21. Crimp the lock nut in 2 locations.

22. Install the plug using ST1 and ST2.

Preparation tool:

ST1: PRESS SNAP RING (499755602)

ST2: INSTALLER (398177700)

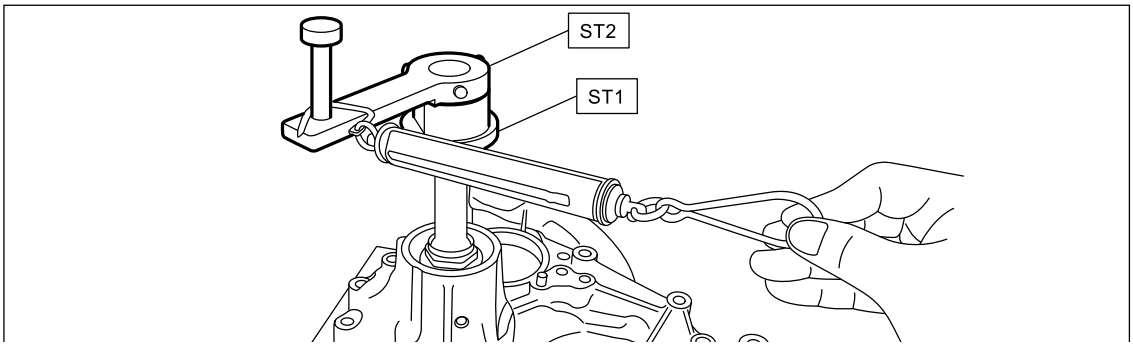
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Drive Pinion Shaft Assembly

INSPECTION

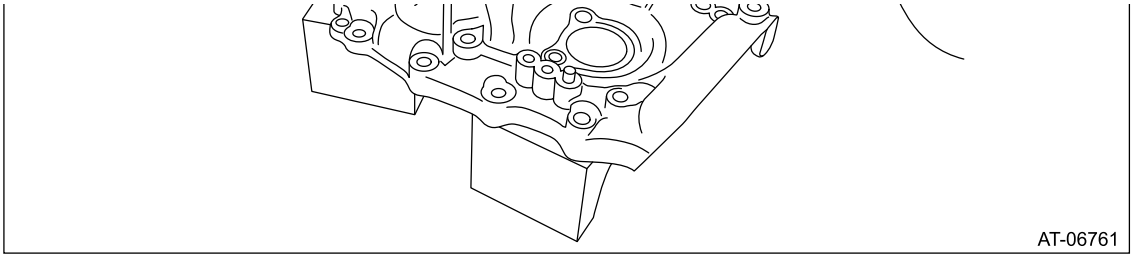
- Make sure that all component parts are free of scratches, holes and other faults.
- Check the tooth contact. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>ADJUSTMENT.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the starting torque of drive pinion shaft.

Caution:

Before measuring, apply differential gear oil to roller of bearing and rotate the bearing several times.



Preparation tool:



ST1: HOLDER (498937110)

ST2: WRENCH (499787700)

Starting torque:

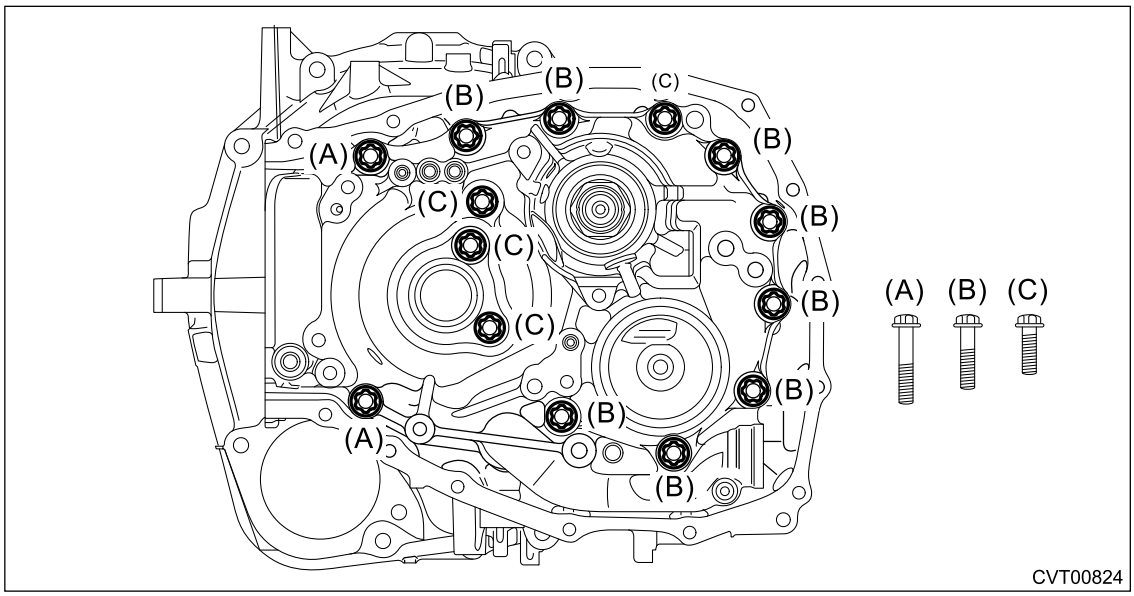
5.1 — 17.1 N (0.5 — 1.7 kgf, 1.1 — 3.8 lbf)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Drive Pinion Shaft Assembly

ADJUSTMENT

1. Remove the liquid gasket from the mating surface completely.
2. Using the ST, install the drive pinion retainer to converter case.

Preparation tool:



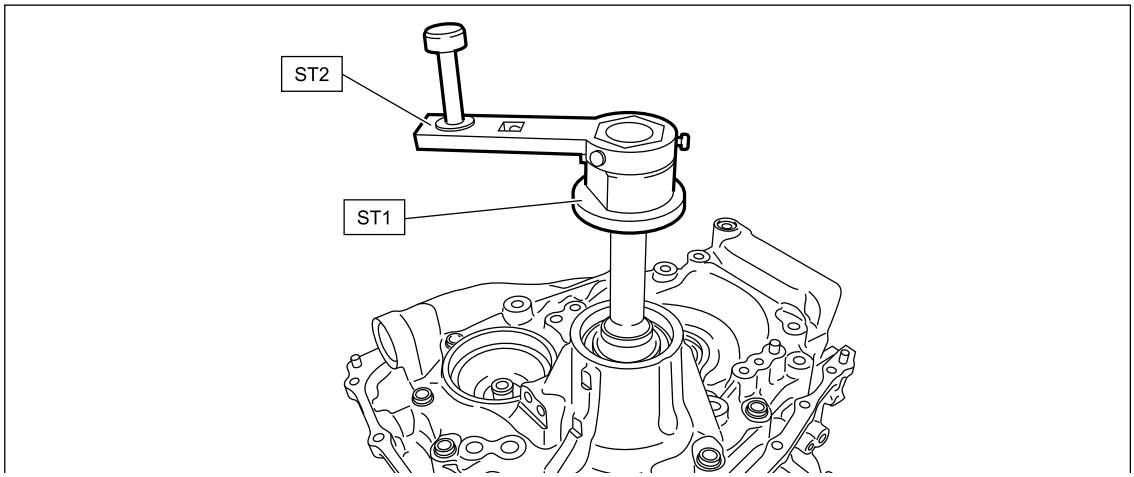
ST: SOCKET (E20) (18270KA020)

Note:

Do not confuse the three different-length bolts when installing.

Tightening torque:

43 N·m (4.4 kgf-m, 31.7 ft-lb)

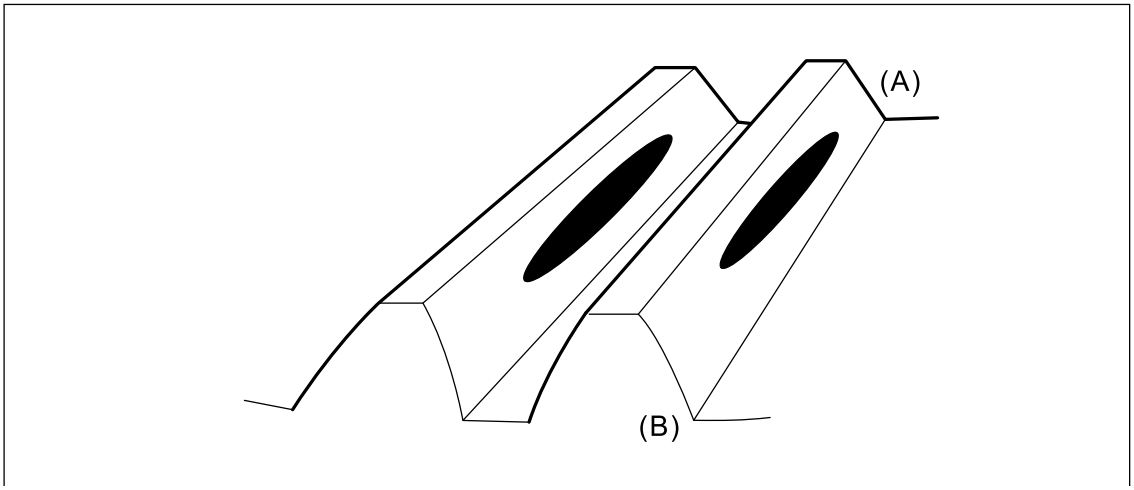


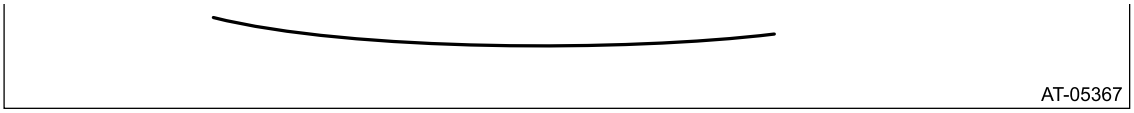
3. Rotate the drive pinion several times using ST1 and ST2.

Preparation tool:

ST1: HOLDER (498937110)

ST2: WRENCH (499787700)

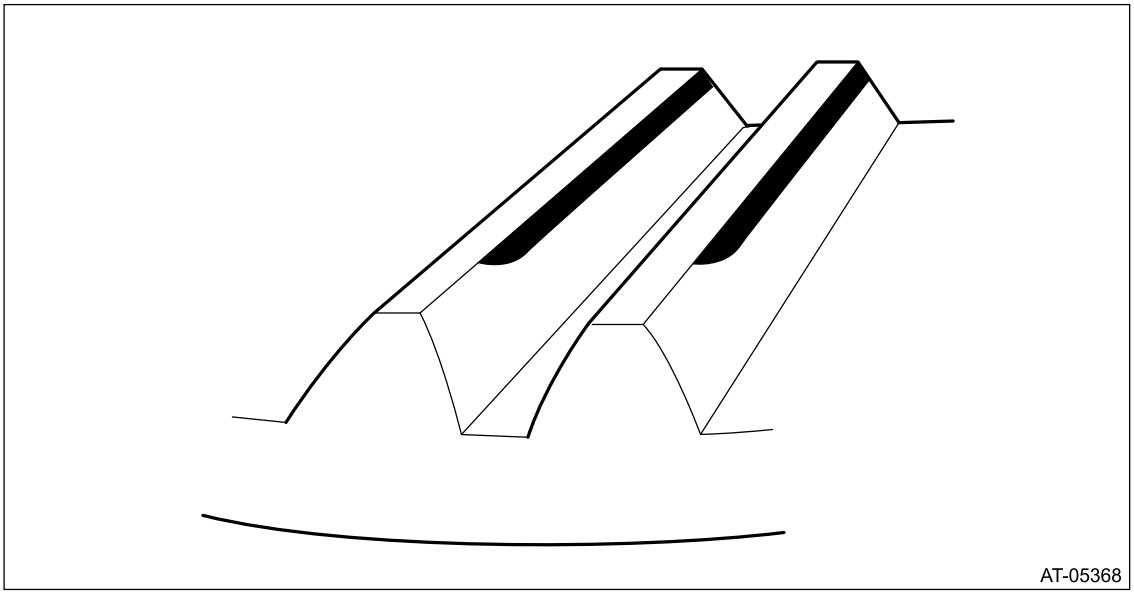


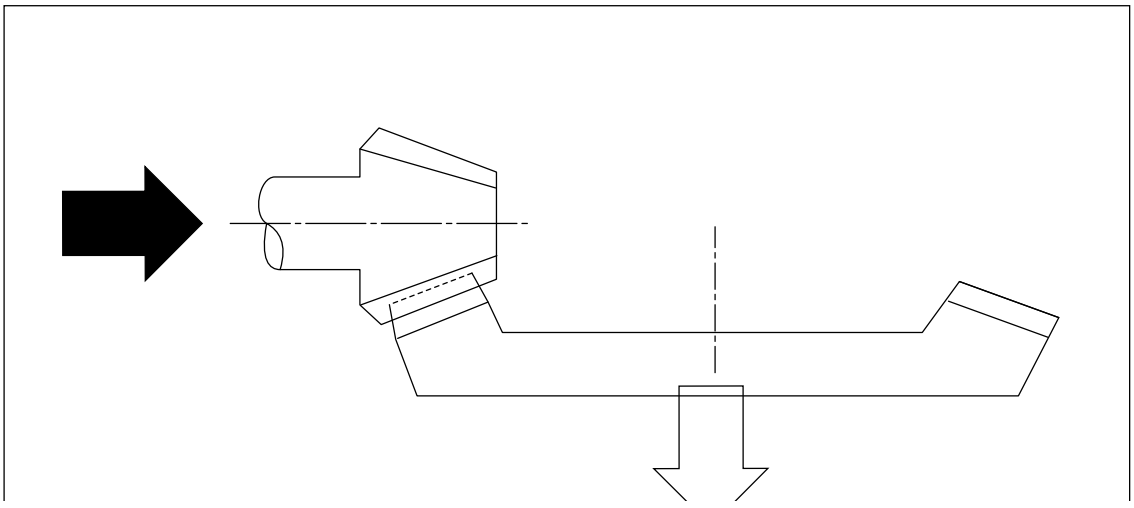


4. Adjust the drive pinion and hypoid driven gear backlash. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>ADJUSTMENT.
5. Using the ST, remove the drive pinion retainer from converter case.
   Preparation tool:
   ST: SOCKET (E20) (18270KA020)
6. Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Then install the drive pinion retainer and rotate the drive pinion in both directions several times. Remove the drive pinion retainer and check the tooth contact pattern.
   If the teeth contact is inappropriate, adjust the backlash or thickness of the shim. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>ADJUSTMENT.
   Note:
   After correction, wipe off the lead-free red dye.

Drive pinion shim	
Part No.	**Thickness mm (in)**
31451AA320	0.150 (0.0059)
31451AA330	0.175 (0.0069)
31451AA340	0.200 (0.0079)
31451AA350	0.225 (0.0089)
31451AA360	0.250 (0.0098)
31451AA370	0.275 (0.0108)

- Correct tooth contact
  Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

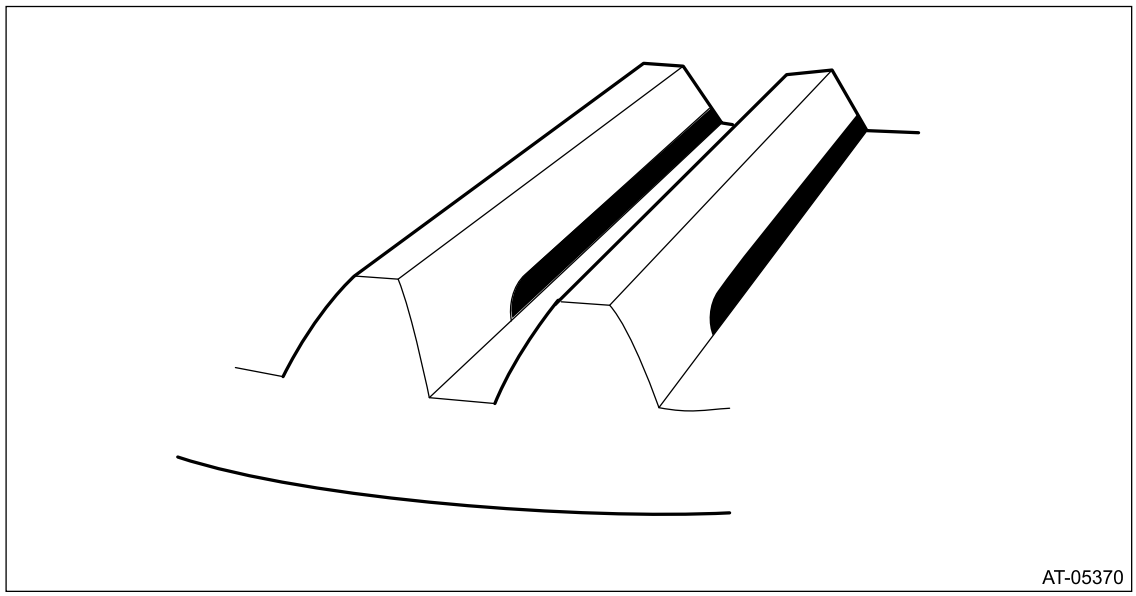




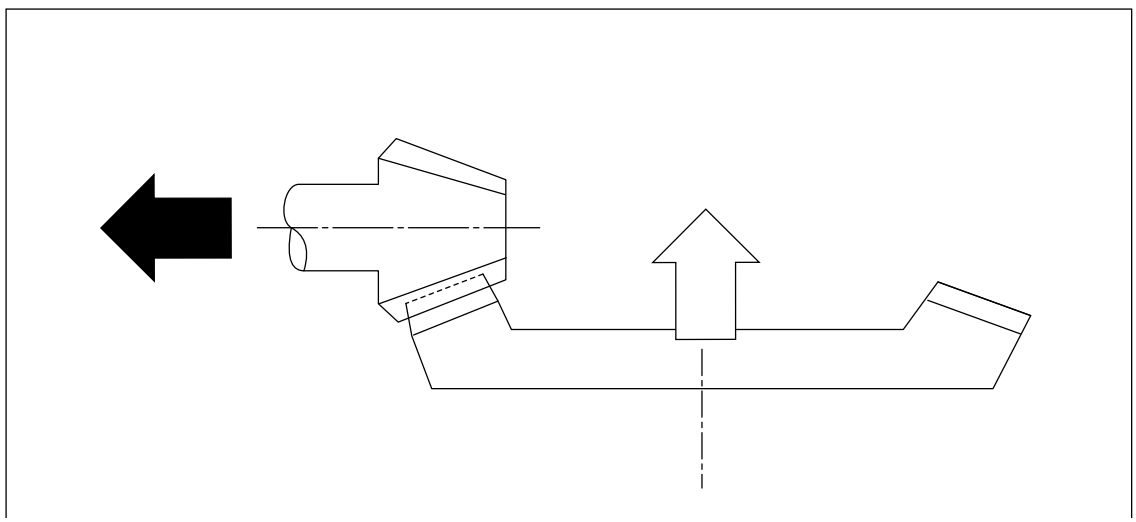
(A) Toe side

(B) Heel side

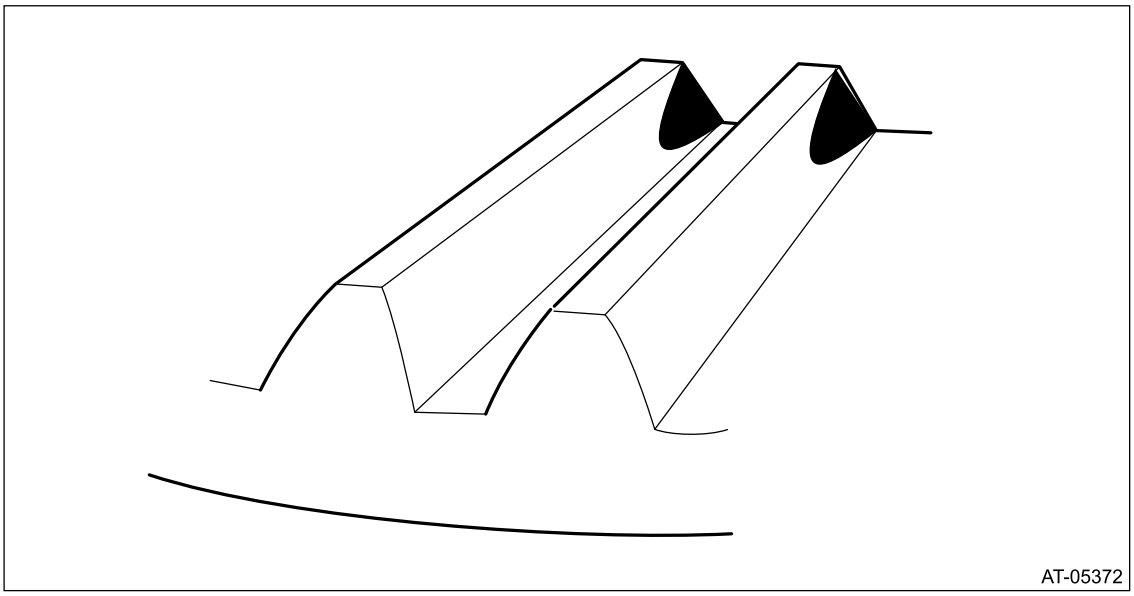
- Face contact
  Check item: Backlash is too large.
  Contact pattern



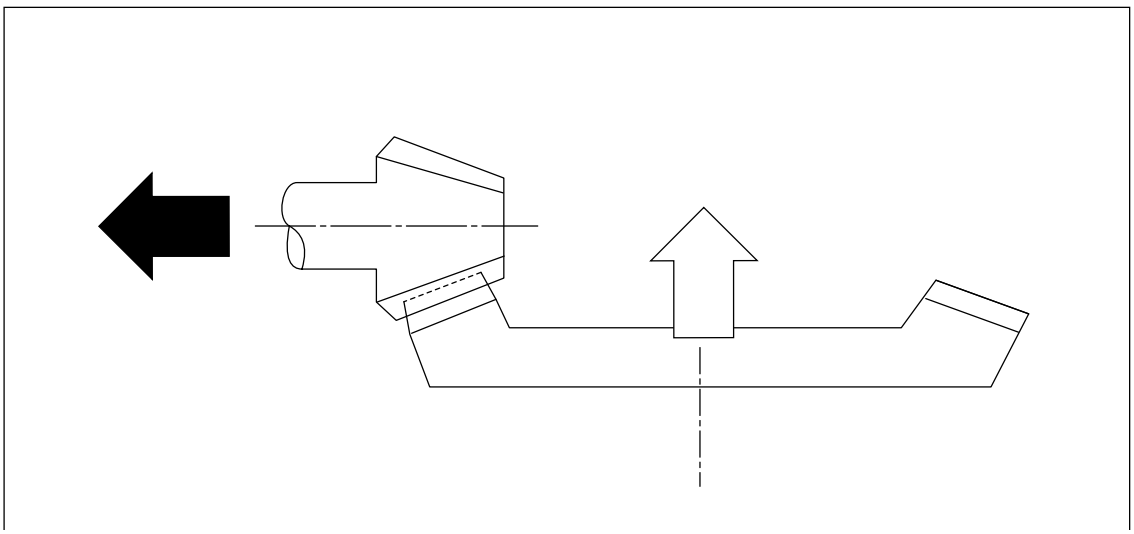
Corrective action: Increase thickness of drive pinion shim according to the procedures for moving the drive pinion close to hypoid driven gear.



- Flank contact
  Check item: Backlash is too small.
  Contact pattern

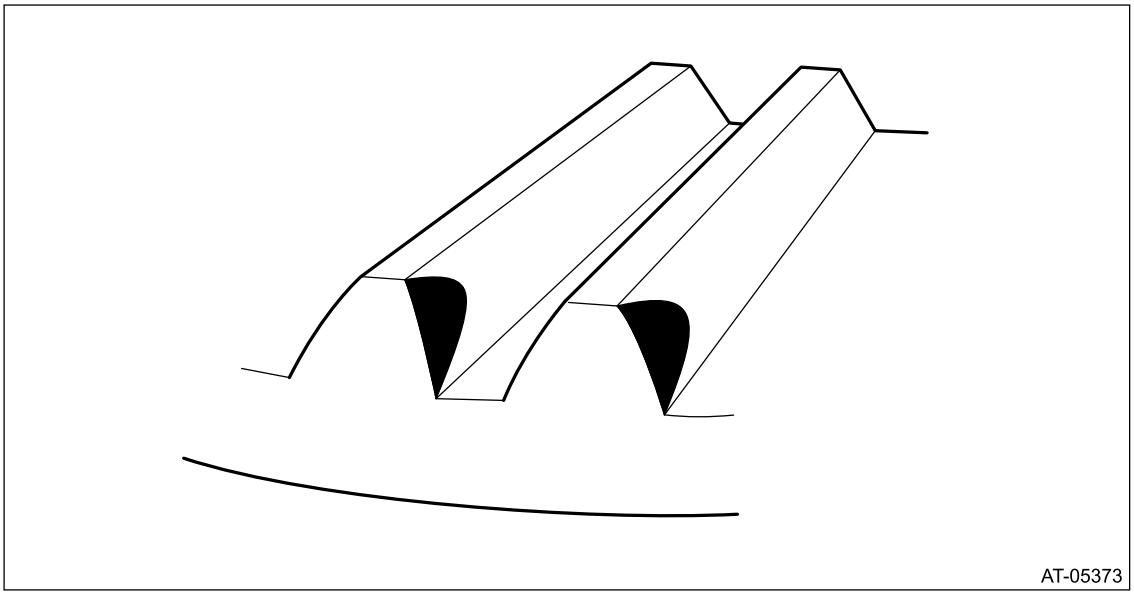


Corrective action: Reduce the thickness of the drive pinion shim according to the procedures for moving the drive pinion away from the hypoid driven gear.



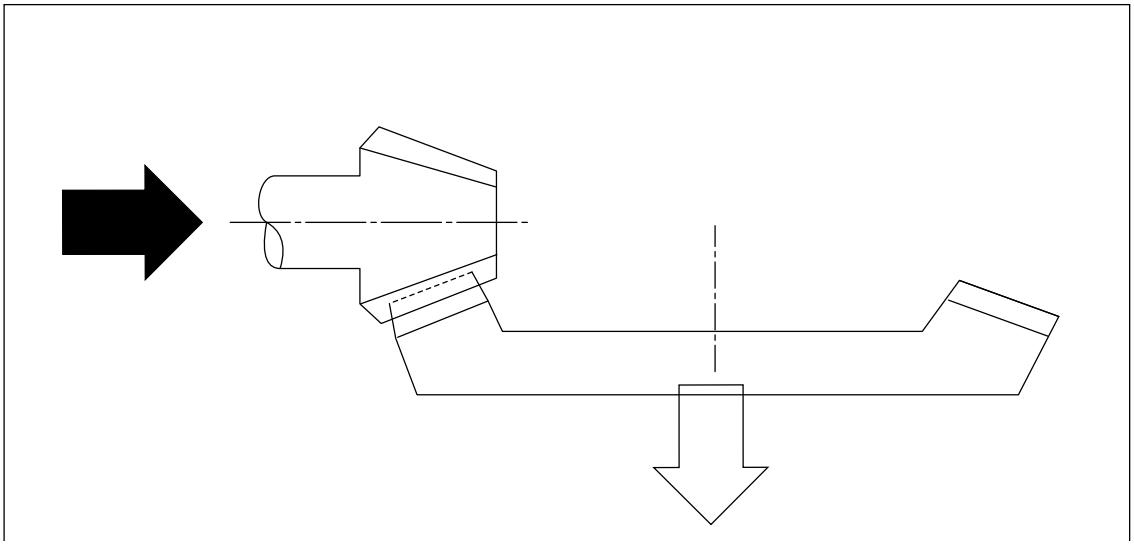
AT-05371

- Toe contact (inside contact)
  Check item: Teeth contact area is too small.
  Contact pattern



AT-05372

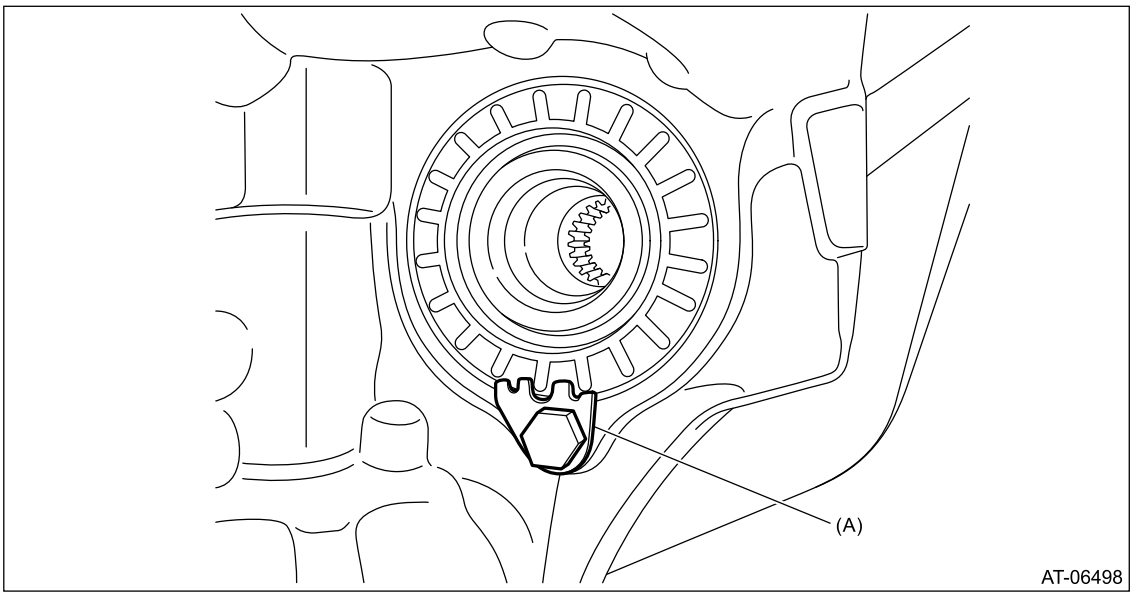
Corrective action: Reduce the thickness of the drive pinion shim according to the procedures for moving the drive pinion away from the hypoid driven gear side.



AT-05371

- Heel contact (outside end contact)
  Check item: Teeth contact area is too small.
  Contact pattern

AT-05373



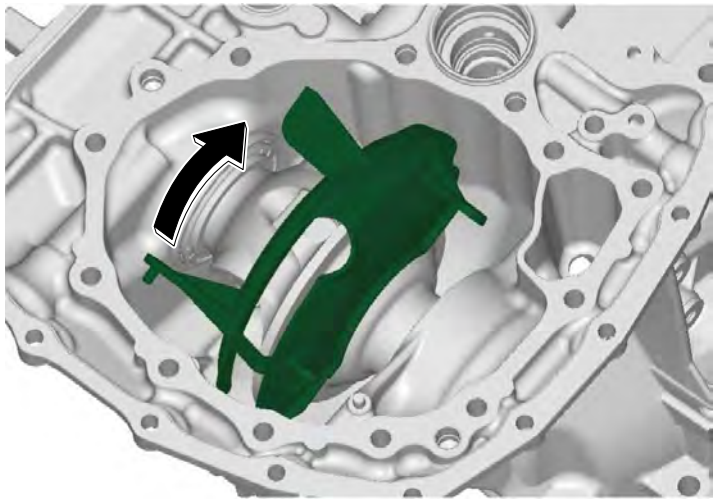
Corrective action: Increase the thickness of the drive pinion shim according to the procedures for moving the drive pinion closer to the hypoid driven gear.

AT-05369

7. Using the ST, loosen the differential side retainer until the mounting groove of the O-ring appears, and then install the O-ring.
   Note:
   - **When loosening the differential side retainer, record the number of the turns made.**
   - **Perform this for both left and right differential side retainers.**
   - **Use new O-rings.**
   - **Apply the differential gear oil to O-ring.**

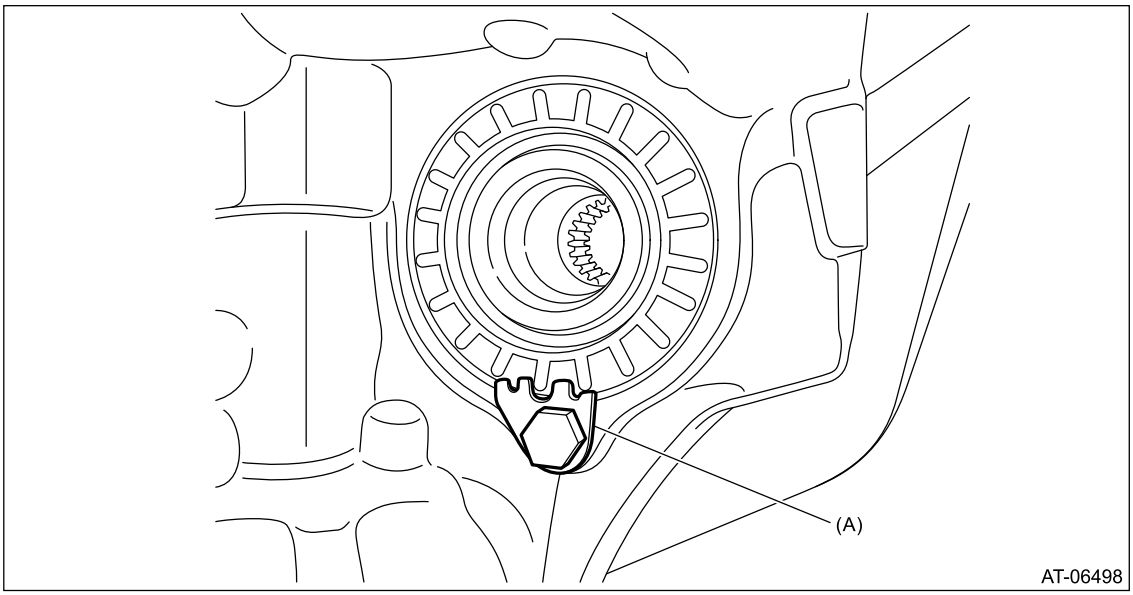
   Preparation tool:
   ST: WRENCH COMPL RETAINER (18658AA020)
8. Using the ST, tighten the retainer to the position before it is loosened.
   Preparation tool:
   ST: WRENCH COMPL RETAINER (18658AA020)
9. Replace the differential side retainer oil seal with a new part. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Side Retainer Oil Seal.
10. Install the lock plate.
    Tightening torque:
    25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Lock plate



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Front Differential Assembly

REMOVAL



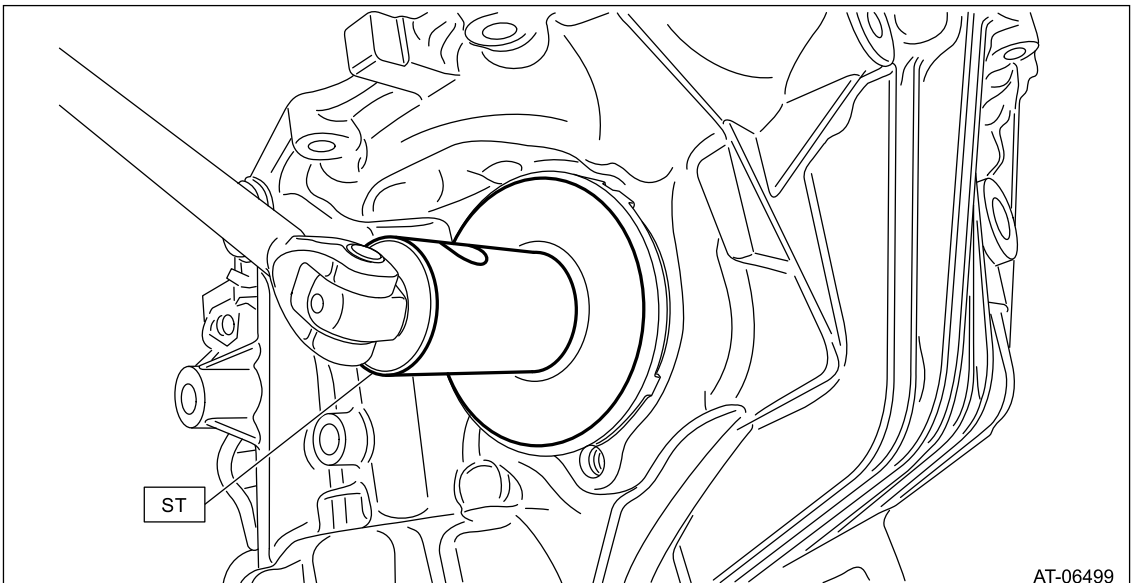
1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE

TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.

7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.
12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.
16. Remove the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>REMOVAL.
17. Remove the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>REMOVAL.
18. Remove the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>REMOVAL.
19. Remove the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>REMOVAL.
20. Remove the forward clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>REMOVAL.
21. Remove the drive pinion shaft assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>REMOVAL.
22. Remove the oil baffle.

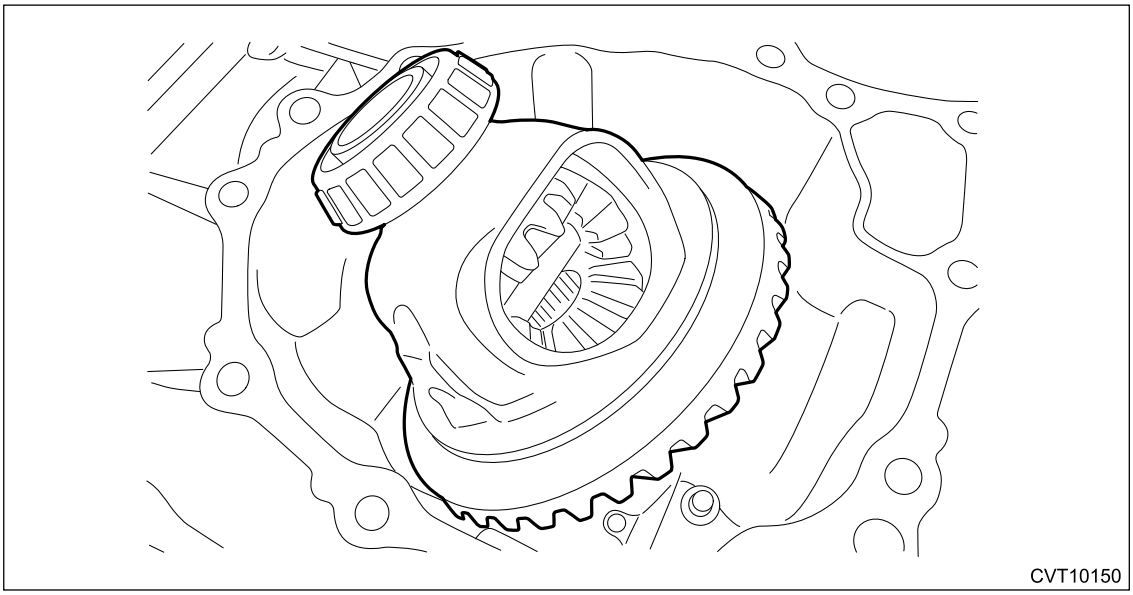
23. Remove the lock plates on both sides.

(A) Lock plate



24. Remove the differential side retainers using ST.

Note:



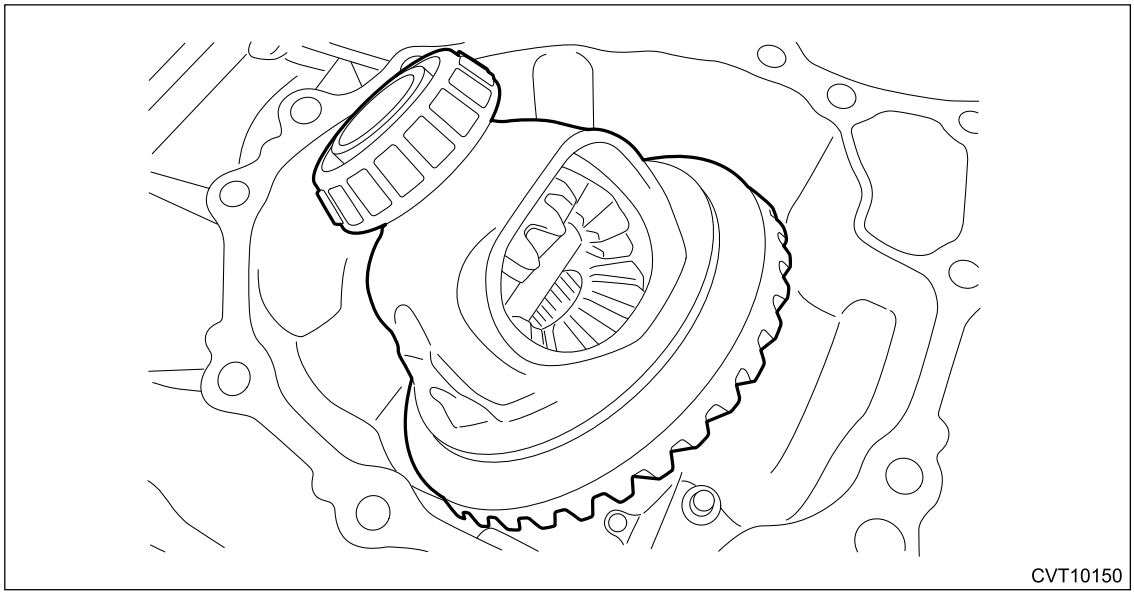
- **When the wrench COMPL retainer interferes with the converter case, align the cutout portion with the interference part.**
- **Support the differential case assembly by hand to avoid damaging the retainer mounting hole of the converter case.**
- **Keep the left and right differential side retainers and left and right bearing outer races by attaching tags or in similar ways to make it possible to identify RH and LH sides.**

Preparation tool:

ST: WRENCH COMPL RETAINER (18658AA020)

25. Remove the front differential assembly while being careful not to damage the attachment part of the retainer.

26. Remove the oil seals and O-rings from both differential side retainers. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>DISASSEMBLY > SIDE RETAINER.

