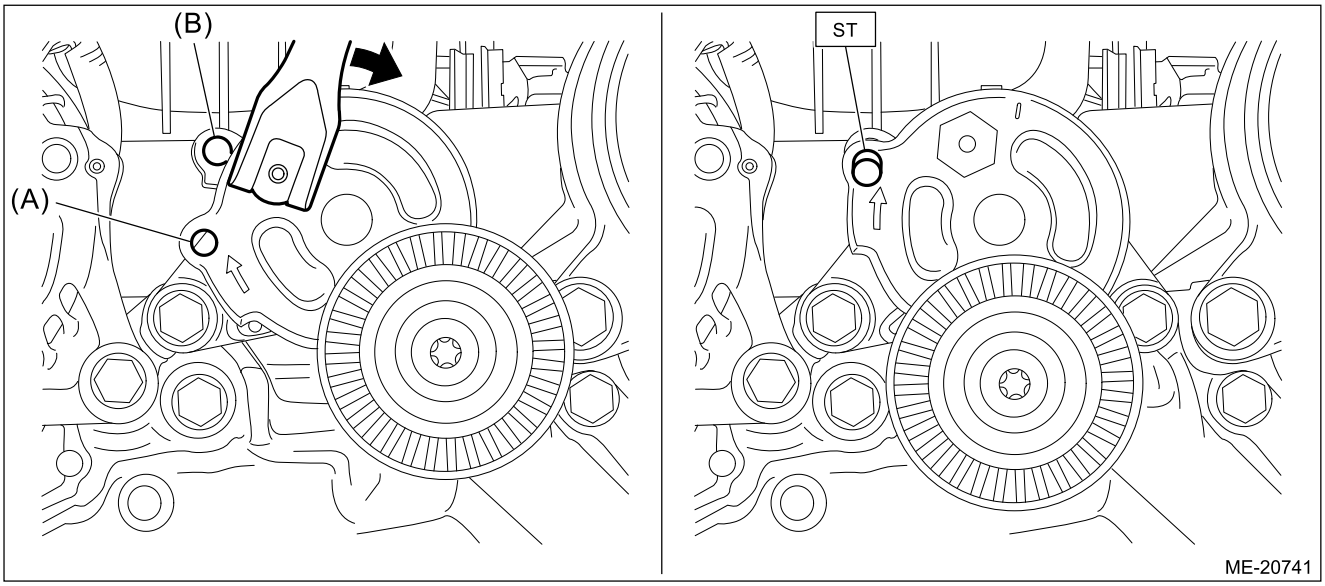
1. V-BELT



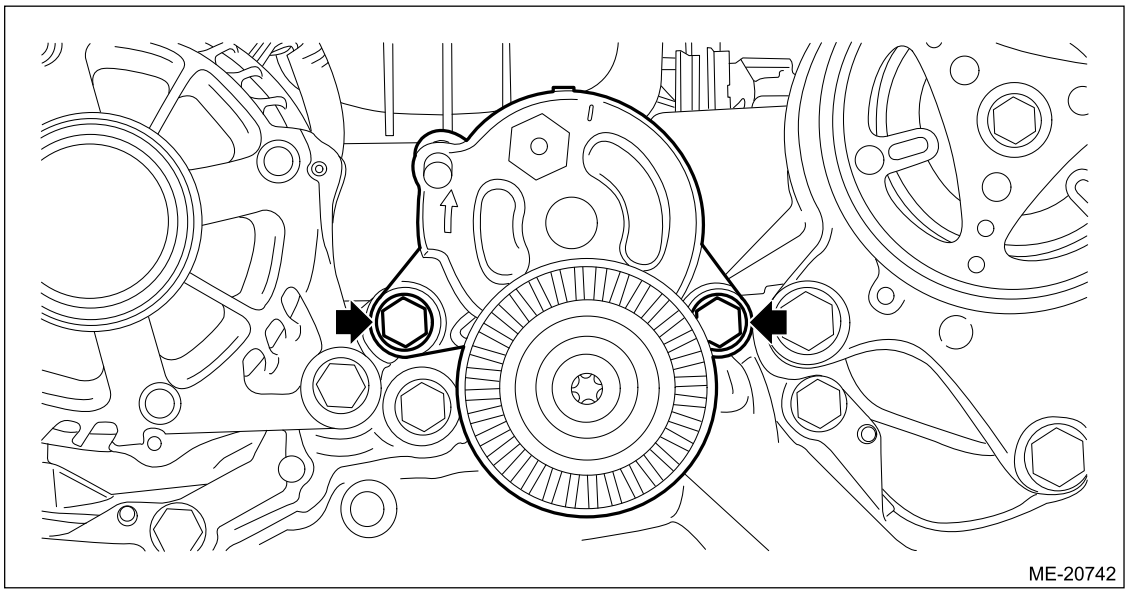
1. When working on the vehicle

Note:
When working on the vehicle, perform the following steps also.

(1) Remove the V-belt covers.



2. Attach the tool to the V-belt tensioner assembly, and rotate the tool clockwise to loosen and remove the V-belt.



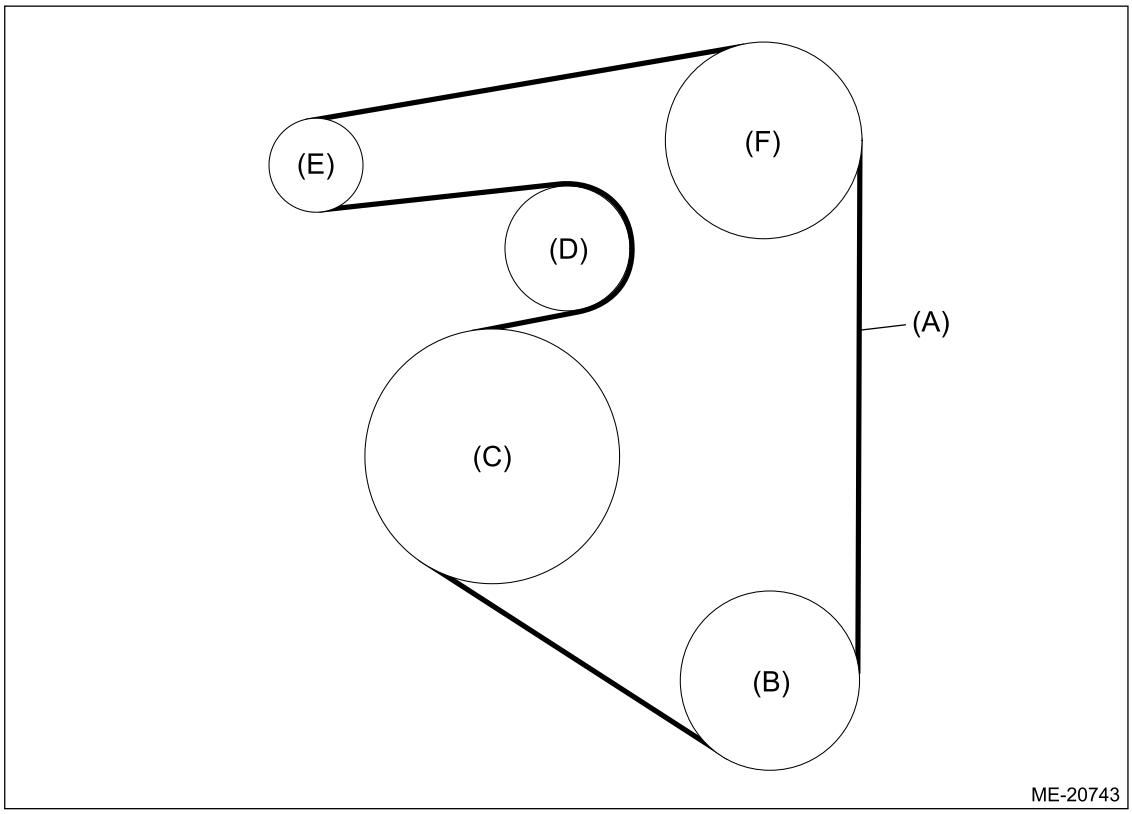
(A) V-belt
(B) Water pump pulley
(C) Crank pulley
(D) V-belt tensioner ASSY
(E) Generator pulley
(F) A/C compressor pulley

2. V-BELT TENSIONER ASSEMBLY

1. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL > V-BELT.
2. Prepare for removing the V-belt tensioner assembly.
   (1) Attach the tool to the V-belt tensioner assembly, and rotate the tool clockwise so that the stopper pin hole (A) aligns with the stopper pin hole (B). Insert the ST or 5 mm hex wrench into the holes.
   Preparation tool:
   ST: STOPPER PIN (499267300)

3. Remove the V-belt tensioner assembly.

MECHANICAL(H4DO) > V-belt



INSTALLATION

1. V-BELT

1. Attach the tool to the V-belt tensioner assembly, and rotate the tool clockwise to remove the V-belt as shown in the figure.

Caution:

- **When reusing the V-belt, wipe off dust and water with cloth.**
- **Do not use the V-belt if there is any oil, grease or coolant on the belt.**
- **Be careful not to rub the V-belt end surface with bare hands; exposed core may cause injury.**
- **Wipe off any dust, oil and water on the groove of each pulley with cloth.**

(A) V-belt
(B) Water pump pulley
(C) Crank pulley
(D) V-belt tensioner assembly
(E) Generator pulley
(F) A/C compressor pulley

2. When working on the vehicle

Note:

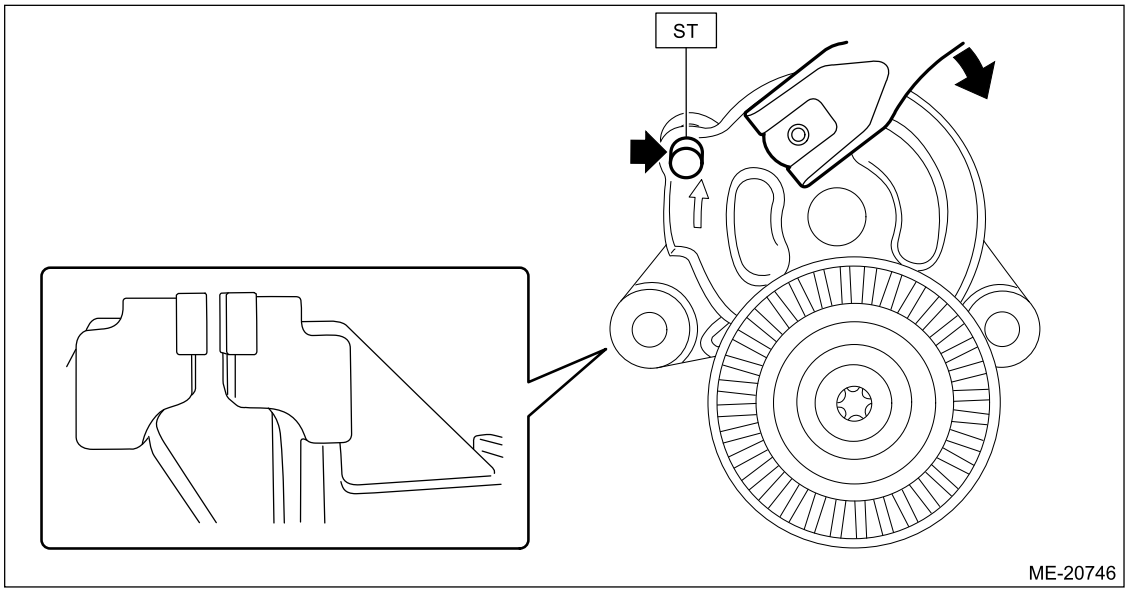
When working on the vehicle, perform the following steps also.

(1) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

2. V-BELT TENSIONER ASSEMBLY



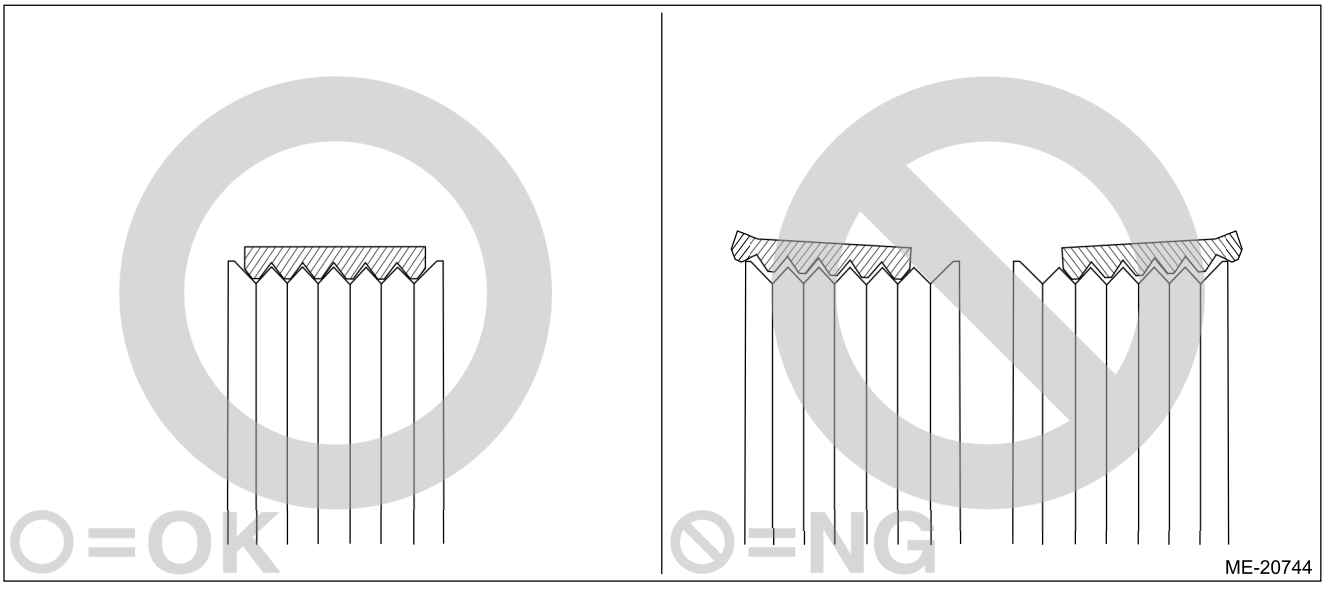
1. The V-belt tensioner assembly is replaced.

Note:

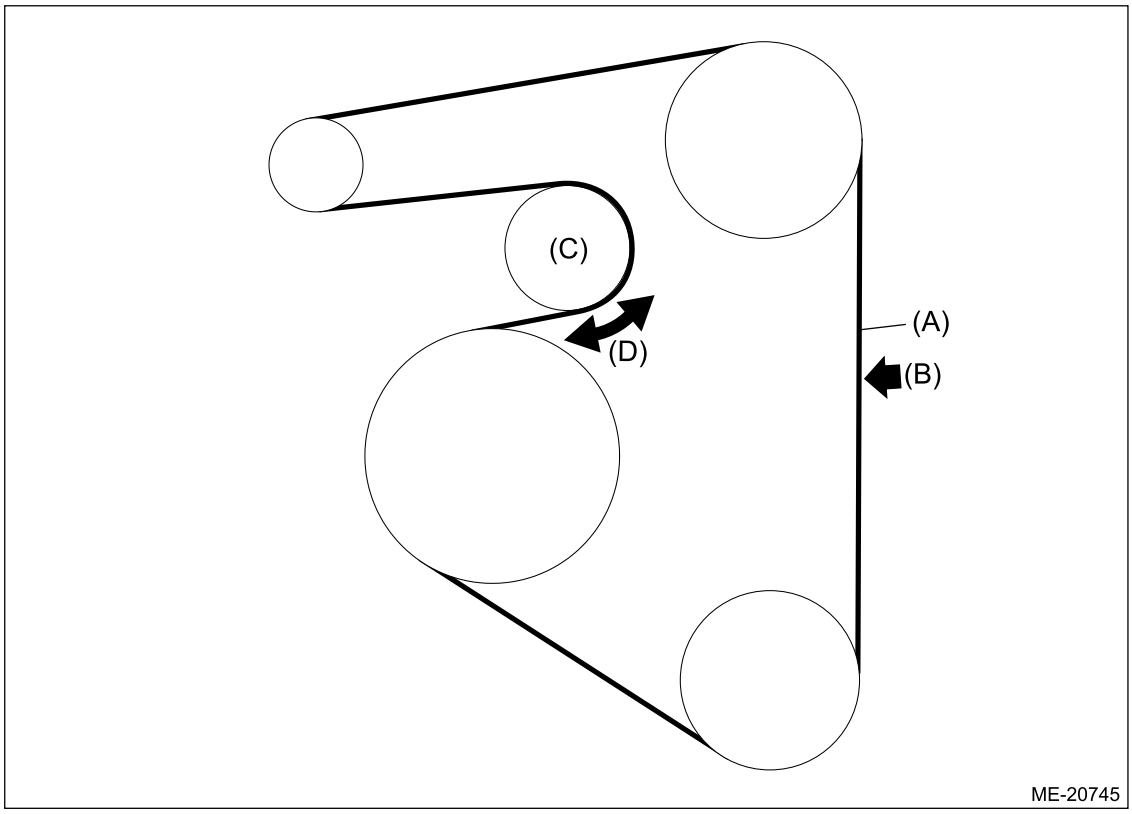
When replacing the V-belt tensioner assembly, also perform the following steps.

(1) Set the V-belt tensioner assembly to be discarded on a vice.

(2) Attach the tool to the V-belt tensioner assembly, and rotate the tool clockwise to remove the ST or 5 mm hex wrench.



2. Install the V-belt tensioner assembly.
   Tightening torque:
   19 N·m (1.9 kgf-m, 14.0 ft-lb)
3. Attach the tool to the V-belt tensioner assembly, and rotate the tool clockwise to remove the ST or 5 mm hex wrench.
4. Install the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION > V-BELT.

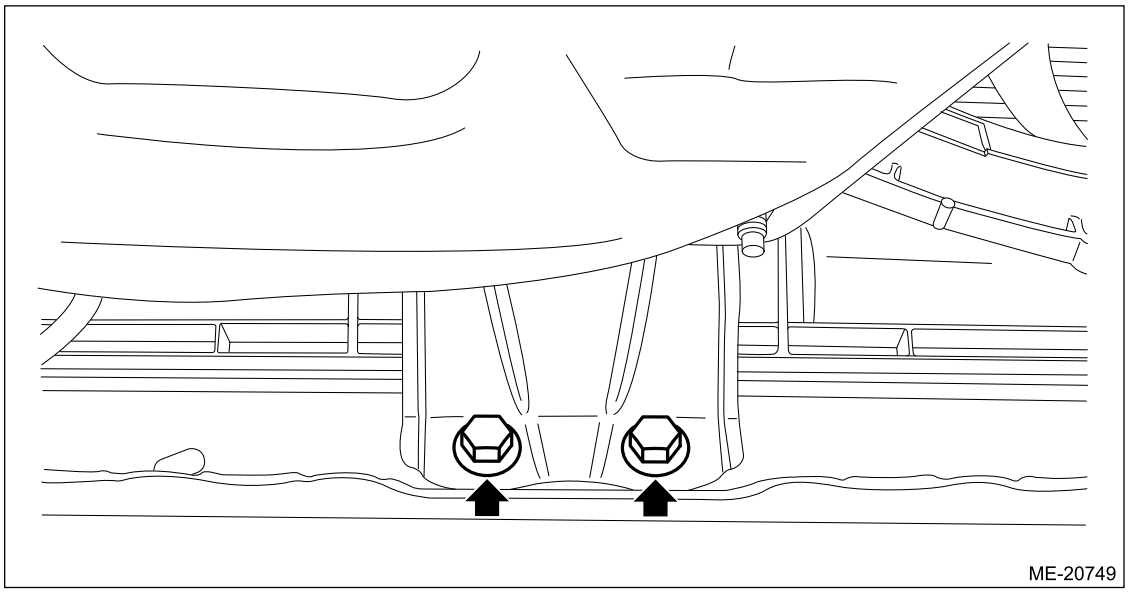


MECHANICAL(H4DO) > V-belt

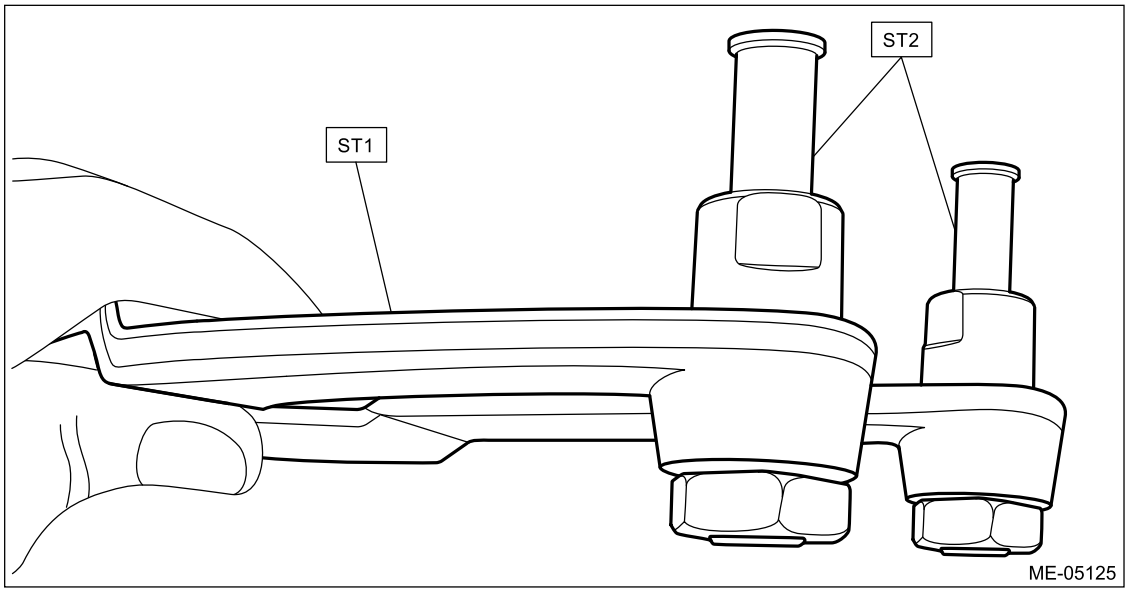
INSPECTION

1. Check the V-belt for cracks, tear or wear.
2. Check the V-belt tensioner assembly for deformation, cracks and any other damage.
3. Check that the V-belt ribs are securely placed on the rib grooves for each pulley.

4. Check that the V-belt tensioner assembly (C) moves in the direction of arrow (D), when the V-belt (A) is pushed and released by the area indicated by the arrow (B).



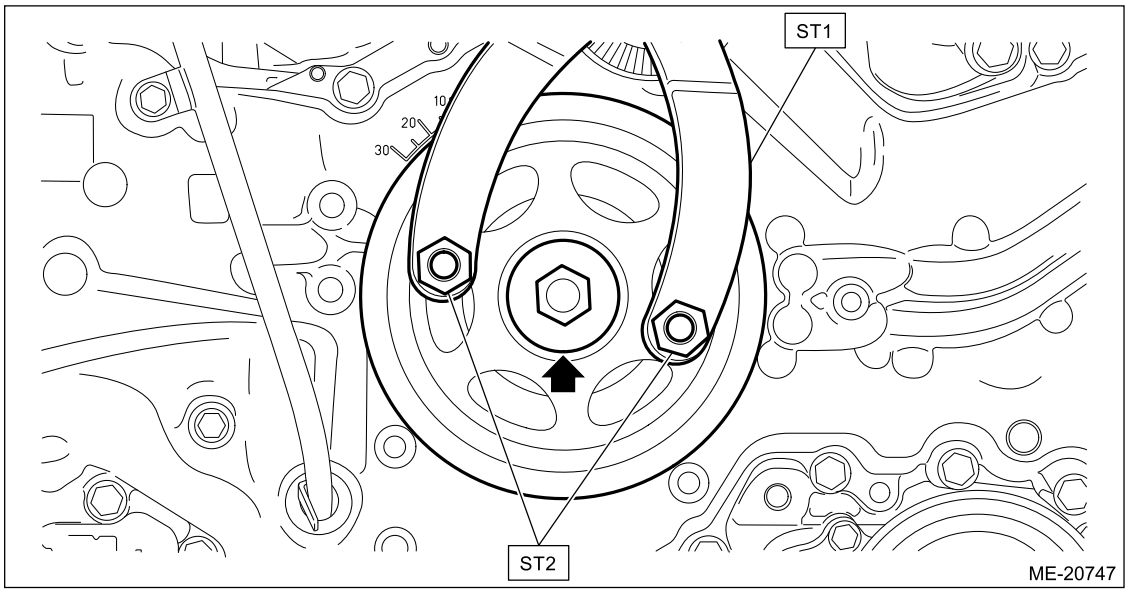
5. Start the engine and confirm that the V-belt rotates smoothly and no abnormal noise is emitted.



REMOVAL

Note:
When replacing a single part, perform the work with the engine assembly installed to body.

1. When working on the vehicle
   Note:
   When working on the vehicle, perform the following steps also.
   (1) Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
   (2) Remove the front under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
   Note:
   This procedure is performed only when the crank pulley bolt contacts the radiator upper frame, causing the bolt not to come off.
   (3) Remove the bolts securing the lower side of the radiator upper frame.
   Note:
   This procedure is performed only when the crank pulley bolt contacts the radiator upper frame, causing the bolt not to come off.



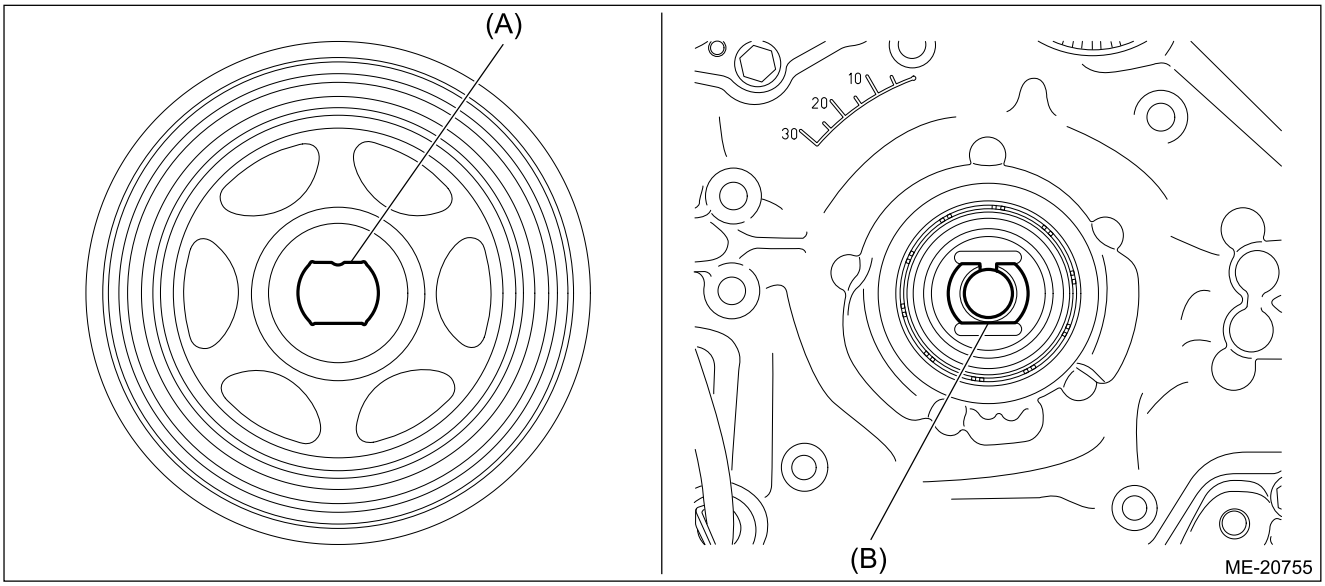
2. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL > V-BELT.
3. Use the ST1 and ST2 to lock the crank pulley, remove the crank pulley bolt.
   Note:
   To prevent damaging ST1, attach the ST2 onto the ST1 as shown in the figure below.

Preparation tool:

ST1: PULLEY WRENCH (18355AA000)

ST2: PULLEY WRENCH PIN SET (18334AA000)

4. Remove the crank pulley.

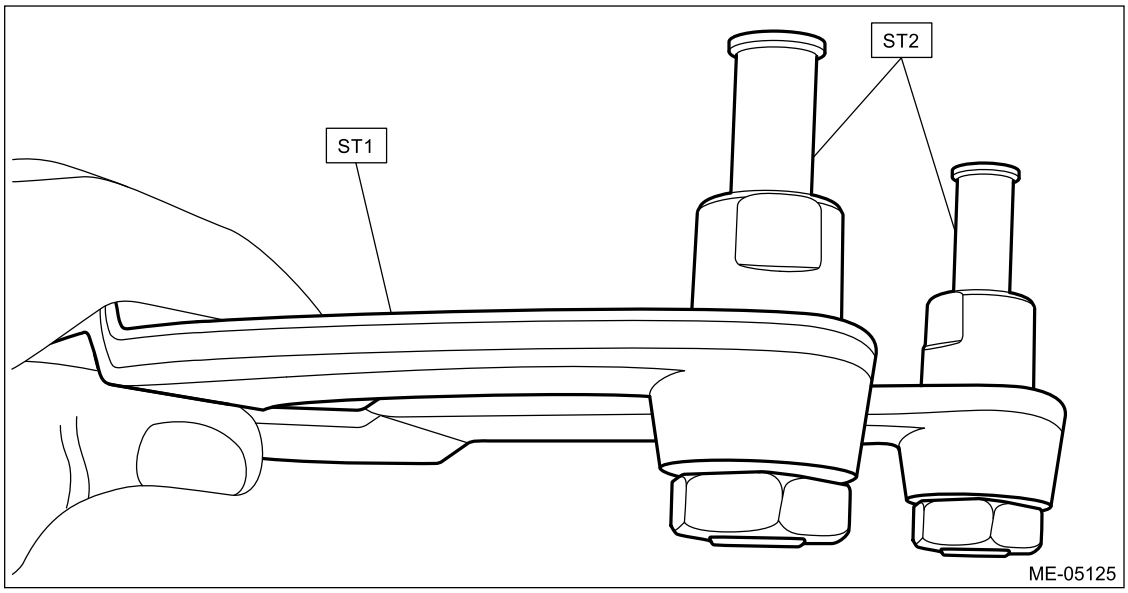


MECHANICAL(H4DO) > Crank Pulley

INSTALLATION

1. Clean the crankshaft thread using compressed air.
2. Apply engine oil to the crank pulley bolt seat and thread.
3. Install the crank pulley.
   (1) Install new O-ring to the crank pulley boss.
   (2) Set the crank pulley to the crank pulley boss.

Note:

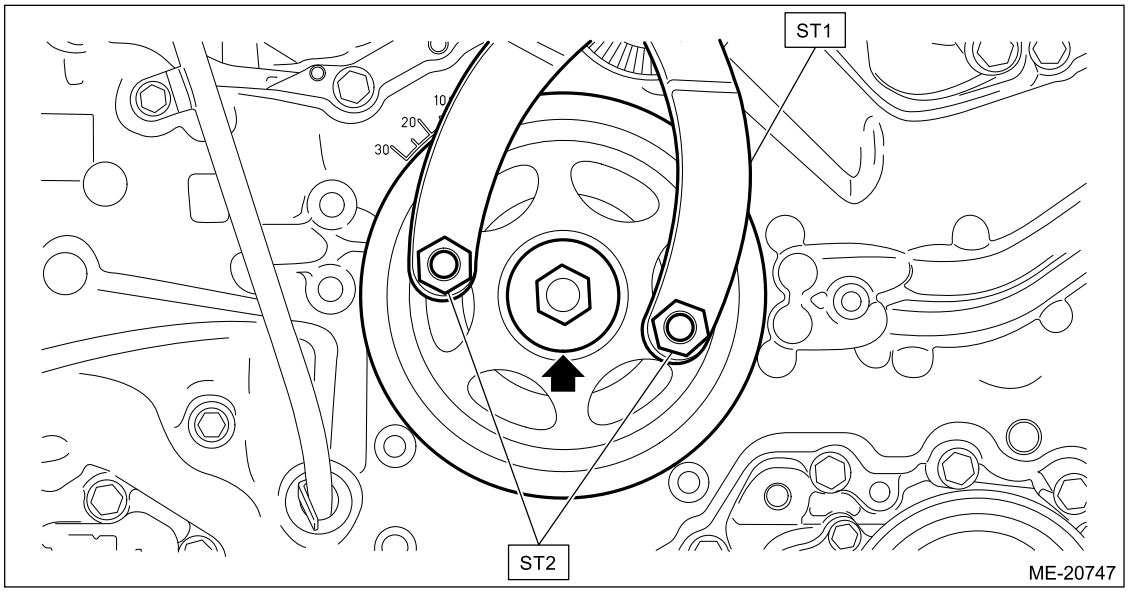


Install the crank pulley by aligning the flat sides (A) of the crank pulley and the flat sides (B) of the crank pulley boss.

(3) Use the ST1 and ST2 to lock the crank pulley, and temporarily tighten the crank pulley bolt.

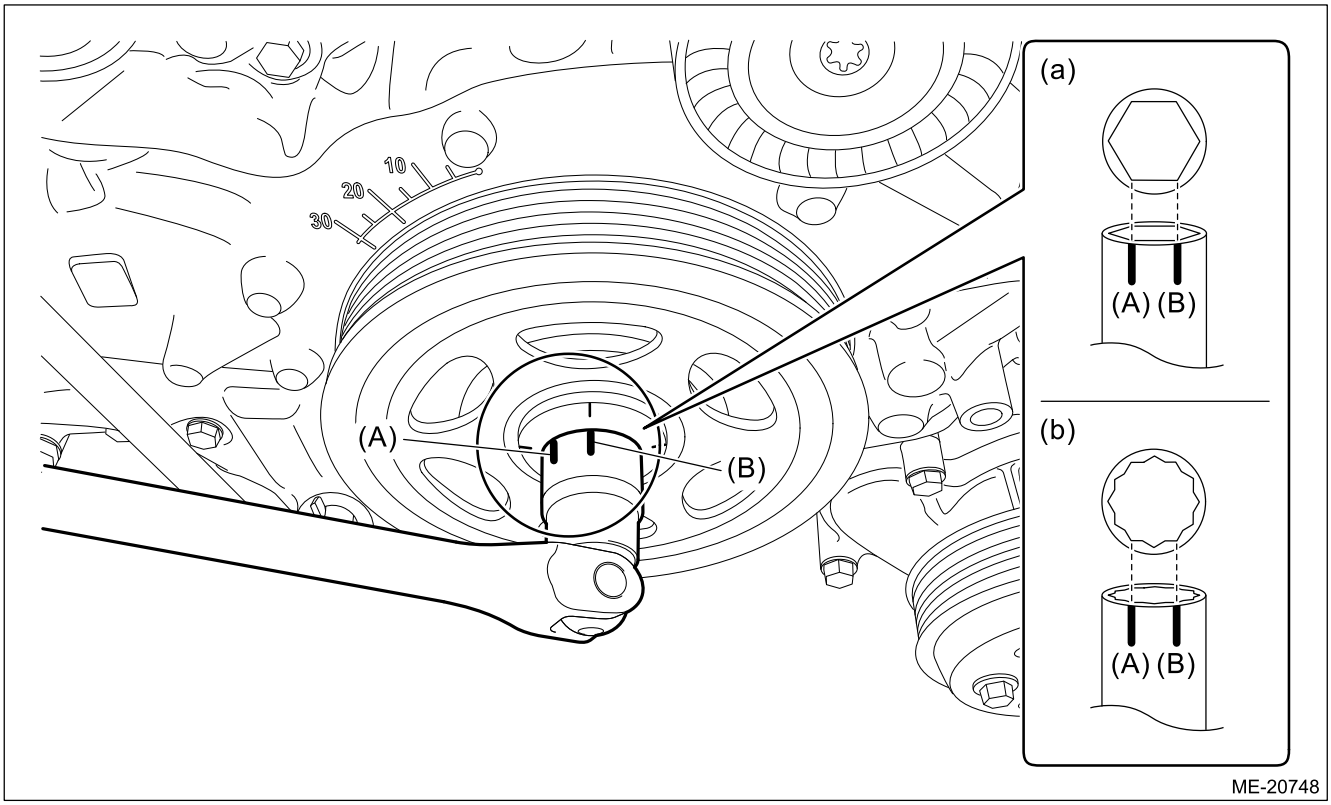
Note:

To prevent damaging ST1, attach the ST2 onto the ST1 as shown in the figure below.



Preparation tool:

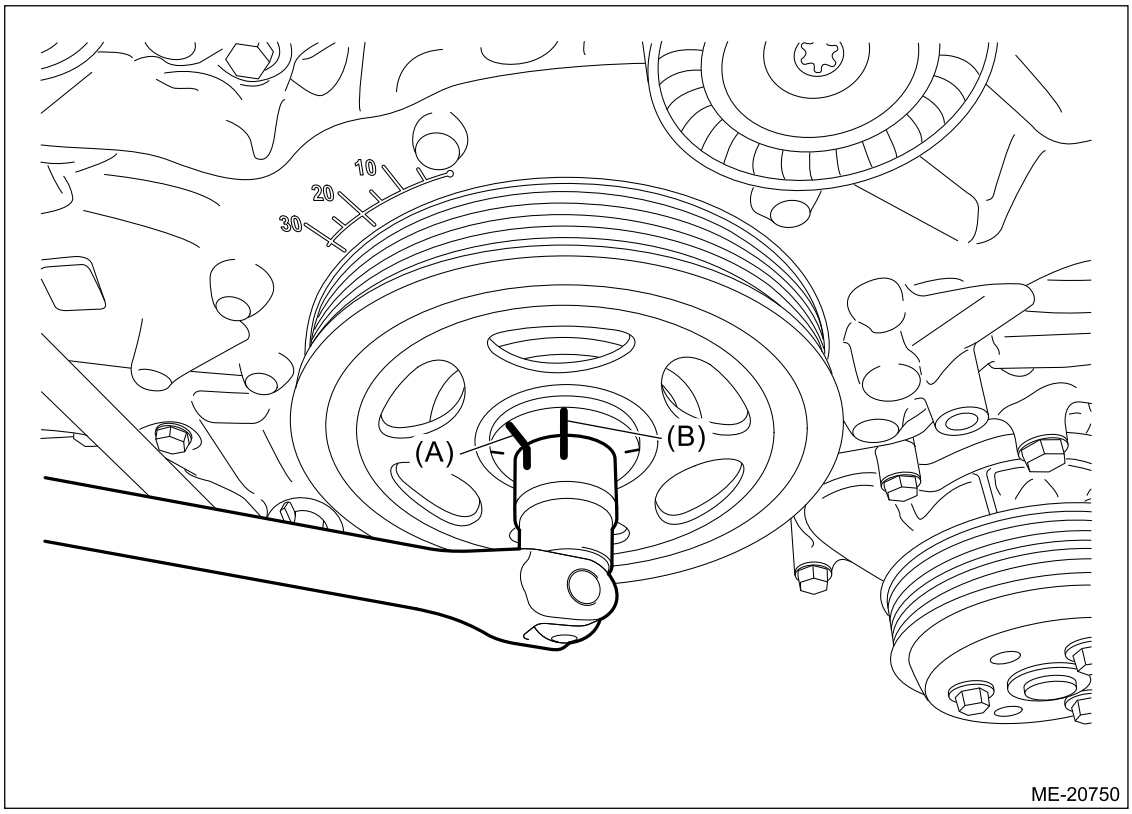
ST1: PULLEY WRENCH (18355AA000)



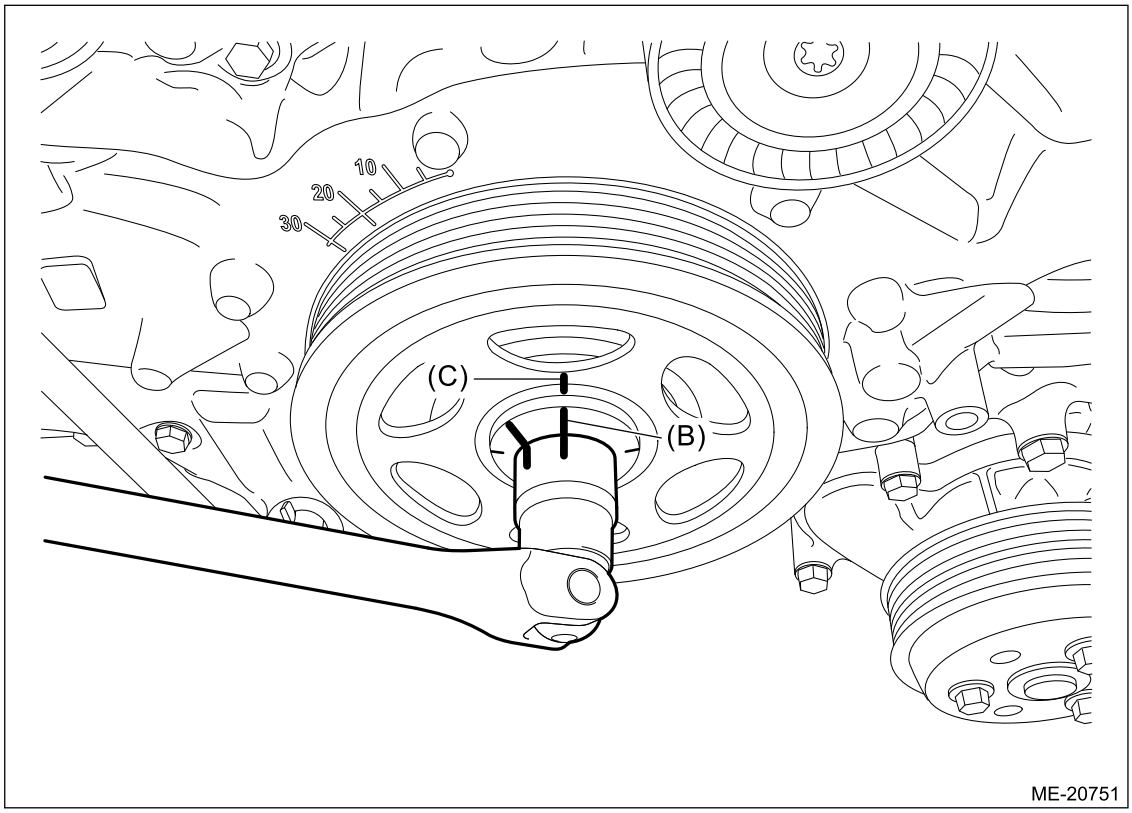
ST2: PULLEY WRENCH PIN SET (18334AA000)

Tightening torque:

80 N·m (8.2 kgf-m, 59.0 ft-lb)



(4) Draw reference lines (A) and (B) using a marker to set the socket to the crank pulley bolt as shown in the figure.



(a) When using 6-point socket (b) When using 12-point socket

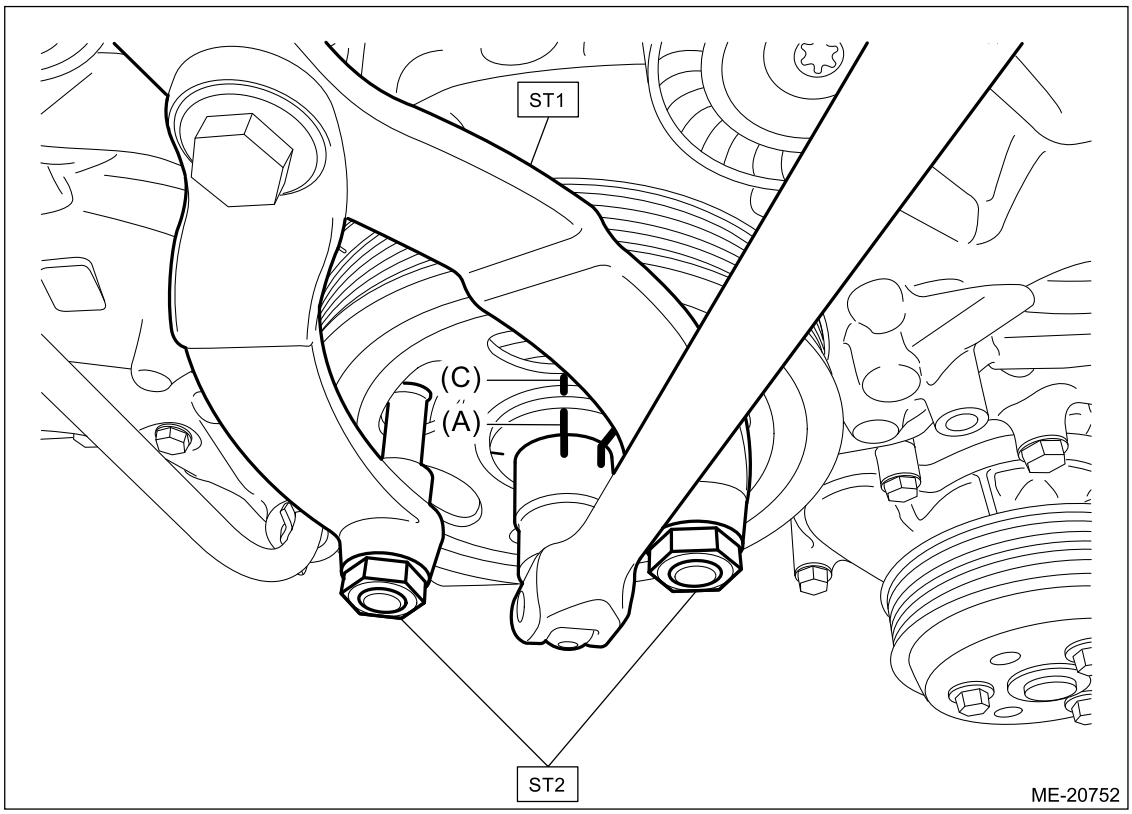
(5) Draw reference lines (A) and (B) on the crank pulley bolt using a marker as shown in the figure.

(6) Draw end line (C) on crank pulley using a marker at the same position as reference line (B) drawn on the crank pulley bolt in step (5).

(7) Use the ST1 and ST2 to lock the crank pulley, and tighten the crank pulley bolt until the reference line (A) and end line (C) are aligned.

Note:

It should be approx. 60° when reference line (A) and end line (C) are aligned.



Preparation tool:

ST1: PULLEY WRENCH (18355AA000)

ST2: PULLEY WRENCH PIN SET (18334AA000)

Tightening angle:

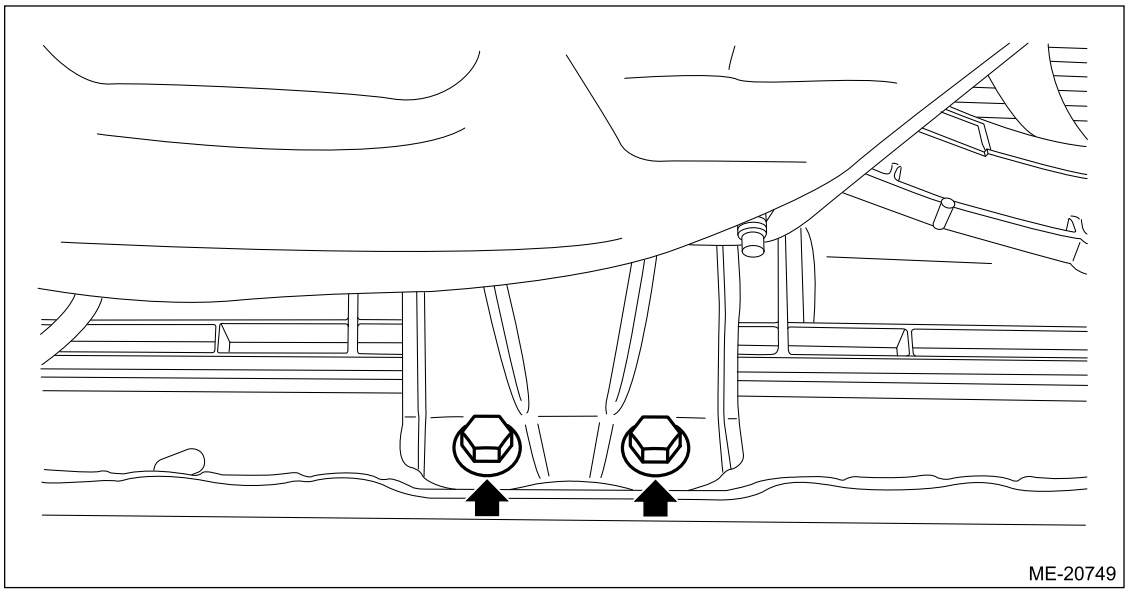
60°±5°

4. Install the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION > V-BELT.

5. When working on the vehicle

Note:

When working on the vehicle, perform the following steps also.



(1) Install the bolts securing the lower side of the radiator upper frame.

Note:

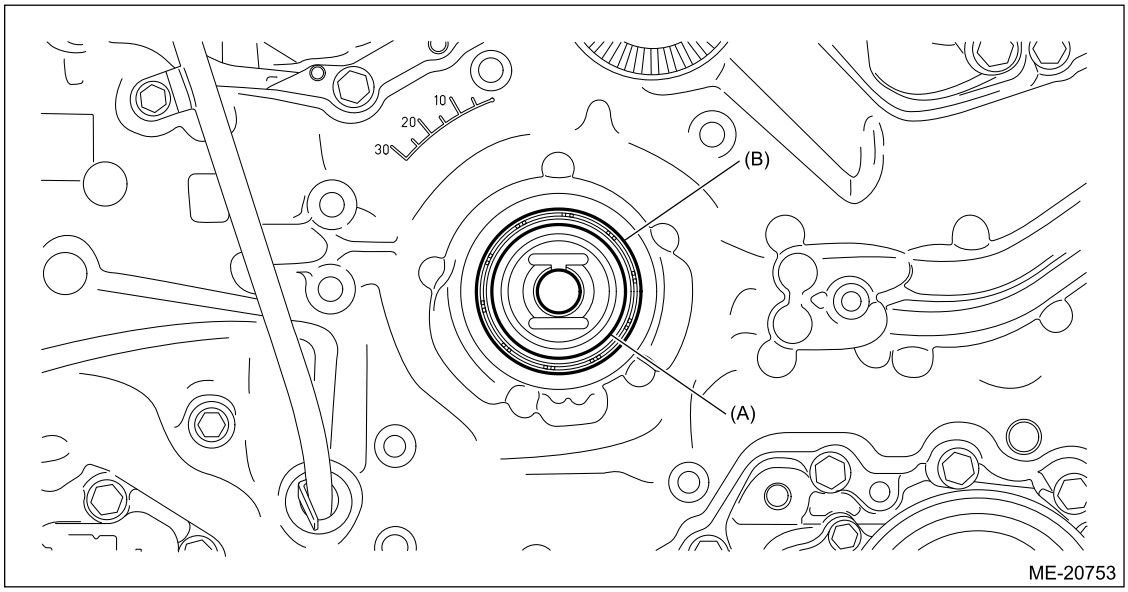
This procedure is performed only when the component is removed for installation/removal of the crank pulley bolt.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

(2) Install the front under cover. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>INSTALLATION.

Note:



This procedure is performed only when the component is removed for installation/removal of the crank pulley bolt.

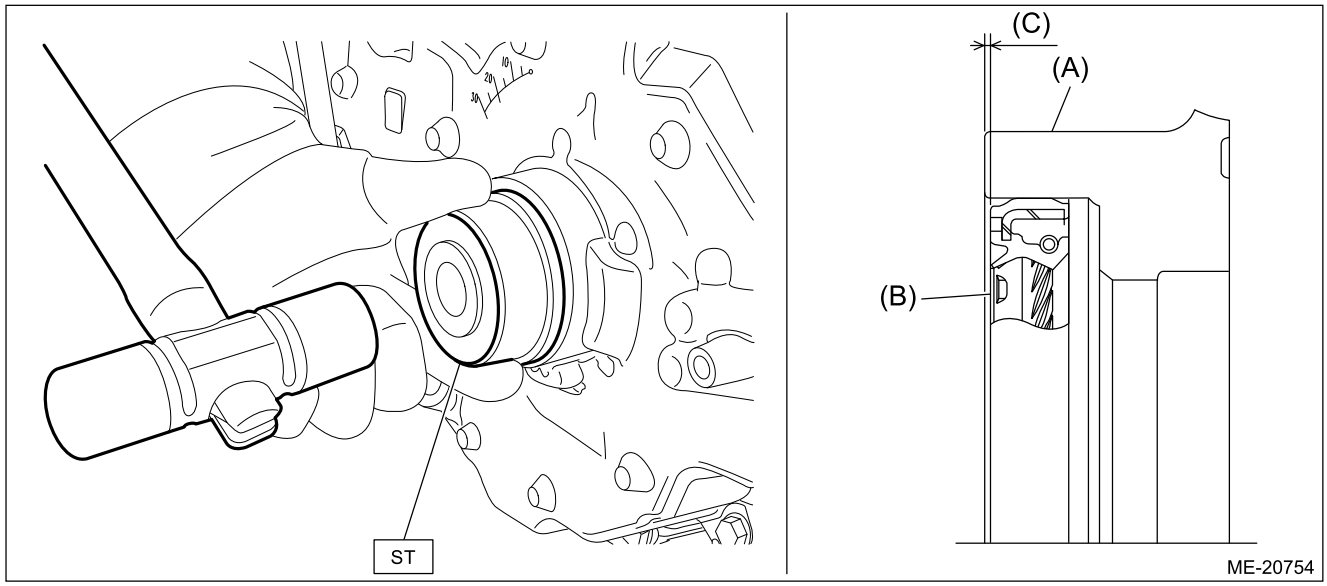
(3) Install the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.

MECHANICAL(H4DO) > Crank Pulley

INSPECTION

1. Check that the crank pulley and crank pulley boss have no deformation, cracks or other damages.
2. Inspect for oil leakage from the front oil seal. If there is an oil leak, replace the front oil seal with a new part according to the following procedures.
   (1) Remove the crank pulley. Ref. to MECHANICAL(H4DO)>Crank Pulley>REMOVAL.
   (2) Remove the crank pulley boss (A) from the chain cover, and remove the front oil seal (B).

(3) Degrease the press-fit section for the chain cover front oil seal, and install the front oil seal to the chain cover using ST.



Caution:

Do not apply fluid such as engine oil to the front oil seal and the chain cover; otherwise engine oil leakage may occur.

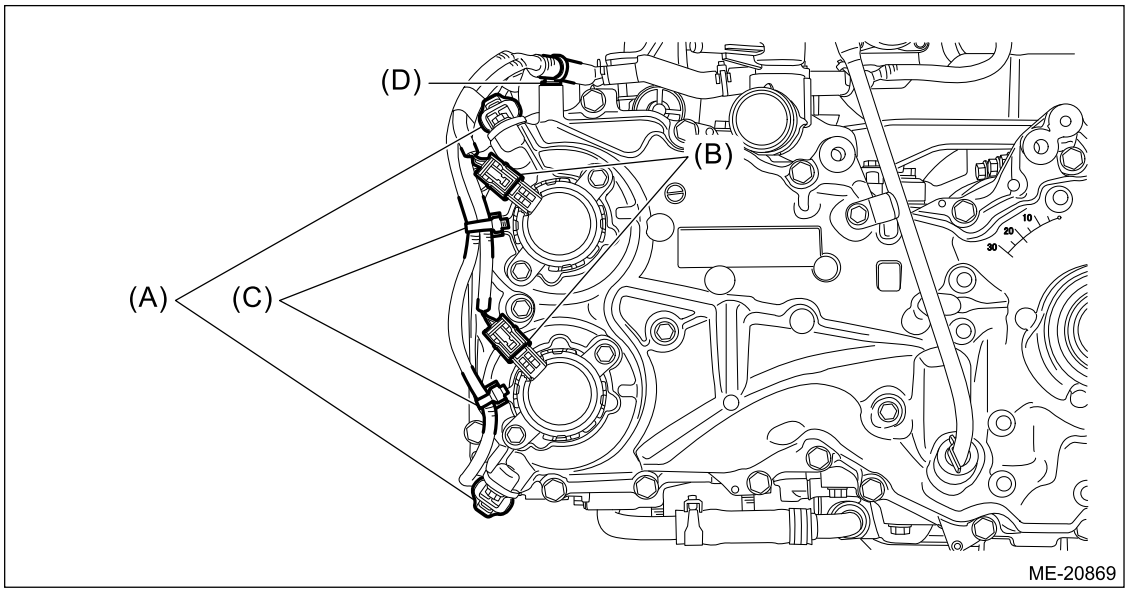
ST 41399FG020 SPECIAL TOOL B

Front oil seal press-fit position:

1^{+0}_{-1} mm ($0.0039^{+0}_{-0.0039}$ in) position from chain cover end face

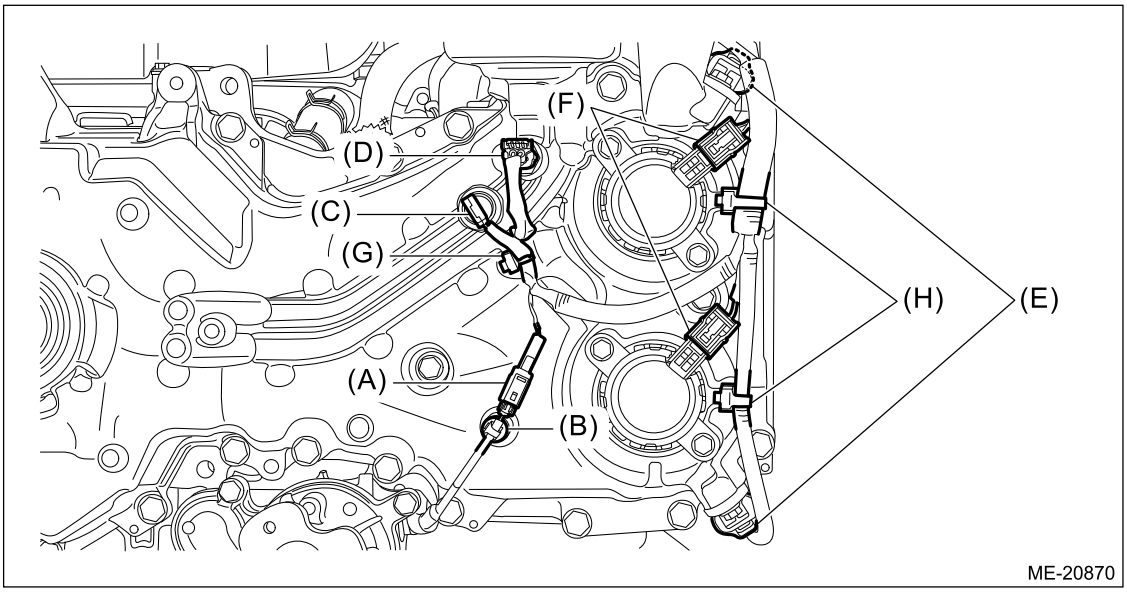
(A) Chain cover

(B) Oil seal



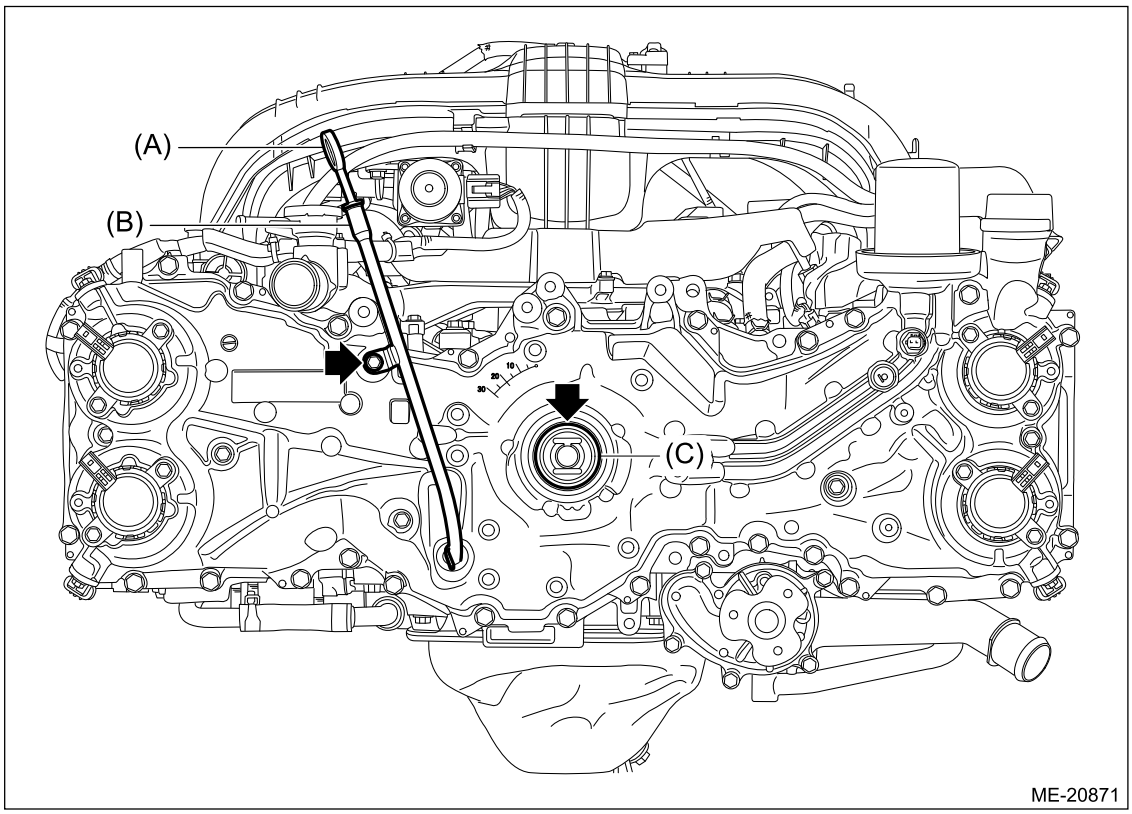
(C) Front oil seal press-fit position (1^{+0}_{-1} mm ($0.0039^{+0}_{-0.0039}$ in) position from chain cover end face)

(4) Install in the reverse order of removal after replacement.

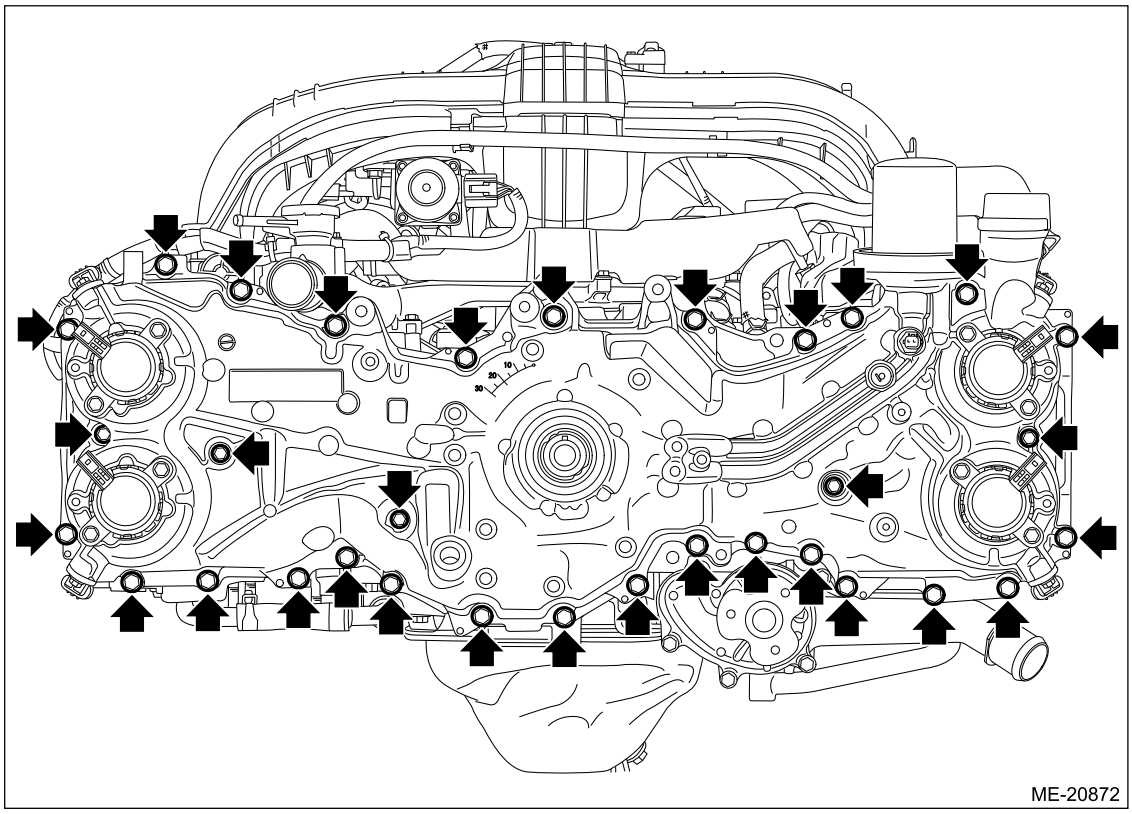


REMOVAL

Note:
When replacing a single part, perform the work with the engine assembly installed to body.

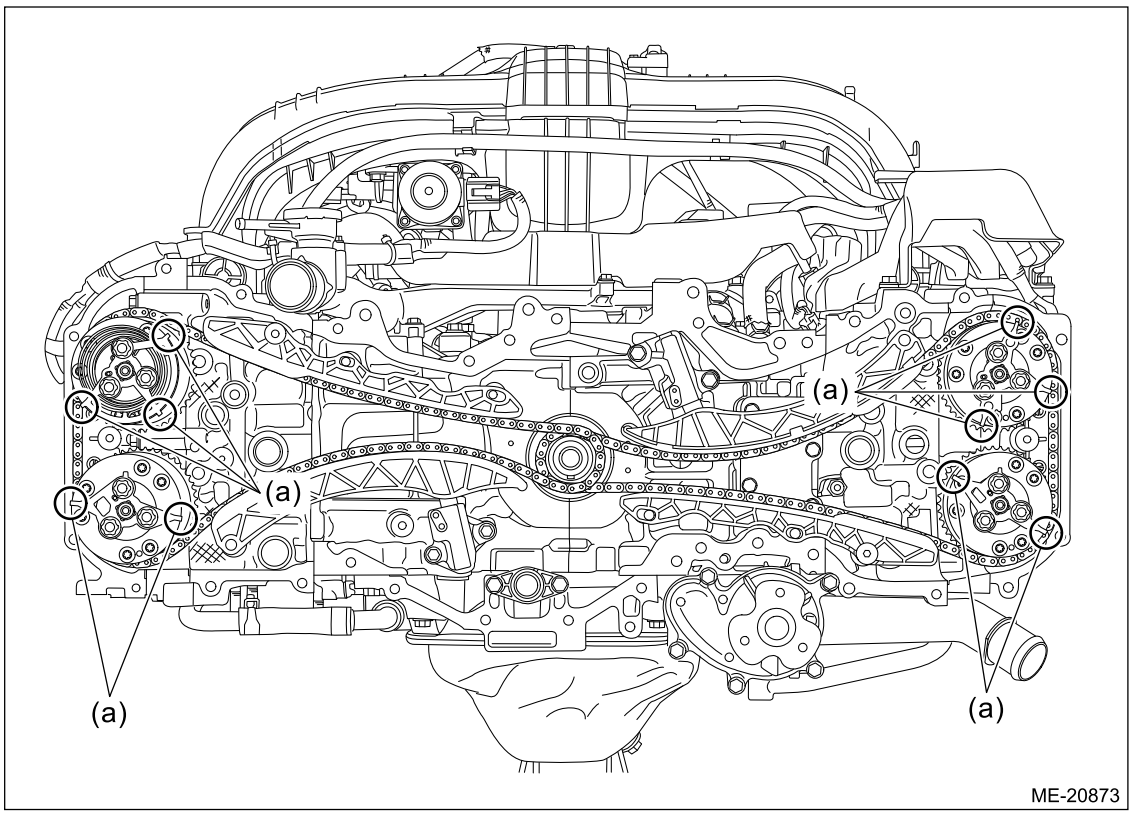


1. When working on the vehicle
   Note:
   When working on the vehicle, perform the following steps also.
   (1) Remove the radiator and the condenser as a assembly. Ref. to COOLING(H4DO)>Radiator>REMOVAL.
2. Drain the engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.
3. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL > V-BELT.
4. Remove the V-belt tensioner assembly. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL > V-BELT TENSIONER ASSEMBLY.
5. Remove the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator>REMOVAL.
6. Remove the A/C compressor. Ref. to AIR CONDITIONER>Compressor>REMOVAL.
7. Remove the water pump pulley. Ref. to COOLING(H4DO)>Water Pump>REMOVAL > WATER PUMP.
8. Remove the crank pulley. Ref. to MECHANICAL(H4DO)>Crank Pulley>REMOVAL.
9. Disconnect the connector (A) and connector (B) to remove the clip (C) and clip (D) securing the engine harness.

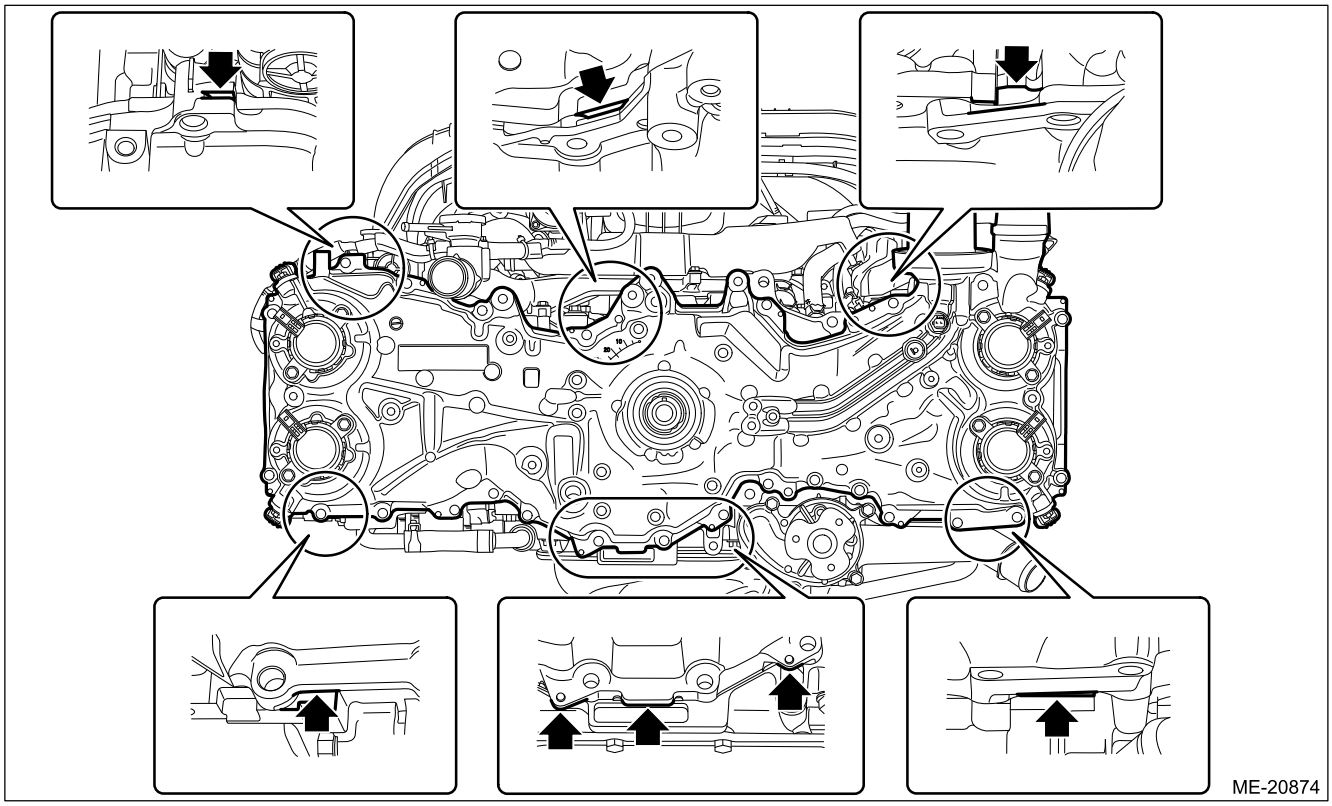


10. Disconnect the connector (A) and remove the clip (B) securing the oil level switch harness.
11. Disconnect the terminal (C), connector (D), connector (E) and connector (F), and remove the clip (G) and clip (H) securing the engine harness.

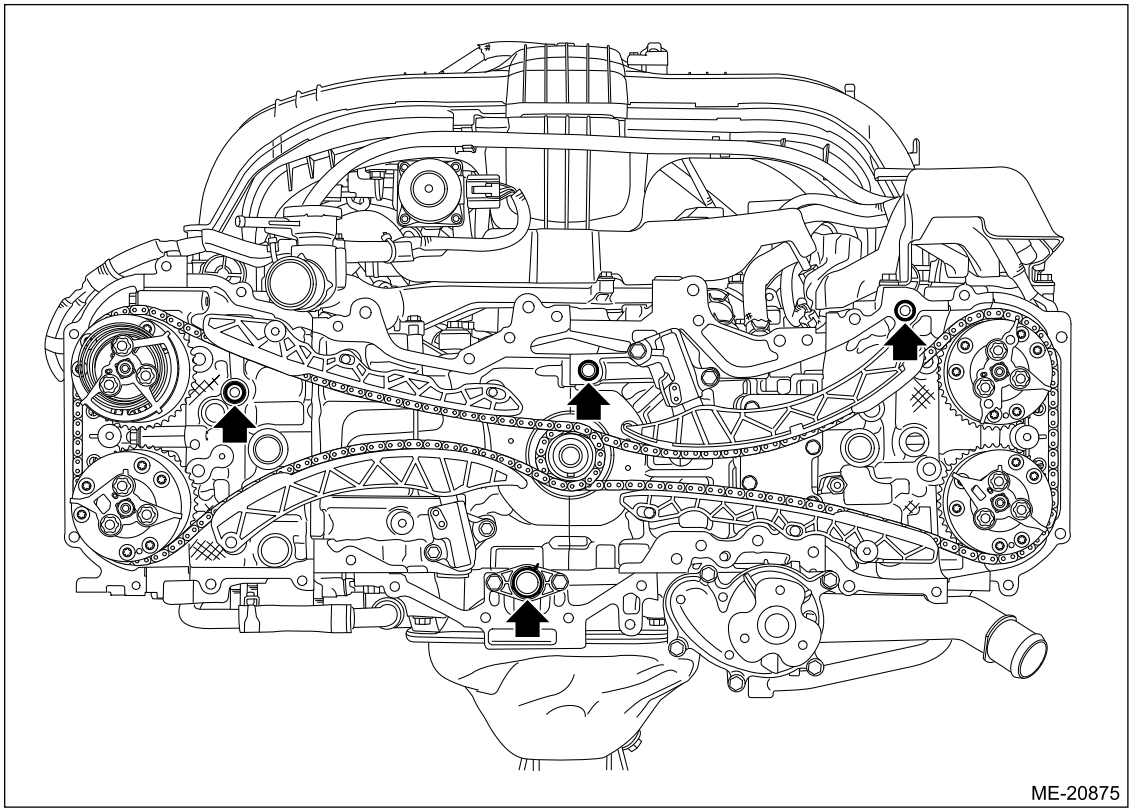
12. Pull out the oil level gauge (A), and remove the oil level gauge guide (B) and crank pulley boss (C).



13. Remove the bolts securing the chain cover to the engine.

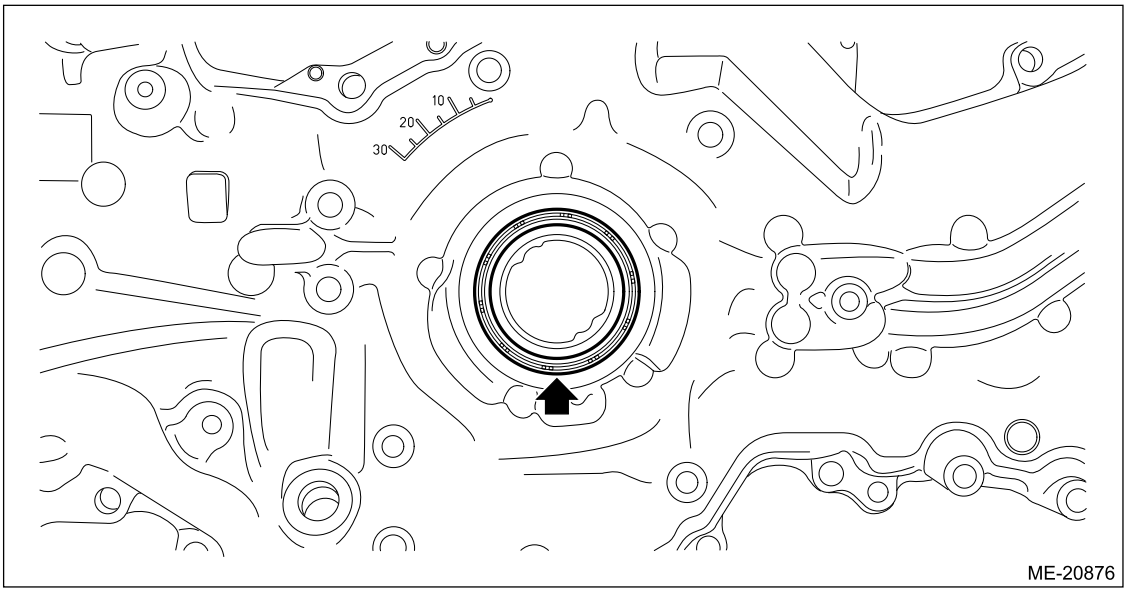


14. Expand the area shown in the figure using a crowbar or a similar tool wrapped in tape for protection, and remove the chain cover from the engine.



Caution:

The chain cover may contact the protrusion (a) of cam sprocket sensor plate and cause damage. When removing the chain cover, move the chain cover horizontally until it cannot contact with the cam sprocket, and then remove it carefully.



15. Remove the O-rings from cylinder head RH, cylinder head LH, cylinder block LH and the oil strainer.

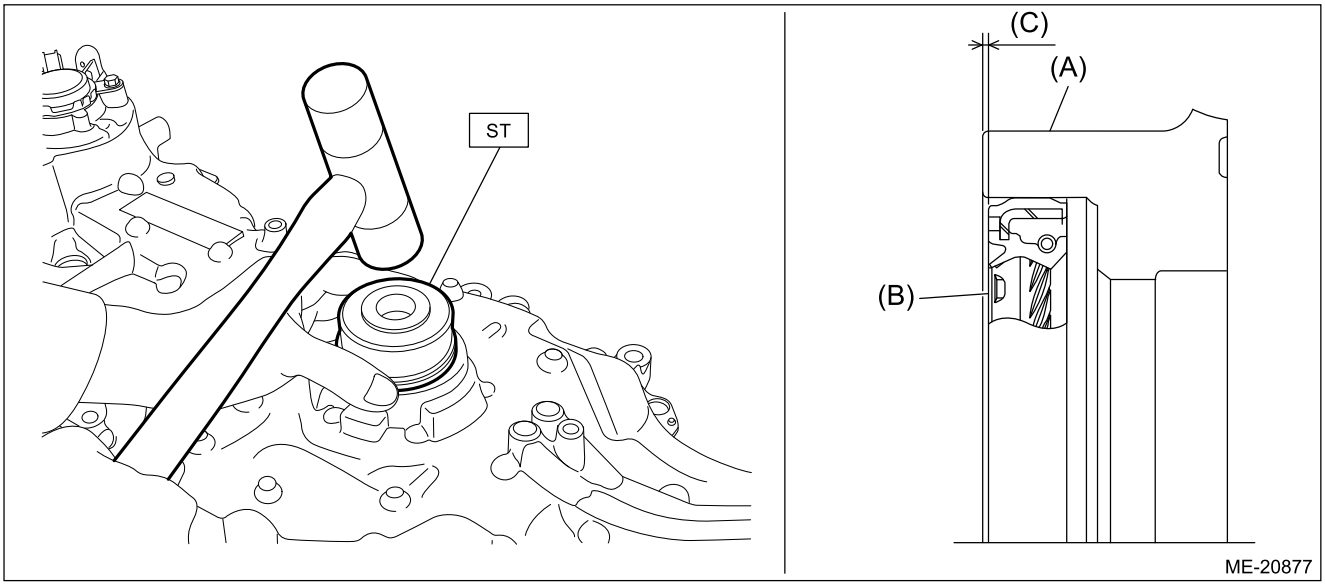
16. Remove the liquid gasket from the chain cover and engine unit.

17. Remove the front oil seal from the chain cover.

MECHANICAL(H4DO) > Chain Cover

INSTALLATION

1. Degrease the press-fit section for the chain cover front oil seal, and install new front oil seal using ST.



Caution:

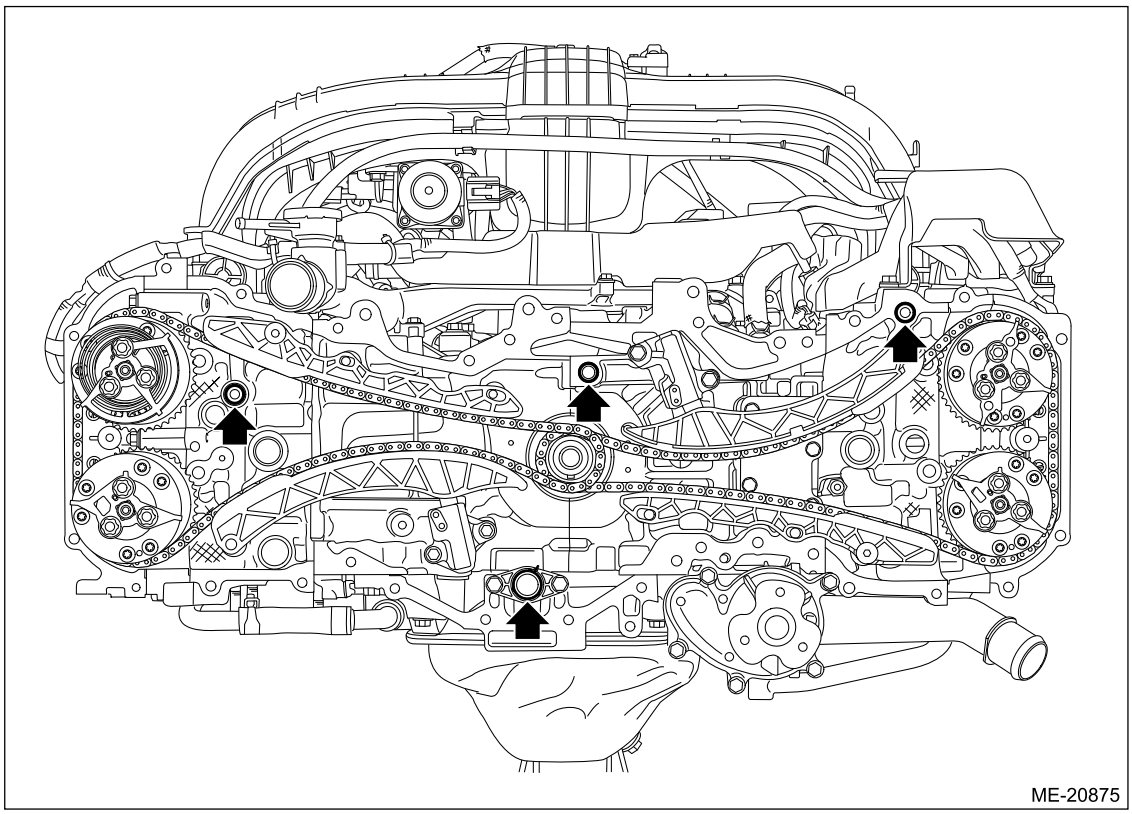
Do not apply fluid such as engine oil to the front oil seal and the chain cover; otherwise engine oil leakage may occur.

ST 41399FG020 SPECIAL TOOL B

Front oil seal press-fit position:

1^{+0}_{-1} mm ($0.0039^{+0}_{-0.0039}$ in) position from chain cover end face

(A) Chain cover

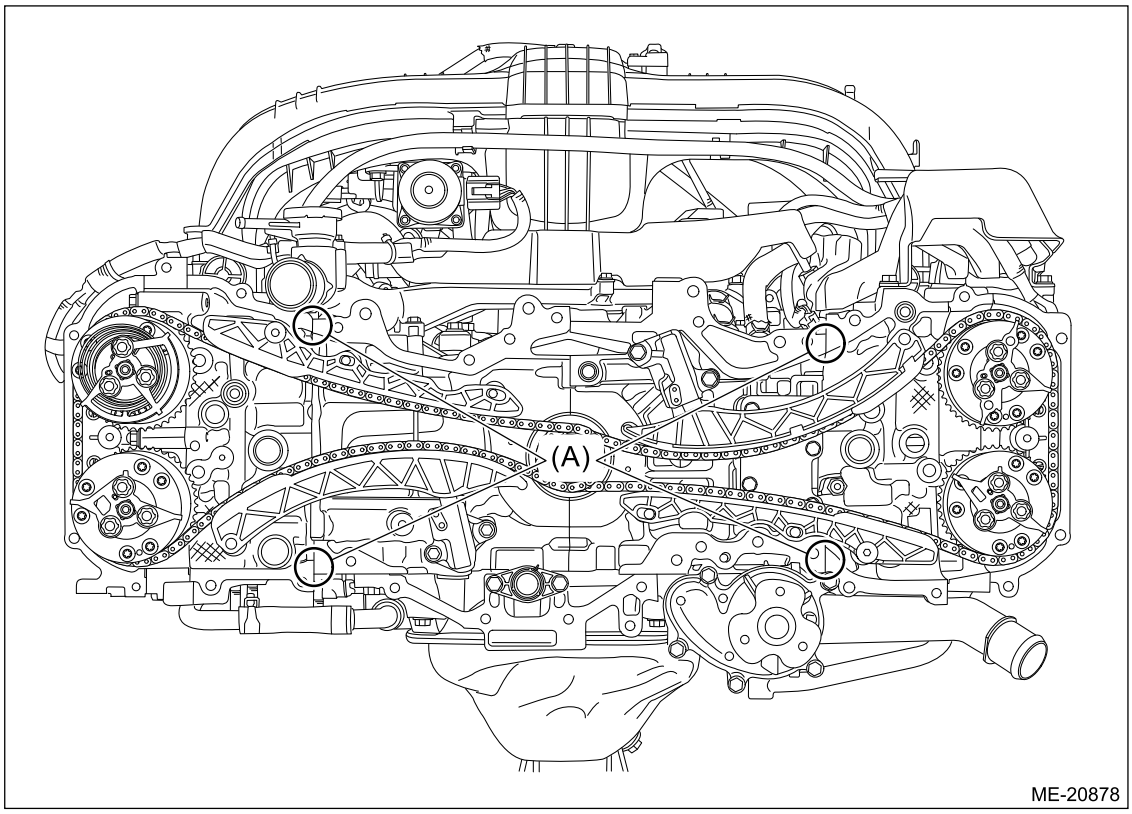


(B) Oil seal

(C) Front oil seal press-fit position (1^{+0}_{-1} mm ($0.0039^{+0}_{-0.0039}$ in) position from chain cover end face)

2. Install new O-rings to cylinder head RH, cylinder head LH, cylinder block LH and oil strainer.

Note:



Apply a coat of engine oil to the O-rings.

3. If there are gaps between head gasket and the chain cover seal surface between the cylinder head and cylinder block (A), apply liquid gasket into the gaps.

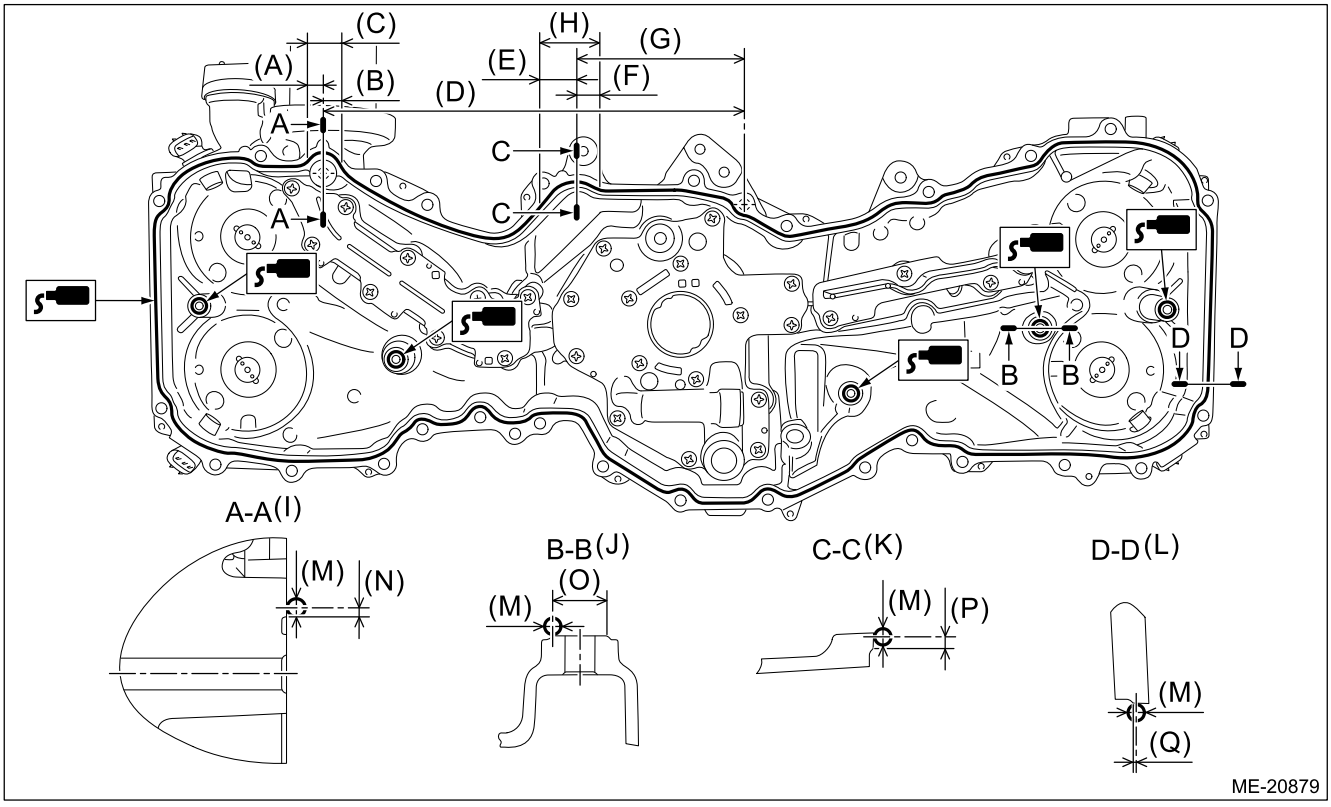
Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

4. Apply liquid gasket to the chain cover mating surface and center boss (5 places) as shown in the

figure.

Note:



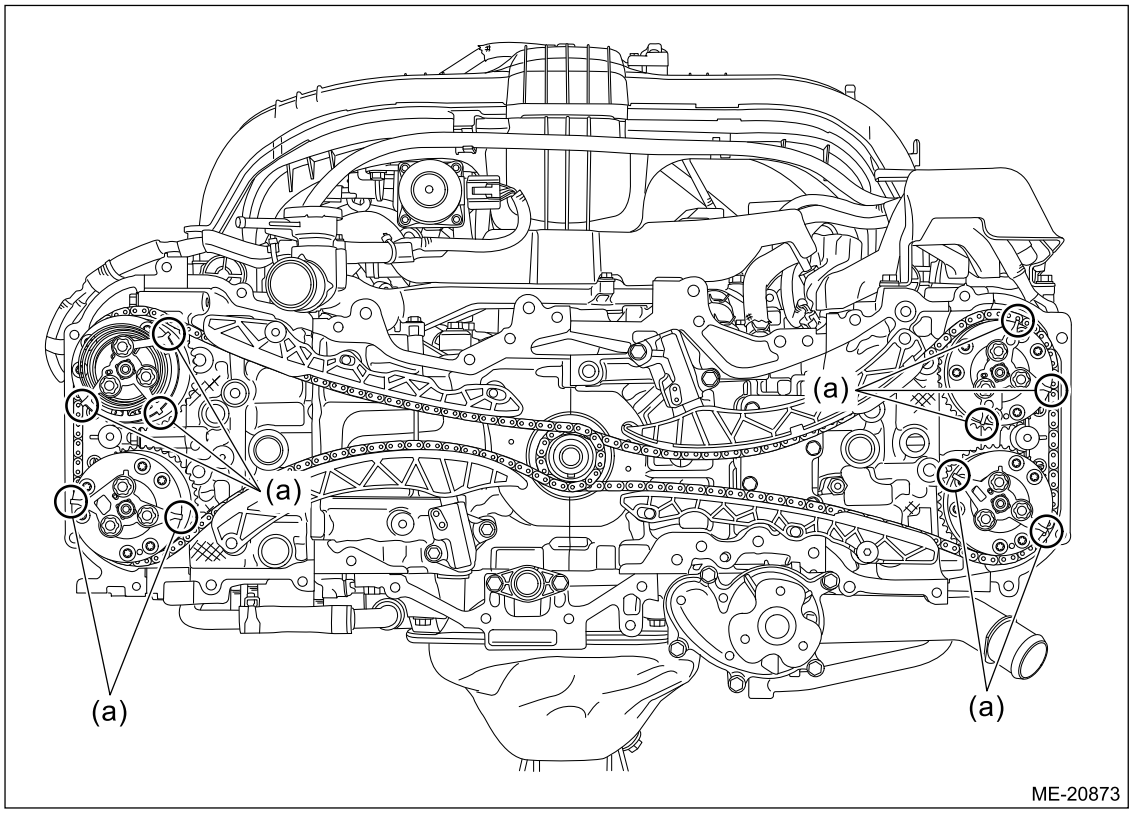
- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine and chain cover.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

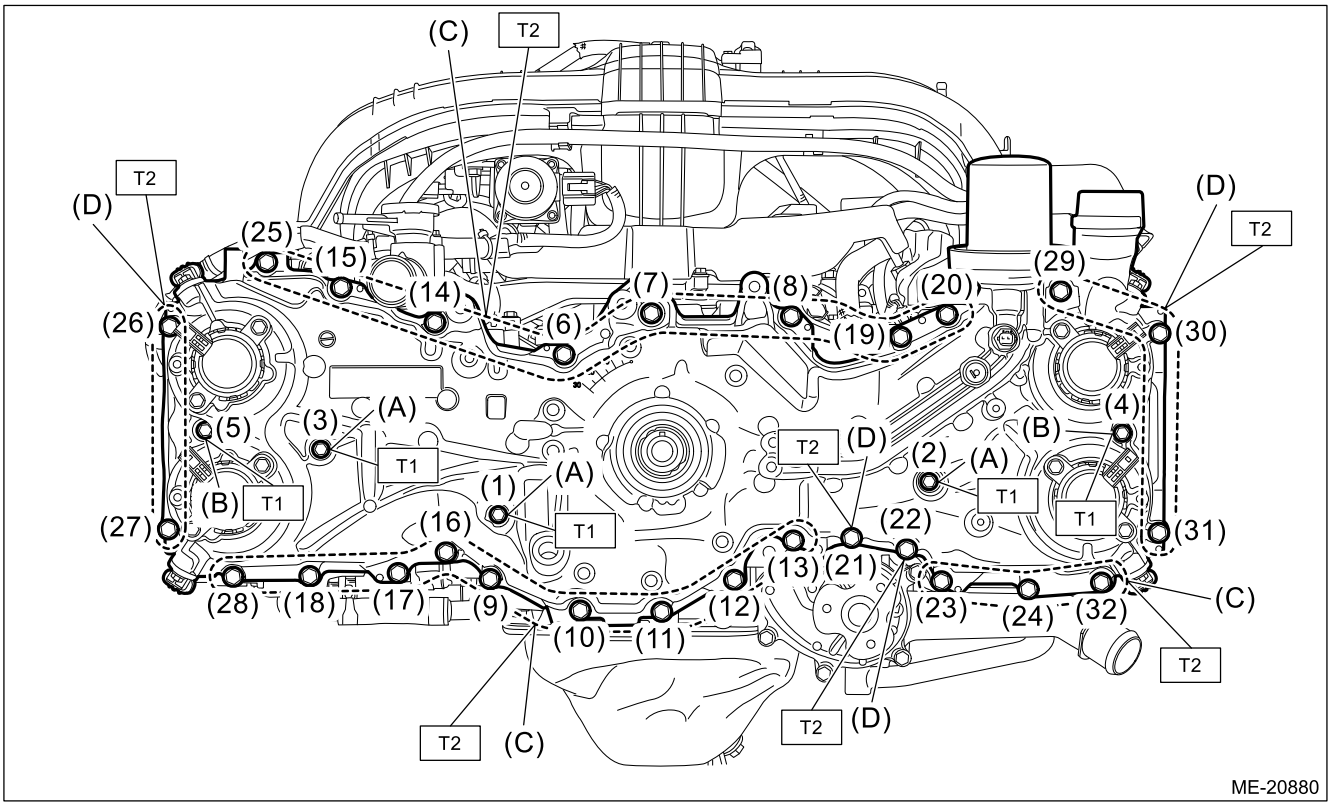
4±0.5 mm (0.1575±0.0197 in)



(A)	14.5 mm (0.5709 in)	(G)	127 mm (5.0000 in)	(M)	⌀4±0.5 mm (0.1575±0.0197 in)
(B)	17.5 mm (0.6890 in)	(H)	Range B	(N)	2.3 mm (0.0906 in)
(C)	Range A	(I)	Liquid gasket applying position of mating surfaces of range A	(O)	⌀12 mm (0.4724 in)
(D)	316.2 mm (12.4488 in)	(J)	Liquid gasket applying position of center boss (5 places)	(P)	2.8 mm (0.1102in)
(E)	24.5 mm (0.9646 in)	(K)	Liquid gasket applying position of mating surfaces of range B	(Q)	1 mm (0.0394in)
(F)	18.5 mm (0.7283 in)	(L)	Liquid gasket applying position of mating surfaces other than range A and range B		

5. Set the chain cover, and tighten the bolts in numerical order as shown in the figure.

Caution:



The chain cover may contact the protrusion (a) of cam sprocket sensor plate and cause damage. When setting the chain cover, move the chain cover horizontally and set it while taking care not to contact with the cam sprocket.

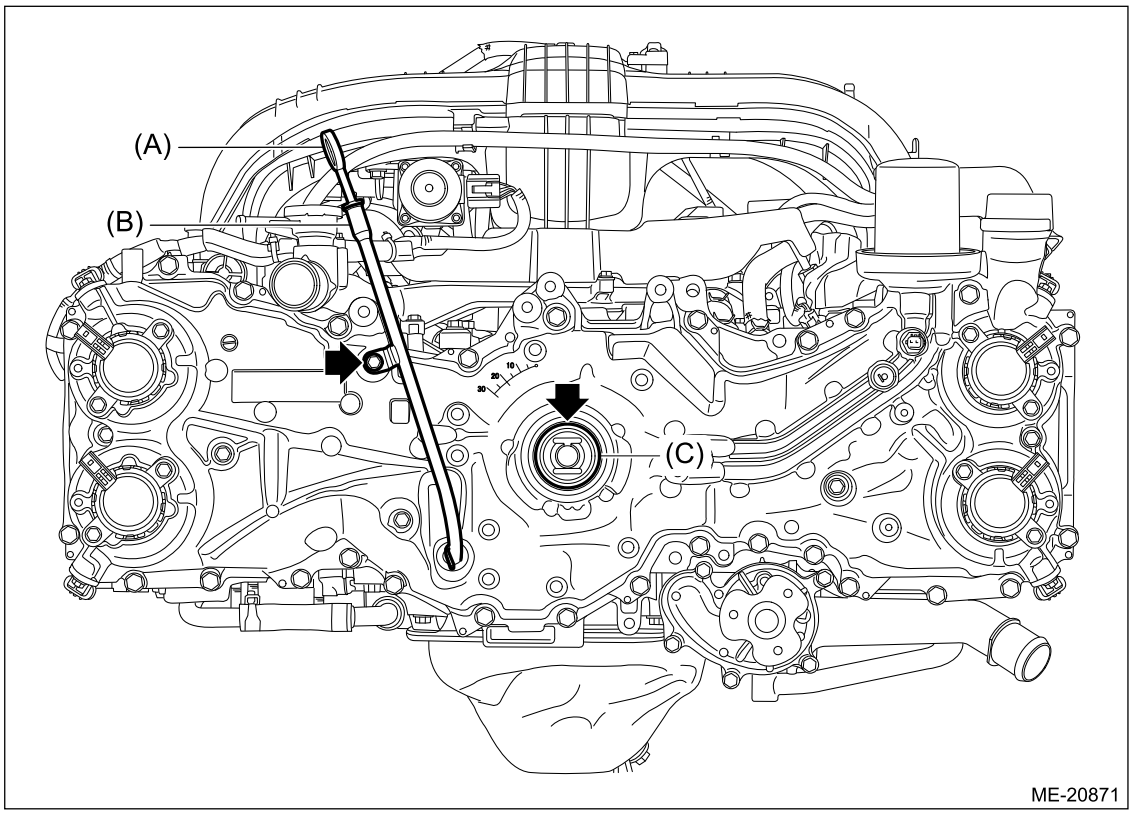
Tightening torque:

T1: 10 N·m (1.0 kgf-m, 7.4 ft-lb)

T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) M6 × 20 (C) M8 × 25 (D) M8 × 60

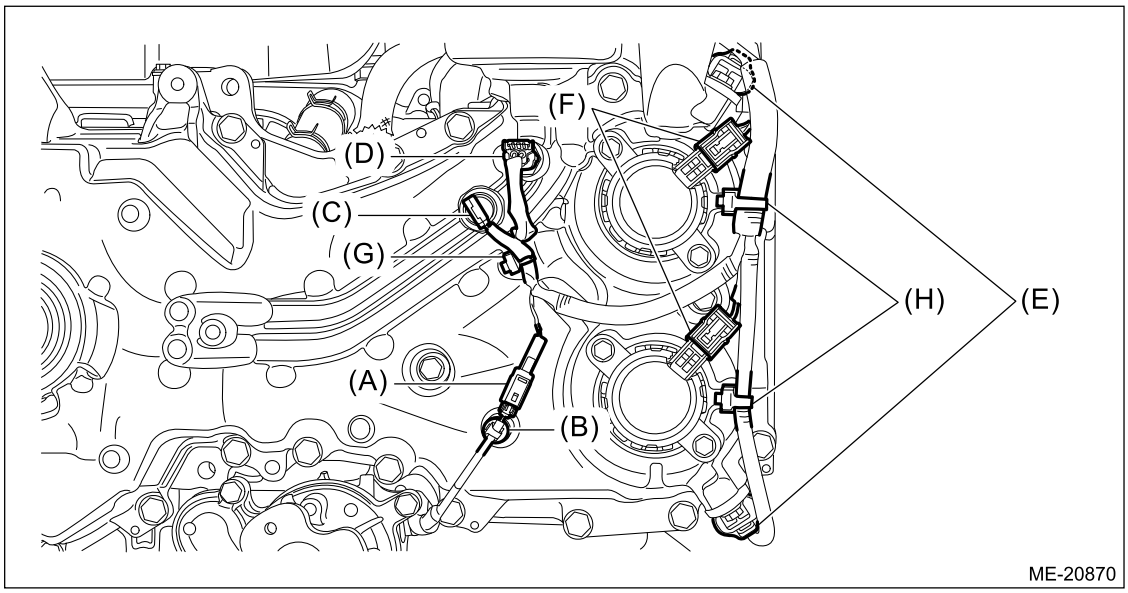
(B) M6 × 50



6. Install the crank pulley boss (C) and oil level gauge guide (B), and insert the oil level gauge (A).

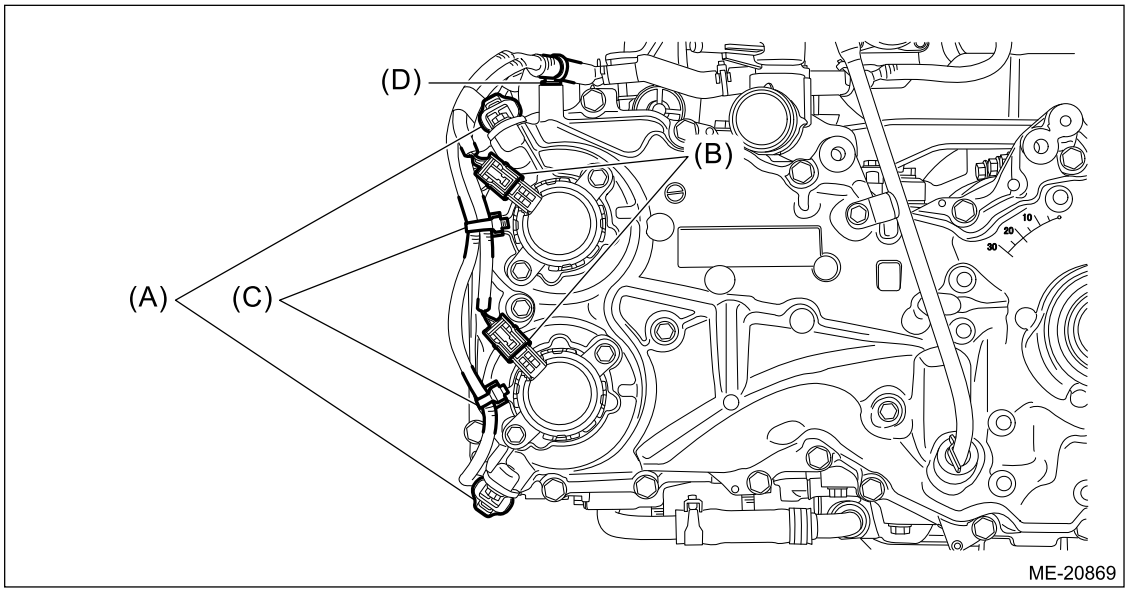
Note:

- **Use a new O-ring to the oil level gauge guide.**
- **Apply a light coat of engine oil to the O-rings of the oil level gauge guide and the oil level gauge.**



Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



7. Secure the engine harness with clip (H) and clip (G), and connect connector (F), connector (E), connector (D) and terminal (C).

8. Secure the oil level switch harness with clip (B), and connect the connector (A).

9. Secure the engine harness with clip (D) and clip (C), and connect connector (B) and connector (A).

10. Install the crank pulley. Ref. to MECHANICAL(H4DO)>Crank Pulley>INSTALLATION.
11. Install the water pump pulley. Ref. to COOLING(H4DO)>Water Pump>INSTALLATION > WATER PUMP.
12. Install the A/C compressor. Ref. to AIR CONDITIONER>Compressor>INSTALLATION.
13. Install the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator>INSTALLATION.
14. Install the V-belt tensioner assembly. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION > V-BELT TENSIONER ASSEMBLY.
15. Install the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION > V-BELT.
16. Fill engine oil. Ref. to LUBRICATION(H4DO)>Engine Oil>REPLACEMENT.
17. When working on the vehicle

    Note:

    When working on the vehicle, perform the following steps also.

    (1) Install the radiator and the condenser as a assembly. Ref. to COOLING(H4DO)>Radiator>INSTALLATION.

MECHANICAL(H4DO) > Chain Cover

DISASSEMBLY

1. Remove the oil filler cap.

2. Remove the engine oil filter and the oil pump union. Ref. to LUBRICATION(H4DO)>Oil Filter>REMOVAL.
3. Remove the oil pressure switch. Ref. to LUBRICATION(H4DO)>Oil Pressure Switch>REMOVAL.
4. Remove the engine oil temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Oil Temperature Sensor>REMOVAL.
5. Remove the oil control solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>REMOVAL.
6. Remove the camshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>REMOVAL.

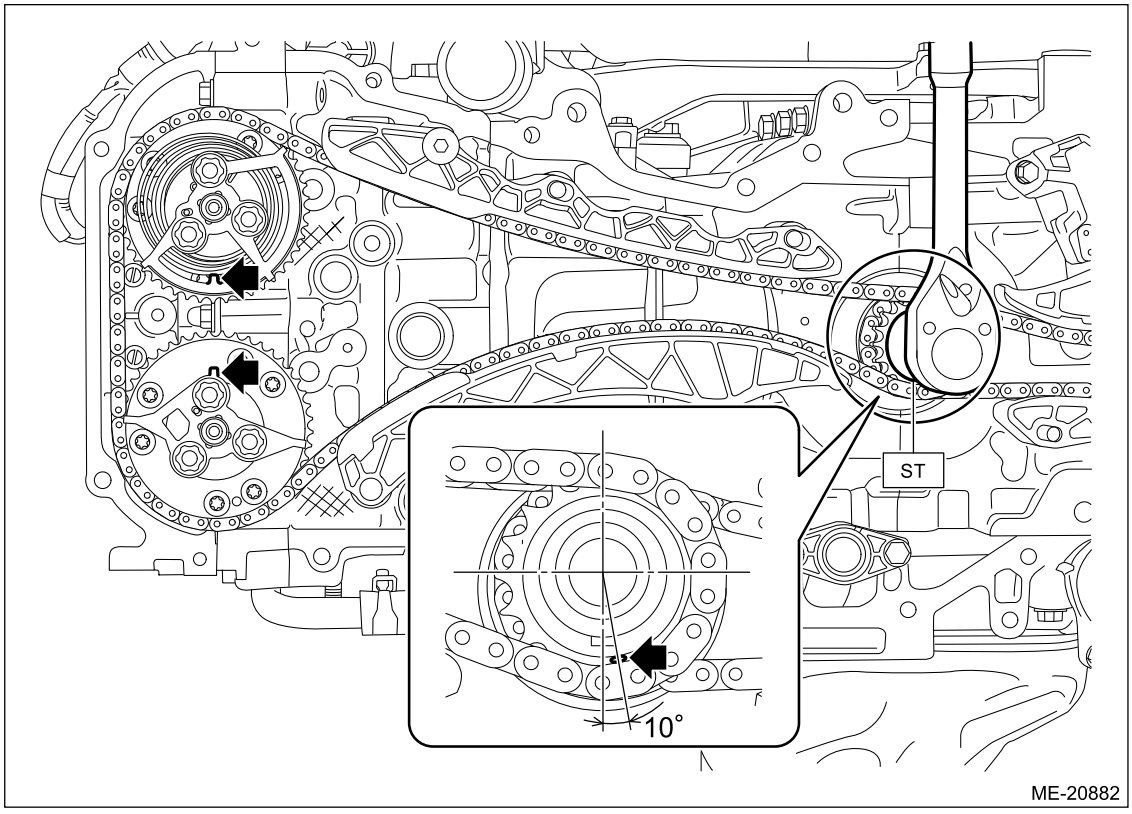
MECHANICAL(H4DO) > Chain Cover

ASSEMBLY

1. Install the camshaft position sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Camshaft Position Sensor>INSTALLATION.
2. Install the oil control solenoid. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Oil Control Solenoid>INSTALLATION.
3. Install the engine oil temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Oil Temperature Sensor>INSTALLATION.
4. Install the oil pressure switch. Ref. to LUBRICATION(H4DO)>Oil Pressure Switch>INSTALLATION.
5. Install the engine oil filter and the oil pump union. Ref. to LUBRICATION(H4DO)>Oil Filter>INSTALLATION.
6. Install the oil filler cap.

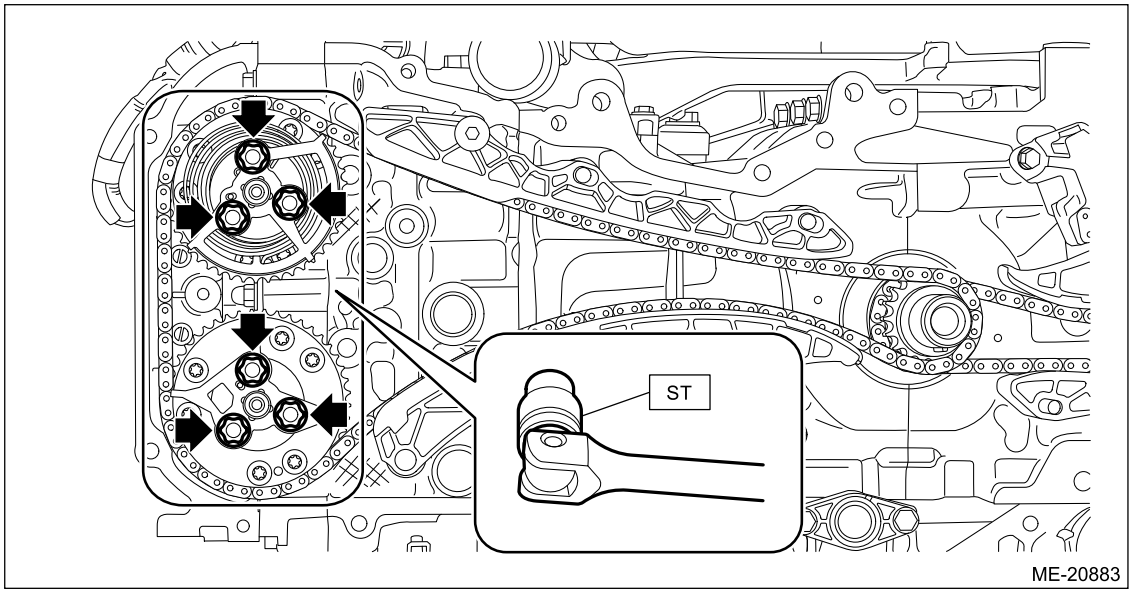
MECHANICAL(H4DO) > Chain Cover

INSPECTION



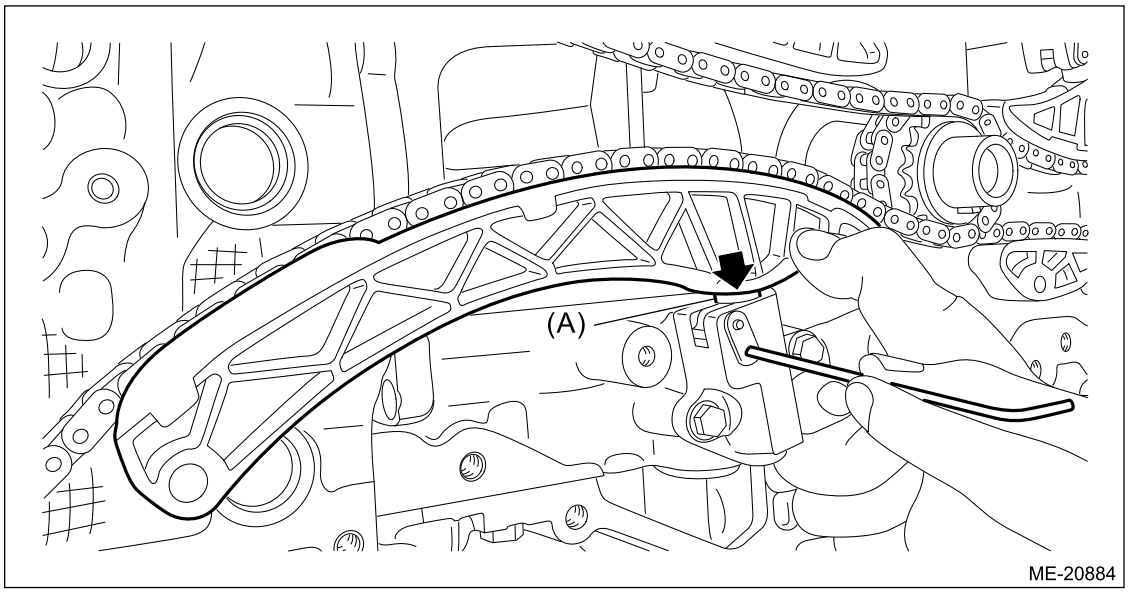
Check that the chain cover does not have deformation, cracks and any other damage.

REMOVAL

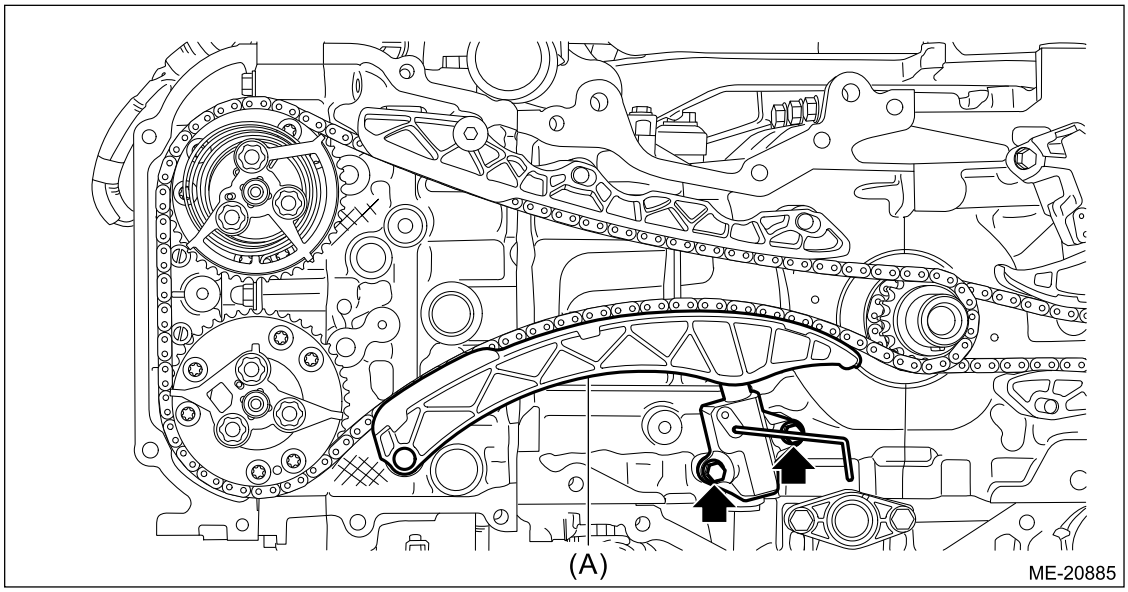


1. TIMING CHAIN RH

Note:
When replacing a single part, perform the work with the engine assembly installed to body.



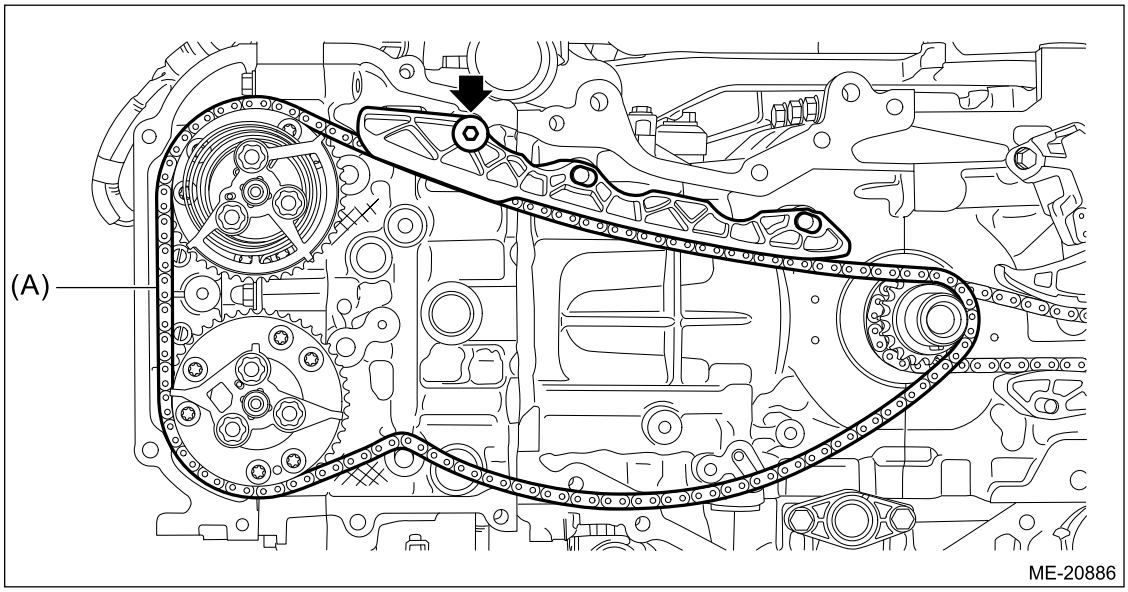
1. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
2. Using the ST and by turning the crankshaft, align the alignment mark of crank sprocket, the alignment mark (protrusion) of the intake cam sprocket RH and the alignment mark (protrusion) of the exhaust cam sprocket RH to the positions as shown in the figure.
   Note:
   If the alignment marks are aligned to the positions as shown in the figure, the crankshaft key is located at six o'clock position.
   Preparation tool:
   ST: CRANKSHAFT SOCKET (18252AA000)



3. When the cam sprocket RH is removed, and the cam carrier RH is disassembled
   Note:
   Follow also steps below when the cam sprocket RH is removed, and the cam carrier RH is disassembled.
   (1) Using the ST, loosen the bolts which hold the intake cam sprocket RH and exhaust cam sprocket RH.
   Note:
   In order to prevent damage on each component, be careful not to loosen the bolts too much.
   Preparation tool:
   ST: SOCKET (18270KA010)

4. Push down the chain lever tensioner RH, and with a 2.5 mm (0.0984 in) dia. stopper pin or a 2.5 mm dia. hex wrench inserted into the stopper pin hole in the chain tensioner RH, secure the plunger (A).

5. Remove the chain tensioner RH, and remove the chain tensioner lever RH (A).



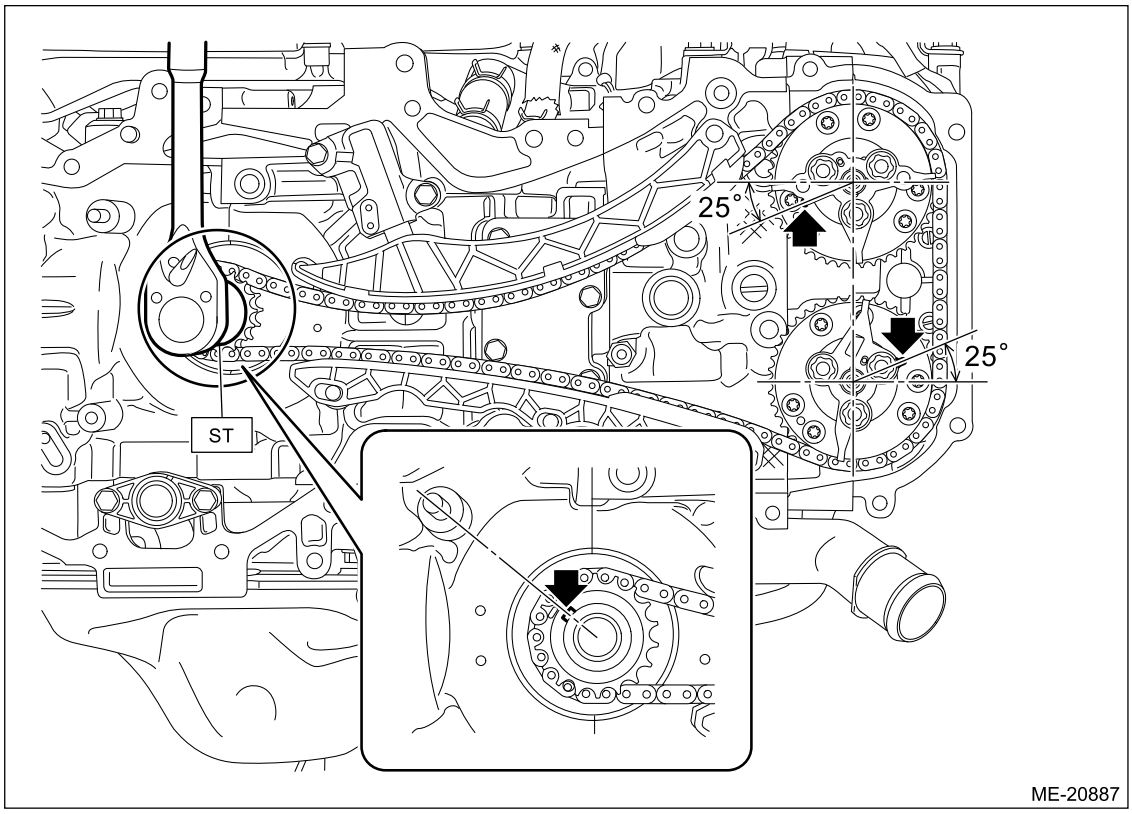
6. Remove the chain guide RH, and remove the timing chain RH (A).

Caution:

- **If the timing chain RH is not installed, the intake camshaft RH and exhaust camshaft RH are kept at zero-lift position. All cams on the camshaft are not pressing down the roller rocker arm (intake valve and exhaust valve). (Under this condition, all valves remain unlifted.)**
- **Intake camshaft RH and exhaust camshaft RH can be independently rotated with the timing chain RH removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero-lift (in range where it can be turned lightly by hand).**

Note:

To avoid mixing with LH side, keep the removed part in order.



2. TIMING CHAIN LH

1. Remove the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN RH.

2. Using the ST and by turning the crankshaft, align the key of the crankshaft, the alignment mark (protrusion) of the intake cam sprocket LH and the alignment mark (protrusion) of the exhaust cam sprocket LH to the positions as shown in the figure.

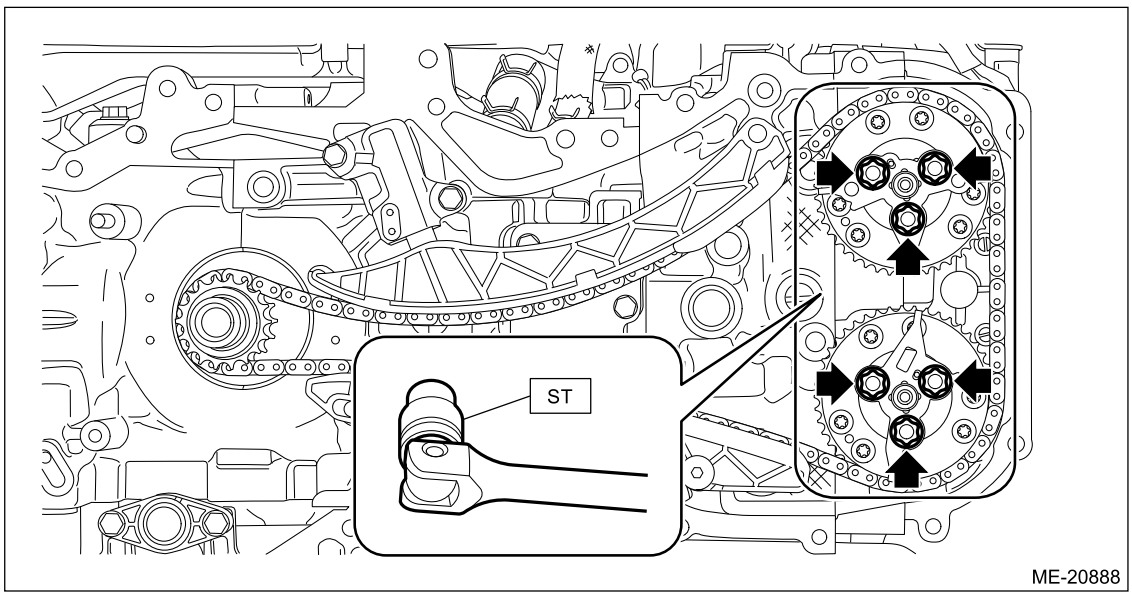
Preparation tool:

ST: CRANKSHAFT SOCKET (18252AA000)

3. When the cam sprocket LH is removed, and the cam carrier LH is disassembled

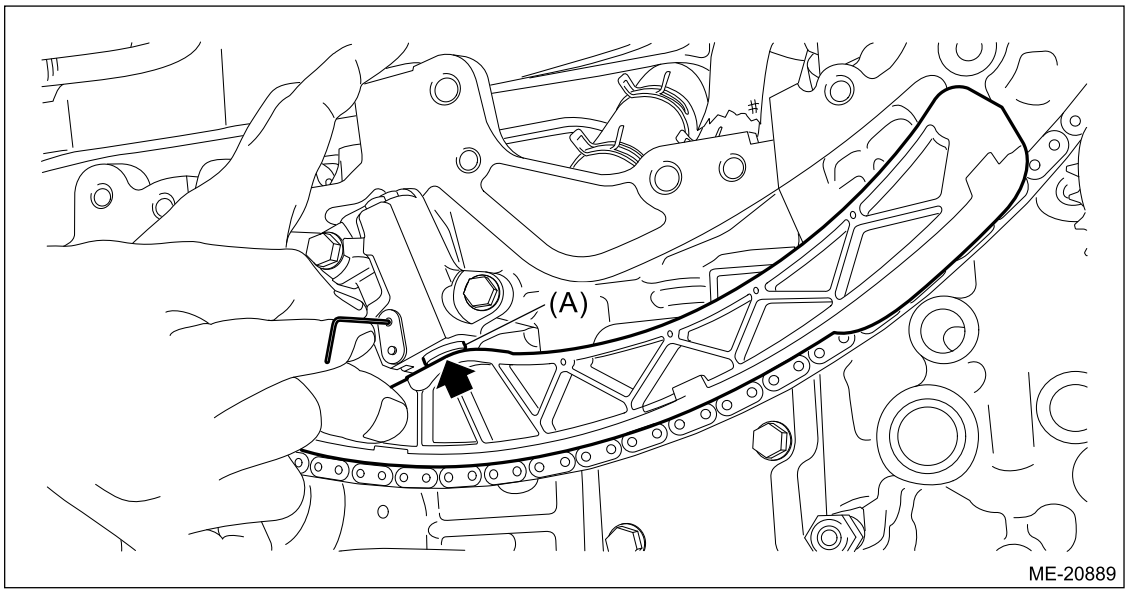
Note:

Follow also steps below when the cam sprocket LH is removed, and the cam carrier LH is disassembled.



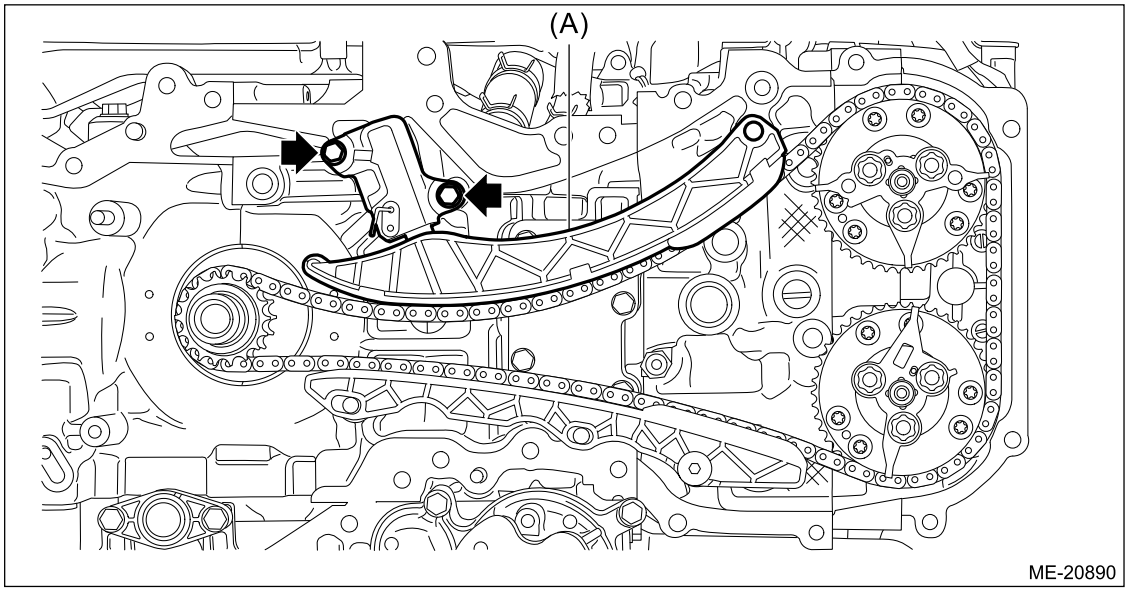
(1) Using the ST, loosen the bolts which hold the intake cam sprocket LH and exhaust cam sprocket LH.

Caution:

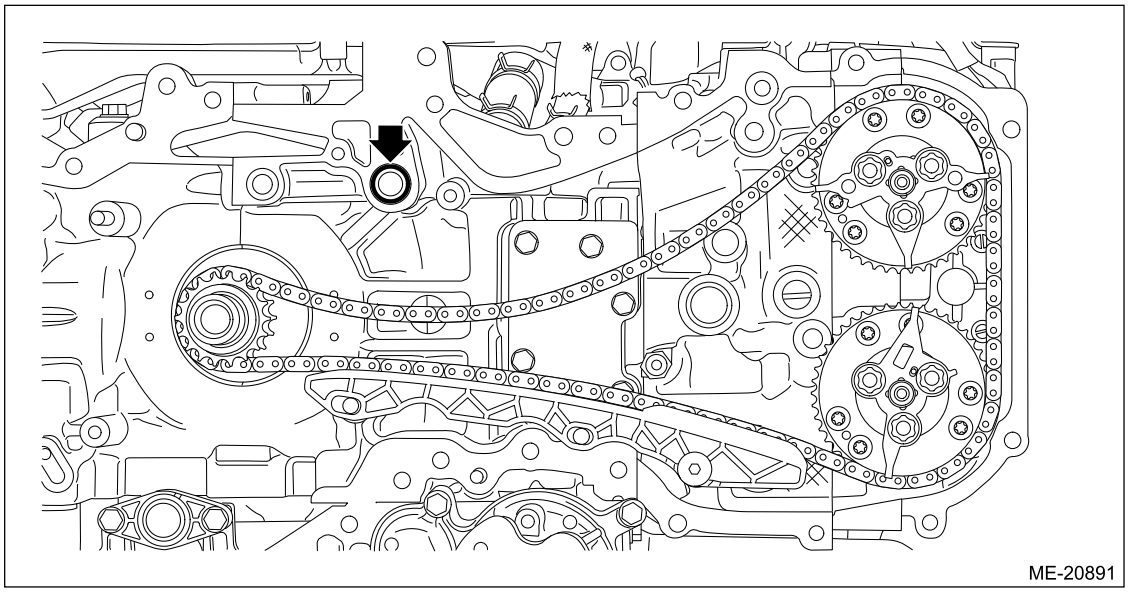


In order to prevent damage on each component, be careful not to loosen the bolts too much.

Preparation tool:



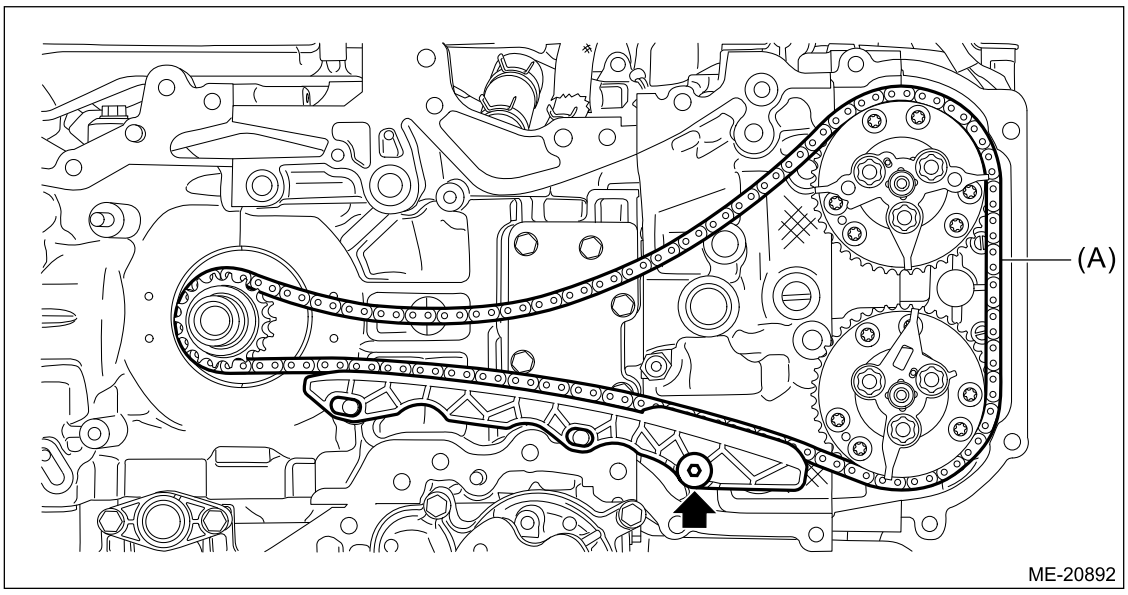
ST: SOCKET (18270KA010)



4. Push down the chain tensioner lever LH as shown in the figure, and insert a stopper pin (clips, etc.) with a diameter of 1.2 mm (0.0472in) or less, or 1.2 mm hex wrench into the stopper pin hole in the chain tensioner LH to secure the plunger (A).

5. Remove the chain tensioner LH, and remove the chain tensioner lever LH (A).

6. Remove the O-ring from the cylinder block LH.



7. Remove the chain guide LH, and remove the timing chain LH (A).

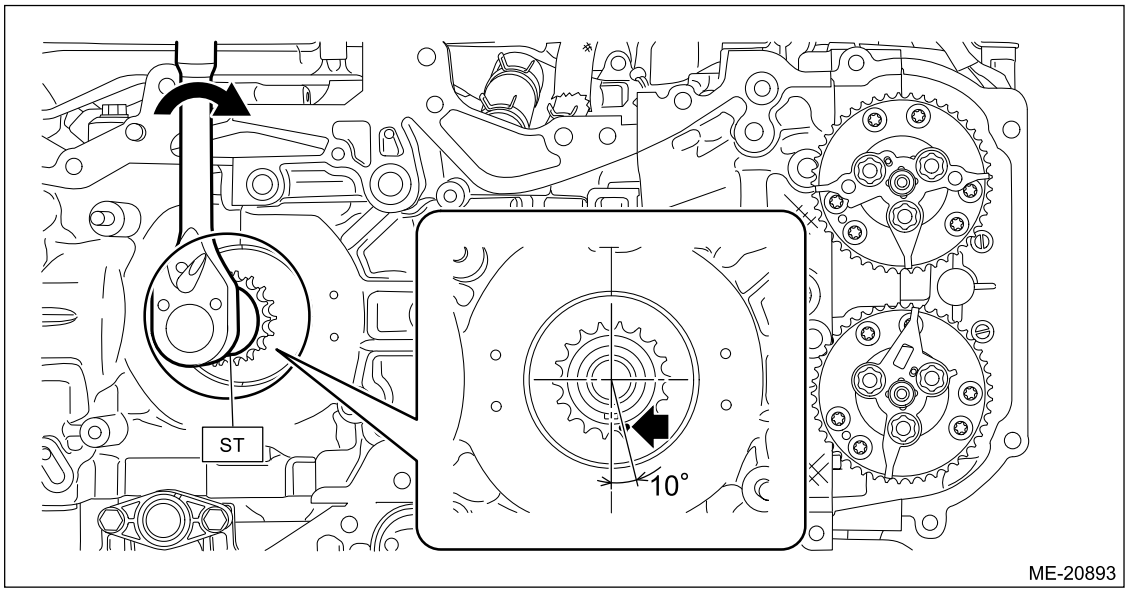
Caution:

- **If the timing chain LH is not installed, the exhaust camshaft LH is kept at zero-lift position. All cams on the exhaust camshaft LH are not pressing down the roller rocker arm (exhaust valve). (Under this condition, exhaust valves remain unlifted.)**
- **Intake camshaft LH is kept at lift position. All cams on the intake camshaft LH are pressing down the roller rocker arm (intake valve). (Under this condition, intake valves remain lifted.)**
- **Intake camshaft LH and exhaust camshaft RH can be independently rotated with the timing chain LH removed. When the exhaust camshaft LH is turned, the valve heads contact each other and valve stem may bend as described in above. Do not turn the exhaust camshaft LH to the outside of range of zero-lift (in range where it can be turned lightly by hand).**
- **#1 piston and #4 piston are located near TDC. If the intake camshaft LH is turned, the valve and the piston may contact and valve stem may bend. Do not turn the intake camshaft LH at this time.**

Note:

To avoid mixing with RH side, keep the removed part in order.

8. Using the ST and by turning the crankshaft approximately 200° clockwise, align the alignment marks



of crank sprocket to the positions as shown in the figure.

Caution:

- **This procedure is required to prevent the valve and piston contacting with each other, by moving the all pistons to the middle of the cylinders.**
- **Never turn counterclockwise because the valve and piston may contact. Counterclockwise turn is allowed only when adjusting precisely the alignment marks, after turning the crank sprocket alignment mark clockwise near the position as shown in the figure.**

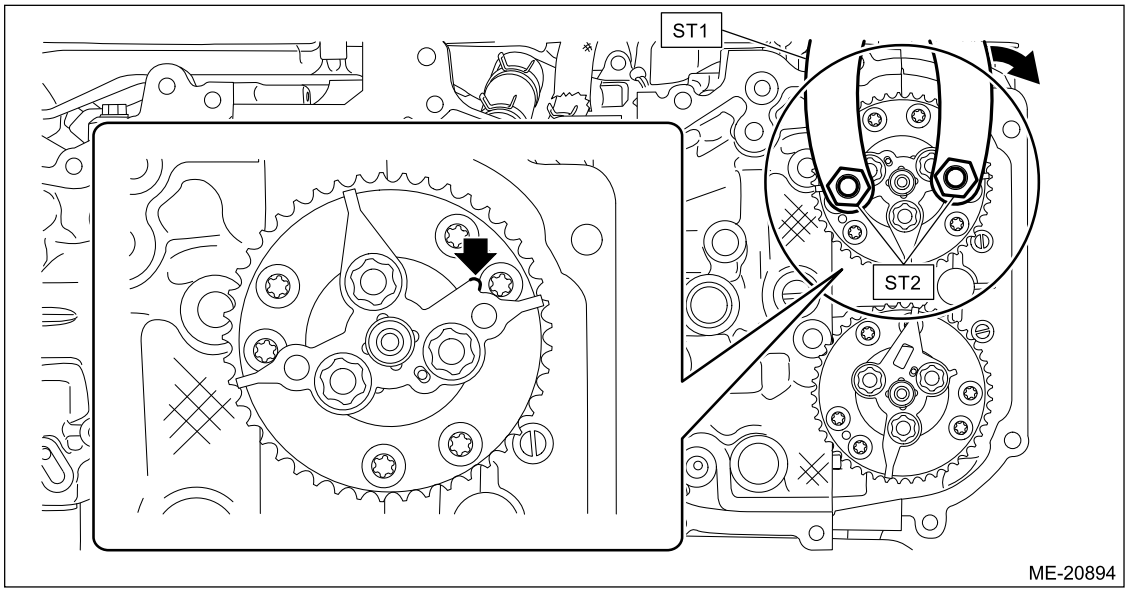
Preparation tool:

ST: CRANKSHAFT SOCKET (18252AA000)

9. Using ST1 and ST2 by turning the intake cam sprocket LH approximately 170° clockwise, align the alignment marks (protrusion) of intake cam sprocket LH to the positions (zero-lift position) as shown in the figure.

Caution:

- **After this work, when the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn the intake camshaft LH and exhaust camshaft LH to the outside of range of zero-lift (in range where it can be turned lightly by hand).**
- **Perform the operation carefully since the ST comes off easily.**



Note:

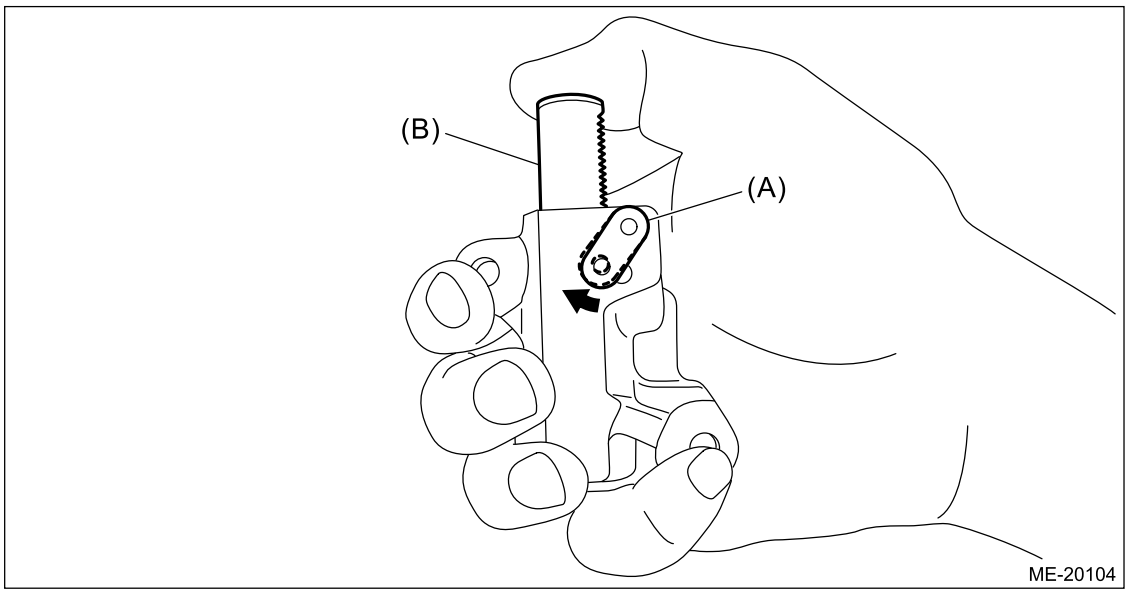
Intake camshaft LH has four peaks of drive sections for the high-pressure fuel pump. Therefore, there is little range where it can be turned lightly by hand in zero-lift position.

Preparation tool:

ST1: PULLEY WRENCH (18355AA000)

ST2: PULLEY WRENCH PIN SET (18334AA020)

ST1
ST2
ME-20894

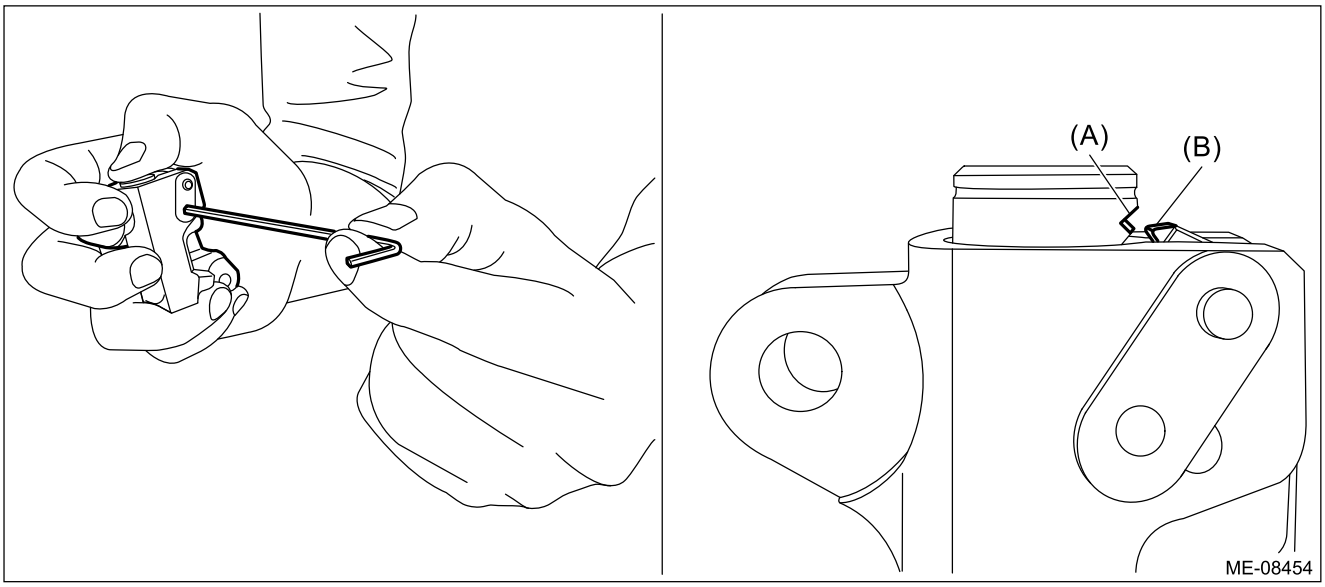


INSTALLATION

1. TIMING CHAIN LH

Note:

- **Be careful that the foreign matter is not into or onto the assembled component during installation.**
- **Apply engine oil to all component parts of the timing chain.**

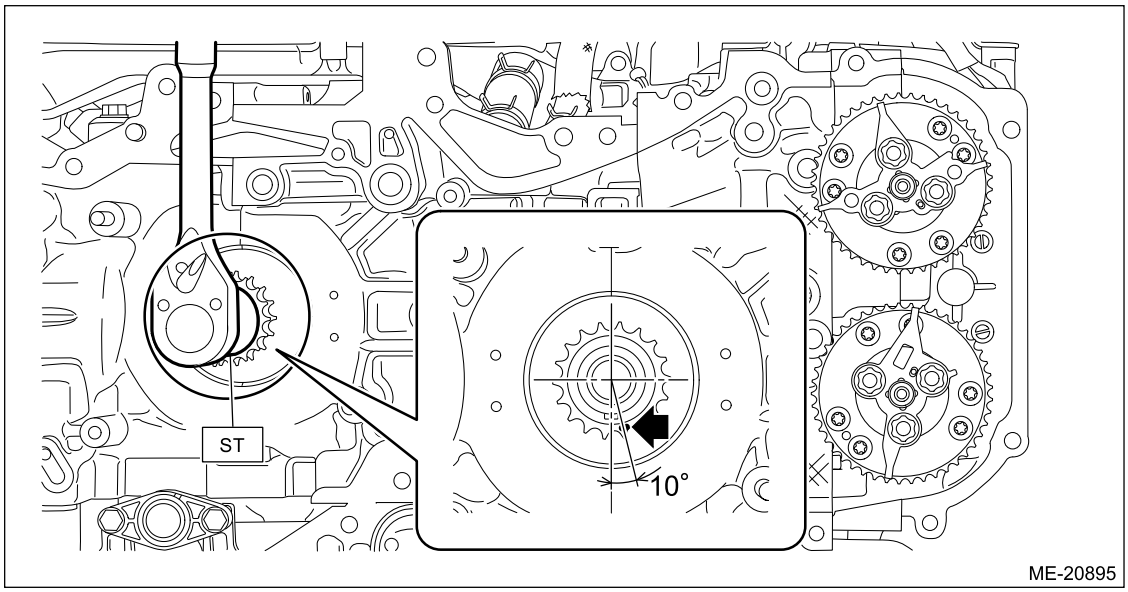


1. Prepare to attach the chain tensioner LH.
(1) Move the link plate (A) in the direction of arrow to press in the plunger (B).

(2) In order to secure the plunger, insert a stopper pin (clips, etc.) with a diameter of 1.2 mm (0.0472in) or less, or 1.2 mm hex wrench into the stopper pin hole.

Note:

If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner are not aligned, check that the first notch of plunger rack (A) is engaged with the stopper tooth (B). If not engaged, retract the plunger a little so that the first notch of plunger rack (A) is engaged with the stopper tooth (B).



2. Check that the alignment mark of the crank sprocket is located at the position shown in the figure. If not aligned, using the ST turn the crankshaft to align the crank sprocket alignment mark to the position shown in the figure.

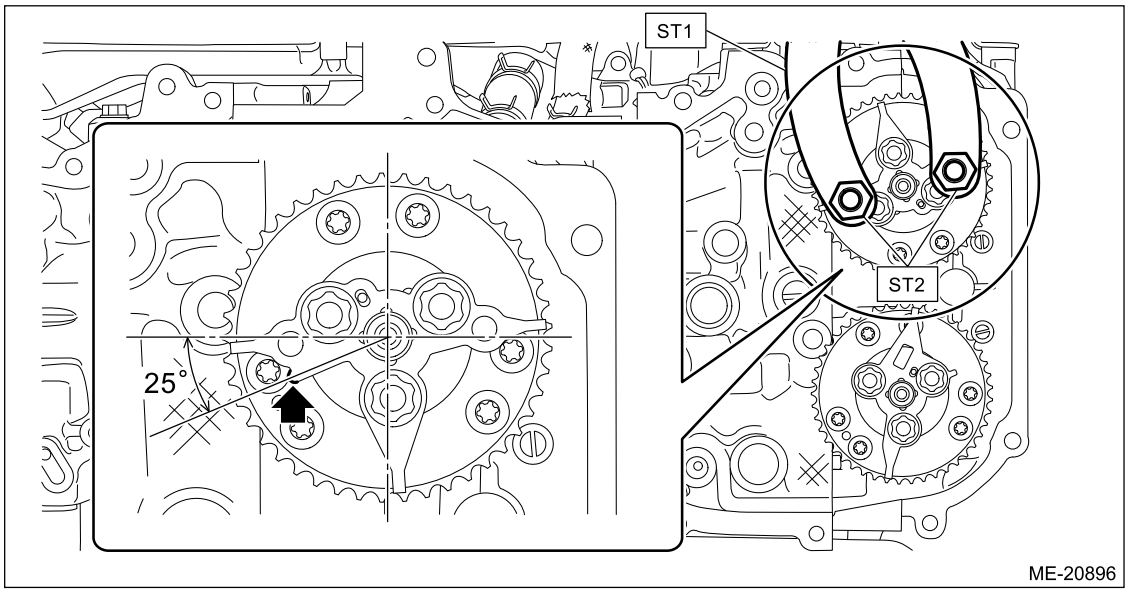
Note:

This procedure is required to prevent the valve and piston contacting with each other in the next step.

Preparation tool:

ST: CRANKSHAFT SOCKET (18252AA000)

3. Using ST1 and ST2, by turning the intake cam sprocket LH, align the alignment marks (protrusion) to the positions as shown in the figure.



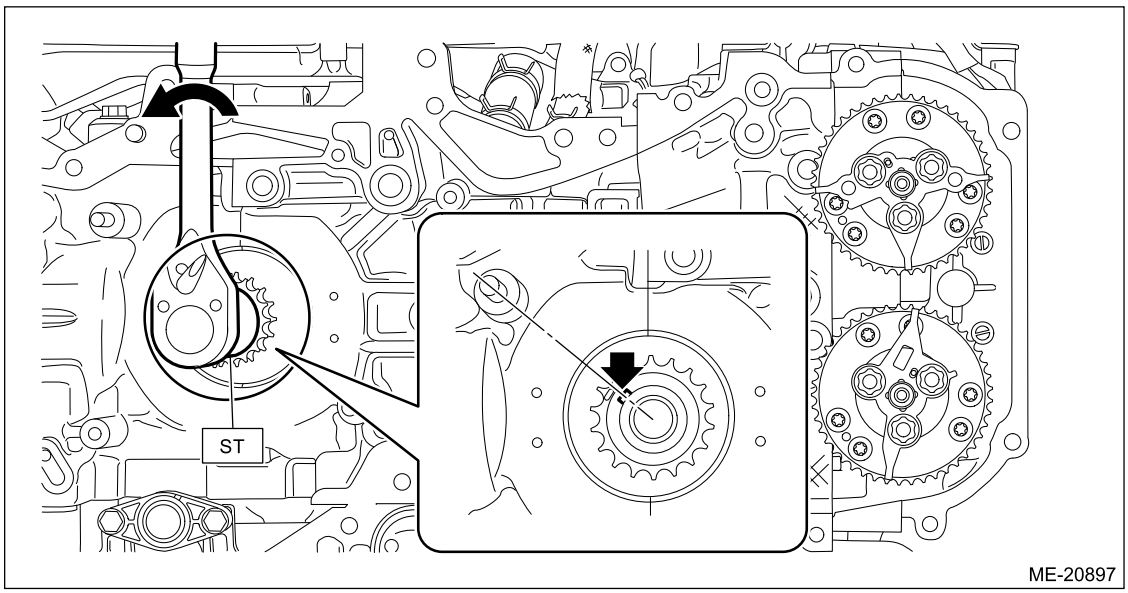
Caution:

- **When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn the exhaust camshaft LH.**
- **Perform the operation carefully since the ST comes off easily.**

Preparation tool:

ST1: PULLEY WRENCH (18355AA000)

ST2: PULLEY WRENCH PIN SET (18334AA020)

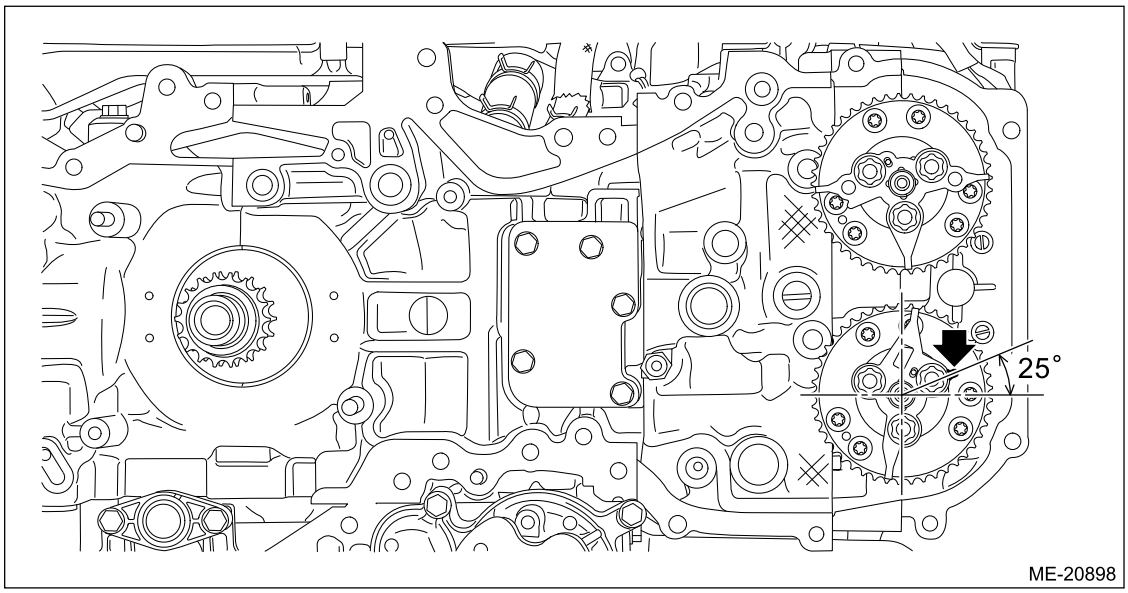


4. Using the ST and by turning the crankshaft approximately 200° counterclockwise, align the alignment marks of crankshaft key to the positions as shown in the figure.

Caution:

Never turn clockwise because the valve and piston may contact. Clockwise turn is allowed only when adjusting the key position precisely, after turning the crankshaft counterclockwise to bring the key near the position as shown in the figure.

Preparation tool:



ST: CRANKSHAFT SOCKET (18252AA000)

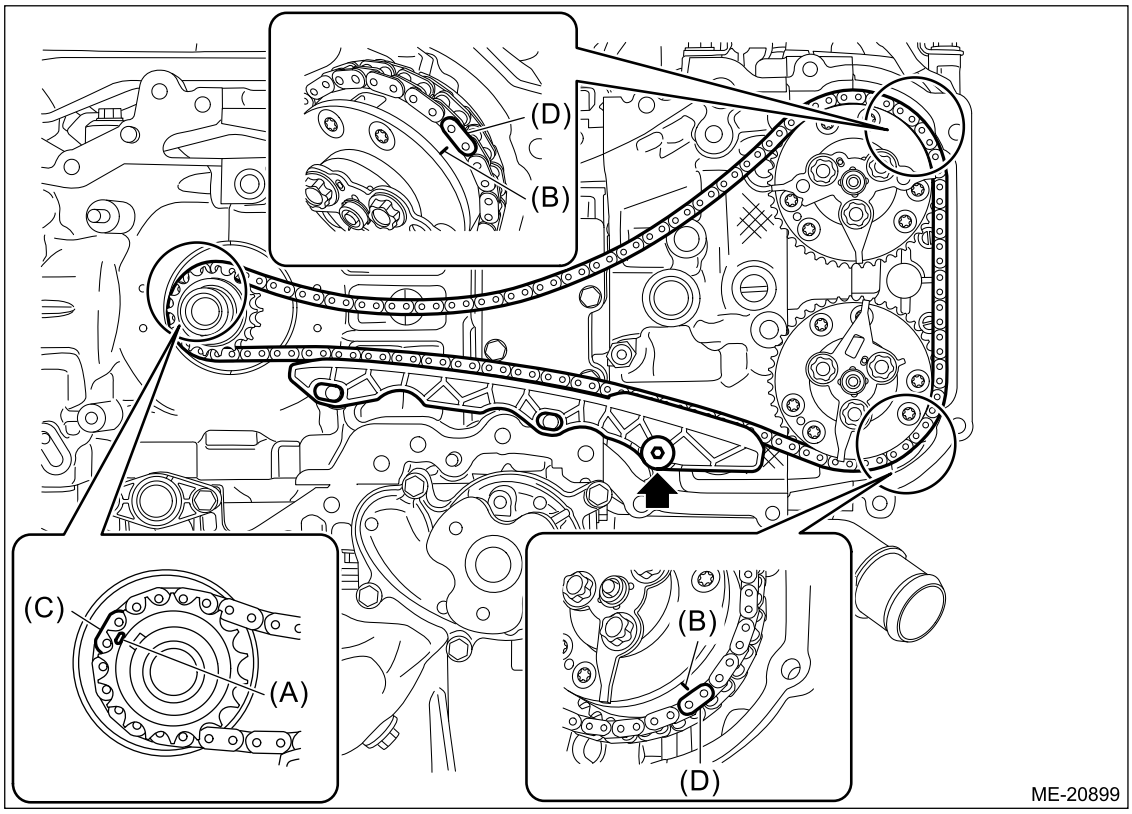
5. Align the alignment mark (protrusion) of exhaust cam sprocket LH to the position shown in the figure.

Caution:

To prevent valve damage, turn the exhaust cam sprocket LH only within the range of zero-lift (in range where it can be turned lightly by hand).

6. Install the timing chain LH and the timing chain guide LH.

(1) Match the timing chain mark (deep blue) to the alignment mark of the crank sprocket.



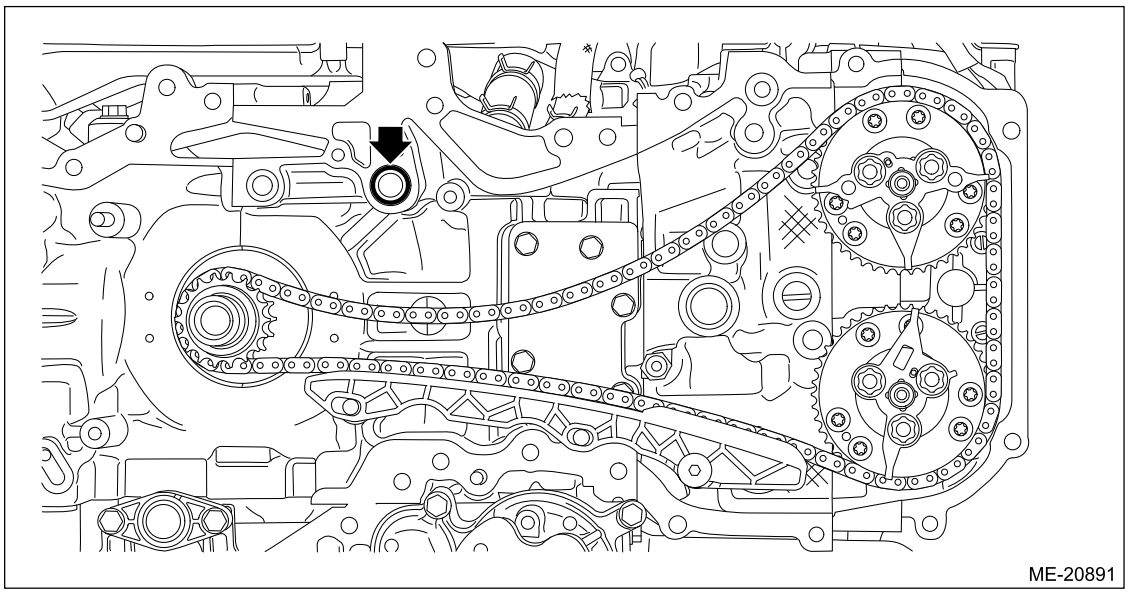
(2) Match the timing chain mark (yellow) to the timing mark position of the intake cam sprocket LH.

(3) Match the timing chain mark (yellow) to the timing mark position of the exhaust cam sprocket LH.

(4) Install timing chain guide LH.

Tightening torque:

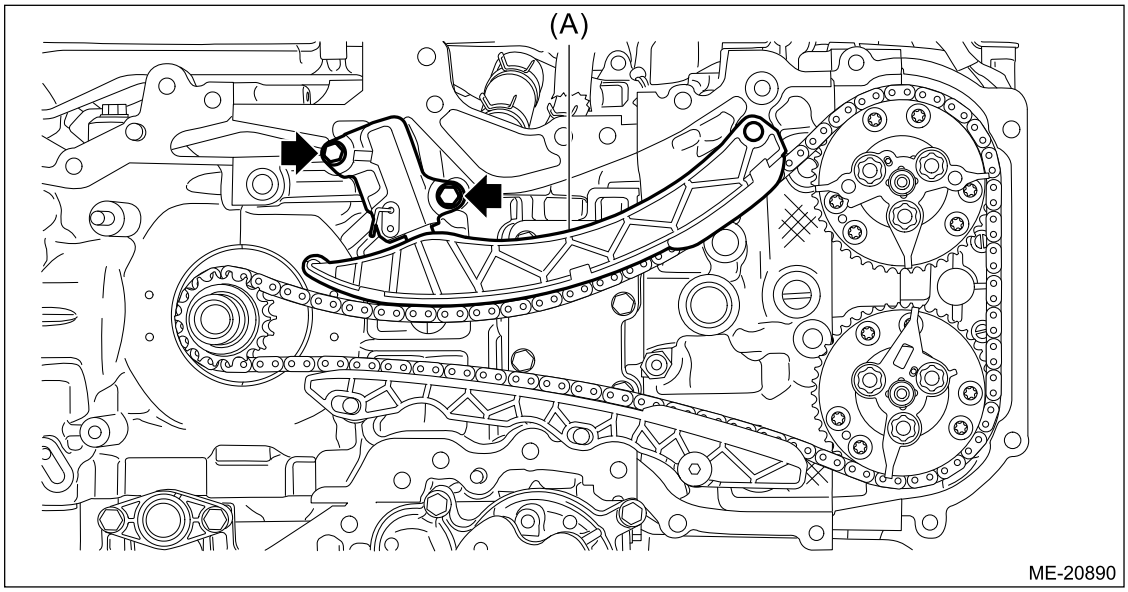
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



(A) Alignment mark
(B) Timing mark
(C) Deep blue
(D) Yellow

7. Install O-rings to the cylinder block LH.

Note:



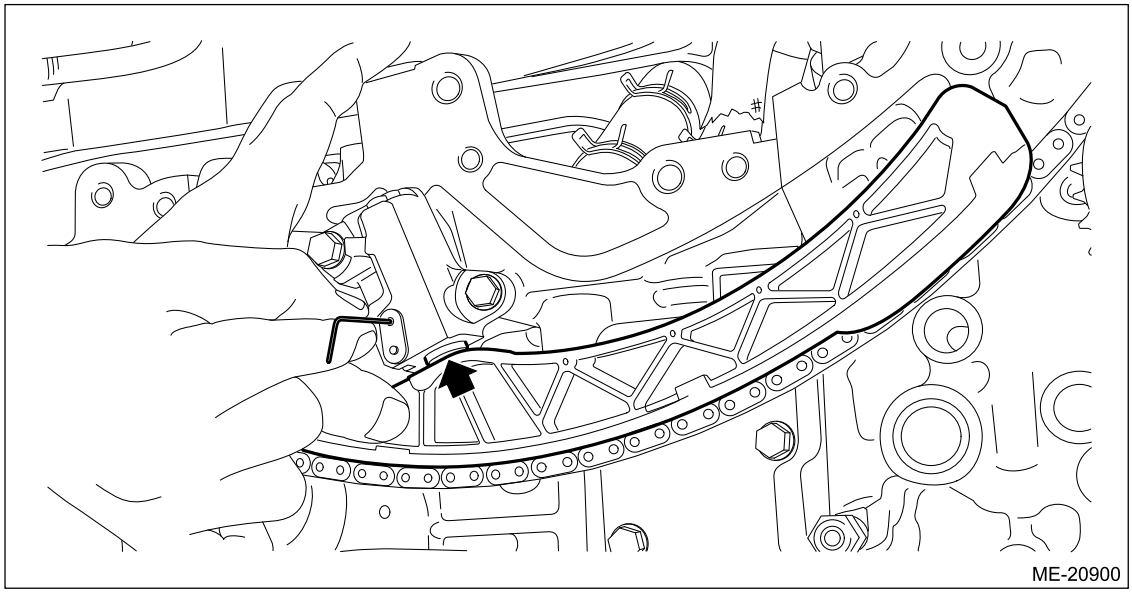
Use new O-rings.

8. Install the chain tensioner lever LH (A) and chain tensioner LH.

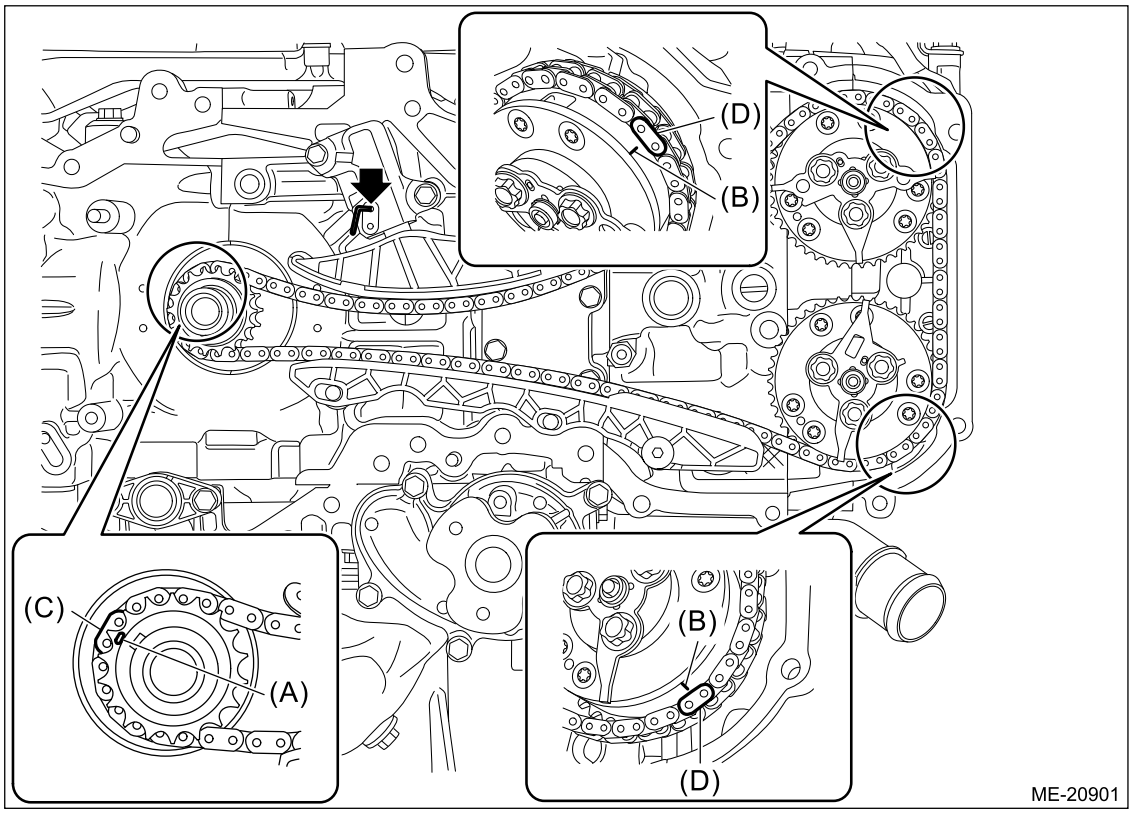
Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

9. Pull out the stopper pin from the chain tensioner LH.



Caution:



Confirm the following before pulling out the stopper pin.

- **Matching of the timing chain mark (deep blue) to the alignment mark of the crank sprocket.**
- **Matching of the timing chain mark (yellow) to the timing mark position of the intake cam sprocket LH.**
- **Matching of the timing chain mark (yellow) to the timing mark position of the exhaust cam sprocket LH.**

Note:

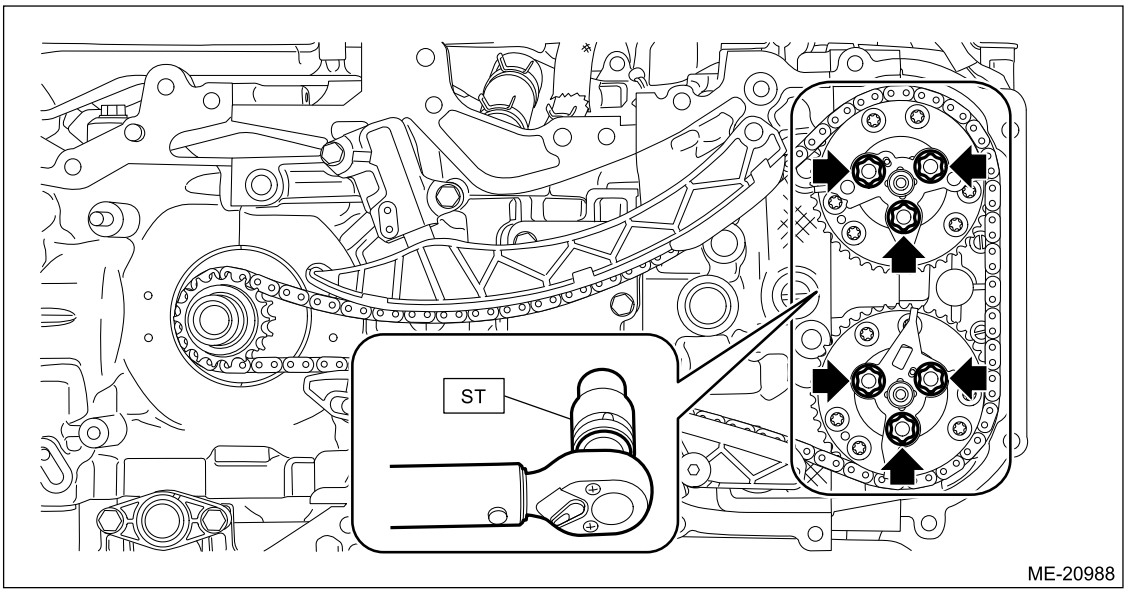
If the stopper pin cannot be removed, lift the chain tension lever LH to remove as shown in the figure.

(A) Alignment mark
(B) Timing mark
(C) Deep blue
(D) Yellow

10. When the cam sprocket LH has been removed, and the cam carrier LH has been disassembled

Note:

Follow also steps below when the cam sprocket LH has been removed, and the cam carrier LH has been disassembled.



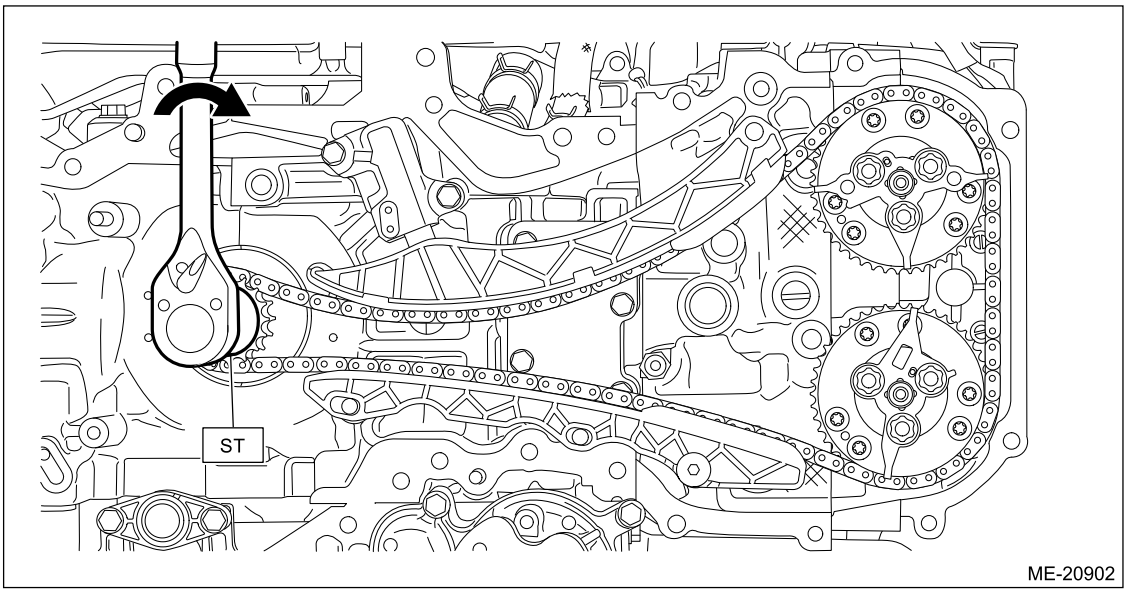
(1) Using the ST, tighten the bolts which hold the intake cam sprocket LH and exhaust cam sprocket LH.

Preparation tool:

ST: SOCKET (18270KA010)

Tightening torque:

18N·m (1.8 kgf-m, 13.3 ft-lb)



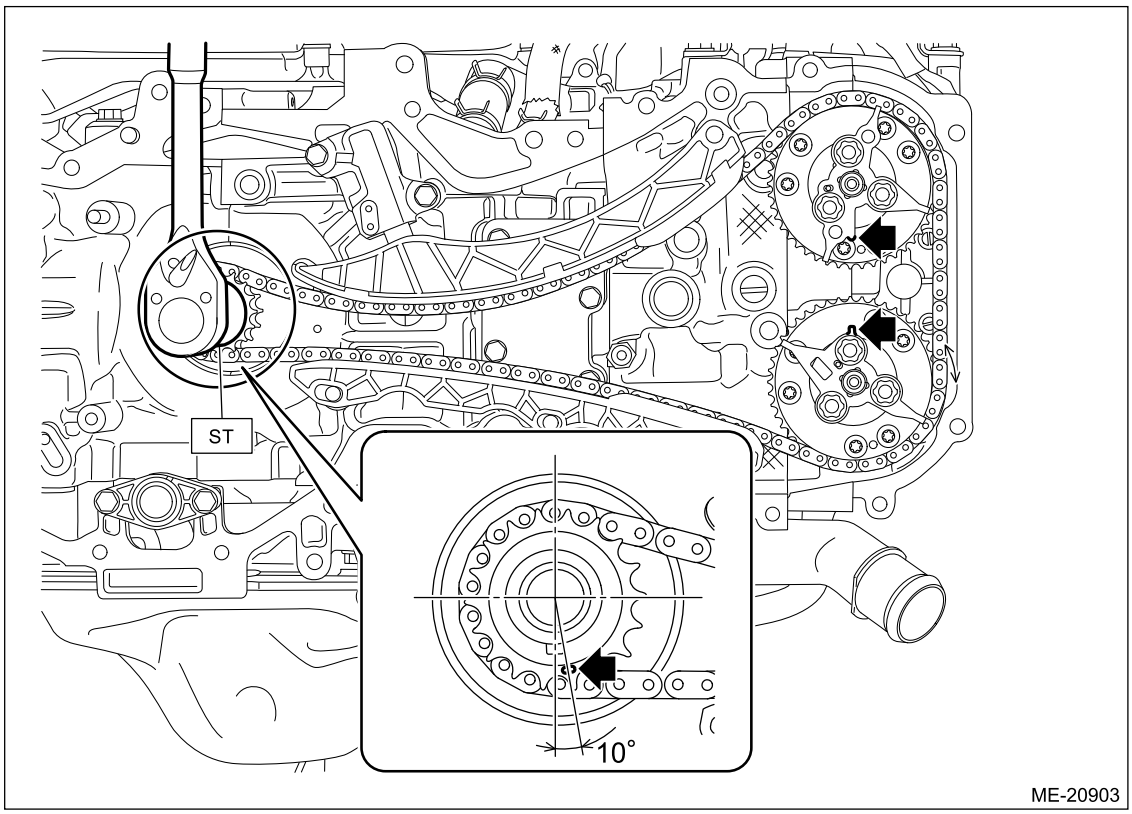
11. Using the ST, turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

Caution:

Always make sure to perform this confirmation.

Preparation tool:

ST: CRANKSHAFT SOCKET (18252AA000)



12. Using the ST and by turning the crankshaft, align the alignment mark of crank sprocket, the alignment mark (protrusion) of the intake cam sprocket LH and the alignment mark (protrusion) of the exhaust cam sprocket LH to the positions as shown in the figure.

Note:

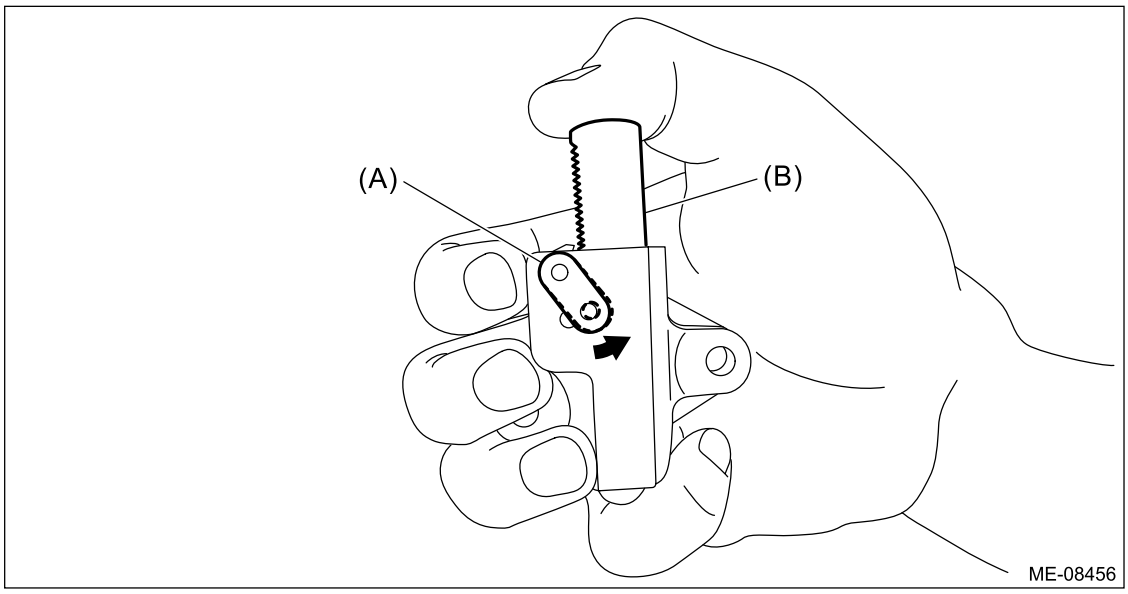
If the alignment marks are aligned to the positions as shown in the figure, the crankshaft key is located at six o'clock position.

Preparation tool:

ST: CRANKSHAFT SOCKET (18252AA000)

13. Install the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION > TIMING CHAIN RH.

2. TIMING CHAIN RH

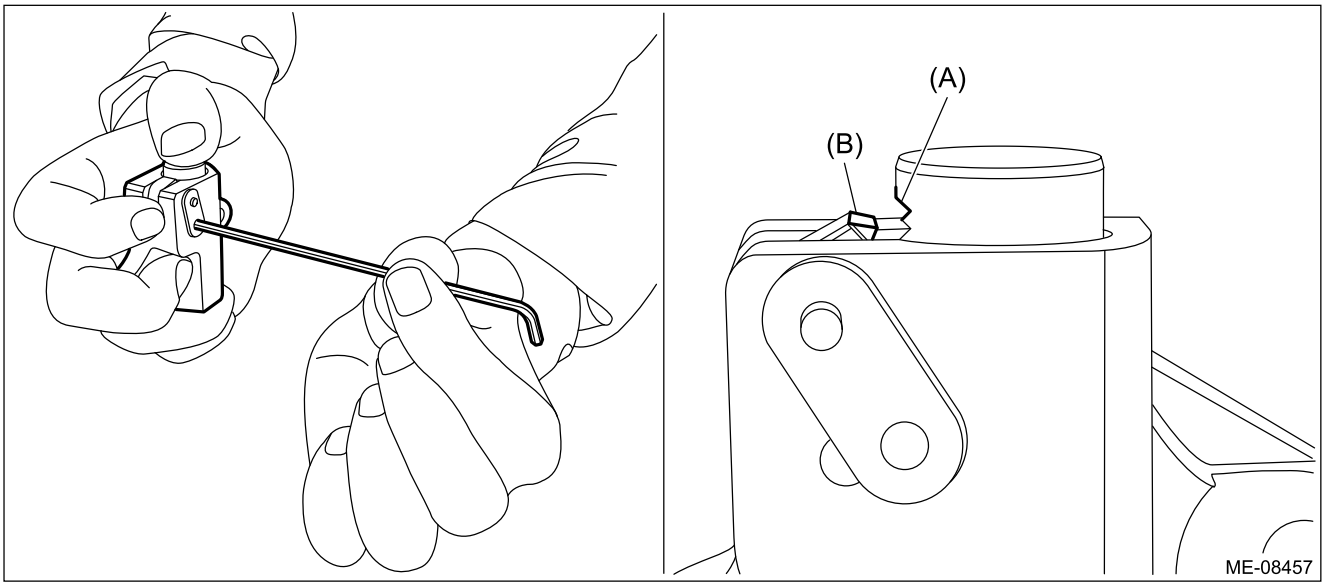


Note:

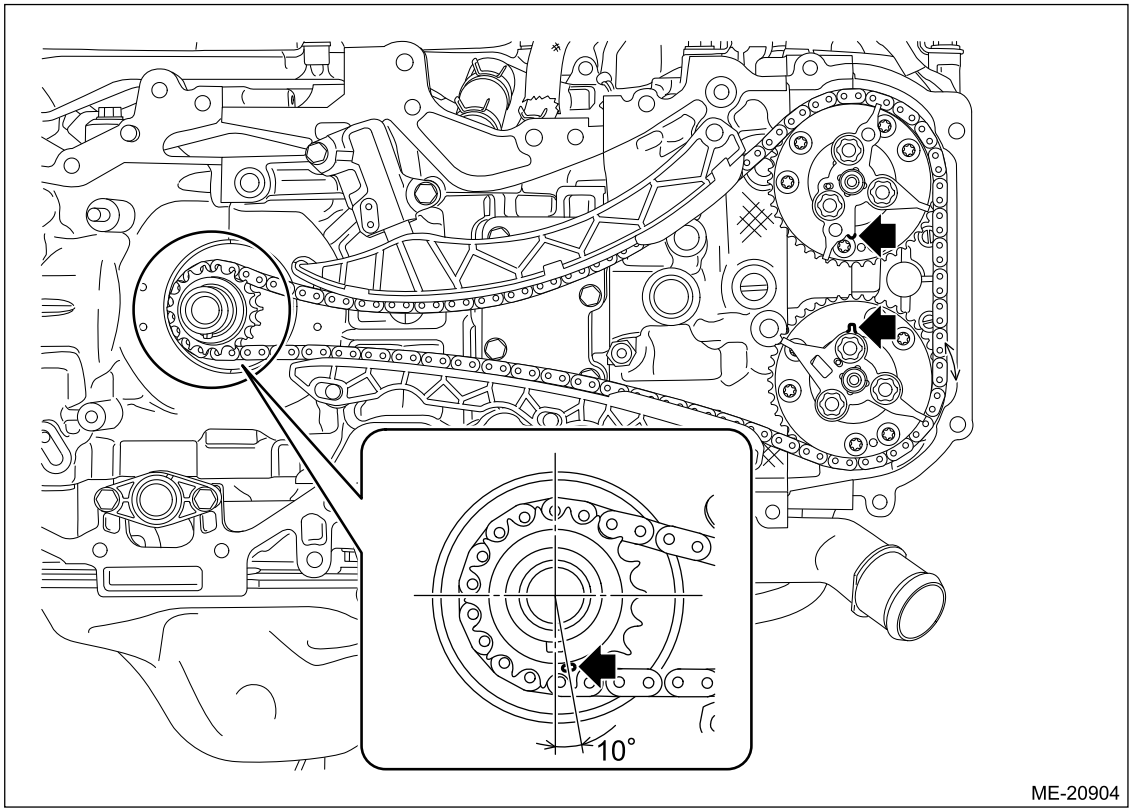
- **Be careful that the foreign matter is not into or onto the assembled component during installation.**
- **Apply engine oil to all component parts of the timing chain.**

1. Install timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION > TIMING CHAIN LH.

2. Prepare to attach the chain tensioner RH.



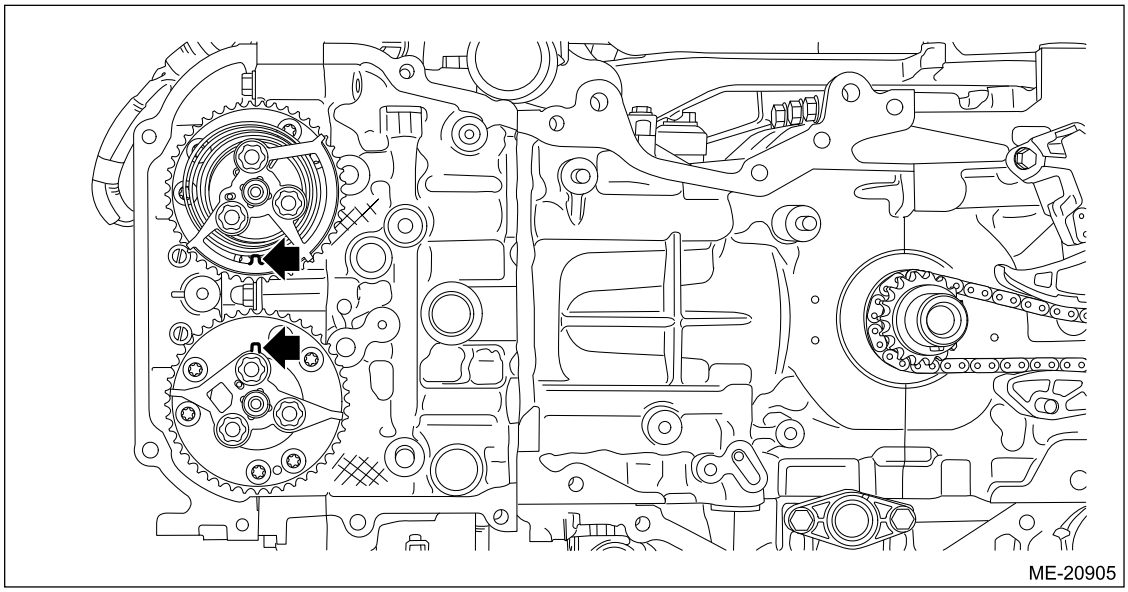
(1) Move the link plate (A) in the direction of arrow to press in the plunger (B).



(2) In order to secure the plunger, insert a stopper pin with a diameter of 2.5 mm (0.0984in) or 2.5 mm hex wrench into the stopper pin hole.

Note:

If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner are not aligned, check that the first notch of plunger rack (A) is engaged with the stopper tooth (B). If not engaged, retract the plunger a little so that the first notch of plunger rack (A) is engaged with the stopper tooth (B).



3. Make sure that the alignment mark of the crank sprocket, the alignment mark (protrusion) of the intake cam sprocket LH and the alignment mark (protrusion) of the exhaust cam sprocket LH are aligned to the positions as shown in the figure.

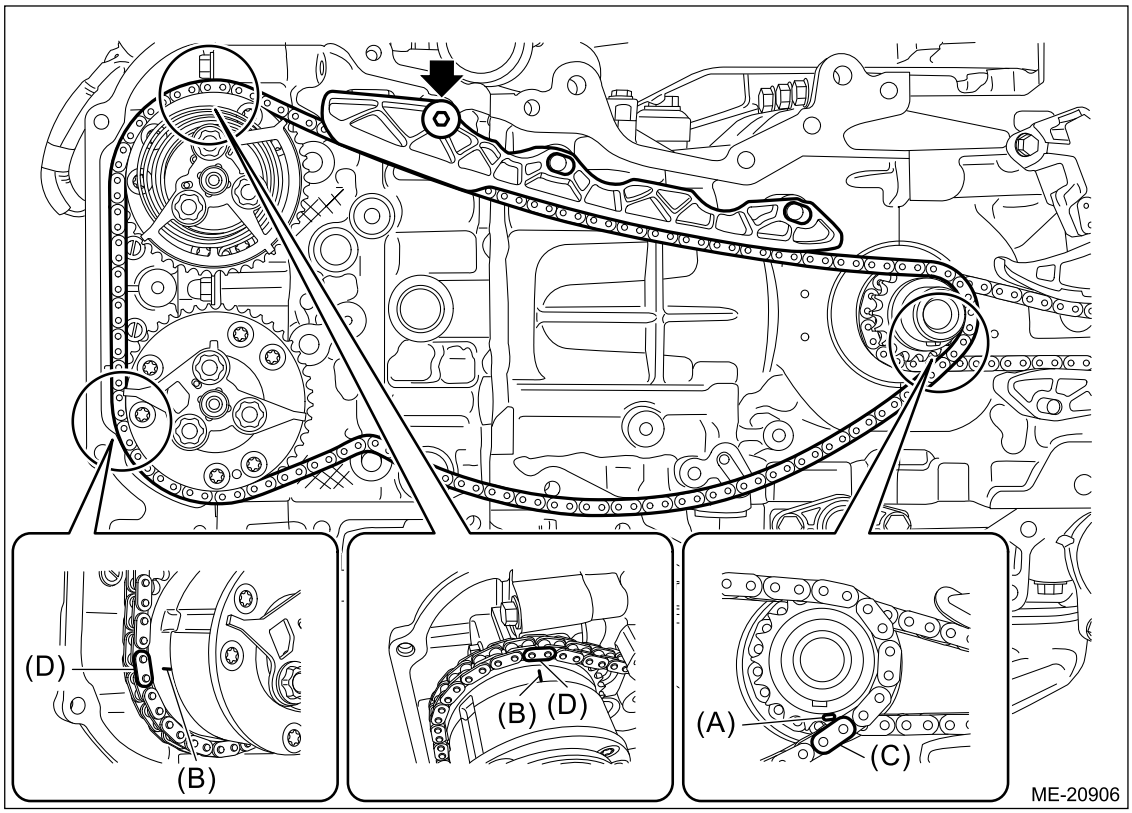
4. Align the alignment mark (protrusion) of the intake cam sprocket RH and the alignment mark (protrusion) of the exhaust cam sprocket RH to the positions as shown in the figure.

Caution:

To prevent valve damage, turn the intake cam sprocket RH and exhaust cam sprocket RH only within the range of zero-lift (in range where it can be turned lightly by hand).

5. Install the timing chain RH and the timing chain guide RH.

(1) Match the timing chain mark (deep blue) to the alignment mark of the crank sprocket.



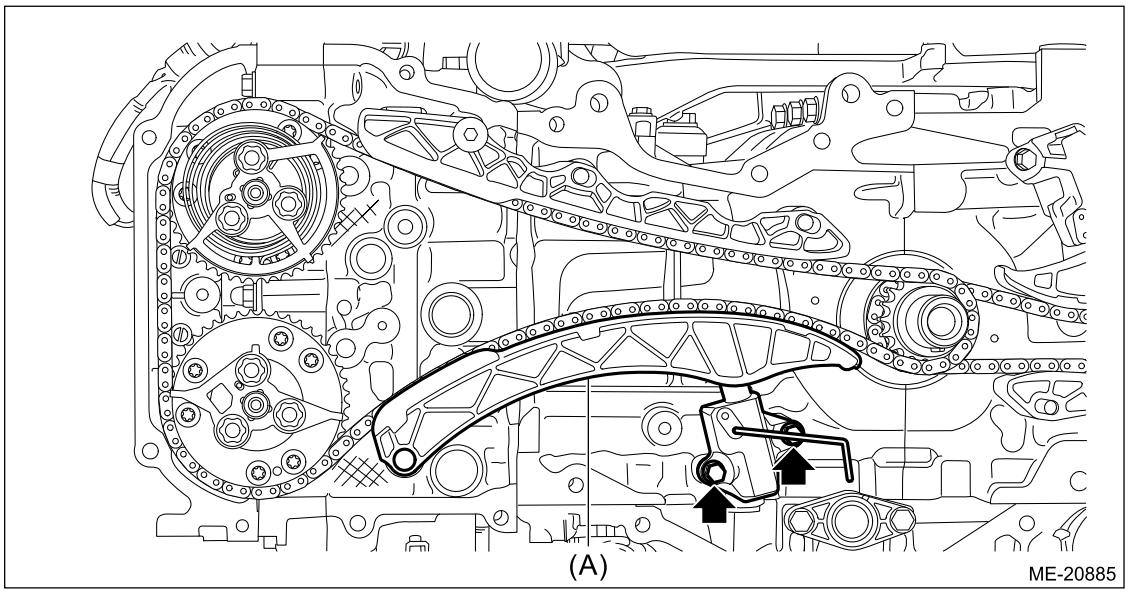
(2) Match the timing chain mark (yellow) to the timing mark position of the intake cam sprocket RH.

(3) Match the timing chain mark (yellow) to the timing mark position of the exhaust cam sprocket RH.

(4) Install the timing chain guide RH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



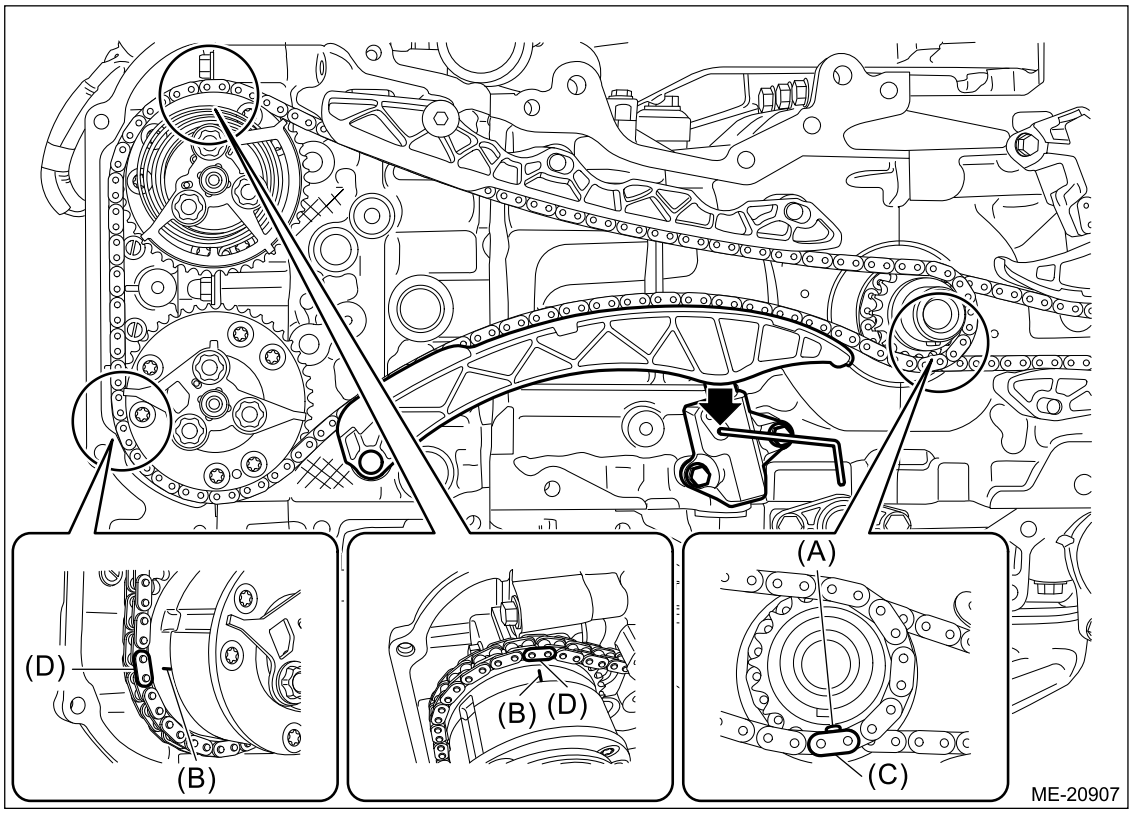
(A) Alignment mark (C) Deep blue (D) Yellow

(B) Timing mark

6. Install the chain tensioner lever RH (A) and chain tensioner RH.

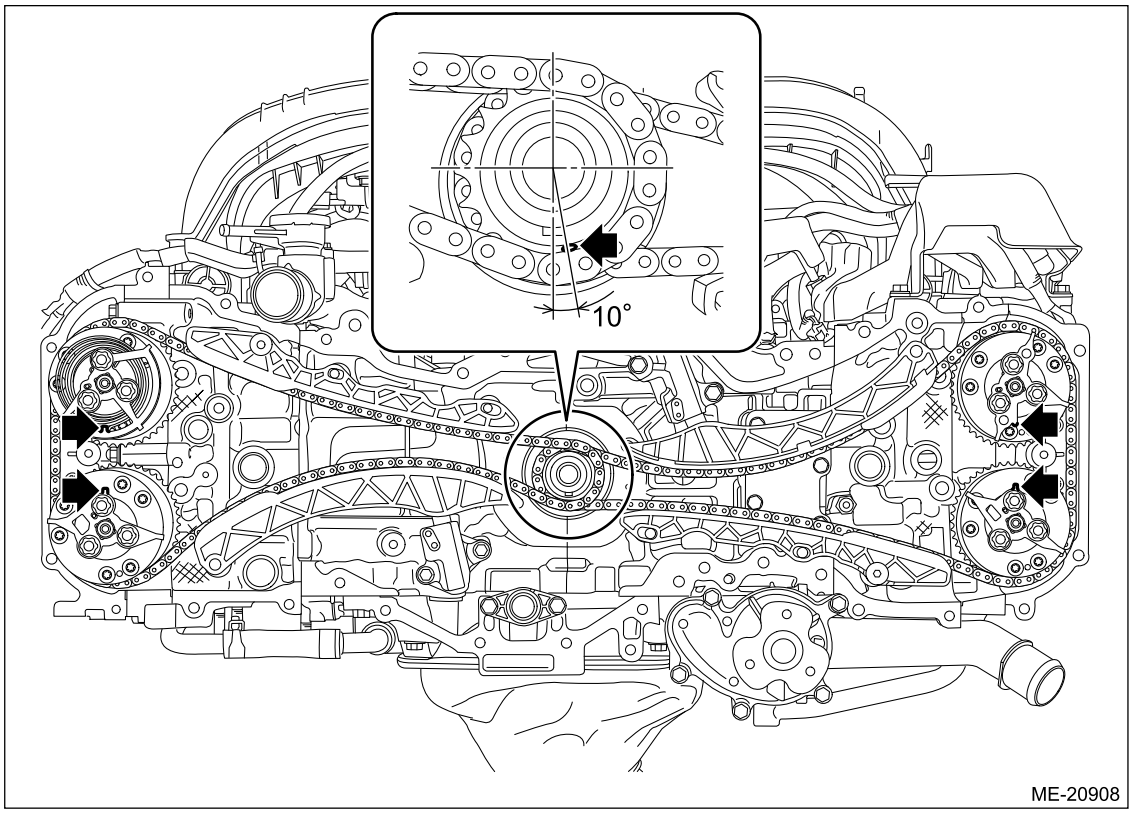
Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



7. Pull out the stopper pin from the chain tensioner RH.

Caution:



Confirm the following before pulling out the stopper pin.

- **Matching of the timing chain mark (deep blue) to the alignment mark of the crank sprocket.**
- **Matching of the timing chain mark (yellow) to the timing mark position of the intake cam sprocket RH.**
- **Matching of the timing chain mark (yellow) to the timing mark position of the exhaust cam sprocket RH.**

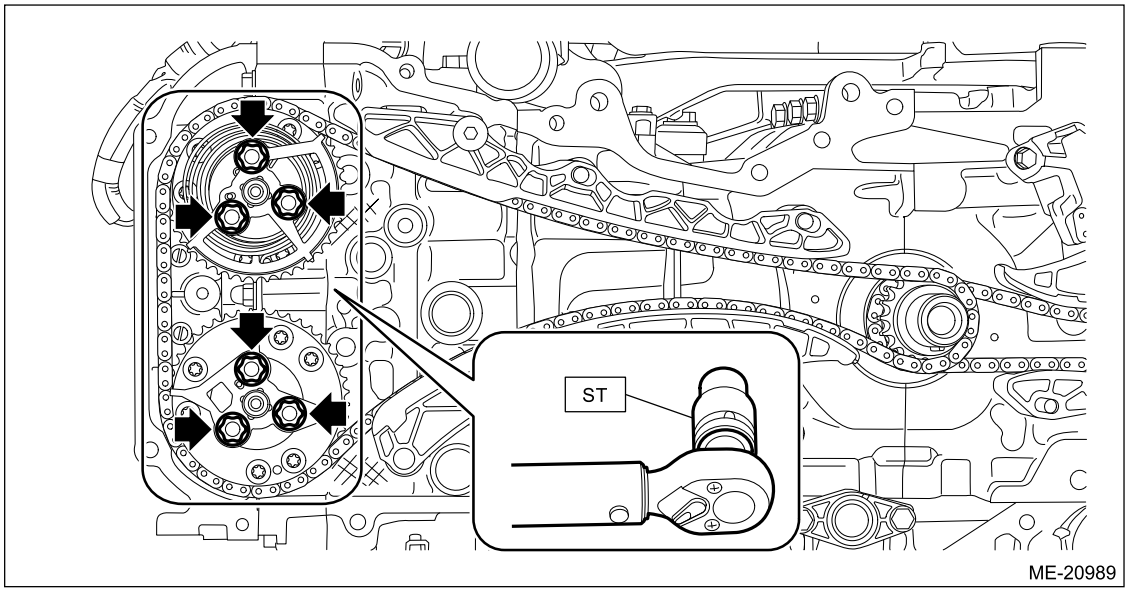
(A) Alignment mark
(B) Timing mark
(C) Deep blue
(D) Yellow

8. Make sure that the alignment mark of the cam sprocket and the alignment mark (protrusion) of the crank sprocket are aligned to the positions as shown in the figure.

9. When the cam sprocket RH has been removed, and the cam carrier RH has been disassembled

Note:

Follow also steps below when the exhaust cam sprocket RH has been removed, and the cam carrier RH has been disassembled.



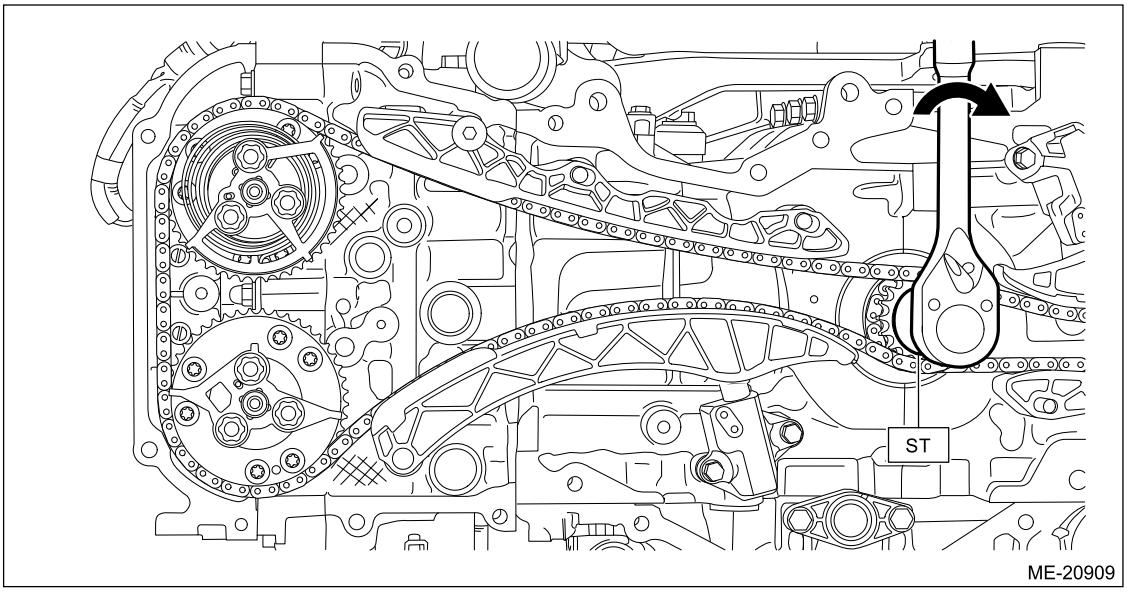
(1) Using the ST, tighten the bolts which hold the intake cam sprocket RH and exhaust cam sprocket RH.

Preparation tool:

ST: SOCKET (18270KA010)

Tightening torque:

18N·m (1.8 kgf-m, 13.3 ft-lb)



10. Using the ST, turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

Caution:

Always make sure to perform this confirmation.

Preparation tool:

ST: CRANKSHAFT SOCKET (18252AA000)

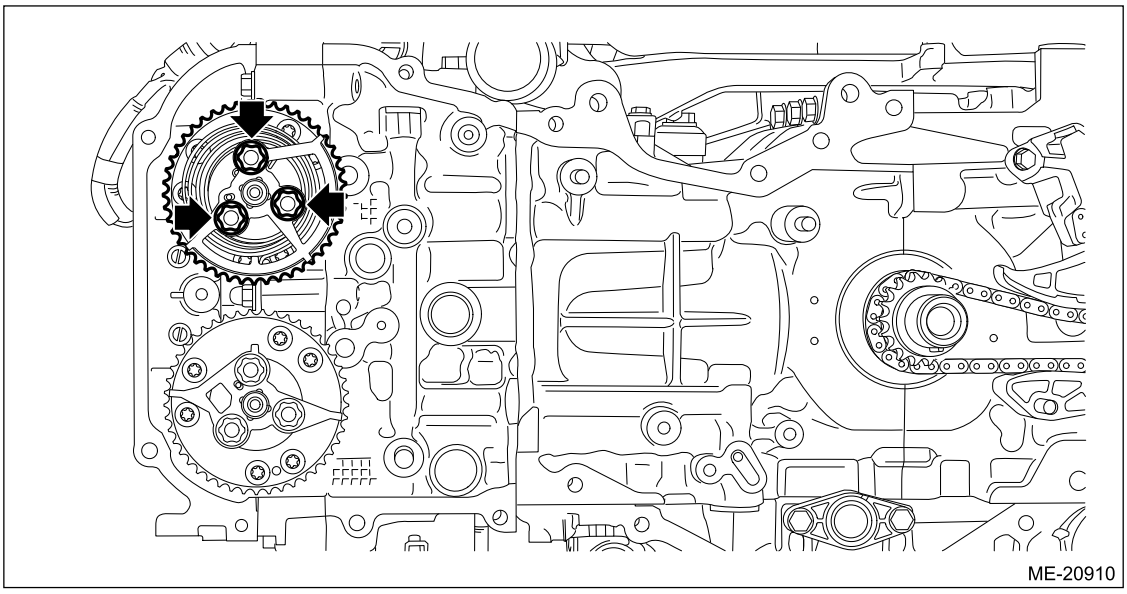
11. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

MECHANICAL(H4DO) > Timing Chain Assembly

INSPECTION

1. Check the timing chain, chain guide, chain tensioner lever and chain tensioner for deformation, cracks or other damages.
2. Check the chain guide and chain tensioner lever for abnormal wear.

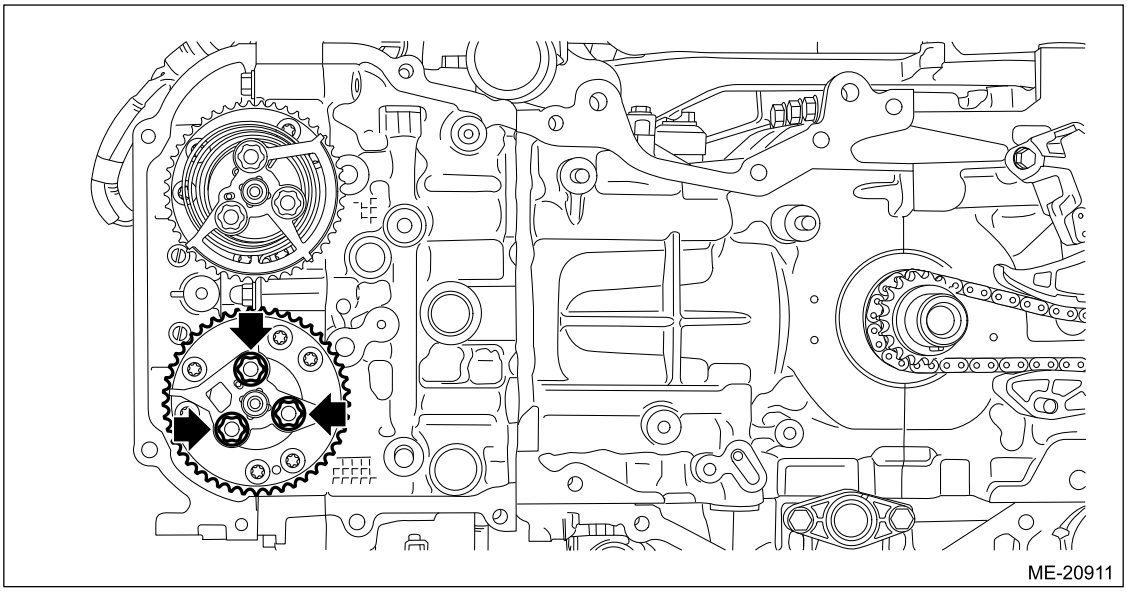
REMOVAL



1. CAM SPROCKET RH

Note:

When replacing a single part, perform the work with the engine assembly installed to body.

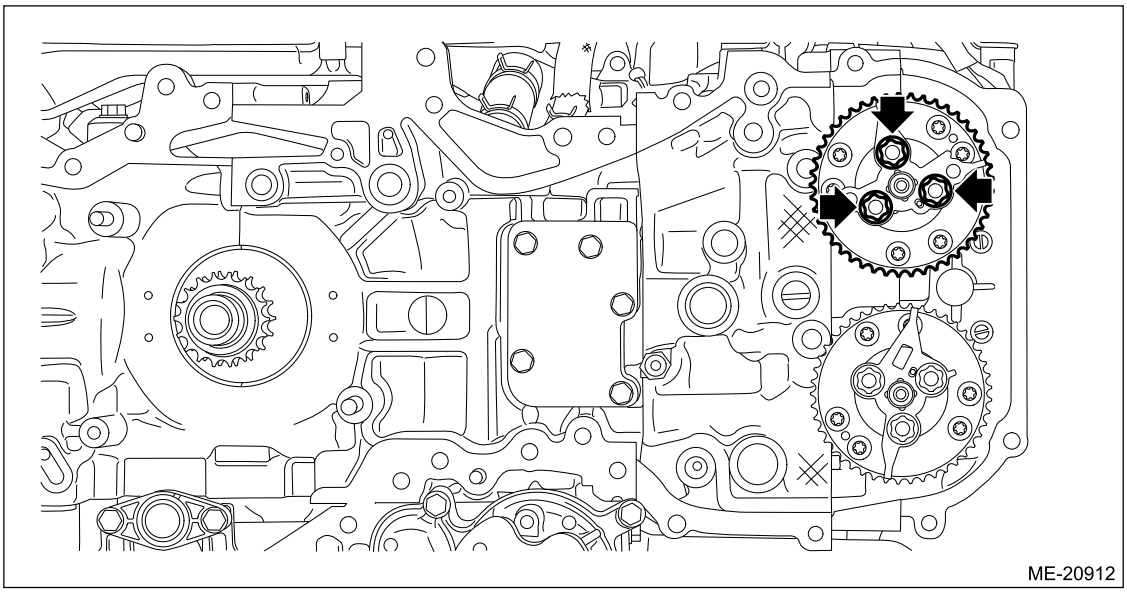


INTAKE CAM SPROCKET RH

1. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
2. Remove the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN RH.
3. Remove the intake cam sprocket RH.

EXHAUST CAM SPROCKET RH

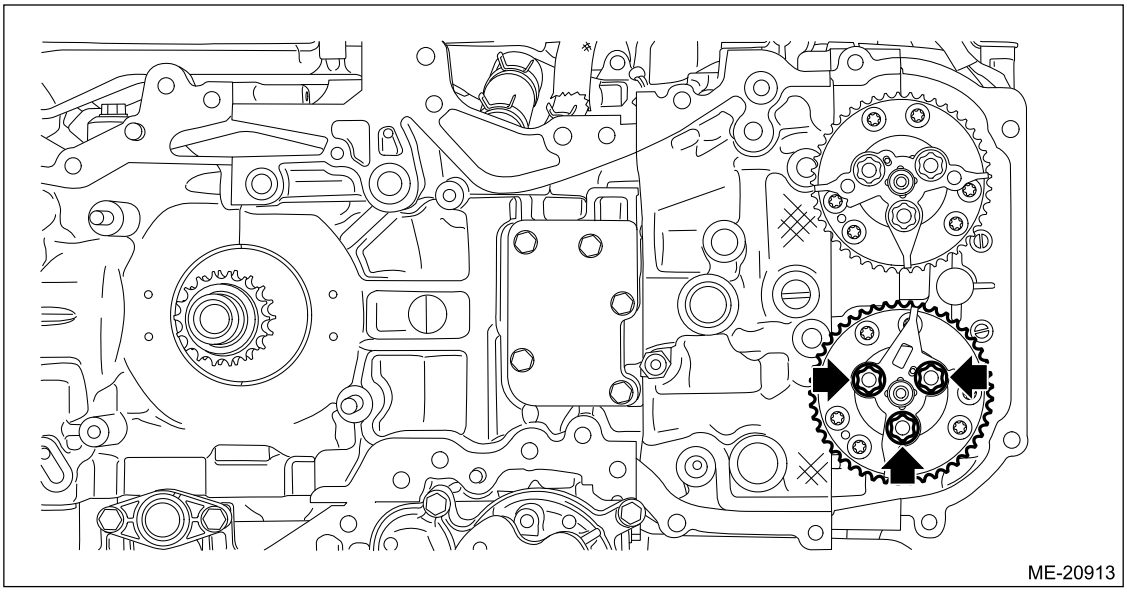
1. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
2. Remove the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN RH.
3. Remove the exhaust cam sprocket RH.



2. CAM SPROCKET LH

Note:

When replacing a single part, perform the work with the engine assembly installed to body.



INTAKE CAM SPROCKET LH

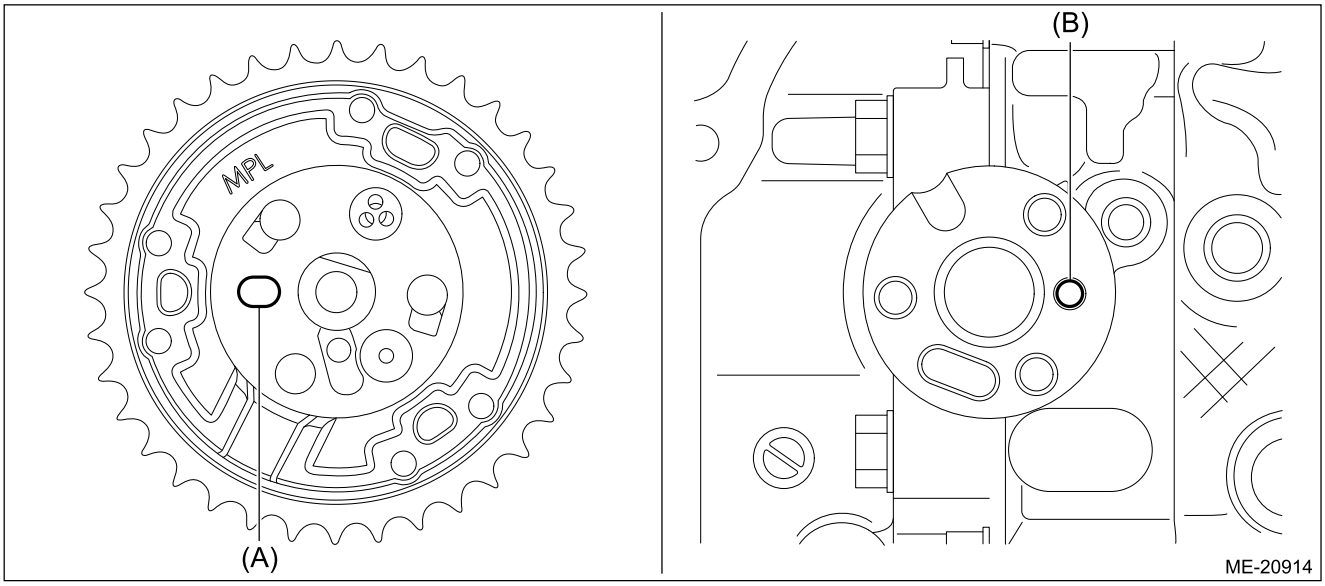
1. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
2. Remove the timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN LH.
3. Remove the intake cam sprocket LH.

EXHAUST CAM SPROCKET LH

1. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
2. Remove the timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN LH.
3. Remove the exhaust cam sprocket LH.

MECHANICAL(H4DO) > Cam Sprocket

INSTALLATION



1. CAM SPROCKET RH

INTAKE CAM SPROCKET RH

1. Install the intake cam sprocket RH by aligning the knock hole (A) of intake cam sprocket RH and the knock pin (B) of intake camshaft RH.

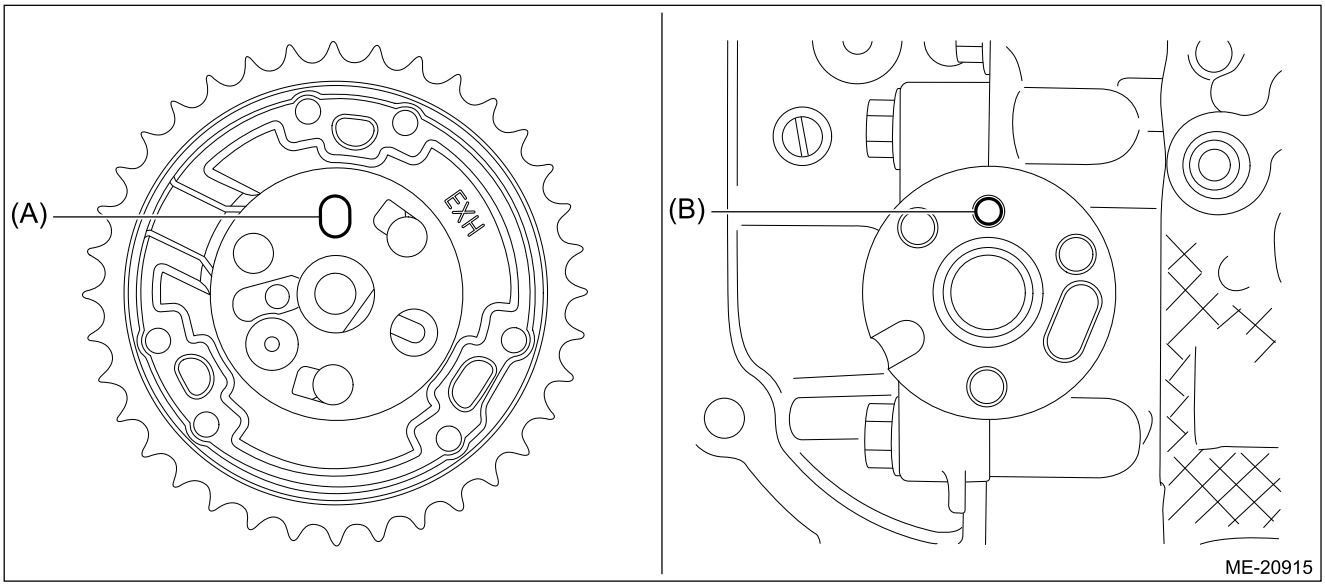
   Note:

   Before installation, check that there is no foreign matter on the intake cam sprocket RH and intake camshaft RH.

2. Tighten the bolts securing the intake cam sprocket RH by hand.

   Note:

   Tighten the bolts until the intake cam sprocket RH contacts the intake camshaft RH by hand.



3. Install the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION > TIMING CHAIN RH.
4. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

EXHAUST CAM SPROCKET RH

1. Install the exhaust cam sprocket RH by aligning the knock hole (A) of exhaust cam sprocket RH and the knock pin (B) of exhaust camshaft RH.

   Note:

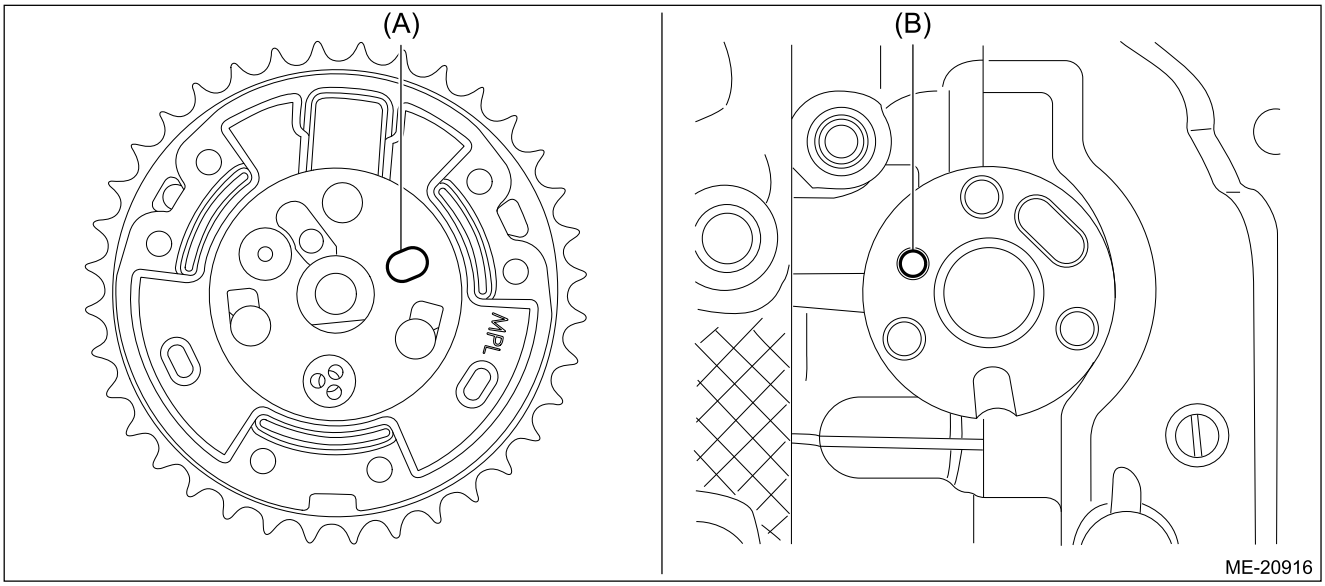
   Before installation, check that there is no foreign matter on the exhaust cam sprocket RH and exhaust camshaft RH.

2. Tighten the bolts securing the exhaust cam sprocket RH by hand.

Note:

Tighten the bolts until the exhaust cam sprocket RH contacts the exhaust camshaft RH by hand.

3. Install the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION > TIMING CHAIN RH.
4. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

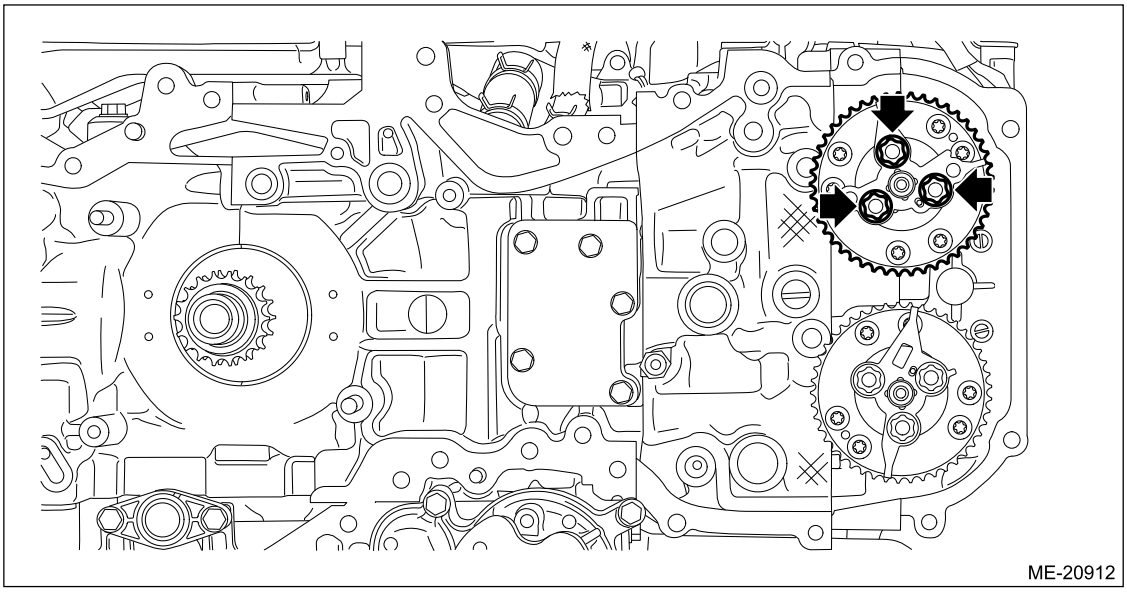


2. CAM SPROCKET LH

INTAKE CAM SPROCKET LH

1. Install the intake cam sprocket LH by aligning the knock hole (A) of intake cam sprocket LH and the knock pin (B) of intake camshaft LH.

Note:

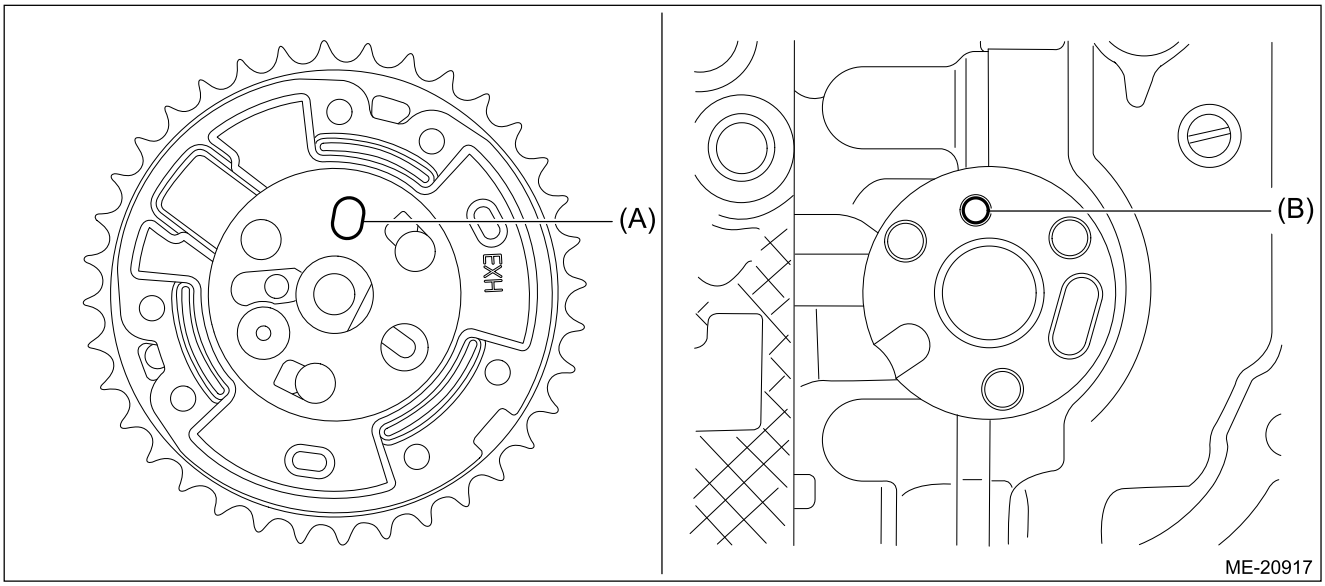


Before installation, check that there is no foreign matter on the intake cam sprocket LH and intake camshaft LH.

2. Tighten the bolts securing the intake cam sprocket LH by hand.

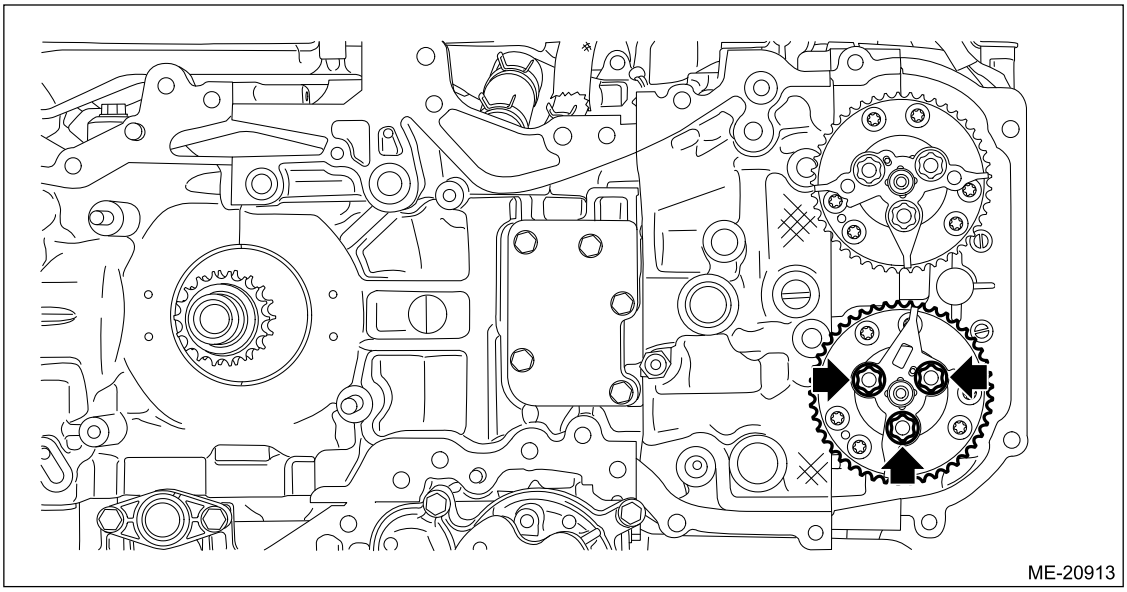
Note:

Tighten the bolts until the exhaust cam sprocket LH contacts the exhaust camshaft LH by hand.



3. Install timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION > TIMING CHAIN LH.
4. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

EXHAUST CAM SPROCKET LH



1. Install the exhaust cam sprocket LH by aligning the knock hole (A) of exhaust cam sprocket LH and the knock pin (B) of exhaust camshaft LH.

Note:

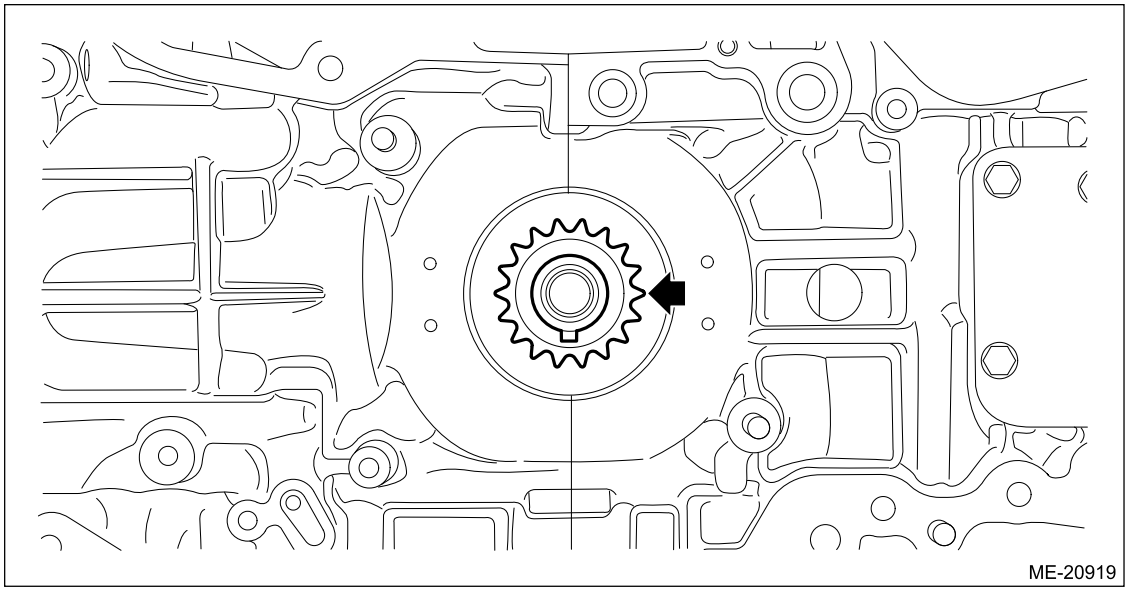
Before installation, check that there is no foreign matter on the exhaust cam sprocket LH and exhaust camshaft LH.

2. Tighten the bolts securing the exhaust cam sprocket LH by hand.
   Note:
   Tighten the bolts until the exhaust cam sprocket LH contacts the exhaust camshaft LH by hand.

3. Install timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION > TIMING CHAIN LH.
4. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

MECHANICAL(H4DO) > Cam Sprocket

INSPECTION



Check the cam sprocket teeth for abnormal wear and scratches.

MECHANICAL(H4DO) > Crank Sprocket

REMOVAL

Note:
When replacing a single part, perform the work with the engine assembly installed to body.

1. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
2. Remove the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL.
3. Remove the crank sprocket.

MECHANICAL(H4DO) > Crank Sprocket

INSTALLATION

1. Install the crank sprocket.
   Note:
   The direction of installation is not specified for the crank sprocket.
2. Install the timing chain. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION.
3. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

MECHANICAL(H4DO) > Crank Sprocket

INSPECTION

1. Check the crank sprocket teeth for abnormal wear and scratches.
2. Make sure there is no free play between crank sprocket and key.

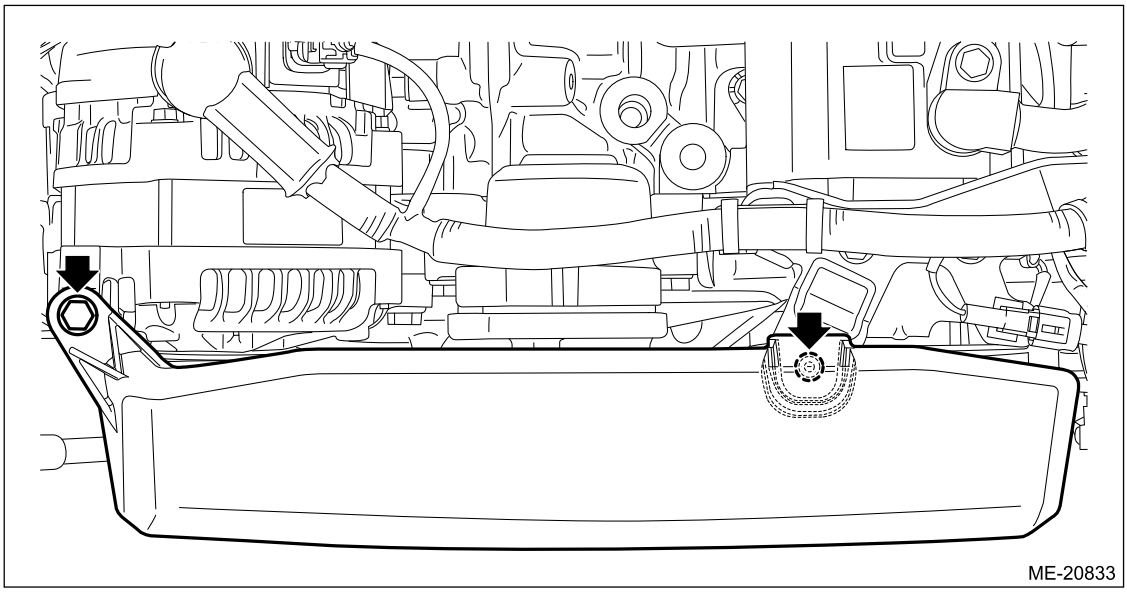
REMOVAL

1. ROCKER COVER RH

Note:

When replacing a single part, perform the work with the engine assembly installed to body.

1. When working on the vehicle

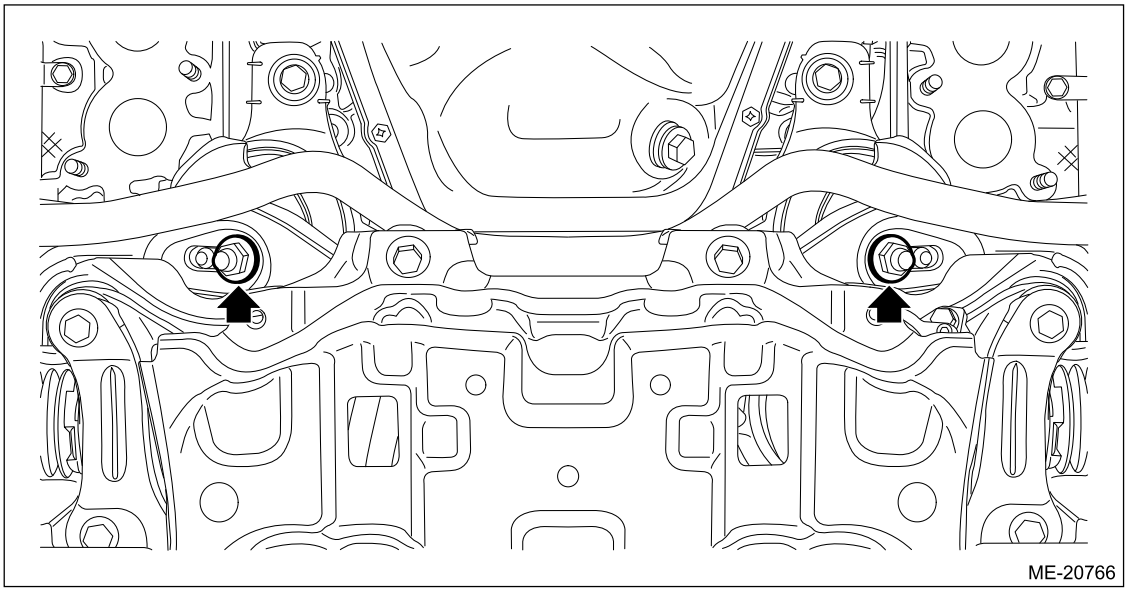


Note:

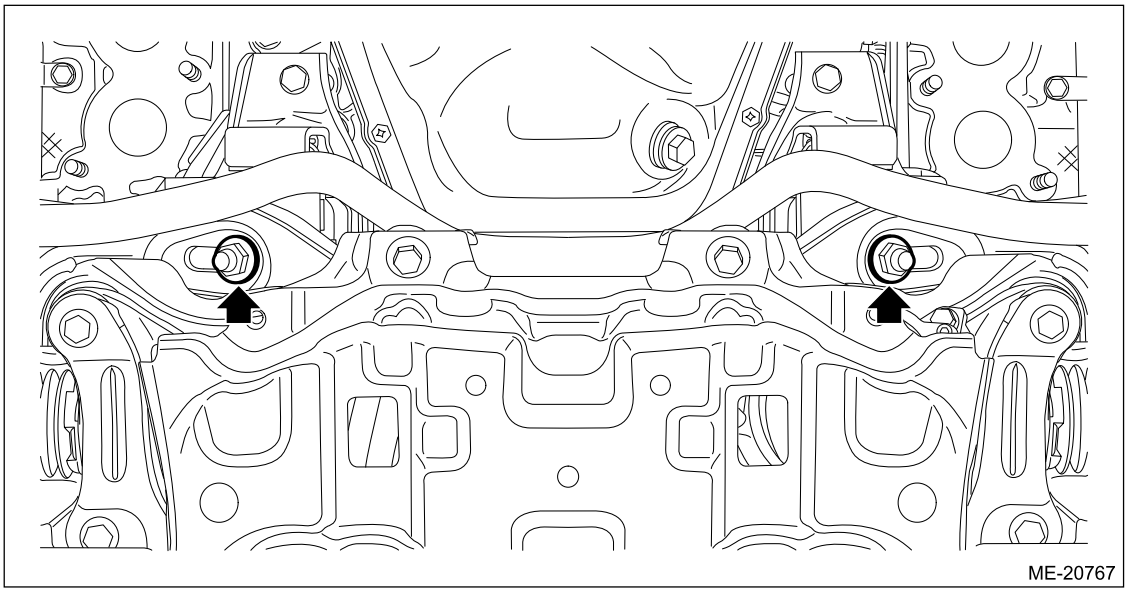
When working on the vehicle, perform the following steps also.

(1) Remove the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>DISASSEMBLY.

(2) Fully open the front hood. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.



(3) Remove the V-belt covers.



(4) Remove the air cleaner case. Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner Case>REMOVAL.

(5) Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.

(6) Remove the nuts which secure the engine mounting to the crossmember. (CVT model)

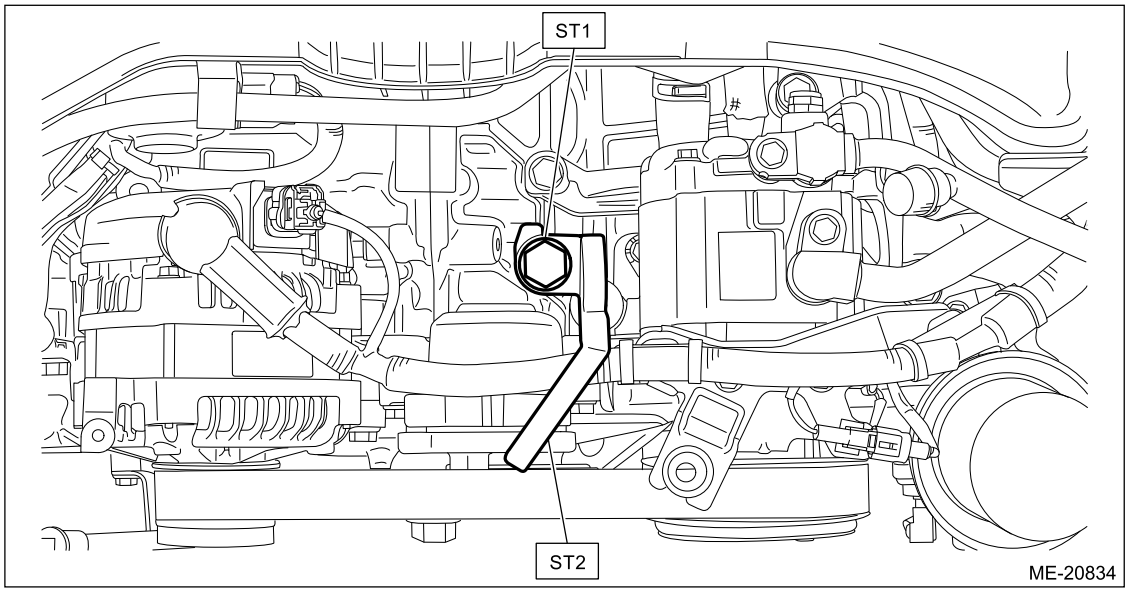
(7) Remove the nuts which secure the engine mounting to the crossmember. (MT model)

(8) Lower the vehicle.

(9) Remove the pitching stopper. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Mounting System>REMOVAL > PITCHING STOPPER.

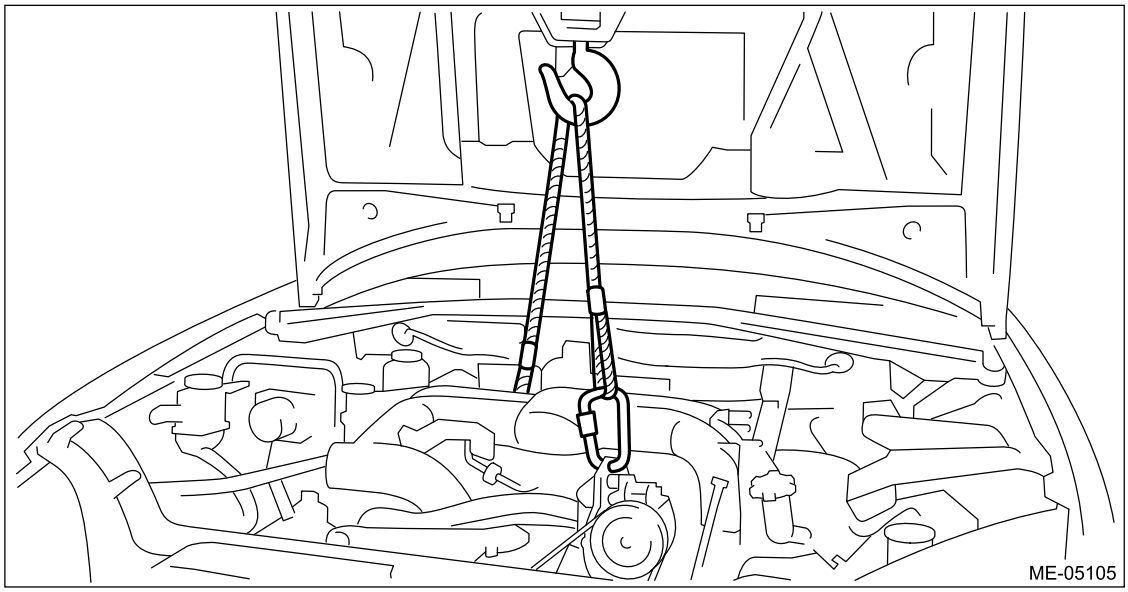
(10) Remove the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>REMOVAL > PITCHING STOPPER.

(11) Using the ST1, install the ST2 to the engine unit.



Preparation tool:

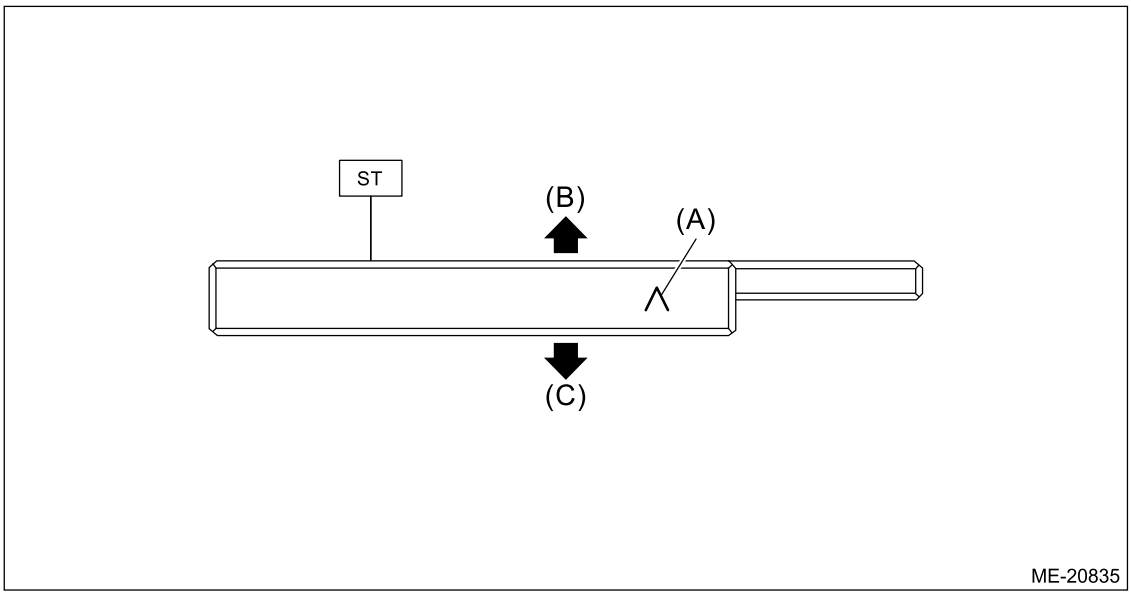
ST1: BOLT (18363AA050)



ST2: HANGER (18360AA040)

Tightening torque:

43 N·m (4.4 kgf-m, 31.7 ft-lb)

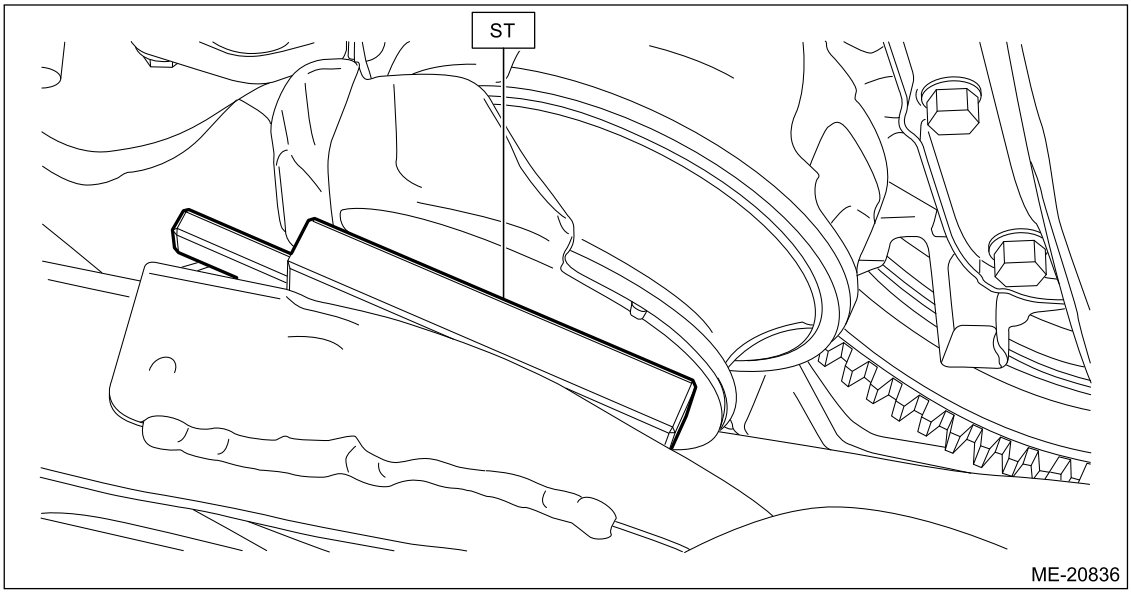


(12) Support the engine with a lifting device and wire ropes.

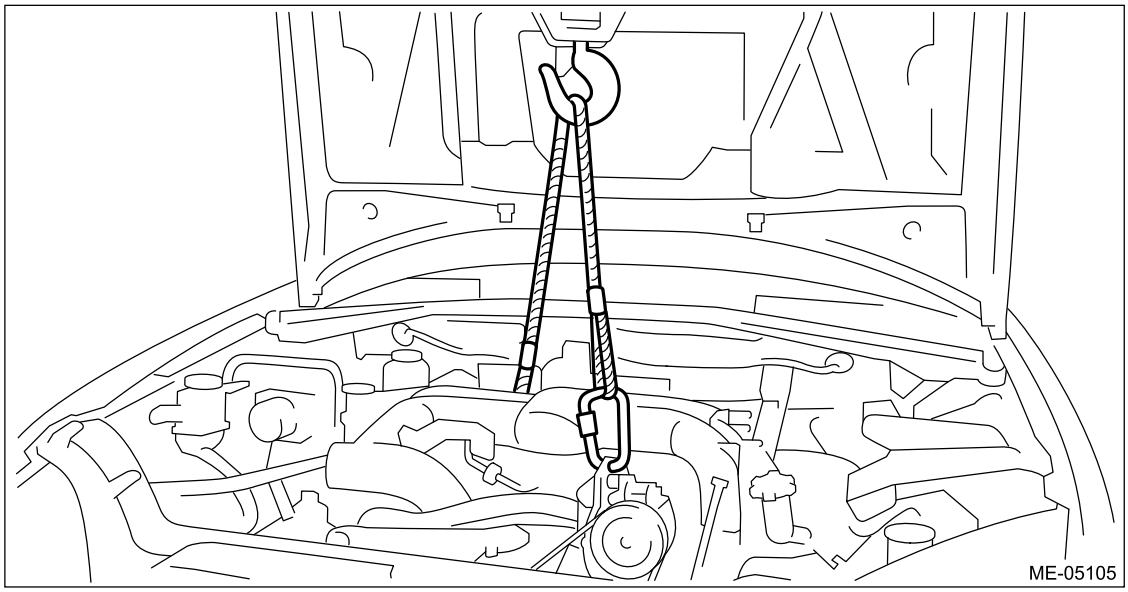
(13) While gradually lifting up the engine, set the ST between the engine mount RH and crossmember, and then slowly lower the engine.

Caution:

- **When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.**
- **To avoid damaging the ST, be sure to set the ST as shown in the figure.**

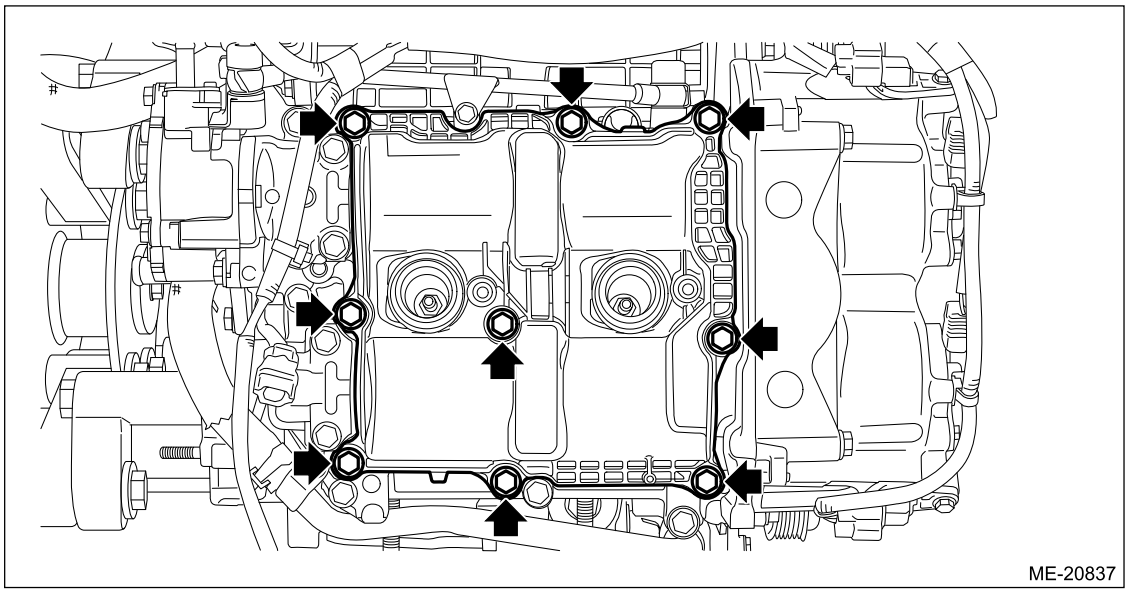


(A) Direction mark (B) Engine mounting side (C) Crossmember side



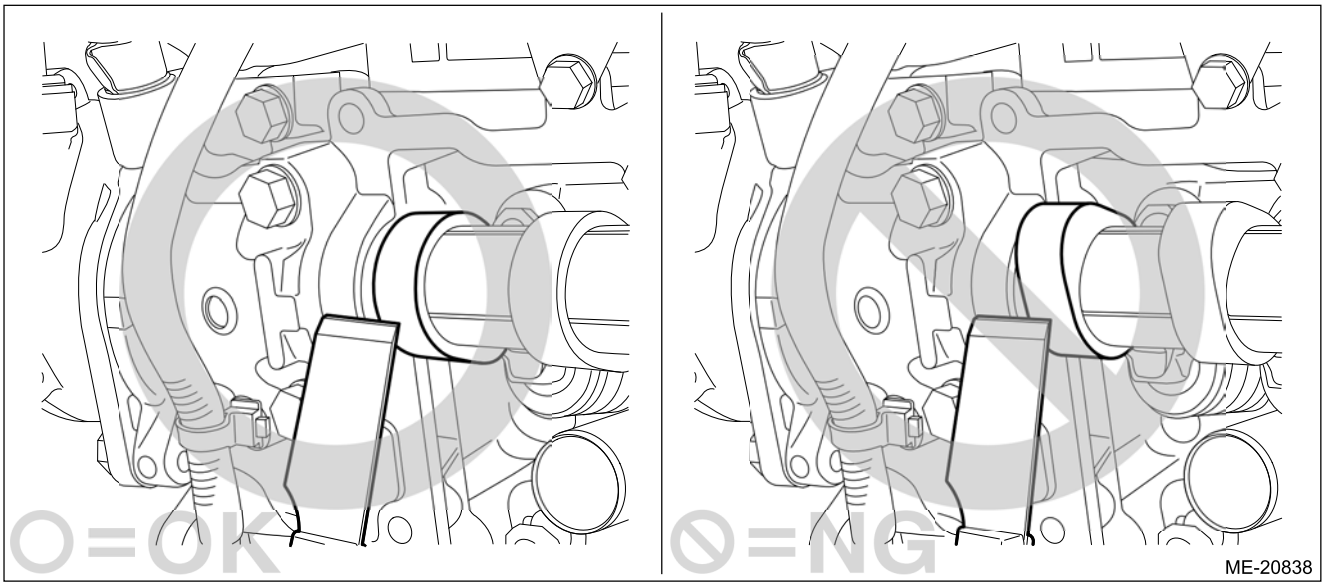
- **After lowering the engine, rock the engine to check that the ST does not come off.**

Preparation tool:

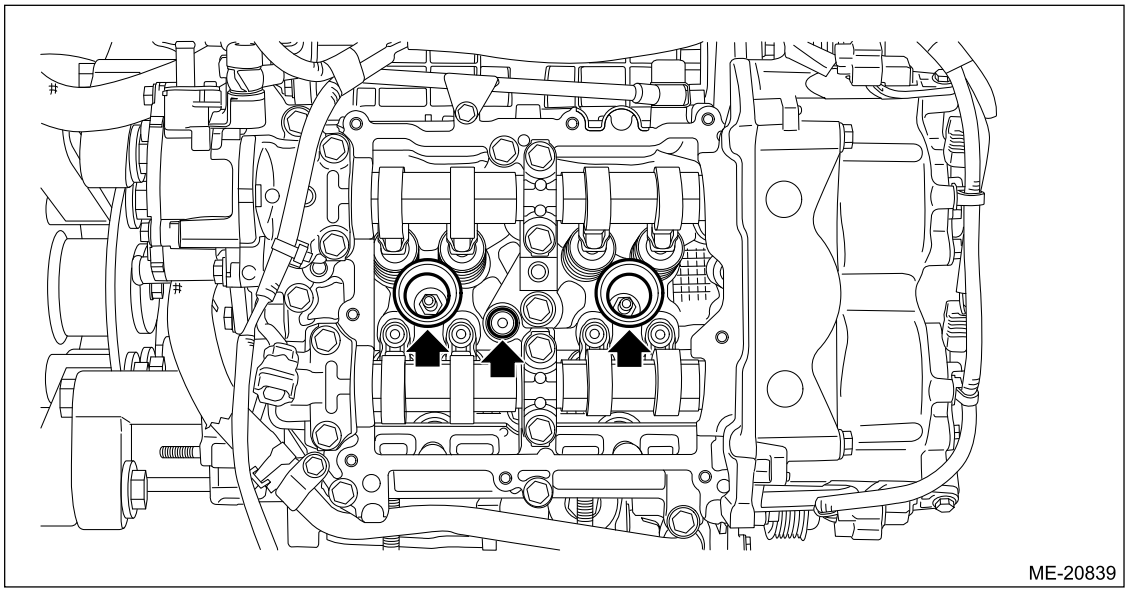


ST: STAND ASSY (18632AA030)

(14) Remove the lifting device and wire ropes.



2. Remove the #1 ignition coil and the #3 ignition coil. Ref. to IGNITION(H4DO)>Ignition Coil>REMOVAL.
3. Remove the rocker cover RH.



4. Remove the rocker cover gasket (ring type) and the spark plug pipe gasket, and remove the liquid gasket.

Caution:

- **When removing the liquid gasket from engine unit using scraper, use special care not to damage the cam lobe of camshaft RH.**
- **If the cam lobe of camshaft RH interferes, turn the crankshaft to the position where the scraper does not touch.**

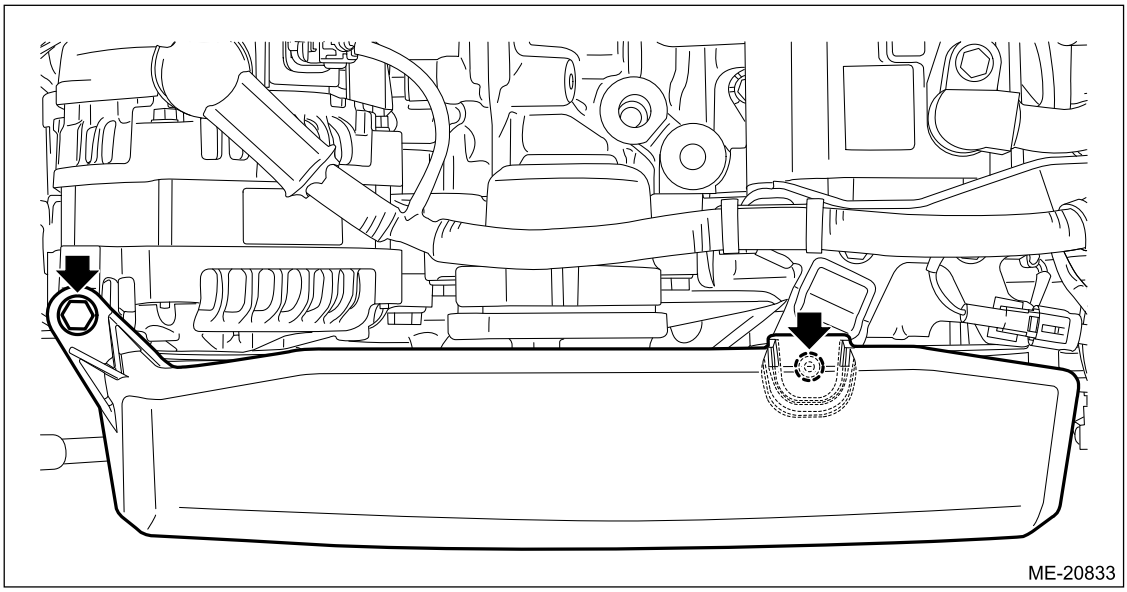
5. Remove the rocker cover gasket RH from the rocker cover RH, and remove the liquid gasket.

2. ROCKER COVER LH

Note:

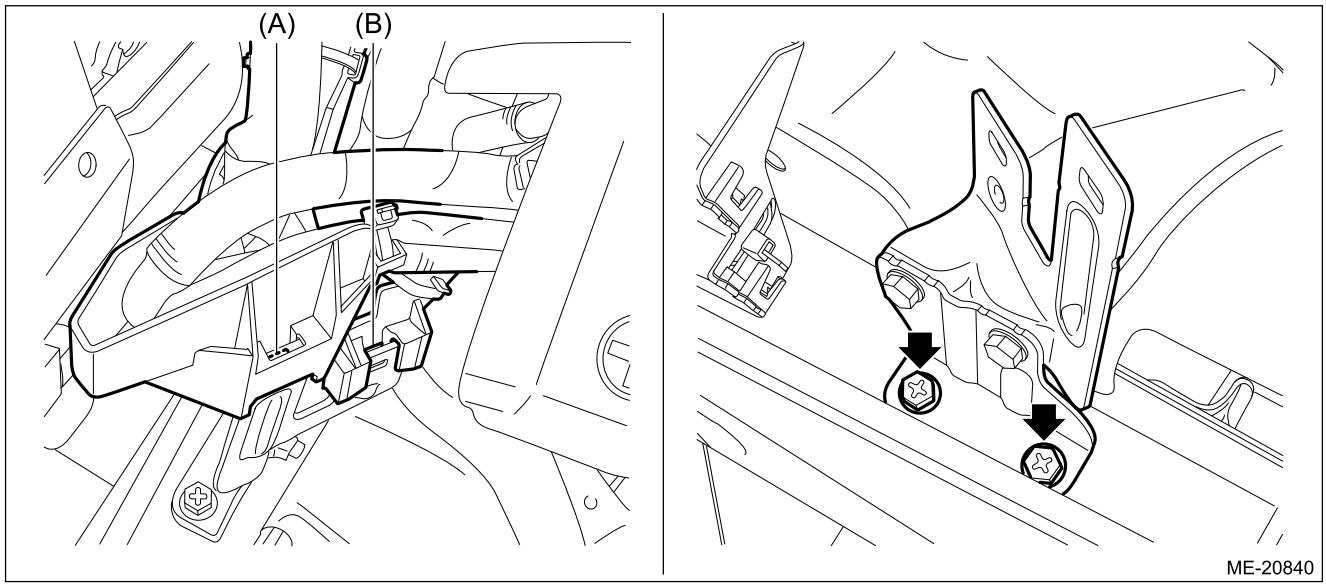
When replacing a single part, perform the work with the engine assembly installed to body.

1. When working on the vehicle



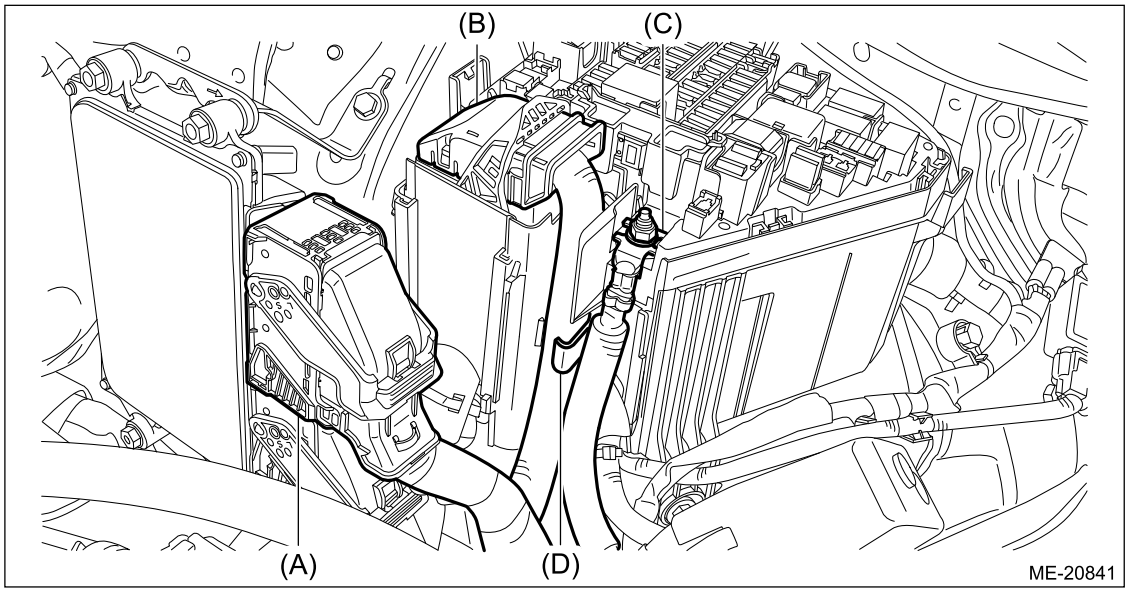
Note:

When working on the vehicle, perform the following steps also.

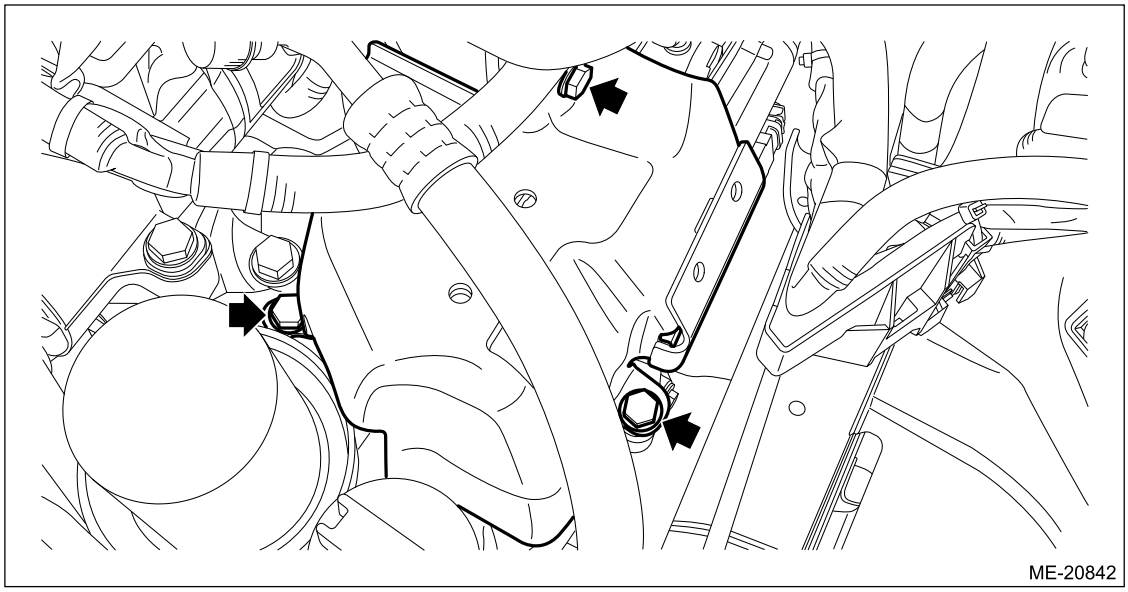


(1) Remove the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>DISASSEMBLY.

(2) Fully open the front hood. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.

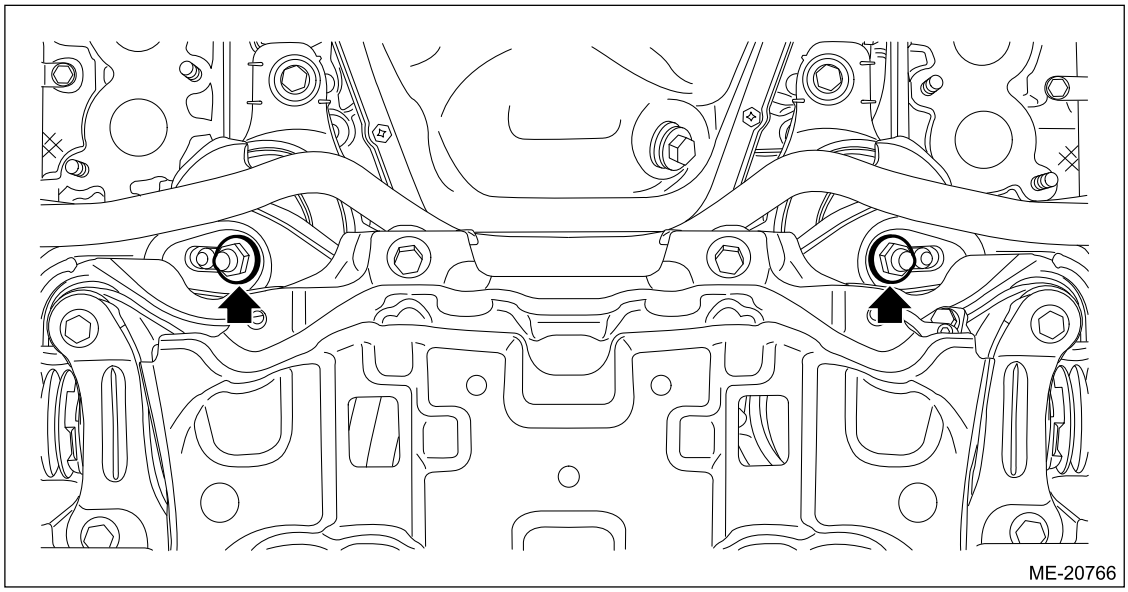


(3) Remove the V-belt covers.

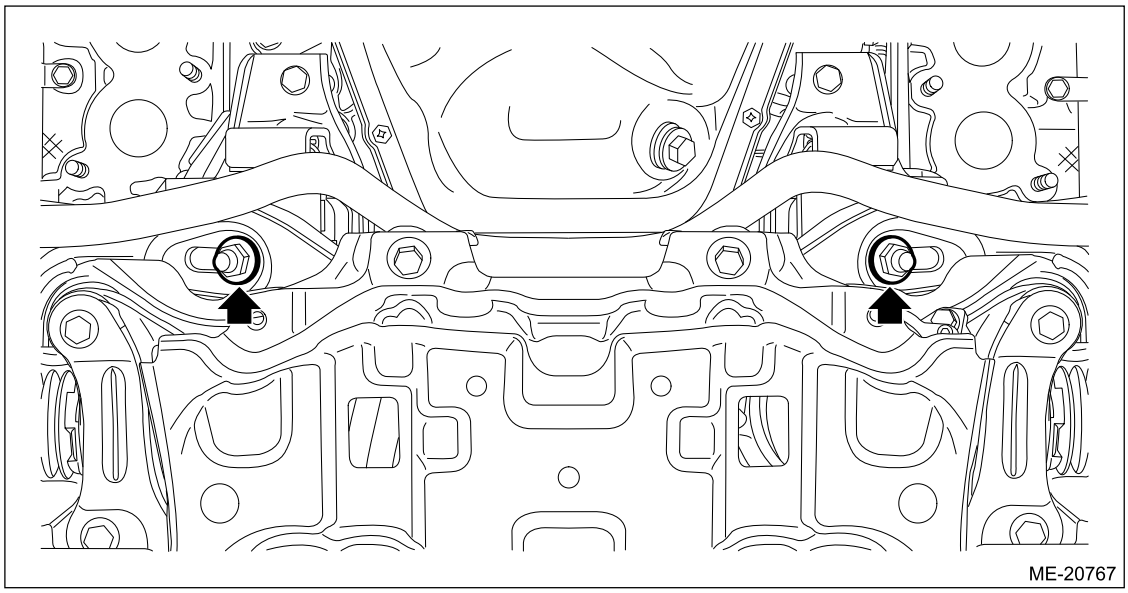


(4) Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
(5) Remove the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>REMOVAL.
(6) Disengage the claw (A) which holds the battery cable to the bracket, and disengage the claw (B) which holds the engine wiring harness.
(7) Remove the bracket from the vehicle.

(8) Disconnect connector (A) from ECM.
(9) Disconnect connector (B) and terminal (C) from the main fuse box.
(10) Remove the engine wiring harness from the clip (D), place it aside so that it does not interfere with work.



(11) Remove the fuel pipe protector from the high-pressure fuel pump case and intake manifold assembly.



(12) Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.

(13) Remove the nuts which secure the engine mounting to the crossmember. (CVT model)

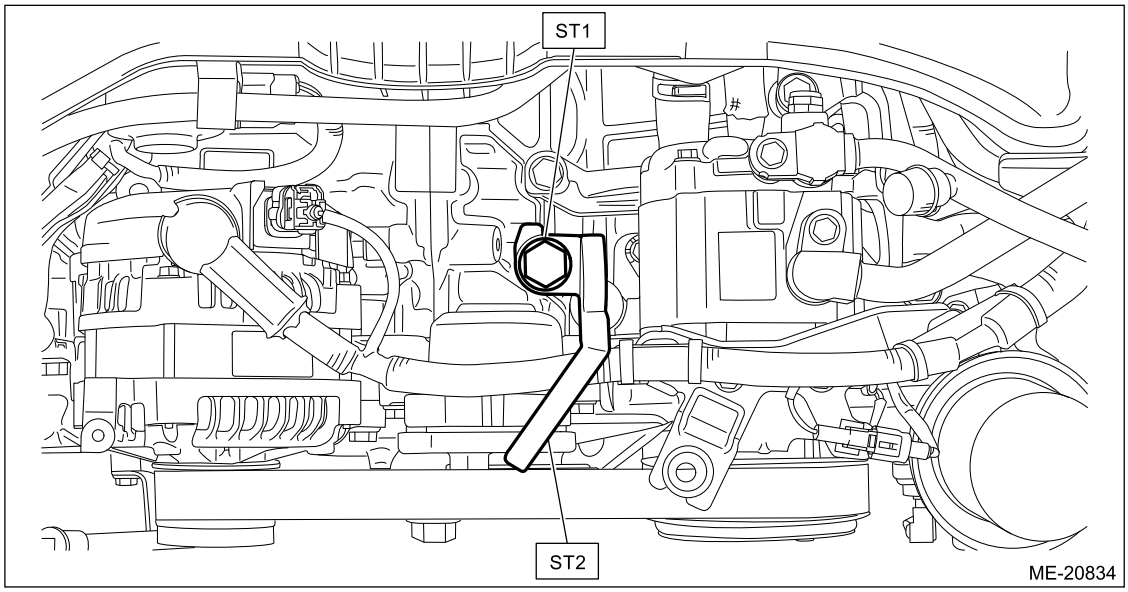
(14) Remove the nuts which secure the engine mounting to the crossmember. (MT model)

(15) Lower the vehicle.

(16) Remove the pitching stopper. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Mounting System>REMOVAL > PITCHING STOPPER.

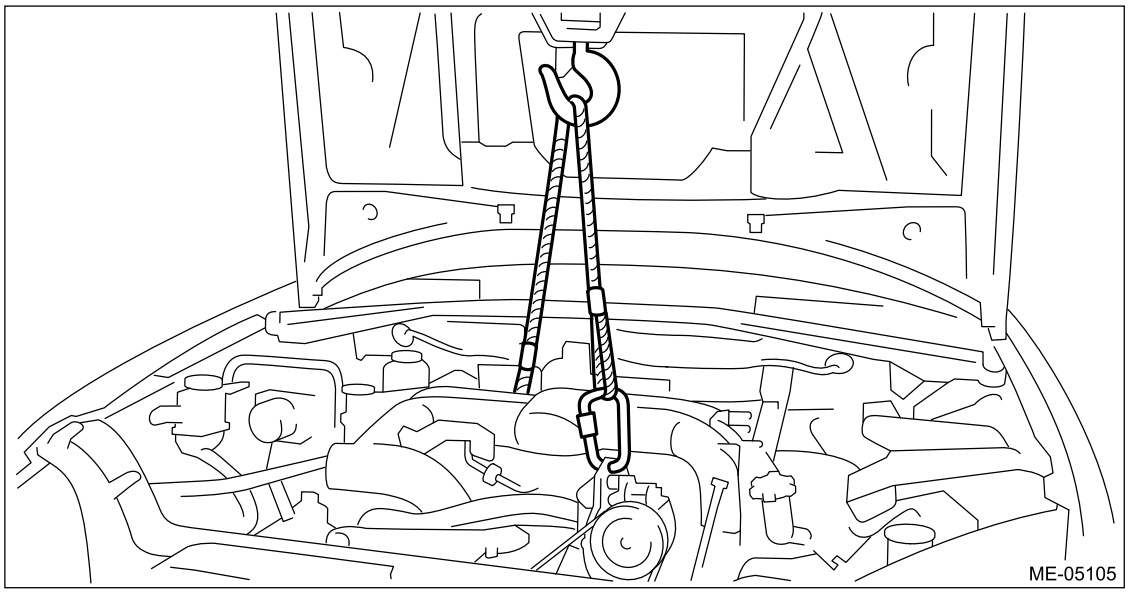
(17) Remove the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>REMOVAL > PITCHING STOPPER.

(18) Using the ST1, install the ST2 to the engine unit.



Preparation tool:

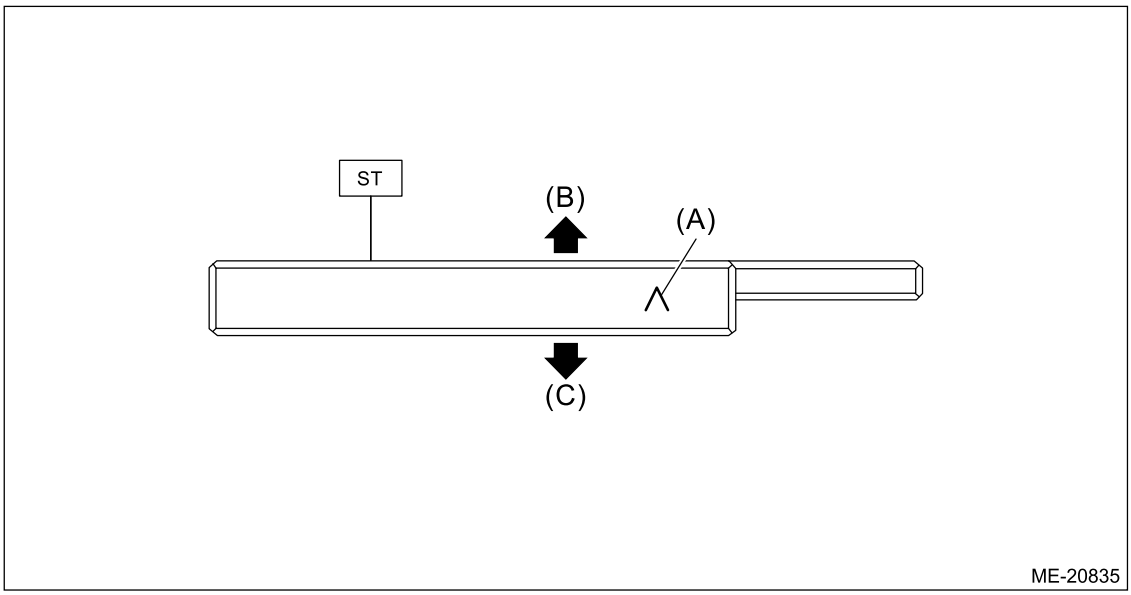
ST1: BOLT (18363AA050)



ST2: HANGER (18360AA040)

Tightening torque:

43 N·m (4.4 kgf-m, 31.7 ft-lb)

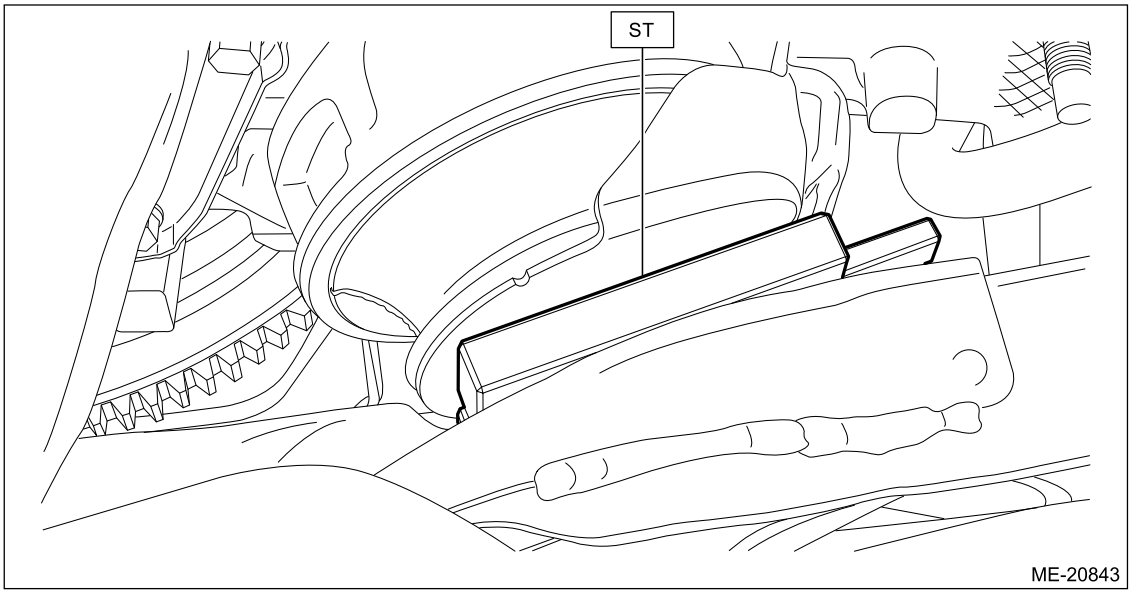


(19) Support the engine with a lifting device and wire ropes.

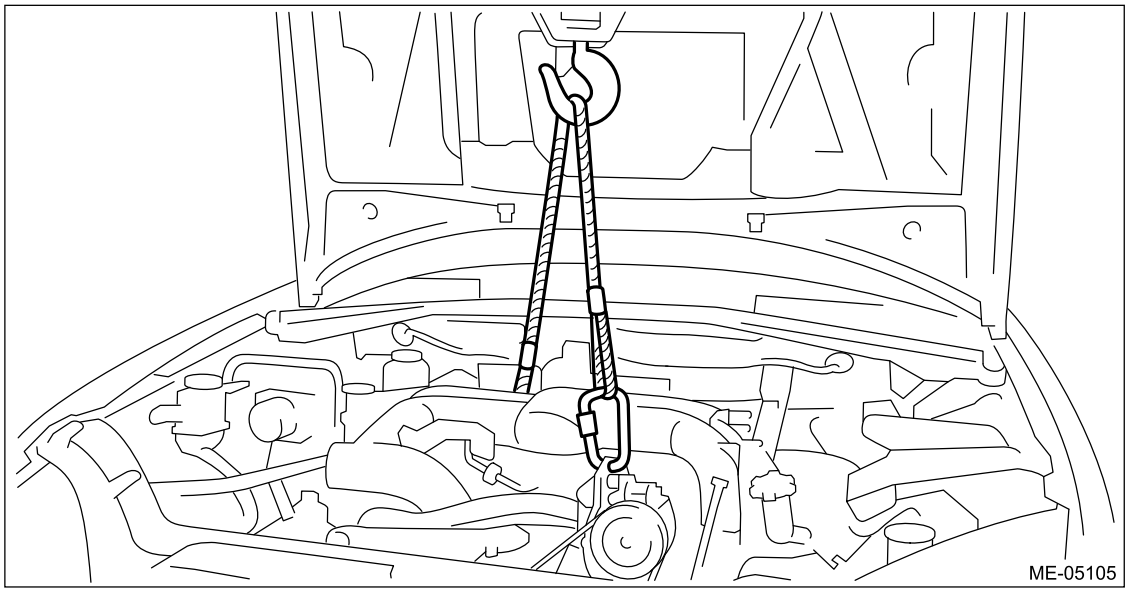
(20) While gradually lifting up the engine, set the ST between the engine mount LH and crossmember, and then slowly lower the engine.

Caution:

- **When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.**
- **To avoid damaging the ST, be sure to set the ST as shown in the figure.**

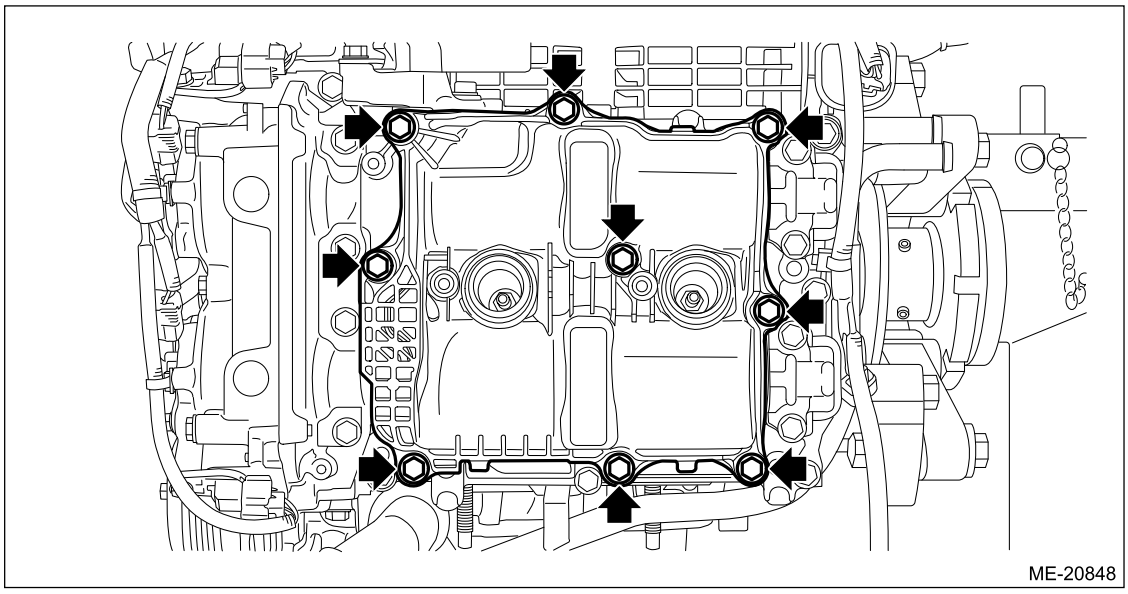


(A) Direction mark (B) Engine mounting side (C) Crossmember side



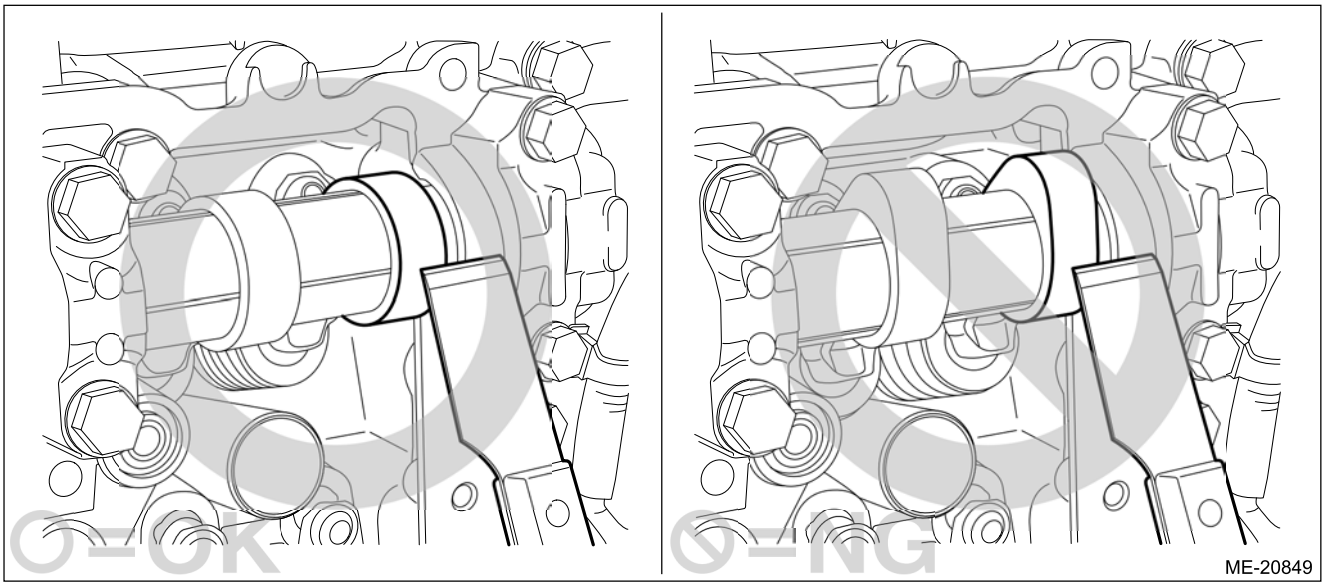
- **After lowering the engine, rock the engine to check that the ST does not come off.**

Preparation tool:

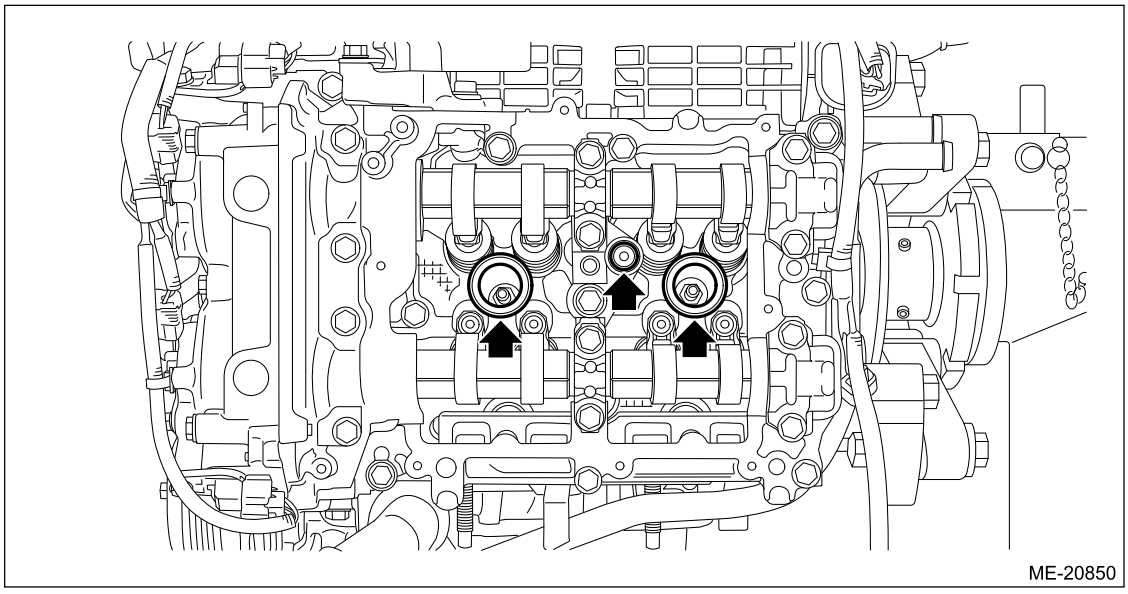


ST: STAND ASSY (18632AA030)

(21) Remove the lifting device and wire ropes.



2. Remove the #2 ignition coil and the #4 ignition coil. Ref. to IGNITION(H4DO)>Ignition Coil>REMOVAL.
3. Remove the rocker cover LH.



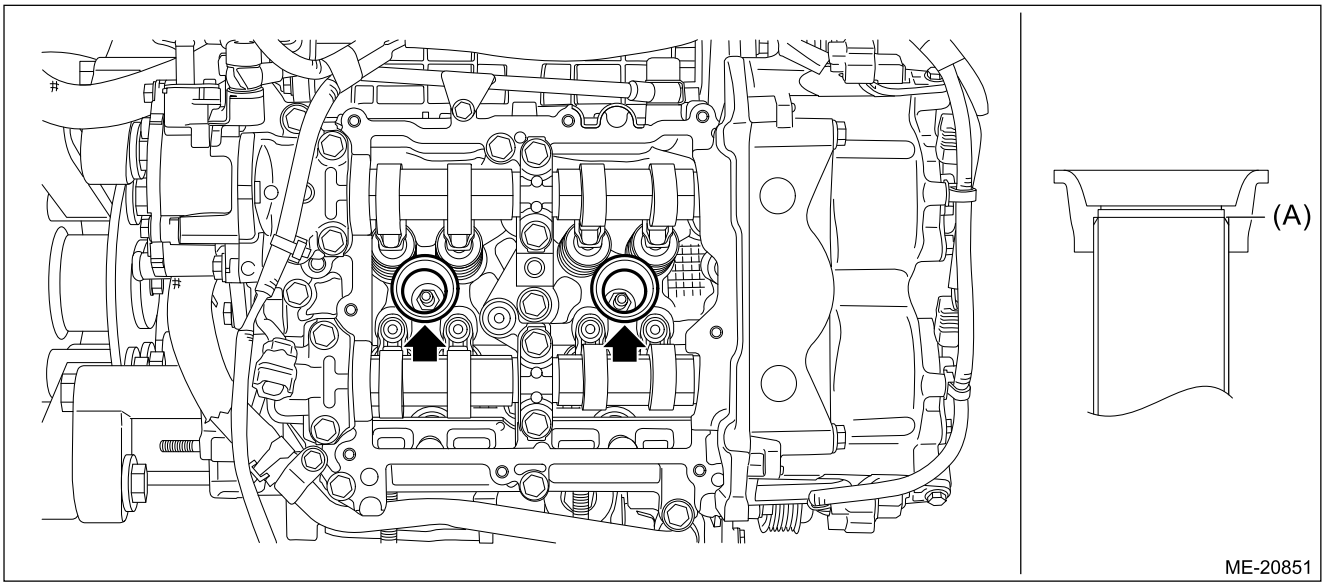
4. Remove the rocker cover gasket (ring type) and the spark plug pipe gasket, and remove the liquid gasket.

Caution:

- **When removing the liquid gasket from engine unit using scraper, use special care not to damage the cam lobe of camshaft LH.**
- **If the cam lobe of camshaft LH interferes, turn the crankshaft to the position where the scraper does not touch.**

5. Remove the rocker cover gasket LH from the rocker cover LH, and remove the liquid gasket.

MECHANICAL(H4DO) > Rocker Cover

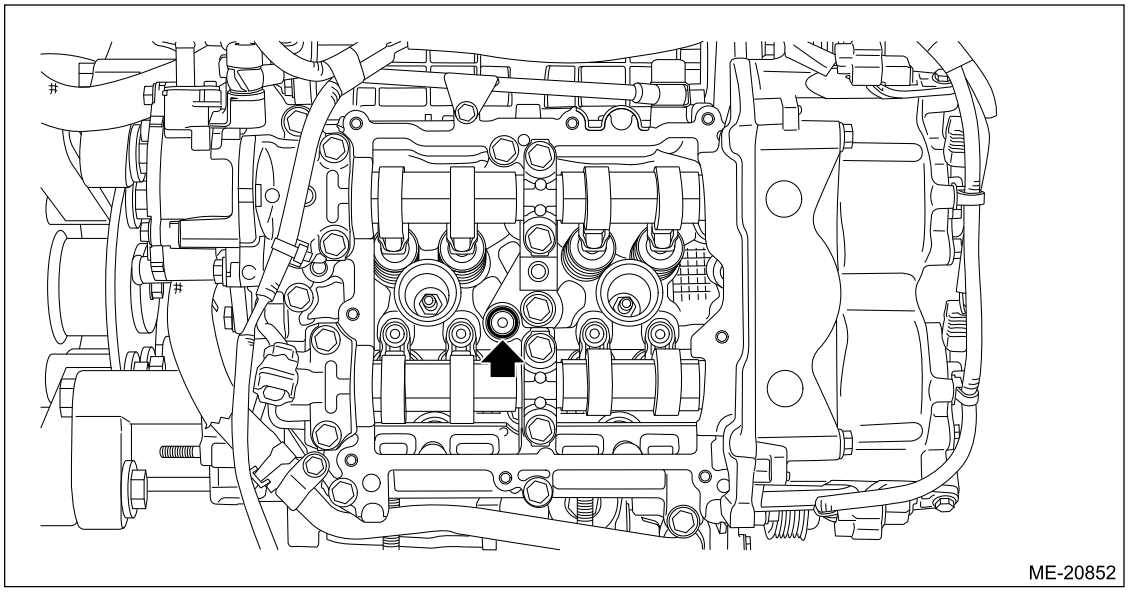


INSTALLATION

1. ROCKER COVER RH

1. Install new spark plug pipe gaskets to #1 spark plug pipe and #3 spark plug pipe.

Note:



Apply a light coat of engine oil to the spark plug pipe gaskets, and insert them onto the spark plug pipe edge (A).

2. Install new rocker cover gasket (ring type) to the cam carrier RH.

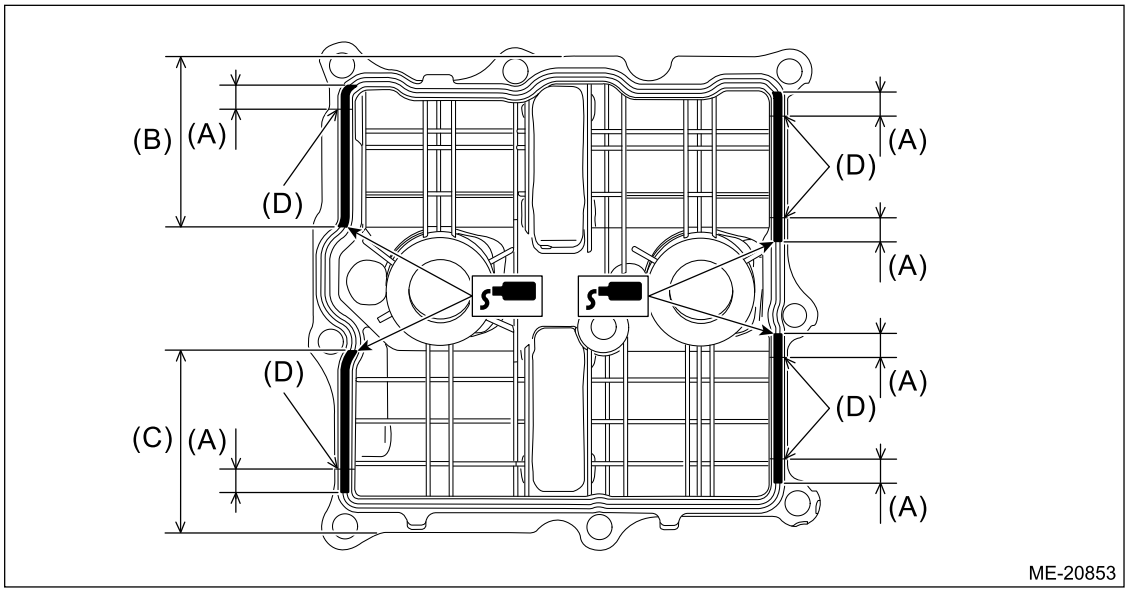
Note:

If this work is performed on the vehicle, apply a light coat of Vaseline to the rocker cover gasket (ring type) to prevent it from falling off.

3. Install new rocker cover gasket RH to the rocker cover RH.

4. Apply liquid gasket to the mating surface of rocker cover RH as shown in the figure.

Note:



- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine.**
- **Be careful not to allow liquid gasket to be squeezed out from rocker cover RH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

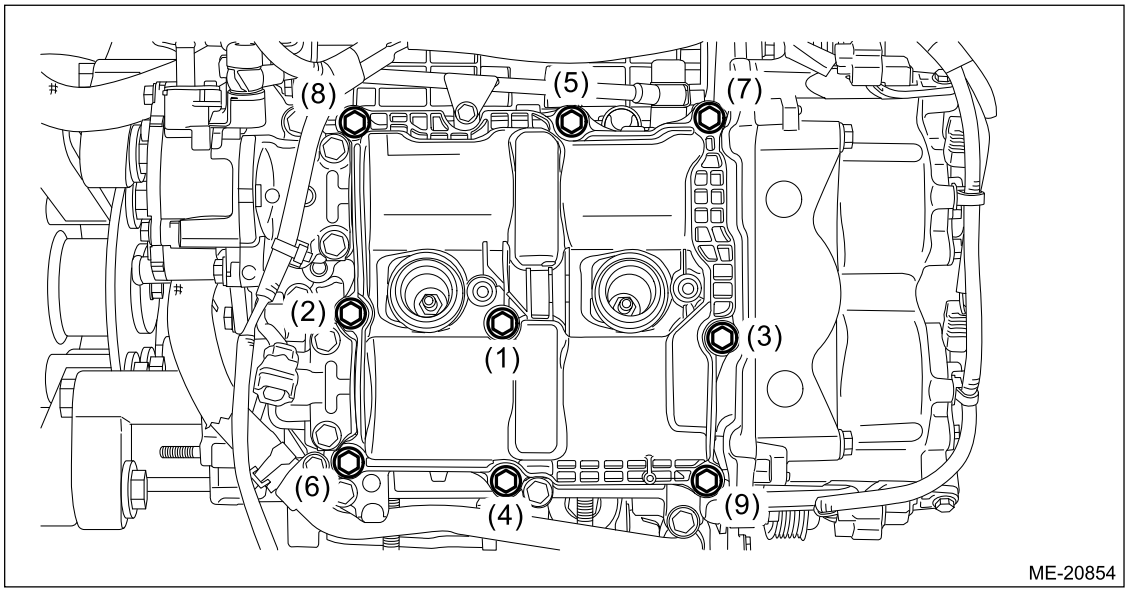
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

3±1 mm (0.1181±0.0394 in)

(A) 10 mm (0.3937 in) or more (C) 72.9 mm (2.8701 in) or more (D) Arch starting point
(B) 74 mm (2.9134 in) or more

5. Install the rocker cover RH to the cam carrier RH.



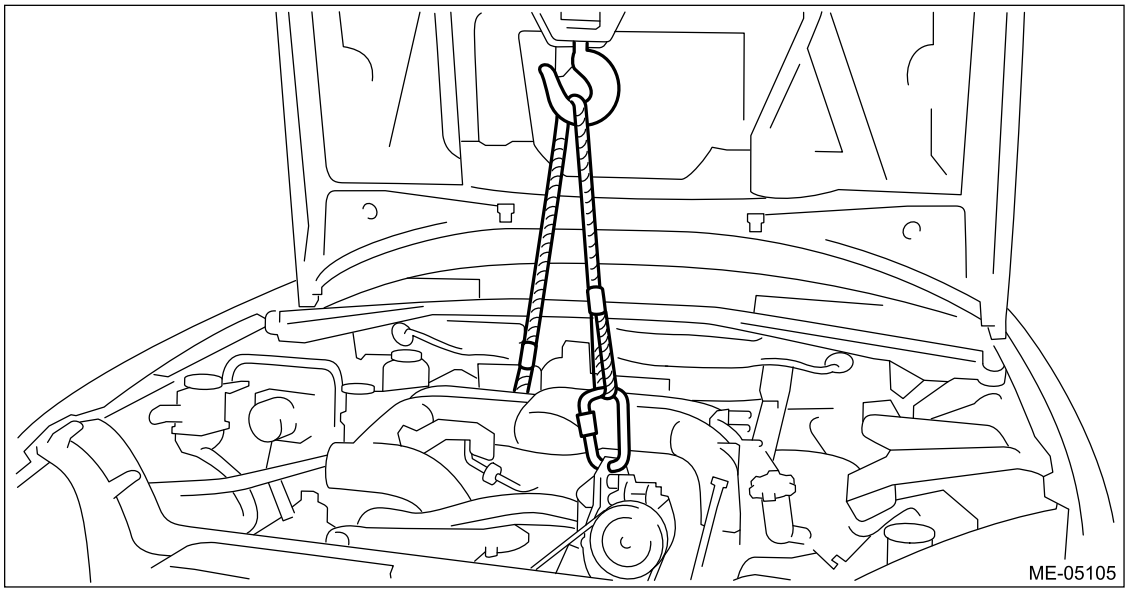
(1) Set the rocker cover RH on the cam carrier RH, and fasten all bolts until their two full threads engage.

(2) Tighten all bolts with a torque of 6.4 N·m (0.7 kgf-m, 4.7 ft-lb) in numerical order as shown in the figure.

(3) Once again, tighten all bolts with a torque of 6.4 N·m (0.7 kgf-m, 4.7 ft-lb) in numerical order as shown in the figure.

Note:

This procedure is necessary to stabilize torque.

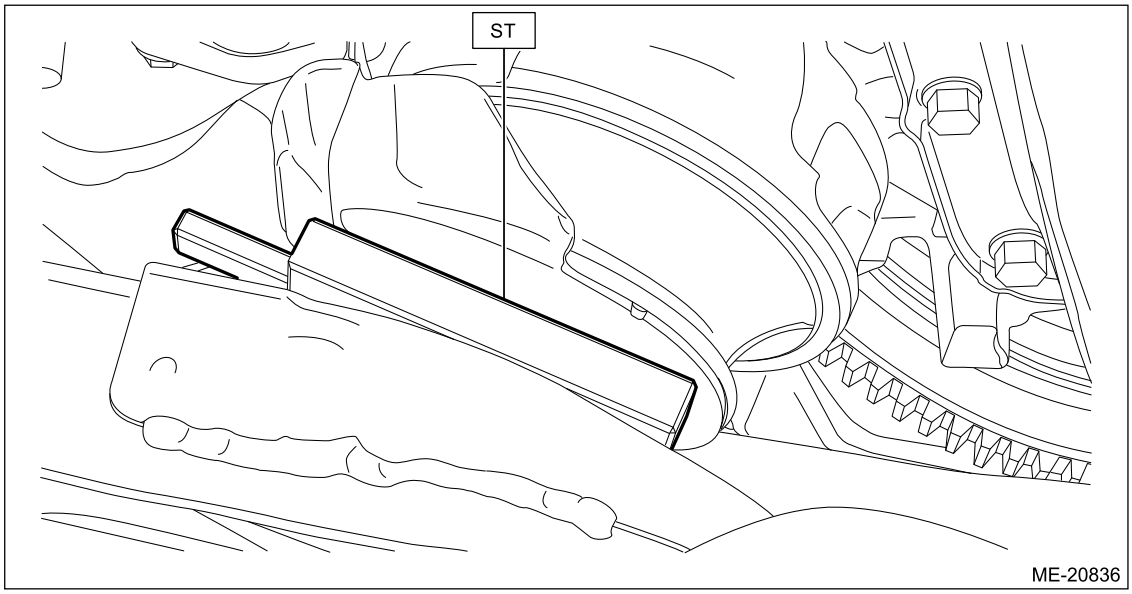


6. Install the #1 ignition coil and the #3 ignition coil. Ref. to IGNITION(H4DO)>Ignition Coil>INSTALLATION.

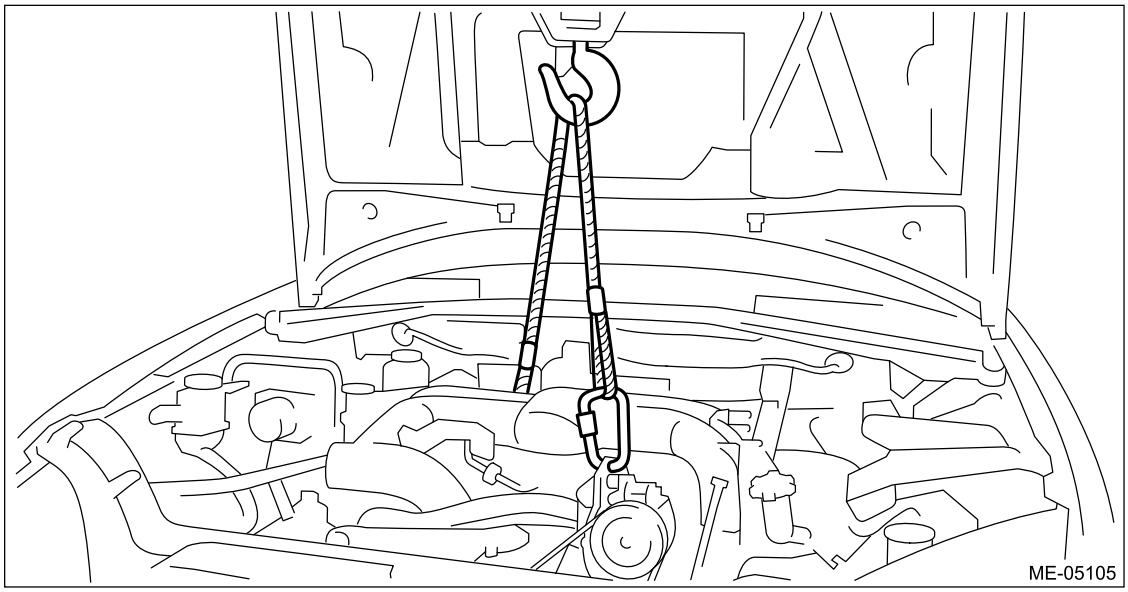
7. When working on the vehicle

Note:

When working on the vehicle, perform the following steps also.

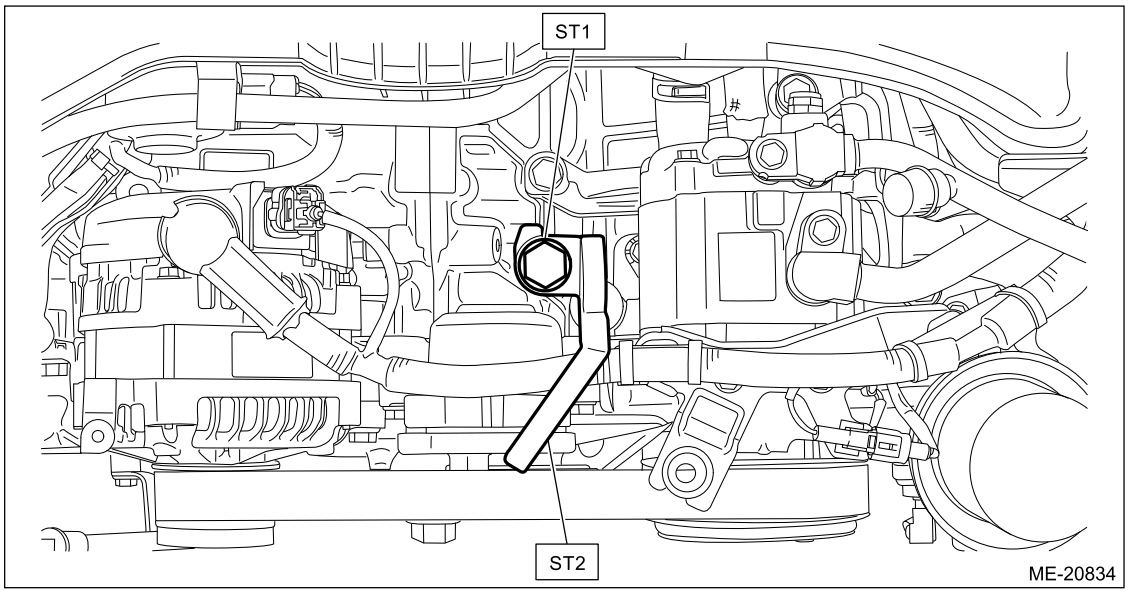


(1) Support the engine with a lifting device and wire ropes.



(2) Lift the engine a little, and remove the ST.

Caution:



When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

(3) Lower the engine and remove the lifting device and wire ropes.

(4) Remove the ST1 and ST2 from the engine unit.

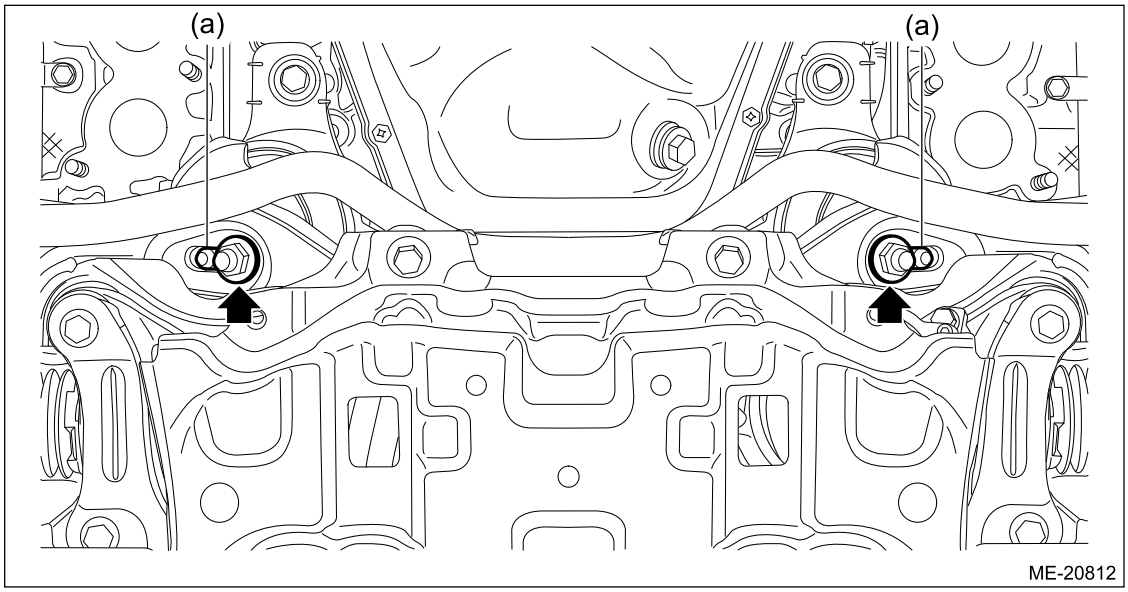
(5) Install the pitching stopper. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Mounting System>INSTALLATION > PITCHING STOPPER.

(6) Install the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>INSTALLATION > PITCHING STOPPER.

(7) Lift up the vehicle.

(8) Install the nuts which hold the engine mounting to the crossmember. (CVT model)

Caution:



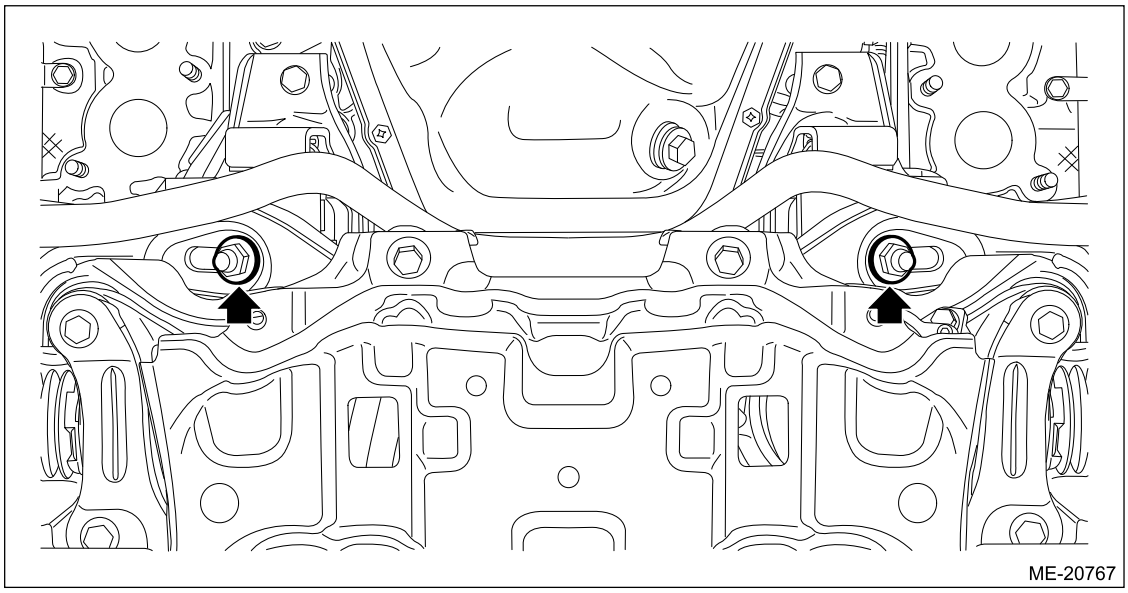
Use new nuts.

Note:

Make sure that locators (a) of the engine mounting are securely inserted.

Tightening torque:

90 N·m (9.2 kgf-m, 66.4 ft-lb)



(9) Install the nuts which hold the engine mounting to the crossmember. (MT model)

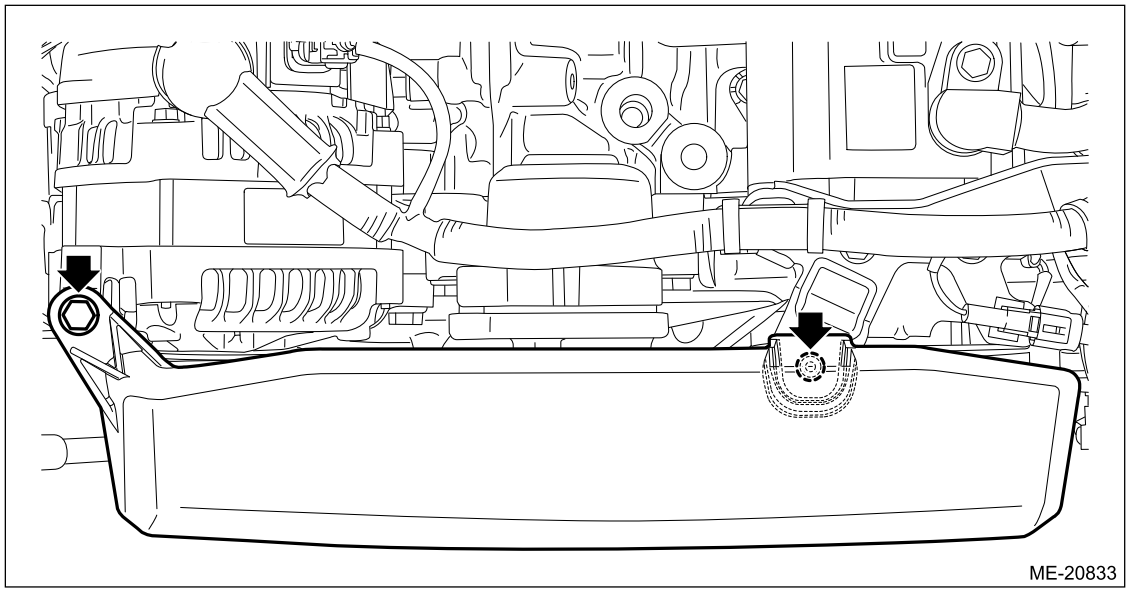
Caution:

Use new nuts.

Tightening torque:

90 N·m (9.2 kgf-m, 66.4 ft-lb)

(10) Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.



(11) Lower the vehicle.

(12) Install the air cleaner case. Ref. to INTAKE (INDUCTION)(H4DO)>Air Cleaner Case>INSTALLATION.

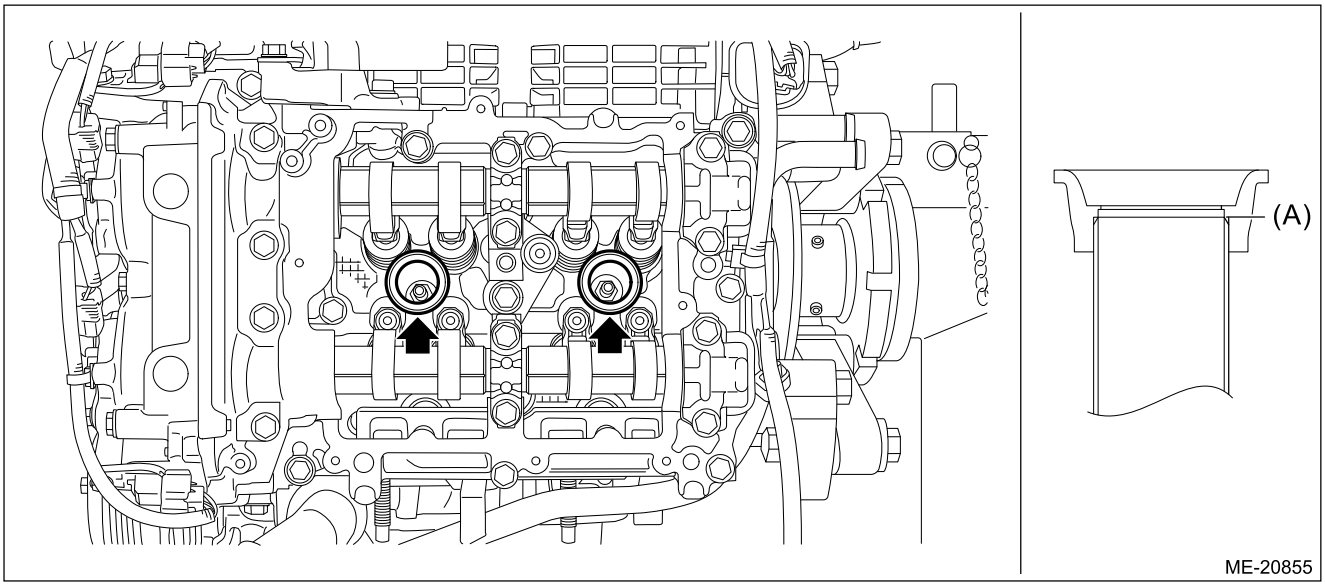
(13) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

(14) Set the front hood to the normal position. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.

(15) Install the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>ASSEMBLY.

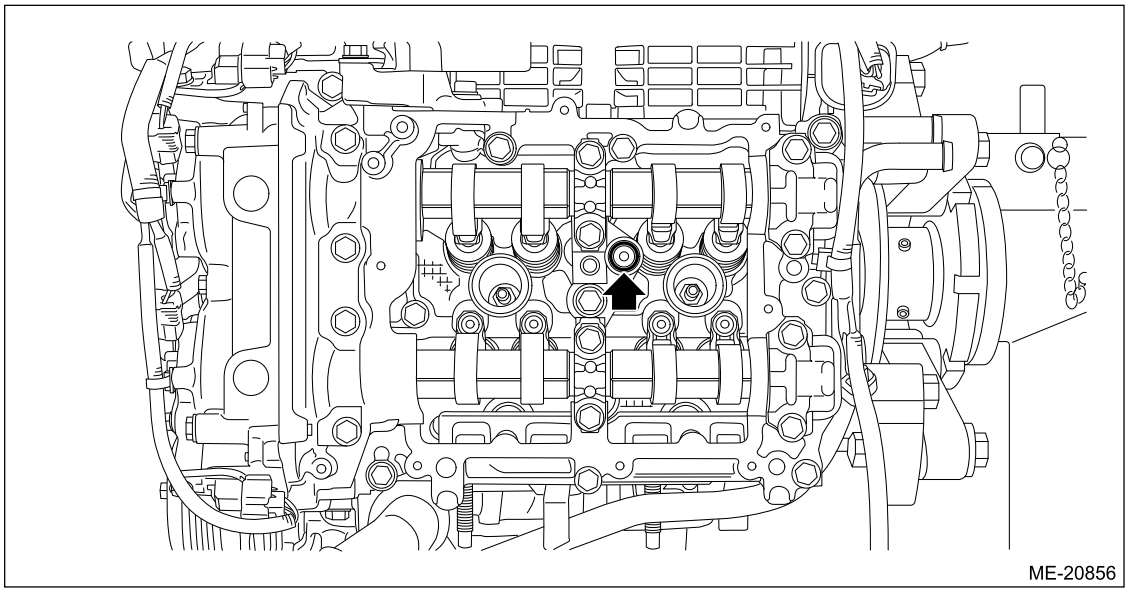


(16) Close the front hood.

2. ROCKER COVER LH

1. Install new spark plug pipe gaskets to #2 spark plug pipe and #4 spark plug pipe.

Note:



Apply a light coat of engine oil to the spark plug pipe gaskets, and insert them onto the spark plug pipe edge (A).

2. Install new rocker cover gasket (ring type) to the cam carrier LH.

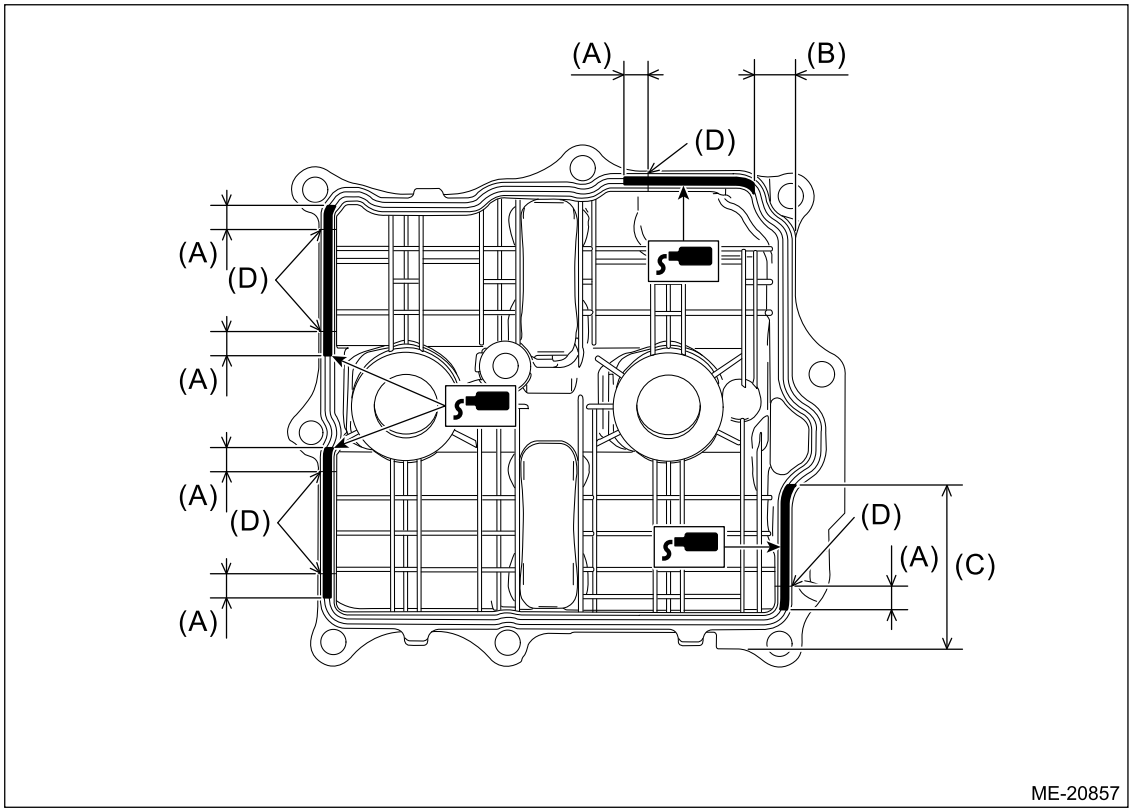
Note:

If this work is performed on the vehicle, apply a light coat of Vaseline to the rocker cover gasket (ring type) to prevent it from falling off.

3. Install new rocker cover gasket LH to the rocker cover LH.

4. Apply liquid gasket to the mating surface of rocker cover LH as shown in the figure.

Note:



- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine.**
- **Be careful not to allow liquid gasket to be squeezed out from rocker cover LH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

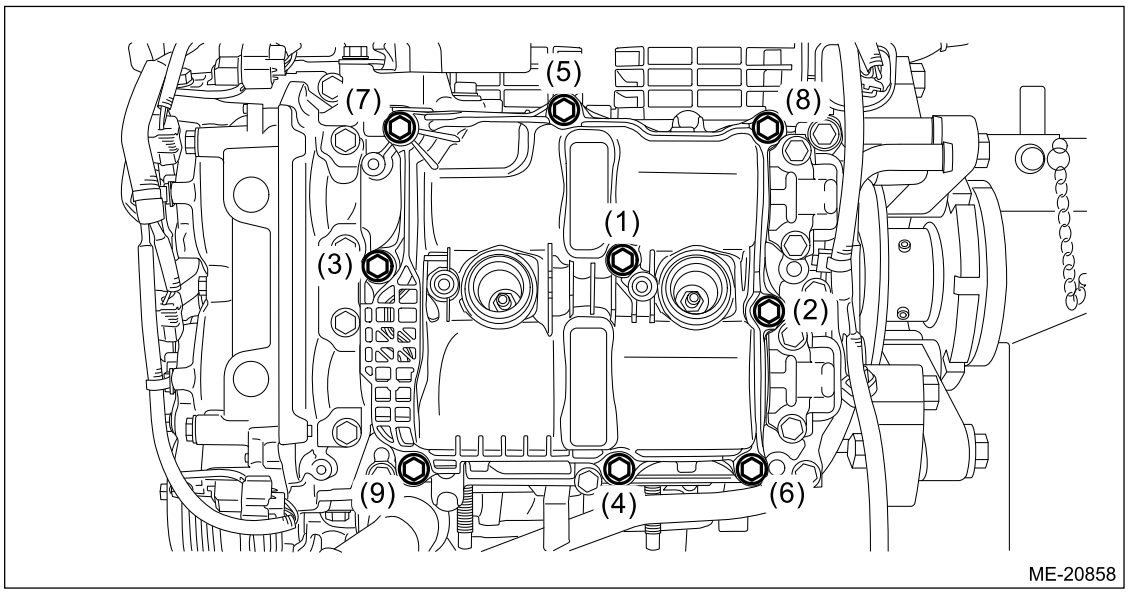
Liquid gasket applying diameter:

3±1 mm (0.1181±0.0394 in)

(A) 10 mm (0.3937 in) or more (C) 70.7 mm (2.7835 in) or more (D) Arch starting point

(B) 17.3 mm (0.6811 in) or more

5. Install the rocker cover LH to the cam carrier LH.



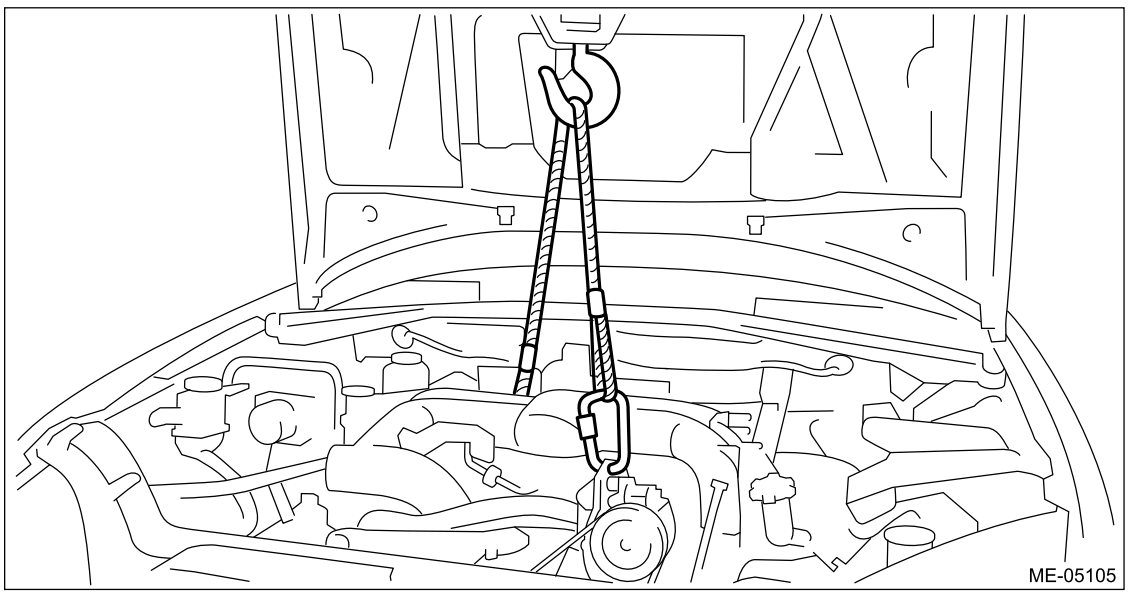
(1) Set the rocker cover LH on the cam carrier LH, and fasten all bolts until their two full threads engage.

(2) Tighten all bolts with a torque of 6.4 N·m (0.7 kgf-m, 4.7 ft-lb) in numerical order as shown in the figure.

(3) Once again, tighten all bolts with a torque of 6.4 N·m (0.7 kgf-m, 4.7 ft-lb) in numerical order as shown in the figure.

Note:

This procedure is necessary to stabilize torque.

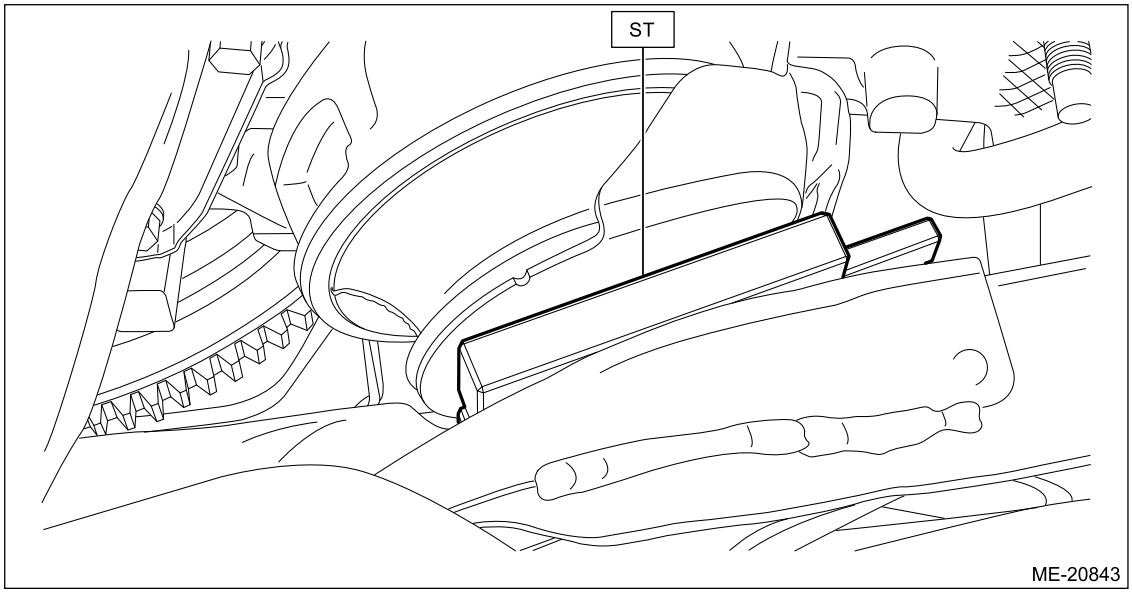


6. Install the #2 ignition coil and the #4 ignition coil. Ref. to IGNITION(H4DO)>Ignition Coil>INSTALLATION.

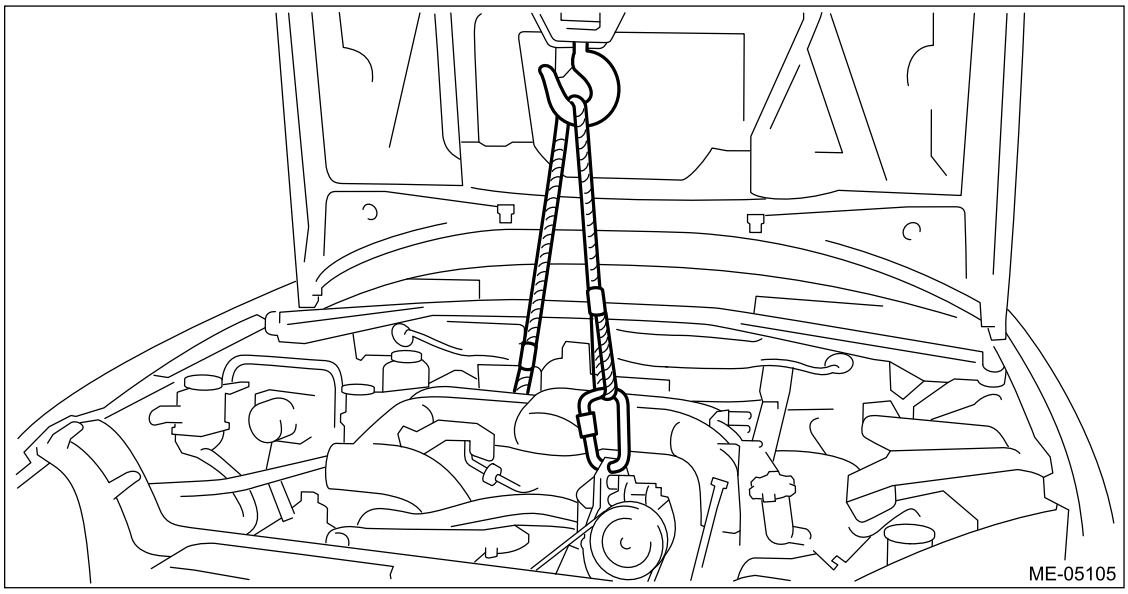
7. When working on the vehicle

Note:

When working on the vehicle, perform the following steps also.

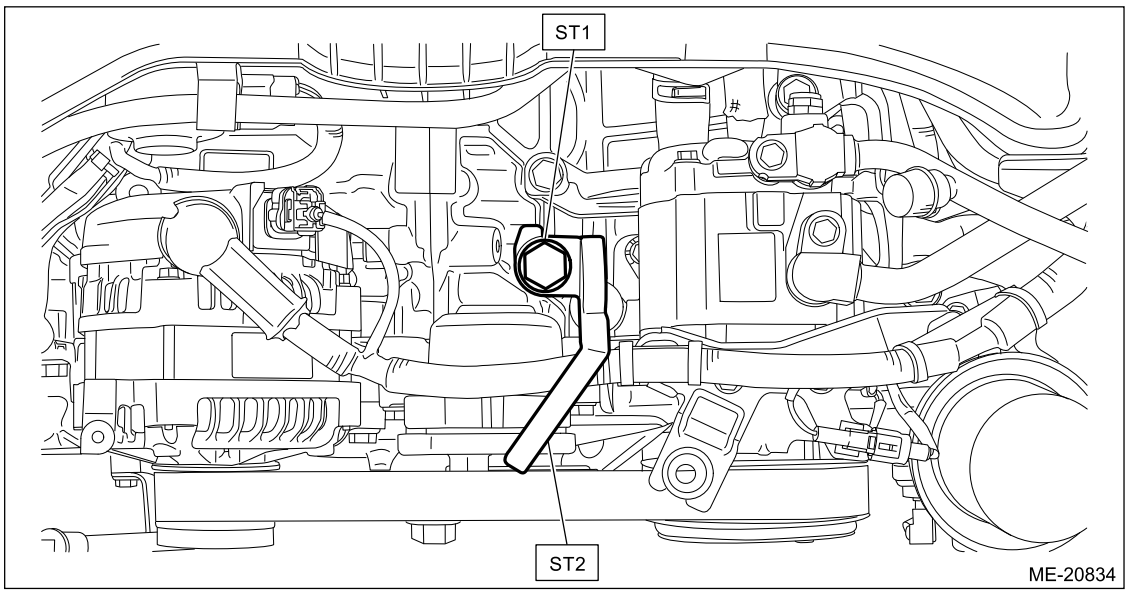


(1) Support the engine with a lifting device and wire ropes.



(2) Lift the engine a little, and remove the ST.

Caution:



When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

(3) Lower the engine and remove the lifting device and wire ropes.

(4) Remove the ST1 and ST2 from the engine unit.

(5) Install the pitching stopper. (CVT model) Ref. to CONTINUOUSLY VARIABLE

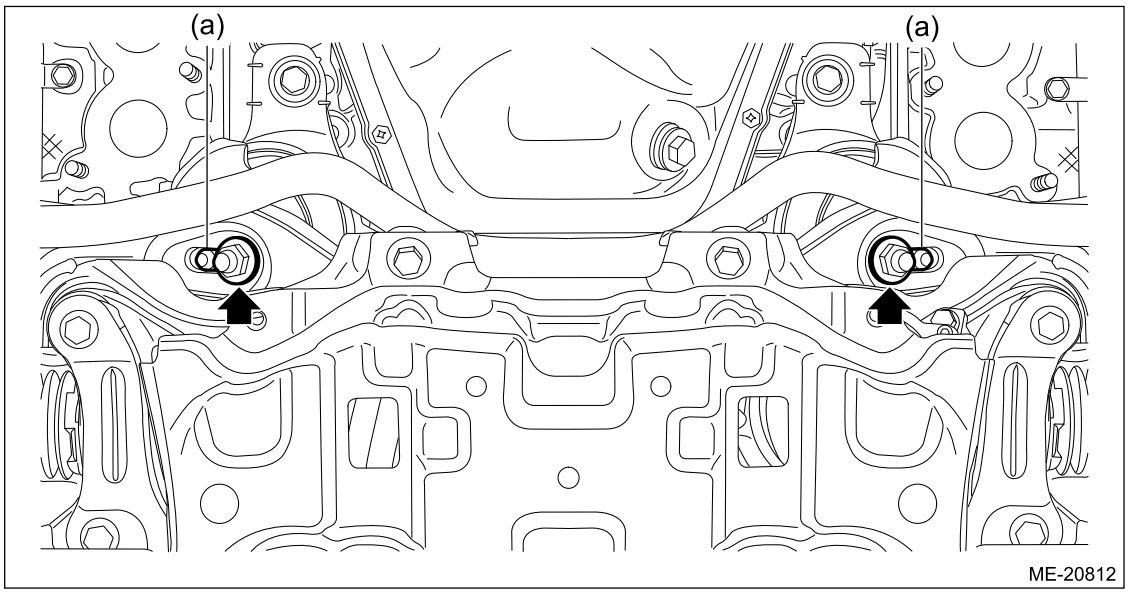
TRANSMISSION(TR580)>Transmission Mounting System>INSTALLATION > PITCHING STOPPER.

(6) Install the pitching stopper. (MT model) Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Mounting System>INSTALLATION > PITCHING STOPPER.

(7) Lift up the vehicle.

(8) Install the nuts which hold the engine mounting to the crossmember. (CVT model)

Caution:



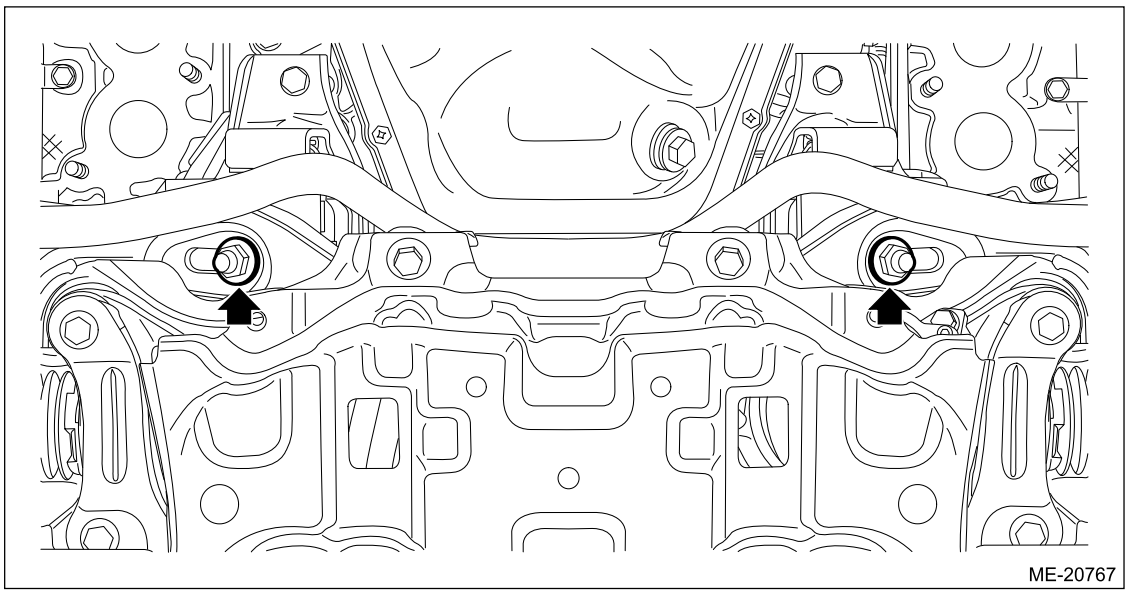
Use new nuts.

Note:

Make sure that locators (a) of the engine mounting are securely inserted.

Tightening torque:

90 N·m (9.2 kgf-m, 66.4 ft-lb)



(9) Install the nuts which hold the engine mounting to the crossmember. (MT model)

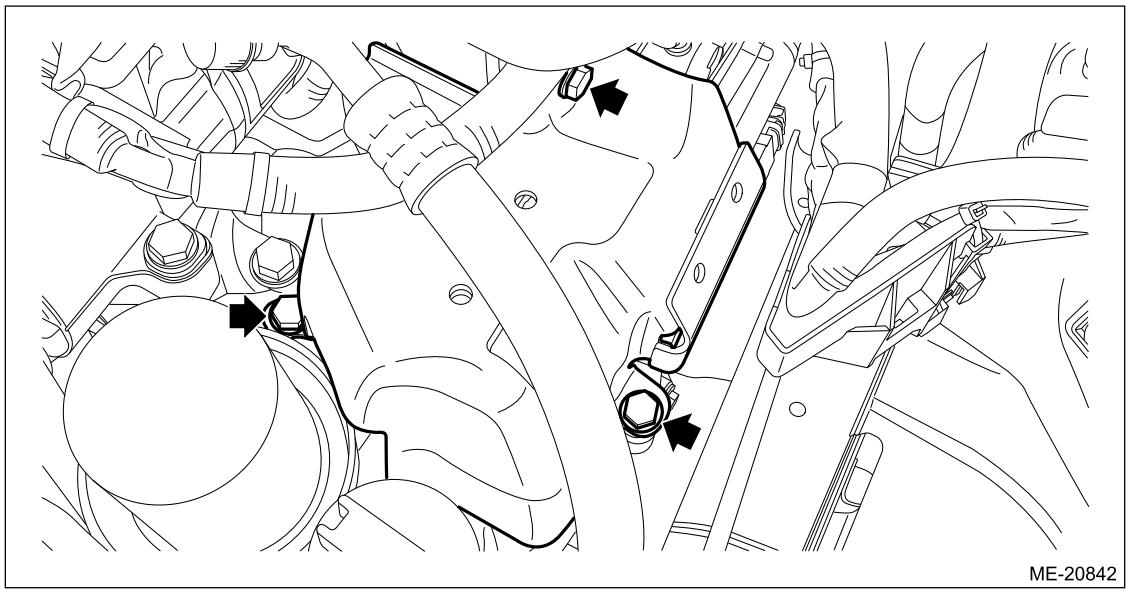
Caution:

Use new nuts.

Tightening torque:

90 N·m (9.2 kgf-m, 66.4 ft-lb)

(10) Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.



(11) Lower the vehicle.

(12) Install the fuel pipe protector to the high-pressure fuel pump case and intake manifold

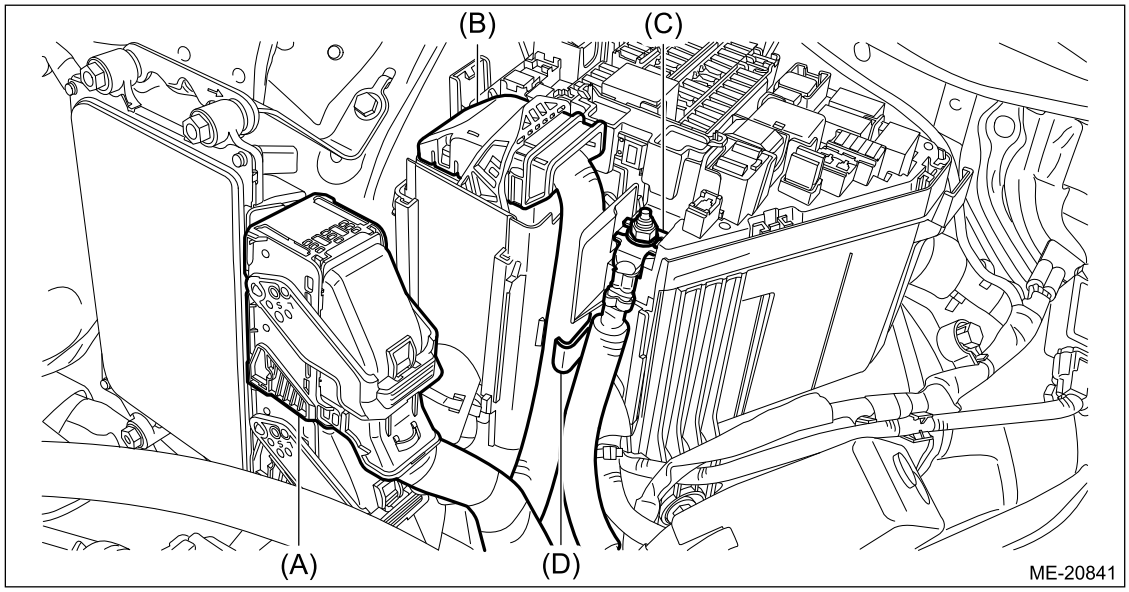
assembly.

Tightening torque:

19 N·m (1.9 kgf-m, 14.0 ft-lb)

(13) Place the engine wiring harness and attach the engine wiring harness to the clip (D).

(14) Connect terminal (C) and connector (B) to the main fuse box.



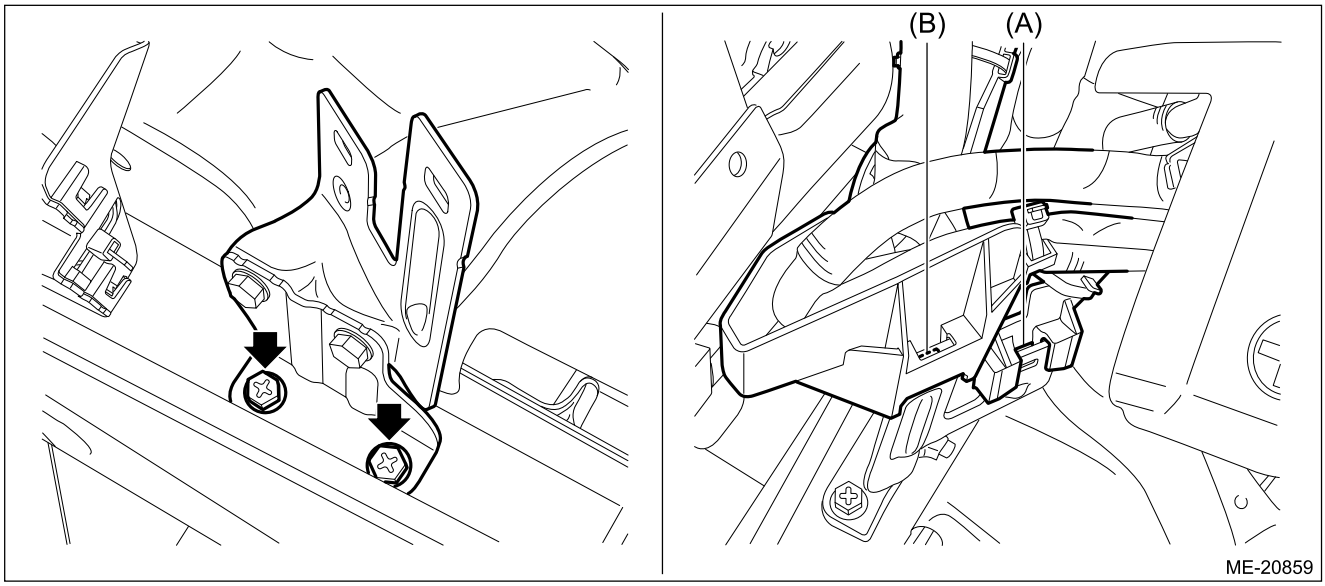
Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

(15) Connect connector (A) to ECM.

Caution:

To prevent damage to the connector (A), when connecting the connector (A), insert the connector (A) straight in until it stops, and while maintaining the position, lock the lever.

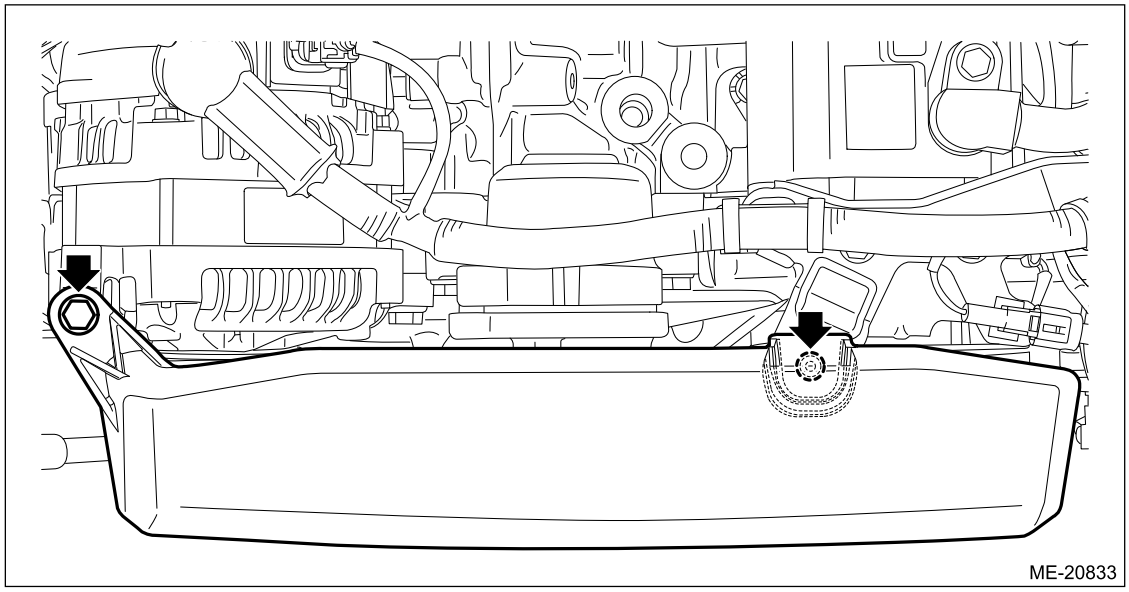


(16) Install the bracket to the vehicle.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

(17) Secure the engine wiring harness (A) to the bracket, and secure the battery cable (B) in place.



(18) Install the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSTALLATION.

(19) Install the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>INSTALLATION.

(20) Install the V-belt cover.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

(21) Set the front hood to the normal position. Ref. to REPAIR CONTENTS>NOTE > FRONT HOOD STAY.

(22) Install the striker - front hood. Ref. to EXTERIOR BODY PANELS>Front Hood>ASSEMBLY.

(23) Close the front hood.

MECHANICAL(H4DO) > Rocker Cover

INSPECTION

Check that the rocker cover does not have deformation, cracks and any other damage.

REMOVAL

1. CAMSHAFT RH

The camshaft RH and cam carrier are designed as removing as a unit. Refer to “Cam Carrier” for removal procedures of camshaft RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL > CAM CARRIER RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>DISASSEMBLY > CAM CARRIER RH.

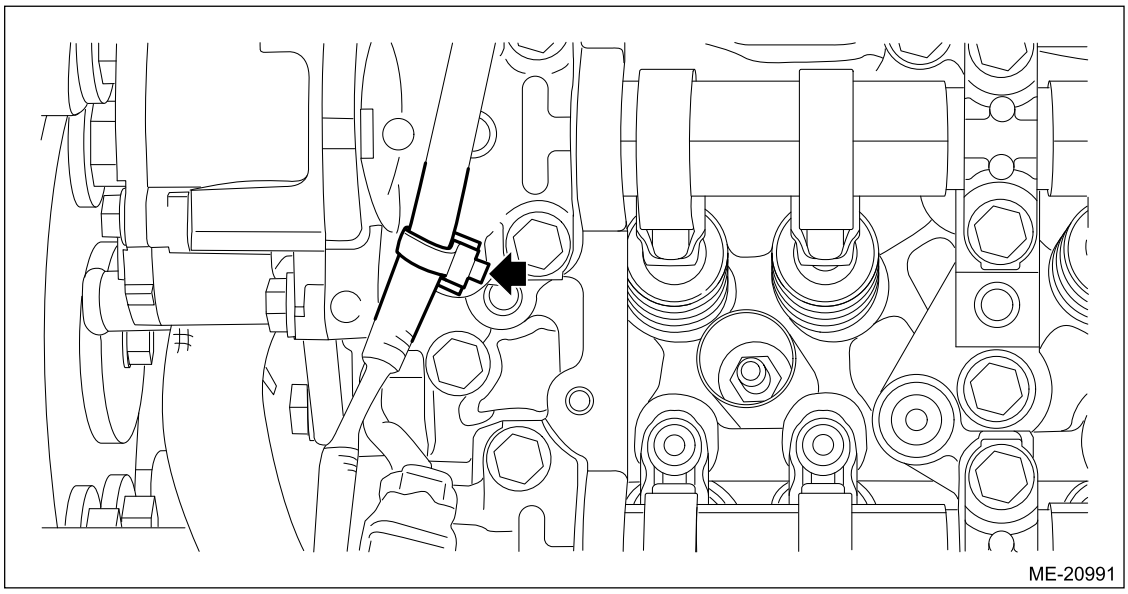
2. CAMSHAFT LH

The camshaft LH and cam carrier are designed as removing as a unit. Refer to “Cam Carrier” for removal procedures of camshaft LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL > CAM CARRIER LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>DISASSEMBLY > CAM CARRIER LH.

INSTALLATION

1. CAMSHAFT RH

The camshaft RH and cam carrier are designed as installing as a unit. Refer to “Cam Carrier” for installation procedures of camshaft RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY > CAM CARRIER RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION > CAM CARRIER RH.



2. CAMSHAFT LH

The camshaft LH and cam carrier are designed as installing as a unit. Refer to “Cam Carrier” for installation procedures of camshaft LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>ASSEMBLY > CAM CARRIER LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION > CAM CARRIER LH.

REMOVAL

1. CAM CARRIER RH

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
3. Remove the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN RH.
4. Remove the rocker cover RH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL > ROCKER COVER RH.
5. Remove the water pipe RH. Ref. to COOLING(H4DO)>Water Pipe>REMOVAL > WATER PIPE RH.
6. Remove the clip holding the engine harness from cam carrier RH.

7. When disassembling the cam carrier RH

   Note:

   When disassembling the cam carrier RH, perform the following steps also.

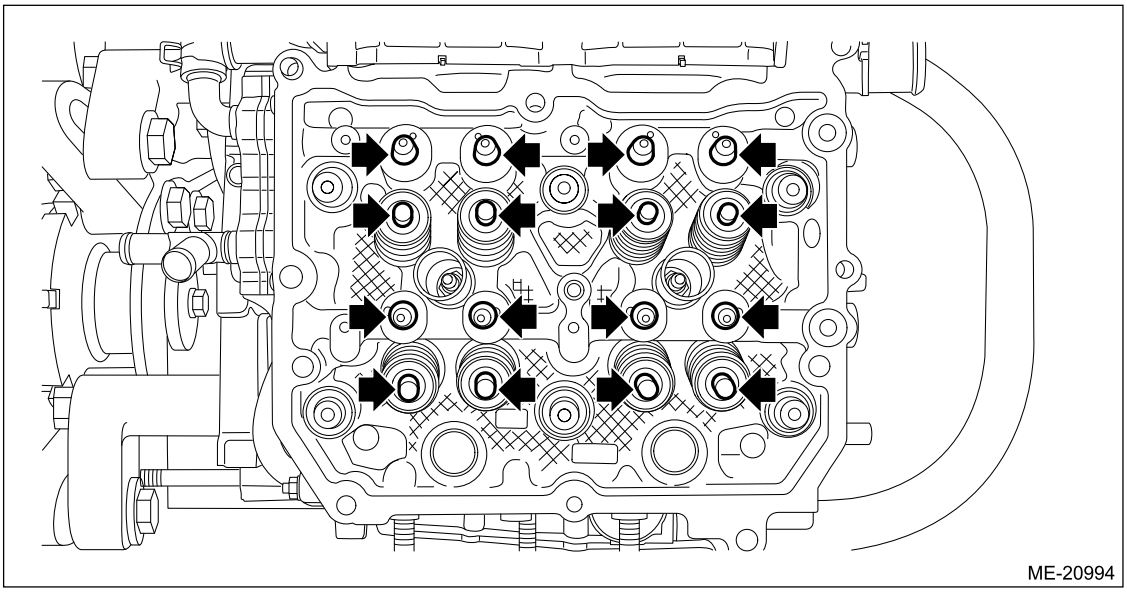
   (1) Remove the oil pipe. Ref. to LUBRICATION(H4DO)>Oil Pipe>REMOVAL.

   (2) Remove the vacuum pump. Ref. to MECHANICAL(H4DO)>Vacuum Pump>REMOVAL.

   (3) Remove the cam sprocket RH. Ref. to MECHANICAL(H4DO)>Cam Sprocket>REMOVAL > CAM SPROCKET RH.
8. Set the part so that the cam carrier RH is on the upper side.
9. Loosen the bolts holding the cam carrier RH equally, a little at a time in numerical sequence as shown in the figure and remove the cam carrier RH.

10. Remove the O-ring and the roller rocker arm from cylinder head RH.

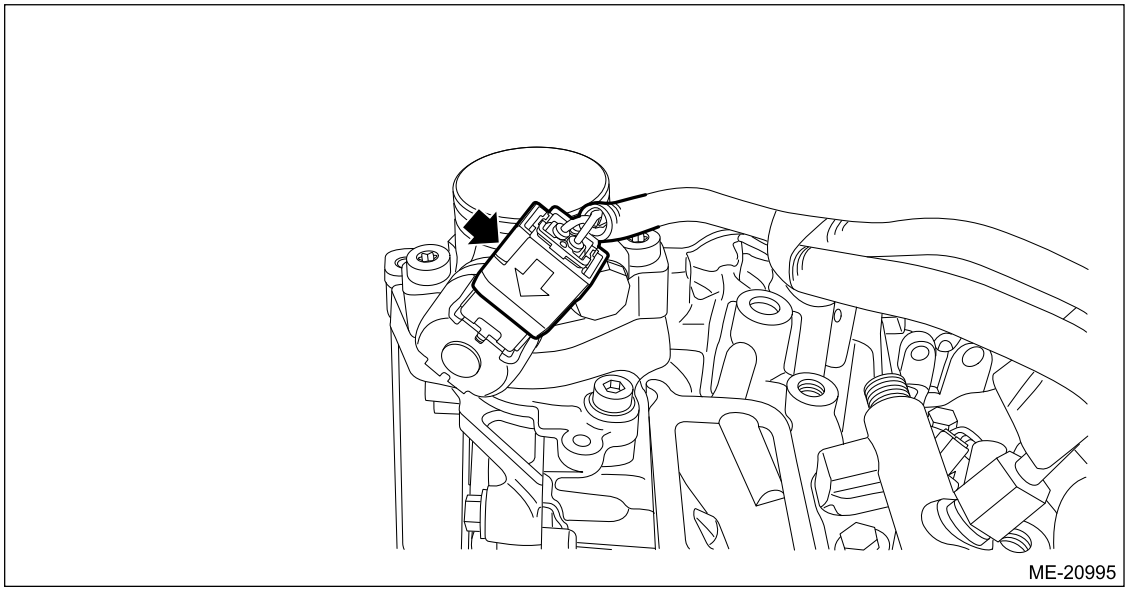
Note:



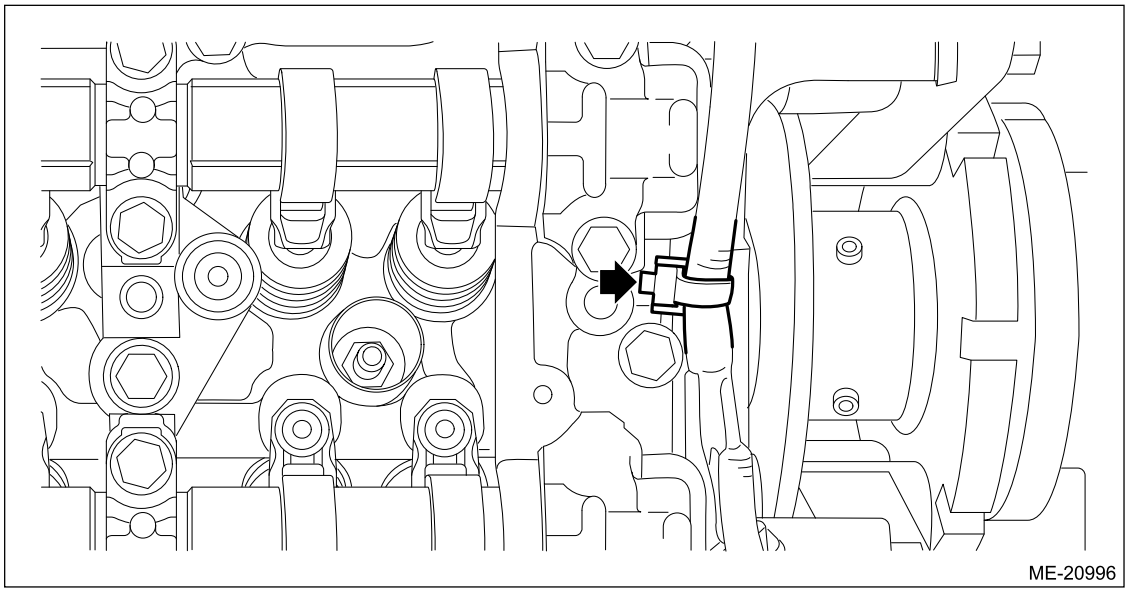
Be careful not to confuse the roller rocker arms.

11. Remove the valve shim and the roller rocker arm pivot from cylinder head RH.

Note:



Be careful not to confuse the valve shim and the roller rocker arm pivot.



12. Remove the liquid gasket from cam carrier RH and cylinder head RH.

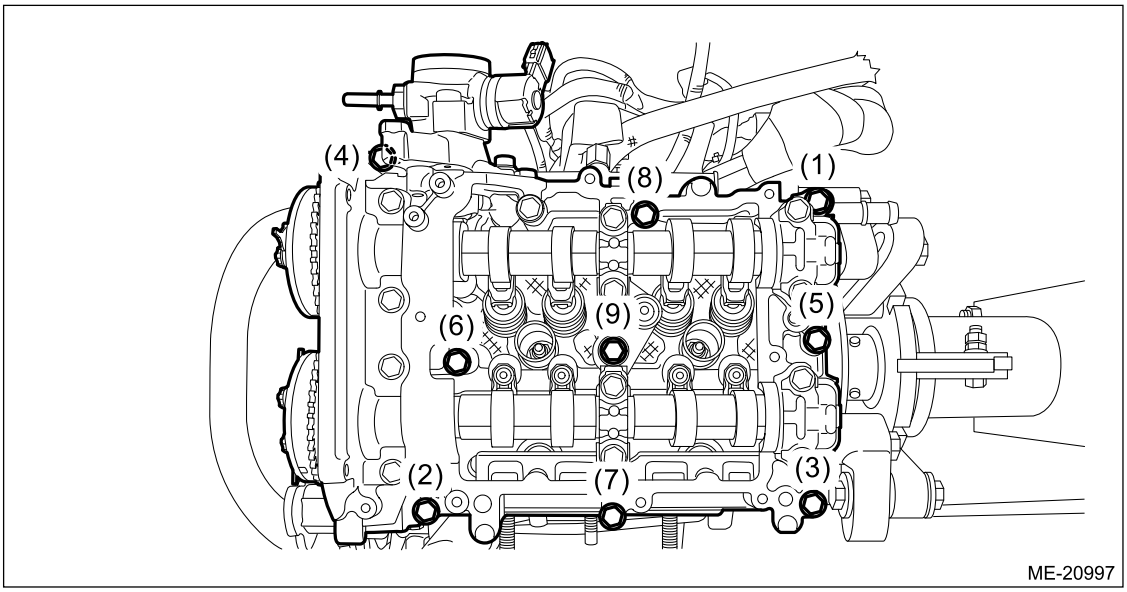
2. CAM CARRIER LH

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
3. Remove the timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>REMOVAL > TIMING CHAIN LH.
4. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
5. Remove the rocker cover LH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL > ROCKER COVER LH.
6. Remove the water pipe LH. Ref. to COOLING(H4DO)>Water Pipe>REMOVAL > WATER PIPE LH.
7. Remove the high-pressure fuel delivery pipes. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE.
8. Disconnect the connector from high-pressure fuel pump.

9. Remove the clip holding the engine harness from cam carrier LH.

10. When disassembling the cam carrier LH

Note:

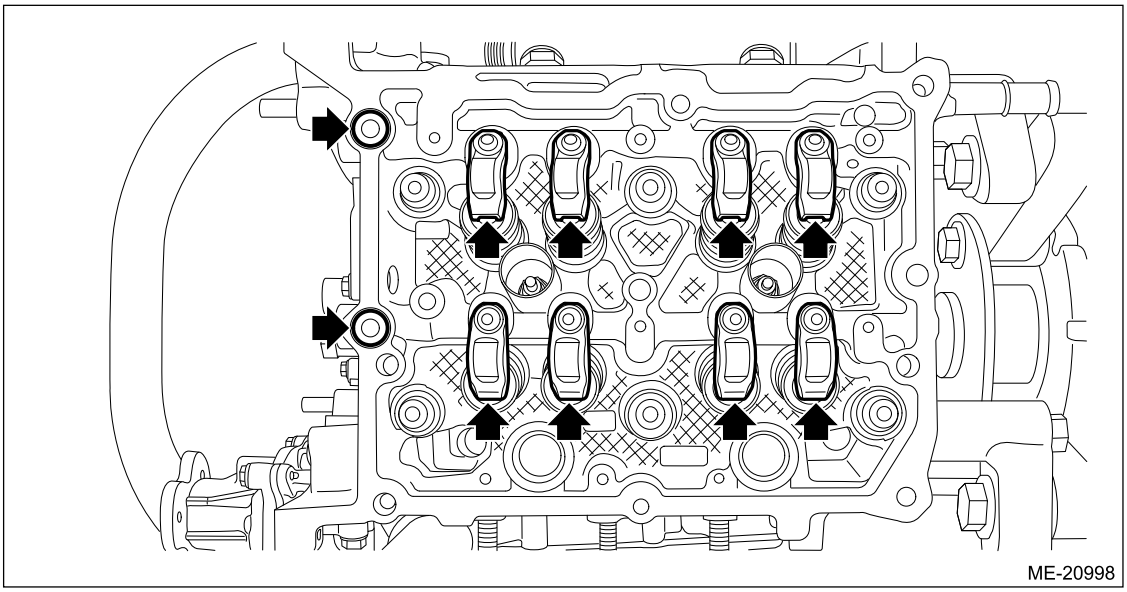


When disassembling the cam carrier LH, perform the following steps also.

(1) Remove the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>High Pressure Fuel Pump>REMOVAL.

(2) Remove the cam sprocket LH. Ref. to MECHANICAL(H4DO)>Cam Sprocket>REMOVAL > CAM SPROCKET LH.

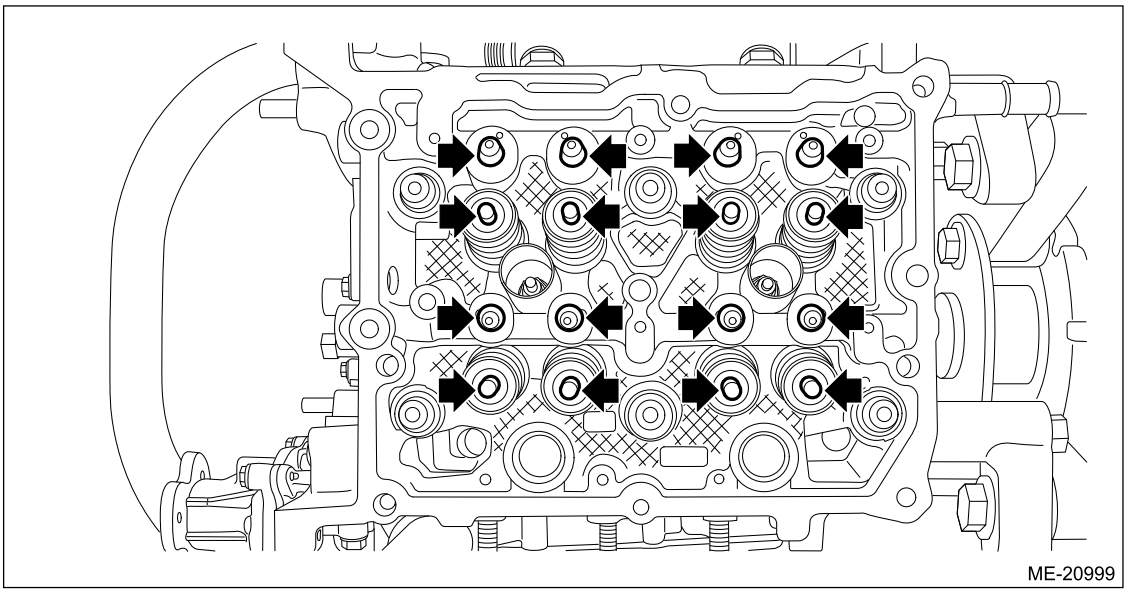
11. Set the part so that the cam carrier LH is on the upper side.



12. Loosen the bolts holding the cam carrier LH equally, a little at a time in numerical sequence as shown in the figure and remove the cam carrier LH.

13. Remove the O-ring and the roller rocker arm from cylinder head LH.

Note:

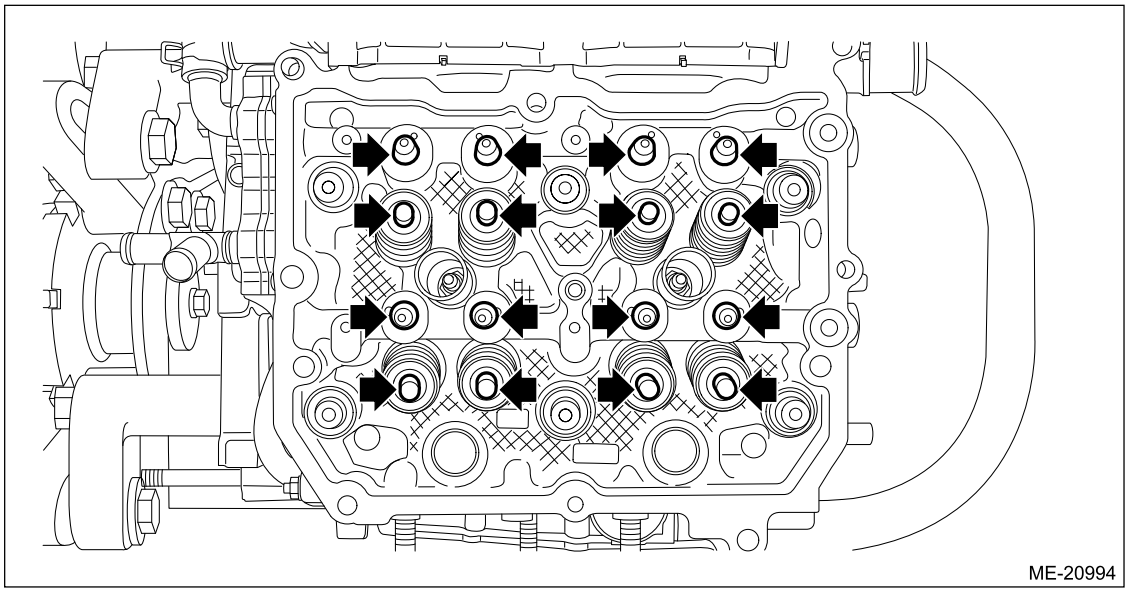


Be careful not to confuse the roller rocker arms.

14. Remove the valve shim and the roller rocker arm pivot from cylinder head LH.

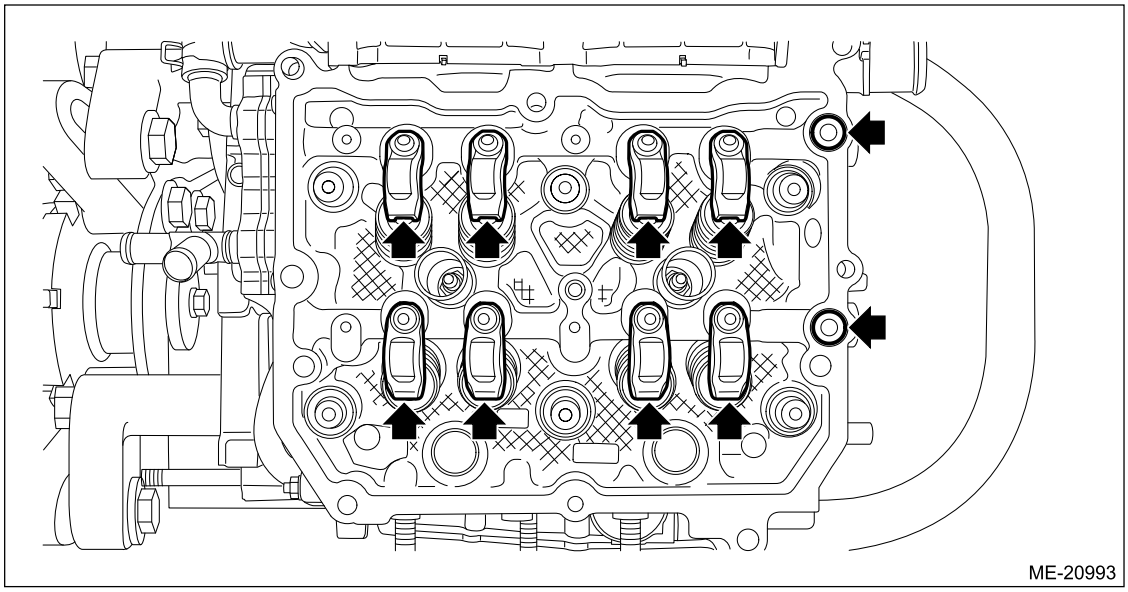
Note:

Be careful not to confuse the valve shim and the roller rocker arm pivot.



15. Remove the liquid gasket from cam carrier LH and cylinder head LH.

MECHANICAL(H4DO) > Cam Carrier



INSTALLATION

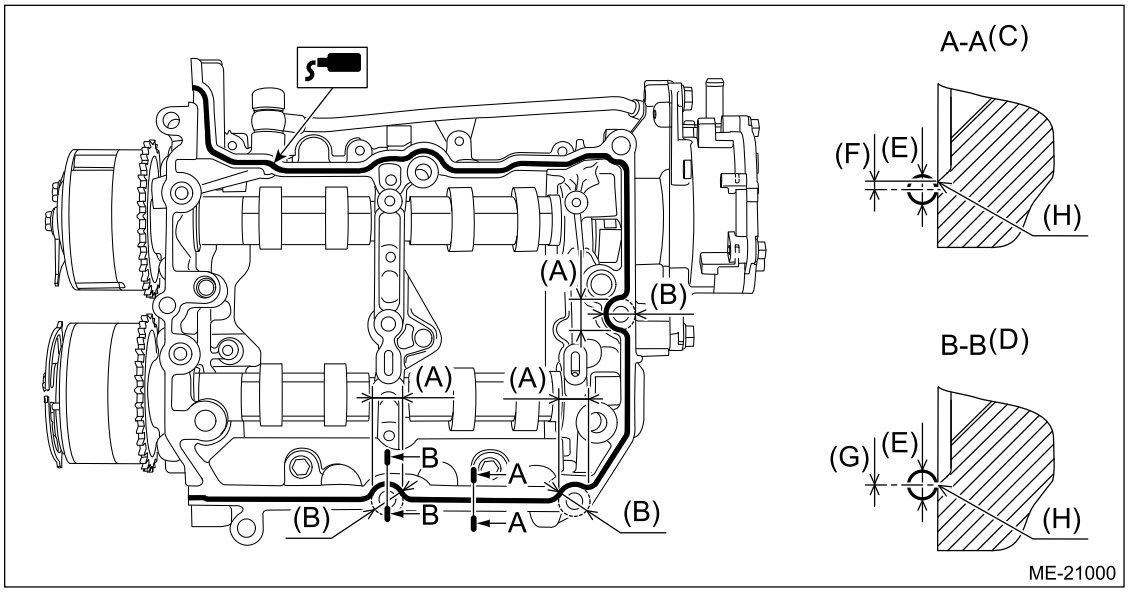
1. CAM CARRIER RH

1. Set the part so that the cylinder head RH is on the upper side.
2. Apply engine oil to the valve shim and the roller rocker arm pivot, and install the valve shim and the roller rocker arm pivot to the cylinder head RH.

3. Apply engine oil to new O-ring and the roller rocker arm, and install the O-ring and the roller rocker arm to the cylinder head RH.