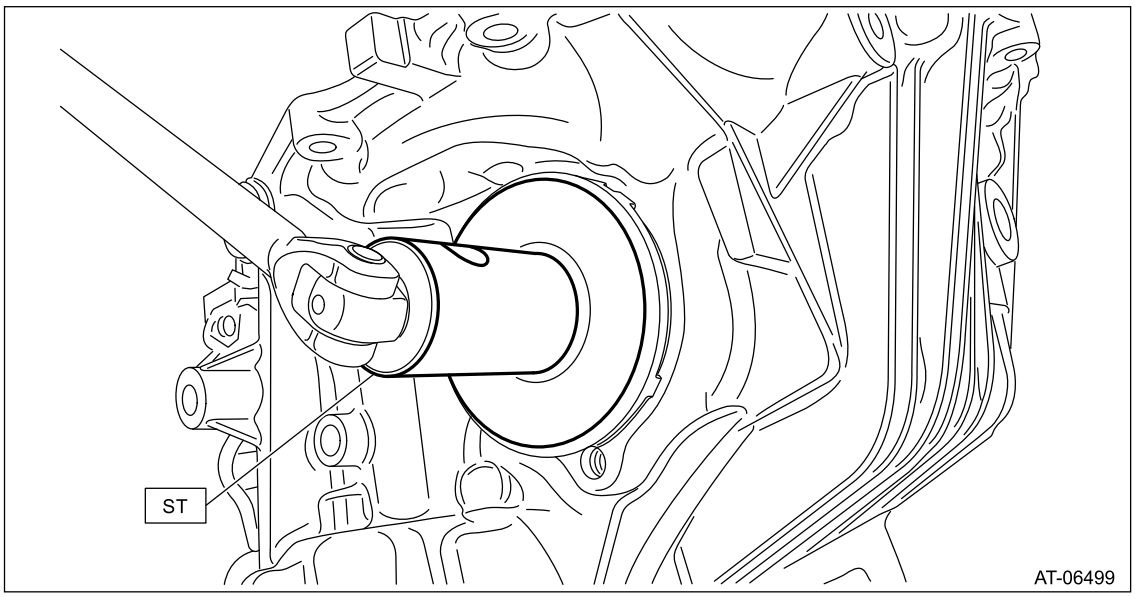


CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Front Differential Assembly

INSTALLATION

1. Install the front differential assembly to the converter case.

Note:



Be careful not to damage the inside of the case (especially the mounting surface of the differential side retainers).

2. Install the bearing outer race.
3. Temporarily install the differential side retainers using ST.

Preparation tool:

ST: WRENCH COMPL RETAINER (18658AA020)

4. Adjust the backlash of the front differential. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>ADJUSTMENT.
5. Inspect and adjust the tooth contact. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>ADJUSTMENT.
6. Using the ST, loosen the differential side retainer until the mounting groove of the O-ring appears, and then install the O-ring.

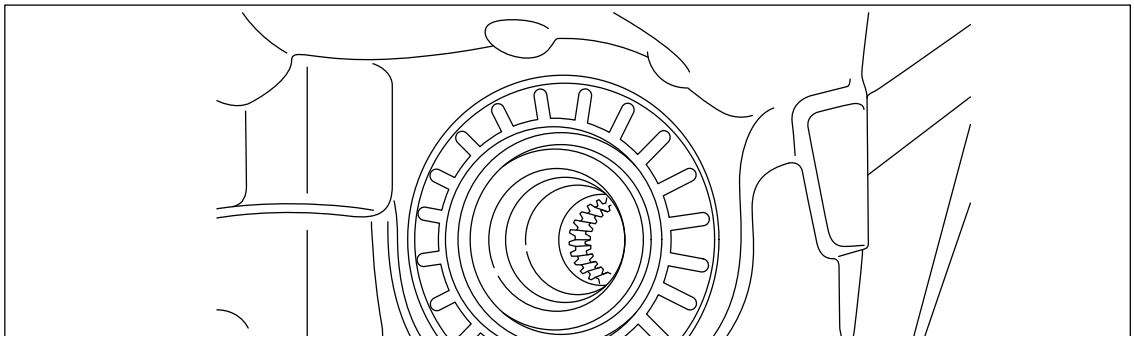
Note:

- **When loosening the differential side retainer, record the number of the turns made.**
- **Perform this for both left and right differential side retainers.**
- **Use new O-rings.**
- **Apply the differential gear oil to O-ring.**

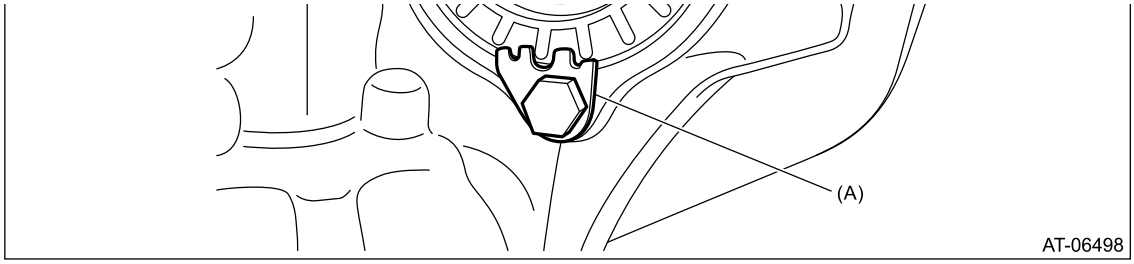
Preparation tool:

ST: WRENCH COMPL RETAINER (18658AA020)

7. Using the ST, tighten the retainer to the position before it is loosened.



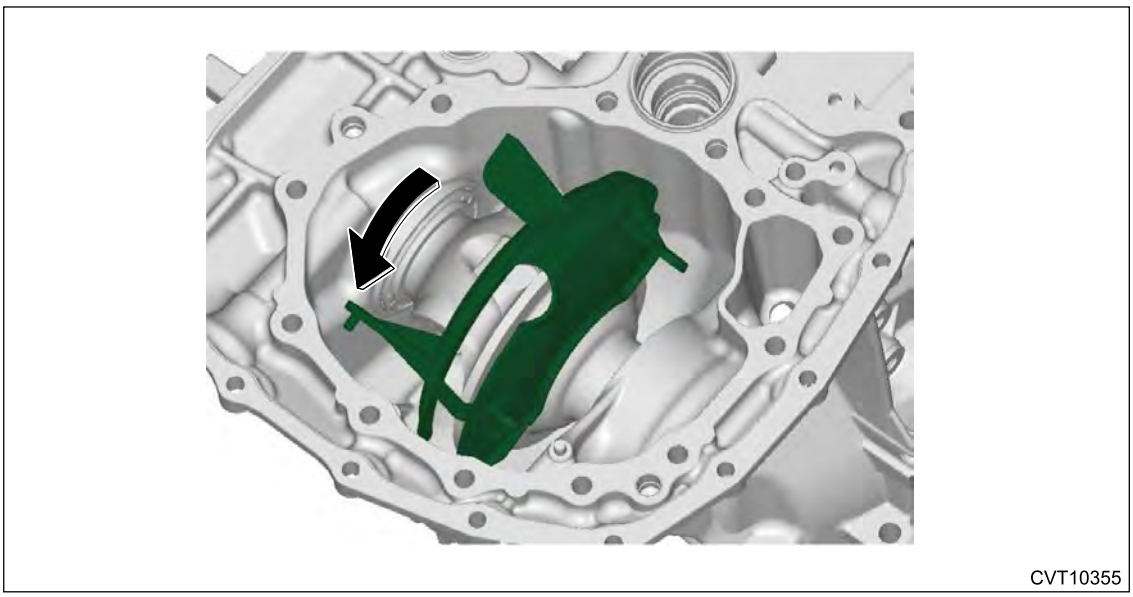
Preparation tool:



ST: WRENCH COMPL RETAINER (18658AA020)

8. Install the oil seal to the differential side retainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Side Retainer Oil Seal.
9. Install the lock plate.

Tightening torque:



25 N·m (2.5 kgf-m, 18.4 ft-lb)

(A) Lock plate

10. Install the oil baffle.

11. Install the drive pinion shaft assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>INSTALLATION.

12. Install the forward clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>INSTALLATION.

13. Install the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>INSTALLATION.

14. Install the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>INSTALLATION.

15. Install the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>INSTALLATION.

16. Install the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.

17. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.

18. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.

19. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.

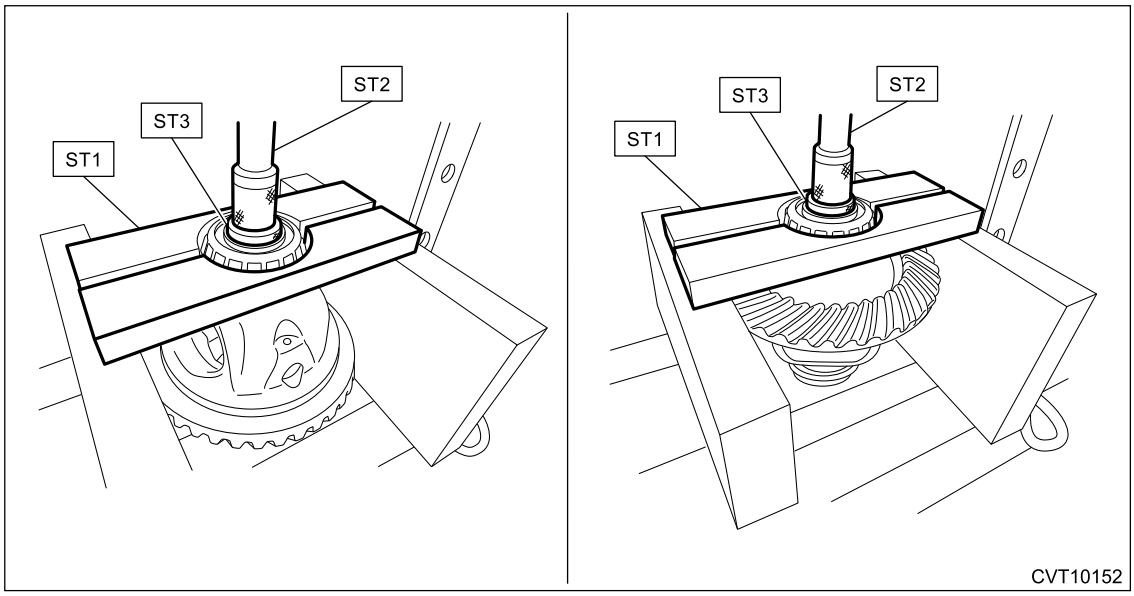
20. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.

21. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.

22. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.

23. Install the extension case. Ref. to CONTINUOUSLY VARIABLE

TRANSMISSION(TR580)>Extension Case>INSTALLATION.

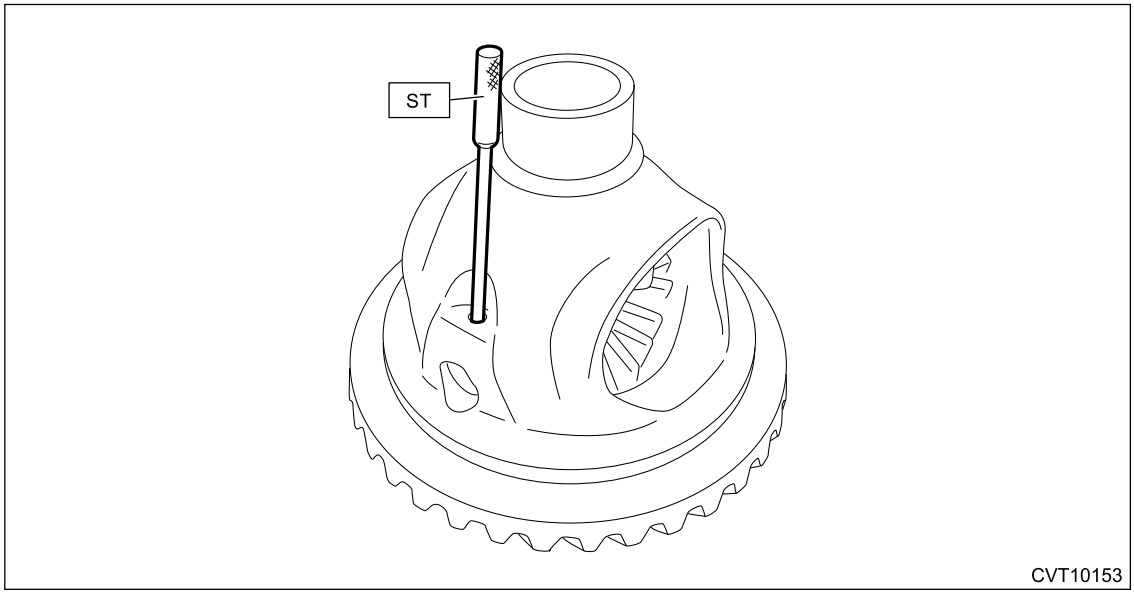


24. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
25. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
26. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.
27. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
28. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
29. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
30. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
31. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

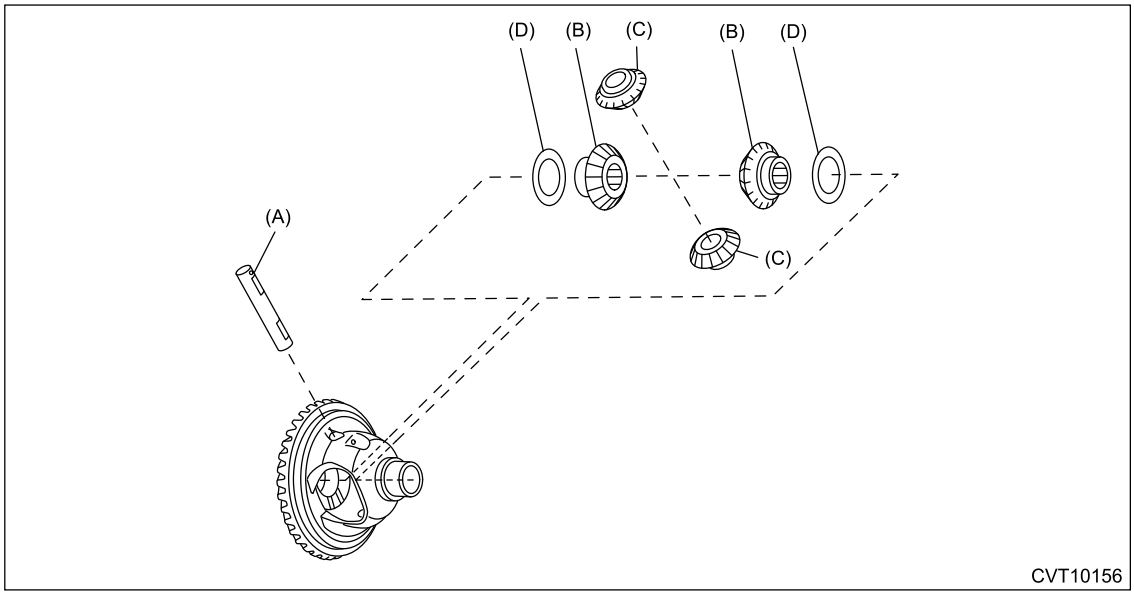
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Front Differential Assembly

DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY



1. Remove the taper roller bearing using ST1, ST2 and ST3.
   Preparation tool:
   ST1: REMOVER (498077000)
   ST2: REMOVER (899864100)
   ST3: SEAT (398497701)



2. Using the ST, remove the spring pin.

Preparation tool:

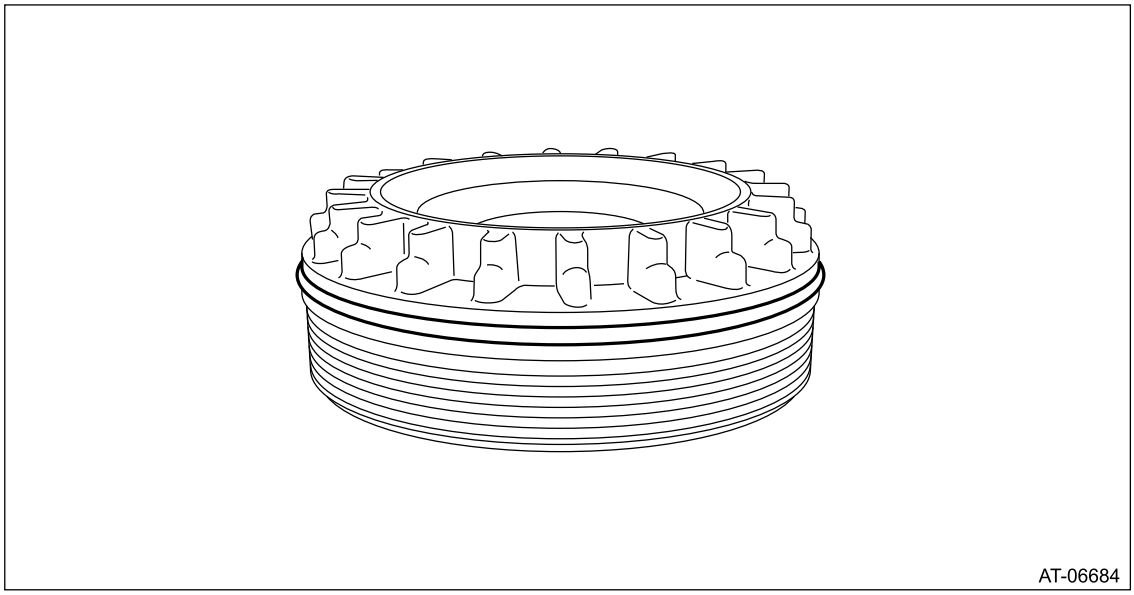
ST: STRAIGHT PIN REMOVER (899904100)

3. Remove the pinion shaft, and remove the differential bevel pinion, differential bevel gear and washer.

(A) Pinion shaft

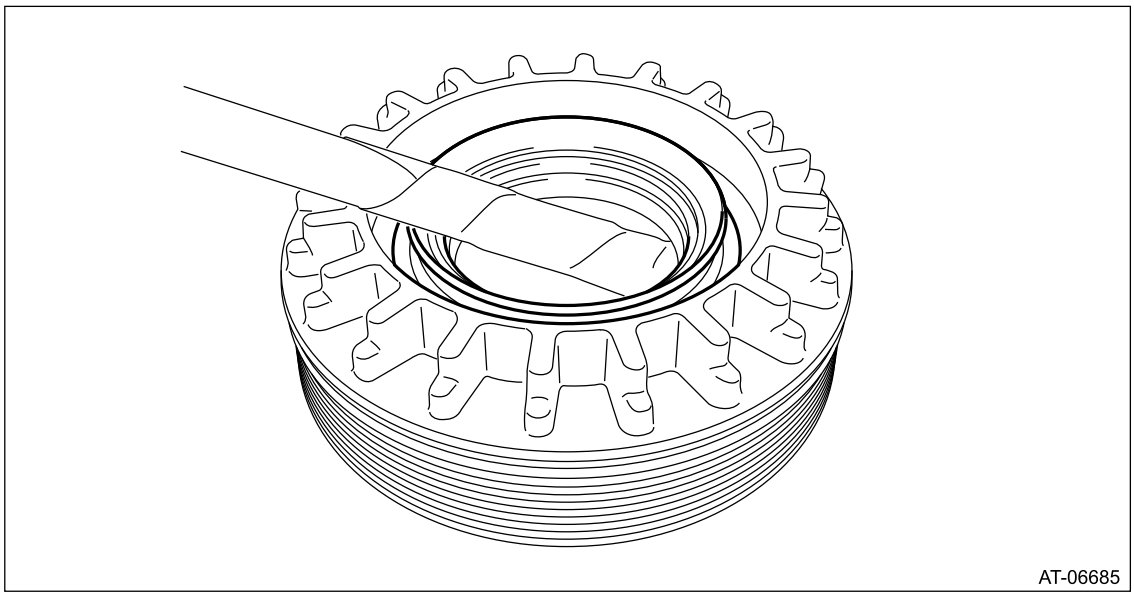
(B) Differential bevel gear

(C) Differential bevel pinion



(D) Washer

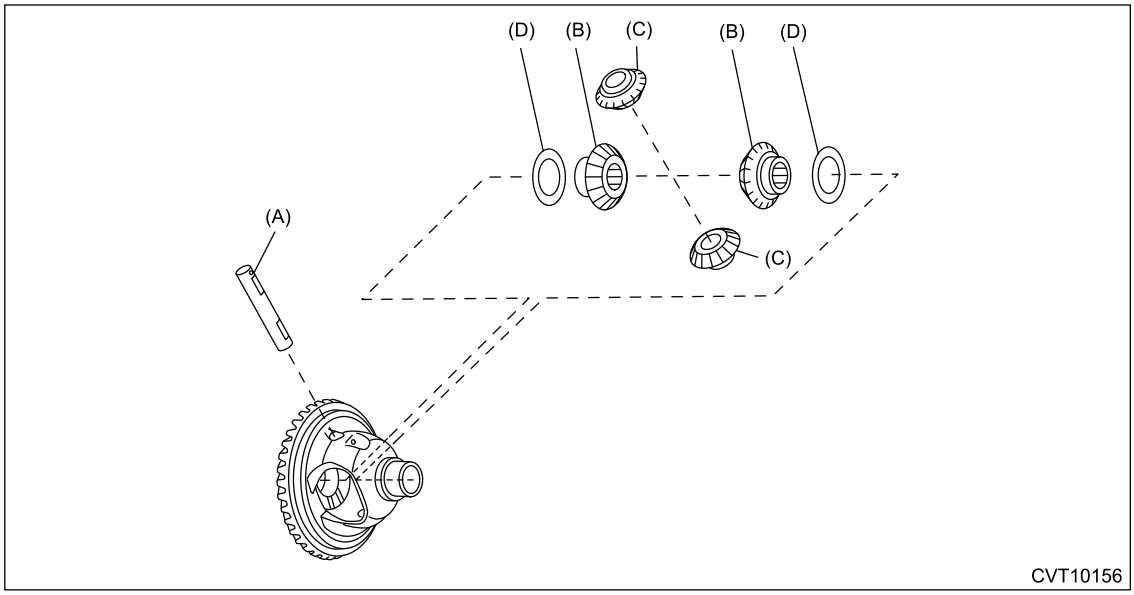
2. SIDE RETAINER



Note:

After adjusting the drive pinion backlash and tooth contact, replace the oil seal and O-ring with new parts.

1. Remove the O-rings.



2. Remove the oil seal.

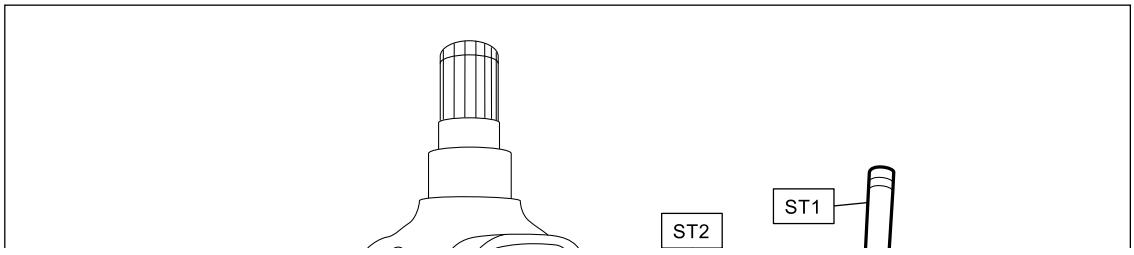
ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

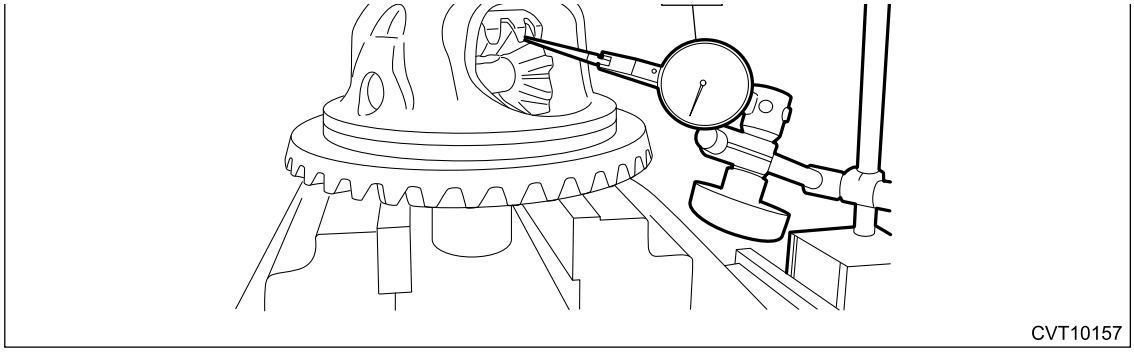
1. Install the differential bevel gear and differential bevel pinion together with washer, and install the pinion shaft.

(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion
(D) Washer

2. Measure the backlash, and select the washer.
(1) Install the SUBARU genuine axle shaft to differential case.



Part No. 38415AA070 AXLE SHAFT



(2) Using ST1 and ST2, insert the ST2 through the window of differential case. Measure the backlash of the gear.

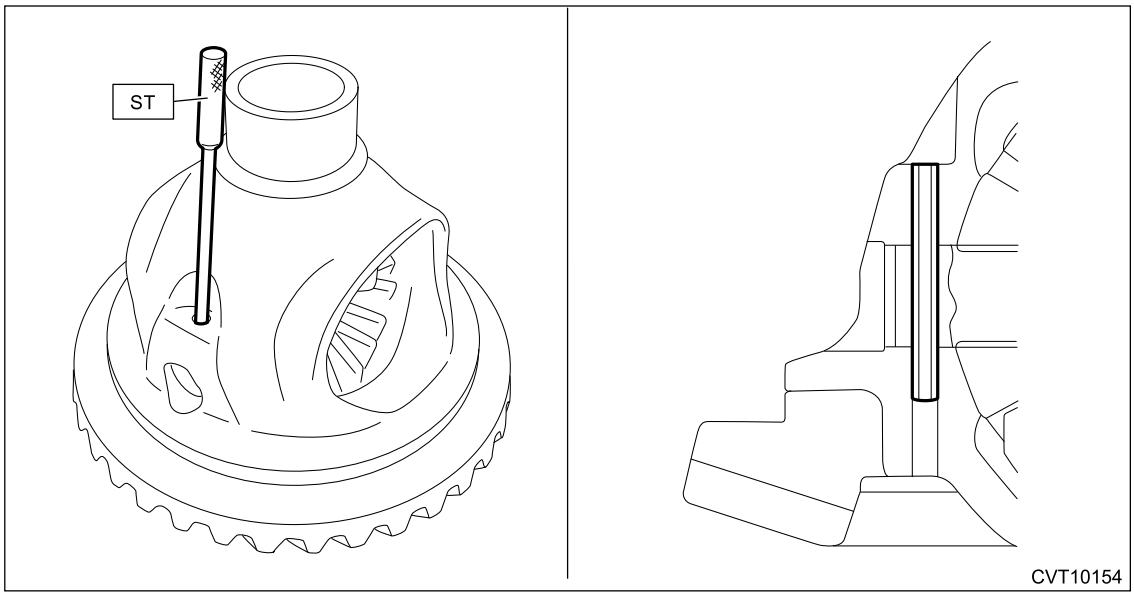
Note:
- **Measure the backlash by applying a differential bevel pinion tooth between two differential bevel gear teeth.**
- **When measuring, fix the differential bevel pinion in place with a screwdriver covered with cloth, or a similar tool.**

Preparation tool:
ST1: MAGNET BASE (498247001)
ST2: DIAL GAUGE (498247100)

Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)

(3) If the backlash is not within specification, select a washer from the table below and replace.

Washer	
Part No.	**Thickness mm (in)**
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

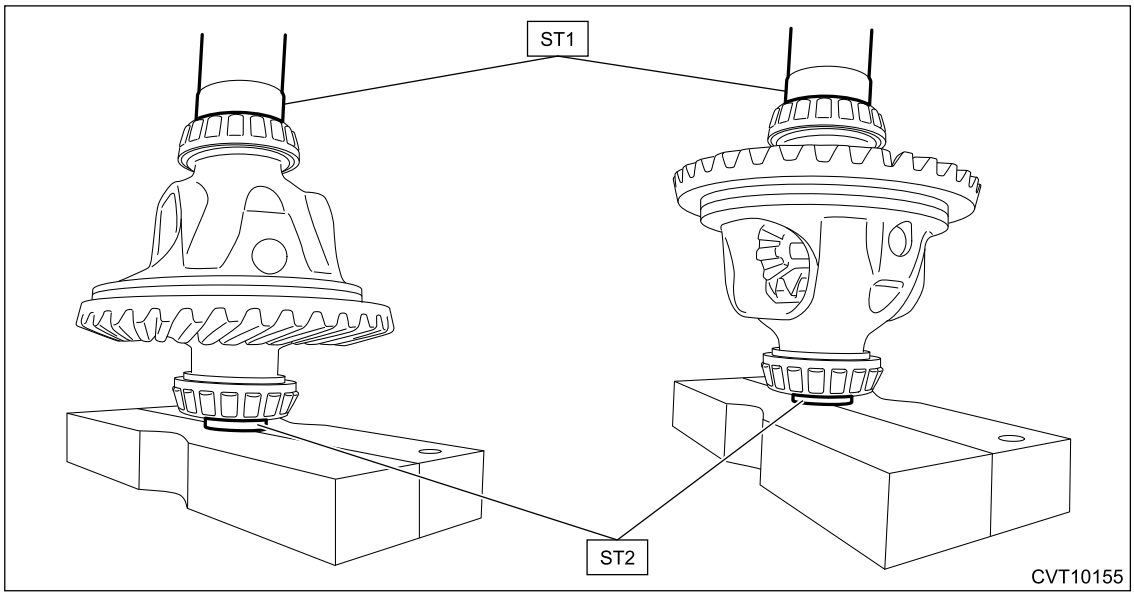


3. Align the pinion shaft and differential case holes, and install the spring pin to the holes from the hypoid driven gear side using the ST.

Note:

Use new spring pin.

Preparation tool:

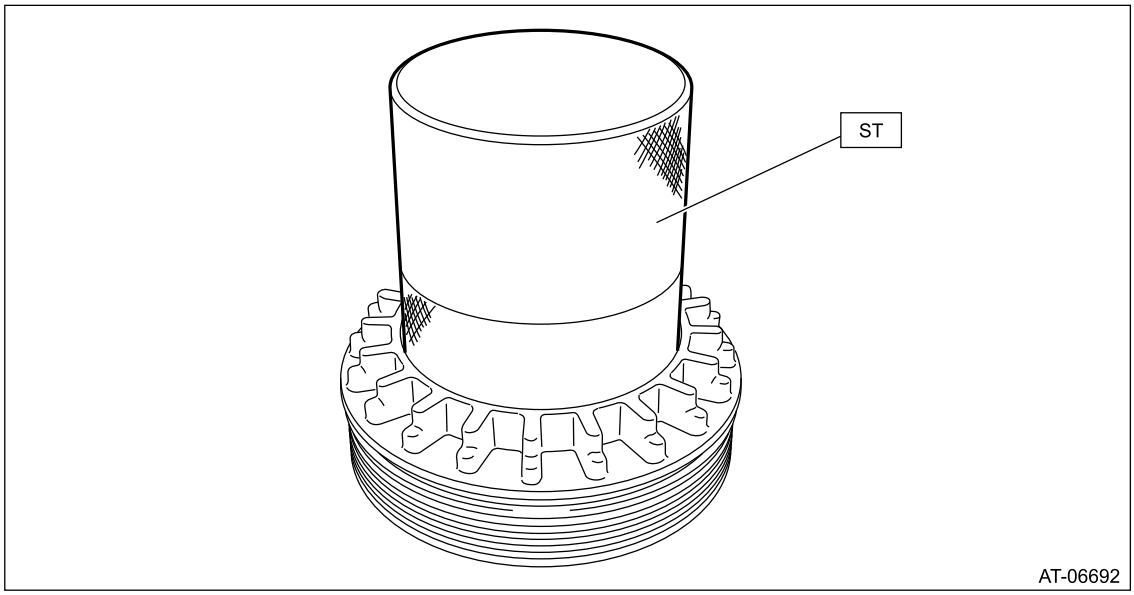


ST: STRAIGHT PIN REMOVER (899904100)

4. Using the ST1 and ST2, install the left and right taper roller bearings.

Preparation tool:

ST1: BUSHING 1-2 INSTALLER (499277100)
ST2: SEAT (398497701)

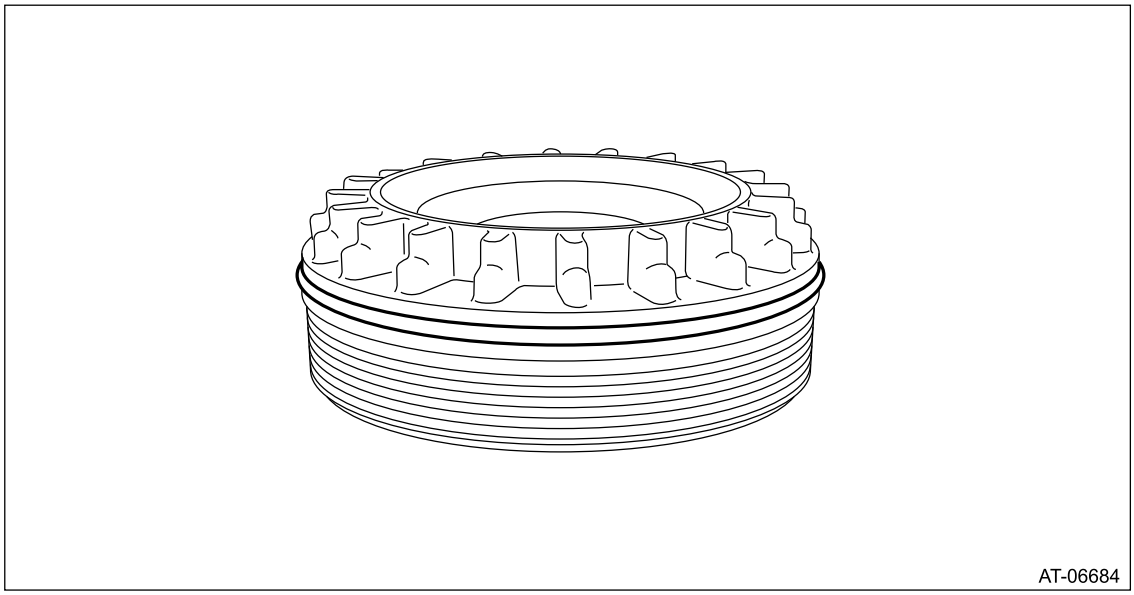


2. SIDE RETAINER

Note:
After adjusting the backlash and tooth contact, replace the oil seal and O-ring of side retainer with new parts.

1. Using the ST, install the oil seal.

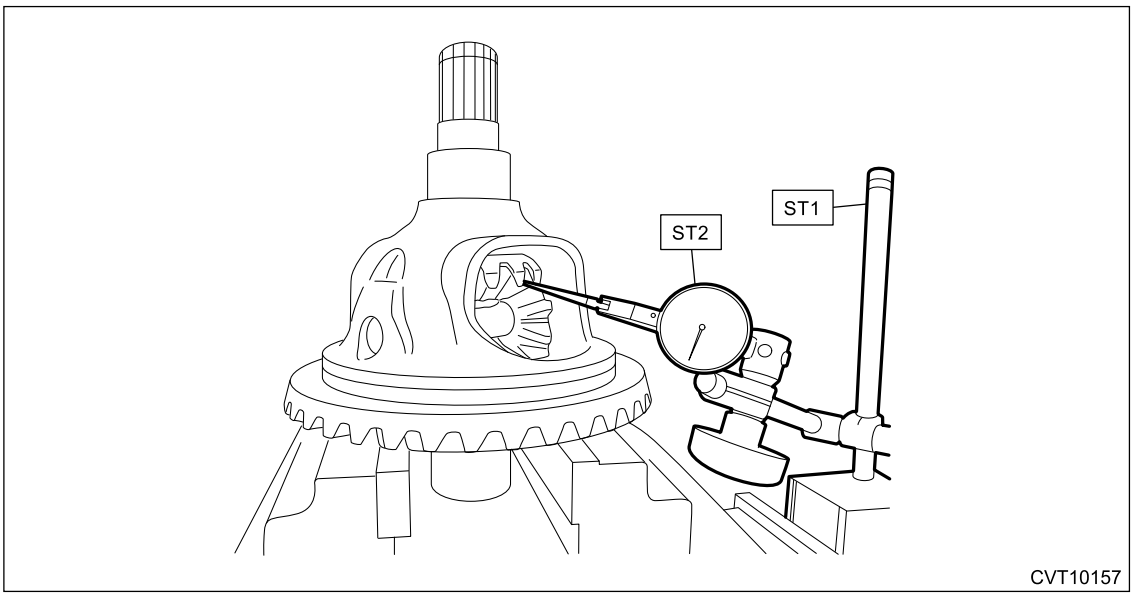
Note:
- **Use a new oil seal.**
- **Apply differential gear oil to the oil seal lip and press-fitting surface.**
- **Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.**



Preparation tool:
ST: DIFFERENTIAL SIDE OIL SEAL INSTALLER (18675AA000)

2. Install the O-rings.

Note:
- **Use new O-rings**



- **Use new O-rings.**
- **Apply the differential gear oil to O-ring.**

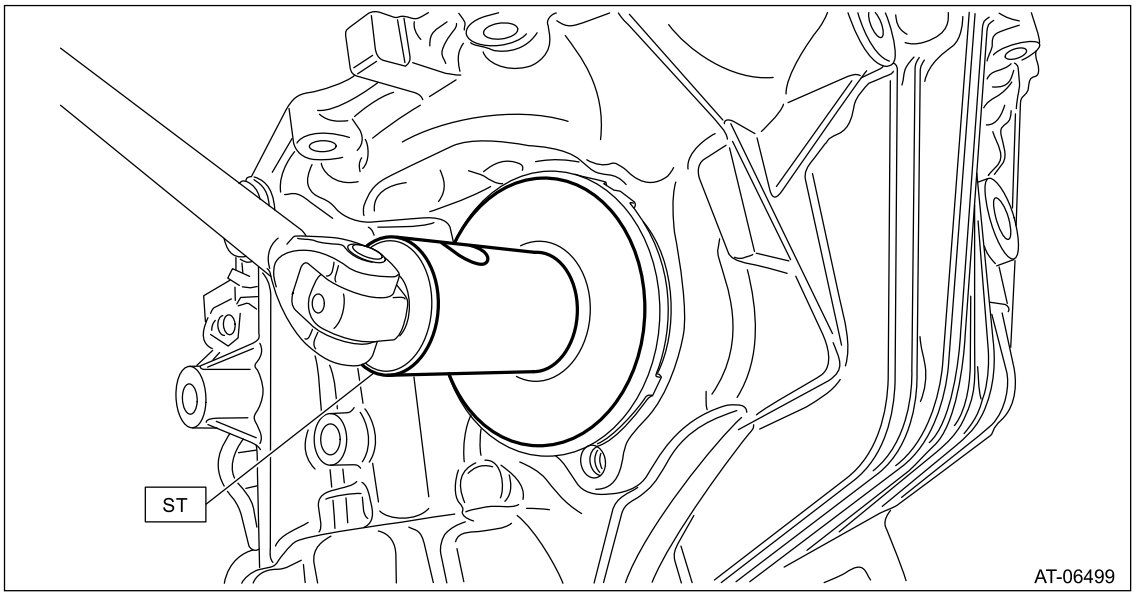
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Front Differential Assembly

INSPECTION

- Check each component for scratches, damage or other faults.
- Check the pinion gear backlash with ST1 and ST2.
  Preparation tool:
  ST1: MAGNET BASE (498247001)
  ST2: DIAL GAUGE (498247100)
  Specification:
  0.13 — 0.18 mm (0.0051 — 0.0071 in)

- Measure the hypoid gear backlash, and then adjust it to be within specification. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>ADJUSTMENT.

ADJUSTMENT



1. Using the ST, screw-in the retainer until resistance is felt.

   Note:

   RH side should be screwed-in more than LH side.

   Preparation tool:

   ST: WRENCH COMPL RETAINER (18658AA020)

2. Remove the remaining liquid gasket from the mating surface completely.
3. Using the ST, install the drive pinion assembly to converter case.

   Preparation tool:

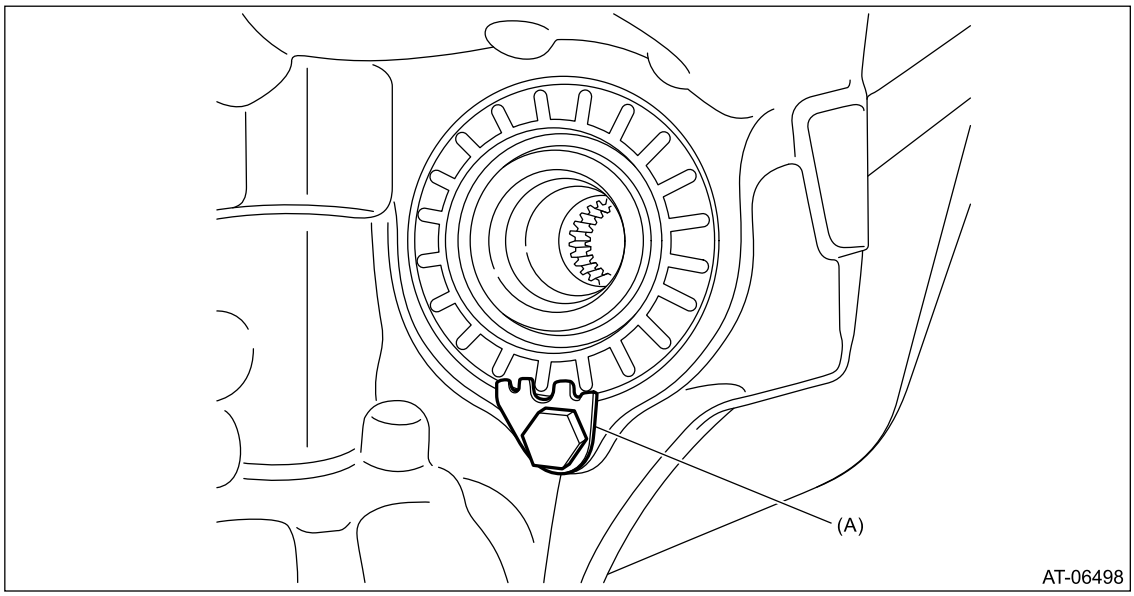
   ST: SOCKET (E20) (18270KA020)

   Note:

   Do not confuse the three different-length bolts when installing.