4. Apply liquid gasket to the mating surface of cam carrier RH as shown in the figure.

Note:



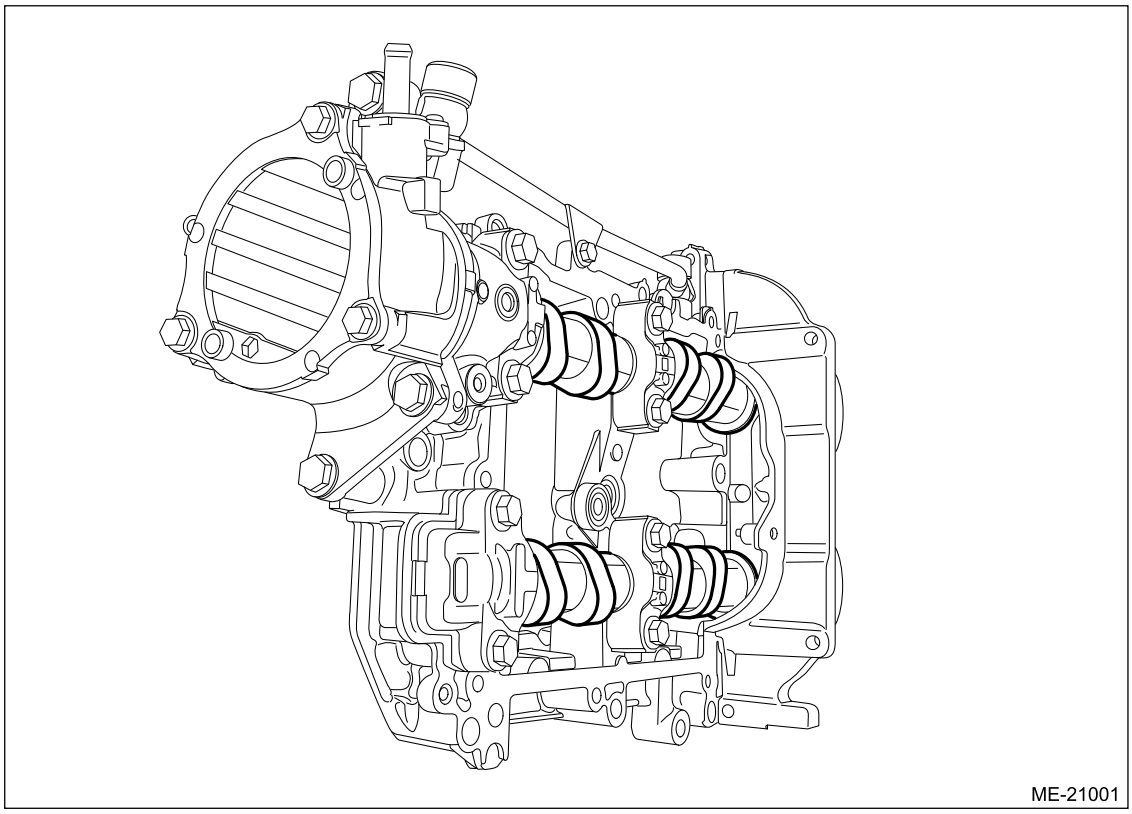
- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the cylinder head RH and cam carrier RH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

4±0.5 mm (0.1575±0.0197 in)

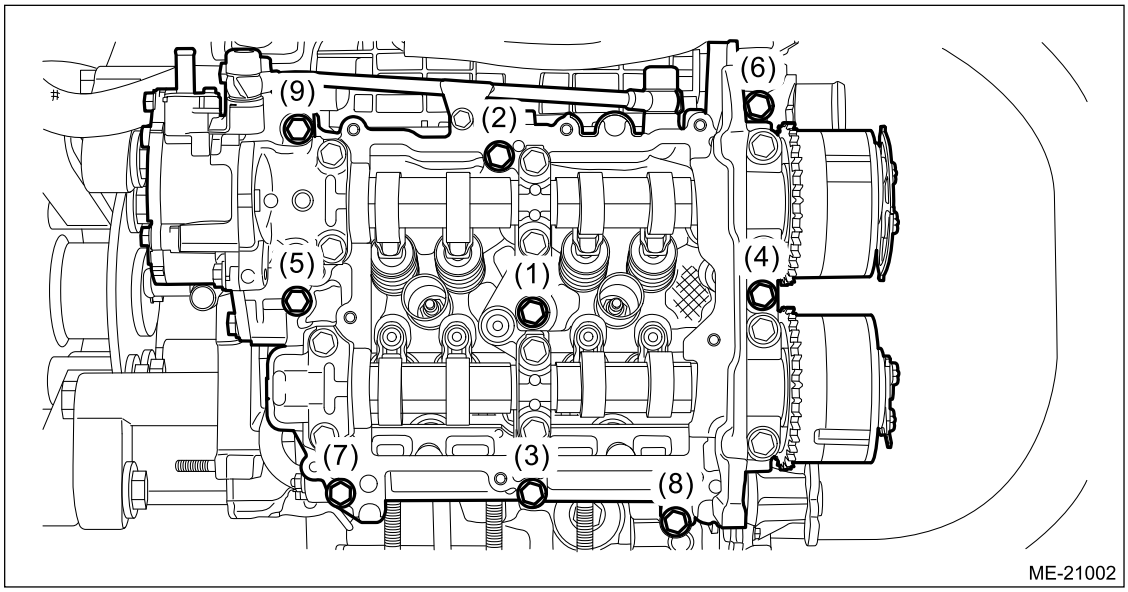


(A)	Range A	(D)	Liquid gasket applying position of mating surfaces of range A	(G)	0±0.5 mm (0±0.0197 in)
(B)	⌀18 mm (0.7087 in)	(E)	⌀4±0.5 mm (0.1575±0.0197 in)	(H)	Chamfer edge
(C)	Liquid gasket applying position of mating surfaces other than range A	(F)	⌀1±1 mm (0.0394±0.0394 in)		

5. Install the cam carrier RH to the cylinder head RH.

(1) Set the cam carrier RH to the cylinder head RH.

Note:



Position the intake camshaft RH and the exhaust camshaft RH to the zero-lift position as shown in the figure.

(2) Tighten all bolts with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.
(3) Loosen the bolts (3 places) by 180° in numerical order (3) → (2) → (1) as shown in the figure.
(4) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order (1) → (2) → (3) as shown in the figure.
(5) Loosen the bolts (3 places) by 180° in numerical order (8) → (6) → (4) as shown in the figure.
(6) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order (4) → (6) → (8) as shown in the figure.
(7) Loosen the bolts (3 places) by 180° in numerical order (7) → (9) → (5) as shown in the figure.
(8) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order (5) → (9) → (7) as shown in the figure.

Note:

After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

6. Set the part so that the intake manifold is on the upper side.
7. When the cam carrier RH has been disassembled

   Note:

   When the cam carrier RH has been disassembled, perform the following steps also.

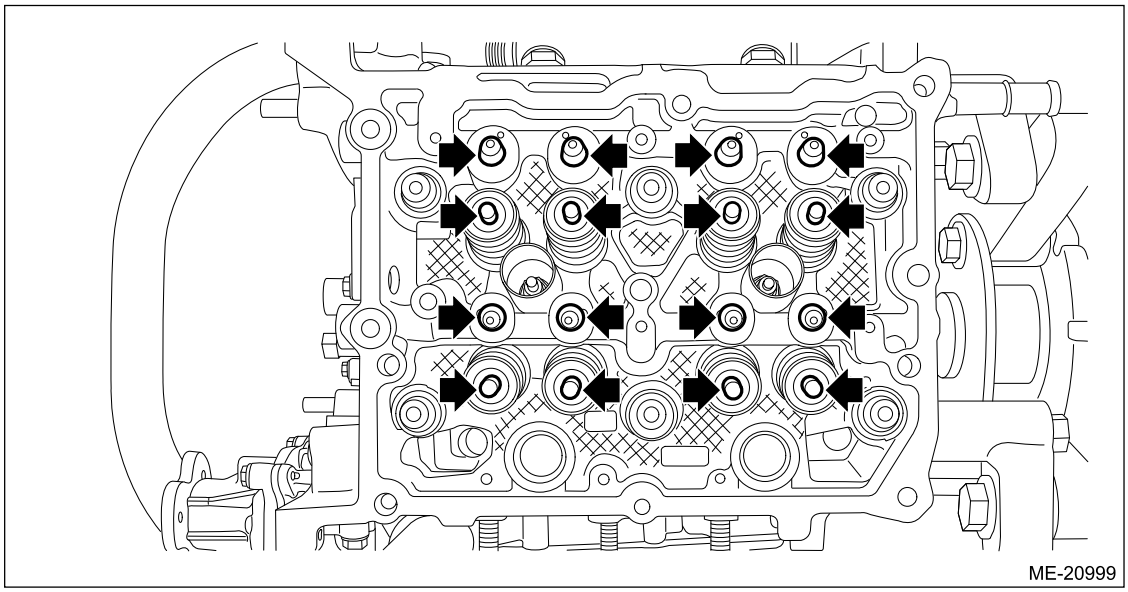
   (1) Install the cam sprocket RH. Ref. to MECHANICAL(H4DO)>Cam Sprocket>INSTALLATION > CAM SPROCKET RH.

   (2) Install the vacuum pump. Ref. to MECHANICAL(H4DO)>Vacuum Pump>INSTALLATION.

   Note:

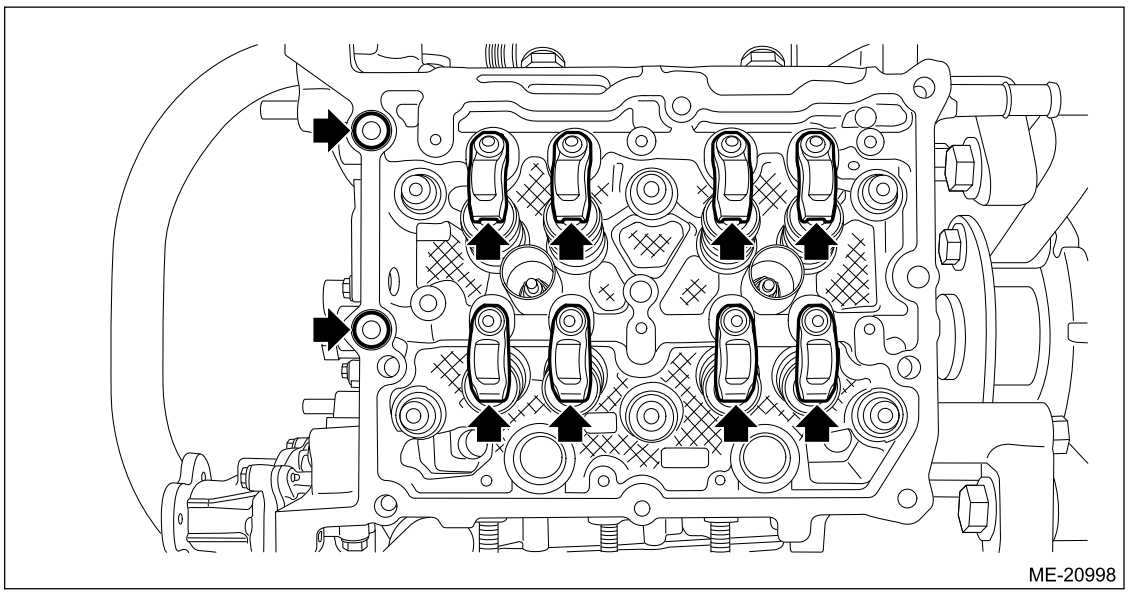
   When installing the vacuum pump, do not turn the intake camshaft RH to the outside of range of zero-lift (in range where it can be turned lightly by hand).

   (3) Install the oil pipe. Ref. to LUBRICATION(H4DO)>Oil Pipe>INSTALLATION.
8. Check the cam clearance. Ref. to MECHANICAL(H4DO)>Cam Clearance>INSPECTION > WHEN TIMING CHAIN ASSEMBLY IS REMOVED.
9. Secure the engine harness to the cam carrier RH with a clip.



10. Install the water pipe RH. Ref. to COOLING(H4DO)>Water Pipe>INSTALLATION > WATER PIPE RH.
11. Install the rocker cover RH. Ref. to MECHANICAL(H4DO)>Rocker Cover>INSTALLATION > ROCKER COVER RH.
12. Install the timing chain RH. Ref. to MECHANICAL(H4DO)>Timing Chain

Assembly>INSTALLATION > TIMING CHAIN RH.



13. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.
14. Install the engine to the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>INSTALLATION.

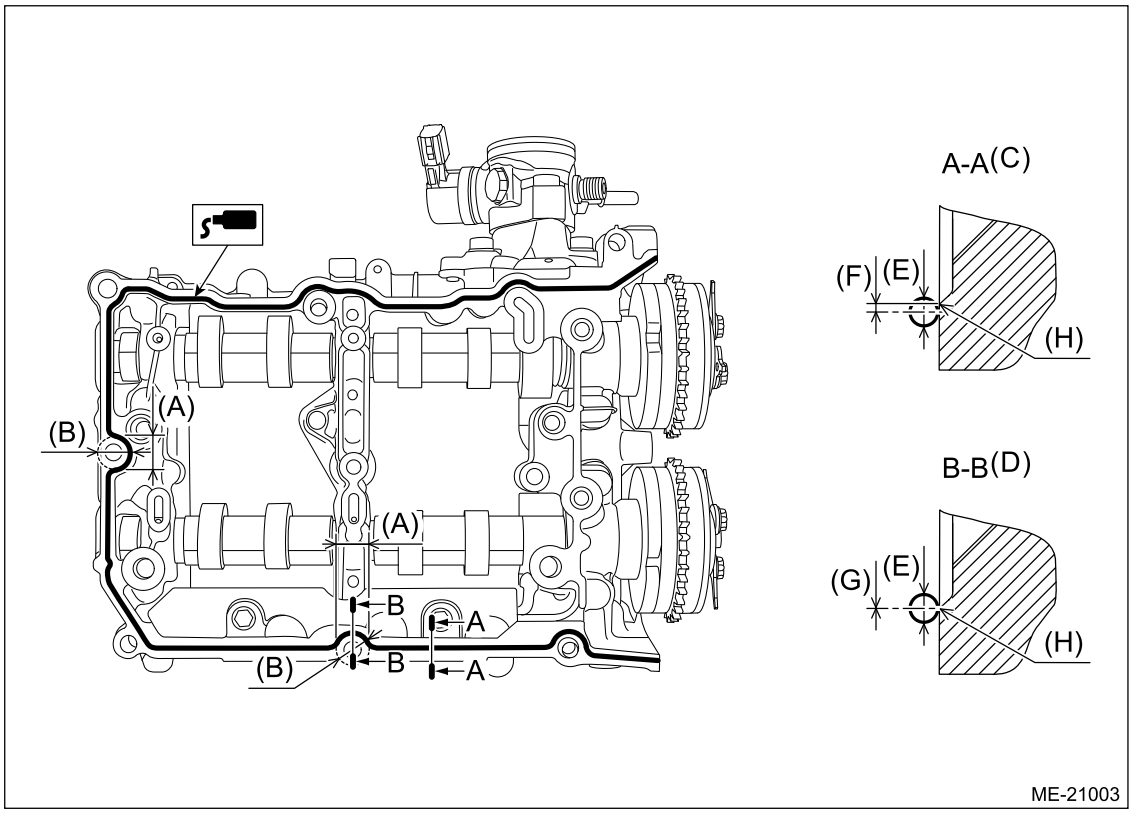
2. CAM CARRIER LH

1. Set the part so that the cylinder head LH is on the upper side.
2. Apply engine oil to the valve shim and the roller rocker arm pivot, and install the valve shim and the roller rocker arm pivot to the cylinder head LH.

3. Apply engine oil to new O-ring and the roller rocker arm, and install the O-ring and the roller rocker arm to the cylinder head LH.

4. Apply liquid gasket to the mating surface of cam carrier LH as shown in the figure.

Note:



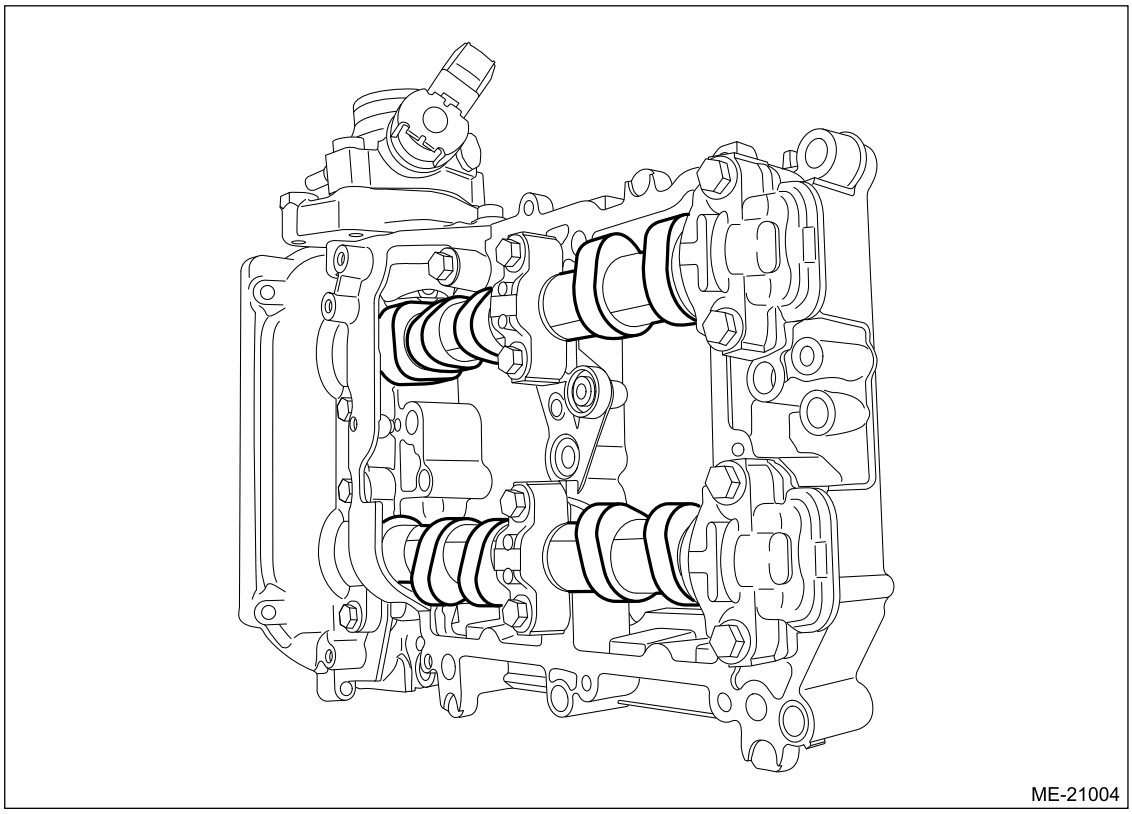
- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the cylinder head LH and cam carrier LH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

4±0.5 mm (0.1575±0.0197 in)

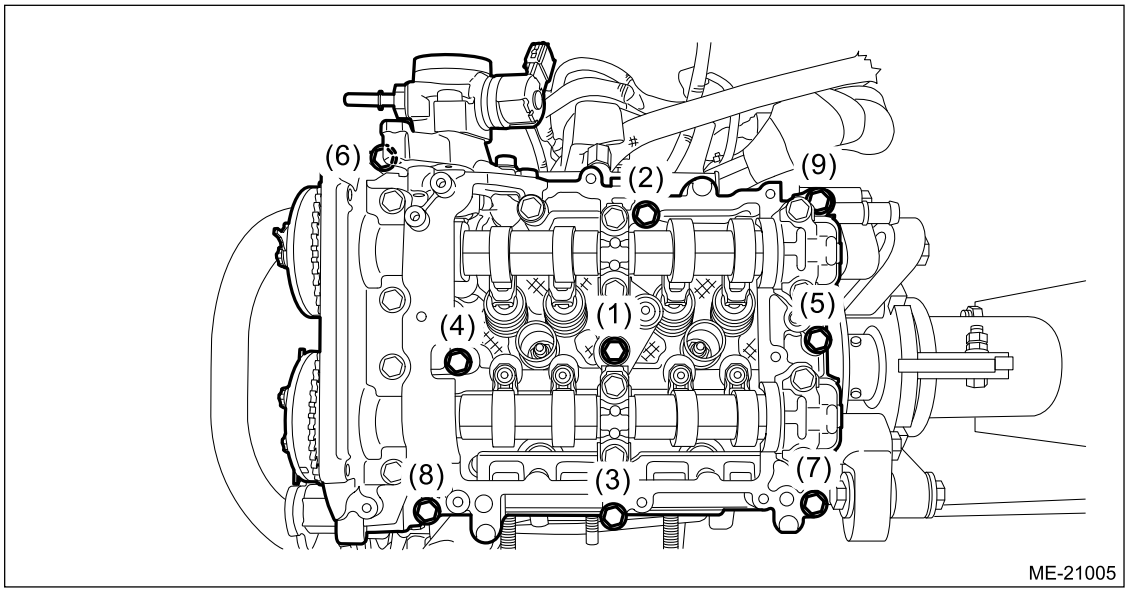


(A)	Range A	(D)	Liquid gasket applying position of mating surfaces of range A	(G)	0±0.5 mm (0±0.0197 in)
(B)	⌀18 mm (0.7087 in)	(E)	⌀4±0.5 mm (0.1575±0.0197 in)	(H)	Chamfer edge
(C)	Liquid gasket applying position of mating surfaces other than range A	(F)	⌀1±1 mm (0.0394±0.0394 in)		

5. Install the cam carrier LH to the cylinder head LH.

(1) Set the cam carrier LH to the cylinder head LH.

Note:



Position the intake camshaft LH and the exhaust camshaft LH to the zero-lift position as shown in the figure.

(2) Tighten all bolts with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.
(3) Loosen the bolts (3 places) by 180° in numerical order (3) → (2) → (1) as shown in the figure.
(4) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order (1) → (2) → (3) as shown in the figure.
(5) Loosen the bolts (3 places) by 180° in numerical order (8) → (6) → (4) as shown in the figure.
(6) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order (4) → (6) → (8) as shown in the figure.
(7) Loosen the bolts (3 places) by 180° in numerical order (7) → (9) → (5) as shown in the figure.
(8) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order (5) → (9) → (7) as shown in the figure.

Note:

After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

6. Set the part so that the installation surface of the intake manifold is on the upper side.
7. When the cam carrier LH has been disassembled

   Note:

   When the cam carrier LH has been disassembled, perform the following steps also.

   (1) Install the cam sprocket LH. Ref. to MECHANICAL(H4DO)>Cam Sprocket>INSTALLATION > CAM SPROCKET LH.

   (2) Install the high-pressure fuel pump. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Pump>INSTALLATION.

   Note:

   Install the high-pressure fuel pump so that the cam lobes on the intake camshaft LH are positioned as shown in the figure. Perform adjustment within the range of zero-lift (in range where it can be turned lightly by hand).

8. Check the cam clearance. Ref. to MECHANICAL(H4DO)>Cam Clearance>INSPECTION > WHEN TIMING CHAIN ASSEMBLY IS REMOVED.
9. Secure the engine harness to the cam carrier LH with a clip.

10. Connect the connector to the high-pressure fuel pump.

11. Install the high-pressure fuel delivery pipe. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE.

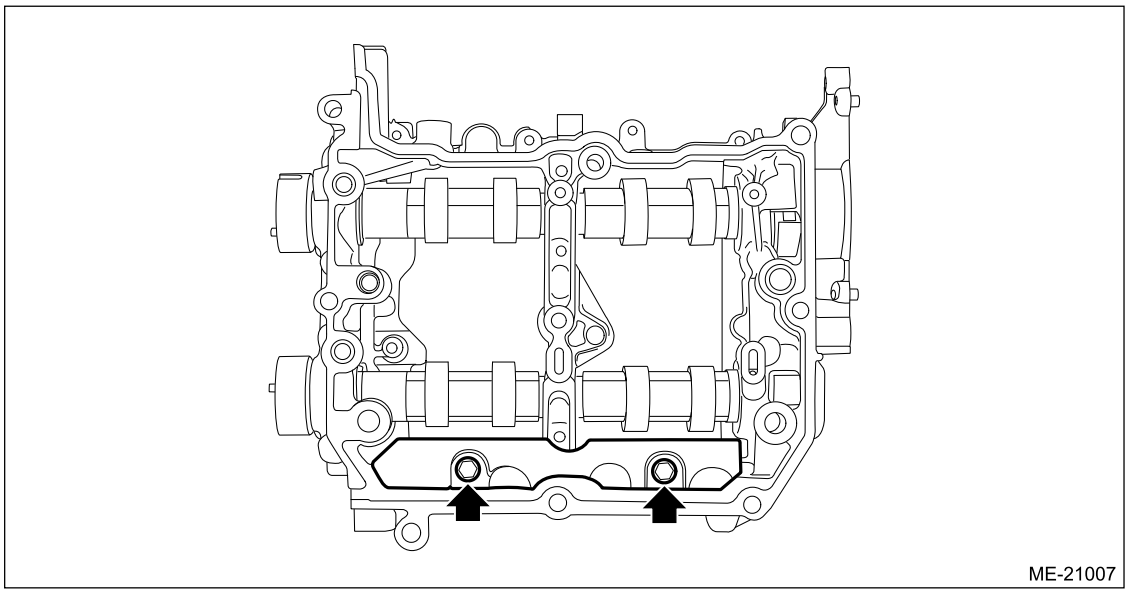
12. Install the water pipe LH. Ref. to COOLING(H4DO)>Water Pipe>INSTALLATION > WATER PIPE LH.

13. Install the rocker cover LH. Ref. to MECHANICAL(H4DO)>Rocker Cover>INSTALLATION > ROCKER COVER LH.

14. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.

15. Install timing chain LH. Ref. to MECHANICAL(H4DO)>Timing Chain Assembly>INSTALLATION > TIMING CHAIN LH.

16. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

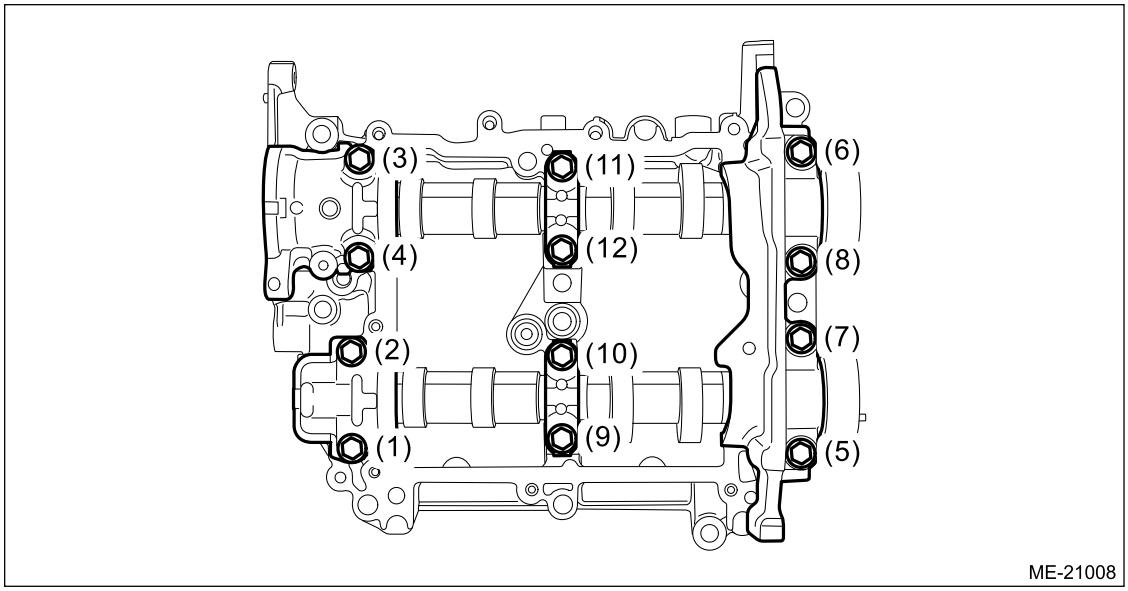


17. Install the engine to the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>INSTALLATION.

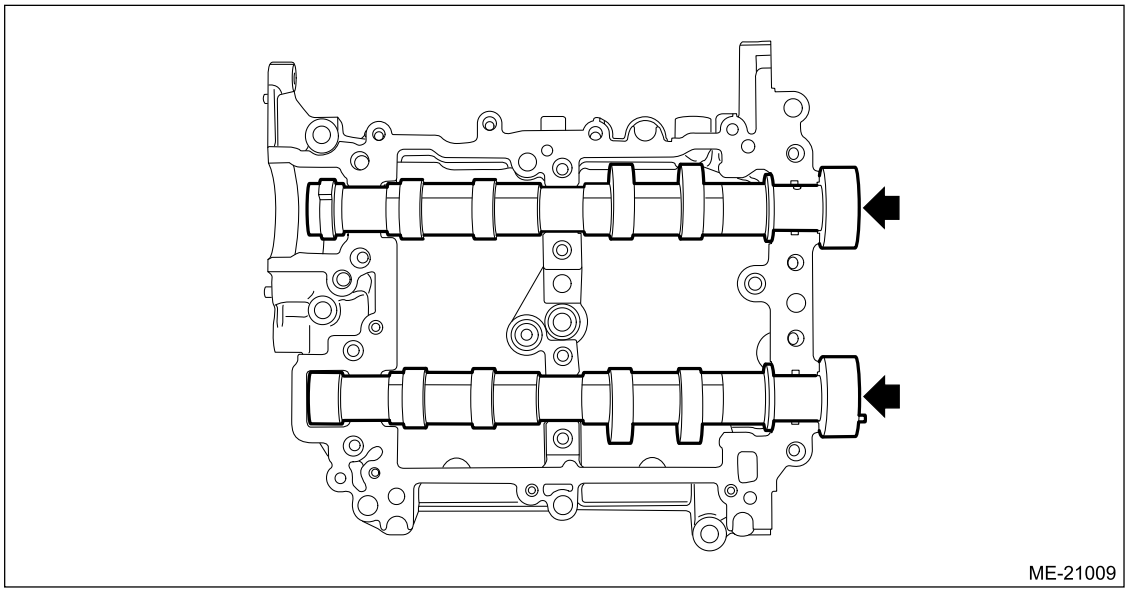
MECHANICAL(H4DO) > Cam Carrier

DISASSEMBLY

1. CAM CARRIER RH

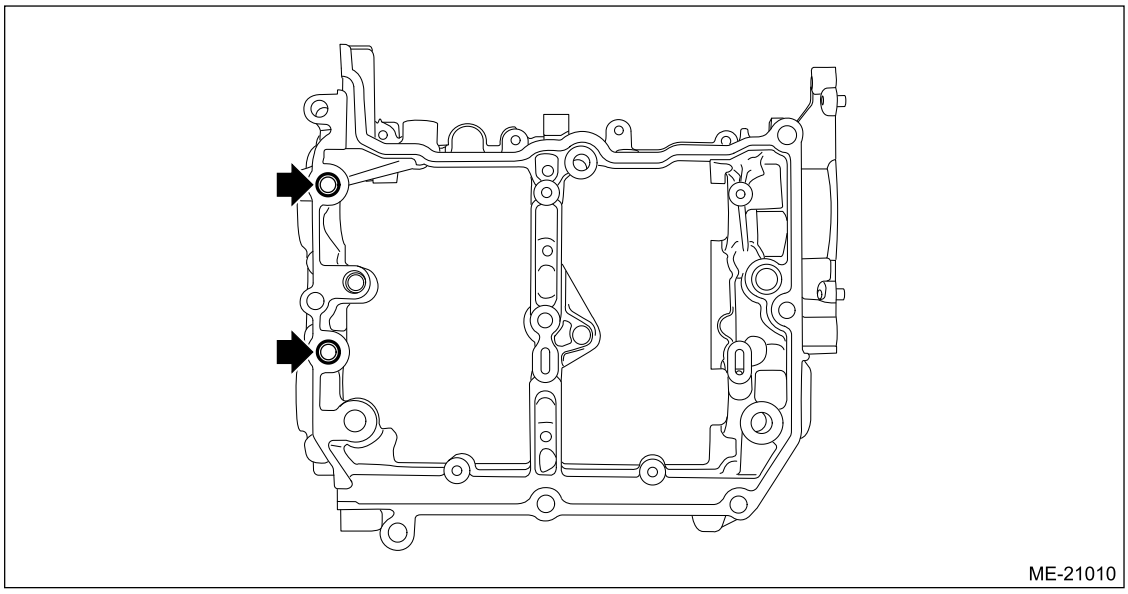


1. Remove the oil spacer from cam carrier RH.



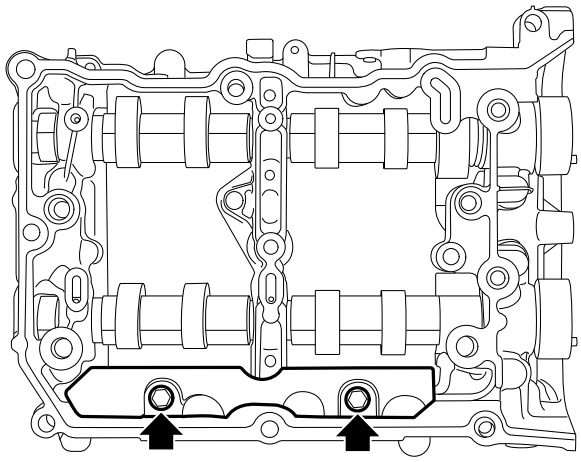
2. Loosen the bolts (front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH, and exhaust rear camshaft cap RH) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.

Note:



Arrange camshaft caps in order so that they can be installed in their original positions.

3. Remove the intake camshaft RH and the exhaust camshaft RH from cam carrier RH.

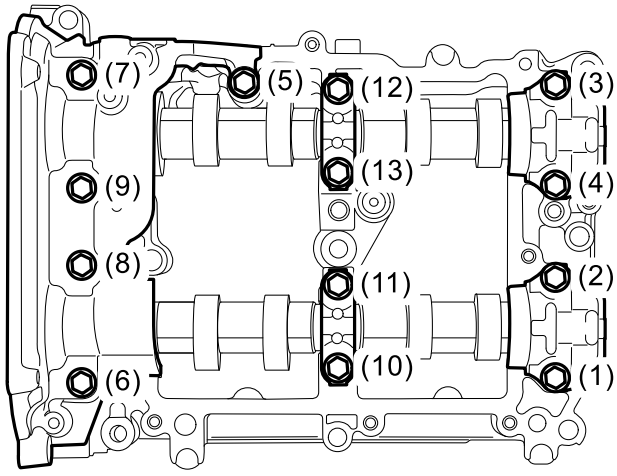


4. Remove the filter from cam carrier RH.

5. Remove the liquid gasket from cam carrier RH and front camshaft cap RH, intake rear camshaft cap RH and exhaust rear camshaft cap RH.

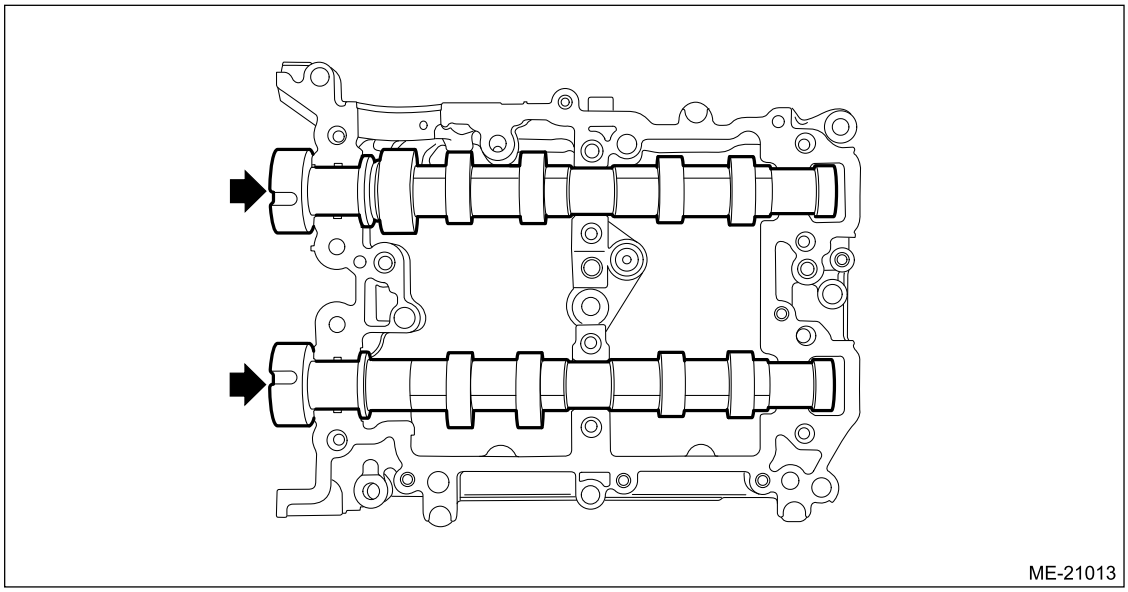
2. CAM CARRIER LH

1. Remove the oil spacer from cam carrier LH.



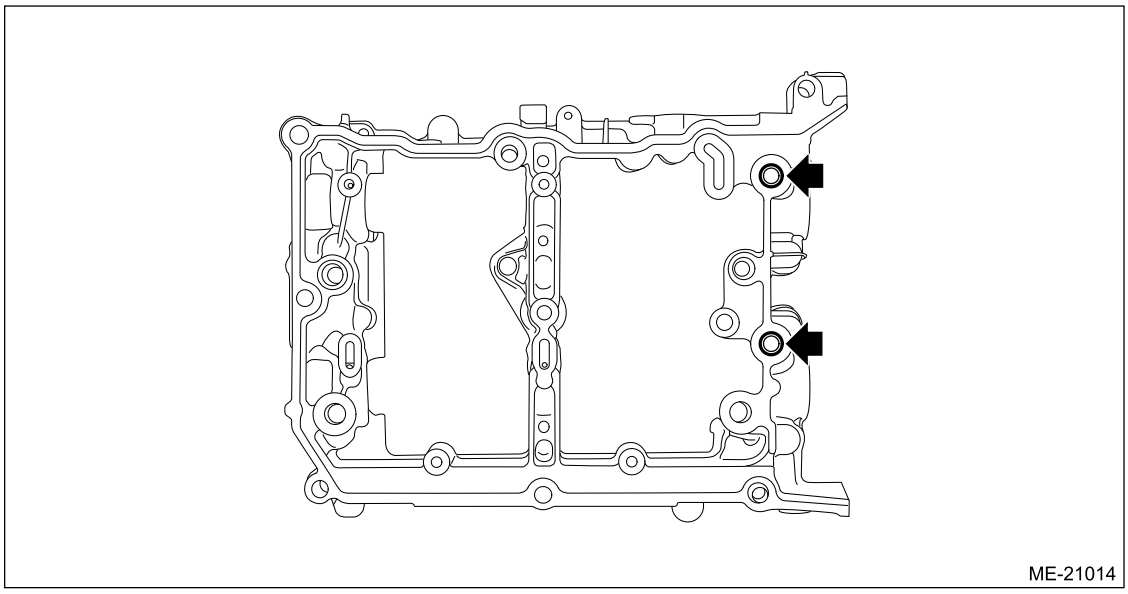
ME-21011

2. Loosen the bolts (front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.



Note:

Arrange camshaft caps in order so that they can be installed in their original positions.



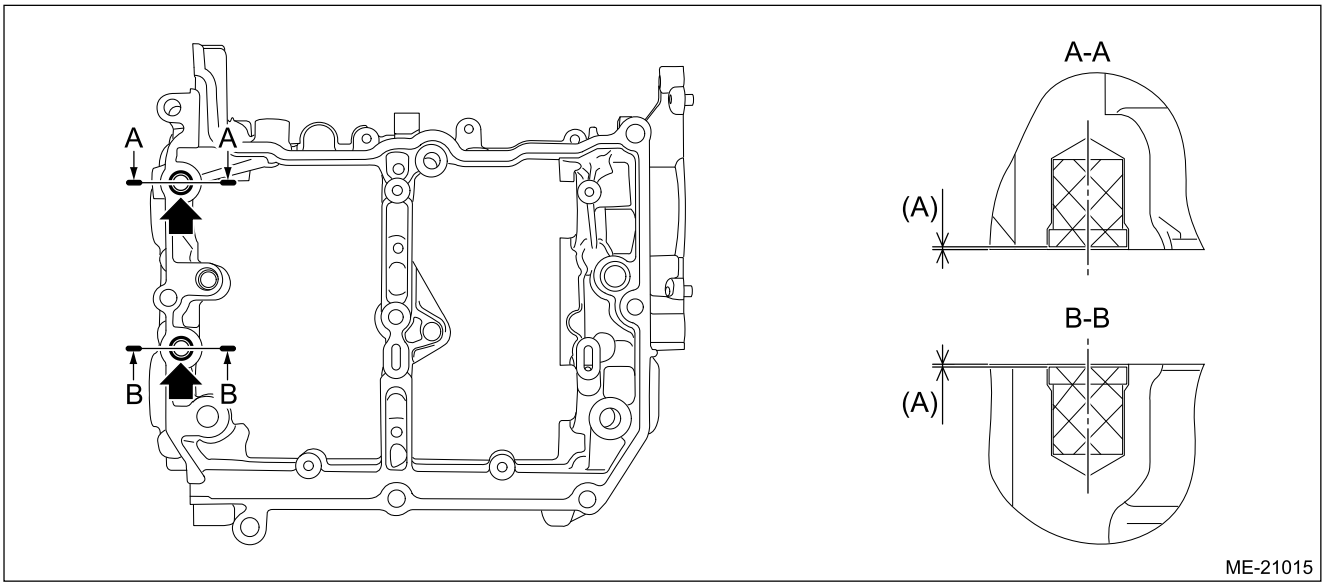
ME-21012

3. Remove the intake camshaft LH and the exhaust camshaft LH from cam carrier LH.

4. Remove the filter from cam carrier LH.

5. Remove the liquid gasket from cam carrier LH and front camshaft cap LH, intake rear camshaft cap LH and exhaust rear camshaft cap LH.

MECHANICAL(H4DO) > Cam Carrier



ASSEMBLY

1. CAM CARRIER RH

1. Install new filter to the cam carrier RH.

Filter insert position:

$0^{+0}_{-0.5}$ mm ($^{+0}_{-0.0197}$ in) position from cam carrier RH end face

(A) 0 — 0.5 mm (0 — 0.0197 in)

2. Set the intake camshaft RH and the exhaust camshaft RH to the cam carrier RH.

Note:

Apply engine oil to the journals of cam carrier RH before setting the intake camshaft RH and exhaust camshaft RH.

3. Install the front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH and exhaust rear camshaft cap RH.

(1) Apply liquid gasket to the mating surface of front camshaft cap RH, intake rear camshaft cap RH and exhaust rear camshaft cap RH as shown in the figure.

Caution:

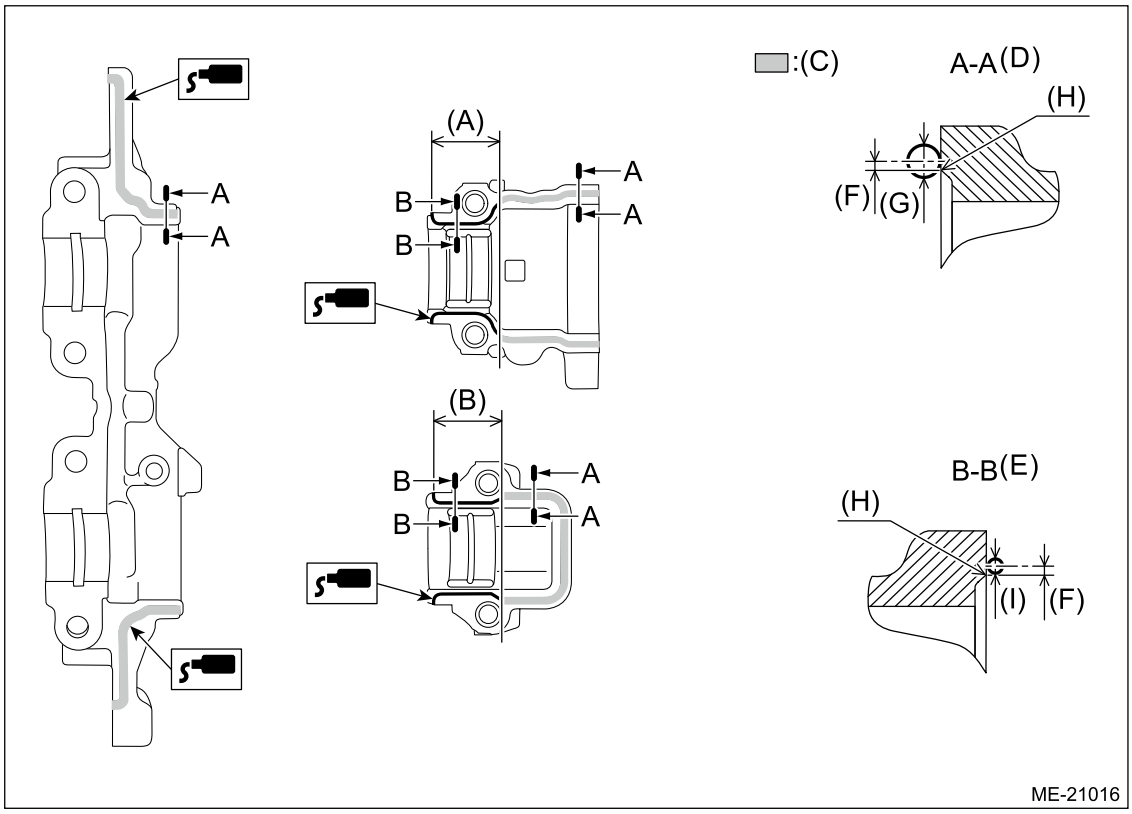
- **Do not apply liquid gasket excessively. Applying excessively may cause excess gasket to flow toward camshaft journal, resulting in engine seizure.**
- **Do not apply liquid gasket excessively to the intake center camshaft cap RH and exhaust center camshaft cap RH.**

Note:

- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the front camshaft cap RH, intake rear camshaft cap RH, exhaust rear camshaft cap RH, and cam carrier RH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent



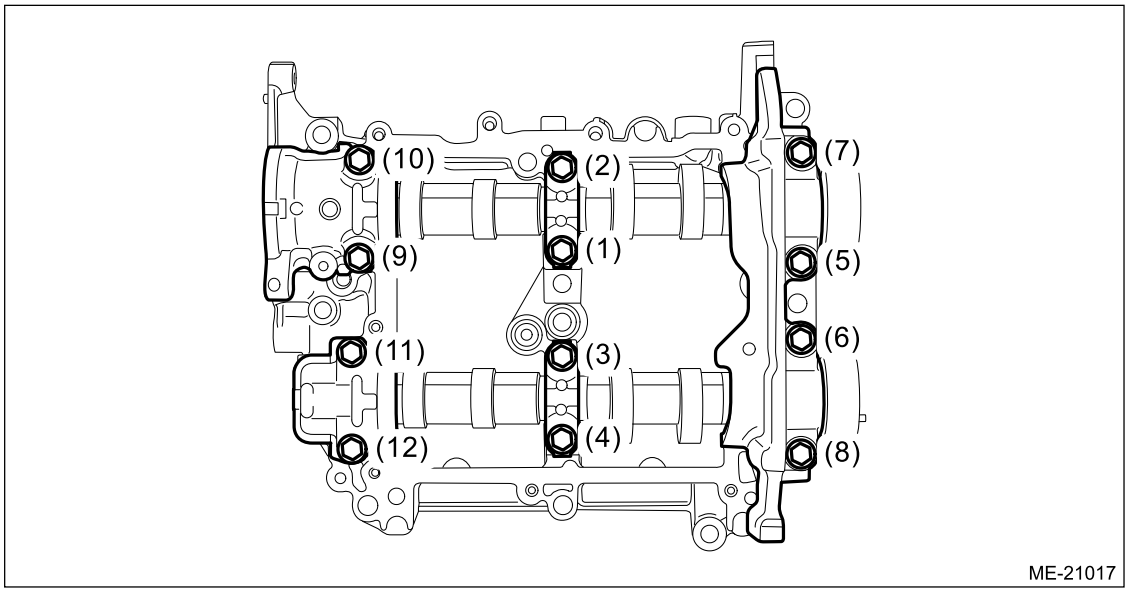
Liquid gasket applying diameter:

Mating surfaces other than range A

2±0.5 mm (0.0787±0.0197 in)

Mating surfaces of range A

3±0.5 mm (0.1181±0.0197 in)

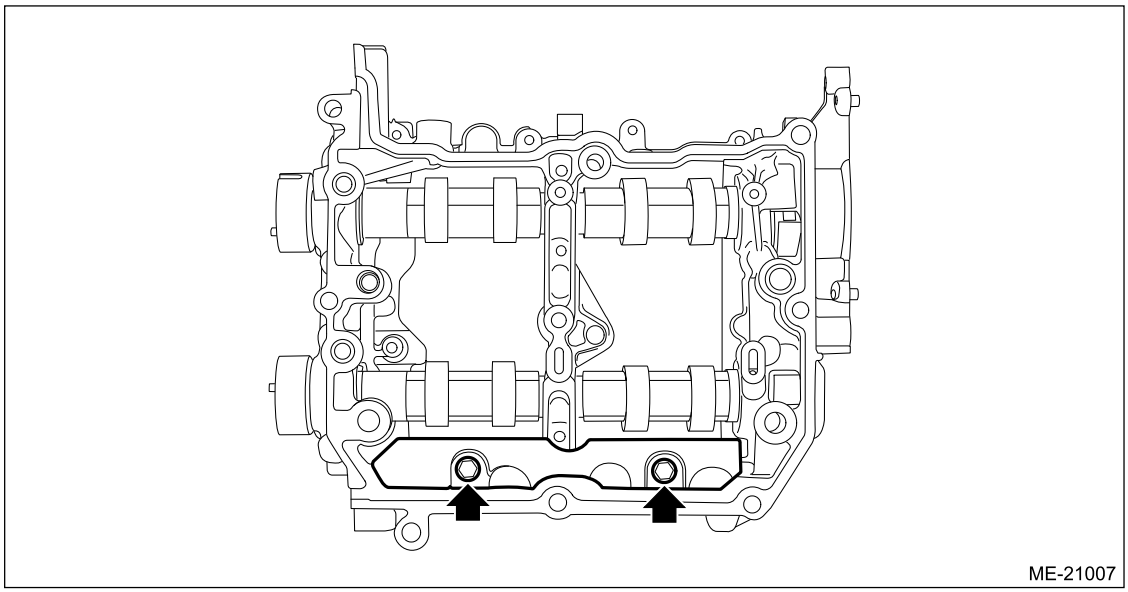


(A) 29 mm (1.1417 in)	(D) Liquid gasket applying position of mating surfaces of range A	(G) ⌀3±0.5 mm (0.1181±0.0197 in)
(B) 28.5 mm (1.1220 in)	(E) Liquid gasket applying position of mating surfaces other than range A	(H) Chamfer edge
(C) Range A	(F) Within 1 mm (0.0394 in)	(I) ⌀2±0.5 mm (0.0787±0.0197 in)

(2) Apply engine oil to the journals of each camshaft cap before setting the camshaft cap.

(3) Tighten the bolts which secure front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH and exhaust rear camshaft cap RH in numerical order as shown in the figure.

Tightening torque:

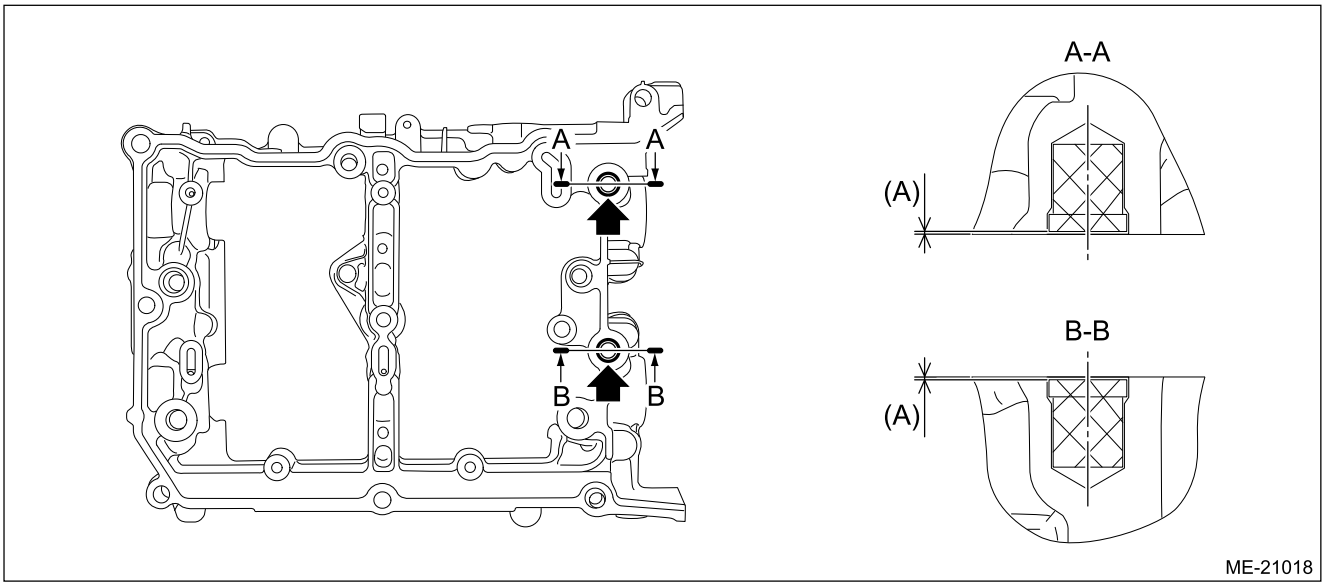


18 N·m (1.8 kgf-m, 13.3 ft-lb)

4. Install the oil spacer to the cam carrier RH.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



2. CAM CARRIER LH

1. Install new filter to the cam carrier LH.

Filter insert position:

$0^{+0}_{-0.5}$ mm ($^{+0}_{-0.0197}$ in) position from cam carrier LH end face

(A) 0 — 0.5 mm (0 — 0.0197 in)

2. Set the intake camshaft LH and the exhaust camshaft LH to the cam carrier LH.

Note:

Apply engine oil to the journals of cam carrier LH before setting the intake camshaft LH and exhaust camshaft LH.

3. Install the front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH.

(1) Apply liquid gasket to the mating surface of front camshaft cap LH, intake rear camshaft cap LH and exhaust rear camshaft cap LH as shown in the figure.

Caution:

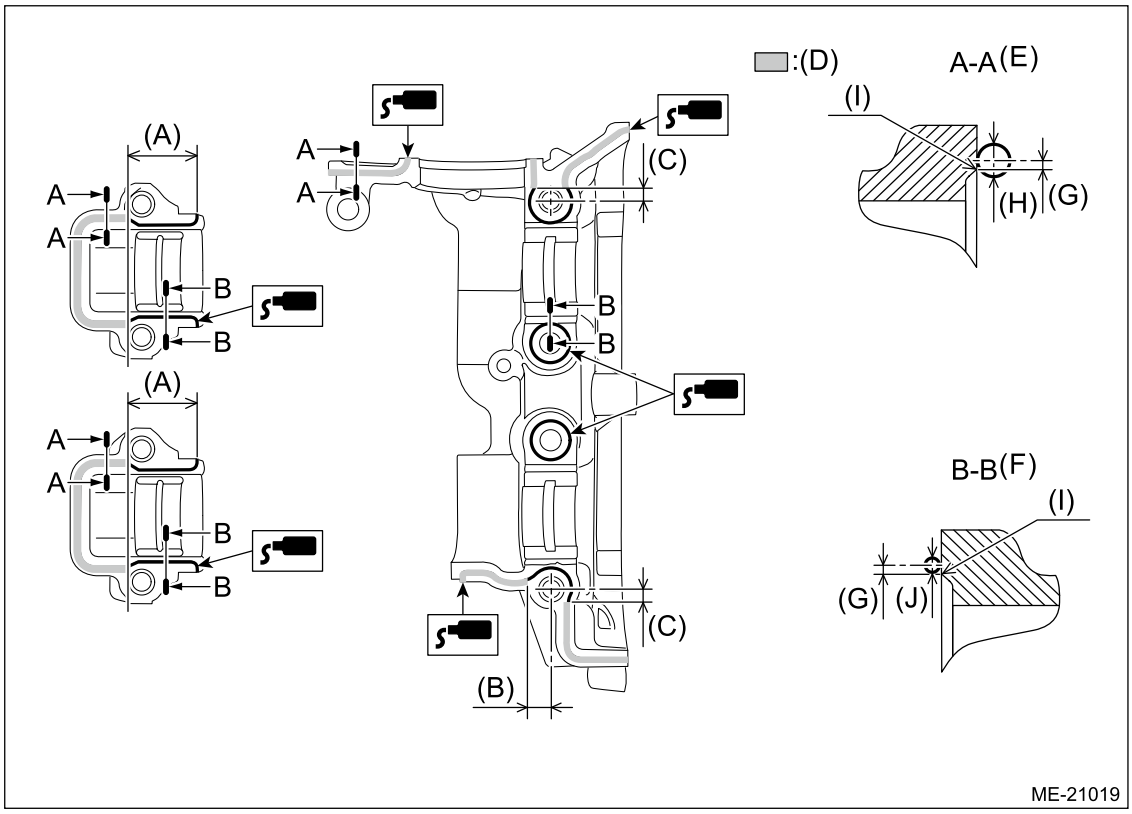
- **Do not apply liquid gasket excessively. Applying excessively may cause excess gasket to flow toward camshaft journal, resulting in engine seizure.**
- **Do not apply liquid gasket excessively to the intake center camshaft cap LH and exhaust center camshaft cap LH.**

Note:

- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the front camshaft cap LH, intake rear camshaft cap LH, exhaust rear camshaft cap LH, and cam carrier LH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent



Liquid gasket applying diameter:

Mating surfaces other than range A

2±0.5 mm (0.0787±0.0197 in)

Mating surfaces of range A

3+0.5 mm (0.1181±0.0197 in)

(A) 28.5 mm (1.1220 in)

(B) 8.5 mm (0.3346 in)

(C) 5.5 mm (0.2165 in)

(D) Range A

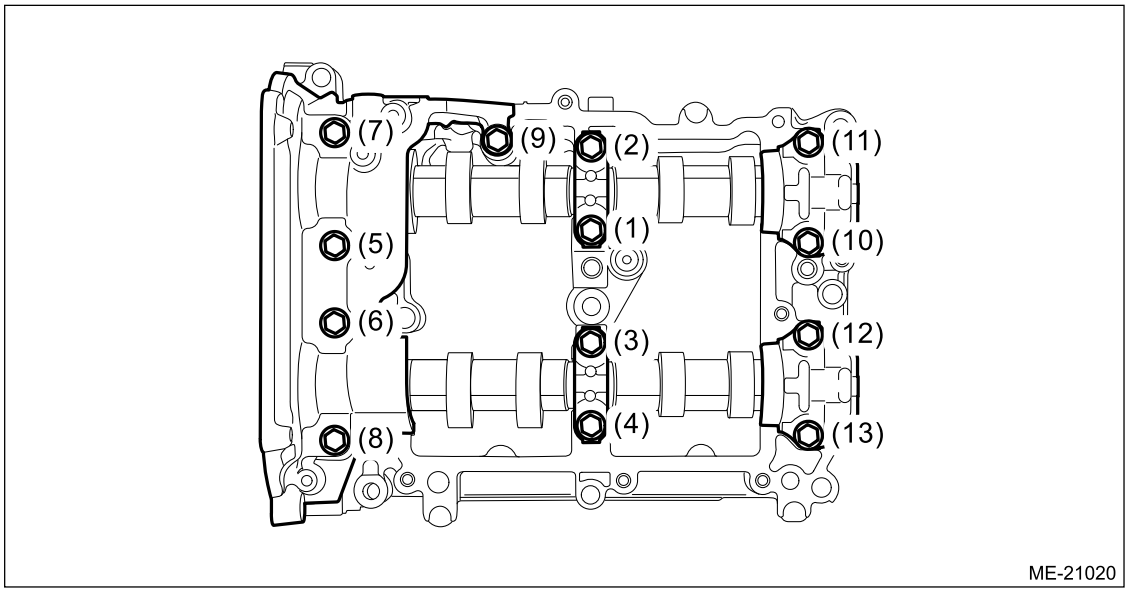
(E) Liquid gasket applying position of mating surfaces of range A

(F) Liquid gasket applying position of mating surfaces other than range A

(G) Within 1 mm (0.0394 in)

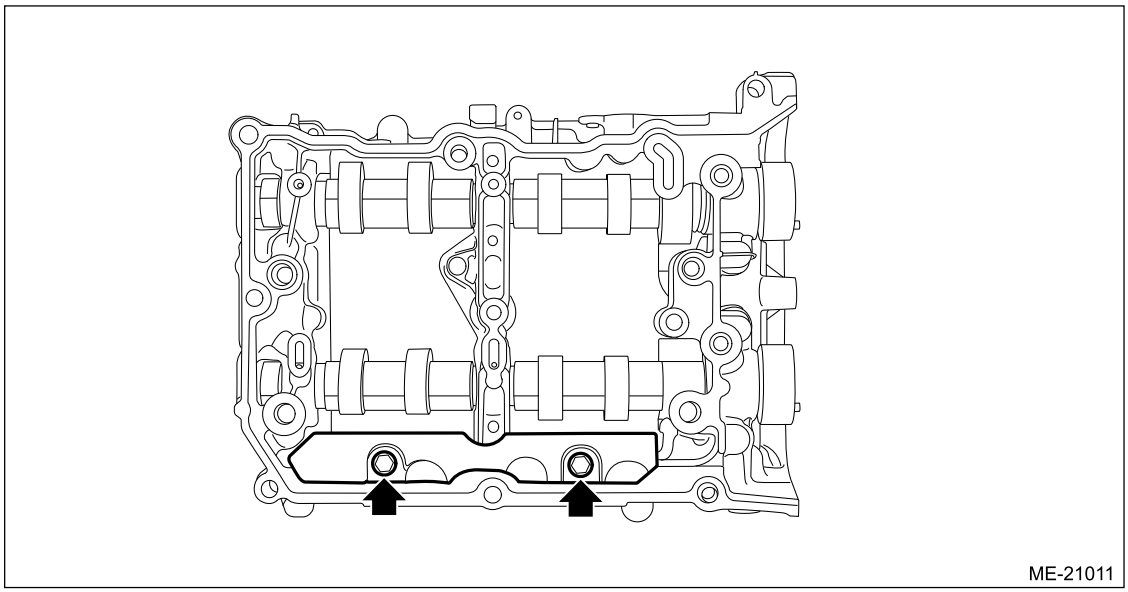
(H) ⌀3±0.5 mm (0.1181±0.0197 in)

(I) Chamfer edge



(J) ⌀2±0.5 mm (0.0787±0.0197 in)

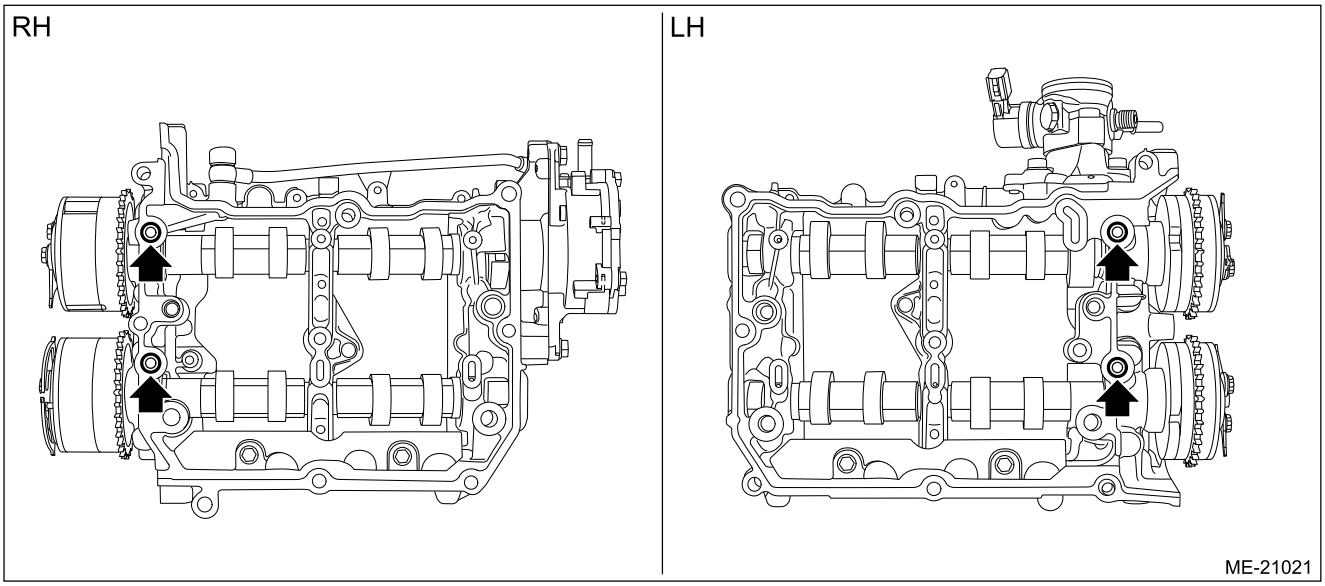
(2) Apply engine oil to the journals of each camshaft cap before setting the camshaft cap.



(3) Tighten the bolts which secure front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH in numerical order as shown in the figure.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)



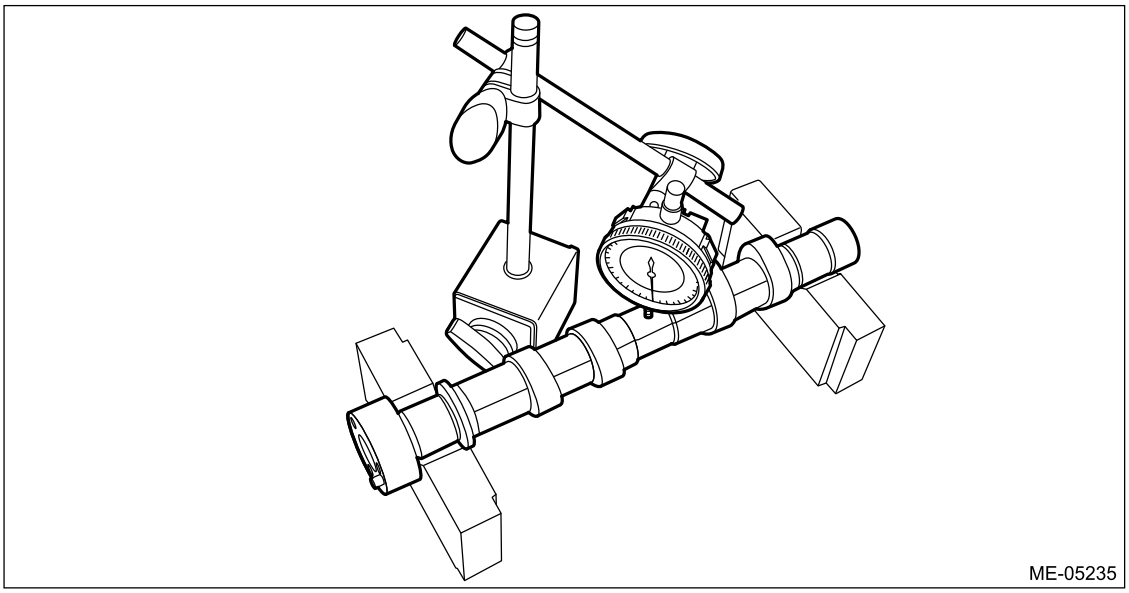
4. Install the oil spacer to the cam carrier LH.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

MECHANICAL(H4DO) > Cam Carrier

INSPECTION

1. Visually check the cam carrier filter, and if clogging is found, replace with a new part.

2. Check the camshaft journals for damage and wear. Replace the camshaft if faulty.
3. Check the cam face condition of camshaft, and remove the minor faults by grinding with oil stone. Replace the camshaft if uneven wear is found.
4. Using a dial gauge, check the camshaft bend. If it exceeds the limit, replace the camshaft.



Note:

Measurement should be performed at a temperature of 20°C (68°F).

Camshaft bend:

Limit

0.020 mm (0.0008 in)

5. Check the cam lobe height “H” and cam base circle diameter “A” of camshaft as shown in the figure, using micrometer. If it is not within the standard, replace the camshaft.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Perform measurement of cam lobe height for fuel pump drive section at two points.**

Camshaft cam lobe overall height H:

Intake

Valve drive section

Standard

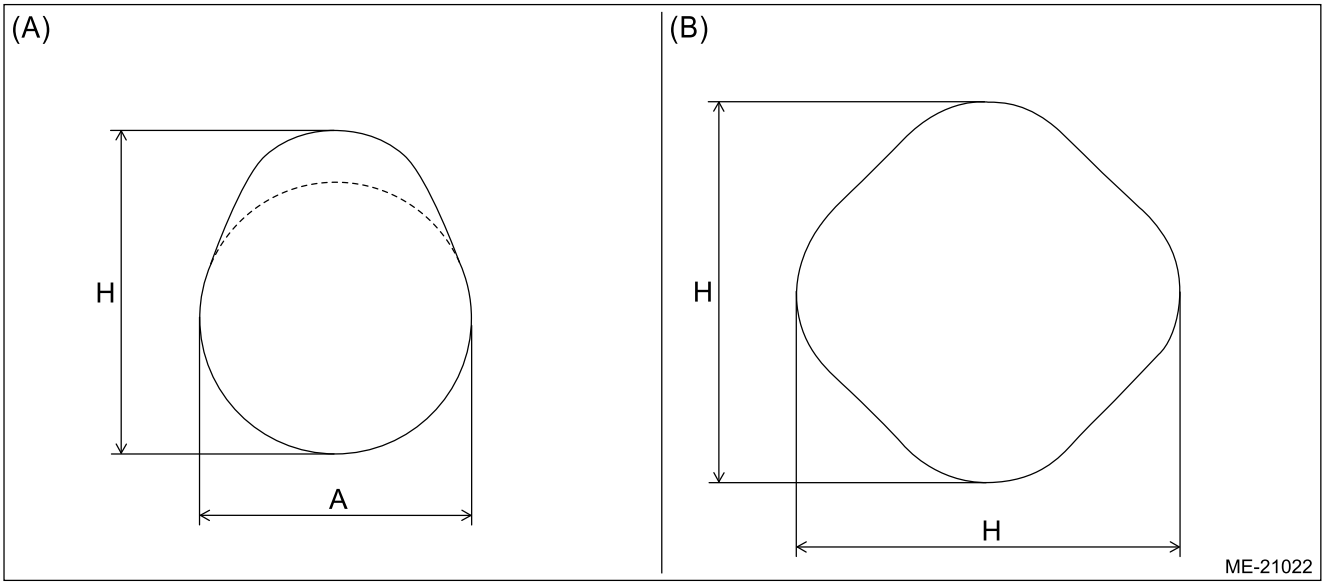
40.34 — 40.44 mm (1.5882 — 1.5921 in)

Fuel pump drive section

Standard

44.35 — 44.45 mm (1.7461 — 1.7500 in)

Exhaust



Standard

39.66 — 39.76 mm (1.5614 — 1.5654 in)

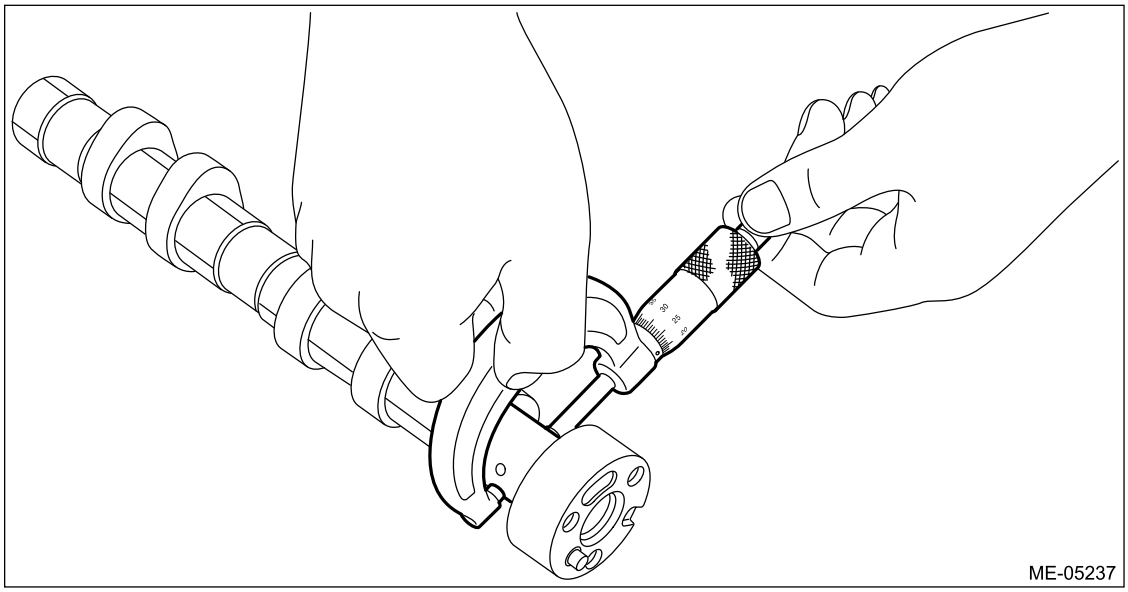
Camshaft cam base circle diameter A:

Standard

34.0 mm (1.3386 in)

(A) Valve drive section (B) Fuel pump drive section

6. Check the camshaft journal outer diameter using micrometer. If it is not within the standard, replace the camshaft.



Note:

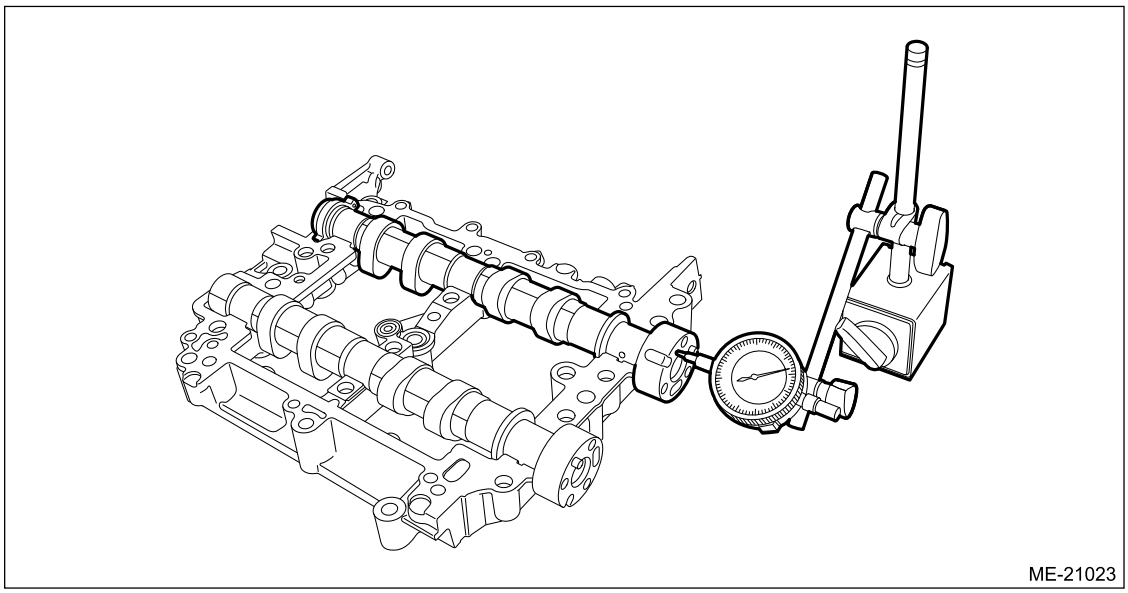
- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure outer diameter of each journal at several points, and read the value of most worn location.**

Camshaft journal outer diameter:

Standard

25.946 — 25.963 mm (1.0215 — 1.0222 in)

7. Using a dial gauge, check the thrust clearance of the camshaft. If it is not within the standard or if uneven wear is found, replace each camshaft cap and cam carrier as a set. If necessary replace the camshaft.



Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Set the dial gauge at end surface of camshaft.**

Camshaft thrust clearance:

Standard

0.068 — 0.116 mm (0.0027 — 0.0047 in)

8. Check the oil clearance on the camshaft using a plastigauge.

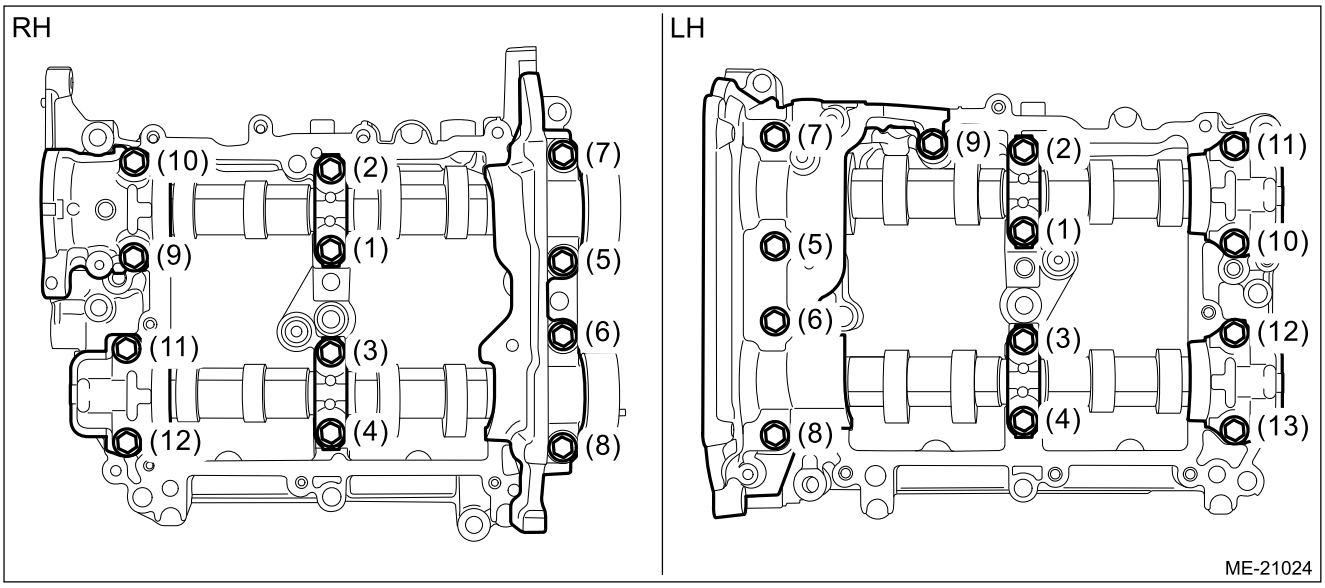
Note:

Measurement should be performed at a temperature of 20°C (68°F).

(1) Remove the liquid gasket from cam carrier and front camshaft cap, intake rear camshaft cap and exhaust rear camshaft cap.

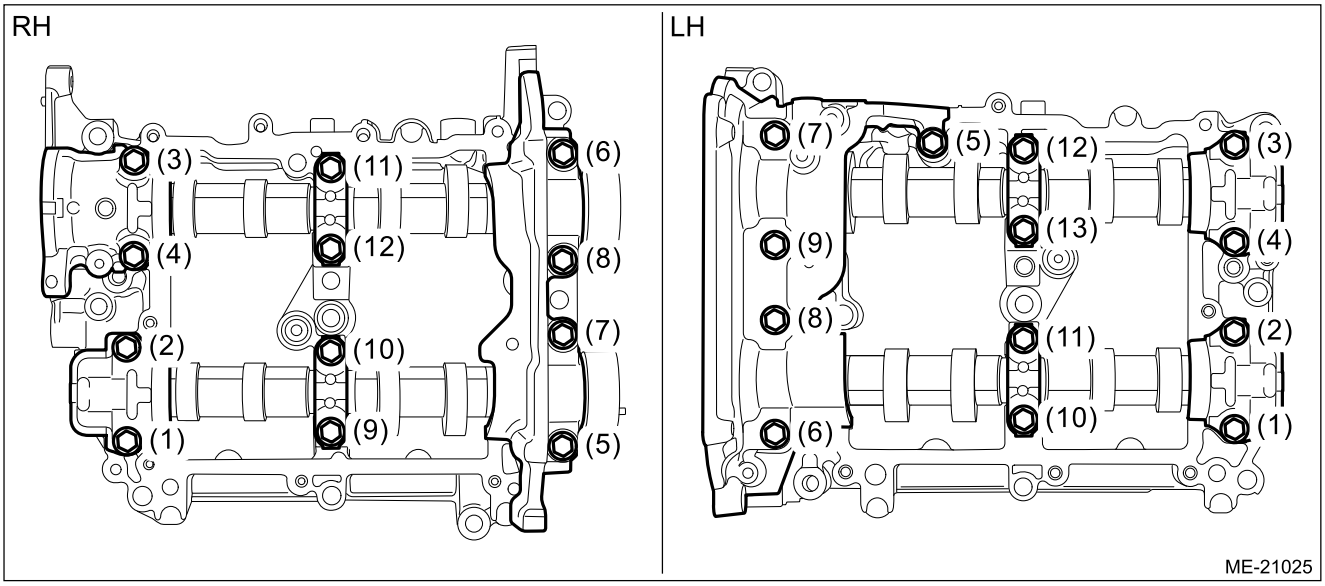
(2) Clean each camshaft cap and cam carrier journals.

(3) Set the camshaft to the cam carrier.



(4) Place a plastigauge across the camshaft journals of each camshaft and set the camshaft caps.

(5) Tighten the bolts which secure front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap in numerical order as

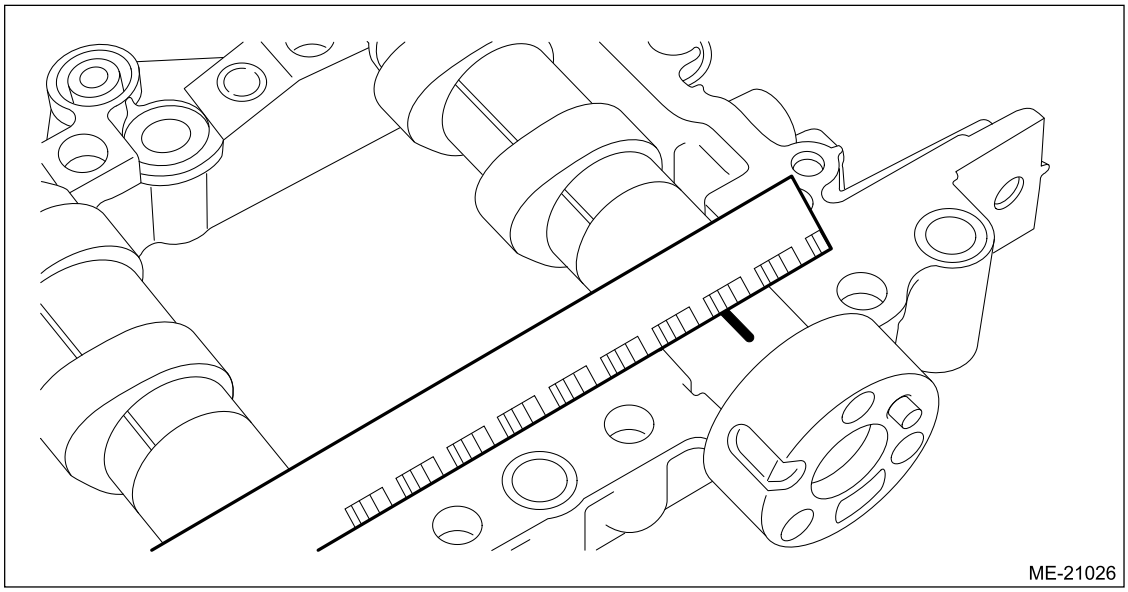


shown in the figure.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

(6) Loosen the bolts (front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.



(7) Determine camshaft oil clearance by matching the widest point of plastigauge on each journal against scale printed on a package of plastigauge. If it is not within the standard, replace each camshaft cap and cam carrier as a set. If necessary replace the camshaft.

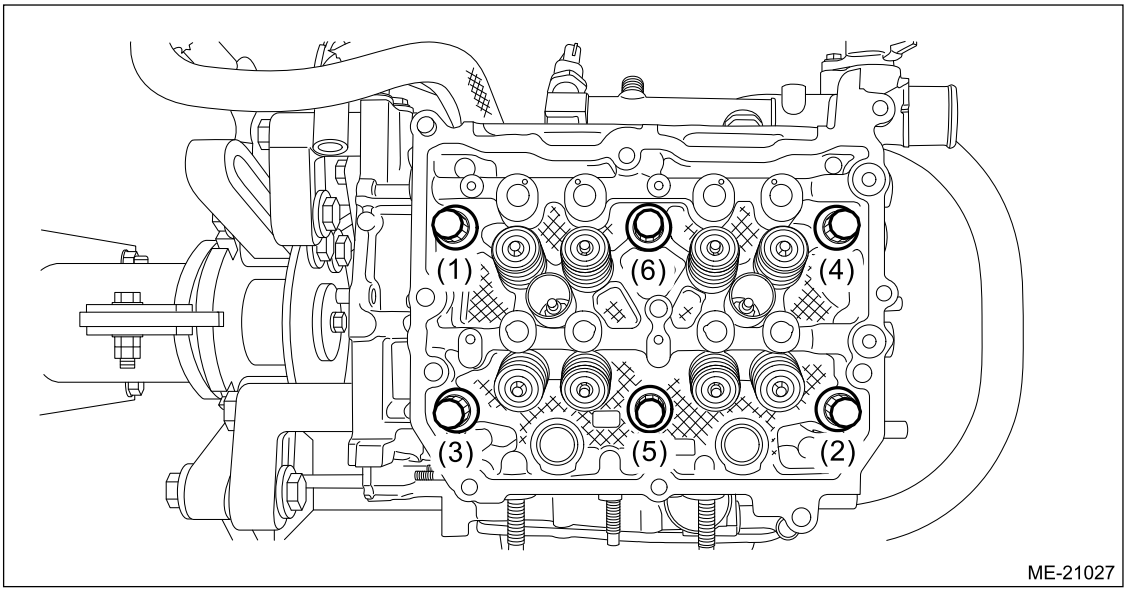
Camshaft oil clearance:

Standard

0.037 — 0.072 mm (0.0015 — 0.0028 in)

(8) Completely remove the plastigauge.

REMOVAL



1. CYLINDER HEAD RH

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
3. Remove the engine wiring harness. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Wiring Harness>REMOVAL.
4. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
5. Remove the rocker cover RH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL > ROCKER COVER RH.
6. Remove the cam carrier RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL > CAM CARRIER RH.
7. Remove the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.
8. Remove the EGR cooler. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Cooler>REMOVAL.
9. When disassembling the cylinder head RH

   Note:

   When disassembling the cylinder head RH, perform the following steps also.

   (1) Remove the fuel injector RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>REMOVAL > FUEL INJECTOR RH.
10. Set the part so that the cylinder head RH is on the upper side.
11. Loosen the bolts securing the cylinder head RH equally, a little at a time in numerical sequence as shown in the figure and remove the cylinder head bolt.

12. While tapping the cylinder head RH with a plastic hammer, separate to remove it from the cylinder block RH.
13. Remove the cylinder head gasket RH.

    Caution:

    Be careful not to scratch the mating surface of cylinder head and cylinder block.
14. Remove the water jacket spacer from the cylinder block RH.

15. Remove the liquid gasket from the cylinder head RH and cylinder block RH.

2. CYLINDER HEAD LH

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.

2. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.

3. Remove the engine wiring harness. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Wiring Harness>REMOVAL.

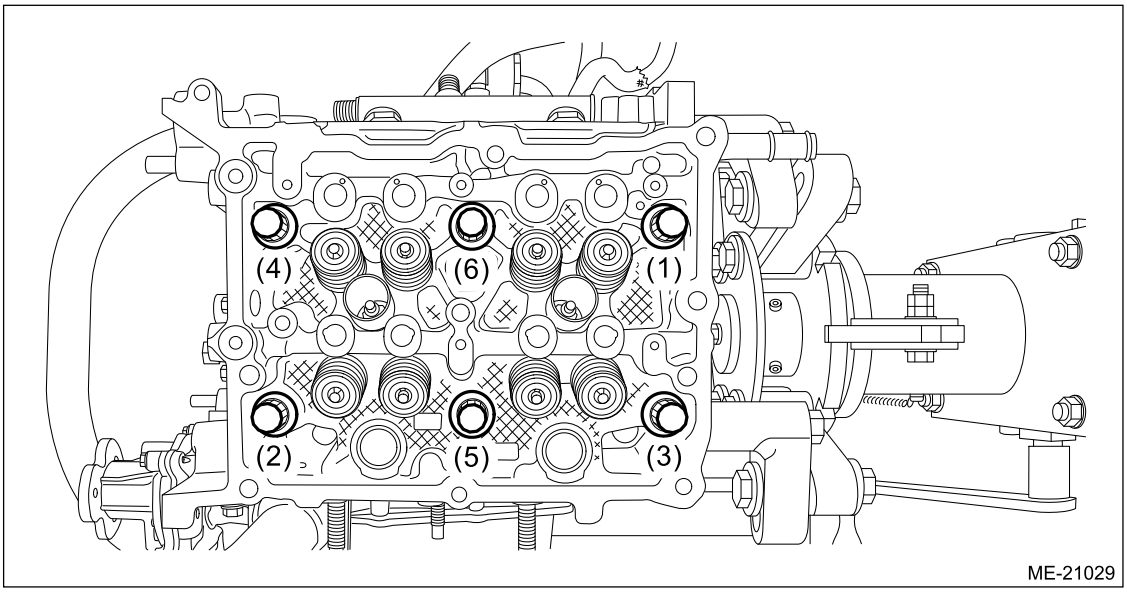
4. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.

5. Remove the rocker cover LH. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL > ROCKER COVER LH.

6. Remove the cam carrier LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL > CAM CARRIER LH.

7. Remove the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>REMOVAL > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.

8. When disassembling the cylinder head LH



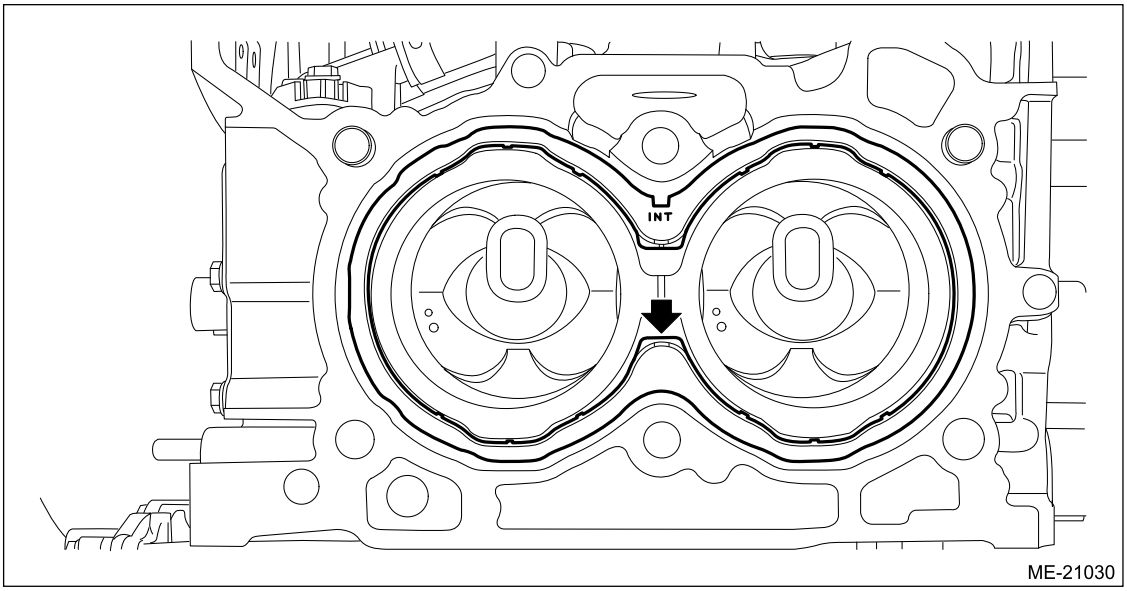
Note:

When disassembling the cylinder head LH, perform the following steps also.

(1) Remove the fuel injector LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>REMOVAL > FUEL INJECTOR LH.

9. Set the part so that the cylinder head LH is on the upper side.

10. Loosen the bolts securing the cylinder head LH equally, a little at a time in numerical sequence as shown in the figure and remove the cylinder head bolt.



11. While tapping the cylinder head LH with a plastic hammer, separate to remove it from the cylinder block LH.

12. Remove the cylinder head gasket LH.

Caution:

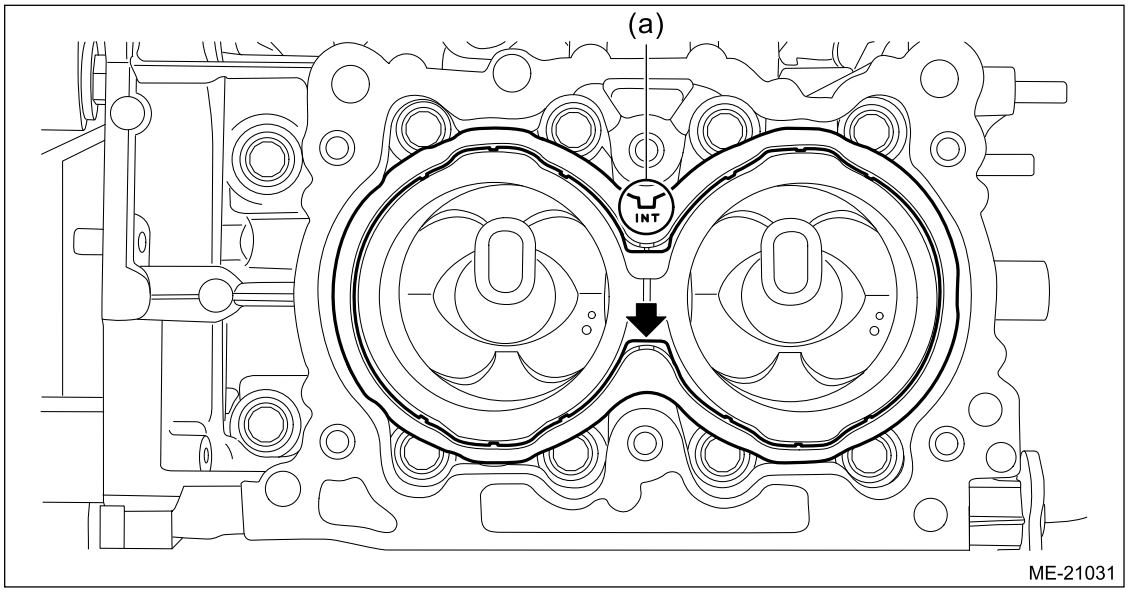
Be careful not to scratch the mating surface of cylinder head and cylinder block.

13. Remove the water jacket spacer from the cylinder block LH.

14. Remove the liquid gasket from cylinder head LH and cylinder block LH.

MECHANICAL(H4DO) > Cylinder Head

INSTALLATION



1. CYLINDER HEAD RH

1. Set the part so that the cylinder block RH is on the upper side.

2. Install the water jacket spacer to the cylinder block RH.

Note:

When installing a water jacket spacer, make sure that the notch (a) comes to the intake side.

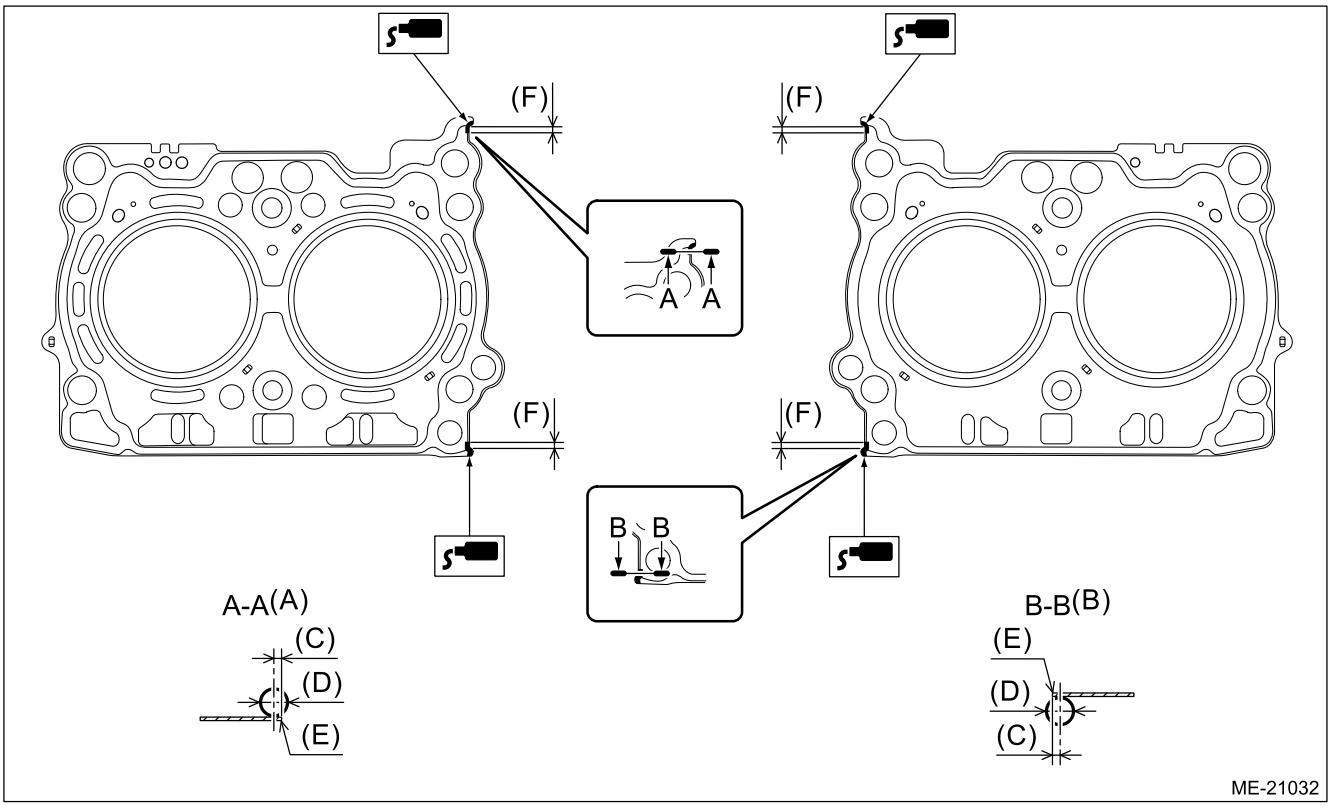
3. Clean the bolt holes in the cylinder block RH.

Caution:

To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant etc.

4. Apply liquid gasket to both sides of new cylinder head gasket RH as shown in the figure.

Note:



- **Before applying liquid gasket, degrease the mating surface of cylinder blocks RH and cylinder head RH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

3±1 mm (0.1181±0.0394 in)

(A) Liquid gasket applying position to the cylinder head side

(B) Liquid gasket applying position to the cylinder block side

(C) Within 1 mm (0.0394 in)

(D) ⌀3±1 mm (0.1181±0.0394 in)

(E) Cylinder head gasket edge

(F) Overlap margin of bead end and liquid gasket: 3 — 10 mm (0.1181 — 0.3937 in)

5. Attach the cylinder head gasket RH.

Note:

Check that liquid gasket RH is squeezed out from the cylinder head gasket.

6. Install the cylinder head RH to the cylinder block RH.

Caution:

Be careful not to scratch the mating surface of cylinder head RH and cylinder block RH.

(1) Clean the cylinder head bolt threads and apply sufficient engine oil to the washer and cylinder head bolts threads.

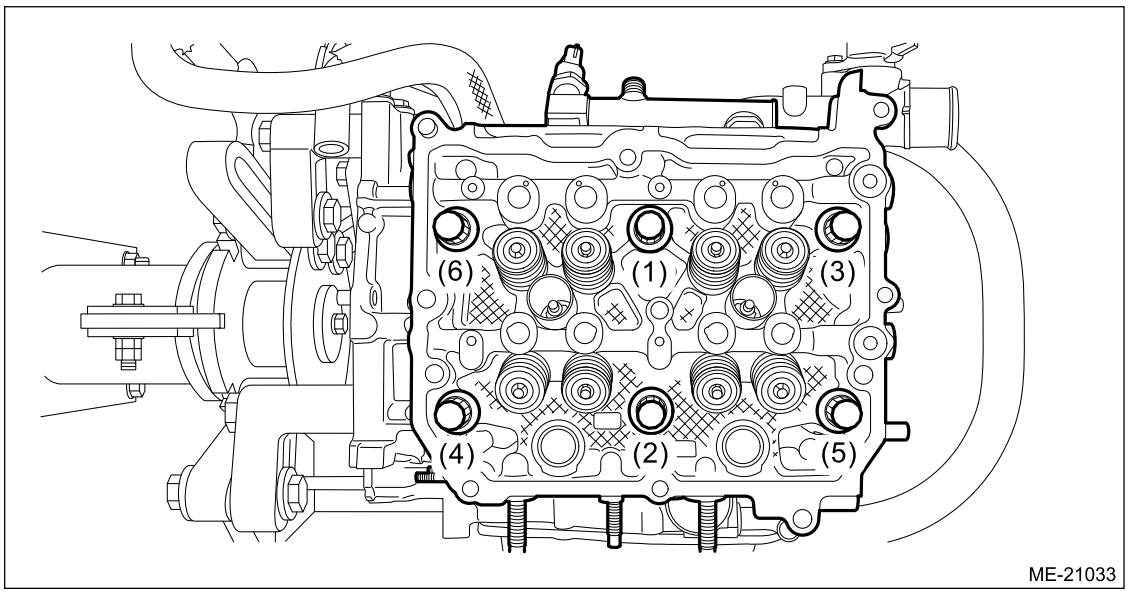
(2) Mount the cylinder head RH onto the cylinder block RH, and tighten all cylinder head bolts with a torque of 29 N·m (3.0 kgf-m, 21.4 ft-lb) in numerical order as shown in the figure.

(3) Tighten all cylinder head bolts further with a torque of 100 N·m (10.2 kgf-m, 73.8 ft-lb) in numerical order as shown in the figure.

Caution:

If the bolt makes stick-slip sound during tightening, repeat the procedure from step 3). In that case, the cylinder head gasket RH can be reused. But it is necessary to remove liquid gasket completely from cylinder block RH, cylinder head RH and cylinder head gasket RH and re-apply to them.

(4) Loosen all cylinder head bolts by 180° in the reverse order of tightening in step (3).



(5) Once again, loosen all cylinder head bolts by 180° in the reverse order of tightening in step (3).

(6) Tighten all cylinder head bolts with a torque of 42 N·m (4.3 kgf-m, 31.0 ft-lb) in numerical order as shown in the figure.

(7) Using an angle gauge, tighten all cylinder head bolts by 78° — 82° in numerical order as shown in the figure.

(8) Using an angle gauge, tighten the cylinder head bolts (2 places) by 73° — 77° in the order of (1) →(2) as shown in the figure.

(9) Using an angle gauge, tighten the cylinder head bolts (4 places) by 28° — 32° in the order of (3) → (4) → (5) → (6) as shown in the figure.

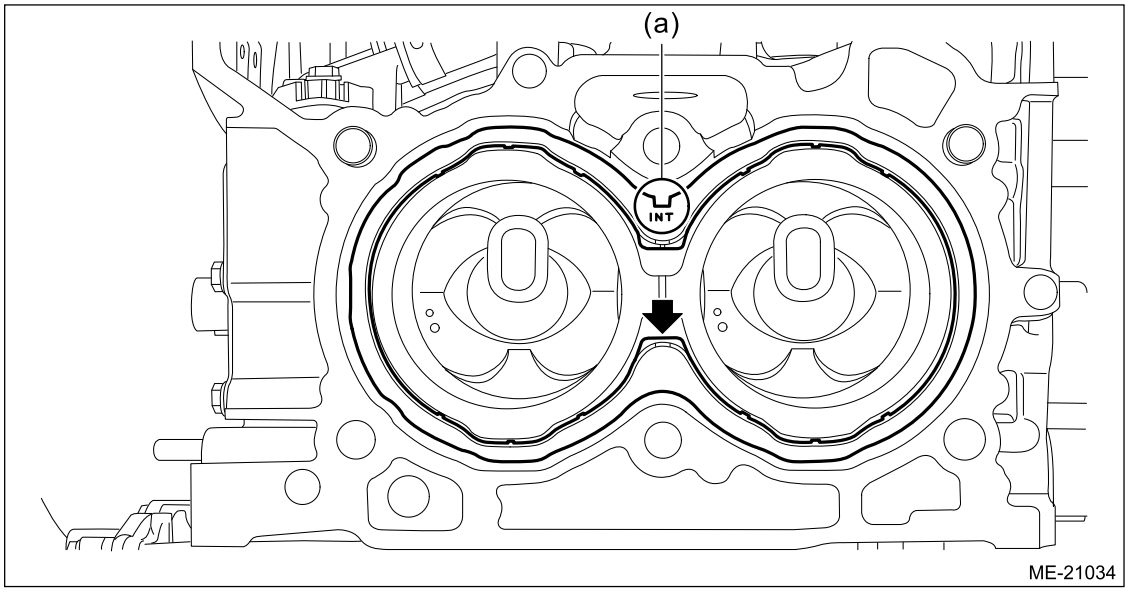
7. Set the part so that the installation surface of the intake manifold is on the upper side.

8. When the cylinder head RH has been disassembled

Note:

When the cylinder head RH has been disassembled, perform the following steps also.

(1) Install the fuel injector RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSTALLATION > FUEL INJECTOR RH.



9. Install the EGR cooler. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>EGR Cooler>INSTALLATION.
10. Install the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.
11. Install the cam carrier RH. Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION > CAM CARRIER RH.
12. Install the rocker cover RH. Ref. to MECHANICAL(H4DO)>Rocker Cover>INSTALLATION > ROCKER COVER RH.
13. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.
14. Install the engine wiring harness. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Wiring Harness>INSTALLATION.
15. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.
16. Install the engine to the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>INSTALLATION.

2. CYLINDER HEAD LH

1. Set the part so that the cylinder block LH is on the upper side.
2. Install the water jacket spacer to the cylinder block LH.

Note:

When installing a water jacket spacer, make sure that the notch (a) comes to the intake side.

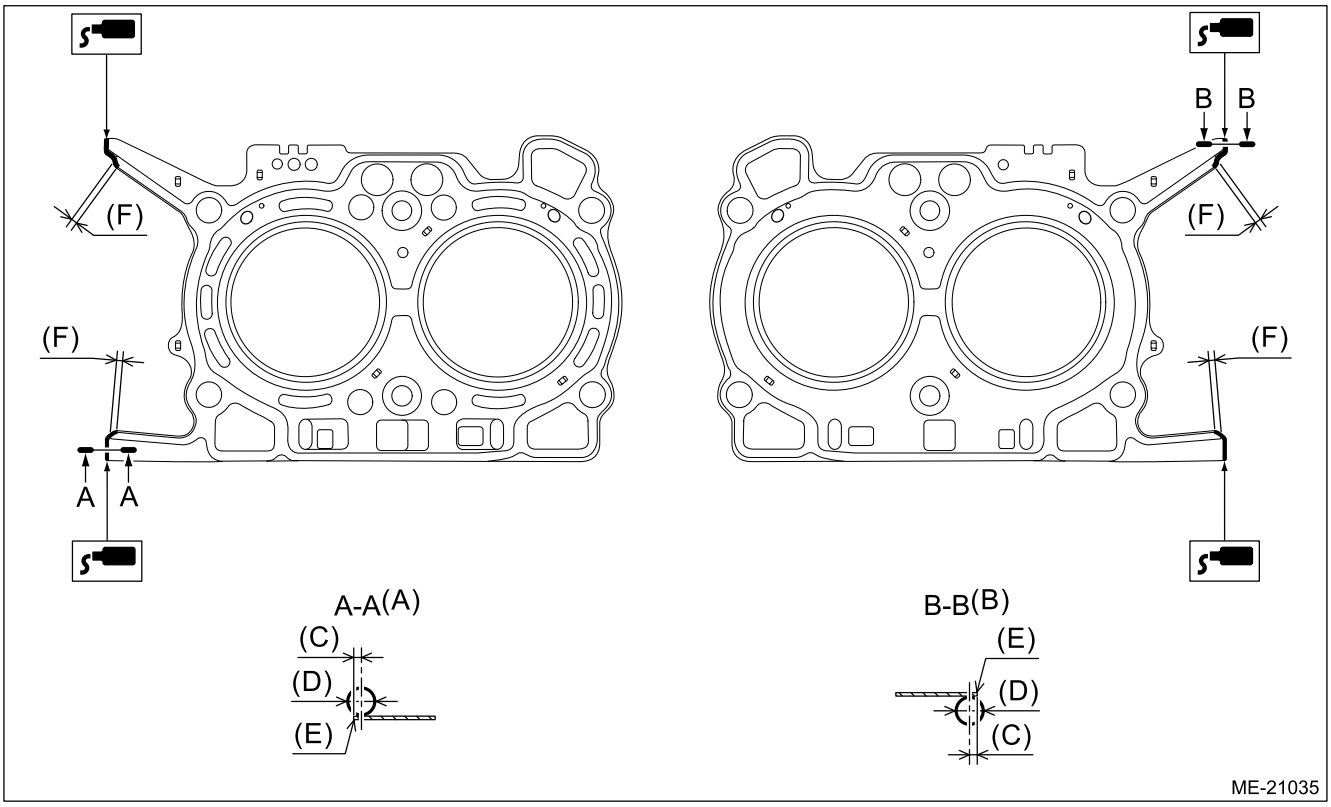
3. Clean the bolt holes in the cylinder block LH.

Caution:

To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant etc.

4. Apply liquid gasket to both sides of new cylinder head gasket LH as shown in the figure.

Note:



- **Before applying liquid gasket, degrease the mating surface of cylinder blocks LH and cylinder head LH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

3±1 mm (0.1181±0.0394 in)

(A) Liquid gasket applying position to the cylinder head side

(B) Liquid gasket applying position to the cylinder block side

(C) Within 1 mm (0.0394 in)

(D) ⌀3±1 mm (0.1181±0.0394 in)

(E) Cylinder head gasket edge

(F) Overlap margin of bead end and liquid gasket: 3 — 10 mm (0.1181 — 0.3937 in)

5. Attach the cylinder head gasket LH.

Note:

Check that liquid gasket is squeezed out from the cylinder head gasket LH.

6. Install the cylinder head LH to the cylinder block LH.

Caution:

Be careful not to scratch the mating surface of cylinder head LH and cylinder block LH.

(1) Clean the cylinder head bolt threads and apply sufficient engine oil to the washer and cylinder head bolts threads.

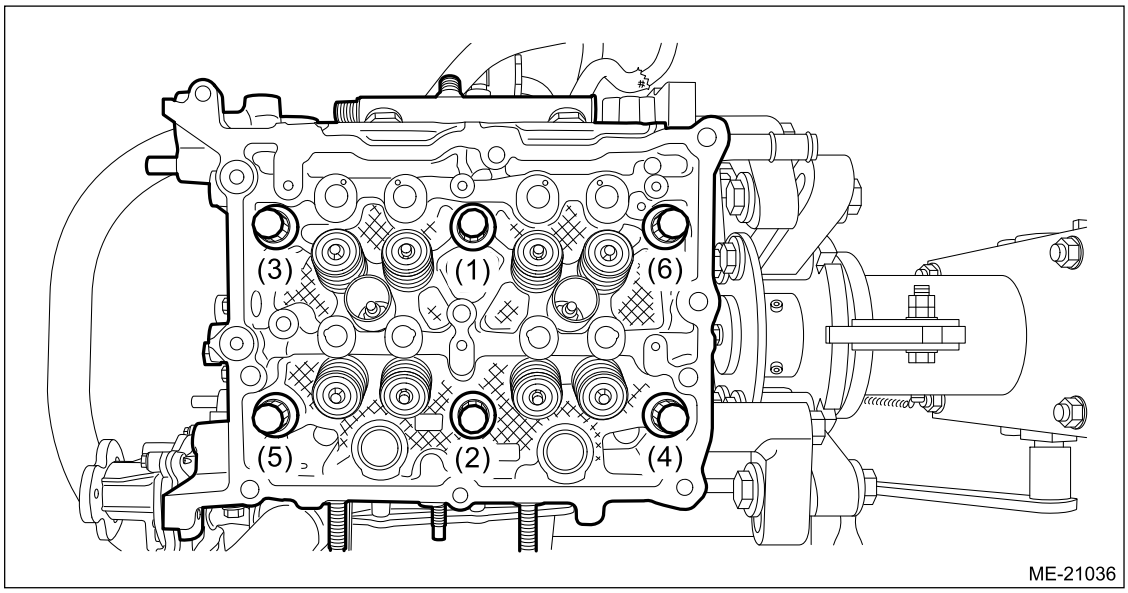
(2) Mount the cylinder head LH onto the cylinder block LH, and tighten all cylinder head bolts with a torque of 29 N·m (3.0 kgf-m, 21.4 ft-lb) in numerical order as shown in the figure.

(3) Tighten all cylinder head bolts further with a torque of 100 N·m (10.2 kgf-m, 73.8 ft-lb) in numerical order as shown in the figure.

Caution:

If the bolt makes stick-slip sound during tightening, repeat the procedure from step 3). In that case, the cylinder head gasket LH can be reused. But it is necessary to remove liquid gasket completely from cylinder block LH, cylinder head LH and cylinder head gasket LH and re-apply to them.

(4) Loosen all cylinder head bolts by 180° in the reverse order of tightening in step (3).



(5) Once again, loosen all cylinder head bolts by 180° in the reverse order of tightening in step (3).

(6) Tighten all cylinder head bolts with a torque of 42 N·m (4.3 kgf-m, 31.0 ft-lb) in numerical order as shown in the figure.

(7) Using an angle gauge, tighten all cylinder head bolts by 78° — 82° in numerical order as shown in the figure.

(8) Using an angle gauge, tighten the cylinder head bolts (2 places) by 73° — 77° in the order of (1) →(2) as shown in the figure.

(9) Using an angle gauge, tighten the cylinder head bolts (4 places) by 28° — 32° in the order of (3) → (4) → (5) → (6) as shown in the figure.

7. Set the part so that the installation surface of the intake manifold is on the upper side.

8. When the cylinder head LH has been disassembled

Note:

When the cylinder head LH has been disassembled, perform the following steps also.

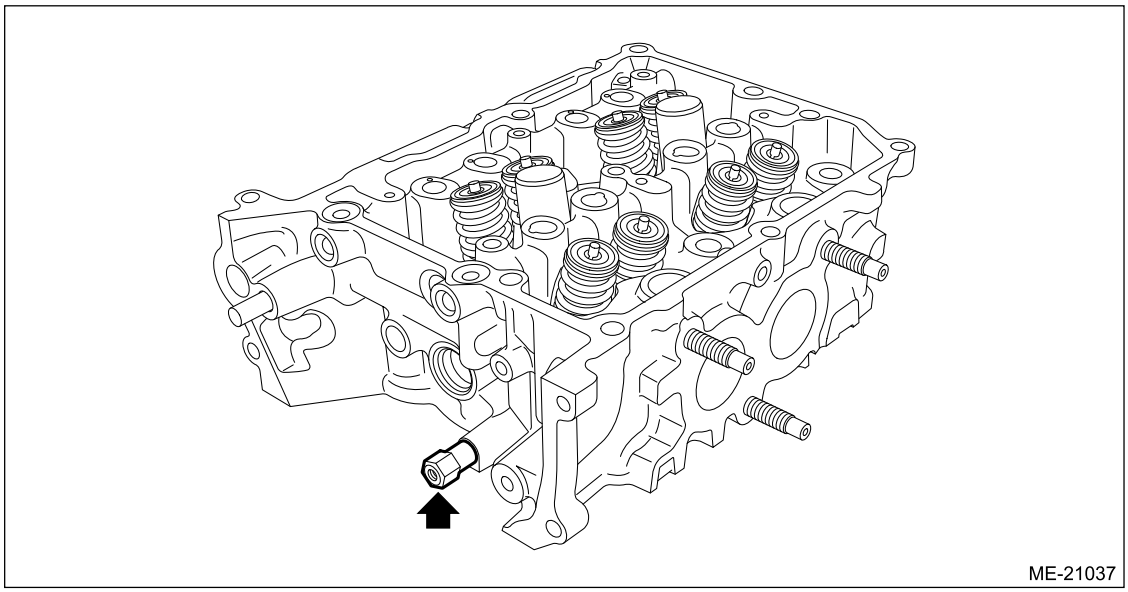
(1) Install the fuel injector LH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Injector>INSTALLATION > FUEL INJECTOR LH.

9. Install the high-pressure fuel delivery pipe assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>High Pressure Fuel Delivery Pipe>INSTALLATION > HIGH-PRESSURE FUEL DELIVERY PIPE ASSEMBLY.

10. Install the cam carrier LH. Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION > CAM CARRIER LH.

11. Install the rocker cover LH. Ref. to MECHANICAL(H4DO)>Rocker Cover>INSTALLATION > ROCKER COVER LH.

12. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.

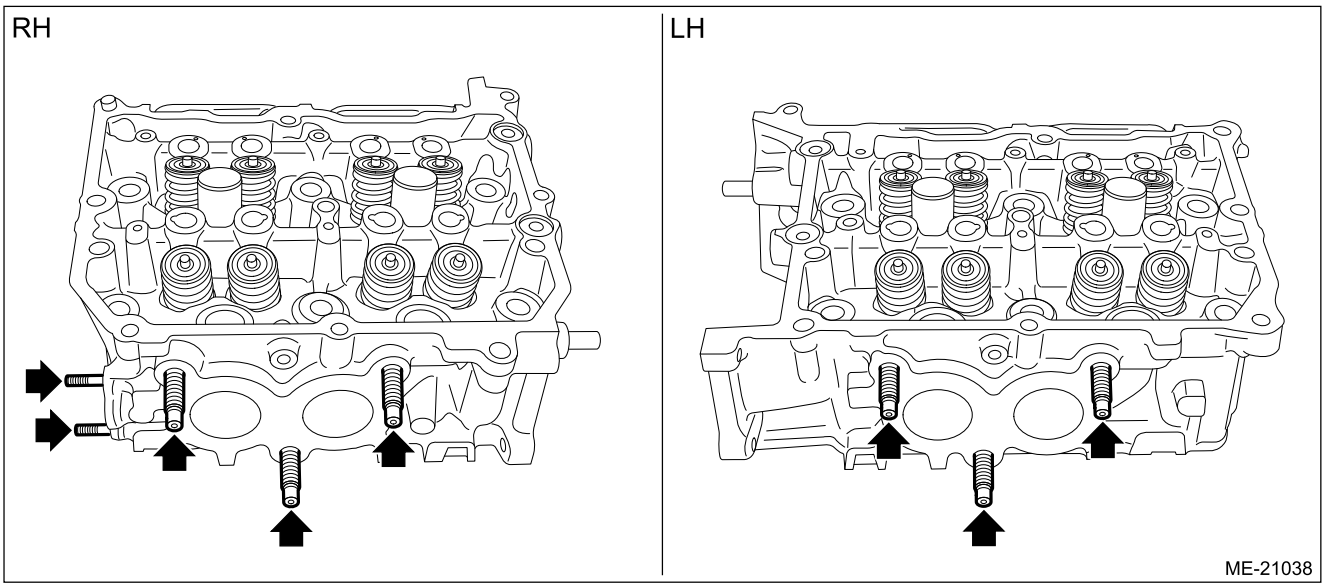


13. Install the engine wiring harness. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Wiring Harness>INSTALLATION.

14. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.

15. Install the engine to the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>INSTALLATION.

DISASSEMBLY



1. Remove the chain cover securing bolt from the cylinder head LH.

2. Remove the stud bolts from the cylinder head.

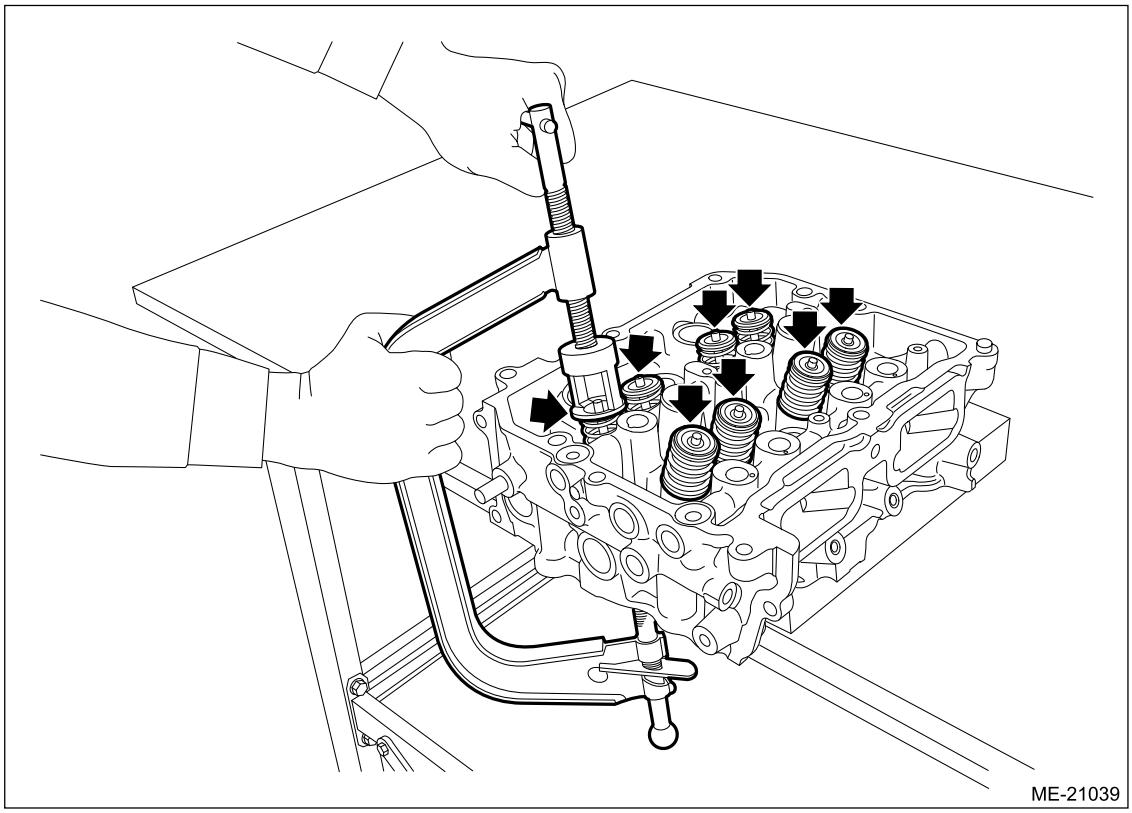
Note:

Remove if necessary.

3. Remove the valve collet, valve, valve spring retainer, valve spring and valve spring seat from the cylinder head RH.

Warning:

Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and thus prone to serious chemical reaction. When handling or disposing of the valve, be sure to confirm "DISPOSAL". Ref. to MECHANICAL(H4DO)>Cylinder Head>DISPOSAL.



Caution:

During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.

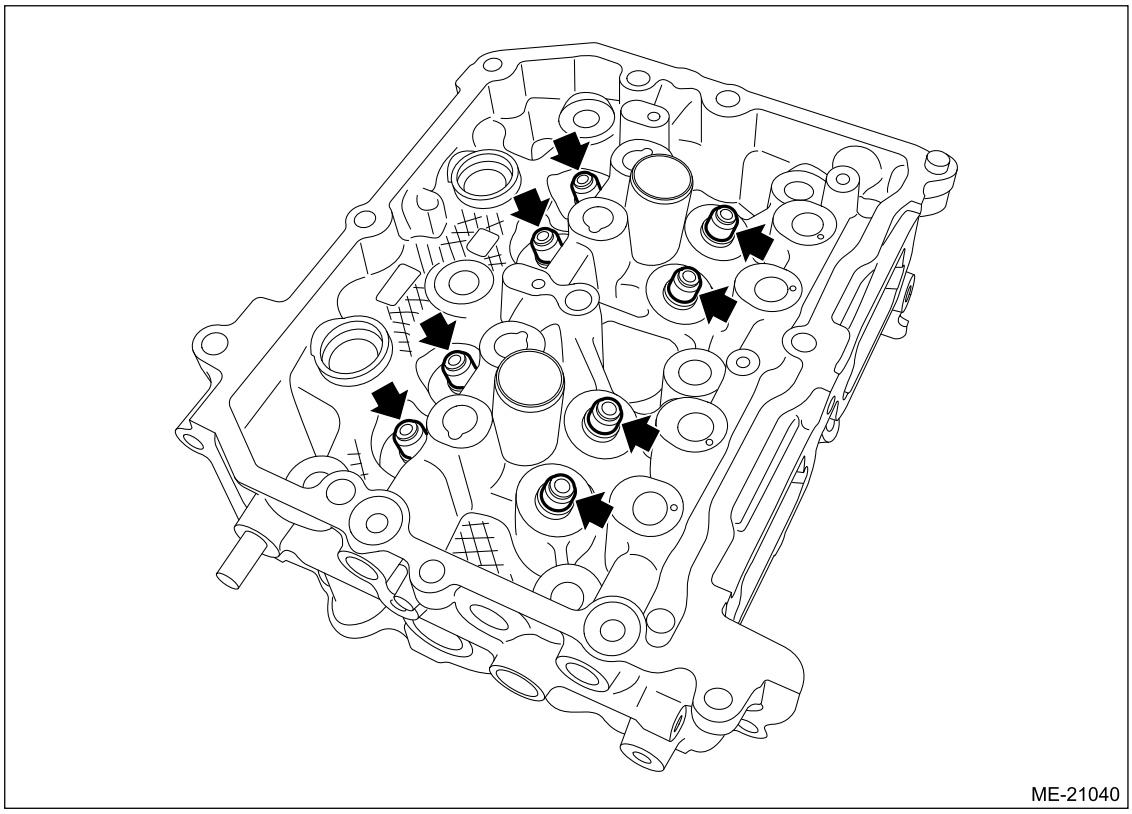
Note:

- **Mark each part to prevent confusion.**
- **Keep all the removed parts in order for re-installing in their original positions.**

(1) Using valve spring compressor, compress the valve spring and remove the valve collet.

(2) Remove valve, valve spring retainer, valve spring and valve spring seat.

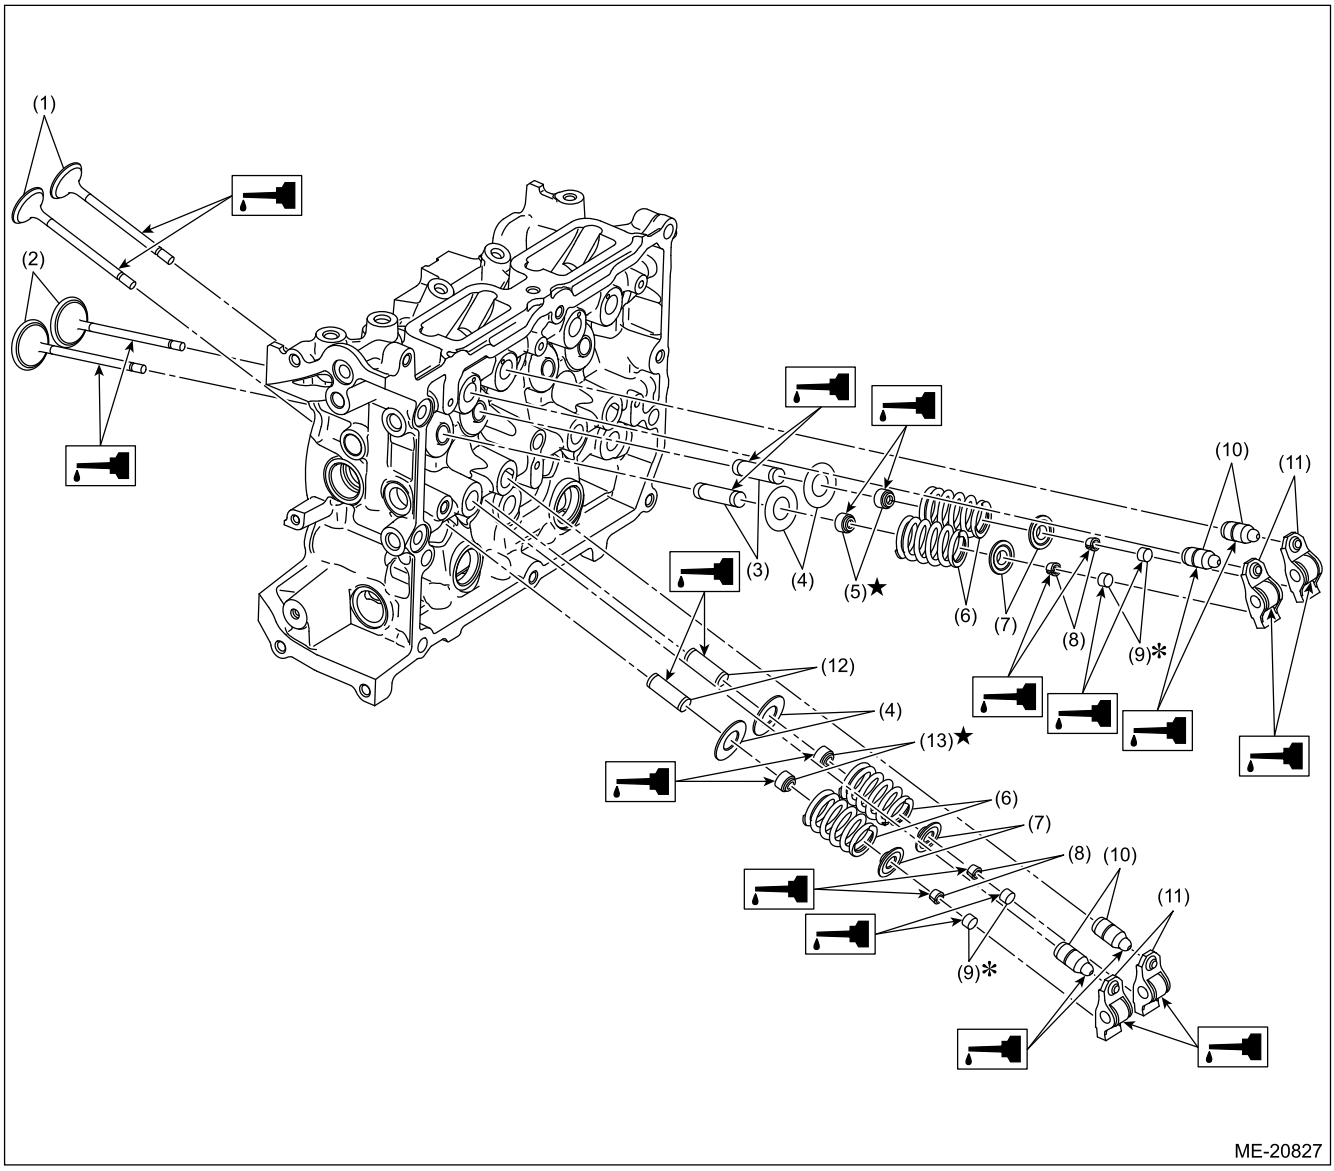
4. Remove the valve collet, valve, valve spring retainer, valve spring and valve spring seat from the cylinder head LH.



5. Remove the valve oil seals from valve guides of cylinder head RH.

Caution:

- **During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.**
- **Use special care not to damage the cylinder head RH and guide during work.**



Note:

For removal of valve guide, refer to INSPECTION. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE & VALVE GUIDE.

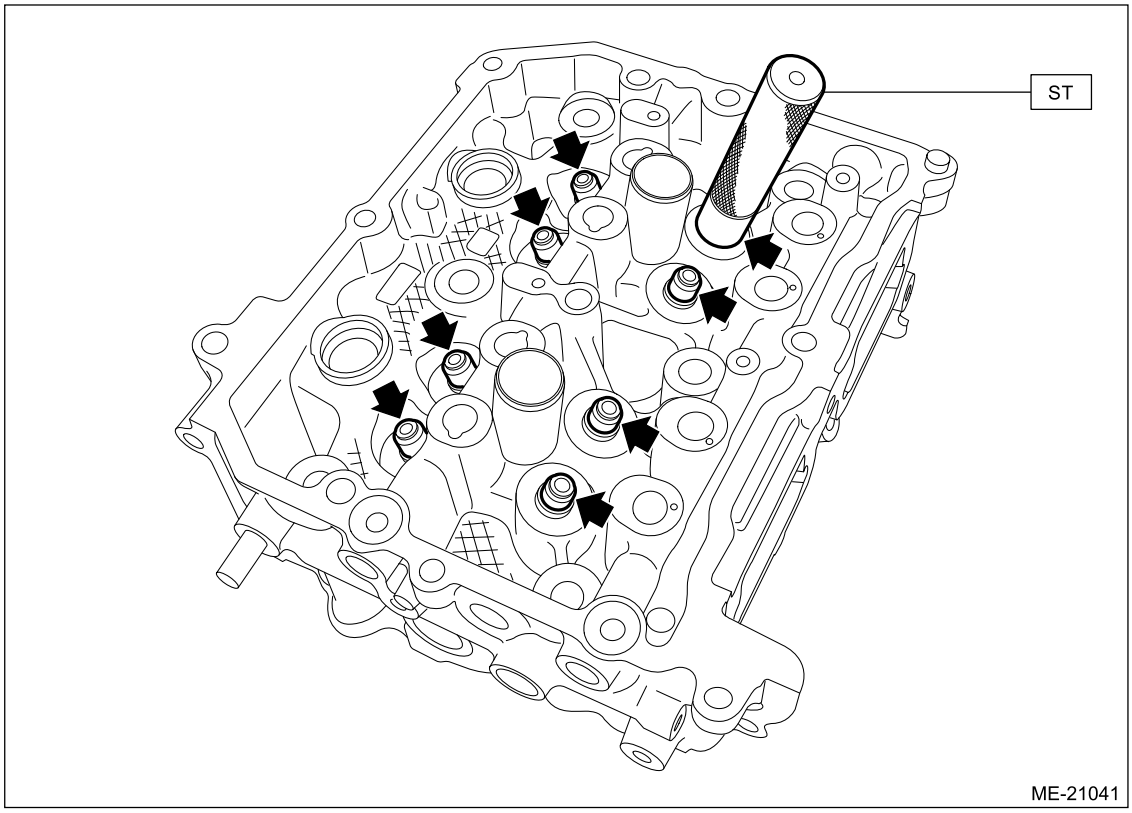
6. For cylinder head LH, remove the valve oil seal in the same manner.

ASSEMBLY

(1) Exhaust valve
(2) Intake valve
(3) Intake valve guide
(4) Valve spring seat
(5) Intake valve oil seal
(6) Valve spring
(7) Valve spring retainer
(8) Valve collet
(9) Valve shim
(10) Roller rocker arm pivot
(11) Roller rocker arm
(12) Exhaust valve guide
(13) Exhaust valve oil seal

1. Using the ST, install new valve oil seals to valve guides of cylinder head RH.

Caution:



- **During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.**
- **Use special care not to damage the cylinder head RH and guide during work.**
- **When installing the valve oil seal, press the ST with hands to install it and never drive the ST with a plastic hammer, otherwise the valve oil seal can be damaged.**

Note:

- **Apply engine oil to valve oil seal before installing.**
- **The intake valve oil seals and exhaust valve oil seals are distinguished by their colors.**
  Identification colors:
  Intake [Gray]
  Exhaust [Light green]
- **For installation of valve guide, refer to INSPECTION. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE & VALVE GUIDE.**

Preparation tool:

ST: VALVE OIL SEAL GUIDE (18261AA010)

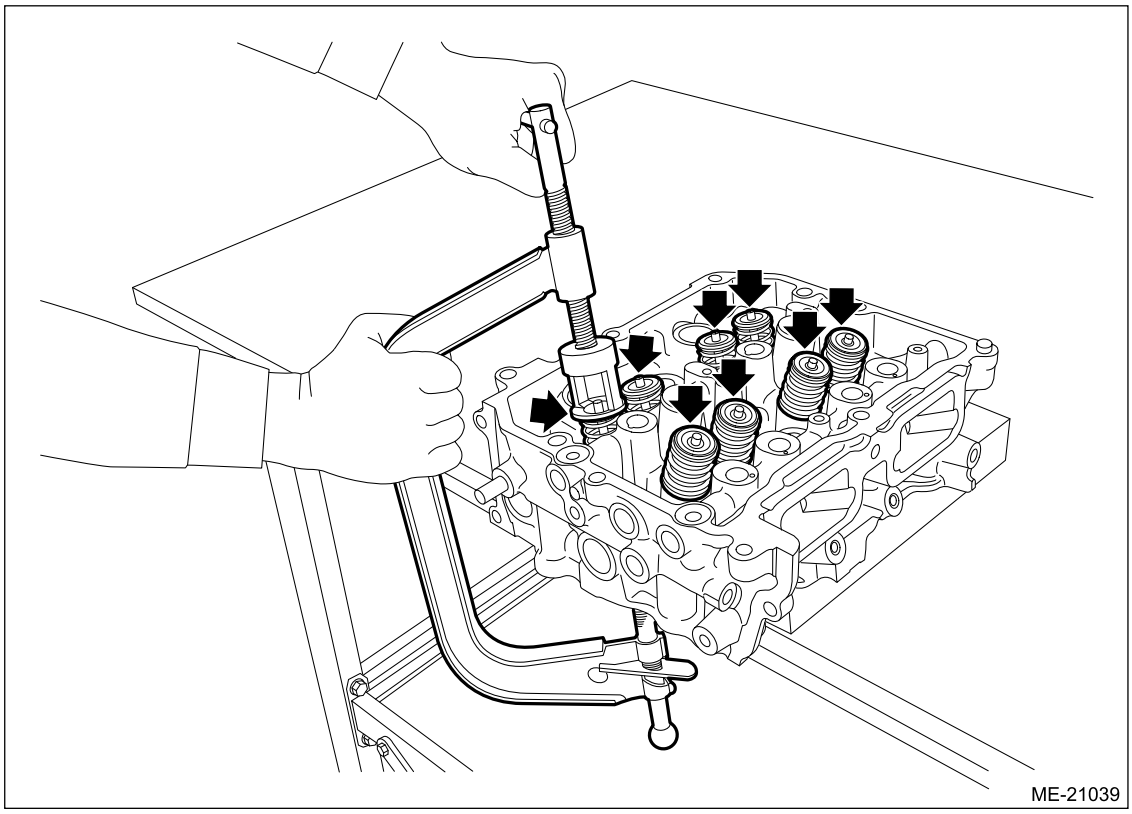
2. For cylinder head LH, install the valve oil seal in the same manner.
3. Install the valve spring seat, valve spring, valve spring retainer, valve and valve collet to the cylinder head RH.

Caution:

During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.

(1) Set the valve spring seat, valve spring and valve spring retainer onto the cylinder head RH.

Note:



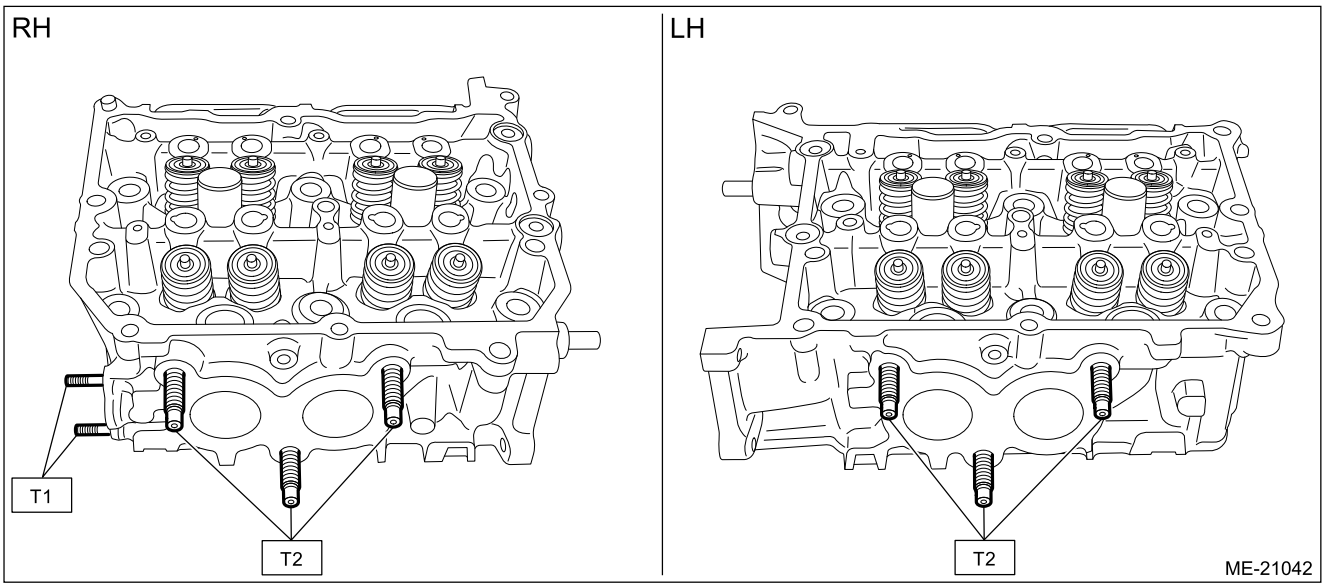
Be sure to install the valve spring with its larger diameter end facing the cylinder head side.

(2) Coat the valve stem of each valve with engine oil and insert the valve into valve guide.

Note:

When inserting the valve into valve guide, use special care not to damage the oil seal lip.

(3) Using valve spring compressor, compress the valve spring and install the valve collet.



4. Install the valve spring seat, valve spring, valve spring retainer, valve and valve collet to the cylinder head LH.
5. Lightly tap the valve spring retainer with a plastic hammer, and make sure that the valve collet is securely attached.
6. Install the stud bolts onto cylinder heads.

   Tightening torque:

   T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

   T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

7. Install the chain cover securing bolt to the cylinder head LH.

   Tightening torque:

   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

INSPECTION

1. CYLINDER HEAD

1. Visually inspect to make sure that there are no cracks, scratches or other damage.
2. Use liquid penetrant tester on the important sections to check for fissures.
3. Check that there are no marks of gas leaking or water leaking on gasket attachment surface.
4. Check the warping of the cylinder head mating surface that mates with cylinder block at the locations shown in the figure using a straight edge (A) and thickness gauge (B). If it exceeds the limit, correct the surface by grinding it with a surface grinder or replace the cylinder head.

   Note:
   - **Measurement should be performed at a temperature of 20°C (68°F).**
   - **If there is warpage on the cylinder head mating surface, the cylinder head bolt tightening torque and angle tightening may be improper. When installing the cylinder head, make sure that tightening torque and angle tightening work is performed precisely according to the operation procedures.**
   - **When the cylinder head is replaced, lap each valve. Refer to "VALVE SEAT" for lapping.**
     Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE SEAT.

   Cylinder head warpage:

   Limit

   0.020 mm (0.0008 in)

   Cylinder head grinding limit:

   98.45 mm (3.8760 in) or less

   Cylinder head height:

   Standard

   98.5 mm (3.8779 in)

2. VALVE & VALVE GUIDE

Warning:

Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and thus prone to serious chemical reaction. When handling or disposing of the valve, be sure to confirm "DISPOSAL". Ref. to MECHANICAL(H4DO)>Cylinder Head>DISPOSAL.

1. Check the valve flange and stem for damage, wear or deformation.
2. Measure the thickness "H" of valve head edge as shown in the figure using a caliper gauge. If it is not within the standard, replace the valve.

Note:

- **It is possible to differentiate between the intake valve and the exhaust valve by their overall length.**

  Valve overall length:

  Intake

  104.95 mm (4.1319 in)

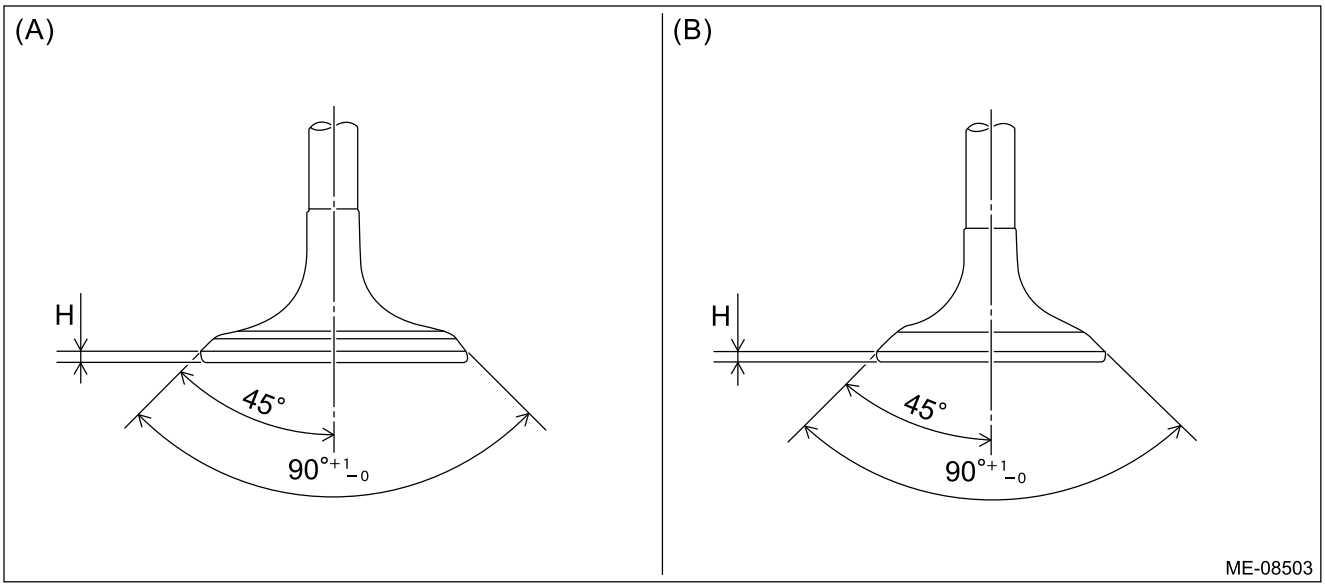
  Exhaust

  96.5 mm (3.7992 in)

- **When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE SEAT.**

Valve head edge thickness H:

Intake (A)



Standard

0.8 — 1.2 mm (0.0315 — 0.0472 in)

Exhaust (B)

Standard

1.0 — 1.4 mm (0.0394 — 0.0551 in)

3. Check the clearance between valve and valve guide. Check the clearance between valve and valve guide by measuring the outer diameter of valve stem and the inner diameter of valve guide respectively.

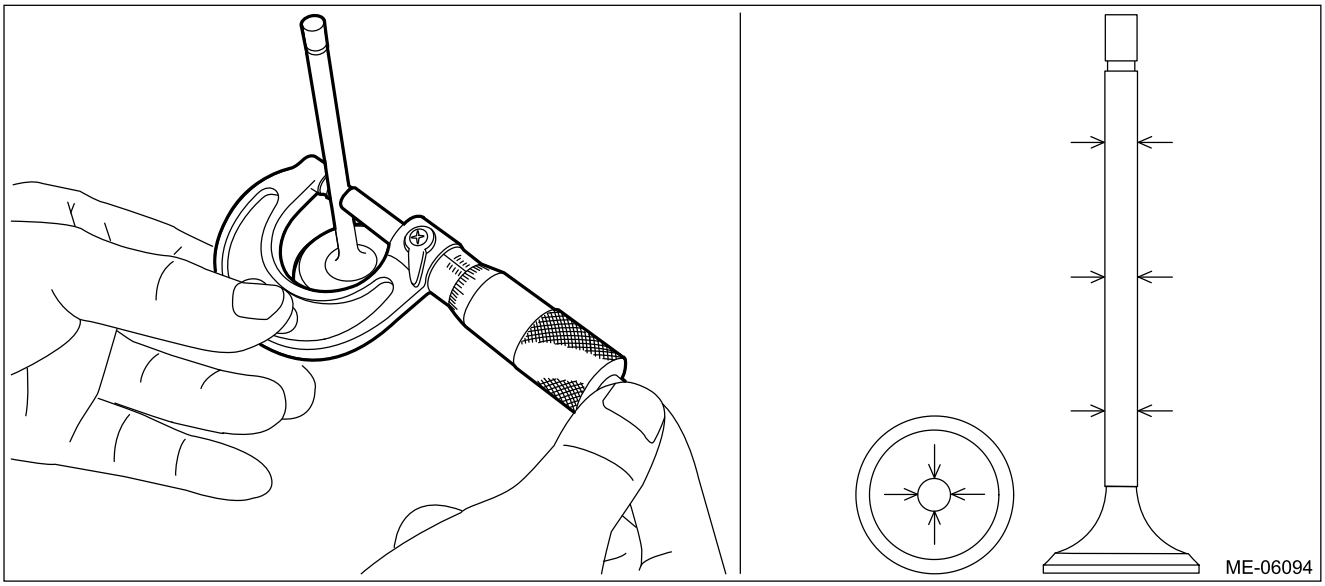
(1) Measure the outer diameter of valve stem with a micrometer. If it is not within the standard, replace the valve.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the outer diameter of the valve stem at the six locations as shown in the figure, and read the value of most worn location.**
- **When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE SEAT.**

Valve stem outer diameter:

Intake



Standard

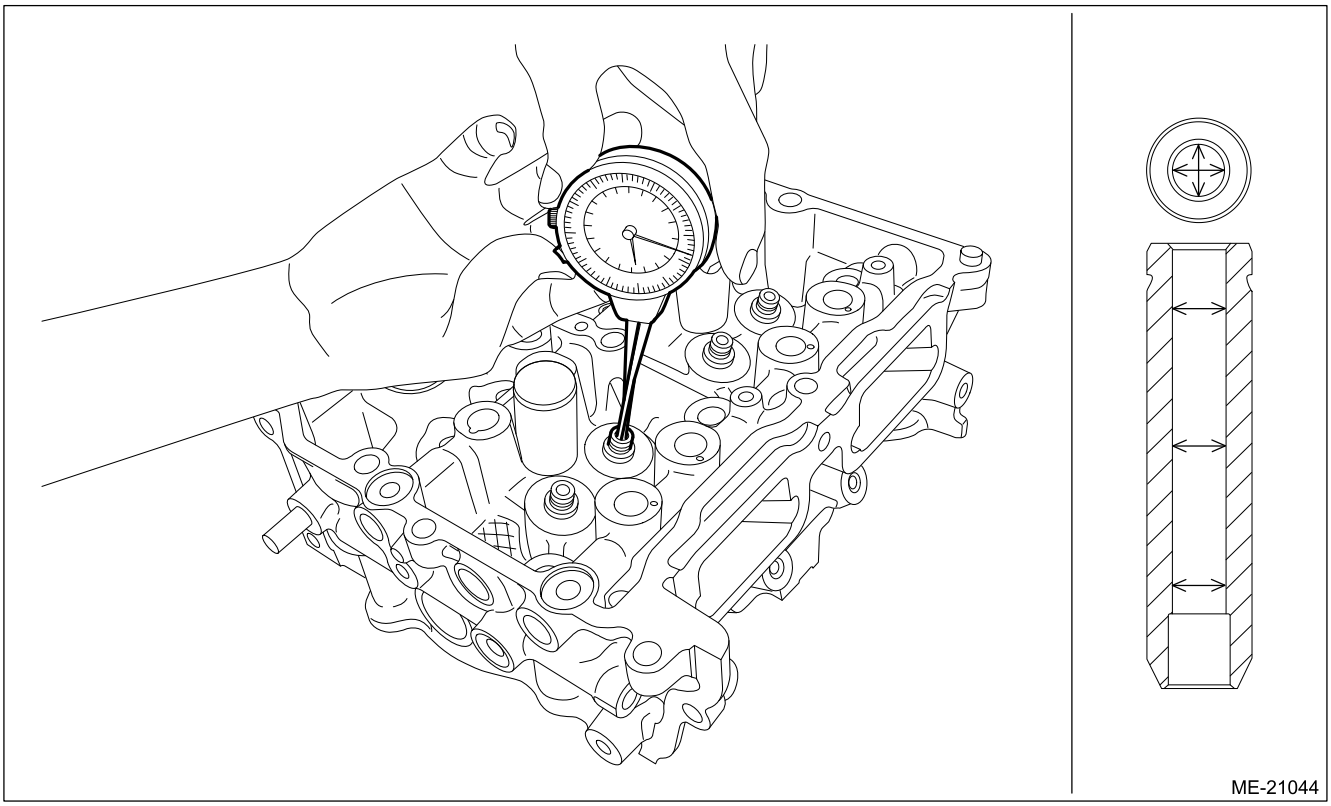
5.455 — 5.470 mm (0.2148 — 0.2154 in)

Exhaust

Standard

5.445 — 5.460 mm (0.2144 — 0.2150 in)

(2) Using a caliper gauge, measure the inner diameter of valve guide. If it is not within the standard, replace the valve guide. For replacement procedure, refer to step 4).



Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the inner diameter of the valve guide at the six locations as shown in the figure, and read the value of most worn location.**

Valve guide inner diameter:

Standard

5.500 — 5.512 mm (0.2165 — 0.2170 in)

(3) Calculate the clearance between valve and valve guide.

Clearance between valve and valve guide:

Intake

Standard

0.030 — 0.057 mm (0.0012 — 0.0022 in)

Exhaust

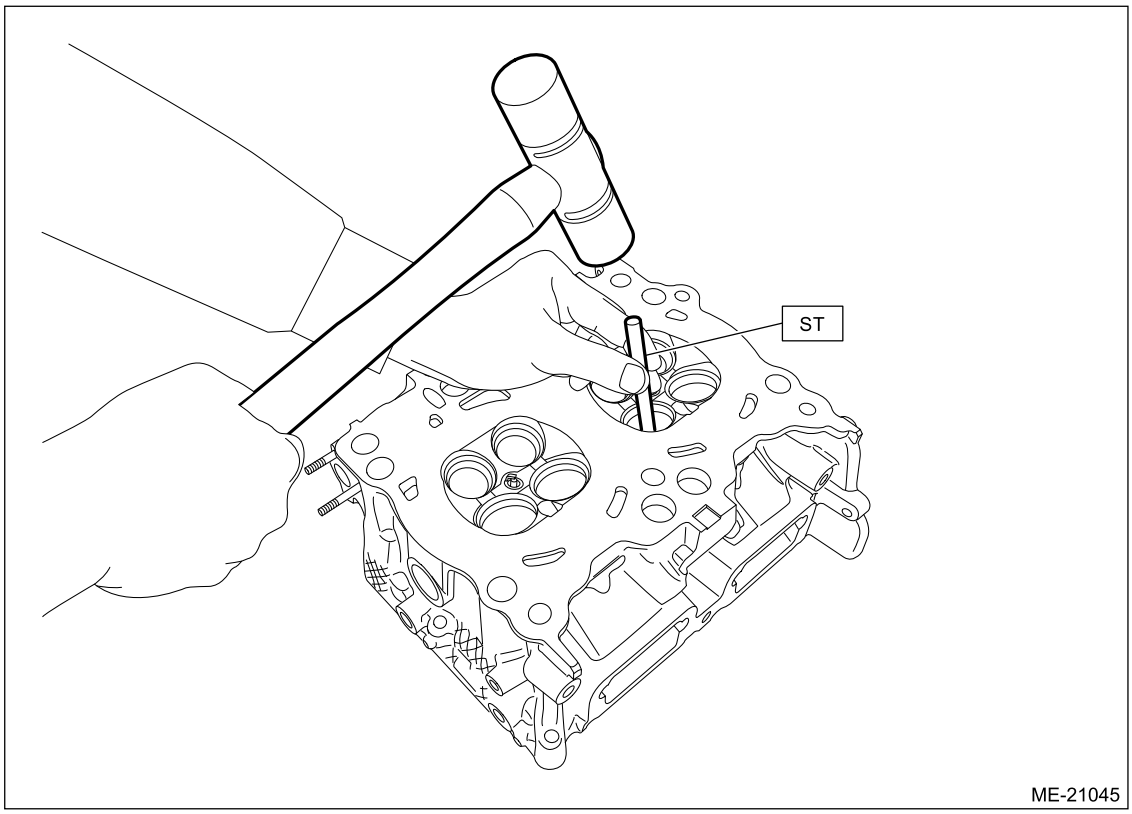
Standard

0.040 — 0.067 mm (0.0016 — 0.0026 in)

4. If the clearance between valve and valve guide exceeds the standard, replace the valve or valve guide, whichever shows the greater amount of wear or damage. For replacement procedure of valve guide, refer to the following.

Note:

When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE SEAT.



(1) Insert ST into the valve guide with the combustion chamber upward and remove the valve guide using plastic hammer.

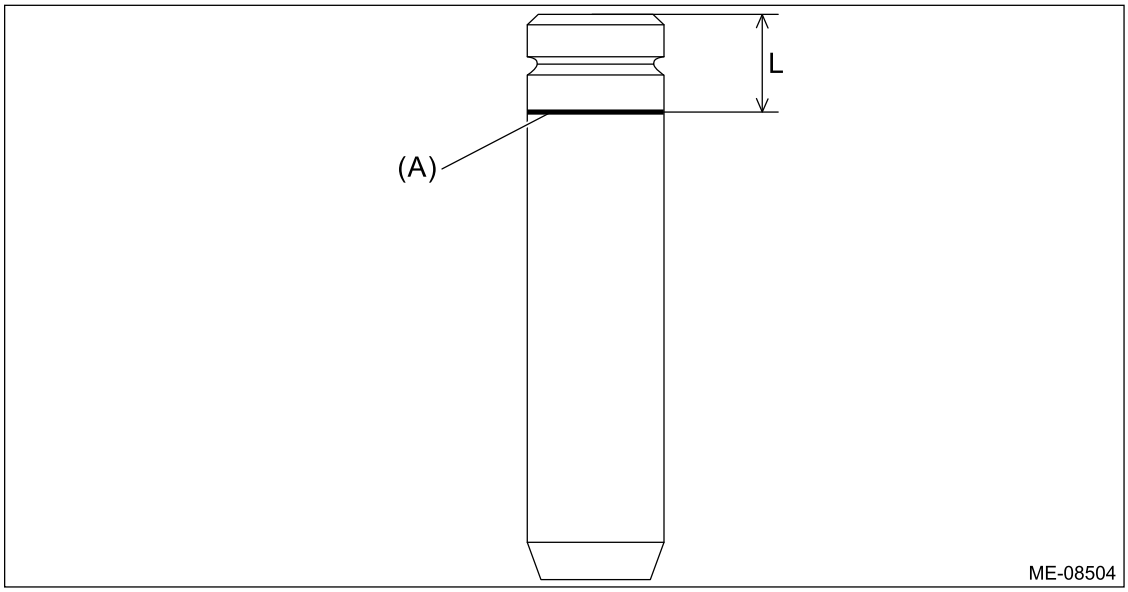
Caution:

- **Place a wood board wrapped with a waste cloth to stabilize the cylinder head before work.**
- **Use special care not to damage the cylinder head during work.**
- **Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.**

Preparation tool:

ST: VALVE GUIDE REMOVER AND INSTALLER (499765700)

(2) Before installing the valve guide, make sure that neither scratches nor damages exist on the inner surface of valve guide installation holes of cylinder head.



(3) Draw a reference line (A) used for insertion on the valve guide using a marker as shown in the figure.

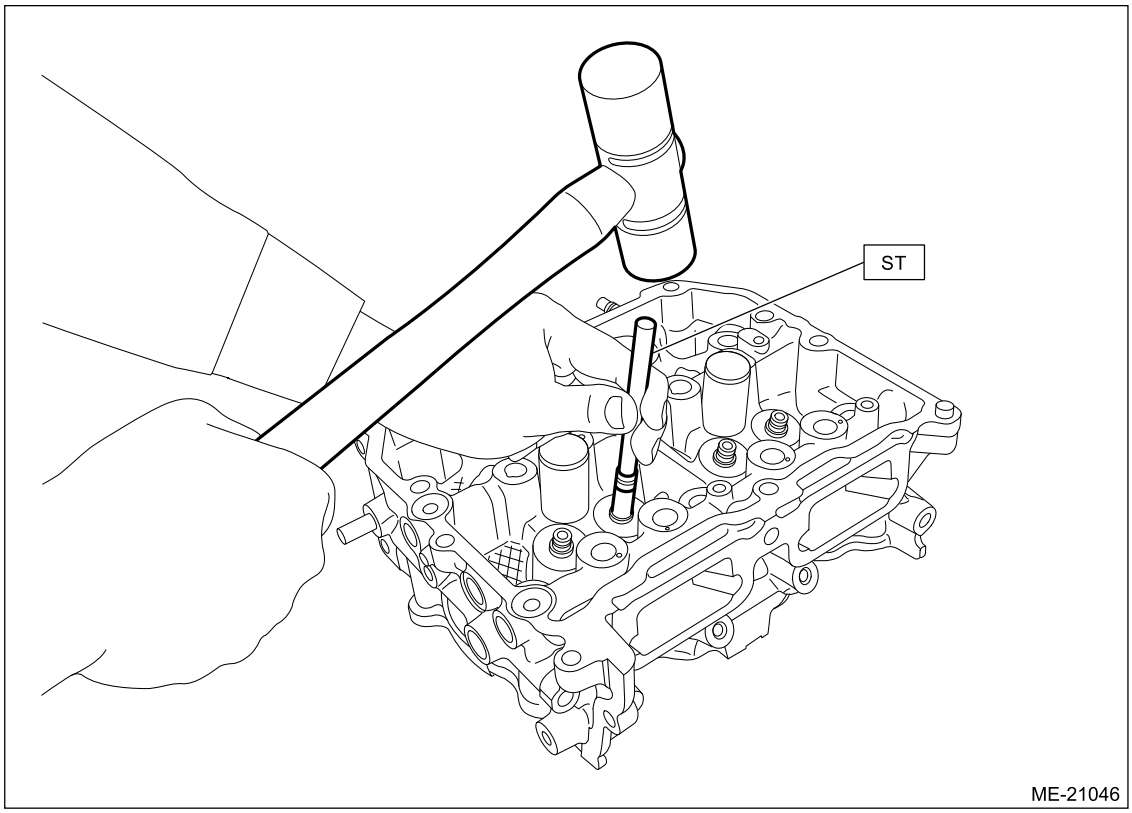
Note:

A reference line for insert is used as a guide when tapping-in the valve guide.

Valve guide inserting reference line position L:

15 mm (0.5906 in)

(4) Apply a enough coat of engine oil to the valve guide, and set the valve guide on the cylinder head with the combustion chamber downward.



(5) Insert the ST into the valve guide, and tap-in the valve guide to the reference line (A) for insert using plastic hammer.

Caution:

- **During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head.**
- **Use special care not to damage the cylinder head during work.**
- **Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.**

Preparation tool:

ST: VALVE GUIDE REMOVER AND INSTALLER (499765700)

(6) Measure the valve guide protrusion amount "L" as shown in the figure using a caliper gauge.

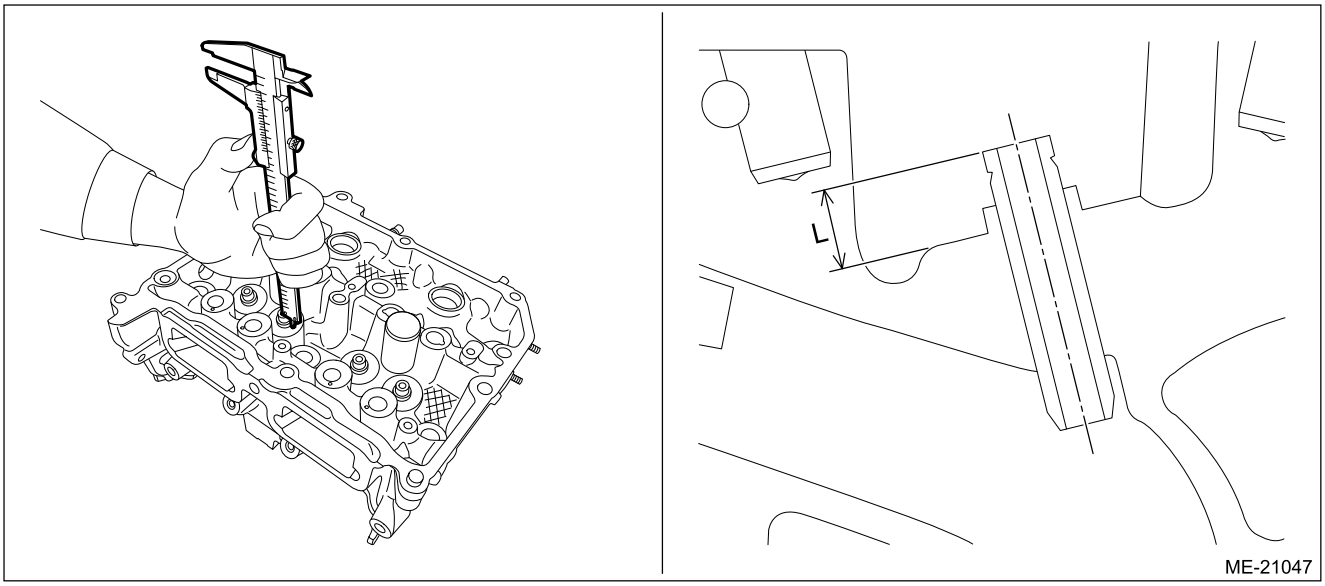
Insert the ST into the valve guide again, and tap-in the valve guide so that it is positioned within standard by referring to the measured value using plastic hammer.

Caution:

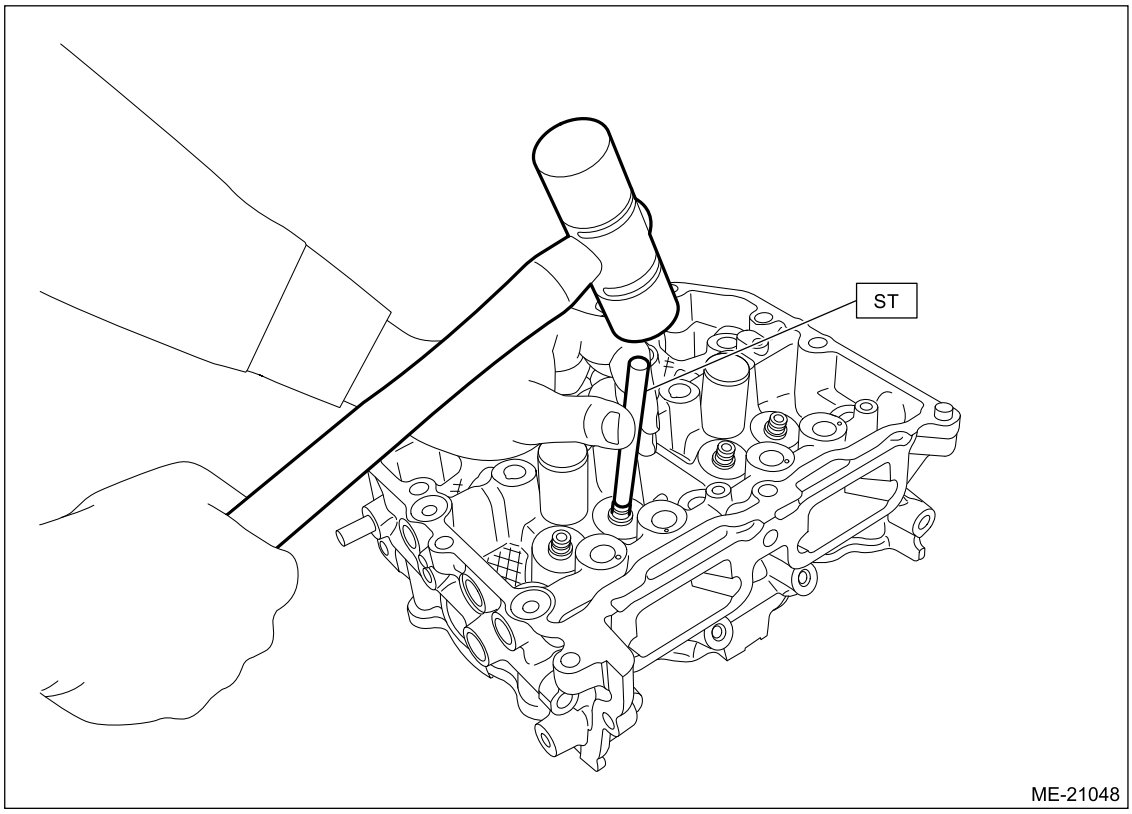
- **During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head.**
- **Use special care not to damage the cylinder head during work.**
- **Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.**

Note:

Be careful not to tap-in excessively by repeating the steps of Tapping-in → Measurement → Tapping-in → Measurement ... when installing the valve guide.



Preparation tool:



ST: VALVE GUIDE REMOVER AND INSTALLER (499765700)

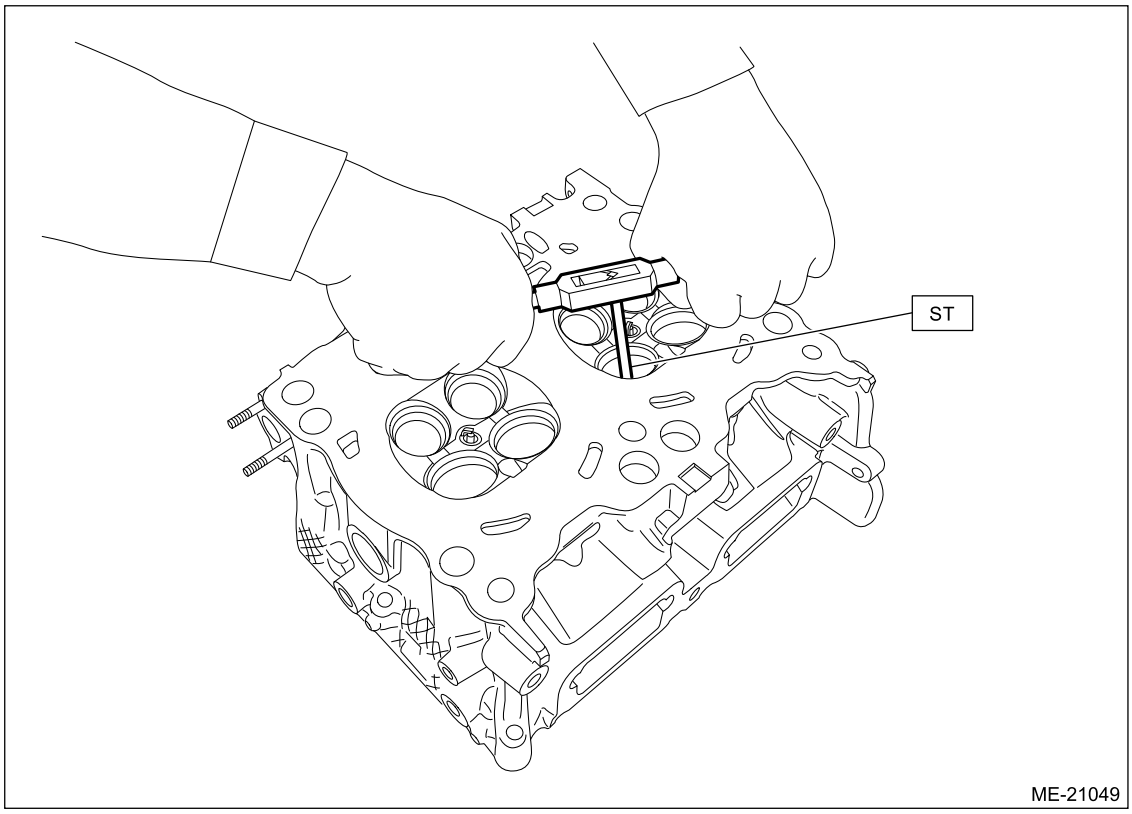
Valve guide protrusion amount L:

Standard

11.4 — 11.8 mm (0.4488 — 0.4646 in)

(7) Ream the inside of valve guide with the combustion chamber upward using the ST. Put the ST in valve guide, and rotate the ST slowly clockwise while pushing it lightly. Bring the ST back while rotating it clockwise.

Caution:



- **Place a wood board wrapped with a waste cloth to stabilize the cylinder head before work.**
- **Use special care not to damage the cylinder head during work.**

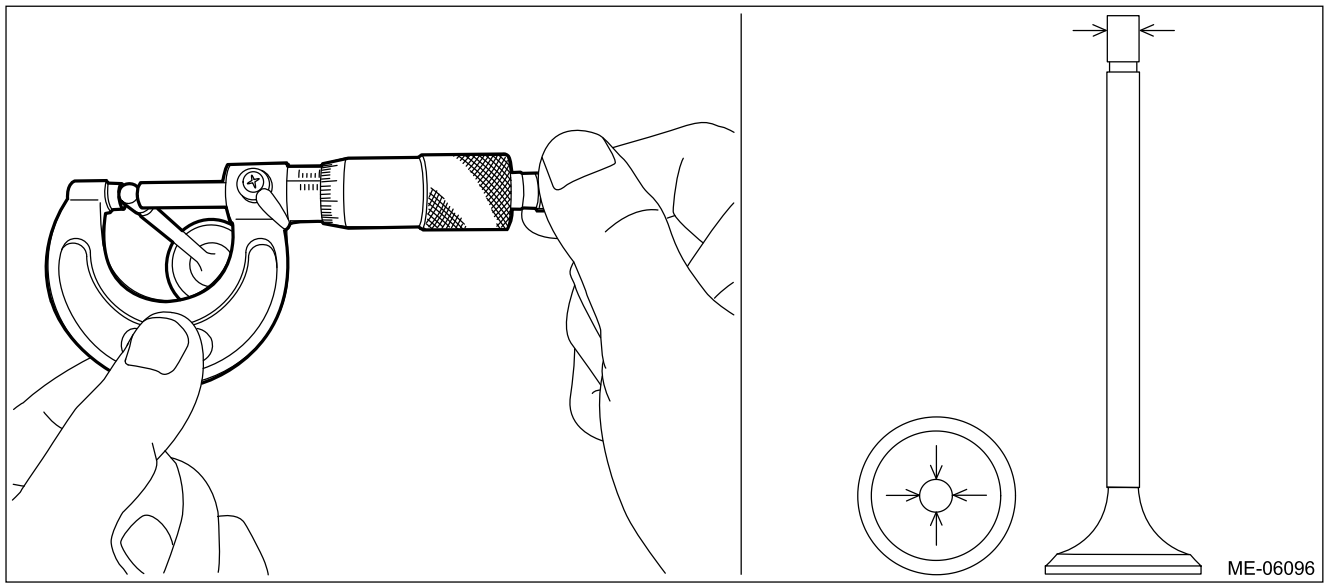
Note:

- **Apply engine oil to the ST.**
- **If the inner surface of valve guide is damaged, the edge of ST should be slightly ground with oil stone.**
- **If the inner surface of valve guide becomes lustrous and the ST does not chip, use a new ST or remedy the ST.**

Preparation tool:

ST: VALVE GUIDE REAMER (499765900)

(8) After reaming, clean the valve guide to remove chips.
(9) Check the seating width between valve and valve seat. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE SEAT.



3. VALVE & VALVE SHIM

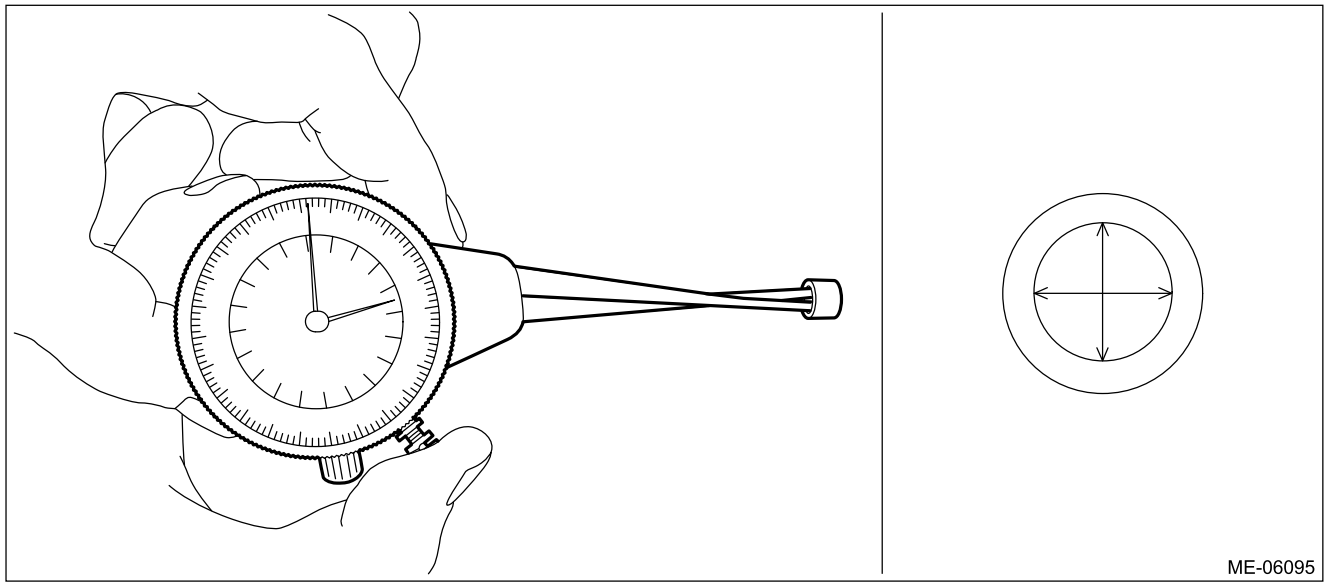
Warning:
Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and thus prone to serious chemical reaction. When handling or disposing of the valve, be sure to confirm "DISPOSAL". Ref. to MECHANICAL(H4DO)>Cylinder Head>DISPOSAL.

1. Visually check the valve shim for damage.
2. Check the clearance between valve and valve shim. Check the clearance between valve and valve shim by measuring the outer diameter of valve stem end and the inner diameter of valve shim respectively.
   (1) Measure the outer diameter of valve stem end with a micrometer. If it is not within the standard, replace the valve.
   Note:
   - **Measurement should be performed at a temperature of 20°C (68°F).**
   - **Measure the outer diameter of the valve stem end at the two locations as shown in the figure, and read the value of most worn location.**
   - **When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE SEAT.**

   Valve stem end outer diameter:
   Intake
   Standard
   5.455 — 5.470 mm (0.2148 — 0.2154 in)
   Exhaust
   Standard

5.445 — 5.460 mm (0.2144 — 0.2150 in)

(2) Using a caliper gauge, measure the inner diameter of valve shim. If it is not within the standard, replace the valve shim.



Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the inner diameter of the valve shim at the two locations as shown in the figure, and read the value of most worn location.**
- **If the valve shim has to be replaced, check the cam clearance and replace with the suitable valve shim. Ref. to MECHANICAL(H4DO)>Cam Clearance>INSPECTION > WHEN TIMING CHAIN ASSEMBLY IS REMOVED.**

Valve shim inner diameter:

Standard

5.500 — 5.560 mm (0.2165 — 0.2189 in)

(3) Calculate the clearance between valve and valve shim. If the clearance exceeds the standard, replace the valve or valve shim, whichever shows the greater amount of wear or damage.

Note:

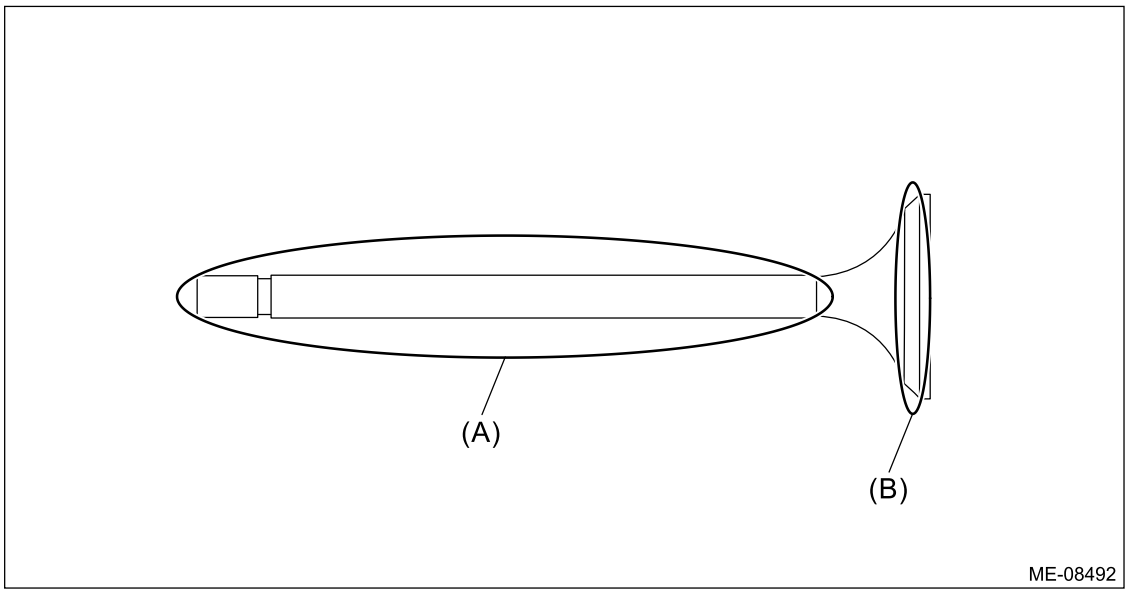
- **When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSPECTION > VALVE SEAT.**
- **If the valve shim has to be replaced, check the cam clearance and replace with the suitable valve shim. Ref. to MECHANICAL(H4DO)>Cam Clearance>INSPECTION > WHEN TIMING CHAIN ASSEMBLY IS REMOVED.**

Clearance between valve and valve shim:

Intake

Standard

0.030 — 0.105 mm (0.0012 — 0.0041 in)



Exhaust

Standard

0.040 — 0.115 mm (0.0016 — 0.0045 in)

4. VALVE SEAT

1. Check the valve seat for damage and deformation.
2. Check the seating width and seating position between valve and valve seat for the intake valve seat and exhaust valve seat.
   (1) Clean the valve and valve seat.
   (2) Coat the stem (A) of the valve lightly with engine oil and apply red dye evenly on the valve face (B).

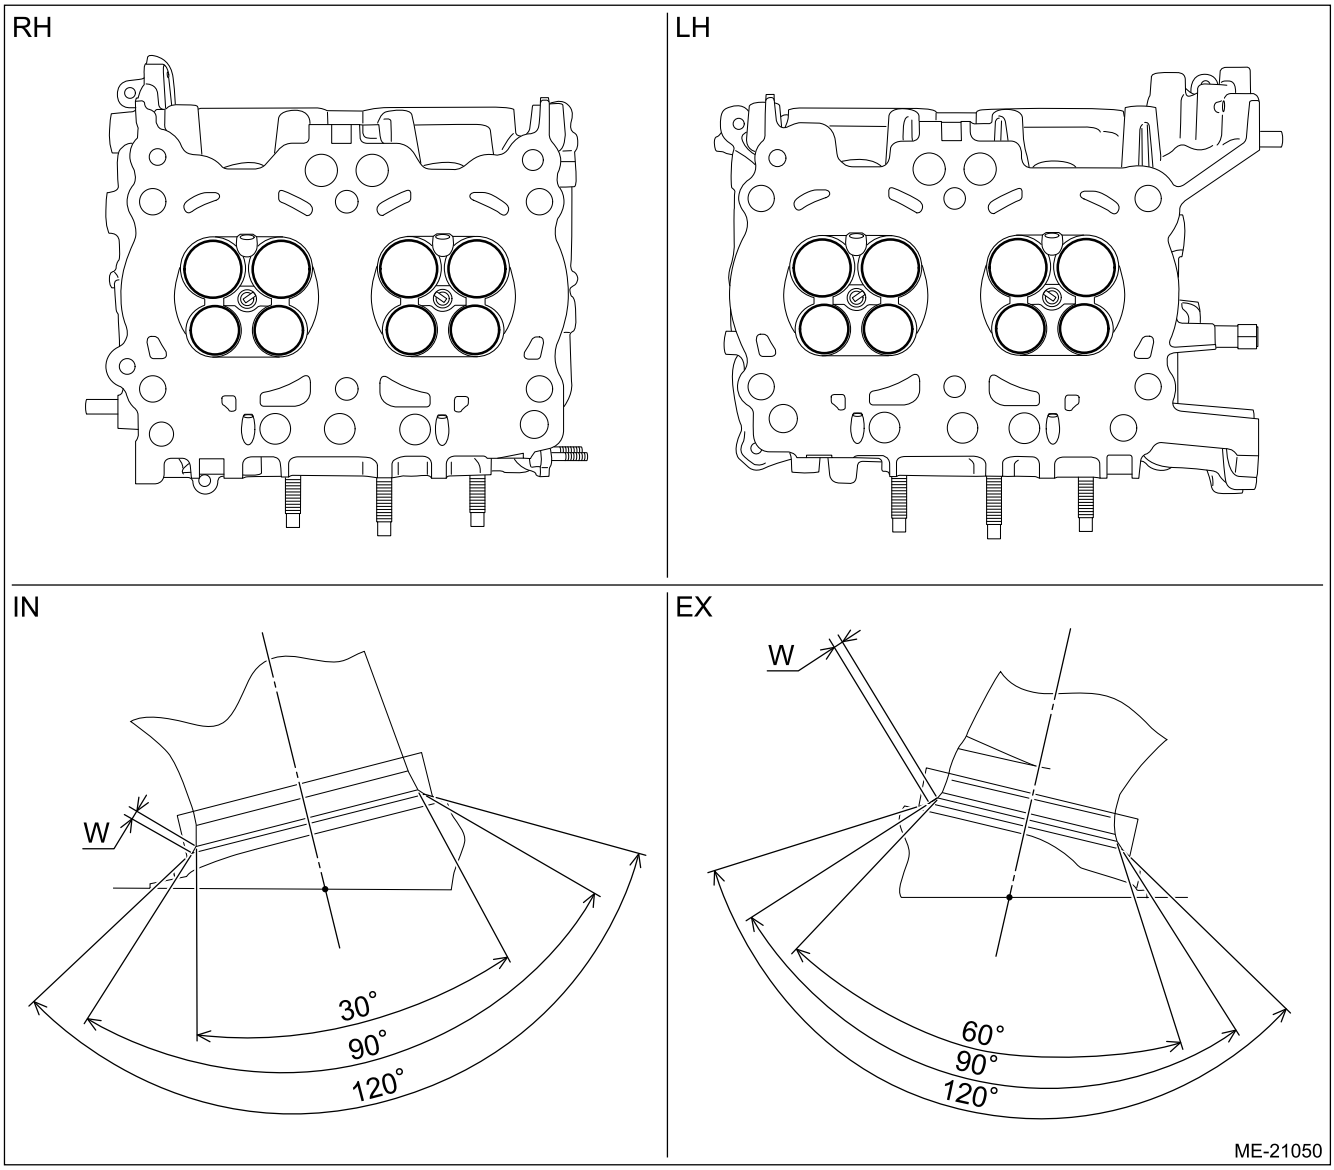
   (3) Using the valve lapper, slowly insert the valve with red dye applied into the valve guide. Lightly press the valve against the valve seat without turning the valve, and then slowly pull out the valve.
   (4) Check the seating width "W" of valve seat as shown in the figure, using a caliper gauge. Check the seating width "W" between valve and valve seat by measuring the width of red dye on the seating surface of valve seat. If the seating width "W" between valve and valve seat is out of the standard, correct the seating surface of valve seat using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

Note:

- **When the red dye does not appear seamlessly on the valve seat seating surface, lap the valve. For lapping procedure, refer to step 4).**
- **When the red dye does not appear seamlessly on the valve seat seating surface even after lapping the valve, correct the valve seat seating surface using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).**

Seating width W between valve and valve seat:

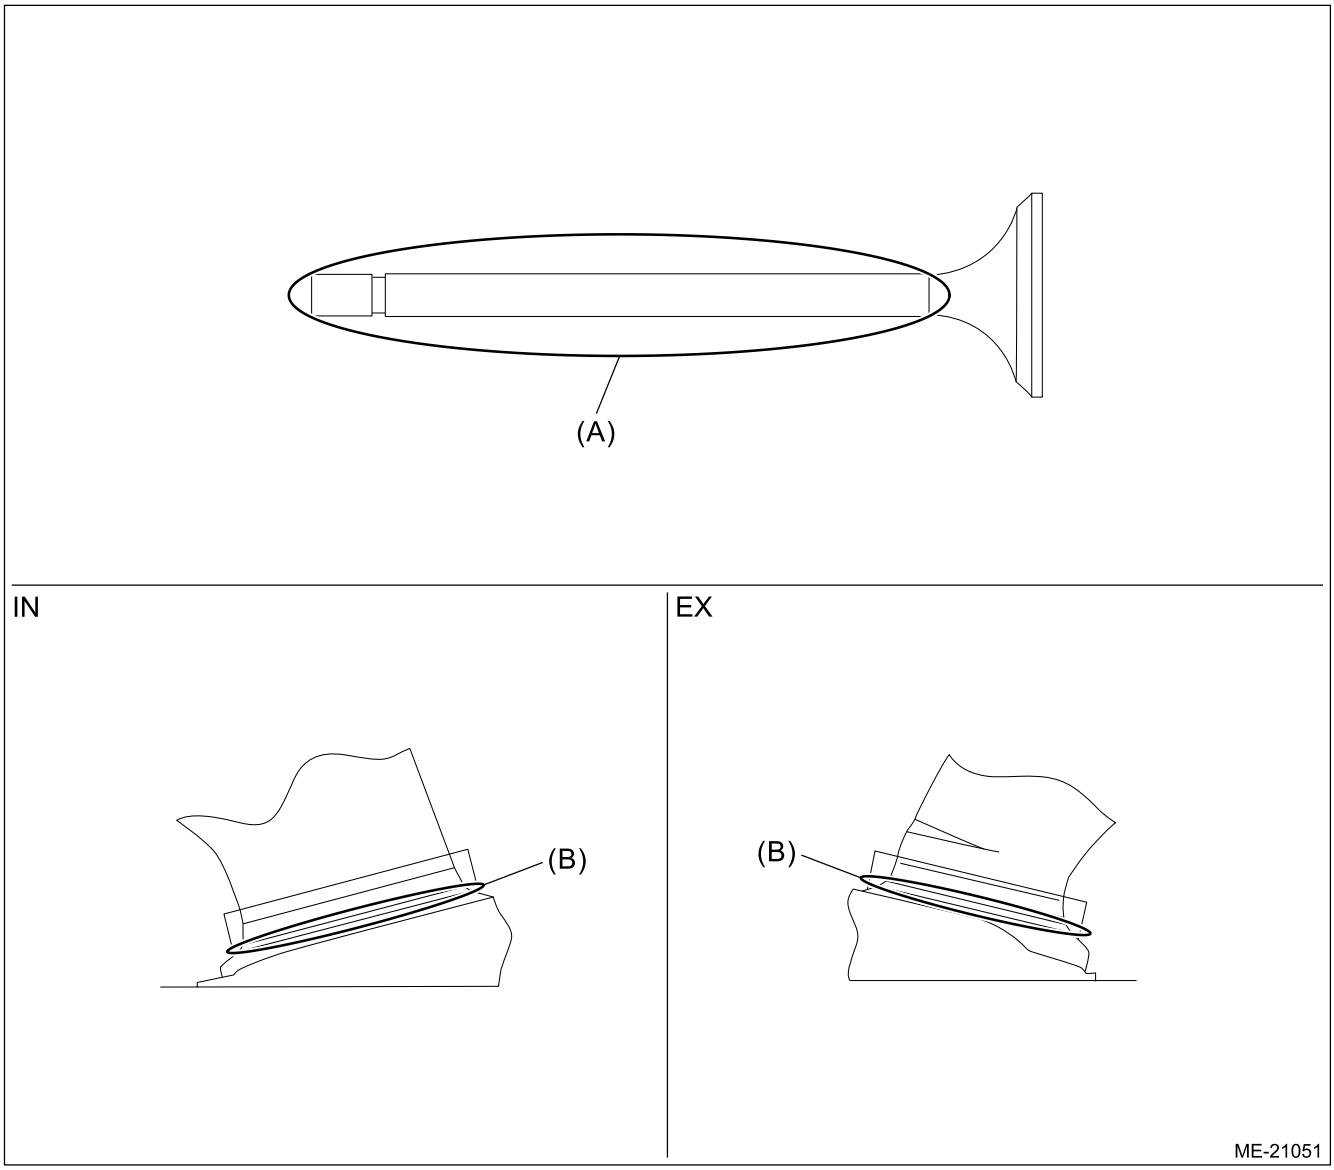
Intake



Standard

0.8 — 1.6 mm (0.0315 — 0.0630 in)

Exhaust

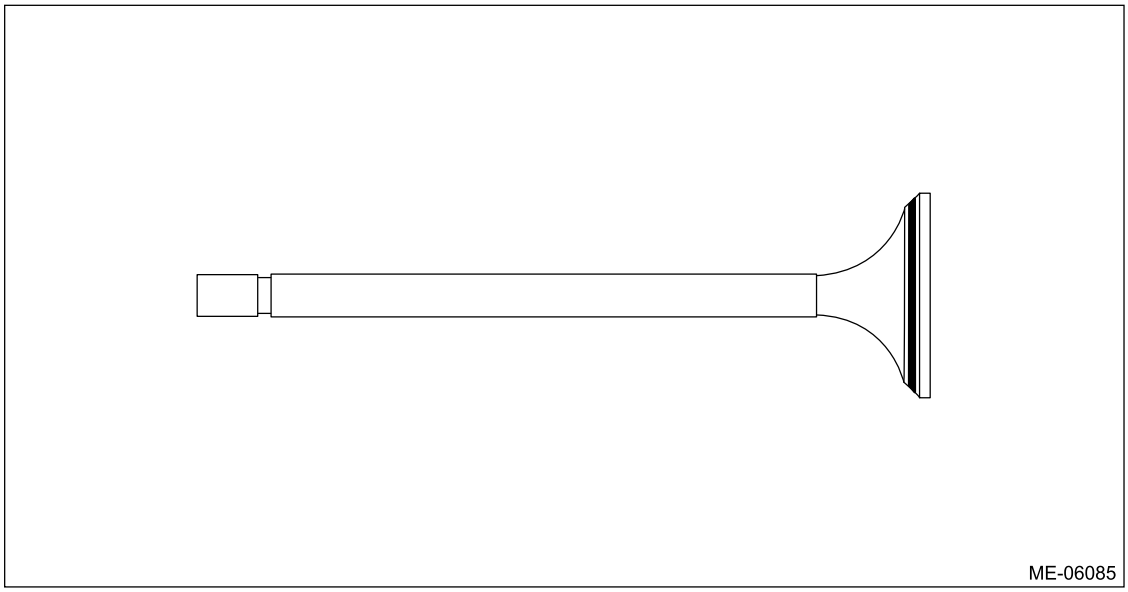


Standard

1.1 — 1.7 mm (0.0433 — 0.0669 in)

(5) Wipe off the red dye on the valve and valve seat completely.

(6) Coat the stem (A) of the valve lightly with engine oil and apply red dye evenly on the seating surface (B) between valve and valve seat.



(7) Using the valve lapper, slowly insert the valve into the valve guide. Lightly press the valve against the valve seat without turning the valve, and then slowly pull out the valve.

(8) Check the seating position between valve and valve seat. Check the seating position between valve and valve seat by checking the position of red dye on the valve face. If the seating position between valve and valve seat is not at the center of valve face, correct the seating surface of valve seat using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

Seating position between valve and valve seat:

Valve face center

(9) After inspection, wipe off the red dye completely.

3. When correcting the seating surfaces of valve seat

(1) Correct the seating angle between valve and valve seat using the 45° valve seat cutter.

Note:

- **Select the size of the valve seat cutter by referring to the outer diameters of the intake valve head and exhaust valve head.**

  Valve head outer diameter:

  Intake

  Standard

  33.9 — 34.1 mm (1.3346 — 1.3425 in)

  Exhaust

  Standard

  27.9 — 28.1 mm (1.0984 — 1.1063 in)

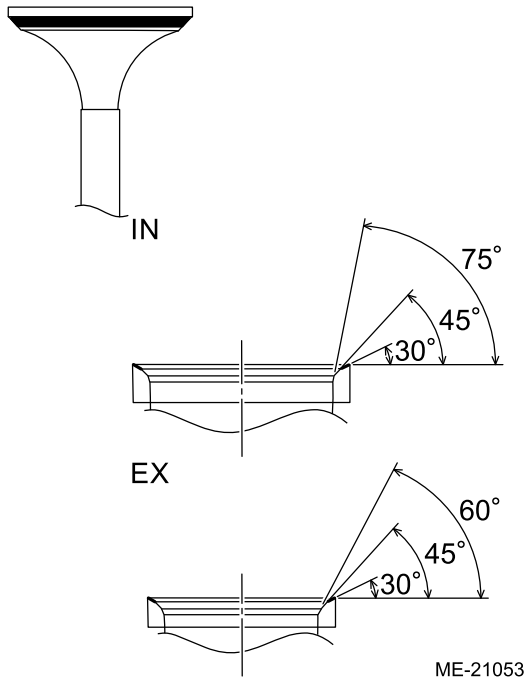
- **Grind the seating surface so that the seating width between valve and valve seat becomes slightly larger than the standard value.**
- **Gradually reduce pressure at the end of grinding process in order to avoid creating a gap on the valve seat correcting surface.**

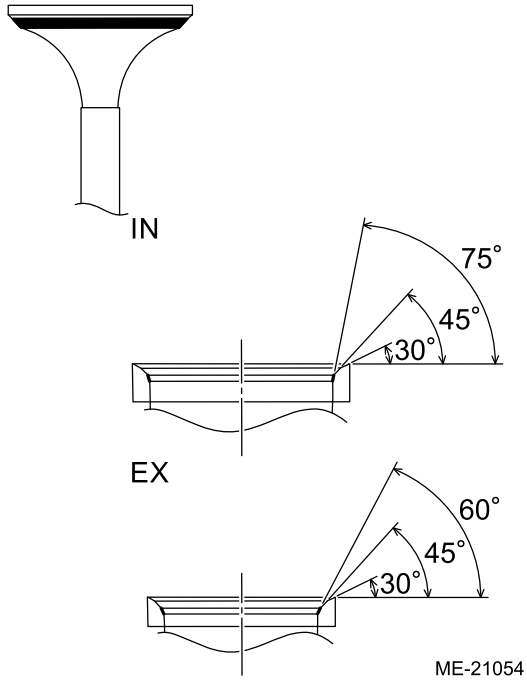
Seating angle between valve and valve seat:

45°

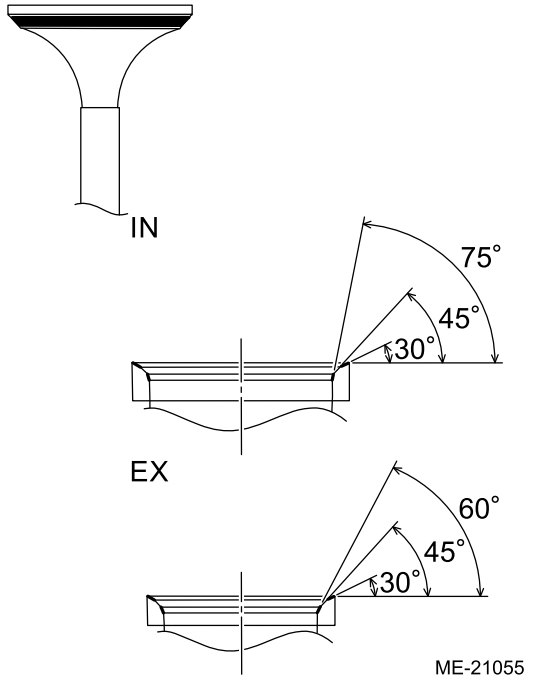
(2) Lap the valve. For lapping procedure of the valve, refer to step 4).

(3) Check the seating position between valve and valve seat. For inspection of the seating position between valve and valve seat, refer to step 2).



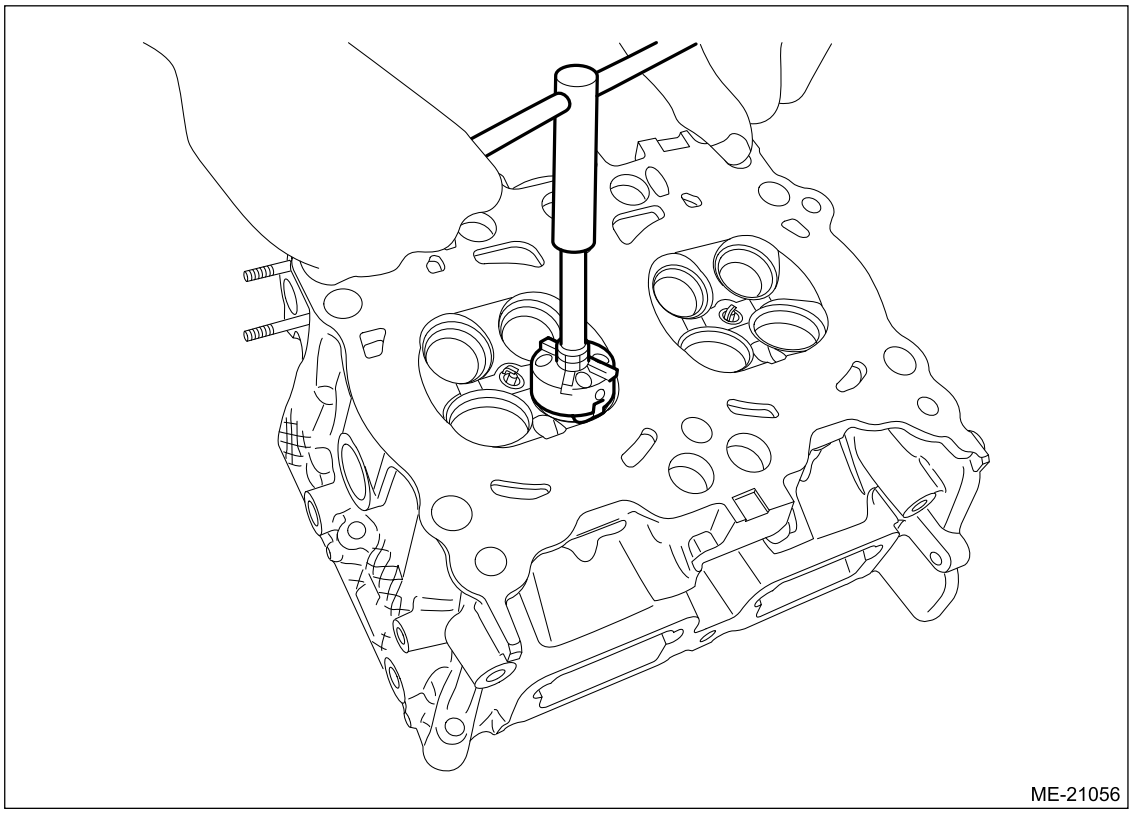


Note:



This procedure is necessary to select a seat cutter to be used in step (4).

(4) Using the 30°, 75° (IN) or 60° (EX) seat cutter, correct the valve seat so that the seating width between valve and valve seat becomes the standard value.



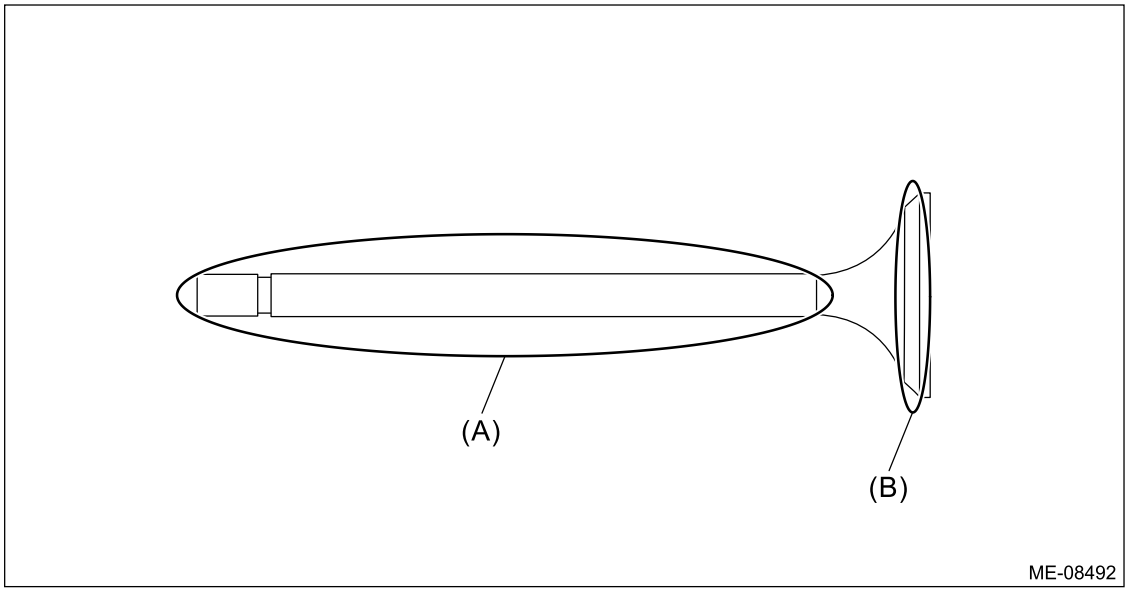
Note:

- **Select a proper valve seat cutter according to the following table.**

Seating position between valve and valve seat	Seat cutter selection
	When the seating position of valve face is high, grind the surface using the 30° seat cutter until seating width between valve and valve seat becomes the standard value.
	When the seating position of valve face is low, grind the surface using the 75° (IN) or 60° (EX) seat cutter until seating width between valve and valve seat becomes the standard value.

Seating position between valve and valve seat	Seat cutter selection
	When the seating position of valve face is at center, grind the surface evenly using the 30°, 75° (IN) or 60° (EX) seat cutters until seating width between valve and valve seat becomes the standard value.

- **Gradually reduce pressure at the end of grinding process in order to avoid creating a gap on the valve seat correcting surface.**



(5) Lap the valve. For lapping procedure of the valve, refer to step 4).

4. When lapping the valve

(1) Coat the stem (A) of the valve lightly with engine oil and put a small amount of valve compound evenly on the valve face (B).

Note:

- **Be careful not to put the valve compound more than necessary.**
- **To avoid damaging the valve guide and valve stem, be careful not to let the valve compound contact the valve stem.**

(2) Using the valve lapper, slowly insert the valve with the valve compound applied into the valve guide, and lap the seating surface between valve and valve seat. First, lift the valve and strike it against the valve seat twice, and then slightly turn the valve once. Repeat these steps as one set.

Note:

- **To prevent the seating width between valve and valve seat from exceeding the standard value, be careful not to keep turning the valve while pressing it against the valve seat during lapping.**
- **Be careful not to lift the valve too far during lapping in order to prevent the valve from coming off the valve guide.**

(3) Wipe off the valve compound on the valve and valve seat completely after lapping.

Note:

Be careful not to leave any valve compound in order to avoid malfunction.

(4) Check the seating width and seating position between valve and valve seat.

5. VALVE SPRING

1. Check the valve spring for damage and deformation.
2. Using a caliper gauge and valve spring tester,check the valve spring free length (reference) and tension/spring height. If it is not within the standard, replace the valve spring.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Valve spring free length is described as a reference. If only valve spring free length is out of the standard, it is not necessary to replace the valve spring.**

Valve spring free length (reference):

Standard

42.64 mm (1.6787in)

Valve spring tension/spring height:

Set

Standard

182 — 210 N (18.56 — 21.41 kgf, 40.92 — 47.22 lbf)/33.0 mm (1.299 in)

Lift

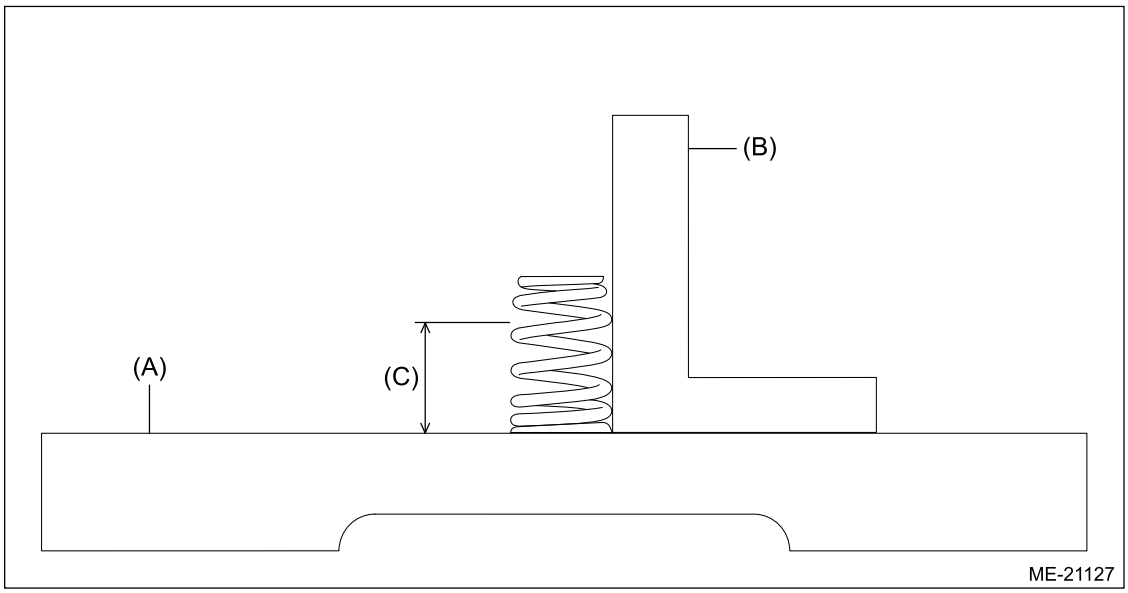
Standard

475 — 525 N (48.43 — 53.53 kgf, 106.80 — 118.04 lbf)/22.0 mm (0.866 in)

3. Using thickness gauge, surface plate and try square, check the squareness of the valve spring. If it is not within the standard, replace the valve spring.

Note:

Measurement should be performed at a temperature of 20°C (68°F).



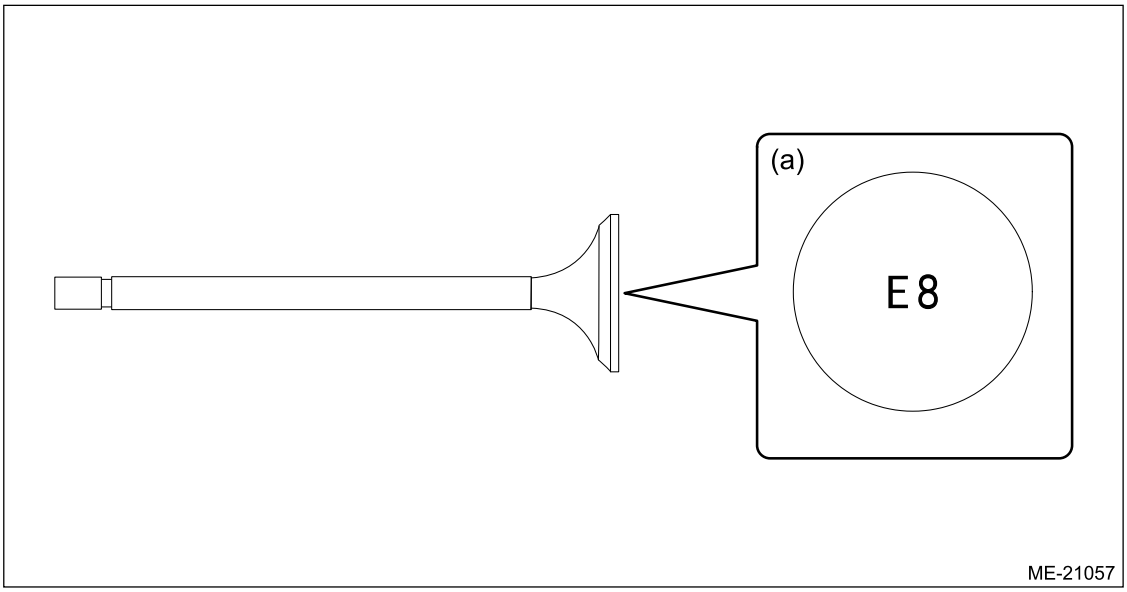
(1) Place the valve spring on the surface plate, with smaller diameter end facing up.

(2) Using try square and thickness gauge, measure the clearance at the point 30 mm (1.1811 in) from the bottom, between one coil and the square.

Valve spring squareness (at height of 30 mm (1.1811 in))

Standard

2.5°, 1.4 mm (0.0551 in) or less



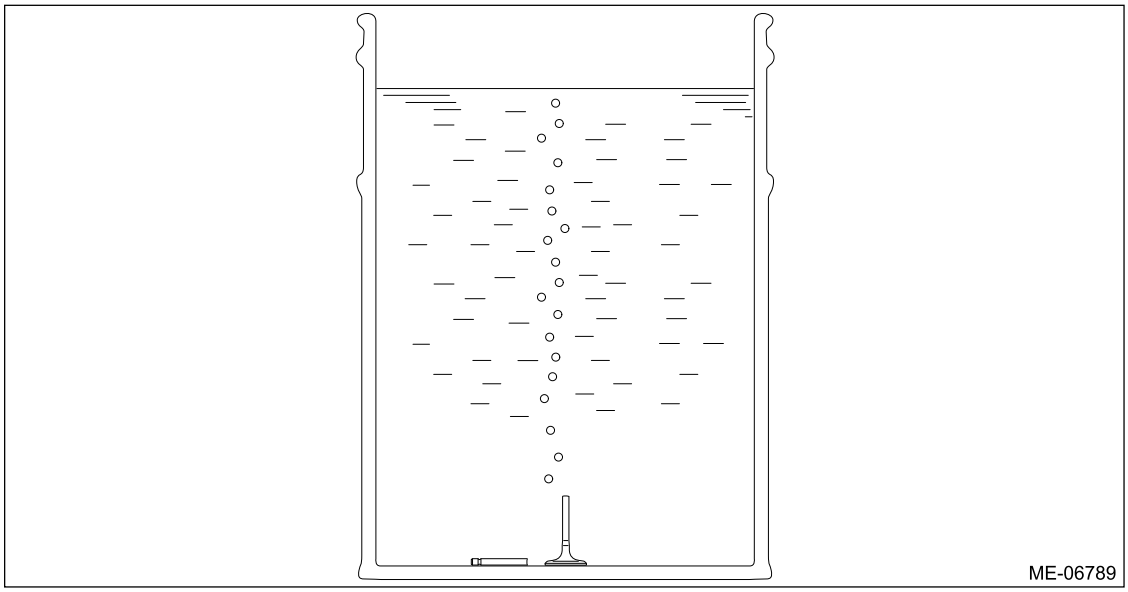
(a) Surface plate (b) Try square (c) 30 mm (1.1811 in)

MECHANICAL(H4DO) > Cylinder Head

DISPOSAL

Warning:

- **Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and poses a risk of causing a severe chemical reaction. Use great care when handling and disposing it.**
- **If the metallic sodium gets into your eyes, you may lose your sight. If it touches the skin, you may get burned severely or if it touches flame, fire may be caused by chemical reaction. Therefore, do not disassemble the exhaust valve.**
- **It is safe when the metallic sodium encapsulated in the exhaust valve is not exposed to the air.**
- **When the exhaust valve is broken, remove the broken exhaust valve, and dispose of the metallic sodium.**
- **Do not intentionally break the exhaust valve and take out the metallic sodium.**
- **Identify the exhaust valve in which the metallic sodium is encapsulated with the embossed mark.**

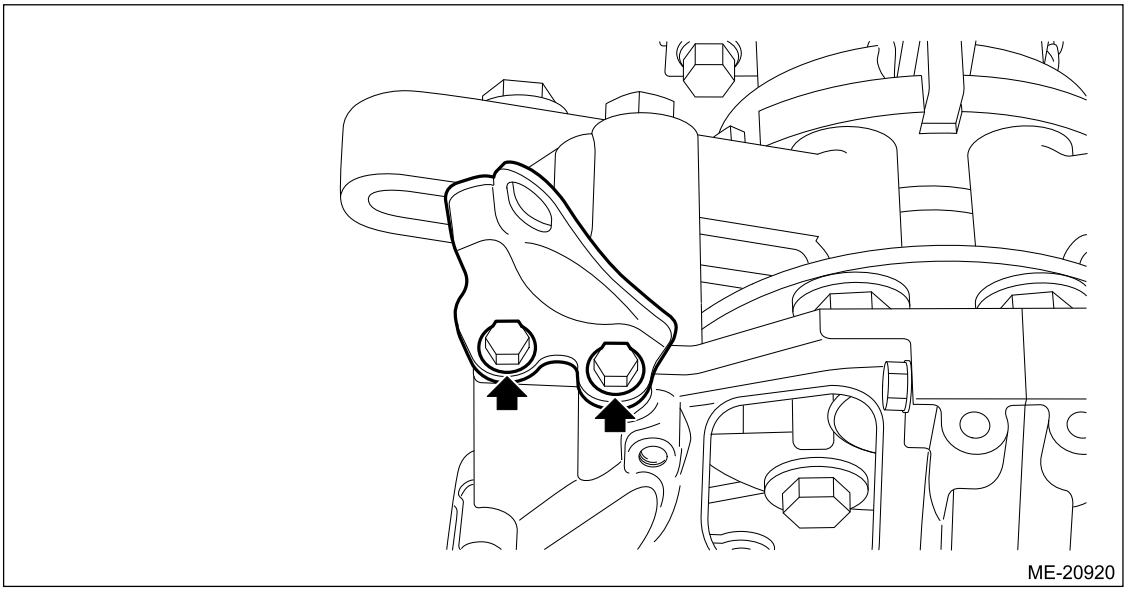


(a) Embossed mark
(Identification: E8)

Caution:

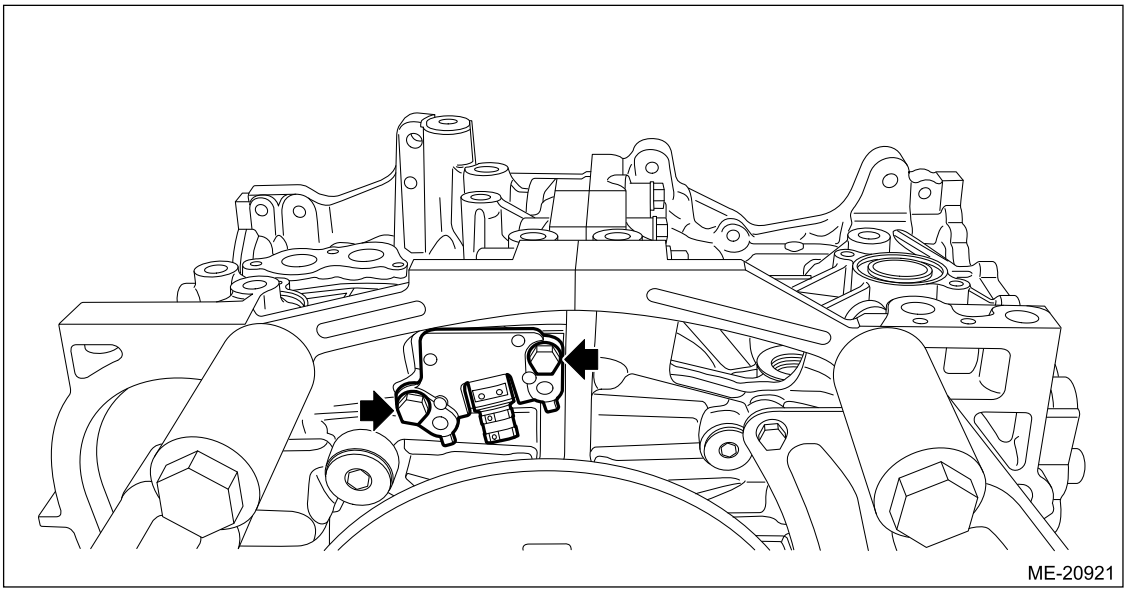
- **When disposing of the exhaust valve that is not broken, entrust the disposal processing to the industrial waste disposer in charge of dissolution treatment.**
- **When the exhaust valve is broken, remove it from the cylinder head, perform appropriate processing in the same manner as the general steel material.**
- **When performing processing, be careful of the following.**
  1. **Prepare the fire extinguisher nearby.**
  2. **Wear the protective goggles.**
  3. **Wear rubber gloves.**

1. Wear rubber gloves and remove the broken exhaust valve from the cylinder head.
2. Prepare large container (bucket or oil can) in well-ventilated place, and fill the container with water (10 L or more).
3. Using a pair of large tweezers or pliers, immerse the broken exhaust valve in the water vertically.
   Caution:
   - **Completely immerse the broken exhaust valve in the water.**
   - **Hydrogen gas is produced by the chemical reaction. Therefore, always keep the container away from open flames such as sparks.**
   - **Because the severe chemical reaction is developed, keep at least 2 to 3 m away from the container.**



4. After completion of chemical reaction (after the elapse of 4 — 5 hours), carefully take out the exhaust valve using a pair of large tweezers or pliers, and dispose of the exhaust valve according to the same disposal procedure the general steel material.

Caution:



- **Concerning the liquid waste disposal of the liquid (sodium hydrate) produced in a chemical reaction, follow all governmental regulations and local regulations related to the liquid waste disposal.**
- **If the liquid produced in a chemical reaction (sodium hydrate) should touch the skin, immediately wash it away with plenty water.**

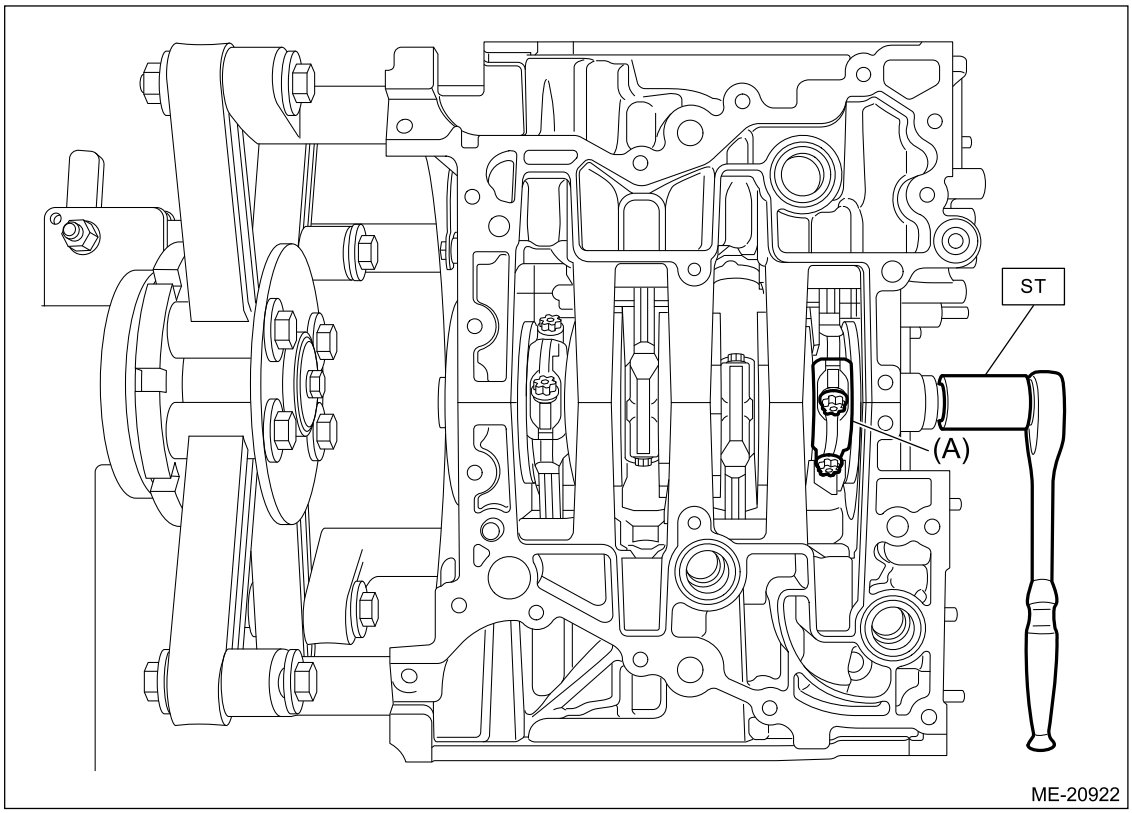
REMOVAL

1. Remove the engine from the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>REMOVAL.
2. Remove the crankshaft position sensor plate with drive plate. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Plate>REMOVAL.
3. Remove the clutch disc and cover. (MT model) Ref. to CLUTCH SYSTEM>Clutch Disc and Cover>REMOVAL.
4. Remove the crankshaft position sensor plate with flywheel. (MT model) Ref. to CLUTCH SYSTEM>Flywheel>REMOVAL.
5. Remove the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>REMOVAL.
6. Remove the engine wiring harness. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Wiring Harness>REMOVAL.
7. Remove the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>REMOVAL.
8. Remove the rocker cover. Ref. to MECHANICAL(H4DO)>Rocker Cover>REMOVAL.
9. Remove the cam carrier. Ref. to MECHANICAL(H4DO)>Cam Carrier>REMOVAL.
10. Remove the cylinder head. Ref. to MECHANICAL(H4DO)>Cylinder Head>REMOVAL.
11. Remove the oil pan upper. Ref. to LUBRICATION(H4DO)>Oil Pan>REMOVAL > OIL PAN UPPER.
12. Remove the crank sprocket. Ref. to MECHANICAL(H4DO)>Crank Sprocket>REMOVAL.
13. Remove the water tank pipe assembly. Ref. to COOLING(H4DO)>Water Pipe>REMOVAL > WATER TANK PIPE ASSY.
14. Remove the PVC connector. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>PCV Connector>REMOVAL.
15. Remove the knock sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Knock Sensor>REMOVAL.
16. Remove the PCV valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>PCV Valve>REMOVAL.
17. Remove the engine rear hanger from cylinder block RH.

18. Remove the bolts securing the crankshaft position sensor holder from the cylinder block LH, and remove the crankshaft position sensor with crankshaft position sensor holder.

19. Set the part so that the cylinder block RH is on the upper side.

20. Remove the #1 and #3 connecting rod caps and pistons from the cylinder block.

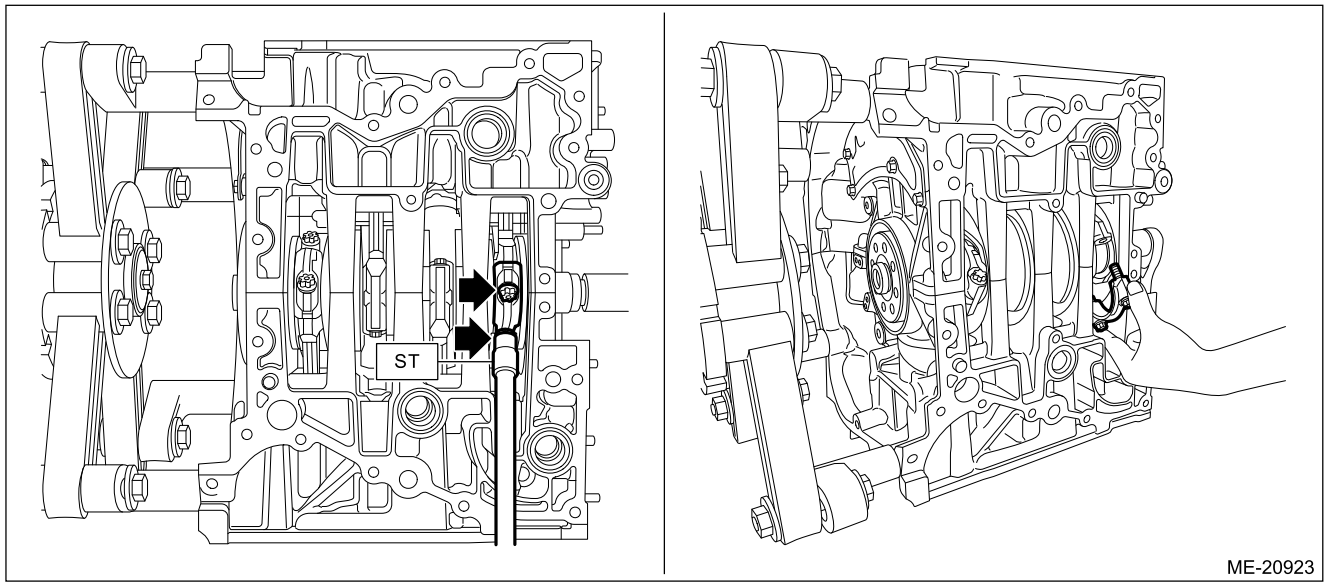


Note:

Mark each connecting rod cap and piston with a cylinder number.

(1) Using the ST, turn the crankshaft so that the #1 connecting rod cap (A) is located at the position shown in the figure.

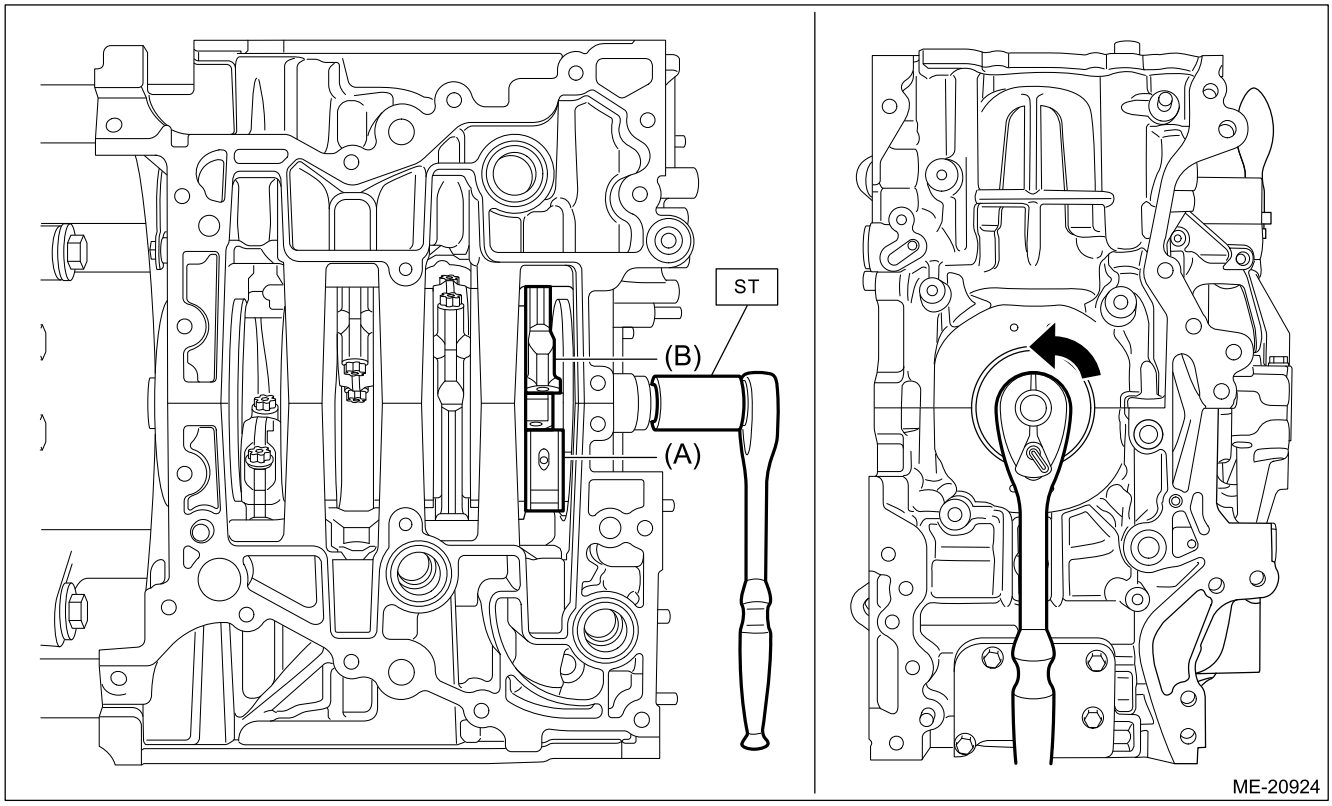
Preparation tool:



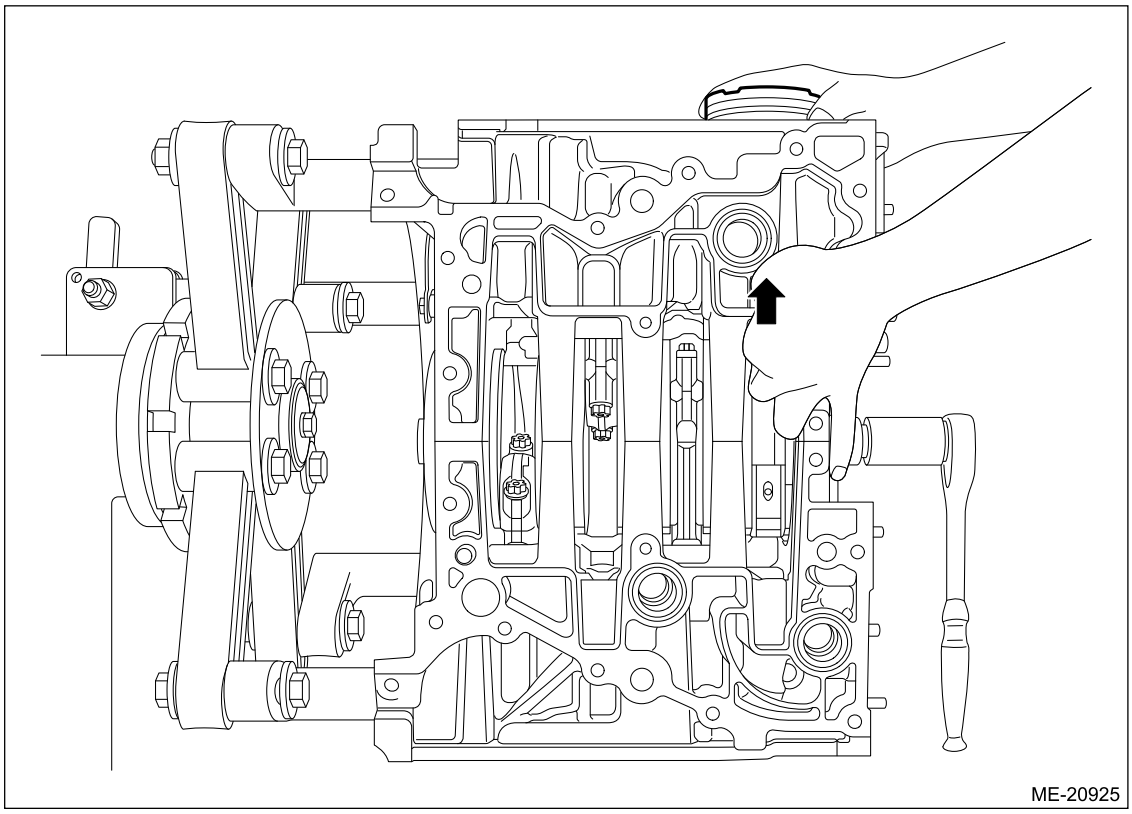
ST: CRANKSHAFT SOCKET (18252AA000)

(2) Using the ST, loosen the #1 connecting rod cap bolt, and remove the #1 connecting rod cap bolt and #1 connecting rod cap.

Preparation tool:



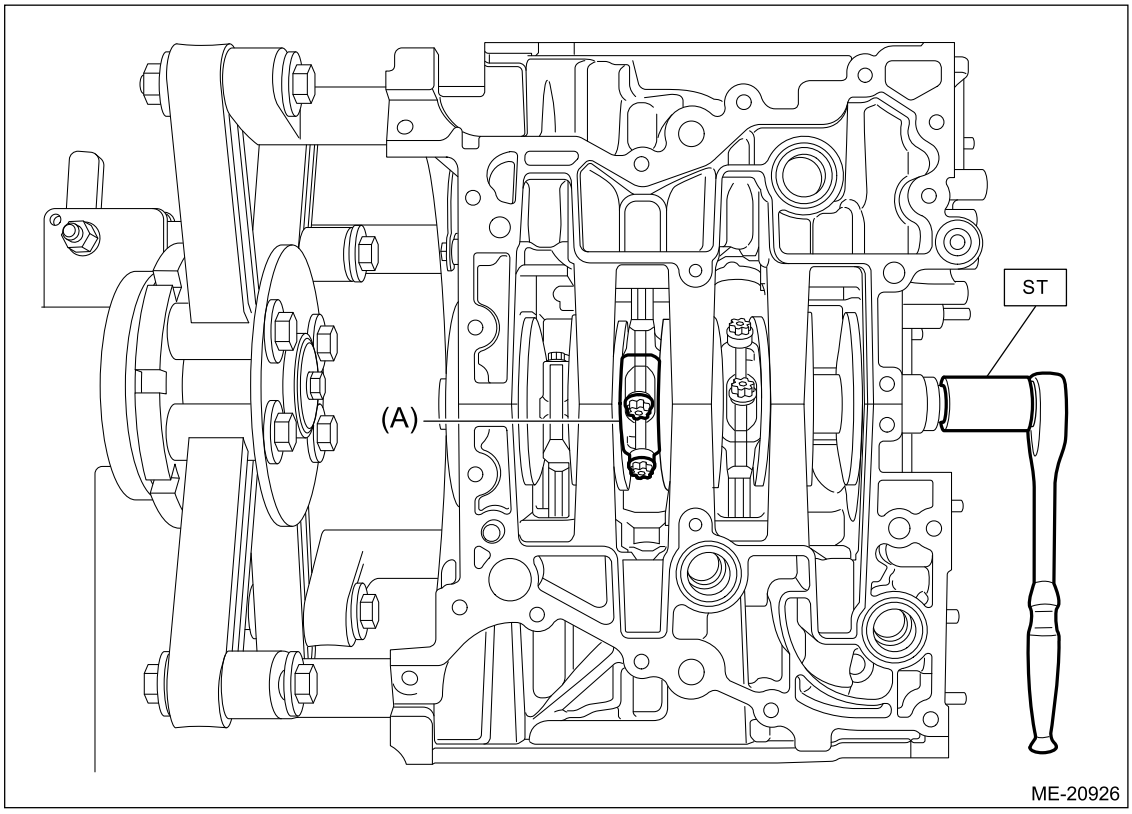
ST: SOCKET (18270AA020)



(3) Using the ST, turn the crankshaft counterclockwise and separate the positions of the #1 pin (A) of crankshaft and the large end (B) of #1 connecting rod.

Preparation tool:

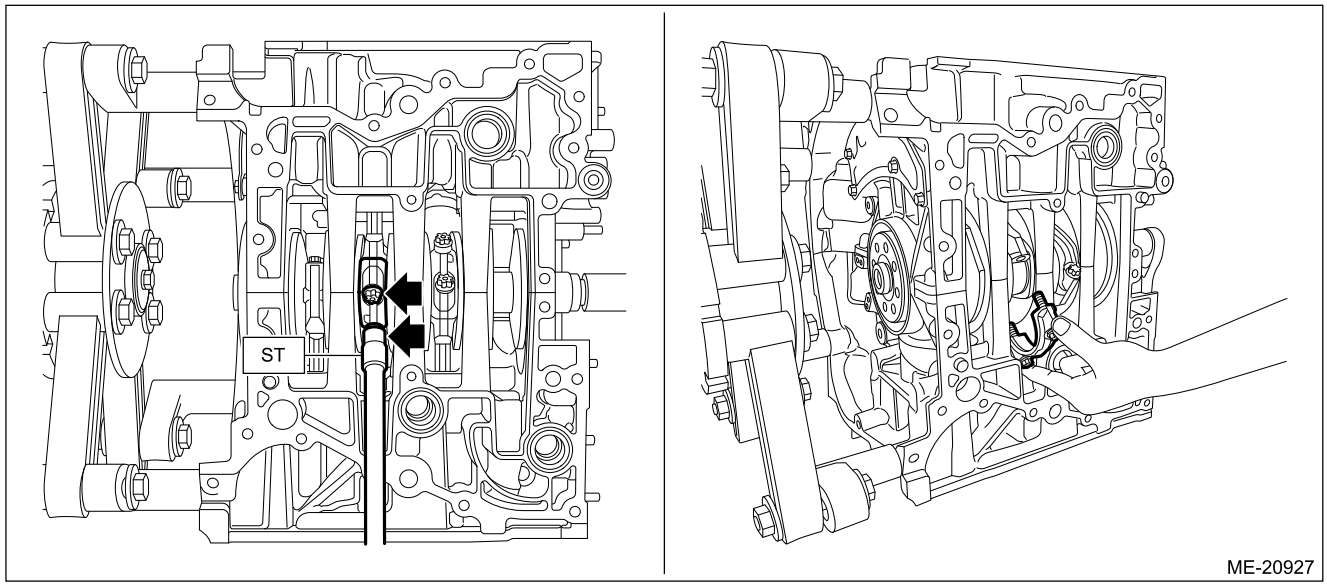
ST: CRANKSHAFT SOCKET (18252AA000)



(4) Push the #1 connecting rod in the direction of the arrow, and remove the #1 piston with #1 connecting rod from the cylinder block.

(5) Using the ST, turn the crankshaft so that the #3 connecting rod cap (A) is located at the position shown in the figure.

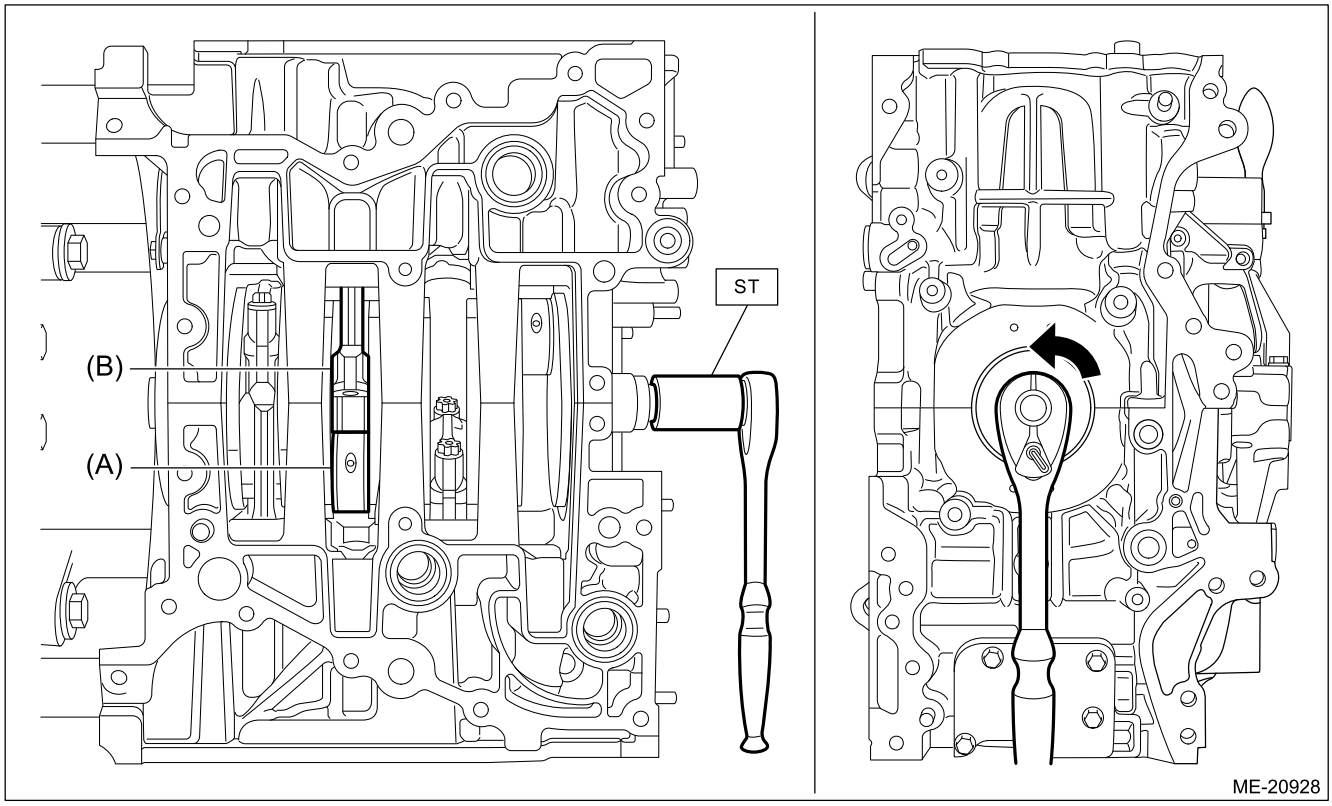
Preparation tool:



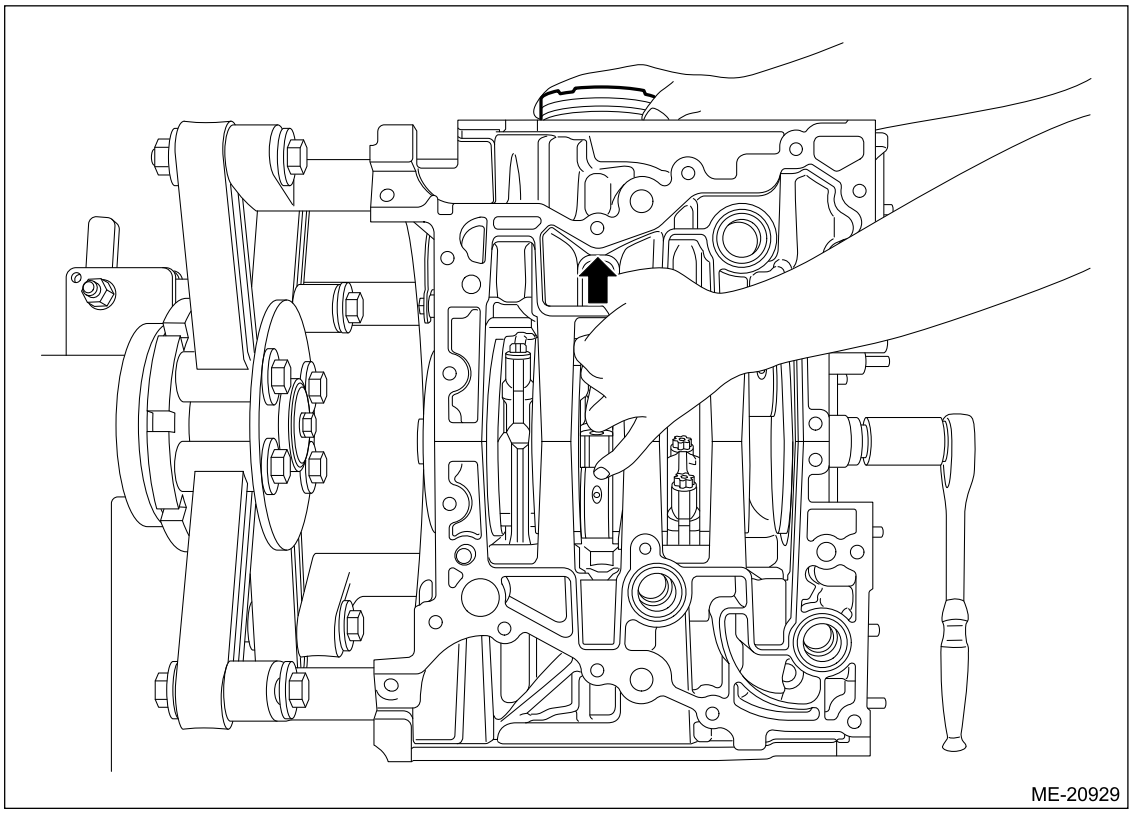
ST: CRANKSHAFT SOCKET (18252AA000)

(6) Using the ST, loosen the #3 connecting rod cap bolt, and remove the #3 connecting rod cap bolt and #3 connecting rod cap.

Preparation tool:



ST: SOCKET (18270AA020)

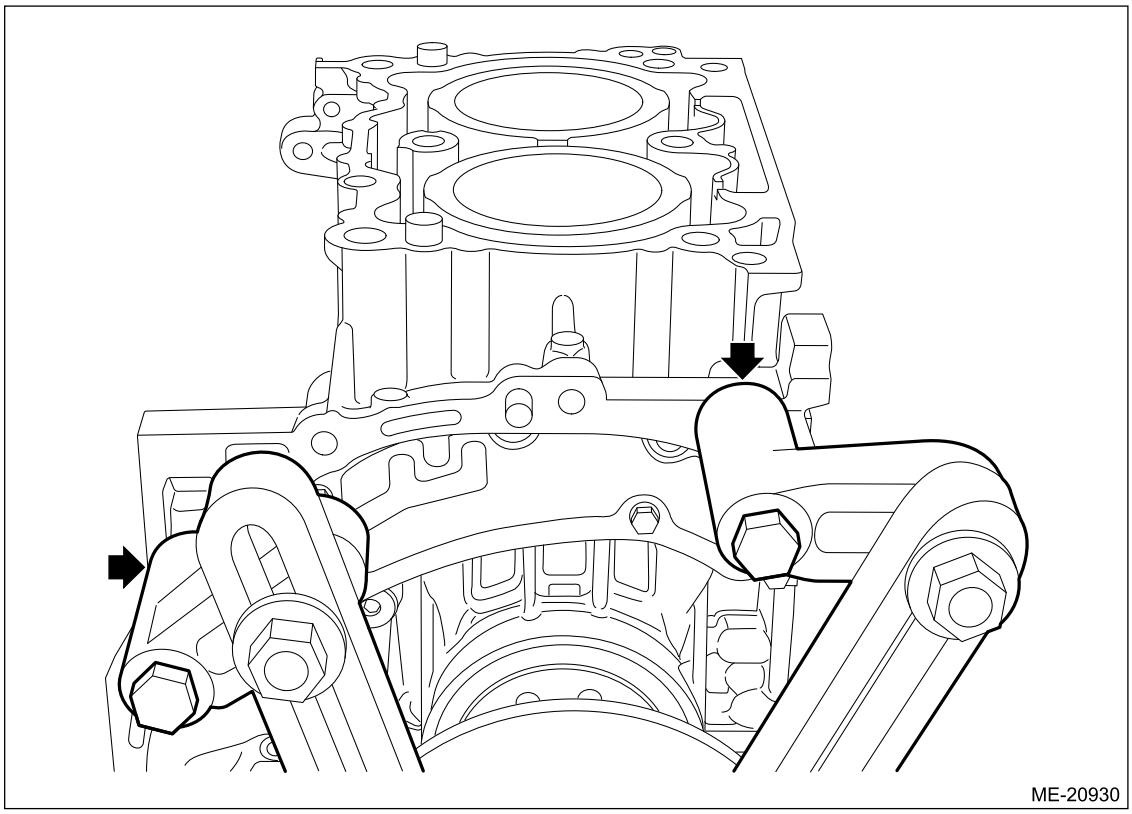


(7) Using the ST, turn the crankshaft counterclockwise and separate the positions of the #3 pin (A) of crankshaft and the large end (B) of #3 connecting rod.

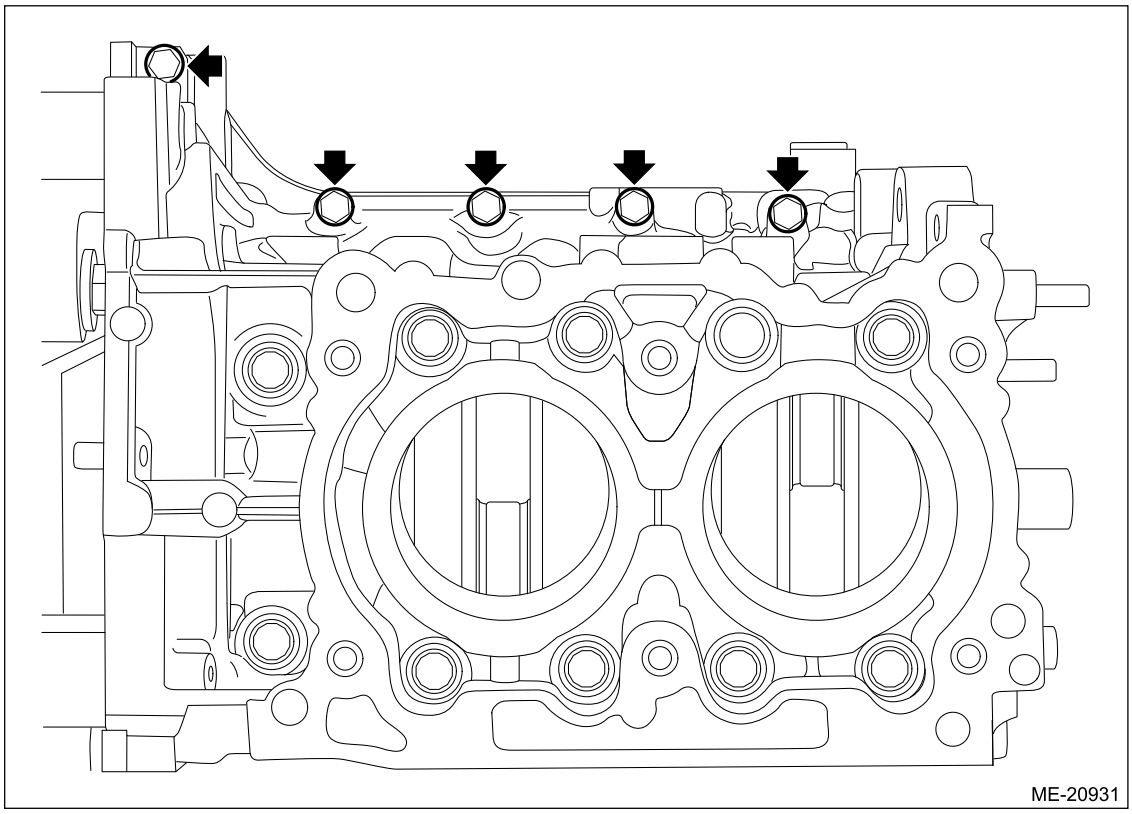
Preparation tool:

ST: CRANKSHAFT SOCKET (18252AA000)

(8) Push the #3 connecting rod in the direction of the arrow, and remove the #3 piston with #3 connecting rod from the cylinder block.

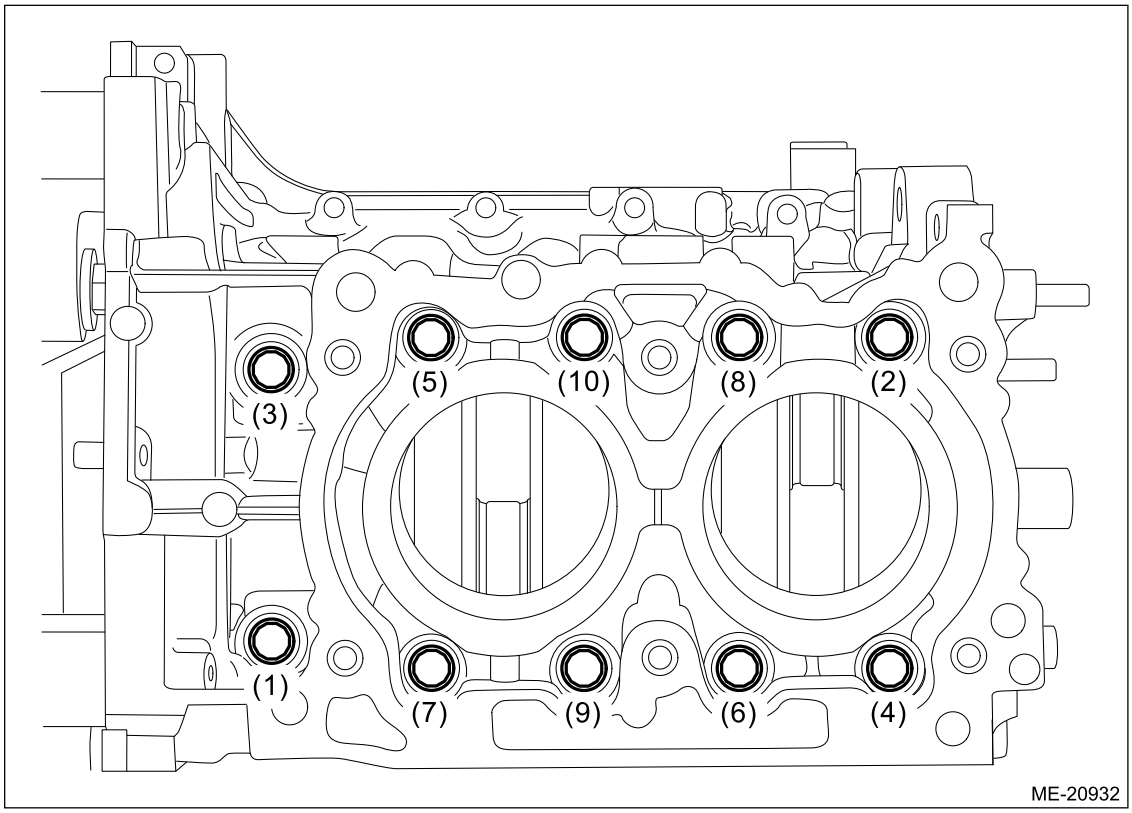


21. Set the part so that the cylinder block LH is on the upper side.



22. Remove #2 and #4 connecting rod caps and pistons in the same removal procedure as #1 and #3 connecting rod caps and pistons.

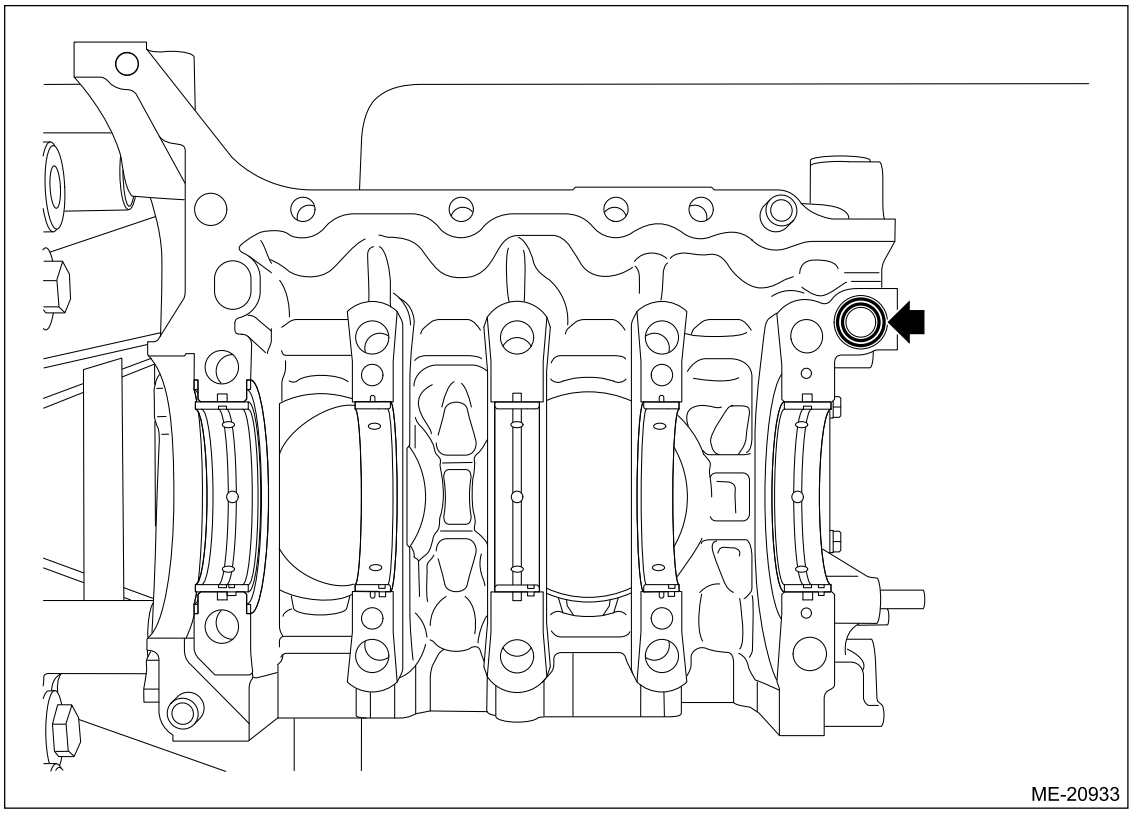
23. Set the part so that the cylinder block RH is on the upper side, and separate the cylinder block.



(1) Remove the engine stand from the cylinder block RH.

(2) Remove the bolt shown in the figure.

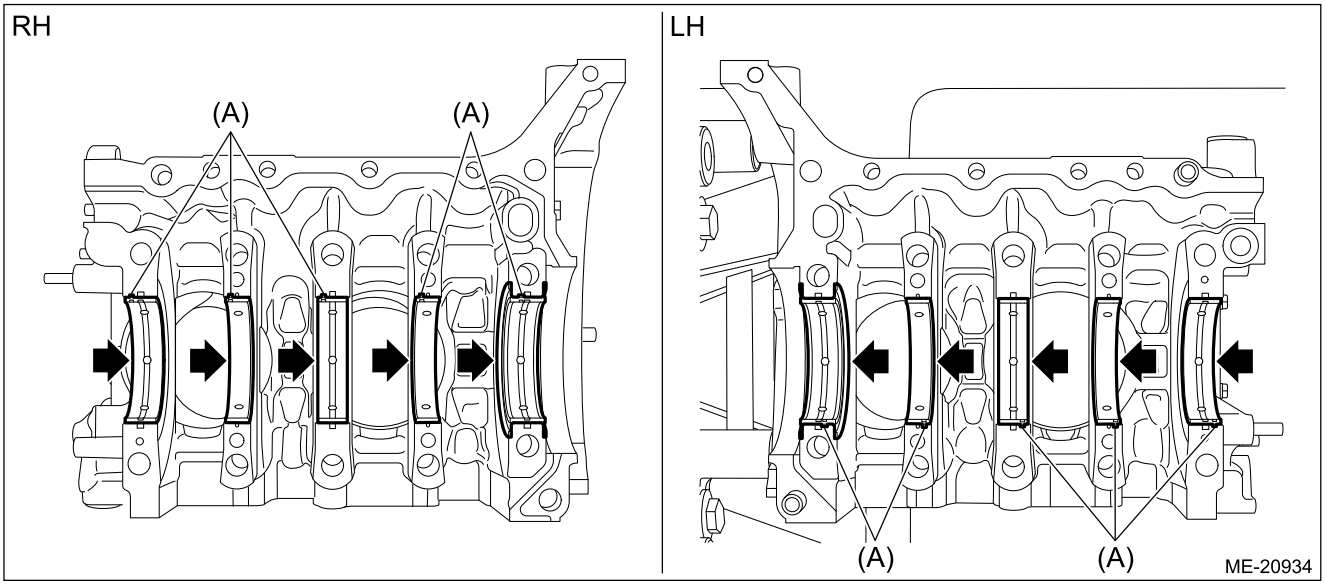
(3) Loosen the cylinder block mounting bolts in numerical order as shown in the figure, and then remove the bolts.



(4) While tapping the cylinder block RH with a plastic hammer, separate the cylinder block RH from the cylinder block LH.

Note:

Lift the cylinder block RH gradually, and confirm that the crankshaft is remaining in the cylinder block LH. Lifting the cylinder block RH carelessly may cause the crankshaft to fall off.



24. Remove the crankshaft from cylinder block LH, and remove the rear oil seal.
25. Remove the O-ring from the cylinder block LH.

26. Remove the crankshaft bearings from the cylinder block.

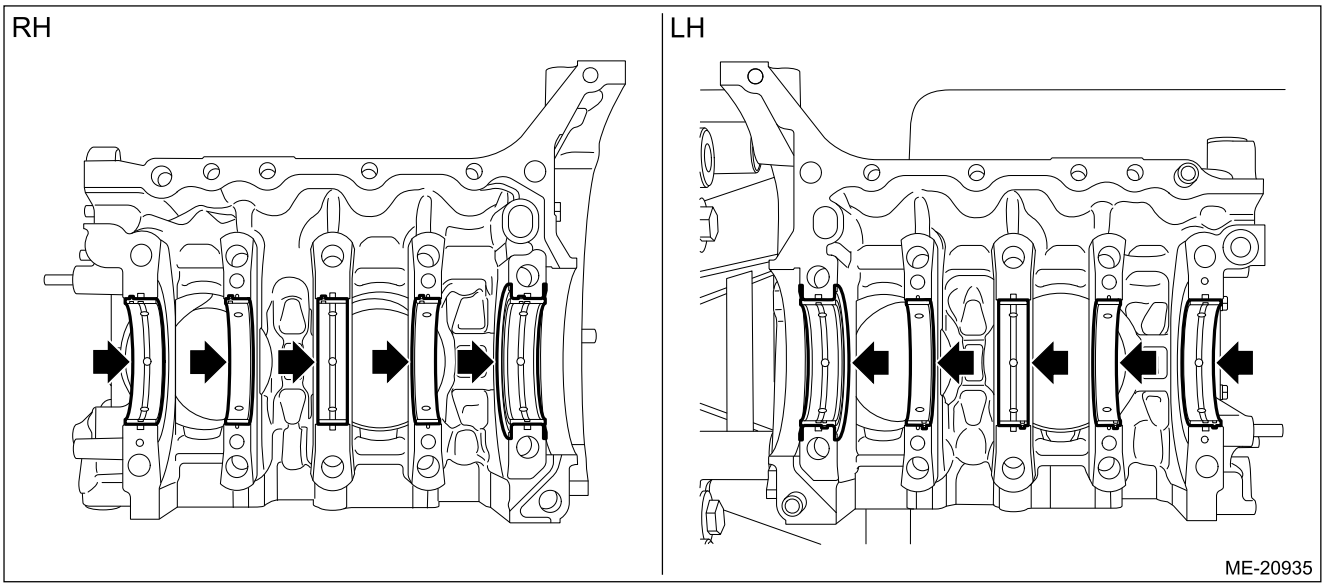
Note:

- **Be careful not to confuse the crankshaft bearing combination.**
- **Press the bearing at the end opposite to locking lip (A).**

27. Remove the liquid gasket from cylinder block.
28. Remove the cylinder block LH from the engine stand.

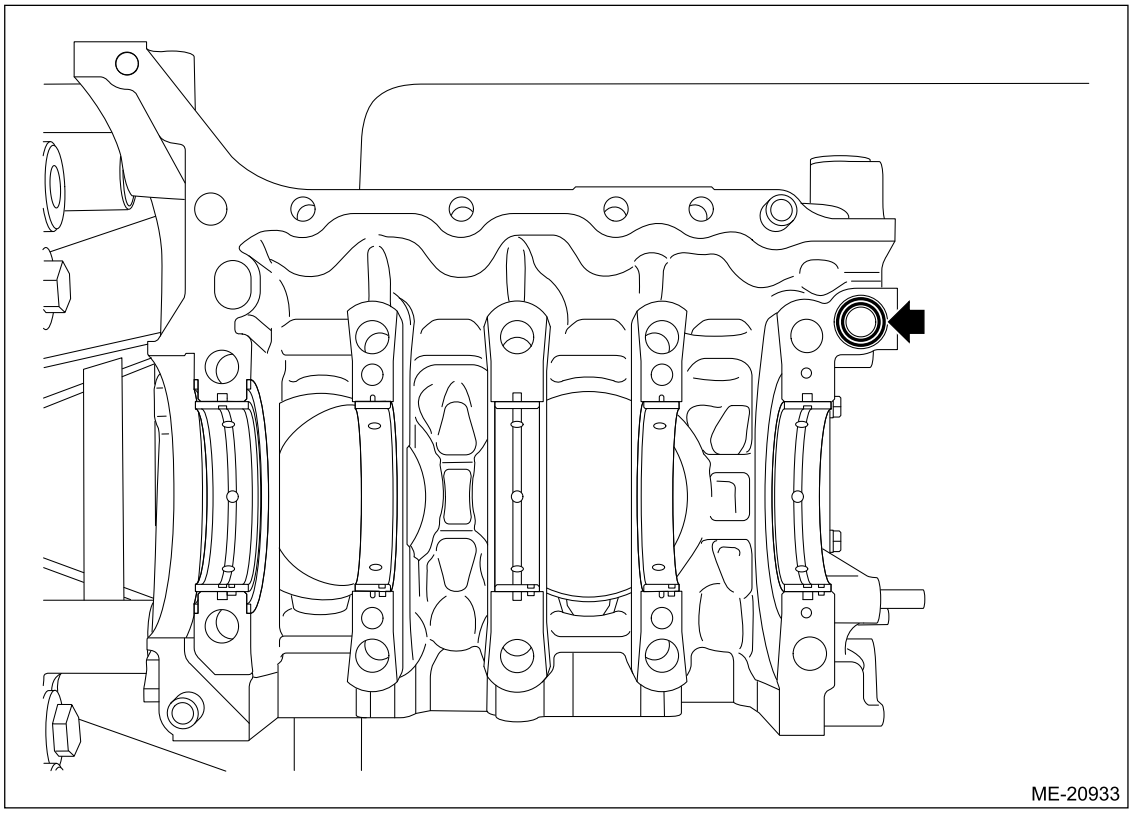
MECHANICAL(H4DO) > Cylinder Block

INSTALLATION



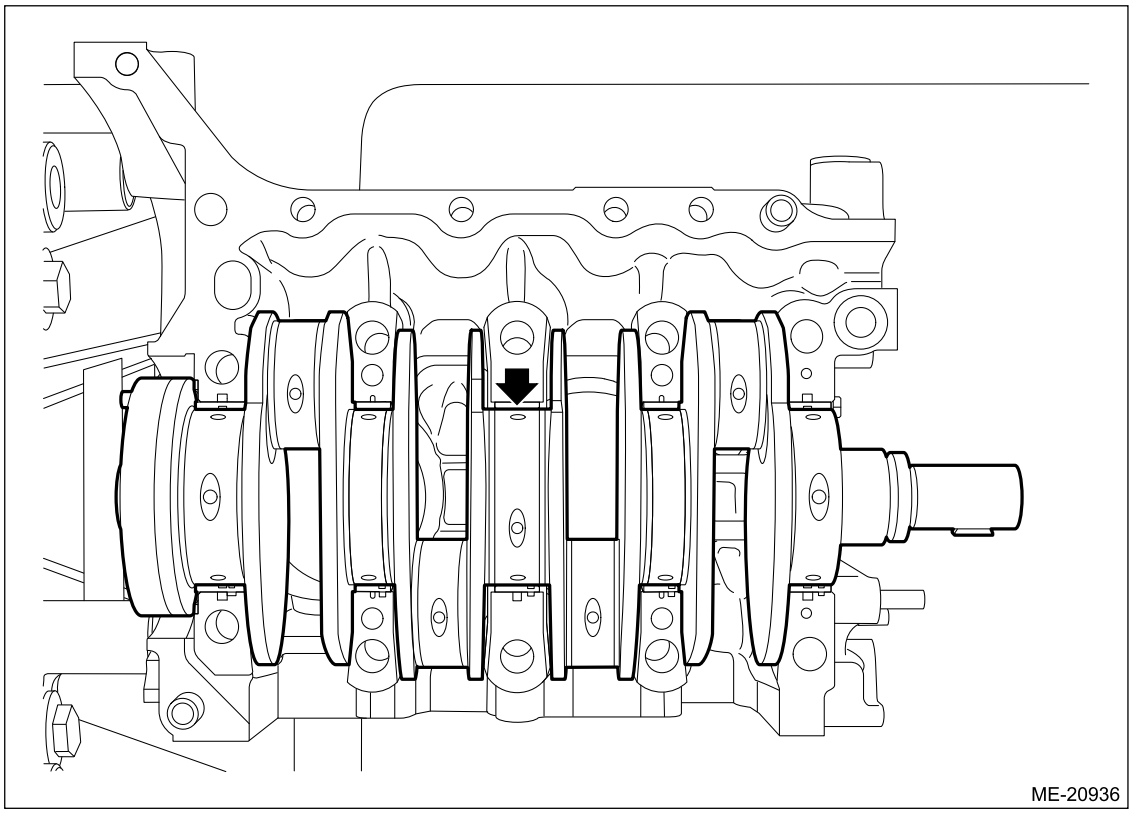
1. Install the cylinder block LH to the engine stand.
2. Apply engine oil to the crankshaft bearing, and install the crankshaft bearing to the cylinder block.

Caution:



When performing the operation of the cylinder block RH, be careful of the following.

1. Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.



2. Be careful not to scratch the mating surface of cylinder block during work.

3. Install new O-rings to the cylinder block LH.

4. Apply engine oil to the crankshaft journal, and set the crankshaft to cylinder block LH.

5. Apply liquid gasket to the mating surface of cylinder block RH as shown in the figure.

Caution:

- **Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.**
- **Be careful not to scratch the mating surface of cylinder block during work.**
- **Do not let the liquid gasket overflow to the oil passage and crankshaft bearing portions, because the engine seizure may result.**

Note:

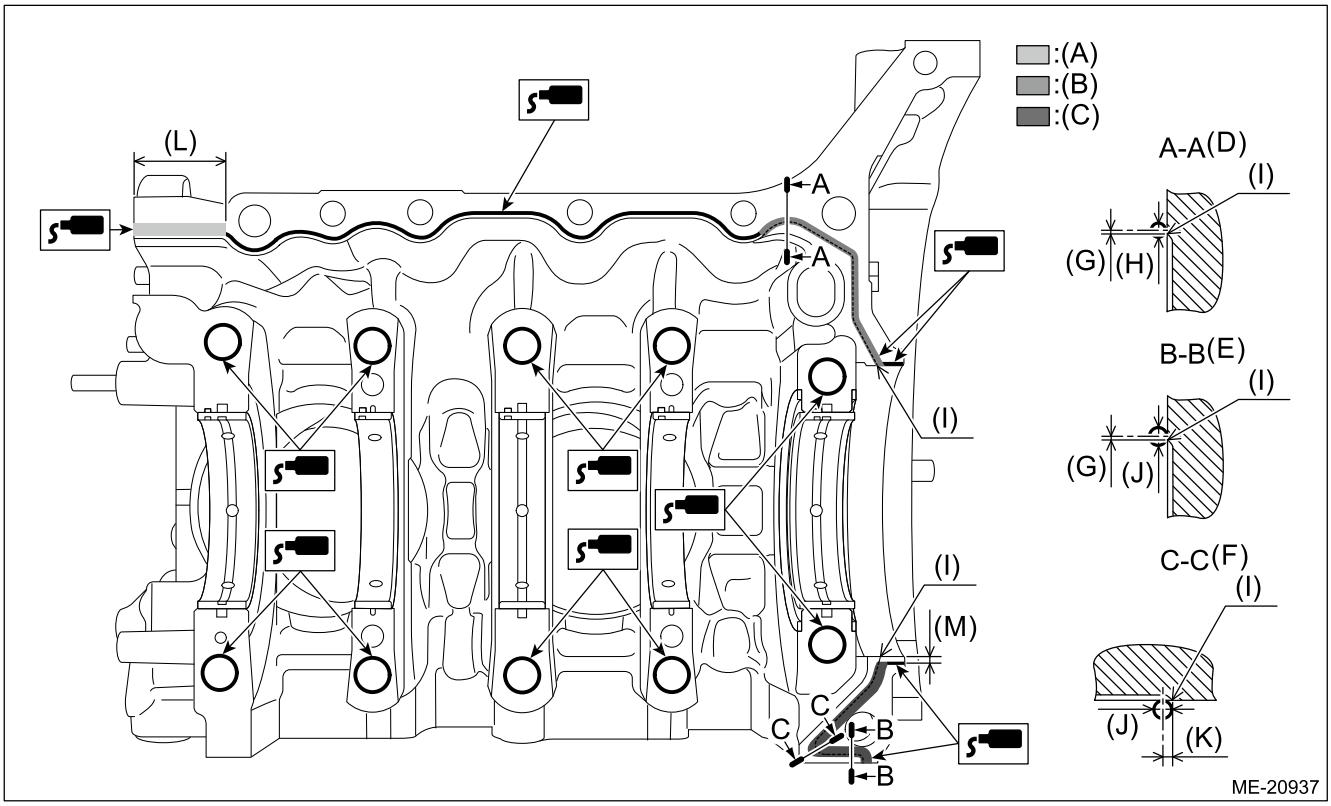
- **Before applying liquid gasket, degrease the old liquid gasket seal surface of the cylinder block RH and cylinder block LH.**
- **Install within 5 min. after applying liquid gasket.**

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

Mating surfaces other than ranges A, B and C



1±0.5 mm (0.0394±0.0197 in)

Mating surfaces of ranges A and C

4±0.5 mm (0.1575±0.0197 in)

Mating surfaces of range B

3.2±0.5 mm (0.1260±0.0197 in)

(A)	Range A	(F)	Liquid gasket applying position of mating surfaces (the edge) of range C	(K)	2 mm (0.0787 in)
(B)	Range B	(G)	Within 1 mm (0.0394 in)	(L)	36 mm (1.4173 in)
(C)	Range C	(H)	⌀3.2±0.5 mm (0.1260±0.0197 in)	(M)	2.5 mm (0.0984 in)
(D)	Liquid gasket applying position of mating surfaces of range B	(I)	Chamfer edge		
(E)	Liquid gasket applying position of mating surfaces (other than the edge) of range C	(J)	⌀4±0.5 mm (0.1575±0.0197 in)		

6. Install the cylinder block RH to the cylinder block LH.

7. Join the cylinder blocks.

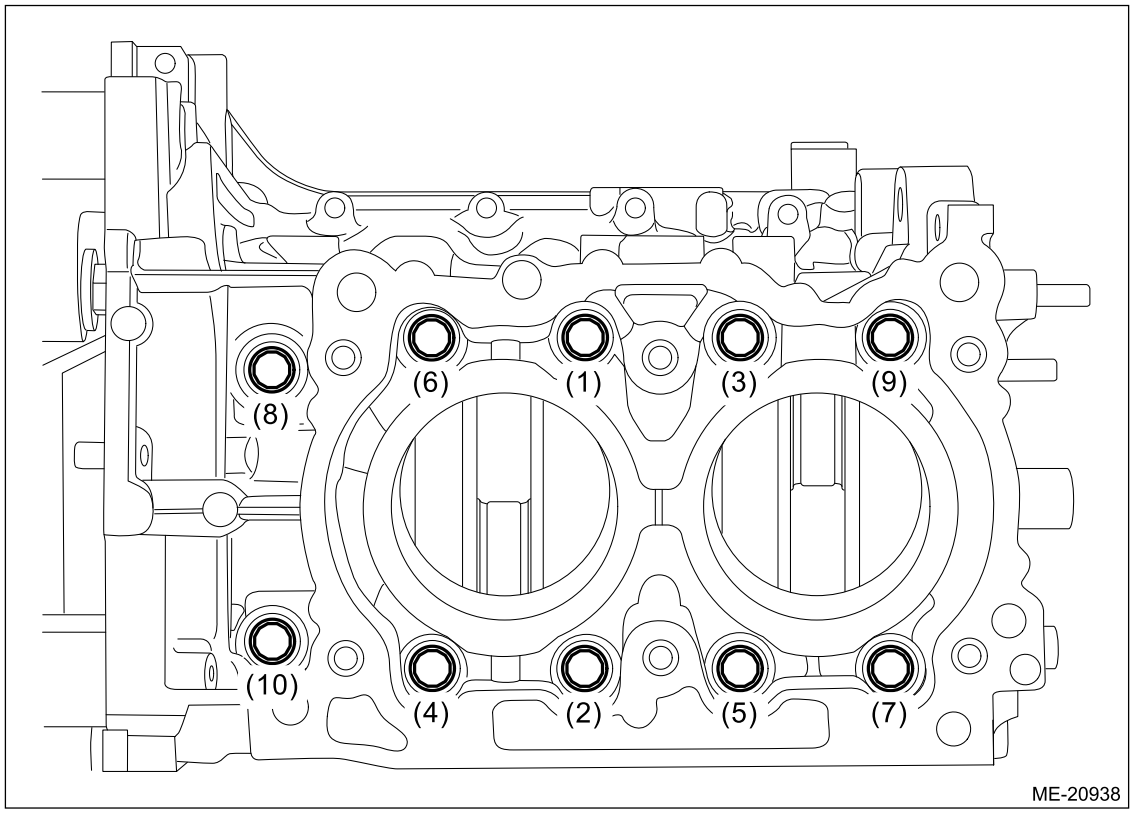
Caution:

When tightening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

(1) Apply a coat of engine oil to the washers and cylinder block mounting bolt threads.

Note:

To prevent mixture of engine oil into the water jacket, do not apply a large amount.



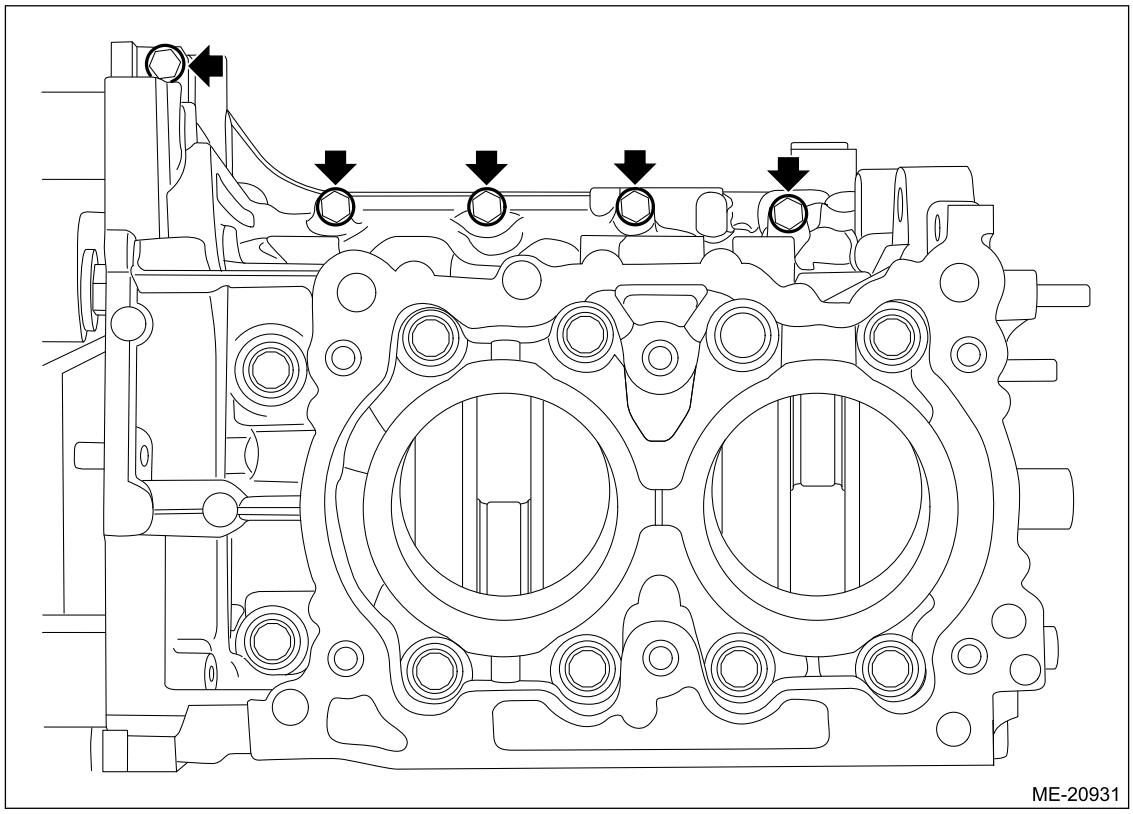
(2) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

(3) Loosen all mounting bolts by 180° in the reverse order of tightening in step (2).

(4) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

(5) Loosen the mounting bolts (4 places) by 180° in the order of (6) → (5) → (4) → (3) as shown in the figure.

(6) Tighten the mounting bolts (4 places) with a torque of 17 N·m (1.7kgf-m, 12.5 ft-lb) in the order of (3) → (4) → (5) → (6) as shown in the figure.
(7) Using an angle gauge, tighten the mounting bolts (4 places) with torque of 58°— 62° in the order of (3) → (4) → (5) → (6) as shown in the figure.
(8) Loosen the mounting bolts (6 places) by 180° in the order of (8) → (7) → (10) → (9) → (2) → (1) as shown in the figure.
(9) Tighten the mounting bolts (6 places) with a torque of 17 N·m (1.7kgf-m, 12.5 ft-lb) in the order of (1) → (2) → (9) → (10) → (7) → (8) as shown in the figure.
(10) Using an angle gauge, tighten the mounting bolts (3 places) with torque of 58°— 62° in the order of (1) → (2) → (9) as shown in the figure.
(11) Using an angle gauge, tighten the mounting bolt (10) (1 place) shown in the figure to the angle of 78°— 82°.
(12) Using an angle gauge, tighten the mounting bolt (7) (1 place) shown in the figure to the angle of 58°— 62°.
(13) Using an angle gauge, tighten the mounting bolt (8) (1 place) shown in the figure to the angle of 78°— 82°.



(14) Install the bolt shown in the figure.

Note:

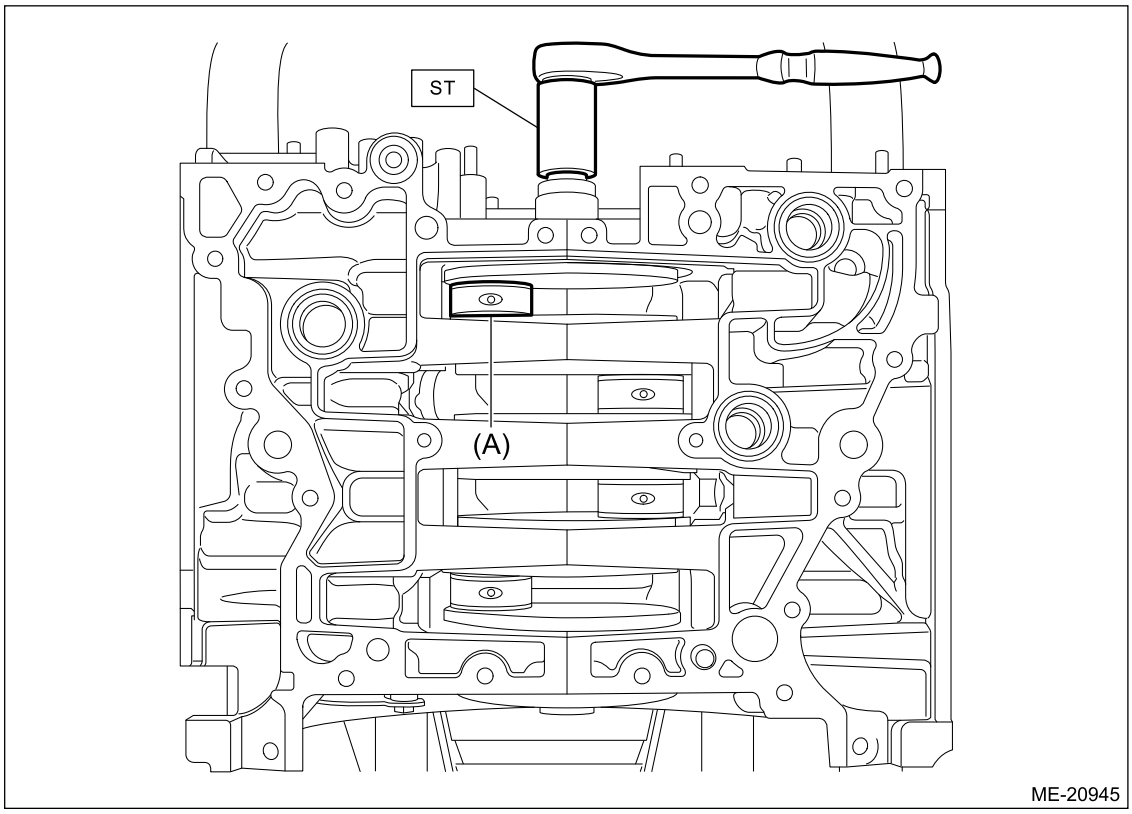
After tightening, if the liquid gasket is squeezed out onto the seal surfaces of the chain cover and oil pan upper, remove any squeezed-out liquid gasket. Any liquid gasket on the chamfer area, however, should not be removed.

Tightening torque:

25 N·m (2.5kgf-m, 18.4ft-lb)

8. Set the part so that the installation surface of the oil pan upper is on the upper side.

9. Check that the piston ring gap for each piston is positioned correctly. Ref. to MECHANICAL(H4DO)>Cylinder Block>ASSEMBLY > PISTON AND CONNECTING ROD.



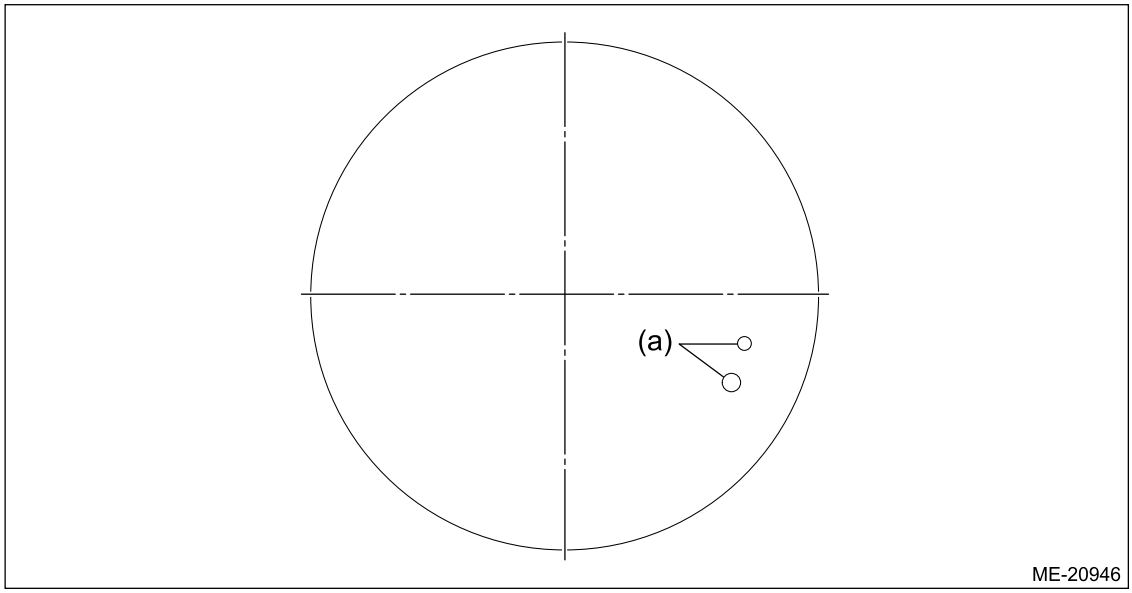
10. Install the piston and connecting rod to the cylinder block.

(1) Apply engine oil to the outer circumference of each piston, crankshaft pin, and in the cylinder block.

(2) Using the ST, turn the crankshaft so that the #1 pin (A) of crankshaft is positioned at TDC.

Preparation tool:

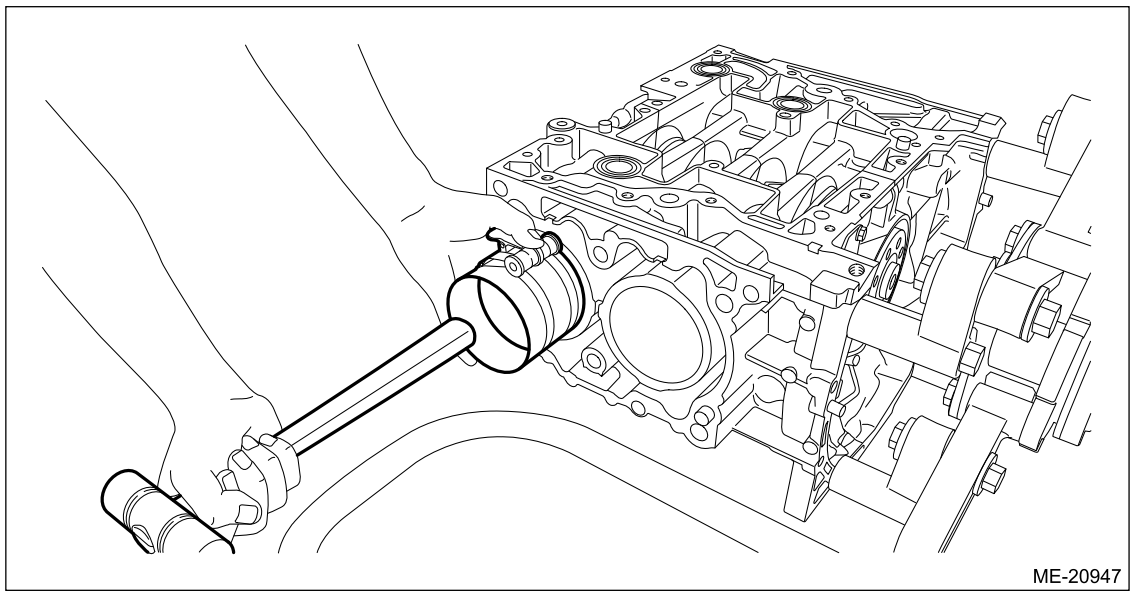
ST: CRANKSHAFT SOCKET (18252AA000)



(3)Compress the piston ring using piston ring compressor, and insert the #1 connecting rod with #1 piston into cylinder block.

Caution:

- **Be careful not to damage the cylinder liner and #1 pin of crankshaft by the #1 connecting rod large end.**
- **Be careful not to apply strong impact when inserting to prevent connecting rod bearing from falling off.**

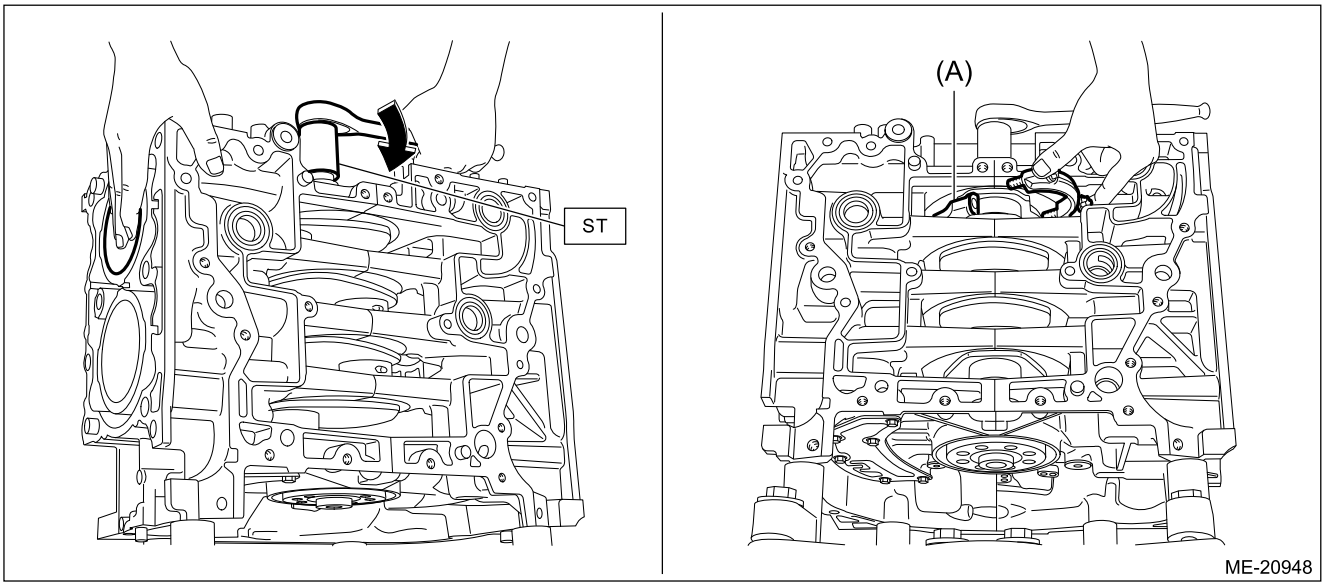


Note:

- **Face the piston front mark (round mark) towards the front of the engine.**

(a) Front mark

- **Insert while lightly tapping the crown of the piston with the handle of a plastic hammer.**

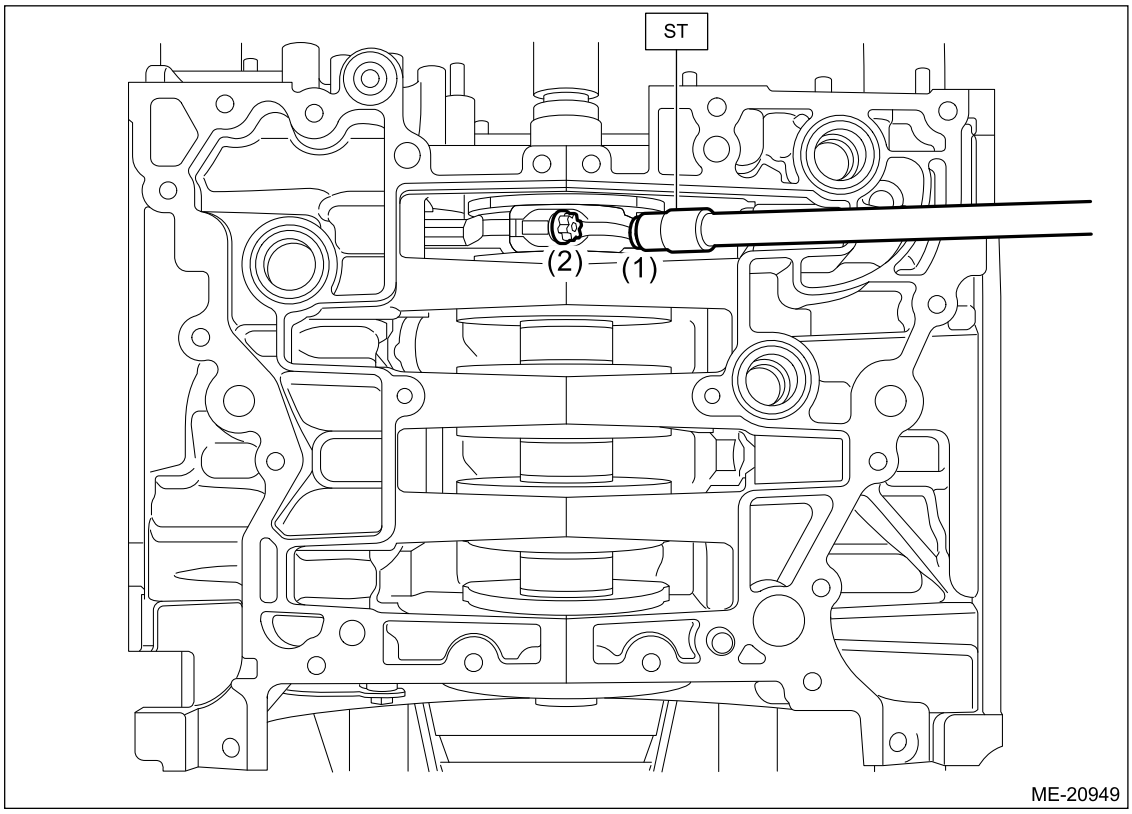


(4) Using the ST, turn the crankshaft counterclockwise so that the #1 pin of crankshaft and the large end (A) of #1 connecting rod are positioned as shown in the figure, while pressing the #1 piston crown, and then set the #1 connecting rod cap and #1 connecting rod cap bolt.

Note:

- **Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.**
- **Use a new connecting rod cap bolt.**
- **Apply a coat of engine oil to the #1 connecting rod cap seat and the connecting rod cap bolt threads.**

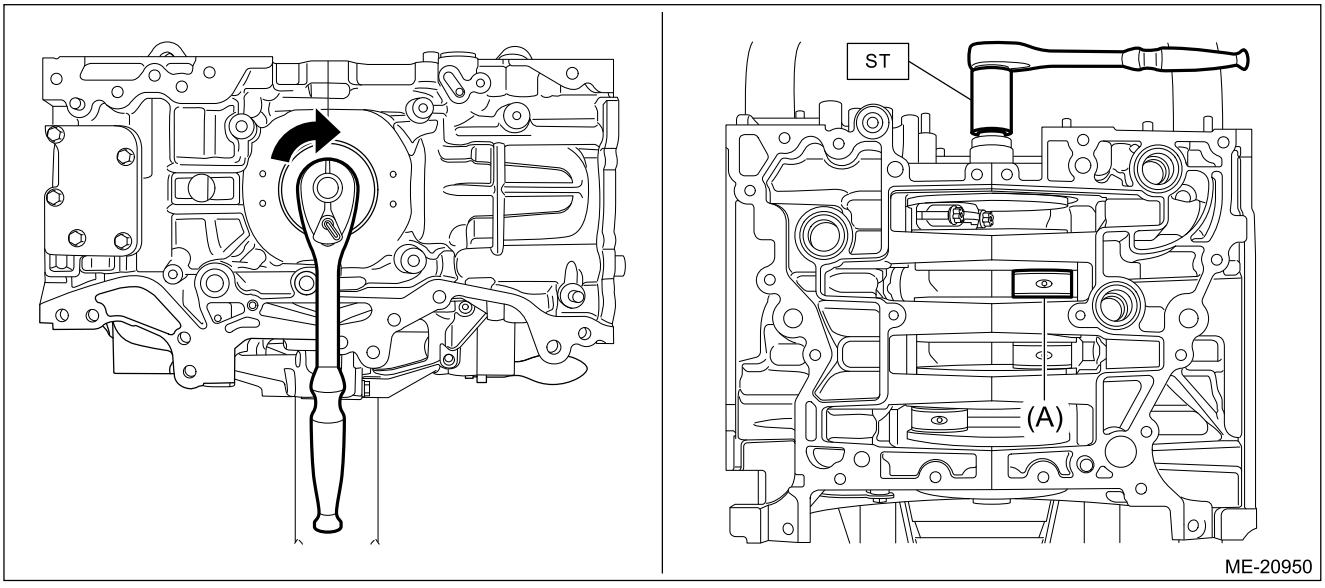
Preparation tool:



ST: CRANKSHAFT SOCKET (18252AA000)

(5) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 22 N·m (2.2 kgf-m, 16.2 ft-lb) in numerical order as shown in the figure.

Preparation tool:

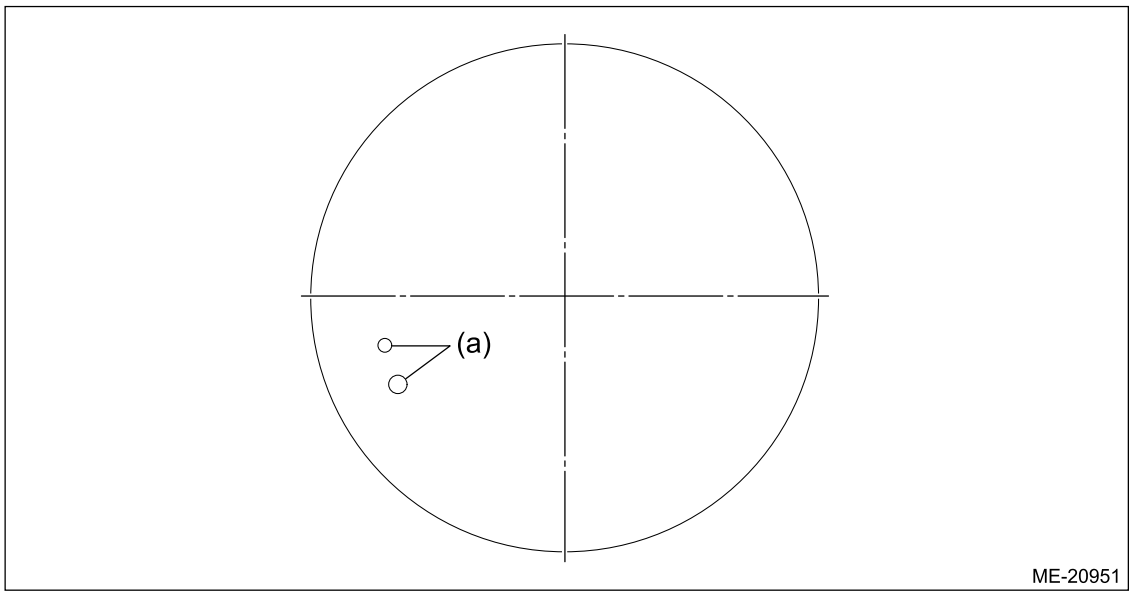


ST: SOCKET (18270AA020)

(6) Using the ST, turn the crankshaft clockwise so that the #2 pin (A) of crankshaft is positioned at TDC.

Preparation tool:

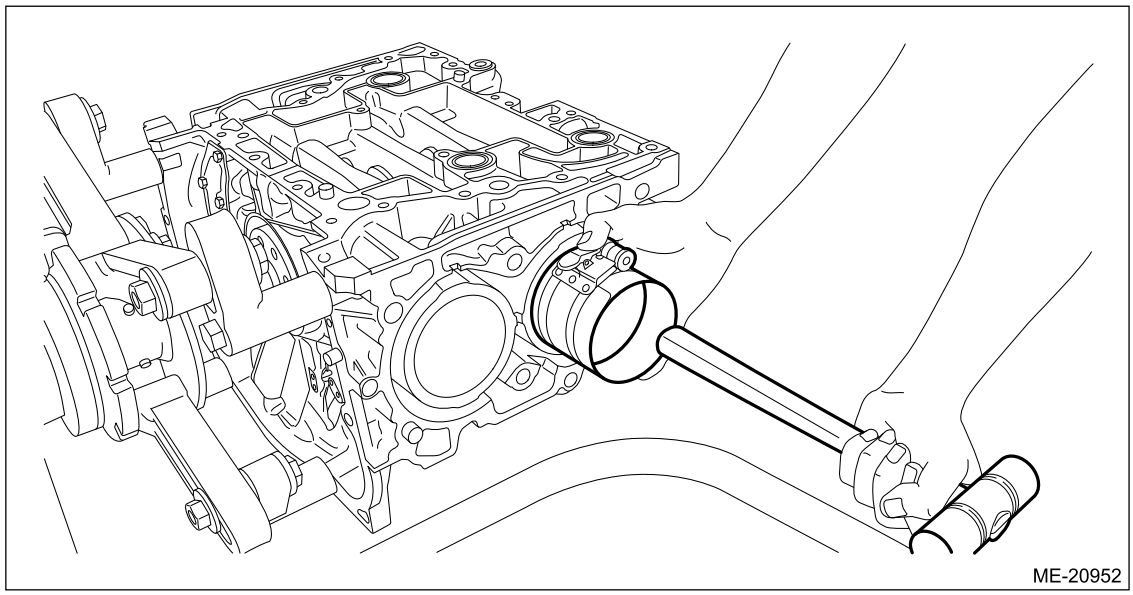
ST: CRANKSHAFT SOCKET (18252AA000)



(7) Compress the piston ring using piston ring compressor, and insert the #2 connecting rod with #2 piston into cylinder block.

Caution:

- **Be careful not to damage the cylinder liner and #2 pin of crankshaft by the #2 connecting rod large end.**
- **Be careful not to apply strong impact when inserting to prevent connecting rod bearing from falling off.**

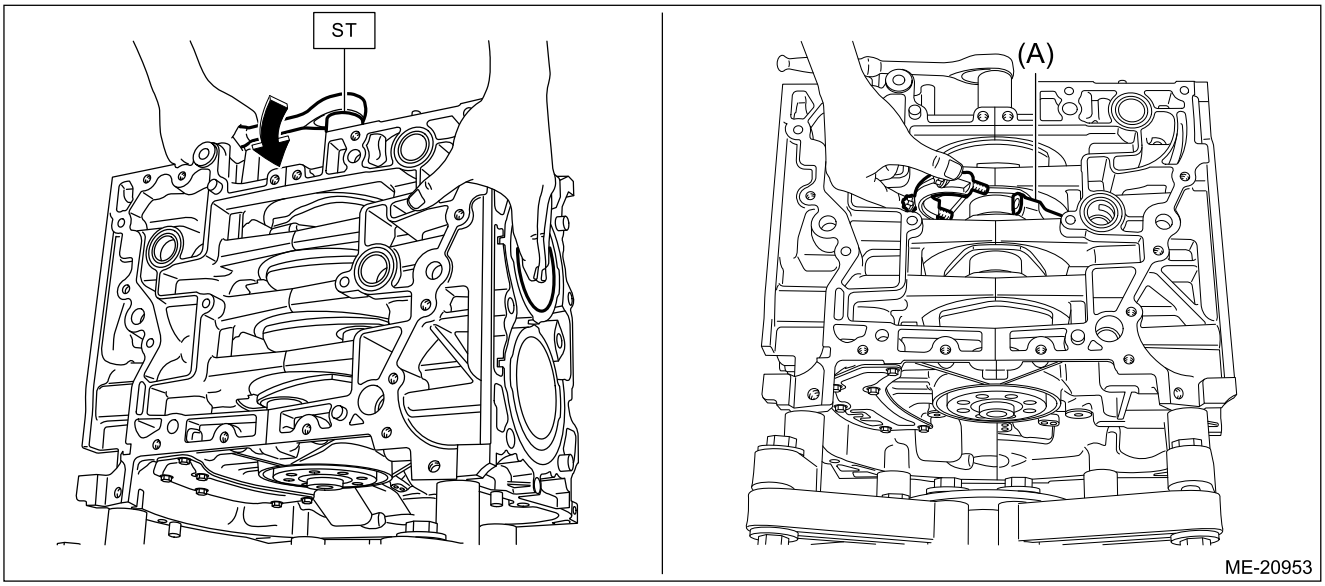


Note:

- **Face the piston front mark (round mark) towards the front of the engine.**

(a) Front mark

- **Insert while lightly tapping the crown of the piston with the handle of a plastic hammer.**

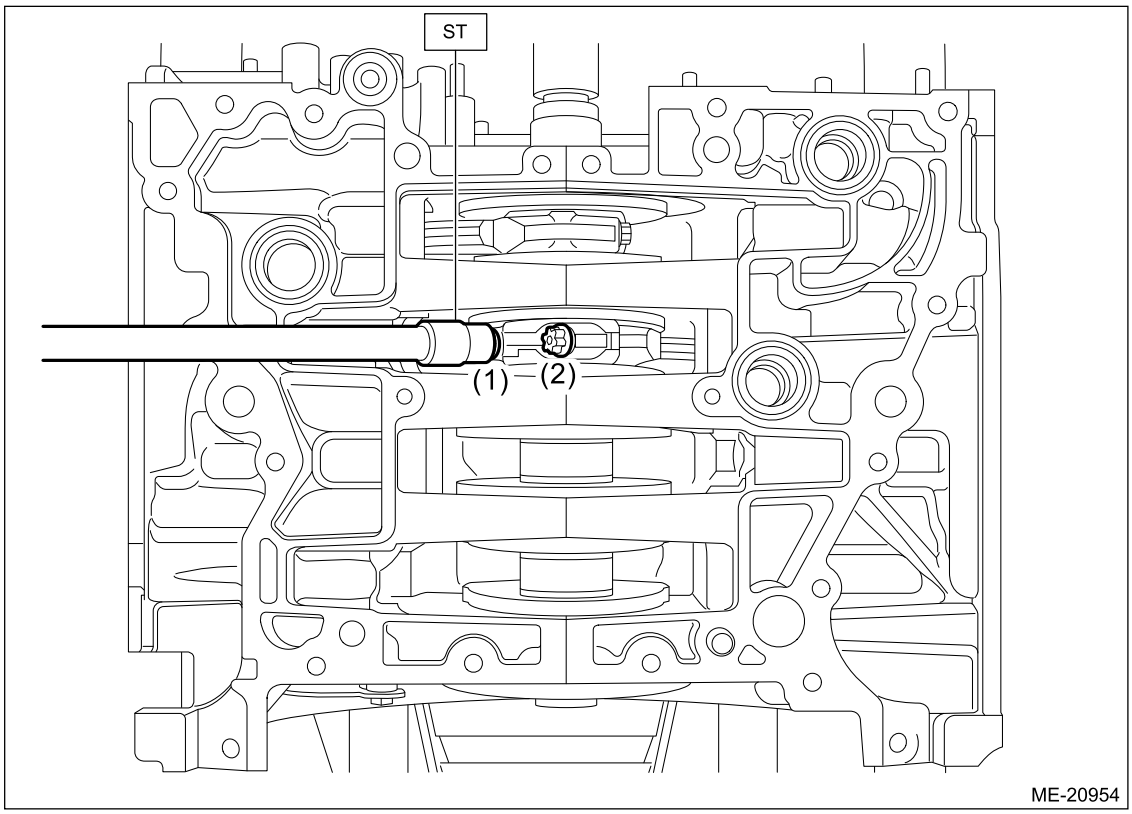


(8) Using the ST, turn the crankshaft clockwise so that the #2 pin of crankshaft and the large end (A) of #2 connecting rod are positioned as shown in the figure, while pressing the #2 piston crown, and then set the #2 connecting rod cap and #2 connecting rod cap bolt.

Note:

- **Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.**
- **Use a new connecting rod cap bolt.**
- **Apply a coat of engine oil to the #2 connecting rod cap seat and the connecting rod cap bolt threads.**

Preparation tool:

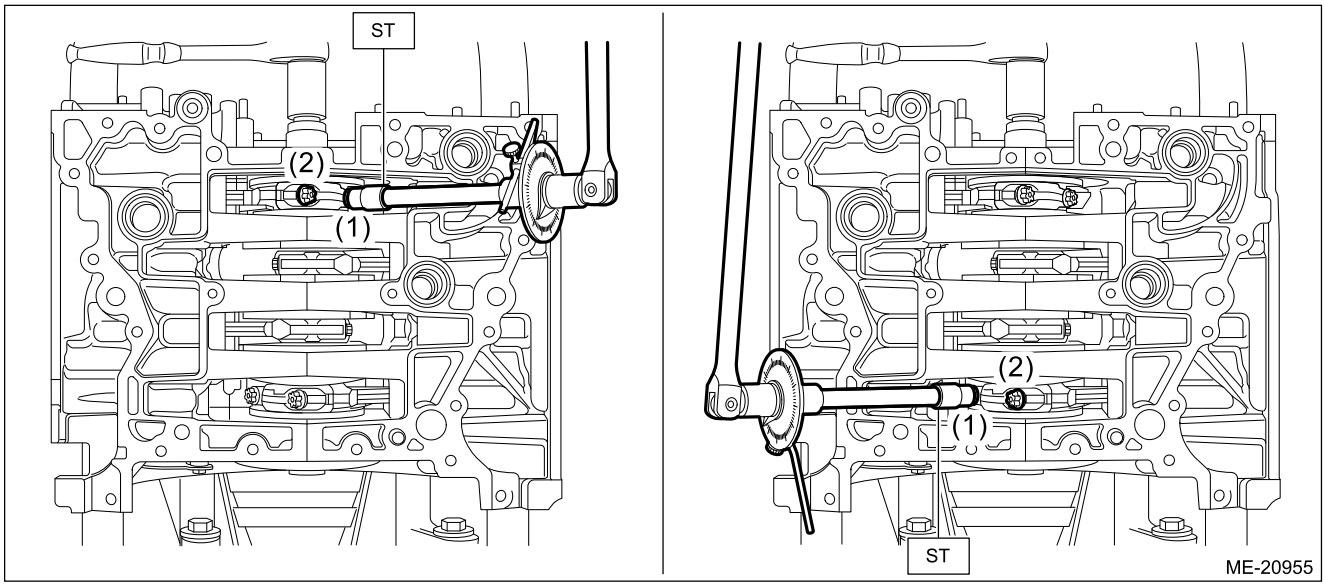


ST: CRANKSHAFT SOCKET (18252AA000)

(9) Using the ST, tighten the #2 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 22 N·m (2.2 kgf-m, 16.2 ft-lb) in numerical order as shown in the figure.

Preparation tool:

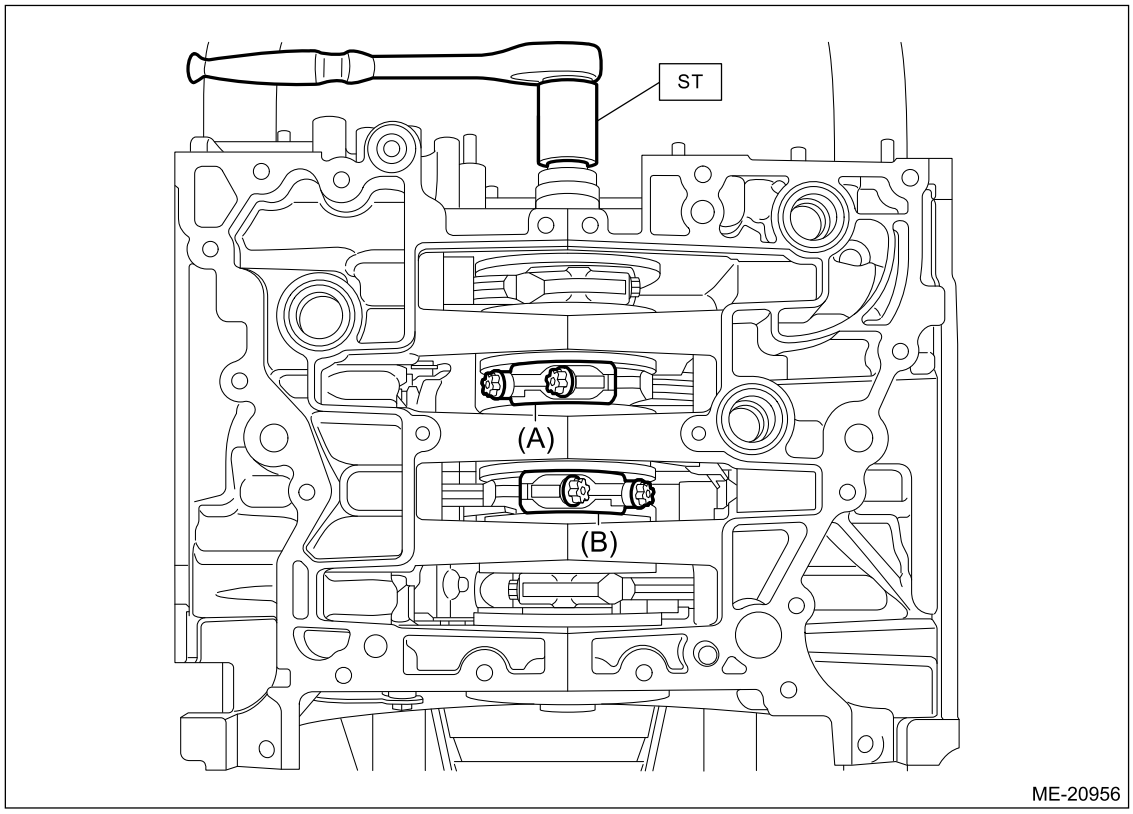
ST: SOCKET (18270AA020)



(10) Install #3 and #4 pistons and connecting rod caps in the same installation procedure as #1 and #2 pistons and connecting rod caps.

(11) Using the ST and angle gauge, tighten the #1 connecting rod cap bolts and #4 connecting rod cap bolts with a torque of 135°— 140° in numerical order as shown in the figure.

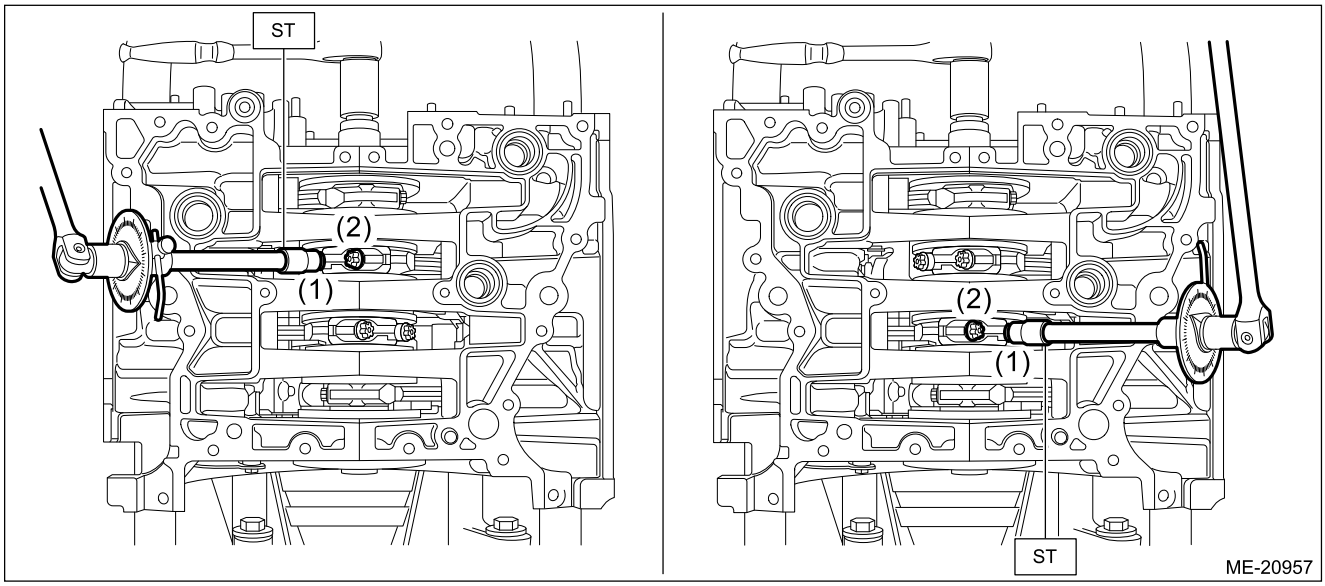
Preparation tool:



ST: SOCKET (18270AA020)

(12) Using the ST, turn the crankshaft so that the #2 connecting rod cap (A) and #3 connecting rod cap (B) is located at the position shown in the figure.

Preparation tool:

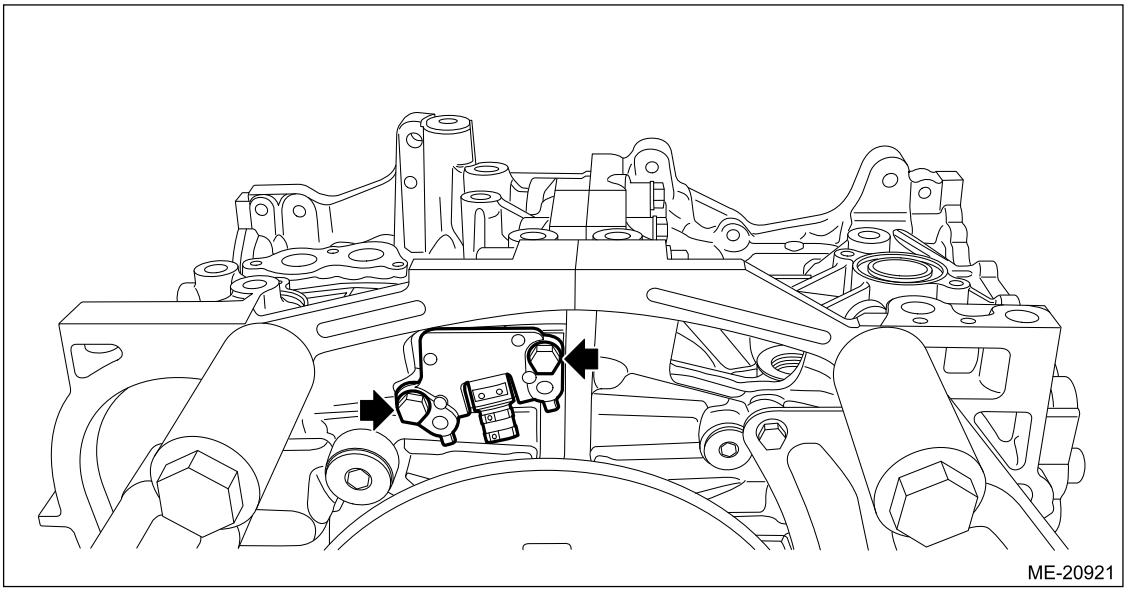


ST: CRANKSHAFT SOCKET (18252AA000)

(13) Using the ST and angle gauge, tighten the #2 connecting rod cap bolts and #3 connecting rod cap bolts with a torque of 135°— 140° in numerical order as shown in the figure.

Preparation tool:

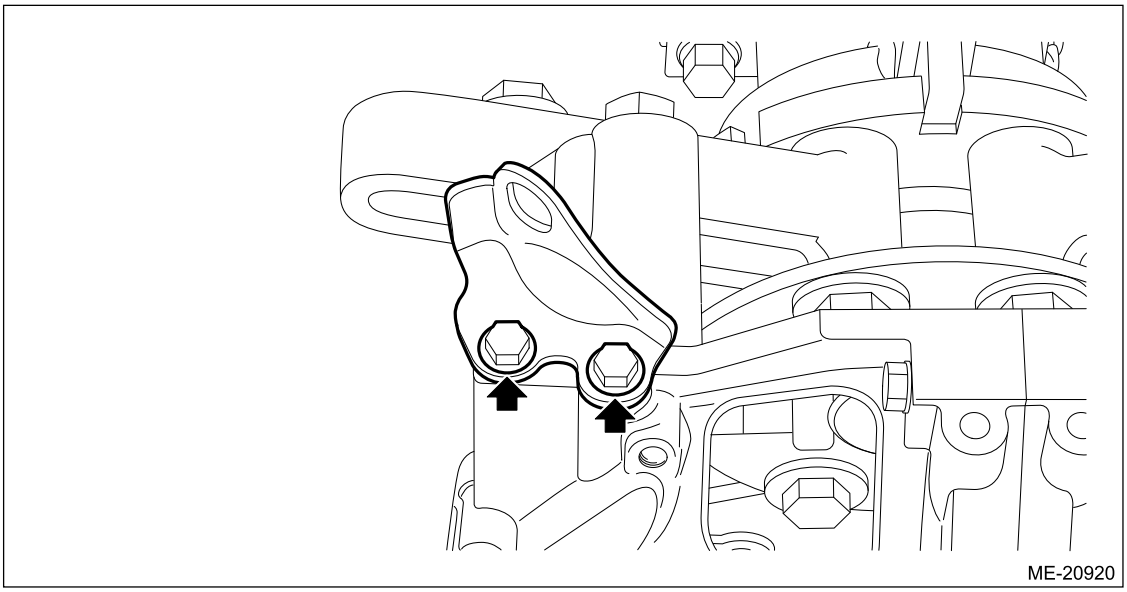
ST: SOCKET (18270AA020)



11. Set the part so that the installation surface of the intake manifold is on the upper side.

12. Install the crankshaft position sensor with crankshaft position sensor holder to the cylinder block LH.

Tightening torque:

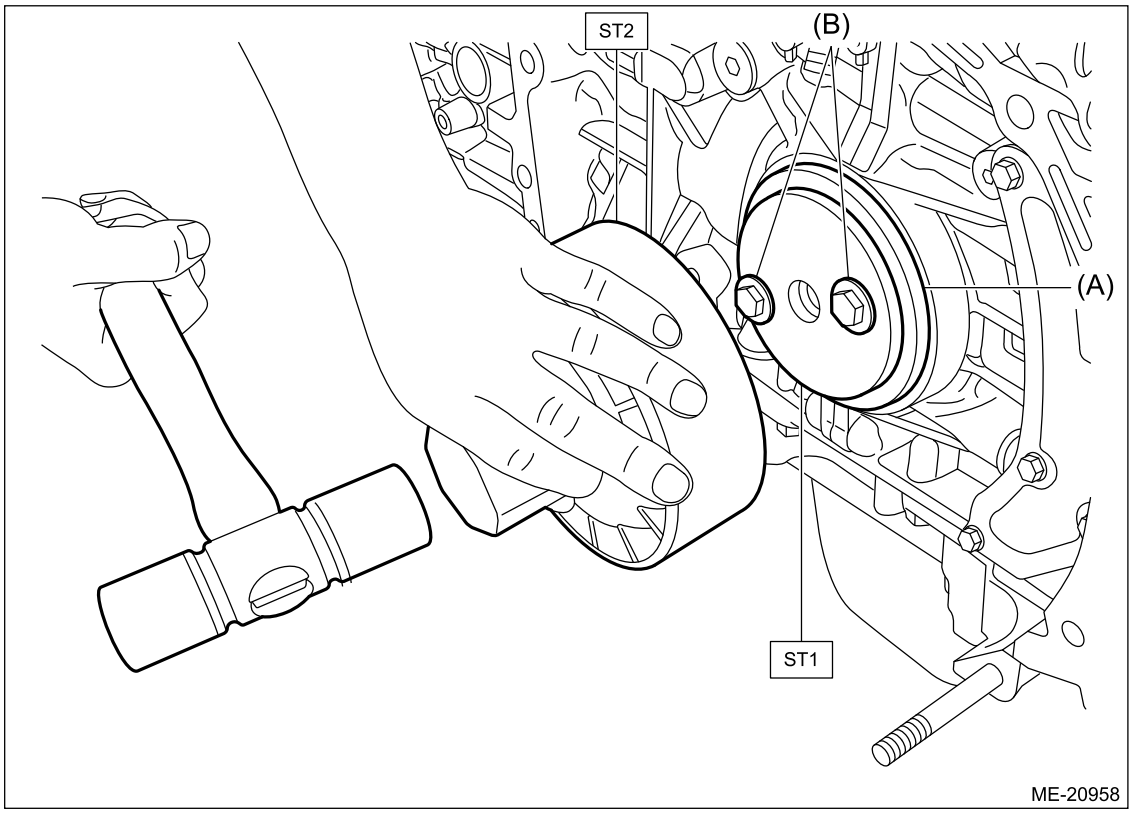


6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

13. Install the engine rear hanger to the cylinder block RH.

Tightening torque:

36 N·m (3.7kgf-m, 26.6 ft-lb)



14. Install the PCV valve. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>PCV Valve>INSTALLATION.
15. Install the knock sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Knock Sensor>INSTALLATION.
16. Install the PCV connector. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) (H4DO)>PCV Connector>INSTALLATION.
17. Install the water tank pipe assembly. Ref. to COOLING(H4DO)>Water Pipe>INSTALLATION > WATER TANK PIPE ASSY.
18. Install the crank sprocket. Ref. to MECHANICAL(H4DO)>Crank Sprocket>INSTALLATION.
19. Install the oil pan upper. Ref. to LUBRICATION(H4DO)>Oil Pan>INSTALLATION > OIL PAN UPPER.
20. Install the cylinder head. Ref. to MECHANICAL(H4DO)>Cylinder Head>INSTALLATION.
21. Install the cam carrier. Ref. to MECHANICAL(H4DO)>Cam Carrier>INSTALLATION.
22. Install the rocker cover. Ref. to MECHANICAL(H4DO)>Rocker Cover>INSTALLATION.
23. Install the chain cover. Ref. to MECHANICAL(H4DO)>Chain Cover>INSTALLATION.
24. Install the engine wiring harness. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Wiring Harness>INSTALLATION.
25. Install the intake manifold assembly. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Intake Manifold Assembly>INSTALLATION.
26. Apply a coat of engine oil to the oil seal inner periphery and outer periphery, and install new rear oil seal using ST1 and ST2.

    Preparation tool:

    ST1: OIL SEAL GUIDE (18671AA020)

    ST2: OIL SEAL INSTALLER (18657AA030)

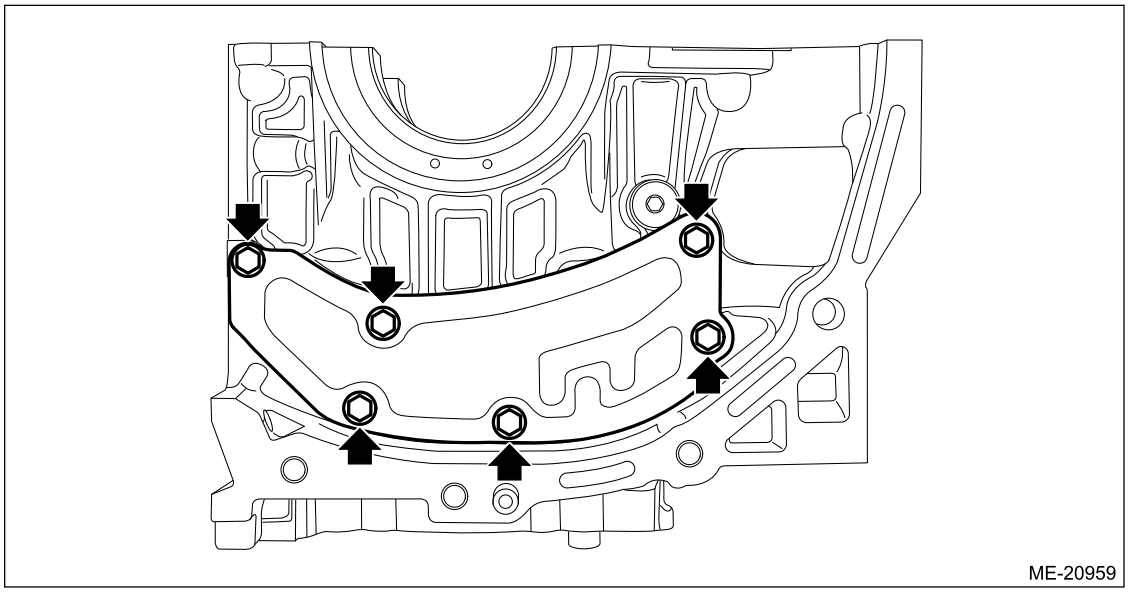
(A) Rear oil seal

(B) Drive plate or flywheel mounting bolt

27. Install the crankshaft position sensor plate with drive plate. (CVT model) Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Plate>INSTALLATION.

28. Install the crankshaft position sensor plate with flywheel. (MT model) Ref. to CLUTCH SYSTEM>Flywheel>INSTALLATION.

29. Install the clutch disc and cover. (MT model) Ref. to CLUTCH SYSTEM>Clutch Disc and Cover>INSTALLATION.

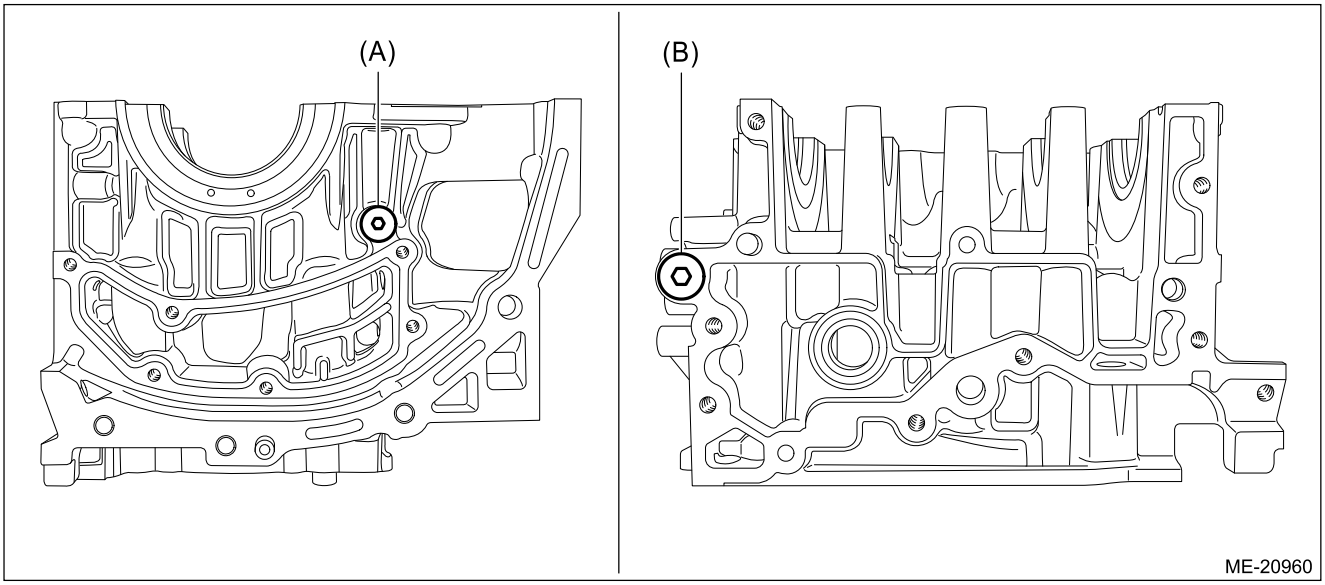


30. Install the engine to the vehicle. Ref. to MECHANICAL(H4DO)>Engine Assembly>INSTALLATION.

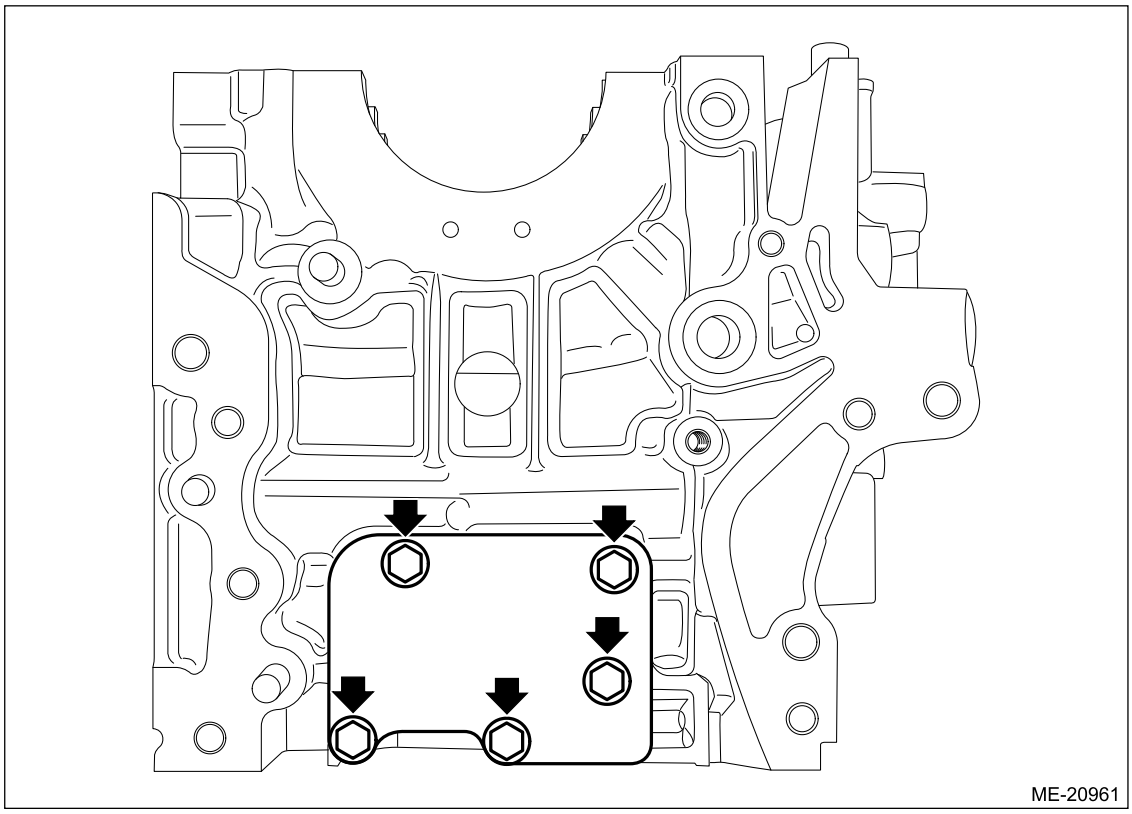
MECHANICAL(H4DO) > Cylinder Block

DISASSEMBLY

1. CYLINDER BLOCK



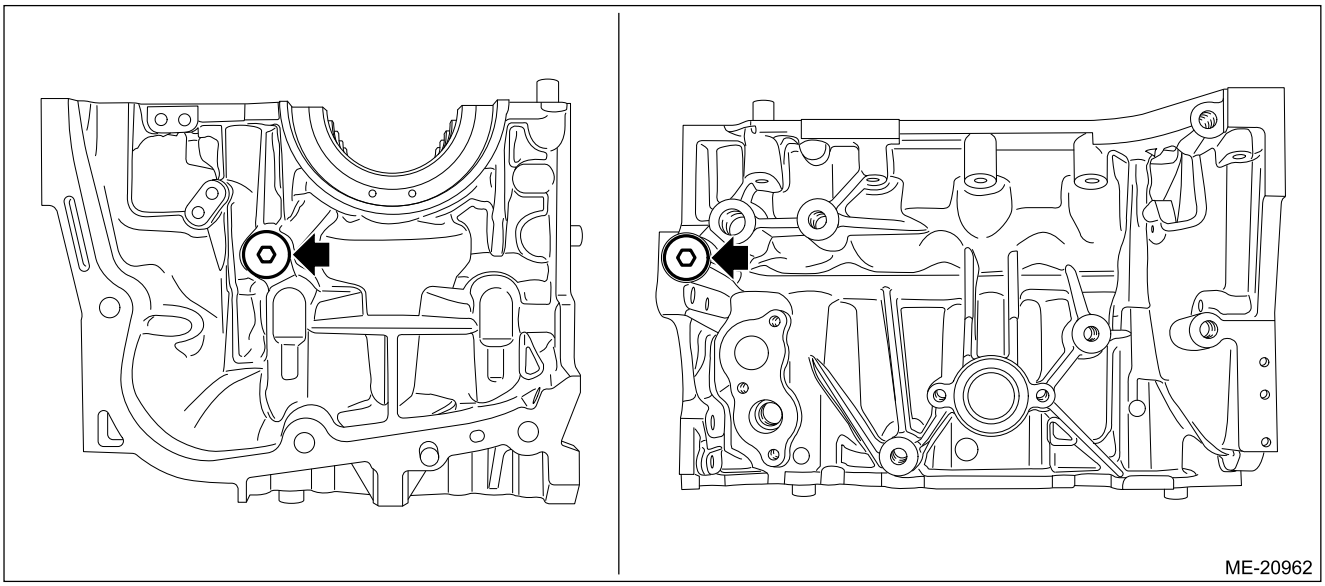
1. Remove the oil separator cover from cylinder block RH.



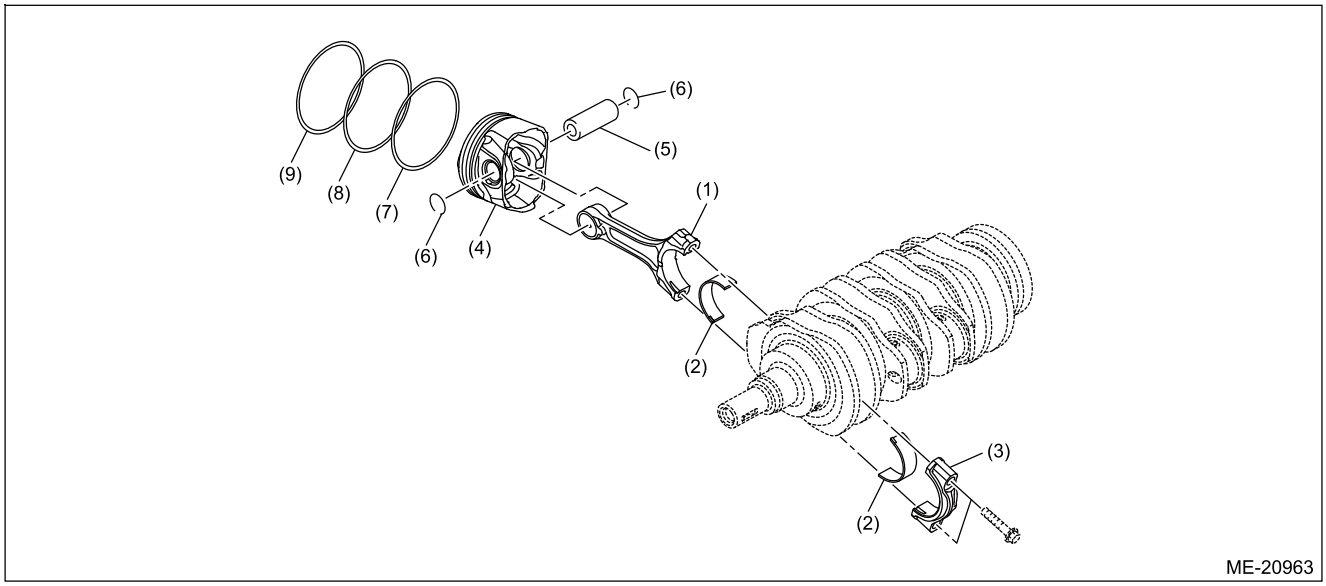
2. Remove the liquid gasket from cylinder block RH.
3. Remove the cylinder block plug (A) and the main gallery plug (B) from cylinder block RH.

Note:

- **Remove if necessary.**
- **After removing the parts, remove the liquid gasket from the thread holes of the cylinder block RH, and from the threaded portions of cylinder block plug and main gallery plug.**



4. Remove the cylinder block plate from cylinder block LH.



5. Remove the main gallery plug from cylinder block LH.

Note:

- **Remove if necessary.**
- **After removing the parts, remove the liquid gasket from the thread holes of the cylinder block LH and main gallery plug.**

2. PISTON AND CONNECTING ROD

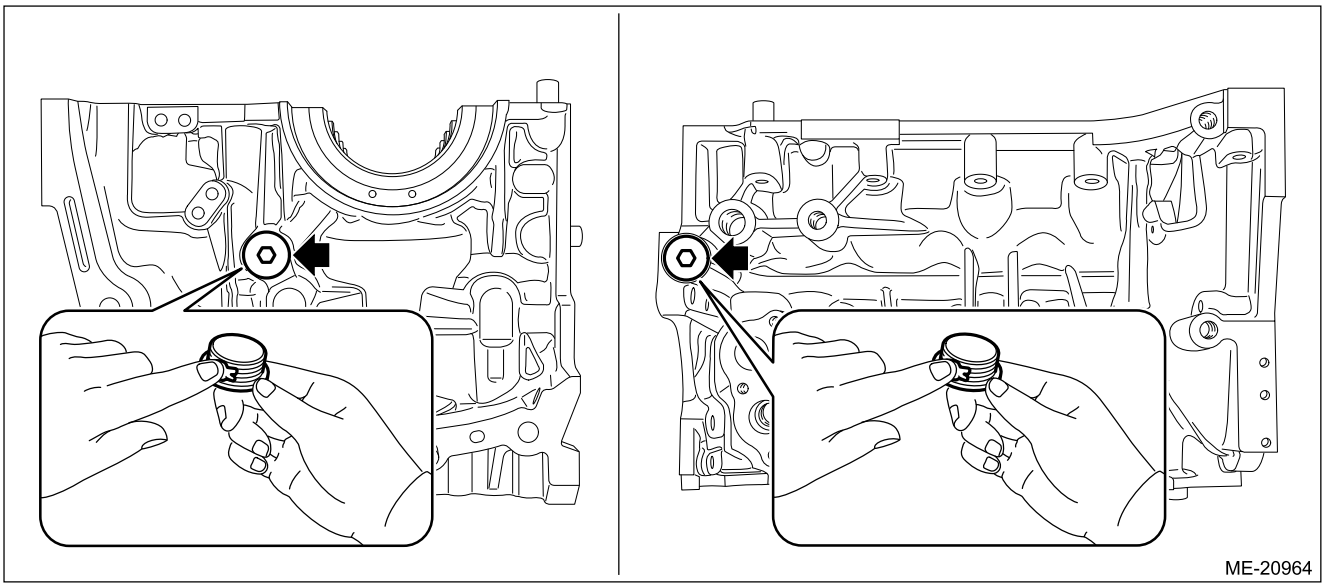
(1) Connecting rod
(2) Connecting rod bearing
(3) Connecting rod cap
(4) Piston
(5) Piston pin
(6) Circlip
(7) Oil ring
(8) Second ring
(9) Top ring

Note:
To prevent confusion of various parts, mark each part.

1. Remove the connecting rod bearing from connecting rod and connecting rod cap.
2. Remove the piston rings from the piston.
   Note:
   Arrange the piston rings in order so that they can be installed in their original positions without confusion.
   (1) Remove the compression rings in the order of top ring and second ring, using piston ring expander.
   (2) Remove the oil rings in the order of upper rail, lower rail and expander by hand.
3. Remove the circlip on one end from the piston using a flat tip screwdriver.
   Note:
   Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.
4. Remove the piston pin from piston, and remove the connecting rod from piston.
5. Remove the circlip on other end from the piston using a flat tip screwdriver.
   Note:
   Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.

MECHANICAL(H4DO) > Cylinder Block

ASSEMBLY

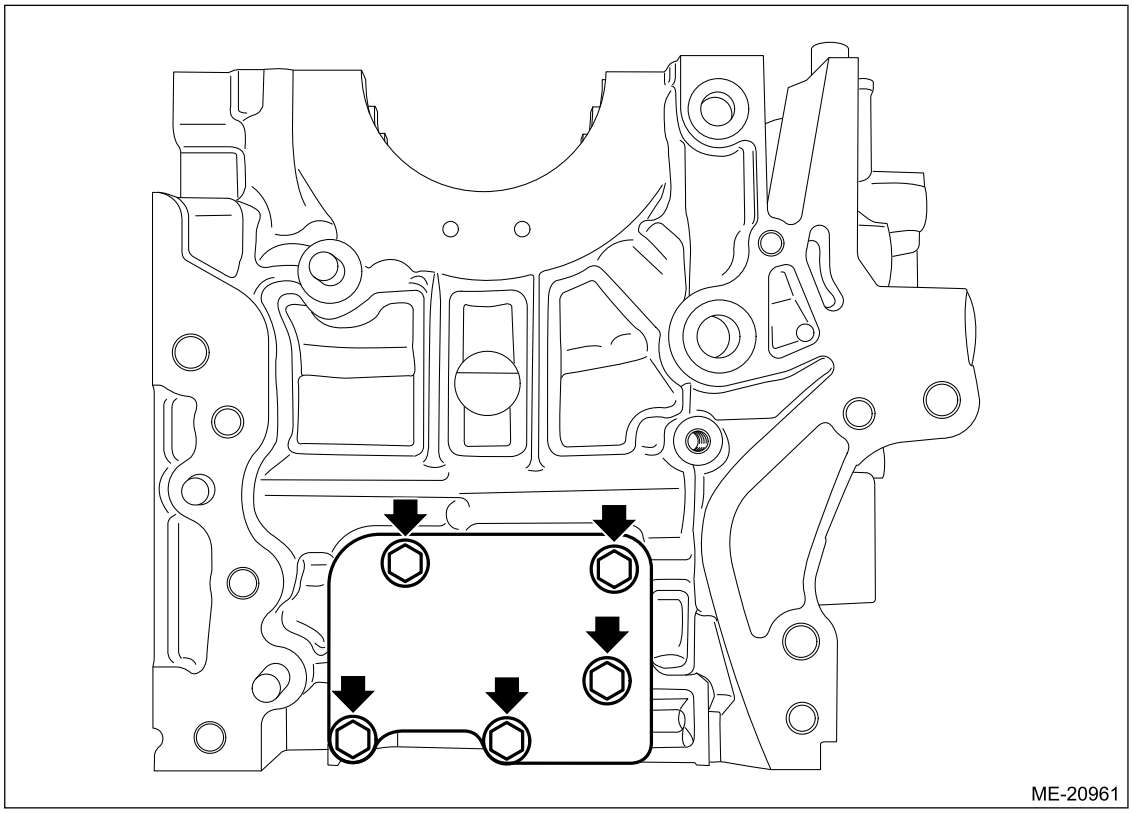


1. CYLINDER BLOCK

1. Apply liquid gasket to the threaded portion of the main gallery plug, and install the main gallery plug to the cylinder block LH.
   Note:
   Before applying liquid gasket, degrease the thread holes of the cylinder block LH and main gallery plug.
   Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:



37 N·m (3.8 kgf-m, 27.3 ft-lb)

2. Install the cylinder block plate onto cylinder block LH.

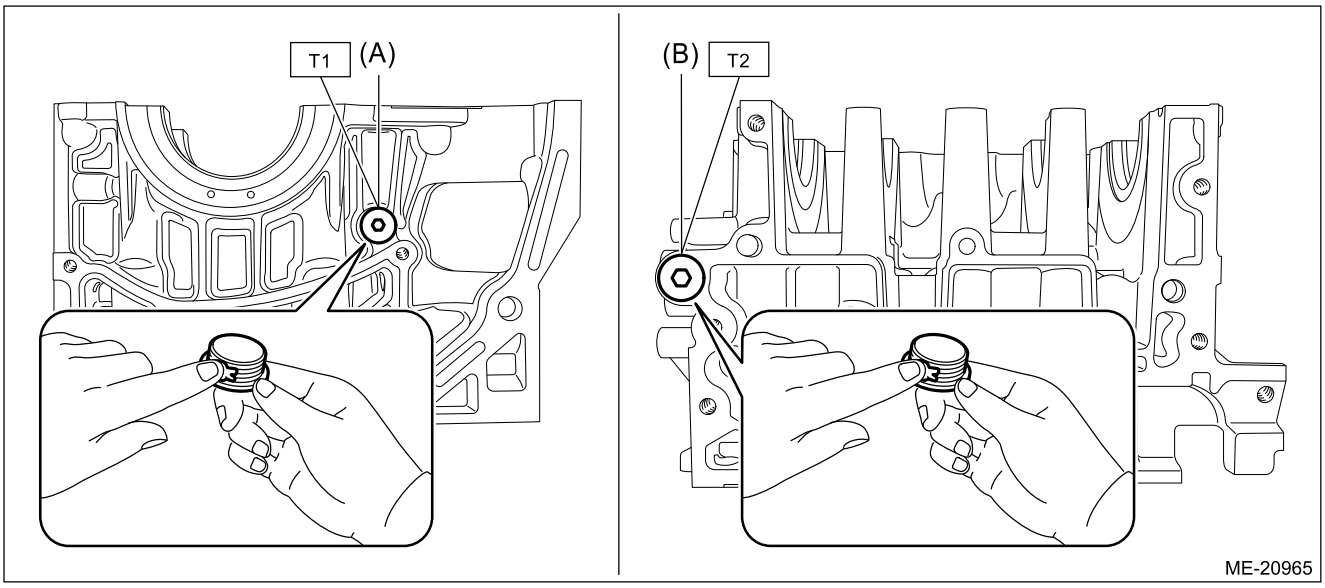
Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3. Apply liquid gasket to the threaded portions of cylinder block plug and main gallery plug, and install the cylinder block plug (A) and main gallery plug (B) to cylinder block RH.

Note:

Before applying liquid gasket, degrease the thread holes of the cylinder block RH, and the threaded portions of cylinder block plug and main gallery plug.



Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

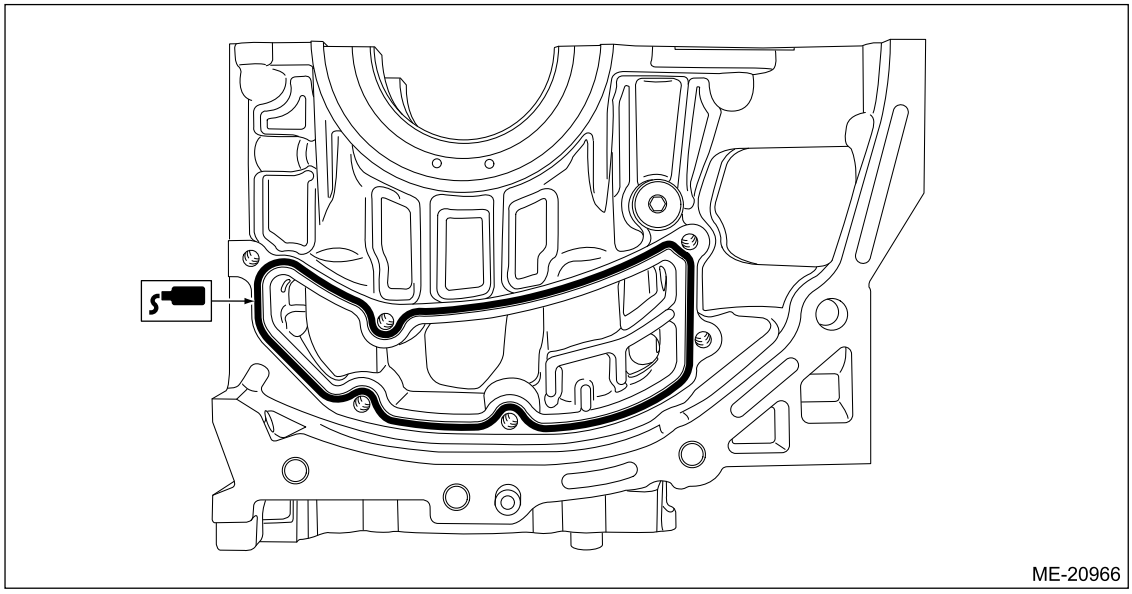
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)

T2: 37 N·m (3.8 kgf-m, 27.3 ft-lb)

4. Install the oil separator cover to the cylinder block RH.

(1) Apply liquid gasket to the mating surfaces of oil separator cover.

Note:

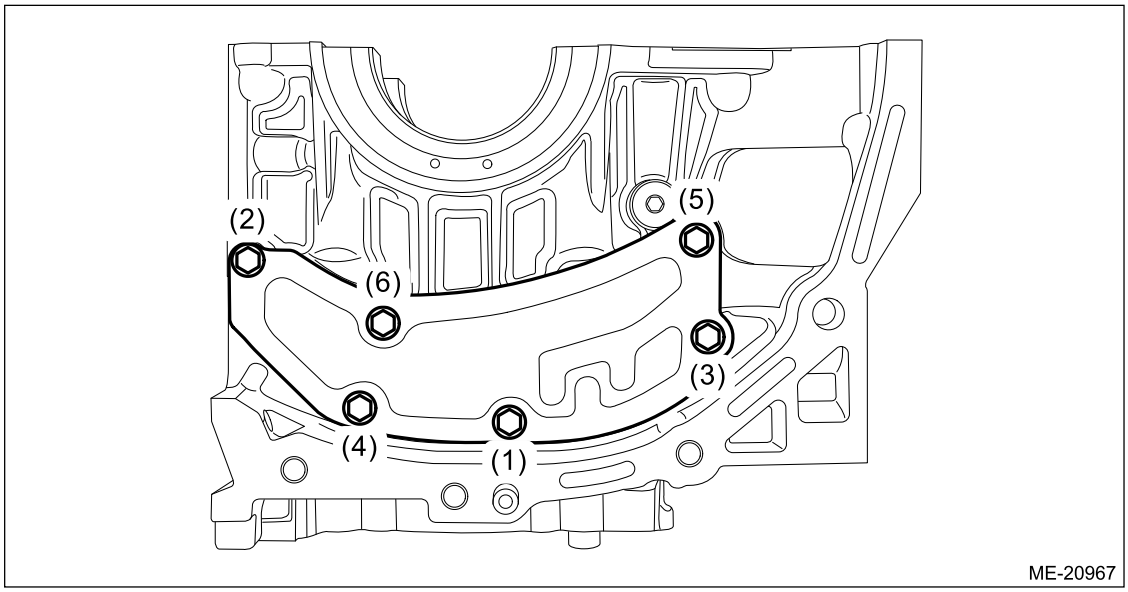


- **Use new oil separator cover.**
- **Before applying liquid gasket, degrease the old liquid gasket seal surface of cylinder block RH.**
- **Install within 5 min. after applying liquid gasket.**

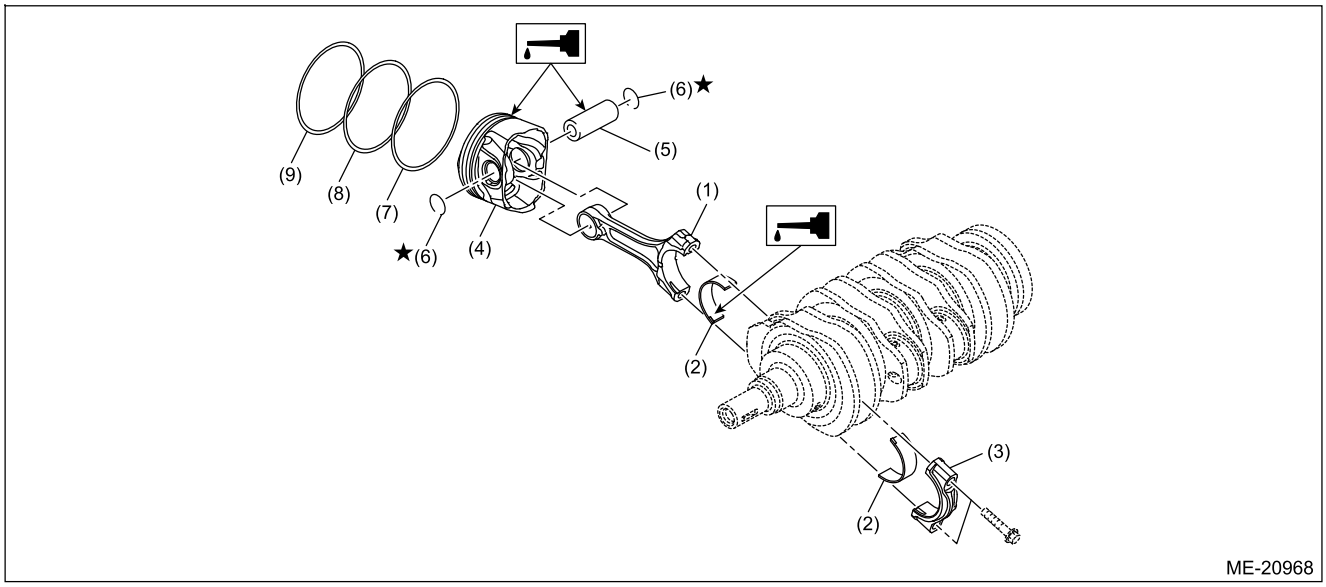
Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:



4±1 mm (0.1772±0.0394 in)

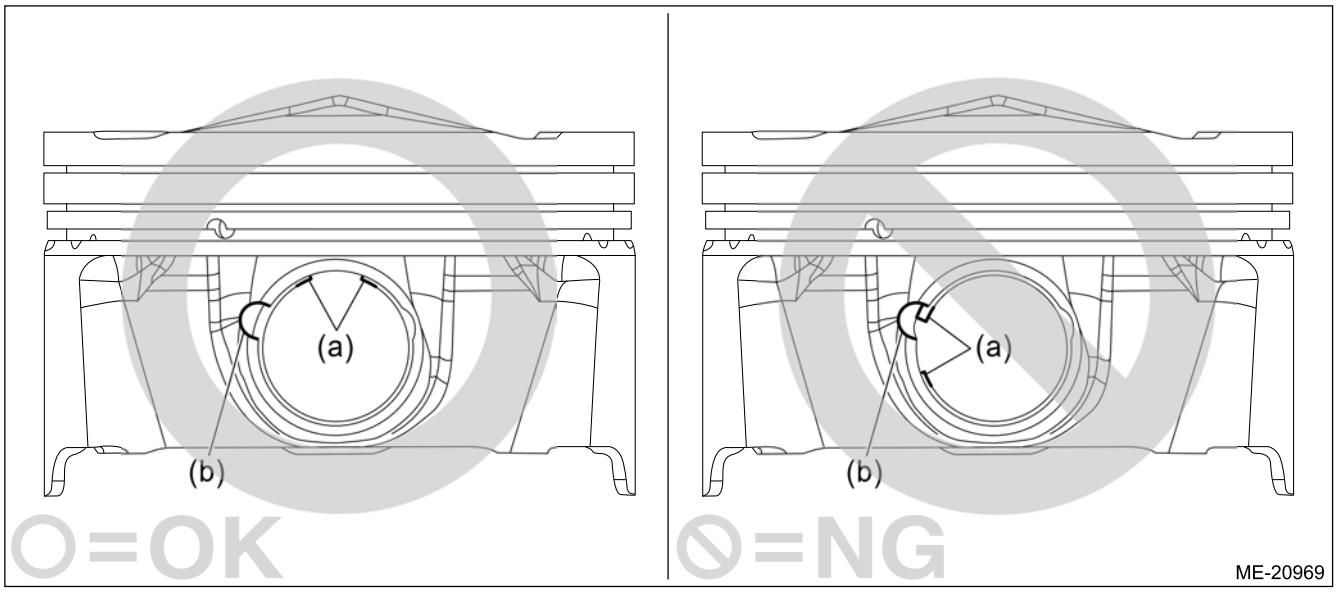


(2) Install the oil separator cover to the cylinder block RH, and tighten the oil separator cover bolts in numerical order as shown in the figure.

Tightening torque:

6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

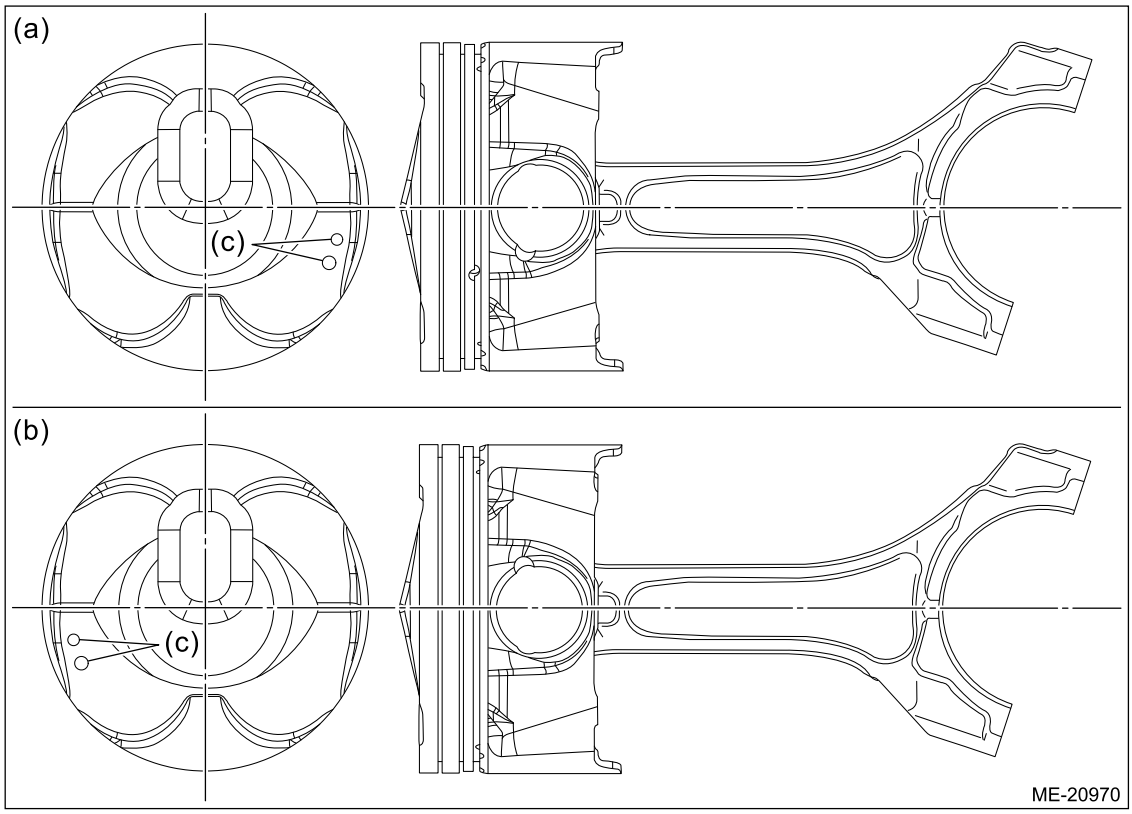
2. PISTON AND CONNECTING ROD



(1) Connecting rod	(4) Piston	(7) Oil ring
(2) Connecting rod bearing	(5) Piston pin	(8) Second ring
(3) Connecting rod cap	(6) Circlip	(9) Top ring

1. Install the connecting rod bearing to the connecting rod and connecting rod cap.
2. Install a new circlip on one side of the piston using a flat tip screwdriver.

Note:

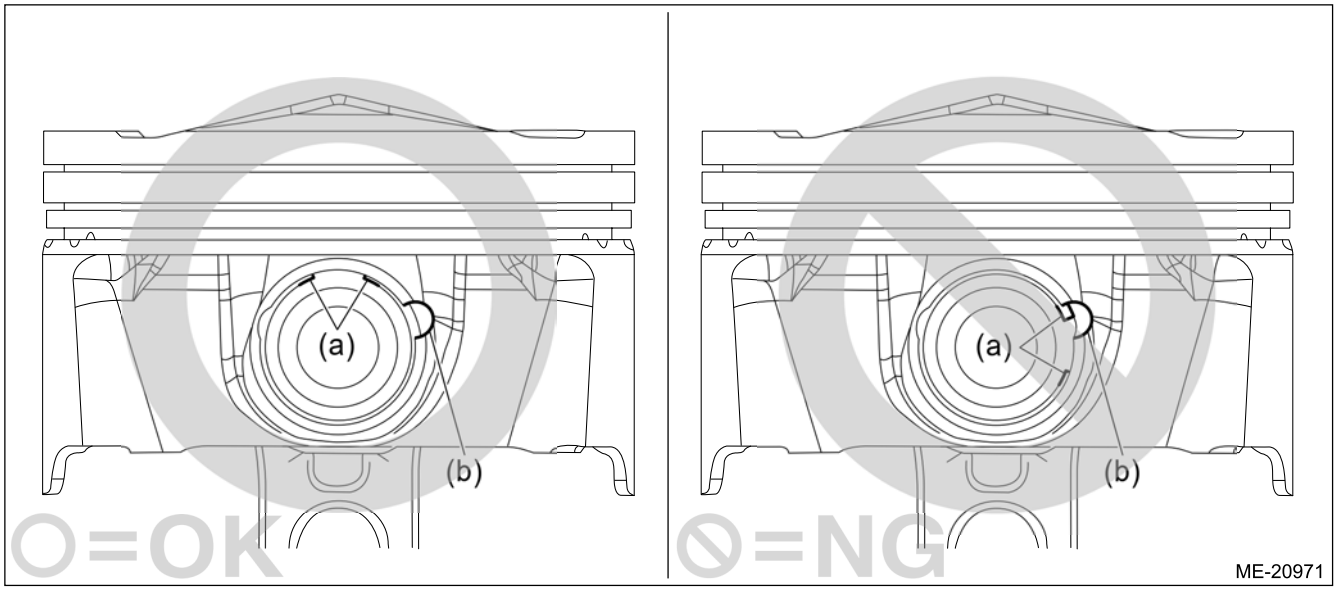


- **Be careful not damage the piston, by wrapping the tip of flat tip screwdriver with tape.**
- **Make sure the circlip is firmly inserted into the circlip groove.**
- **After installing the circlip, rotate the circlip so that its end part (a) and the cutout portion of circlip groove (b) do not match.**

3. Set the piston to the connecting rod.

Note:

Align the front mark of piston and the connecting rod direction correctly as shown in the figure.

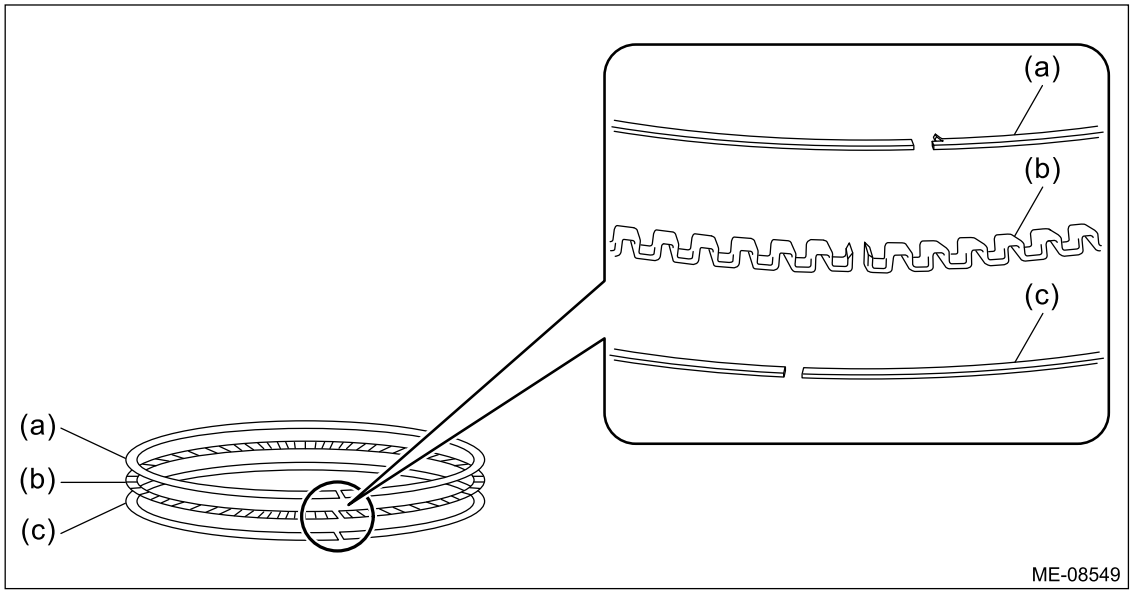


(a) RH side (#1 and #3) (b) LH side (#2 and #4) (c) Front mark

4. Apply engine oil to the piston pin, and attach the piston pin.

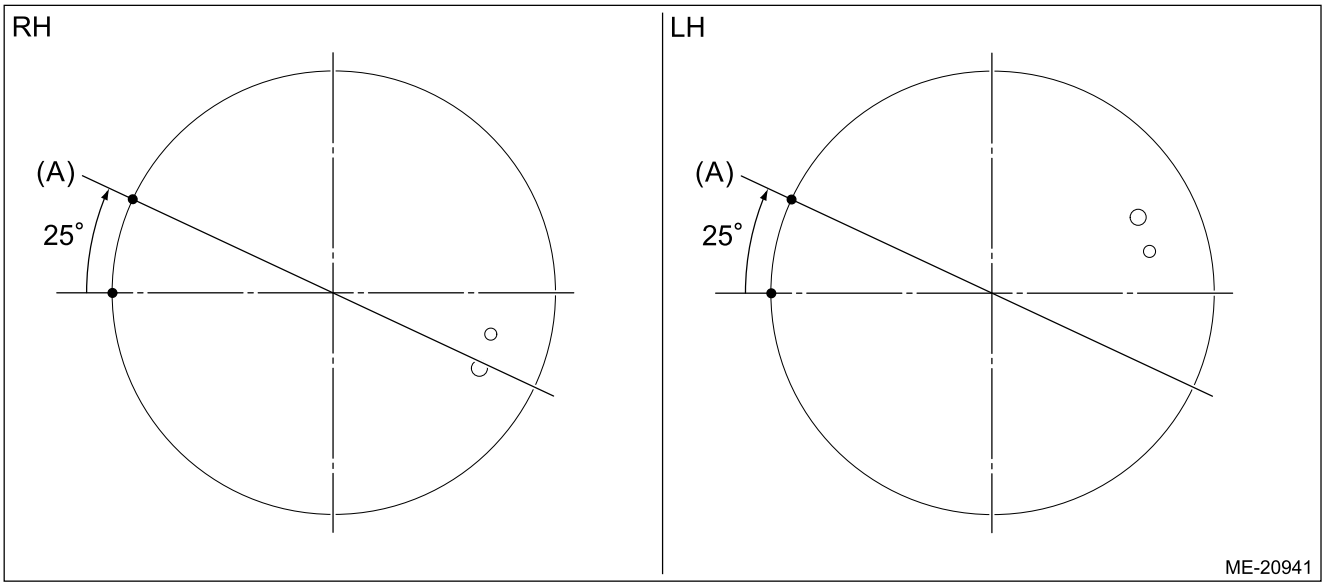
5. Install a new circlip on the piston using a flat tip screwdriver.

Note:



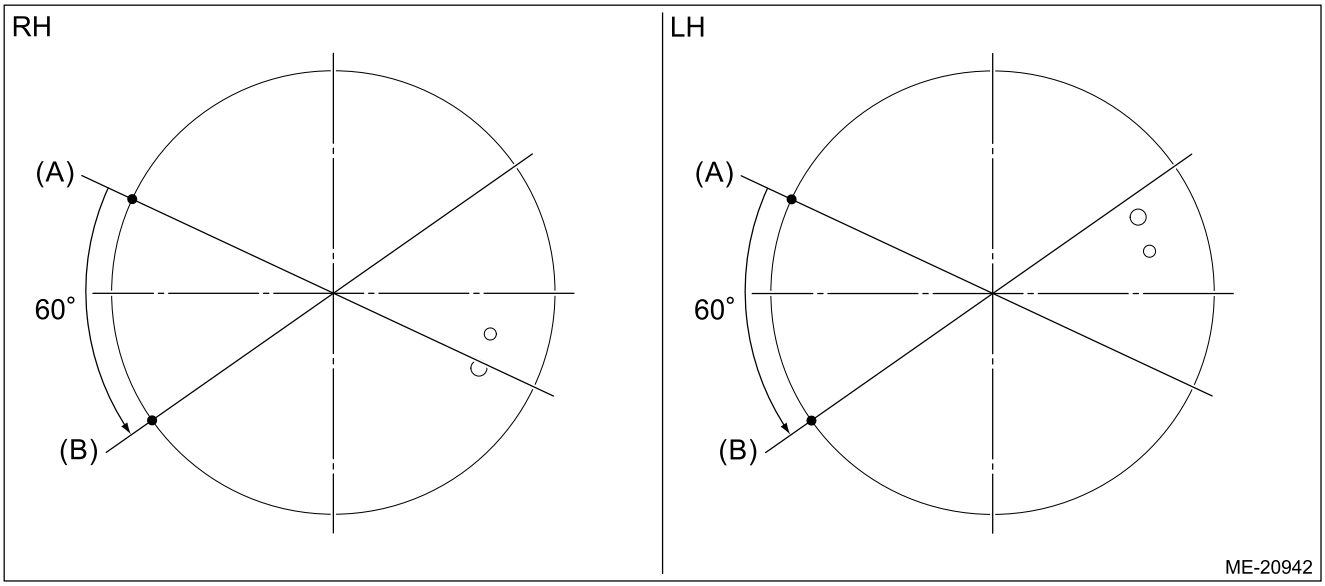
- **Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.**
- **Make sure the circlip is firmly inserted into the circlip groove.**
- **After installing the circlip, rotate the circlip so that its end part (a) and the cutout portion of circlip groove (b) do not match.**

6. Install the oil rings to the piston in the order of expander, lower rail and upper rail by hand.

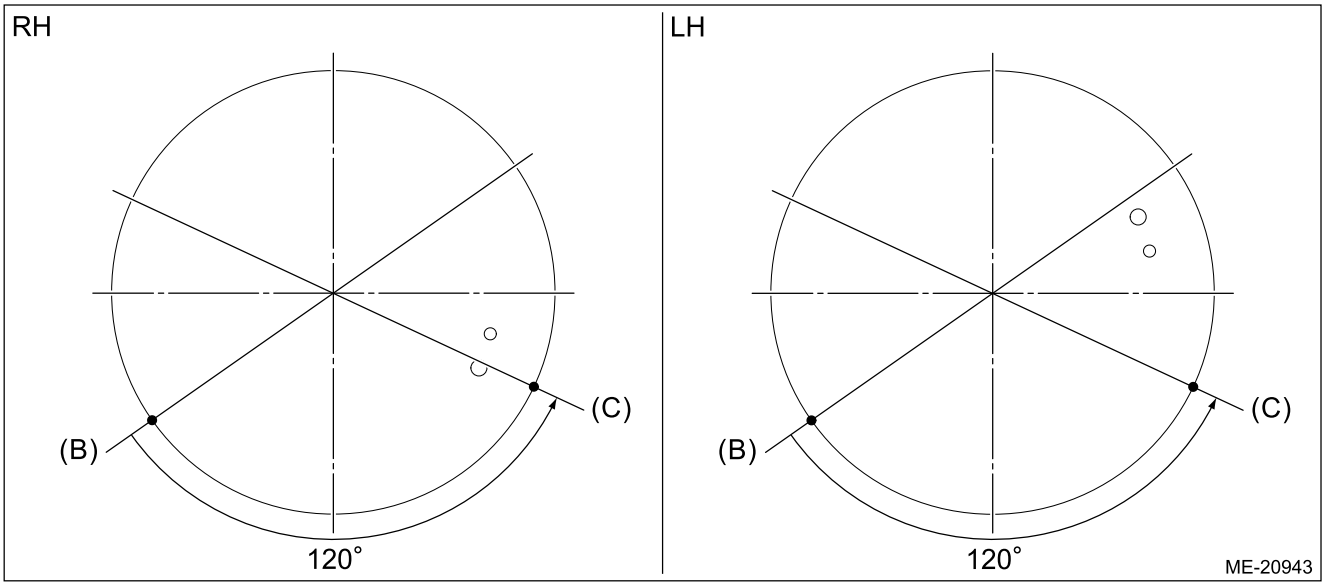


Note:

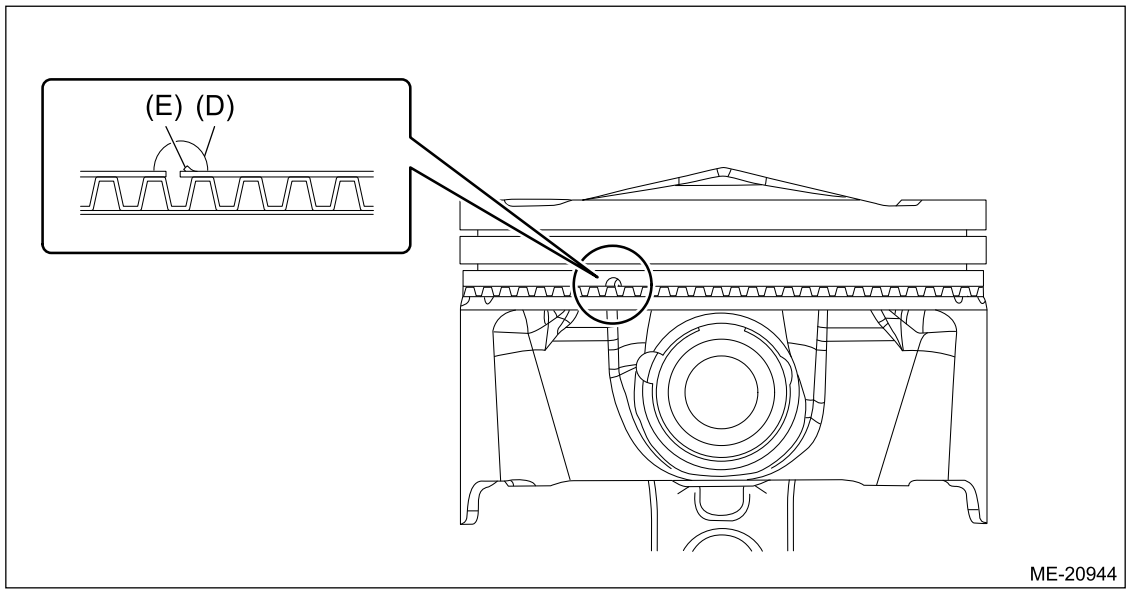
Oil ring consists of the upper rail, expander and lower rail.



(a) Upper rail (b) Expander (c) Lower rail



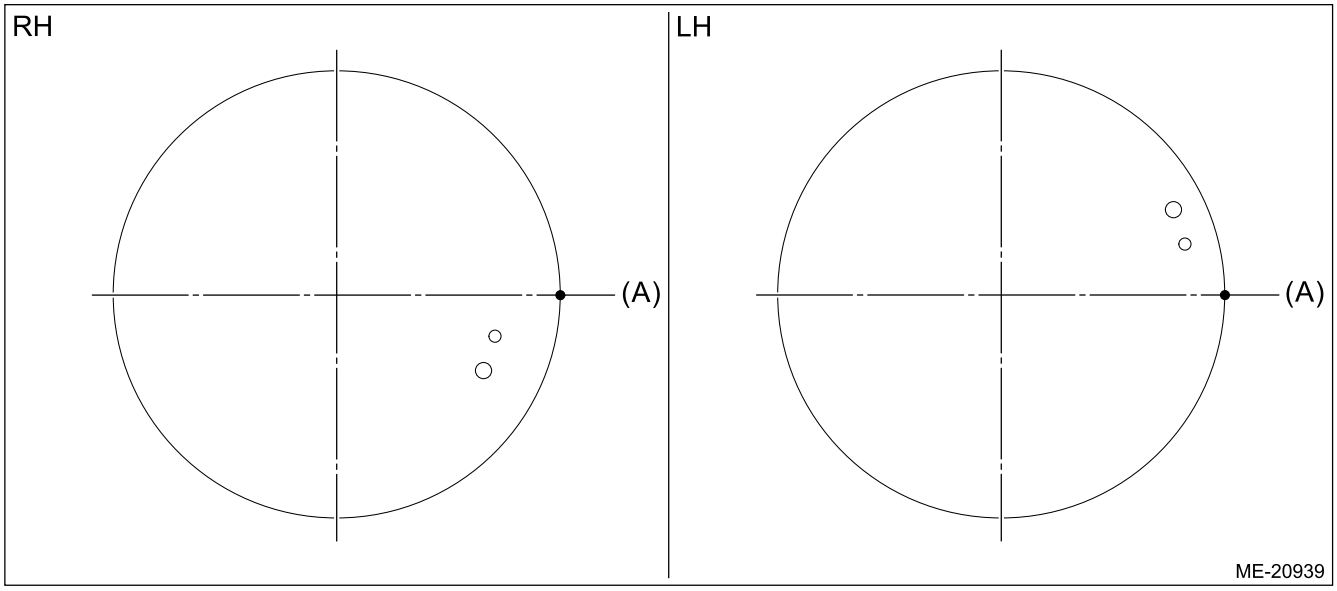
(1) Set the ring gap of the expander to the position (A).



(2) Set the ring gap of the lower rail at position (B), located 60° counterclockwise from the position (A) in the figure.

(3) Set the ring gap of the upper rail at position (C), located 120° counterclockwise from the position (B) in the figure.

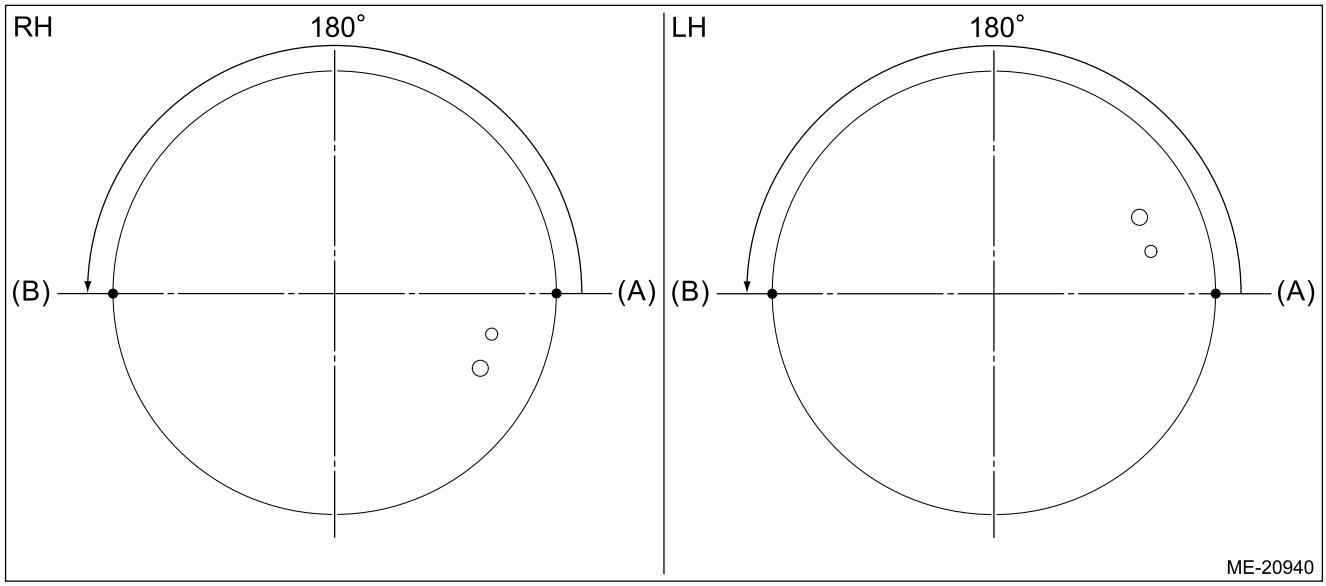
(4) Align the upper rail spin stopper (E) to the side hole (D) on the piston.



7. Install the compression rings to the piston in the order of second ring and top ring, using piston ring expander.

(1) Set the ring gap of the second ring to the position (A) in the figure.

Note:



The ring mark (2HR) on the second ring should face the piston crown.

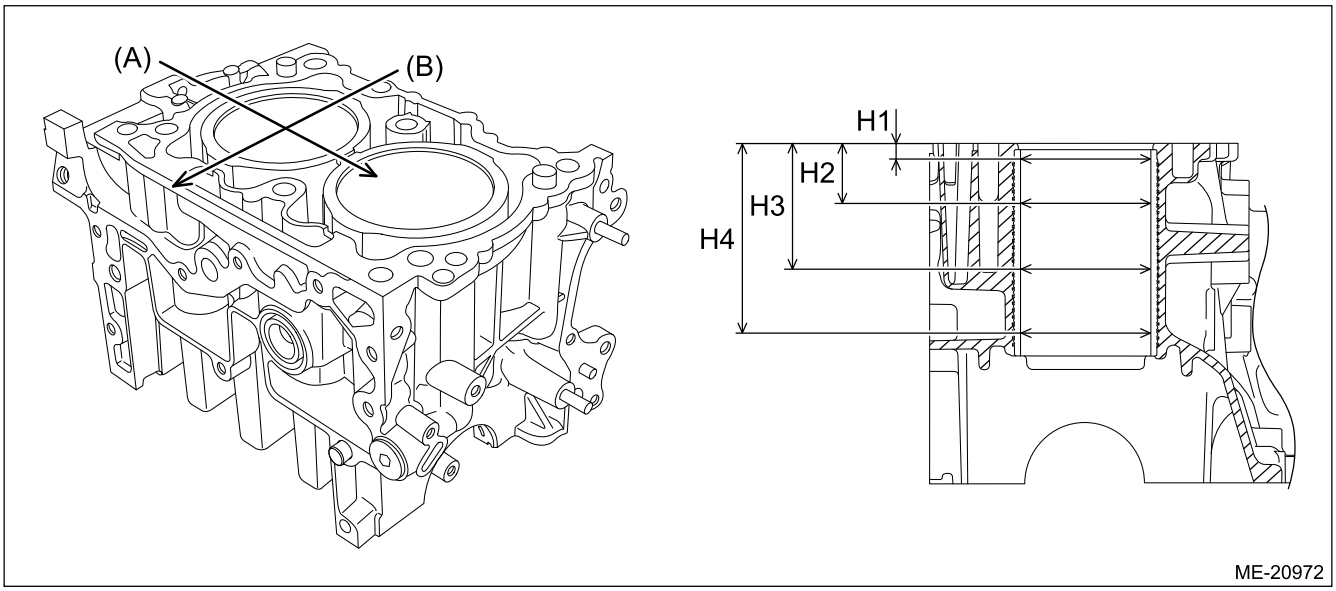
(2) Set the ring gap of top ring at (B) in the figure on the 180° opposite direction of (A).

Note:

The ring mark (1HR) of the top ring should face the piston crown.

8. Check again that the piston rings are installed correctly.
   Note:
   Also check that the ring gaps is not positioned within the range of piston skirt extended line.