   Tightening torque:

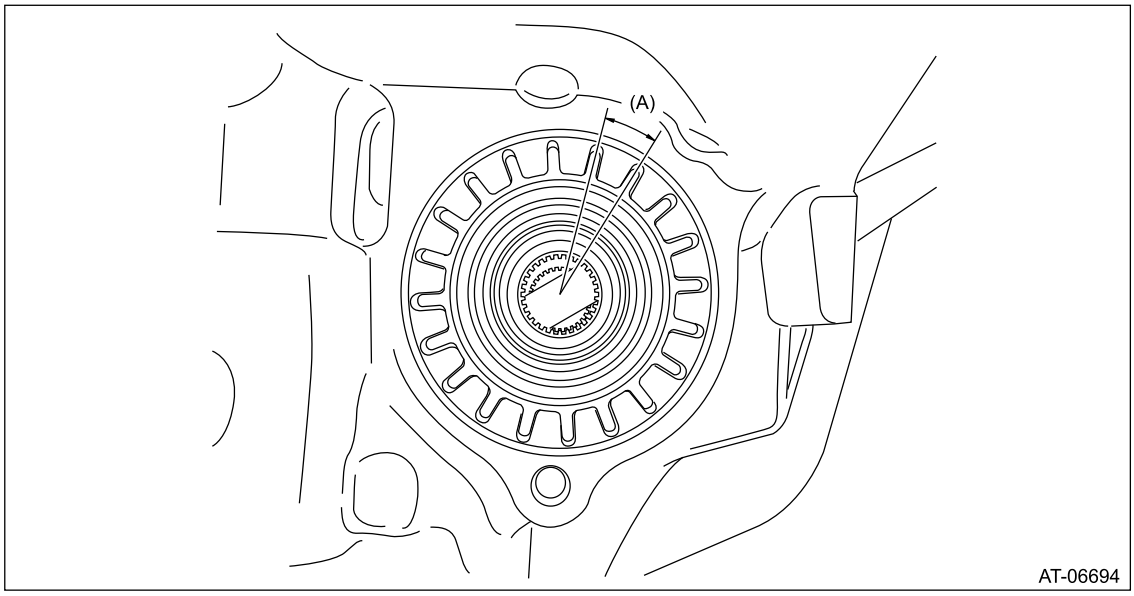
   43 N·m (4.4 kgf-m, 31.7 ft-lb)



4. Rotate the drive pinion shaft ten times or more using ST1 and ST2.

   Preparation tool:

ST1: HOLDER (18667AA010)
ST2: WRENCH (499787700)

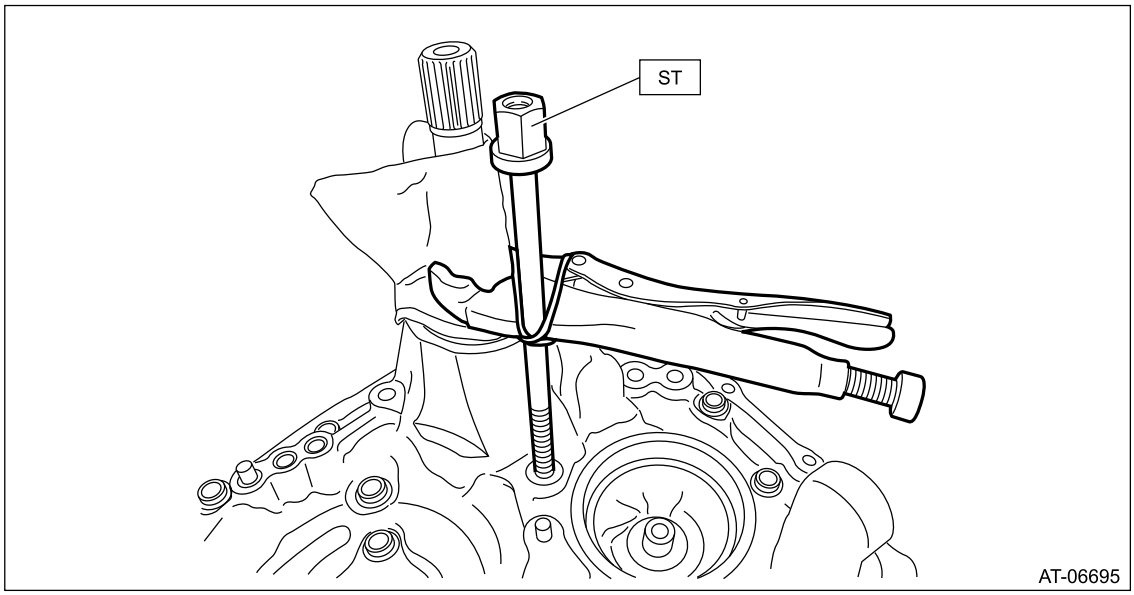


5. While rotating the pinion shaft, tighten the retainer LH and loosen the retainer RH until the shaft can't be turned anymore. The backlash is "zero" when the pinion shaft comes to the point where it doesn't rotate.
6. After the "zero" state is established, loosen the retainer LH by 3 notches and secure it with the lock plate. Retighten the retainer RH until it stops. Rotate the drive pinion 2 or 3 times. Tighten the retainer RH further 1-3/4 notches. This sets the preload. Finally, secure the retainer with its lock plate.

(A) Lock plate

Note:
Turning the retainer by every one tooth changes the backlash approx. 0.05 mm

(0.0020 in).

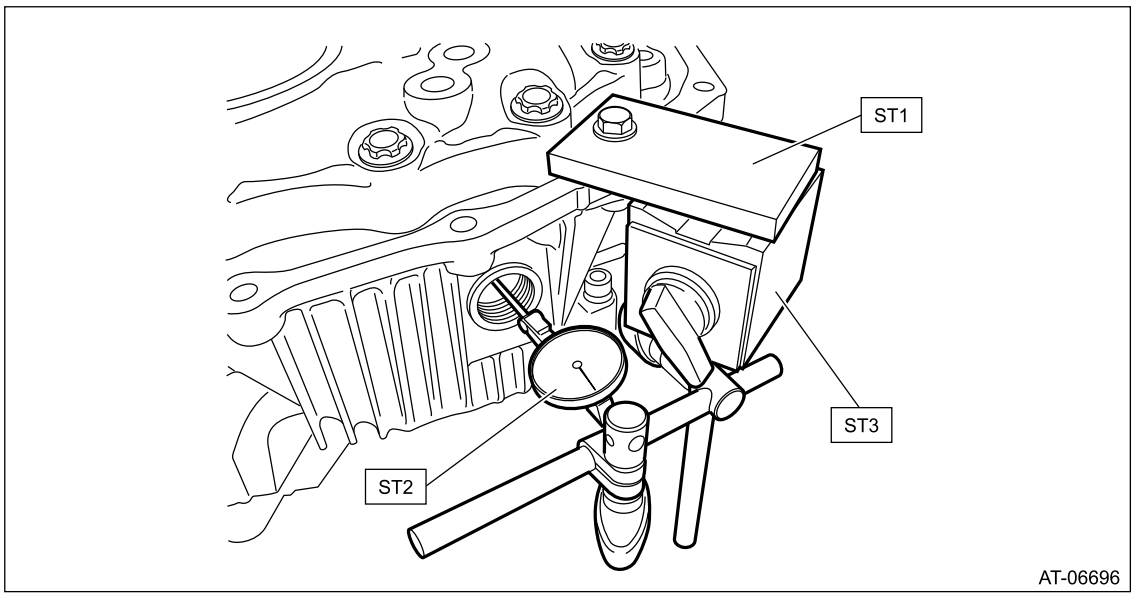


(A) 1 tooth

7. Insert the two SUBARU genuine axle shafts into differential case.

Part No. 38415AA070 Axle shaft

8. Install the ST to the drive pinion retainer, and wrap the drive pinion shaft with cloth and pinch with vise pliers. Using a tie-wrap or a wire, fix the vise pliers to the ST.
Make sure the drive pinion shaft does not move.
Preparation tool:
ST: COMPRESSOR SHAFT (18763AA000)



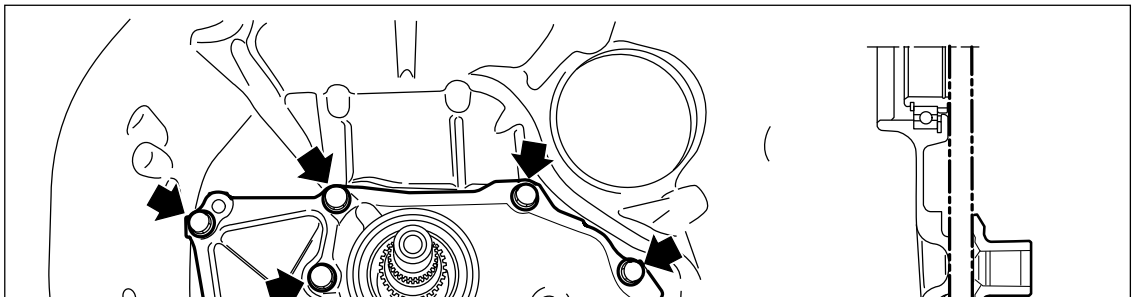
9. Check the backlash is within specification using ST1, ST2 and ST3.
Preparation tool:
ST1: PLATE (498255400)
ST2: DIAL GAUGE (498247100)

ST3: MAGNET BASE (498247001)

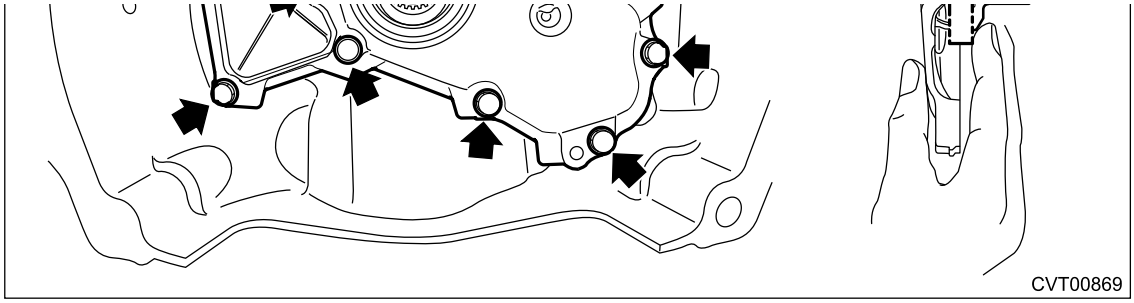
Backlash:

0.13 — 0.18 mm (0.005 — 0.007 in)

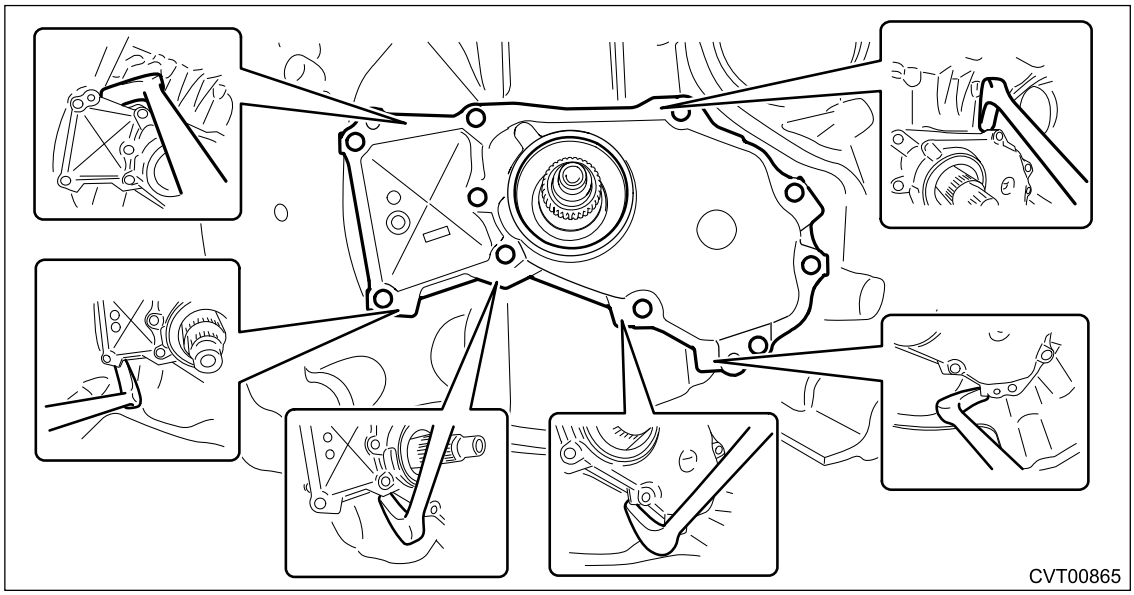
10. Adjust the teeth contact of the front differential and drive shaft. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>ADJUSTMENT.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump Chain

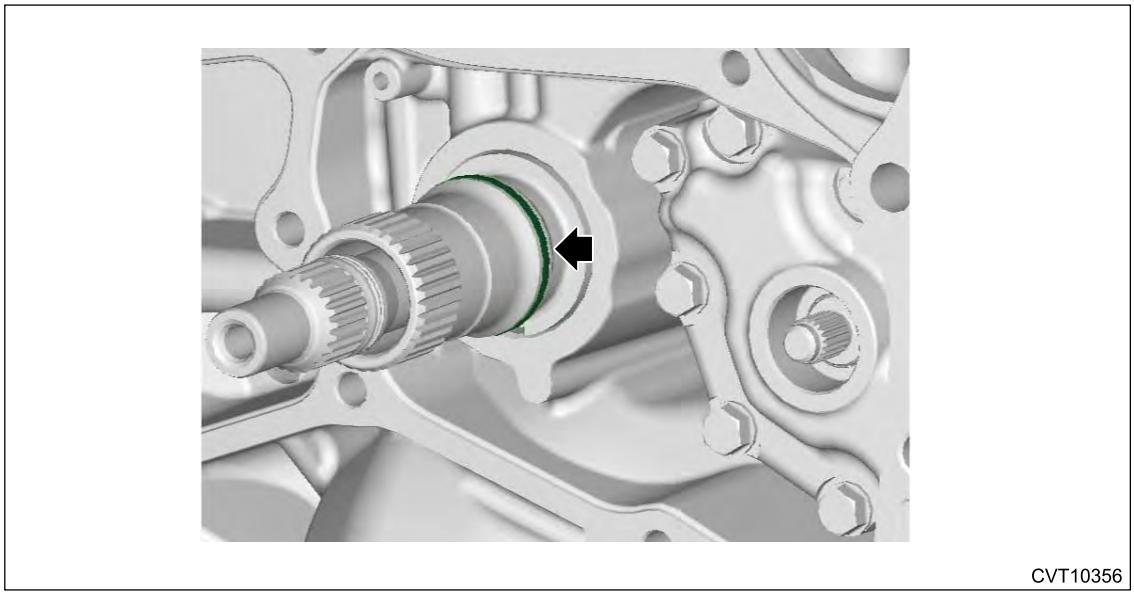


REMOVAL



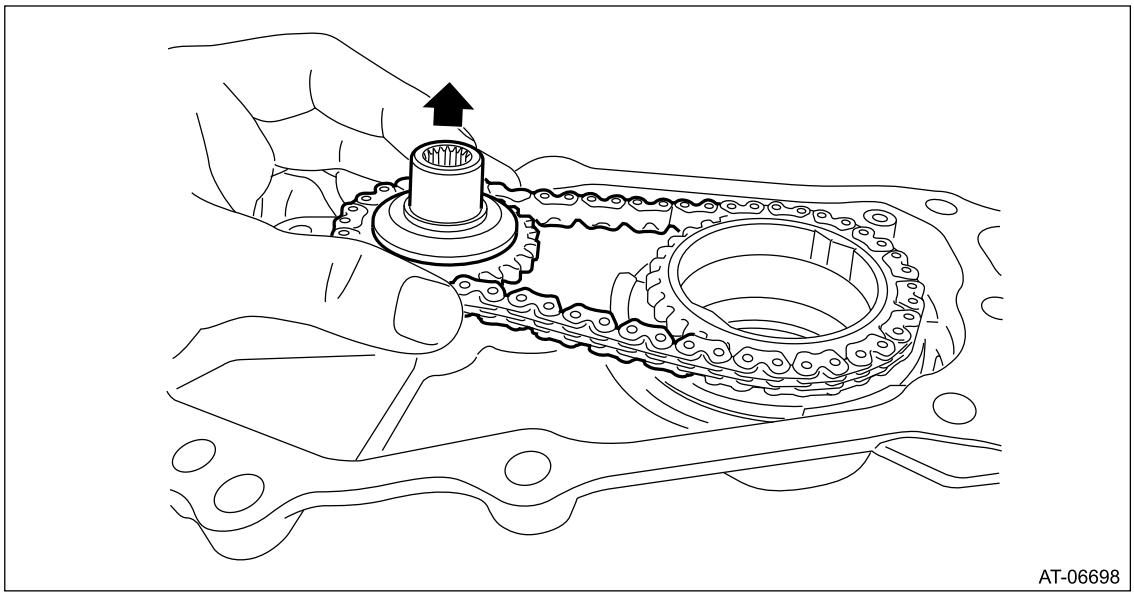
1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly>REMOVAL.
3. Remove the oil pump chain, oil pump sprocket, driven sprocket and oil pump chain cover.

Note:

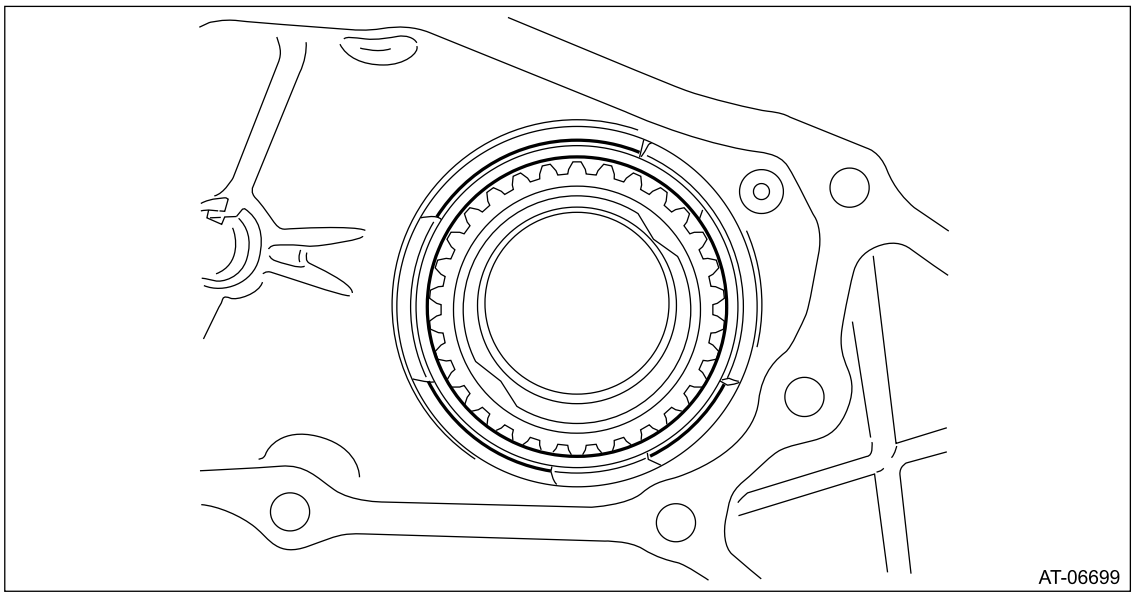


Oil pump chain cover may be hard to remove because the driven sprocket is installed to the shaft side of the oil pump. Do not remove it forcibly. Remove it while holding the driven sprocket by hand.

4. Remove the seal rings.

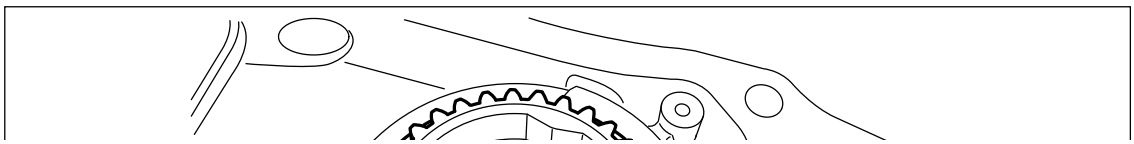


5. Remove the driven sprocket from oil pump chain cover to remove the oil pump chain.

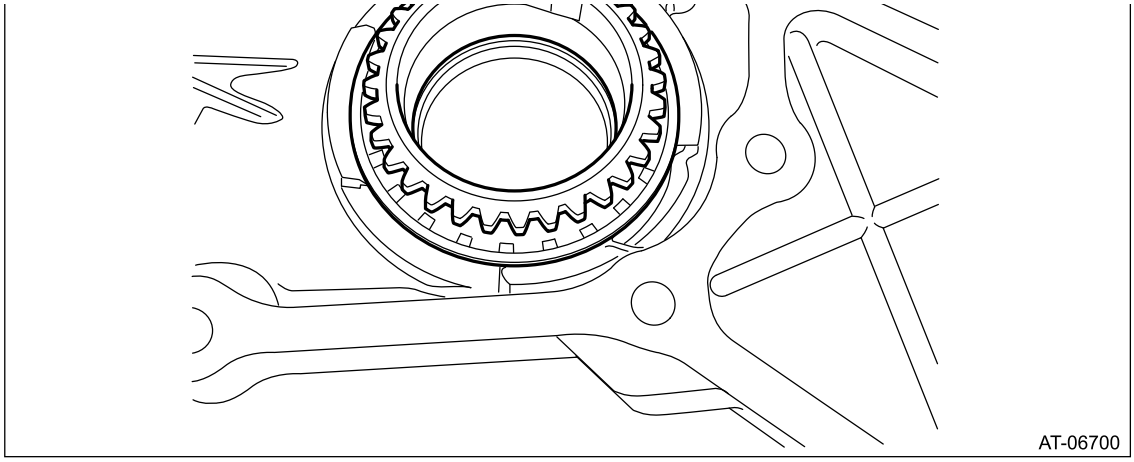


Note:

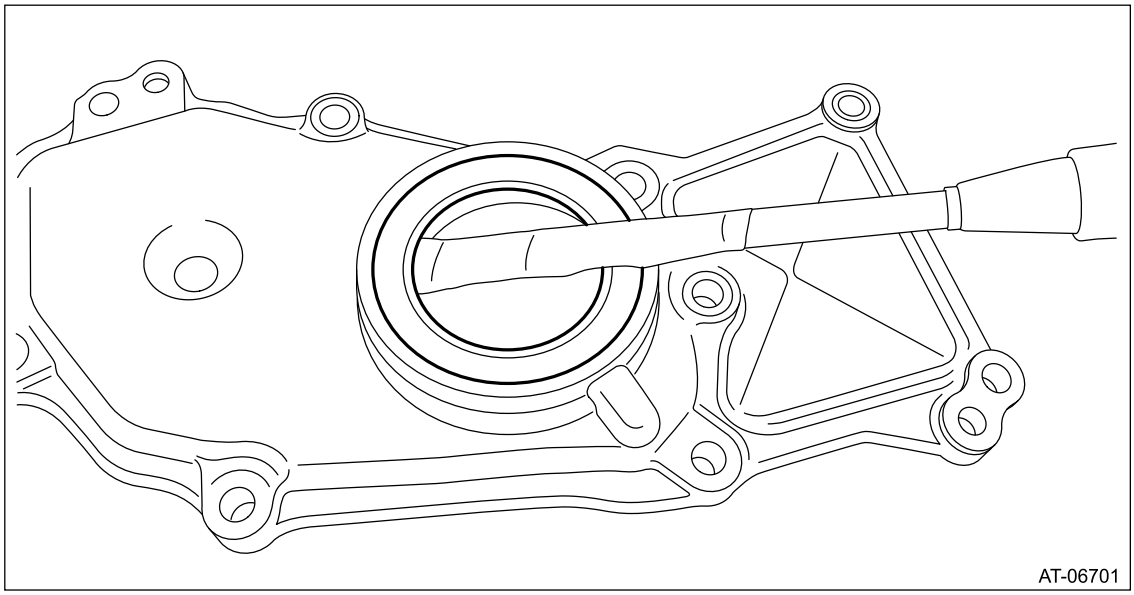
- **The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.**
- **If the ball bearing is removed from the driven sprocket, replace with a new part**



- If the ball bearing is removed from the driven sprocket, replace with a new part.



6. Remove the snap ring.



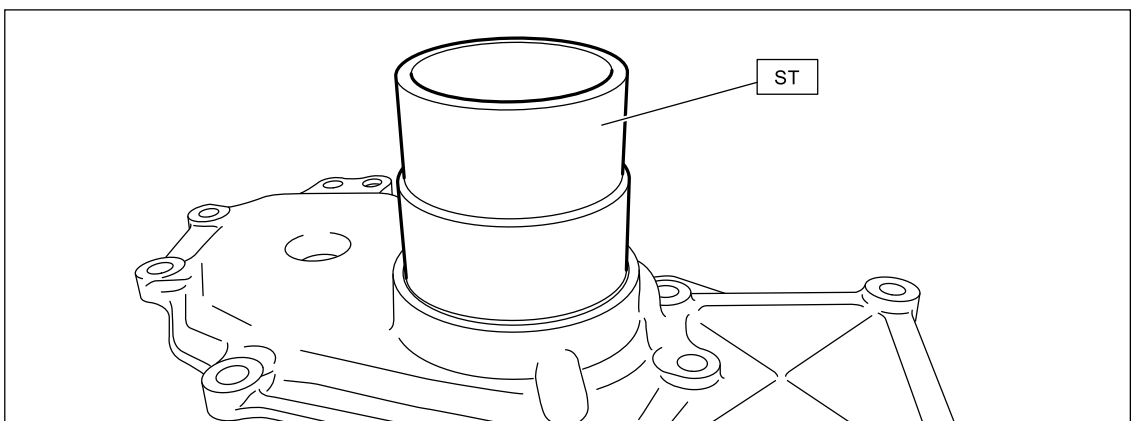
7. Remove the drive sprocket.

8. Remove the oil seal from the oil pump chain cover.

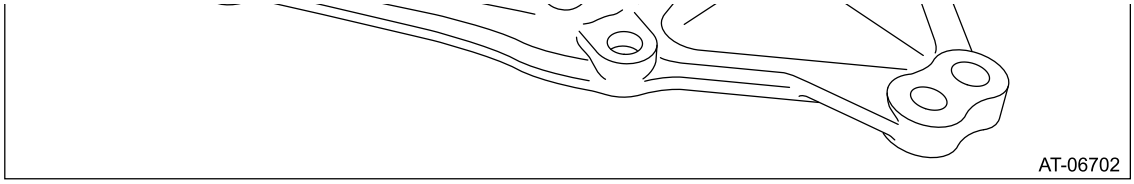
CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump Chain

INSTALLATION

1. Clean the mating surface of oil pump chain cover and converter case.

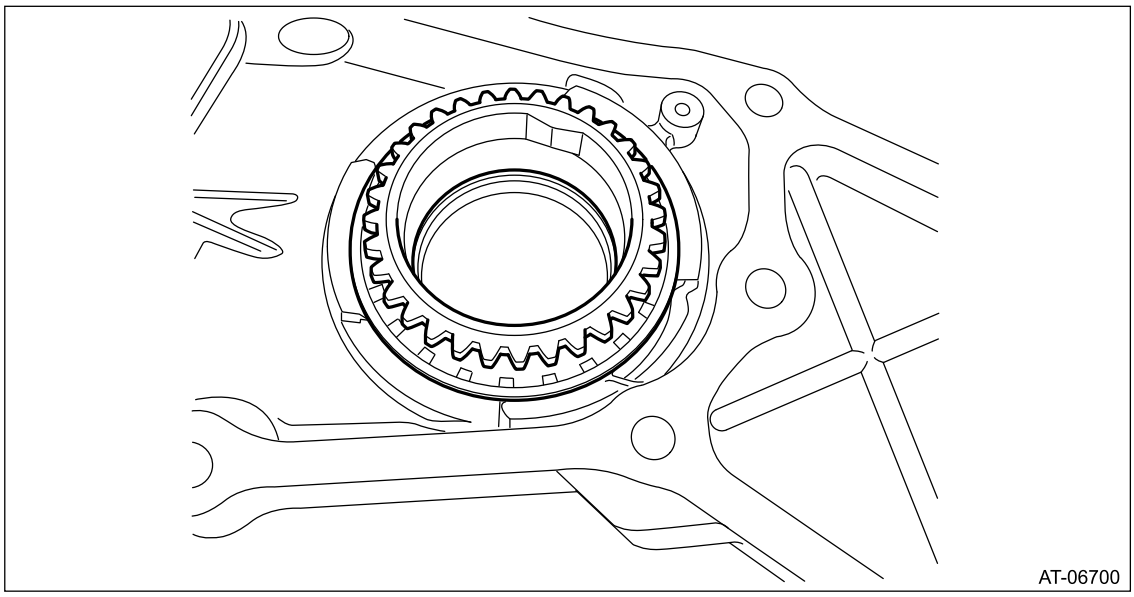


2. Using the ST, install the oil seal.



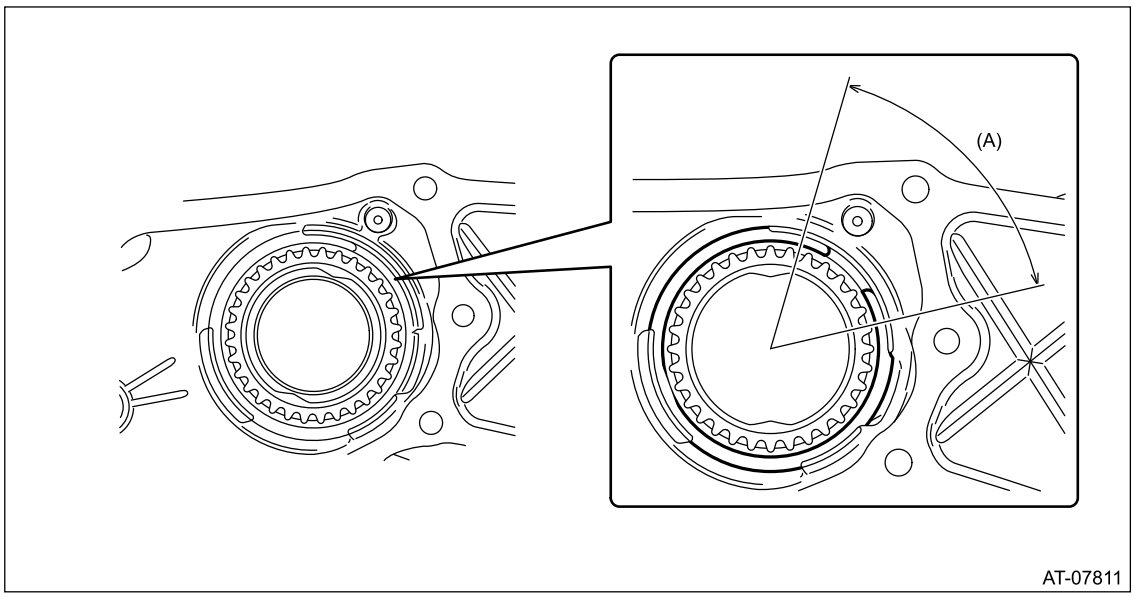
Note:

- **Use a new oil seal.**
- **Apply CVTF to the oil seal lip and press-fitting surface.**

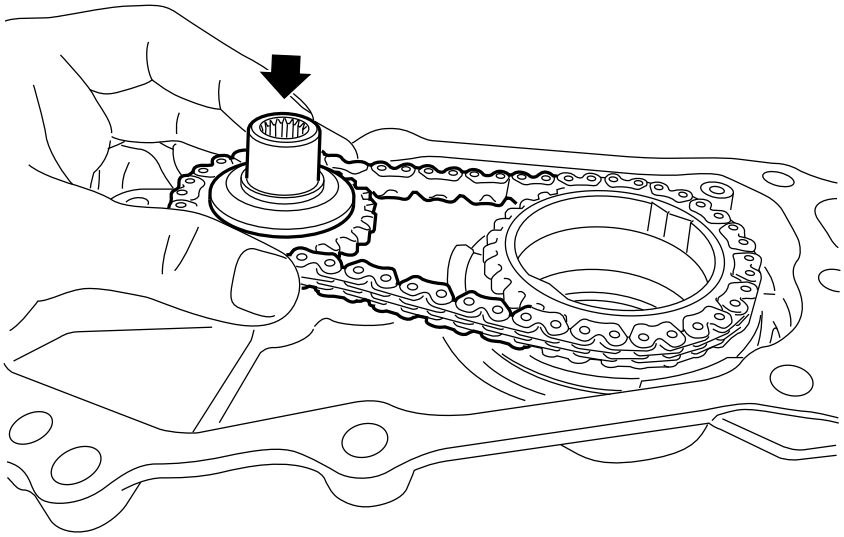


Preparation tool:

ST: PRESS SNAP RING (499755602)



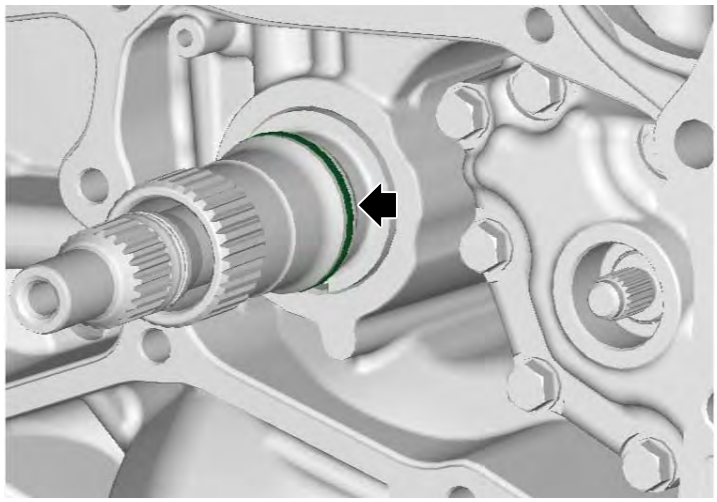
3. Install the drive sprocket.



4. Install the snap ring so that its cutout portion is securely fitted into the snap ring groove of the oil pump chain cover.

(A) Installation range of cutout portion for snap ring

5. Place the oil pump chain on drive sprocket.



6. Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.

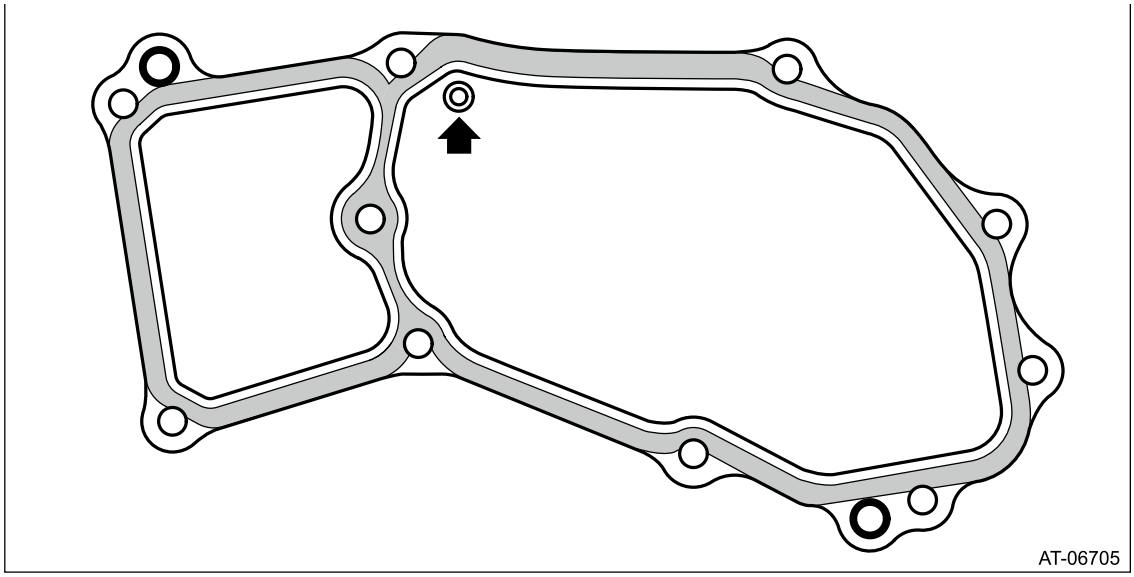
AT-06704

7. Install the seal rings.

Note:

- **Use new seal rings.**
- **Apply CVTF to the seal rings.**
- **When installing the seal rings, do not expand the seal rings too much.**

CVT10356

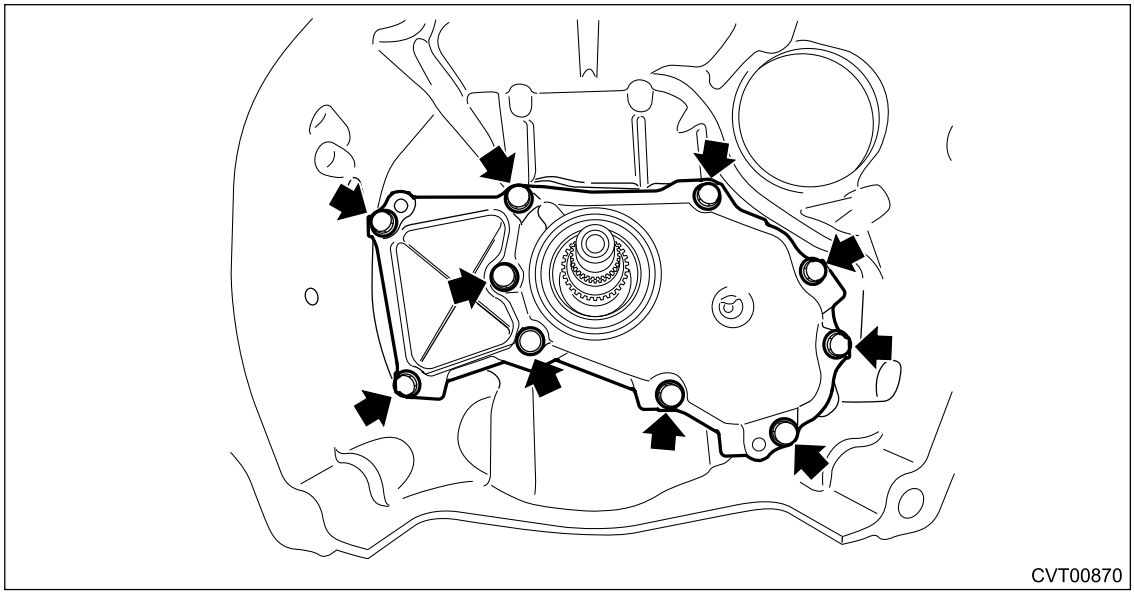


8. Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

Caution:

Do not apply liquid gasket at the arrowed hole.

Liquid gasket:



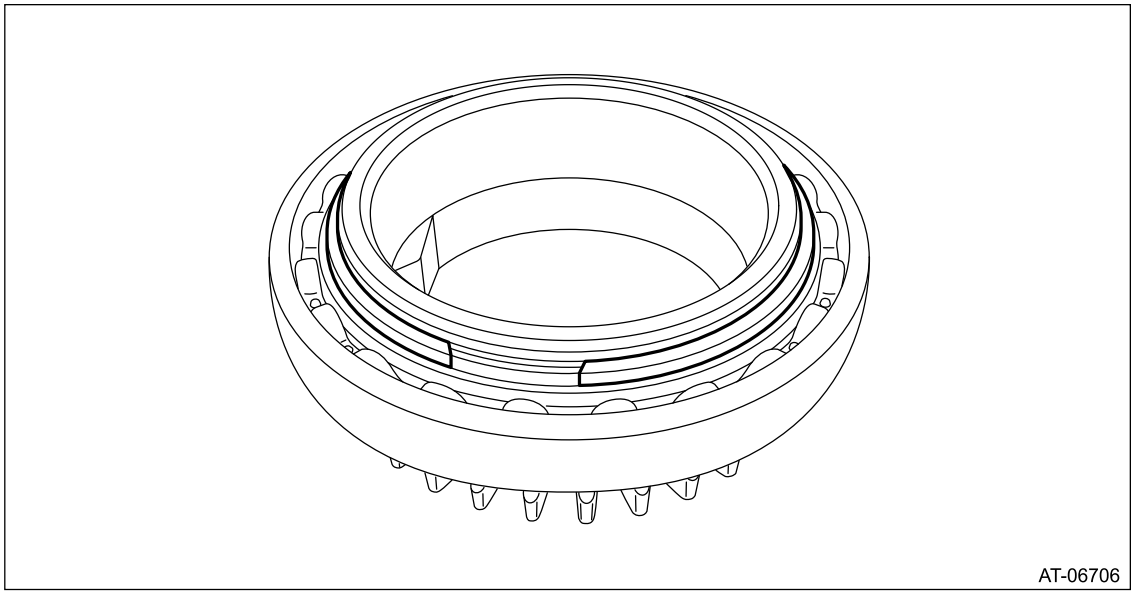
THREE BOND 1215B or equivalent

9. Install the oil pump chain cover.

Tightening torque:

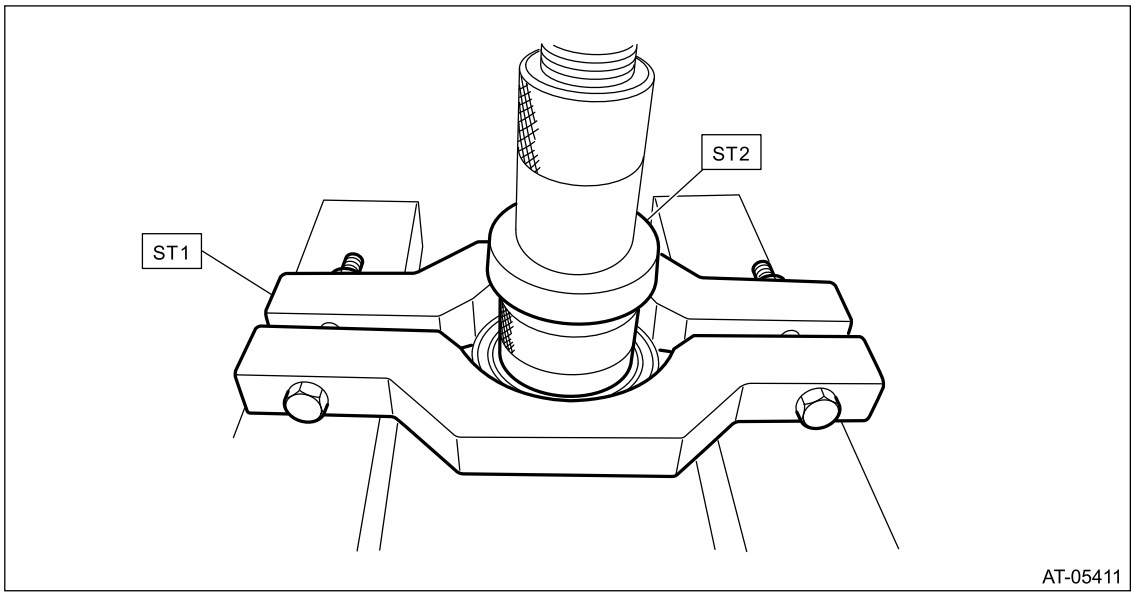
21 N·m (2.1 kgf-m, 15.5 ft-lb)

10. Install the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly>INSTALLATION.



11. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump Chain



DISASSEMBLY

1. DRIVE SPROCKET

1. Remove the snap ring.

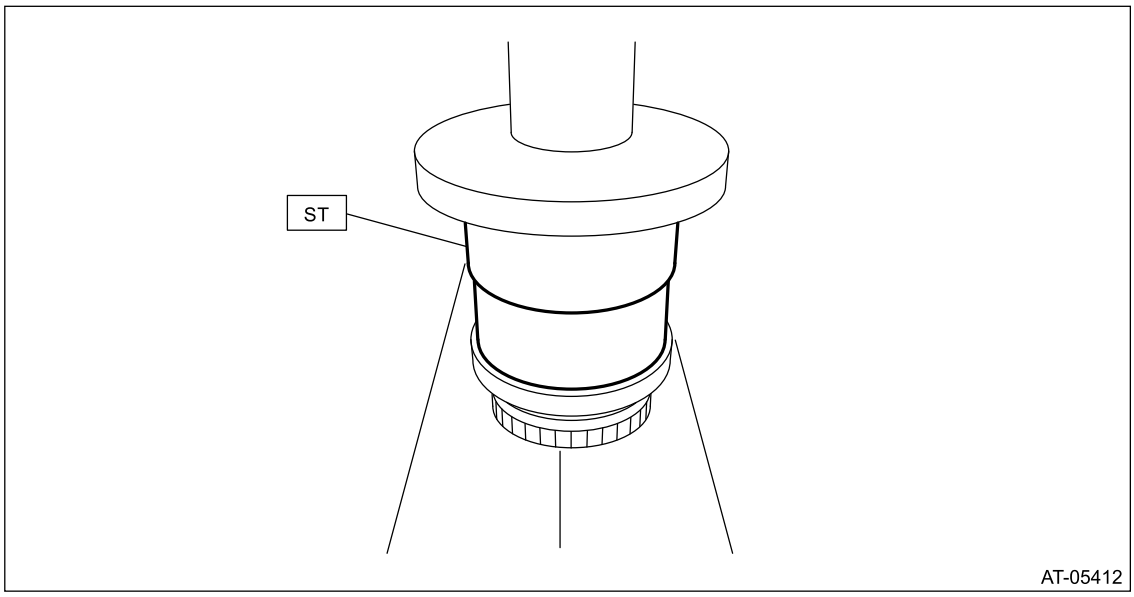
2. Remove the ball bearing using the ST1 and ST2.
   Preparation tool:
   ST1: REMOVER (498077600)
   ST2: INSTALLER (399513600)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump Chain

ASSEMBLY

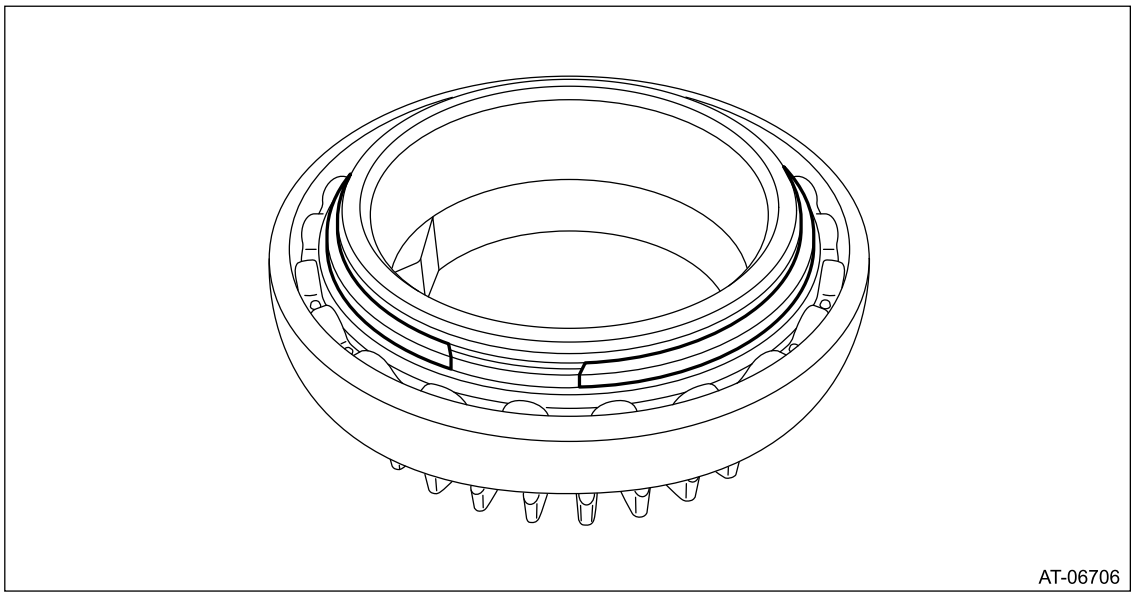
1. DRIVE SPROCKET

1. Using the ST, install the ball bearing.



Note:

Use a new ball bearing.



Preparation tool:

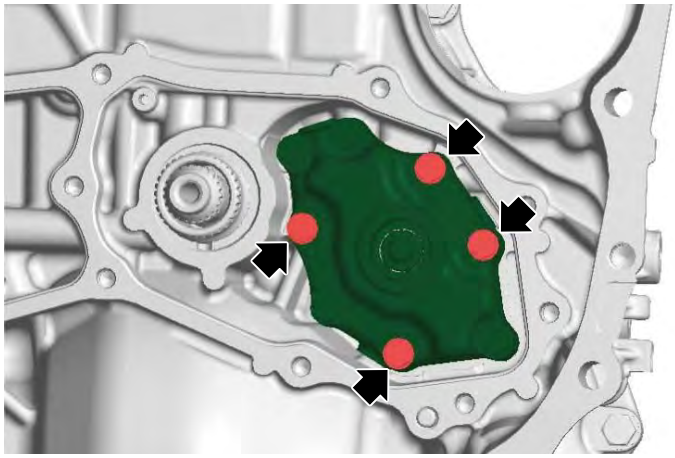
ST: PRESS SNAP RING (499755502)

ST 499755502 PRESS SNAP RING

2. Install the snap ring.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump Chain

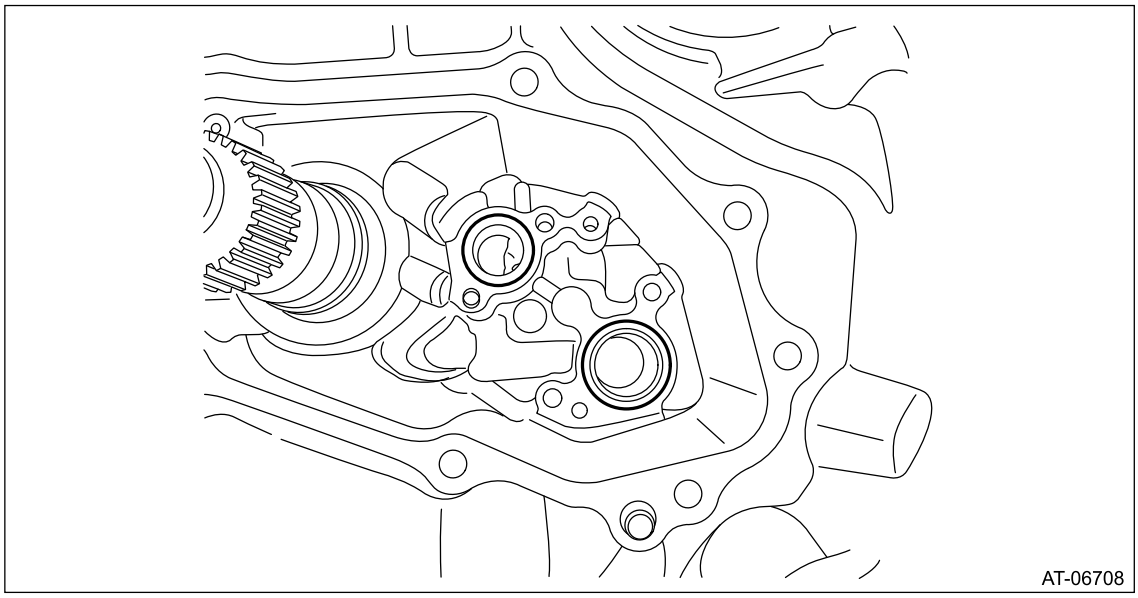
INSPECTION



- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.

- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump



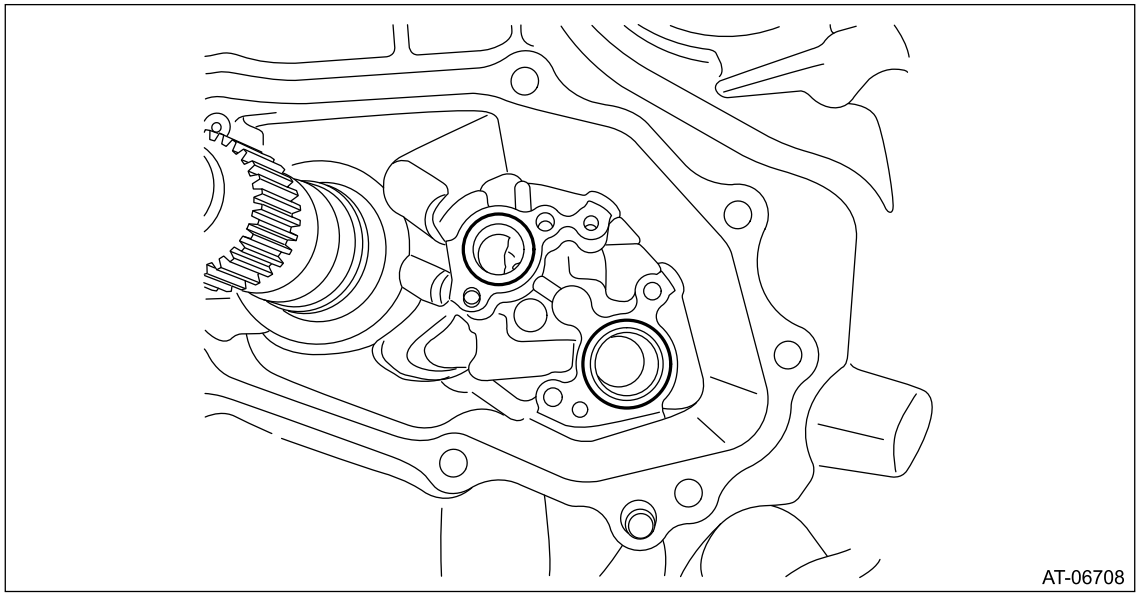
REMOVAL

1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly>REMOVAL.
3. Remove the oil pump chain cover. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pump Chain>REMOVAL.
4. Remove the oil pump and the plate.

CVT10357

5. Remove the O-rings.

AT-06708



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump

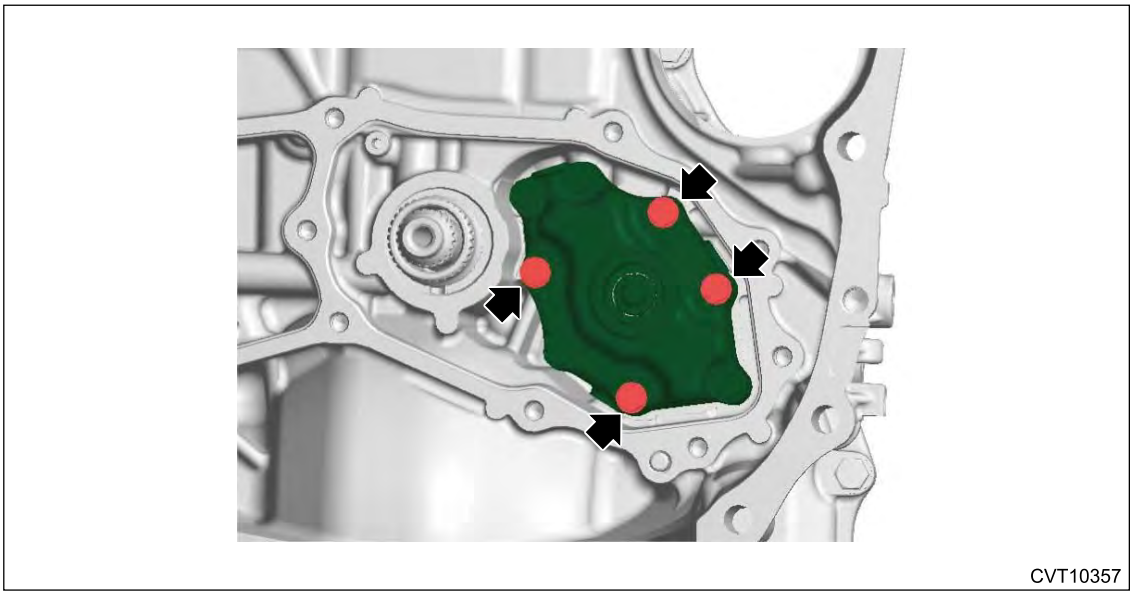
INSTALLATION

1. Install the O-rings.

Note:

- **Use new O-rings.**
- **Apply CVTF to the O-rings.**

AT-06708



2. Install the plate and the oil pump.

Note:

Apply CVTF to the bolt.

Tightening torque:

8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

3. Install the oil pump chain cover. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pump Chain>INSTALLATION.
4. Install the torque converter assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Torque Converter Assembly>INSTALLATION.
5. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Oil Pump

INSPECTION

Check the following items.

- Check the oil pump for damage and wear.
- Rotate the oil pump by hand, and check that it rotates smoothly.

1. Measure the secondary pressure. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Pressure (Line Pressure) Test>INSPECTION.
2. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
3. Check oil strainer for clogging.
   When oil strainer has no clogging, replace the oil pump.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Converter Case

REMOVAL

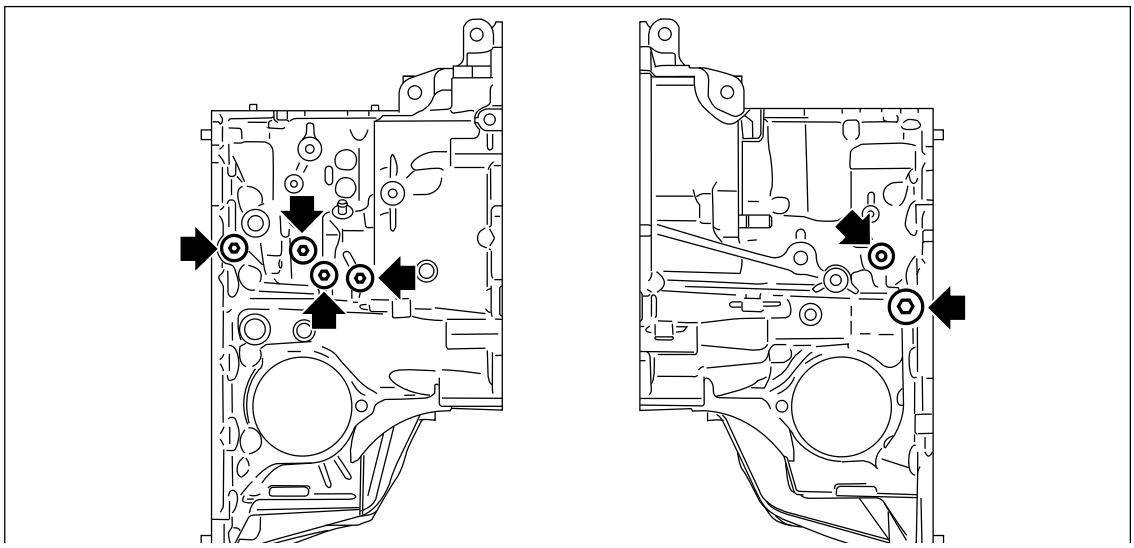
1. Remove the transmission assembly from the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>REMOVAL.
2. Remove the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>REMOVAL.
3. Remove the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>REMOVAL.
4. Remove the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>REMOVAL.
5. Remove the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>REMOVAL.
6. Remove the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>REMOVAL.
7. Remove the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>REMOVAL.
8. Remove the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>REMOVAL.
9. Remove the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>REMOVAL.
10. Remove the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>REMOVAL.
11. Remove the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE

TRANSMISSION(TR580)>Transfer Driven Gear>REMOVAL.

12. Remove the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>REMOVAL.
13. Remove the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>REMOVAL.
14. Remove the oil pan and oil strainer. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>REMOVAL.
15. Remove the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>REMOVAL.
16. Remove the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>REMOVAL.
17. Remove the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>REMOVAL.
18. Remove the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>REMOVAL.
19. Remove the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>REMOVAL.
20. Remove the forward clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>REMOVAL.
21. Remove the drive pinion shaft assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>REMOVAL.
22. Remove the front differential assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>REMOVAL.
23. Remove the oil pump chain cover. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pump Chain>REMOVAL.
24. Remove the oil pump. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pump>REMOVAL.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Converter Case

INSTALLATION



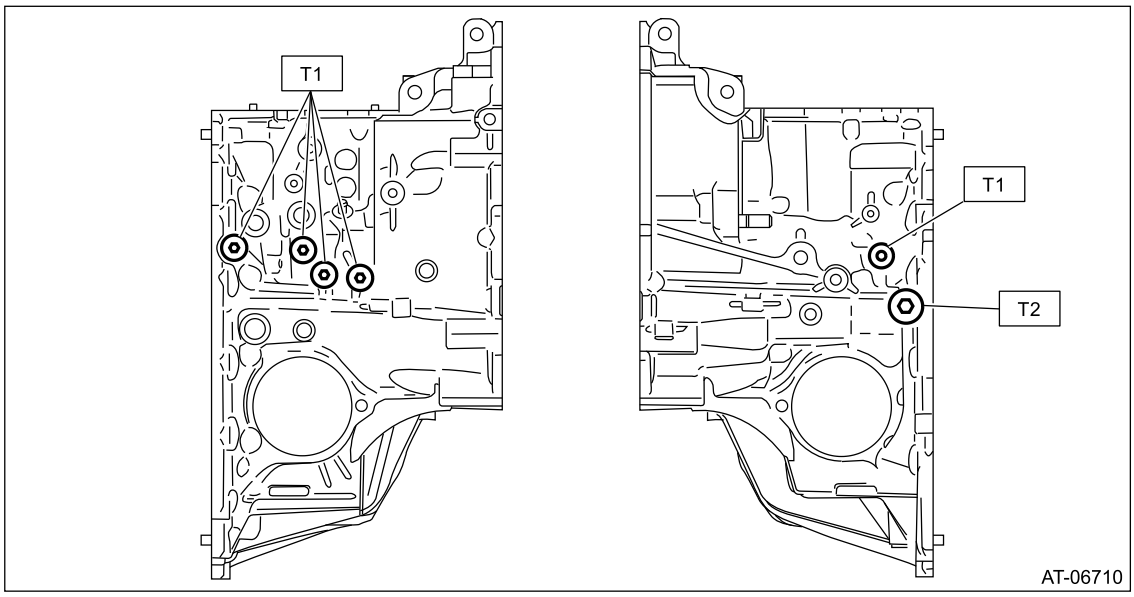
1. Install the oil pump. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pump>INSTALLATION.
2. Install the oil pump chain cover. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pump Chain>INSTALLATION.
3. Install the front differential assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Front Differential Assembly>INSTALLATION.
4. Install the drive pinion shaft assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Drive Pinion Shaft Assembly>INSTALLATION.
5. Install the forward clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Forward Clutch Assembly>INSTALLATION.
6. Install the reverse brake assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reverse Brake Assembly>INSTALLATION.
7. Install the primary pulley, secondary pulley and variator chain. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Pulley and Secondary Pulley>INSTALLATION.
8. Install the reduction drive gear. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Drive Gear>INSTALLATION.
9. Install the transmission case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Case>INSTALLATION.
10. Install the transmission control device. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Device>INSTALLATION.

11. Install the oil strainer and oil pan. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Oil Pan and Strainer>INSTALLATION.
12. Install the reduction driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Reduction Driven Gear>INSTALLATION.
13. Install the transfer driven gear assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Driven Gear>INSTALLATION.
14. Install the transfer clutch assembly. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transfer Clutch>INSTALLATION.
15. Install the parking pawl. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Parking Pawl>INSTALLATION.
16. Install the extension case. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Extension Case>INSTALLATION.
17. Install the inhibitor switch. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSTALLATION.
18. Install the secondary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Secondary Speed Sensor>INSTALLATION.
19. Install the primary speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Primary Speed Sensor>INSTALLATION.
20. Install the turbine speed sensor. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Turbine Speed Sensor>INSTALLATION.
21. Install the transmission harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Harness>INSTALLATION.
22. Install the control valve body. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Control Valve Body>INSTALLATION.
23. Install the air breather hose. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Air Breather Hose>INSTALLATION.
24. Install the transmission assembly to the vehicle. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Automatic Transmission Assembly>INSTALLATION.

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Converter Case

DISASSEMBLY

1. Remove the pitching stopper bracket.
2. Remove the filler plug, oil drain plug and overflow drain plug. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Differential Gear Oil>REPLACEMENT.
3. Remove all plugs.



CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Converter Case

ASSEMBLY

1. Install the oil drain plug.
   Tightening torque:
   70 N·m (7.1 kgf-m, 51.6 ft-lb)
2. Install the overflow drain plug.
   Note:
   Overflow plug of differential gear oil is temporarily attached.
3. Install all plugs.
   Note:
   Use new O-rings.
   Tightening torque:
   T1: 22 N·m (2.2 kgf-m, 16.2 ft-lb)
   T2: 22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

4. Install the pitching stopper bracket.
   Tightening torque:
   41 N·m (4.2 kgf-m, 30.2 ft-lb)

CONTINUOUSLY VARIABLE TRANSMISSION(TR580) > Converter Case

INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in “D” or “R” range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in “D” or “R” range.	• Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in “D” or “R” range.	• Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in “D” or “R” range.	• Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in “D” or “R” range.	• Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving,	• Control valve body • Secondary pressure circuit

with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in “D” or “R” range.	• Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in “D” or “R” range.	• Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in “D” range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in “D” range.	• Control valve body • Lockup hydraulic line • Torque converter assembly

Symptoms	Faulty parts
Excessive shift shock occurs when shifting the select lever from “N” range to “D” range, or from “N” range to “R” range.	• Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in “P” range, or parking cannot be released when shifting from “P” range to another range.	• Select cable • Parking mechanism
Select lever does not shift smoothly.	• Select cable • Inhibitor switch • Detent spring • Manual plate

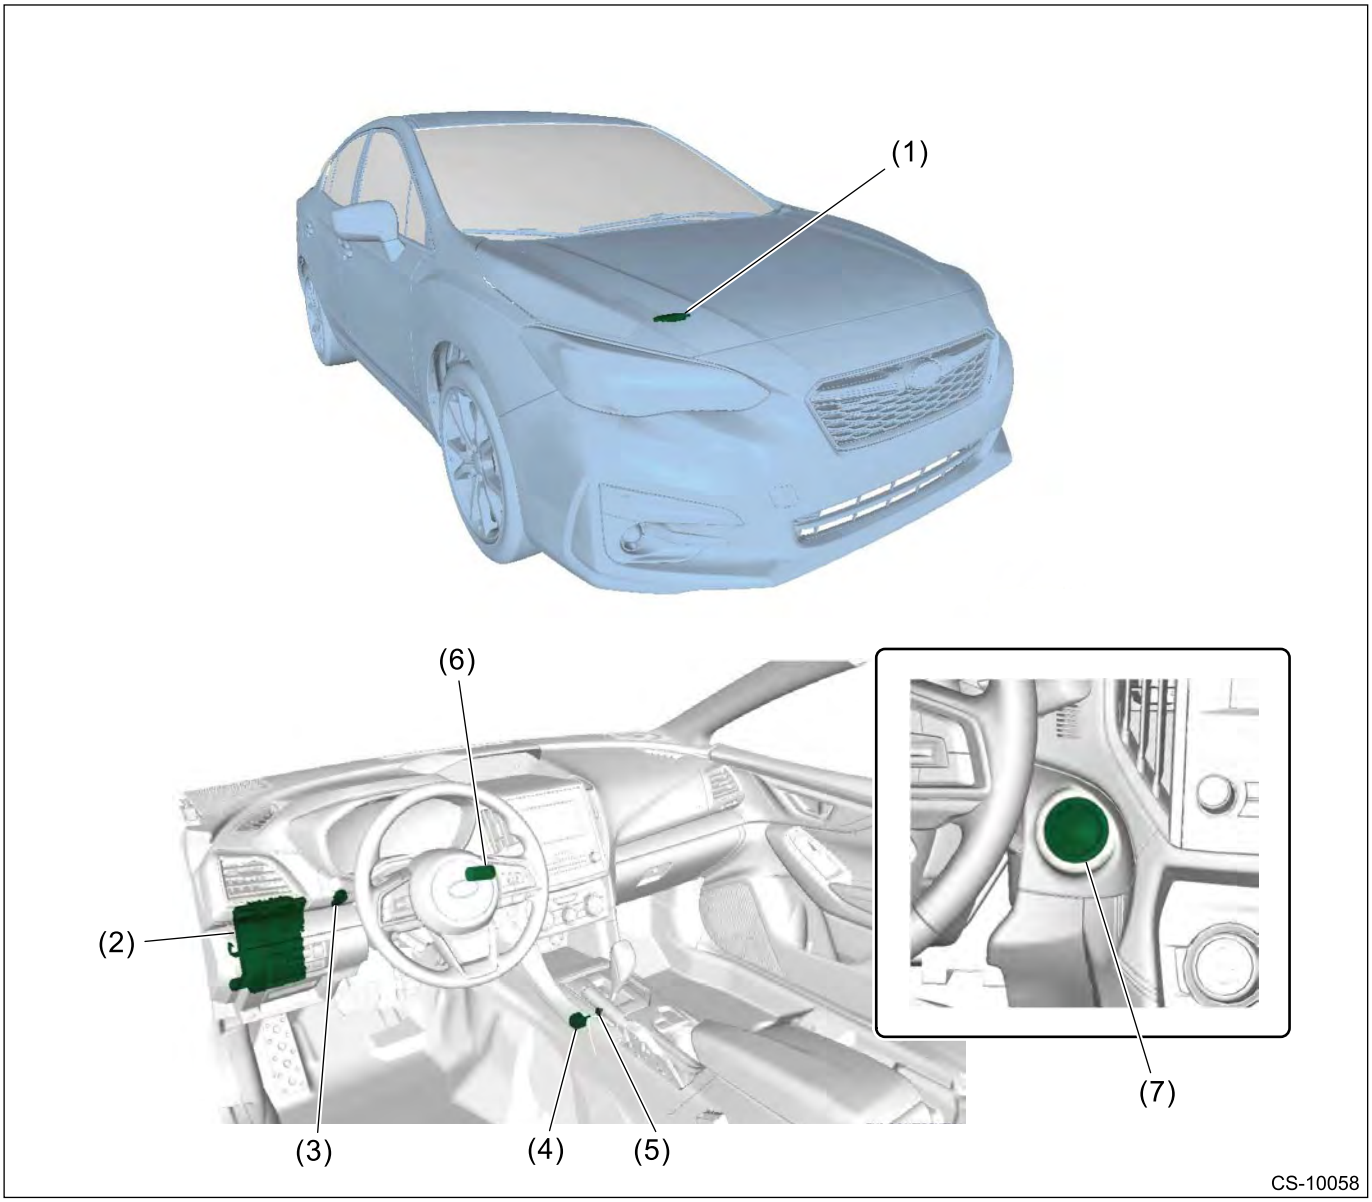
PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL



TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

CONTROL SYSTEMS > General Description

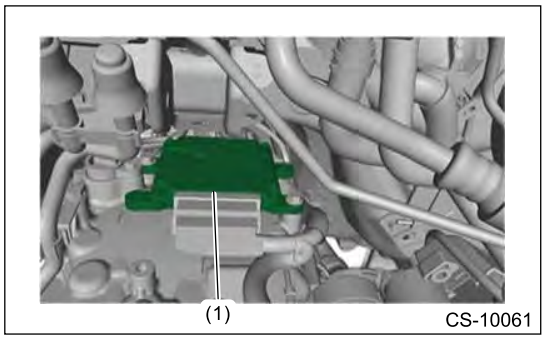
CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Before disconnecting electrical connectors, be sure to disconnect the negative terminal from battery.

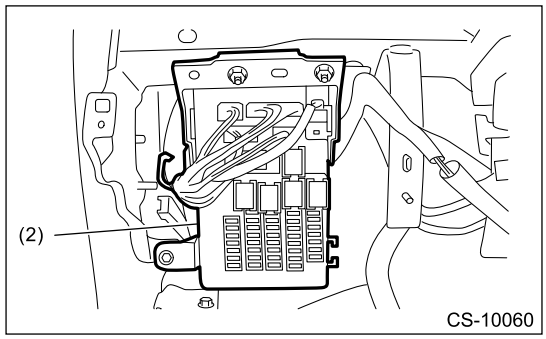
LOCATION

(1) TCM (“P” range)

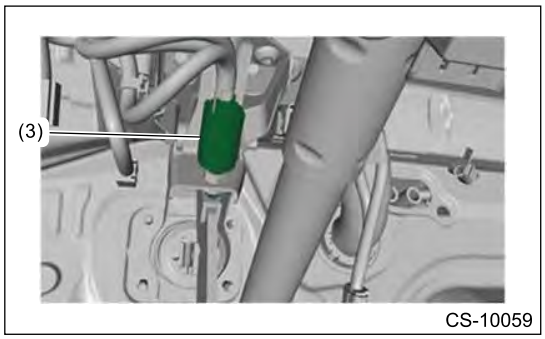
(2) Body integrated unit



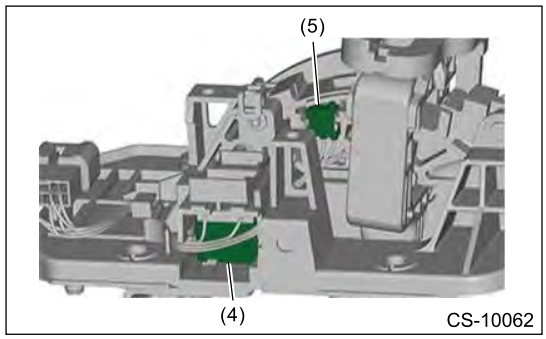
(3) Stop light and brake switch



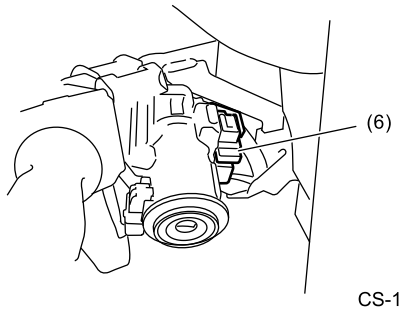
(4) Solenoid unit



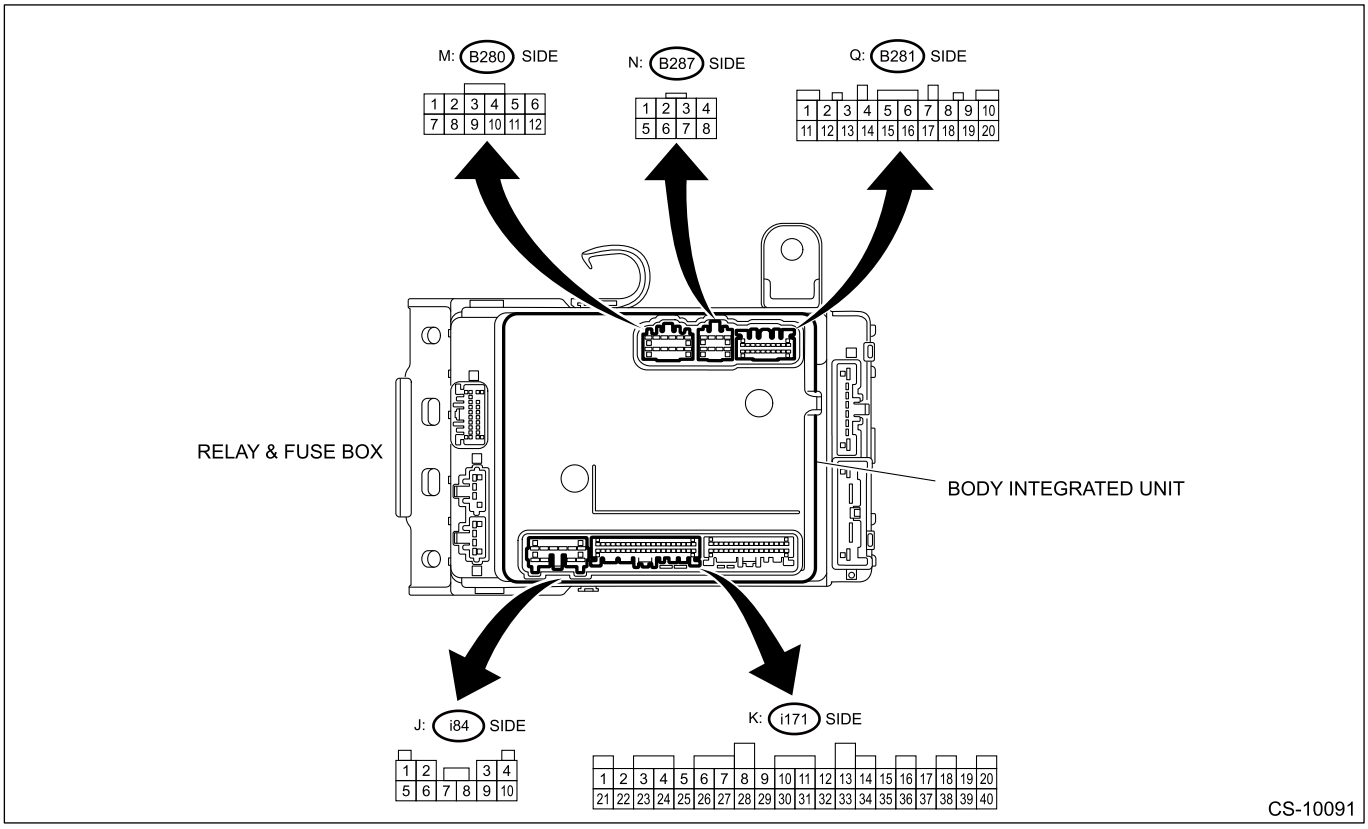
(5) “P” range switch



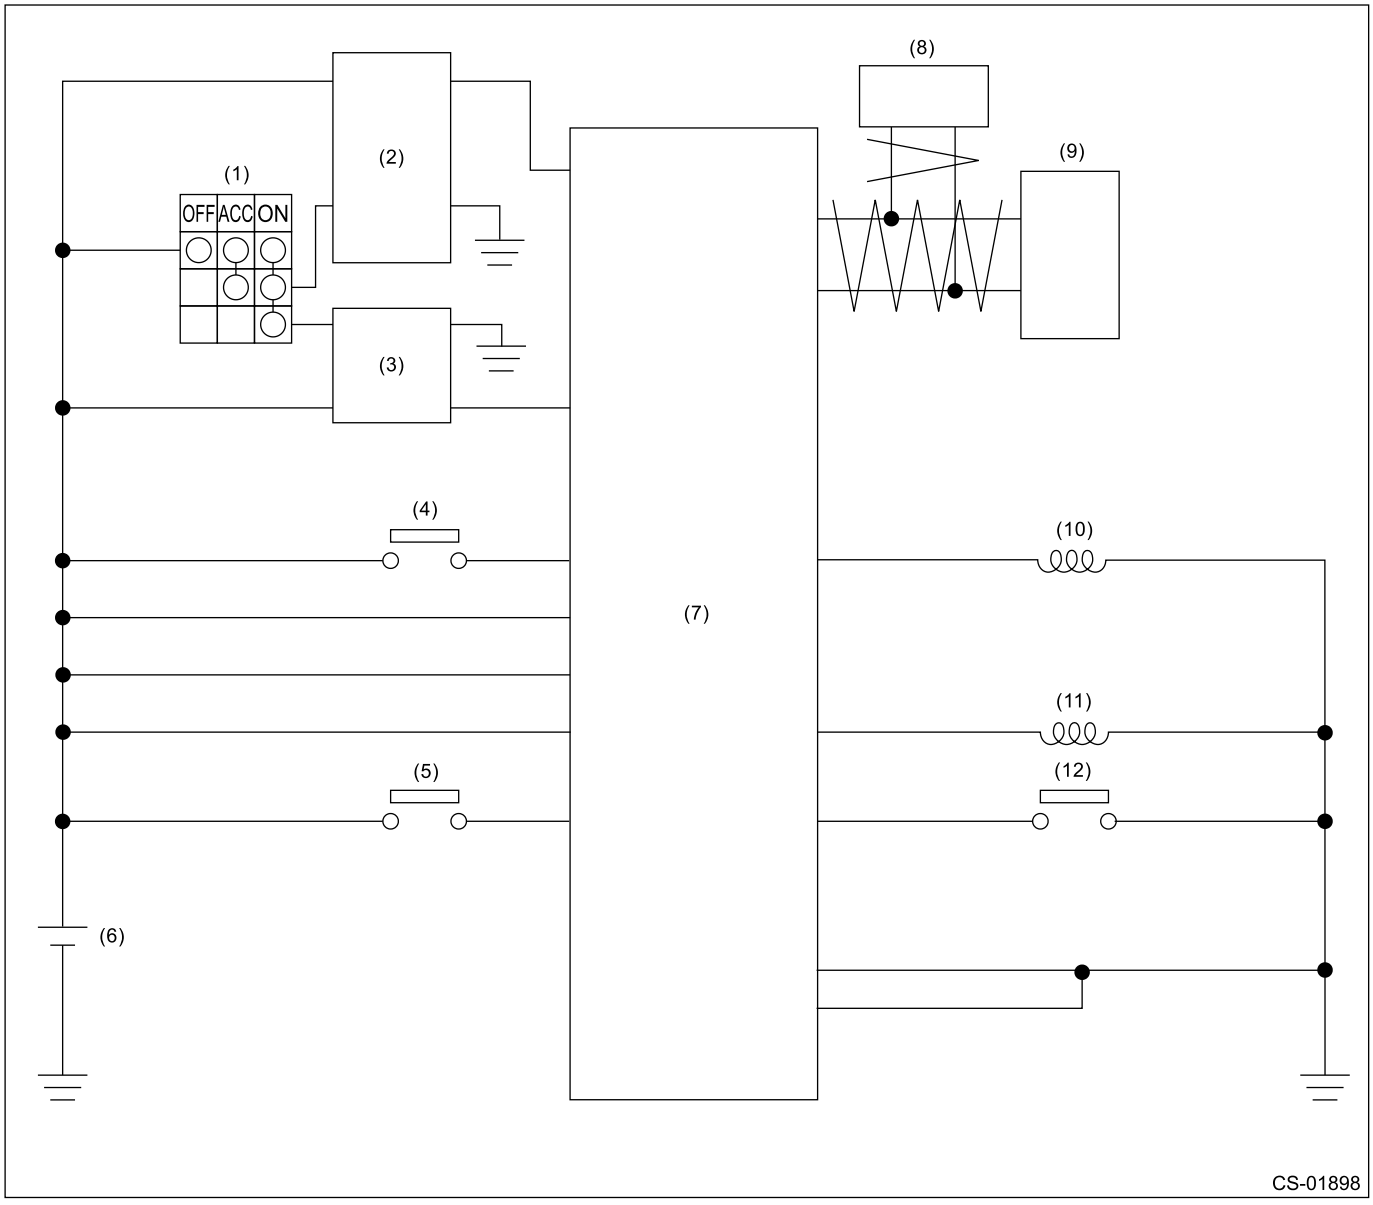
(6) Key lock solenoid (model without push button ignition switch)



(7) Push button ignition switch (model with push button ignition switch)



CONTROL SYSTEMS > AT Shift Lock Control System



ELECTRICAL SPECIFICATION

Item	Connector No.	Terminal No.	Input/Output signal Measured value and measuring conditions
Battery power supply	B280	1	9 — 16 V
	B281	7	
	B287	4	
TCM (“P” range)	B281	17	Pulse signal (CAN communication)
	B281	19	
Stop light switch	B281	16	9 — 16 V when stop light switch is ON 1 V when stop light switch is OFF
“P” range switch	i171	40	Less than 1 V when select lever is in “P” range 9 — 16 V when select lever is in other positions than “P” range
Solenoid unit output	i84	3	9 — 16 V when shift lock is released Less than 1 V when shift lock is operating
Key warning switch signal (Model without push button ignition switch)	i84	1	9 — 16 V when key is inserted Less than 1 V when key is removed
Key lock solenoid signal (Model without push button ignition switch)	B280	12	9 — 16 V when the key is inserted with the select lever shifted in positions other than “P” range Less than 1 V at other conditions than above
Ground	i84	4	Less than 1 V
	B287	1

INSPECTION

1. SHIFT LOCK OPERATION

- Model without push button ignition switch

1. CHECK COMMUNICATION OF SUBARU SELECT MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check whether communication to all systems can be executed normally.