MECHANICAL(H4DO) > Cylinder Block



INSPECTION

1. CYLINDER BLOCK & PISTON

1. Visually inspect to make sure that there are no cracks, scratches or other damage.
2. Use liquid penetrant tester on the important sections to check for fissures.
3. Check that there are no traces of gas leaking or water leaking on the gasket attachment surface.
4. Check the oil passages for clogging.
5. Check for warpage of mating surfaces of the cylinder block that contacts cylinder head using a straight edge and thickness gauge. If it exceeds the limit, correct the surface by grinding it with a surface grinder or replace the cylinder block.
   Note:
   Measurement should be performed at a temperature of 20°C (68°F).
   Cylinder block warpage:
   Limit
   0.025 mm (0.0010 in)
   Grinding limit of cylinder block:
   204.95 mm (8.0689 in) or less
   Height of cylinder block:
   Standard
   205.0 mm (8.0709 in)
6. Using a cylinder bore gauge, check the cylindricality and out-of-roundness of cylinder liner. If they are not within the standard, perform reboring (including honing), or replace the cylinder block and piston as a set. For reboring and honing procedure, refer to step 8).

Note:

- **Measure the cylinder liner with cylinder blocks separated (into cylinder block RH and cylinder block LH).**
- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Write down all measurement values as the values are used in the next procedure.**
- **Measure the inner diameter of each cylinder liner in both the thrust and piston pin directions at the heights as shown in the figure.**

(A) Piston pin direction (B) Thrust direction

H1: 10 mm (0.3937 in) H2: 45 mm (1.7717 in) H3: 80 mm (3.1496 in)

H4: 105 mm (4.1339 in)

- **Calculate the cylindricality of cylinder liner by using the following formula.**

Calculation formula
C = The larger value between the calculation values C′ and C″ C′ = (D (a) − D (b))/2 C″ = (D(c)−D(d))/2
C: Cylindricality of cylinder liner D(a): The largest value of all the values obtained by measuring the cylinder liner inner diameter in the direction of the piston pin D(b): The smallest value of all the values obtained by measuring the cylinder liner inner diameter in the direction of the piston pin D(c): The largest value of all the values obtained by measuring the cylinder liner inner diameter in the thrust direction D(d): The smallest value of all the values obtained by measuring the cylinder liner inner diameter in the thrust direction

- **Calculate the out-of-roundness of cylinder liner at each measurement height by using the following formula.**

Calculation formula
R = (D(e)−D(f))/2
R: Out-of-roundness of cylinder liner D(e): The larger value between the measurement values in the piston pin direction and in the thrust direction of cylinder liner inner diameter

D(f): The smaller value between the measurement values in the piston pin direction and in the thrust direction of cylinder liner inner diameter

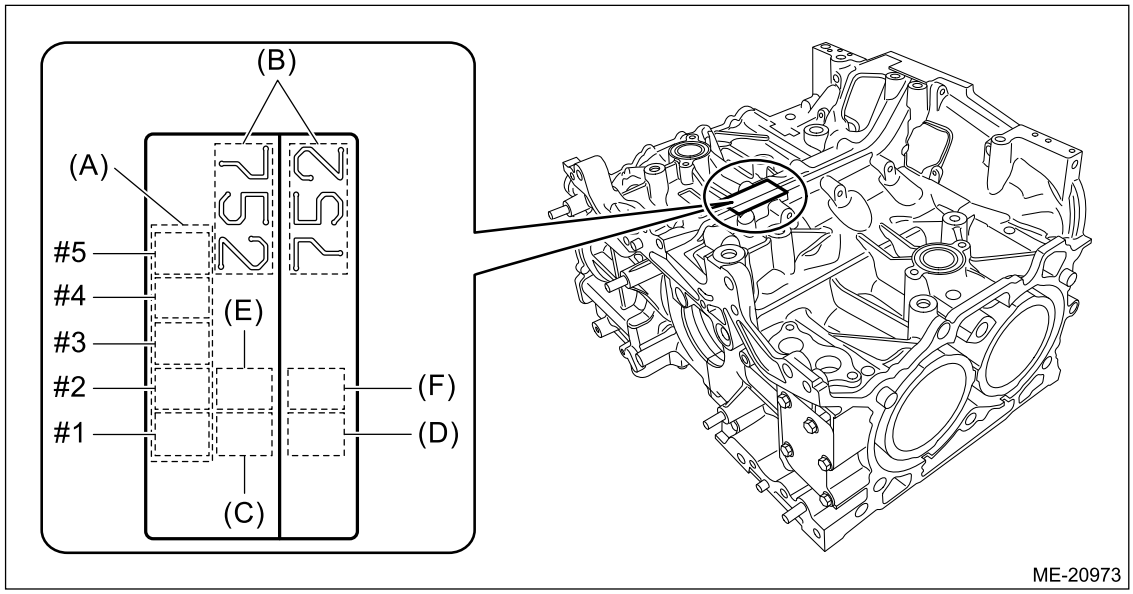
Cylindricality of cylinder liner:

Limit

0.030 mm (0.0012 in)

Out-of-roundness of cylinder liner:

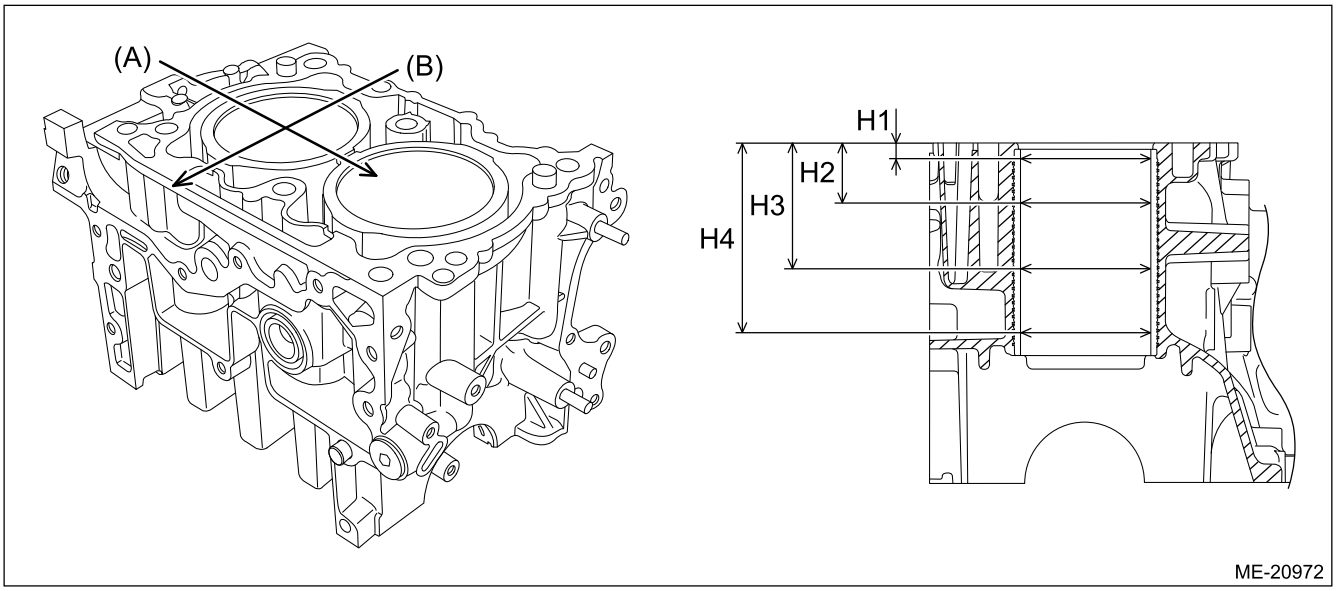
Limit



0.030 mm (0.0012 in)

7. Check the clearance between cylinder liner and piston. Check the clearance between cylinder liner and piston by measuring the inner diameter of cylinder liner and the outer diameter of piston respectively.

(1)Measure the inner diameter of cylinder liner. If they are not within the standard, perform reboring (including honing), or replace the cylinder block and piston as a set. For reboring and honing procedure, refer to step 8).



Note:

- **Measure the cylinder liner with cylinder blocks separated (into cylinder block RH and cylinder block LH).**
- **Measurement should be performed at a temperature of 20°C (68°F).**
- **The cylinder bore size mark is stamped on the upper face of the cylinder block.**

(A) Main journal size mark
(B) Cylinder block (RH) – (LH) combination mark
(C) #1 cylinder bore size mark
(D) #2 cylinder bore size mark
(E) #3 cylinder bore size mark
(F) #4 cylinder bore size mark

- **Measure the inner diameter of each cylinder liner in both the thrust and piston pin directions at the heights as shown in the figure and read the value of the most worn location.**

(A) Piston pin direction (B) Thrust direction

H1: 10 mm (0.3937 in) H2: 45 mm (1.7717 in) H3: 80 mm (3.1496 in)

H4: 105 mm (4.1339 in)

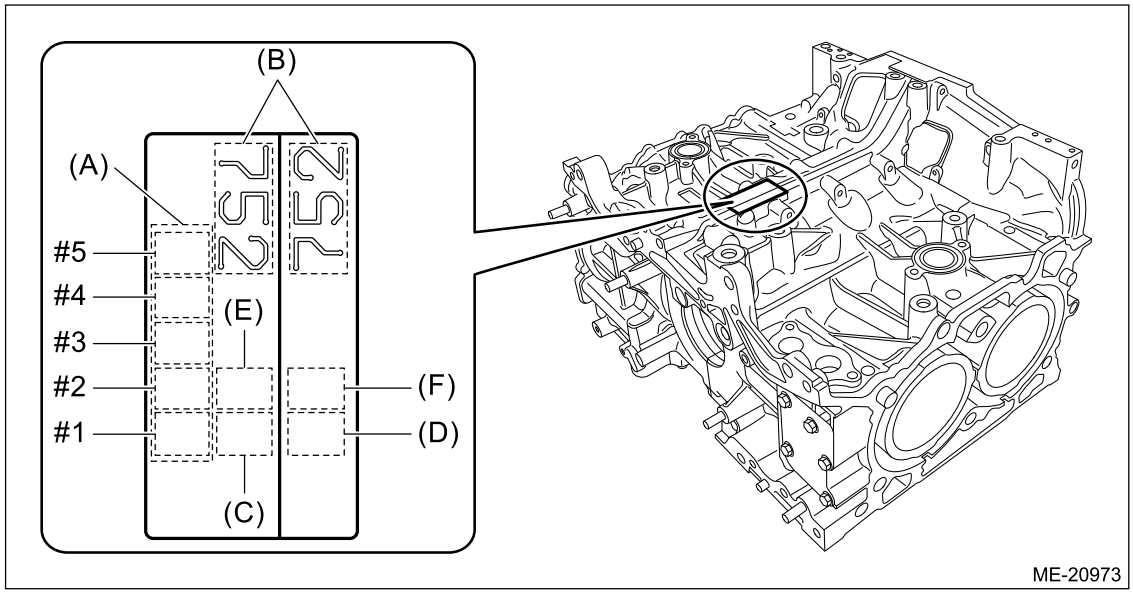
Inner diameter of cylinder liner:

Cylinder bore size mark A

Standard

84.005 — 84.015 mm (3.3073 — 3.3077 in)

Cylinder bore size mark B



Standard

83.995 — 84.005 mm (3.3069 — 3.3073 in)

(2) Check the outer diameter of piston with a micrometer. If it is not within the standard, replace the piston.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the outer diameter of each piston in thrust direction at the height as shown in the figure.**
- **Standard sized pistons are classified into two grades, "A" and "B". These grades should be used as guide lines in selecting a standard piston.**
- **The grade can be judged by the stamp of cylinder bore size mark on the upper face of the cylinder block.**

(A) Main journal size mark
(B) Cylinder block (RH) – (LH) combination mark
(C) #1 cylinder bore size mark
(D) #2 cylinder bore size mark
(E) #3 cylinder bore size mark
(F) #4 cylinder bore size mark

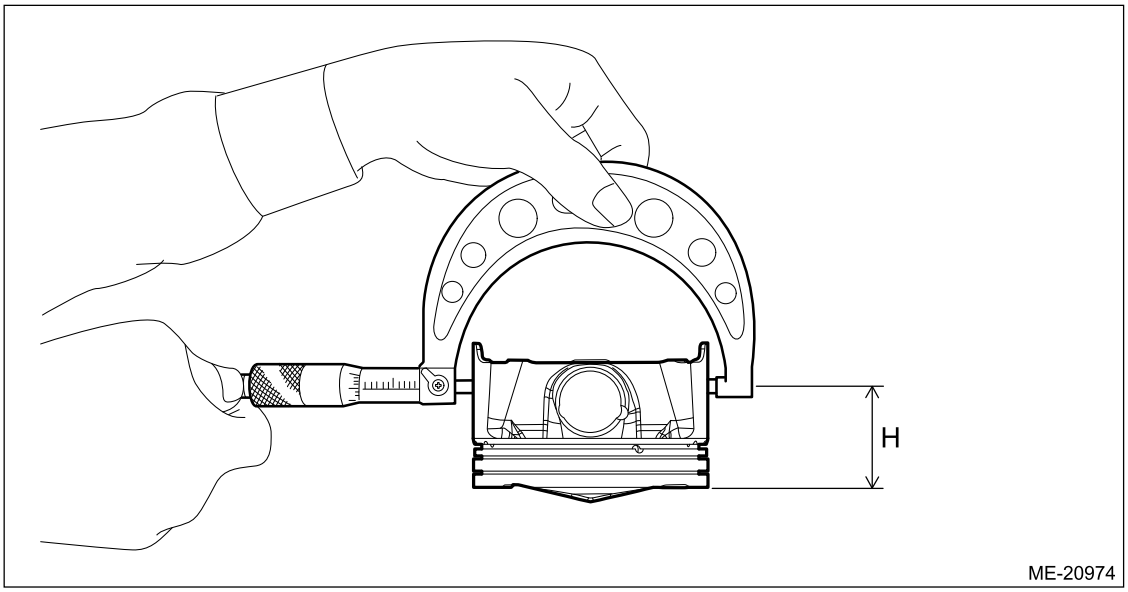
- **If the piston is replaced, check the clearance between cylinder liner and piston in the step (3), and select a suitable sized piston.**

Piston grade point H:

38.0 mm (1.4961 in)

Piston outer diameter:

Standard size (grade A = cylinder bore size mark A)



Standard

83.995 — 84.005 mm (3.3069 — 3.3073 in)

Standard size (grade B = cylinder bore size mark B)

Standard

83.985 — 83.995 mm (3.3065 — 3.3069 in)

(3) Calculate the clearance between cylinder liner and piston. If they are not within the standard, perform reboring (including honing), or replace the cylinder block and piston as a set. For reboring and honing procedure, refer to step 8).

Note:

The clearance between cylinder liner and piston is decided by matching the cylinder block bore size mark and the grade of piston outer diameter (grade A or B).

Clearance between cylinder liner and piston:

Standard

0.000 — 0.020 mm (0.0000 — 0.0008 in)

8. Reboring and honing

(1) If any of the cylindricality, out-of-roundness, inner diameter or clearance between cylinder liner and piston is out of standard or if there is any damage on the cylinder liner, perform reboring (including honing).

Caution:

When any of the cylinder liner needs reboring, all other cylinder liners must be rebored at the same time, and replaced with proper size pistons.

Oversize piston outer diameter:

0.25 mm (0.0098 in) oversize

Standard

84.235 — 84.255 mm (3.3163 — 3.3171 in)

0.50 mm (0.0197 in) oversize

Standard

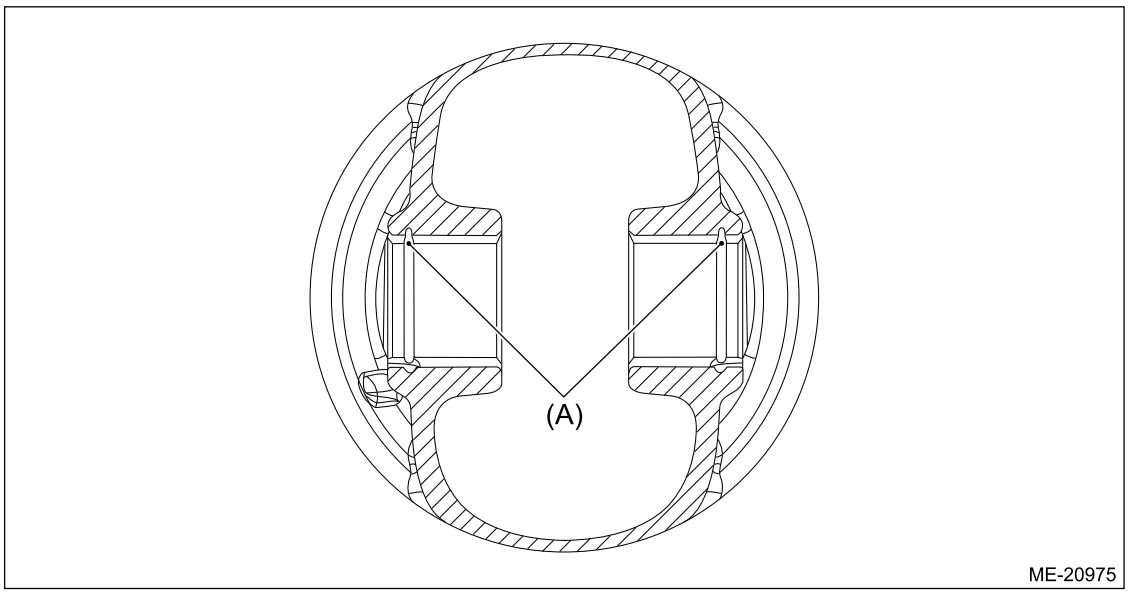
84.485 — 84.505 mm (3.3262 — 3.3270 in)

(2) If the inner diameter of cylinder liner exceeds the limit after reboring (including honing), replace the cylinder block and piston as a set.

Note:

- **Immediately after reboring (including honing), the inner diameter of cylinder liner may differ from its real diameter due to temperature rise. Thus, when measuring the inner diameter of cylinder liner, wait until the temperature has cooled to 20°C (68°F).**
- **For the measurement of the inner diameter of cylinder liner, refer to step 7).**

Inner diameter of cylinder liner boring limit (diameter):



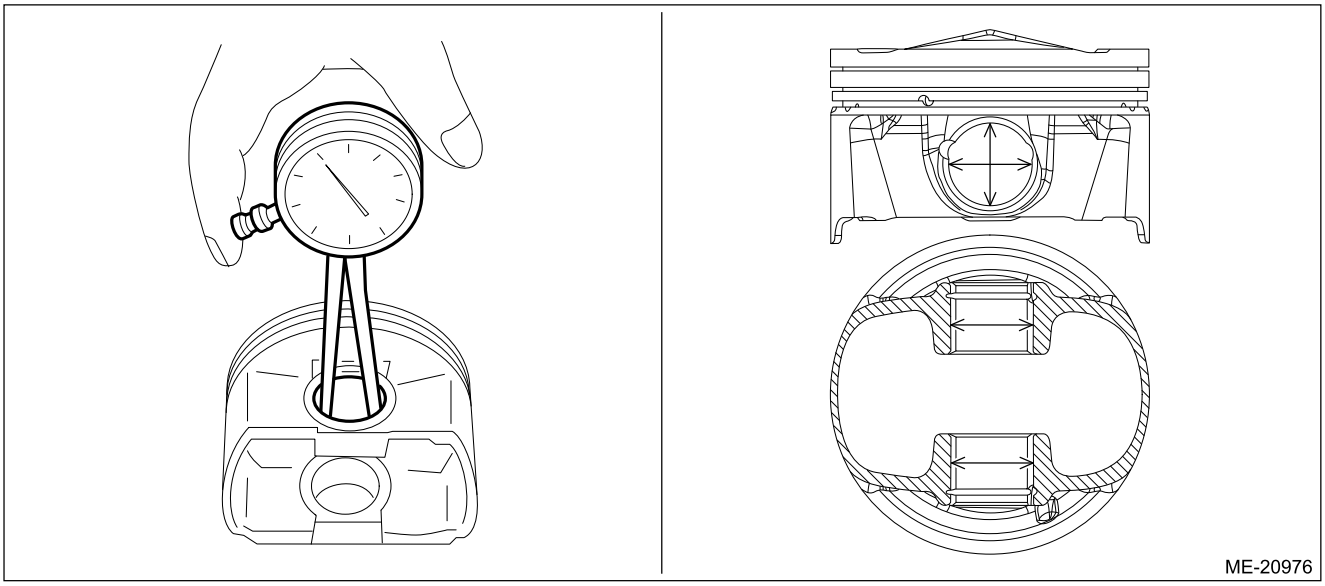
84.505 mm (3.3270 in) or less

2. PISTON AND PISTON PIN

1. Check the piston and piston pin for wear or crack.
2. Check the snap ring for distortion or wear.
3. Check the piston ring groove for damage.
4. Check the circlip groove (A) for burr.

Note:

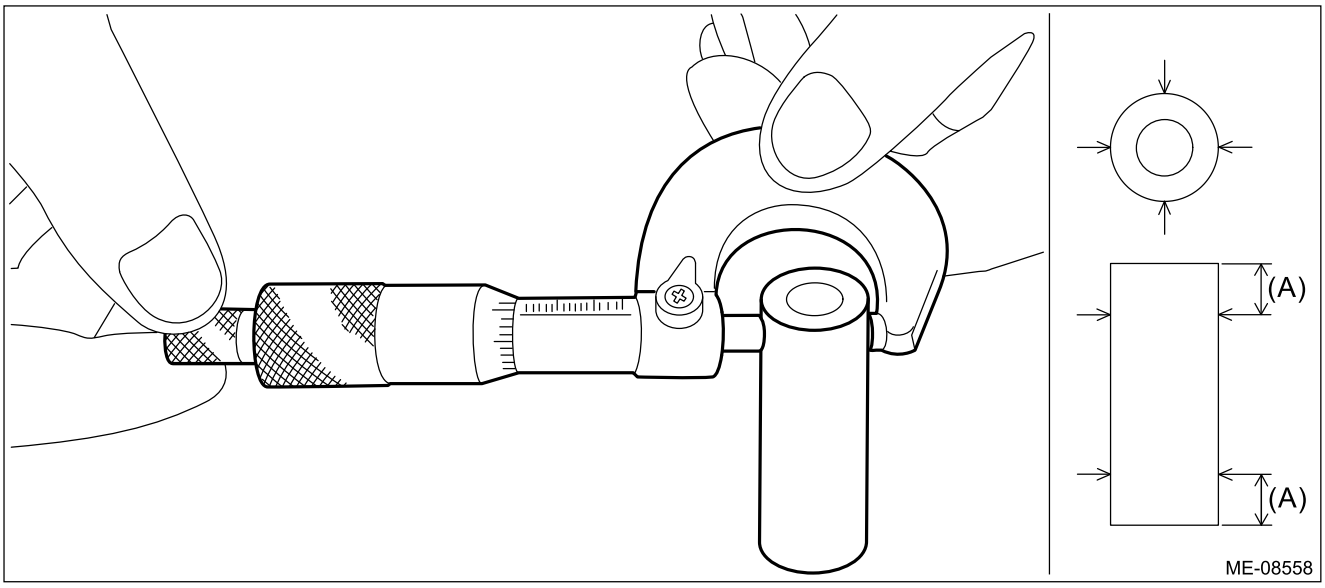
If the burr is found, remove the burr from groove.



5. Check that the piston pin can be inserted into the piston with a thumb at 20°C (68°F).
6. Check the clearance between piston and piston pin. Check the clearance between piston and piston pin by measuring the inner diameter of piston pin hole and the outer diameter of piston pin respectively.

(1) Using a caliper gauge, measure the inner diameter of piston pin hole.

Note:



- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the inner diameter of the piston pin hole at the four locations as shown in the figure, and read the value of most worn location.**
- **Record the measured value.**

(2) Measure the outer diameter of piston pin with a micrometer.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the outer diameter of the piston pin at the four locations as shown in the figure, and read the value of most worn location.**
- **Record the measured value.**

(A) 10 mm (0.3937 in)

(3) Calculate the clearance between piston and piston pin. If it is not within the standard, replace the piston and piston pin as a set.

Clearance between piston and piston pin:

Standard

0.004 — 0.008 mm (0.0002 — 0.0003 in)

3. PISTON RING

1. Make sure the piston ring is not broken or damaged.
2. Using a cylindrical guide, insert the piston ring into the cylinder liner so that they are perpendicular to the cylinder wall, and check the piston ring gap using a thickness gauge. If it is not within the standard, replace the piston ring.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Use piston ring with same size as piston when replacing piston ring.**

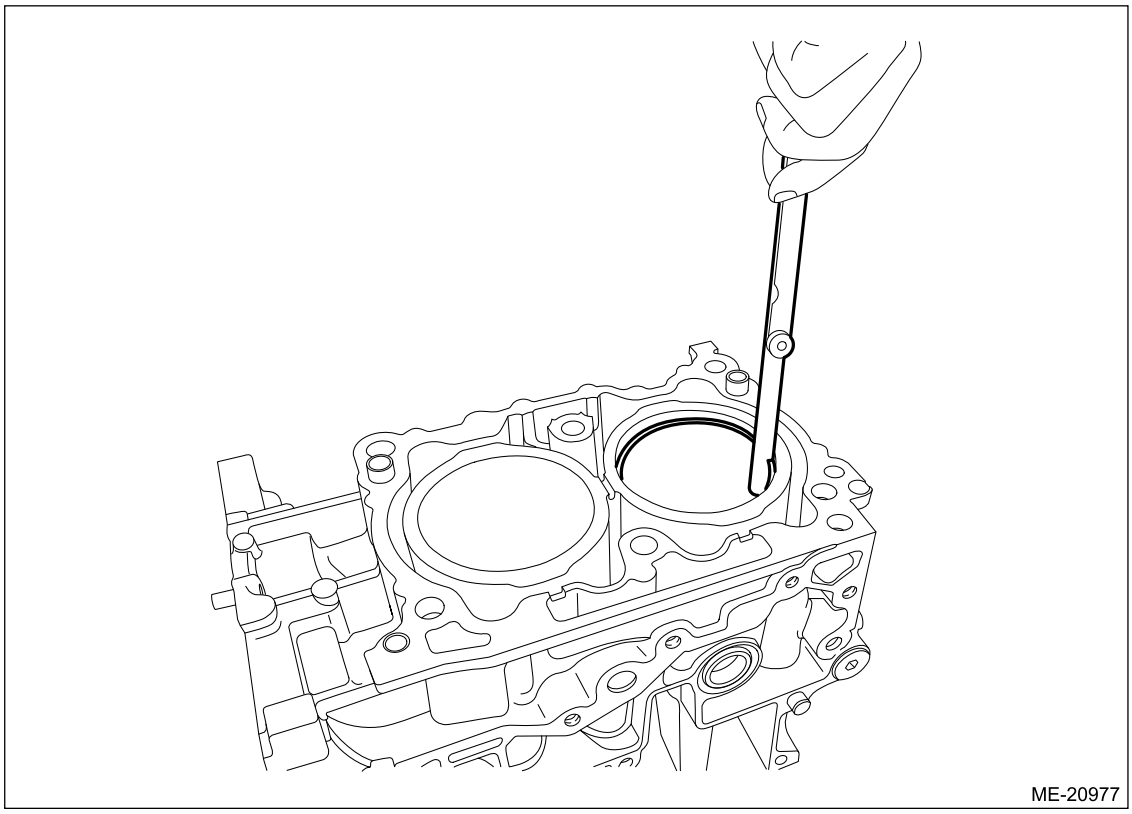
Piston ring gap:

Compression ring (top ring)

Standard

0.20 — 0.25 mm (0.0079 — 0.0098 in)

Compression ring (second ring)



Standard

0.40 — 0.50 mm (0.0157 — 0.0197 in)

Oil ring (upper rail and lower rail)

Standard

0.10 — 0.35 mm (0.0039 — 0.0138 in)

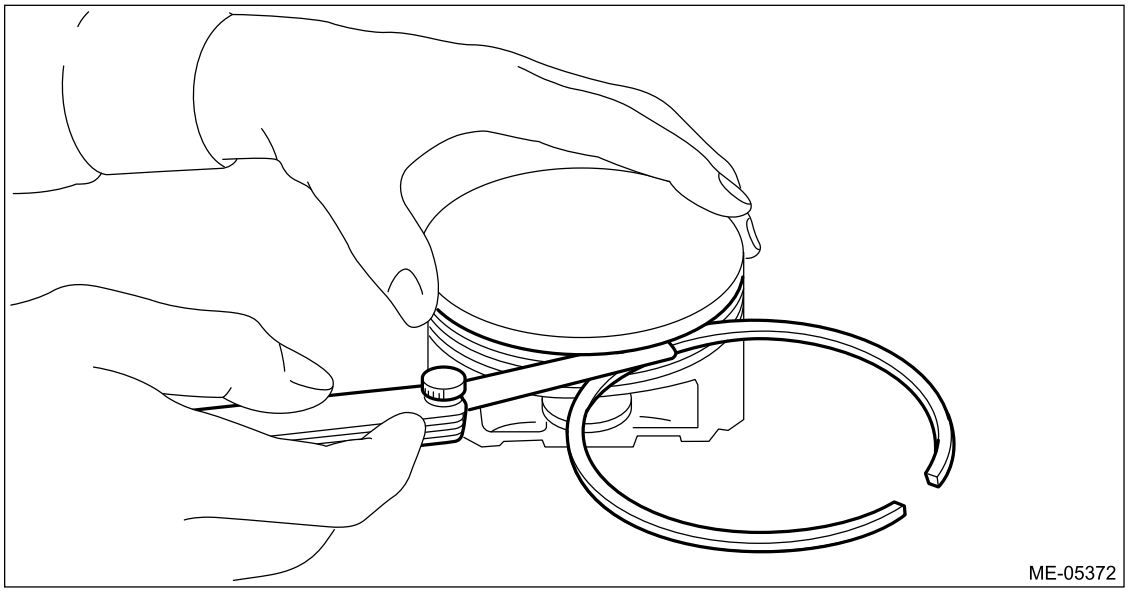
3. Fit the compression ring straight into the piston ring groove, then check the clearance between compression ring and piston with a thickness gauge. If it is not within the standard, replace the compression ring.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Before inspecting the clearance, clean the piston ring groove and compression ring.**
- **Use compression ring with same size as piston when replacing compression ring.**

Clearance between compression ring and piston:

Top ring



Standard

0.040 — 0.080 mm (0.0016 — 0.0031 in)

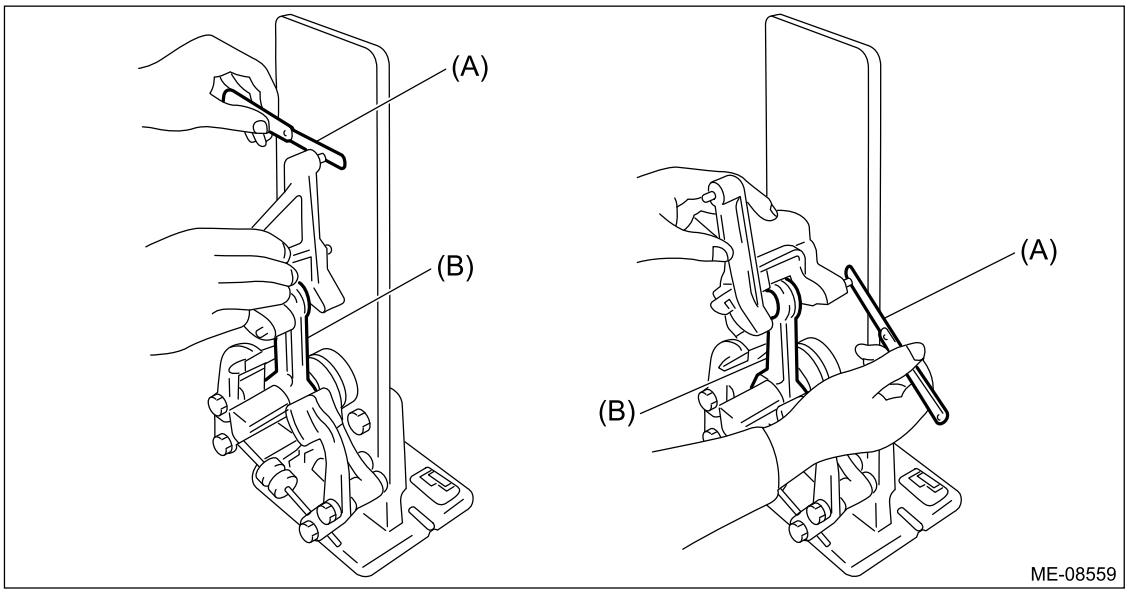
Second ring

Standard

0.030 — 0.070 mm (0.0012 — 0.0028 in)

4. CONNECTING ROD AND CONNECTING ROD BEARING

1. Check for bend or twist using a connecting rod aligner. If it exceeds the limit, replace the connecting rod.



Note:

Measurement should be performed at a temperature of 20°C (68°F).

Bend or twist per 100 mm (3.9370 in) in length:

Limit

0.10 mm (0.0039 in)

(A) Thickness gauge (B) Connecting rod

2. Check that the large or small end thrust surface of each connecting rod is not damaged.

3. Check each connecting rod bearing for scar, peeling, seizure, melting or wear, etc.

4. Check the thrust clearance of each connecting rod using a thickness gauge.

Note:

Measurement should be performed at a temperature of 20°C (68°F).

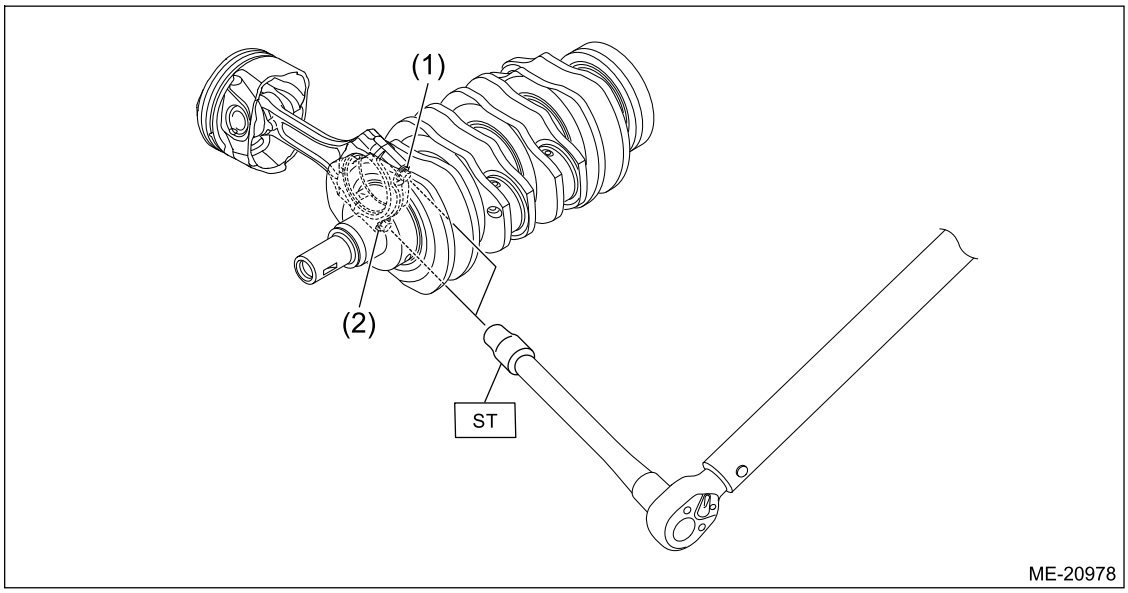
(1) Clean the #1 connecting rod bearing and the #1 pin of crankshaft, and apply engine oil to the #1 pin of crankshaft.

(2) Set the #1 connecting rod bearing to the #1 connecting rod and #1 connecting rod cap.

(3) Set the #1 connecting rod, #1 connecting rod cap and #1 connecting rod cap bolt to the #1 pin of crankshaft.

Note:

- **Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.**
- **Use a new connecting rod cap bolt.**
- **Apply a coat of engine oil to the #1 connecting rod cap bolt thread.**



(4) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 22 N·m (2.2 kgf-m, 16.2 ft-lb) in numerical order as shown in the figure.

Caution:

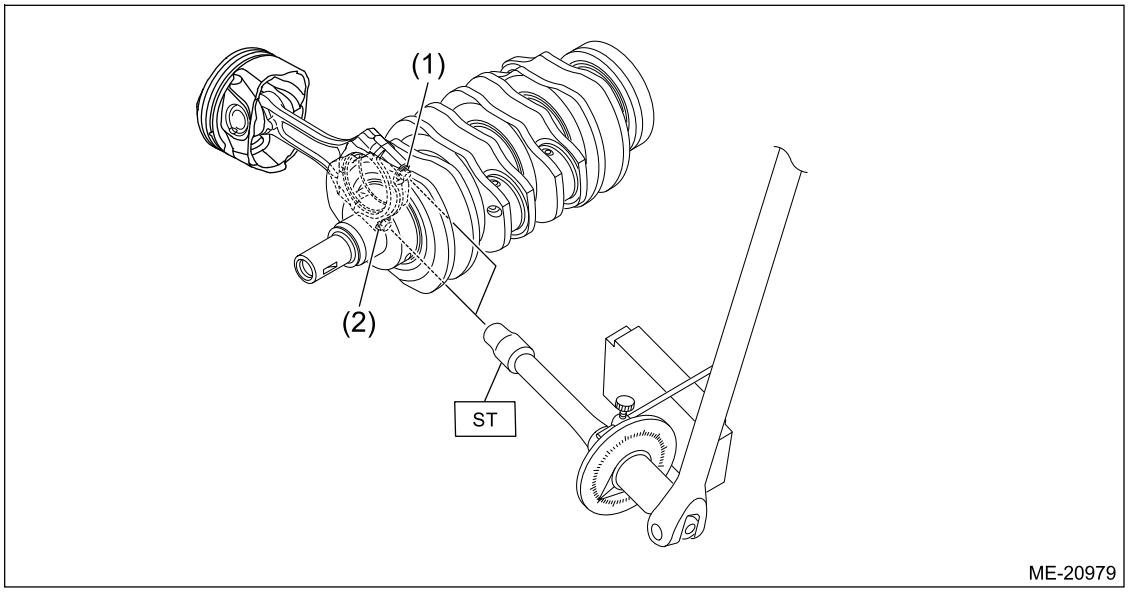
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**

Preparation tool:

ST: SOCKET (18270AA020)

(5) Using the ST and angle gauge, tighten the #1 connecting rod cap bolts with torque of 135° — 140° in numerical order as shown in the figure.

Caution:



- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**

Note:

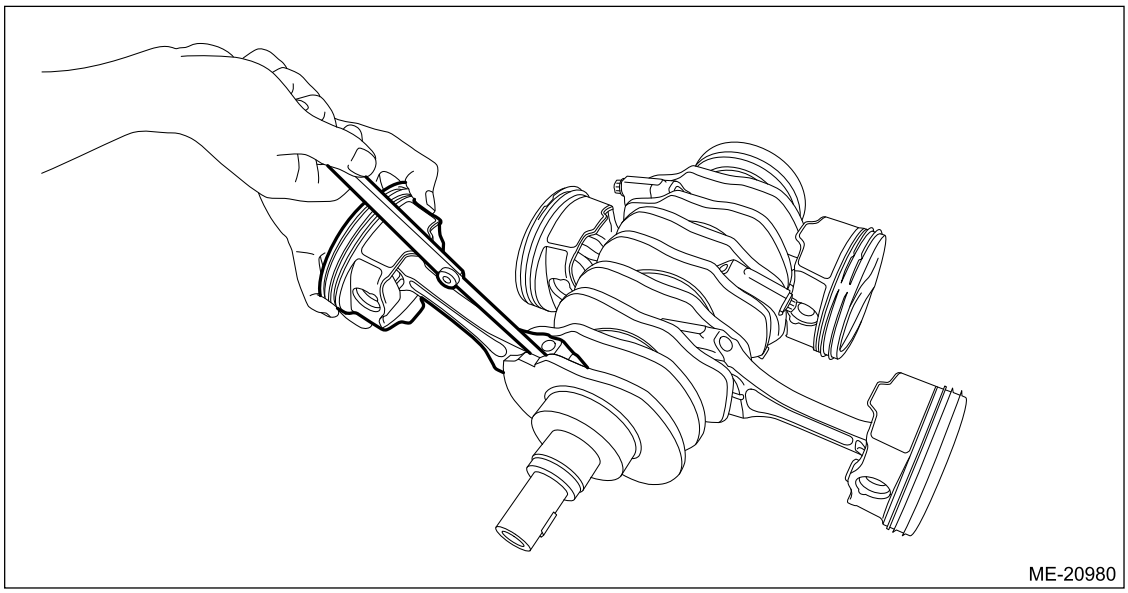
Prevent angle gauge from rotating using a V-block, etc.

Preparation tool:

ST: SOCKET (18270AA020)

(6) In the same manner, install the #2, #3 and #4 connecting rods.

(7) Check the thrust clearance of each connecting rod using a thickness gauge. If it is not within the standard, replace the connecting rod.



Note:

Measure the thrust clearance of each connecting rod at several points, and replace the connecting rod if there is uneven wear.

Connecting rod thrust clearance:

Standard

0.070 — 0.330 mm (0.0028 — 0.0130 in)

5. Check the oil clearance on each connecting rod bearing using plastigauge.

Note:

Measurement should be performed at a temperature of 20°C (68°F).

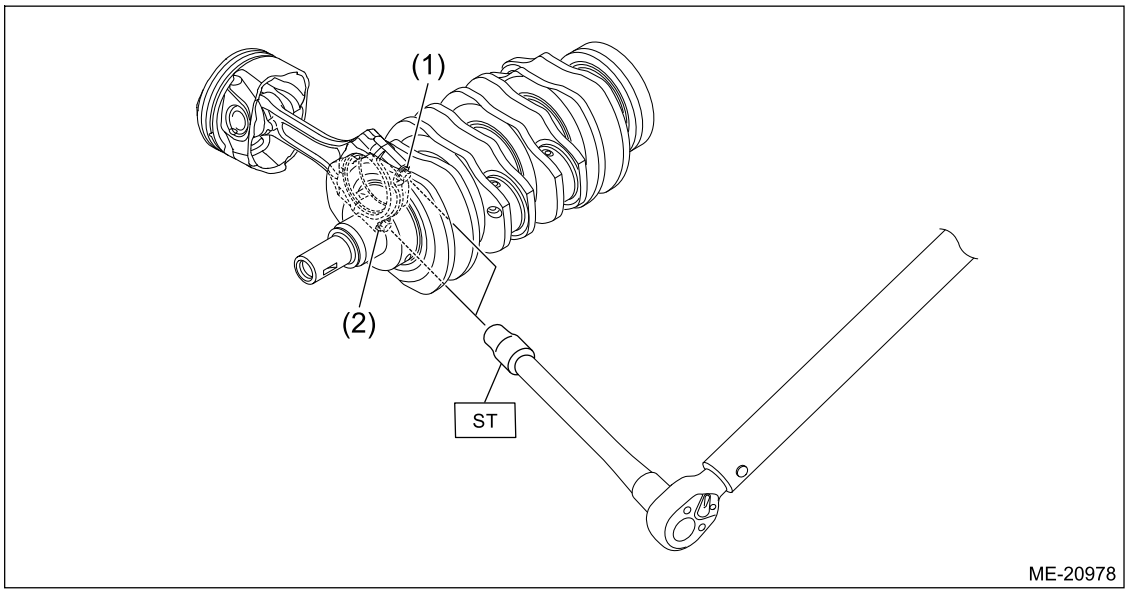
(1) Clean the #1 connecting rod bearing and the #1 pin of crankshaft.

(2) Set the #1 connecting rod bearing to the #1 connecting rod and #1 connecting rod cap.

(3) Place a plastigauge across the #1 pin of crankshaft, and set the #1 connecting rod, #1 connecting rod cap and #1 connecting rod cap bolt to the #1 pin of crankshaft.

Note:

- **Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.**
- **Use a new connecting rod cap bolt.**
- **Apply a coat of engine oil to the #1 connecting rod cap bolt thread.**



(4) Using the ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 22 N·m (2.2 kgf-m, 16.2 ft-lb) in numerical order as shown in the figure.

Caution:

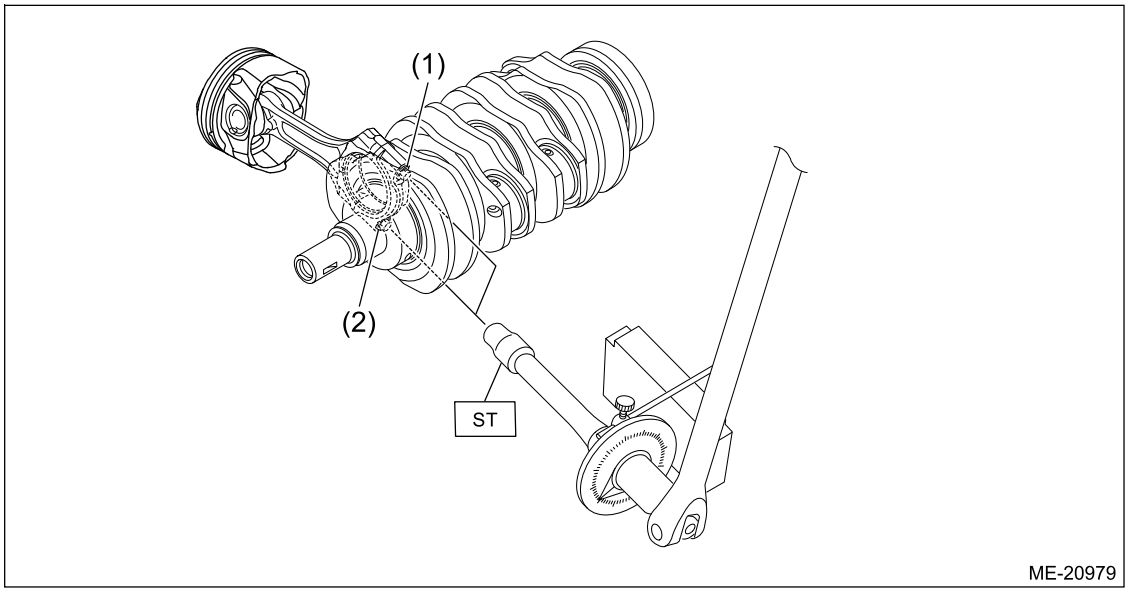
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**
- **During tightening, be careful not to move the #1 connecting rod and the #1 connecting rod cap.**

Preparation tool:

ST: SOCKET (18270AA020)

(5) Using the ST and angle gauge, tighten the #1 connecting rod cap bolts with torque of 135° — 140° in numerical order as shown in the figure.

Caution:



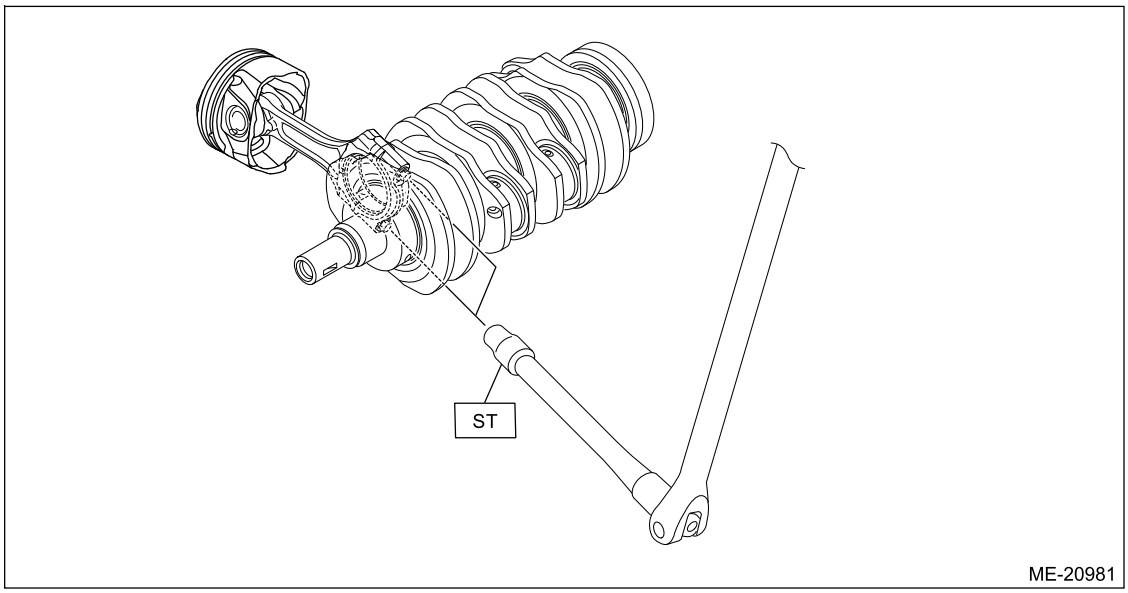
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**
- **During tightening, be careful not to move the #1 connecting rod and the #1 connecting rod cap.**

Note:

Prevent angle gauge from rotating using a V-block, etc.

Preparation tool:

ST: SOCKET (18270AA020)



(6) Using the ST, loosen the #1 connecting rod cap bolt, and remove the #1 connecting rod cap bolt and #1 connecting rod cap.

Caution:

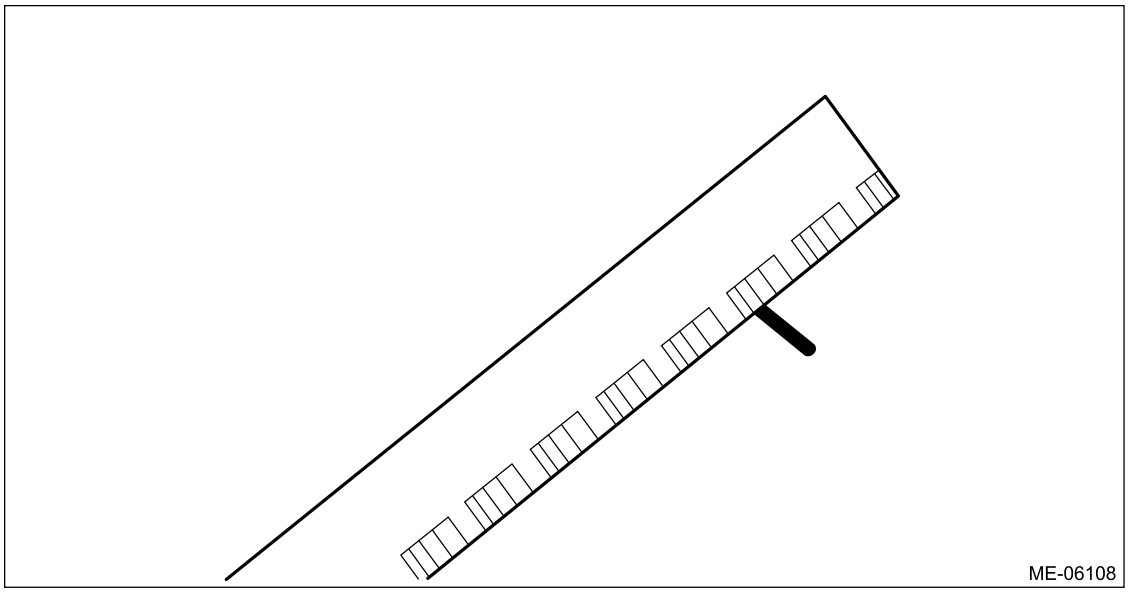
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**
- **During removal, be careful not to move the #1 connecting rod and the #1 connecting rod cap.**

Preparation tool:

ST: SOCKET (18270AA020)

(7) Determine oil clearance of the #1 connecting rod bearing by matching the widest point of the plastigauge on #1 pin of crankshaft against scale printed on a package of the plastigauge. If it is not within the standard, replace the #1 connecting rod bearing.

Note:



Measure the outer diameter of crankshaft pin using micrometer, and select the suitable size connecting rod bearing when replacing the connecting rod bearing.

		Unit: mm (in)
Bearing	**Connecting rod bearing thickness (at center)**	**Crankshaft pin outer diameter**
	Standard	**Standard**
Standard size	1.492 — 1.508 (0.0587 — 0.0594)	47.976 — 48.000 (1.8888 — 1.8898)
0.03 (0.0012) Undersize	1.511 — 1.515 (0.0595 — 0.0596)	47.946 — 47.970 (1.8876 — 1.8886)
0.05 (0.0020) Undersize	1.521 — 1.525 (0.0599 — 0.0600)	47.926 — 47.950 (1.8868 — 1.8878)
0.25 (0.0098) Undersize	1.621 — 1.625 (0.0638 — 0.0640)	47.726 — 47.750 (1.8790 — 1.8799)

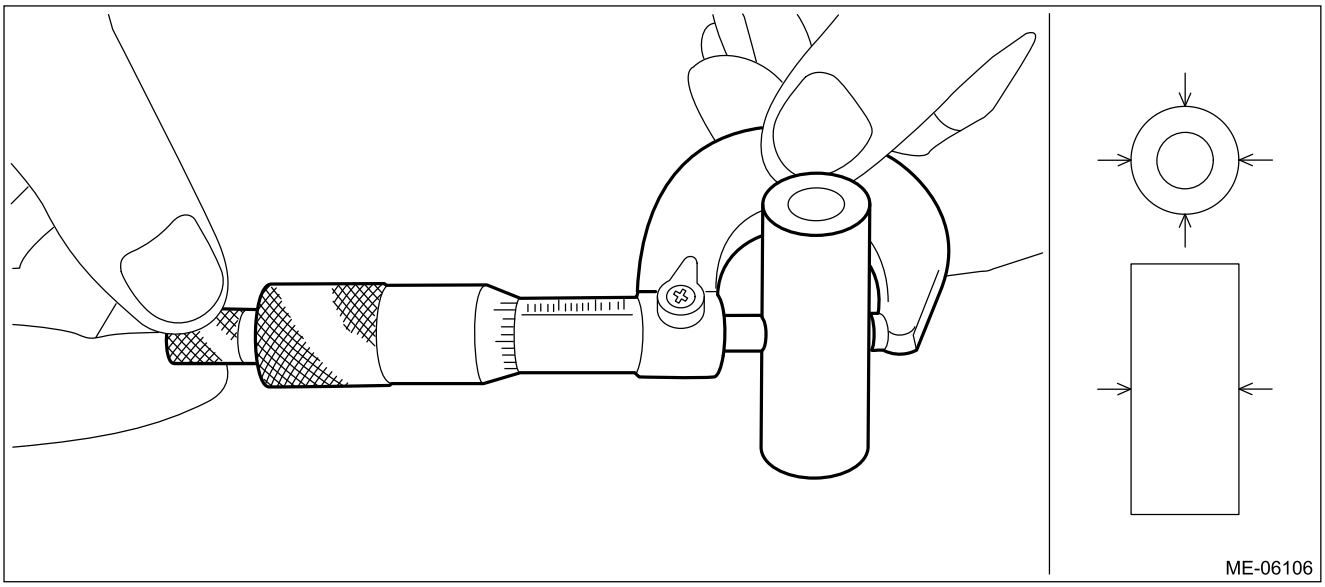
Connecting rod bearing oil clearance:

Standard

0.017 — 0.047 mm (0.0007 — 0.0019 in)

(8) Completely remove the plastigauge.

(9) In the same manner, check oil clearance of the #2, #3 and #4 connecting rod bearings.

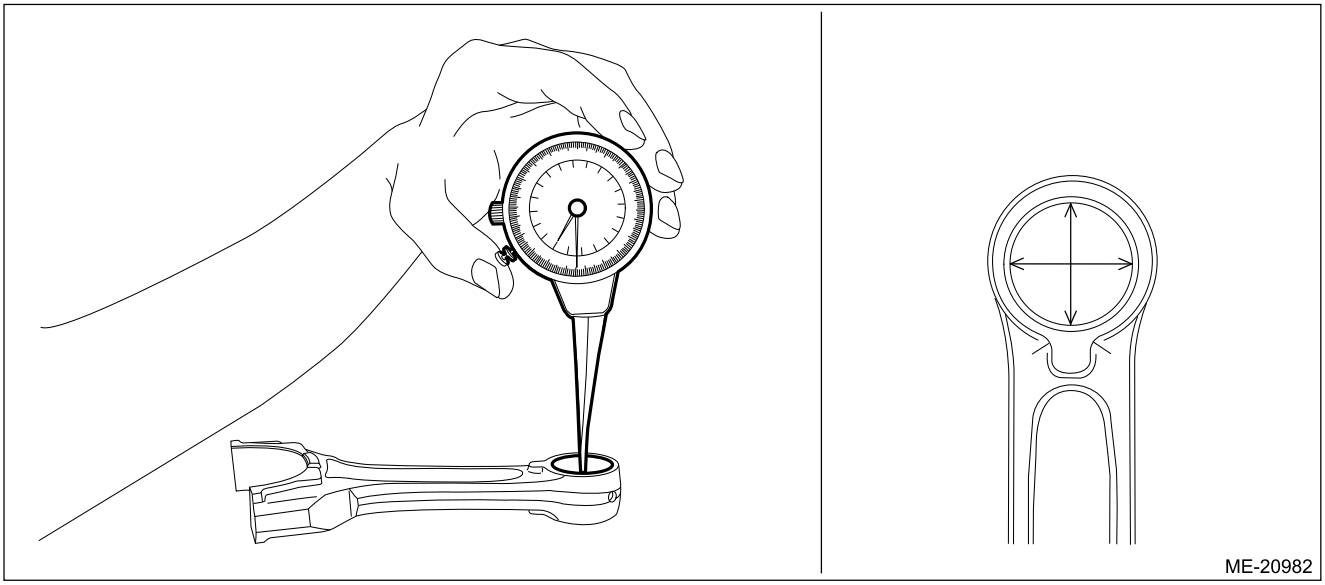


5. PISTON PIN & CONNECTING ROD BUSHING

1. Check that the connecting rod bushing is not damaged.
2. Check the clearance between piston pin and connecting rod bushing. Check the clearance between piston pin and connecting rod bushing by measuring the outer diameter of piston pin and the inner diameter of connecting rod bushing respectively.

(1) Measure the outer diameter of piston pin with a micrometer.

Note:



- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the outer diameter of the piston pin at the two locations as shown in the figure, and read the value of most worn location.**
- **Record the measured value.**

(2) Using a caliper gauge, measure the inner diameter of connecting rod bushing.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Measure the inner diameter of the connecting rod bushing at the two locations as shown in the figure, and read the value of most worn location.**
- **Record the measured value.**

(3) Calculate the clearance between piston pin and connecting rod bushing.

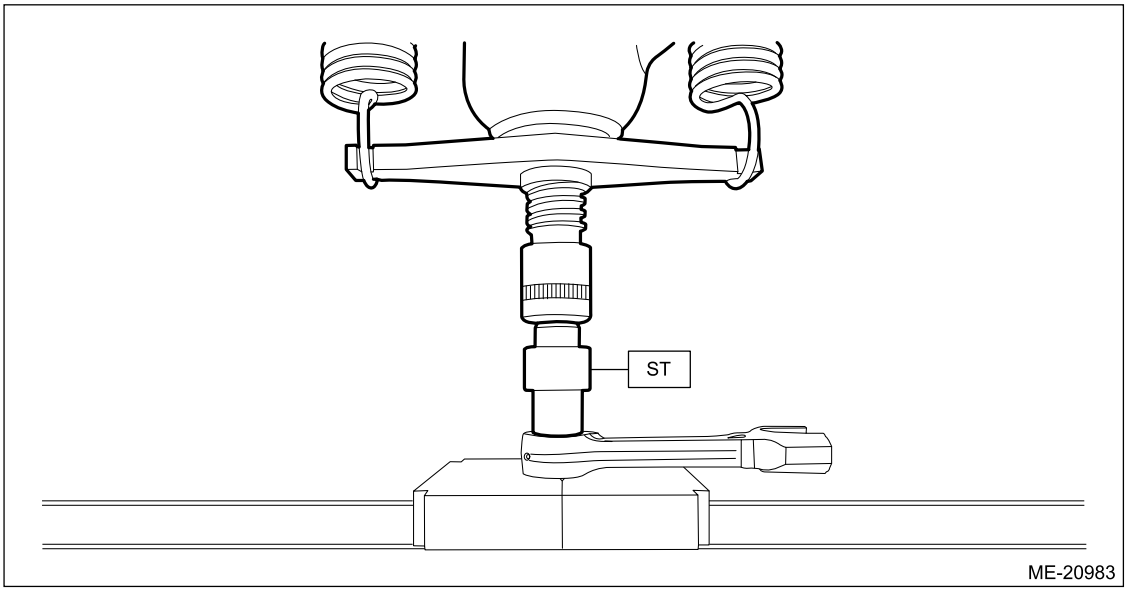
Clearance between piston pin and connecting rod bushing:

Standard

0.004 — 0.026 mm (0.0002 — 0.0010 in)

3. If the clearance between piston pin and connecting rod bushing is not within the standard, replace the connecting rod bushing and piston pin as a set. For replacement procedure of connecting rod bushing, refer to the following.

(1) Using the ST and a press, pull out the connecting rod bushing from the small end of the

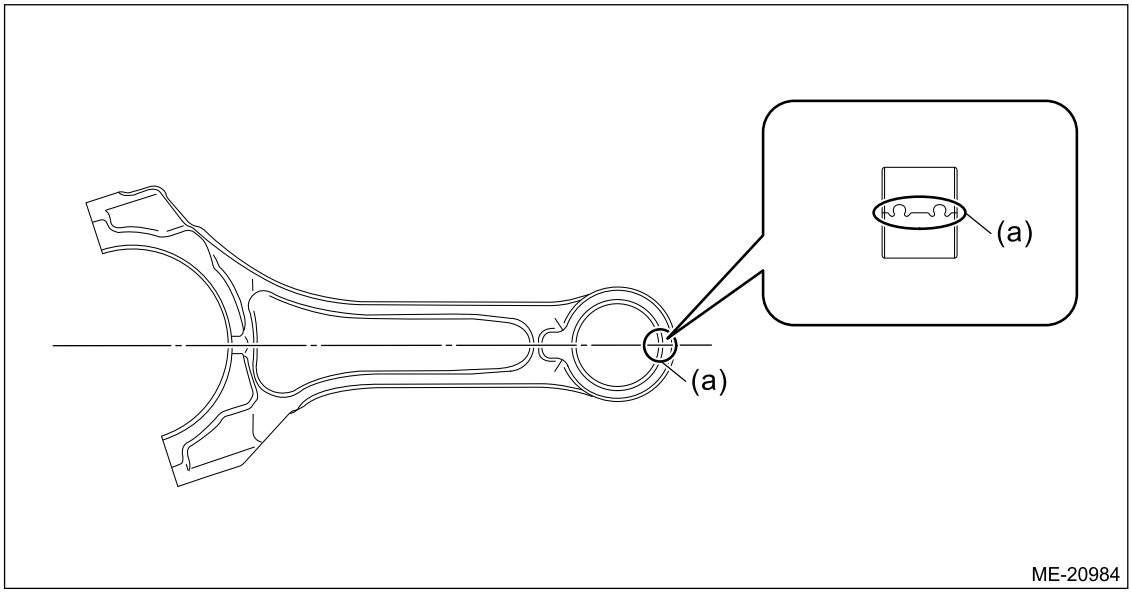


connecting rod.

Note:

The direction of ST for pulling out and for press fitting is different. Therefore, attention must be paid to the direction of usage for ST.

Preparation tool:

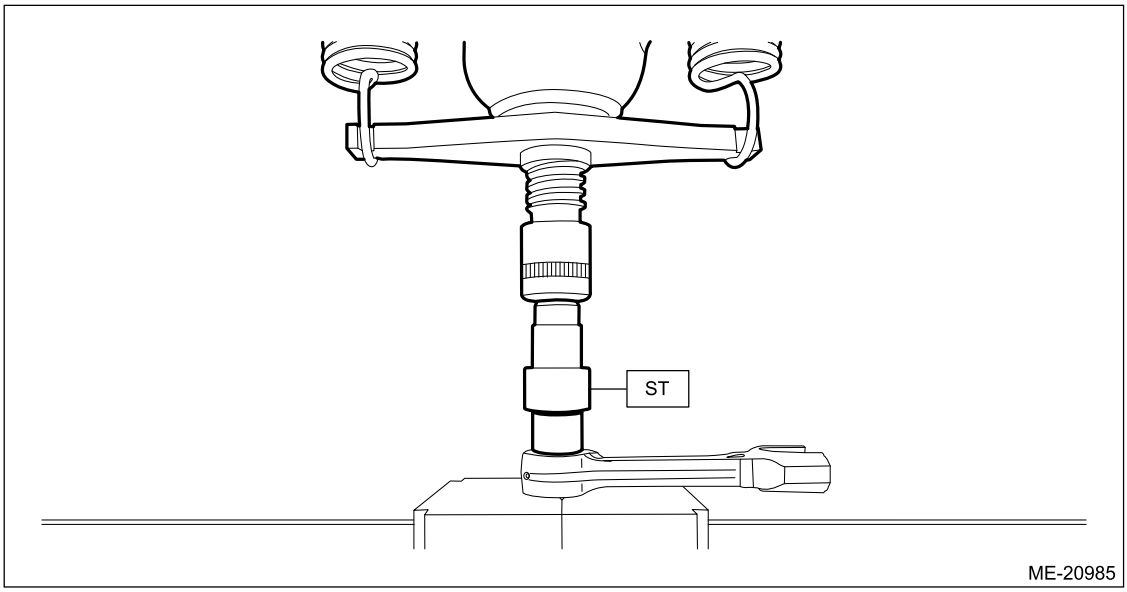


ST: CONNECTING ROD BUSHING REMOVER AND INSTALLER (18350AA000)

(2)Press the connecting rod bushing with ST and the press, after applying engine oil on the periphery of connecting rod bushing.

Note:

- **Clinch area of the connecting rod bushing is as shown in the figure.**



(a) Clinch area of connecting rod bushing

- **The direction of ST for pulling out and for press fitting is different. Therefore, attention must be paid to the direction of usage for ST.**

Preparation tool:

ST: CONNECTING ROD BUSHING REMOVER AND INSTALLER (18350AA000)

(3) Make two 3 mm (0.1181 in) holes in the pressed connecting rod bushing by aligning with the pre-manufactured holes provided on the small end of the connecting rod.

(4) Using a reamer, ream the inside surface of the connecting rod bushing. Insert the reamer in the connecting rod bushing, and turn slowly clockwise while pushing lightly. Bring the reamer back while rotating it clockwise.

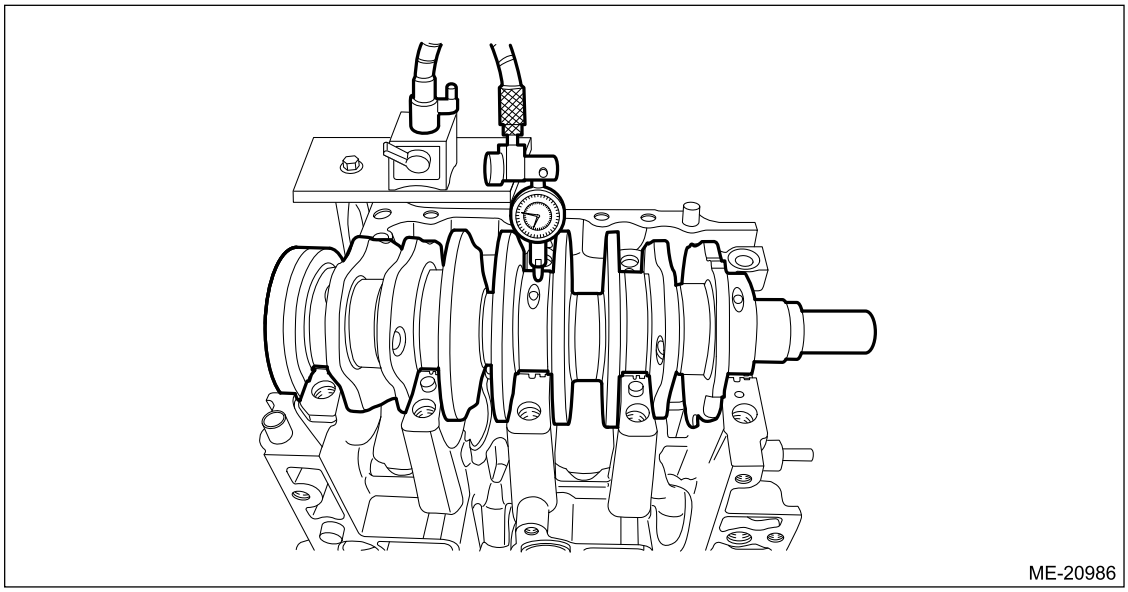
Note:

- **Use a reamer with a diameter of ⌀22.**
- **Apply engine oil to the reamer.**
- **If the inner surface of connecting rod bushing is damaged, the edge of reamer should be slightly ground with oil stone.**
- **If the inner surface of connecting rod bushing becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.**

(5) After completion of reaming, clean the connecting rod bushing to remove chips.

6. CRANKSHAFT AND CRANKSHAFT BEARING

1. Clean the crankshaft completely, and check it for cracks using liquid penetrant tester.
2. Using a dial gauge, check the crankshaft bend. If it exceeds the limit, grind to correct the crankshaft journal or replace the crankshaft.



Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **If a suitable V-block is not available, using just the #1 and #5 crankshaft bearings on cylinder block, position the crankshaft on cylinder block. Then, measure the crankshaft bend using a dial gauge.**
- **When grinding to correct the crankshaft journal, refer to step 3).**

Crankshaft bend:

Limit

0.035 mm (0.0014 in)

3. Using a micrometer, check the outer diameter of crankshaft pin, outer diameter of journal, cylindricality, and out-of-roundness. If it is not within the standard, replace the connecting rod bearing or crankshaft bearing, and grind to correct the crankshaft pin or journal or replace the crankshaft as required.

Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Select the suitable size connecting rod bearing or crankshaft bearing when replacing the connecting rod bearing or crankshaft bearing.**
- **When grinding to correct the crankshaft pin or journal, finish them to the suitable outer diameter as shown in the table below according to the undersize bearing to be used.**

Unit: mm (in)

Bearing	Connecting rod bearing thickness (at center)	Crankshaft pin outer diameter	Crankshaft bearing thickness (at center)		Crankshaft journal outer diameter
			#1, #2, #3, #4	#5	
	Standard	Standard	Standard	Standard	Standard
Standard size	1.492 — 1.508 (0.0587 — 0.0594)	47.976 — 48.000 (1.8888 — 1.8898)	2.498 — 2.513 (0.0983 — 0.0989)	2.496 — 2.511 (0.0983 — 0.0989)	67.985 — 68.003 (2.6766 — 2.6773)
0.03 (0.0012) Undersize	1.511 — 1.515 (0.0595 — 0.0596)	47.946 — 47.970 (1.8876 — 1.8886)	2.519 — 2.522 (0.0992 — 0.0993)	2.517 — 2.520 (0.0991 — 0.0992)	67.955 — 67.979 (2.6754 — 2.6763)
0.05 (0.0020) Undersize	1.521 — 1.525 (0.0599 — 0.0600)	47.926 — 47.950 (1.8868 — 1.8878)	2.529 — 2.532 (0.0996 — 0.0997)	2.527 — 2.530 (0.0995 — 0.0996)	67.935 — 67.959 (2.6746 — 2.6755)
0.25 (0.0098) Undersize	1.621 — 1.625 (0.0638 — 0.0640)	47.726 — 47.750 (1.8790 — 1.8799)	2.629 — 2.632 (0.1035 — 0.1036)	2.627 — 2.630 (0.1034 — 0.1035)	67.735 — 67.759 (2.6667 — 2.6677)

Crankshaft pin:

Cylindricality

Limit

0.006 mm (0.0002 in)

Out-of-roundness

Limit

0.005 mm (0.0002 in)

Grinding limit (dia.)

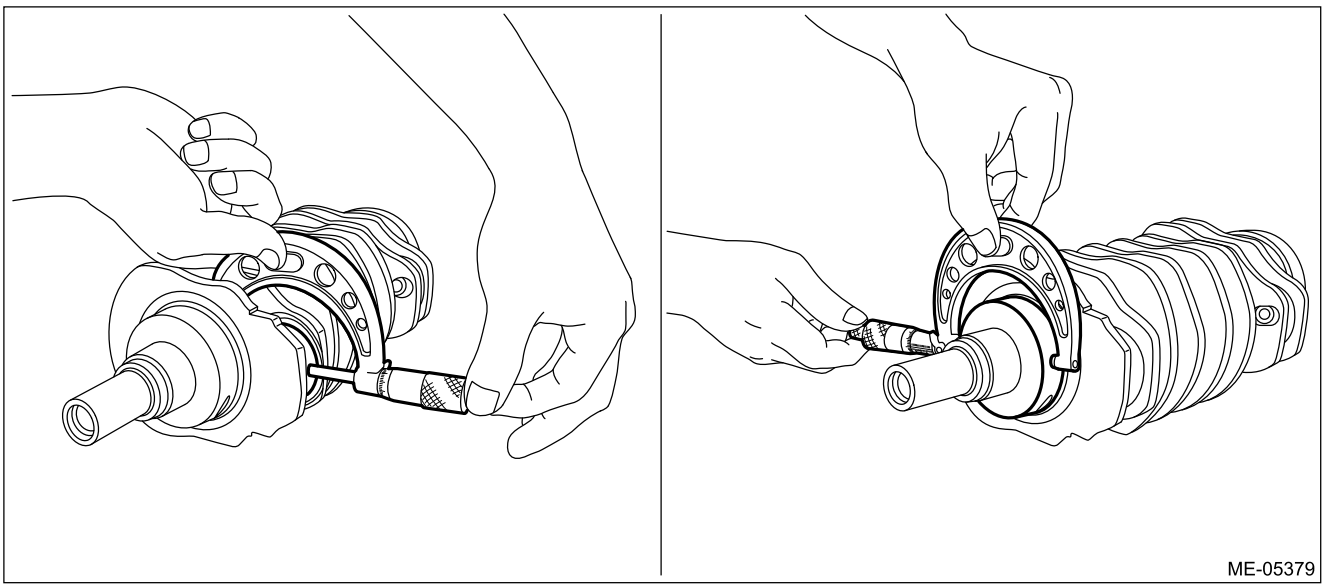
47.726 mm (1.8790 in) or less

Crankshaft journal:

Cylindricality

Limit

0.006 mm (0.0002 in)



Out-of-roundness

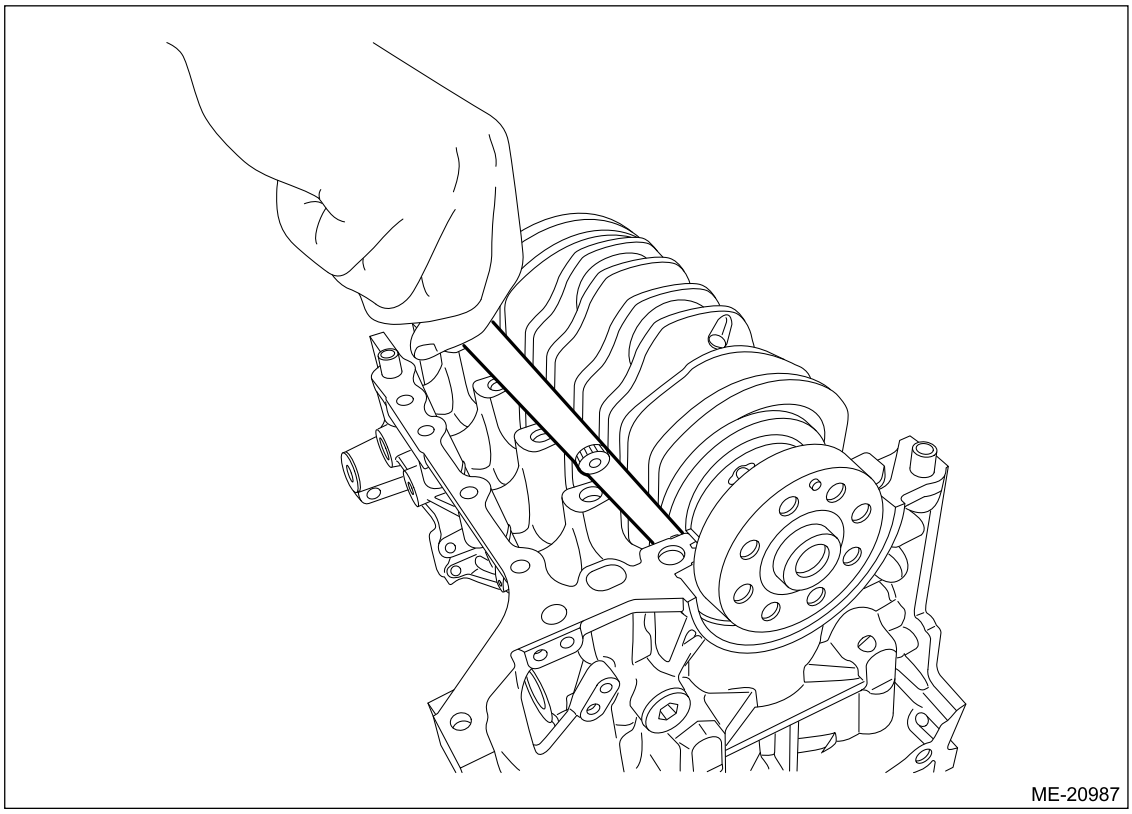
Limit

0.005 mm (0.0002 in)

Grinding limit (dia.)

67.735 mm (2.6667 in) or less

4. Inspect the crankshaft bearing for scar, peeling, seizure, melting or wear, etc.
5. Use a thickness gauge to check the thrust clearance of crankshaft at thrust of #5 crankshaft bearing. If it is not within the standard, replace the #5 crankshaft bearing.



Note:

- **Measurement should be performed at a temperature of 20°C (68°F).**
- **Set all the crankshaft bearings onto the cylinder block, then mount the crankshaft on the cylinder block, and use a thickness gauge to measure the thrust clearance of crankshaft.**
- **Select the #5 crankshaft bearing of suitable size by referring to step 3) when replacing #5 crankshaft bearing.**

Crankshaft thrust clearance:

Standard

0.130 — 0.308 mm (0.0051 — 0.0121 in)

6. Check the oil clearance on each crankshaft bearing using plastigauge.

Note:

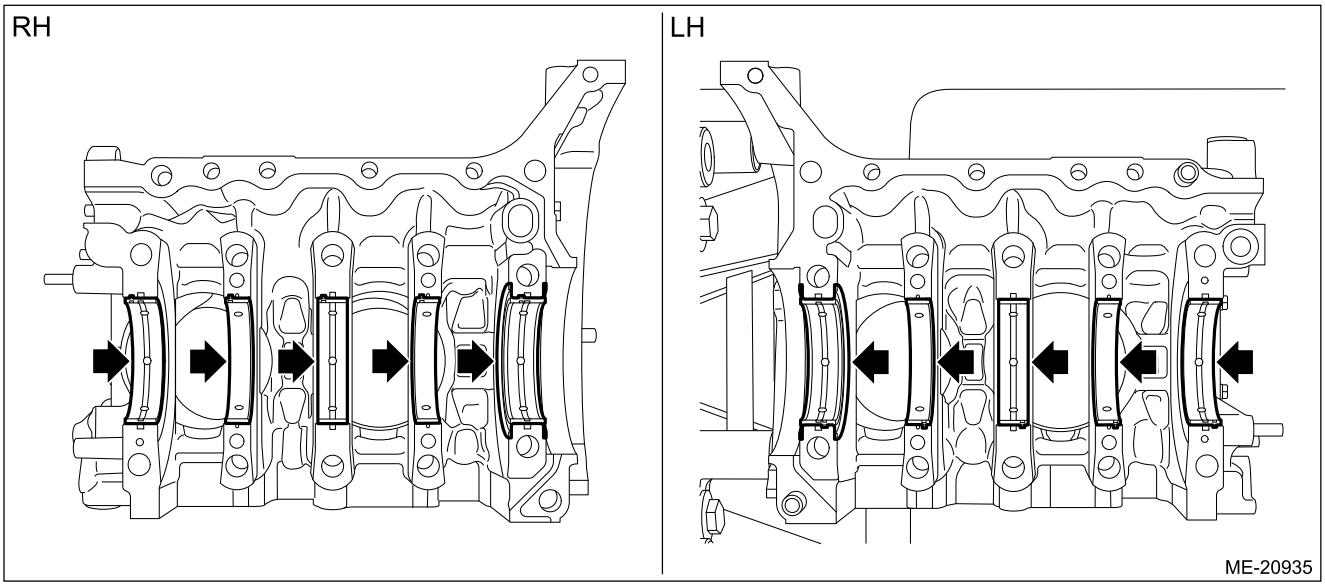
Measurement should be performed at a temperature of 20°C (68°F).

(1) Install the cylinder block LH to the engine stand.

Caution:

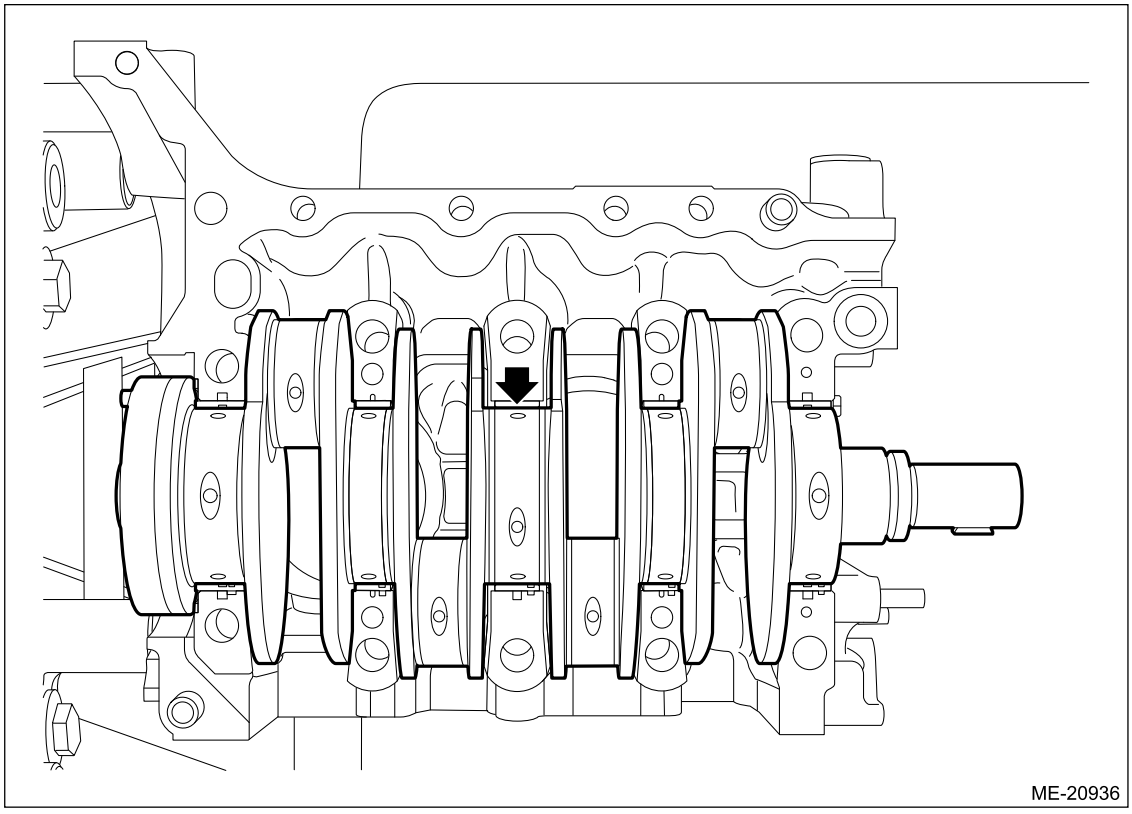
- **When the engine stand is not used, place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.**
- **Be careful not to scratch the mating surface of cylinder block during work.**

(2) Remove the liquid gasket from cylinder block.



(3) Clean each crankshaft bearing and crankshaft journal.

(4) Set each crankshaft bearing to the cylinder block.



Caution:

When performing the operation of the cylinder block RH, be careful of the following.

1. **Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.**
2. **Be careful not to scratch the mating surface of cylinder block during work.**

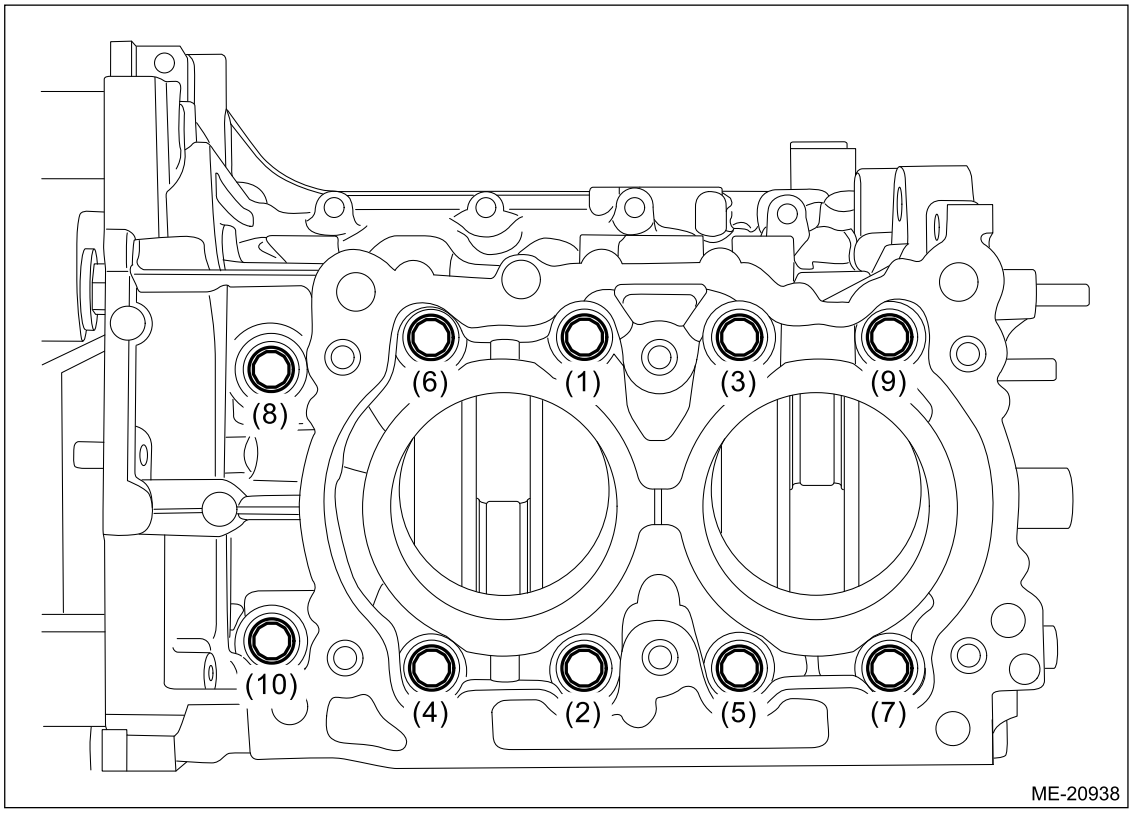
(5) Set the crankshaft to the cylinder block LH.

(6) Place a plastigauge across the crankshaft journals and set the cylinder block RH to the cylinder block LH.

(7) Join the cylinder blocks.

Caution:

When tightening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



1. Apply a coat of engine oil to the washers and cylinder block mounting bolt threads.

   Note:

   To prevent mixture of engine oil into the water jacket, do not apply a large amount.

2. Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

3. Loosen all mounting bolts by 180° in the reverse order of tightening in step 2.
4. Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.
5. Loosen the mounting bolts (4 places) by 180° in the order of (6) → (5) → (4) → (3) as shown in the figure.
6. Tighten the mounting bolts (4 places) with a torque of 17 N·m (1.7kgf-m, 12.5 ft-lb) in the order of (3) → (4) → (5) → (6) as shown in the figure.
7. Using an angle gauge, tighten the mounting bolts (4 places) with torque of 58° — 62° in the order of (3) → (4) → (5) → (6) as shown in the figure.
8. Loosen the mounting bolts (6 places) by 180° in the order of (8) → (7) → (10) → (9) → (2) → (1) as shown in the figure.
9. Tighten the mounting bolts (6 places) with a torque of 17 N·m (1.7kgf-m, 12.5 ft-lb) in the order of (1) → (2) → (9) → (10) → (7) → (8) as shown in the figure.
10. Using an angle gauge, tighten the mounting bolts (3 places) with torque of 58° — 62° in the order of (1) → (2) → (9) as shown in the figure.
11. Using an angle gauge, tighten the mounting bolt (10) (1 place) shown in the figure to the angle of 78° — 82°.
12. Using an angle gauge, tighten the mounting bolt (7) (1 place) shown in the figure to the angle of 58° — 62°.
13. Using an angle gauge, tighten the mounting bolt (8) (1 place) shown in the figure to the angle of 78°— 82°.

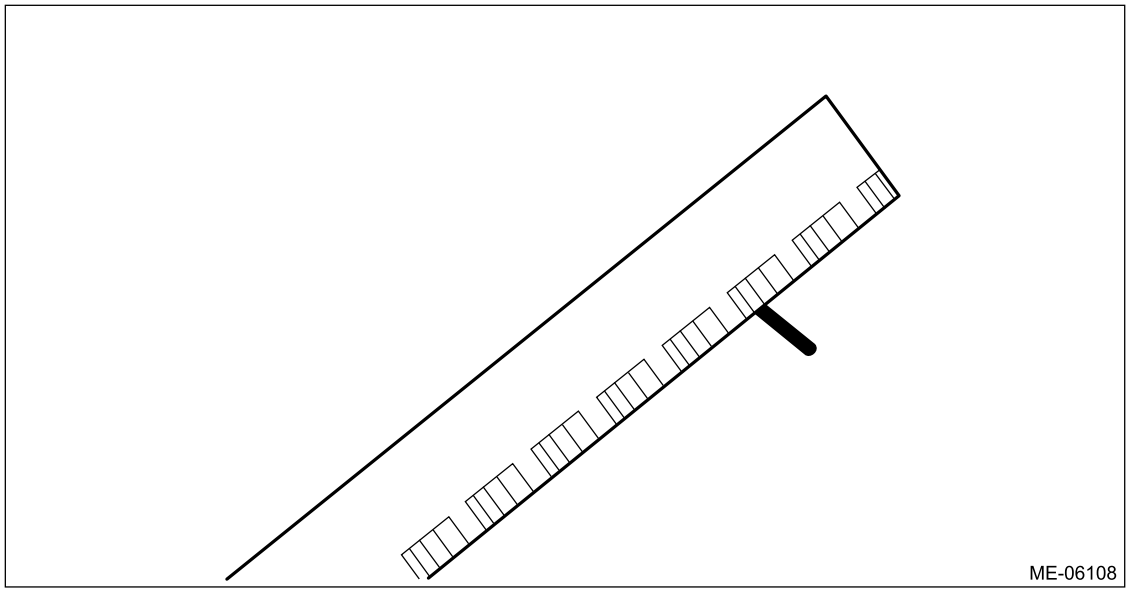
(8) Loosen the cylinder block mounting bolts in numerical order as shown in the figure, and then remove the bolts.

(9) While tapping the cylinder block RH with a plastic hammer, separate the cylinder block RH from the cylinder block LH.

Note:

Lift the cylinder block RH gradually, and confirm that the crankshaft is remaining in the cylinder block LH. Lifting the cylinder block RH carelessly may cause the crankshaft to fall off.

(10) Determine the crankshaft oil clearance by matching the widest point of the plastigauge on each journal against scale printed on a package of the plastigauge. If it is not within the standard, replace the crankshaft bearing, and grind to correct the crankshaft journal or replace the crankshaft as required.



Note:

- **Select the crankshaft bearing of suitable size by referring to step 3) when replacing crankshaft bearing.**
- **When grinding to correct the crankshaft journal, finish it to the suitable outer diameter by referring to step 3) according to the undersize bearing to be used.**

Crankshaft oil clearance:

Standard

0.013 — 0.031 mm (0.0005 — 0.0012 in)

(11)Completely remove the plastigauge.

SPECIFICATION

Refer to “Cylinder Head” for removal and installation procedures of the intake and exhaust valves.

INSPECTION

Note:

The "RANK" shown in the chart shows the possibilities of the cause of trouble in order from "Very often" to "Rarely".

A — Very often

B — Sometimes

C — Rarely

Symptoms	Problem parts etc.	Possible cause	RANK
1. Engine does not start.			
1) Starter does not turn.	Starter	Defective battery-to-starter harness	B
		Defective starter switch	C
		Defective relay	C
		Defective inhibitor switch	C
		Defective clutch start switch	C
		Defective starter	B
	Battery	Improper connection of terminal	A
		Run-down battery	A
		Defective charging system	B
	Friction	Seizure of crankshaft and connecting rod bearing	C
		Seized camshaft	C
		Seized or stuck piston and cylinder	C
	Immobilizer system Ref. to IMMOBILIZER (DIAGNOSTICS)>Basic Diagnostic Procedure.		A
2) Initial combustion does not occur.	Starter	Defective starter	C
	Engine control system Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Basic Diagnostic Procedure.		A
	Fuel line	Defective fuel pump and relay	A
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Trouble	B
		Defective timing	B
	Compression	Incorrect cam clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder liner and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B

Symptoms	Problem parts etc.	Possible cause	RANK
3) Initial combustion occurs.	Engine control system Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Basic Diagnostic Procedure.		A
	Intake system	Defective intake manifold gasket	B
		Defective throttle body gasket	B
	Fuel line	Defective fuel pump and relay	C
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Trouble	B
		Defective timing	B
	Compression	Incorrect cam clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder liner and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B
4) Engine stalls after initial combustion.	Engine control system Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Basic Diagnostic Procedure.		A
	Intake system	Loosened or cracked intake duct	B
		Loosened or cracked PCV hose	C
		Loosened or cracked vacuum hose	C
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Dirty air cleaner element	C
	Fuel line	Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Trouble	B
		Defective timing	B
	Compression	Incorrect cam clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B

Symptoms	Problem parts etc.	Possible cause	RANK
2. Rough idle and engine stall	Engine control system Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Basic Diagnostic Procedure.		A
	Intake system	Loosened or cracked intake duct	A
		Loosened or cracked PCV hose	A
		Loosened or cracked vacuum hose	A
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Defective PCV valve	C
		Loosened oil filler cap	B
		Dirty air cleaner element	C
	Fuel line	Defective fuel pump and relay	C
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Defective timing	C

		Incorrect valve timing	B
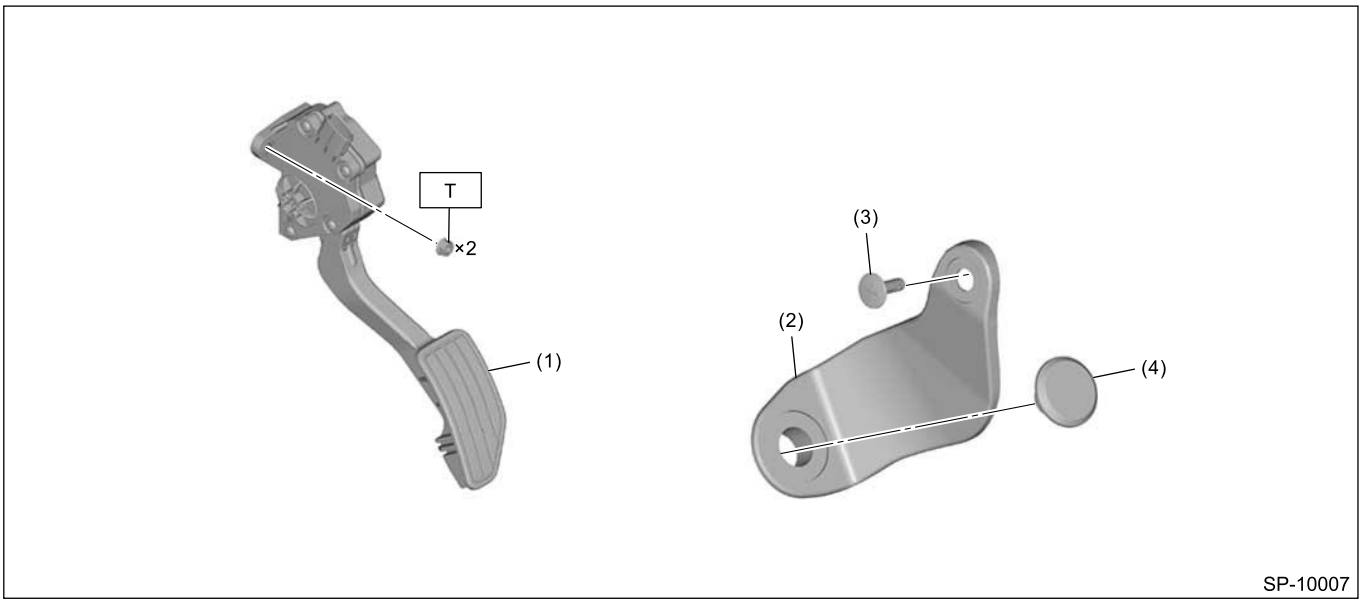
	Lubrication system	Incorrect oil pressure	C
	Cooling system	Over-cooling	C

INSPECTION

Type of sound	Condition	Possible cause
Regular clicking sound	Sound increases as engine speed increases.	• Valve mechanism is defective • Incorrect cam clearance • Worn camshaft • Broken valve spring • Defective valve shim
Heavy and dull clank	Oil pressure is low.	• Worn crankshaft bearing • Worn connecting rod bearing
	Oil pressure is normal.	• Loosened flywheel mounting bolt • Damaged engine mounting
High-pitched clank	Sound is noticeable when accelerating with an overload condition.	• Ignition timing advanced • Accumulation of carbon inside combustion chamber • Wrong heat range of spark plug • Improper octane value gasoline
Clank noise when engine speed is (1,000 — 2,000 r/min)	Sound is reduced when the fuel injector of the noisy cylinder is stopped.*	• Worn crankshaft bearing • Worn connecting rod bearing
Knocking sound when engine is operating under idling speed and engine is warm	Sound is reduced when the fuel injector of the noisy cylinder is stopped.*	• Worn cylinder liner and piston ring • Broken or stuck piston ring • Worn piston pin and piton pin hole of piston
	Sound is not reduced if each fuel injector is stopped in turn.*	• Unusually worn valve rocker • Unusually worn valve shim • Worn cam sprocket • Worn journal of cam carrier and camshaft cap
Squeaky sound	—	• Insufficient generator lubrication
Rubbing sound	—	• Poor contact of generator brush and rotor
Gear scream when starting engine	—	• Defective ignition starter switch • Worn gear and starter pinion
Sound like polishing glass with a dry cloth	—	• Defective V-belt tensioner assembly (loose V-belt) • Defective water pump shaft
Hissing sound	—	• Insufficient compression • Air leakage in air intake system, hose, connection or manifold
Timing chain noise	—	• Loose timing chain • Timing chain contacting with adjacent part
Valve noise	—	• Incorrect cam clearance

*: Fuel injector can be stopped using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Active Test>OPERATION.

SPEED CONTROL SYSTEMS(H4DO)



SP(H4DO)

1. General Description
2. Accelerator Pedal

SPECIFICATION

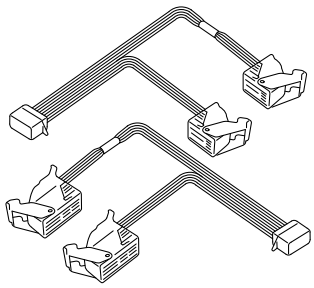
Accelerator pedal	Stroke	At pedal pad	50 — 60 mm (1.97 — 2.36 in)

COMPONENT

(1) Accelerator pedal ASSY
(2) Accelerator plate
(3) Clip
(4) Accelerator stopper

Tightening torque: N·m (kfg-m, ft-lb)

T: 7.5 (0.8, 5.5)



CAUTION

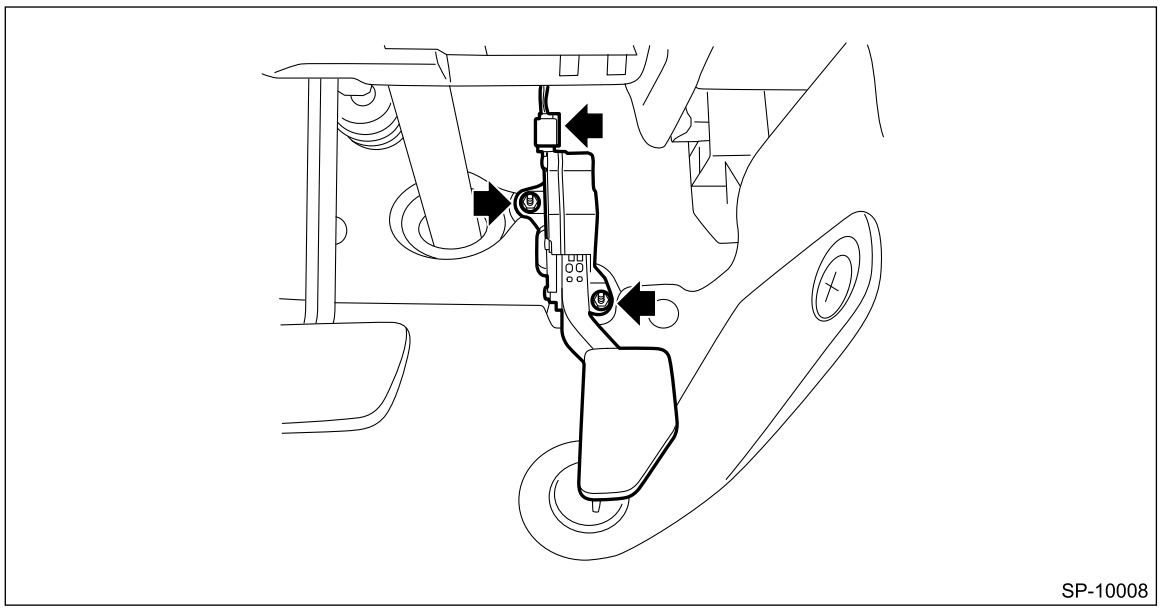
- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.

- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18460AA120	18460AA120 (Newly adopted tool)	CHECK BOARD	Used for measuring voltage and resistance of ECM terminals.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

SPEED CONTROL SYSTEMS(H4DO) > Accelerator Pedal

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the connector and remove the accelerator pedal assembly.

SPEED CONTROL SYSTEMS(H4DO) > Accelerator Pedal

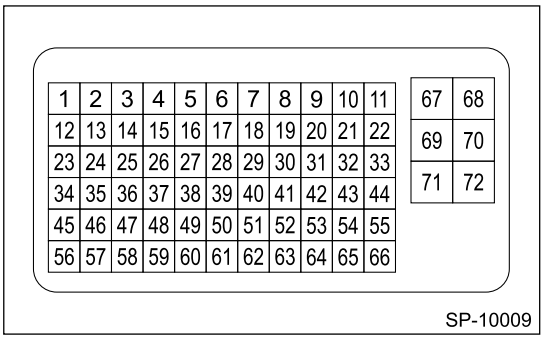
INSTALLATION

1. Install the accelerator pedal assembly, and connect the connector.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SPEED CONTROL SYSTEMS(H4DO) > Accelerator Pedal

DISASSEMBLY

Note:
The accelerator pedal cannot be disassembled.



SPEED CONTROL SYSTEMS(H4DO) > Accelerator Pedal

INSPECTION

1. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH CIRCUIT TESTER)

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Disconnect the ECM connector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
3. Attach the ST between ECM and the engine wiring harness and the bulkhead harness. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>CAUTION.
   Special tool:
   CHECK BOARD (18460AA120)
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

5. Turn to IG ON.
6. Measure the voltage between ECM connector terminals.

Accelerator pedal sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	66 (+) — 55 (−)	0.3 — 1.1 V
	Depressed (full opened)		2.3 — 3.8 V
Sub	Not depressed (full closed)	64 (+) — 65 (−)	0.3 — 1.1 V
	Depressed (full opened)		2.3 — 3.8 V

7. After inspection, restore the vehicle to its original state.

2. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH SUBARU SELECT MONITOR 4)

Note:
Individual difference of the accelerator pedal may not be corrected sufficiently on the ECM side after DTCs were cleared or the battery was removed and installed on the vehicle. Therefore, when the accelerator opening angle signal does not indicate 100%, repeat the ignition switch ON (engine OFF) and ignition switch OFF operations at intervals of three seconds or more, until the accelerator opening angle signal indicates 100%.

1. Connect the Subaru Select Monitor 4.
2. Turn to IG ON.
3. Read the accelerator opening angle and the main accelerator sensor voltage using Subaru Select Monitor 4.
   Note:
   For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

Accelerator pedal sensor	Accelerator pedal opening angle	Standard
Main	0.0%	0.3 — 1.1 V
	100.0%	2.3 — 3.8 V
Sub	0.0%	0.3 — 1.1 V
	100.0%	2.3 — 3.8 V

3. OTHER INSPECTIONS

1. Check that there is no deformation, cracks or other damages.
2. Check for smooth operation when the accelerator pedal is depressed.
3. Check if the accelerator pedal returns to its original position smoothly when the pedal is released.

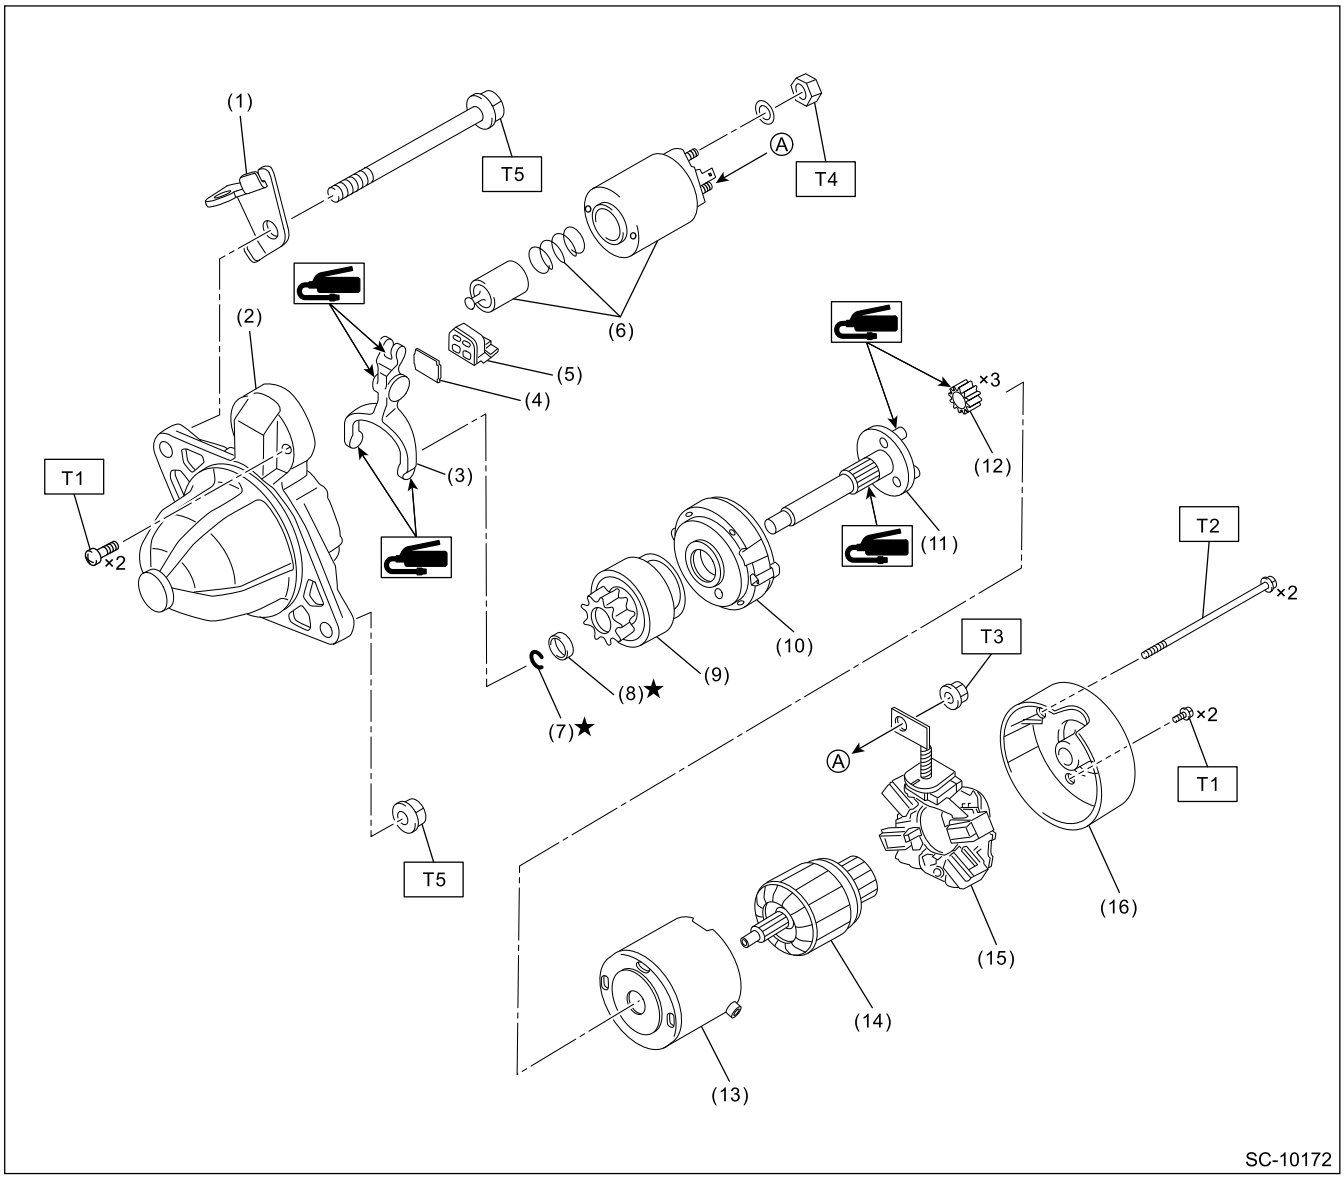
	Brush length	Standard	12.45 mm (0.490 in)	12.3 mm (0.484 in)
		Limit	5.0 mm (0.197 in)	7.0 mm (0.276 in)
	Brush spring force	Standard	12.3 — 16.7 N (1.25 — 1.70 kgf, 2.77 — 3.75 lbf)	15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf)
		Limit	3.6 N (0.37 kgf, 0.81 lbf)	2.5 N (0.25 kgf, 0.56 lbf)
	No-load characteristics	Voltage	11 V	
		Current	95 A or less	
Generator	Type		Rotating-field three-phase type, voltage regulator built-in type, each with load response control system	
	Model		104211-4020	
	Manufacturer		DENSO	
	Voltage and output		12 V — 130 A	
	Polarity on ground side		Negative	
	Direction of rotation		Clockwise (when observed from pulley side)	
	Stator connection		3-phase △ type	
	Output current		1,500 r/min — 41 A or more 2,500 r/min — 103 A or more 5,000 r/min — 130 A or more	
	Regulated voltage		14.0 — 14.6 V [25°C (77°F)]	
	Rotor slip ring outer diameter	Standard	14.2 — 14.8 mm (0.559 — 0.583 in)	
		Limit	14.0 mm (0.551 in)	
Battery	Type		75D23L	
	Nominal capacity		5 HR: 52 Ah [25°C (77°F)]	
	Nominal voltage		12 V	

	Item	Specifications
	CCA	530 A
	BCI group number*	35



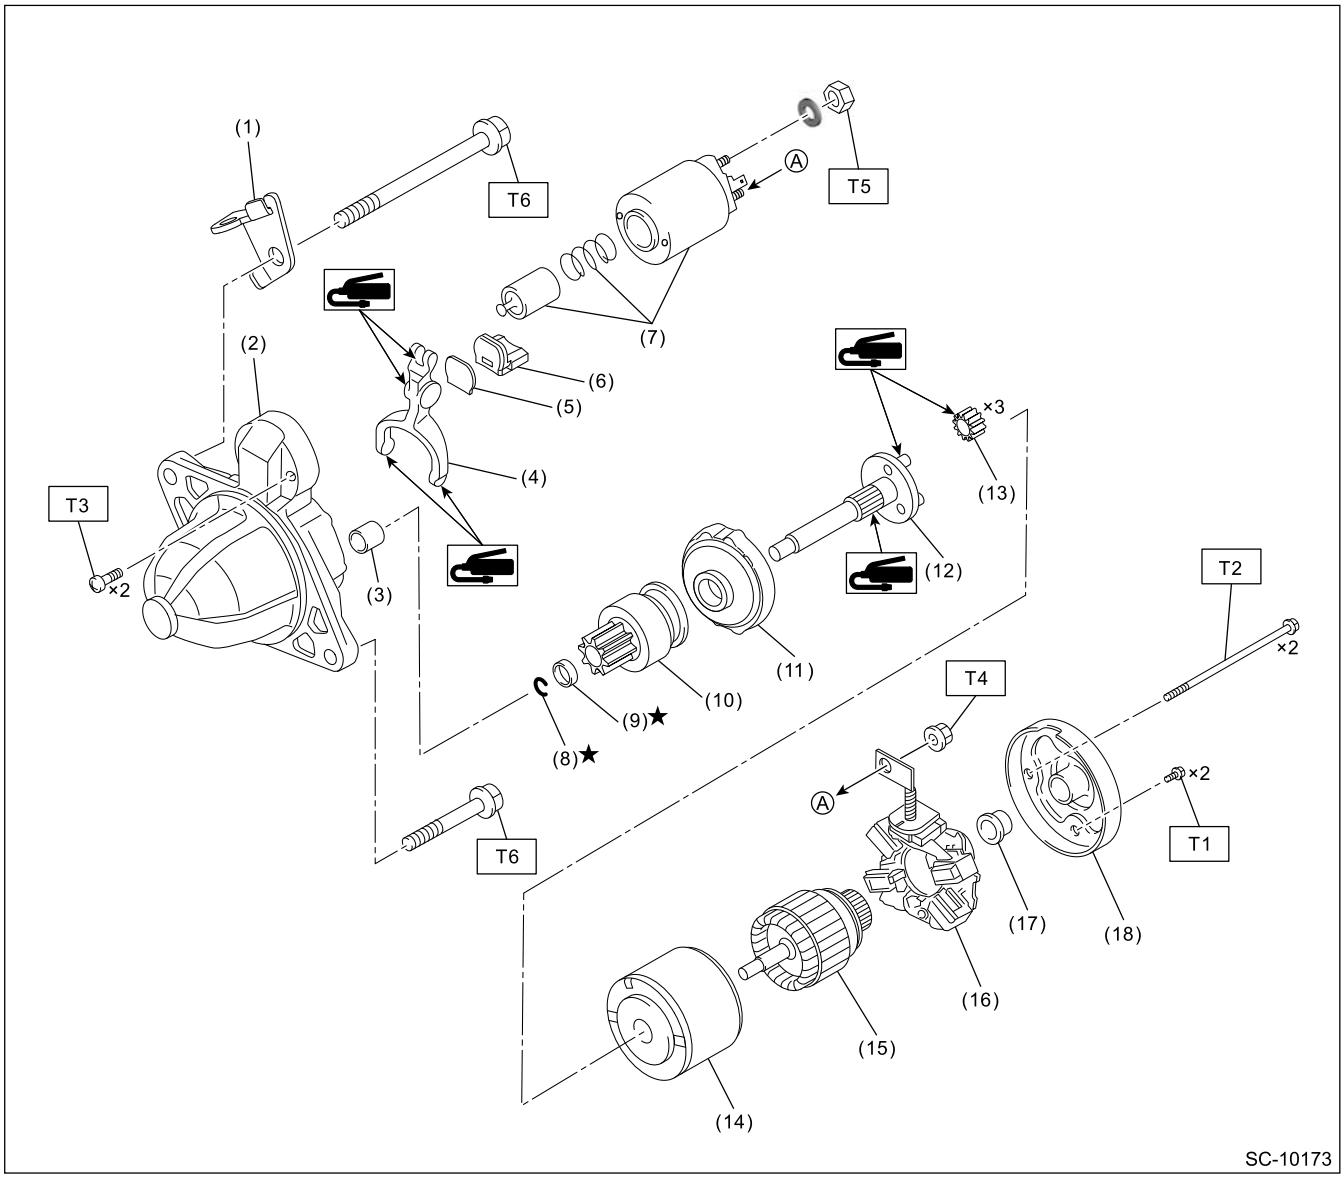
*Use the information about the battery size as a reference. This information shall not be guaranteed by FHI.

STARTING/CHARGING SYSTEMS(H4DO) > General Description

COMPONENT

1. STARTER

- CVT model

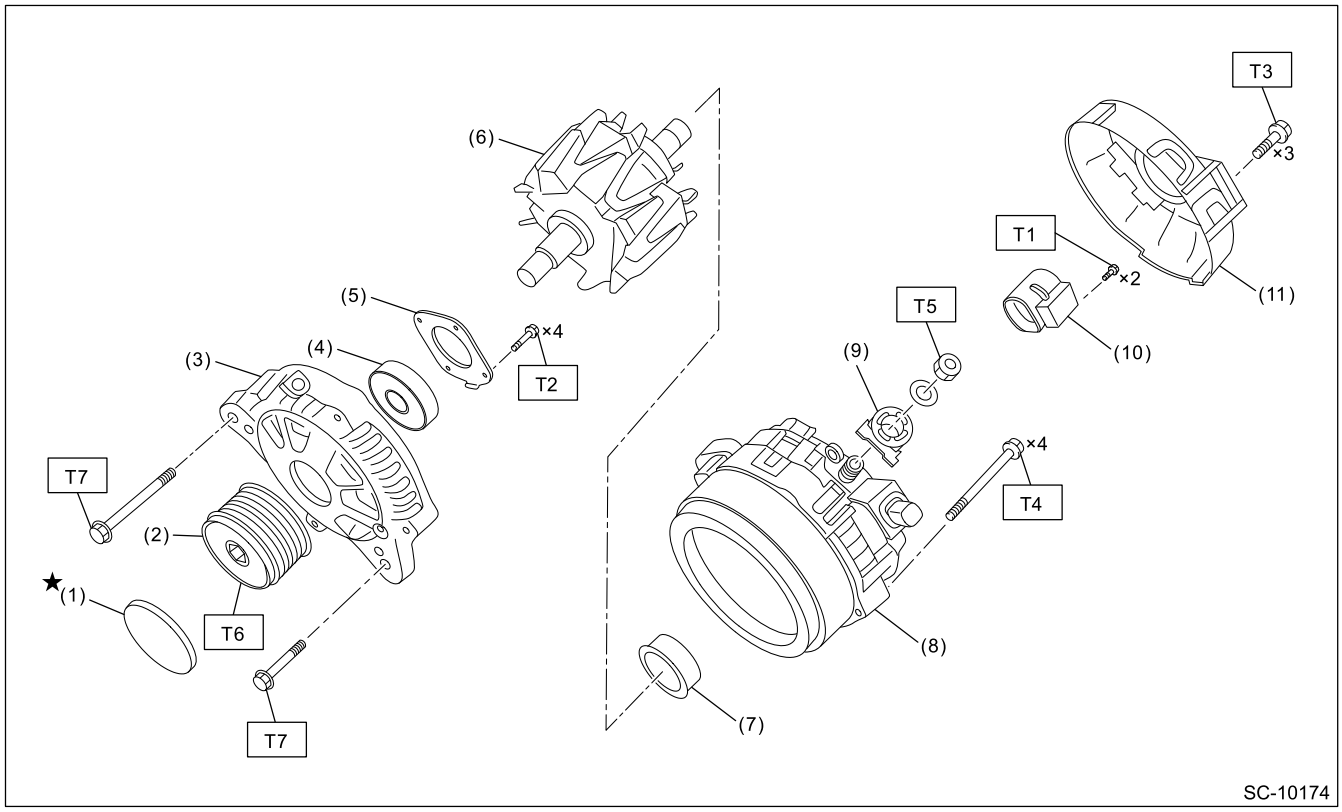


(1)	Cable stay	(9)	Overrunning clutch	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Starter housing	(10)	Internal gear	***T1:***	***3.4 (0.3, 2.5)***
(3)	Shift lever	(11)	Shaft	***T2:***	***3.5 (0.4, 2.6)***
(4)	Plate	(12)	Pinion gear	***T3:***	***10.7 (1.1, 7.9)***
(5)	Seal rubber	(13)	Yoke ASSY	***T4:***	***11 (1.1, 8.1)***

(6) Magnet switch ASSY
(7) Snap ring
(8) Stopper
(14) Armature ASSY
(15) Brush holder ASSY
(16) Starter cover

T5: 50 (5.1, 36.9)

- MT model

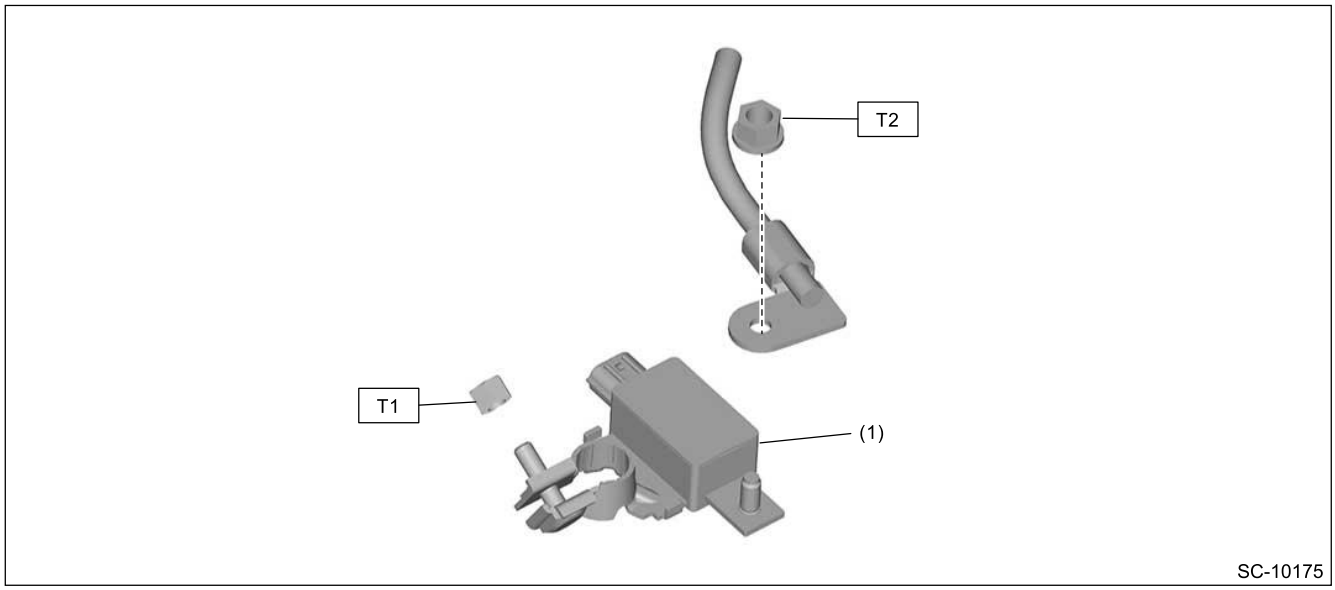


(1) Cable stay
(2) Starter housing
(3) Sleeve bearing
(4) Shift lever
(5) Plate
(6) Seal rubber
(7) Magnet switch ASSY
(8) Snap ring
(9) Stopper
(10) Overrunning clutch
(11) Internal gear
(12) Shaft
(13) Pinion gear
(14) Yoke ASSY
(15) Armature ASSY
(16) Brush holder ASSY
(17) Sleeve bearing
(18) Starter cover

Tightening torque: N·m (kgf-m, ft-lb)

T1: 1.4 (0.1, 1.0)
T2: 6 (0.6, 4.4)
T3: 7.5 (0.8, 5.5)
T4: 10 (1.0, 7.4)
T5: 11 (1.1, 8.1)
T6: 50 (5.1, 36.9)

2. GENERATOR



(1) Dust cover
(2) Pulley
(3) Front cover
(4) Ball bearing
(5) Bearing retainer
(6) Rotor ASSY
(7) Bearing cover
(8) Stator coil ASSY
(9) Bushing
(10) Brush ASSY
(11) Rear cover

Tightening torque: N·m (kgf-m, ft-lb)

T1: 1.76 (0.2, 1.3)
T2: 2.26 (0.2, 1.7)
T3: 4.55 (0.5, 3.4)
T4: 5.6 (0.6, 4.1)
T5: 15.5 (1.6, 11.4)
T6: 80 (8.2, 59)
T7: Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator> INSTALLATION.

3. BATTERY SENSOR

(1) Battery sensor

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)

T2: 7.5 (0.8, 5.5)

STARTING/CHARGING SYSTEMS(H4DO) > General Description

CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

STARTING/CHARGING SYSTEMS(H4DO) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

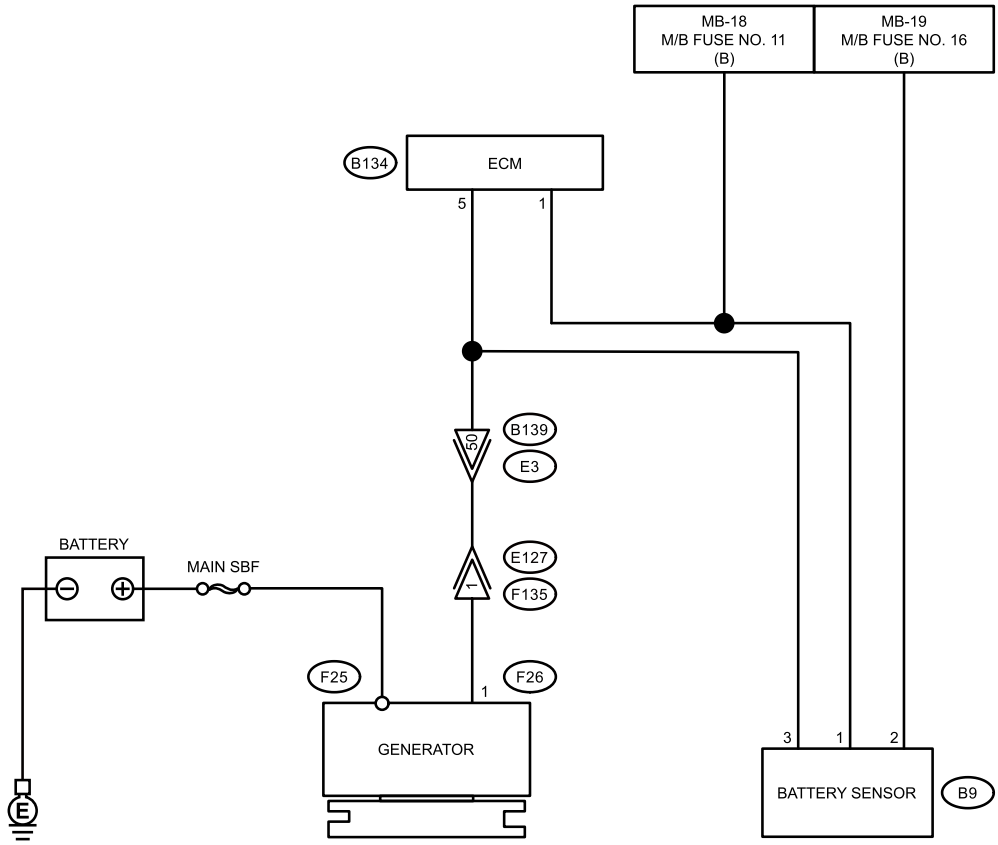


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

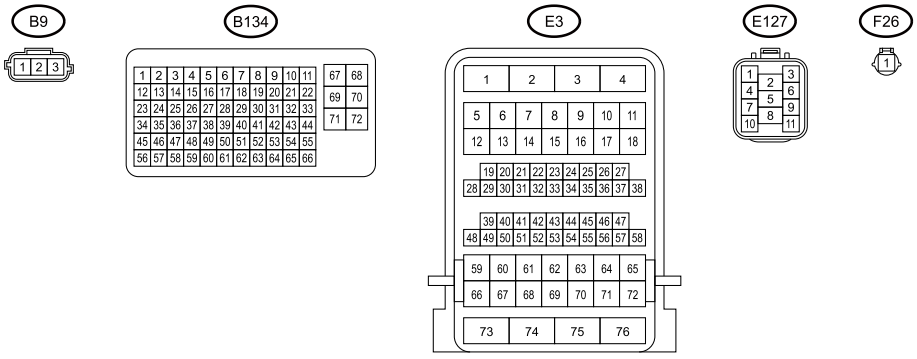

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current. **Note:** • **When measuring the standby current, prepare a circuit tester which can measure down to 1 mA.** • **When measuring the standby current for models with keyless access function, prepare an analog type.**

WIRING DIAGRAM

SC-10231

INSPECTION

INSPECTION WHEN OIL PRESSURE WARNING LIGHT IS ILLUMINATED

Note:

If the alternator overheats, the charge warning light illuminates temporarily.

1. CHECK DTC.

Read the DTC using the Subaru Select Monitor 4.

Note:

For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

Is DTC detected?

Yes — (1) Repair the corresponding system.
(2) Go to 2.

No — Go to 2.

2. CHECK V-BELT.

Check the V-belt for abnormalities.

Is the V-belt normal?

Yes — Go to 3.

No — Replace the V-belt or V-belt tensioner assembly.

3. CHECK GENERATOR B TERMINAL.

Check the voltage of the generator terminal B.

Is the battery voltage applied?

Yes — Go to 4.

No — Repair the harness between generator and MAIN SBF.

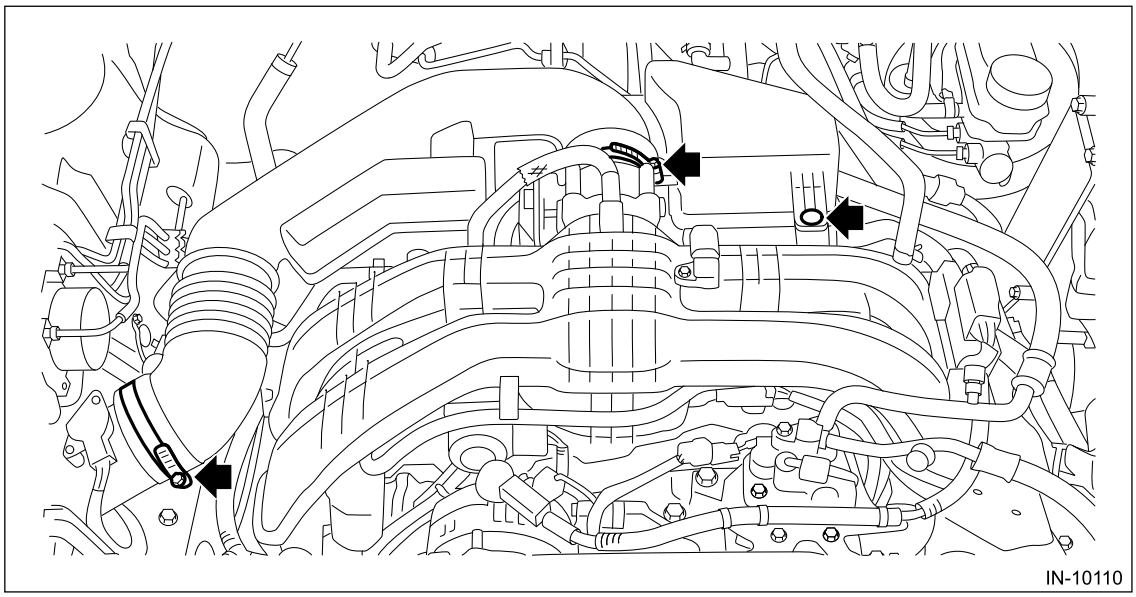
4. CHECK CONTINUITY BETWEEN GENERATOR MAIN BODY AND CHASSIS GROUND.

Check continuity between generator main body and chassis ground.

Is there continuity?

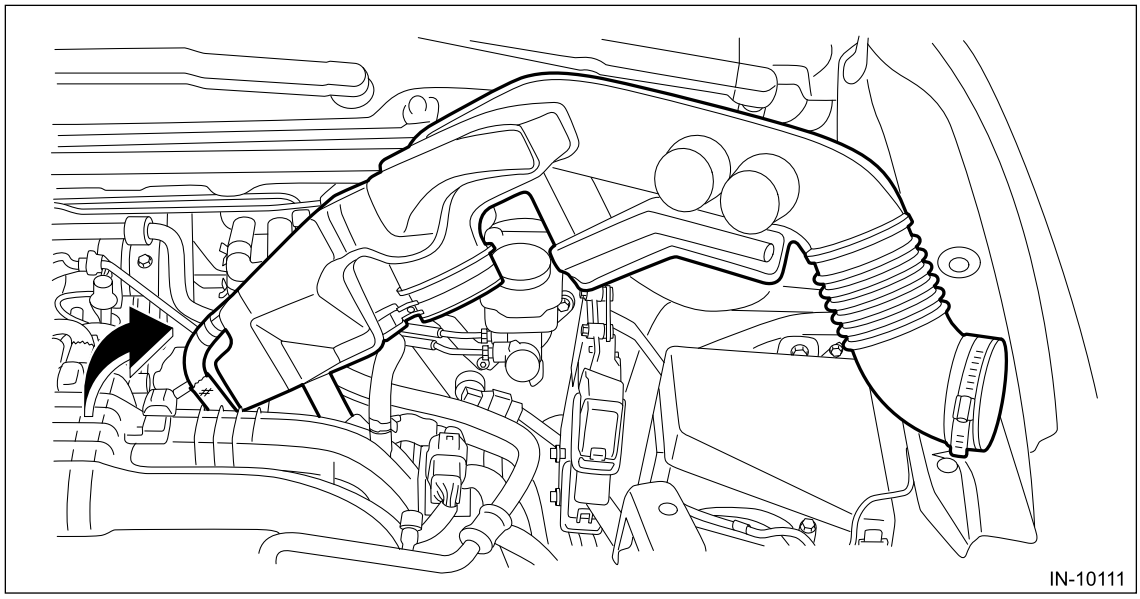
Yes	Go to 5.
No	Check and repair the installation condition of the generator, chassis ground and engine ground.

5. CHECK COMBINATION METER.



Perform the self-diagnosis of combination meter.

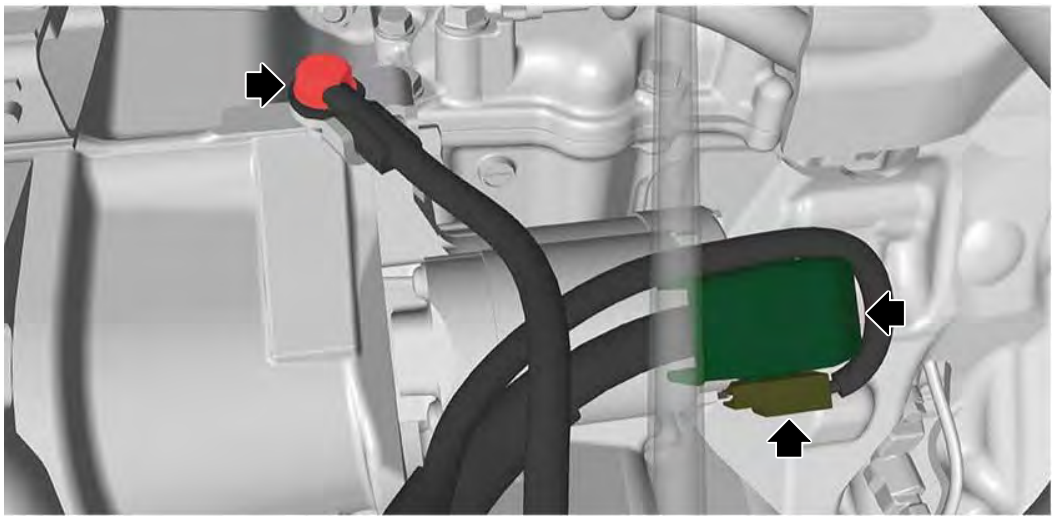
Is the charge warning light OK?



Yes	Repair or replace the generator.
No	Replace the combination meter.

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.

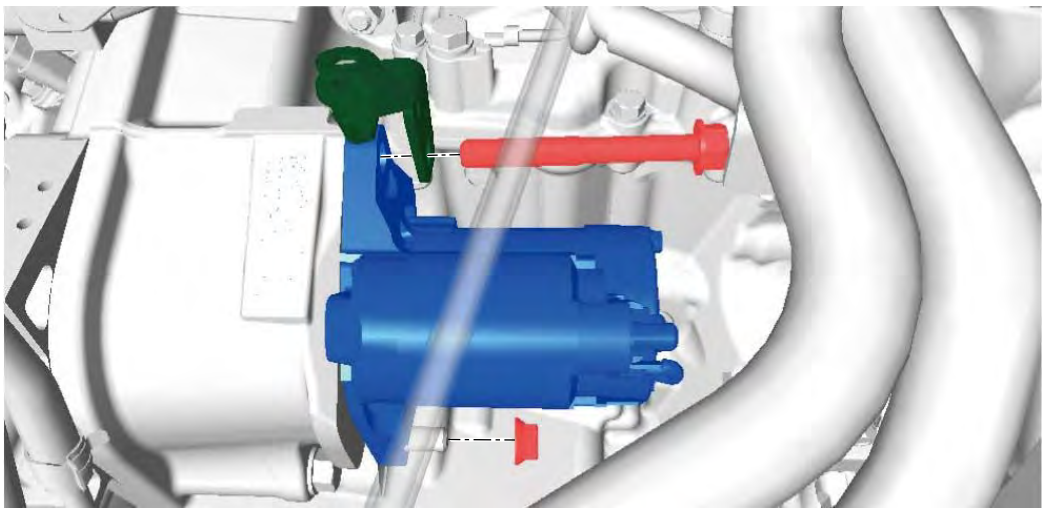


3. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.

4. Remove the front wheel LH. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.
5. Disconnect the connector, terminal B and ground terminal.

Caution:

In order to prevent damaging the ground terminal, fix the ground terminal when loosing the bolt, and avoid the part from rotating together while loosening the bolt.



SC-10176

6. Remove the cable stay and starter.

Note:

For the MT model, a bolt is used in the lower side of the starter.

SC-10177

STARTING/CHARGING SYSTEMS(H4DO) > Starter

INSTALLATION

1. Install the starter and cable stay.

Note:

For the MT model, a bolt is used in the lower side of the starter.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

2. Connect the connector, terminal B and ground terminal.

Tightening torque:

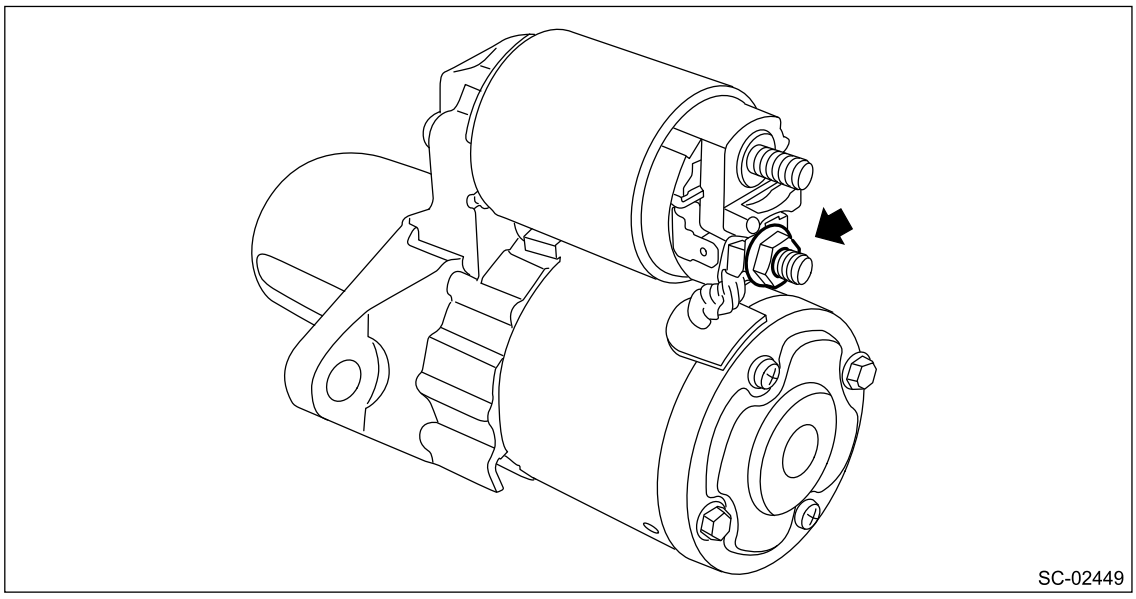
Terminal B

11 N·m (1.1 kgf-m, 8.1 ft-lb)

Ground terminal

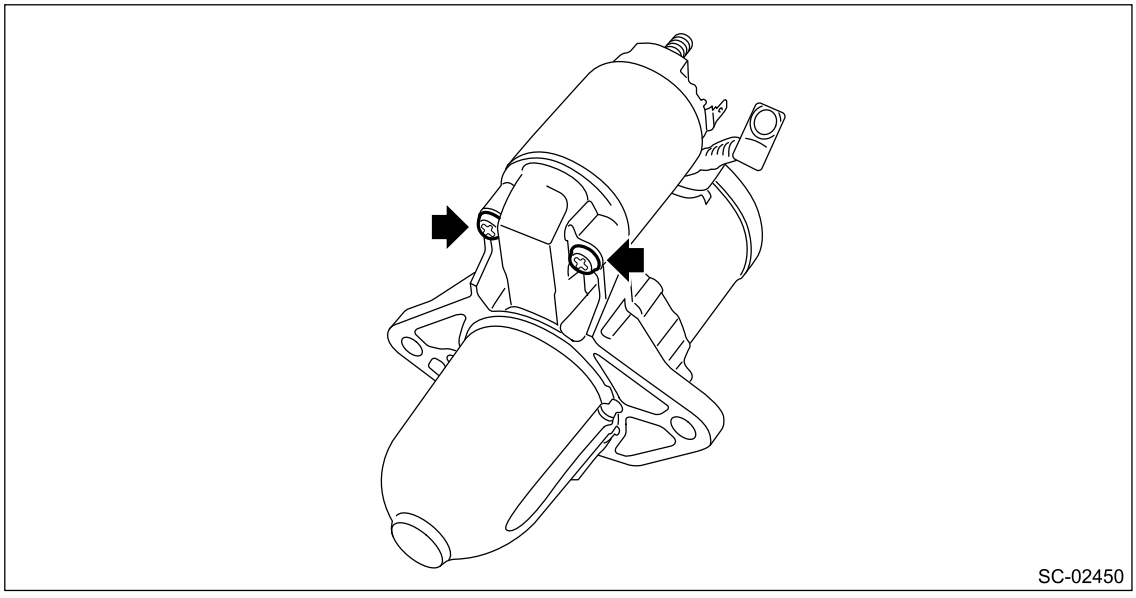
14 N·m (1.4 kgf-m, 10.3 ft-lb)

3. Install the front wheel LH. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.
4. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



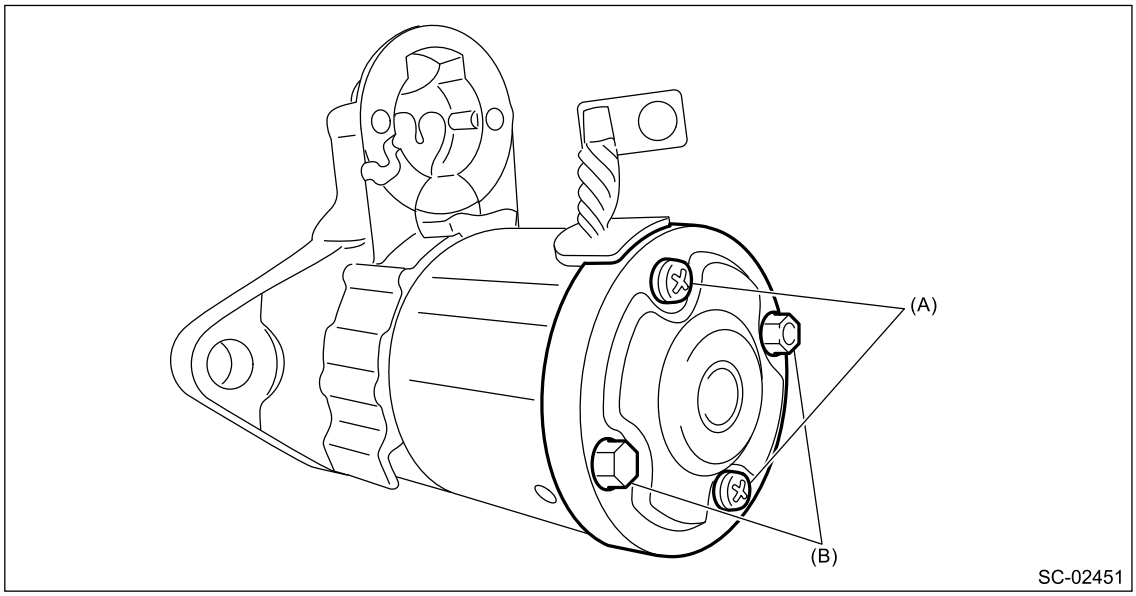
STARTING/CHARGING SYSTEMS(H4DO) > Starter

DISASSEMBLY



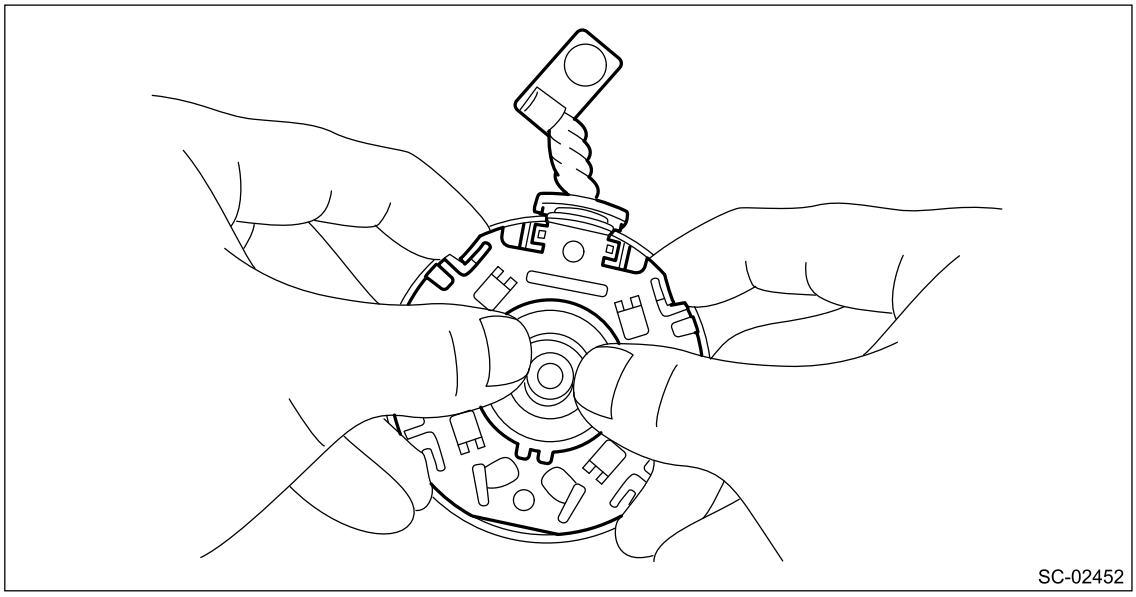
Caution:

The starter should be placed through a no-load test whenever it has been overhauled.

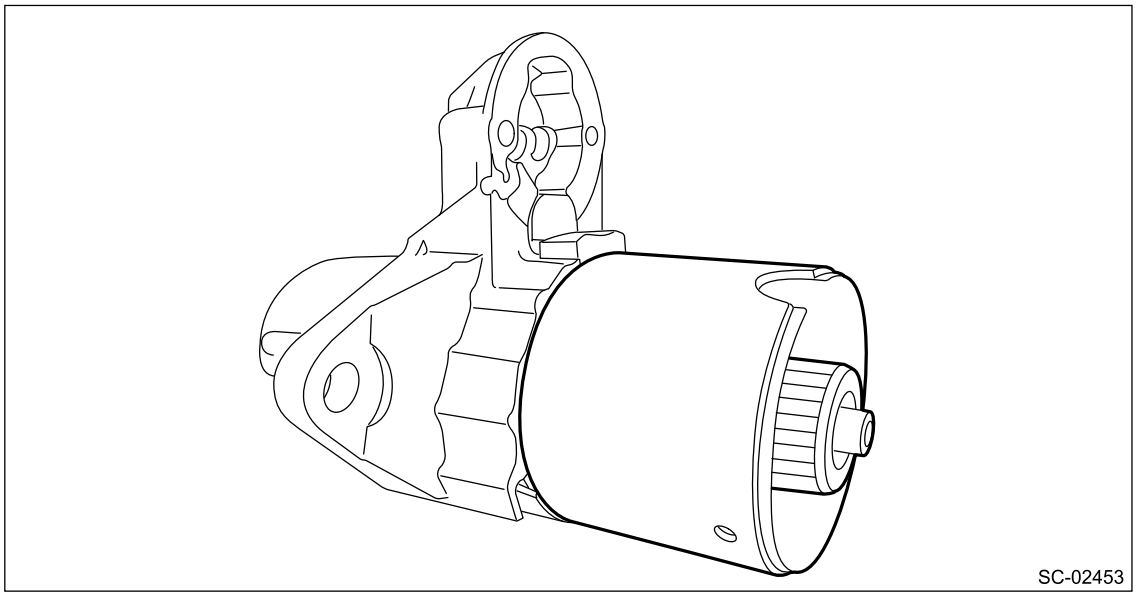


1. Disconnect the cable from the M terminal.

2. Remove the magnet switch assembly.

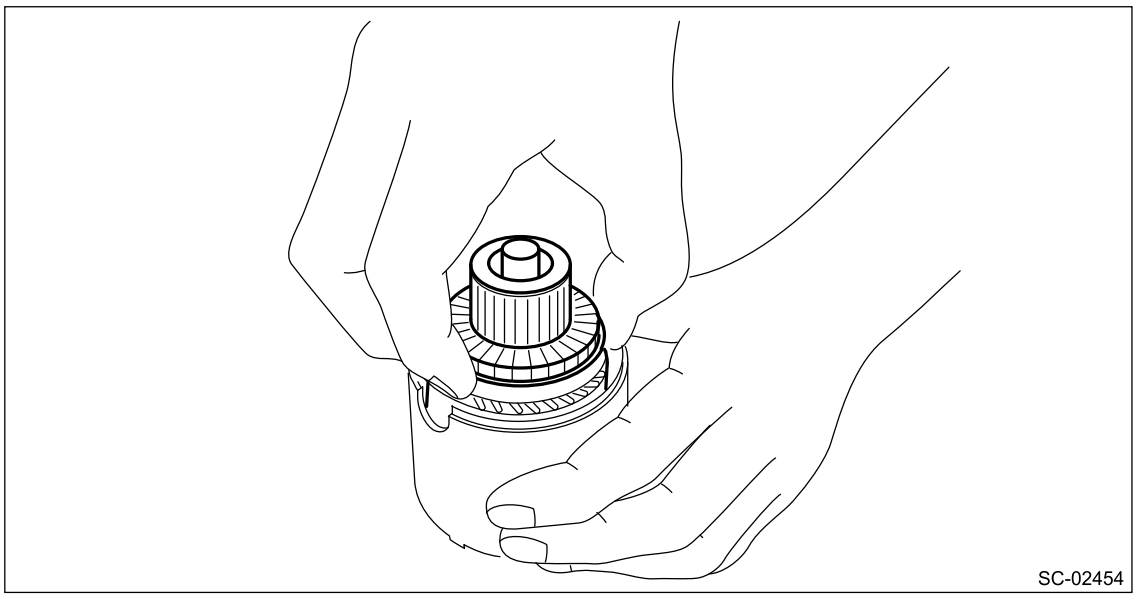


3. Remove the bolt (A) and through bolts (B), and remove the starter cover.

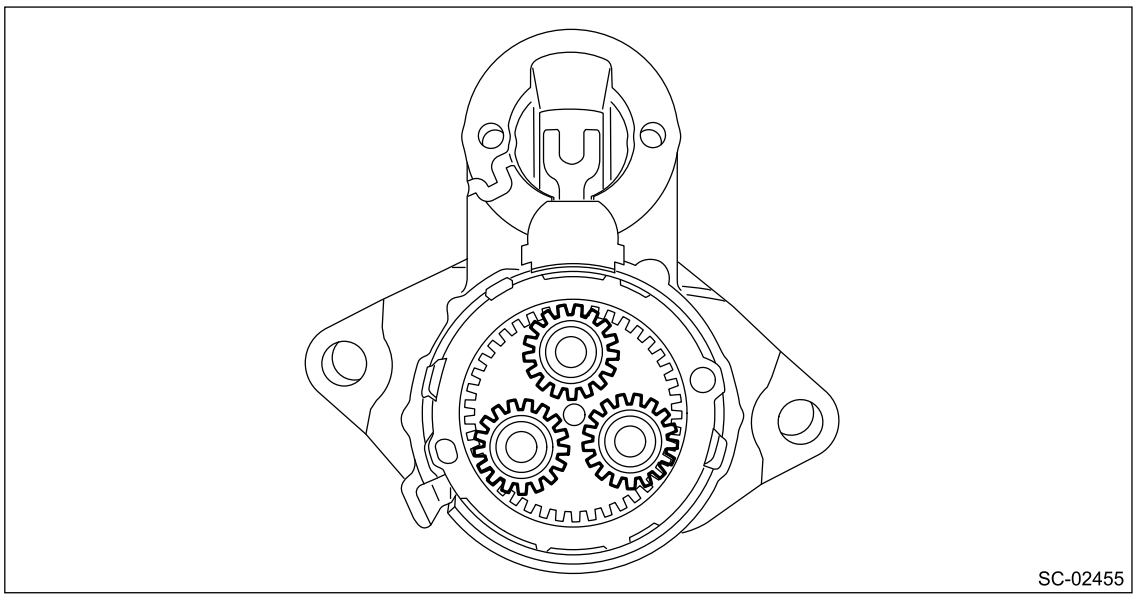


4. Remove the brush holder assembly.

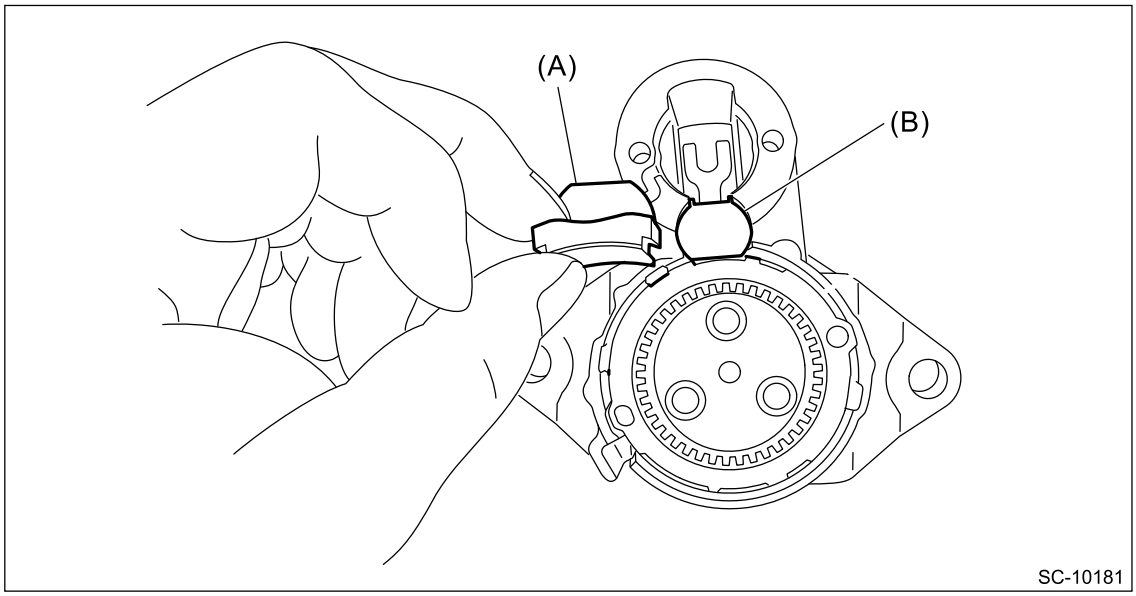
Note:



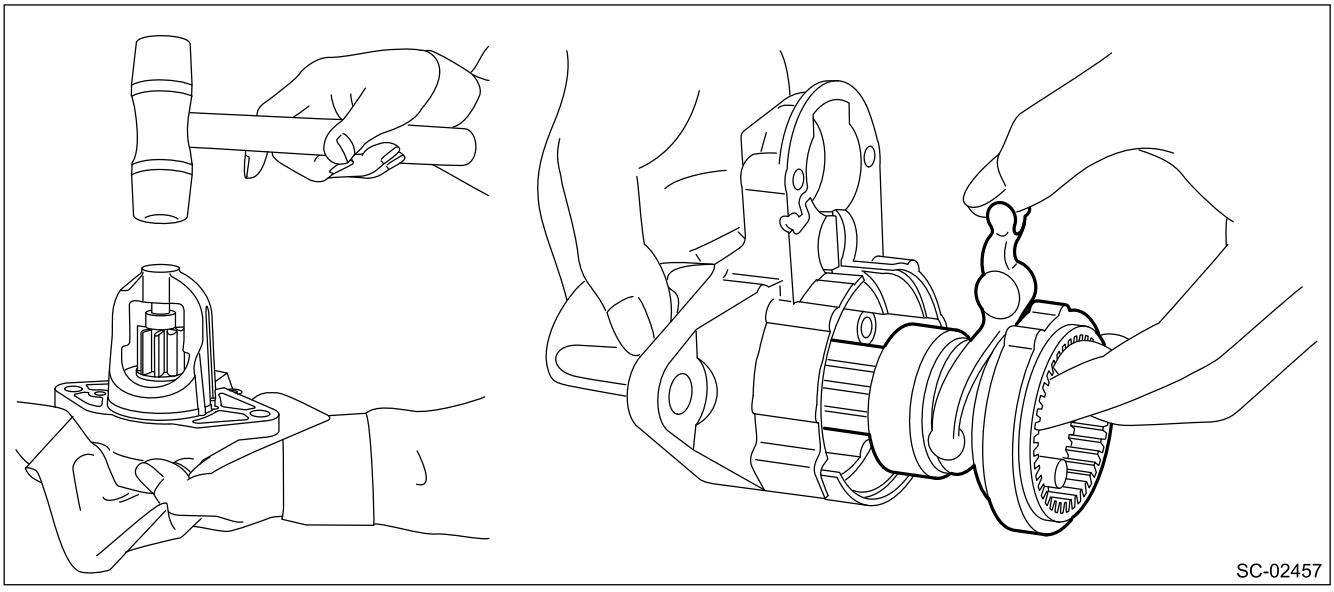
Hold the brush with your fingers so that the brush spring does not come flying out.



5. Remove the armature assembly and yoke assembly together as a single unit.

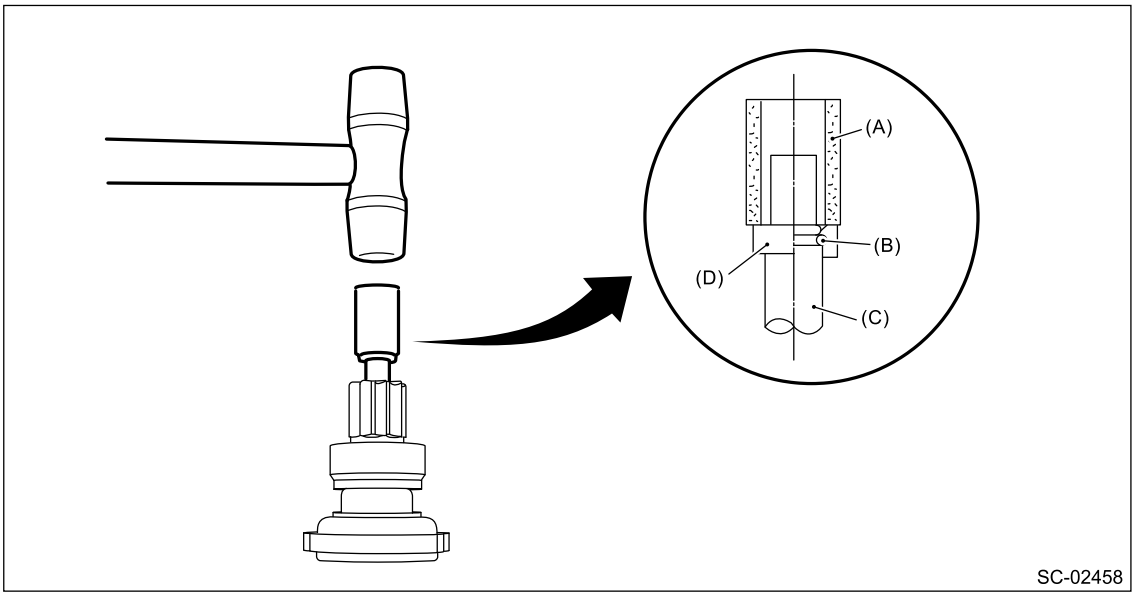


6. Separate the armature assembly and yoke assembly.

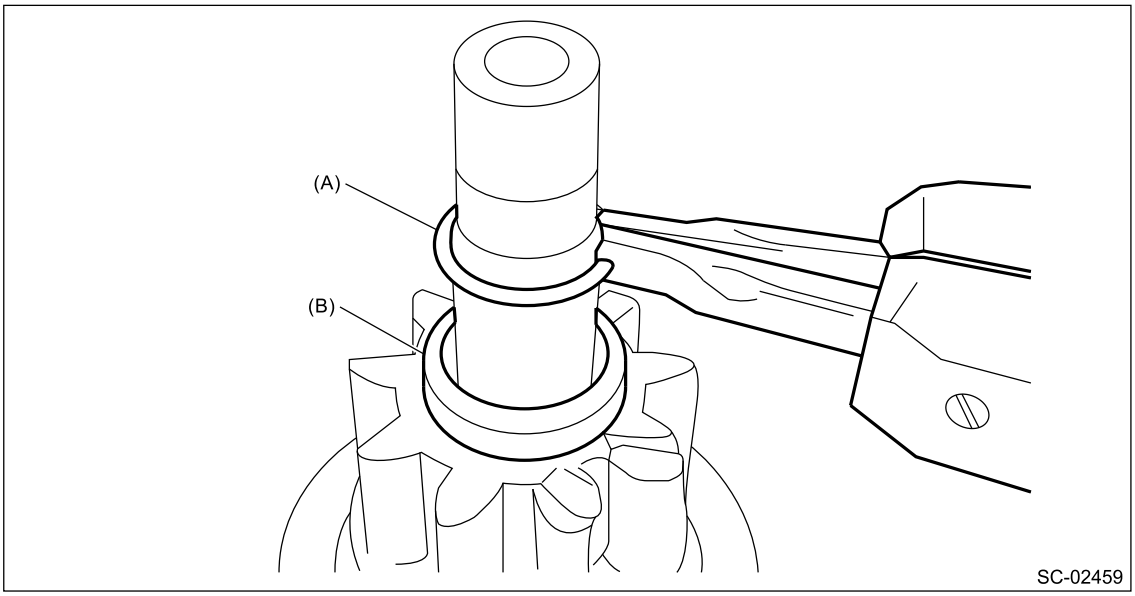


7. Remove the pinion gear.

8. Remove the seal rubber (A) and plate (B).

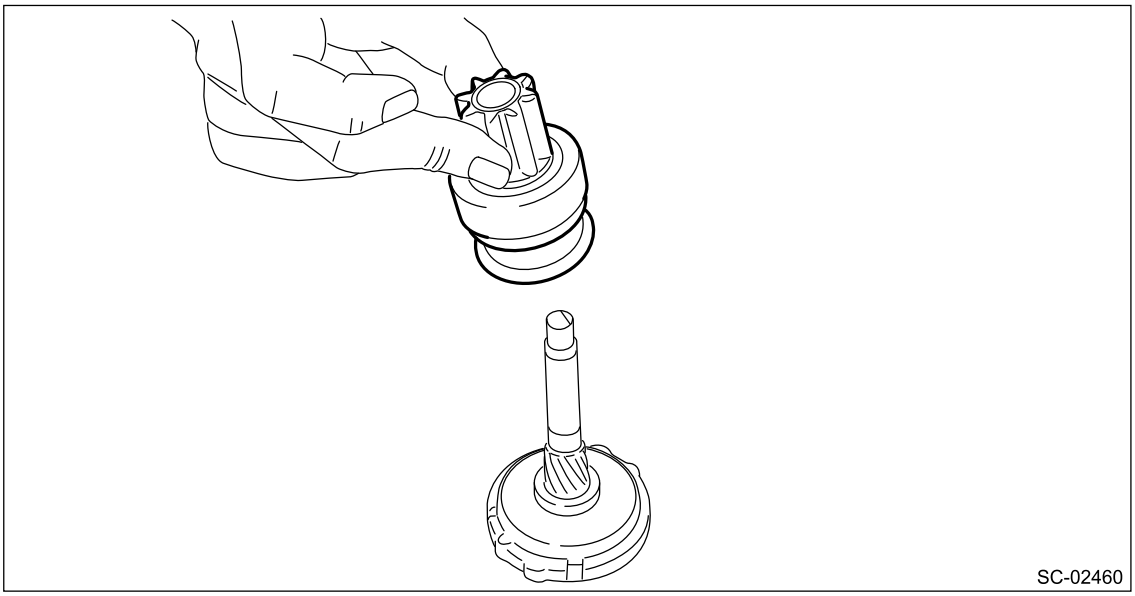


9. Lightly tap the starter housing with a plastic hammer as shown in the figure, and remove the overrunning clutch, internal gear, shaft and shift lever together as one unit.

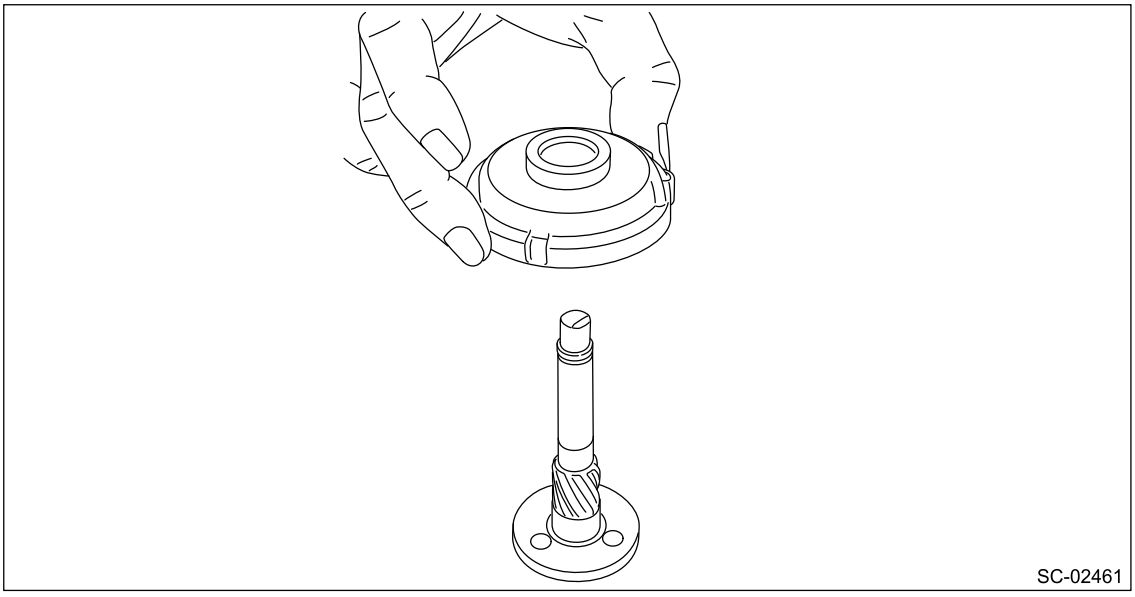


10. Use the following procedures to remove the overrunning clutch.

(1) Set an appropriate tool (suitable attachment, etc.), and remove the stopper from snap ring by lightly tapping the stopper with a plastic hammer.



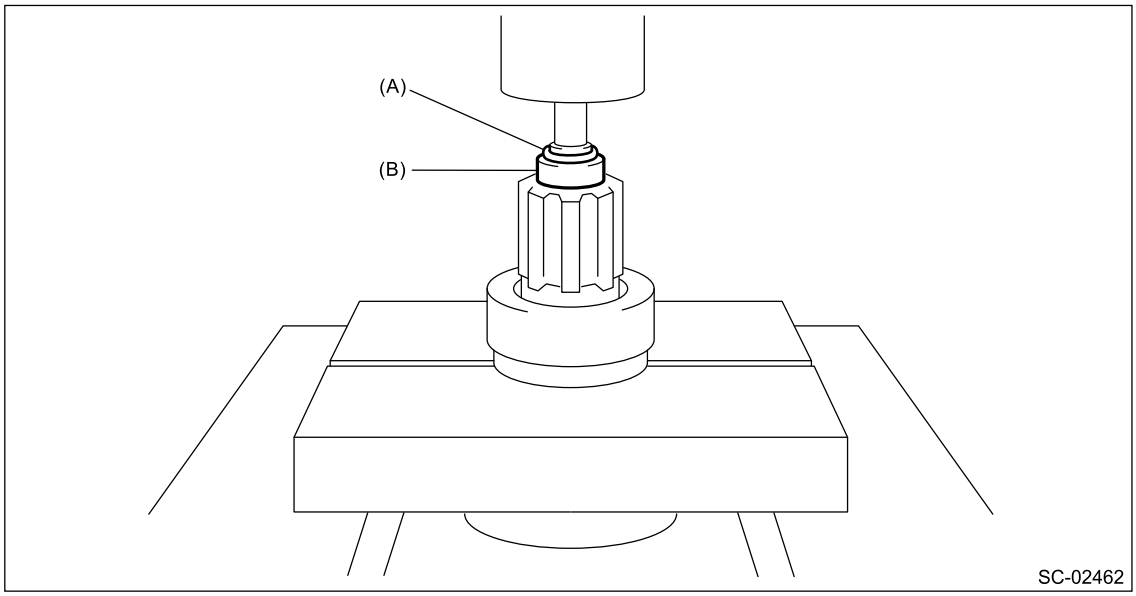
(A) Appropriate tool (B) Snap ring (C) Shaft
(D) STOPPER



(2) Remove the snap ring (A), and remove the stopper (B).

(3) Remove the overrunning clutch.

11. Remove the internal gear.



ASSEMBLY

1. Apply grease to the shaft sliding surfaces of the internal gear.
Grease:
Multemp #6129 or equivalent

2. Install the internal gear to the shaft.

3. Install the overrunning clutch as follows:
(1) Apply grease to the spline portion of the shaft.
Grease:
Multemp #6129 or equivalent
(2) Set the overrunning clutch.
(3) Pass a new stopper through, and attach a new snap ring.
(4) Using a press, pressure fit stopper (B) into snap ring (A).
Caution:
Do not apply any load to the internal gear.

4. Install the overrunning clutch, internal gear, shaft and shift lever as a single unit to the starter housing.

   Note:

   Apply grease to the moving parts of the shift lever.

   Grease:

   Multemp #6129 or equivalent

5. Apply grease to the inside of the internal gear and pinion gear, and attach the pinion gear to the internal gear assembly.

   Note:

   Apply grease evenly to the contact surfaces of each gear.

   Grease:

   Molykote® AG650 or equivalent

6. Install the plate and seal rubber.
7. Set the armature assembly to the yoke assembly.
8. Attach the armature assembly and yoke assembly to the starter housing together as a single unit.

   Note:

   As shown in the figure, match the protrusion of the yoke assembly to the cut out of the starter housing.

9. Use an appropriate tool (suitable attachment, etc.) to attach the brush holder assembly.

Note:

Be careful not to damage the brushes.

10. Set the starter cover, and secure the brush holder assembly with bolts.

Tightening torque:

CVT model

3.4 N·m (0.3 kgf-m, 2.5 ft-lb)

MT model

1.4 N·m (0.1 kgf-m, 1.0 ft-lb)

11. Install the through bolt.

Tightening torque:

CVT model

3.5 N·m (0.4 kgf-m, 2.6 ft-lb)

MT model

6 N·m (0.6 kgf-m, 4.4 ft-lb)

12. Install the magnet switch assembly.

Tightening torque:

CVT model

3.4 N·m (0.3 kgf-m, 2.5 ft-lb)

MT model

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

13. Connect the cable to the terminal M.

Tightening torque:

CVT model

10.7 N·m (1.1 kgf-m, 7.9 ft-lb)

MT model

10 N·m (1.0 kgf-m, 7.4 ft-lb)

STARTING/CHARGING SYSTEMS(H4DO) > Starter

INSPECTION

Note:

For the disassembly or assembly procedures required for inspection, refer to DISASSEMBLY or ASSEMBLY of Starter. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>DISASSEMBLY. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>ASSEMBLY.

1. ARMATURE ASSEMBLY

1. Check the commutator for signs of seizure or stepped wear. If the symptom is minor, use sandpaper to repair. If it cannot be repaired, replace the armature assembly.
2. Measure runout on the commutator.

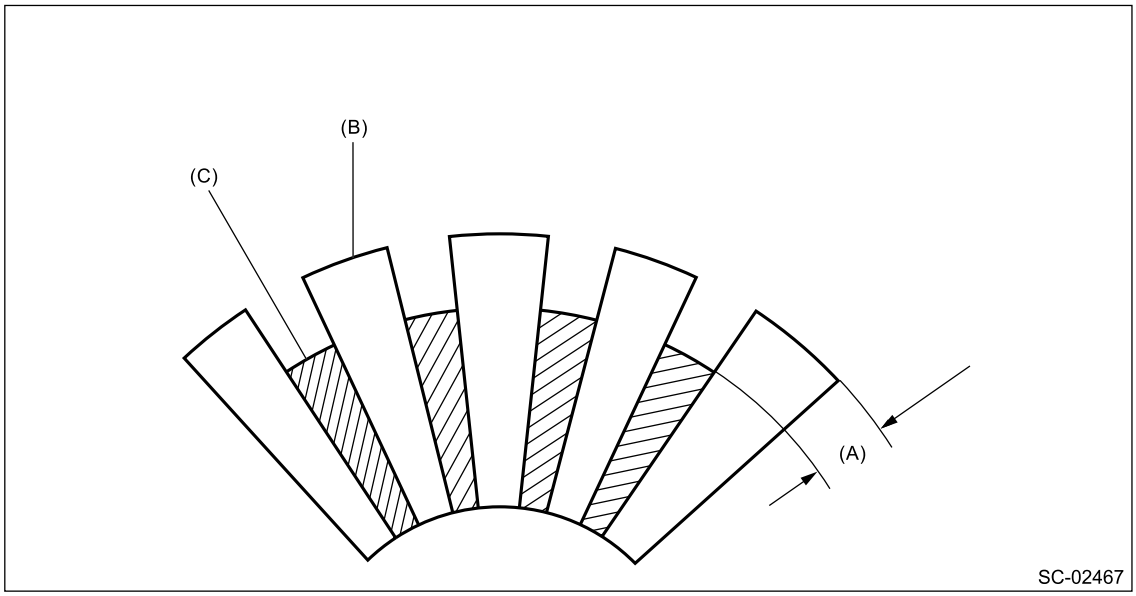
   Commutator runout:

   Standard

   0.05 mm (0.0020 in)

   Limit

   0.10 mm (0.0039 in)



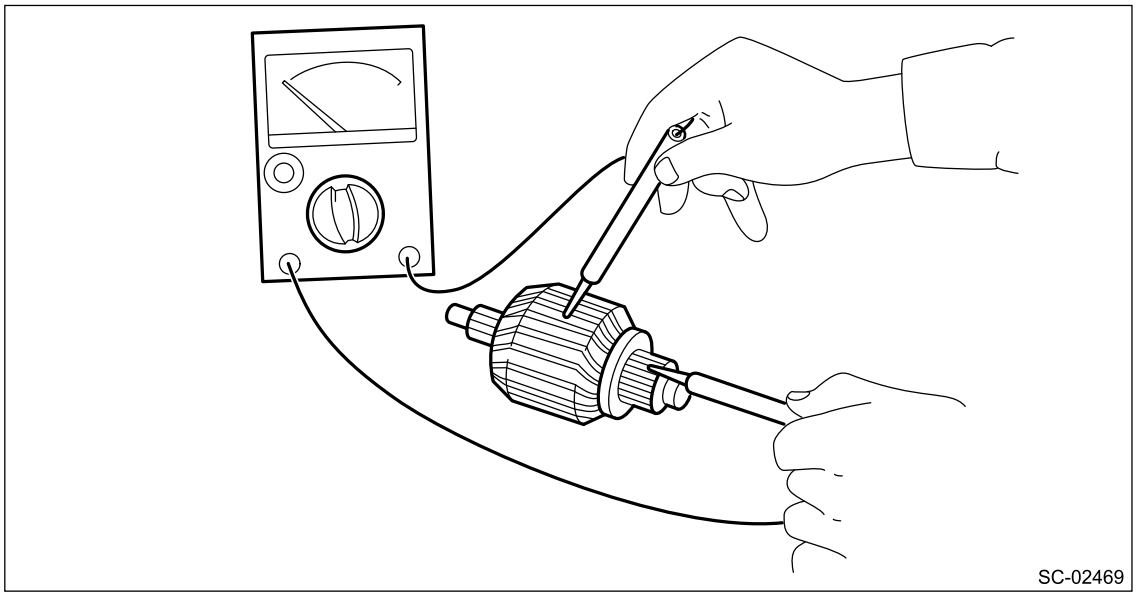
(A) Dial gauge (B) V-block

3. Measure the depth of the segment mold. If it is not within the specification, replace the armature assembly.

   Depth of segment mold:

   Standard

   0.50 mm (0.020 in)



(A) Depth of mold (B) Segment (C) Mold

4. Place the armature assembly on the growler tester to check for short circuits. While slowly turning the armature assembly, support the steel sheet for the armature core. If the circuit of the armature is shorted, the steel sheet will vibrate, causing it to move towards the core. When the steel sheet has moved or vibrated, replace the armature.

(A) Steel sheet (B) Growler tester

5. Check insulation between commutator segment and shaft. If there is continuity, replace the armature assembly.

2. YOKE ASSEMBLY

Make sure that the pole is set at the predetermined position.

3. OVERRUNNING CLUTCH

Inspect the pinion, and if there is any wear or damage, replace the overrunning clutch. Also, check that the pinion rotates counterclockwise smoothly and does not rotate clockwise. If there is any fault, replace the overrunning clutch.

Caution:

To prevent spilling of grease, do not clean the overrunning clutch with oil.

4. BRUSH AND BRUSH HOLDER

1. Visually check the brush. If there is any abnormal wear or cracks, replace the brush.
2. Measure the length of the brush.

Brush length:

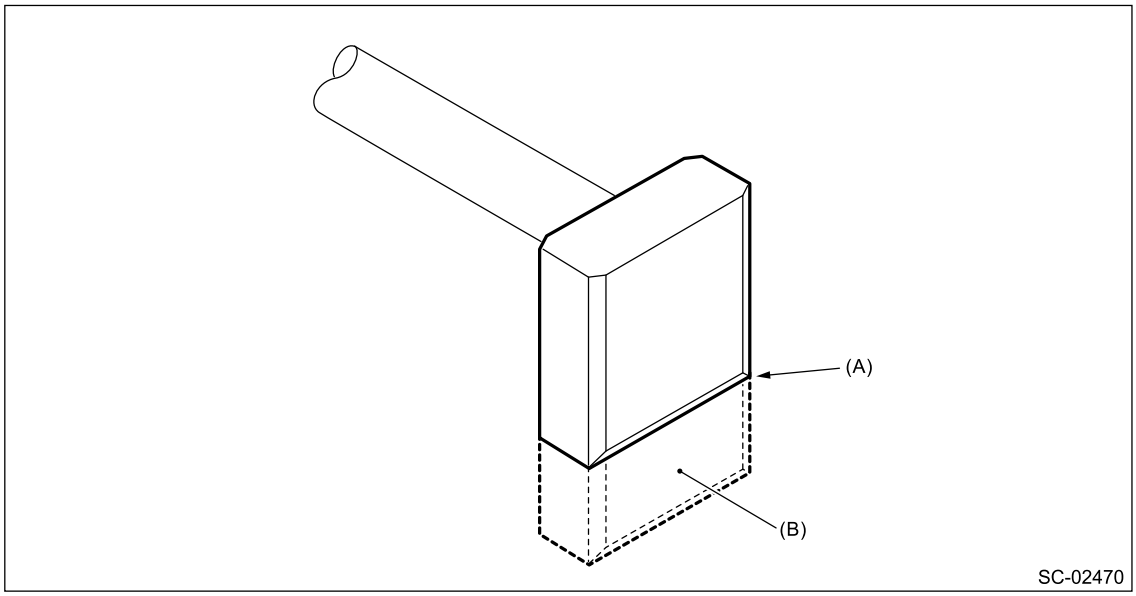
Standard

CVT model

12.45 mm (0.490 in)

MT model

12.3 mm (0.484 in)



Limit

CVT model

5.0 mm (0.197 in)

MT model

7.0 mm (0.276 in)

(A) Service limit line (B) Brush

3. Check that the brush moves smoothly in the brush holder.
4. Measure the brush spring force with a spring scale.

Brush spring force:

Standard

CVT model

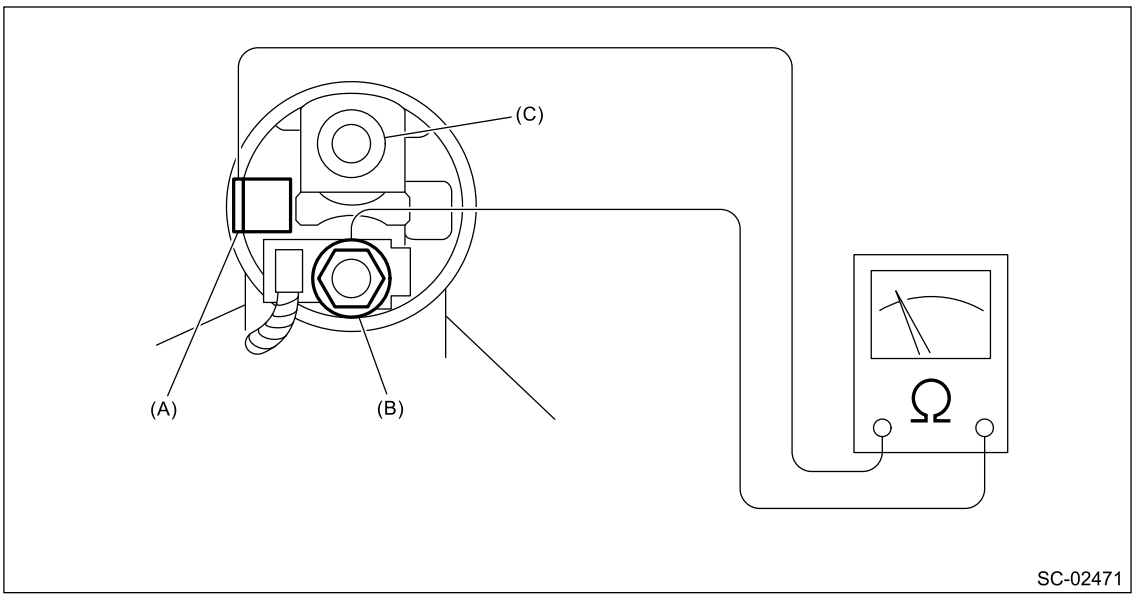
12.3 — 16.7 N (1.25 — 1.70 kgf, 2.77 — 3.75 lbf) (when new)

MT model

15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf) (when new)

Limit

CVT model



3.6 N (0.37 kgf, 0.81 lbf)

MT model

2.5 N (0.25 kgf, 0.56 lbf)

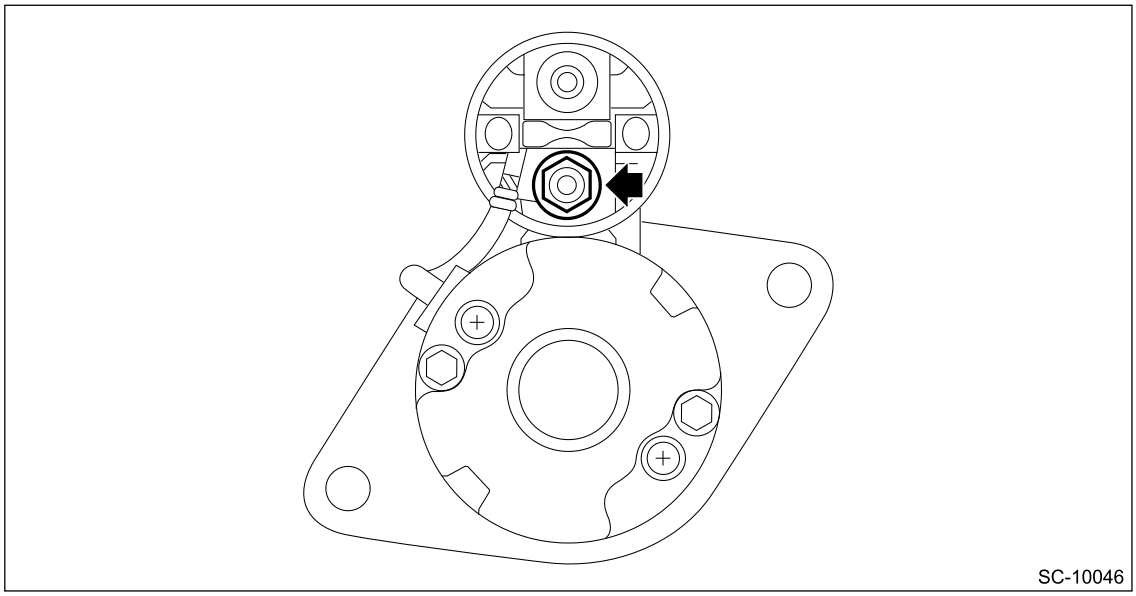
5. MAGNET SWITCH ASSEMBLY

Check the resistance between terminals shown in the following table.

(A) Terminal S (B) Terminal M (C) Terminal B

Terminals	Standard
Terminal S — terminal M	1 Ω or less
Terminal S — Ground	1 Ω or less
Terminal M — terminal B	1 MΩ or more

6. MAGNET SWITCH ASSEMBLY OPERATION



Caution:

Perform the inspection in a short period of time. (Within 3 to 5 seconds)

1. Loosen the nut which holds the cable to the M terminal.

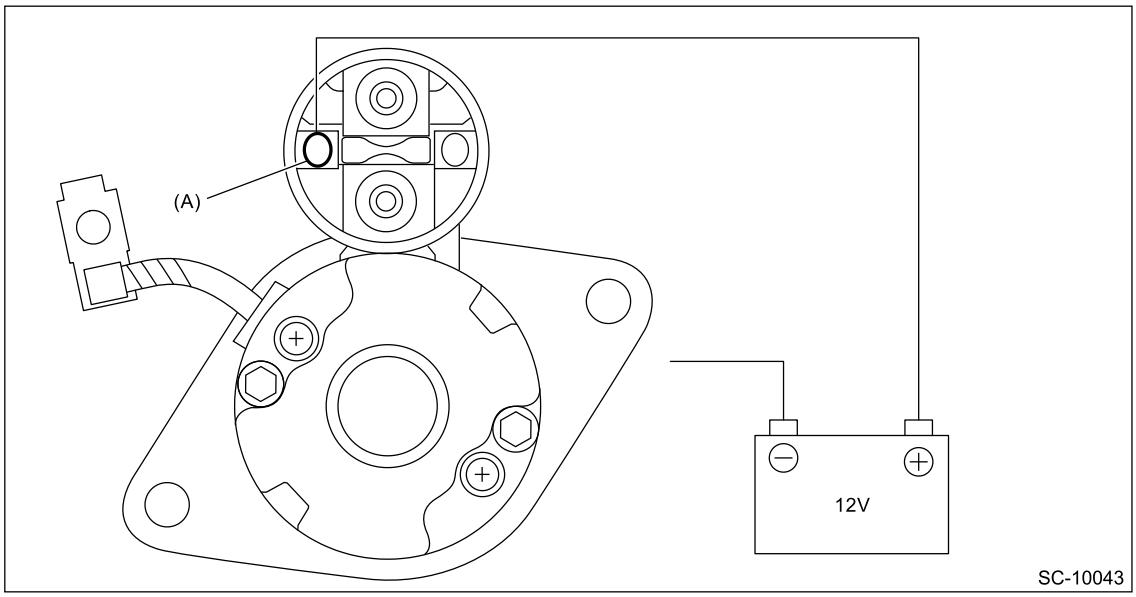
   Note:

   This procedure is required to facilitate the cable removal from the M terminal.

2. Connect the battery positive terminal to the S terminal, and connect the battery negative terminal to the starter housing. Then, if the pinion protrudes, it is normal.

   Note:

   The motor may rotate while the pinion protrudes. This occurs due to current that flows to the motor via pull-in coil. This is not a problem.



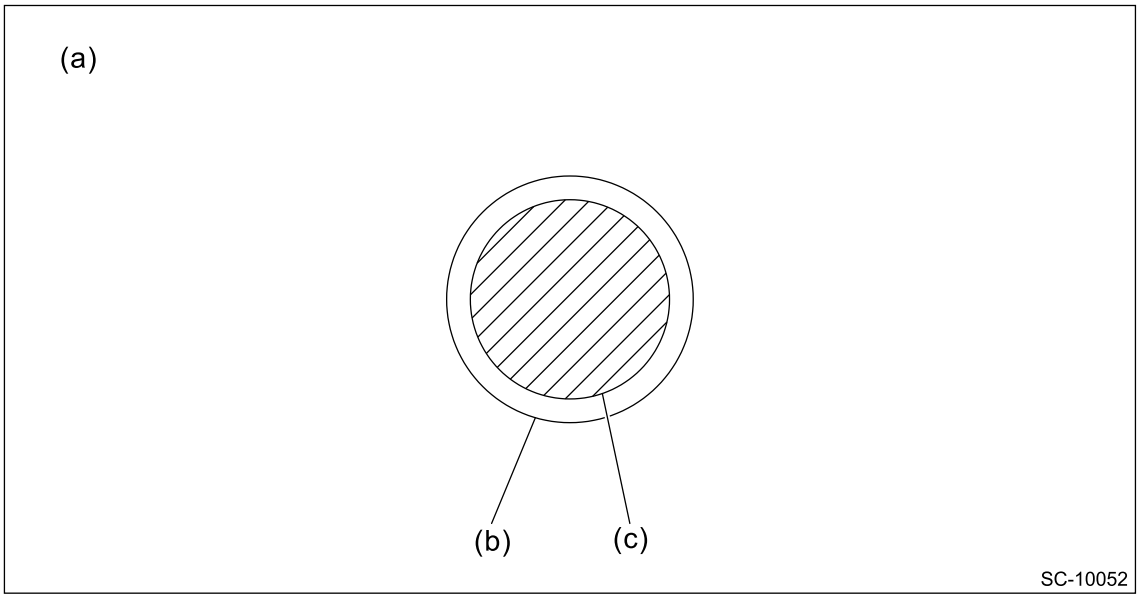
(A) Terminal S

3. Disconnect the cable from the M terminal. Check that the pinion is being protruded at this time.

Caution:

Hold the disconnected cable so that it does not contact the terminal or wiring.

4. Disconnect the battery negative terminal from the starter housing. Then, if the pinion returns to its original position, it is normal.

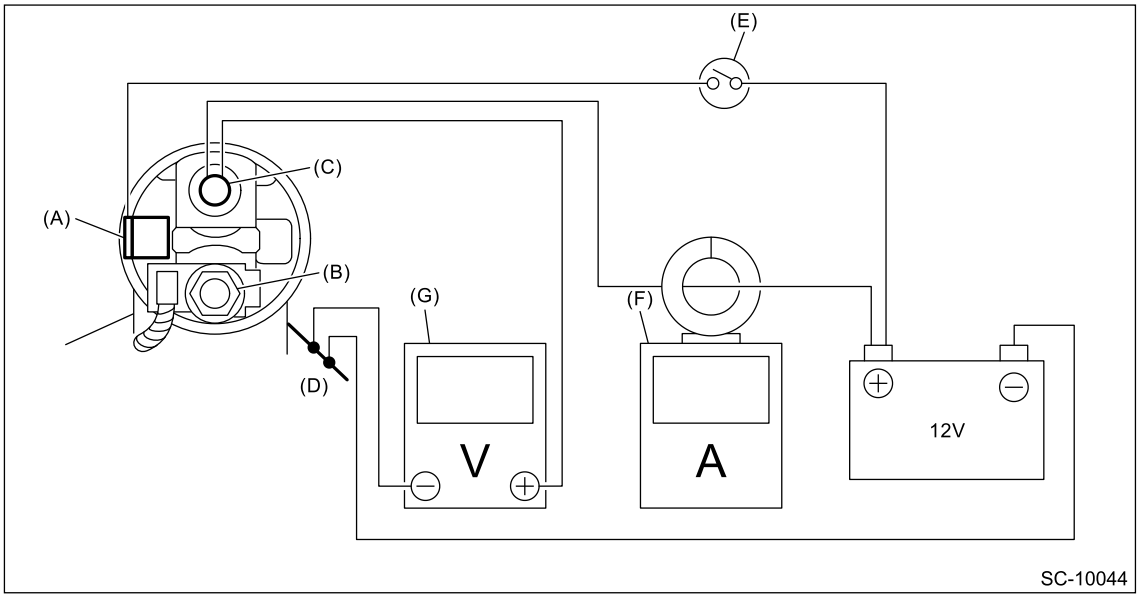


(A) Terminal S

7. NO-LOAD TEST

Caution:

- **Use a thick cable due to large current flowing through the cable.**
  - **For B terminal and ground, it is recommended that the cross-section area of continuity part (shaded part) should be 20 mm^2 (0.00310 sq in) or more. For S terminal, 1.25 mm^2 (0.00194 sq in) or more.**



(a) Cable cross-section (b) Cable shield part (c) Cable continuity part

  - **It is possible to use a booster cable instead of wiring.**
- **Be careful not to burn yourself and cause a fire due to heat.**
- **Perform the no-load test in a short period of time. (Within 3 to 5 seconds)**

Note:

For no-load test, use the circuit shown in figure.

(A) Terminal S (B) Terminal M (C) Terminal B

(D) Magnet switch ASSY (E) Switch (F) Circuit tester with clamp-type ammeter

(G) Circuit tester

1. Using a vise, secure the starter.

Caution:

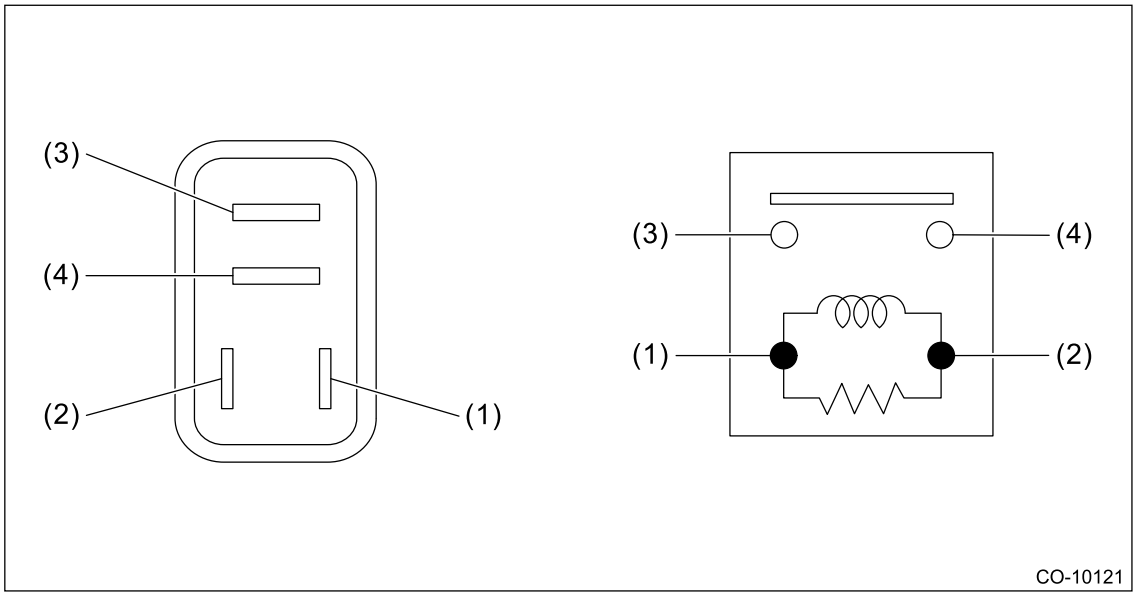
Be careful not to deform or damage the starter.

2. Turn the switch ON, and check that the pinion protrudes rapidly into the specified position and rotates powerfully without noise.
3. Check the current and voltage after its rotation speed stabilizes.

   Standard (current/voltage)

   95 A or less / approx. 11 V

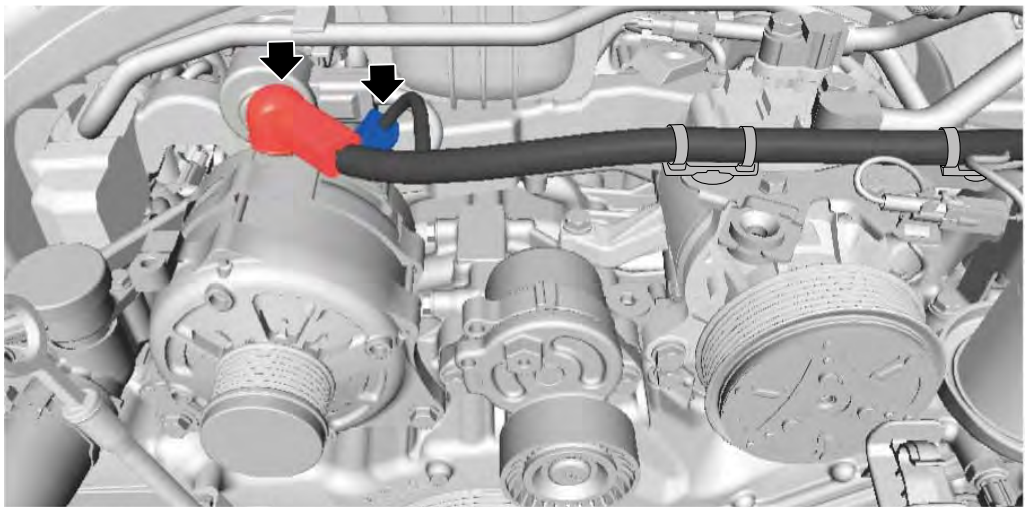
8. OTHER INSPECTIONS



Check that there is no deformation, cracks or other damages.

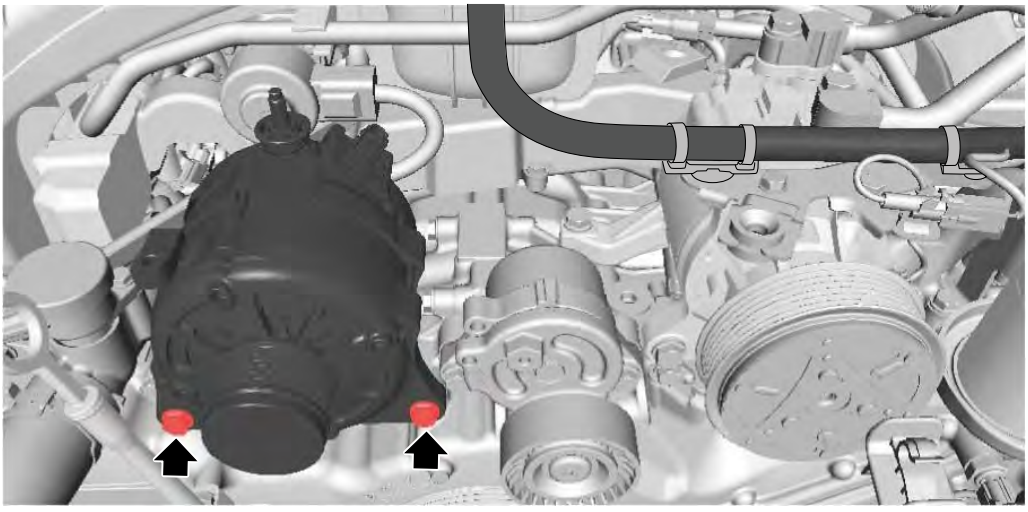
LOCATION

INSPECTION



1. Check that there is no deformation, cracks or other damages.
2. Check the resistance between terminals. Replace the relay if it is faulty.

Terminal No.	Inspection conditions	Standard
3 — 4	Always	1 MΩ or more
3 — 4	Apply battery voltage between terminals 1 and 2.	Less than 1 Ω

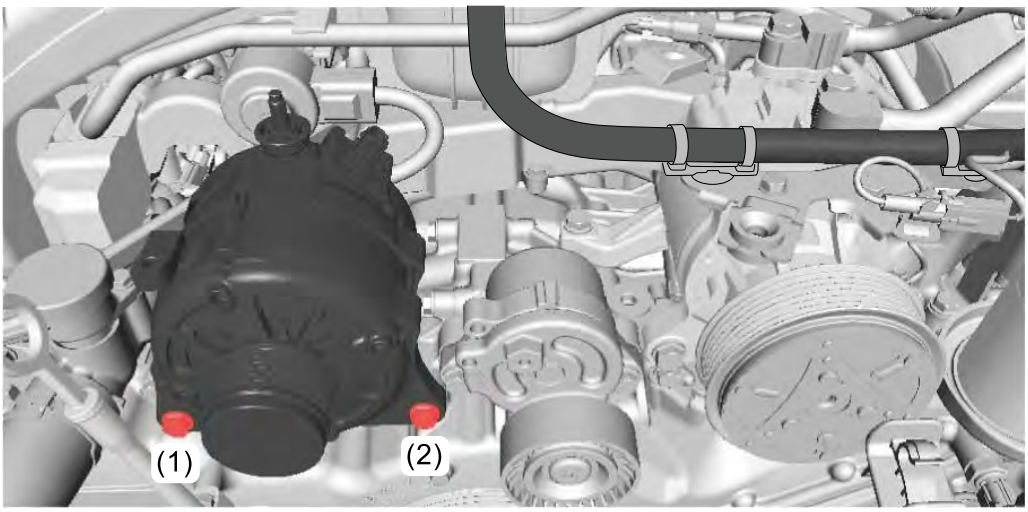


REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL > V-BELT.
3. Disconnect the connector and terminal B.

SC-10179

4. Remove the generator.



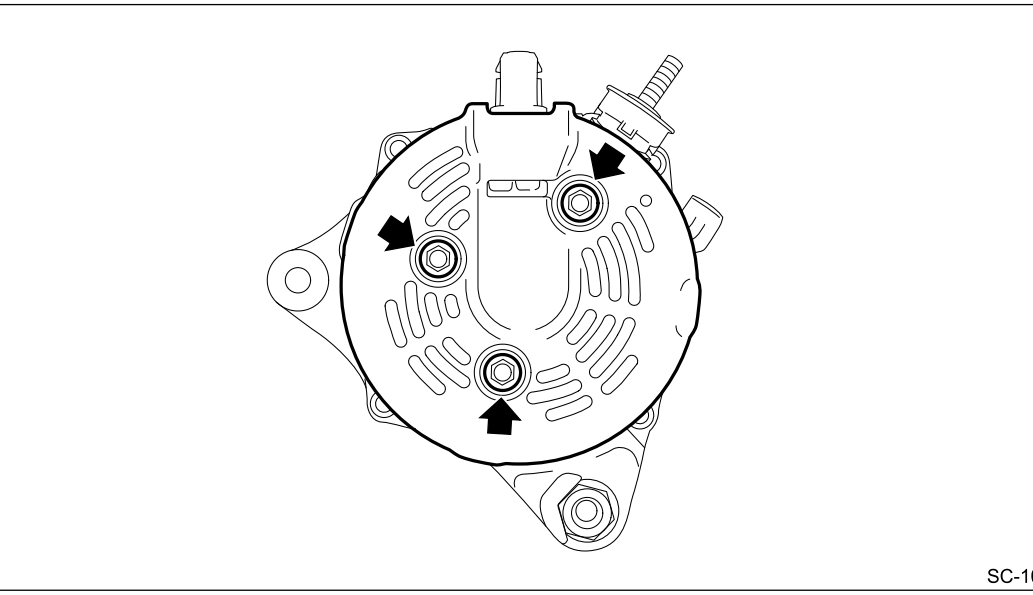
SC-10180

INSTALLATION

1. Temporarily install the generator.
2. Tighten the bolts in the numerical order as shown in the figure.

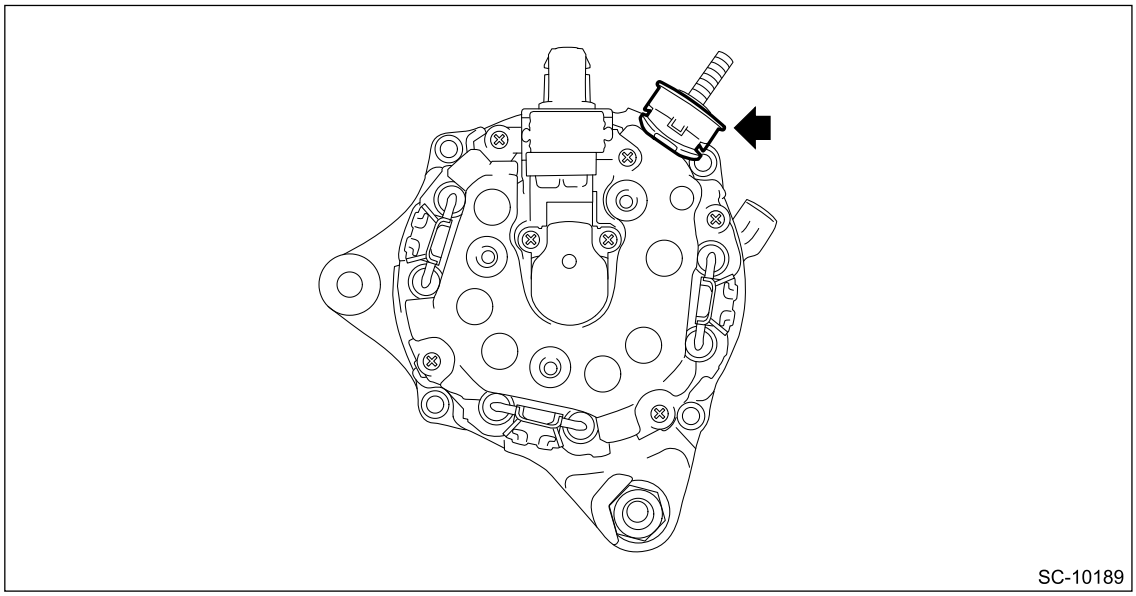
Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)



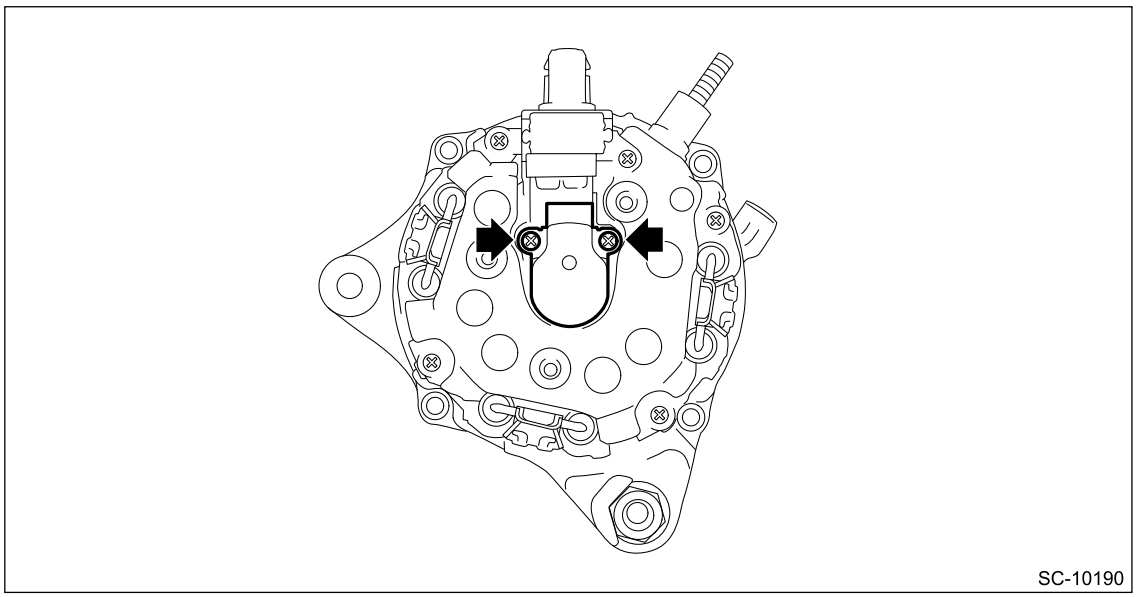
SC-10182

3. Connect the connector and terminal B.
   Tightening torque:
   15.5 N·m (1.6 kgf-m, 11.4 ft-lb)
4. Install the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION > V-BELT.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



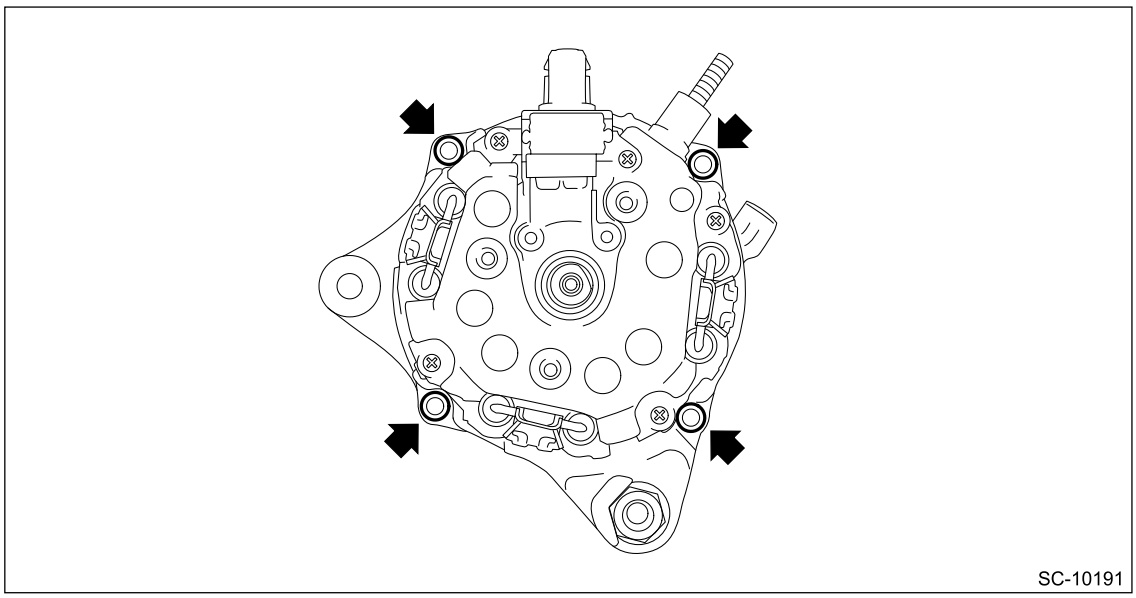
STARTING/CHARGING SYSTEMS(H4DO) > Generator

DISASSEMBLY



1. Remove the rear cover.

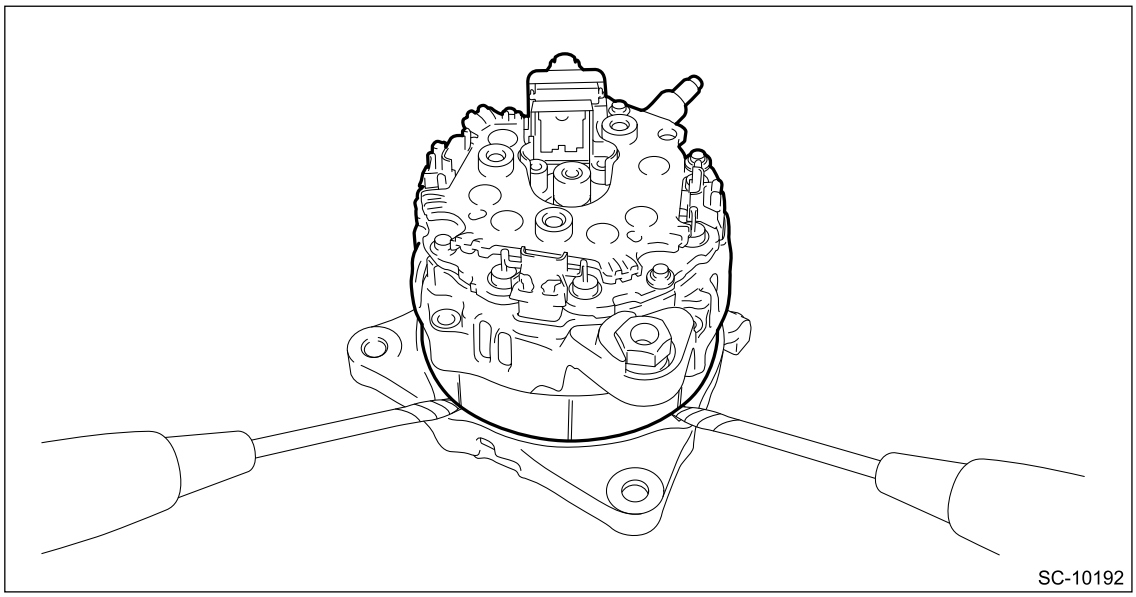
SC-10188



2. Remove the bushing from the terminal B.

3. Remove the brush assembly.

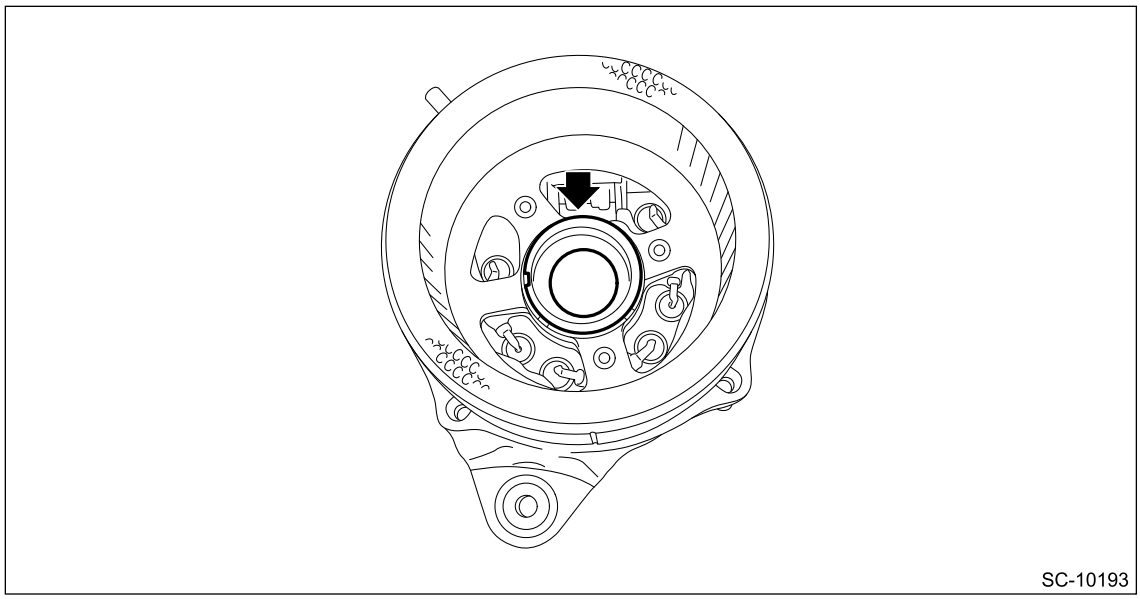
4. Remove the through bolt.



5. Insert a flat tip screwdriver or similar tool wrapped with protective tape into the gap between stator

core and the front cover, and remove the stator coil assembly from the rotor assembly.

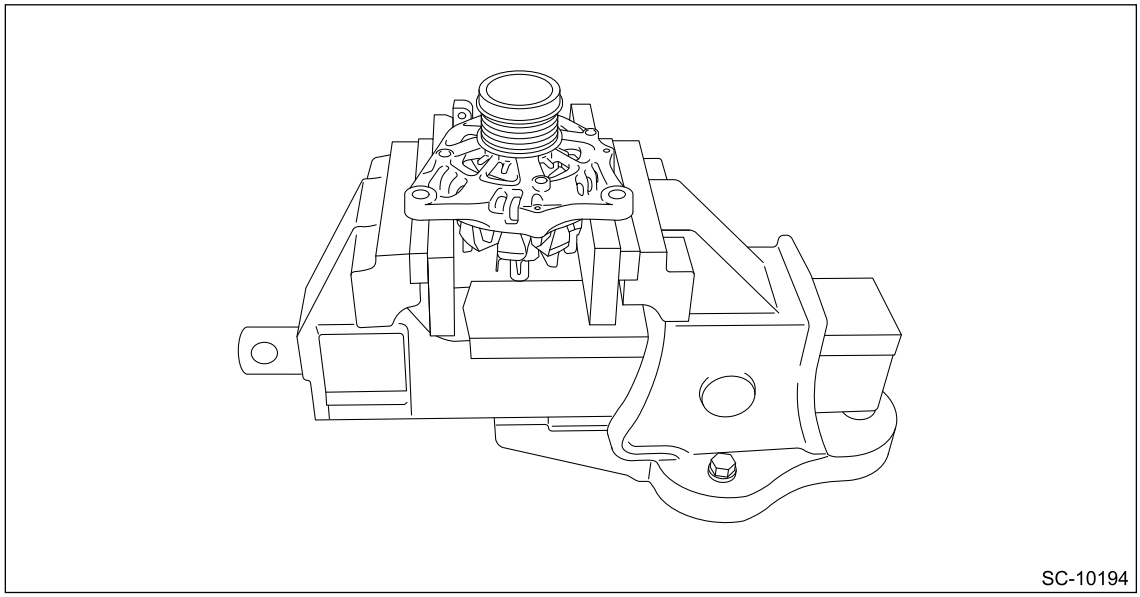
Caution:



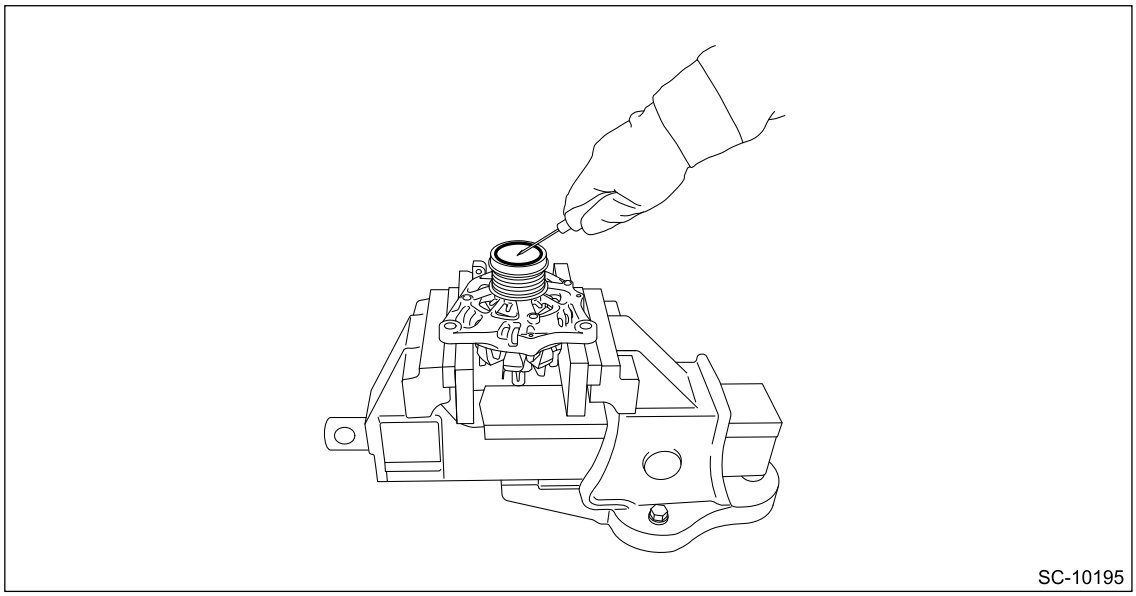
- **Be careful not to deform or damage the parts during operation.**
- **Disassemble while lifting the entire stator coil assembly evenly.**

6. Remove the bearing cover from the stator coil assembly.

Caution:

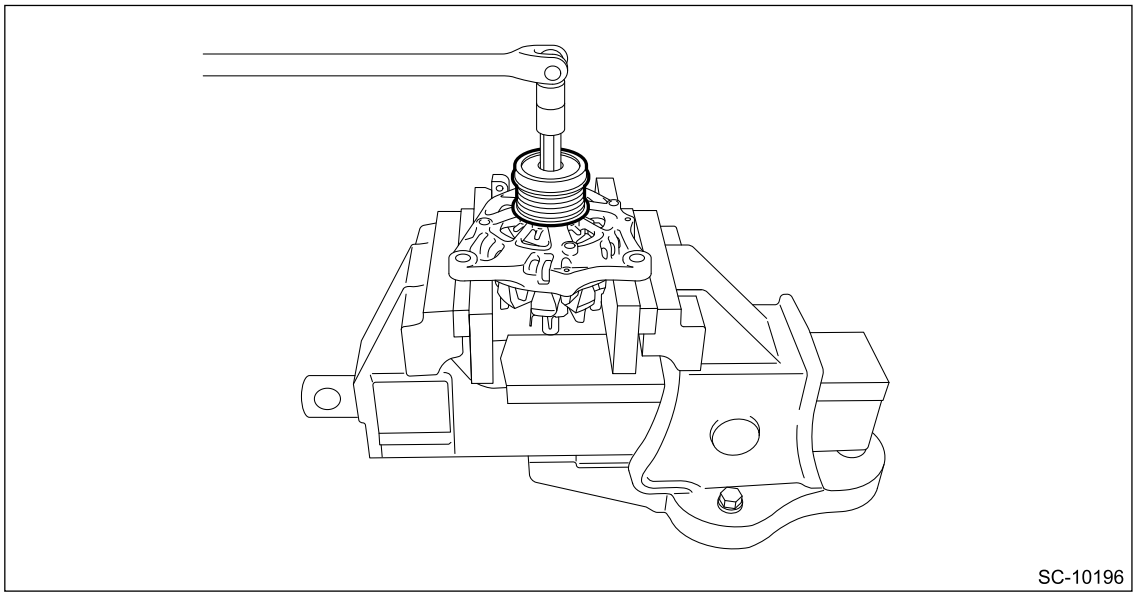


Do not reuse the bearing cover.



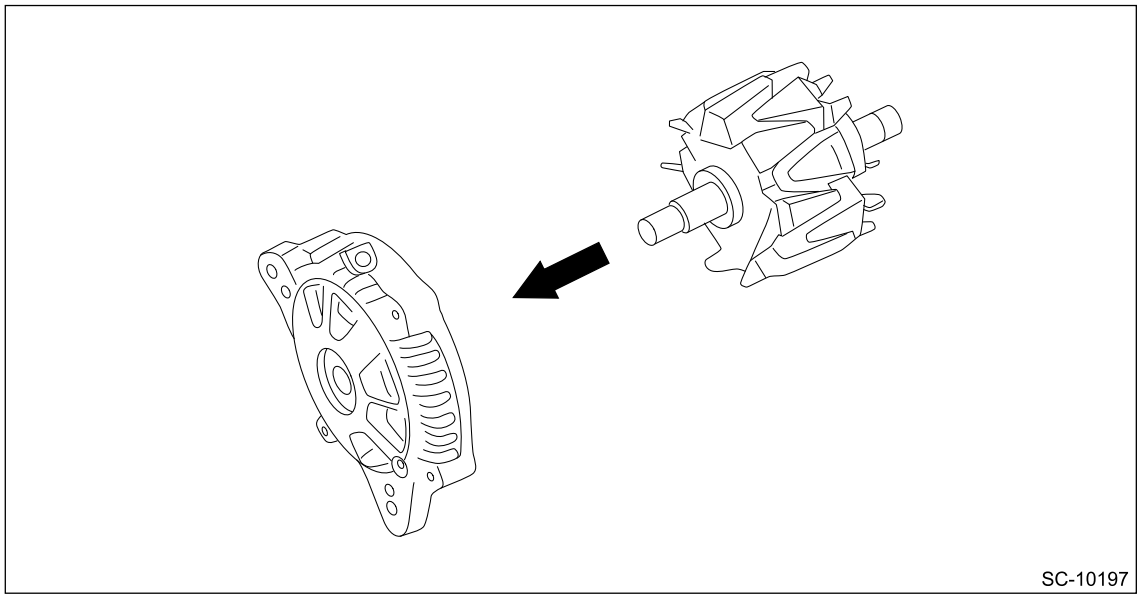
7. Using a vise, secure the rotor assembly.

Caution:



- **Place aluminum plates or wooden pieces between the contacting surfaces of the vise and rotor to prevent rotor damage.**
- **Be sure to hold it with the wider surface of the pole core.**
- **Do not tighten the vise more than necessary.**

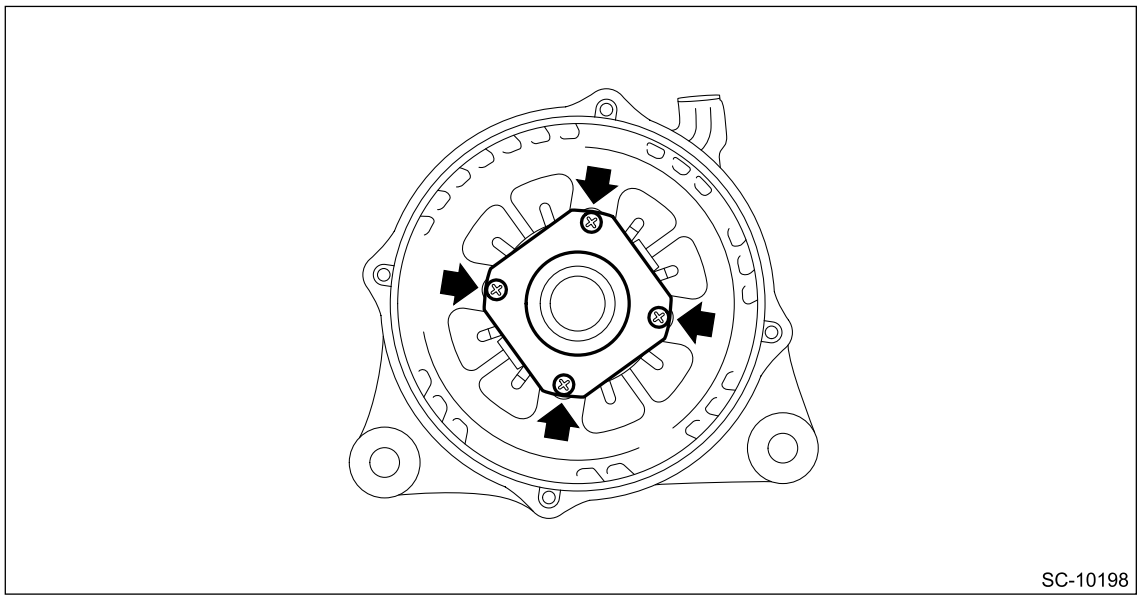
8. Using a thin flat tip screwdriver, break and remove the dust cover.



9. Remove the pulley.

10. Remove the front cover from the rotor assembly.

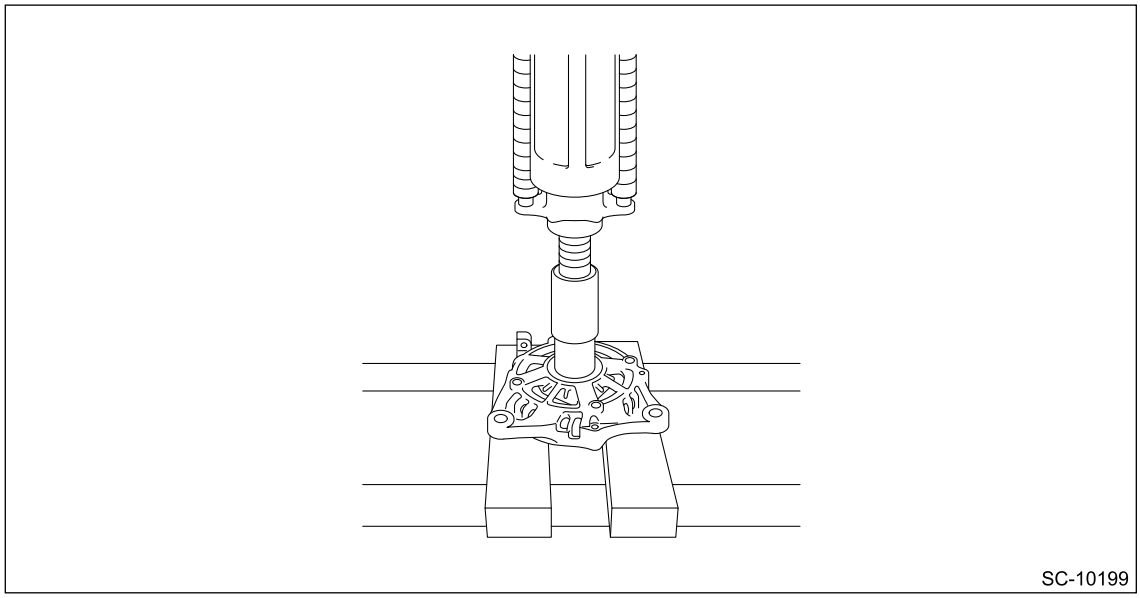
Note:



If it is stuck, use a press to remove.

11. Remove the bearing retainer from the front cover.

Note:



The following procedures from here are not necessary to be performed if bearing replacement is not required.

12. Use the press to remove the ball bearing from the front cover.

Caution:

Press the inner race of bearing using an attachment, etc. suitable for the press.

STARTING/CHARGING SYSTEMS(H4DO) > Generator

ASSEMBLY

1. Install a new ball bearing to the front cover using a press.

Caution:

- **Press the outer race of bearing using an attachment, etc. suitable for the press.**
- **Do not apply grease, etc. to the bearing.**
- **If grease, etc. adheres to the bearing mounting section, remove it completely.**

2. Install the bearing retainer to the front cover.

Tightening torque:

2.26 N·m (0.2 kgf-m, 1.7 ft-lb)

3. Using a vise, secure the rotor assembly.

Caution:

- **Place aluminum plates or wooden pieces between the contacting surfaces of the vise and rotor to prevent rotor damage.**
- **Be sure to hold it with the wider surface of the pole core.**
- **Do not tighten the vise more than necessary.**

4. Install the front cover to the rotor assembly.
5. Install the pulley.

   Tightening torque:

   80 N·m (8.2 kgf-m, 59.0 ft-lb)
6. Install a new dust cover.
7. Install a new bearing cover to the stator coil assembly.
8. Install the stator coil assembly to the rotor assembly.
9. Install the through bolt.

   Tightening torque:

   5.6 N·m (0.6 kgf-m, 4.1 ft-lb)
10. Install the brush assembly.

    Note:

    Install with the brush pressed using the lock pin, etc. Remove the lock pin after installation.

    Tightening torque:

    1.76 N·m (0.2 kgf-m, 1.3 ft-lb)
11. Install the bushing to the terminal B.
12. Install the rear cover.

    Tightening torque:

    4.55 N·m (0.5 kgf-m, 3.4 ft-lb)
13. Manually turn the pulley to check that the rotor rotates smoothly.

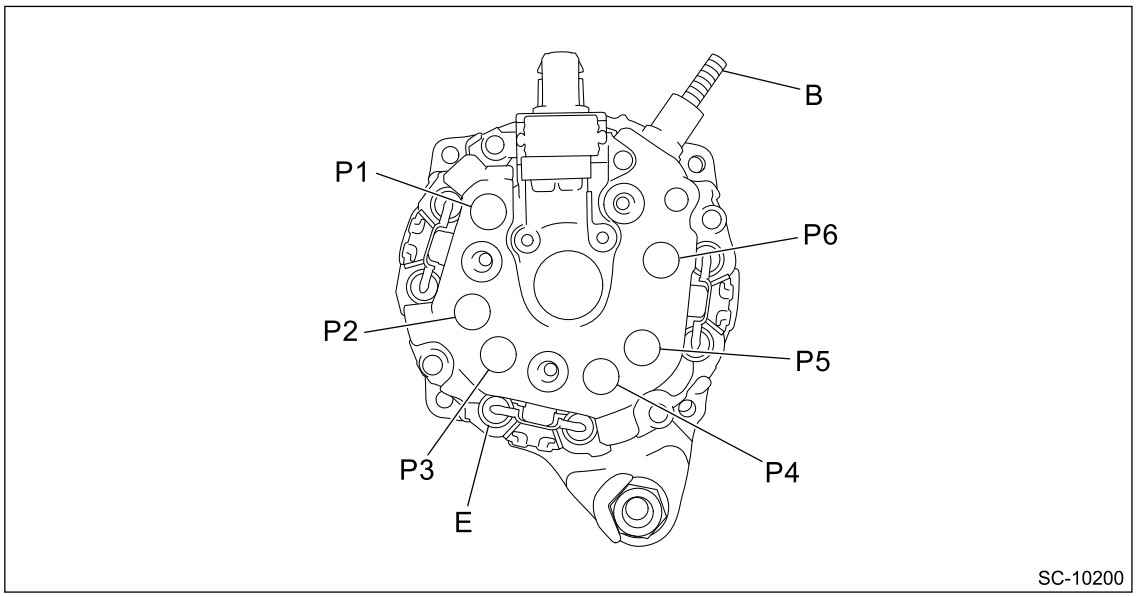
INSPECTION

Note:

For the disassembly or assembly procedures required for inspection, refer to DISASSEMBLY or ASSEMBLY of Generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>DISASSEMBLY. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>ASSEMBLY.

1. DIODE

Caution:



There is the possibility of damaging the diodes if a mega-tester or a similar measuring instrument is used. Never use a mega tester or equivalent for this test.

1. Check for continuity between the diode lead and terminal E or B. If continuity is not as shown in the table, replace the stator coil assembly.
   - At analog type tester

Tester lead		Continuity
−lead	+lead	
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes

- At digital type tester

Tester lead		Continuity
−lead	+lead	
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

2. ROTOR ASSEMBLY

1. Inspect the slip rings for contamination or any roughness on the sliding surface.
2. Measure the slip ring outer diameter.

   Slip ring outer diameter:

   Standard

   14.2 — 14.8 mm (0.559 — 0.583 in)

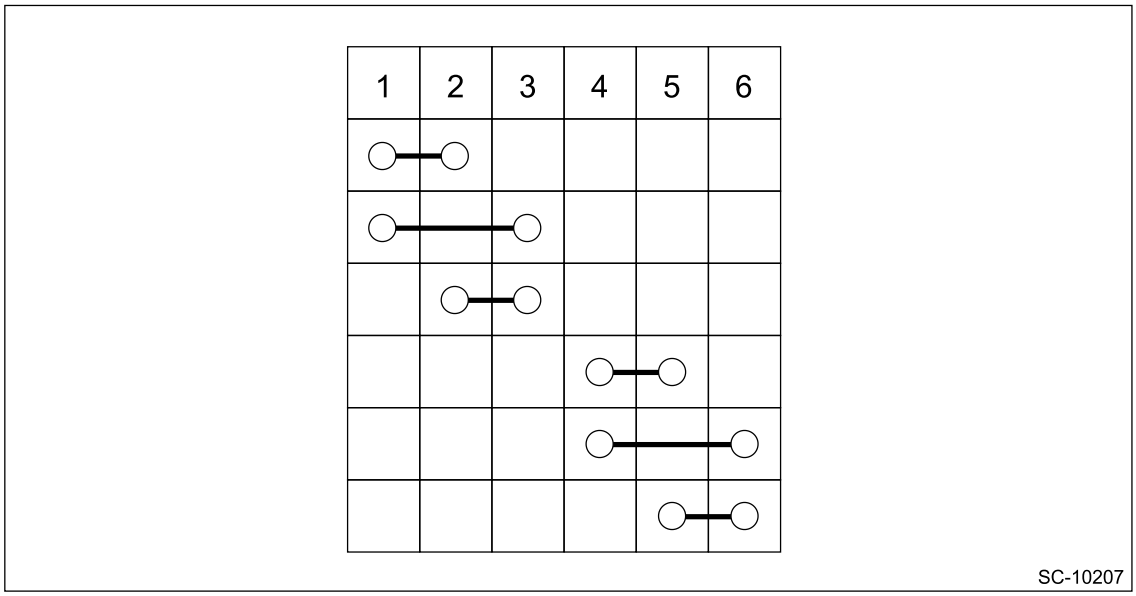
   Limit

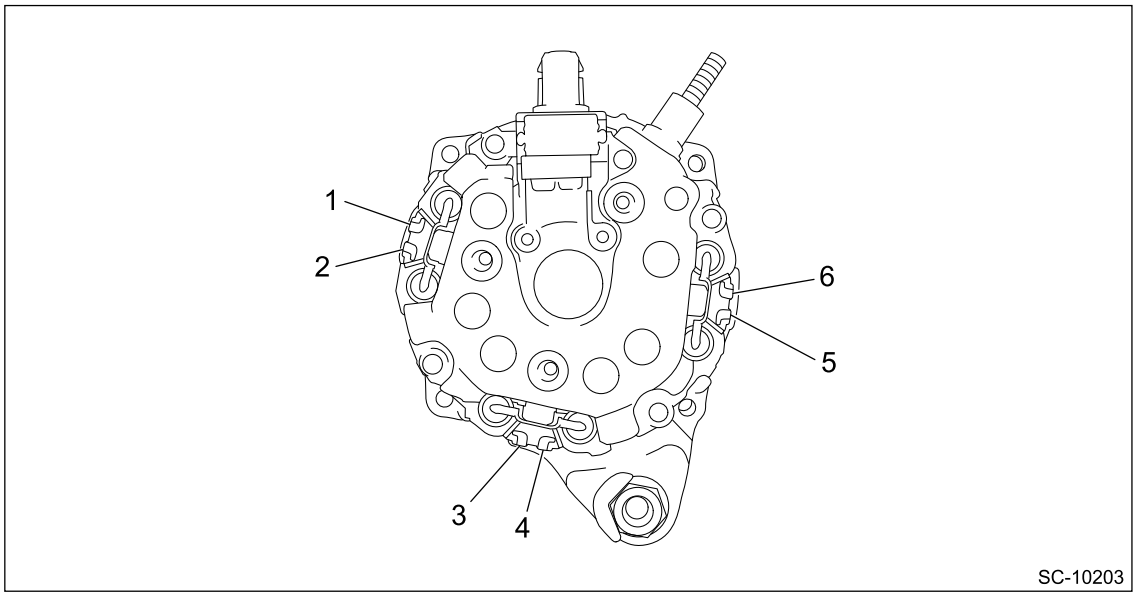
   14.0 mm (0.551 in)
3. Check the resistance between slip rings.

   Specification:

   Approx. 2.0 — 2.4 Ω

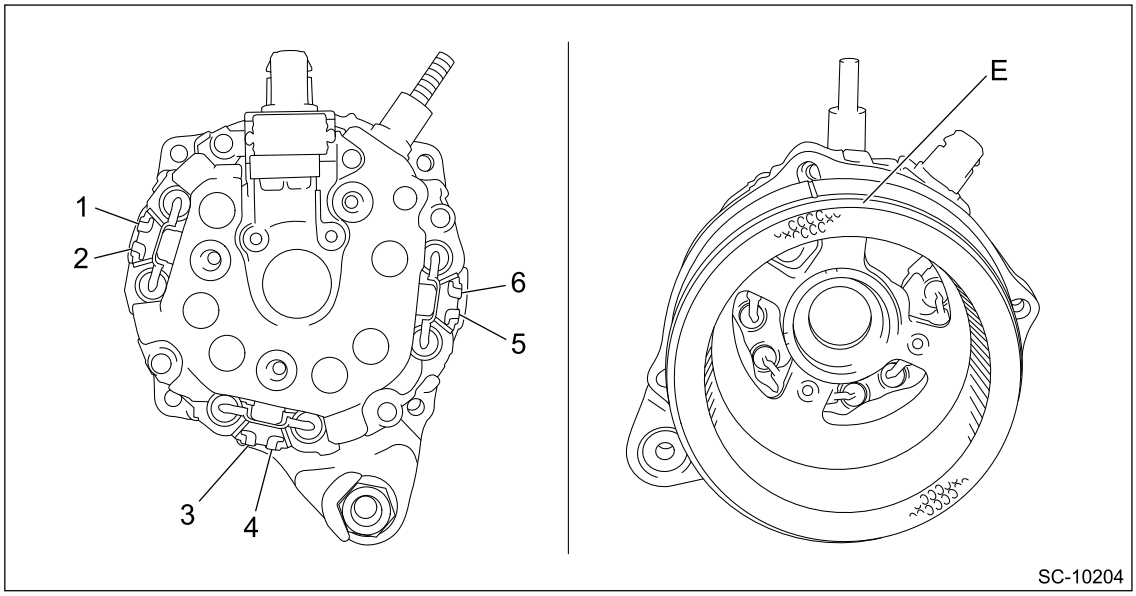
4. Check insulation between slip ring and rotor core or shaft. Replace the rotor assembly if continuity exists.





5. Check the ball bearings (rotor side). Check the following items and replace the rotor assembly if necessary.

- Check that there is no deformation, rust or other damages.
- Check that there is no resistance or looseness when rotating the ball bearings by hand.
- Check for grease leakage.



3. STATOR COIL ASSEMBLY

1. Inspect the continuity between the stator coil terminals. If continuity is not as shown in the table, replace the stator coil assembly.

2. Inspect insulation between the stator coil stator core and lead wire terminals. Replace the stator coil assembly if continuity exists.

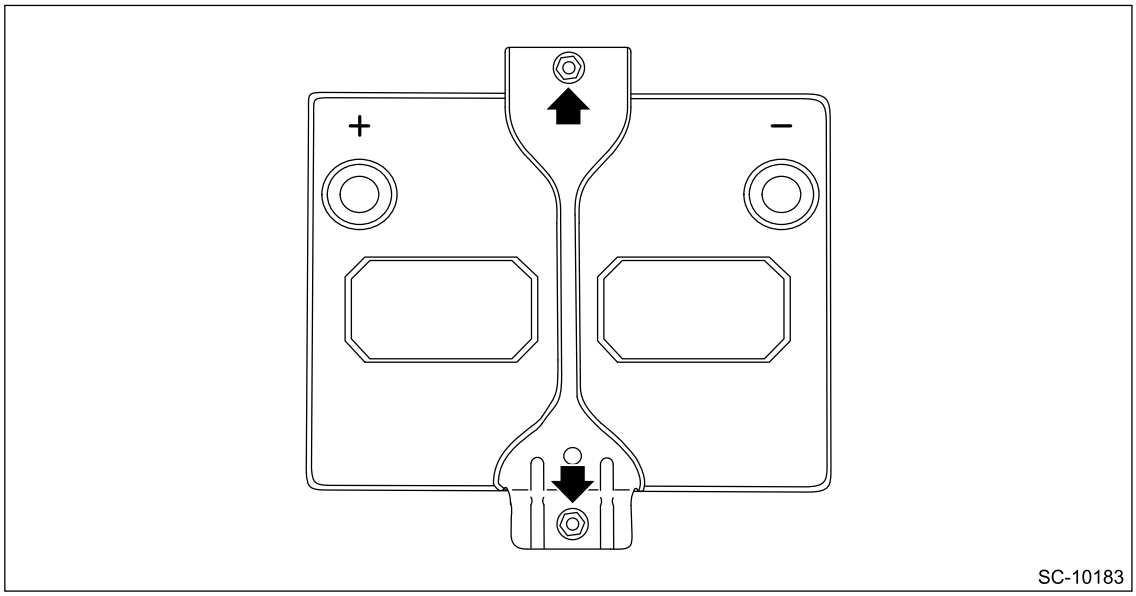
4. BRUSH ASSEMBLY

1. Visually check the brush. If there is any abnormal wear or cracks, replace the brush assembly.
2. Check that the brush moves smoothly in the brush holder.

5. BALL BEARING (FRONT COVER SIDE)

Check the ball bearing (front cover side). Check the following items and replace the ball bearing if necessary.

- Check that there is no deformation, rust or other damages.
- Check that there is no resistance or looseness when rotating the ball bearings by hand.
- Check for grease leakage.



6. OTHER INSPECTIONS

- Check that there is no deformation, cracks or other damages.
- Check that no foreign substances are clogged.

STARTING/CHARGING SYSTEMS(H4DO) > Battery

REMOVAL

1. Disconnect the positive (+) terminal after disconnecting the negative (-) terminal of battery.
2. Remove the battery cable holder.
3. Remove the battery holder.

4. Remove the battery.

STARTING/CHARGING SYSTEMS(H4DO) > Battery

INSTALLATION

Caution:

Since the initial diagnosis of the electronic throttle control is conducted after the battery terminal is connected, wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

1. Install the battery.
2. Install the battery holder.
   Tightening torque:
   3.5 N·m (0.4 kgf-m, 2.6 ft-lb)
3. Install the battery cable holder.
4. Connect the positive terminal and then connect the ground terminal to the battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   Clean the battery terminals and apply a thin coat of grease to prevent corrosion as necessary.
   Tightening torque:
   Positive terminal
   6 N·m (0.6 kgf-m, 4.4 ft-lb)
   Ground terminal
   6 N·m (0.6 kgf-m, 4.4 ft-lb)

STARTING/CHARGING SYSTEMS(H4DO) > Battery

INSPECTION

Warning:

- **As batteries produce flammable gases, be careful not to bring an open flame close to the batteries.**
- **Ventilate sufficiently when using or charging battery in enclosed space.**
- **Electrolyte is corrosive acid, and has toxicity; be careful of handling the fluid.**
- **For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. In addition, never lean over the battery.**
- **Be careful that the electrode does not come into contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.**
- **Be careful not to let the electrode contact with the coated parts.**
- **Before starting work, remove rings, metal watch-bands, and other metal jewelry.**
- **Be careful not to let the metal tools contact the positive battery terminal and anything connected to it. When the operation using a metal tool to the positive terminal or anything connected to it is required, disconnect the battery ground terminal before starting the operation.**

1. APPEARANCE

Check the battery case, top cover and terminals for dirt or cracks, and perform the following work as necessary.

- Clean the battery with water and wipe with a dry cloth.
- Apply a thin coat of grease on the terminals to prevent corrosion.

Check

- **Normal** → Go to the check item 2.
- **Abnormal** → Replace the battery.

2. ELECTROLYTE LEVEL

Check the electrolyte level in each cell.

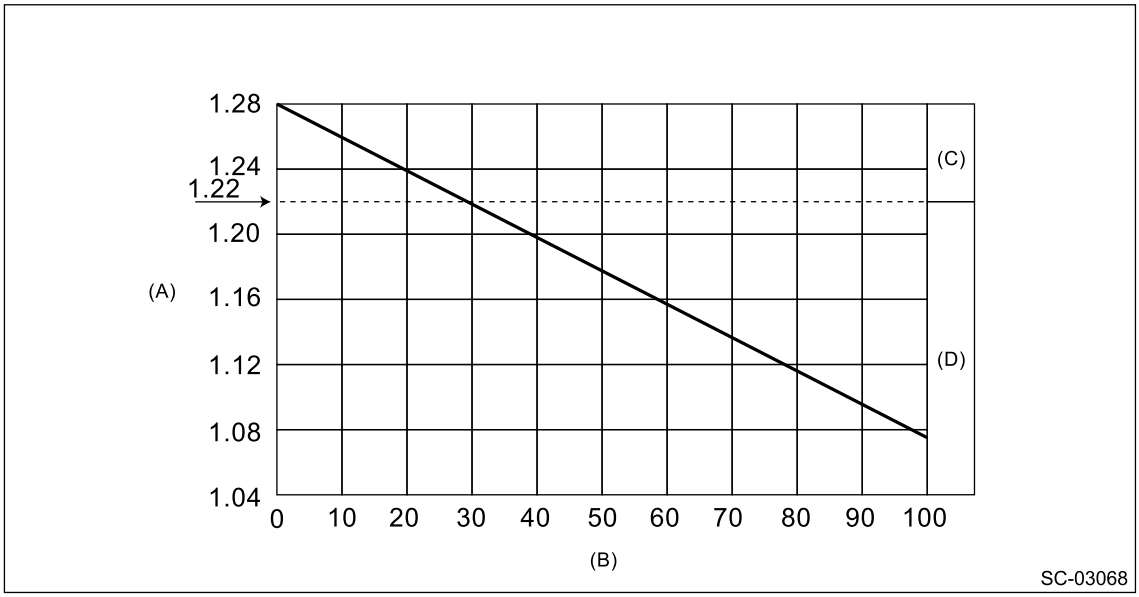
Caution:

Do not fill beyond MAX level.

Note:

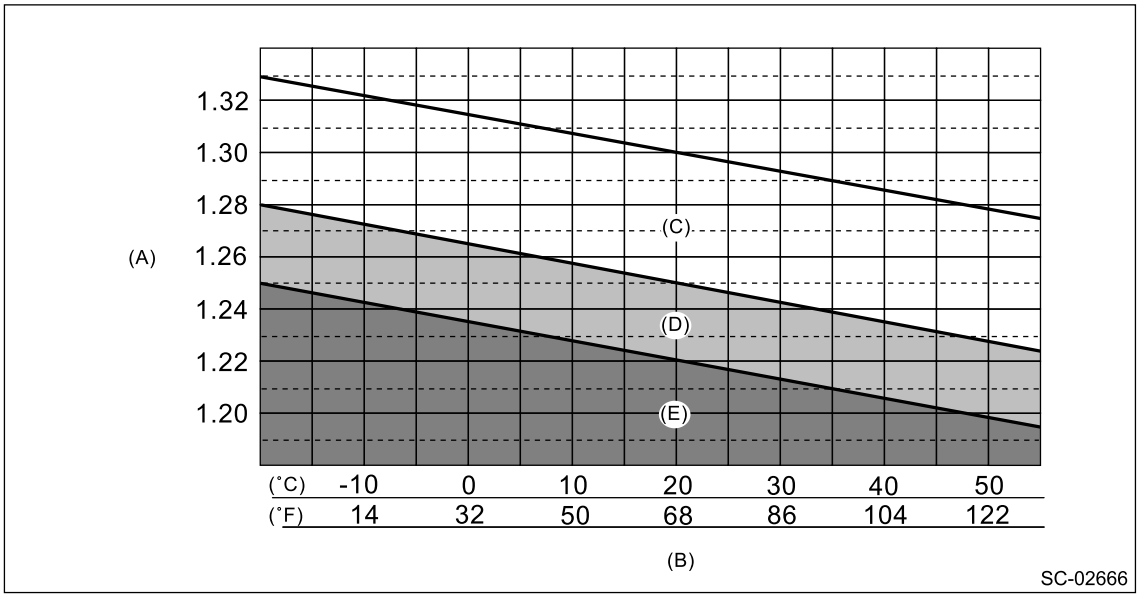
If the level is below the middle point between MIN level and MAX level, pour distilled water into the battery cell to bring the level to MAX.

Check



- **MAX level** → Go to the check item 3.
- **Below the middle point between MIN level and MAX level** → **Fill** → Go to the check item 3.

3. SPECIFIC GRAVITY OF ELECTROLYTE



Check the specific gravity of the electrolyte using a hydrometer and a thermometer.

Note:

- **Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following calculation:**
  S_{20} = St +0.0007× (t − 20)
  S_{20}: Specific gravity corrected at electrolyte temperature of 20°C
  St: Measured specific gravity
  t: Measured temperature (°C)
- **When measuring in a simplified manner using the battery terminal voltage, calculate the specific gravity by the following formula.**
  Specific gravity = [0.187 × battery terminal voltage (V)] − 1.1
  Perform the steps 1) and 2) before measuring the voltage in order to stabilize the voltage.
  1) Turn the ignition switch to OFF and illuminate the headlight for 30 seconds.
  2) After turning off the headlight, leave the vehicle for one minute.
- **Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between specific gravity and state of charge is as shown in the figure.**

(A) Specific gravity [20°C (68°F)] (B) Amount of discharge (%) (C) Good
(D) Need to charge or replace

(A) Specific gravity [20°C (68°F)] (B) Electrolyte temperature (C) Good
(D) Caution (E) Need charging

Check

- **Specific gravity: 1.250 — 1.290, and difference between cells is 0.04 or less → Battery is normal**
- **Specific gravity: Less than 1.250, or difference between cells is 0.04 or more → Battery needs to be charged or replaced**

4. STANDBY CURRENT

1. Prepare the circuit tester which can measure down to 1 mA.

Note:

For model with keyless access function, the standby current changes regularly. Therefore, prepare the analog type circuit tester.

2. Using the circuit tester, check the standby current.

(1) Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION > APPEARANCE. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION > ELECTROLYTE LEVEL. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION > SPECIFIC GRAVITY OF ELECTROLYTE.

Note:

The standby current may be displayed lower than the actual value if the battery is weak, so charge or replace the battery as necessary.

(2) Check that the fuse is not blown out and is properly inserted.

(3) When non-genuine electrical parts (including parts sold in authorized workshops) are installed, remove all parts.

(4) Check that back-up fuse is inserted. Ref. to PRE-DELIVERY INSPECTION>PRE-DELIVERY INSPECTION (PDI) PROCEDURE > FUSE INSTALLATION.

(5) Start the engine, and set the switch positions for each system as shown in the following table.

Note:

Some of the listed systems are not equipped depending on the vehicle. Set only the systems equipped on the vehicle to the positions as shown.

System	Position
Headlight	ON or Auto
Fog light	ON

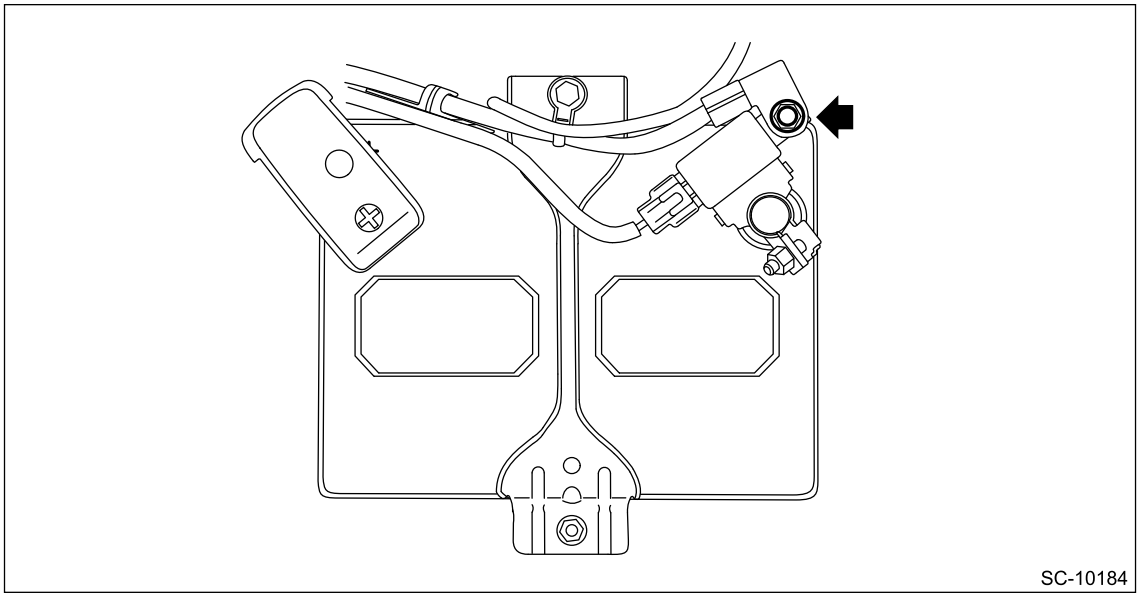
System	Position
Wiper (front and rear)	ON or Low speed
Audio and navigation system	ON
Rear defogger	ON
Room light	DOOR
Luggage light	DOOR
Map light	OFF
Auto A/C	ON (AUTO)
Manual A/C	ON (Speed 1)
Electronic parking brake	ON
Electrical parts other than listed above (electrical parts that users can confirm the operation with the key removed)	OFF

(6) Turn the ignition switch to OFF.

(7) Operate the front hood lock release lever to unlock the front hood.

(8) Close all the doors (including rear gate and trunk lid) and then lock the doors. (Security alarm is in set condition)

Note:



For model with keyless access function, take the access key 1.5 m or more away from the vehicle after the door lock. And do not put the access key close to the vehicle while measuring the standby current.

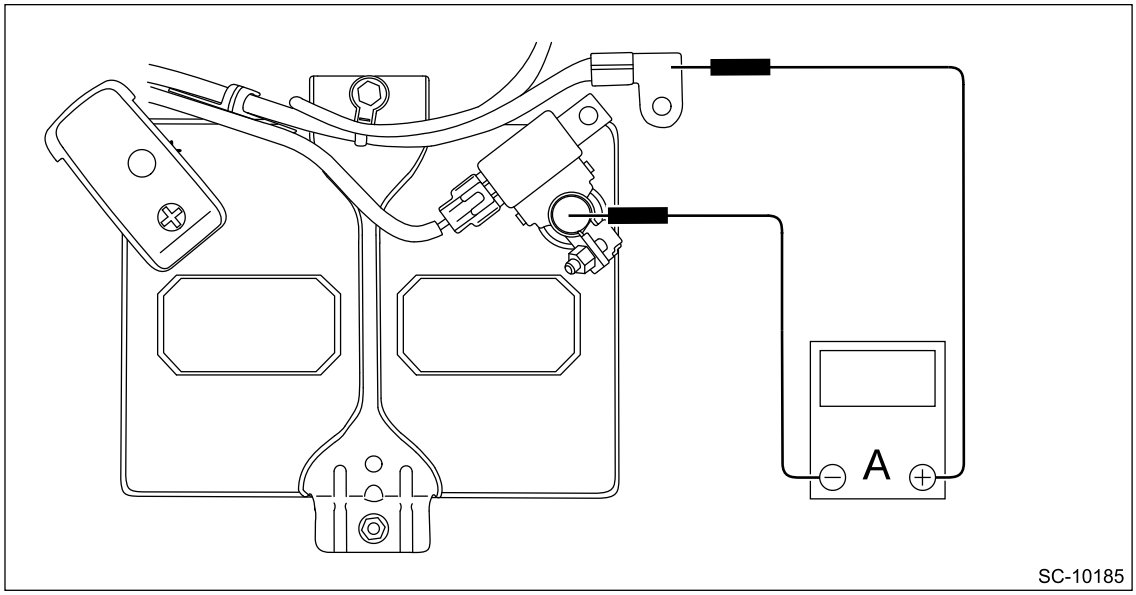
(9) Wait for 5 minutes after door lock until the standby current stabilizes.

(10) Loosen the nut which holds the ground terminal to the battery sensor.

Note:

Do not remove the ground terminal.

(11) Connect the circuit tester positive terminal to the ground terminal.



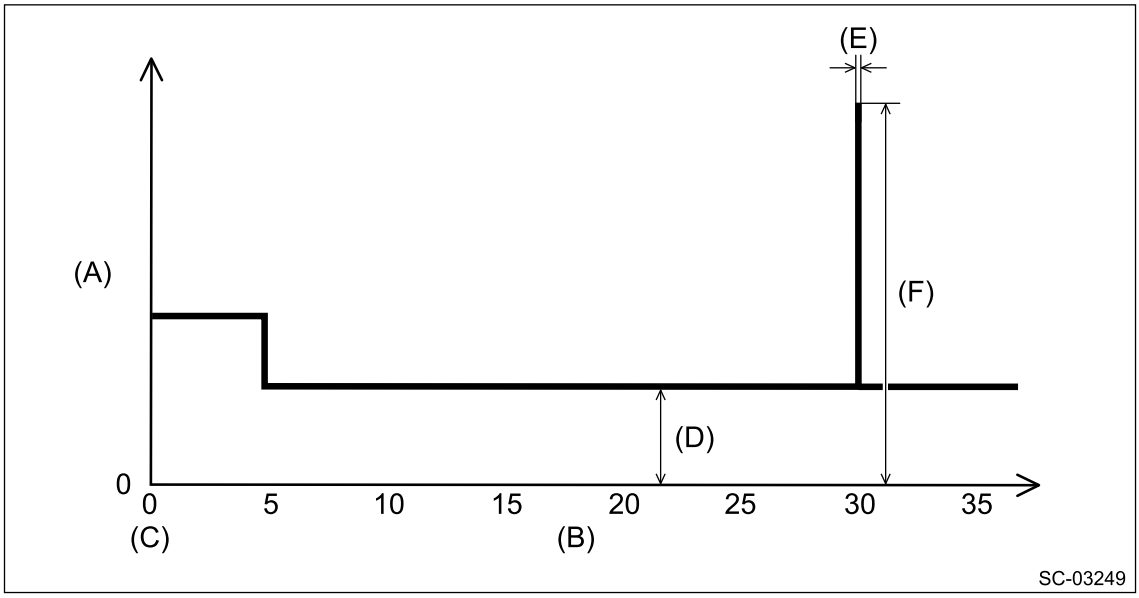
Note:

To prevent the damage to the circuit tester, set the circuit tester range to a large value first, then gradually change it to smaller values.

(12) Connect the circuit tester negative terminal to the ground terminal installation part of the battery sensor.

(13) While connecting the circuit tester positive terminal with the ground terminal as shown in the

figure, remove the ground terminal from the battery sensor.



(14) Check the standby current.

Caution:

If the terminals and circuit tester are detached during standby current inspection, repeat the procedure from step (9).

Note:

- **For model with keyless access function, the standby current changes periodically because the keyless access system continuously searches the access key (polling).**
- **When measuring the standby current, the reading of the circuit tester oscillates. Therefore, read the average value (median value).**
- **The standby current may become large when the vehicle system (ELCM) is activated 5 times at 30-minute intervals or 5 hours after turning the ignition switch to OFF. Therefore, the measurement should be completed in 20 minutes. If it takes more than 20 minutes, start the engine once, stop the engine, then perform the inspection.**

(A) Current/mA
(B) Time/min
(C) Ignition OFF
(D) Less than 70 mA
(E) 5 seconds (system operation)
(F) 300 mA or more

Check

- **When the maximum measurement value is less than 70 mA → Standby current is normal.**
- **When the maximum measurement value is 70 mA or more → Go to step (15).**

(15) Remove all fuses one by one to identify which system changes the standby current value significantly. Ref. to WIRING SYSTEM>Power Supply Circuit.

(16) Check the related part, harness and connector of the system whose standby current has changed significantly.

STARTING/CHARGING SYSTEMS(H4DO) > Battery

CHARGE

Warning:

- **Do not bring an open flame close to the battery.**

Caution:

- **If the terminals are corroded, clean with a brush and common caustic soda solution.**
- **As batteries produce flammable gases while charging, be careful not to bring an open flame close to the batteries.**
- **Ventilate sufficiently when charging batteries.**
- **Observe instructions when handling the battery charger.**
- **Before charging the battery on the vehicle, disconnect the battery ground terminal to prevent damage of generator diodes or other electrical units.**

1. NORMAL CHARGE (CONSTANT CURRENT CHARGE)

Charge the battery with the current value specified by manufacturer or with approximately 1/10 of battery's rating capacity. (See the table below.)

Type	Charging current (A)	CCA (A)
75D23L	5.0 — 6.5	530

Caution:

- **The charge control feature and specifications for judgment of charge completion depend on the device. Follow the instruction manual of the charger used.**
- **Keep the electrolyte temperature at 45°C (113°F) or less while charging. Stop charging when the temperature exceeds this value.**

Note:

The characteristics of typical charging methods are as follows.

- **Constant current charging**
  This method makes it easy to charge to 100%, since the electrolyte is agitated by the gassing occurred at the end of charging. However, the time for charging is comparatively long because the current value is kept constant.
- **Constant voltage charging**
  This method completes charging in a short period of time due to the large current. However, it is difficult to charge to 100% because no gassing occurred at the end of charging and the electrolyte is not agitated. Therefore, the combined use with the constant current charging is preferable.
- **Quasi-constant voltage charging**
  This method is widely used for commercially available chargers.
  Compared to the constant voltage charging whose charging current at the beginning of charging becomes large, it reduces the charging current by lowering the voltage at the initial stage, resulting in battery load reduction. The time for charging is comparatively long. However, this type of chargers can be manufactured comparatively inexpensive due to the simple control circuit (or manual settings). After the initial stage of charging is completed, it gradually raises the charging voltage so that the charging current is within the specification, until the battery is fully charged.
- **Constant voltage/current charging**
  In addition to the constant voltage charging, this method controls the upper limit of the current.
  The constant current charging is applied at the beginning of charging, and the constant voltage charging is applied at the end. This makes battery charge comparatively efficient in a short period of time. Charging by generators is similar to this method.

Judgment of charge completion

1. Specific gravity of electrolyte should be held within the specific range of 1.250 — 1.290 for one hour or more.
2. Voltage while charging should be held within the specified range of 15.0 — 16.8 V for one hour or more.
3. Gas is actively generated in all cells.
4. The amount of charge reaches 1.2 — 1.5 times of the amount of discharge.

Note:

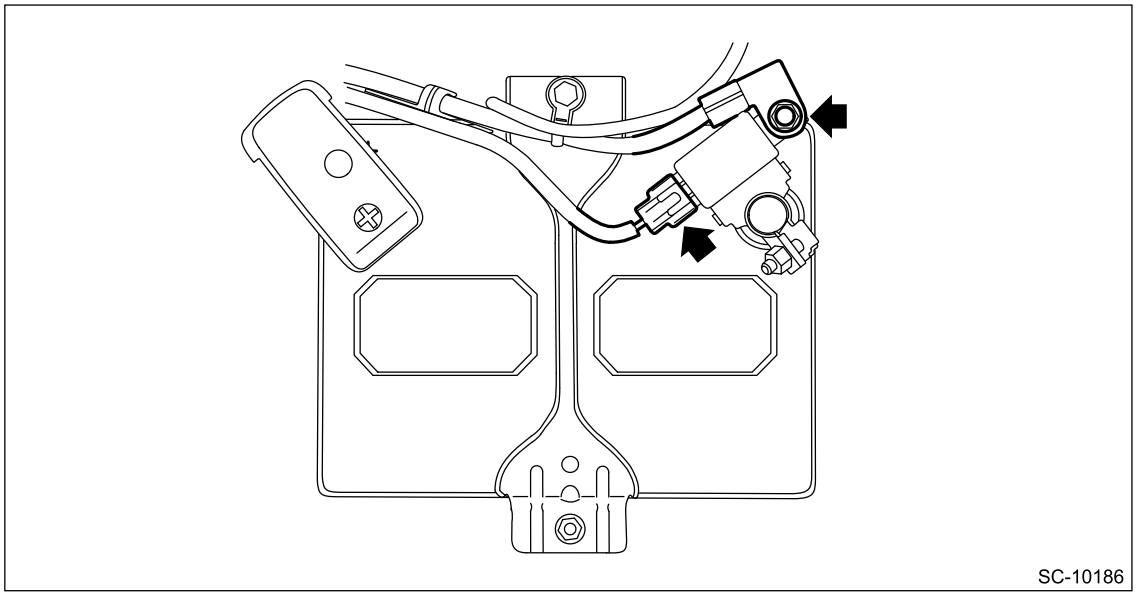
The amount of discharge/charge can be calculated by the following formula.

Amount of discharge (Ah) = remaining capacity calculated by specific gravity (%) × 5 hour rate capacity (Ah)

Amount of charge (Ah) = Charging current value (A) × Time for charging

2. QUICK CHARGING

Charge the battery in a short period of time with a relatively large current by using a quick charger. Charge the battery with the current value at approximately 1/2 of battery's rating capacity. (See the table below.)

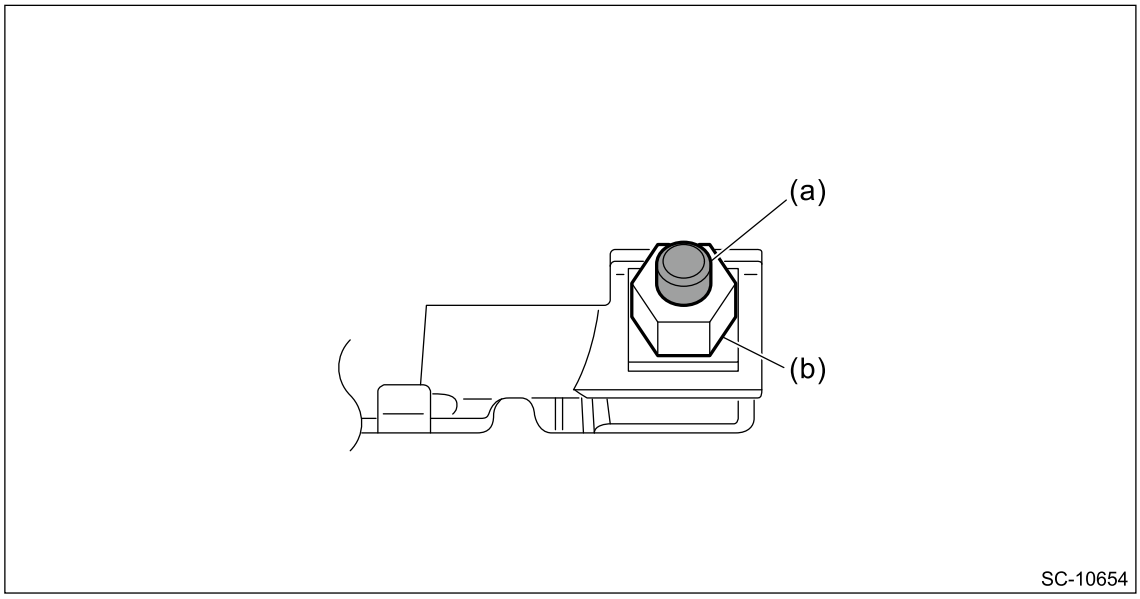


Caution:

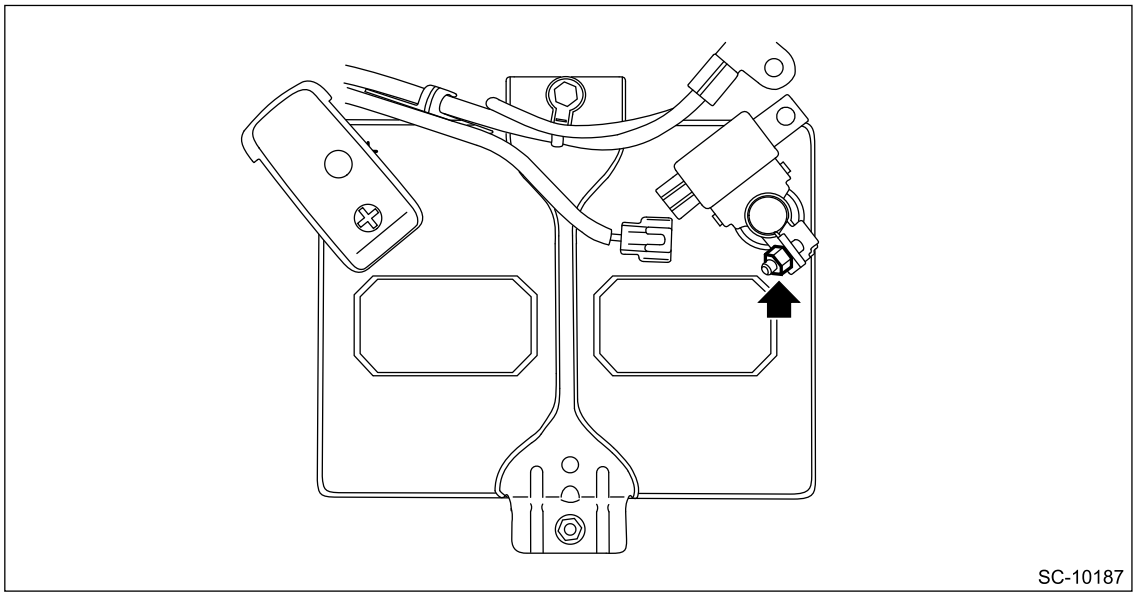
- **Quick charging is accompanied by a large amount of heat generation. Charging should be completed in up to 30 minutes regardless of battery size.**
- **Quick charging is used to recover the battery until it can start the vehicle. For full charging, use the normal charging method.**
- **Keep the electrolyte temperature at 55°C (131°F) or less while quick charging. Stop charging when the temperature exceeds this value.**

Type	Charging current (A)	CCA (A)
75D23L	25.0 — 32.5	530

REMOVAL



1. Disconnect the connector and ground terminal.



2. Remove the battery sensor.

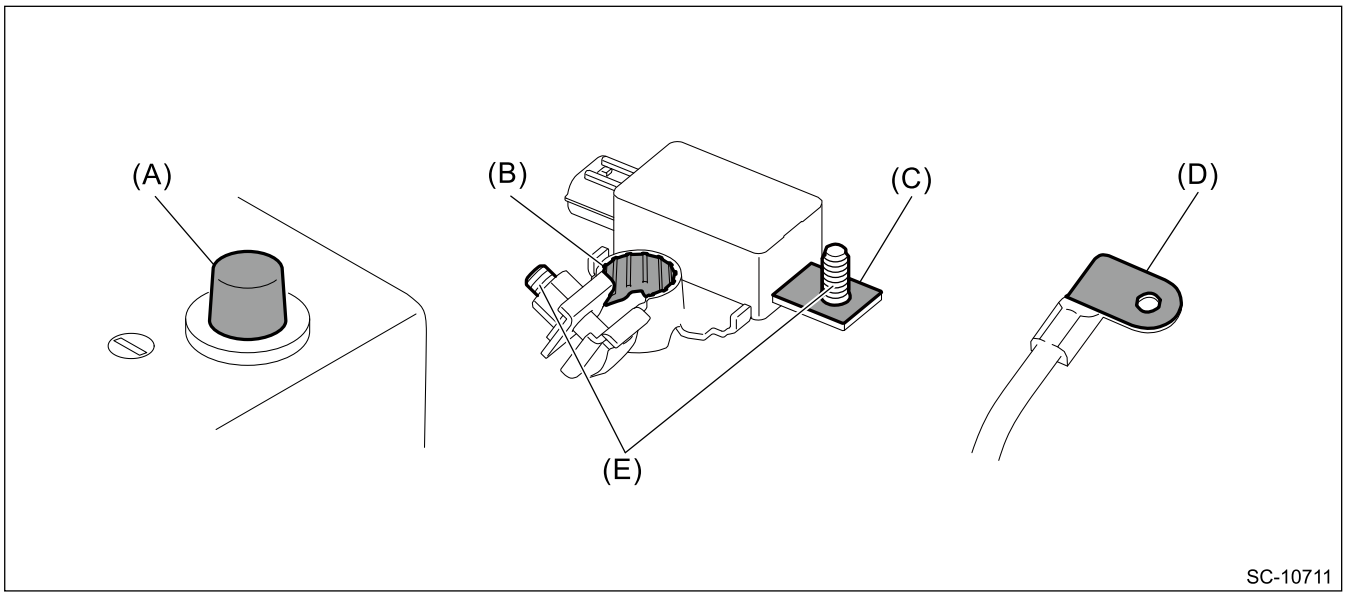
Caution:

The end of the bolt (a) of the battery sensor is crimped. Therefore, do not loosen the nut (b) to the crimped portion.

STARTING/CHARGING SYSTEMS(H4DO) > Battery Sensor

INSTALLATION

Caution:



- **If the battery terminal is worn and the terminal section is loose, replace it with a new battery.**
- **After connecting the ground terminal to the battery sensor, the initial diagnosis of the electronic throttle control is conducted by the vehicle. Therefore, wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.**

1. Install the battery sensor.

(1) Clean and degrease the battery terminal, inside of the battery sensor terminal, ground terminal connecting area, and ground terminal.

Caution:

As residual grease on the bolt thread may cause overtorque, clean and degrease the thread if grease remains on it. Also, be careful to avoid battery sensor deformation and intrusion of grease into the inside of the connector when wiping.

(A) Battery terminal (C) Ground terminal connecting area and ground (E) Bolt

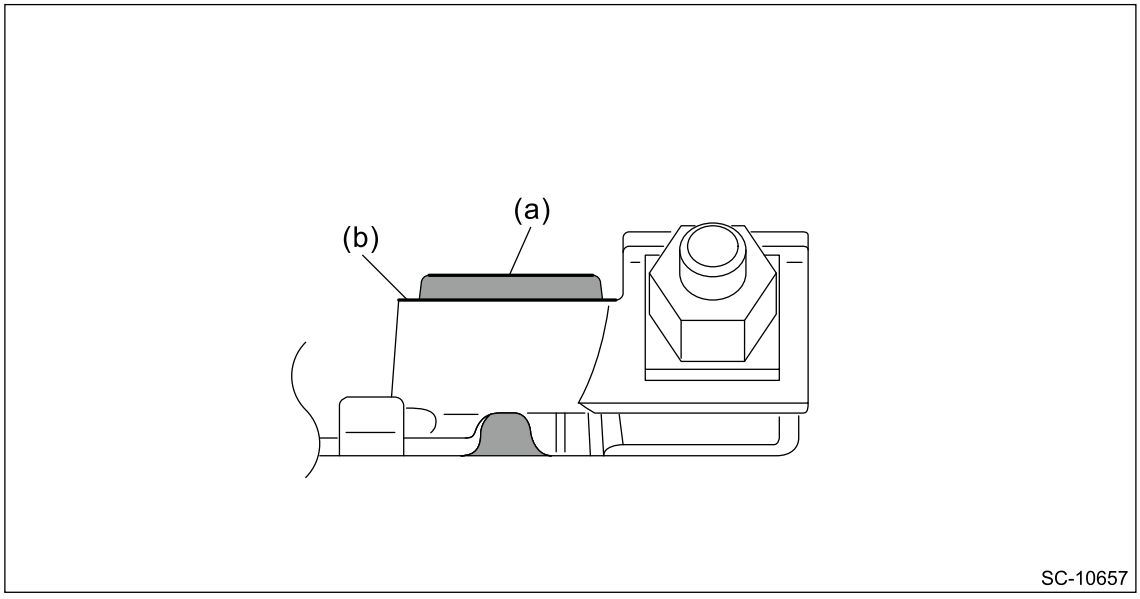
terminal thread

(B) Inside of the battery sensor terminal (D) Ground terminal

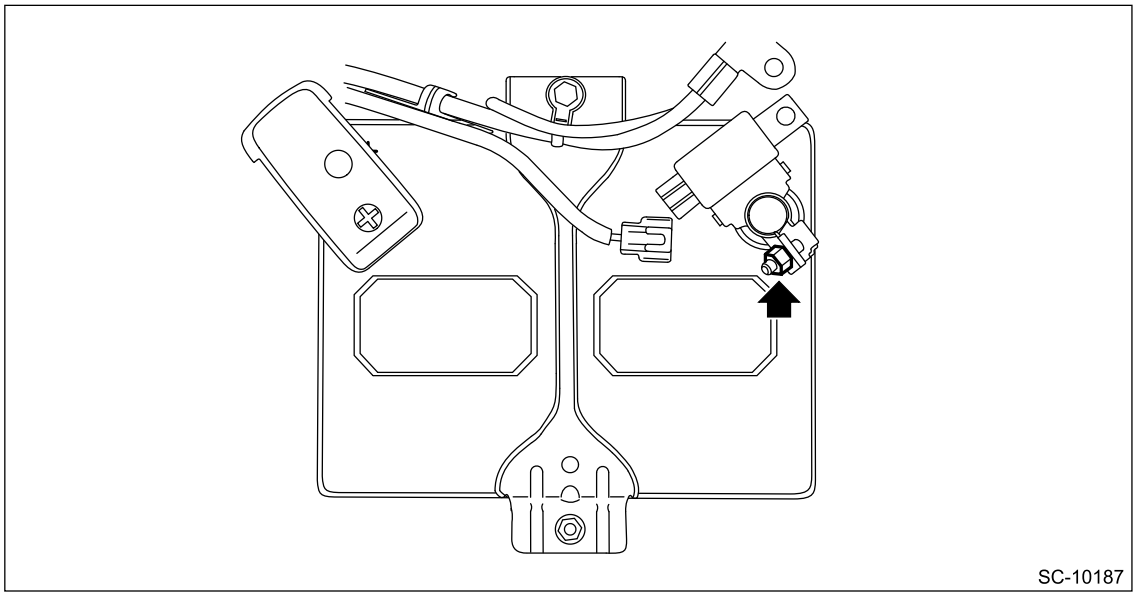
(2) Loosen the battery sensor nut up to just before the crimp to make sure that the clamp is open.

Note:

This operation is required to firmly insert the battery sensor into the battery terminal.



(3) Set the battery sensor to the battery terminal, and tighten the nut.

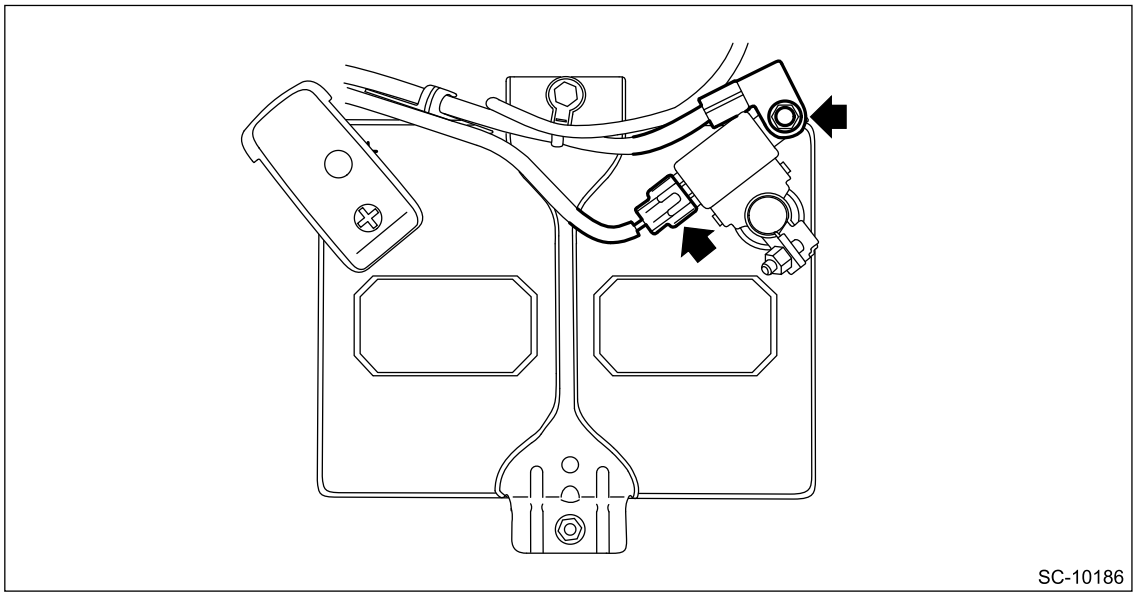


Caution:

Insert until the battery terminal upper end (a) exceeds the height of the battery sensor terminal upper end (b).

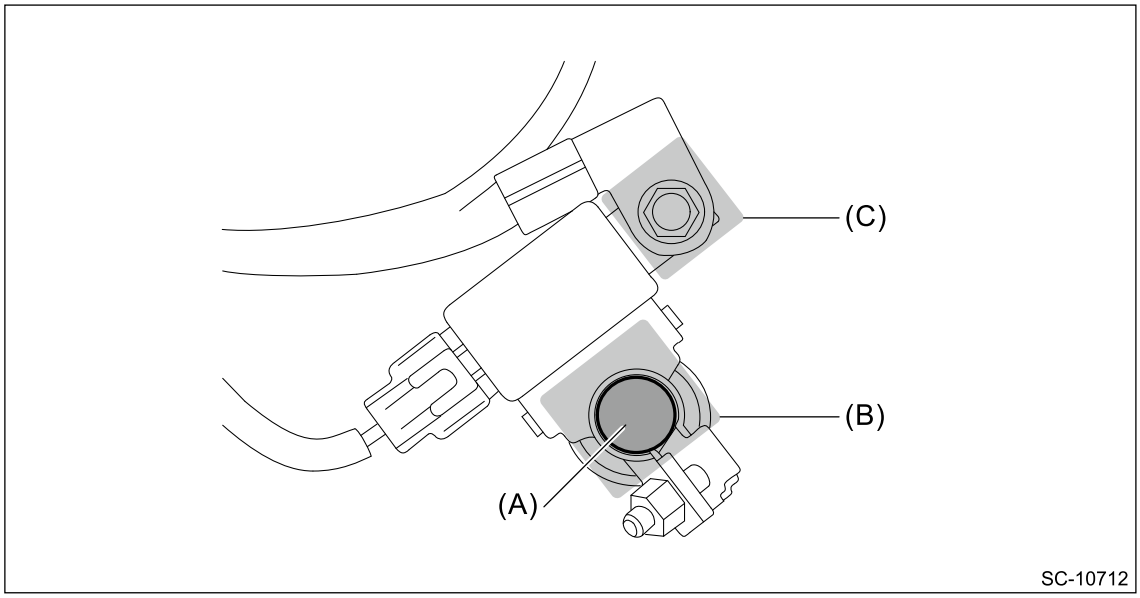
Tightening torque:

6 N·m (0.6 kgf-m, 4.4 ft-lb)



2. Connect the connector and ground terminal to the battery sensor.

Tightening torque:



7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3. Apply a thin coat of grease to cover the battery terminal surface (A), connection between the battery terminal and the battery sensor (B), and connection between the ground terminal and the battery sensor (C).

Caution:

This procedure is required to prevent rust and suppress sulfation. Be careful to avoid overgreasing as it causes insulation.

STARTING/CHARGING SYSTEMS(H4DO) > Battery Sensor

INSPECTION

Check that there is no deformation, cracks or other damages.

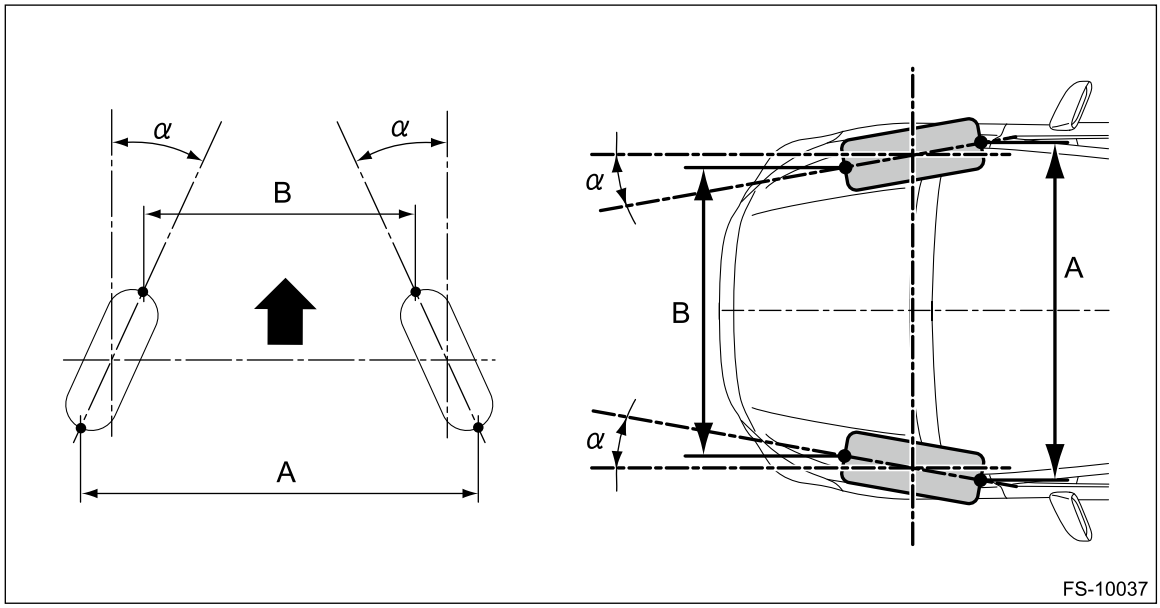
FRONT SUSPENSION

FS

1. General Description
2. Wheel Alignment
3. Crossmember Support
4. Stabilizer
5. Ball Joint
6. Front Arm
7. Crossmember
8. Front Strut
9. General Diagnostic Table

SPECIFICATION

1. FRONT ALIGNMENT (INSPECTION VALUE)



Suspension height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	140 (5.51)
Camber (tolerance: ±0°30′ Differences between RH and LH: 35′ or less)		−0°30′
Caster (referential value)		5°55′
Steering angle (tolerance: ±1.5°)	Inner wheel	37.8°
	Outer wheel	32.9°
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0° ±0°12′
Kingpin angle (referential value)		14°14′

2. REAR ALIGNMENT (INSPECTION VALUE)

Suspension height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	−15 (−0.59)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		−1°20′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)
		Toe angle (sum of both wheels): IN0°15′±15′
Thrust angle (tolerance: 0°00±30′)		0°00′

Note:

- **Adjust with the value less than the inspection value, taking aging variation into consideration.**
- **Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.**
- **Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.**
- **If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.**

FRONT SUSPENSION > General Description

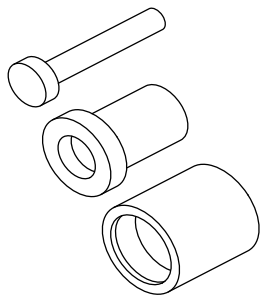
CAUTION

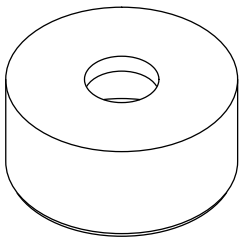
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of strut COMPL - front, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed, installed or replaced, perform the following adjustment.
  - Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
  - VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

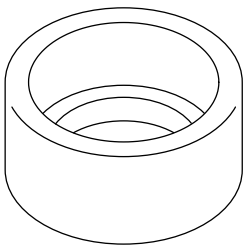
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  - Be careful with fire.
  - Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  - Follow all government and local regulations concerning disposal of refuse when disposing.
- Be sure that the surface of brake disc or brake pad is free from grease or oil.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

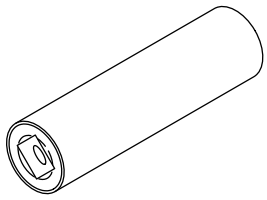
PREPARATION TOOL

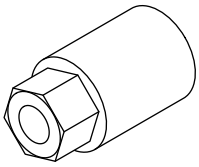
1. SPECIAL TOOL











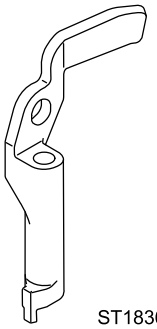


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-927680000	927680000	INSTALLER & REMOVER SET	Used for replacing the bushing front - front arm of front arm assembly.
 ST20299AG000	20299AG000	REMOVER	• Used for replacing the bushing rear - front arm of front arm assembly. • Used together with BASE (20299AG010).
 ST20299AG010	20299AG010	BASE	• Used for replacing the bushing rear - front arm of front arm assembly. • Used together with REMOVER (20299AG000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20299AG020	20299AG020	STUD BOLT SOCKET	Used for removing and installing the stud bolt for front arm assembly installing portion.

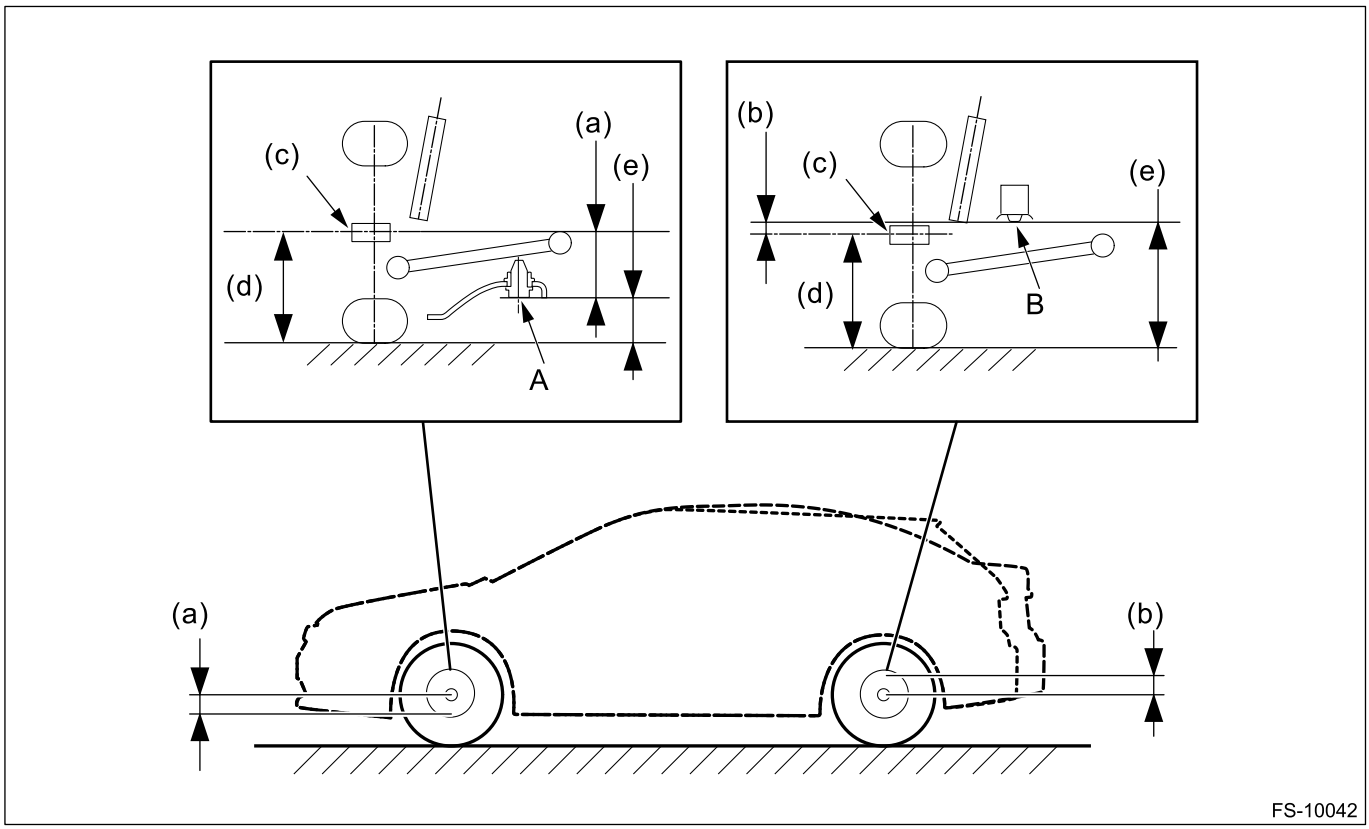
2. GENERAL TOOL

TOOL NAME	REMARKS
DST-i	Used together with Subaru Select Monitor 4.
Alignment gauge	Used for measuring wheel alignment.
Alignment gauge adapter	Used for measuring wheel alignment.
Turning radius gauge	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Tie-rod ball joint puller	Used for disconnecting tie-rod end.
Dial gauge	Used for damper strut measurement.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.
Shackle	• Two units used for hanging power unit. • Attached to both end of chain sling and connected to engine hook. • Load capacity: 250 kg (551 lb) or more
Sling belt	• Used for removing and installing crossmembers. • Width: 35 — 40 mm (1.38 — 1.57 in) • Length: 2 m (6.6 ft) • Load capacity: 1 t (2205 lb) or more

INSPECTION

Check the following items before performing the wheel alignment measurement.

- Tire inflation pressure
- Uneven wear of RH and LH tires, or difference of sizes
- Tire runout
- Excessive play and wear of ball joint
- Excessive play and wear of tie-rod end
- Excessive play of wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play of steering link
- Deformation and excessive play of suspension parts

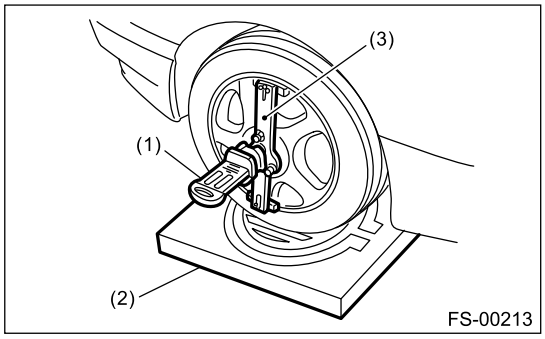


Check, adjust and measure the wheel alignment in accordance with the following procedures.

1	Suspension height (front and rear wheels)	Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > SUSPENSION HEIGHT.
	↓	
2	Camber (front and rear wheels)	Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > CAMBER. Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT > FRONT CAMBER.
	↓	
3	Caster (front wheel)	Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > CASTER.
	↓	
4	Adjustment of difference between right and left steering angles	Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > STEERING ANGLE. Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT > ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES.
	↓	
5	Front wheel toe-in	Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > FRONT WHEEL TOE-IN. Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT > FRONT WHEEL TOE-IN.
	↓	
6	Rear wheel toe-in	Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > REAR WHEEL TOE-IN.

		Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT > REAR WHEEL TOE-IN.
↓		
7	Thrust angle	Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > THRUST ANGLE. Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT > THRUST ANGLE.

1. SUSPENSION HEIGHT

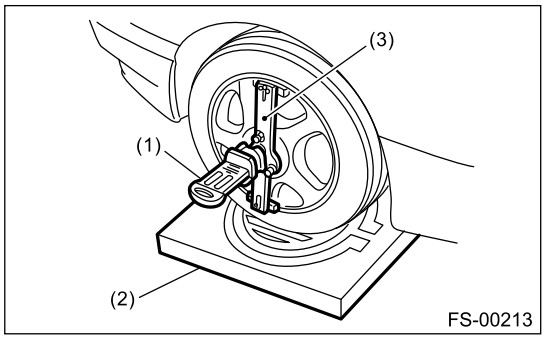


1. Park the vehicle on a level surface.
2. Empty the vehicle so that it is at "curb weight".
   Note:
   Empty the trunk or luggage room, load the spare tire, jack and service tools, and fill up the fuel tank.
3. Set the steering wheel in a straight-ahead position, and stabilize the suspension by moving the vehicle in a straight line for 5 m (16 ft) or more.
4. Measure the distance (d) from the spindle end (c) to the ground surface.
5. Measure the distance (e) from the bolt tip on the vehicle body (points "A" and "B" in the following figure) to the ground surface.
6. Calculate the suspension heights (a) and (b).

Suspension height specification mm (in) (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	
Front	**Rear**
140 (5.51)	−15 (−0.59)

2. CAMBER

1. Place the front wheel on the turning radius gauge.
   Note:
   Make sure the ground contact surfaces of the front and rear wheels are at the same height.
2. Set the adapter into the center of wheel, and then set the wheel alignment gauge.



(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3. Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

Camber (difference between RH and LH 35′ or less)
−0°30′±0°30′

3. CASTER

1. Place the front wheel on the turning radius gauge. Make sure the ground contact surfaces of the front and rear wheels are at the same height.
2. Set the adapter into the center of wheel, and then set the wheel alignment gauge.

(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3. Measure the caster angle in accordance with the operation manual for wheel alignment gauge.

Caster
5°56′

4. STEERING ANGLE

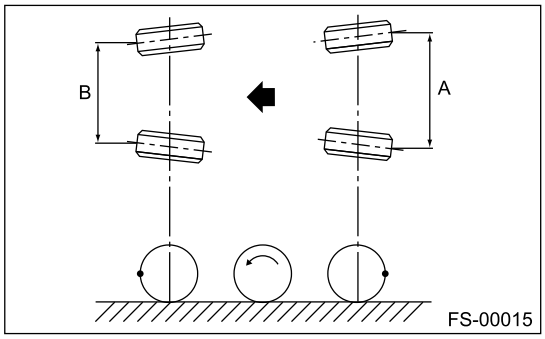
1. Place the vehicle on turning radius gauge.
2. While depressing the brake pedal, turn the steering wheel fully to the left and right.
3. With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angles.

Inner wheel	Outer wheel
37.8°±1.5°	32.9°±1.5°

5. FRONT WHEEL TOE-IN

Toe-in: Inspection value

0±3 mm (0±0.12 in)



1. Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
2. Place a mark at the center of both left and right tires, and measure distance "A" between the marks.
3. Move the vehicle forward to rotate the tires 180°.

   Note:

   Be sure to rotate the tires in the forward direction.
4. Measure the distance "B" between the left and right marks.

   Find toe-in using the following calculation:

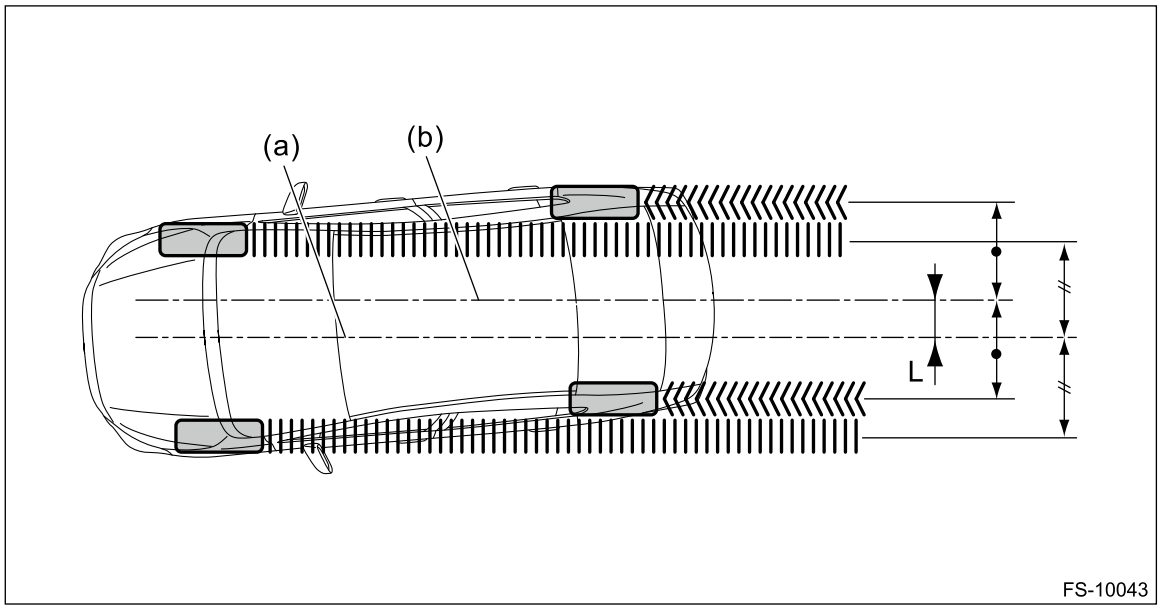
   A − B = Toe-in

6. REAR WHEEL TOE-IN

Refer to the FRONT WHEEL TOE-IN for rear toe-in inspection procedures. Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION > FRONT WHEEL TOE-IN.

Toe-in: Inspection value

3±3 mm (0.12±0.12 in)



7. THRUST ANGLE

1. Park the vehicle on a level surface.
2. Move the vehicle 3 — 4 meters (10 — 13 ft) straight forward.
3. Draw the center of loci for both the front and rear axles.
4. Measure distance "L" between the center lines of the axle loci.

Thrust angle: Inspection value

0°±30′

Less than 30′ when "L" is 23 mm (0.9 in) or less.

(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

FRONT SUSPENSION > Wheel Alignment

ADJUSTMENT

Caution:

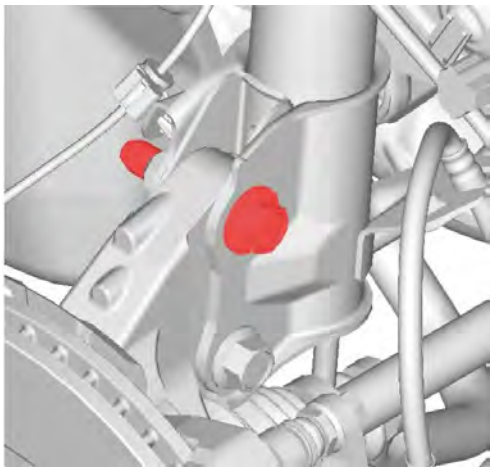
When the wheel alignment has been adjusted, perform the following adjustment.

– Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.

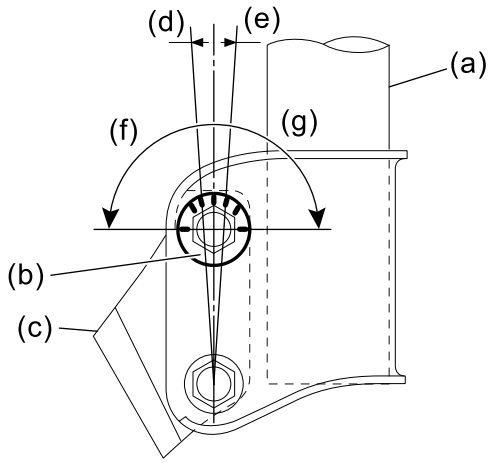
– VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

1. FRONT CAMBER

1. Adjust the camber angle to the following value.



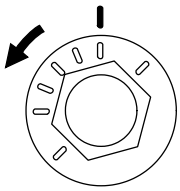
Camber (difference between RH and LH 35′ or less)
−0°30′±0°30′

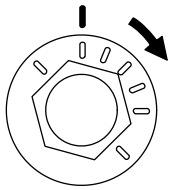


2. Loosen the two self-locking nuts while holding the strut bolts.

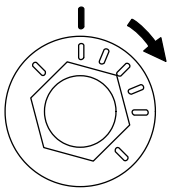
3. Turn the camber adjusting bolt so that the camber is set at specification.

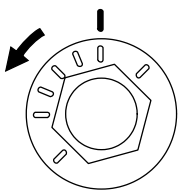
Note:





Moving the adjusting bolt by one scale changes the camber by approximately 0°10′.





FS-10044

(a) Strut ASSY
(b) Adjusting bolt
(c) Housing - front axle
(d) Outer direction
(e) Inner direction
(f) Camber is increased.
(g) Camber is decreased.

To increase camber.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00352	 FS-00353

To decrease camber.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00353	 FS-00352

4. Tighten two new self-locking nuts.

Tightening torque:

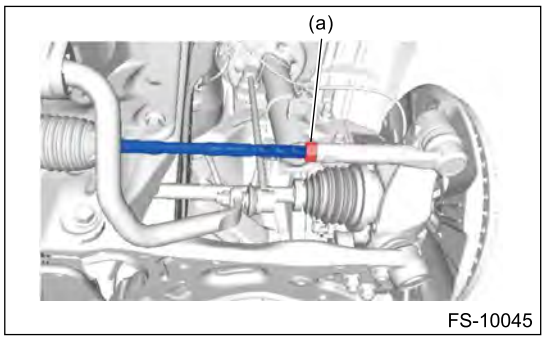
155 N·m (15.8 kgf-m, 114.3 ft-lb)

Note:

While holding the adjusting bolt side, tighten the nut side.

2. ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES

1. Operate the steering system from lock to lock and stop operating it at the center position from lock to lock, and then install the steering wheel in the straight-ahead position.
   Note:
   Using of the steering wheel angle sensor output values shown on Subaru Select Monitor will facilitate your work.
2. Before adjusting toe-in, be sure to adjust the steering wheel in the straight-ahead position (steering angle sensor output: 0 deg).



3. FRONT WHEEL TOE-IN

When adjusting the toe-in, adjust it to the following value.

Toe-in: Adjustment value

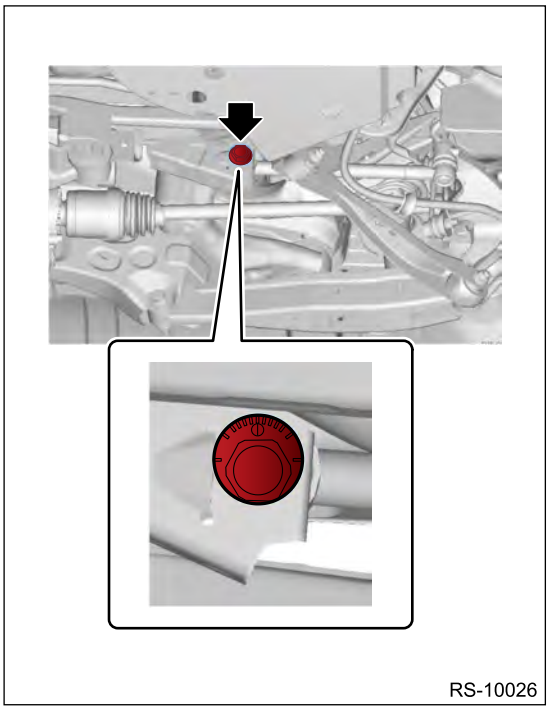
0±2 mm (0±0.08 in)

1. Check that the left and right wheel steering angles are within specification.
2. Loosen the left and right side steering tie-rod lock nuts (a).
3. Turn the left and right tie-rods by equal amounts until the toe-in is at the specification.
   Note:
   Both the left and right tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).
4. Tighten the tie-rod lock nut (a).

Tightening torque:

85 N·m (8.7 kgf-m, 62.7 ft-lb)

5. Check and correct the tie-rod boot if twisted.

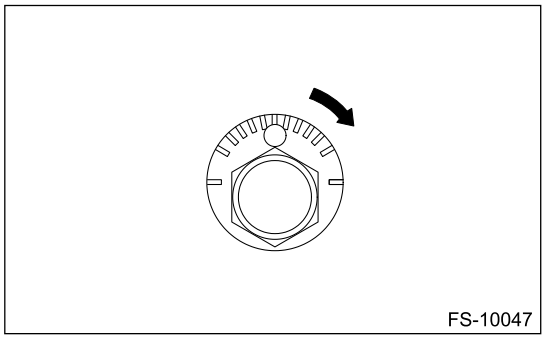


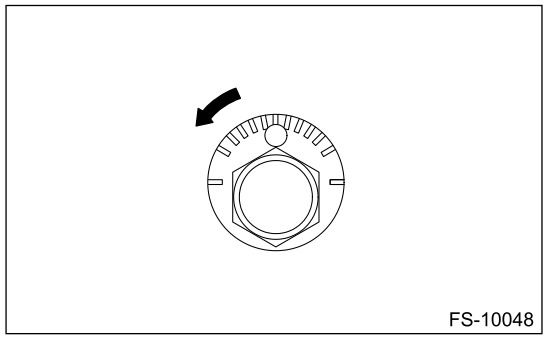
4. REAR WHEEL TOE-IN

When adjusting, adjust it to the following value.

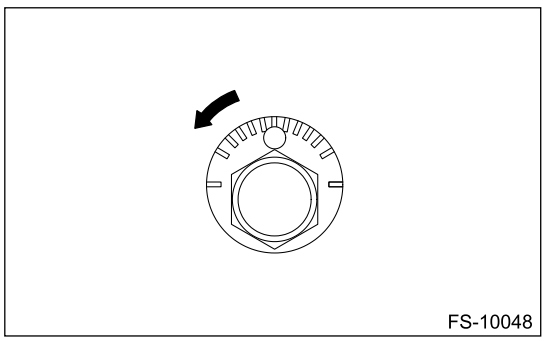
Toe-in: Adjustment value

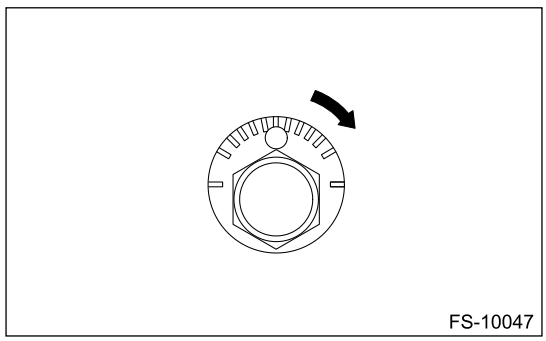
3±2 mm (0.12±0.08 in)





1. Loosen the self-locking nut after holding the bolt head section of lateral link assembly - front.





2. Turn the adjusting bolt until toe-in is within the specification.

Note:

When the toe-in of left and right wheels are adjusted at the same time, one graduation of the scale changes toe-in by approx. 6.0 mm (0.24 in).

To increase toe-in.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
	

To decrease toe-in.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
	

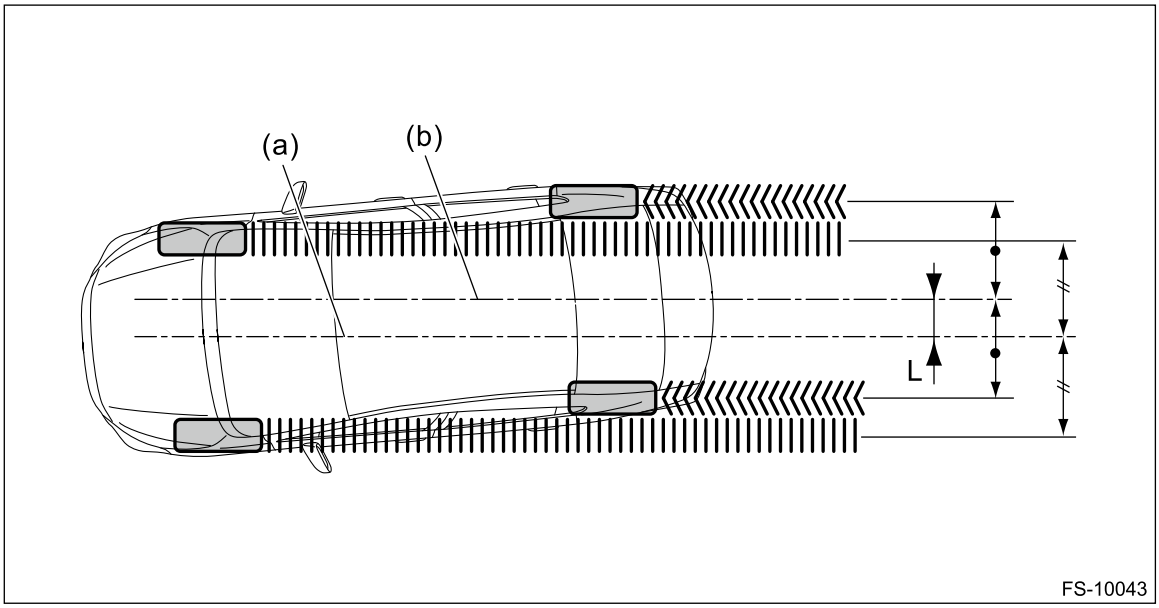
3. Attach and tighten a new self-locking nut.

Tightening torque:

100 N·m (10.2 kgf-m, 73.8 ft-lb)

Note:

While holding the adjusting bolt side, tighten the nut side.



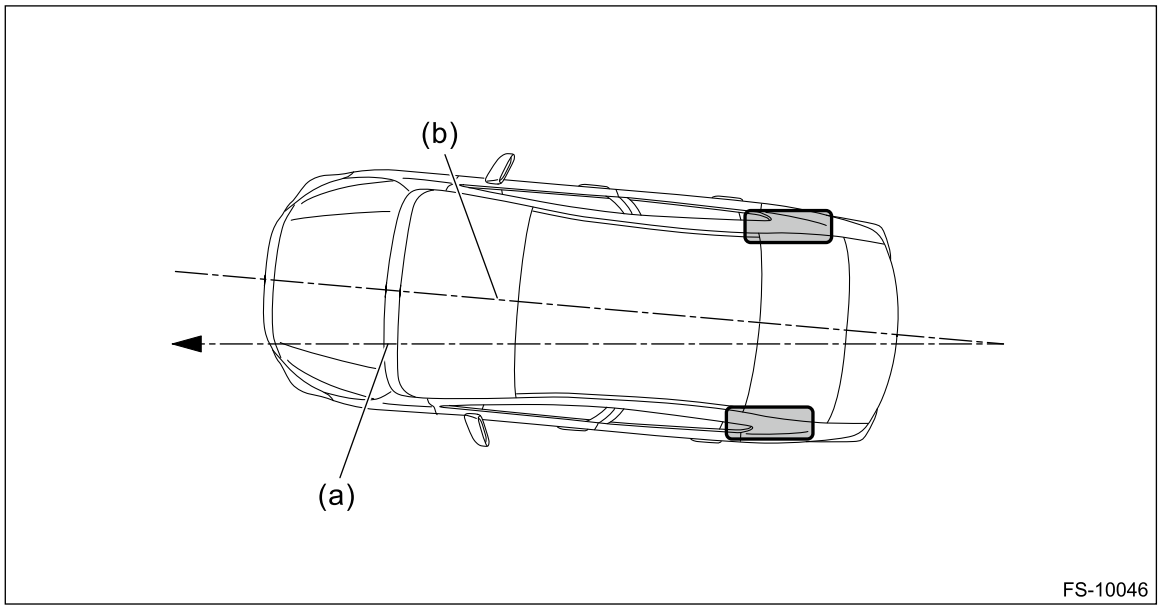
5. THRUST ANGLE

When adjusting, adjust it to the following value.

Thrust angle: Adjustment value

0°±30′

Less than 20′ when "L" is 15 mm (0.6 in) or less



(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

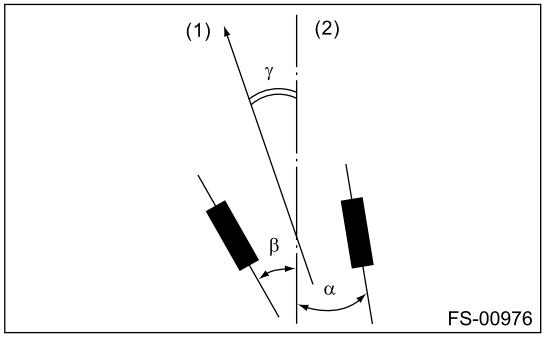
1. Make thrust angle adjustments by turning the toe-in adjusting bolts of the rear suspension equally in the same direction.
2. When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.
3. When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 15′. ("L" is approx. 11 mm (0.43 in).)

Note:

Thrust angle is a mean value of left and right wheel toe angles in relation to the vehicle body center line.

Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.

(a) Thrust angle (b) Body center line



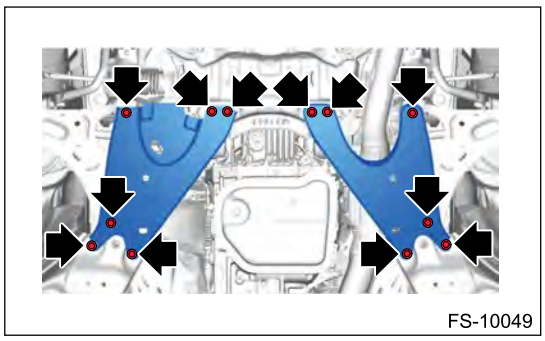
Thrust angle:

$\gamma = (\alpha - \beta)/2$

α: Rear RH wheel toe-in angle

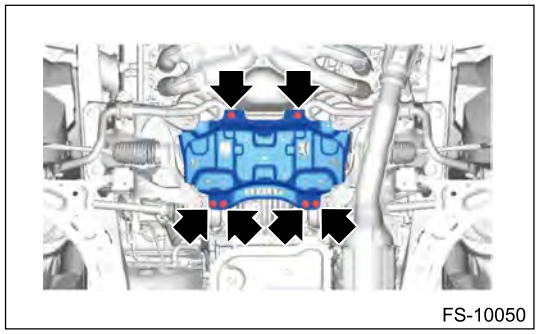
β: Rear LH wheel toe-in angle

Substitute only the positive toe-in values from each wheel into α and β in the calculation.



(1) Front

(2) Body center line



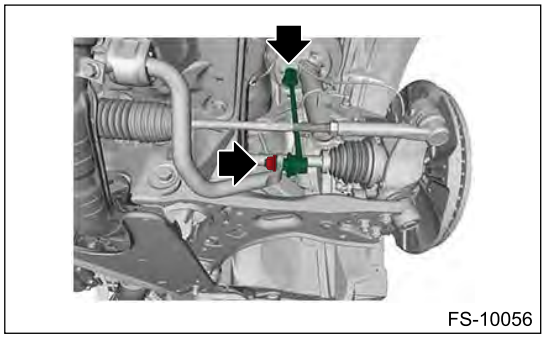
FRONT SUSPENSION > Crossmember Support

REMOVAL

1. Lift up the vehicle.
2. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
3. Remove the bolt, and remove the crossmember support - rear.

4. Remove the bolt, and remove the crossmember support - front.

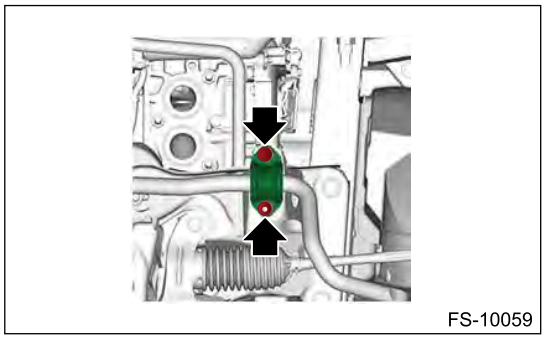
FRONT SUSPENSION > Crossmember Support



INSTALLATION

1. Install the crossmember support - front and the crossmember support - rear.
   Tightening torque:
   Crossmember support - front: 60N·m (6.1 kgf-m, 44.3 ft-lb)
   Crossmember support - rear: 70N·m (7.1 kgf-m, 51.6 ft-lb)
2. Install the under cover - front.
   Tightening torque:
   18N·m (1.8 kgf-m, 13.3 ft-lb)

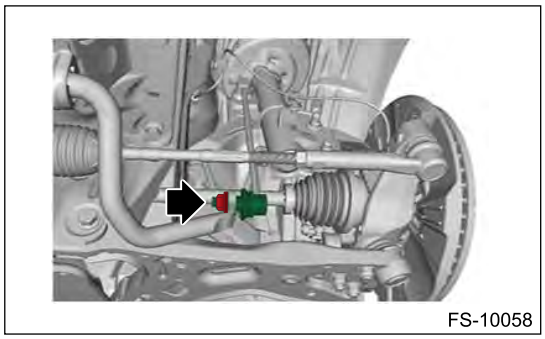
REMOVAL



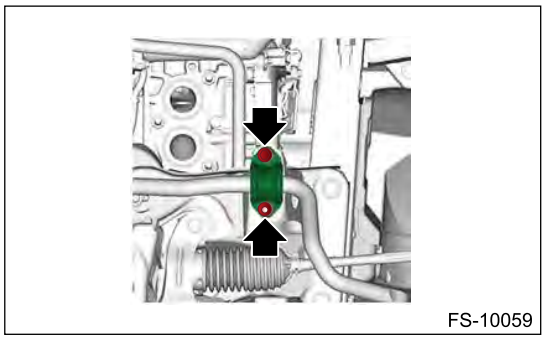
1. STABILIZER LINK

1. Lift up the vehicle, and then remove the front wheels.
2. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
3. Remove the left and right stabilizer links.

2. STABILIZER BUSHING



1. Lift up the vehicle.
2. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
3. Remove the crossmember support - rear. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.
4. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
5. Remove the clamp - stabilizer bushing on the left and right sides.



6. Remove the bushing - stabilizer.

3. STABILIZER

1. Lift up the vehicle.
2. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
3. Remove the crossmember support - rear. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.
4. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
5. Remove the left and right stabilizer links (bottom part).

FS-10058

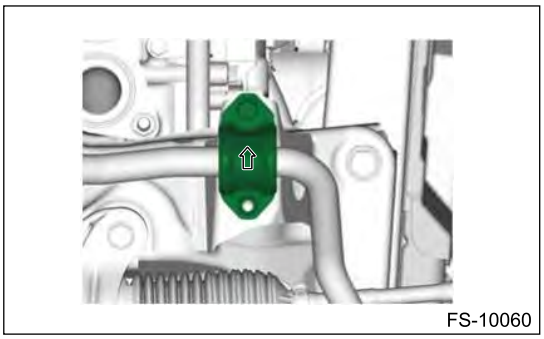
6. Remove the clamp - stabilizer bushing on the left and right sides.

FS-10059

7. Remove the stabilizers.

FRONT SUSPENSION > Stabilizer

INSTALLATION



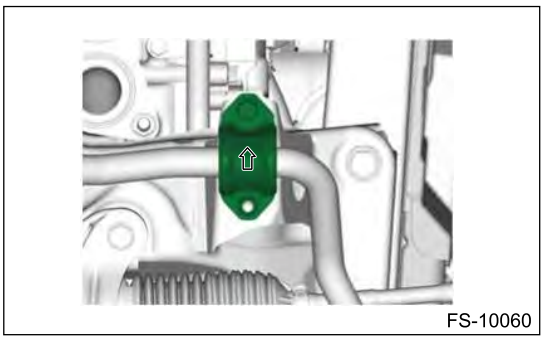
1. STABILIZER LINK

1. Before installation, inspect the following items and replace any faulty part with a new one.
   Check the stabilizer link for damage.
2. Install the stabilizer link.
   Tightening torque:
   60 N·m (6.1 kgf-m, 44.3 ft-lb)
3. Install the under cover - front.
   Tightening torque:
   18N·m (1.8 kgf-m, 13.3 ft-lb)
4. Lower the vehicle, and install the front wheels.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. STABILIZER BUSHING

1. Before installation, inspect the following items and replace any faulty part with a new one.
   Check the stabilizer bushing for abnormal cracks, fatigue or damage.
2. Install the bushing - stabilizer.
3. Install the clamp - stabilizer bushing.

Caution:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.

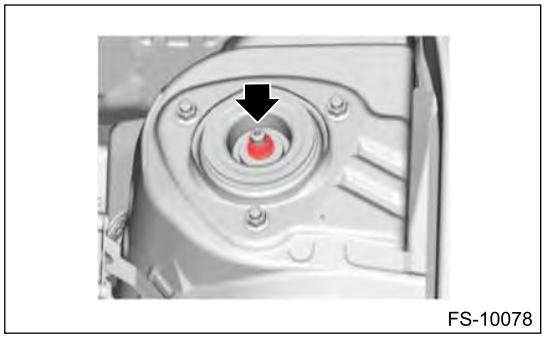


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

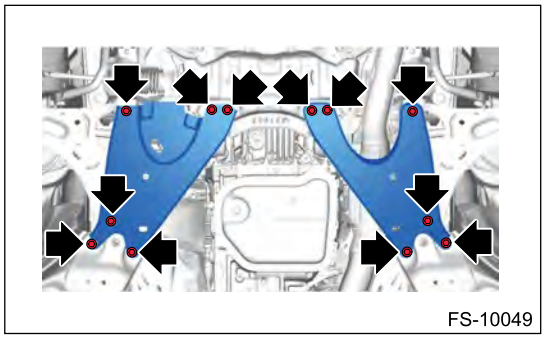
4. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
5. Install the crossmember support - rear. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.
6. Install the under cover - front.
Tightening torque:
18N·m (1.8 kgf-m, 13.3 ft-lb)

3. STABILIZER

1. Install the clamp - stabilizer bushing.
Caution:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.



Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



2. Install the stabilizer link (bottom part).
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
3. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
4. Install the crossmember support - rear. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.
5. Install the under cover - front.
Tightening torque:
18N·m (1.8 kgf-m, 13.3 ft-lb)

REMOVAL

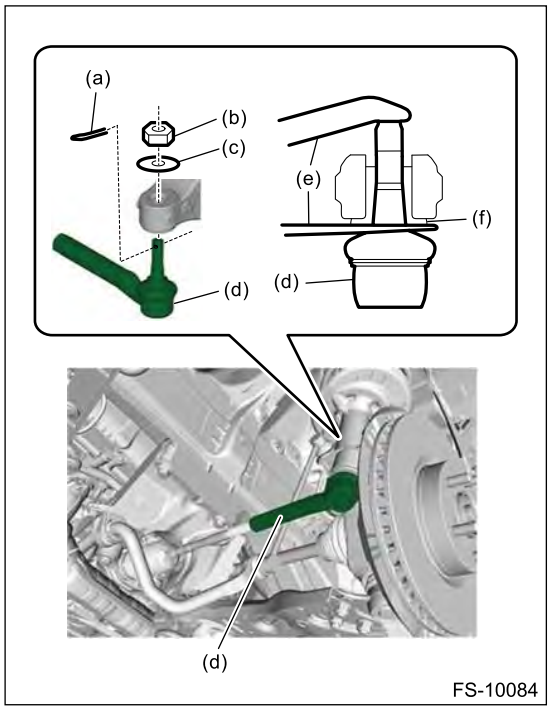
1. Remove the strut mount protection cap.
2. Loosen the nut for a strut mount CTR by 2 turns.

FS-10078

3. Lift up the vehicle, and then remove the front wheels.
4. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
5. Remove the bolt, and remove the crossmember support - rear.

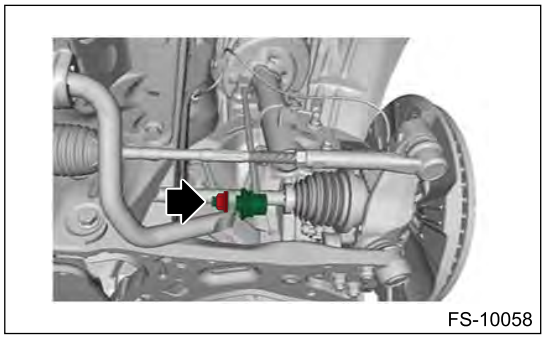
FS-10049

6. Disconnect the tie-rod end.



Note:

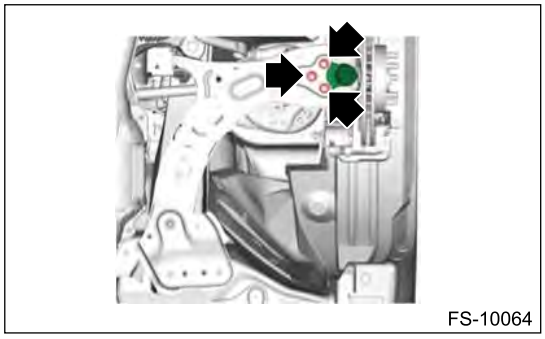
Securely hook the tie-rod ball joint puller (e) to the collar (f).



(1) Pull out the cotter pin (a).
(2) Remove the castle nut (b) and washer (c).
(3) Using a tie-rod ball joint puller (e), detach the tie-rod end (d).

Preparation tool:

Tie-rod ball joint puller



7. Remove the left and right stabilizer links (bottom part).

8. Remove the flange nut on the bottom of the ball joint.

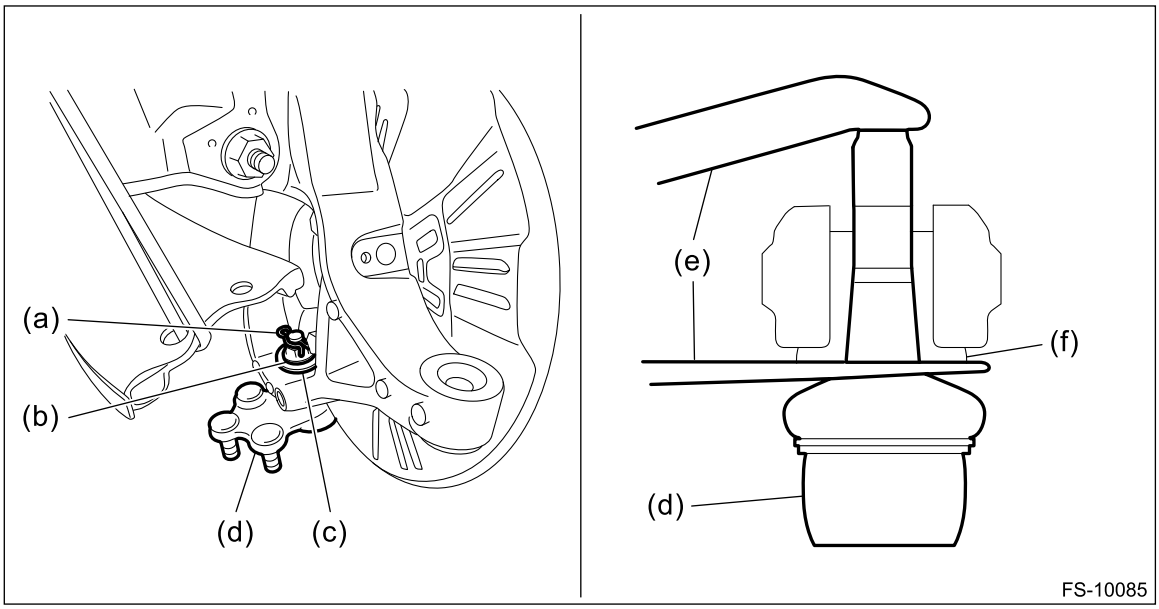
Note:

- **To prevent damage of the front arm ball joint boot, place a wooden block, etc. between front arm and ball joint.**
- **Mark the engaging position of the ball joint and front arm assembly before loosening the flange nuts. Doing so will facilitate aligning the position when assembling and lessen adjusting allowance for wheel alignment.**

9. Remove the drive shaft. Ref. to DRIVE SHAFT SYSTEM>Front Drive Shaft>REMOVAL.

10. Remove the ball joint.

Note:



Securely hook the tie-rod ball joint puller (e) to the collar (f).

(1) Pull out the snap pin (a), and remove the flange nut (b) and washer (c).

(2) Use a tie-rod ball joint puller (e) to detach the ball joint (d).

Preparation tool:

Tie-rod ball joint puller

(3) Pull out the ball joint.

FRONT SUSPENSION > Ball Joint

INSTALLATION

Caution:

- **For parts which are not reusable, always use new parts.**
- **Do not apply grease to the tapered portion of ball stud.**
- **Make sure that there is no gap between the housing assembly - front axle and the collar.**
- **If the collar is removed from the housing assembly - front axle, replace the housing assembly - front axle with a new part.**

1. Install the ball joint into the housing - front axle.
   Tightening torque:
   51N·m (5.2 kgf-m, 37.6 ft-lb)
2. Insert the washer, and secure the flange nut.
3. Insert a new snap pin to secure the flange nut.
4. Install the drive shaft. Ref. to DRIVE SHAFT SYSTEM>Front Drive Shaft>INSTALLATION.
5. Install the flange nut on the bottom of the ball joint.
   Tightening torque:
   100N·m (10.2 kgf-m, 73.8 ft-lb)
6. Install the stabilizer link (bottom part).
   Tightening torque:
   60N·m (6.1 kgf-m, 44.3 ft-lb)
7. Install the tie-rod end.
   Note:
   - **Do not forget to install the washer.**
   - **When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.**

Tightening torque:

27N·m (2.7 kgf-m, 19.9 ft-lb)

8. Insert a new cotter pin and secure the castle nut.
9. Install the crossmember support - rear.

   Tightening torque:

   70N·m (7.1 kgf-m, 51.6 ft-lb)
10. Install the under cover - front.

    Tightening torque:

    18N·m (1.8kgf-m, 13.3 ft-lb)
11. Lower the vehicle, and install the front wheels.

    Tightening torque:

    120N·m (12.2 kgf-m, 88.5 ft-lb)
12. Confirm that the wheels are in full contact with the ground, and tighten the nuts of the strut mount CTR.

    Caution:

    Be sure to use a new self-locking nut.

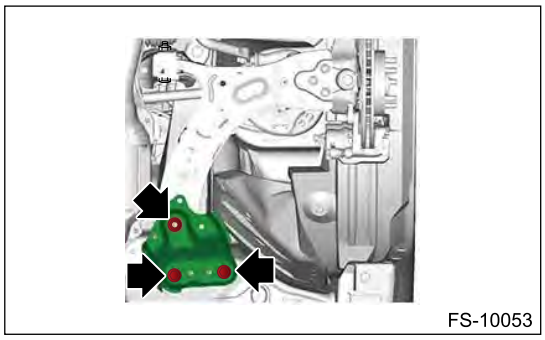
    Tightening torque:

    55N·m (5.6 kgf-m, 40.6 ft-lb)

FRONT SUSPENSION > Ball Joint

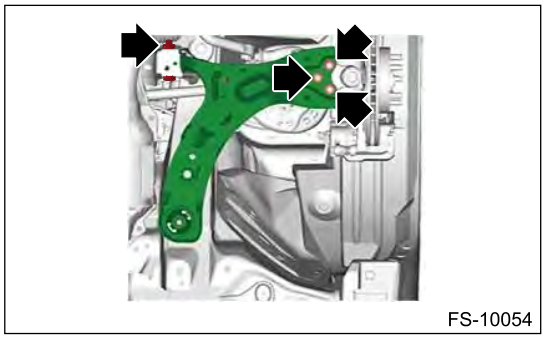
INSPECTION

1. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.



- **Looseness exists** → Replace the ball joint. Ref. to FRONT SUSPENSION>Ball Joint>REMOVAL.

2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the hub unit COMPL - front axle. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.
3. Replace the ball joint if the dust cover is damaged when visually inspecting the dust cover.



FRONT SUSPENSION > Front Arm

REMOVAL

1. Lift up the vehicle, and then remove the front wheels.
2. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
3. Remove the crossmember support - rear. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.
4. Remove the front arm rear plate.

5. Remove the front arm assembly.

FRONT SUSPENSION > Front Arm

INSTALLATION

Caution:
For parts which are not reusable, always use new parts.

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Check the front arm assembly for damage or cracks, and replace if defective.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
   - Visually check the dust cover on the ball joint for damage.
2. Using new self-locking nuts and flange bolts, temporarily tighten the front arm assembly to the crossmember COMPL.
3. Using new self-locking nuts, temporary tighten the front arm assembly to the body side.
4. Install the front arm rear plate.
   Tightening torque:
   150 N·m (15.3 kgf-m, 110.6 ft-lb)
5. Connect the front arm assembly to the ball joint.
   Tightening torque:
   100 N·m (10.2 kgf-m, 73.8 ft-lb)
6. Install the crossmember support - rear.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

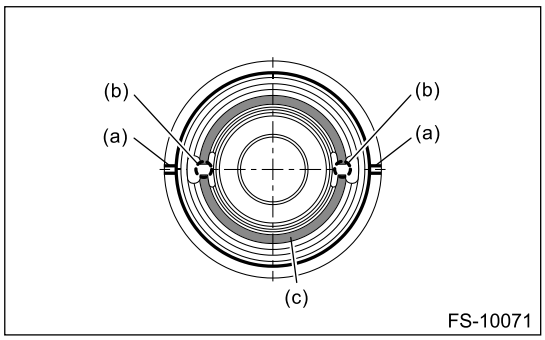
7. Install the under cover - front.
Tightening torque:
18N·m (1.8kgf-m, 13.3 ft-lb)

8. Install the front wheels.
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

9. Unload the vehicle from the lift, confirm that the wheels are in full contact with the ground and the vehicle is at curb weight, and tighten the bolt which secures the front arm assembly to the crossmember COMPL and the nut which secures the assembly to the body side.
Tightening torque:
Ref. to FRONT SUSPENSION>General Description>COMPONENT > FRONT SUSPENSION.

10. Inspect the wheel alignment and adjust if necessary.
- Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
- Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

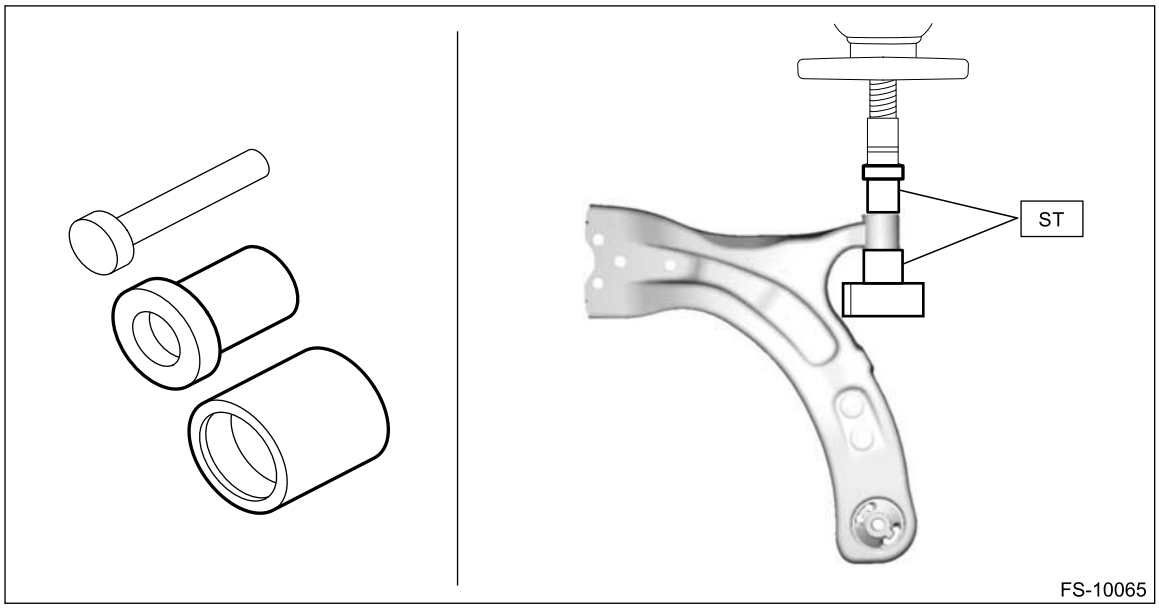
Caution:
When the wheel alignment has been adjusted, perform the following adjustment.
- **Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.**
- **VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.**



11. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

FRONT SUSPENSION > Front Arm

DISASSEMBLY

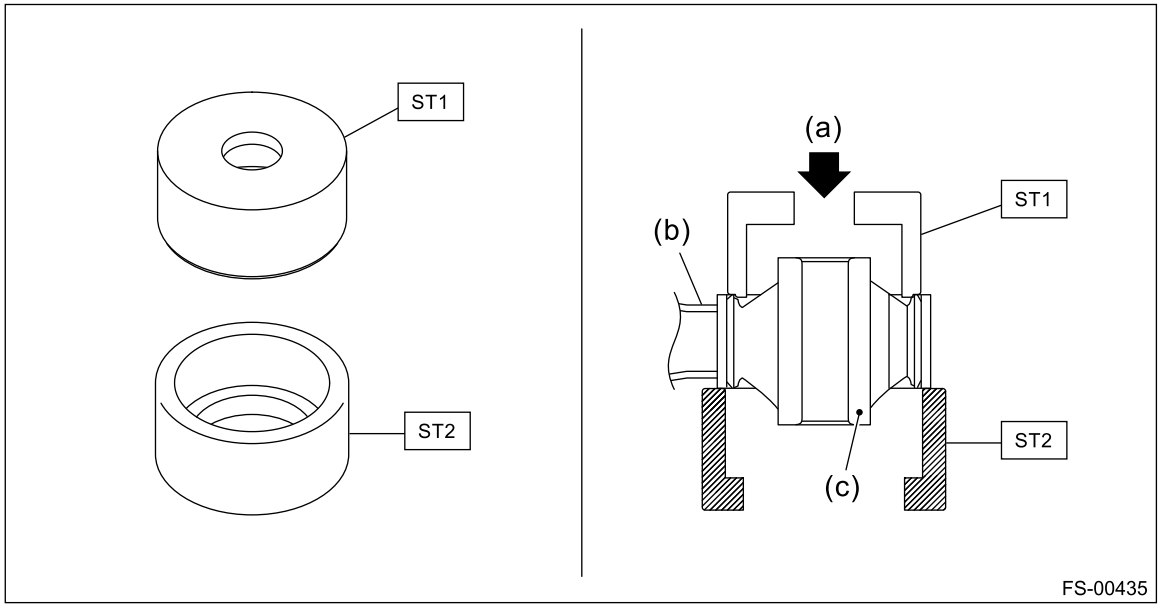


1. BUSHING FRONT - FRONT ARM

1. Put an alignment mark on the front arm assembly based on the split portion of the bushing intermediate plate of the busing front - front arm.
Caution:
Always put an alignment mark for aligning the position on bushing installation.

(a) Put an alignment mark. (b) Gap of bushing intermediate plate (c) Bushing intermediate plate

2. Using the ST and a press, remove the busing front - front arm.
Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)



2. BUSHING REAR - FRONT ARM

1. Put an alignment mark on the front arm assembly based on the center of recess portion of the busing rear - front arm.
2. Using the ST and a press, remove the busing rear - front arm.

Preparation tool:

ST1: REMOVER (20299AG000)

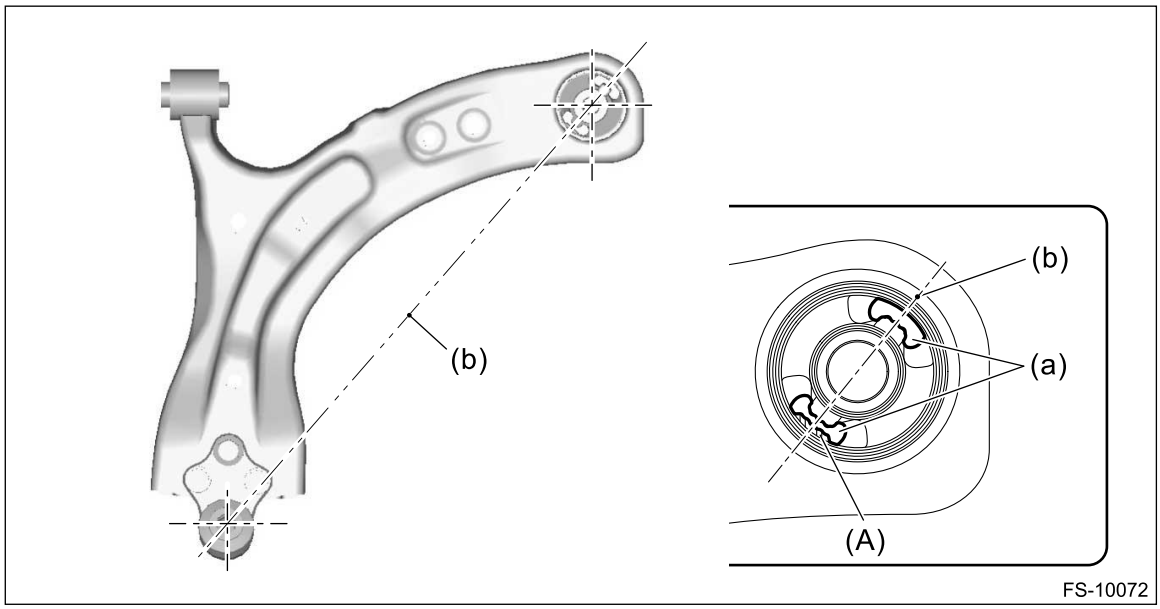
ST2: BASE (20299AG010)

(a) Press (b) Front arm (c) Rear bushing

FRONT SUSPENSION > Front Arm

ASSEMBLY

1. BUSHING FRONT - FRONT ARM



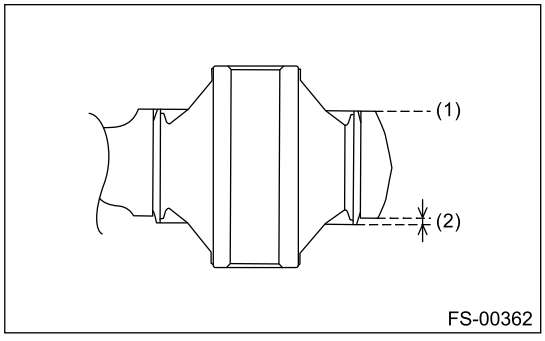
1. Before assembly, inspect the following items and replace any faulty part with a new one.
   - Check the front arm assembly for damage or cracks, and replace if defective.

- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for damage.

2. Assemble each part in the reverse order of disassembly.

2. BUSHING REAR - FRONT ARM

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Check the front arm assembly for damage or cracks, and replace if defective.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
   - Visually check the dust cover on the ball joint for damage.
2. Align a line extending from the center of recess portion with the ball joint after placing the protrusion (A) of recess portion to the ball joint side of the front arm assembly.

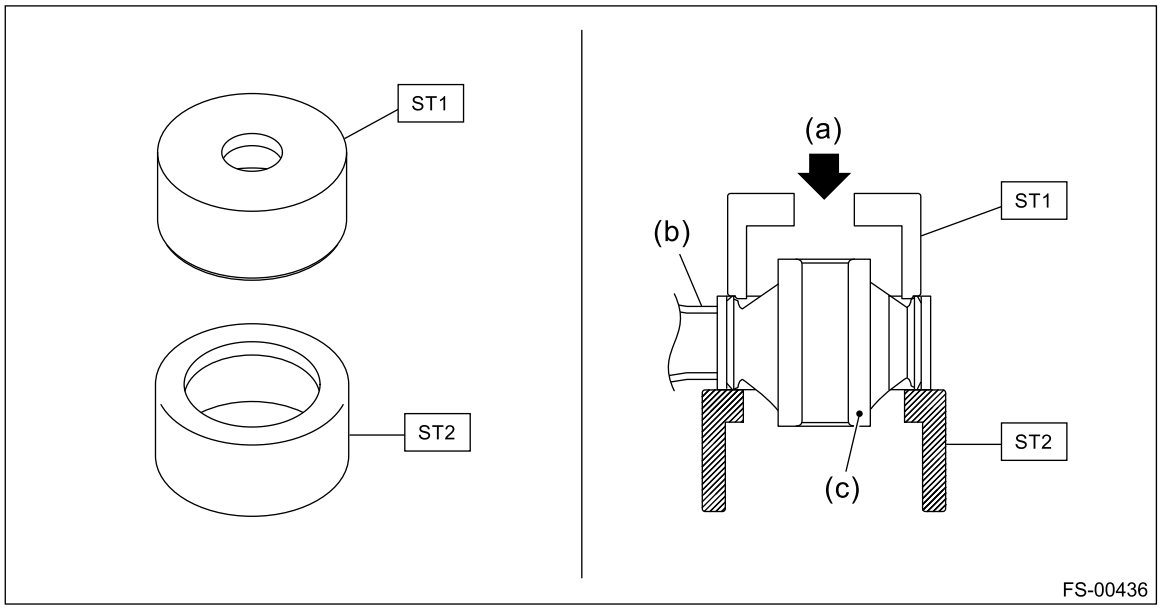


(a) Recess section (b) Center line of recess section

3. Using the ST and a press, install the busing rear - front arm.

Caution:

Align the upper face of front arm assembly and the end of bushing during installation.



(1) Aligned

(2) Not aligned

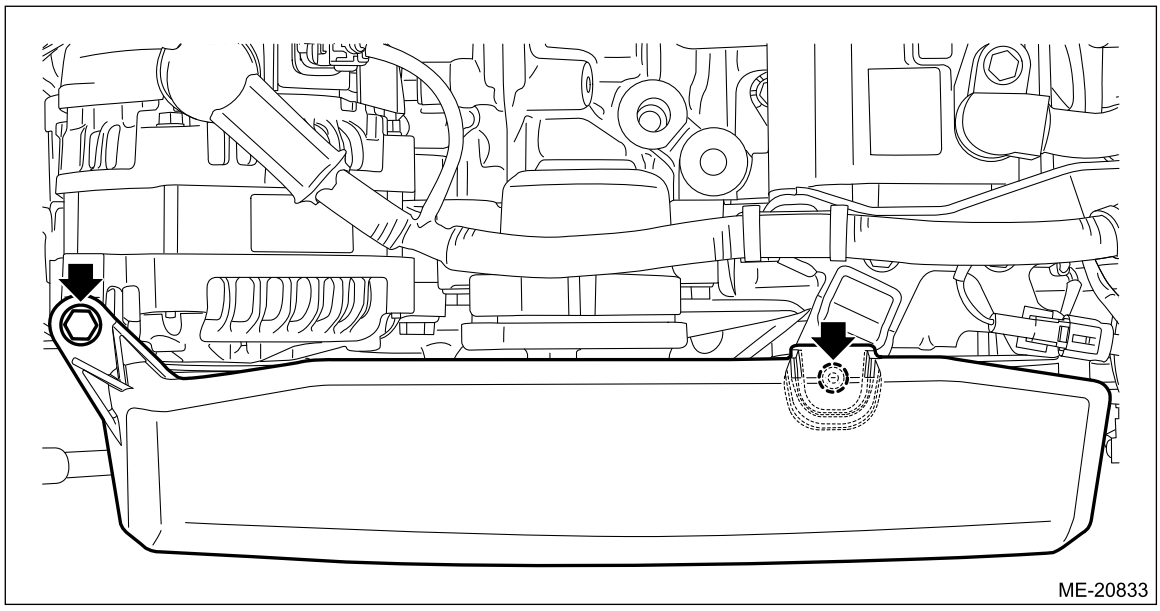
Preparation tool:

ST1: REMOVER (20299AG000)

ST2: BASE (20299AG010)

(a) Press

(b) Front arm ASSY



(c) Bushing rear - front arm

REMOVAL

Caution:

- **The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.**
- **Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the power steering control module connector when removing or installing. If a foreign matter enters, completely remove it.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the V-belt covers.

3. Using the ST1, install the ST2 to the engine unit.

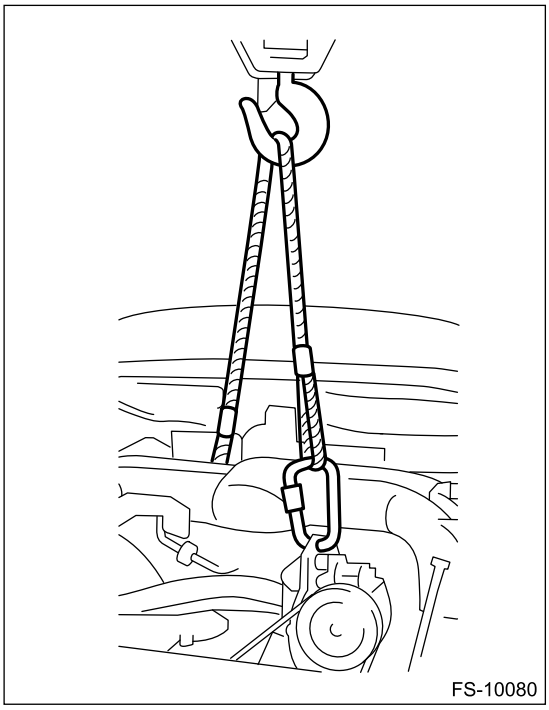
   Preparation tool:

   ST1: BOLT (18363AA050)

   ST2: HANGER (18360AA040)

   Tightening torque:

   43 N·m (4.4kgf-m, 31.7 ft-lb)

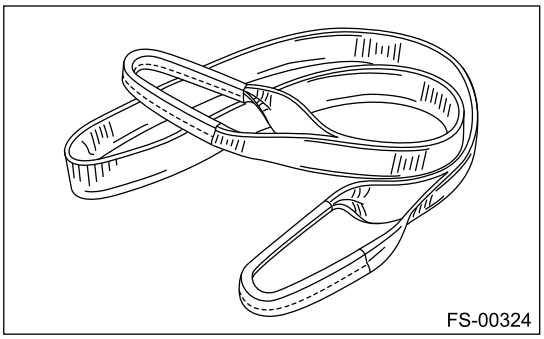


4. Support the engine with a lifting device and wire ropes.

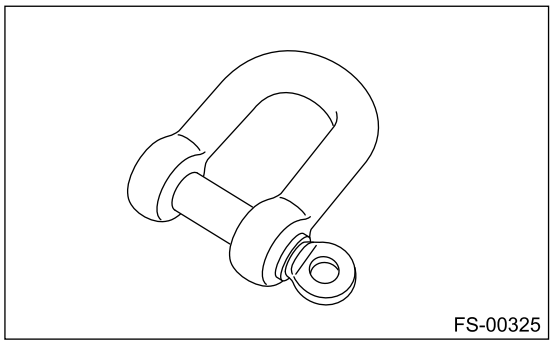
(1) While lifting up the vehicle, also raise up the lifting device simultaneously.

Caution:

Be careful not to damage the vehicle with a lifting device or wire ropes.



(2) Raise up the lifting device, and lift the engine body by approx. 10 mm (0.39 in).



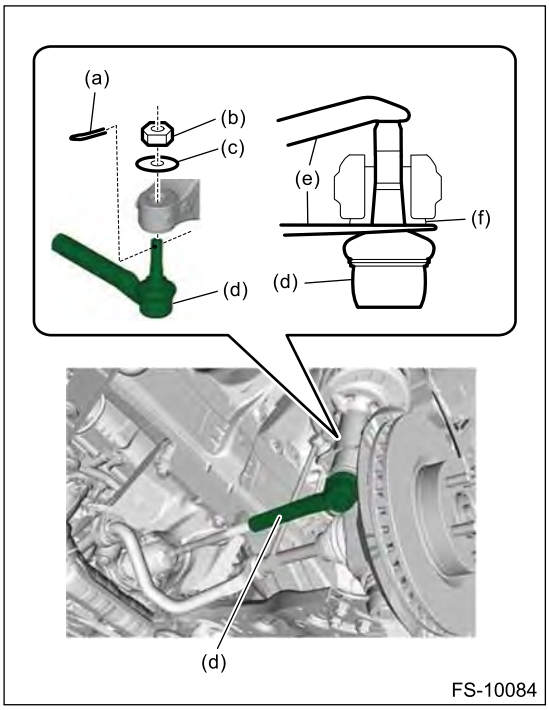
(3) Attach the sling belt so that it wraps around the both frames using the shackle.

Caution:

- **Be sure to attach the sling belt to ensure safety in operation.**
- **Use a sling belt with the length of 2 m (6.6 ft), the width of 35 — 40 mm (1.38 — 1.57 in) and the load capacity of 1 t (2205 lb) or more.**

- **Use a shackle with the load capacity of 0.5 t (1103 lb) or more.**

5. Lift up the vehicle, and then remove the front wheels.
6. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
7. Remove the crossmember support - rear and the crossmember support - front. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.
8. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
9. Remove the stabilizers. Ref. to FRONT SUSPENSION>Stabilizer>REMOVAL > STABILIZER.
10. Disconnect the tie-rod end.

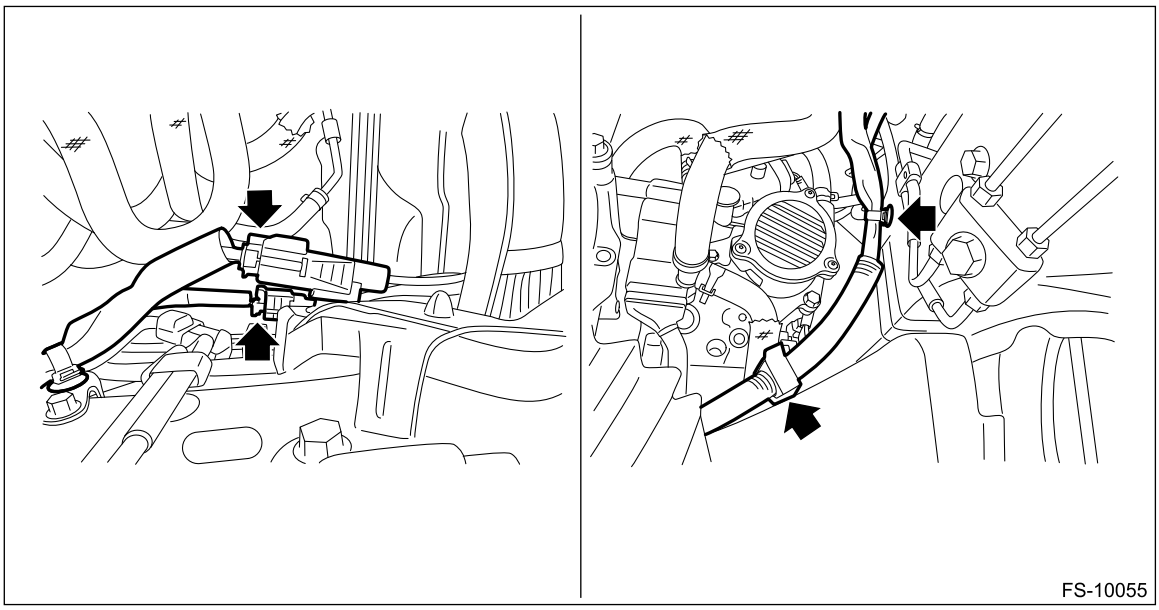


Note:

Securely hook the tie-rod ball joint puller (e) to the collar (f).

(1) Pull out the cotter pin (a).
(2) Remove the castle nut (b) and washer (c).
(3) Using a tie-rod ball joint puller (e), detach the tie-rod end (d).

Preparation tool:

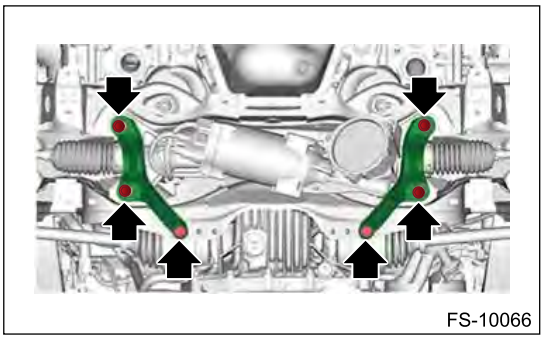


Tie-rod ball joint puller

11. Remove the front arm assembly. Ref. to FRONT SUSPENSION>Front Arm>REMOVAL.

12. Remove the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>REMOVAL.

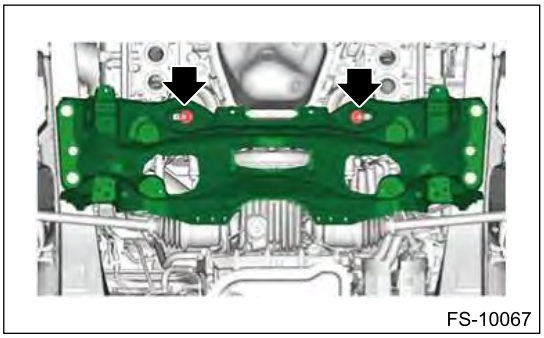
13. Disconnect the power steering harness connector and harness clamp.



14. Remove the steering gearbox assembly from the crossmember COMPL.

Caution:

When lowering the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.



(1) Support the steering gearbox assembly from the bottom side using a transmission jack.

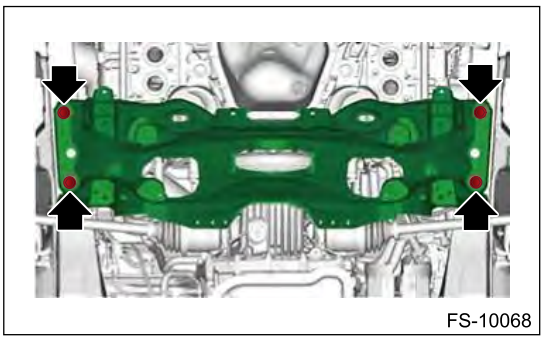
(2) Remove the bolts securing the steering gearbox assembly and stiffener to the crossmember COMPL.

FS-10066

(3) Lower the transmission jack slowly, and lower the steering gearbox assembly.

15. Remove the nuts which secure the crossmember COMPL to the engine mounting.

FS-10067



16. Remove the crossmember COMPL.

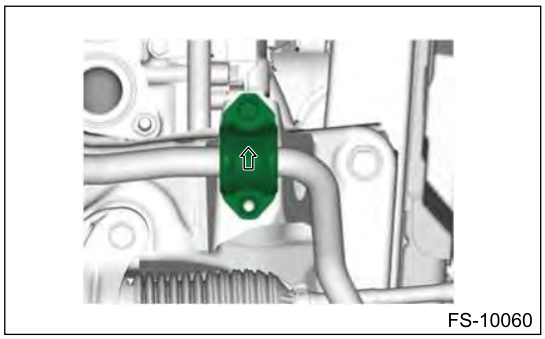
Caution:

The crossmember COMPL is heavy. Make sure that it is firmly supported so that it is level.

(1) Support the crossmember COMPL from the bottom side using a transmission jack.

(2) Remove the bolts which secure the crossmember COMPL to the body.

FS-10068



(3) Lower the transmission jack slowly, and lower the crossmember COMPL.

FRONT SUSPENSION > Crossmember

INSTALLATION

Caution:

- **When raising the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.**
- **The crossmember COMPL is heavy. Make sure that it is firmly supported so that it is level.**
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Make sure that there is no gap between the housing assembly - front axle and the collar.**
- **If the collar is removed from the housing assembly - front axle, replace the housing assembly - front axle with a new part.**
- **Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.**

1. Install the crossmember COMPL.

   Note:

   Check the crossmember COMPL for damage or cracks, and correct or replace if defective.

   (1) Install the bolts which secure the crossmember COMPL to the body.

   Tightening torque:

   Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to FRONT SUSPENSION>General Description>COMPONENT > FRONT SUSPENSION.
2. Install the engine mounting and the crossmember COMPL with new nuts.

   Caution:

   Be careful not to damage the vehicle with a lifting device or wire ropes.

   Tightening torque:

   Engine mounting — crossmember COMPL: 90 N·m (9.2 kgf-m, 66.4 ft-lb)
3. Install the steering gearbox assembly and stiffener to the crossmember COMPL.

   Tightening torque:

   Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to FRONT SUSPENSION>General Description>COMPONENT > FRONT SUSPENSION.
4. Install the power steering harness connector and harness clamp.
5. Install the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSTALLATION.
6. Install the front arm assembly. Ref. to FRONT SUSPENSION>Front Arm>INSTALLATION.
7. Install the tie-rod end.

Note:

- **Do not forget to install the washer.**
- **When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.**

Tightening torque:

27 N·m (2.7 kgf-m, 19.9 ft-lb)

8. Insert a new cotter pin and secure the castle nut.
9. Install the stabilizer. Ref. to FRONT SUSPENSION>Stabilizer>INSTALLATION > STABILIZER.
10. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
11. Install the crossmember support - front and the crossmember support - rear. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.
12. Install the under cover - front.

    Tightening torque:

    18N·m (1.8kgf-m, 13.3 ft-lb)
13. Install the front wheels and lower the vehicle.

    Tightening torque:

    120 N·m (12.2 kgf-m, 88.5 ft-lb)
14. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
15. Inspect the wheel alignment and adjust if necessary.
    - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
    - Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

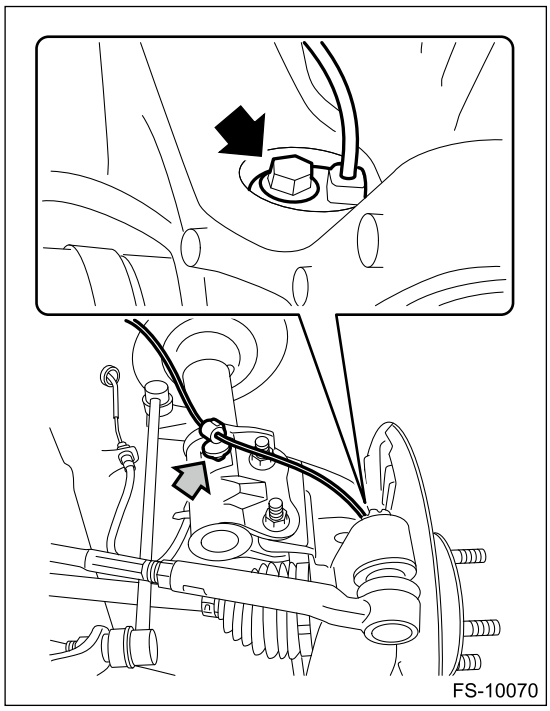
    Caution:

    When the wheel alignment has been adjusted, perform the following adjustment.

    – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.

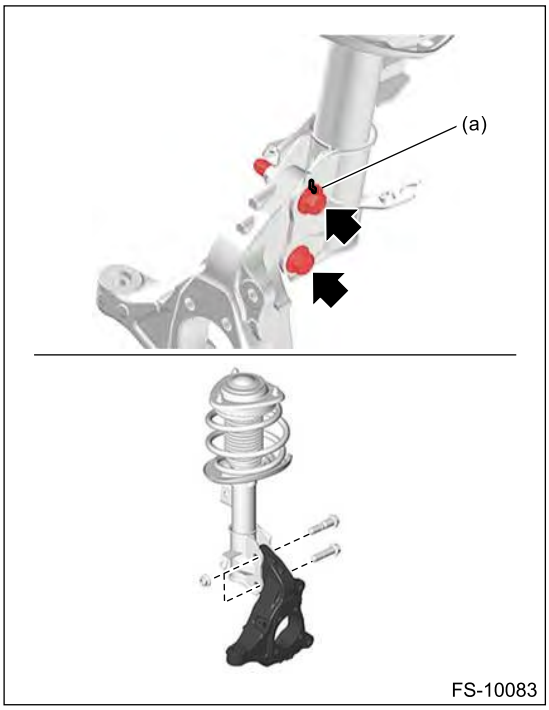
    – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.
16. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

REMOVAL

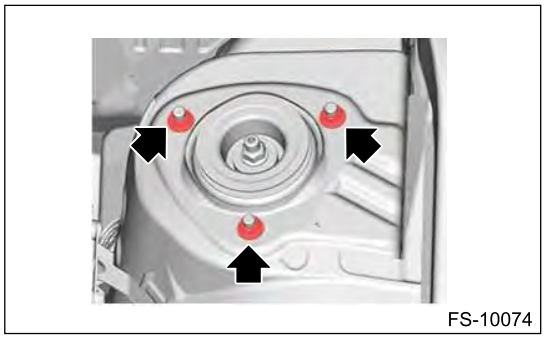


1. Lift up the vehicle, and then remove the front wheels.
2. Remove the left and right stabilizer links (upper part).

3. Remove the brake hose bracket.



4. Remove the ABS wheel speed sensor.



5. Remove the strut assembly.
   (1) Place an alignment mark (a) on the adjusting bolt and the strut.
   (2) Remove the adjusting bolts and flange bolts for the strut assembly.

Caution:

While holding the adjusting bolt side, tighten the nut side.

(3) Remove the three nuts securing strut mount to body.

FRONT SUSPENSION > Front Strut

INSTALLATION

Caution:

For parts which are not reusable, always use new parts.

1. Install the strut mount - front at the upper side of the strut to the vehicle body.
   Tightening torque:
   32 N·m (3.3 kgf-m, 23.6 ft-lb)
2. Align alignment marks on the camber adjusting bolt and strut, and install the strut to the housing - front axle.
   Note:
   While holding the bolt head of adjusting bolt, tighten the nut.
   Tightening torque:
   155 N·m (15.8 kgf-m, 114.3 ft-lb)
3. Install the ABS wheel speed sensor and harness bracket.
   Caution:
   During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.
   Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4. Install the brake hose bracket.
   Tightening torque:
   33 N·m (3.4 kgf-m, 24.3 ft-lb)
5. Install the stabilizer link. Ref. to FRONT SUSPENSION>Stabilizer>INSTALLATION > STABILIZER LINK.
6. Lower the vehicle, and install the front wheels.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
7. Inspect the wheel alignment and adjust if necessary.
   - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
   - Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

   Caution:
   When the wheel alignment has been adjusted, perform the following adjustment.
   – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
   – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.
8. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

FRONT SUSPENSION > Front Strut

DISASSEMBLY

1. Using a coil spring compressor, compress the coil spring.
2. Using a hexagon wrench to prevent strut rod from turning, remove the self-locking nut with ST.

   Caution:
   When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

   Preparation tool:
   ST: STRUT MOUNT SOCKET (20399AG000)

Note:

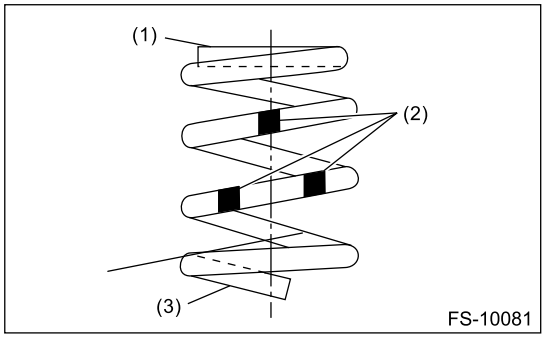
<Example of coil spring compressor installation>

The installing position of coil spring compressor varies depending on the coil spring shape and winding number.

3. Remove the strut mount - front, the strut bearing - front and the dust cover - front strut from the strut COMPL.
4. Gradually decrease the compression force of compressor, and remove the coil spring.
5. Remove the helper - front strut.

FRONT SUSPENSION > Front Strut

ASSEMBLY



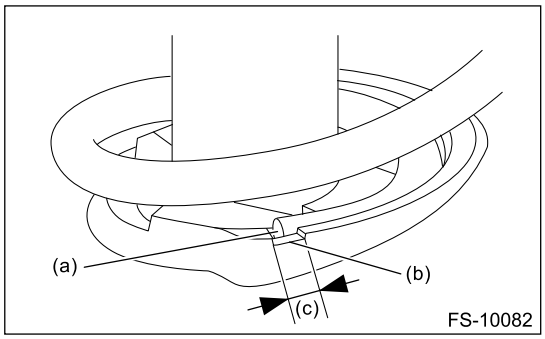
1. Before assembly, check each part. Ref. to FRONT SUSPENSION>Front Strut>INSPECTION.
2. Using a coil spring compressor, compress the coil spring.

Caution:

When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

Note:

Make sure that the vertical install direction of the coil spring is as shown in the figure.



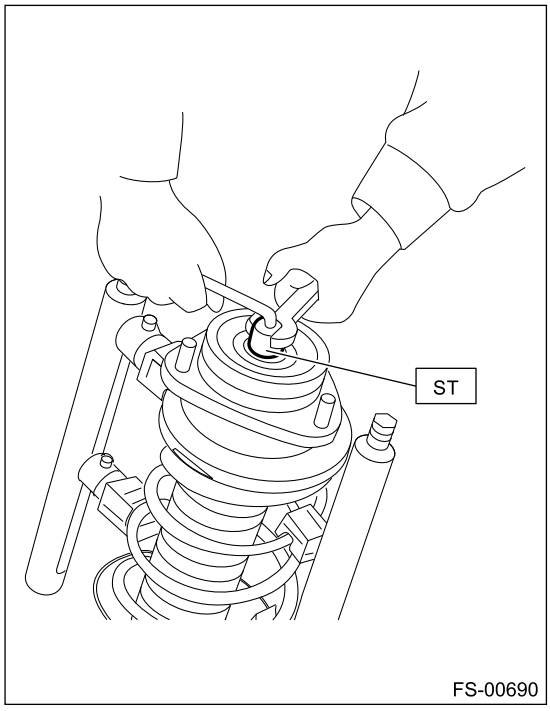
(1) Diameter is large (upper part)

(2) Identification paint

(3) Diameter is small (bottom part)

3. Install the rubber seat LWR to the strut COMPL.
4. Set the coil spring correctly so that the spring end face (a) fits within the area (c) of the cutout

portion (b) of rubber seat LWR as shown in the figure.



5. Install the helper - front strut to the piston rod.
6. Pull the piston rod fully upward, and install the dust cover - front strut.
7. Temporarily assemble the strut mount - front and the strut bearing - front, install it to the piston rod, and temporarily tighten a new self-locking nut.
8. Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.

Caution:

Make sure that the strut bearing - front turns smoothly after tightening.

Preparation tool:

ST: STRUT MOUNT SOCKET (20399AG000)

Tightening torque:

55 N·m (5.6 kgf-m, 40.6 ft-lb)

9. Loosen the coil spring compressor carefully.

FRONT SUSPENSION > Front Strut

INSPECTION

Check the removed part for wear, damage and cracks, and then repair or replace it if defective.

1. STRUT

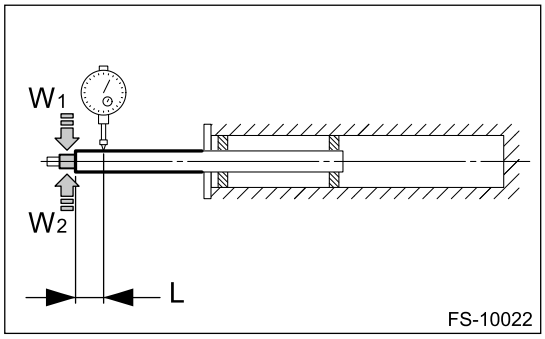
1. Check for oil leaks.

2. Move the piston rod up and down to check that it operates smoothly without any hitch.
3. Check the piston rod runout.

Preparation tool:

Dial gauge

(1) Fix the outer shell.



(2) Extend the piston rod until it stops retracting, and set the dial gauge at the L position from the end of the piston rod.

Measuring point:

L=10 mm (0.39 in)

(3) While applying a force of W [20 N (2 kgf, 4 lbf)] to the arrowed section, read the dial gauge indication P_1.

(4) While applying a force of W_2 20 N (2 kgf, 4 lbf) from the opposite side of W_1, read the dial gauge indication P_2.

Play limit (P_1+ P_2): 0.8 mm (0.031 in)

4. Replace the strut if faulty is found in the inspection or limit value is exceeded.

2. STRUT MOUNT - FRONT

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new part if defective.

3. RUBBER SEAT LWR

If cracks or damage are found, replace it with a new part.

4. STRUT BEARING - FRONT

If abnormal cracks or any abnormality in rotation are found, replace it with a new part.

5. COIL SPRING - FRONT

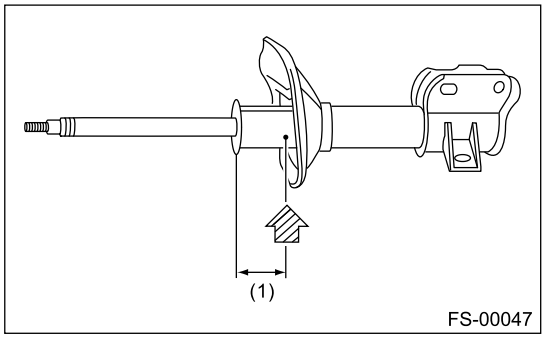
If cracks, damage or deformation are found, replace it with a new part.

6. HELPER - FRONT STRUT

If major cracks or damage are found, replace it with a new part.

7. DUST COVER - FRONT

If major cracks or damage are found, replace it with a new part.



FRONT SUSPENSION > Front Strut

DISPOSAL

Caution:

- **Before handling the strut damper and shock absorber, be sure to wear goggles to protect eyes from gas, oil and cutting powder.**
- **Do not disassemble the strut damper and shock absorber or place them into a fire.**
- **When discarding gas filled strut dampers and shock absorbers, drill holes in them to purge the gas.**

1. Place the strut damper and shock absorber on a level surface with the piston rod fully expanded.
2. Make a hole of 30 mm (1.18 in) deep into the specified position shown in the figure, using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.

(1) 40 mm (1.57 in)

INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Deformation or damage of suspension parts	Replace.
(2) Defective strut COMPL or shock absorber COMPL	Replace.
(3) Improper installation of strut assembly or shock absorber assembly	Replace with appropriate parts.
(4) Installation of the wrong coil spring	Replace with appropriate parts.

2. POOR RIDE COMFORT

1. Large rebound shock.
2. Rocking of the vehicle continues too long after running over bump and hump.
3. Excessive shock in bumping.

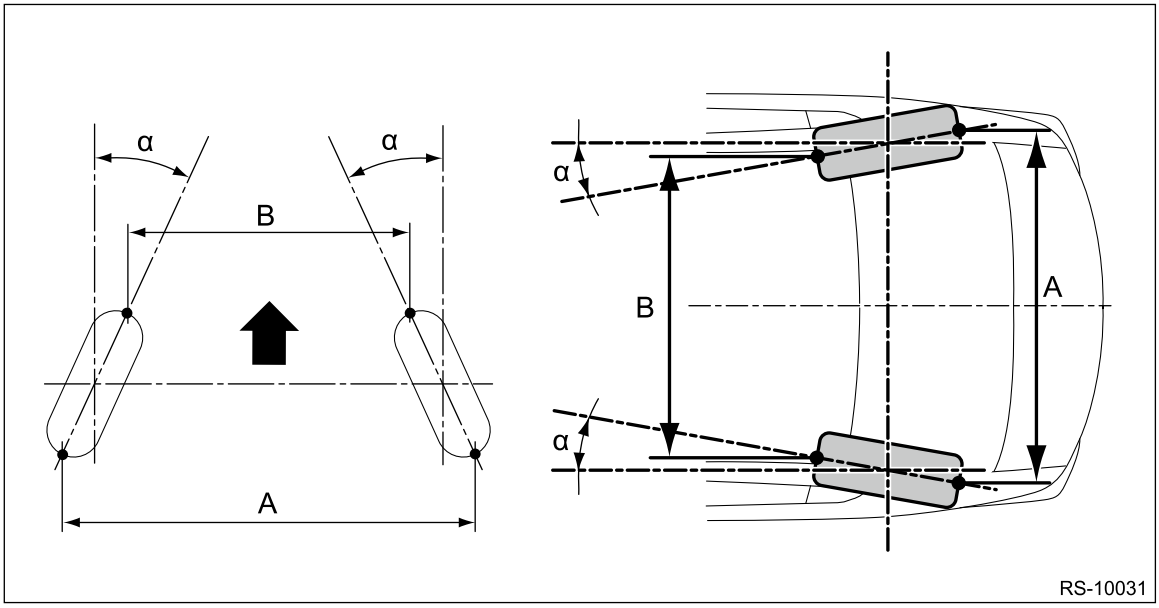
Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Fault in operation of strut or shock absorber	Replace.
(5) Damage or deformation of strut mount or shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of strut or shock absorber	Replace with appropriate parts.
(7) Abnormal deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly or shock absorber	Replace.
(9) Oil leakage from the strut or shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of strut or shock absorber component parts	Replace.
(2) Loosening of the suspension link installing bolt	Tighten to the specified torque.
(3) Abnormal deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of strut or shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

REAR SUSPENSION

RS

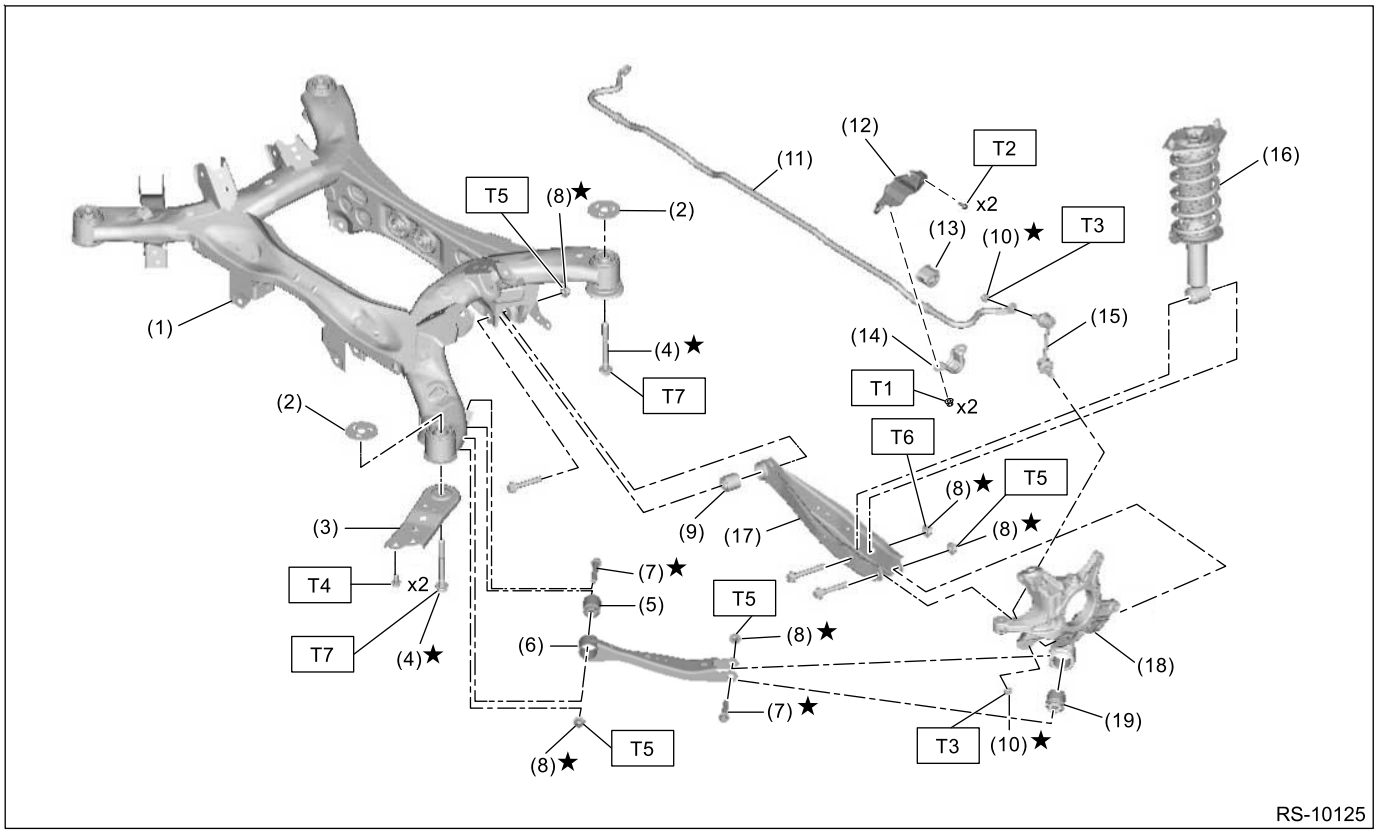


1. General Description
2. Wheel Alignment
3. Trailing Link
4. Rear Lateral Link (front)
5. Rear Lateral Link (rear)
6. Sub Frame
7. Stabilizer
8. Upper Arm
9. Rear Shock Absorber
10. General Diagnostic Table

SPECIFICATION

Suspension height (Tolerance: $^{+12\ mm}_{-24\ mm}(^{+0.47\ in}_{-0.94\ in})$)	mm (in)	−15 (−0.59)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		−1°20′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)
		Toe angle (sum of both wheels): IN0°15′ ±15′
Thrust angle (tolerance: 0°00′±30′)		0°00′

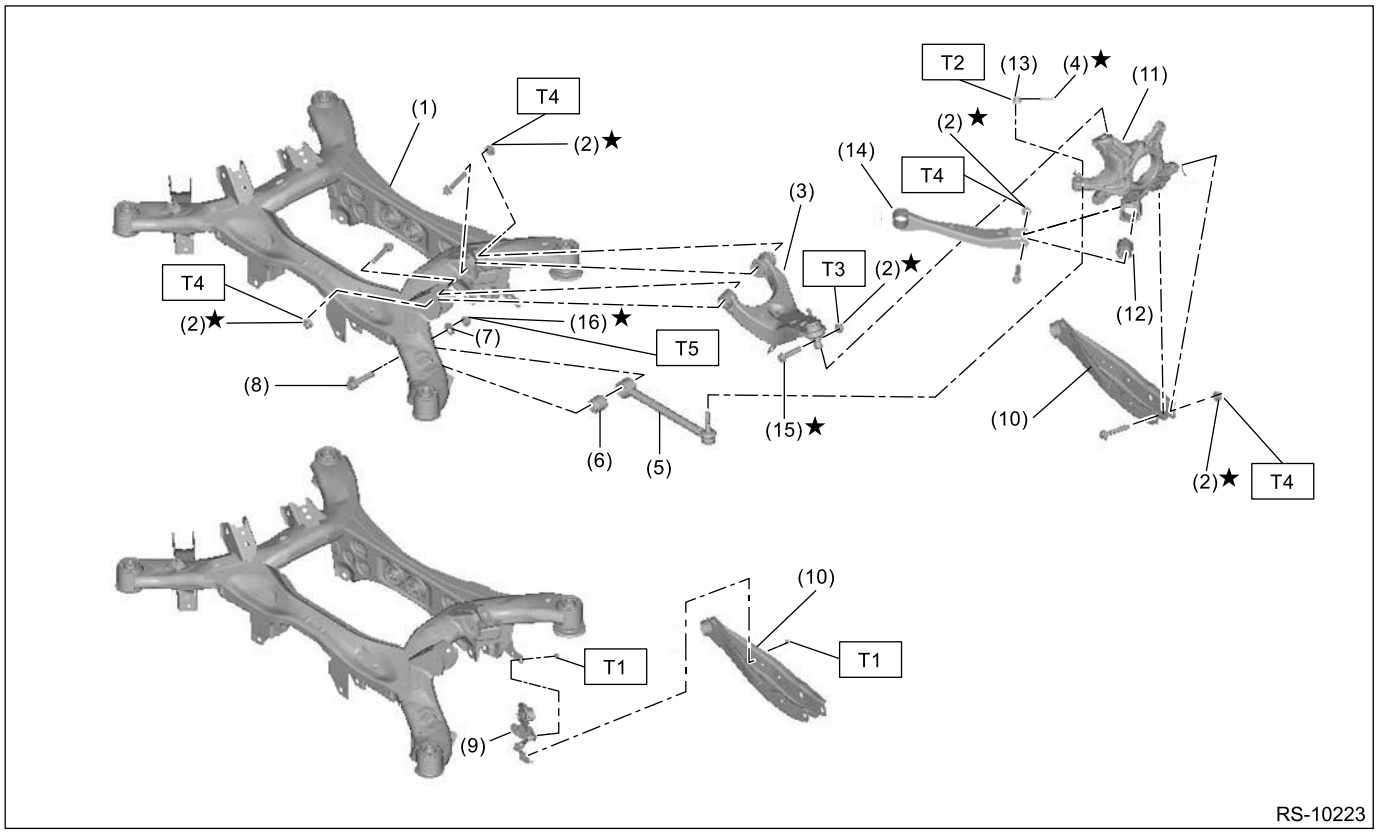
Note:



- **Adjust with the value less than the inspection value, taking aging variation into consideration.**
- **Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.**
- **Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.**
- **If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.**

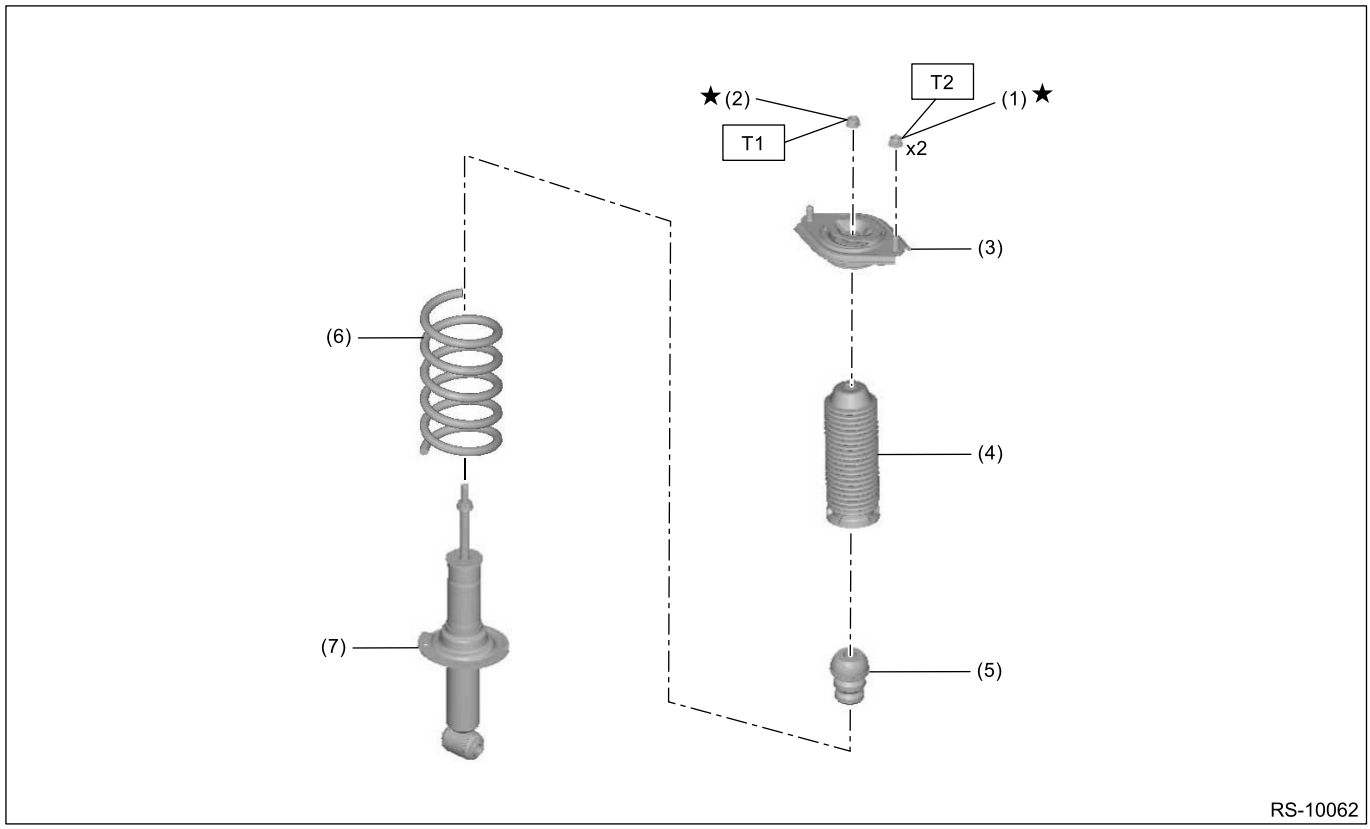
A − B = Positive: Toe-in, Negative: Toe-out
α = Individual toe angles

COMPONENT



1. REAR SUSPENSION

(1) Sub frame ASSY
(2) Stopper UPR
(3) Support - sub frame
(4) Flange bolt A
(5) Bushing A - trailing link
(6) Trailing link
(7) Flange bolt B
(8) Self-locking nut
(9) Bushing C - lateral link rear
(10) Flange nut
(11) Stabilizer
(12) Bracket COMPL - stabilizer
(13) Bushing - stabilizer
(14) Clamp - stabilizer bushing
(15) Stabilizer link
(16) Rear shock absorber ASSY
(17) Rear lateral link ASSY - rear
(18) Housing ASSY - rear axle
(19) Bushing - trailing link



Tightening torque: N·m (kgf-m, ft-lb)

T1: 30 (3.1, 22.1)
T2: 35 (3.6, 25.8)
T3: 38 (3.9, 28)
T4: 70 (7.1, 51.6)
T5: 90 (9.2, 66.4)
T6: 120 (12.2, 88.5)
T7: 145 (14.8, 106.9)

(1)	Sub frame ASSY	(9)	Sensor ASSY - headlight beam leveler (models with auto headlight beam leveler only)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Self-locking nut A	(10)	Rear lateral link ASSY - rear	***T1: 7.5 (0.8, 5.5)***
(3)	Rear upper arm ASSY	(11)	Housing ASSY - rear axle	***T2: 60 (6.1, 44.3)***
(4)	Snap pin	(12)	Bushing - trailing link	***T3: 80 (8.2, 59)***
(5)	Rear lateral link ASSY - front	(13)	Flange nut	***T4: 90 (9.2, 66.4)***
(6)	Bushing B - lateral link front	(14)	Trailing link	***T5: 120 (12.2, 88.5)***
(7)	Adjusting washer	(15)	Flange bolt	
(8)	Adjusting bolt	(16)	Self-locking nut B	

2. REAR SHOCK ABSORBER

(1)	Flange nut	(5)	Helper - rear	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Self-locking nut	(6)	Coil spring - rear	***T1: 25 (2.5, 18.4)***	
(3)	Shock mount - rear	(7)	Shock absorber COMPL - rear	***T2: 30 (3.1, 22.1)***	
(4)	Dust cover - rear shock				

REAR SUSPENSION > General Description

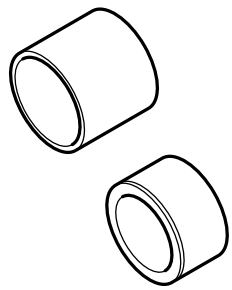
CAUTION

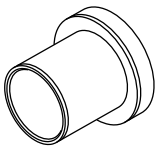
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of shock absorbers, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed, installed or replaced, perform the following adjustment.
  - Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
  - VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

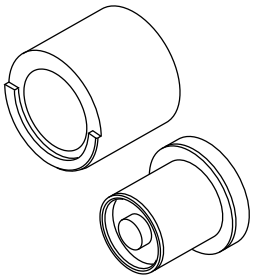
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  - Be careful with fire.
  - Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  - Follow all government and local regulations concerning disposal of refuse when disposing.
- Be sure that the surface of brake disc or brake pad is free from grease or oil.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

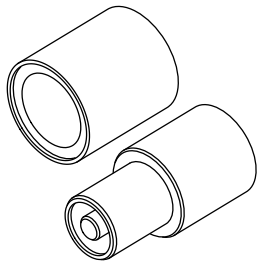
PREPARATION TOOL

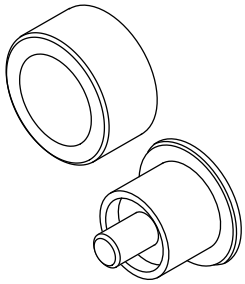
1. SPECIAL TOOL











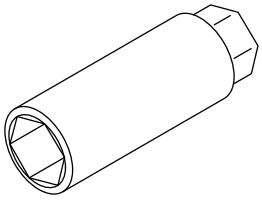


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing A - trailing link of the housing assembly - rear axle. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing A - trailing link of the housing assembly - rear axle. • Used together with base part of INSTALLER & REMOVER (20099PA010).
 ST20099AE000	20099AE000	INSTALLER & REMOVER	Used for replacing the bushing B - lateral link.

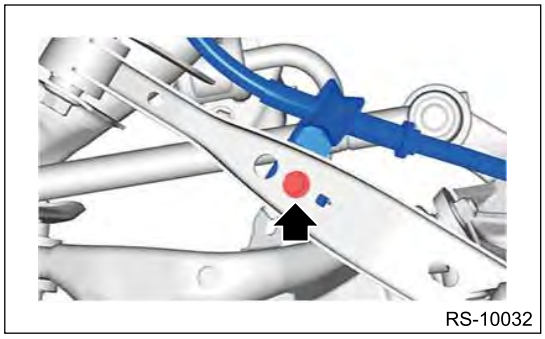
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099AE010	20099AE010	INSTALLER & REMOVER	Used for replacing the bushing C - lateral link.
 ST20099AE040	20099AE040	INSTALLER & REMOVER	Used for replacing the bushing C - lateral link.
 ST20399FG000	20399FG000	STRUT MOUNT SOCKET	• Used for disassembling and assembling strut assembly and shock absorber assembly. • Used for checking center nut torque of strut assembly and shock absorber assembly.

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment tester	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Jack	Used for removing and installing suspension.
Bearing puller	Used for removing bushings.
Tie-rod ball joint puller	Used for disconnecting the rear lateral link assembly - front.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.

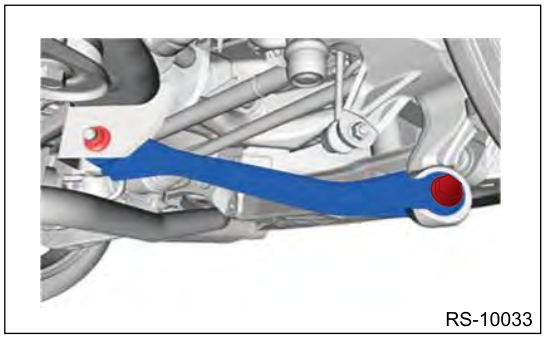
INSPECTION

Note:



For wheel alignment, measure or adjust the front and rear wheels at a time. Refer to "Wheel Alignment" in "FRONT SUSPENSION" section for measurement and adjustment procedures of wheel alignment.

- **Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.**
- **Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.**



REAR SUSPENSION > Trailing Link

REMOVAL

1. Lift up the vehicle, and then remove the rear wheels.
2. Disconnect the cable assembly - parking brake.

RS-10032

3. Remove the bolts and nuts, and then remove the trailing link.

RS-10033

REAR SUSPENSION > Trailing Link

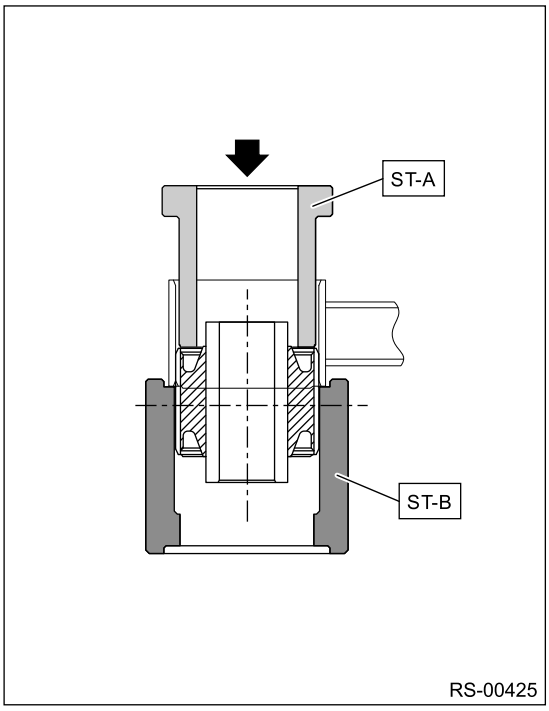
INSTALLATION

Caution:

- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1. Install the trailing link.
   Tightening torque:
   90 N·m (9.2 kgf-m, 66.4 ft-lb)
2. Install the cable assembly - parking brake.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
3. Install the rear wheels and lower the vehicle.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)

REAR SUSPENSION > Trailing Link



DISASSEMBLY

1. BUSHING A - TRAILING LINK

Using the ST, push out the bushing - A trailing link.

Preparation tool:

ST-A: BUSHING REMOVER (20099FG000)
ST-B: INSTALLER & REMOVER (20099PA010)

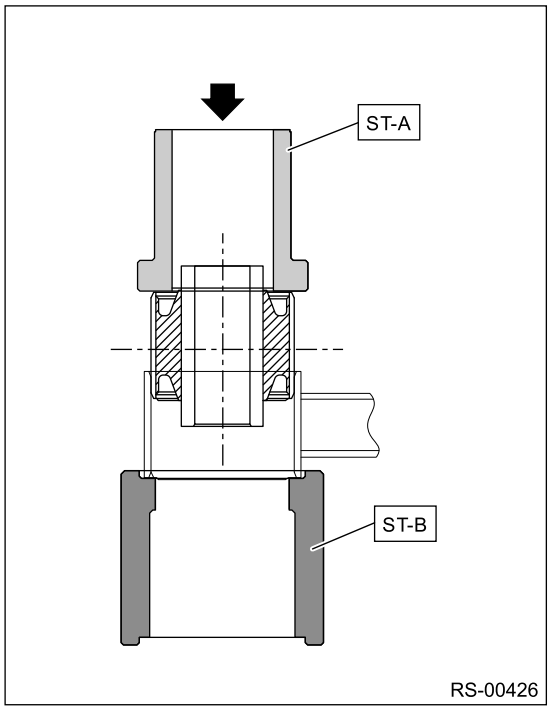
2. BUSHING - TRAILING LINK

For the removal procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. Ref. to DRIVE SHAFT SYSTEM>Rear Axle>DISASSEMBLY > TRAILING LINK BUSHING.

REAR SUSPENSION > Trailing Link

ASSEMBLY

1. BUSHING A - TRAILING LINK



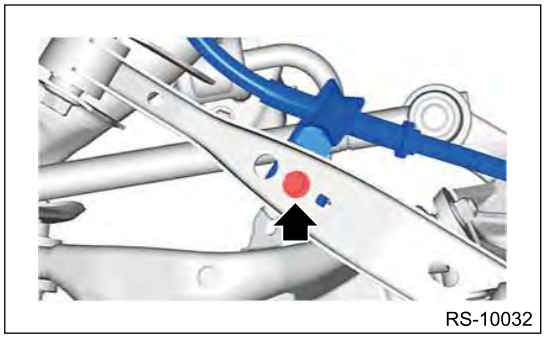
1. Before assembly, inspect the following items and replace any faulty part with a new one.
   - Perform visual check for damage or bend on the trailing link.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
2. Using the ST-A and ST-B, press-fit the bushing.

   Caution:

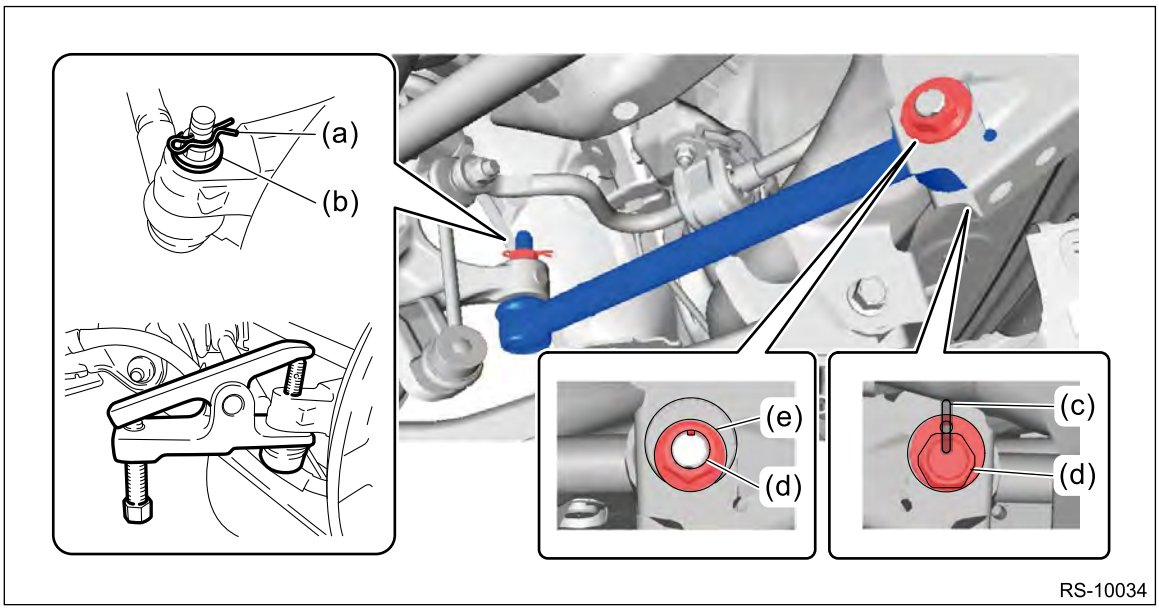
   Make sure to press the bushing straight in.

   Preparation tool:

   ST-A: BUSHING REMOVER (20099FG000)
   ST-B: INSTALLER & REMOVER (20099PA010)



2. BUSHING - TRAILING LINK



For the installation procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. Ref. to DRIVE SHAFT SYSTEM>Rear Axle>ASSEMBLY > TRAILING LINK BUSHING.

REMOVAL

1. Lift up the vehicle, and then remove the rear wheels.
2. Disconnect the cable assembly - parking brake.

RS-10032

3. Remove the trailing link. Ref. to REAR SUSPENSION>Trailing Link>REMOVAL.
4. Remove the rear lateral link assembly - front.
   (1) Remove the snap pin (a) and nut (b).
   (2) Remove the ball joint from the housing assembly - rear axle.
   Preparation tool:
   Tie-rod ball joint puller
   (3) Put alignment marks (c) on the adjusting bolt for the rear lateral link assembly - front and on the sub frame assembly.
   (4) Remove the adjusting bolt (d), and remove the rear lateral link assembly - front.
   Caution:
   When removing the adjusting bolt (d), make sure to fix the bolt head in place when loosening the nut (e).

RS-10034

INSTALLATION

Caution:

- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Visually check the rear lateral link assembly - front for damage and deformation.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
   - Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.
2. Install the rear lateral link assembly - front.
   Caution:
   - **When installing the adjusting bolt (d), make sure to fix the bolt head in place and tighten the nut side (e).**
   - **Align alignment marks (c) on the adjusting bolt for the rear lateral link assembly - front and on the sub frame assembly.**

   Tightening torque:
   Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to REAR SUSPENSION>General Description>COMPONENT.
3. Install the trailing link.
   Tightening torque:
   90 N·m (9.2 kgf-m, 66.4 ft-lb)
4. Install the cable assembly - parking brake.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
5. Install the rear wheels and lower the vehicle.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
6. Inspect the wheel alignment and adjust if necessary.
   - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
   - Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

   Caution:
   When the wheel alignment has been adjusted, perform the following adjustment.
   – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
   – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

REAR SUSPENSION > Rear Lateral Link (front)

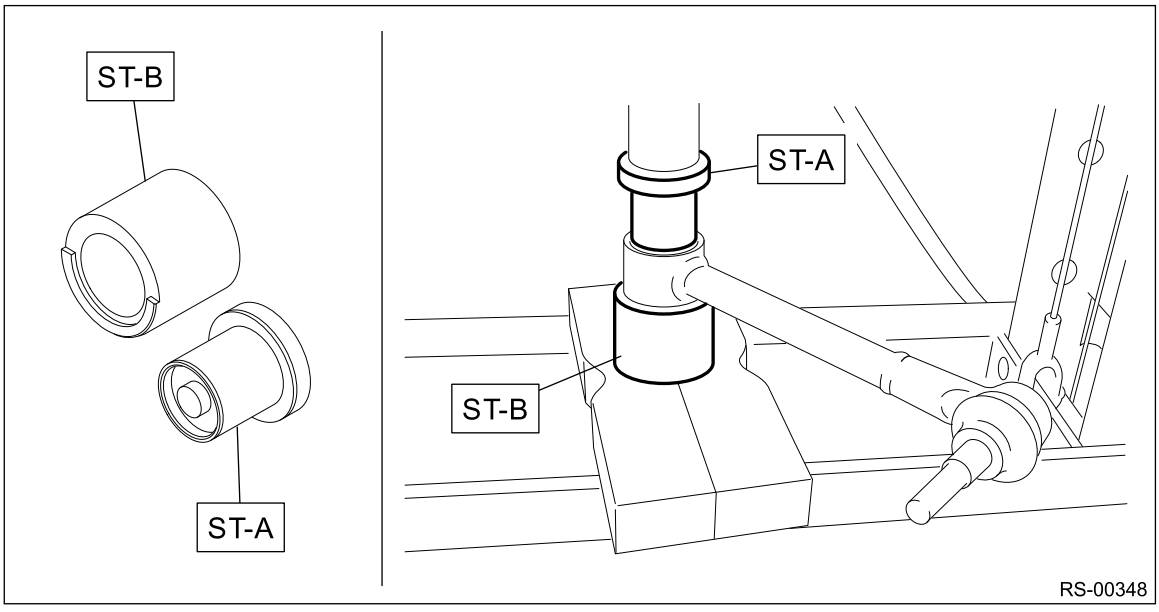
DISASSEMBLY

Using the ST, push out the bushing B - lateral link.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE000)

REAR SUSPENSION > Rear Lateral Link (front)

ASSEMBLY



1. Before assembly, inspect the following items and replace any faulty part with a new one.
   - Visually check the rear lateral link assembly - front for damage and deformation.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
   - Visually check the dust cover on the ball joint for damage.
2. Using the ST, press-fit the bushing B - lateral link.

   Caution:

   Make sure to press the bushing straight in.

   Preparation tool:

   ST-A & ST-B: INSTALLER & REMOVER (20099AE000)

REAR SUSPENSION > Rear Lateral Link (rear)

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Lift up the vehicle, and then remove the rear wheels.
3. Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Rear Height Sensor>REMOVAL.
4. Remove the rear lateral link assembly - rear.
   (1) Remove the bolts and nuts, and remove the lower side of rear shock absorber assembly.
   (2) Remove the bolts and nuts, and remove the rear lateral link assembly - rear.

REAR SUSPENSION > Rear Lateral Link (rear)

INSTALLATION

Caution:

- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Visually check the rear lateral link assembly - rear for damage and deformation.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
2. Install the rear lateral link assembly - rear.
   Tightening torque:
   Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to REAR SUSPENSION>General Description>COMPONENT.
3. Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)
   Caution:
   Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4. Install the rear wheels and lower the vehicle.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
6. Inspect the wheel alignment and adjust if necessary.
   - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.

- Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

  Caution:

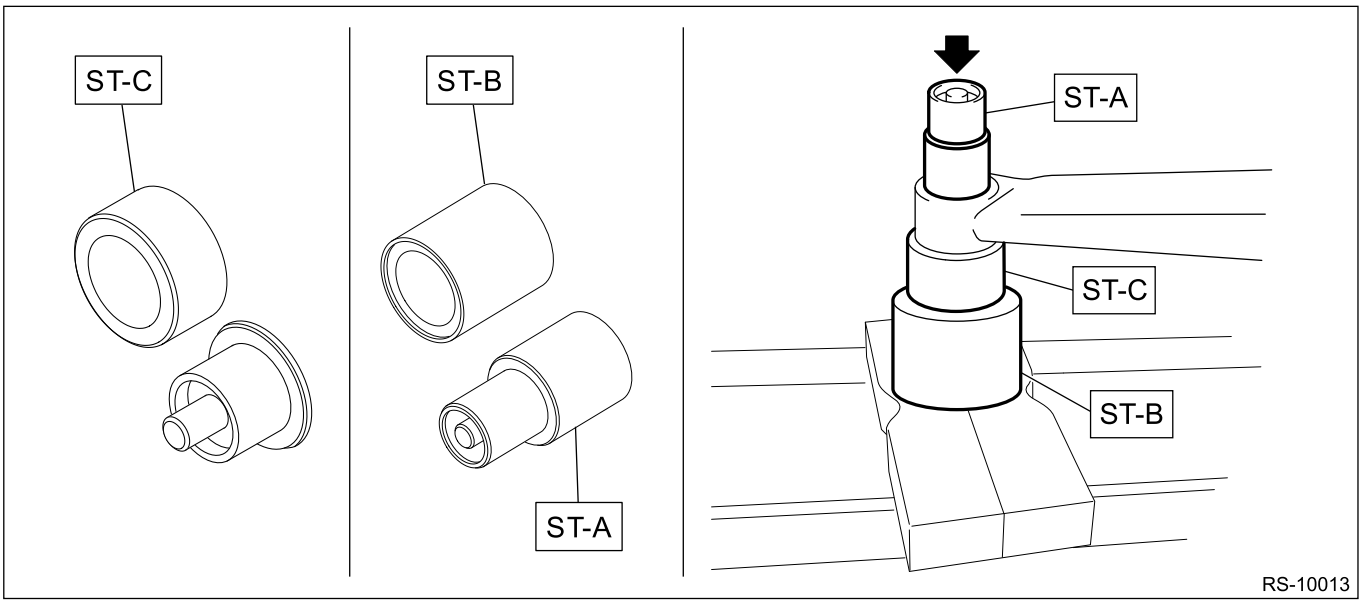
  When the wheel alignment has been adjusted, perform the following adjustment.

  – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.

  – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

7. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE > REINITIALIZATION.

REAR SUSPENSION > Rear Lateral Link (rear)



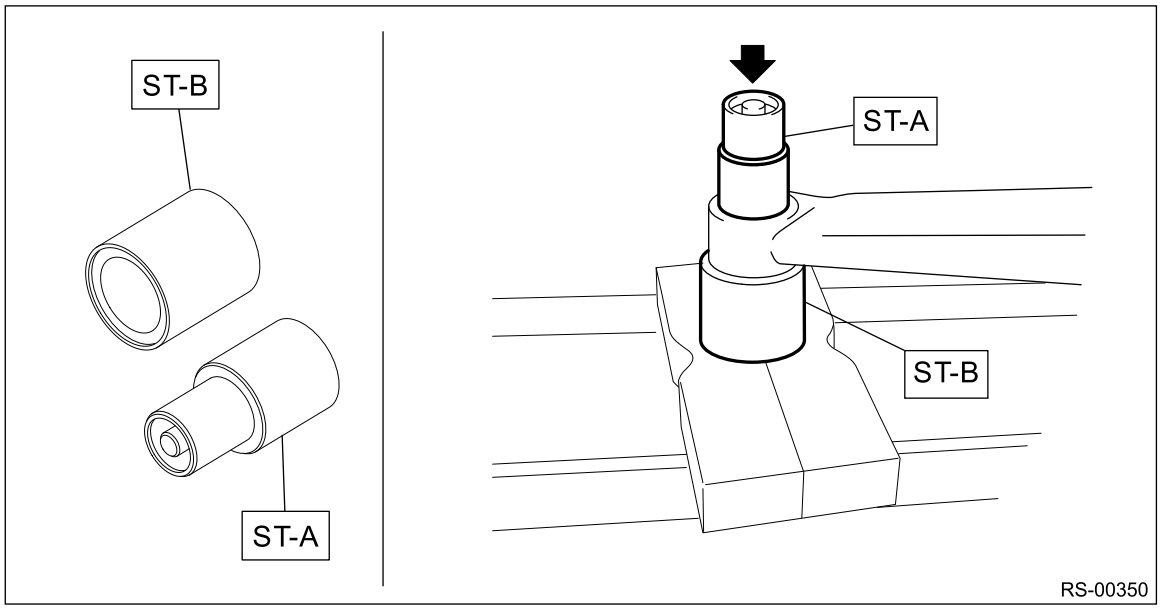
DISASSEMBLY

Using the ST, push out the bushing.

Preparation tool:

ST-A & ST-B: INSTALLER & REMOVER (20099AE010)

ST-C: INSTALLER & REMOVER (20099AE040)



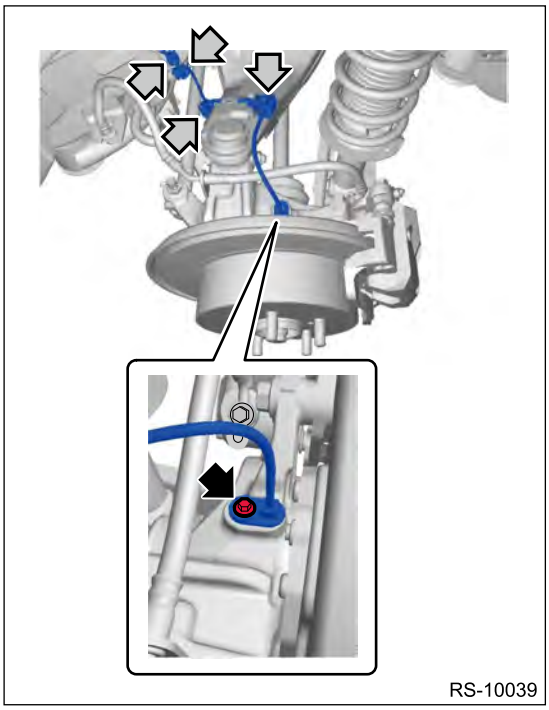
REAR SUSPENSION > Rear Lateral Link (rear)

ASSEMBLY

1. Before assembly, inspect the following items and replace any faulty part with a new one.
   - Visually check the rear lateral link assembly - rear for damage and deformation.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
2. Using the ST, press the bushing into place.

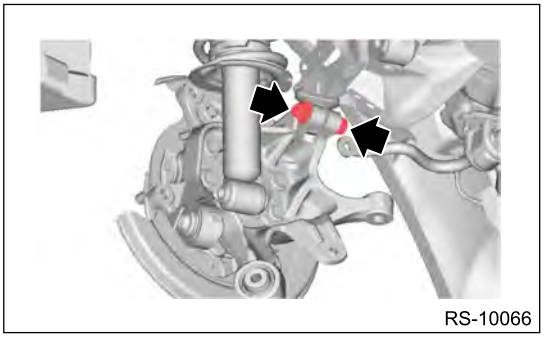
   Preparation tool:

   ST-A & ST-B: INSTALLER & REMOVER (20099AE010)

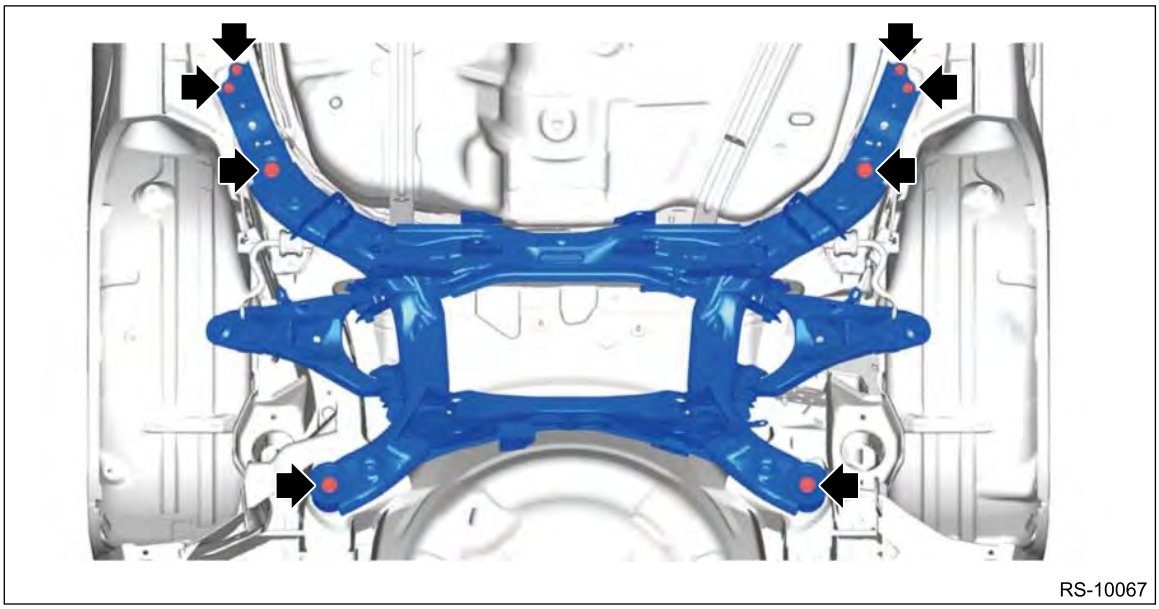


ST-B
ST-A
ST-A
ST-B
RS-00350

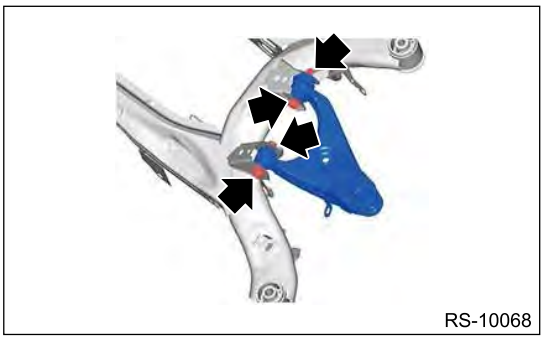
REMOVAL



1. Release the parking brake.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Lift up the vehicle, and then remove the rear wheels.
4. Remove the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>REMOVAL.
5. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
6. Remove the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
7. Remove the clamp of the sub rear harness.



8. Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Rear Height Sensor>REMOVAL.
9. Remove the trailing link. Ref. to REAR SUSPENSION>Trailing Link>REMOVAL.
10. Remove the rear lateral link assembly - front. Ref. to REAR SUSPENSION>Rear Lateral Link (front)>REMOVAL.
11. Remove the rear lateral link assembly - rear. Ref. to REAR SUSPENSION>Rear Lateral Link (rear)>REMOVAL.
12. Disconnect the stabilizer link (bottom part). (Model with stabilizer) Ref. to REAR SUSPENSION>Stabilizer>REMOVAL > STABILIZER LINK.
13. Remove the clip and bolt on the harness clamp, and remove the rear ABS wheel speed sensor.
    Caution:
    - **Be careful not to damage the sensor.**
    - **Do not apply excessive force to the sensor harness.**



14. Remove the disc brake assembly - rear. Ref. to BRAKE>Rear Disc Brake Assembly>REMOVAL.
15. Remove the cable assembly - parking brake and the parking brake shoe. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>REMOVAL.
16. Remove the drive shaft. Ref. to DRIVE SHAFT SYSTEM>Front Drive Shaft>REMOVAL.
17. Remove the housing assembly - rear axle.

18. Remove the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL.
19. Remove the sub frame assembly.
    (1) Support the sub frame assembly using a transmission jack.
        Caution:
        The sub frame assembly is heavy. Make sure that it is firmly supported so that it is level.
    (2) Remove the bolt, and remove the left and right sub frame supports.
    (3) Remove the sub frame assembly.
        Caution:
        While checking there is no dragging of harness and wire, lower it slowly with a transmission jack.

20. Remove the upper arm from the sub frame assembly.

REAR SUSPENSION > Sub Frame

INSTALLATION

Caution:

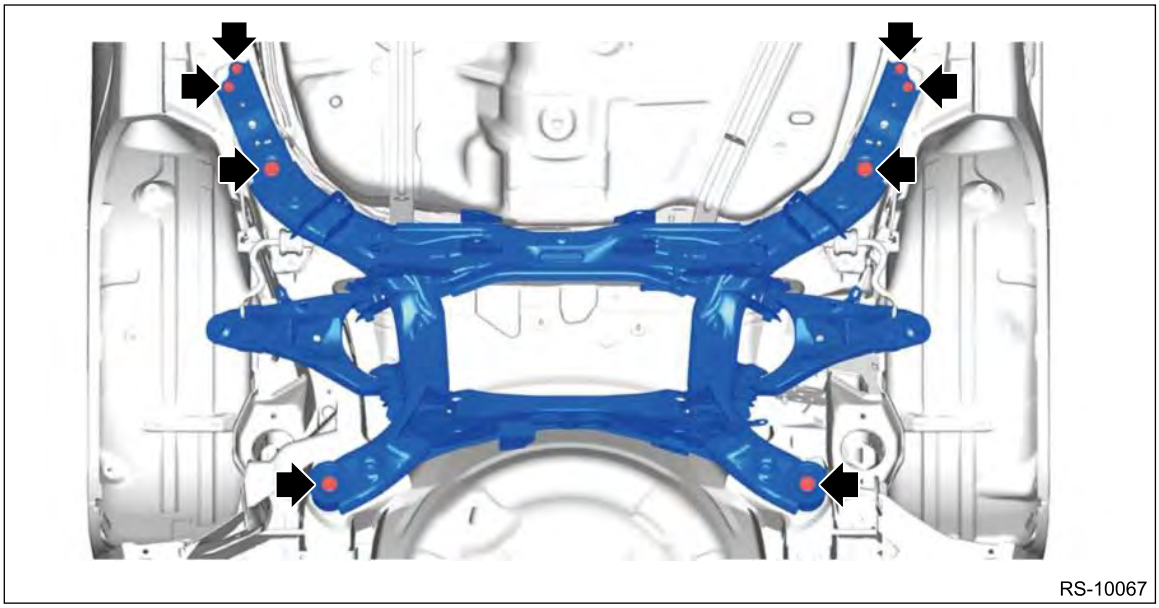
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.**

1. Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

2. Install the upper arm to the sub frame assembly.

Tightening torque:

90 N·m (9.2 kgf-m, 66.4 ft-lb)



3. Install the sub frame assembly.

(1) Lift the sub frame assembly using a transmission jack.

(2) Install the right and left sub frame supports, and install the sub frame assembly.

Caution:

- **The sub frame assembly is heavy. Make sure that it is firmly supported so that it is level.**
- **While checking there is no dragging of harness and wire, raise it slowly with a transmission jack.**

Tightening torque:

Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to REAR SUSPENSION>General Description>COMPONENT.

4. Install the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION.
5. Install the housing assembly - rear axle.

   Tightening torque:

   Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to REAR SUSPENSION>General Description>COMPONENT.
6. Install the drive shaft. Ref. to DRIVE SHAFT SYSTEM>Rear Drive Shaft>INSTALLATION.
7. Install the cable assembly - parking brake. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>INSTALLATION.
8. Install the brake hose bracket and the disc brake assembly - rear.

   Tightening torque:

   Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

   Disc brake assembly - rear: 66 N·m (6.7 kgf-m, 48.7 ft-lb)
9. Install the rear ABS wheel speed sensor.

   Tightening torque:

   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
10. Install the stabilizer link (bottom part). (Model with stabilizer) Ref. to REAR SUSPENSION>Stabilizer>INSTALLATION > STABILIZER LINK.
11. Install the rear lateral link assembly - rear. Ref. to REAR SUSPENSION>Rear Lateral Link (rear)>INSTALLATION.
12. Install the rear lateral link assembly - front. Ref. to REAR SUSPENSION>Rear Lateral Link (front)>INSTALLATION.
13. Install the trailing link. Ref. to REAR SUSPENSION>Trailing Link>INSTALLATION.
14. Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Caution:

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

15. Install the clamp of the sub rear harness.
16. Install the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.
17. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.
18. Install the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>INSTALLATION.
19. Install the rear wheels and lower the vehicle.

    Tightening torque:

    120 N·m (12.2 kgf-m, 88.5 ft-lb)
20. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
21. Inspect the wheel alignment and adjust if necessary.
    - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
    - Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

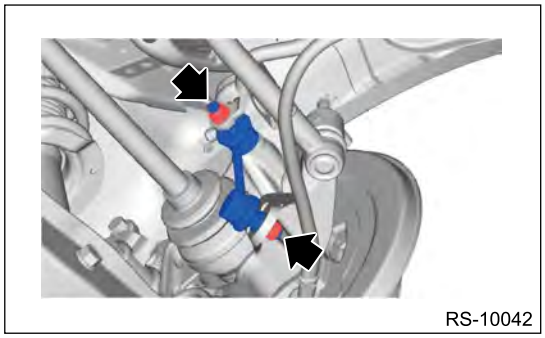
    Caution:

    When the wheel alignment has been adjusted, perform the following adjustment.

    – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.

    – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.
22. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

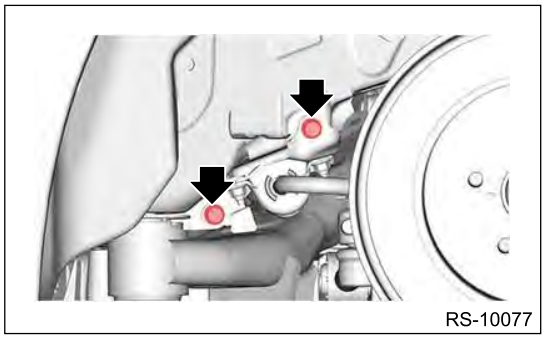
REAR SUSPENSION > Sub Frame



INSPECTION

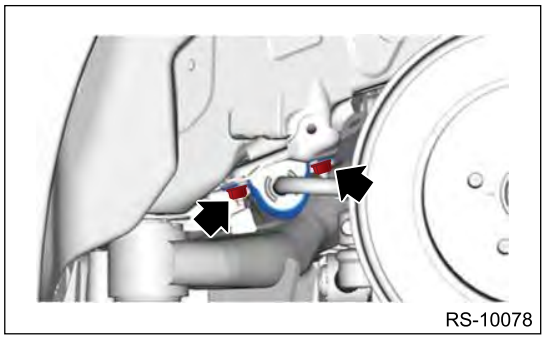
Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

REMOVAL



1. STABILIZER LINK

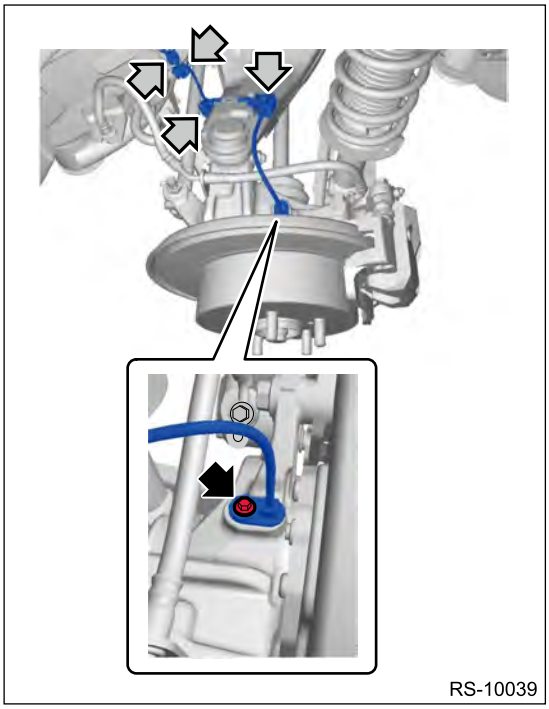
1. Lift up the vehicle, and then remove the rear wheels.
2. Remove the left and right stabilizer links.



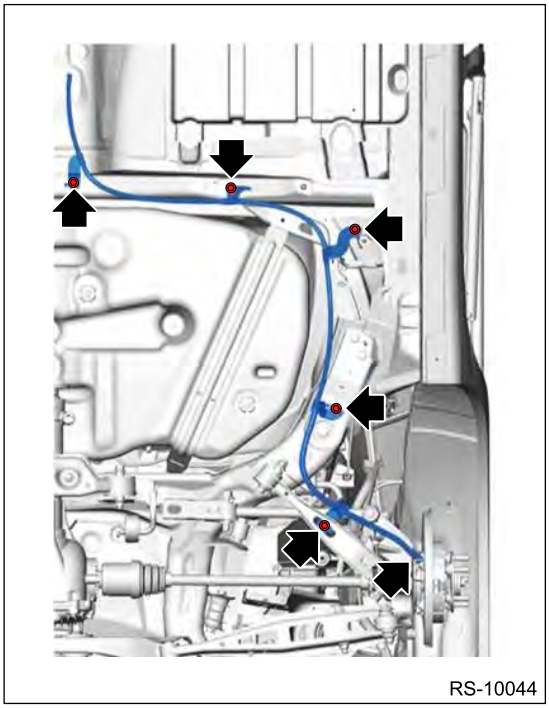
2. STABILIZER BUSHING

1. Lift up the vehicle, and then remove the rear wheels.
2. Remove the bolts holding the bracket COMPL - stabilizer on the left and right sides.

3. Remove the clamp - stabilizer bushing on the left and right sides.

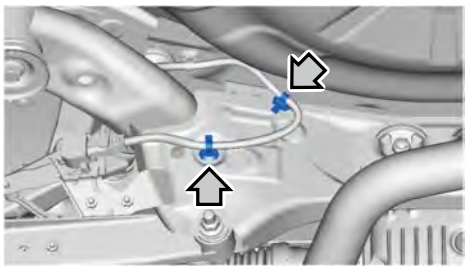


4. Remove the bushing - stabilizer.



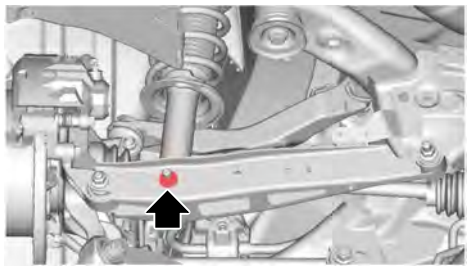
3. STABILIZER

1. Release the parking brake.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Lift up the vehicle, and then remove the rear wheels.
4. Remove the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>REMOVAL.
5. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.



6. Remove the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
7. Remove the clip and bolt on the harness clamp, and remove the rear ABS wheel speed sensor.
   Caution:
   - **Be careful not to damage the sensor.**
   - **Do not apply excessive force to the sensor harness.**

8. Remove the disc brake assembly - rear. Ref. to BRAKE>Rear Disc Brake Assembly>REMOVAL.
9. Remove the cable assembly - parking brake and the parking brake shoe. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>REMOVAL.
10. Disconnect the cable assembly - parking brake.



11. Remove the clamp of the sub rear harness.

RS-10038

12. Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Rear Height Sensor>REMOVAL.

13. Disconnect the stabilizer link (upper part). (Model with stabilizer) Ref. to REAR SUSPENSION>Stabilizer>REMOVAL > STABILIZER LINK.

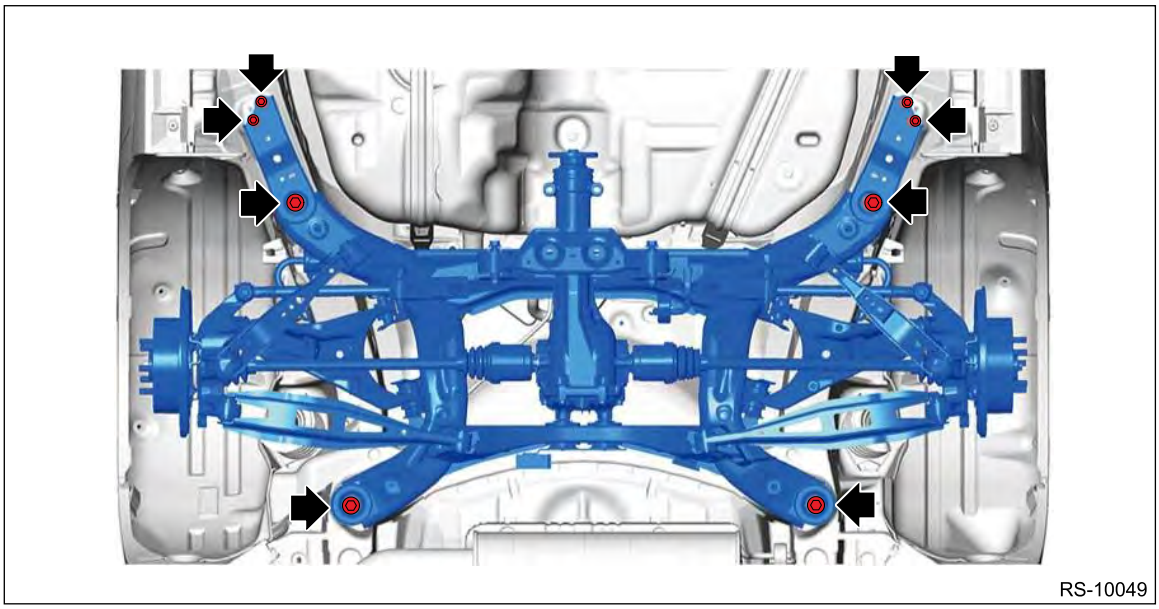
14. Remove the bolts from the lower side of rear shock absorber assembly.

RS-10036

15. Remove the sub frame assembly.

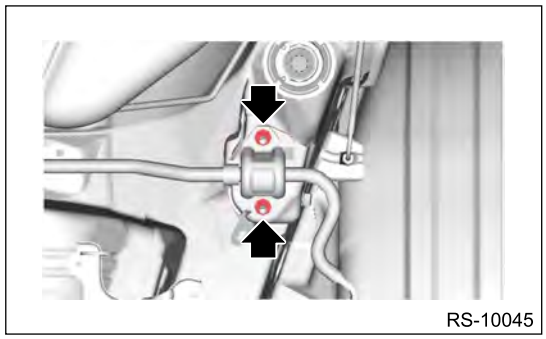
(1) Support the sub frame assembly using a transmission jack.

Caution:



The sub frame assembly is heavy. Make sure that it is firmly supported so that it is level.

(2) Remove the bolt, and remove the left and right sub frame supports.



(3) Remove the sub frame assembly.

Caution:

While checking there is no dragging of harness and wire, lower it slowly with a transmission jack.

RS-10049

16. Remove the stabilizers.

REAR SUSPENSION > Stabilizer

INSTALLATION

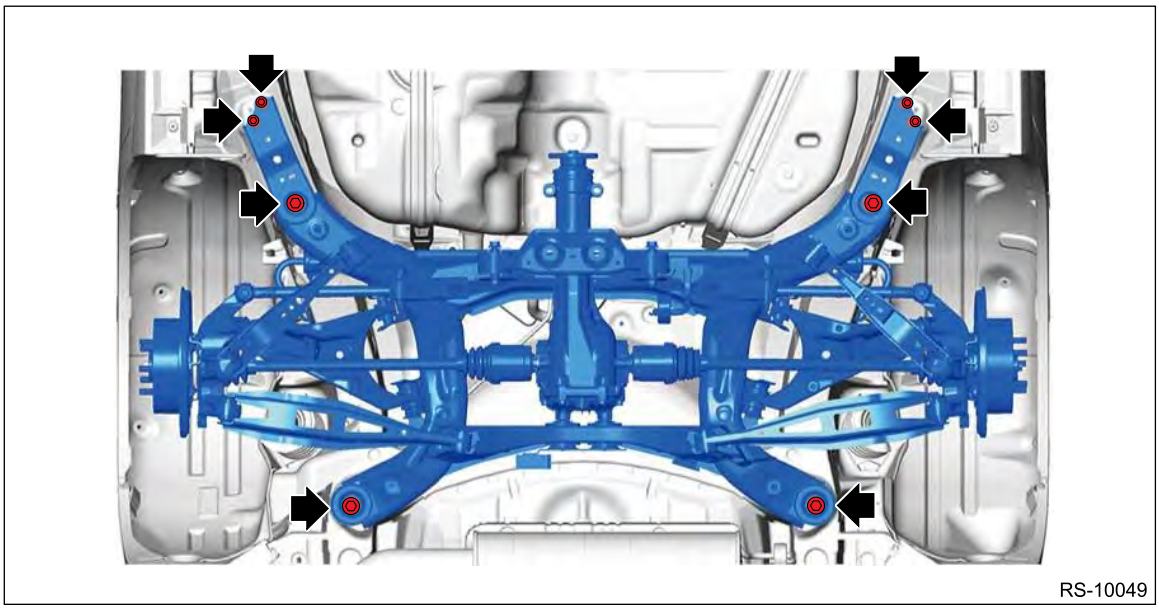
Caution:

- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1. STABILIZER LINK

1. Before installation, inspect the following items and replace any faulty part with a new one.
   Check the stabilizer link for damage.
2. Install the stabilizer link.
   Tightening torque:
   38 N·m (3.9 kgf-m, 28 ft-lb)
3. Install the rear wheels and lower the vehicle.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. STABILIZER BUSHING



1. Before installation, inspect the following items and replace any faulty part with a new one.
   Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
2. Install the bushing - stabilizer.
3. Install the clamp - stabilizer bushing.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
4. Install the bracket COMPL - stabilizer.
   Caution:
   To prevent damage to the vehicle body, place a cloth, etc. between the bracket COMPL - stabilizer and the vehicle body. After tightening nuts to specified torque, be sure to remove the cloth, etc.
   Tightening torque:
   35 N·m (3.6 kgf-m, 25.8 ft-lb)
5. Install the rear wheels and lower the vehicle.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)

3. STABILIZER

1. Before installation, inspect the following items and replace any faulty part with a new one.

- Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
- Check the stabilizer link for damage.

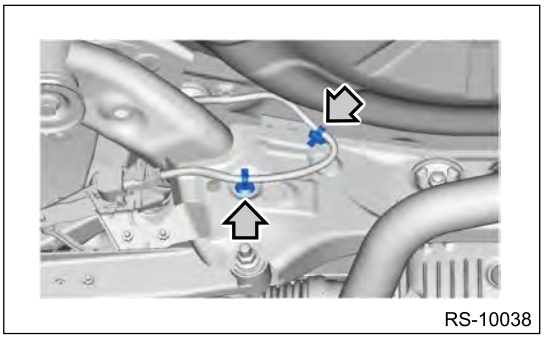
2. Install the clamp - stabilizer bushing.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
3. Install the sub frame assembly.
   (1) Lift the sub frame assembly using a transmission jack.
   (2) Install the right and left sub frame supports, and install the sub frame assembly.
   Caution:
   - **The sub frame assembly is heavy. Make sure that it is firmly supported so that it is level.**
   - **While checking there is no dragging of harness and wire, raise it slowly with a transmission jack.**

   Tightening torque:
   Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to REAR SUSPENSION>General Description>COMPONENT.
4. Install the bolts on the lower side of rear shock absorber assembly.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
5. Install the stabilizer link (upper part). (Model with stabilizer)
   Tightening torque:
   38 N·m (3.9 kgf-m, 28 ft-lb)
6. Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)
   Caution:
   Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7. Install the clamp of the sub rear harness.
8. Install the cable assembly - parking brake.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
9. Install the cable assembly - parking brake. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>INSTALLATION.

10. Install the brake hose bracket and the disc brake assembly - rear.
    Tightening torque:
    Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
    Disc brake assembly - rear: 66 N·m (6.7 kgf-m, 48.7 ft-lb)
11. Install the rear ABS wheel speed sensor.
    Tightening torque:
    7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
12. Install the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.
13. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.
14. Install the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>INSTALLATION.
15. Install the rear wheels and lower the vehicle.
    Tightening torque:
    120 N·m (12.2 kgf-m, 88.5 ft-lb)
16. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
17. Inspect the wheel alignment and adjust if necessary.
    - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
    - Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

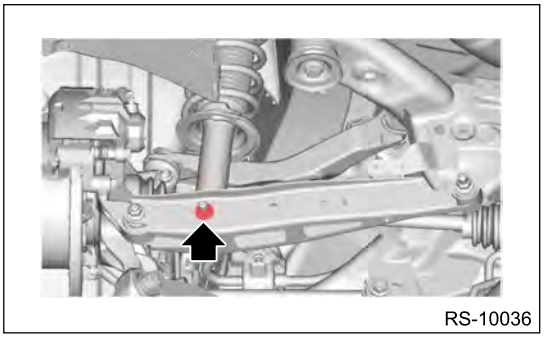
    Caution:
    When the wheel alignment has been adjusted, perform the following adjustment.
    – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
    – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.
18. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

REMOVAL



1. Release the parking brake.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Lift up the vehicle, and then remove the rear wheels.
4. Remove the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>REMOVAL.
5. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
6. Remove the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
7. Remove the clip and bolt on the harness clamp, and remove the rear ABS wheel speed sensor.
   Caution:
   - **Be careful not to damage the sensor.**
   - **Do not apply excessive force to the sensor harness.**

8. Remove the disc brake assembly - rear. Ref. to BRAKE>Rear Disc Brake Assembly>REMOVAL.
9. Remove the cable assembly - parking brake and the parking brake shoe. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>REMOVAL.
10. Disconnect the cable assembly - parking brake.



11. Remove the clamp of the sub rear harness.

12. Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Rear Height Sensor>REMOVAL.

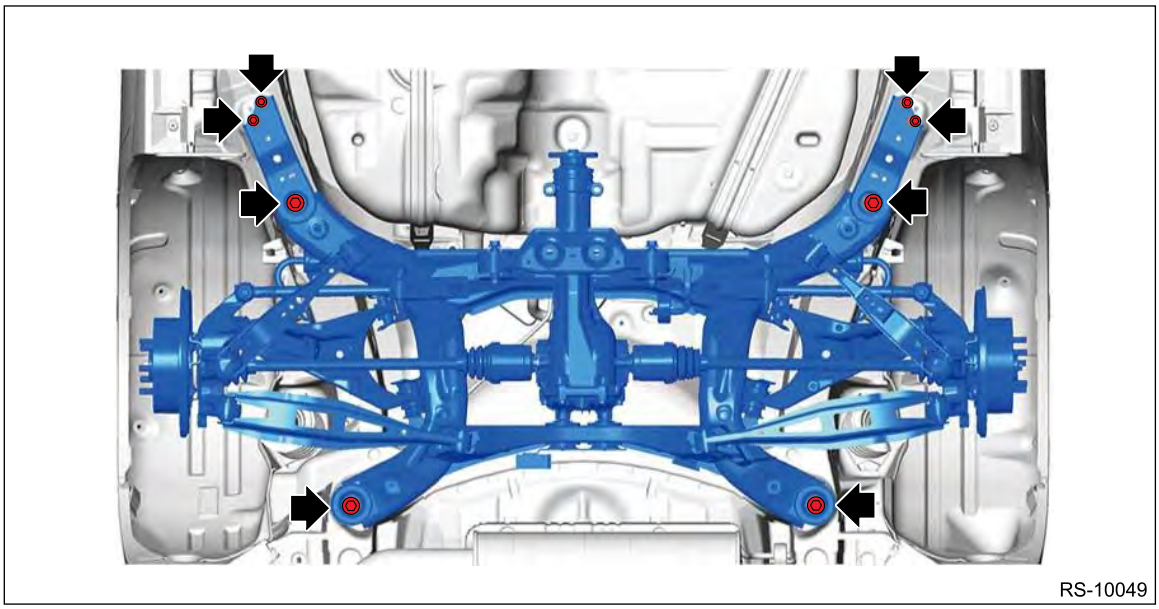
13. Disconnect the stabilizer link (upper part). (Model with stabilizer) Ref. to REAR SUSPENSION>Stabilizer>REMOVAL > STABILIZER LINK.

14. Remove the bolts from the lower side of rear shock absorber assembly.

15. Remove the sub frame assembly.

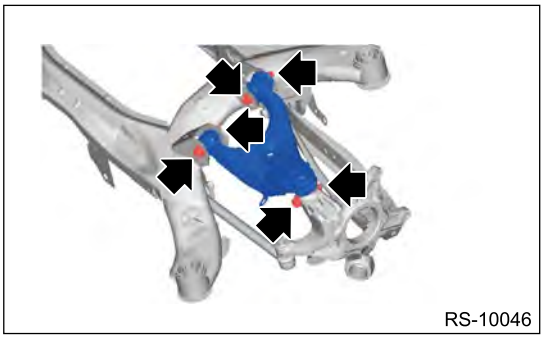
(1) Support the sub frame assembly using a transmission jack.

Caution:



The sub frame assembly is heavy. Make sure that it is firmly supported so that it is level.

(2) Remove the bolt, and remove the left and right sub frame supports.



(3) Remove the sub frame assembly.

Caution:

While checking there is no dragging of harness and wire, lower it slowly with a transmission jack.

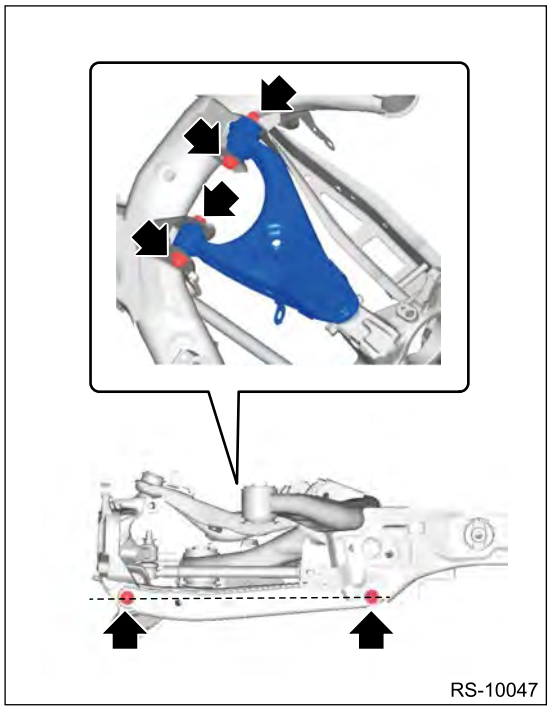
16. Remove the upper arm.

REAR SUSPENSION > Upper Arm

INSTALLATION

Caution:

- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing when the arm is positioned in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**



1. Before installation, inspect the following items and replace any faulty part with a new one.

- Visually check the upper arm assembly for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2. Install the upper arm assembly.

(1) Make the installation sections of the rear lateral link assembly - rear (the bolt on the housing assembly - rear axle side and the bolt on the sub frame assembly side) horizontal.

(2) Install the upper arm assembly to the sub frame assembly.

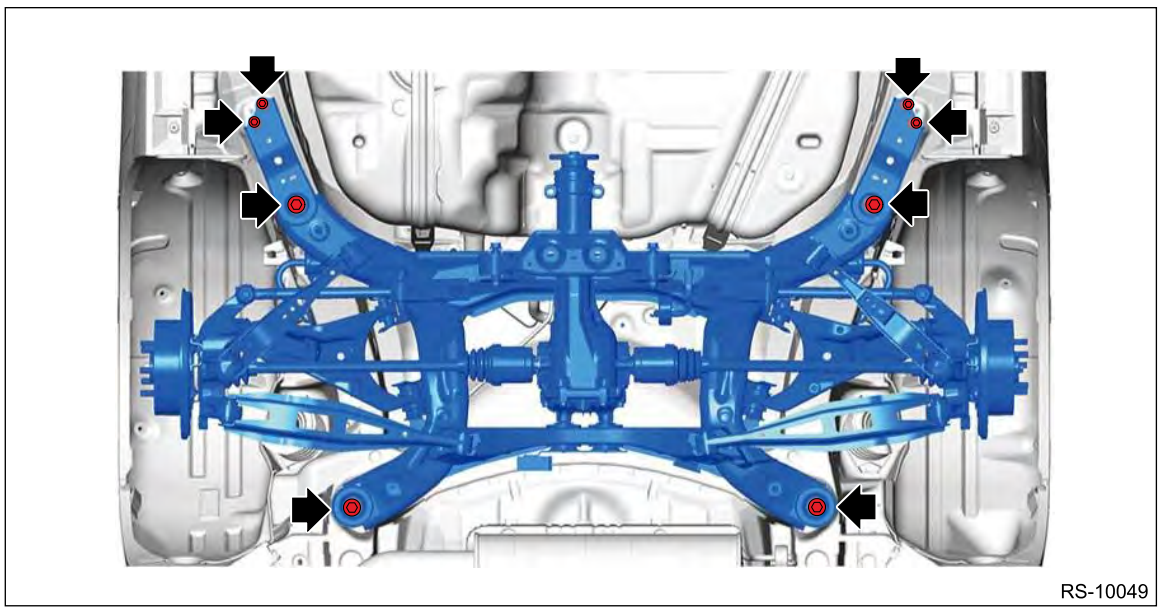
Tightening torque:

Upper arm assembly — sub frame assembly: 90 N·m (9.2 kgf-m, 66.4 ft-lb)

3. Connect the upper arm assembly and the housing assembly - rear axle.

Tightening torque:

Upper arm assembly — housing assembly - rear axle: 80 N·m (8.2 kgf-m, 59 ft-lb)



4. Install the sub frame assembly.

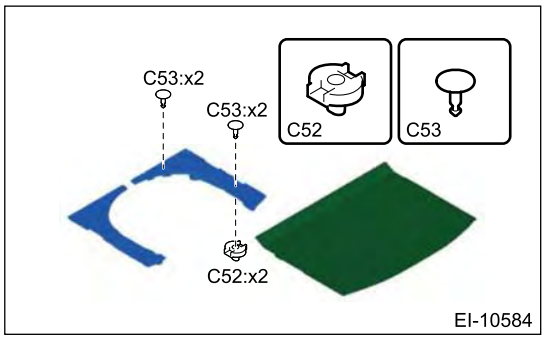
(1) Lift the sub frame assembly using a transmission jack.

(2) Install the right and left sub frame supports, and install the sub frame assembly.

Caution:

- **The sub frame assembly is heavy. Make sure that it is firmly supported so that it is level.**
- **While checking there is no dragging of harness and wire, raise it slowly with a transmission jack.**

Tightening torque:

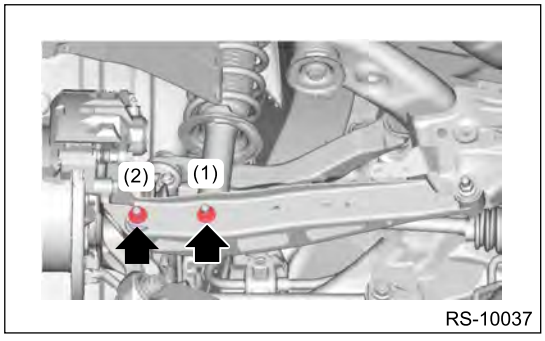


Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to REAR SUSPENSION>General Description>COMPONENT.

5. Install the bolts on the lower side of rear shock absorber assembly.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
6. Install the stabilizer link (upper part). (Model with stabilizer)
   Tightening torque:
   38 N·m (3.9 kgf-m, 28 ft-lb)
7. Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)
   Caution:
   Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8. Install the clamp of the sub rear harness.
9. Install the cable assembly - parking brake.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
10. Install the cable assembly - parking brake. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>INSTALLATION.
11. Install the brake hose bracket and the disc brake assembly - rear.
    Tightening torque:
    Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
    Disc brake assembly - rear: 66 N·m (6.7 kgf-m, 48.7 ft-lb)
12. Install the rear ABS wheel speed sensor.
    Tightening torque:
    7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
13. Install the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.
14. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.
15. Install the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>INSTALLATION.
16. Install the rear wheels and lower the vehicle.
    Tightening torque:
    120 N·m (12.2 kgf-m, 88.5 ft-lb)
17. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
18. Inspect the wheel alignment and adjust if necessary.
    - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
    - Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

    Caution:
    When the wheel alignment has been adjusted, perform the following adjustment.
    – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
    – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.
19. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trunk trim panel assembly - side (4 door model). Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the rear floor mat, the spacer - rear floor mat and the cap - rear suspension (5 door model).
   1. Remove the rear floor mat and the spacer - rear floor mat.

   2. Remove the cap - rear suspension.

4. Lift up the vehicle, and then remove the rear wheels.
5. Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Rear Height Sensor>REMOVAL.
6. Remove the bolts and nuts, and lower the rear lateral link assembly - rear.
   (1) Remove the bolts from the lower side of rear shock absorber assembly.
   (2) Disconnect the housing assembly - rear axle from the rear lateral link assembly - rear.

7. Remove the nuts on the upper side of rear shock absorber assembly.

8. Lower the rear lateral link assembly - rear, and remove the rear shock absorber assembly.

REAR SUSPENSION > Rear Shock Absorber

INSTALLATION

Caution:

- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1. Install the rear shock absorber assembly.
   (1) Lower the rear lateral link assembly - rear, and place the rear shock absorber assembly inside.
   (2) Lower the rear lateral link assembly - rear, and install the upper side of rear shock absorber assembly.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
   (3) Install the bolts on the lower side of rear shock absorber assembly.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
   (4) Install the rear lateral link assembly - rear.
   Tightening torque:
   90 N·m (9.2 kgf-m, 66.4 ft-lb)
   (5) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)
   Caution:
   Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the rear wheels and lower the vehicle.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
3. Install the trunk trim panel assembly - side (4 door model) or rear floor mat (5 door model).
   - 4 door model: Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>INSTALLATION.
   - 5 door model: Install the rear floor mat and the spacer - rear floor mat.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
5. Inspect the wheel alignment and adjust if necessary.
   - Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
   - Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

Caution:

When the wheel alignment has been adjusted, perform the following adjustment.

- **Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.**
- **VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.**

6. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE > REINITIALIZATION.

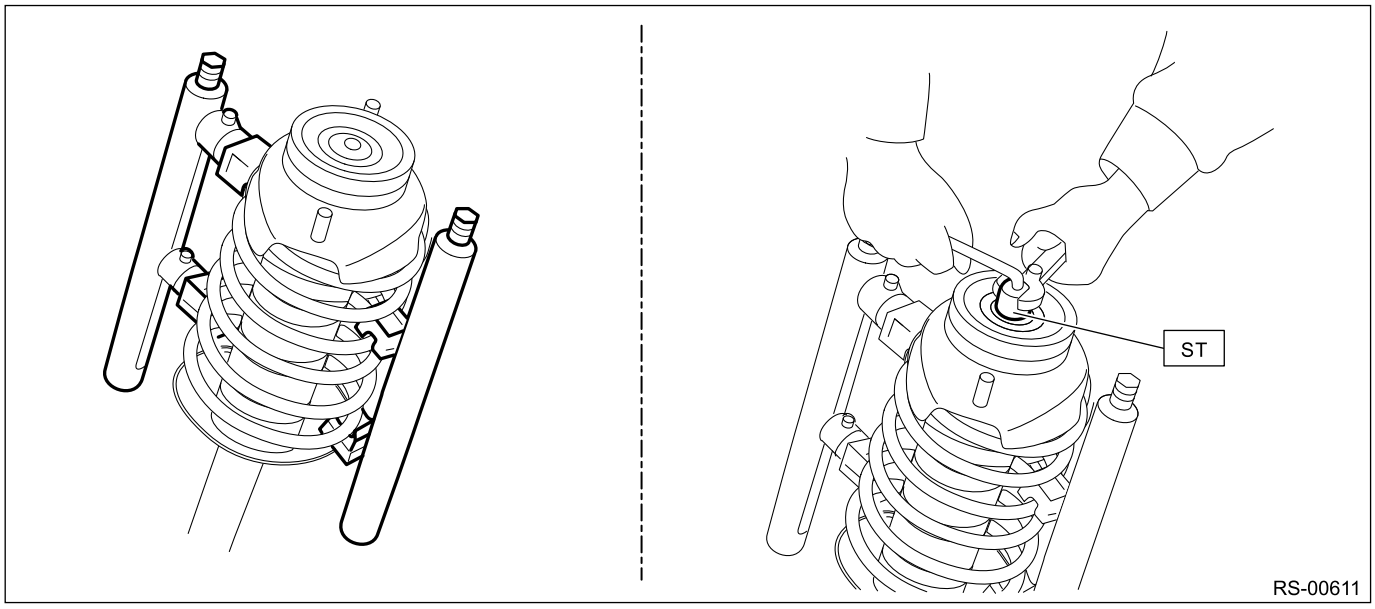
REAR SUSPENSION > Rear Shock Absorber

DISASSEMBLY

1. Using a coil spring compressor, compress the coil spring.
2. Using a hexagon wrench to prevent the shock absorber piston rod from turning, remove the self-locking nut with ST.

Caution:

When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.



Preparation tool:

ST: STRUT MOUNT SOCKET (20399FG000)

Note:

<Example of coil spring compressor installation>

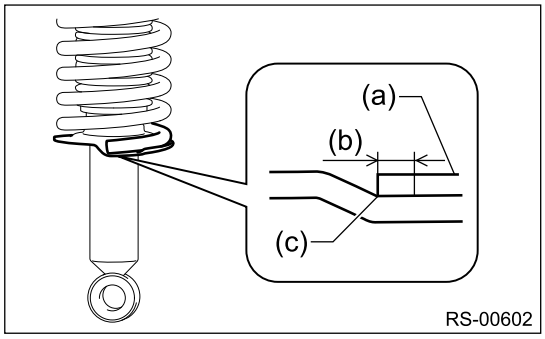
The installing position of coil spring compressor varies depending on the coil spring shape and winding number.

3. Remove the shock mount - rear from the shock absorber COMPL - rear.
4. Gradually decrease the compression pressure of compressor, and remove the coil spring - rear.
5. Remove the helper - rear and the dust cover - rear shock.

REAR SUSPENSION > Rear Shock Absorber

ASSEMBLY

1. Before assembly, check each part. Ref. to REAR SUSPENSION>Rear Shock



Absorber>INSPECTION.

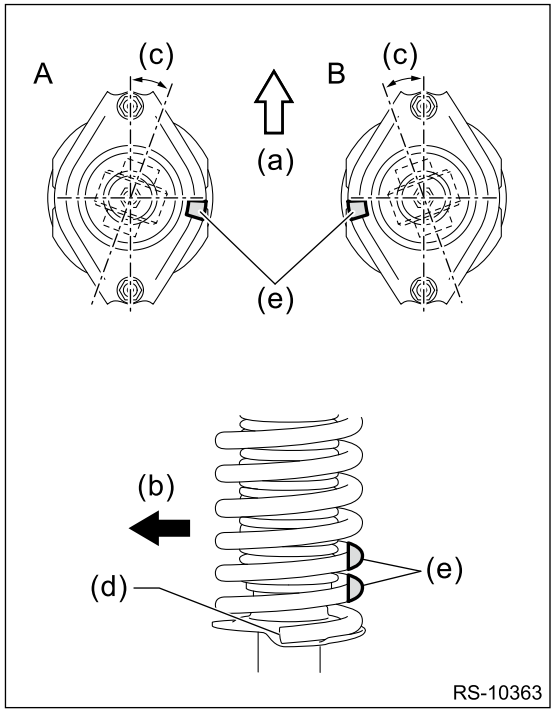
2. Using a coil spring compressor, compress the coil spring - rear.

Caution:

When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

3. Install by aligning with the edge surface of the coil spring - rear and the stopper portion of the lower side spring seat.

(a) Coil spring - rear



(b) 0+10 mm (0+0.4 in)

(c) Spring seat stopper portion

4. Install the helper - rear and the dust cover - rear shock to the piston rod.
5. Fully pull up the piston rod in the upward direction.
6. Temporarily tighten the rubber seat - shock UPR and the shock mount - rear with new self-locking nuts.

Note:

Position the shock mount - rear as shown in the figure.

A LH side

B RH side

(a) Front side of vehicle

(b) Vehicle outside

(c) 10°±5°

(d) End portion of coil spring - rear

(e) Identification paint (Install with the paint facing the vehicle inside.)

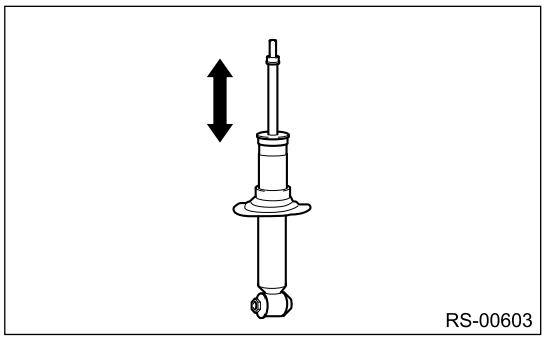
7. Using a hexagon wrench to prevent the shock absorber piston rod from turning, tighten the new self-locking nut with ST.

Preparation tool:

ST: STRUT MOUNT SOCKET (20399FG000)

Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)



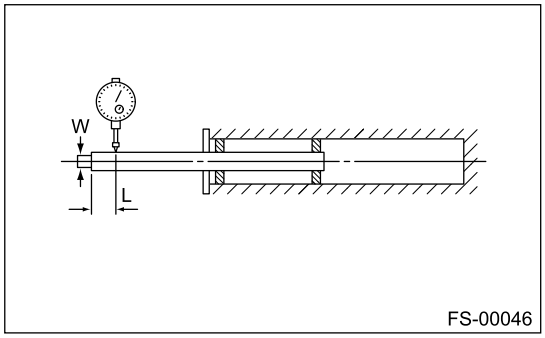
8. Loosen the coil spring compressor carefully.

REAR SUSPENSION > Rear Shock Absorber

INSPECTION

1. Check for oil leaks.

2. Move the piston rod up and down to check that it operates smoothly without any hitch.



3. Check the piston rod for play as follows:

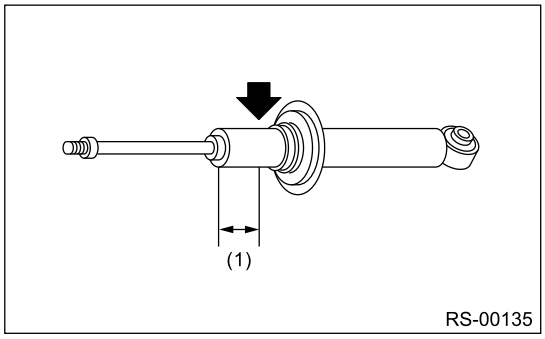
(1) Fix the outer shell in place and fully extend the rod.

(2) Set the dial gauge on the end of the rod L [10 mm (0.39 in)].

(3) While applying a force of W [20 N (2 kgf, 4 lbf)] to the threaded part, read the dial gauge indication P_1.

(4) Apply a force of 20 N (2 kgf, 4 lbf) from the opposite direction of "W", and then read the dial gauge indication P_2.

Play limit (P_1+ P_2): 0.8 mm (0.031 in)



REAR SUSPENSION > Rear Shock Absorber

DISPOSAL

Caution:

- **Before discarding the strut COMPL and the shock absorber COMPL, be sure to wear goggles to protect eyes from gas, oil and cutting powder.**
- **Do not disassemble the strut COMPL and the shock absorber COMPL or throw them into flames.**
- **When discarding the strut COMPL and the shock absorber COMPL filled with gas, drill a hole on them to purge the gas.**

1. Place the shock absorber on a level surface with the piston rod fully expanded.
2. Make a hole of 30 mm (1.18 in) deep into the specified position shown in the figure, using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.

(1) 40 mm (1.57 in)

INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or damaged coil spring	Replace.
(2) Rough operation of shock absorber	Replace.
(3) Installation of the wrong shock absorber	Replace with proper parts.
(4) Installation of the wrong coil spring	Replace with proper parts.

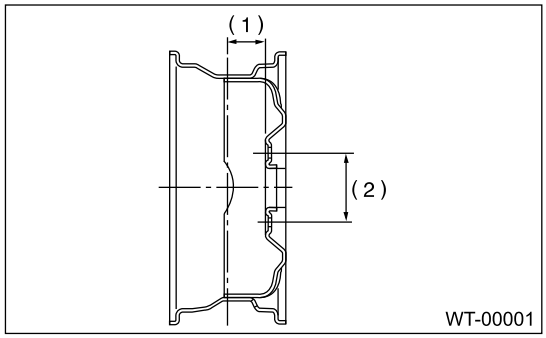
2. POOR RIDE COMFORT

1. Large rebound shock
2. Rocking of the vehicle continues too long after running over bump and hump.
3. Excessive shock in bumping

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of shock absorber	Replace.
(5) Damage or deformation of shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in shock absorber	Replace.
(9) Oil leakage from the shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of shock absorber component parts	Replace.
(2) Loosening of the suspension link or arm installing bolt	Tighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.



WHEEL AND TIRE SYSTEM

WT

1. General Description
2. Tire and Wheel
3. Full Wheel Cap
4. Temporary Tire
5. Tire Pressure Monitoring System
6. General Diagnostic Table

SPECIFICATION

1. NOTE

(1) Inset

(2) P.C.D.

Note:

Size and inflation pressure of the standard equipment tire, temporary tire and appropriate tire for equipment are described on the "Tire inflation pressure" label attached to the body side of the driver's door.

2. STANDARD EQUIPMENT TIRE & WHEEL

- 4 door model

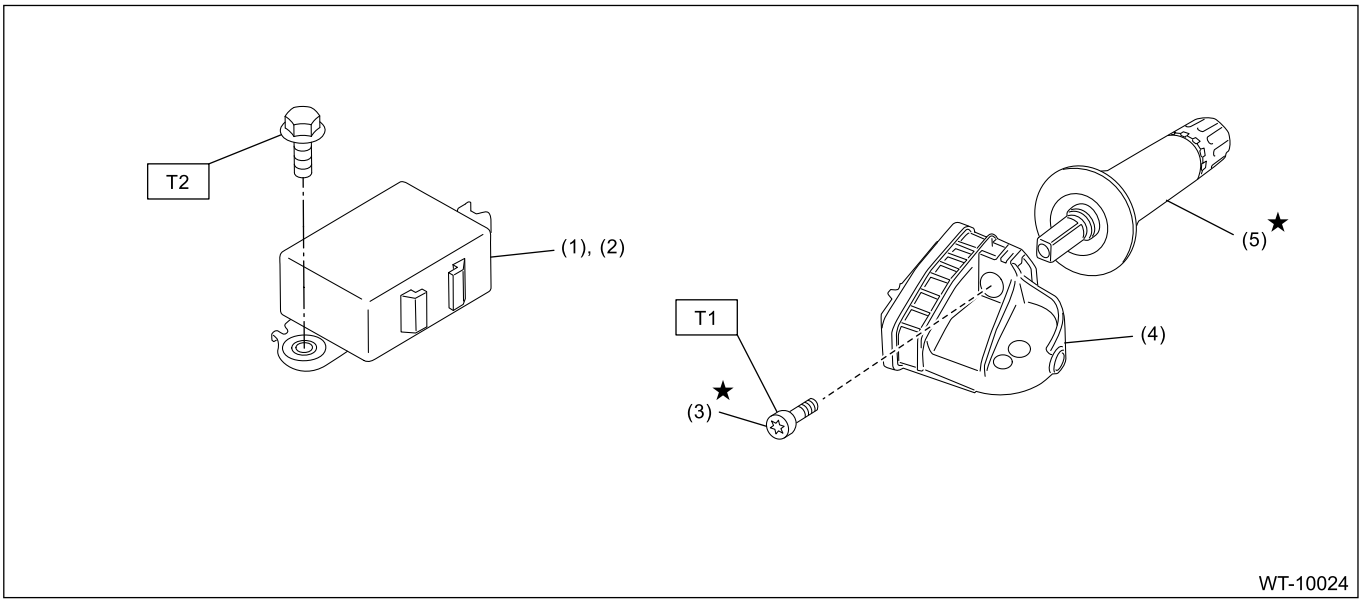
Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
P205/55R16 89V	16 × 6^1/$_2$ J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)
205/50R17 89V	17 × 7 J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)
P225/40R18 88V	18 × 7^1/$_2$ J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)

- 5 door model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
P205/55R16 89V	16 × 6^1/$_2$ J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)
205/50R17 89V	17 × 7 J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)
P225/40R18 88V	18 × 7^1/$_2$ J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)

3. TEMPORARY TIRE & WHEEL

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
T135/80D16 101M	16 × 4T	20 (0.79)	100 (3.94)	Not used	420 (4.2, 60)
205/50R17 88V	17 × 7 J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)
P205/55R16 89V	16 × 6$^1/_2$ J	55 (2.17)	100 (3.94)	230 (2.3, 33)	220 (2.2, 32)



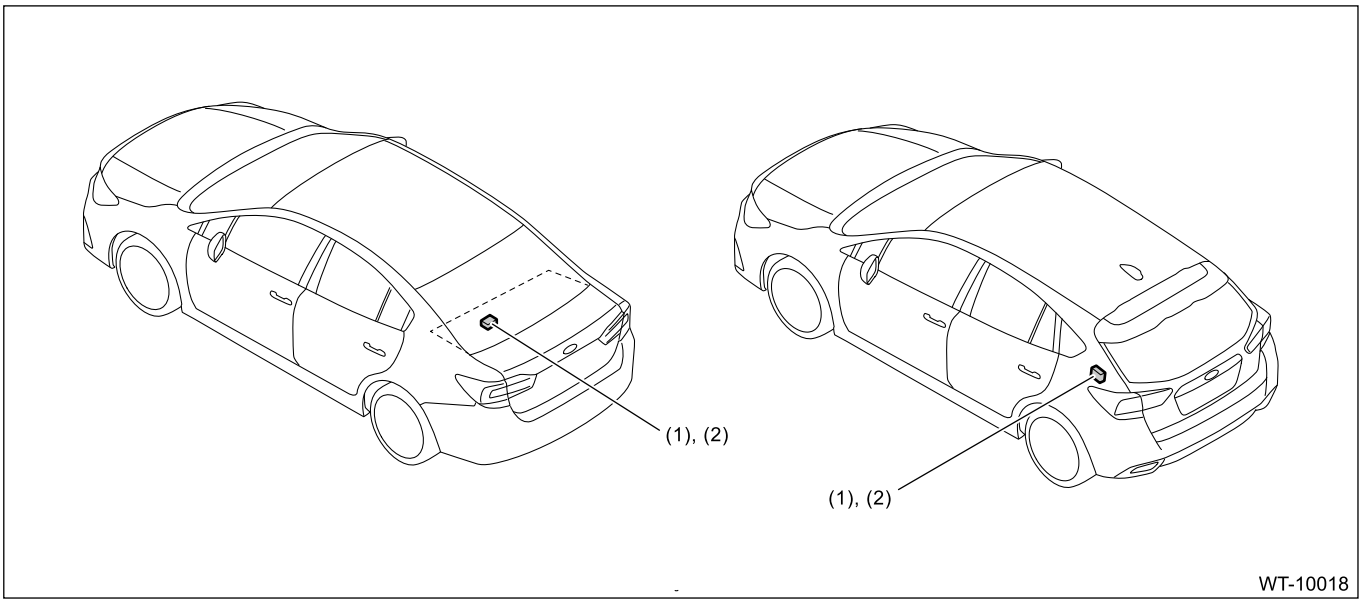
4. SERVICE DATA

Part	Axial runout	Radial runout
Steel wheel	1.5 mm (0.059 in)	
Aluminum wheel	1 mm (0.039 in)	

Wheel balancing	Standard	Service limit
Dynamic unbalance	5 g (0.18 oz) or less	

WHEEL AND TIRE SYSTEM > General Description

COMPONENT



(1) TPMS & keyless entry control module (model without keyless access with push button start)
(2) TPMS CM (model with keyless access with push button start)
(3) Screw
(4) Transmitter (snap in type)
(5) Valve

Tightening torque: N·m (kgf-m, ft-lb)

T1: 1.4 (0.1, 1)

T2: 7.5 (0.8, 5.5)

(1) TPMS & keyless entry control module (model without keyless access with push button start)

(2) TPMS CM (model with keyless access with push button start)

WHEEL AND TIRE SYSTEM > General Description

PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Air pressure gauge	Used for measuring tire air pressure.
Dial gauge	Used for measuring wheel runout.
Wheel balancer	Used for adjusting wheel balance.
Circuit tester	Used for measuring resistance, voltage and current.

REMOVAL

1. Remove the hubcap. (Model with full hubcap) Ref. to WHEEL AND TIRE SYSTEM>Full Wheel Cap>REMOVAL.
2. Lift up the vehicle.
3. Remove the wheel nut.
4. Remove the wheels.

Caution:

When removing the wheels, be careful not to damage the bolt - hub.

INSTALLATION

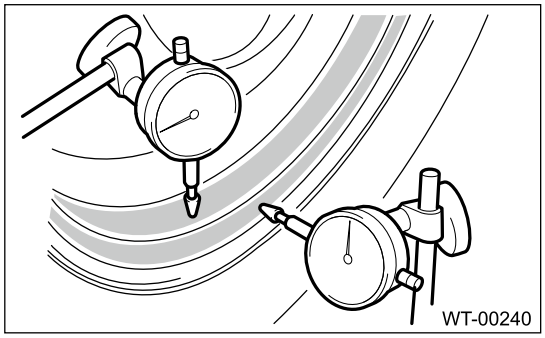
1. Install the wheels to vehicle.
2. Tighten the wheel nuts to the specified torque.

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

INSPECTION

1. TIRES



Caution:

When replacing a tire, make sure to use tires of the same size, construction and load range as originally installed.

1. Tire size and tire inflation pressure check Ref. to WHEEL AND TIRE SYSTEM>General Description>SPECIFICATION.
2. Cracks, damage and wear check
3. Tire runout check

(1) Lift up the vehicle.

(2) Slowly rotate the wheel to check rim “runout” using a dial gauge.

- Aluminum wheel

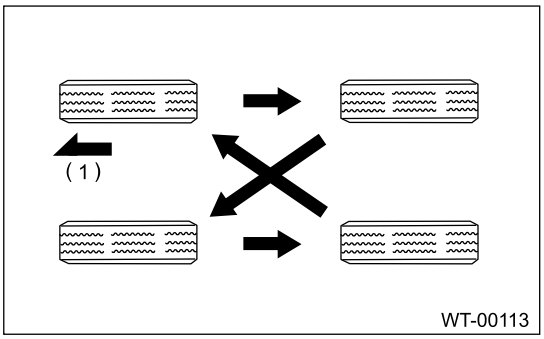
  Service limit:

  Axial and longitudinal runout: 1 mm (0.04 in)
- Steel wheel

  Service limit:

  Axial and longitudinal runout: 1.5 mm (0.06 in)

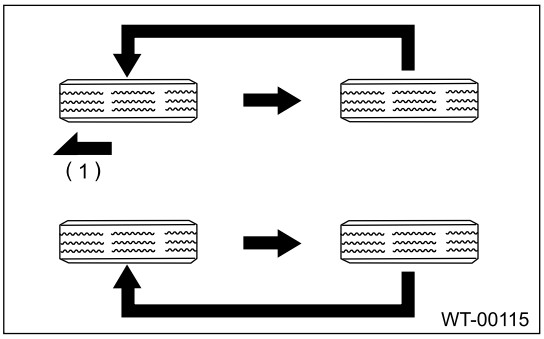
(3) If the rim runout exceeds service limit, replace the wheel.



2. TIRE ROTATION

Note:

Rotate tires periodically (9,600 km/6,000 miles) in order to prolong life and to prevent uneven wear.

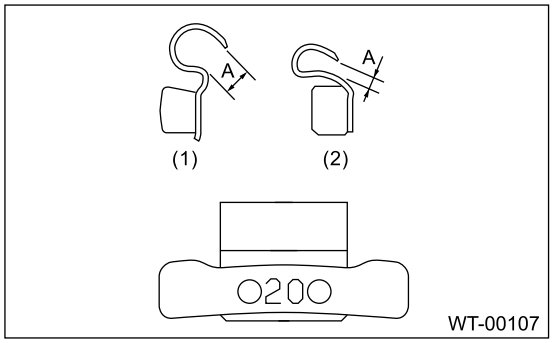


Rotate tires as shown in the figure depending on whether or not the direction of the tire rotation is specified.

- When the direction of tire rotation is not specified

(1) Front side of vehicle

- When the direction of tire rotation is specified



(1) Front side of vehicle

3. WHEEL BALANCING

1. Using the wheel balancer, measure wheel balance.
2. Adjust the wheel balancing.

Note:

- **Unbalance after adjusting the wheel balancing should be 5 g (0.18 oz) or less.**
- **When using the adhesive type weight, degrease the surface where the adhesive type weight will be applied securely.**
- **After applying the adhesive type weight, apply a force to the weight and attain full adhesion.**
- **Using the knock-on type weight, check the size of the knock-on part.**

(1) Knock-on type weight for aluminum wheel

(2) Knock-on type weight for steel wheel

Service limit A:

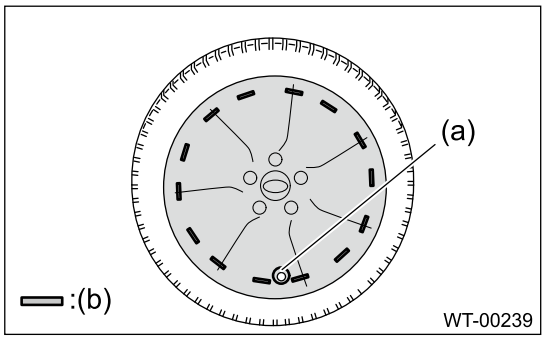
Knock-on type weight for steel wheel: 2 mm (0.08 in)

Knock-on type weight for aluminum wheel: 5 mm (0.2 in)

WHEEL AND TIRE SYSTEM > Full Wheel Cap

REMOVAL

Remove the full hubcap using your hands protected with gloves or the like.



Note:

The wheels may be damaged while removing the hubcaps, but the performance will not be impaired.

WHEEL AND TIRE SYSTEM > Full Wheel Cap

INSTALLATION

1. Align the valve with the valve hole (a) in the hubcap.
2. Install the hubcap by lightly tapping the claw (b).

WHEEL AND TIRE SYSTEM > Full Wheel Cap

INSPECTION

Check for damage on the hubcap.

WHEEL AND TIRE SYSTEM > Temporary Tire

NOTE

"T-type" or "Temporary" tire for temporary use is equipped as a temporary tire.

Caution:

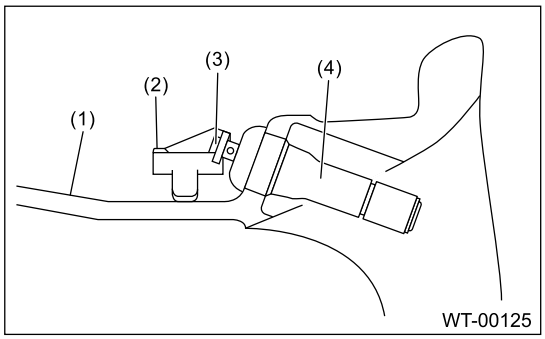
- **The "T-type" or "Temporary" tire is only for temporary use. Replace with a standard equipment sized tire as soon as possible.**
- **Do not use standard sized tire chains for "T-type" or "Temporary" tires. Because tire size is small, tire chains can not be installed properly and will damage the vehicle and tires if they are detached while driving.**
- **Do not drive at a speed greater than 80 km/h (50 MPH).**
- **Drive the vehicle as slowly as possible and avoid bumps on the road.**

WHEEL AND TIRE SYSTEM > Temporary Tire

REPLACEMENT

Refer to "Tire and Wheel" for removal and installation of the "T-type" or "Temporary" tire. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel.

WHEEL AND TIRE SYSTEM > Temporary Tire



INSPECTION

For inspection of the "T-type" or "Temporary" tire, refer to "Inspection" for standard equipment tire. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSPECTION > TIRES.

REMOVAL

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

1. Remove the wheels from the vehicle. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.
2. Remove the tires from wheels.
   Caution:
   Use a tire changer when removing the tire from the wheel.
3. Loosen the screw to remove the transmitter from the valve stem.
   Caution:
   Do not reuse the valve and screw.
   Replace the valve and screw with a new part even when reusing transmitter.

(1) Wheel
(2) Transmitter
(3) Screw
(4) Valve

4. Remove the valve from the wheel.

2. TPMS & KEYLESS CONTROL MODULE

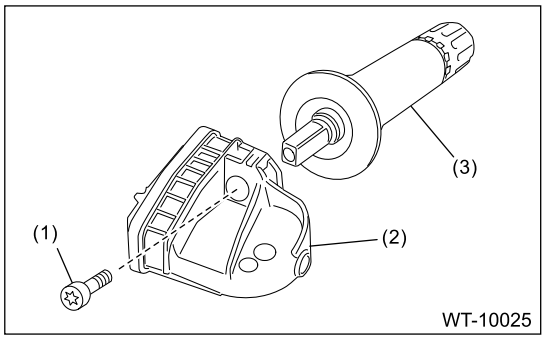
Note:

- **TPMS CM for keyless entry model is integrated with the keyless entry control module.**
- **For removal procedures, refer to "SECURITY AND LOCKS" section. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module>REMOVAL.**

3. TPMS CM

Note:

For removal procedures of the TPMS CM for models with keyless access with push button start, refer to the "SECURITY AND LOCKS" section. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module>REMOVAL.

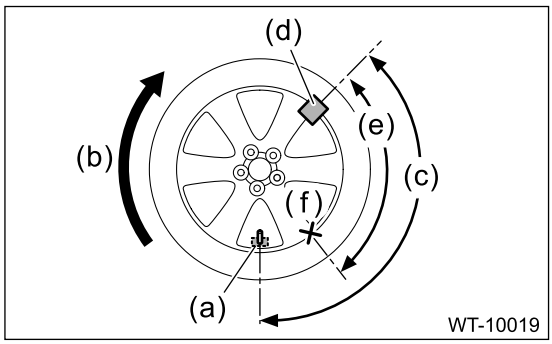


INSTALLATION

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

Caution:

Use the new transmitter assembly or replace the new valve and screw, when installing.



1. Replace the valve and screw with a new part when reusing transmitter.

(1) Screw
(2) Transmitter
(3) Valve

Tightening torque:
1.4 N·m (0.1 kgf-m, 1 ft-lb)

2. Install the transmitter to the wheel by aligning it with valve hole.
Note:
When using the jig that pulls the valve cap by hooking its neck part, use another short-type cap.
3. Install the tires to wheels.
Caution:
- **Use a tire changer when installing tire to wheel.**
- **To prevent damaging the transmitter, set the tire changer boom in the position as shown in the figure.**

(a) Transmitter
(b) Direction of turn table rotation
(c) 135°
(d) Tire changer boom
(e) 90°
(f) Starting point for fitting the bead to the rim

4. Install the wheels to vehicle. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.
5. Register the transmitter ID when the transmitter has been replaced. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID).

2. TPMS & KEYLESS CONTROL MODULE

Note:

- **TPMS CM for keyless entry model is integrated with the keyless entry control module. When the keyless entry control module has been replaced, re-register the TPMS transmitter. Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID).**
- **For installation procedures, refer to "SECURITY AND LOCKS" section. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module>INSTALLATION.**

3. TPMS CM

Note:

For installation procedures of the TPMS CM for models with keyless access with push button start, refer to the "SECURITY AND LOCKS" section. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module>INSTALLATION.

1. Install the trim panel - trunk side LH.
2. Install the trim panel - trunk rear.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

INSPECTION

Symptoms	Possible cause	Corrective action
Vehicle is unstable.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. • Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. • Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.
	Front strut	Check the front strut. Ref. to FRONT SUSPENSION>Front Strut>INSPECTION.
	Rear shock absorber	Check the rear shock absorber. Ref. to REAR SUSPENSION>Rear Shock Absorber>INSPECTION.
	Housing assembly - front axle	Check the housing assembly - front axle. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>INSPECTION.
Vehicle is abnormally out of balance.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Stabilizer	Inspect the stabilizer.

Symptoms	Possible cause	Corrective action
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. • Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. • Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.
Abnormal wheel vibration	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Improper wheel balancing	Check the wheel balance. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSPECTION > WHEEL BALANCING.
	Housing assembly - front axle	Check the housing assembly - front axle. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>INSPECTION.
Abnormal tire wear	Improperly inflated tire	Adjust the tire pressure.
	Improper wheel balancing	Check the wheel balance. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSPECTION > WHEEL BALANCING.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. • Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

Symptoms	Possible cause	Corrective action
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. • Adjustment: Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

DIFFERENTIALS

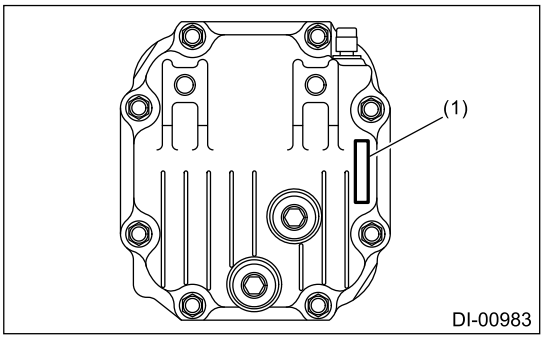
4. Rear Differential (T-type)
5. Rear Differential (VA-type)
6. Rear Differential Front Oil Seal
7. Rear Differential Side Oil Seal
8. Rear Differential Front Member
9. Rear Differential Mount Bushing
10. Rear Differential Inspection Mode
11. General Diagnostic Table

SPECIFICATION

1. REAR DIFFERENTIAL

When replacing a rear differential assembly, select the correct one according to the following table.

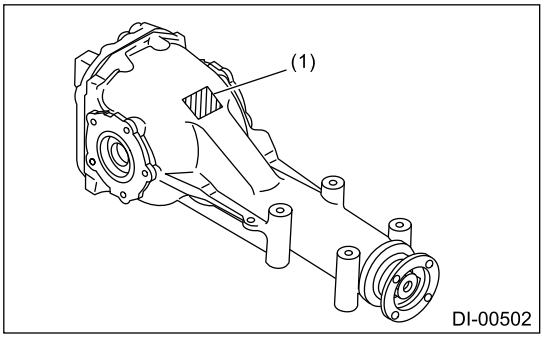
Note:



- **Using a different rear differential assembly will cause the drive train and tires to drag or emit abnormal noise.**
- **For option code, refer to "IDENTIFICATION" section.** **Ref. to IDENTIFICATION.**

Model	2.0 L	
	CVT	5MT
Rear differential type	VA1-type	T-type
Identification	42	T2
LSD type	—	
Type of gear	Hypoid gear	
Gear ratio (number of gear teeth)	3.700 (37/10)	4.111 (37/9)
Oil capacity	0.8 L (0.8 US qt, 0.7 Imp qt)	
Rear differential gear oil	SUBARU GEAR OIL EXTRA MT (75W-80)	GL-5 (75W-90)

2. IDENTIFICATION

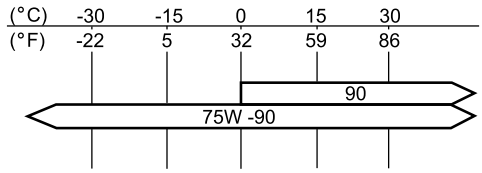


Identification positions are shown in the following figures. For details concerning identification, refer to the "IDENTIFICATION" section.

- VA1-type

(1) Identification

- T-type

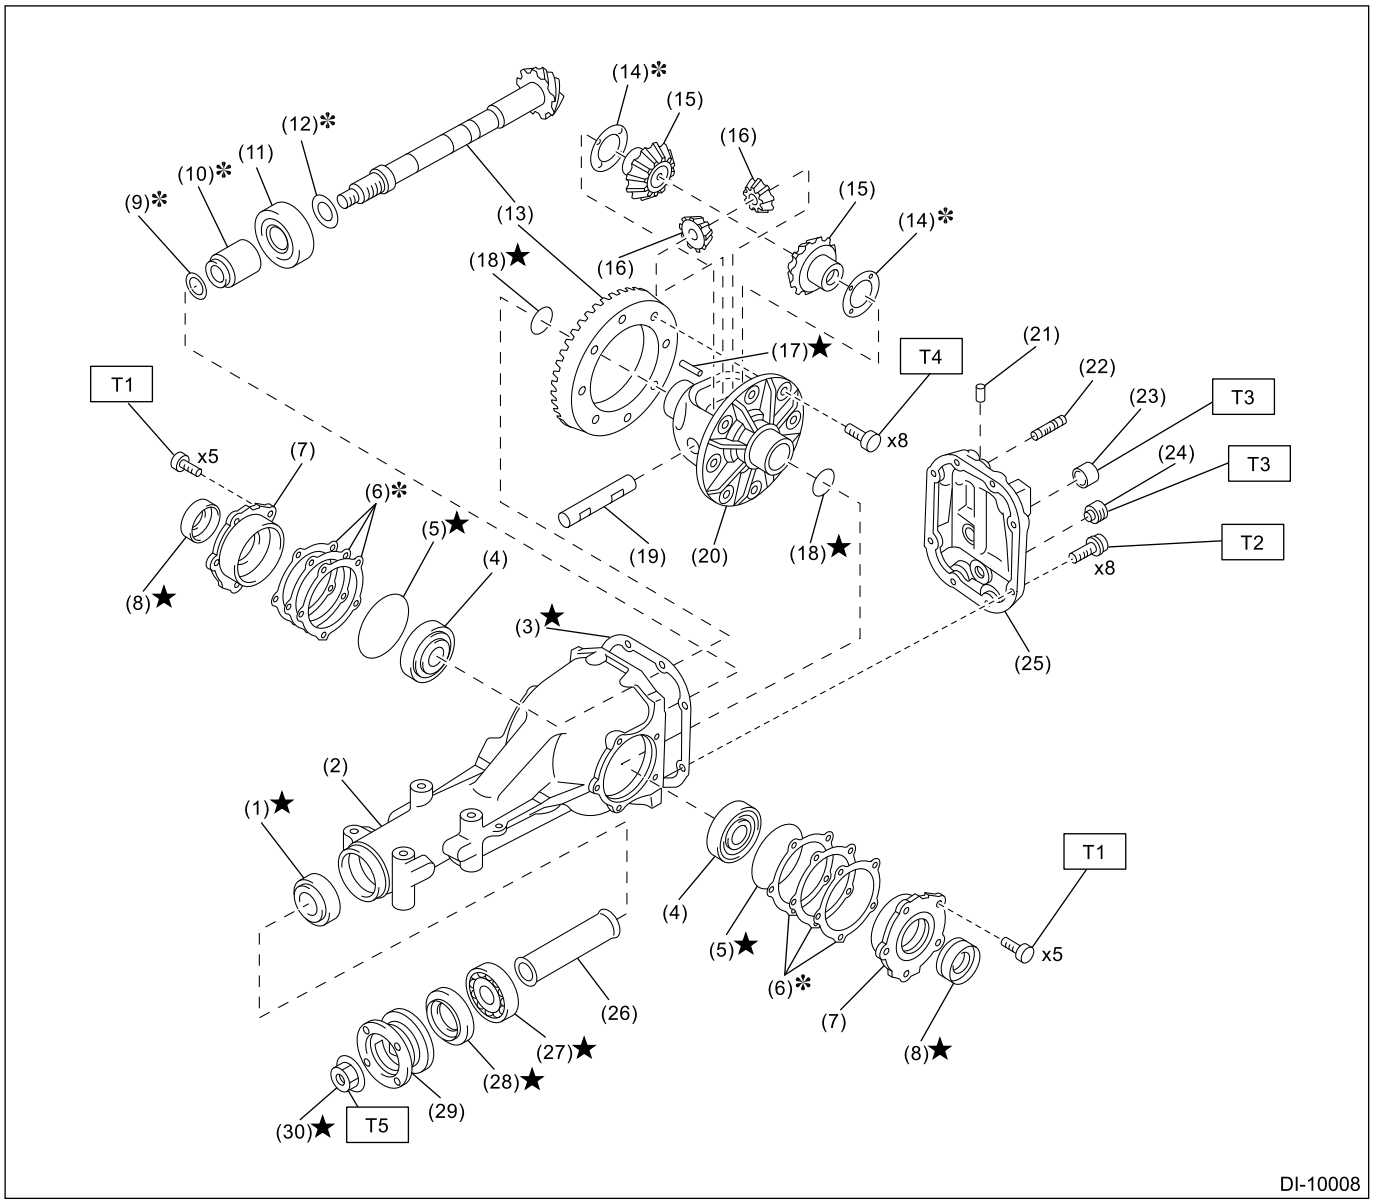


(1) Identification

3. REAR DIFFERENTIAL GEAR OIL

Caution:
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

- VA1-type
  Recommended gear oil:
  SUBARU GEAR OIL EXTRA MT (75W-80)
- T-type
  Recommended gear oil:
  GL-5 (75W-90) or equivalent



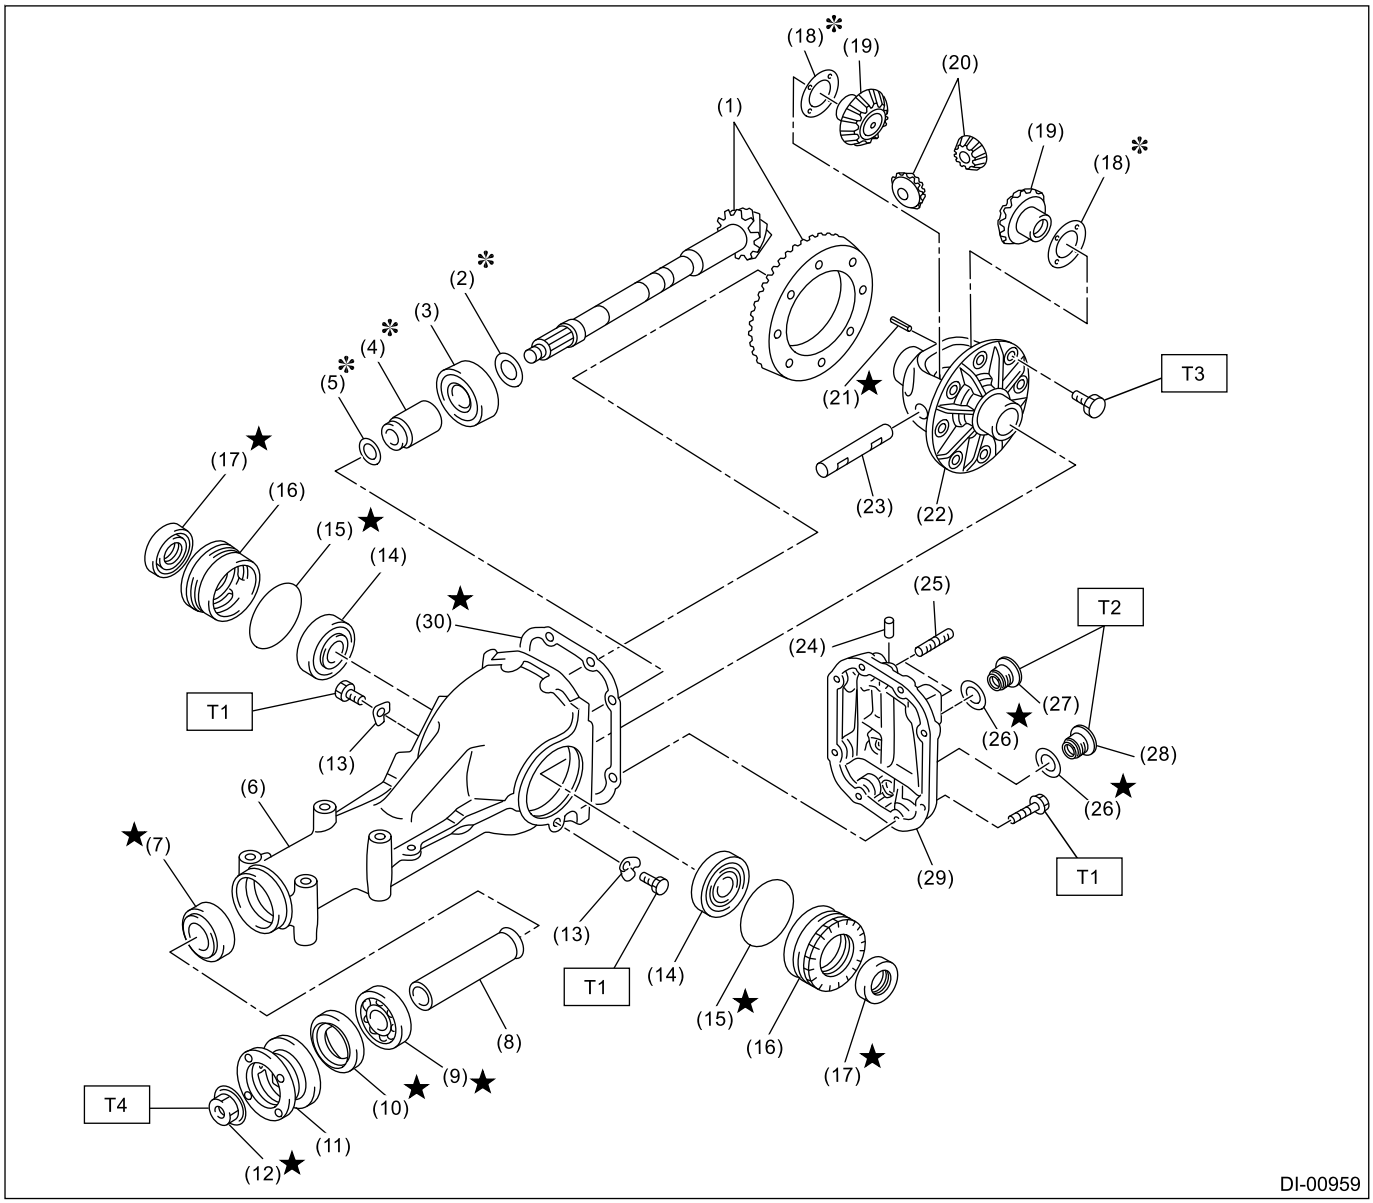
API classification	GL-5
SAE viscosity No. and applicable temperature	 DI-10007

4. SERVICE DATA

Drive pinion bearing preload (for new bearing)	Measured with spring measurement (measured from the companion flange bolt)	N (kgf, lbf)	T-type	18.1 — 38.8 (1.8 — 4.0, 4.1 — 8.7)
			VA1-type	12.7 — 32.2 (1.3 — 3.3, 2.9 — 7.2)
	Measured with torque wrench	N·m (kgf-m, ft-lb)	T-type	0.69 — 1.47 (0.07 — 0.15, 0.51 — 1.08)
			VA1-type	0.48 — 1.22 (0.05 — 0.12, 0.35 — 0.90)
Side gear backlash		mm (in)	T-type	0.10 — 0.20 (0.004 — 0.008)
			VA1-type	0.05 — 0.15 (0.002 — 0.006)
Hypoid driven gear backlash		mm (in)	T-type	0.10 — 0.20 (0.004 — 0.008)
			VA1-type	0.10 — 0.15 (0.004 — 0.006)
Hypoid driven gear runout on its back surface		mm (in)	T-type	0.05 (0.002)
Total preload (measured from the companion flange bolt hole)		N (kgf, lbf)	T-type	20.7 — 54.4 (2.1 — 5.5, 4.7 — 12.2)
Companion flange mating surface runout			mm (in)	0.08 (0.003)
Companion flange runout on its inner side			mm (in)	0.08 (0.003)

COMPONENT

1. REAR DIFFERENTIAL (T-TYPE)



(1) Front bearing
(2) Differential carrier
(3) Gasket
(4) Side bearing
(5) O-ring
(6) Side retainer shim
(7) Side retainer
(8) Side oil seal
(9) Preload adjusting washer
(10) Preload adjusting spacer
(11) Rear bearing
(12) Pinion height adjusting washer
(13) Hypoid driven gear and drive pinion set
(14) Side gear thrust washer
(15) Side gear
(16) Pinion mate gear
(17) Pinion shaft lock pin
(18) Circlip
(19) Pinion mate shaft
(20) Differential case
(21) Air breather cap
(22) Stud bolt
(23) Filler plug
(24) Drain plug
(25) Rear cover
(26) Spacer

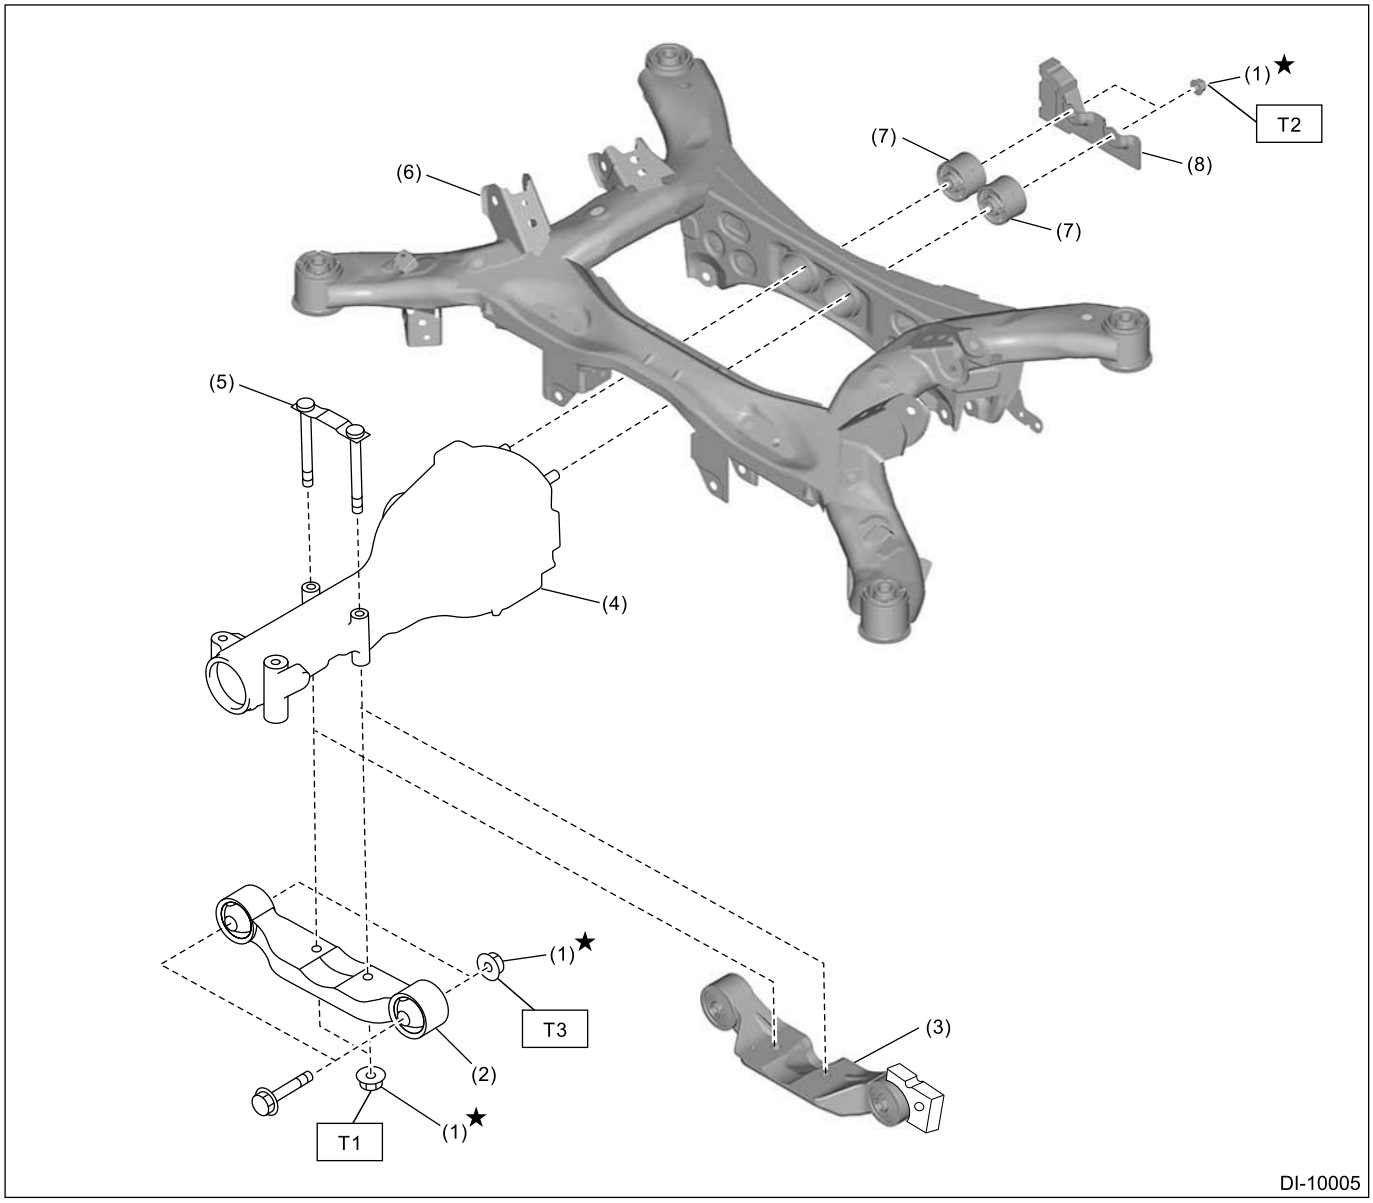
T2: 29.5 (3.0, 21.8)
T3: 49 (5.0, 36.1)
T4: 103 (10.5, 76.0)
T5: 181.5 (18.5, 133.9)

2. REAR DIFFERENTIAL (VA1-TYPE)



(1) Hypoid driven gear and drive pinion set
(2) Pinion height adjusting washer
(3) Rear bearing
(4) Preload adjusting spacer
(5) Preload adjusting washer
(6) Differential carrier
(7) Front bearing
(8) Spacer
(9) Pilot bearing
(10) Front oil seal
(11) Companion flange
(12) Self-locking nut
(13) Lock plate
(14) Side bearing
(15) O-ring
(16) Side retainer
(17) Side oil seal
(18) Side gear thrust washer
(19) Side gear
(20) Pinion mate gear
(21) Spring pin
(22) Differential case
(23) Pinion mate shaft
(24) Air breather cap
(25) Stud bolt
(26) Gasket
(27) Filler plug
(28) Drain plug
(29) Rear cover
(30) Gasket

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 50 (5.1, 36.9)
T3: Ref. to DIFFERENTIALS>Rear Differential (VA-type)>ASSEMBLY.
T4: 191 (19.5, 140.9)

3. REAR DIFFERENTIAL MOUNTING SYSTEM

(1)	Self-locking nut	(5)	Rear differential member plate	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear differential front member (T type)	(6)	Sub frame	***T1: 50 (5.1, 36.9)***
(3)	Rear differential front member (VA1 type)	(7)	Rear differential mount bushing	***T2: 70 (7.1, 51.6)***
(4)	Rear differential ASSY	(8)	Mass damper	***T3: 110 (11.2, 81.1)***

DIFFERENTIALS > General Description

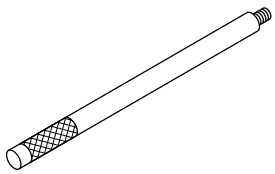
CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.

- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix up grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing the O-ring or snap ring, apply a sufficient amount of gear oil to avoid damage and deformation.
- Avoid damaging the mating surface of the case.
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  - Be careful with fire.
  - Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  - Follow all government and local regulations concerning disposal of refuse when disposing.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

PREPARATION TOOL

1. SPECIAL TOOL



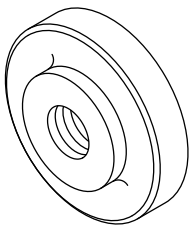


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
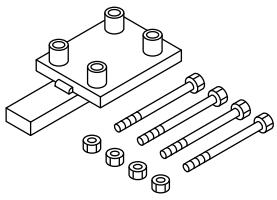
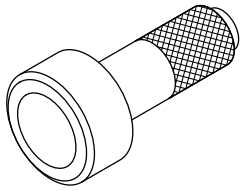
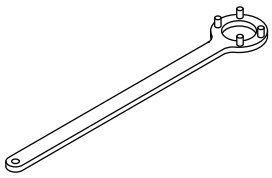
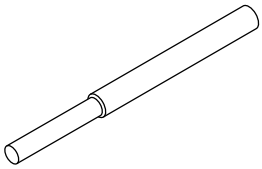
 ST-398477701	398477701	HANDLE	• Used for installing the rear bearing race. • Used for installing the front bearing race.
 ST-398477702	398477702	DRIFT	• Used for installing the front bearing race. (T-type) • Used for installing the rear bearing race. (VA1-type) • Used for installing side bearing race. (VA1-type)









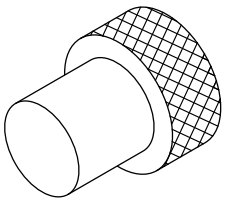


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
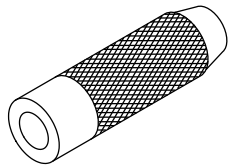
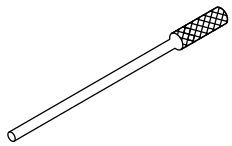
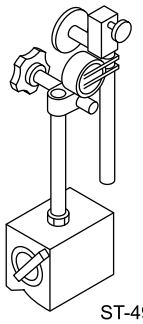
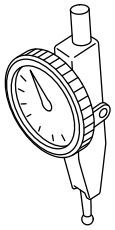
 ST-398217700	398217700	ATTACHMENT SET	Stand for rear differential carrier disassembly and assembly.
 ST-498447120	498447120	INSTALLER	Used for installing the front oil seal.
 ST-498427200	498427200	FLANGE WRENCH	Used for stopping rotation of companion flange when removing and tightening self-lock nut.
 ST-398467700	398467700	DRIFT	Used for removing drive pinion shaft, pilot bearing and front bearing cone.
 ST-399780104	399780104	WEIGHT	• Used for installing the front bearing cone and the companion flange. • Used for installing the pilot bearing.









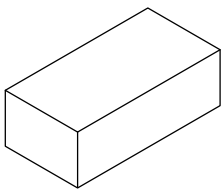


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

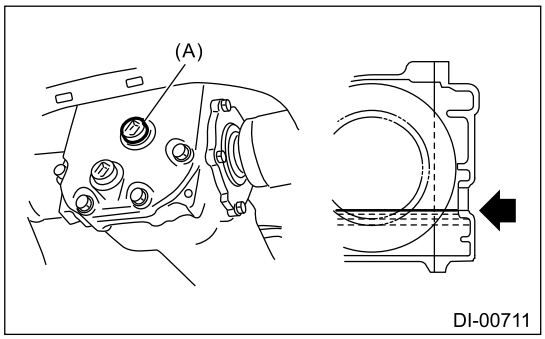
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Transmission jack	Used for removing and installing the rear differential.
Puller	Used for removing the side bearing retainer.
Thickness gauge	Used for measuring clearance.
Hexagon wrench	Used for installing and removing the filler plug and drain plug.
Tire lever	Used for removing the rear drive shaft. (VA1-type)
Angle gauge	Used for installing the hypoid driven gear. (VA1-type)
DST-i	Used together with Subaru Select Monitor 4.



INSPECTION

1. Lift up the vehicle.
2. Remove the filler plug, and then check the gear oil. Replace the gear oil if it is contaminated, deteriorated or cloudy. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.
3. Check that the gear oil level is within −5 mm (−0.2 in) from the bottom of the filler plug hole. If the level is low, make sure that there is no oil leakage and refill up to the bottom of filler plug hole.

   Note:

   On VA1-types at factory settings, the oil level may be within −14 mm (−0.6 in) from the bottom of the filler plug. This is at normal level, requiring no oil refill.

   - T-type

(A) Filler plug

   - VA1-type

(A) Filler plug

4. Install the filler plug.

   Caution:

   For VA1 type, use a new gasket.

   Note:

   For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the filler plug.

   Liquid gasket:

   THREE BOND 1105 (Part No. 004403010) or equivalent

   Tightening torque:

   T-type:

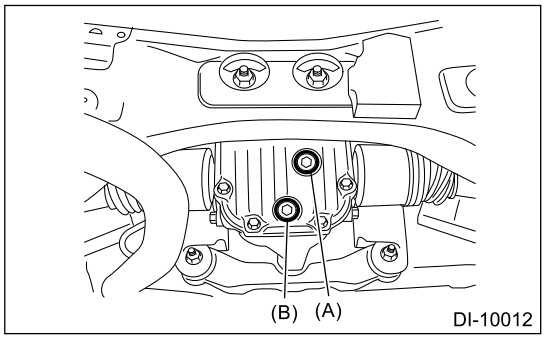
   49 N·m (5.0 kgf-m, 36.1 ft-lb)

   VA1-type:

   50 N·m (5.1 kgf-m, 36.9 ft-lb)

REPLACEMENT

Caution:



- **Gear oil is extremely hot just after driving. Be wary of receiving burns.**
- **Be careful not to spill the differential gear oil on exhaust pipe. If gear oil is spilled, wipe it off completely.**

1. Lift up the vehicle.
2. Remove the drain plug and filler plug, and drain the gear oil.
   - T-type

(A) Filler plug
(B) Drain plug

   - VA1-type

(A) Filler plug
(B) Drain plug

3. Install the drain plug.

Caution:

For VA1 type, use a new gasket.

Note:

For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the drain plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

T-type:

49 N·m (5.0 kgf-m, 36.1 ft-lb)

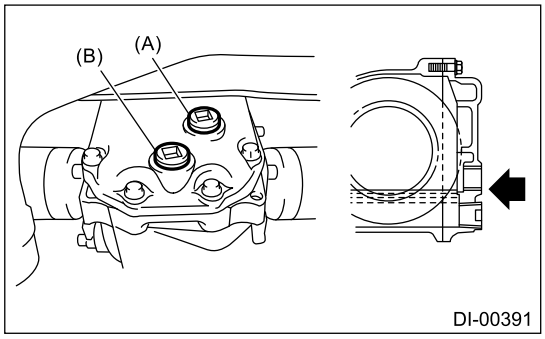
VA1-type:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

4. Fill the differential carrier with gear oil to the bottom of filler plug.

Caution:

Carefully refill gear oil while watching the level. Excessive or insufficient oil must be avoided.

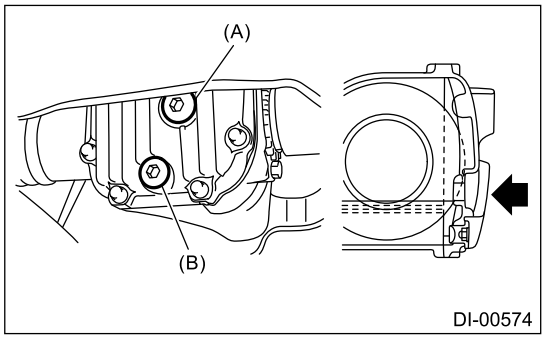


Recommended gear oil:

Ref. to DIFFERENTIALS>General Description>SPECIFICATION.

Oil capacity:

0.8 L (0.8 US qt, 0.7 Imp qt)



- T-type

(A) Filler plug

(B) Drain plug

- VA1-type

(A) Filler plug

(B) Drain plug

5. Install the filler plug.

Caution:

For VA1 type, use a new gasket.

Note:

For the T-type, degrease the thread portion sufficiently and apply liquid gasket to the filler plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

T-type:

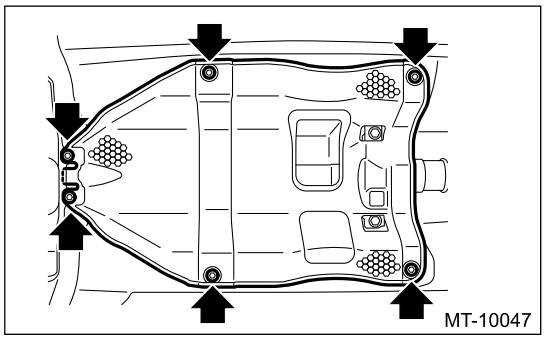
49 N·m (5.0 kgf-m, 36.1 ft-lb)

VA1-type:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

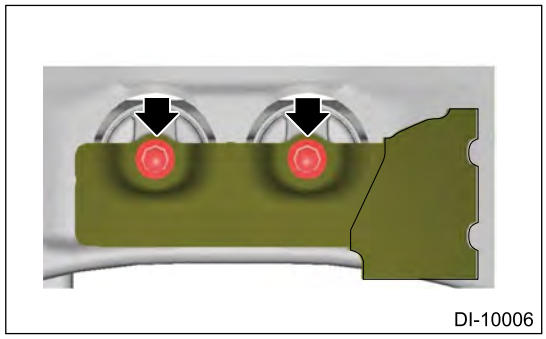
NOTE

1. CVT MODEL



For the front differential, refer to the “CONTINUOUSLY VARIABLE TRANSMISSION (TR580)” section.
Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly.

2. MT model



For the front differential, refer to the “MANUAL TRANSMISSION AND DIFFERENTIAL (5MT)” section.
Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly.

REMOVAL

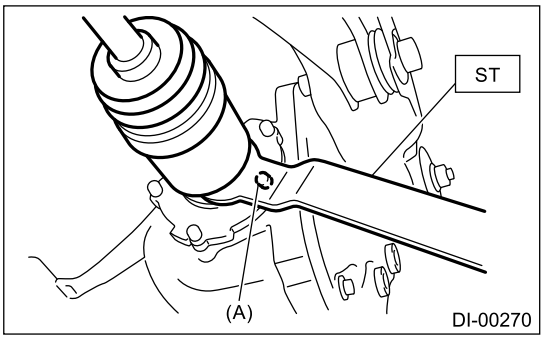
1. Shift the select lever or gear shift lever to neutral.
2. Release the parking brake.
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Lift up the vehicle.
5. Remove the rear tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.
6. Drain differential gear oil. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.
7. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
8. Remove the center exhaust cover.

9. Remove the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
10. Loosen the self-lock nuts which hold the rear differential to the sub frame.

11. Remove the DOJ of the rear drive shaft using the ST or a tire lever.

Caution:

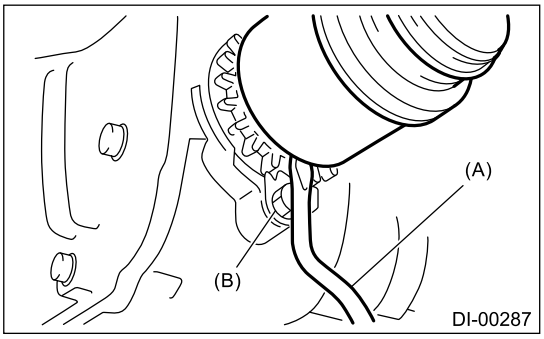
When removing the DOJ, fit the tire lever or ST to the bolts as shown in the figure so as not to damage the side retainer.



Note:

- **For the T-type, use the ST.**
- **For the VA-type, use the tire lever.**

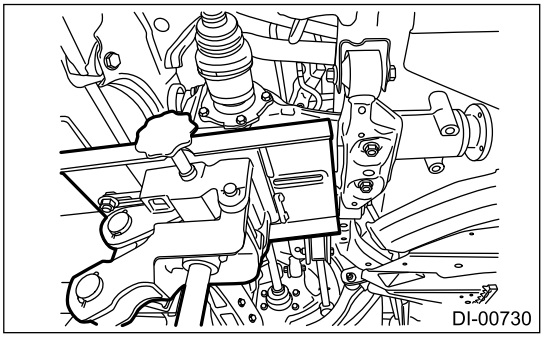
T-type



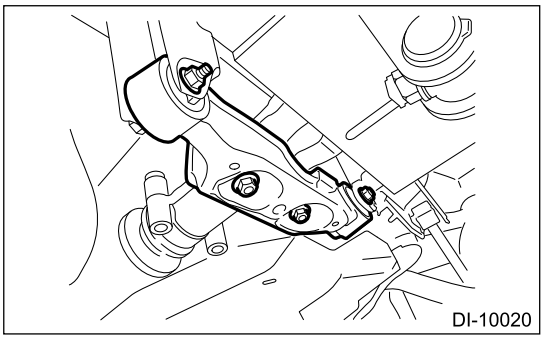
Special Tool:

ST: 28099PA100 DRIVE SHAFT REMOVER

(A) Bolt

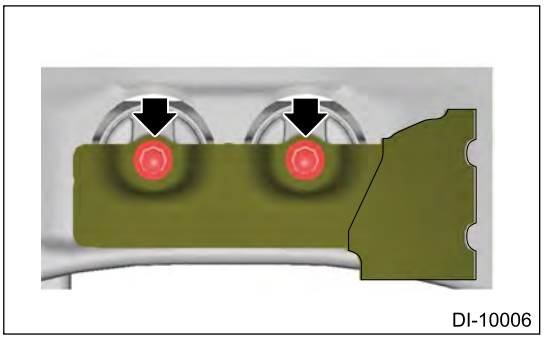


VA1-type



(A) Tire lever

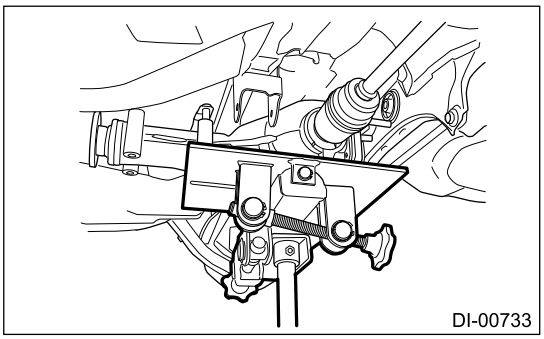
(B) Bolt



12. Set the transmission jack.

13. Remove the rear differential front member.

14. Remove the self-lock nuts which hold the rear differential to the sub frame.

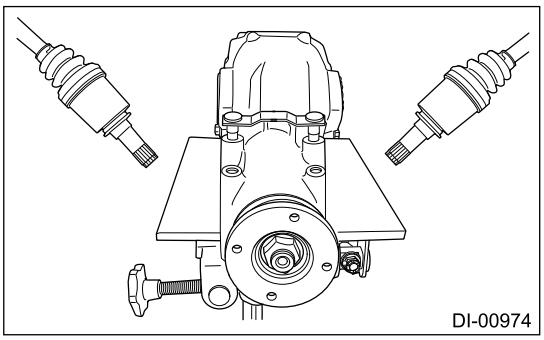


15. Remove the mass damper.

16. Pull out the rear differential stud bolt from rear differential mount bushing.

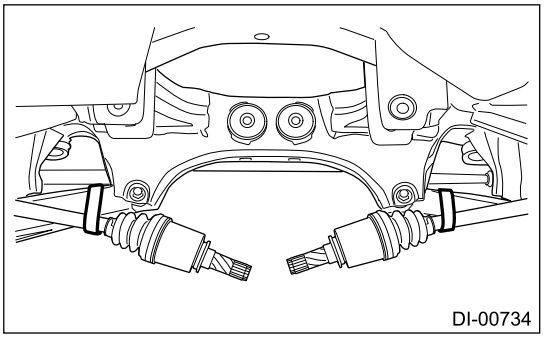
Note:

When pulling out the stud bolt from the rear differential mount bushing, carefully adjust the angle and location of transmission jack and jack stand, if necessary.



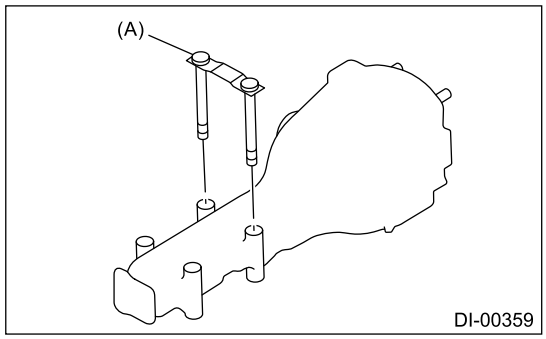
17. Lower the transmission jack.

18. Pull out the rear drive shaft.



Note:

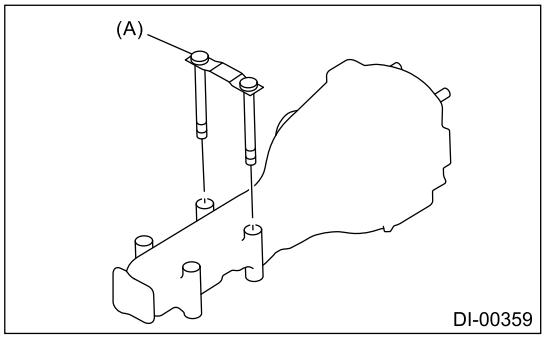
If it is difficult to pull out the rear drive shaft, use the DRIVE SHAFT REMOVER (28099PA100) for T-type and the tire lever for VA1-type.



19. Lower the transmission jack.

20. Secure the rear drive shaft using a wire.

21. Remove the rear differential member plate.

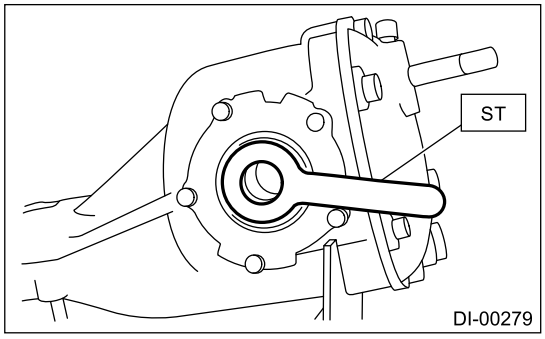


(A) Rear differential member plate

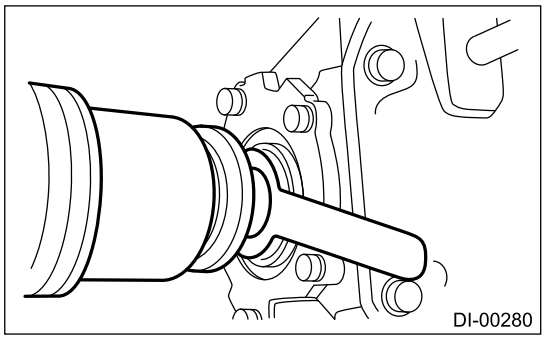
DIFFERENTIALS > Rear Differential (T-type)

INSTALLATION

1. Install the rear differential member plate.

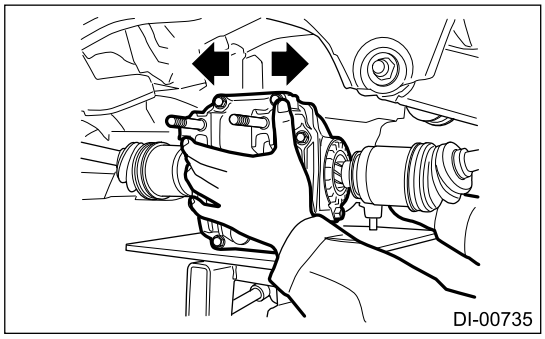


(A) Rear differential member plate

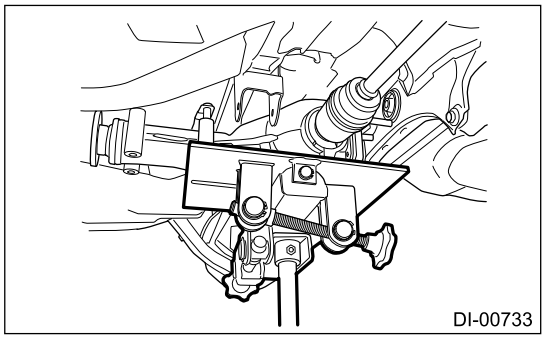


2. Set the rear differential to transmission jack.
3. Set the ST to the rear differential.

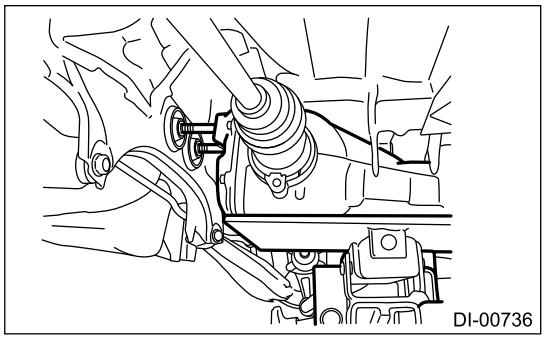
Special Tool:



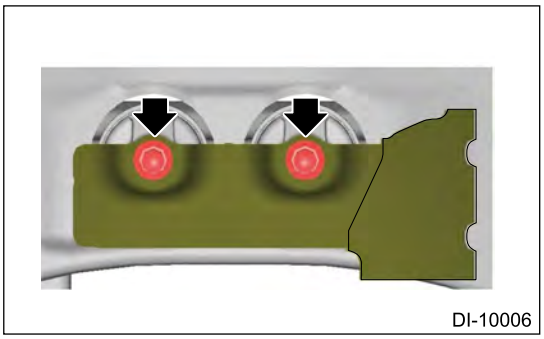
ST: 28099PA090 OIL SEAL PROTECTOR



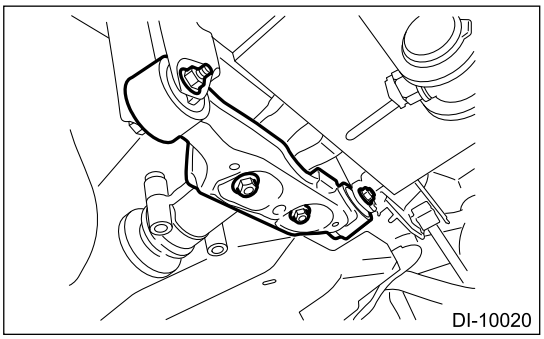
4. Insert the rear drive shaft until the spline portion of the rear drive shaft exceeds the side oil seal.



5. Remove the OIL SEAL PROTECTOR (28099PA090) from rear differential.
6. Push the rear differential from side to side to insert the DOJ completely.



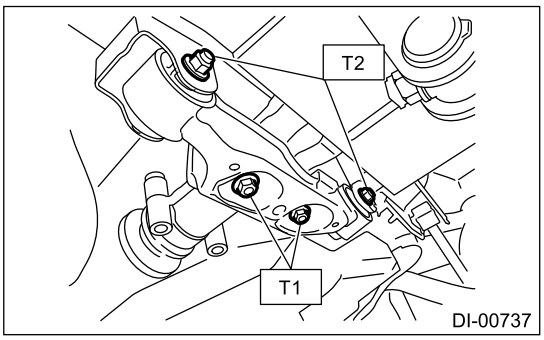
7. Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into the rear differential mount bushing.



8. Raise the transmission jack, and adjust the height to the rear differential mounting position.

9. Install the mass damper.
10. Tighten a new self-locking nut temporarily to the rear differential stud bolt.

11. Install the rear differential front member, and temporarily attach and tighten a new self-locking nut.

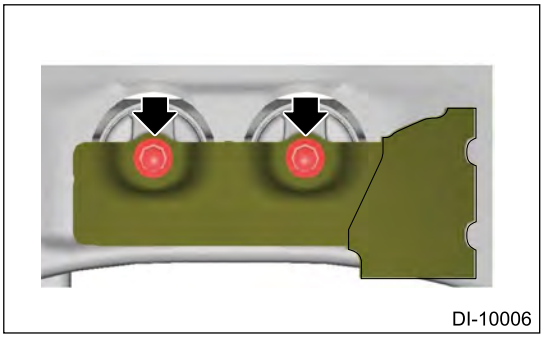


12. Remove the transmission jack.

13. Tighten the self-locking nut.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

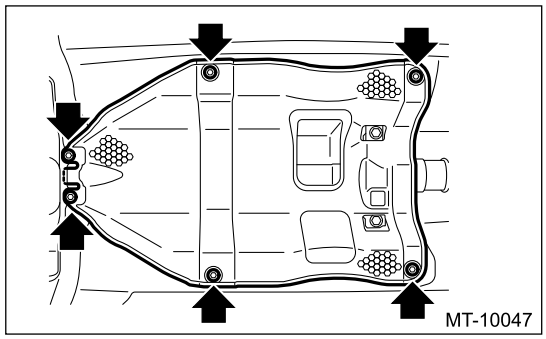


T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

14. Tighten the self-locking nut.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)



15. Install the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.

16. Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

17. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.
18. Fill differential gear oil. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.
19. Lower the vehicle.
20. Install the rear tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.
21. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
22. Perform "Rear differential inspection mode" using the Subaru Select Monitor. (CVT model) Ref. to DIFFERENTIALS>Rear Differential Inspection Mode.

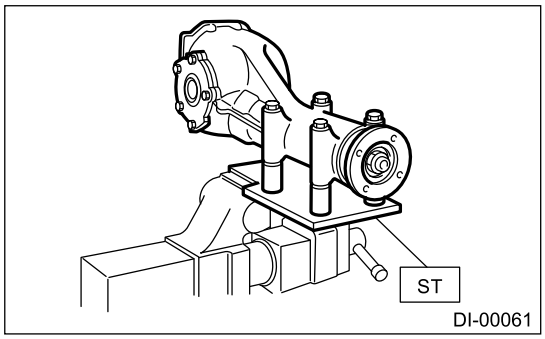
Caution:

Be sure to perform rear differential inspection mode when the following work has been performed.

- **Replacement of rear differential**
- **Replacement of rear differential hypoid gear set**
- **Replacement of transmission assembly**
- **Replacement of front differential hypoid gear set**

DIFFERENTIALS > Rear Differential (T-type)

DISASSEMBLY

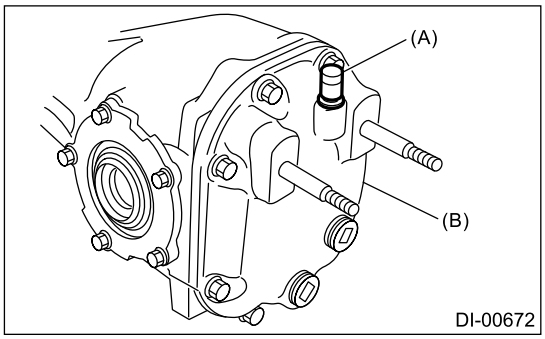


To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact and backlash between hypoid driven gear and drive pinion
- Hypoid driven gear runout on its back surface
- Total preload of drive pinion

1. Set the ST on a vise, and install the differential assembly to the ST.

Special Tool:



ST: 398217700 ATTACHMENT SET

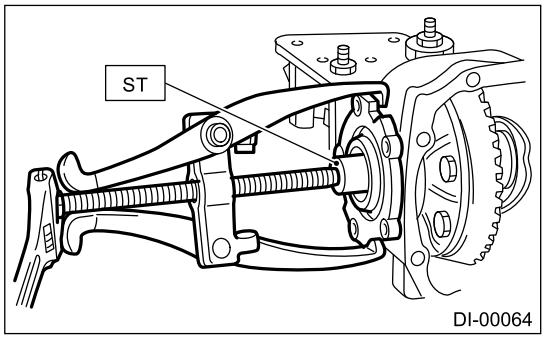
2. Remove the drain plug and filler plug.
3. Remove the air breather cap.

Caution:

- **Do not attempt to remove the air breather cap unless necessary.**
- **Whenever the air breather cap is removed, replace it with a new part.**

(A) Air breather cap

(B) Rear cover

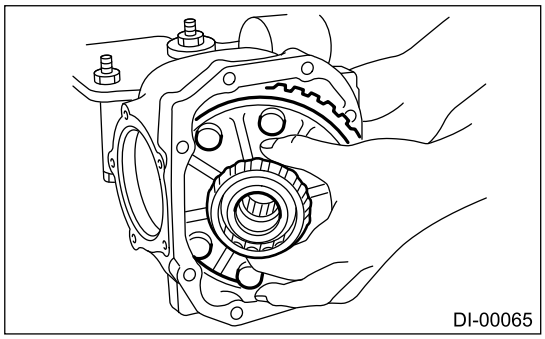


4. Remove the bolts, and then remove the rear cover.
5. Remove the stud bolts from rear cover if necessary.
6. Remove the side retainer attachment bolts, set the ST to the differential case, and remove the side retainer with a puller.

Note:

- **Side retainer shim of each side should be kept together with its mating retainer.**
- **Keep the side retainers separate by attaching tags or in similar ways to make it possible to identify RH and LH sides during reassembly.**

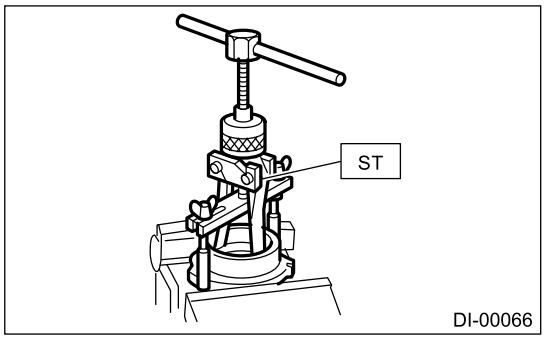
Special Tool:



ST: 398457700 ATTACHMENT

7. Remove the side oil seal and O-ring from the side retainer.
8. Remove the differential case assembly.

Caution:

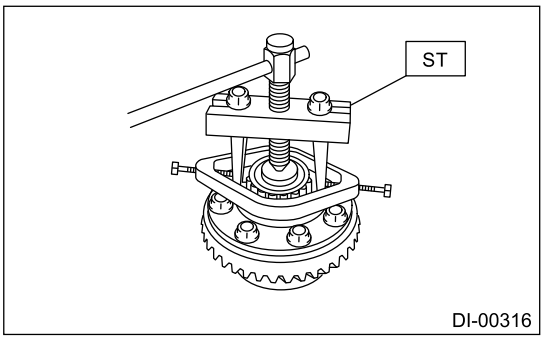


Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

9. When replacing the side bearing, remove the side bearing race from the side retainer using the ST.

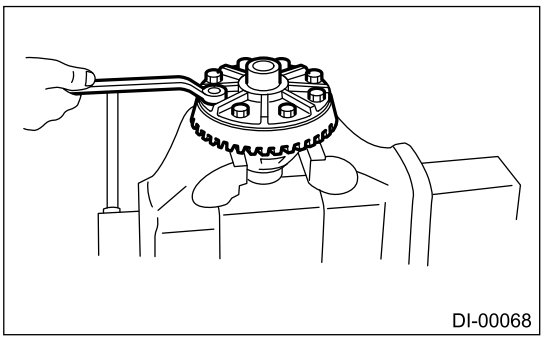
Special Tool:

ST: 398527700 PULLER ASSY



10. Remove the side bearing cone using the ST.

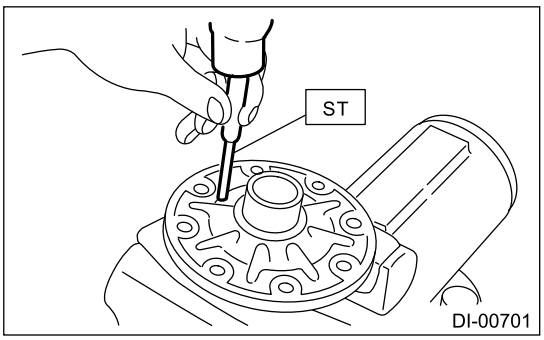
Note:



- **Do not attempt to disassemble the parts unless necessary.**
- **Set the ST so that its claws catch the edge of the side bearing cone.**
- **Never mix up the RH and LH side bearing races and cones.**

Special Tool:

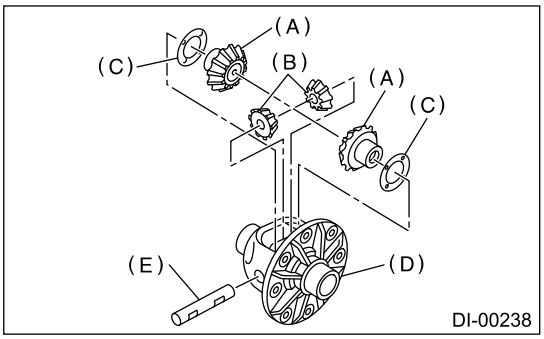
ST: 18759AA000 PULLER ASSY



11. Remove the hypoid driven gear by loosening hypoid driven gear bolts.

12. Remove the pinion shaft lock pin from hypoid driven gear side using the ST.

Special Tool:



ST: 899904100 STRAIGHT PIN REMOVER

13. Draw out the pinion mate shaft and remove pinion mate gears, side gears and side gear thrust washers.

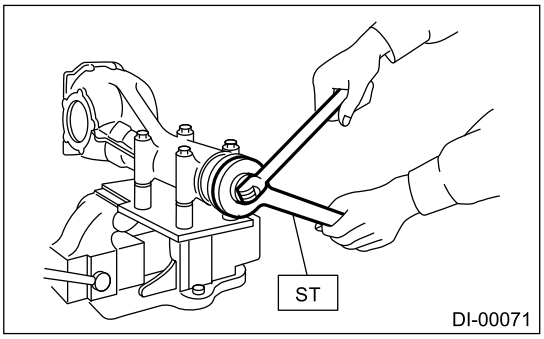
Note:

The gears and washers should be marked with front or rear, RH or LH, or kept separately.

(A) Side gear

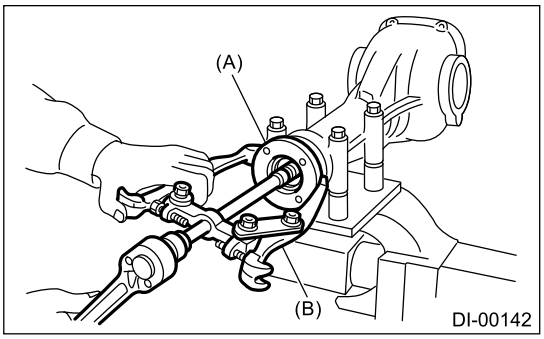
(B) Pinion mate gear

(C) Side gear thrust washer



(D) Differential case

(E) Pinion mate shaft



14. Remove the self-locking nut while securing the companion flange with the ST.

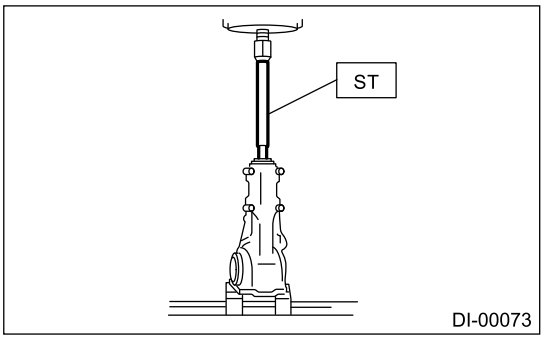
Special Tool:

ST: 498427200 FLANGE WRENCH

15. Extract the companion flange with a puller.

(A) Companion flange

(B) Puller



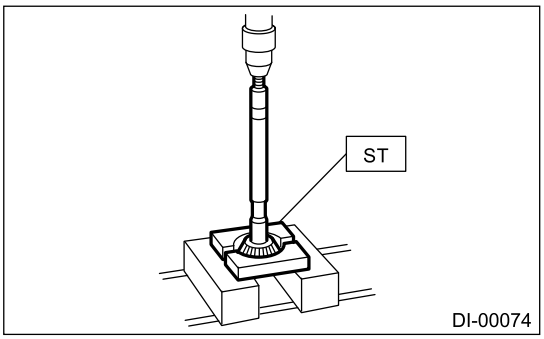
16. Press the end of drive pinion shaft using the ST and remove the rear bearing cone, pinion height adjusting washer, preload adjusting spacer and washer.

Caution:

Hold the drive pinion so as not to drop it.

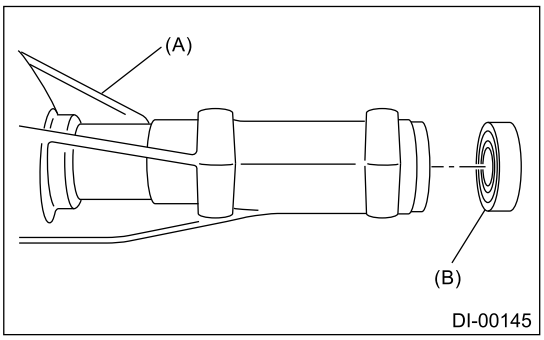
Special Tool:

ST: 398467700 DRIFT



17. Support the rear bearing cone with the ST, and remove it from the drive pinion.

Note:

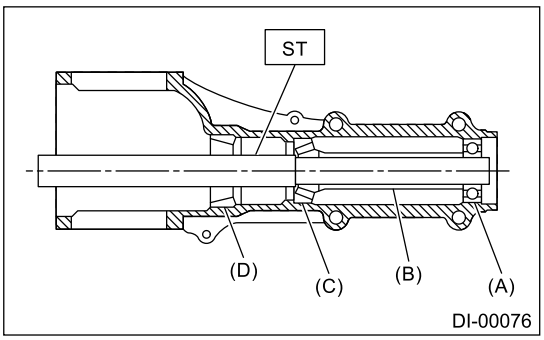


Place the replacer so that its center-recessed side faces the bearing cone.

Special Tool:

ST: 398517700 REPLACER

18. Remove the front oil seal using the PULLER ASSY (398527700).



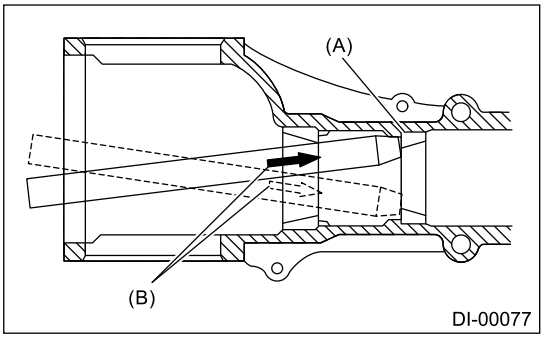
(A) Differential carrier

(B) Front oil seal

19. Remove the pilot bearing together with the front bearing cone and spacer using the ST.

Special Tool:

ST: 398467700 DRIFT



(A) Pilot bearing

(B) Spacer

(C) Front bearing

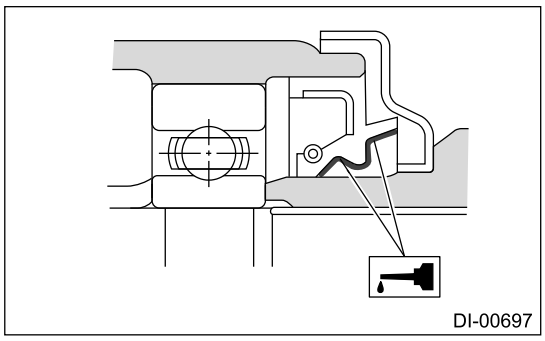
(D) Rear bearing race

20. When replacing the bearings, tap out and remove the front bearing race and rear bearing race in this order using a brass bar.

(A) 2 cutout portions along diagonal lines

(B) Tap alternately with brass bar.

DIFFERENTIALS > Rear Differential (T-type)



ASSEMBLY

Caution:

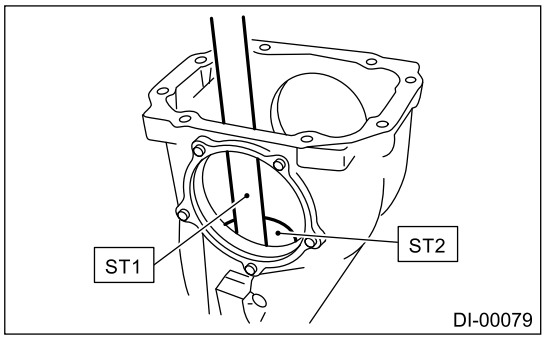
- **Keep the shims and washers in order, so that they are not improperly installed.**
- **Be careful not to mix up the side bearing race RH and LH.**
- **Be careful not to mix up the side oil seal RH and LH.**

Note:

- **Check and adjust each part during assembly.**
- **Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.**
- **Apply differential gear oil when installing the bearings and thrust washers.**
- **Apply differential gear oil to the lips when installing the oil seal.**

1. Adjusting preload for front and rear bearings

Note:



Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.

(1) Install the rear bearing race using the ST1 and ST2.

Special Tool:

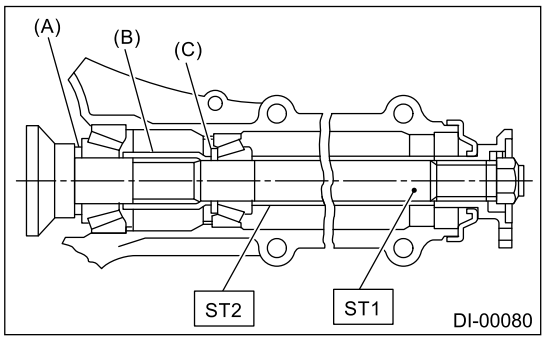
ST1: 398477701 HANDLE

ST2: 398477703 DRIFT 2

(2) Using the HANDLE (398477701) and DRIFT (398477702), install a new front bearing race to the differential carrier.

(3) Insert the ST1 into the differential carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.

Note:



- **At this time, install a provisionally selected or previously used pinion height adjusting washer. Measure and record the thickness.**
- **If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.**

(4) Install the preload adjusting spacer and washer, new front bearing cone, ST2, companion flange and self-locking nut.

Special Tool:

ST1: 398507702 DUMMY SHAFT

ST2: 398507703 DUMMY COLLAR

(A) Pinion height adjusting washer

(B) Preload adjusting spacer

(C) Preload adjusting washer

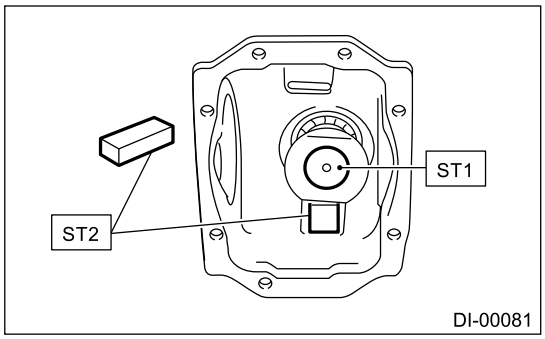
(5) Turn the ST1 by hand to smooth the bearing, and tighten a new self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

Caution:

Be careful not to give excessive preload.

Note:

- **Measure the preload in direction of tangent to the flange.**
- **When tightening the self-locking nut, lock the ST1 with the ST2 as shown in the figure.**

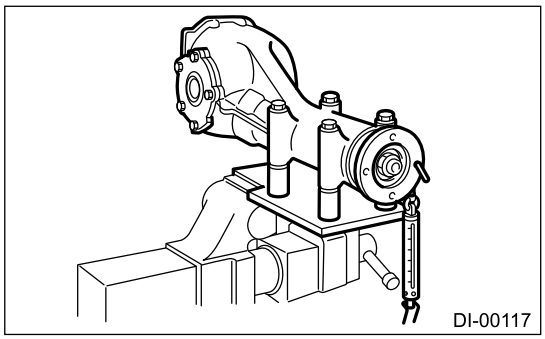


Special Tool:

ST1: 398507702 DUMMY SHAFT

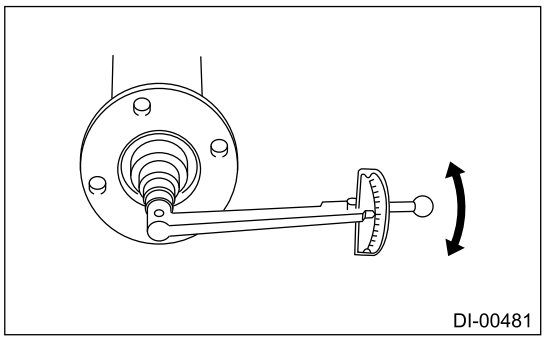
ST2: 398507704 BLOCK

Tightening torque:



181.5 N·m (18.5 kgf-m, 133.9 ft-lb)

Specification:

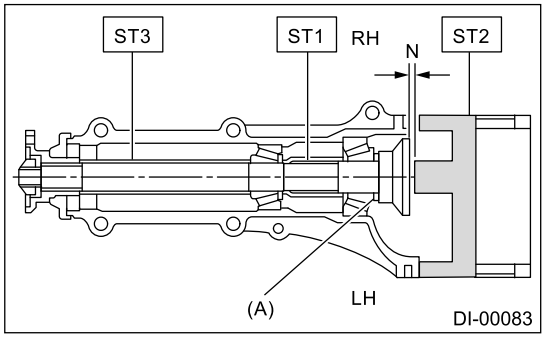


Initial load:

18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lbf)

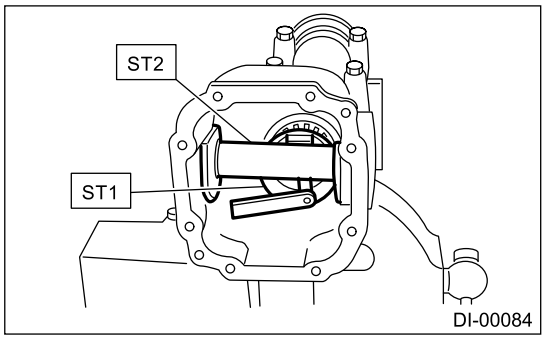
Initial torque:

0.69 — 1.47 N·m (0.07 — 0.15 kgf-m, 0.51 — 1.08 ft-lb)



Preload adjusting washer	
Part No.	**Thickness mm (in)**
383705200	2.59 (0.1020)
383715200	2.57 (0.1012)
383725200	2.55 (0.1004)
383735200	2.53 (0.0996)
383745200	2.51 (0.0988)
383755200	2.49 (0.0980)
383765200	2.47 (0.0972)
383775200	2.45 (0.0965)
383785200	2.43 (0.0957)

Preload adjusting washer	
Part No.	**Thickness mm (in)**
383795200	2.41 (0.0949)
383805200	2.39 (0.0941)
383815200	2.37 (0.0933)
383825200	2.35 (0.0925)
383835200	2.33 (0.0917)
383845200	2.31 (0.0909)



Preload adjusting spacer	
Part No.	**Length mm (in)**
383695201	56.2 (2.213)
383695202	56.4 (2.220)
383695203	56.6 (2.228)
383695204	56.8 (2.236)
383695205	57.0 (2.244)
383695206	57.2 (2.252)

2. Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.
(1) Install the ST2.
Special Tool:
ST1: 398507702 DUMMY SHAFT
ST2: 398507701 DIFFERENTIAL CARRIER GAUGE
ST3: 398507703 DUMMY COLLAR

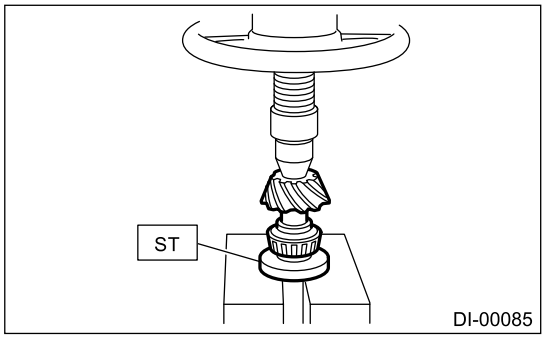
(A) Pinion height adjusting washer

(2) Measure the clearance “N” between the end of ST2 and the end surface of ST1 by using a thickness gauge.
Note:
Make sure there is no clearance between the differential carrier and ST2.
Special Tool:
ST1: 398507702 DUMMY SHAFT
ST2: 398507701 DIFFERENTIAL CARRIER GAUGE

(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.
T = To + N − (H × 0.01) − 0.20 mm (0.0079 in)

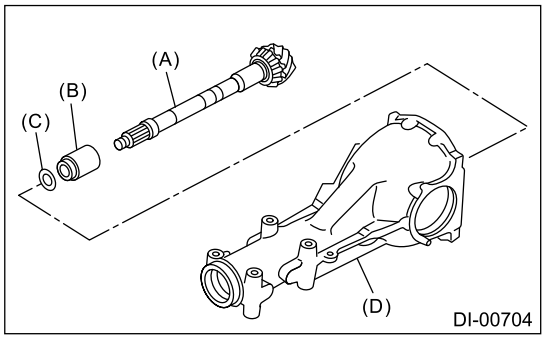
T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		

(Example of calculation)
To = 3.39 mm (0.1335 in)
N = 0.24 mm (0.0094 in)
H = + 1
T = 3.39 mm (0.1335 in) + 0.24 mm (0.0094 in) − 0.01 mm (0.0004 in) − 0.20 mm (0.0079 in) = 3.42 mm (0.1346 in)
Result: Thickness = 3.42 mm (0.1346 in)
Therefore use washer 383605200.



Pinion height adjusting washer	
Part No.	**Thickness mm (in)**
383495200	3.09 (0.1217)
383505200	3.12 (0.1228)
383515200	3.15 (0.1240)
383525200	3.18 (0.1252)
383535200	3.21 (0.1264)
383545200	3.24 (0.1276)
383555200	3.27 (0.1287)
383565200	3.30 (0.1299)
383575200	3.33 (0.1311)
383585200	3.36 (0.1323)
383595200	3.39 (0.1335)
383605200	3.42 (0.1346)

Pinion height adjusting washer	
Part No.	**Thickness mm (in)**
383615200	3.45 (0.1358)
383625200	3.48 (0.1370)
383635200	3.51 (0.1382)
383645200	3.54 (0.1394)
383655200	3.57 (0.1406)
383665200	3.60 (0.1417)
383675200	3.63 (0.1429)
383685200	3.66 (0.1441)



3. Install the selected pinion height adjusting washer on drive pinion, and press-in the rear bearing cone with the ST.

Special Tool:

ST: 398177700 INSTALLER

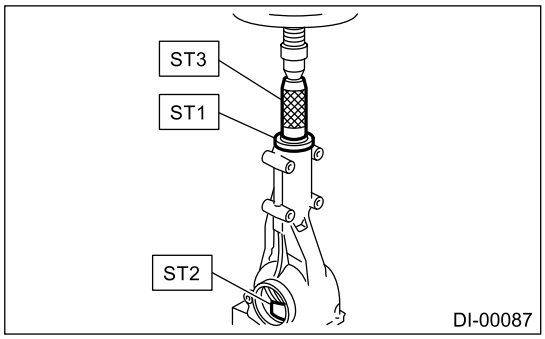
4. Insert the drive pinion, and install the preselected preload adjusting spacer and washer.

(A) Drive pinion

(B) Preload adjusting spacer

(C) Preload adjusting washer

(D) Differential carrier



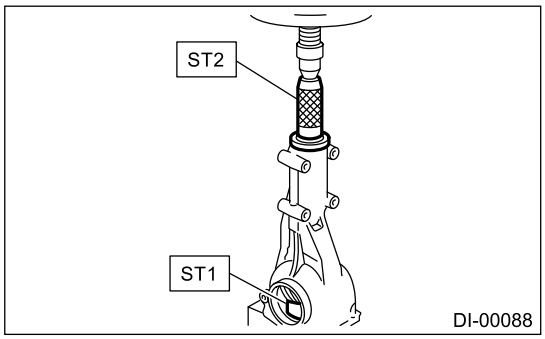
5. Press-fit a new front bearing cone with the ST1, ST2 and ST3.

Special Tool:

ST1: 398507703 DUMMY COLLAR

ST2: 399780104 WEIGHT

ST3: 899580100 INSTALLER

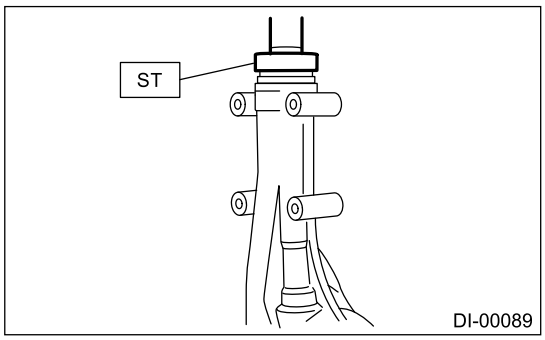


6. Insert the spacer, then press-fit a new pilot bearing with the ST1 and ST2.

Special Tool:

ST1: 399780104 WEIGHT

ST2: 899580100 INSTALLER



7. Using the ST, install a new front oil seal.

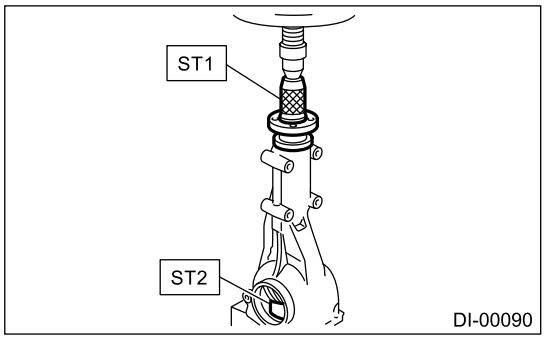
Note:

- **Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.**
- **Apply differential gear oil to the oil seal lips.**

Special Tool:

ST: 498447120 INSTALLER

8. Press-fit the companion flange with the ST1 and ST2.



Caution:

Be careful not to damage the pilot bearing.

Special Tool:

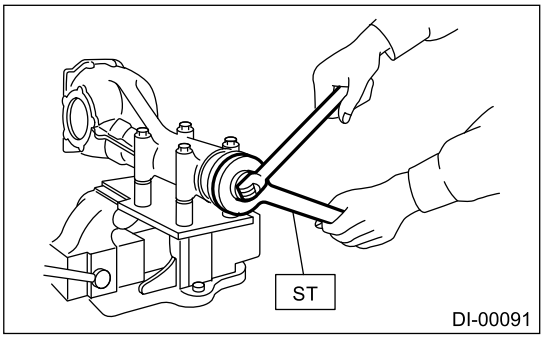
ST1: 899874100 INSTALLER

ST2: 399780104 WEIGHT

9. Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

Seal material:

THREE BOND 1324 (Part No. 004403042) or equivalent



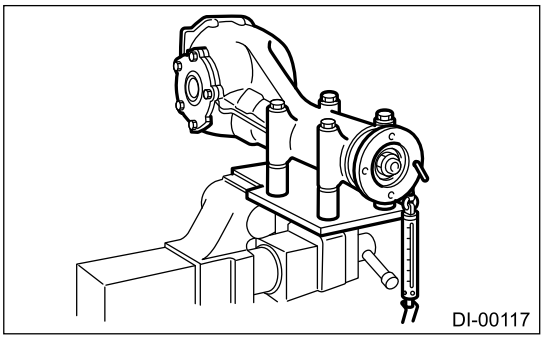
10. Tighten a new self-locking nut while securing the companion flange with the ST.

Tightening torque:

181.5 N·m (18.5 kgf-m, 133.9 ft-lb)

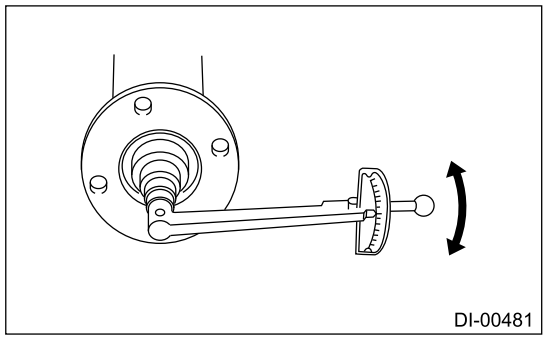
Special Tool:

ST: 498427200 FLANGE WRENCH



11. Check the initial torque or initial load.

Specification:

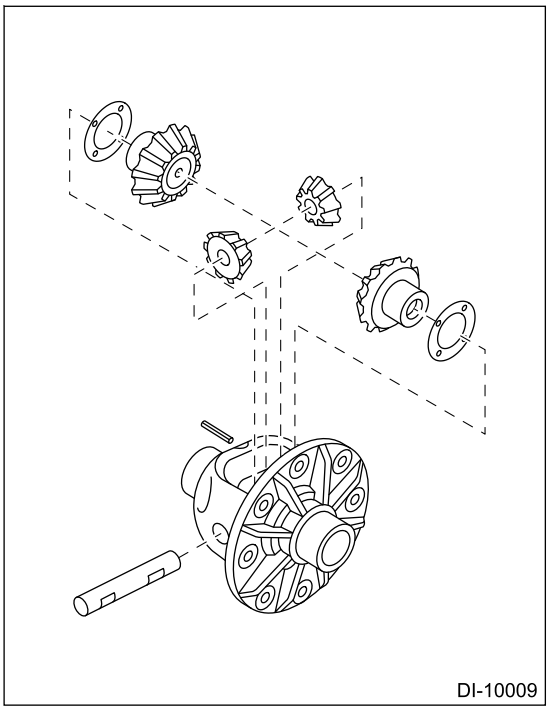


Initial load:

18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lbf)

Initial torque:

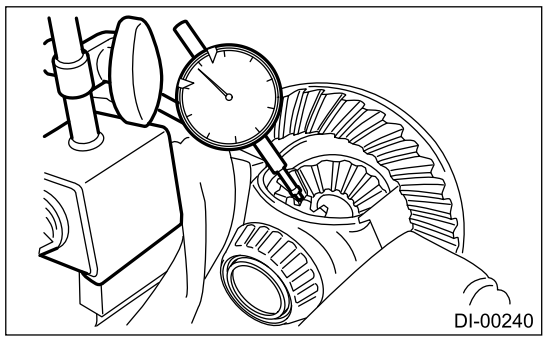
0.69 — 1.47 N·m (0.07 — 0.15 kgf-m, 0.51 — 1.08 ft-lb)



12. Assembling differential case

(1) Install the side gears and pinion mate gears together with the side gear thrust washers and pinion mate shaft.

Note:



- **Apply gear oil on both sides of the washer and on the pinion mate shaft before installing.**
- **Insert the pinion mate shaft into the differential case by aligning the pin holes.**

(2) Measure the side gear backlash.

Specification:

0.10 — 0.20 mm (0.004 — 0.008 in)

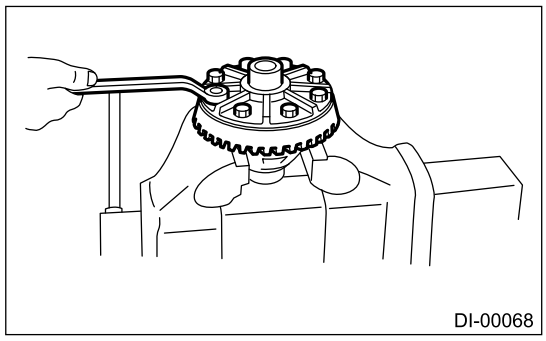
(3) Adjust the side gear backlash within the specified value by selecting the side gear thrust washer.

Side gear thrust washer

Side gear thrust washer Thickness mm (in)	
Part No.	**Thickness mm (in)**
383445201	0.75 — 0.80 (0.0295 — 0.0315)
383445202	0.80 — 0.85 (0.0315 — 0.0335)
383445203	0.85 — 0.90 (0.0335 — 0.0354)

(4) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.

(5) Using the STRAIGHT PIN REMOVER (899904100), drive a new pinion shaft lock pin into the differential case.

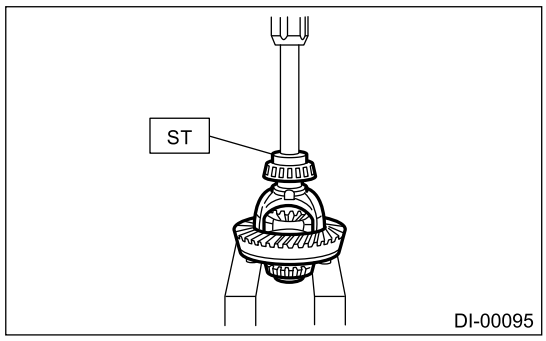


13. Install the hypoid driven gear to differential case.

Note:

- **Before installing bolts, apply seal material to bolt threads.**
  Seal material:
  THREE BOND 1324 (Part No. 004403042) or equivalent
- **Make sure there is no clearance between the differential case and driven gear.**
- **Tighten opposing bolts in order.**

Tightening torque:

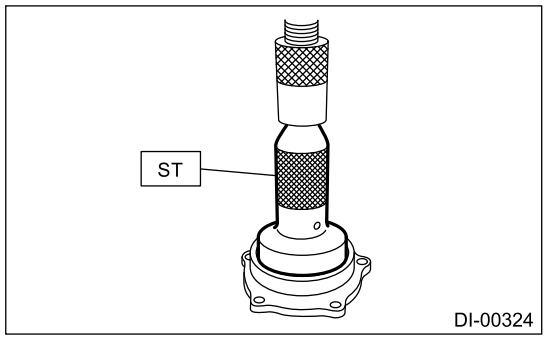


103 N·m (10.5 kgf-m, 76.0 ft-lb)

14. Press-fit the side bearing cone using the ST.

Special Tool:

ST: 398487700 DRIFT



15. Using the ST, press-fit the side bearing race to the side retainer.

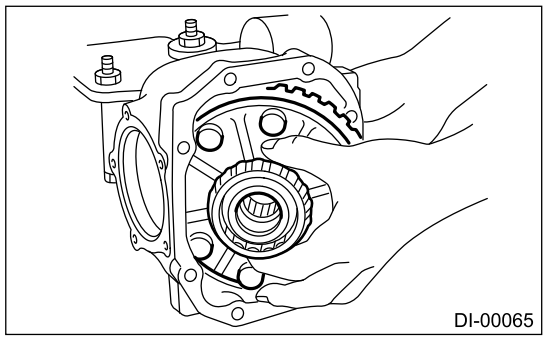
Caution:

Make sure that bearing races and cones are properly assembled.

Special Tool:

ST: 398417700 DRIFT

16. Side retainer shim adjustment



Note:

The hypoid driven gear backlash and side bearing preload can be adjusted by the side retainer shim thickness.

(1) Install the differential case assembly.

Caution:

Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

(2) Install the side retainer shim.

Caution:

- **Be careful not to mix up the side retainer shim RH and LH.**
- **If the side retainer shim is broken or corroded, replace with a new part.**

Side retainer shim	
Part No.	**Thickness mm (in)**
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

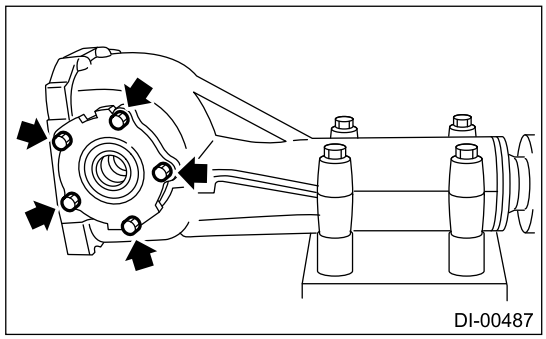
(3) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

Caution:

Be careful that side bearing race is not damaged by the bearing roller.

代替画像1

この画像は代替画像です



(A) Arrow mark (on the side retainer)

(B) Arrow mark (on the differential carrier)

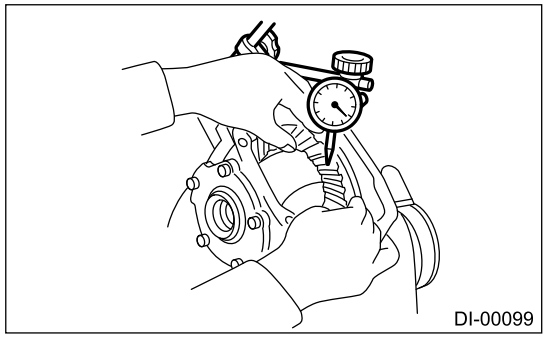
(4) Tighten the side retainer bolts.

Tightening torque:

10.5 N·m (1.1 kgf-m, 7.7 ft-lb)

(5) Measure the hypoid driven gear to drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge. If it is outside the standard value, adjust the side retainer shim by the following method.

- **When backlash is less than 0.1 mm (0.004 in):**



Reduce the thickness of shim on the back side of the hypoid driven gear and increase the thickness of shims on the teeth side of the hypoid driven gear.

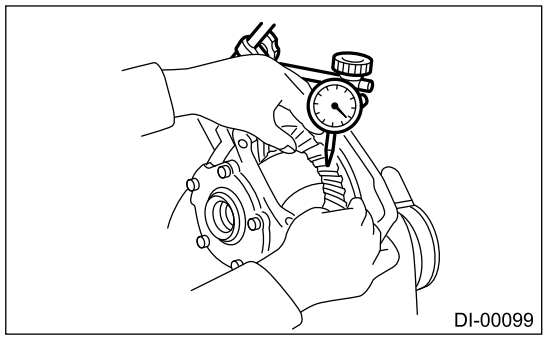
- **When backlash exceeds 0.2 mm (0.008 in):**

Increase the thickness of shim on the back side of the hypoid driven gear and reduce the thickness of shims on the teeth side of the hypoid driven gear.

Specification:

0.10 — 0.20 mm (0.004 — 0.008 in)

(6) Measure the total preload of the drive pinion. If it is outside the standard value, adjust the thickness of side retainer shims, increasing/reducing both shims by an even amount at a time.

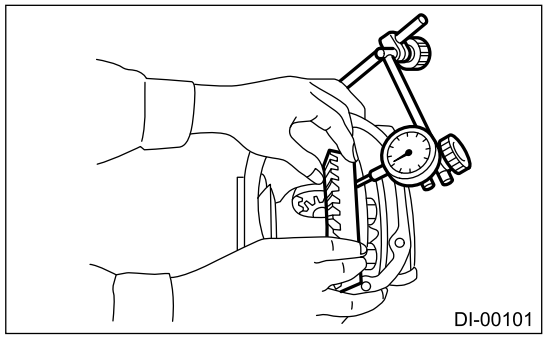


Specification:

20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lbf)

17. Recheck the hypoid driven gear to drive pinion backlash.

Specification:



0.10 — 0.20 mm (0.004 — 0.008 in)

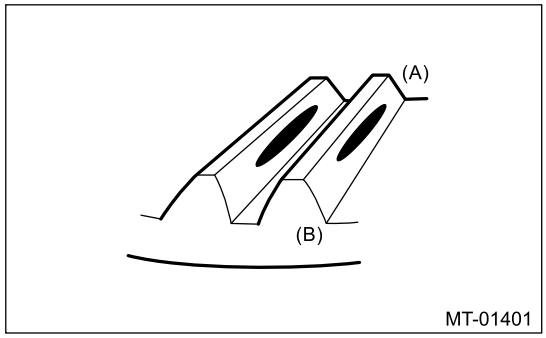
18. Check pinion and hypoid driven gears rotate smoothly and make sure of the hypoid driven gear runout on its back surface. If it exceeds the limit value, check for any foreign objects between the hypoid driven gear and differential case, and for any deformation of the differential case or hypoid driven gear.

Service limit:

0.05 mm (0.002 in)

19. Check and adjustment of the tooth contact of hypoid driven gear and drive pinion

(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.



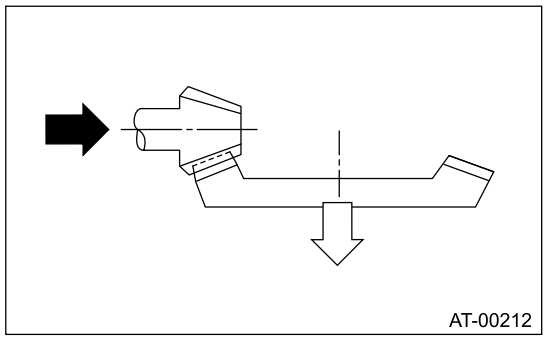
(2) When the contact pattern is not correct, readjust.

Note:

Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

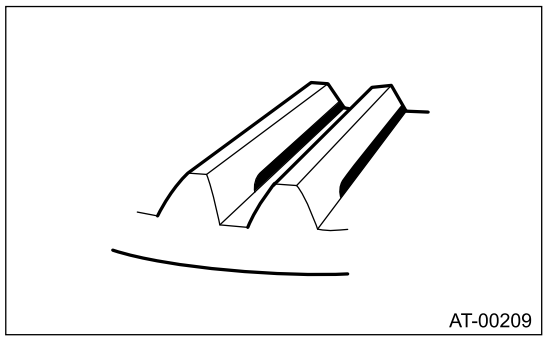
- Correct tooth contact

  Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



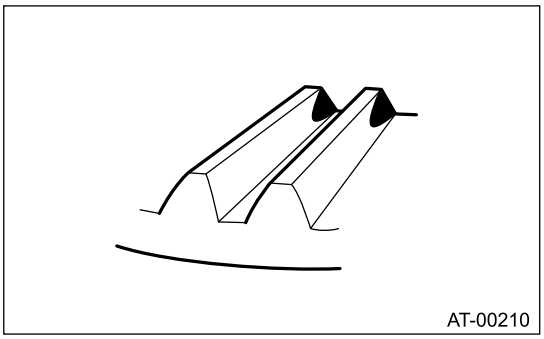
(A) Toe side

(B) Heel side



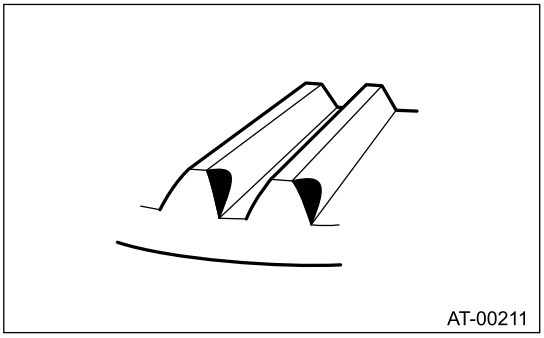
- Face contact
  Check item: Backlash is too large.
  Contact pattern

  Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.

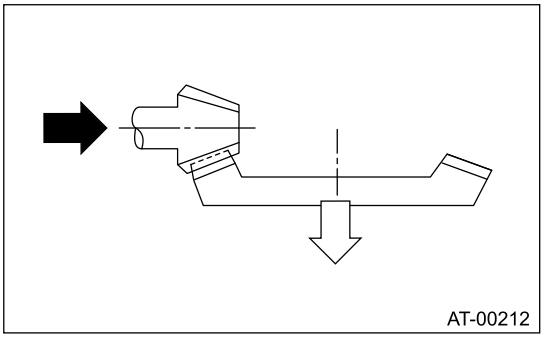


- Flank contact
  Check item: Backlash is too small.
  Contact pattern

  Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



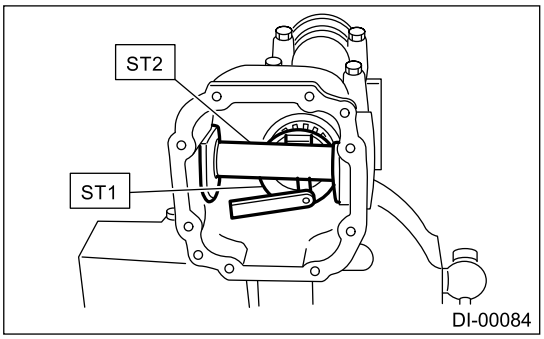
- Toe contact (inside contact)
  Check item: Teeth contact area is too small.
  Contact pattern



Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

- Heel contact (outside end contact)
  Check item: Teeth contact area is too small.
  Contact pattern

Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



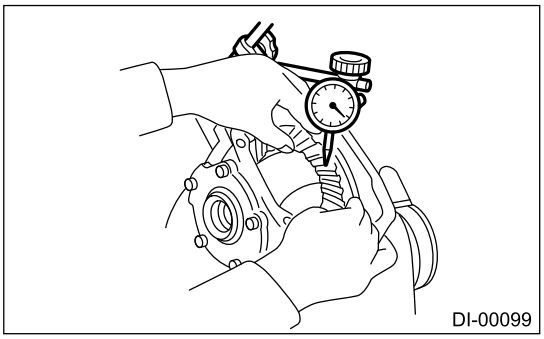
20. If proper tooth contact is not obtained, readjust the drive pinion height by changing the RH and LH side retainer shims and the hypoid driven gear backlash.

(1) Drive pinion height

Special Tool:

ST1: 398507702 DUMMY SHAFT

ST2: 398507701 DIFFERENTIAL CARRIER GAUGE



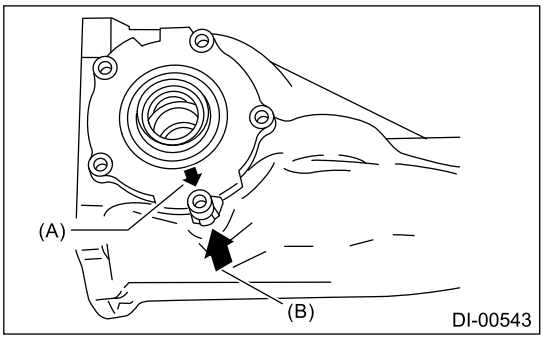
T = To + N − (H × 0.01) − 0.20 mm (0.0079 in)

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		

(2) Hypoid driven gear backlash

Specification:

0.10 — 0.20 mm (0.004 — 0.008 in)



21. Remove the side retainer.

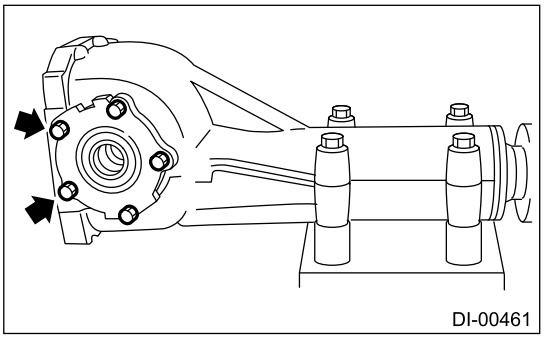
22. Install a new O-ring to the side retainer.

23. Install a new side oil seal to the side retainer. Ref. to DIFFERENTIALS>Rear Differential Side Oil Seal>REPLACEMENT.

24. Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

(A) Arrow mark (on the side retainer)

(B) Arrow mark (on the differential carrier)

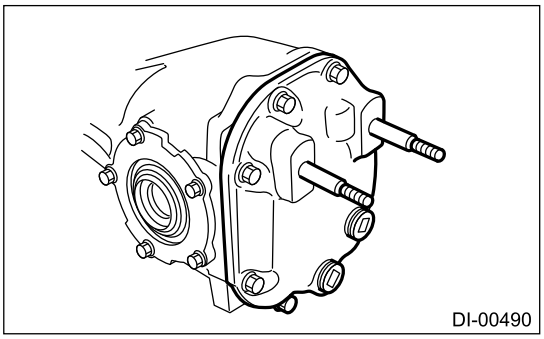


25. Apply liquid gasket to the bolts indicated by arrows, and tighten the bolts.

Liquid gasket:

THREE BOND 1110F, THREE BOND 1110B or equivalent

Tightening torque:

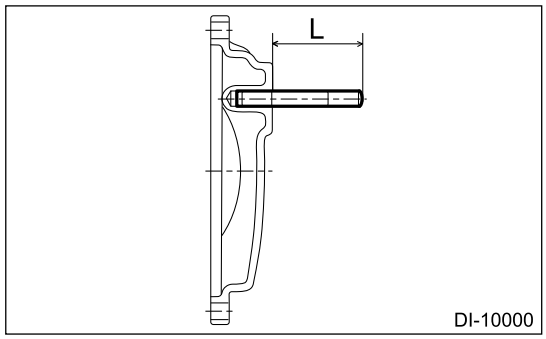


10.5 N·m (1.1 kgf-m, 7.7 ft-lb)

26. Replace the gasket with a new part and install the rear cover.

Tightening torque:

29.5 N·m (3.0 kgf-m, 21.8 ft-lb)

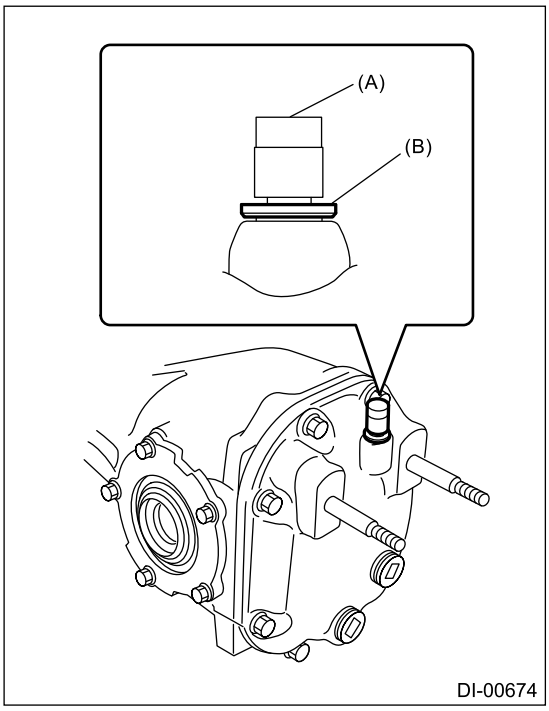


27. When the stud bolts are removed from the rear cover, install the stud bolts so that the exposed length of stud bolt is within the range of "L".

Caution:

- **Do not tighten forcibly if the exposed length of stud bolt does not fall within the specified range. Remove the stud bolt, and check for contamination of foreign matter and any defects in the screw hole.**
- **Do not tighten with a tightening torque of 49 N·m (5.0 kgf-m, 36.1 ft-lb) (reference value) or more.**

Exposed length L of stud bolt:



59.0 — 61.0 mm (2.32 — 2.40 in)

28. Install the air breather cap.

Caution:

When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

29. Install the drain plug.

Note:

Apply liquid gasket to the drain plug.

Liquid gasket:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

49 N·m (5.0 kgf-m, 36.1 ft-lb)

30. Install the filler plug.

Note:

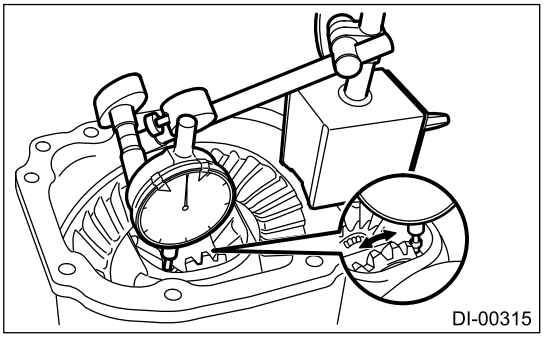
After installing the rear differential assembly to the vehicle, fill the gear oil, then apply liquid gasket, and tighten to the specified torque. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.

DIFFERENTIALS > Rear Differential (T-type)

INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.

1. Hypoid driven gear and drive pinion
   - If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
   - If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.
2. Side gear and pinion mate gear
   - Replace if cracks, scoring or other defects are evident on the tooth surface.
   - Replace if thrust washer contact surface is worn or scored. Slight damages of the surface can be corrected by oil stones or equivalent.
3. Bearing
   Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4. Side gear thrust washer
   Replace if seized, flawed, abnormally worn or having other defects.
5. Oil seal
   Replace if deformed or damaged, and at every disassembling.
6. Differential carrier
   Replace if the bearing bores are worn or damaged.
7. Differential case
   Replace if sliding surfaces are abnormally worn, burned, or cracked.
8. Companion flange
   Replace if the oil seal lip contact surface shows cracking.



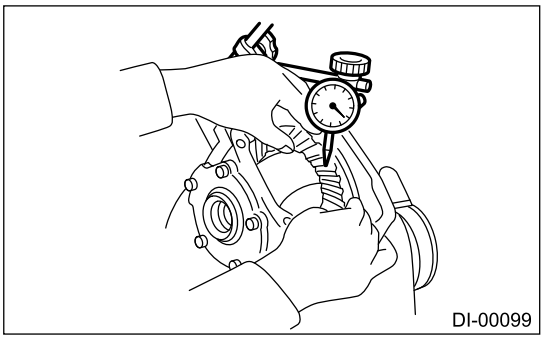
1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of side gear.

Specification:

0.10 — 0.20 mm (0.004 — 0.008 in)

If it is outside the standard value, adjust the side gear backlash by selecting side gear thrust washer.



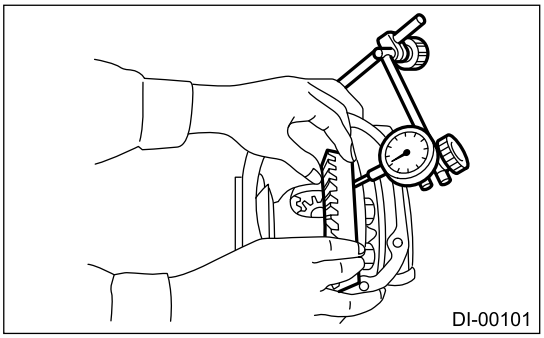
2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.

Specification:

0.10 — 0.20 mm (0.004 — 0.008 in)

If it is outside the standard value, adjust the side bearing preload and repair if necessary.



3. HYPOID DRIVEN GEAR RUNOUT ON ITS BACK SURFACE

Using a dial gauge, check the hypoid driven gear back surface runout.

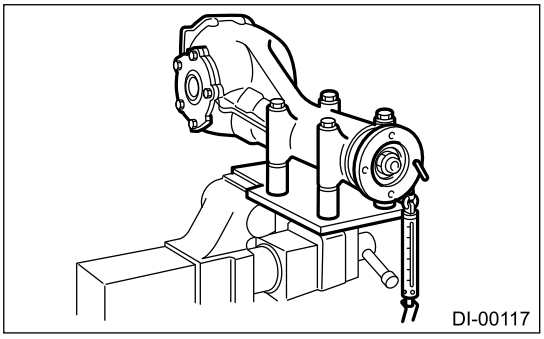
Service limit:

0.05 mm (0.002 in)

If it exceeds the limit value, replace the hypoid driven gear.

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between the hypoid driven gear and drive pinion. Ref. to DIFFERENTIALS>Rear Differential (T-type)>ASSEMBLY.

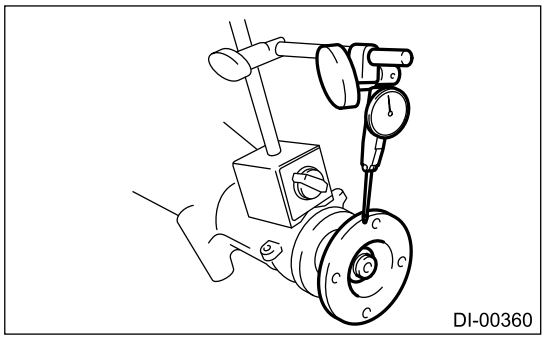


5. TOTAL PRELOAD

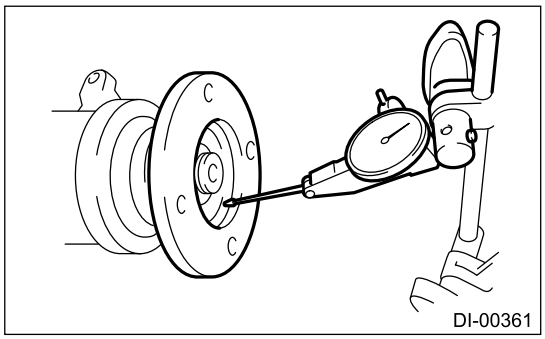
Using a spring scale, check the total preload.

Specification:

20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lb)



If it is outside the standard value, adjust the side retainer shim.



6. COMPANION FLANGE

1. If rust or dirt is attached to the companion flange, remove them.
2. Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Service limit:
0.08 mm (0.003 in)

3. Set the dial gauge inside of the companion flange, and measure the runout.
Service limit:
0.08 mm (0.003 in)

4. If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5. If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6. If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

DIFFERENTIALS > Rear Differential (T-type)

ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust the side gear backlash. Ref. to DIFFERENTIALS>Rear Differential (T-type)>ASSEMBLY.

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. Ref. to DIFFERENTIALS>Rear Differential (T-type)>ASSEMBLY.

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. Ref. to DIFFERENTIALS>Rear Differential (T-type)>ASSEMBLY.

4. TOTAL PRELOAD

Adjust the side retainer shim. Ref. to DIFFERENTIALS>Rear Differential (T-type)>ASSEMBLY.

DIFFERENTIALS > Rear Differential (VA-type)

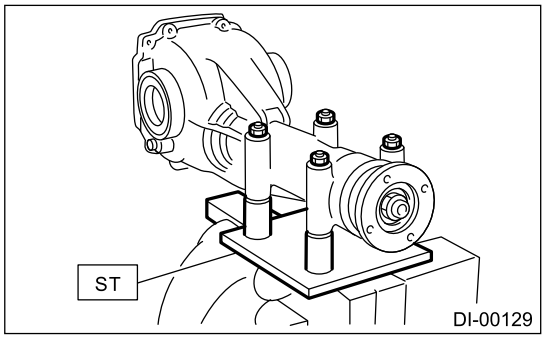
REMOVAL

The removal procedure for VA1-type is included in “REMOVAL” for T-type. Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL.

DIFFERENTIALS > Rear Differential (VA-type)

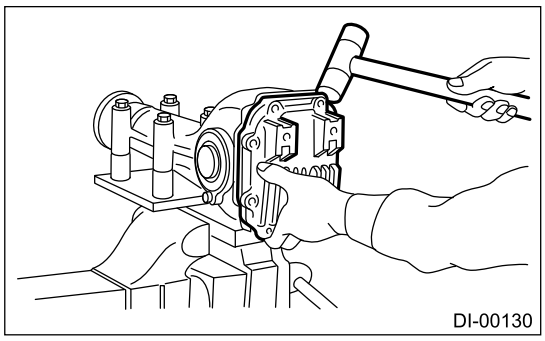
INSTALLATION

The installation procedure for VA1-type is included in “INSTALLATION” for T-type. Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION.



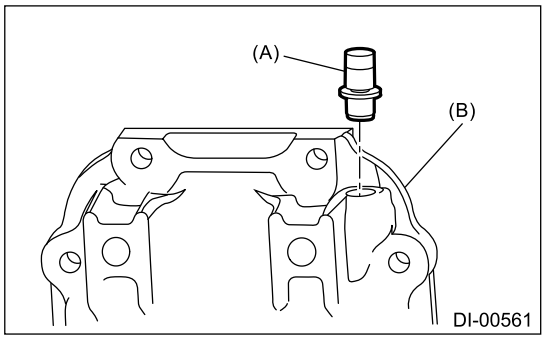
DIFFERENTIALS > Rear Differential (VA-type)

DISASSEMBLY



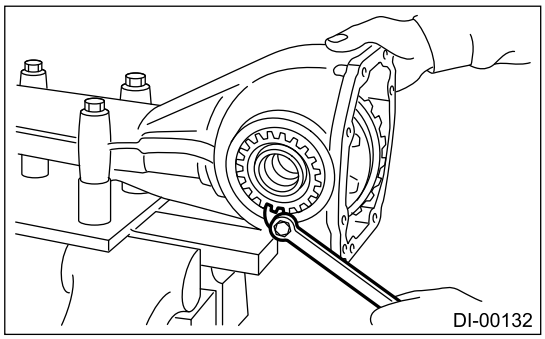
To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact and backlash between hypoid driven gear and drive pinion



1. Set the ST on a vise, and install the differential assembly to the ST.
   Special Tool:
   ST: 398217700 ATTACHMENT SET

2. Remove the drain plug and filler plug.
3. Remove the bolts, and remove the rear cover while lightly tapping with a plastic hammer.

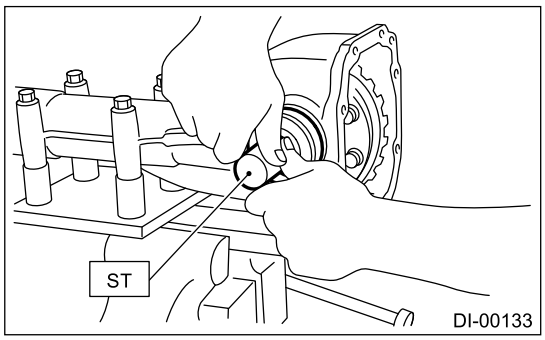


4. Remove the stud bolts from rear cover if necessary.
5. Remove the air breather cap.
   Caution:
   - **Do not attempt to remove the air breather cap unless necessary.**
   - **Whenever the air breather cap is removed, replace it with a new part.**

(A) Air breather cap

(B) Rear cover

6. Remove the lock plate.

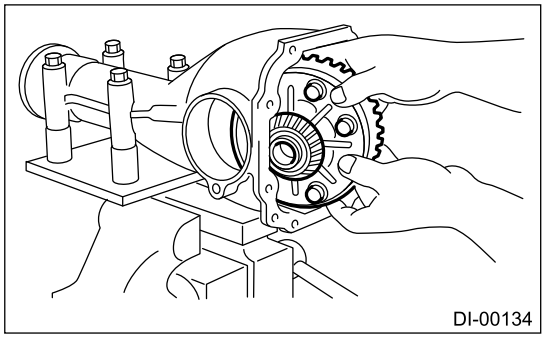


7. Remove the side retainer using the ST.

Note:

When keeping the side retainers aside, use labels etc. to avoid confusing the left and right.

Special Tool:

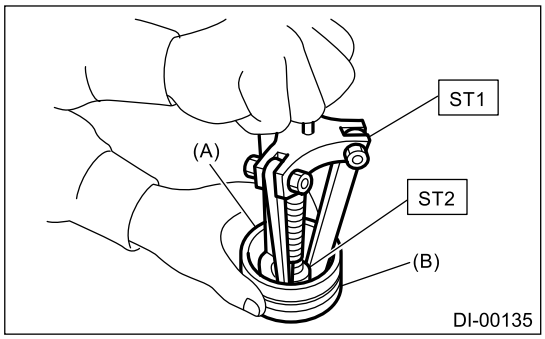


ST: 18630AA010 WRENCH COMPL RETAINER

8. Remove the differential case assembly.

Caution:

Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

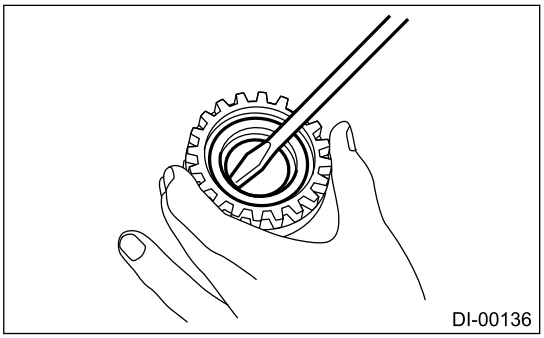


9. Remove the side bearing race using the ST1 and ST2.

Special Tool:

ST1: 499705401 PULLER ASSY

ST2: 499705404 SEAT



(A) Side bearing race

(B) Side retainer

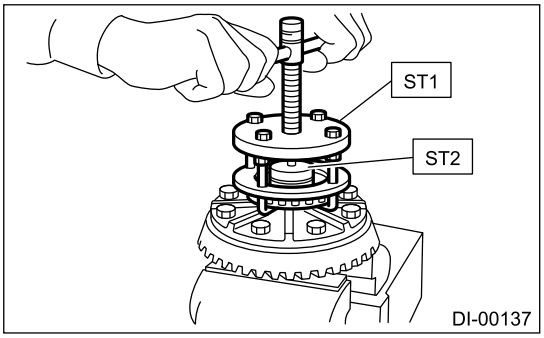
10. Remove the side oil seal from the side retainer.

Note:

Perform this operation only when changing oil seal.

11. Remove the O-rings.

12. Remove the side bearing cone using the ST1 and ST2.

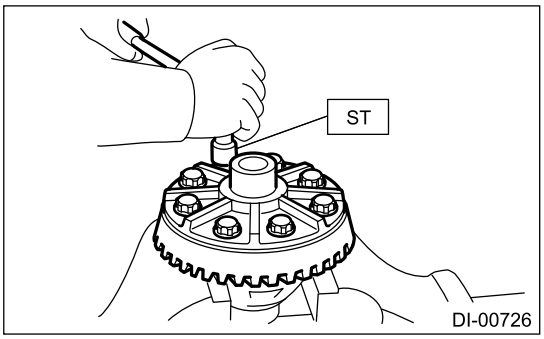


Note:

- **Do not attempt to disassemble the parts unless necessary.**
- **Set the puller so that its claws catch the edge of the bearing cone.**
- **Store so that the right and left side bearing races and cones are not mixed together.**

Special Tool:

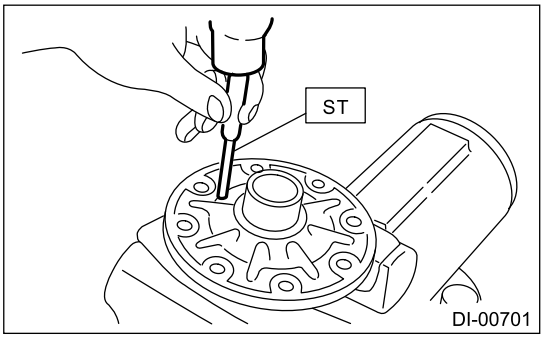
ST1: 899524100 PULLER SET



ST2: 399520105 SEAT

13. Using the ST, loosen the hypoid driven gear bolt and remove the hypoid driven gear.

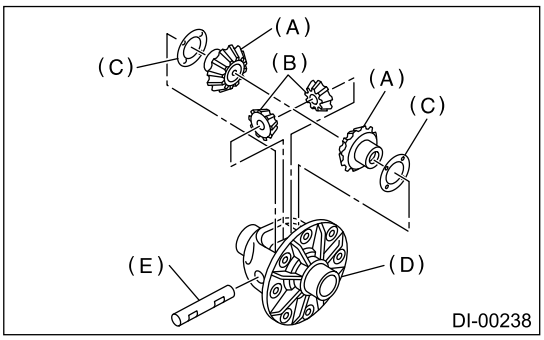
Special Tool:



ST: 18270KA020 SOCKET (E20)

14. Remove the spring pin from hypoid driven gear side using the ST.

Special Tool:



ST: 899904100 STRAIGHT PIN REMOVER

15. Draw out the pinion mate shaft and remove pinion mate gears, side gears and side gear thrust washers.

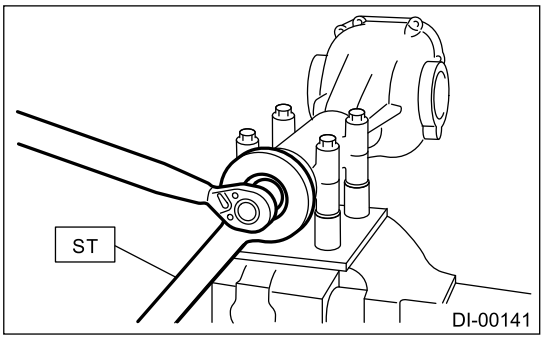
Note:

The gears and washers should be marked with front or rear, RH or LH, or kept separately.

(A) Side gear

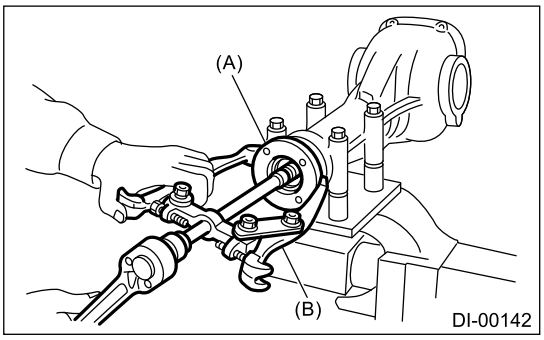
(B) Pinion mate gear

(C) Side gear thrust washer



(D) Differential case

(E) Pinion mate shaft



16. Remove the self-locking nut while securing the companion flange with the ST.

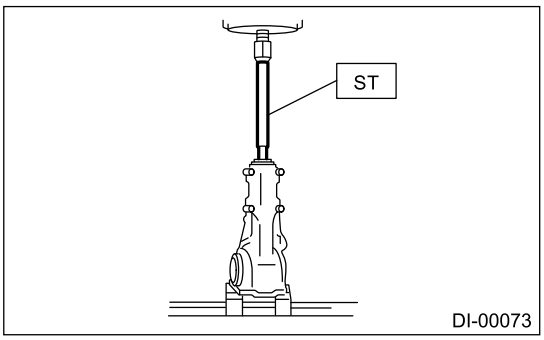
Special Tool:

ST: 498427200 FLANGE WRENCH

17. Extract the companion flange with a puller.

(A) Companion flange

(B) Puller



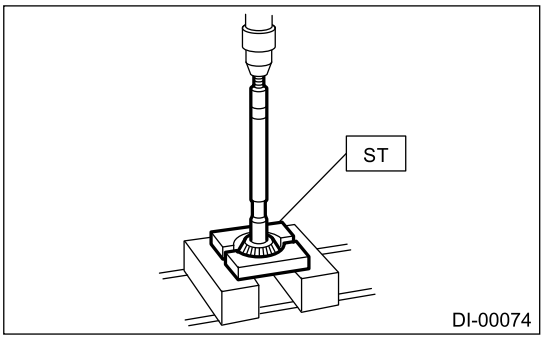
18. Press the end of drive pinion shaft using the ST and remove the rear bearing cone, pinion height adjusting washer, preload adjusting spacer and washer.

Caution:

Hold the drive pinion so as not to drop it.

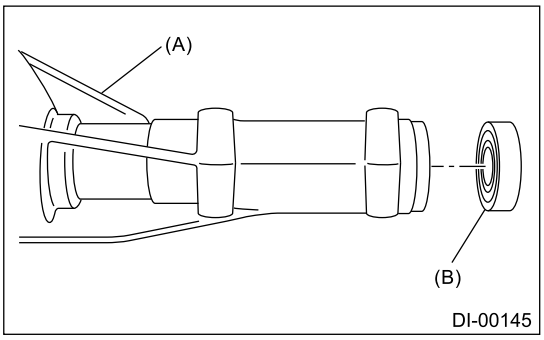
Special Tool:

ST: 398467700 DRIFT



19. Support the rear bearing cone with the ST, and remove it from the drive pinion.

Note:

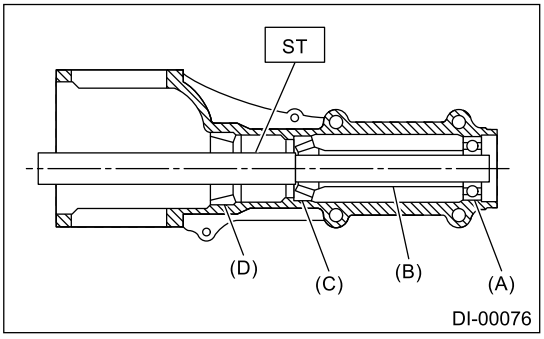


Place the remover so that its center-recessed side faces the bearing cone.

Special Tool:

ST: 498515500 REMOVER

20. Remove the front oil seal using the PULLER ASSY (398527700).



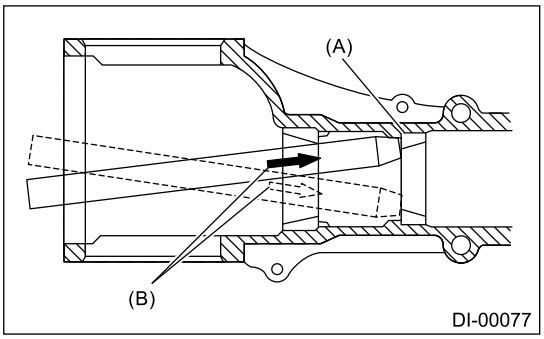
(A) Differential carrier

(B) Front oil seal

21. Remove the pilot bearing together with the front bearing cone and spacer using the ST.

Special Tool:

ST: 398467700 DRIFT



(A) Pilot bearing

(B) Spacer

(C) Front bearing

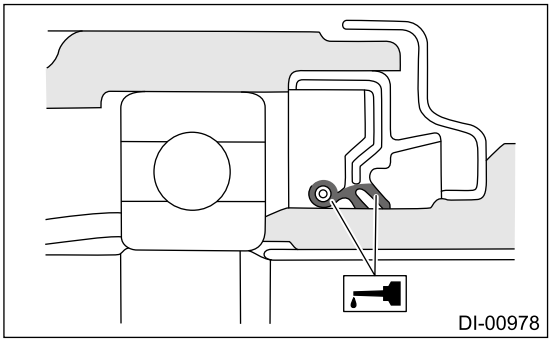
(D) Rear bearing race

22. When replacing the bearings, tap out and remove the front bearing race and rear bearing race in this order using a brass bar.

(A) 2 cutout portions along diagonal lines

(B) Tap alternately with brass bar.

DIFFERENTIALS > Rear Differential (VA-type)



ASSEMBLY

Caution:

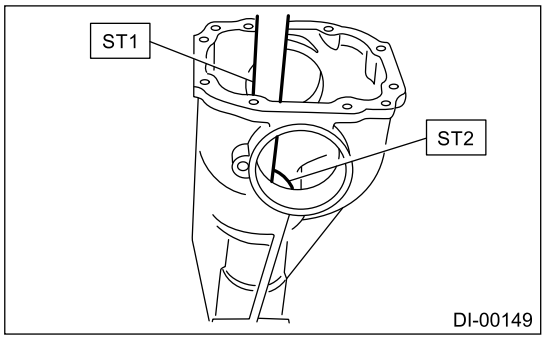
- **Keep the shims and washers in order, so that they are not improperly installed.**
- **Be careful not to mix up the side bearing race RH and LH.**
- **Be careful not to mix up the side oil seal RH and LH.**

Note:

- **Check and adjust each part during assembly.**
- **Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.**
- **Apply differential gear oil when installing the bearings and thrust washers.**
- **Apply differential gear oil to the lips when installing the oil seal.**

1. Adjusting preload for front and rear bearings

Note:



Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must be carried out with oil seal removed.

(1) Install the rear bearing race using the ST1 and ST2.

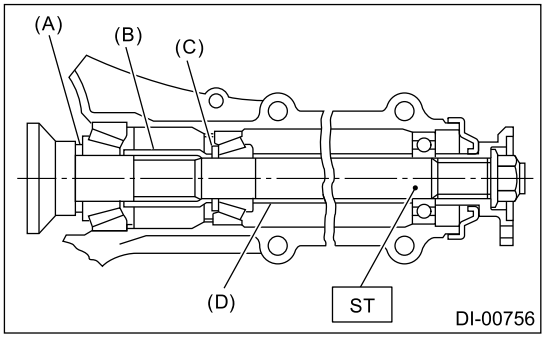
Special Tool:

ST1: 398477701 HANDLE

ST2: 398477702 DRIFT

(2) Using the HANDLE (398477701) and DRIFT (498447110), install a new front bearing race to the differential carrier.
(3) Insert a new front bearing cone.
(4) Measure and record the thickness of the pinion height adjusting washer.

Note:



- **At this time, install a provisionally selected or previously used pinion height adjusting washer.**
- **If tooth contact (drive pinion and hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.**

(5) Insert the ST into the differential carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.
(6) Install the preload adjusting spacer, washer, spacer, new pilot bearing, companion flange, and self-locking nut.

Special Tool:

ST: 498447150 DUMMY SHAFT

Part No. 32285AA000 Spacer

(A) Pinion height adjusting washer
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Spacer (SUBARU genuine parts)

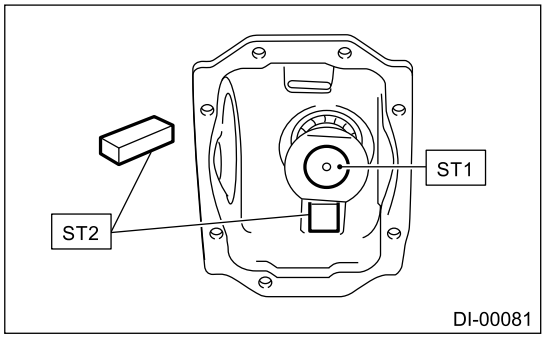
(7) Turn the ST1 by hand to smooth the bearing, and tighten a new self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

Caution:

Be careful not to give excessive preload.

Note:

- **Measure the preload in direction of tangent to the flange.**
- **When tightening the self-locking nut, lock the ST1 with the ST2 as shown in the figure.**

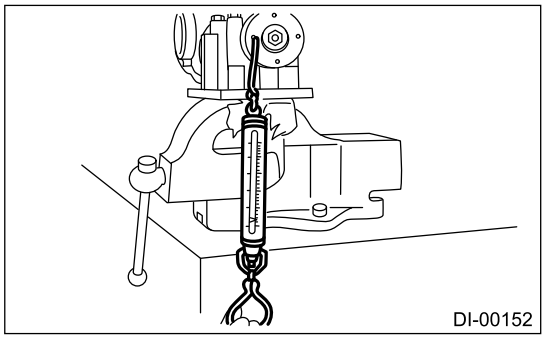


Special Tool:

ST1: 498447150 DUMMY SHAFT

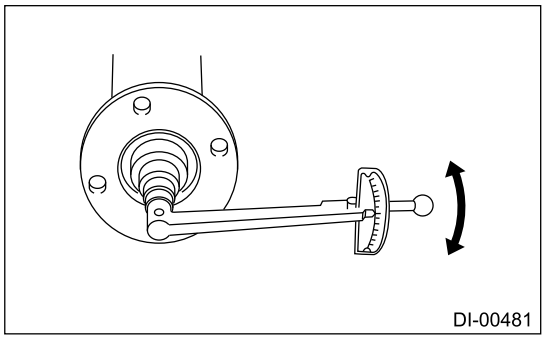
ST2: 398507704 BLOCK

Tightening torque:



191 N·m (19.5 kgf-m, 140.9 ft-lb)

Specification:



Initial load:

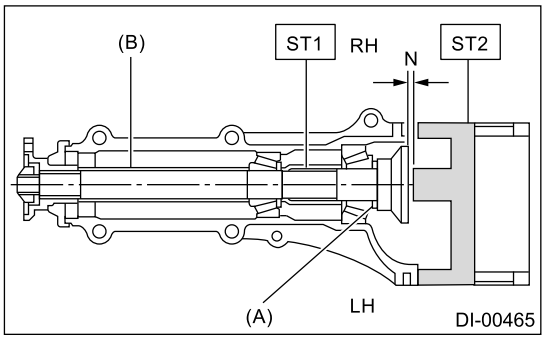
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:

0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)

Preload adjusting washer	
Part No.	**Thickness mm (in)**
38336AA000	1.500 (0.0591)
38336AA120	1.513 (0.0596)
38336AA010	1.525 (0.0600)
38336AA130	1.538 (0.0606)
38336AA020	1.550 (0.0610)

Preload adjusting washer	
Part No.	**Thickness mm (in)**
38336AA140	1.563 (0.0615)
38336AA030	1.575 (0.0620)
38336AA150	1.588 (0.0625)
38336AA040	1.600 (0.0630)
38336AA160	1.613 (0.0635)
38336AA050	1.625 (0.0640)
38336AA170	1.638 (0.0645)
38336AA060	1.650 (0.0650)
38336AA180	1.663 (0.0655)
38336AA070	1.675 (0.0659)
38336AA190	1.688 (0.0665)
38336AA080	1.700 (0.0669)
38336AA200	1.713 (0.0674)
38336AA090	1.725 (0.0679)
38336AA210	1.738 (0.0684)
38336AA100	1.750 (0.0689)
38336AA220	1.763 (0.0694)
38336AA110	1.775 (0.0699)



Preload adjusting spacer	
Part No.	**Length mm (in)**
32288AA040	52.3 (2.059)
32288AA050	52.5 (2.067)
31454AA100	52.6 (2.071)
32288AA060	52.7 (2.075)
31454AA110	52.8 (2.079)
32288AA070	52.9 (2.083)
31454AA120	53.0 (2.087)
32288AA080	53.1 (2.091)
32288AA090	53.3 (2.098)

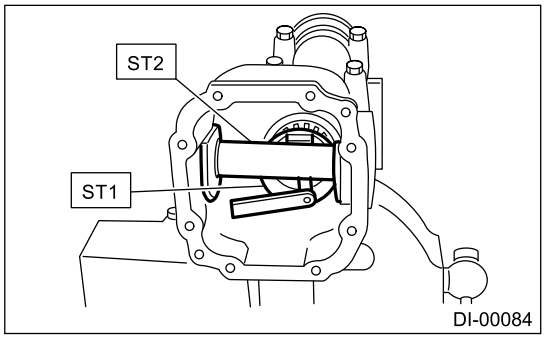
2. Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.
(1) Install the ST2.

Special Tool:

ST1: 498447150 DUMMY SHAFT
ST2: 498505501 DIFFERENTIAL CARRIER GAUGE

Part No. 32285AA000 Spacer

(A) Pinion height adjusting washer
(B) Spacer (SUBARU genuine parts)



(2) Measure the clearance "N" between the end of ST2 and the end surface of ST1 by using a thickness gauge.

Note:

Make sure there is no clearance between the differential carrier and ST2.

Special Tool:

ST1: 498447150 DUMMY SHAFT
ST2: 498505501 DIFFERENTIAL CARRIER GAUGE

(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.

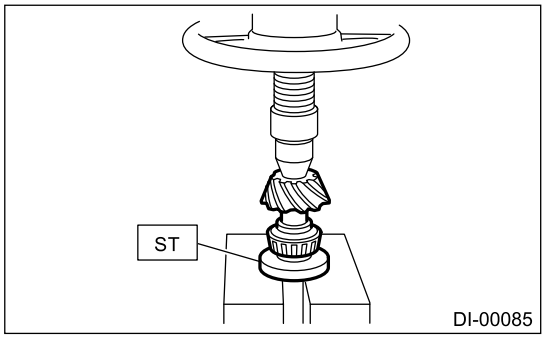
Note:

Adjust it using the 1 — 3 washers.

T = To + N − 0.05 mm (0.0020 in)

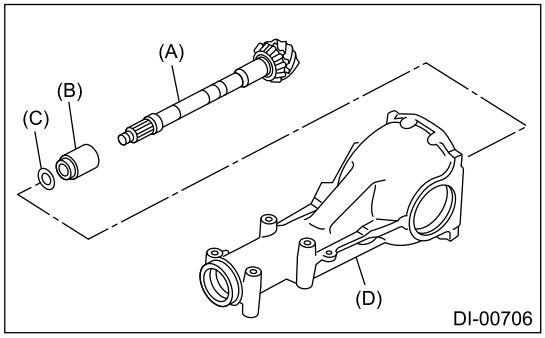
T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
Memo:		

(Example of calculation)
To = 0.15 mm (0.0059 in)
N = 0.1 mm (0.0039 in)
T = 0.15+ 0.1− 0.05 = 0.2 mm (0.0079 in)
Result: Thickness = 0.2 mm (0.0079 in)



Therefore use part number 32295AA220.

Pinion height adjusting washer	
Part No.	**Thickness mm (in)**
32295AA200	0.150 (0.0059)
32295AA210	0.175 (0.0069)
32295AA220	0.200 (0.0079)
32295AA230	0.225 (0.0089)
32295AA240	0.250 (0.0098)
32295AA250	0.275 (0.0108)



3. Install the selected pinion height adjusting washer on drive pinion, and press-in the rear bearing cone with the ST.

Special Tool:

ST: 498175500 INSTALLER

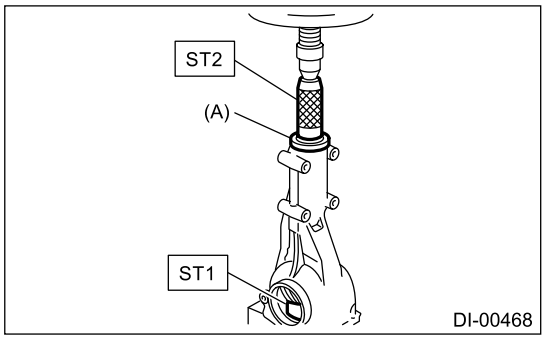
4. Insert the drive pinion, and install the preselected preload adjusting spacer and washer.

(A) Drive pinion

(B) Preload adjusting spacer

(C) Preload adjusting washer

(D) Differential carrier



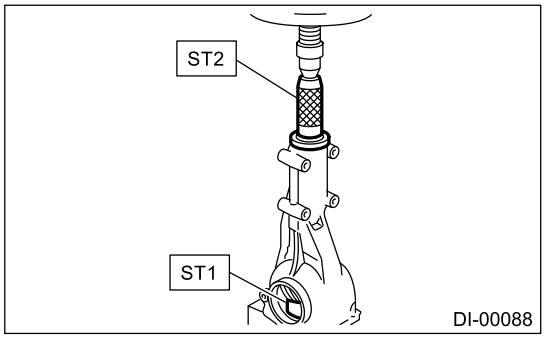
5. Press-fit a new front bearing cone with the ST1, ST2 and spacer.

Special Tool:

ST1: 399780104 WEIGHT

ST2: 899580100 INSTALLER

Part No. 32285AA000 Spacer



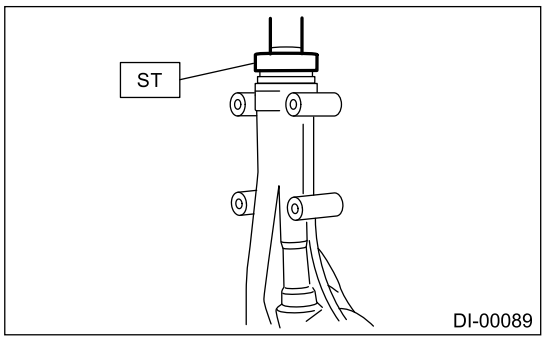
(A) Spacer (SUBARU genuine parts)

6. Insert the spacer, then press-fit a new pilot bearing with the ST1 and ST2.

Special Tool:

ST1: 399780104 WEIGHT

ST2: 899580100 INSTALLER



7. Using the ST, install a new front oil seal.

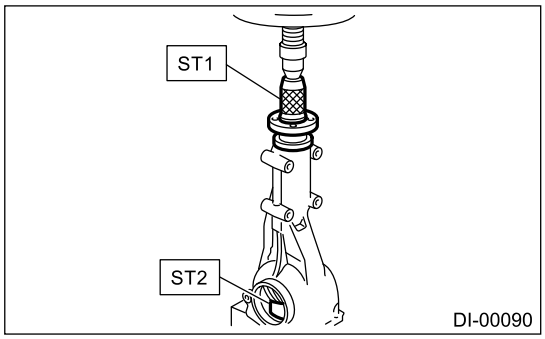
Note:

- **Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.**
- **Apply differential gear oil to the oil seal lips.**

Special Tool:

ST: 498447120 INSTALLER

8. Press-fit the companion flange with the ST1 and ST2.



Caution:

Be careful not to damage the pilot bearing.

Special Tool:

ST1: 899874100 INSTALLER

ST2: 399780104 WEIGHT

9. Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

Seal material:

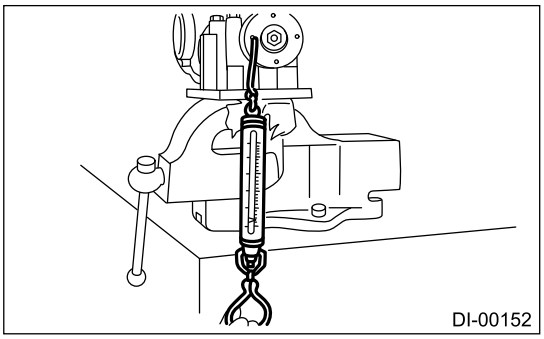
THREE BOND 1324 (Part No. 004403042) or equivalent

10. Tighten a new self-locking nut while securing the companion flange with the ST.

Tightening torque:

191 N·m (19.5 kgf-m, 140.9 ft-lb)

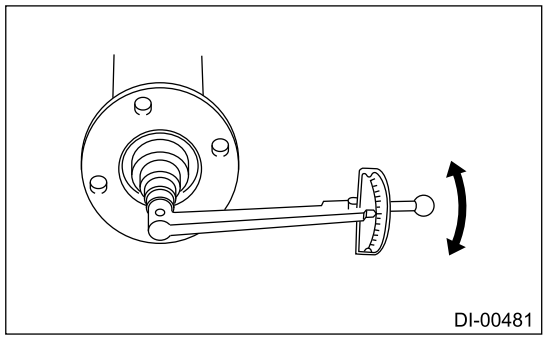
Special Tool:



ST: 498427200 FLANGE WRENCH

11. Check the initial torque or initial load.

Specification:

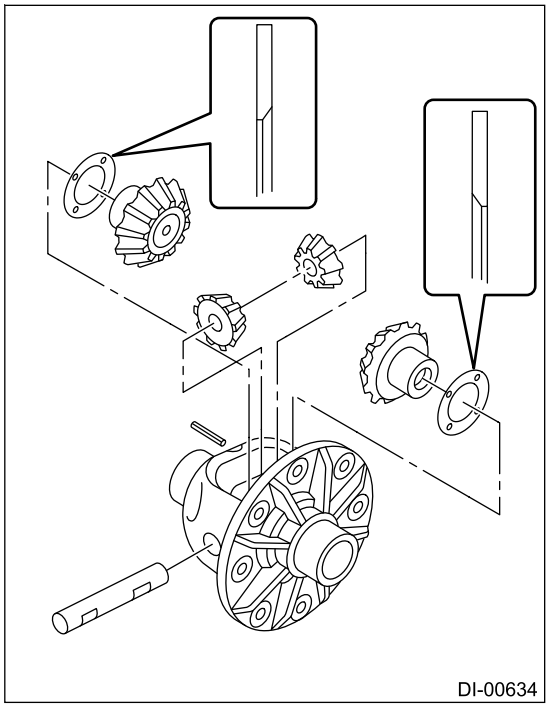


Initial load:

12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)

Initial torque:

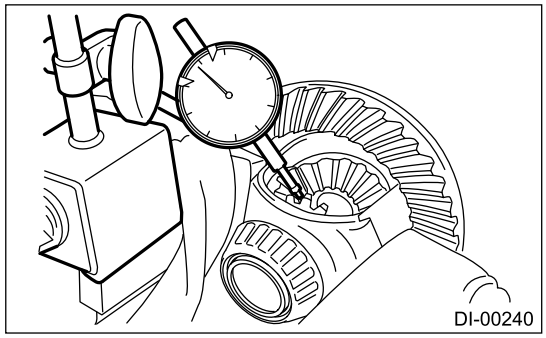
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)



12. Assembling differential case

(1) Install the side gears and pinion mate gears together with the side gear thrust washers and pinion mate shaft.

Note:



- **Apply gear oil on both sides of the washer and on the side gear shaft before installing.**
- **Insert the pinion mate shaft into the differential case by aligning the pin holes.**
- **The side gear thrust washer inner surface has a chamfered side. Install the washer with the chamfered side facing toward the side gear.**

(2) Measure the side gear backlash.

Specification:

0.05 — 0.15 mm (0.002 — 0.006 in)

(3) Adjust the side gear backlash within the specified value by selecting the side gear thrust

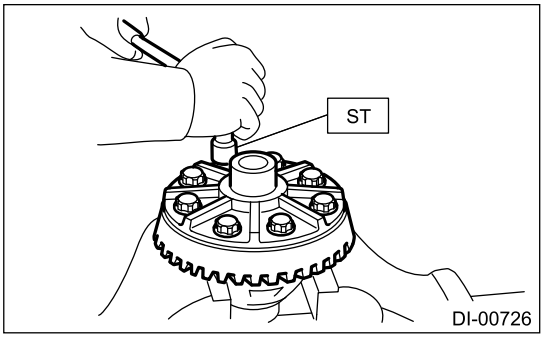
washer.

Side gear thrust washer	
Part No.	**Thickness mm (in)**
803135011	0.925 — 0.950 (0.0364 — 0.0374)
803135012	0.950 — 0.975 (0.0374 — 0.0384)
803135013	0.975 — 1.000 (0.0384 — 0.0394)
803135014	1.000 — 1.025 (0.0394 — 0.0404)
803135015	1.025 — 1.050 (0.0404 — 0.0413)

(4) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.

(5) Using the STRAIGHT PIN REMOVER (899904100), drive a new spring pin into the differential case.

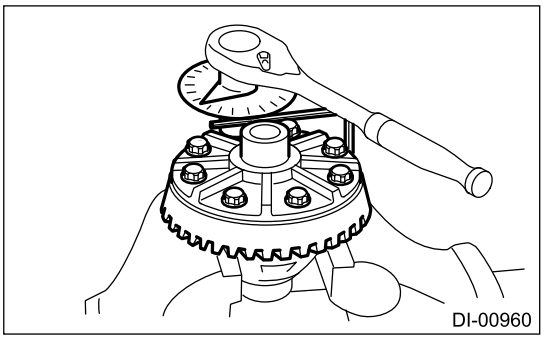
13. Install the hypoid driven gear to differential case.



Note:

- **Before installing bolts, apply seal material to bolt threads.**
  Seal material:
  THREE BOND 1324 (Part No. 004403042) or equivalent
- **Make sure there is no clearance between the differential case and driven gear.**
- **Tighten opposing bolts in order.**

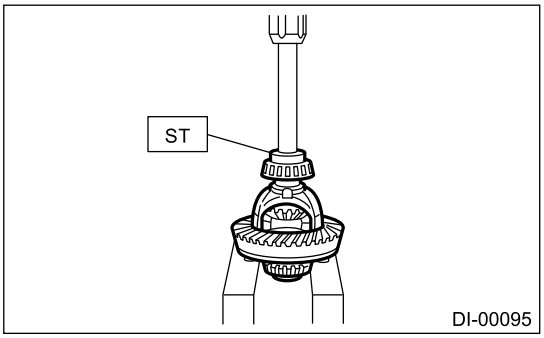
(1) Tighten the hypoid driven gear mounting bolts to the specified torque using the ST.



Special Tool:
ST: 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

(2) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.



Tightening angle:
35° ± 2°

14. Press-fit the side bearing cone using the ST.

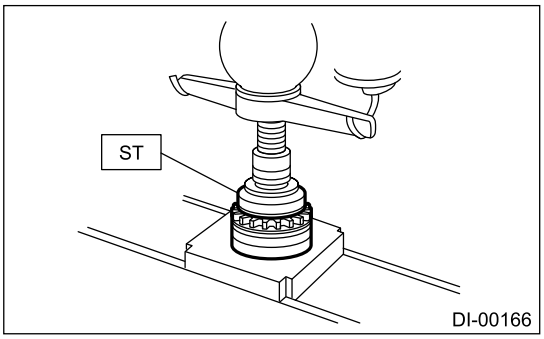
Special Tool:

ST: 498485400 DRIFT

15. Assemble the side retainer.

(1) Install a new side oil seal to the side retainer.

Caution:



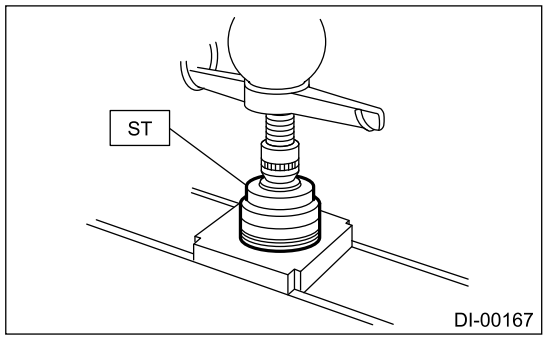
Pay attention to the left and right of the oil seal.

Note:

Apply differential gear oil to the oil seal lip.

Special Tool:

ST: 498447100 INSTALLER

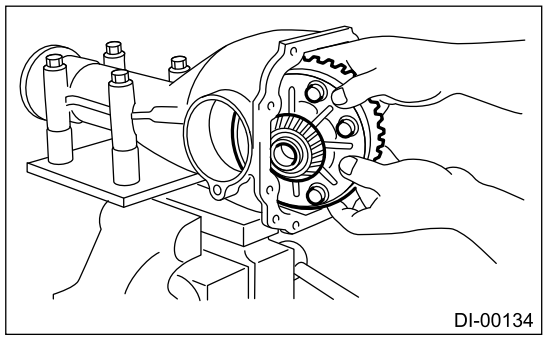


(2) Install the side bearing race into the side retainer.

Caution:

Make sure that bearing races and cones are properly assembled.

Special Tool:

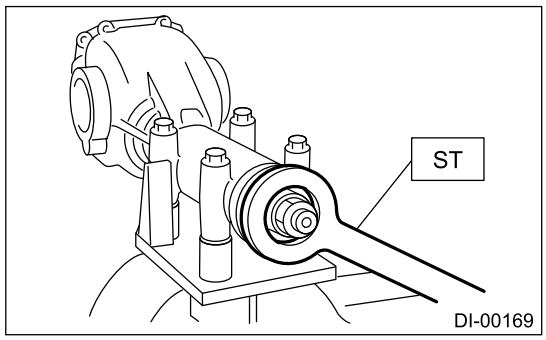


ST: 398477702 DRIFT

(3) Install the differential case assembly.

Caution:

Be careful not to hit the teeth of hypoid driven gear against the differential carrier.

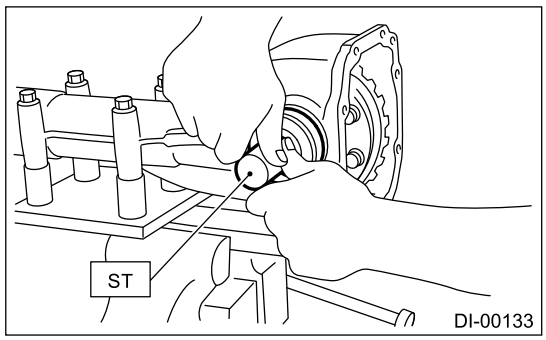


(4) Lightly tighten the side retainer in the differential carrier.

16. Perform the backlash adjustment between the hypoid driven gear and drive pinion, and side bearing preload adjustment.

(1) Turn the drive pinion with the ST to seat the side bearing securely.

Special Tool:

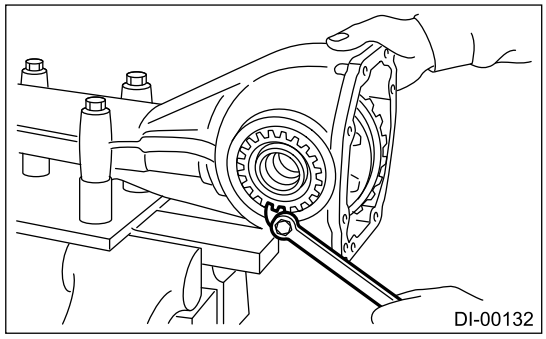


ST: 498427200 FLANGE WRENCH

(2) Using the ST, tighten the side retainer RH, and then tighten the side retainer LH until there is no backlash.

Special Tool:

ST: 18630AA010 WRENCH COMPL RETAINER

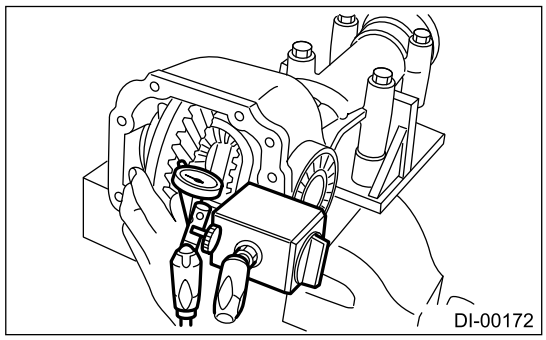


(3) Loosen the side retainer LH by approx. 1.5 teeth, and tighten the side retainer RH by approx. 2 teeth [amount that the side retainer LH is turned back (approx. 1.5 teeth) + approx. 0.5 teeth]. Difference between [amount that the side retainer LH is turned back (approx. 1.5 teeth)] and [amount that the side retainer RH is tightened (approx. 2 teeth)] gives preload.

(4) Temporarily tighten the lock plate.

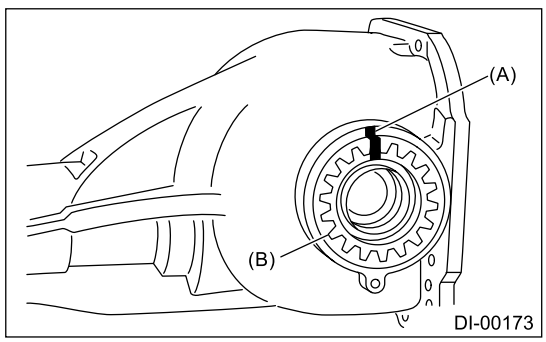
Note:

Turn over the lock plate to shift the holder by 0.5 teeth.



(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

Note:

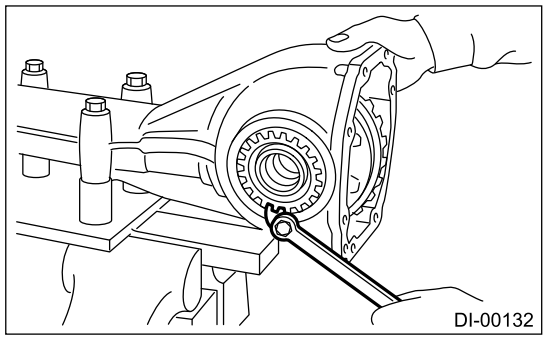


If it is outside the standard value, repeat the procedures for the backlash adjustment between hypoid driven gear and drive pinion, and the side bearing preload adjustment.

Specification:

0.10 — 0.15 mm (0.004 — 0.006 in)

17. Put alignment marks on both the differential carrier and side retainer. Remove the side retainers one side at a time. After installing a new O-ring and applying oil to the threaded portion, restore them to the original position.

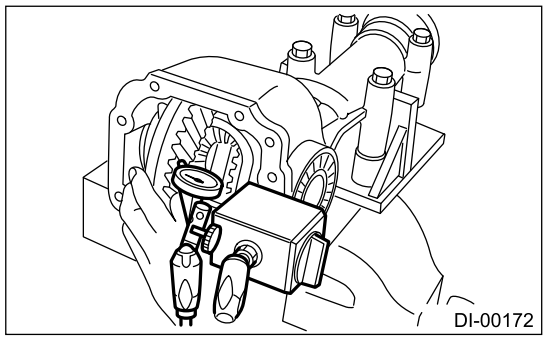


(A) Alignment mark

(B) Side retainer

18. Install the lock plate.

Tightening torque:



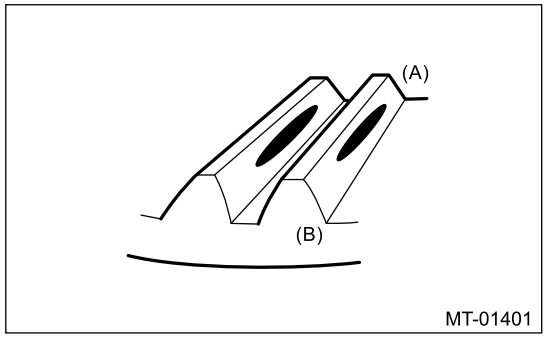
25 N·m (2.5 kgf-m, 18.4 ft-lb)

19. Recheck the backlash between hypoid driven gear and drive pinion.

Specification:

0.10 — 0.15 mm (0.004 — 0.006 in)

20. Checking and adjusting the tooth contact of hypoid driven gear



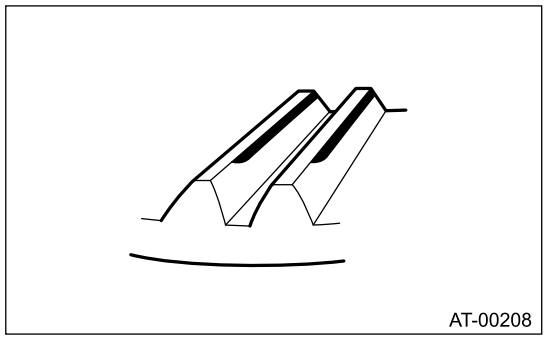
(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is not correct, readjust.

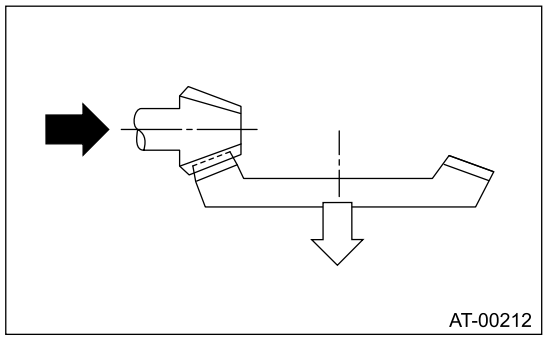
Note:

Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact
  Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)

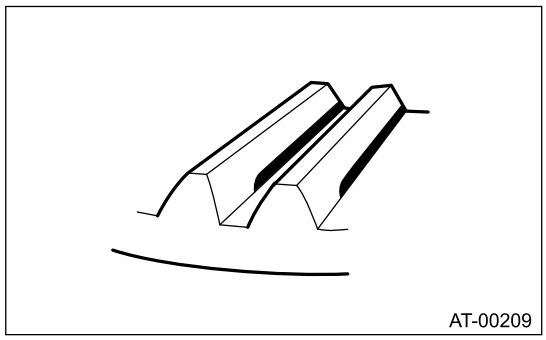


(A) Toe side

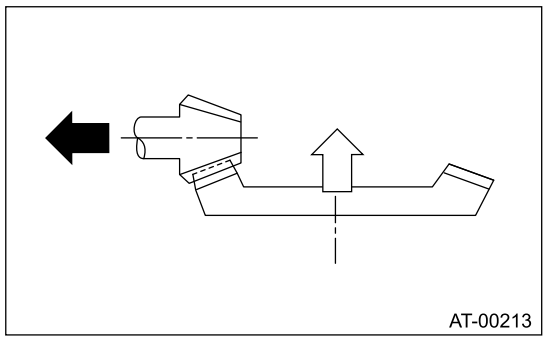


(B) Heel side

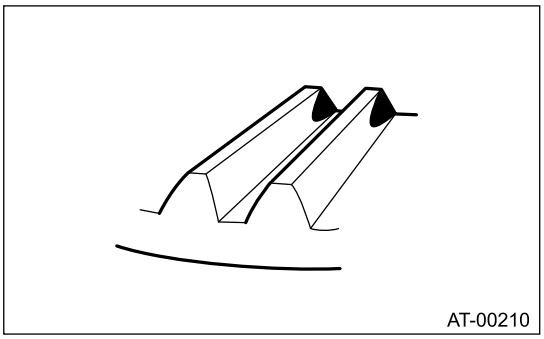
- Face contact
  Check item: Backlash is too large.



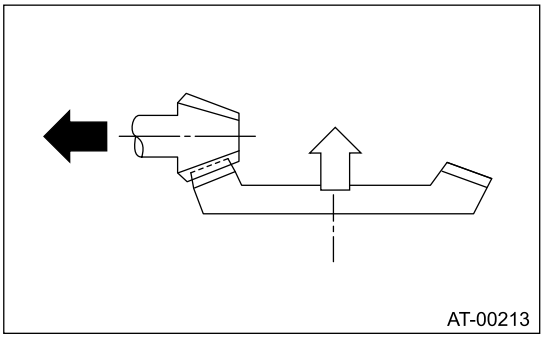
Contact pattern



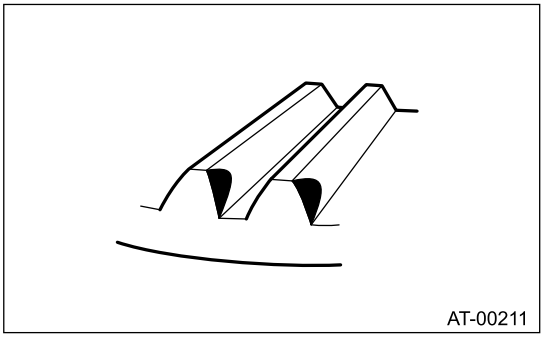
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



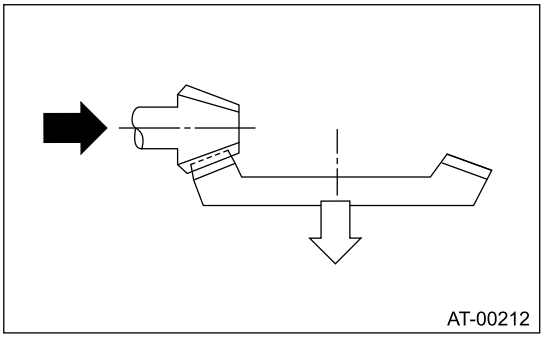
- Flank contact
  Check item: Backlash is too small.
  Contact pattern



Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



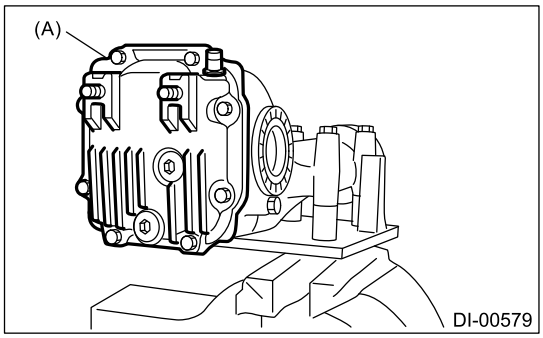
- Toe contact (inside contact)
  Check item: Teeth contact area is too small.
  Contact pattern



Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.

- Heel contact (outside end contact)
  Check item: Teeth contact area is too small.
  Contact pattern

Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



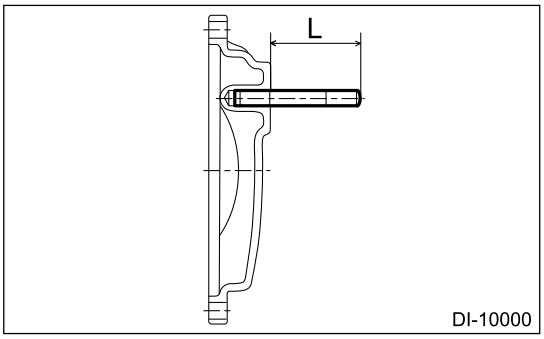
21. If proper tooth contact is not obtained, readjust the drive pinion height, side bearing preload (previously described) and the hypoid driven gear backlash.

22. Replace the gasket with a new part and install the rear cover.

Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Rear cover

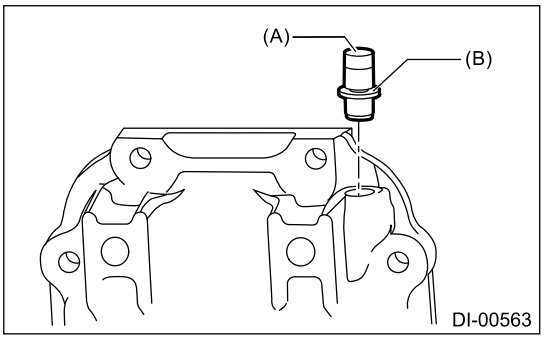


23. When the stud bolts are removed from the rear cover, install the stud bolts so that the exposed length of stud bolt is within the range of "L".

Caution:

- **Do not tighten forcibly if the exposed length of stud bolt does not fall within the specified range. Remove the stud bolt, and check for contamination of foreign matter and any defects in the screw hole.**
- **Do not tighten with a tightening torque of 55 N·m (5.6 kg-m, 40.6 ft-lb) (reference value) or more.**

Exposed length L of stud bolt:



59.0 — 61.0 mm (2.32 — 2.40 in)

24. Install the air breather cap.

Caution:

When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.

25. Replace the gasket with a new part, and install the drain plug.

Tightening torque:

50 N·m (5.1 kg-m, 36.9 ft-lb)

26. Install the filler plug.

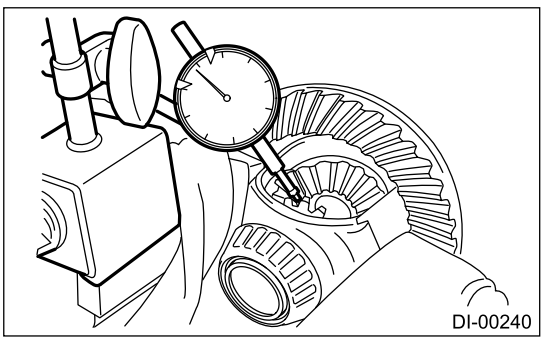
Note:
After installing the rear differential assembly to the vehicle, fill the gear oil, then use a new gasket, and tighten to the specified torque. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.

DIFFERENTIALS > Rear Differential (VA-type)

INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage or other defects. Repair or replace the defective parts as necessary.

1. Hypoid driven gear and drive pinion
   - If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
   - If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.
2. Side gear and pinion mate gear
   - Replace if cracks, scoring or other defects are evident on the tooth surface.
   - Replace if thrust washer contact surface is worn or seized. Slight damages of the surface can be corrected by oil stones or equivalent.
3. Bearing
   Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4. Side gear thrust washer
   Replace if seized, flawed, abnormally worn or having other defects.
5. Oil seal
   Replace if deformed or damaged, and at every disassembling.
6. Differential carrier
   Replace if the bearing bores are worn or damaged.
7. Differential case
   Replace if its sliding surfaces are abnormally worn, burned, or cracked.
8. Companion flange
   Replace if the oil seal lip contact surface shows cracking.



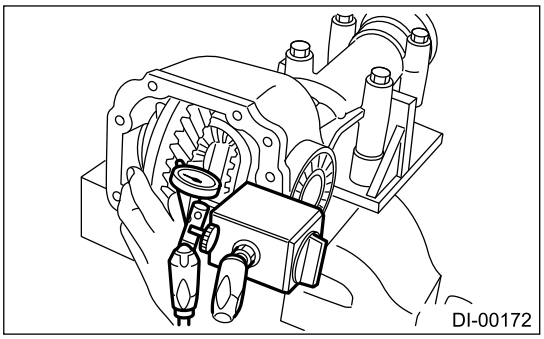
1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of side gear.

Specification:

0.05 — 0.15 mm (0.002 — 0.006 in)

If it is outside the standard value, adjust the side gear backlash by selecting side gear thrust washer.



2. HYPOID DRIVEN GEAR BACKLASH

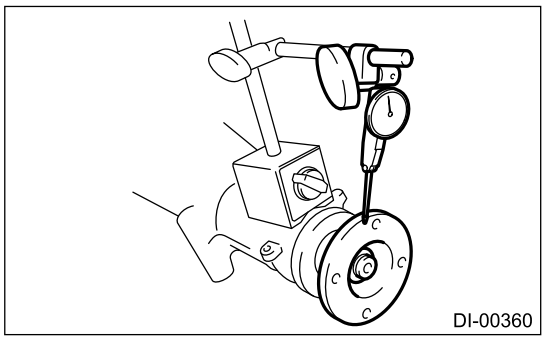
Using a dial gauge, check the backlash of hypoid driven gear.

Specification:

0.10 — 0.15 mm (0.004 — 0.006 in)

If it is outside the standard value, adjust the side bearing preload and repair if necessary.

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION



Inspect the tooth contact between the hypoid driven gear and drive pinion. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>ASSEMBLY.

4. COMPANION FLANGE

1. If rust or dirt is attached to the companion flange, remove them.
2. Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

   Service limit:

   0.08 mm (0.003 in)

3. Set the dial gauge inside of the companion flange, and measure the runout.

   Service limit:

   0.08 mm (0.003 in)

4. If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5. If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6. If the runout exceeds the limit after replacing the companion flange, the drive pinion may be

assembled incorrectly or bearing is faulty.

ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust the side gear backlash. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>ASSEMBLY.

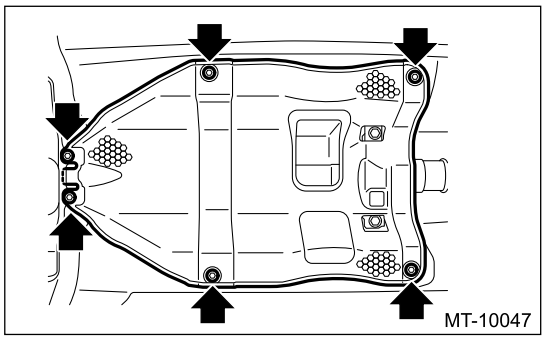
2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>ASSEMBLY.

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. Ref. to DIFFERENTIALS>Rear Differential (VA-type)>ASSEMBLY.

DIFFERENTIALS > Rear Differential Front Oil Seal

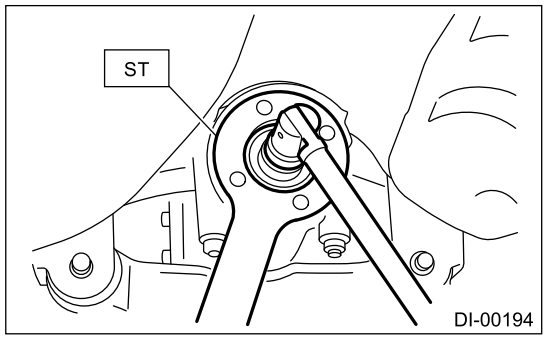


INSPECTION

Check that there is no oil leaking from the oil seal. If there is oil leakage, replace with the new part and check the propeller shaft.

DIFFERENTIALS > Rear Differential Front Oil Seal

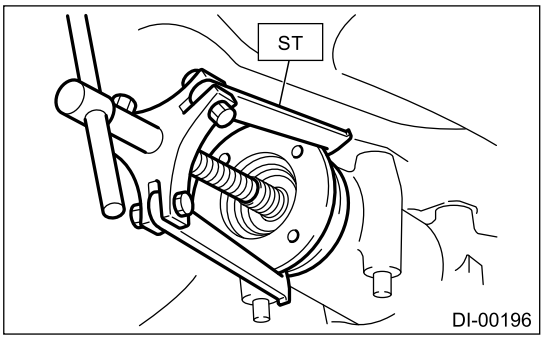
REPLACEMENT



1. Shift the select lever or gear shift lever to neutral.
2. Release the parking brake.
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Lift up the vehicle.
5. Drain differential gear oil. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.
6. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
7. Remove the center exhaust cover.

8. Remove the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
9. Check the initial torque and write it down.
10. Remove the self-locking nut while securing the companion flange with the ST.

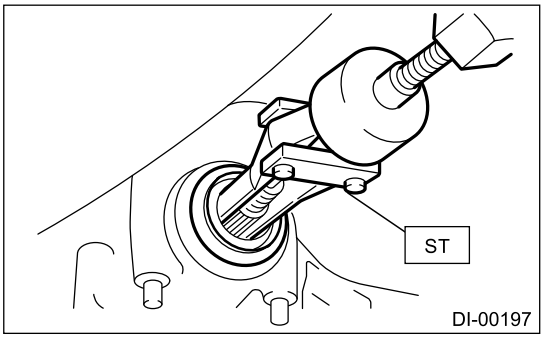
Special Tool:



ST: 498427200 FLANGE WRENCH

11. Extract the companion flange using the ST.

Special Tool:

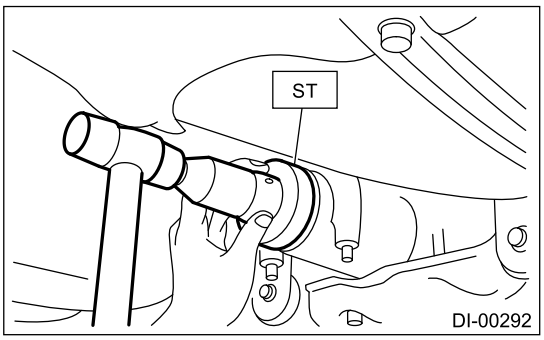


ST: 399703600 PULLER ASSY

12. Remove the oil seal using the ST or a screwdriver.

Special Tool:

ST: 398527700 PULLER ASSY



13. Using the ST, install a new front oil seal.

Note:

Apply differential gear oil to the oil seal lips.

Special Tool:

ST: 498447120 INSTALLER

14. Use a plastic hammer to install companion flange.

15. Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

Seal material:

THREE BOND 1324 (Part No. 004403042) or equivalent

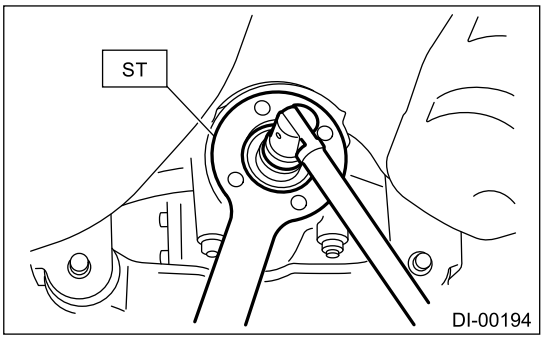
16. Tighten a new self-locking nut to the specified torque while securing the companion flange with the ST.

Caution:

Tighten it so that the initial torque of companion flange becomes the same as that of before oil seal replacement.

Tightening torque:

T-type:



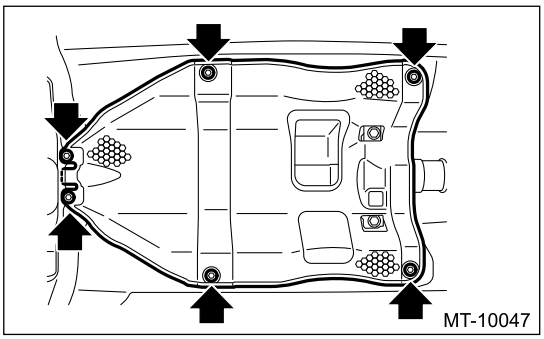
167 — 196 N·m (17.0 — 20.0 kgf-m, 123.2 — 144.6 ft-lb)

VA1-type:

162 — 220 N·m (16.5 — 22.5 kgf-m, 119.5 — 162.3 ft-lb)

Special Tool:

ST: 498427200 FLANGE WRENCH



17. Install the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.

18. Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

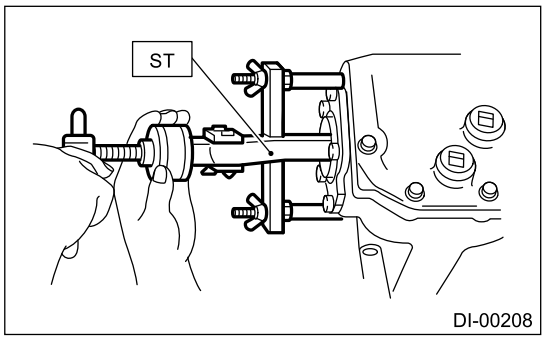
19. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.

20. Fill differential gear oil. Ref. to DIFFERENTIALS>Differential Gear Oil>REPLACEMENT.

21. Lower the vehicle.

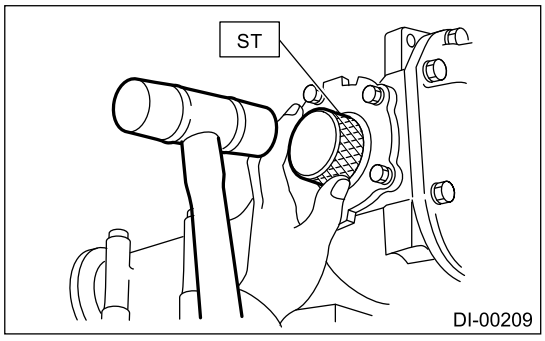
22. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

DIFFERENTIALS > Rear Differential Side Oil Seal



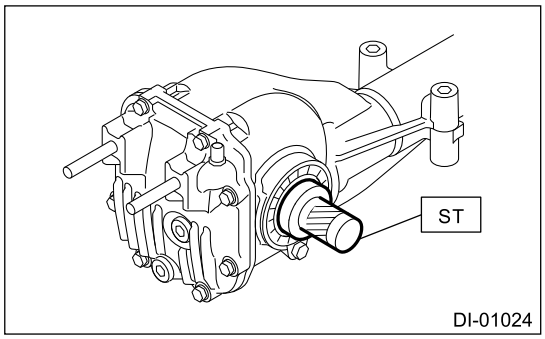
INSPECTION

Inspect for oil leakage from the oil seal. If there is an oil leak, replace with a new one.



DIFFERENTIALS > Rear Differential Side Oil Seal

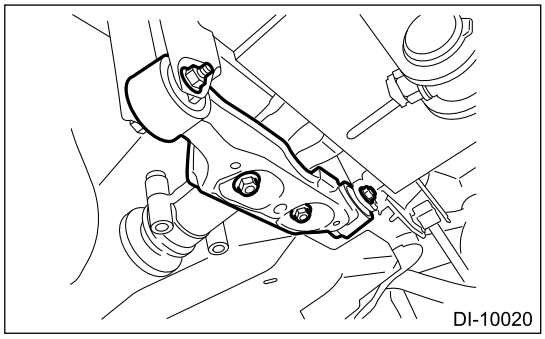
REPLACEMENT



1. Remove the rear differential.
   - T-type:
     Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL.
   - VA1-type:
     Ref. to DIFFERENTIALS>Rear Differential (VA-type)>REMOVAL.
2. Remove the side oil seal using the ST or a screwdriver wrapped with vinyl tape to prevent side retainer damage.
   Special Tool:
   ST: 398527700 PULLER ASSY

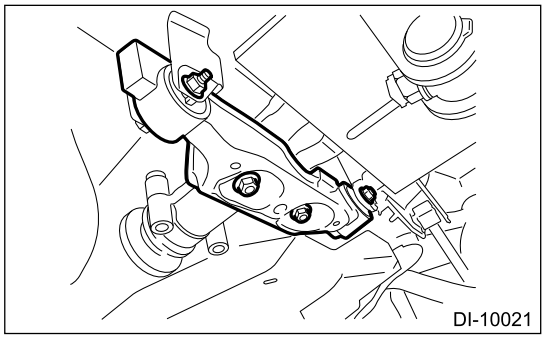
3. Using the ST, install a new side oil seal.
   Caution:
   Pay attention to the left and right of the oil seal.
   Note:
   Apply differential gear oil to the oil seal lips.
   - T-type
     Special Tool:
     ST: 398437700 OIL SEAL INSTALLER

   - VA1-type
     Special Tool:
     ST: 498447100 INSTALLER



4. Install the rear differential.

- T-type:
  Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION.
- VA1-type:
  Ref. to DIFFERENTIALS>Rear Differential (VA-type)>INSTALLATION.

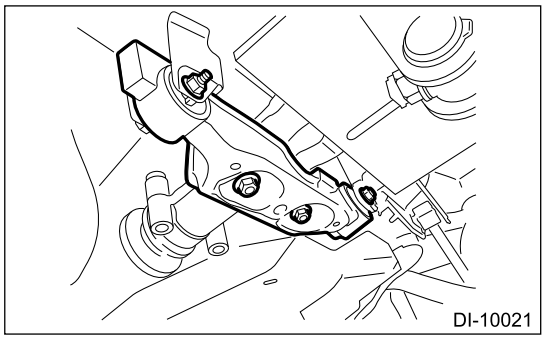


DIFFERENTIALS > Rear Differential Front Member

REMOVAL

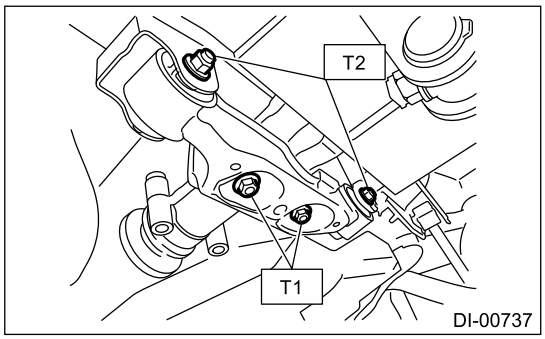
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Set the transmission jack.
4. Remove the rear differential front member.
   - T-type

   - VA1-type



DIFFERENTIALS > Rear Differential Front Member

INSTALLATION



1. Install the rear differential front member, and temporarily attach and tighten a new self-locking nut.
   - T-type

   - VA1-type

2. Remove the transmission jack.
3. Tighten the self-locking nut.
   Tightening torque:
   T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
   T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

4. Lower the vehicle.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

DIFFERENTIALS > Rear Differential Front Member

INSPECTION

1. Check the rear differential front member for damage, bend and corrosion.
   If damage, bend or corrosion is excessive, replace the rear differential front member.
2. Check the bushings of rear differential front member for cracking, hardening and damage.
   If cracking, hardening or damage is excessive, replace rear differential front member.

DIFFERENTIALS > Rear Differential Mount Bushing

INSPECTION

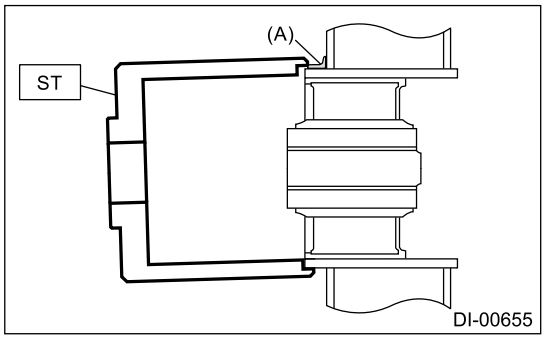
Check the rear differential mount bushing for cracks, hardening or damage. Replace if cracking, hardening or damage is excessive.

DIFFERENTIALS > Rear Differential Mount Bushing

REPLACEMENT

Caution:

- **If there was so much rust in the rear differential mount bushing, remove the rust before starting work.**
- **Apply the molybdenum grease on the square thread of the ST (shaft and nut) before use.**



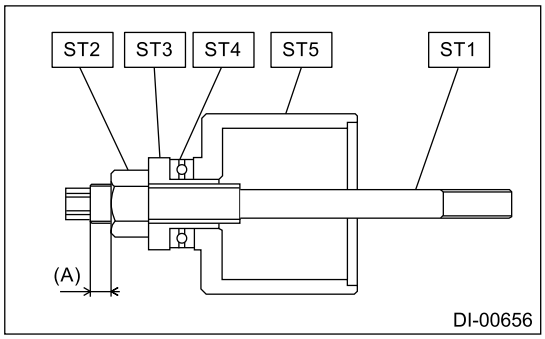
1. Remove the rear differential.
   - T-type:
     Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL.
   - VA1-type:
     Ref. to DIFFERENTIALS>Rear Differential (VA-type)>REMOVAL.
2. Fit the ST to the periphery of the sub frame cylinder, and make sure that the ST does not contact with welded spots or spatters.

   Caution:

   If the ST rises on the welded spots or spatters, the ST may be damaged during the operation. To avoid this, remove the excessive welds or spatters with a sander or equivalent so that the ST contacts the cylinder peripheral part.

   Special Tool:

   ST: 41399FG010 SPECIAL TOOL A

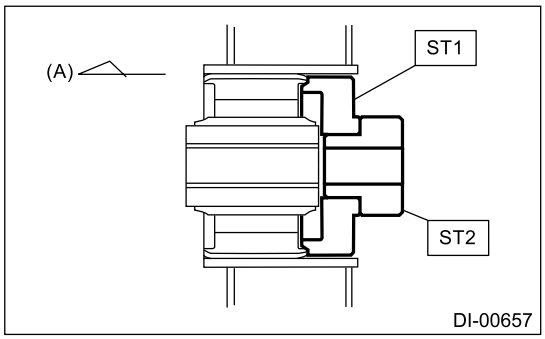


(A) Welded spot

3. Set the ST1, ST2, ST3, ST4 and ST5 as shown in the figure.

   Special Tool:

   ST1: 41399FG091 SPECIAL TOOL SHAFT
   ST2: 41399FG070 SPECIAL TOOL NUT
   ST3: 41399FG050 SPECIAL TOOL SLEEVE
   ST4: 41399FG080 SPECIAL TOOL BEARING
   ST5: 41399FG010 SPECIAL TOOL A



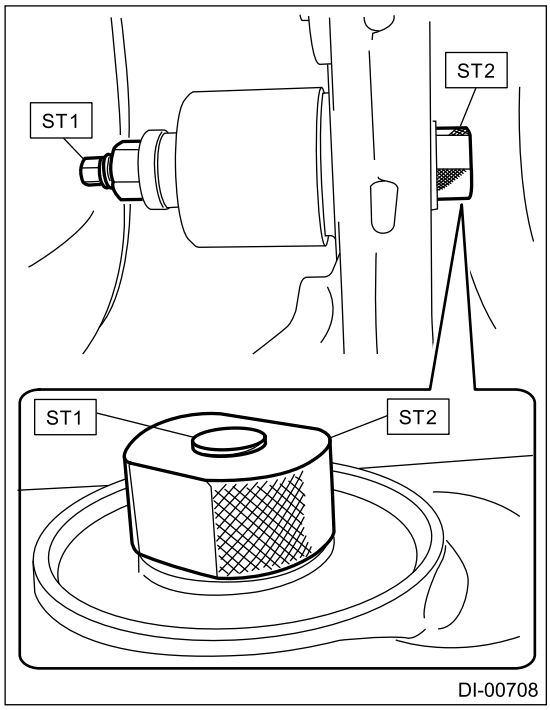
(A) 5 mm (0.2 in) or less

4. Fit and hold the ST1 and ST2 to the rear differential mount bushing from the rear side of vehicle.

Special Tool:

ST1: 41399FG031 SPECIAL TOOL C

ST2: 41399FG061 SPECIAL TOOL RING



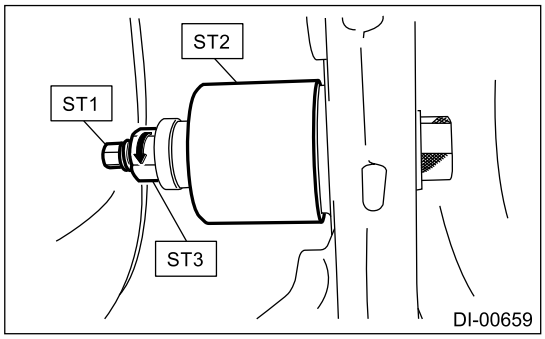
(A) Front side of vehicle

5. Insert the ST set in the step 3) through the rear differential mount bushing hole from the front side of vehicle, and screw-in the ST1 by hand until the front end of ST1 comes out slightly from the rear end of ST2.

Special Tool:

ST1: 41399FG091 SPECIAL TOOL SHAFT

ST2: 41399FG061 SPECIAL TOOL RING



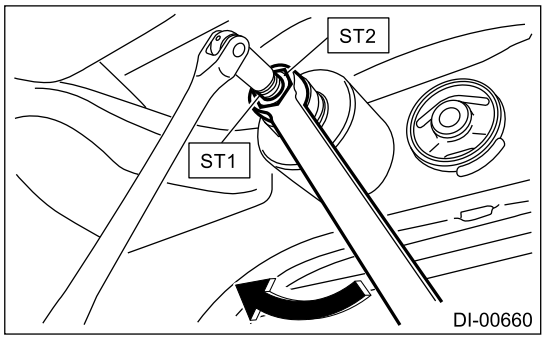
6. Hold the ST1 to prevent it from rotating, and screw-in the ST3 by hand until there is no loose fit on the ST2.

Caution:

When setting the ST to the vehicle, always make sure that the ST2 fits the periphery of the sub frame cylinder and is not tilted.

Special Tool:

ST1: 41399FG091 SPECIAL TOOL SHAFT
ST2: 41399FG010 SPECIAL TOOL A
ST3: 41399FG070 SPECIAL TOOL NUT



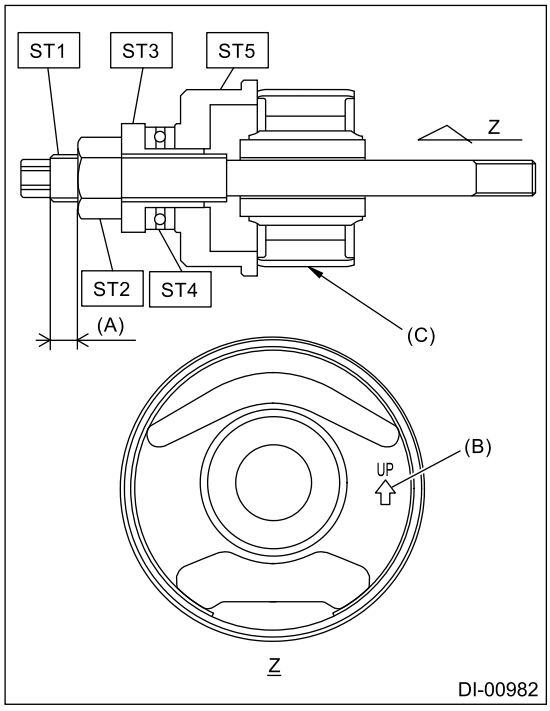
7. Hold the ST1 with a tool to prevent it from rotating, and screw-in the ST2 to remove the rear differential mount bushing.

Caution:

- **Rotation of ST1 will damage the screw at the rear end of rear differential mount bushing. Never rotate the ST1.**
- **If the ST starts to tilt while removing the rear differential mount bushing, stop the work and set the ST again.**

Special Tool:

ST1: 41399FG091 SPECIAL TOOL SHAFT
ST2: 41399FG070 SPECIAL TOOL NUT



8. Set the ST1, ST2, ST3, ST4, ST5 and rear differential mount bushing as shown in the figure.

Note:

- **Set the ST2 nut near to the end of ST1 screw.**
- **Hold the rear differential mount bushing with the arrow marked side facing toward the rear of the vehicle, and set the ST so that the arrow mark faces upward.**
- **Mark the bottom end of rear differential mount bushing to identify the installing direction.**

Special Tool:

ST1: 41399FG091 SPECIAL TOOL SHAFT
ST2: 41399FG070 SPECIAL TOOL NUT
ST3: 41399FG050 SPECIAL TOOL SLEEVE
ST4: 41399FG080 SPECIAL TOOL BEARING
ST5: 41399FG020 SPECIAL TOOL B

(A) 8 mm (0.31 in) or more
(B) Arrow mark
(C) Marked position

9. Attach the ST1 to the ST2, and fit and hold the STs as a unit to the sub frame from the rear side of vehicle.

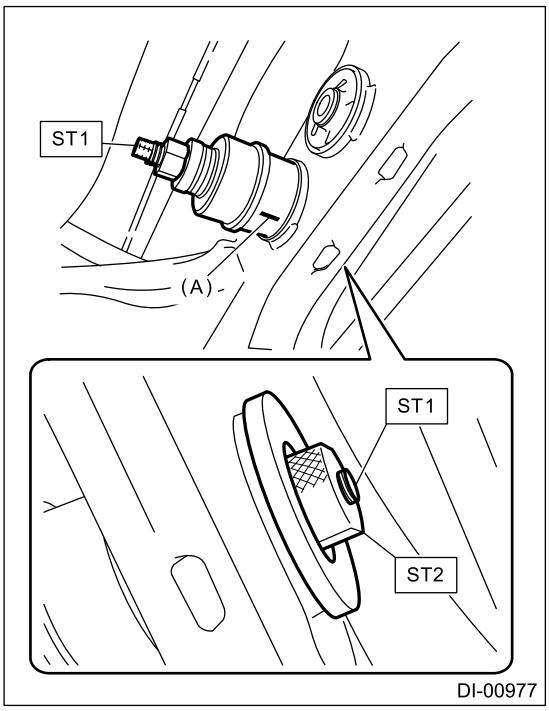
Special Tool:

ST1: 41399FG061 SPECIAL TOOL RING
ST2: 41399FG041 SPECIAL TOOL D

代替画像1

この画像は代替画像です

10. Insert the ST and rear differential mount bushing, that have been set in step 8), into the sub frame from the front side of vehicle. Then, screw-in the ST1 by hand until the front end of ST1 comes out slightly from the rear end of ST2.



Caution:

Set the rear differential mount bushing with its mark facing the bottom end direction.

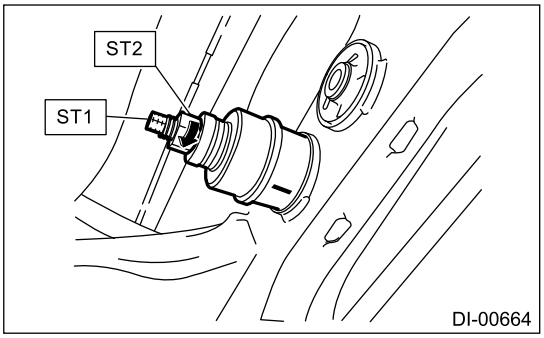
Special Tool:

ST1: 41399FG091 SPECIAL TOOL SHAFT

ST2: 41399FG061 SPECIAL TOOL RING

(A) Mark

11. Hold the ST1 to prevent it from rotating, and screw-in the ST2 by hand until there is no loose fit on the ST and the rear differential mount bushing.



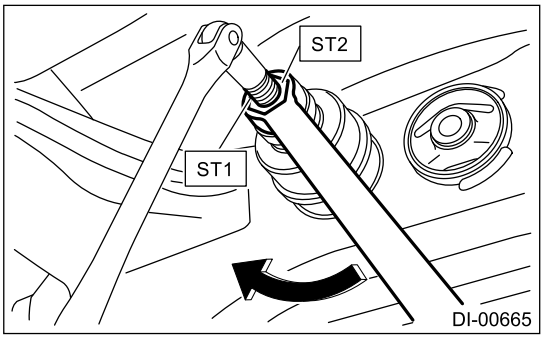
Caution:

Make sure that the ST and rear differential mount bushing are not tilted.

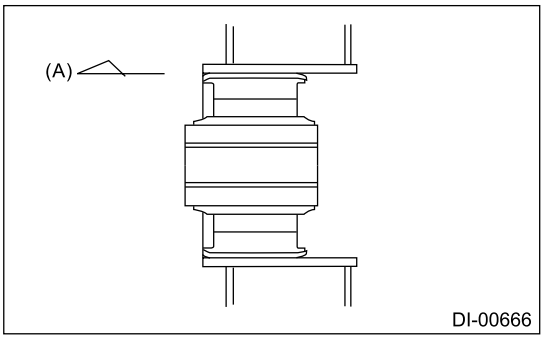
Special Tool:

ST1: 41399FG091 SPECIAL TOOL SHAFT

ST2: 41399FG070 SPECIAL TOOL NUT



12. Screw-in the ST2 while holding the ST1 with a tool to prevent it from rotating, and press-fit the rear differential mount bushing to the front end of sub frame cylinder.



Special Tool:

ST1: 41399FG091 SPECIAL TOOL SHAFT

ST2: 41399FG070 SPECIAL TOOL NUT

13. Make sure that the rear differential mount bushing is inserted to the front end of sub frame cylinder.

(A) Front side of vehicle

14. Install the rear differential.

- T-type:
  Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION.
- VA1-type:
  Ref. to DIFFERENTIALS>Rear Differential (VA-type)>INSTALLATION.

GENERAL DESCRIPTION

Caution:
Be sure to perform rear differential inspection mode.

- Follow the messages displayed on the Subaru Select Monitor when working.
- "Rear differential inspection mode" using the Subaru Select Monitor is available only for the CVT model.
- Perform rear differential inspection mode when the following work has been performed.
  Transmission assembly replacement/Replacement of rear differential/Replacement of front differential hypoid gear set/Replacement of rear differential hypoid gear set

PROCEDURE

Caution:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.

1. Shift the select lever to "P" range.
2. Apply the parking brake.
3. Lift up the vehicle.
   Warning:
   Lift up the vehicle until the tire bottom is 30 cm or more above the ground.
4. Connect the Subaru Select Monitor to data link connector.
5. Turn the ignition switch to ON. (For model with push button start, press the push button ignition switch twice without depressing brake pedal.)
6. Select «Diagnosis» in the «Start» screen of Subaru Select Monitor.
7. On «Vehicle selection» display, input the vehicle information and select «Confirmed».
8. On «Main Menu» display, select «Each System».
9. On «Select System» display, select «Transmission Control System».
10. On «Select Function» display, select «Work Support».
11. On «Work Support» display, select «Rear differential inspection mode».
12. Follow the messages displayed on the Subaru Select Monitor screen when working.
13. The results of the rear differential inspection mode are displayed on the Subaru Select Monitor screen.
    - When ended normally:
      «The rear differential has been replaced normally.»
    - When ended abnormally:
      «A rear differential abnormality has been detected. Reinspect the items at the time of rear differential installation.»
    - When interrupted:
      «Inspection is stopped. Restart this inspection mode from the beginning.»
14. After the message «Inspection has been completed. Set the ignition switch to OFF.» appears, the rear differential inspection mode completes.

Note:

- **When the rear differential inspection mode is completed properly, the following warning lights may illuminate. But this is not a malfunction. If warning light illuminates, clear the memory.**
  VDC/ABS, engine, power steering, EyeSight
- **For detailed operation procedures, refer to "Application help".**
- **If the rear differential inspection mode does not end normally, repeat the mode until it ends normally.**
- **When the inspection mode does not end normally, the AWD warning light will start blinking at 2 Hz.**
- **When the rear differential inspection mode ends abnormally, the front differential and rear differential may be different from the specifications for the vehicle.**
- **When the rear differential inspection mode is interrupted, the following reasons are possible.**

Message	Main reasons for abnormal termination	Action to take
• «Inspection is stopped.» • «Inspection is stopped. Restart this inspection mode from the beginning.»	TCM has detected a failure.	Perform the diagnosis for TCM. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.
	VDC has a failure.	Perform the diagnosis for VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.
	Brake is applied after start during automatic running.	—
	Too delayed operation to the instructions displayed on the Subaru Select Monitor.	—
«TCM incompatible. Rear differential inspection mode is stopped.»	The model does not support the rear differential inspection mode.	Check the specifications.
«The TCM has detected a fault. Inspect following the manual.»	TCM has detected a failure.	Perform the diagnosis for TCM. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	(1) Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.	Repair or replace.
	(2) Clogged or damaged air breather cap.	Clean, repair or replace.
	(3) Loose bolts on the side retainer, or incorrectly fitted O-ring.	Tighten the bolts to specified torque. Replace the O-ring.
	(4) Loose rear cover attachment bolts or damaged gasket.	Replace the gasket, and tighten the bolts to specified torque.
	(5) Loose filler plug or drain plug.	• Apply liquid gasket, and tighten to the specified torque. (T-type) • Replace the gasket, and tighten to the specified torque. (VA1-type)
	(6) Wear, damage or incorrect fitting of drive shaft, side retainer or oil seal.	Repair or replace.
2. Seizure **Note:** **Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.**	(1) Insufficient backlash for hypoid gear.	Readjust or replace.
	(2) Excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Insufficient or improper oil used.	Add recommended oil to the specified level.
3. Damage **Note:** **Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.**	(1) Improper backlash for hypoid gear.	Readjust or replace.
	(2) Insufficient or excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Excessive backlash for differential gear.	Replace gear or thrust washer.
	(4) Loose bolts and nuts such as hypoid driven gear bolt.	Retighten.
	(5) Damage due to overloading.	Replace.
4. Noises when starting or shifting gears	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust. (Drive pinion adjustment and backlash adjustment)

Symptom or trouble	Possible cause	Remedy
Note: **Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembling.**	(2) Excessive backlash for hypoid driven gear.	Replace the gear or the pinion height adjusting washer.
	(3) Excessive backlash for side gear.	Replace gear or thrust washer.
	(4) Insufficient preload for front or rear bearing.	Readjust.
	(5) Loose drive pinion nut.	Tighten to the specified torque.
	(6) Loose bolts and nuts such as side retainer attachment bolt.	Tighten to the specified torque.
5. Noises when cornering	(1) Damaged differential gear.	Replace.
	(2) Excessive wear or damage of thrust washer.	Replace.
	(3) Broken pinion mate shaft.	Replace.
	(4) Stuck or damaged side bearing.	Replace.
6. Gear Noise **Note:** **Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and lifting-up all four wheels. Perform these inspections according to the condition of trouble. When listening to noises, shift the gear into four-wheel drive and fourth speed position, trying to pick up only differential noise.**	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust or replace the hypoid gear set.
	(2) Improper backlash of the hypoid driven gear.	Readjust.
	(3) Scored or chipped teeth of hypoid gear.	Replace hypoid gear set.
	(4) Scuffed hypoid gear.	Replace hypoid gear set.
	(5) Improper preload for front or rear bearings.	Readjust.
	(6) Stuck, scored or chipped teeth of front or rear bearing.	Replace.
	(7) Stuck, scored or chipped teeth of side bearing.	Replace.
	(8) Vibrating differential gear.	Replace the differential gear.

DRIVE SHAFT SYSTEM > General Description

CAUTION

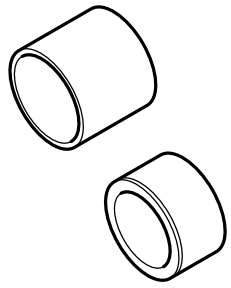
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.

- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- When the suspension-related components have been removed, installed or replaced, perform the following adjustment.
  - Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
  - VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

DRIVE SHAFT SYSTEM > General Description

PREPARATION TOOL

1. SPECIAL TOOL



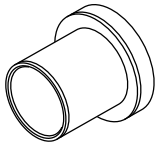


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
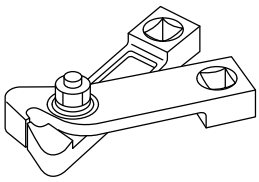
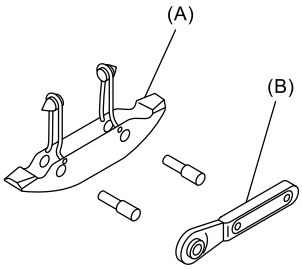
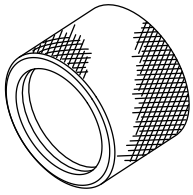
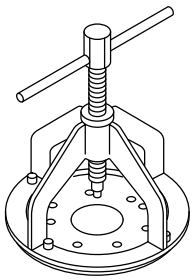
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the trailing link bushing of rear axle housing assembly. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the trailing link bushing of rear axle housing assembly. • Used together with base part of INSTALLER & REMOVER (20099PA010).









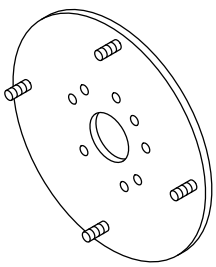


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
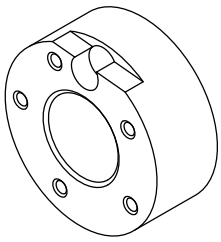
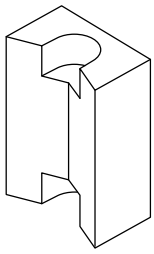
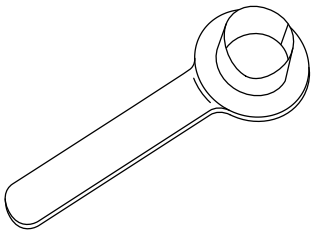
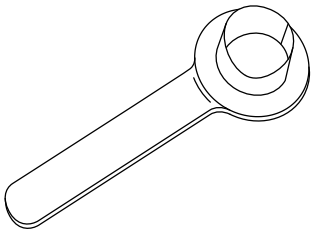
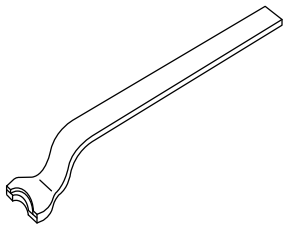
 ST28099AC000	28099AC000	BOOT BAND PLIER	Used for tightening the boot band. (For front drive shaft)
 ST-925091000	925091000	BAND TIGHTENING TOOL	Used for tightening the boot band. (A) Jig for the band (B) Ratchet wrench
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST-926470000	926470000	AXLE SHAFT PULLER	• Used for removing the drive shaft. • Used together with AXLE SHAFT PULLER PLATE (28099PA110).
 ST28099PA110	28099PA110	AXLE SHAFT PULLER PLATE	Exchange with the plate of the AXLE SHAFT PULLER (926470000) to use.











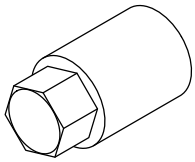


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
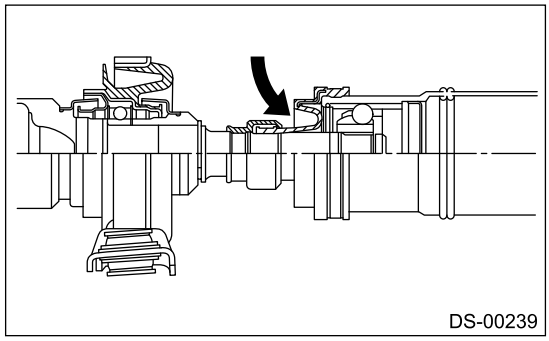
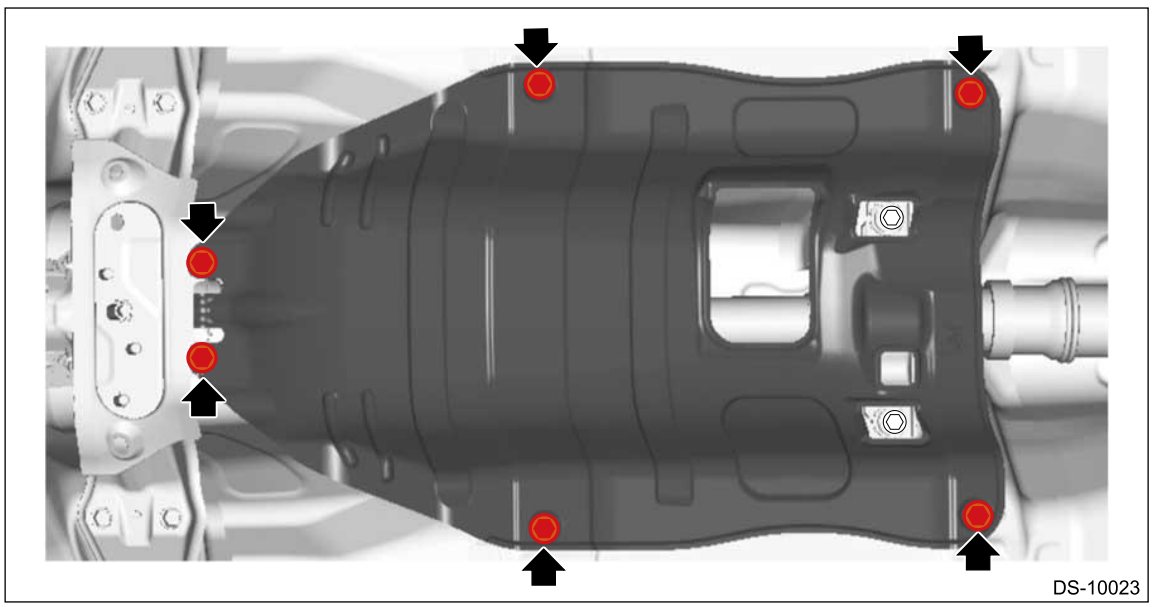
 ST-927080000	927080000	HUB STAND	Used for assembling hub bolt in hub.
 ST28399AG000	28399AG000	HUB STAND	Used for extracting hub bolt.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	• Used for installing front drive shaft into front differential. • For protecting the oil seal.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to the rear differential. • For protecting the oil seal.
 ST28099PA100	28099PA100	DRIVE SHAFT REMOVER	Used for removing the rear drive shaft from rear differential. (T-type)

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	Used for disassembling and assembling strut mount.



2. GENERAL TOOL

TOOL NAME	REMARKS
Tie-rod ball joint puller	Used for disconnecting joints.
DIAL GAUGE	Used for inspecting the propeller shaft run-out.
Extension cap	Used for preventing leakage of gear oil or CVTF.
Crowbar	Used for extracting drive shaft.
Needle nose pliers	Used for tightening the boot band of the rear drive shaft. • Snap-on 96BCP Or equivalent.

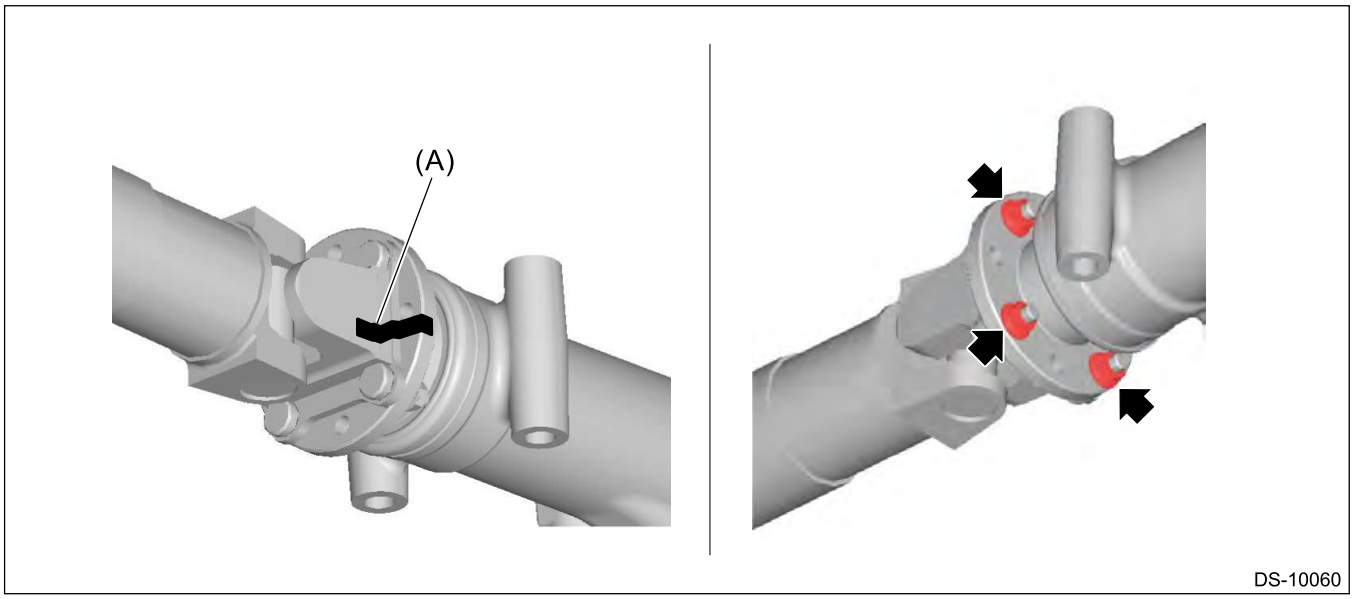


REMOVAL

Caution:

- **Before removing propeller shaft, wrap metal parts with a cloth or rubber material.**
- **Do not disassemble the center EDJ of the propeller shaft.**
- **Before removing propeller shaft, wrap the metal parts attached to the rubber boot of center EDJ with a cloth or rubber material, as shown in the figure. The rubber boot may be damaged due to interference with adjacent metal parts while bending the EDJ during removal.**

1. Shift the select lever or gear shift lever to neutral.
2. Release the parking brake.
3. Lift up the vehicle.
4. Remove the rear exhaust pipe and muffler. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL. Ref. to EXHAUST(H4DO)>Muffler>REMOVAL.
5. Remove the bolts, and then remove the center exhaust cover.



6. Remove the propeller shaft assembly.

   Caution:

   Do not disassemble the propeller shaft.

   (1) Place alignment marks (A) on the flange yoke and rear differential.

   (2) Remove the four nuts holding the propeller shaft to the rear differential, and remove the four bolts.

(3) Remove the center bearing.

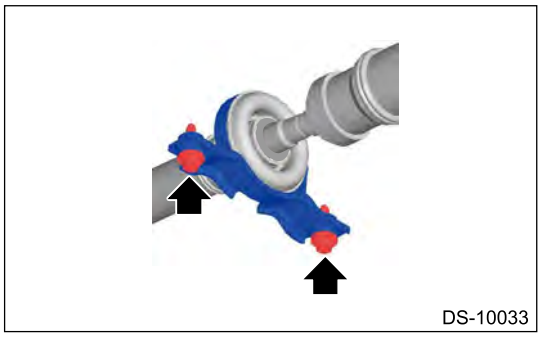
(4) Remove the propeller shaft from transmission.

Caution:

Be careful not to damage oil seals and contact surface of the sleeve yoke.

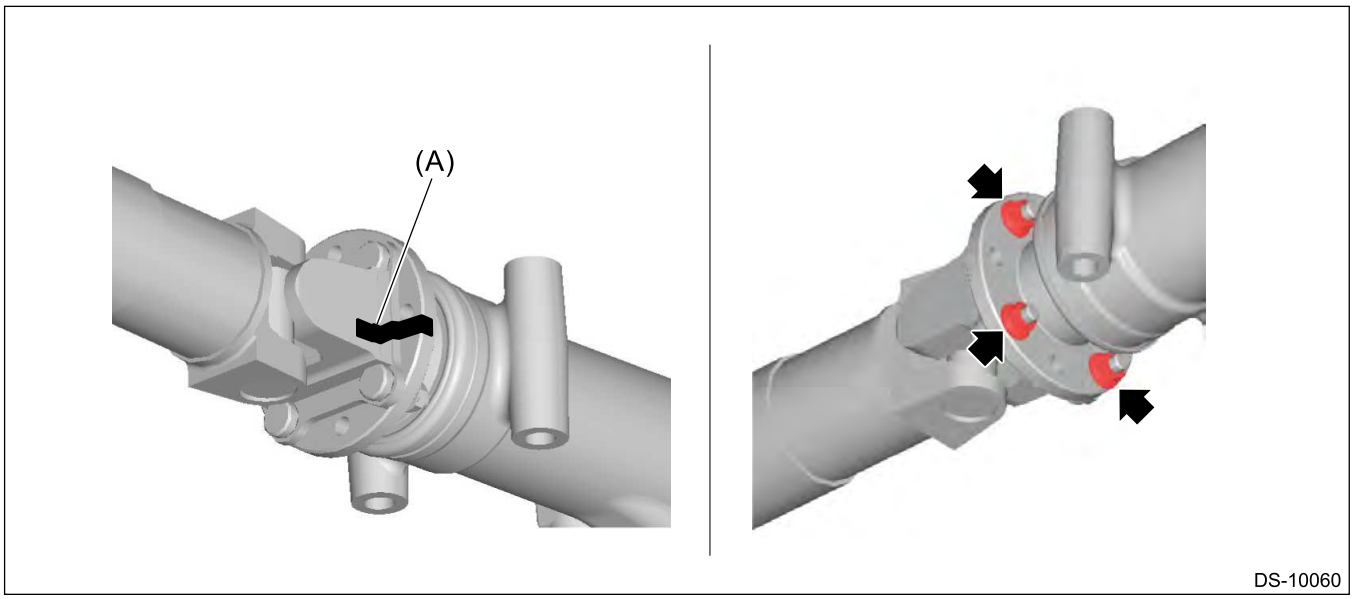
Note:

- **Use a container to catch CVTF or oil flowing from propeller shaft.**
- **To prevent CVTF from leaking, install extension cap etc. to the transmission.**



DRIVE SHAFT SYSTEM > Propeller Shaft

INSTALLATION

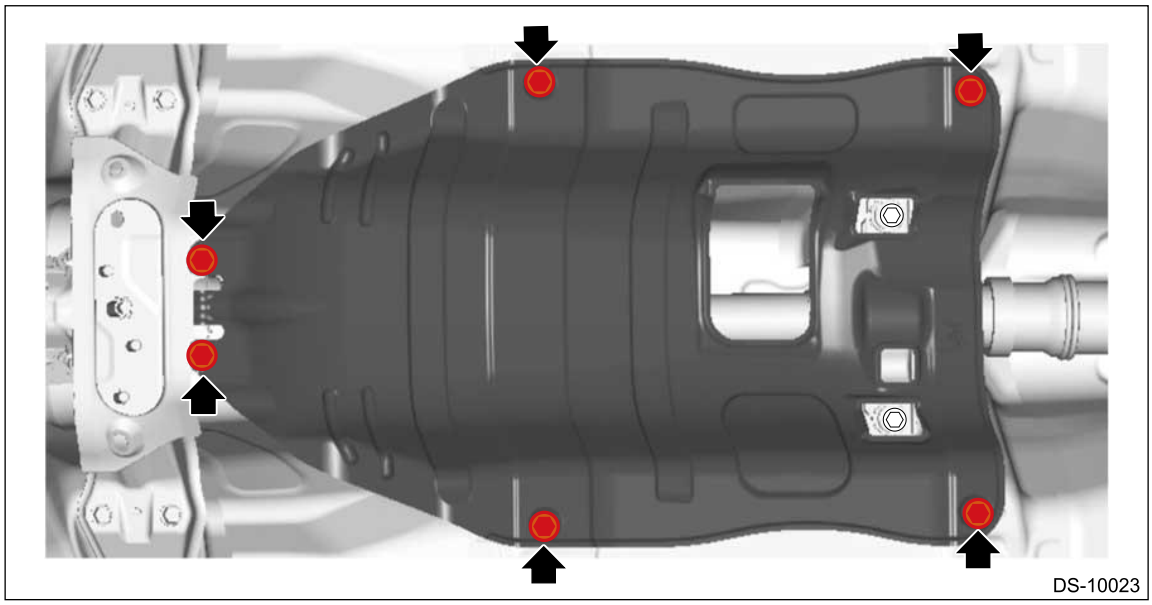


1. Before installation, check the following items, and replace the propeller shaft assembly as necessary.
   - Dents or cracks on the tube surface
   - Splines for deformation or abnormal wear
   - Unsmooth joint operation or abnormal noise
   - Center bearing for looseness, unsmooth operation or noise.
   - Oil seals for abnormal wear or damage
   - Damaged center bearing
2. Apply fluid or gear oil to the oil seal lip and the propeller shaft. Ref. to RECOMMENDED MATERIALS > FLUID.
3. Insert the sleeve yoke into the transmission and attach center bearing to body.

   Tightening torque:

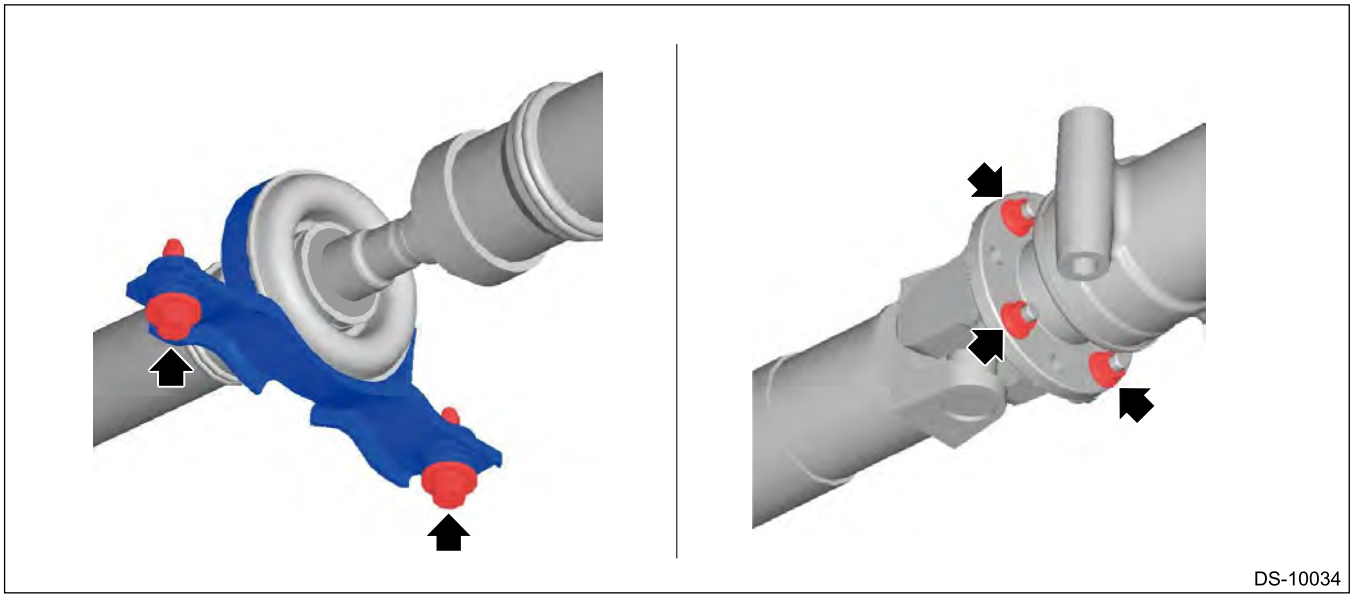
   52 N·m (5.3 kgf-m, 38.4 ft-lb)

4. Align the alignment marks (A), and connect the yoke flange and rear differential.
5. Install the four bolts and nuts.
   Tightening torque:
   31 N·m (3.2 kgf-m, 22.9 ft-lb)



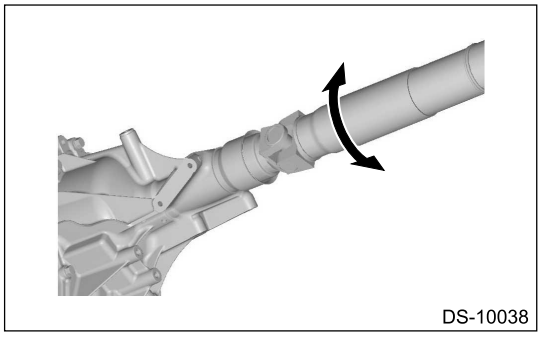
6. Check the propeller shaft with the propeller shaft installed to the vehicle. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSPECTION.
7. Install the center exhaust cover.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
8. Install the rear exhaust pipe and muffler. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION. Ref. to EXHAUST(H4DO)>Muffler>INSTALLATION.
9. Lower the vehicle.

DRIVE SHAFT SYSTEM > Propeller Shaft



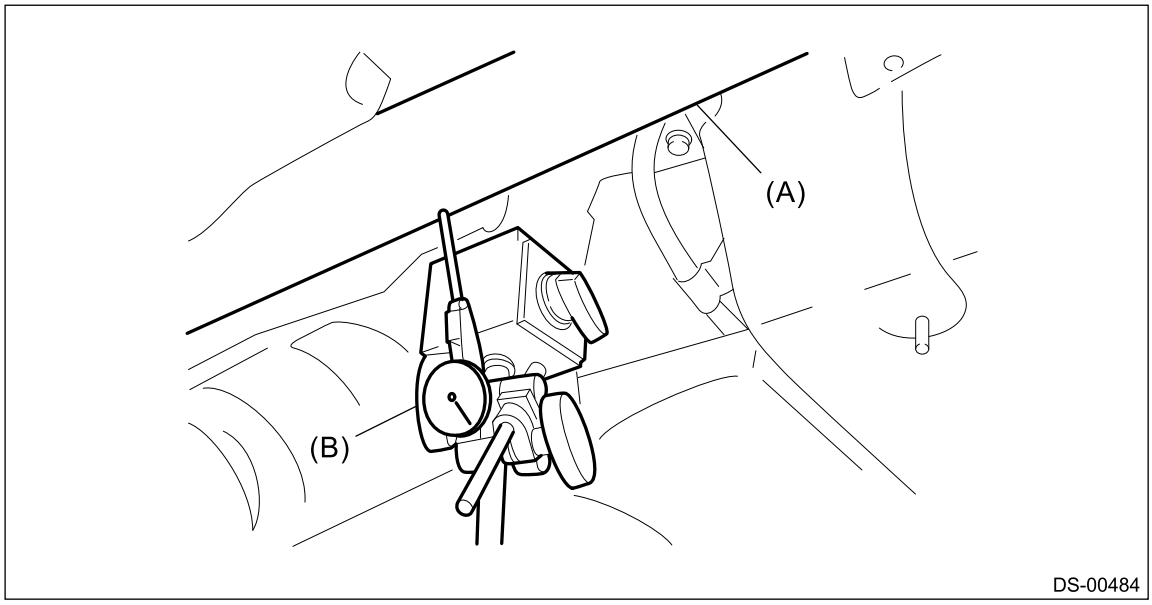
INSPECTION

Check the propeller shaft with the propeller shaft installed to the vehicle.



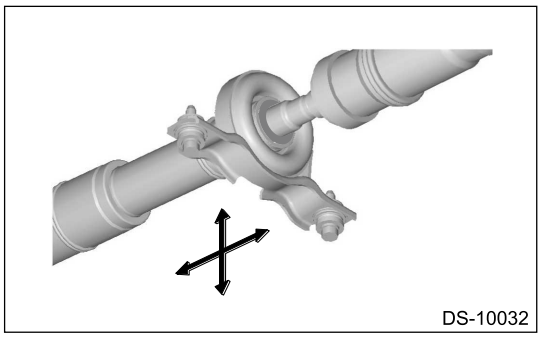
1. Remove the rear exhaust pipe and muffler. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL. Ref. to EXHAUST(H4DO)>Muffler>REMOVAL.
2. Remove the bolts, and then remove the center exhaust cover.

3. Check the propeller shaft mounting bolt for looseness.
(1) Yoke flange mounting bolts and nuts which connect to the rear differential
(2) Center bearing bracket mounting bolts



4. Check the spline and bearing for the propeller shaft.
(1) Turn the propeller shaft by hand to check if abnormal looseness exists at splines.
(2) Also move yokes to check if abnormal looseness exists at spiders and bearings.

5. Measure the deflection of the propeller shaft.
(1) Set the dial gauge (B) with its indicator stem at the center of the propeller shaft (A).
(2) Turn the propeller shaft (A) slowly by hands to check for runout of the propeller shaft.



Runout:

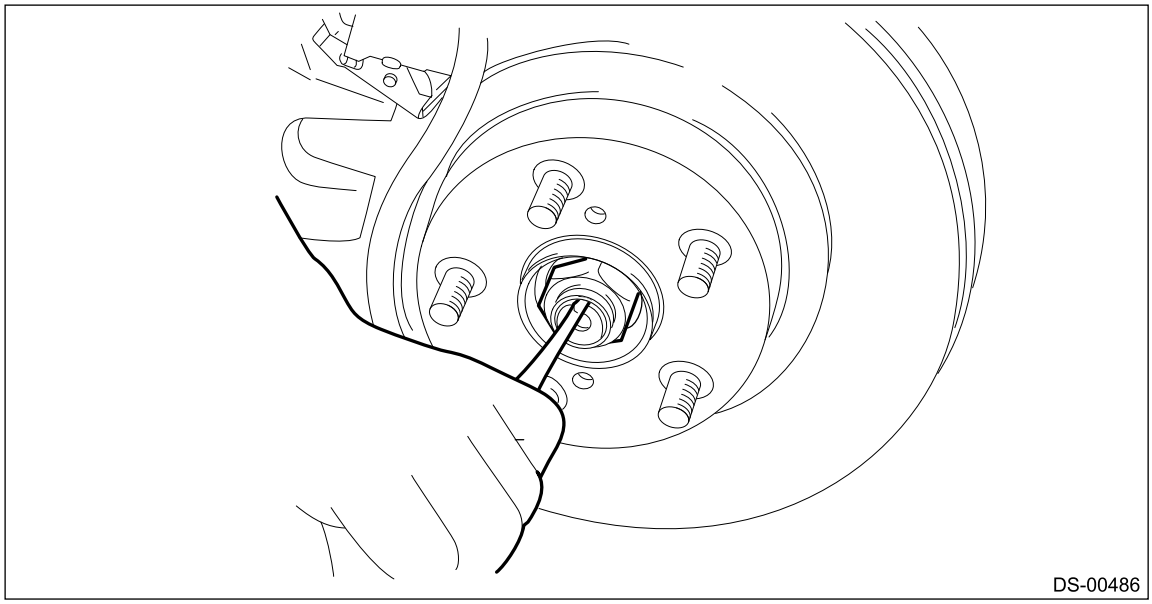
Limit: 0.6 mm (0.024 in)

6. Check the center bearing for rattling.

Move the propeller shaft near the center bearing up, down, left, right by hand, to check for any abnormal free play of the bearings.

7. Replace the propeller shaft assembly if faulty is found in the inspection.

REMOVAL



1. Lift up the vehicle, and then remove the front wheels.
2. Remove the axle nut.

   Caution:

   Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

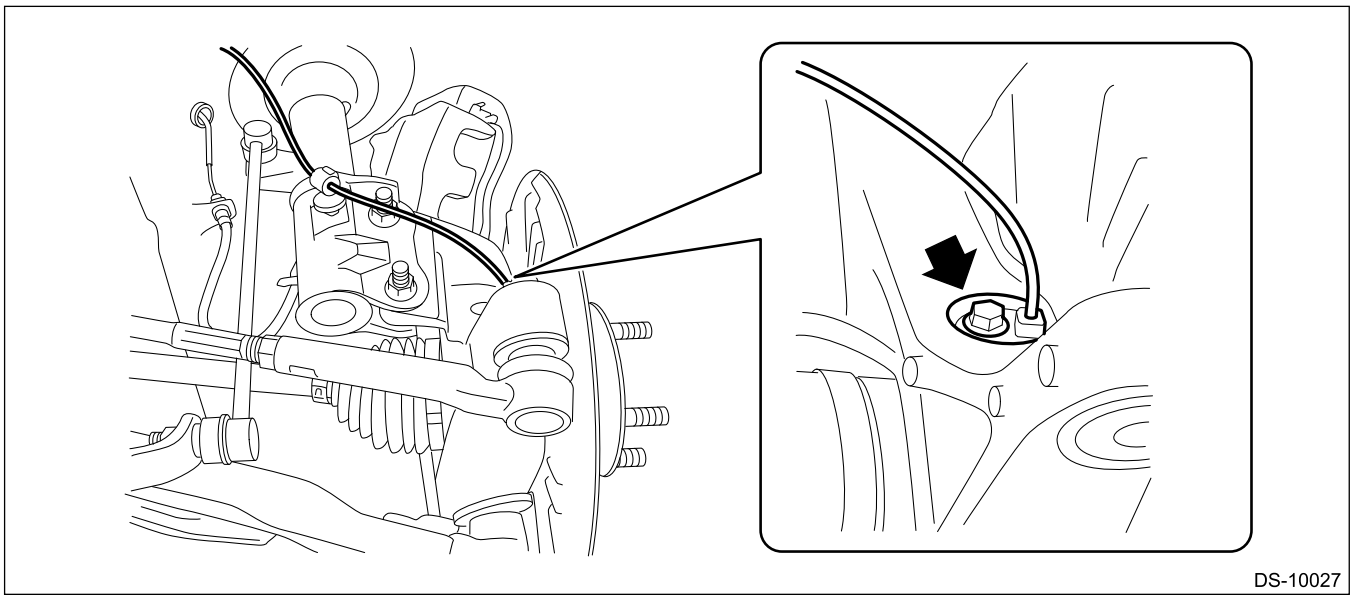
   (1) Lift the crimped section of axle nut.

   (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

3. Remove the caliper body assembly from the front axle housing.

   (1) Remove the mounting bolts and the brake hose bracket, and remove the caliper body assembly.

   (2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the strut assembly.



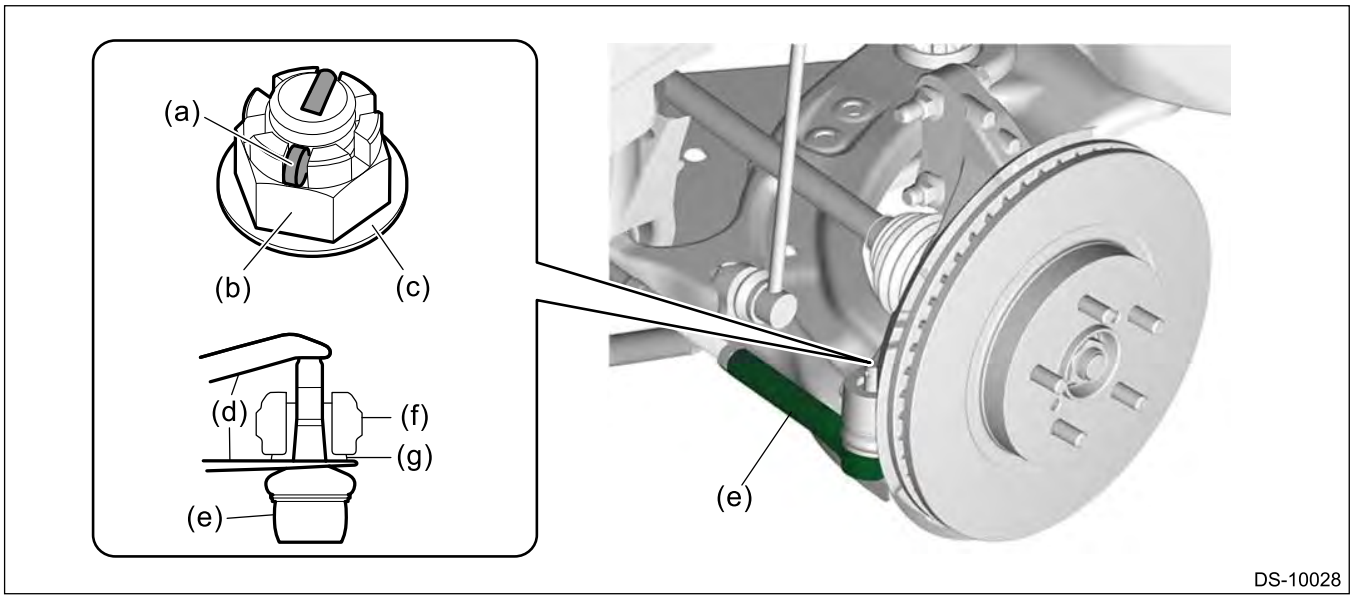
4. Remove the disc rotor.

Note:

When the disc rotor is difficult to be removed from the front hub unit bearing, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

5. Remove the bolts, and remove the front ABS wheel speed sensor and clips.

6. Disconnect the tie-rod end.

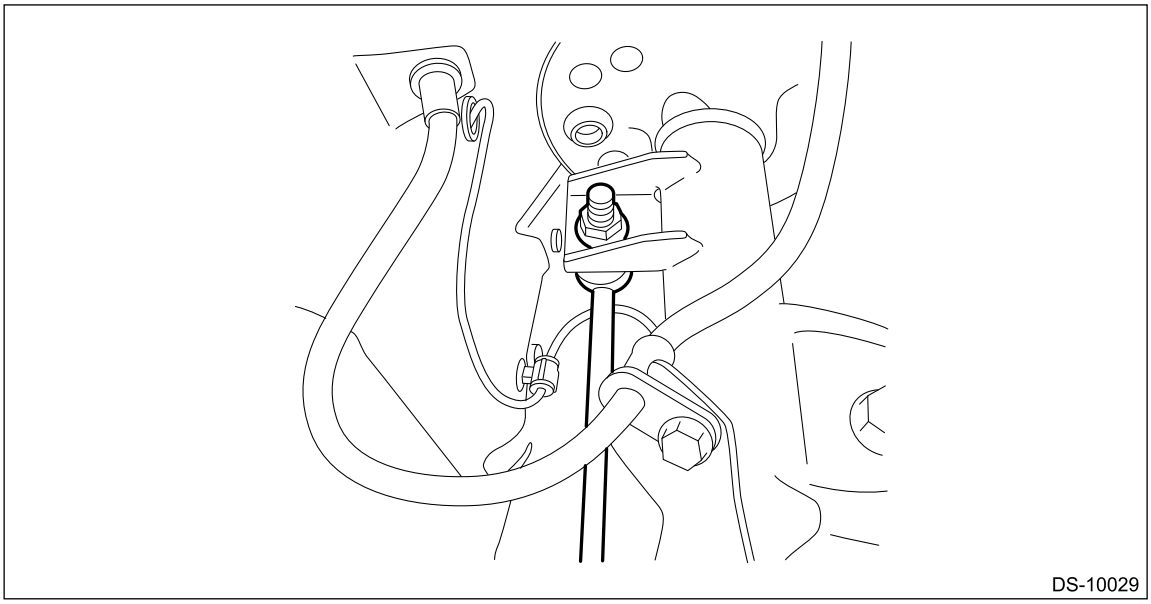


(1) Pull out the cotter pin (a).

(2) Remove the castle nut (b) and washer (c).

(3) Using the tie-rod ball joint puller (d), detach the tie-rod end (e) from the housing (f).

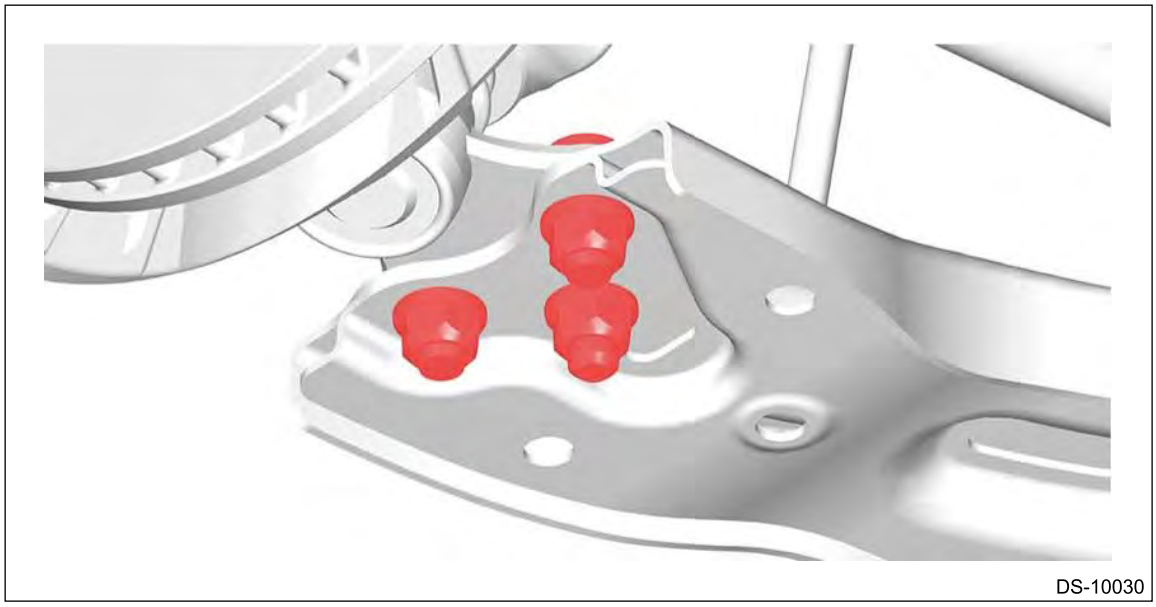
Caution:



- **Be careful not to damage the boot of the joint.**
- **Securely place the tie-rod ball joint puller (d) on the steel collar (g).**

7. Remove the stabilizer link.

Caution:



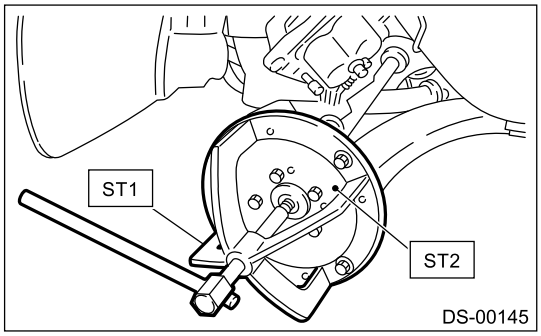
Be careful not to damage the boot of the joint.

8. Remove the three nuts of the ball joint, and disconnect the front lower arm assembly from the front axle housing.

Note:

- **To prevent damage of the front arm ball joint boot, place a wooden block, etc. between front arm and ball joint.**
- **Mark the engaging position of the ball joint and front arm assembly before loosening the flange nuts. Doing so will facilitate aligning the position when assembling and lessen adjusting allowance for wheel alignment.**

9. Remove the front drive shaft assembly from the front hub unit bearing.



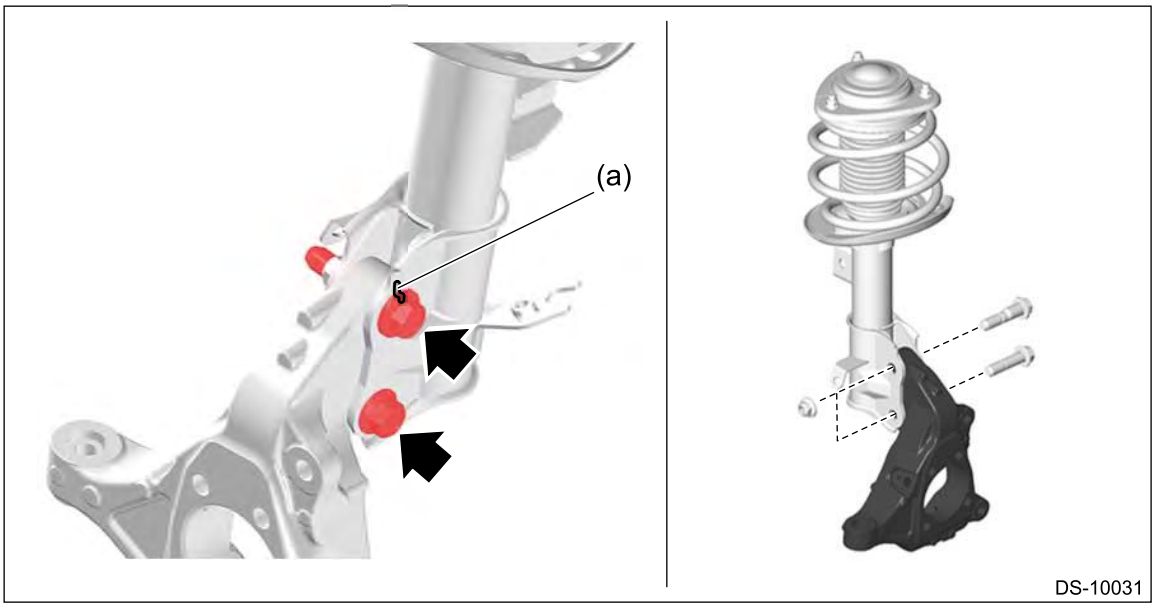
Note:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)



10. Remove the front axle housing.

(1) Place an alignment mark (a) on the adjusting bolt and the strut.

(2) Remove the adjusting bolts and flange bolts for the strut assembly, and then remove the front axle housing.

Caution:

- **While holding the head of the adjusting bolt, loosen the flange nut.**
- **Be careful of the weight of front axle housing.**
- **Be careful not to damage the spline portion of the drive shaft.**

11. Remove the front ball joint from the front axle housing. Ref. to FRONT SUSPENSION>Ball Joint>REMOVAL.
12. Refer to "Front Hub Unit Bearing" for removal of the front hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>REMOVAL.

DRIVE SHAFT SYSTEM > Front Axle

INSTALLATION

1. Install the ball joint to the front axle housing, and insert the snap pin.
   Caution:
   - **Securely install the washer.**
   - **Make sure there is no clearance between steel collar and housing.**
   - **If the steel collar is removed, replace the housing with a new part.**

   Tightening torque:
   51 N·m (5.2 kgf-m, 37.6 ft-lb)
2. Install the front axle housing.
   (1) Install the adjusting bolts and flange bolts.
   Caution:
   (a) Align alignment marks.
   Tightening torque:
   155 N·m (15.3 kgf-m, 110.6 ft-lb)
3. Install the ball joint to the front lower arm.
   Tightening torque:
   100 N·m (10.2 kgf-m, 73.8 ft-lb)
4. Install the front drive shaft assembly.
   Caution:
   - **Use new axle nuts.**
   - **Be careful not to damage the spline portion of the drive shaft.**
   - **Be careful not to damage the magnetic encoder.**

   (1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
   (2) Tighten the axle nut temporarily.
5. Install the front ABS wheel speed sensor and clips.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6. Install the disc rotor.
7. Install the caliper body assembly.

Caution:

Use a new bolt.

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

8. Install the brake hose bracket.

Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)

9. Install the stabilizer link.

Tightening torque:

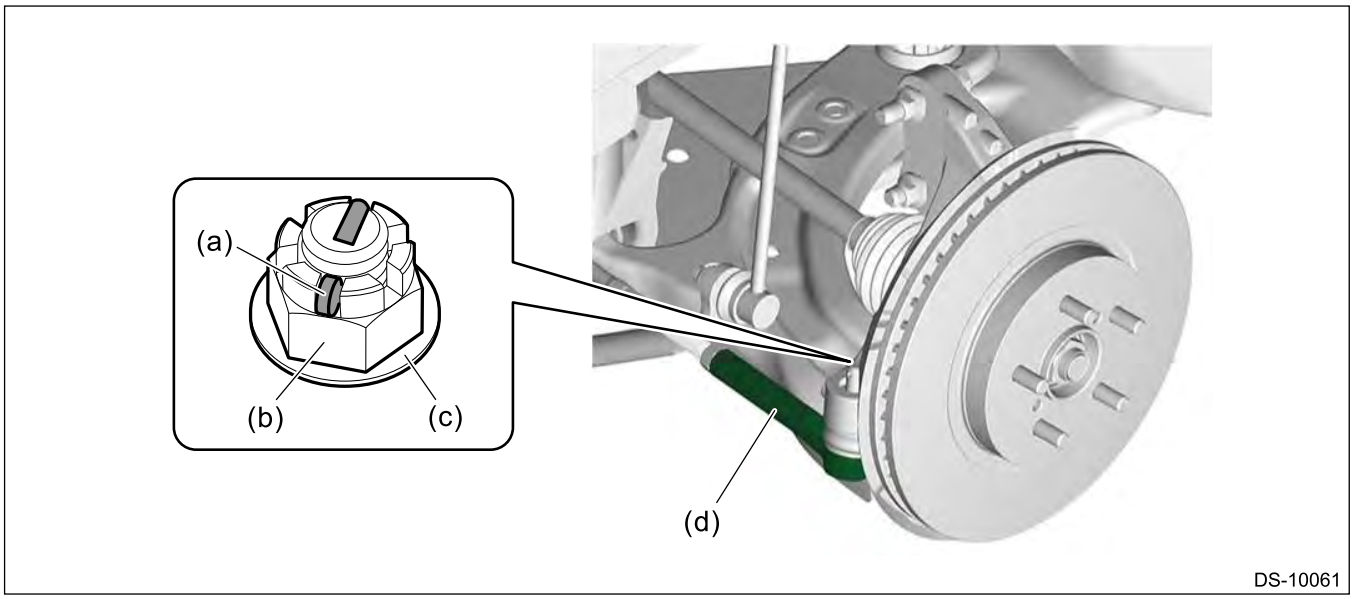
60 N·m (6.1 kgf-m, 44.3 ft-lb)

10. Connect the tie-rod ends.

(1) Connect the tie-rod ends (d) to the front axle housing.

(2) Install the washer (c), and tighten the castle nuts (b) to the specified torque.

Caution:



- **Securely install the washer.**
- **Make sure there is no clearance between steel collar and housing.**
- **If the steel collar is removed, replace the housing with a new part.**
- **When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.**

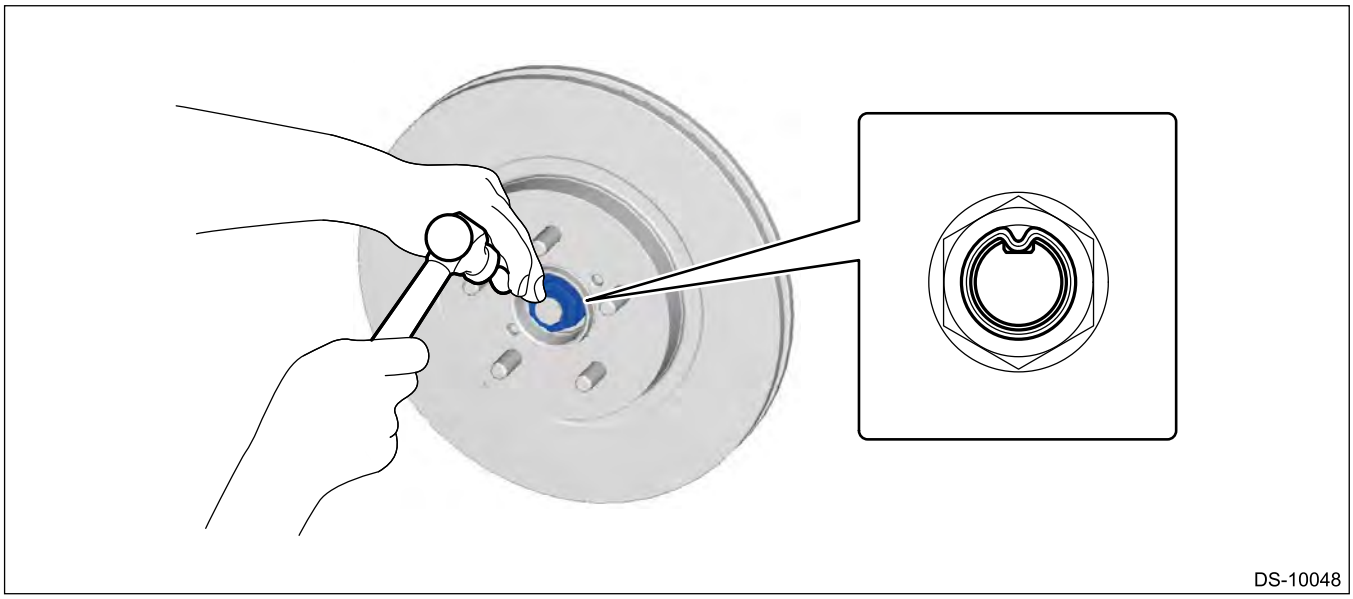
Tightening torque:

27 N·m (2.8 kgf-m, 19.9 ft-lb)

(3) Tighten the castle nut (b) within the range of 60° so that the cotter pin (a) mounting hole and cutout portion of the castle nut (b) are aligned.

(4) Insert the cotter pin (a), and bend the tip of the pin to fix it.

11. While depressing the brake pedal, tighten a new axle nut to the specified torque and lock it securely.



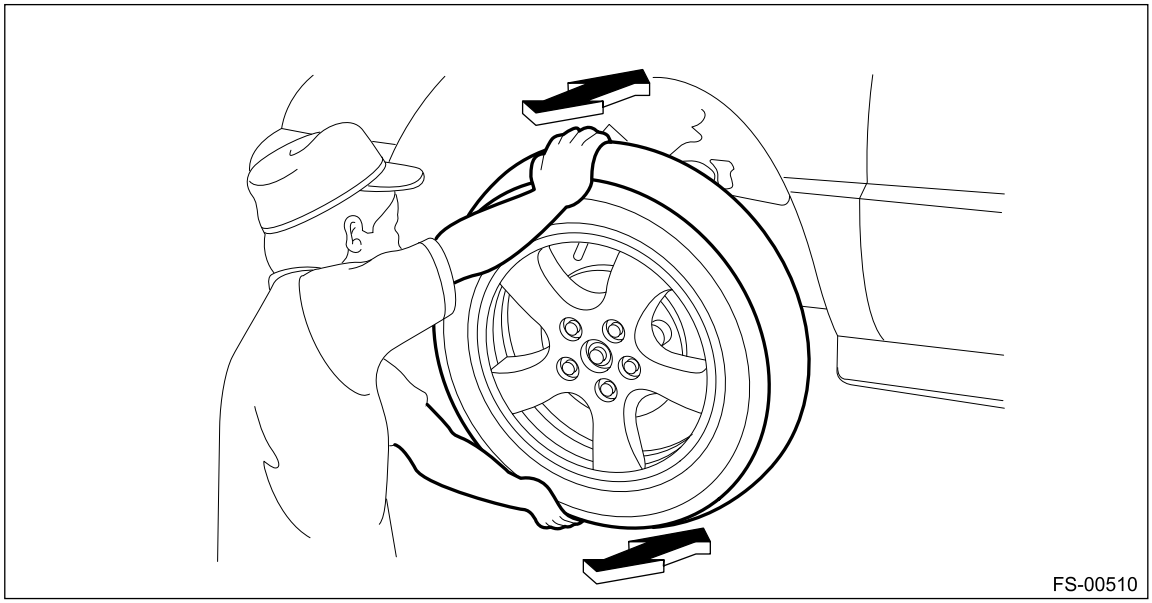
Caution:

Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

220 N·m (22.4 kgf-m, 162.3 ft-lb)

12. After tightening the axle nut, lock it securely.



13. Install the front wheels, and perform the following inspections.

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the front hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.

3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Looseness exists** → Replace the ball joint assembly. Ref. to FRONT SUSPENSION>Ball Joint>REMOVAL.

14. Inspect the wheel alignment and adjust if necessary. Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

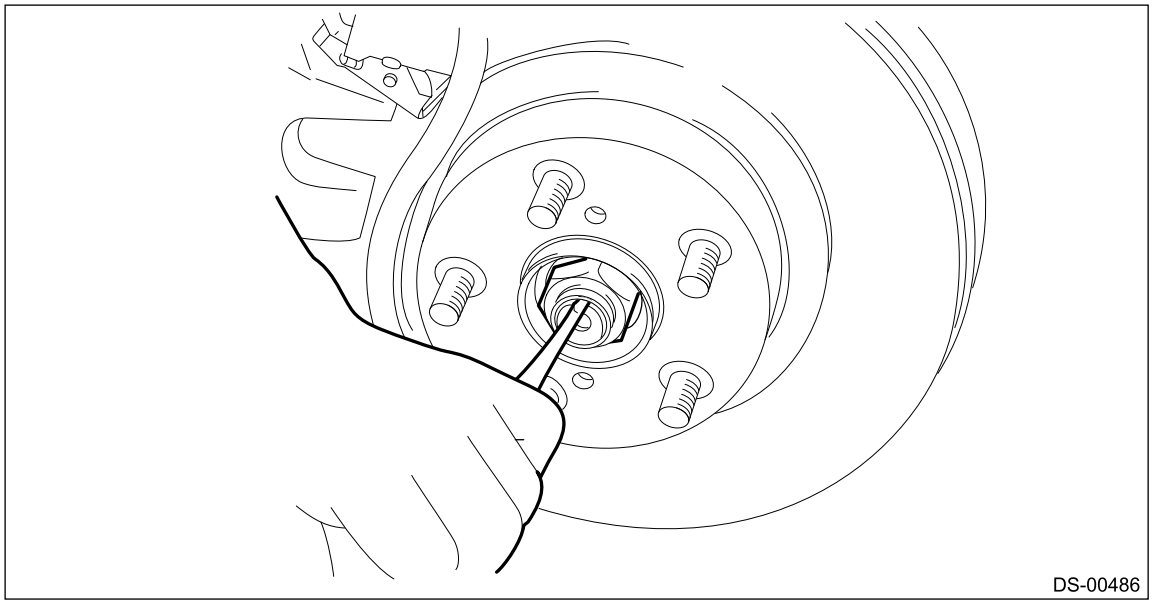
Caution:

When the wheel alignment has been adjusted, perform the following adjustment.

- **Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.**
- **VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.**

15. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

REMOVAL



1. Lift up the vehicle, and then remove the front wheels.
2. Remove the axle nut.

   Caution:

   Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

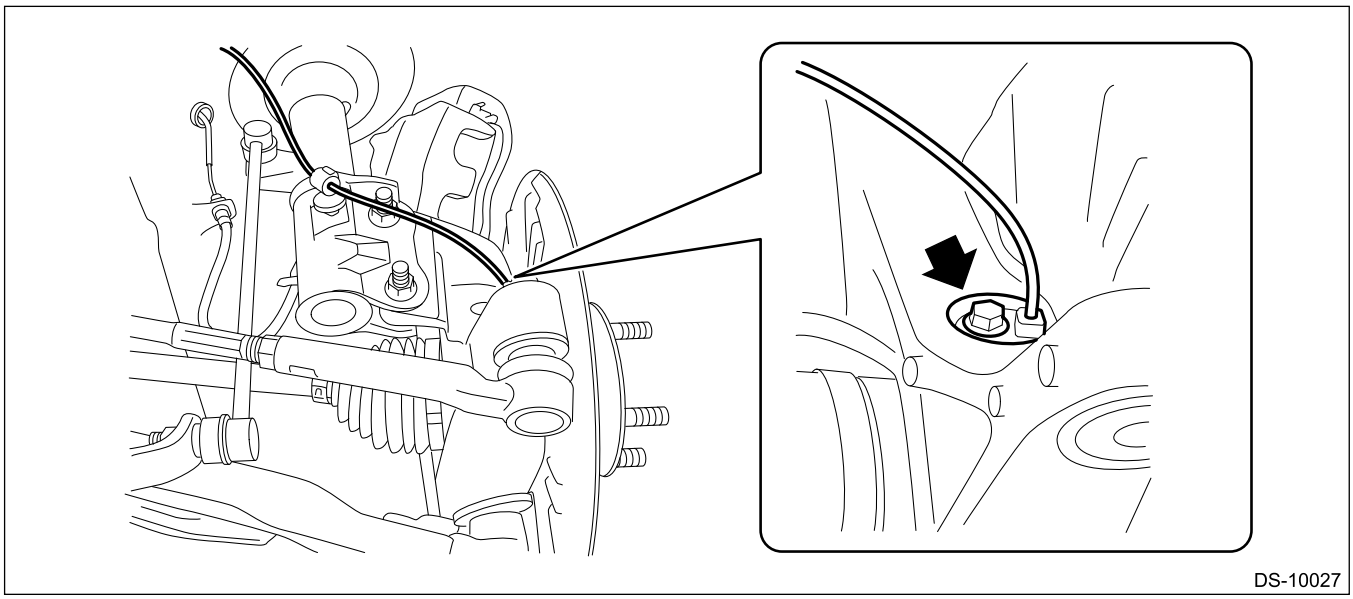
   (1) Lift the crimped section of axle nut.

   (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

3. Remove the caliper body assembly from the front axle housing.

   (1) Remove the mounting bolts and the brake hose bracket, and remove the caliper body assembly.

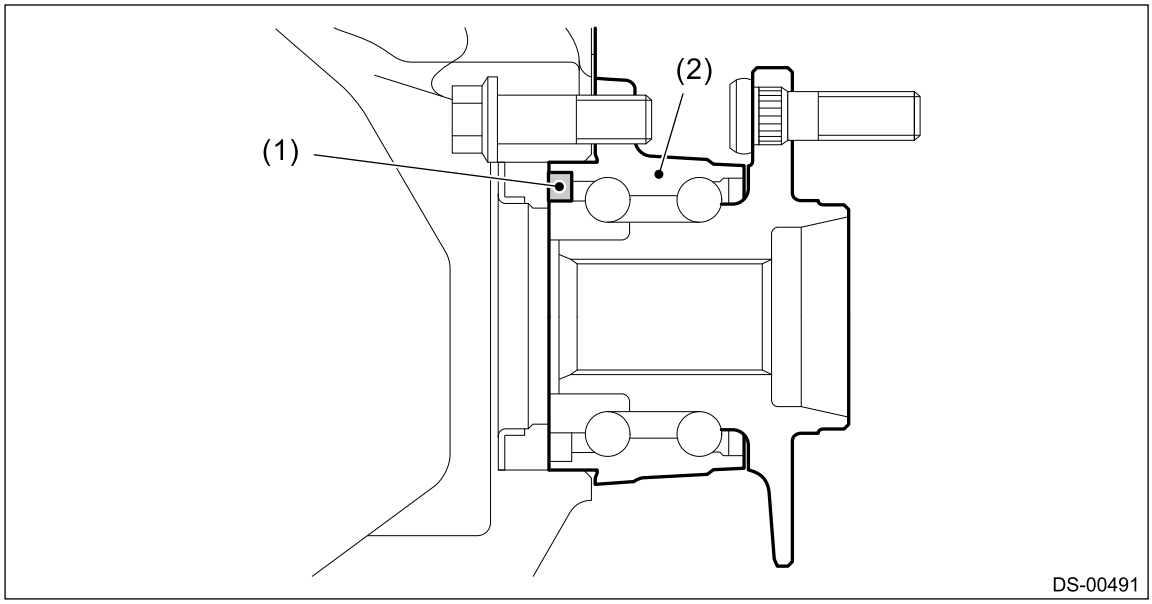
   (2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the strut assembly.



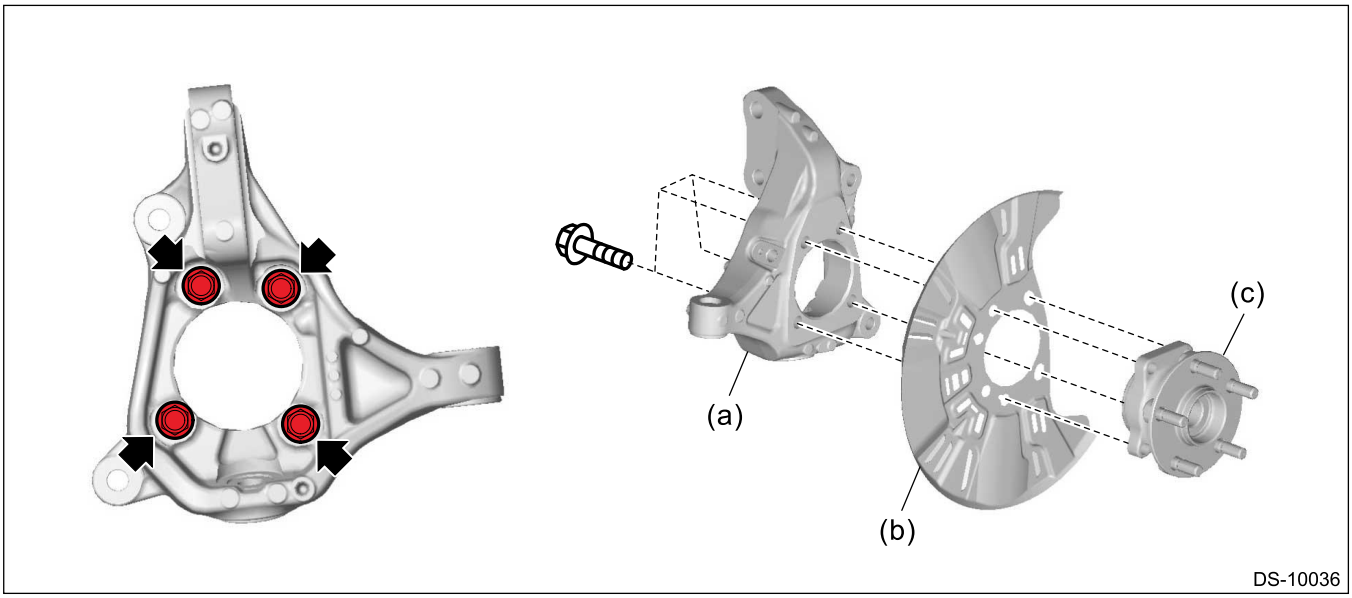
4. Remove the disc rotor.

Note:

When the disc rotor is difficult to be removed from the front hub unit bearing, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.



5. Remove the bolts, and remove the front ABS wheel speed sensor and clips.



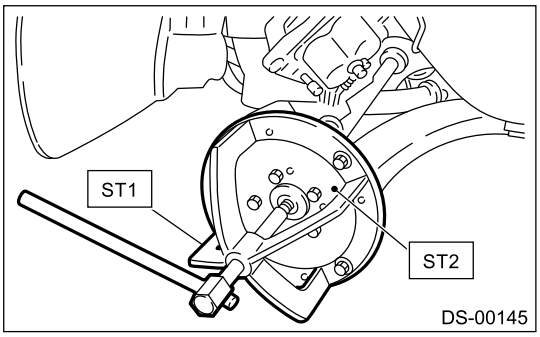
6. Remove the bolt from the front axle housing, and remove the front hub unit bearing.

Caution:

- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**

(1) Magnetic encoder (2) Front hub unit bearing

(a) Front axle housing (b) Front brake back plate (c) Front hub unit bearing



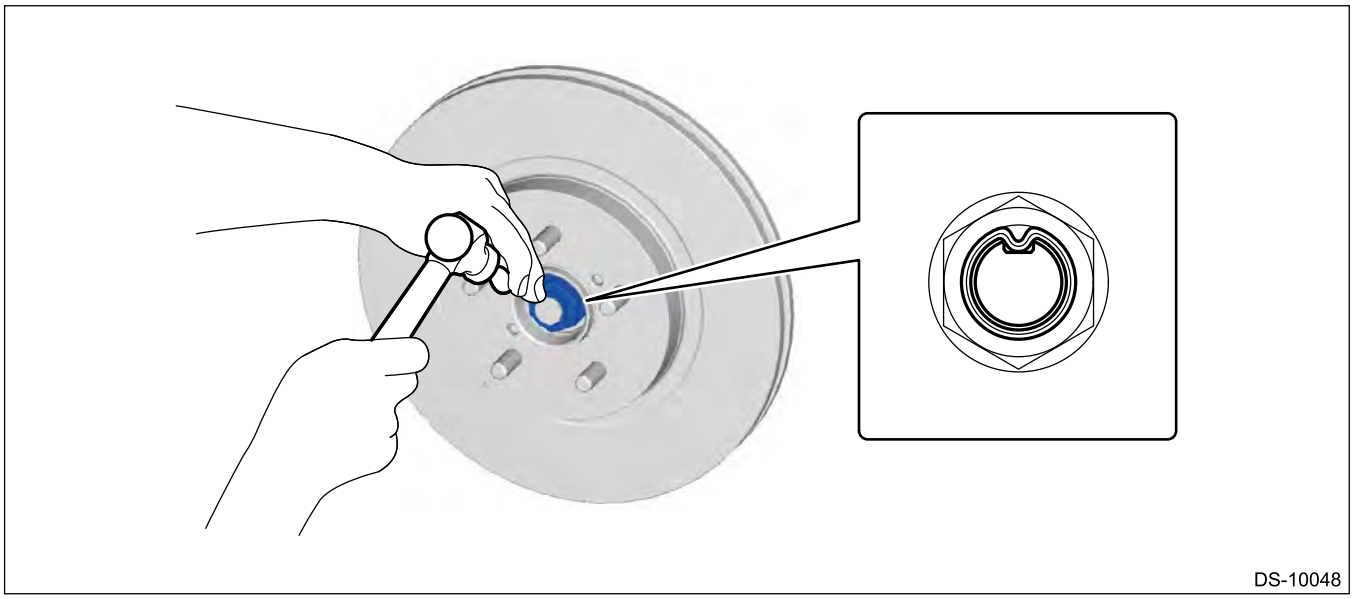
Note:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

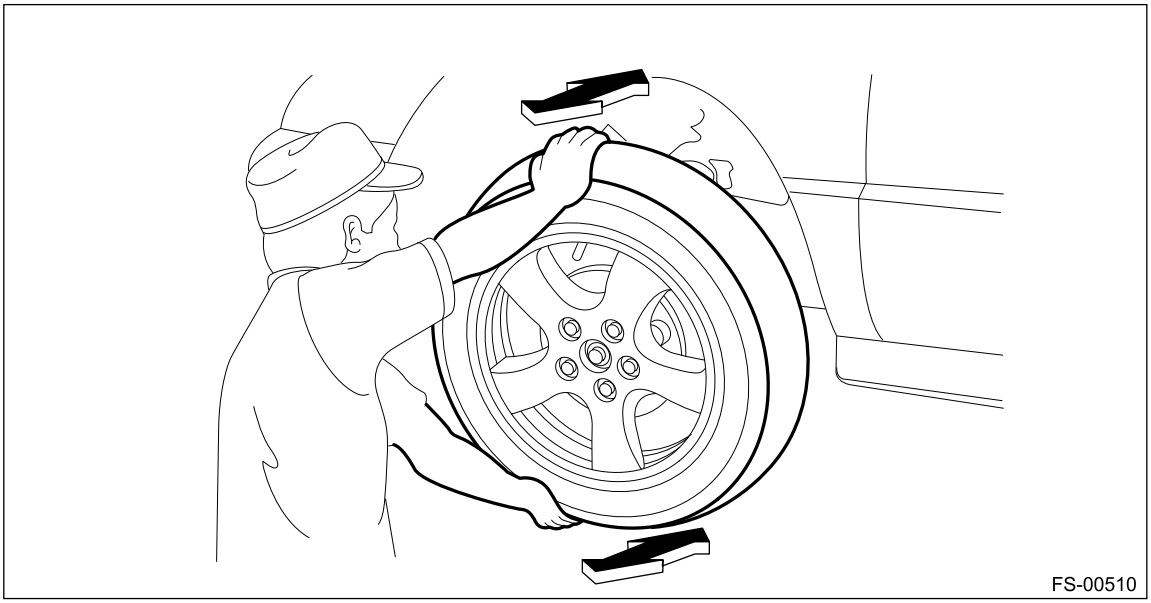


INSTALLATION

1. Place the front brake back plate between the front axle housing and the front hub unit bearing, and tighten the bolt.
   Caution:
   - **Do not get closer the tool which charged magnetism to magnetic encoder.**
   - **Be careful not to damage the magnetic encoder.**
   - **Use a new bolt.**

   Tightening torque:
   85 N·m (8.67 kgf-m, 62.7 ft-lb)
2. Install the front drive shaft assembly.
   Caution:
   - **Use new axle nuts.**
   - **Be careful not to damage the spline portion of the drive shaft.**
   - **Be careful not to damage the magnetic encoder.**

   (1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
   (2) Tighten the axle nut temporarily.
3. Install the front ABS wheel speed sensor and clips.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4. Install the disc rotor.
5. Install the caliper body assembly.
   Caution:
   Use a new bolt.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
6. Install the brake hose bracket.
   Tightening torque:
   33 N·m (3.4 kgf-m, 24.3 ft-lb)
7. While depressing the brake pedal, tighten a new axle nut to the specified torque and lock it securely.
   Caution:
   Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.
   Tightening torque:
   220 N·m (22.4 kgf-m, 162.3 ft-lb)
8. After tightening the axle nut, lock it securely.



9. Install the front wheels, and perform the following inspections.

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the front hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.

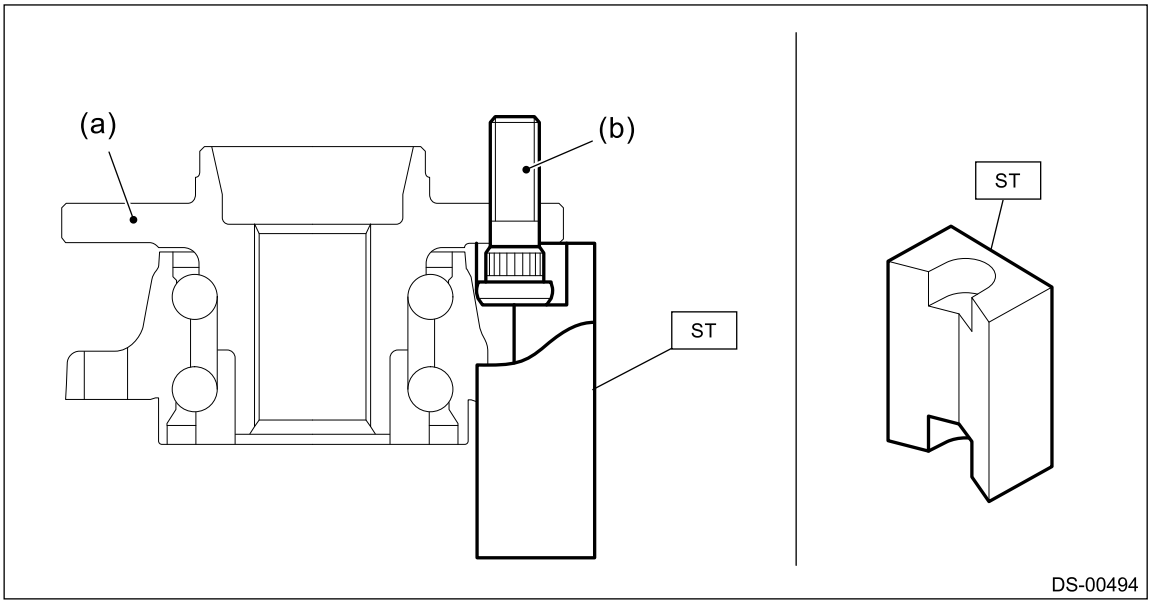
3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Looseness exists** → Replace the ball joint assembly. Ref. to FRONT SUSPENSION>Ball Joint>REMOVAL.

DRIVE SHAFT SYSTEM > Front Hub Unit Bearing

DISASSEMBLY

Using the ST or a hydraulic press, push out the hub bolt (b) from the front hub unit bearing (a).

Caution:



- **Be careful not to hammer the hub bolts. This may deform the hub unit bearing.**
- **Do not reuse the hub bolt.**

Note:

Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

Preparation tool:

ST: HUB STAND (28399AG000)

DRIVE SHAFT SYSTEM > Front Hub Unit Bearing

ASSEMBLY

1. Install the front hub unit bearing to the ST securely.

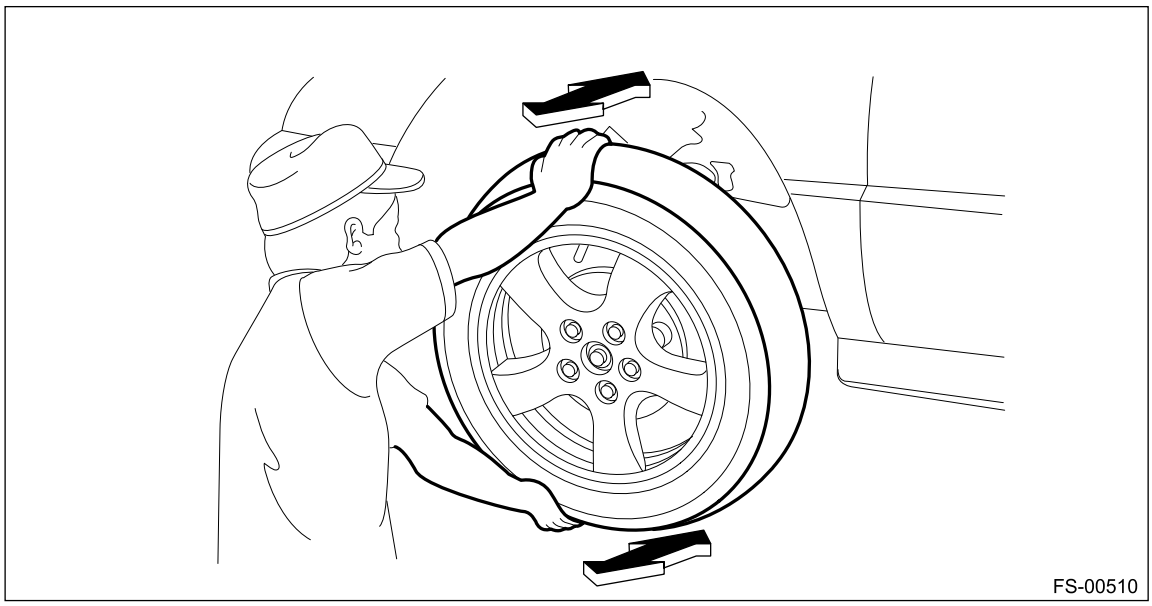
   Preparation tool:

   ST: HUB STAND (927080000)

2. Using a press, press the new hub bolts (b) until their seating surfaces contact the hub unit bearing (a).

   Note:

   Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.



INSPECTION

1. Moving the front tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

   Caution:

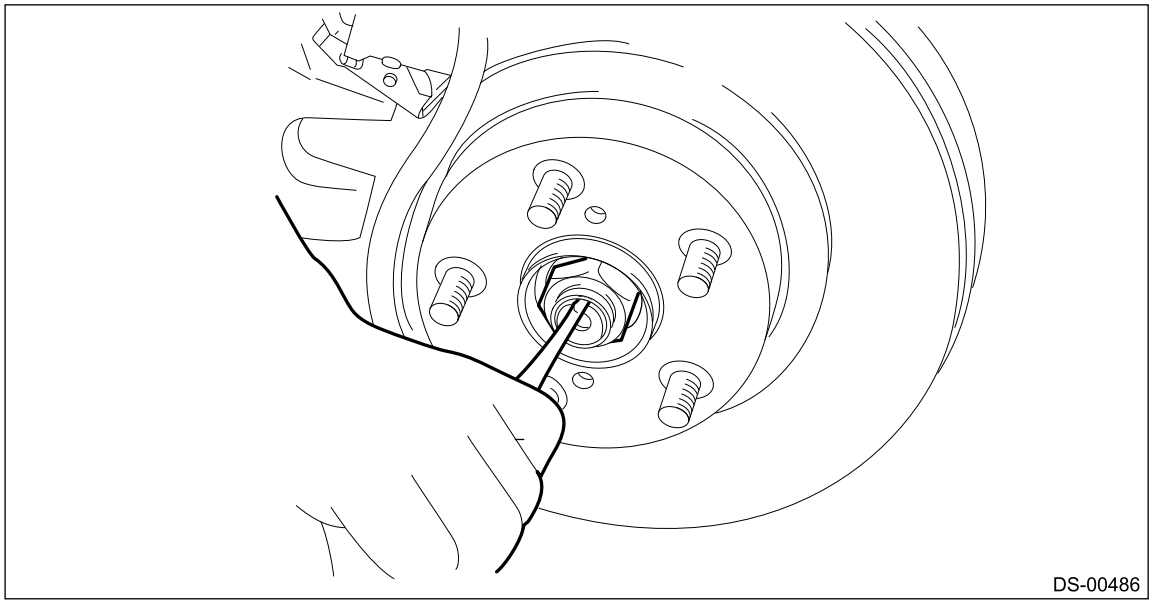
   If there is unsmooth sliding operation or abnormal noise in the bearing, replace the hub unit bearing.

2. Inspect the hub unit bearing for axial looseness.
   1. Remove the tire and disc rotor.
   2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

   Service limit:

   Maximum: 0.05 mm (0.0020 in)

REMOVAL



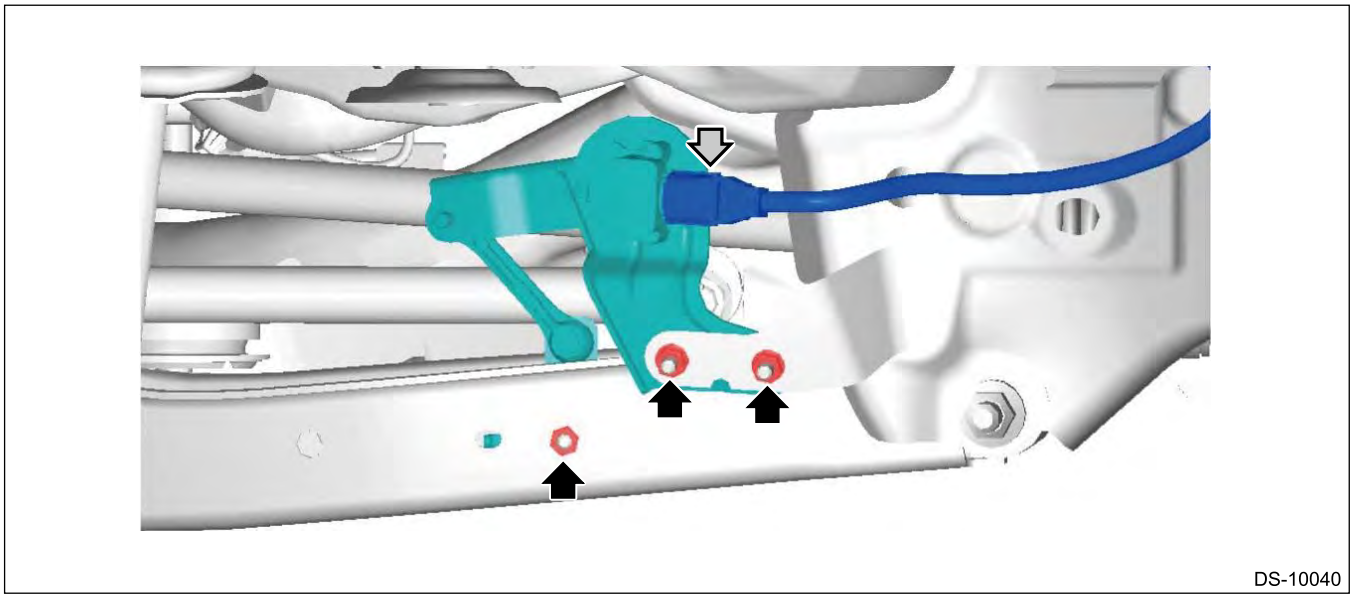
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle, and then remove the rear wheels.
3. Remove the axle nut.

   Caution:

   Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

   (1) Lift the crimped section of axle nut.

   (2) Remove the axle nut using a socket wrench while depressing the brake pedal.



4. Disconnect the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

   Caution:

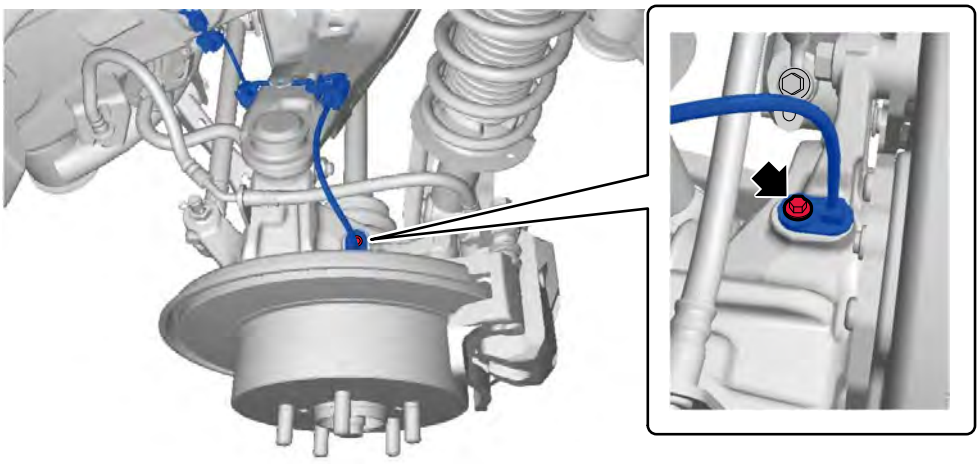
   Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

   (1) Disconnect the connector of the sensor assembly - headlight beam leveler.

   (2) Remove the bolts and nuts, and remove the sensor assembly - headlight beam leveler.

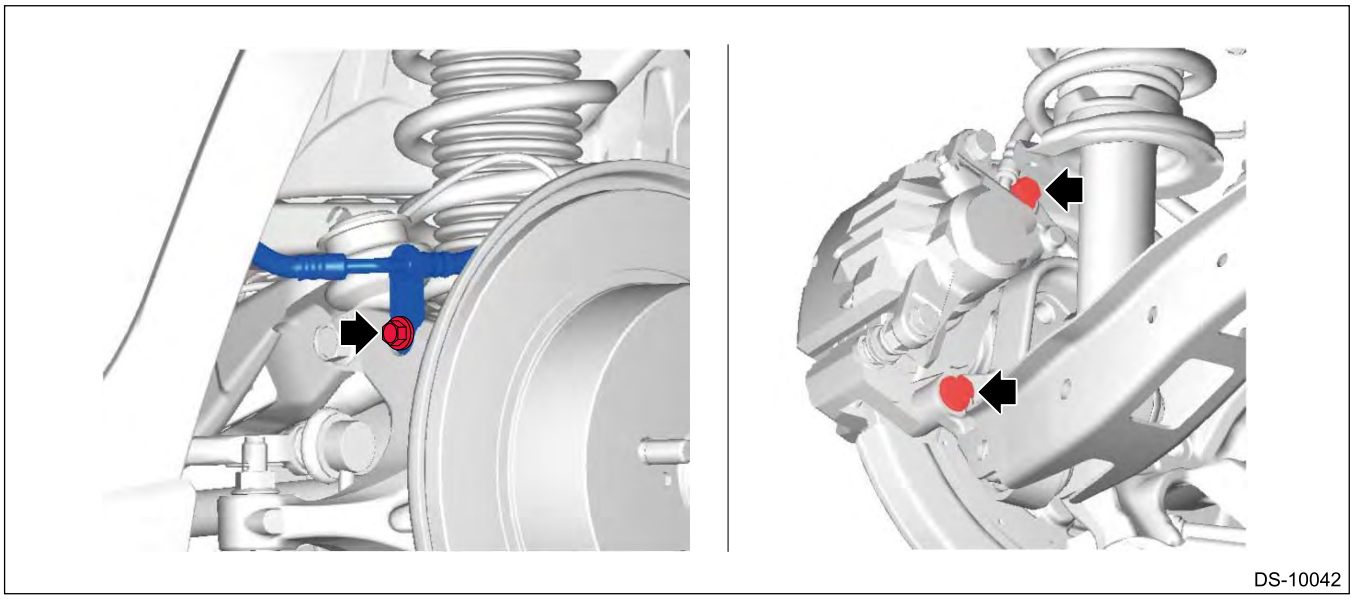
5. Remove the bolts and nuts and lower the rear lateral link.

(1) Remove the nut and disconnect the rear stabilizer link. (Model with rear stabilizer)
(2) Remove the bolts from the lower side of rear shock absorber assembly.
(3) Disconnect the rear axle housing assembly from the rear lateral link.



DS-10041

6. Remove the rear ABS wheel speed sensor from the rear axle housing assembly.
(1) Remove the bolts, and remove the ABS wheel speed sensor.



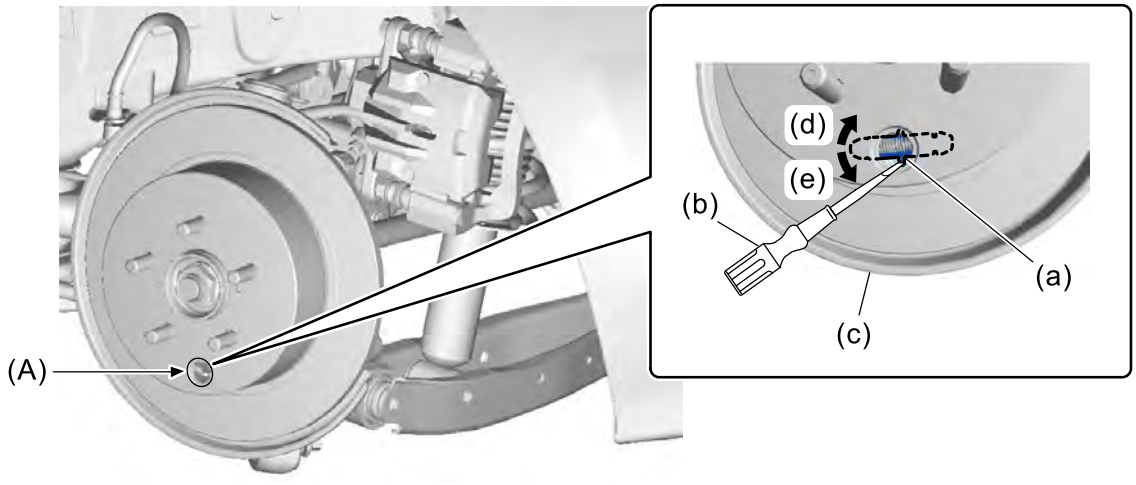
Caution:

- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

DS-10039

7. Remove the caliper body assembly from the rear axle housing assembly.
(1) Remove the bolts and then remove the brake hose bracket and caliper body assembly.

(2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the shock absorber assembly with the harnesses.



8. Remove the rear disc rotor.

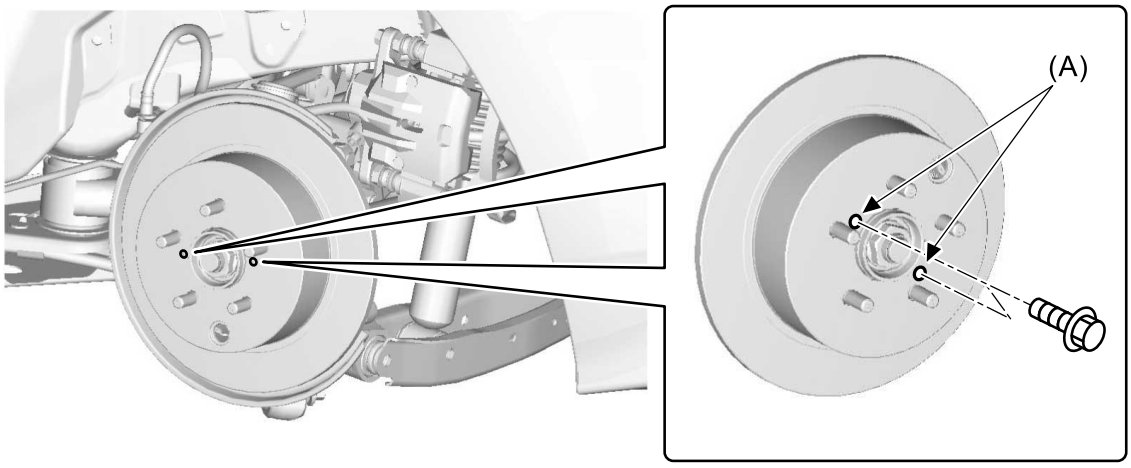
Note:

If it is difficult to remove the rear disc rotor, perform the following two methods in order.

1. Remove the adjusting hole cover (A), insert the flat tip screwdriver, and rotate the adjuster assembly - rear brake until the brake shoe moves far enough to remove the disc rotor.

DS-10044

(a) Adjuster ASSY - rear brake



(b) Flat tip screwdriver

(c) Disc rotor

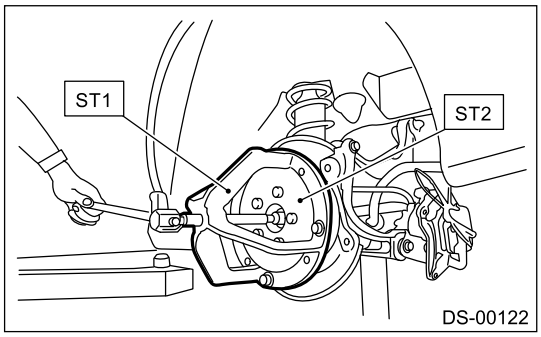
(d) Extend the adjuster ASSY - rear brake

(e) Shorten the adjuster ASSY - rear brake

2. If the disc rotor is not removed after performing above step, screw in an 8 mm (0.31 in) bolt to the threaded part (A) of the disc rotor, and remove the disc rotor.

DS-10045

9. Remove the rear drive shaft assembly from the rear hub unit bearing.



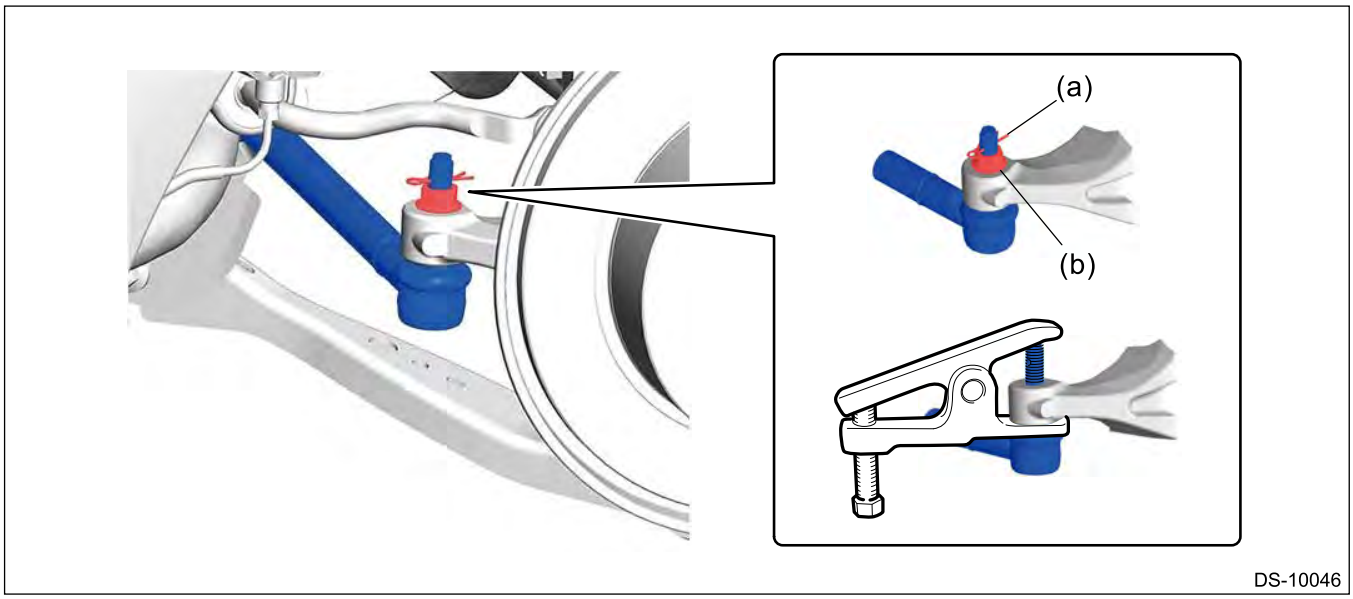
Note:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)



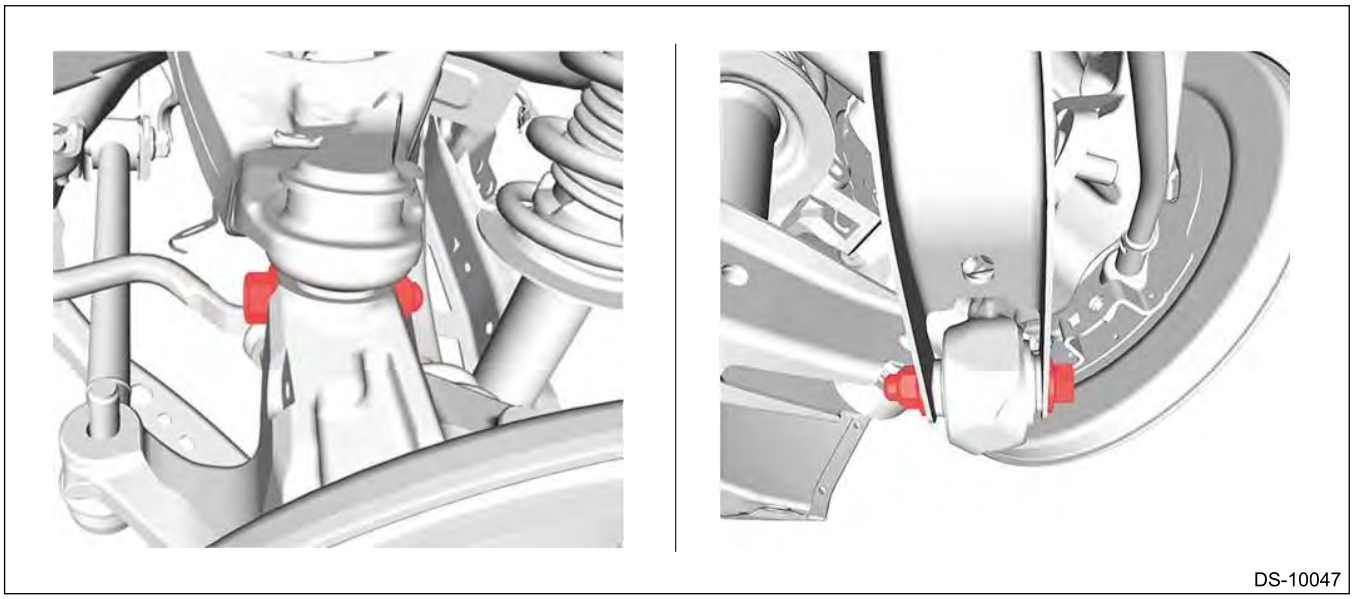
10. Remove the front lateral link.