Is the system name displayed?

Yes — Go to 2.

No — For diagnostic procedures, refer to the LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK SHIFT LOCK.

1. Turn the ignition switch to ON.
2. Shift the select lever to “P” range.

While brake pedal is not depressed, is it possible to move the select lever from the “P” range to other ranges?

Yes — Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.

No — Go to 3.

3. CHECK SHIFT LOCK.

While brake pedal is depressed, is it possible to move the select lever from the “P” range to other ranges?

Yes — Go to 4.

No — Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.

4. CHECK SHIFT LOCK.

Shift the select lever to “N” range.

Is it possible to move the select lever from the “N” range to the “P” range?

Yes — Go to 5.

No — Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”.
Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.

5. CHECK SHIFT LOCK.

1. Shift the select lever to “N” range.
2. Turn the ignition switch to ACC.

While brake pedal is depressed, is it possible to move the select lever from the “N” range to the “P” range?

Yes — Go to 6.

No — Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”.
Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.

6. CHECK KEY INTERLOCK.

1. Shift the select lever to other than “P” range.
2. Turn the ignition switch to OFF.

Can the ignition key be removed?

Yes — Perform the inspection of “KEY INTERLOCK CANNOT BE LOCKED OR RELEASED”.
Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > KEY INTERLOCK CANNOT BE LOCKED OR RELEASED.

No — Go to 7.

7. CHECK KEY INTERLOCK.

Shift the select lever to "P" range.

Can the ignition key be removed?

Yes	AT shift lock system is normal.
No	Perform the inspection of "KEY INTERLOCK CANNOT BE LOCKED OR RELEASED". Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > KEY INTERLOCK CANNOT BE LOCKED OR RELEASED.

- Model with push button ignition switch

1. CHECK COMMUNICATION OF SUBARU SELECT MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check whether communication to all systems can be executed normally.

Is the system name displayed?

Yes	Go to 2.
No	For diagnostic procedures, refer to the LAN section. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK SHIFT LOCK.

1. Turn the ignition switch to ON.
2. Shift the select lever to "P" range.

While brake pedal is not depressed, is it possible to move the select lever from the "P" range to other ranges?

Yes	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.
No	Go to 3.

3. CHECK SHIFT LOCK.

While brake pedal is depressed, is it possible to move the select lever from the "P" range to other ranges?

Yes	Go to 4.
No	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.

4. CHECK SHIFT LOCK.

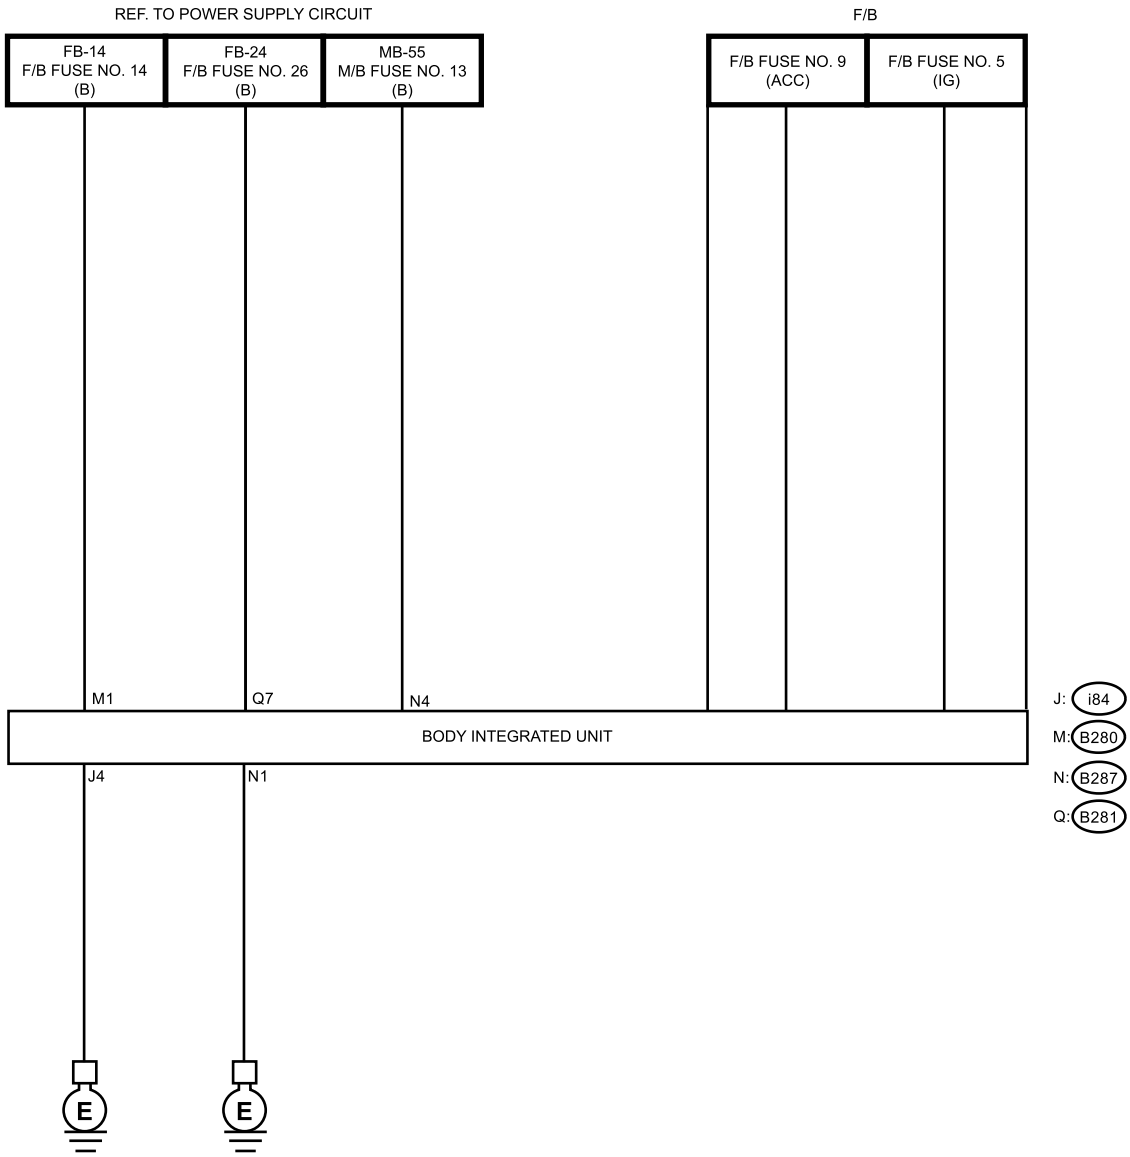
Shift the select lever to "N" range.

Is it possible to move the select lever from the "N" range to the "P" range?

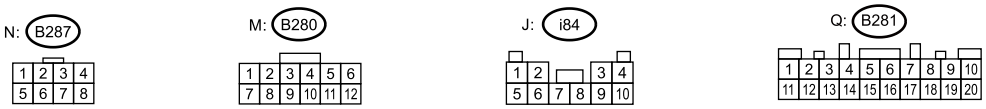
Yes	Go to 5.
No	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.

5. CHECK SHIFT LOCK.

1. Shift the select lever to "N" range.
2. Turn the ignition switch to ACC.



While brake pedal is depressed, is it possible to move the select lever from the "N" range to the "P" range?



Yes	AT shift lock system is normal.
No	Perform the inspection of "SELECT LEVER CANNOT BE LOCKED OR RELEASED". Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SELECT LEVER CANNOT BE LOCKED OR RELEASED.

2. BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

CS-10094

1. CHECK DTC OF BODY INTEGRATED UNIT.

Check DTC of body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the DTC of power line displayed on body integrated unit?

Yes — Repair or replace it according to the DTC.

No — Go to 2.

2. CHECK CURRENT DATA.

Check the current data «BATT voltage (control)» display of body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Is the display 10 — 15 V?

Yes — Go to 4.

No — Go to 3.

3. CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND BATTERY.

1. Turn the ignition switch to ON.
2. Measure the voltage between body integrated unit and chassis ground.
   Connector & terminal
   (B280) No. 1 (+) — Chassis ground (−):
   (B281) No. 7 (+) — Chassis ground (−):
   (B287) No. 4 (+) — Chassis ground (−):

Is the voltage 9 — 16 V?

Yes — Go to 4.

No — Check harness for open circuit between the body integrated unit and the battery or a blown fuse.

4. CHECK BODY INTEGRATED UNIT IGN POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Measure the voltage between F/B fuse No. 5 and chassis ground.
   Connector & terminal
   F/B fuse No. 5 (+) — Chassis ground (−):

Is the display 10 V or more?

Yes — Go to 5.

No — Repair the open circuit of the harness between body integrated unit and ignition switch.

5. CHECK BODY INTEGRATED UNIT AND ACC VOLTAGE SUPPLY CIRCUIT.

1. Turn the ignition switch to ACC.
2. Measure the voltage between F/B fuse No. 9 and chassis ground.
   Connector & terminal
   F/B fuse No. 9 (+) — Chassis ground (−):

Is the display 10 V or more?

Yes — Go to 6.

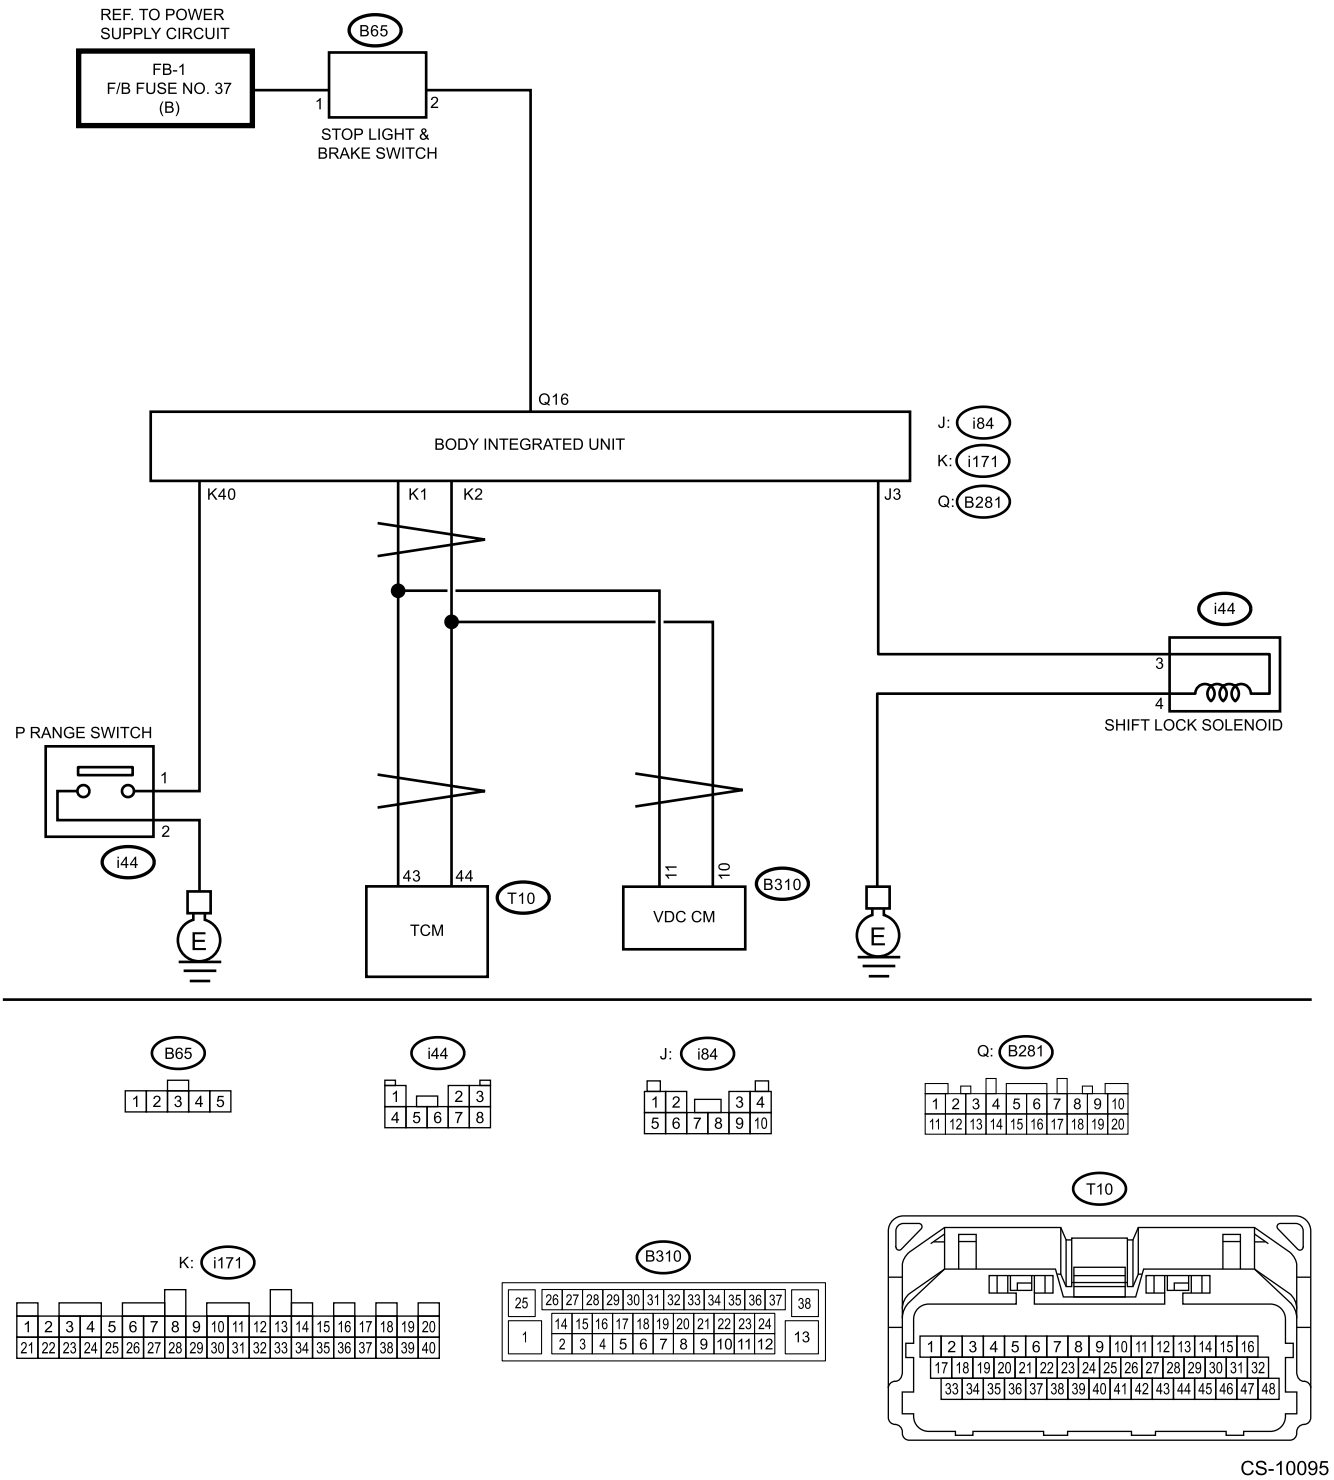
No — Repair the open circuit of the harness between body integrated unit and ignition switch.

6. CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND.

1. Turn the ignition switch to OFF.
2. Measure the harness resistance between the body integrated unit and chassis ground.
   Connector & terminal
   (i84) No. 4 — Chassis ground:
   (B287) No. 1 — Chassis ground:

Is the resistance less than 1 Ω?

Yes — Go to 7.



No — Repair the open circuit of harness between the body integrated unit and chassis ground.

7. CHECK FOR POOR CONTACT.

Is there poor contact of connector?

Yes	Repair the poor contact.
No	End.

3. SELECT LEVER CANNOT BE LOCKED OR RELEASED

CS-10095

1. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT.

Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT.

Is there any fault?

Yes — Follow the procedures to perform inspection and repair.

No — Go to 2.

2. CHECK CURRENT DATA.

1. Connect the Subaru Select Monitor.
2. Shift the select lever to "P" range.
3. Turn the ignition switch to ON.
4. Select the current data display and display «P SW». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Is the display "ON" in the P range and "OFF" in ranges other than P?

Yes — Go to 3.

No — Go to 8.

3. CHECK CURRENT DATA.

Select the current data display and display «Stop Light Switch». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Is "ON" displayed when the brake pedal is depressed and "OFF" displayed when the brake pedal is released?

Yes — Go to 4.

No — Go to 11.

4. CHECK BODY INTEGRATED UNIT DTC.

Check the DTC of the body integrated unit when the brake pedal is pressed and when it is released.
(Hold each condition for 5 seconds or more.)

Is there a DTC of a current malfunction?

Yes — Follow the DTC to perform inspection and repair.

No — Go to 5.

5. CHECK CURRENT DATA.

Select the current data display and display «Shift lock solenoid output». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Is “ON” displayed when the brake pedal is depressed and “OFF” displayed when the brake pedal is released?

Yes — Go to 6.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

6. CHECK CURRENT DATA.

Select the current data display and display «Shift Position». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Is the display “7” in the “P” range and other than “7” in ranges other than “P”?

Yes — Go to 7.

No — Check the following items.

- Inhibitor switch
- Harness between inhibitor switch and TCM
- TCM input signal
- TCM CAN communication
- Body integrated unit CAN receive

7. CHECK CURRENT DATA.

1. Select the current data display and display «Front Wheel Speed». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.
2. Start the engine.
3. Raise vehicle speed gradually up to approximately 20 km/h (12 MPH).

Is a figure equivalent to the speedometer being indicated?

Yes — Go to 12.

No — Check the following items.
- Wheel speed sensor
- VDC CM CAN communication
- Body integrated unit CAN receive

Replace the wheel speed sensor, VDC CM or body integrated unit, or both.

8. CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND "P" RANGE SWITCH.

1. Disconnect the connector from body integrated unit.
2. Disconnect the connector of "P" range switch.
3. Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and "P" range switch.

Connector & terminal

(i171) No. 40 — (i44) No. 1:

Is there any fault in the harness?

Yes — Repair or replace the harness between the body integrated unit and the "P" range switch.

No — Go to 9.

9. CHECK HARNESS BETWEEN "P" RANGE SWITCH AND CHASSIS GROUND.

Measure the resistance of harness between "P" range switch and chassis ground.

Connector & terminal

(i44) No. 2 — Chassis ground:

Is it less than 10 Ω?

Yes — Go to 10.

No — Measure the resistance of harness between "P" range switch and chassis ground.

10. CHECK "P" RANGE SWITCH.

Measure the resistance between "P" range switch connector terminals.

Terminals

No. 2 — No. 1:

Is it less than 10 Ω in the "P" range, and 1 MΩ or more in ranges other than "P"?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Replace the AT select lever COMPL. Ref. to CONTROL SYSTEMS>Select Lever>REMOVAL.

11. CHECK STOP LIGHT SWITCH INPUT SIGNAL.

1. Disconnect the connector from body integrated unit.
2. Measure the voltage between the body integrated unit connector terminal and chassis ground.

   Connector & terminal

   (B281) No. 16 (+) — Chassis ground (−):

Is the voltage 9 — 16 V when the brake pedal is depressed, and less than 1.5 V when not pressed?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

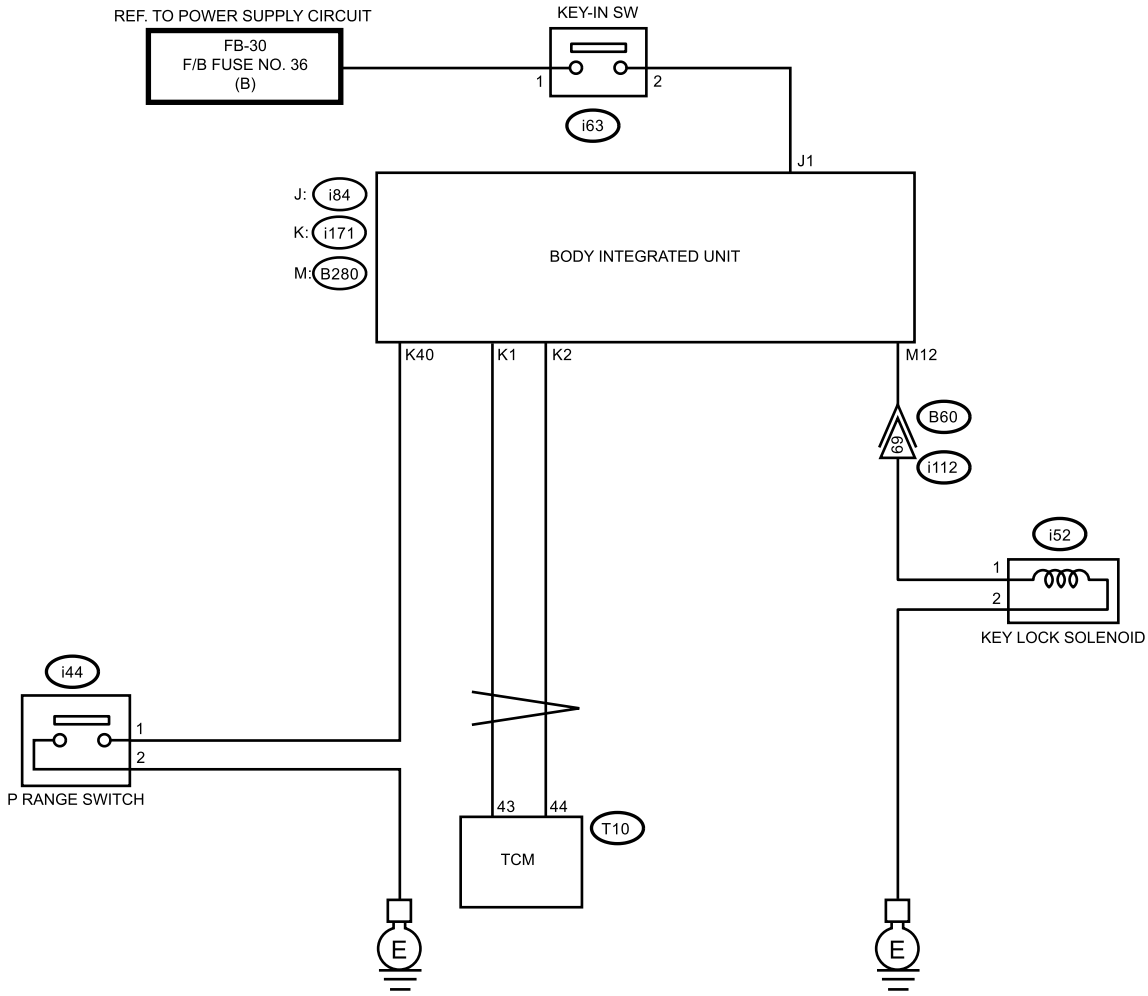
No — Check the stop light system.

12. CHECK SOLENOID UNIT OPERATION.

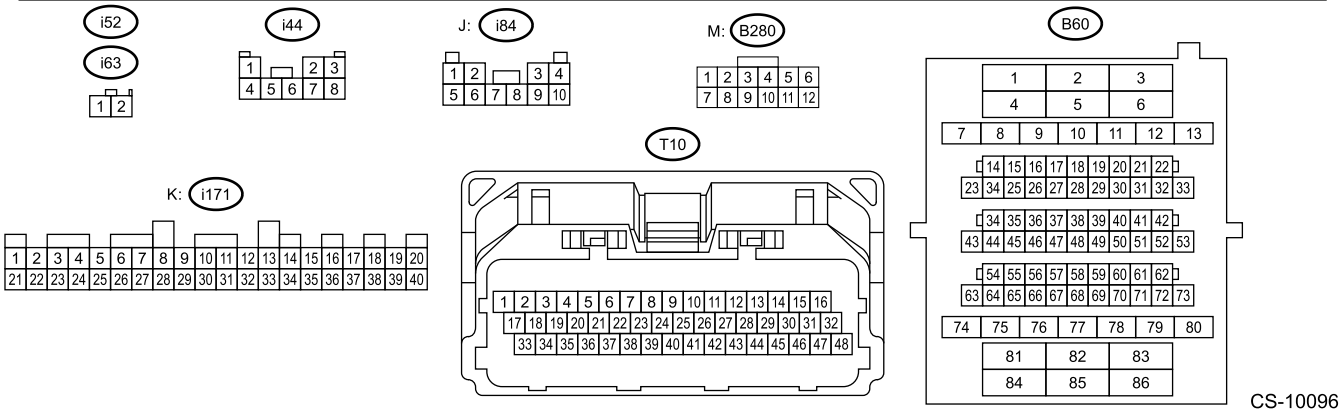
Connect the battery to the solenoid unit connector terminal, and operate the solenoid unit.

Terminals

No. 3 (+) — No. 4 (−):



Does the solenoid unit operate normally?



Yes	Check the lock mechanism of the select lever body.
No	Replace the solenoid unit. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and "P" Range Switch.

4. KEY INTERLOCK CANNOT BE LOCKED OR RELEASED

Note:

Check of this item only applies to models without a push button ignition switch.

1. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT.

Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT.

Is there any fault?

Yes — Follow the procedures to inspect and repair.

No — Go to 2.

2. CHECK CURRENT DATA.

1. Connect the Subaru Select Monitor.
2. Shift the select lever to "P" range.
3. Turn the ignition switch to ON.
4. Select the current data display and display «P SW». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Is the display "ON" in the P range and "OFF" in ranges other than P?

Yes — Go to 3.

No — Go to 5.

3. CHECK CURRENT DATA.

1. Select the current data display and display the «key-lock warning SW». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.
2. Turn the ignition switch to OFF.

Does the display change as "ON" ←→ "OFF" when the key is inserted and removed?

Yes — Go to 4.

No — Go to 8.

4. CHECK CURRENT DATA.

1. Turn the ignition switch to OFF.
2. Select the current data display and display «Key lock solenoid output». Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Is the display “Unlock” in the “P” range and “Lock” in ranges other than “P”?

Yes — Go to 9.

No — Go to 5.

5. CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND “P” RANGE SWITCH.

1. Disconnect the connector from body integrated unit.
2. Disconnect the connector of “P” range switch.
3. Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and “P” range switch.

Connector & terminal

(i171) No. 40 — (i44) No. 1:

Is there any fault in the harness?

Yes — Repair or replace the harness between the body integrated unit and the “P” range switch.

No — Go to 6.

6. CHECK HARNESS BETWEEN “P” RANGE SWITCH AND CHASSIS GROUND.

Measure the resistance of harness between “P” range switch and chassis ground.

Connector & terminal

(i44) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 7.

No — Repair or replace the harness between the “P” range switch and chassis ground.

7. CHECK “P” RANGE SWITCH.

Measure the resistance between “P” range switch connector terminals.

Terminals

No. 2 — No. 1:

Is it less than 10 Ω in the “P” range, and 1 MΩ or more in ranges other than “P”?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Replace the AT select lever COMPL. Ref. to CONTROL SYSTEMS>Select Lever>REMOVAL.

8. CHECK HARNESS BETWEEN BATTERY AND KEY-IN SWITCH AND BODY INTEGRATED UNIT.

1. Disconnect the connector from body integrated unit.
2. Measure the voltage between body integrated unit and chassis ground.

Connector & terminal

(i84) No. 1 (+) — Chassis ground (−):

Is the display 9 — 16 V when the key is inserted, and less than 1.5 V with the key removed?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Check the following items.

- Key-in switch
- Harness/fuse
- Ignition circuit

9. CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND KEY LOCK SOLENOID.

1. Disconnect the connector from body integrated unit.
2. Disconnect the connector of key lock solenoid.
3. Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and key lock solenoid.
   Connector & terminal
   (B280) No. 12 — (i52) No. 1:

Is there any fault in the harness?

Yes — Repair or replace the harness between the body integrated unit and the key lock solenoid.

No — Go to 10.

10. CHECK HARNESS BETWEEN KEY LOCK SOLENOID AND CHASSIS GROUND.

Measure the resistance of harness between key lock solenoid and chassis ground.
Connector & terminal
(i52) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 11.

No — Repair or replace the harness between the key lock solenoid and chassis ground.

11. CHECK KEY LOCK SOLENOID OPERATION.

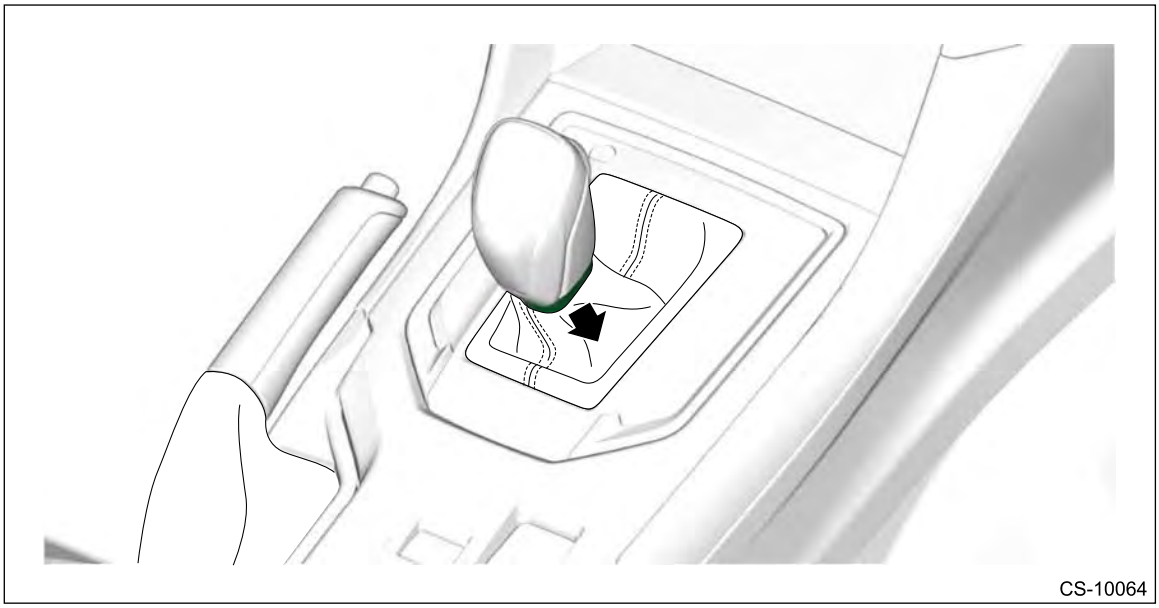
Connect the battery to the key lock solenoid connector terminal, and operate the solenoid.
Terminals
No. 1 (+) — No. 2 (−):

Does the key lock solenoid operate normally?

Yes — Go to 12.

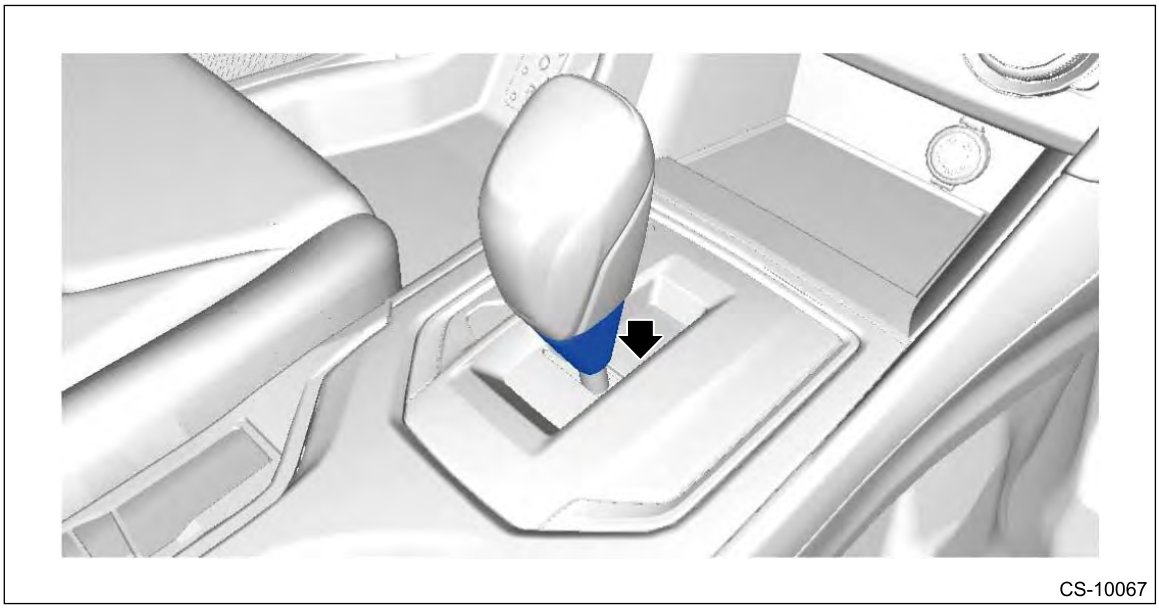
No — Replace the key lock solenoid.

12. CHECK OUTPUT OF BODY INTEGRATED UNIT.



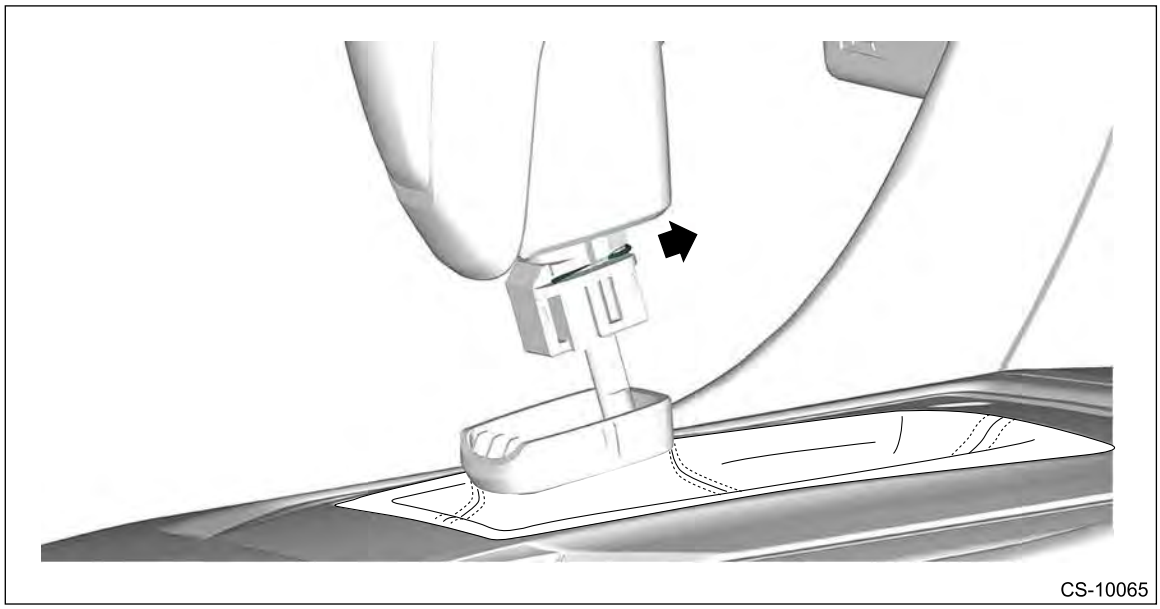
1. Connect all connectors.
2. Insert the key.
3. Measure the voltage between body integrated unit and chassis ground.
   Connector & terminal
   (B280) No. 12 — Chassis ground:

Is it 7.5 to 16 V in ranges other than “P”, and 0 V in the “P” range?