(1) Remove the snap pin (a) and nut (b).

(2) Remove the ball joint from the rear axle housing assembly using the tie-rod ball joint puller.

Caution:

Be careful not to damage the boot of the joint.



11. Remove the rear axle housing assembly.

(1) Separate the rear axle housing assembly by removing the bolts of the upper arm and trailing link.

Caution:

Be careful not to damage the boot of the joint.

(2) Remove the rear axle housing assembly.

Caution:

- **Be careful of the weight of rear axle housing assembly.**
- **Be careful not to damage the spline portion of the drive shaft.**

12. Refer to "Rear Hub Unit Bearing" for removal of the rear hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>REMOVAL.

DRIVE SHAFT SYSTEM > Rear Axle

INSTALLATION

1. Temporarily tighten the rear axle housing assembly to the upper arm assembly.

2. Install the rear drive shaft assembly.

Caution:

- **Use new axle nuts.**
- **Be careful not to damage the spline portion of the drive shaft.**
- **Be careful not to damage the magnetic encoder.**

(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

(2) Tighten the axle nut temporarily.

3. Tighten the rear shock absorber assembly, rear stabilizer link and other links to the specified torque.

Tightening torque:

Rear suspension: Ref. to REAR SUSPENSION>General Description>COMPONENT > REAR SUSPENSION.

Rear shock absorber: Ref. to REAR SUSPENSION>General Description>COMPONENT > REAR SHOCK ABSORBER.

4. Install the rear disc rotor.

5. Install the caliper body assembly.

Tightening torque:

66 N·m (6.7 kgf-m, 48.7 ft-lb)

6. Install the brake hose bracket and rear ABS wheel speed sensor.

Tightening torque:

Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

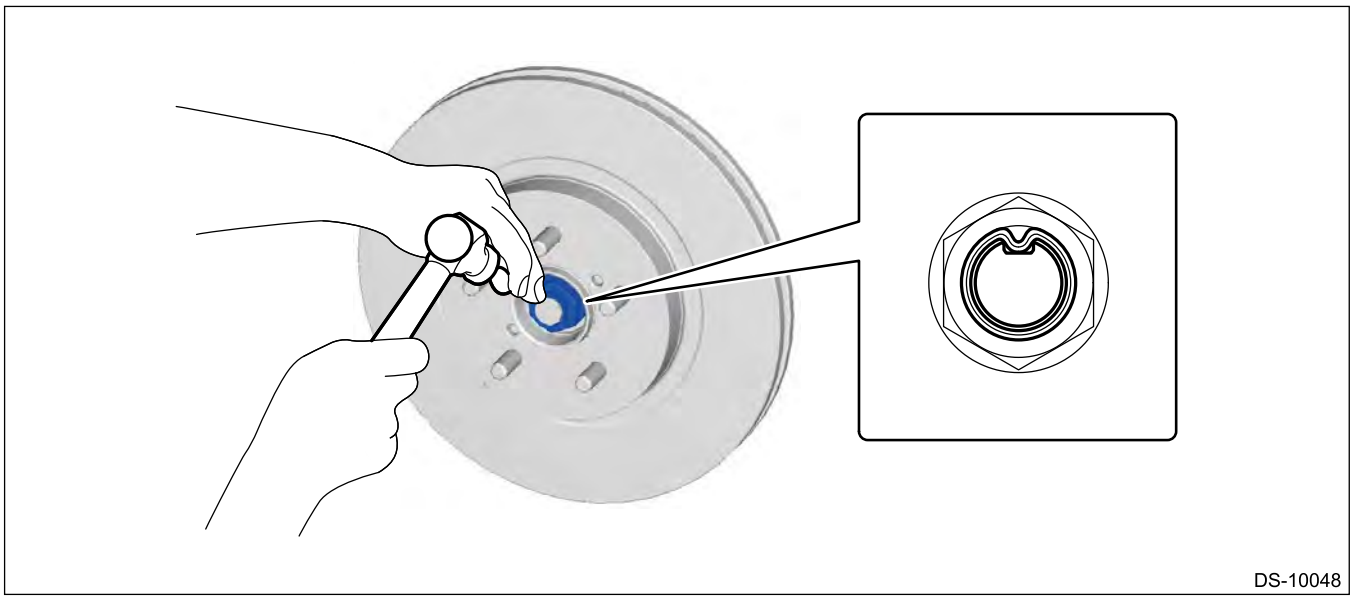
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7. Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8. While pressing the brake pedal, tighten the new axle nuts to the specified torque.



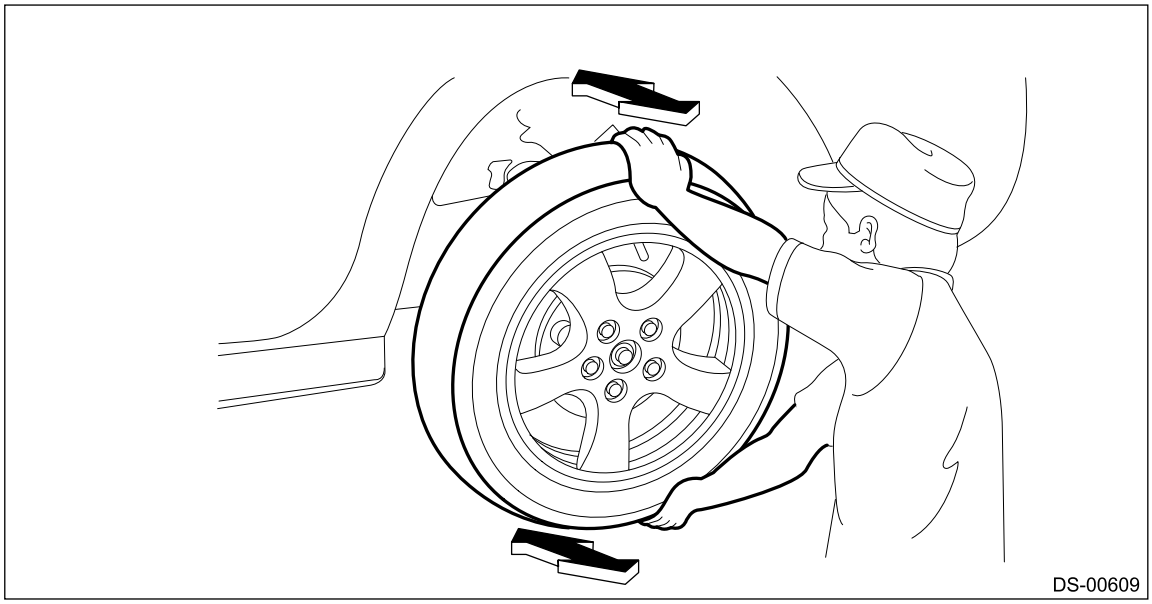
Caution:

Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

240 N·m (24.5 kgf-m, 177 ft-lb)

9. After tightening the axle nut, lock it securely.



10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

11. Install the rear wheels, and perform the following inspections.

Tightening torque:

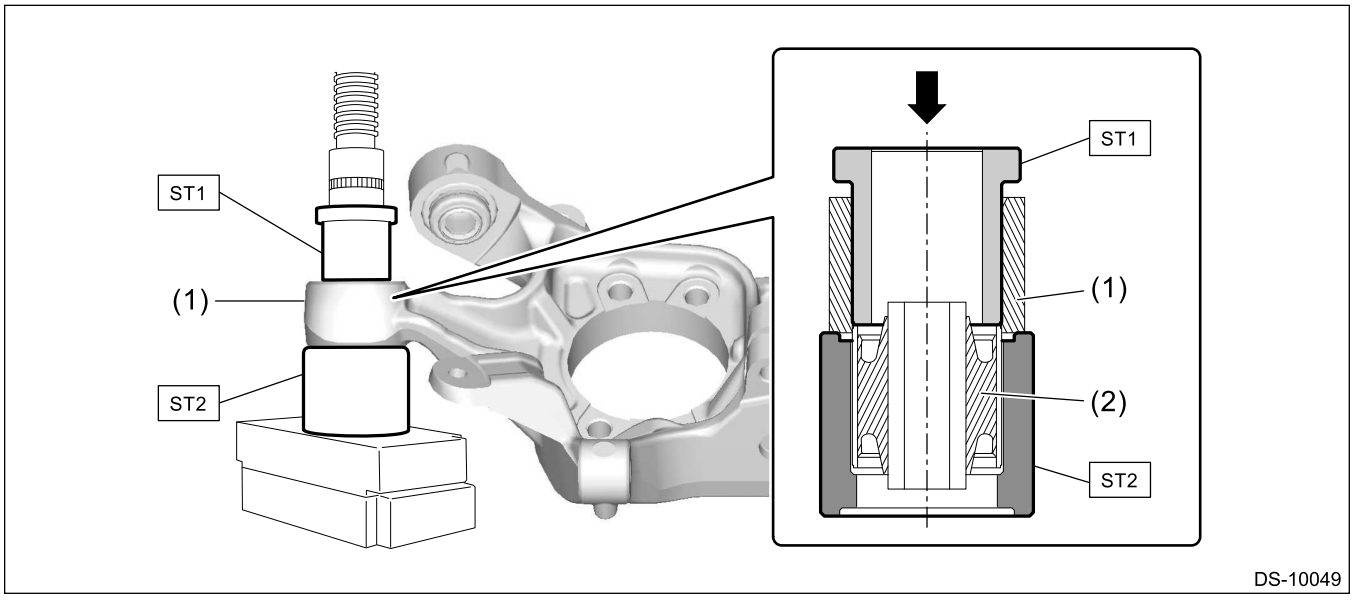
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the rear hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>INSPECTION.

12. Inspect the wheel alignment and adjust if necessary. Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.
Caution:
When the wheel alignment has been adjusted, perform the following adjustment.
- **Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.**
- **VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.**

13. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

DRIVE SHAFT SYSTEM > Rear Axle



DISASSEMBLY

1. PILLOW BALL BUSHING

Do not remove the pillow ball bushing from the rear axle housing assembly, because it cannot be replaced. If removed, replace the rear axle housing assembly.

2. TRAILING LINK BUSHING

1. Remove the rear axle housing assembly. Ref. to DRIVE SHAFT SYSTEM>Rear Axle>REMOVAL.
2. Using the ST and a hydraulic press, push out the bushing.
Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)

(1) Rear axle housing ASSY (2) Trailing link bushing

DRIVE SHAFT SYSTEM > Rear Axle

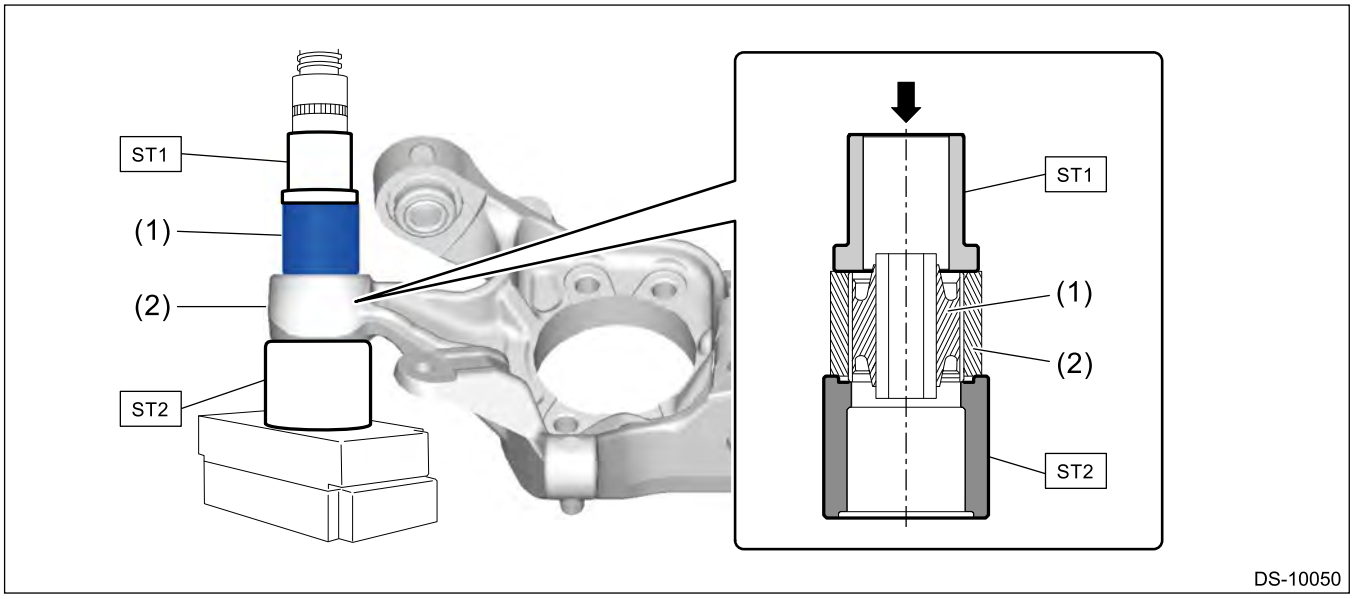
ASSEMBLY

1. PILLOW BALL BUSHING

Do not remove the pillow ball bushing from the rear axle housing assembly, because it cannot be replaced. If removed, replace the rear axle housing assembly.

2. TRAILING LINK BUSHING

1. Before assembly, inspect the following items and replace any faulty part with a new one.
   - Perform visual check for damage or bend on the trailing link.
   - Visually check the bushing for abnormal cracks, fatigue or damage.
2. Press-fit the bushing using ST and the hydraulic press.



Caution:

Make sure to press the bushing straight in.

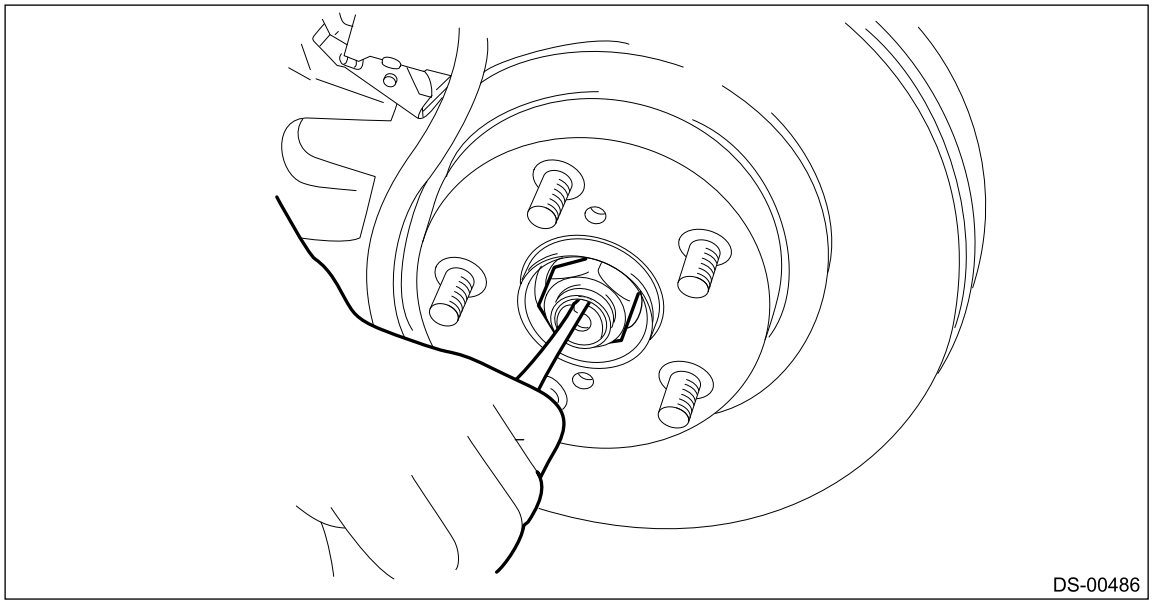
Preparation tool:

ST1: BUSHING REMOVER (20099FG000)

ST2: INSTALLER & REMOVER (BASE) (20099PA010)

(1) Trailing link bushing (2) Rear axle housing ASSY

REMOVAL



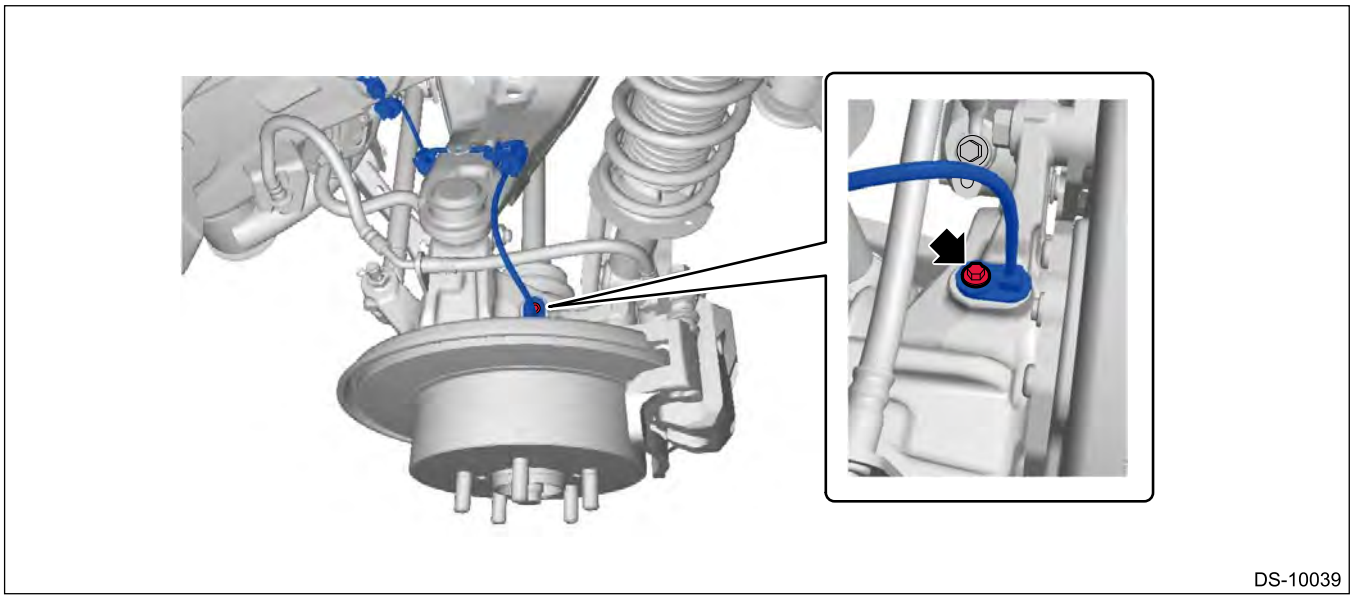
1. Lift up the vehicle, and then remove the rear wheels.
2. Remove the axle nut.

   Caution:

   Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

   (1) Lift the crimped section of axle nut.

   (2) Remove the axle nut using a socket wrench while depressing the brake pedal.



3. Remove the rear ABS wheel speed sensor from the rear axle housing assembly.

   (1) Remove the bolts, and remove the ABS wheel speed sensor.

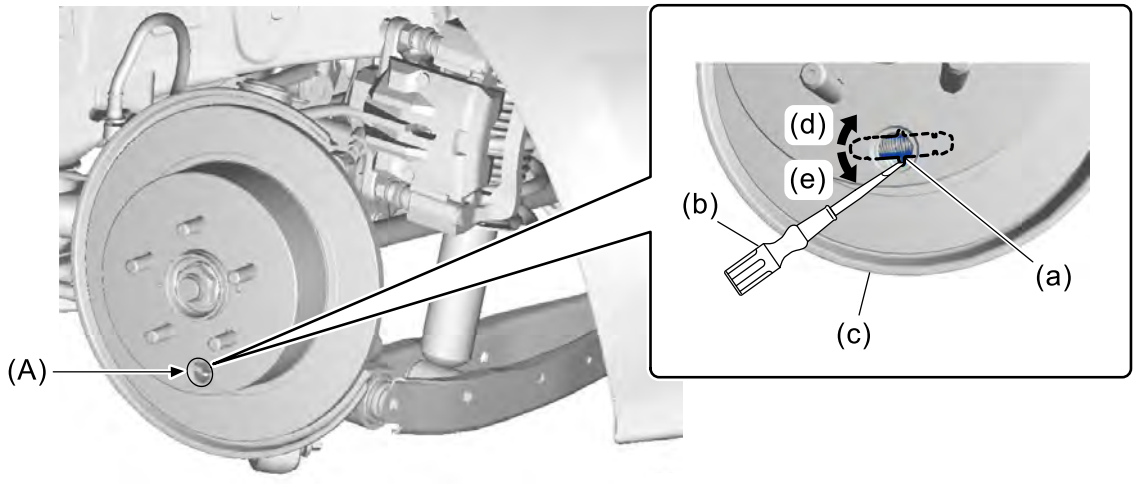
   Caution:

   - **Be careful not to damage the sensor.**
   - **Do not apply excessive force to the sensor harness.**

4. Remove the caliper body assembly from the rear axle housing assembly.

   (1) Remove the bolts and then remove the brake hose bracket and caliper body assembly.

(2) Prepare wiring harnesses etc. to be discarded, and suspend the caliper body assembly from the shock absorber assembly with the harnesses.



5. Remove the rear disc rotor.

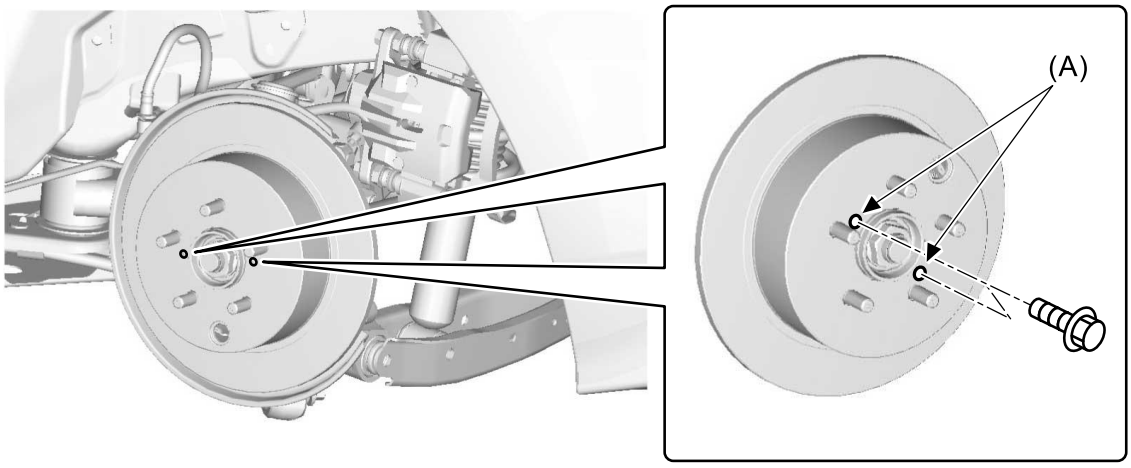
Note:

If it is difficult to remove the rear disc rotor, perform the following two methods in order.

1. Remove the adjusting hole cover (A), insert the flat tip screwdriver, and rotate the adjuster assembly - rear brake until the brake shoe moves far enough to remove the disc rotor.

DS-10044

(a) Adjuster ASSY - rear brake



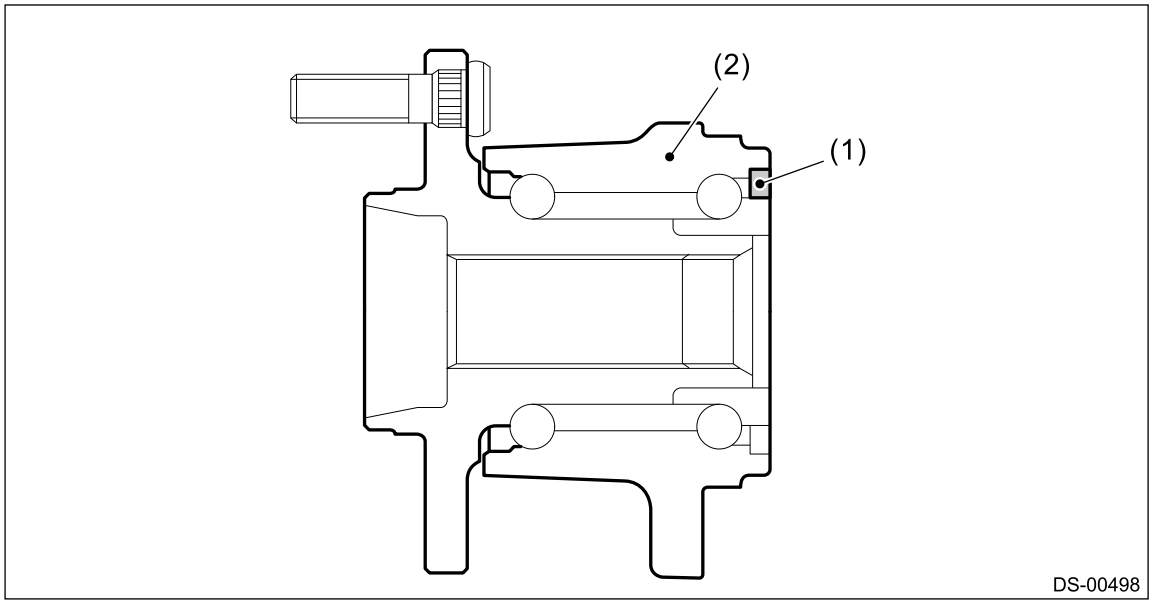
(b) Flat tip screwdriver

(c) Disc rotor

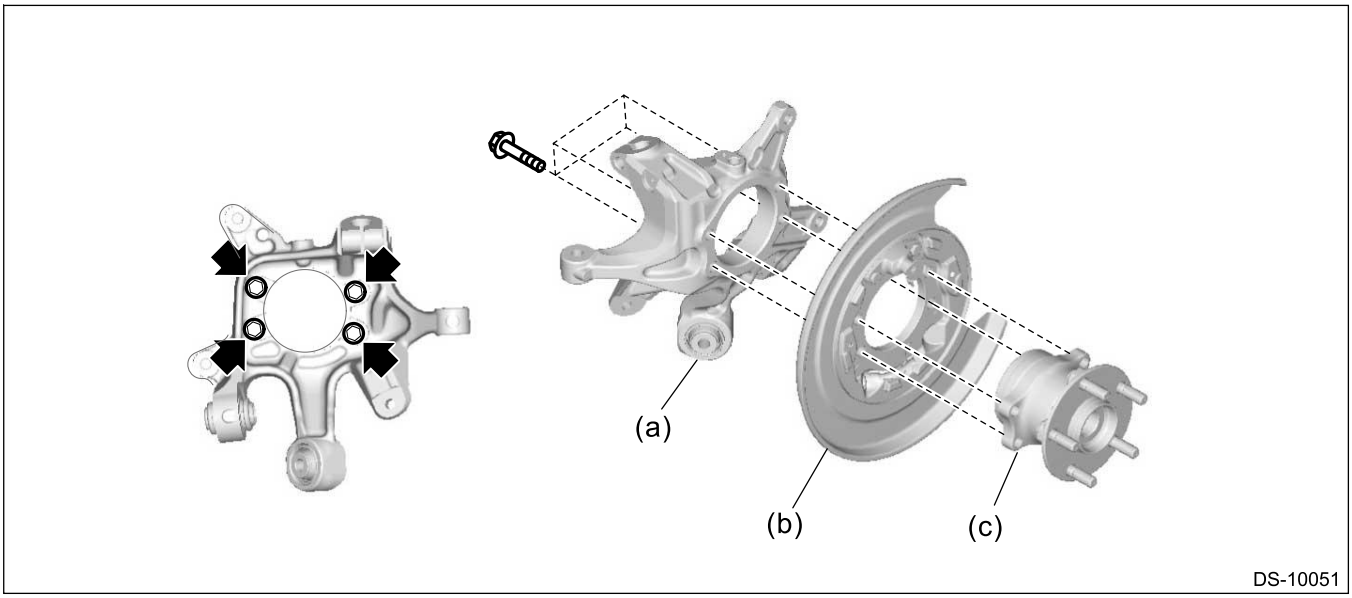
(d) Extend the adjuster ASSY - rear brake

(e) Shorten the adjuster ASSY - rear brake

2. If the disc rotor is not removed after performing above step, screw in an 8 mm (0.31 in) bolt to the threaded part (A) of the disc rotor, and remove the disc rotor.



DS-10045



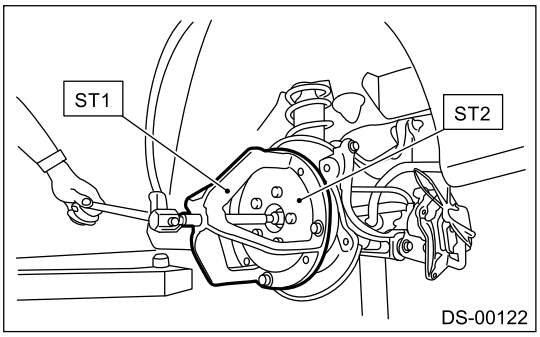
6. Remove the bolt from the rear axle housing assembly, and remove the rear hub unit bearing.

Caution:

- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**

(1) Magnetic encoder (2) Rear hub unit bearing

(a) Rear axle housing ASSY (b) Rear brake back plate (c) Rear hub unit bearing



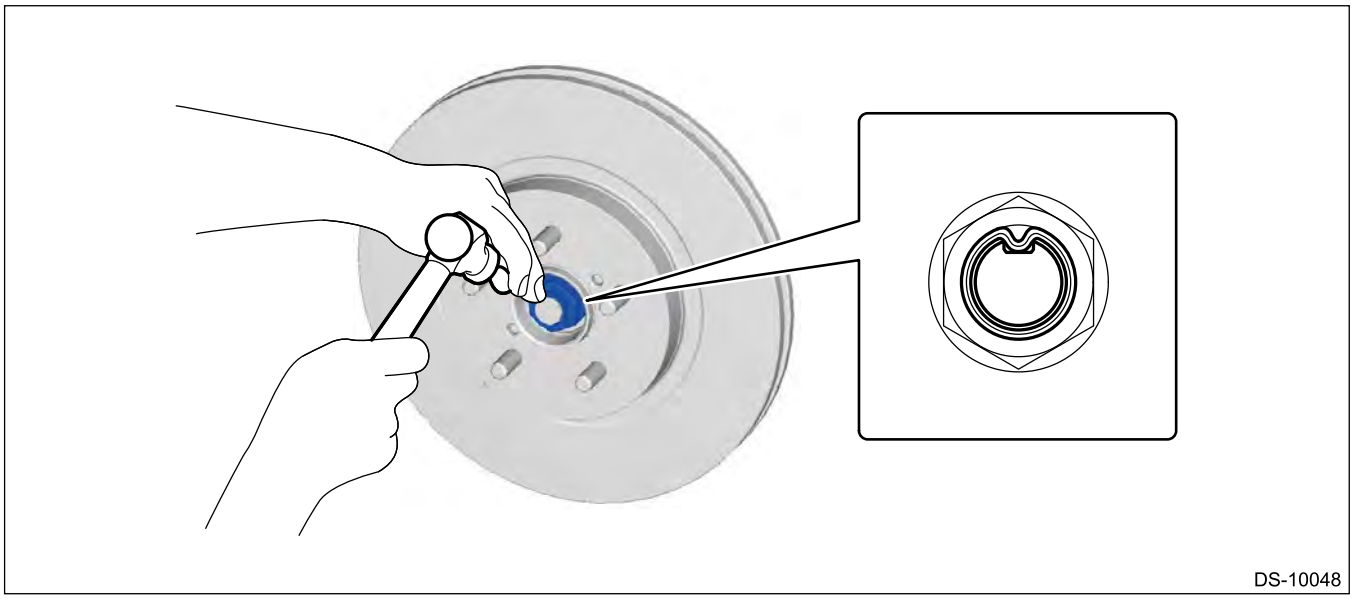
Note:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

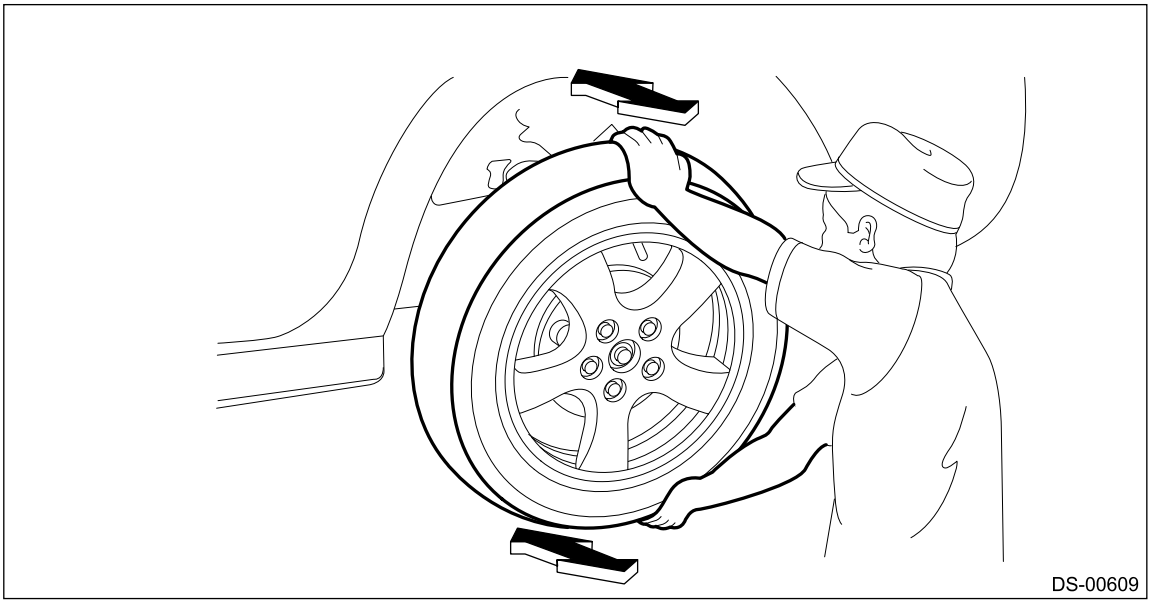


INSTALLATION

1. Place the rear brake back plate between the rear axle housing assembly and the rear hub unit bearing, and tighten the bolt.
   Caution:
   - **Be careful not to damage the magnetic encoder.**
   - **Do not get closer the tool which charged magnetism to magnetic encoder.**
   - **Use a new bolt.**

   Tightening torque:
   65 N·m (6.6 kgf-m, 47.9 ft-lb)
2. Install the rear drive shaft assembly.
   Caution:
   - **Use new axle nuts.**
   - **Be careful not to damage the spline portion of the drive shaft.**
   - **Be careful not to damage the magnetic encoder.**

   (1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
   (2) Tighten the axle nut temporarily.
3. Install the rear disc rotor.
4. Install the caliper body assembly.
   Tightening torque:
   66 N·m (6.7 kgf-m, 48.7 ft-lb)
5. Install the brake hose bracket and rear ABS wheel speed sensor.
   Tightening torque:
   Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
   Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6. While pressing the brake pedal, tighten the new axle nuts to the specified torque.
   Caution:
   Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.
   Tightening torque:
   240 N·m (24.5 kgf-m, 177 ft-lb)
7. After tightening the axle nut, lock it securely.



8. Install the rear wheels, and perform the following inspections.

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

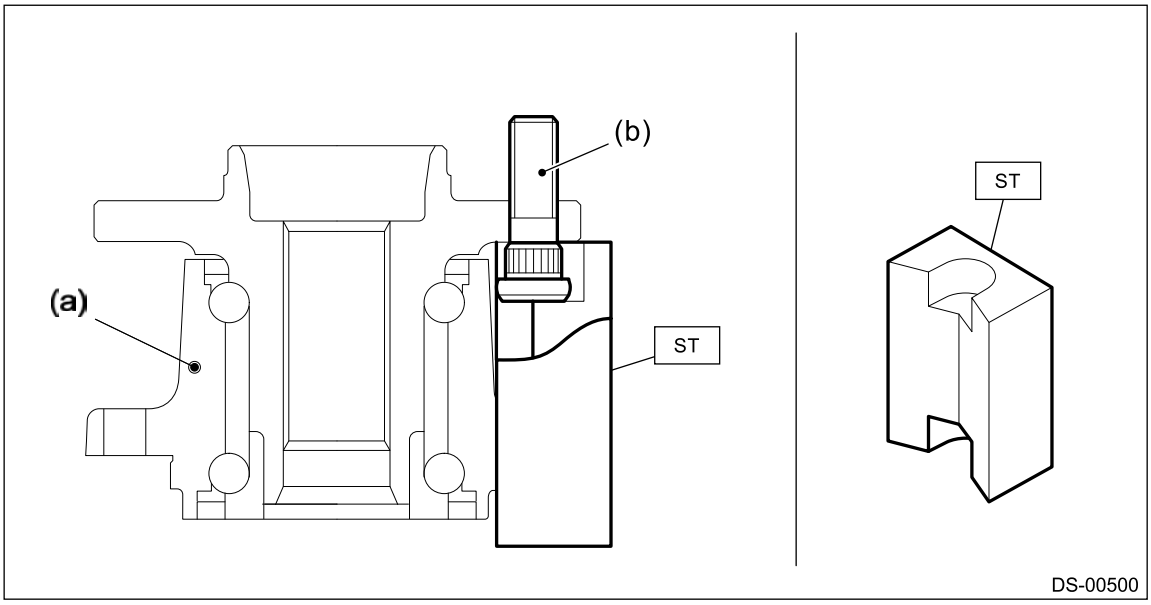
1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the rear hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>INSPECTION.

DRIVE SHAFT SYSTEM > Rear Hub Unit Bearing

DISASSEMBLY

Using the ST or a hydraulic press, push out the hub bolt (b) from the rear hub unit bearing (a).

Caution:



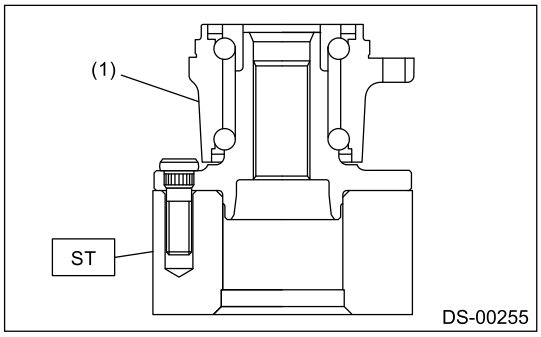
- **Be careful not to hammer the hub bolts. This may deform the hub unit bearing.**
- **Do not reuse the hub bolt.**

Note:

Since the rear hub unit bearing can not be disassembled, only hub bolts can be removed.

Preparation tool:

ST: HUB STAND (28399AG000)



DRIVE SHAFT SYSTEM > Rear Hub Unit Bearing

ASSEMBLY

1. Install the rear hub unit bearing to the ST securely.

   Preparation tool:

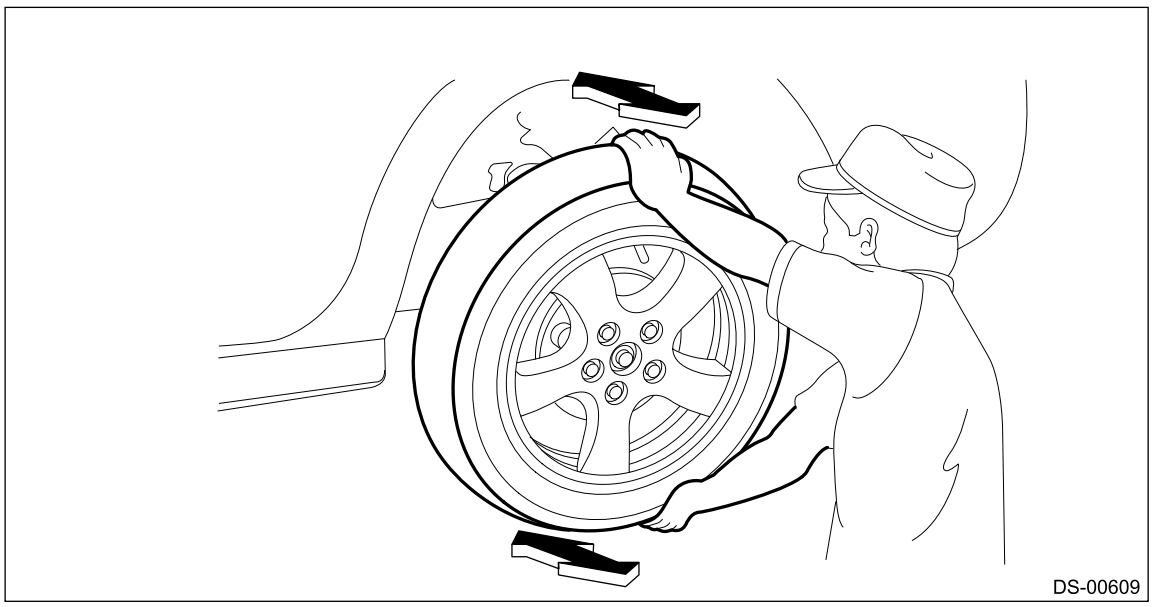
   ST: HUB STAND (927080000)

   (1) Rear hub unit bearing

2. Using a press, press new hub bolts (b) until their seating surfaces contact the rear hub unit bearing (a).

   Note:

   Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.



INSPECTION

1. Moving the rear tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

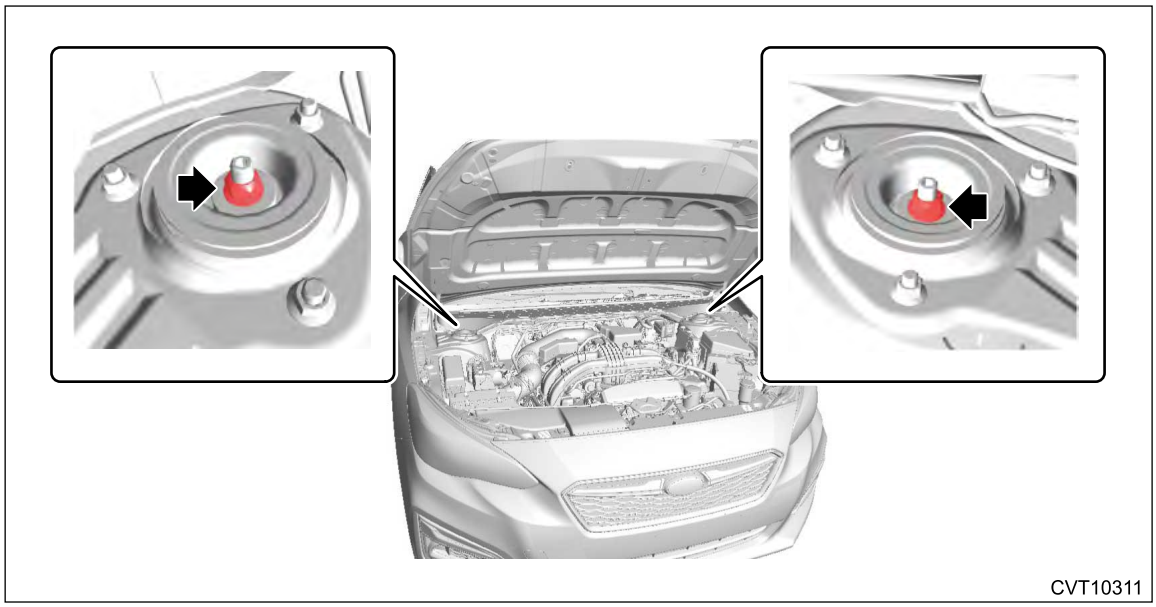
   Caution:

   If there is unsmooth sliding operation or abnormal noise in the bearing, replace the rear hub unit bearing.

2. Inspect the hub unit bearing for axial looseness.
   1. Remove the tire and disc rotor.
   2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

   Service limit:

   Maximum: 0.05 mm (0.0020 in)



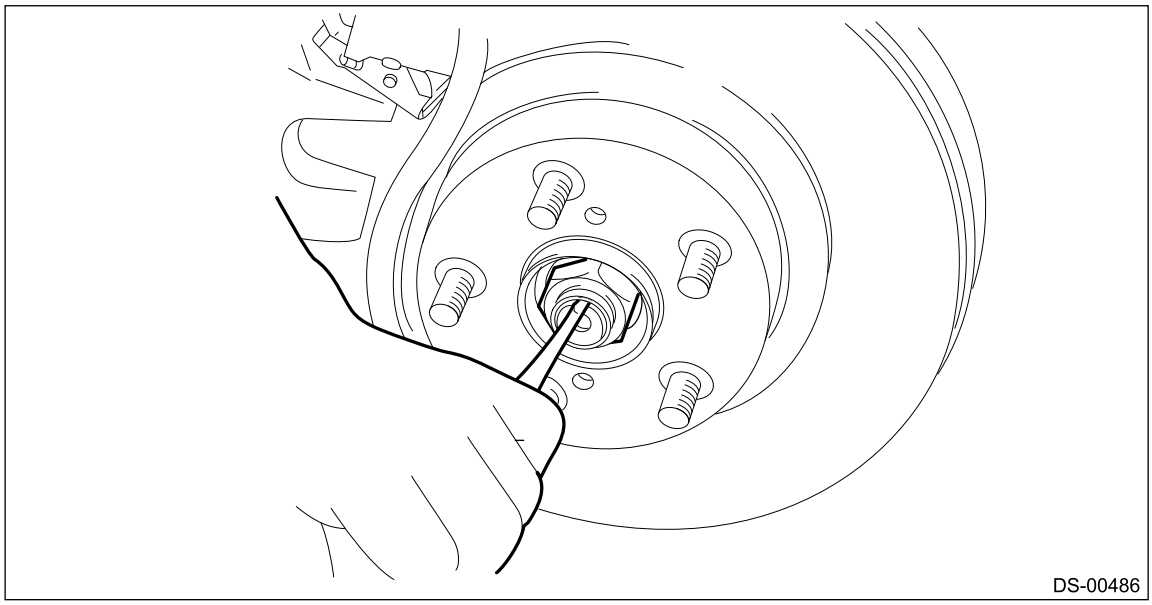
DS-00660

REMOVAL

1. Remove the strut mount protection cap.
2. Loosen the self-locking nut of the strut mount CTR by two turns.

   Note:

   Loosen the self-locking nut only on the removal side if only one side of the front drive shaft is removed.



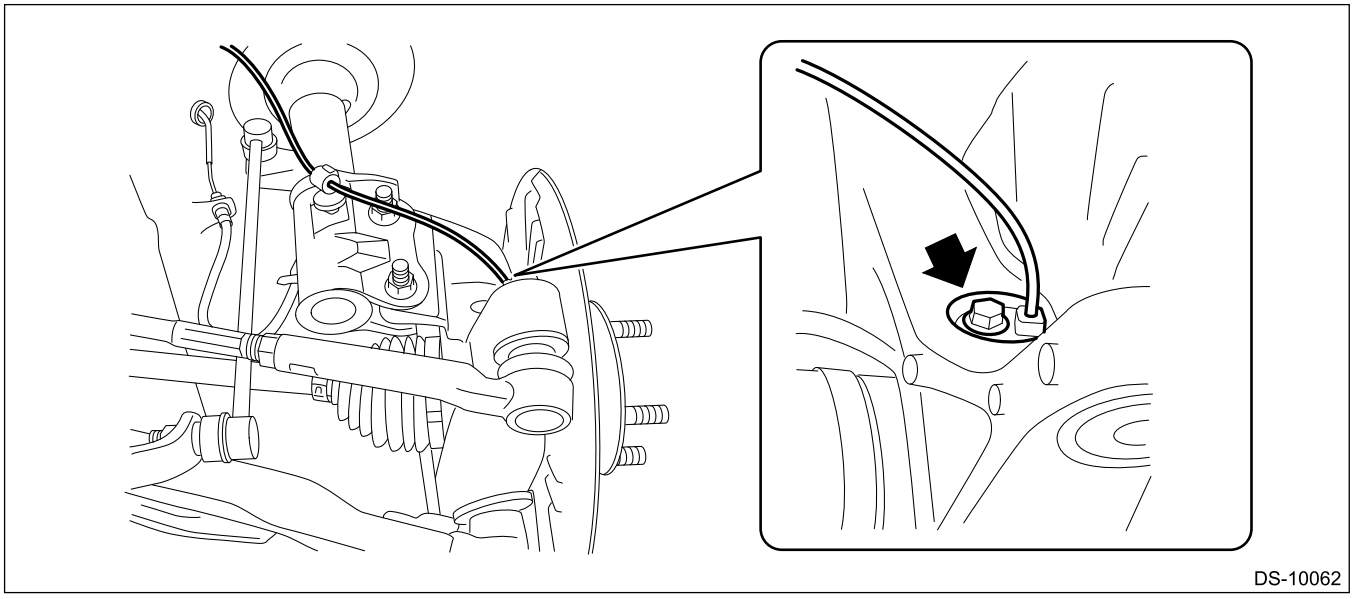
3. Lift up the vehicle, and then remove the front wheels.
4. Remove the axle nut.

   Caution:

   Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

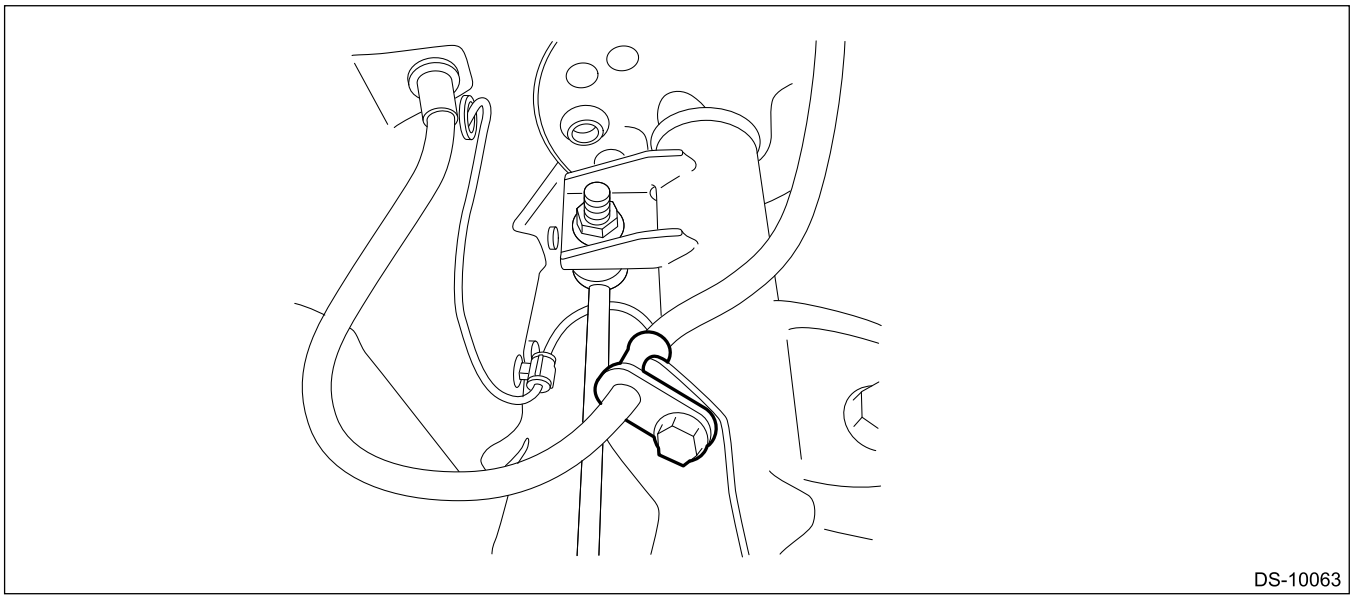
   (1) Lift the crimped section of axle nut.

   (2) Remove the axle nut using a socket wrench while depressing the brake pedal.

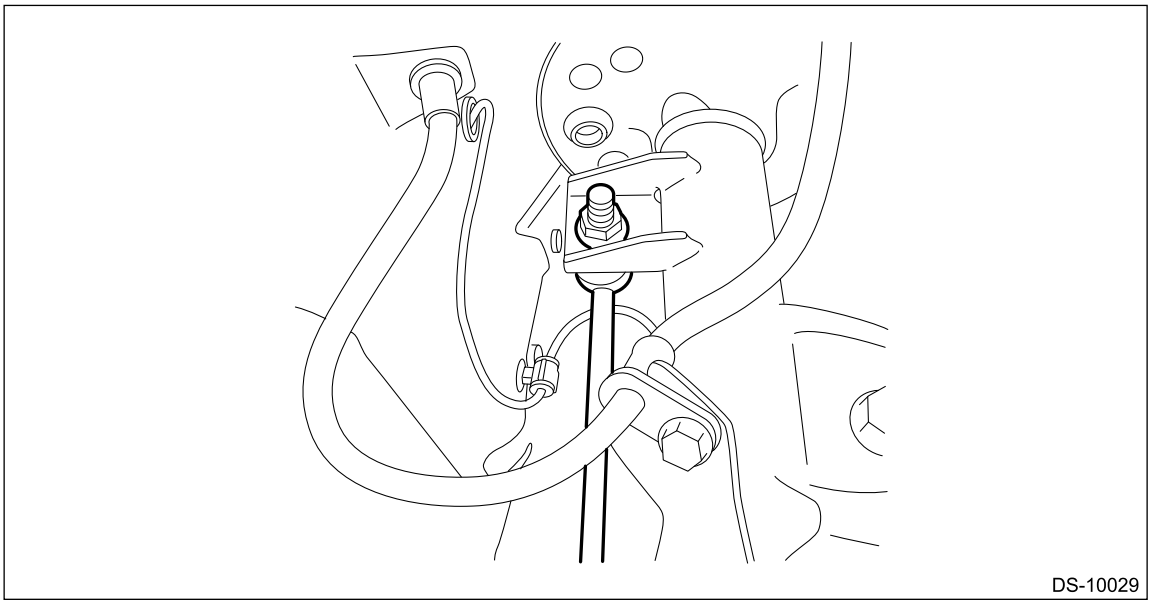


5. Remove the support crossmember rear.

Note:

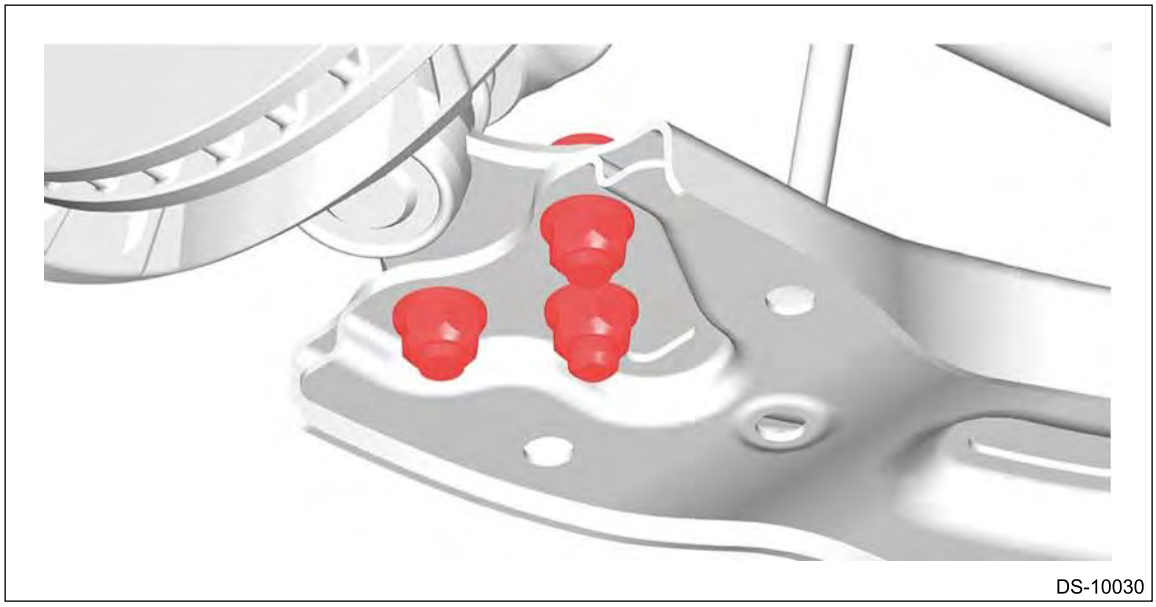


Remove the support crossmember rear only on the removal side if only one side of the front drive shaft is removed.



6. Remove the front ABS wheel speed sensor and clips.

7. Remove the brake hose bracket.



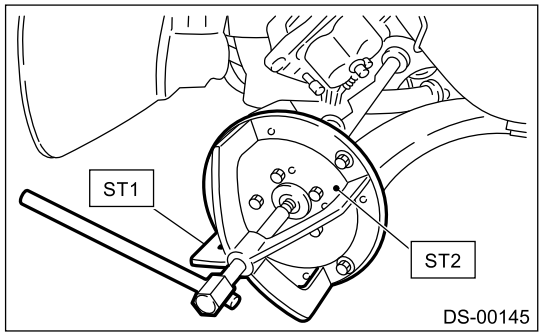
8. Disconnect the stabilizer link.

9. Remove the three nuts of the ball joint, and disconnect the front lower arm assembly from the front axle housing.

Note:

- **To prevent damage of the front arm ball joint boot, place a wooden block, etc. between front arm and ball joint.**
- **Mark the engaging position of the ball joint and front arm assembly before loosening the flange nuts. Doing so will facilitate aligning the position when assembling and lessen adjusting allowance for wheel alignment.**

10. Remove the front drive shaft assembly from the front axle housing.



Note:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

11. Using a bar, remove the front drive shaft assembly from transmission.

Caution:

Be careful not to allow the bar to damage holder area.

DRIVE SHAFT SYSTEM > Front Drive Shaft

INSTALLATION

1. Before installation, check the drive shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Front Drive Shaft>INSPECTION.

2. Replace the differential side retainer oil seal with a new part.

- MT model: Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Differential Side Retainer Oil Seal>REPLACEMENT.
- CVT model: Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Side Retainer Oil Seal>REPLACEMENT.

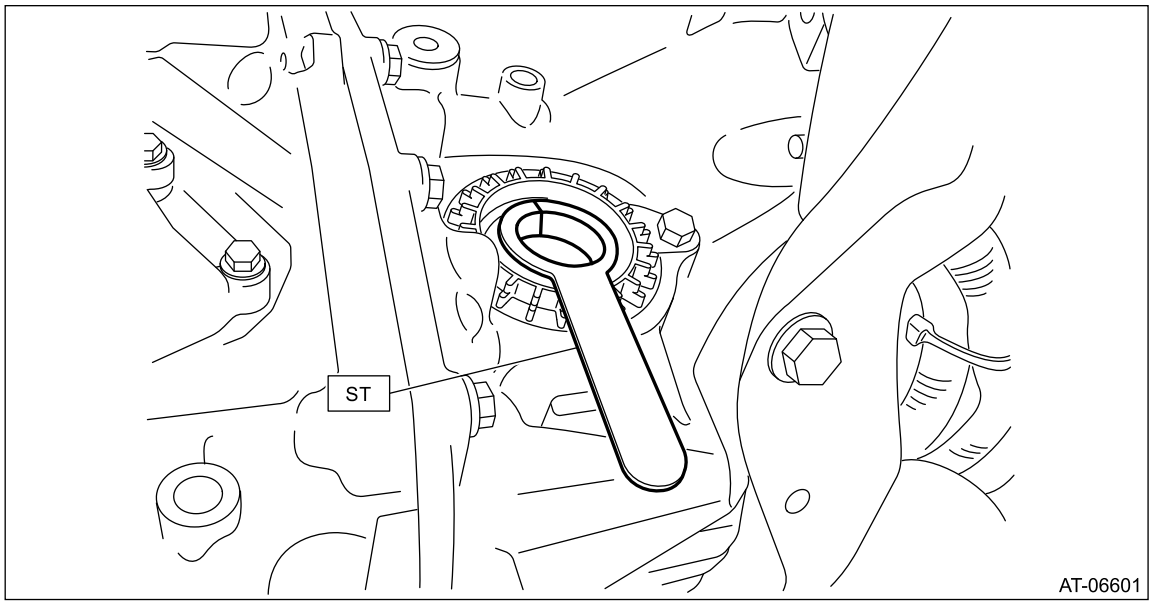
Caution:

- **After pulling out the drive shaft assembly, be sure to replace with a new oil seal.**
- **Replace the circlip with a new part.**

3. Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

Caution:

- **Be careful not to damage the spline portion of the drive shaft.**
- **Be careful not to damage the magnetic encoder.**



4. Using the ST, install the front drive shaft assembly to the transmission.

Caution:

- **To prevent the front lower arm assembly from damaging the ball joint dust cover, place the ball joint on the upper side of the front lower arm assembly before starting the operation.**
- **Be careful not to damage the front lower arm assembly and ball joint by covering the upper side of the front lower arm assembly with a cloth.**

Preparation tool:

ST: OIL SEAL PROTECTOR (28399SA010)

5. Install the front axle housing to the front lower arm assembly.

Tightening torque:

100 N·m (10.2 kgf-m, 73.8 ft-lb)

6. Tighten the axle nut temporarily.

Caution:

Use new axle nuts.

7. Install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

8. Install the brake hose bracket.

Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)

9. Install the front ABS wheel speed sensor and clips.

Tightening torque:

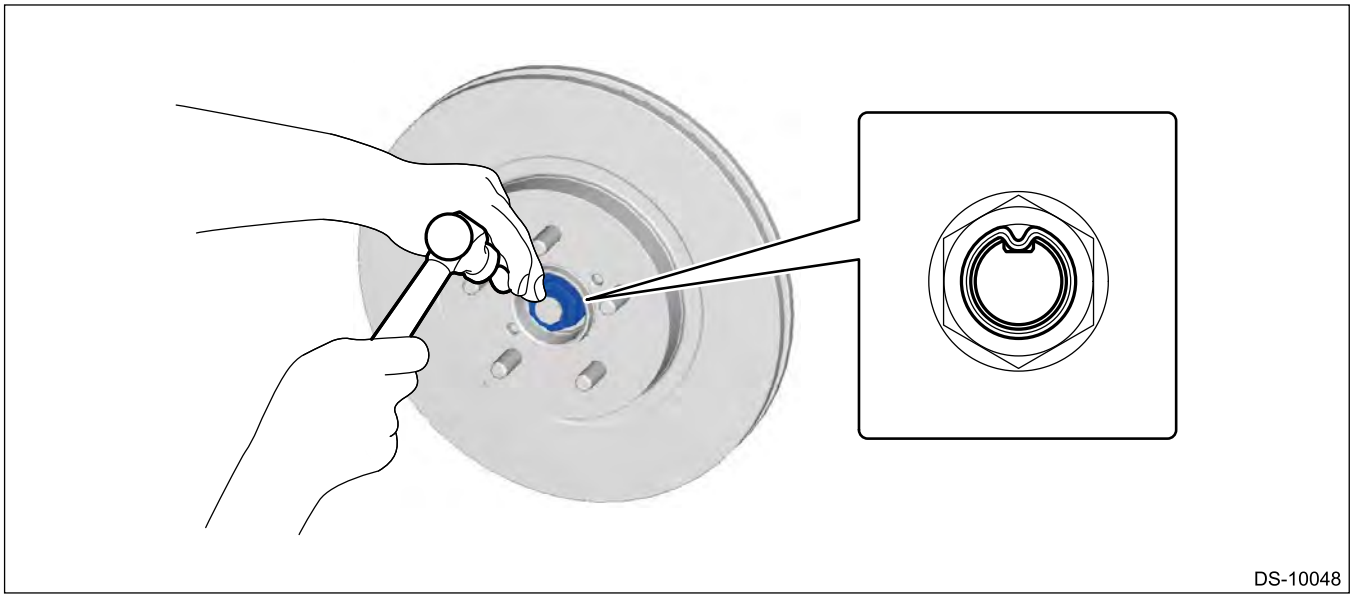
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

10. Install the support crossmember rear.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

11. While pressing the brake pedal, tighten the new axle nuts to the specified torque.



Caution:

Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

220 N·m (22.4 kgf-m, 162.3 ft-lb)

12. After tightening axle nut, lock it securely.

13. Install the front wheels.

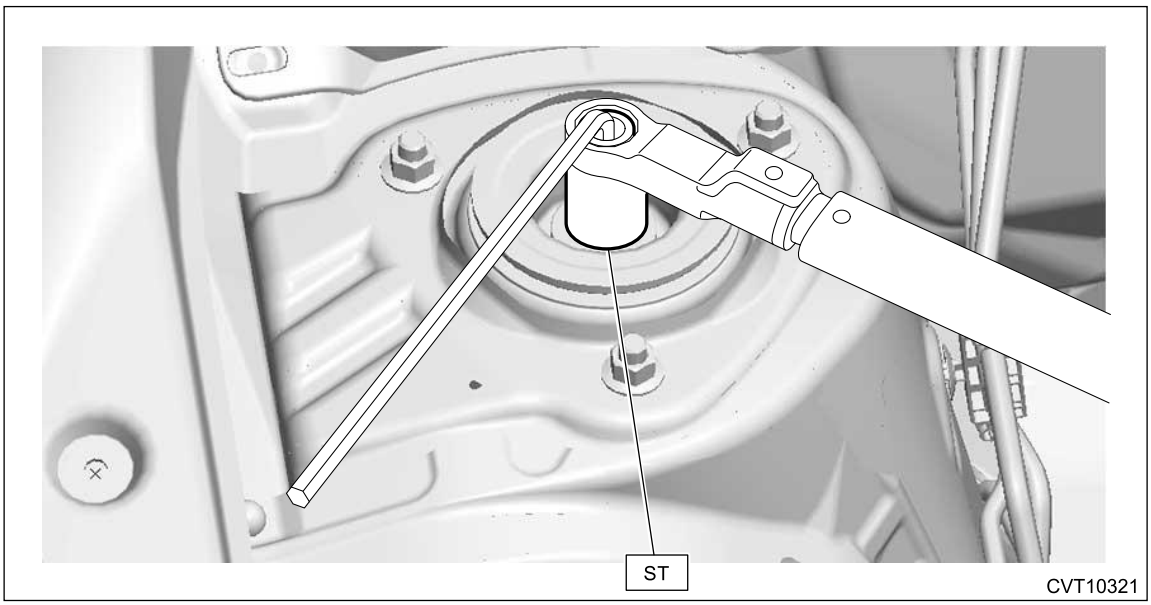
Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

14. Lower the vehicle.

15. Replace the strut mount CTR self-locking nut, and tighten it using the ST.

Caution:



- **Always replace the self-locking nut in the state where the wheels are in full contact with the ground.**
- **Use a new self-locking nut.**

Preparation tool:

ST: STRUT MOUNT SOCKET (20399AG000)

Tightening torque:

55 N·m (5.6 kgf-m, 40.6 ft-lb)

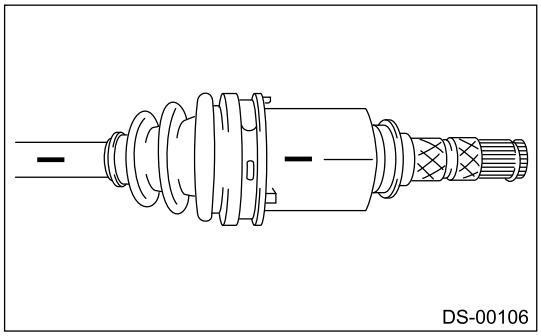
16. Install the strut mount protection cap.

17. Inspect the wheel alignment and adjust if necessary. Ref. to FRONT SUSPENSION>Wheel

Alignment>INSPECTION. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

Caution:

When the wheel alignment has been adjusted, perform the following adjustment.

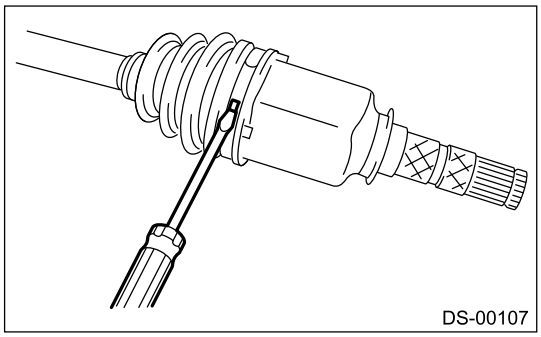


- **Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.**
- **VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.**

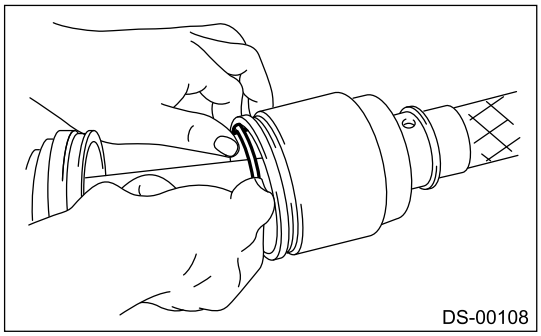
18. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

DRIVE SHAFT SYSTEM > Front Drive Shaft

DISASSEMBLY



1. Place alignment marks on the shaft and outer race (PTJ).

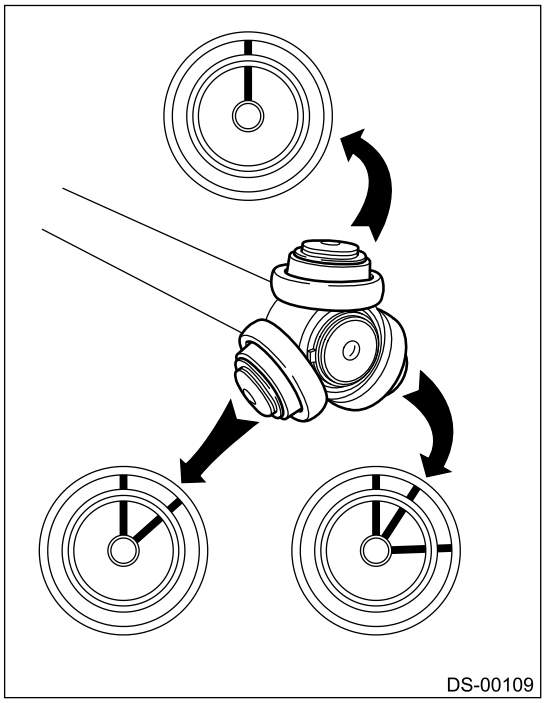


2. Remove the boot band and boot (PTJ).

Caution:

Be careful not to damage the boot.

3. Remove the snap ring from outer race (PTJ).



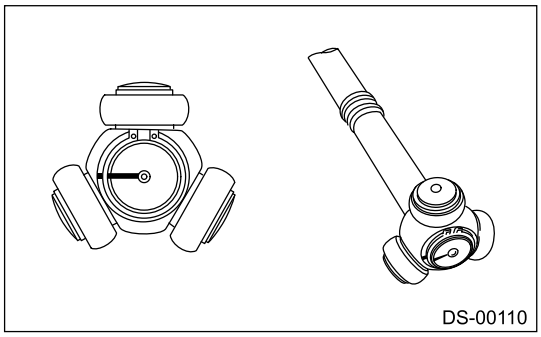
4. Remove the outer race (PTJ) from shaft assembly.

5. Wipe off grease.

Caution:

The grease is a special type of grease. Do not mix with other grease.

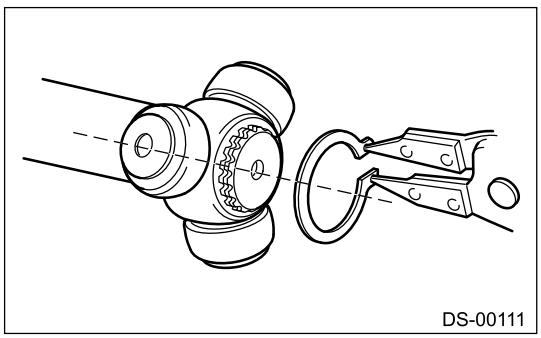
6. Place alignment marks on the roller kit and trunnion.



7. Remove the roller kit from trunnion.

Caution:

Be careful with the roller kit position.

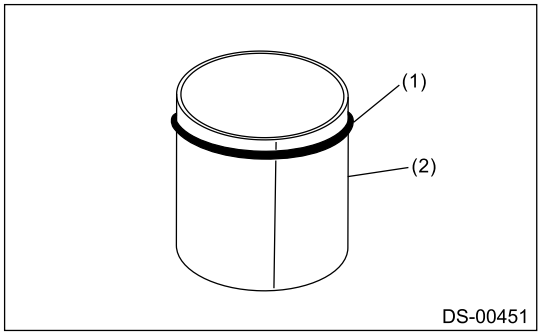


8. Place alignment marks on the trunnion and shaft.

9. Remove the snap ring and trunnion.

Caution:

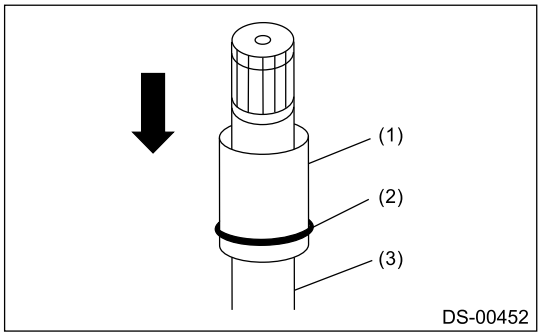
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.



10. Remove the boot (PTJ).
11. Remove the O-ring from the groove of the shaft.

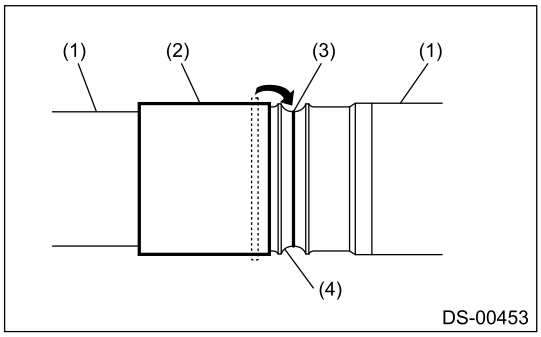
Note:

The EBJ is a non-disassembly part, so the axle disassembly stops here.



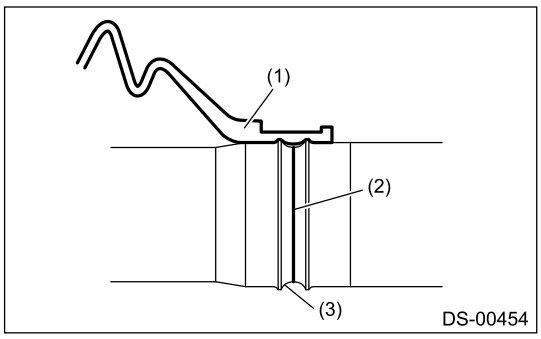
ASSEMBLY

1. Roll up a thick piece of paper to a size where the shaft can pass through, and affix with tape to form a cylinder.
2. Attach a new O-ring on this cylinder.
   Caution:
   - **Always use a new O-ring.**
   - **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
   - **Make sure to install the O-ring so that it does not twist as much as possible.**
   - **Do not stretch the O-ring to 30 mm (1.18 in) or more in an inner diameter.**



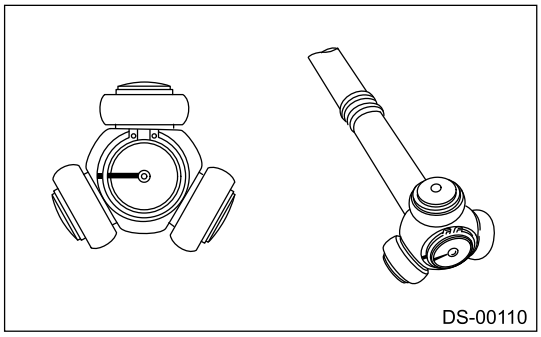
(1) O-ring
(2) Cylinder made with thick paper, etc.

3. Pass the cylinder material onto the shaft, and slide in the direction of the shaft axis.



(1) Cylinder material
(2) O-ring
(3) Shaft

4. Clean the shaft boot groove, and wipe off the grease.
5. Slide the cylinder material near the shaft boot groove, and move the O-ring from the cylinder material onto the shaft boot groove.
   Caution:
   - **Attach the O-ring to the shaft boot groove center.**
   - **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
   - **Make sure to install the O-ring so that it does not twist as much as possible.**
   - **With the O-ring attached, do not wash with kerosene, gasoline, etc.**

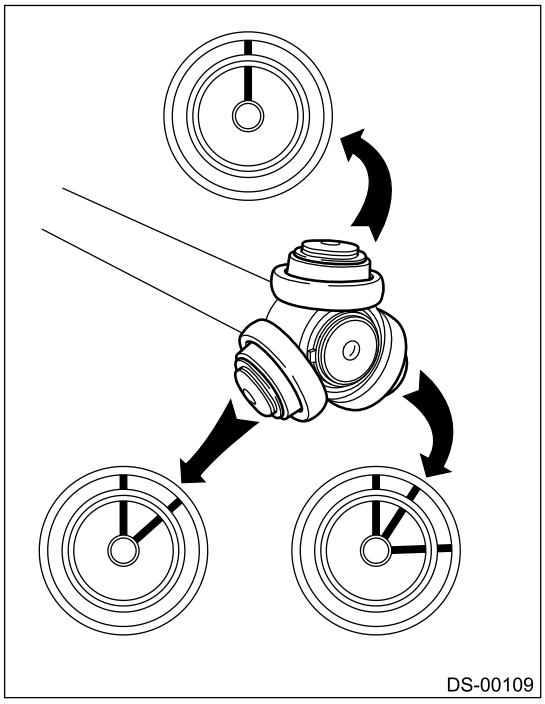


(1) Shaft
(2) Cylinder material
(3) O-ring
(4) Boot groove

6. Pass the small diameter boot band through the shaft.
7. Wrap vinyl tape around the splines of the shaft.
   Caution:
   To prevent damage to the boots, make sure to always wrap with vinyl tape for protection.
8. Install a new boot (PTJ).
   Caution:
   Make sure to fit securely on the boot groove of the shaft.

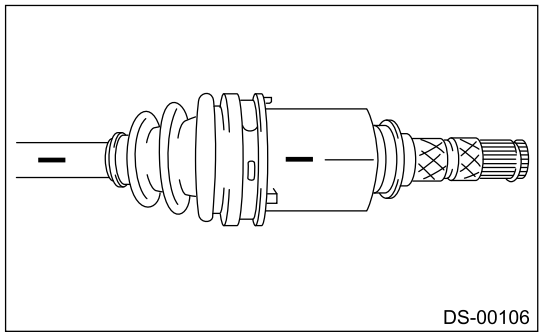
(1) Boot (PTJ)
(2) O-ring
(3) Boot groove

9. Match the alignment marks, and attach the trunnion onto the shaft.



10. Attach the snap ring to the shaft.
    Caution:
    Confirm that the snap ring is completely fitted in the shaft groove.
11. Fill 100 — 110 g (3.53 — 3.88 oz) of specified grease into the interior of the outer race (PTJ).

Grease: Ref. to RECOMMENDED MATERIALS > GREASE.



12. Apply a thin coat of specified grease to the roller kit and trunnion.
13. Match the alignment marks of the roller kit and trunnion, and attach the roller kit.

Caution:

Be careful with the roller kit position.

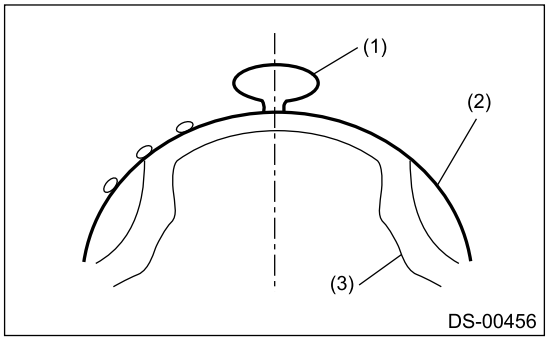
14. Match the alignment marks of the shaft and outer race (PTJ), and attach the outer race (PTJ).

15. Install the snap ring in the groove of the outer race (PTJ).

Caution:

Pull the shaft lightly and make sure that the snap ring is completely fitted in the groove.

16. Apply an even coat of the specified grease at an amount of 30 — 40 g (1.06 — 1.41 oz) on the entire inner surface of boot (PTJ).
17. Attach the boot (PTJ) taking care not to twist it.



Caution:

- **Clean the large end of boot (PTJ) and the boot groove well, and remove the grease and other substances.**
- **When installing the boot (PTJ), position the outer race (PTJ) at center of the stroke.**

18. Set the new boot band at the specified position.
19. Tighten the boot bands using ST, torque wrench and socket flex handle.

Caution:

The large boot band is to be tightened so that the omega shaped part is at the position indicated in the figure below.

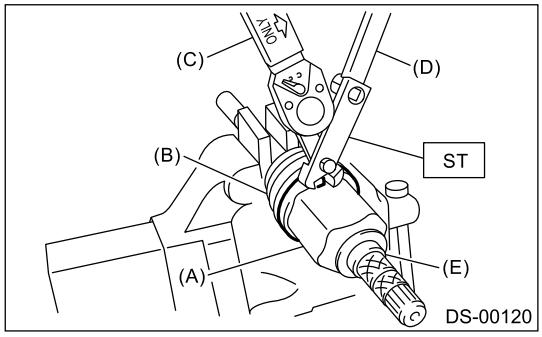
(1) Omega shaped part

(2) Boot band

(3) Outer race (PTJ)

Tightening torque:

Large boot band



178 N·m (18.2 kgf-m, 131.3 ft-lb)

Small boot band

145 N·m (14.8 kgf-m, 106.9 ft-lb)

Preparation tool:

ST: BOOT BAND PLIER (28099AC000)

(A) Large boot band

(B) Boot (PTJ)

(C) TORQUE WRENCH

(D) Socket flex handle

(E) Outer race (PTJ)

20. Extend and retract the PTJ repeatedly so that grease is spread evenly.

DRIVE SHAFT SYSTEM > Front Drive Shaft

INSPECTION

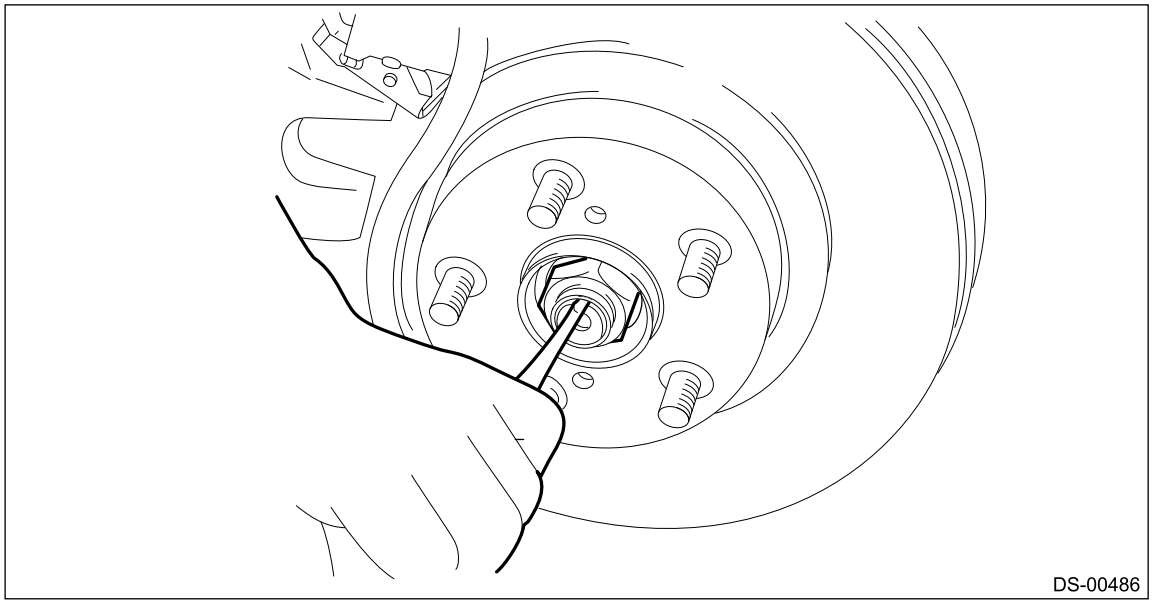
Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

- **PTJ (pillow tripod joint)**
  Check for seizure, corrosion, damage, wear and excessive play.
- **EBJ (high-efficiency compact ball fixed joint)**
  Check for seizure, corrosion, damage and excessive play.
- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**
  Check for wear, warping, breakage and scratches.
- **Grease:**
  Check for discoloration and fluidity.

REMOVAL



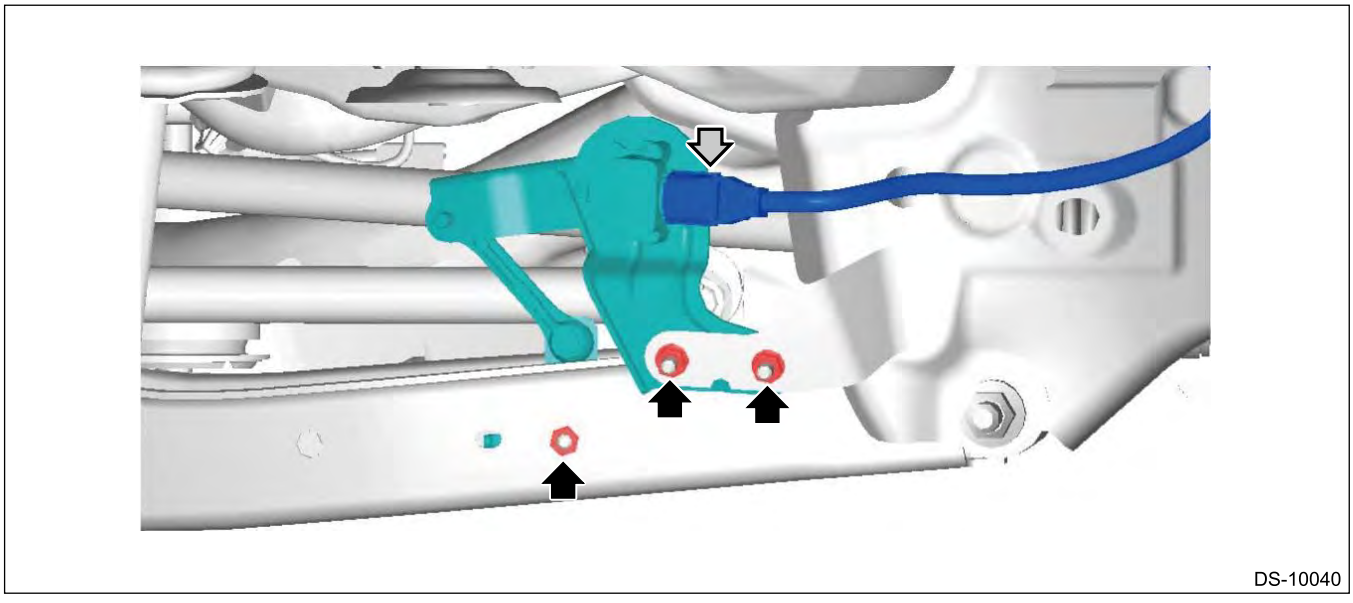
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle, and then remove the rear wheels.
3. Remove the axle nut.

   Caution:

   Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

   (1) Lift the crimped section of axle nut.

   (2) Remove the axle nut using a socket wrench while depressing the brake pedal.



4. Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

   Caution:

   Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

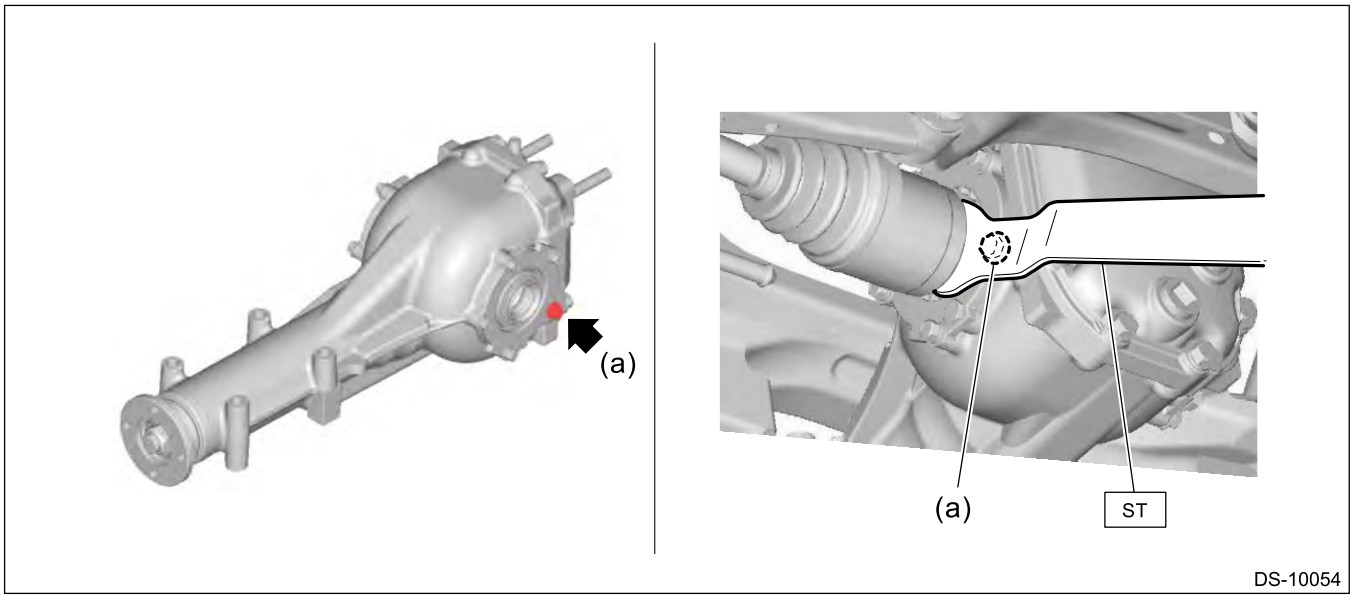
   (1) Disconnect the connector of the sensor assembly - headlight beam leveler.

   (2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

5. Drain differential gear oil.

6. Remove the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.

7. Loosen the joint of rear differential assembly and rear drive shaft assembly.



- T type: Pull out the rear drive shaft assembly by fitting the ST to the bolt (a) as shown in the figure.

  Caution:

  Fit the ST to the bolts as shown in the figure to prevent damage of the side bearing retainer.

  Preparation tool:

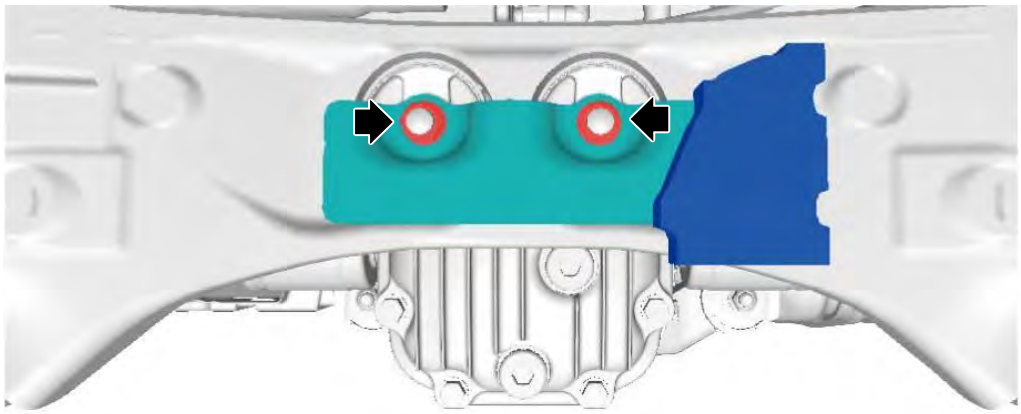
  ST: DRIVE SHAFT REMOVER (28099PA100)

- VA1 type: Pull out the rear drive shaft assembly by fitting the tire lever (b) to the bolt (a) as shown in the figure.

  Caution:

  To prevent damage to the side bearing retainer, use by placing the tire lever against the bolt as shown in the figure.

8. Remove the rear differential assembly.

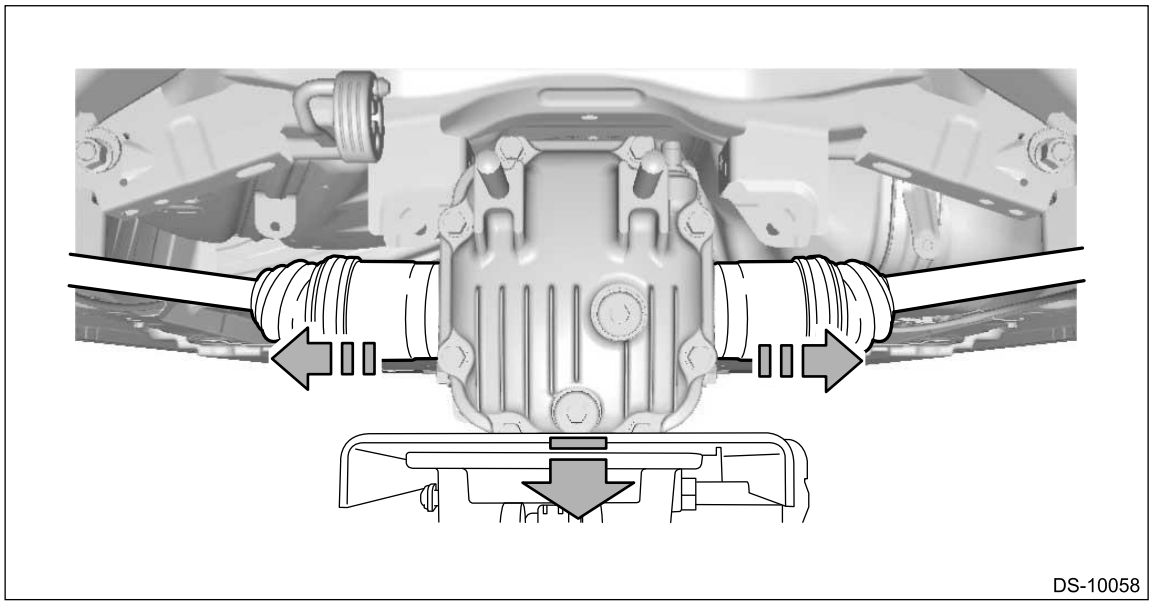


(1) Support the rear differential assembly with a transmission jack.

(2) Remove the bolts which hold the rear differential front member from the rear sub frame assembly.

DS-10056

(3) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly, and remove the mass damper.



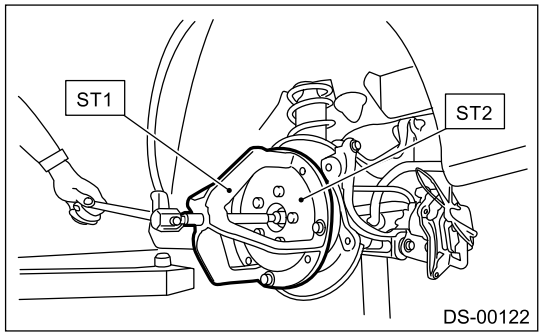
DS-10057

9. Completely pull out the rear drive shaft assembly while lowering the rear differential.

Caution:

Pay attention to avoid damaging the boot of drive shaft.

10. Remove the rear drive shaft assembly from the rear axle housing assembly.



Note:

If it is hard to remove, use the ST.

Preparation tool:

ST1: AXLE SHAFT PULLER (926470000)

ST2: AXLE SHAFT PULLER PLATE (28099PA110)

DRIVE SHAFT SYSTEM > Rear Drive Shaft

INSTALLATION

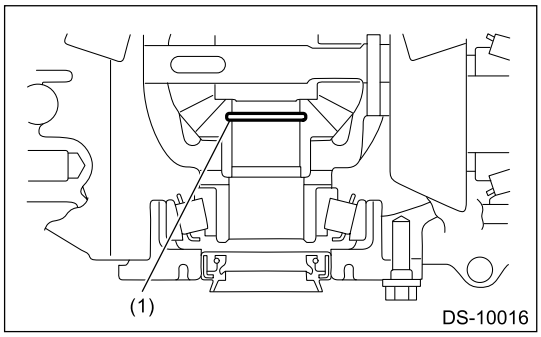
1. Replace the rear differential side oil seal. Ref. to DIFFERENTIALS>Rear Differential Side Oil Seal>REPLACEMENT.

Caution:

After pulling out the drive shaft assembly, be sure to replace with a new oil seal.

2. Insert the drive shaft assembly into the rear hub spline, and pull it into the specified position.

Caution:



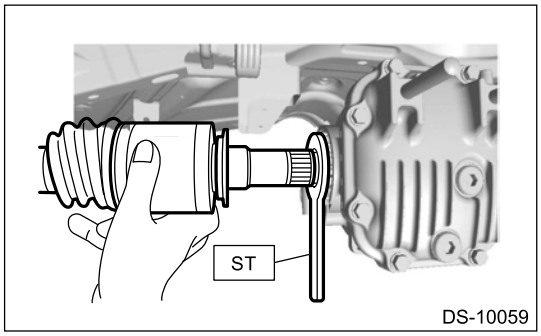
- **Be careful not to damage the spline portion of the drive shaft.**
- **Be careful not to damage the magnetic encoder.**

3. Tighten the axle nut temporarily.

Caution:

Use new axle nuts.

4. Check that circlip is placed on the groove of side gear. (MT model)

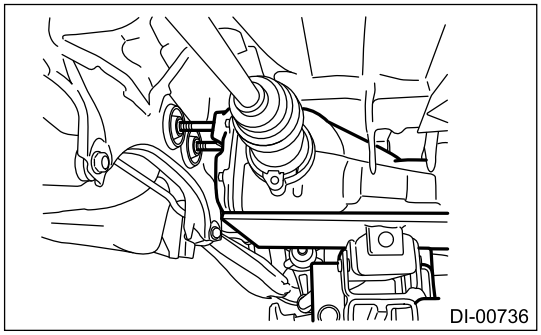


(1) Circlip

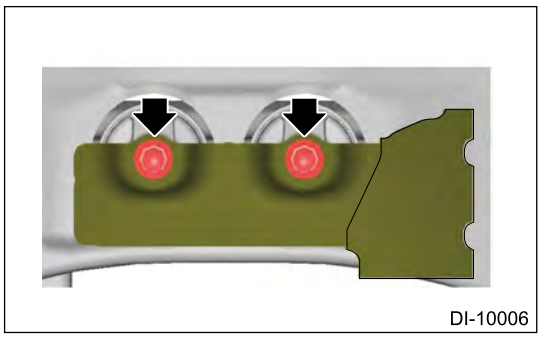
5. Using the ST, install the rear drive shaft assembly to the rear differential.

Preparation tool:

ST: OIL SEAL PROTECTOR (28099PA090)



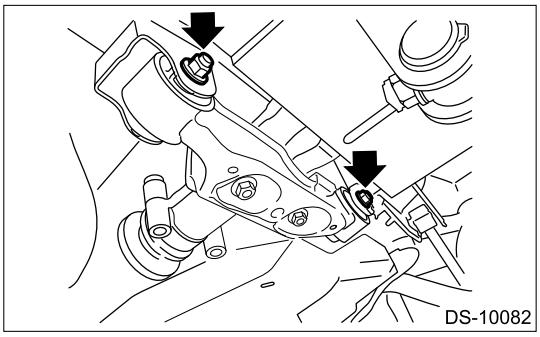
6. Install the rear differential assembly.



Caution:

Use a new self-locking nut.

(1) Raise the transmission jack and insert the rear differential stud bolt into rear differential mount bushing.



(2) Install the mass damper to the rear differential stud bolt, and temporarily tighten a new self-locking nut.

(3) Install the rear differential front member, and temporarily attach and tighten a new self-locking

nut.

(4) Remove the transmission jack.

(5) Tighten new self-locking nuts.

Tightening torque:

Differential assembly — bushing - differential: 70 N·m (7.1 kgf-m, 51.6 ft-lb)

Differential assembly — rear sub frame assembly: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

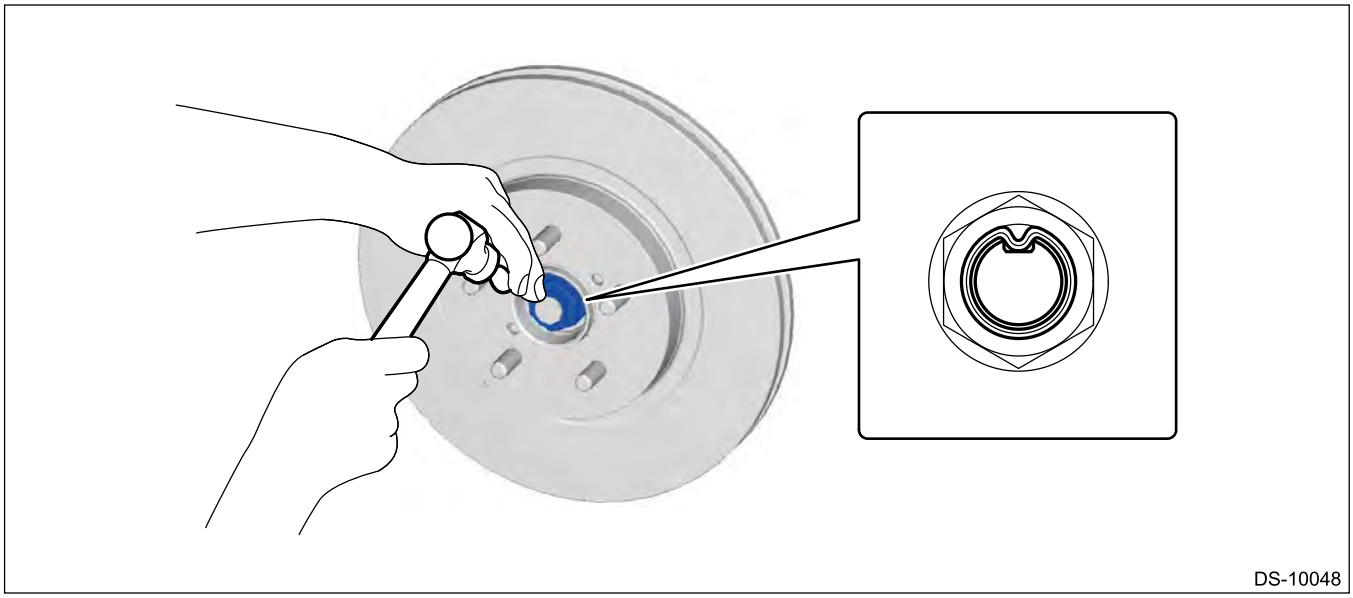
7. Install the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.

8. Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

9. While pressing the brake pedal, tighten the new axle nuts to the specified torque.



Caution:

Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:

240 N·m (24.5 kgf-m, 177 ft-lb)

10. Lock the axle nut securely.

11. Fill differential gear oil.

12. Install the rear wheels.

Tightening torque:

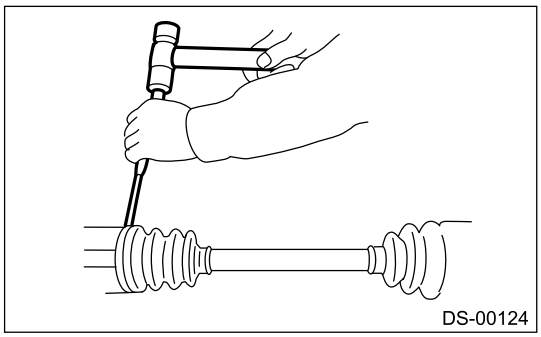
120 N·m (12.2 kgf-m, 88.5 ft-lb)

13. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

14. Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

DISASSEMBLY

1. Take out the outer race (DOJ) from the shaft assembly.

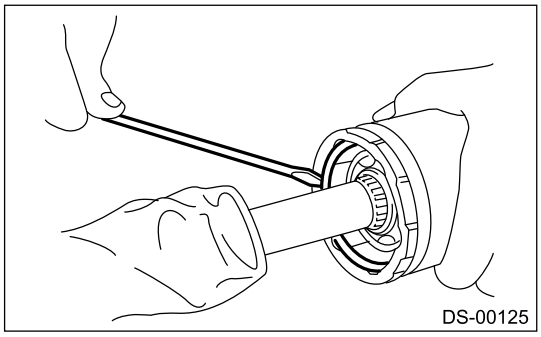


Caution:

Be careful not to damage the boot.

(1) Using a flat tip screwdriver or pliers, loosen the boot band on the large end of boot (DOJ).

Caution:



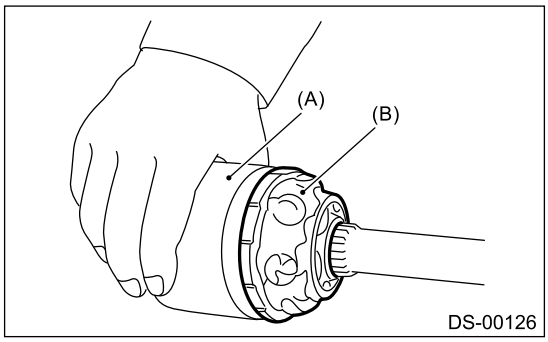
Be careful not to damage the boot.

(2) Remove the boot band on the small end of boot (DOJ) in the same manner.

(3) Remove the large end of boot (DOJ) from outer race (DOJ).

(4) Remove the round snap ring at the neck of outer race (DOJ) with a flat tip screwdriver.

(5) Take out the outer race (DOJ) from the shaft assembly.

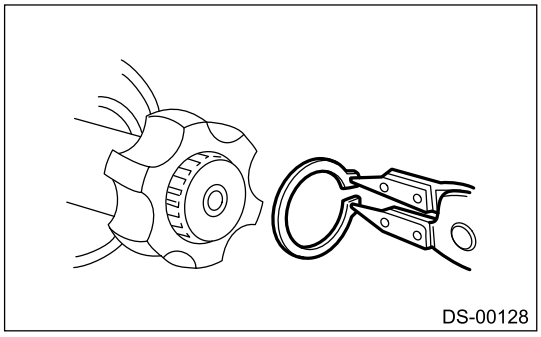


(6) Wipe off the grease and take out the ball bearings.

Caution:

The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

Note:



Disassemble the parts taking care not to lose balls.

(A) Outer race (DOJ)

(B) Grease

2. Remove the cage from the inner race.
   (1) Turn the cage by a half pitch to the track groove of inner race and shift the cage.
   (2) Using pliers, remove the snap ring fixing the inner race to the shaft.

   (3) Take out the inner race.
   (4) Take off the cage from shaft and remove the boot (DOJ).

Caution:
Wrap shaft splines with vinyl tape to protect the boot from scratches.

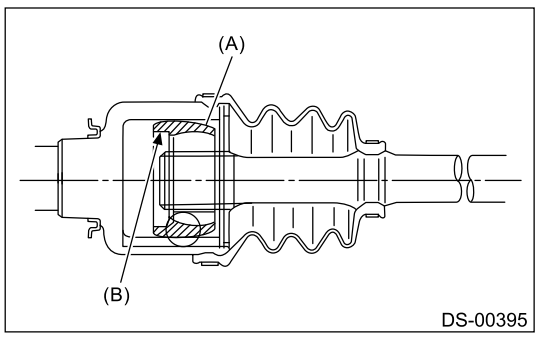
3. Remove the boot (EBJ) using the same procedures as for the boot (DOJ).

Note:
The EBJ is a non-disassembly part, so the drive shaft disassembly stops here.

DRIVE SHAFT SYSTEM > Rear Drive Shaft

ASSEMBLY

1. MT model



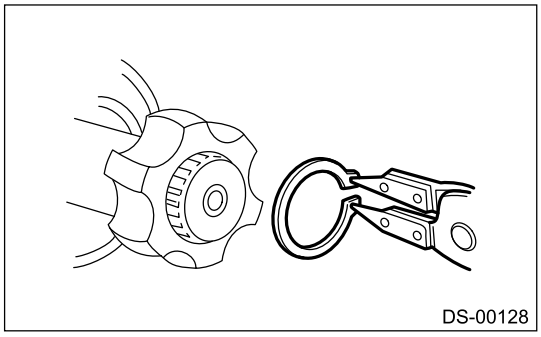
Caution:
Wrap shaft splines with vinyl tape to protect the boot from scratches.

Note:
Use specified grease.

Grease: **Ref. to RECOMMENDED MATERIALS > GREASE.**

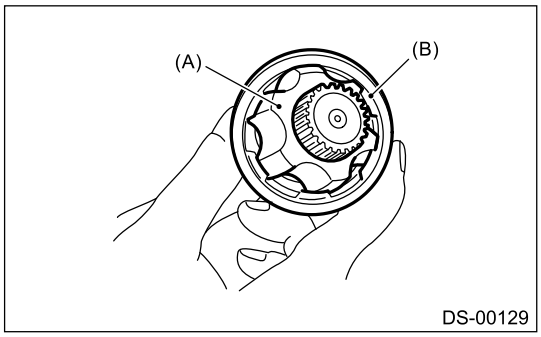
1. Install the inner race to the shaft.
   (1) Install the boot (EBJ) to the specified position, and fill it with 50 — 60 g (1.76 — 2.12 oz) of specified grease.
   (2) Place the boot (DOJ) at the center of shaft.
   (3) Insert the cage onto shaft.

Note:
Insert the cage with the cutout portion facing the shaft end, since the cage has an orientation.



(A) Cage
(B) Cutout portion

(4) Install the inner race on shaft and fix the snap ring in place with pliers.

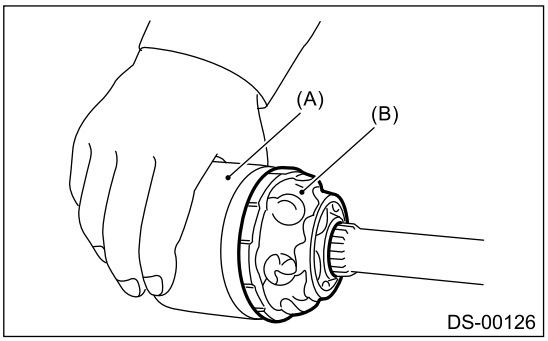


Note:

Confirm that the snap ring is completely fitted in the shaft groove.

2. Install the cage to the inner race.

(1) Install the cage (B) with the protruding section aligned with the track on the inner race (A), and turn by a half pitch.



(2) Fill 80 — 90 g (2.82 — 3.17 oz) of specified grease into the interior of the outer race (DOJ).

(3) Apply a thin coat of specified grease to the cage pocket and ball.

(4) Insert the ball bearings into the cage pocket.

3. Connect the shaft assembly to the outer race (DOJ).

(1) Align the outer race (DOJ) track and ball positions, and place the shaft, inner race, cage and balls in the original positions, and then fix outer race (DOJ) in place.

(A) Outer race (DOJ)

(B) Grease

(2) Install the snap ring in the groove on the outer race (DOJ).

Caution:

Be careful of the following items during installation:

- **Make sure that the balls, cage and inner race are completely fitted in the outer race (DOJ).**
- **Use care not to place the matched position of snap ring in the ball groove of outer race (DOJ).**
- **Pull the shaft lightly and assure that the circlip is completely fitted in the groove.**

(3) Apply an even coat of the specified grease at an amount of [20 — 30 g (0.71 — 1.06 oz)] on the entire inner surface of boot (DOJ). Also apply grease to the shaft.

(4) Install the boot (DOJ) taking care not to twist it.

Note:

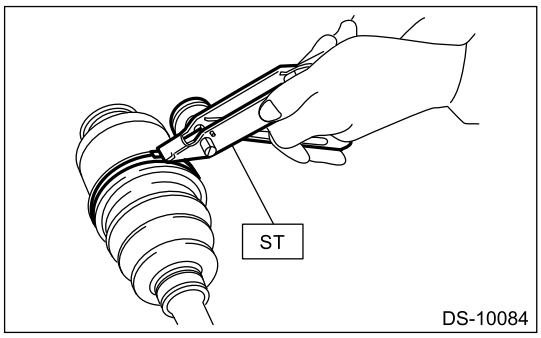
- **The inside of the large end of boot (DOJ) and the boot groove shall be cleaned so as to be free from grease and other substances.**
- **When installing the boot (DOJ), position the outer race (DOJ) at center of the stroke.**

(5) Put a new boot band through the clip and wind twice in the band groove of the boot (DOJ).

(6) Pinch the end of boot band with pliers. Hold the clip and tighten securely.

Note:

When tightening boot, use care so that the air within the boot is appropriate.



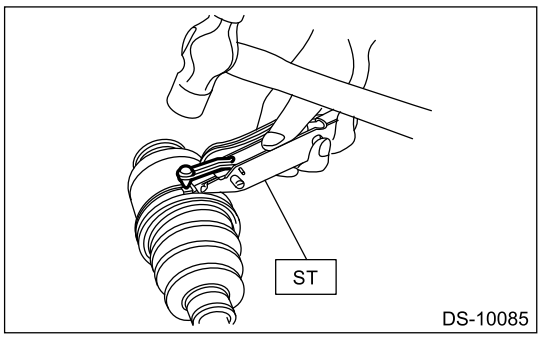
(7) Tighten the boot band using the ST.

Note:

Tighten the boot band until it cannot be moved by hand.

Preparation tool:

ST: BAND TIGHTENING TOOL (925091000)



(8) Tap the clip with the punch provided at the end of the ST.

Note:

Tap to an extent that the boot underneath is not damaged.

Preparation tool:

ST: BAND TIGHTENING TOOL (925091000)

(9) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

Caution:

Make sure that the end of the boot band is in close contact with clip.

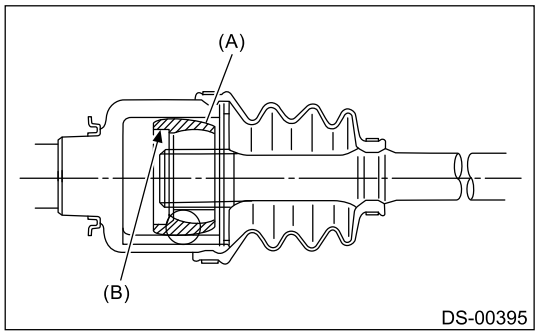
4. Install the boot band to the boot (EBJ) using the same procedures as for the boot (DOJ).
5. Extend and retract the DOJ repeatedly to provide an equal coating of grease.

2. CVT MODEL

Caution:

Wrap shaft splines with vinyl tape to protect the boot from scratches.

Note:



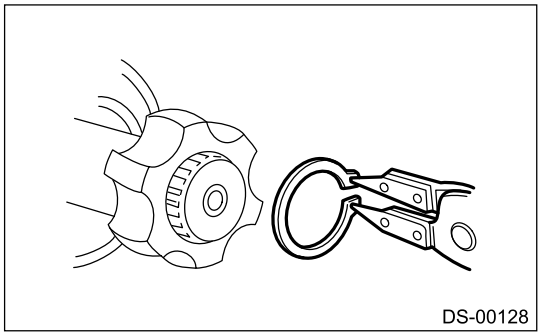
Use specified grease.

Grease: **Ref. to RECOMMENDED MATERIALS > GREASE.**

1. Install the inner race to the shaft.
   (1) Install the boot (EBJ) to the specified position, and fill it with 50 — 60 g (1.76 — 2.12 oz) of specified grease.
   (2) Place the boot (DOJ) at the center of shaft.
   (3) Insert the cage onto shaft.

   Note:

   Insert the cage with the cutout portion facing the shaft end, since the cage has an orientation.

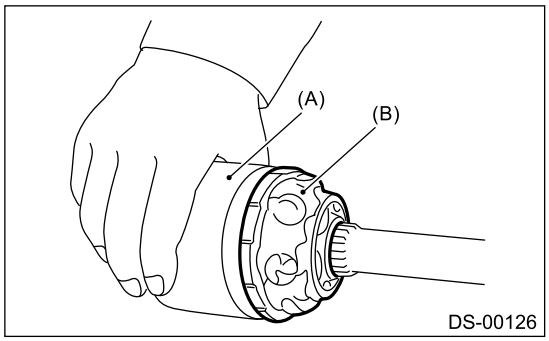


(A) Cage
(B) Cutout portion

   (4) Install the inner race on shaft and fix the snap ring in place with pliers.

   Note:

   Confirm that the snap ring is completely fitted in the shaft groove.



2. Install the cage to the inner race.
   (1) Install the cage (B) with the protruding section aligned with the track on the inner race (A), and turn by a half pitch.

(2) Fill 80 — 90 g (2.82 — 3.17 oz) of specified grease into the interior of the outer race (DOJ).
(3) Apply a thin coat of specified grease to the cage pocket and ball.
(4) Insert the ball bearings into the cage pocket.

3. Connect the shaft assembly to the outer race (DOJ).

(1) Align the outer race (DOJ) track and ball positions, and place the shaft, inner race, cage and balls in the original positions, and then fix outer race (DOJ) in place.

(A) Outer race (DOJ)
(B) Grease

(2) Install the snap ring in the groove on the outer race (DOJ).

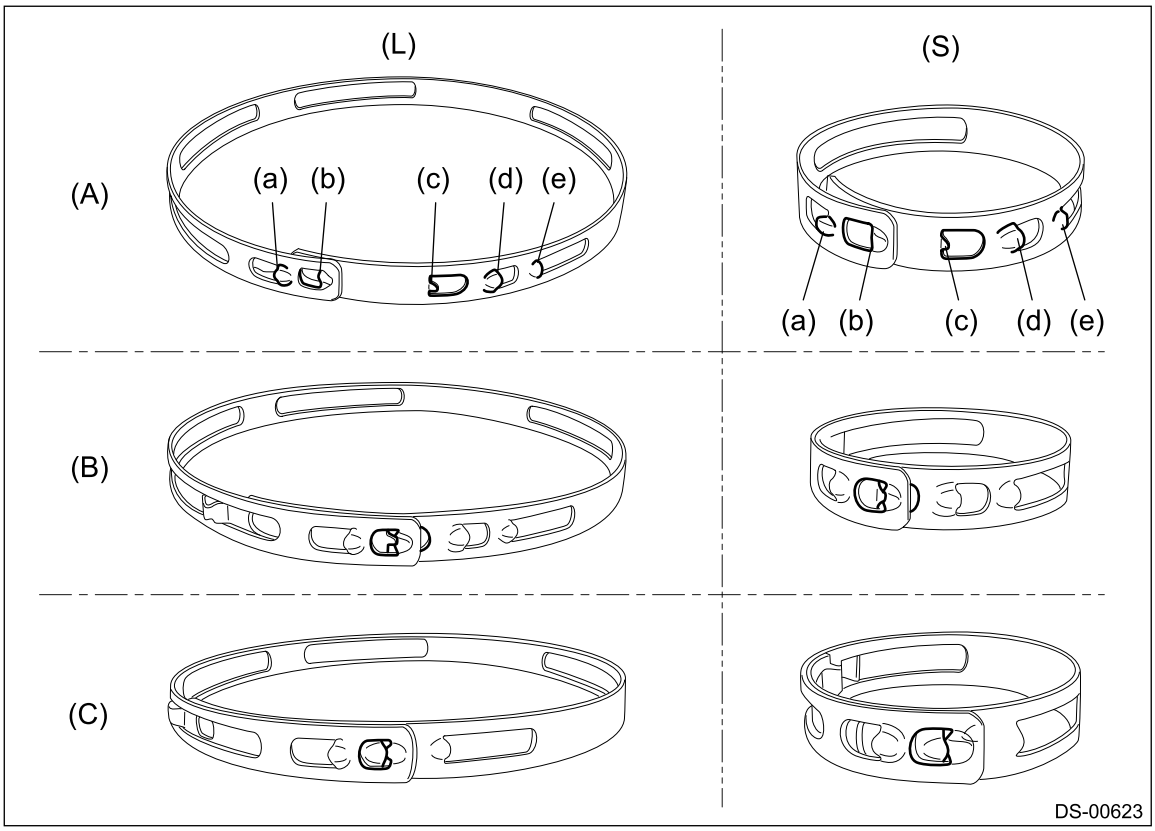
Caution:

Be careful of the following items during installation:

- **Make sure that the balls, cage and inner race are completely fitted in the outer race (DOJ).**
- **Use care not to place the matched position of snap ring in the ball groove of outer race (DOJ).**
- **Pull the shaft lightly and assure that the circlip is completely fitted in the groove.**

(3) Apply an even coat of the specified grease at an amount of [20 — 30 g (0.71 — 1.06 oz)] on the entire inner surface of boot (DOJ). Also apply grease to the shaft.

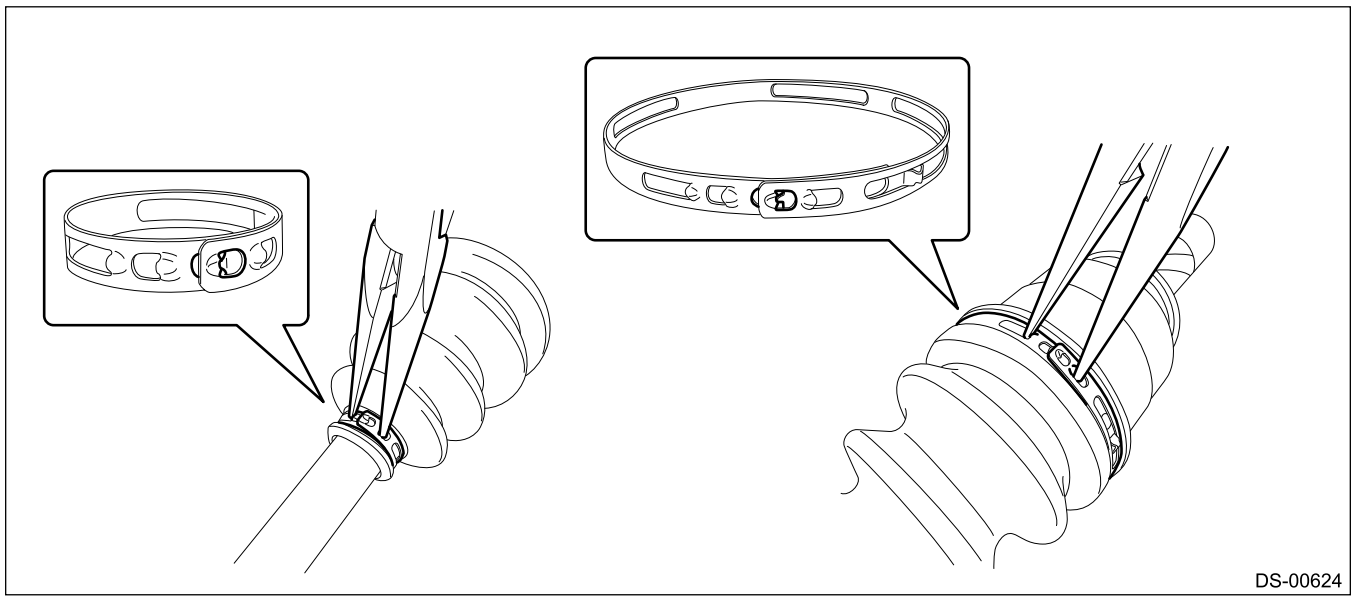
(4) Install the boot (DOJ) taking care not to twist it.



Note:

- **The inside of the large end of boot (DOJ) and the boot groove shall be cleaned so as to be free from grease and other substances.**
- **When installing the boot (DOJ), position the outer race (DOJ) at center of the stroke.**

(5)Prepare a new boot band, pinch (a) and (e) of the boot band with needle nose pliers, and align it with the groove of the boot (DOJ).



Caution:

- **Be careful not to damage the boot.**
- **When tightening boot, use care so that the air within the boot is appropriate.**

(L) Boot band for large diameter
(S) Boot band for small diameter
(A) Free position
(B) Temporarily tightening position
(C) Fully tightening position
(a) Holding portion using pliers
(c) Convex claw for temporarily tightening position
(e) Holding portion using pliers
(b) Concave claw
(d) Convex claw

(6) Pinch (a) and (e) of the boot band with needle nose pliers, and align the concave claw (b) with the convex claw (c) for temporarily tightening position.

(7) Check the positions of the boot (DOJ) and boot band, align the concave claw (b) with the convex claw (d), and tighten the boot band.

4. Install the boot band to the boot (EBJ) using the same procedures as for the boot (DOJ).

5. Extend and retract the DOJ repeatedly to provide an equal coating of grease.

INSPECTION

Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.

- **DOJ (Double Offset Joint):**
  Check for seizure, corrosion, damage, wear and excessive play.
- **EBJ (High-Efficiency Compact Ball Fixed Joint):**
  Check for seizure, corrosion, damage and excessive play.
- **Shaft:**
  Check for excessive bending, twisting, damage and wear.
- **Boot:**
  Check for wear, warping, breakage and scratches.
- **Grease:**
  Check for discoloration and fluidity.

INSPECTION

Note:

Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptoms	Possible cause	Corrective action
Noise or vibration from propeller shaft	• Center bearing • Runout of propeller shaft • Loose or gap at connections	Inspect the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSPECTION.
Abnormal wheel vibration	Wheel is out of balance.	Check the wheel balance. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSPECTION > WHEEL BALANCING.
	Front wheel alignment	Check the front wheel alignment. Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.
	Rear wheel alignment	Check the rear wheel alignment. Ref. to REAR SUSPENSION>Wheel Alignment>INSPECTION.
	Front strut	Check the front strut. Ref. to FRONT SUSPENSION>Front Strut>INSPECTION.
	Rear shock absorber	Check the rear shock absorber. Ref. to REAR SUSPENSION>Rear Shock Absorber>INSPECTION.
	Front drive shaft	Check the front drive shaft. Ref. to DRIVE SHAFT SYSTEM>Front Drive Shaft>INSPECTION.
	Rear drive shaft	Check the rear drive shaft. Ref. to DRIVE SHAFT SYSTEM>Rear Drive Shaft>INSPECTION.
	Front hub unit bearing	Check the front hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.
	Rear hub unit bearing	Check the rear hub unit bearing. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>INSPECTION.
Noise from the underbody	Wheel is out of balance.	Check the wheel balance. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSPECTION > WHEEL BALANCING.
	Front wheel alignment	Check the front wheel alignment. Ref. to FRONT SUSPENSION>Wheel Alignment>INSPECTION.

Symptoms	Possible cause	Corrective action
	Rear wheel alignment	Check the rear wheel alignment. Ref. to REAR SUSPENSION>Wheel Alignment>INSPECTION.
	Front strut	Check the front strut. Ref. to FRONT SUSPENSION>Front Strut>INSPECTION.
	Rear shock absorber	Check the rear shock absorber. Ref. to REAR SUSPENSION>Rear Shock Absorber>INSPECTION.

SPECIFICATION

Note:

Refer to "PARKING BRAKE" for parking brake specifications. Ref. to PARKING BRAKE>General Description>SPECIFICATION.

1. FRONT DISC BRAKE

Item			Specification	
Size			15-inch type	16-inch
Type			Floating 2-POT piston type Ventilated disc	
Effective cylinder diameter	mm (in)		40.4× 2 (1.591 × 0.079)	
Pad dimension (Length × Width × Thickness)	mm (in)		117.8 × 50.5× 11 (4.638 × 1.988 × 0.433)	
Pad thickness	mm (in)	Standard	11 (0.43)	
		Limit	1.5 (0.059)	
Effective disc diameter	mm (in)		228 (8.98)	244 (9.61)
Rotor dimension (O.D. × Thickness)	mm (in)		24 × 277 (0.9 × 10.91)	24 × 294 (0.9 × 11.57)
Disc thickness	mm (in)	Standard	24 (0.94)	
		Limit	22 (0.87)	
Disc runout	mm (in)	Standard	–	
		Limit	0.05 (0.002)	
Clearance adjustment			Automatic adjustment	

2. REAR DISC BRAKE

Item			Specification
Size			15-inch type
Type			Floating 1-POT piston type Solid disc
Effective cylinder diameter	mm (in)		38.1 (1.5)
Pad dimension (Length × Width × Thickness)	mm (in)		92 × 33 × 9 (3.622 × 1.299 × 0.354)
Pad thickness	mm (in)	Standard	9 (0.354)
		Limit	1.5 (0.059)
Effective disc diameter	mm (in)		238 (9.37)
Rotor dimension (O.D. × Thickness)	mm (in)		274 × 10 (10.79 × 0.39)
Disc thickness	mm (in)	Standard	10 (0.39)
		Limit	8.5 (0.335)
Disc runout	mm (in)	Standard	–
		Limit	0.05 (0.002)
Clearance adjustment			Automatic adjustment

3. MASTER CYLINDER

Item		Specification
Type		Tandem
Effective diameter	mm (in)	23.8 (0.94)
Reservoir type		Sealed type
Brake fluid reservoir capacity	cm^3 (cu in)	250 (15.26)

4. BRAKE BOOSTER

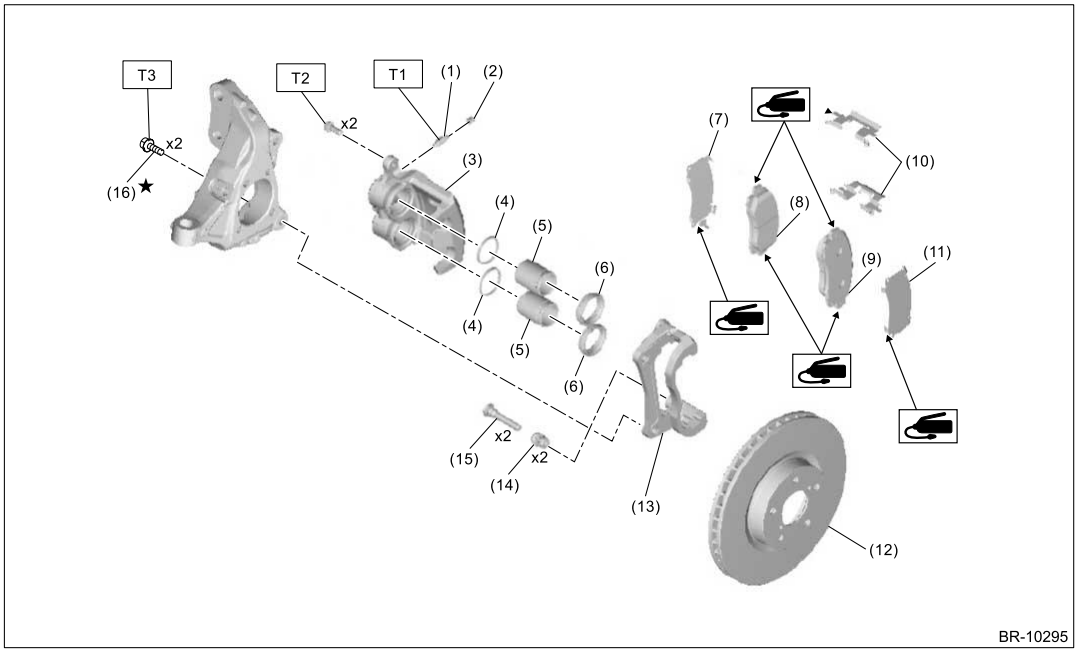
Item	Specification
Type	Vacuum suspended

Item		Specification	
Effective diameter	mm (in)	215 + 227 (8.46+8.93)	
Brake fluid pressure		Brake pedal force N (kgf, lbf)	Fluid pressure kPa (kgf/cm^2, psi)
When engine is stopped		147 (15, 33)	512 (5.23, 74.38)
		294 (30, 66)	1,530 (15.6, 222)
When engine is running and vacuum pressure is at 93 kPa (697 mmHg, 27.47 inHg)		147 (15, 33)	7,468 (76.1, 1,082)
		294 (30, 66)	14,808 (151, 2,148)

5. BRAKE LINE, BRAKE PEDAL AND BRAKE FLUID

Caution:

- **Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.**
- **Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.**
- **When refilling brake fluid, do not allow dirt or dust to get into the reservoir tank.**
- **Always use new SUBARU genuine brake fluid when replacing or refilling the fluid. Do not reuse drained brake fluid.**



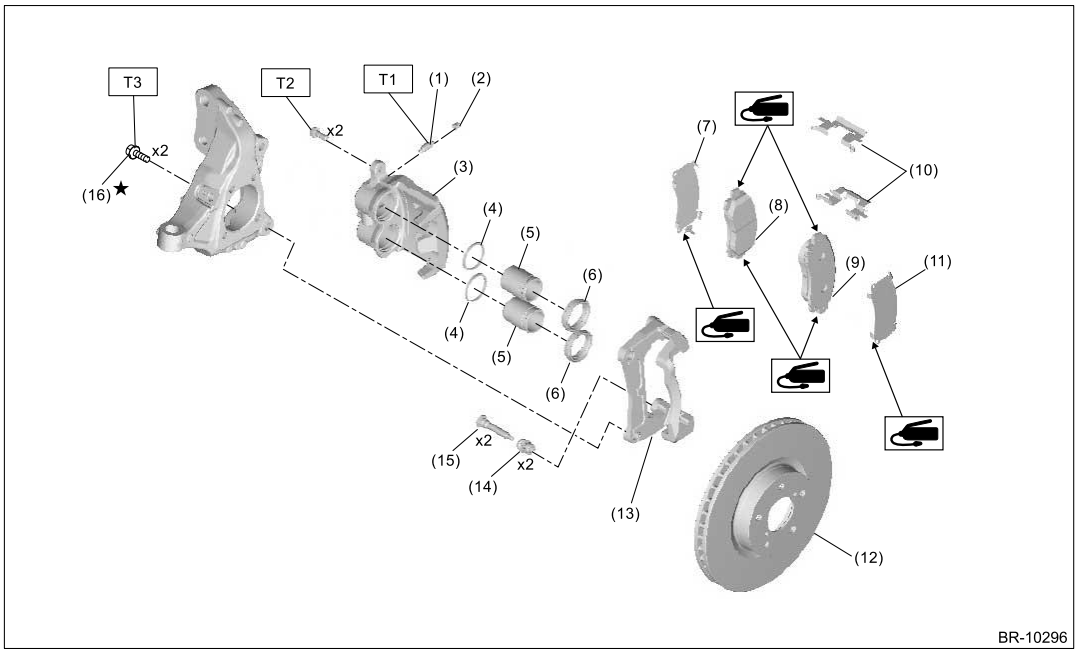
Item		Specification
Brake line		Dual circuit system
Brake pedal	Type	Suspended type
	Free play mm (in)	0.5 — 2.7 (0.02 — 0.11) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf)]
Brake fluid		FMVSS No. 116, DOT3 or DOT4

BRAKE > General Description

COMPONENT

1. FRONT DISC BRAKE

- 15-inch model



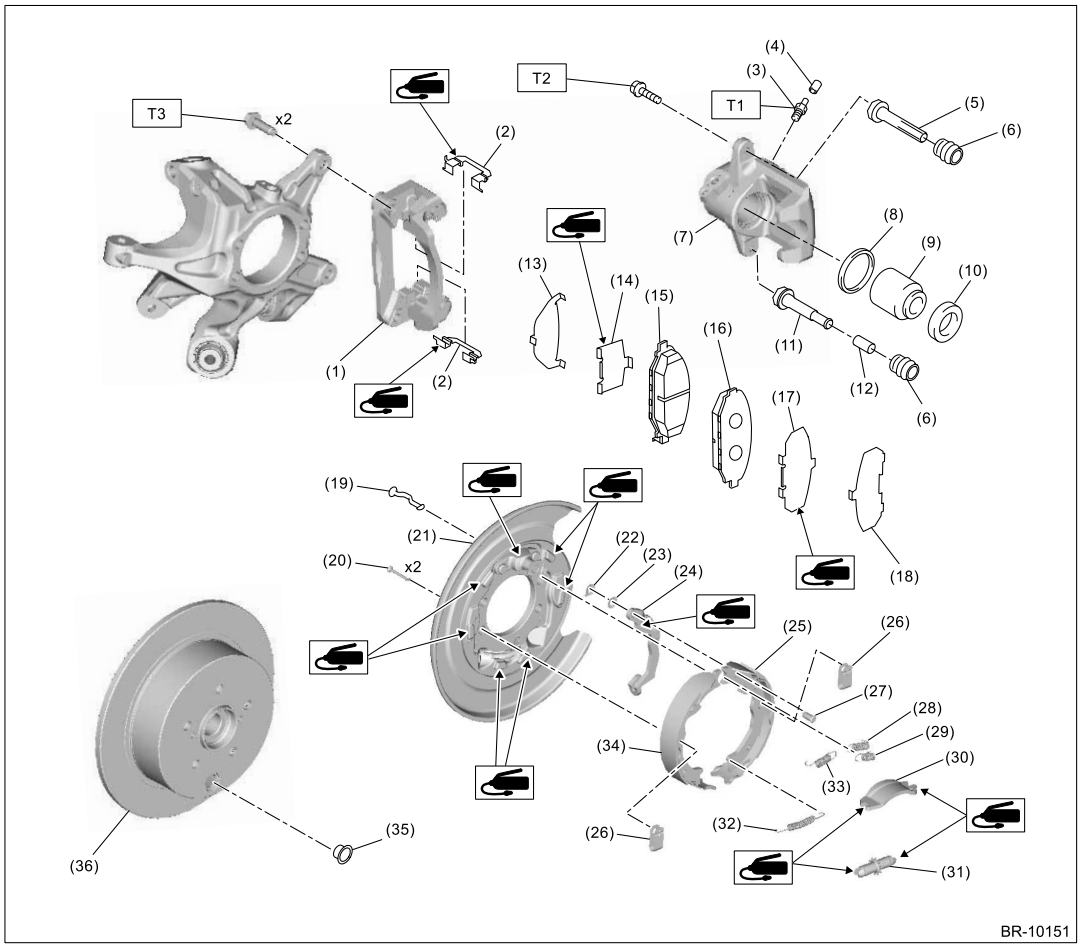
(1) Bleeder - screw
(2) Cap - bleeder
(3) Caliper body
(4) Piston seal
(5) Piston - disc brake
(6) Piston boot
(8) Pad - disc brake front inner
(9) Pad - disc brake front outer
(10) Pad clip - front brake
(11) Shim - disc brake front outer
(12) Disc rotor (ventilated type)
(13) Support - front disc brake
(15) Guide pin - front brake
(16) Mounting bolt

Tightening torque: N·m (kgf-m, ft-lb)

T1: 8 (0.8, 5.9)
T2: 27 (2.8, 19.9)

(7) Shim - disc brake front inner (14) Pin boot ***T3: 120 (12.2, 88.5)***

- 16-inch model

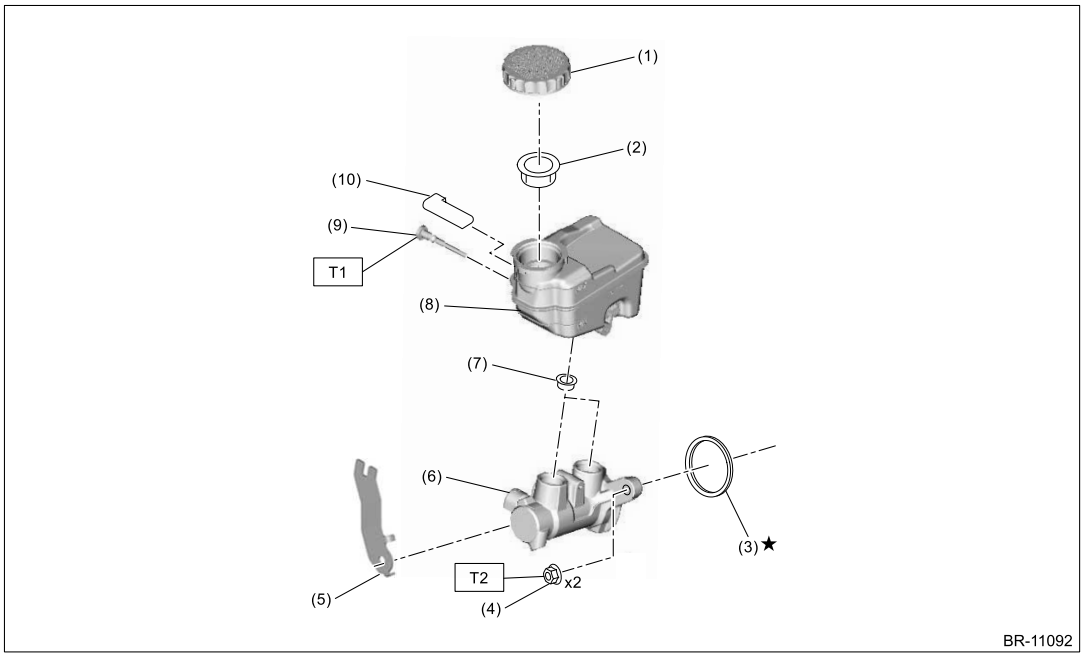


(1) Bleeder - screw
(2) Cap - bleeder
(3) Caliper body
(4) Piston seal
(5) Piston - disc brake
(6) Piston boot
(7) Shim - disc brake front inner
(8) Pad - disc brake front inner
(9) Pad - disc brake front outer
(10) Pad clip - front brake
(11) Shim - disc brake front outer
(12) Disc rotor (ventilated type)
(13) Support - front disc brake
(14) Pin boot
(15) Guide pin - front brake
(16) Mounting bolt

Tightening torque: N·m (kgf-m, ft-lb)

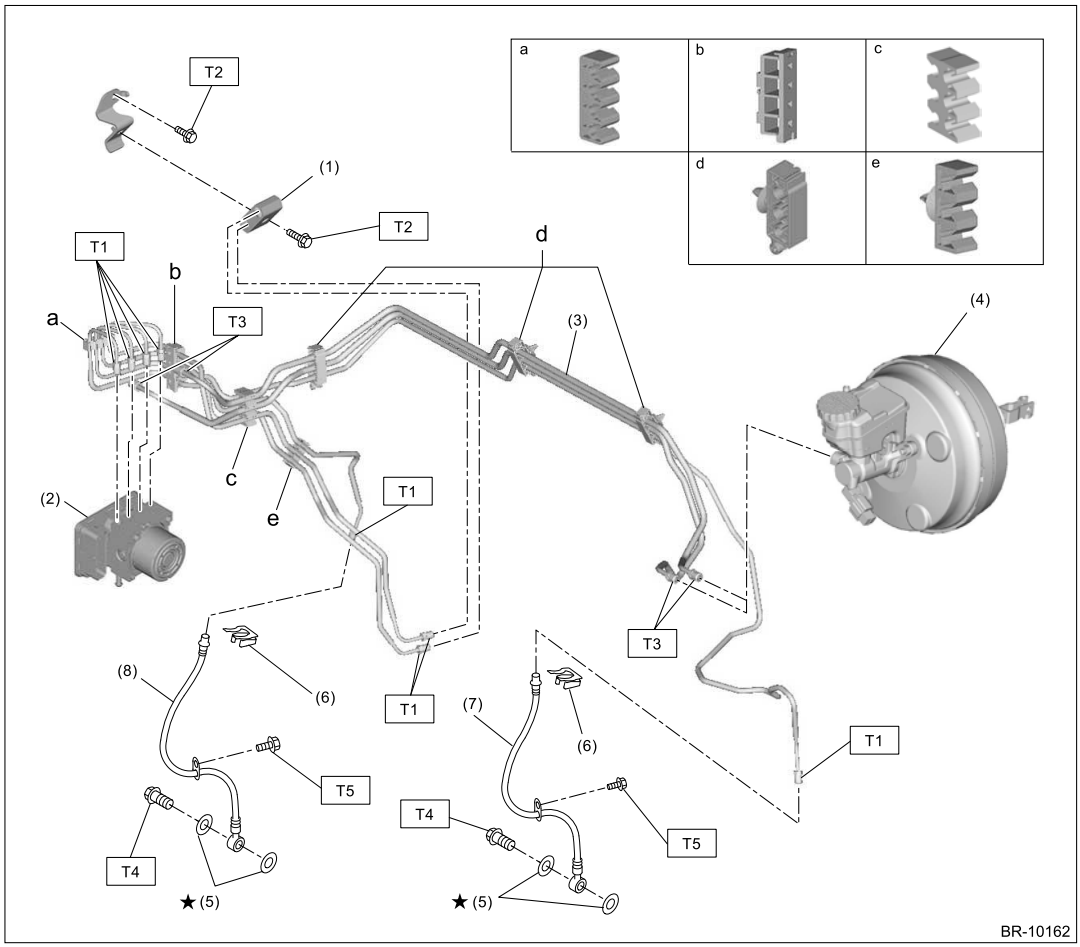
T1: 8 (0.8, 5.9)
T2: 27 (2.8, 19.9)
T3: 120 (12.2, 88.5)

2. REAR DISC BRAKE



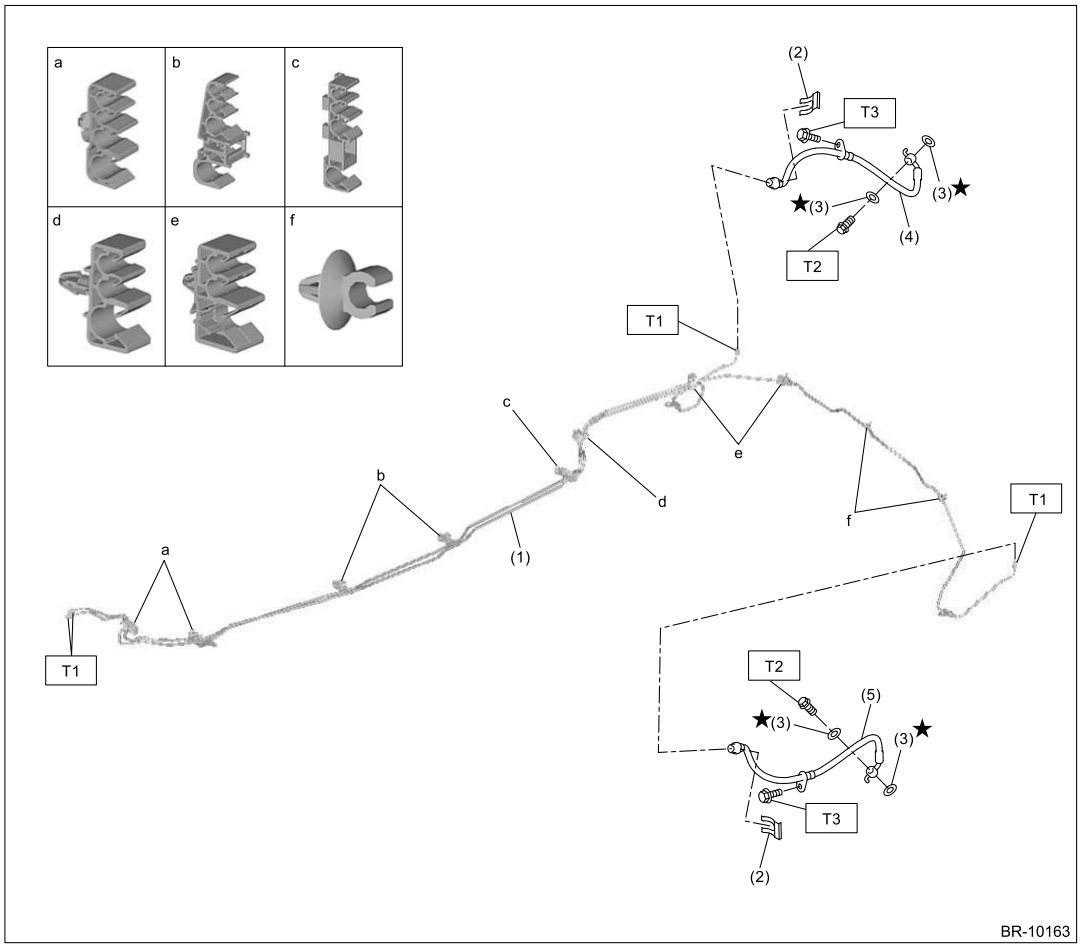
(1) Support - rear disc brake
(2) Pad clip - rear brake
(3) Bleeder - screw
(4) Cap - bleeder
(5) Guide pin - rear brake (black)
(6) Pin boot
(7) Caliper body
(8) Piston seal
(9) Piston - disc brake
(10) Piston boot
(11) Lock pin - rear brake (silver)
(12) Lock pin - bushing
(13) Shim - disc brake rear outer
(14) Shim - disc brake rear inner
(15) Pad - disc brake rear inner
(16) Pad - disc brake rear outer
(17) Shim - disc brake rear inner
(18) Shim - disc brake rear outer
(19) Pin - secondary shoe hold-down
(20) Pin - primary shoe hold-down
(21) Back plate - rear brake
(22) Retainer - rear brake
(23) Spring washer - rear brake
(24) Parking lever - rear
(25) Parking brake shoe (secondary)
(26) Cup - shoe hold-down
(27) Pin - parking lever
(28) Spring - secondary shoe return
(29) Spring - strut
(30) Strut - brake
(31) Adjuster ASSY - rear brake
(32) Spring - adjuster
(33) Spring - primary shoe return
(34) Parking brake shoe (primary)
(35) Adjusting hole cover
(36) Disc rotor (solid type)

Tightening torque: N·m (kgf-m, ft-lb)



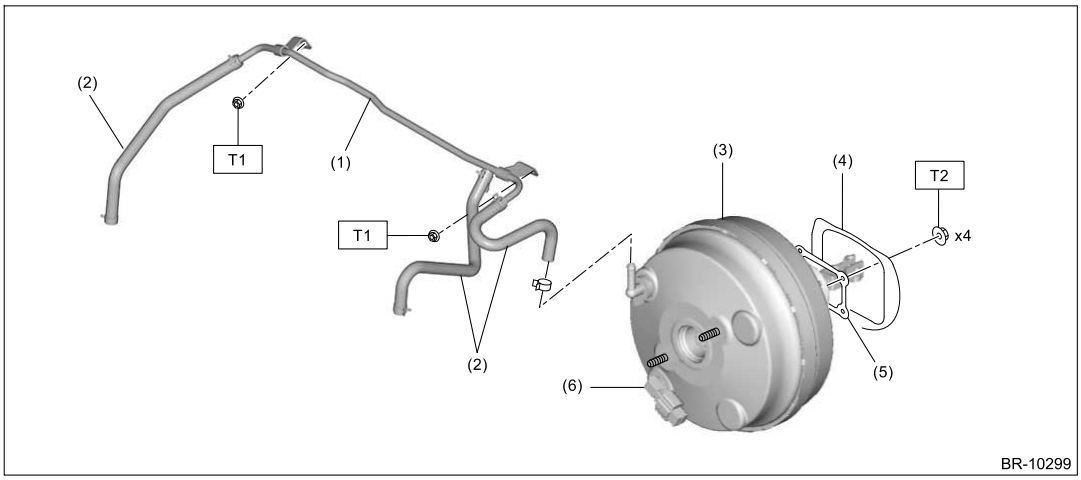
T1: 8 (0.8, 5.9)
T2: 27 (2.8, 19.9)
T3: 66 (6.7, 48.7)

3. MASTER CYLINDER



(1) Cap - reservoir tank	(6) Cylinder body ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Filter - master cylinder	(7) Seal	***T1: 5.5 (0.6, 4.1)***
(3) Ring seal	(8) Reservoir tank	***T2: 25 (2.5, 18.4)***
(4) Nut	(9) Pin	
(5) Bracket - master cylinder	(10) Level - indicator	

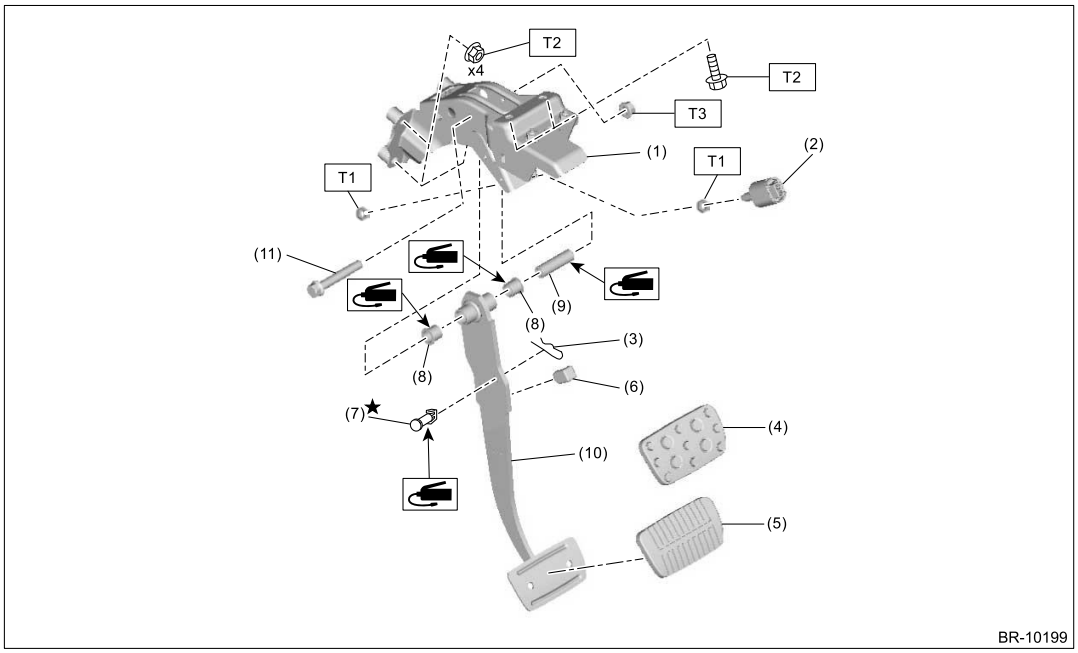
4. FRONT BRAKE PIPES AND HOSES



(1)	Connector - two-way	(5)	Gasket	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	VDC control module and hydraulic control unit (VDCCM&H/U)	(6)	Clamp	***T1: 15 (1.5, 11.1)***
(3)	Front brake pipe ASSY	(7)	Front brake hose LH	***T2: 18 (1.8, 13.3)***
(4)	Master cylinder ASSY	(8)	Front brake hose RH	***T3: 19 (1.9, 14)***
				T4: 26 (2.7, 19.2)
				T5: 33 (3.4, 24.3)

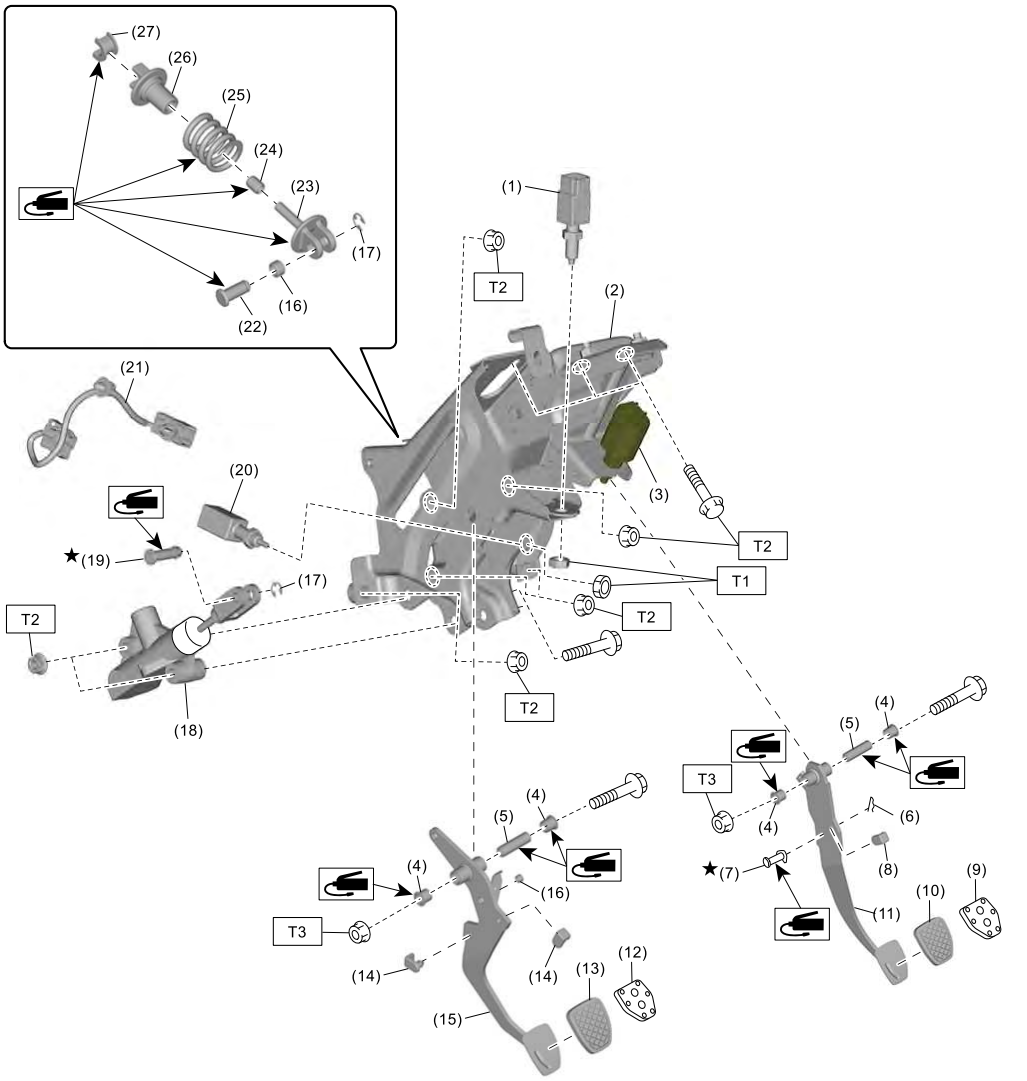
5. CENTER AND REAR BRAKE PIPES AND HOSES

(1) Center brake pipe ASSY	(4) Rear brake hose RH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Clamp	(5) Rear brake hose LH	***T1: 15 (1.5, 11.1)***
(3) Gasket		***T2: 26 (2.7, 19.2)***
		T3: 33 (3.4, 24.3)



6. BRAKE BOOSTER

(1) Vacuum pipe	(4) Damping seat (model with EyeSight)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Vacuum hose	(5) Gasket	***T1: 7.5 (0.8, 5.5)***
(3) Vacuum booster ASSY	(6) Vacuum sensor	***T2: 18 (1.8, 13.3)***



7. BRAKE PEDAL

- CVT model

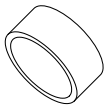
(1) Pedal bracket	(7) Clevis pin	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Stop light switch	(8) Bushing - pedal	***T1: 8 (0.8, 5.9)***
(3) Snap pin	(9) Spacer - pedal	***T2: 18 (1.8, 13.3)***
(4) Pad - brake pedal (sport type)	(10) Pedal - brake	***T3: 30 (3.1, 22.1)***
(5) Pad - brake pedal (normal type)	(11) Bolt - pedal	
(6) Stopper - pedal		

- MT model

CL-10014

(1) Clutch switch	(12) Clutch pedal pad (sport type)	(23) Assist rod A
(2) Pedal bracket	(13) Clutch pedal pad (normal type)	(24) Assist bushing A
(3) Stop light switch	(14) Clutch pedal stopper	(25) Assist spring
(4) Pedal bushing	(15) Clutch pedal	(26) Assist rod B
(5) Spacer	(16) Bushing A	(27) Assist bushing B
(6) Snap pin	(17) Clip	
(7) Clevis pin	(18) Master cylinder ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***
(8) Brake pedal stopper	(19) Clevis pin	***T1: 8 (0.8, 5.9)***
(9) Brake pedal pad (sport type)	(20) Clutch start switch	***T2: 18 (1.8, 13.3)***
(10) Brake pedal pad (normal type)	(21) Harness connector	***T3: 30 (3.1, 22.1)***
(11) Brake pedal	(22) Assist pin	

BRAKE > General Description



CAUTION

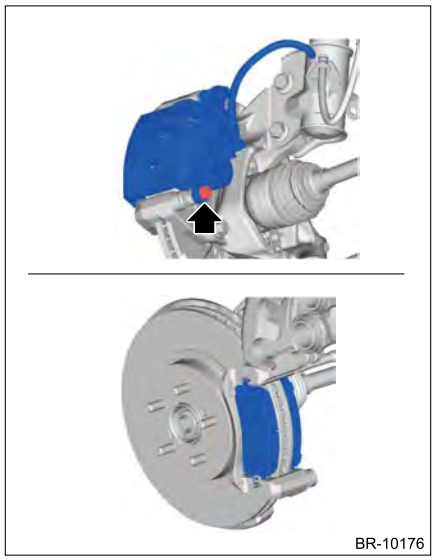
- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.

- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**
 ST99099AL000	99099AL000	PISTON BOOT INSTALLER	Used for installing the piston boot.



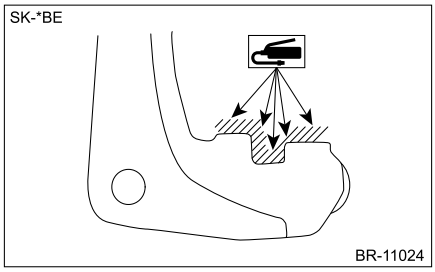
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Pressure gauge	Used for measuring the operation and airtightness of the brake booster.
Vacuum gauge	Used for measuring the operation and airtightness of the brake booster.
Dial gauge	Used for measuring brake disc rotor run-out.
Cap	Used for brake hose installing portion of brake disc caliper.

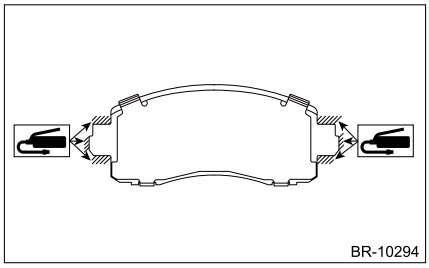
BRAKE > Front Brake Pad

REMOVAL

1. Lift up the vehicle, and then remove the front wheels.
2. Remove the pad - disc brake front.
   (1) Remove the caliper bolt on the lower side.
   (2) Raise the caliper body assembly and remove the pad - disc brake front.
   Note:
   Do not disconnect the brake hose from the caliper body assembly.



BRAKE > Front Brake Pad



INSTALLATION

Note:
Before installation, remove the pad clip - front brake and remove mud, foreign matter and rust from the caliper body assembly and the support - front disc brake.

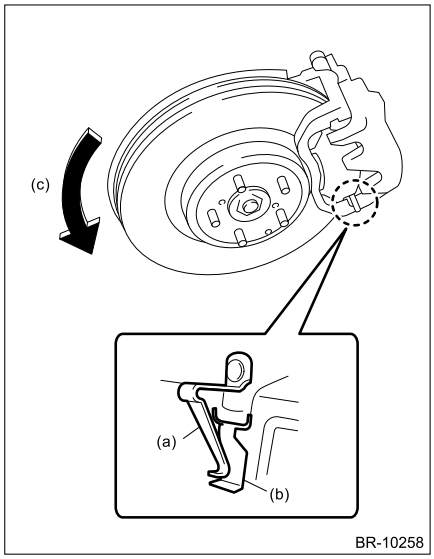
1. Apply a thin coat of grease to the support - front disc brake.
   Preparation items:
   Grease: An item contained in the pad kit, Molykote M7439 or equivalent

2. Check the brake pad. Ref. to BRAKE>Front Brake Pad>INSPECTION.
3. Apply a thin coat of grease to the pad - disc brake front.
   Preparation items:
   Grease: An item contained in the pad kit, Molykote M7439 or equivalent

4. Install the pad clip - front brake.
5. Press back the piston - disc brake with a tool as needed.

Caution:

When pressing back the piston - disc brake, the clearance between pad - disc brake and brake disc becomes large, which makes the brake pedal effort softer. After the installation of front wheel, be sure to perform the adjustment of the clearance and the pedal effort by depressing the brake pedal several times.

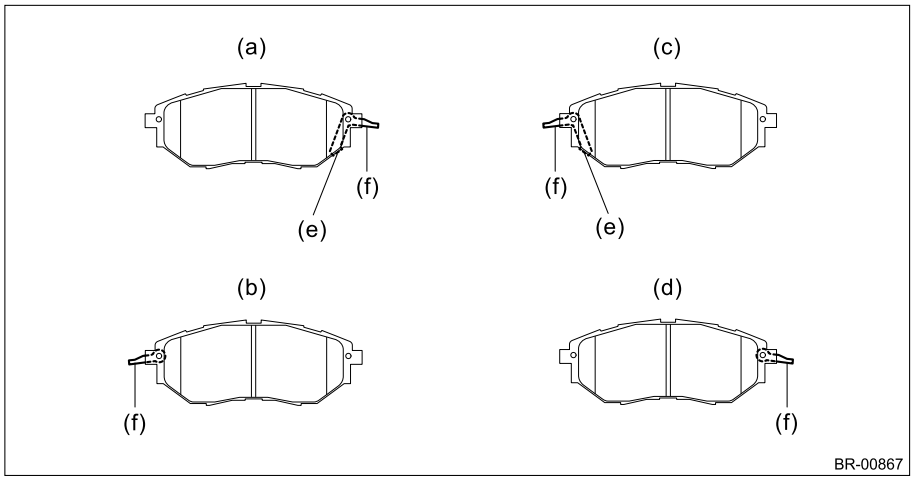


Preparation tool:

Disc brake piston tool

6. Install the pad - disc brake front.

Caution:



- **Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.**
- **Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.**
- **If the pad return spring is deformed or damaged, replace the pad - disc brake front with a new part.**

(a) Pad return spring (b) Supporting surface of pad clip (c) Direction of brake rotor rotation

Note:

Install the pad indicator in proper direction.

(a) LH — IN (c) RH — IN (e) Pad indicator

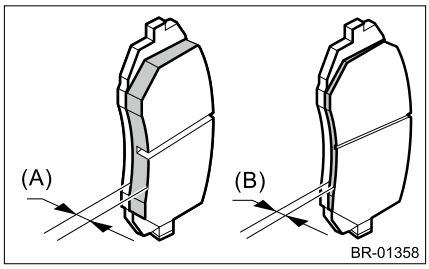
(b) LH — OUT (d) RH — OUT (f) Pad return spring

7. Install the caliper body assembly.

Tightening torque:

27 N·m (2.8 kgf-m, 19.9 ft-lb)

8. Install the front wheels.



Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

BRAKE > Front Brake Pad

INSPECTION

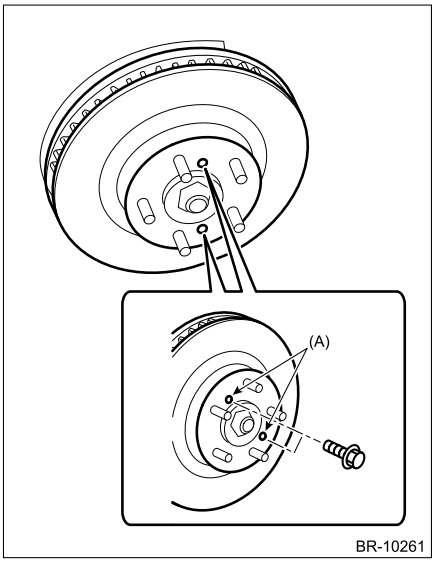
1. Check the thickness (A) of the pad - disc brake front.
   Note:
   - **Always replace the pads of both wheels and both sides as a set.**
   - **Replace pad clips if they are twisted or worn.**
   - **Replace the pad if there is oil or grease on it.**
   - **Wear indicators are installed on the pad - disc brake front inner and the pad - disc brake front outer, and a squeaking sound is heard if the pad is worn to the limit.**

	Brake pad type	Standard (A)	Wear limit (B)
Pad thickness	15-inch type	11 mm (0.43 in)	1.5 mm (0.059 in)
	16-inch type		

2. If the wear limit is exceeded in the inspection, replace the pad - disc brake front.

BRAKE > Front Disc Rotor

REMOVAL



1. Lift up the vehicle, and then remove the front wheels.
2. Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the strut assembly.

3. Remove the disc rotor.

Note:

When the disc rotor is difficult to be removed, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

BRAKE > Front Disc Rotor

INSTALLATION

Note:

Before installation, remove mud and foreign matter from the disc brake assembly.

1. Check the front disc rotor. Ref. to BRAKE>Front Disc Rotor>INSPECTION.
2. Install the disc rotor.
3. Install the disc brake assembly.

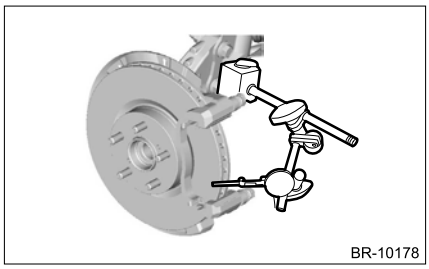
Caution:

Use a new mounting bolt.

Tightening torque:

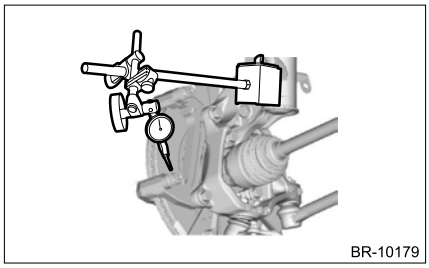
Mounting bolt: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)



4. Install the front wheels.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)

BRAKE > Front Disc Rotor



INSPECTION

1. DISC ROTOR RUNOUT CHECK

1. Check the hub unit COMPL - front axle for free play and runout before the inspection of disc rotor runout limit. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSPECTION.
2. Check the disc rotor runout.
   (1) Remove the caliper body assembly. Ref. to BRAKE>Front Disc Rotor>REMOVAL.
   (2) Secure the disc rotor by tightening the five wheel nuts.
   (3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.
   Disc rotor runout limit
   0.05 mm (0.002 in)
   Note:
   <Example of magnet stand and dial gauge installation>
   The location where the magnet stand is installed varies to stabilize the magnet stand.

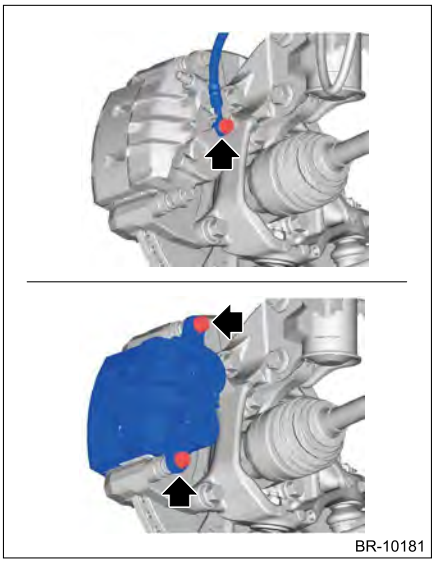
   (4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.
   Disc rotor runout limit
   0.05 mm (0.002 in)
   Note:
   <Example of magnet stand and dial gauge installation>
   The location where the magnet stand is installed varies to stabilize the magnet stand.

3. If the disc rotor runout exceeds service limit, grind the disc rotor.
4. Check the disc rotor thickness after grinding. Ref. to BRAKE>Front Disc Rotor>INSPECTION > DISC ROTOR THICKNESS CHECK.

2. DISC ROTOR THICKNESS CHECK

1. Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	15-inch	24 mm (0.94 in)	22 mm (0.87 in)	277 mm (10.91 in)
	16-inch			294 mm (11.57 in)



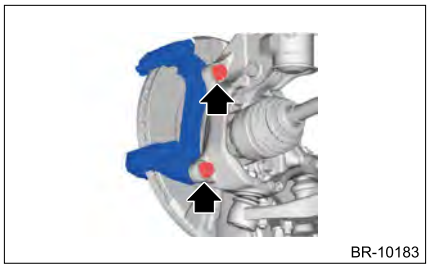
2. If the wear limit is exceeded in the inspection, replace the disc rotor.

BRAKE > Front Disc Brake Assembly

REMOVAL

1. Lift up the vehicle, and then remove the front wheels.
2. Remove the union bolt and the caliper bolt, and remove the caliper body assembly.

   Caution:
   - **Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.**
   - **Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.**



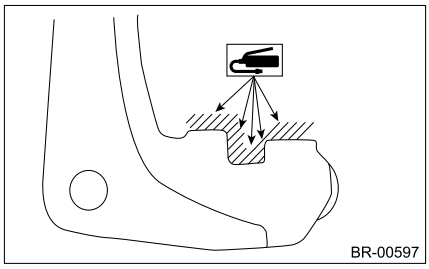
3. Remove the support - front disc brake.

   (1) Remove the pad - disc brake front.

   (2) Remove the mounting bolts, and then remove the support - front disc brake.

BRAKE > Front Disc Brake Assembly

INSTALLATION



Note:

Before installation, remove the pad clip - front brake and remove mud, foreign matter and rust from the caliper body assembly and the support - front disc brake.

1. Check each part. Ref. to BRAKE>Front Disc Brake Assembly>INSPECTION.
2. Apply a thin coat of grease to the support - front disc brake.

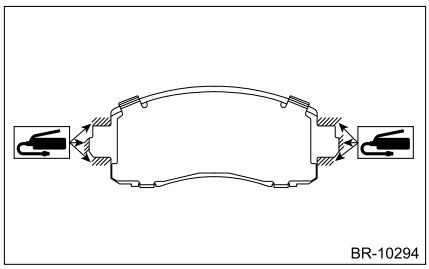
   Preparation items:

   Grease: An item contained in the pad kit, Molykote M7439 or equivalent

3. Install the pad clip - front brake.
4. Install the support - front disc brake.

Caution:

Use a new mounting bolt.



Tightening torque:

Mounting bolt: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

5. Apply a thin coat of grease to the pad - disc brake front.

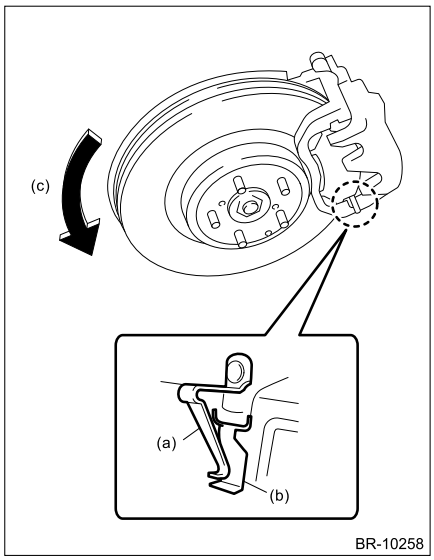
Preparation items:

Grease: An item contained in the pad kit, Molykote M7439 or equivalent

6. Press back the piston - disc brake with a tool as needed.

Caution:

When pressing back the piston - disc brake, the clearance between pad - disc brake and brake disc becomes large, which makes the brake pedal effort softer. After the installation of front wheel, be sure to perform the adjustment of the clearance and the pedal effort by depressing the brake pedal several times.

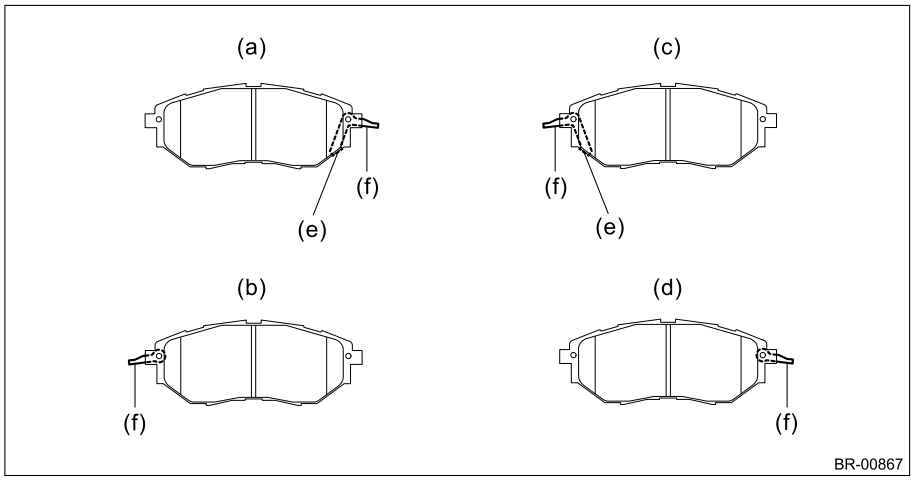


Preparation tool:

Disc brake piston tool

7. Install the brake pad.

Caution:



- **Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.**
- **Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.**
- **If the pad return spring is deformed or damaged, replace the brake pad with a new part.**

(a) Pad return spring (b) Supporting surface of pad clip (c) Direction of brake rotor rotation

Note:

Install the brake pad indicator in proper direction.

(a) LH — IN	(c) RH — IN	(e) Pad indicator
(b) LH — OUT	(d) RH — OUT	(f) Pad return spring

8. Install the caliper body assembly.

Tightening torque:

27 N·m (2.8 kgf-m, 19.9 ft-lb)

9. Connect the brake hose using a new brake hose gasket.

Tightening torque:

26 N·m (2.7 kgf-m, 19.2 ft-lb)

10. Bleed air from the brake line. Ref. to BRAKE>Air Bleeding>PROCEDURE > BRAKE LINE.

11. Install the front wheels.

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

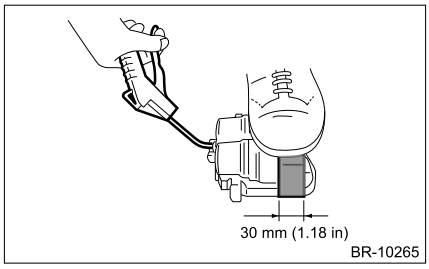
BRAKE > Front Disc Brake Assembly

DISASSEMBLY

Caution:

Be careful not to allow foreign matter to enter the brake hose connector.

1. Remove mud and foreign matter from the caliper body assembly.

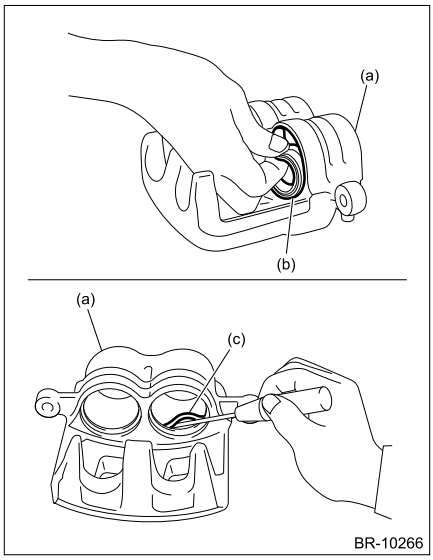


2. Remove the piston - disc brake.

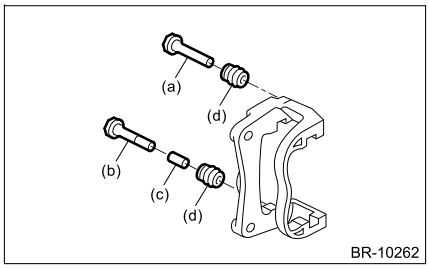
(1) Place a wooden block in the caliper body as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.

(2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

Note:



Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.

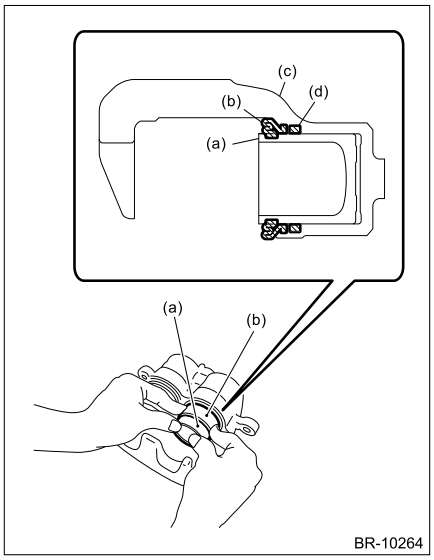


3. Remove the piston boot (b) and piston seal (c) from the caliper body cylinder (a).

Caution:

Do not damage the cylinder and piston seal groove.

4. Remove each part from support - front disc brake.



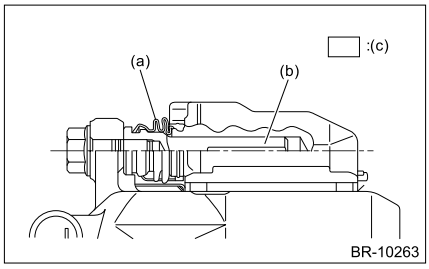
(a) Guide pin - front brake
(b) Lock pin - front brake
(c) Lock pin - sleeve
(d) Pin boot

BRAKE > Front Disc Brake Assembly

ASSEMBLY

1. Check each part. Ref. to BRAKE>Front Disc Brake Assembly>INSPECTION.
2. Clean the inside of the caliper body using brake fluid.
   Preparation items:
   Brake fluid: FMVSS No. 116, DOT3 or DOT4
3. Install the piston seal and the piston - disc brake.
   (1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
   (2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.
   Preparation items:
   Brake fluid: FMVSS No. 116, DOT3 or DOT4
   (3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.
   Preparation items:
   Grease: An item contained in the piston seal kit or Nippon Grease NIGLUBE RX-2
   (4) Install the piston - disc brake to the caliper body.
   Caution:
   Do not force the piston - disc brake into the sliding part of caliper body.

(a) Piston - disc brake
(b) Piston boot
(c) Caliper body ASSY
(d) Piston seal



4. Apply grease to the following locations.
   - Lock pin - front brake
   - Periphery of the guide pin - front brake
   - Support - front disc brake pin sliding section, and grooves of pin boot

   Preparation items:

   Brake grease: An item contained in the piston seal kit or Nippon Grease NIGLUBE RX-2
5. Install the pin boot to the lock pin - front brake and the guide pin - front brake, and insert them into the support - front disc brake.

   Caution:

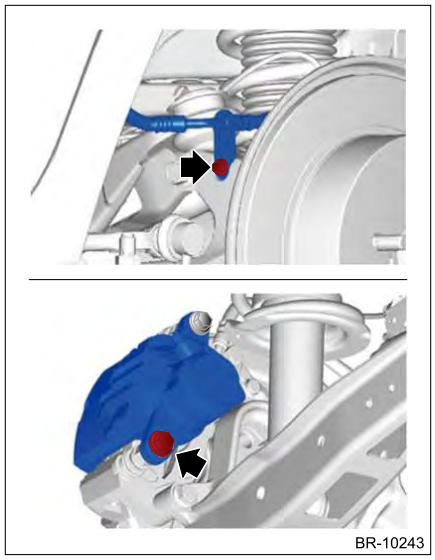
   Insert the lock pin - front brake and guide pin - front brake into specified position, and make sure that they slide and seat properly.

(a) Pin boot
(b) Lock pin - front brake or guide pin - front brake
(c) Grease applied area

BRAKE > Front Disc Brake Assembly

INSPECTION

1. Check the piston sliding part of caliper body and the piston for uneven wear, damage or rust.
2. Check the rubber parts for damage or deterioration.
3. If faulty is found in the inspection, replace the relevant part.



BRAKE > Rear Brake Pad

REMOVAL

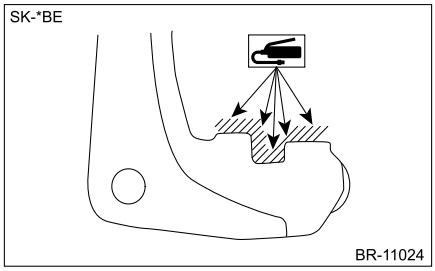
1. Lift up the vehicle, and then remove the rear wheels.
2. Remove the pad - disc brake rear.
   (1) Remove the brake hose bracket.
   (2) Remove the caliper bolt on the lower side.
   (3) Raise the caliper body assembly and remove the pad - disc brake rear.

Note:

Do not disconnect the brake hose from the caliper body assembly.

BRAKE > Rear Brake Pad

INSTALLATION

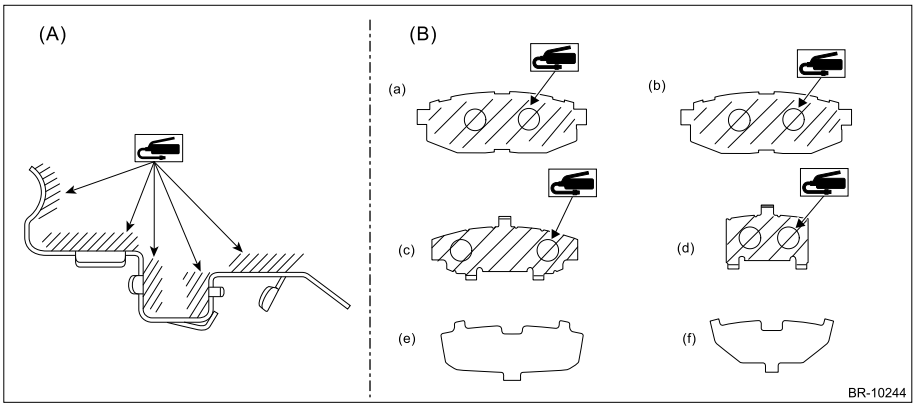


Note:

Before installation, remove the pad clip - rear brake and remove mud, foreign matter and rust from the caliper body assembly and the support - rear disc brake.

1. Apply a thin coat of grease to the support - rear disc brake.

Preparation items:



Grease: An item contained in the pad kit, Molykote M7439 or equivalent

2. Check the brake pad. Ref. to BRAKE>Rear Brake Pad>INSPECTION.
3. Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Preparation items:

Grease (pad side (A)): An item contained in the pad kit, Molykote M7439 or equivalent
Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N

(A) Pad clip - rear brake

(B) Pad - disc brake rear and the shim - disc brake rear

(a) Pad - disc brake rear outer

(b) Pad - disc brake rear inner

(c) Shim - disc brake rear inner

(d) Shim - disc brake rear inner

(e) Shim - disc brake rear outer

(f) Shim - disc brake rear outer

4. Install the pad clip - rear brake.
5. Press back the piston - disc brake with a tool as needed.

Caution:

When pressing back the piston - disc brake, the clearance between pad - disc brake and disc rotor becomes large, which makes the brake pedal effort softer. After the installation of rear wheel, be sure to perform the adjustment of the clearance and the pedal effort by depressing the brake pedal several times.

Preparation tool:

Disc brake piston tool

6. Install the pad - disc brake rear.

Note:

Install the pad indicator in proper direction.

7. Install the caliper body assembly.

Tightening torque:

27 N·m (2.8 kgf-m, 19.9 ft-lb)

8. Install the brake hose bracket.

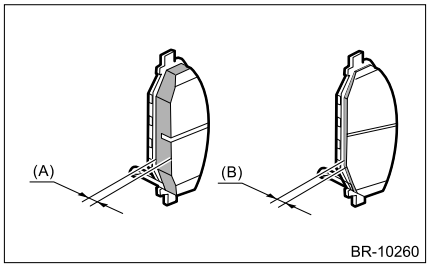
Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)

9. Install the rear wheels.

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)



BRAKE > Rear Brake Pad

INSPECTION

1. Check the thickness of the pad - disc brake rear.

Note:

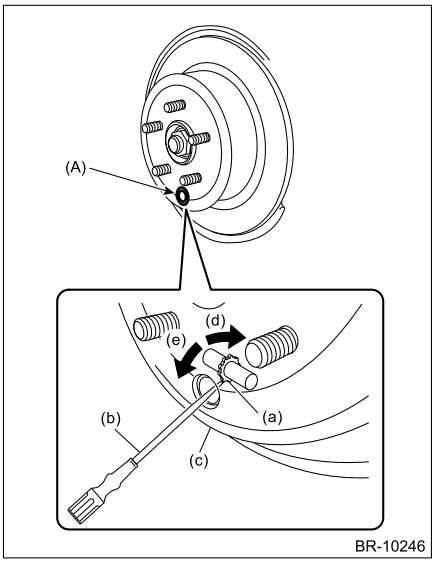
- **Always replace the pads of both wheels and both sides as a set.**
- **Replace pad clips if they are twisted or worn.**
- **Replace the pad if there is oil or grease on it.**
- **Wear indicators are installed on the pad - disc brake rear inner, and a squeaking sound is heard if the pad is worn to the limit.**

	Standard (A)	Wear limit (B)
Pad thickness	9 mm (0.354 in)	1.5 mm (0.059 in)

2. If the wear limit is exceeded in the inspection, replace the brake pad.

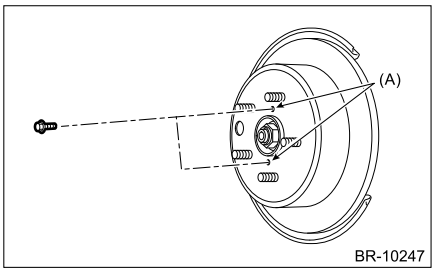
REMOVAL

1. Lift up the vehicle, and then remove the rear wheels.
2. Release the lever assembly - hand brake.
3. Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.



4. Remove the disc rotor.

Note:



If it is difficult to remove the disc rotor, perform the following two methods in order.

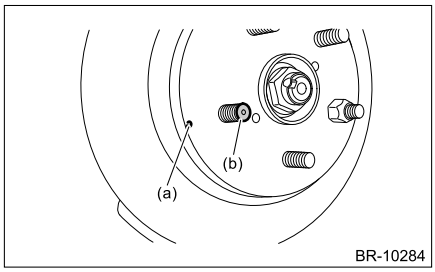
1. Remove the adjusting hole cover (A), and loosen the adjuster assembly - rear brake by inserting a flat tip screwdriver.

(a)	Adjuster ASSY - rear brake	(c)	Disc rotor	(e)	Shorten the adjuster ASSY - rear brake
(b)	Flat tip screwdriver	(d)	Extend the adjuster ASSY - rear brake		

2. When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

BRAKE > Rear Disc Rotor

INSTALLATION



Note:

Before installation, remove mud and foreign matter from the disc brake assembly.

1. Check the rear disc rotor. Ref. to BRAKE>Rear Disc Rotor>INSPECTION.
2. Install the disc rotor.

   Note:

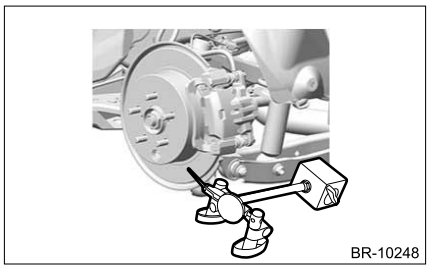
   When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.

3. Adjust the parking brake. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT.
4. Install the disc brake assembly.

   Tightening torque:

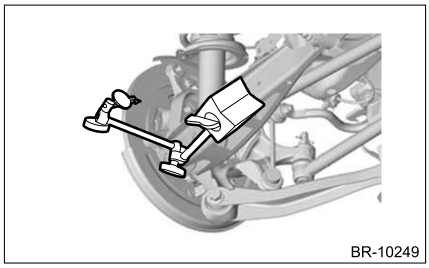
   Mounting bolt: 66 N·m (6.7 kgf-m, 48.7 ft-lb)

Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)



5. Install the rear wheels.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)

BRAKE > Rear Disc Rotor



INSPECTION

1. DISC ROTOR RUNOUT CHECK

1. Check the hub unit COMPL - rear axle for free play and runout before the inspection of disc rotor runout limit. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>INSPECTION.
2. Check the disc rotor runout.
   (1) Remove the caliper body assembly. Ref. to BRAKE>Rear Disc Brake Assembly>REMOVAL.
   (2) Secure the disc rotor by tightening the five wheel nuts.
   (3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.
   Disc rotor runout limit:
   0.05 mm (0.002 in)
   Note:
   <Example of magnet stand and dial gauge installation>
   The location where the magnet stand is installed varies to stabilize the magnet stand.

   (4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.
   Disc rotor runout limit:
   0.05 mm (0.002 in)
   Note:
   <Example of magnet stand and dial gauge installation>
   The location where the magnet stand is installed varies to stabilize the magnet stand.

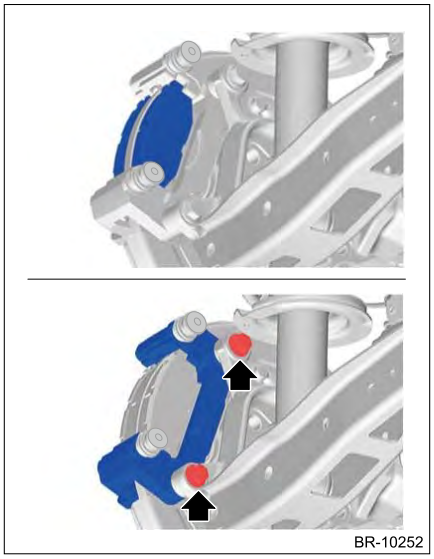
3. If the disc rotor runout exceeds service limit, grind the disc rotor.
4. Check the disc rotor thickness after grinding. Ref. to BRAKE>Rear Disc Rotor>INSPECTION > DISC ROTOR THICKNESS CHECK.

2. DISC ROTOR THICKNESS CHECK

1. Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	10 mm (0.39 in)	8.5 mm (0.335 in)	274 mm (10.79 in)

2. If the wear limit is exceeded in the inspection, replace the disc rotor.

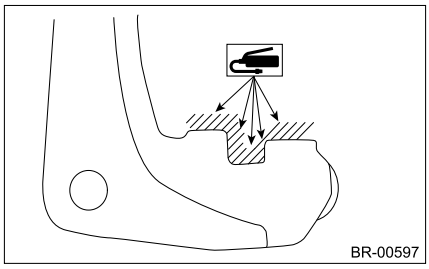


BRAKE > Rear Disc Brake Assembly

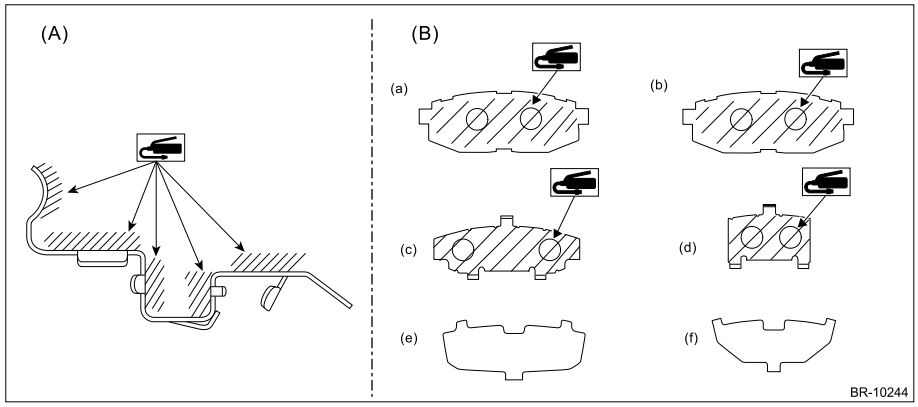
REMOVAL

1. Lift up the vehicle, and then remove the rear wheels.
2. Remove the union bolt and the caliper bolt, and remove the caliper body assembly.
   Caution:
   - **Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.**
   - **Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.**

3. Remove the support - rear disc brake.
   (1) Remove the pad - disc brake rear.
   (2) Remove the mounting bolts, and then remove the support - rear disc brake.



BRAKE > Rear Disc Brake Assembly



INSTALLATION

Note:
Before installation, remove the pad clip - rear brake and remove mud, foreign matter and rust from the caliper body assembly and the support - rear disc brake.

1. Check each part. Ref. to BRAKE>Rear Disc Brake Assembly>INSPECTION.
2. Apply a thin coat of grease to the support - rear disc brake.
   Preparation items:
   Grease: An item contained in the pad kit, Molykote M7439 or equivalent

3. Install the support - rear disc brake to the housing assembly - rear axle.
   Tightening torque:
   66 N·m (6.7 kgf-m, 48.7 ft-lb)
4. Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.
   Preparation items:
   Grease (pad clip (A)): An item contained in the pad kit, Molykote M7439 or equivalent
   Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N

(A) Pad clip - rear brake
(B) Pad - disc brake rear and the shim - disc brake rear

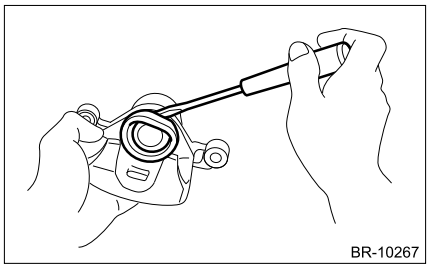
(a) Pad - disc brake rear outer
(b) Pad - disc brake rear inner
(c) Shim - disc brake rear inner
(d) Shim - disc brake rear inner
(e) Shim - disc brake rear outer
(f) Shim - disc brake rear outer

5. Install the pad clip - rear brake.
6. Press back the piston - disc brake with a tool as needed.
   Caution:
   When pressing back the piston - disc brake, the clearance between pad - disc brake and disc rotor becomes large, which makes the brake pedal effort softer. After the installation of rear wheel, be sure to perform the adjustment of the clearance and the pedal effort by depressing the brake pedal several times.
   Preparation tool:
   Disc brake piston tool
7. Install the pad - disc brake rear.

Note:
Install the pad indicator in proper direction.

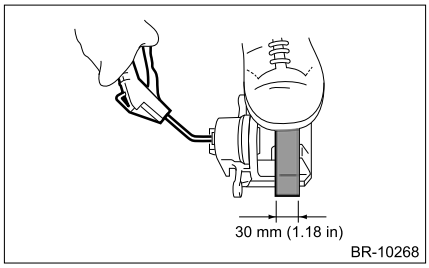
8. Install the caliper body assembly.
   Tightening torque:
   27 N·m (2.8 kgf-m, 19.9 ft-lb)
9. Install the brake hose bracket.
   Tightening torque:
   33 N·m (3.4 kgf-m, 24.3 ft-lb)
10. Connect the brake hose using a new brake hose gasket.
    Tightening torque:
    26 N·m (2.7 kgf-m, 19.2 ft-lb)
11. Bleed air from the brake line. Ref. to BRAKE>Air Bleeding>PROCEDURE > BRAKE LINE.
12. Install the rear wheels.
    Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)



BRAKE > Rear Disc Brake Assembly

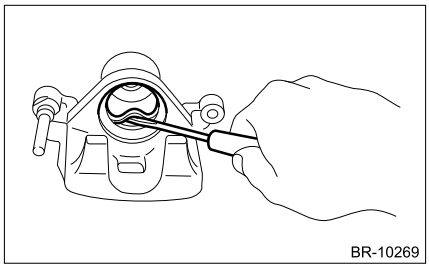
DISASSEMBLY



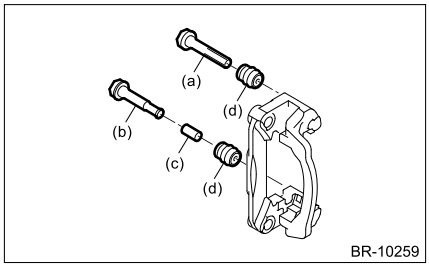
Caution:

Be careful not to allow foreign matter to enter the brake hose connector.

1. Remove mud and foreign matter from the caliper body assembly.
2. Remove the piston boot.



3. Remove the piston - disc brake.
   (1) Place a wooden block in the caliper body assembly as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
   (2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.



4. Remove the piston seal.

   Caution:

   Do not damage the piston sliding part and the piston seal groove.

5. Remove each part from support - rear disc brake.

(a) Guide pin - rear brake (black)
(b) Lock pin - rear brake (silver)
(c) Lock pin - bushing
(d) Pin boot

BRAKE > Rear Disc Brake Assembly

ASSEMBLY

1. Check each part. Ref. to BRAKE>Rear Disc Brake Assembly>INSPECTION.
2. Clean the inside of the caliper body using brake fluid.

Preparation items:

Brake fluid: FMVSS No. 116, DOT3 or DOT4

3. Install the piston seal and the piston - disc brake.

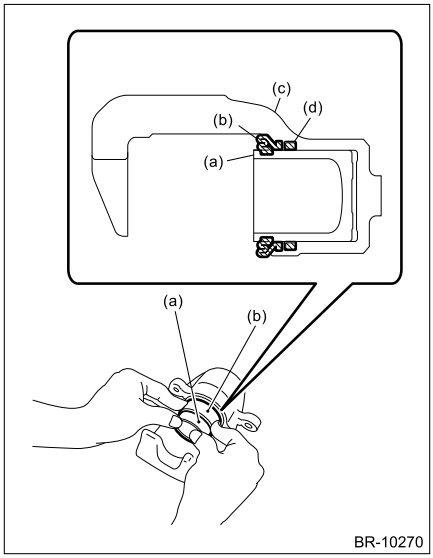
(1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.

(2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

Preparation items:

Brake fluid: FMVSS No. 116, DOT3 or DOT4

(3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.



Preparation items:

Grease: An item contained in the pad kit or Nippon Grease NIGLUBE RX-2

(4) Install the piston - disc brake to the caliper body.

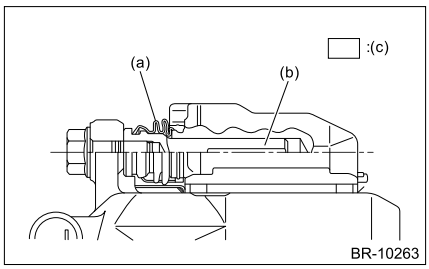
Caution:

Do not force the piston - disc brake into the sliding part of caliper body.

(a) Piston - disc brake
(c) Caliper body
(d) Piston seal
(b) Piston boot

4. Apply grease to the following locations.

- Lock pin - rear brake
- Periphery of the guide pin - rear brake
- Support - front disc brake pin sliding section, and grooves of pin boot



Preparation items:

Grease: An item contained in the piston seal kit or Nippon Grease NIGLUBE RX-2

5. Install the pin boot to the lock pin - rear brake and guide pin - rear brake, and insert them into the support - rear disc brake.

Caution:

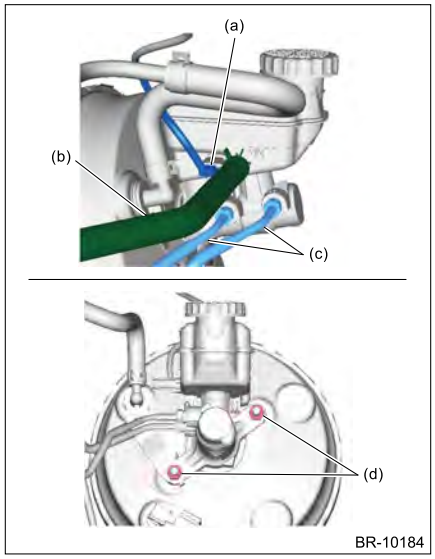
Insert the lock pin - rear brake and guide pin - rear brake into specified position, and make sure that they slide and seat properly.

(a) Pin boot
(b) Lock pin - rear brake or guide pin - rear brake
(c) Grease applied area

BRAKE > Rear Disc Brake Assembly

INSPECTION

1. Check the piston sliding part of caliper body and the piston - disc brake for uneven wear, damage or rust.
2. Check the rubber parts for damage or deterioration.
3. If faulty is found in the inspection, replace the relevant part.

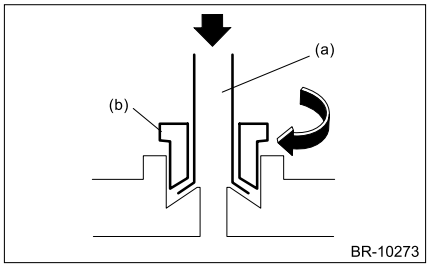


BRAKE > Master Cylinder

REMOVAL

Caution:

- **Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.**
- **Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.**

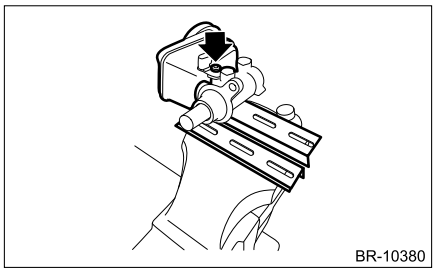


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Drain brake fluid from the reservoir tank completely.
3. Remove the master cylinder assembly.
   (1) Disconnect the fluid level gauge connector (a).
   (2) Disconnect the clutch hose (b). (MT model)
   (3) Disconnect the brake pipe (c).
   (4) Remove the nut (d), and slowly remove the master cylinder assembly from the vacuum booster assembly.

BRAKE > Master Cylinder

INSTALLATION

1. Replace the ring seal of the master cylinder assembly with a new part.
2. Install the master cylinder assembly.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
3. Turn and tighten the flare nut (b) by hand while pressing the brake pipe (a) toward the master cylinder assembly side.
   Caution:
   Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.
   Tightening torque:
   19 N·m (1.9 kgf-m, 14 ft-lb)



4. Bleed air from the brake system and clutch system (MT model). Ref. to BRAKE>Air Bleeding>PROCEDURE.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

BRAKE > Master Cylinder

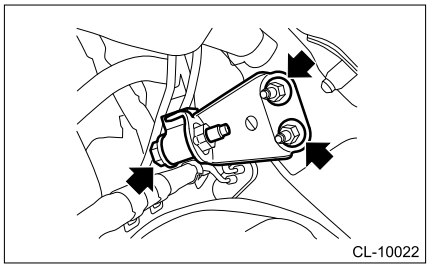
DISASSEMBLY

1. Remove the reservoir tank.
   Caution:
   Be careful not to tighten a vise excessively.
   (1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
   (2) Turn and pull off the pin using a driver to remove the reservoir tank.

2. Remove the seal from the cylinder body assembly.

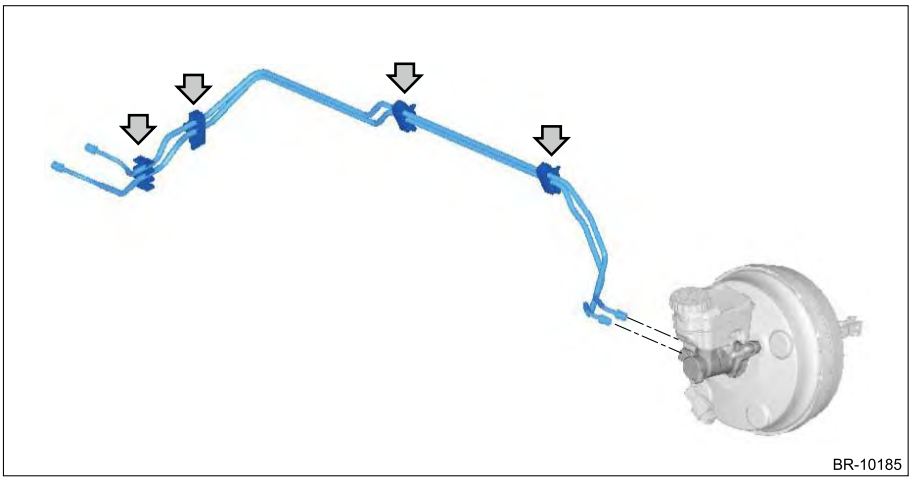
ASSEMBLY

1. Install the seal to the cylinder body assembly.
2. Install the reservoir tank.
   Caution:
   Be careful not to tighten a vise excessively.
   (1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
   (2) Tighten the pin using a driver to install the reservoir tank.
   Tightening torque:
   5.5 N·m (0.6 kgf-m, 4.1 ft-lb)



REMOVAL

1. BRAKE BOOSTER

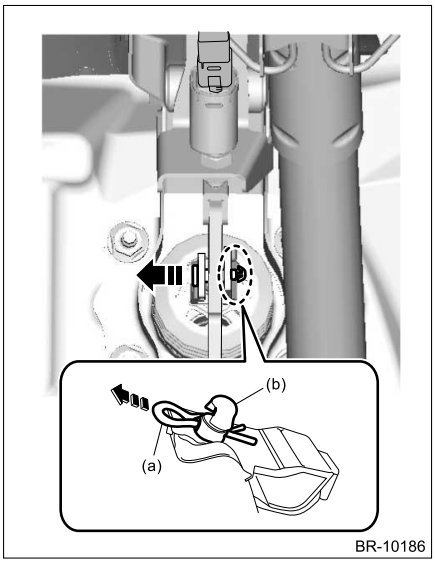


Caution:

- **Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.**
- **Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the vacuum hose. Ref. to BRAKE>Brake Booster>REMOVAL > BRAKE VACUUM HOSE.
3. Remove the nuts, and then remove the clutch connector bracket. (MT model)

4. Remove the engine control module (ECM). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
5. Remove the master cylinder assembly. Ref. to BRAKE>Master Cylinder>REMOVAL.
6. Remove the brake pipe assembly from the pipe clip.



7. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
8. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > KNEE AIRBAG MODULE AND PASSENGER'S LAP SEAT BELT PRETENSIONER.
9. Remove the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>REMOVAL.

   Caution:

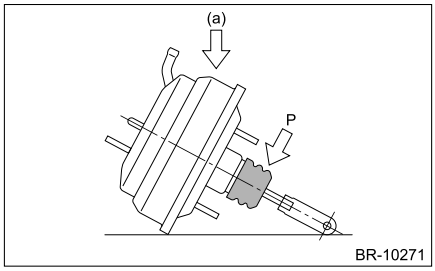
   To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
10. Remove the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
11. Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

    Caution:

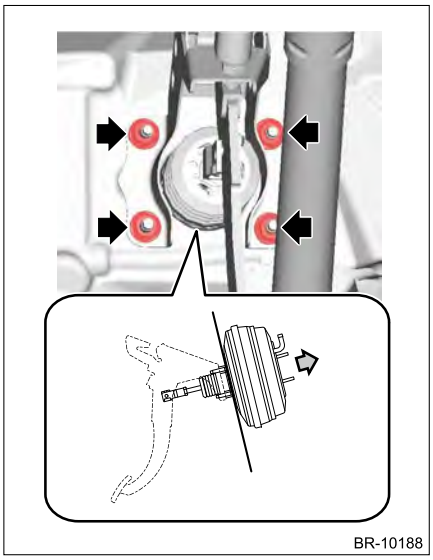
    - **Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.**
    - **Do not change the push rod length.**

12. Disconnect the vacuum sensor connector.

Caution:



- **Do not remove the vacuum sensor. If removed, replace the vacuum booster assembly with a new part.**
- **Do not rotate the vacuum sensor when disconnecting the connector of vacuum sensor. Otherwise the grommet on the mounting location of the vacuum sensor may be damaged.**



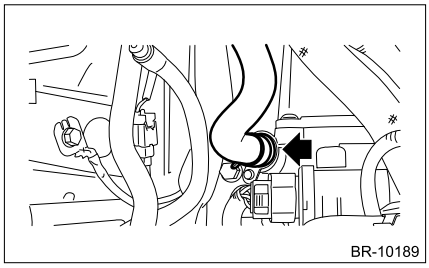
13. Remove the vacuum booster assembly.

Caution:

- **Do not disassemble the vacuum booster assembly.**
- **Make sure that the booster shell and vacuum pipe are not subject to strong impacts.**
- **Be careful not to drop the vacuum booster assembly. If the vacuum booster assembly is dropped accidentally, replace it.**
- **Be careful when placing the vacuum booster assembly on floor.**
- **If external force (a) is applied from above when the vacuum booster assembly is placed in this position, the resin portion as indicated by "P" may become damaged.**

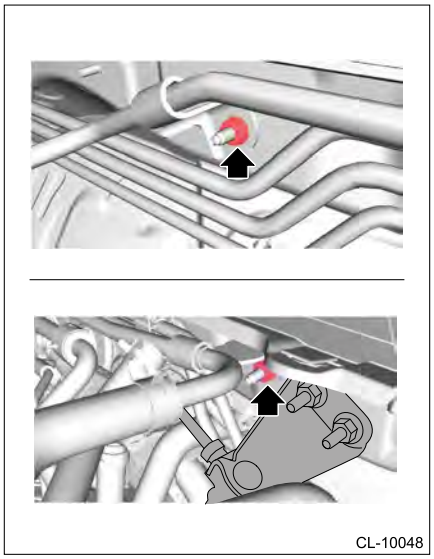
(1) Remove the nuts, and then remove the vacuum booster assembly.

2. BRAKE VACUUM HOSE



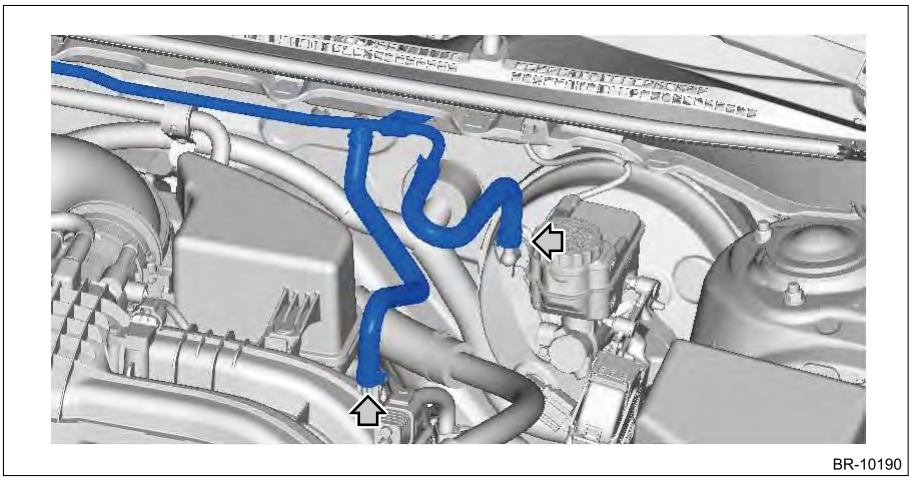
1. Remove the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>REMOVAL.

Note:



With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body.

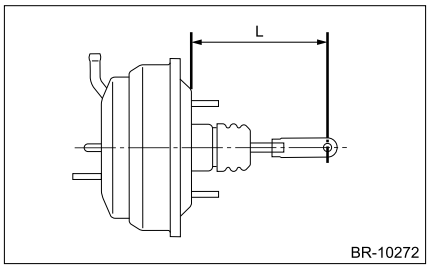
2. Remove the vacuum hose.



(1) Disconnect the vacuum hose from the vacuum pump.

(2) Disconnect the hose clamp from the bulkhead.

(3) Disconnect the vacuum hose from the intake manifold assembly and the vacuum booster assembly.



BRAKE > Brake Booster

INSTALLATION

1. BRAKE BOOSTER

1. Check and adjust the operating rod of the vacuum booster assembly.
   (1) Measure the length between the vacuum booster assembly mounting surface and clevis pin hole.
   (2) If it is not within the specification, loosen the lock nut, rotate the vacuum booster assembly operating rod to adjust the rod length.
   Specification L:
   136.3 mm (5.37 in)

2. Install the vacuum booster assembly.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
   Caution:
   - **Apply grease to the snap pin to prevent the operating rod from wear.**
   - **Replace the clevis pin with a new part, and apply a thin coat of grease to the clevis pin.**
     Preparation items:
     Grease: Shell Gadus S2 V220 or equivalent
   - **When installing the master cylinder assembly, replace the ring seal with a new part, and install it to the vacuum booster assembly.**
3. Install the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>INSTALLATION.
4. Install the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSTALLATION.
   Caution:
   - **Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.**
   - **Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.**
   - **Always place the tilt lever to the lock position after the steering column is adjusted.**
5. Install the knee airbag module.
   Tightening torque:
   7.5N·m (0.8 kgf-m, 5.5 ft-lb)
6. Install the cover assembly - instrument panel LWR driver.
7. Install the master cylinder assembly. Ref. to BRAKE>Master Cylinder>INSTALLATION.

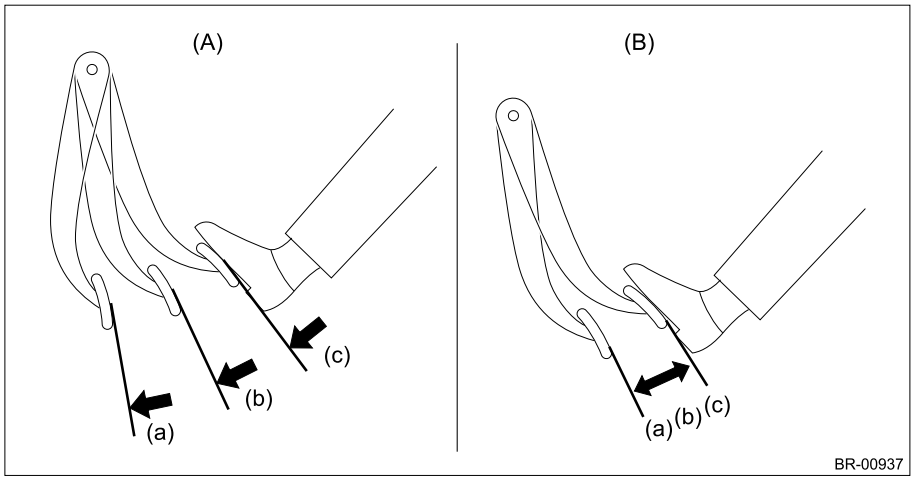
8. Install the engine control module (ECM). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSTALLATION.
9. Install the clutch connector bracket. (MT model)
   Tightening torque:
   7.5N·m (0.8 kgf-m, 5.5 ft-lb)
10. Install the vacuum hose. Ref. to BRAKE>Brake Booster>INSTALLATION > BRAKE VACUUM HOSE.
11. Bleed air from the brake system. Ref. to BRAKE>Air Bleeding>PROCEDURE.
12. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
13. Perform a road test to make sure the brakes do not drag.

2. BRAKE VACUUM HOSE

1. Install the vacuum hose.
   (1) Connect the vacuum hose to the intake manifold assembly and the vacuum booster assembly.
   (2) Install the vacuum hose to the vacuum pump.
   (3) Install the hose clamp to the bulkhead.
   Tightening torque:
   7.5N·m (0.8 kgf-m, 5.5 ft-lb)

BRAKE > Brake Booster

INSPECTION



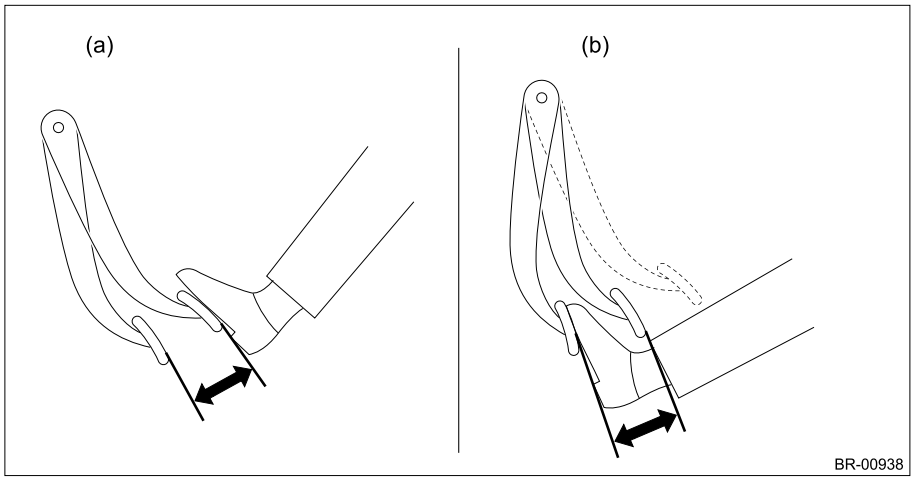
1. OPERATION CHECK WHEN NOT USING MEASURING DEVICES

Caution:
When checking operation, be sure to apply the parking brake securely.

When an operation check is performed with no measuring devices, a faulty part cannot be identified correctly. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

AIR TIGHTNESS CHECK

1. Start the engine, and idle it for 1 to 2 minutes, then turn it OFF.
2. Depress the brake pedal several times applying the normal pedal force.
   Note:
   The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression.
3. If no change occurs in the pedal height when pressed, the vacuum booster assembly is faulty.



(A) Normal (B) Not OK

(a) 1st (b) 2nd (c) 3rd

Note:
- **In case of defective operation, inspect the condition of the check valve and vacuum hose as well.**
- **Replace them if faulty, and perform the test again.**
- **If no improvement is observed, check precisely with gauges.**

CHECK OPERATION

1. While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.

(a) When engine is stopped (b) When engine is started

2. With the brake pedal depressed, start the engine.
3. As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the vacuum booster assembly is faulty.

Note:

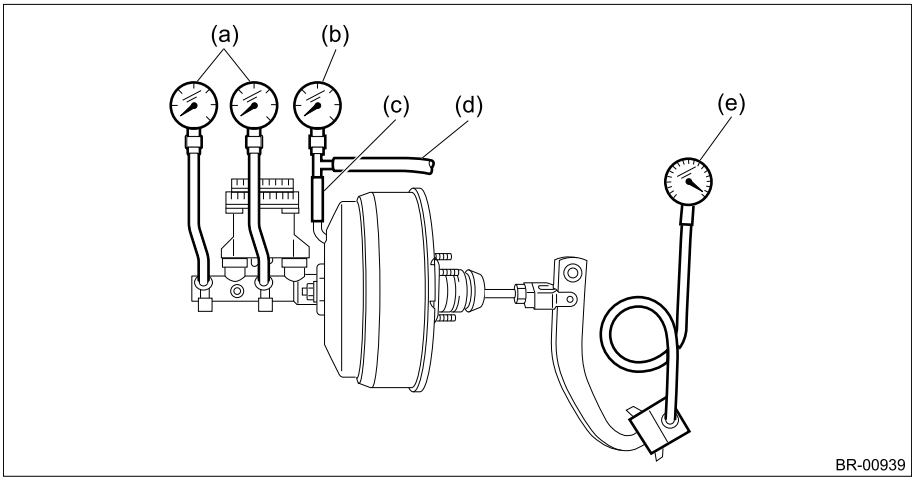
If a faulty part is detected after inspection, check precisely with measuring devices.

LOADED AIR TIGHTNESS CHECK

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed.
Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of vacuum booster assembly is normal. If the pedal height increases, it is faulty.

Note:

If a faulty part is detected after inspection, check precisely with measuring devices.

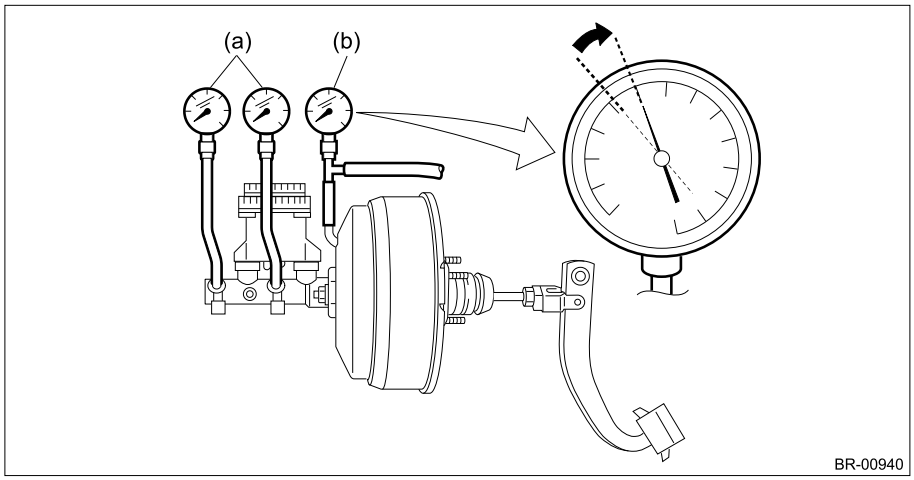


2. OPERATION CHECK WHEN USING MEASURING DEVICES

Caution:

When checking operation, be sure to apply the parking brake securely.

CHECK WITH MEASURING DEVICES

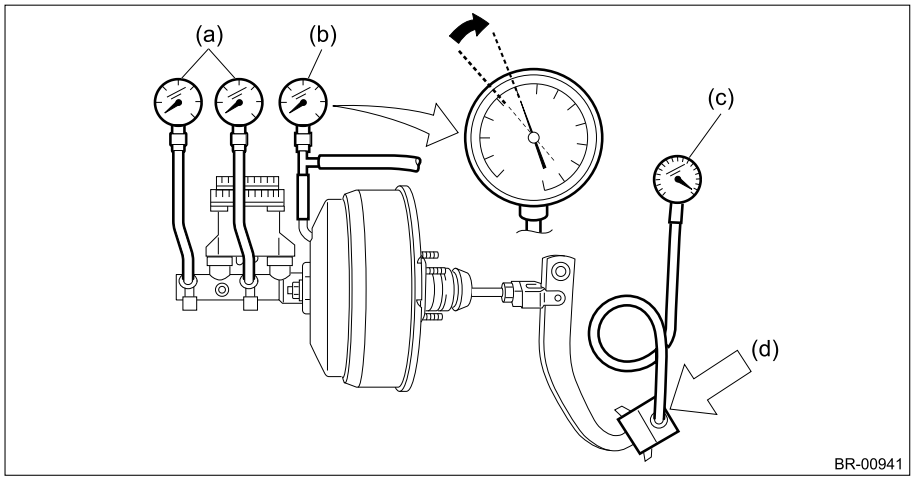


Connect a measuring device as shown in the figure. After bleeding air from the pressure gauge, perform each check.

(a) Pressure gauge
(b) Vacuum gauge
(c) Adapter hose
(d) Vacuum hose
(e) Pedal force gauge

AIR TIGHTNESS CHECK

1. Start the engine and keep it running at idle until vacuum pressure indicates 66.7 kPa (500 mmHg, 19.69 inHg) while the brake pedal is not depressed.



(a) Pressure gauge (b) Vacuum gauge

2. Stop the engine and check the vacuum pressure.
   If the value matches the following standard, the vacuum booster assembly function is normal.
   Vacuum pressure: standard
   The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less
   If a faulty part is detected after inspection, it may results from one of the following causes.
   - Check valve malfunction
   - Leak from vacuum hose
   - Leak from shell joint section or stud bolt welded section
   - Damaged diaphragm
   - Leak from valve body seal and bearing section
   - Leak from plate and seal assembly section
   - Leak from poppet valve assembly section

LOADED AIR TIGHTNESS CHECK

1. Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lbf).
2. Keep the engine running at idle and the pedal depressed until vacuum pressure of the vacuum gauge indicates 66.7 kPa (500 mmHg, 19.69 inHg).

(a) Pressure gauge (c) Pedal force gauge (d) Depressed
(b) Vacuum gauge

3. Stop the engine and check the vacuum gauge.
   If the value matches the following standard, the vacuum booster function is normal.
   Vacuum pressure: standard
   The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less
   If a faulty part is detected after inspection, refer to "AIR TIGHTNESS CHECK".
   Ref. to BRAKE>Brake Booster>INSPECTION.
4. If the vacuum booster assembly is faulty, replace it with a new part.

LACK OF BOOST ACTION CHECK

1. Turn the engine OFF, and set the value of the vacuum gauge to "0".
2. Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	512 (5.23, 74.38)	1,530 (15.6, 222)

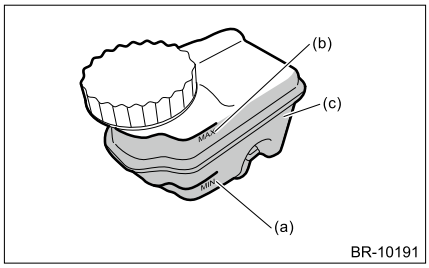
BOOSTING ACTION CHECK

1. Set the vacuum gauge reading to 93 kPa (697 mmHg, 27.47 inHg) with the engine running.
2. Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	7,468 (76.1, 1,082)	14,808 (151, 2,148)

3. BRAKE VACUUM HOSE

Check to see that air only flows in one direction, when air is blown into or sucked from the hose.



BRAKE > Brake Fluid

INSPECTION

Caution:

- **Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.**
- **Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.**
- **Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.**
- **Do not allow dirt or dust to get into the reservoir tank.**

1. Check the fluid for discoloration.
2. Check that the amount of brake fluid is between the lines of "MIN" and "MAX" from the front view or from the forward right and left within 90°.
   Caution:
   Always check the level using the specified direction because there is a partition in the reservoir tank.

(a) MIN. level
(b) MAX. level
(c) Brake fluid

3. If the brake fluid level is close to "MIN", check the brake pipe or brake hose for any leak first. Then, check that the brake fluid level is reduced due to brake pad wear.
4. If the fluid is extremely discolored or the fluid level is less than the specified value after inspection, replenish or replace with the new fluid.

BRAKE > Brake Fluid

REPLACEMENT

Caution:

- **Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.**
- **Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.**
- **Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.**
- **Do not allow dirt or dust to get into the reservoir tank.**

Note:

- **During the operation, keep the reservoir tank filled with brake fluid to prevent entry of air.**
- **Operate the brake pedal slowly and depress it fully.**
- **For convenience and safety, perform the work with 2 people.**
- **The required amount of brake fluid is approximately 500 mL (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.**

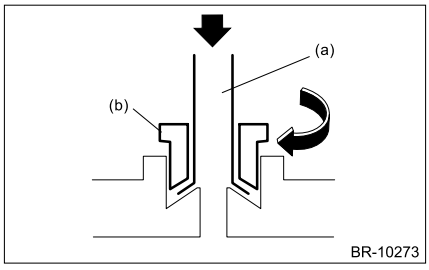
1. Lift up the vehicle.
2. Remove both the front and rear wheels.
3. Drain brake fluid from the reservoir tank.
4. Replenish the reservoir tank with the recommended brake fluid, and perform the same procedure as for bleeding the brake line on each brake caliper. Ref. to BRAKE>Air Bleeding>PROCEDURE.
   Preparation items:
   Recommended brake fluid: FMVSS No. 116, DOT3 or DOT4
   Note:
   Repeat the full stroke depressing operation of the brake pedal slowly, until new brake fluid comes out from a transparent vinyl tube. (On each brake caliper, 20 times or more of pedal operations is necessary in order for new brake fluid from the master cylinder to come out from the bleeder - screw.)

PROCEDURE

Caution:

- **Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.**
- **Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.**
- **Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.**
- **Do not allow dirt or dust to get into the reservoir tank.**
- **For convenience and safety, perform the work with 2 people.**
- **During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.**
- **After air bleeding operation, wipe off fluid around each bleeder - screw and the reservoir tank.**

For air bleed procedure of each part, refer to the following.



- Master cylinder: Ref. to BRAKE>Air Bleeding>PROCEDURE > MASTER CYLINDER.
- Brake line: Ref. to BRAKE>Air Bleeding>PROCEDURE > BRAKE LINE.
- Hydraulic control unit: Ref. to BRAKE>Air Bleeding>PROCEDURE > HYDRAULIC CONTROL UNIT.
- Caliper: Ref. to BRAKE>Air Bleeding>PROCEDURE > CALIPER.

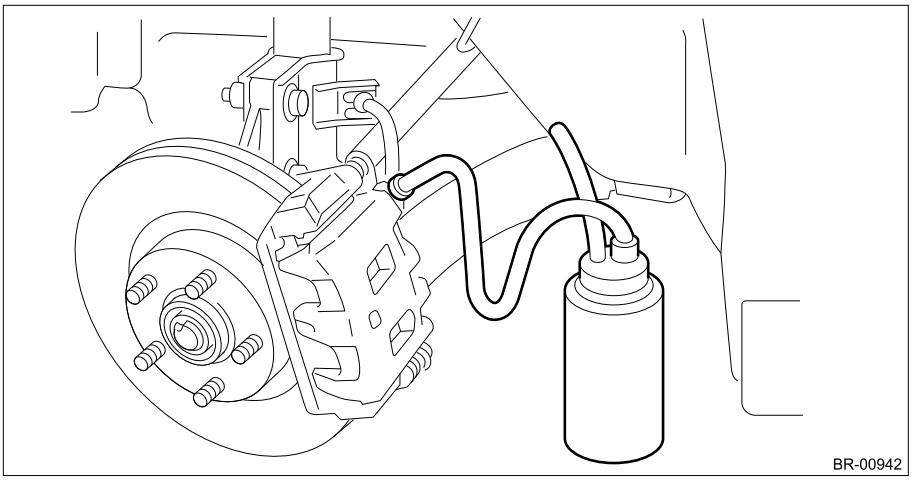
1. MASTER CYLINDER

Note:

- **When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the brake master cylinder and the clutch master cylinder (MT model).**
  For air bleed procedure of the clutch fluid, refer to "CLUTCH SYSTEM" section. Ref. to CLUTCH SYSTEM>Clutch Fluid Air Bleeding>PROCEDURE.
- **If bleeding of the master cylinder assembly is not necessary, omit the following procedures, and perform bleeding of the brake line. Ref. to BRAKE>Air Bleeding>PROCEDURE > BRAKE LINE.**

1. Install the brake pipe to the master cylinder assembly.
   (1) Screw and tighten the flare nut (b) so that the end of the nut contacts the back side of the brake pipe flare, while pressing the brake pipe (a) toward the master cylinder assembly side.
   Caution:
   Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.
   Tightening torque:
   Brake pipe flare nut: 19 N·m (1.9 kgf-m,14 ft-lb)

2. Fill the reservoir tank of the master cylinder assembly with brake fluid.
   Note:
   - **Replenish brake fluid to the MAX level.**
   - **During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.**
3. Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly that is the closest from the VDC control module & hydraulic control unit, and the other end of the vinyl tube to a collection container.
4. Loosen the bleeder - screw, depress the brake pedal slowly and hold it.
5. Tighten the bleeder - screw, and release the brake pedal quickly.
6. Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.
   Note:
   Air bubbles are removed after repeating the procedures six to seven times.
7. Attach a transparent vinyl tube to the bleeder - screw of the left front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
8. Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.



Note:

- **Air bubbles are removed after repeating the procedures seven to eight times.**
- **With the procedures so far, bleed is completed for the air that entered in the master cylinder, front brake piping hose passages and front caliper.**
  Next, perform the following procedures to bleed air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.

9. Attach a transparent vinyl tube to the bleeder - screw of the left rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
10. Loosen the bleeder - screw, and repeat the full stroke depressing operation of the brake pedal slowly, until the brake fluid in the transparent vinyl tube has no more air bubbles, then tighten the bleeder - screw.
    Note:
    By repeating the procedures 15 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the left rear caliper body assembly and is discharged.
11. Attach a transparent vinyl tube to the bleeder - screw of the right rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
12. Perform step 10).
    Note:
    - **By repeating the procedures 10 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the right rear caliper body assembly and is discharged.**
    - **With the procedures so far, bleed is completed for the air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.**
      Lastly, perform the following procedures to bleed air that may remain in areas where the brake fluid flow stands.
13. Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
14. After repeating firmly depressing of the brake pedal quickly five or six times, depress and hold the pedal.
15. Loosen the bleeder - screw to drain brake fluid. When the brake pedal reaches the full stroke position, tighten the bleeder - screw quickly, and release the brake pedal.
16. Repeat steps 14) and 15) until there are no more air bubbles in the transparent vinyl tube.
    Note:
    Repeat the procedures approximately four to five times.
17. Repeat steps 14) to 16) above for each brake caliper.
    Note:
    Bleed air in the order starting from the front RH → front LH → rear LH → rear RH.
18. Tighten the bleeder - screw to the specified torque.
    Tightening torque:
    Bleeder - screw: 8 N·m (0.8 kgf-m, 5.9 ft-lb)
19. Install the cap - bleeder to each bleeder - screw.

2. BRAKE LINE

1. When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the master cylinder assembly before bleeding the brake line. Ref. to BRAKE>Air Bleeding>PROCEDURE > MASTER CYLINDER.
2. Fill the reservoir tank of the master cylinder assembly with brake fluid.
   Note:
   While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.
3. Attach one end of a transparent vinyl tube to the bleeder - screw, and the other end to a brake fluid collection container.

4. Loosen the bleeder - screw, and then repeat the full stroke depressing operation of the brake pedal, until brake fluid in the transparent vinyl tube has no more air bubbles.
   Note:
   Air bubbles are removed after repeating the depressing operation 15 times or more for the front caliper, and 20 times or more for the rear caliper.
5. Perform the steps 2) to 4) above on each brake caliper.
   Note:
   Perform in the order starting from the front RH → front LH → rear LH → rear RH.
6. Tighten the loosened bleeder - screw, repeat firmly depressing of the brake pedal 5 to 6 times, and then depress and hold the brake pedal.
7. Loosen the bleeder - screw to drain the brake fluid. When the brake pedal reaches the full stroke position, immediately tighten the bleeder - screw and return the brake pedal.
8. Repeat steps 6) and 7) until there are no more air bubbles in the transparent vinyl tube.
9. Perform the steps 6) to 8) above on each brake caliper.
   Note:
   Perform in the order starting from the front RH → front LH → rear LH → rear RH.
10. Operate the hydraulic control unit in the sequence control mode for both ABS and VDC systems.
    Caution:
    - **If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform steps 11) to 16).**
    - **For normal air bleeding operation, do not operate the sequence control for the hydraulic control unit. (Operating the sequence control may let air in the normal air bleeding passages move to the pressure control section.)**

    Note:
    - **Normal air bleeding operation does not help bleed air that enters the pressure control section in the hydraulic control unit.**
    - **If there is a possibility that air enters the pressure control section in the hydraulic control unit (if VDC or ABS operates with air contained in the normal air bleeding passage), perform the sequence control mode for both of the ABS and VDC systems.**
11. Perform the ABS sequence control mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>ABS Sequence Control.
    Caution:
    Be sure to perform the ABS sequence control mode first.
12. Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.
    Note:
    - **Perform in the order starting from the front RH → front LH → rear LH → rear RH.**
    - **As a reference, the number of the full stroke depressing operation is six times.**
13. Perform the VDC sequence control mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Sequence Control.
14. Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.
15. Repeat from steps 11) to 14) for three cycles.
16. In case air still remains at step 15), repeat steps 11) to 14) again until all air is removed.
17. Fill the reservoir tank with brake fluid up to the “MAX” level.
18. Tighten the bleeder - screw to the specified torque.
    Tightening torque:
    Bleeder - screw: 8 N·m (0.8 kgf-m, 5.9 ft-lb)
19. Install the cap - bleeder to each bleeder - screw.
20. Check that there are no brake fluid leaks at the flare nut portion or in the entire brake system.
21. After inspection, wipe off fluid around each bleeder - screw and the reservoir tank.

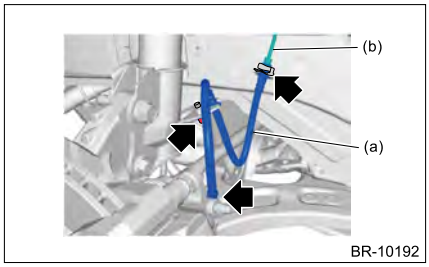
22. Perform a road test and ensure that the brakes operate normally.

3. HYDRAULIC CONTROL UNIT

1. Bleed air from the brake line. Ref. to BRAKE>Air Bleeding>PROCEDURE > BRAKE LINE.

   Note:

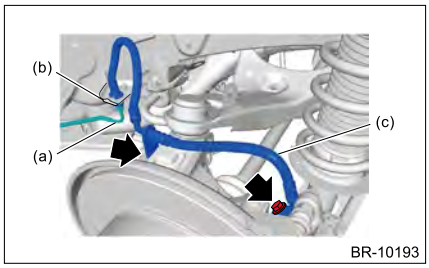
   If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform the sequence control mode for both of the ABS and VDC systems. (Refer to steps 10) to 16) for brake lining.)



4. CALIPER

1. Bleed air from the brake line. Ref. to BRAKE>Air Bleeding>PROCEDURE > BRAKE LINE.

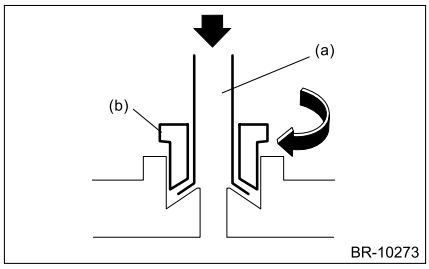
REMOVAL



1. FRONT BRAKE HOSE

1. Remove the front brake hose.
   1. Disconnect the brake hose (a) and the brake pipe (b).
      Preparation tool:
      Flare nut wrench
   2. Remove the clamp, strut mounting bolt and union bolt, and remove the front brake hose.

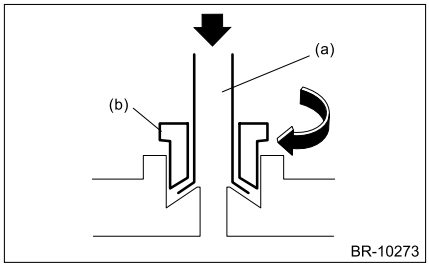
2. REAR BRAKE HOSE



1. Remove the rear brake hose.
   1. Remove the brake hose bracket bolt and union bolt.
   2. Disconnect the brake pipe (a).
      Preparation tool:
      Flare nut wrench
   3. Remove the brake hose clamp (b), and remove the rear brake hose (c).

INSTALLATION

1. FRONT BRAKE HOSE



1. Secure the brake hose to the brake hose mount part of strut COMPL.
   Tightening torque:
   Brake hose: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
2. Connect the brake hose to the caliper body assembly using a new gasket.
   Tightening torque:
   Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)
3. Position the disc in straight position and route the brake hose through the hole in the bracket on the wheel apron side.
   Caution:
   Do not twist the brake hose.
4. Connect the brake pipe and the hose, then temporarily tighten the flare nut.
5. Secure the brake hose to wheel apron bracket with clamp.
6. Turn and tighten the flare nut (b) by hand while pushing the brake pipe (a) away from yourself.
   Caution:
   Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.
   Tightening torque:
   Brake pipe flare nut: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

7. Bleed air from the brake system. Ref. to BRAKE>Air Bleeding>PROCEDURE.

2. REAR BRAKE HOSE

1. Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
2. Insert the clamp to secure brake hose.
   Tightening torque:
   Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
3. Install the brake hose to rear caliper body using a new gasket.
   Tightening torque:
   Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)
4. Turn and tighten the flare nut (b) by hand while pushing the brake pipe (a) away from yourself.
   Caution:
   Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.
   Tightening torque:
   Brake pipe flare nut: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

5. Bleed air from the brake system. Ref. to BRAKE>Air Bleeding>PROCEDURE.

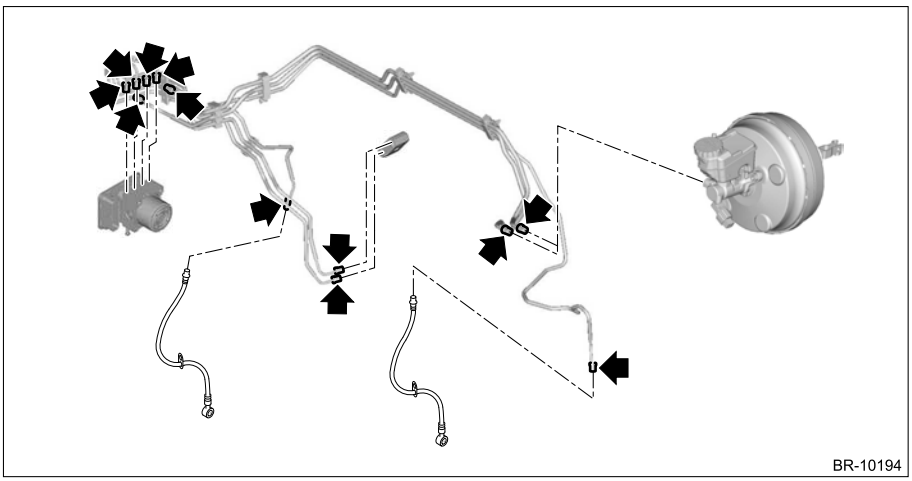
BRAKE > Brake Hose

INSPECTION

Check the hose for crack, interference with other parts, damage, and fluid leakage on connecting sections. If any faulty is found, repair or replace the relevant part.

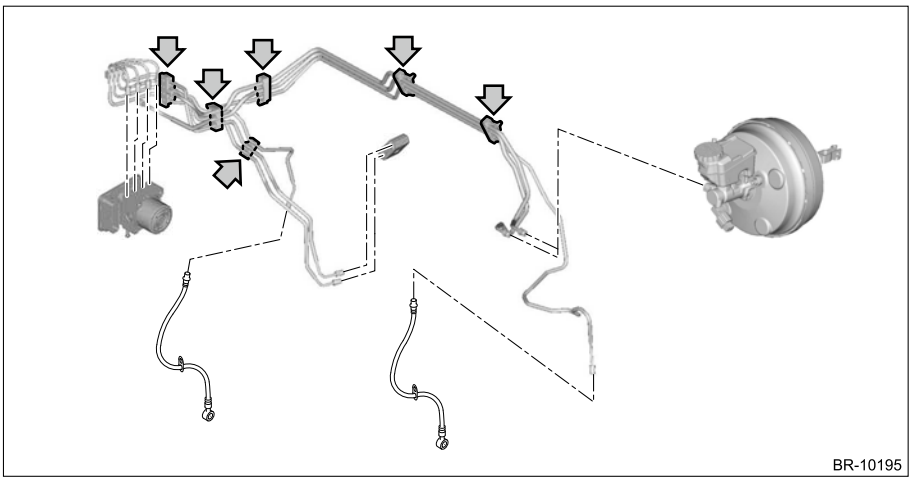
REMOVAL

Caution:



- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  - **Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
  - **Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.**
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When removing the brake pipe, do not bend.**

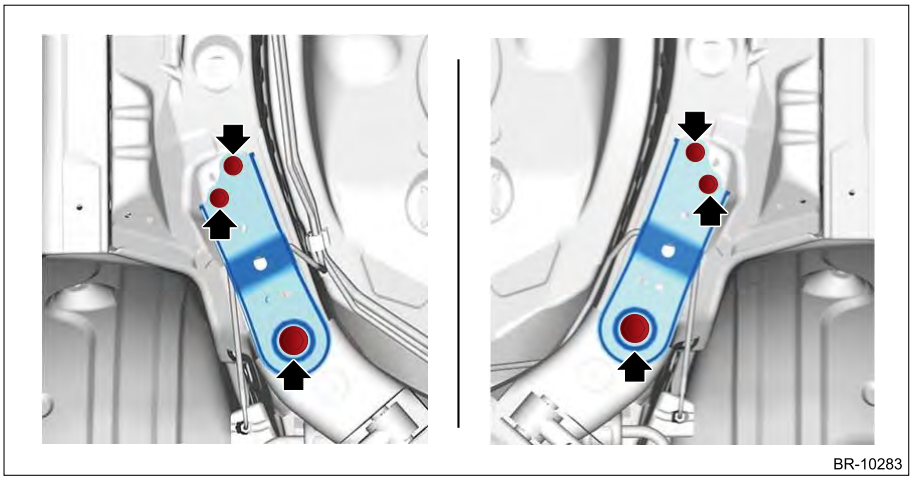
Note:



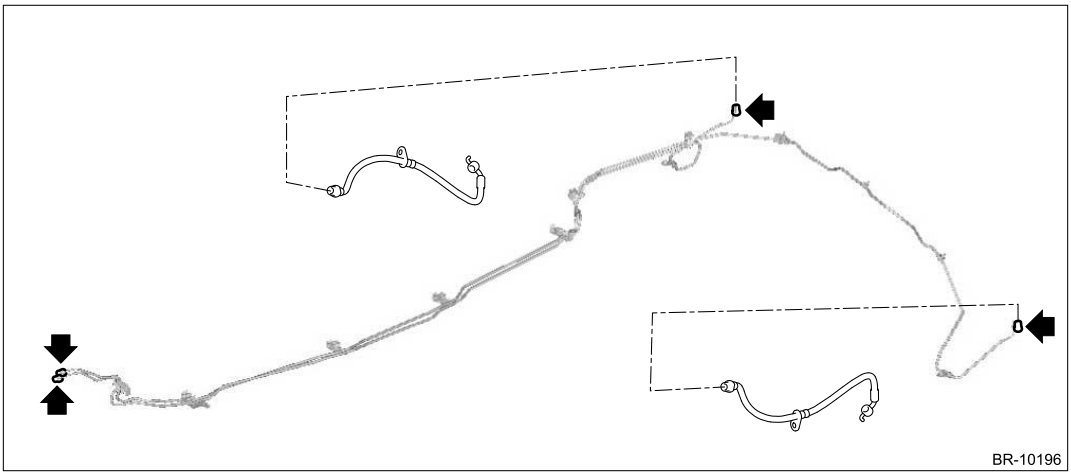
The airbag system wiring harness is routed near the center brake pipe.

1. FRONT BRAKE PIPE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Lift up the vehicle, and then remove the front wheels.
3. Remove the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.
4. Remove the vacuum booster assembly. Ref. to BRAKE>Brake Booster>REMOVAL > BRAKE BOOSTER.
5. Remove the brake pipe.
   (1) Separate each brake pipe using a flare nut wrench.

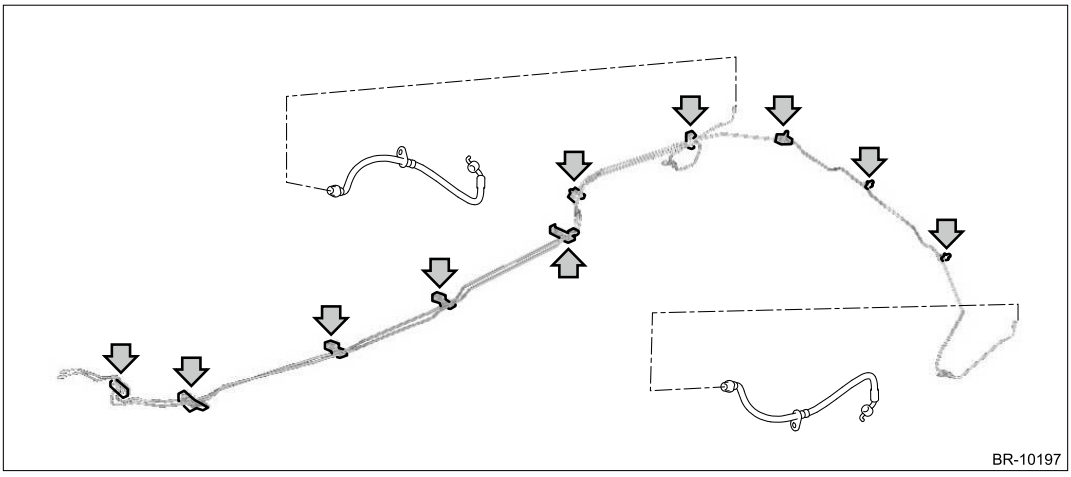


(2) Remove the brake pipe from the pipe clip.



2. CENTER AND REAR BRAKE PIPE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Lift up the vehicle, and then remove the rear wheels.
3. Remove the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.
4. Remove the fuel tank protector RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>REMOVAL.



5. Remove the floor under protector RH. Ref. to EXTERIOR/INTERIOR TRIM>Floor Under Protector>REMOVAL.
6. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
7. Remove the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
8. Remove the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>REMOVAL.
9. Remove the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank>REMOVAL.
10. Remove the support - sub frame.

11. Remove the brake pipe.
    (1) Separate each brake pipe using a flare nut wrench.

    (2) Remove the brake pipe from the pipe clip and the rear floor.

BRAKE > Brake Pipe

INSTALLATION

Caution:

- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  - **Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
  - **Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.**
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When installing the brake pipe, do not bend.**
- **After installing the brake pipe and hose, perform air bleed.**
- **After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.**

Note:

The airbag system wiring harness is routed near the center brake pipe.

1. FRONT BRAKE PIPE

1. Install the brake pipe.
   (1) Install the brake pipe to the pipe clip.
   (2) Install each brake pipe using a flare nut wrench.
   Tightening torque:
   Refer to "COMPONENT" of "General Description". Ref. to BRAKE>General Description>COMPONENT > FRONT BRAKE PIPES AND HOSES.
2. Install the vacuum booster assembly. Ref. to BRAKE>Brake Booster>INSTALLATION > BRAKE BOOSTER.
3. Install the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.
4. Install the front wheels.
   Tightening torque:
   120 N·m (12.2 kgf-m, 88.5 ft-lb)
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

2. CENTER AND REAR BRAKE PIPE

1. Install the brake pipe.
   (1) Install the brake pipe to the pipe clip and the rear floor.
   (2) Install each brake pipe using a flare nut wrench.
   Tightening torque:
   Refer to "COMPONENT" of "General Description". Ref. to BRAKE>General Description>COMPONENT > CENTER AND REAR BRAKE PIPES AND HOSES.
2. Install the support - sub frame.
   Tightening torque:
   Refer to "COMPONENT" of "General Description". Ref. to REAR SUSPENSION>General Description>COMPONENT > REAR SUSPENSION.
3. Install the fuel tank. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank>INSTALLATION.
4. Install the rear differential. Ref. to DIFFERENTIALS>Rear Differential (T-type)>INSTALLATION.
5. Install the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.
6. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.
7. Install the floor under protector RH. Ref. to EXTERIOR/INTERIOR TRIM>Floor Under Protector>INSTALLATION.
8. Install the fuel tank protector RH. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>INSTALLATION.
9. Install the crossmember support - rear RH. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.
10. Install the rear wheels.
    Tightening torque:
    120 N·m (12.2 kgf-m, 88.5 ft-lb)
11. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

BRAKE > Brake Pipe

INSPECTION

Check the pipe for crack and damage, and also check the connection for fluid leakage. If any faulty is found, repair or replace the relevant part.

Note:

Use a mirror when inspecting back sides and other locations which are hard to see.

REMOVAL

1. CVT MODEL

Caution:

Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>REMOVAL.

   Caution:

   To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
5. Remove the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
6. Remove the brake pedal assembly.

   (1) Disconnect the stop light switch connector.

   (2) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

   Caution:

   - **Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.**
   - **Do not change the push rod length.**

(3) Remove the bolt and nut, and then detach the brake pedal assembly.

2. MT model

Note:

Brake pedal is integrated with the clutch pedal.

For removal procedures of the brake pedal, refer to Clutch section. Ref. to CLUTCH SYSTEM>Clutch Pedal>REMOVAL.

BRAKE > Brake Pedal

INSTALLATION

1. CVT MODEL

Caution:

Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Install the brake pedal assembly.
   Caution:
   - **Apply grease to the snap pin to prevent the operating rod from wear.**
   - **Replace the clevis pin with a new part, and apply a thin coat of grease to the clevis pin.**

   Preparation items:
   Grease: Shell Gadus S2 V220 or equivalent

   Tightening torque:
   Brake pedal: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
2. Install the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>INSTALLATION.
3. Install the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSTALLATION.
   Caution:
   - **Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.**
   - **Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.**
   - **Always place the tilt lever to the lock position after the steering column is adjusted.**
4. Install the knee airbag module.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5. Install the cover assembly - instrument panel LWR driver.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
7. Check that the brake light operate properly.
8. Check the brake pedal after installation. Ref. to BRAKE>Brake Pedal>INSPECTION.

2. MT model

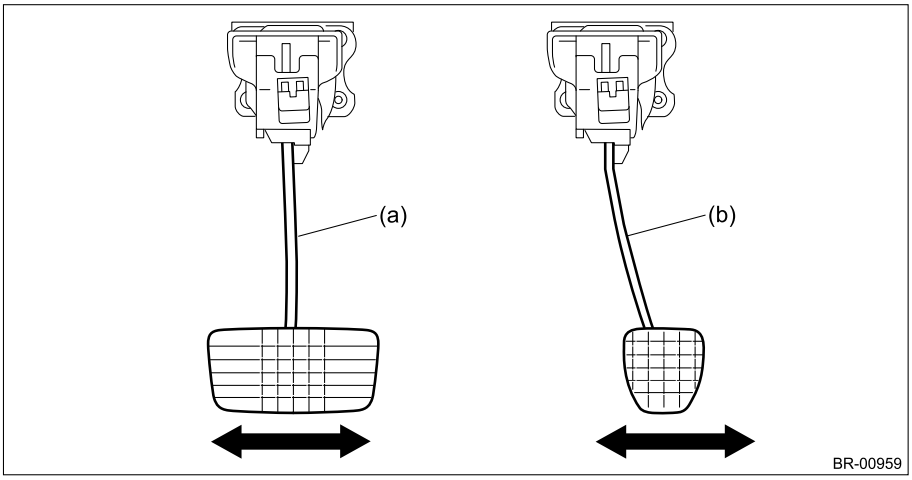
Note:

Brake pedal is integrated with the clutch pedal.

For installation procedure of the brake pedal, refer to Clutch section. Ref. to CLUTCH SYSTEM>Clutch Pedal>INSTALLATION.

BRAKE > Brake Pedal

INSPECTION



1. Move the pad - brake pedal in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

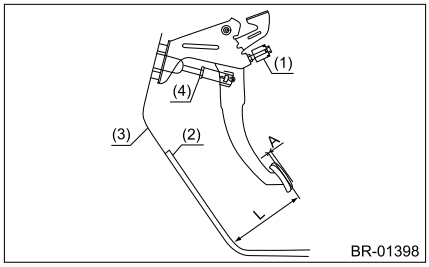
   Caution:

   If excessive deflection is noted, replace with a new bushing.

   Deflection of brake pedal:

   Service limit: 5.0 mm (0.197 in) or less

(a) Brake pedal (CVT model) (b) Brake pedal (MT model)



2. Check the position of the pedal pad.

   Pedal height L:

   143 — 153 mm (5.63 — 6.02 in)

   Brake pedal free play A:

   0.5 — 2.7 mm (0.02 — 0.11 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf)]

(1) Stop light switch (3) Toe board (4) Brake booster operating rod

(2) Mat

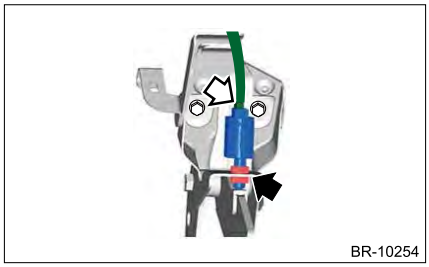
3. If it is not within the specification, loosen the lock nuts of vacuum booster operating rod, and rotate the rod to adjust the pedal height L within the specification.
4. Tighten the lock nut.

   Tightening torque:

   Operating lock nut: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

   Note:

   Check the brake pedal height. When adjusting, also adjust the stop light switch.



BRAKE > Stop Light Switch

REMOVAL

Caution:

Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

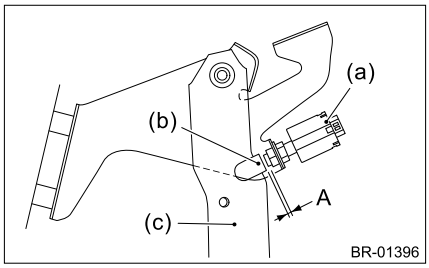
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the stop light switch.
   (1) Disconnect the stop light switch connector.
   (2) Remove the nut, and remove the stop light switch.

BRAKE > Stop Light Switch

INSTALLATION

Caution:

Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.



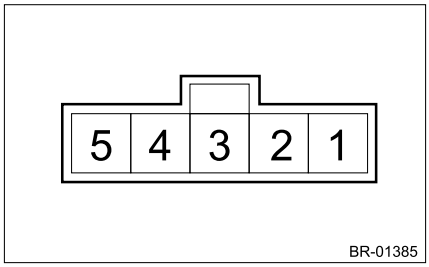
1. Install the stop light switch onto the bracket with screws and position it with the nut.
2. Adjust the stop light switch position, and then tighten the nut. Ref. to BRAKE>Stop Light Switch>ADJUSTMENT > CLEARANCE ADJUSTMENT.
   Tightening torque:
   8 N·m (0.8 kgf-m, 5.9 ft-lb)
3. Install the knee airbag module.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4. Install the cover assembly - instrument panel LWR driver.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

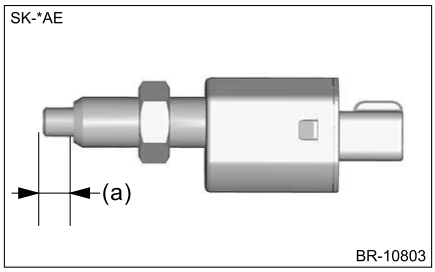
BRAKE > Stop Light Switch

INSPECTION

1. INSPECT THE SPECIFIED POSITION

1. Measure the clearance between the end of the stop light switch and the stopper.
   Caution:
   Be careful not to rotate the stop light switch.
   Stop light switch clearance A:
   1.5 mm (0.06 in)





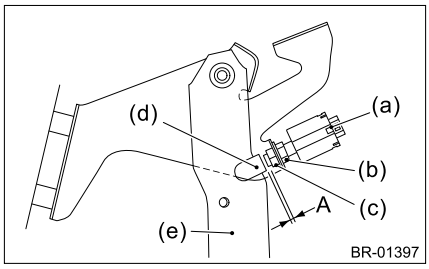
(a) Stop light switch
(b) Stopper
(c) Brake pedal

2. Adjust the position of the stop light switch if the inspection result is not within the standard value. Ref. to BRAKE>Stop Light Switch>ADJUSTMENT > CLEARANCE ADJUSTMENT.
3. If the stop light switch does not operate properly or it is not secured at the specified position after adjustment, replace with a new part.

2. CHECK OUTPUT

1. Check the voltage between connector terminals.
Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
2 — 3	Apply battery voltage between terminals 1 (+) — 3 (−). When pressing-in the end of the stop light switch to make the length (a) 3.6 mm (0.14 in) (the actual length will be a little shorter than 3.6 mm (0.14 in)), output voltage turns OFF.	0.5 V or less
	Apply battery voltage between terminals 1 (+) — 3 (−). When returning the end of the stop light switch to make the length (a) 3.6 mm (0.14 in) (the actual length will be a little longer than 3.6 mm (0.14 in)), output voltage turns ON.	12 V
4 — 3	Apply battery voltage between terminals 5 (+) — 3 (−). When pressing-in the end of the stop light switch to make the length (a) 4.5 mm (0.18 in) (the actual length will be a little shorter than 4.5 mm (0.18 in)), output voltage turns ON.	12 V
	Apply battery voltage between terminals 5 (+) — 3 (−). When returning the end of the stop light switch to make the length (a) 4.5 mm (0.18 in) (the actual length will be a little longer than 4.5 mm (0.18 in)), output voltage turns OFF.	0.5 V or less

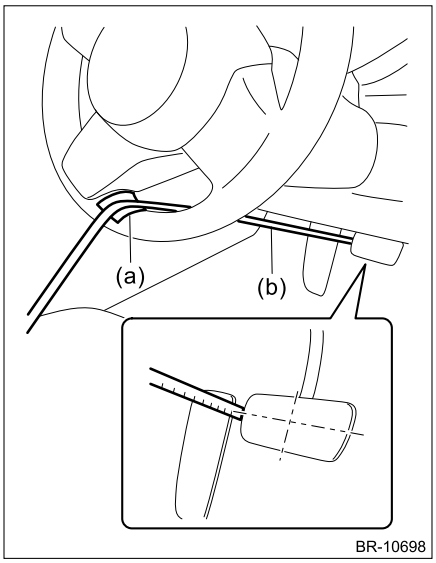


2. Replace the stop light switch if the inspection result is not within the standard value.

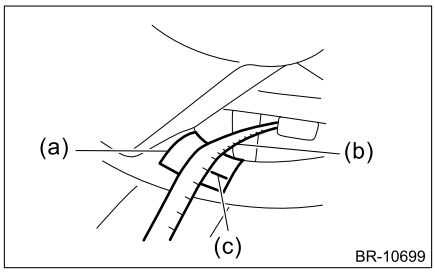
BRAKE > Stop Light Switch

ADJUSTMENT

1. CLEARANCE ADJUSTMENT



1. Loosen the lock nut, and adjust the stop light switch position until the clearance (A) between the threaded end of the stop light switch and the stopper becomes 1.5 mm (0.06 in). Then, tighten the lock nut.
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)



(a) Stop light switch
(b) Lock nut A
(c) Lock nut B
(d) Stopper
(e) Brake pedal

2. ADJUSTMENT WHEN VDC WARNING LIGHT OR EyeSight WARNING LIGHT IS ILLUMINATING

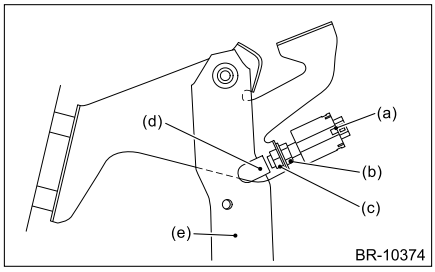
1. Measure the brake pedal stroke which turns on the stop light switch.
(1) Release the steering wheel lock, tilt the steering column to the lowest end and fully retract the column by the telescopic system.
(2) Affix the masking tape (a) to protect the steering wheel from damage, pass the measure (b) through the steering wheel and fix it to the vertical center position of the brake pedal.
Caution:
If the measure (b) interferes with the knee airbag module, remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.

(3) Set the measure (b) so that it becomes straight from the brake pedal, and add a marking (c) on the masking tape (a).

(4) Operate the brake pedal, and read the position where the stop light illuminates (the amount of the pedal stroke) using the marking added in the previous step.
Caution:
If the pedal stroke is less than 3 mm (0.12 in), it may lead to an incorrect light illumination by vibrations, etc.

2. If the stop light illuminating position is not within the adjustment value, readjust the stop light switch position.
Note:
Turning the lock nut B by 90° changes the amount of pedal stroke by approx. 1 mm (0.04 in).
Adjustment value (amount of pedal stroke):

4 mm (0.16 in) or more, 6 mm (0.24 in) or less



(1) Loosen the lock nut A.

(2) Turn the lock nut B to adjust the stop light switch position so that the stop light illuminating position is within the adjustment value.

(3) After adjustment, tighten the lock nut A.

Tightening torque:

8 N·m (0.8 kgf-m, 5.9 ft-lb)

(a) Stop light switch

(b) Lock nut A

(c) Lock nut B

(d) Stopper

(e) Brake pedal

(4) After the lock nut is tightened, check again that the stop light illuminating position is within the adjustment value. If it's not within the adjustment value, perform the adjustment procedure again.

Caution:

If the stop light illuminating position is less than 3 mm (0.12 in), it may lead to an incorrect stop light illumination by vibrations etc. even when the brake pedal is not operated while driving.

BRAKE > Brake Vacuum Pump

REMOVAL

For removal procedures of the brake vacuum pump, refer to the “MECHANICAL” section. Ref. to MECHANICAL(H4DO)>Vacuum Pump>REMOVAL.

BRAKE > Brake Vacuum Pump

INSTALLATION

For installation procedures of the brake vacuum pump, refer to the “MECHANICAL” section. Ref. to MECHANICAL(H4DO)>Vacuum Pump>INSTALLATION.

BRAKE > Brake Vacuum Pump

INSPECTION

Refer to “MECHANICAL” section for brake vacuum pump inspection. Ref. to MECHANICAL(H4DO)>Vacuum Pump>INSPECTION.

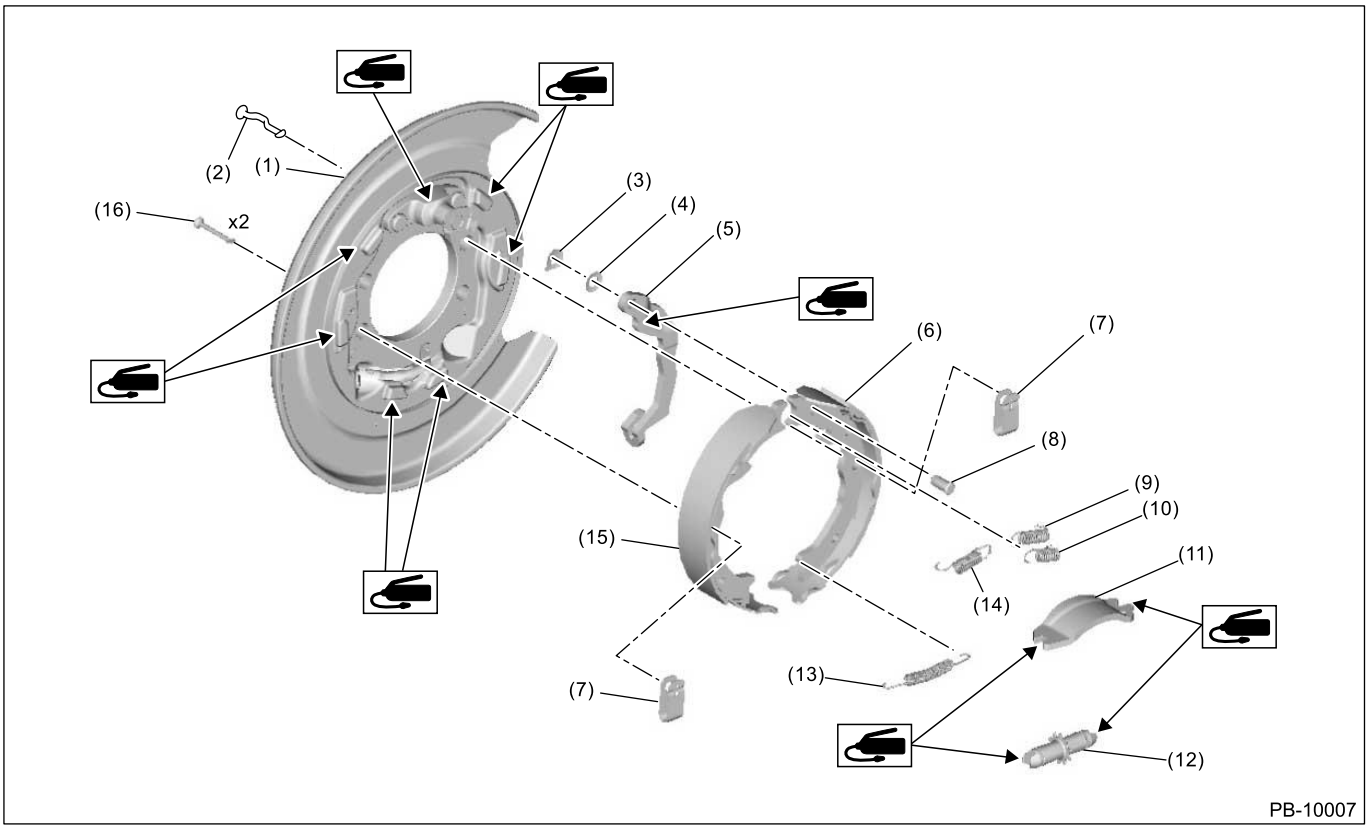
INSPECTION

	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on lining	Replace, grind or clean.
	(4) Improper operation of master cylinder assembly, disc caliper, vacuum booster assembly or check valve	Repair or replace.
2. Unstable or uneven braking	(1) Fluid on lining or rotor	Correct the cause of fluid leakage, and clean or replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper lining contact, deteriorated surface, deteriorated or worn lining material	Repair by grinding, or replace.
	(4) Deformed back plate	Repair or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Defective hub unit COMPL	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake and cable system.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Repair or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Repair or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Repair or replace.
	(7) Faulty wheel bearing	Replace.
5. Brake noise (1) (creaking sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose hub unit COMPL	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or support	Replace the pad or the support.

	Trouble and possible cause	Corrective action
8. VDC warning light or EyeSight warning light illuminating	Stop light switch adjustment malfunction	Adjust the stop light switch. Ref. to BRAKE>Stop Light Switch>ADJUSTMENT > ADJUSTMENT WHEN VDC WARNING LIGHT OR EyeSight WARNING LIGHT IS ILLUMINATING.
9. Stop light illuminating due to vibrations, etc. during driving (brake operation not performed)	Stop light switch adjustment malfunction	Adjust the stop light switch. Ref. to BRAKE>Stop Light Switch>ADJUSTMENT > ADJUSTMENT WHEN VDC WARNING LIGHT OR EyeSight WARNING LIGHT IS ILLUMINATING.

PARKING BRAKE

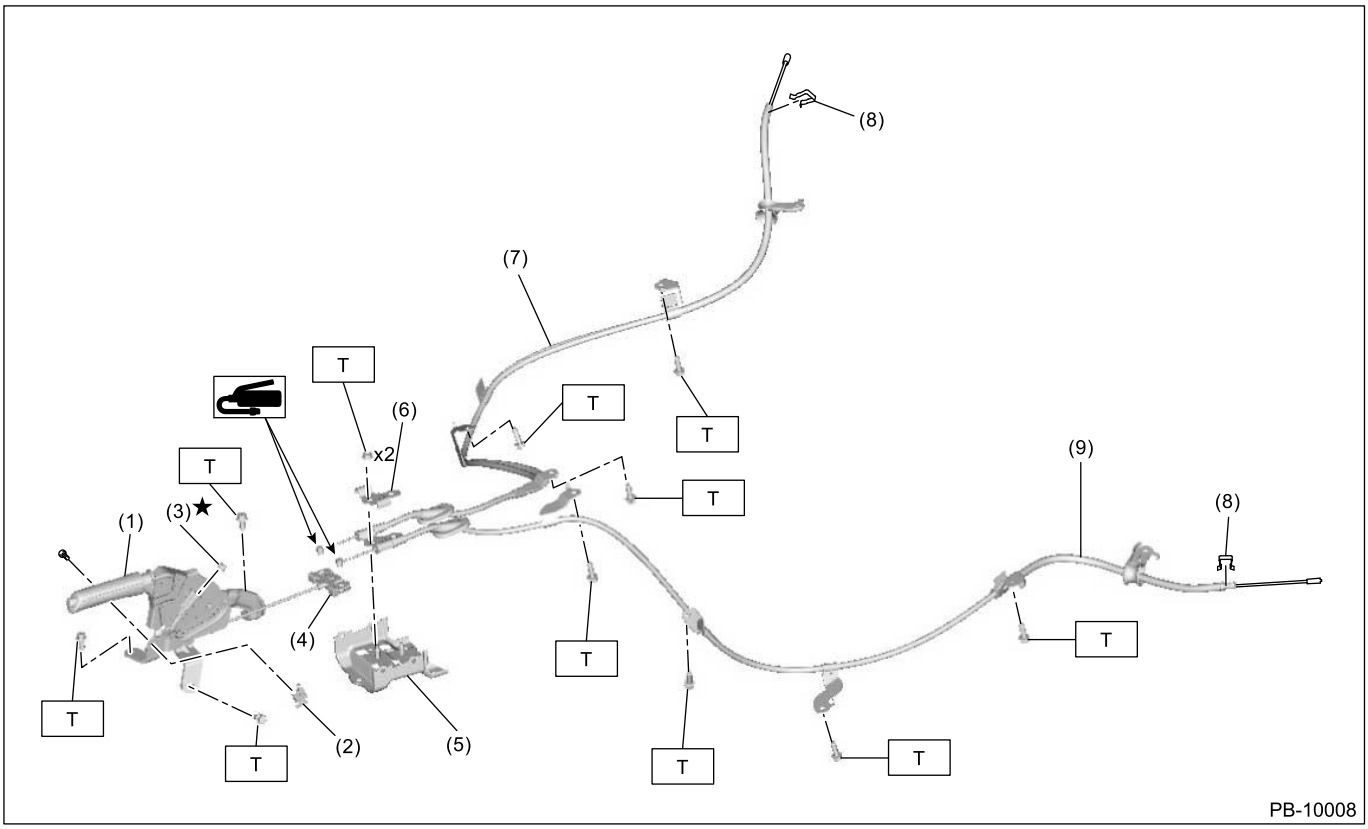
PB



1. General Description
2. Parking Brake Lever
3. Parking Brake Cable
4. Parking Brake Assembly (Rear Disc Brake)
5. General Diagnostic Table

SPECIFICATION

Item		Specification	
Type		Drum in disc duo servo type	
Effective drum diameter mm (in)		170 (6.69)	
Lining dimensions (Length × Width × Thickness) mm (in)		147.7 × 30 × 3.5 (5.81 × 1.181 × 0.14)	
Inside diameter mm (in)		Standard	170 (6.69)
		Limit	171 (6.73)
Lining thickness mm (in)		Standard	3.5 (0.14)
		Limit	1.5 (0.059)
Clearance adjustment		Manual adjustment	
Free play adjusting method		Auto adjuster	
Operation method		Manual lever type	
Lever stroke	Notches/N (kgf, lbf)	7 — 8/200 (20.4, 45)	



COMPONENT

1. PARKING BRAKE

(1) Back plate - rear brake
(2) Pin - secondary shoe hold-down
(3) Retainer - rear brake
(4) Spring washer - rear brake
(5) Parking lever - rear
(6) Parking brake shoe (secondary)
(7) Cup - shoe hold-down
(8) Pin - parking brake
(9) Spring - secondary shoe return
(10) Spring - strut
(11) Strut - brake
(12) Adjuster ASSY - rear brake
(13) Spring - adjuster
(14) Spring - primary shoe return
(15) Parking brake shoe (primary)
(16) Pin - primary shoe hold-down

2. PARKING BRAKE LEVER & CABLE

(1) Lever ASSY - hand brake
(2) Switch ASSY - hand brake
(3) Adjusting nut (self-locking nut)
(4) Equalizer
(5) Bracket
(6) Clamp A - hand brake cable
(7) Cable ASSY - parking brake RH
(8) Clamp B - hand brake cable
(9) Cable ASSY - parking brake LH

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

PARKING BRAKE > General Description

CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.

PARKING BRAKE > General Description

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

REMOVAL

1. Set the wheel stoppers to tires.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

   Note:

   On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
3. Remove the driver's seat. Ref. to SEATS>Front Seat>REMOVAL.
4. Remove the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
5. Remove the lever assembly - hand brake.

   (1) Disconnect the connector (a) of the switch assembly - hand brake.

   (2) Remove the adjusting nut (b).

   Caution:

   A self-locking nut is used for the adjusting nut of parking cable. Therefore, replace the self-locking nut with a new one when disassembling.

   (3) Remove the bolt, and then remove the lever assembly - hand brake.

6. Remove the inner cable end (a) from the equalizer (b).

PARKING BRAKE > Parking Brake Lever

INSTALLATION

1. Install the inner cable end to equalizer.
2. Install the lever assembly - hand brake.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
   Caution:
   Do not reuse the adjusting nut (self locking nut). Always replace with a new part.
3. Be sure to adjust the lever stroke. Ref. to PARKING BRAKE>Parking Brake Lever>ADJUSTMENT.
4. Install the console box assembly.
   Tightening torque:
   6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
5. Install the driver's seat. Ref. to SEATS>Front Seat>INSTALLATION.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
   Note:
   For CVT models, after connecting the battery ground terminal, place the select lever in the P position.

PARKING BRAKE > Parking Brake Lever

INSPECTION

1. LEVER ASSEMBLY

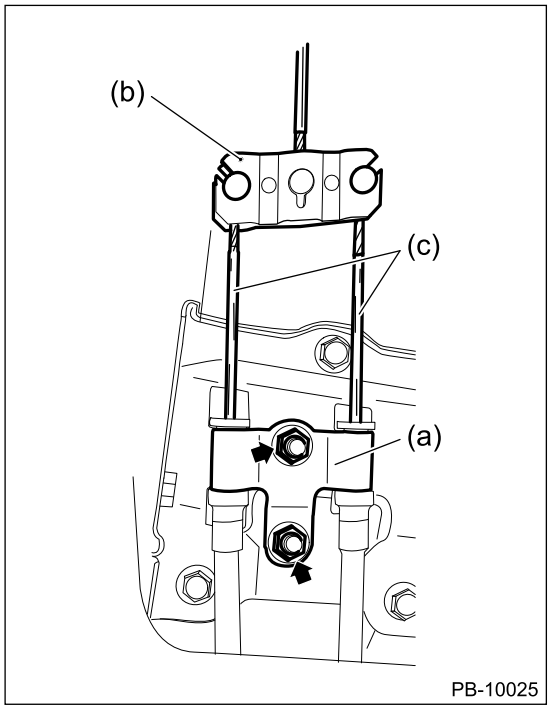
1. Operate the lever assembly - hand brake 3 to 4 times and fully return the lever assembly - hand brake.
2. While slowly pulling up the lever assembly - hand brake, count the notches.
   Lever stroke:

7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)

If it is not within the specified value, adjust the parking brake. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT.

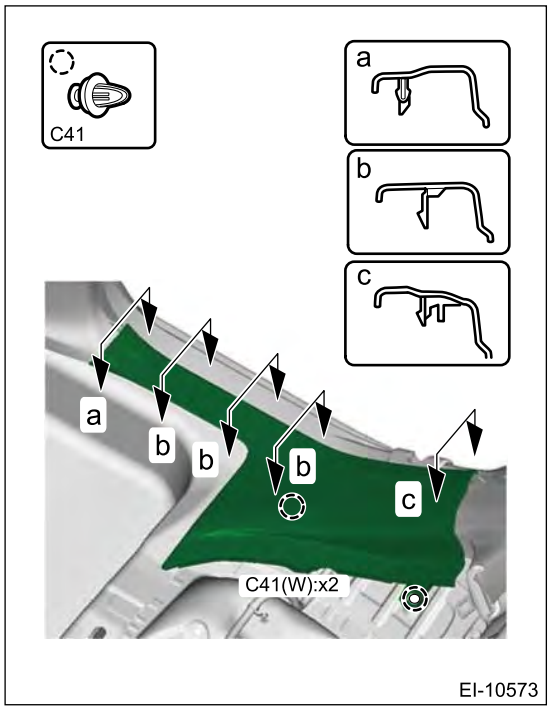
PARKING BRAKE > Parking Brake Lever

ADJUSTMENT



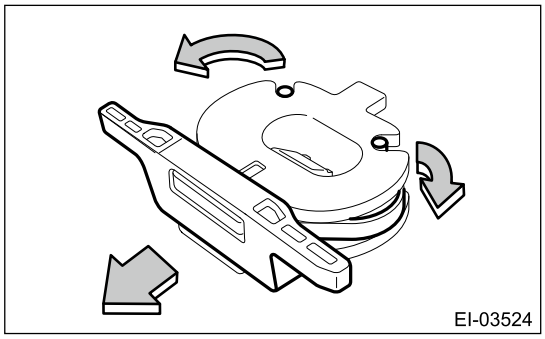
Adjust the parking lever stroke. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT > LEVER STROKE.

REMOVAL



Caution:

Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Before removing the rear seat, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. Ref. to AIRBAG SYSTEM>General Description>CAUTION.



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
   Note:
   - **On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.**
   - **For the power seat, move the seat to the front-most position before removing the battery ground terminal.**
2. Remove the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
3. Remove the lever assembly - hand brake. Ref. to PARKING BRAKE>Parking Brake Lever>REMOVAL.
4. Remove the nut and remove the clamp A - hand brake cable (a).
5. Remove the inner cable end (c) from the equalizer (b).

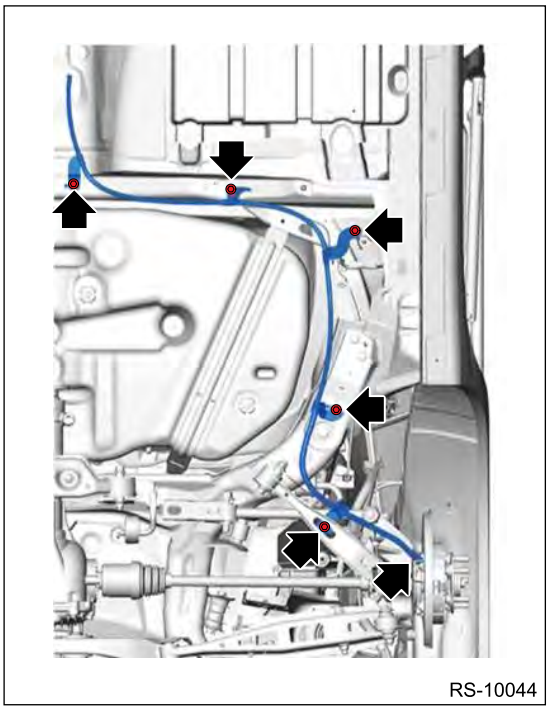
6. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
7. Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.
   Caution:
   Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.

8. Remove the clips and knobs of the hook - seat cushion rear.

9. Turn over the floor carpet and remove the grommet of the cable assembly - parking brake from the rear floor.

10. Lift up the vehicle, and then remove the rear wheels.

11. Remove the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>REMOVAL.



12. Remove the rear exhaust pipe and muffler.

- Rear exhaust pipe: Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
- Muffler: Ref. to EXHAUST(H4DO)>Muffler>REMOVAL.

13. Remove the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.

14. Remove the cable assembly - parking brake from the lever section of parking brake shoe. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>REMOVAL.

15. Remove the cable assembly - parking brake.

PARKING BRAKE > Parking Brake Cable

INSTALLATION

Caution:

- **After installing the backrest assembly, make sure that each seat belt operates normally.**
- **Make sure that they are properly secured on each hook on the vehicle side.**

1. Install the cable assembly - parking brake.
   Tightening torque:
   Cable clamp: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
2. Install the cable assembly - parking brake to the lever section of parking brake shoe. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>INSTALLATION.
3. Install the grommet to the rear floor.
4. Install the propeller shaft assembly. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.
5. Install the rear exhaust pipe and muffler.
   - Rear exhaust pipe: Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.
   - Muffler: Ref. to EXHAUST(H4DO)>Muffler>INSTALLATION.
6. Install the fuel tank protector. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Tank Protector>INSTALLATION.
7. Place the floor mat to the original position, and then attach the clip and the knob of the hook - seat cushion rear.
8. Install the side sill covers - rear INN on the right and left side.
9. Install the rear seat cushion assembly.
10. Install the inner cable end to equalizer, and install the clamp A - hand brake cable.
11. Install the lever assembly - hand brake.
    Tightening torque:
    18 N·m (1.8 kgf-m, 13.3 ft-lb)
12. Install the console box assembly.
    Tightening torque:

6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

13. Install the rear wheels.

Tightening torque:

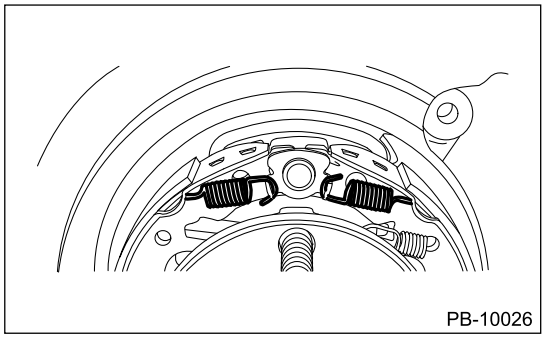
120 N·m (12.2 kgf-m, 88.5 ft-lb)

14. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

Note:

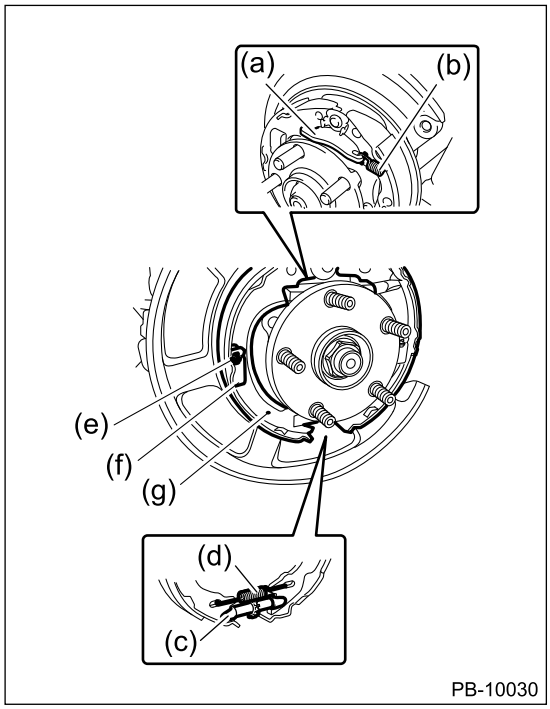
For CVT models, after connecting the battery ground terminal, place the select lever in the P position.

PARKING BRAKE > Parking Brake Cable



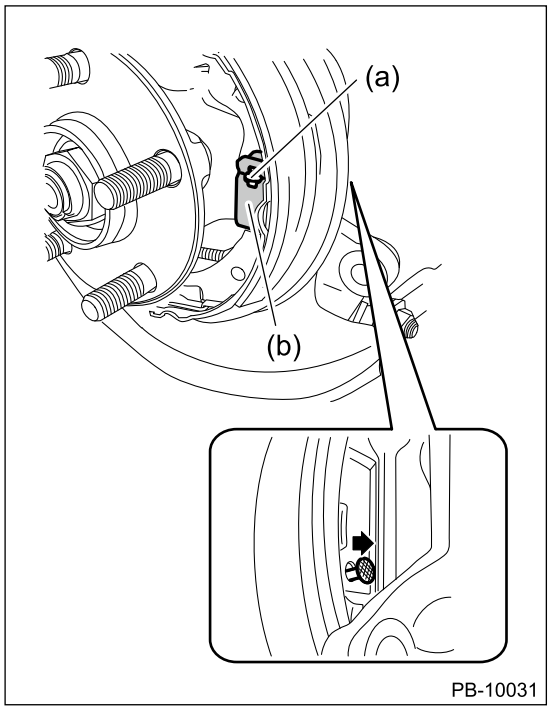
INSPECTION

Check the removed cable and replace if damaged, rusty or malfunctioning.

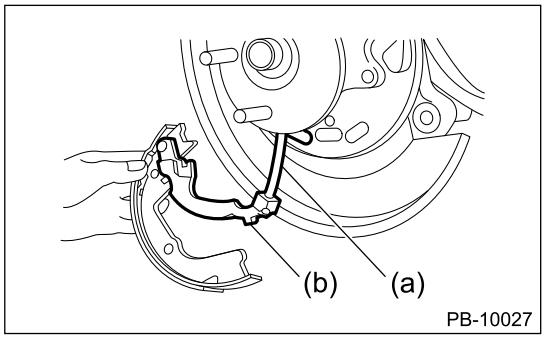


1. Check the cable for smooth operation.
2. Check the inner cable for damage and rust.
3. Check the outer cable for damage, bends and cracks.

REMOVAL



1. Release the parking brake.
2. Lift up the vehicle, and then remove the rear wheels.
3. Remove the rear disc rotor. Ref. to BRAKE>Rear Disc Rotor>REMOVAL.
4. Remove the spring - primary shoe return and the spring - secondary shoe return.



5. Remove the parking brake shoe on the primary side.
   (1) Remove the strut - brake (a) and the spring - strut (b).
   (2) Remove the adjuster assembly - rear brake (c) and the spring - adjuster (d).
   (3) Remove the pin - shoe hold-down (e) and the spring - shoe clamp (f), and remove the parking brake shoe (g).

6. Remove the pin - shoe hold-down (a) and the spring - shoe clamp (b), and remove the secondary side parking brake shoe.

7. Remove the cable assembly - hand brake cable (a) from the parking lever - rear (b).

8. Remove the retainer - rear brake and the spring washer - rear brake, and remove the parking lever - rear and the brake shoe.

PARKING BRAKE > Parking Brake Assembly (Rear Disc Brake)

INSTALLATION

Caution:

Be sure the lining surface is free from brake fluid and grease.

1. Apply brake grease to the following locations.

Preparation items:

Brake grease: Dow Corning Molykote 44MA or equivalent

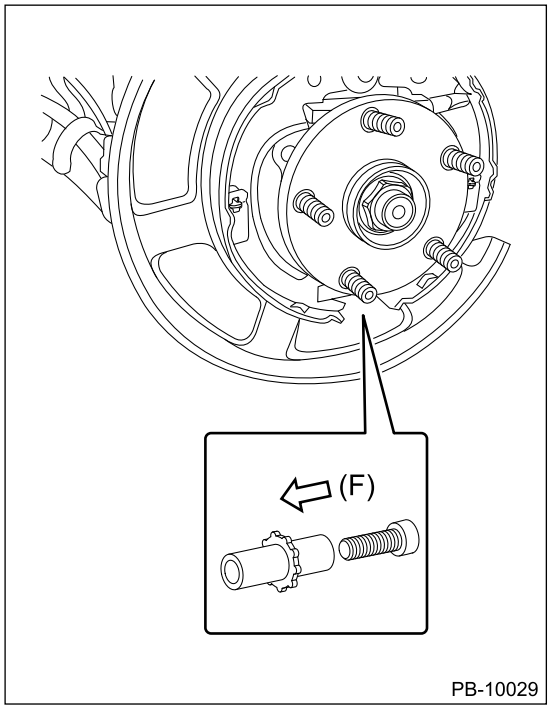
- Six contact surfaces of the parking brake shoe rim and back plate - rear brake
- Contact surface of the parking brake shoe and the anchor pin
- Contact surface of the parking lever assembly - rear and the strut - brake
- Contact surface of the parking brake shoe and the adjuster assembly - rear brake
- Contact surface of the parking brake shoe and the strut - brake
- Contact surface of the parking lever - rear and the parking brake shoe

2. Install the parking lever - rear to the secondary side parking brake shoe.

Note:

Install the pin - parking lever and spring washer - rear brake to the parking lever - rear, and swage the retainer - rear brake to secure.

3. Install the cable assembly - parking brake to the parking lever - rear.



Note:

Check that the cable assembly - parking brake does not fall from the cable guide.

4. Attach the adjuster assembly - rear brake and the spring - adjuster to the primary side and the secondary side parking brake shoes.

Note:

Install the adjuster assembly - rear brake with the screw section facing to the direction shown in the figure below.

(F) Left wheel: front side of vehicle, right wheel: rear side of vehicle

5. Install the parking brake shoes to the back plate - rear brake with the pins - shoe hold-down and the springs - shoe clamp.
6. Install the strut - brake and the spring - strut to the parking brake shoes.

Note:

Install the spring - strut so that it comes towards the front side of the vehicle.

7. Install the return springs on the primary side first, and then the secondary side.
8. Install the disc rotor and the disc brake assembly - rear.

Tightening torque:

66 N·m (6.7 kgf-m, 48.7 ft-lb)

9. Adjust the parking brake. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT.
10. Install the rear wheels.

Tightening torque:

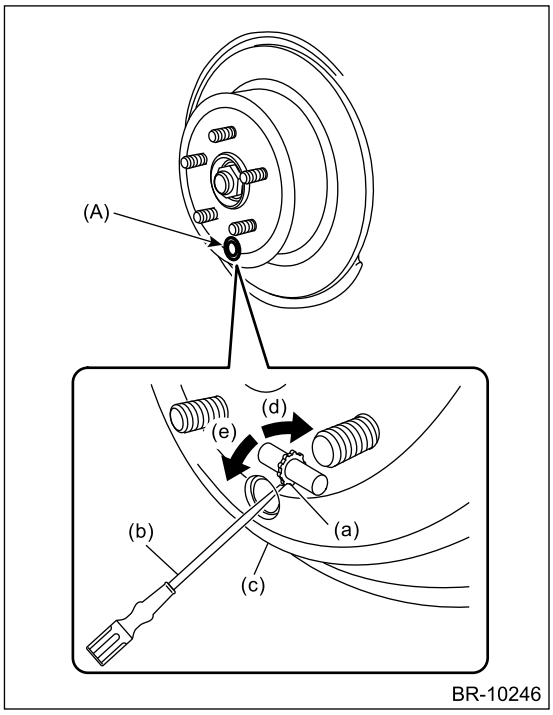
120 N·m (12.2 kgf-m, 88.5 ft-lb)

11. If new parking brake shoes are replaced, drive the vehicle to break-in the parking brake lining.
(1) Drive the vehicle at approximately 35 km/h (22 MPH) or more.

(2) While pressing the button of the lever assembly - hand brake, pull the lever assembly - hand brake with a force of 150 N (15.3 kgf, 33.7 lbf).
(3) Drive the vehicle for about 200 m (0.12 mile) in this condition.
(4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat steps (1) through (3) again.
(5) After breaking-in, re-adjust the parking brakes. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT.

PARKING BRAKE > Parking Brake Assembly (Rear Disc Brake)

INSPECTION



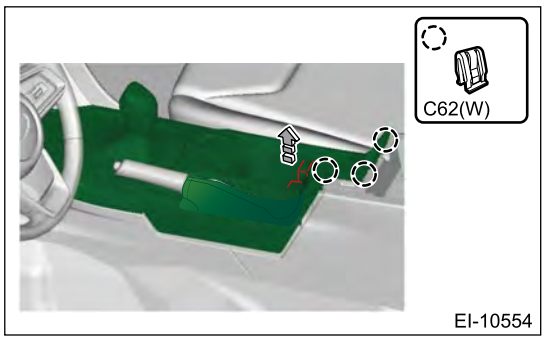
1. Measure the inner diameter of the rear disc rotor. If scoring or worn is found on the disc, replace the rear disc rotor.
   Disc rotor inner diameter:
   Specification: 170 mm (6.69 in)
   Service limit: 171 mm (6.73 in)
2. Measure the lining thickness. If it exceeds the limit, replace the brake shoe.
   Lining thickness:
   Standard: 3.5 mm (0.14 in)
   Service limit: 1.5 mm (0.059 in)
   Note:
   Replace the right and left parking brake shoe as a set.

PARKING BRAKE > Parking Brake Assembly (Rear Disc Brake)

ADJUSTMENT

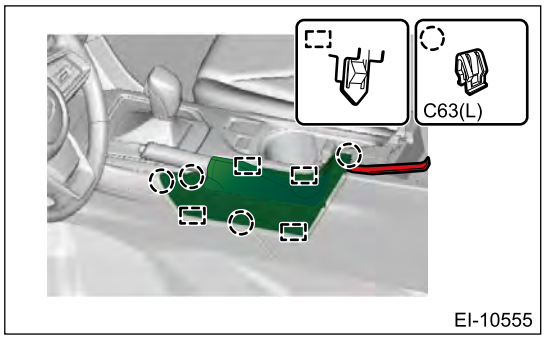
1. SHOE CLEARANCE

1. Return the lever assembly - hand brake completely.
2. Loosen the adjusting nut, and make the cable free.
3. Remove the adjusting hole cover (A).
4. Remove the adjusting hole cover (A), and loosen the adjuster assembly - rear brake by inserting a flat tip screwdriver.



(a) Adjuster ASSY - rear brake
(c) Disc rotor
(e) Shorten the adjuster ASSY - rear brake
(b) Flat tip screwdriver
(d) Extend the adjuster ASSY - rear brake

5. Loosen the adjuster assembly - rear brake by 10 notches in the direction of the arrow (e).
Caution:
- **Check there is no brake drag.**
- **Make sure that the adjuster assembly - rear brake is loosened by 10 notches. If it is not loosened sufficiently, dragging may occur.**

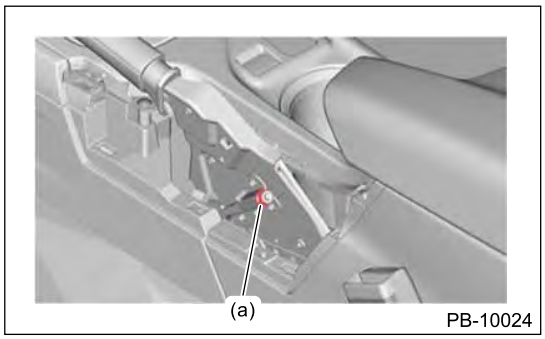


6. Install the adjusting hole cover to the disc rotor.
7. Adjust the parking lever stroke. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT > LEVER STROKE.

2. LEVER STROKE

1. Adjust the shoe clearance before adjusting lever stroke. Ref. to PARKING BRAKE>Parking Brake Assembly (Rear Disc Brake)>ADJUSTMENT > SHOE CLEARANCE.
2. Remove the boot - hand brake.
(1) Pull up the cup holder, and release the engagement of the clip at the end of the cover assembly - front.

(2) Release the engagement of claws and clips, and then remove the boot - hand brake.



(3) Pull the lever assembly - hand brake hard 3 to 5 times.

(4) Turn the adjusting nut (a) until the lever stroke is at the specified value.

Lever stroke:

7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)

3. Check there is no parking brake drag.

4. Check that the brake warning light illuminates when the lever assembly - hand brake is operated.

Note:

The light must illuminate when the first notch is reached after pulling the lever.

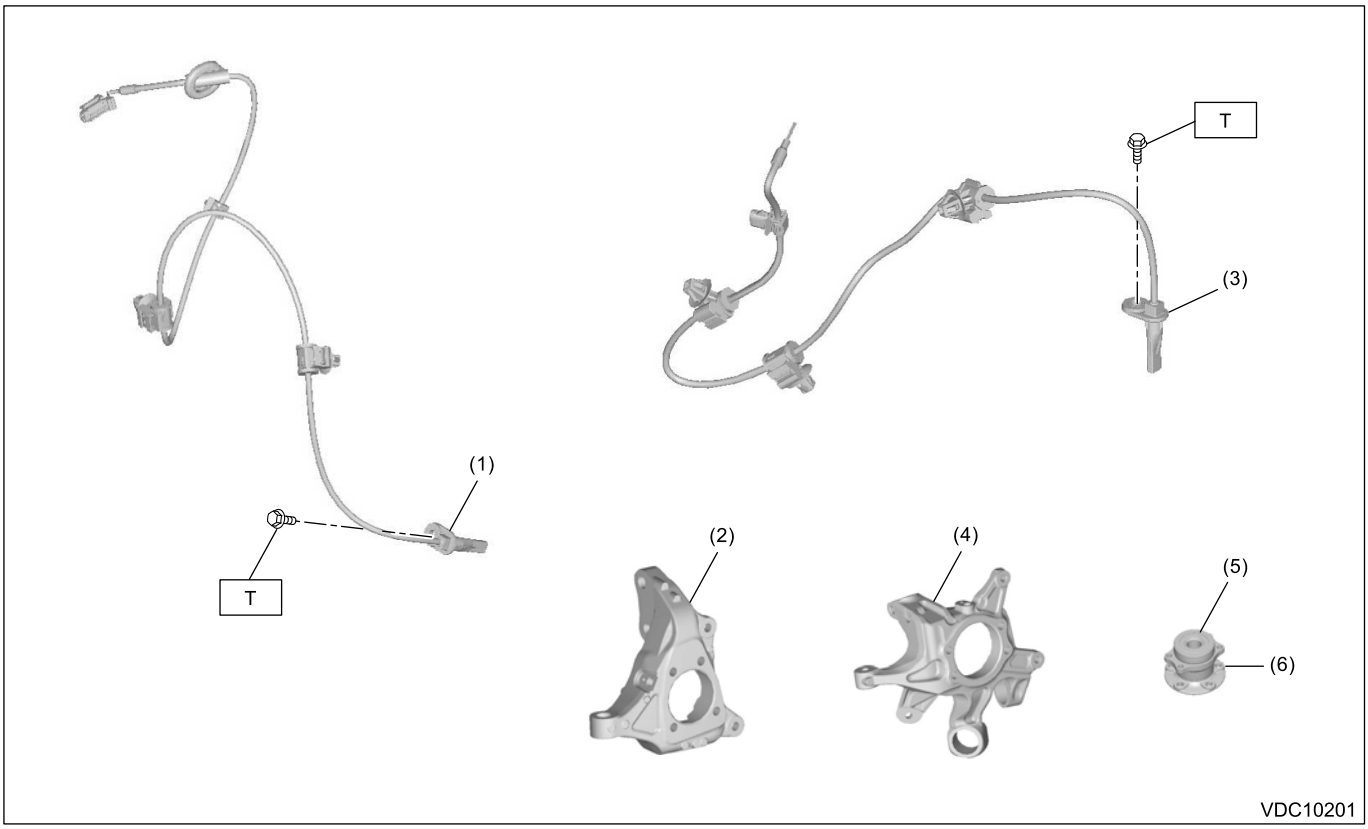
5. Install the boot - parking brake.

INSPECTION

Symptoms	Possible cause	Corrective action
Brake drag	Lever assembly - hand brake is maladjusted.	Adjust.
	Parking brake cable does not move.	Repair or replace.
	Parking brake shoe clearance is maladjusted.	Adjust.
	Spring - shoe return is faulty.	Replace.
Noise from brake	Spring - shoe return is faulty.	Replace.
	Spring - shoe clamp is faulty.	Replace.

VEHICLE DYNAMICS CONTROL (VDC)

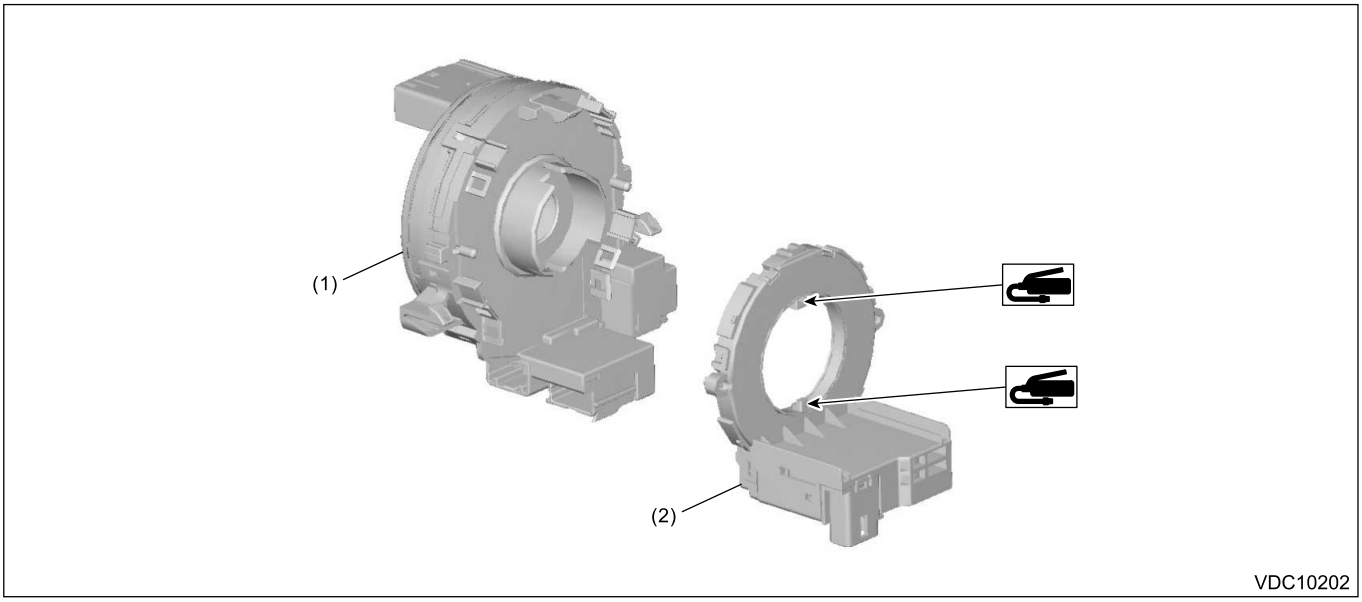
VDC



1. General Description
2. Relay and Fuse
3. Vehicle Dynamics Control System
4. VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)
5. ABS Sequence Control
6. VDC Sequence Control
7. Brake Lamp Relay
8. Yaw Rate and G Sensor
9. Steering Angle Sensor
10. Front ABS Wheel Speed Sensor
11. Rear ABS Wheel Speed Sensor
12. Front Magnetic Encoder
13. Rear Magnetic Encoder
14. VDC OFF Switch
15. General Diagnostic Table

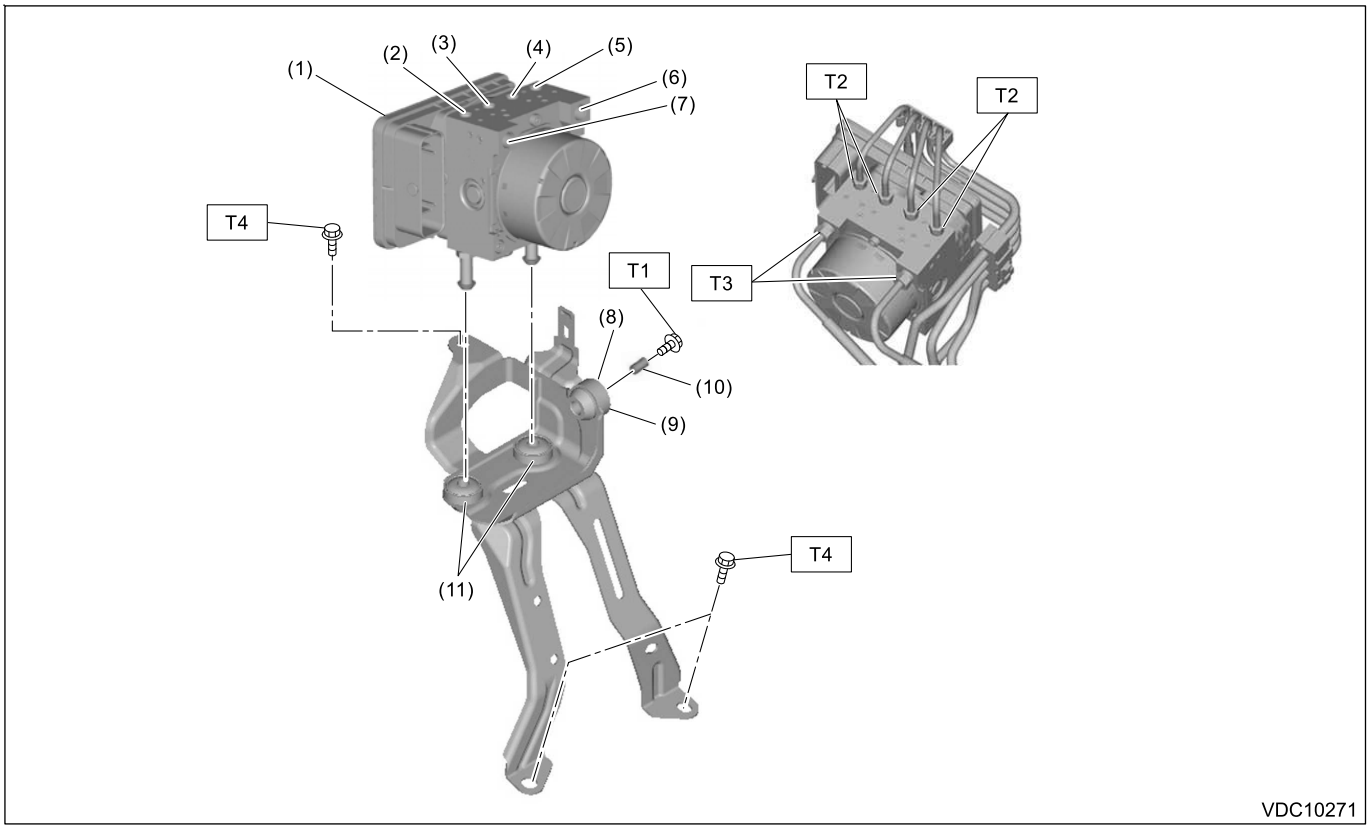
SPECIFICATION

Item				Specification or identification
ABS wheel speed sensor	ABS wheel speed sensor gap (for reference)	Front		0.61 — 1.59 mm (0.02 — 0.06 in)
		Rear		0.56 — 1.24 mm (0.02 — 0.05 in)
	Identifications of harness (symbol)	Front	RH	K1
			LH	K2
		Rear	RH	K5
			LH	K6
VDCCM&H/U identification		Models without EyeSight		D8
		Models with EyeSight		D9



COMPONENT

1. ABS WHEEL SPEED SENSOR



(1)	Front ABS wheel speed sensor	(4)	Housing ASSY - rear axle	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Housing ASSY - front axle	(5)	Magnetic encoder	***T: 7.5 (0.8, 5.5)***
(3)	Rear ABS wheel speed sensor	(6)	Hub unit COMPL	

2. STEERING ANGLE SENSOR

(1)	Steering roll connector	(2)	Steering angle sensor

3. VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U)

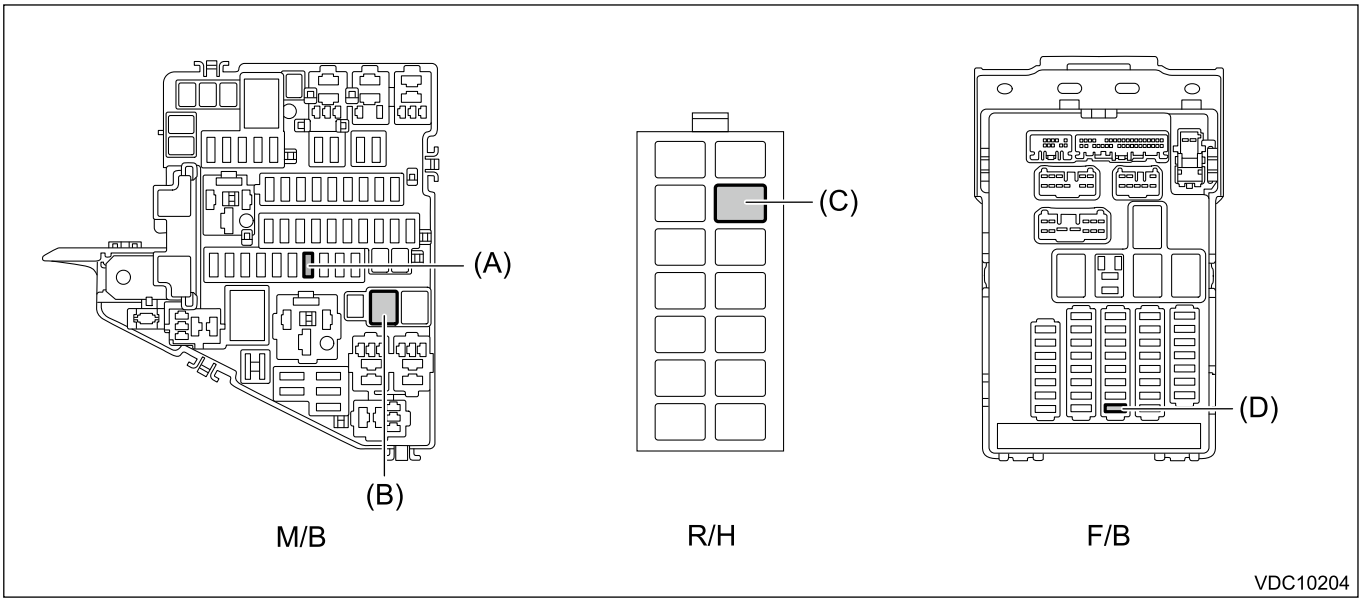
(1)	VDC control module and hydraulic control unit (VDCCM&H/U)	(7)	Secondary inlet	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear RH outlet	(8)	Damper - hydraulic unit	***T1: 7.5 (0.8, 5.5)***
(3)	Front LH outlet	(9)	Bracket - hydraulic unit	***T2: 15 (1.5, 11.1)***
(4)	Front RH outlet	(10)	Spacer	***T3: 19 (1.9, 14)***
(5)	Rear LH outlet	(11)	Damper - hydraulic unit	***T4: 33 (3.4, 24.3)***
(6)	Primary inlet			

VEHICLE DYNAMICS CONTROL (VDC) > General Description

CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

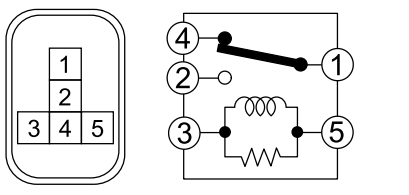
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring the sensor.
Steering wheel puller	Used for removing the steering wheel.

LOCATION

Main fuse box (M/B)	Fuse 30 A (VDC CM&H/U)	(A)
	Fuse 40A (VDC CM&H/U)	(B)
Relay holder (R/H)	Brake light relay	(C)
Fuse & relay box (F/B)	Fuse 7.5 A (VDC CM&H/U)	(D)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.



INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1. Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2. Replace the relay if the inspection result is not within the standard value.

VEHICLE DYNAMICS CONTROL (VDC) > Vehicle Dynamics Control System

WIRING DIAGRAM

Refer to “Vehicle Dynamics Control” in the wiring diagram. Ref. to WIRING SYSTEM>Vehicle Dynamics Control System>WIRING DIAGRAM.

VEHICLE DYNAMICS CONTROL (VDC) > Vehicle Dynamics Control System

ELECTRICAL SPECIFICATION

For the electrical specification, refer to “Control Module I/O Signal” of “BRAKE CONTROL (DIAGNOSTICS)” section. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Control Module I/O Signal.

VEHICLE DYNAMICS CONTROL (VDC) > Vehicle Dynamics Control System

INSPECTION

For inspection, refer to “Basic Diagnostic Procedure” of “BRAKE CONTROL (DIAGNOSTICS)” section. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

VEHICLE DYNAMICS CONTROL (VDC) > Vehicle Dynamics Control System

NOTE

For operation procedures of each component of the vehicle dynamics control system, refer to the respective section.

- VDC control module & hydraulic control unit (VDCCM&H/U): Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
- Yaw rate & G sensor: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Yaw Rate and G Sensor.
- Steering angle sensor: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Steering Angle Sensor.
- Front ABS wheel speed sensor: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor.
- Rear ABS wheel speed sensor: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Rear ABS Wheel Speed Sensor.
- Front magnetic encoder: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front Magnetic Encoder.
- Rear magnetic encoder: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Rear Magnetic Encoder.
- VDC OFF switch: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC OFF Switch.

REMOVAL

Caution:

- **Avoid unnecessary removal of parts in order to prevent fluid leakage.**
- **When the VDCCM&H/U components are removed, be sure to perform the installation according to the installation procedures. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>INSTALLATION.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Move the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>REMOVAL.

   Note:

   With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body.
3. Remove the VDC control module & hydraulic control unit (VDCCM&H/U).

   Caution:

   - **Do not pull on the harness when disconnecting the connector.**
   - **Wrap the brake pipe with a vinyl bag so as not to spill the brake fluid on the painted surface of the vehicle body.**
   - **If brake fluid is spilled on the painted surface of the vehicle body, wash it off immediately with water and wipe clean.**

   (1) Remove any dirt from around the VDCCM&H/U.

   (2) Pull up the lock lever (b) while pressing the lock button (a) and disconnect the VDCCM&H/U connector.

(3) Separate each brake pipe using a flare nut wrench.

(4) Remove the bolts and remove the bracket - hydraulic unit and VDCCM&H/U.

VEHICLE DYNAMICS CONTROL (VDC) > VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

INSTALLATION

Caution:

- **When installing the VDCCM&H/U to the bracket - hydraulic unit, make sure that there is no oil adhered to the bolts and the threads of VDCCM&H/U. If the oil is adhered, degrease it carefully before tightening.**
- **Connect the VDCCM&H/U connector securely.**

1. Install the bracket - hydraulic unit and the VDCCM&H/U.

(1) Attach the bracket - hydraulic unit.

Tightening torque:

33 N·m (3.4 kgf-m, 23.8 ft-lb)

(2) Install the VDCCM&H/U to the bracket - hydraulic unit.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

(3) Connect the VDCCM&H/U connector.

(4) Install each brake pipe using a flare nut wrench.

Tightening torque:

Refer to "COMPONENT" of "General Description". Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>COMPONENT > VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U).

2. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
4. Bleed air from the brake system. Ref. to BRAKE>Air Bleeding>PROCEDURE.
5. Perform parameter confirmation, selection, and registration.
   Note:
   - **When the VDCCM&H/U is replaced with a new part, be sure to perform the selection • registration operation.**
   - **When the registration has not been performed, the DTC code [Parameter selection error] is detected together with the ABS/EBD/VDC warning light illumination.**

   (1) Check that the applied model and grade of the relevant vehicle are included. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER CHECK.

   (2) If the applied model and grade of the target vehicle are not included, perform parameter selection and registration. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER SELECTION.
6. Perform "VDC sensor midpoint setting mode". Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

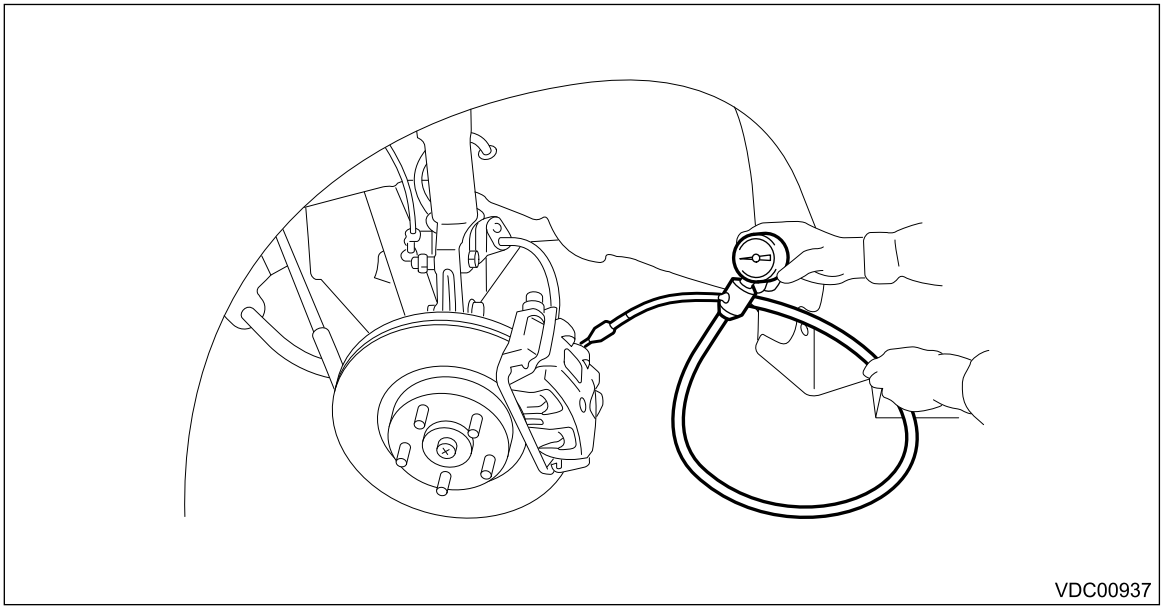
VEHICLE DYNAMICS CONTROL (VDC) > VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

INSPECTION

1. Check the identification (a) of the VDC control module & hydraulic control unit (VDCCM&H/U).
   Note:
   For the identification, refer to "SPECIFICATION" in "General Description". Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>SPECIFICATION.

2. Check the condition of connection and settlement of connector, and correct or replace if defective.

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE



1. Lift up the vehicle, and then remove the wheel.
2. Remove the bleeder - screws from the front LH and front RH caliper bodies.
3. Connect two pressure gauges to front LH and front RH caliper bodies.

Caution:

- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use the pressure gauge used for the measurement of transmission oil. Doing so will cause the piston seal to expand and deform.**

Note:

Wrap sealing tape around the pressure gauge.

4. Bleed air from the pressure gauges and the front LH and front RH caliper bodies.
5. Perform ABS sequence control. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>ABS Sequence Control.

   Note:

   When the hydraulic unit begins to work, first the front LH side performs decompression, hold and compression, and then the front RH side performs decompression, hold and compression.
6. Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
Initial value	3,500 kPa (36 kgf/cm^2, 511 psi)	3,500 kPa (36 kgf/cm^2, 511 psi)
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less
When pressurized	3,500 kPa (36 kgf/cm^2, 511 psi) or more	3,500 kPa (36 kgf/cm^2, 511 psi) or more

7. Remove the pressure gauge from the front LH and front RH caliper bodies.
8. Install the bleeder - screws of the front LH and front RH caliper bodies.
9. Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10. Connect two pressure gauges to rear LH and rear RH caliper bodies.
11. Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12. Perform ABS sequence control. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>ABS Sequence

Control.

Note:

When the hydraulic unit begins to work, first the rear LH side performs decompression, hold and compression, and then the rear RH side performs decompression, hold and compression.

13. Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.
14. Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15. Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16. Bleed air from the brake system. Ref. to BRAKE>Air Bleeding.

2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER

1. Set wheels other than the one to measure on free rollers.
2. Prepare for the ABS sequence control operation. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>ABS Sequence Control.
3. Set the front wheels or rear wheels on the brake tester and set the gear to neutral.
4. Operate the brake tester.

   Note:

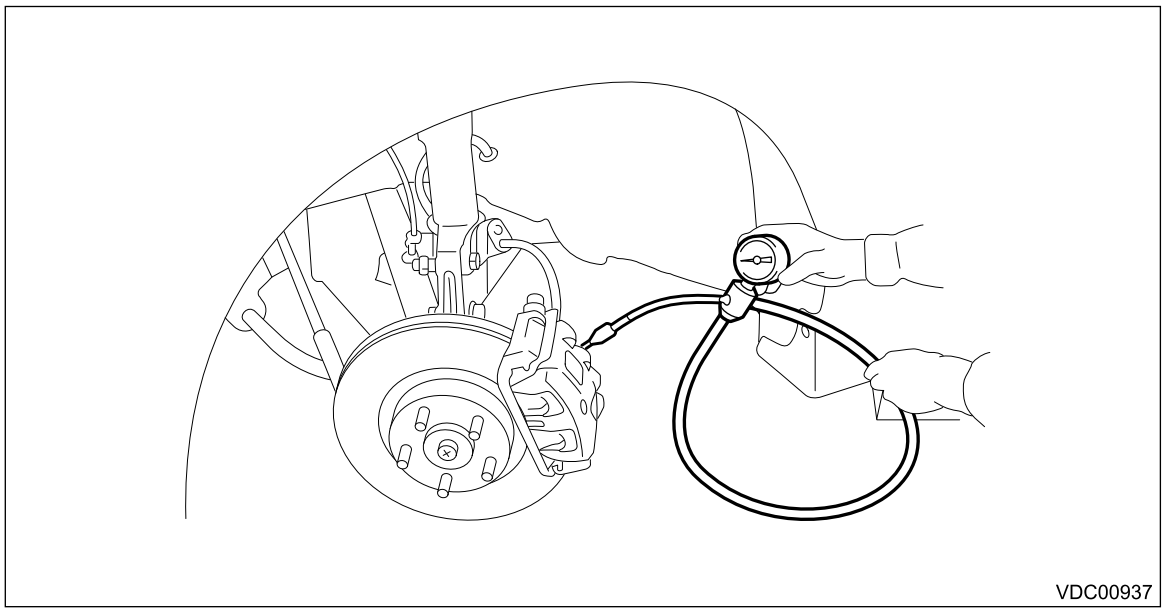
   When any wheel speed reaches 10 km/h (6 MPH), the ABS sequence control stops and ABS operation is returned to the normal control mode.
5. Perform ABS sequence control. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>ABS Sequence Control.
6. When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs decompression, hold and compression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs decompression, hold and compression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7. Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
Initial value	1,000 N (102 kgf, 225 lb)	1,000 N (102 kgf, 225 lb)
When depressurized	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less
When pressurized	1,000 N (102 kgf, 225 lb) or more	1,000 N (102 kgf, 225 lb) or more

8. After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION USING A PRESSURE GAUGE

1. Lift up the vehicle, and then remove the wheel.
2. Remove the bleeder - screws from the front LH and front RH caliper bodies.



3. Connect two pressure gauges to front LH and front RH caliper bodies.

Caution:

- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use a pressure gauge used for the measuring transmission oil pressure, as the piston seal may expand and deform.**

Note:

Wrap sealing tape around the pressure gauge.

4. Bleed air from the pressure gauge.
5. Perform VDC sequence control. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Sequence Control.

Note:

When the hydraulic unit begins to work, first the front LH side performs compression, hold and decompression, and then the front RH side performs compression, hold and decompression.

6. Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
When pressurized	3,000 kPa (31 kgf/cm^2, 441 psi) or more	3,000 kPa (31 kgf/cm^2, 441 psi) or more
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less

7. Remove the pressure gauge from the front LH and front RH caliper bodies.
8. Install the bleeder - screws of the front LH and front RH caliper bodies.
9. Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10. Connect two pressure gauges to rear LH and rear RH caliper bodies.
11. Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12. Perform VDC sequence control. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Sequence Control.

Note:

When the hydraulic unit begins to work, first the rear RH side performs compression, hold and decompression, and then the rear LH side performs compression, hold and decompression.

13. Read the values indicated on the pressure gauges and check if it is within specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
14. Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15. Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16. Bleed air from the brake system. Ref. to BRAKE>Air Bleeding.

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

1. Set wheels other than the one to measure on free rollers.
2. Prepare to operate the VDC sequence control. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Sequence Control.
3. Set the front wheels or rear wheels on the brake tester and set the gear to neutral.
4. Operate the brake tester.

   Note:

   When any wheel speed reaches 10 km/h (6 MPH), the VDC sequence control stops and VDC operation is returned to the normal control mode.
5. Perform VDC sequence control. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Sequence Control.
6. When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs compression, hold and decompression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs compression, hold and decompression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7. Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
When pressurized	2,000 N (204 kgf, 450 lbf) or more	2,000 N (204 kgf, 450 lbf) or more
When depressurized	500 N (51 kgf, 112 lbf) or less	500 N (51 kgf, 112 lbf) or less

8. After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

VEHICLE DYNAMICS CONTROL (VDC) > VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

ADJUSTMENT

1. VDC SENSOR MIDPOINT SETTING MODE

After installing, replacing or adjusting the following parts, perform the VDC sensor midpoint setting mode.

- Steering angle sensor

- Steering wheel
- Suspension parts
- Wheel alignment
- VDCCM&H/U
- VDCCM&H/U bracket

1. Park the vehicle on a level surface, and set the steering wheel to the neutral position.
2. Perform the VDC sensor 0 point setting mode.
   (1) Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (2) Turn the ignition switch to ON.
   (3) On [Start] display, select [Diagnosis].
   (4) On [Select Vehicle] display, input the target vehicle information and select [Set].
   (5) On [Main Menu] display, select [Each System].
   (6) On [Select System] display, select [Brake Control], and then select [Enter].
   (7) On [Select Function] display, select [Data monitor].
   (8) From the data monitor item list, select [Steering Angle Sensor], [Longitudinal G Sensor] and [Abnormal Lateral G Sensor output].
   (9) Check that the steering angle sensor output value is within the range of following values.
   - Model without EyeSight: −10 — 10 deg
   - Model with EyeSight: −2 — 2 deg

   Note:
   If the output value is different from the standard value, check the steering wheel.
   (10) Check that output values for the longitudinal G sensor and lateral G sensor are −2 — 2 m/s^2.
   Note:
   If the output value is not at the standard value, check the installing condition of the VDCCM&H/U and VDCCM&H/U bracket.
   (11) On [Select Function] display, select [Work Support].
   (12) From the work support item list, select [VSC(VDC) Centering Mode], and perform the setting according to the procedure displayed on the Subaru Select Monitor screen.
3. Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.
4. Make sure that the DTC is not stored.

VEHICLE DYNAMICS CONTROL (VDC) > VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

MAINTENANCE MODE

1. VDCCM PARAMETER READING

1. Perform reading of parameter.
   (1) Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (2) Turn the ignition switch to ON.
   (3) On [Start] display, select [Diagnosis].
   (4) On [Select Vehicle] display, input the target vehicle information and select [Set].
   (5) On [Main Menu] display, select [Each System].
   (6) On [Select System] display, select [Brake Control], and then select [Enter].

(7) On [Select Function] display, select [Work Support].
(8) On [Work Support] display, select [Reading of parameter: ECM to SSM].

2. Save and close the file.

2. VDCCM PARAMETER WRITING

1. Perform writing of parameter.
(1) Connect the Subaru Select Monitor.
Note:
For detailed operation procedures, refer to "Application help".
(2) Turn the ignition switch to ON.
(3) On [Start] display, select [Diagnosis].
(4) On [Select Vehicle] display, input the target vehicle information and select [Set].
(5) On [Main Menu] display, select [Each System].
(6) On [Select System] display, select [Brake Control], and then select [Enter].
(7) On [Select Function] display, select [Work Support].
(8) On [Work Support] display, select [Writing of parameter: SSM to ECM].
2. Open the file saved in the [Reading of parameter: ECM to SSM].
3. When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the [OK] button.

3. VDCCM PARAMETER SELECTION

Note:

- **When the VDCCM&H/U is replaced with a replacement part, be sure to perform the parameter selection/registration to the VDCCM&H/U using this function.**
- **To check the applied model, refer to the "Model number plate" attached to the vehicle.** **Ref. to IDENTIFICATION.**
- **If you entered a wrong applied model, you can re-write it.**
- **When the registration has not been performed, the DTC code "Parameter" is detected together with the ABS/EBD/VDC warning light illumination.**
- **This function can be used for the replacement part of VDCCM&H/U.**

1. Perform selection of parameter.
(1) Connect the Subaru Select Monitor.
Note:
For detailed operation procedures, refer to "Application help".
(2) Turn the ignition switch to ON.
(3) On [Start] display, select [Diagnosis].
(4) On [Select Vehicle] display, input the target vehicle information and select [Set].
(5) On [Main Menu] display, select [Each System].
(6) On [Select System] display, select [Brake Control], and then select [Enter].
(7) On [Select Function] display, select [Work Support].
(8) On [Work Support] display, select [Selection of Parameter].
2. Check the applied model and option code indicated on the "Model number plate". Ref. to IDENTIFICATION.
3. Enter the applied model of 7-digit alphanumeric characters and click the [OK] button.
4. When the option code input screen appears after entering the applied model, enter the option code consisting of 4-digit alphanumeric characters, and click the [OK] button. When the option code is 3 digits, add "0" (zero) in front and enter the code as 4 digits.
5. When the confirmation screen indicating the vehicle information appears, check that the correct

applied model and grade are displayed and click the [OK] button.

Note:

When the displayed applied model and grade are different from those of the vehicle, click the [OK] button and then perform the registration operation again.

6. Execute the Clear Memory Mode after parameter selection and registration operations because the DTC for "Parameter selection error" is memorized. Ref. to COMMON (DIAGNOSTICS)>Clear memory.

4. VDCCM PARAMETER CHECK

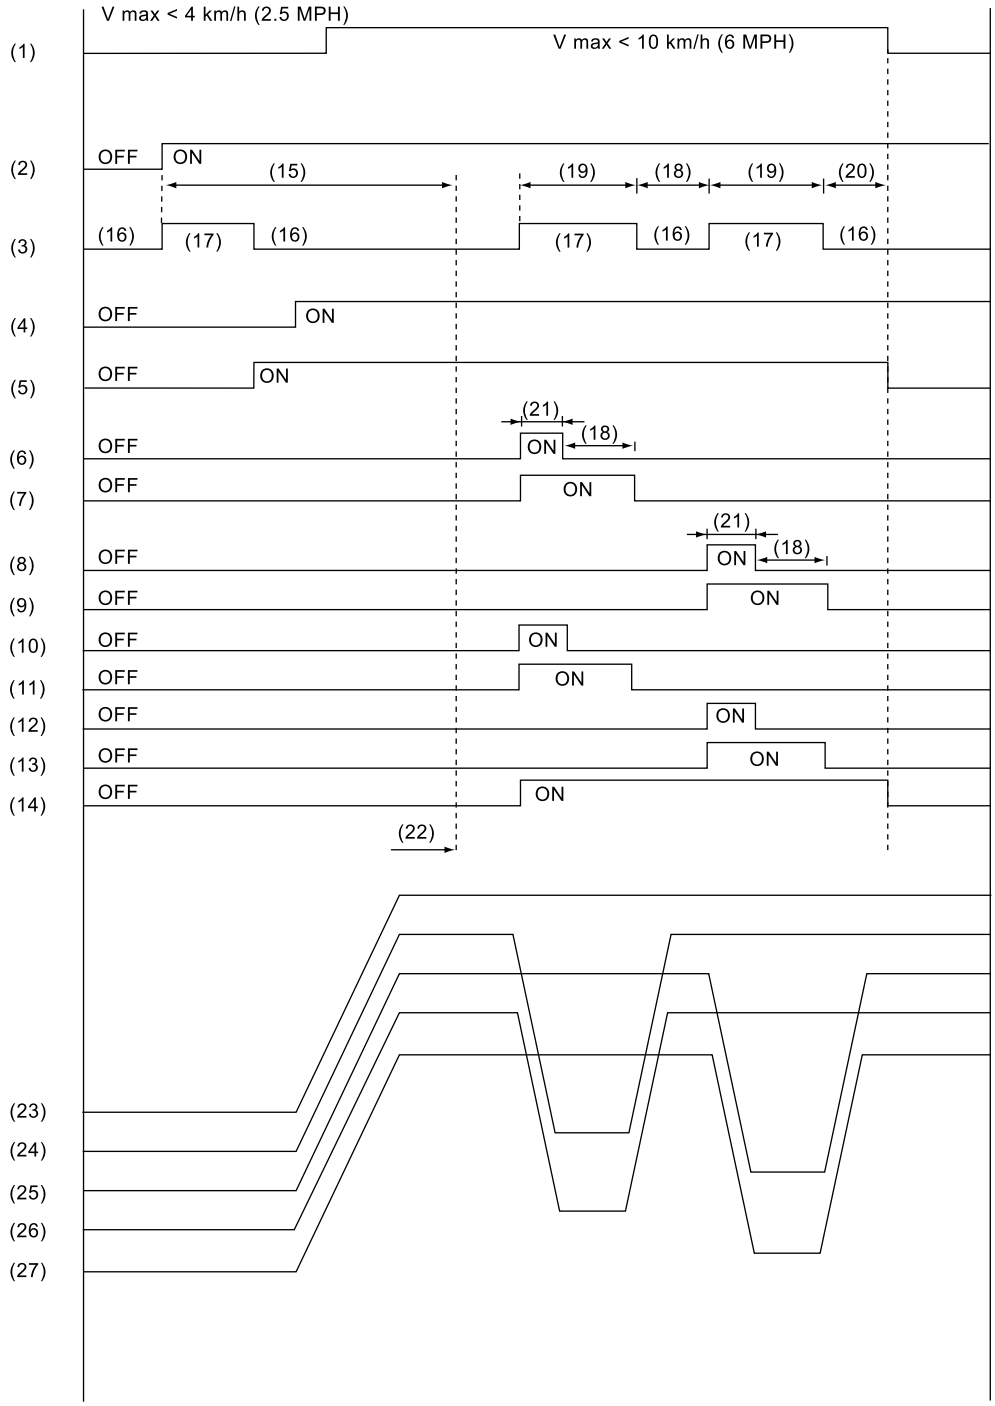
Note:

The parameter data registered in the VDCCM is shown on the display.

1. Perform confirming on parameter.
   (1) Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (2) Turn the ignition switch to ON.
   (3) On [Start] display, select [Diagnosis].
   (4) On [Select Vehicle] display, input the target vehicle information and select [Set].
   (5) On [Main Menu] display, select [Each System].
   (6) On [Select System] display, select [Brake Control], and then select [Enter].
   (7) On [Select Function] display, select [Work Support].
   (8) On [Work Support] display, select [Confirm on parameter].
2. Check that the applied model and grade of the target vehicle are included, and click the [OK] button.
3. If the applied model and grade of the target vehicle are not included, perform "parameter selection and registration". Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>MAINTENANCE MODE > VDCCM PARAMETER SELECTION.

OPERATION

1. While the ABS sequence control is being performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
2. ABS sequence control can be started by the Subaru Select Monitor.



1. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

Note:
In the event of any trouble, the ABS sequence control will not operate.

1. Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (1) Turn the ignition switch to ON.
   (2) On [Start] display, select [Diagnosis].
   (3) On [Select Vehicle] display, input the target vehicle information and select [Set].
   (4) On [Main Menu] display, select [Each System].
   (5) On [Select System] display, select [Brake Control], and then select [Enter].
   (6) On [Select Function] display, select [Work Support].
   (7) On the work support item list, select [ABS Sequence Control Mode].
2. Follow the procedures displayed in the Subaru Select Monitor to execute the following.
   (1) When using a brake tester, depress the brake pedal with a force of 100 N (10.2 kgf, 22.5 lbf).
   (2) When using a pressure gauge, press the brake pedal so that the pressure gauge indicates 3,500 kPa (36 kgf/cm^2, 511 psi).
3. The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR ABS SEQUENCE CONTROL

Note:
The control operation starts at point A.

VDC01320

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) Switch - stop light
(5) Valve relay
(6) Front LH decompression valve
(7) Front LH compression valve
(11) Rear RH compression valve
(12) Rear LH decompression valve
(13) Rear LH compression valve
(14) Pump motor
(15) A few seconds
(16) Light OFF
(17) Light ON
(20) 0.6 sec.
(21) 0.4 sec.
(22) Point A
(23) Master cylinder pressure
(24) Front LH wheel cylinder pressure
(25) Front RH wheel cylinder pressure
(26) Rear RH wheel cylinder pressure

(8) Front RH decompression valve
(9) Front RH compression valve
(10) Rear RH decompression valve
(18) 1.0 sec.
(19) 1.4 sec.
(27) Rear LH wheel cylinder pressure

VEHICLE DYNAMICS CONTROL (VDC) > ABS Sequence Control

SPECIFICATION

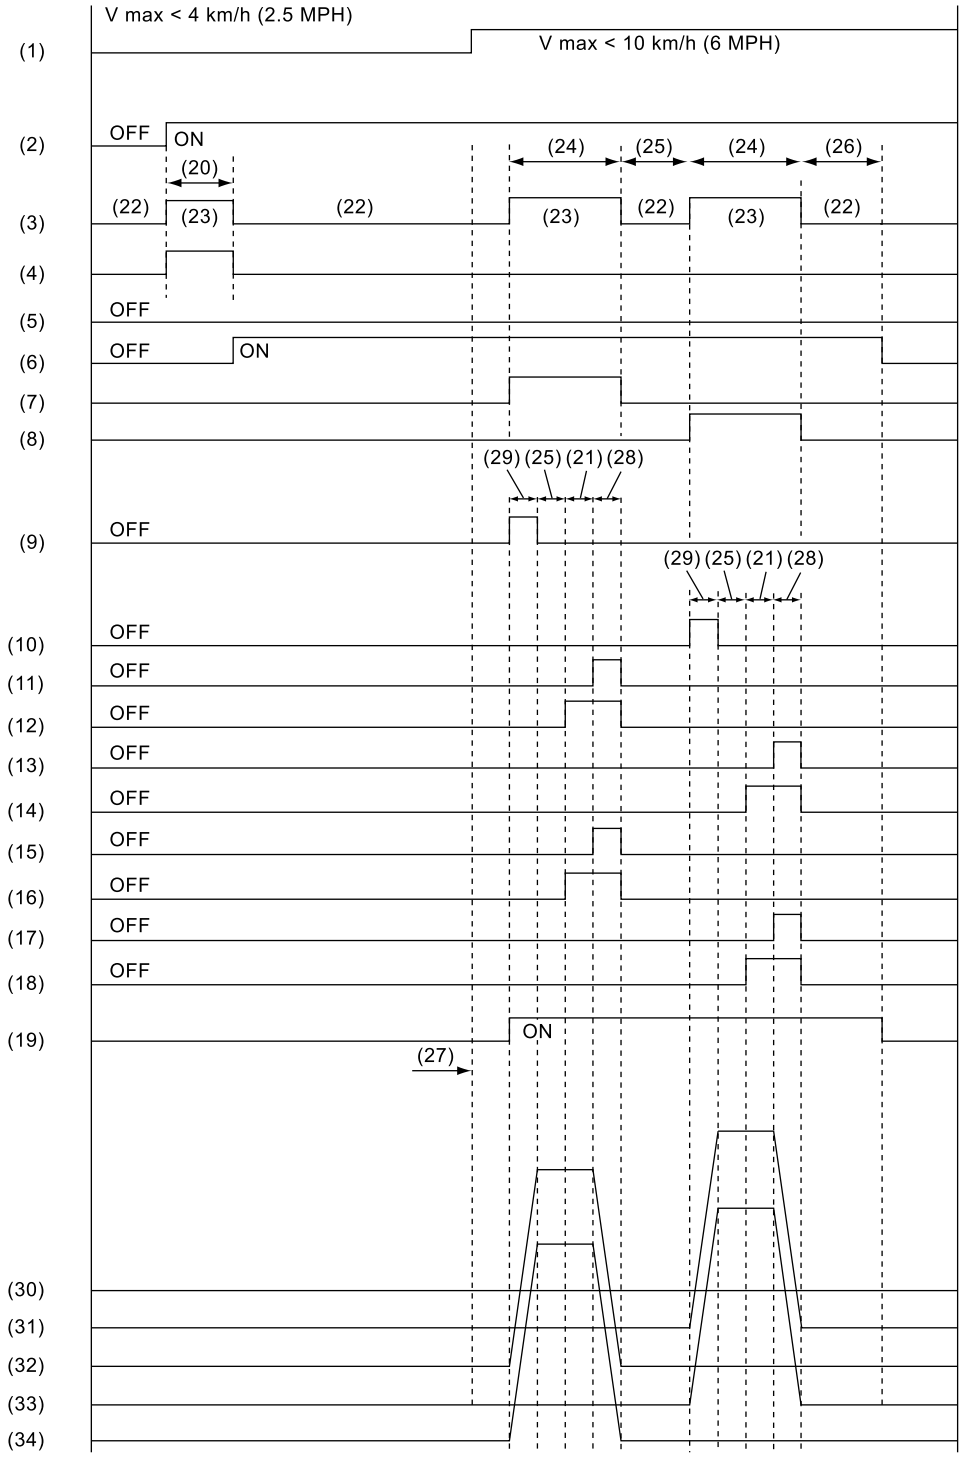
1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- When the brake pedal is released during ABS sequence control and the switch - stop light becomes OFF.
- After completion of ABS sequence control.
- When a malfunction is detected.

OPERATION

1. While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.
2. VDC sequence control can be started by Subaru Select Monitor.



1. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

Note:
In the event of any trouble, sequence control will not operate.

1. Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (1) Turn the ignition switch to ON.
   (2) On [Start] display, select [Diagnosis].
   (3) On [Select Vehicle] display, input the target vehicle information and select [OK].
   (4) On [Main Menu] display, select [Each System].
   (5) On [Select System] display, select [Brake Control], and then select [Enter].
   (6) On [Select Function] display, select [Work Support].
   (7) On the work support item list, select [VDC Check Mode].
2. Operate according to the procedures displayed in the Subaru Select Monitor.
3. The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR VDC SEQUENCE CONTROL

Note:
The control operation starts at point A.

VDC01434

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) VDC warning light
(5) Switch - stop light
(6) Valve relay
(7) VDC switching valve 1 front LH
(8) VDC switching valve 1 front RH
(13) Front RH decompression valve
(14) Front RH compression valve
(15) Rear RH decompression valve
(16) Rear RH compression valve
(17) Rear LH decompression valve
(18) Rear LH compression valve
(19) Pump motor
(20) A few seconds
(25) 1 second
(26) 1.6 sec.
(27) Point A
(28) 0.4 sec.
(29) 0.8 sec.
(30) Master cylinder pressure
(31) Front RH wheel cylinder pressure
(32) Front LH wheel cylinder pressure

(9) VDC switching valve 2 front LH

(11) Front LH decompression valve
(12) Front LH compression valve
(21) 1.2 sec.
(22) Light OFF
(23) Light ON
(24) 3.4 sec.
(33) Rear LH wheel cylinder pressure
(34) Rear RH wheel cylinder pressure

VEHICLE DYNAMICS CONTROL (VDC) > VDC Sequence Control

SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- After completion of VDC sequence control.
- When a malfunction is detected.

NOTE

For brake light relay, refer to "Relay and Fuse". Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Relay and Fuse.

OPERATION

1. BRAKE LAMP LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR

Caution:
For models with EyeSight, performing brake light relay compulsory operation may cause the EyeSight warning light to illuminate. If the brake light relay compulsory operation is performed, refer to "Basic Diagnostic Procedure" of "EyeSight (DIAGNOSTICS)" and check DTCs and then clear memory. **Ref. to EyeSight (DIAGNOSTICS)>Basic Diagnostic Procedure.**

1. Connect the Subaru Select Monitor.
   Note:
   - **In the event of any trouble, brake lamp lighting operation mode will not function.**
   - **For detailed operation procedures, refer to "Application help".**

   (1) On [Start] display, select [Diagnosis].
   (2) On [Select Vehicle] display, input the target vehicle information and select [Set].
   (3) On [Main Menu] display, select [Each System].
   (4) On [Select System] display, select [Brake Control], and then select [Enter].
   (5) On [Select Function] display, select [Work Support].
   (6) From the work support item list, select Brake Lamp Lighting Operation mode.
2. Operate according to the procedures displayed in the Subaru Select Monitor.

SPECIFICATION

1. CONDITIONS TO COMPLETE BRAKE LAMP LIGHTING OPERATION MODE

When the following conditions develop, the brake lamp lighting operation mode stops and the normal control mode is restored.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- When brake lamp lighting operation mode ends.
- When a malfunction is detected.

NOTE

Yaw rate & longitudinal G and lateral G sensor are integrated with the VDC control module & hydraulic control unit (VDCCM&H/U).

INSPECTION

1. YAW RATE & LONGITUDINAL G AND LATERAL G SENSOR SIGNAL

1. CHECK YAW RATE & G SENSOR.

1. Check the installation condition of the VDC control module & hydraulic control module (VDCCM&H/U).
2. Using Subaru Select Monitor, display [Data monitor].
3. Read the output of [Yaw Rate Sensor], [Longitudinal G Sensor] and [Lateral G Sensor].

When the vehicle is placed horizontally, are the displayed values −1.5 — 1.5 m/s^2 for longitudinal G and lateral G sensor, and −4 — 4 deg/s for yaw rate sensor?

Yes — Go to 2.

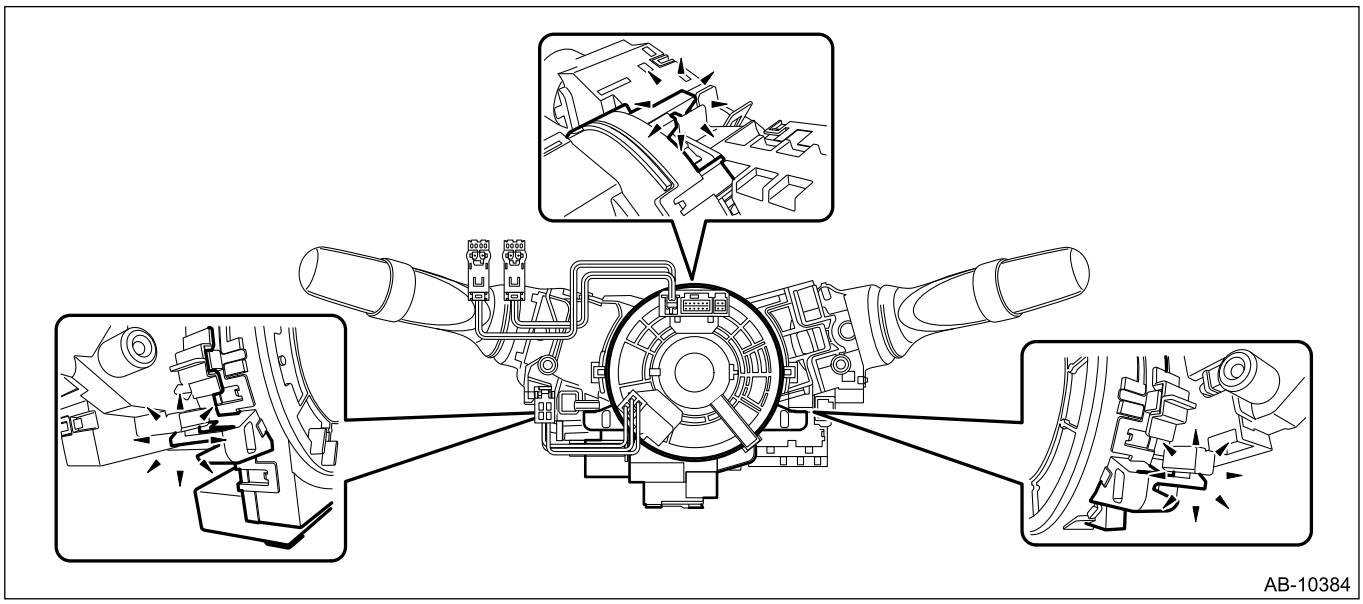
No — Replace the VDC control module & hydraulic control unit (VDCCM&H/U).

2. PERFORM DRIVING TEST.

Drive for approximately 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.

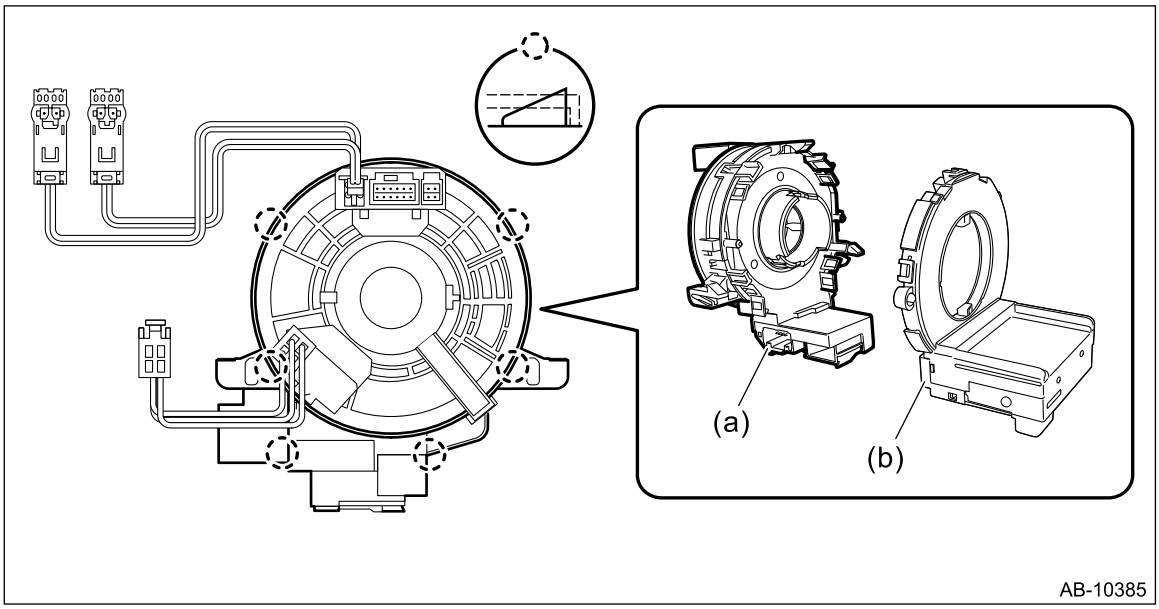
Is there any abnormal movement or the warning light illumination while driving?

Yes — Perform the diagnosis according to DTCs for the VDC system. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.



No — G sensor is normal.

REMOVAL



Caution:

- **If the steering wheel and steering angle sensor are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**
- **Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Always use the steering wheel puller for removal to avoid deforming the steering wheel.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**

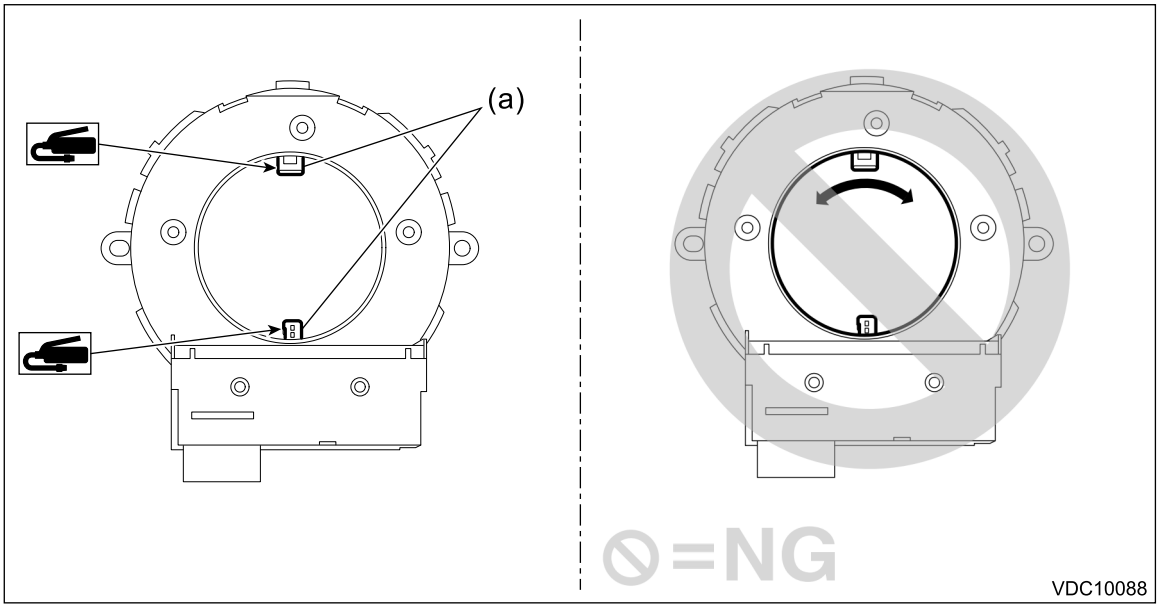
1. Position the front wheels straight ahead.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
4. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
5. Remove the cover assembly - column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
6. Remove the steering roll connector.
   Caution:
   Make sure that the steering roll connector is not turned from the original position.
   (1) Disconnect the connector under the steering roll connector.
   (2) Release the claws and remove the steering roll connector.

7. Remove the steering angle sensor.
   (1) Release the claws and remove the steering angle sensor (b) from the steering roll connector (a).

VEHICLE DYNAMICS CONTROL (VDC) > Steering Angle Sensor

INSTALLATION

Caution:



- **When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**
- **Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Install the steering angle sensor.

(1) Apply grease to the protrusion (a) of the new steering angle sensor.

Caution:

Do not rotate the steering angle sensor protrusion.

(2) Align the center of steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>INSTALLATION.

(3) Align the position of the protrusion and install the steering angle sensor to the steering roll connector.

2. Install the cover assembly - column.
3. Install the steering wheel.

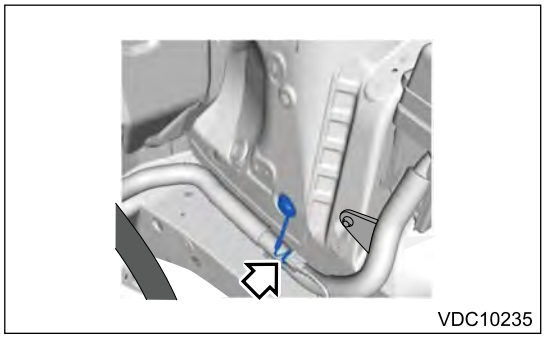
Tightening torque:

Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:

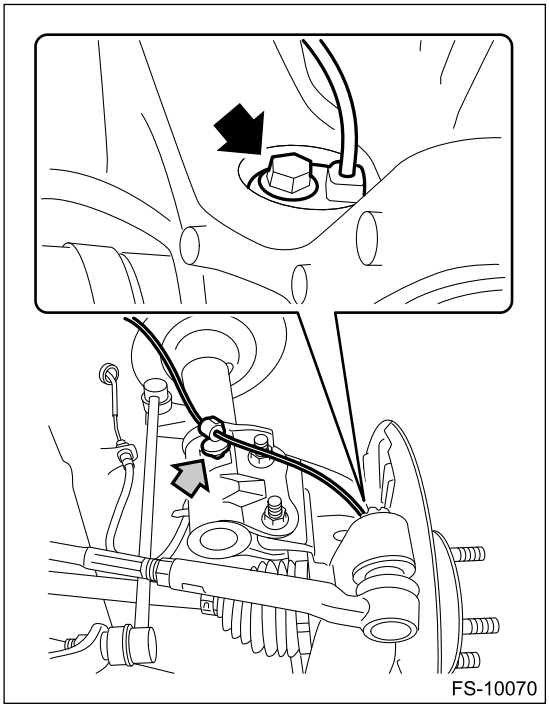
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

4. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
6. Perform the neutral position setting of the steering angle sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.



VEHICLE DYNAMICS CONTROL (VDC) > Front ABS Wheel Speed Sensor

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Lift up the vehicle, and then remove the front wheels.
3. Remove the front ABS wheel speed sensor.

   Caution:
   - **Be careful not to damage the sensor.**
   - **Do not apply excessive force to the sensor harness.**
   - **Leave the sensor harness clamp on the vehicle side.**

   (1) Disconnect the connector of the front ABS wheel speed sensor in the engine compartment.

   (2) Remove each harness clip and grommet.
   (3) Remove the front ABS wheel speed sensor from the housing assembly - front axle.

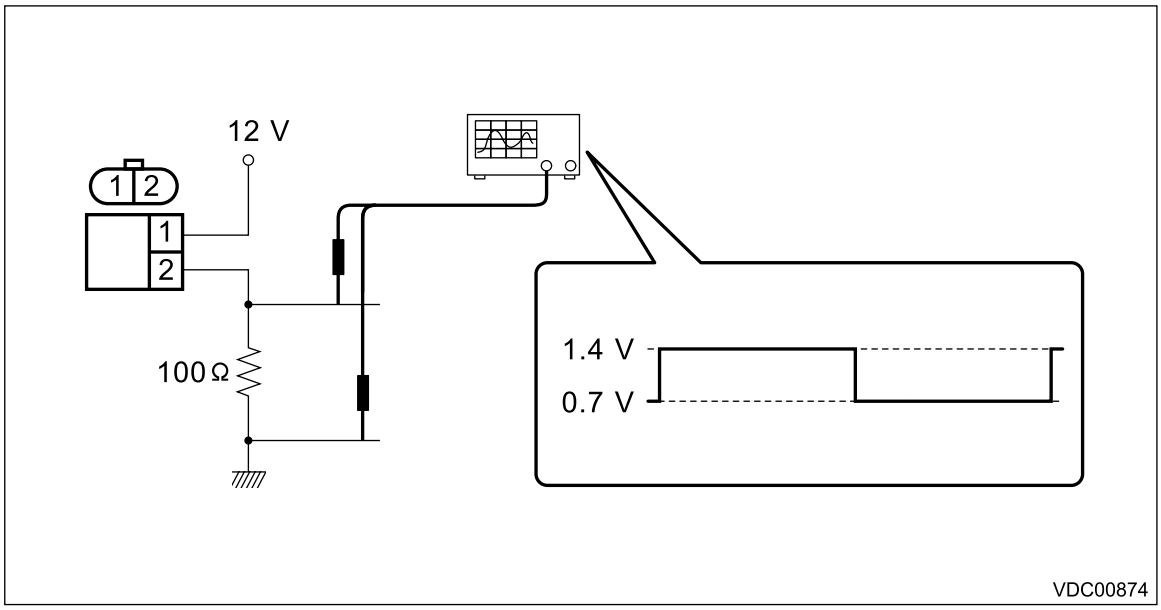
VEHICLE DYNAMICS CONTROL (VDC) > Front ABS Wheel Speed Sensor

INSTALLATION

Caution:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1. Install the front ABS wheel speed sensor.
   Tightening torque:
   Front ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the front wheels.
   Tightening torque:
   Front wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
3. Lower the vehicle.
   Note:
   Check if the harness is not pulled and does not come in contact with the suspension or body while operating the steering.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

VEHICLE DYNAMICS CONTROL (VDC) > Front ABS Wheel Speed Sensor



INSPECTION

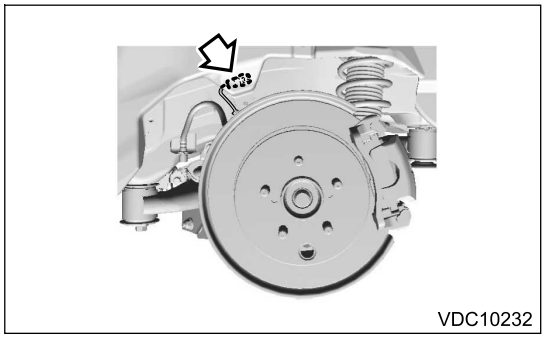
1. CHECK WITH SUBARU SELECT MONITOR

1. Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (1) On [Start] display, select [Diagnosis].
   (2) On [Select Vehicle] display, input the target vehicle information and select [Set].
   (3) On [Main Menu] display, select [Each System].
   (4) On [Select System] display, select [Brake Control], and then select [Enter].
   (5) On [Select Function] display, select [Data monitor].
   (6) From the data monitor item list, select [FR Wheel Speed] and [FL Wheel Speed].
2. Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
3. If the speed indicated on the display does not change in the inspection, check the ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor>INSPECTION > CHECK ABS WHEEL SPEED SENSOR UNIT.

2. CHECK ABS WHEEL SPEED SENSOR UNIT

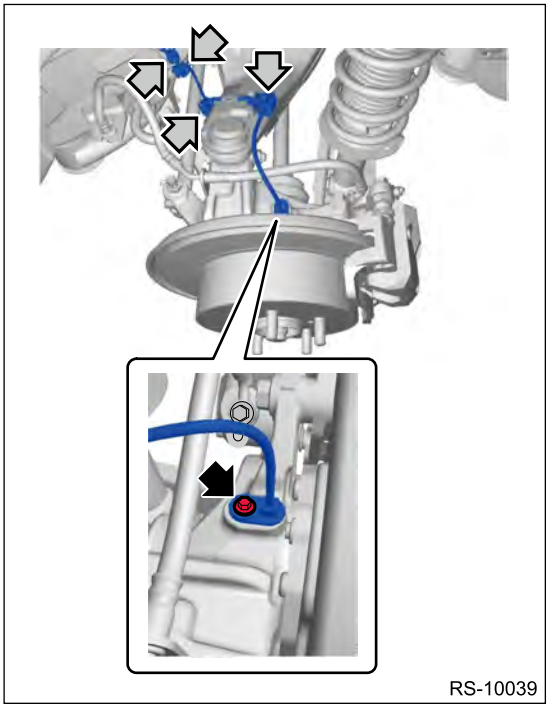
1. Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
2. Disconnect the ABS wheel speed sensor connector.
3. Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
4. Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.
   Standard value of output voltage:
   0.7 — 1.4 V

5. Replace the ABS wheel speed sensor if the inspection result is not within the standard value.



VEHICLE DYNAMICS CONTROL (VDC) > Rear ABS Wheel Speed Sensor

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Lift up the vehicle, and then remove the rear wheels.
3. Remove the rear ABS wheel speed sensor.

   Caution:
   - **Be careful not to damage the sensor.**
   - **Do not apply excessive force to the sensor harness.**
   - **Leave the sensor harness clamp on the vehicle side.**

   (1) Disconnect the connector from the rear ABS wheel speed sensor.

   (2) Remove the harness clamp and bolts, and remove the rear ABS wheel speed sensor from the rear axle housing.

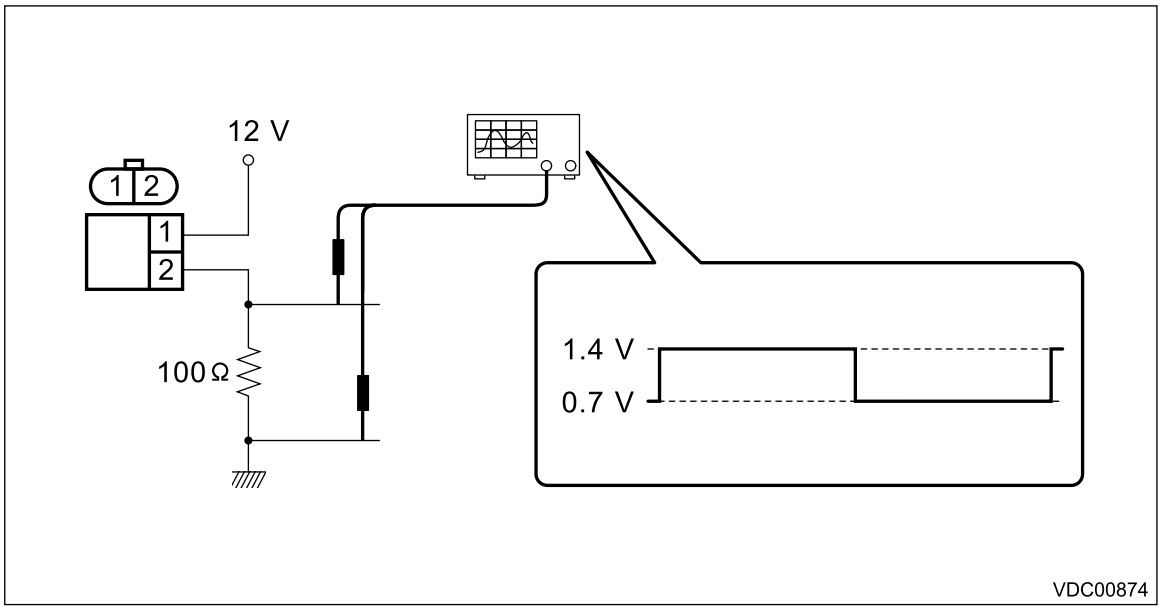
VEHICLE DYNAMICS CONTROL (VDC) > Rear ABS Wheel Speed Sensor

INSTALLATION

Caution:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1. Install the rear ABS wheel speed sensor.
   Note:
   Check the identification (mark) on the harness to make sure there is no warpage. **Ref. to VEHICLE DYNAMICS CONTROL (VDC)>General Description>SPECIFICATION.**
   Tightening torque:
   Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the rear wheels.
   Tightening torque:
   Rear wheel: 120N·m (12.2 kgf-m, 88.5 ft-lb)
3. Lower the vehicle.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

VEHICLE DYNAMICS CONTROL (VDC) > Rear ABS Wheel Speed Sensor



INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR

1. Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (1) On [Start] display, select [Diagnosis].
   (2) On [Vehicle selection] display, input the target vehicle information and select [OK].
   (3) On [Main Menu] display, select [Each System].
   (4) On [Select System] display, select [Brake Control], and then select [Enter].
   (5) On [Select Function] display, select [Data monitor].
   (6) From the data monitor item list, select [RR Wheel Speed] and [RL Wheel Speed].
2. Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
3. If the speed indicated on the display does not change in the inspection, check the ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Rear ABS Wheel Speed Sensor>INSPECTION > CHECK ABS WHEEL SPEED SENSOR UNIT.

2. CHECK ABS WHEEL SPEED SENSOR UNIT

1. Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
2. Disconnect the ABS wheel speed sensor connector.
3. Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
4. Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.
   Standard value of output voltage:
   0.7 — 1.4 V

5. Replace the ABS wheel speed sensor if the inspection result is not within the standard value.

VEHICLE DYNAMICS CONTROL (VDC) > Front Magnetic Encoder

REMOVAL

Refer to “Front Hub Unit Bearing” for removal, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>REMOVAL.

VEHICLE DYNAMICS CONTROL (VDC) > Front Magnetic Encoder

INSTALLATION

Refer to “Front Hub Unit Bearing” for installation, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. Ref. to DRIVE SHAFT SYSTEM>Front Hub Unit Bearing>INSTALLATION.

VEHICLE DYNAMICS CONTROL (VDC) > Front Magnetic Encoder

INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit COMPL - front axle.

Note:

Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

VEHICLE DYNAMICS CONTROL (VDC) > Rear Magnetic Encoder

REMOVAL

Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>REMOVAL.

VEHICLE DYNAMICS CONTROL (VDC) > Rear Magnetic Encoder

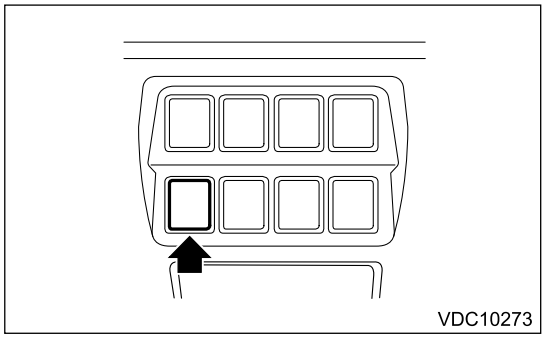
INSTALLATION

Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. Ref. to DRIVE SHAFT SYSTEM>Rear Hub Unit Bearing>INSTALLATION.

VEHICLE DYNAMICS CONTROL (VDC) > Rear Magnetic Encoder

INSPECTION

Visually check the magnetic encoder parts for any damage. If necessary, replace with a new hub unit COMPL - rear axle.



Note:

Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

VEHICLE DYNAMICS CONTROL (VDC) > VDC OFF Switch

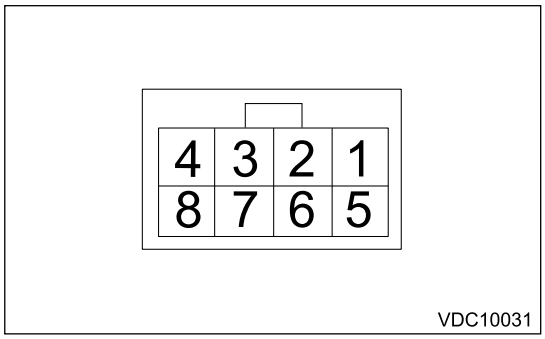
REMOVAL

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the cover assembly - instrument panel LWR driver OUT. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Release the claws and remove the VDC OFF switch.

VEHICLE DYNAMICS CONTROL (VDC) > VDC OFF Switch

INSTALLATION

1. Install the VDC OFF switch.
2. Install the cover assembly - instrument panel LWR driver OUT.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.



VEHICLE DYNAMICS CONTROL (VDC) > VDC OFF Switch

INSPECTION

1. Measure the resistance between the VDC OFF switch terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
6 — 8	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2. Replace the VDC OFF switch if the inspection result is not within the standard value.

INSPECTION

For general diagnostic table, refer to “General Diagnostic Table” of “BRAKE CONTROL (DIAGNOSTICS)” section. Ref. to BRAKE CONTROL (DIAGNOSTICS)>General Diagnostic Table>INSPECTION.

CLUTCH SYSTEM

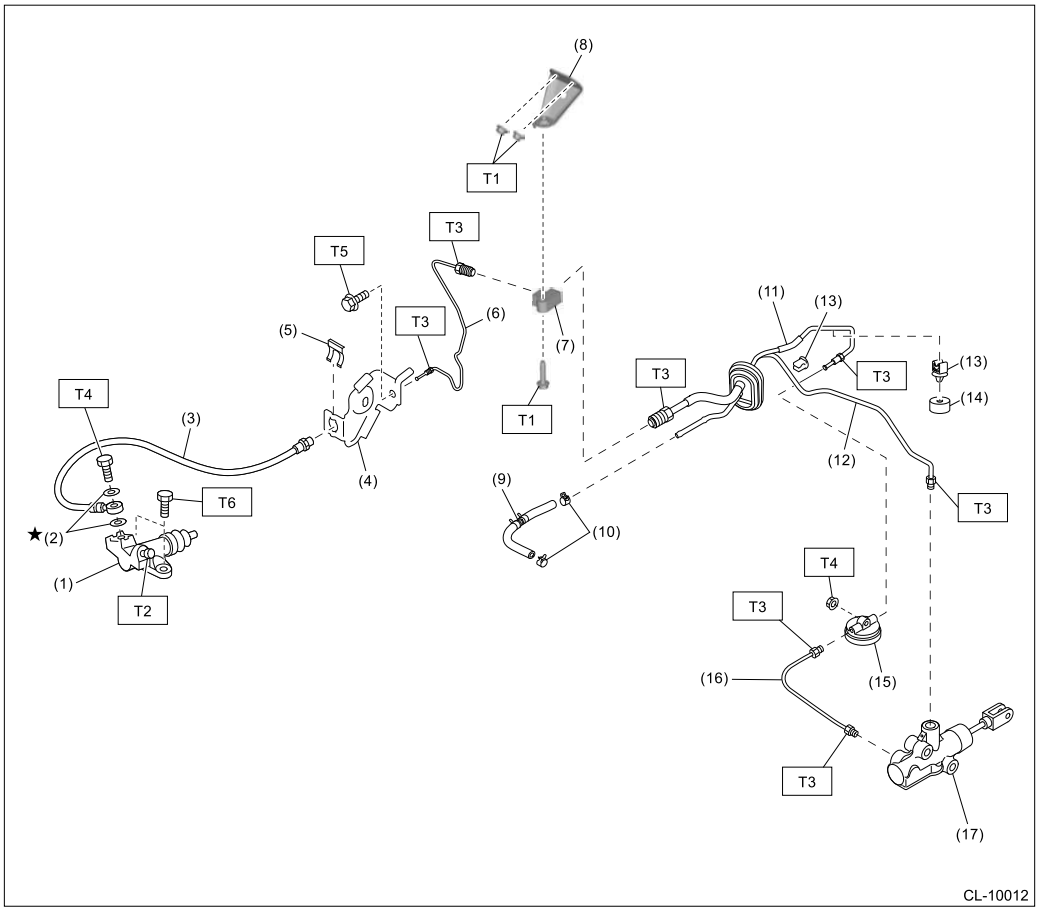
10. Clutch Pedal
11. Clutch Switch
12. General Diagnostic Table

SPECIFICATION

Model			2.0 L
Transmission type			5MT
Clutch cover	Type		Push type
	Diaphragm set load N (kgf, lbf)		5,688 (580, 1,279)
Clutch disc	Facing material		Woven (non-asbestos)
	O.D. × I.D. × Thickness mm (in)	Flywheel side	225 × 150 × 3.2 (8.86 × 5.9 × 0.126)
		Clutch cover side	225 × 150 × 3.5 (8.86 × 5.9 × 0.138)
	Spline outer diameter mm (in)		25.2 (0.992), (number of teeth: 24)
	Depth of rivet head mm (in)	Flywheel side	1.35 — 1.95 (0.053 — 0.077)
		Clutch cover side	1.65 — 2.25 (0.065 — 0.089)
		Limit of sinking	0.8 (0.031)
	Deflection limit mm (in)		0.7 (0.028) at R = 110 (4.33)
Clutch release lever ratio			1.6
Release bearing			Grease-packed self-aligning
Clutch pedal	Full stroke mm (in)		130 — 135 (5.12 — 5.31)
	Free play mm (in)		4 — 11 (0.16 — 0.43)
Flywheel	Type		Flexible

COMPONENT

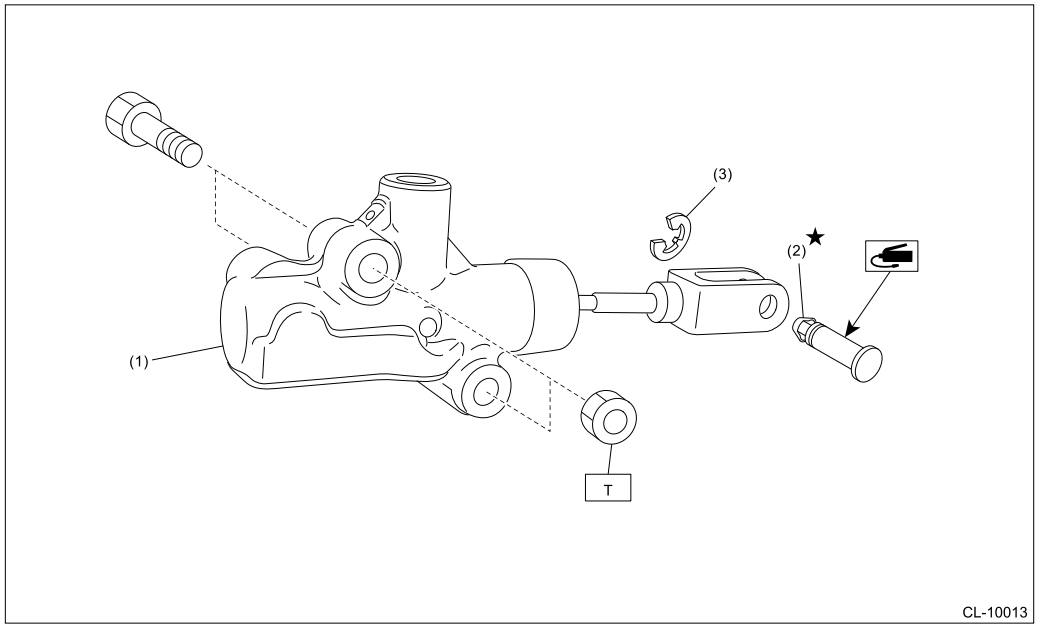
1. CLUTCH ASSEMBLY



(1) Dust cover
(2) Lever spring
(3) Pivot
(4) Release lever
(5) Clip
(6) Release bearing
(7) Clutch cover
(8) Clutch disc
(9) Flexible flywheel
(10) Pilot bearing

Tightening torque: N·m (kgf-m, ft-lb)

T1: 16 (1.6, 11.8)

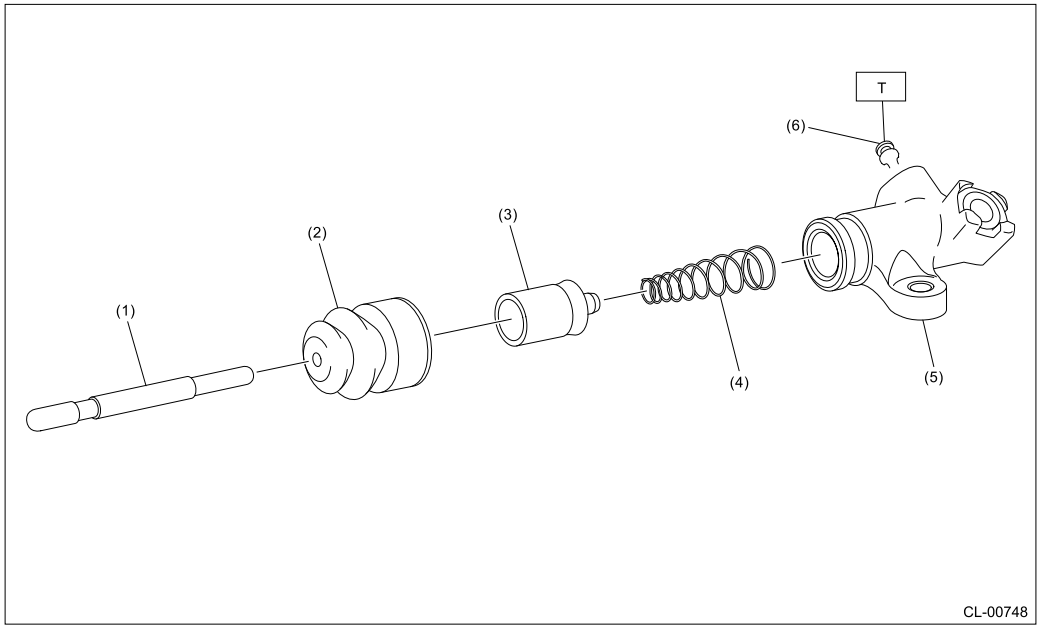


T2: Ref. to CLUTCH SYSTEM>Flywheel>INSTALLATION.

2. CLUTCH PIPE AND HOSE

(1) Operating cylinder	(10) Clamp	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Gasket	(11) Clutch pipe	***T1: 7.5 (0.8, 5.5)***
(3) Clutch hose	(12) Clutch pipe	***T2: 7.8 (0.8, 5.8)***
(4) Clutch hose bracket	(13) Clamp	***T3: 15 (1.5, 11.1)***
(5) Clamp	(14) Mass damper	***T4: 18 (1.8, 13.3)***
(6) Clutch pipe	(15) Clutch damper	***T5: 25 (2.5, 18.4)***
(7) Two-way connector	(16) Clutch pipe	***T6: 37 (3.8, 27.3)***
(8) Clutch connector bracket	(17) Master cylinder ASSY	
(9) Tank hose		

3. MASTER CYLINDER

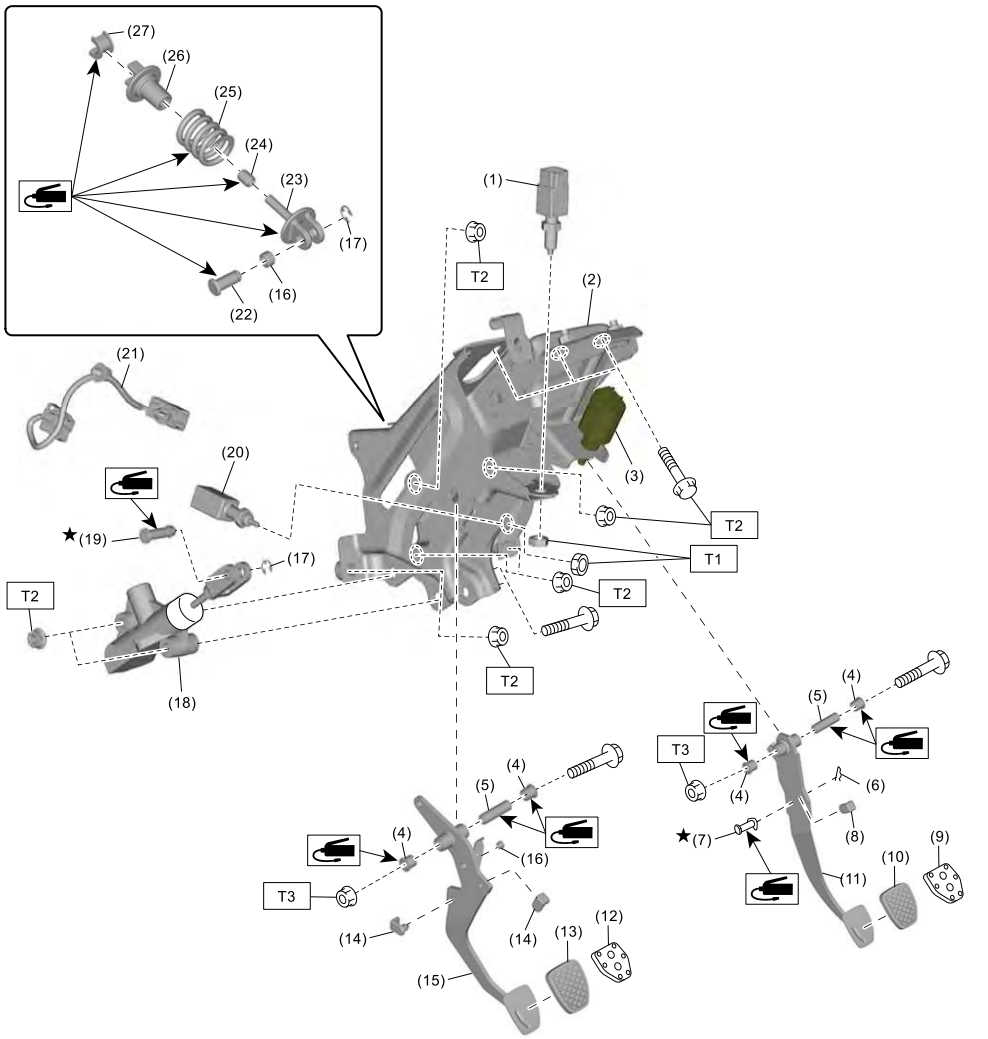


(1) Master cylinder ASSY
(2) Clevis pin
(3) Clip

Tightening torque: N·m (kgf-m, ft-lb)

T: 18 (1.8, 13.3)

4. OPERATING CYLINDER



(1) Push rod
(2) Boot
(3) Piston
(4) Piston spring
(5) Operating cylinder
(6) Bleeder screw

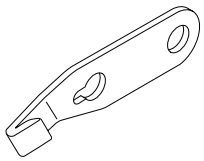
Tightening torque: N·m (kgf-m, ft-lb)

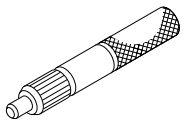
T: 7.8 (0.8, 5.8)

5. CLUTCH PEDAL ASSEMBLY

(1)	Clutch switch	(12)	Clutch pedal pad (sport type)	(23)	Assist rod A
(2)	Pedal bracket	(13)	Clutch pedal pad (normal type)	(24)	Assist bushing A
(3)	Stop light switch	(14)	Clutch pedal stopper	(25)	Assist spring
(4)	Pedal bushing	(15)	Clutch pedal	(26)	Assist rod B
(5)	Spacer	(16)	Bushing A	(27)	Assist bushing B
(6)	Snap pin	(17)	Clip		
(7)	Clevis pin	(18)	Master cylinder ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***	
(8)	Brake pedal stopper	(19)	Clevis pin	***T1: 8 (0.8, 5.9)***	
(9)	Brake pedal pad (sport type)	(20)	Clutch start switch	***T2: 18 (1.8, 13.3)***	
(10)	Brake pedal pad (normal type)	(21)	Harness connector	***T3: 30 (3.1, 22.1)***	
(11)	Brake pedal	(22)	Assist pin		

CLUTCH SYSTEM > General Description





CAUTION

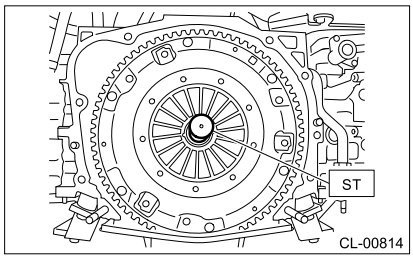
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Apply grease onto sliding or revolving surfaces before installation.

- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Keep fluid away from the vehicle body. If contaminated with fluid, immediately wash the contaminated area using water.

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498497100	498497100	CRANKSHAFT STOPPER	Used for stopping rotation of the flywheel.
 ST-499747100	499747100	CLUTCH DISC GUIDE	• Used for removing and installing the clutch disc. • Used for measuring deflection on facing.



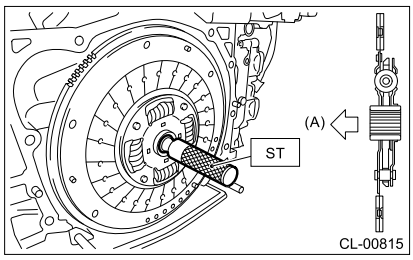
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Dial gauge	Used for measuring clutch disc run-out.
Depth gauge	Used for measuring clutch disc wear.
Angle gauge	Used for installing the flywheel.

CLUTCH SYSTEM > Clutch Disc and Cover

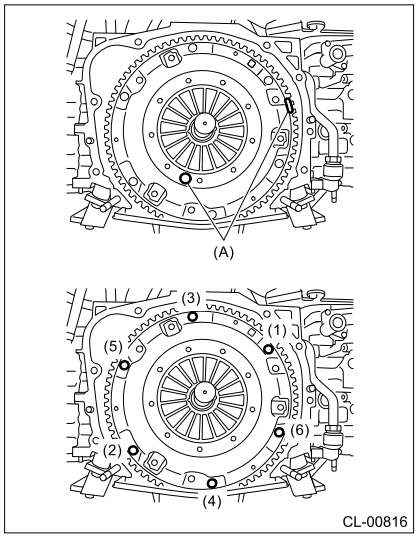
REMOVAL

1. Remove the manual transmission assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Install the ST to the flywheel.
   Special tool:
   ST: 499747100 CLUTCH DISC GUIDE



3. Remove the clutch cover and clutch disc.
   Caution:
   - **Take care not to allow oil to adhere to the clutch disc face.**
   - **Do not disassemble the clutch cover or clutch disc.**

CLUTCH SYSTEM > Clutch Disc and Cover



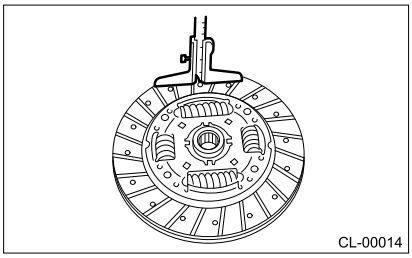
INSTALLATION

1. Insert the CLUTCH DISC GUIDE (499747100) into the clutch disc.
2. Install it by inserting the end of the ST to the pilot bearing.
   Caution:
   Pay attention to the orientation of the clutch disc.
   Special tool:
   ST: 499747100 CLUTCH DISC GUIDE

(A) Flywheel side

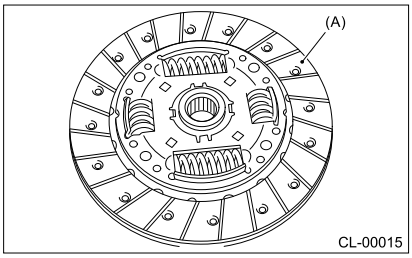
3. Install the clutch cover and tighten the bolts to specified torque.
   Note:
   - **When installing a clutch cover, position the clutch cover so that the spacing between the unbalance marks (paint mark) on the flywheel and clutch cover is 120° or more apart. (The unbalance mark indicates the direction of residual unbalance.)**
   - **Temporarily tighten each bolt by hand, and tighten them to the specified torque in a crisscross order.**
   Tightening torque:
   16 N·m (1.6 kgf-m, 11.8 ft-lb)

(A) Unbalance mark (paint)



4. Remove the CLUTCH DISC GUIDE (499747100).
5. Install the manual transmission assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

CLUTCH SYSTEM > Clutch Disc and Cover

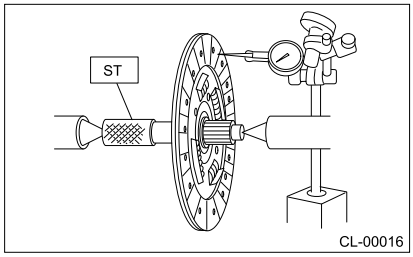


INSPECTION

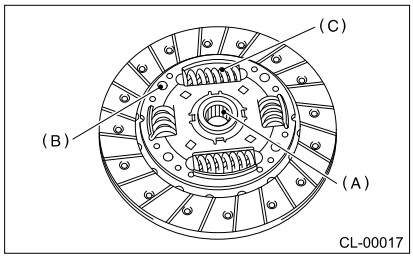
1. CLUTCH DISC

1. Facing wear
   Measure the depth from the facing surface to the rivet head. Replace if the surface is partially worn or worn down to less than the specified value.
   Caution:
   Do not wash the clutch disc with cleaning fluid.
   Service limit:
   0.8 mm (0.031 in)

2. Hardened facing
   Replace the clutch disc.
3. Oil soakage on facing
   Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other locations for oil leakage.



(A) Clutch facing



4. Deflection on facing
   If deflection exceeds the limit value at the outer circumference of the facing, replace the clutch disc.
   Special tool:
   ST: 499747100 CLUTCH DISC GUIDE

Service limit:

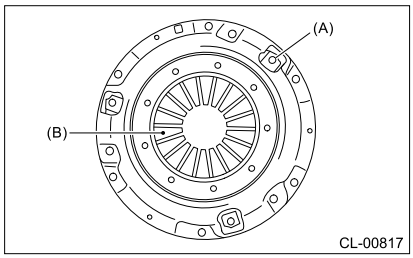
0.7 mm (0.028 in) at R = 110 mm (4.33 in)

5. If there is spline wear, loose rivets, failed damper springs, etc., replace the clutch disc.

(A) Spline

(B) Rivet

(C) Damper spring



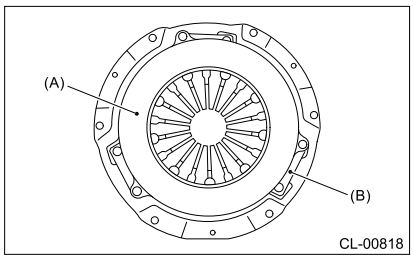
2. CLUTCH COVER

Note:

Visually check the following items without disassembling, and replace or repair if defective.

1. Loose thrust rivet

2. Damaged or worn bearing contact area at the center of diaphragm spring



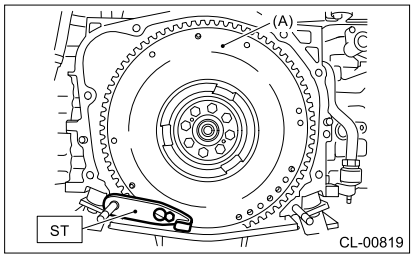
(A) Thrust rivet

(B) Diaphragm spring

3. Damaged or worn disc contact surface of the pressure plate

4. Loose strap plate installation area

5. Worn diaphragm sliding area



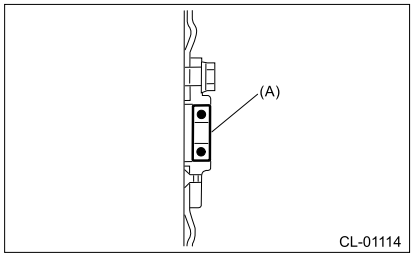
(A) Pressure plate

(B) Strap plate

CLUTCH SYSTEM > Flywheel

REMOVAL

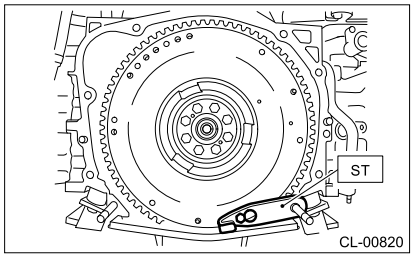
1. Remove the manual transmission assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the clutch cover and clutch disc. Ref. to CLUTCH SYSTEM>Clutch Disc and Cover>REMOVAL.
3. Install the ST.
   Special tool:
   ST: 498497100 CRANKSHAFT STOPPER



(A) Flywheel

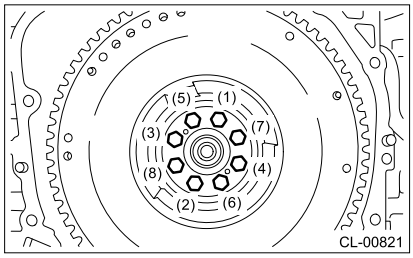
4. Remove the flywheel and crankshaft position sensor plate.
5. Drive out the pilot bearing from the flywheel.

CLUTCH SYSTEM > Flywheel



INSTALLATION

1. Press in a new pilot bearing to the position where it is flush with the flywheel surface or up to 0.4 mm (0.016 in) deeper than that.
   Caution:
   Do not press the bearing inner ring.



(A) Pilot bearing

2. Temporarily install the crankshaft position sensor plate and flywheel.
   Note:
   Align the knock pin hole of the crankshaft position sensor plate to the knock pin of the crankshaft to secure the knock pin.
3. Install the ST.
   Special tool:
   ST: 498497100 CRANKSHAFT STOPPER

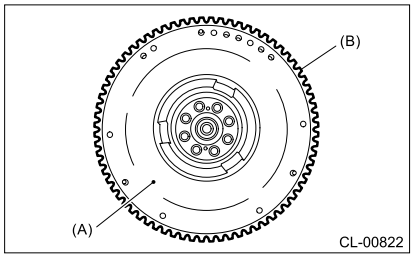
4. Tighten the flywheel mounting bolts in two stages.
   (1) Tighten the flywheel attachment bolts.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)

(2) While checking the tightening angle with the angle gauge, further tighten the flywheel mounting bolts.

Tightening angle:

30° — 35°

5. Install the clutch disc and clutch cover. Ref. to CLUTCH SYSTEM>Clutch Disc and Cover>INSTALLATION.
6. Install the manual transmission assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.



CLUTCH SYSTEM > Flywheel

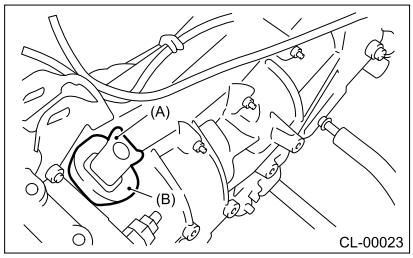
INSPECTION

Caution:

Because the center pilot bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or solvents.

1. If there is damage or defectiveness in the facing sliding surface or ring gear, replace the flywheel.

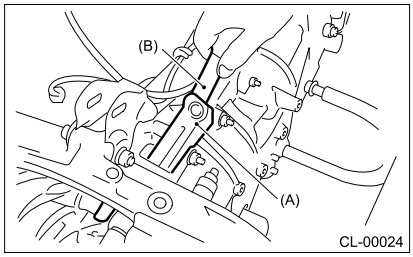
(A) Flywheel



(B) Ring gear

2. Smoothness of rotation
   Rotate the ball bearing while applying pressure in the thrust direction.
3. If any noise or excessive play is noted, replace the pilot bearing.

CLUTCH SYSTEM > Release Bearing and Lever



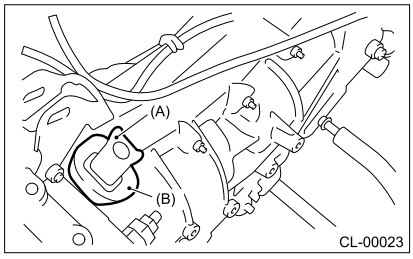
REMOVAL

1. Remove the manual transmission assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the two clips from the release lever and remove the release bearing.
   Caution:
   Be careful not to deform the clips.
3. Remove the dust cover.

(A) Release lever
(B) Dust cover

4. Remove the attachment point of lever spring by inserting a screwdriver through the clutch housing release lever hole. Then remove the release lever.

(A) Release lever
(B) Screwdriver



CLUTCH SYSTEM > Release Bearing and Lever

INSTALLATION

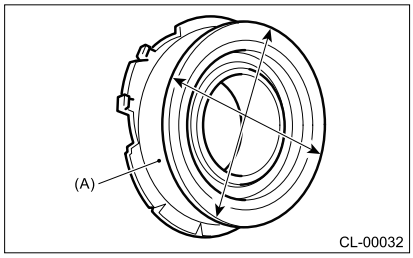
Note:
Apply the specified grease to lubricate to the following points before installation.
- **Contact surface of lever and pivot**
- **Contact surface of lever and bearing**
- **Transmission main shaft spline**
- **Contact surface of release bearing and transmission case**

Grease
NICHIMOLY N-130 or equivalent

1. While pushing the release lever to the pivot and twisting it to both sides, fit the lever spring onto the raised portion of the pivot.
   Caution:
   Observing from the main case hole, check that the lever spring is installed securely.
2. Install the release bearing and fasten it with two clips.
3. Install the dust cover.

(A) Release lever
(B) Dust cover

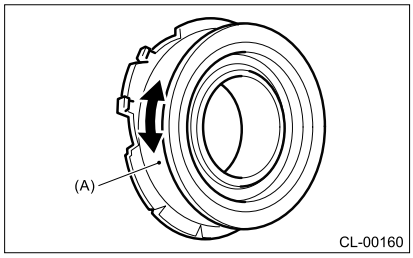
4. Operate the release lever and check if the release bearing moves smoothly.
5. Apply grease to the contact point of the release lever and operating cylinder.
   Grease
   NICHIMOLY N-130 or equivalent
6. Install the manual transmission assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.



CLUTCH SYSTEM > Release Bearing and Lever

INSPECTION

1. RELEASE BEARING

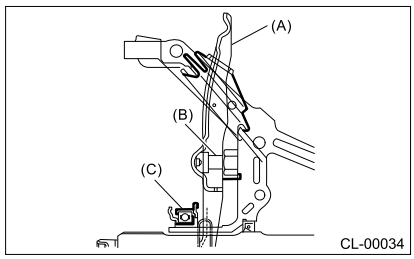


Caution:
Since this bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or any other solvent when servicing the clutch.

1. Check the bearing play by applying force to the bearing in the radial direction.
   Specification:
   1.4 mm (0.055 in) or more

(A) Bearing case

2. While applying force to the bearing in the rotational direction, check the bearing for smooth rotation.

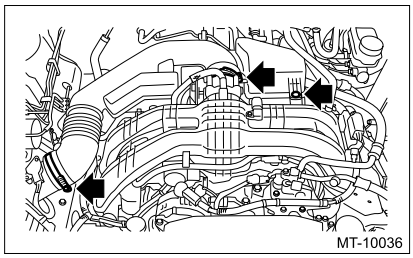


(A) Bearing case

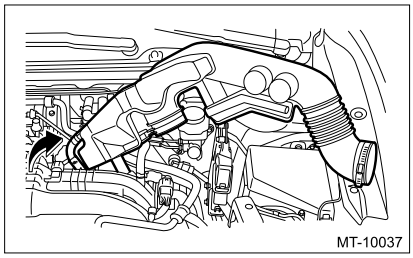
3. Check for wear and damage at the bearing case surface in contact with the lever.

2. RELEASE LEVER

Check the pivot portion of the lever and the contact area with the release bearing case for wear.

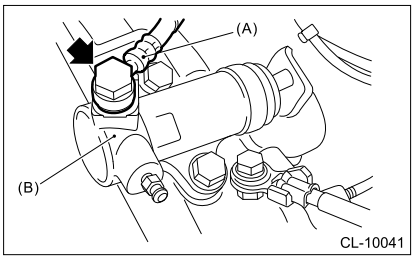


(A) Release lever
(B) Pivot
(C) Release bearing



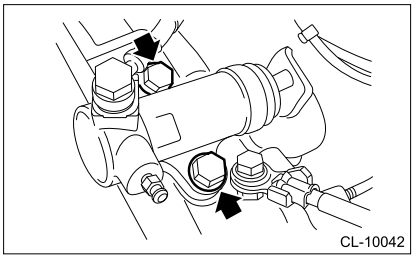
REMOVAL

Caution:
Brake fluid spilled on the vehicle body will harm the paint surface; therefore, wash it off with water and wipe clean quickly if spilled.



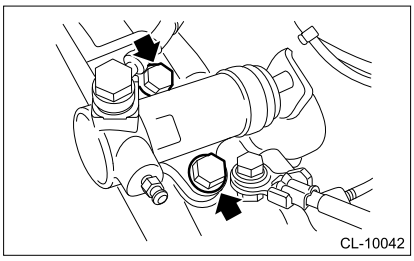
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.

3. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.



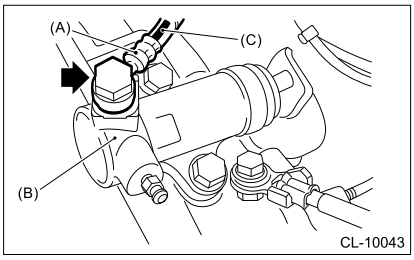
4. Disconnect the clutch hose.
   Caution:
   Cover the hose joint to prevent the brake fluid from flowing out.

(A) Clutch hose
(B) Operating cylinder



5. Remove the operating cylinder.

INSTALLATION

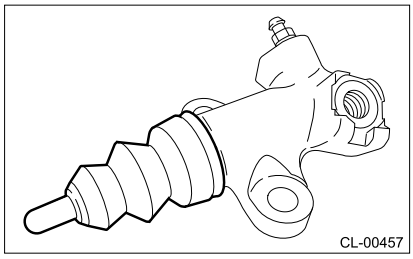


1. Install the operating cylinder.
   Note:
   Before installing, apply grease to the contact point of the release lever and operating cylinder.
   Grease
   NICHIMOLY N-130 or equivalent
   Tightening torque:

37 N·m (3.8 kgf-m, 27.3 ft-lb)

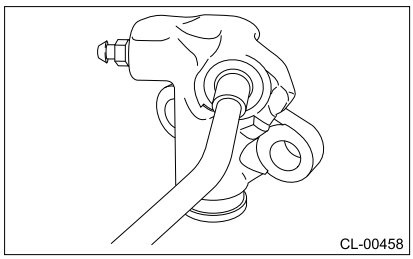
2. Replace the gasket with a new part,and install the clutch hose.
   Caution:
   - **Be sure to install with the mark side facing upward.**
   - **Do not twist the parts during installation.**

   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)



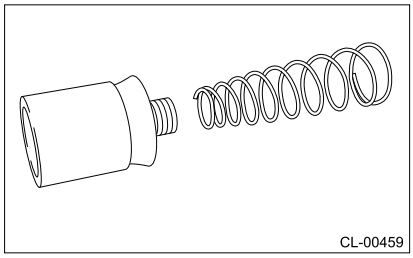
(A) Clutch hose
(B) Operating cylinder
(C) Mark

3. After bleeding air from the operating cylinder, ensure that the clutch operates properly. Ref. to CLUTCH SYSTEM>Clutch Fluid Air Bleeding>PROCEDURE.
4. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



CLUTCH SYSTEM > Operating Cylinder

DISASSEMBLY



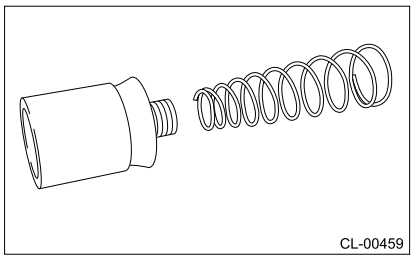
1. Remove the boot and push rod.

2. Apply compressed air through clutch hose attachment hole.
   Note:
   Face the piston hole down and place a piece of wood underneath to prevent the piston from popping out.

3. Separate the piston and piston spring.

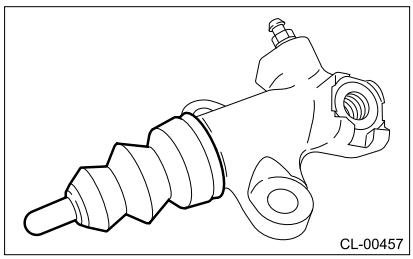
CLUTCH SYSTEM > Operating Cylinder

ASSEMBLY



Note:

During assembly, apply hydraulic oil to all parts.



Recommended brake fluid:

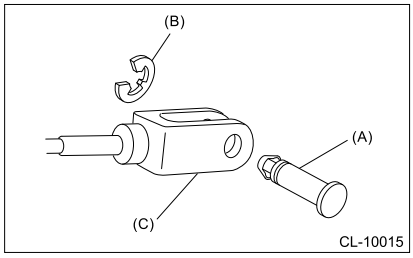
New FMVSS No. 116 DOT3 or DOT4

1. Install the piston spring.

2. Insert piston into the operating cylinder.
3. Install push rod to the boot.
4. Install the boot and push rod.

CLUTCH SYSTEM > Operating Cylinder

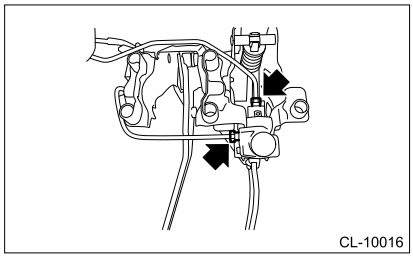
INSPECTION



1. Check that the operating cylinder is not damaged. Replace the operating cylinder if it is damaged.
2. Check the operating cylinder for brake fluid leakage or damage on the boot.
   Replace the operating cylinder if brake fluid leaks or damages on the boot are noted.

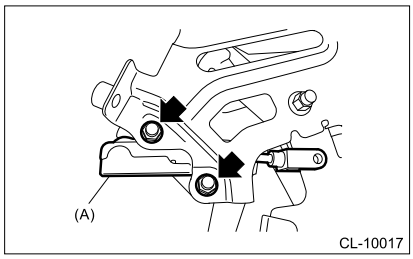
REMOVAL

Caution:



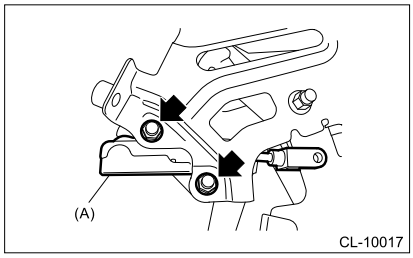
- **Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Drain the brake fluid. Ref. to CLUTCH SYSTEM>Clutch Fluid.
4. Remove the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
5. Remove the steering column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
6. Remove the clutch pedal assembly. Ref. to CLUTCH SYSTEM>Clutch Pedal>REMOVAL.
7. Remove the clip and clevis pin, and then remove the push rod of the master cylinder.



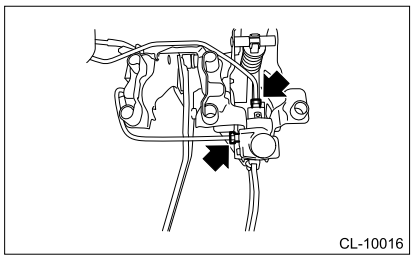
(A) Clevis pin
(B) Clip
(C) Push rod

8. Disconnect the clutch pipe.



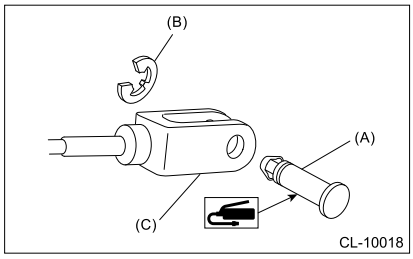
9. Remove the master cylinder.

(A) Master cylinder



INSTALLATION

1. Install the master cylinder.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Master cylinder

2. Tighten the clutch pipe.
   Tightening torque:
   15 N·m (1.5 kgf-m, 11.1 ft-lb)

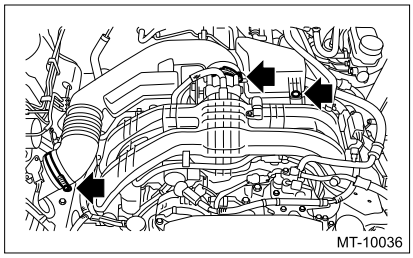
3. Install the push rod of the master cylinder, and install the clevis pin and clip.
   Caution:
   Always use a new clevis pin.
   Note:
   Apply grease to the clevis pin.

(A) Clevis pin
(B) Clip
(C) Push rod

4. Install the clutch pedal assembly. Ref. to CLUTCH SYSTEM>Clutch Pedal>INSTALLATION.
5. Install the steering column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>INSTALLATION.
6. Fill the recommended brake fluid. Ref. to CLUTCH SYSTEM>Clutch Fluid.
7. After bleeding air from the clutch system, ensure that no fluid leaks and the clutch operates properly. Ref. to CLUTCH SYSTEM>Clutch Fluid Air Bleeding.
8. Install the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>INSTALLATION.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

CLUTCH SYSTEM > Master Cylinder

INSPECTION

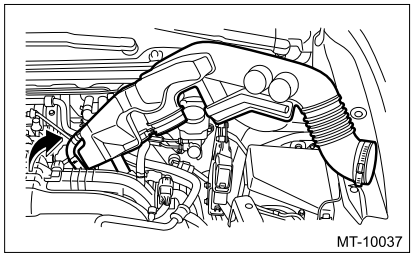


If any damage, deformation, wear, swelling, rust or other faults are found on the master cylinder assembly, reservoir tank, clutch damper, clutch pipe and clutch hose, replace the faulty part.

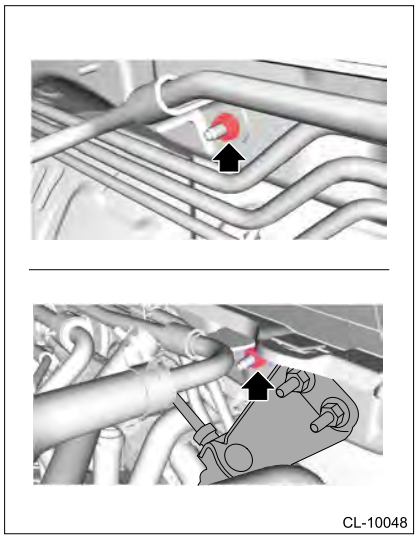
REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". **Ref. to AIRBAG SYSTEM>General Description>CAUTION.**



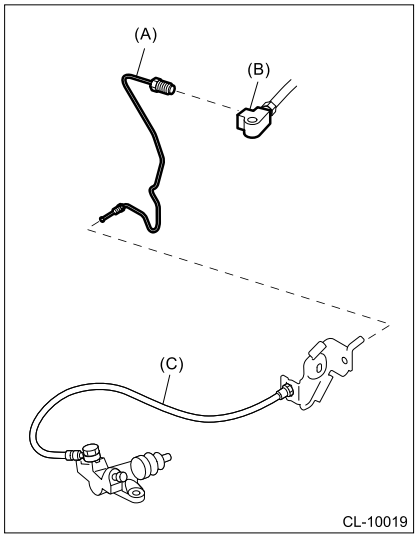
1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the clip from the air intake boot, and loosen the clamp.



4. Remove the air intake boot, and place it aside so that it does not interfere with the work.

   Caution:

   Be careful not to pull out the PCV hose.

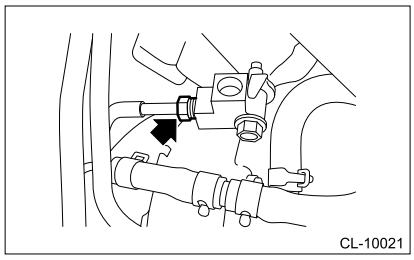


5. Drain the brake fluid. Ref. to CLUTCH SYSTEM>Clutch Fluid.
6. Disconnect the vacuum pipe & hose assembly.

7. Remove the clutch pipe.

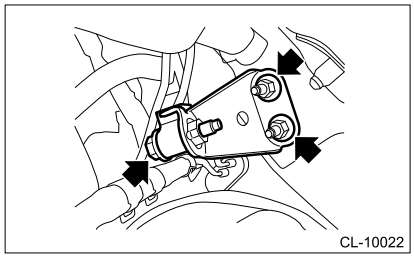
   Caution:

   Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

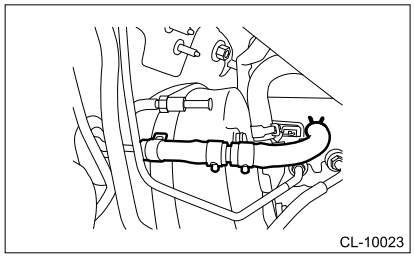


(A) Clutch pipe
(B) Two-way connector
(C) Clutch hose

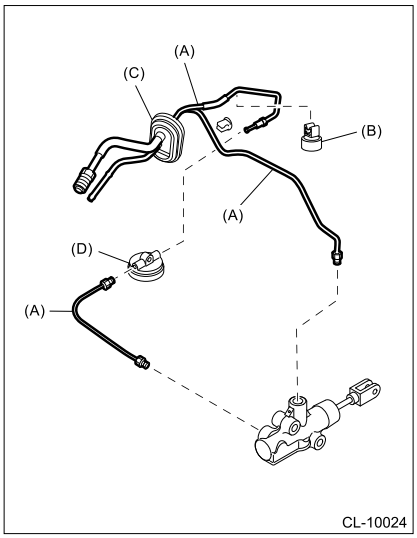
8. Remove the clutch hose bracket.
9. Remove the clamp, and then remove the clutch hose.



(A) Clamp
(B) Clutch hose
(C) Clutch hose bracket



10. Remove the clutch hose from operating cylinder.
11. Disconnect the clutch pipe.



12. Remove the two-way connector and the clutch connector bracket.

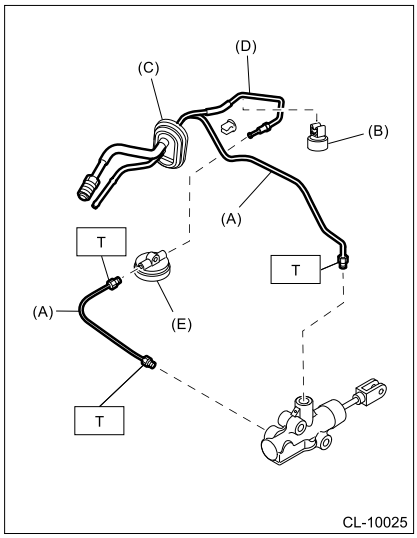
13. Remove the tank hose.

14. Remove the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
15. Remove the steering column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
16. Remove the clutch pedal assembly. Ref. to CLUTCH SYSTEM>Clutch Pedal>REMOVAL.
17. Remove the clutch pipe from the mass damper, clutch damper, master cylinder and clutch pipe grommet.

(A) Clutch pipe
(B) Mass damper
(C) Grommet
(D) Clutch damper

CLUTCH SYSTEM > Clutch Pipe and Hose

INSTALLATION

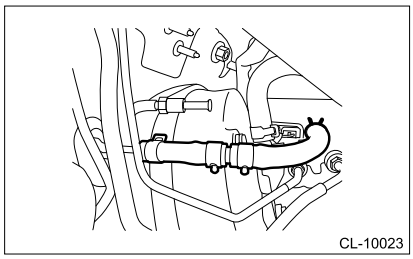


1. Install the clutch pipe to the mass damper, clutch damper, master cylinder and pipe grommet.

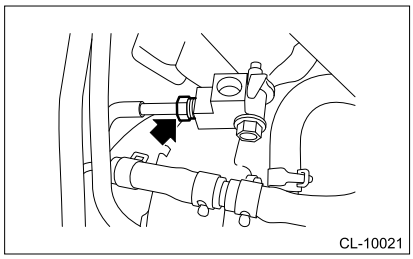
Caution:

Be sure to tighten the clutch pipe (D) temporarily.

Tightening torque:

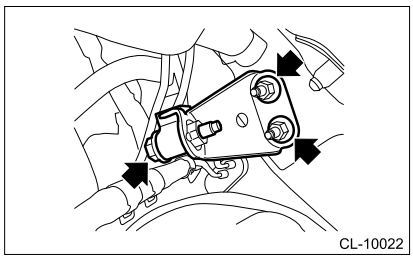


T: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

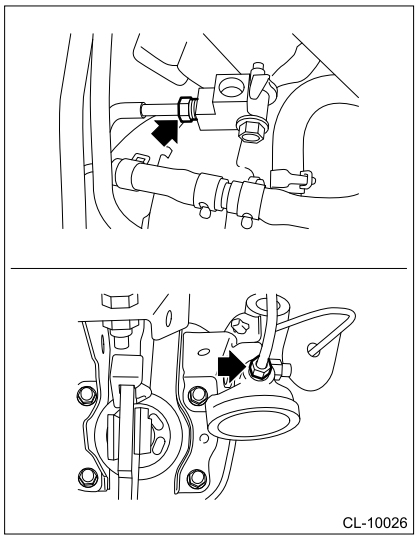


(A) Clutch pipe

(B) Mass damper
(C) Grommet
(D) Clutch pipe
(E) Clutch damper



2. Install the clutch pedal assembly. Ref. to CLUTCH SYSTEM>Clutch Pedal>INSTALLATION.
3. Install the tank hose.
Caution:
Be sure to install so that the side with the triangle mark faces upward.

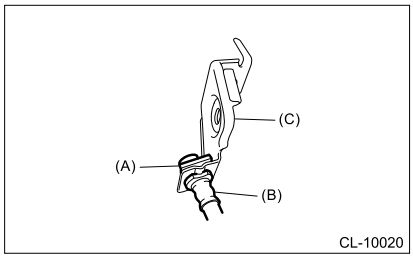


4. Temporarily install the two-way connector and the clutch connector bracket, and engage the clutch pipe.

5. Install the two-way connector and the clutch connector bracket.
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6. Tighten the clutch pipe.
Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

7. Install the steering column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>INSTALLATION.
8. Replace the gasket with a new part,and install the clutch hose to the operating cylinder.
Caution:
Be sure to install with the marking side facing upward.



Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

9. Connect the clutch hose, and install the clamp.

Caution:

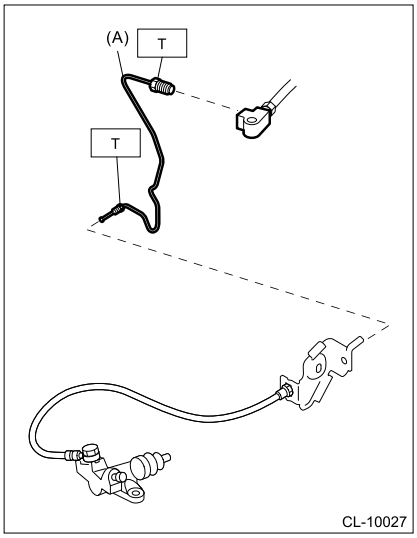
- **Be sure to install the clutch hose with the marking side facing upward.**
- **Install the clutch hoses while making sure that there is no twisting.**

(A) Clamp

(B) Clutch hose

(C) Clutch hose bracket

10. Install the clutch hose bracket.



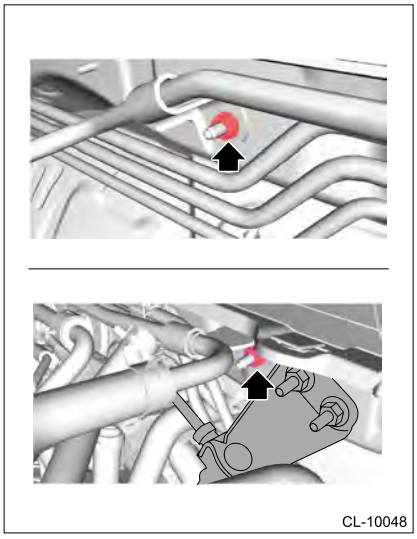
Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

11. Install the clutch pipe.

Tightening torque:

T: 15 N·m (1.5 kgf-m, 11.1 ft-lb)



(A) Clutch pipe

12. Install the vacuum pipe & hose assembly.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

13. Fill the recommended brake fluid. Ref. to CLUTCH SYSTEM>Clutch Fluid.
14. Bleed air from the clutch system, and ensure that no fluid leaks. Ref. to CLUTCH SYSTEM>Clutch Fluid Air Bleeding>PROCEDURE.
15. Adjust the clutch pedal. Ref. to CLUTCH SYSTEM>Clutch Pedal>ADJUSTMENT.
16. Install the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>INSTALLATION.
17. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
18. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

CLUTCH SYSTEM > Clutch Pipe and Hose

INSPECTION

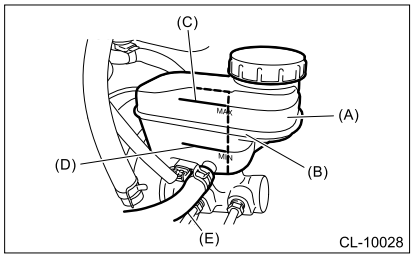
Check the clutch pipe, tank hose and clutch hose for breaks and damage. Check the joint for brake fluid leakage.
If crack, breakage or damage is found, repair or replace the faulty clutch pipe, tank hose or clutch hose.

CLUTCH SYSTEM > Clutch Fluid

INSPECTION

Caution:

Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.



1. Park the vehicle on a level surface.
2. Check the brake fluid level using the scale on the outside of the reservoir tank. If the level is below "MIN", add fluid to bring it up to "MAX", and also inspect for leakage.

   Caution:

   This reservoir tank has the brake fluid chamber and the clutch fluid chamber. When checking the fluid level, always check the fluid from the clutch fluid chamber side where the tank hose is connected.

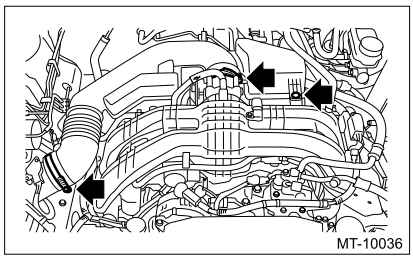
   Recommended brake fluid:

   New FMVSS No. 116 DOT3 or DOT4

(A) Reservoir tank
(B) Clutch fluid chamber
(C) MAX. level
(D) MIN. level
(E) Tank hose

CLUTCH SYSTEM > Clutch Fluid

REPLACEMENT

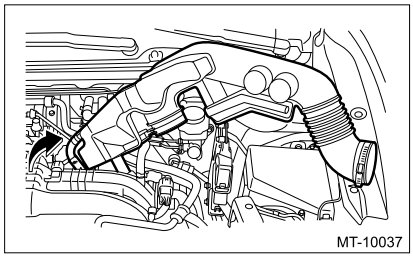


Caution:

- **Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.**
- **Use new FMVSS No. 116 DOT3 or DOT4.**
- **Cover the air bleeder with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the bleeder.**
- **Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.**
- **Be careful not to allow dirt or dust to enter the reservoir tank.**

Note:

- **During the bleeding operation, keep the reservoir tank filled with brake fluid to prevent entry of air.**
- **Clutch pedal must be operated very slowly.**
- **Bleed air from the oil line with help of a co-worker.**
- **The required amount of brake fluid is approximately 190 mL (6.4 US fl oz, 6.7 Imp fl oz) for total clutch system.**



1. Remove the clip from the air intake boot, and loosen the clamp.

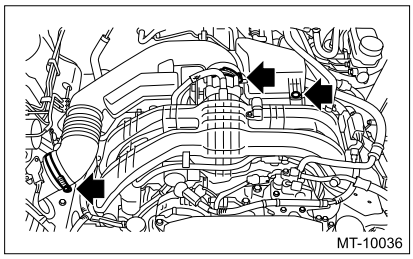
2. Remove the air intake boot, and place it aside so that it does not interfere with the work.

   Caution:

   Be careful not to pull out the PCV hose.

3. Drain the brake fluid from the air bleeder of the operating cylinder.
4. Refill the reservoir tank with recommended brake fluid.
   Recommended brake fluid:
   New FMVSS No. 116 DOT3 or DOT4
5. Bleed air from brake fluid. Ref. to CLUTCH SYSTEM>Clutch Fluid Air Bleeding.
6. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

PROCEDURE

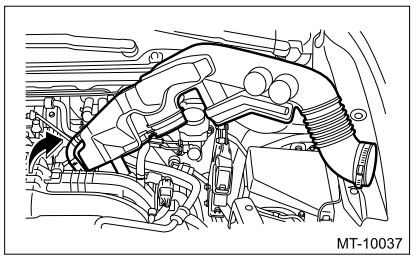


Caution:

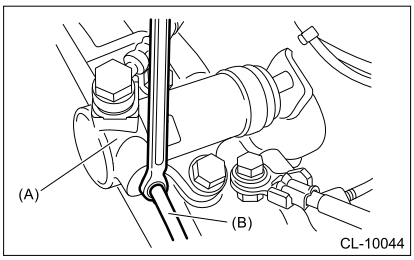
Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

Note:

Bleed air from the oil line with help of a co-worker.



1. Remove the clip from the air intake boot, and loosen the clamp.



2. Remove the air intake boot, and place it aside so that it does not interfere with the work.

   Caution:

   Be careful not to pull out the PCV hose.

3. Fit one end of a vinyl tube into the air bleeder of the operating cylinder, and put the other end into a container.

(A) Operating cylinder

(B) Vinyl tube

4. Slowly depress the clutch pedal several times and keep it depressed. Open the air bleeder for 1 — 2 seconds to discharge air together with the brake fluid. Next, close the air bleeder, and slowly release the clutch pedal.

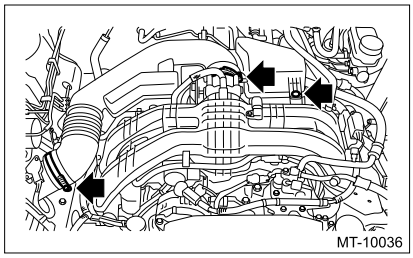
   Caution:

   Cover the air bleeder with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the bleeder.

5. Repeat procedure 4), until there are no more air bubbles appearing from the air bleeder.
6. Tighten the air bleeder.

   Tightening torque:

   7.8 N·m (0.8 kgf-m, 5.8 ft-lb)

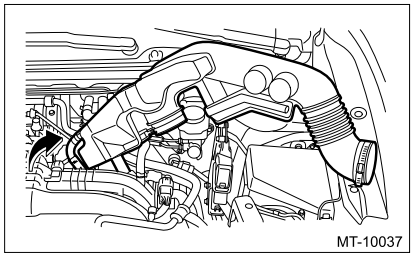


7. After stepping on the clutch pedal, make sure that there are no leaks evident in the entire clutch system.
8. After bleeding the air from clutch system, ensure that the clutch operates properly.
9. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

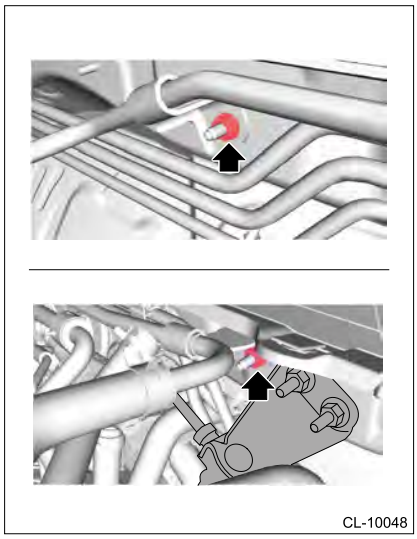
REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". **Ref. to AIRBAG SYSTEM>General Description>CAUTION.**



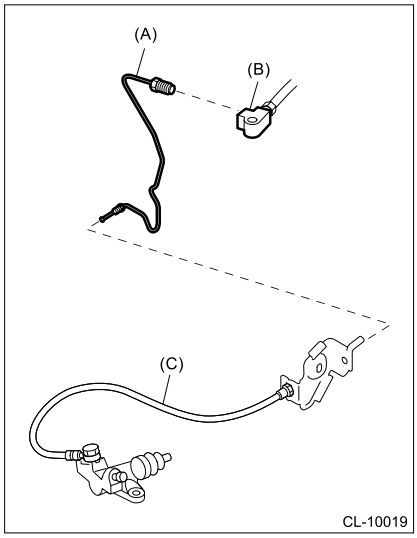
1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the clip from the air intake boot, and loosen the clamp.



4. Remove the air intake boot, and place it aside so that it does not interfere with the work.

   Caution:

   Be careful not to pull out the PCV hose.

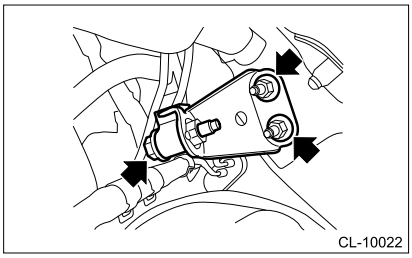


5. Drain the brake fluid. Ref. to CLUTCH SYSTEM>Clutch Fluid.
6. Disconnect the vacuum pipe & hose assembly.

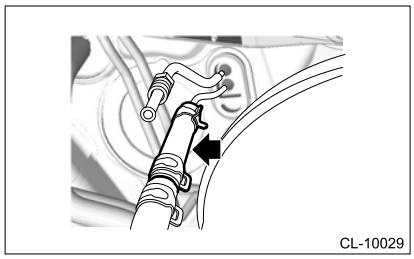
7. Remove the clutch pipe.

   Caution:

   Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

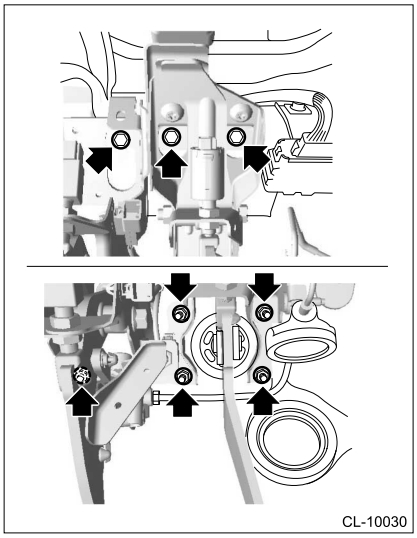


(A) Clutch pipe
(B) Two-way connector
(C) Clutch hose



8. Disconnect the clutch pipe.

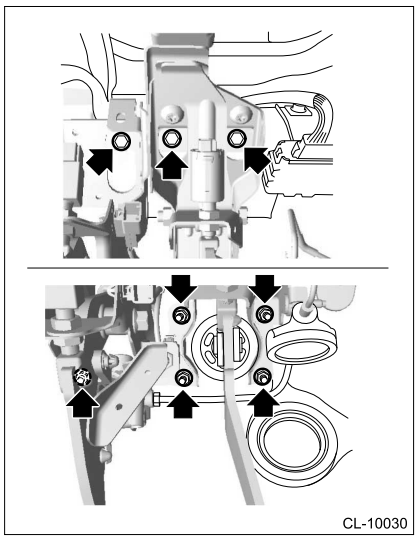
9. Remove the two-way connector and the clutch connector bracket.



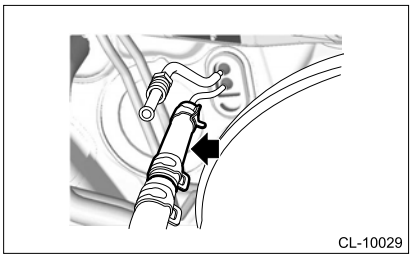
10. Disconnect the tank hose from the clutch pipe.

11. Remove the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
12. Remove the steering column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
13. Remove the duct - foot driver. Ref. to AIR CONDITIONER>Heater Duct>REMOVAL>FOOT>LH SIDE.
14. Disconnect the connector from the clutch switch and clutch start switch.
15. Disconnect the connector from stop light switch.
16. Remove the snap pin and clevis pin connecting the operating rod and brake pedal.
17. Remove the clutch pedal assembly.

Caution:

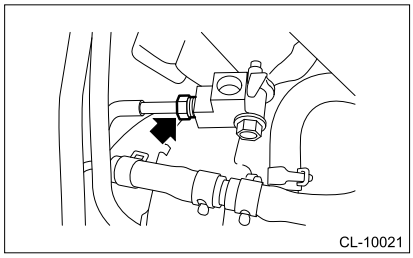


Place vinyl, etc. in order not to drop the brake fluid to the floor carpet.



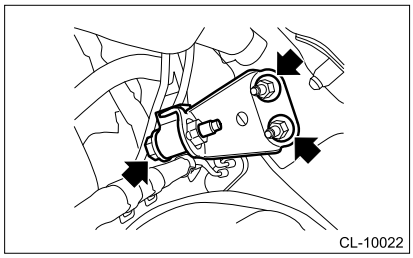
CLUTCH SYSTEM > Clutch Pedal

INSTALLATION



1. Install the clutch pedal assembly.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)

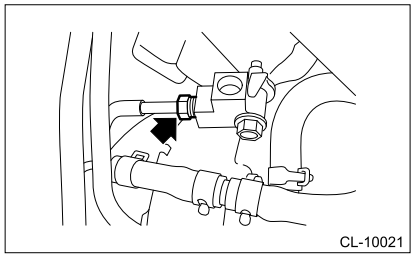
2. Install the snap pin and clevis pin connecting the operating rod and brake pedal.
   Caution:
   Always use a new clevis pin.
   Note:
   Apply grease to the clevis pin.
3. Connect the connector to the stop light switch.
4. Connect the connector to the clutch switch and clutch start switch.
5. Install the duct - foot driver. Ref. to AIR CONDITIONER>Heater Duct>INSTALLATION>FOOT>LH SIDE.
6. Install the steering column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>INSTALLATION.
7. Connect the tank hose.



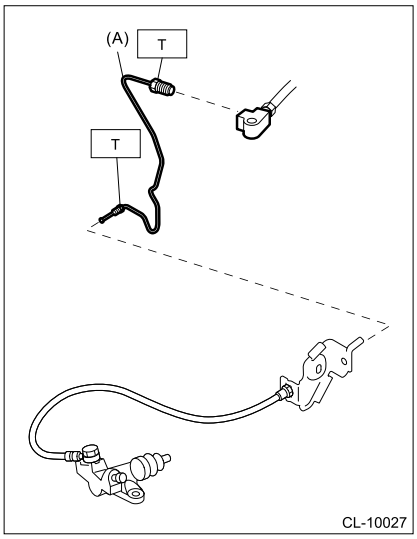
8. Temporarily install the two-way connector and the clutch connector bracket, and engage the clutch pipe.

9. Install the two-way connector and the clutch connector bracket.

Tightening torque:



7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

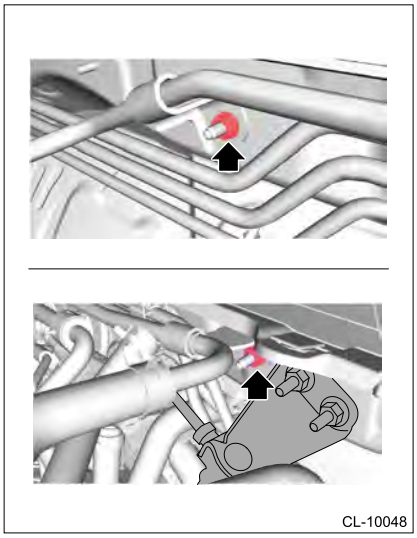


10. Tighten the clutch pipe.

Tightening torque:

15 N·m (1.5 kgf-m, 11.1 ft-lb)

11. Install the clutch pipe.

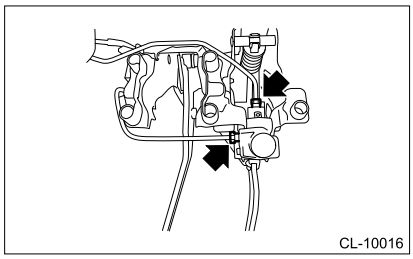


(A) Clutch pipe

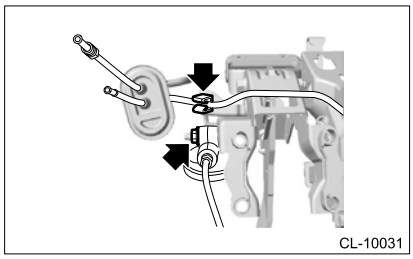
12. Install the vacuum pipe & hose assembly.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

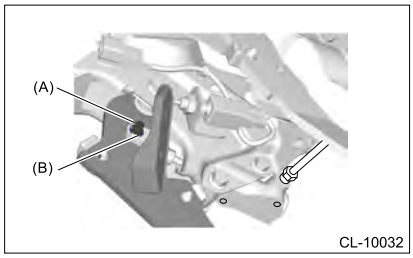


13. Fill the recommended brake fluid. Ref. to CLUTCH SYSTEM>Clutch Fluid.
14. After bleeding air from the clutch system, ensure that no fluid leaks and the clutch operates properly. Ref. to CLUTCH SYSTEM>Clutch Fluid Air Bleeding>PROCEDURE.
15. Adjust the clutch pedal. Ref. to CLUTCH SYSTEM>Clutch Pedal>ADJUSTMENT.
16. Install the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>INSTALLATION.
17. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
18. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
19. Check the clutch start system.



CLUTCH SYSTEM > Clutch Pedal

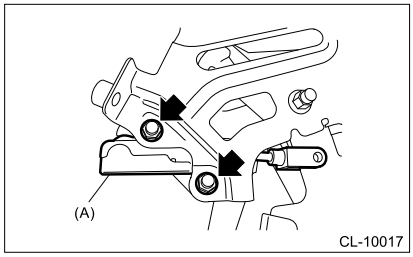
DISASSEMBLY



1. Disconnect the clutch pipe.

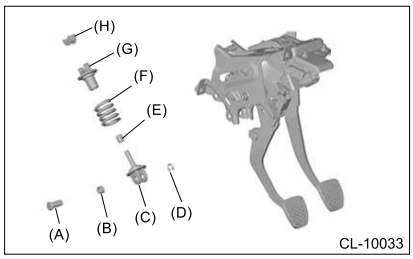
2. Remove the clutch damper mounting nut, and disconnect the clutch pipe from the clamp.

3. Remove the clutch switches.
4. Remove the clip and pull out the clevis pin.



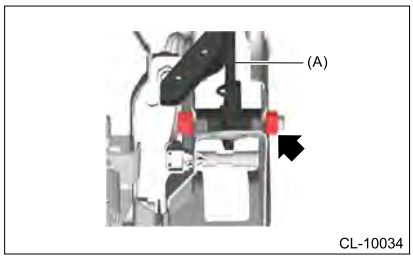
(A) Clevis pin
(B) Clip

5. Remove the master cylinder.



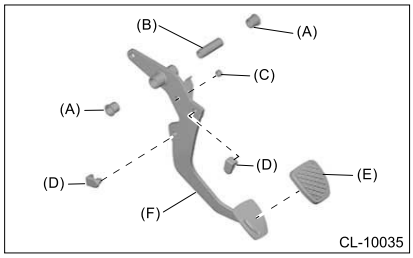
Note:

Secure the push rod with a tape etc. to prevent it from falling off.



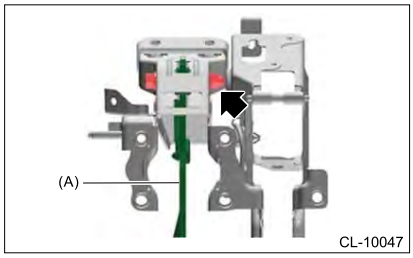
(A) Master cylinder

6. Remove the assist pin, bushing A, assist rod A, clip, assist bushing A, assist spring, assist rod B and assist bushing B.



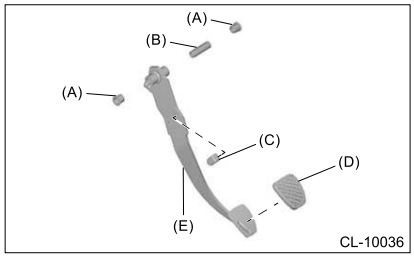
(A) Assist pin
(B) Bushing A
(C) Assist rod A
(D) Clip
(E) Assist bushing A
(F) Assist spring
(G) Assist rod B
(H) Assist bushing B

7. Remove the clutch pedal.



(A) Clutch pedal

8. Remove the pedal bushing, spacer, bushing A, clutch pedal stopper and clutch pedal pad.



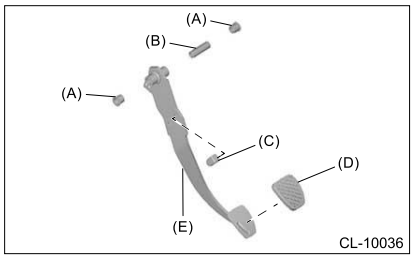
(A) Pedal bushing
(B) Spacer
(C) Bushing A
(D) Clutch pedal stopper
(E) Clutch pedal pad
(F) Clutch pedal

9. Remove the brake pedal.

(A) Brake pedal

10. Remove the pedal bushing, spacer, brake pedal stopper and brake pedal pad.

(A) Pedal bushing
(B) Spacer
(C) Brake pedal stopper
(D) Brake pedal pad
(E) Brake pedal



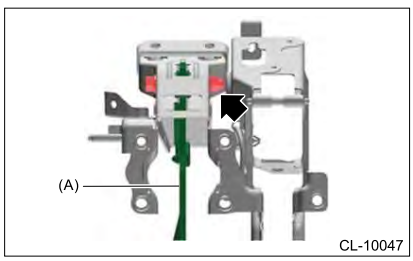
CLUTCH SYSTEM > Clutch Pedal

ASSEMBLY

1. Attach the brake pedal pad, brake pedal stopper, spacer and pedal bushing.

Caution:

Before installing the pedal bushing and spacer, clean the sliding surface and apply grease.

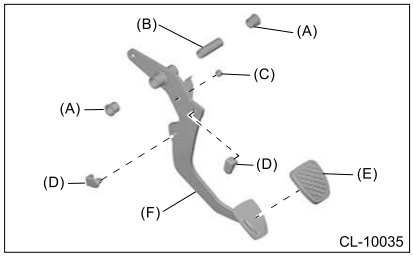


(A) Pedal bushing
(B) Spacer
(C) Brake pedal stopper
(D) Brake pedal pad
(E) Brake pedal

2. Install the brake pedal.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)

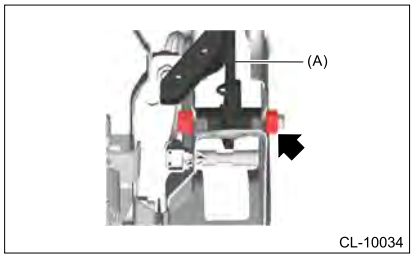


(A) Clutch pedal

3. Install the clutch pedal pad, clutch pedal stopper, bushing A, spacer and pedal bushing.

Caution:

Before installing the pedal bushing and spacer, clean the sliding surface and apply grease.

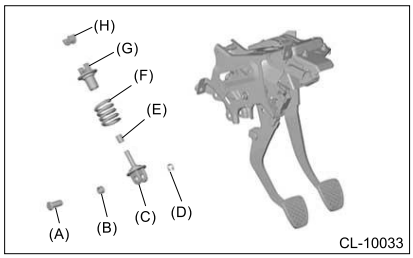


(A) Pedal bushing
(B) Spacer
(C) Bushing A
(D) Clutch pedal stopper
(E) Clutch pedal pad
(F) Clutch pedal

4. Install the clutch pedal.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)



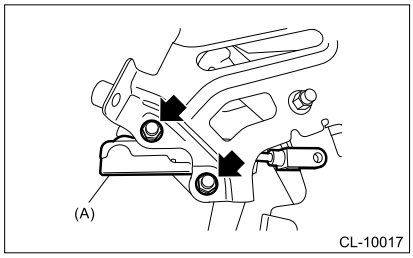
(A) Clutch pedal

5. Install the assist bushing B, assist rod B, assist spring, assist bushing A, clip, assist rod A, bushing A and assist pin.

Note:

Apply grease to the assist bushing B, assist rod B, assist spring seating surface, assist bushing A, assist rod A, and bushing A.

(A) Assist pin
(B) Bushing A
(C) Assist rod A
(D) Clip
(E) Assist bushing A
(F) Assist spring
(G) Assist rod B
(H) Assist bushing B



6. Install the master cylinder.

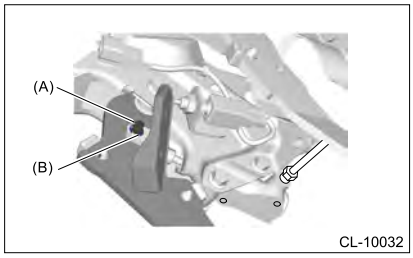
Note:

Secure the push rod with a tape etc. to prevent it from falling off.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

(A) Master cylinder



7. Secure the clevis pin with mounting clip.

Caution:

Always use a new clevis pin.

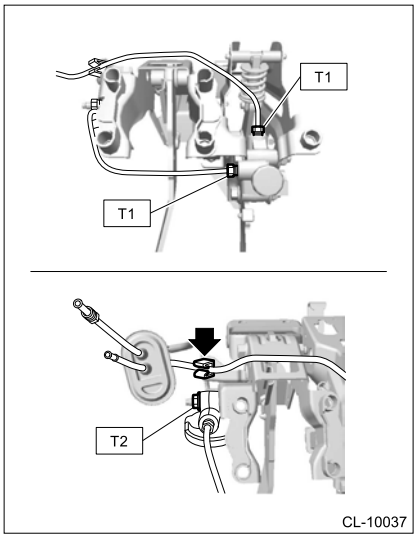
Note:

Before installing the clevis pin, apply grease.

(A) Clevis pin

(B) Clip

8. Install the clutch switch.



9. Install the clutch pipe to the clamp.

10. Install the clutch damper, and install the clutch pipe to the master cylinder.

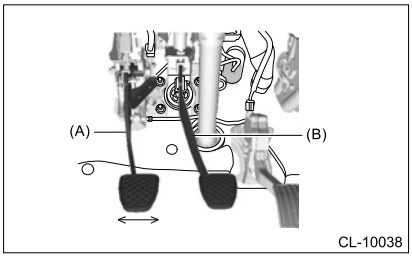
Tightening torque:

T1: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

CLUTCH SYSTEM > Clutch Pedal

INSPECTION



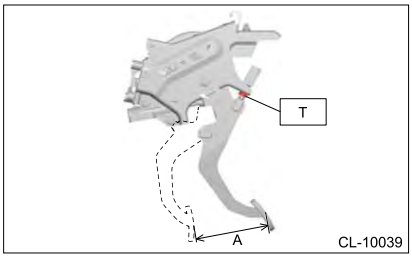
Move the clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lbf) to check that the clutch pedal deflection is within the limit.

Caution:

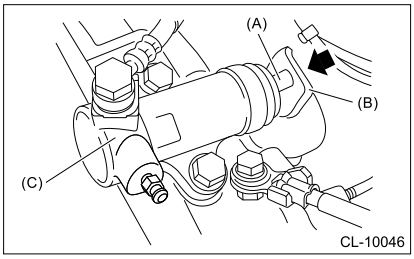
If the deflection exceeds the limit, replace the clutch pedal assembly with a new part.

Service limit:

4.0 mm (0.157 in) or less



(A) Clutch pedal
(B) Brake pedal



CLUTCH SYSTEM > Clutch Pedal

ADJUSTMENT

1. If the full stroke A of the clutch pedal is not within the specified value, loosen the lock nuts of the clutch switch and adjust the full stroke A of the clutch pedal with the clutch switch.
   Caution:
   When adjusting the full stroke A of the clutch pedal, do not turn the clutch switch.
   Specification:
   130 — 135 mm (5.12 — 5.31 in)
   Tightening torque:
   T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)

2. Depress and release the clutch pedal two or three times to ensure that the clutch pedal and release lever operate smoothly.
   If the clutch pedal and release lever do not operate smoothly, bleed air from the clutch hydraulic system. Ref. to CLUTCH SYSTEM>Clutch Fluid Air Bleeding.
3. Measure the clutch pedal full stroke length again to ensure that it is within the standard value. If it is not within the standard value, repeat adjustment procedures from the beginning.
   Specification:
   130 — 135 mm (5.12 — 5.31 in)
4. Push the release lever until the operating cylinder push rod retracts. Check that the brake fluid level in the reservoir tank increases.

(A) Push rod
(B) Release lever
(C) Operating cylinder

5. If the brake fluid level increases, hydraulic clutch play is correct.
6. If the brake fluid level does not increase or push rod does not retract, readjust the clutch pedal.
7. Check the brake fluid level using the scale on the outside of reservoir tank. Ref. to CLUTCH SYSTEM>Clutch Fluid>INSPECTION.

CLUTCH SYSTEM > Clutch Switch

REMOVAL

Caution:

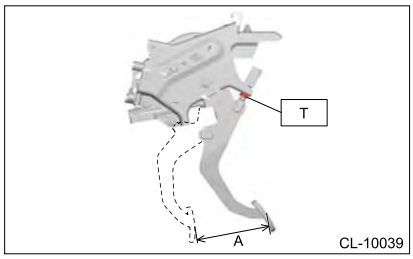
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
4. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
5. Disconnect the connector from the clutch switch and clutch start switch.
6. Remove the clutch switch and clutch start switch.

CLUTCH SYSTEM > Clutch Switch

INSTALLATION

1. CLUTCH SWITCH



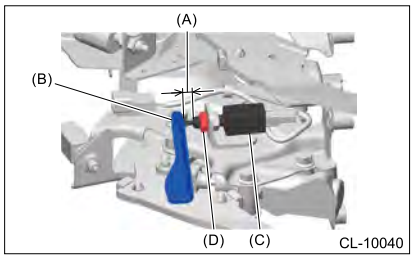
1. Install the clutch switch.
2. Move the clevis pin of push rod to left and right, retain it at the position where it moves smoothly, and measure the clutch pedal full stroke A.

   Specification:

   130 — 135 mm (5.12 — 5.31 in)

   Tightening torque:

   T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)



3. If the clutch pedal full stroke is out of the standard value, adjust it. Ref. to CLUTCH SYSTEM>Clutch Pedal>ADJUSTMENT.
4. Connect the connector to the clutch switch.
5. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
6. Install the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>INSTALLATION.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. CLUTCH START SWITCH

1. Install the clutch start switch.
2. Fully depress the clutch pedal and hold it.
3. Install so that the gap (A) between the clutch pedal plate and the clutch start switch becomes 7.3 mm (0.29 in), and tighten the lock nut.

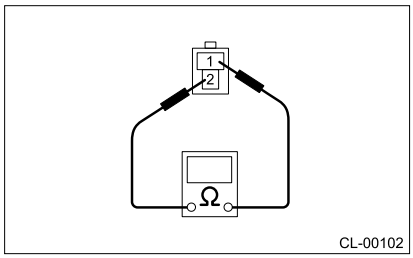
   Tightening torque:

   8 N·m (0.8 kgf-m, 5.9 ft-lb)

(A) 7.3 mm (0.29 in)
(B) Clutch pedal plate
(C) Clutch start switch
(D) Lock nut

4. Connect the connector to the clutch start switch.
5. Check the clutch start system.

6. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
7. Install the instrument panel lower cover. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>INSTALLATION.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

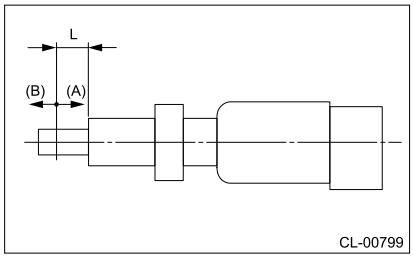


CLUTCH SYSTEM > Clutch Switch

INSPECTION

1. CLUTCH START SWITCH

1. Perform inspections for the clutch start system, and if it does not operate normally, adjust the clutch start switch and check it again. Ref. to CLUTCH SYSTEM>Clutch Switch>ADJUSTMENT.
2. When the clutch start switch does not operate normally even if it is adjusted, check the clutch start switch for continuity.
   (1) Remove the clutch start switch. Ref. to CLUTCH SYSTEM>Clutch Switch>REMOVAL.
   (2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not within the standard value, replace the switch.

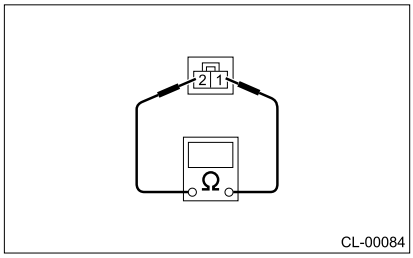


Condition	Terminal No.	Standard
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more

(3) Check that the switch is turned on and off in dimension L.

Dimension L:

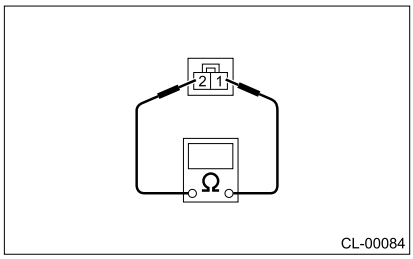
9 — 10 mm (0.35 — 0.39 in)



(A) ON
(B) OFF

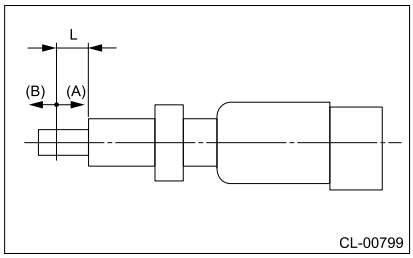
(4) Install the clutch start switch. Ref. to CLUTCH SYSTEM>Clutch Switch>INSTALLATION > CLUTCH START SWITCH.

2. CLUTCH SWITCH



1. Check the clutch switch for continuity.
   (1) Disconnect the connector of clutch switch.
   (2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not within the standard value, check the clutch stroke and installation condition, and check again.

Condition	Terminal No.	Standard
When clutch pedal is depressed	No. 1 — No. 2	1 MΩ or more
When the clutch pedal is not depressed	No. 1 — No. 2	Less than 1 Ω



2. When the clutch switch does not operate normally even if the clutch stroke and installation condition are normal, check the clutch switch for continuity.
   (1) Remove the clutch switches. Ref. to CLUTCH SYSTEM>Clutch Switch>REMOVAL.
   (2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not within the standard value, replace the switch.

Condition	Terminal No.	Standard
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more

   (3) Check that the switch is turned on and off in dimension L.
   Dimension L:
   5 — 6.5 mm (0.2 — 0.26 in)

   (A) ON
   (B) OFF

   (4) Install the clutch switch. Ref. to CLUTCH SYSTEM>Clutch Switch>INSTALLATION > CLUTCH SWITCH.

CLUTCH SYSTEM > Clutch Switch

ADJUSTMENT

1. Loosen the lock nut of the clutch start switch.
2. Fully depress the clutch pedal and hold it.
3. Adjust the gap (A) between the clutch pedal plate and the clutch start switch to be 7.3 mm (0.29 in).

(A) 7.3 mm (0.29 in)
(B) Clutch pedal plate
(C) Clutch start switch

(D) Lock nut

4. Tighten the lock nut.
   Tightening torque:
   8 N·m (0.8 kgf-m, 5.9 ft-lb)

INSPECTION

1. CLUTCH

Symptoms	Possible cause	Corrective action
1. Clutch slippage It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms. • Engine temporarily speeds up when the accelerator ON immediately after shifting. • High-speed driving is not possible; especially rapid acceleration is not possible and vehicle speed does not increase in proportion to the increase in engine speed. • Power drops particularly when ascending a slope, and there is a burning smell of the clutch plate. • Method of testing: Park the vehicle and fully apply the parking brake. Disengage the clutch and shift the transmission gear into the 1st. Gradually increase the engine speed while gradually allowing the clutch to engage. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not move forward and the engine does not stall.	(a) Oil on the clutch face	Replace.
	(b) Worn clutch face	Replace.
	(c) Deteriorated diaphragm spring	Replace.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Defective release bearing holder	Repair or replace.
2. Clutch drags. As a symptom of this trouble, a harsh scratching noise occurs and control becomes difficult when shifting gears. The symptom becomes more apparent when shifting into the 1st gear. However, because most trouble of this sort is due to a defective synchronization mechanism, perform the following tests. • Method of testing: Ref. to CLUTCH SYSTEM>General Diagnostic Table>INSPECTION > DIAGNOSTIC DIAGRAM OF CLUTCH DRAG. The problem is caused by insufficient disengagement of the clutch if an abnormal noise occurs during this test.	(a) Worn or rusty clutch disc hub spline	Replace the clutch disc.
	(b) Excessive deflection of clutch disc face	Repair or replace.
	(c) Crankshaft pilot needle bearing sticking	Replace.
	(d) Cracked clutch disc face	Replace.
	(e) Stuck clutch disc (smeared by oil or water)	Replace.
3. Clutch chatters. Clutch chattering is an unpleasant vibration to the whole vehicle when the vehicle	(a) Adhesion of oil on the clutch face	Replace the clutch disc.
	(b) Weak or broken damper spring	Replace the clutch disc.

Symptoms	Possible cause	Corrective action
is just started with clutch partially engaged.	(c) Poor contact of the disc surface or excessively worn disc	Replace the faulty clutch disc.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Loose disc rivets	Replace the clutch disc.
	(f) Loose engine mounting	Retighten or replace mounting.
	(g) Loose pitching stopper	Retighten the pitching stopper. Or replace it.
4. Noisy clutch Noise occurs when the clutch is disengaged, engaged, or partially engaged.	(a) Broken, worn or insufficiently lubricated release bearing	Replace the release bearing.
	(b) Insufficient lubrication of the pilot bearing	Replace the pilot bearing.
	(c) Loose clutch disc hub	Replace the clutch disc.
	(d) Loose damper spring retainer	Replace the clutch disc.
	(e) Deteriorated or broken damper spring	Replace the clutch disc.
5. Clutch grabs suddenly. When starting the vehicle with the clutch partially engaged, the clutch engages suddenly and the vehicle jumps instead of making a smooth start.	(a) Grease or oil on facing	Replace the clutch disc.
	(b) Deteriorated cushioning spring	Replace the clutch disc.
	(c) Worn or rusted spline of clutch disc or main shaft	Take off rust, apply grease or replace clutch disc or main shaft.
	(d) Deteriorated or broken damper spring	Replace the clutch disc.
	(e) Loose engine mounting	Retighten or replace mounting.
	(f) Deteriorated diaphragm spring	Replace.

2. CLUTCH PEDAL

Symptoms	Corrective action
Insufficient clutch pedal free play	Adjust the free play of the pedal.
Excessively worn and damaged pedal shaft and/or bushing	Replace the bushing or shaft with a new part.

3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

1. CHECK GEAR NOISE.

1. Start the engine.
2. While idling the engine, step on the clutch pedal and quickly shift from neutral to reverse.

Is there any abnormal noise from the transmission gear?

Yes — Go to 2.

No — Clutch is normal.

2. CHECK GEAR NOISE.

Depress the clutch pedal at idle, and shift from neutral to reverse within 0.5 — 1.0 second.

Is there any abnormal noise from the transmission gear?

Yes	Go to 3.
No	Inspect defective transmission or excessive clutch drag torque, pilot bearing, clutch disc, transmission and clutch disc hub spline.

3. CHECK GEAR NOISE.

1. Depress the clutch pedal at idle, and shift from neutral to reverse within 0.5 — 1.0 second.
2. While stepping on the clutch pedal, shift from neutral to reverse, reverse to neutral several times.

Is there any abnormal noise from the transmission gear?

Yes	Inadequate clutch disengage. Inspect the clutch disc, clutch cover, clutch release, and clutch pedal free play.
No	Clutch and flywheel seizure. Inspect the clutch disc and the spline of the clutch disc hub.

SPECIFICATION

1. TORQUE CONVERTER

Model	DOHC non-turbo
Type	Symmetric, 3-element, single stage, 2-phase torque converter
Stall torque ratio	2.32
Nominal mm (in)	215 (8.46)
Stall speed (at sea level) r/min	2,150 — 3,050 (D range) 2,050 — 2,950 (R range)
One-way clutch	Sprag type one-way clutch

2. OIL PUMP

Type		Internal gear pump
Driving method		Driven by chain
Number of teeth	Inner rotor	8
	Outer rotor	9

3. TRANSMISSION CONTROL ELEMENT

Type	Forward continuously variable speed change, 1 reverse, planetary gear
Multi-plate clutch	1 sets
Multi-plate brake	1 sets

4. TRANSMISSION GEAR RATIO

Forward	3.439 — 0.489
Rev	3.522

5. PLATE

Number of forward clutch drive plates	3
Number of reverse brake drive plates	4

6. SELECTOR POSITION

P (Park)	Transmission neutral, output shaft locked, engine start enabled
R (Reverse)	Rev
N (Neutral)	Transmission neutral, engine start enabled
D (Drive)	Forward continuously variable speed change
M (Manual mode) (paddle shift +side)	Manual gear change 1st → 2nd → 3rd → 4th → 5th → 6th → 7th
M (Manual mode) (paddle shift −side)	Manual gear change 1st ← 2nd ← 3rd ← 4th ← 5th ← 6th ← 7th
L (Low)	Forward continuously variable speed change

	(engine brake)

7. HYDRAULIC CONTROL AND LUBRICATION

Type	Electronic hydraulic control (gear ratio is changed by signals of vehicle speed and accelerator opening angle.)
Fluid	Specified fluid: SUBARU CVT FLUID LINEARTRONIC II **Caution:** **Always use specified CVTF. Using other fluid will cause malfunction.**
Fluid capacity L (US qt, Imp qt)	10.48 — 10.98 (11.1 — 11.6, 9.2 — 9.7)
Lubrication system	Forced feed lubrication with oil pump

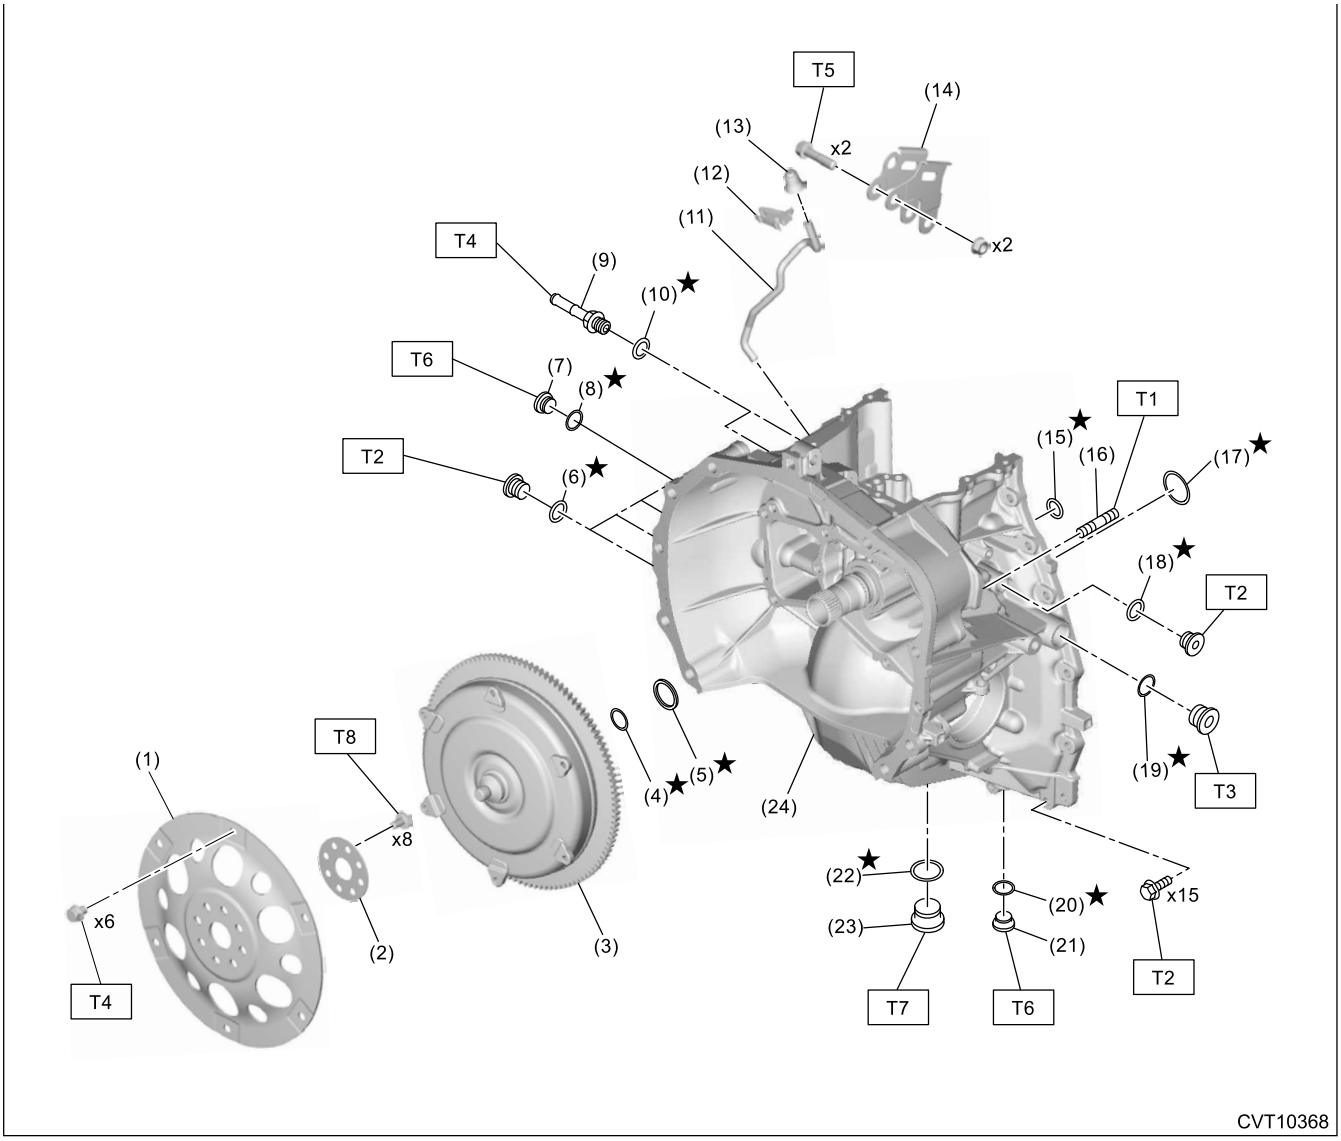
8. COOLING AND HARNESS

Cooling system		CVTF cooler (with warmer feature)
Transmission harness	Power supply circuit, CAN communication, paddle shift circuit, back-up light circuit, starter circuit, etc.	30 poles

9. TRANSFER

Transfer type	Multi-plate transfer (MP-T)
Number of transfer clutch drives & driven plates	4
Control method	Electronic hydraulic type
Reduction gear ratio	1.000 (43/43)

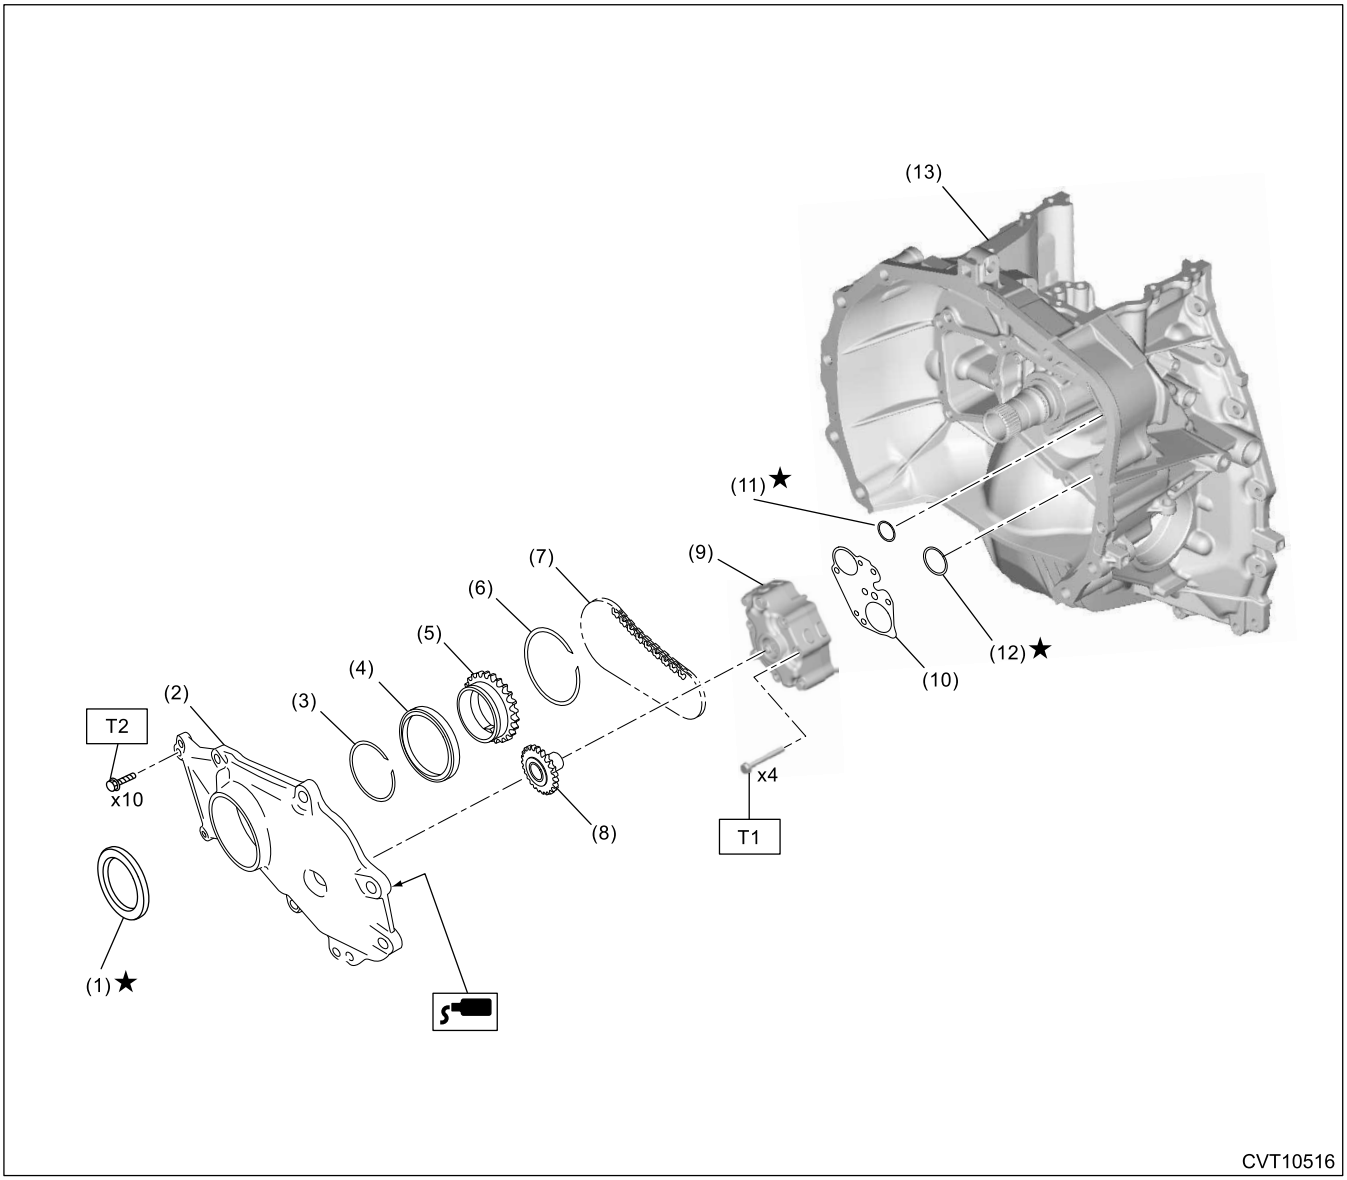
10. REDUCTION GEAR RATIO



Front final reduction gear ratio	3.700

11. RECOMMENDED GEAR OIL

Lubrication oil	SUBARU GEAR OIL EXTRA MT or equivalent
Front differential oil capacity L (US qt, Imp qt)	1.21 — 1.31 (1.3 — 1.4, 1.1 — 1.2)



COMPONENT

1. TORQUE CONVERTER ASSEMBLY AND CONVERTER CASE

(1) Drive plate	(13) Air breather cap	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Reinforcement drive plate	(14) Pitching stopper bracket	***T1: 18 (1.8, 13.3)***

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > General Description

CAUTION

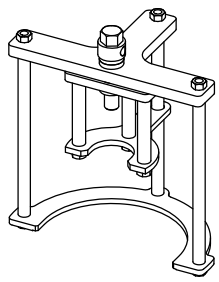
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Do not place the valve cover with its inner side facing up until it is installed, to prevent intrusion of foreign matter into the control valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine CVTF and recommended grease. Do not mix CVTF, grease etc. of different grades or manufacturers.
- Be sure to tighten bolts and nuts to the specified torque.
- Apply CVTF onto sliding or revolving surfaces before installation.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of CVTF or gear oil to appropriate

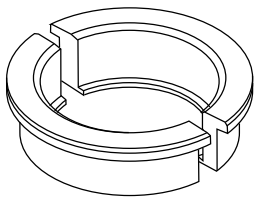
locations in order to avoid damage and deformation.

- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- After removing the sensors, breather hose and plugs, plug the holes to avoid foreign materials intruding as necessary.
- During disassembly or assembly, be sure to use nylon gloves or paper towels. Do not use cloth gloves or waste cloth.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the hypoid gear and drive pinion shaft as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

PREPARATION TOOL

1. SPECIAL TOOL





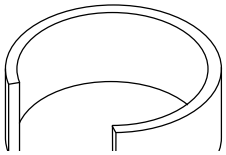


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
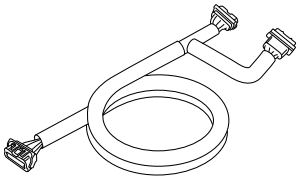
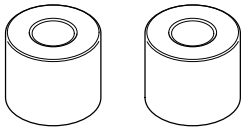
 ST18769AA010	18769AA010	EXPANDER PULLEY	Used for removing and installing the secondary pulley assembly.
 ST18767AA010	18767AA010	BEARING REMOVER	Used for removing the ball bearing of transfer clutch assembly.

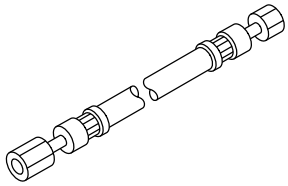
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	18762AA010	COMPRESSOR SPECIAL TOOL	Used for removing and installing snap ring of forward clutch assembly.

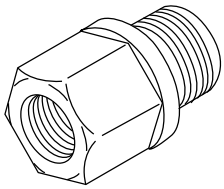
 ST18762AA010			
 ST18761AA010	18761AA010	SHEET SPECIAL TOOL	• Used for removing and installing control valve body. • Used for removing and installing valve cover. • Used for removing and installing transmission harness.
 ST18681AA010	18681AA010	PRESSURE GAUGE ADAPTER	Used for measuring the secondary pressure (line pressure). **Note:** **Used together with the genuine O-ring (part No. 806916050).**
 ST18801AA000	18801AA000	OIL PRESSURE GAUGE ASSY	Used for measuring the secondary pressure (line pressure).
 ST18658AA020	18658AA020	WRENCH COMPL RETAINER	Used for removing and installing the differential side retainer.

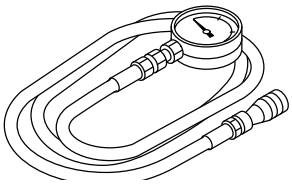
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	34099AC020	ADAPTER HOSE B	Used for measuring the transfer clutch hydraulic pressure. **Note:** **Used with genuine union screw (Part No. 801914010) and gasket (Part No. 803914060).**





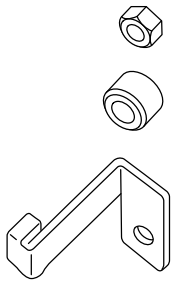


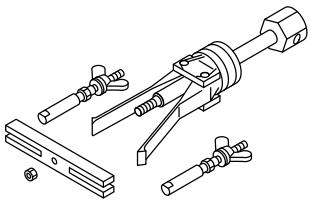


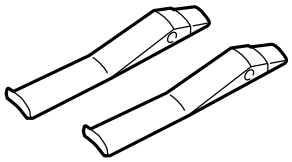


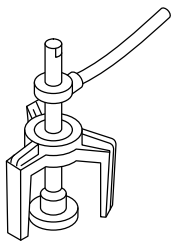
ST34099AC020			
 ST18460AA040	18460AA040	CHECK BOARD	Used for measuring voltage and resistance of TCM terminals.
 ST18362AA020	18362AA020	ADAPTER	Used for measuring the transfer clutch hydraulic pressure.
 ST34099AC010	34099AC010	ADAPTER HOSE A	Used for measuring the transfer clutch hydraulic pressure.
 ST18681AA000	18681AA000	PRESSURE GAUGE ADAPTER	Used for measuring the transfer clutch hydraulic pressure. **Note:** **Used together with the genuine O-ring (part No. 806911080).**

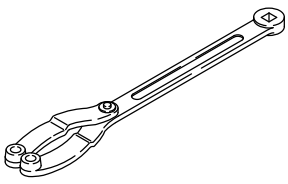
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	498575400	OIL PRESSURE GAUGE ASSY	Used for measuring the transfer clutch hydraulic pressure.





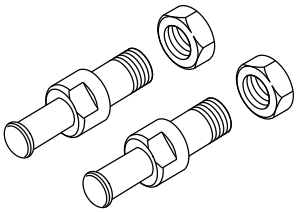


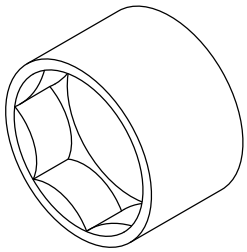


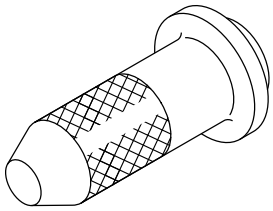


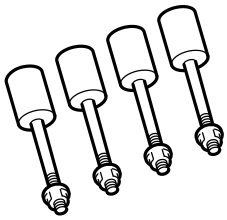
ST-498575400			
 ST-498277200	498277200	STOPPER SET	• Used for removing and installing transmission assembly to engine. • Used for preventing the torque converter from dropping off.
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the bearing outer race of the drive pinion shaft. • Used for removing the bearing of transmission case.
 ST18760AA000	18760AA000	CLAW	• Used for removing the bearing of transmission case. • Used together with PULLER ASSY (398527700).
 ST-398673600	398673600	COMPRESSOR	Used for removing and installing snap ring of forward clutch assembly.

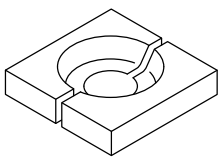
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	18355AA000	PULLEY WRENCH	• Used for removing and installing the lock nut of reduction driven gear. • Used together with PIN SET (18334AA000).





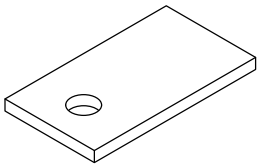


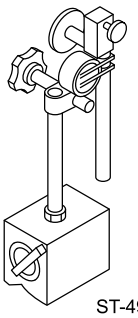


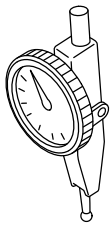


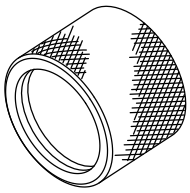
ST18355AA000			
 ST18334AA000	18334AA000	PULLEY WRENCH PIN SET	• Used for removing and installing the lock nut of reduction driven gear. • Used together with PULLEY WRENCH (18355AA000).
 ST-499987003	499987003	SOCKET WRENCH (35)	Used for removing and installing the lock nut of reduction driven gear.
 ST-498057300	498057300	INSTALLER	Used for installing the extension case oil seal.
 ST18632AA000	18632AA000	STAND ASSY	Used for disassembling and assembling the transmission.

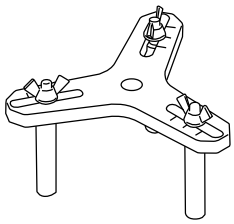
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	498515500	REMOVER	Used for removing the bearing inner race of the drive pinion shaft.





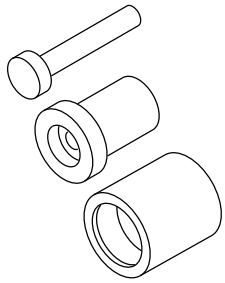


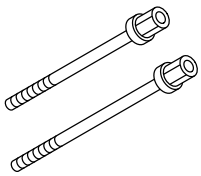


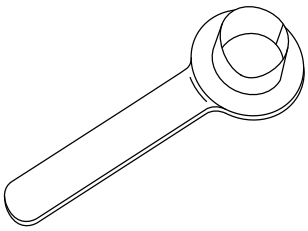


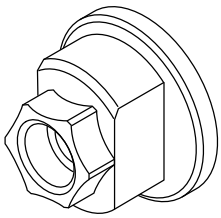
ST-498515500			
 ST-498255400	498255400	PLATE	Used for measuring the backlash of hypoid gear.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash of differential bevel pinion gear. • Used for measuring the backlash of hypoid gear. • Used together with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash of differential bevel pinion gear. • Used for measuring the backlash of hypoid gear. • Used together with MAGNET BASE (498247001).
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.

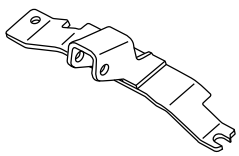
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	18762AA001	COMPRESSOR SPECIAL TOOL	• Used for disassembling and installing the multi-plate clutch piston. • COMPRESSOR SPECIAL TOOL (18762AA000) can also be used.





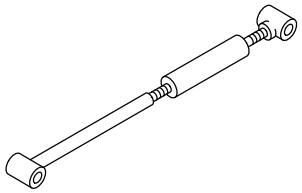


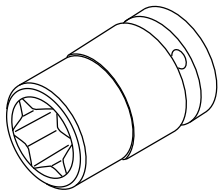


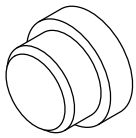


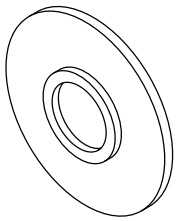
ST18762AA001			
 ST-927720000	927720000	HOUSING BUSHING INSTALLER AND REMOVER	• Used for installing the oil seal. • Use BUSHING SHAFT (927880000).
 ST18763AA000	18763AA000	COMPRESSOR SHAFT	Used for measuring the backlash of hypoid gear.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting oil seal when installing front drive shaft.
 ST-498937110	498937110	HOLDER	• Used for removing and installing the drive pinion lock nut. • Used as a holder to rotate gear when checking tooth contact.

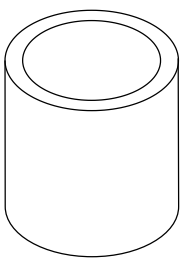
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	41099AA012	ENGINE SUPPORT BRACKET	Used for supporting the engine.











ST41099AA012			
 ST41099AA020	41099AA020	ENGINE SUPPORT	Used for supporting the engine.
 ST18270KA020	18270KA020	SOCKET (E20)	• Used for removing and installing the hypoid driven gear. • Used for removing and installing the drive pinion shaft retainer.
 ST-398497701	398497701	SEAT	Used for removing and installing the bearing.
 ST-398177700	398177700	INSTALLER	• Used for installing the ball bearing. • Used for installing the parking gear. • Used for installing the bearing outer race. • Used for installing the plug.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST28499TC010	28499TC010	PRESS SNAP RING	Used for installing the bearing outer race of drive pinion shaft.

 ST-899864100	899864100	REMOVER	• Used for removing and installing the ball bearing. • Used for removing the parking gear and transfer drive gear. • Used for removing the bearing inner race of the front differential.
 ST-498077000	498077000	REMOVER	Used for removing the bearing inner race of the front differential.
 ST18657AA010	18657AA010	INSTALLER	Used for installing the oil seal at shifter arm shaft portion.
 ST-498077600	498077600	REMOVER	Used for removing the ball bearing of drive sprocket.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18720AA000	18723AA000	REMOVER	Used for removing the ball bearing of transfer clutch assembly.

 ST-498497300	498497300	CRANKSHAFT STOPPER	Used for stopping the drive plate rotation when removing and installing the drive plate.
 ST18270AA050	18270AA050 (Newly adopted tool)	SOCKET	Used for installing the drive plate mounting bolt. **Note:** • **This tool is made by KYOTO TOOL Co., Ltd. (KTC). Item number: B3-14W** • **To make it easier to obtain, it has been specified as a special tool.**
 ST-399513600	399513600	INSTALLER	Used for removing the ball bearing of drive sprocket.
 ST-499267300	499267300	STOPPER PIN	Used for adjusting the inhibitor switch.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the ball bearing of the transmission case. • Used for installing the bearing inner race.

 ST-499277200	499277200	INSTALLER	Used for installing the ball bearing of the transfer clutch assembly.
 ST-499575400	499575400	GAUGE	Used for measuring height of end play.
 ST-499575500	499575500	GAUGE	Used for measuring height of end play.
 ST-499787500	499787500	ADAPTER	• Used for removing and installing the drive pinion shaft lock nut. • Used for measuring the preload of the drive pinion shaft. • Used for measuring the backlash of hypoid gear.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499575600	499575600	GAUGE	Used for measuring height of end play.

 ST-499787700	499787700	WRENCH	• Used for removing and installing the drive pinion shaft lock nut. • Used for measuring the preload of the drive pinion shaft. • Used for measuring the backlash of hypoid gear.
 ST-499757002	499757002	INSTALLER	• Used for removing the bearing of reduction driven gear. • Used for installing the parking gear. • Used for installing the transfer drive gear.
 ST-899580100	899580100	INSTALLER	• Used for installing the collar of reduction driven gear. • Used for installing the ball bearing of the transfer driven gear. • Used for installing the bearing inner race of drive pinion shaft.
 ST-498077300	498077300	REMOVER	Used for installing the ball bearing of reduction driven gear.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499755502	499755502	PRESS SNAP RING	Used for installing the drive sprocket ball bearing.
	499755602	PRESS SNAP	• Used for installing the oil seal

 ST-499755602	499755602	PRESS SNAP RING	• Used for installing the oil seal. • Used for installing the plug.
 ST-498077400	498077400	REMOVER	Used for removing the ball bearing of transfer driven gear.
 ST-20099AE020	20099AE020	INSTALLER	Used for installing the bearing outer race of drive pinion shaft.
 ST-927130000	927130000	EXTENSION DRIVE SHAFT	Used for installing the bearing inner race of drive pinion shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18270AA040	18270AA040	SOCKET	Used for removing and installing the transfer clutch pressure test plug.
	73099SG000	SPECIAL TOOL	Used for installing the transfer clutch

 ST73099SG000		CONDENSER	pressure test plug.
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	Used for tightening the strut mount self-locking nut.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

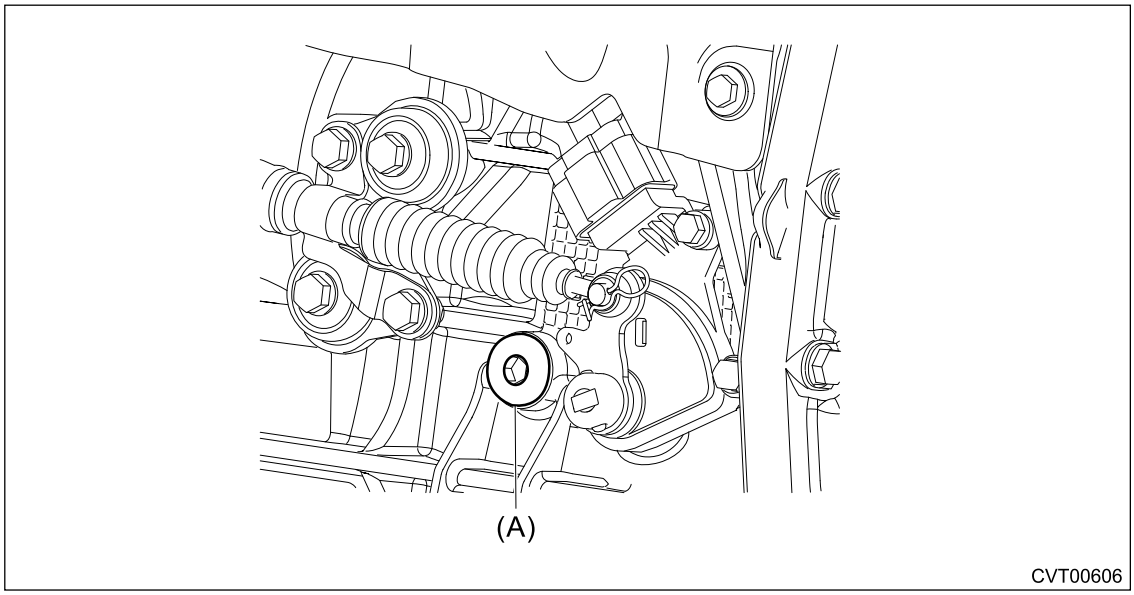
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Thickness gauge	Used for measuring the clearance in reverse brake, forward clutch and transfer clutch.
Caliper	Used for measuring the dimension.
Spring scale	Used for measuring the starting torque of the drive pinion.

TOOL NAME	REMARKS
TORX® bit T70	Used for removing and installing differential gear oil drain plug.
Straight pin remover	Used for removing and installing the straight pin and spring pin.
Push/pull gauge	Used for measuring clutch clearance.
Angle gauge	Used for installing the drive plate.
DST-i	Used together with Subaru Select Monitor 4.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF

INSPECTION

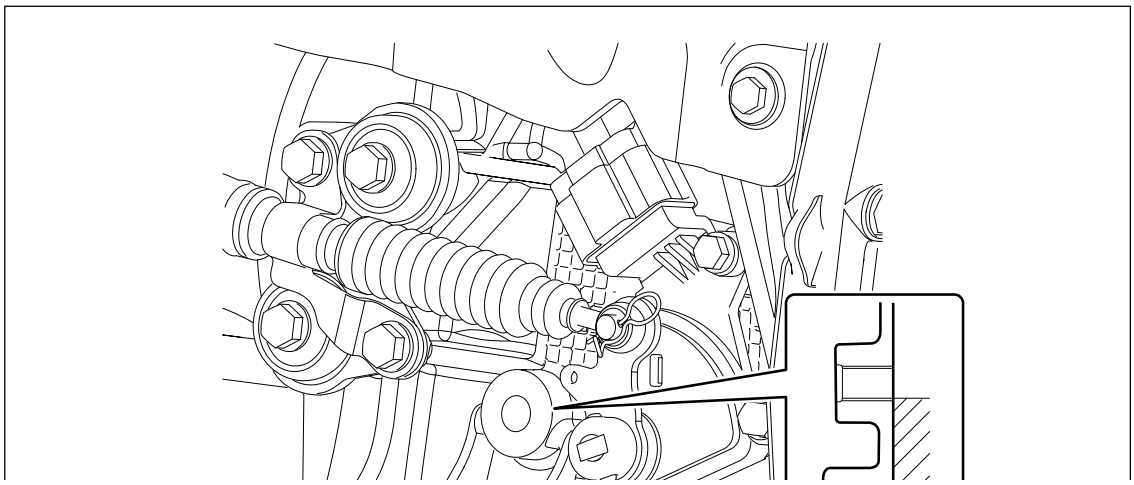
Check for leakage of CVTF from transmission.



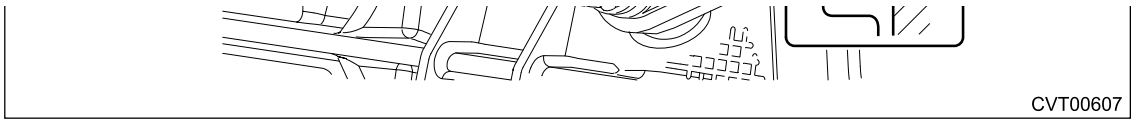
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF

ADJUSTMENT

Caution:



- **CVTF level changes along with CVTF temperature. When inspecting CVTF level, observe the specified CVTF temperature.**
- **Always use specified CVTF. Using other fluid will cause malfunction.**



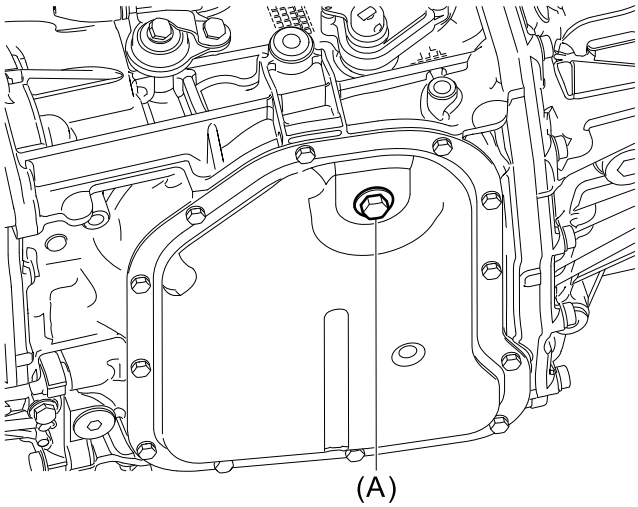
1. Start the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
   Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor>OPERATION.
2. Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.
3. With the engine running, lift up the vehicle and remove the filler plug.
   Caution:
   Pay special attention to the following operations as the engine is at idle.
   Note:
   CVTF is at the specified level when it is up to the filler plug hole lower section.

(A) Filler plug

4. When there is no CVTF leakage from the transmission, add the specified fluid up to the filler plug hole lower section.
   Specified fluid:
   Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>General Description>SPECIFICATION > HYDRAULIC CONTROL AND LUBRICATION.
   Caution:
   Note that when CVTF is added up to the lower section of filler plug while the transmission is in cold condition, overfilling of CVTF occurs, causing the oil to spill out.

CVT00607

5. Install the filler plug.
   Note:
   Use a new gasket.
   Tightening torque:
   50 N·m (5.1 kgf-m, 36.9 ft-lb)

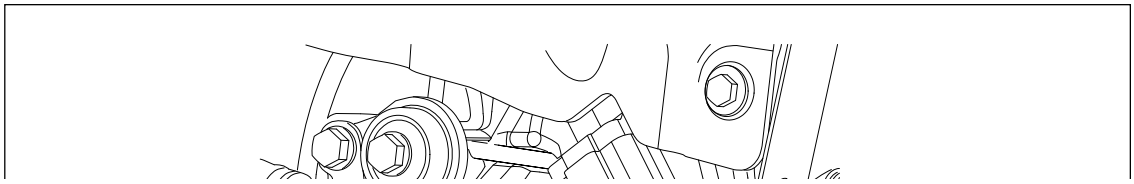


CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF

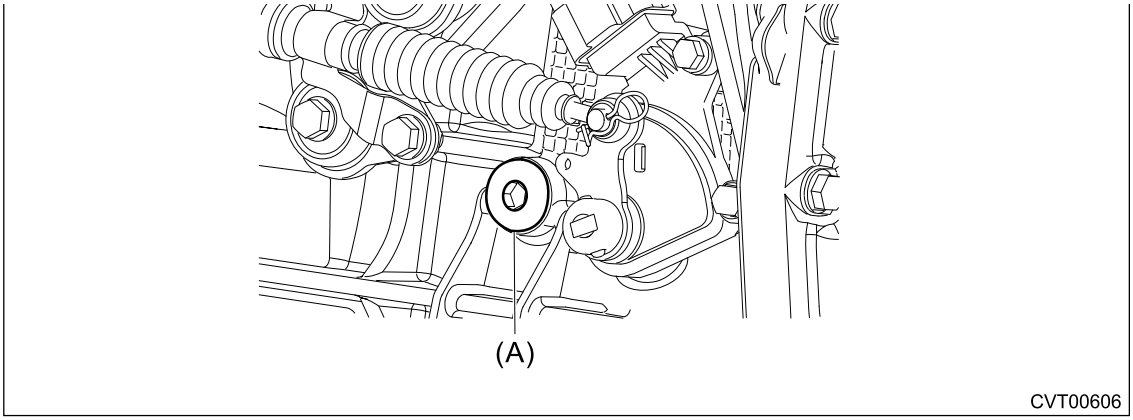
REPLACEMENT

Caution:

- **Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.**
- **Be careful not to spill the CVTF on exhaust pipe to prevent it from emitting smoke or causing fires. If CVTF adheres, wipe it off completely.**
- **Always use specified CVTF. Using other fluid will cause malfunction.**



1. Lift up the vehicle, and remove the CVTF drain plug.



CVT00608

(A) CVTF drain plug

2. Check the CVTF condition. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>CONDITION CHECK.
3. Install the CVTF drain plug and gasket.
   Note:
   Use a new gasket.
   Tightening torque:
   31 N·m (3.2 kgf-m, 22.9 ft-lb)
4. Remove the filler plug.

(A) Filler plug

5. Add the specified fluid up to the filler plug hole lower section.
   Specified fluid:
   Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>General Description>SPECIFICATION > HYDRAULIC CONTROL AND LUBRICATION.
6. Temporarily tighten the filler plug.
7. Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
8. Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.
   Caution:
   Pay special attention to the following operations as the engine is at idle.
9. With the select lever shifted to "P" range and the engine started, lift up the vehicle. Adjust the CVTF level and check for leakage. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.
10. Replace with a new gasket, and attach the filler plug.
    Tightening torque:
    50 N·m (5.1 kgf-m, 36.9 ft-lb)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF

CONDITION CHECK

Note:
When replacing CVTF, determine the condition inside the transmission body by inspecting the drained CVTF.

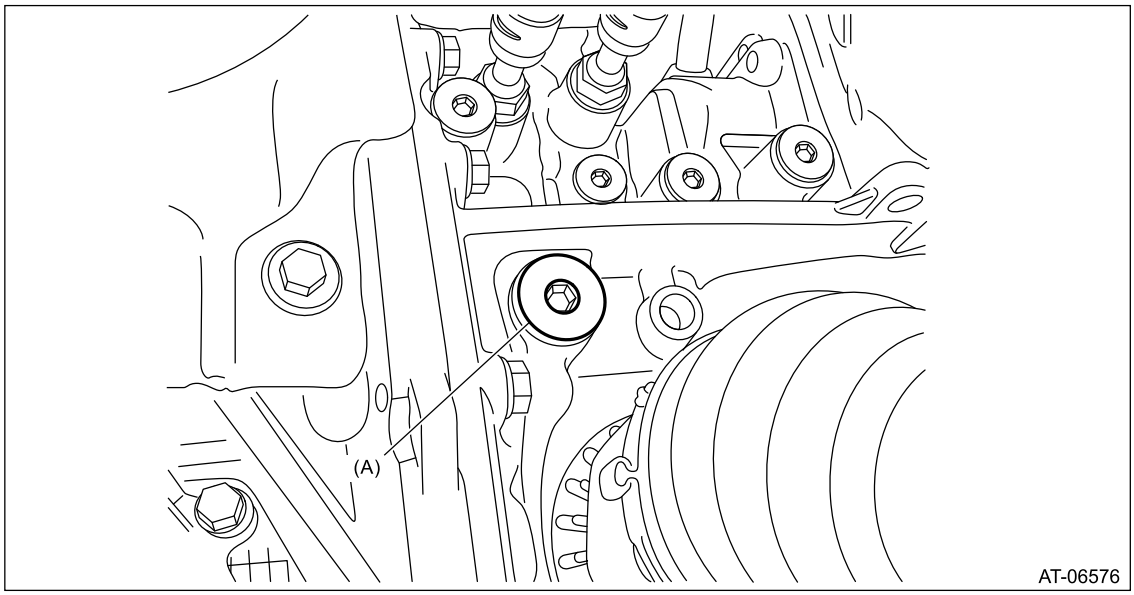
Fluid condition	Trouble and possible cause	Corrective action

Fluid condition	Trouble and possible cause	Corrective action
Metal particles.	Excessive wear of the internal of the transmission body.	Replace CVTF and check if CVT operates correctly.
Thick and varnish-form fluid.	Burnt clutches	Replace CVTF and check the CVT body or vehicle for faulty.
Clouded CVTF or bubbles.	Water mixed in fluid.	Replace CVTF and check the water entering point.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Differential Gear Oil

INSPECTION

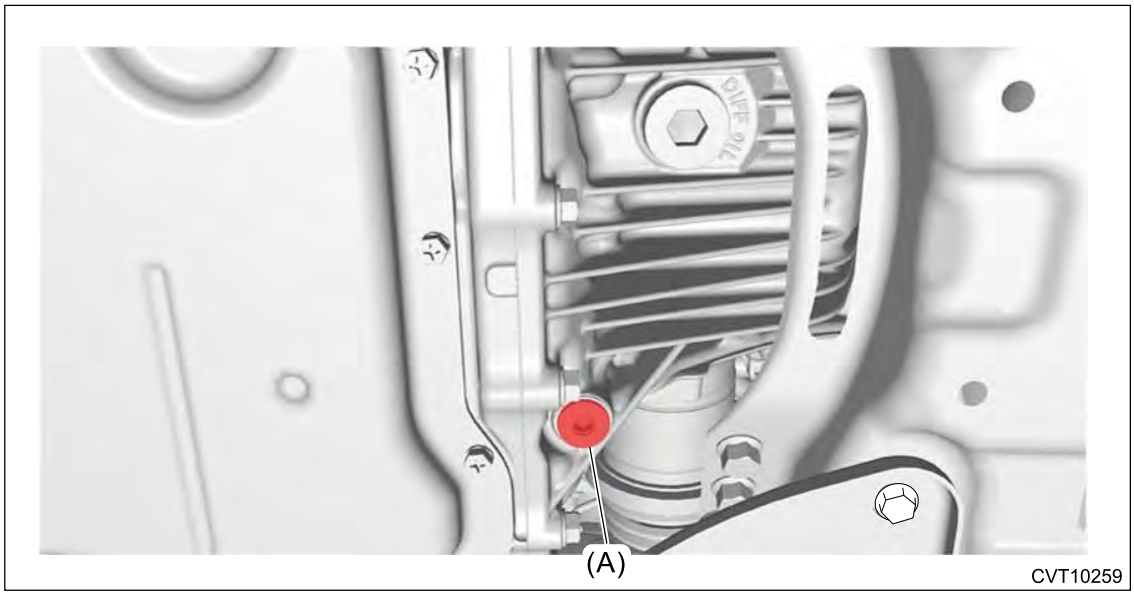
Check that there is no leakage of differential gear oil from the converter case.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Differential Gear Oil

ADJUSTMENT

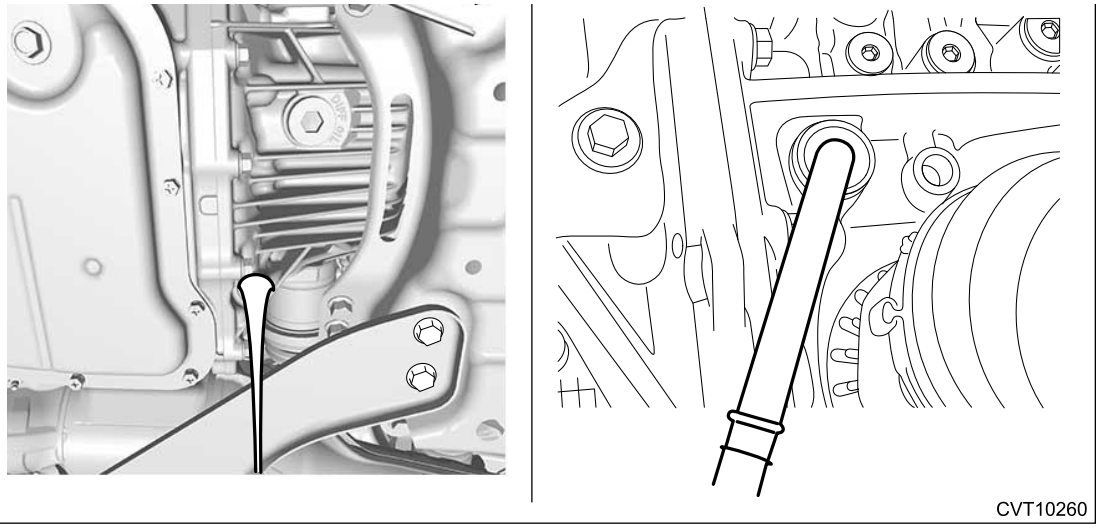
Note:



Immediately after removing the overflow drain plug, remaining gear oil (approx. 8 cc) may come out of the overflow pipe. This is not included in the specified amount. When removing the overflow drain plug, make sure the gear oil flows out of the overflow drain plug hole by filling with gear oil.

1. Lift up the vehicle.
2. Remove the filler plug.

(A) Filler plug

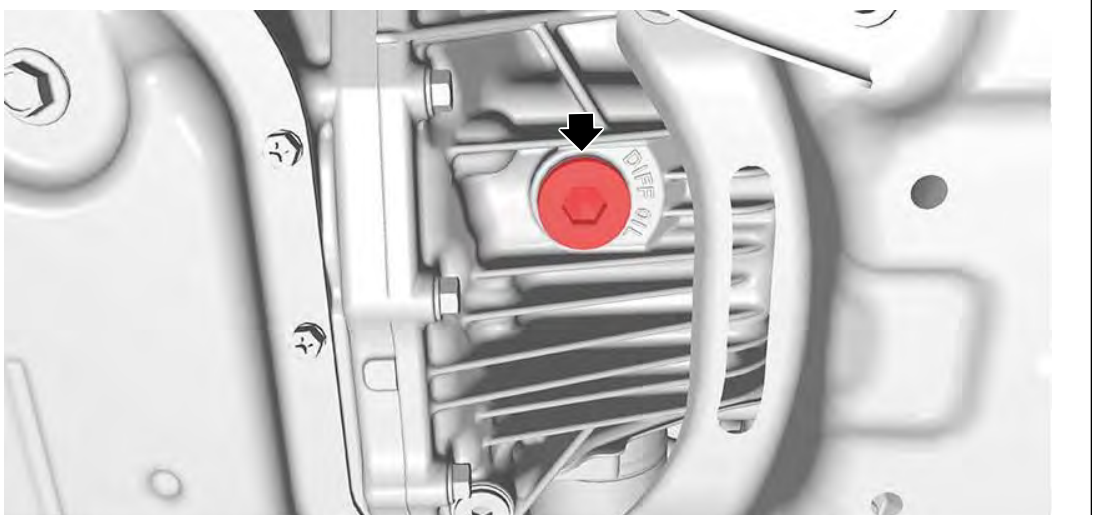


3. Remove the overflow drain plug.

(A) Overflow drain plug

4. Fill in the differential gear oil through the filler plug hole up to where the oil flows out of the overflow drain plug.
   Recommended gear oil:
   Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>General Description>SPECIFICATION > RECOMMENDED GEAR OIL.
5. When the flow of the differential gear oil turns into a narrow stream, install the overflow drain plug.
   Note:
   Use a new gasket.
   Tightening torque:
   50 N·m (5.1 kgf-m, 36.9 ft-lb)

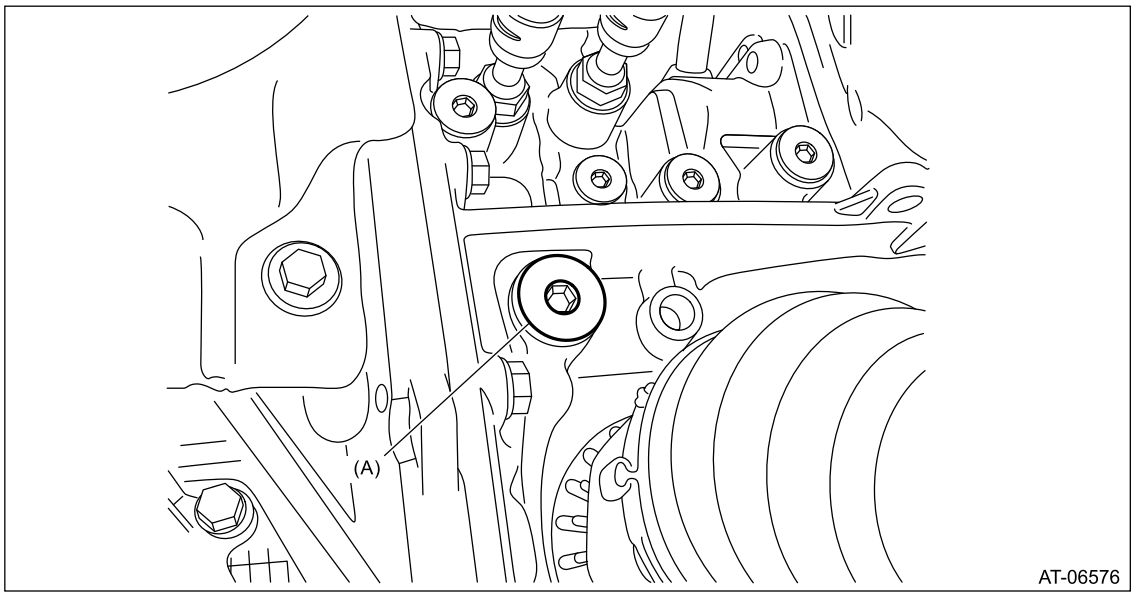
6. Install the filler plug.
   Note:
   Use a new gasket.
   Tightening torque:
   50 N·m (5.1 kgf-m, 36.9 ft-lb)



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Differential Gear Oil

REPLACEMENT

Caution:

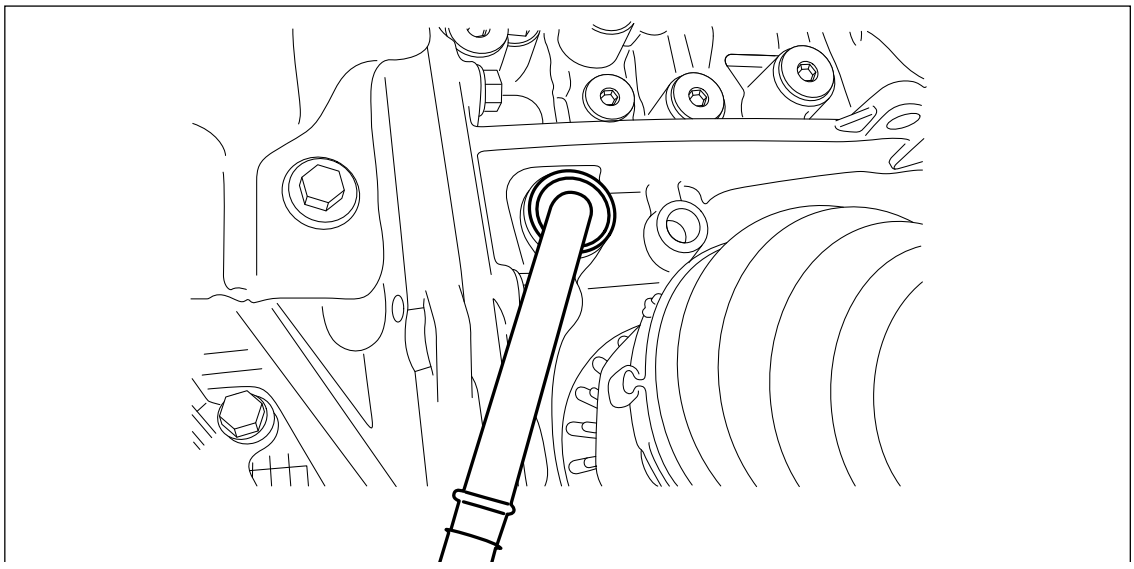


- **Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.**
- **Be careful not to spill differential gear oil on the exhaust pipe to prevent it from emitting smoke or causing a fire. If gear oil adheres, wipe it off completely.**

1. Lift up the vehicle.
2. Remove the differential gear oil drain plug using TORX® bit T70. Drain differential gear oil.
3. Install the differential gear oil drain plug using TORX® bit T70.
   Note:
   Use a new gasket.
   Tightening torque:
   70 N·m (7.1 kgf-m, 51.6 ft-lb)

4. Remove the filler plug.

(A) Filler plug



5. Pour gear oil into the filler plug hole.

Recommended gear oil:

Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>General Description>SPECIFICATION > RECOMMENDED GEAR OIL.

Gear oil capacity:

Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>General Description>SPECIFICATION > RECOMMENDED GEAR OIL.

6. Adjust the level of differential gear oil. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Gear Oil>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > AWD ON/OFF Switching Mode

GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- Perform as necessary in FWD mode.
- When switched to FWD, AWD light illuminates.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > AWD ON/OFF Switching Mode

PROCEDURE

Caution:

- **Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.**
- **On completing the work in FWD, switch back in AWD.**

1. Shift the select lever to the "P" range.
2. Connect the Subaru Select Monitor to data link connector.
3. Turn the ignition switch to ON.
4. Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger.
5. Select [Diagnosis] on [Start] display of Subaru Select Monitor.
6. On [Vehicle selection] display, enter vehicle information and select [OK].
7. On [Main Menu] display, select [Each System].
8. On [Select System] display, select [Transmission].
9. On [Select Function] display, select [Work Support].
10. On [Work Support] display, select [AWD ON/OFF switching mode].
11. Follow the messages displayed on the Subaru Select Monitor screen when working.
    Switching completes successfully if any of the following messages is displayed.
    - When switching from AWD to FWD: [Switched to FF. To return to AWD, perform basic mode again.]
    - When switching from FWD to AWD: [Switched to AWD. To return to FF, perform basic mode again.]

    Note:
    - **If communication error occurs during switching mode, start in the [AWD ON/OFF switching mode] again.**
    - **If operation is interrupted before the successful end message is displayed, perform the [AWD ON/OFF switching mode] from the beginning until confirming the operation is successfully ended. If this mode fails to complete successfully, the cause is as follows.**
      - **Select lever is not in "P" range.**
      - **Engine is running.**
    - **For detailed operation procedures, refer to "Application help".**

INSPECTION

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of CVT.

Caution:

Always observe the local traffic laws when performing the test.

2. D RANGE SHIFT FUNCTION

Make sure that the engine speed is 1,100 — 1,400 r/min while driving on the level road at 50 km/h (31 MPH) after accelerating from halting up to 1/4 of accelerator opening angle. Then stop the vehicle. Check normal gear change has occurred while the vehicle speed changes from a constant speed to zero.

3. KICK-DOWN FUNCTION

3. KICK-DOWN FUNCTION

Check if engine speed will rise by operating the accelerator opening angle to the full from a constant speed of 50 km/h (31 MPH) or more.

4. ENGINE BRAKE OPERATION

- **MODEL WITH MANUAL MODE**
  - Drive in “7th speed of manual mode” [110 — 120 km/h (69 — 75 MPH)], and shift down from 7th to 6th. Check if the indicator of combination meter switches “7” → “6”. At the same time, check engine braking in 6th gear.
  - Drive in “6th speed of manual mode” [80 — 90 km/h (50 — 56 MPH)], and shift down from 6th to 5th. Check if the indicator of combination meter switches “6” → “5”. At the same time, check the engine brake in 5th gear.
  - Drive in “5th speed of manual mode” [60 — 70 km/h (37 — 43 MPH)], and shift down from 5th to 4th. Check if the indicator of combination meter switches “5” → “4”. At the same time, check the engine brake in 4th gear.
  - Drive in “4th speed of manual mode” [50 — 60 km/h (31 — 37 MPH)], and shift down from 4th to 3rd. Check if the indicator of combination meter switches “4” → “3”. At the same time, check the engine brake in 3rd gear.
  - Drive in “3rd speed of manual mode” [40 — 50 km/h (25 — 31 MPH)], and shift down from 3rd to 2nd. Check if the indicator of combination meter switches “3” → “2”. At the same time, check the engine brake in 2nd gear.
  - Drive in “2nd speed of manual mode” [20 — 30 km/h (12 — 19 MPH)], and shift down from 2nd to 1st. Check if the indicator of combination meter switches “2” → “1”. At the same time, check the engine brake in 1st gear.
- **MODEL WITHOUT MANUAL MODE**
  Drive in D range at [50 — 60 km/h (31 — 37 MPH)], and shift to “L” range. Check if the indicator of combination meter switches “D” → “L”. At the same time, check the engine brake in L range.

5. LOCK-UP FUNCTION

When the accelerator is lightly depressed while driving on a flat road in “D” range, check that rpm does not change abruptly.

6. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to the “P” range and apply the parking brake. Check that the vehicle does not move when the parking brake is released.

7. NOISE AND VIBRATION

Check for noise and vibration during a constant driving, accelerating, decelerating and manual shift operation.

8. OIL LEAKAGE

After the driving test, inspect for leakage of CVTF and differential gear oil from the transmission body.

INSPECTION

Caution:

Make sure no other person is around the vehicle during stall test measurement.

Note:

Stall test is extremely important in diagnosing the condition of CVT and engine. The test is necessary to measure the engine stall speeds in "R" and "D" range.

Purposes of the stall test:

- **Operational check of forward clutch and reverse brake**
- **Operational check of the torque converter assembly**
- **Engine performance check**

1. Place wheel chocks at the front and rear of all wheels and engage the parking brake.
2. Turn the A/C OFF.
3. Using the Subaru Select Monitor, check if the throttle valve operates when you depress the

accelerator pedal. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor>LIST.

4. Check the engine oil level. Ref. to LUBRICATION(H4DO)>Engine Oil.
5. Check the coolant level. Ref. to COOLING(H4DO)>Engine Coolant.
6. Adjust the CVTF level. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.
7. Increase the CVTF temperature to 60 — 80°C (140 — 176°F) with the engine running and the select lever shifted to "N" or "P" range.
8. Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake function. (With EyeSight)
9. Shift the select lever to the "D" range.
10. Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
11. When the engine speed stabilizes, quickly record the engine speed and release accelerator pedal. Shift the select lever to the "N" range. Let the engine idle for one minute or more to cool it down.
12. Shift to "R" range and perform the same stall test.

Note:

- **Do not perform a stall test for over 5 seconds at a time. (From closed throttle, fully open throttle to stall speed reading.) Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.**
- **Be sure to cool down the engine for at least one minute after each stall test with the select lever set in the "P" or "N" range and with the idle speed of 1,200 r/min or less.**
- **If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the CVT from sustaining damage.**

Stall speed standard:

D range: 2,150—3,050 r/min
R range: 2,050—2,950 r/min

Stall test judgment

Stall speed (at sea level)	Range	Probable cause
Lower than standard value	D, R	• Insufficient engine output • Torque converter malfunction
Higher than standard value	D	• Forward clutch slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction
	R	• Reverse brake slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction
	D, R	• Torque converter malfunction • Control valve body malfunction • TCM malfunction • Damaged harness and harness connector

INSPECTION

Note:

When the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before shock is felt. This symptom helps to check the condition of forward clutch and reverse brake.

- **Perform the test at normal operation CVTF temperature of 60 — 80°C (140 — 176°F).**
- **Be sure to allow one minute or more interval between tests.**
- **Make three measurements and take the average value.**

1. Apply the parking brake.
2. Start the engine. Check the idle speed. (A/C OFF)
3. Shift the select lever from "N" to "D" range. Using a stop watch, measure the time elapsed from shifting the lever until the shock is felt.

   Time lag standard:

   1.5 seconds or less

If "N" → "D" time lag is longer than specified:

- Secondary pressure (line pressure) is too low.
- Forward clutch worn
- Forward clutch piston malfunction
- Control valve body malfunction
- Learning incomplete

4. In the same manner, measure the time lag when shifting from "N" range to "R" range.

Time lag standard:

1.5 seconds or less

If "N" → "R" time lag is longer than specified:

- Secondary pressure (line pressure) is too low.
- Reverse brake worn
- Reverse brake piston malfunction
- Control valve body malfunction
- Learning incomplete

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Secondary Pressure (Line Pressure) Test

INSPECTION

Caution:

- **Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.**
- **Make sure no other person is around the vehicle during secondary pressure (line pressure) test measurement.**
- **After performing the secondary pressure (line pressure) test measurement, adjust the CVTF level.**

Note:

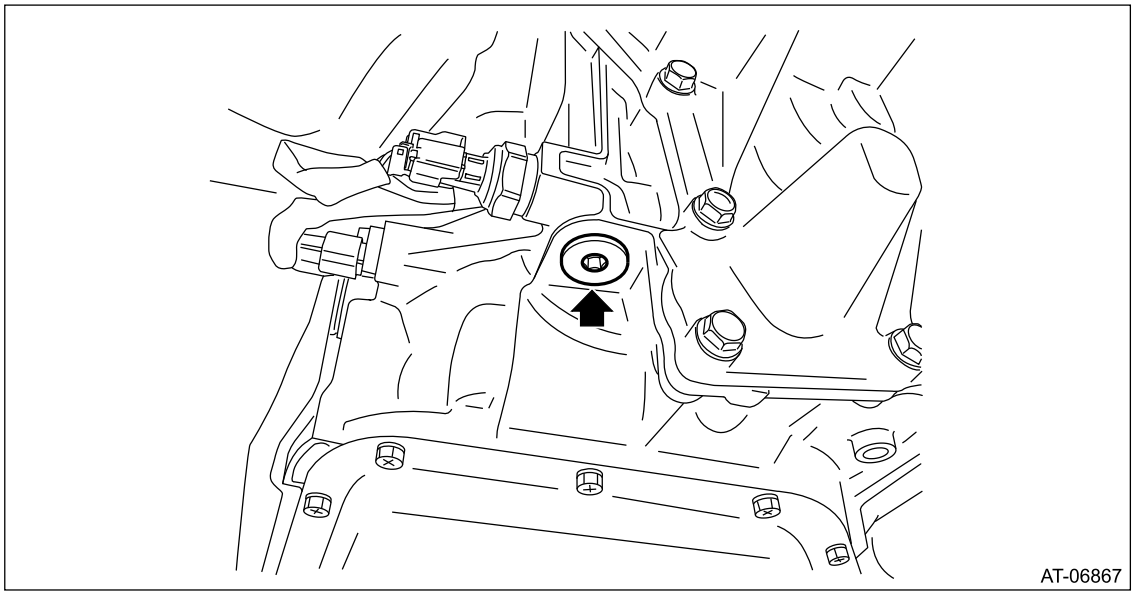
- **If the pulley and variator chain, clutch or brake show signs of slipping or shift feel is not correct, check the secondary pressure (line pressure).**
- **Connect Subaru Select Monitor to vehicle so as to measure the engine speed and actual secondary pressure (secondary pressure (line pressure)).**
- **In many cases, slippage or inability to operate the vehicle may be due to insufficient oil**

pressure for the operation of clutch, brake or control valve.

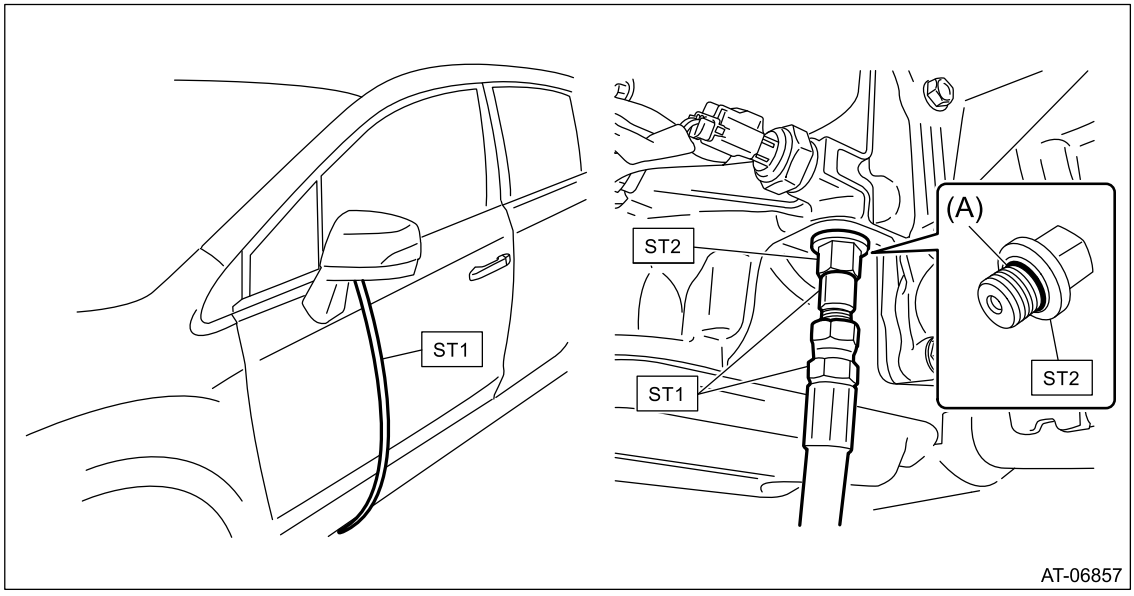
1. Lift up the vehicle.
2. Remove the secondary pressure (line pressure) test plug, and install ST1 and ST2.

Caution:

Removal of the test plug and installation of the ST shall be both performed quickly.



Note:



Use the ST2 with genuine O-ring (part No. 806916050) attached.

Preparation tool:

ST1: OIL PRESSURE GAUGE ASSY (18801AA000)

ST2: PRESSURE GAUGE ADAPTER (18681AA010)

(A) O-ring (genuine part)

3. Lower the vehicle.
4. Set the gauge so that it can be seen from the driver's seat.
5. Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
6. Check the engine oil level. Ref. to LUBRICATION(H4DO)>Engine Oil.
7. Check the coolant level. Ref. to COOLING(H4DO)>Engine Coolant.
8. Adjust the CVTF level. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.
9. Increase the CVTF temperature to 60 — 80°C (140 — 176°F) with the engine running and the select lever shifted to "N" or "P" range.
10. Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake function. (With EyeSight)
11. While depressing the foot brake pedal, shift the select lever to "D" range.
12. Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
13. Immediately after the engine speed becomes steady, record the reading of the secondary pressure (line pressure), engine speed and actual secondary pressure on Subaru Select Monitor. And then release the accelerator pedal. Shift the select lever to the "N" range. Let the engine idle for one minute or more to cool it down.

Note:

- **Do not continue the stall test for 5 seconds or more at a time (from fully closed throttle, fully open throttle to secondary pressure (line pressure) reading). Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.**
- **After performing the secondary pressure (line pressure) test, be sure to cool down the engine for at least one minute with the select lever set in "P" or "N" range and with the idle speed at 1,200 r/min or less.**
- **Under each condition, check that the measured pressure matches almost totally with actual secondary pressure.**
- **When both measured pressure and actual secondary pressure are out of specification, judge as control valve malfunction.**
- **The value at stall is for reference because the pressure changes under different conditions or circumstances.**
- **The value at idling is steady because it is not affected by any condition or circumstance.**
- **When the engine is started with the select lever in the "P" range and the secondary pressure at idling is measured without shifting the select lever, the value may be**

higher than the standard. Shift the select lever to the "D" or "R" range, then measure the value.

Secondary pressure (line pressure) standard				
	Range	**Throttle**	**Brake**	**Secondary pressure (line pressure) (MPa (kgf/cm^2, psi))**
Stall	D, R	Full open	ON	4.5 — 6.0 (45.9 — 61.2, 652 — 870)
Idling	P, N	Full closed	OFF	0.5 — 1.5 (5.1 — 15.3, 72 — 218)

14. Remove the ST and install the plug after measurement.

Caution:

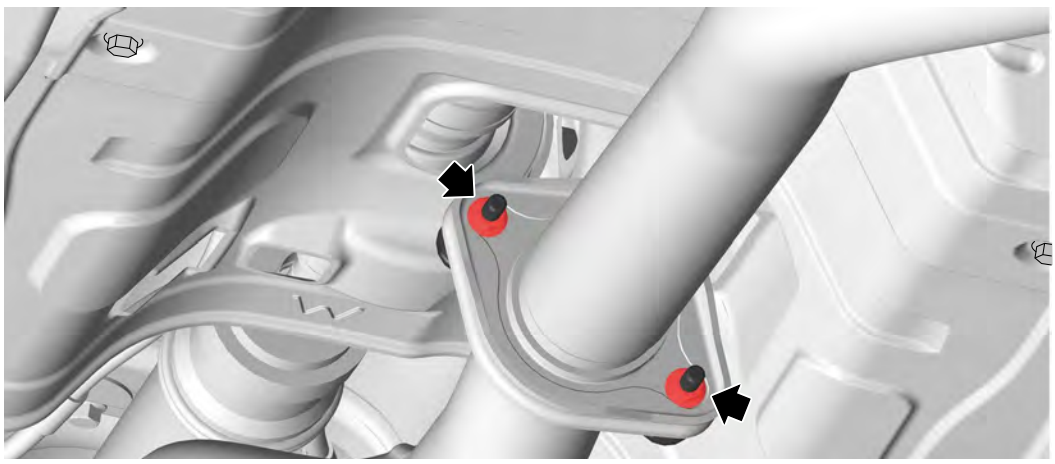
Removal of the ST and installation of the test plug shall be both performed quickly.

Note:

- **Use new O-rings.**
- **Apply CVTF to the O-rings.**

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

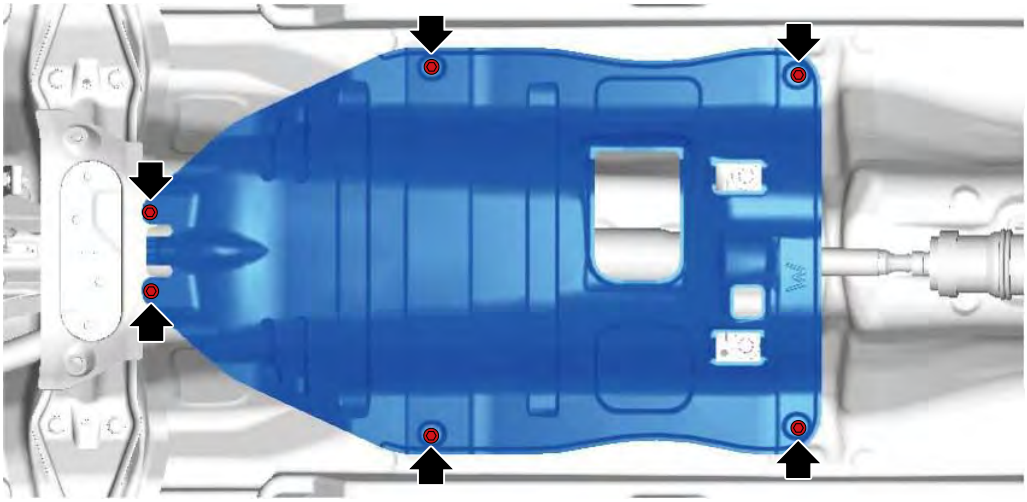


15. Adjust the CVTF level. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

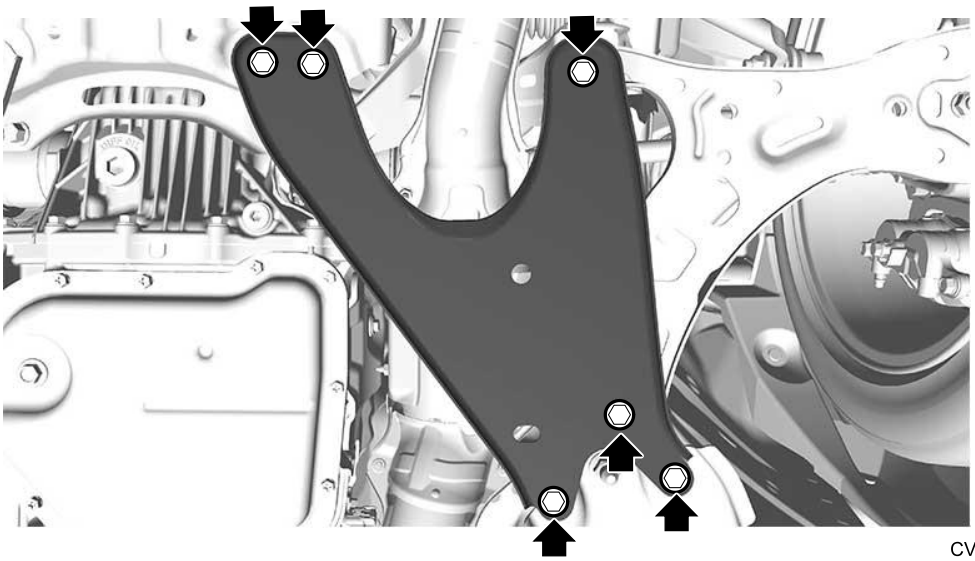
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Clutch Pressure Test

INSPECTION

1. Lift up the vehicle.



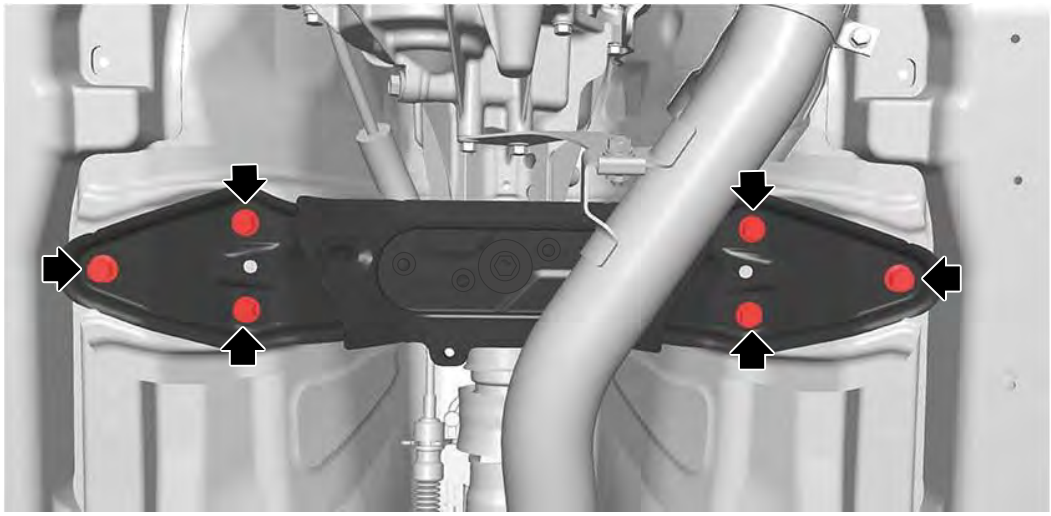
2. Disconnect the rear exhaust pipe from the front exhaust pipe.



EX-10058

3. Remove the center exhaust cover.

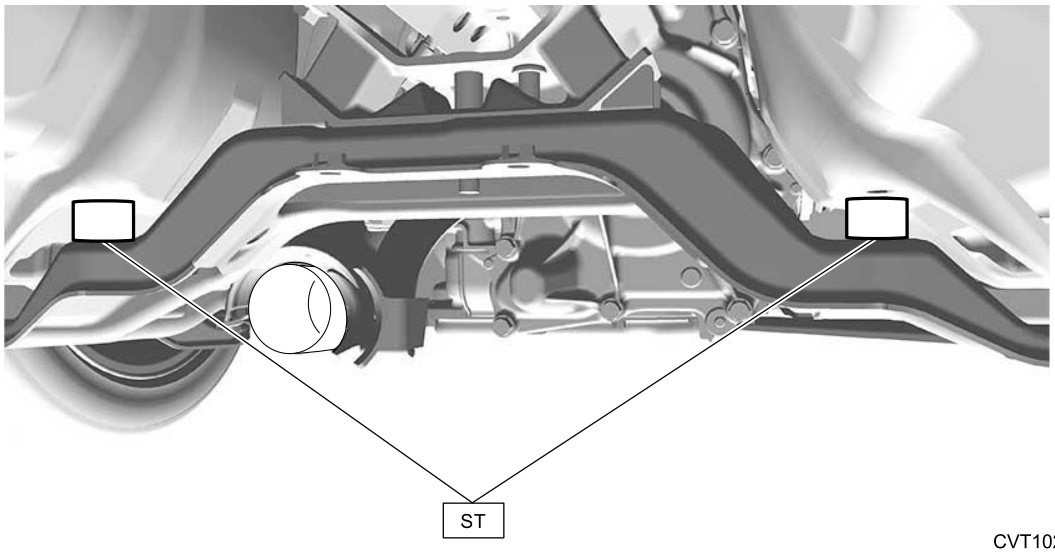
CVT10310



4. Remove the crossmember support - rear LH.

CVT10263

5. Set the transmission jack under the transmission.



6. Remove the mounting bolt of rear crossmember.

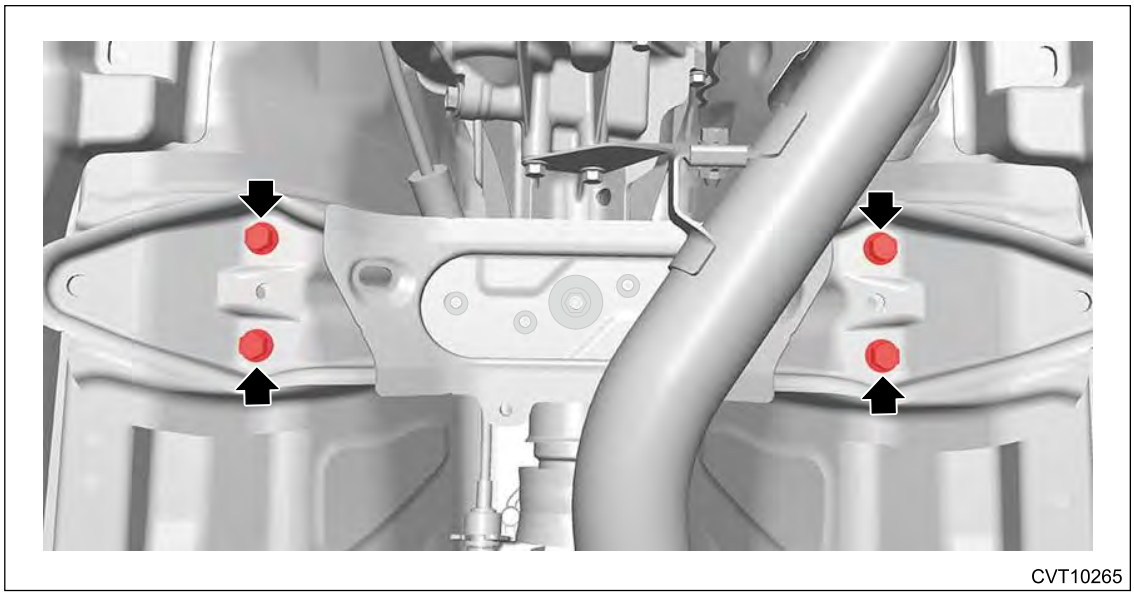
CVT10262

7. Lower the rear side of the transmission, and set the ST at four positions in the rear crossmember.

Preparation tool:

ST: ADAPTER (18362AA020)

CVT10264

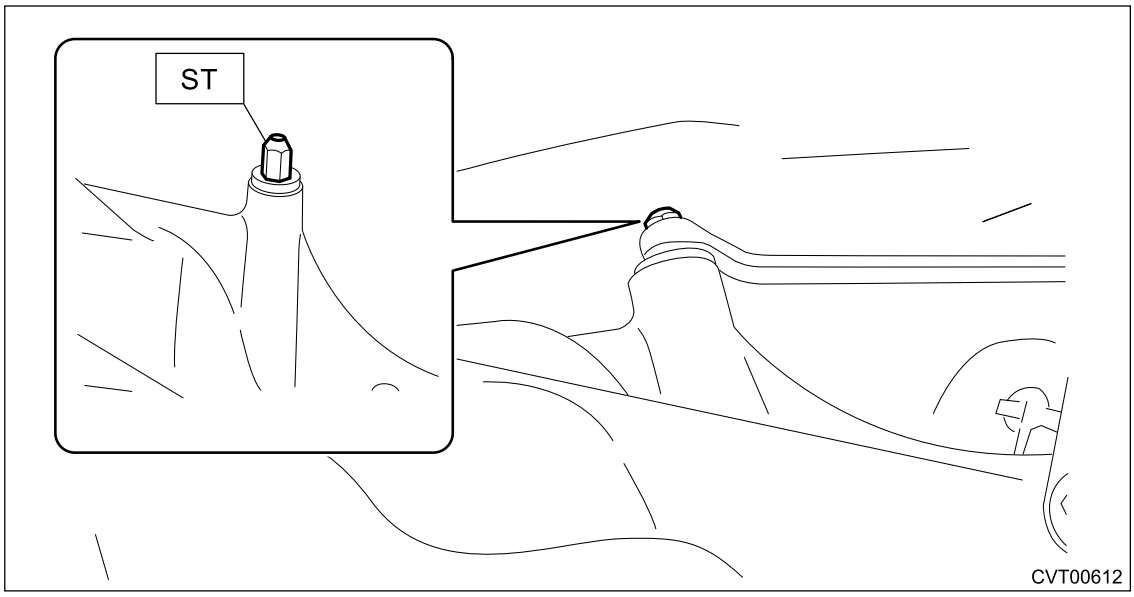


8. Install the rear crossmember with M10 × 30 mm bolts.

Caution:

Be careful not to use longer bolts than the specified length. Those bolts may interfere

with the floor panel.



Part No. (reference) 10510307

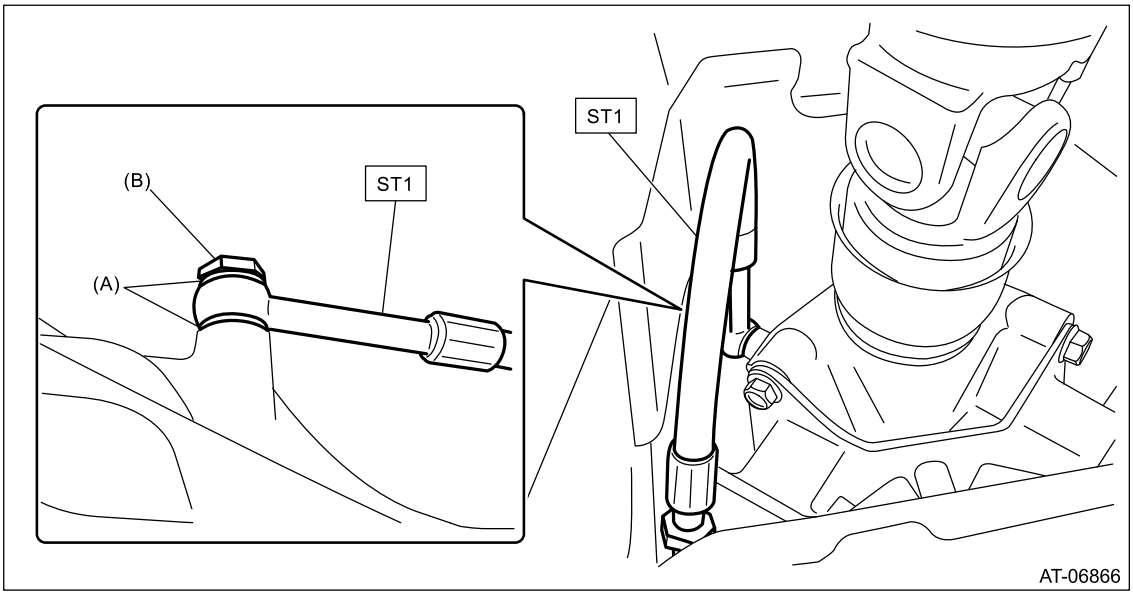
9. Using the ST, remove the transfer clutch pressure test plug.

Preparation tool:

ST: SOCKET (18270AA040)

10. Set the ST1 and ST2 to the transmission.

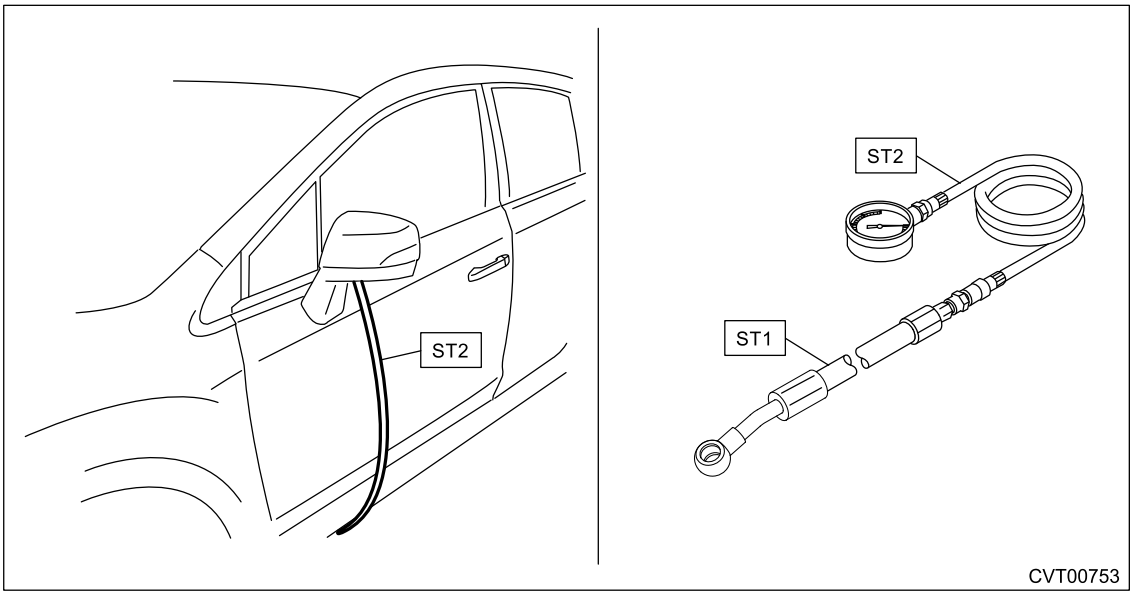
Note:



Use ST1 with genuine union screw (Part No. 801914010) and gasket (Part No.

803914060) attached.

Preparation tool:



ST1: ADAPTER PRESSURE GAUGE (18681AA050)

ST2: OIL PRESSURE GAUGE ASSY (498575400)

(A) Gasket (genuine part)

(B) Union screw (genuine part)

11. Temporarily tighten the front exhaust pipe and rear exhaust pipe.

12. Lower the vehicle.
13. Connect the Subaru Select Monitor to the data link connector and read the current data.
14. Check the transfer clutch pressure as in secondary pressure (line pressure) test. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure (Line Pressure) Test.

Note:

- **Use Subaru Select Monitor for switching to FWD mode. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>AWD ON/OFF Switching Mode.**
- **If no oil pressure is produced, if it does not change in AWD mode or if oil pressure is produced in FWD mode, there may be a problem in the control valve body.**

Range position	ON Duty ratio (%)	Accelerator pedal opening angle (%)	Standard transfer clutch pressure kPa (kgf/cm^2, psi)	
			AWD mode	FWD mode
D	95 — 100	Fully opened (100)	1,000 — 1,200 (10.2 — 12.2, 145 — 174)	—

Range position	ON Duty ratio (%)	Accelerator pedal opening angle (%)	Standard transfer clutch pressure kPa (kgf/cm^2, psi)	
			AWD mode	FWD mode
	60	Adjust ON Duty ratio to 60%.	400 — 700 (4.1 — 7.1, 58 — 102)	—
	0	Fully closed (0)	—	0 (0, 0)
N or P	0	Fully closed (0)	0	—

15. Lift up the vehicle.
16. Remove the ST.
17. Install the test plug using ST1 and ST2.

Note:

- **Use new O-rings.**
- **Apply CVTF to the O-rings.**
- **Tighten the test plug while directly aligning ST2 and torque wrench.**

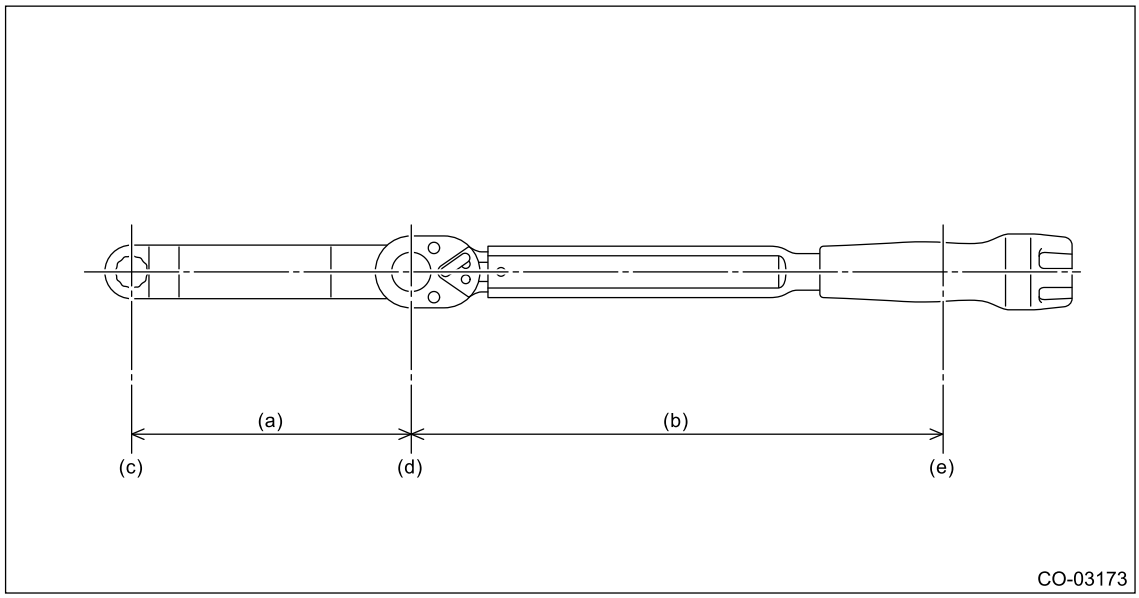
Preparation tool:

ST1: SOCKET (18270AA040)

ST2: SPECIAL TOOL CONDENSER (73099SG000)

ST2: SPECIAL TOOL CONDENSER (75099SG000)

Tightening torque:



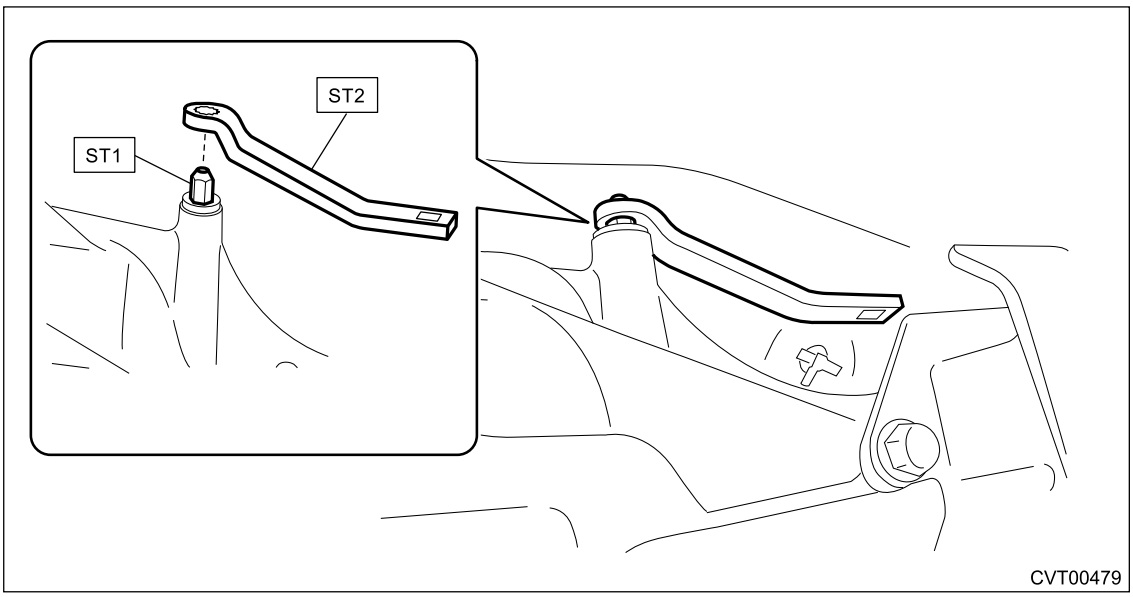
Calculation formula
T = L/ (100 mm (3.94in) +L) × 22N·m (2.2kgf-m, 16.2ft-lb)

T: Tightening torque

L: Effective length of torque wrench

Note:

If the effective length of the torque wrench used is unknown, consult the manufacturer of the torque wrench.



(a) Effective length of the ST2

(b) Effective length of the torque wrench

(c) Center of drive angle of the ST2

(d) Center of drive angle of the torque wrench

(e) Center of the position where a force is applied by hand

18. Set the transmission jack under the transmission.

19. Remove the ST (ADAPTER) and M10 × 30 mm bolts from the rear crossmember.

20. Raise the transmission assembly, and install the rear crossmember.

Tightening torque:

75 N·m (7.6 kgf-m, 55.3 ft-lb)

75 N·m (7.6 kgf-m, 55.3 ft-lb)

21. Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

22. Install the rear exhaust pipe to the front exhaust pipe.

Note:

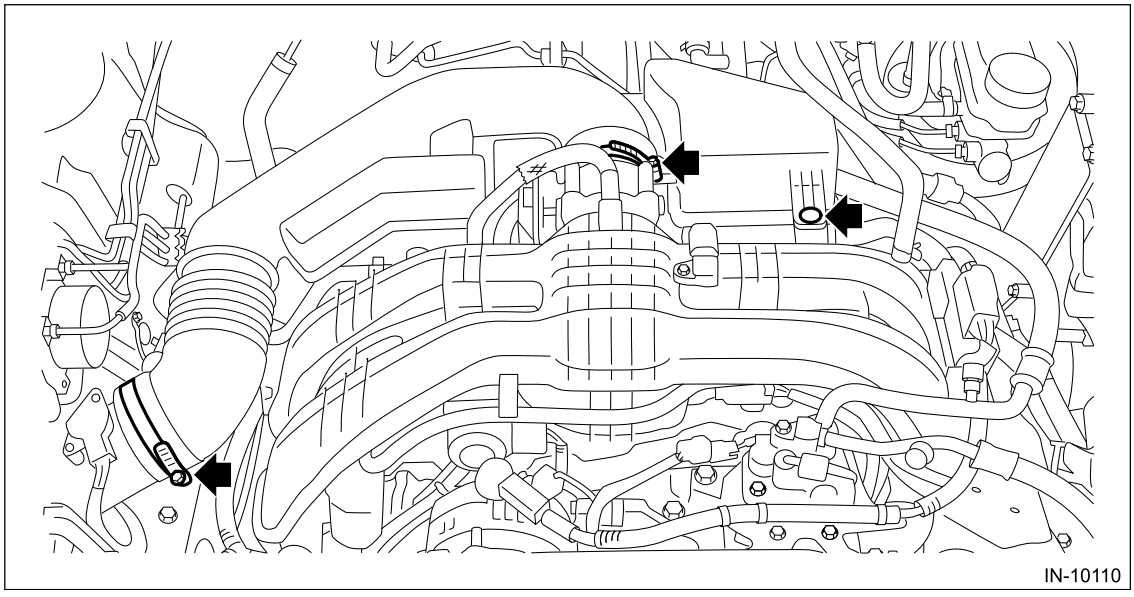
Use a new gasket.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

23. Install the crossmember support - rear LH.

Tightening torque:

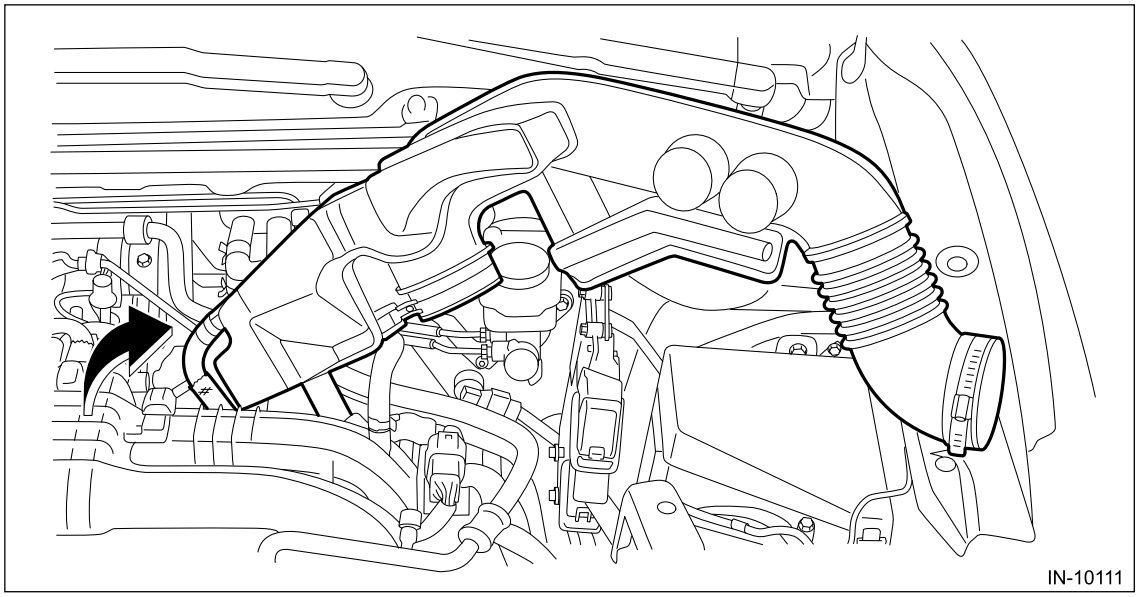


70 N·m (7.1 kgf-m, 51.6 ft-lb)

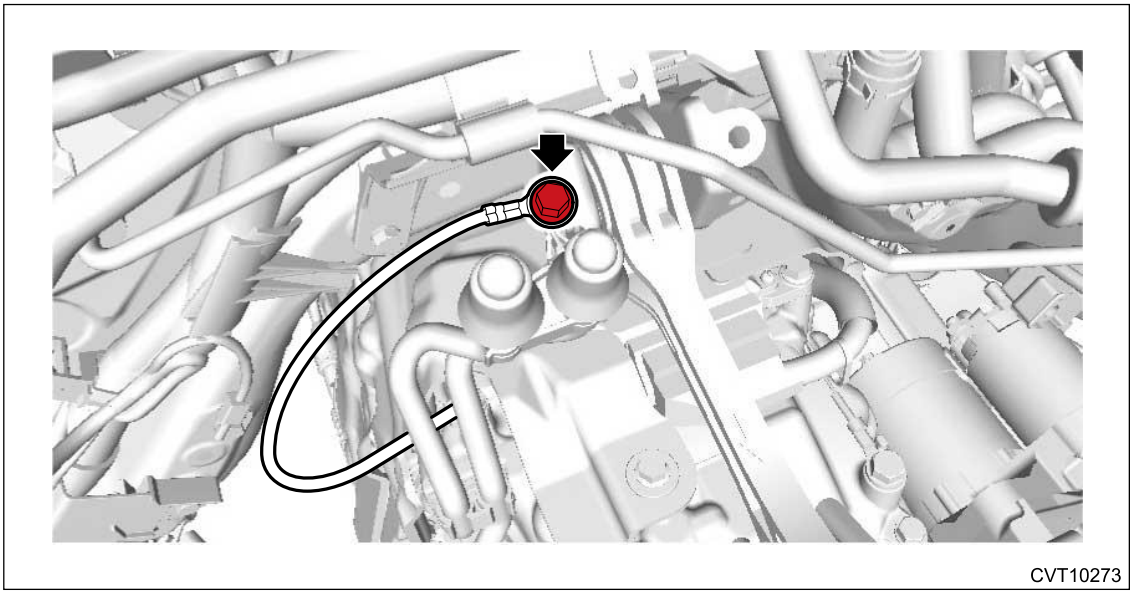
24. Lower the vehicle.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Automatic Transmission Assembly

REMOVAL



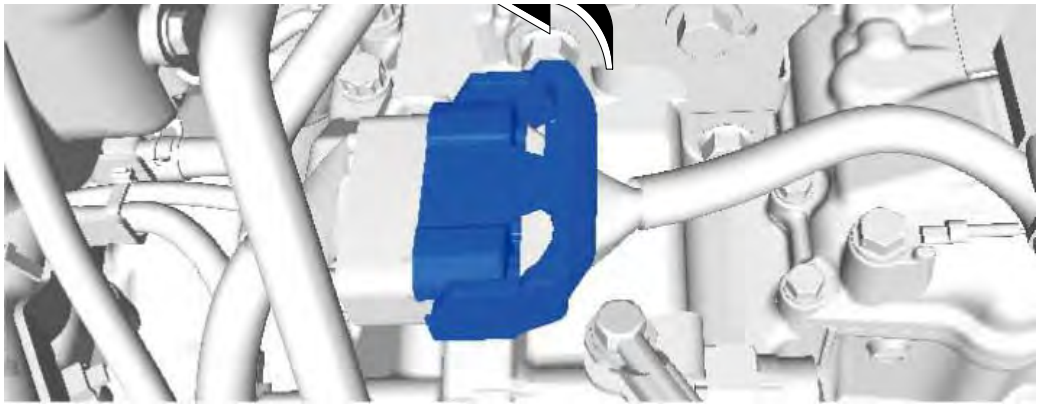
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.



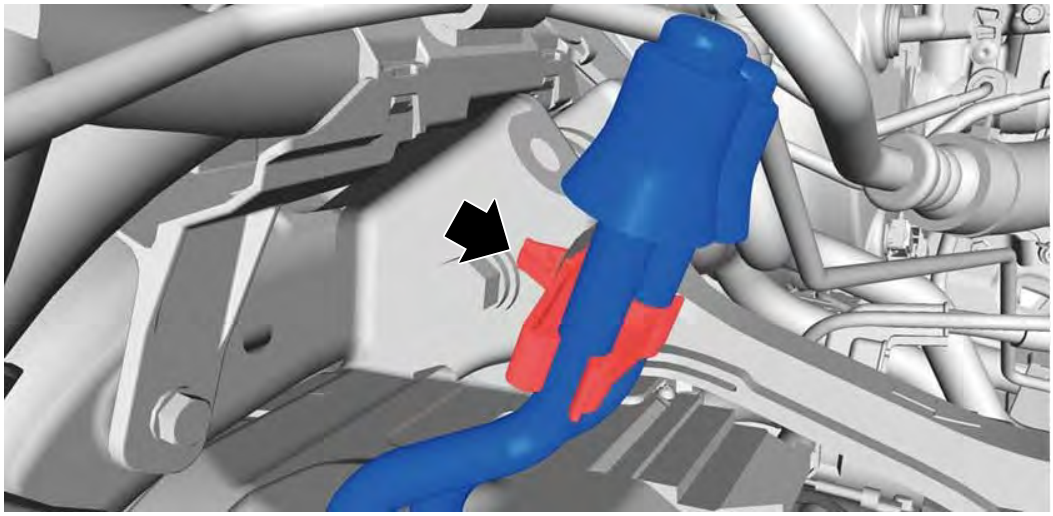
3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:

Be careful not to pull out the PCV hose.

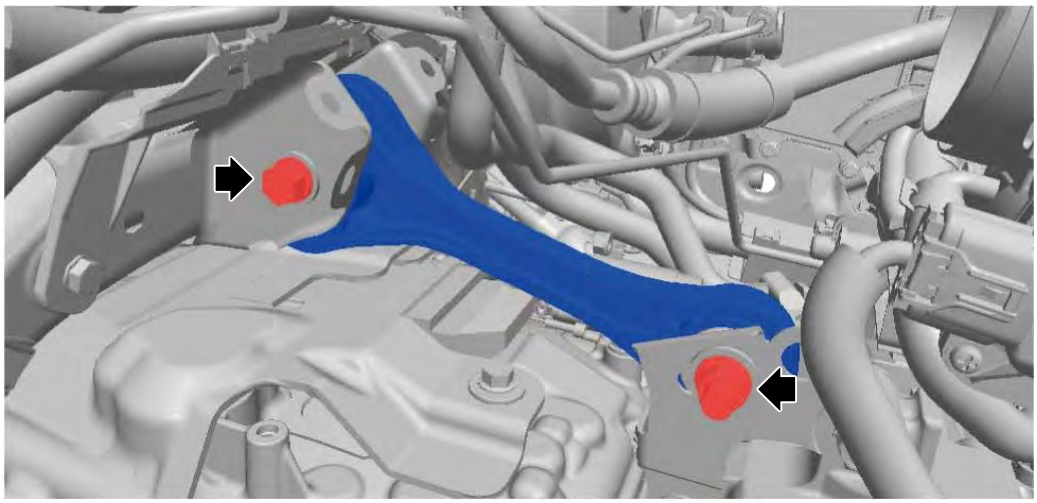


4. Remove the transmission radio ground terminal.



5. Disconnect the transmission harness connector.

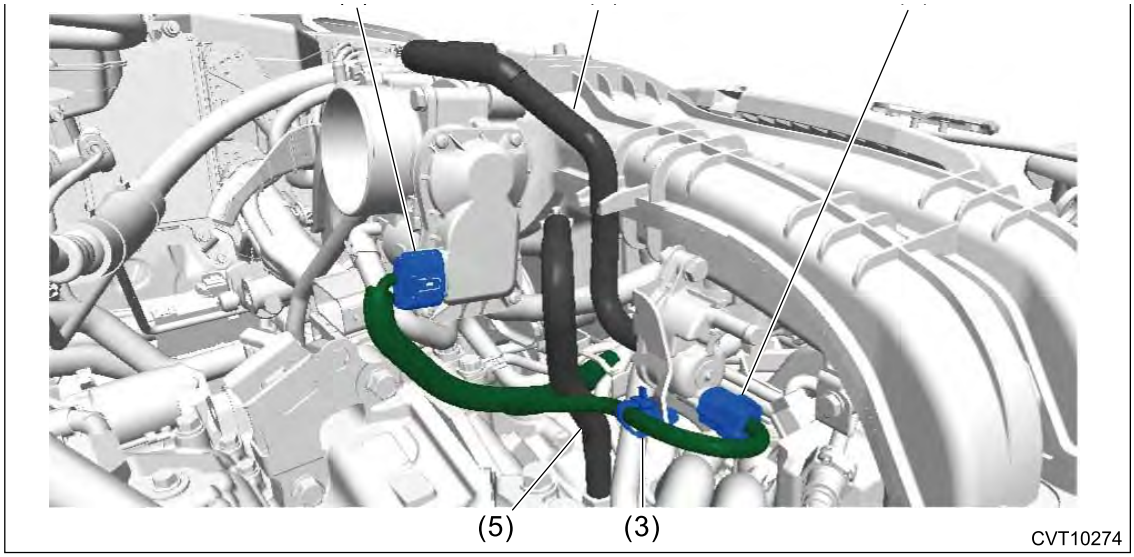
CVT10266



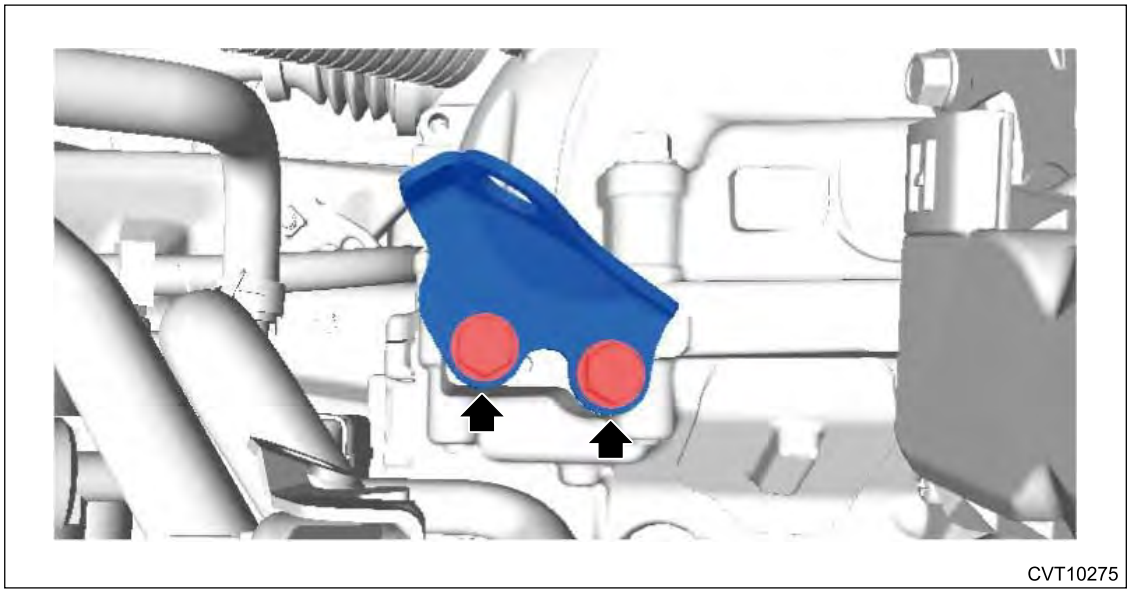
6. Remove the air breather hose together with the bracket.

CVT10439

7. Remove the starter. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>REMOVAL.

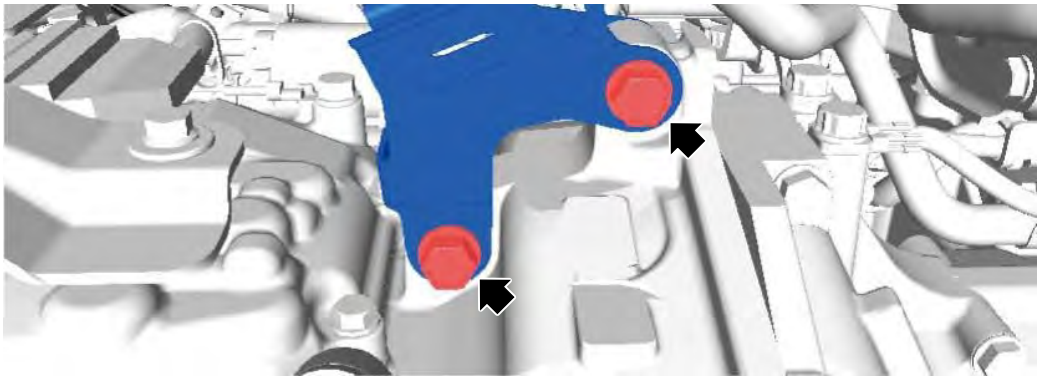


8. Remove the pitching stopper.

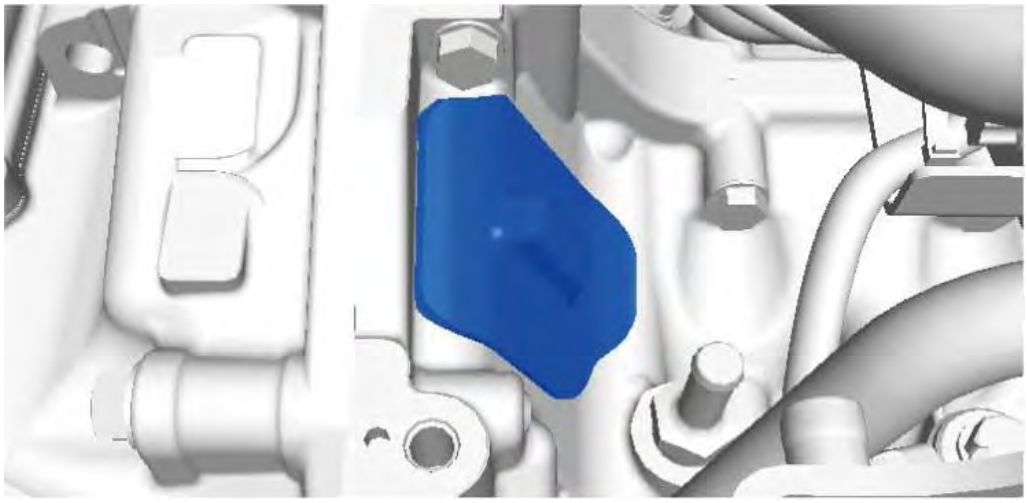


CVT10272

9. Remove the throttle position sensor harness connector (1), purge control solenoid valve harness connector (2), harness clip (3), vacuum hose (4) and PCV hose (5).



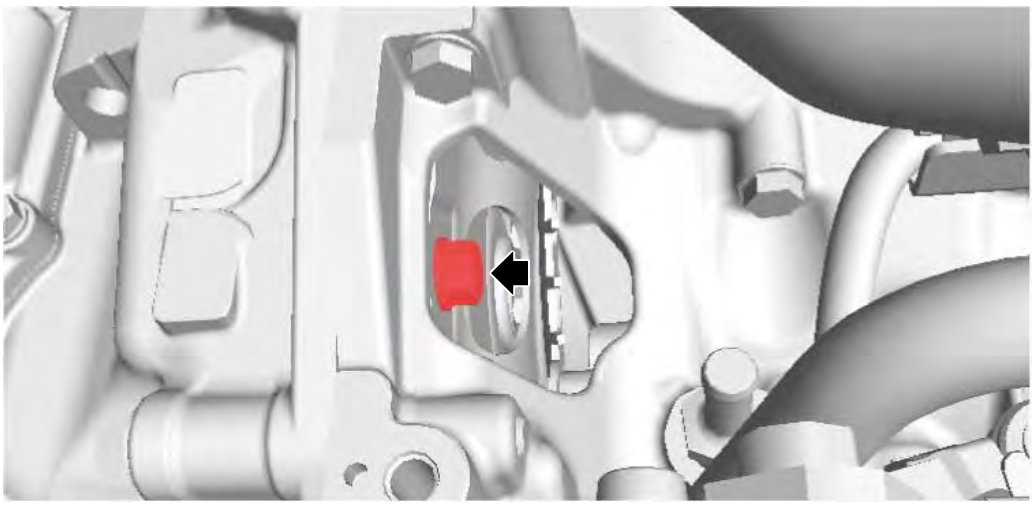
10. Remove the engine hanger rear.



11. Remove the pitching stopper bracket.

CVT10276

12. Remove the service hole plug.



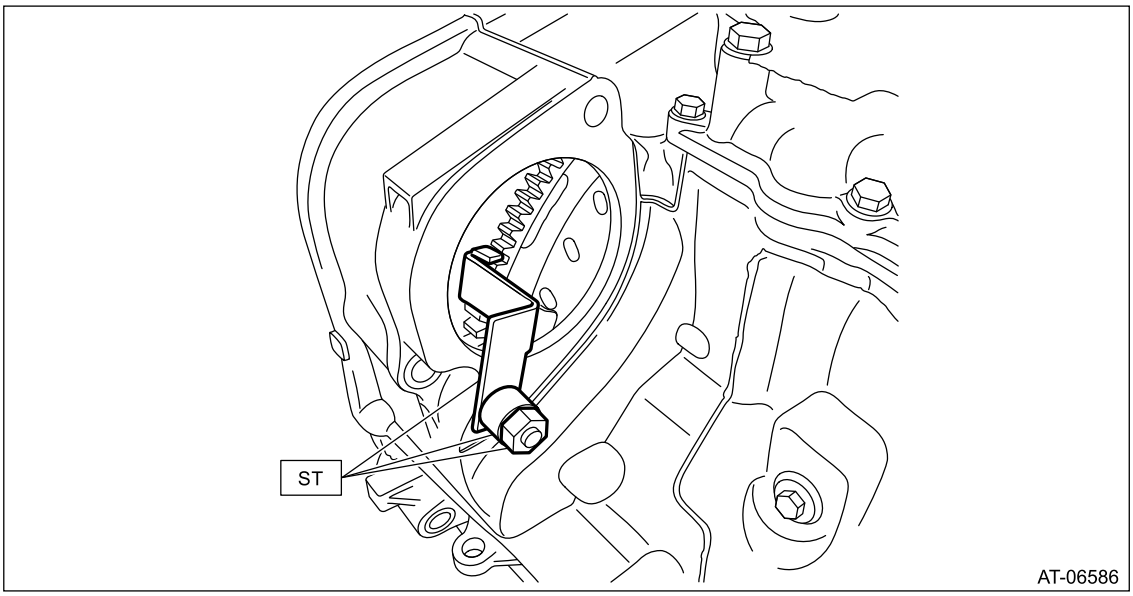
CVT10278

13. Remove the six bolts combining the torque converter and drive plate while rotating the crank pulley a little at a time in the same direction as engine revolution.

Caution:

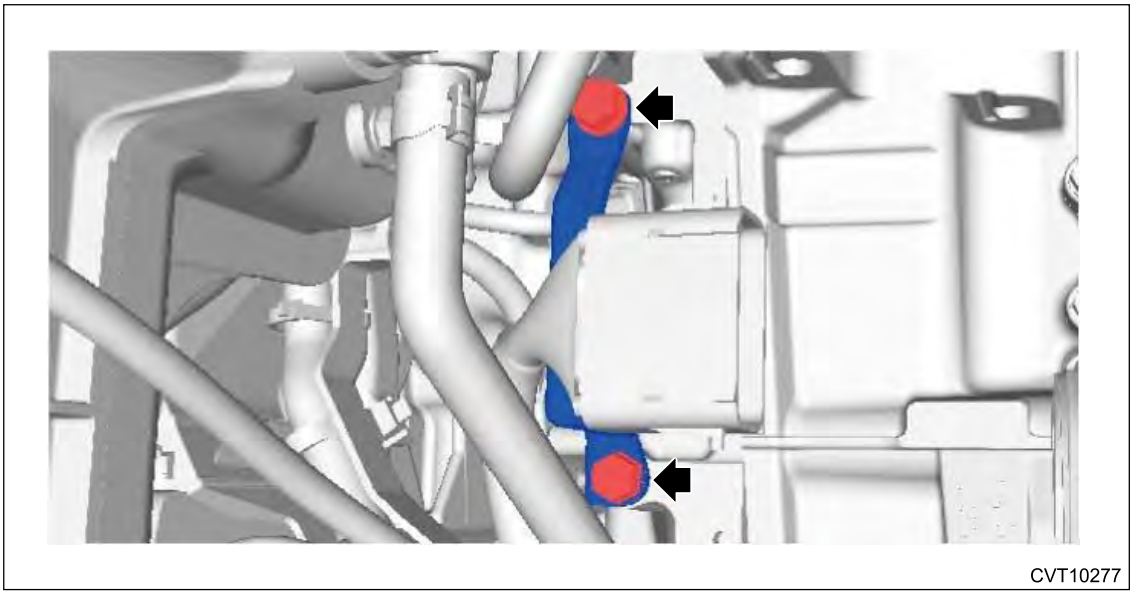
- **Be careful not to drop bolts into the converter housing.**
- **Be careful not to damage the mounting bolts.**

CVT10279



14. Make sure the torque converter moves freely by rotating with finger through the starter installation

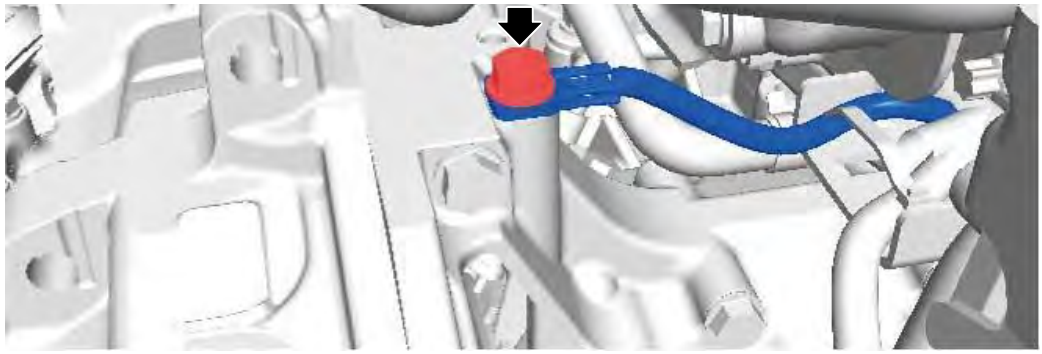
hole.



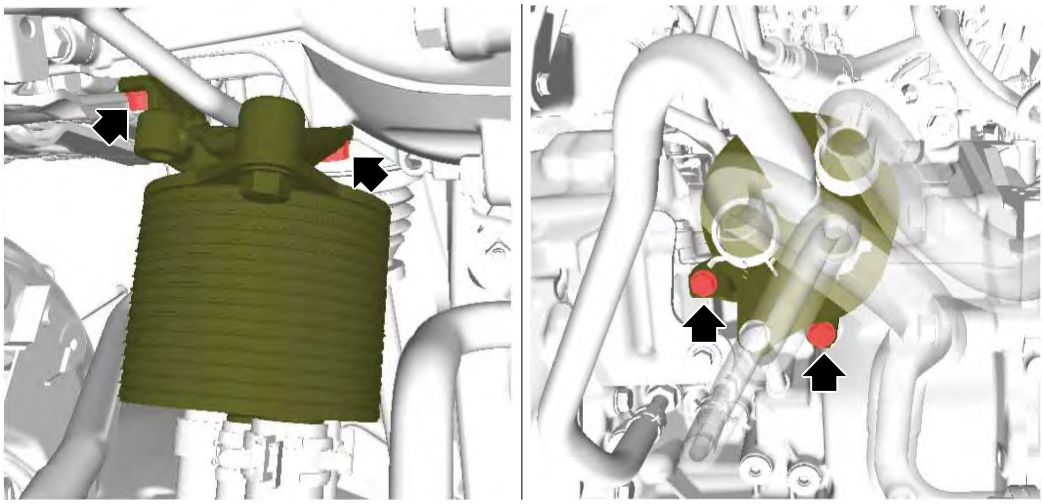
15. Attach the ST to the converter case.

Preparation tool:

ST: STOPPER SET (498277200)

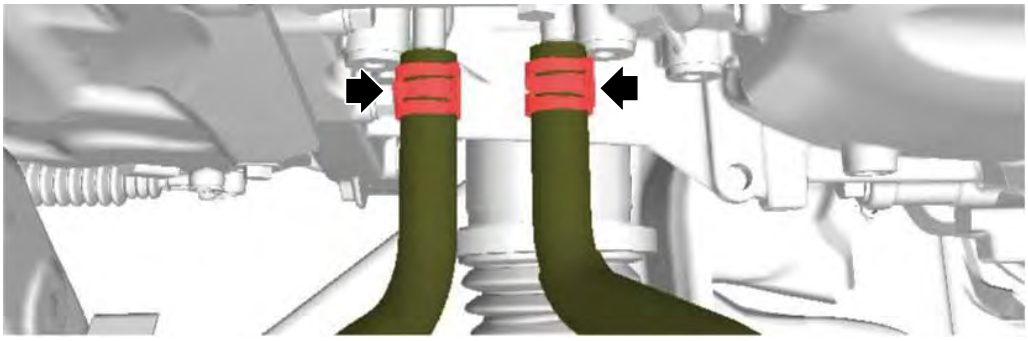


16. Remove the engine harness connector bracket.



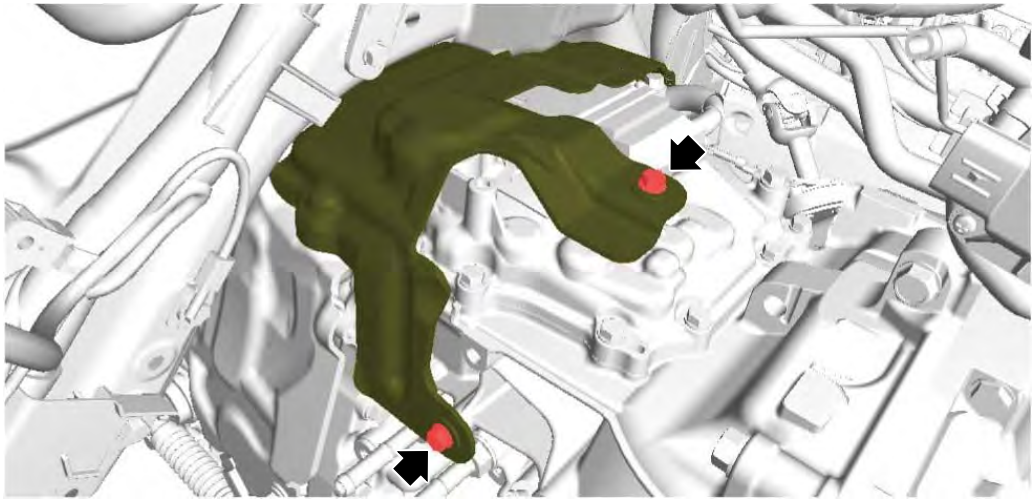
17. Remove the engine ground terminal.

CVT10280



18. Remove the CVTF cooler (with warmer feature) from the transmission, and using a piece of wire, affix to a location of the body where it will not interfere with the removal/installation of the transmission.

CVT10281

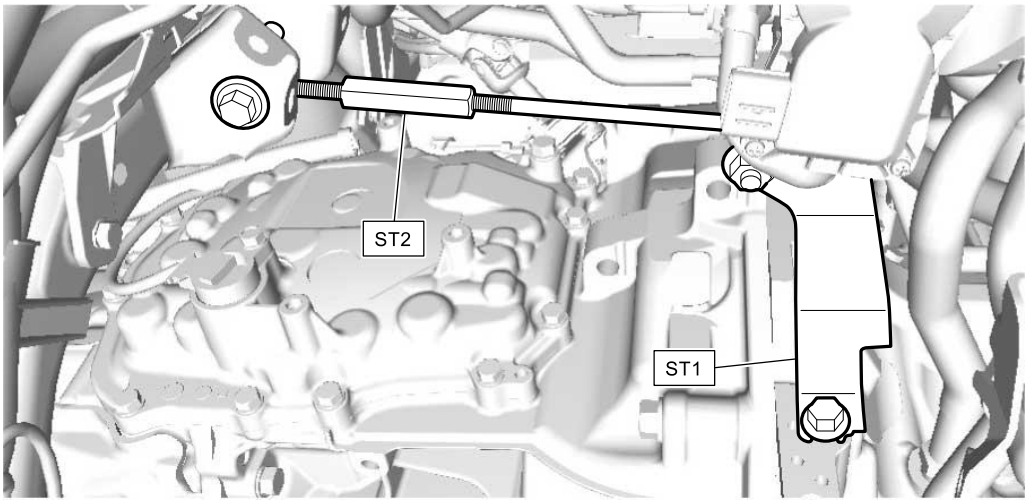


19. Remove the CVTF inlet hose and outlet hose from the pipe.

CVT10282

20. Remove the transmission case cover (small).

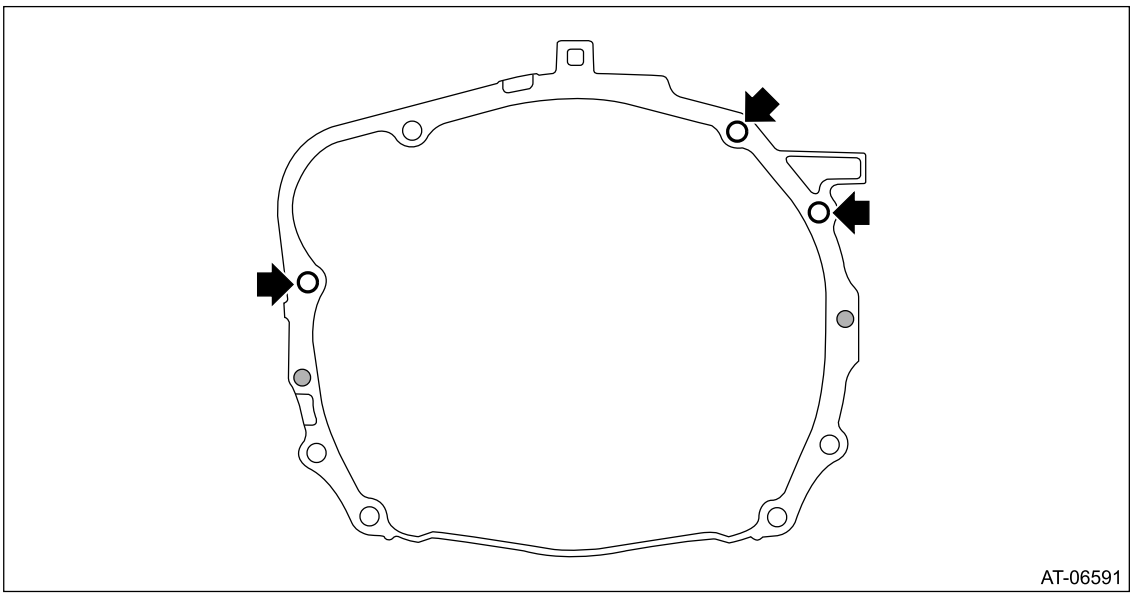
CVT10283



21. Remove the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>REMOVAL.

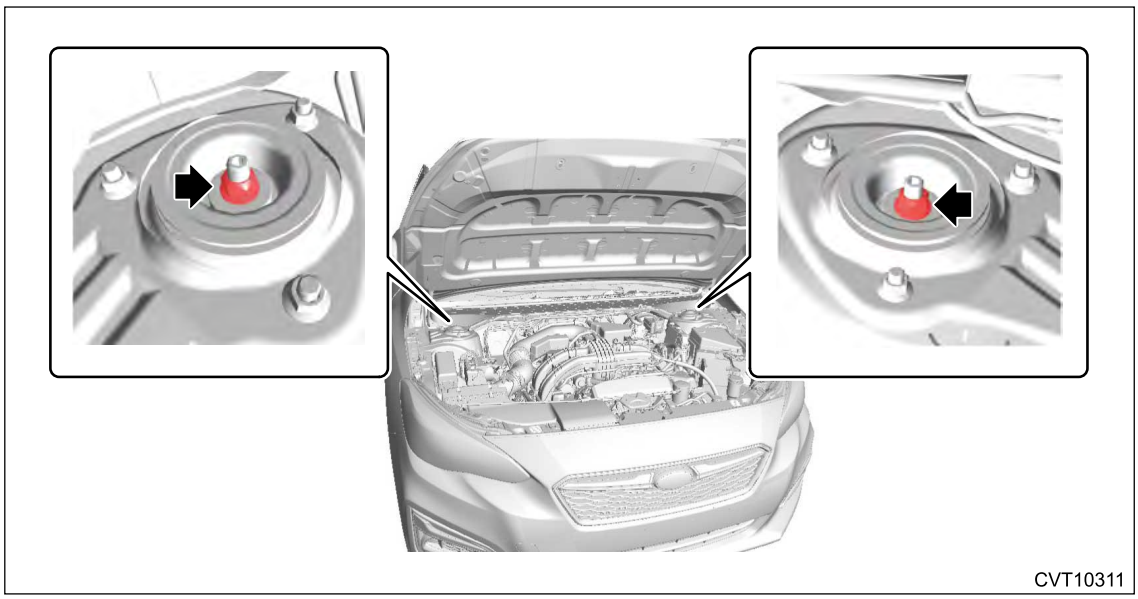
22. Set the ST1 and ST2.

Preparation tool:



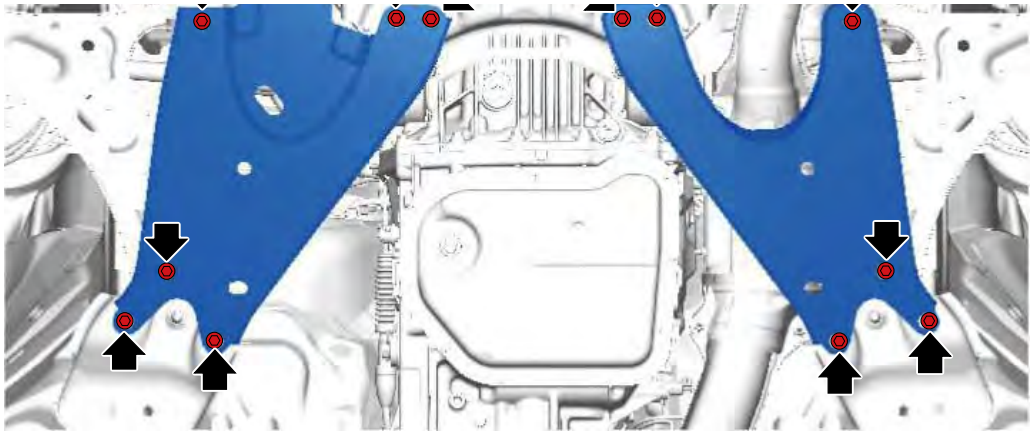
ST1: ENGINE SUPPORT BRACKET (41099AA012)

ST2: ENGINE SUPPORT (41099AA020)

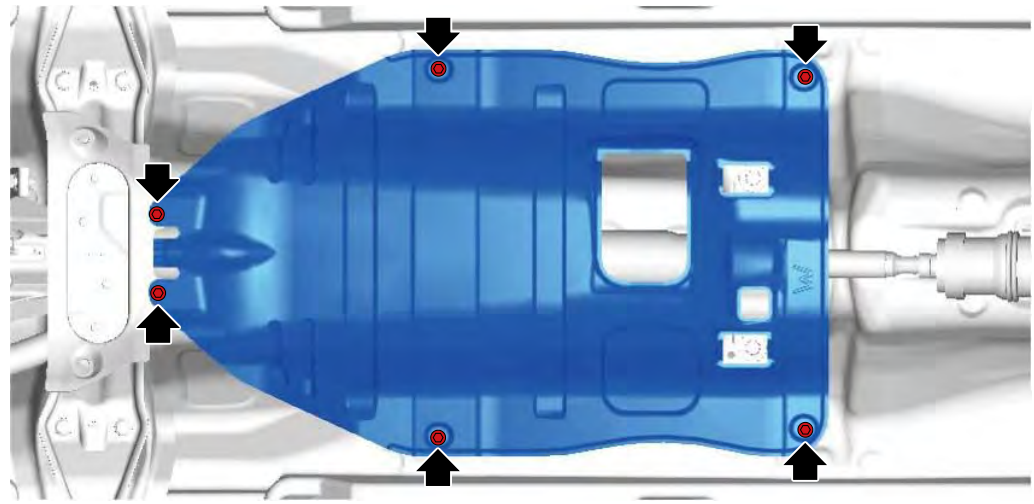


CVT10286

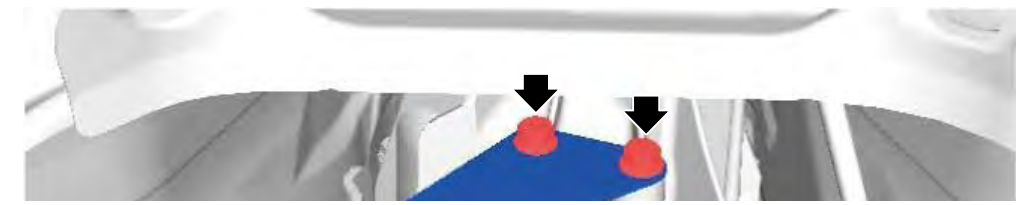
23. Remove the three transmission connecting bolts.



24. Loosen the nut of the front suspension strut mount by two turns.



25. Lift up the vehicle.
26. Remove the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.
27. Remove the under cover.
28. Remove the crossmember support - rear.



CVT10313

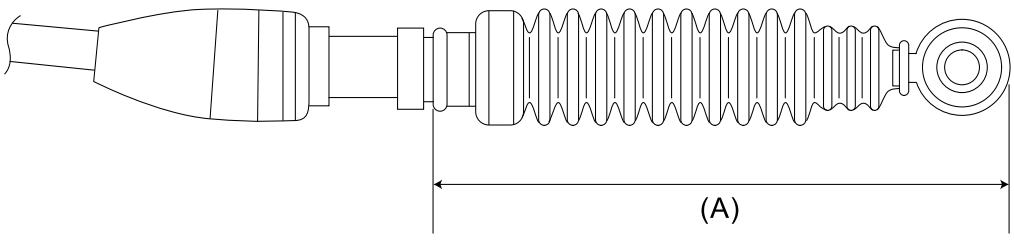
29. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.

30. Remove the center exhaust cover.

CVT10310

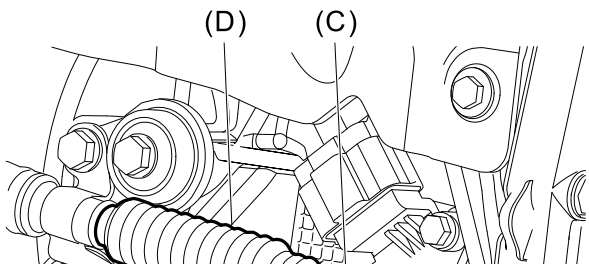
31. Remove the exhaust hanger bracket.

CVT10312

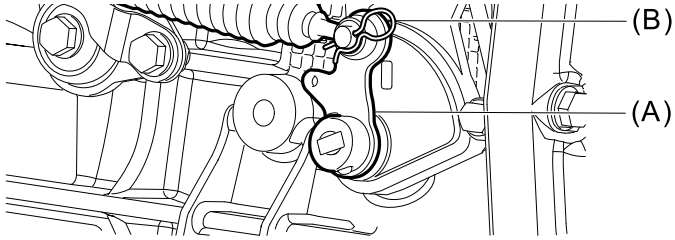


32. Remove the CVTF drain plug to drain CVTF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>REPLACEMENT.

33. Drain differential gear oil. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Gear Oil>REPLACEMENT.



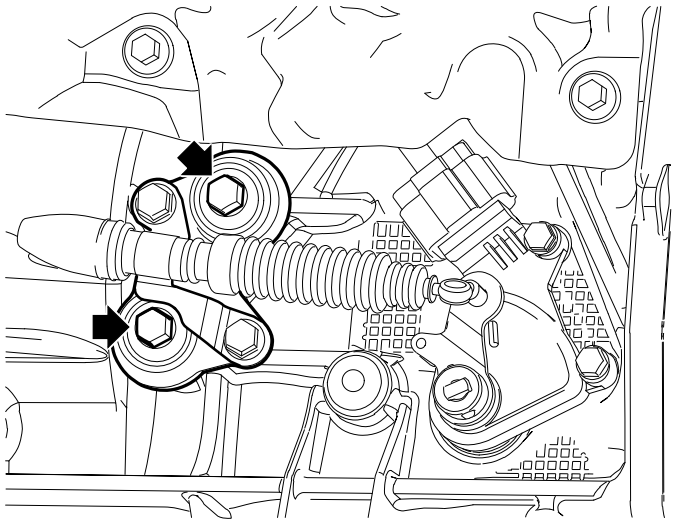
34. Remove the snap pin and washer from shifter arm and remove the select cable from shifter arm.



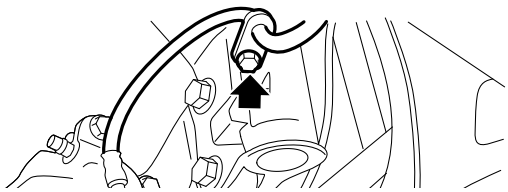
Caution:

Do not apply excessive load while holding the part (A).

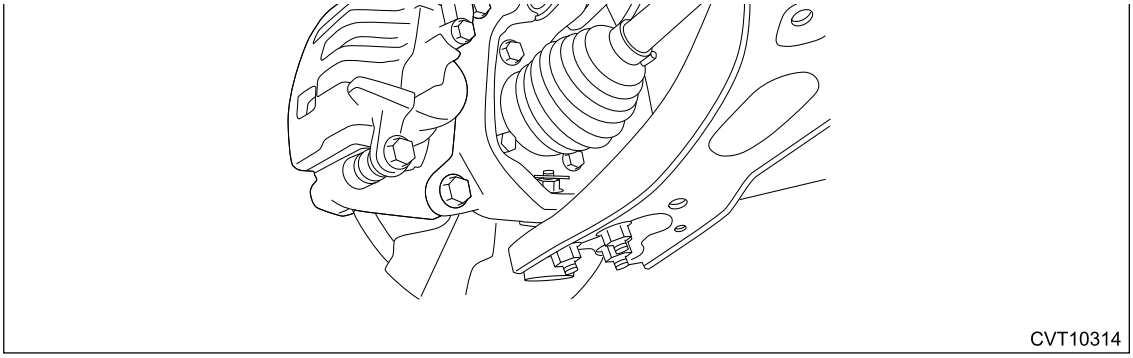
CVT10415



CVT00621



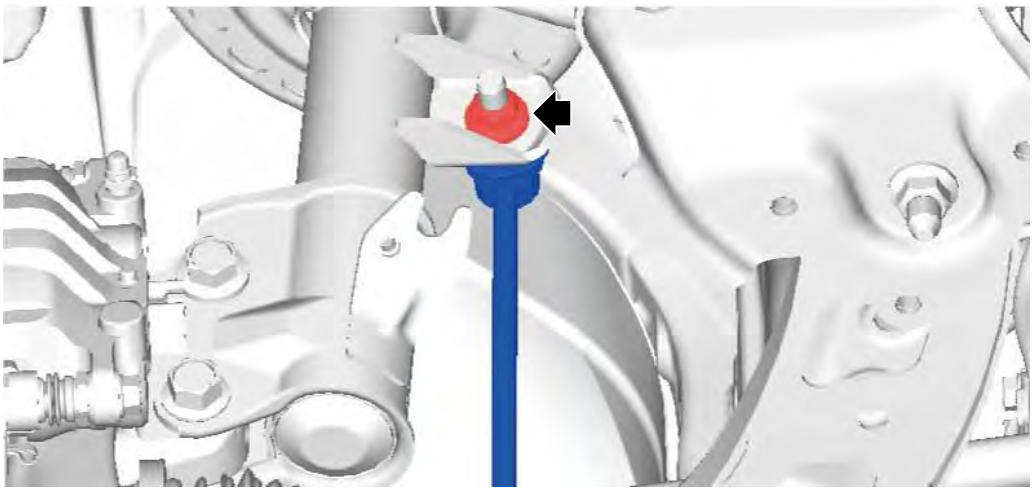
(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable



35. Remove the plate assembly from the transmission case.

CVT00622

36. Remove the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.

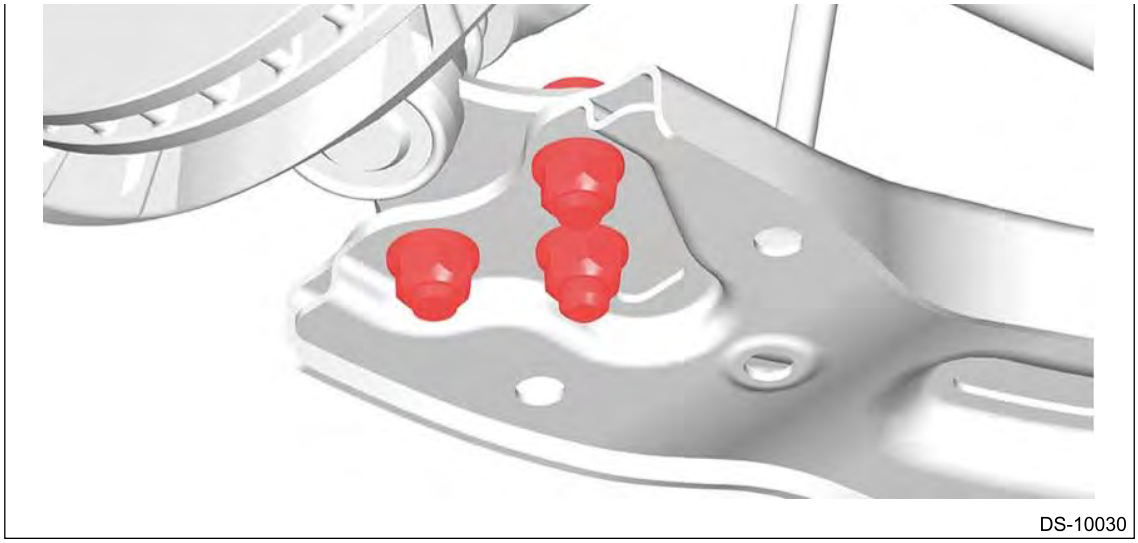


37. Remove the brake hose bracket.

CVT10314

38. Remove the front ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor>REMOVAL.

39. Remove the stabilizer link.



CVT10315

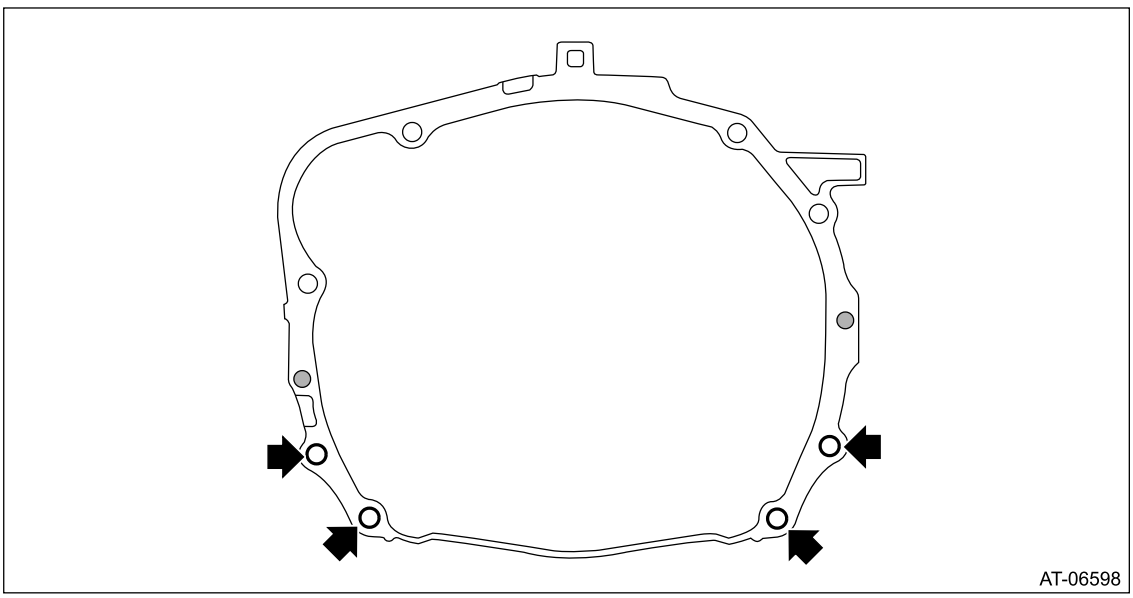
40. Separate the front arm assembly from the ball joint.

Note:

- **Mark the engaging position of the ball joint and front arm assembly before loosening the flange nuts. Doing so will facilitate aligning the position when assembling and lessen adjusting allowance for wheel alignment.**
- **To prevent damage of the front arm assembly ball joint boot, place a wooden block, etc. between front arm assembly and ball joint.**

41. Using a tire lever or a crow bar, etc., pull out until the front drive shaft transmission side joint slides move smoothly.

Note:



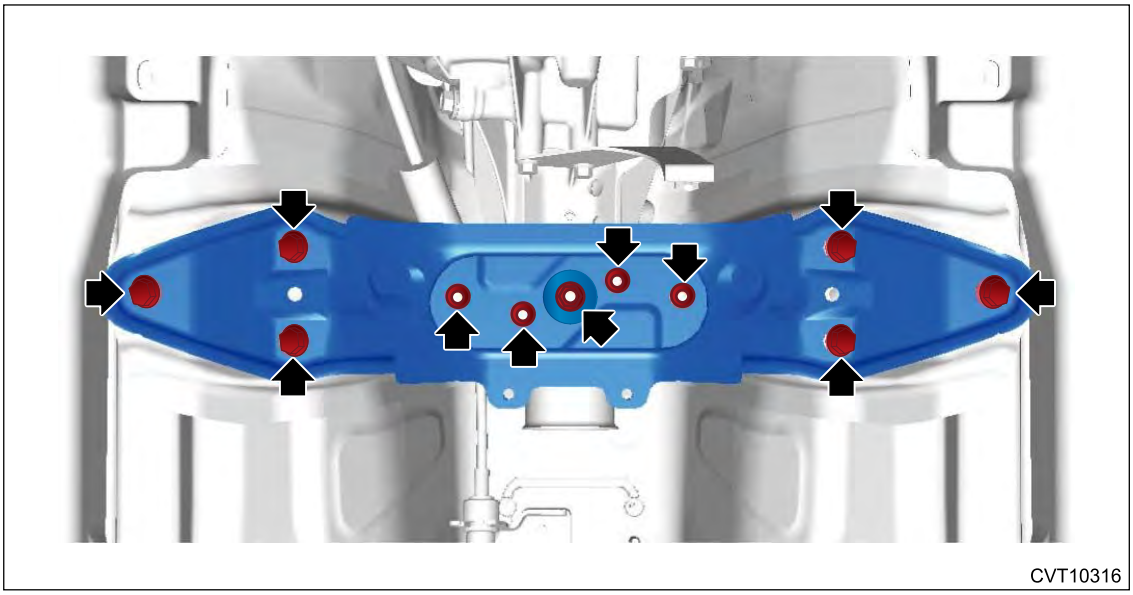
Place cloth between the tire lever or bar and the transmission in order to avoid damaging the transmission side retainer.

42. Hold the transmission side joint of the front drive shaft by hand and extract the housing from the transmission while pressing the housing outward, so as not to stretch the boot.

Note:

- **Before pulling the RH front drive shaft from transmission, turn the steering wheel to the right hand at full lock.**
- **Before pulling the LH front drive shaft from transmission, turn the steering wheel to the left hand at full lock.**

43. Remove the two transmission connecting bolts and two nuts (lower side).

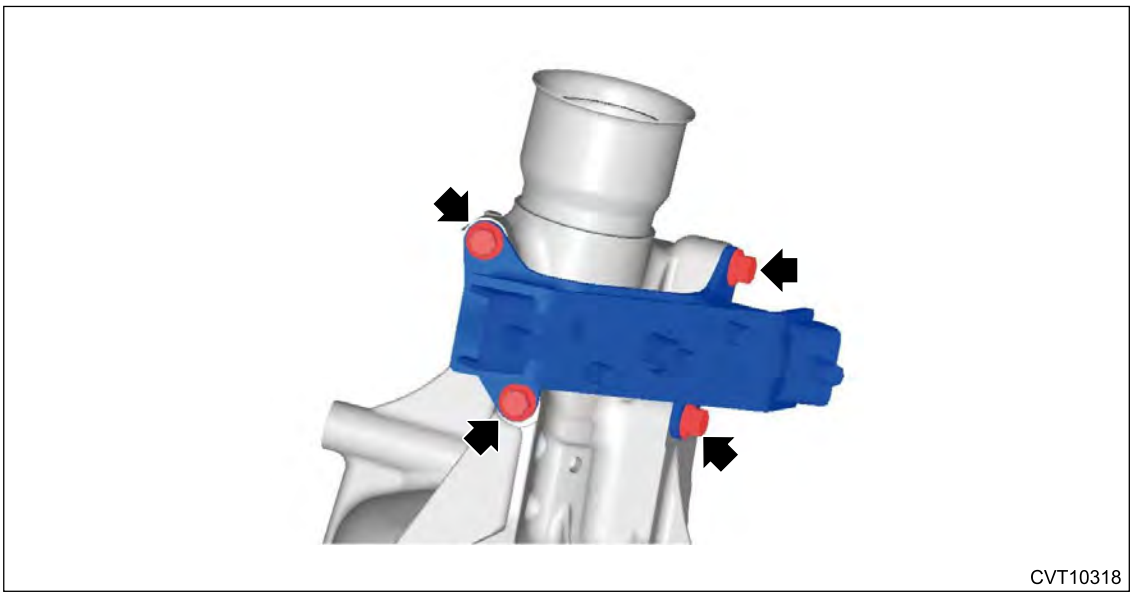


44. Set the transmission jack under the transmission.

Note:

Make sure that the support plates of transmission jack do not touch the oil pan.

45. Remove the hanger bracket.
46. Remove the transmission rear crossmember from the vehicle.

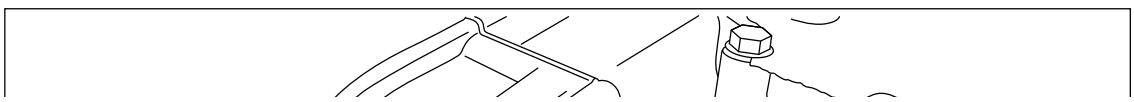


47. While lowering the transmission jack gradually, fully retract the engine support, and then tilt the engine rearward.
48. Remove the transmission assembly.

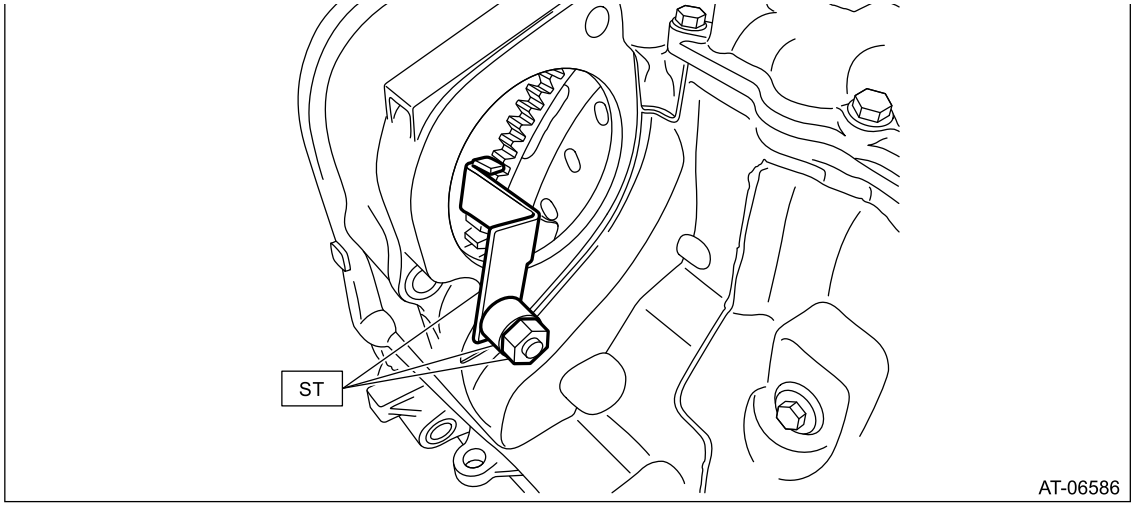
Note:

Remove it while moving the transmission jack up and down so that the engine and transmission remain directly aligned.

49. Remove the rear cushion rubber.



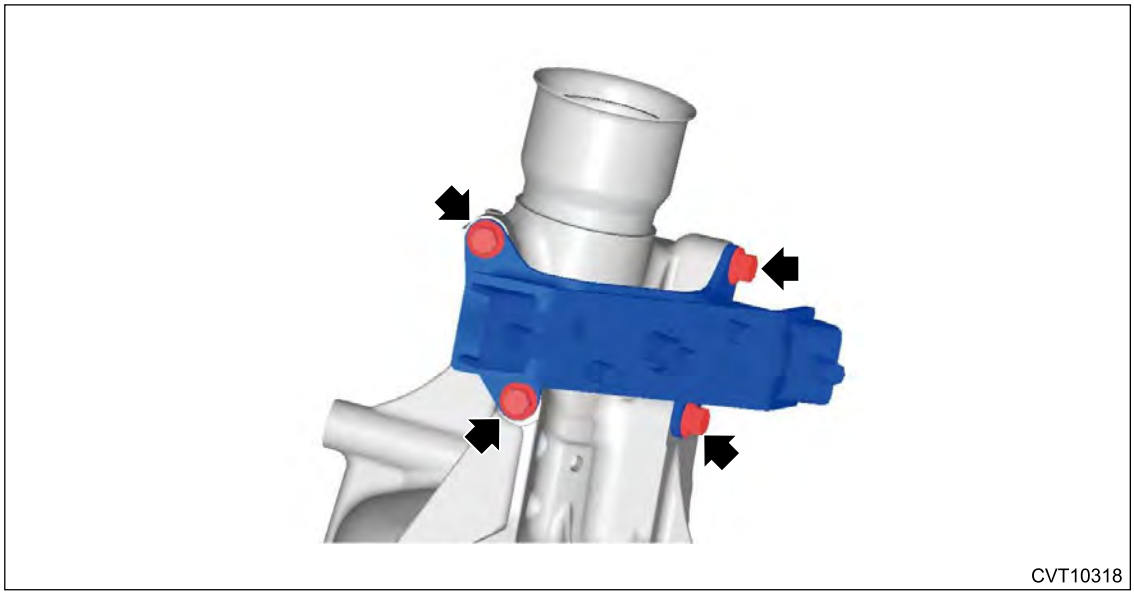
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Automatic Transmission Assembly



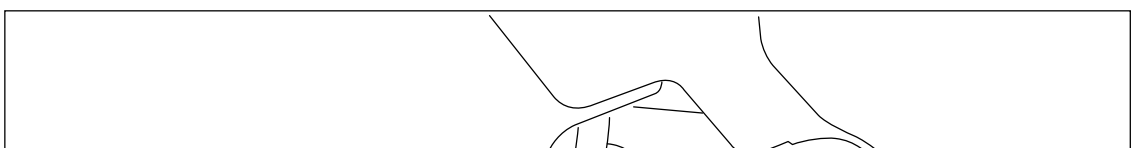
INSTALLATION

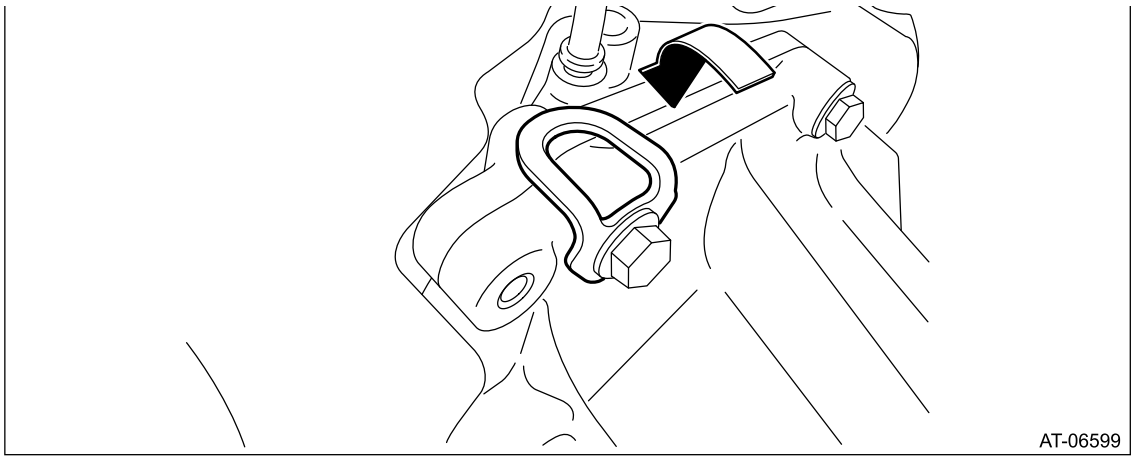
1. Attach the ST to converter case.

Preparation tool:



ST: STOPPER SET (498277200)





2. When completely overhauling the transmission, refill CVTF through the transmission right side plug. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Preparation for Overhaul.
3. Replace the front differential side retainer oil seal. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Side Retainer Oil Seal>REPLACEMENT.
   Note:
   - **Be sure to replace the differential side retainer oil seal with a new part whenever the front drive shaft is removed from the transmission.**
   - **When a new differential side retainer oil seal has been installed, replacement is not required.**
4. Install the rear cushion rubber on the transmission.
   Tightening torque:

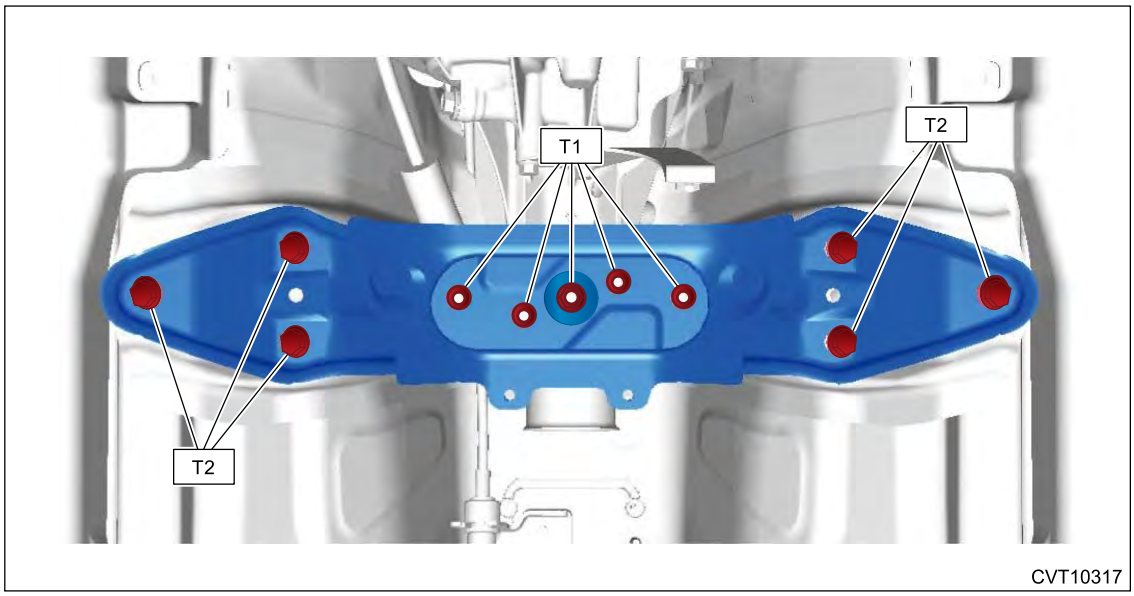
   40 N·m (4.1 kgf-m, 29.5 ft-lb)

5. Mount the transmission onto the transmission jack.
6. Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.
   Caution:
   Do not apply extra overload or impact to the transmission case.

7. Remove the pitching stopper bracket, if mounted.

8. Install the transmission onto the engine.

Note:

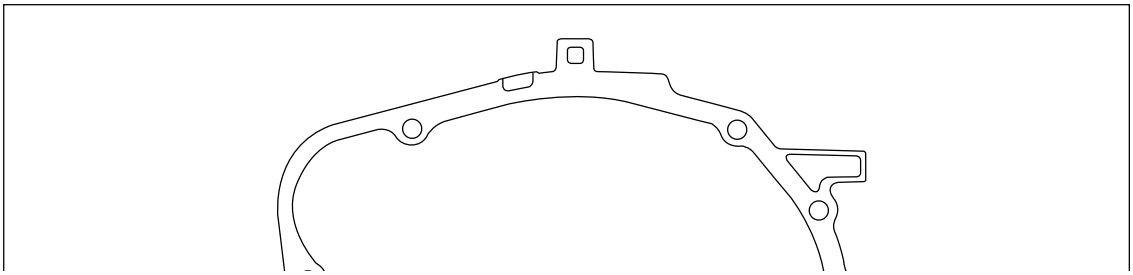


- **While raising the transmission jack gradually, turn the screw of engine support, then tilt the engine forward.**
- **Temporarily attach the two engine connecting bolts and two nuts (lower side).**

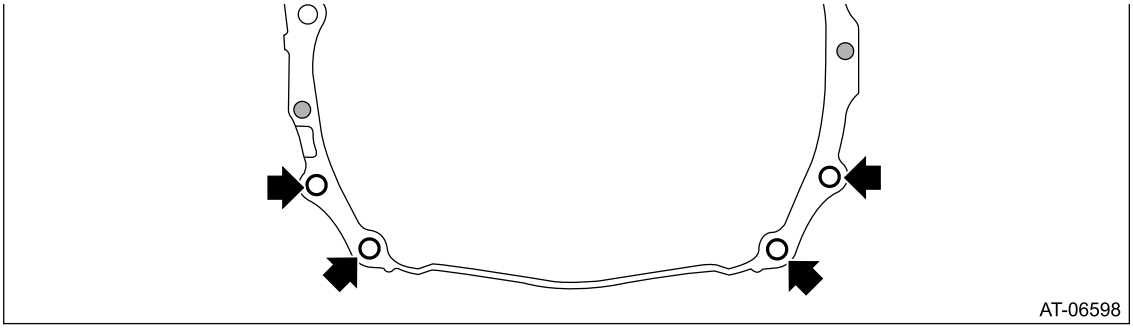
9. Install the transmission rear crossmember.

Tightening torque:

T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)



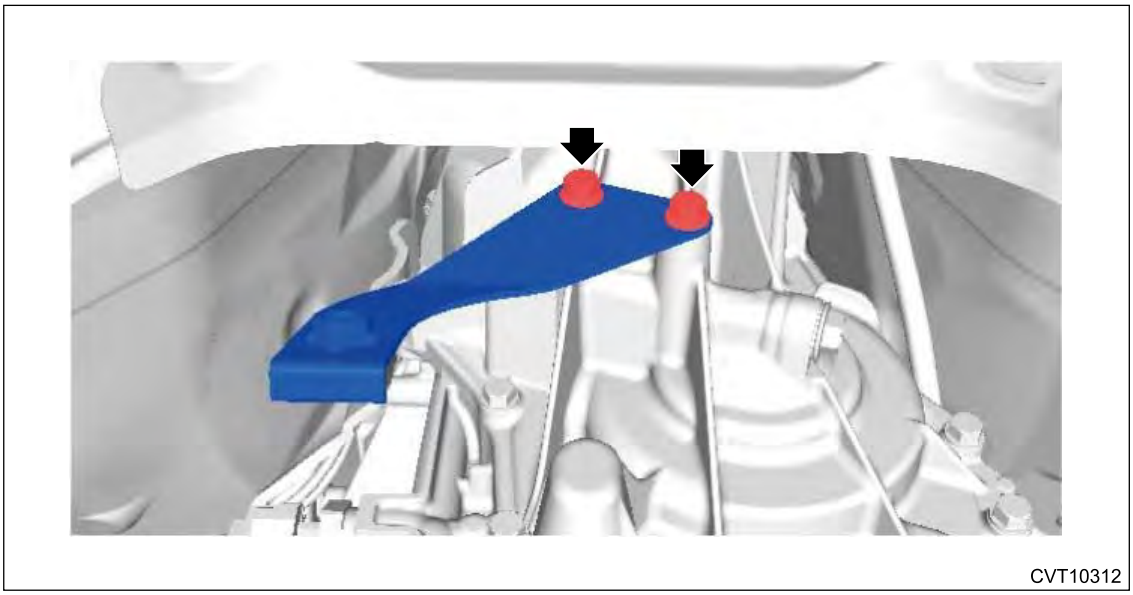
T2: 75 N·m (7.6kgf-m, 55.3 ft-lb)



10. Tighten the two engine connecting bolts and two nuts (lower side).

Tightening torque:

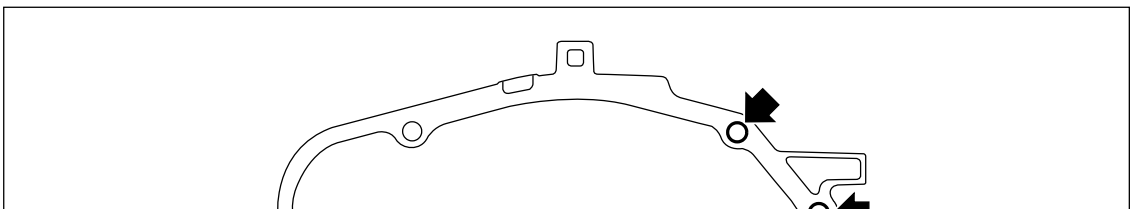
50 N·m (5.1 kgf-m, 36.9 ft-lb)



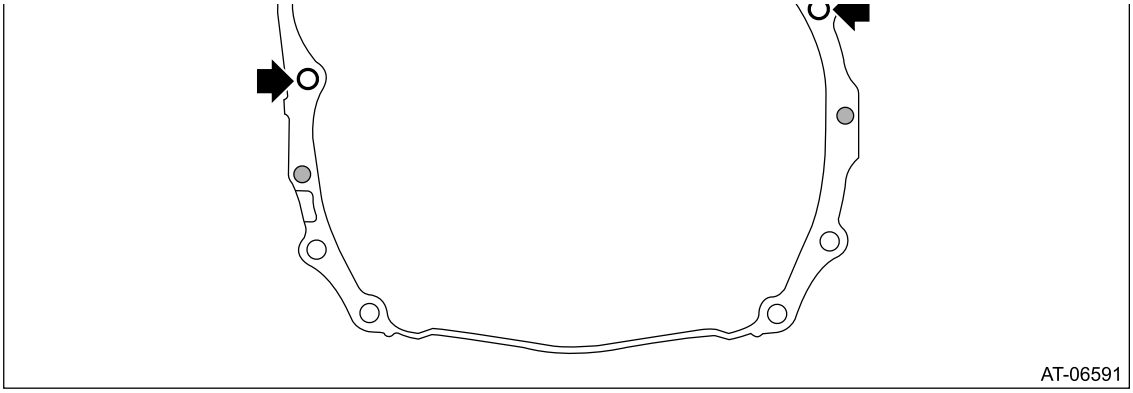
11. Install the exhaust hanger bracket.

Tightening torque:

23 N·m (2.3 kgf-m, 17.0 ft-lb)



12. Remove the transmission jack.

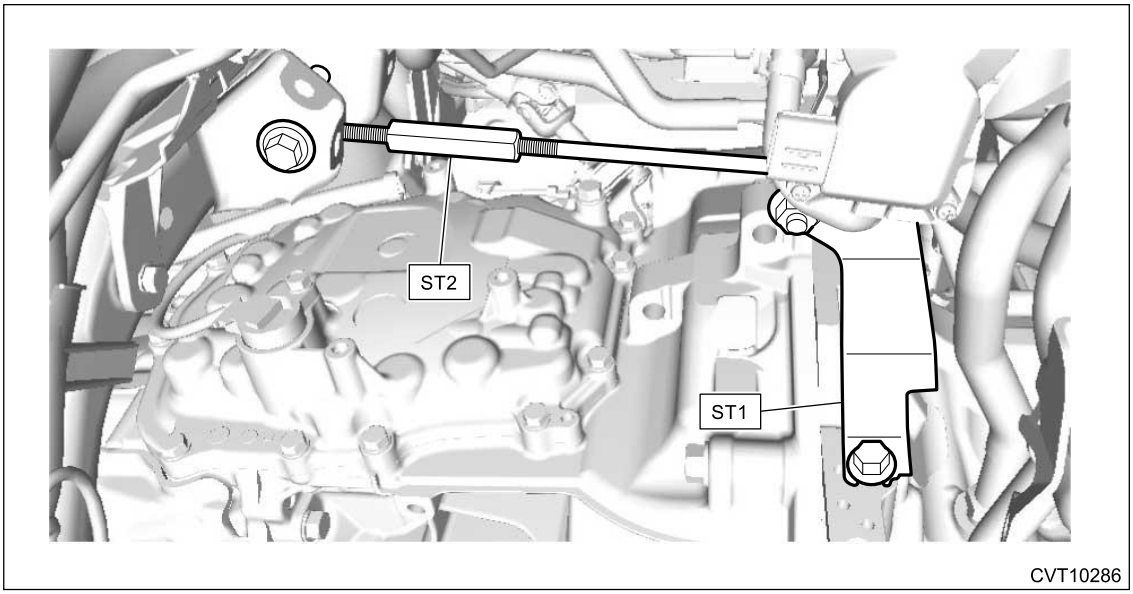


13. Lower the vehicle.

14. Install the three engine mounting bolts (upper side).

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)



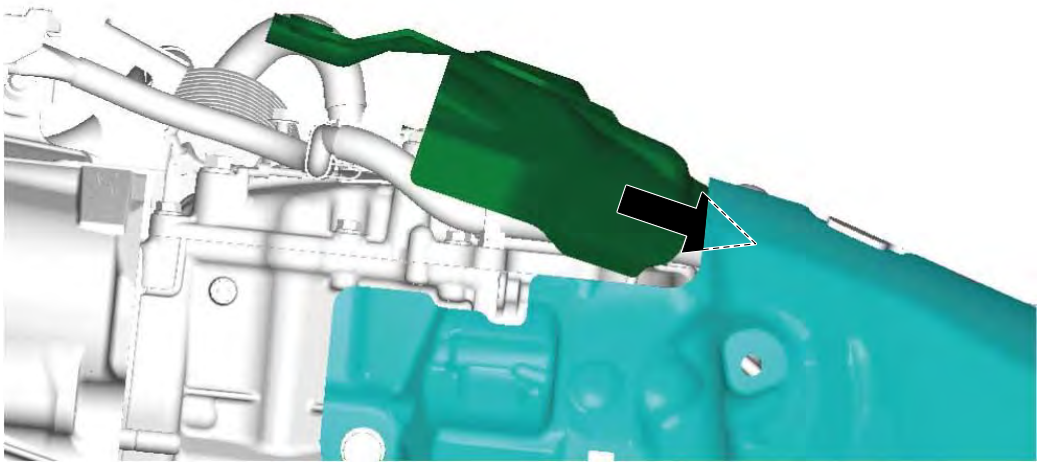
15. Remove the ST1 and ST2.

Preparation tool:

ST1: ENGINE SUPPORT BRACKET (41099AA012)

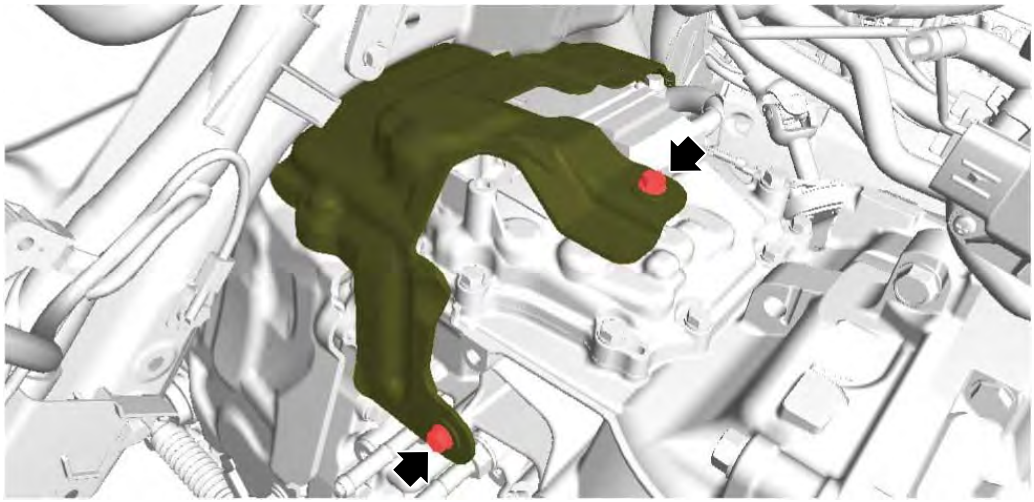
ST2: ENGINE SUPPORT (41099AA020)

16. Install the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>INSTALLATION.



17. Insert the transmission case cover (small) between transmission case cover (large) and transmission to install.

Caution:

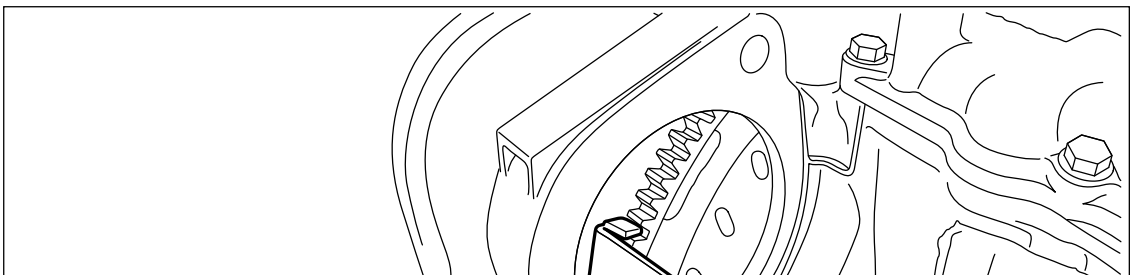


When inserting, be careful that the insulator inside transmission case cover is not turned over.

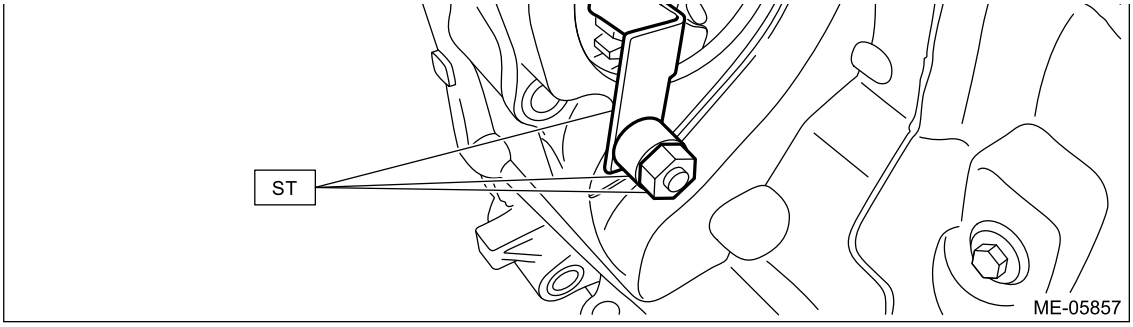
Tightening torque:

7 N·m (0.7kgf-m, 5.3 ft-lb)

CVT10293



CVT10283

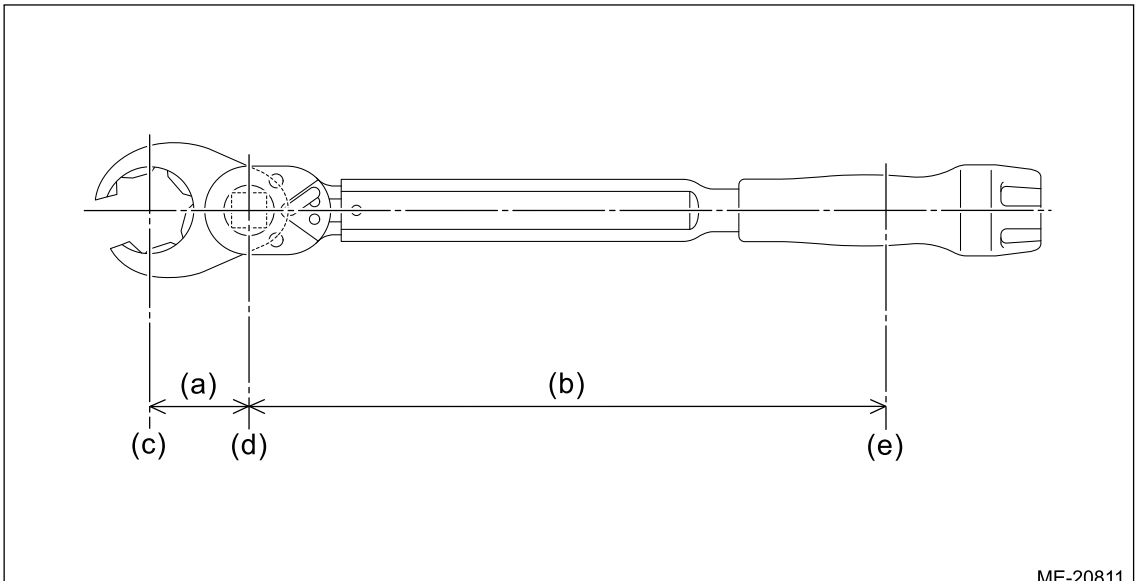


18. Install the torque converter assembly to the drive plate.

(1) Remove the ST from converter case.

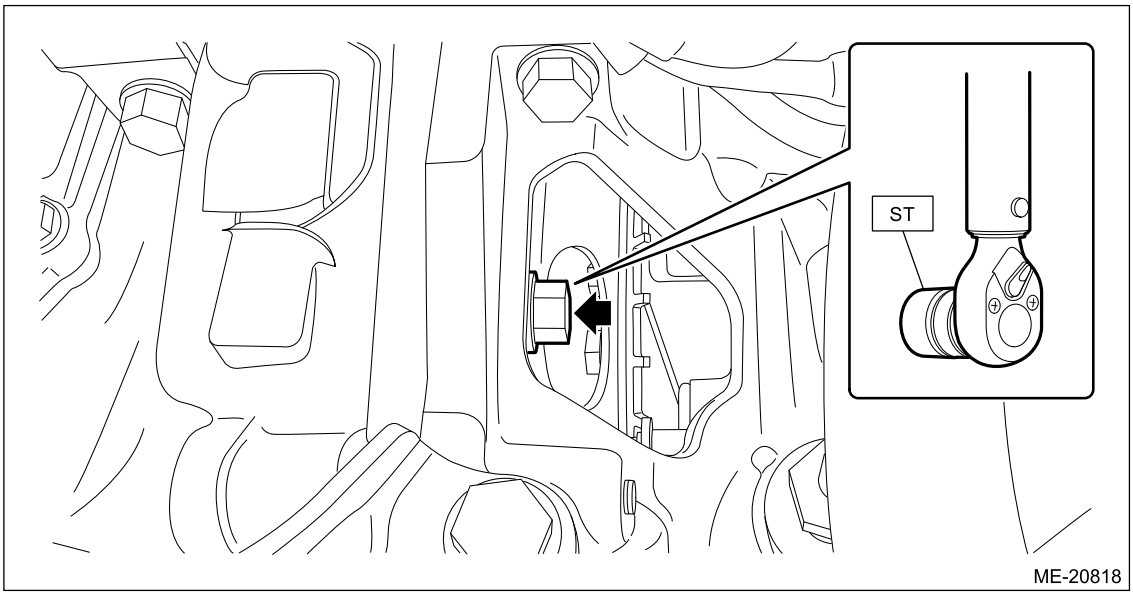
Note:

Be careful not to drop the ST into the converter case when removing the ST.



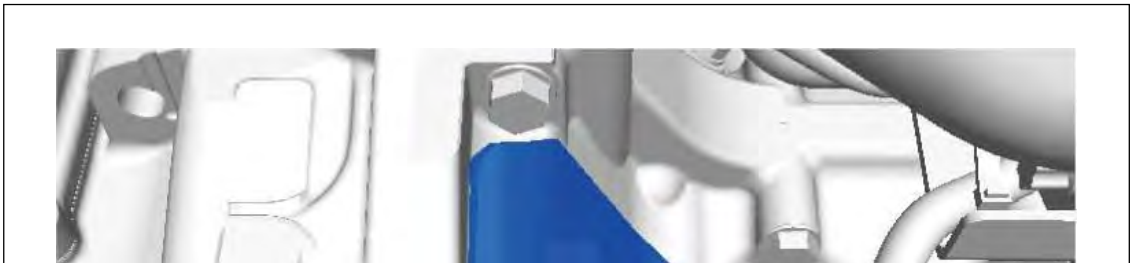
(2)Insert the wrench into the crank pulley bolt, and rotate the crank pulley to install the bolts which hold the torque converter assembly to the drive plate using the ST.

Note:



- **Be careful not to drop bolts into the converter housing.**
- **When not using the ST, use a crowfoot wrench for tightening.**
- **Use the following formula to calculate the reading of a torque wrench when tightening with a crowfoot wrench.**

Calculation formula
T = 25 N·m (2.5kgf-m, 18.4ft-lb) × L1/ (L1+L2)
T: Reading of the torque wrench L1: Effective length of the torque wrench L2: Effective length of the crowfoot wrench **Note:** **If the effective length of the tool used is unknown, consult the manufacturer of the tool.**

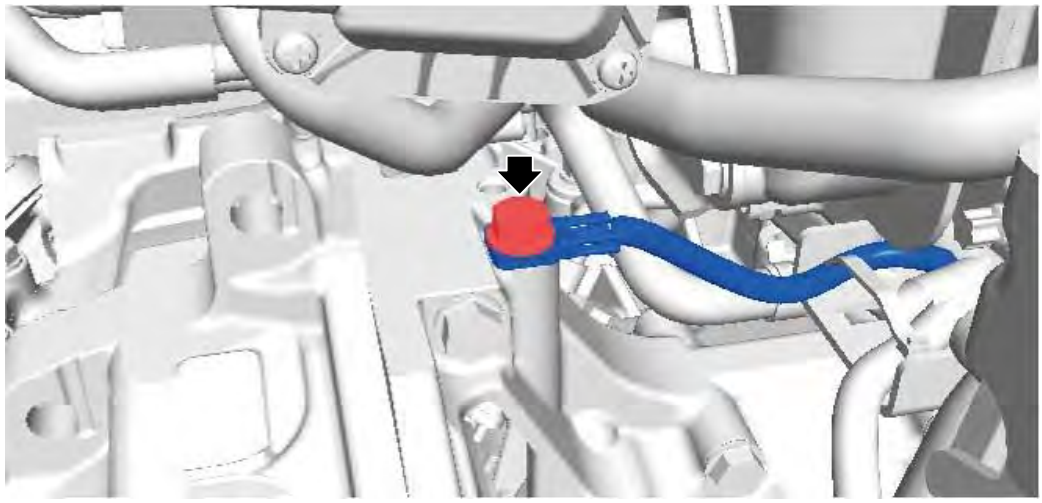


(a) Effective length of the crowfoot wrench
(b) Effective length of the torque wrench
(c) Center of the open end of crowfoot wrench
(d) Center of drive angle of the torque wrench
(e) Center of the position where a force is applied by hand

Preparation tool:
ST: SOCKET (18270AA050)
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

19. Install the remaining five bolts by rotating the crank pulley a little at a time in the same direction as engine revolution.
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

20. Install the service hole plug.

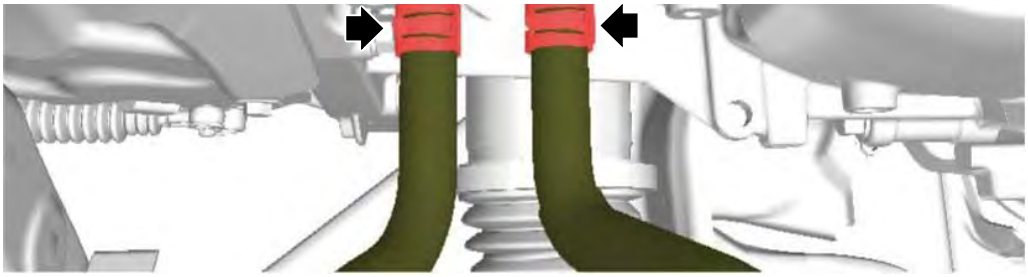


CVT10278

21. Install the engine ground terminals.

Tightening torque:

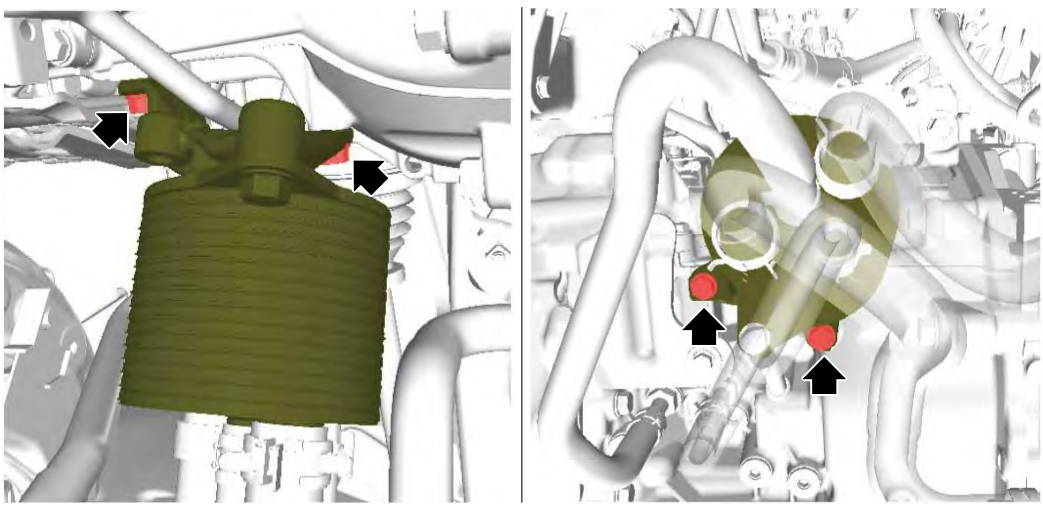
19 N·m (1.9 kgf-m, 14.0 ft-lb)



CVT10280

22. Replace the CVTF inlet hose and CVTF outlet hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF Cooler (With Warmer Function)>REMOVAL. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF Cooler (With Warmer Function)>INSTALLATION.

23. Install the CVTF inlet hose and CVTF outlet hose to transmission.



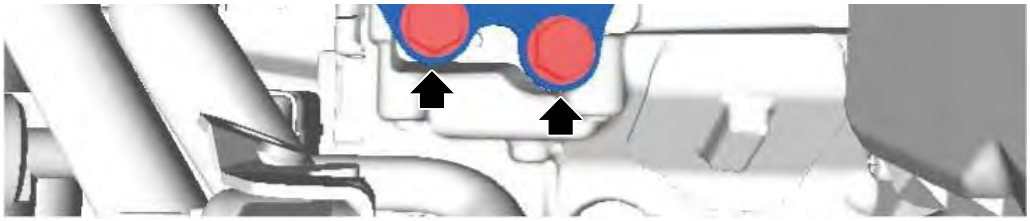
CVT10282

24. Install the CVTF cooler (with warmer feature) to the transmission.

Tightening torque:

23 N·m (2.3 kgf-m, 17.0 ft-lb)

CVT10281

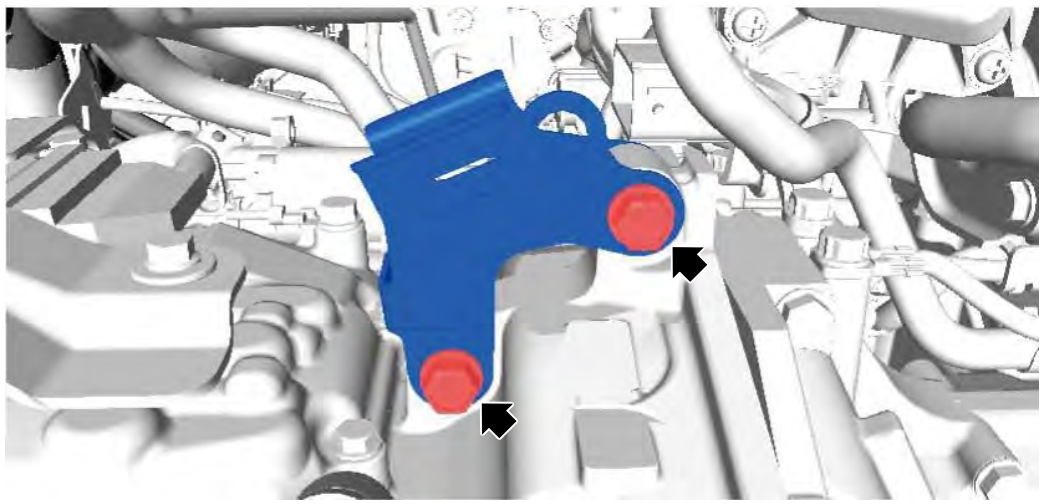


25. Install the starter. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>INSTALLATION.

26. Install the engine hanger rear.

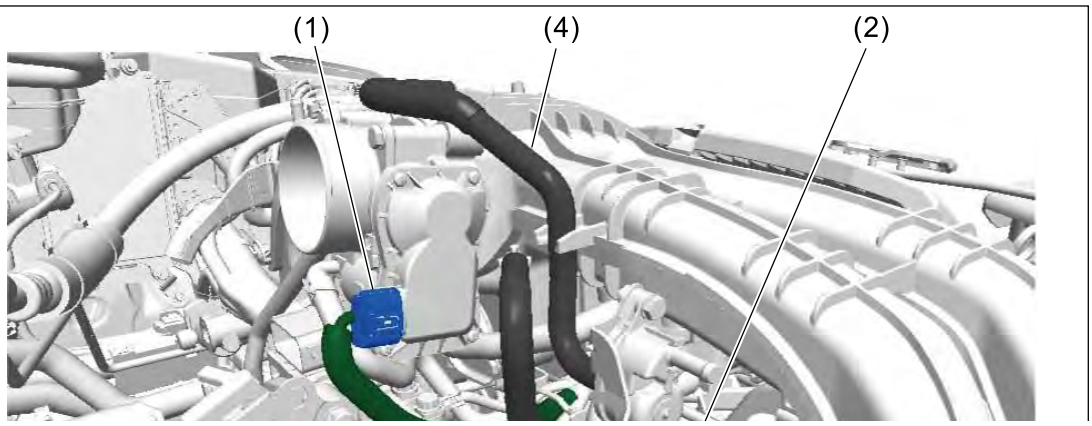
Tightening torque:

21 N·m (2.1 kgf-m, 15.5 ft-lb)



CVT10275

27. Install the pitching stopper bracket.

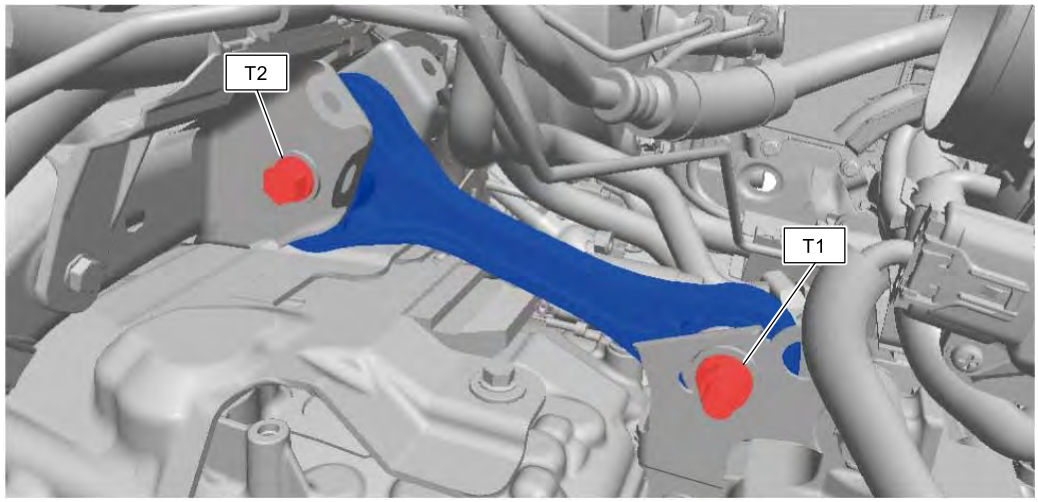


Tightening torque:

41 N·m (4.2 kgf-m, 30.2 ft-lb)

CVT10276

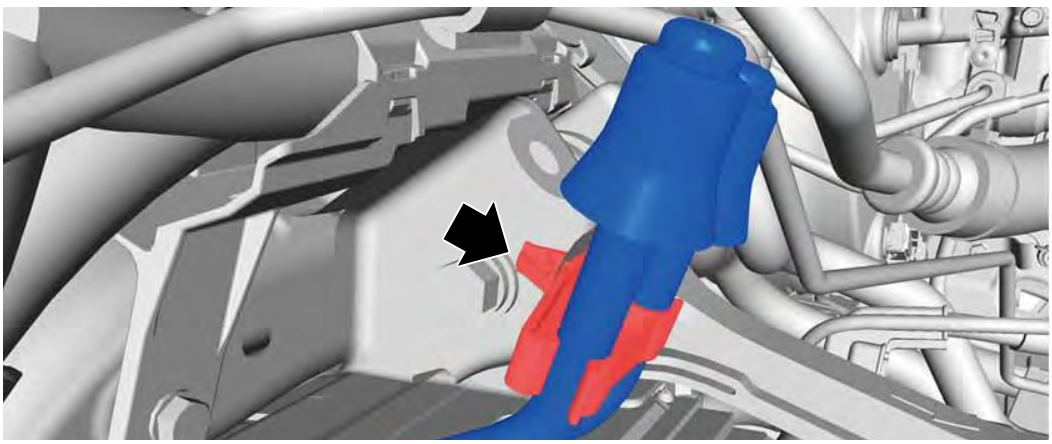
28. Connect the throttle position sensor harness connector (1), purge control solenoid valve harness connector (2), harness clip (3), vacuum hose (4) and PCV hose (5).



CVT10274

29. Install the pitching stopper.

Tightening torque:

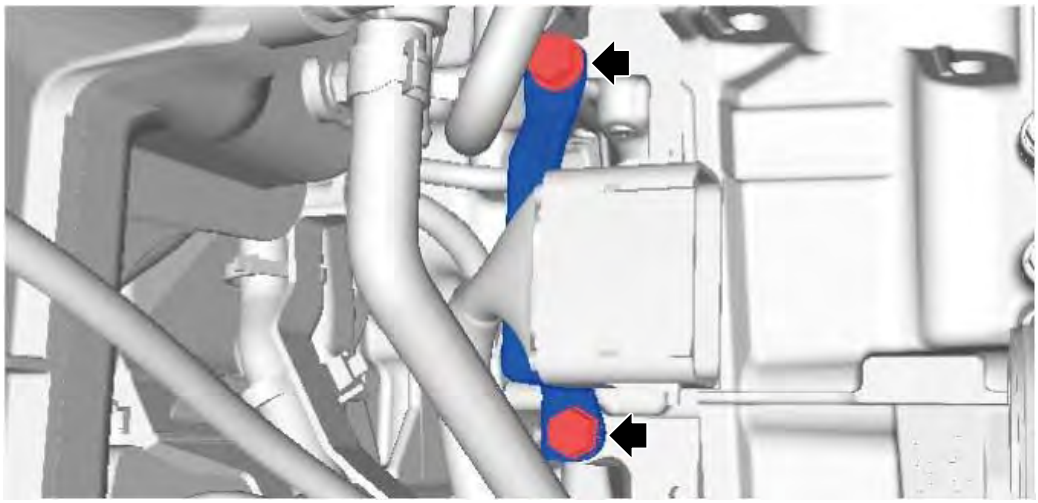


T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

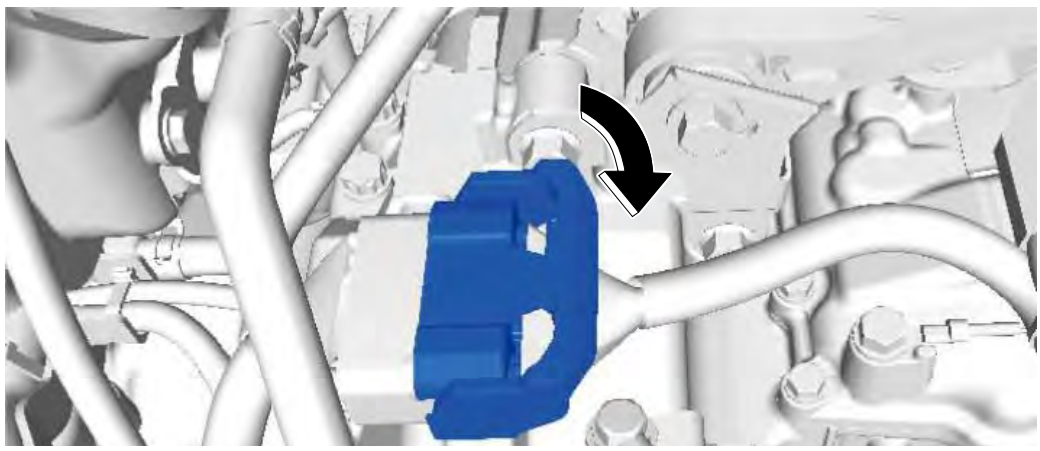
CVT10319

30. Install the air breather hose and air breather hose bracket.



CVT10439

31. Install the engine harness connector bracket.

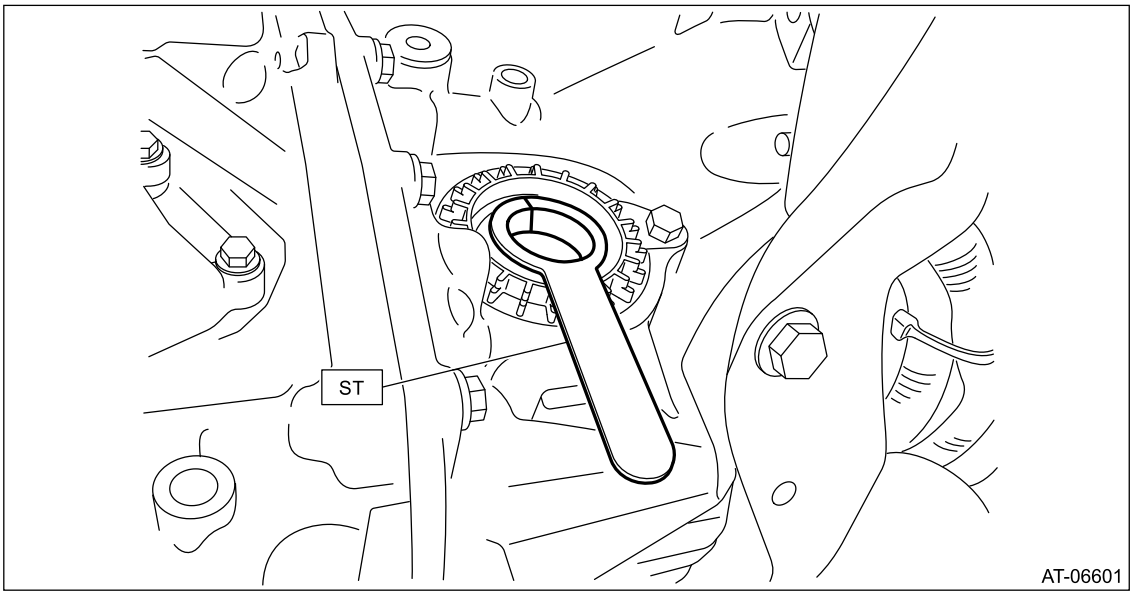


Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

CVT10277

32. Connect the transmission harness connector.



CVT10438

33. Lift up the vehicle.

34. Set the ST to the side retainer.

Preparation tool:

ST: OIL SEAL PROTECTOR (28399SA010)

AT-06601

35. Replace the circlip of the drive shaft with a new part.

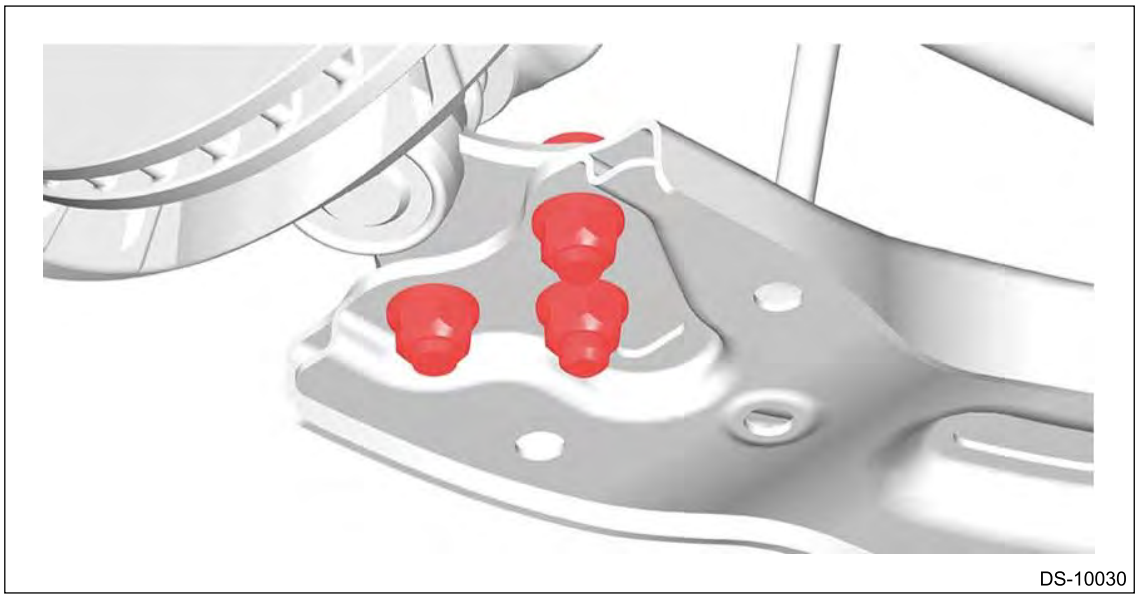
36. Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).

Note:

- **Before inserting the RH front drive shaft into transmission, turn the steering wheel to the right hand at full lock.**
- **Before inserting the LH front drive shaft into transmission, turn the steering wheel to the left hand at full lock.**

37. Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.

Caution:

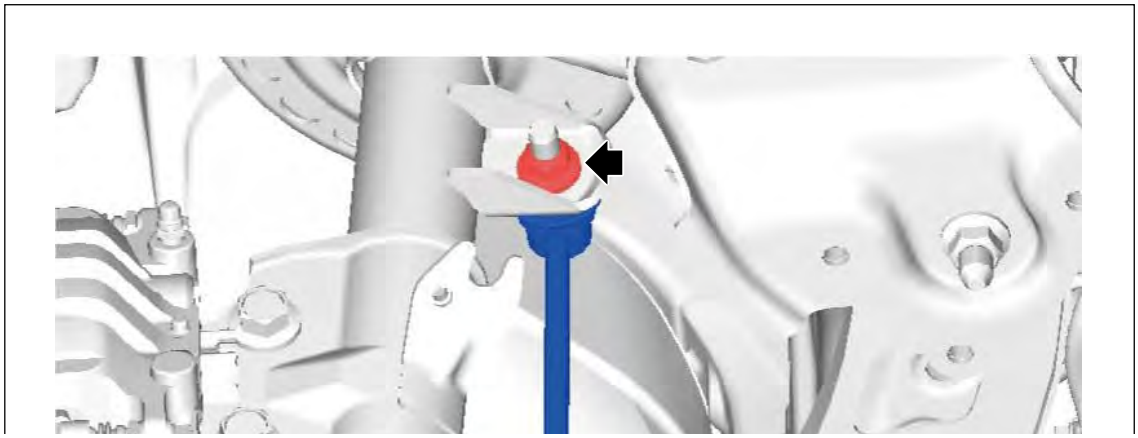


- **To prevent the front lower arm assembly from damaging the ball joint dust cover, place the ball joint on the upper side of the front lower arm assembly before starting the operation.**

- **Be careful not to damage the front lower arm assembly and ball joint by covering the upper side of the front lower arm assembly with a cloth.**

38. Insert the ball joint into the front arm assembly, and fix with nuts.

Tightening torque:

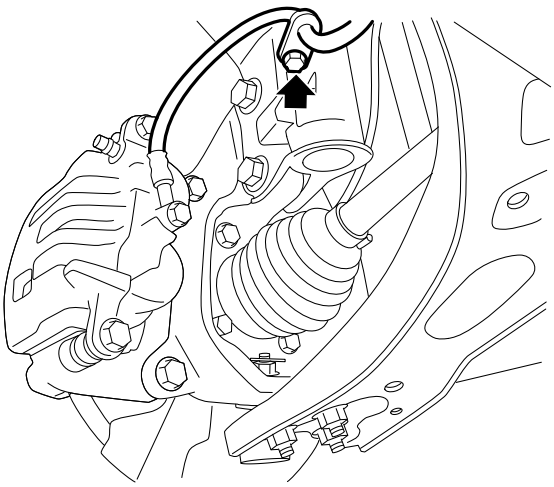


100 N·m (10.2kgf-m, 73.8 ft-lb)

39. Install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)



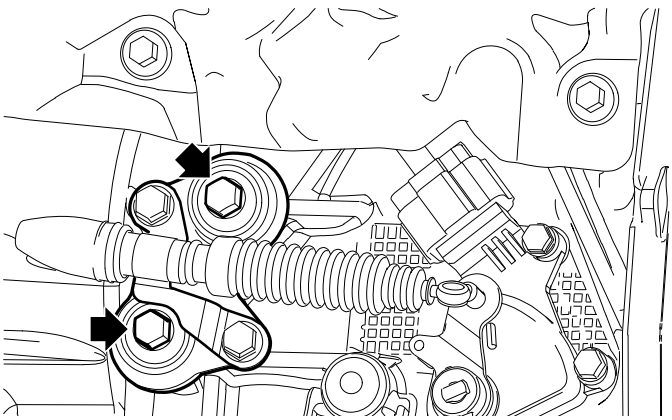
CVT10315

40. Install the front ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor>INSTALLATION.

41. Install the brake hose bracket.

Tightening torque:

33 N·m (3.4kgf-m, 24.3 ft-lb)

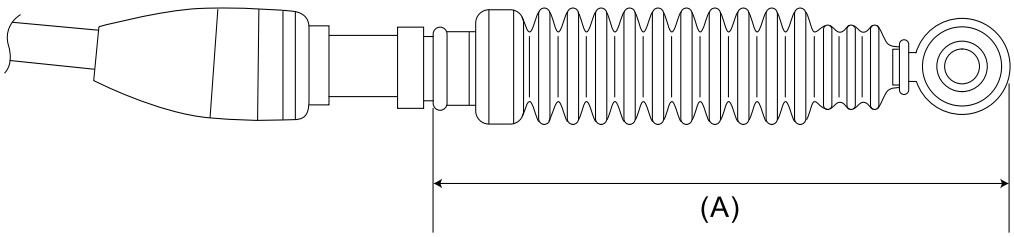


CVT10314

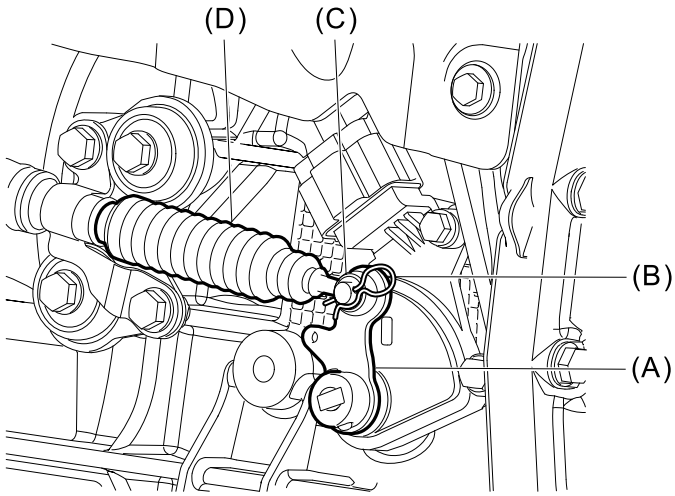
42. Install the plate assembly to transmission.

Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)



CVT00622

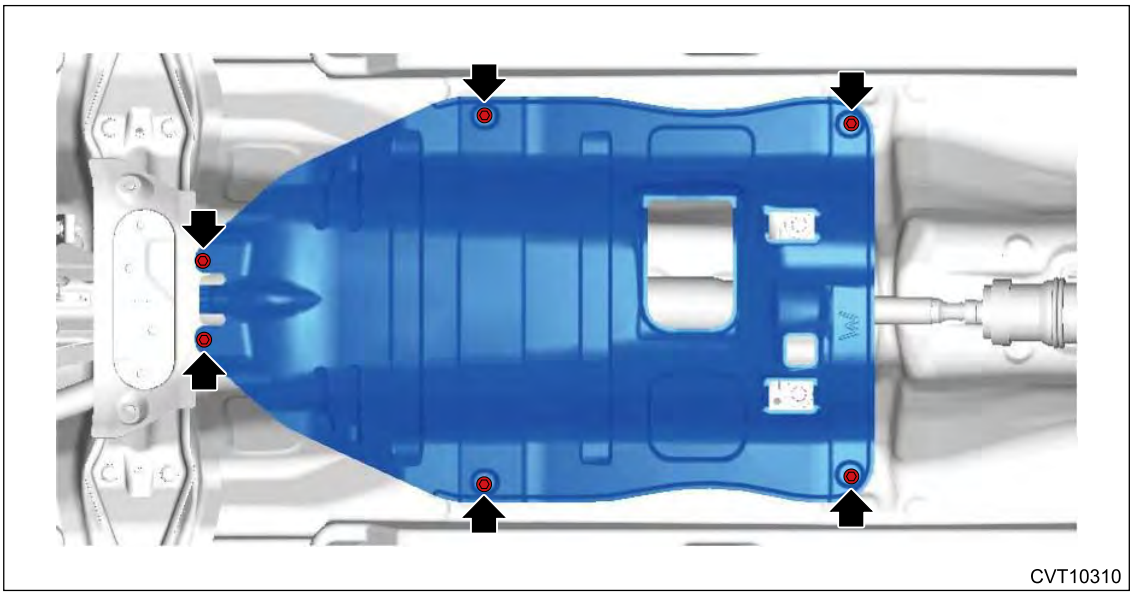


43. Install the washer and snap pin to the shifter arm.

Caution:

Do not apply excessive load while holding the part (A).

CVT10415

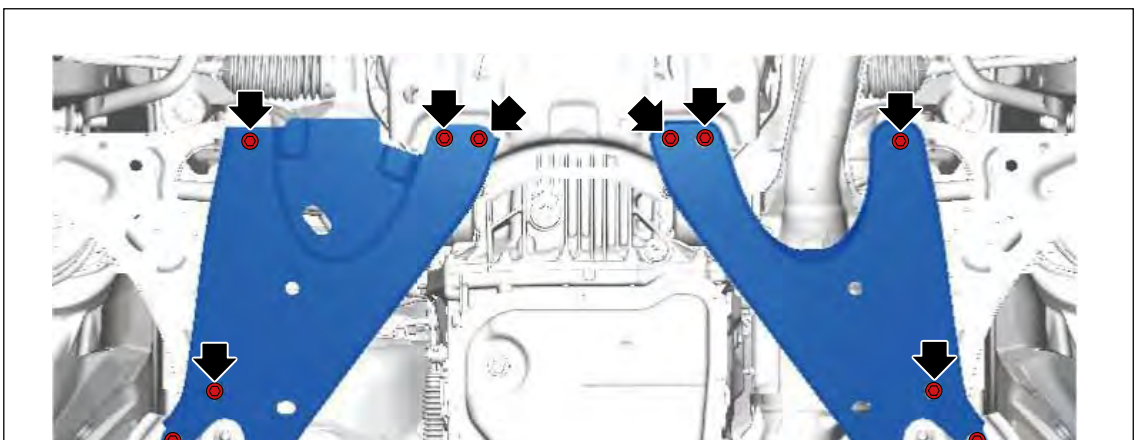


CVT00621

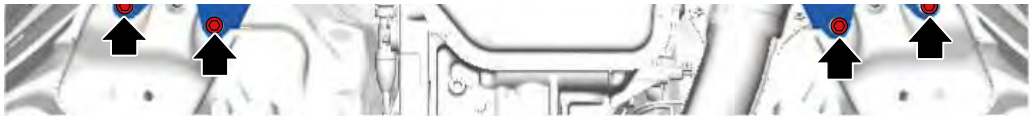
(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable

44. Install the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.

45. Install the center exhaust cover.



Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



46. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.

47. Install the crossmember support - rear.

Tightening torque:
70 N·m (7.1kgf-m, 51.6ft-lb)

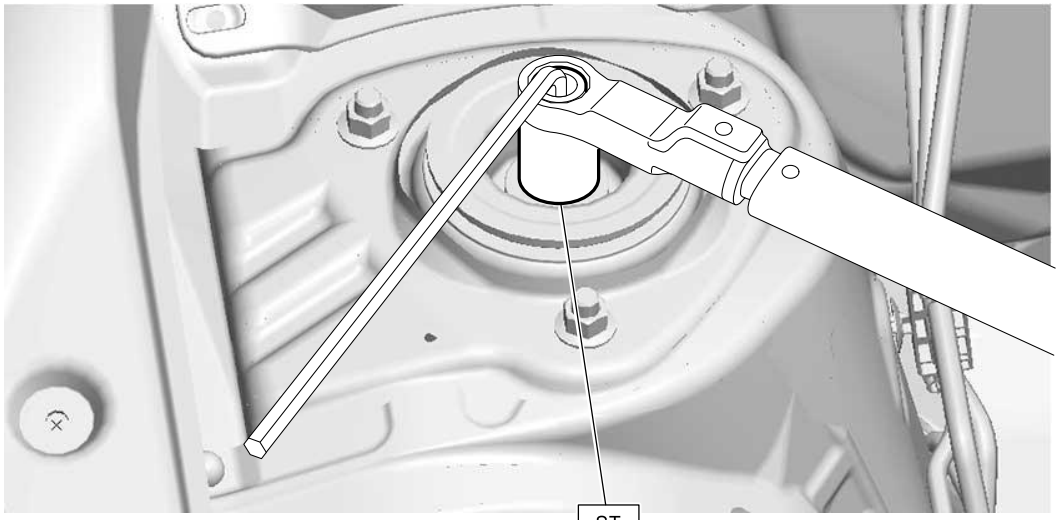
CVT10313

48. Install the under cover.

49. Lower the vehicle.

50. Using the ST, tighten the self-locking nut of the front suspension strut mount.

Caution:



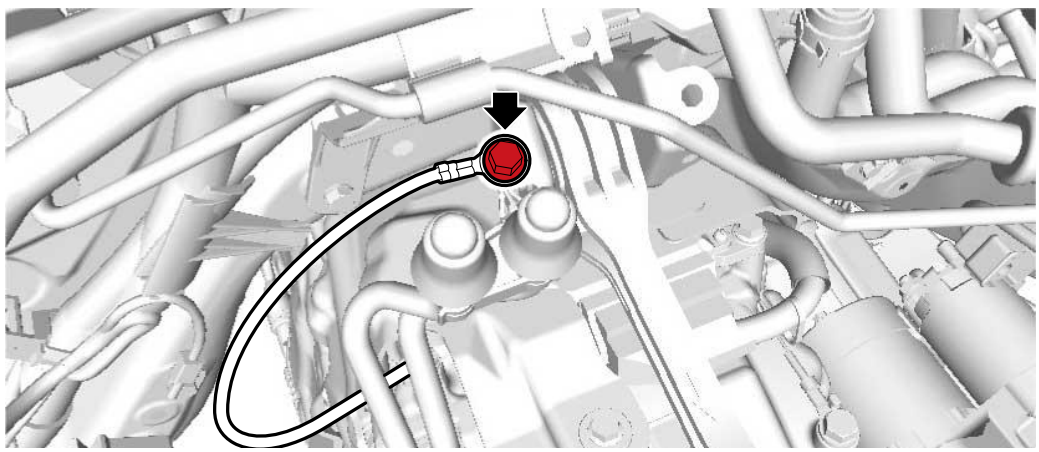
- **Use a new self-lock nut.**
- **Tighten in the state where the wheels are in full contact with the ground.**

Preparation tool:

ST: STRUT MOUNT SOCKET (20399AG000)

Tightening torque:

55 N·m (5.6kgf-m, 40.6ft-lb)



CVT10321

51. Connect the transmission radio ground terminal.

Tightening torque:

32.3 N·m (3.3 kgf-m, 23.8 ft-lb)

CVT10273

52. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

53. Install the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.

54. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.

55. Refill differential gear oil to adjust the differential gear oil amount. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Gear Oil>ADJUSTMENT.

56. Refill CVTF to adjust the CVTF amount. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

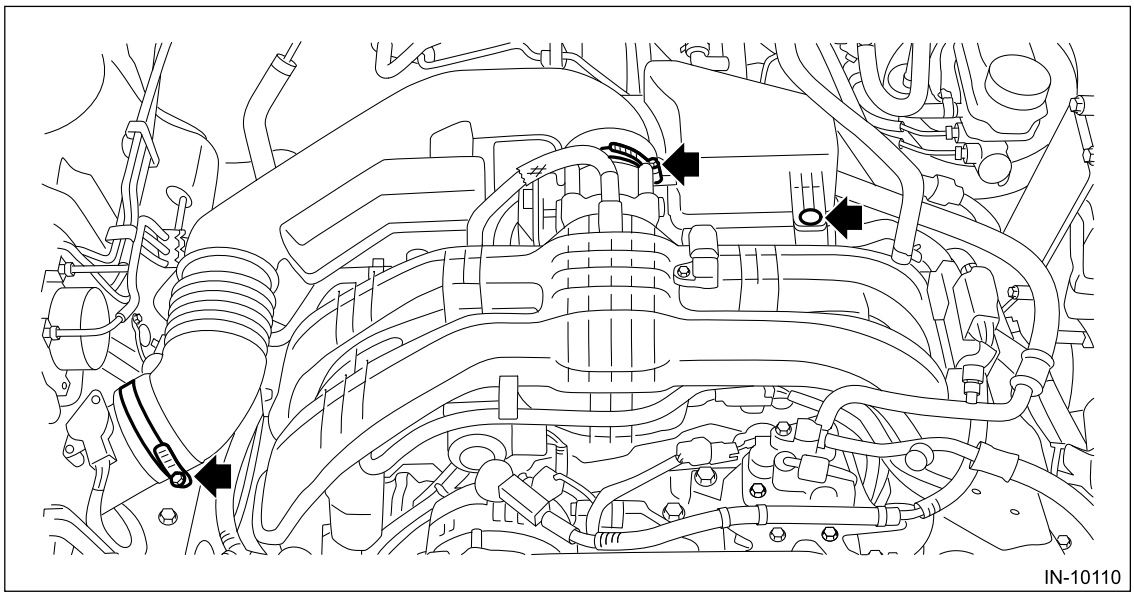
57. Using the Subaru Select Monitor, perform [Clear AT learning value] on [Work Support], and perform [AT learning mode]. Ref. to TRANSMISSION (DIAGNOSTICS)>Learning Control>PROCEDURE.

58. Execute the rear differential inspection mode. Ref. to DIFFERENTIALS>Rear Differential Inspection Mode.

Caution:

Always execute the rear differential inspection mode at the replacement of the following.

- **Replacement of transmission assembly**
- **Replacement of front differential hypoid gear set**

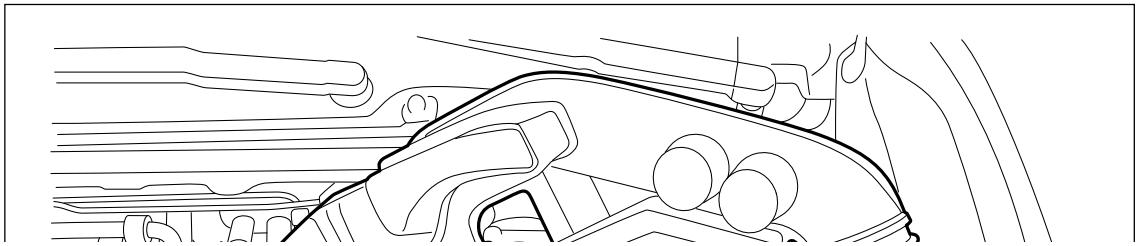


59. Inspect the wheel alignment and adjust if necessary. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

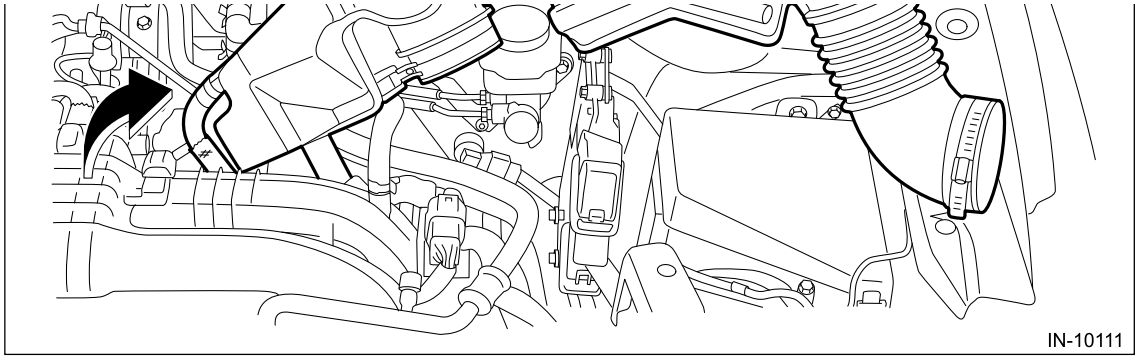
60. Perform the road test to make sure there is no fault. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Road Test>INSPECTION.

REMOVAL

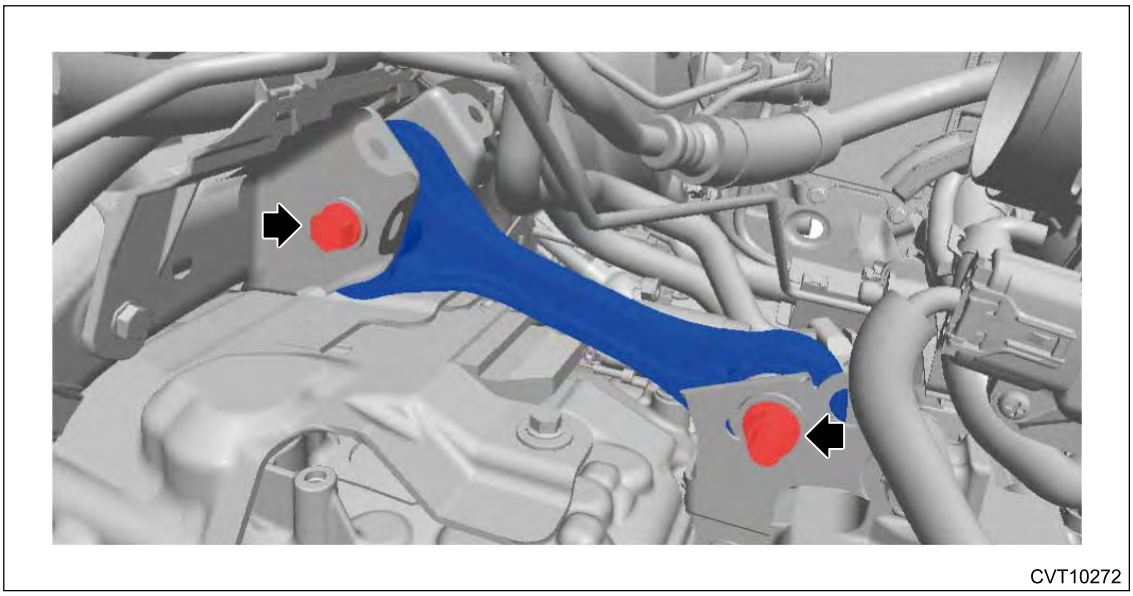
1. PITCHING STOPPER



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.

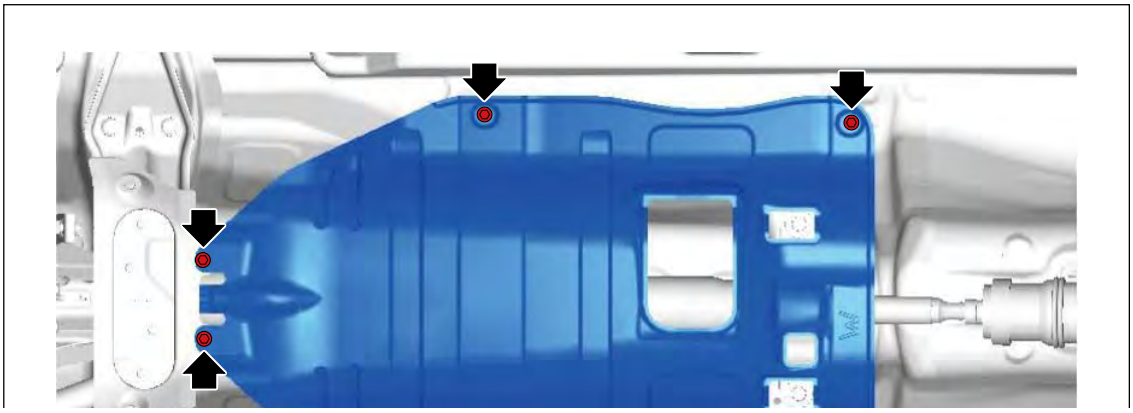


3. Remove the air intake boot, and place it aside so that it does not interfere with the work.



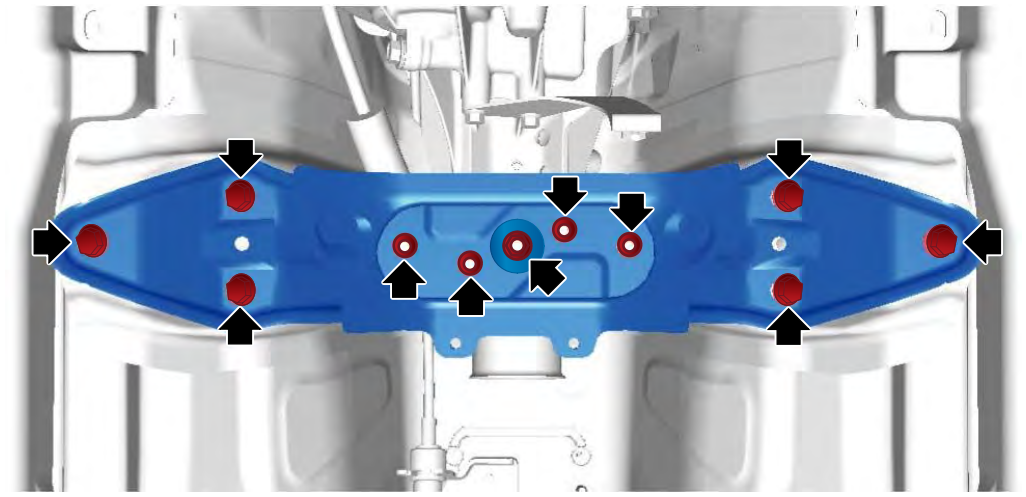
Note:

Be careful not to pull out the PCV hose.

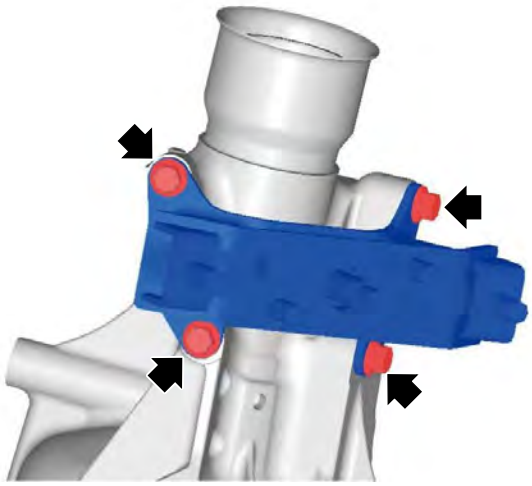


4. Remove the pitching stopper.

2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Lift up the vehicle.
3. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
4. Remove the center exhaust cover.

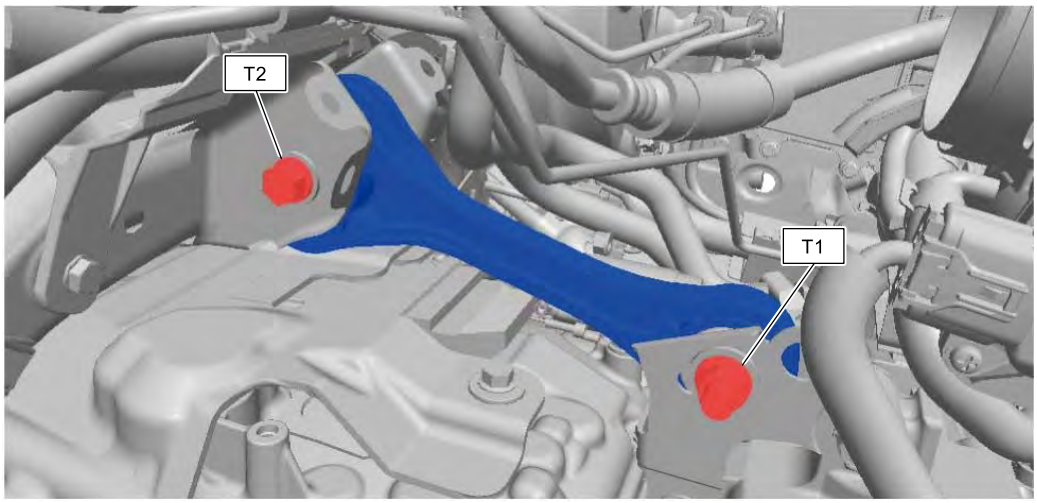


CVT10310

5. Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.
6. Remove the transmission rear crossmember.

CVT10316

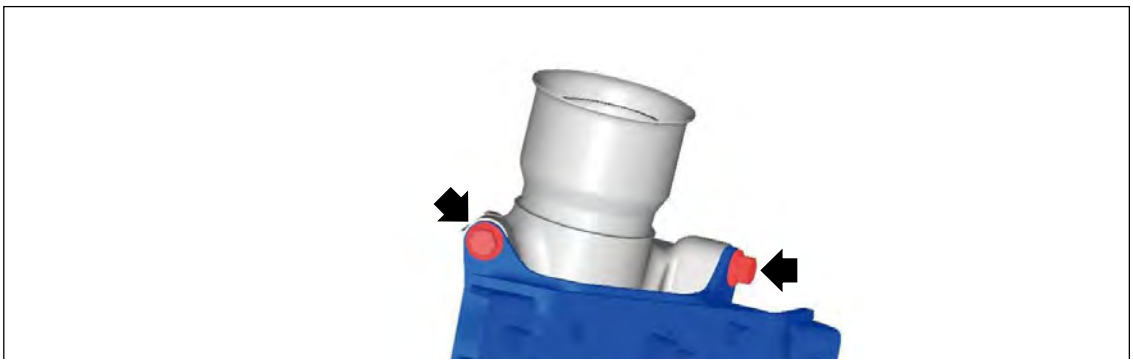
7. Remove the rear cushion rubber.



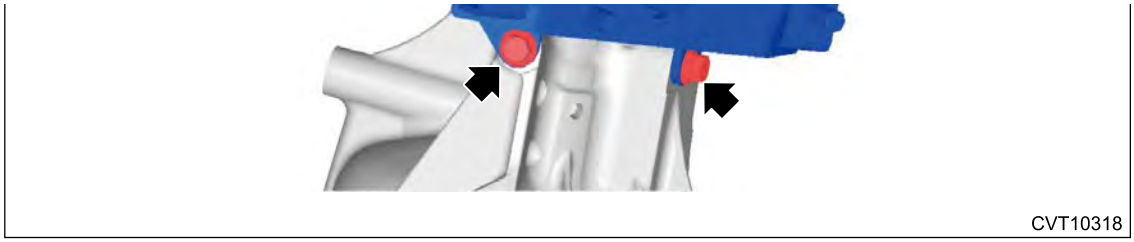
CVT10318

INSTALLATION

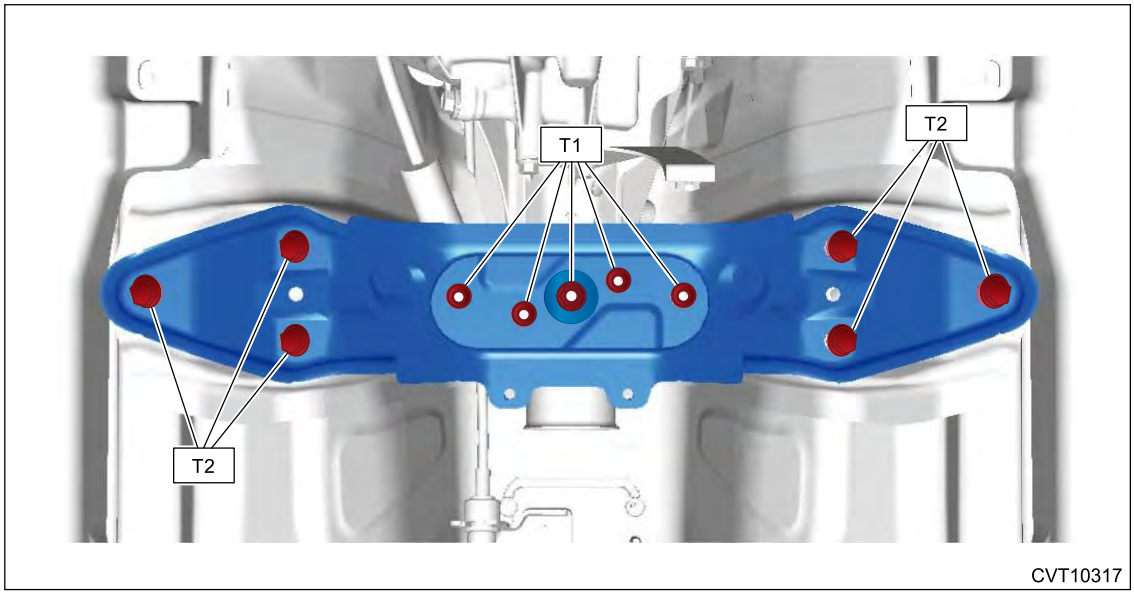
1. PITCHING STOPPER



1. Install the pitching stopper.
   Tightening torque:
   T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
   T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



2. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.



2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

1. Attach the rear cushion rubber to the transmission.
   Tightening torque:
   40 N·m (4.1 kgf-m, 29.5 ft-lb)

2. Install the transmission rear crossmember.
   Tightening torque:
   T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
   T2: 75 N·m (7.6 kgf-m, 55.3 ft-lb)

3. Remove the transmission jack.
4. Install the center exhaust cover.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
5. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Mounting System

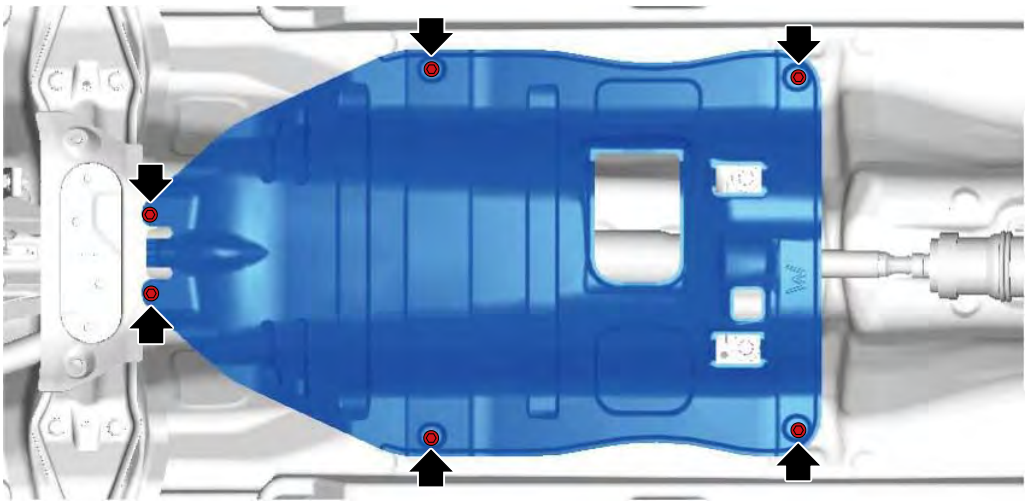
INSPECTION

- Check the crossmember for bends or damage.
- Check that the cushion rubber is not stiff, cracked or otherwise damaged.
- Check the pitching stopper for bends or damage.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case Oil Seal

INSPECTION

Check for leakage of CVTF from the joint section of transmission and propeller shaft. If a leak is found, inspect the propeller shaft and replace the oil seal.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case Oil Seal

REPLACEMENT

Caution:

Immediately after the vehicle has been running or after idling for a long time, the CVTF will be hot. Be careful not to burn yourself.

1. Lift up the vehicle.
2. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
3. Remove the center exhaust cover.

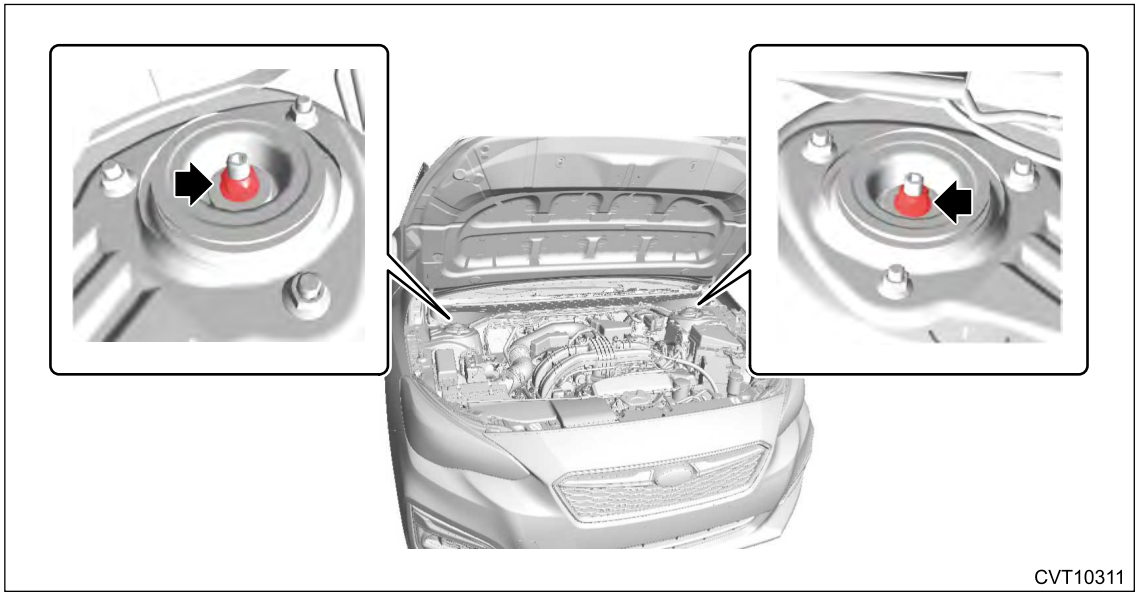
4. Clean the transmission exterior.
5. Remove the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
6. Using a screwdriver or ST, remove the oil seal trying not to damage the extension case.

6. Using a screwdriver or ST, remove the oil seal trying not to damage the extension case.
   Preparation tool:
   ST: PULLER ASSY (398527700)
7. Using the ST, install the oil seal.
   Note:
   - **Use a new oil seal.**
   - **Apply CVTF to the oil seal lip and press-fitting surface.**

   Preparation tool:
   ST: INSTALLER (498057300)
8. Install the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.
9. Install the center exhaust cover.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
10. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
11. Adjust the CVTF level and check there is no leakage. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Differential Side Retainer Oil Seal

INSPECTION

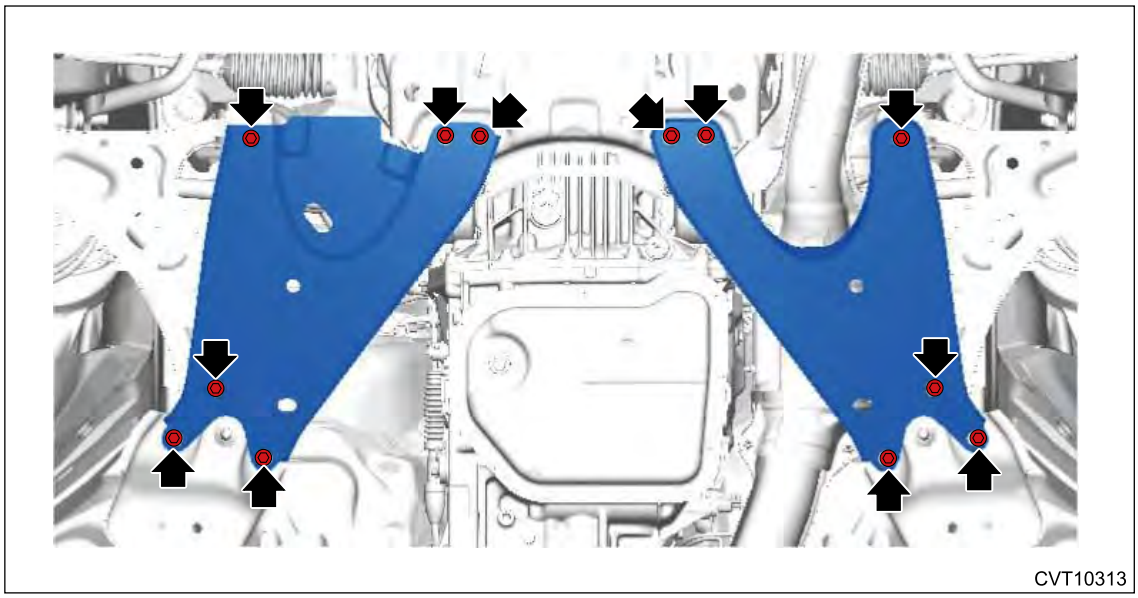


Check for leakage of gear oil from differential side retainer oil seal part. If there is an oil leak, inspect the front drive shaft and replace the oil seal.

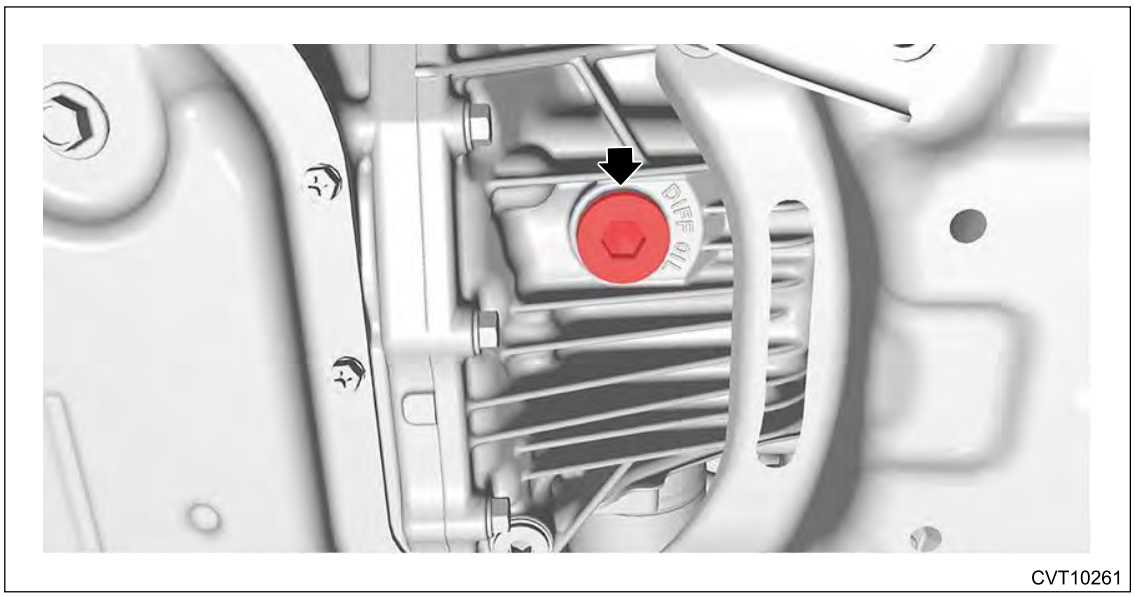
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Differential Side Retainer Oil Seal

REPLACEMENT

Caution:
- **Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.**
- **Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. If differential gear oil is spilled on the exhaust pipe, wipe it off completely.**



1. Loosen the self-locking nut of the front suspension strut mount by two turns.
   Note:
   Loosen the self-locking nut only on the removal side if only one side of the differential side retainer oil seal is replaced.



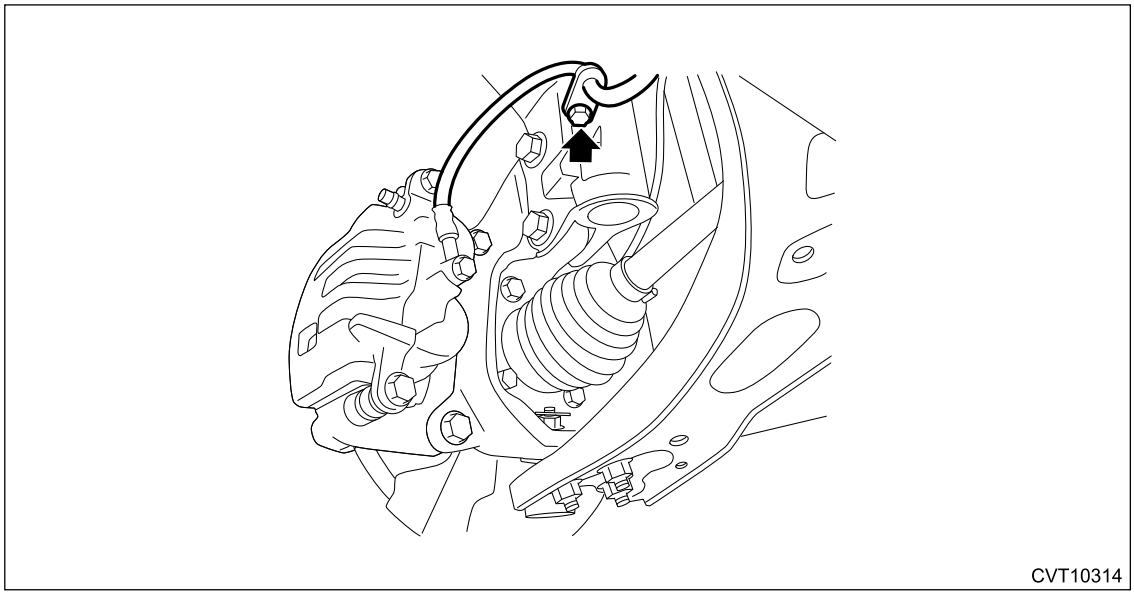
2. Lift up the vehicle.
3. Remove the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.
4. Remove the crossmember support - rear.

Note:

Remove the crossmember support - rear only on the removal side if only one side of the differential side retainer oil seal is replaced.

5. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
6. Remove the differential gear oil drain plug using TORX® bit T70, and then drain differential gear oil.

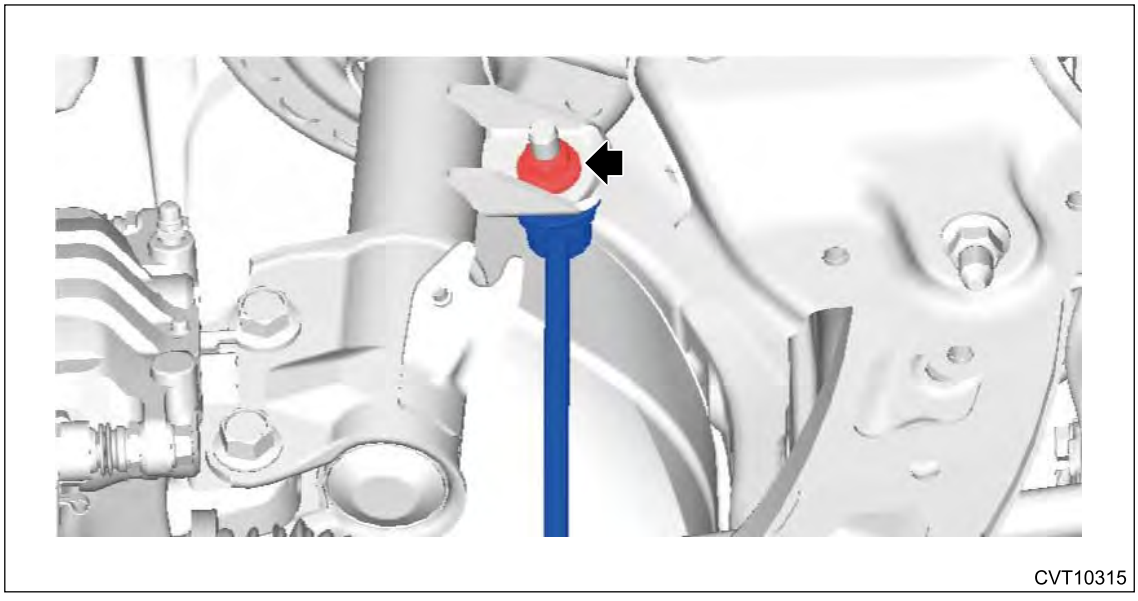
7. Tighten the differential gear oil drain plug.



Note:

Use a new gasket.

Tightening torque:

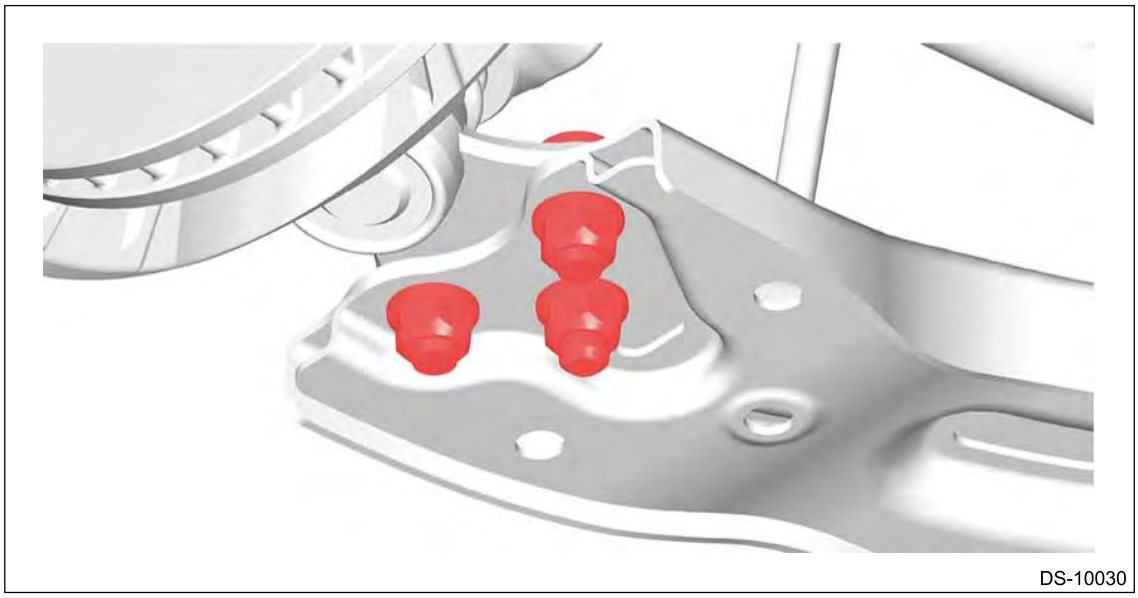


70 N·m (7.1 kgf-m, 51.6 ft-lb)

8. Remove the brake hose bracket.

9. Remove the front ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor>REMOVAL.

10. Remove the stabilizer link.



11. Separate the front arm assembly from the ball joint.

11. Separate the front arm assembly from the ball joint.

Note:

- **Mark the engaging position of the ball joint and front arm assembly before loosening the flange nuts. Doing so will facilitate aligning the position when assembling and lessen adjusting allowance for wheel alignment.**
- **To prevent damage of the front arm assembly ball joint boot, place a wooden block, etc. between front arm assembly and ball joint.**

12. Using a crowbar, etc., pull out until the front drive shaft transmission side joint slides move smoothly.

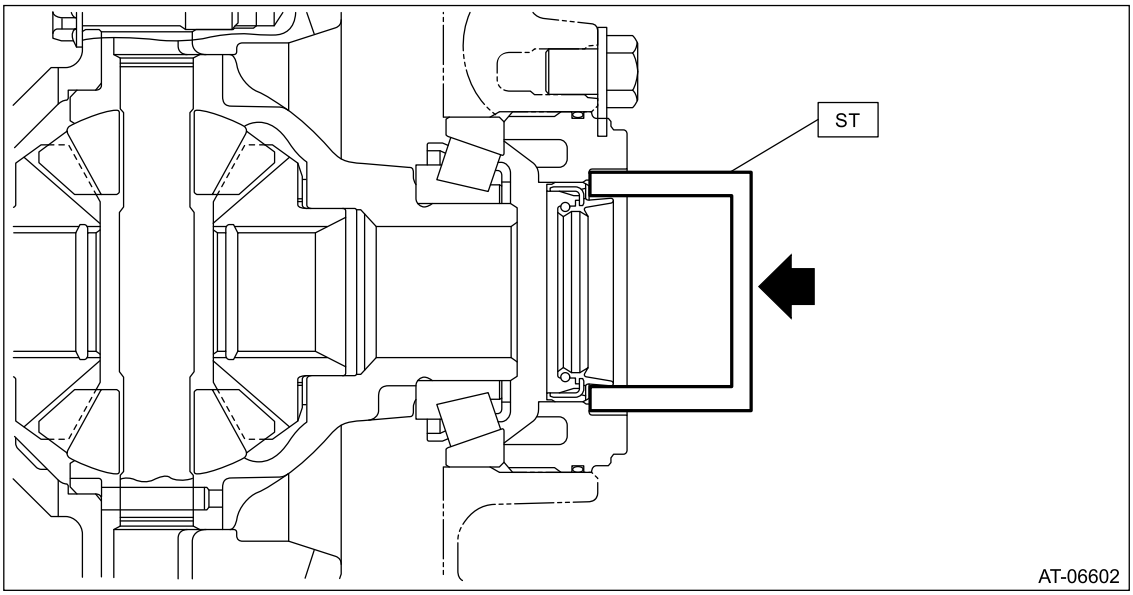
Note:

Place cloth between the crowbar and the transmission in order to avoid damaging the transmission side retainer.

13. Hold the transmission side joint of the front drive shaft by hand and extract the housing from the transmission while pressing the housing outward, so as not to stretch the boot.

Note:

- **Before pulling the RH front drive shaft from transmission, turn the steering wheel to the right hand at full lock.**
- **Before pulling the LH front drive shaft from transmission, turn the steering wheel to the left hand at full lock.**

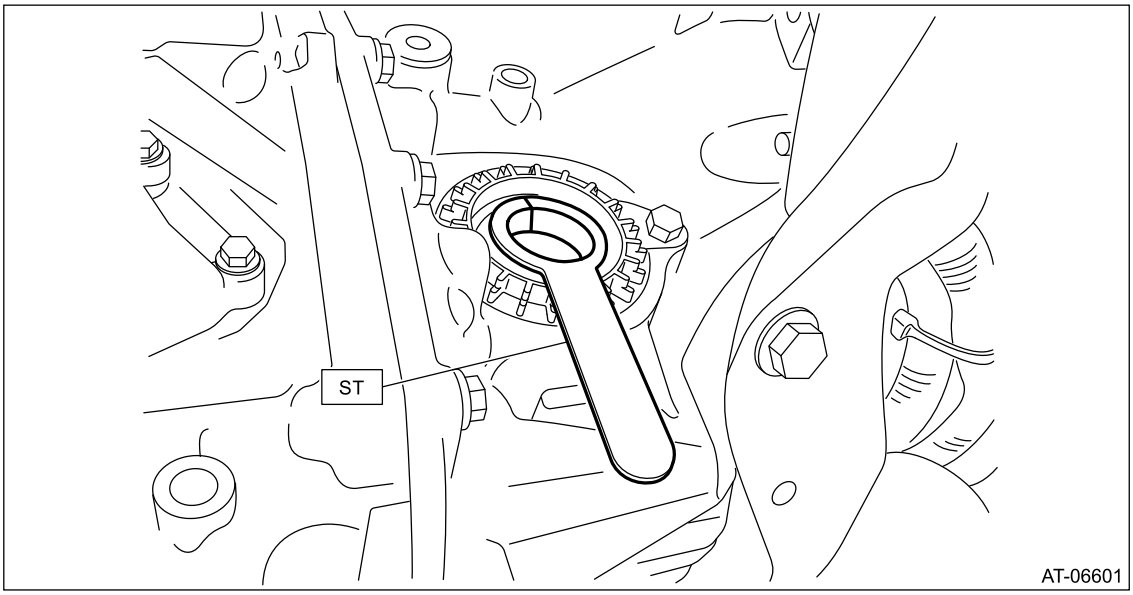


14. Remove the differential side retainer oil seal using driver wrapped with vinyl tape etc.
15. Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.

Note:

- **Apply differential gear oil to the lip surface, so that the oil seal lip is not deformed.**
- **Apply differential gear oil to the press-fitting surface of oil seal and the differential side retainer.**
- **Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.**

Preparation tool:



ST: DIFFERENTIAL SIDE OIL SEAL INSTALLER (18675AA000)

16. Set the ST to the side retainer.

Preparation tool:

ST: OIL SEAL PROTECTOR (28399SA010)

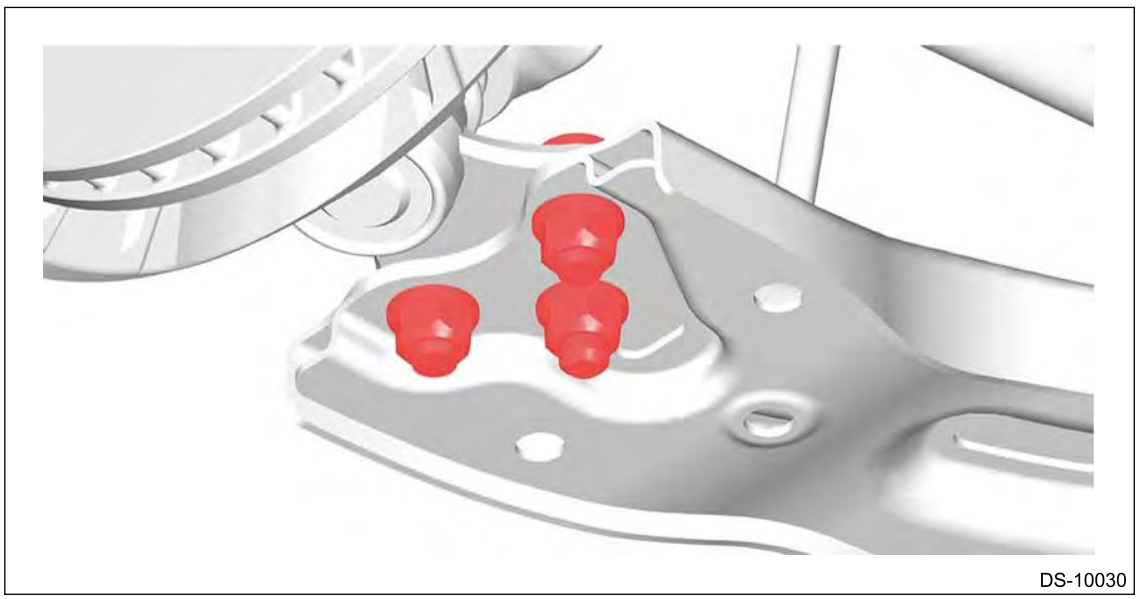
17. Replace the circlip of the drive shaft with a new part.

18. Insert the front drive shaft spline section into transmission and remove the ST (DIFFERENTIAL SIDE OIL SEAL INSTALLER).

Note:

- **Before inserting the RH front drive shaft into transmission, turn the steering wheel to the right hand at full lock.**
- **Before inserting the LH front drive shaft into transmission, turn the steering wheel to the left hand at full lock.**

19. Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.

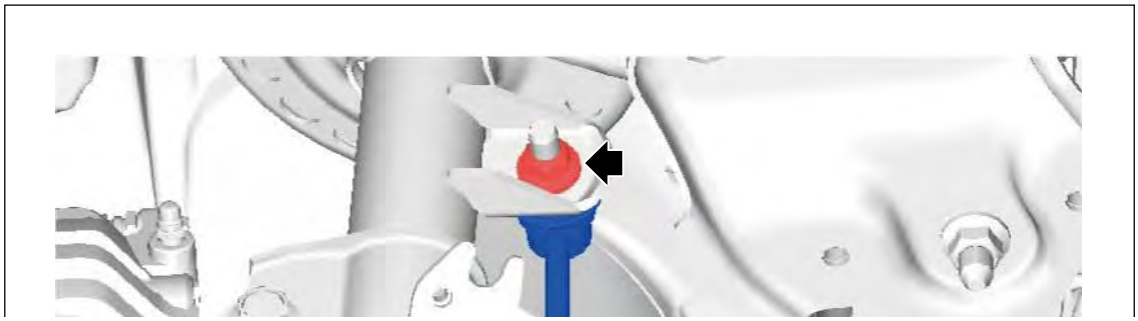


Caution:

- **To prevent the front lower arm assembly from damaging the ball joint dust cover, place the ball joint on the upper side of the front lower arm assembly before starting the operation.**
- **Be careful not to damage the front lower arm assembly and ball joint by covering the upper side of the front lower arm assembly with a cloth.**

20. Insert the ball joint into the front arm assembly, and fix with nuts.

Tightening torque:

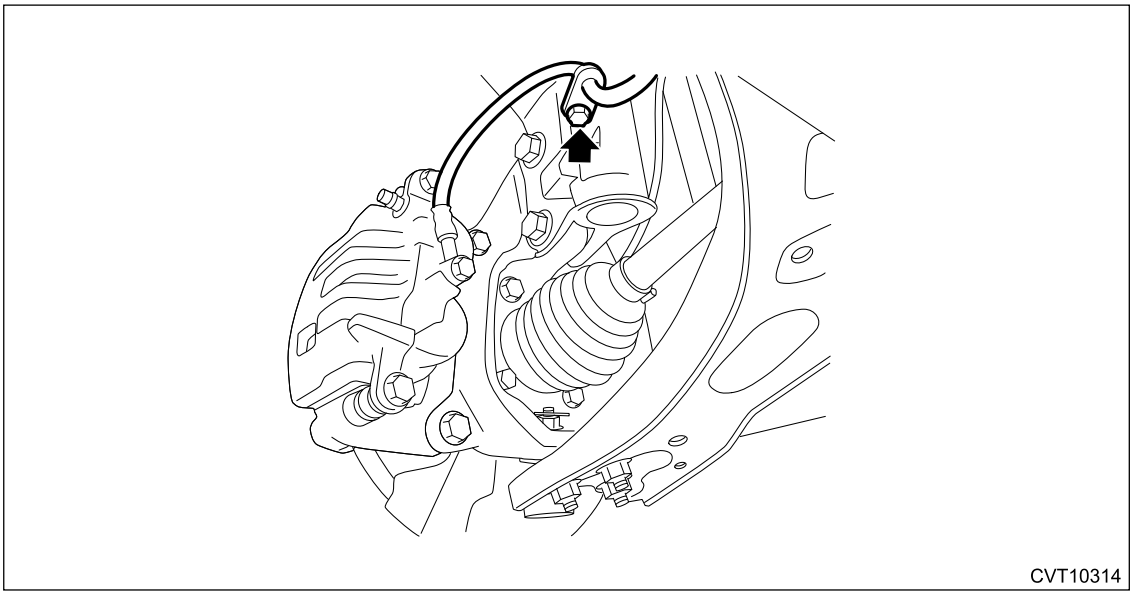


100 N·m (10.2 kgf-m, 73.8 ft-lb)

21. Install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)



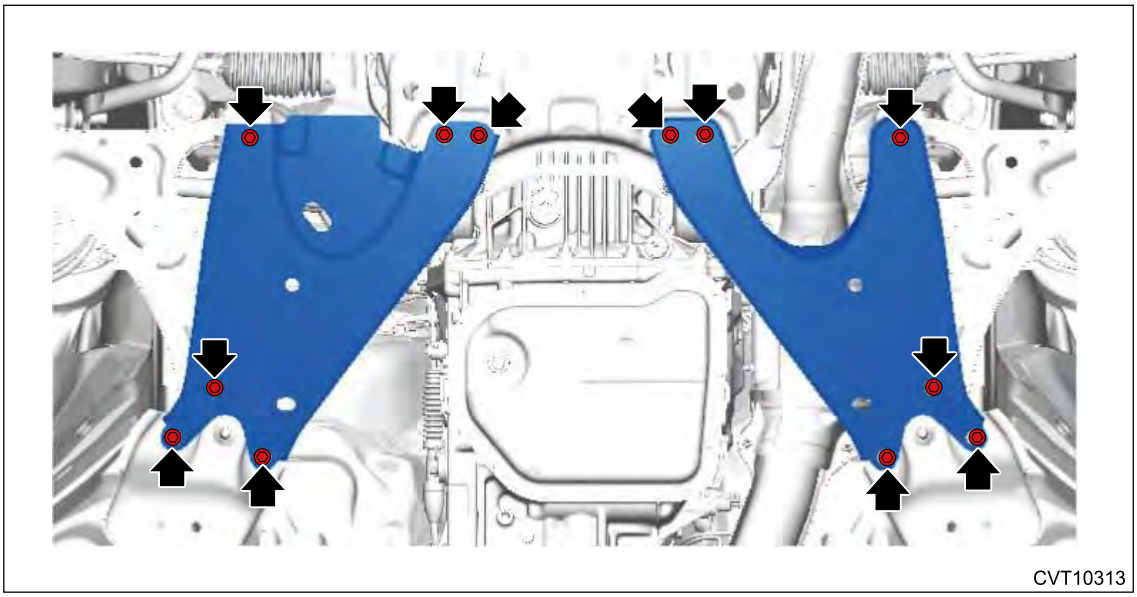
CVT10315

22. Install the front ABS wheel speed sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Front ABS Wheel Speed Sensor>INSTALLATION.

23. Install the brake hose bracket.

Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)



CVT10314

24. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.

25. Install the crossmember support - rear.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

CVT10313

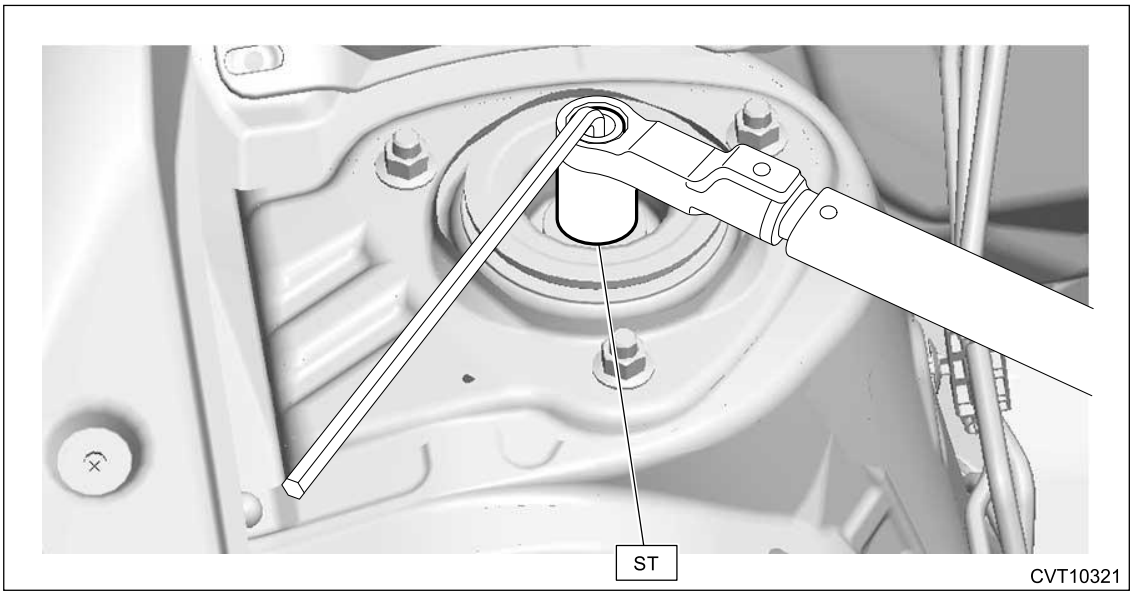
26. Refill differential gear oil to adjust the differential gear oil amount. Ref. to CONTINUOUSLY

VARIABLE TRANSMISSION(TR580)>Differential Gear Oil>ADJUSTMENT.

27. Install the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.

28. Using the ST, tighten the self-locking nut of the front suspension strut mount.

Caution:



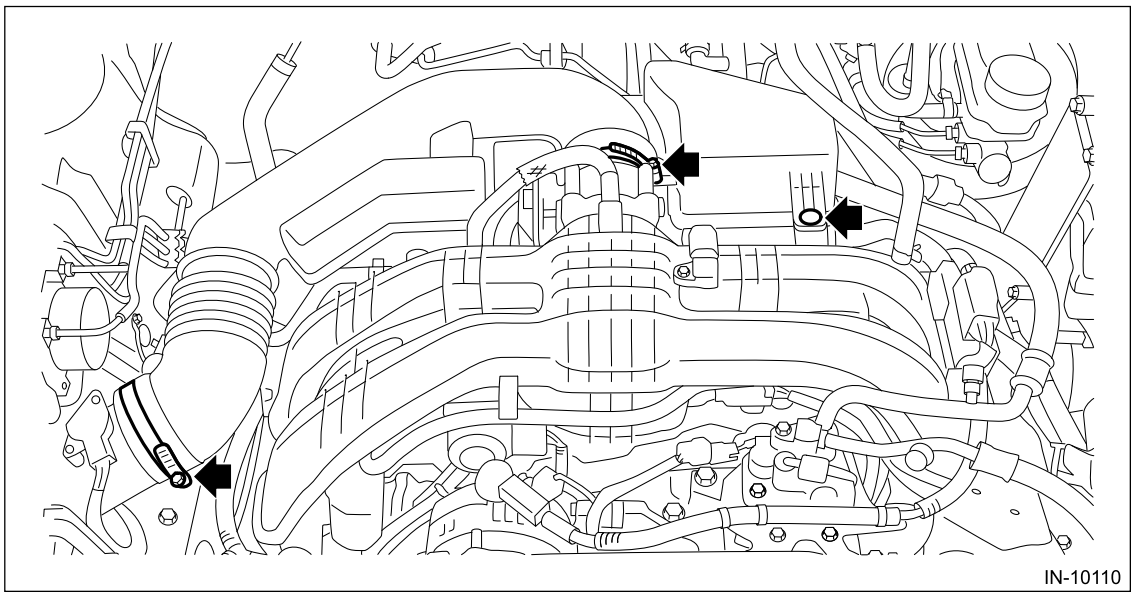
- **Use a new self-lock nut.**
- **Tighten in the state where the wheels are in full contact with the ground.**

Preparation tool:

ST: STRUT MOUNT SOCKET (20399AG000)

Tightening torque:

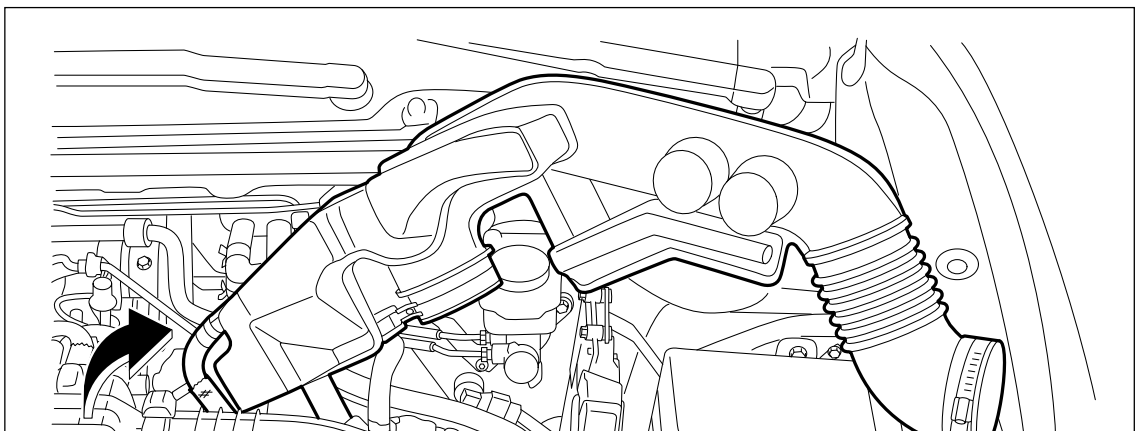
55 N·m (5.6 kgf-m, 40.6 ft-lb)



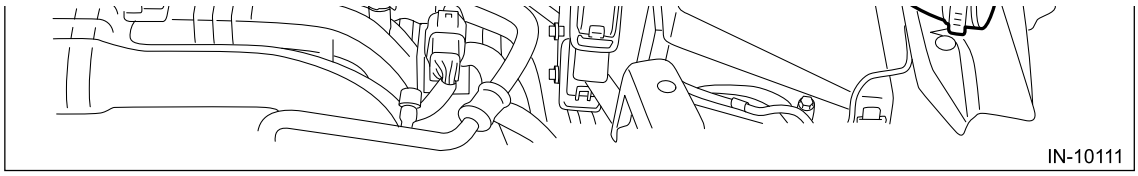
29. Inspect the wheel alignment and adjust if necessary. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.

INSPECTION

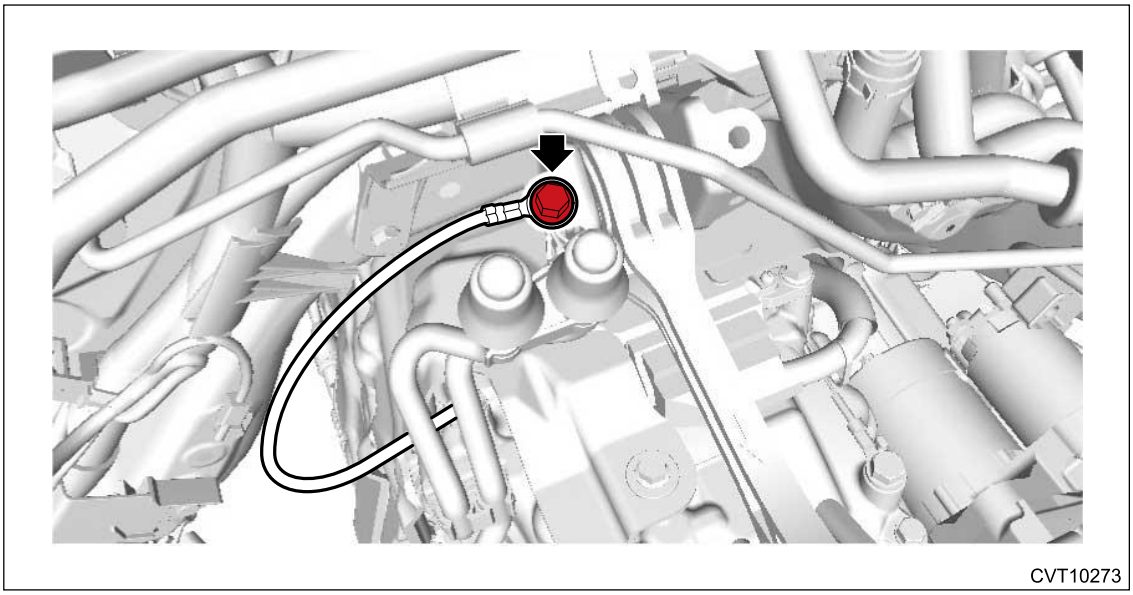
When the driving condition or starter motor operation is improper, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.

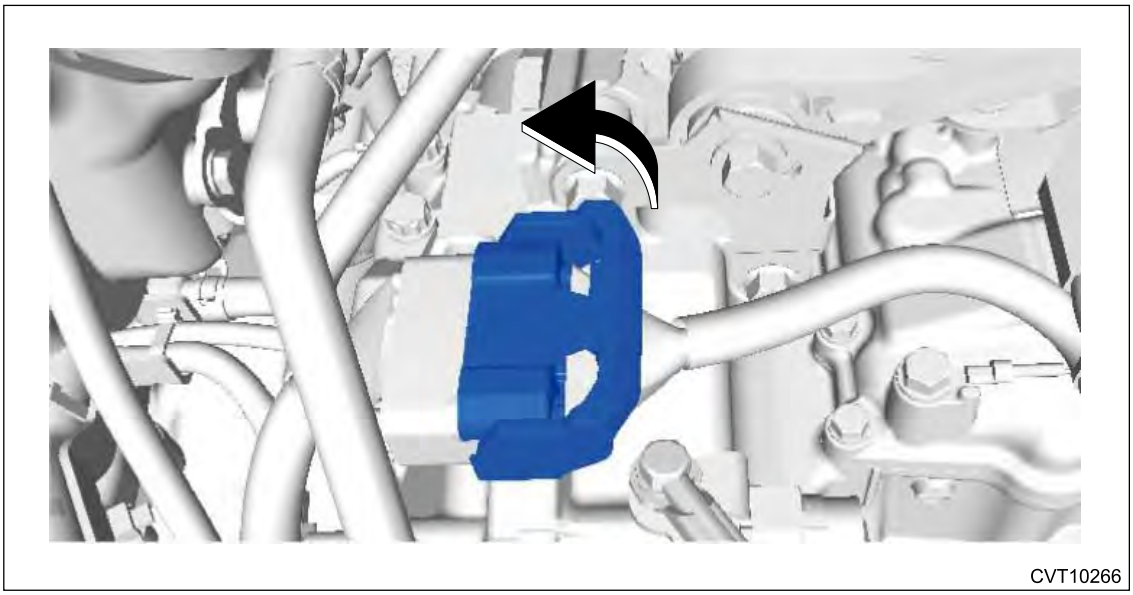


3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

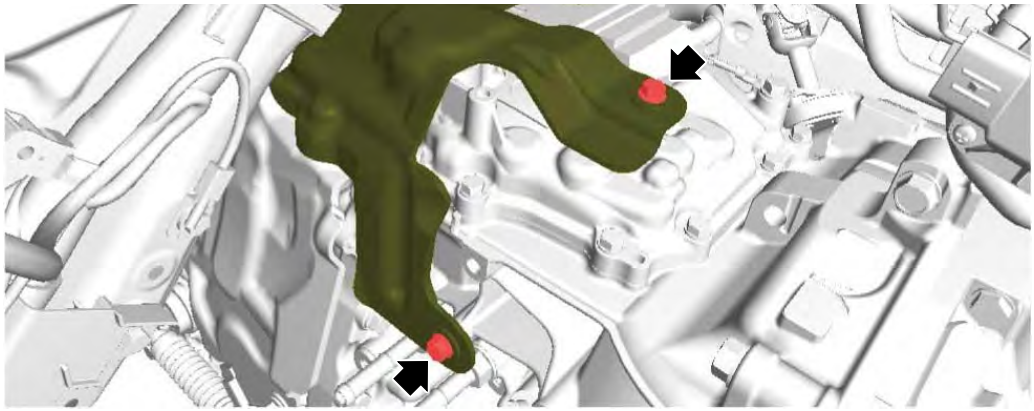


Note:

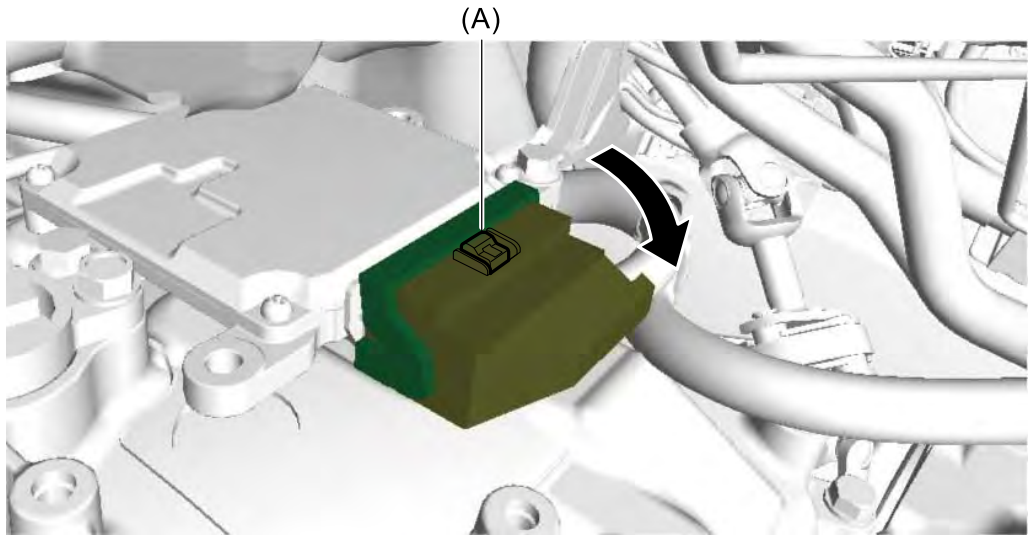
Be careful not to pull out the PCV hose.



4. Remove the transmission radio ground terminal.



5. Disconnect the transmission harness connector.



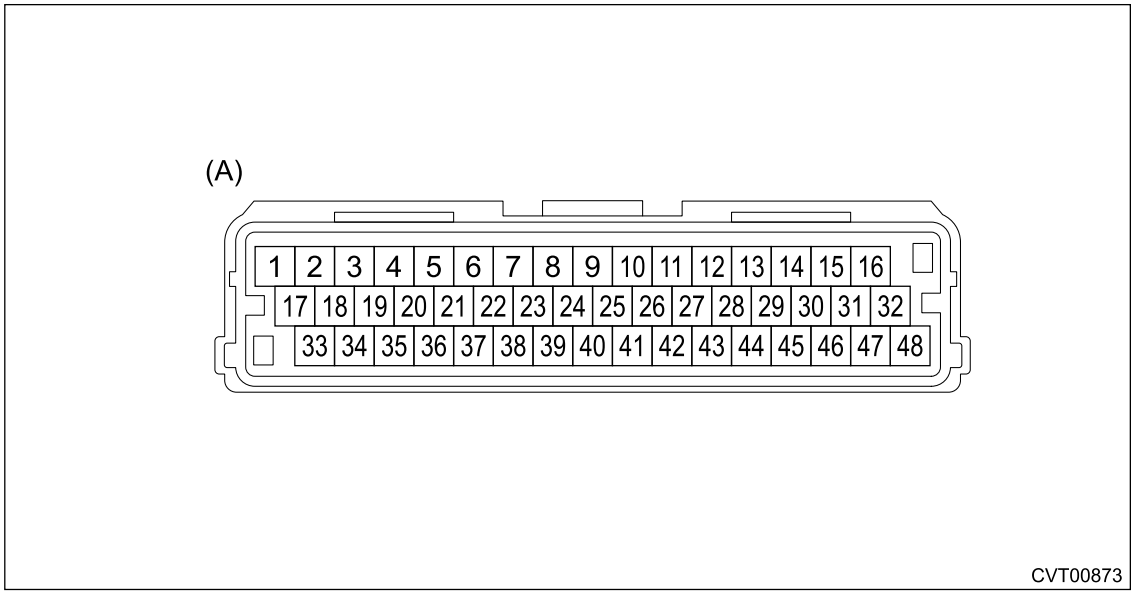
6. Remove the transmission case cover (small).

7. Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

(A) Lock button

8. Set the ST between the TCM and transmission harness. Ref. to TRANSMISSION (DIAGNOSTICS)>General Description>CAUTION.

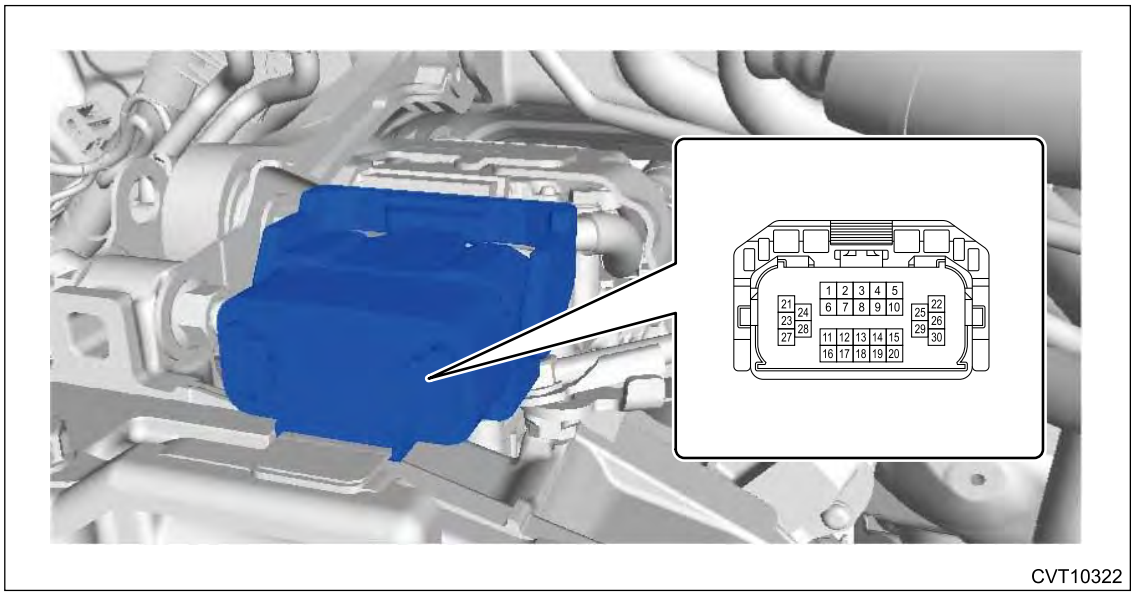
Preparation tool:



ST: CHECK BOARD (18460AA040)

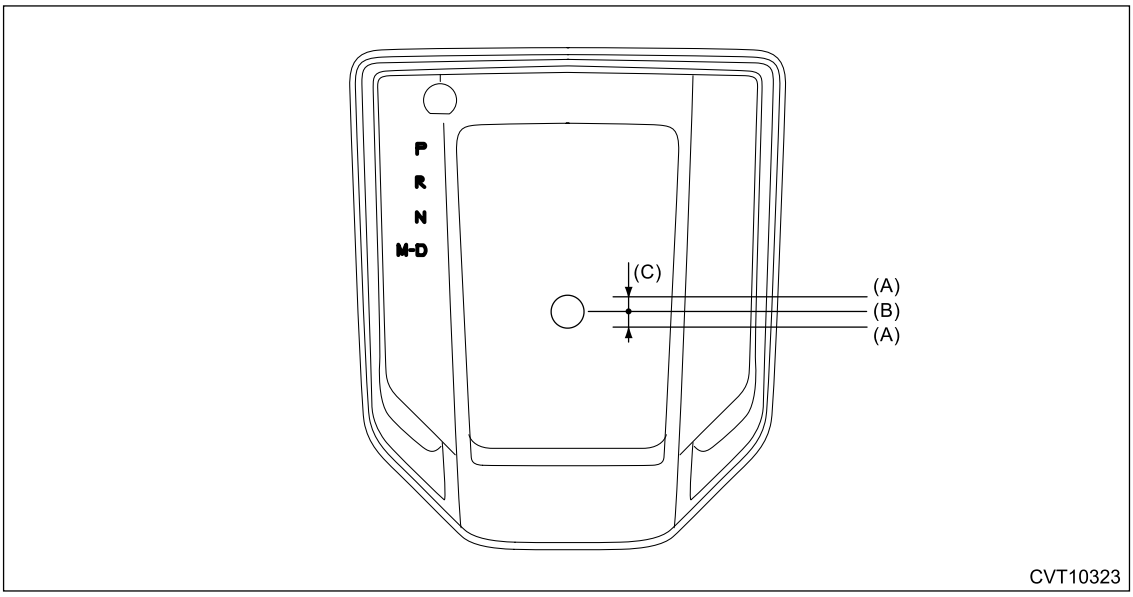
9. Check for continuity in inhibitor switch circuit by shifting the select lever in "P", "R", "N" and "D" respectively.

Note:



- **Check that there is no continuity in the starter circuit when the select lever is in the "R" and "D" ranges.**
- **When inhibitor switch is normal, check there is no poor contact in vehicle side connector and no open circuit in harness.**

	Range	Terminal No.	Standard
Signal sent to TCM	P	38 — 42	Less than 1 Ω
	R	37 — 42	
	N	36 — 42	
	D	35 — 42	

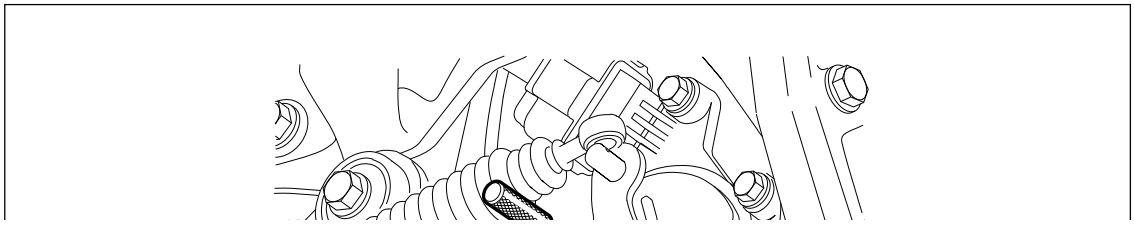


(A) Check board connector

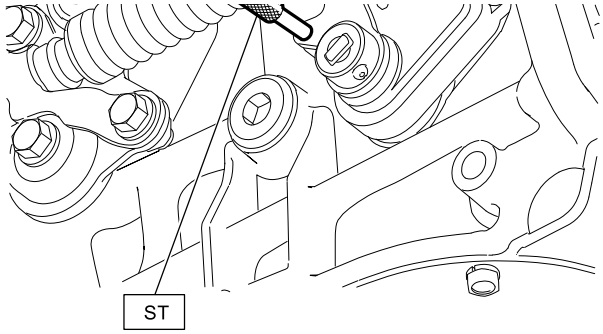
	Range	Terminal No.	Standard
Starter circuit	P / N	1 — 5	Less than 1 Ω
Back-up light circuit	R	22 — 26	

10 Check that there is continuity at equal points when the select lever is moved 1.5° in both directions

10. Check that there is continuity at equal points when the select lever is moved 1.5° in both directions from the "N" range.
If there is continuity in only one direction or in other points, adjust the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>ADJUSTMENT.



(A) Continuity does not exist.
(B) Continuity exists.
(C) 1.5°



11. Repeat the above inspection in other gear ranges. If there is fault, adjust the inhibitor switch and select cable. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>ADJUSTMENT. Ref. to CONTROL SYSTEMS>Select Cable>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Inhibitor Switch

ADJUSTMENT

1. Shift the select lever to "N" range.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Loosen the two bolts holding the inhibitor switch.
4. Insert the ST vertically into the holes of the shifter arm and switch body.
Preparation tool:
ST: STOPPER PIN (499267300)

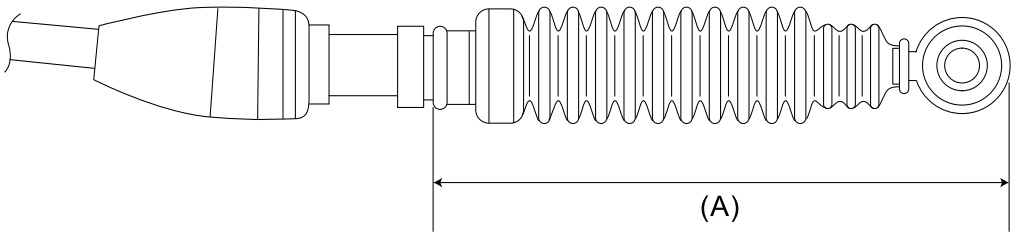
CVT00756

5. Tighten the two bolts holding the inhibitor switch.

Tightening torque:

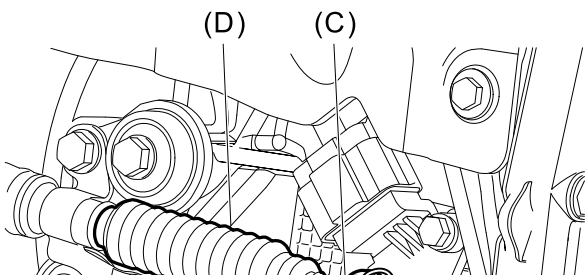
5 N·m (0.5 kgf-m, 3.7 ft-lb)

6. Repeat the inspection of the inhibitor switch. If the inhibitor switch is determined to be “faulty”, replace it.

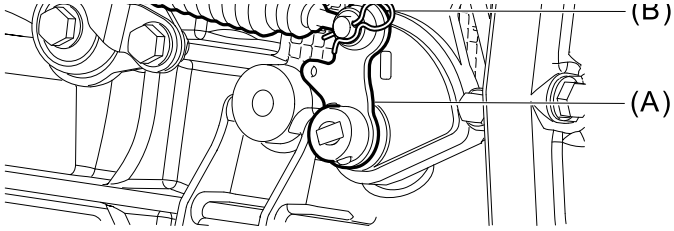


CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Inhibitor Switch

REMOVAL



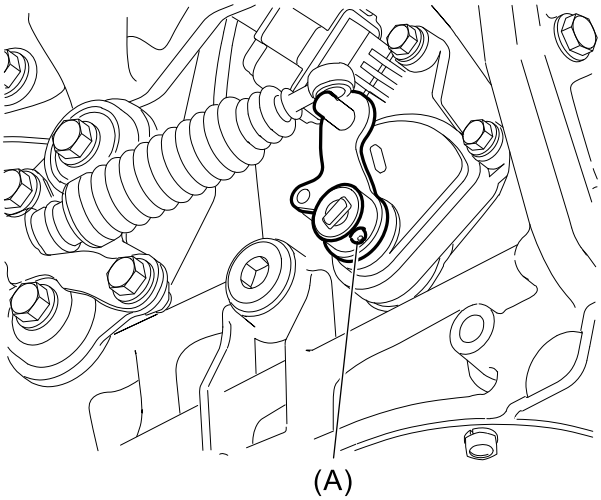
1. Shift the select lever to the “N” range.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Lift up the vehicle.
4. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
5. Remove the snap pin and washer from the shifter arm.



Caution:

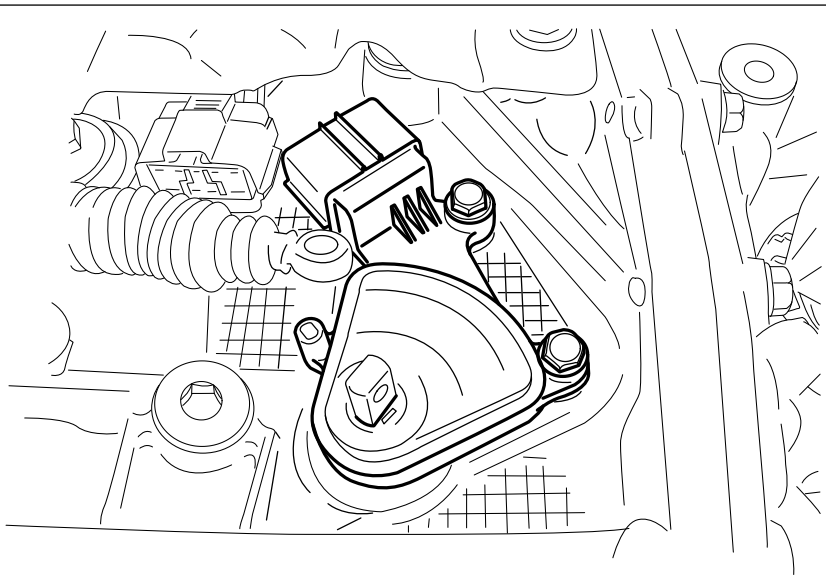
Do not apply excessive load while holding the part (A).

CVT10415



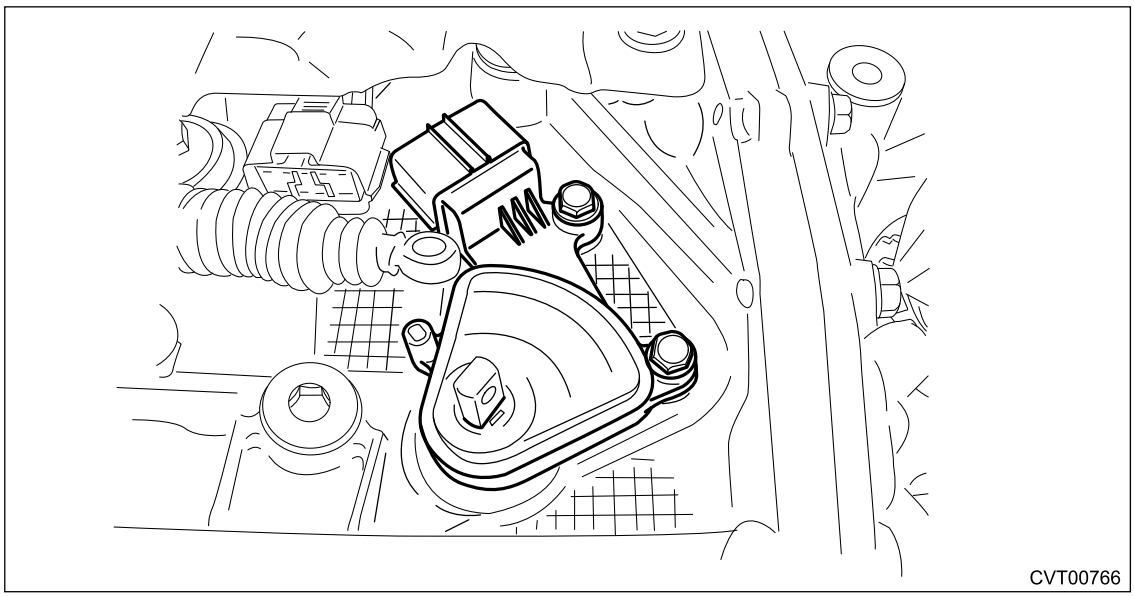
CVT00621

(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable



6. Remove the spring pin and shifter arm.

CVT00757

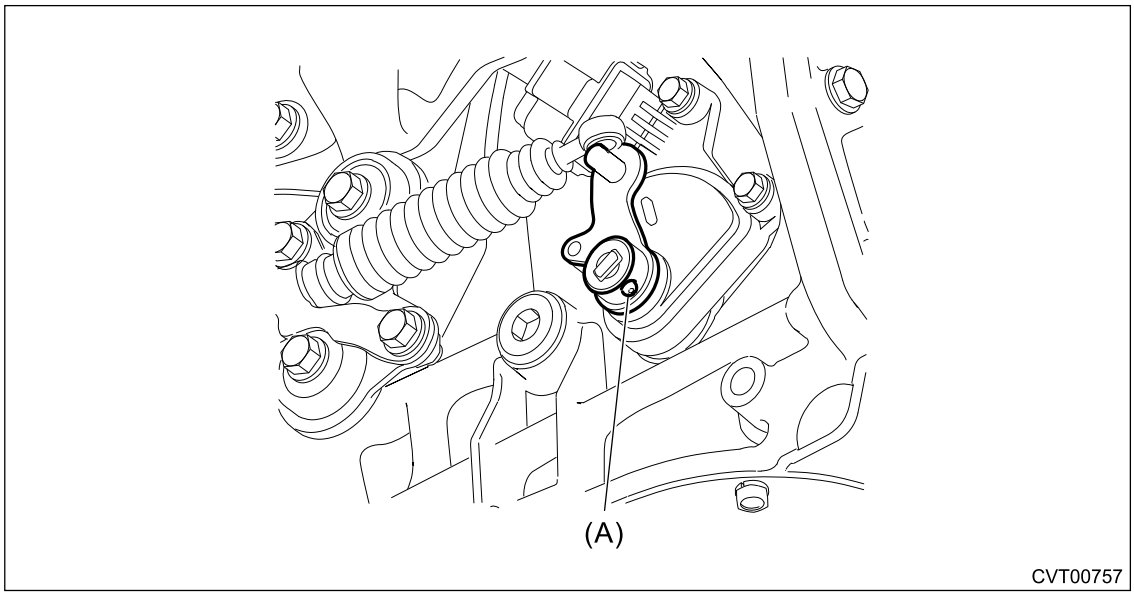


(A) Spring pin

7. Disconnect the inhibitor harness connector.
8. Remove the inhibitor switch.

CVT00766

INSTALLATION

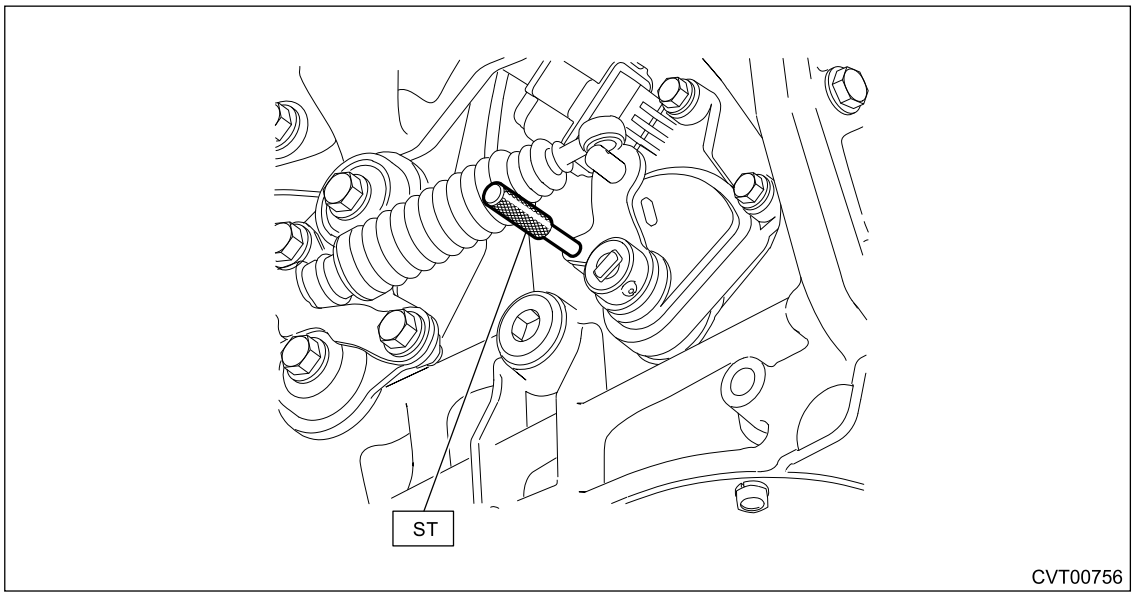


1. Install the inhibitor switch to the transmission case temporarily.

2. Connect the inhibitor harness connector.
3. Install the shifter arm and fix with the spring pin.

Note:

Use new spring pin.



(A) Spring pin

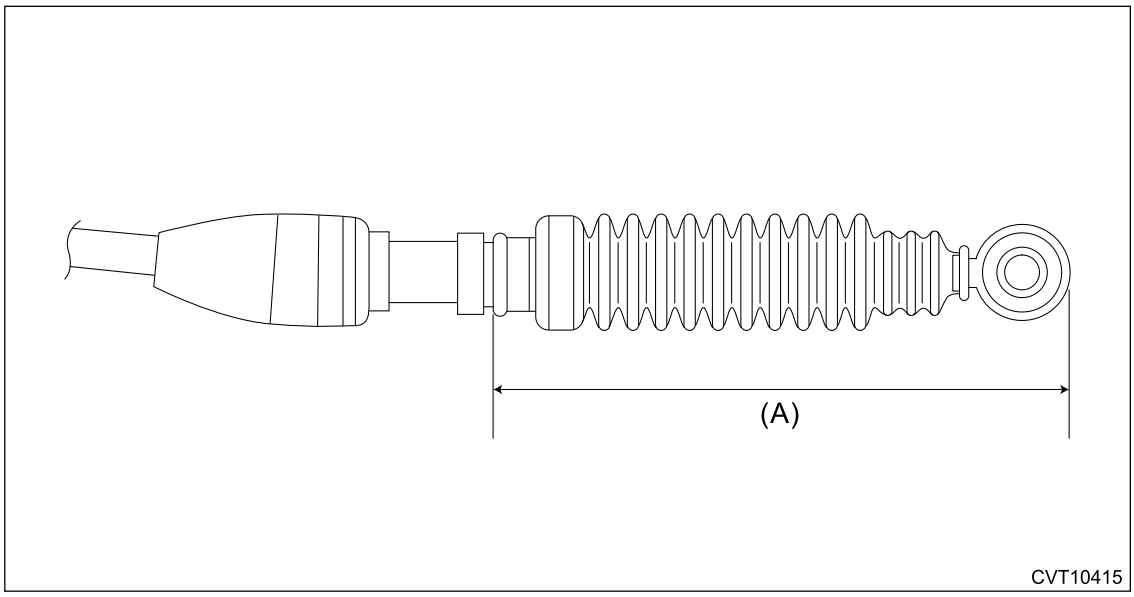
4. Shift the shifter arm to "N" range.
5. Install the ST vertically in the cutout of shifter arm and the hole of switch body.

Preparation tool:

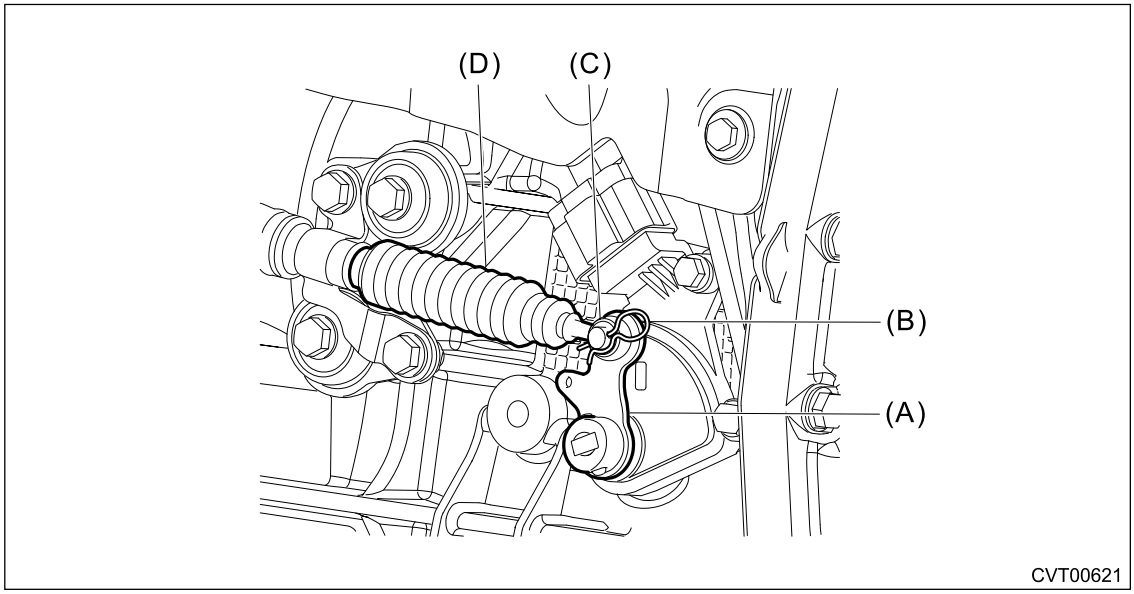
ST: STOPPER PIN (499267300)

6. Tighten the two bolts holding the inhibitor switch.

Tightening torque:



5 N·m (0.5 kgf-m, 3.7 ft-lb)



7. Install the select cable to the shifter arm.

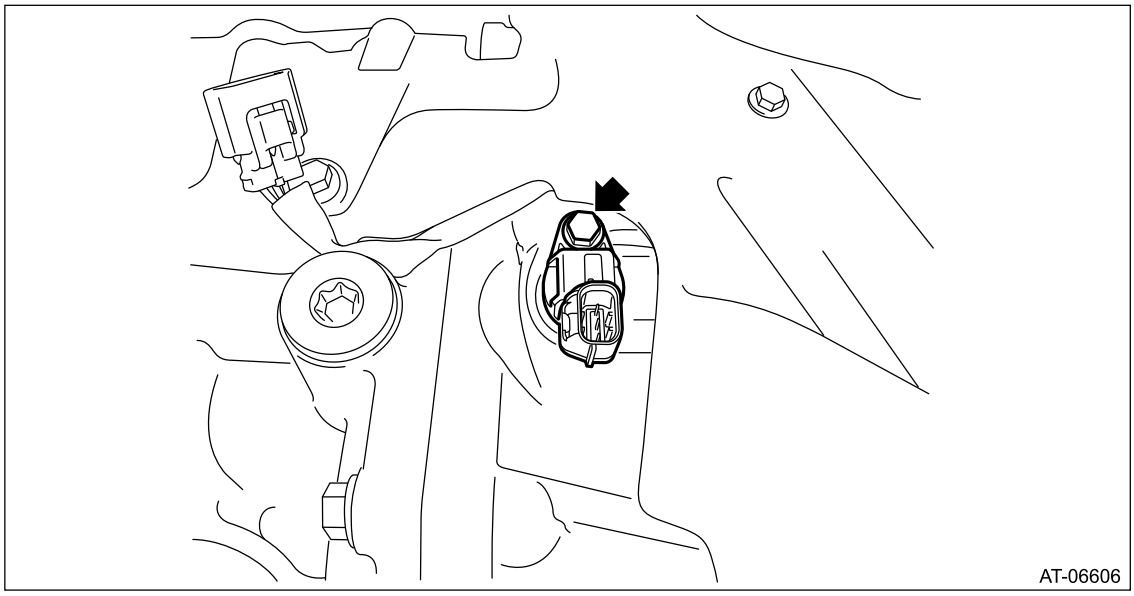
8. Install the select cable, washer and snap pin.

Caution:

Do not apply excessive load while holding the part (A).

(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable

9. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
10. Lower the vehicle.
11. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
12. Check the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSPECTION.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Turbine Speed Sensor

REMOVAL

Caution:

Be sure to prevent water or oil from contacting the connector terminal of turbine speed sensor. If adhesion occurs, replace with a new part.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Lift up the vehicle.
3. Remove the harness connector from turbine speed sensor.
4. Remove the turbine speed sensor.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Turbine Speed Sensor

INSTALLATION

Caution:

Be sure to prevent water or oil from contacting the connector terminal of turbine speed sensor. If adhesion occurs, replace with a new part.

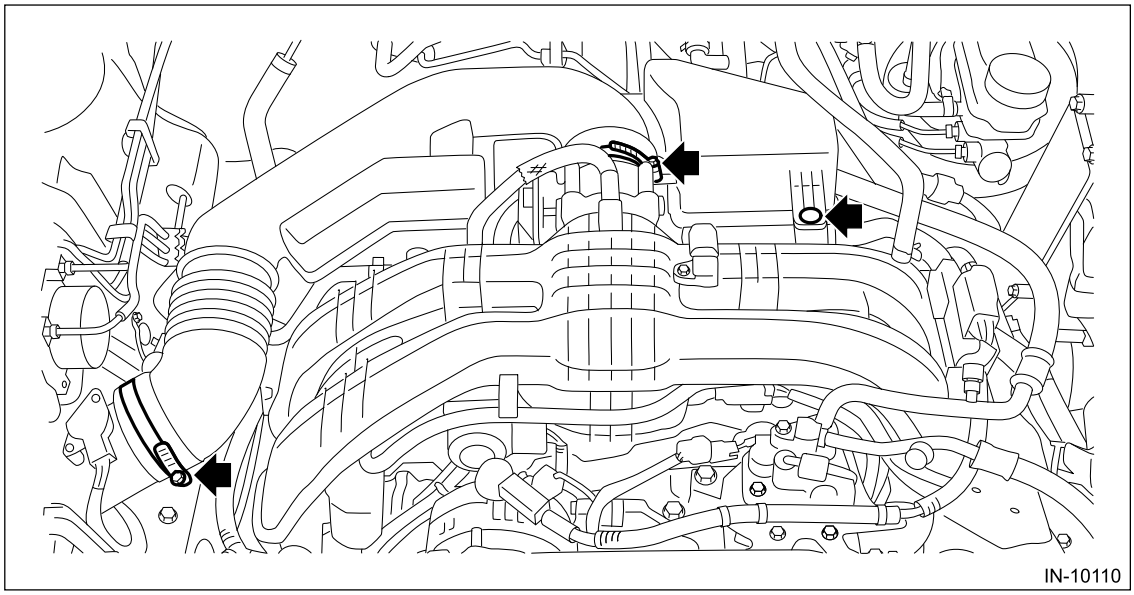
1. Install the turbine speed sensor.