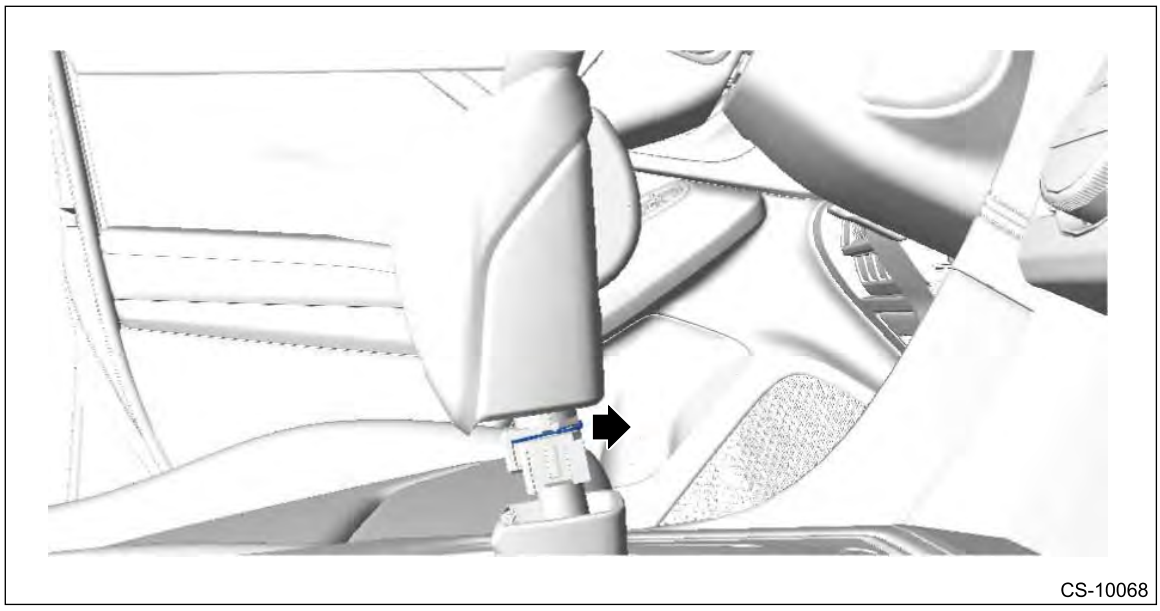


Yes	Check the lock mechanism of the steering lock body.
No	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

REMOVAL

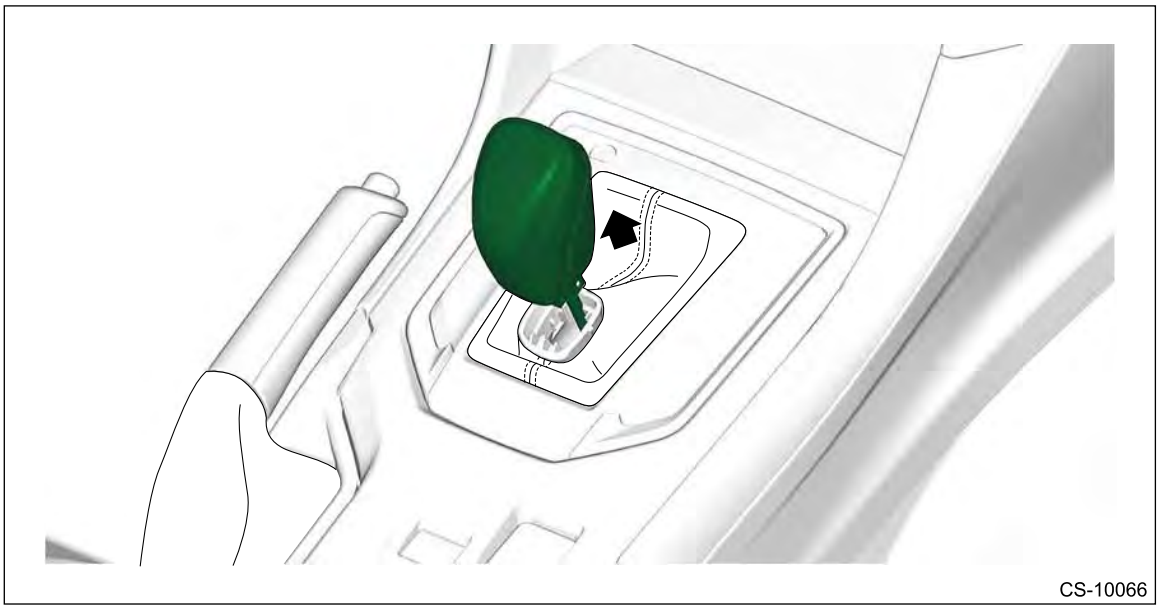


1. Shift the select lever to "N" range.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Lower the boot assembly vertically toward the lever. (Model with boot shifter)

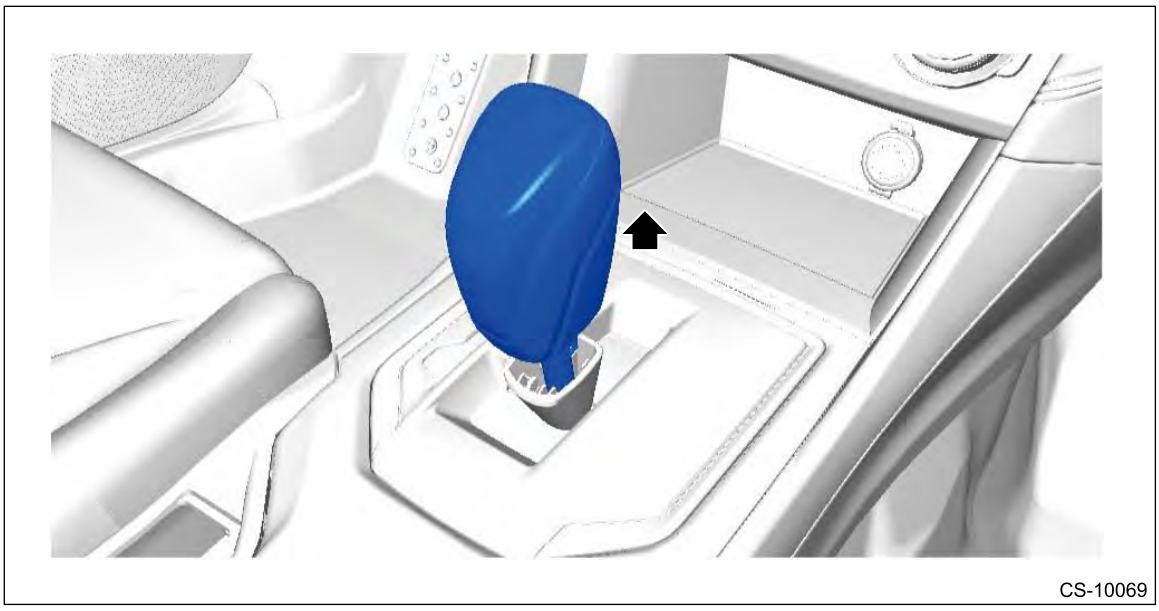


4. Lower the cover grip AT vertically toward the lever. (Model with gate shifter)

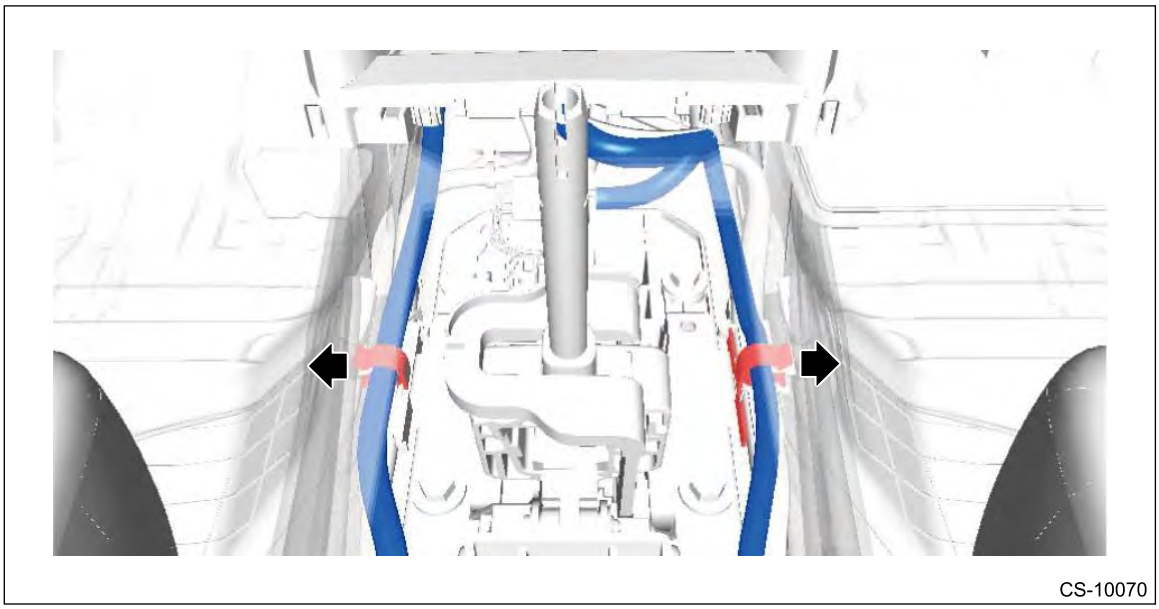
5. Remove the clamp grip pin.
   - Model with boot shifter



- Model with gate shifter

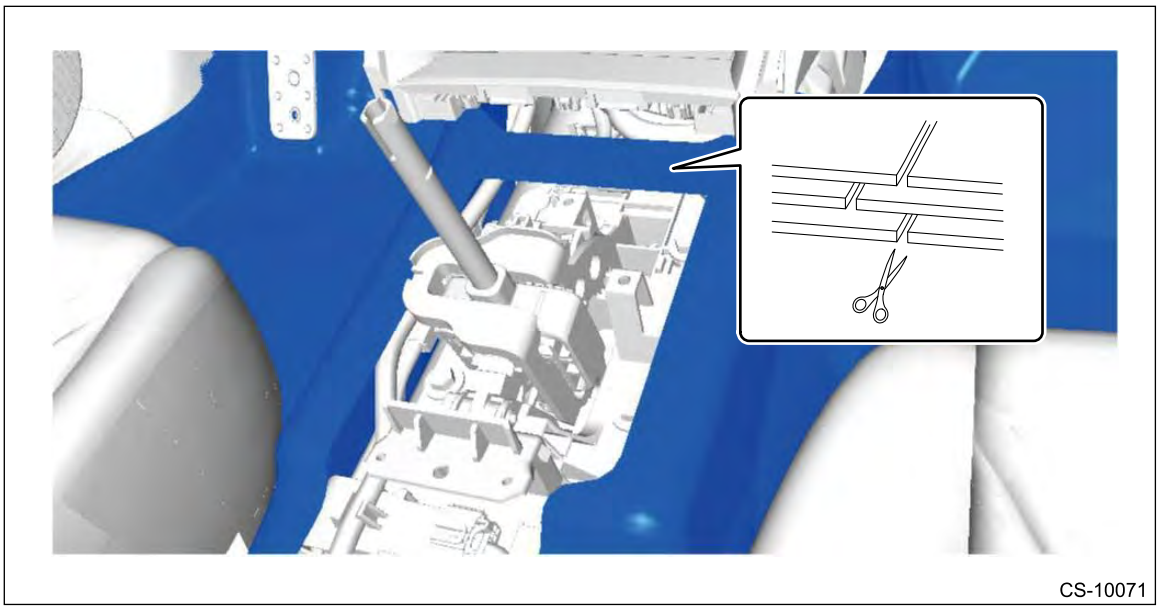


6. Remove the grip assembly.

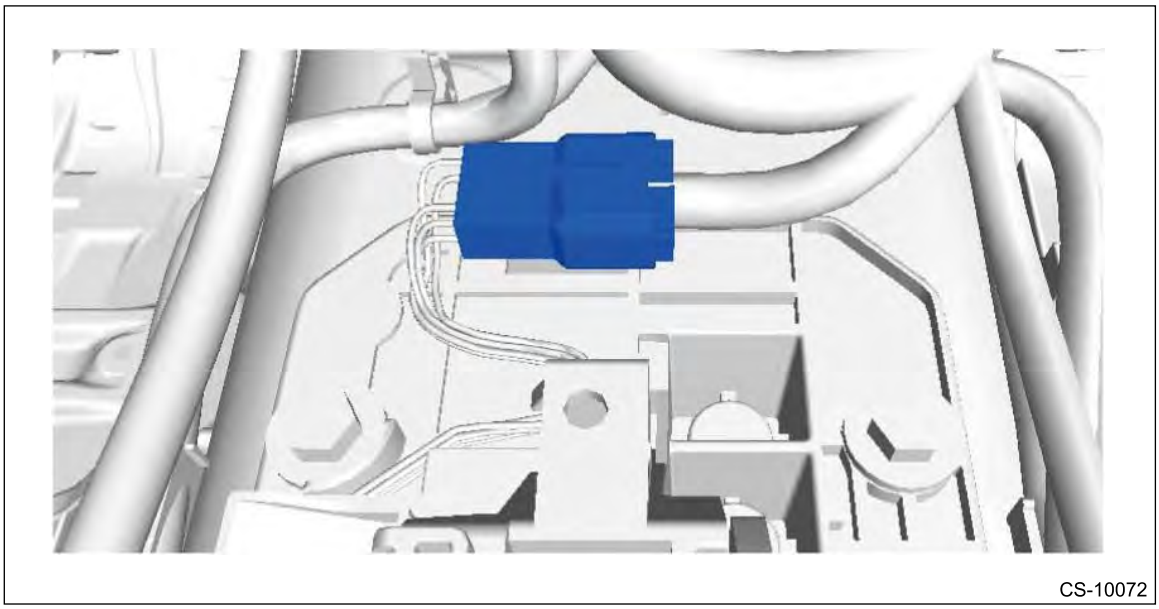


- Model with boot shifter

- Model with gate shifter

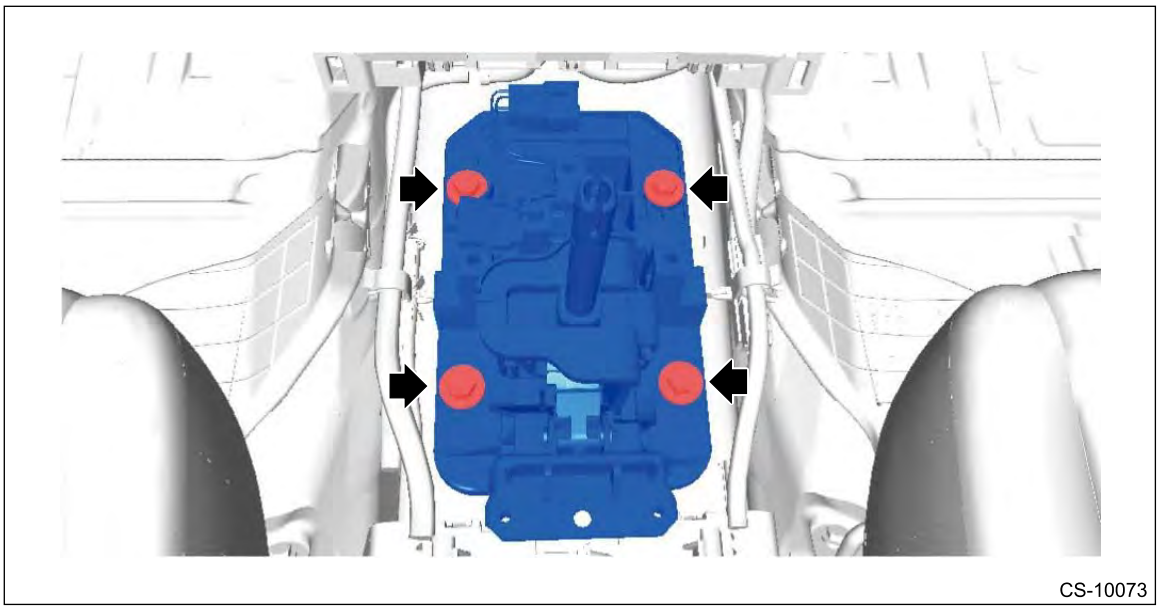


7. Remove the front console panel. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
8. Remove the panel center LWR LH and RH. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
9. Remove the harness clip from the select lever assembly.



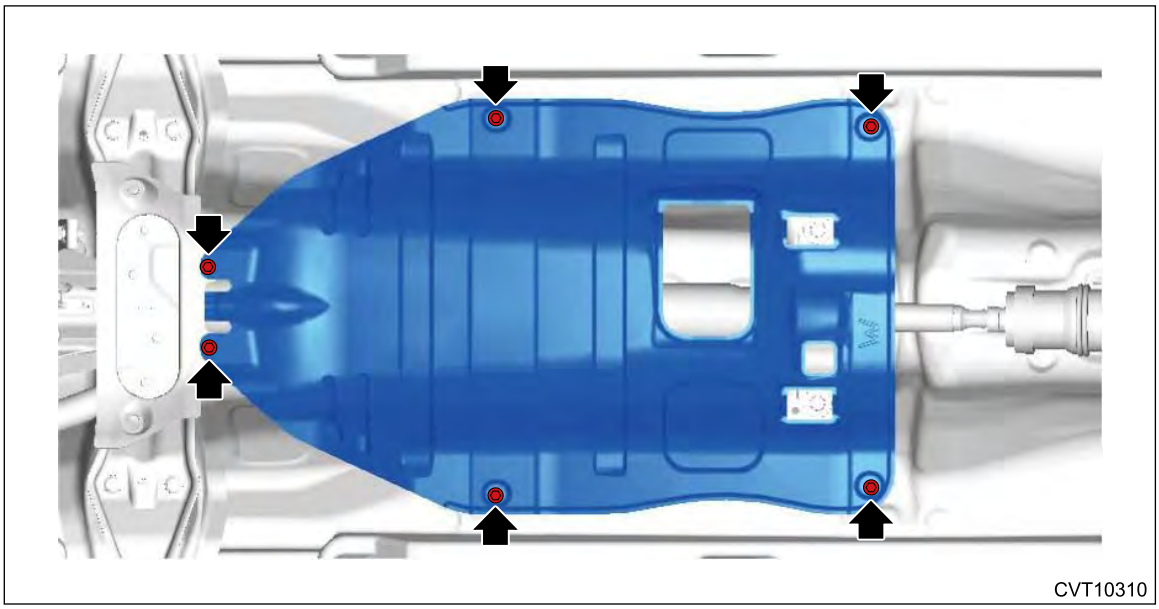
CS-10070

10. Separate the floor carpet to three layers, and cut them while staggering their cut position as shown in the figure.



CS-10071

11. Disconnect the harness connector.

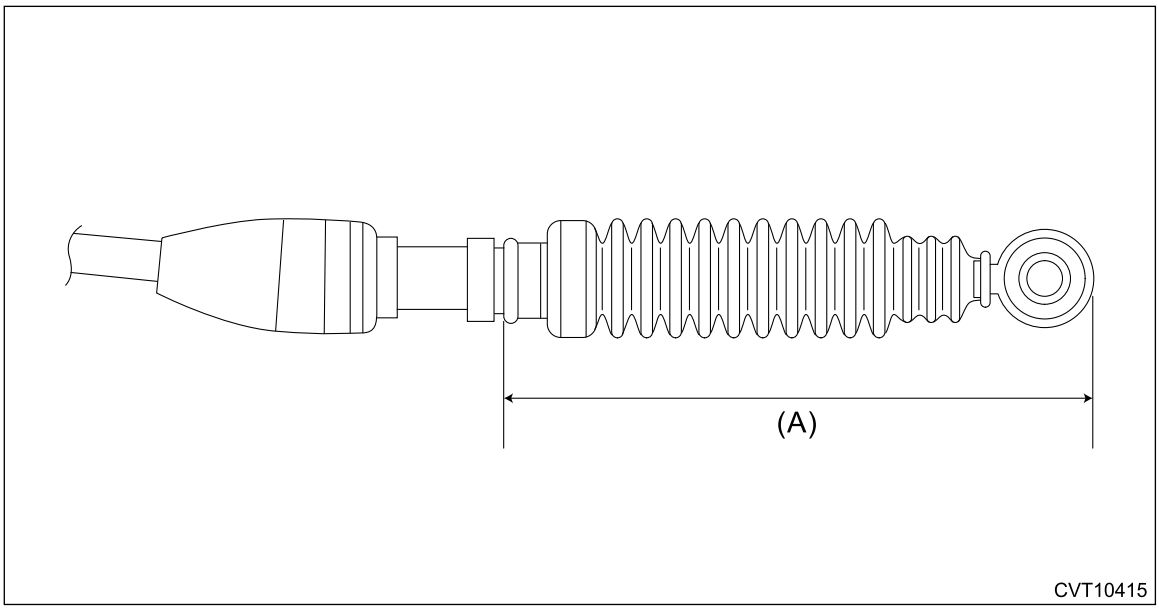


CS-10072

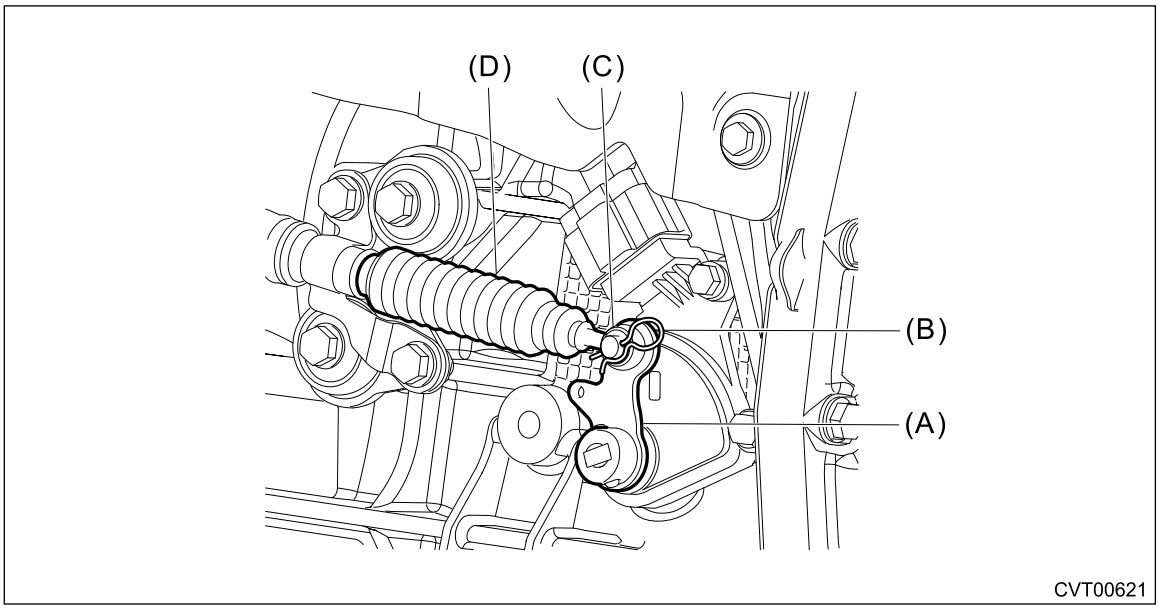
12. Remove four bolts.

CS-10073

13. Lift up the vehicle.

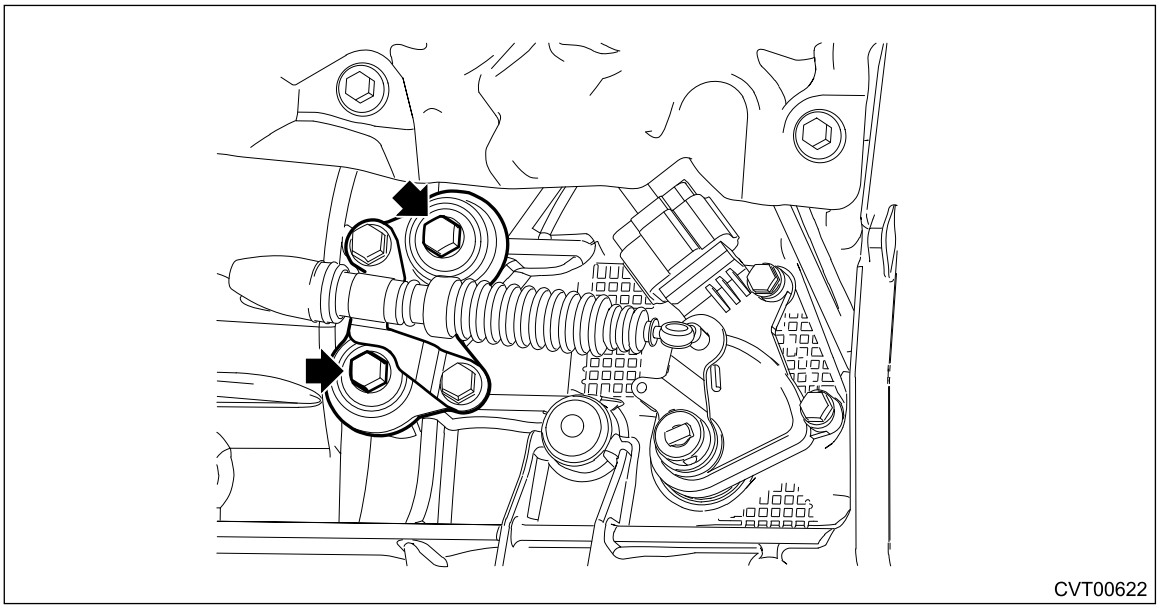


14. Remove the center exhaust cover.



15. Remove the snap pin and washer from the shifter arm.

Caution:



Do not apply excessive load while holding the part (A).

(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable

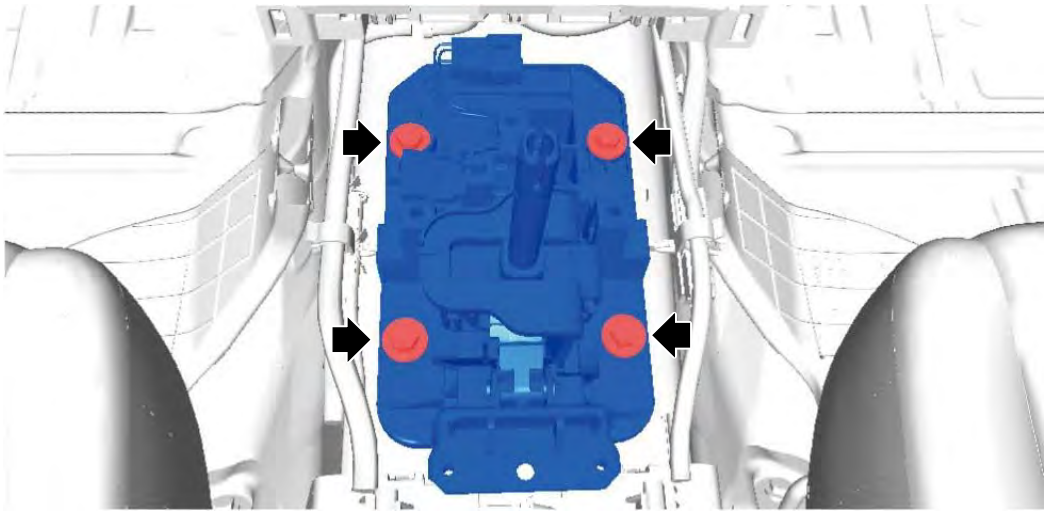
16. Remove the plate assembly from the transmission case.

17. Lower the vehicle, and remove the select lever assembly from the room side.

Note:

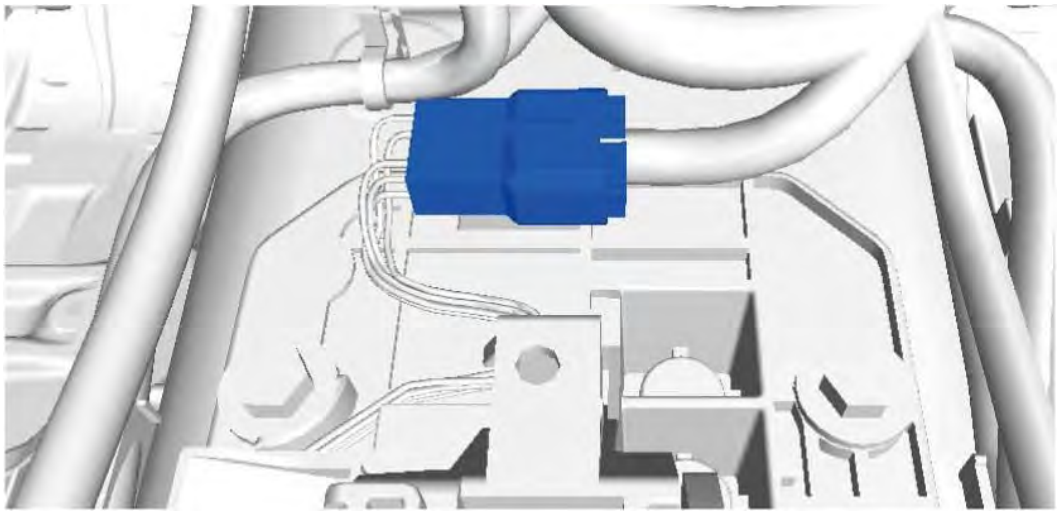
Pass the select cable from the underside of the vehicle to the room side.

CONTROL SYSTEMS > Select Lever



INSTALLATION

1. Set the select lever assembly to the vehicle body.



2. Tighten the four mounting bolts to attach the select lever assembly to the vehicle body.

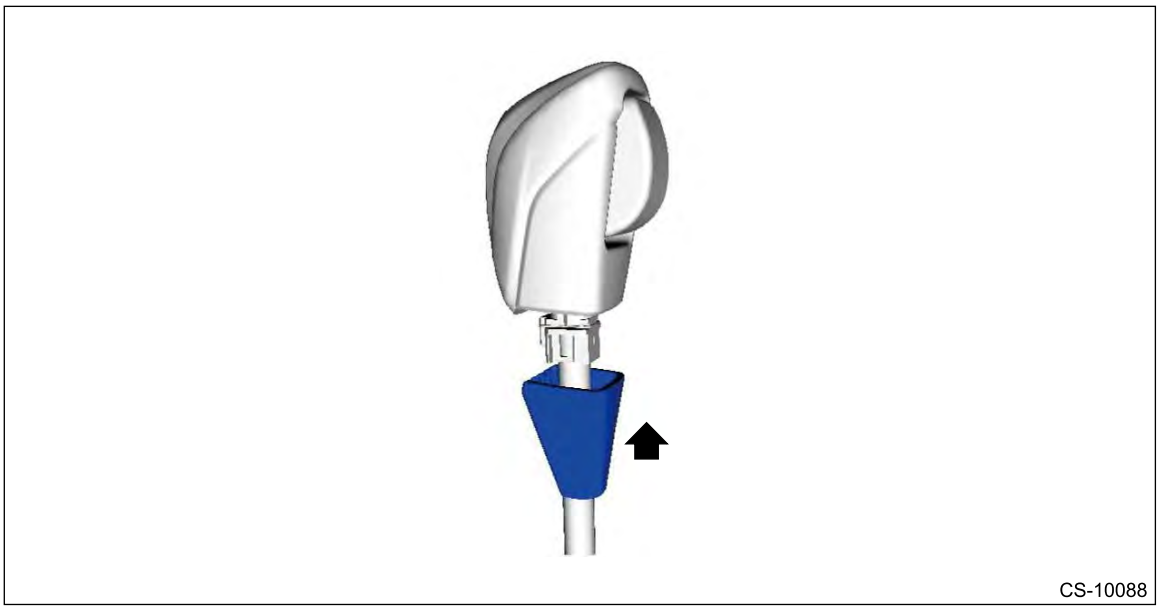
Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

CS-10073

3. Connect the harness connector.

CS-10072

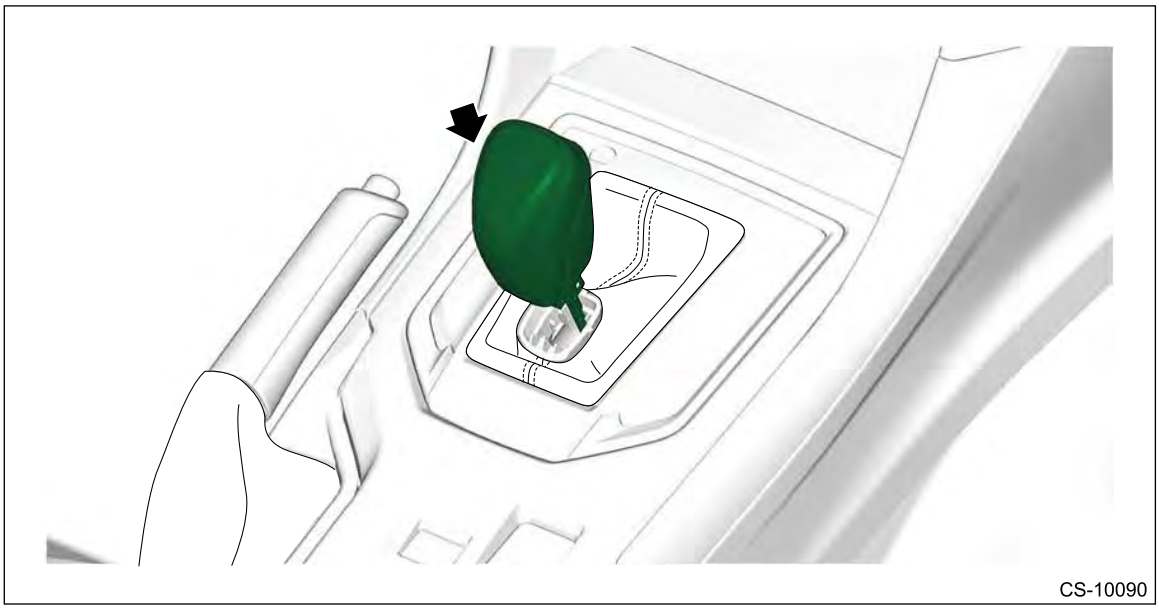


4. Adhere the cut carpet with double sided tape etc.
5. Install the harness clip to the select lever assembly.
6. Shift the select lever to “N” range.
7. Install the panel center LWR LH and RH. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
8. Install the front console panel. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
9. Accessing from the button side of the grip, attach the clamp grip pin.

10. Install the cover grip AT securely. (Model with gate shifter)

Note:

After installation, check that the cover grip AT cannot be detached.

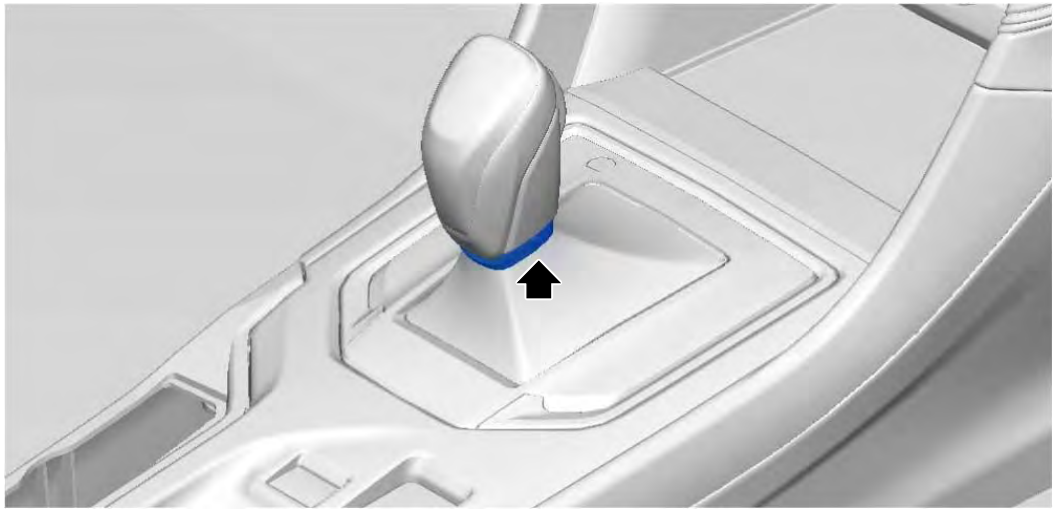


11. Insert the grip assembly to the select lever and press it down until a click is heard.

Note:

For the model with boot shifter, insert the grip assembly while holding with your fingers so that the clamp grip pin does not come out.

- Model with boot shifter



- Model with gate shifter

12. Securely install the boot assembly. (Model with boot shifter)

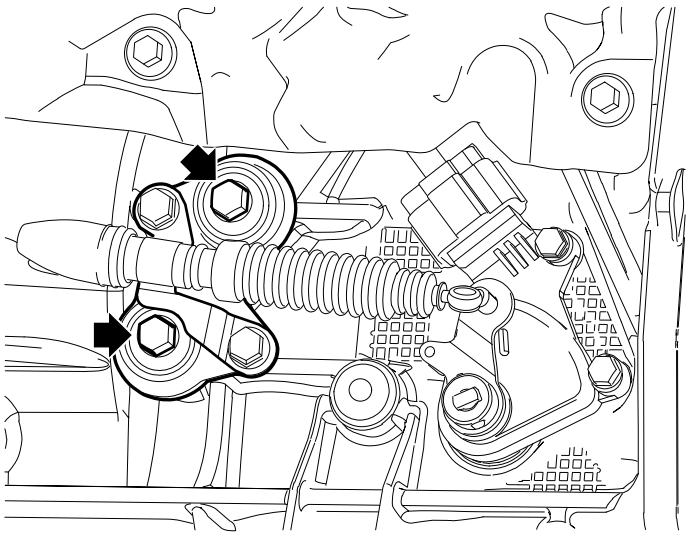
Note:

After installation, check that the boot assembly does not come off.

13. After installation of grip, check the following points.

- The grip will not come off.
- The button on the grip operates normally.

14. Install the console box. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.

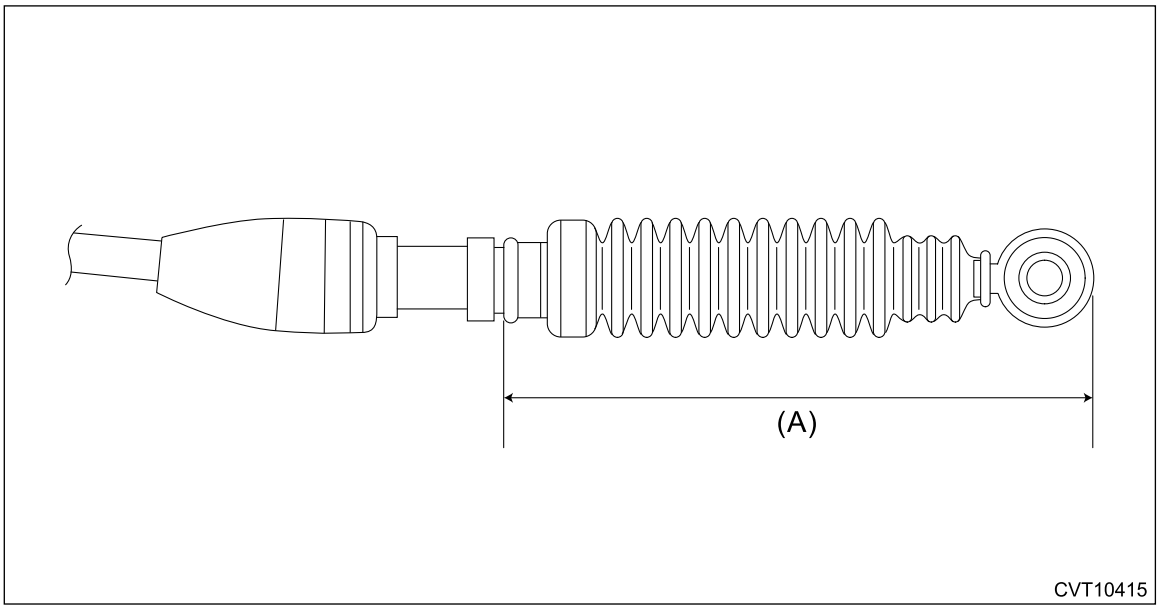


15. Shift the select lever to “N” range.

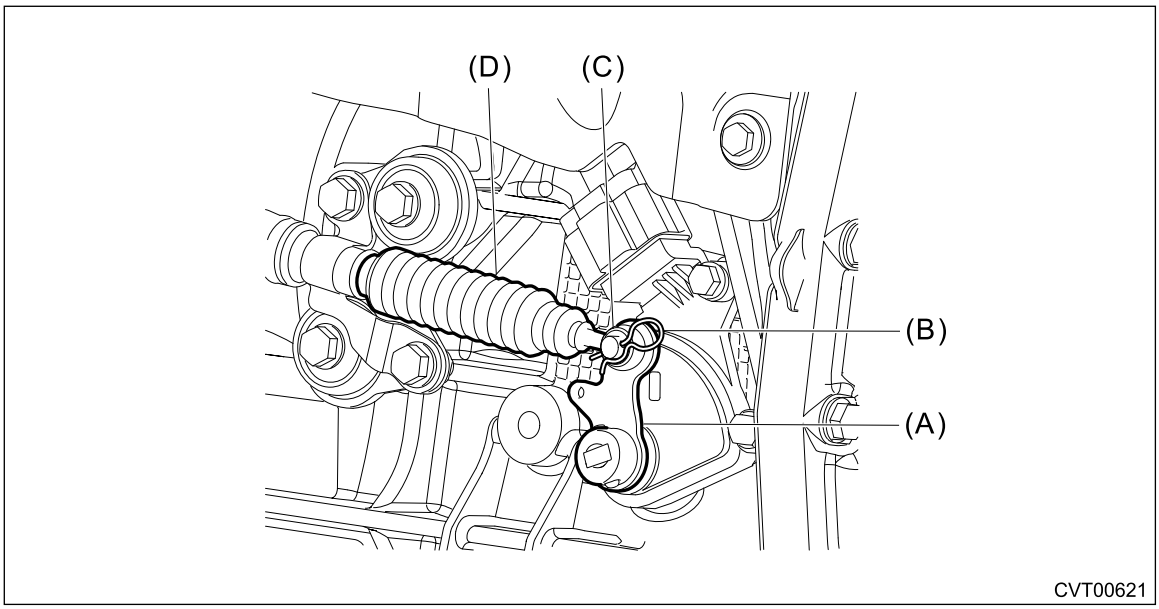
16. Lift up the vehicle.

17. Install the plate assembly to transmission.

Tightening torque:



T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



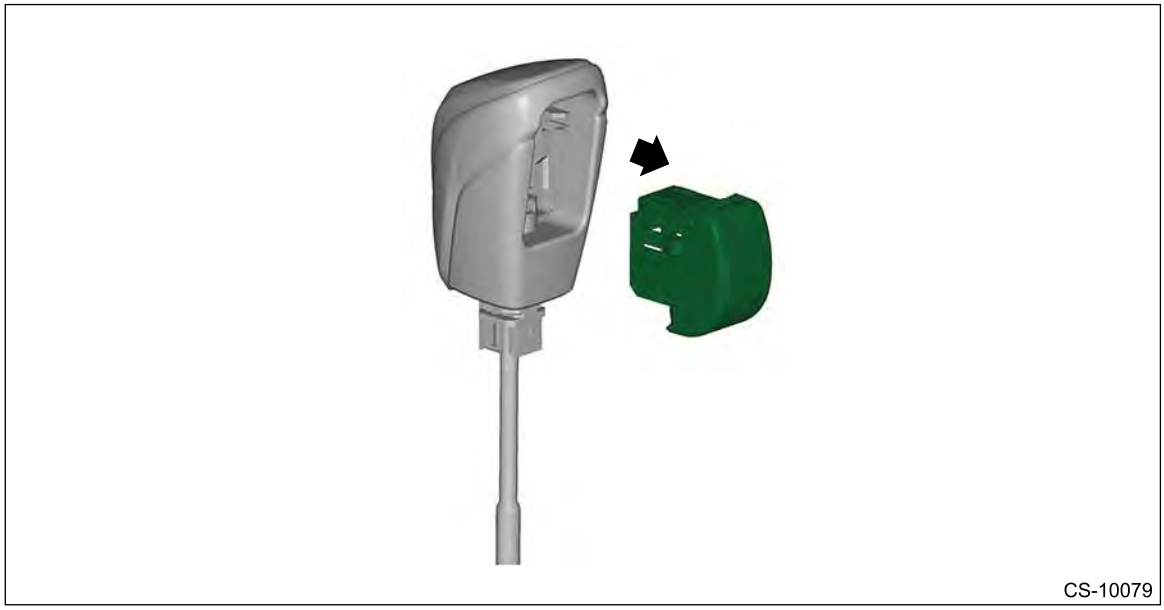
18. Install the washer and snap pin to the shifter arm.

Caution:

Do not apply excessive load while holding the part (A).

(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable

19. Adjust the select cable position. Ref. to CONTROL SYSTEMS>Select Cable>ADJUSTMENT.
20. After adjustment, confirm that the select lever operates properly at all range positions using the shift lock release button.
21. Install the center exhaust cover.
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
22. Lower the vehicle.
23. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
24. Inspect the following items. If a malfunction is found in the inspection, adjust the select cable or inhibitor switch.
(1) The shift lock operates normally. Ref. to CONTROL SYSTEMS>AT Shift Lock Control System>INSPECTION > SHIFT LOCK OPERATION.



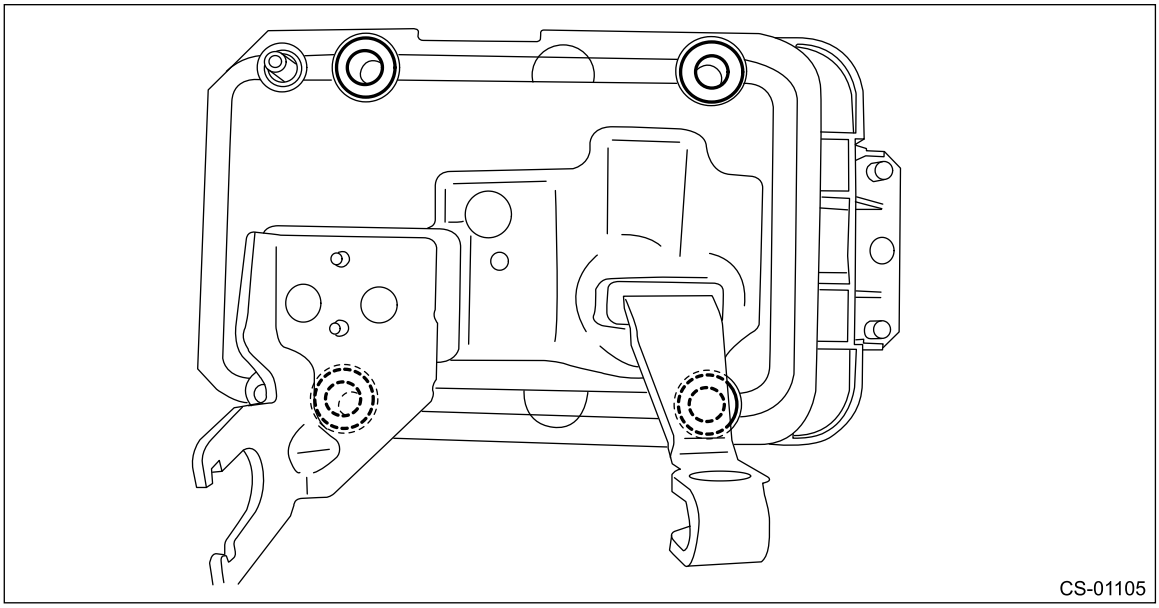
(2) Engine starts when the select lever is in “P” or “N” range, but not in other ranges.
(3) Back-up light illuminates when the select lever is in the “R” range, but not in other ranges.
(4) Select lever and indicator positions are matched.