   Note:

   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**

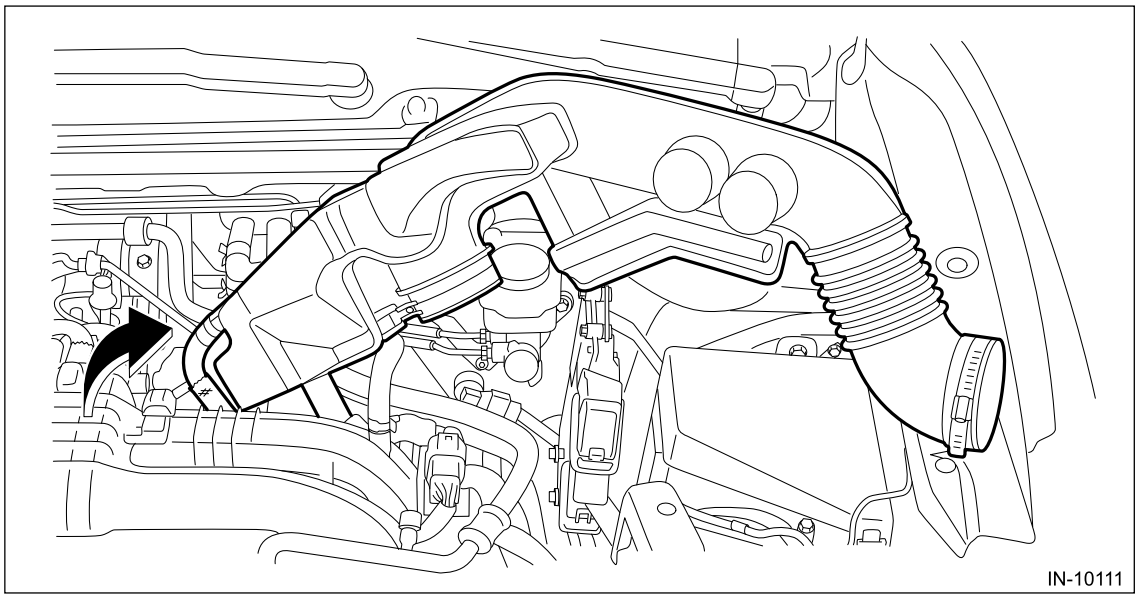
   Tightening torque:

   7 N·m (0.7 kgf-m, 5.2 ft-lb)



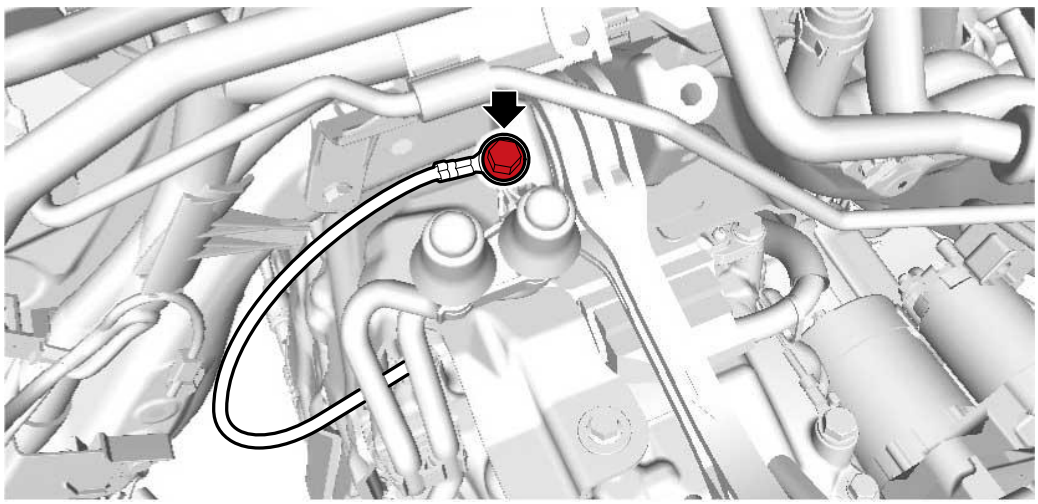
2. Connect the harness connector

2. Connect the harness connector.
3. Lower the vehicle.
4. Connect the ground terminal to battery sensor. Ref. to REPAIR CONTENTS>NOTE > SAFETY.



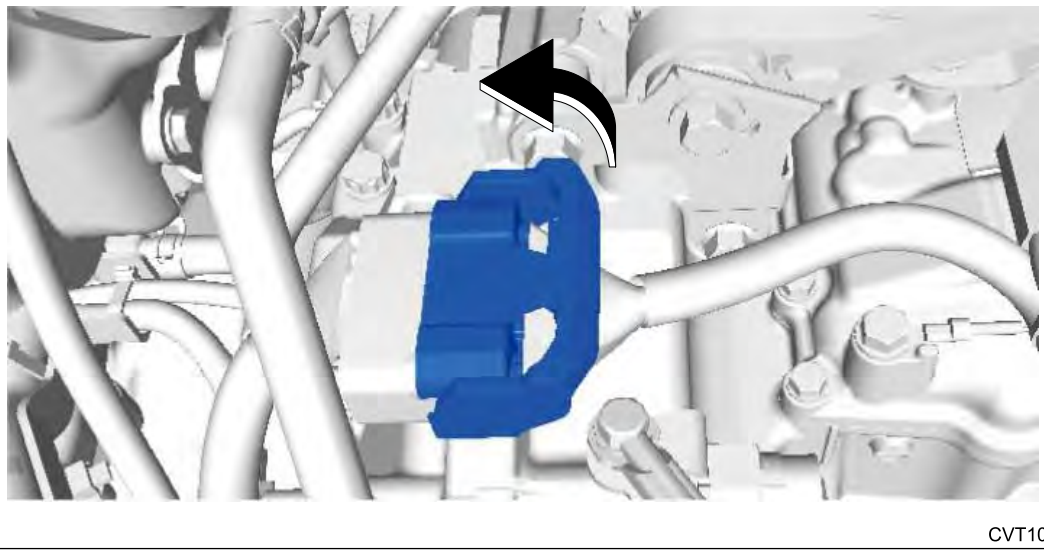
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Turbine Speed Sensor

INSPECTION



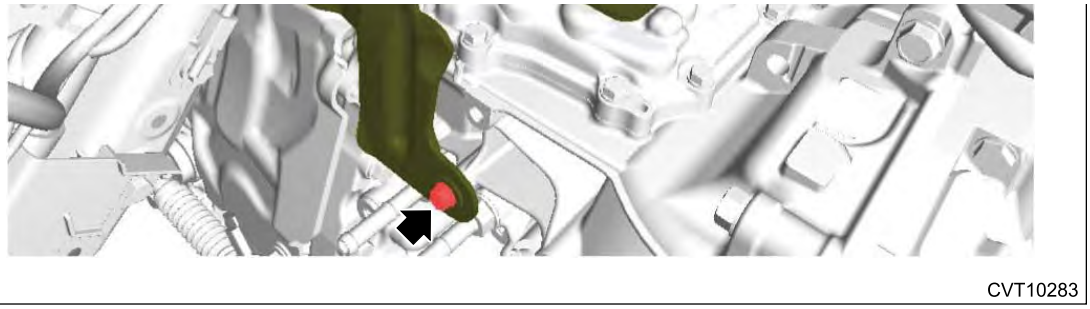
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.

3. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Note:
   Be careful not to pull out the PCV hose.

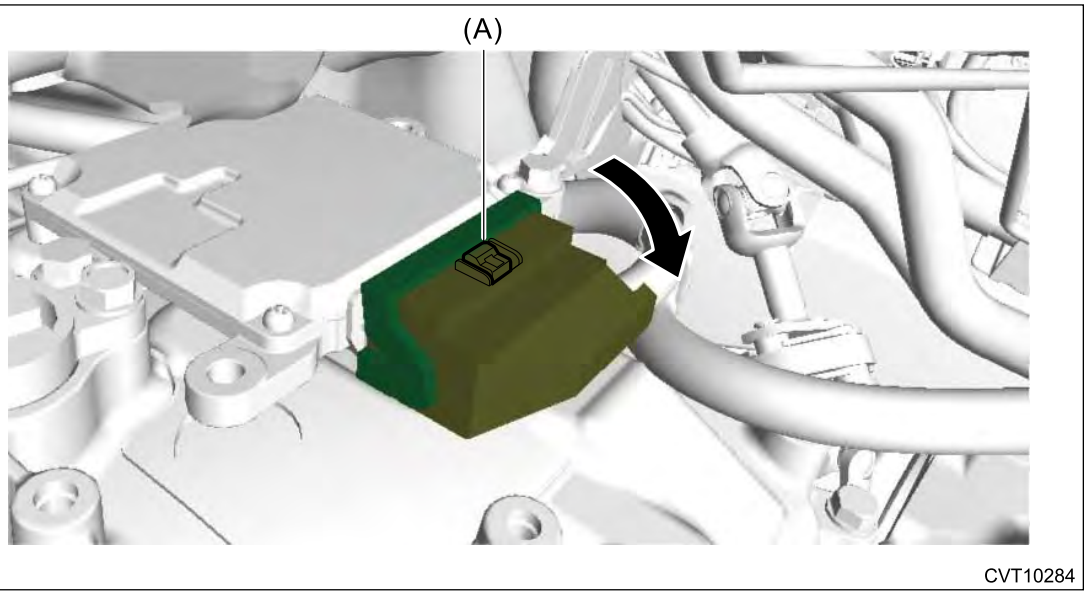


4. Remove the transmission radio ground terminal.

CVT10273



5. Disconnect the transmission harness connector.



CVT10266

6. Remove the transmission case cover (small).

7. Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

(A) Lock button

8. Set the ST between the TCM and transmission harness. Ref. to TRANSMISSION (DIAGNOSTICS)>General Description>CAUTION.

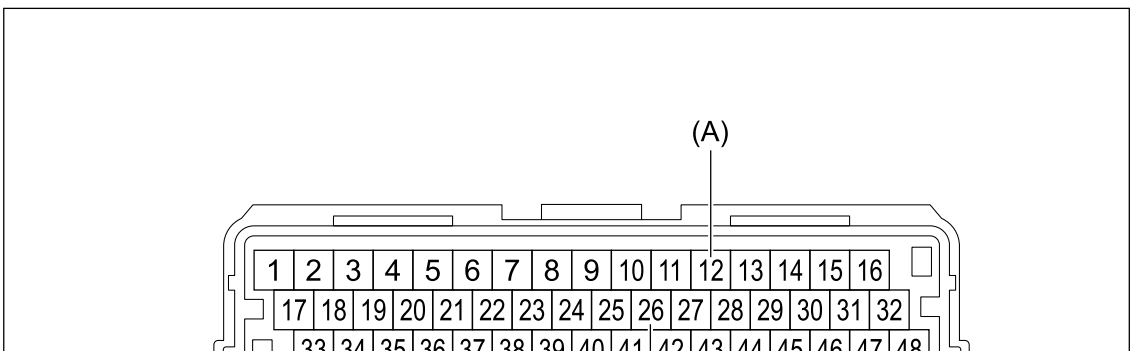
Preparation tool:

ST: CHECK BOARD (18460AA040)

9. Connect the transmission radio ground terminal and transmission harness connector.

Tightening torque:

32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



10. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

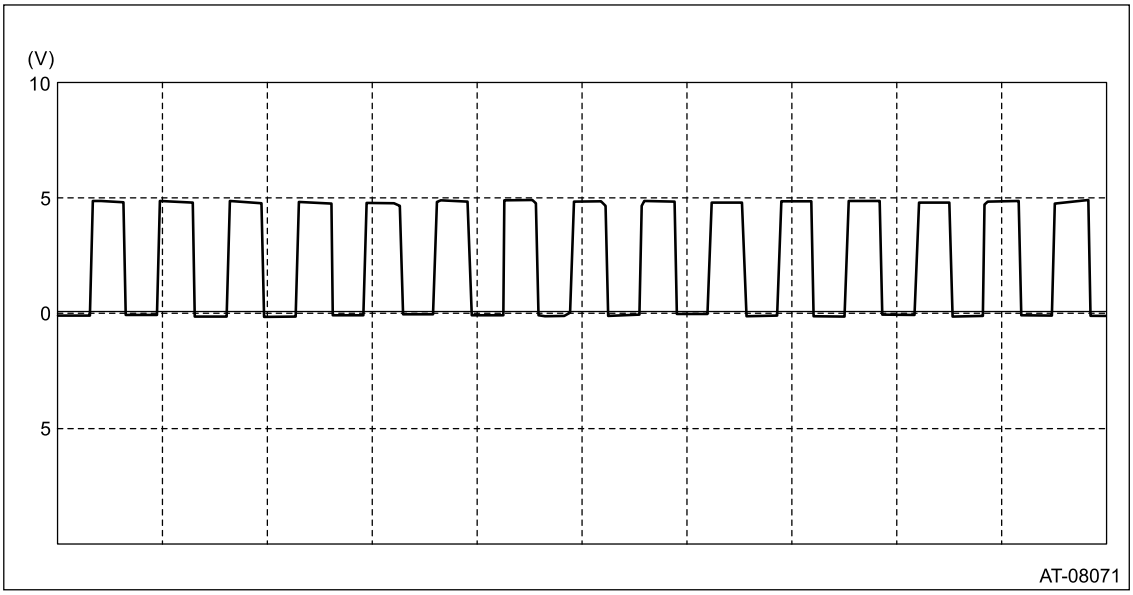
11. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.

12. Set the probe of oscilloscope to the check board connector.

Connector & terminal

(B54)No. 12 (+) — No. 26 (−):

(A) + probe



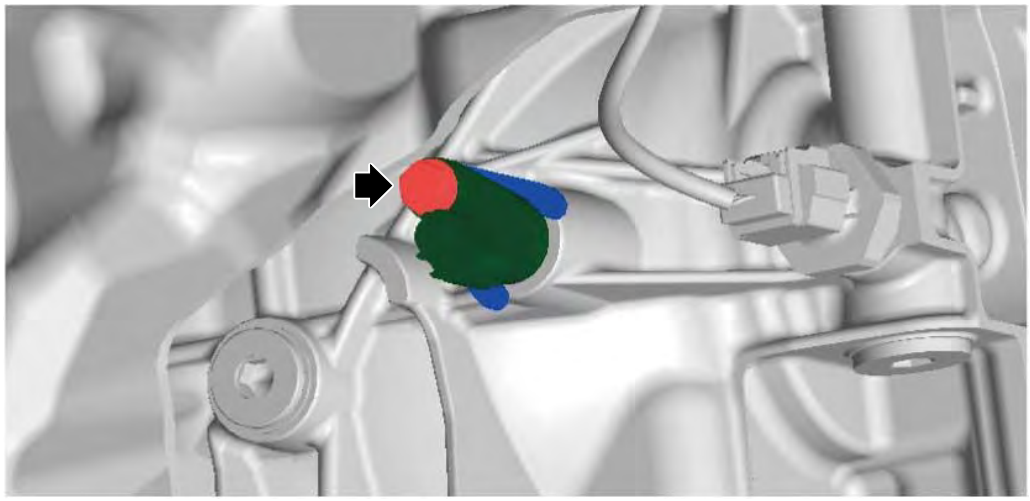
(B) − probe

13. Start and warm up the engine.

14. Check the waveform and output voltage of the turbine speed sensor with engine idling.

Note:

The waveform cycle changes as the speed changes.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Secondary Speed Sensor

REMOVAL

Caution:

- **Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.**
- **When secondary speed sensor is removed, CVTF leaks. After installing the secondary speed sensor, adjust the CVTF level.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Lift up the vehicle.
3. Remove the harness connector from secondary speed sensor.
4. Remove the secondary speed sensor and spacer.

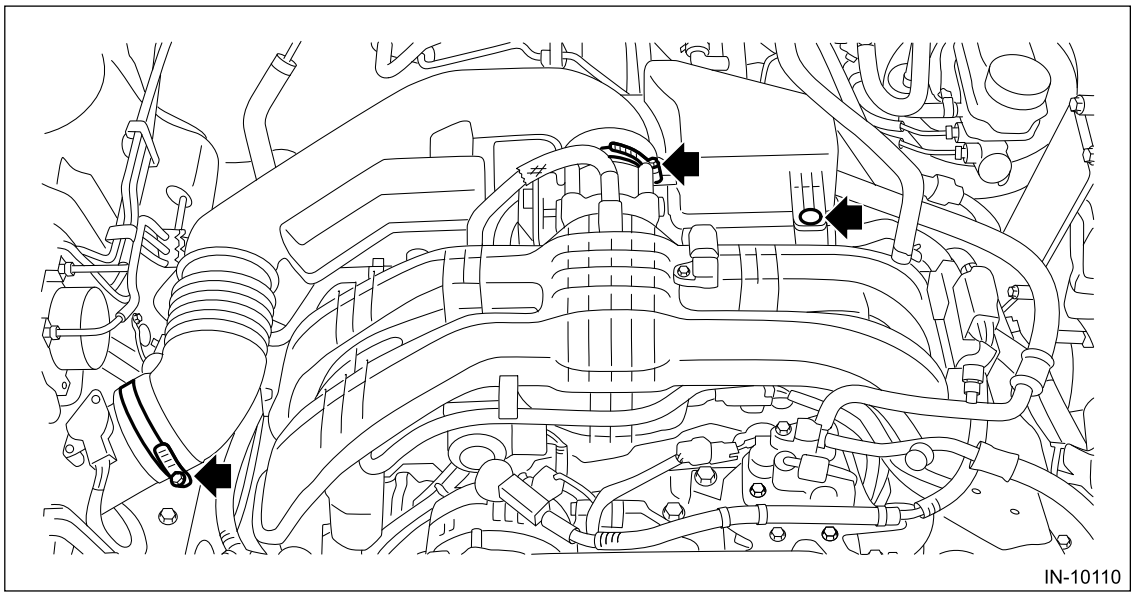
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Secondary Speed Sensor

INSTALLATION

Caution:

- **Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.**
- **After installing the secondary speed sensor, adjust the CVTF level.**

1. Install the secondary speed sensor and spacer.
   Note:
   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**
   Tightening torque:

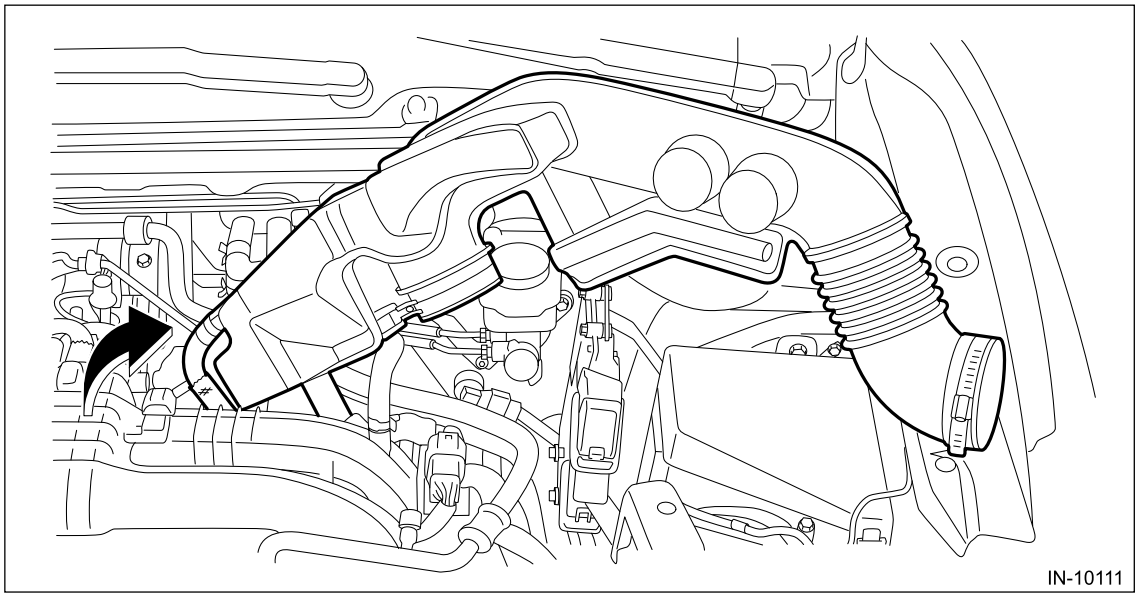


7 N·m (0.7 kgf-m, 5.2 ft-lb)

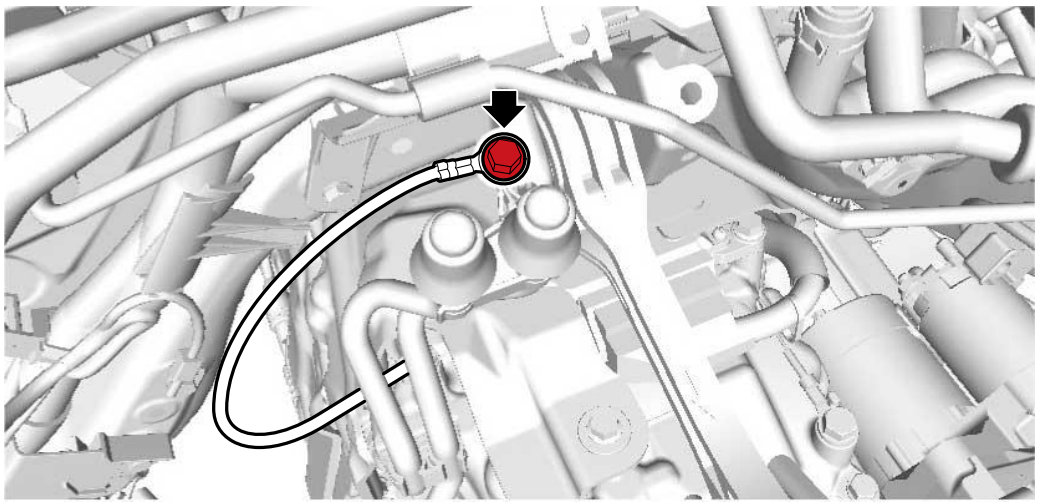
2. Connect the harness connector.
3. Lower the vehicle.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
5. Refill CVTF to adjust the CVTF level. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Secondary Speed Sensor

INSPECTION



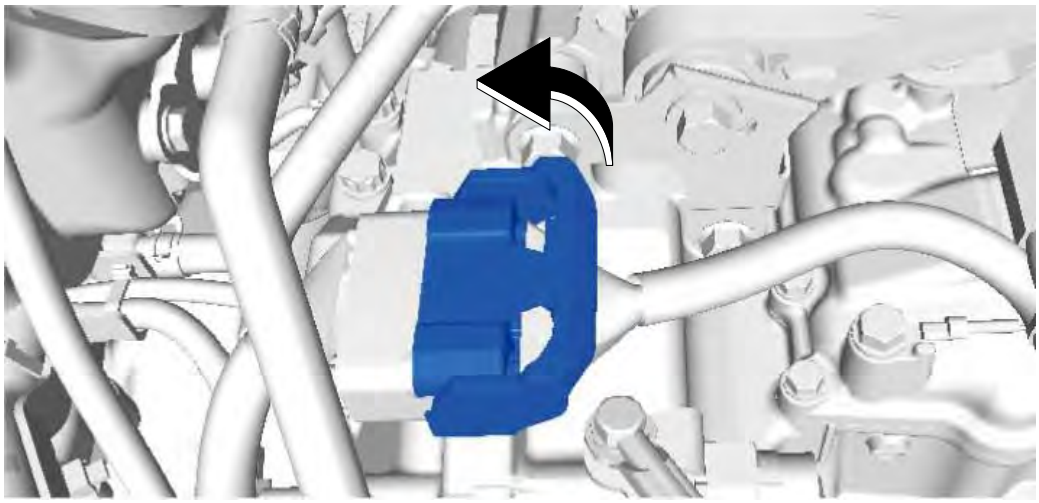
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.



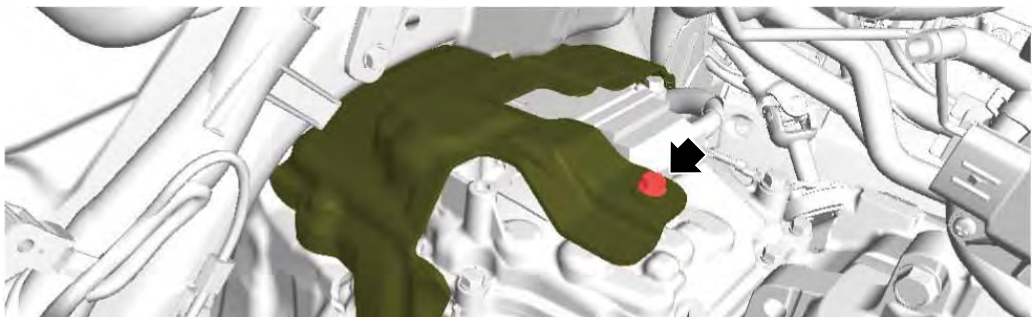
3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Note:

Be careful not to pull out the PCV hose.



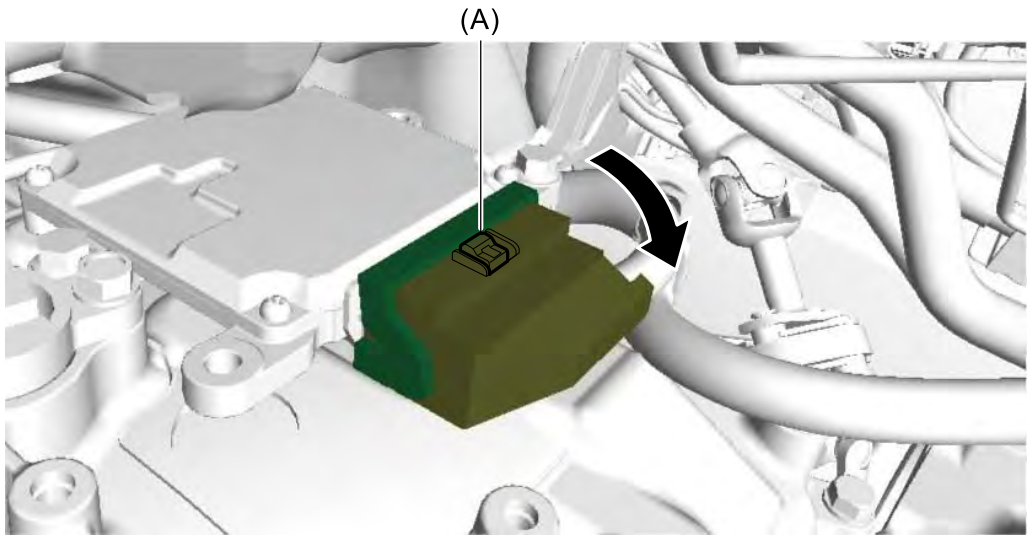
4. Remove the transmission radio ground terminal.



CVT10273

5. Disconnect the transmission harness connector.

CVT10266



6. Remove the transmission case cover (small).

CVT10283

7. Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

CVT10284

(A) Lock button

8. Set the ST between TCM and transmission harness. Ref. to TRANSMISSION (DIAGNOSTICS)>General Description>CAUTION.

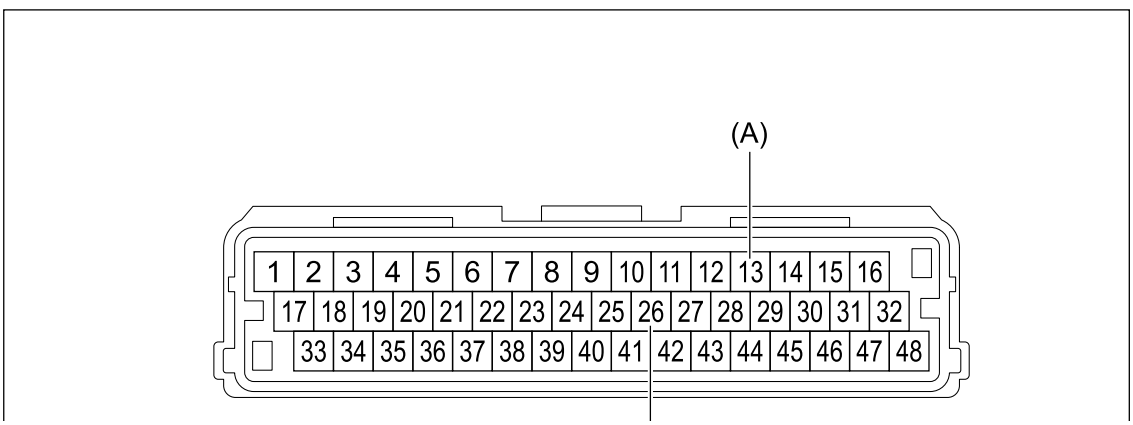
Preparation tool:

ST: CHECK BOARD (18460AA040)

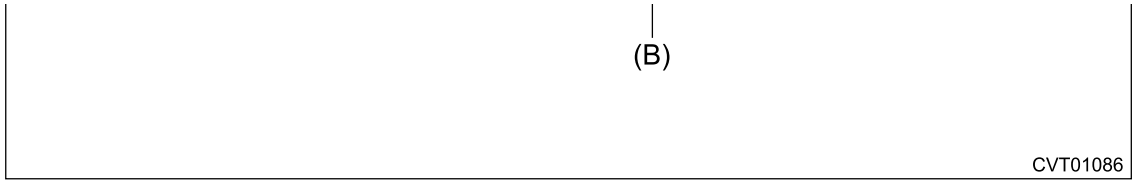
9. Connect the transmission radio ground terminal and transmission harness connector.

Tightening torque:

32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



10. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.



11. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.

12. Set the probe of oscilloscope to the check board connector.

Connector & terminal

(B54)No. 13 (+) — No. 26 (−):

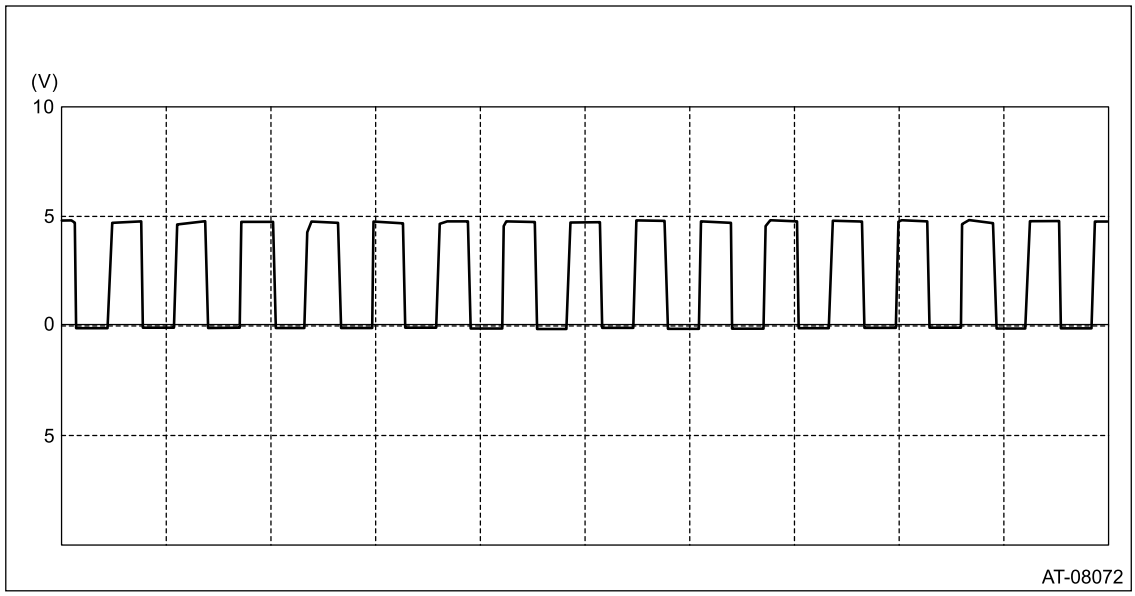
(A) + probe

(B) – probe

13. Start and warm up the engine.

14. Lift up the vehicle.

Caution:



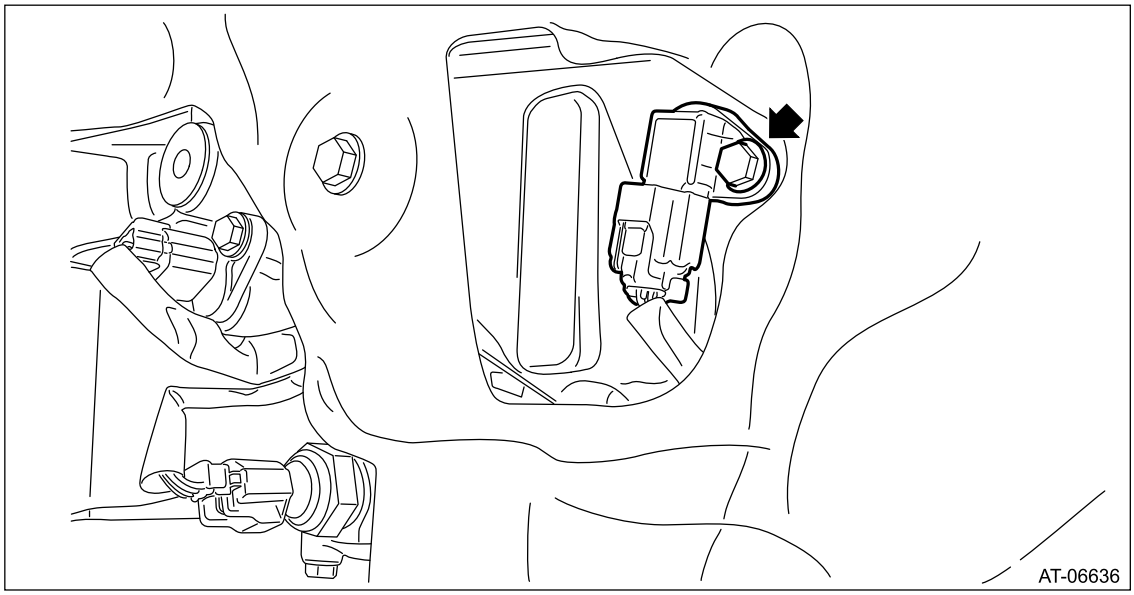
Lift up the vehicle until the tire bottom is 0.3 m (0.98 ft) or more above the ground.

15. Shift the select lever to the “D” range.

16. Check the waveform and output voltage of the secondary speed sensor with engine idling.

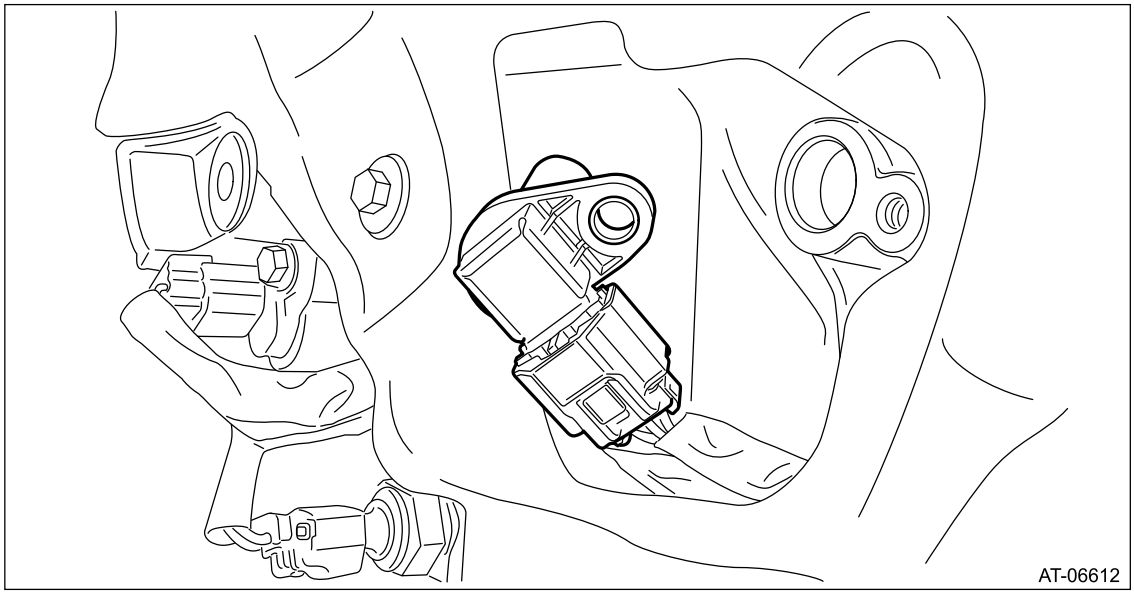
Note:

The waveform cycle changes as the speed changes.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Primary Speed Sensor

REMOVAL



Caution:

Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

1. Remove the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the primary speed sensor.

3. Remove the harness connector from primary speed sensor.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Primary Speed Sensor

INSTALLATION

Caution:

Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

1. Connect the harness connector.
2. Install the primary speed sensor.

   Note:

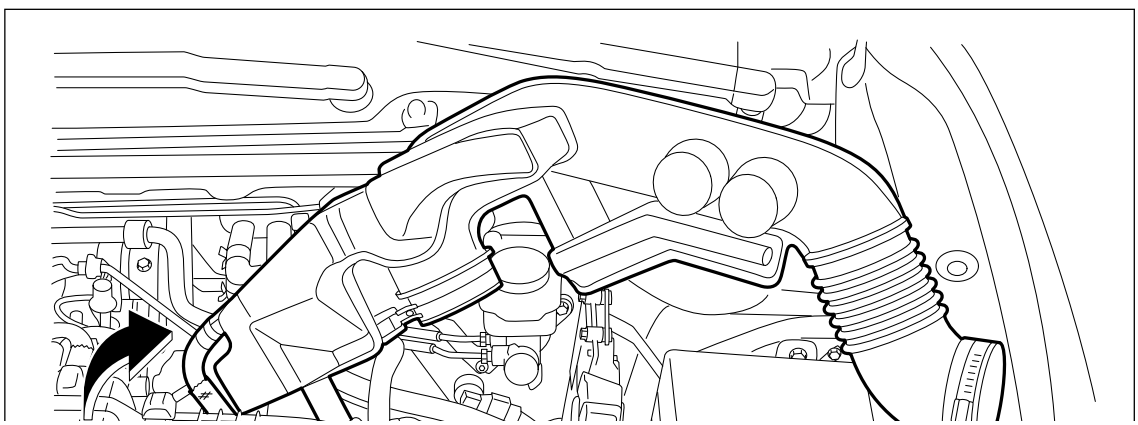
   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**

   Tightening torque:

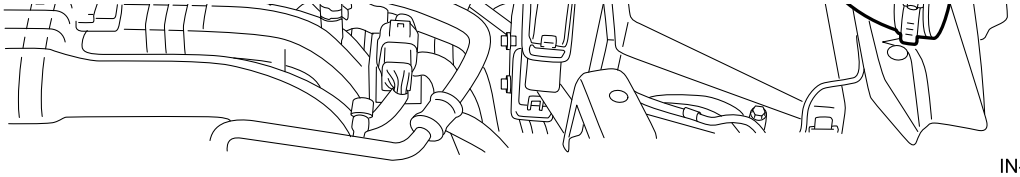
   7 N·m (0.7 kgf-m, 5.2 ft-lb)
3. Install the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Primary Speed Sensor

INSPECTION



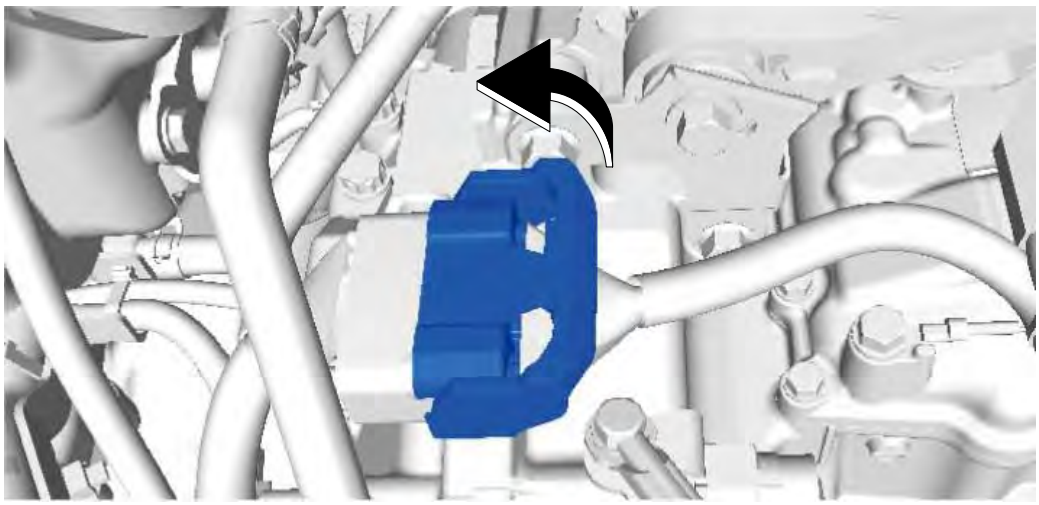
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.



3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

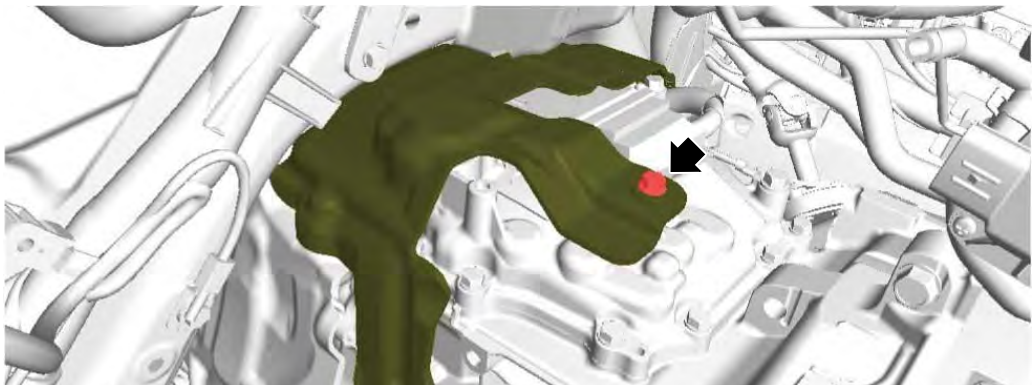
   Note:

   Be careful not to pull out the PCV hose.



IN-10111

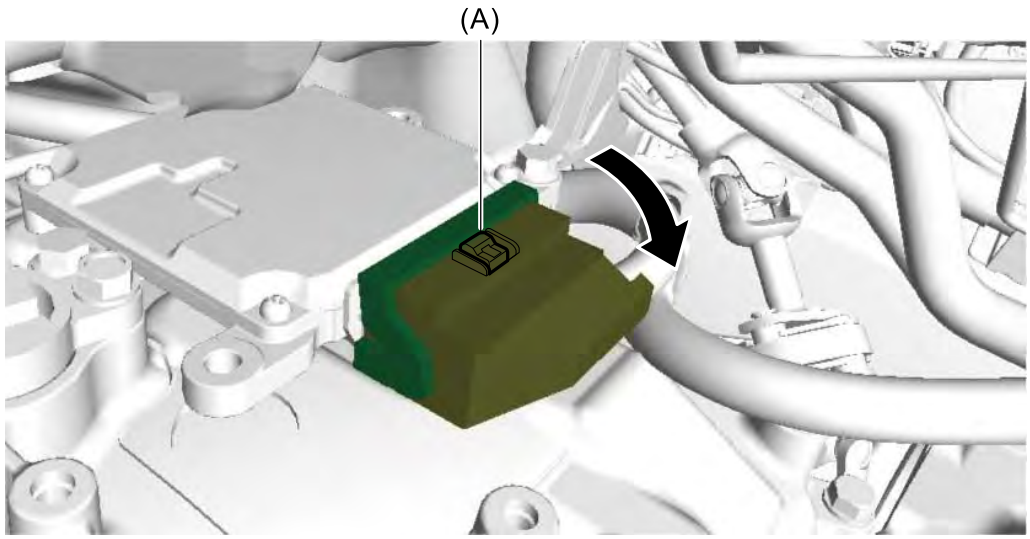
4. Remove the transmission radio ground terminal.



CVT10273

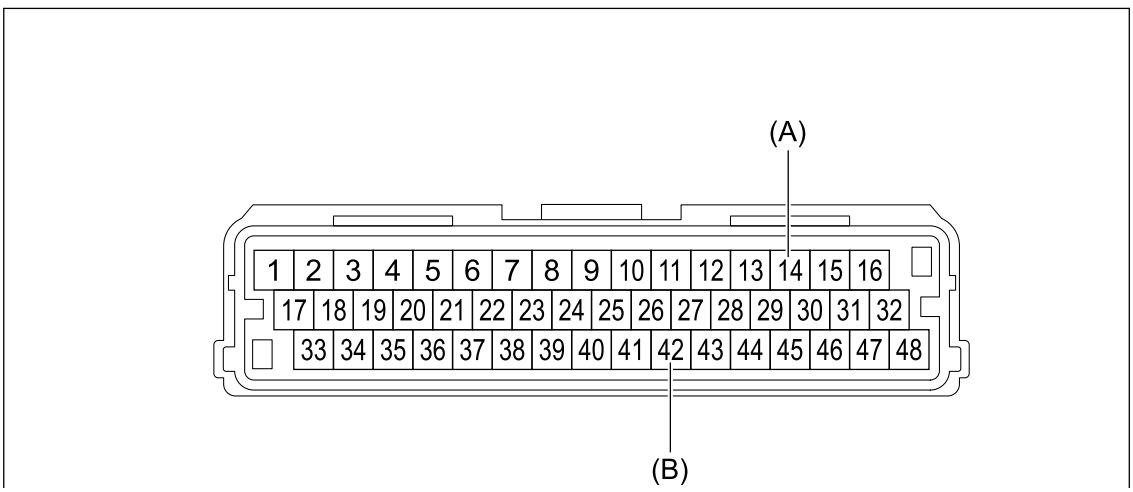
5. Disconnect the transmission harness connector.

CVT10266



6. Remove the transmission case cover (small).

CVT10283



7. Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

CVT10284

(A) Lock button

8. Set the ST between TCM and transmission harness. Ref. to TRANSMISSION (DIAGNOSTICS)>General Description>CAUTION.
   Preparation tool:
   ST: CHECK BOARD (18460AA040)
9. Connect the transmission radio ground terminal and transmission harness connector.
   Tightening torque:
   32.3 N·m (3.3 kgf-m, 23.8 ft-lb)
10. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
11. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
12. Set the probe of oscilloscope to the check board connector.
    Connector & terminal
    (B54)No. 14 (+) — No. 42 (−):

CVT00717

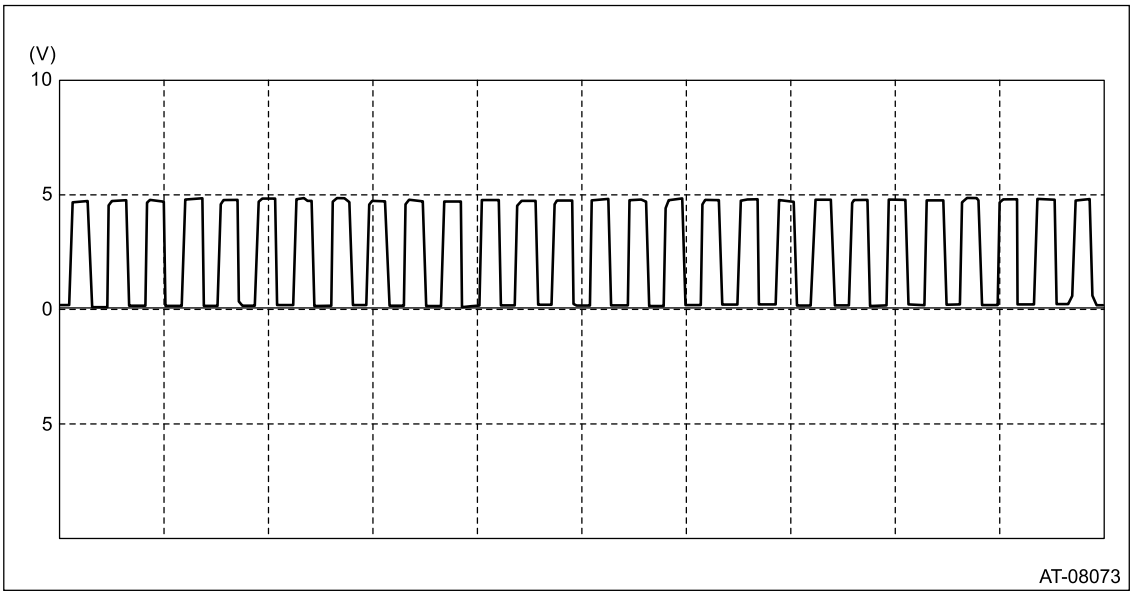
(A) + probe

(B) – probe

13. Start and warm up the engine.

14. Lift up the vehicle.

Caution:



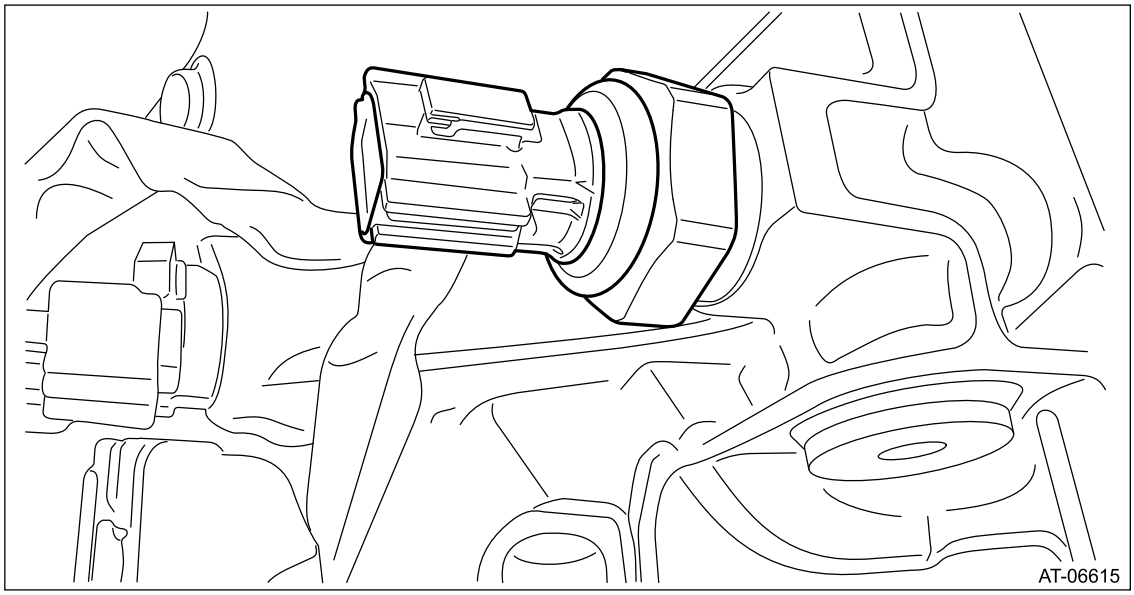
Lift up the vehicle until the tire bottom is 0.3 m (0.98 ft) or more above the ground.

15. Shift the select lever to the "D" range.

16. Check the waveform and output voltage of the primary speed sensor with engine idling.

Note:

The waveform cycle changes as the speed changes.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Secondary Pressure Sensor

REMOVAL

Caution:

- **Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.**
- **When secondary pressure sensor is removed, CVTF leaks. After installing the secondary pressure sensor, adjust the CVTF level.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Lift up the vehicle.
3. Remove the secondary pressure sensor connector.
4. Remove the secondary pressure sensor.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Secondary Pressure Sensor

INSTALLATION

Caution:

- **Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.**
- **After installing the secondary pressure sensor, adjust the CVTF level.**

Install in the reverse order of removal.

Note:

Use new O-rings.

Tightening torque:

39 N·m (4.0 kgf-m, 28.8 ft-lb)

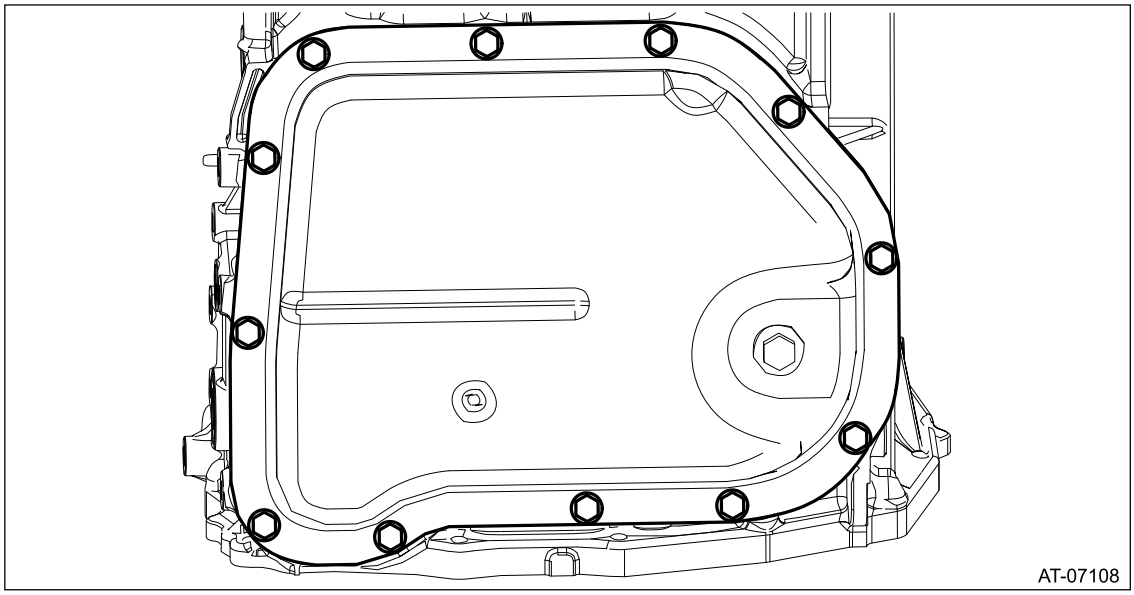
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Secondary Pressure Sensor

INSPECTION

1. Start and warm up the engine

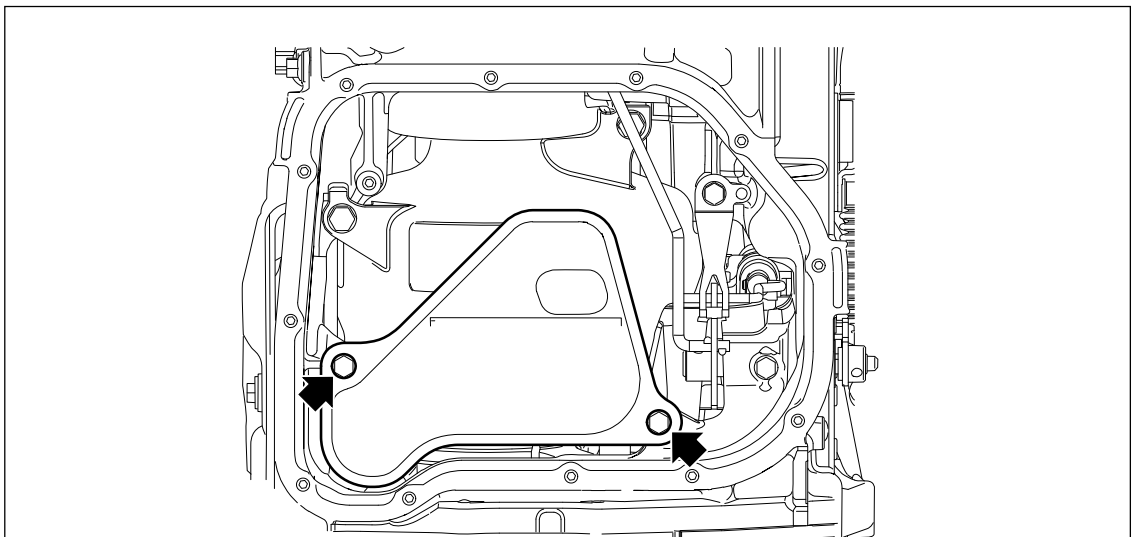
1. ~~Start and warm up the engine.~~
2. Depress the brake pedal, and shift the select lever to “D” range.
3. Shift the select lever to “P” or “N” range.
4. Depress the brake pedal and hold it.
5. Check «secondary pressure sensor voltage» by using Subaru Select Monitor while the engine is idling. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor>OPERATION.
   Standard
   Approx. 0.8 V
6. Check «secondary pressure sensor voltage» by using Subaru Select Monitor while the engine is stopped and the ignition switch is turned on. Ref. to TRANSMISSION (DIAGNOSTICS)>Data Monitor>OPERATION.
   Specification:
   Approx. 0.5 V

REMOVAL



Caution:

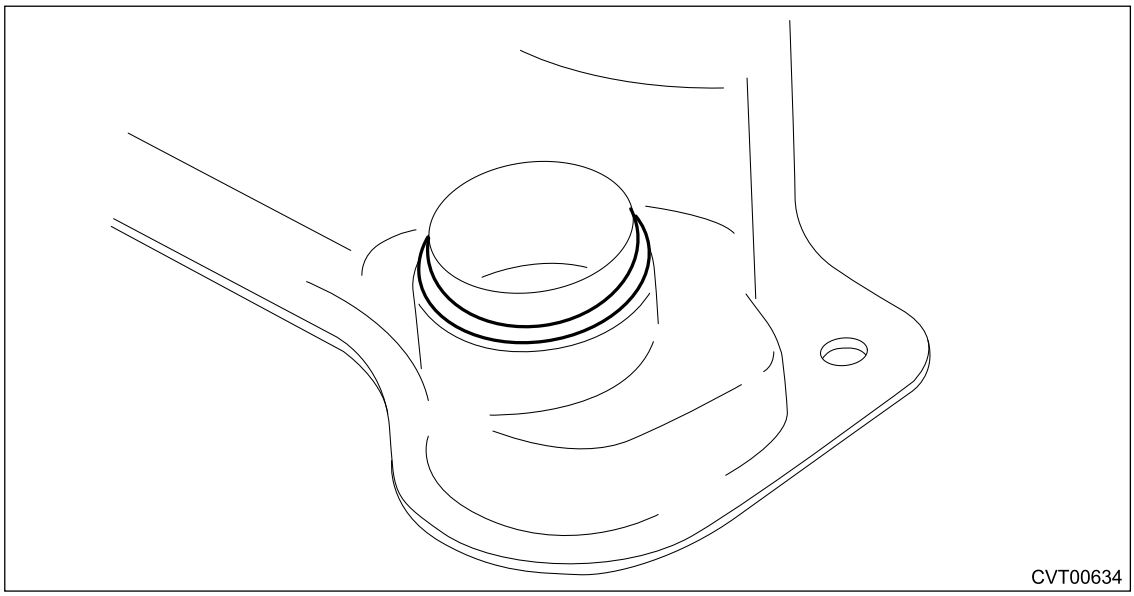
- **Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.**
- **Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.**



1. Lift up the vehicle.
2. Clean the transmission exterior.
3. Remove the CVTF drain plug to drain CVTF.
4. Remove the oil pan.

   Caution:

   Be careful not to allow foreign matter such as dust or dirt to enter the oil pan.

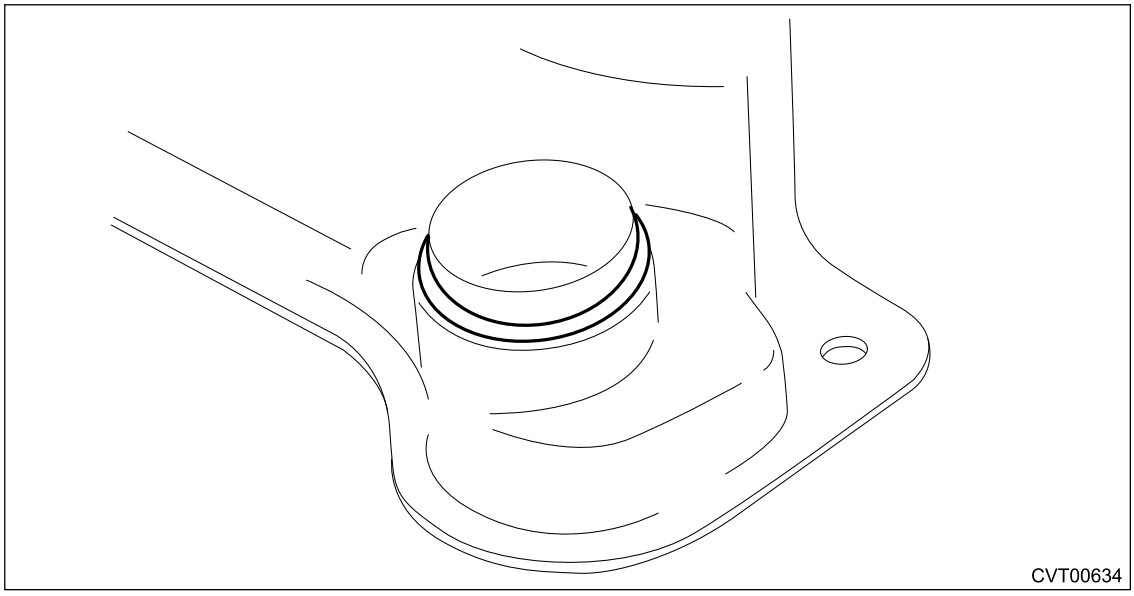


5. Remove the magnet.
6. Remove the oil strainer.

CVT00633

7. Remove the O-ring from oil strainer.

CVT00634



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pan and Strainer

INSTALLATION

1. Clean the mating surface of oil pan and transmission case.
2. Install the O-ring to the oil strainer.

   Note:

   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**

CVT00634

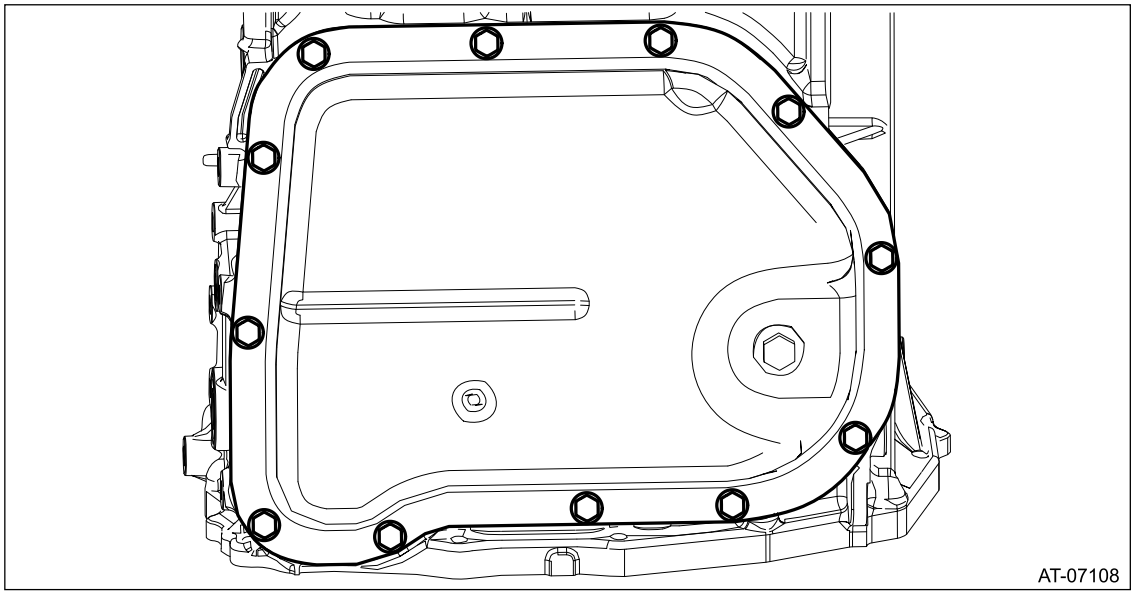
3. Install the oil strainer.

   Tightening torque:

   9 N·m (0.9 kgf-m, 6.6 ft-lb)

4. Clean the magnet.
5. Attach the magnet at the specified position of the oil pan.
6. Apply liquid gasket all around the oil pan mating surface seamlessly.

Liquid gasket:



THREE BOND 1217B (Part No. K0877YA020) or equivalent

7. Install the oil pan by equally tightening the bolts.

Tightening torque:

5 N·m (0.5 kgf-m, 3.7 ft-lb)

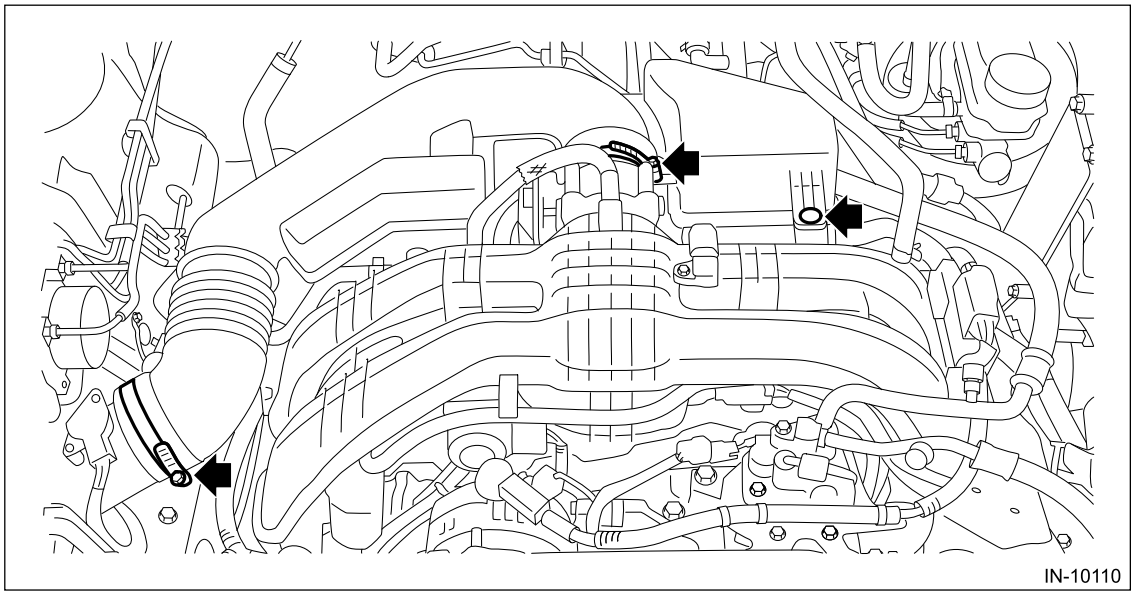
8. Refill CVTF and adjust the level. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>REPLACEMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pan and Strainer

INSPECTION

- Check each part for damage or dust.
- Check oil strainer for clogging.

REMOVAL

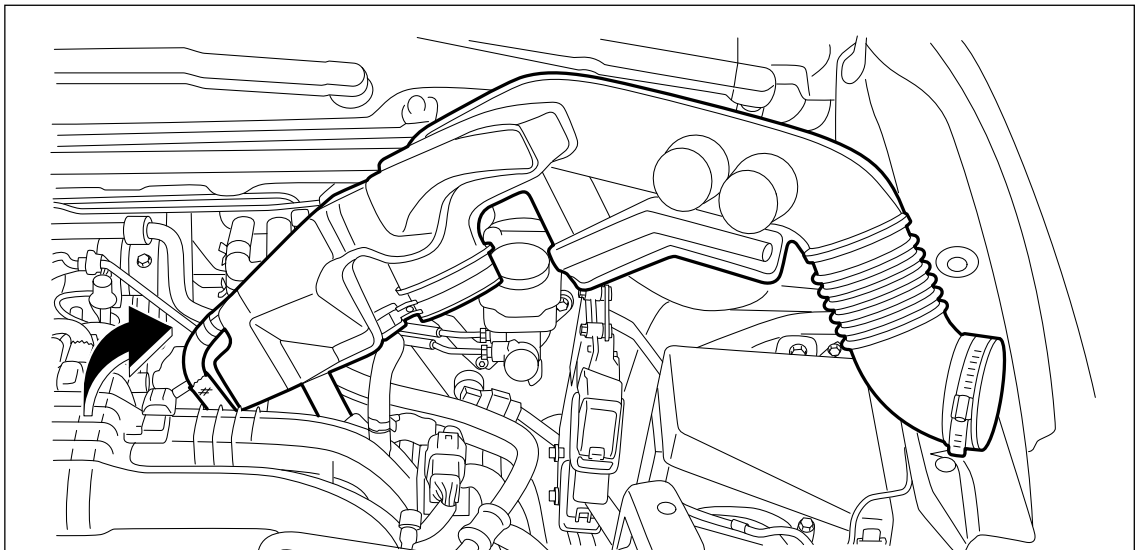


Caution:

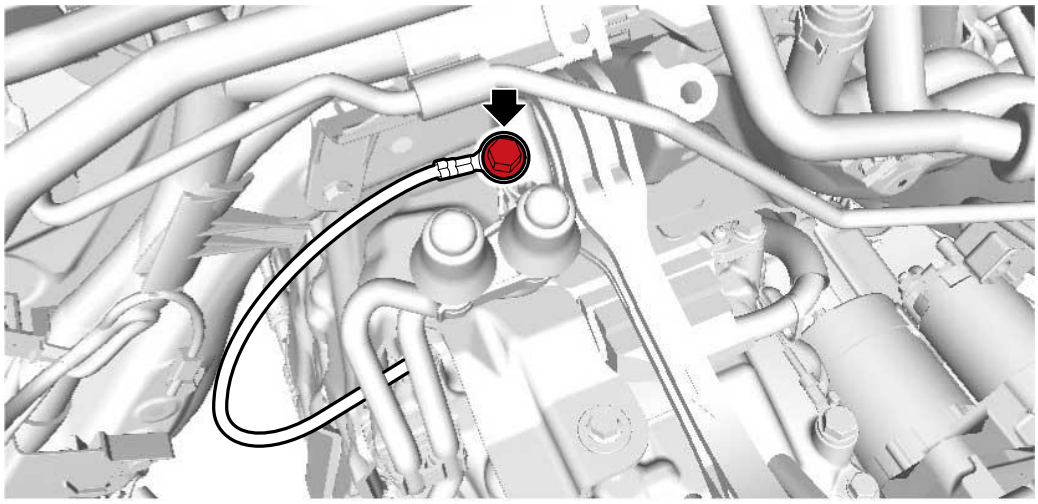
- **Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.**
- **Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.**
- **Always clean the engine compartment before removal.**

Note:

The control valve body is replaced as an assembly only, because it is a non-disassembly part.



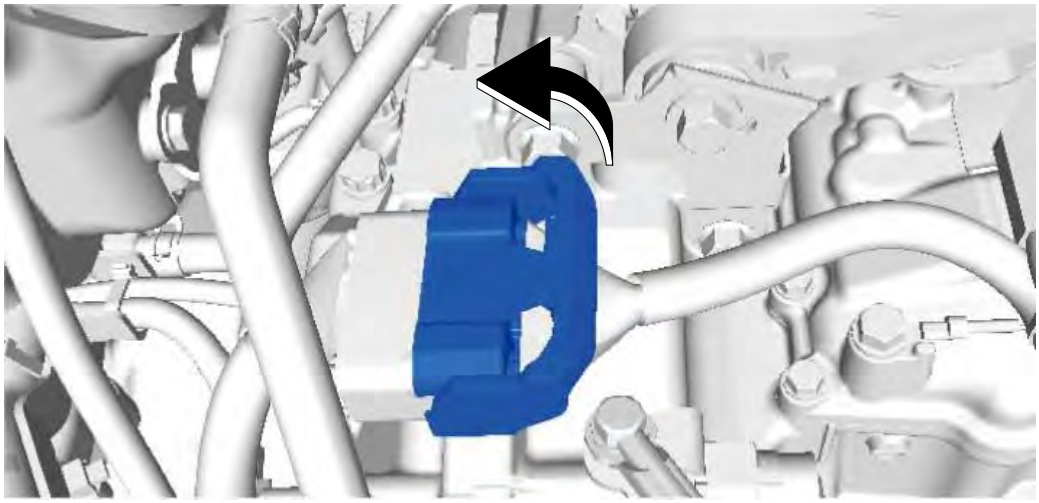
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.



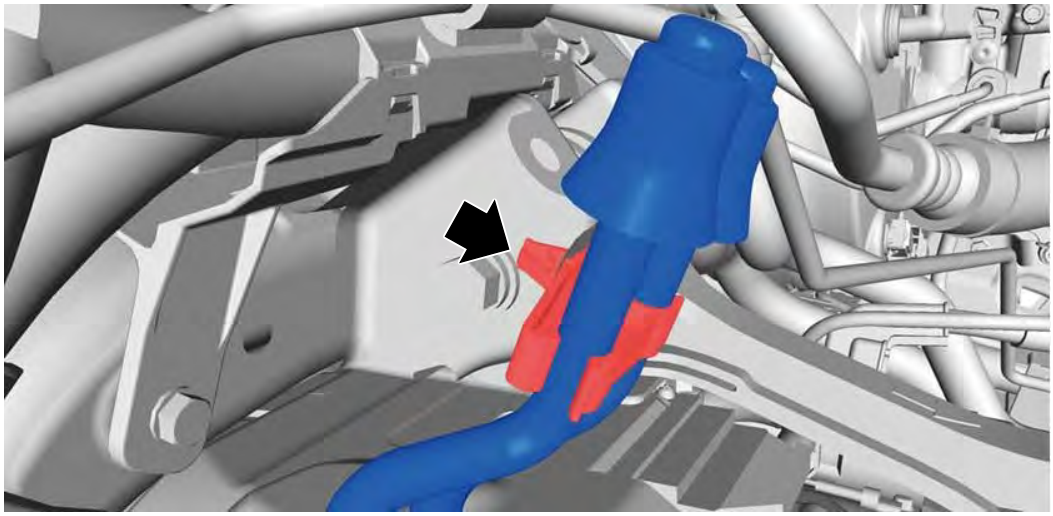
3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Note:

Be careful not to pull out the PCV hose.

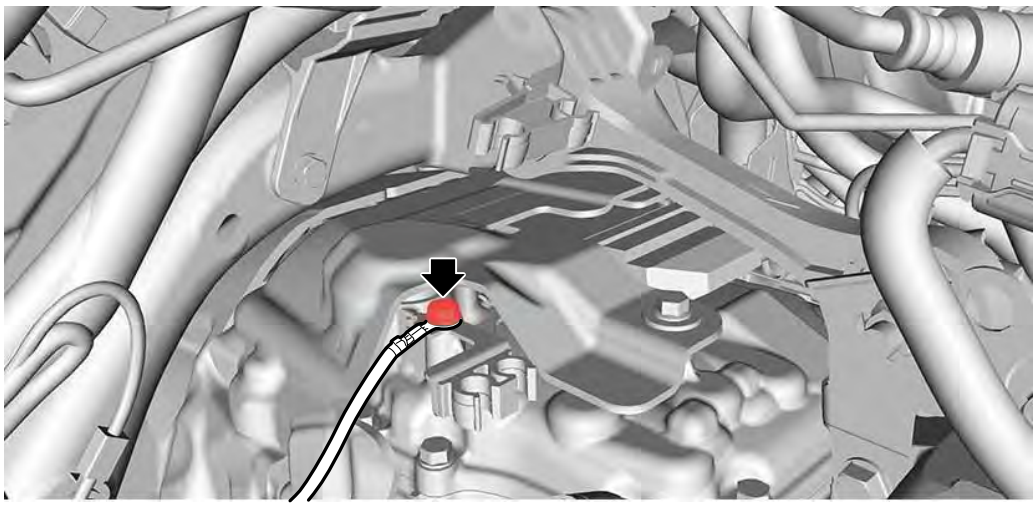


4. Remove the transmission radio ground terminal.



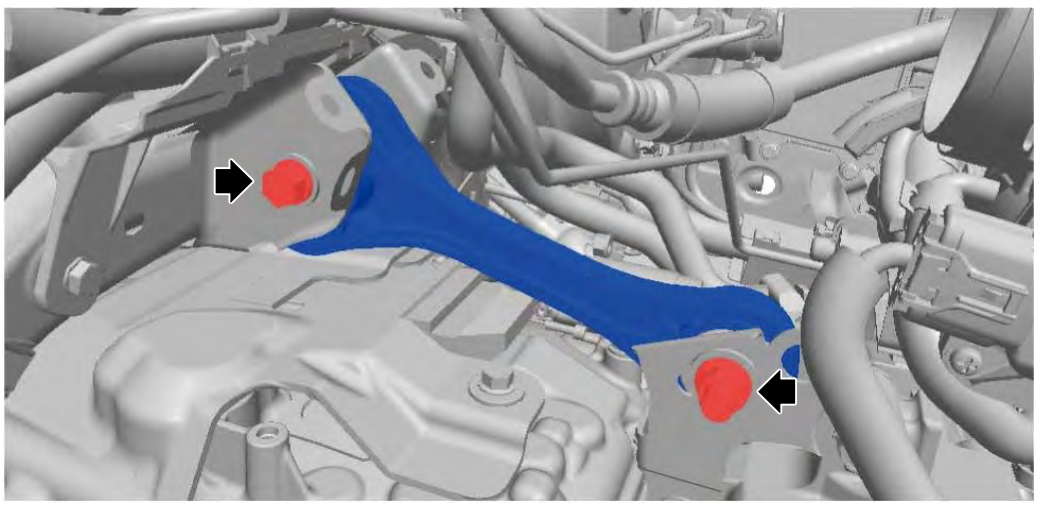
CVT10273

5. Disconnect the transmission harness connector.



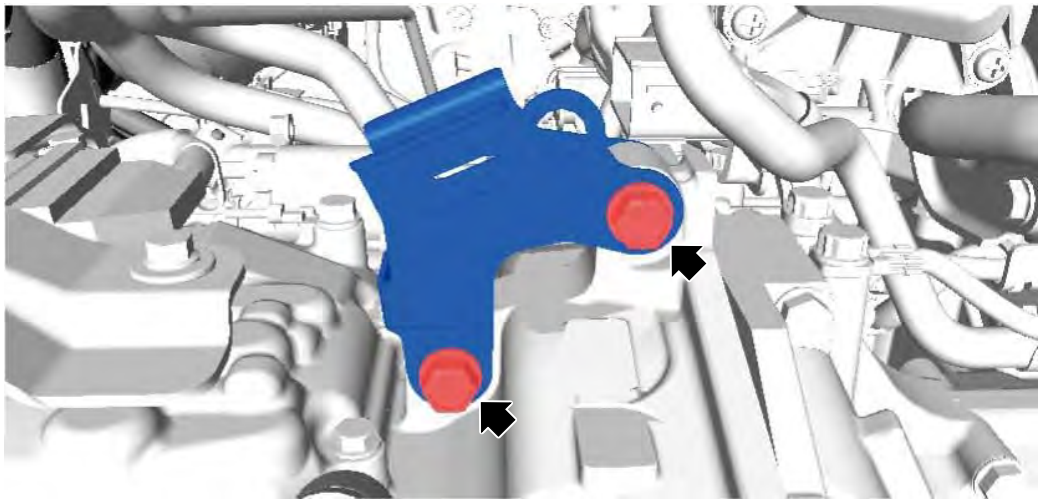
CVT10266

6. Remove the air breather hose together with the bracket.



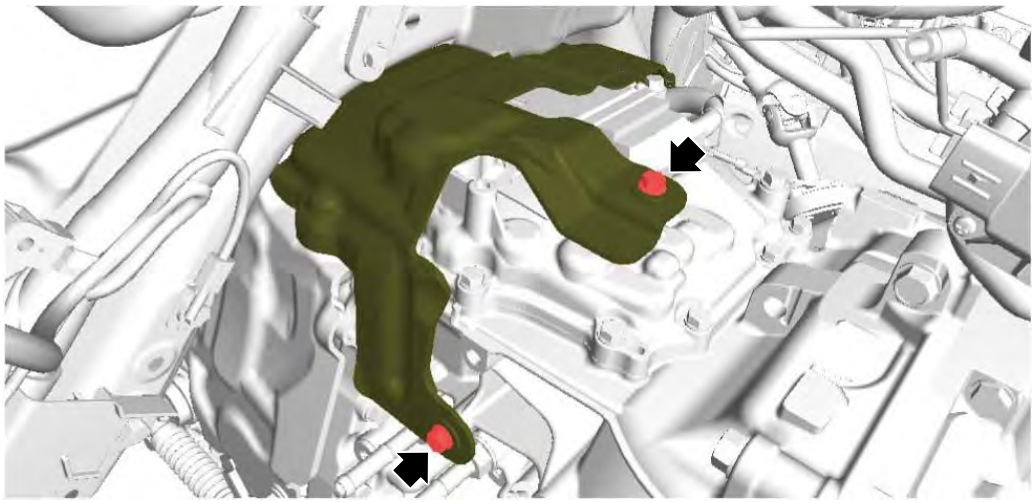
CVT10439

7. Remove the transmission radio ground cord.



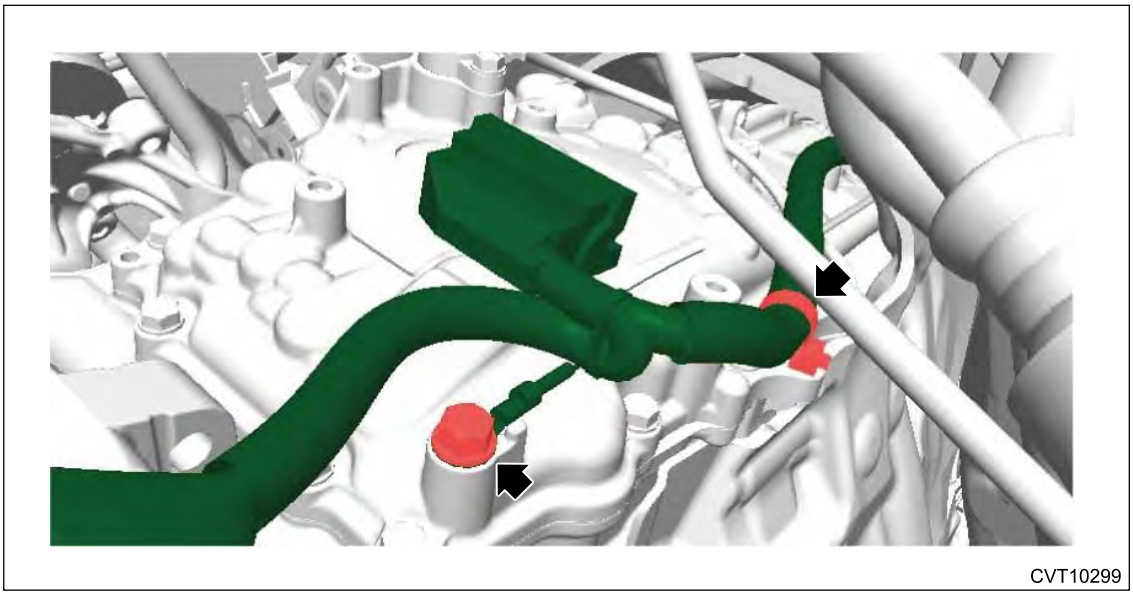
CVT10268

8. Remove the pitching stopper.



CVT10272

9. Remove the pitching stopper bracket.



CVT10276

10. Remove the transmission case cover (small).

CVT10283

11. Remove the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>REMOVAL.

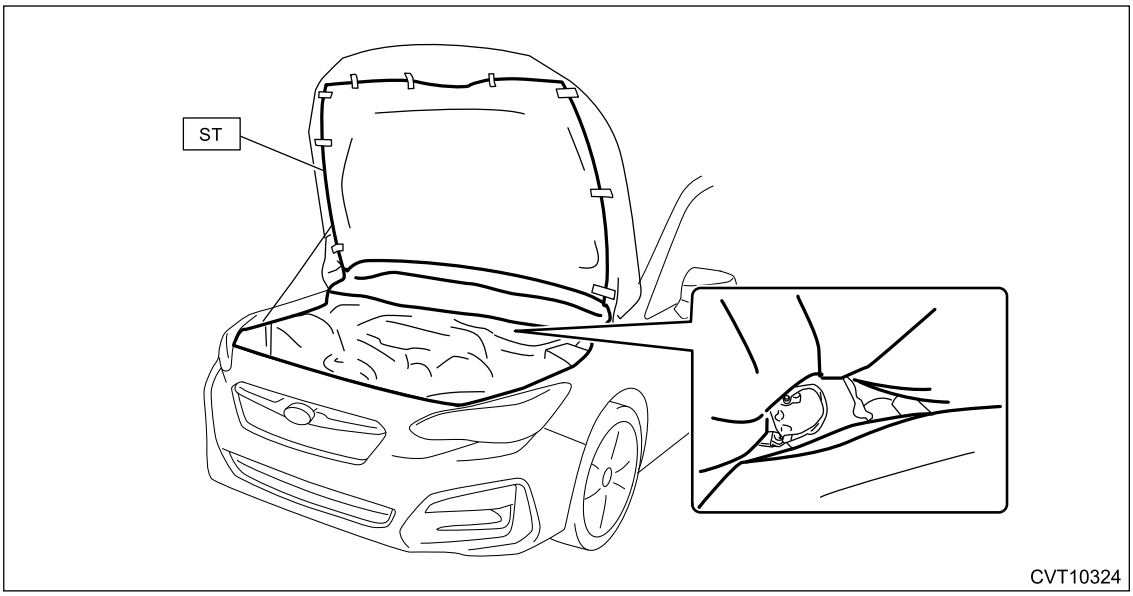
12. Remove the transmission harness clip and ground terminal.

13. Remove the throttle body, and move it aside so that it will not interfere with the removal of the control valve. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>REMOVAL.

Note:

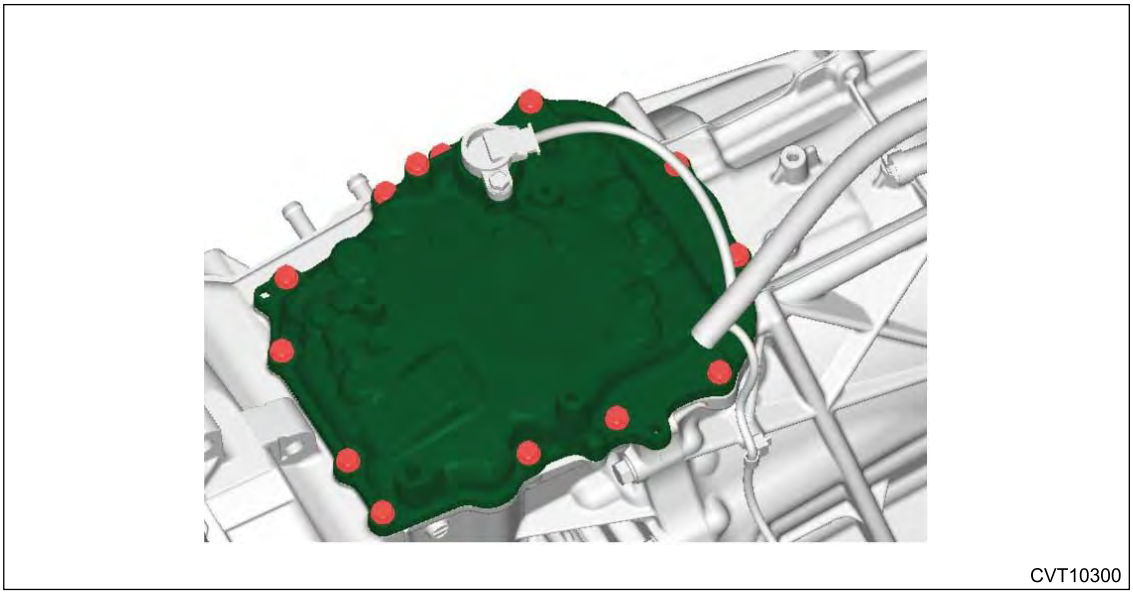
Do not remove the preheater hose.

14. Clean the transmission exterior.



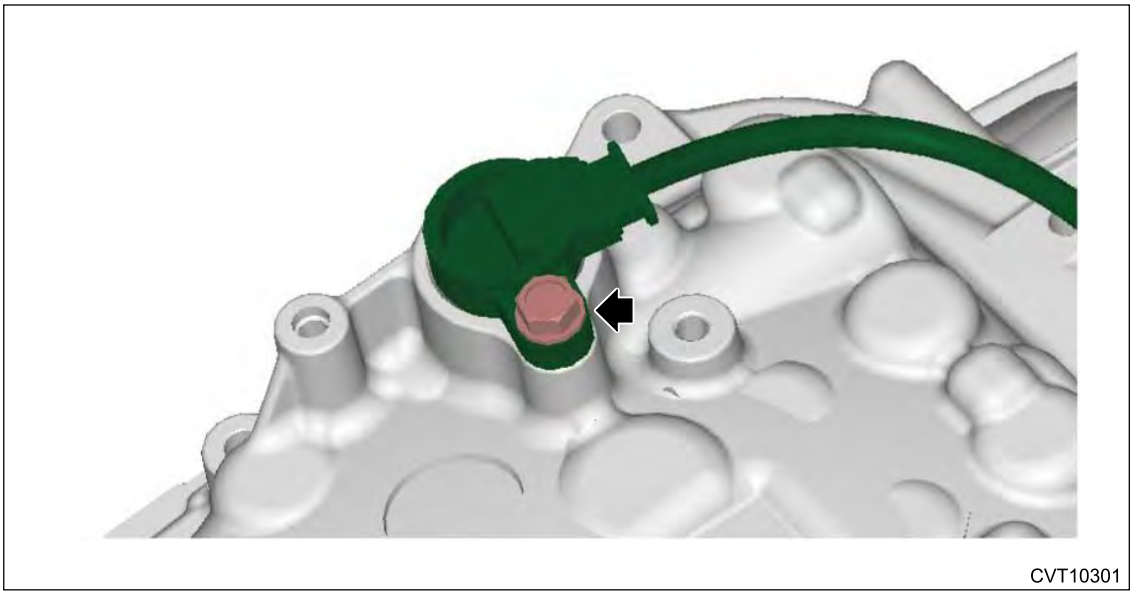
15. Fix the ST with tape, and set the ST to the vehicle.

Note:

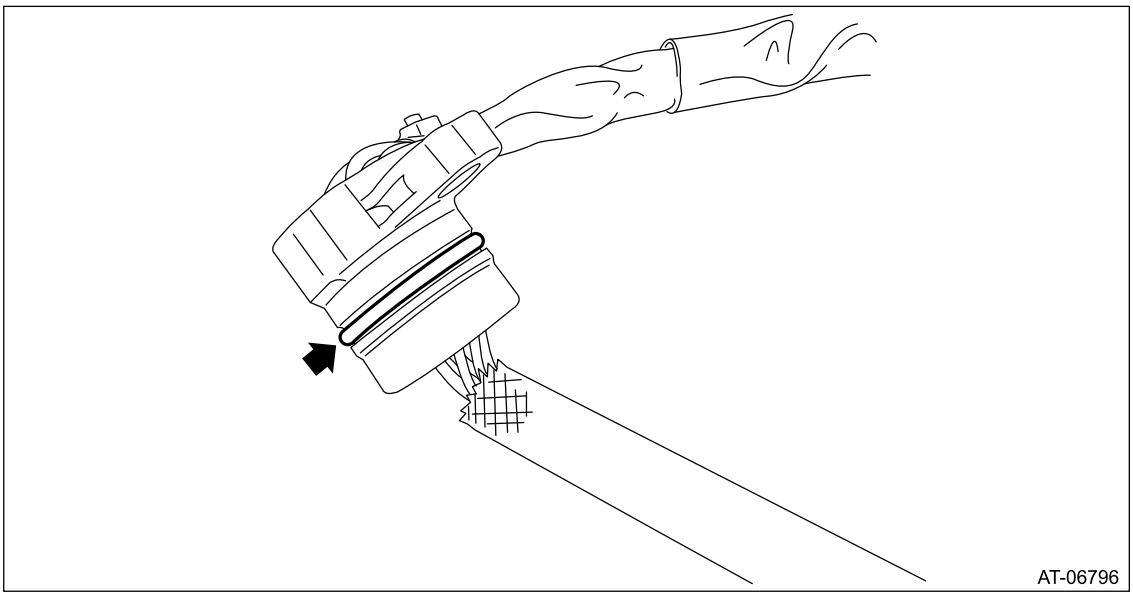


When replacing the control valve body, the sheet is included in the control valve body for repairs.

Preparation tool:

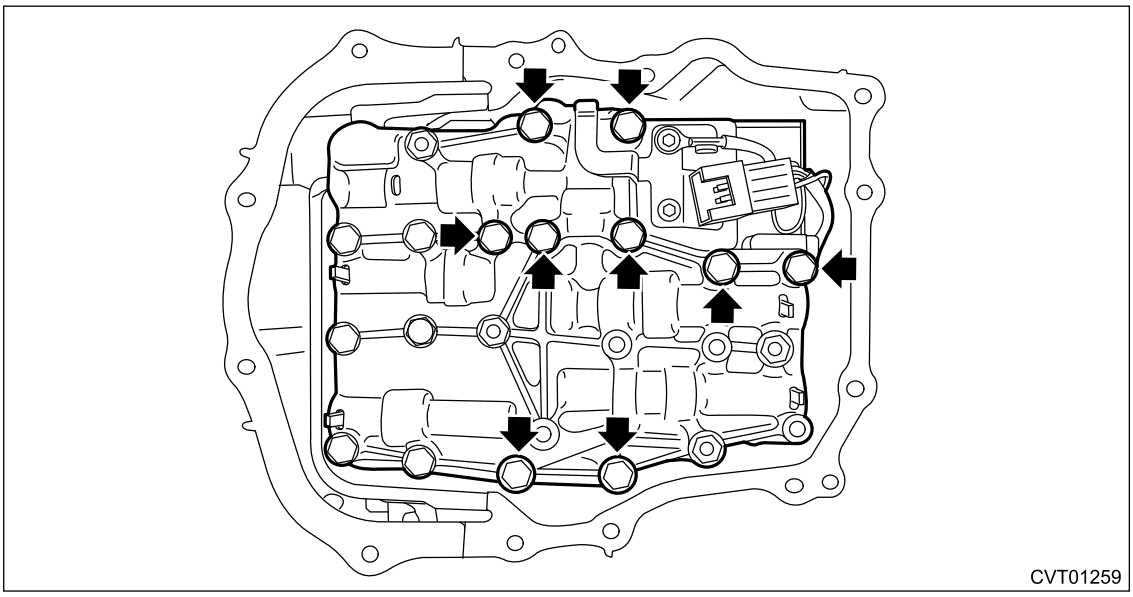


ST: SHEET SPECIAL TOOL (18761AA010)

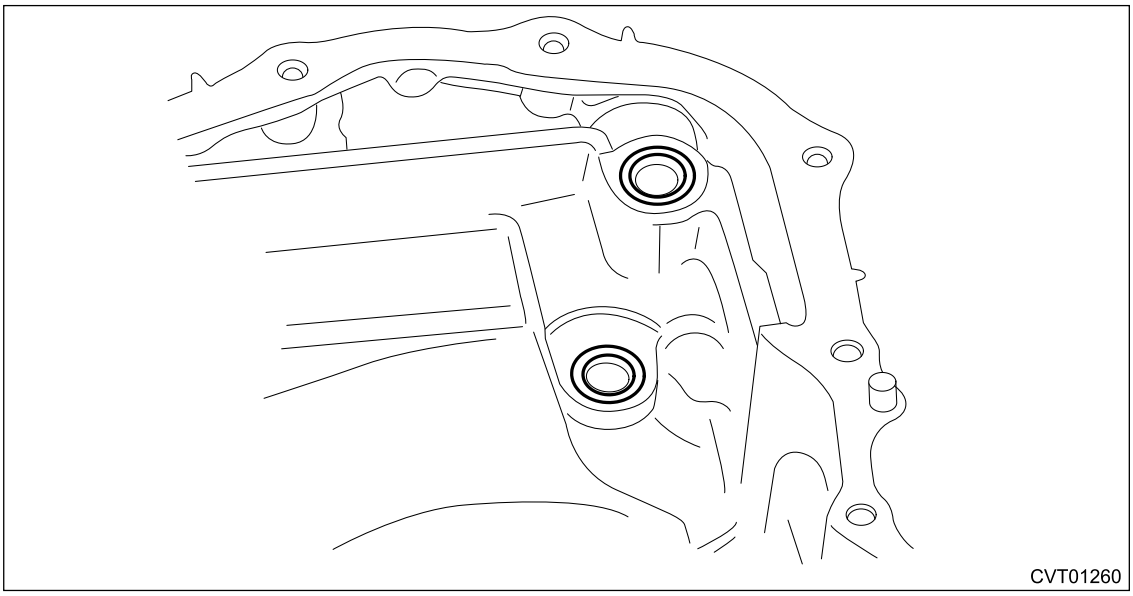


16. Remove the valve cover and gasket.

17. Remove the transmission harness from the valve cover.



18. Remove the O-ring from the transmission harness.



19. Disconnect the harness connector from the control valve body.

20. Remove the control valve body.

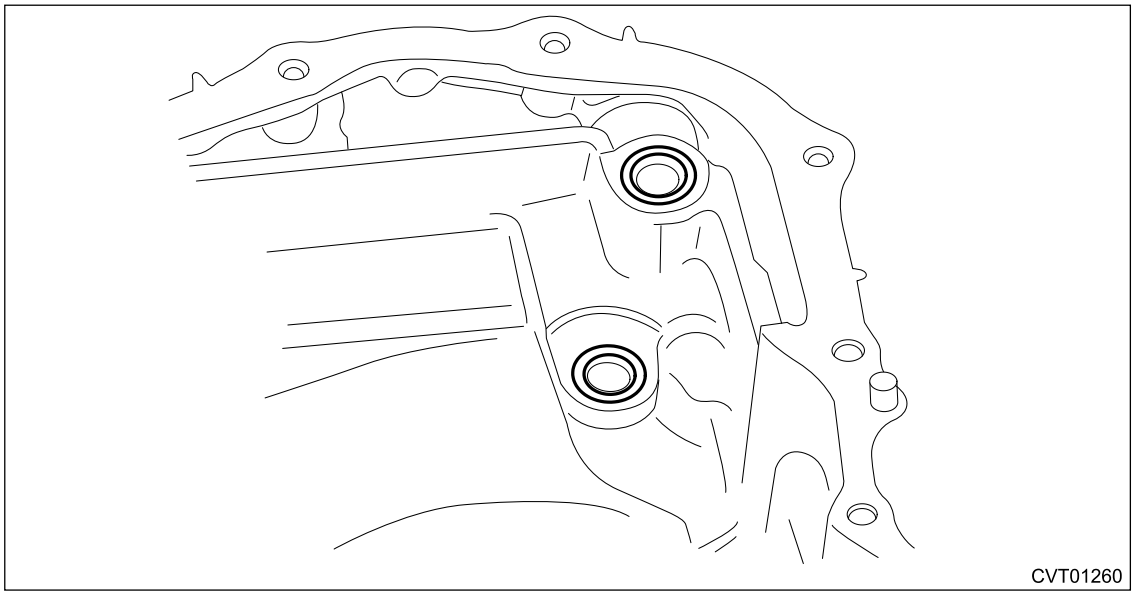
21. Remove the O-ring from the transmission.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Control Valve Body

INSTALLATION

1. Clean the mating surface of valve cover and transmission side.

Caution:



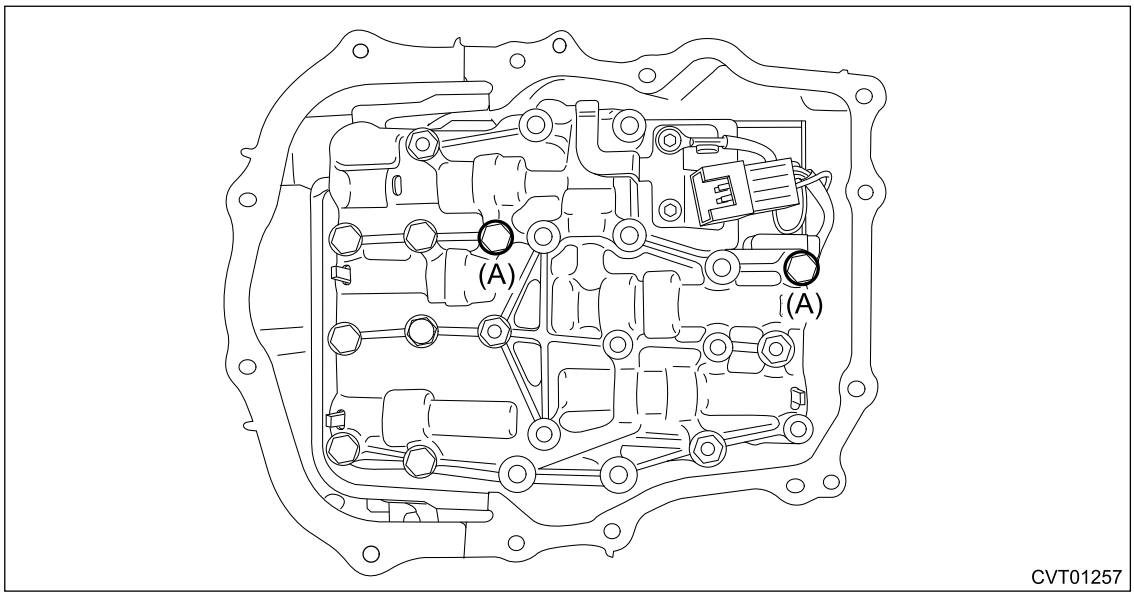
When cleaning the mating surface of the transmission side, be careful not to allow any dust, foreign matter and used liquid gasket to enter the transmission.

2. Check the control valve body for dust and other foreign matter.

3. Install the O-rings.

Note:

- **Use new O-rings.**
- **Apply CVTF to the O-rings.**

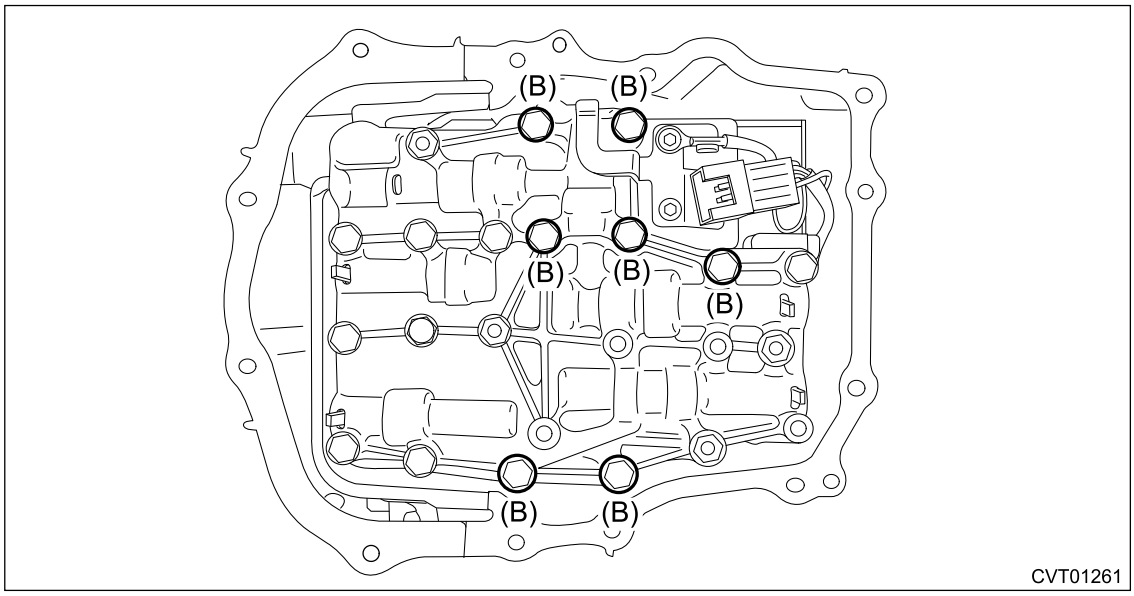


4. Install the control valve body.

(1) Install the control valve body to the transmission.

Caution:

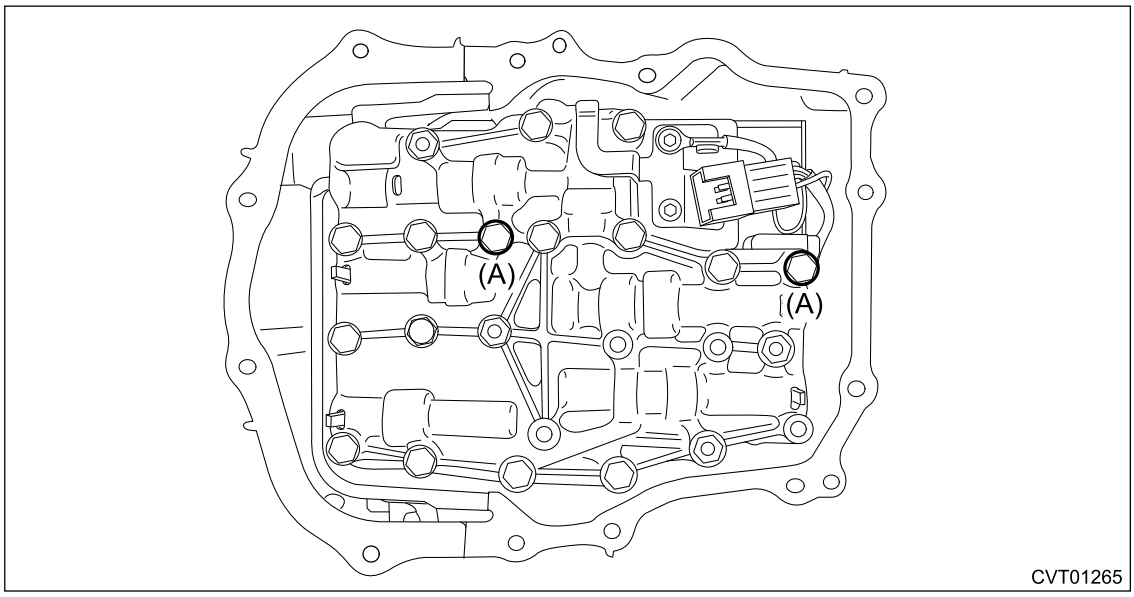
- **Do not damage the O-ring.**
- **Perform installation so that the O-ring is not displaced.**



(2) Temporarily tighten the bolt (A: silver).

(3) Attach the bolt (B).

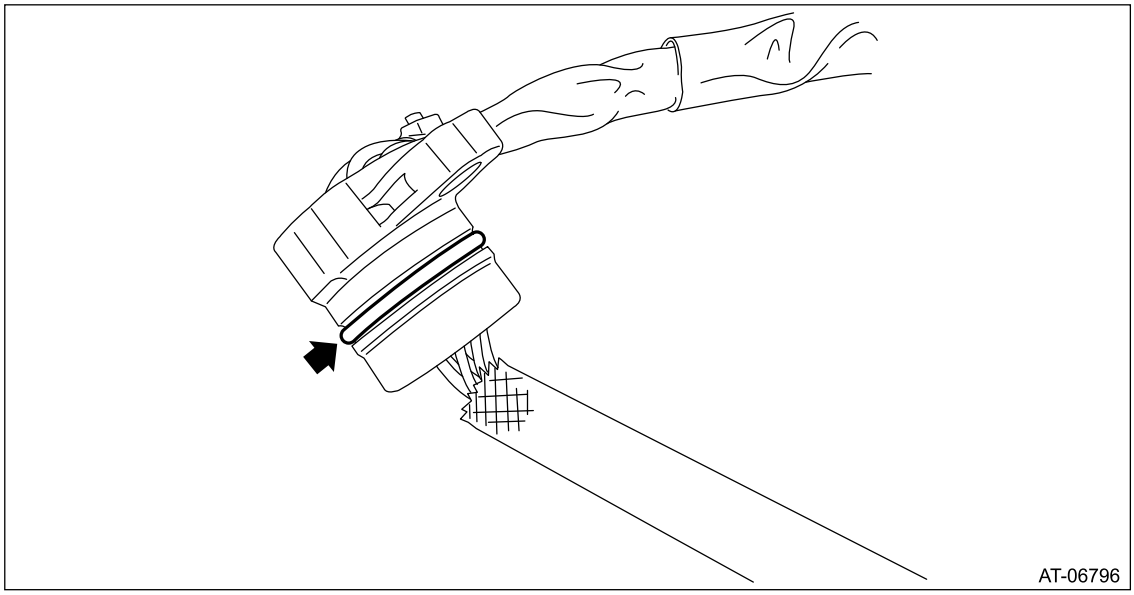
Tightening torque:



9 N·m (0.9 kgf-m, 6.6 ft-lb)

(4) Tighten the bolt (A: silver).

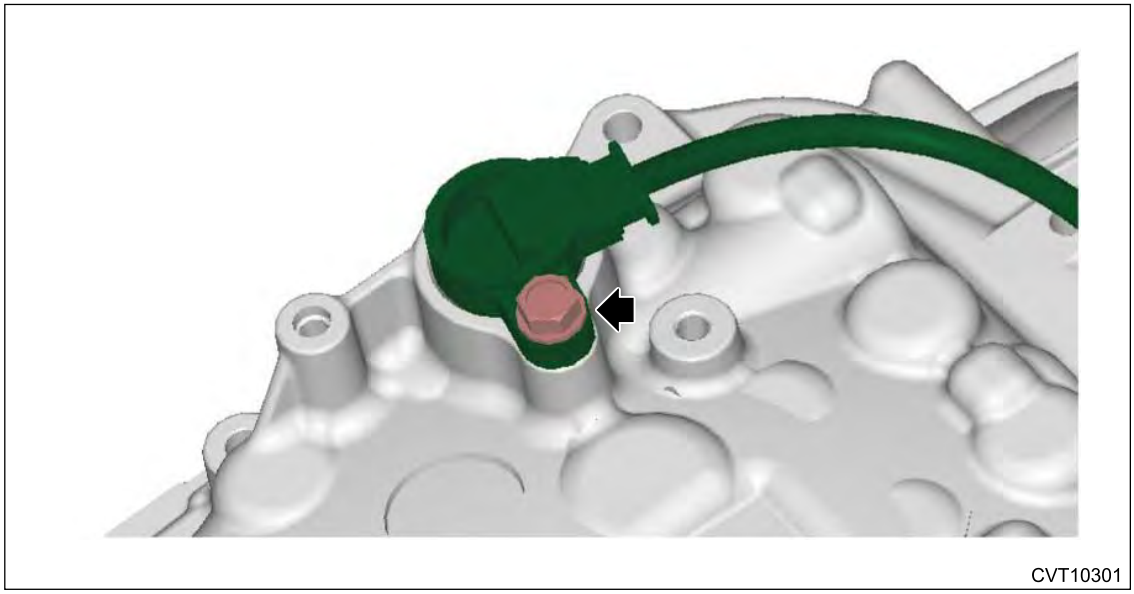
Tightening torque:



9 N·m (0.9 kgf-m, 6.6 ft-lb)

5. Install the O-ring to the transmission harness.

Note:



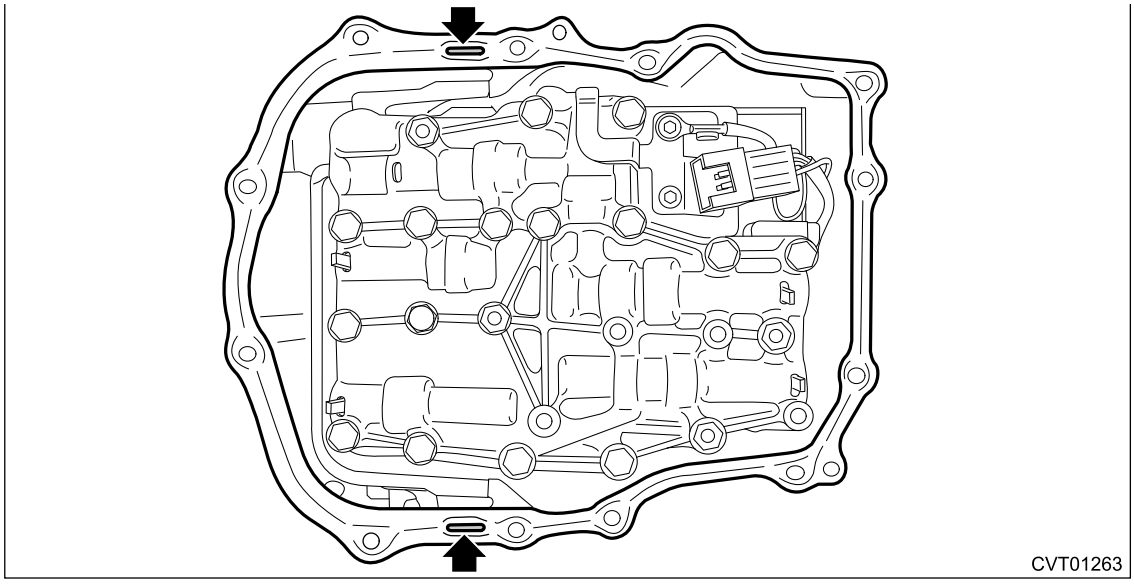
- **Use new O-rings.**
- **Apply CVTF to the O-rings.**

6. Install the transmission harness to the valve cover.

Tightening torque:

7 N·m (0.7 kgf-m, 5.2 ft-lb)

7. Install the gasket to the transmission.



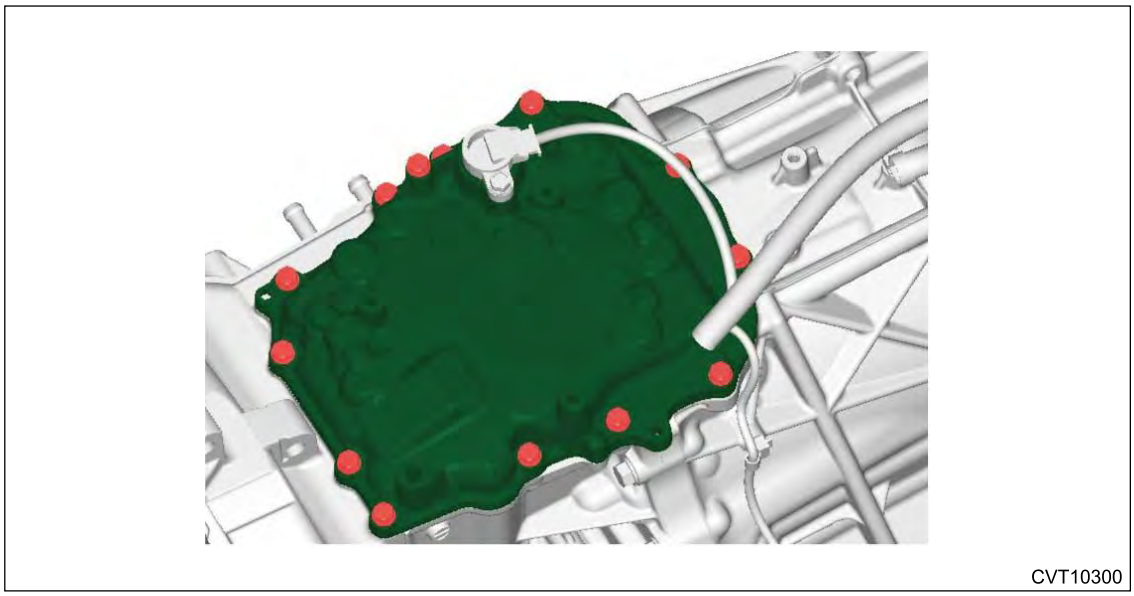
Note:

Use a new gasket.

8. Apply liquid gasket to the oval hole of gasket.

Liquid gasket:

THREE BOND 1215B or equivalent



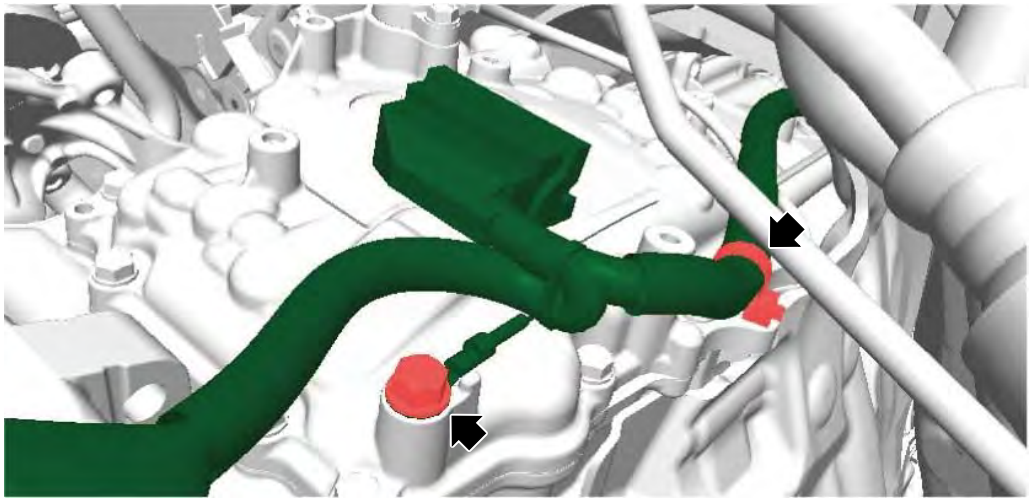
9. Install the valve cover.

Caution:

Be careful not to catch the sheet of the ST.

Tightening torque:

8 N·m (0.8 kgf-m, 5.9 ft-lb)

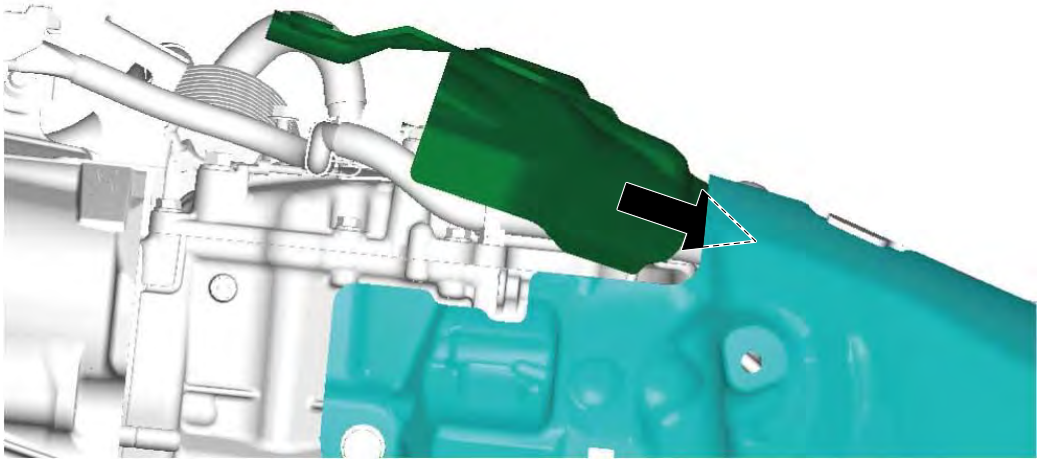


10. Remove the ST (SHEET SPECIAL TOOL).

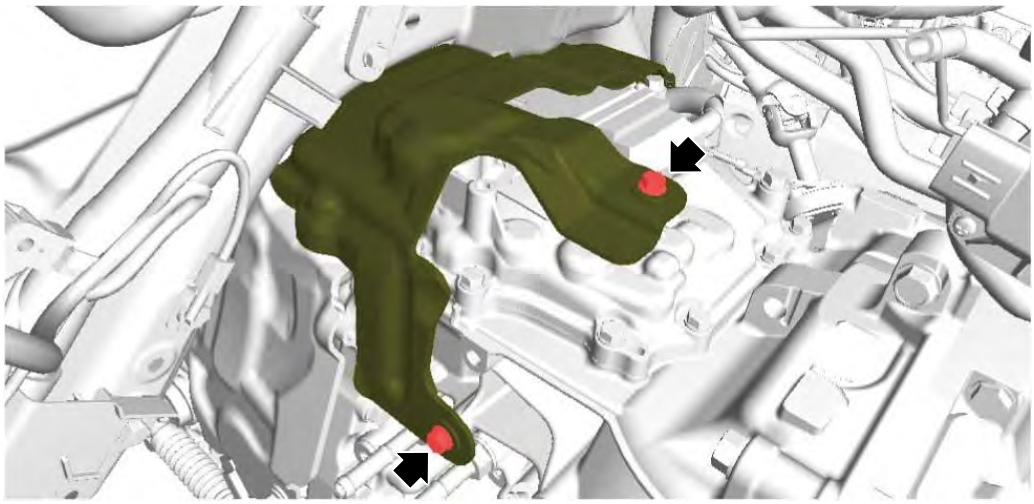
11. Install the throttle body. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Throttle Body>INSTALLATION.

12. Install the transmission harness clip and transmission ground terminal.

Tightening torque:



14 N·m (1.4 kgf-m, 10.3 ft-lb)



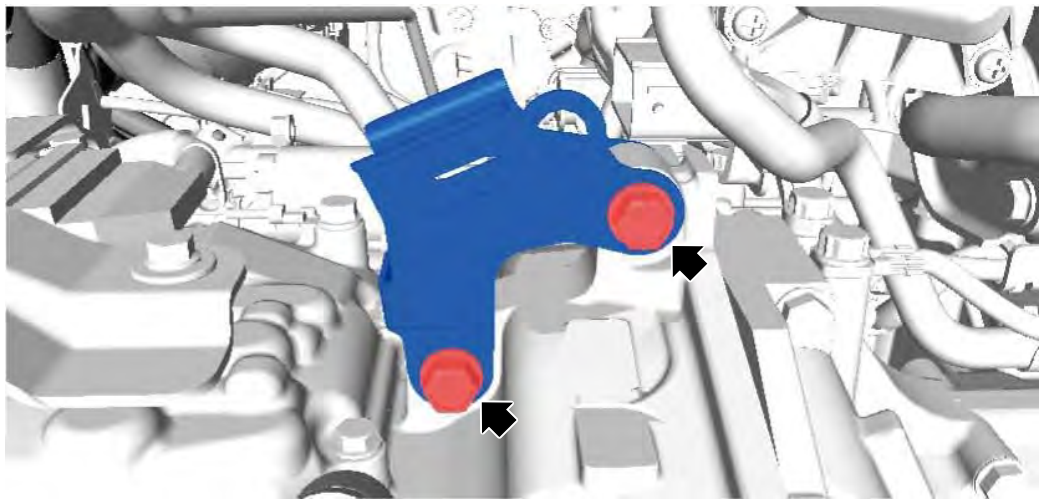
CVT10299

13. Install the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM)>INSTALLATION.
14. Insert the transmission case cover (small) between transmission case cover (large) and transmission to install.

Tightening torque:

Cover (small): 7 N·m (0.7 kgf-m, 3.7 ft-lb)
Cover (large): 8 N·m (0.8 kgf-m, 5.9 ft-lb)

CVT10293

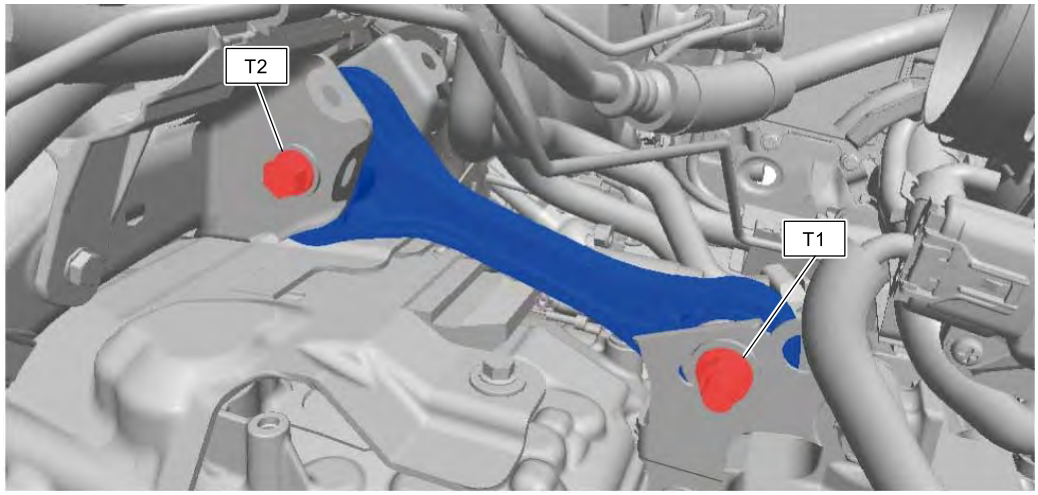


CVT10283

15. Install the pitching stopper bracket.

Tightening torque:

41 N·m (4.2 kgf-m, 30.2 ft-lb)



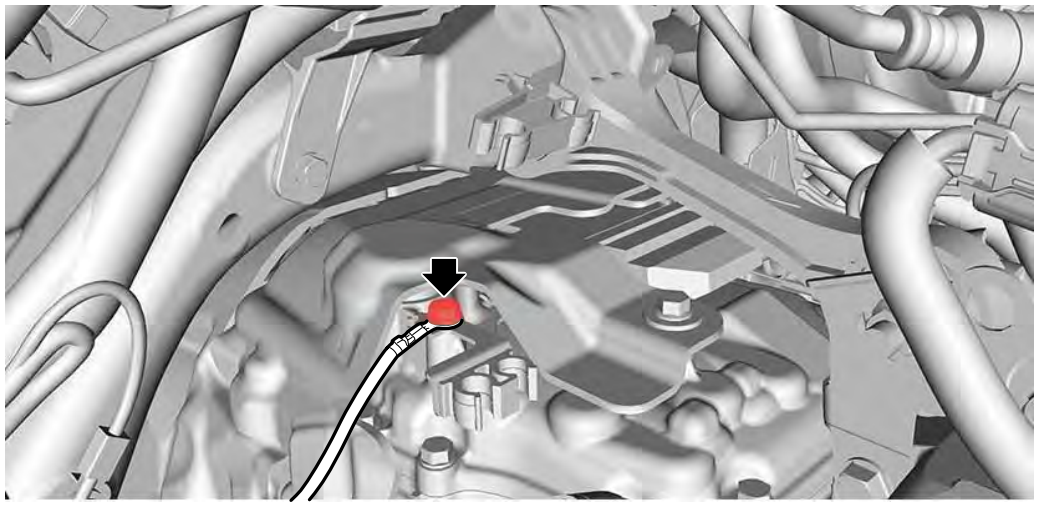
CVT10276

16. Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

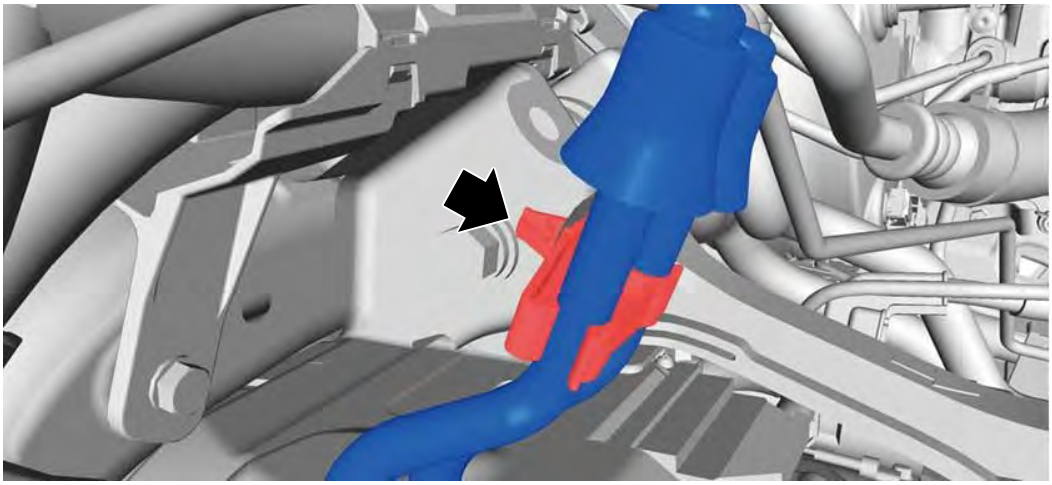
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



CVT10319

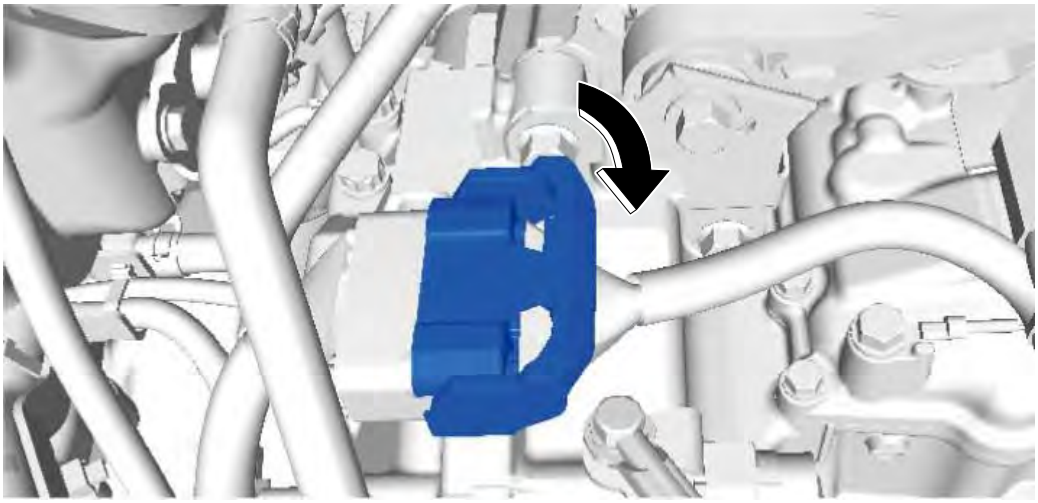
17. Install the transmission radio ground cord.

Tightening torque:



7 N·m (0.7 kgf-m, 5.2 ft-lb)

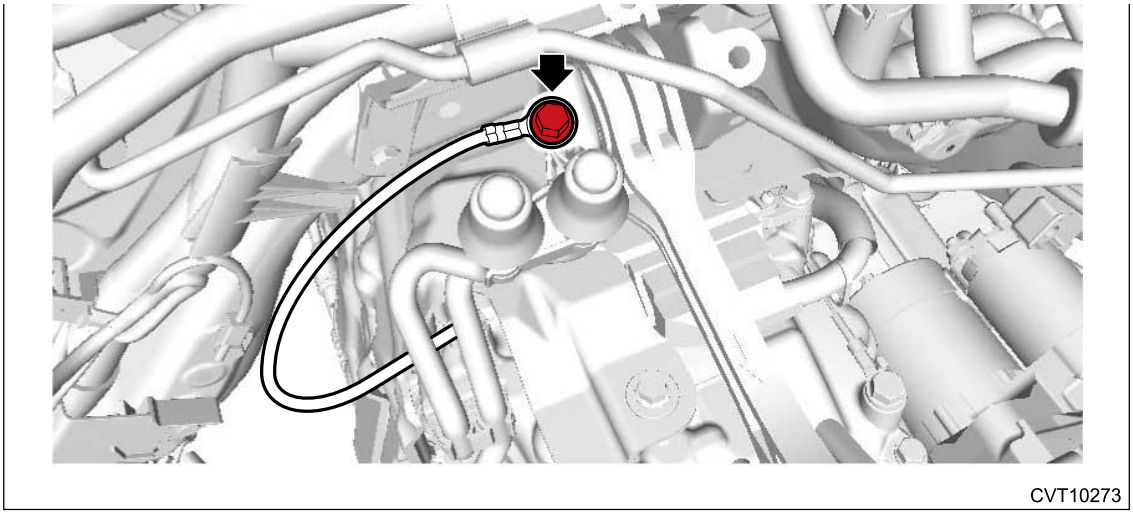
CVT10268



18. Install the air breather hose and air breather hose bracket.

CVT10439

19. Connect the transmission harness connector.

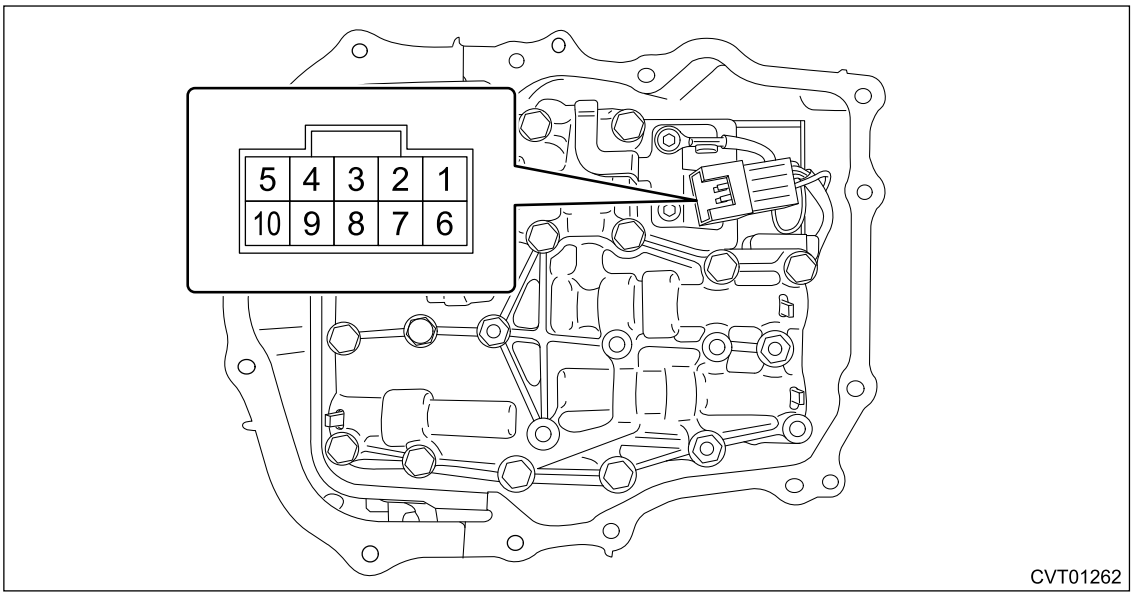


CVT10438

20. Connect the transmission radio ground terminal.

Tightening torque:

32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



21. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
22. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
23. Adjust the amount of CVTF. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.
24. Using the Subaru Select Monitor, perform [Clear AT learning value] on [Work Support], and perform [AT learning mode]. Ref. to TRANSMISSION (DIAGNOSTICS)>Learning Control>PROCEDURE.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Control Valve Body

INSPECTION

- Check each part for damage or dust.
- Measure the resistance of each solenoid, sensor and ground wire.

Note:
Measurement should be performed at a temperature of 20°C (68°F).

- **Solenoid**

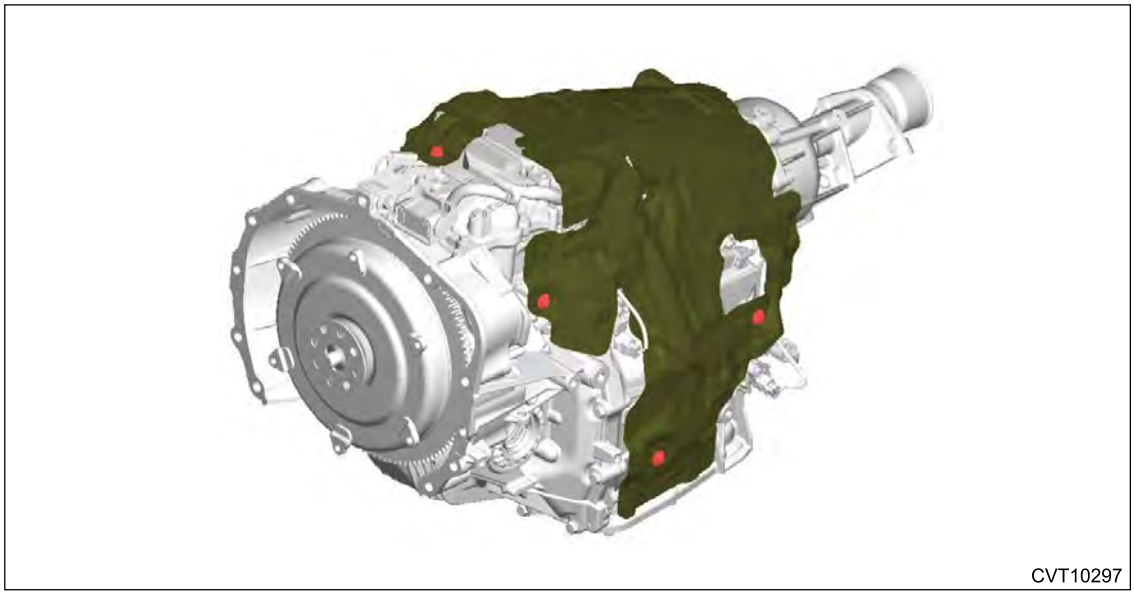
Solenoid	Terminal No.	Standard
Primary UP solenoid	No. 2 — Control valve body	Approx. 10 — 13.5Ω

Solenoid	Terminal No.	Standard
Secondary solenoid	No. 3 — Control valve body	Approx. 5 — 7 Ω
F&R clutch solenoid	No. 4 — Control valve body	Approx. 4 — 6 Ω

F&R clutch solenoid	No. 4 — Control valve body	Approx. 4 — 6 Ω
Primary DOWN solenoid	No. 7 — Control valve body	Approx. 10 — 13.5Ω
Lock-up duty solenoid	No. 9 — Control valve body	Approx. 10 — 13.5Ω
AWD solenoid	No. 10 — Control valve body	Approx. 2 — 4.5Ω

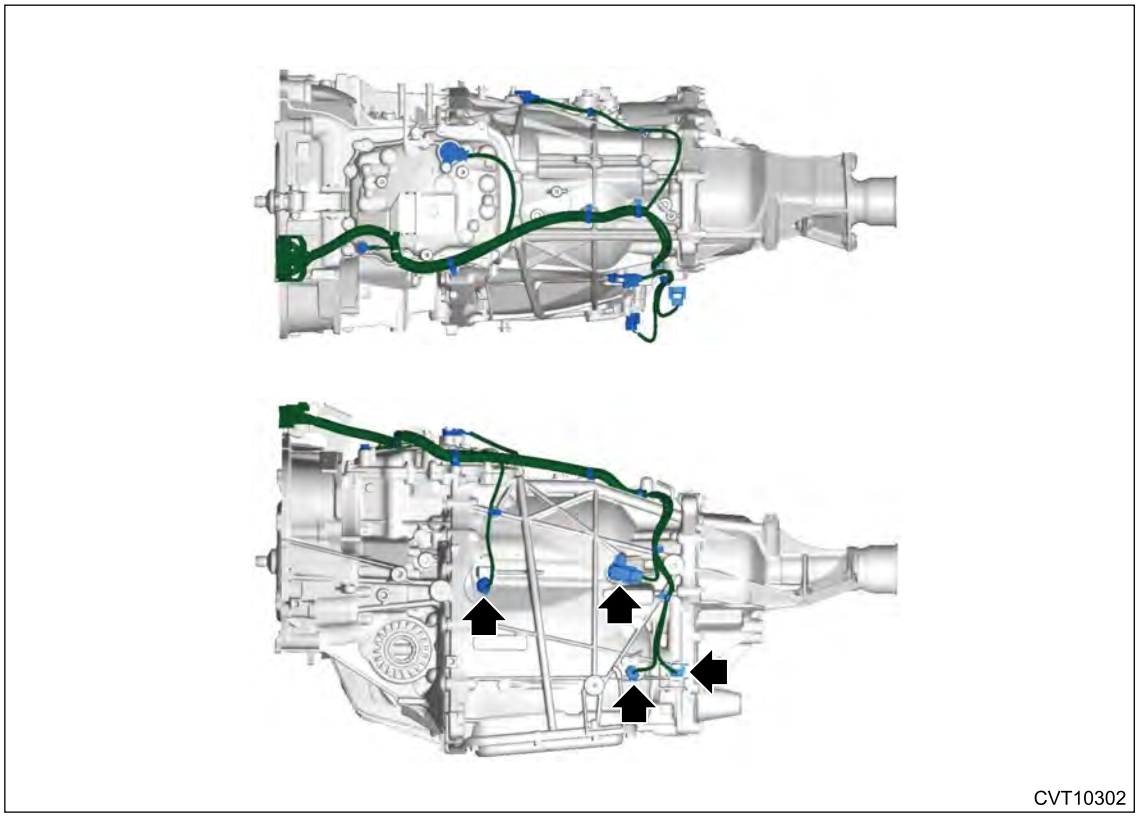
- **Oil temperature sensor**

Sensor	Terminal No.	Standard At 20°C (68°F)
Oil temperature sensor	No. 1 — No. 6	Approx. 2.5 kΩ



- **Transmission ground**

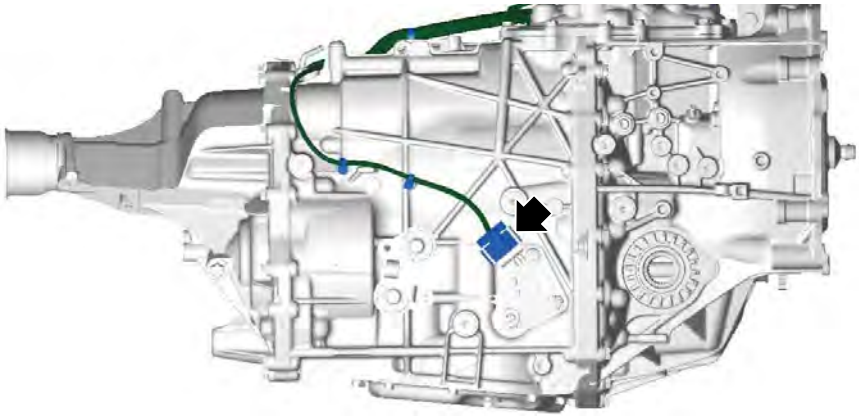
Terminal No.	Standard
No. 8 — Control valve body	Less than 1 Ω



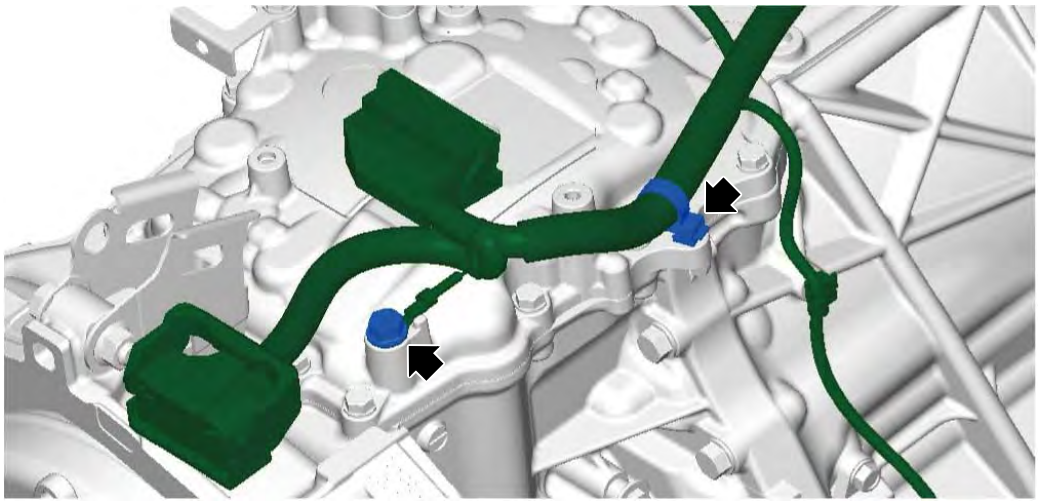
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Harness

REMOVAL

1. Remove the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the transmission case cover.



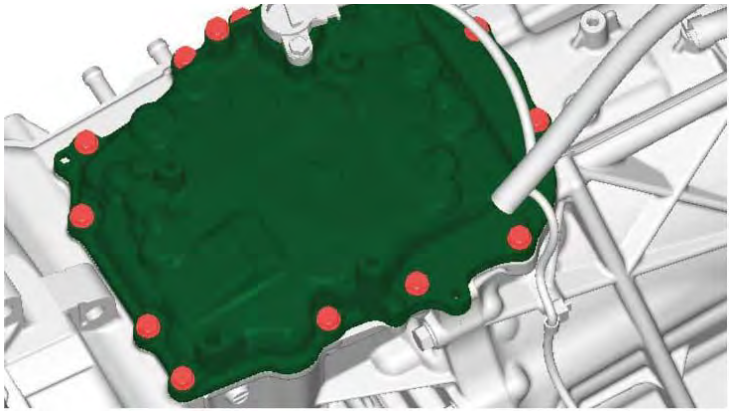
3. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
4. Disconnect the harness connector from the turbine speed sensor, primary speed sensor, secondary speed sensor and secondary pressure sensor.



5. Disconnect the harness connector from the inhibitor switch.

CVT10303

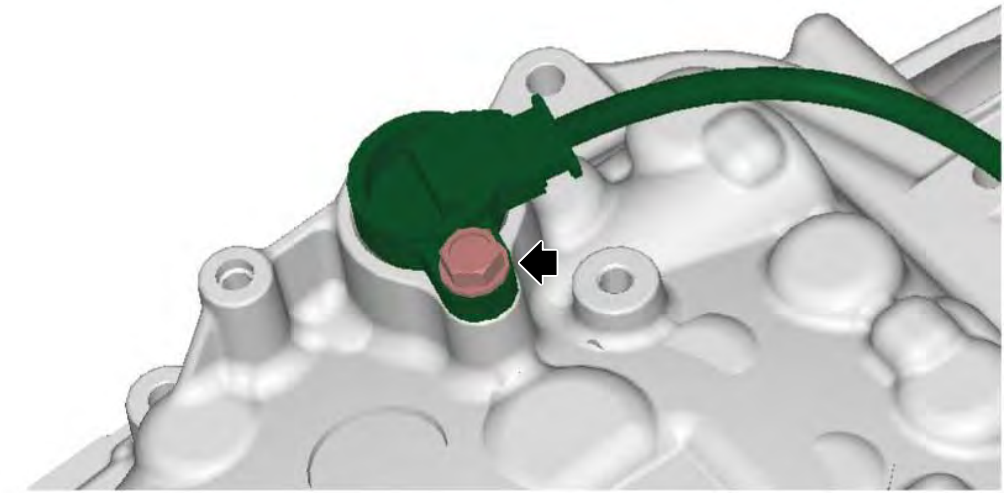
6. Disconnect the ground terminal and remove the harness clip.



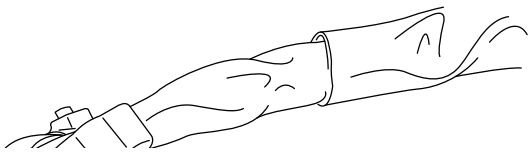
CVT10304

7. Clean the transmission exterior.

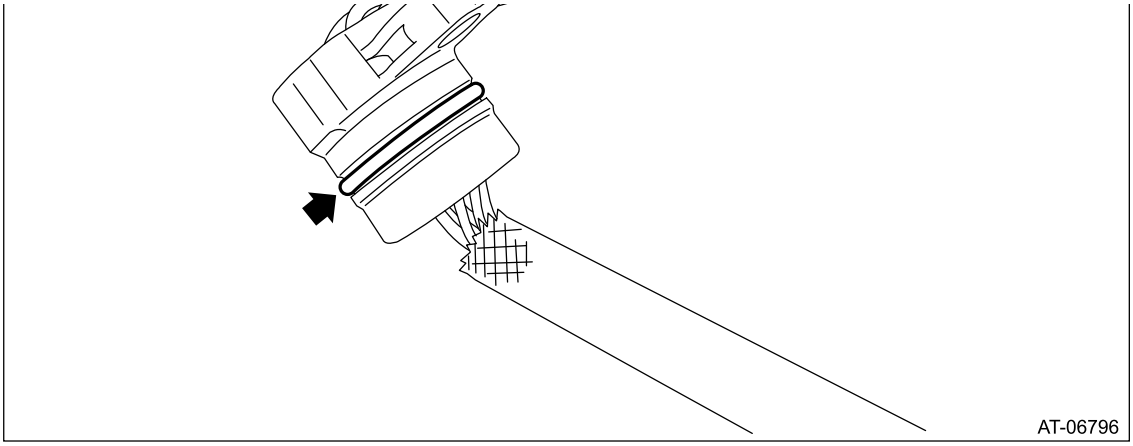
8. Remove the valve cover and gasket.



CVT10300



9. Disconnect the harness connector from the control valve body.

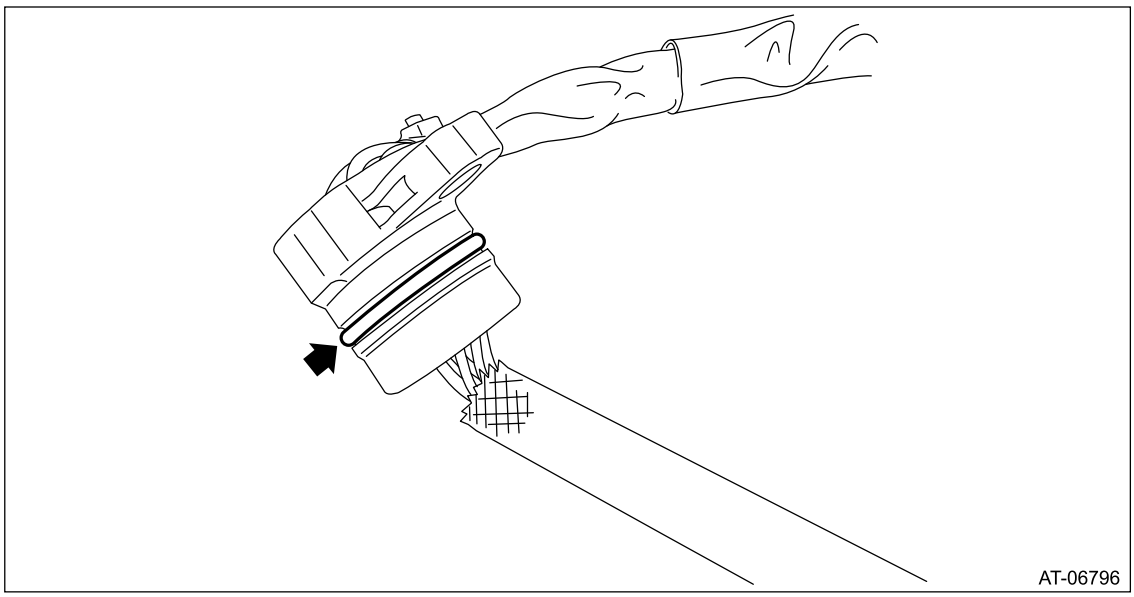


10. Remove the transmission harness.

CVT10301

11. Remove the O-rings.

12. Remove the harness clip from the transmission, and remove the transmission harness.



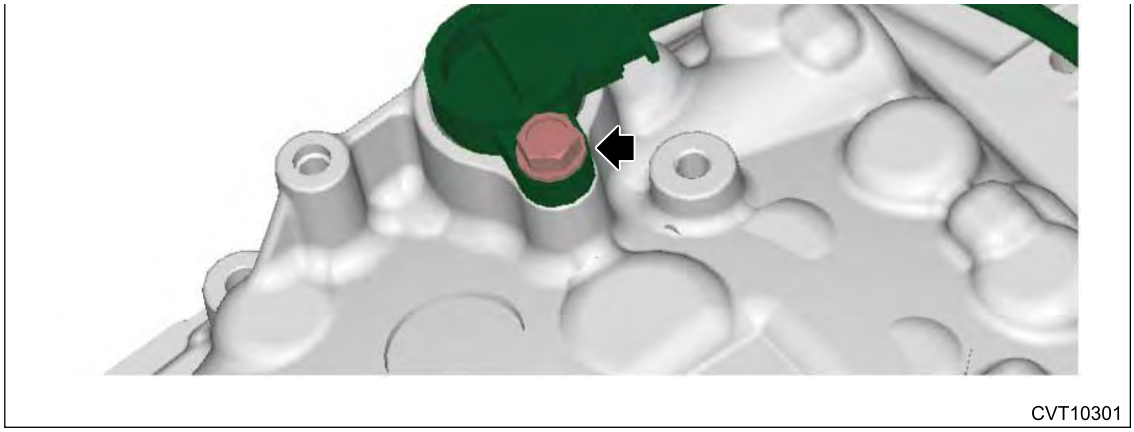
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Harness

INSTALLATION

1. Clean the mating surface of valve cover and transmission side.
2. Check the control valve body for dust and other foreign matter.
3. Install the O-rings.

   Note:

   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**

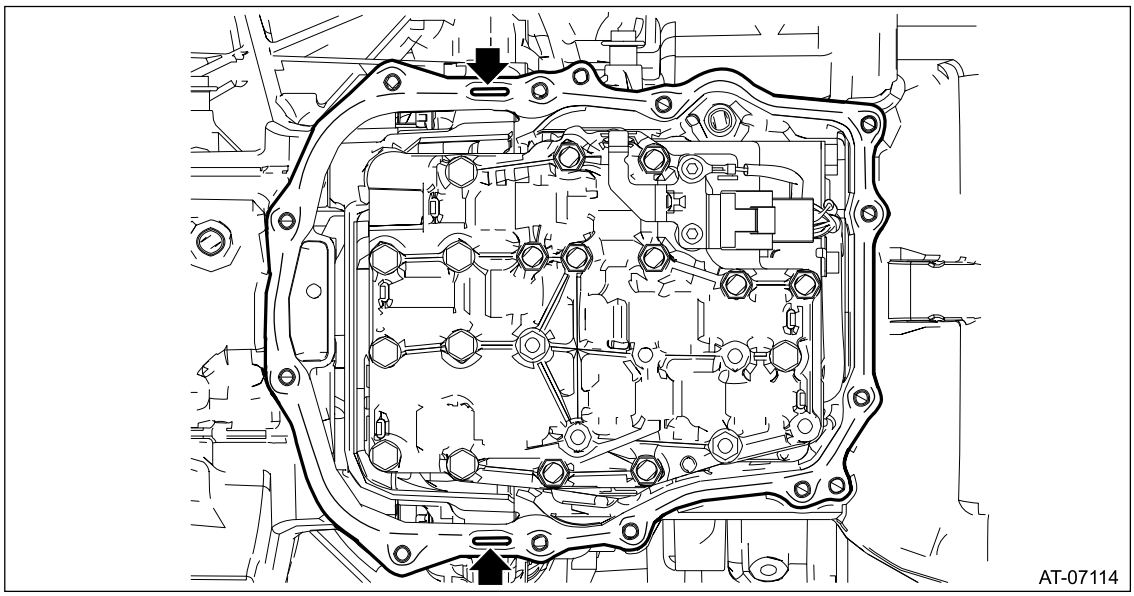


4. Install the transmission harness.

   Tightening torque:

   7 N·m (0.7 kgf-m, 5.2 ft-lb)

5. Attach the gasket.

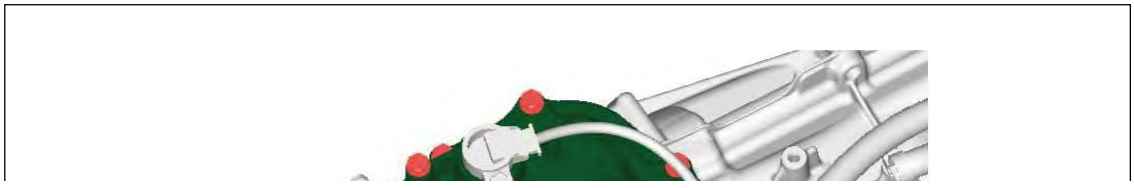


Note:

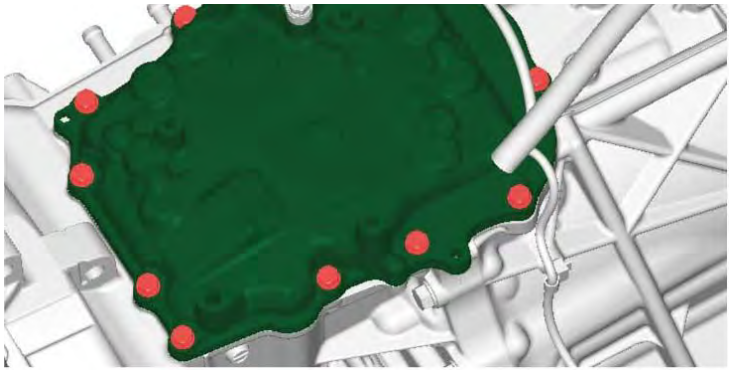
Use a new gasket.

6. Apply liquid gasket to the oval hole of gasket.

Liquid gasket:



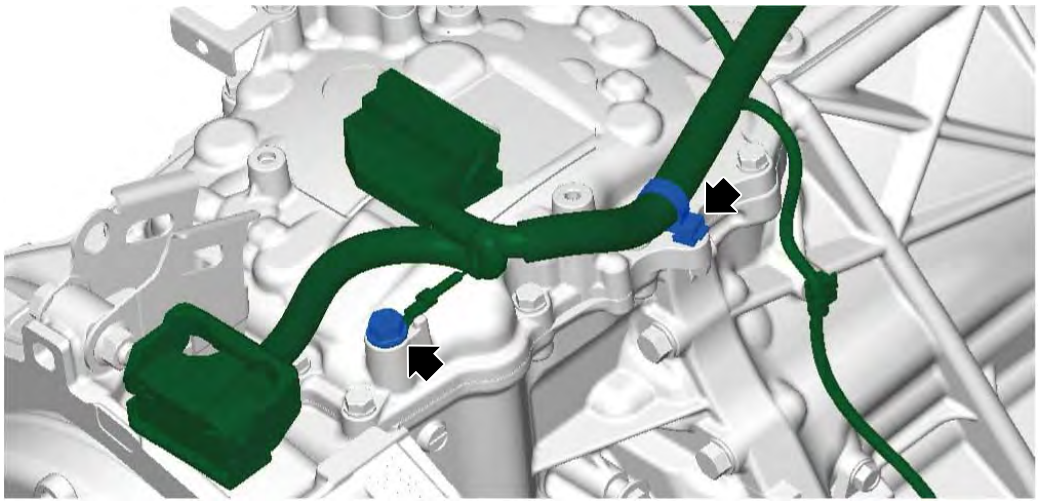
THREE BOND 1215B or equivalent



7. Connect the transmission harness connector to the control valve body, and install the valve cover.

Tightening torque:

8 N·m (0.8 kgf-m, 5.9 ft-lb)

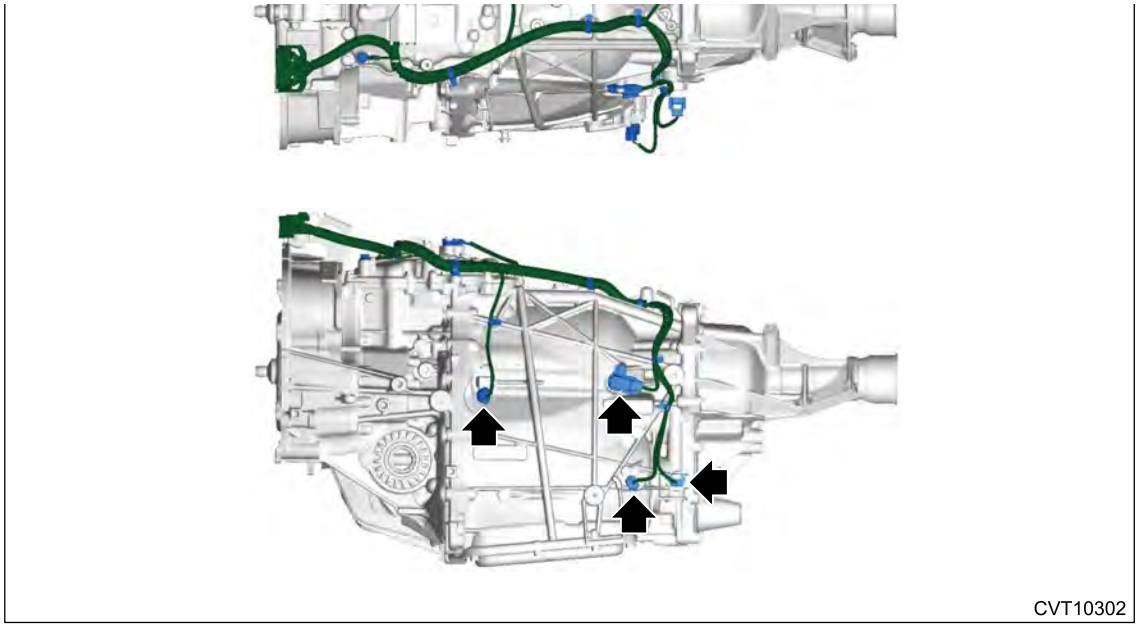


CVT10300

8. Install the transmission ground terminal and harness clip.

Tightening torque:

14 N·m (1.4 kgf-m, 10.3 ft-lb)



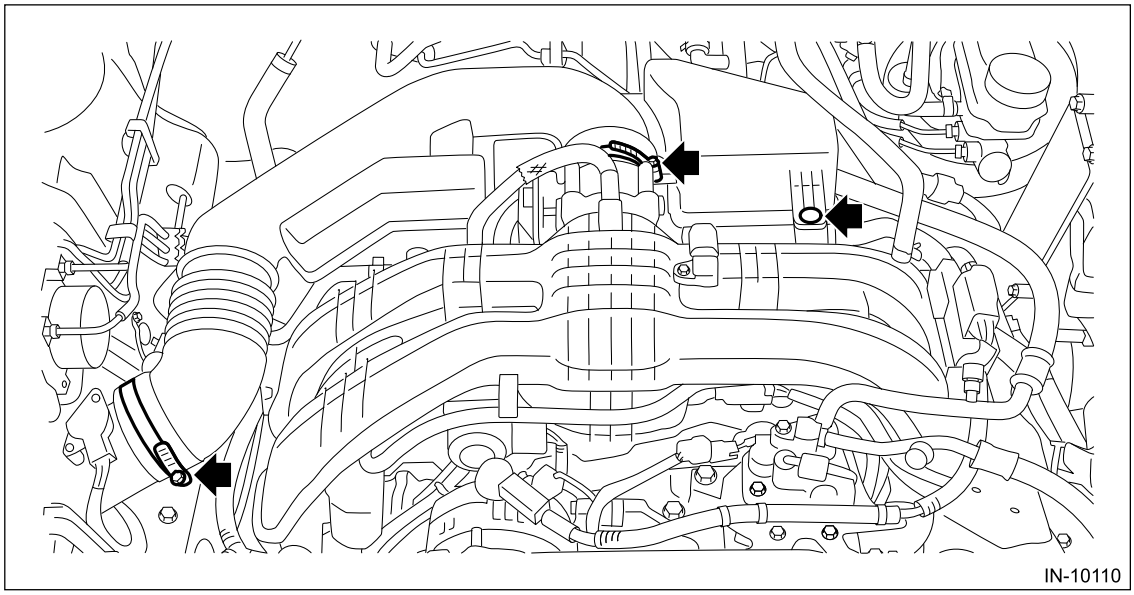
CVT10304

9. Connect the harness connector to the inhibitor switch.

10. Connect the harness connector to the turbine speed sensor, primary speed sensor, secondary speed sensor and secondary pressure sensor.

11. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
12. Install the transmission case cover (large).
    Tightening torque:
    8 N·m (0.8 kgf-m, 5.9 ft-lb)
13. Install the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.
14. Adjust the CVTF level. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Harness

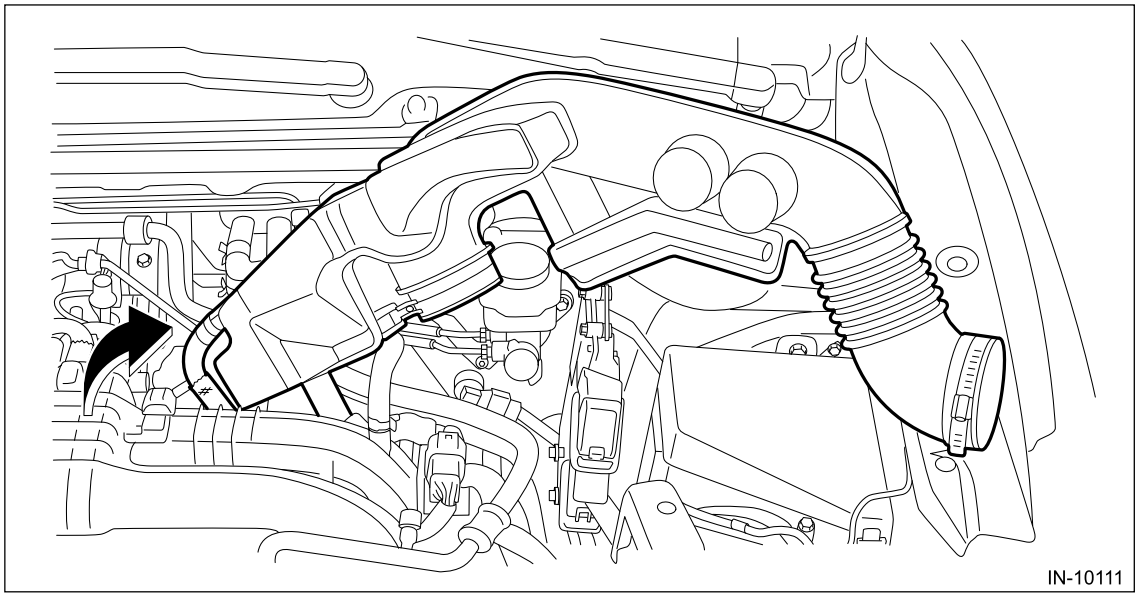


INSPECTION

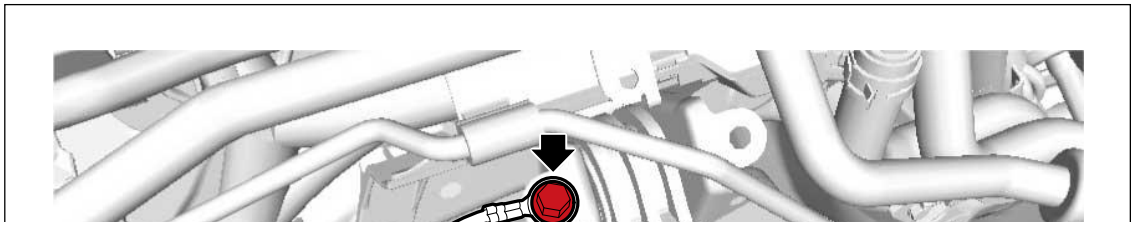
1. Visually check the harness and connector for damage or crack.
2. Check the harness terminal for rust, disconnection or poor contact.
3. Check the continuity between harness terminals.
   Note:
   For details of transmission harness circuit, refer to wiring diagram. Ref. to WIRING SYSTEM>CVT Control System>WIRING DIAGRAM.
   Harness continuity standard
   Less than 1 Ω

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Control Module (TCM)

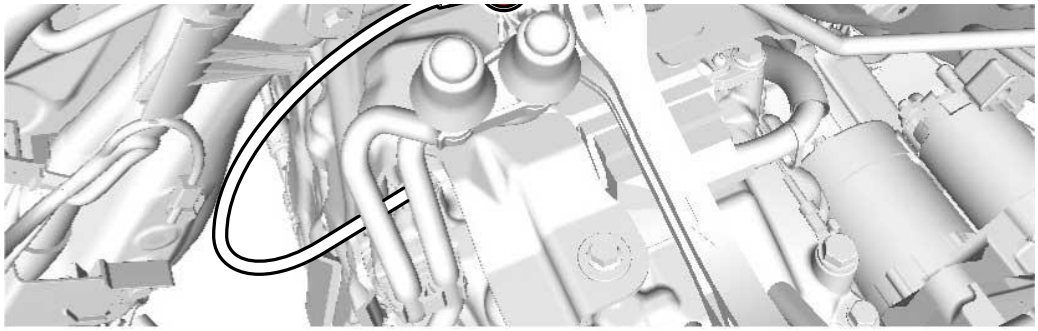
REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.

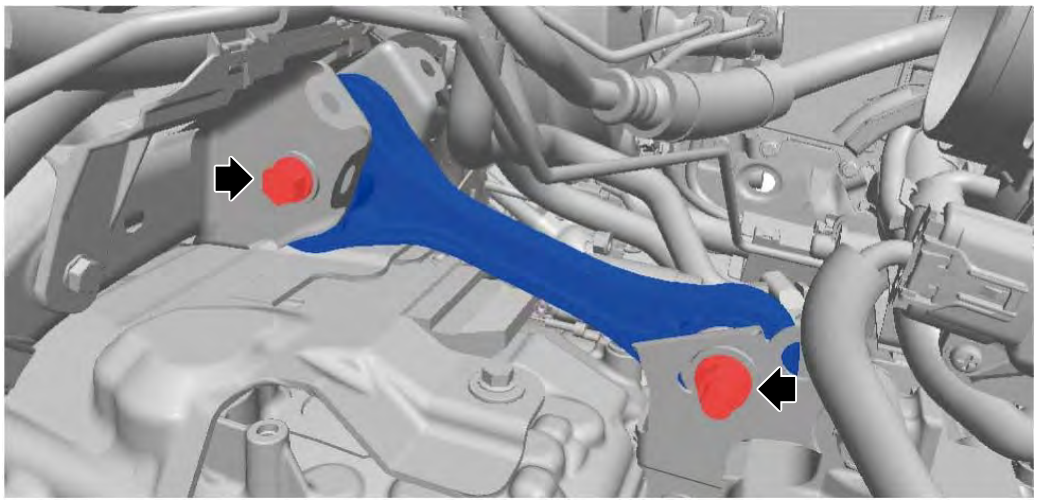


3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

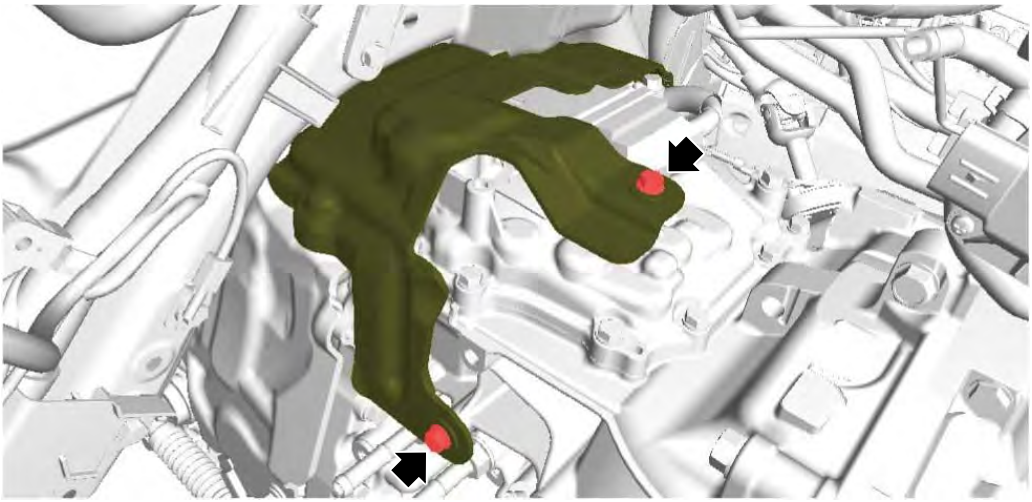


Caution:

Be careful not to pull out the PCV hose.



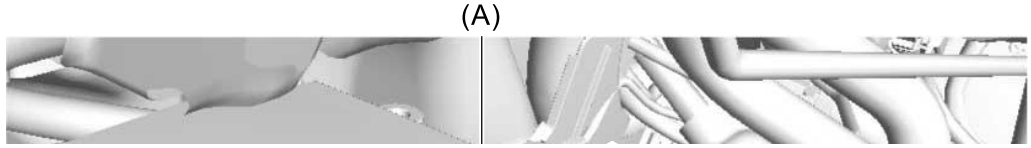
4. Remove the transmission radio ground terminal.



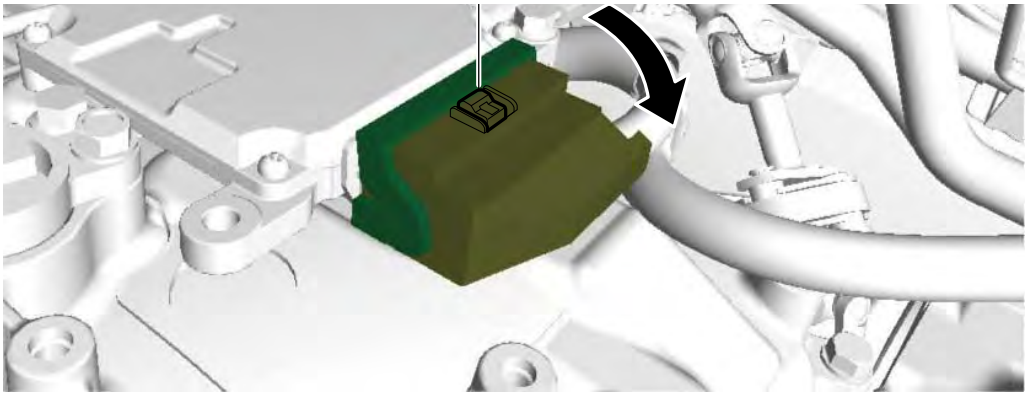
CVT10273

5. Remove the pitching stopper.

CVT10272



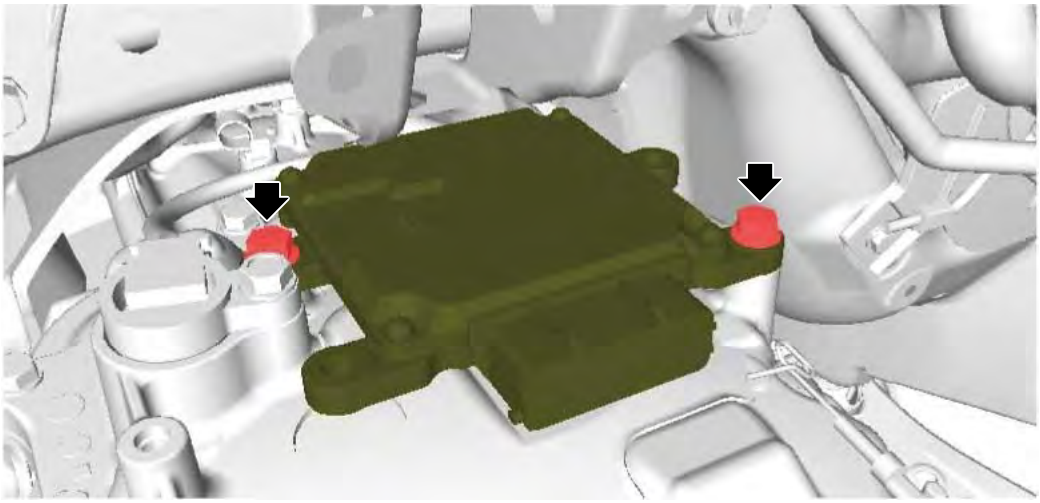
6. Remove the transmission case cover (small).



CVT10283

7. Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

(A)



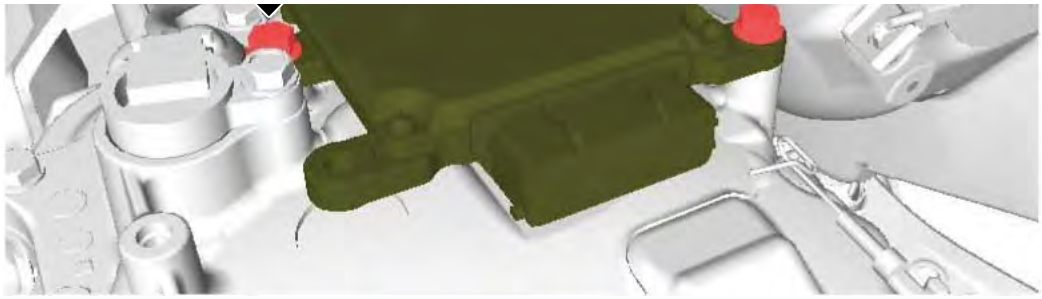
CVT10284

(A) Lock button

8. Remove the TCM.

CVT10285

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Control Module (TCM)

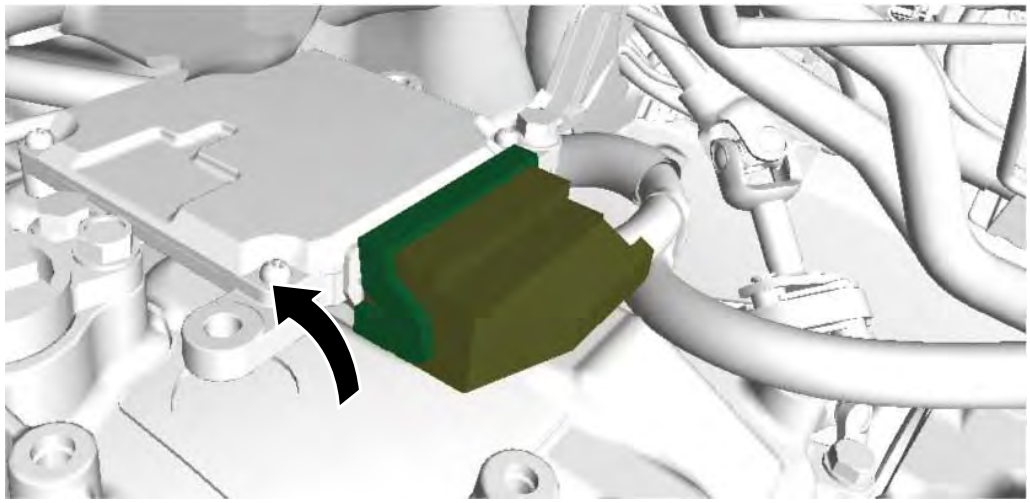


INSTALLATION

1. Attach the TCM.

Tightening torque:

7 N·m (0.7kgf-m, 5.2 ft-lb)



CVT10285

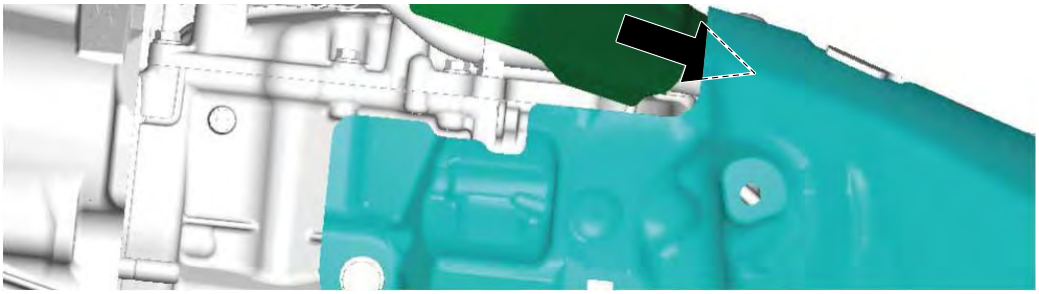
2. Attach the harness connector to the TCM.

Note:

Move the lock lever in the arrow direction, and confirm that a clicking sound is heard.

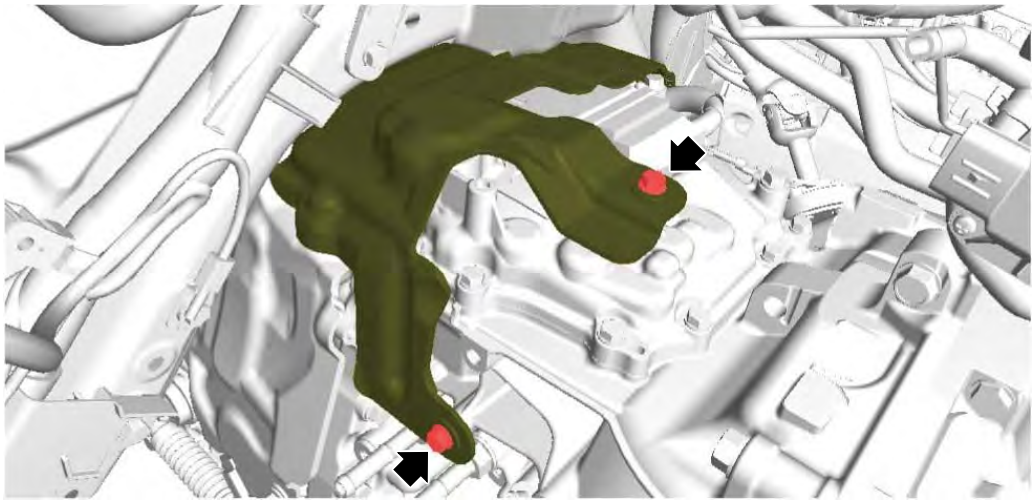
CVT10292

3. Insert the transmission case cover (small) between transmission case cover (large) and transmission to install.



Caution:

When inserting, be careful that the insulator inside transmission case cover is not turned over.

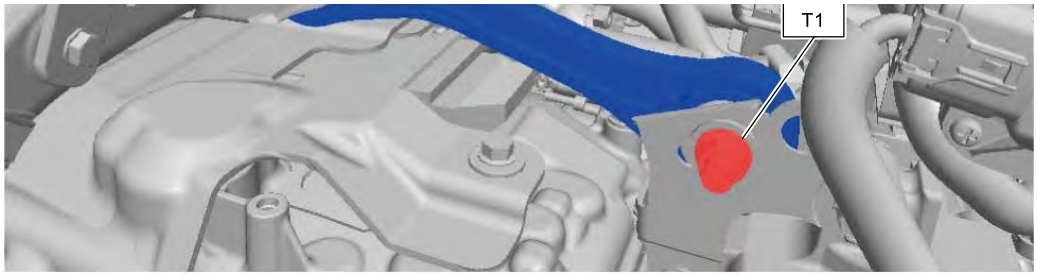


Tightening torque:

7 N·m (0.7kgf-m, 5.2 ft-lb)

CVT10293

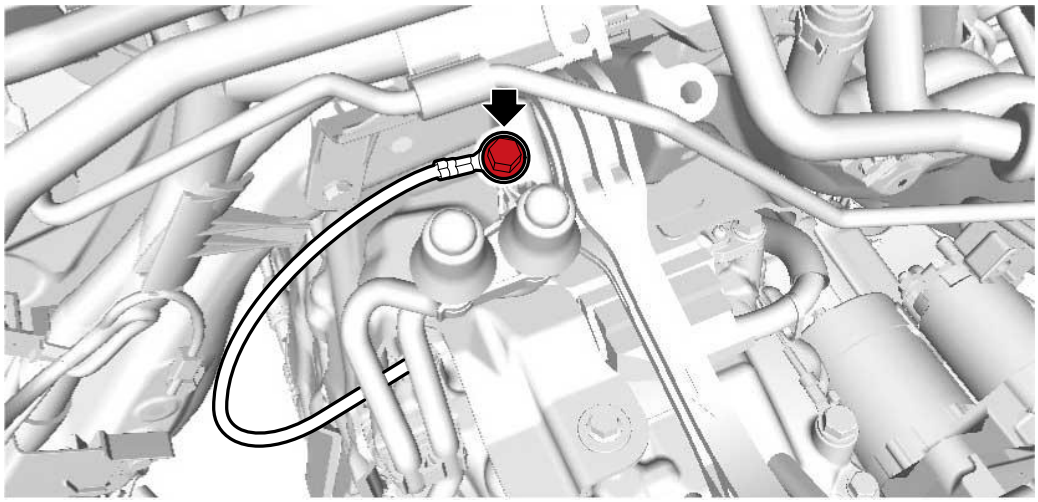
CVT10283



4. Install the pitching stopper.

Tightening torque:

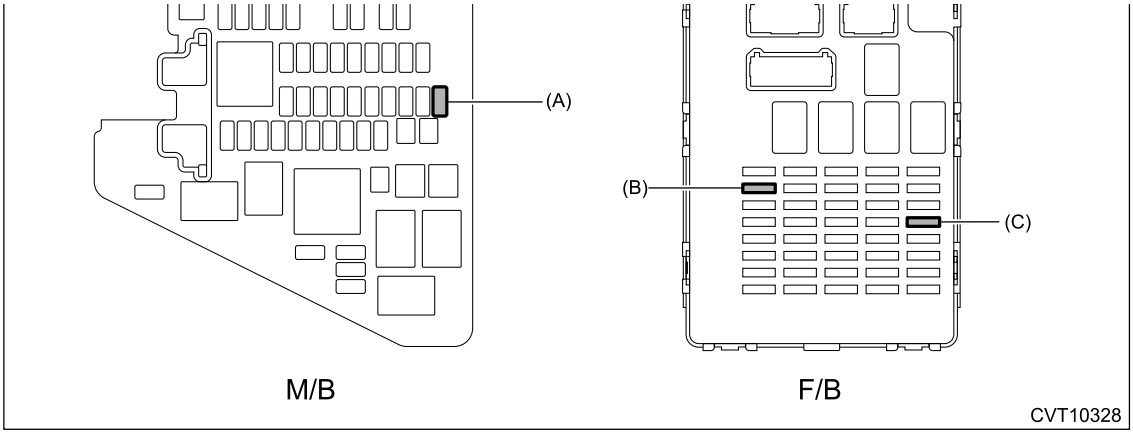
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)



T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

CVT10319

5. Connect the transmission radio ground terminal.
   Tightening torque:
   32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



CVT10273

6. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
8. Using the Subaru Select Monitor, perform [Clear AT learning value] on [Work Support], and perform [AT learning mode]. Ref. to TRANSMISSION (DIAGNOSTICS)>Learning Control>PROCEDURE.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Relay and Fuse

LOCATION

Main fuse box	Fuse 20 A	(A)
Relay & fuse box	Fuse 15 A	(B)
Relay & fuse box	Fuse 10 A	(C)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Relay and Fuse

INSPECTION

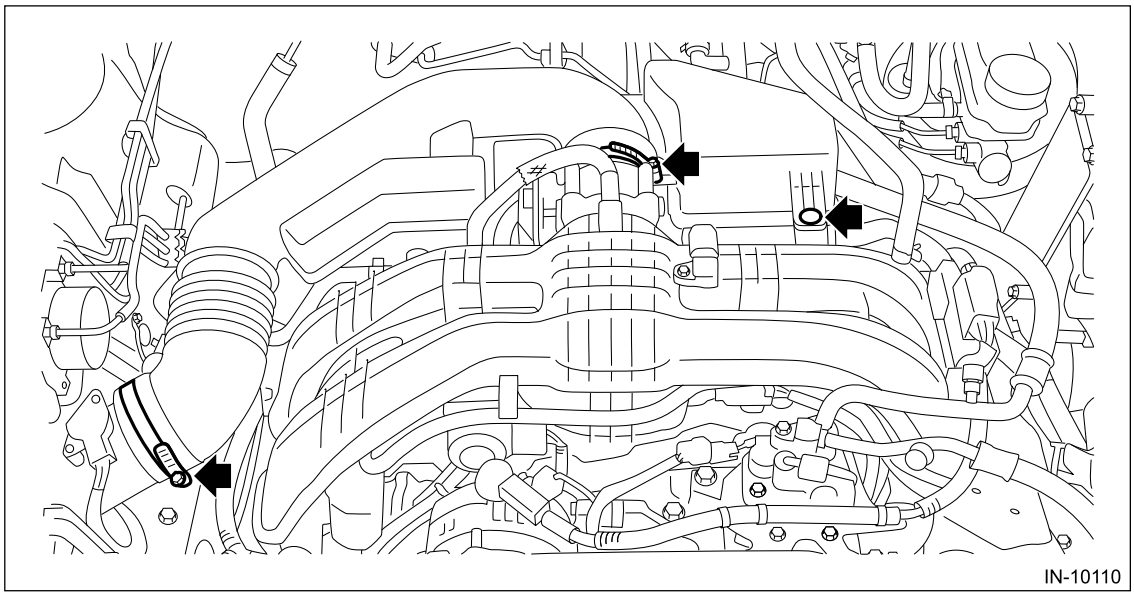
1. CHECK FUSE

Remove the fuse and inspect visually. If the fuse is blown out, replace the fuse.

Note:

If the fuse is blown again, check the system.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Cooler (With Warmer Function)

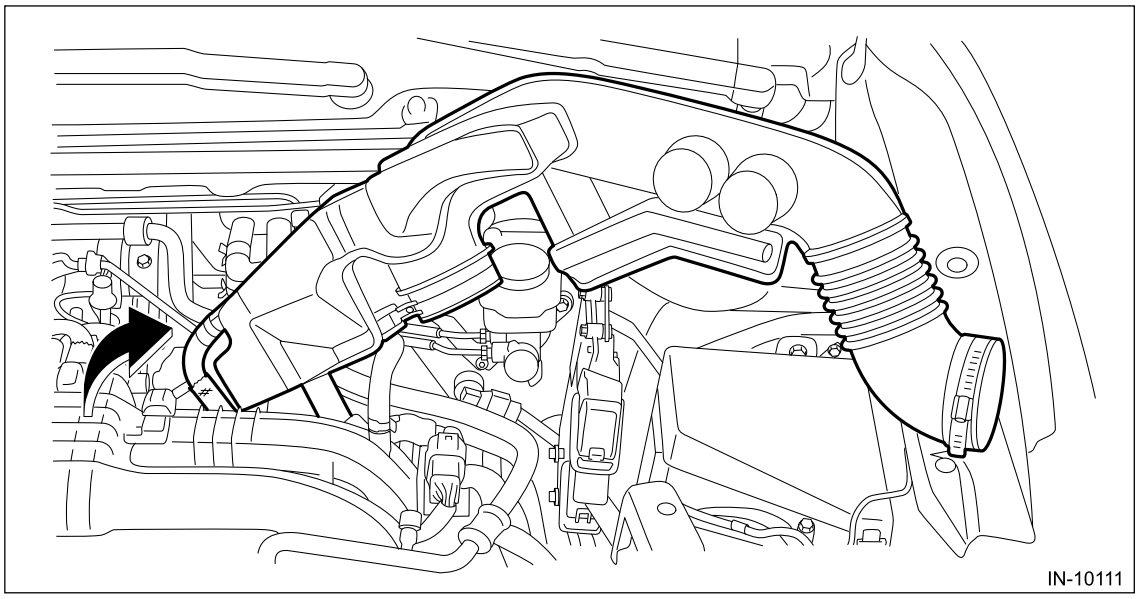


REMOVAL

Caution:

If the CVTF and engine coolant is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.

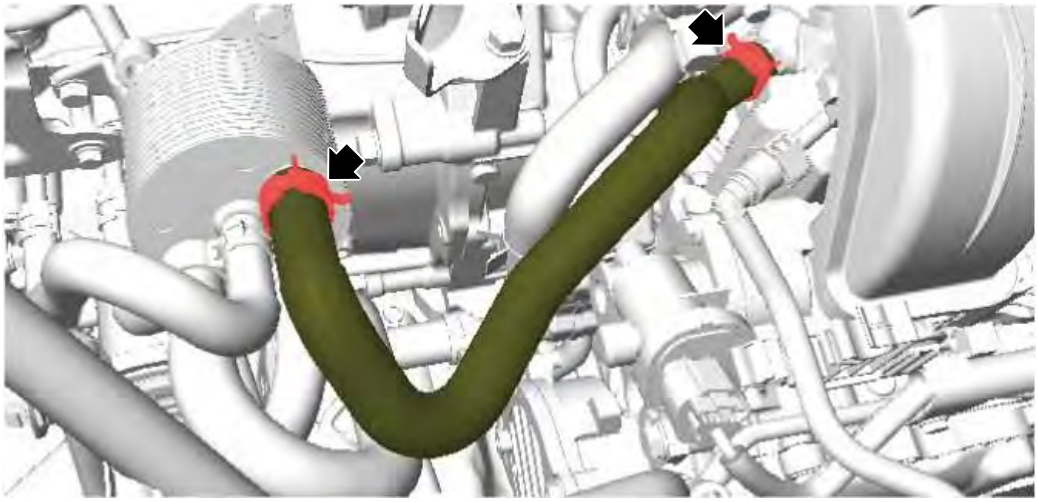


2. Drain engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT.
3. Remove the clip from the air intake boot, and loosen the clamp.

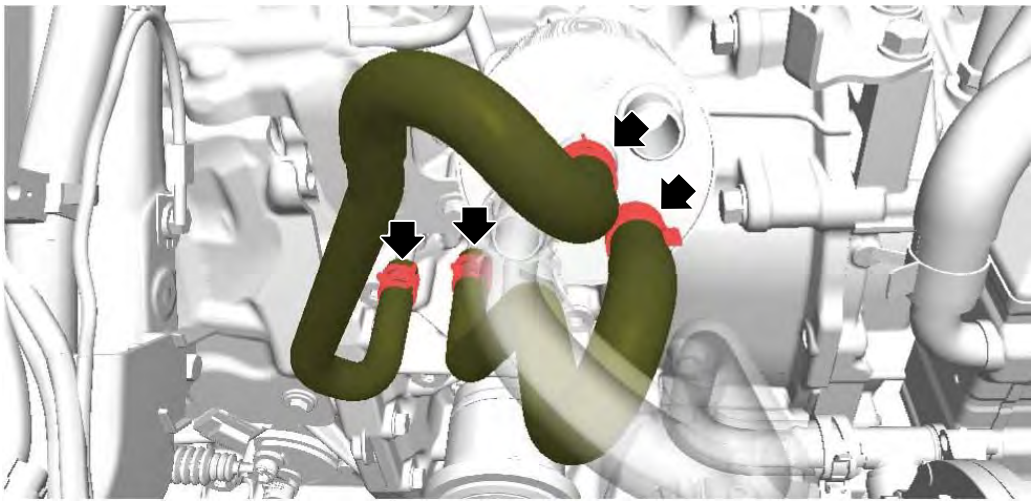
4. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:

Be careful not to pull out the PCV hose.

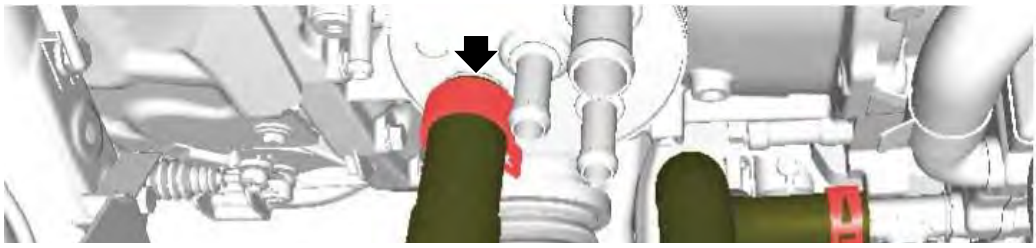


5. Remove the purge hose, purge control solenoid valve harness connector and harness clip.



CVT10287

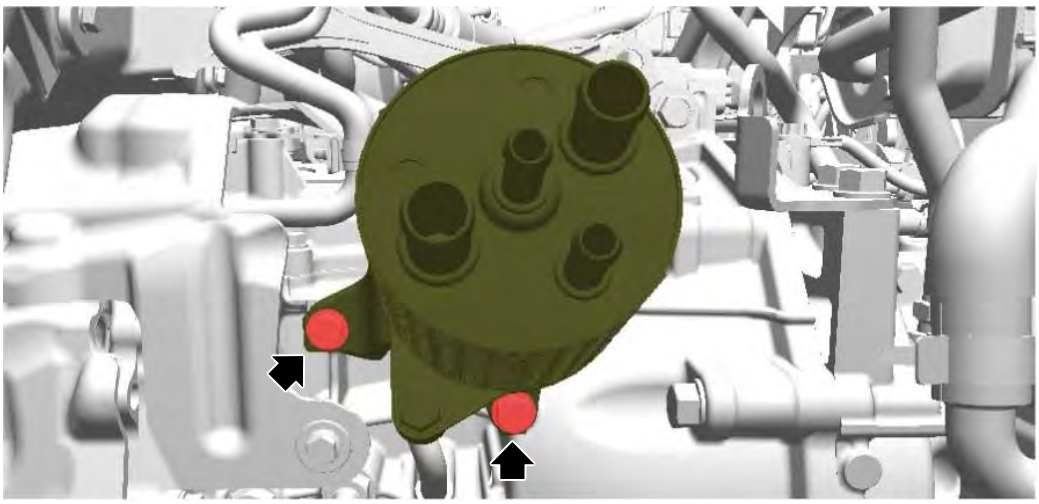
6. Remove the water hose (outlet).



CVT10288

7. Remove the CVTF inlet hose and outlet hose.

CVT10289



8. Remove the water hose (inlet).

CVT10290

9. Remove the CVTF cooler (with warmer feature) from the transmission.

CVT10291

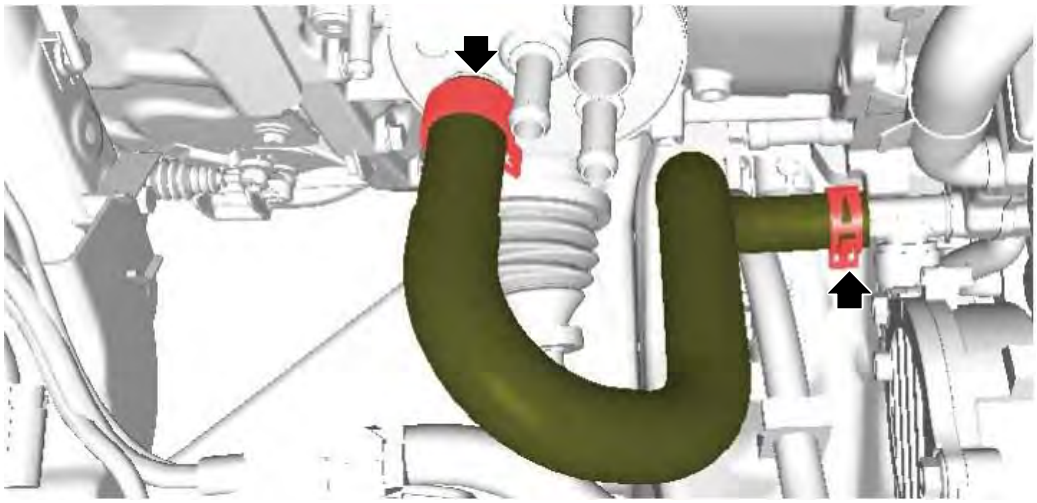
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Cooler (With Warmer Function)

INSTALLATION

1. Install the CVTF cooler (with warmer feature) to the transmission.

Tightening torque:

23 N·m (2.3 kgf-m, 17.0 ft-lb)

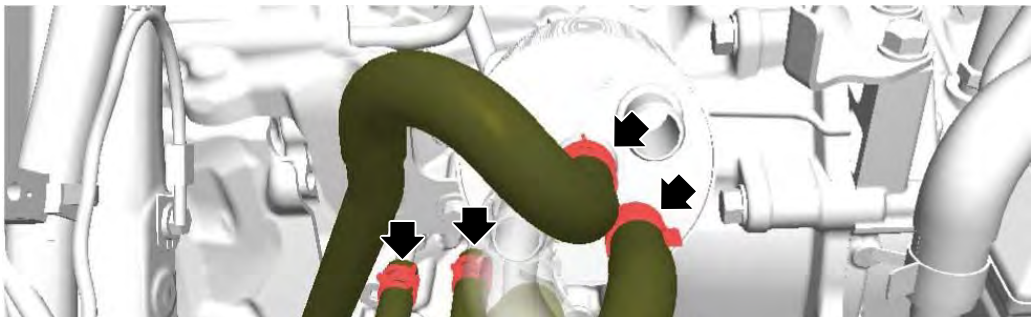


CVT10291

2. Install the water hose (inlet).

Note:

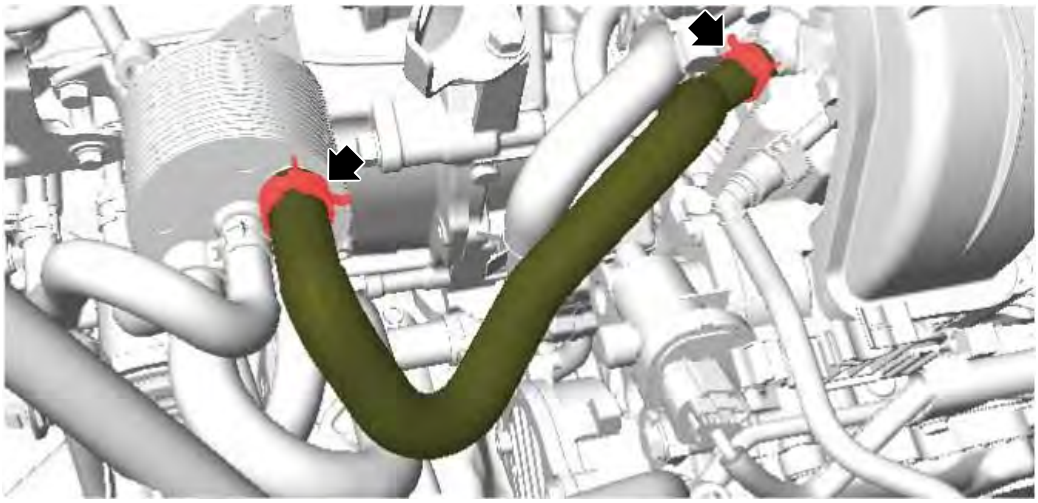
With the paint on the water hose (inlet) facing the vehicle outside, install it to the EGR cooler.



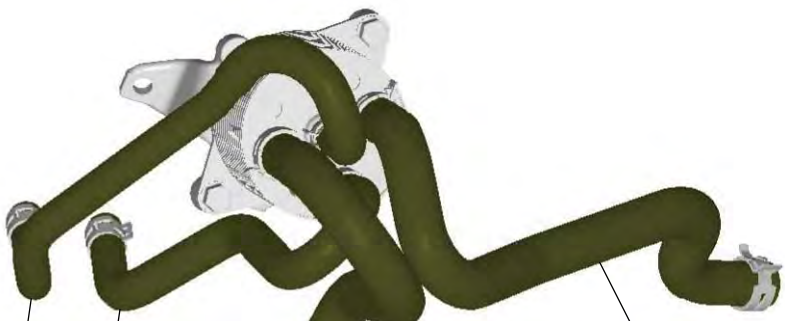
CVT10290

3. Install the CVTF inlet hose and CVTF outlet hose to transmission.

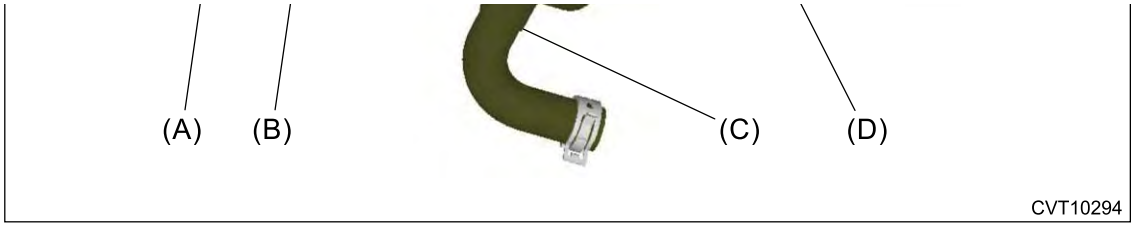
Note:



Use the new CVTF inlet hose and CVTF outlet hose.

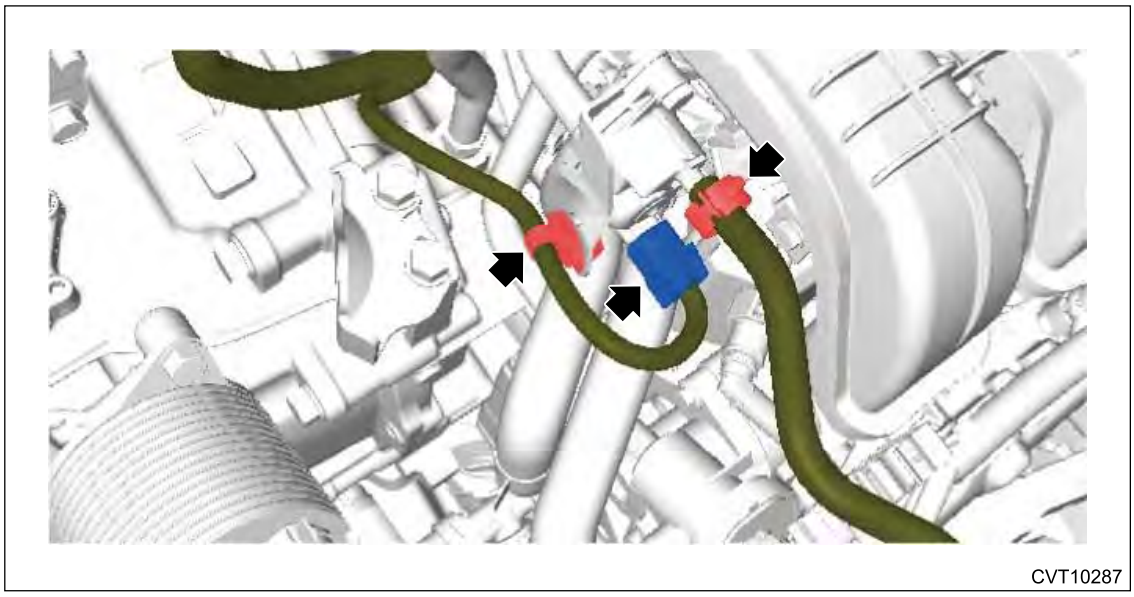


CVT10289



4. Connect the water hose (outlet).

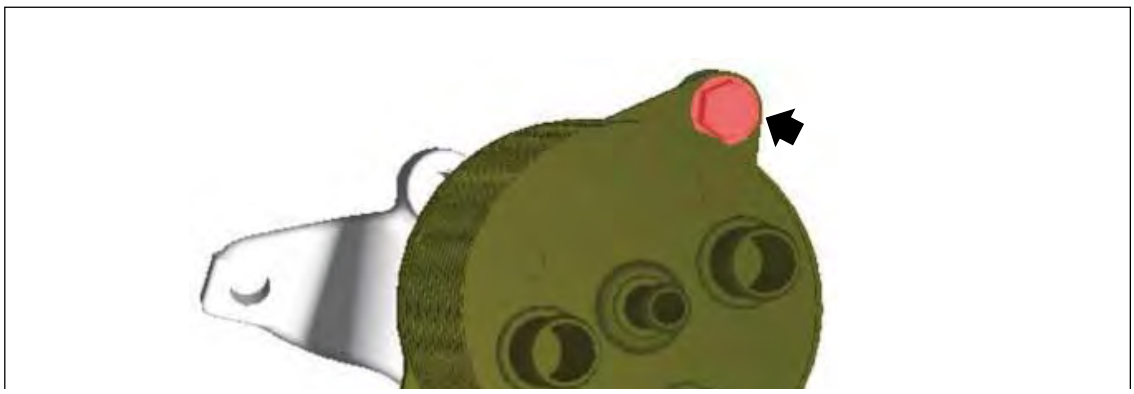
CVT10288



5. Check installation condition of each hose.
   - Make sure the hoses do not interfere with each other or with other components.
   - Check each hose for bent, excess curve, and twisting conditions.

(A) CVTF cooler inlet hose
(B) CVTF cooler outlet hose
(C) Water hose (inlet)
(D) Water hose (outlet)

6. Install the purge hose, purge control solenoid valve harness connector and harness clip.

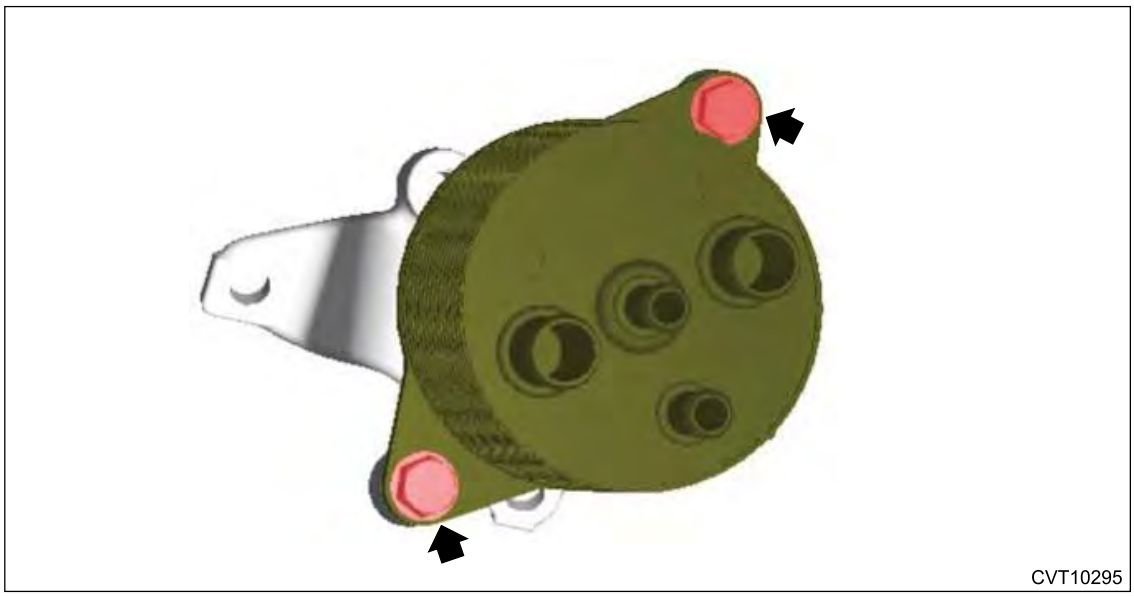


7. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
9. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT.
10. Adjust the CVTF level. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>CVTF>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Cooler (With Warmer Function)

DISASSEMBLY

1. Remove the bracket from the CVTF cooler (with warmer feature).



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Cooler (With Warmer Function)

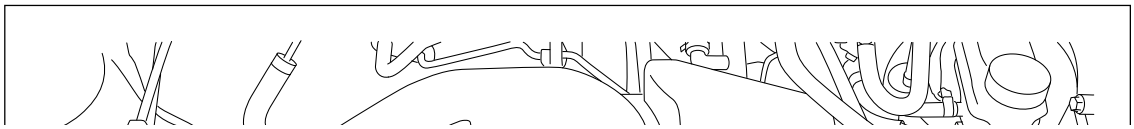
ASSEMBLY

1. Attach the bracket.
   Tightening torque:
   23 N·m (2.3 kgf-m, 17.0 ft-lb)

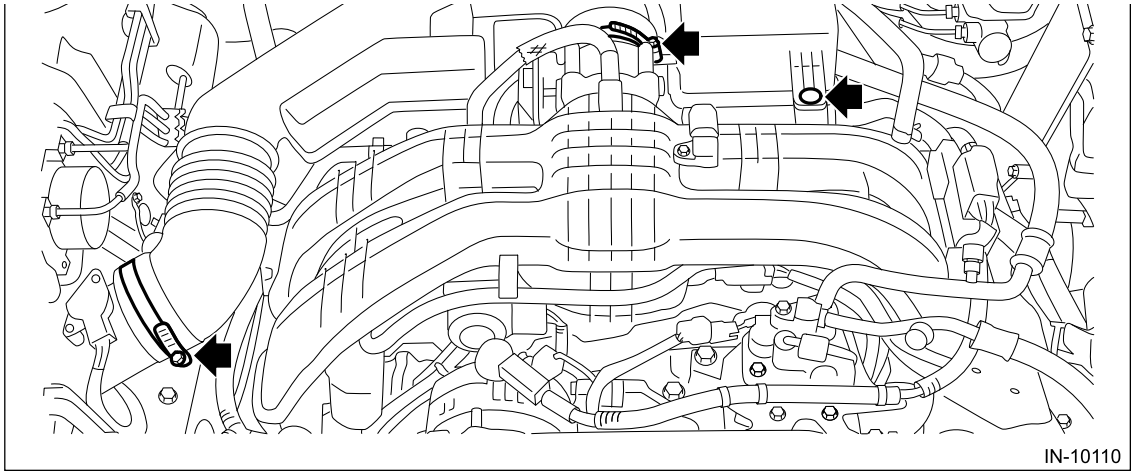
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Cooler (With Warmer Function)

INSPECTION

Replace any faulty CVTF cooler hoses, CVTF cooler pipes and clamps found in the inspection below.



1. Check that there are no CVTF or engine coolant leaks from the connections.
2. Check the clamp for deformation.
3. Lightly bend the CVTF cooler hose and check for cracks in the surface or other damages.
4. Pinch the CVTF cooler hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
5. Check for peeling, cracks, and deformation at the tip of the hose.
6. Check the CVTF cooler (with warmer feature) for any damage.

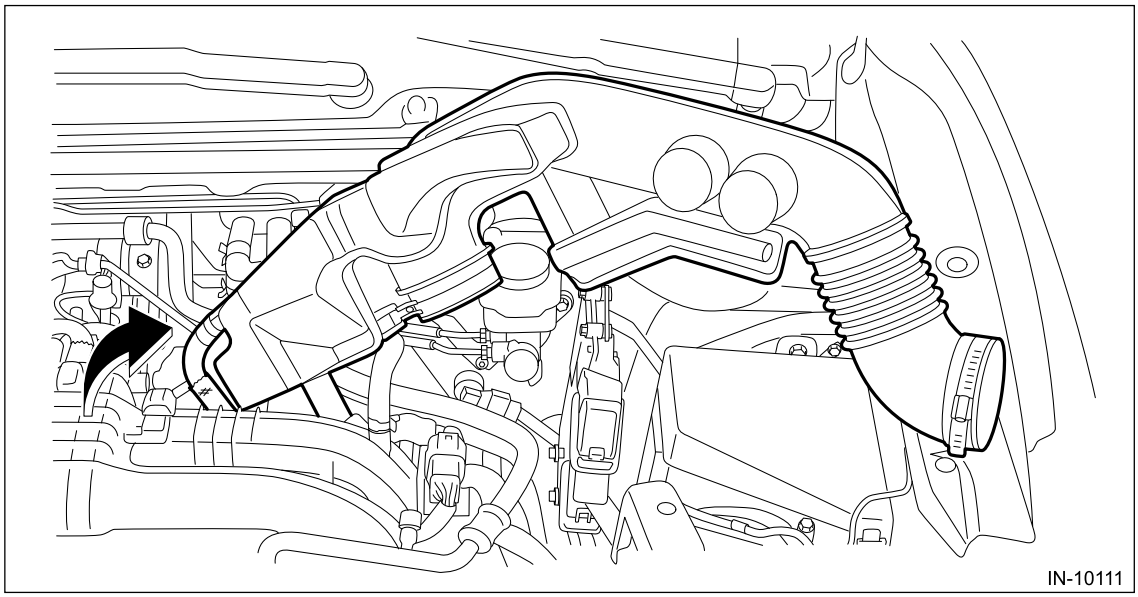


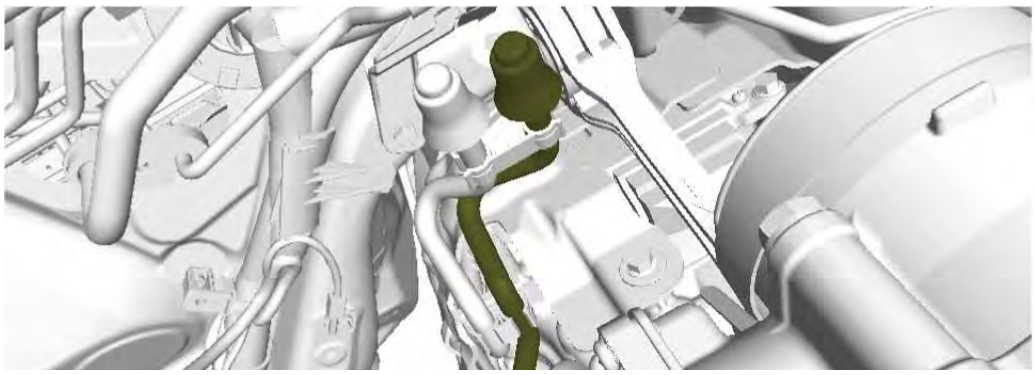
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Air Breather Hose

REMOVAL

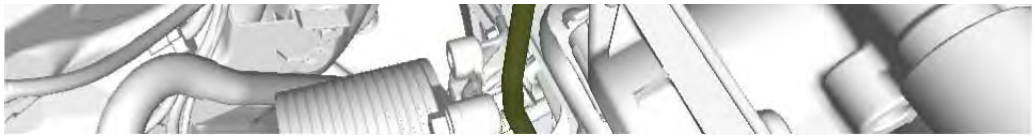
1. FRONT DIFFERENTIAL SIDE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the clip from the air intake boot, and loosen the clamp.





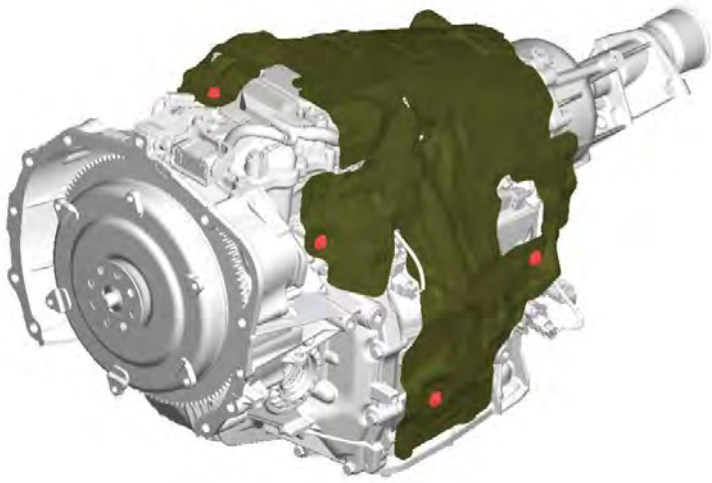
3. Remove the air intake boot, and place it aside so that it does not interfere with the work.



Caution:

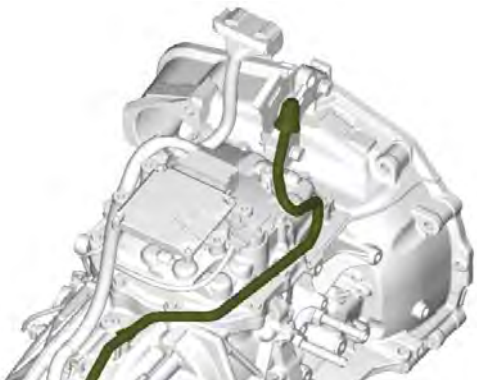
Be careful not to pull out the PCV hose.

4. Remove the air breather hose.



CVT10296

5. Remove the air breather cap.



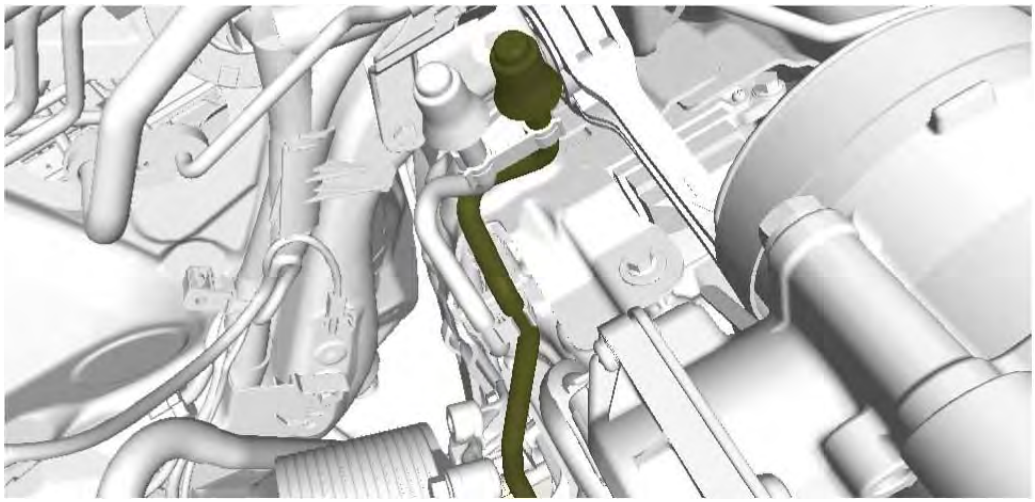
2. TRANSMISSION CASE SIDE

1. Remove the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the transmission case cover.

CVT10297

3. Remove the air breather hose.

CVT10298



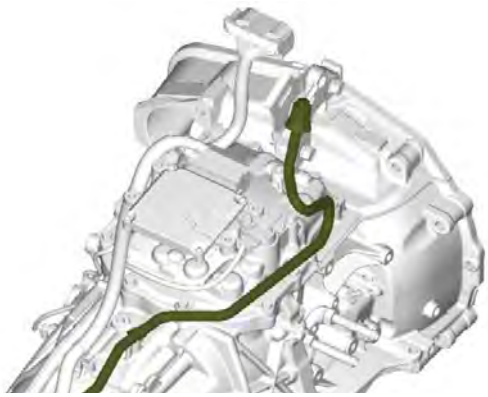
4. Remove the air breather cap.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Air Breather Hose

INSTALLATION

1. FRONT DIFFERENTIAL SIDE

1. Install the air breather cap.
2. Install the air breather hose.



CVT10296

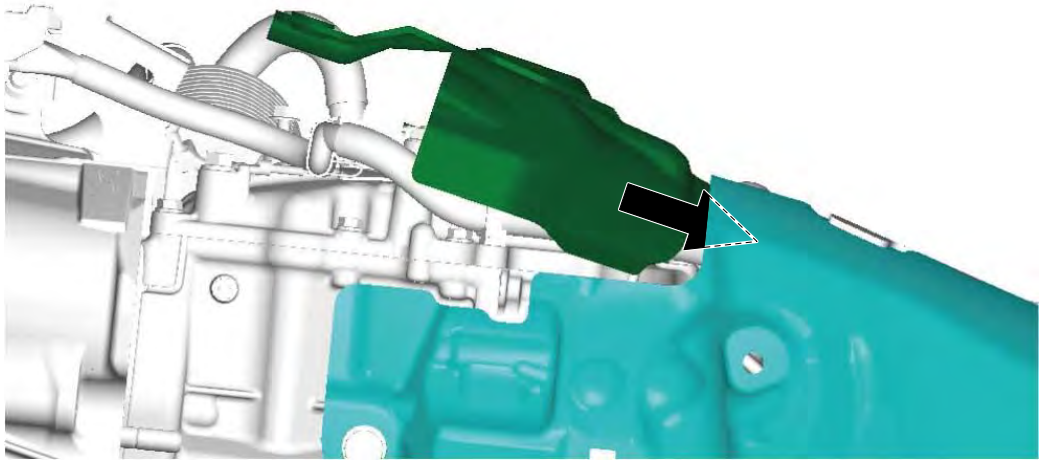
3. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.

2. TRANSMISSION CASE SIDE

1. Install the air breather cap.
2. Install the air breather hose.

CVT10298

3. Install the transmission case cover.



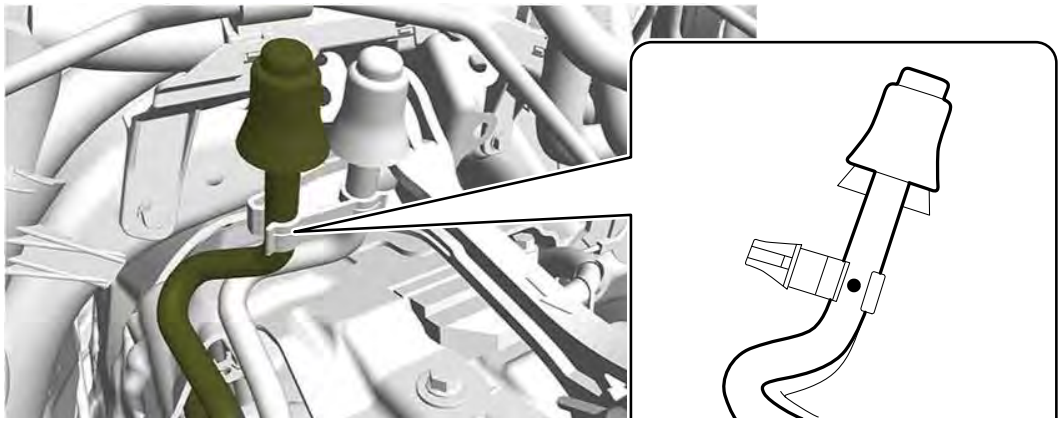
Tightening torque:

Cover (small): 7 N·m (0.7 kgf-m, 3.7 ft-lb)

Cover (large): 8 N·m (0.8 kgf-m, 5.9 ft-lb)

Note:

First install the transmission case cover (large), then insert the transmission case cover (small) between the transmission case cover (large) and the transmission to install.



CVT10293

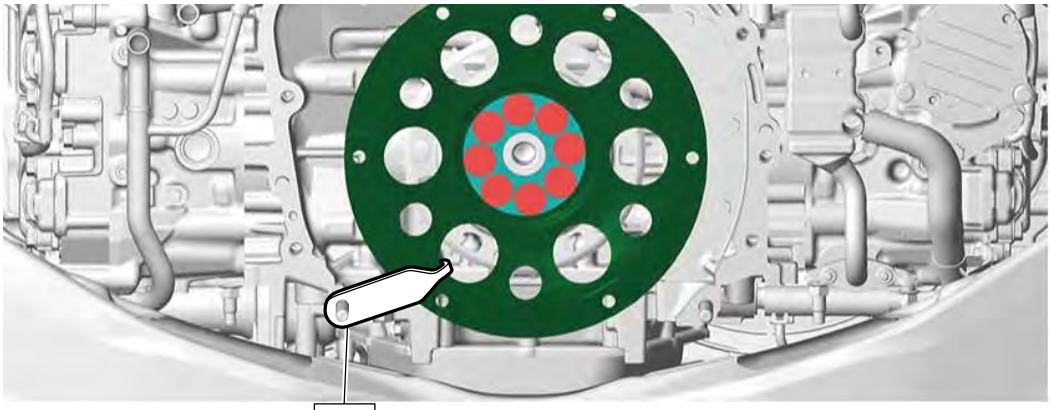
4. Install the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.
5. Install the air breather hose to the bracket.

Note:

Assemble the hose with the marked position facing in the direction shown in the figure.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Air Breather Hose

INSPECTION



Check the hose for peeling, crack or clogging.

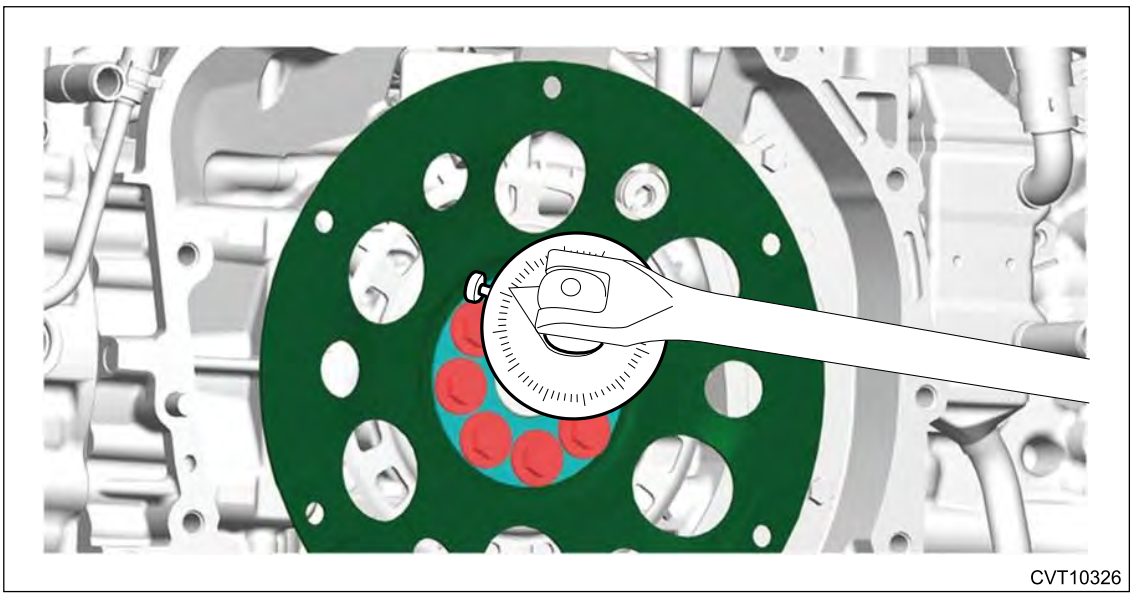
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Drive Plate

REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Set the ST.
   Preparation tool:
   ST: CRANKSHAFT STOPPER (498497300)

3. Remove the drive plate and reinforcement drive plate.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Drive Plate



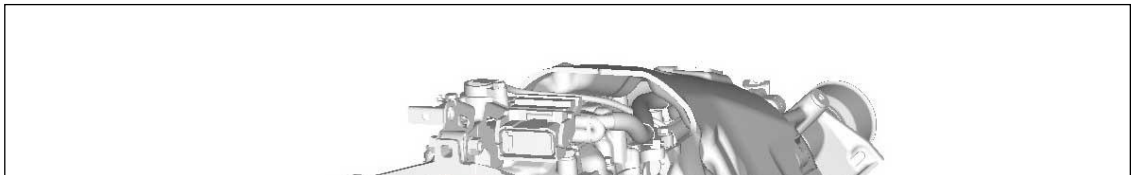
INSTALLATION

1. Temporarily install the drive plate and reinforcement drive plate.
   Note:
   Align the knock pin hole of the crankshaft position sensor plate to the knock pin of the crankshaft to secure the knock pin.
2. Set the ST.
   Preparation tool:
   ST: CRANKSHAFT STOPPER (498497300)

3. Tighten the drive plate mounting bolt in two stages.
   (1) Tighten the drive plate mounting bolt.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
   (2) While checking the tightening angle with the angle gauge, tighten the drive plate mounting bolts to the specified angle.
   Tightening angle:
   30° — 35°

4. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Drive Plate



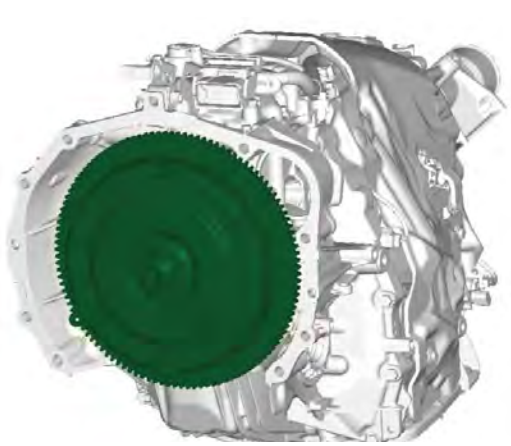
INSPECTION

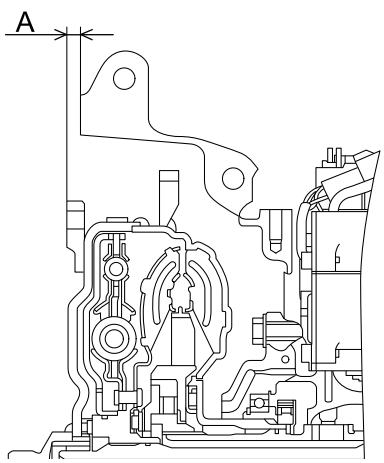
Check the drive cable for damage.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Torque Converter Assembly

REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Pull out the torque converter assembly horizontally.
   Caution:
   Do not scratch the inside of engaging parts.





CVT10306

3. Remove the O-ring from the input shaft.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Torque Converter Assembly

INSTALLATION

1. Install the O-ring to the input shaft.
   Note:
   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**
2. While holding the torque converter assembly by hand, carefully install it into the torque converter case.
   Note:
   - **Apply CVTF to the oil seal lip.**
   - **Do not damage the oil seal and O-ring.**
3. Engage the splines while gently rotating the torque converter assembly by hand, and securely insert the assembly.
4. Measure depth “A”, from converter case end surface to drive plate contacting surface.
   Standard (reference):
   6.8 mm (0.268 in) or less

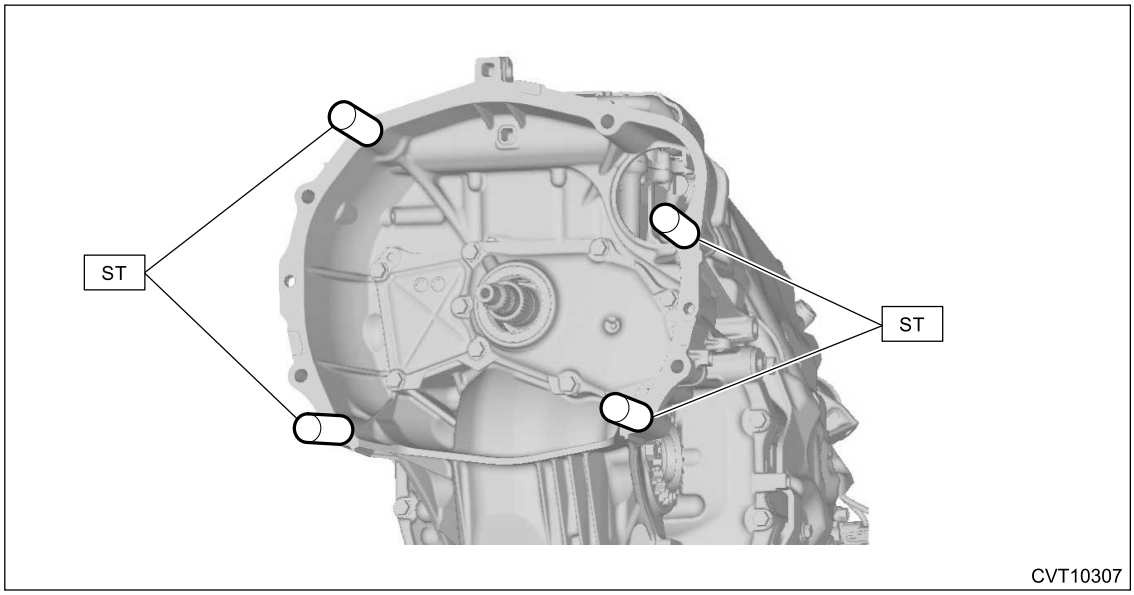
5. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Torque Converter Assembly

INSPECTION

- Check the protrusion of torque converter assembly center (front boss) is not deformed or damaged.
- Check the ring gear and exterior for break or damage.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Preparation for Overhaul



GENERAL DESCRIPTION

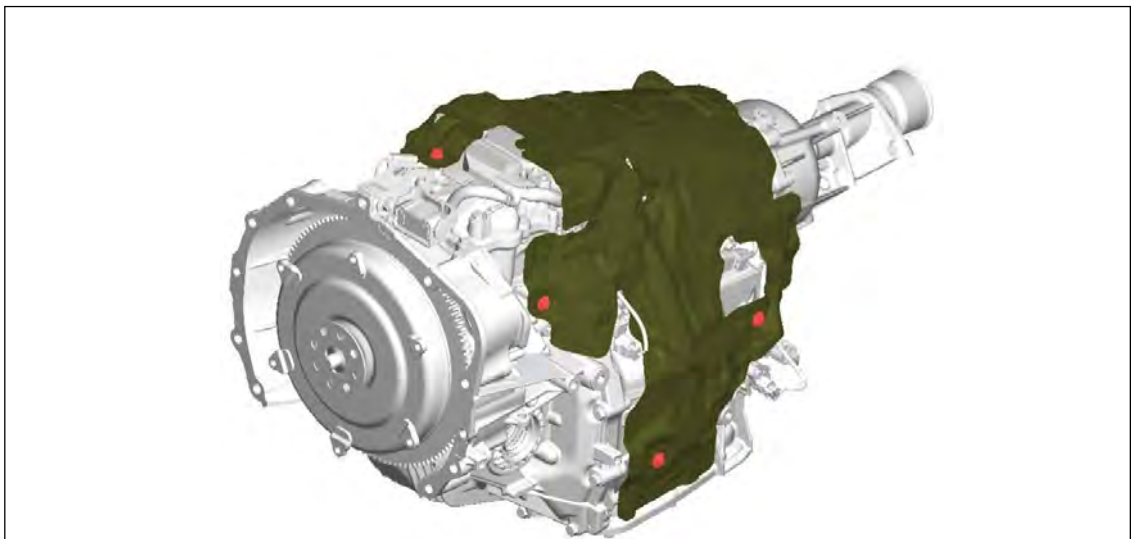
Before disassembling and assembling the transmission, follow the following procedures to prepare.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Preparation for Overhaul

PROCEDURE

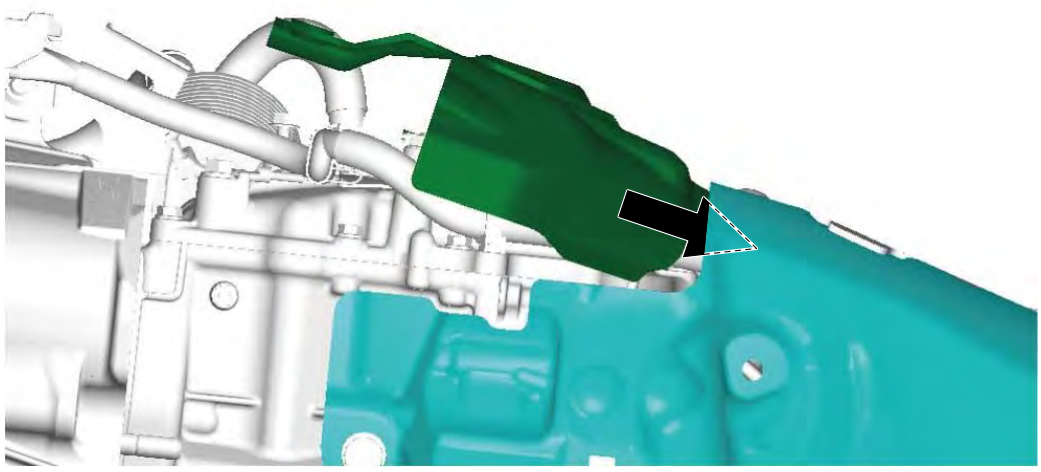
1. Clean the transmission exterior.
2. Remove the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly.
3. Attach the ST to the transmission.
   Preparation tool:
   ST: STAND ASSY (18632AA000)

4. Remove the transmission case cover on the transmission upper side.



Note:

For installation, first install the transmission case cover (large), then insert the transmission case cover (small) between the transmission case cover (large) and the transmission to install.



Tightening torque:

Cover (small): 7 N·m (0.7 kgf-m, 5.2 ft-lb)

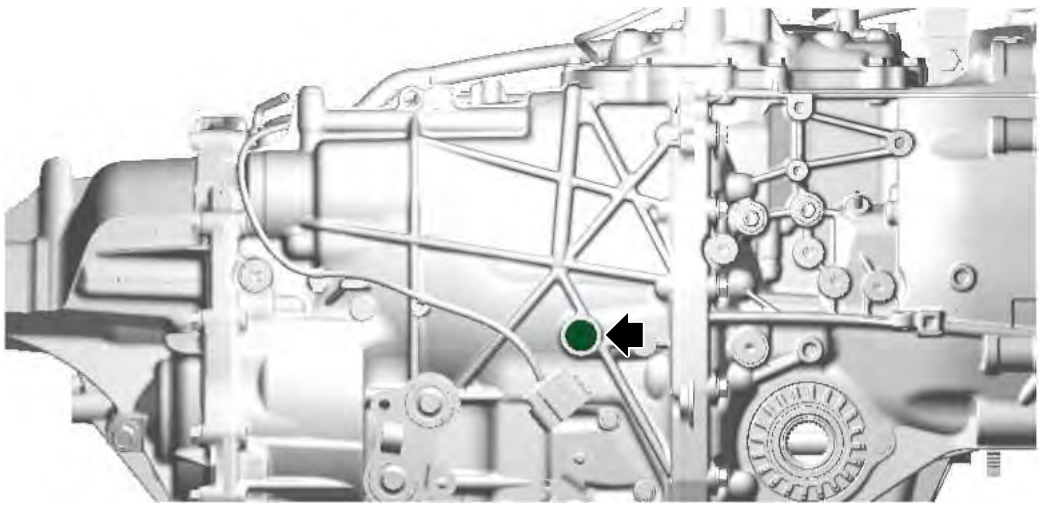
Cover (large): 8 N·m (0.8 kgf-m, 5.9 ft-lb)

CVT10297

CVT10293

5. Place the transmission assembly on end.
6. When completely overhauling the transmission, refill approx. 10 L (2.6 US qt, 8.8 Imp qt) of CVTF through the transmission right side plug, and install the plug. Finally, install the transmission case cover.

Caution:



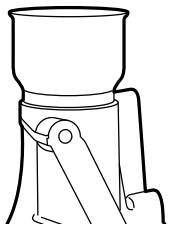
Always use specified CVTF. Using other fluid will cause malfunction. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>General Description>SPECIFICATION > HYDRAULIC CONTROL AND LUBRICATION.

Note:

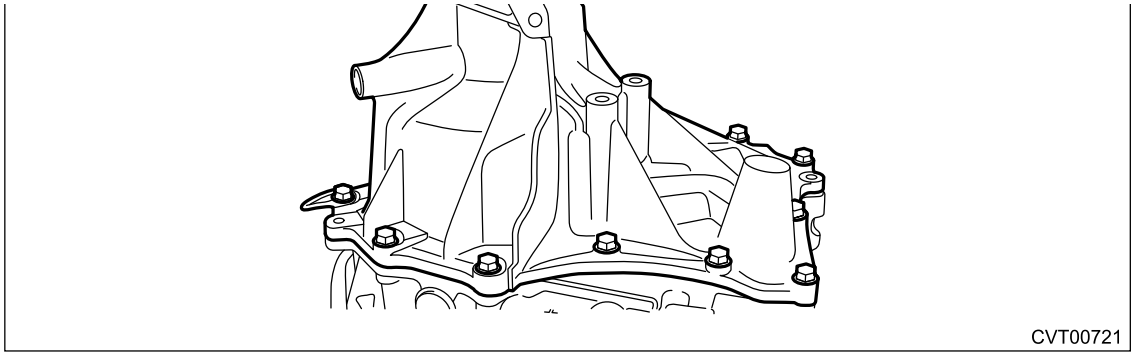
Use a new gasket.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case



REMOVAL

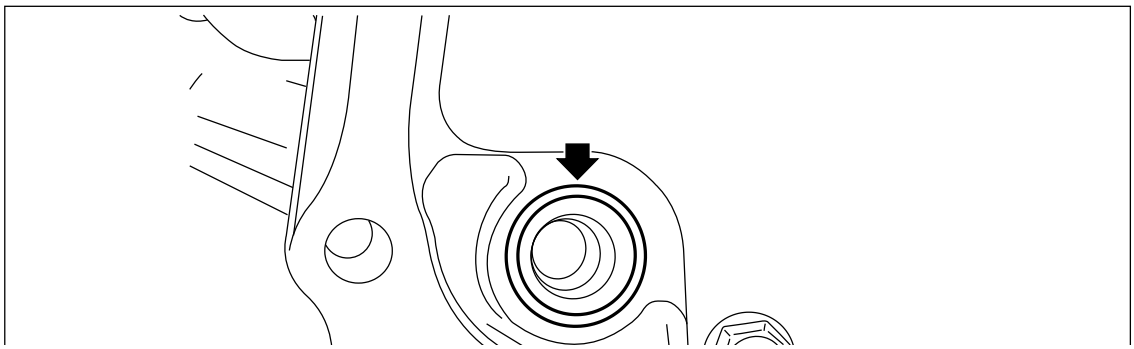
1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the extension case and transmission hanger.

   Note:

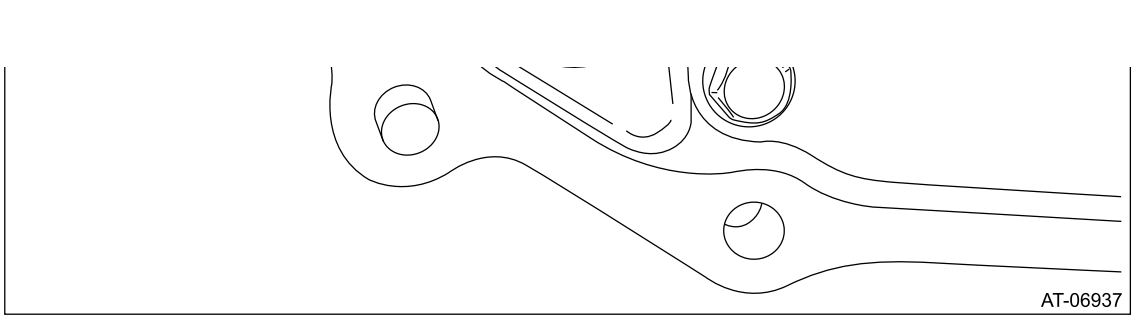
   The total number of extension case mounting bolts is 13.

3. Remove the O-rings.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case



INSTALLATION

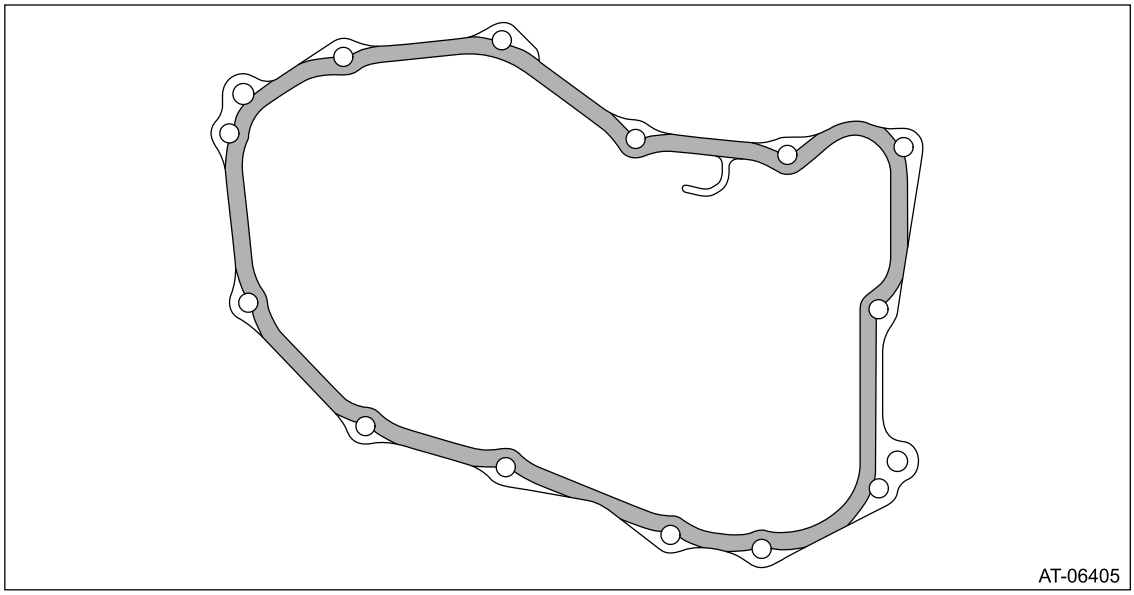


1. Clean the mating surface of extension case and transmission case.
2. Select the transfer drive gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>ADJUSTMENT.
3. Select the transfer driven gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>ADJUSTMENT.

4. Attach the selected transfer drive gear shim to extension case with vaseline.
5. Attach the selected transfer driven gear shim to extension case with vaseline.
6. Install the O-ring to the transmission case.

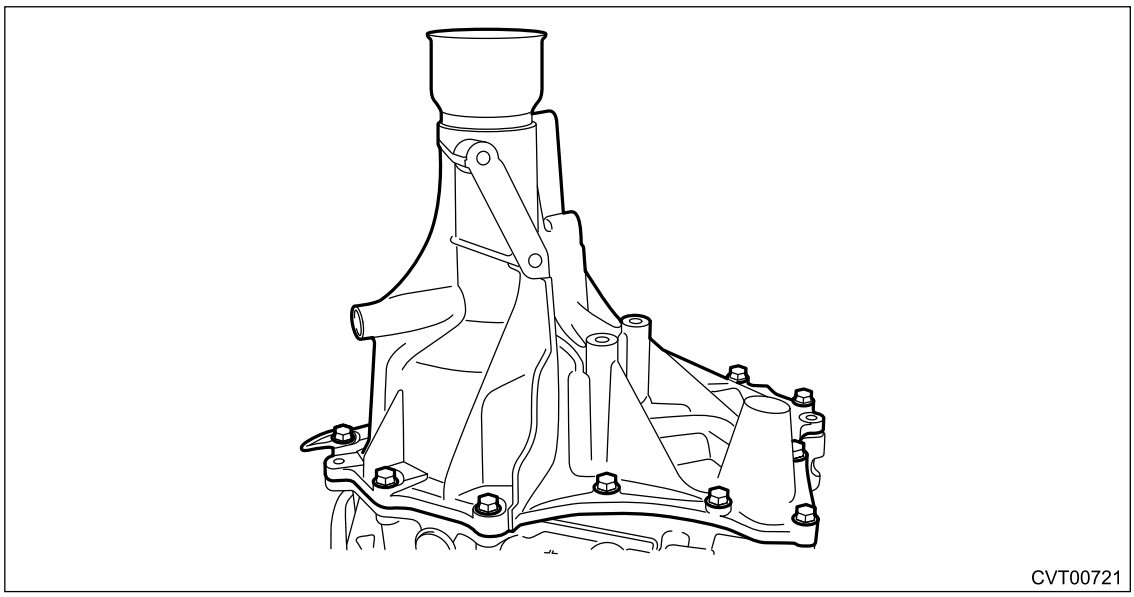
Note:

- **Use new O-rings.**
- **Apply CVTF to the O-rings.**



7. Apply liquid gasket to extension case seamlessly.

Liquid gasket:



THREE BOND 1215B or equivalent

8. Install the extension case to transmission hanger.

Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

9. Install the transmission assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

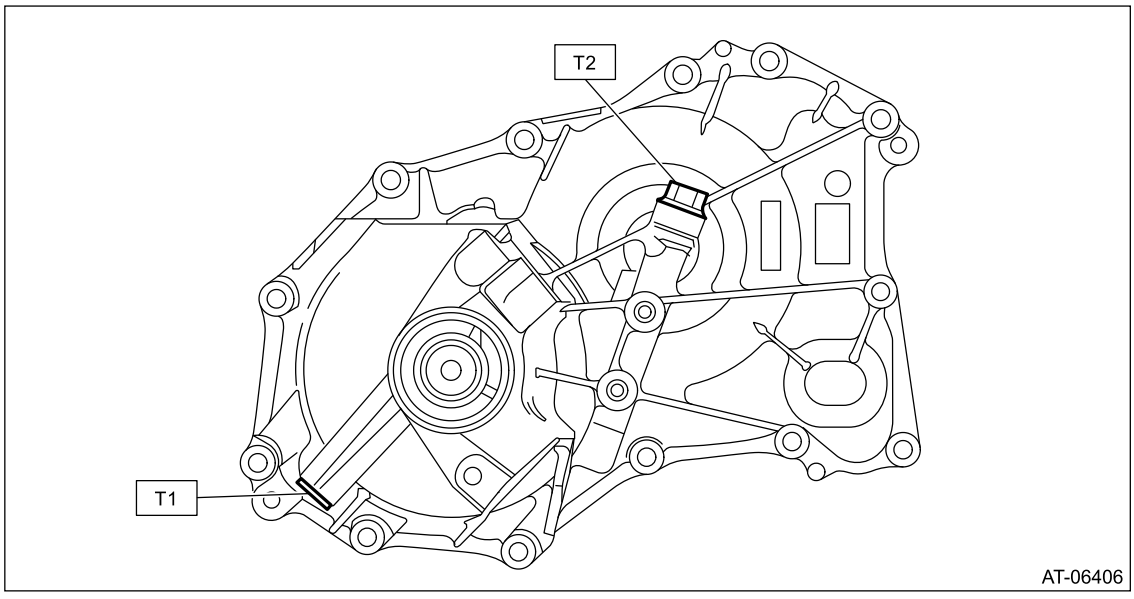
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case

DISASSEMBLY

1. Remove the dust cover from extension case.
2. Remove the extension case oil seal from the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Side Retainer Oil Seal>REPLACEMENT.
3. Remove all plugs.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case

ASSEMBLY



1. Press-fit the dust cover into extension case.
2. Install the extension case oil seal to extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Side Retainer Oil Seal>REPLACEMENT.
3. Install all plugs.

Note:

- **Use a new O-ring or a gasket.**
- **Apply CVTF to the O-rings.**

Tightening torque:

T1: 22 N·m (2.2 kgf-m, 16.2 ft-lb)
T2: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

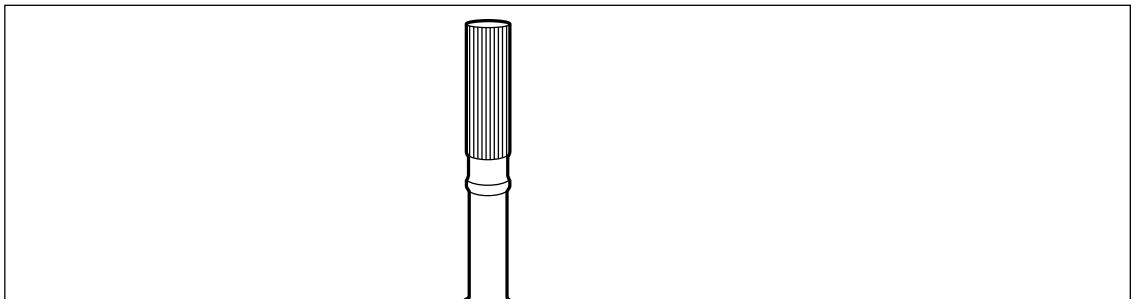
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case

INSPECTION

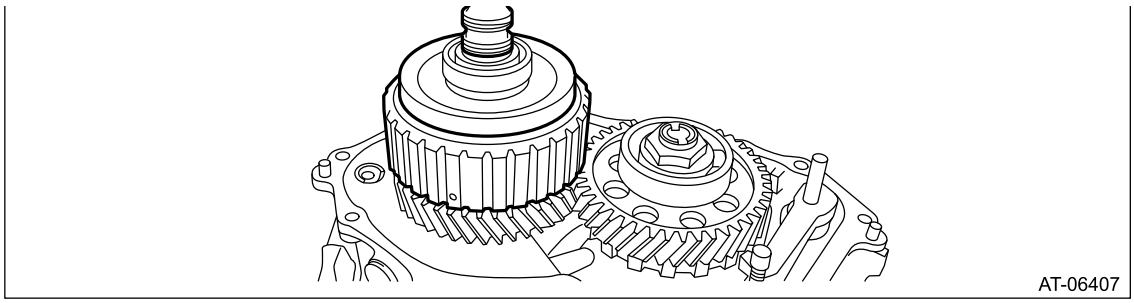
- Check there is no leak of CVTF from the joint between extension case and transmission case.
- Check there is no damage or cracks on the extension case and other parts.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Extension Case

ADJUSTMENT

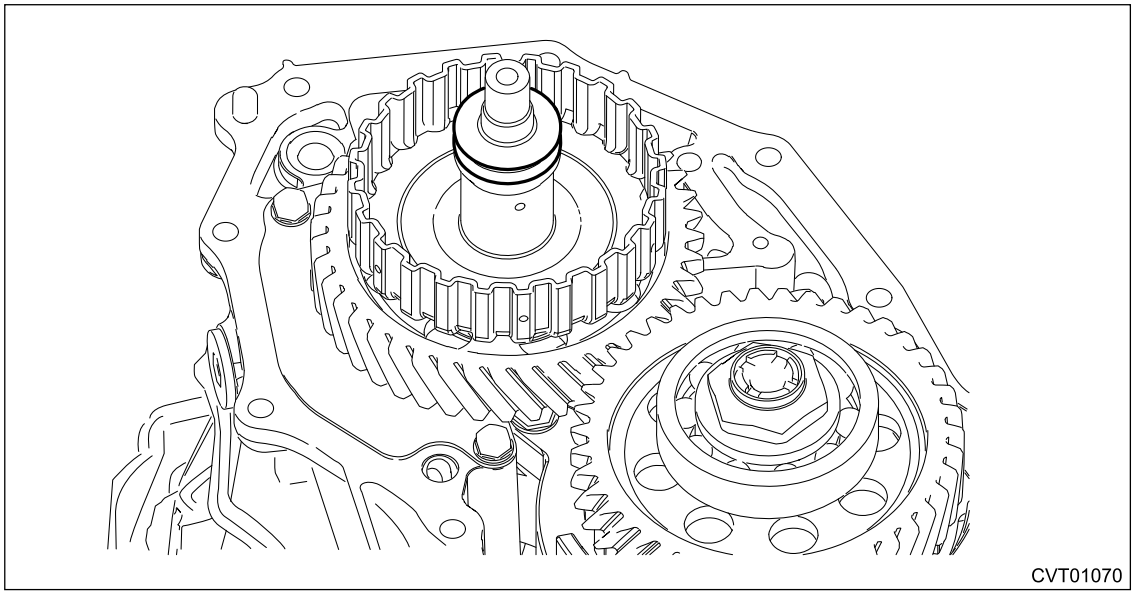


Note:



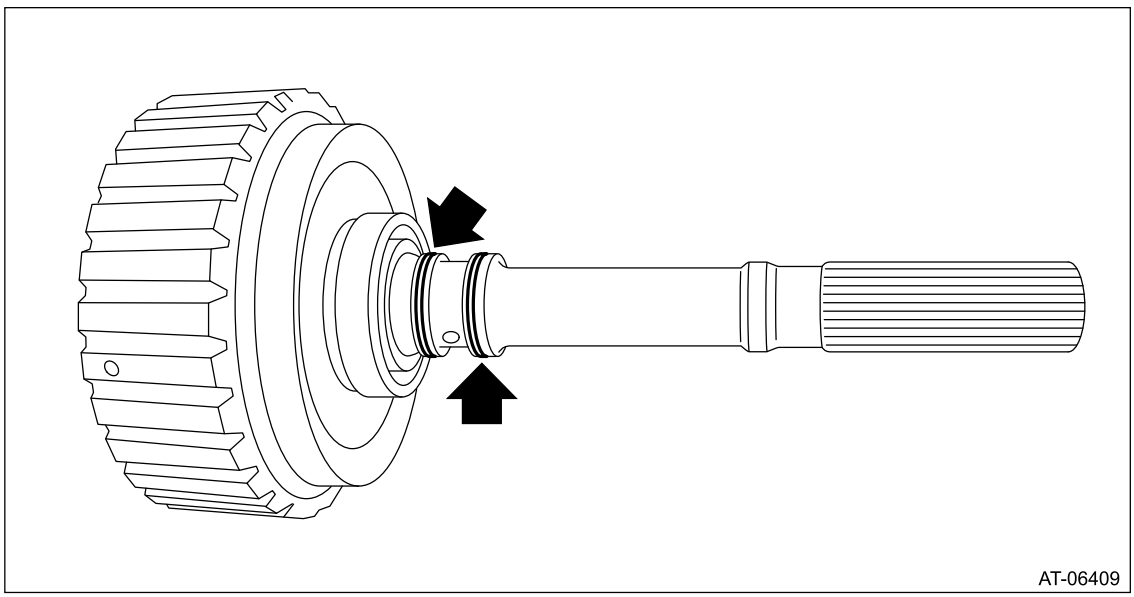
When replacing the extension case, select the transfer drive gear shim and transfer driven gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>ADJUSTMENT. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Clutch

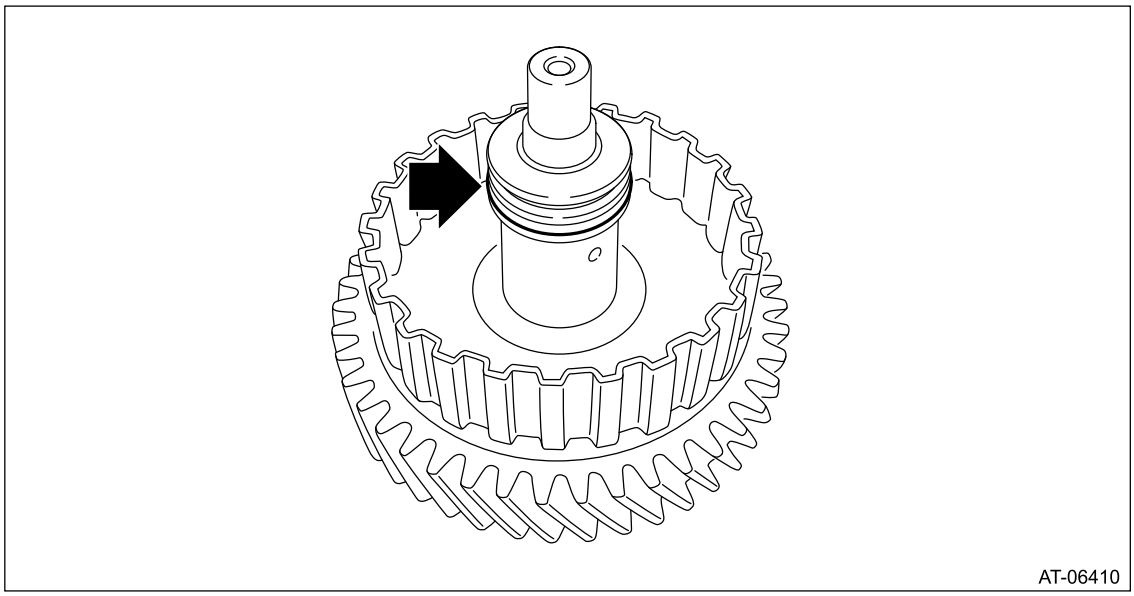


REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
3. Remove the transfer clutch assembly.



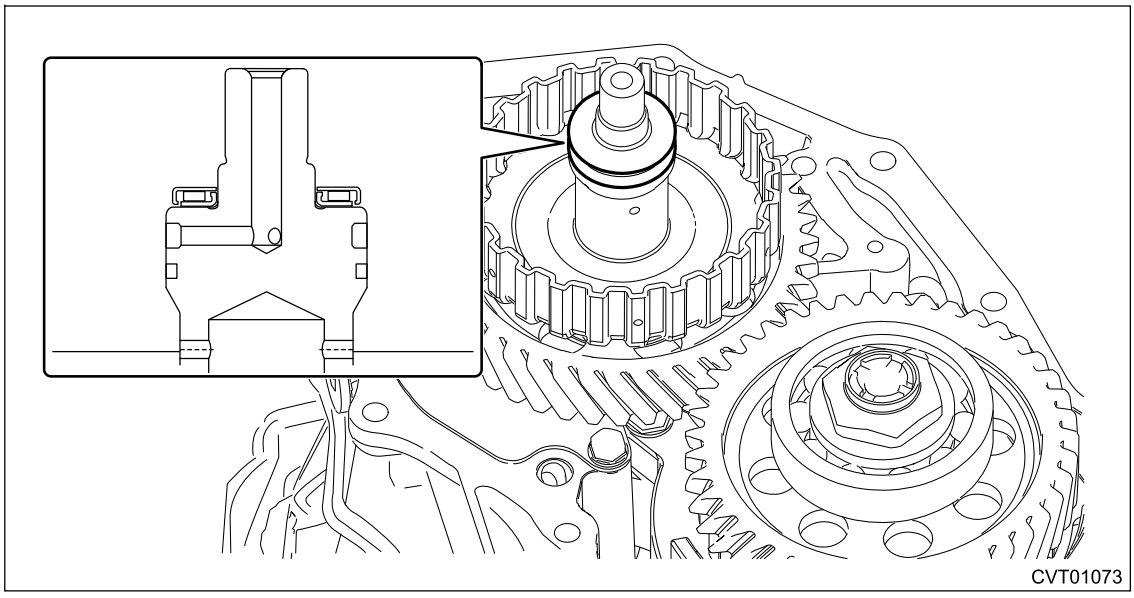
4. Remove the thrust bearing.



5. Remove the seal ring from transfer clutch assembly.

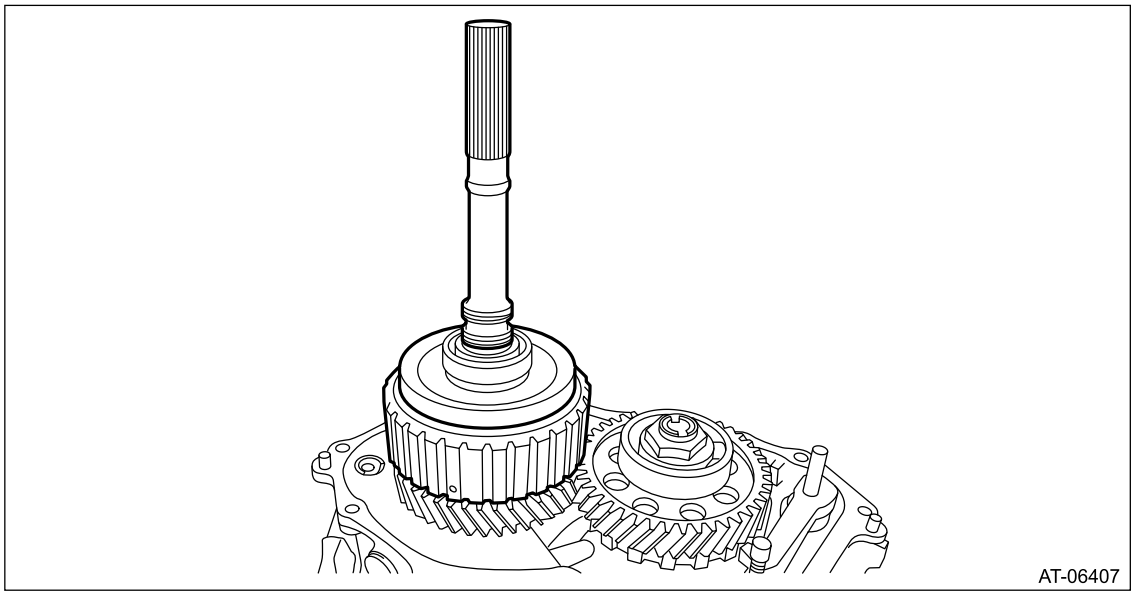
6. Remove the seal ring from the transfer driven gear assembly.

6. Remove the seal ring from the transfer driven gear assembly.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Clutch

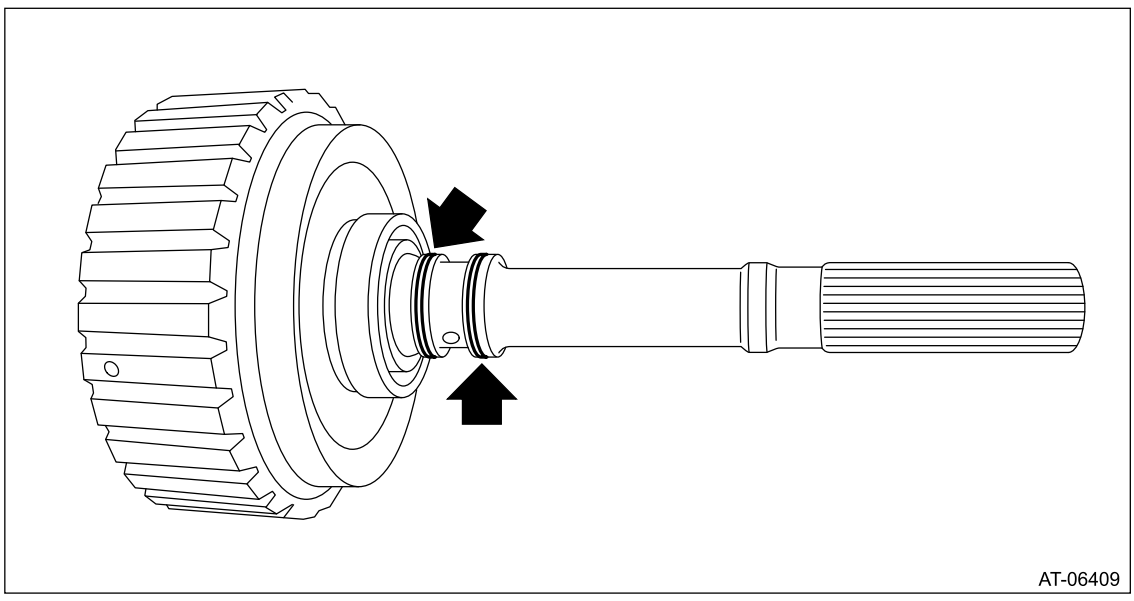
INSTALLATION



1. Install the thrust bearing.

   Note:

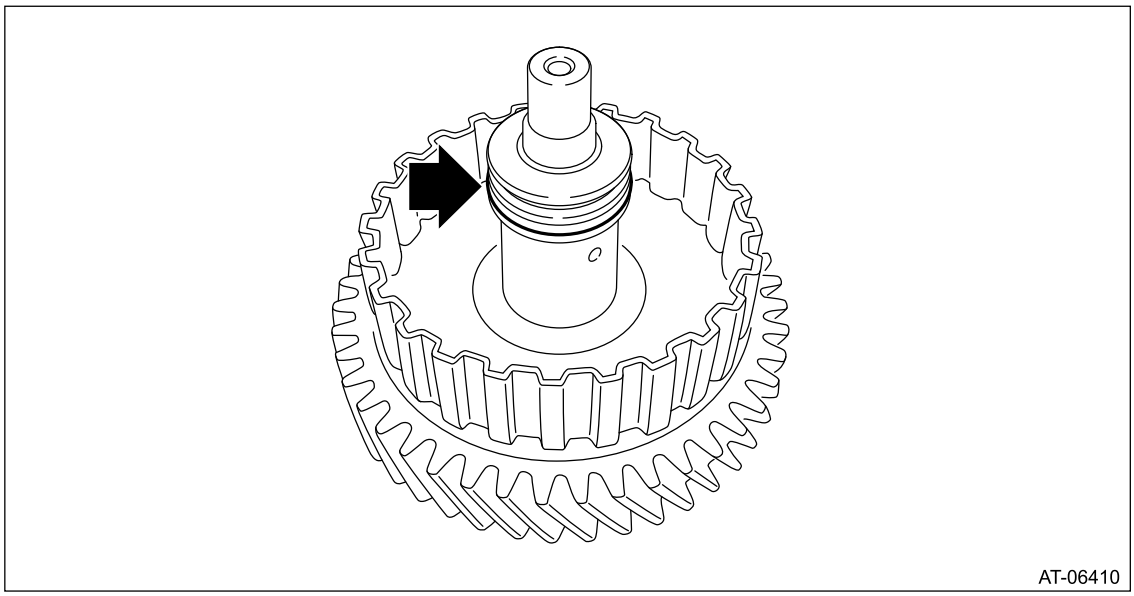
   Make sure to install in the right direction.



2. Install the transfer clutch assembly.

3. Select the transfer driven gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>ADJUSTMENT.
4. Attach the selected transfer driven gear shim to extension case with vaseline.
5. Remove the transfer clutch assembly.
6. Install the seal ring to the transfer clutch assembly.

Note:

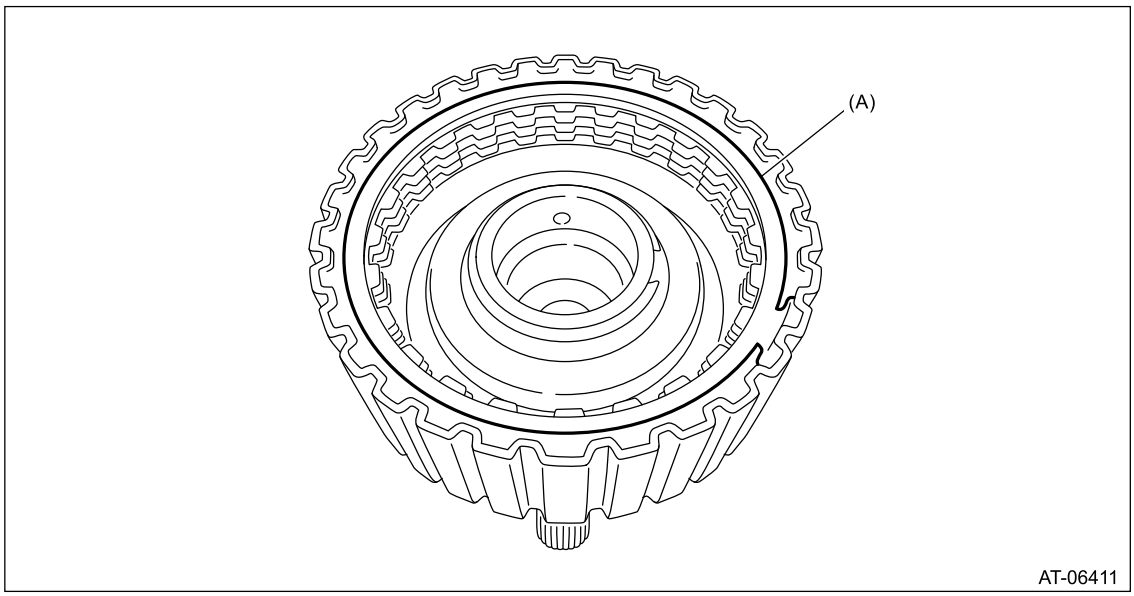


- **Use new seal rings.**
- **When installing the seal rings, do not expand the seal rings too much.**
- **Apply CVTF to the seal rings.**

7. Install the seal ring to the transfer driven gear assembly.

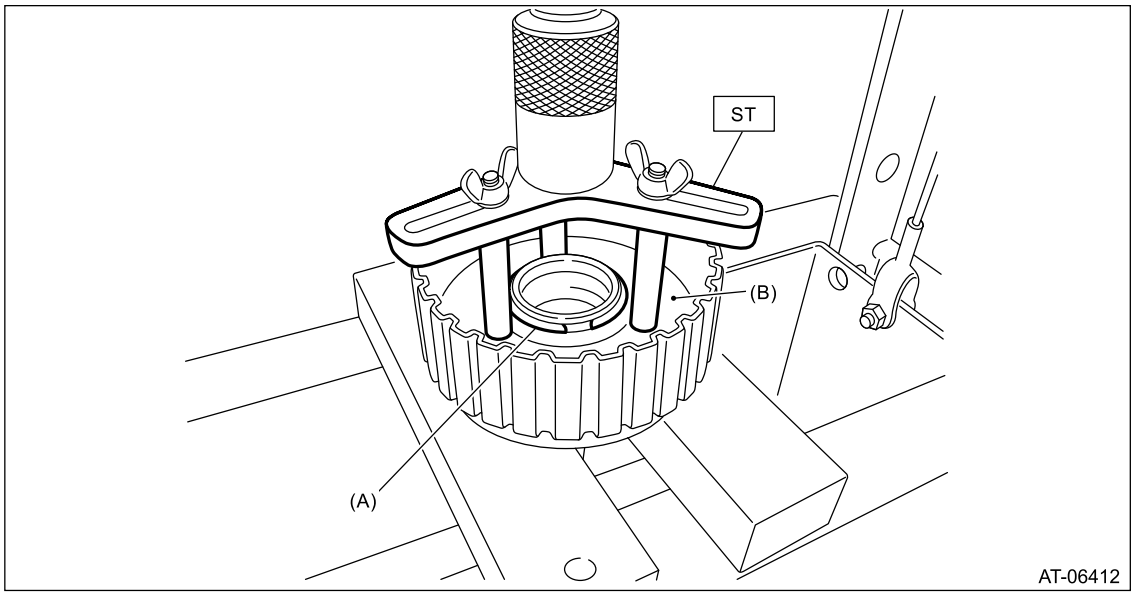
Note:

- **Use new seal rings.**
- **When installing the seal rings, do not expand the seal rings too much.**
- **Apply CVTF to the seal rings.**



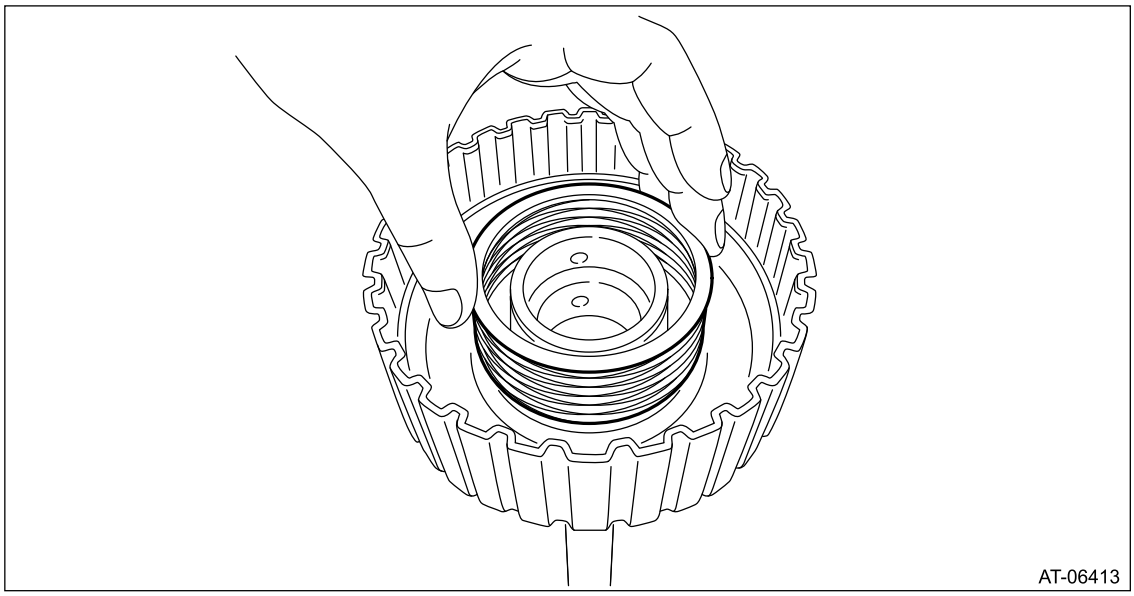
8. Install the transfer clutch assembly.
9. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
10. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Clutch



DISASSEMBLY

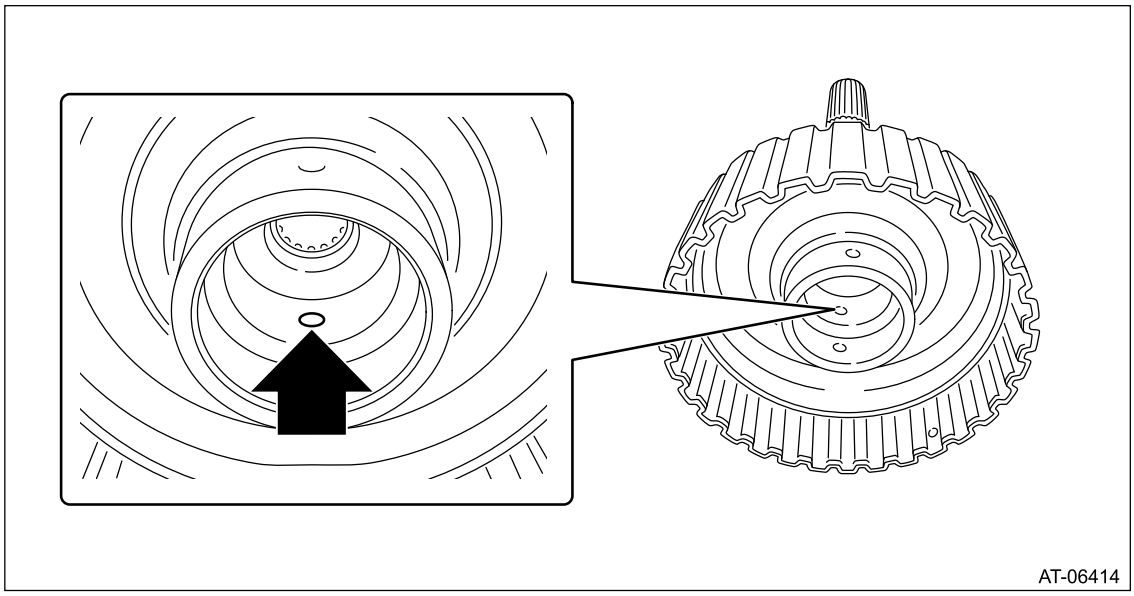
1. Remove the snap ring, and then remove the pressure plate, drive plate and driven plate.



(A) Snap ring

2. Using the ST, compress the return spring with a press and remove the snap ring.
Preparation tool:
ST: COMPRESSOR SPECIAL TOOL (18762AA001)

(A) Snap ring
(B) Transfer clutch piston seal

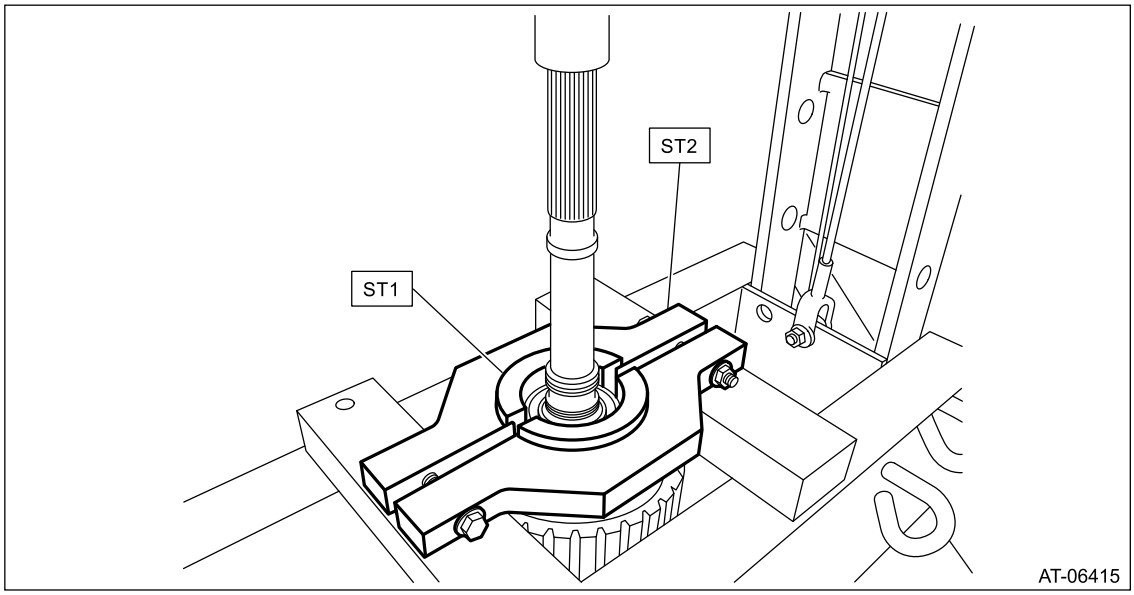


3. Remove the transfer clutch piston seal.
4. Remove the return spring.

5. Remove the transfer clutch piston by blowing compressed air through transfer clutch assembly hole.

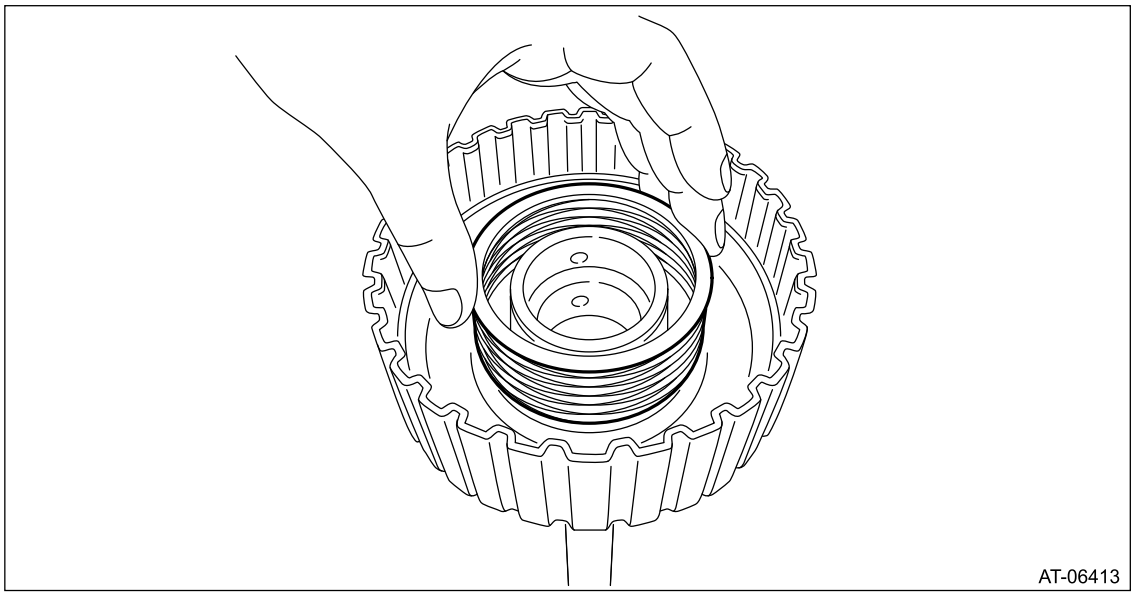
Note:

Plug the holes through which the compressed air is not blown.



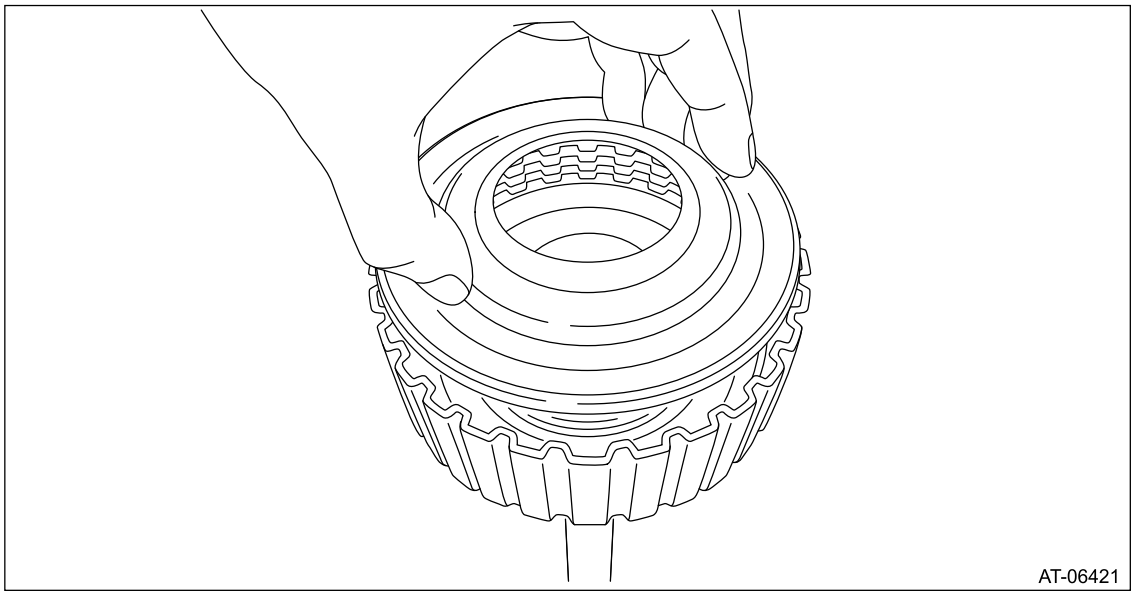
6. Remove the ball bearing using the ST1 and ST2.

Preparation tool:

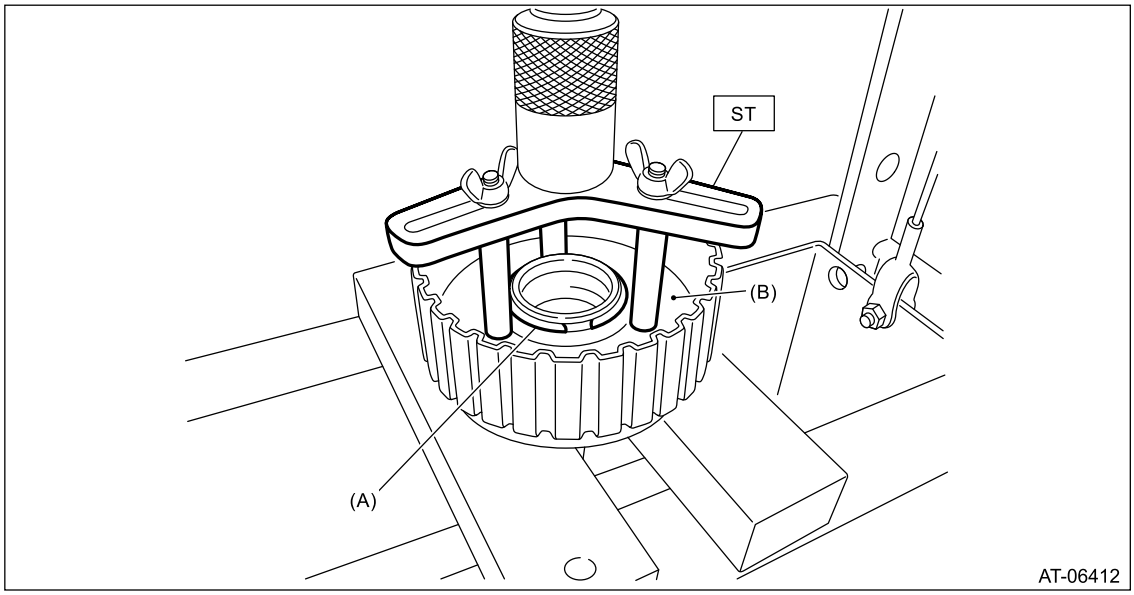


ST1: BEARING REMOVER (18767AA010)

ST2: REMOVER (18723AA000)

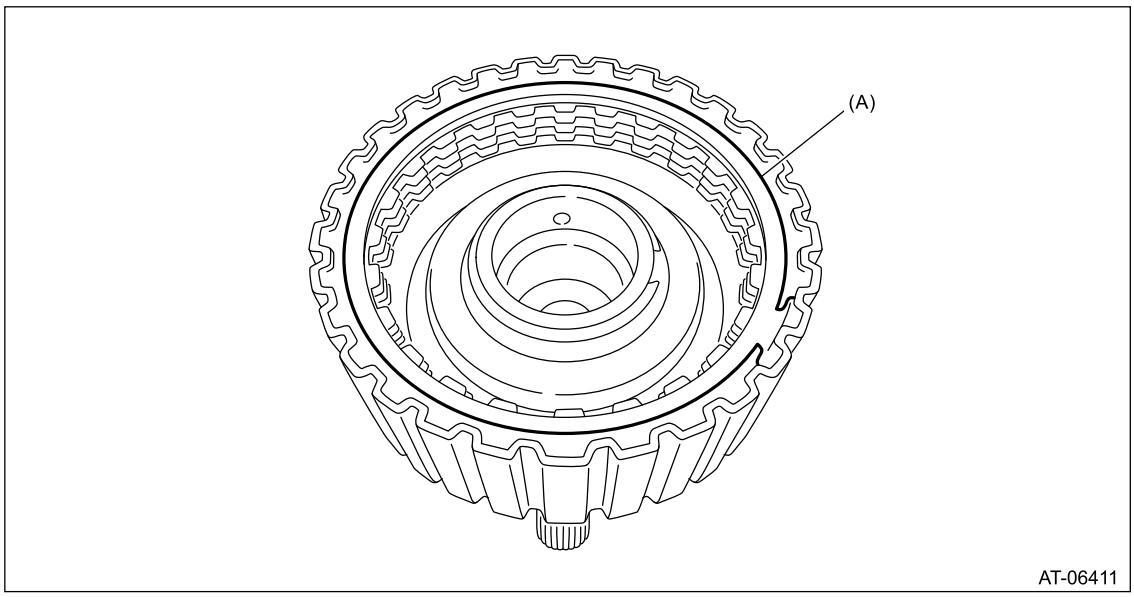


ASSEMBLY



1. Install the transfer clutch piston.
   Note:
   Apply CVTF to the transfer clutch piston lip.
2. Install the return spring.

3. Install the transfer clutch piston seal.
   Note:
   Apply CVTF to the lip section of transfer clutch piston seal.

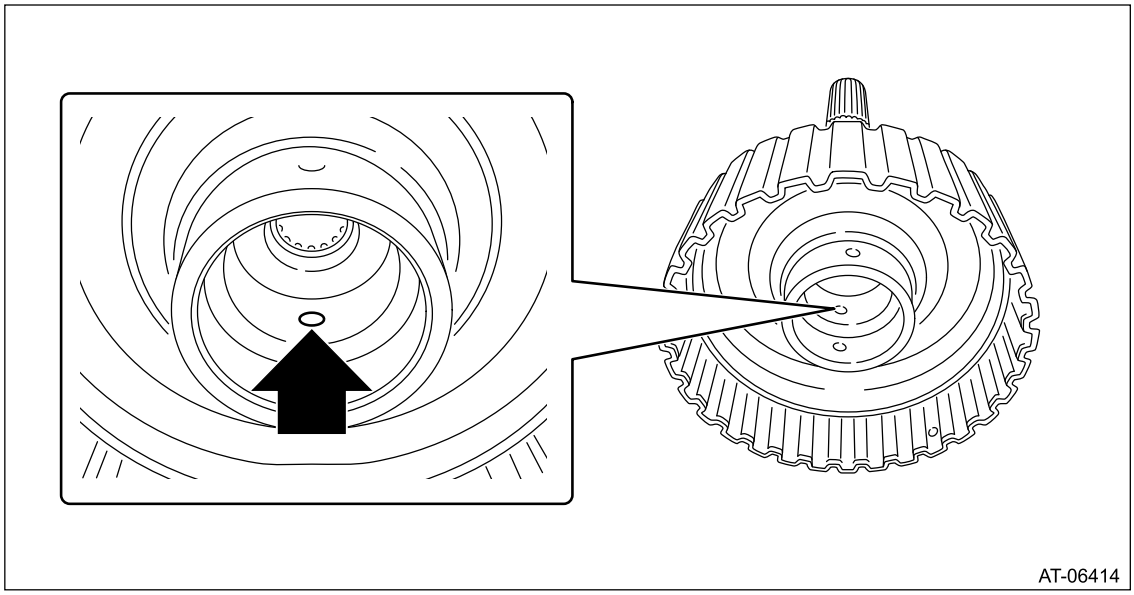


4. Using the ST, compress the return spring with a press and install the snap ring.
   Preparation tool:
   ST: COMPRESSOR SPECIAL TOOL (18762AA001)

(A) Snap ring

(B) Transfer clutch piston seal

5. Install the pressure plate, driven plate, drive plate and snap ring.



(A) Snap ring

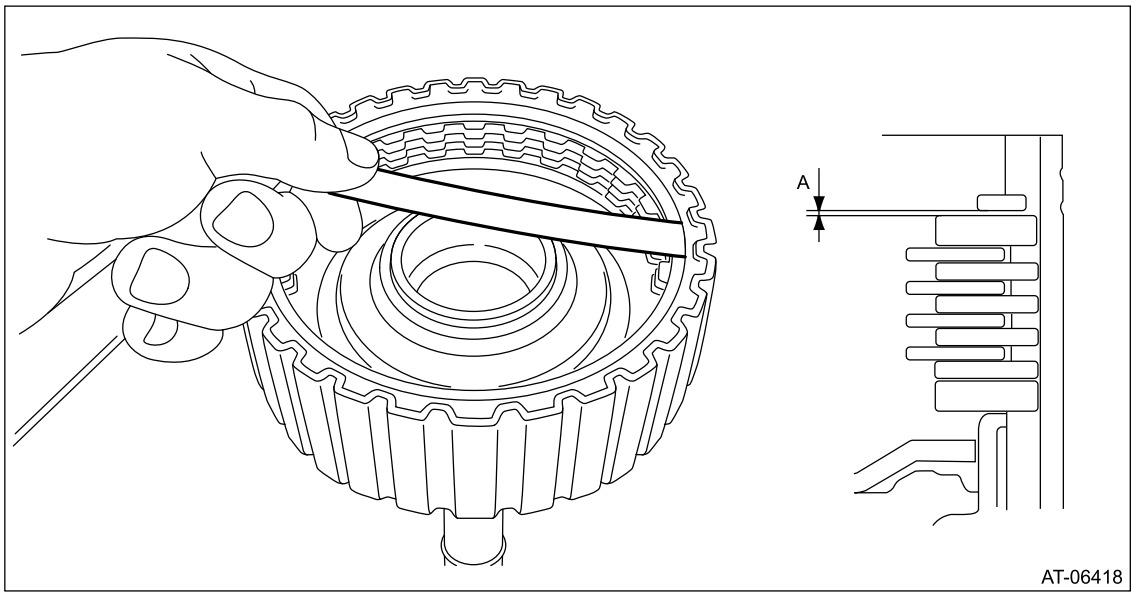
6. Blow compressed air through transfer clutch assembly hole, and check the transfer clutch piston

operation.

Note:

Plug the holes through which the compressed air is not blown.

7. Before measuring clearance "A", place same thickness shims on both sides to prevent the plate from tilting.



8. When the clearance "A" exceeds the limit for use, select the transfer clutch plate set and pressure plate, and adjust the clearance "A" within the initial specified value.

Initial standard:

0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:

1.3 mm (0.051 in)

(1) Measure the thickness of the pressure plate for the transfer clutch plate set that has been used before replacement.

(2) Select the transfer clutch plate set that uses the pressure plate of which the value is close to the measured value in (1), and check the clearance "A".

measured value in (1), and check the clearance "A".

Transfer clutch plate set	
Part No.	**Pressure plate thickness mm (in)**
31523AA370	3.3 (0.130)
31523AA380	3.7 (0.146)
31523AA390	4.1 (0.161)
31523AA400	4.5 (0.177)

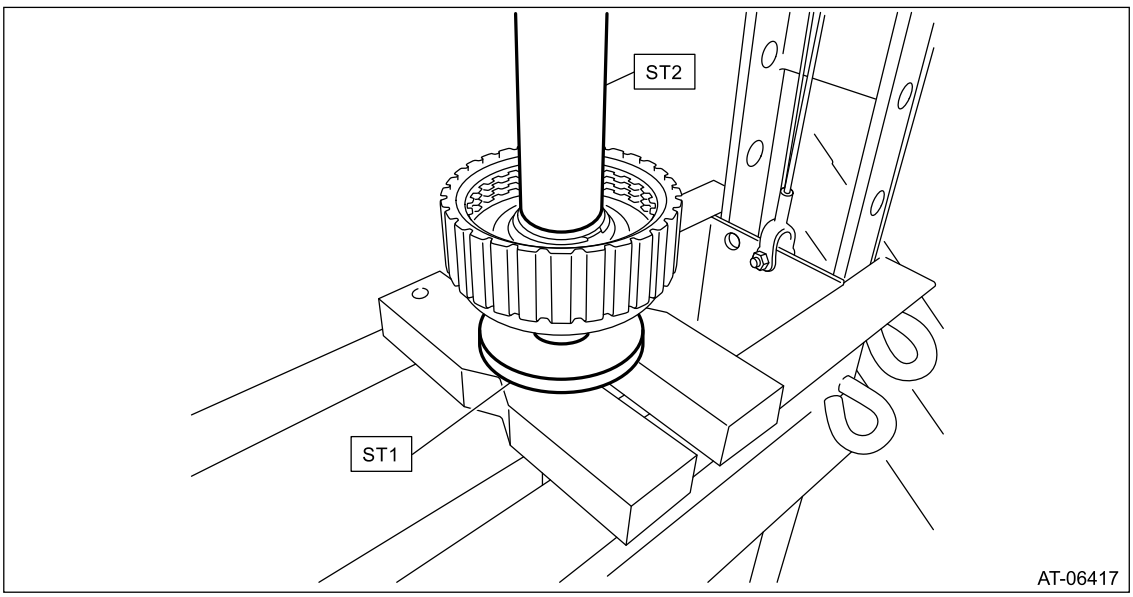
(3) When the clearance "A" exceeds the limit for use in step (2), replace the pressure plate installed on the lower side of the transfer clutch plate set, and check the clearance "A" again.

Pressure plate	
Part No.	**Thickness mm (in)**
31593AA151	3.3 (0.130)
31593AA161	3.7 (0.146)

(4) When the clearance "A" exceeds the limit for use in step (3), select the transfer clutch plate set that was not used in step (2), and adjust the clearance "A" again.

9. Check the clearance between snap ring and pressure plate. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSPECTION.

10. Install the ball bearing using the ST1 and ST2.



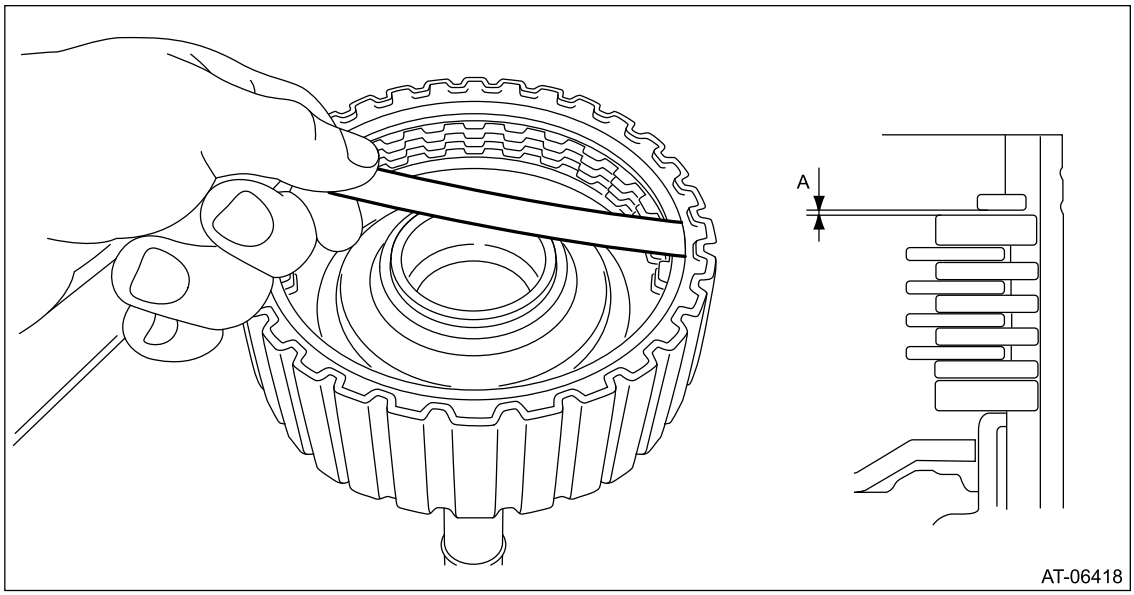
Note:

Use a new ball bearing.

Preparation tool:

ST1: INSTALLER (398177700)

ST2: INSTALLER (499277000)



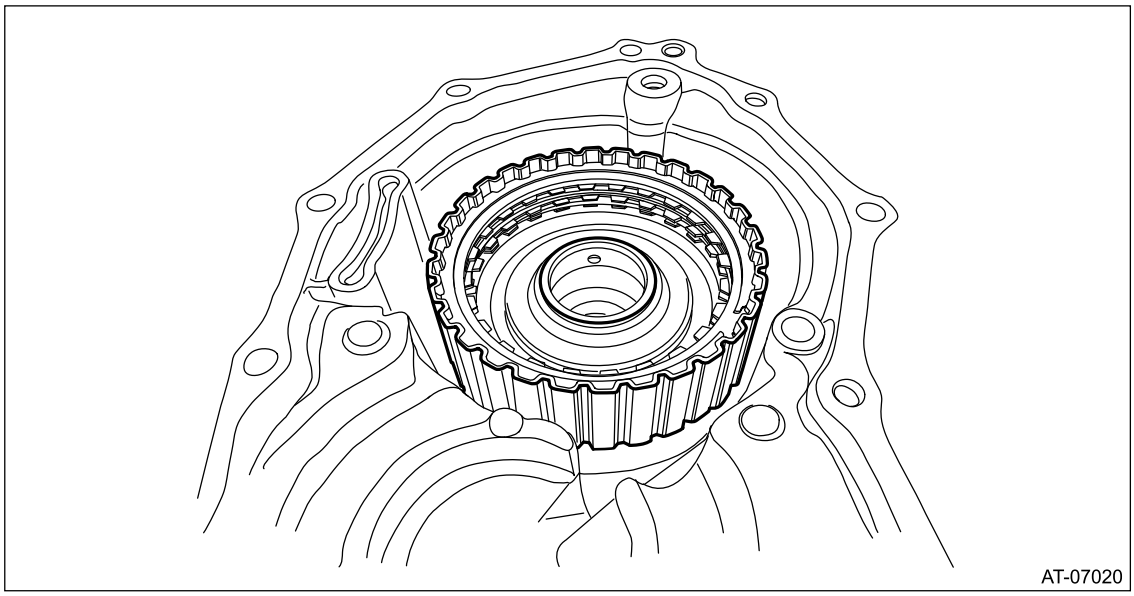
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Clutch

INSPECTION

- Inspect the drive plate facing for wear and damage.
- Driven plate for discoloration (burnt color)
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the lip seal for damage.
- Inspect the extension end play, and adjust it to within the standard value. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>ADJUSTMENT.

1. Before measuring clearance "A" between snap ring and driven plate, place same thickness shims on both sides to prevent the plate from tilting.
2. When clearance "A" exceeds the limit for use, replace the drive plate and driven plate as a set, and select the pressure plate within the initial specified value.
   Initial standard:
   0.7 — 1.1 mm (0.028 — 0.043 in)
   Limit thickness:
   1.3 mm (0.051 in)

3. Check for tight corner braking phenomenon when the vehicle is moved forward with the steering fully turned. If tight corner braking occurs, perform the following procedures.
   (1) With the steering wheel held at fully turned position, drive the vehicle in "D" range and with vehicle speed at approx. 5 km/h (3 MPH) in both clockwise and counterclockwise directions for

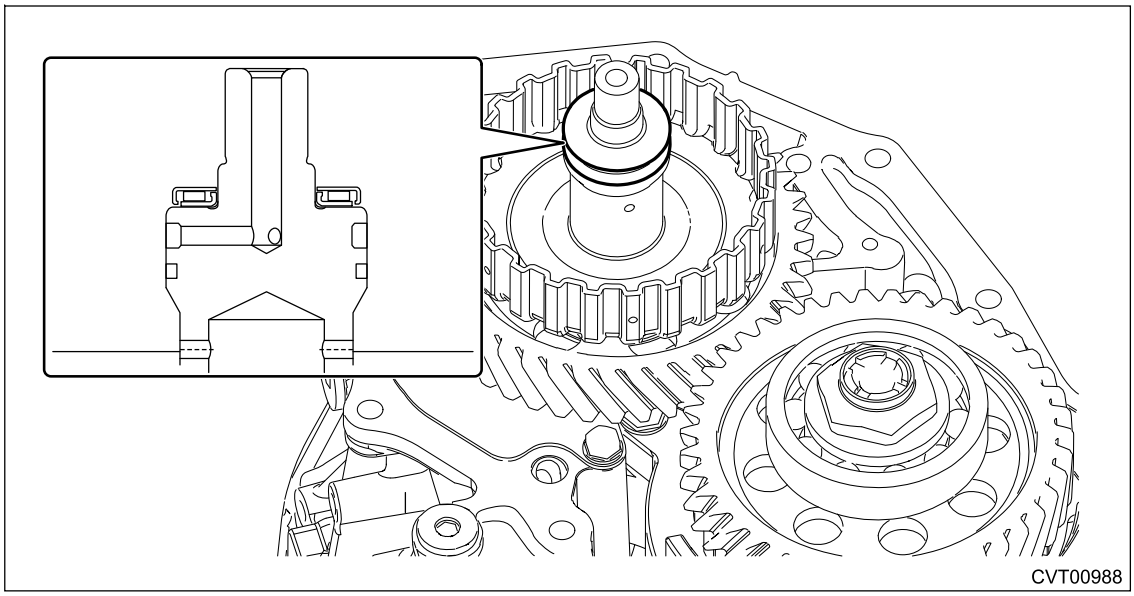


approx. ten times each, while repeating acceleration and braking intermittently.

(2) If the tight corner braking phenomenon still persists, drive the vehicle again in a circle for several laps.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Clutch

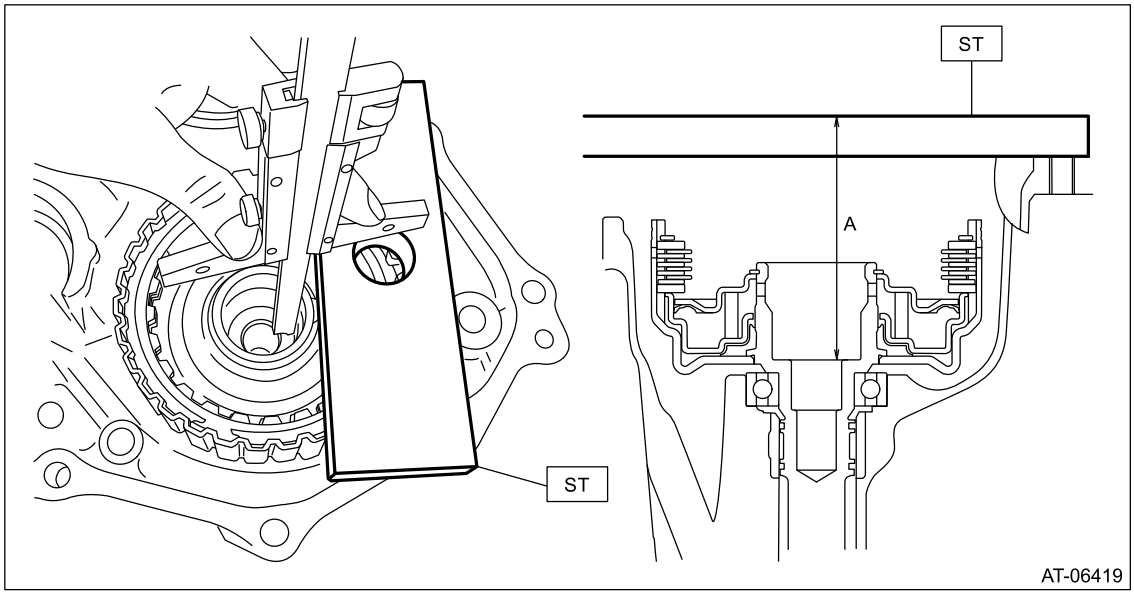
ADJUSTMENT



1. Install the transfer clutch assembly to the extension case with the transfer driven gear shims and thrust bearings removed.

2. Install the thrust bearing to the transfer driven gear.

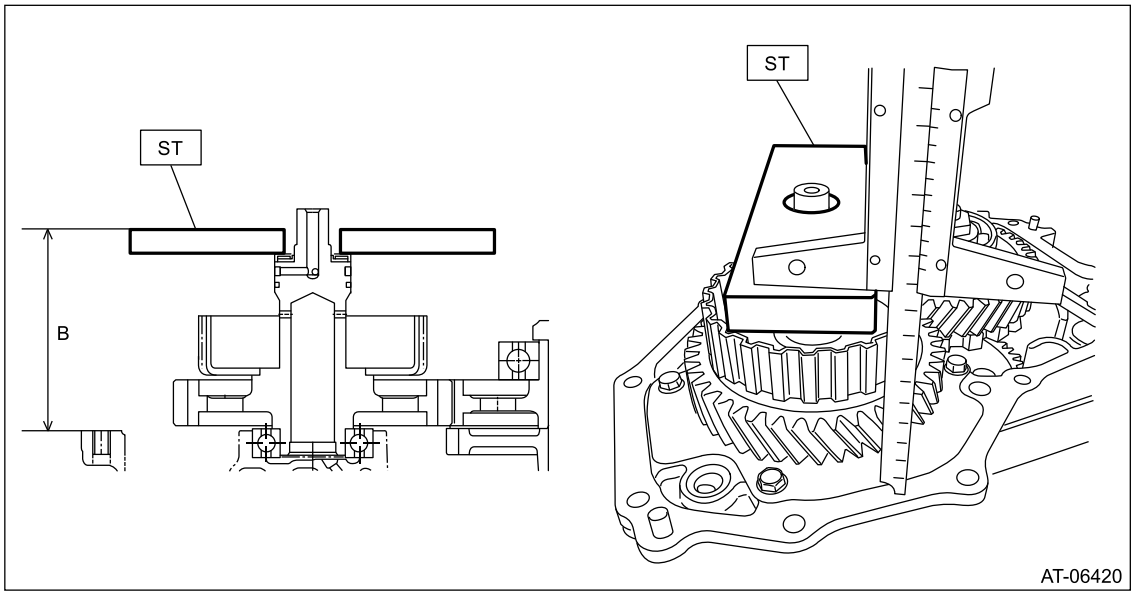
Note:



Make sure to install in the right direction.

3. Using the ST, measure the height "A" from the ST end face to the thrust bearing catch surface of the transfer clutch assembly.

Preparation tool:



ST: GAUGE (499575500)

4. Using the ST, measure the height "B" from the transmission case mating surface to the end of ST.

Preparation tool:

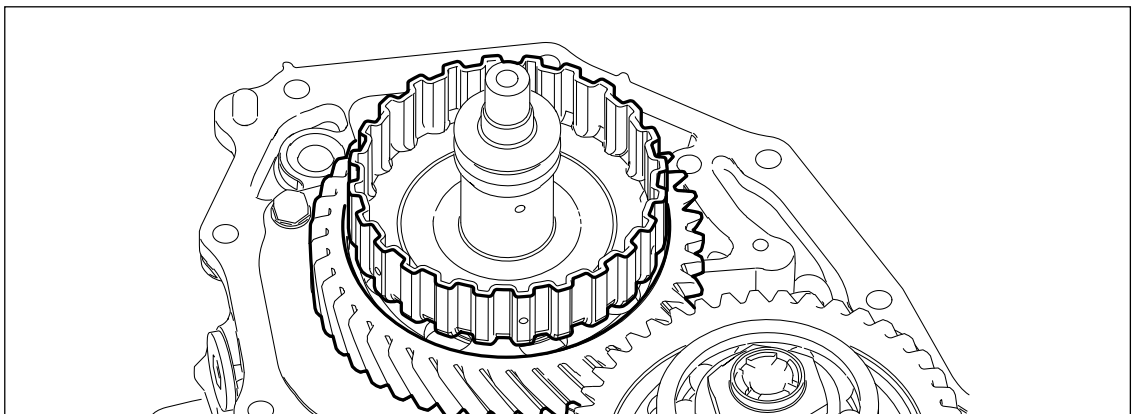
ST: GAUGE (499575500)

5. Obtain the thickness of transfer driven gear shim using the following formula to select one to three transfer driven gear shims.

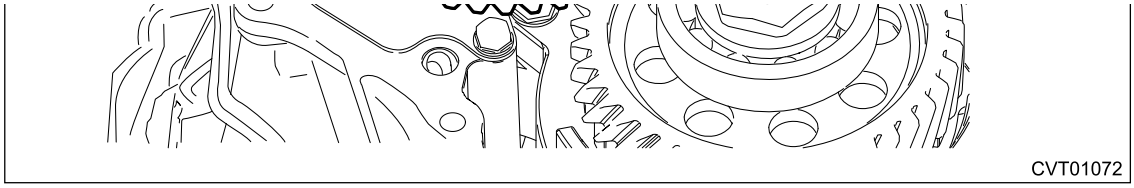
T mm = A − B − (0.05 — 0.25)

[T in = A − B − (0.002 — 0.01)]

T: Transfer driven gear shim thickness

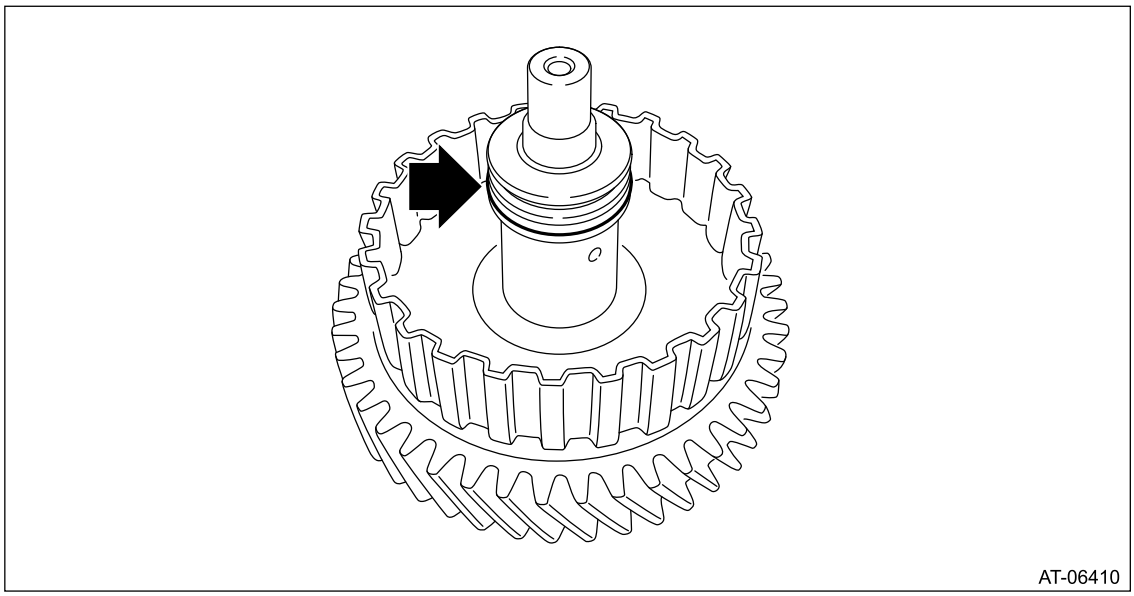


A: Height from the ST end face to the transfer clutch assembly thrust bearing catch surface
B: Height from the mating surface of the transmission case to the end of the ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance



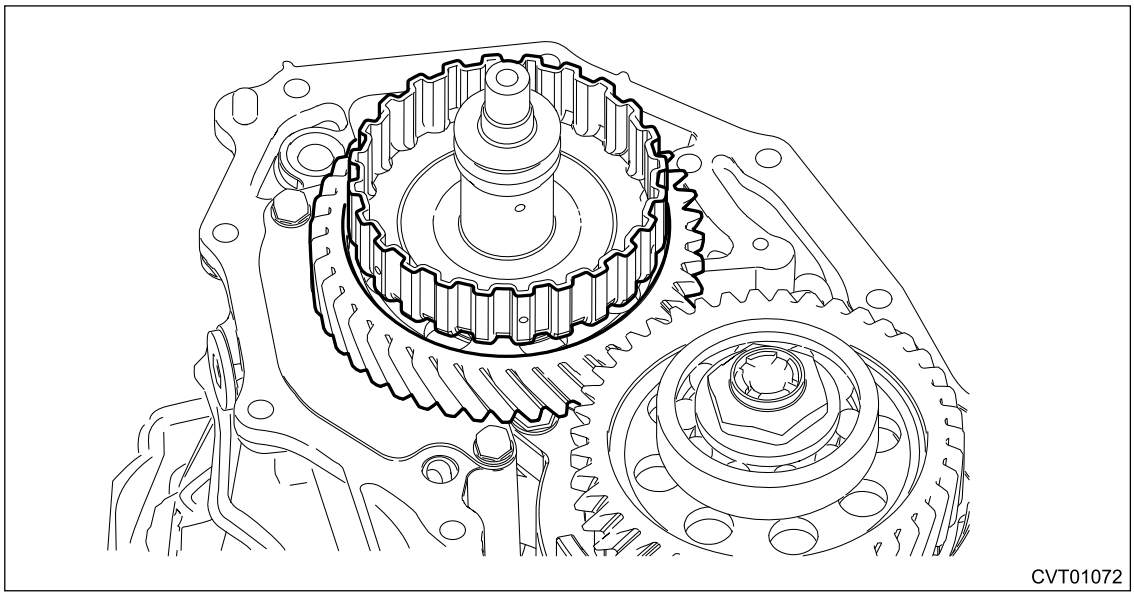
Transfer driven gear shim	
Part No.	**Thickness mm (in)**
33280AA030	0.3 (0.012)
33280AA040	0.4 (0.016)
33280AA050	0.5 (0.020)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Driven Gear



REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
3. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
4. Remove the transfer driven gear assembly.



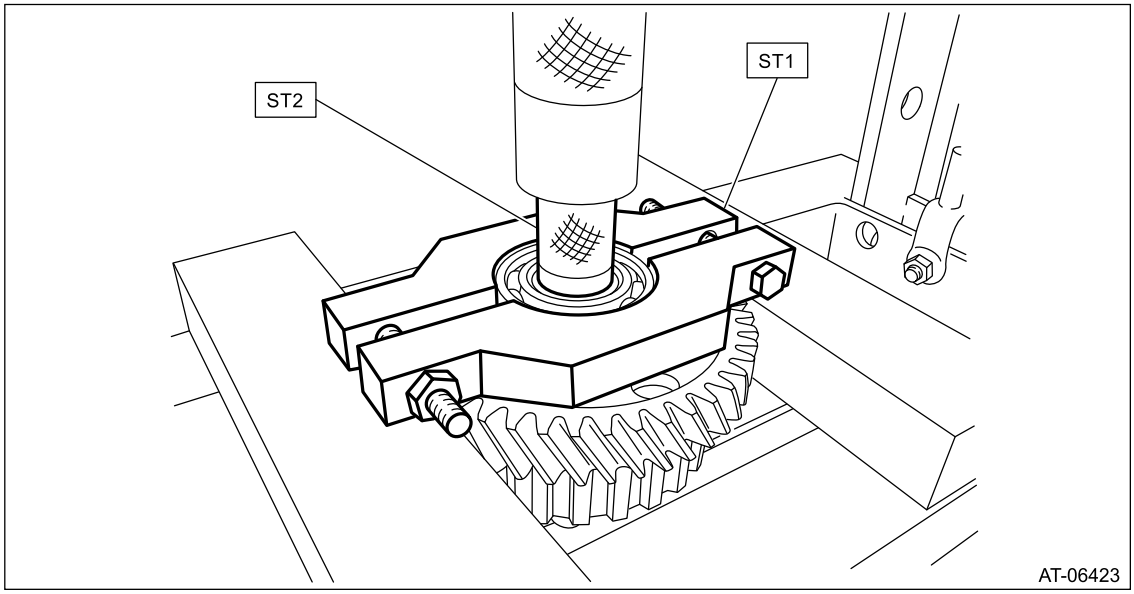
5. Remove the seal ring from the transfer driven gear assembly.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Driven Gear

INSTALLATION

1. Install the transfer driven gear assembly.

2. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
3. Select the transfer driven gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>ADJUSTMENT.
4. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION

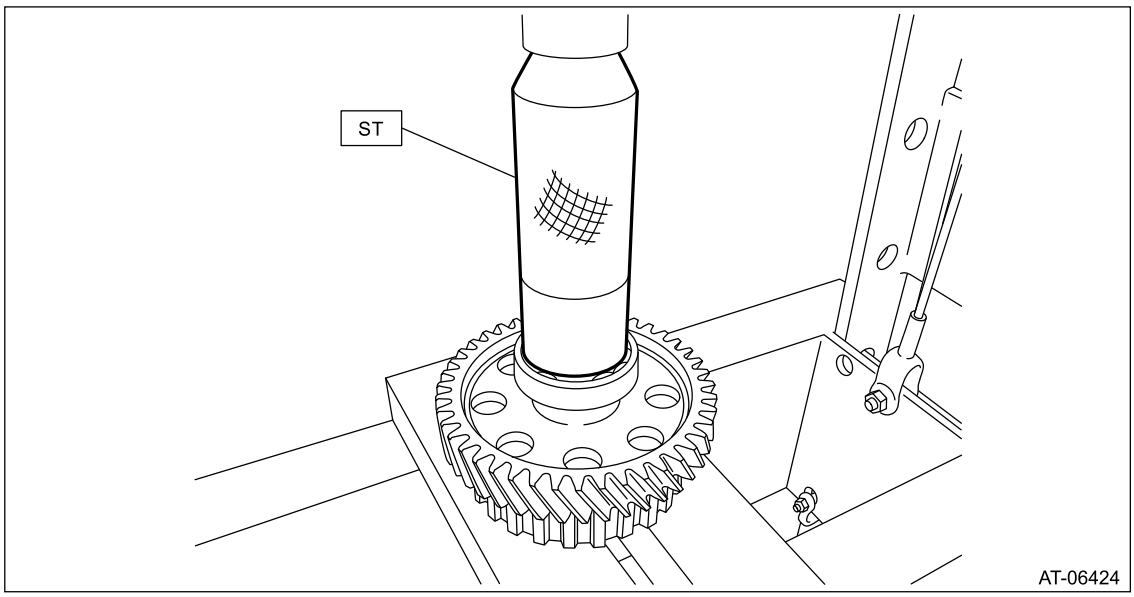


TRANSMISSION(TR580)>Extension Case>INSTALLATION.

5. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Driven Gear

DISASSEMBLY



1. Remove the ball bearing using the ST1 and ST2.
   Preparation tool:
   ST1: REMOVER (498077400)
   ST2: REMOVER (899864100)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Driven Gear

ASSEMBLY

1. Using the ST, install the ball bearing.
   Preparation tool:
   ST: INSTALLER (899580100)

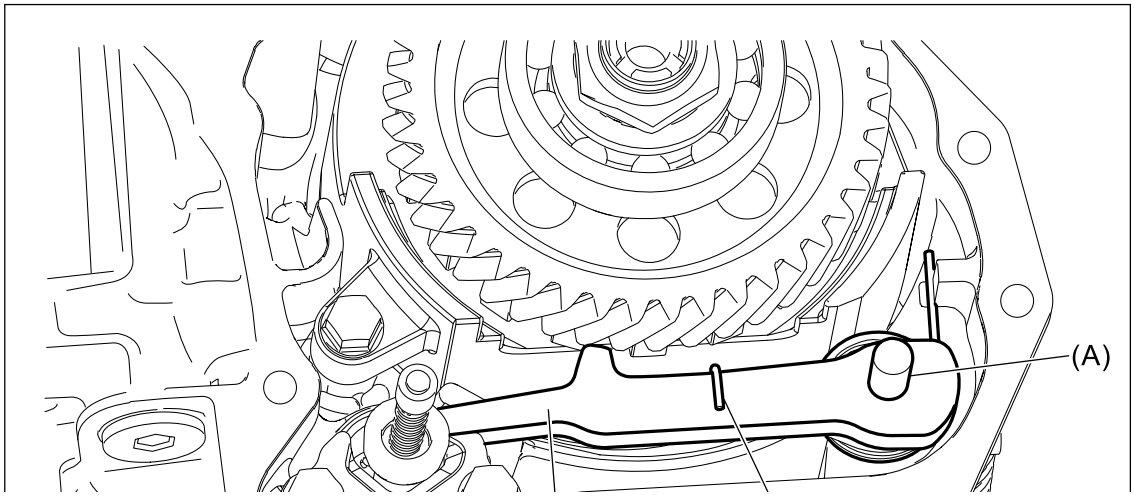
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Driven Gear

INSPECTION

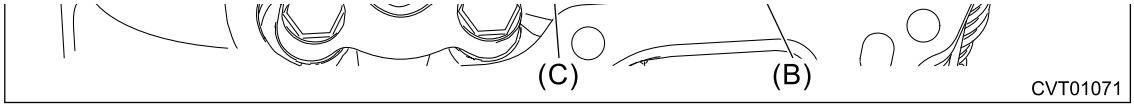
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check the transfer driven gear for breakage or damage.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transfer Driven Gear

ADJUSTMENT



Note:

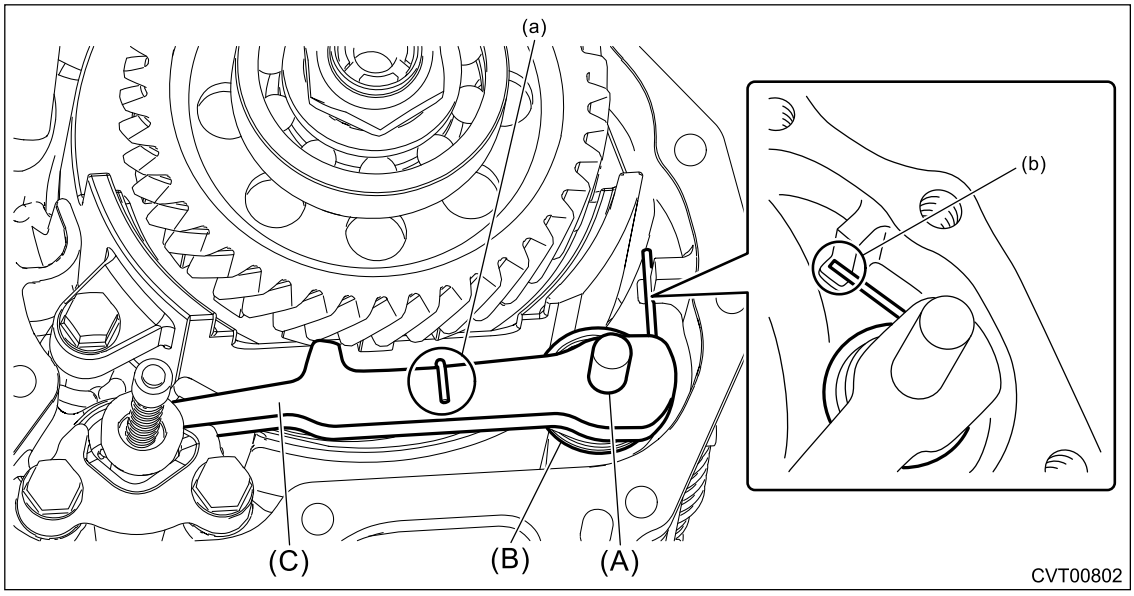


When the transfer driven gear or bearing is replaced, select the transfer driven gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Parking Pawl

REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Shift the range select lever to “N” range.
3. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
4. Remove the parking pawl shaft, return spring and parking pawl.



(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Parking Pawl

INSTALLATION

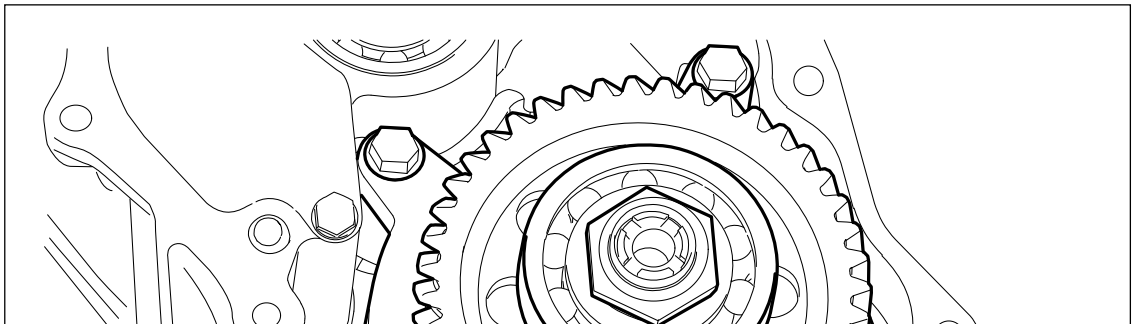
1. Set the range select lever to the "N" range.
2. Install the parking pawl shaft, return spring and parking pawl.
   Note:
   Make sure that the end of return spring sticks out of parking pawl as shown in (a).
   Make sure that the other end contacts the rib of transmission case as shown in (b).

(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

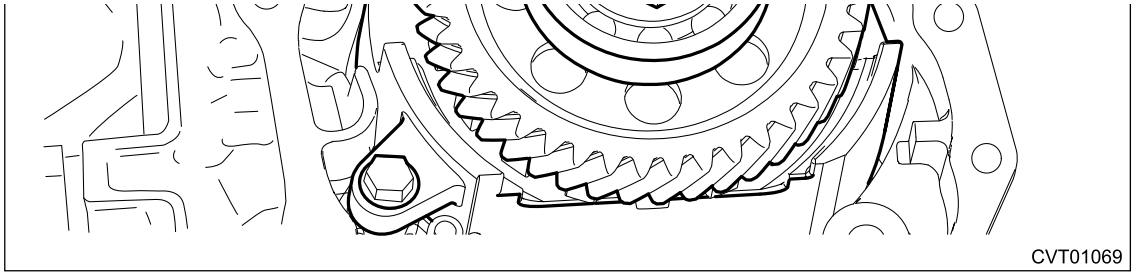
3. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
4. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE

4. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Parking Pawl



INSPECTION

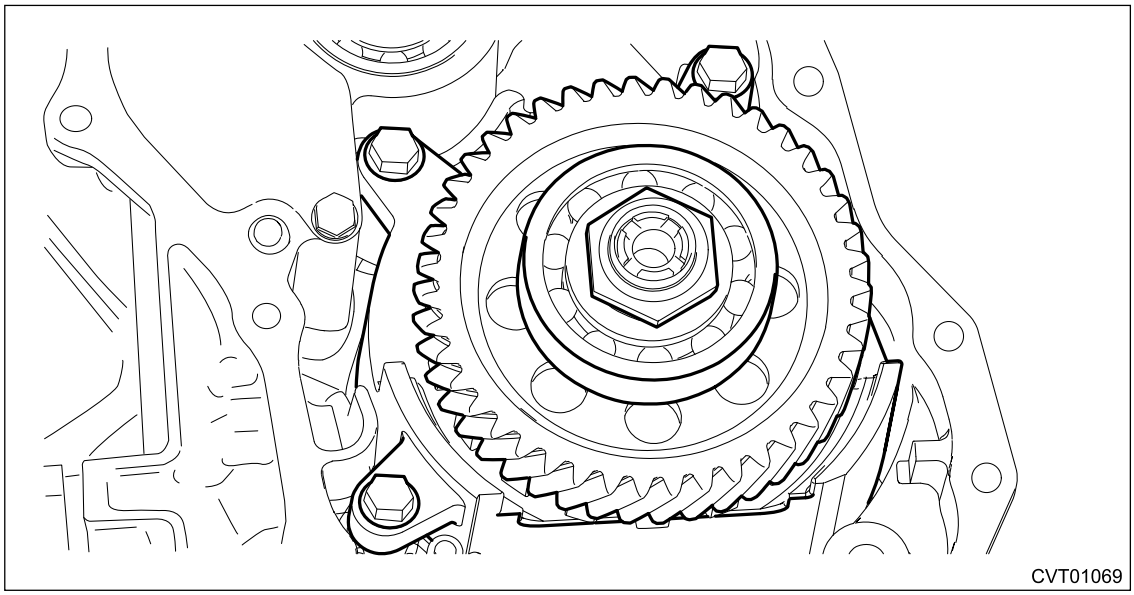


- Check the parking pawl for breakage or damage.
- Check for worn, broken and/or damaged return spring.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Driven Gear

REMOVAL

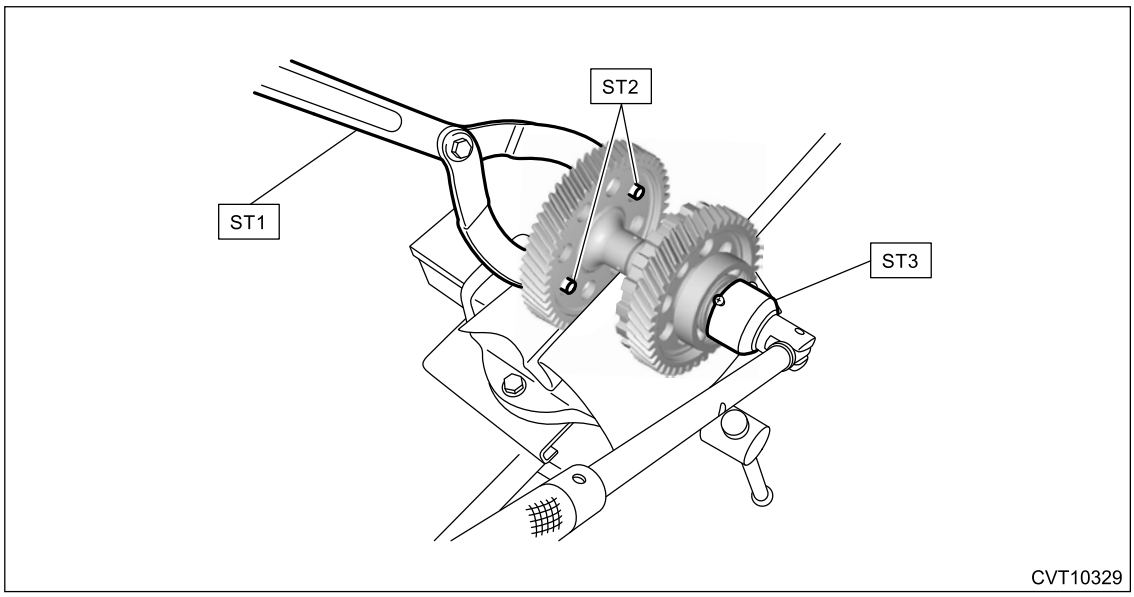
1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
3. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
4. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
5. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
6. Remove the reduction driven gear assembly and spacer oil.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Driven Gear

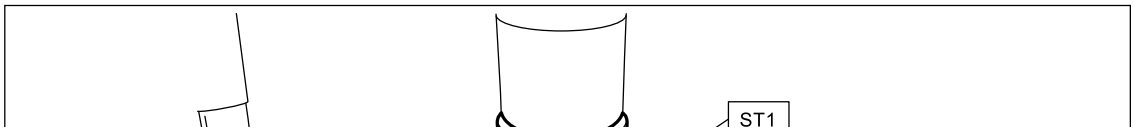
INSTALLATION

1. Install the reduction driven gear assembly and spacer oil.
   Tightening torque:
   17 N·m (1.7 kgf-m, 12.5 ft-lb)

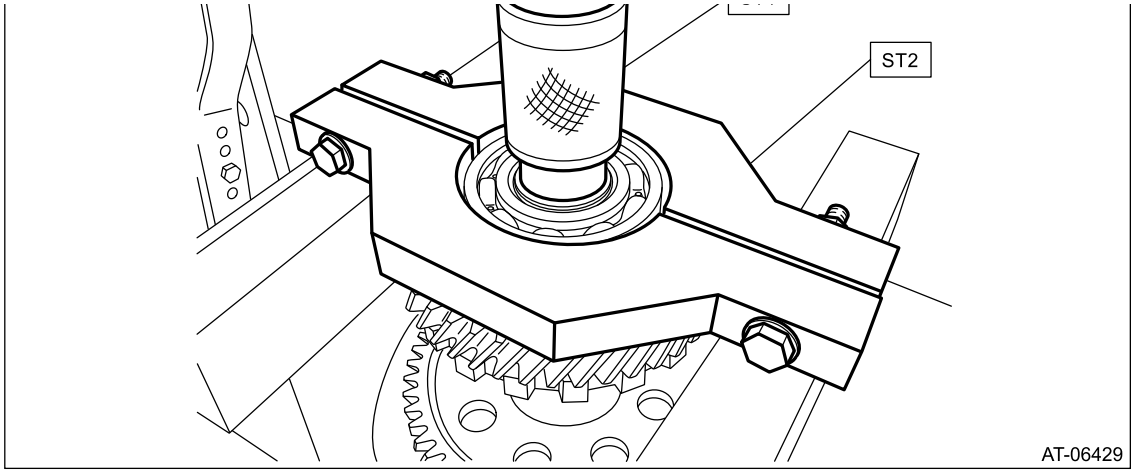


2. Select the transfer drive gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>ADJUSTMENT.
3. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
4. Attach the selected transfer drive gear shim to extension case with vaseline.
5. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.

6. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
7. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
8. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

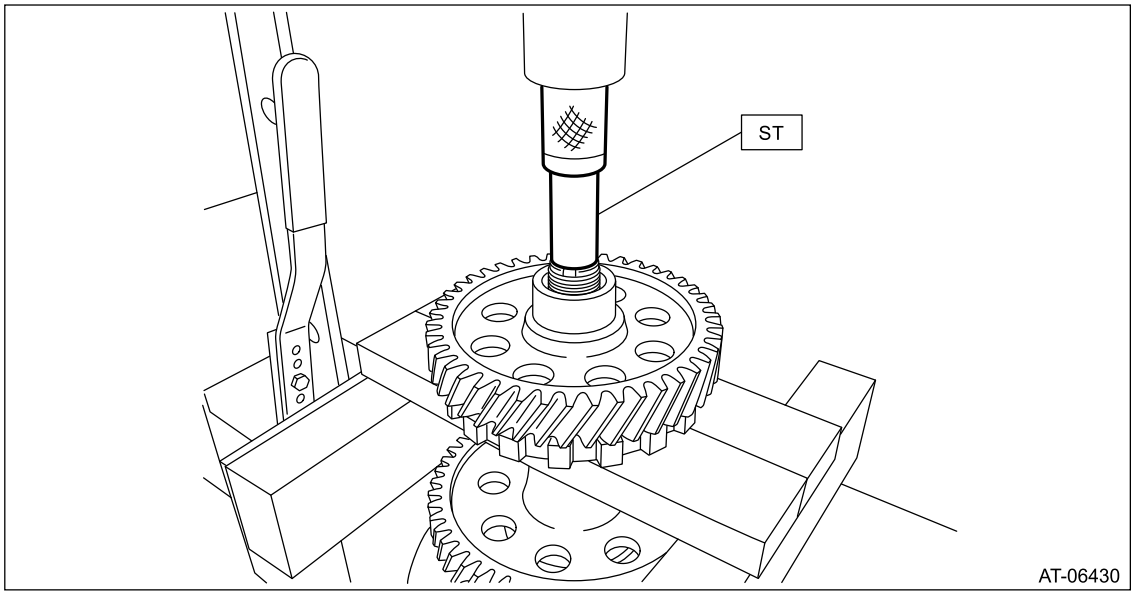


CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Driven Gear

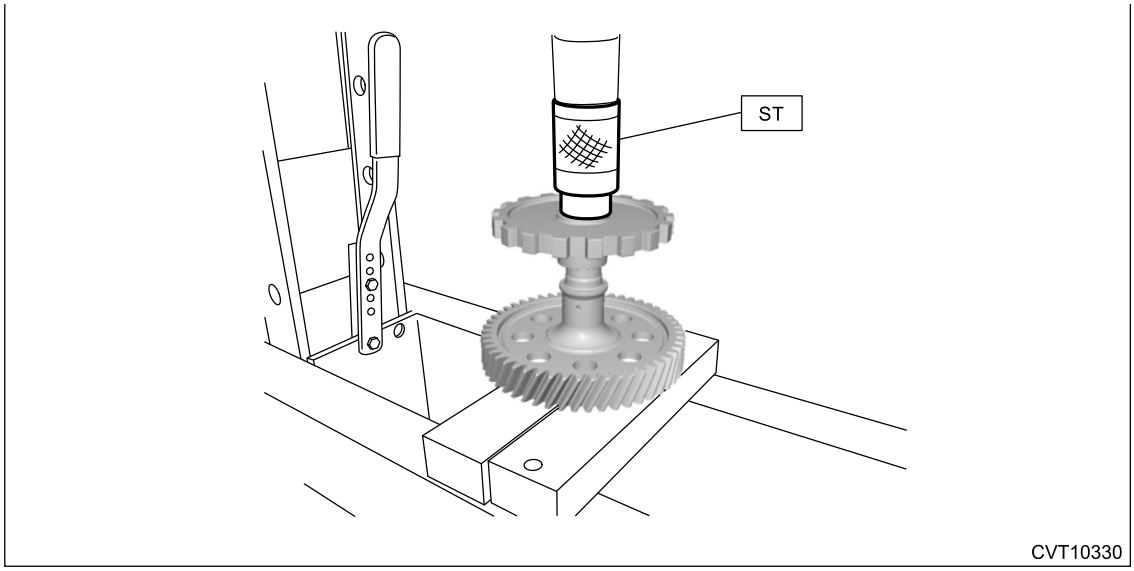


DISASSEMBLY

1. Flatten the tab of the lock nut.
2. Using the ST1, ST2 and ST3, counter the rotation of the reduction driven gear assembly, and remove the lock nut.
   Preparation tool:
   ST1: PULLEY WRENCH (18355AA000)
   ST2: PULLEY WRENCH PIN SET (18334AA000)
   ST3: SOCKET WRENCH (35) (499987003)



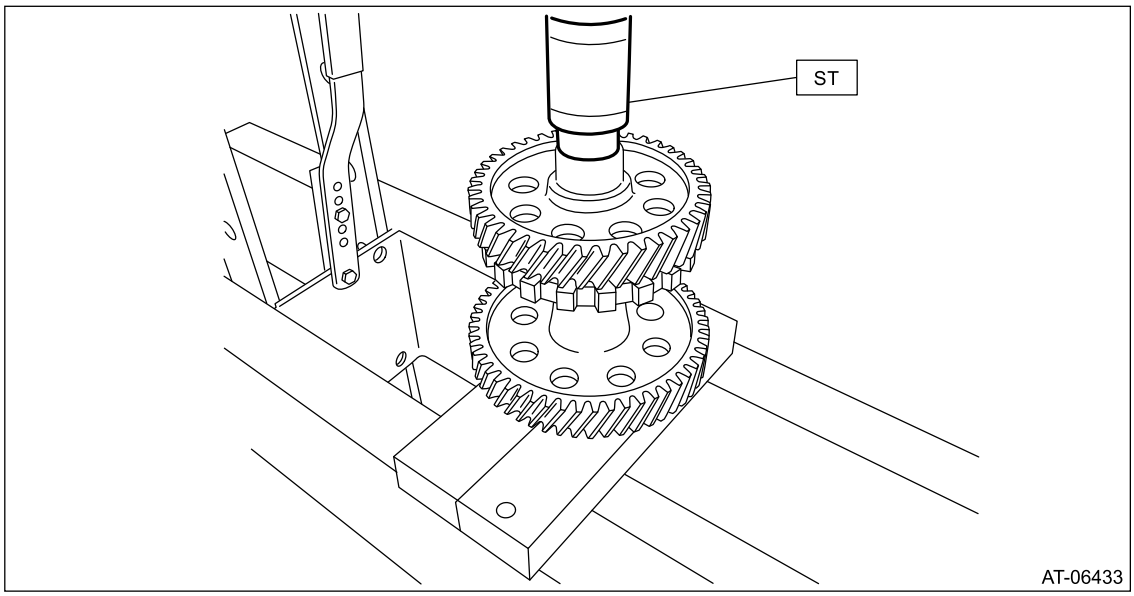
3. Remove the ball bearing using the ST1 and ST2.
   Preparation tool:
   ST1: INSTALLER (499757002)
   ST2: REMOVER (498077300)



4. Using the ST, remove the parking gear and transfer drive gear.
Preparation tool:
ST: REMOVER (899864100)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Driven Gear

ASSEMBLY

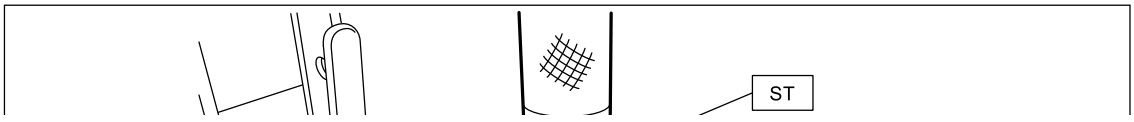


1. Using the ST, install the parking gear.
Preparation tool:
ST: INSTALLER (499757002)

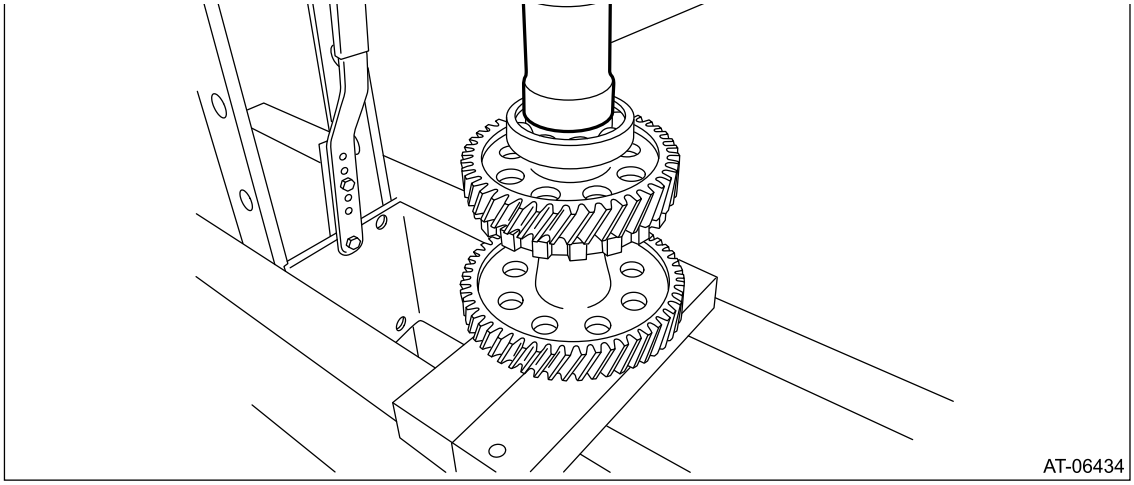
2. Using the ST, install the transfer drive gear.

Preparation tool:

ST: INSTALLER (499757002)



3. Using the ST, install the ball bearing.



Note:

Use a new ball bearing.

Preparation tool:

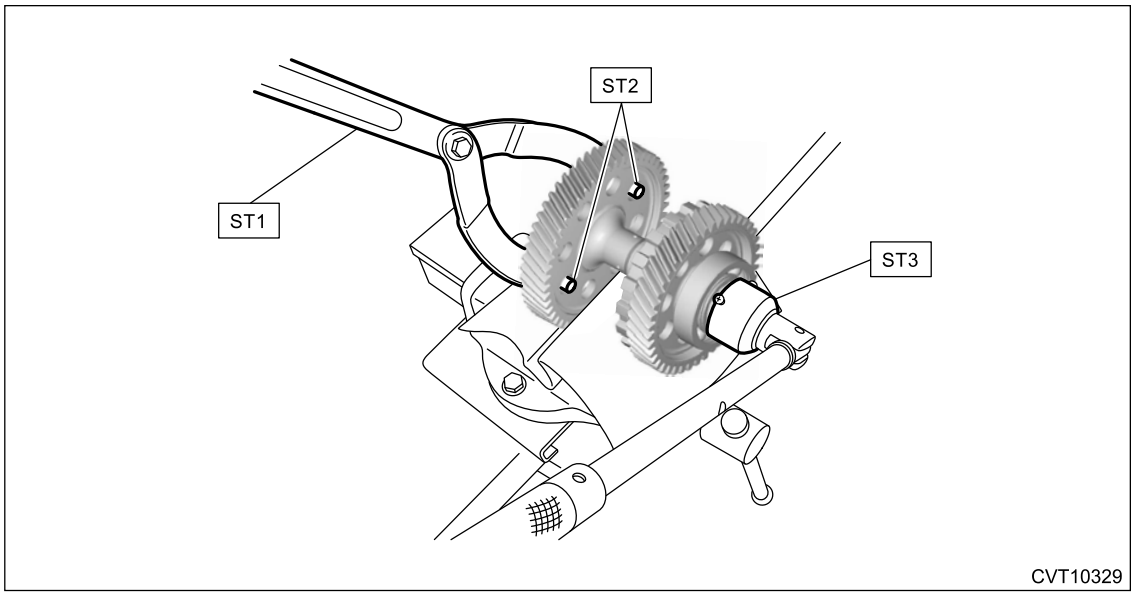
ST: BUSHING 1-2 INSTALLER (499277100)

4. Using the ST1, ST2 and ST3, counter the rotation of the reduction driven gear assembly, and install the lock nut.

Note:

Use a new lock nut.

Preparation tool:

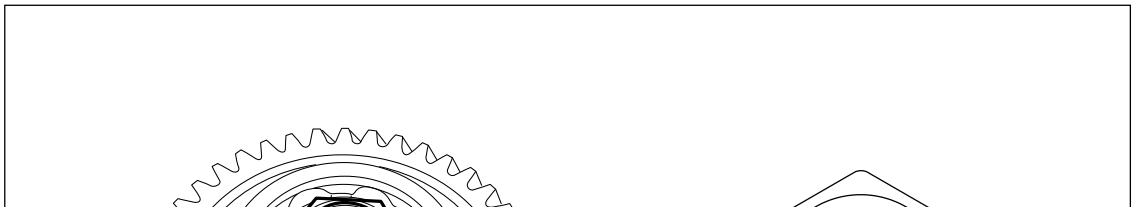


ST1: PULLEY WRENCH (18355AA000)

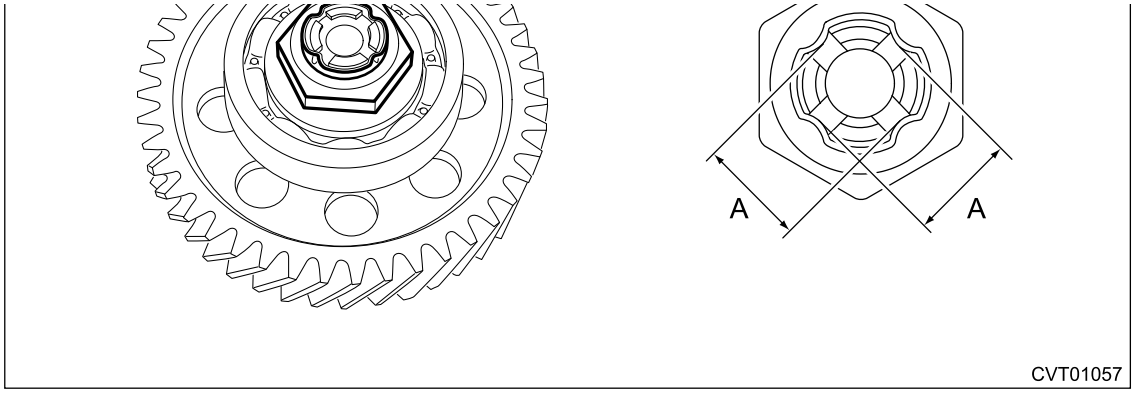
ST2: PULLEY WRENCH PIN SET (18334AA000)

ST3: SOCKET WRENCH (35) (499987003)

Tightening torque:



95 N·m (9.7 kgf-m, 70.1 ft-lb)

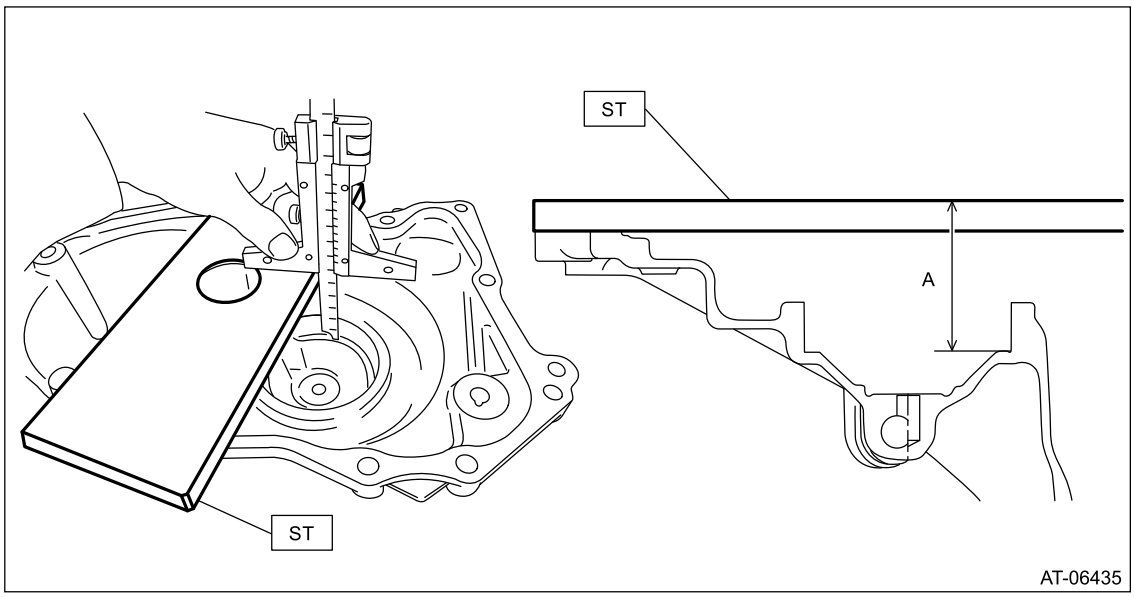


5. Crimp the lock nut at four locations so that the dimension of A becomes 18.9 mm (0.74 in) or less.

Caution:

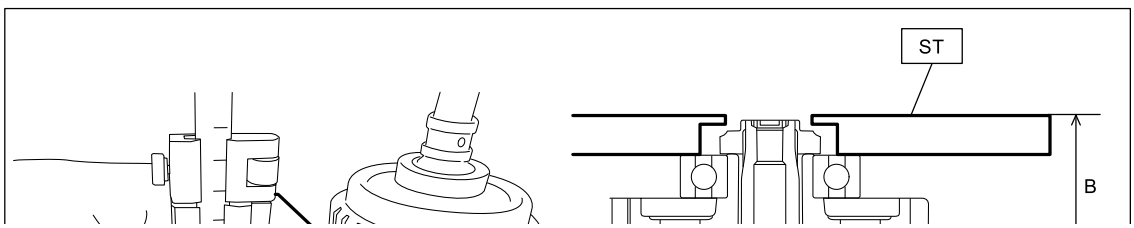
Do not allow the lock nut to be cracked during crimping operation.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Driven Gear

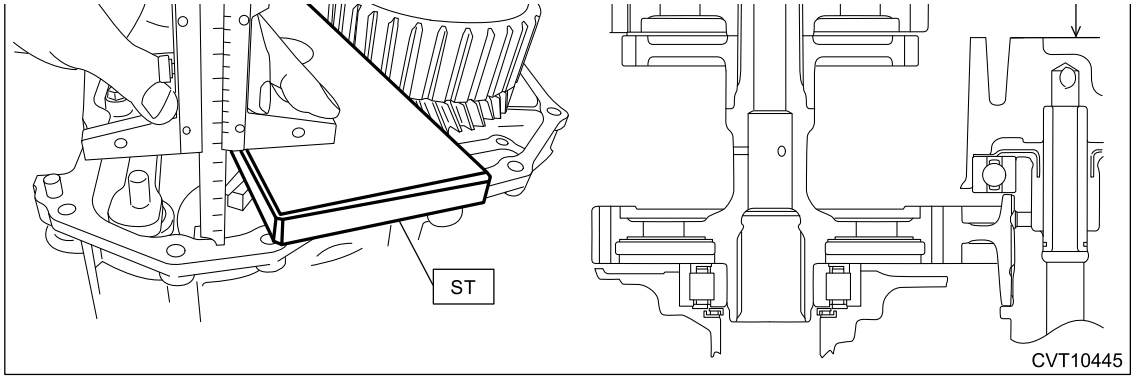


INSPECTION

- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Make sure each gear is not broken or damaged.



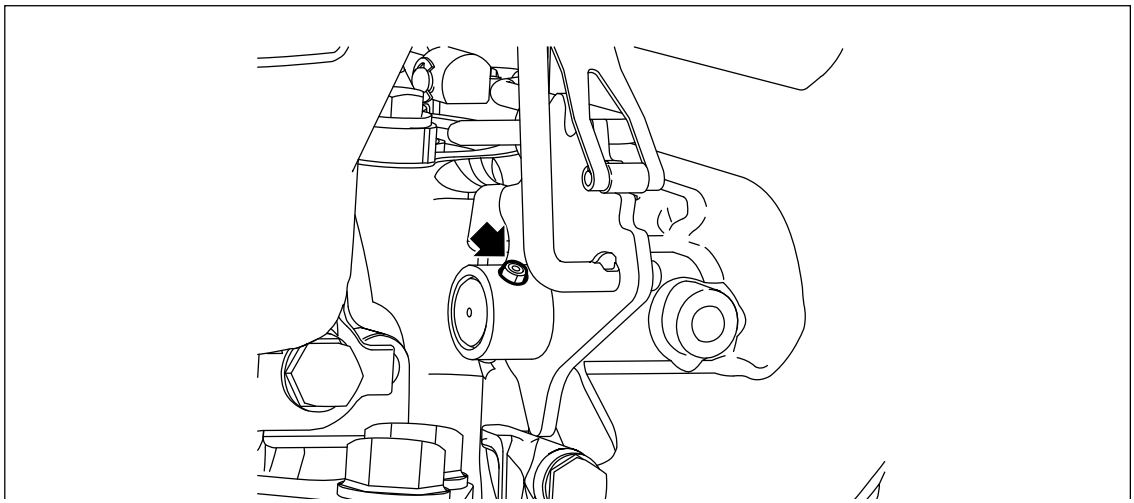
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Driven Gear



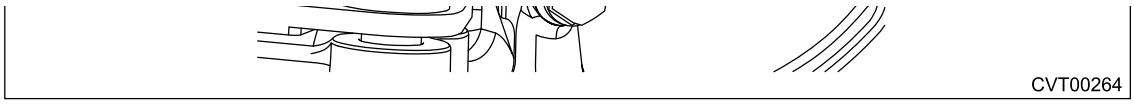
ADJUSTMENT

1. Measure the height "A" from the ST upper face to the ball bearing catch surface.
   Preparation tool:
   ST: GAUGE (499575600)

2. Measure the height "B" from the ST to the mating surface of the transmission case.
   Preparation tool:
   ST: GAUGE (499575600)

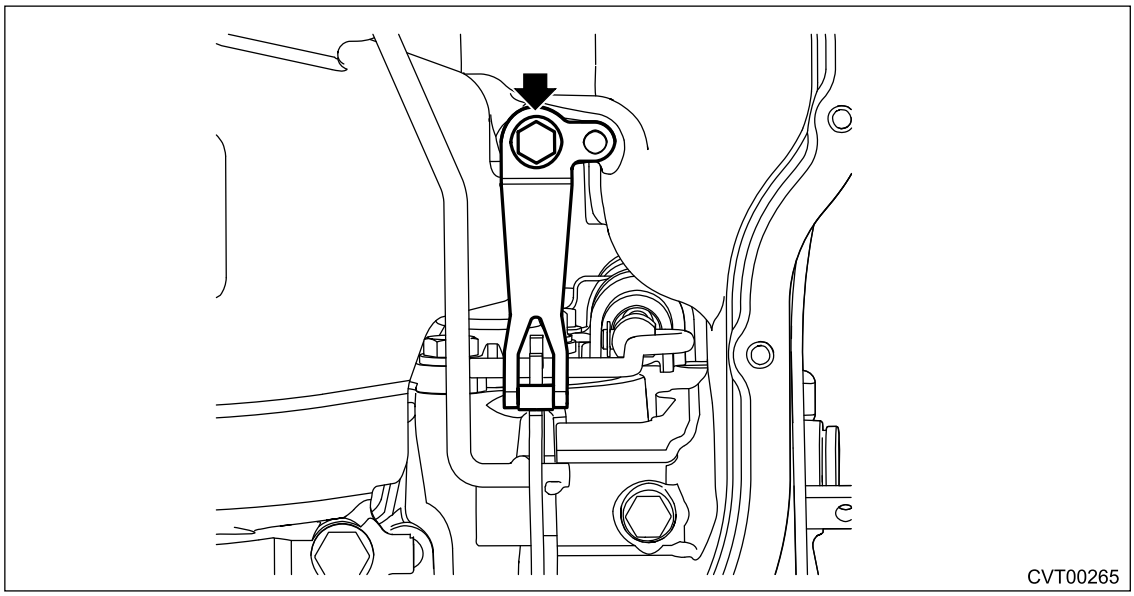


3. Obtain the thickness of transfer drive gear shim using the following formula to select one to three transfer drive gear shims.
   T mm = A − B − (0.05 — 0.25)
   [T in = A − B − (0.002 — 0.01)]
   T: Shim thickness
   A: Height from the ST upper face to the ball bearing catch surface
   B: Height from ST to transmission case mating surface
   0.05 — 0.25 mm (0.002 — 0.01 in): Clearance



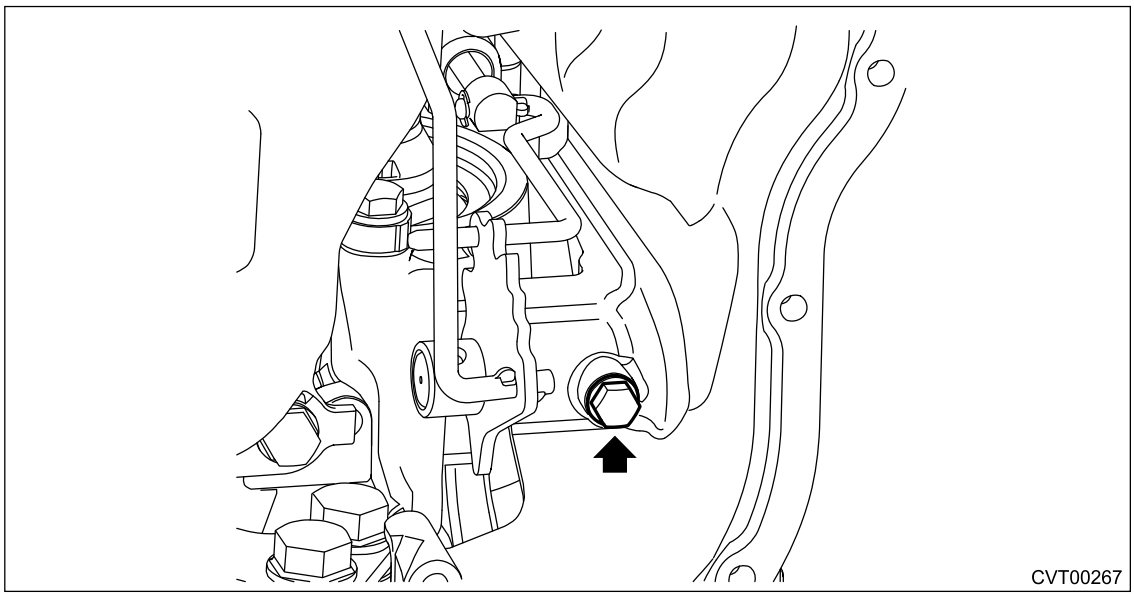
Transfer drive gear shim	
Part No.	**Thickness mm (in)**
33279AA090	0.3 (0.012)
33279AA100	0.4 (0.016)
33279AA110	0.5 (0.020)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Control Device

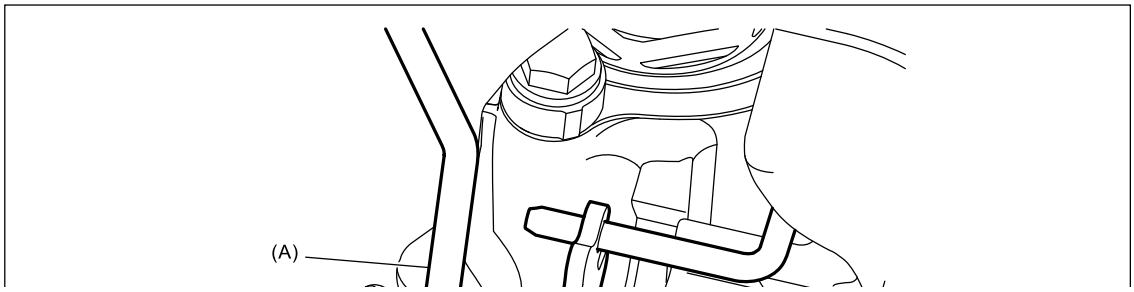


REMOVAL

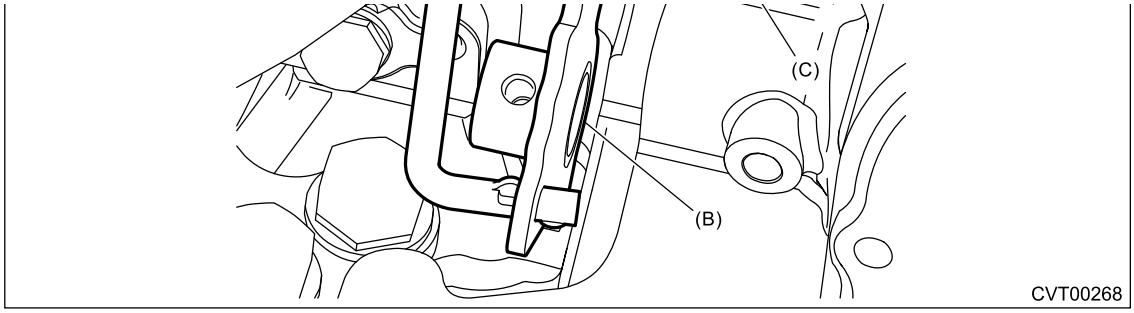
1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
3. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
4. Shift the manual plate to “N” range, and remove the spring pin.
   Note:
   Prevent the spring pin from dropping in the transmission using paper towel etc.



5. Remove the detent spring.

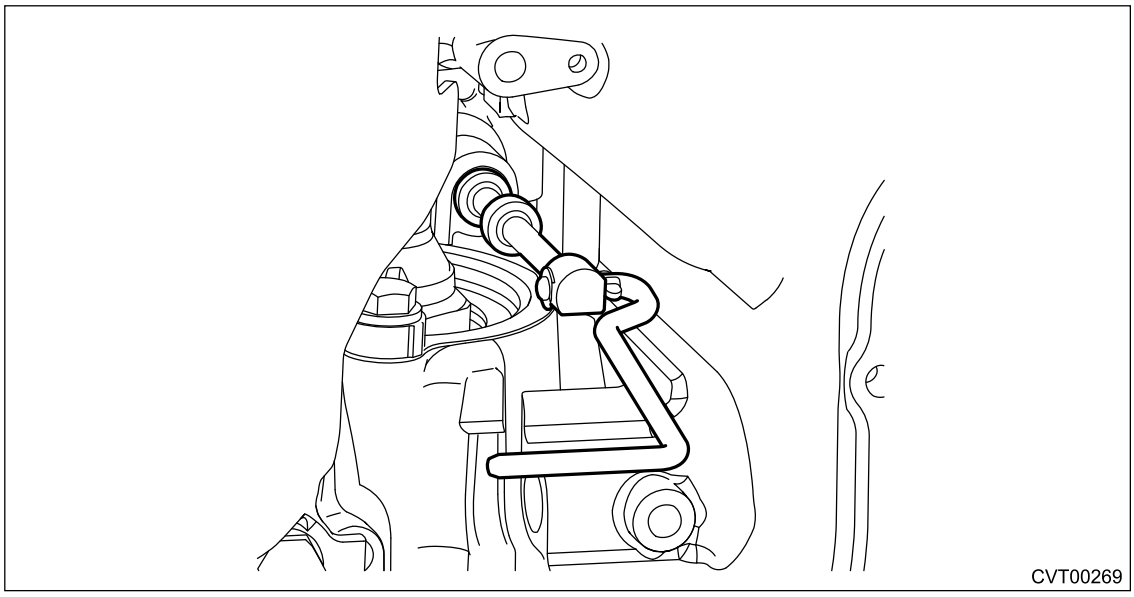


6. Remove the bolt, and remove the shifter arm shaft.

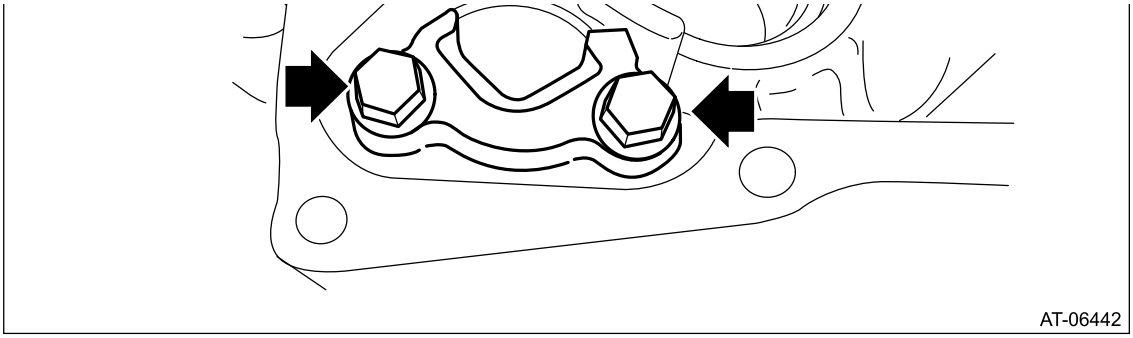


Note:

Do not damage the lip of oil seal press-fitted in the case.



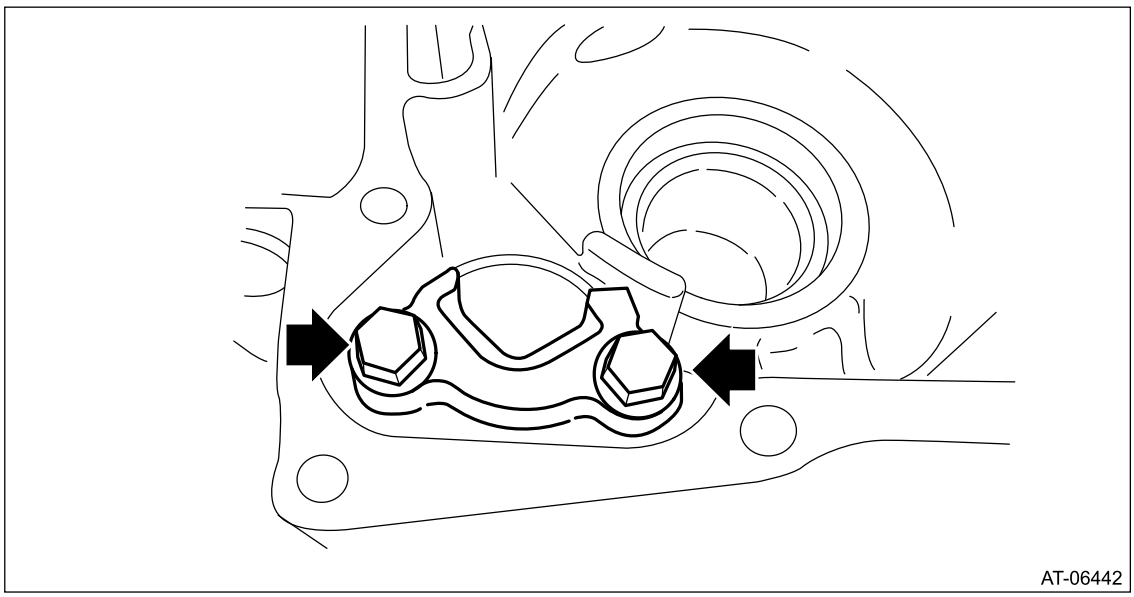
7. Remove the manual plate from the shifter arm shaft, and remove the shift connecting rod of the manual valve.

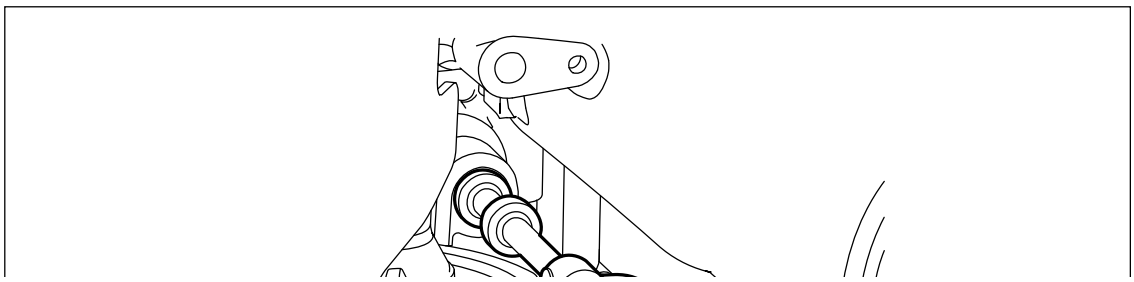


(A) Parking rod
(B) Manual plate
(C) Shift connecting rod

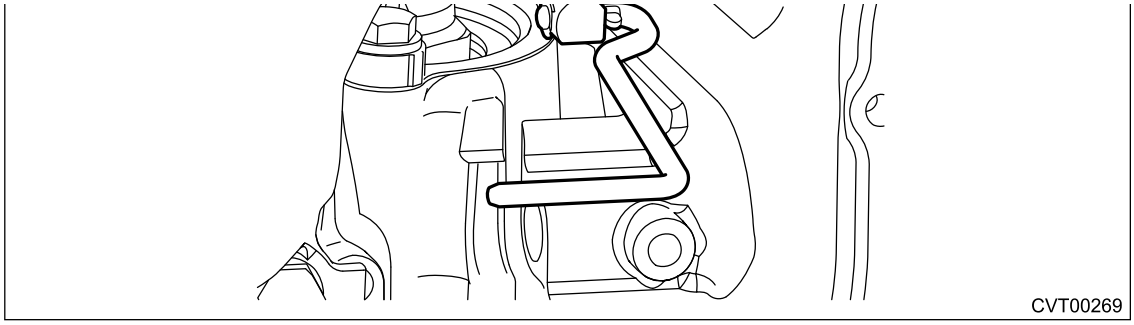
8. Remove the manual plate and parking rod.
9. Remove the manual valve.

10. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
11. Remove the parking support.



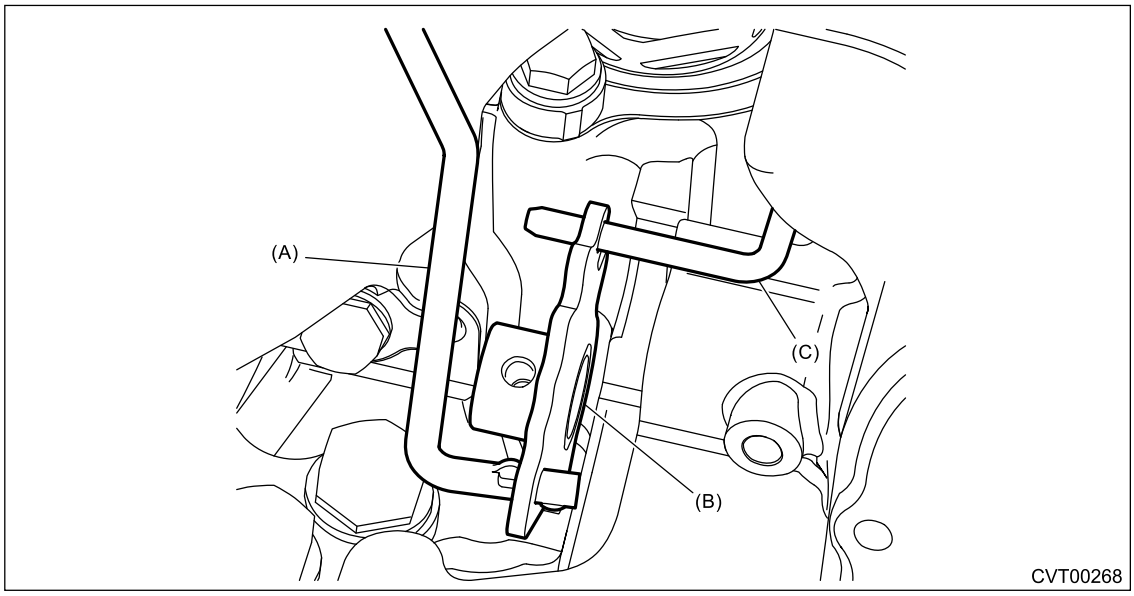


CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Control Device



INSTALLATION

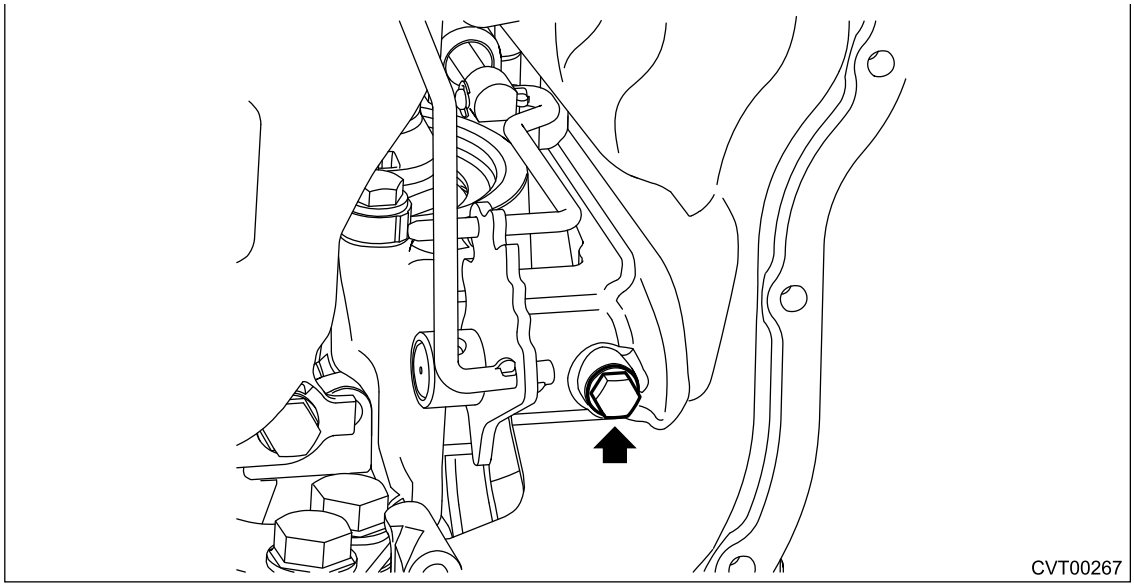
1. Install the parking support.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)



2. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
3. Install the manual valve.

4. Install the parking rod to the manual plate.
5. Insert the parking rod into the transmission case, and install the shift connecting rod of the manual valve to the manual plate.

(A) Parking rod
(B) Manual plate
(C) Shift connecting rod

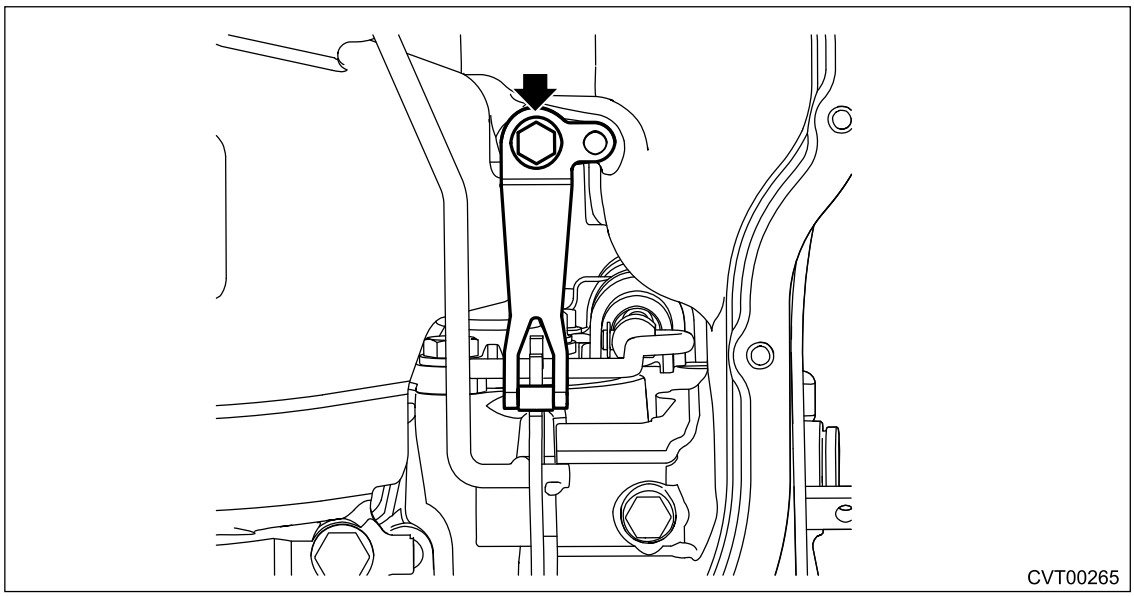


6. Insert the shifter arm shaft to the transmission assembly, install the manual plate to the shifter arm shaft, and secure the shifter arm shaft with a bolt.

Note:

Do not damage the lip of oil seal press-fitted in the case.

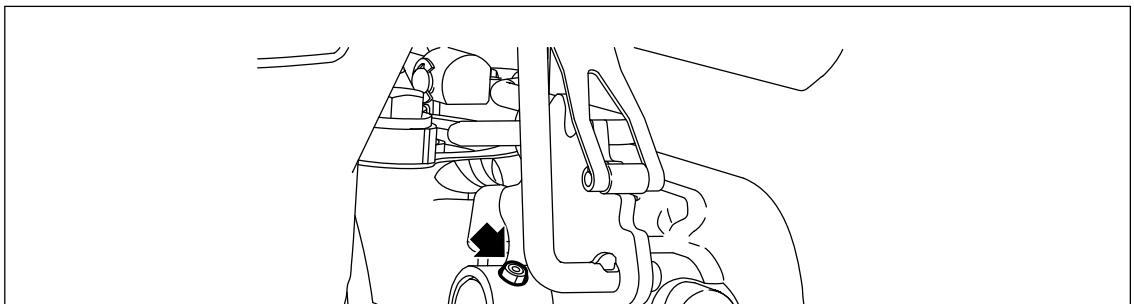
Tightening torque:



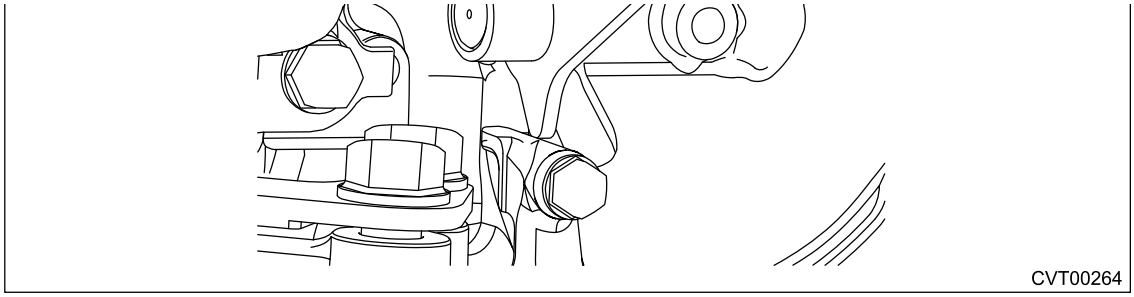
7 N·m (0.7 kgf-m, 5.2 ft-lb)

7. Install the detent spring.

Tightening torque:



7 N·m (0.7 kgf-m, 5.2 ft-lb)



8. Install the spring pin.

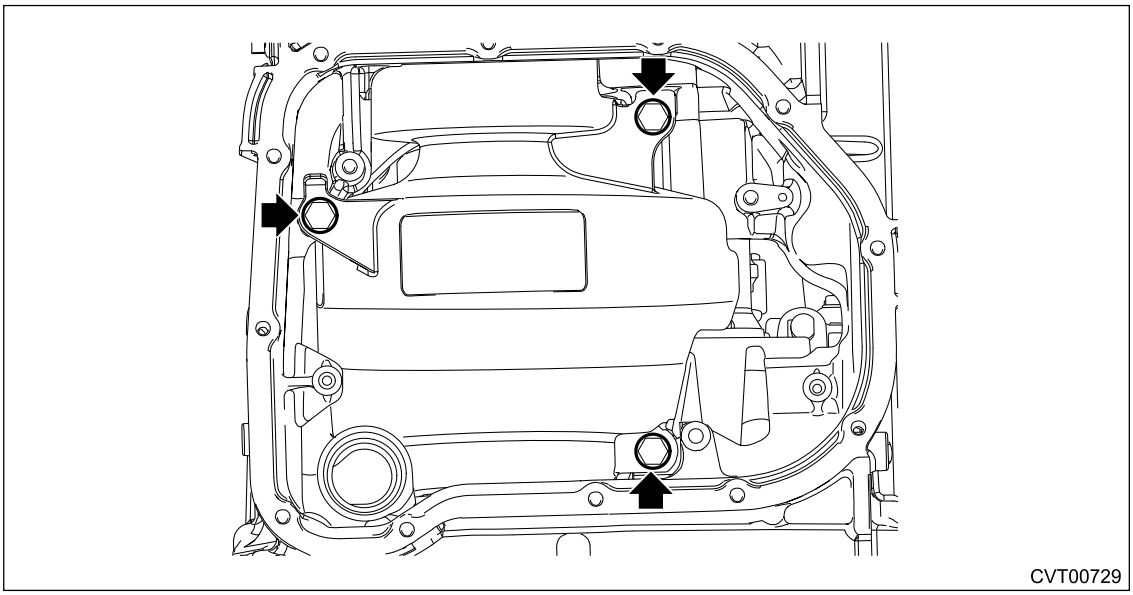
Note:

Use new spring pin.

9. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
10. Adjust the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>ADJUSTMENT.
11. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.
12. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

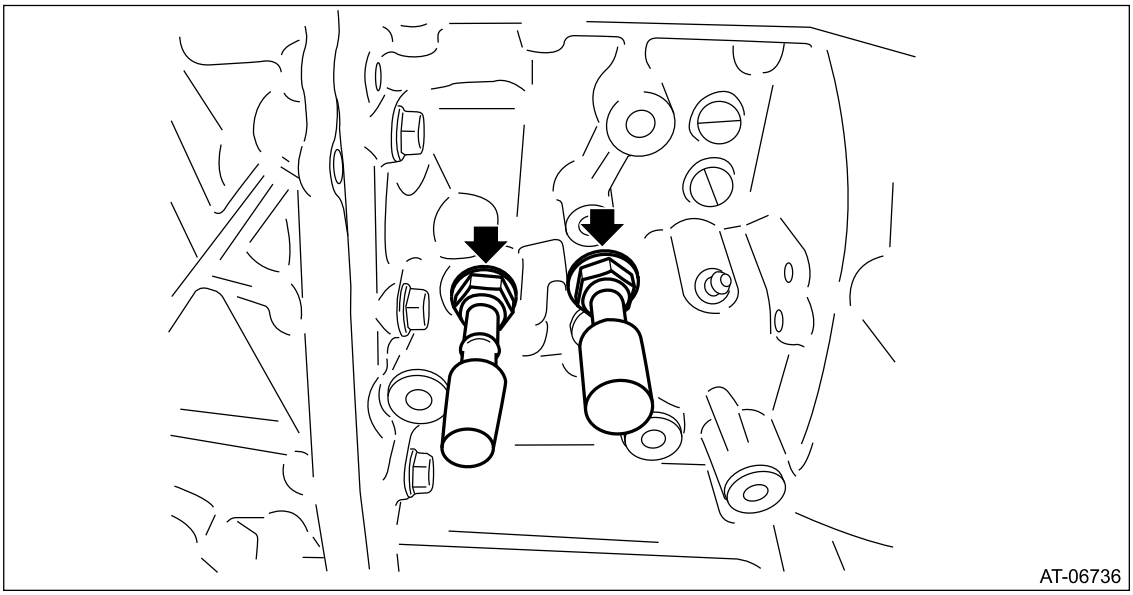
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Control Device

INSPECTION



Make sure that the manual plate and detent spring are not worn or otherwise damaged.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Case

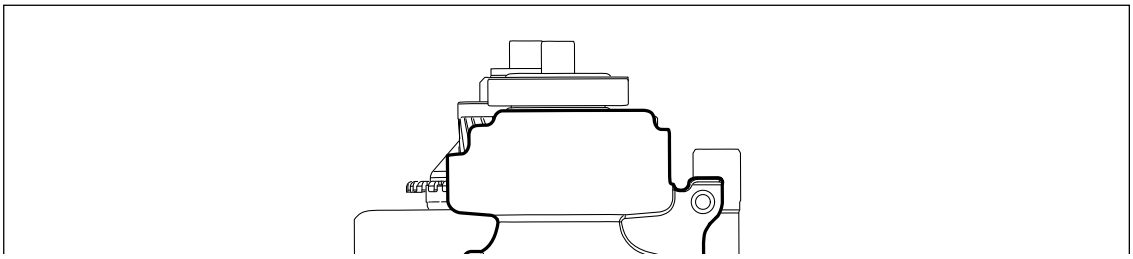


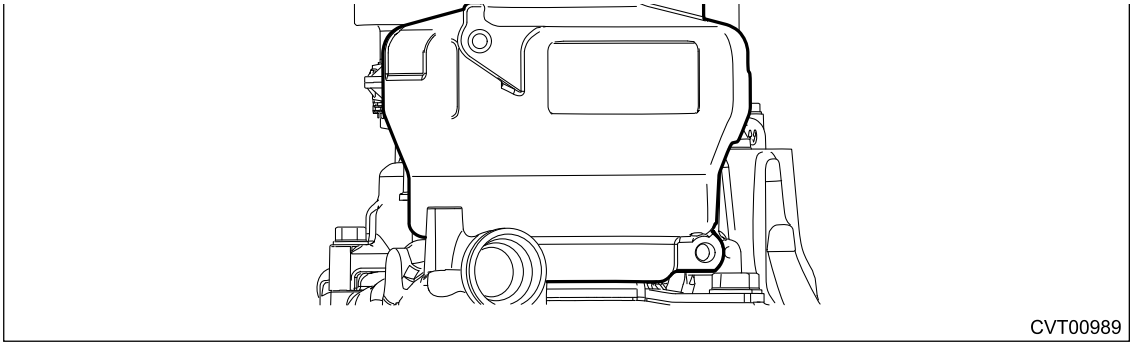
REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.
7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.

13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.
16. Remove the oil baffle securing bolt.

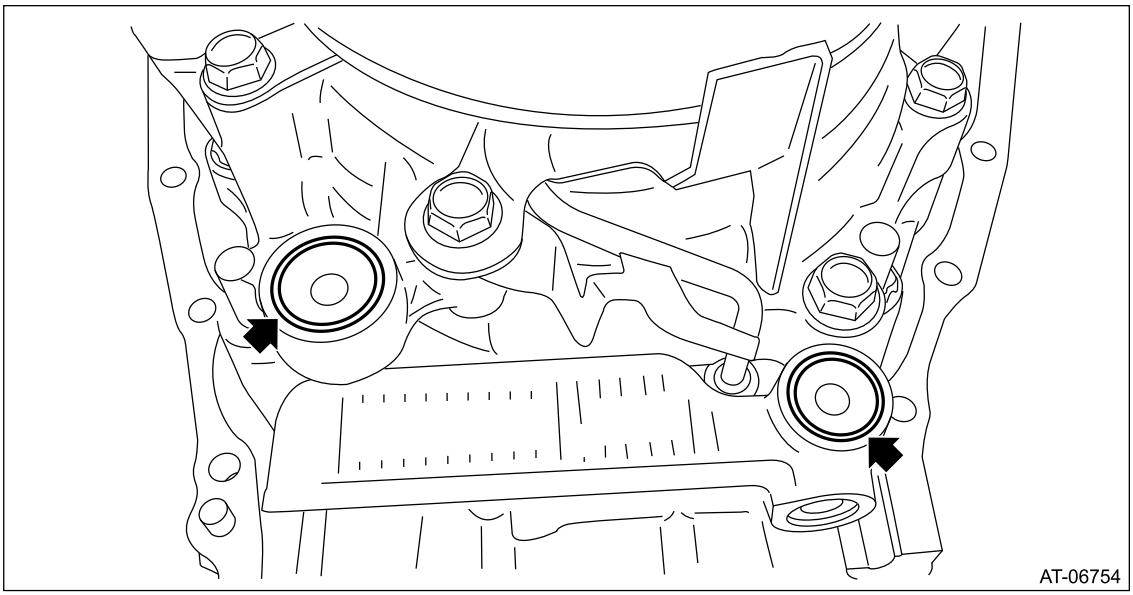
17. Remove the oil cooler pipe.





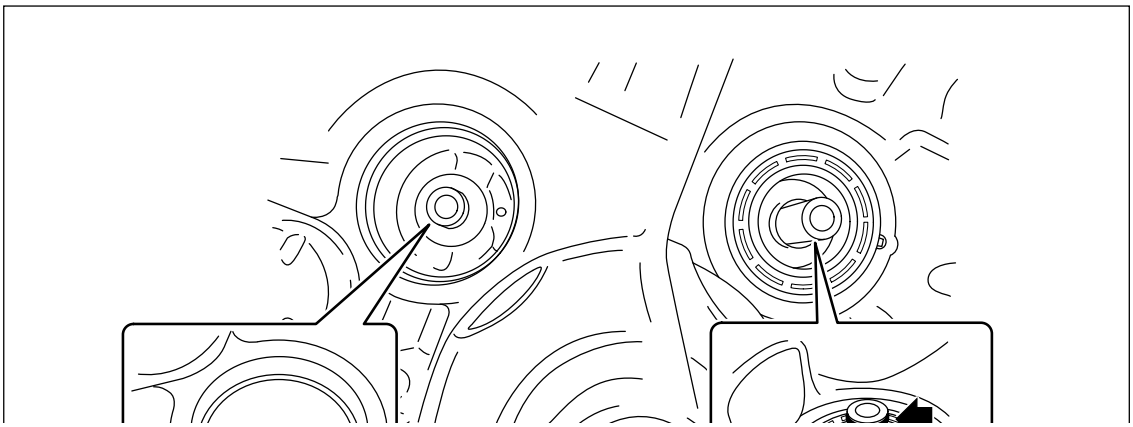
18. Remove the transmission case.

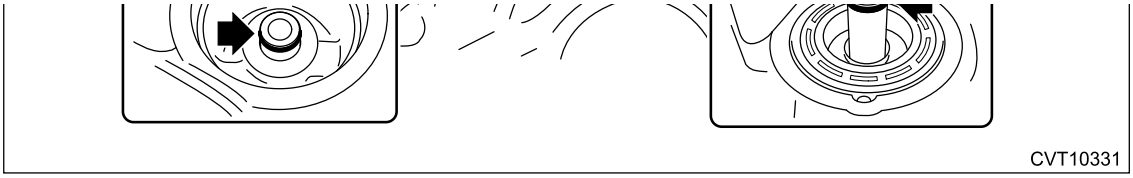
Note:



The total number of transmission case mounting bolts is 15.

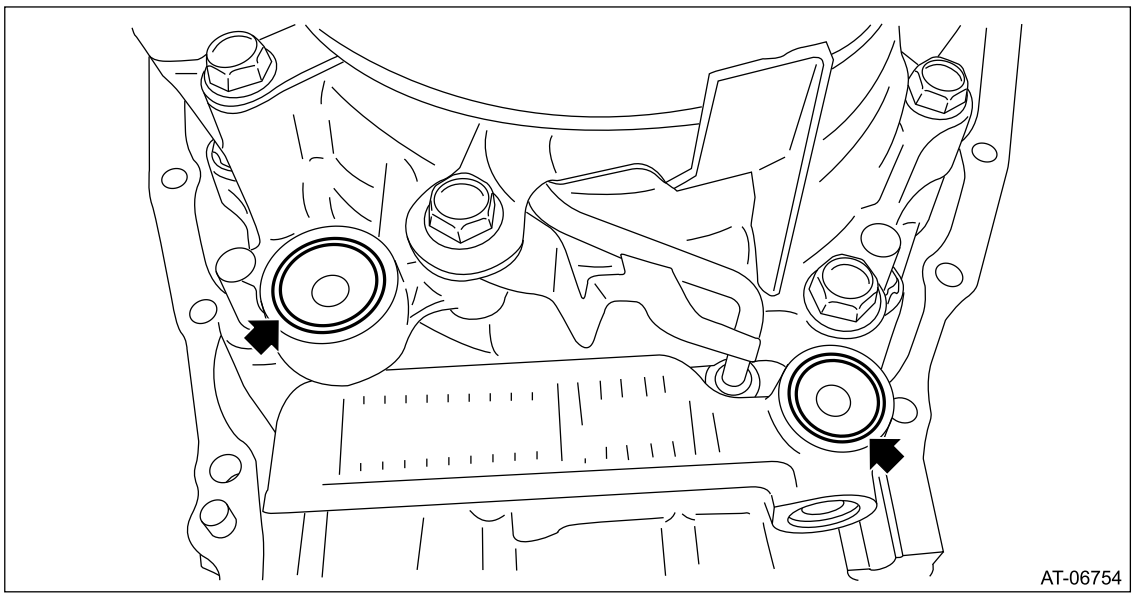
19. Remove the oil baffle.

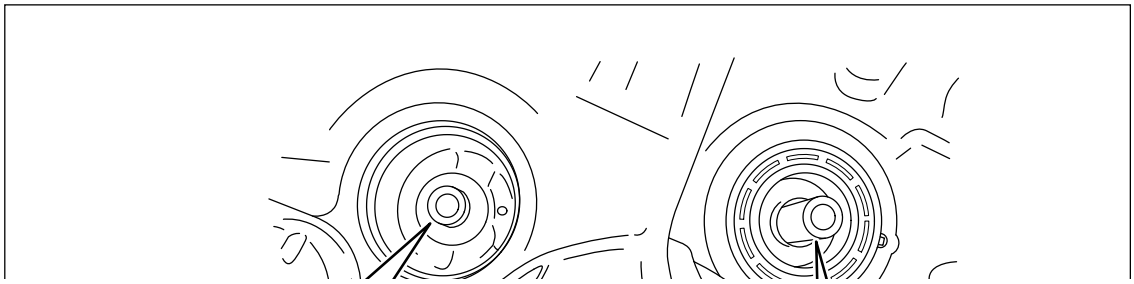




20. Remove the O-rings.

21. Remove the seal ring from the transmission case.

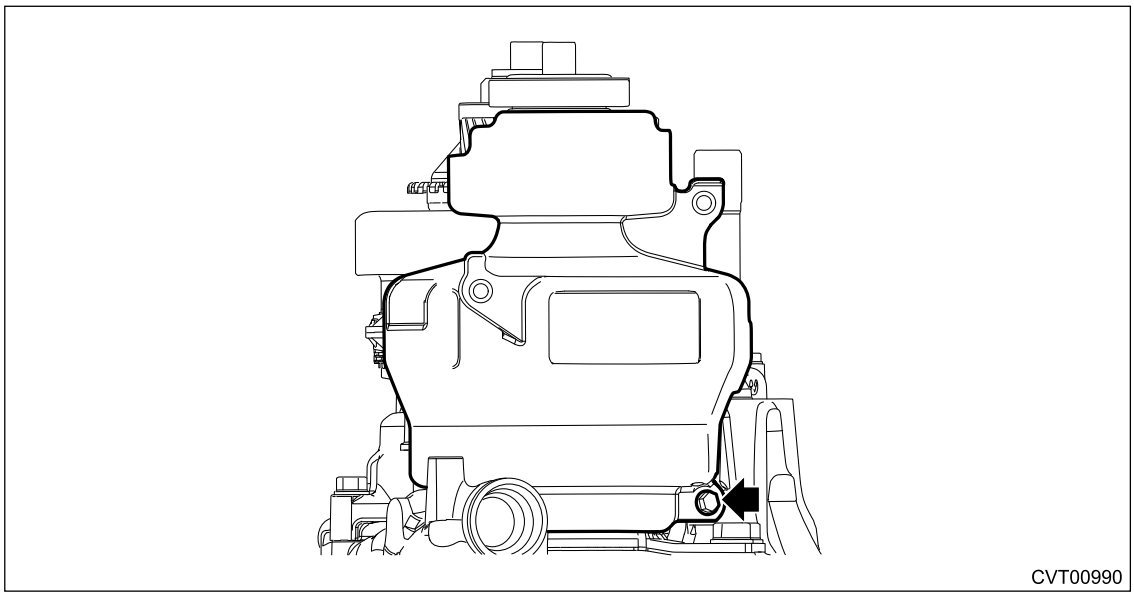




CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Case

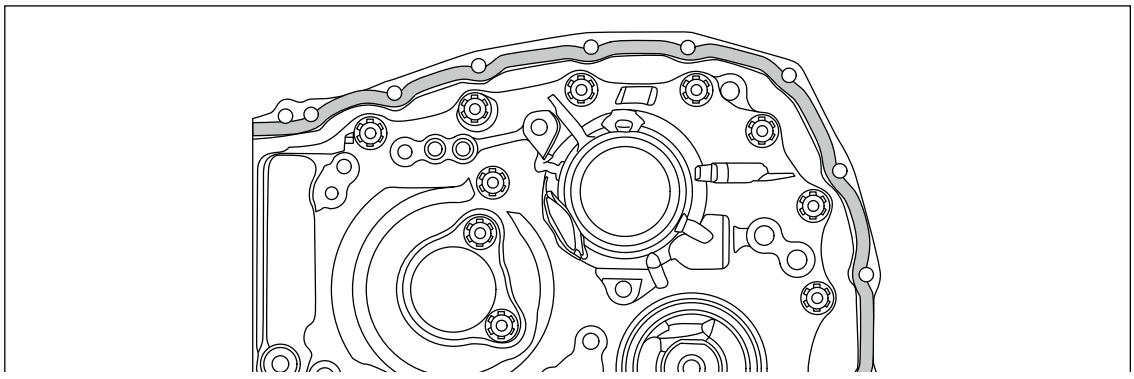
INSTALLATION

1. Clean the mating surface of transmission case and converter case.
2. Select the reduction gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>ADJUSTMENT.
3. Remove the transmission case, and install the selected reduction gear shim to the reduction drive gear.
4. Install the O-rings to the reverse clutch housing and drive pinion retainer.
   Note:
   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**

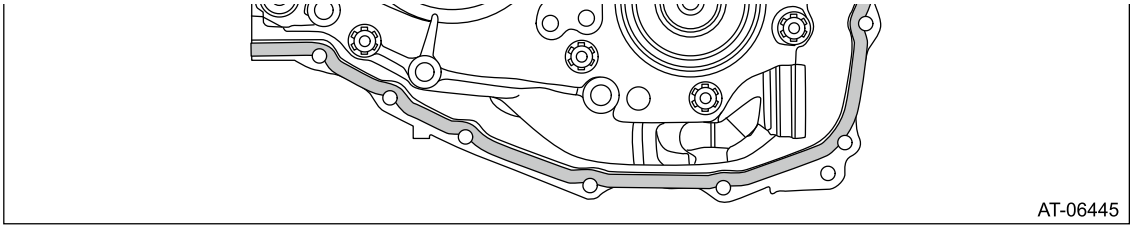


5. Install the seal ring to the transmission case.
   Note:
   - **Use new seal rings.**
   - **When installing the seal rings, do not expand the seal rings too much.**
   - **Apply CVTF to the seal rings.**

CVT10331



6. Cover the secondary pulley with the oil baffle, and temporarily install it with bolts.



CVT00990

7. Apply liquid gasket seamlessly to the mating surface of transmission case.

Liquid gasket:

THREE BOND 1215B or equivalent

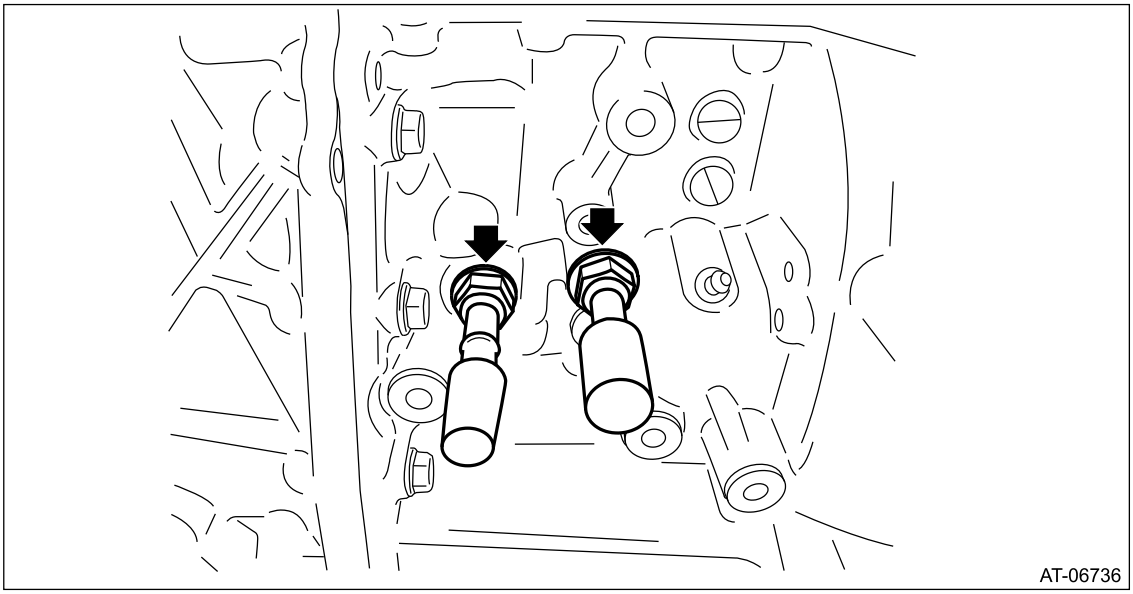
8. Install the transmission case.

Note:

The total number of transmission case mounting bolts is 15.

Tightening torque:

22 N·m (2.2 kgf-m, 16.2 ft-lb)

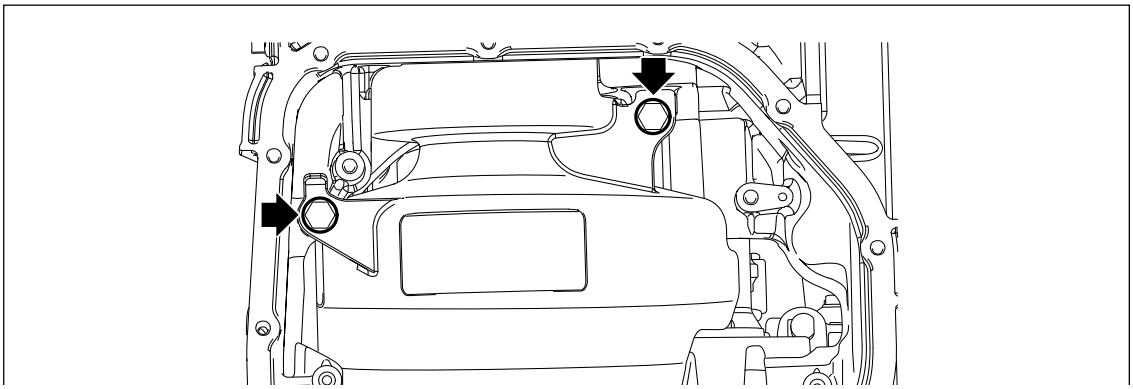


9. Install the oil cooler pipe.

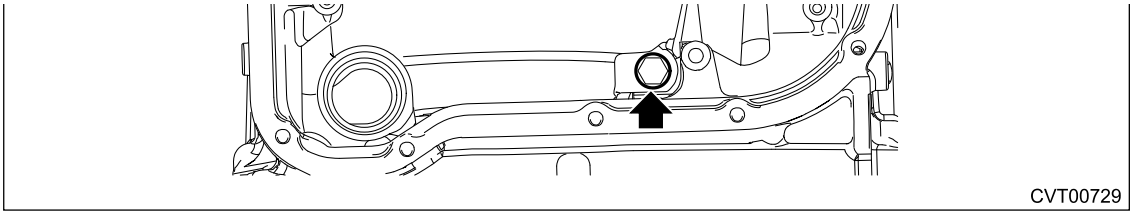
Note:

Use new O-rings.

Tightening torque:



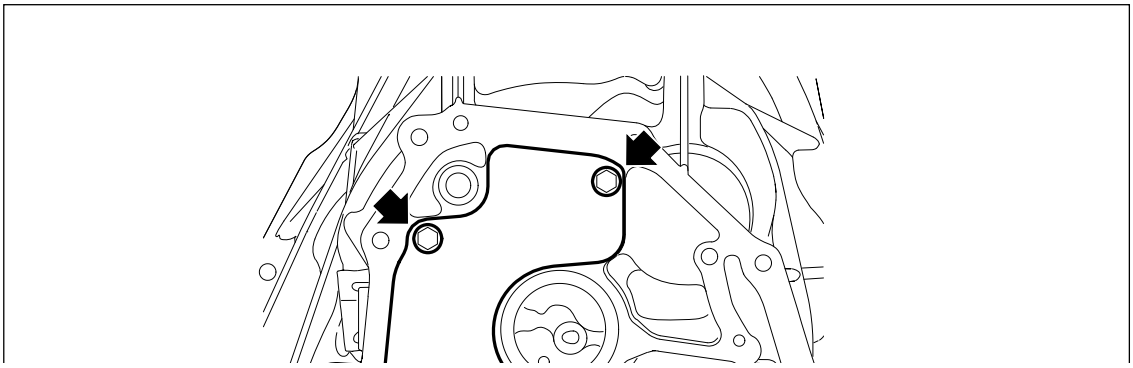
25 N·m (2.5 kgf-m, 18.4 ft-lb)

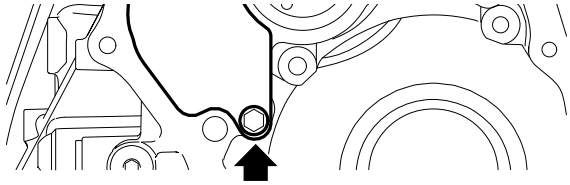


10. Install the oil baffle securing bolt.

Tightening torque:

16 N·m (1.6 kgf-m, 11.8 ft-lb)

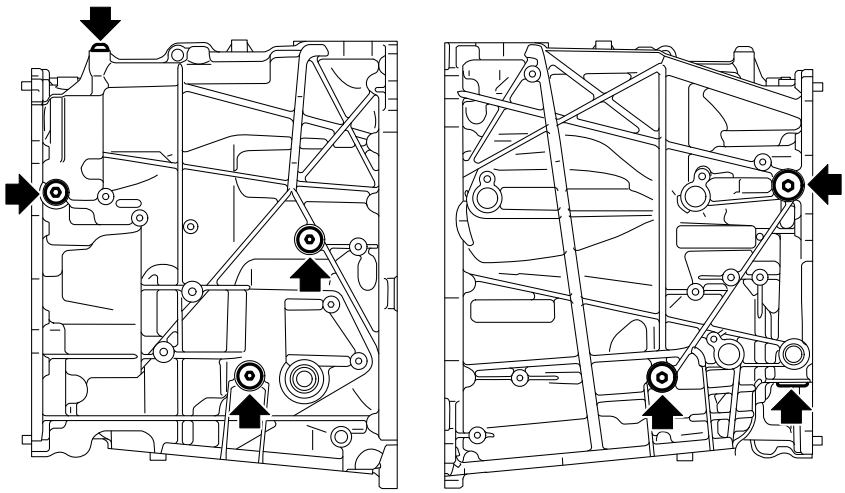




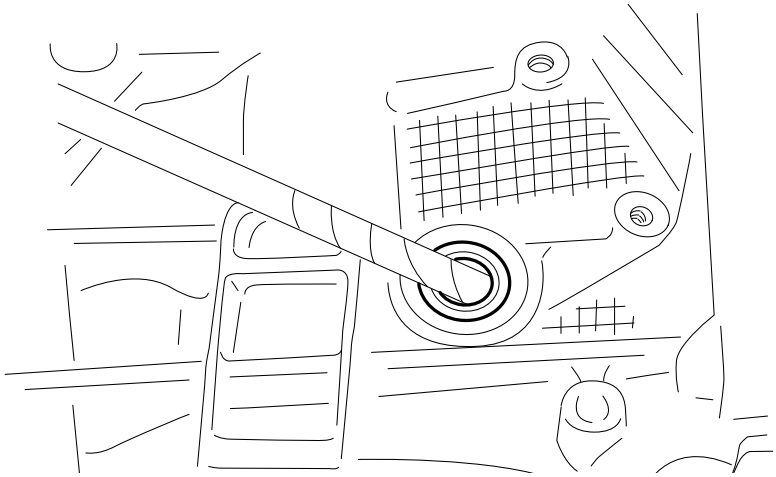
11. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.
12. Install the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.
13. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.
14. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
15. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.
16. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
17. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
18. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
19. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
20. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.
21. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
22. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
23. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
24. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
25. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Case

DISASSEMBLY



1. Remove the oil stopper plate.

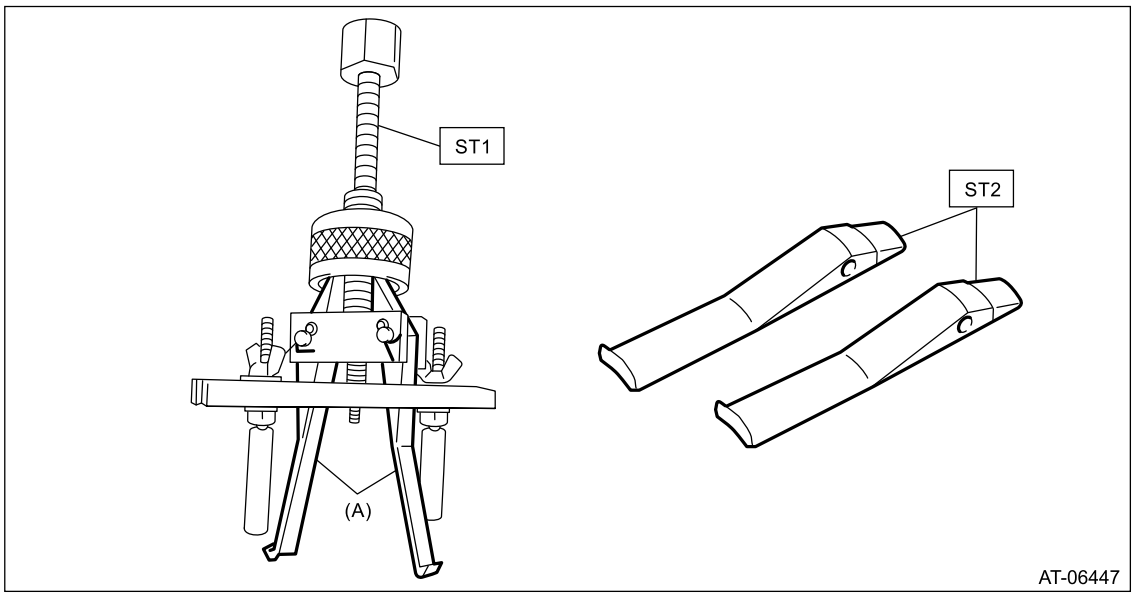


CVT00728

2. Remove all plugs from the transmission case.

CVT10364

3. Remove the oil seal using a screwdriver wrapped with cloth etc.



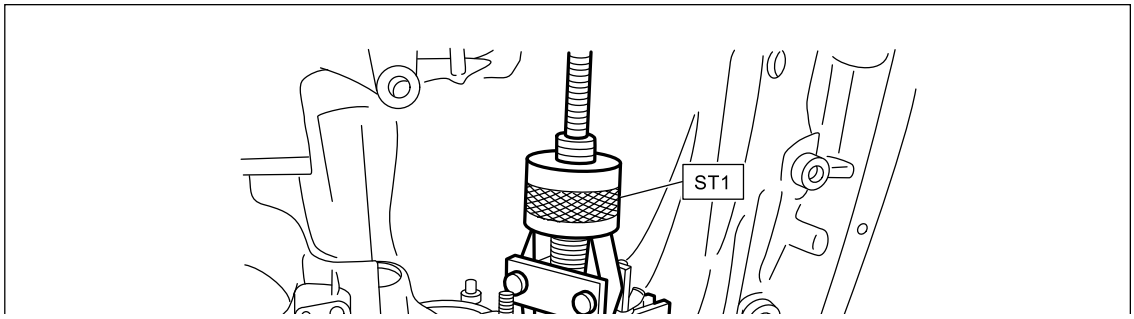
4. Remove the ball bearing of the secondary pulley using the ST1 and ST2.

(1) Remove the claw of ST1, and attach the claw of ST2.

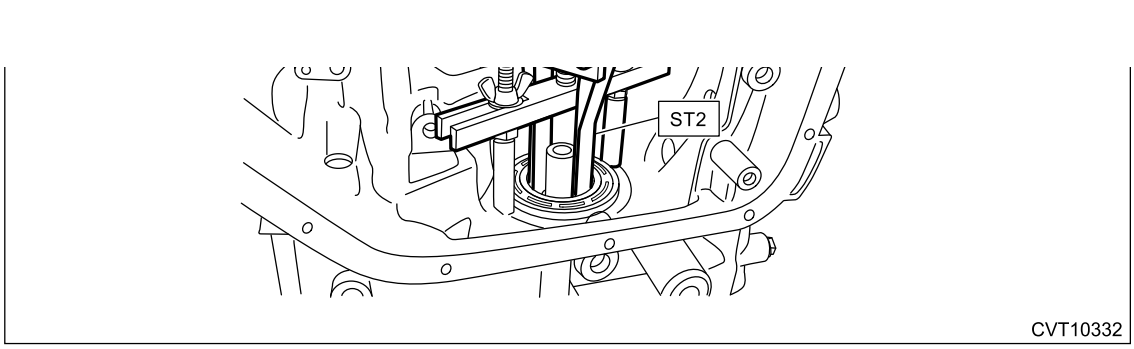
Preparation tool:

ST1: PULLER ASSY (398527700)

ST2: CLAW (18760AA000)

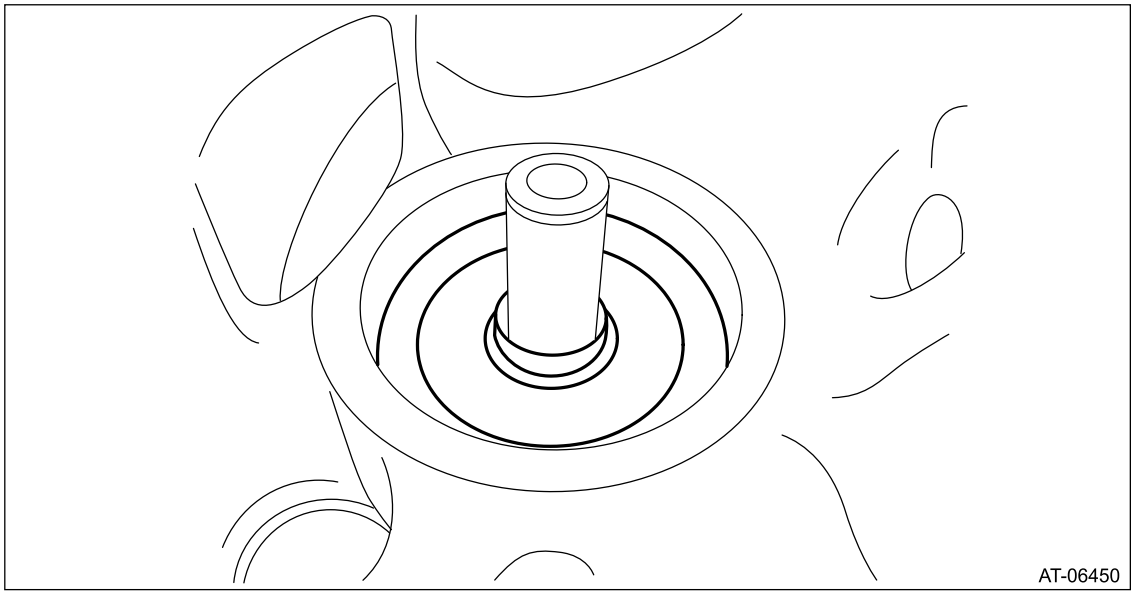


(A) Claw



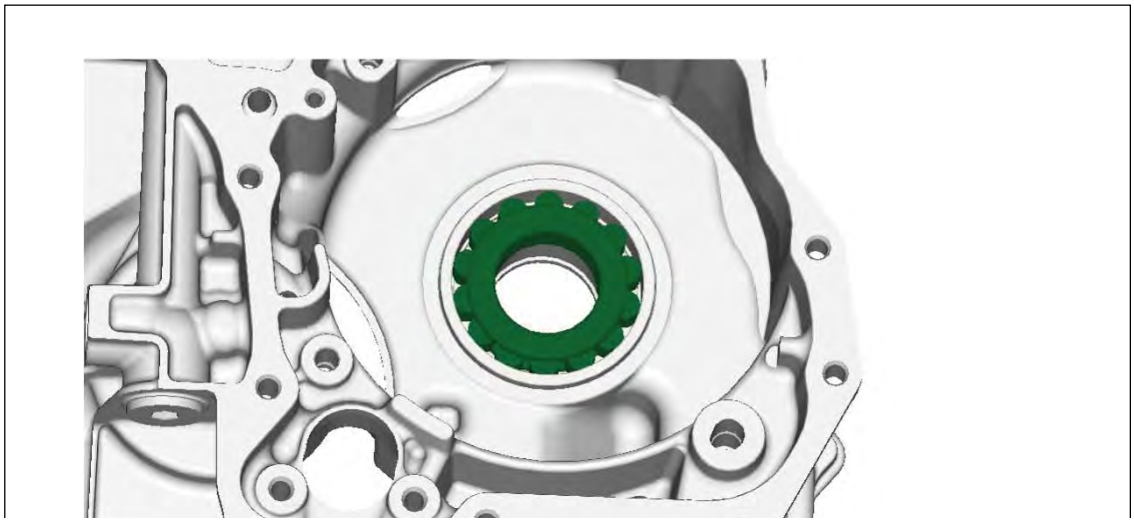
(2) Remove the ball bearing of the secondary pulley using the ST1 and ST2.

Preparation tool:

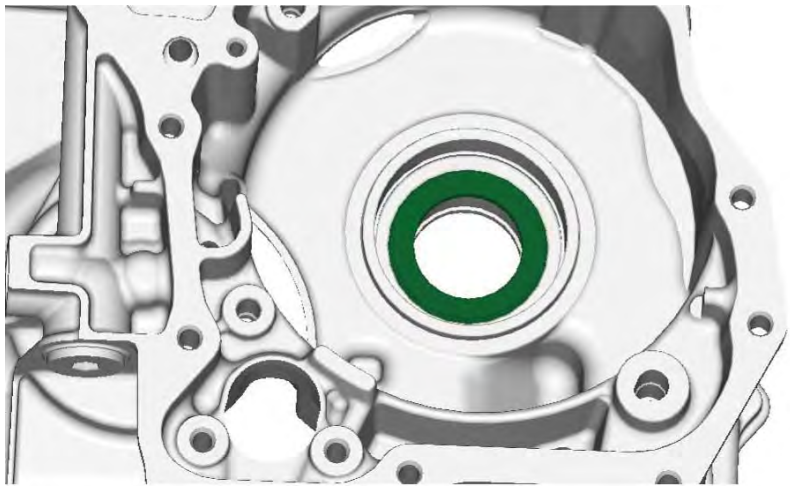


ST1: PULLER ASSY (398527700)

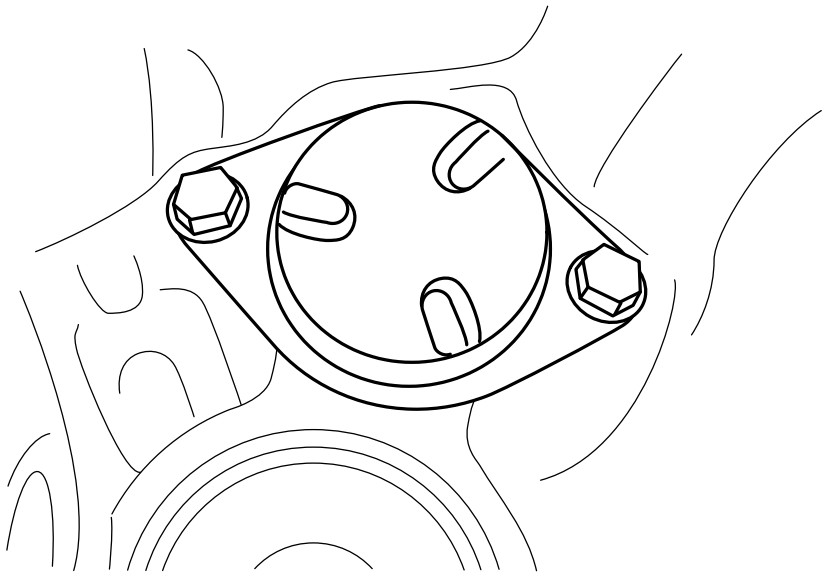
ST2: CLAW (18760AA000)



5. Remove the oil guide.

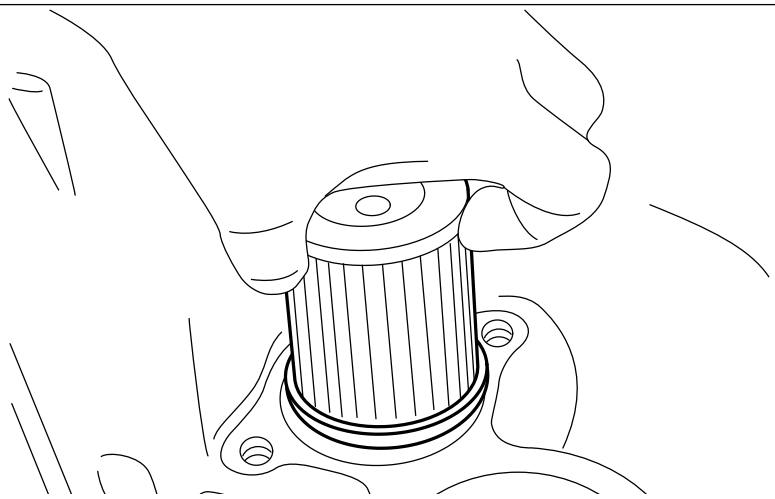


6. Remove the roller bearing of the reduction driven gear.

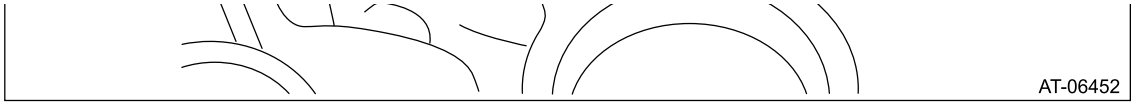


CVT10396

7. Remove the thrust bearing.

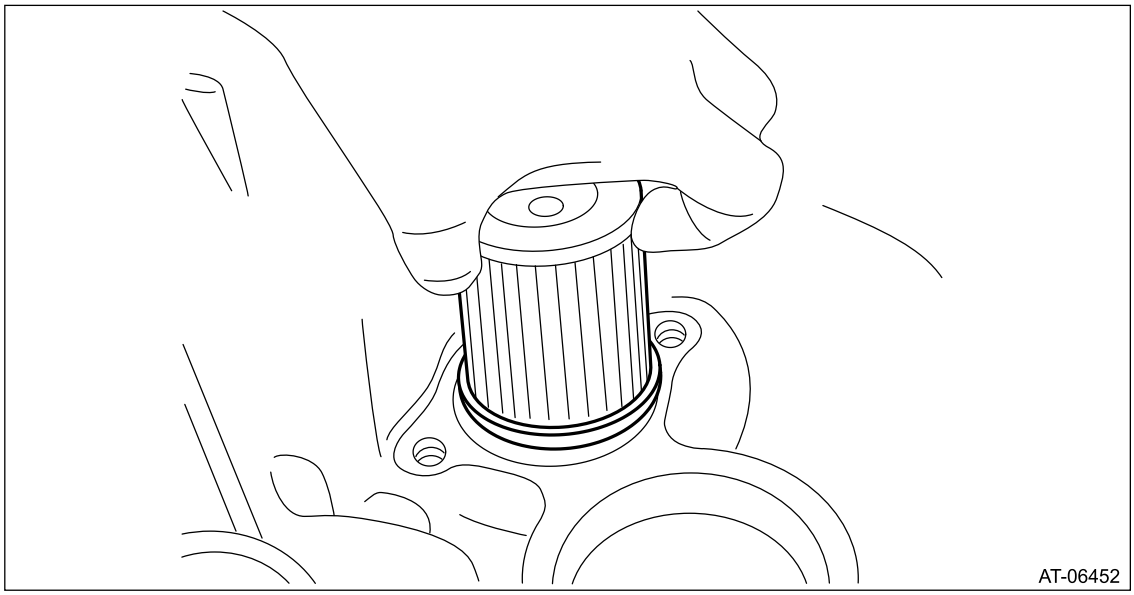


CVT10397

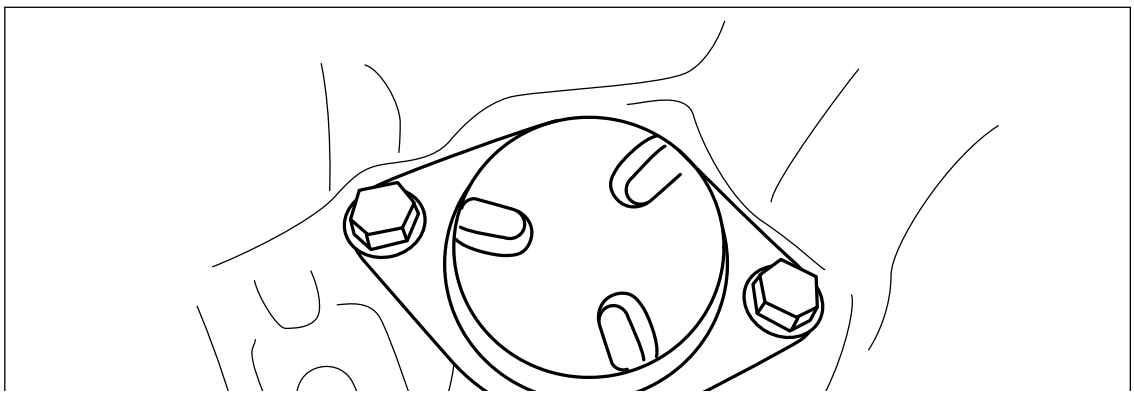


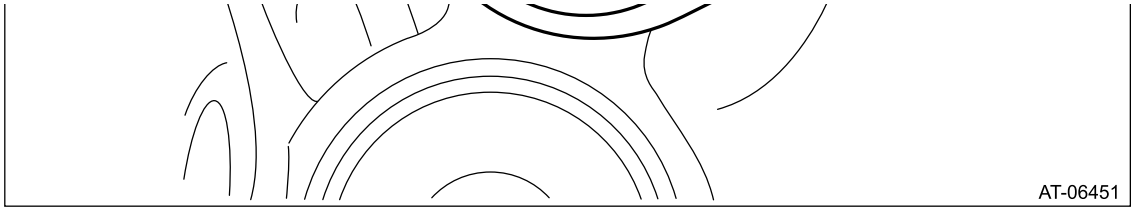
8. Remove the CVTF filter cover and gasket.

AT-06451



9. Remove the CVTF filter.

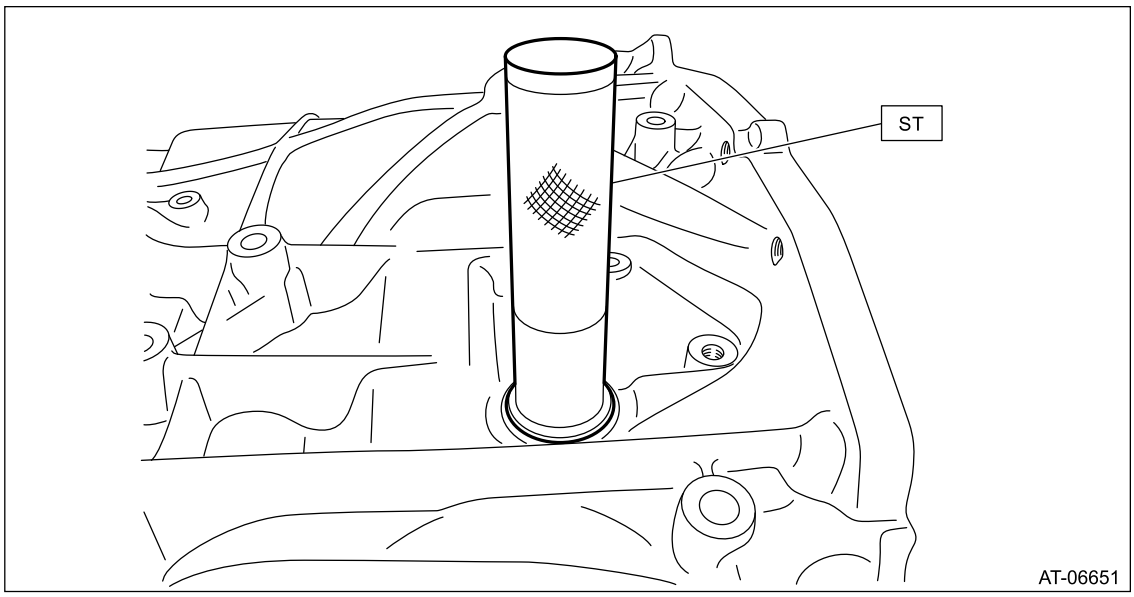




ASSEMBLY

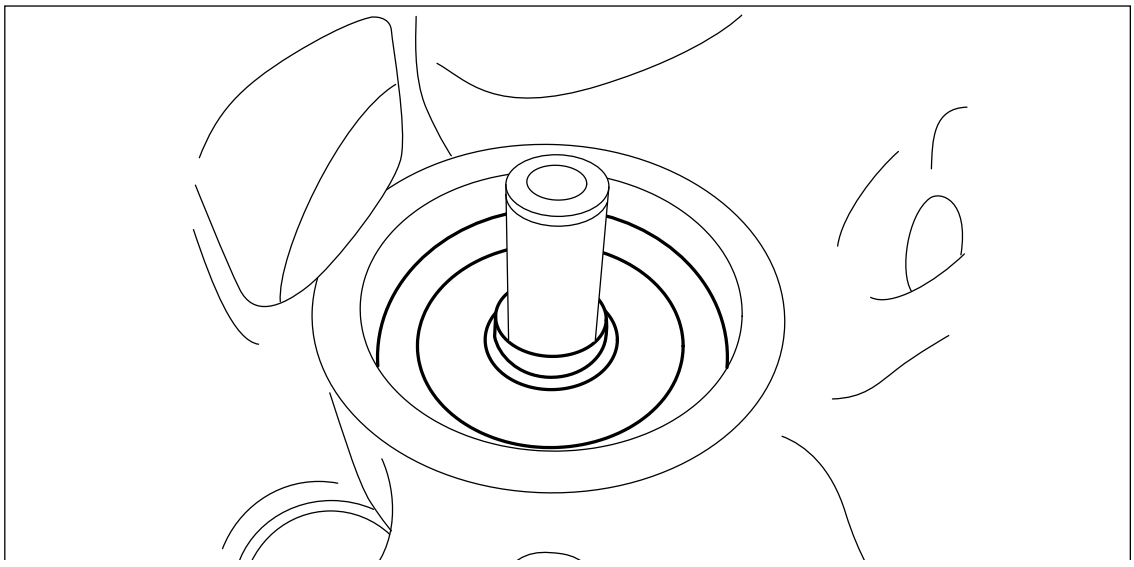
1. Face the O-ring side of the CVTF filter to the transmission case side, and install the CVTF filter.
   Note:
   Apply CVTF to the O-ring of CVTF filter.

2. Install the CVTF filter cover and gasket.
   Note:
   Use a new gasket.
   Tightening torque:
   17 N·m (1.7 kgf-m, 12.5 ft-lb)



3. Using the ST, install the oil seal.

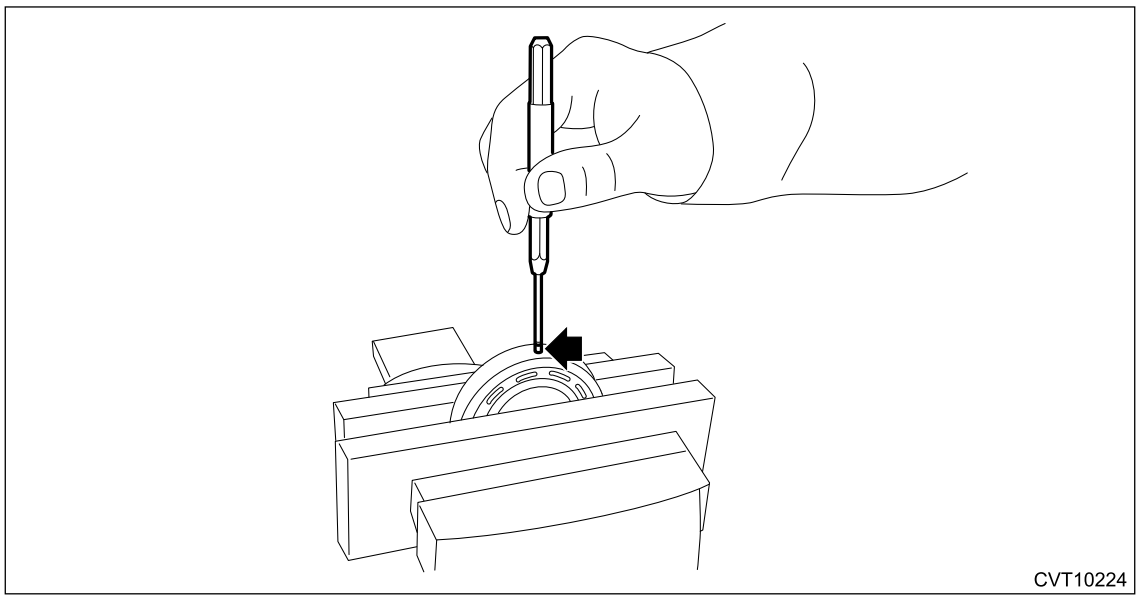
Note:



- **Use a new oil seal.**
- **Apply CVTF to the oil seal lip and press-fitting surface.**

Preparation tool:

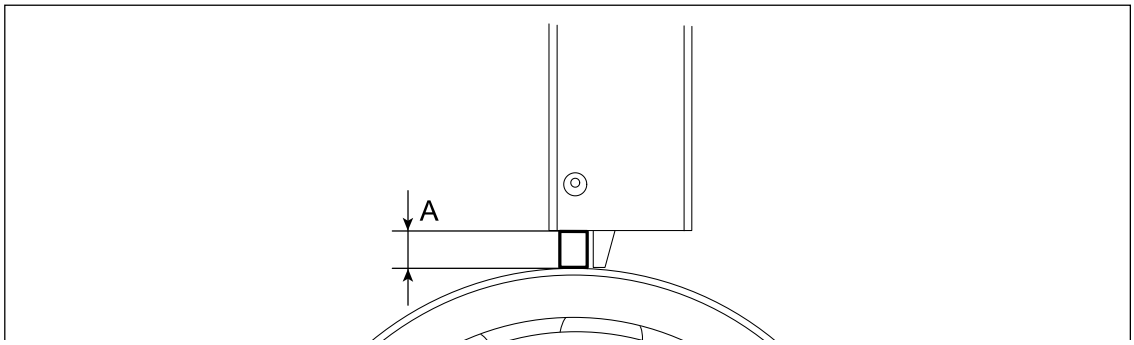
ST: INSTALLER (18657AA000)



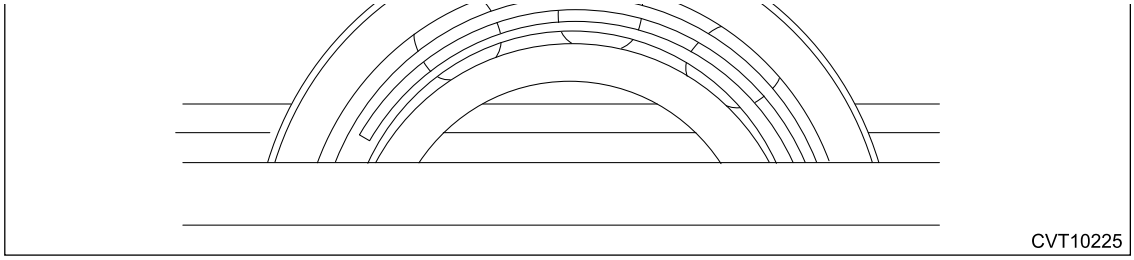
4. Install the oil guide.

5. Press-fit the roll pin into the ball bearing on the secondary pulley side.
(1) Hold the roll pin with a knock pin punch or the like, and press-fit with a hammer.

Note:



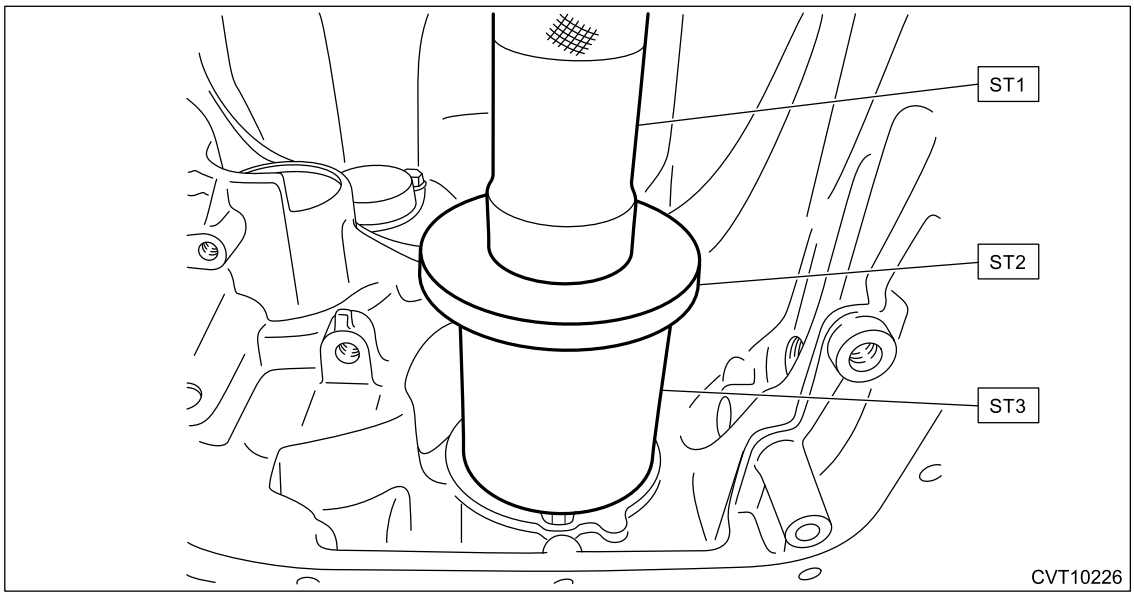
- **Use a new ball bearing.**
- **When securing the ball bearing with a vise, place a wood piece therebetween to avoid scratching the bearing race.**



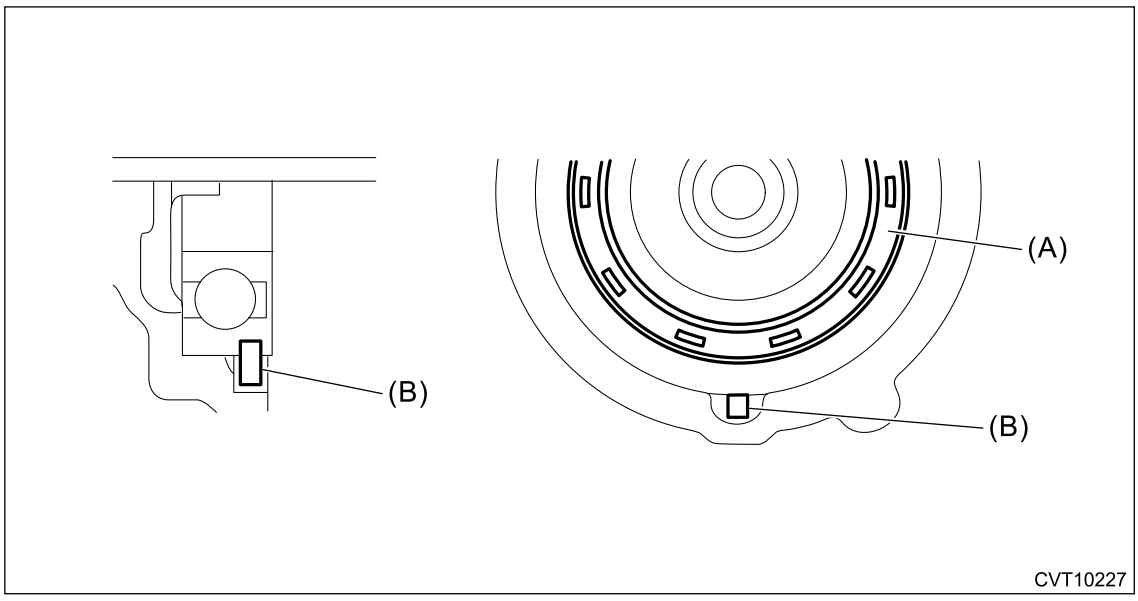
(2) Measure the height "A" of the roll pin.

Specification:

4.4 mm (0.173 in) or less



6. Using ST1, ST2 and ST3, install the ball bearing on the secondary pulley side.



Note:

- **Align the roll pin to the cutout of the transmission case.**
- **Press-fit the pin so that it is positioned on near side (the retainer should be seen on your side).**

Preparation tool:

ST1: BUSHING 1-2 INSTALLER (499277100)
ST2: INSTALLER (398177700)
ST3: PRESS SNAP RING (28499TC010)

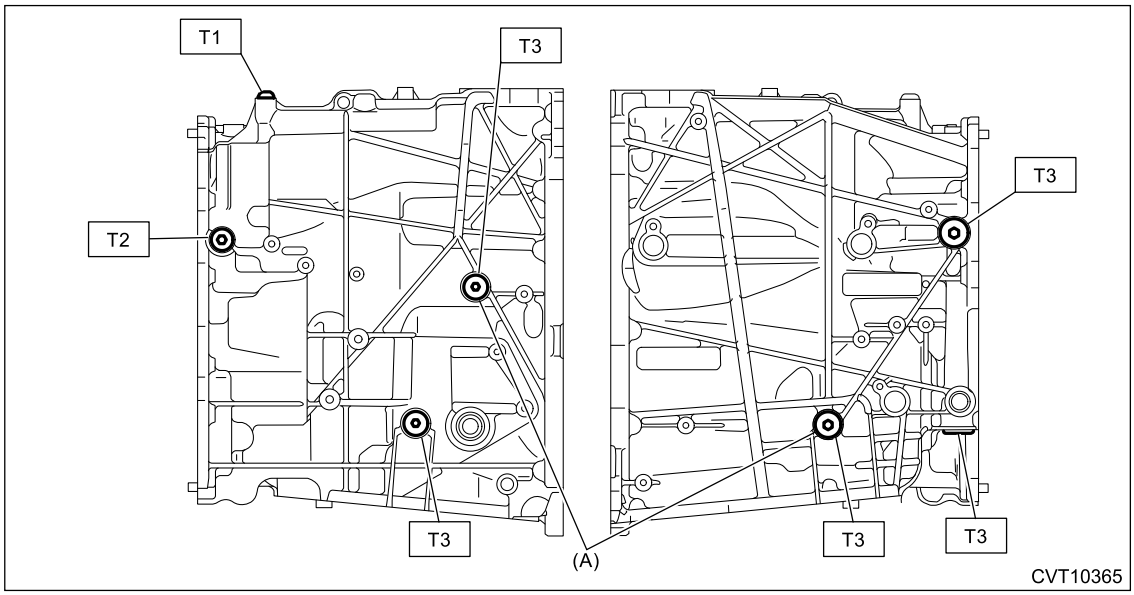
(A) Retainer

(A) Retainer

(B) Roll pin

7. Install all plugs.

Note:



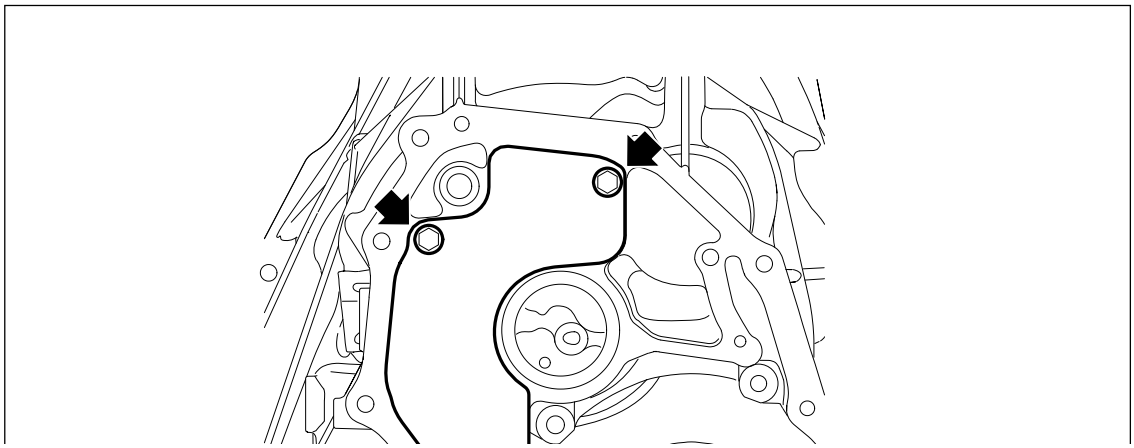
- **Use new O-rings.**
- **Apply CVTF to the O-rings.**
- **For the plug (A), fill the CVTF, and then tighten the plug using a new gasket.**

Tightening torque:

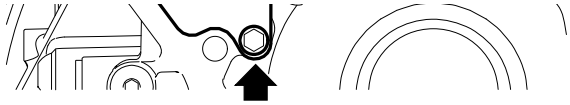
T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)

T2: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

T3: 50 N·m (5.1 kgf-m, 36.9 ft-lb)



8. Install the oil stopper plate.

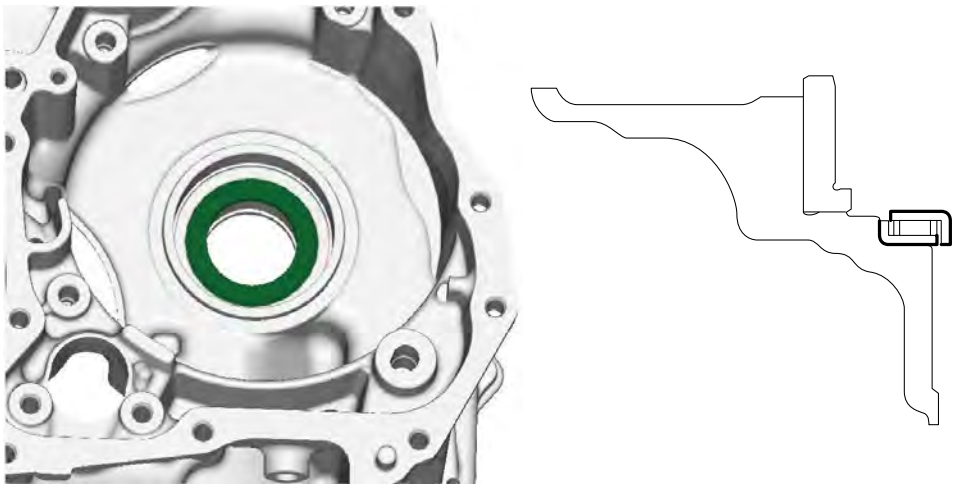


Note:

Use a new bolt.

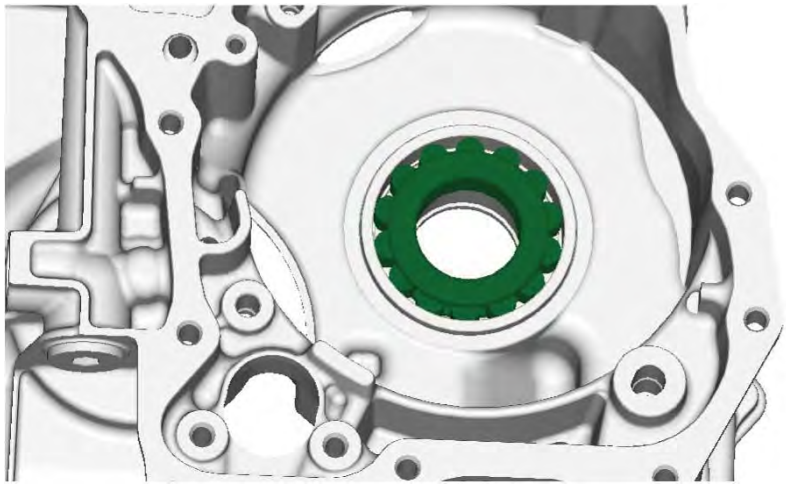
Tightening torque:

9 N·m (0.9 kgf-m, 6.6 ft-lb)



CVT00728

9. Install the thrust bearing to the transmission case.



Note:

Face the temper color surface to the transmission side.

CVT10390

10. Install the roller bearing of the reduction driven gear.

CVT10396

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Case

INSPECTION

- Check the transmission case for damage.
- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check the bearing for smooth operation.
- Check the bearing for seizure or wear.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Transmission Case

ADJUSTMENT

Note:

When replacing the transmission case with a new part, perform the following check and adjustment for the selection.

- Select the transfer driven gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>ADJUSTMENT.

- Select the transfer drive gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>ADJUSTMENT.
- Select the reduction drive gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>ADJUSTMENT.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Filter

REMOVAL

Note:

- **Although CVTF filter is a maintenance-free part, replace it if a large quantity of wear debris and metal particles are found in CVTF and CVTF filter.**
- **For removal of CVTF filter, refer to "Transmission Case". Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>REMOVAL. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>DISASSEMBLY.**

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Filter

INSTALLATION

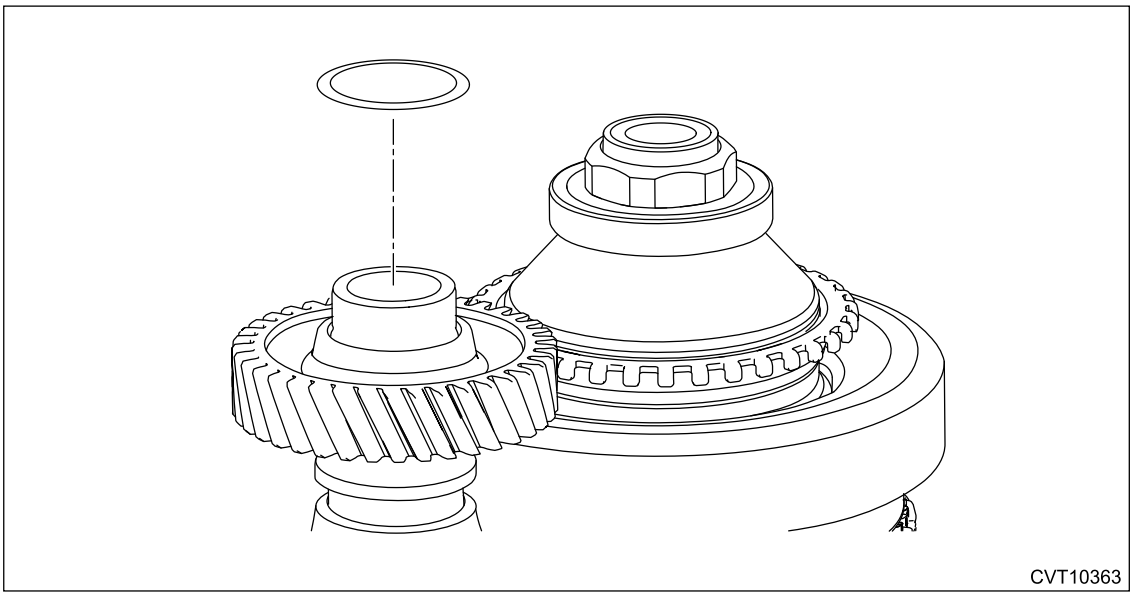
Note:

For installation of CVTF filter, refer to "Transmission Case". Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>ASSEMBLY. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > CVTF Filter

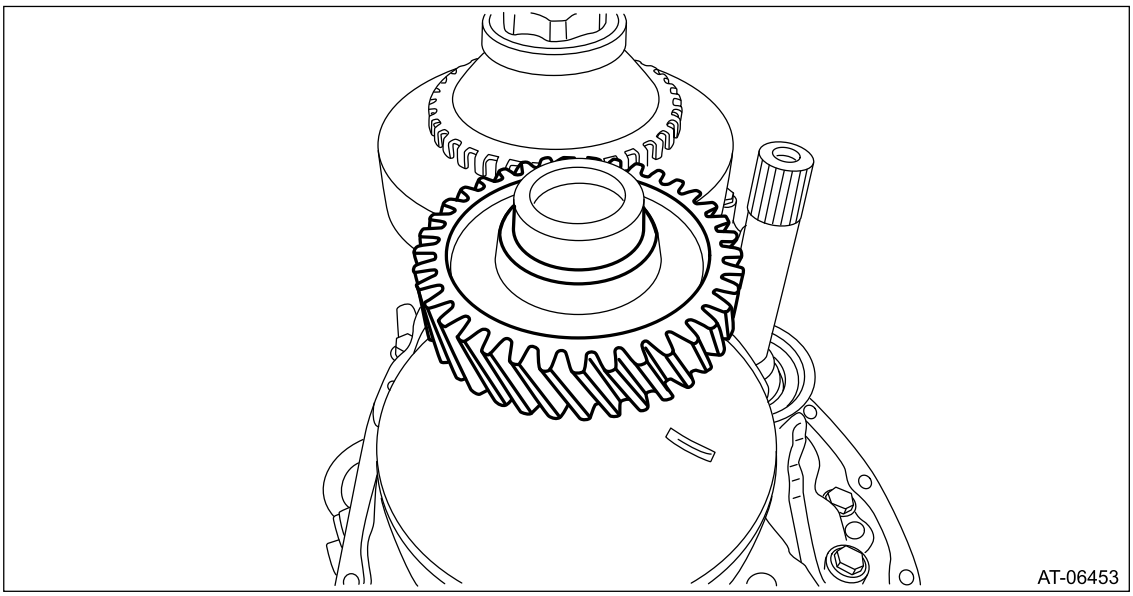
INSPECTION

- Check if a large quantity of wear debris or metal particles are in CVTF and CVTF filter.
- Check for broken part or damaged O-ring.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Drive Gear

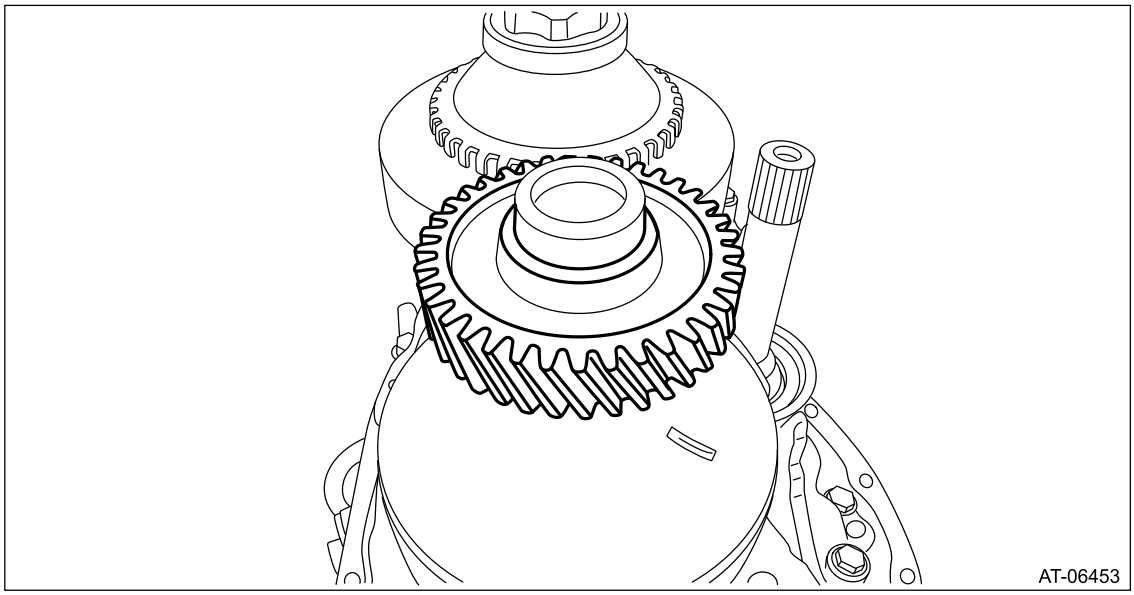
REMOVAL



1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.
7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.
16. Remove the transmission case. Ref. to CONTINUOUSLY VARIABLE

TRANSMISSION(TR580)>Transmission Case>REMOVAL.

17. Remove the reduction drive gear shim.



18. Remove the reduction drive gear.

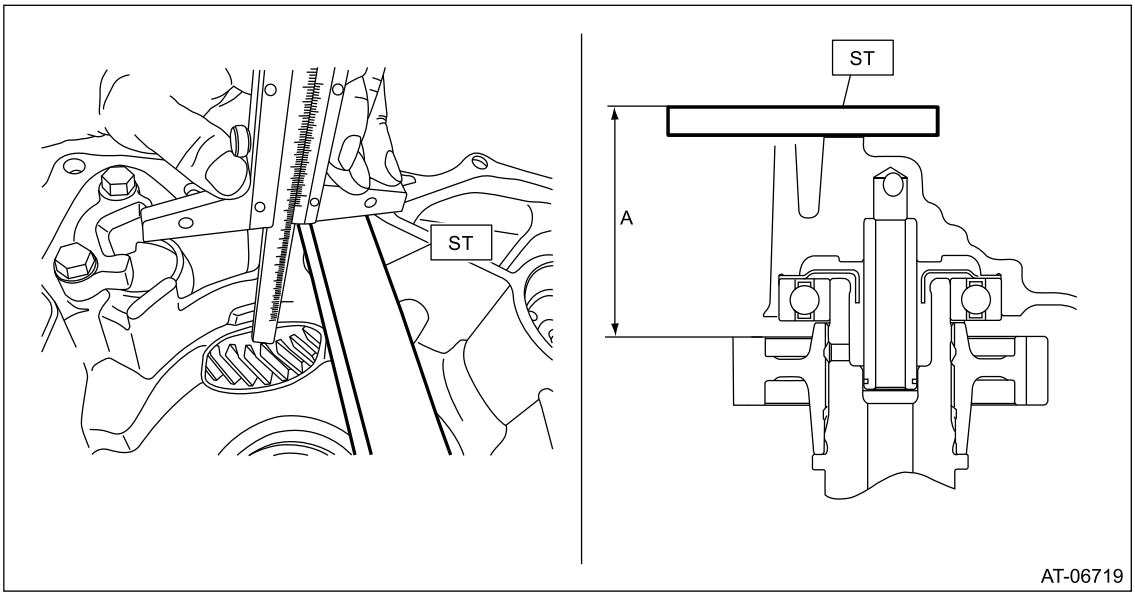
INSTALLATION

1. Install the reduction drive gear to secondary pulley.

2. Select the reduction drive gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>ADJUSTMENT.
3. Install the selected reduction drive gear shim.
4. Install the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.
5. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.
6. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.
7. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.
8. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
9. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.
10. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
11. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.

12. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
13. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
14. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.
15. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
16. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
17. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
18. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
19. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

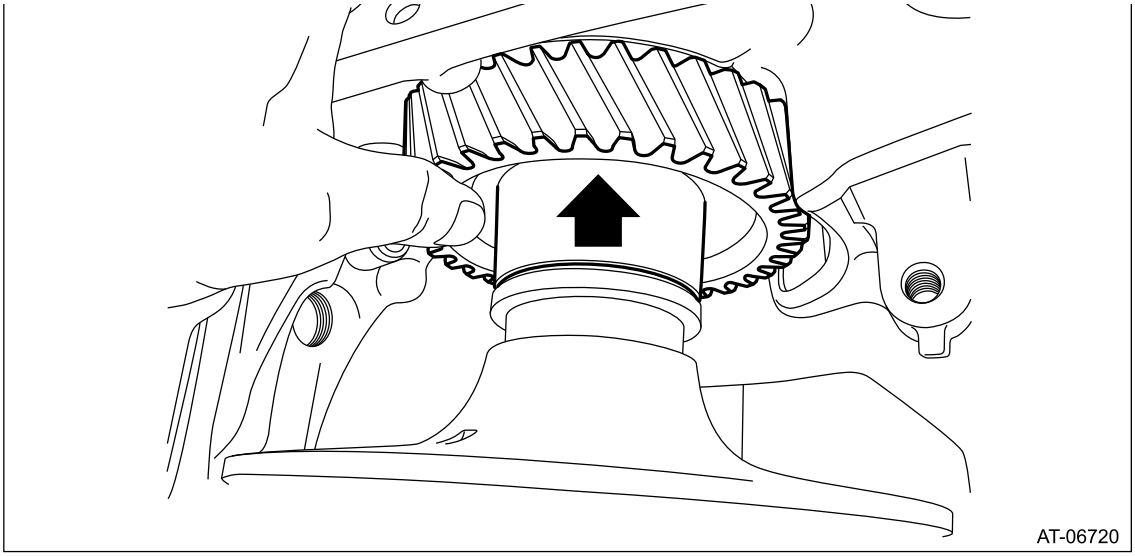
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Drive Gear



INSPECTION

Check the reduction drive gear for breakage or damage.

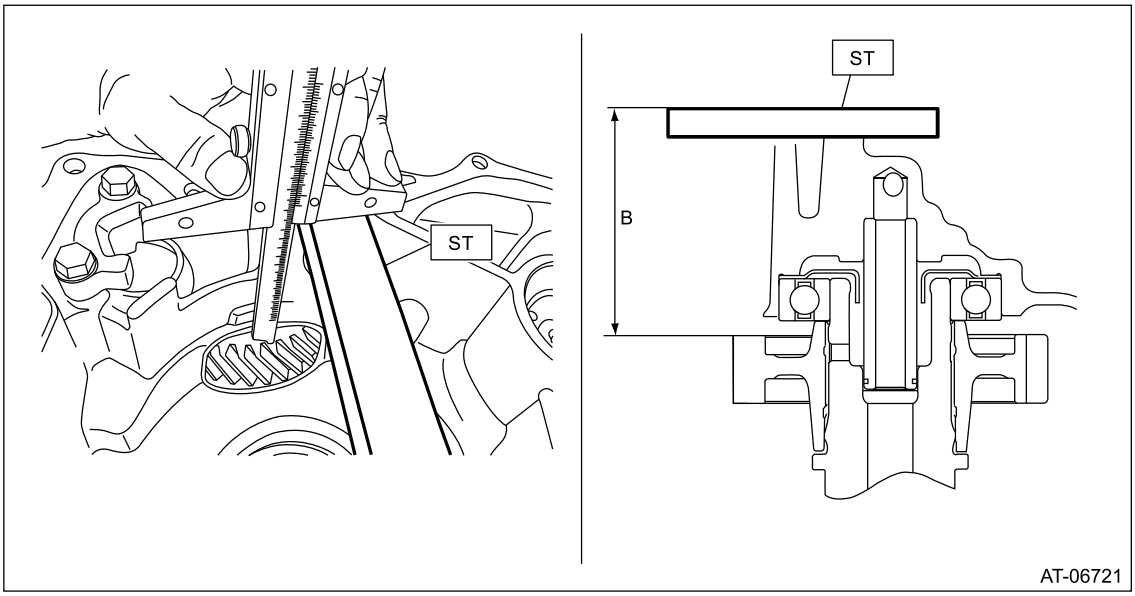
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reduction Drive Gear



ADJUSTMENT

1. Remove the reduction drive gear shim.
2. Install the transmission case, and secure it with four or five bolts.
   Tightening torque:
   22 N·m (2.2 kgf-m, 16.2 ft-lb)
3. Measure depth “A” from the ST upper face to the reduction drive gear end face.
   Preparation tool:
   ST: GAUGE (499575400)

4. Raise and hold the reduction drive gear.



5. Measure depth "B" from the ST upper face to the reduction drive gear end face.

Preparation tool:

ST: GAUGE (499575400)

6. Calculate the following formula.

T mm = A − B

[T in = A − B]

T: Moving distance of reduction drive gear shim

A: Depth from the ST upper face to the reduction drive gear end surface

B: Depth from the ST upper face to the reduction drive gear end surface

Moving distance of transfer drive gear [T]	Total shim thickness mm (in)
0.420 — 0.519 (0.0165 — 0.0204)	0.3 (0.012)
0.520 — 0.619 (0.0205 — 0.0242)	0.4 (0.016)
0.620 — 0.719 (0.0244 — 0.0283)	0.5 (0.020)
0.720 — 0.819 (0.0283 — 0.0322)	0.6 (0.024)
0.820 — 0.919 (0.0323 — 0.0362)	0.7 (0.028)
0.920 — 1.019 (0.0362 — 0.0401)	0.8 (0.031)
1.020 — 1.119 (0.0402 — 0.0441)	0.9 (0.035)
1.120 — 1.219 (0.0441 — 0.0480)	1.0 (0.039)
1.220 — 1.319 (0.0480 — 0.0519)	1.1 (0.043)

1.320 — 1.419 (0.0520 — 0.0559)	1.2 (0.047)
1.420 — 1.519 (0.0559 — 0.0598)	1.3 (0.051)
1.520 — 1.619 (0.0598 — 0.0637)	1.4 (0.055)
1.620 — 1.719 (0.0638 — 0.0677)	1.5 (0.059)
1.720 — 1.819 (0.0677 — 0.0716)	1.6 (0.063)
1.820 — 1.920 (0.0717 — 0.0756)	1.7 (0.067)

7. Select one to three reduction drive gear shims so that the total thickness meets the value obtained from step 6).

Part No.	Reduction drive gear shim thickness mm (in)
31288AA261	0.3 (0.012)
31288AA271	0.4 (0.016)

Part No.	Reduction drive gear shim thickness mm (in)
31288AA281	0.5 (0.020)
31288AA291	0.6 (0.024)

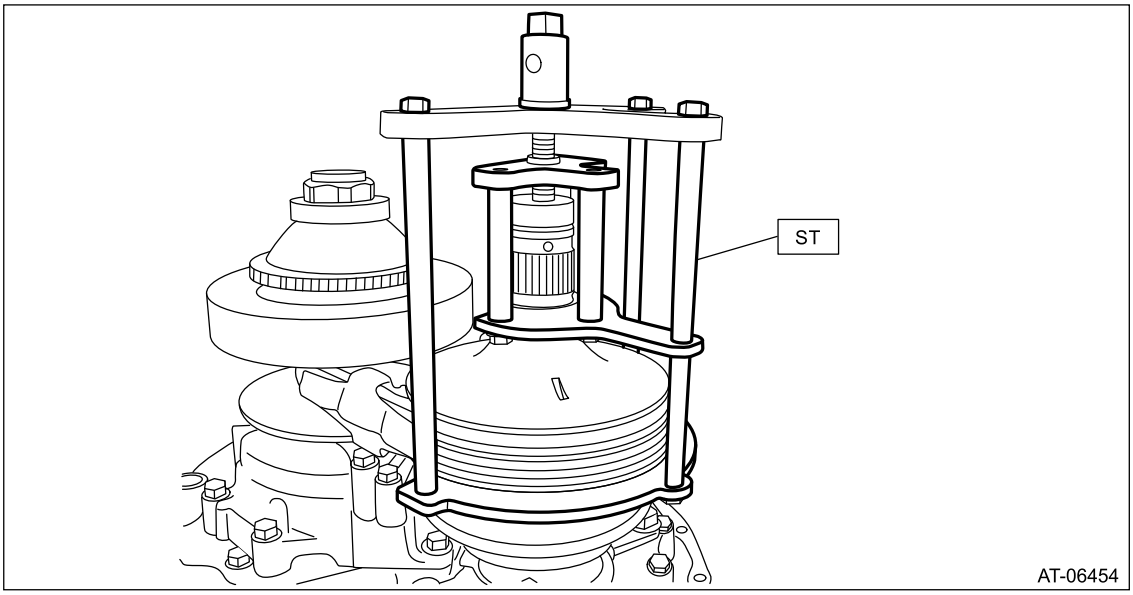
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Primary Pulley and Secondary Pulley

REMOVAL

Note:
Always replace primary pulley and secondary pulley as an assembly because they are non-disassembled parts.

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.
7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE

TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.

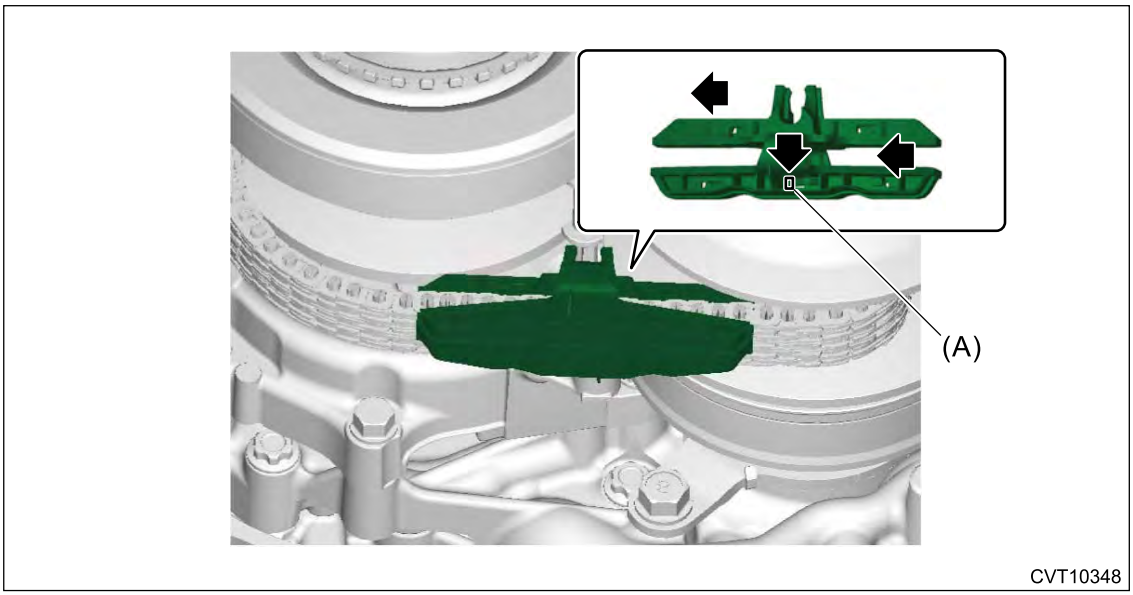


16. Remove the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>REMOVAL.

17. Remove the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>REMOVAL.

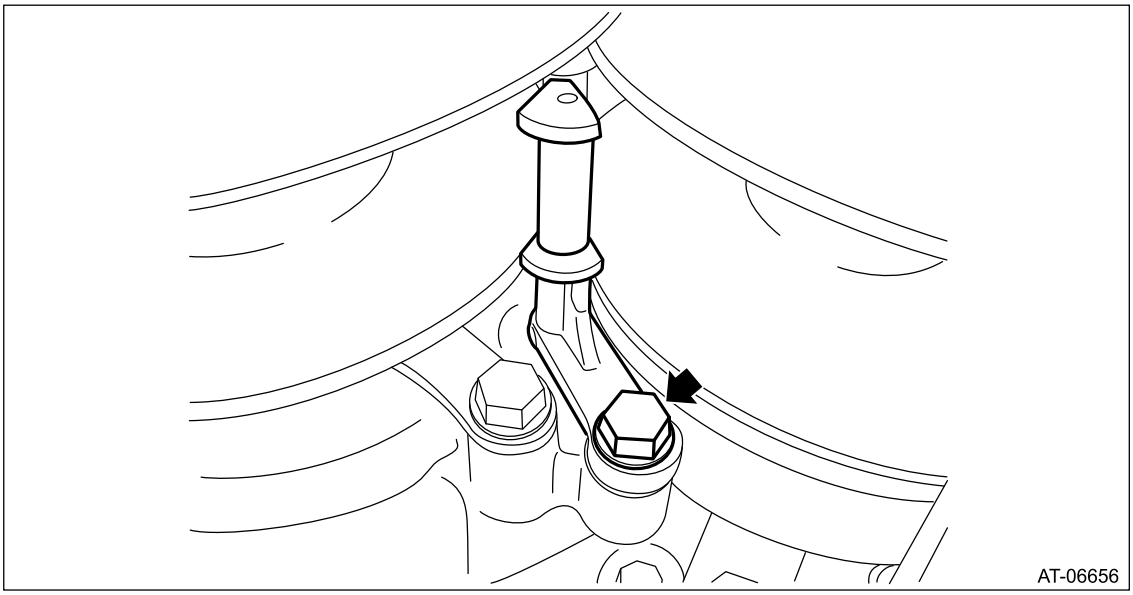
18. Set the ST to secondary pulley, expand the V groove of pulley, and then completely loosen the variator chain.

Preparation tool:



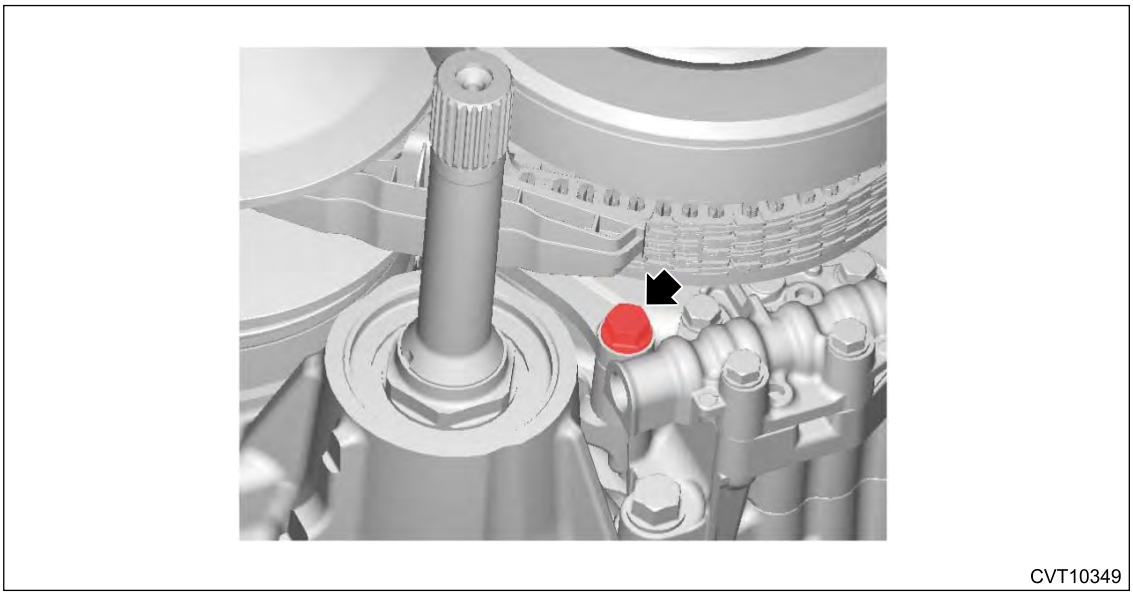
ST: EXPANDER PULLEY (18769AA010)

19. Remove the chain guide.



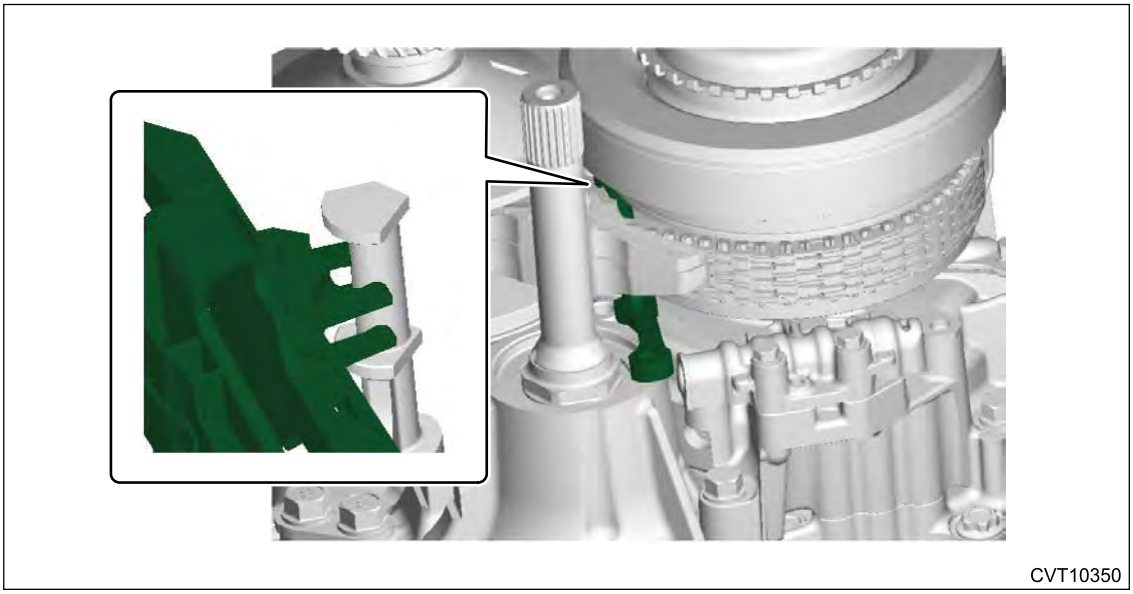
(1) Remove the chain guide from lubrication pipe.

(2) While pushing the claw (A) down, slide the upper chain guide to the direction of the arrow and remove the chain guide.

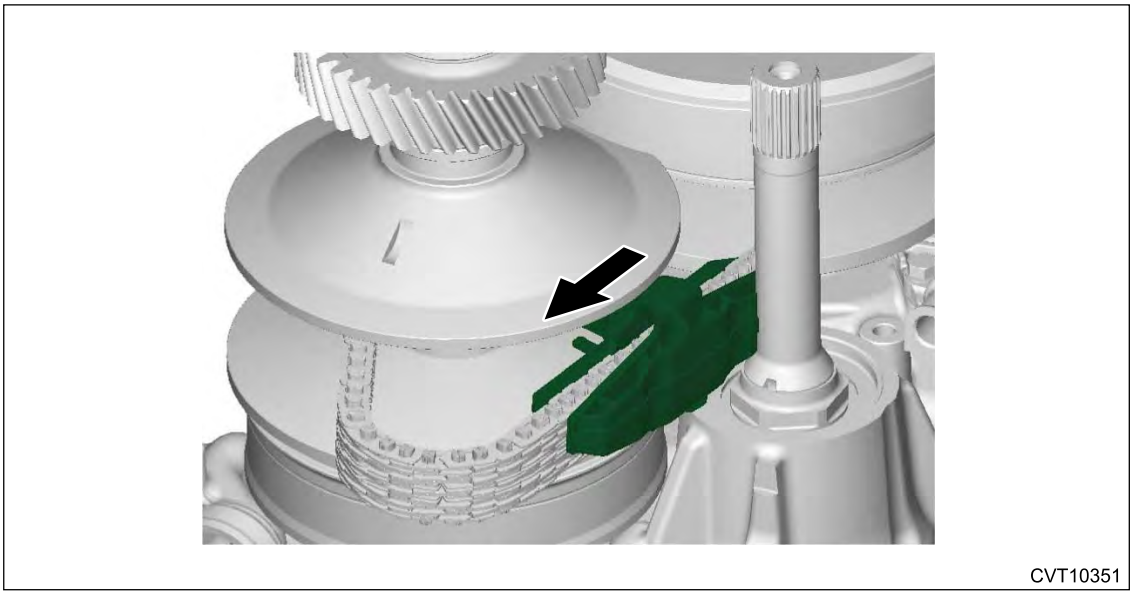


(3) Remove the lubrication pipe.

(3) Remove the lubrication pipe.

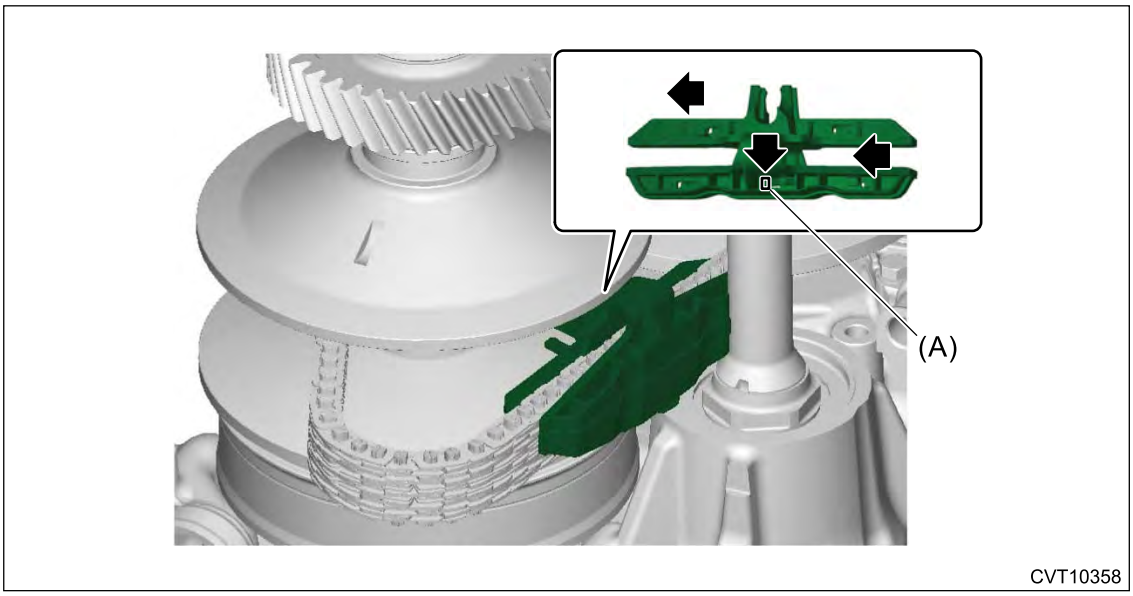


(4) Remove the support rod mounting bolts.



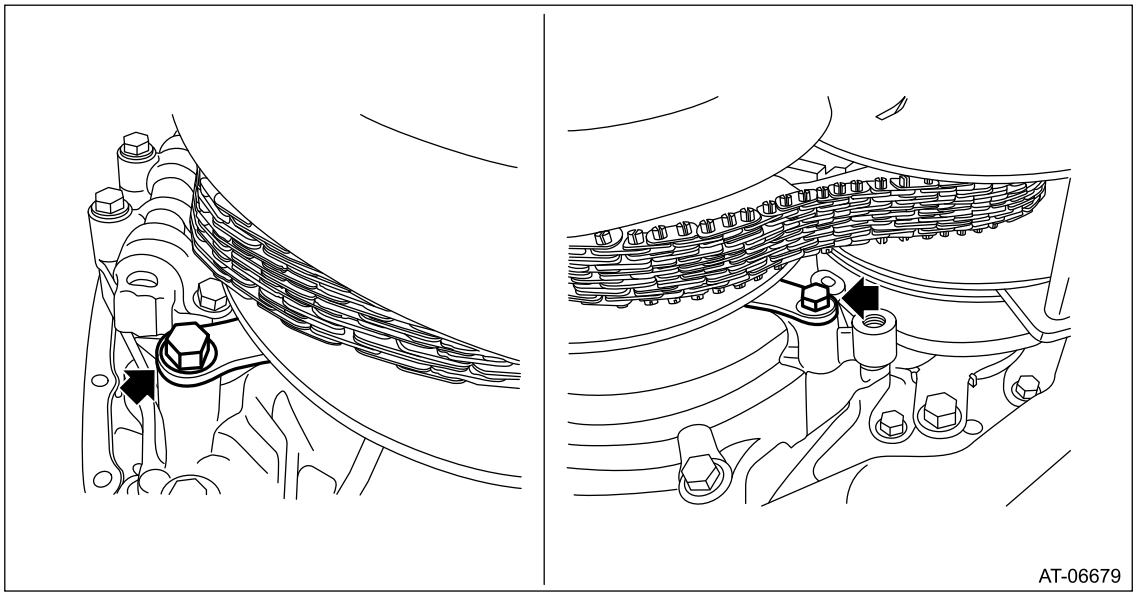
(5) Raise the support rod, and remove the chain guide from the support rod. Then, remove the support rod.

Caution:



Protect the both pulleys and variator chain from scratching.

CVT10350

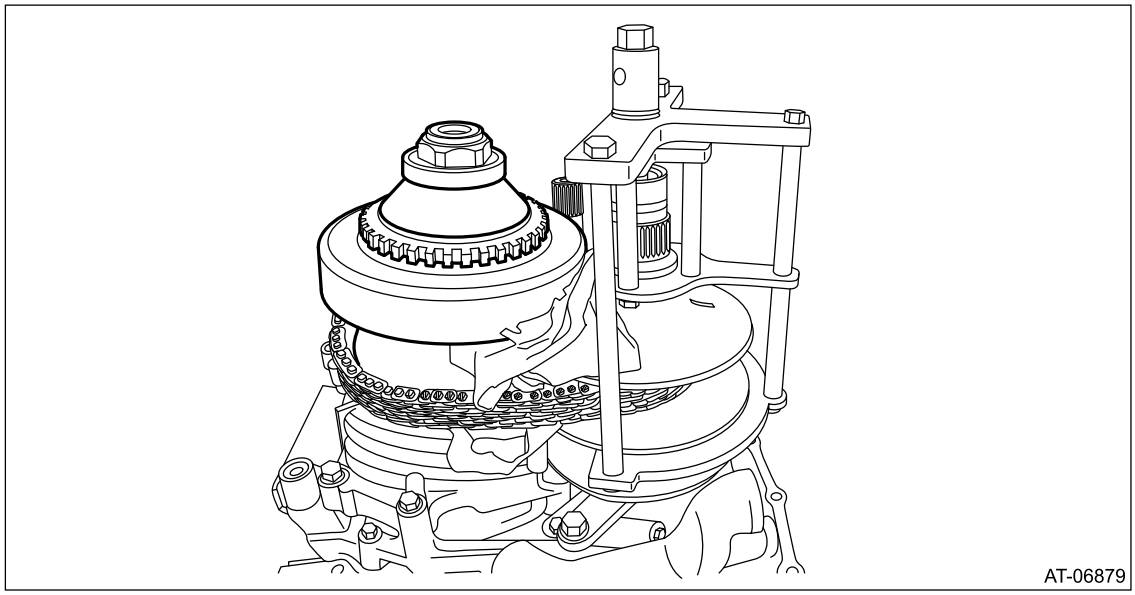


(6) Move the chain guide to the secondary pulley side.

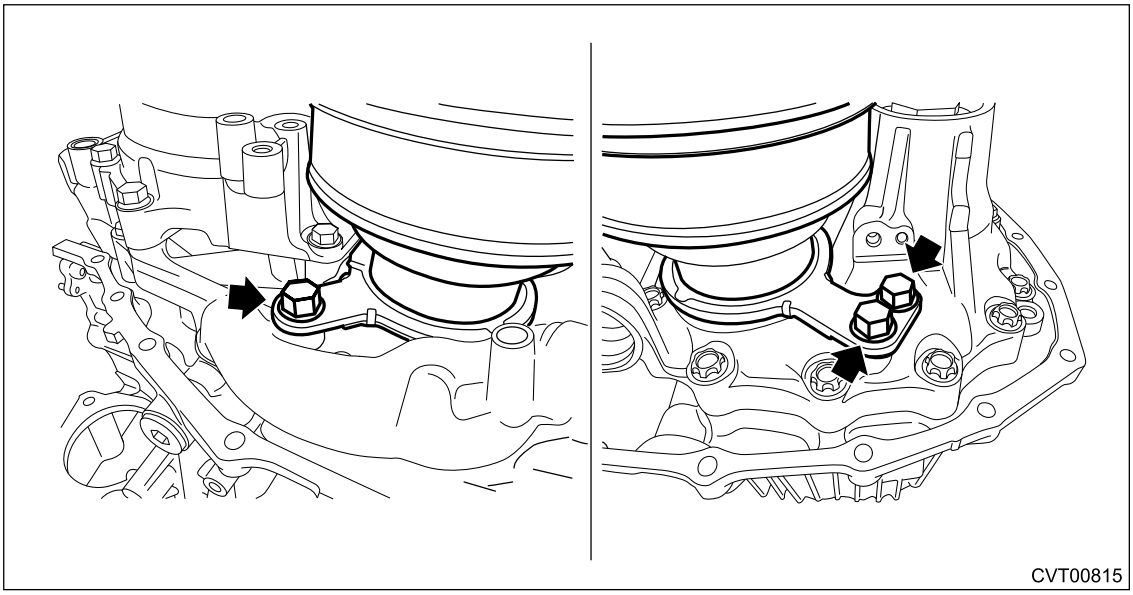
CVT10351

(7) While pushing the claw (A) down, slide the upper chain guide to the direction of the arrow and remove the chain guide.

20. Remove the primary pulley mounting bolt.

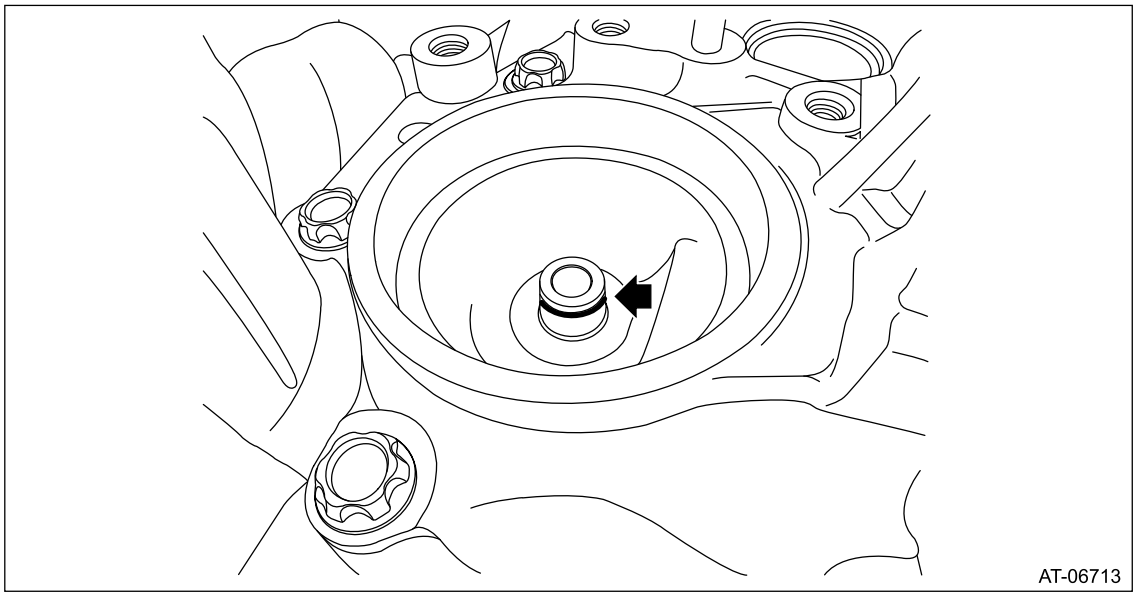


21. Remove the primary pulley from the reverse brake housing and intersect the V groove of secondary pulley and the V groove of primary pulley. Remove the variator chain from primary pulley, and remove the primary pulley.

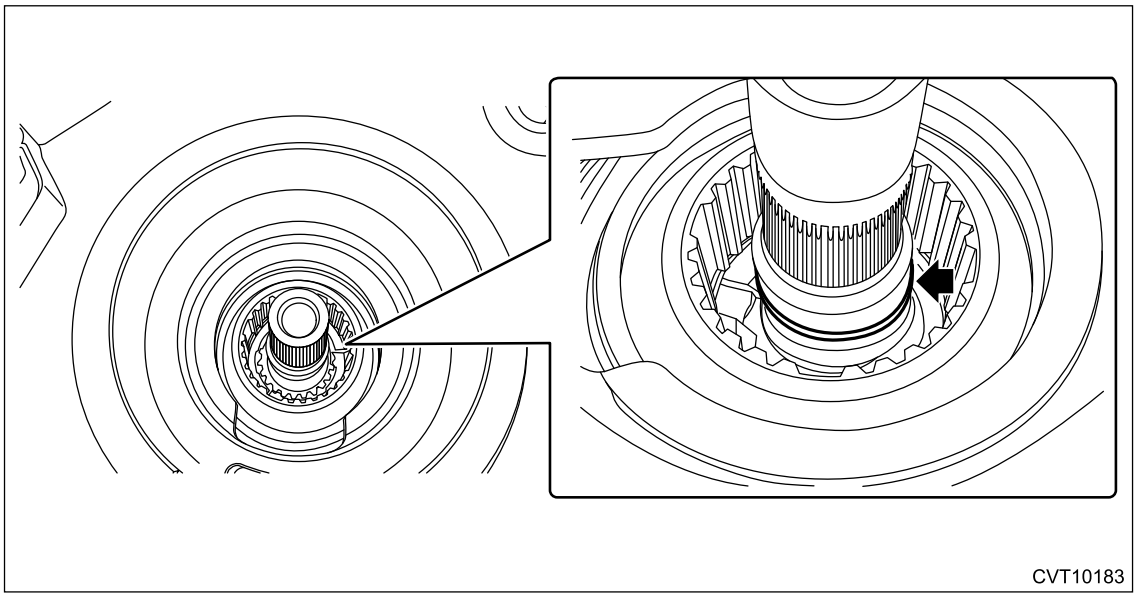


Caution:

Cover the V grooves of secondary pulley and primary pulley with cloth to protect the



both pulleys and variator chain from scratching.



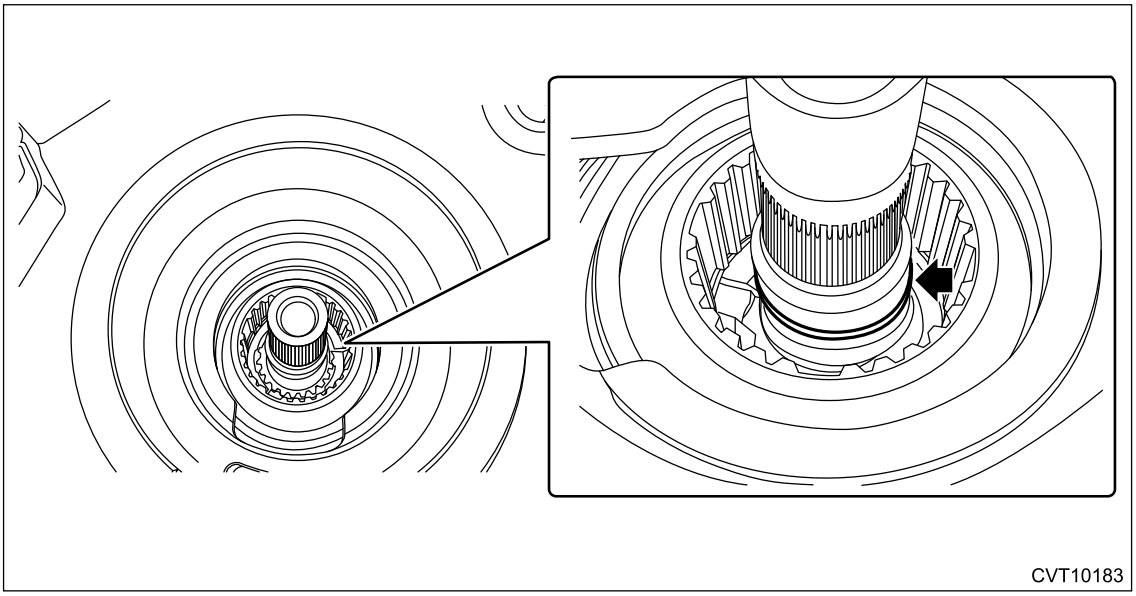
22. Remove the ST (EXPANDER PULLEY) from the secondary pulley.
23. Remove the variator chain from secondary pulley.
24. Remove the secondary pulley mounting bolts, and remove the secondary pulley.

25. Remove the seal ring from drive pinion retainer.

26. Remove the seal ring from the input shaft.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Primary Pulley and Secondary Pulley

INSTALLATION

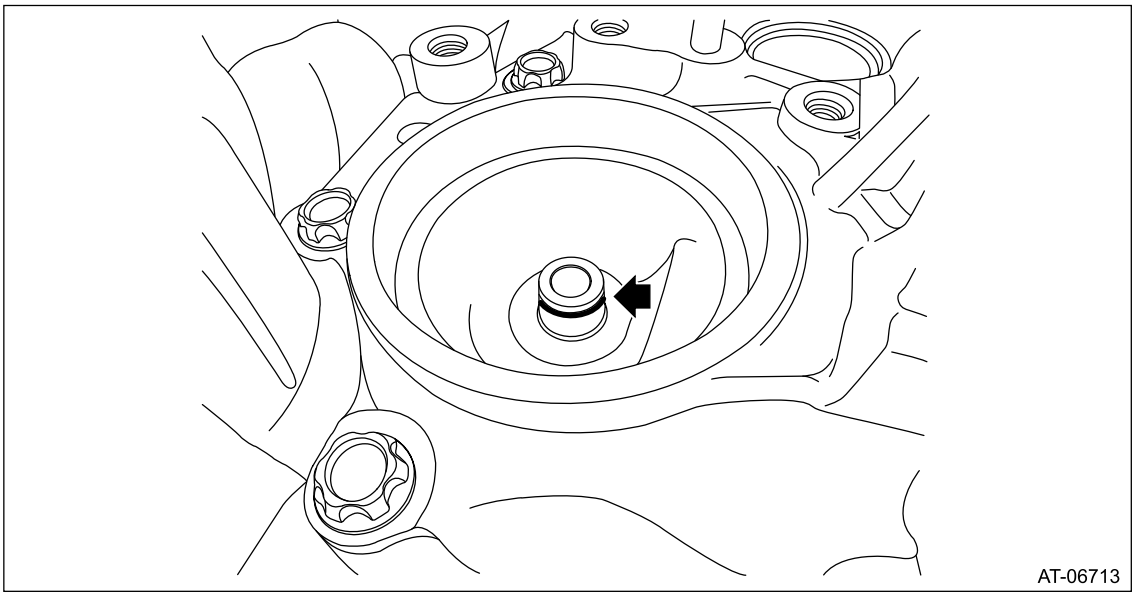


1. Select shims for pulley alignment. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>ADJUSTMENT

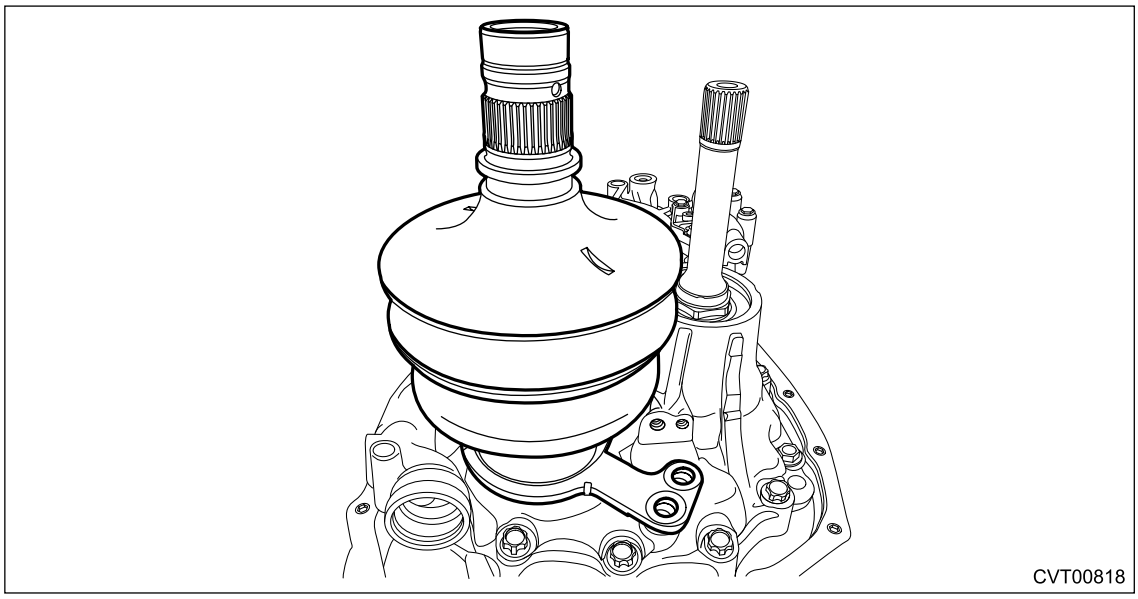
TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>ADJUSTMENT:

2. Install the seal ring to the input shaft.

Note:



- **Use new seal rings.**
- **When installing the seal rings, do not expand the seal rings too much.**
- **Apply CVTF to the seal rings.**

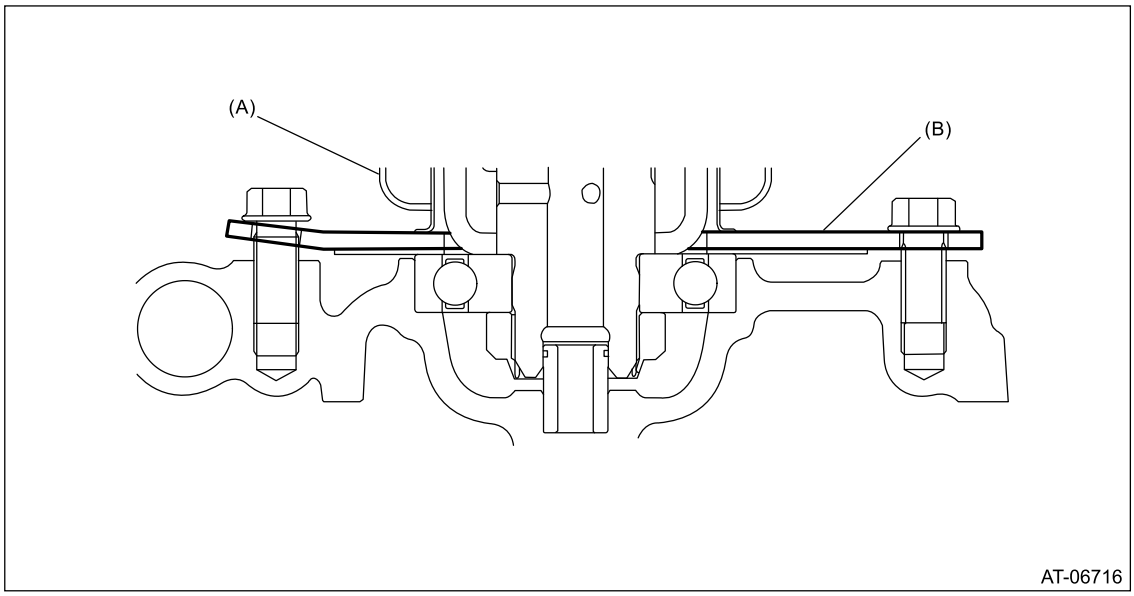


3. Install the seal ring to drive pinion retainer.

Note:

- **Use new seal rings.**
- **Apply CVTF to the seal rings.**

4. Install the selected shims to the primary pulley bearing catch surface.
5. Install the secondary pulley to the drive pinion retainer.

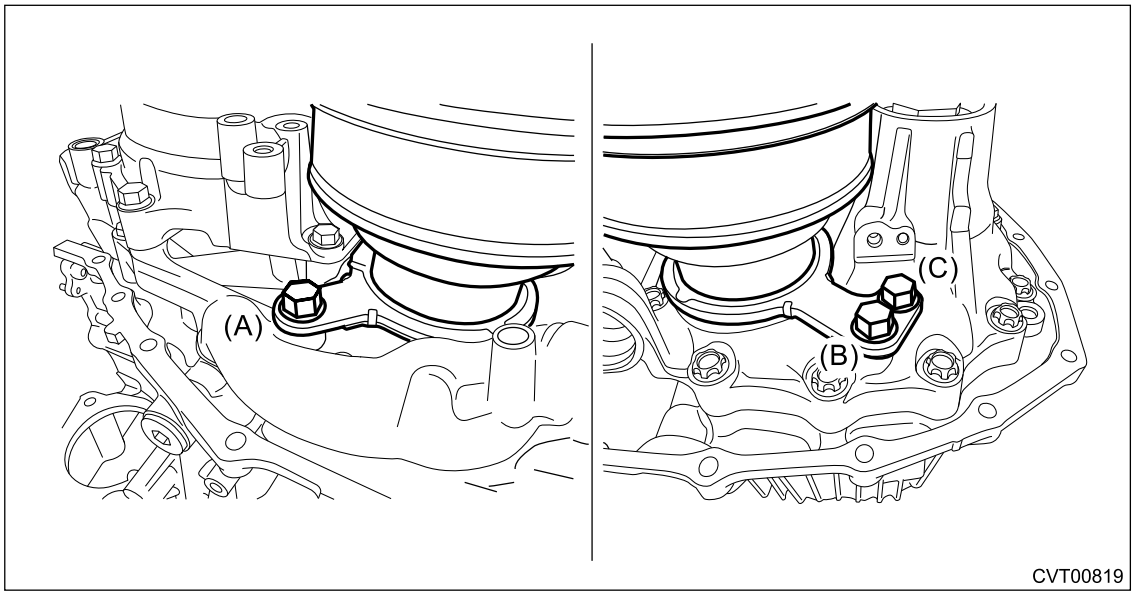


6. Install and tighten the secondary pulley securing bolts.

(1) Tighten the three bolts until the seating surfaces contact the bearing retainer.

Note:

- **Be careful not to tilt the bearing retainer of the secondary pulley.**
- **Apply CVTF to the bolt.**

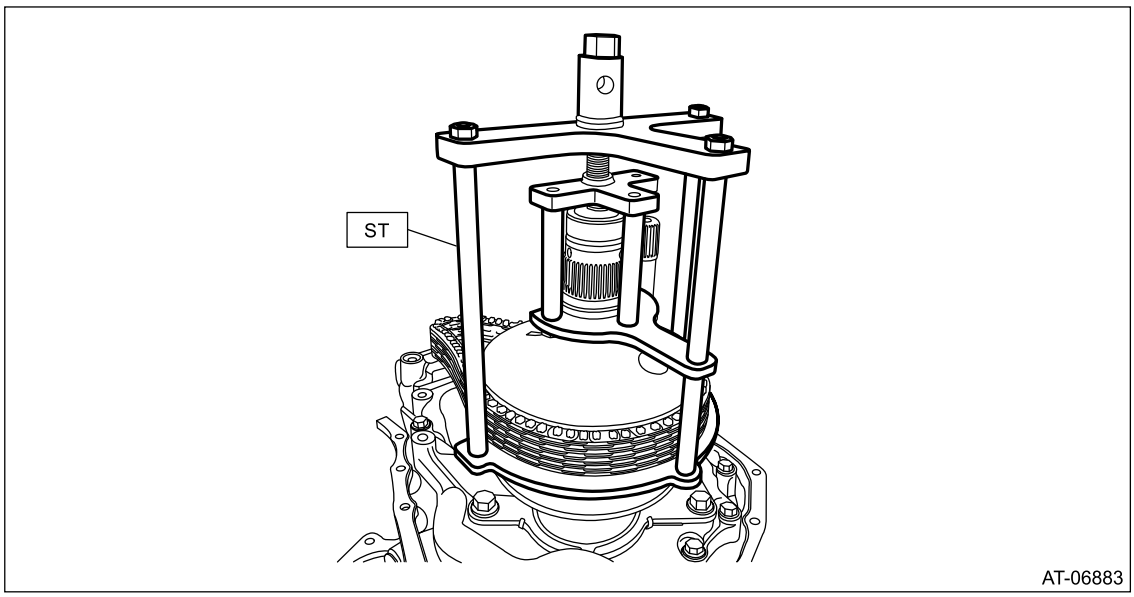


(A) Secondary pulley

(B) Bearing retainer

(2) Tighten the bolts in the order of (A) → (B) → (C) → (B).

Tightening torque:



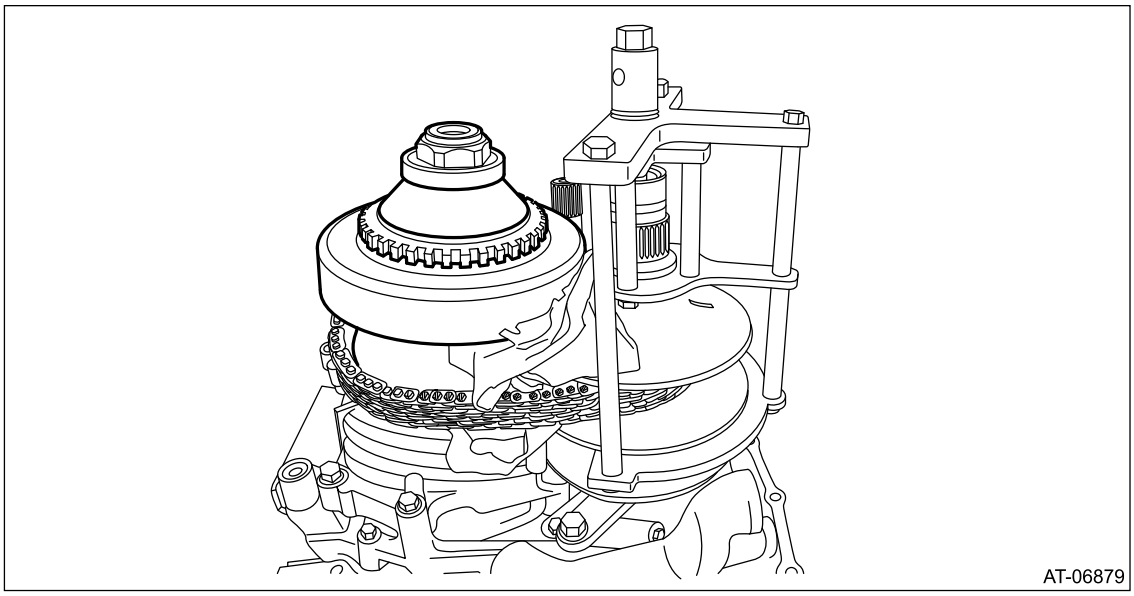
67.5 N·m (6.9 kgf-m, 49.8 ft-lb)

7. Place the variator chain on the V groove of the secondary pulley, and set the ST.

Preparation tool:

ST: EXPANDER PULLEY (18769AA010)

8. Expand the V groove of the secondary pulley.



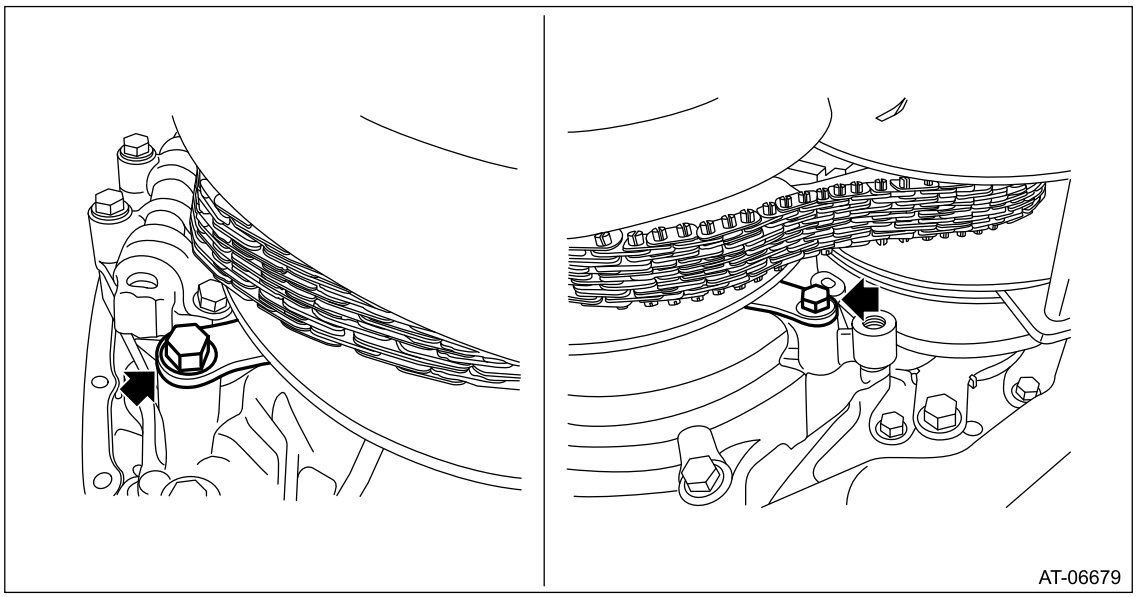
9. Install the primary pulley to the reverse brake housing together with the variator chain.

Caution:

Cover the V grooves of primary pulley and secondary pulley with cloth to protect the both pulleys and variator chain from scratching.

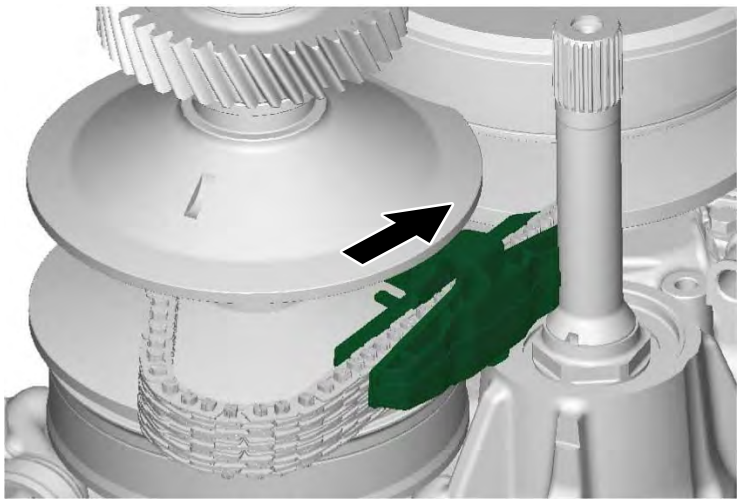
both pulleys and variator chain from scratching.

(1) Intersect the V groove of primary pulley and the V groove of secondary pulley and install the secondary pulley while placing the variator chain on secondary pulley.



(2) Install the primary pulley to the reverse brake housing so that the bolt hole of primary bearing retainer and the bolt hole of reverse brake housing are aligned.

10. Install the primary pulley bolt.

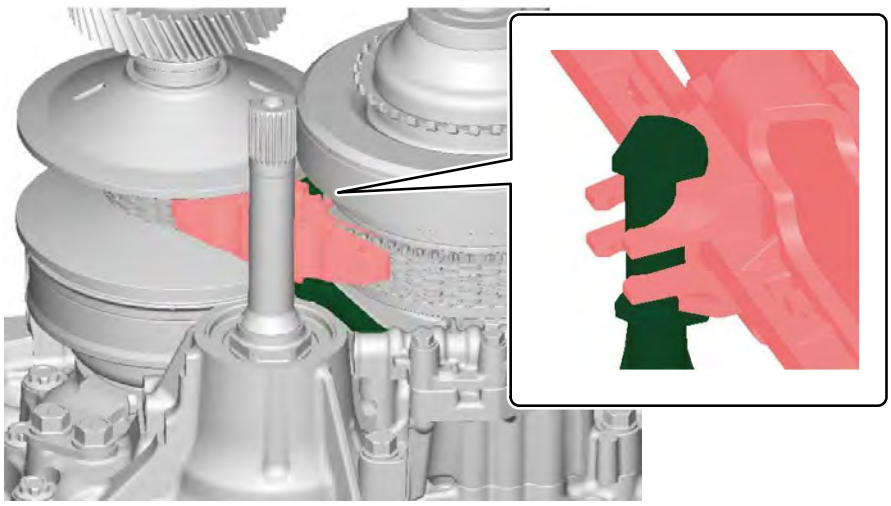


Tightening torque:

21 N·m (2.1 kgf-m, 15.5 ft-lb)

11. Install the chain guide.

(1) Install the chain guide to the variator chain, and move it to the primary pulley side.



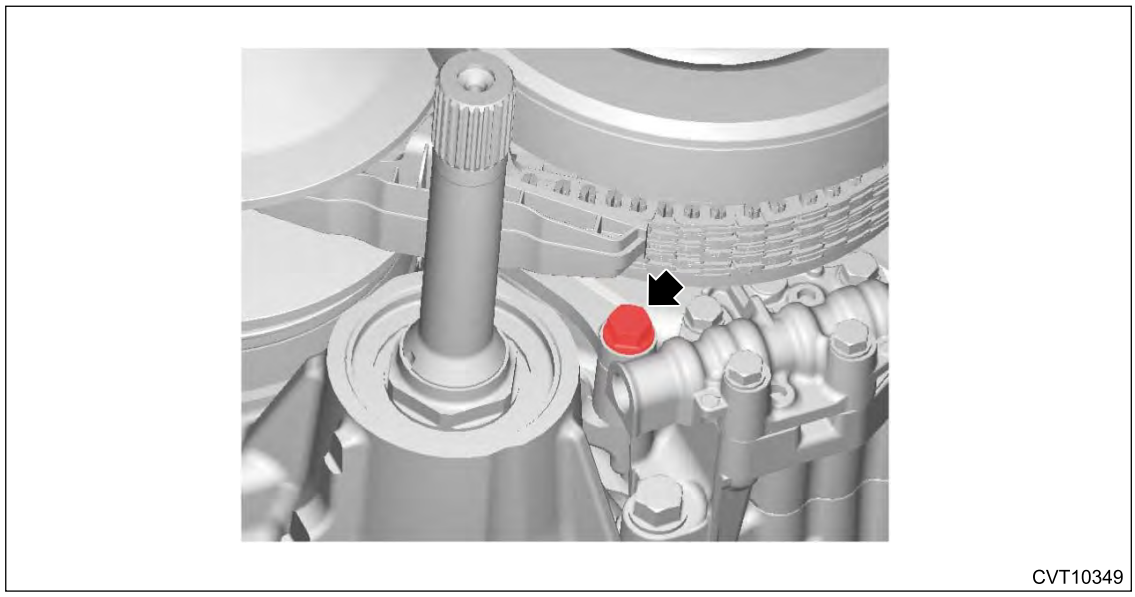
CVT10367

(2) Place the support rod inside of the variator chain.

Caution:

Protect the both pulleys and variator chain from scratching.

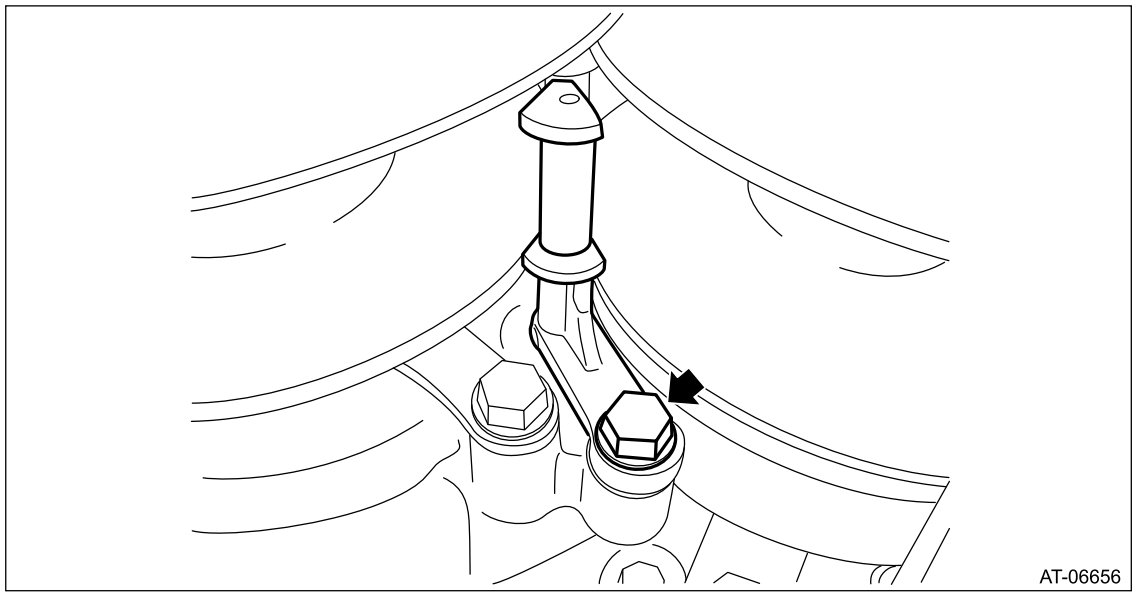
(3) While holding the support rod, press the chain guide so that the support rod runs through between the protrusions of chain guide and install the chain guide to the support rod.



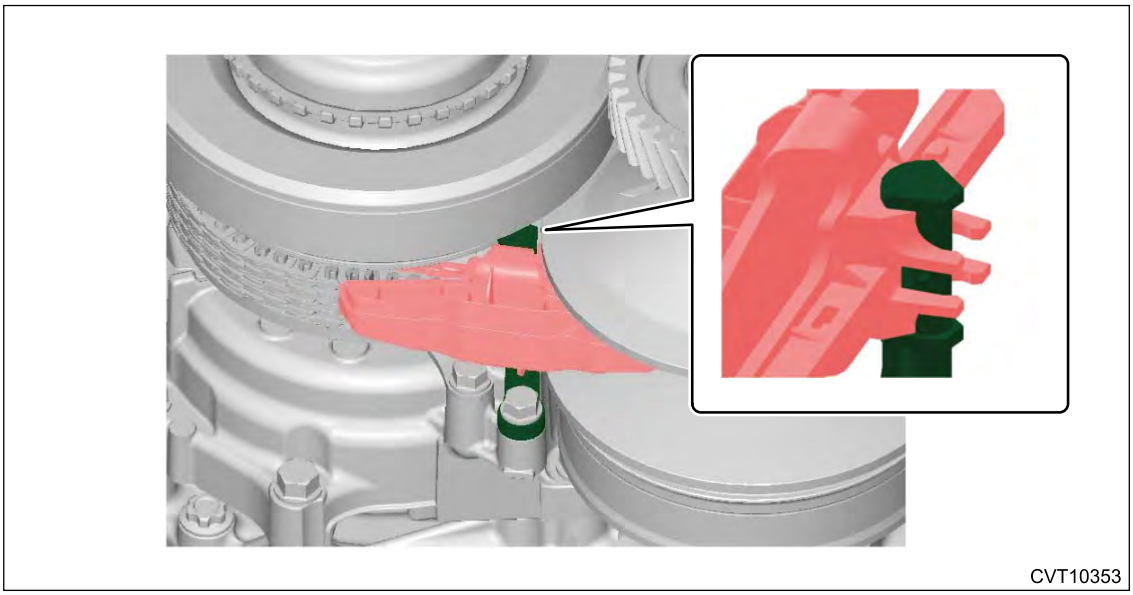
CVT10352

(4) Install the support rod.

Tightening torque:



21 N·m (2.1 kgf-m, 15.5 ft-lb)



(5) Install the lubrication pipe.

Tightening torque:

21 N·m (2.1 kgf-m, 15.5 ft-lb)

(6) Install the chain guide so that the lubrication pipe runs through between the protrusions of each chain guide. Then remove the ST (PULLEY EXPANDER).

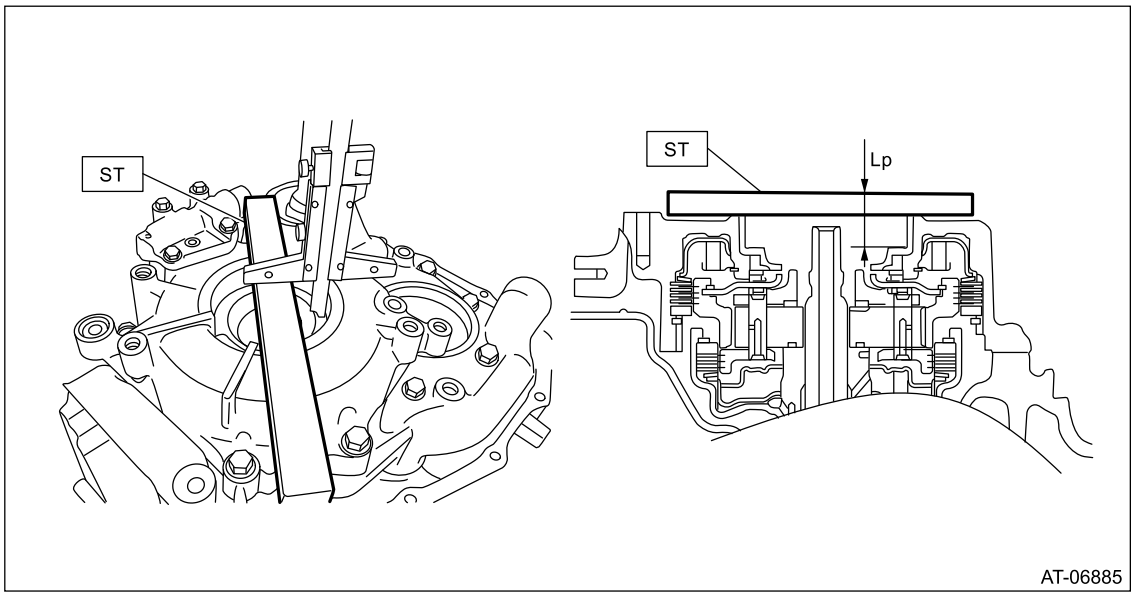
12. Install the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>INSTALLATION.
13. Select the reduction drive gear shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>ADJUSTMENT.
14. Install the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.
15. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.
16. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.
17. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.
18. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.
19. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
20. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
21. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
22. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
23. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
24. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE

TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.

25. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
26. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
27. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
28. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
29. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Primary Pulley and Secondary Pulley

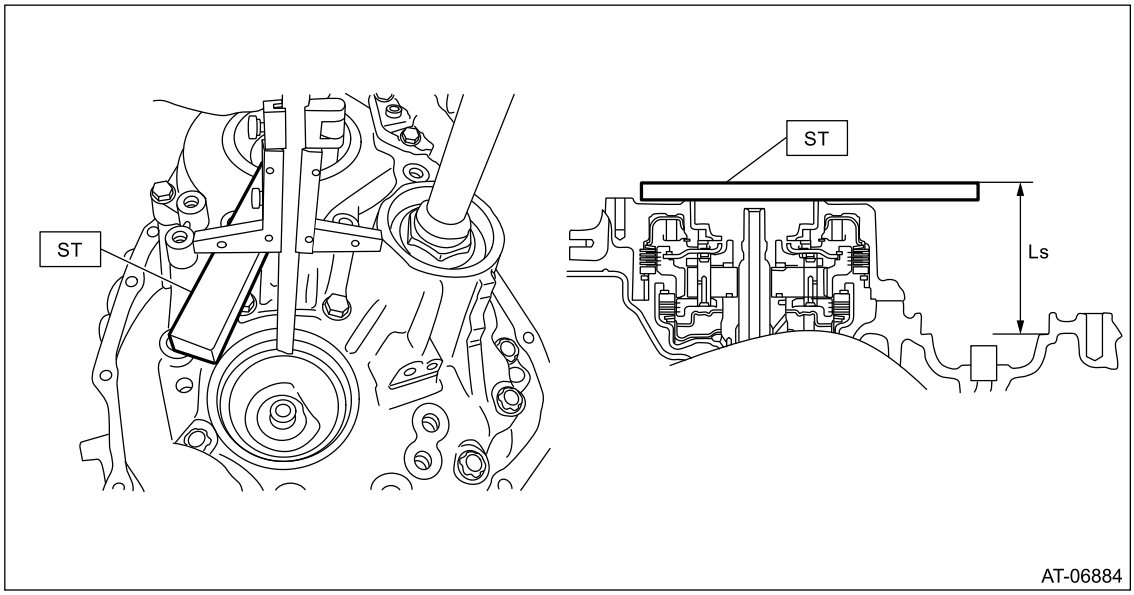
INSPECTION



- Check the surface of primary and secondary pulley cones for damage or wear.
- Check the primary and secondary pulley for damage.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Primary Pulley and Secondary Pulley

ADJUSTMENT



1. PROCEDURE IN REPLACEMENT OF PRIMARY AND SECONDARY PULLEY, OR IN REPLACEMENT OF PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

1. Measure depth “Lp” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
   Preparation tool:
   ST: GAUGE (499575400)

2. Measure the depth “Ls” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
   Preparation tool:
   ST: GAUGE (499575400)

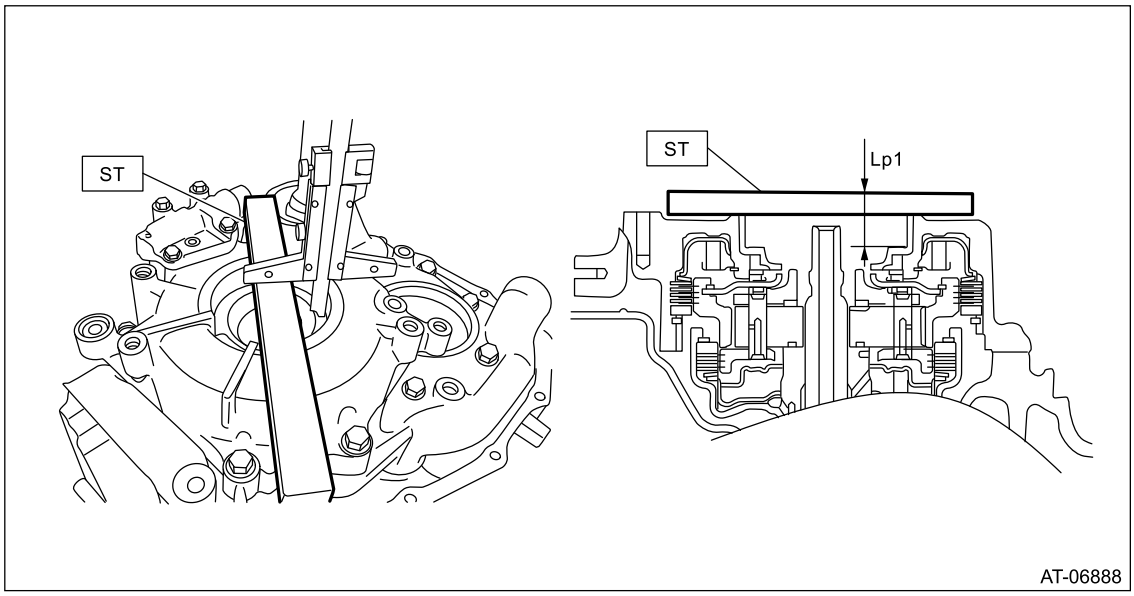
ST: GAUGE (499575400)

3. Calculate the following formula.
Calculation formula:
T (mm) = B − A + Lp − Ls −31.079
[T (in) = B − A + Lp − Ls −1.224]
T: Pulley alignment
A: Specified primary pulley dimension
B: Specified secondary pulley dimension
Lp: Depth from the ST upper face to the primary pulley bearing catch surface
Ls: Depth from the ST upper face to the secondary pulley bearing catch surface
31.079 mm (1.224 in): Constant

Pulley alignment T mm (in)	**Thickness of shim mm (in)**
-0.05 — 0.049 (-0.002 — 0.002)	No shims
0.050 — 0.149 (0.002 — 0.006)	0.1 (0.004)
0.150 — 0.249 (0.006 — 0.010)	0.2 (0.008)
0.250 — 0.349 (0.010 — 0.014)	0.3 (0.012)
0.350 — 0.449 (0.014 — 0.018)	0.4 (0.016)
0.450 — 0.549 (0.018 — 0.022)	0.5 (0.020)
0.550 — 0.649 (0.022 — 0.026)	0.6 (0.024)
0.650 — 0.749 (0.026 — 0.029)	0.7 (0.028)
0.750 — 0.849 (0.029 — 0.033)	0.8 (0.031)
0.850 — 0.949 (0.033 — 0.037)	0.9 (0.035)
0.950 — 1.049 (0.037 — 0.041)	1.0 (0.039)
1.050 — 1.149 (0.041 — 0.045)	1.1 (0.043)

1.050 1.149 (0.041 0.045)	1.1 (0.043)

4. Select one to two shims so that the total thickness meets the value obtained from step 3).



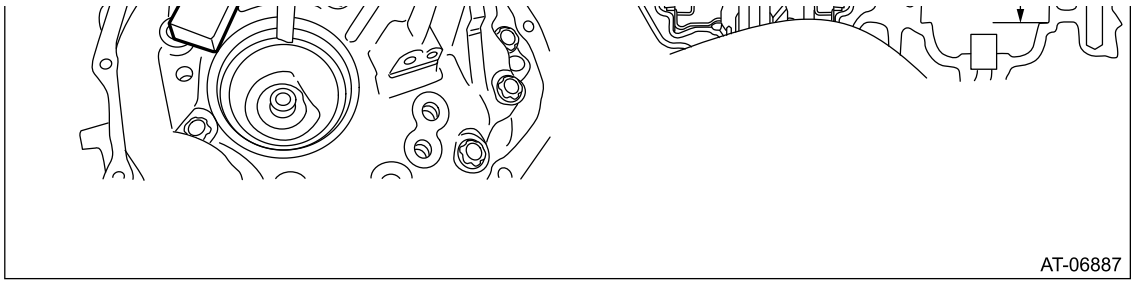
Part No.	Shim thickness mm (in)
32451AA050	0.1 (0.004)
32451AA060	0.2 (0.008)
32451AA070	0.3 (0.012)
32451AA080	0.4 (0.016)
32451AA090	0.5 (0.020)
Part No.	**Shim thickness mm (in)**
32451AA100	0.6 (0.024)

2. PROCEDURE WHEN REPLACING ONLY DRIVE PINION RETAINER OR REVERSE BRAKE HOUSING

1. Clean the mating surface of current drive pinion retainer and converter case.
2. Measure and record the shim thickness that is attached on the current reverse brake housing.
3. Using the current drive pinion retainer, measure depth “Lp1” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.

   Preparation tool:

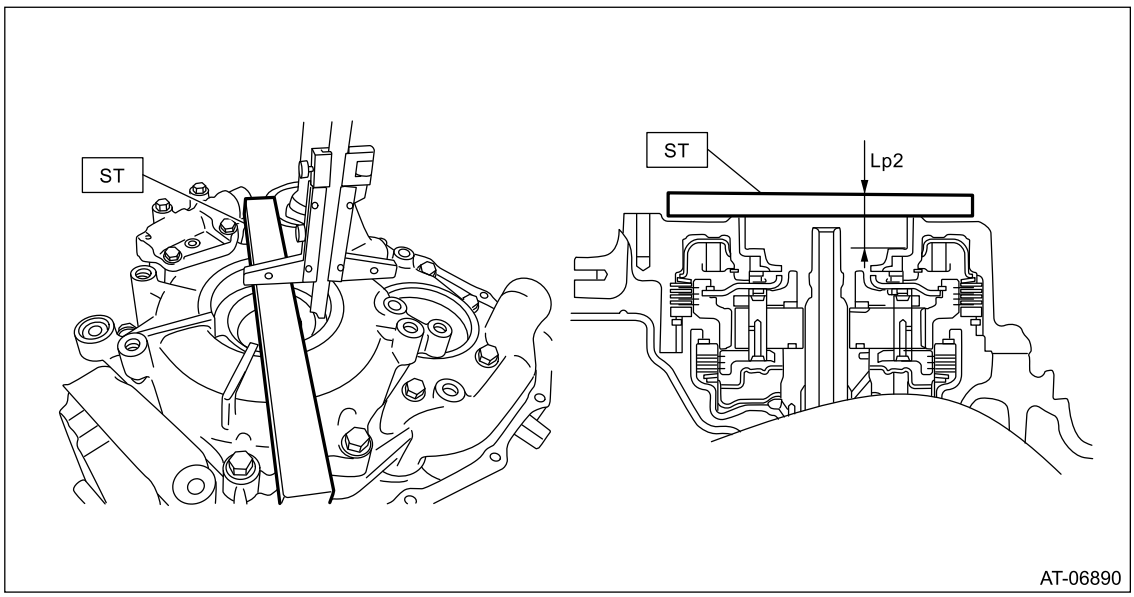
   ST: GAUGE (499575400)



4. Using the current drive pinion retainer or current reverse brake housing, measure the depth “Ls1” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.

   Preparation tool:

   ST: GAUGE (499575400)

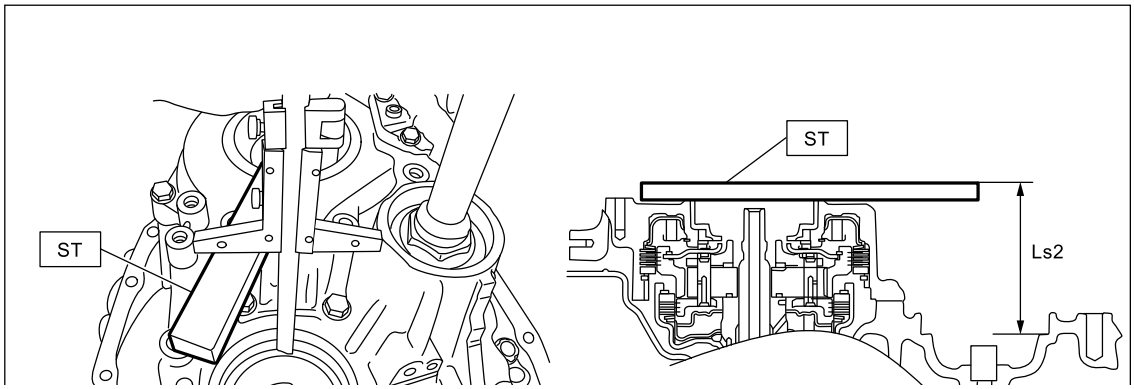


5. Calculate the "LD1" using the following formula and record it.

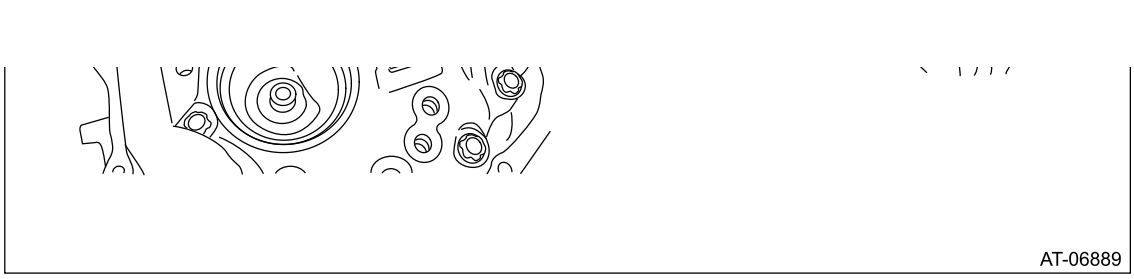
Calculation formula:
LD1 mm (in) = Ls1 − Lp1
LD1: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp1: Depth from the ST upper face to the primary pulley bearing catch surface
Ls1: Depth from the ST upper face to the secondary pulley bearing catch surface

6. Using the new drive pinion retainer or new reverse brake housing, measure the depth "Lp2" from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.

Preparation tool:



ST: GAUGE (499575400)



7. Using the new drive pinion retainer or new reverse brake housing, measure depth "Ls2" from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.

Preparation tool:

ST: GAUGE (499575400)

8. Calculate the "LD2" using the following formula and record it.
   Calculation formula:

   LD2 mm (in) = Ls2 − Lp2
   LD2: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
   Lp2: Depth from the ST upper face to the primary pulley bearing catch surface
   Ls2: Depth from the ST upper face to the secondary pulley bearing catch surface
9. Calculate the recorded values of "LD1" and "LD2" to obtain the positive number to select the shims.
   Calculation formula: T1 mm (in) = LD1 − LD2 or T2 mm (in) = LD2 − LD1
   T1, T2: Difference between new drive pinion retainer or new reverse brake housing and current drive pinion retainer or current reverse brake housing
   LD1: Calculated value of current drive pinion retainer or current reverse brake housing
   LD2: Calculated value of new drive pinion retainer or new reverse brake housing

Difference of the case (T1) mm (in)	Shim selection procedure
0 — 0.050 (0 — 0.00197)	Select a new shim of the same thickness with the shim that is used on the primary pulley side of the current reverse brake housing.
0.051 — 0.150 (0.00201 — 0.00591)	Select a shim which is 0.1 mm (0.004 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.151 — 0.250 (0.00594 — 0.00984)	Select a shim which is 0.2 mm (0.008 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.251 — 0.350 (0.00988 — 0.01378)	Select a shim which is 0.3 mm (0.012 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.351 — 0.450 (0.01382 — 0.01772)	Select a shim which is 0.4 mm (0.016 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.451 — 0.550 (0.01776 — 0.02165)	Select a shim which is 0.5 mm (0.020 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.
0.551 — 0.600 (0.02169 — 0.02362)	Select a shim which is 0.6 mm (0.024 in) thicker than the shim that is used on the primary pulley side of the current reverse brake housing.

Difference of the case (T2) mm (in)	Shim selection procedure
0 — 0.050 (0 — 0.00197)	Select a new shim of the same thickness with the shim that is used on the primary pulley side of the current reverse brake housing.
0.051 — 0.150 (0.00201 — 0.00591)	Select a shim which is 0.1 mm (0.004 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.151 — 0.250 (0.00594 — 0.00984)	Select a shim which is 0.2 mm (0.008 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.251 — 0.350 (0.00988 — 0.01378)	Select a shim which is 0.3 mm (0.012 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.351 — 0.450 (0.01382 — 0.01772)	Select a shim which is 0.4 mm (0.016 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.451 — 0.550 (0.01776	Select a shim which is 0.5 mm (0.020 in) thinner than the shim that is

0.451 — 0.550 (0.01776 — 0.02165)	Select a shim which is 0.5 mm (0.020 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.
0.551 — 0.600 (0.02169 — 0.02362)	Select a shim which is 0.6 mm (0.024 in) thinner than the shim that is used on the primary pulley side of the current reverse brake housing.

Part No.	Shim thickness mm (in)
32451AA050	0.1 (0.004)
32451AA060	0.2 (0.008)

Part No.	Shim thickness mm (in)
32451AA070	0.3 (0.012)
32451AA080	0.4 (0.016)

32451AA100	0.6 (0.024)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Variator Chain

REMOVAL

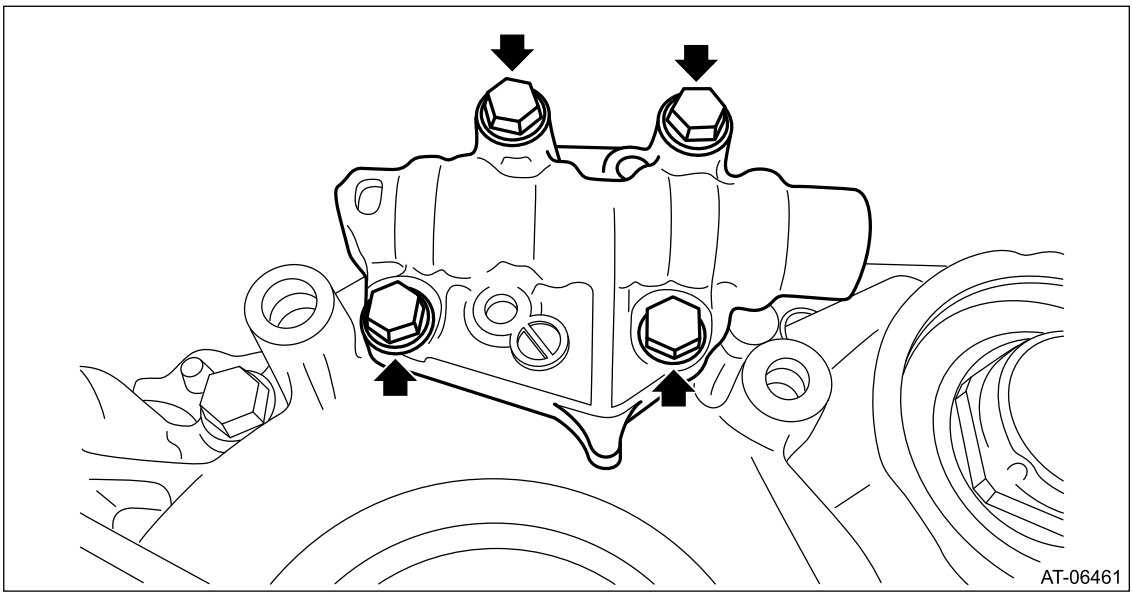
For removal of variator chain, refer to “Primary Pulley and Secondary Pulley”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>REMOVAL.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Variator Chain

INSTALLATION

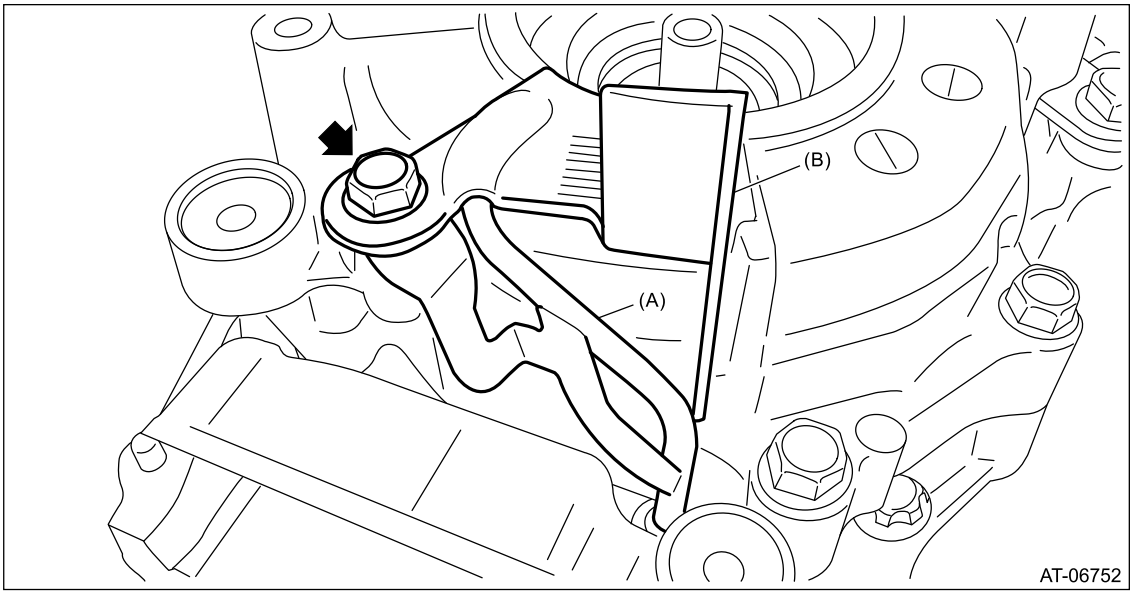
For installation of variator chain, refer to “Primary Pulley and Secondary Pulley”. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Variator Chain



INSPECTION

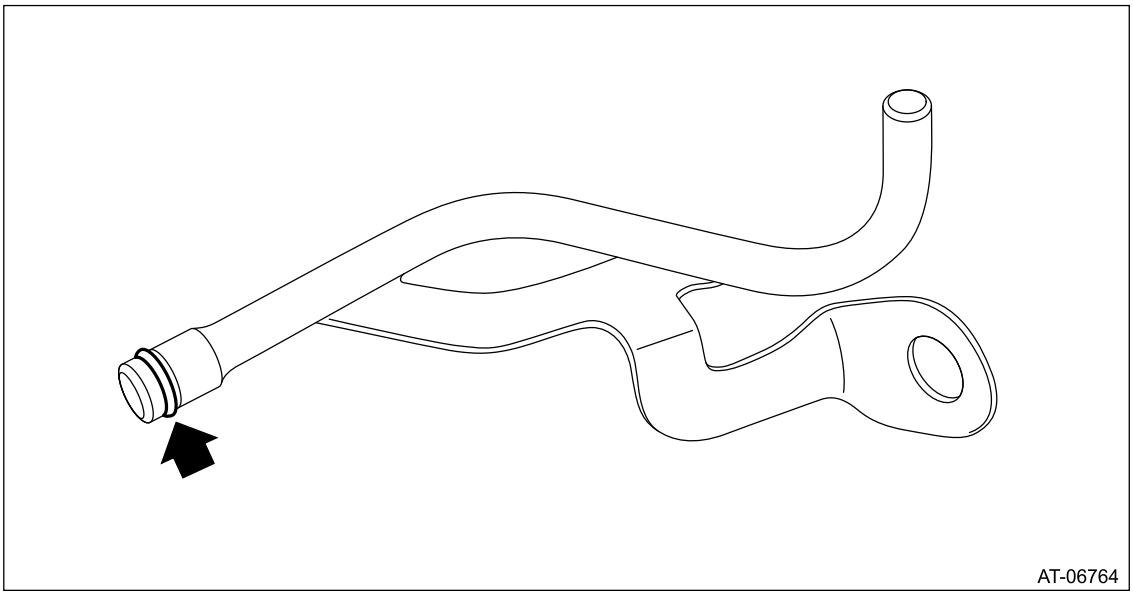
Check the variator chain for damage and wear.



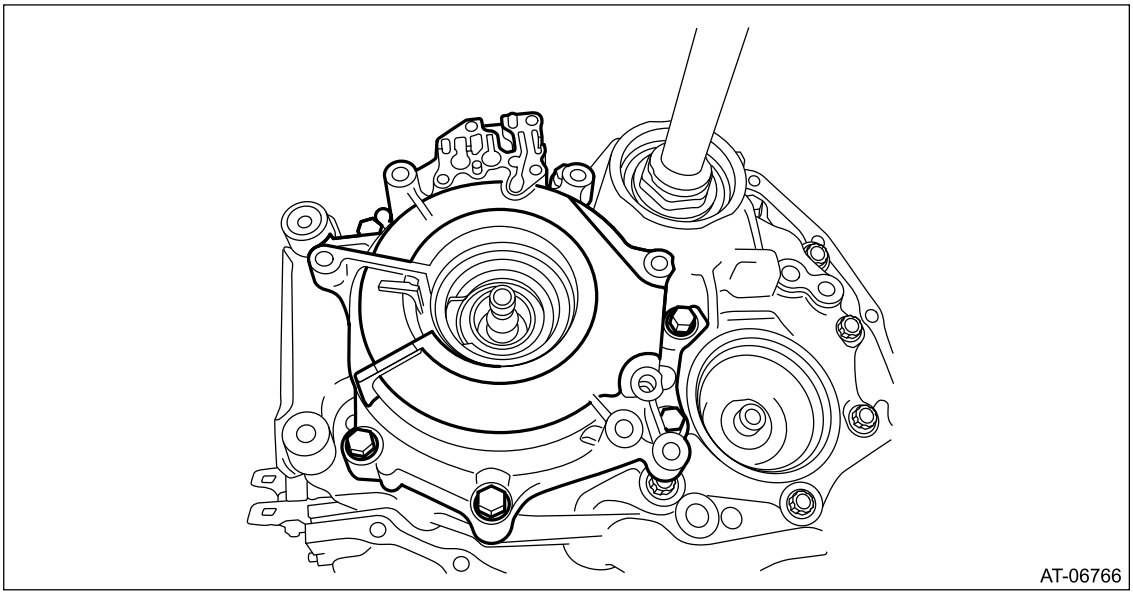
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reverse Brake Assembly

REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.
7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.
16. Remove the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>REMOVAL.
17. Remove the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>REMOVAL.
18. Remove the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>REMOVAL.
19. Remove the manual valve assembly.

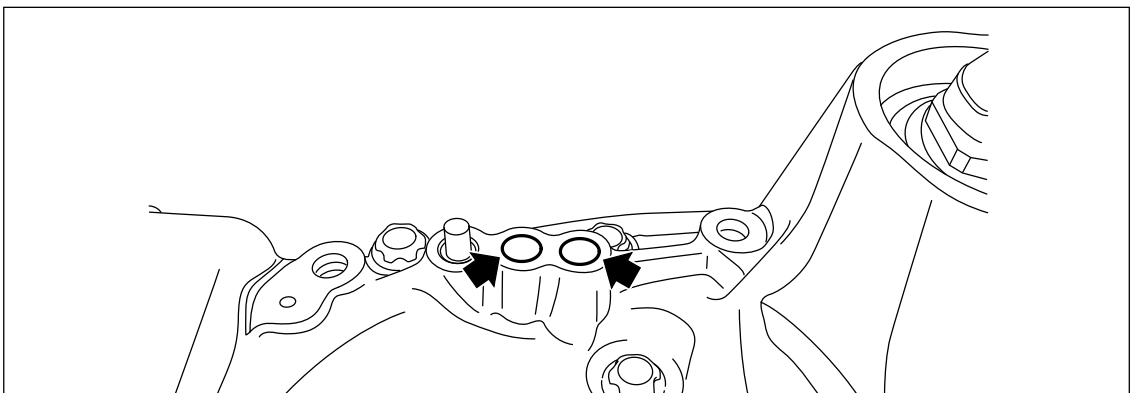


20. Remove the oil guide and lubrication pipe.

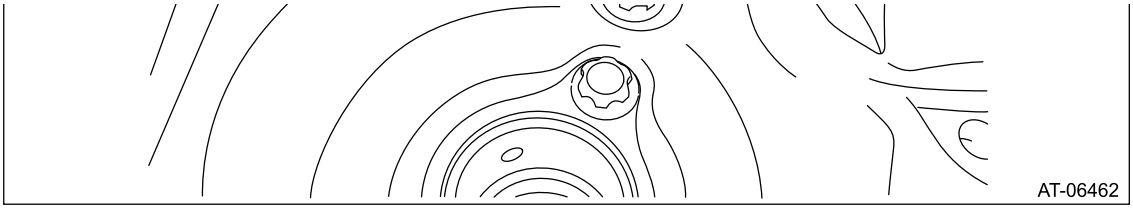


(A) Lubrication pipe

(B) Oil guide

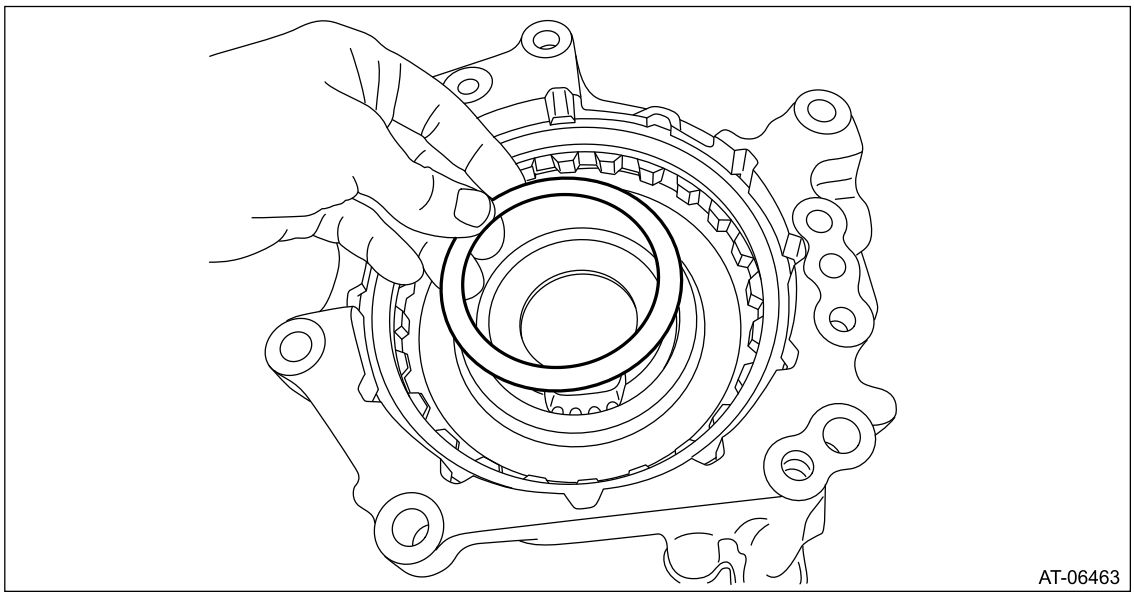


21. Remove the O-ring from lubrication pipe.



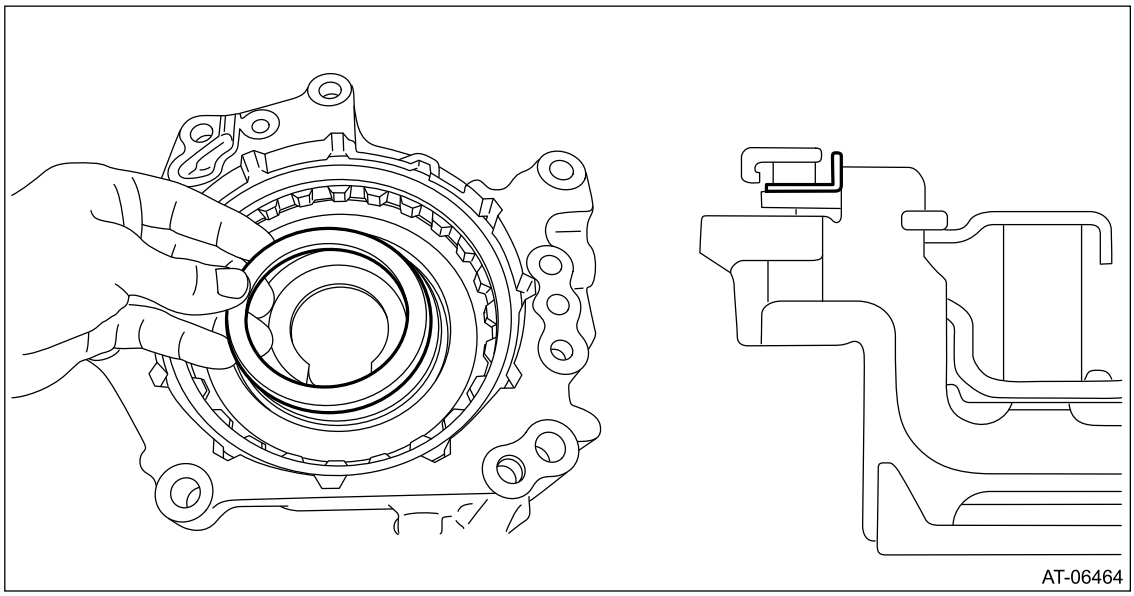
22. Remove the reverse brake assembly.

23. Remove the O-rings.

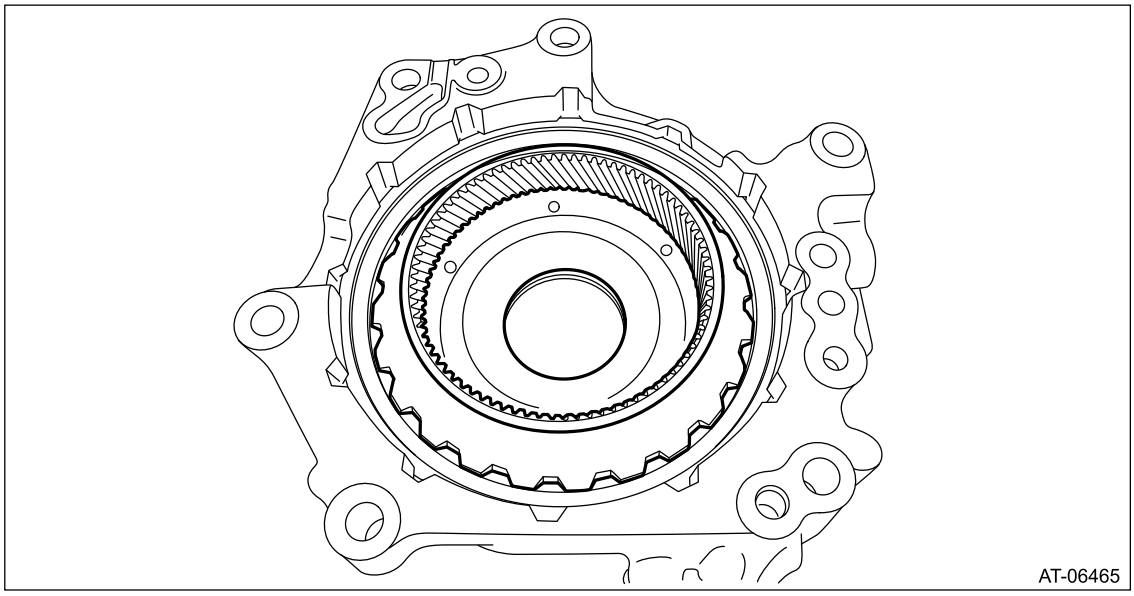


CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reverse Brake Assembly

INSTALLATION



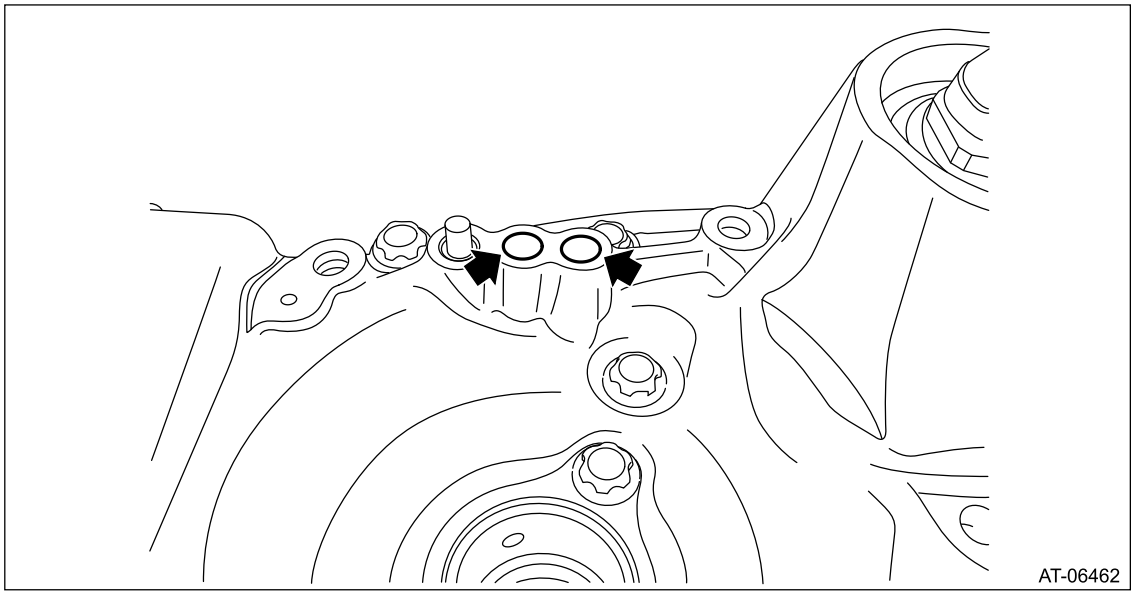
1. Select a washer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>ADJUSTMENT.
2. Install the selected washer to the reverse brake housing.



3. Install the thrust bearing to the reverse brake housing.

Note:

Face the temper color surface to the reverse brake side.

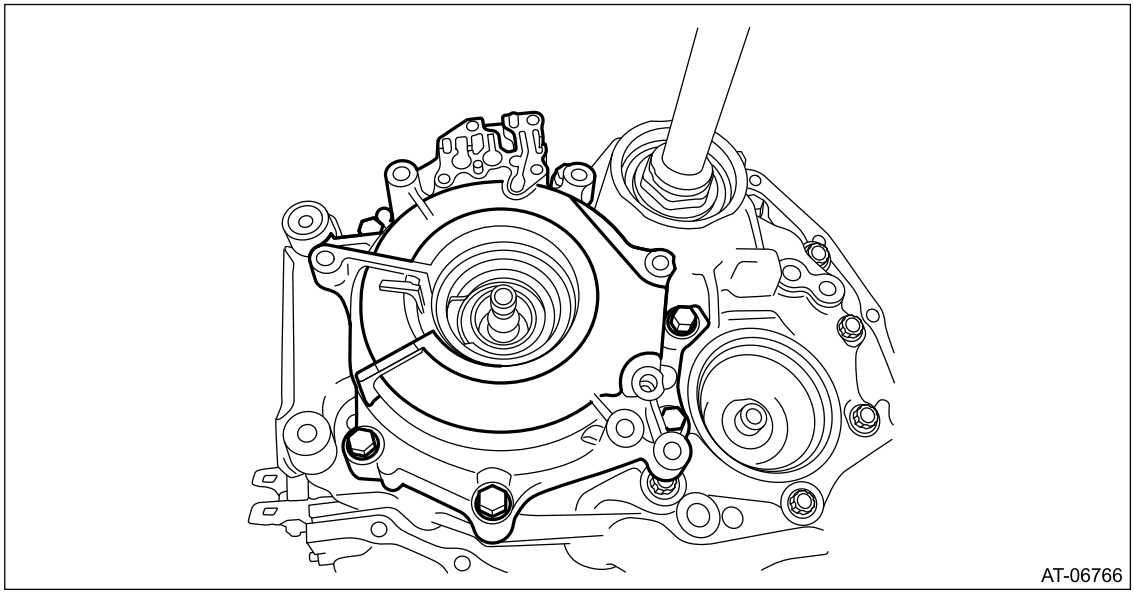


4. Remove the internal gear from the forward clutch assembly, and install it to the reverse brake housing.

5. Install the O-rings.

Note:

- **Install a new O-ring.**
- **Apply CVTF to the O-rings.**

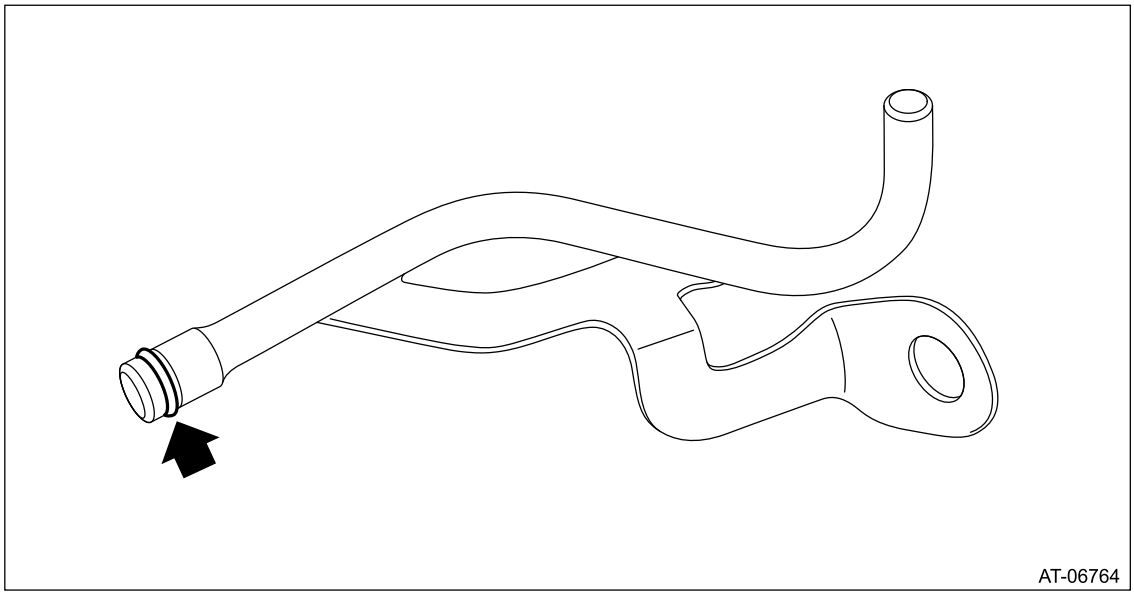


6. Install the reverse brake assembly and internal gear as a unit to the drive pinion retainer.

Note:

Slowly rotate the input shaft by hand to engage the internal gear and pinion gear of planetary carrier.

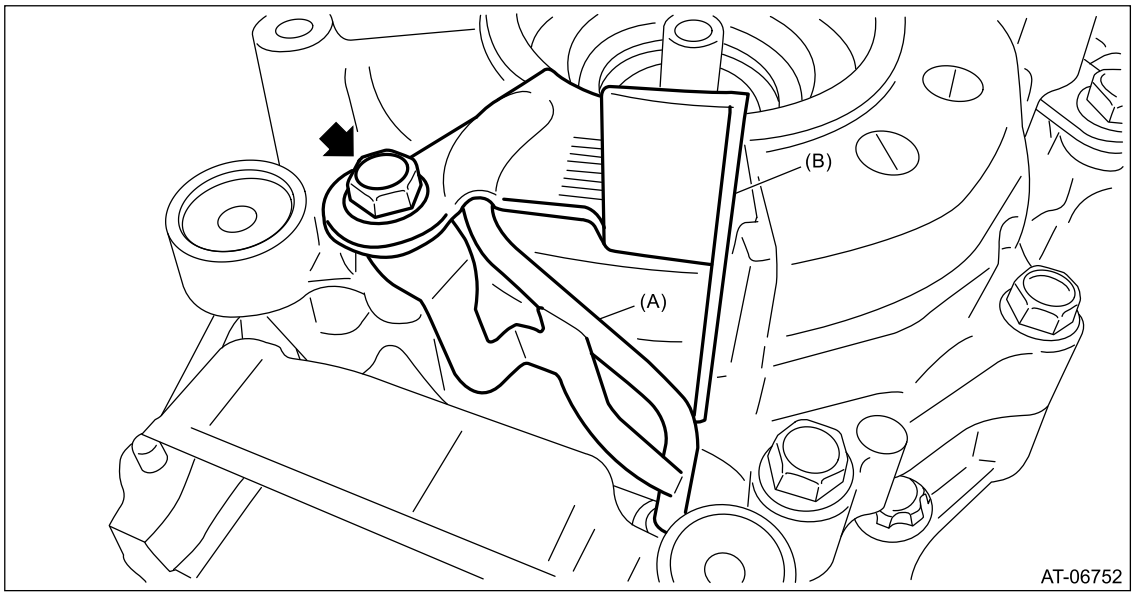
Tightening torque:



37 N·m (3.8 kgf-m, 27.3 ft-lb)

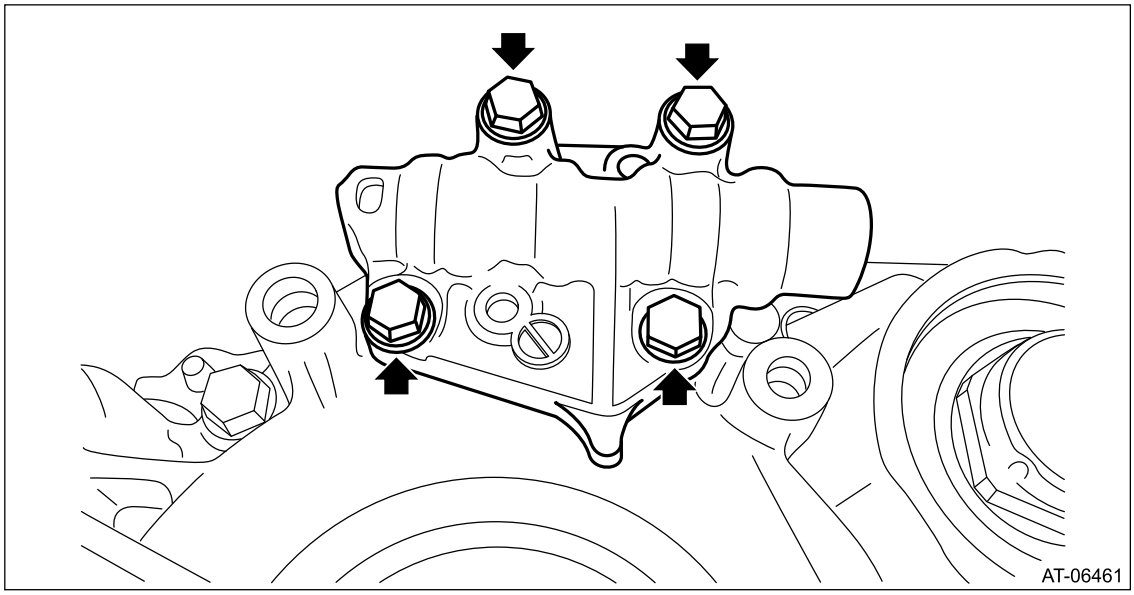
7. Install the O-ring to the lubrication pipe.

Note:



- **Install a new O-ring.**
- **Apply CVTF to the O-rings.**

8. Install the lubrication pipe and oil guide.



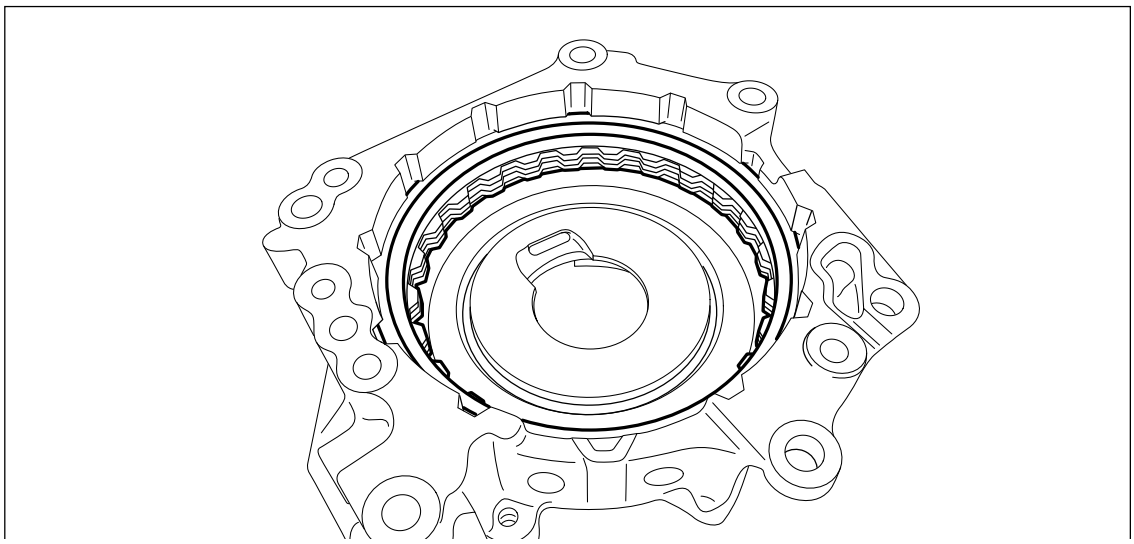
Tightening torque:

16 N·m (1.6 kgf-m, 11.8 ft-lb)

(A) Lubrication pipe
(B) Oil guide

9. Install the manual valve assembly and separator plate.
Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

10. Install the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>INSTALLATION.
11. Select shims for pulley alignment. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>ADJUSTMENT.
12. Install the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>INSTALLATION.
13. Install the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.

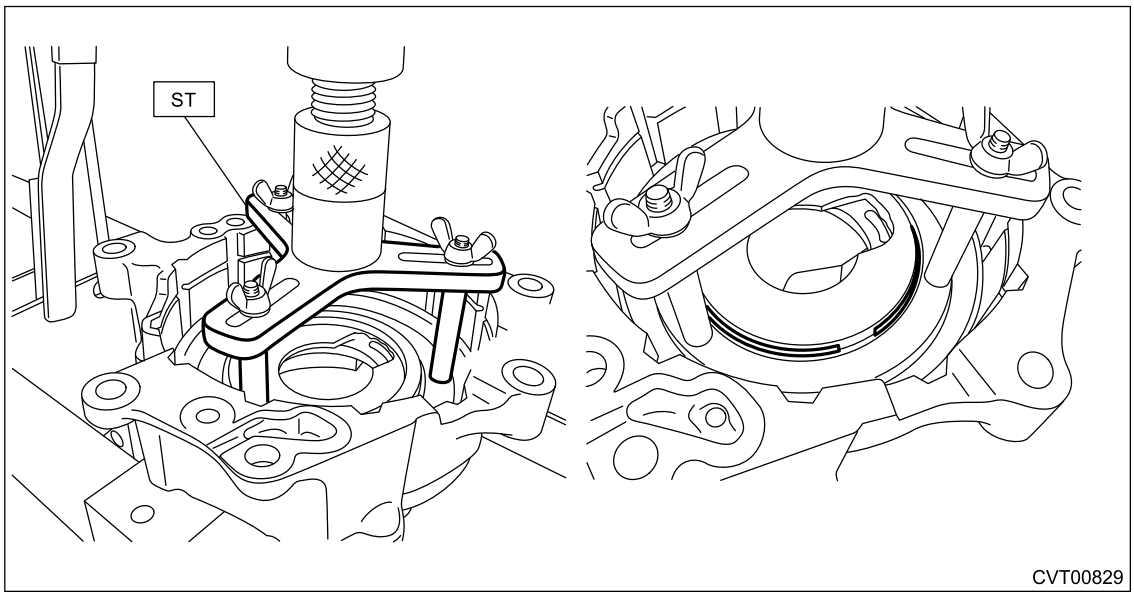


14. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.
15. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.

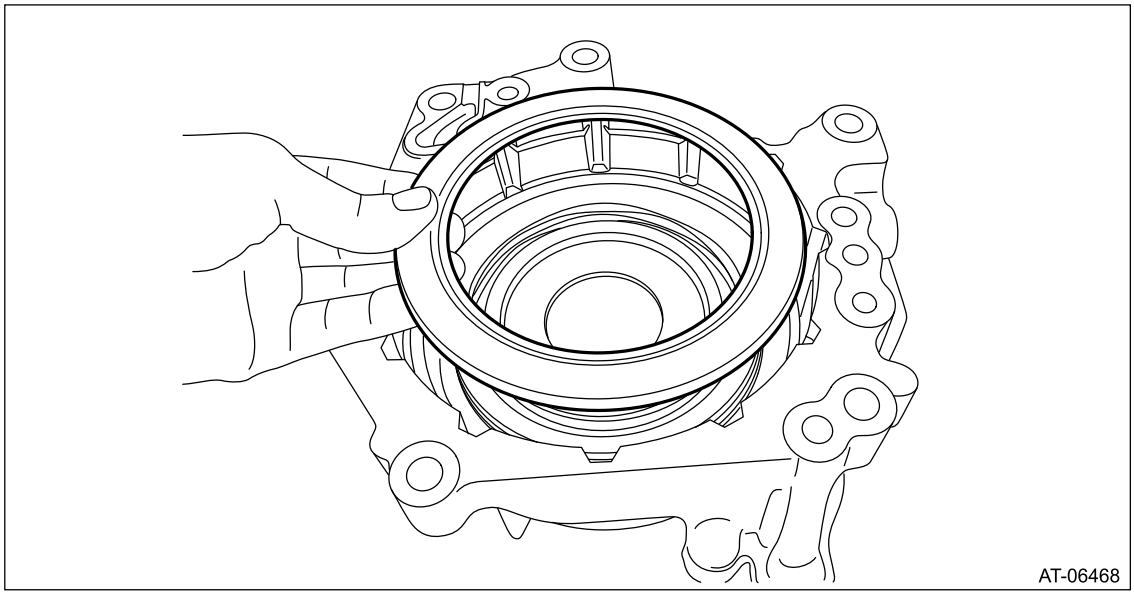
16. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.
17. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.
18. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
19. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
20. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
21. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
22. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
23. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.
24. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
25. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
26. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
27. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
28. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reverse Brake Assembly

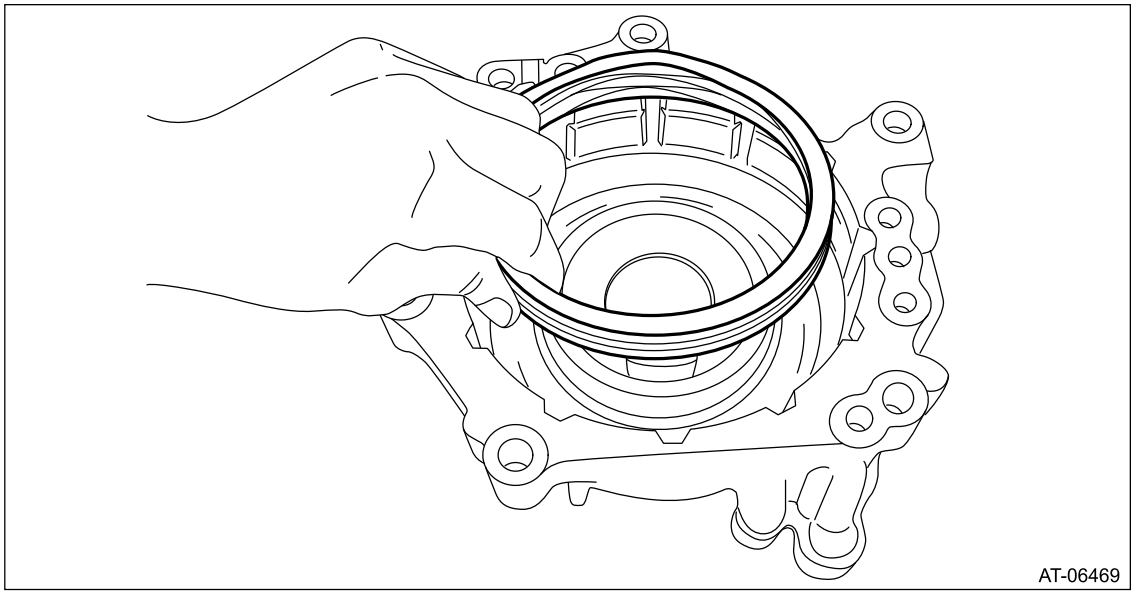
DISASSEMBLY



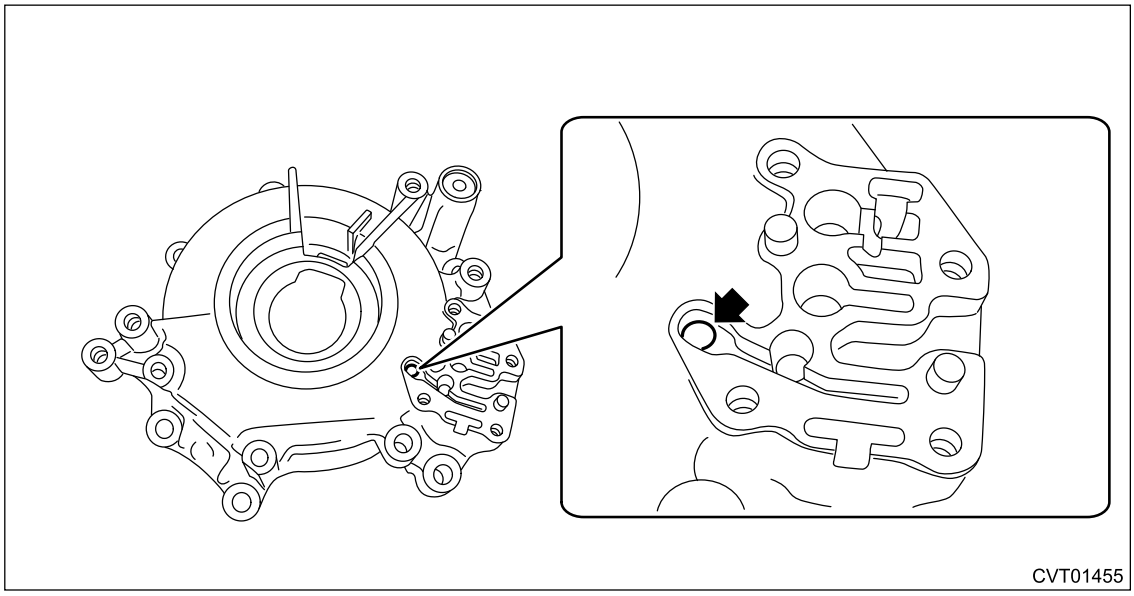
1. Remove the snap ring.
2. Remove the retaining plate, drive plate, driven plate and dish plate.



3. Compress the return spring using the ST to remove the snap ring.
Preparation tool:



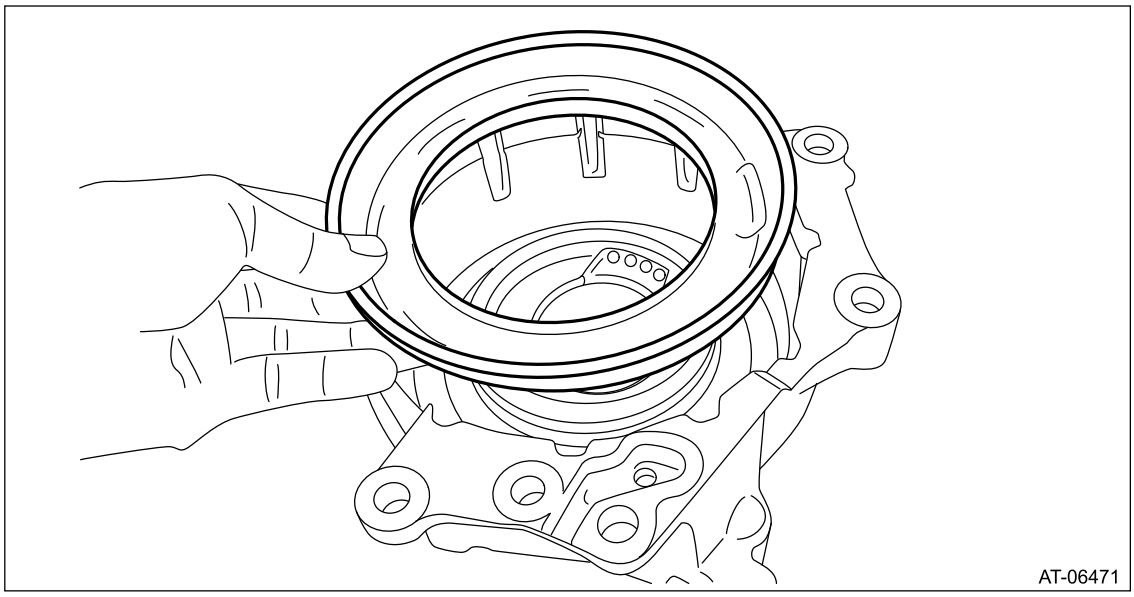
ST: COMPRESSOR SPECIAL TOOL (18762AA001)



4. Using the ST, remove the snap ring and spring retainer.

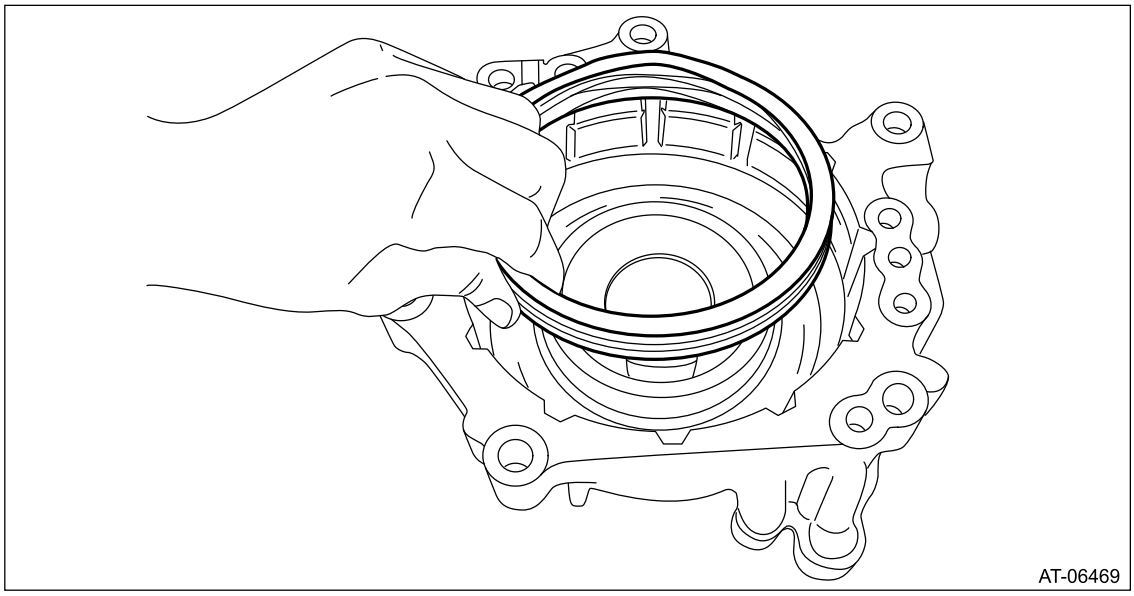
5. Remove the return spring.

6. Remove the reverse brake piston by blowing compressed air intermittently from reverse brake housing hole.



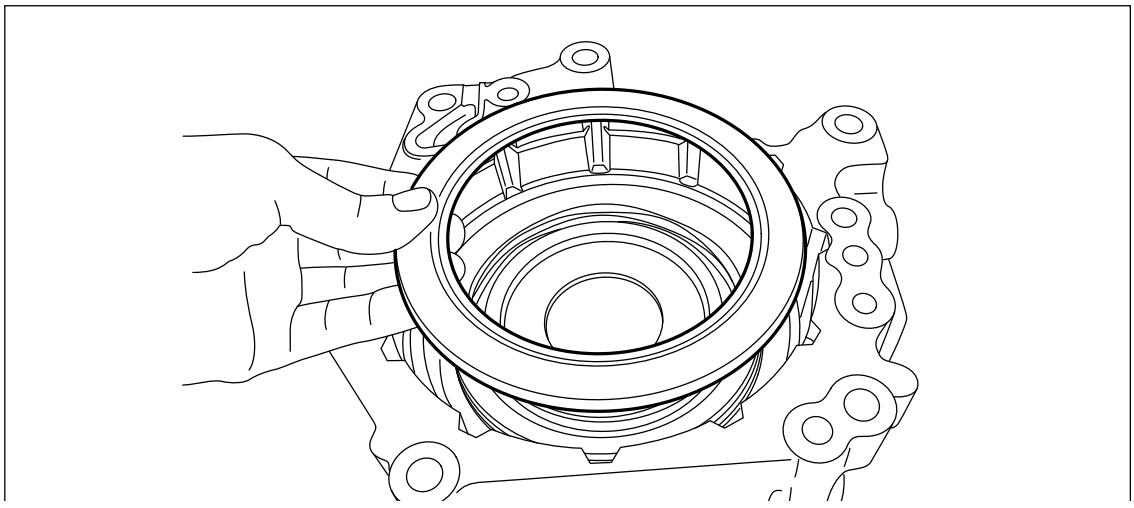
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reverse Brake Assembly

ASSEMBLY

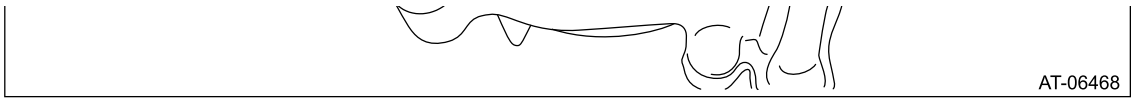


1. Install the reverse brake piston.

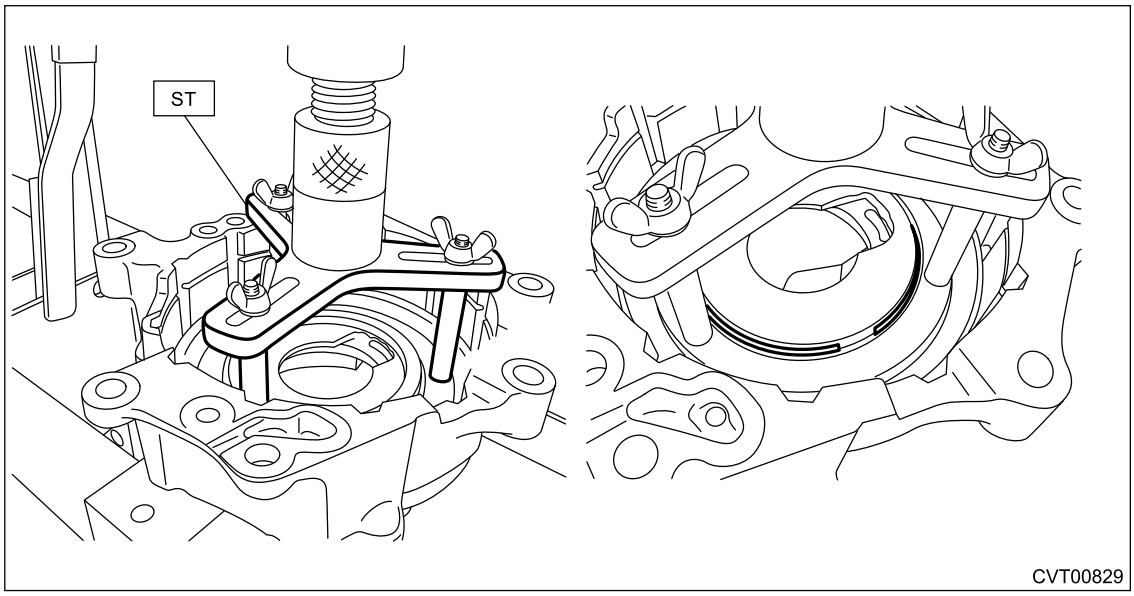
Note:



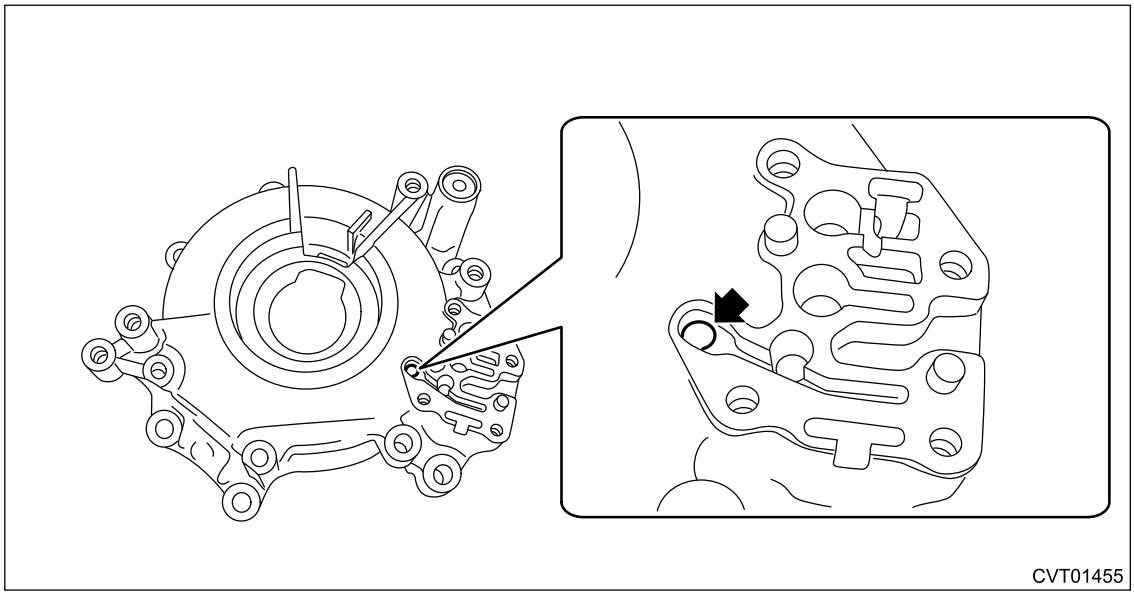
Apply CVTF to the sealing area of reverse brake piston.

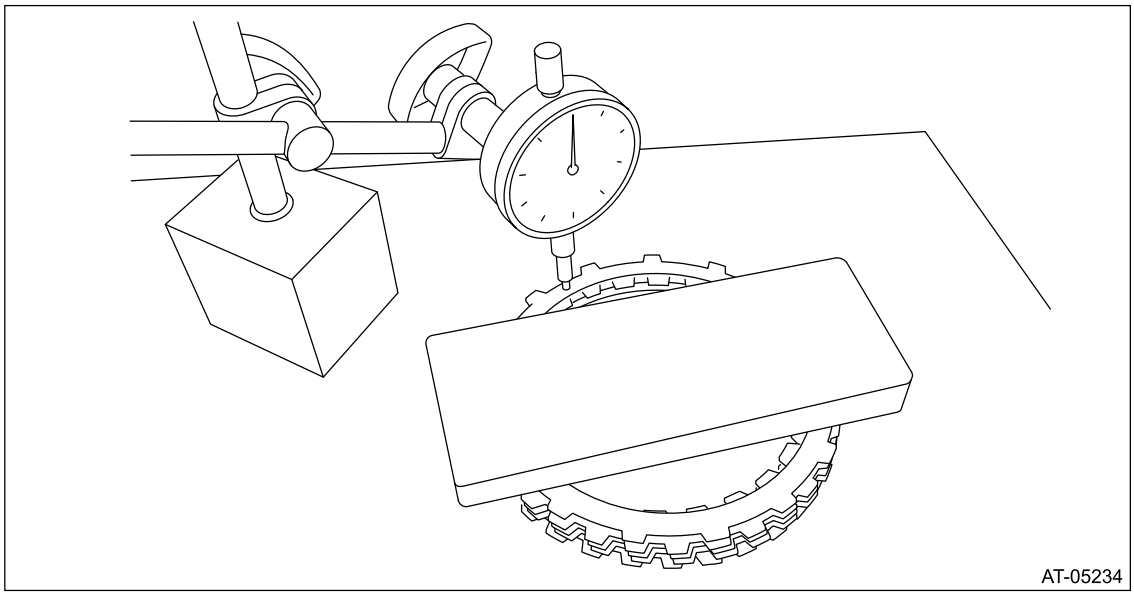


2. Install the return spring.



3. Install the spring retainer.





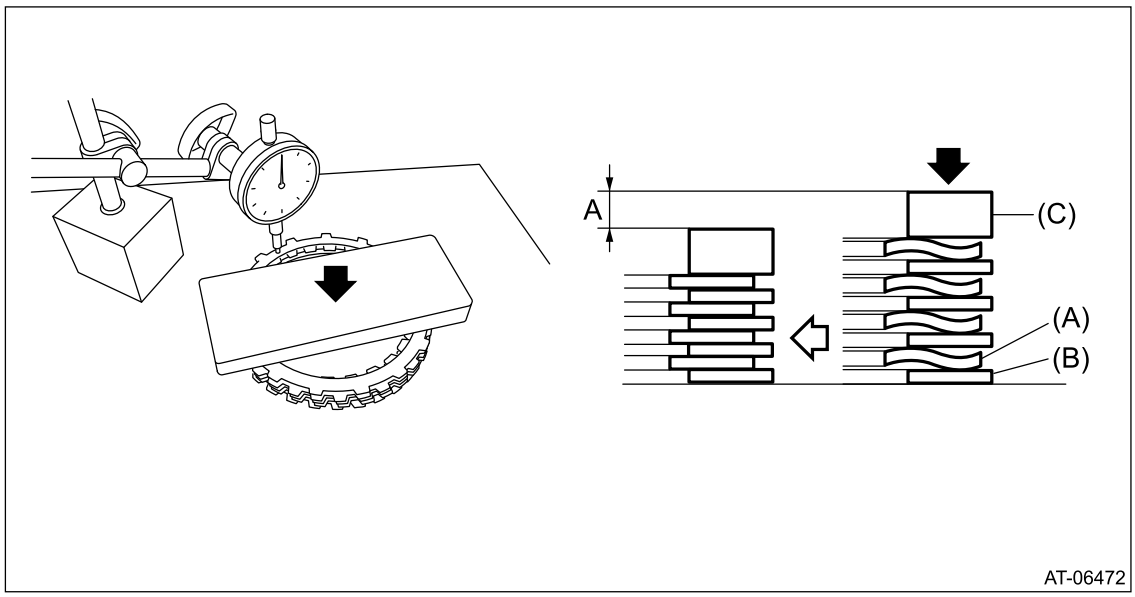
4. Compress the return spring using the ST to install the snap ring.
   Preparation tool:
   ST: COMPRESSOR SPECIAL TOOL (18762AA001)

5. Check the operation of reverse brake piston by blowing compressed air intermittently from reverse brake housing hole.

6. Place the driven plate, drive plate and retaining plate neatly in this order on surface table.
7. Set the dial gauge to retaining plate, and read its scale.
   Note:
   The value, which is read in the gauge at this time, is zero point.
8. Scale and record the weight "Z" of a flat board which will be put on retaining plate.
   Note:
   - **Use a stiff board which does not bend against load as a flat board to be put on retaining plate.**
   - **Use a flat board weighing less than 29 N (3.0 kgf, 6.5 lb).**
9. Put the flat board on retaining plate.

10. Using the following formula, read the push/pull gauge and calculate “N”.

N = 29 N (3.0 kgf, 6.5 lb) - Z



29 N (3.0 kgf, 6.5 lb): Load applied to clutch plate

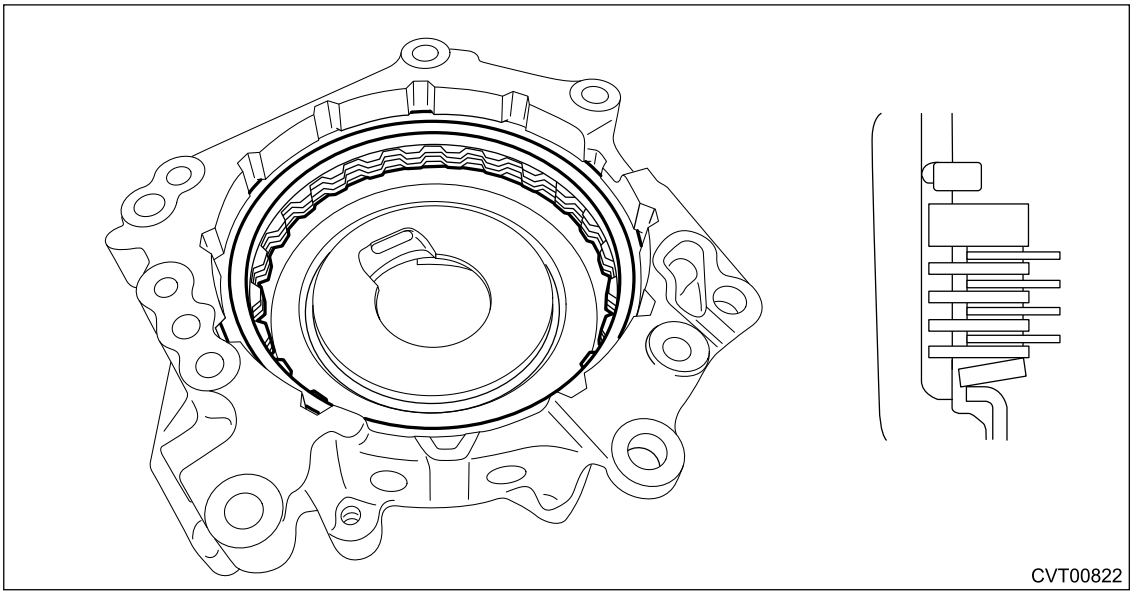
Z: Flat board weight

11. Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.

Note:

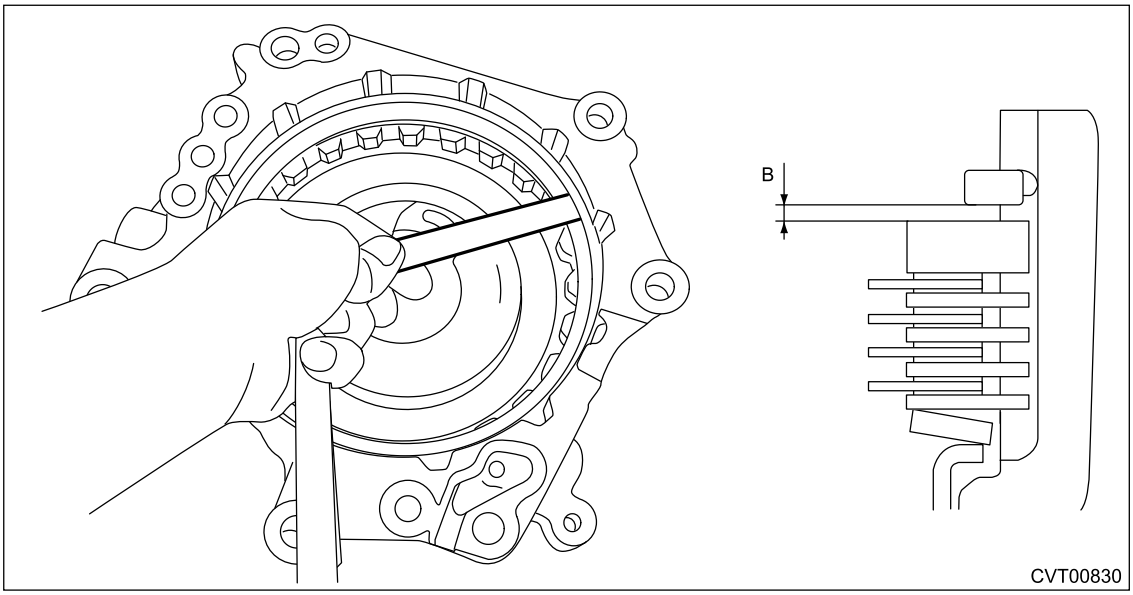
Measure at four points with a 90° interval and calculate the average.

(A) Drive plate



(B) Driven plate

(C) Retaining plate



12. Install the dish plate, drive plate, driven plate, retaining plate and snap ring to the reverse brake housing.

Note:

Install the dish plate in the correct direction.

13. Measure and record the clearance "B" between the retaining plate and snap ring.

14. Piston stroke calculation

Calculate with A and B dimensions recorded before. If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.

S mm (in) = A + B

S: Piston stroke

A: Compression amount of drive plate and dish plate

B: Clearance between retaining plate and snap ring

Initial standard:

1.8 — 2.2 mm (0.071 — 0.087 in)

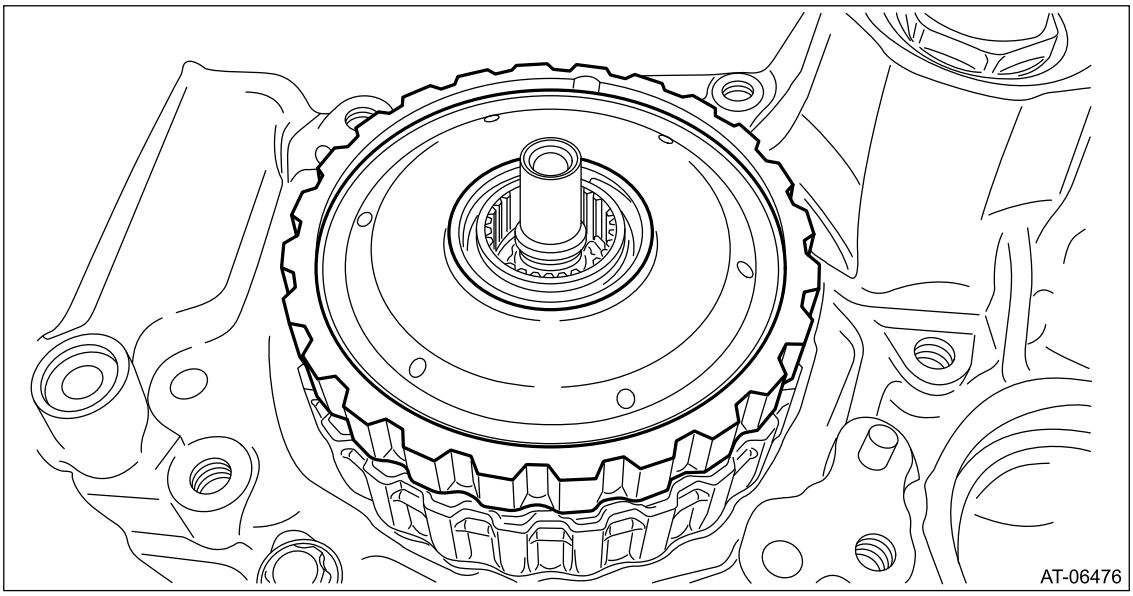
Limit thickness:

2.4 mm (0.094 in)

Retaining plate	
Part No.	**Thickness mm (in)**
31567AB750	4.2 (0.165)
31567AB800	4.4 (0.173)

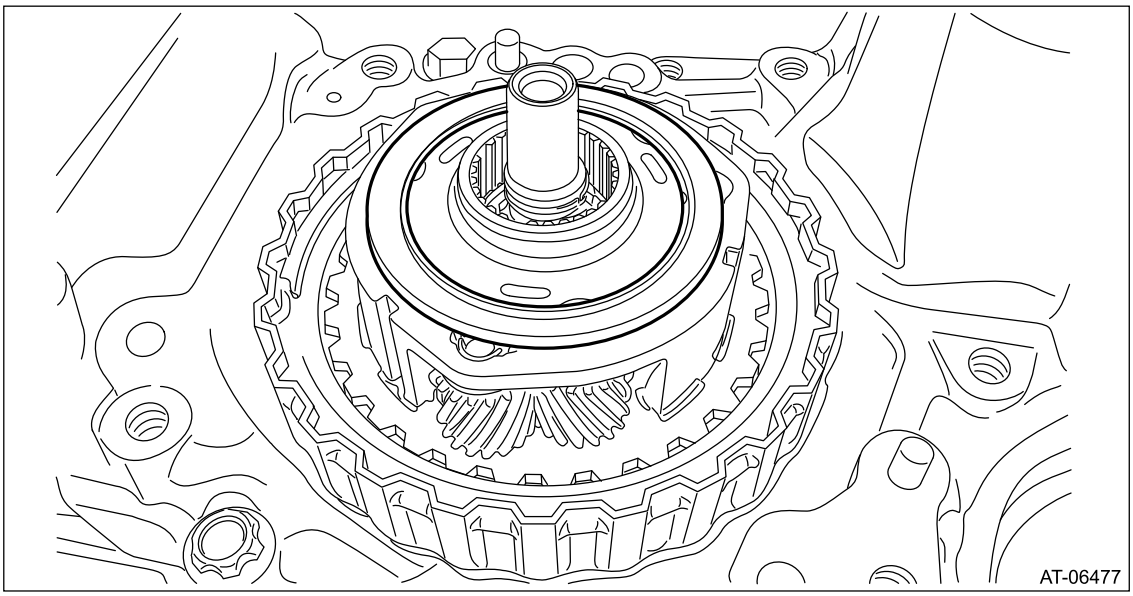
31567AB810	4.6 (0.181)

Retaining plate	
Part No.	**Thickness mm (in)**
31567AB820	4.8 (0.189)



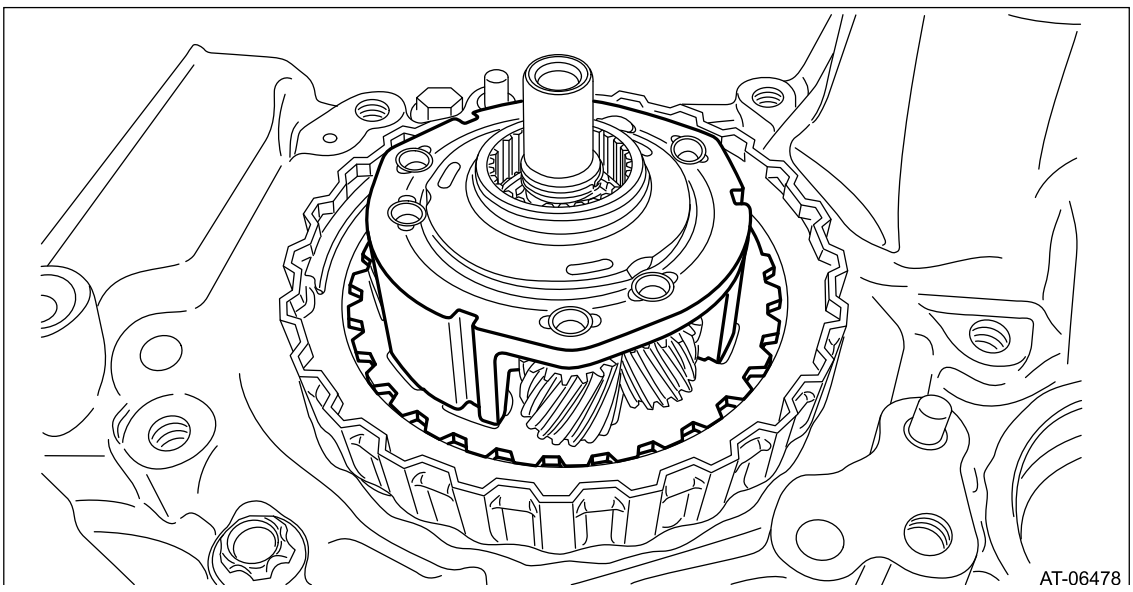
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Reverse Brake Assembly

INSPECTION

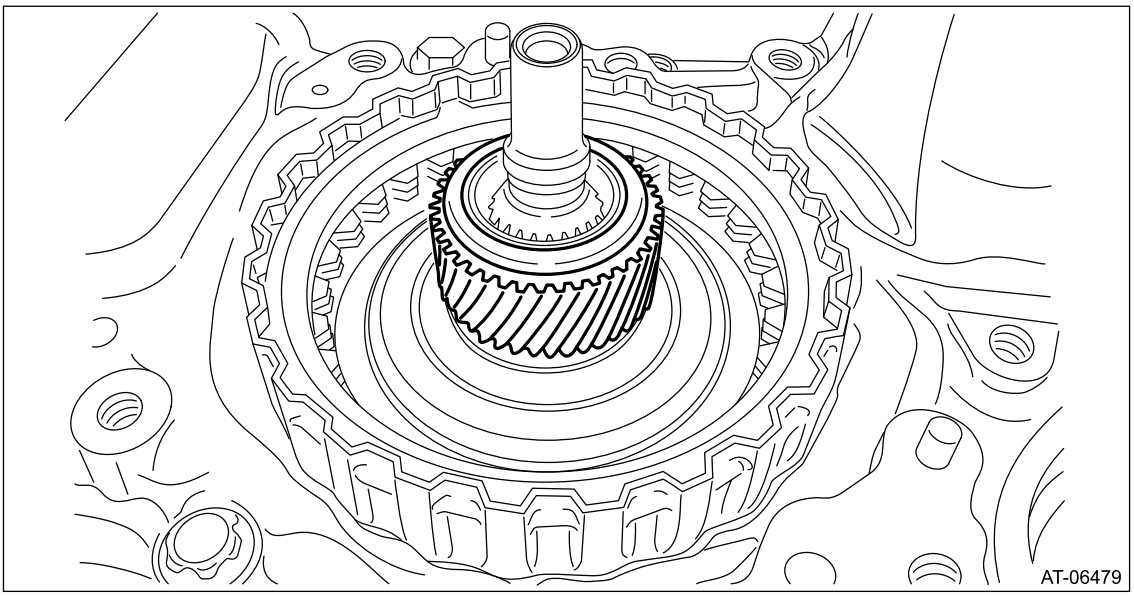


- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and snap ring of reverse brake is within the limit. If it exceeds the limit, replace with a new drive plate and select and adjust the retaining plate within the initial standard value. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>ASSEMBLY.

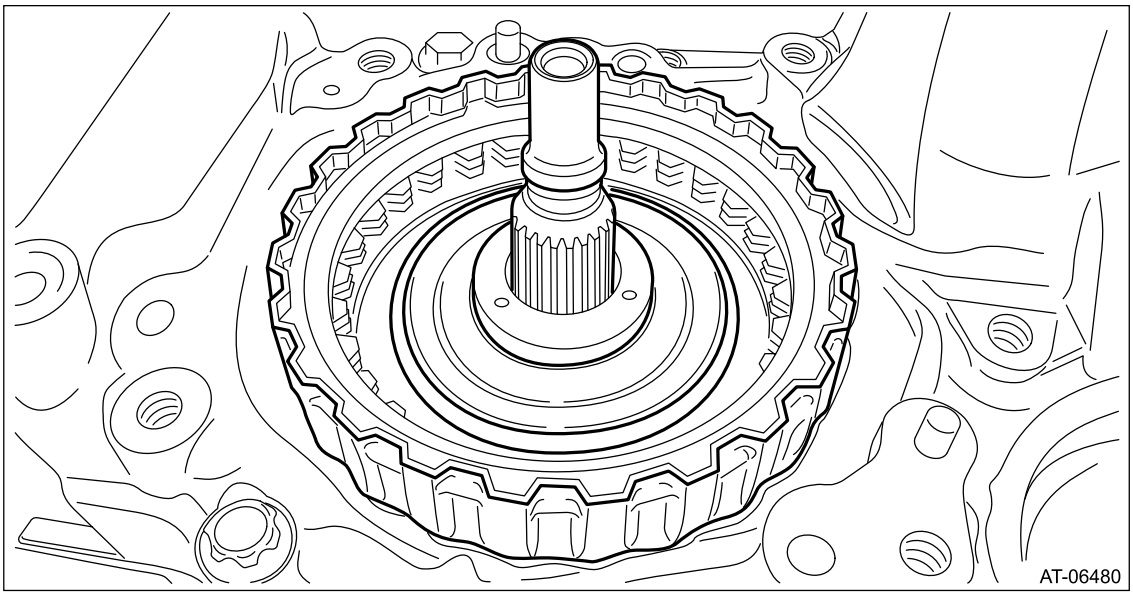
REMOVAL



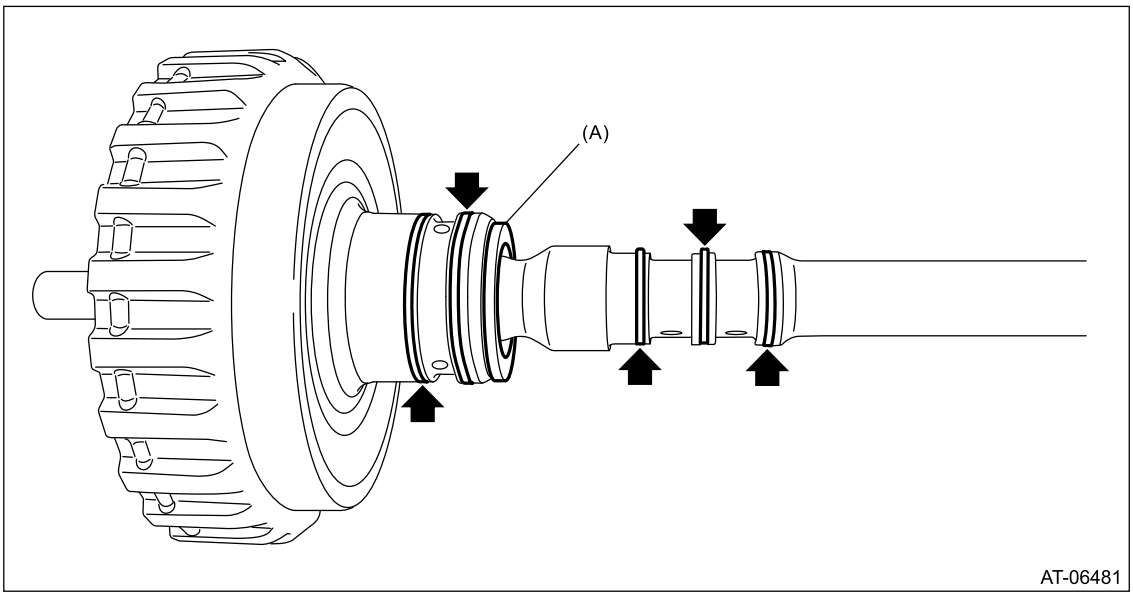
1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.
7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.
16. Remove the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>REMOVAL.
17. Remove the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>REMOVAL.
18. Remove the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>REMOVAL.
19. Remove the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>REMOVAL.
20. Remove the internal gear.



21. Remove the thrust bearing.



22. Remove the planetary carrier.

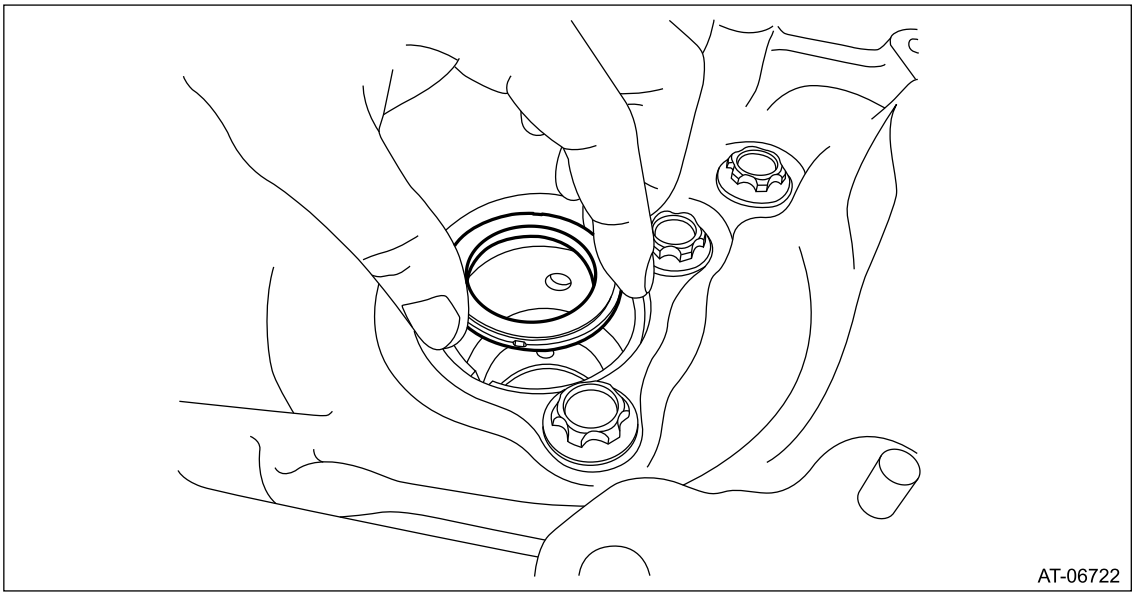


23. Remove the thrust bearing and sun gear.

24. Remove the forward clutch assembly.

25. Remove the thrust bearing and seal ring.

(A) Thrust bearing



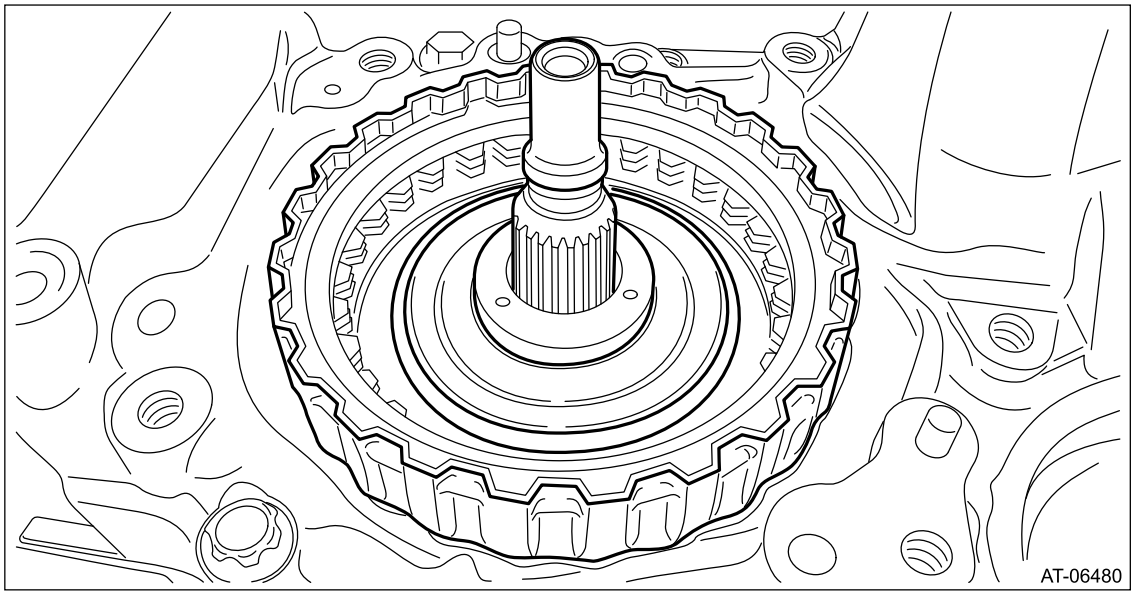
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Forward Clutch Assembly

INSTALLATION

1. Install the thrust bearing to the converter case.

   Note:

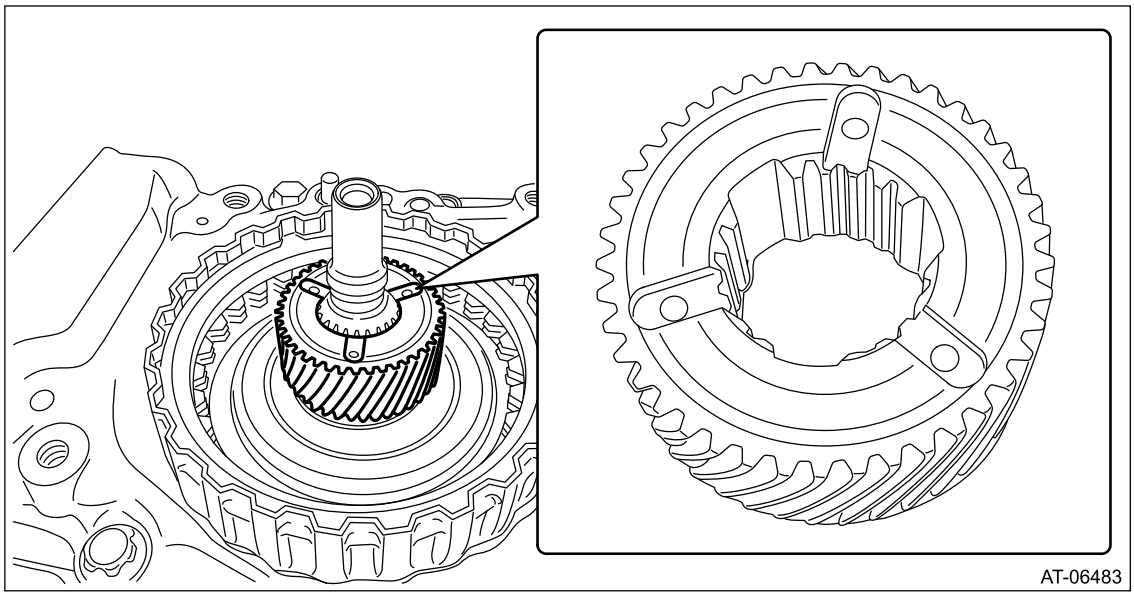
   Face the temper color surface to the converter case side.



2. Install the seal ring to the input shaft.

   Note:

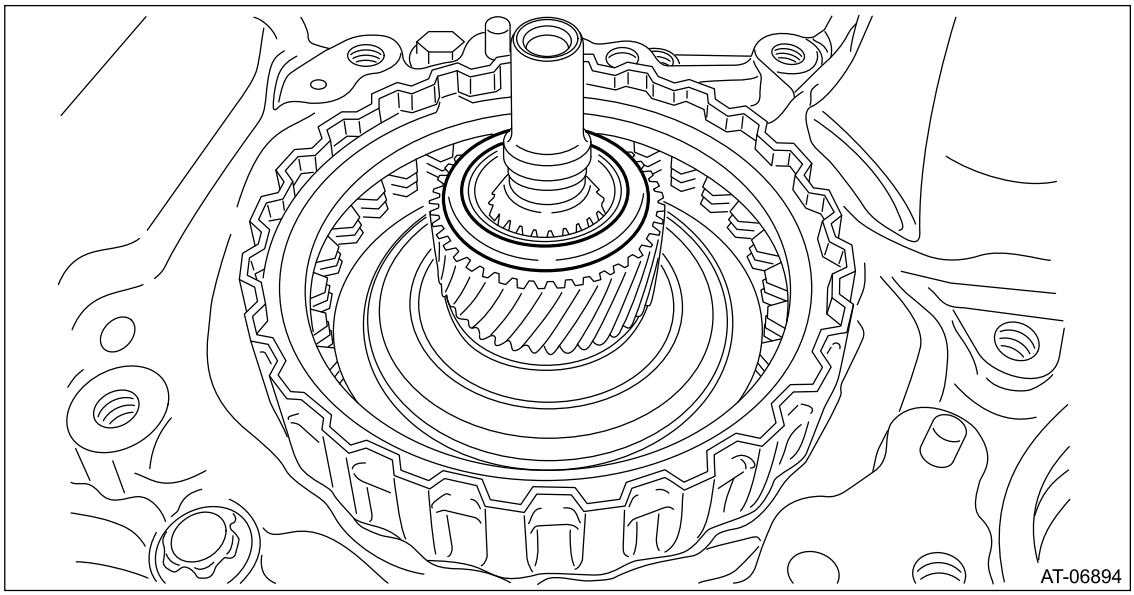
   - **Use new seal rings.**
   - **When installing the seal rings, do not expand the seal rings too much.**
   - **Apply CVTF to the seal rings.**



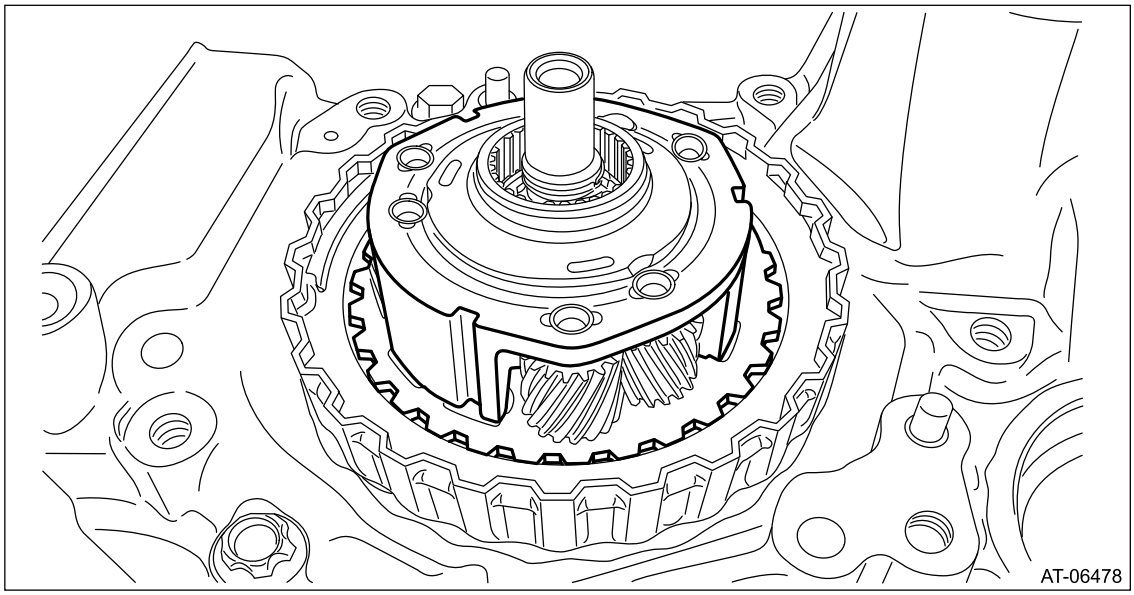
3. Install the forward clutch assembly to the converter case.

4. Install the sun gear.

Note:



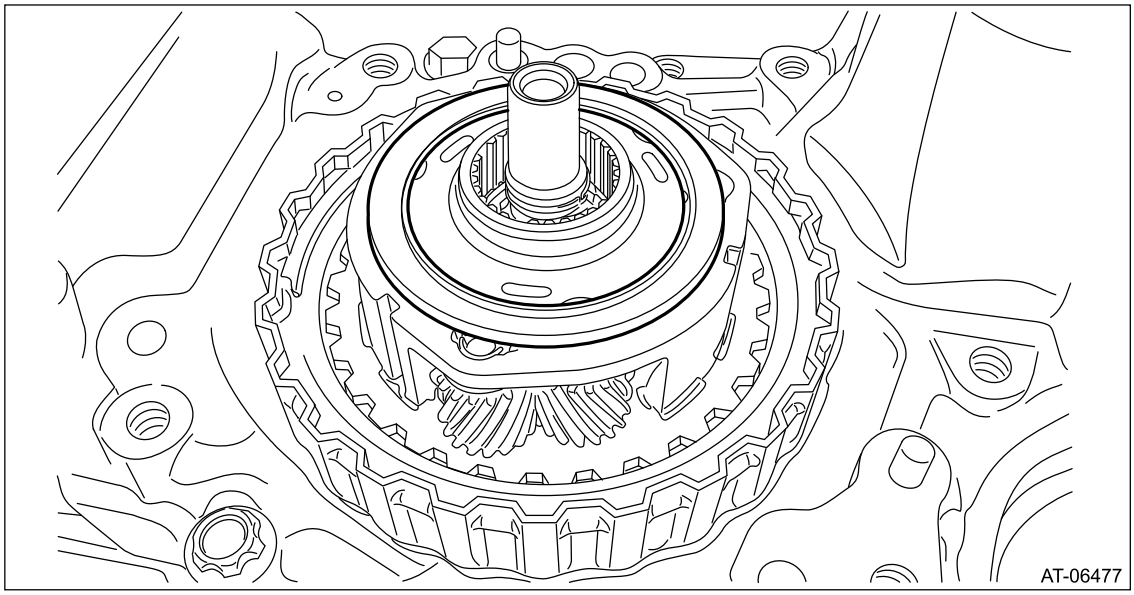
Face the end face of the sun gear to the reverse brake side as shown in the figure.



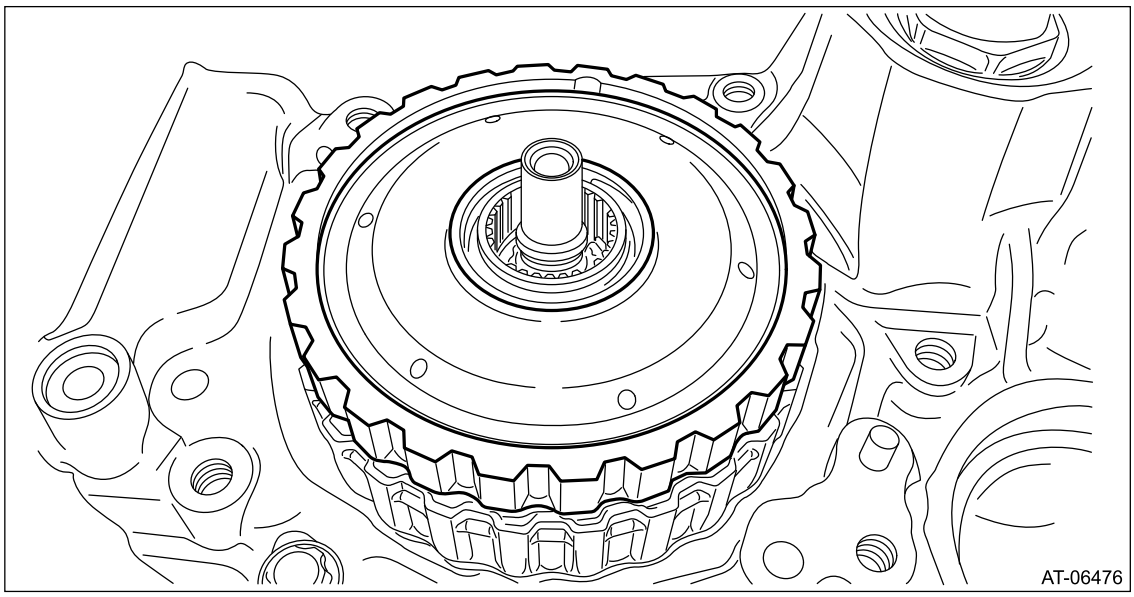
5. Install the thrust bearing to the sun gear.

Note:

Face the temper color surface to the reverse brake side.



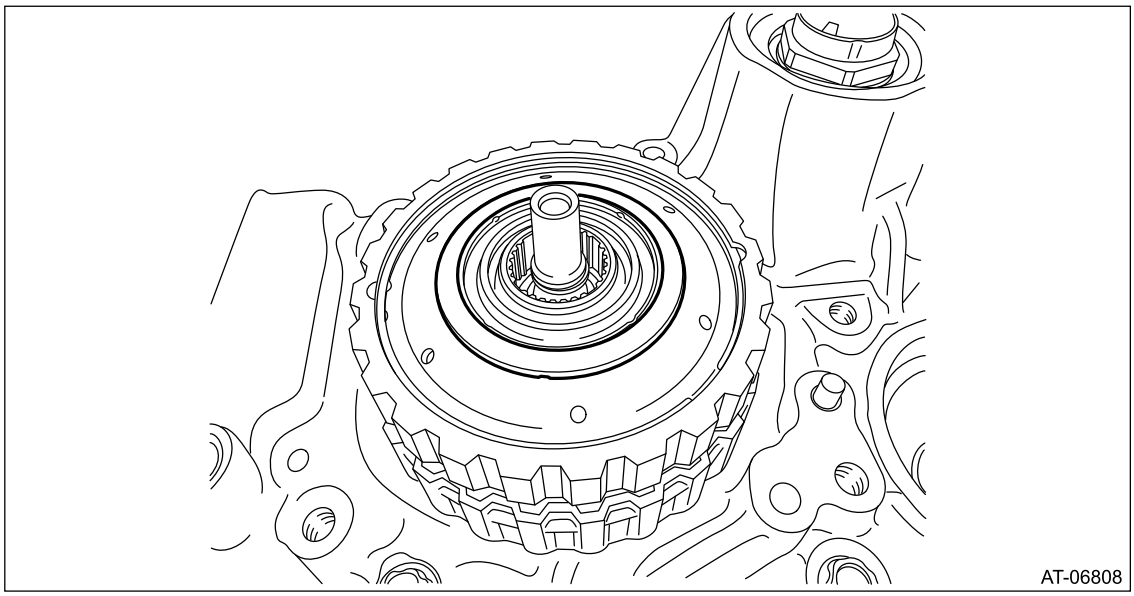
6. Install the planetary carrier.



7. Install the thrust bearing.

Note:

Face the temper color surface to the reverse brake side.



8. Install the internal gear.

9. Install the thrust bearing to the internal gear.

Note:

Face the temper color surface to the reverse brake side.

10. Select a washer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>ADJUSTMENT.

11. Install the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>INSTALLATION.

12. Install the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>INSTALLATION.

13. Install the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>INSTALLATION.

14. Install the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.

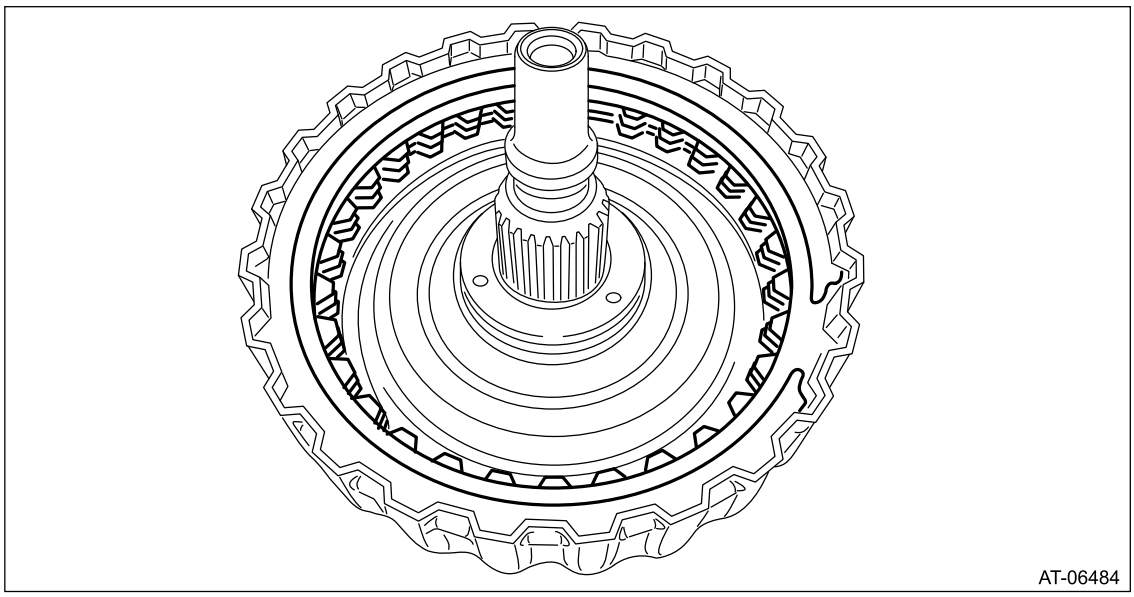
15. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.

16. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.

17. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE

TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION

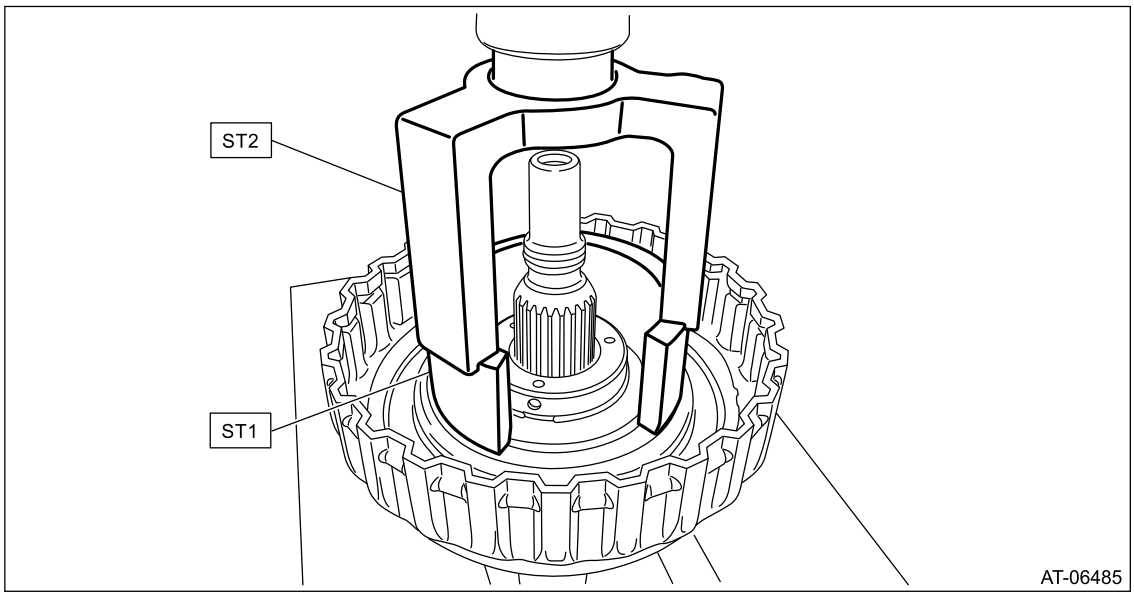
TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.



18. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.
19. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
20. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
21. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
22. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
23. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
24. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.
25. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
26. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
27. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
28. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
29. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

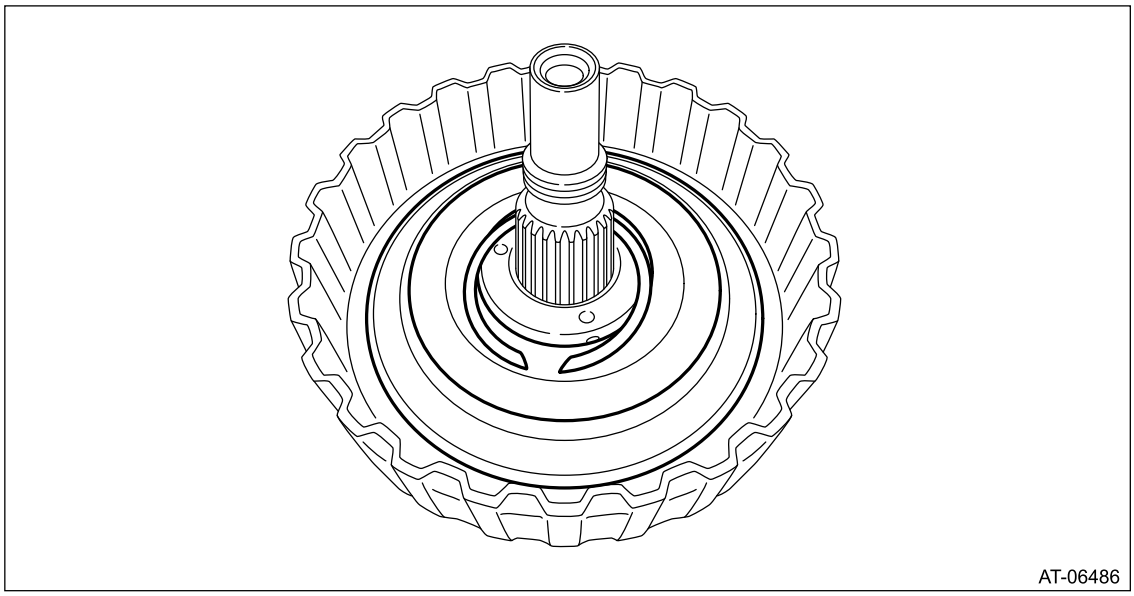
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Forward Clutch Assembly

DISASSEMBLY

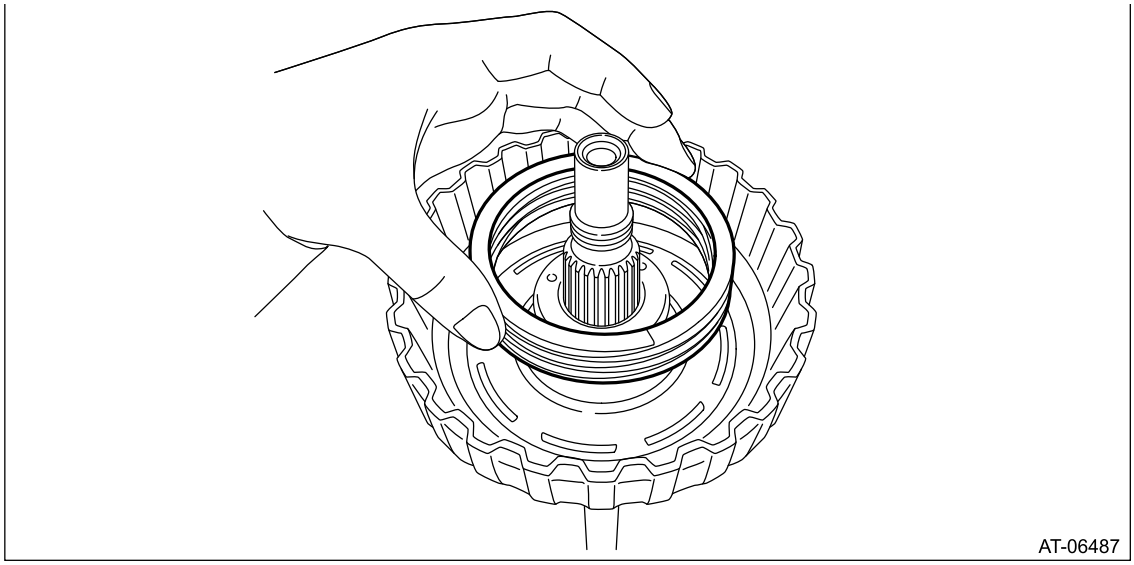


1. FORWARD CLUTCH ASSEMBLY

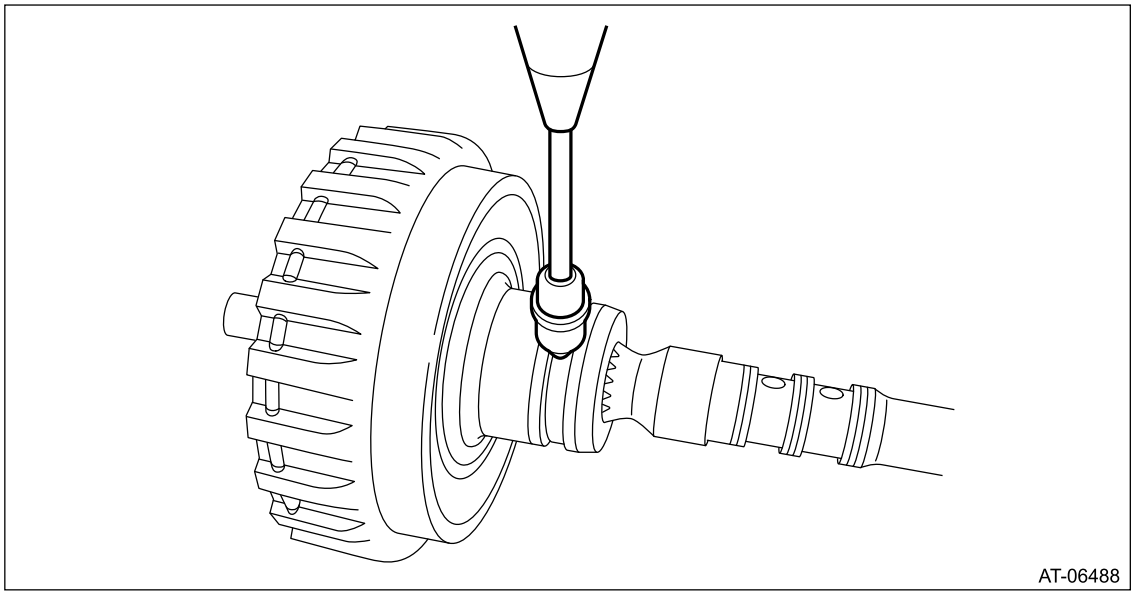
1. Remove the snap ring.
2. Remove the retaining plate, drive plate, driven plate and dish plate.



3. Compress the return spring using the ST1 and ST2 to remove the snap ring.
   Preparation tool:
   ST1: COMPRESSOR SPECIAL TOOL (18762AA010)



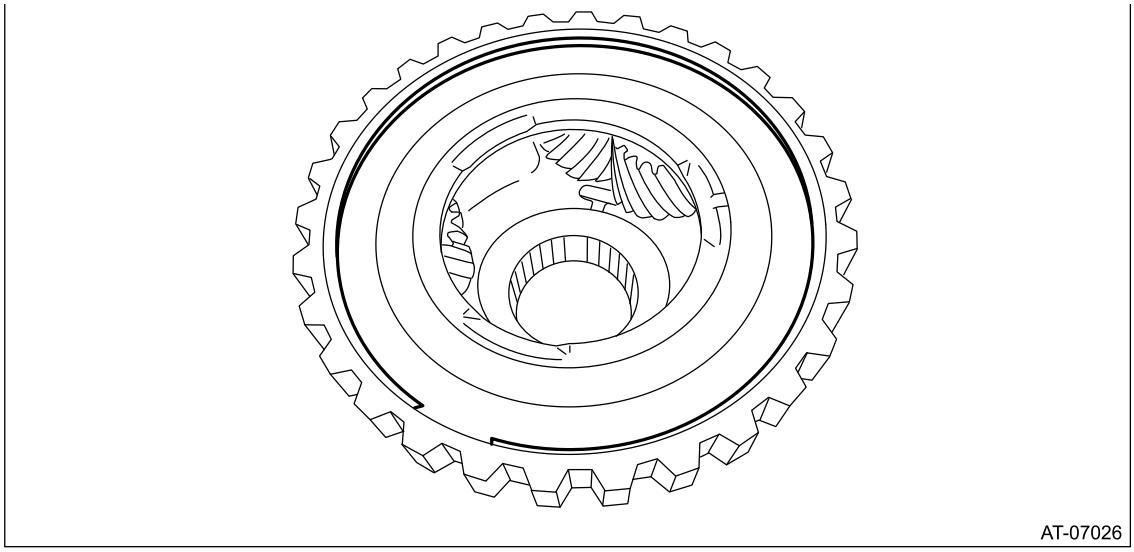
ST2: COMPRESSOR (398673600)



4. Remove the chamber COMPL and snap ring.

5. Remove the return spring.

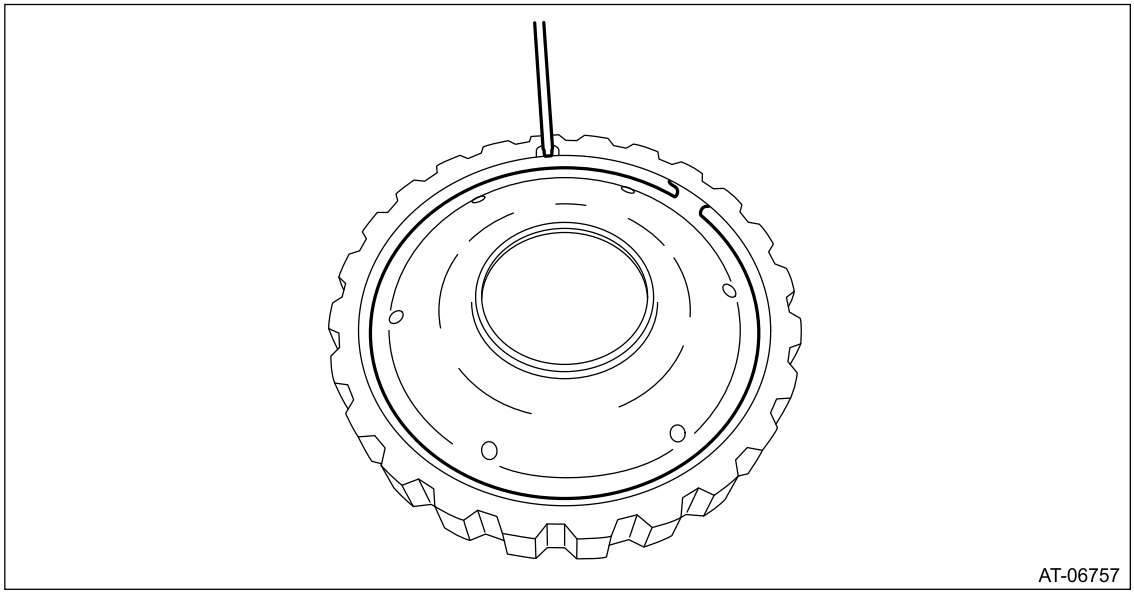
6. Remove the forward clutch piston by blowing compressed air intermittently from the forward clutch carrier hole.



2. PLANETARY CARRIER ASSEMBLY

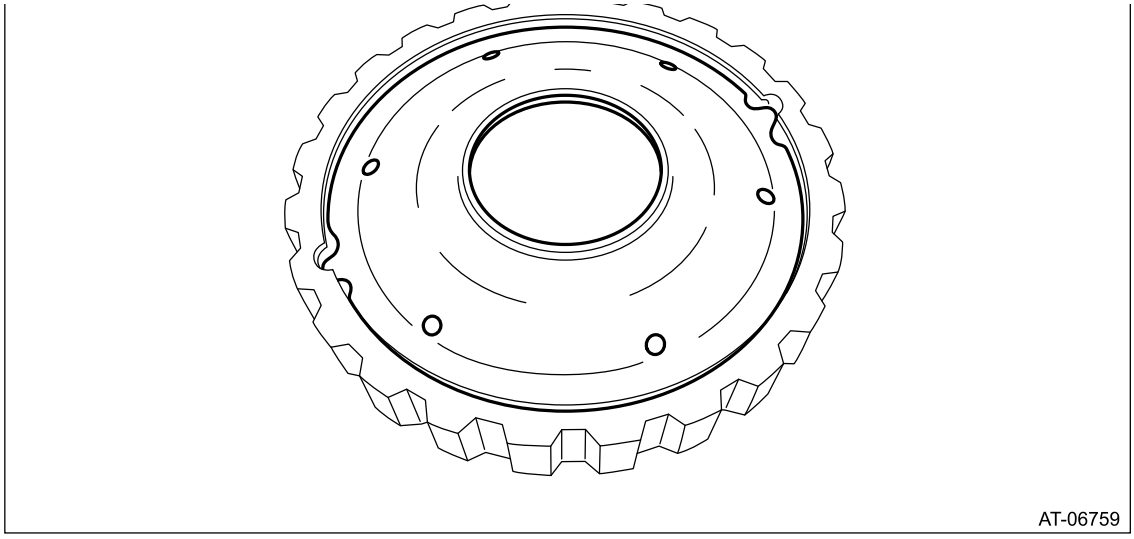
Note:

Disassemble the balance oil guide only.



1. Remove the snap ring.

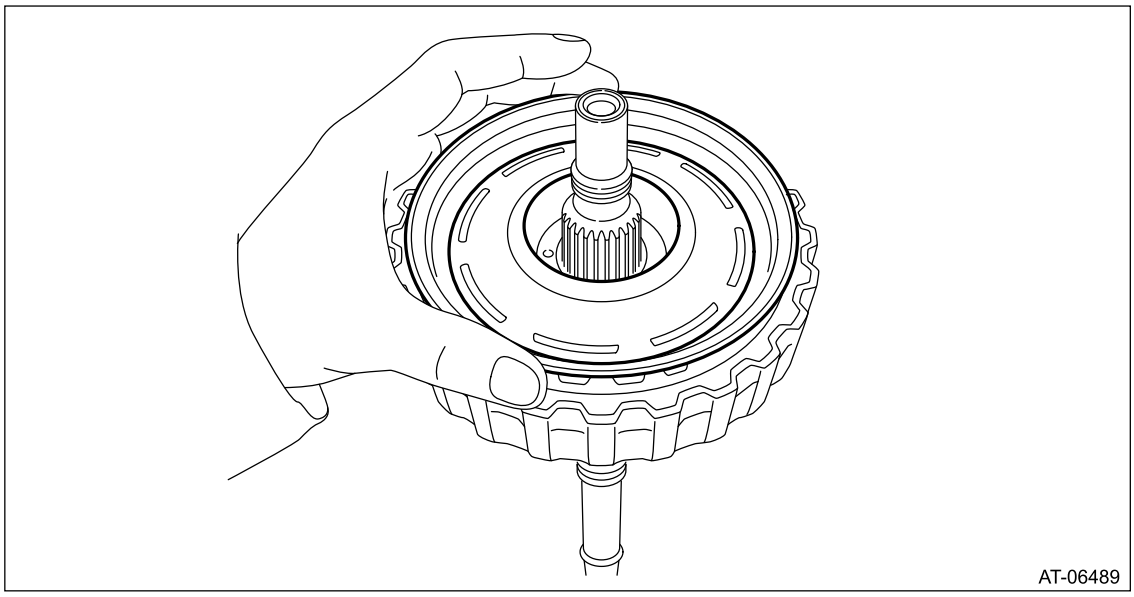
2. Remove the balance oil guide.

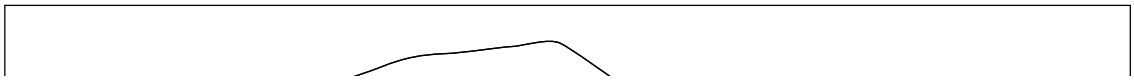


3. INTERNAL GEAR

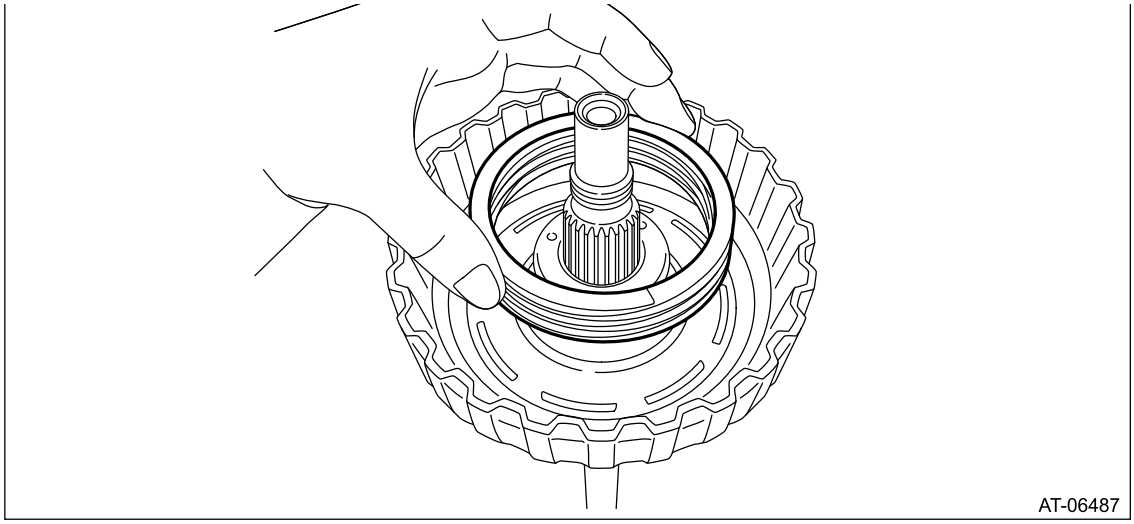
1. Remove the snap ring.

2. Remove the thrust gear plate.





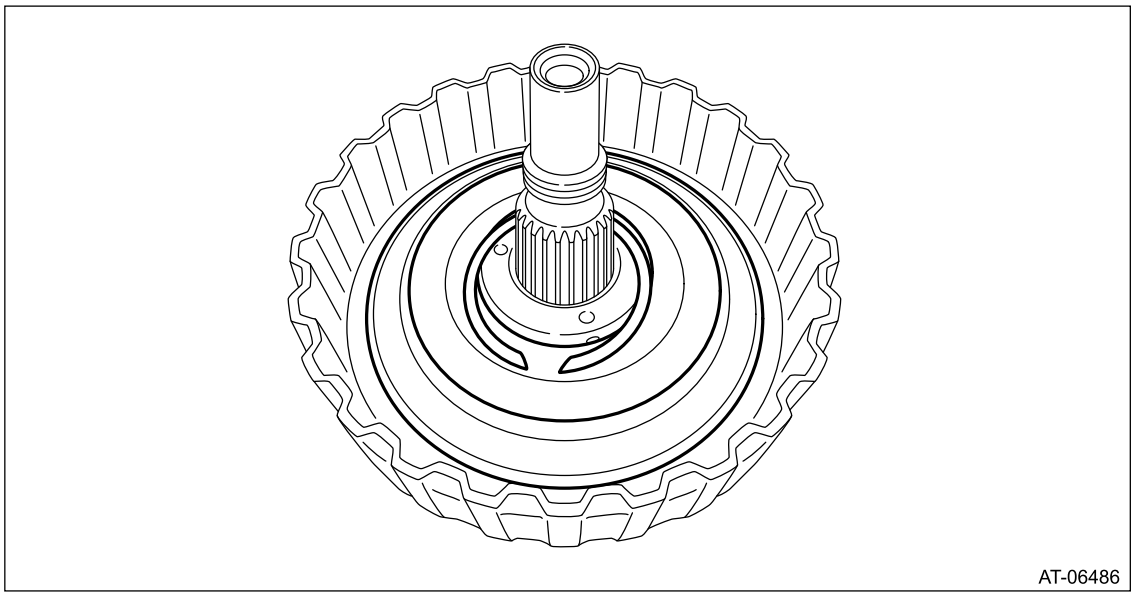
ASSEMBLY



1. FORWARD CLUTCH ASSEMBLY

1. Install the forward clutch piston to forward clutch drum.
   Note:
   - **Apply CVTF to the seal of forward clutch piston.**
   - **Insert it all the way to the end.**

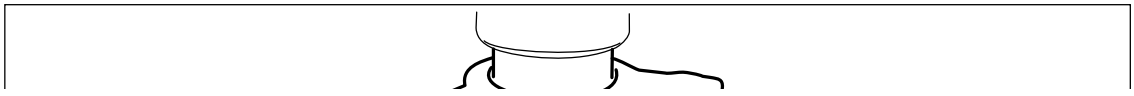
2. Install the return spring.

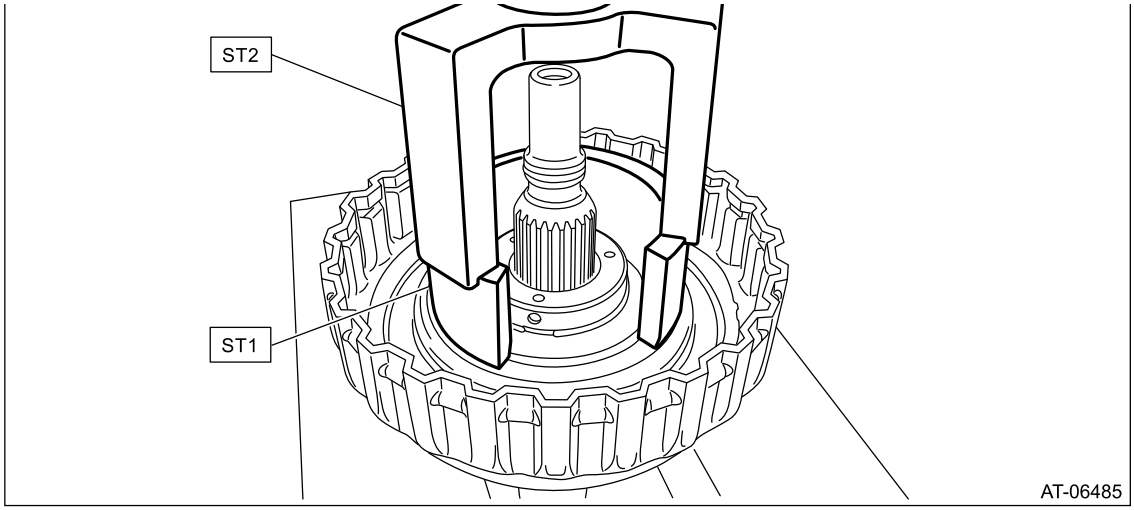


3. Install the chamber COMPL.

Note:

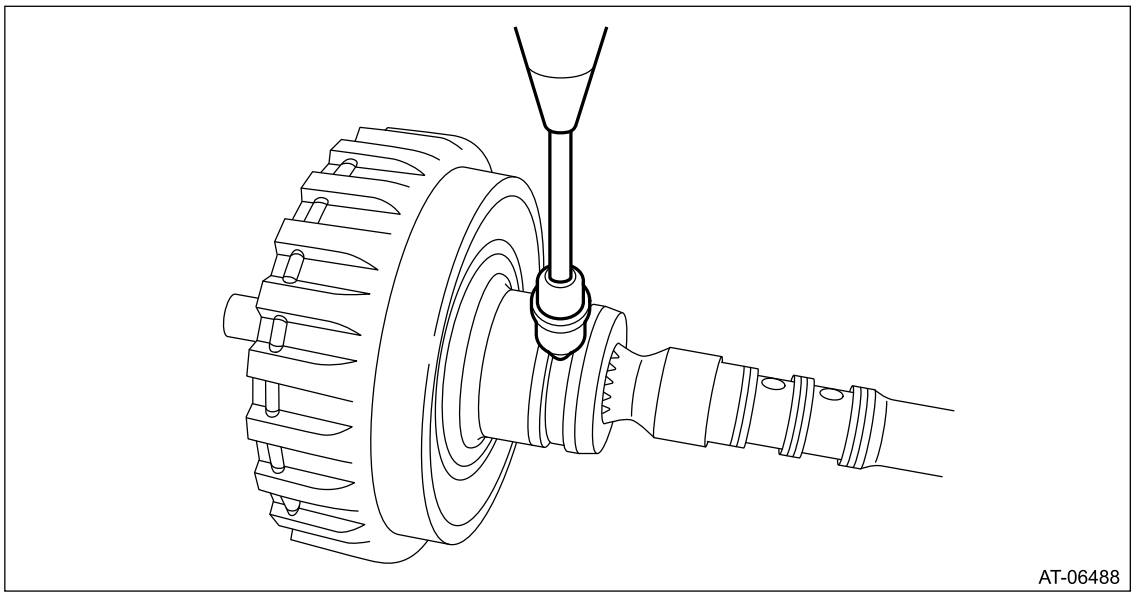
Apply CVTF to the sealing area of chamber COMPL.





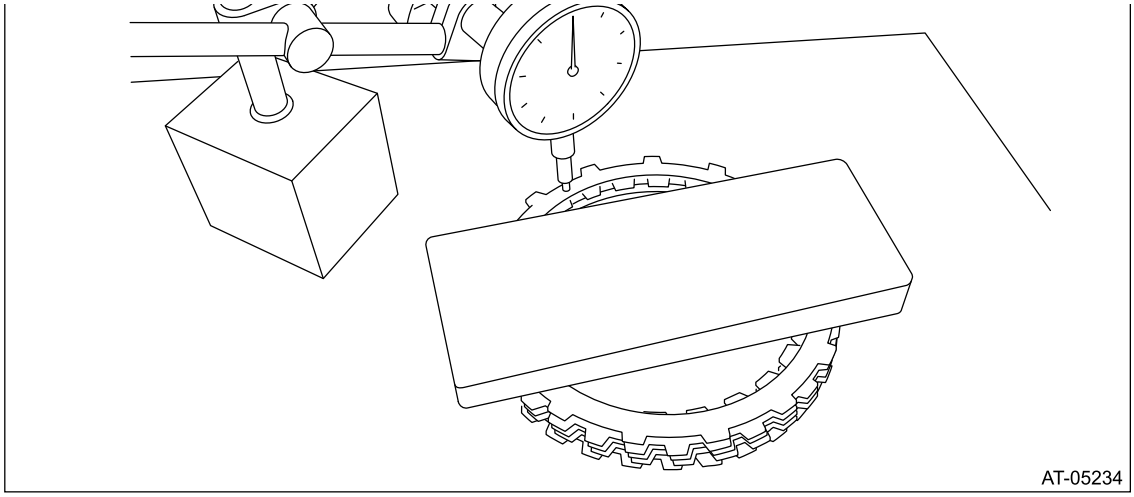
4. Using the ST1 and ST2, compress the return spring with a press and install the snap ring.

Preparation tool:



ST1: COMPRESSOR SPECIAL TOOL (18762AA010)

ST2: COMPRESSOR (398673600)

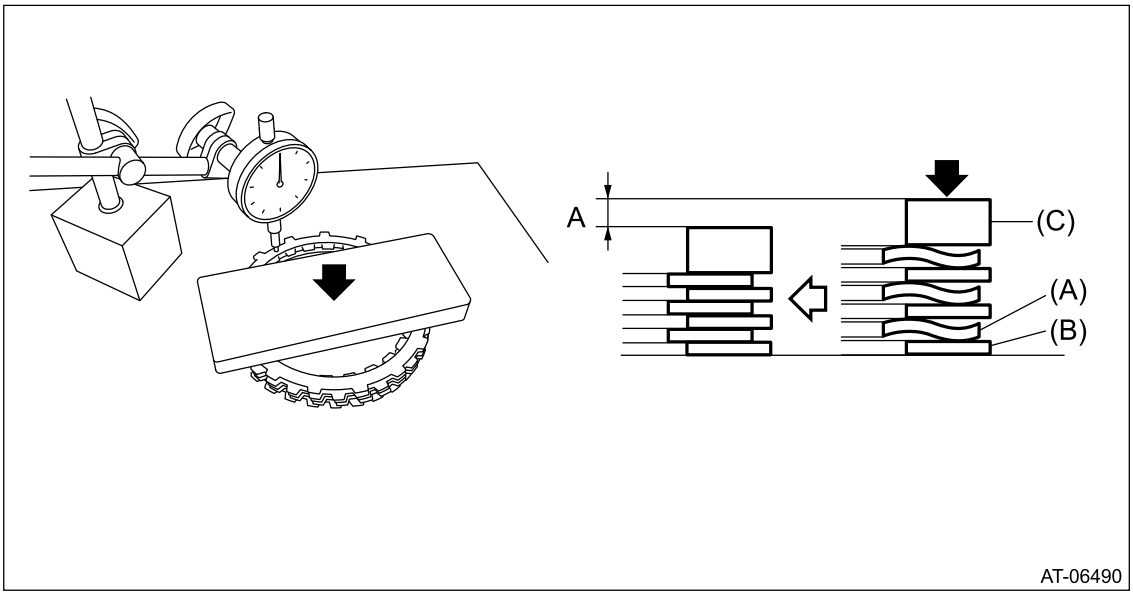


5. Check the operation of forward clutch piston by blowing compressed air intermittently from forward clutch carrier hole.

6. Place the driven plate, drive plate and retaining plate neatly in this order on surface table.
7. Set the dial gauge to retaining plate, and read its scale.
   Note:
   The value, which is read in the gauge at this time, is zero point.
8. Scale and record the weight "Z" of a flat board which will be put on retaining plate.
   Note:
   - **Use a stiff board which does not bend against load as a flat board to be put on retaining plate.**
   - **Use a flat board weighing less than 52 N (5.3 kgf, 11.7 lb).**
9. Put the flat board on retaining plate.

10. Using the following formula, read the push/pull gauge and calculate “N”.

N = 52 N (5.3 kgf, 11.7 lb) − Z



52 N (5.3 kgf, 11.7 lb): Load applied to clutch plate

Z: Flat board weight

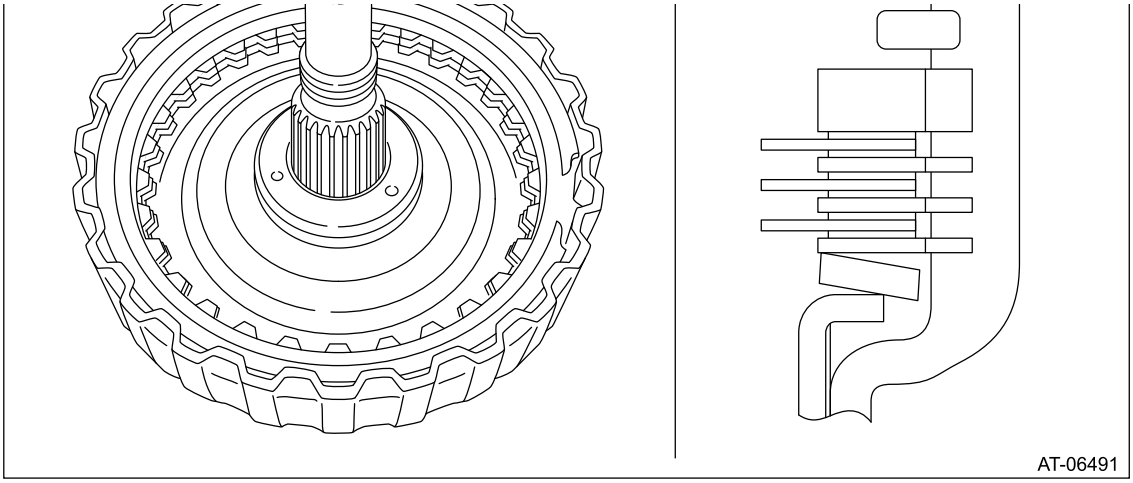
11. Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.

Note:

Measure at four points with a 90° interval and calculate the average.

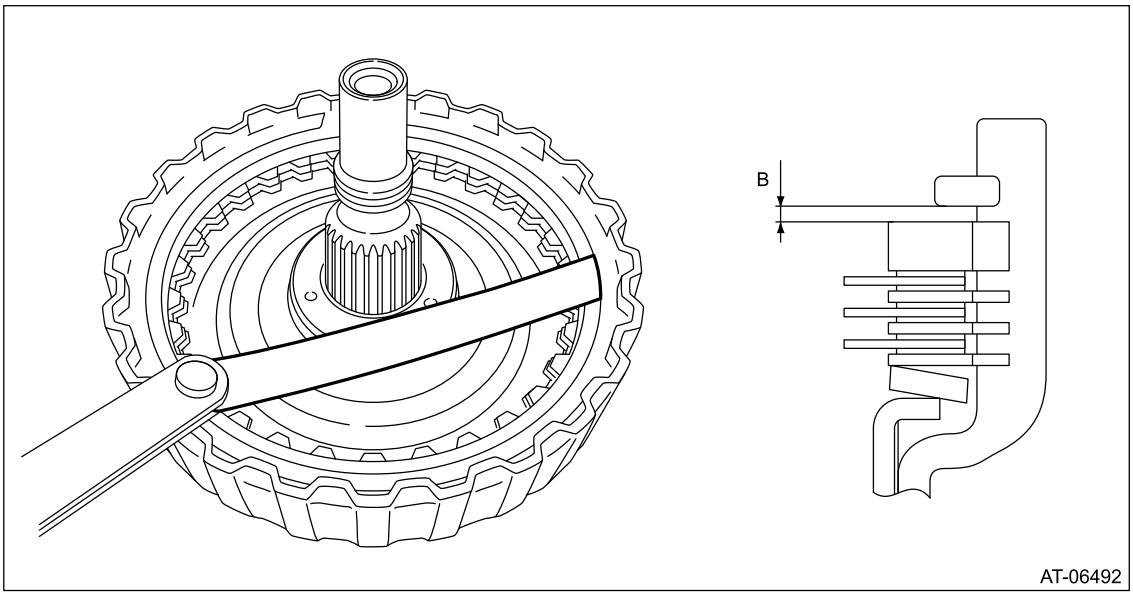
(A) Driven plate

(B) Drive plate



(C) Retaining plate

12. Install the dish plate, drive plate, driven plate, retaining plate and snap ring to the forward clutch carrier.



Note:

Install the dish plate in the correct direction.

13. Measure and record the clearance "B" between the retaining plate and snap ring.

14. Piston stroke calculation

Calculate with A and B dimensions recorded before.

If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.

S mm (in) = A + B

S: Piston stroke

A: Compression amount of drive plate and dish plate

B: Clearance between retaining plate and snap ring

Initial standard:

1.0 — 1.4 mm (0.040 — 0.055 in)

Limit thickness:

1.6 mm (0.063 in)

Retaining plate	
Item number	**Thickness mm (in)**
31567AB760	4.2 (0.165)
31567AB770	4.4 (0.173)
31567AB780	4.6 (0.181)

Retaining plate	
Item number	**Thickness mm (in)**
31567AB790	4.8 (0.189)

31567AB830	5.0 (0.197)

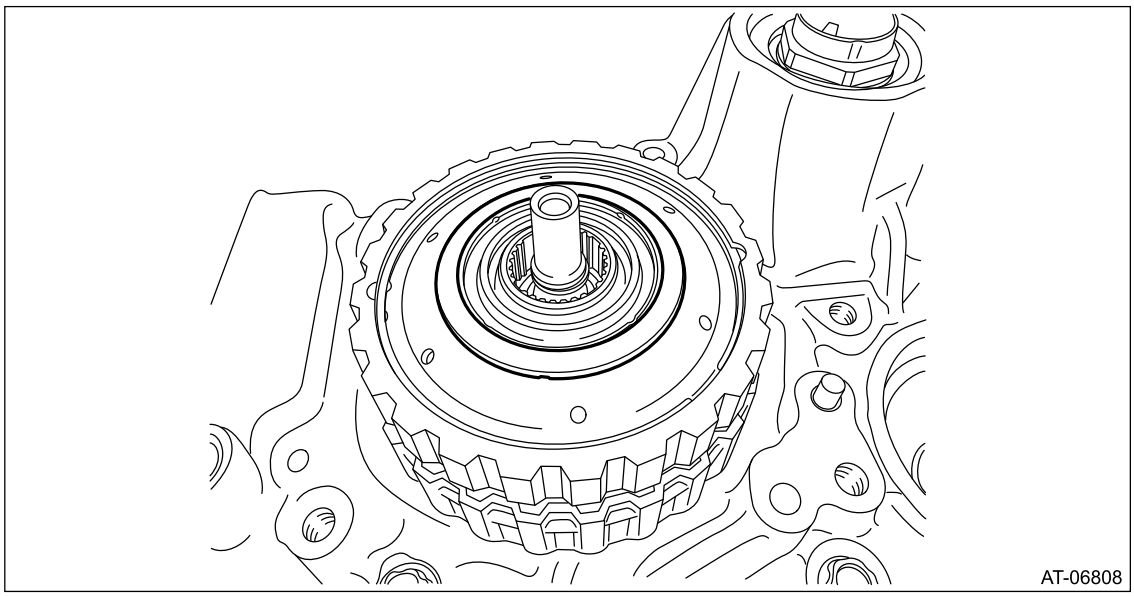
2. PLANETARY CARRIER ASSEMBLY

Note:
Assemble in the reverse order of disassembly.

3. INTERNAL GEAR

Note:
Assemble in the reverse order of disassembly.

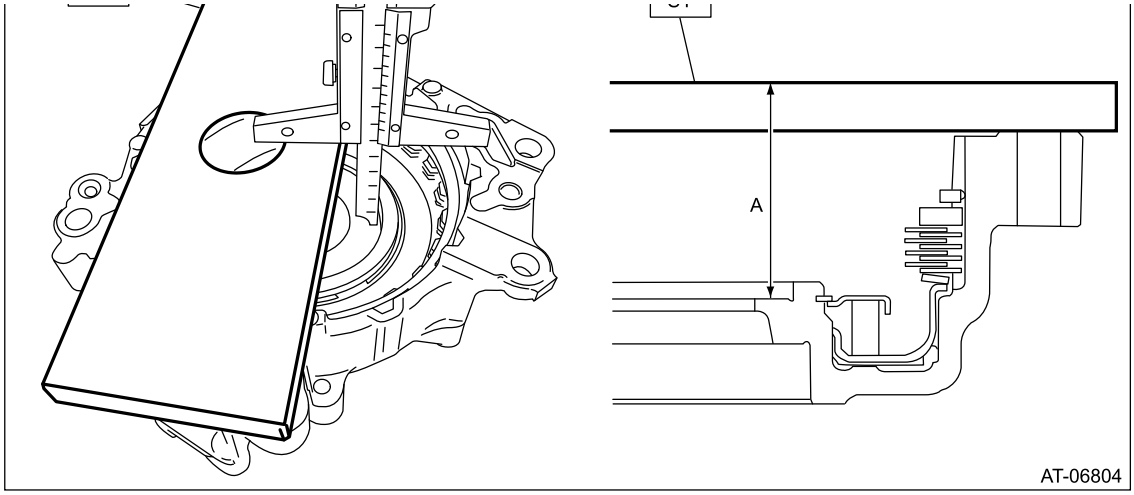
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Forward Clutch Assembly



INSPECTION

- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and internal gear of forward clutch is within the limit. If it exceeds the standard, replace the forward clutch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>ASSEMBLY.

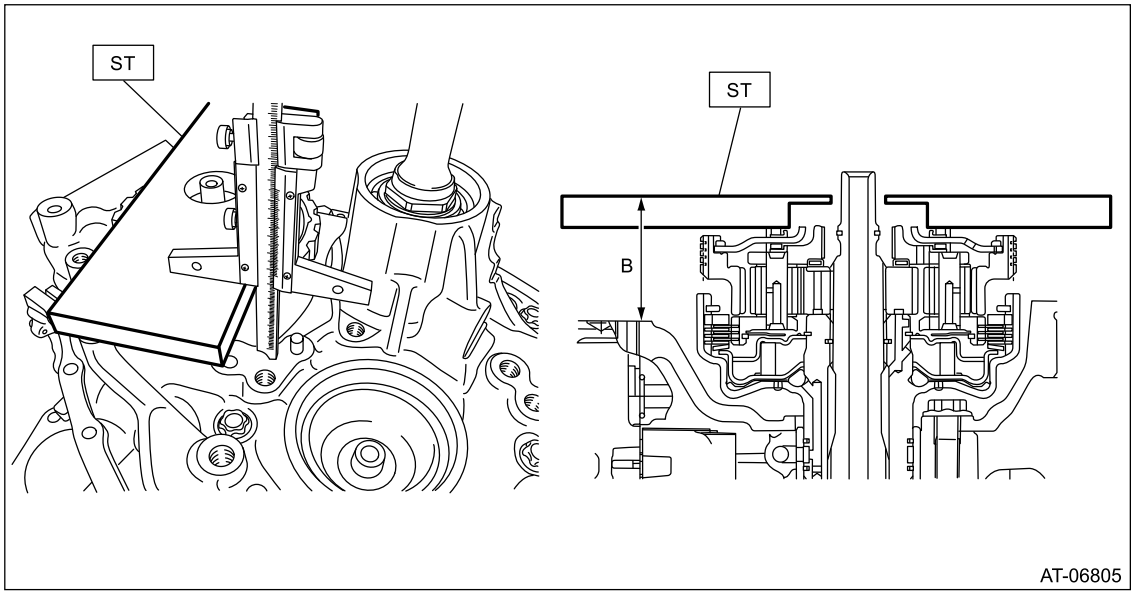
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Forward Clutch Assembly



ADJUSTMENT

1. Install the thrust bearing to the internal gear.
Note:
Face the temper color surface to the reverse brake side.

2. Measure depth “A” from the ST upper face to the washer mounting surface.
Preparation tool:
ST: GAUGE (499575600)



3. Measure the height "B" from the ST upper face to the mating surface of the drive pinion retainer.

Preparation tool:

ST: GAUGE (499575600)

4. Obtain the thickness of washer using the following formula to select the washer.

T mm = A − B − (0.35 — 0.70)

[Tin = A − B − (0.014 — 0.028)]

T: Shim thickness

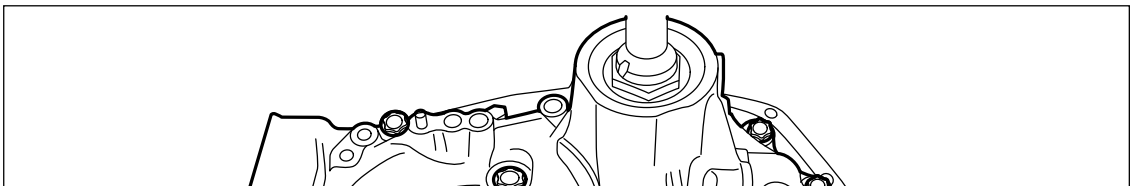
A: Depth from the ST upper face to the washer mounting surface

B: Height from ST upper face to the drive pinion retainer mating surface

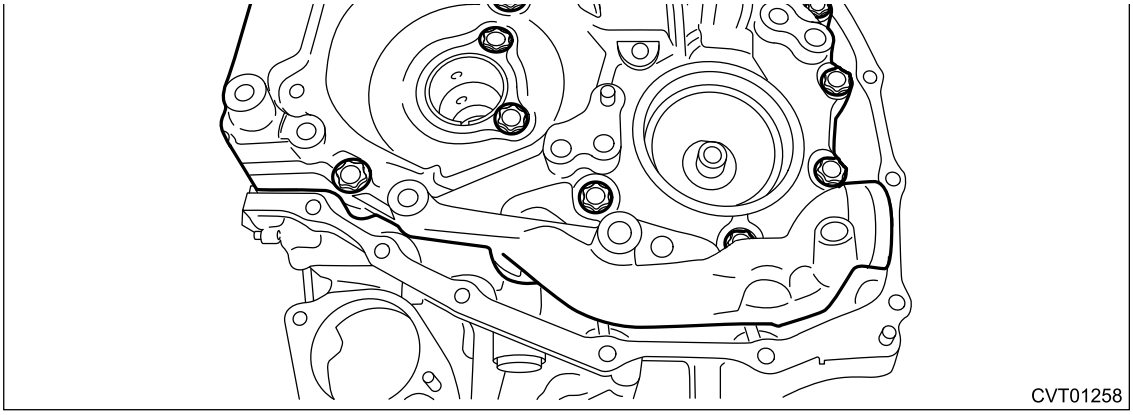
0.35 — 0.70 mm (0.014 — 0.028 in): Clearance

Washer	
Part No.	**Thickness mm (in)**
803064020	1.3 (0.051)
803064021	1.55 (0.061)
803064022	1.8 (0.071)
803064023	2.05 (0.081)

Washer	
Part No.	**Thickness mm (in)**
803064024	2.3 (0.091)
803064025	2.55 (0.100)

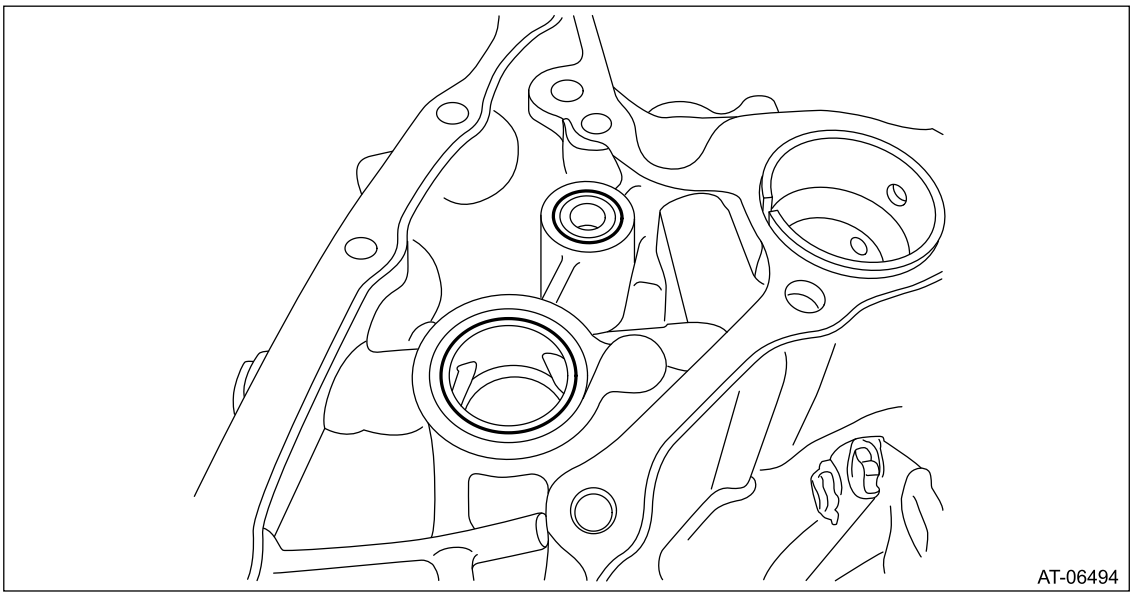


CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Drive Pinion Shaft Assembly



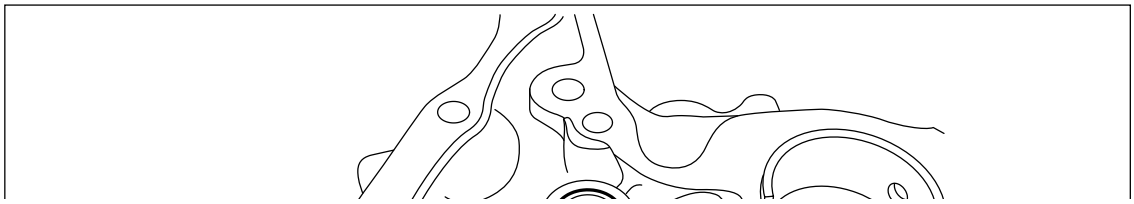
REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL

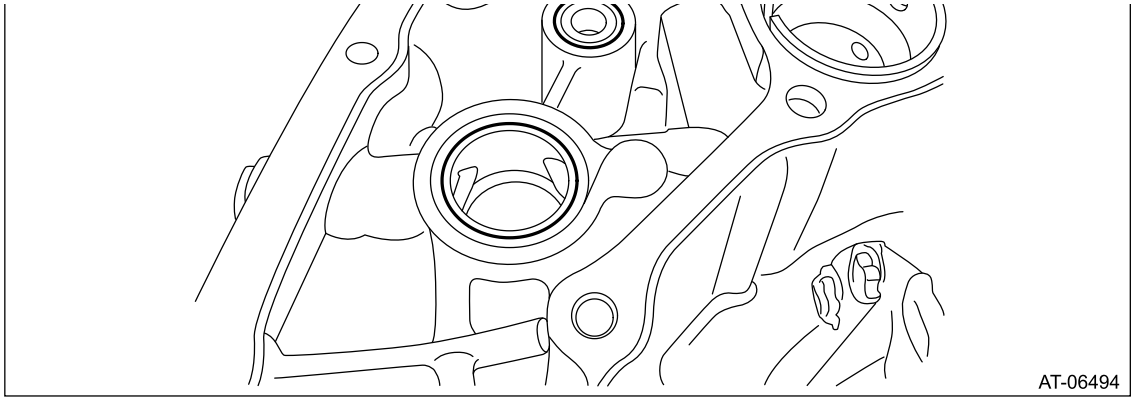


TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.

2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.
7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.
16. Remove the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>REMOVAL.
17. Remove the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>REMOVAL.
18. Remove the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>REMOVAL.
19. Remove the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>REMOVAL.
20. Remove the forward clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>REMOVAL.
21. Using the ST, remove the drive pinion retainer.
    Preparation tool:
    ST: SOCKET (E20) (18270KA020)



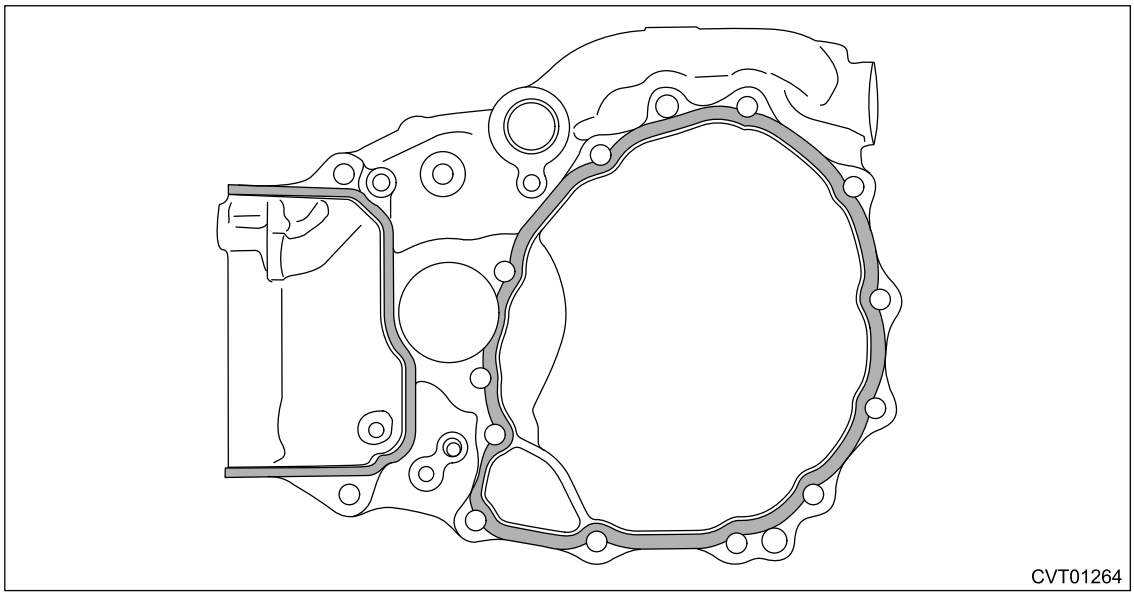
22. Remove the O-rings.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Drive Pinion Shaft Assembly

INSTALLATION

1. Clean the mating surface of drive pinion retainer and converter case.
2. Adjust the backlash and tooth contact between drive pinion shaft assembly and the front differential side gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>ADJUSTMENT.
3. Install O-rings in two locations to the converter case.
   Note:
   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**



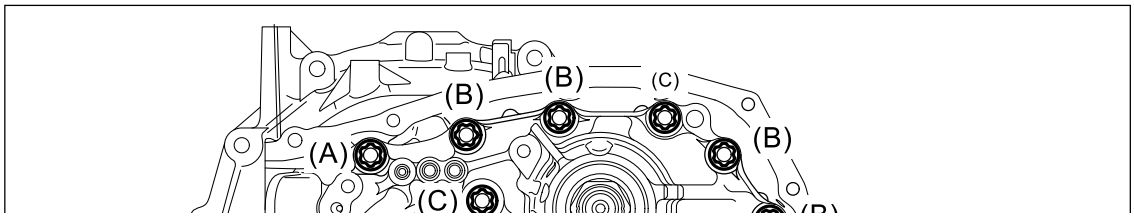
4. Apply liquid gasket seamlessly to the mating surface of drive pinion retainer.

Liquid gasket:

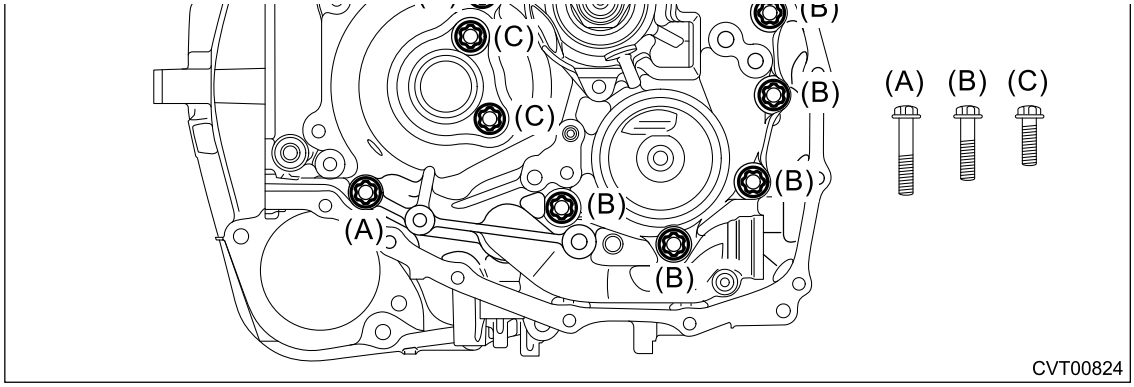
THREE BOND 1215B or equivalent

5. Install the drive pinion retainer to converter case, and tighten the bolt using the ST.

Preparation tool:



ST: SOCKET (E20) (18270KA020)

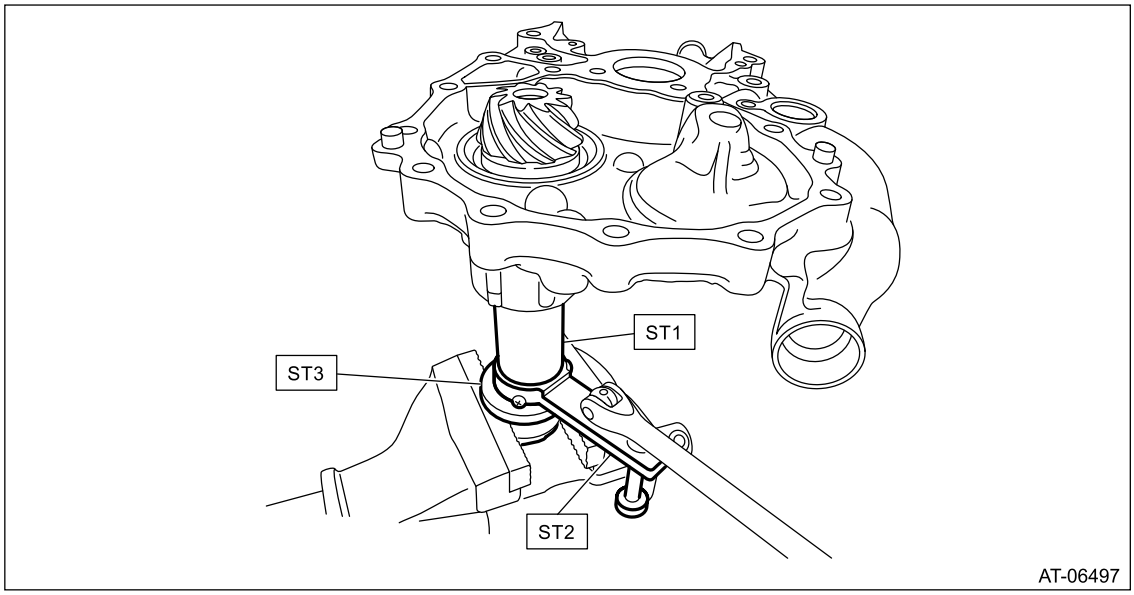


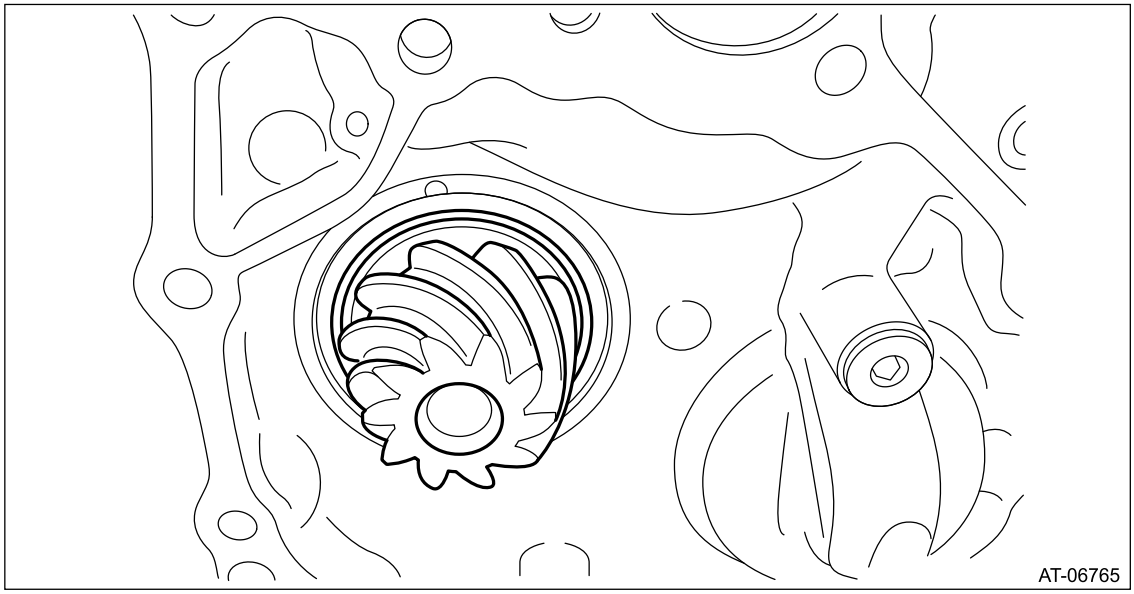
Note:

Do not confuse the three different-length bolts when installing.

Tightening torque:

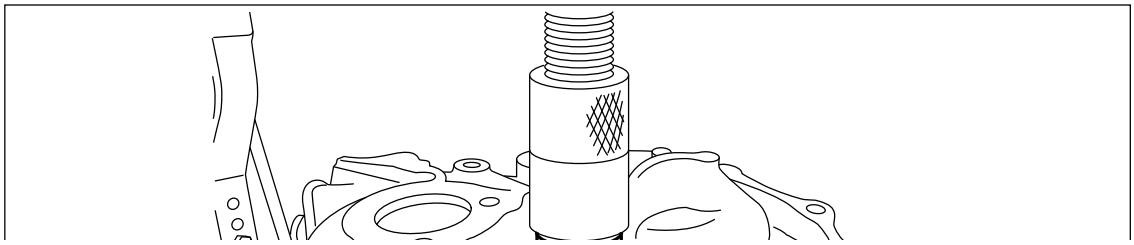
43 N·m (4.4 kgf-m, 31.7 ft-lb)



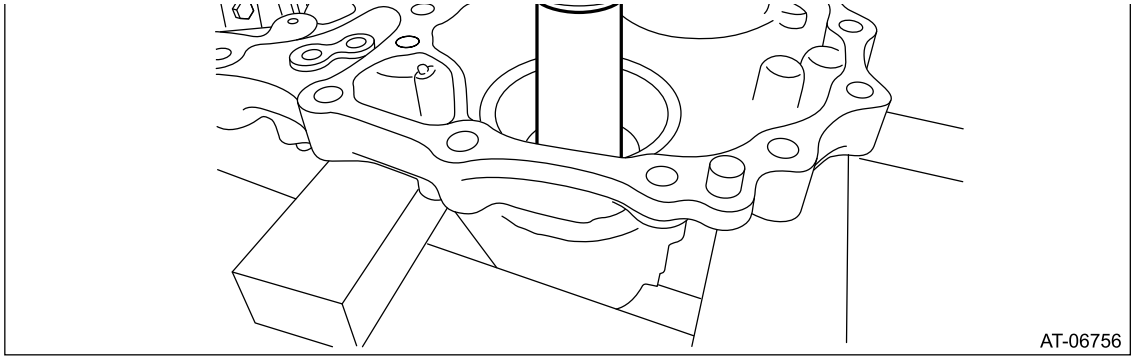


6. Install the forward clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>INSTALLATION.
7. Install the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>INSTALLATION.
8. Install the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>INSTALLATION.
9. Install the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>INSTALLATION.
10. Install the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.
11. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.
12. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.
13. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.
14. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.
15. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
16. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
17. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
18. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
19. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
20. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.
21. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
22. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
23. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
24. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
25. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

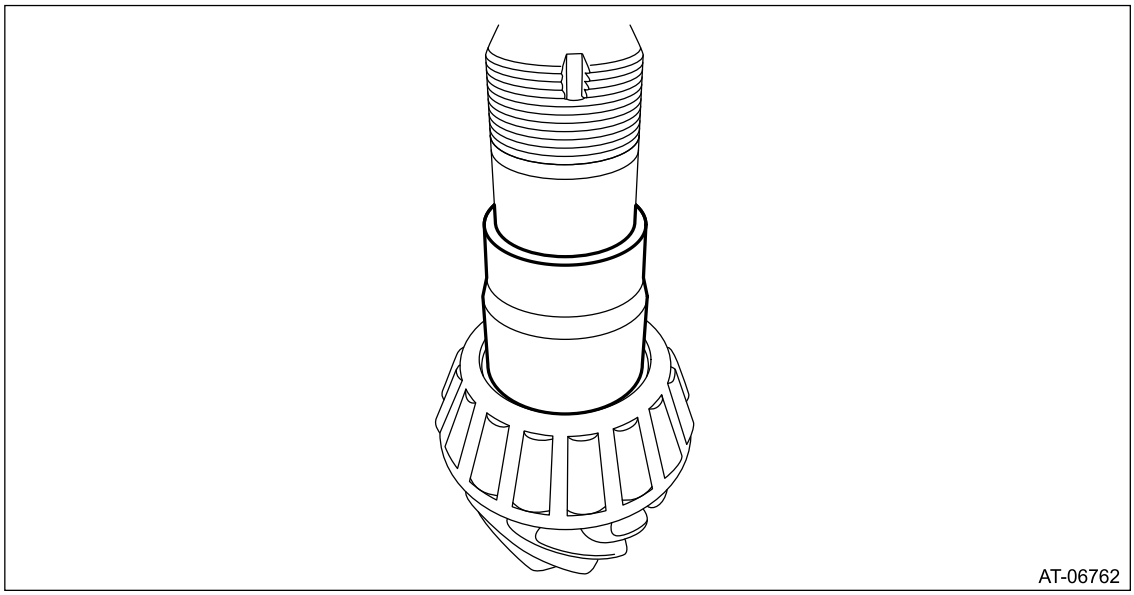
DISASSEMBLY



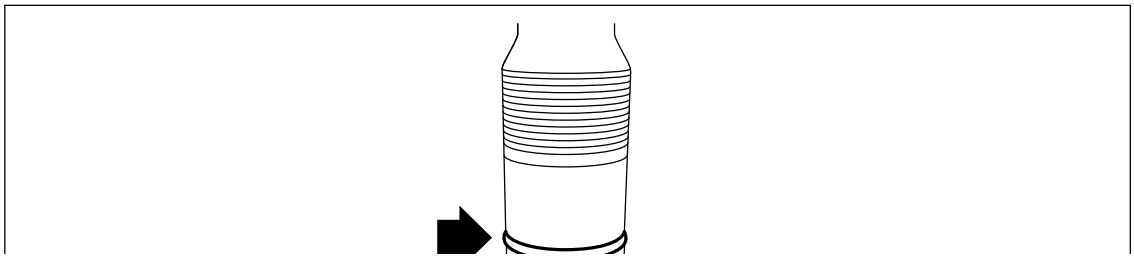
1. Flatten the tab of the lock nut.
2. Using ST1, ST2 and ST3, fix at the spline portion of drive pinion shaft to remove the lock nut.
   Preparation tool:
   ST1: ADAPTER (499787500)
   ST2: WRENCH (499787700)
   ST3: HOLDER (498937110)

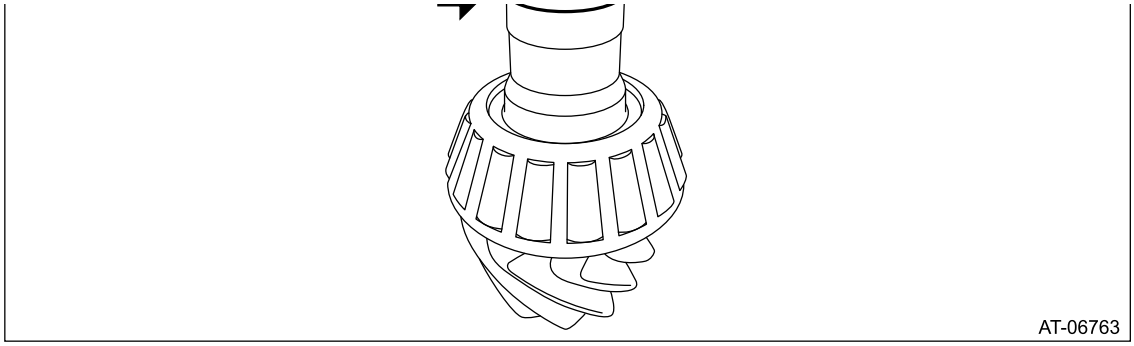


3. Remove the drive pinion shaft from the drive pinion retainer.



4. Using the round bar with diameter of 36 mm (1.42 in) or 37 mm (1.46 in), remove the bearing inner race and plug.

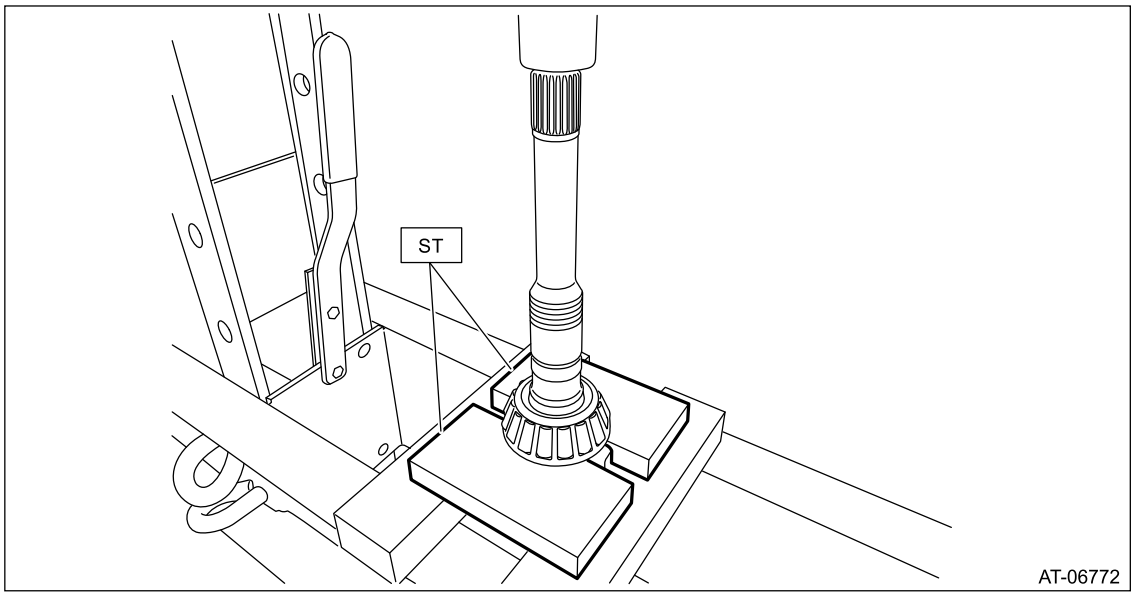




5. Remove the drive pinion washer.

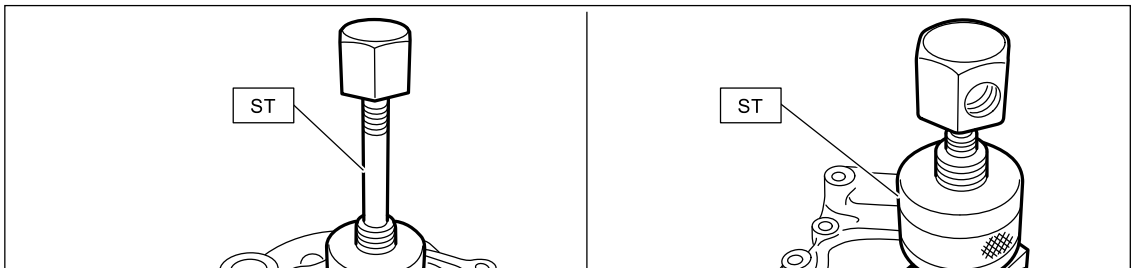
6. Remove the drive pinion spacer.

7. Remove the O-rings.

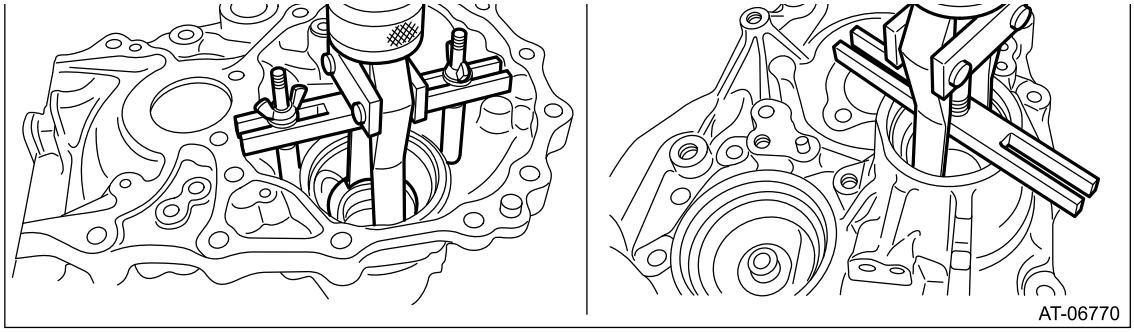


8. Remove the inner race and drive pinion shim from drive pinion shaft using ST.

Preparation tool:



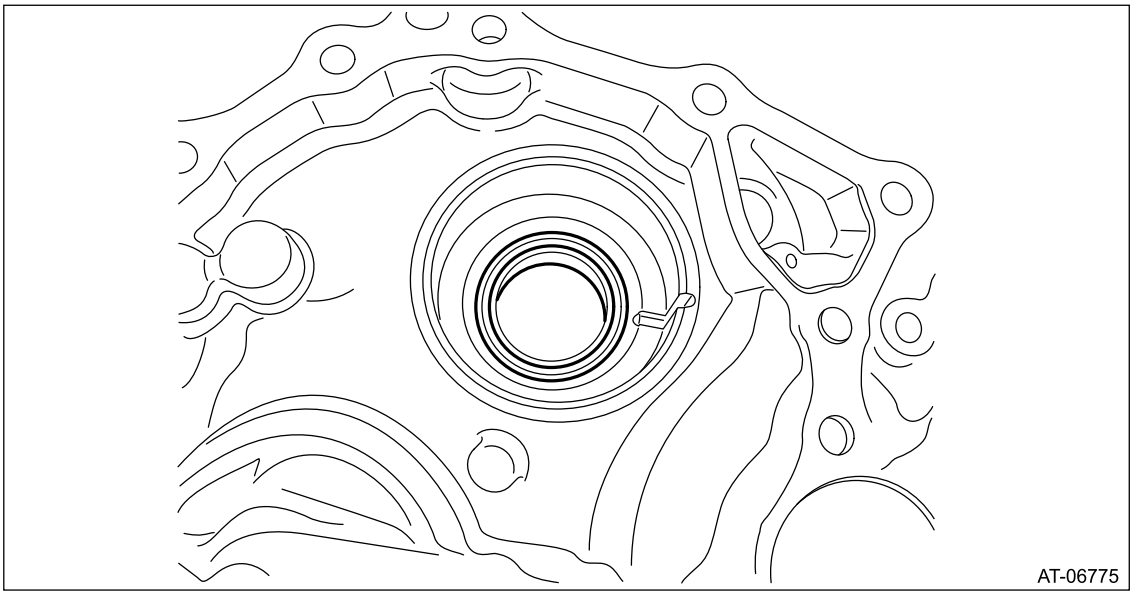
ST: REMOVER (498515500)

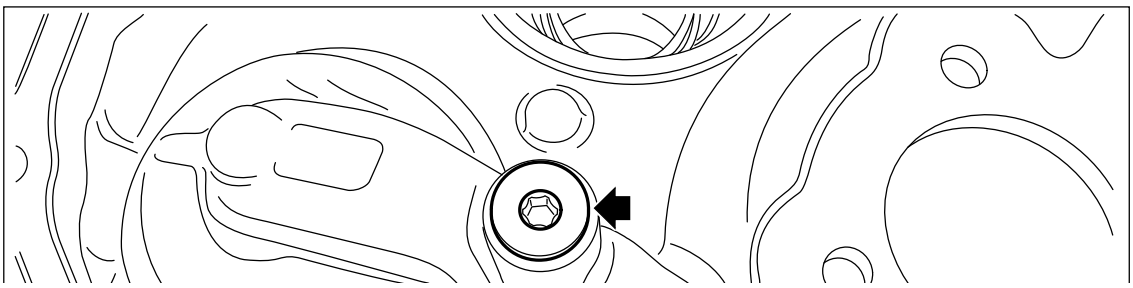


9. Using the ST, remove the outer race.

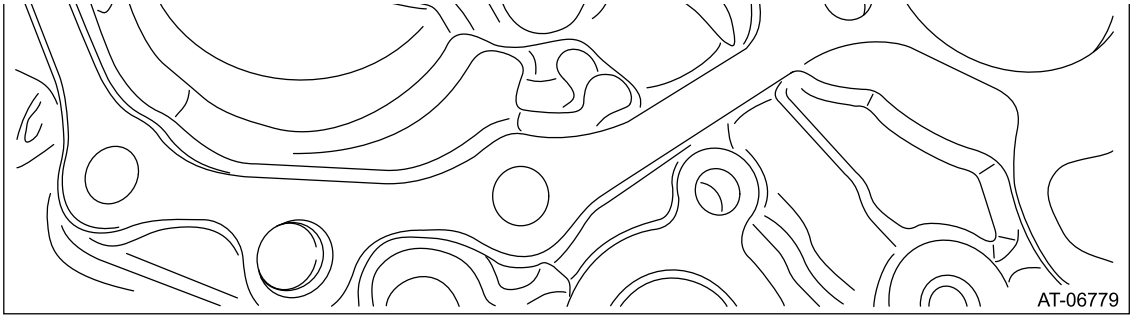
Preparation tool:

ST: PULLER ASSY (398527700)





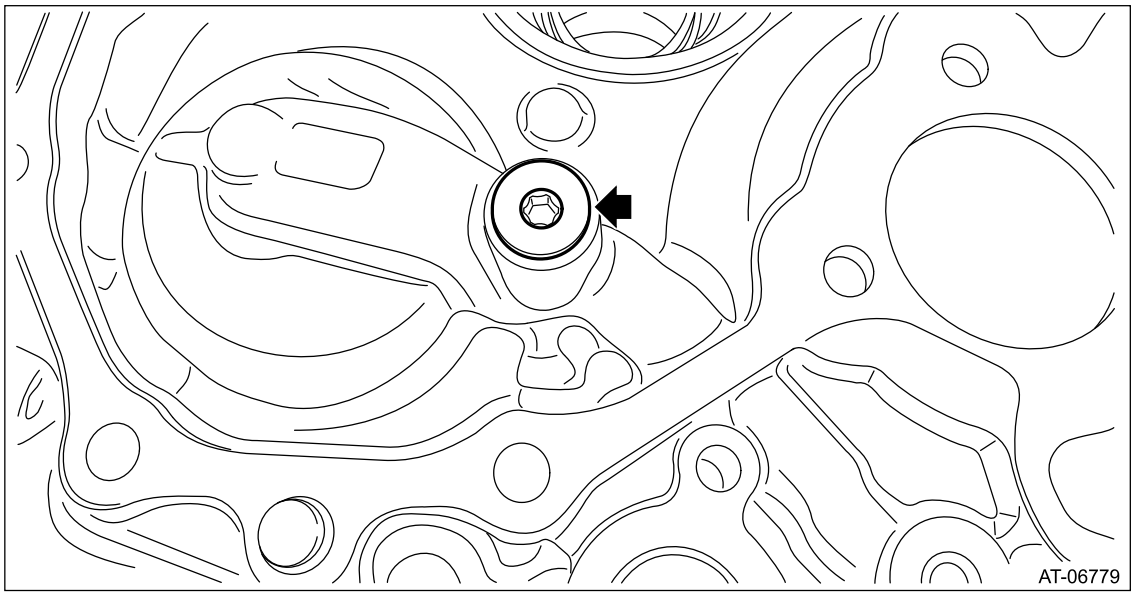
10. Remove the two oil seals using a screwdriver wrapped with cloth, etc.



Caution:

Do not damage the fitting surface of oil seal.

11. Remove the plug from drive pinion retainer.

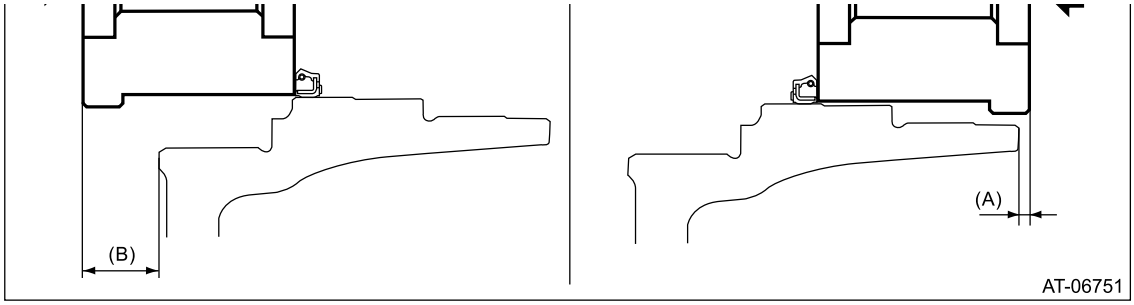


ASSEMBLY

1. Install the plug to drive pinion retainer.

   Note:
   - **Use new O-rings.**
   - **Apply CVTF to the O-rings.**

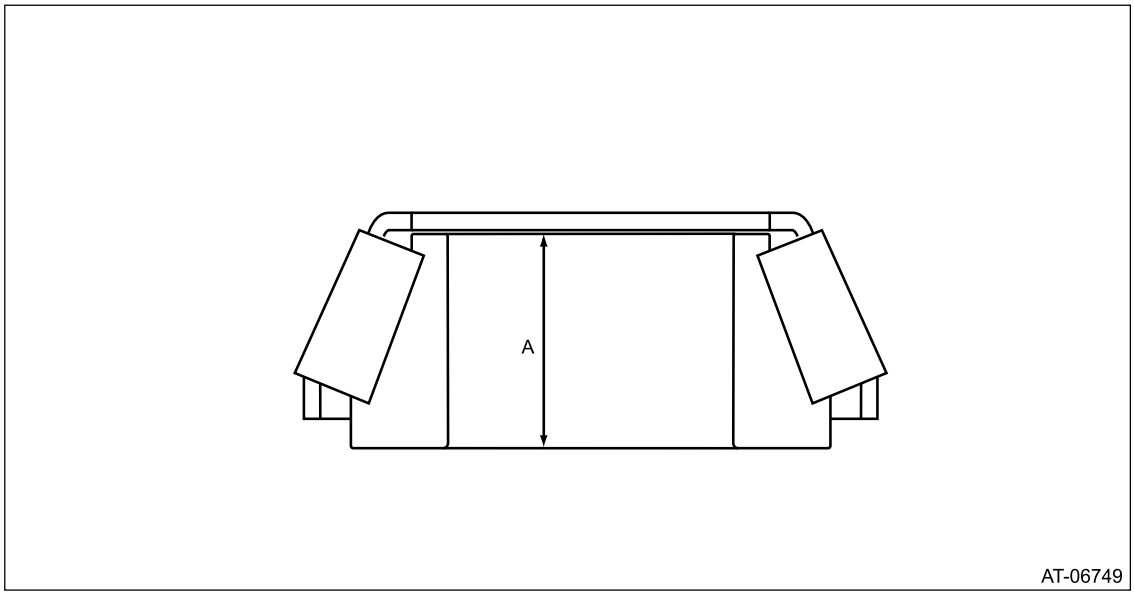
   Tightening torque:
   22 N·m (2.2 kgf-m, 16.2 ft-lb)



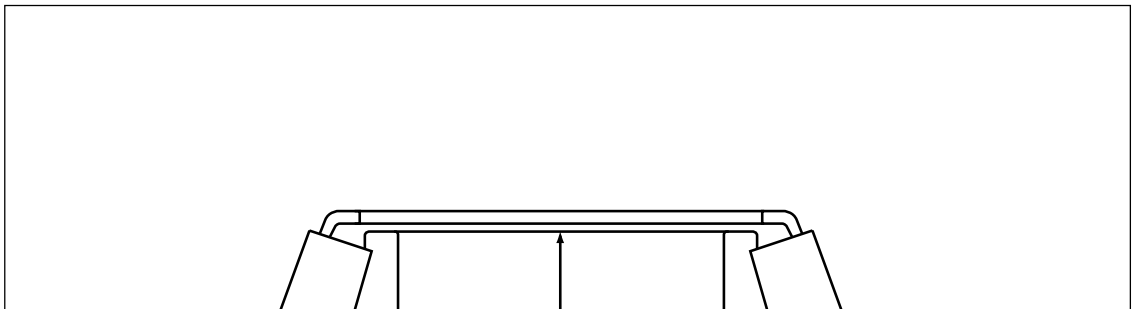
2. Using the ST, install the oil seal to drive pinion retainer.

   Note:
   - **Apply CVTF to the oil seal press-fitting surface and lip.**
   - **Install the oil seal in the correct direction.**

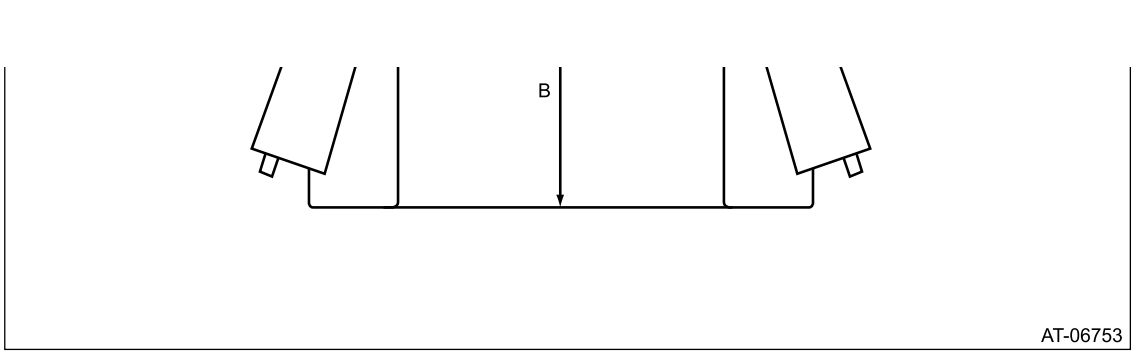
   Preparation tool:
   ST: HOUSING BUSHING INSTALLER AND REMOVER (927720000)



(A) 2.8 mm (0.11 in)

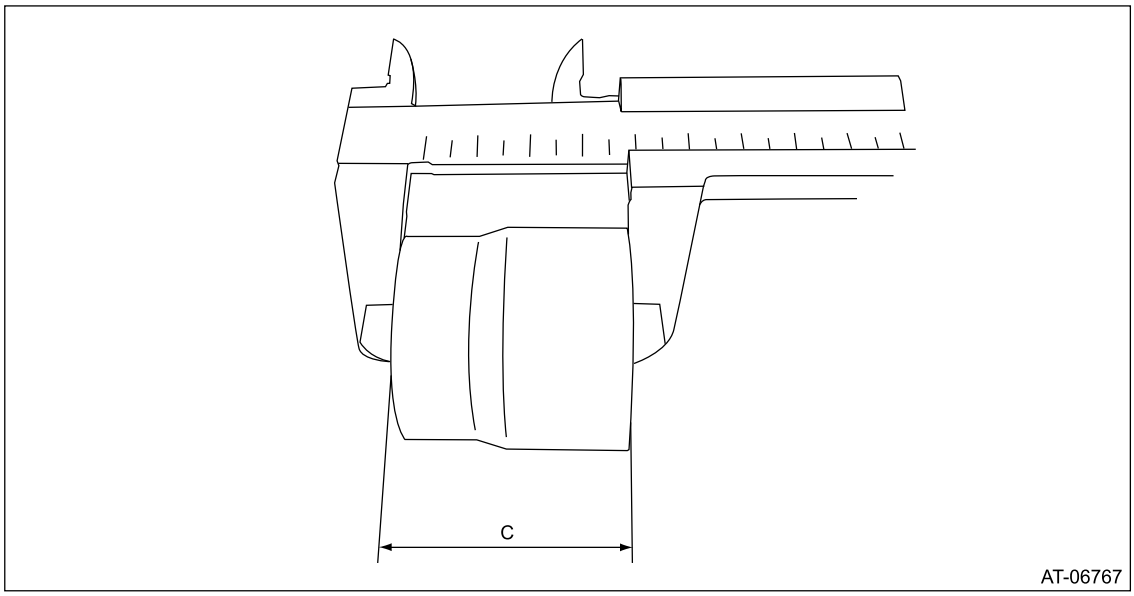


(B) 18.7 mm (0.74 in)



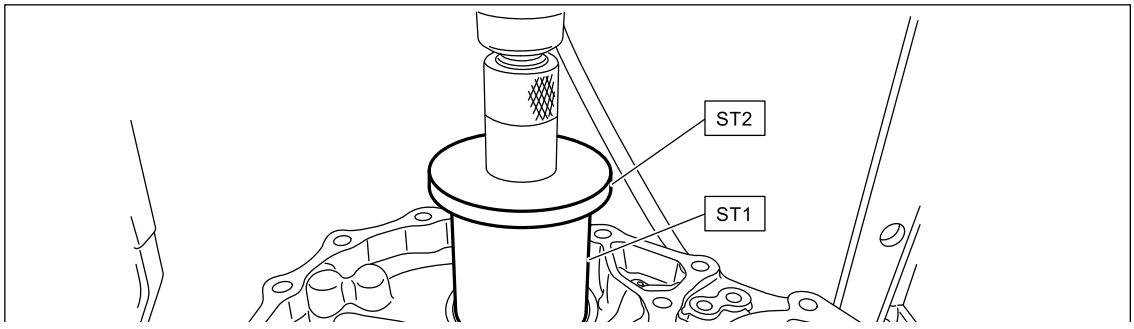
3. Select the drive pinion washer.

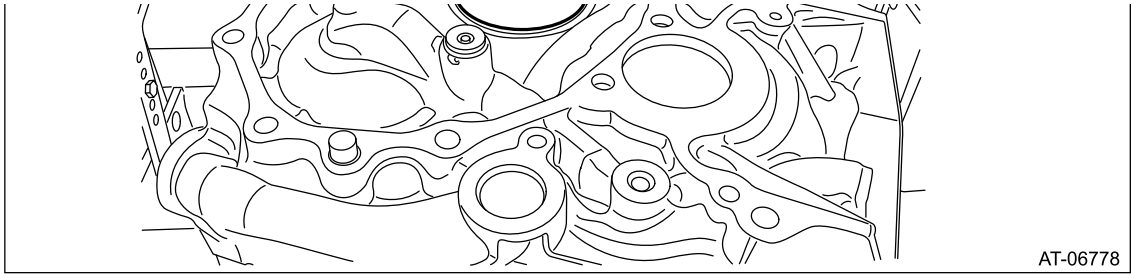
(1) Measure the roller bearing inner race width “A” on the front side.



(2) Measure the roller bearing inner race width “B” on the rear side.

(3) Measure the spacer width “C”.



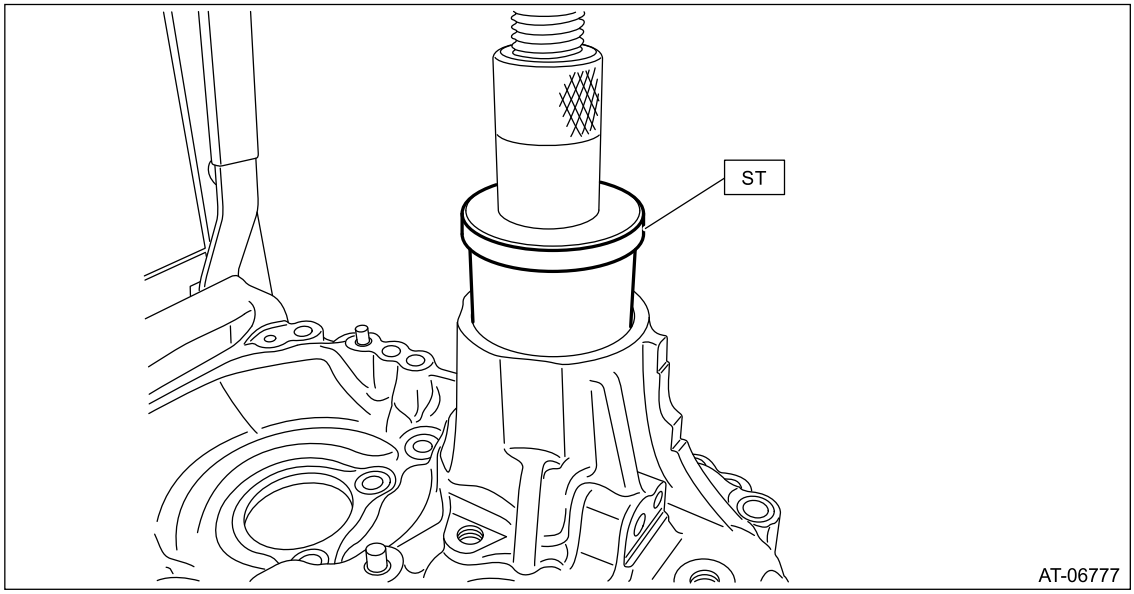


(4) Using the ST1 and ST2, install the front roller bearing outer race to the drive pinion retainer.

Preparation tool:

ST1: PRESS SNAP RING (28499TC010)

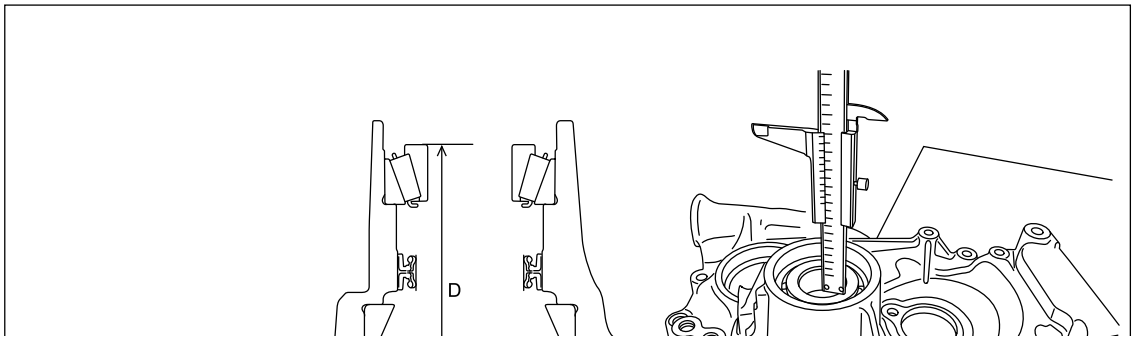
ST2: INSTALLER (398177700)

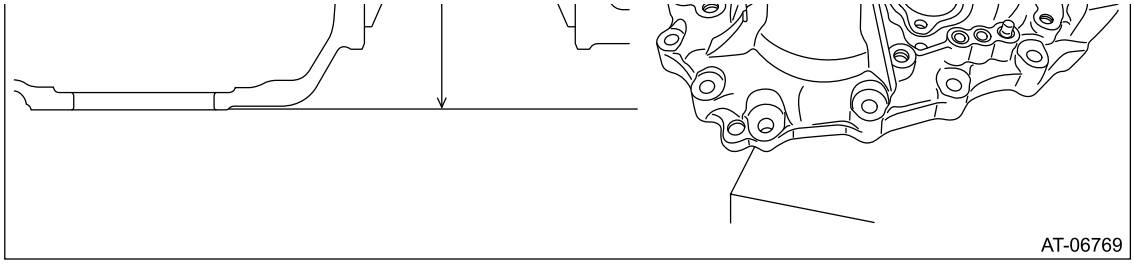


(5) Using the ST, install the rear roller bearing outer race to the drive pinion retainer.

Preparation tool:

ST: INSTALLER (20099AE020)



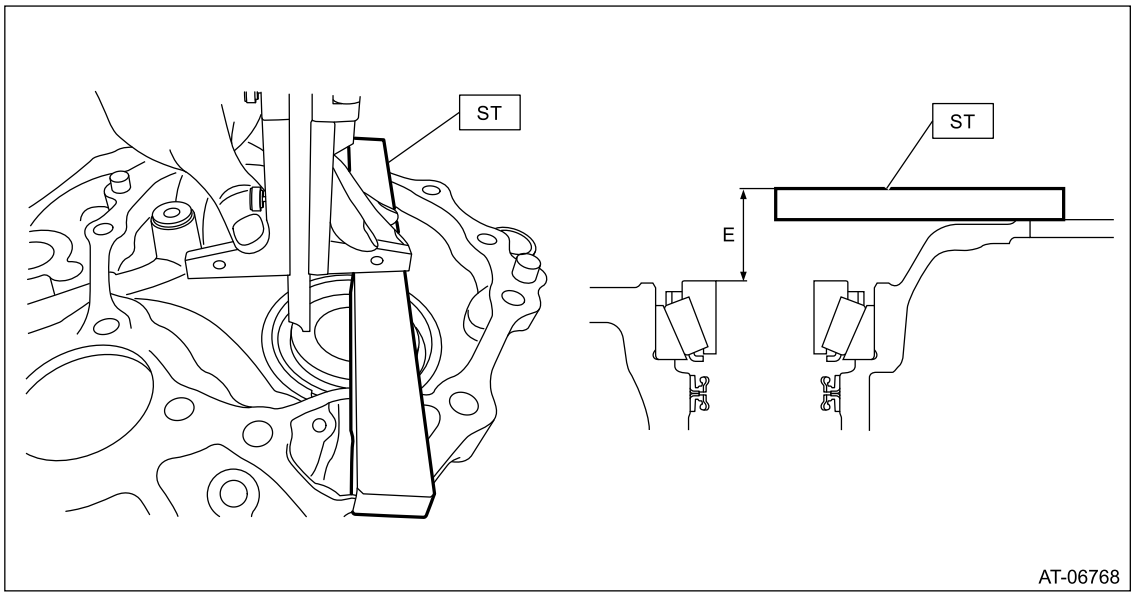


(6) Place the drive pinion retainer on the surface plate, and install the inner race to the rear roller bearing outer race.

Note:

Place the drive pinion retainer so that the mating surface of the drive pinion retainer (mating surface with the converter case) contacts the surface plate.

(7) Measure the height "D" from the end face of the rear roller bearing inner race to the surface plate.



(8) Install the inner race to the front roller bearing outer race.

(9) Measure the depth "E" from the end face of the front roller bearing inner race to the end face of the ST.

Preparation tool:

ST: GAUGE (499575400)

(10) Using following formula, select one to three drive pinion washers.

T mm = D − (A + B + C + E − 15) − (0±0.0125)

[Tin = D − (A + B + C + E −0.591) − (0±0.0005)]

A: Front roller bearing width

B: Rear roller bearing width

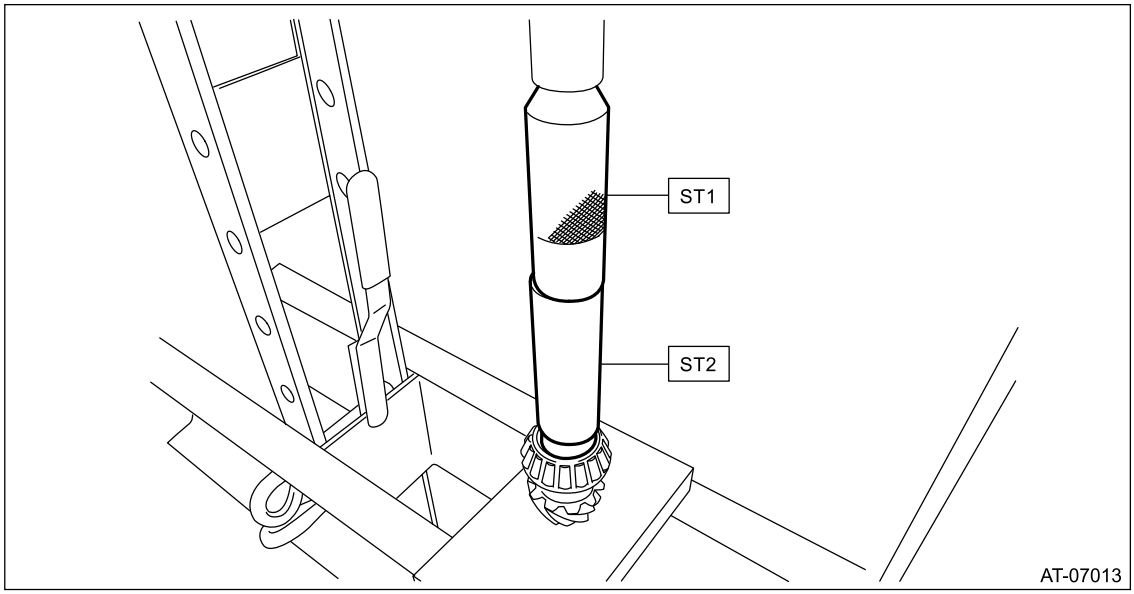
C: Spacer width

D: Height from end face of rear roller bearing inner race to surface plate

E: Depth from end face of front roller bearing inner race to end face of ST

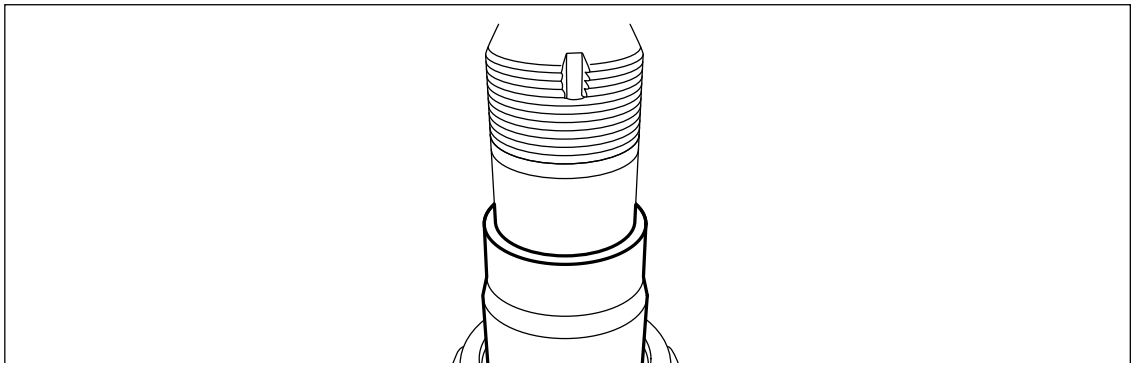
15 mm (0.591 in): Thickness of ST

T: Drive pinion washer thickness

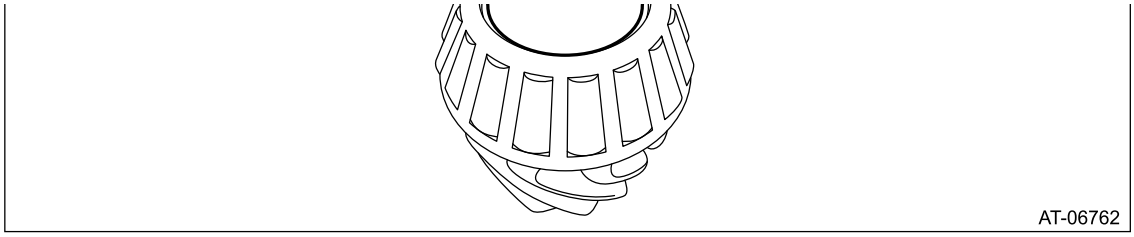


0±0.0125 mm (0±0.0005 in): Clearance

Drive pinion washer	
Part No.	**Thickness mm (in)**

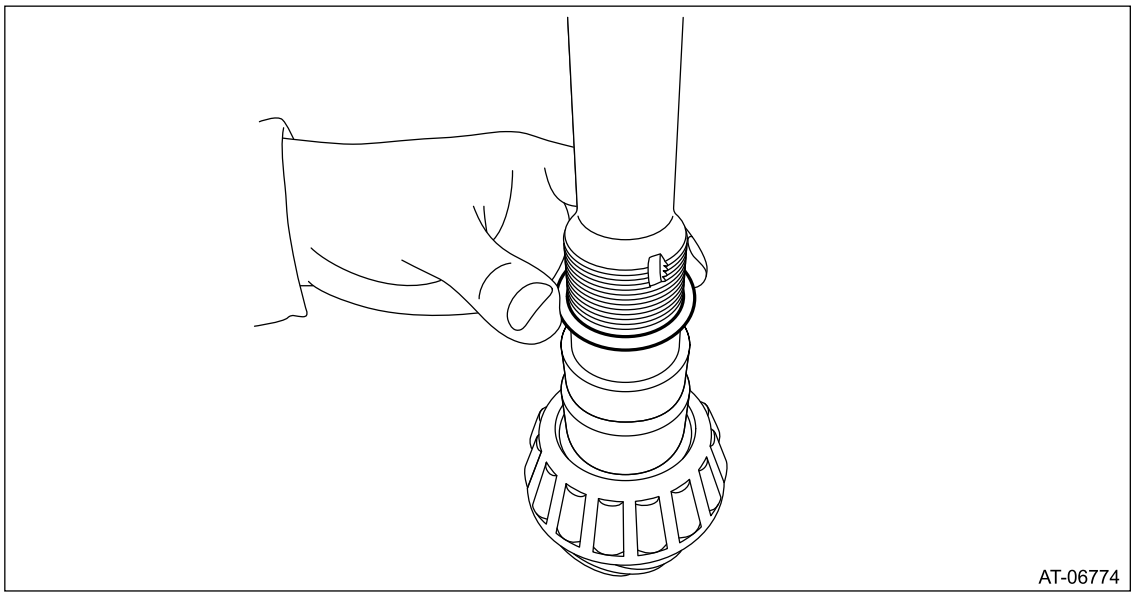


Drive pinion washer	
Part No.	**Thickness mm (in)**
38336AA750	0.150 (0.0059)
38336AA760	0.175 (0.0069)
38336AA770	0.200 (0.0079)
38336AA780	0.225 (0.0089)
38336AA790	0.250 (0.0098)
38336AA800	0.275 (0.0108)



38336AA810	0.300 (0.0118)
38336AA820	0.400 (0.0157)

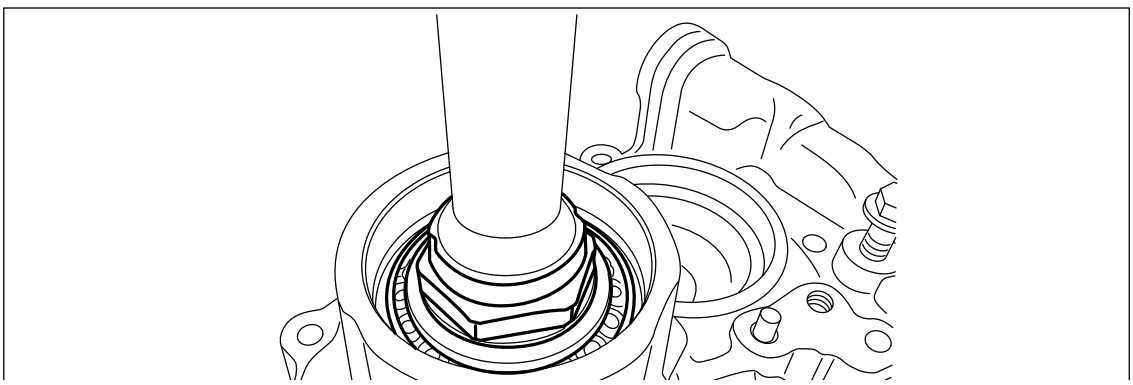
4. Measure and record the drive pinion shim thickness to be reused.
5. Install the drive pinion shim that is reused for the drive pinion shaft.
6. Using the ST1 and ST2, press-fit the inner race to the drive pinion shaft.
   Preparation tool:
   ST1: INSTALLER (899580100)
   ST2: EXTENSION DRIVE SHAFT (927130000)



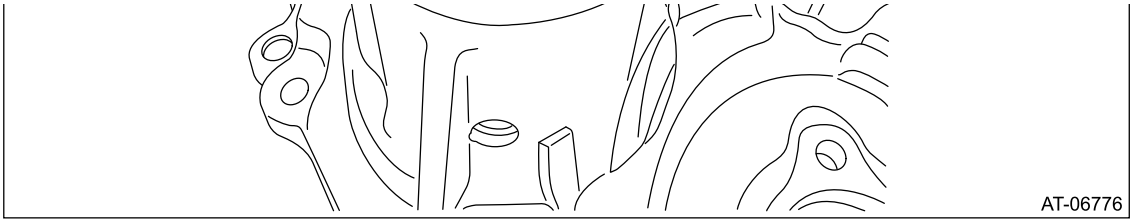
7. Install the drive pinion spacer.
   Note:
   Replace the O-ring with a new part after tooth contact inspection.

8. Install the selected drive pinion washer.

9. Insert the drive pinion shaft into the drive pinion retainer.



Caution:



Be careful not to damage the oil seal.

10. Install the inner bearing and lock nut.

Note:

- **Use a new lock nut.**
- **Apply differential gear oil to the threaded portion of the drive pinion shaft.**

11. Using the ST1, ST2 and ST3, tighten the lock nut to the specified torque so that the starting torque of the drive pinion shaft is within the specified range.

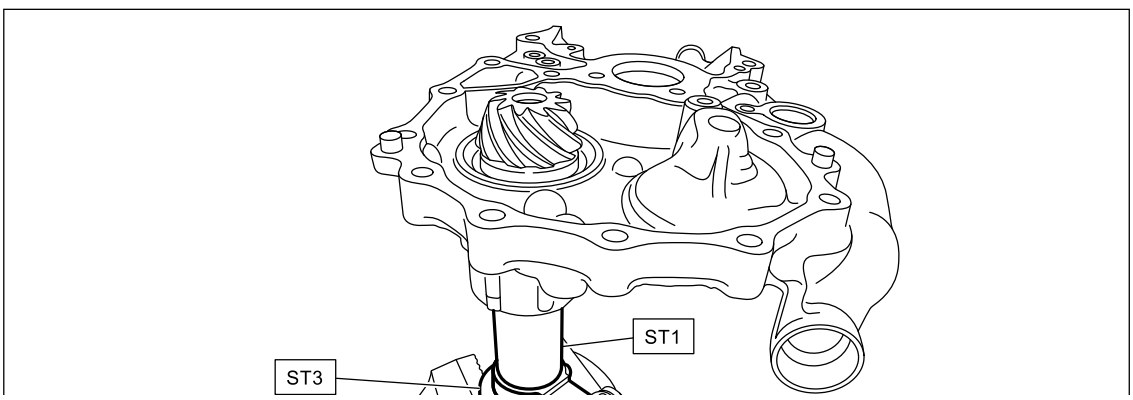
Caution:

Before inspecting the starting torque, apply differential gear oil to roller of bearing and rotate the bearing several times.

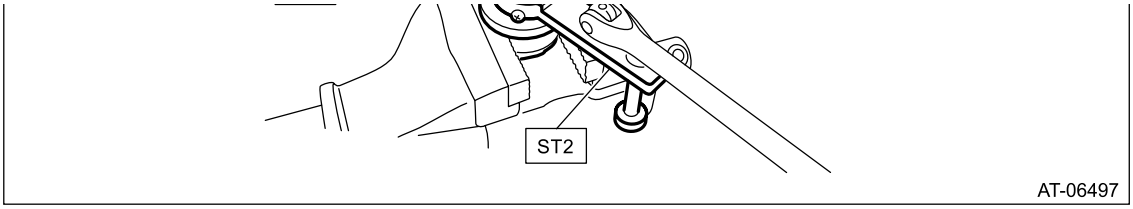
Note:

- **Tighten the lock nut while directly aligning ST2 and torque wrench.**
- **If the starting torque is not within the specified range, select the drive pinion washer, and repeat the step until the starting torque is within the specified range.**
- **When a thicker drive pinion washer is selected, the starting torque decreases. When a thinner drive pinion washer is selected, the starting torque increases.**

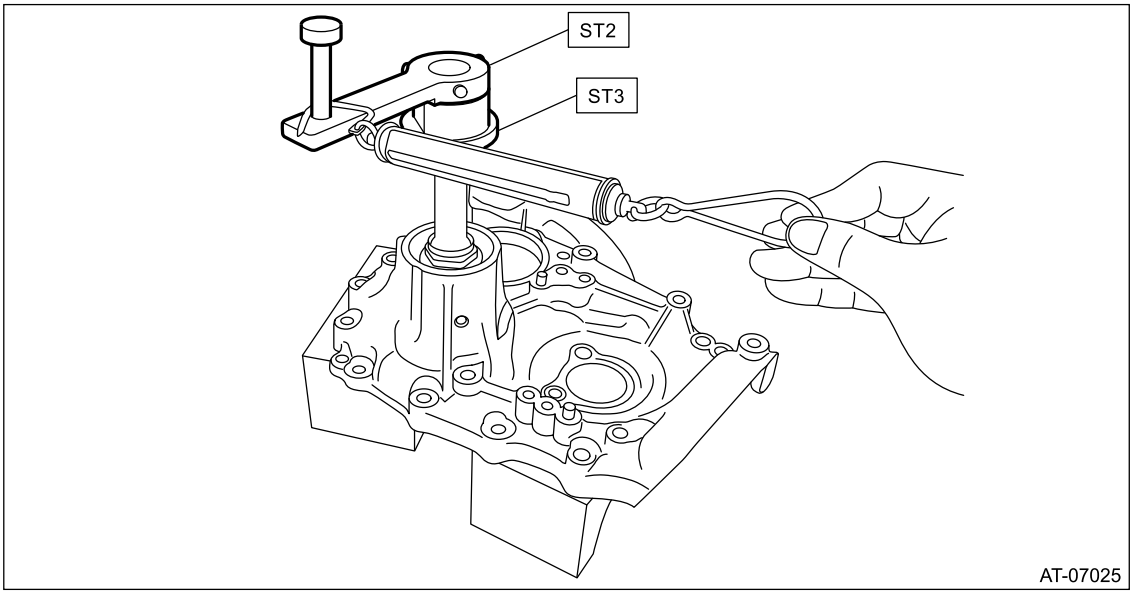
Starting torque:



5.1 — 17.1 N (0.5 — 1.7 kgf, 1.1 — 3.8 lbf)



Preparation tool:

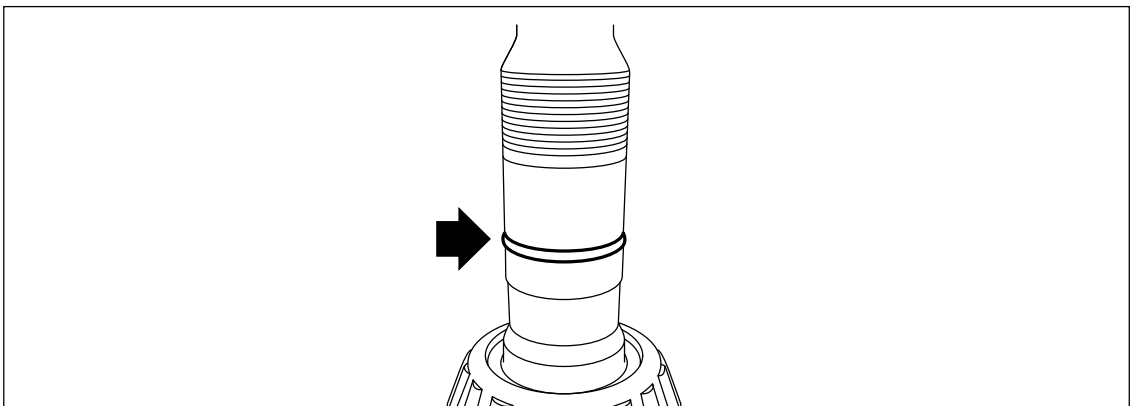


ST1: ADAPTER (499787500)
ST2: WRENCH (499787700)
ST3: HOLDER (498937110)

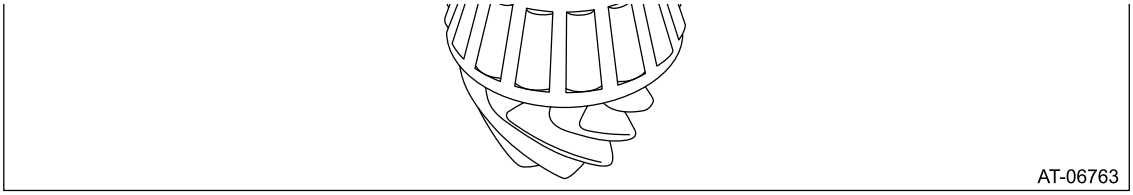
Using the following formula, calculate the tightening torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 170 — 250 N·m (17.3 — 25.5 kgf-m, 125.4 — 184.4 ft-lb) [Specified tightening torque range]
T2: Tightening torque
L1: ST1 length 0.072 m (2.83 in)
L2: Torque wrench length
Example:

Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	144 — 211 (14.7 — 21.5, 106.2 — 155.6)
0.45 (17.72)	147 — 215 (15.0 — 21.9, 108.4 — 158.6)
0.5 (19.69)	149 — 218 (15.2 — 22.2, 109.9 — 160.8)
0.55 (21.65)	150 — 221 (15.3 — 22.5, 110.6 — 163.0)

12. Install the drive pinion retainer to the converter case, and check the backlash and tooth contact. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>ADJUSTMENT. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>ADJUSTMENT.

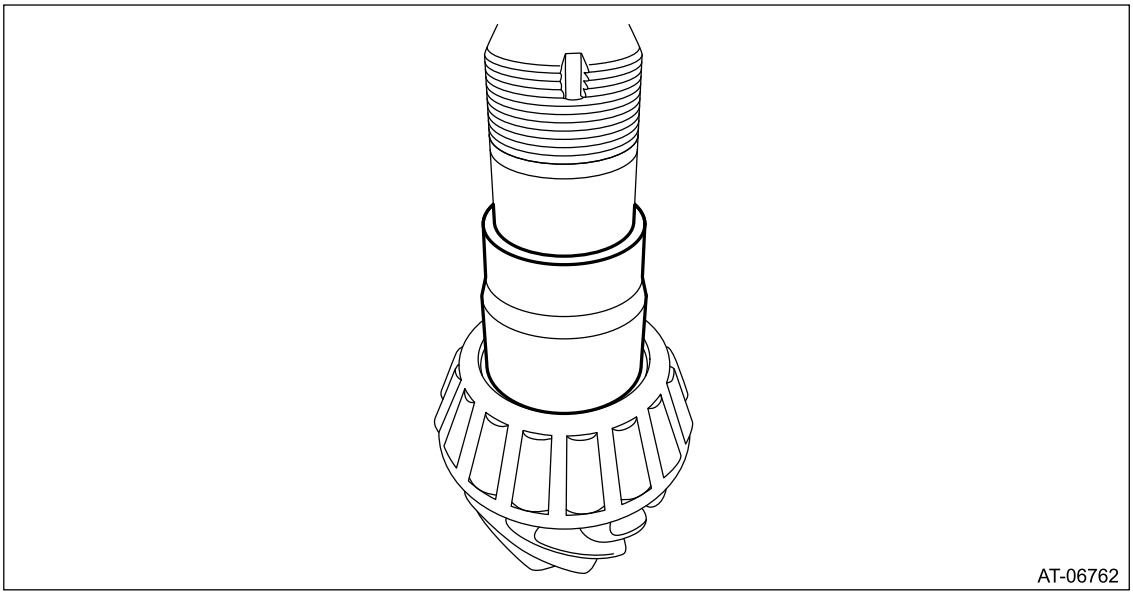


13. Remove the drive pinion retainer from converter case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>REMOVAL.



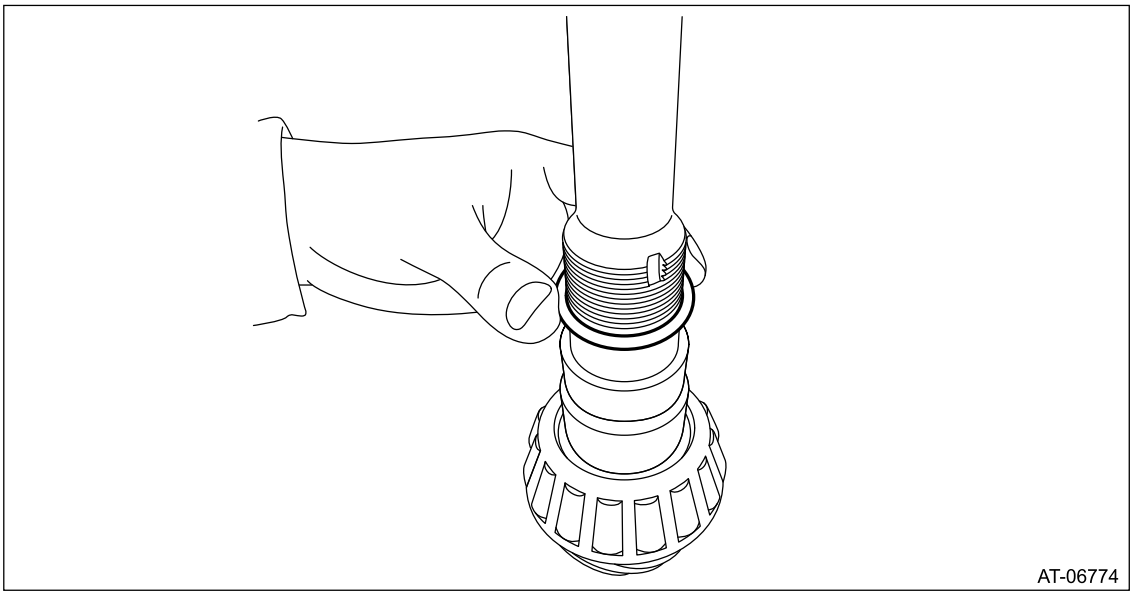
14. Remove the drive pinion spacer from the drive pinion shaft. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>DISASSEMBLY.

15. Install the O-ring to the drive pinion shaft.

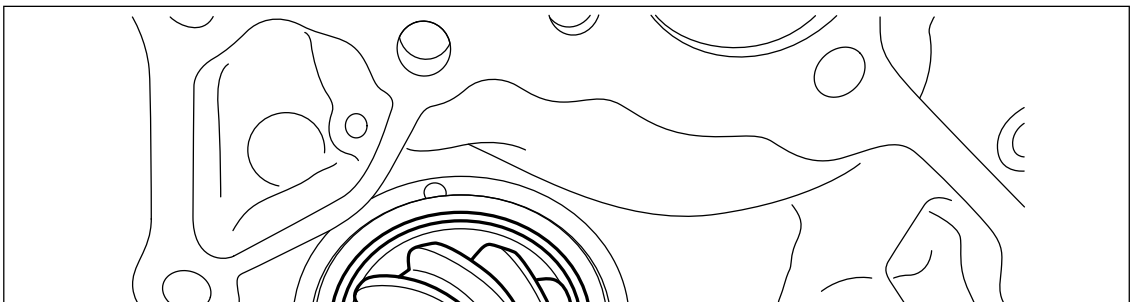


Note:

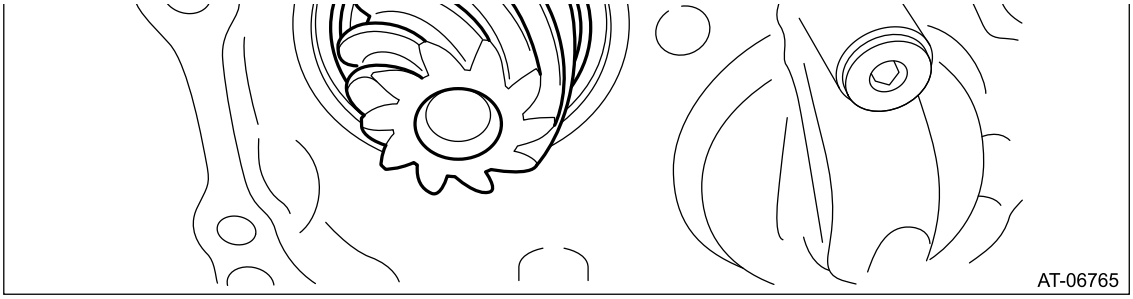
- **Use new O-rings.**
- **Apply CVTF to the O-rings.**



16. Install the drive pinion spacer to the drive pinion shaft.



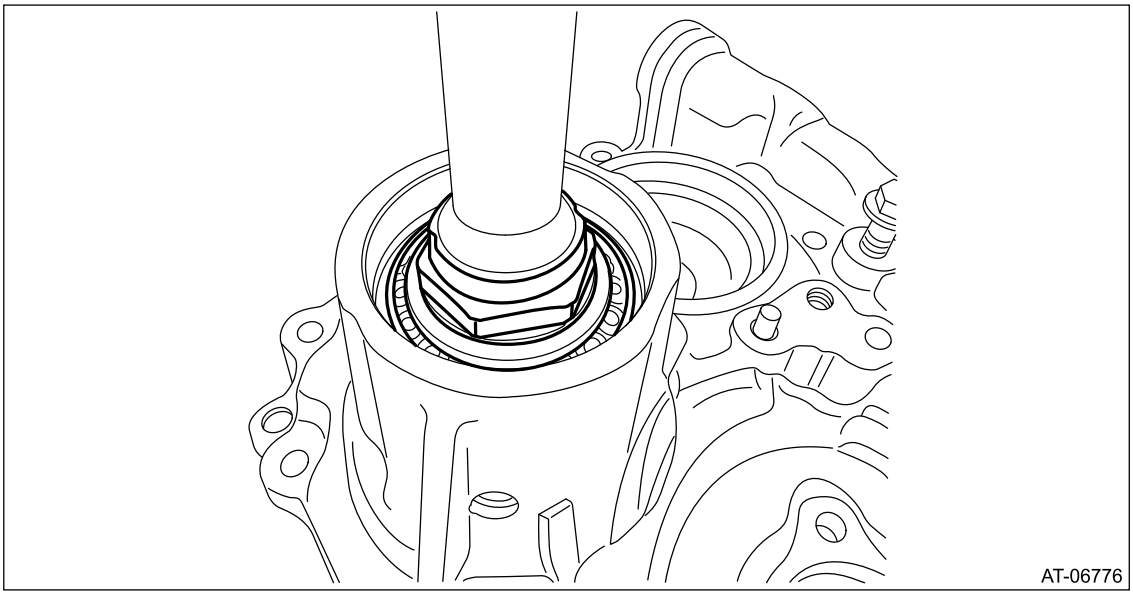
17. Install the drive pinion washer.



18. Insert the drive pinion shaft into the drive pinion retainer.

Caution:

Be careful not to damage the oil seal.



19. Install the inner bearing and lock nut.

Note:

Apply differential gear oil to the threaded portion of the drive pinion shaft.

20. Using the ST1, ST2 and ST3, tighten the lock nut to the specified torque so that the starting torque of the drive pinion shaft is within the specified range.

Caution:

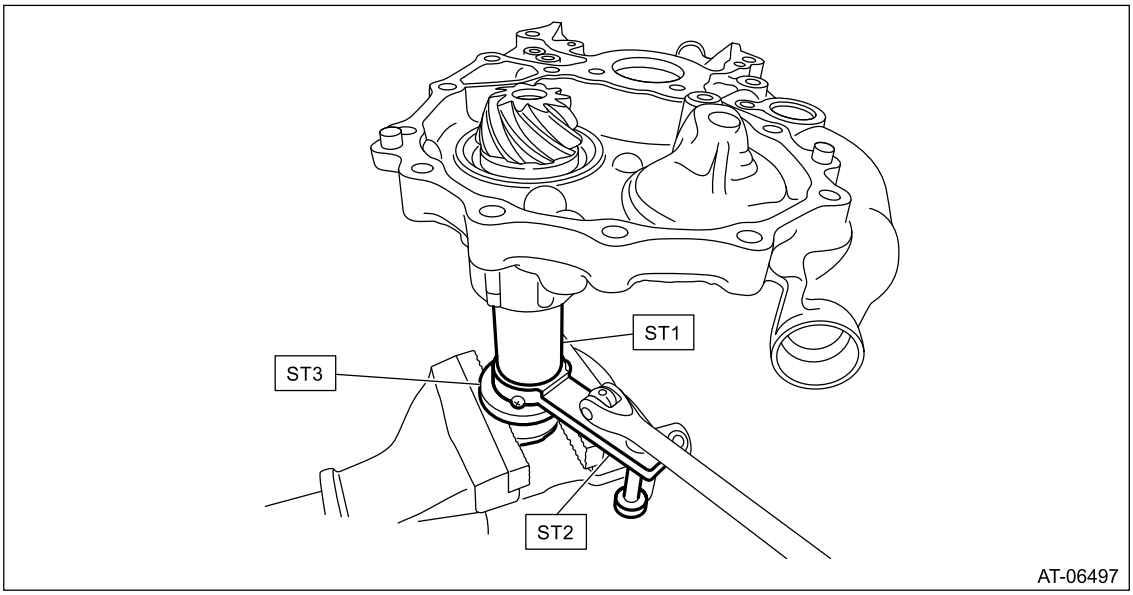
Before inspecting the starting torque, apply differential gear oil to roller of bearing and rotate the bearing several times.

Note:

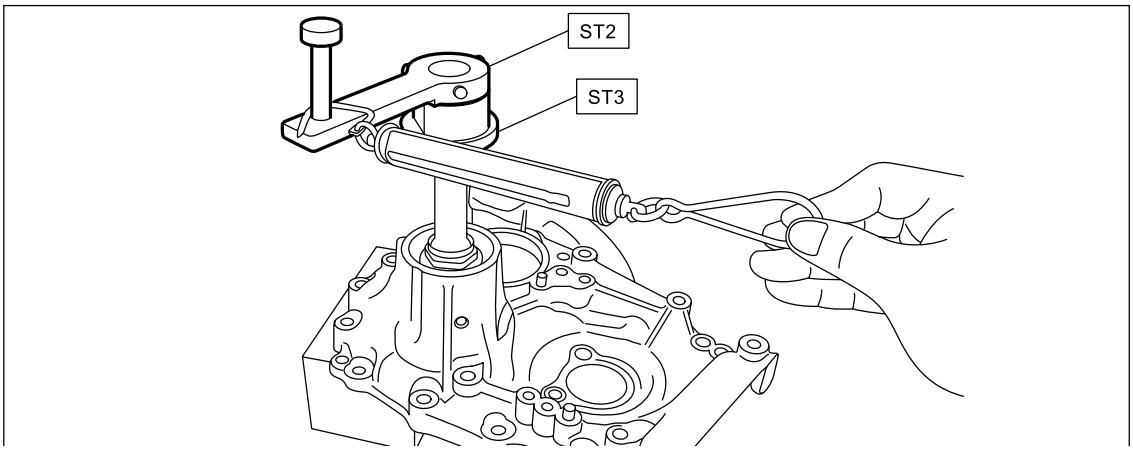
- **Tighten the lock nut while directly aligning ST2 and torque wrench.**
- **If the starting torque is not within the specified range, select the drive pinion washer, and repeat the step until the starting torque is within the specified range.**
- **When a thicker drive pinion washer is selected, the starting torque decreases. When a thinner drive pinion washer is selected, the starting torque increases.**

Starting torque:

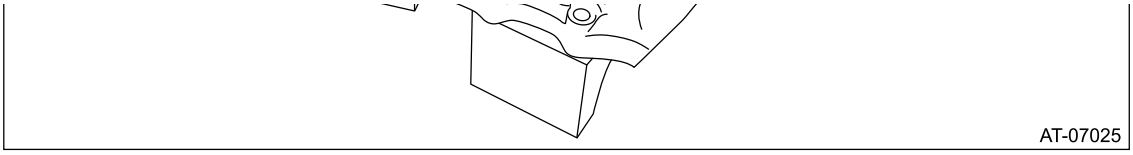
5.1 — 17.1 N (0.5 — 1.7 kgf, 1.1 — 3.8 lbf)



Preparation tool:



ST1: ADAPTER (499787500)
ST2: WRENCH (499787700)
ST3: HOLDER (498937110)



Using the following formula, calculate the tightening torque for a torque wrench.
$T2 = L2/(L1 + L2) \times T1$
T1: 170 — 250 N·m (17.3 — 25.5 kgf-m, 125.4 — 184.4 ft-lb) [Specified tightening torque range]
T2: Tightening torque
L1: ST1 length 0.072 m (2.83 in)
L2: Torque wrench length
Example:

Example:

Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	144 — 211 (14.7 — 21.5, 106.2 — 155.6)
0.45 (17.72)	147 — 215 (15.0 — 21.9, 108.4 — 158.6)
0.5 (19.69)	149 — 218 (15.2 — 22.2, 109.9 — 160.8)
0.55 (21.65)	150 — 221 (15.3 — 22.5, 110.6 — 163.0)