CONTROL SYSTEMS > Select Lever

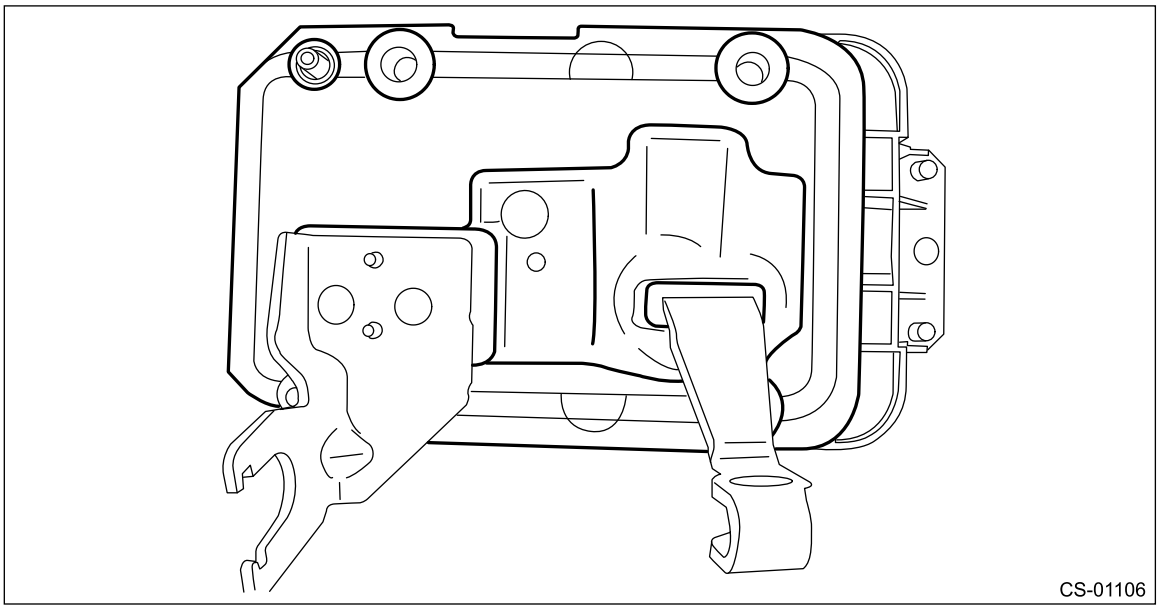
DISASSEMBLY

1. GRIP ASSEMBLY

1. Remove the button assembly _ AT.

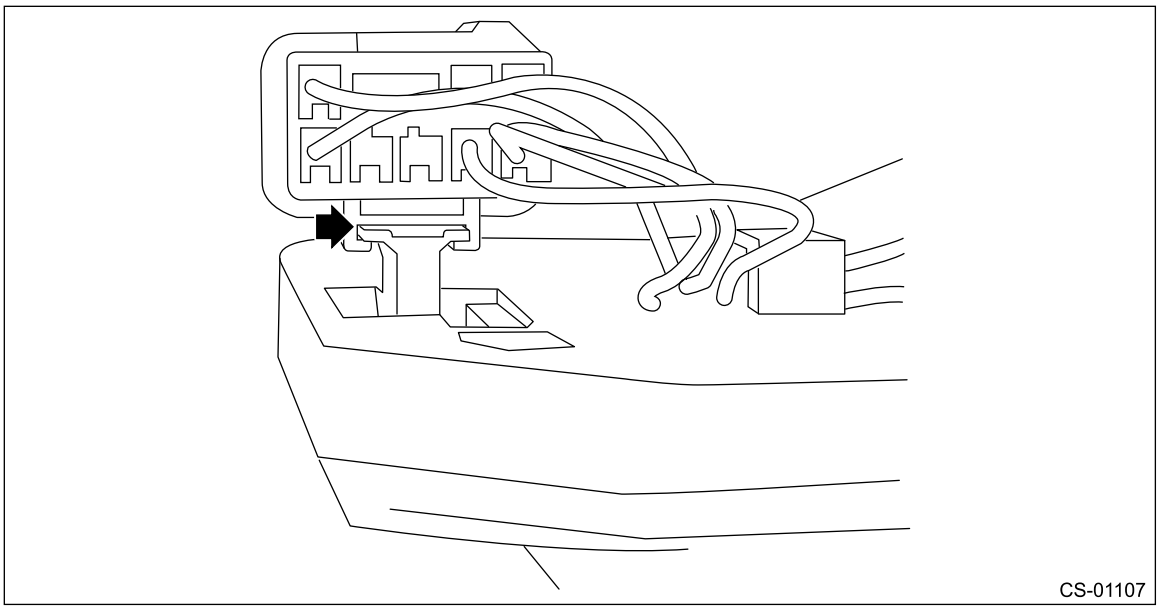


(A) Claw

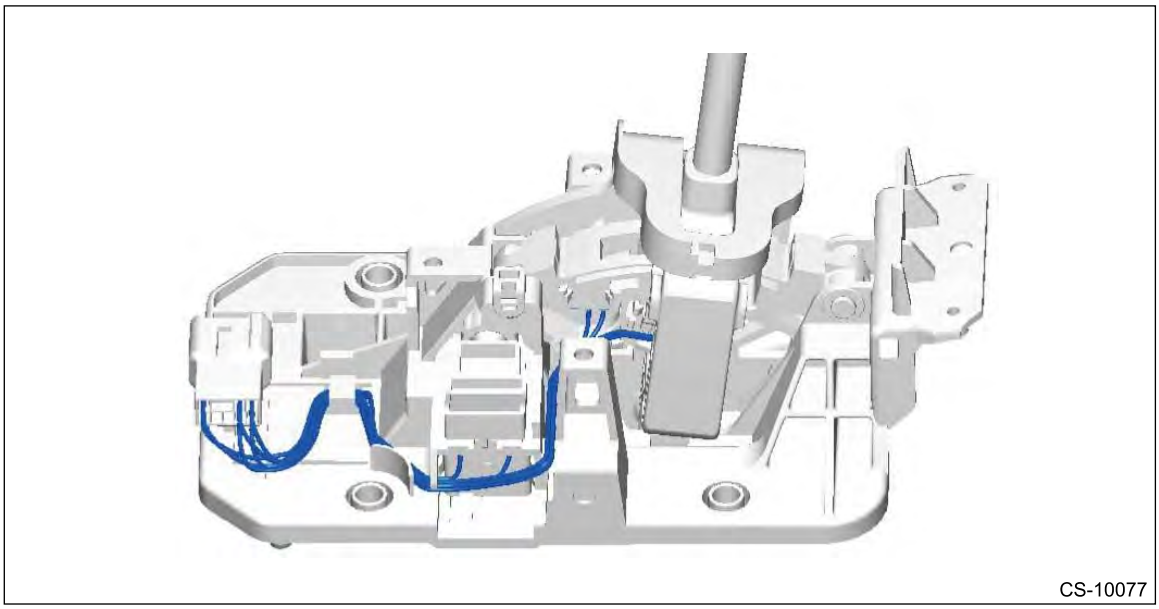


2. Remove the rod COMPL.

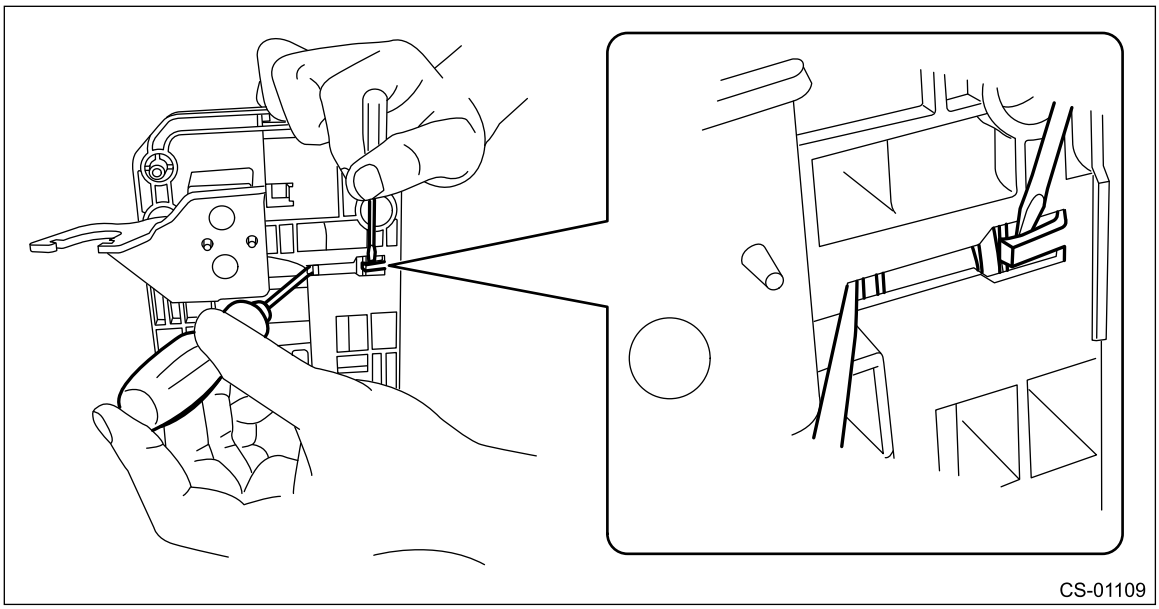
2. AT SELECT LEVER ASSEMBLY



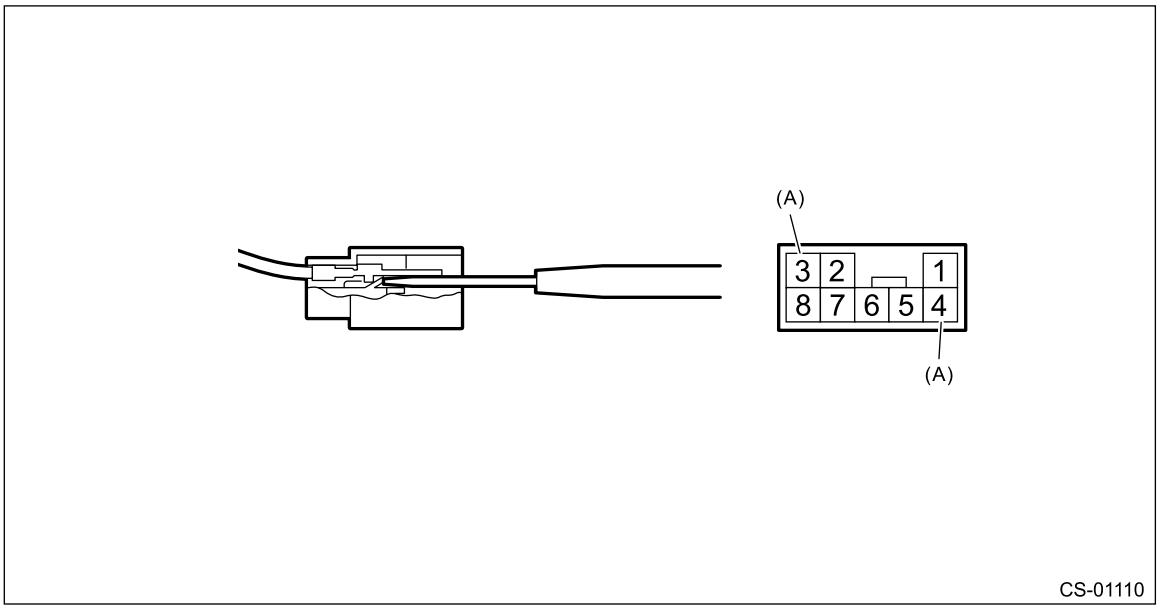
1. Remove the spacer plate.



2. Remove the gasket.



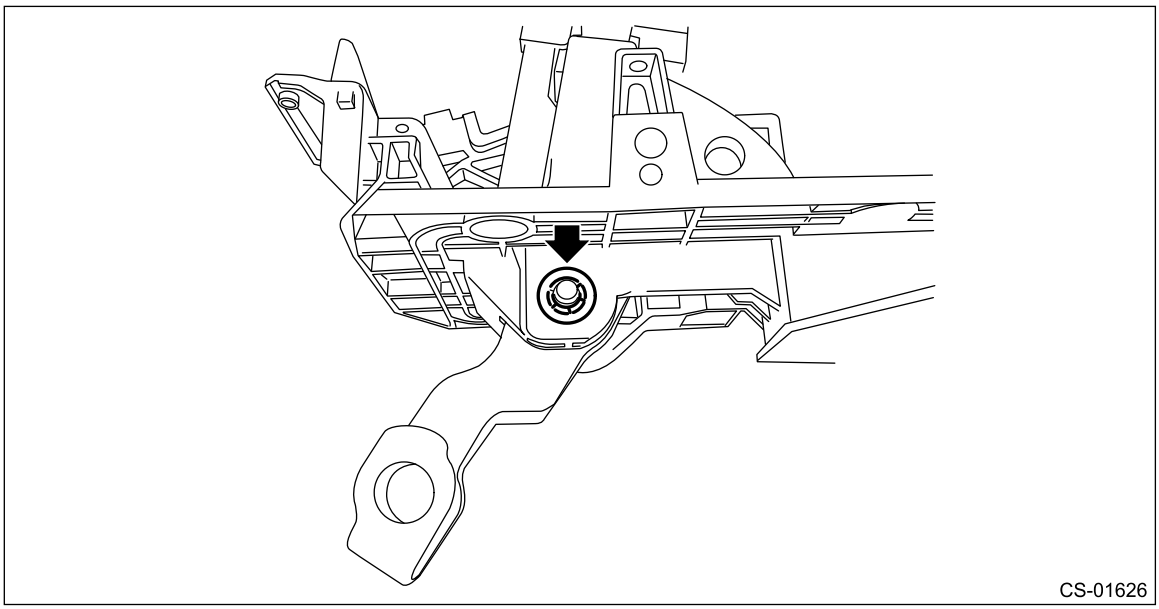
3. Insert a flat tip screwdriver with a thin tip under the connector and disconnect the harness connector from the plate COMPL.



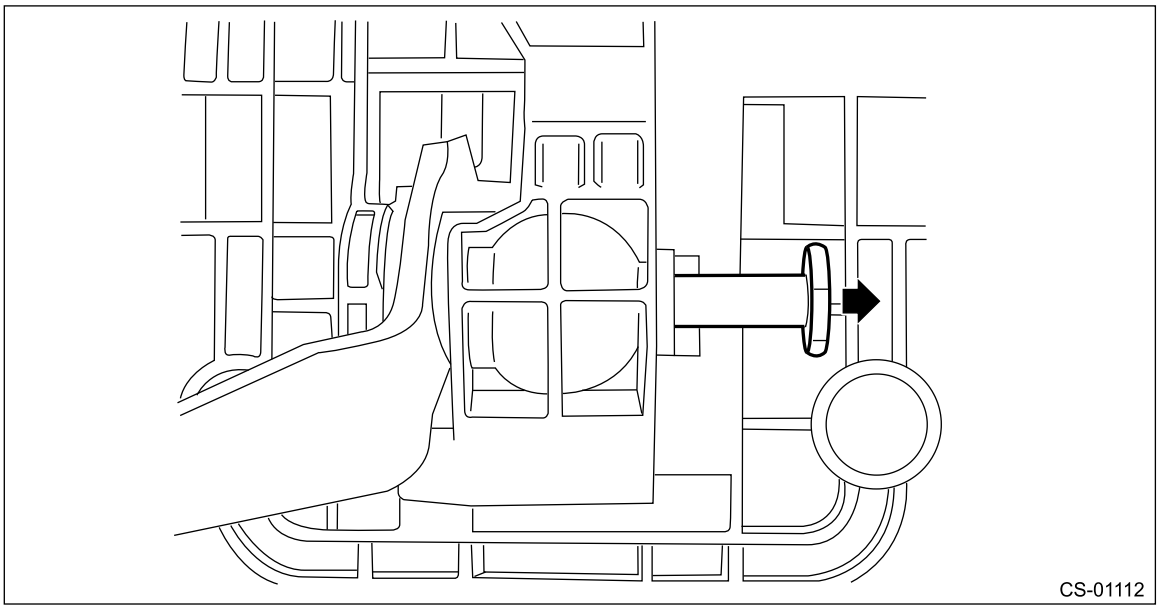
4. Remove the harness from the plate COMPL.

5. Raise the claw with a flat tip screwdriver with a thin tip and remove the solenoid unit.

6. Remove the terminal of the solenoid unit using a flat tip precision screwdriver with a tip width of 1.3 mm (0.05 in) or less, KTC connector terminal tool ECC-1T or equivalent.



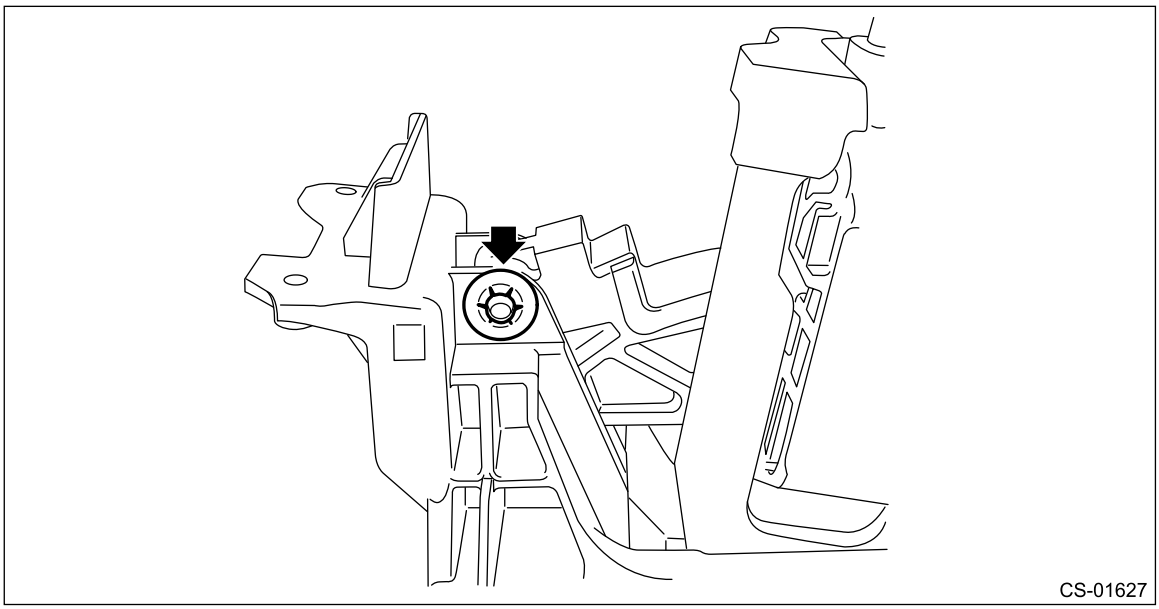
(A) Solenoid unit terminals



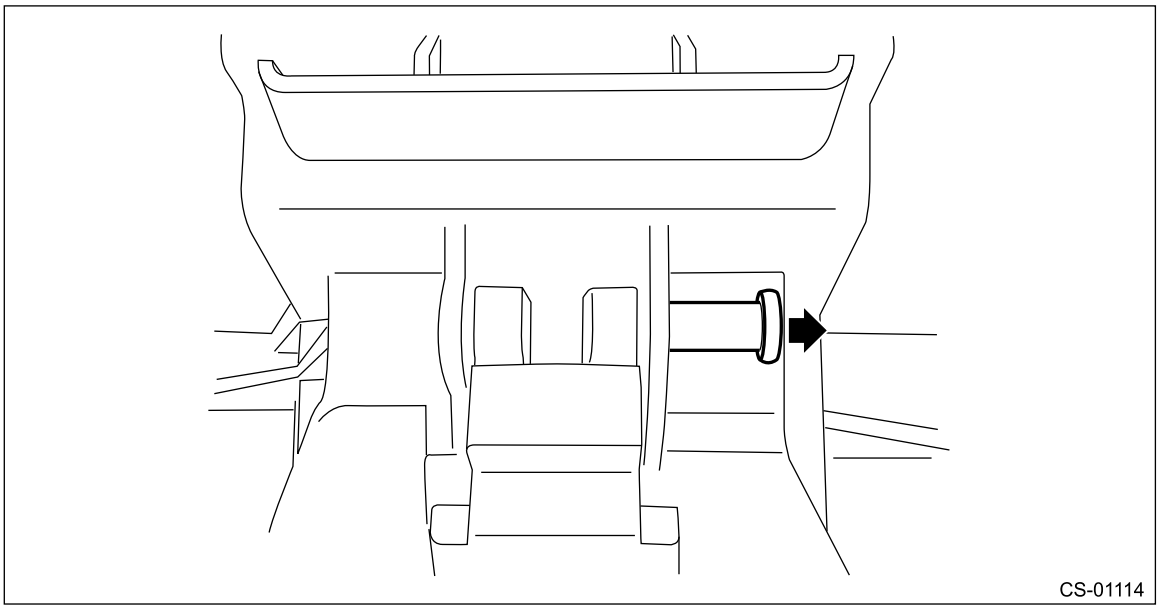
7. Remove the clamp push nut.

Note:

Replace the clamp push nut with a new part.

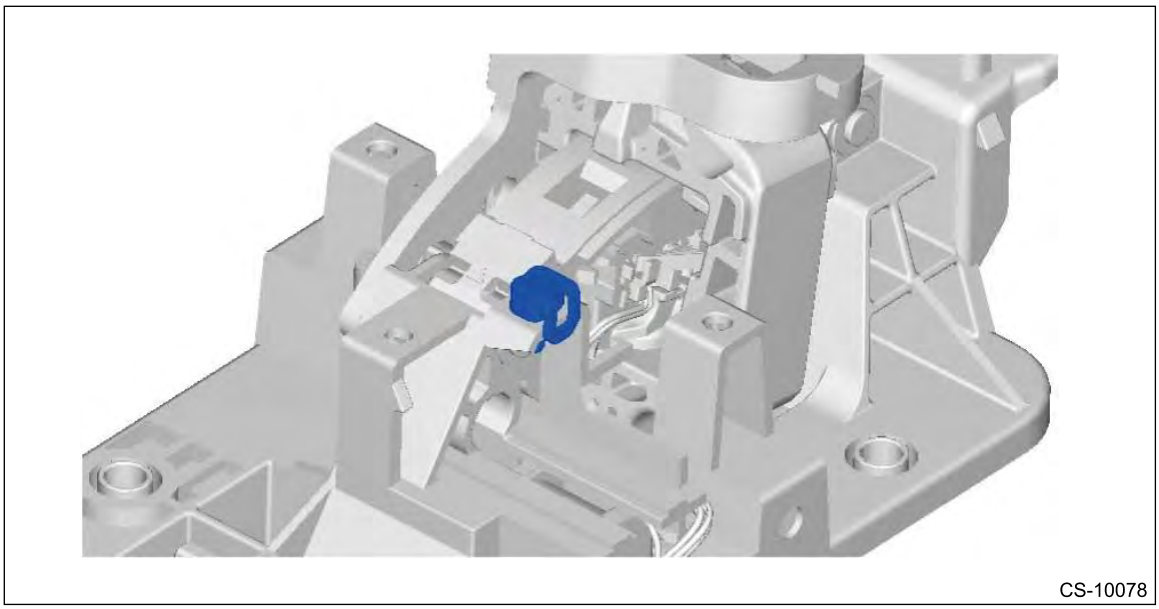


8. Pull out shaft control.

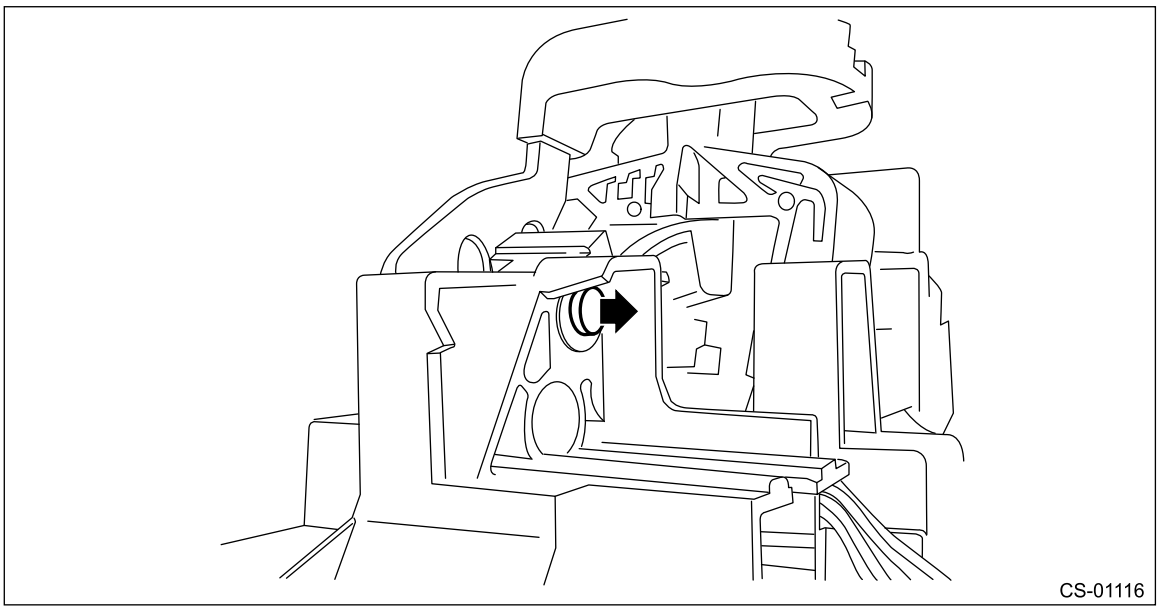


9. Remove the clamp push nut.

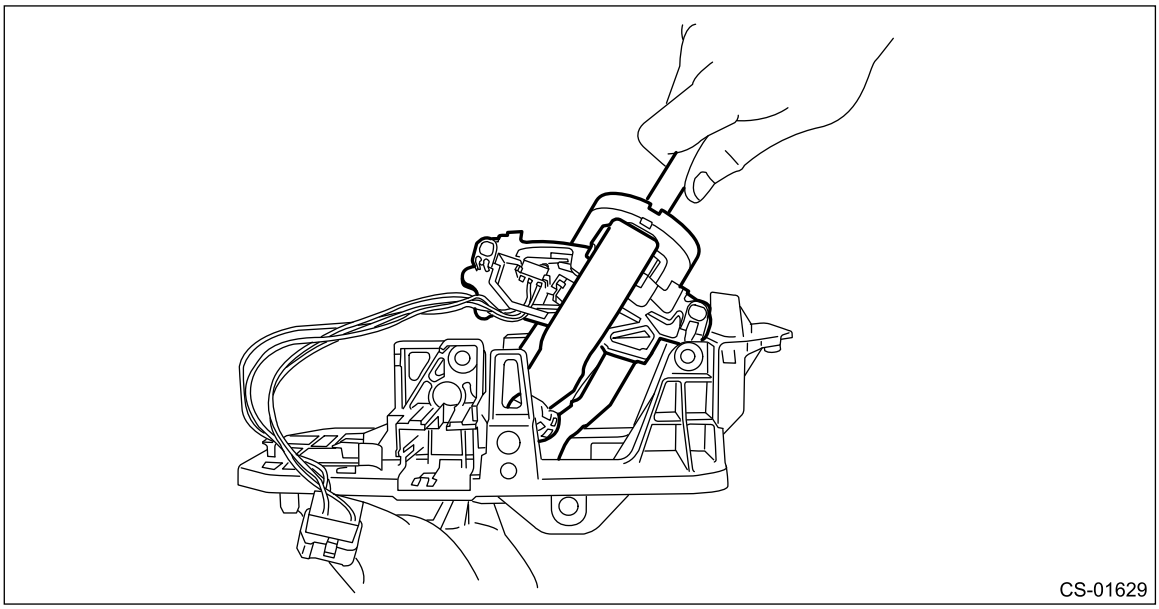
Note:



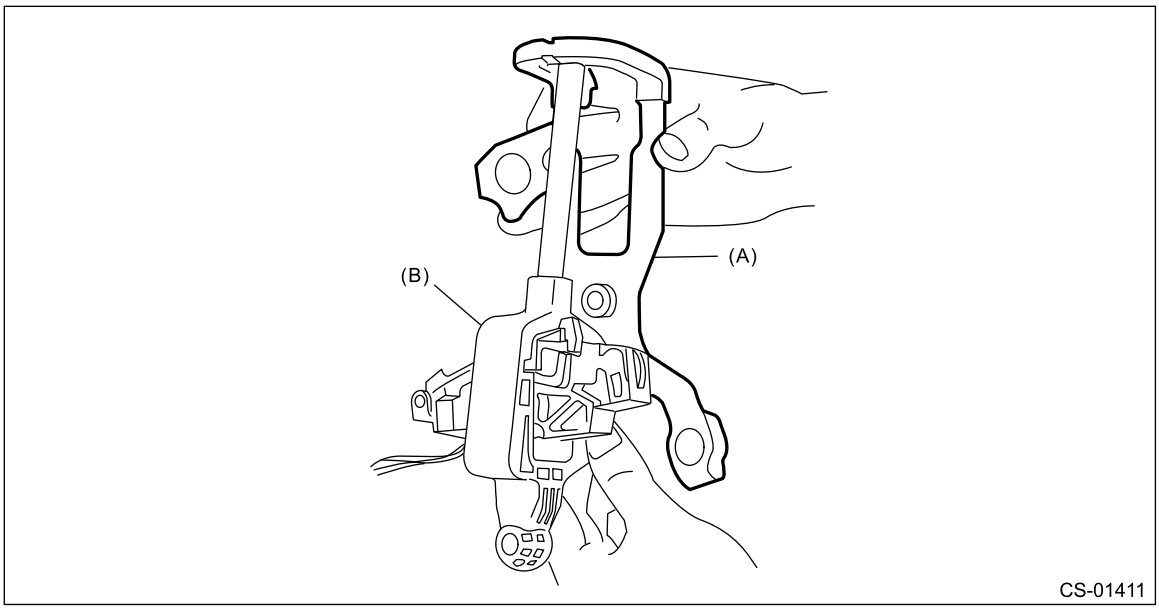
Replace the clamp push nut with a new part.



10. Pull out spacer pin guide.

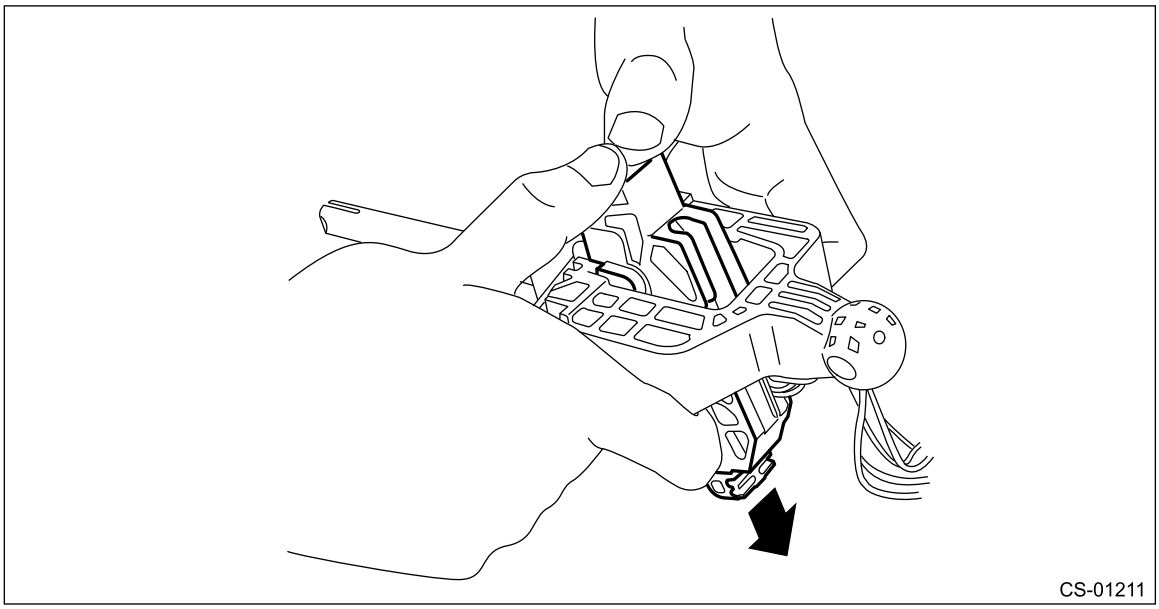


11. Remove the clamp pin.

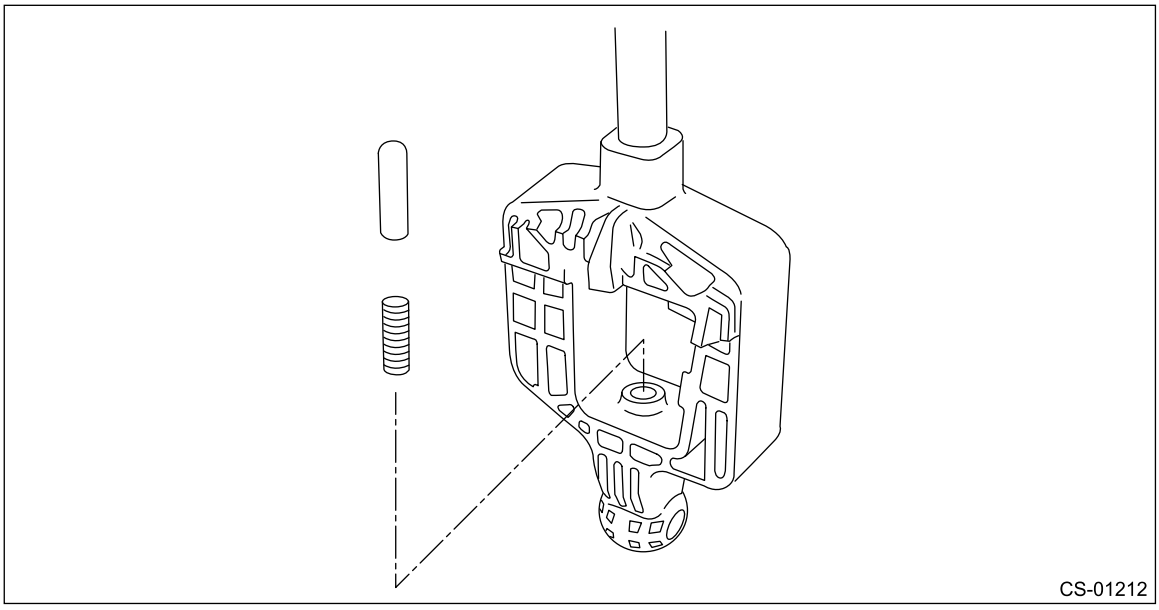


12. Remove the spacer pin guide.

13. Remove the select lever COMPL from the plate COMPL.



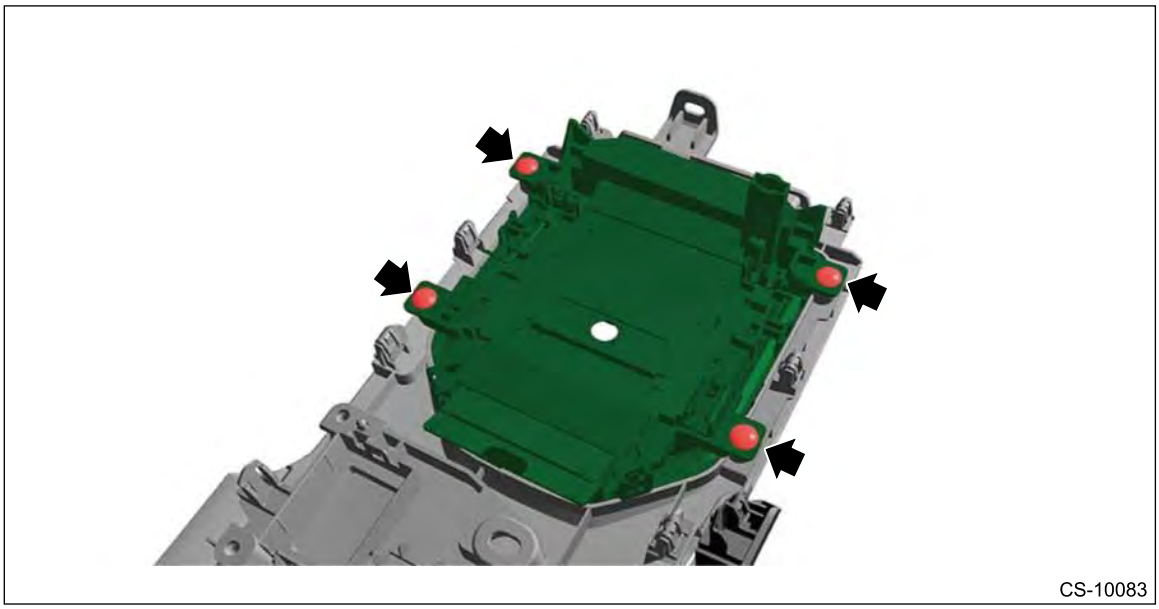
14. Remove the arm COMPL.



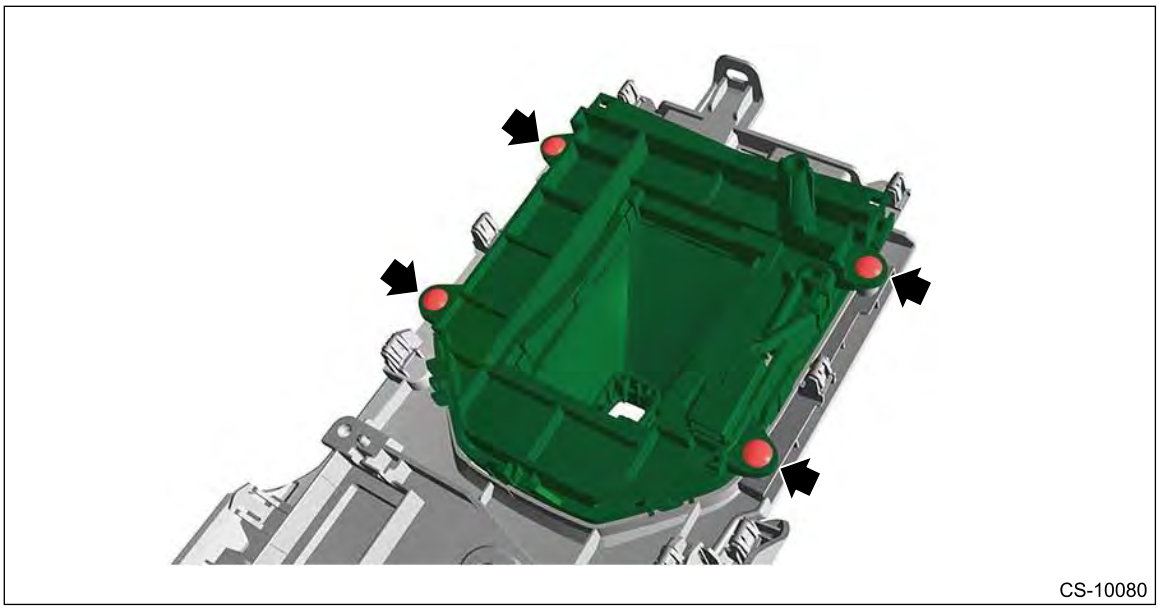
(A) Arm COMPL

(B) Selector lever COMPL

15. Remove the plate guide from the select lever COMPL.

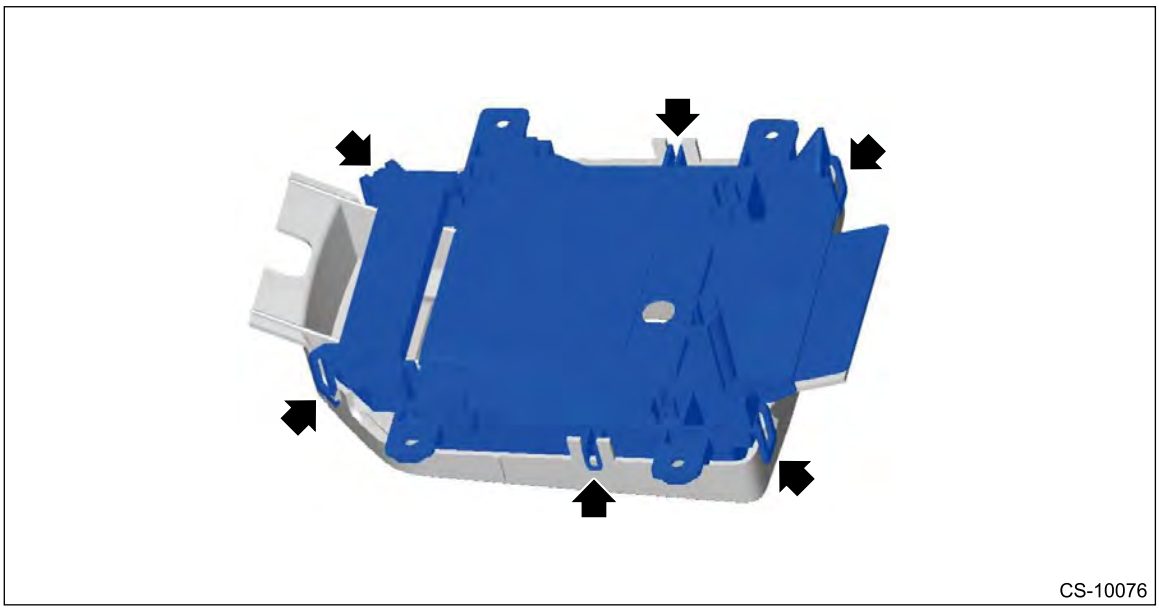


16. Remove the rod detent and detent spring from the select lever COMPL.



3. INDICATOR ASSEMBLY

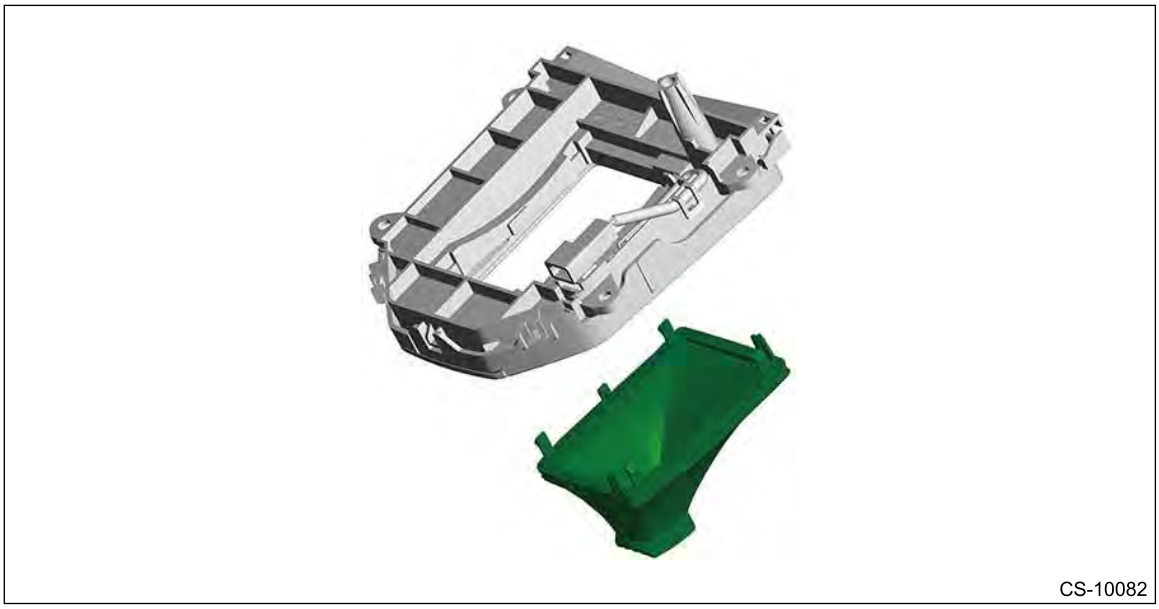
1. Disconnect the harness connector from the console front cover assembly, and remove the indicator assembly.



- Model with gate shifter

- Model with boot shifter

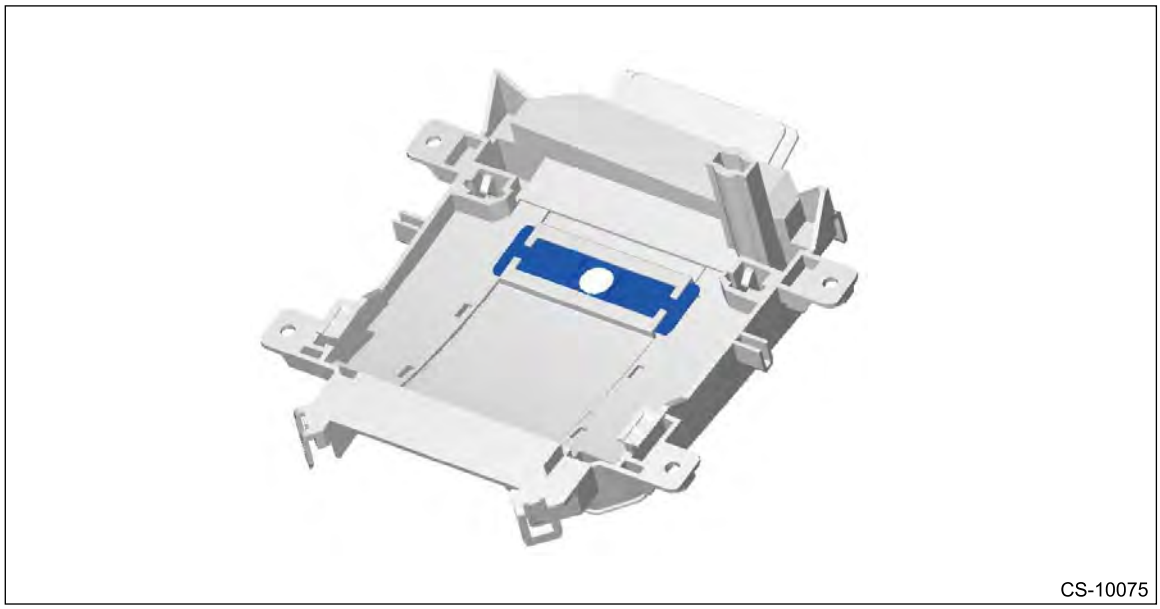
2. Remove the housing from the indicator assembly. (Model with gate shifter)



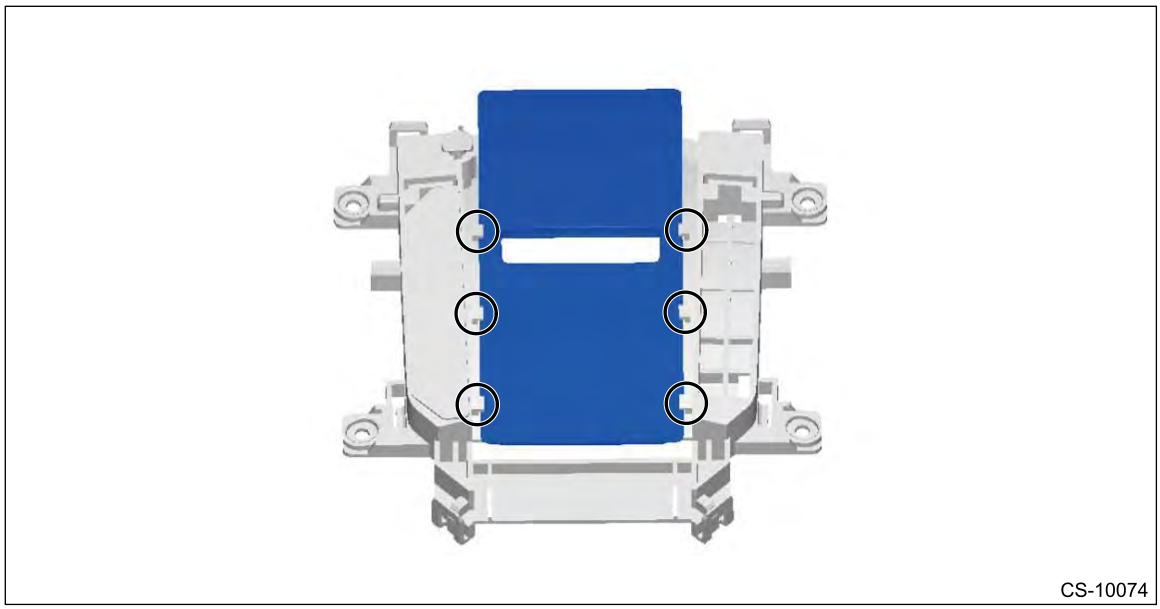
3. Remove the boot assembly from the indicator assembly. (Model with boot shifter)

Caution:

When removing the boot assembly, be careful not to damage the boot assembly claws and adjacent parts.



CS-10081



CS-10082

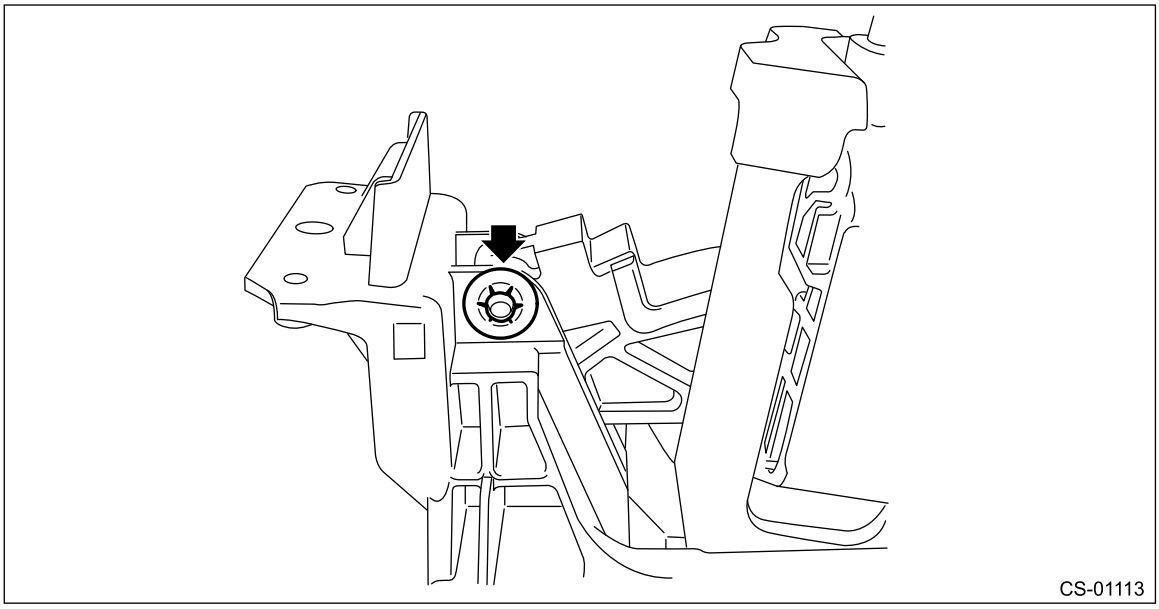
4. Remove the blind B. (Model with gate shifter)

5. Remove the blind A from the housing. (Model with gate shifter)

ASSEMBLY

1. CLIP ASSEMBLY

1. Install the rod COMPL.
2. Install the button assembly - AT.

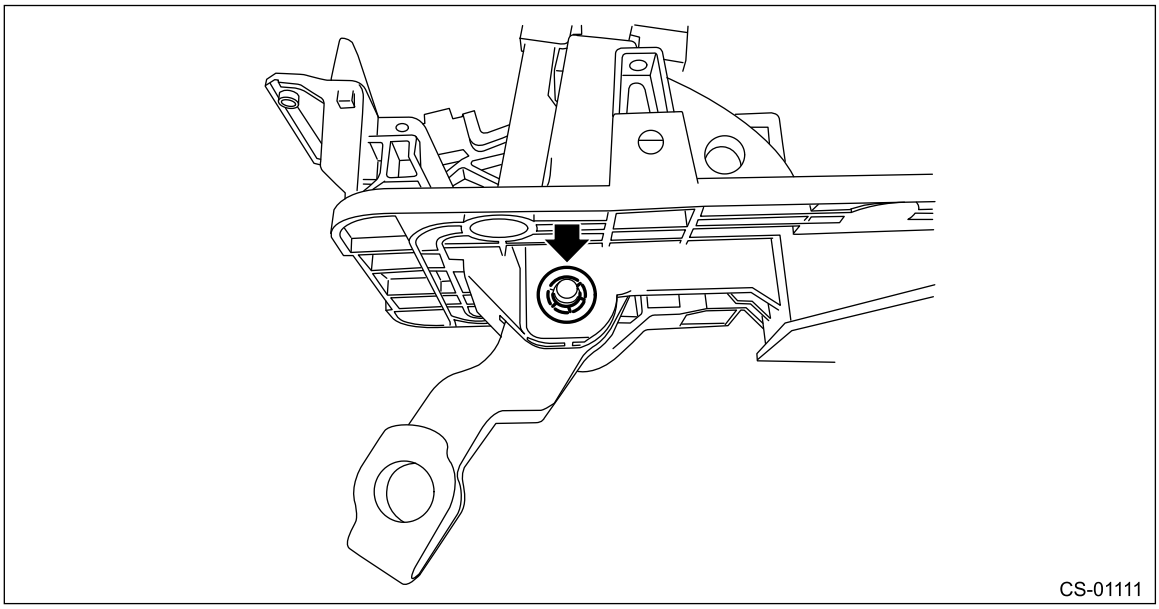


2. AT SELECT LEVER ASSEMBLY

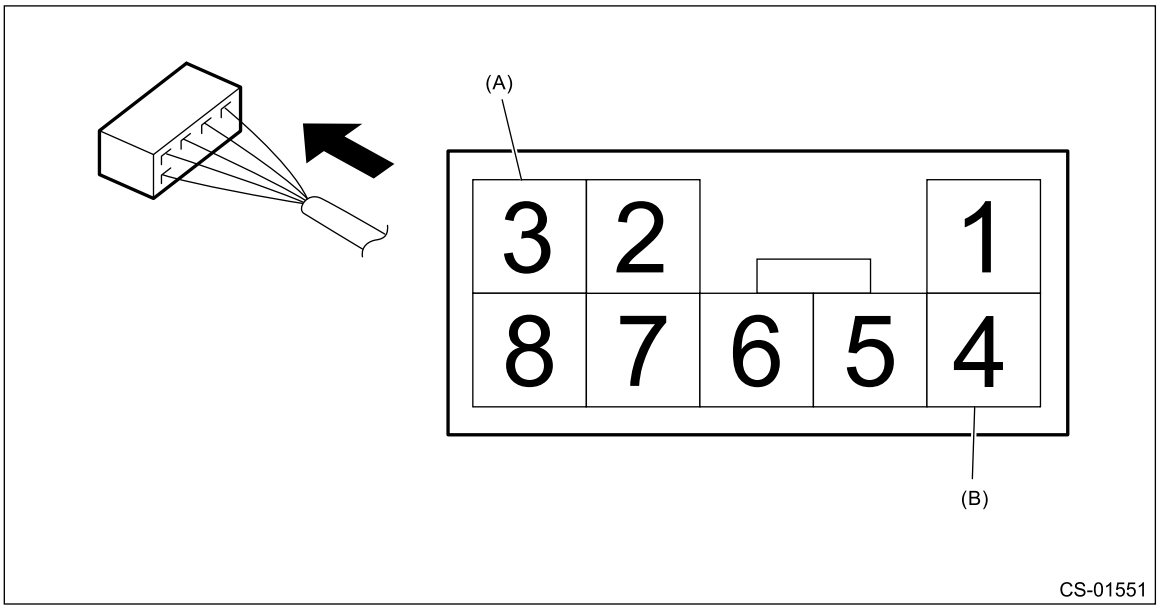
1. Clean all the parts before assembly.
2. Apply Multemp D No. 2 or equivalent to the sliding portion of each part.
3. Install the rod detent and detent spring to the select lever COMPL.
4. Install the plate guide to the select lever COMPL.
5. Install the arm assembly.
6. Install the select lever COMPL to the plate COMPL.
7. Install the spacer pin.

8. Install the clamp pin.
9. Install the spacer pin guide.
10. Install the clamp push nut.

Note:



Replace the clamp push nut with a new part.



11. Install the shaft control.
12. Install the clamp push nut.

Note:

Replace the clamp push nut with a new part.

13. Insert the solenoid unit terminals to the harness connector.

(A) Solenoid unit (color code: blue)

(B) Solenoid unit (color code: black)

14. Install the solenoid unit.

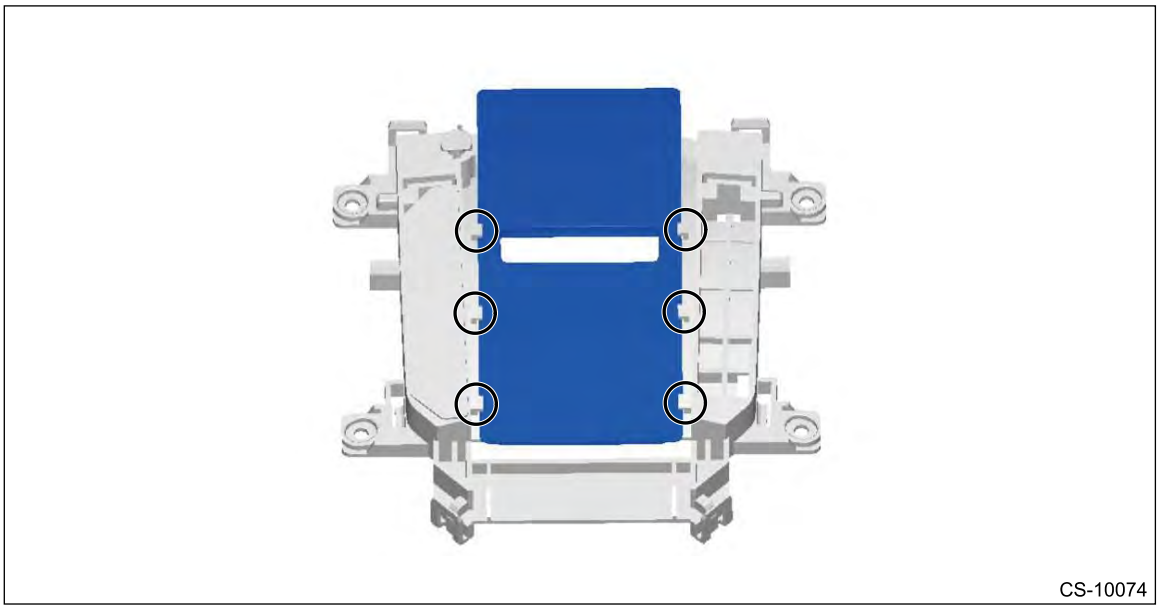
15. Install the harness to the plate COMPL.

16. Install the harness connector to the plate COMPL.

17. Install the gasket.

18. Install the spacer plate.

19. After installation, check the following points.



- The select indicator matches the select lever position when the select lever is changed from “P” range to “D” range.
- The select lever position and the position mark match each other.
- Operating force to move the select lever from “P” to “D” range

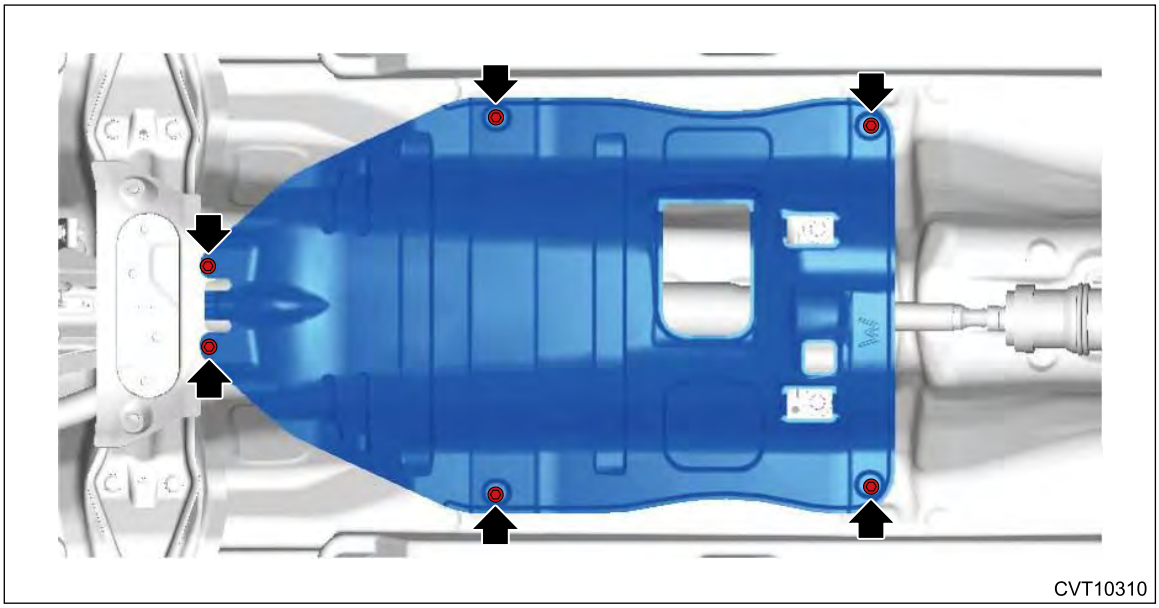
3. INDICATOR ASSEMBLY

1. Install the blind A to the housing. (Model with gate shifter)

Note:

The blind A should be installed so that it is securely caught inside the tab of the housing.

2. Install the blind B behind the blind A. (Model with gate shifter)
3. Install the boot assembly. (Model with boot shifter)
4. Install the housing to the indicator assembly. (Model with gate shifter)
5. Install the harness connector to the front console cover, and install the indicator assembly.

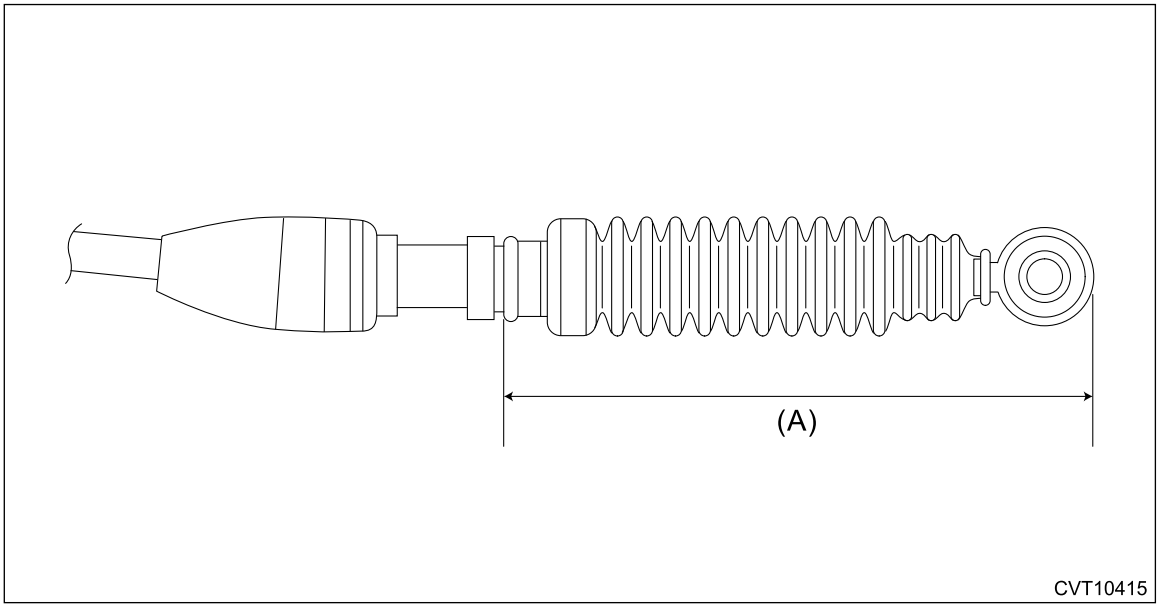


CONTROL SYSTEMS > Select Lever

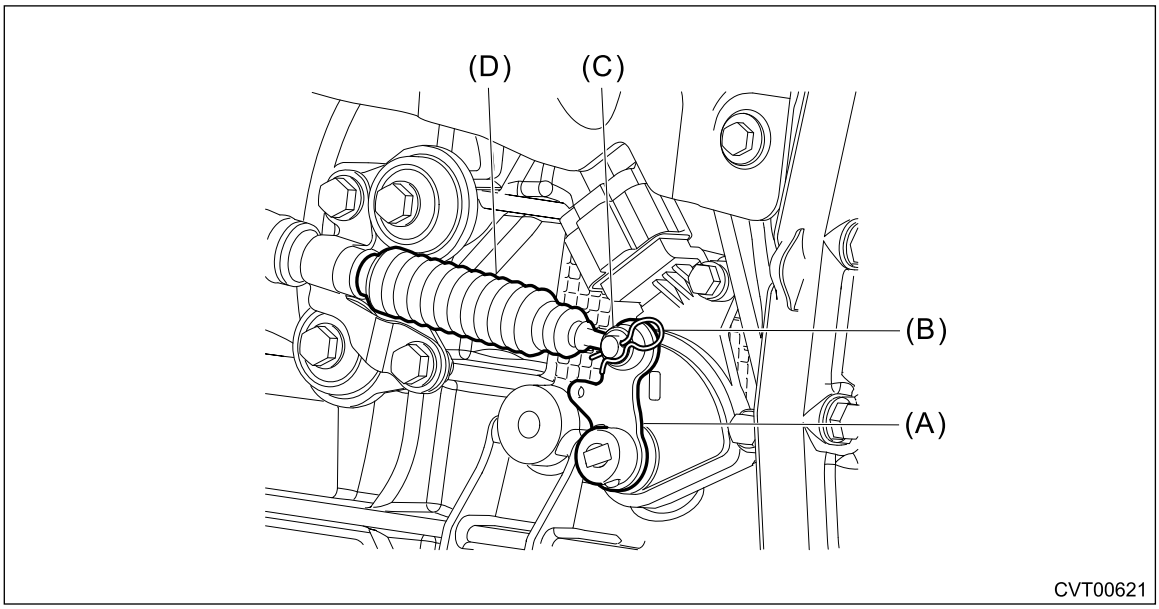
INSPECTION

1. Inspect the removed parts by comparing with new parts for deformation, damage and wear. Repair or replace if defective.
2. Inspect the select lever assembly operating condition before assembly. Normal if it operates smoothly.

REMOVAL

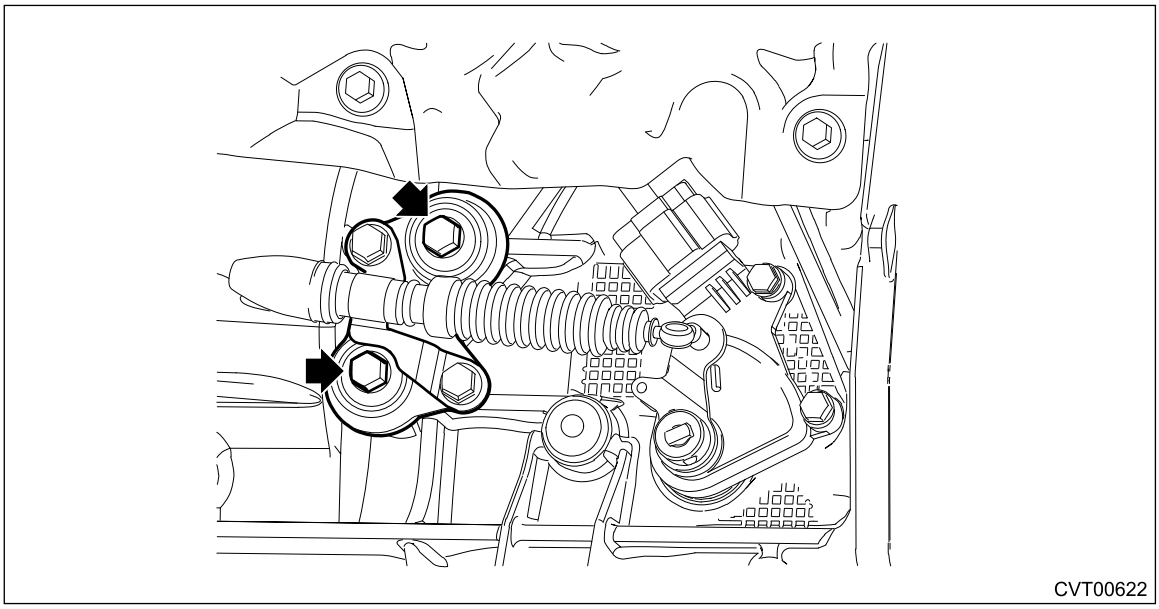


1. Shift the select lever to “N” range.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Lift up the vehicle.
4. Remove the center exhaust cover.



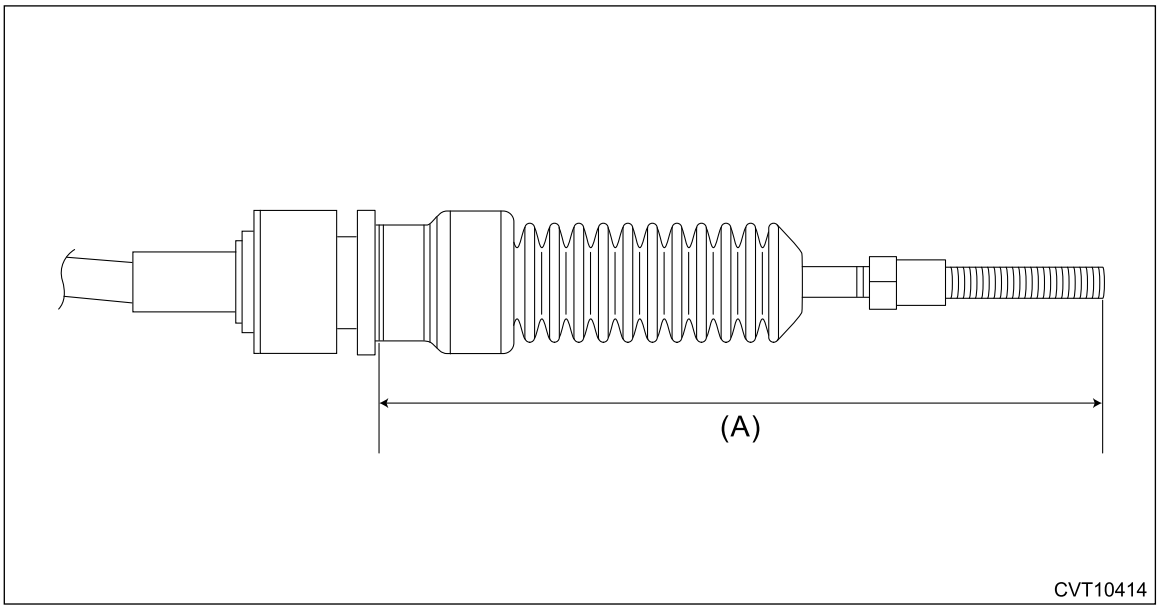
5. Remove the snap pin and washer from the shifter arm.

Caution:

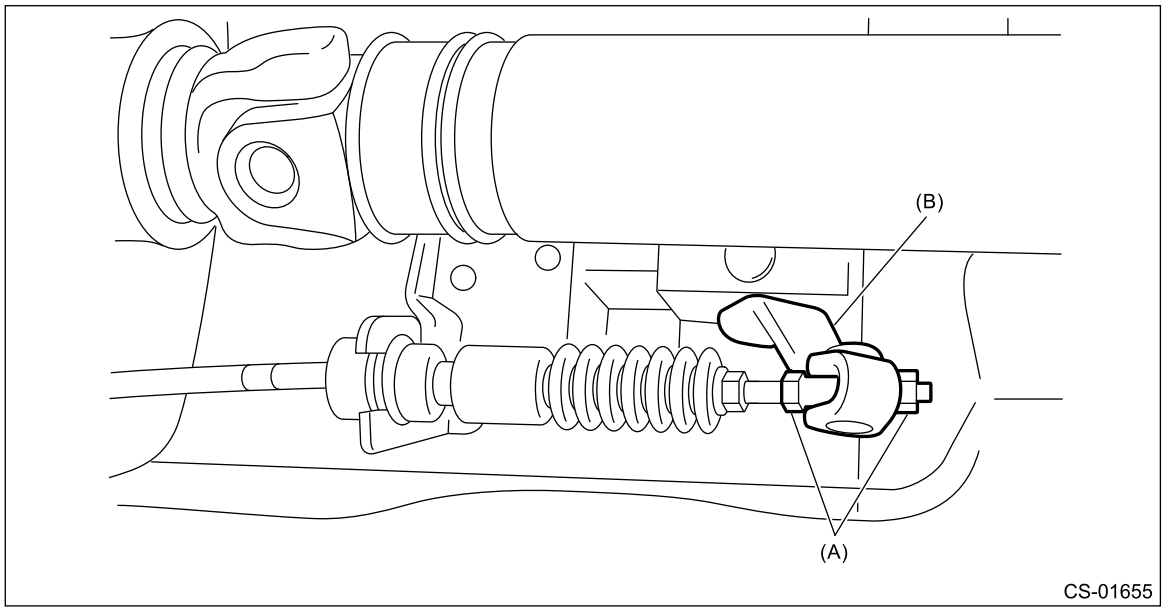


Do not apply excessive load while holding the part (A).

(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable



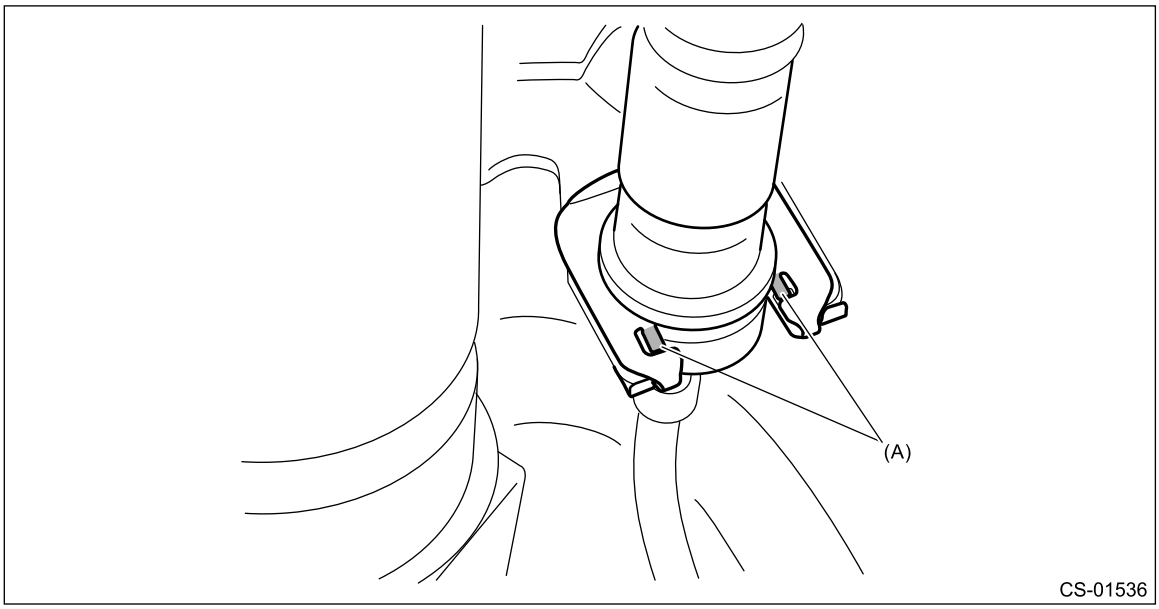
6. Remove the plate assembly from the transmission case.



7. Disconnect the cable from arm COMPL.

Caution:

Do not apply excessive load while holding the part (A).



(A) Adjusting nut

(B) Arm COMPL

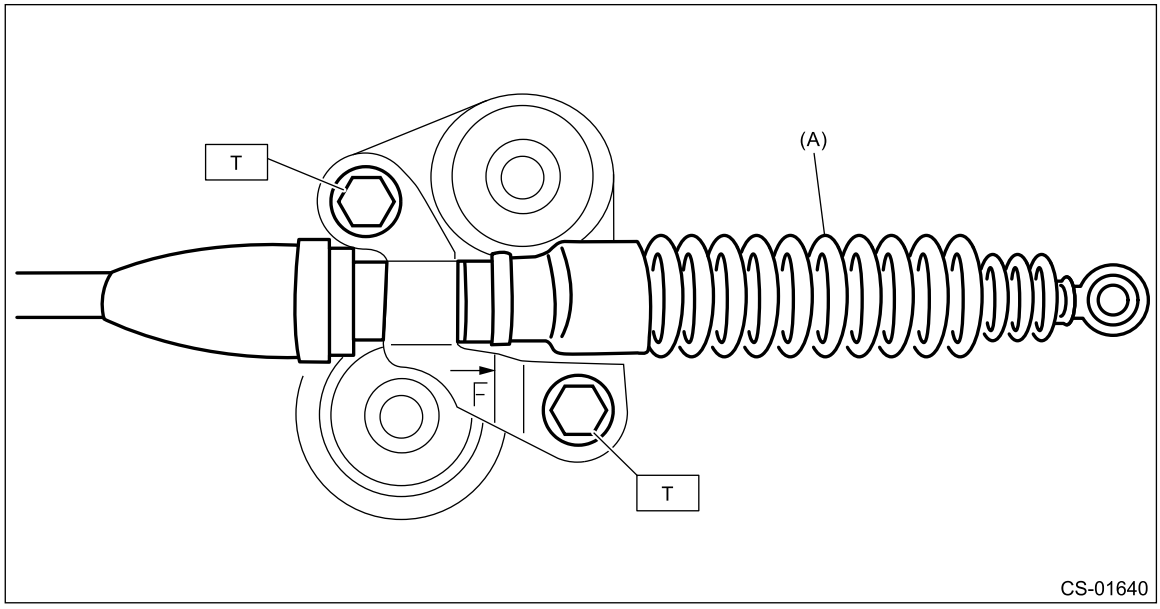
8. Raise the claw of clamp to remove the cable from bracket.

(A) Claw

9. Remove the select cable from plate assembly.

CONTROL SYSTEMS > Select Cable

INSTALLATION



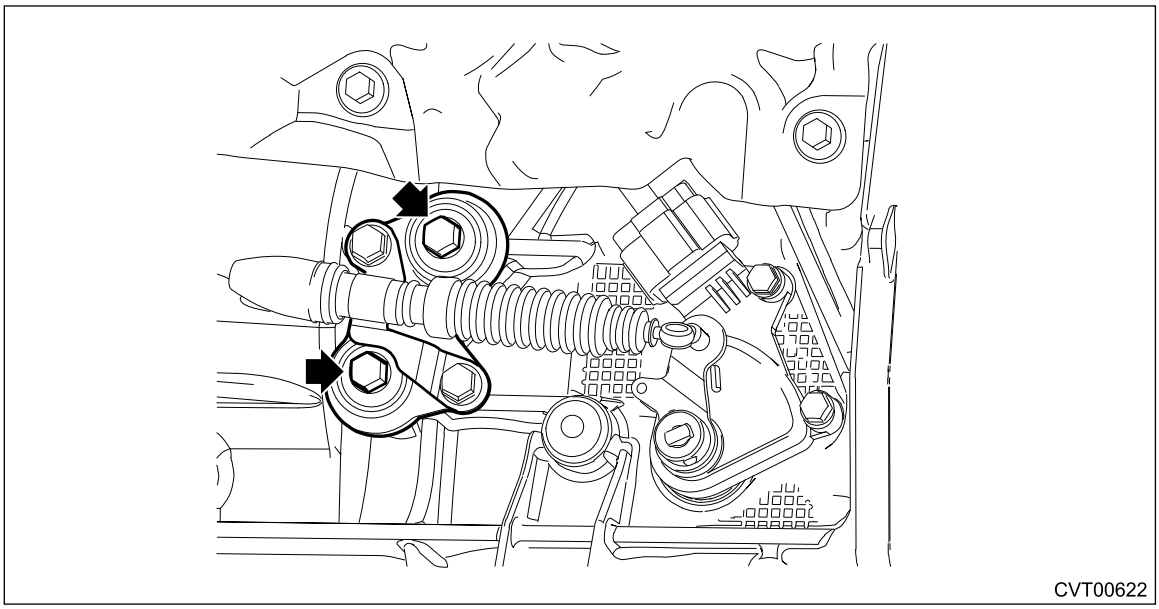
1. Position the select cable as shown in the figure, and install it to the plate assembly.

Caution:

- **If the cable is installed in the wrong direction, loosen the bracket bolts, and then reinstall the cable in the correct direction.**
- **Do not adjust the cable end direction by turning it forcibly to prevent the boot from being twisted.**

Tightening torque:

T: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

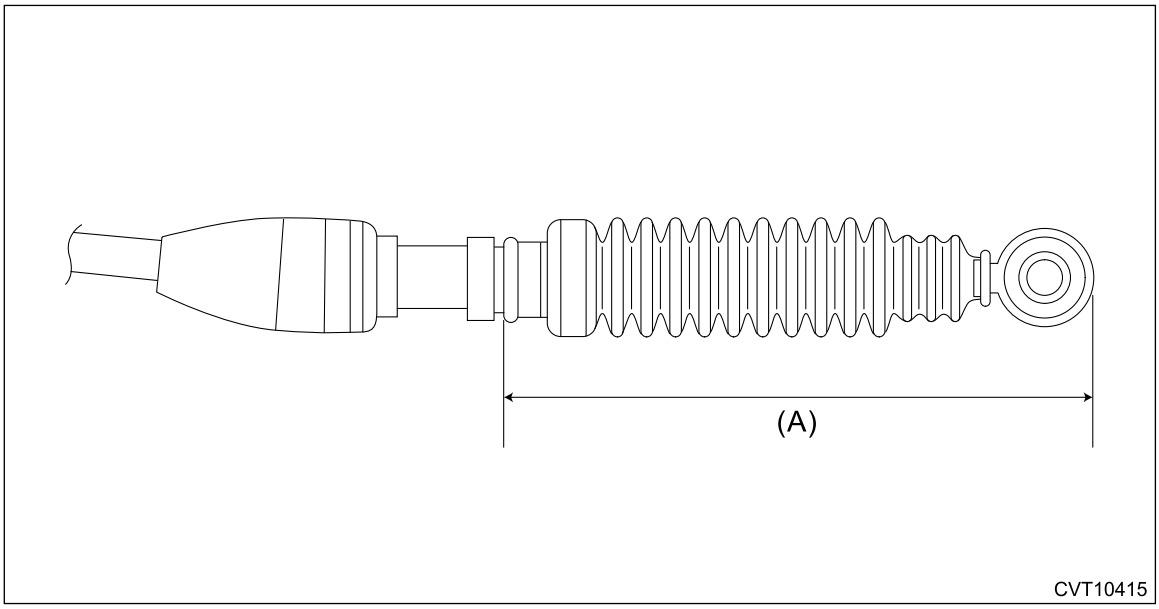


(A) Select cable

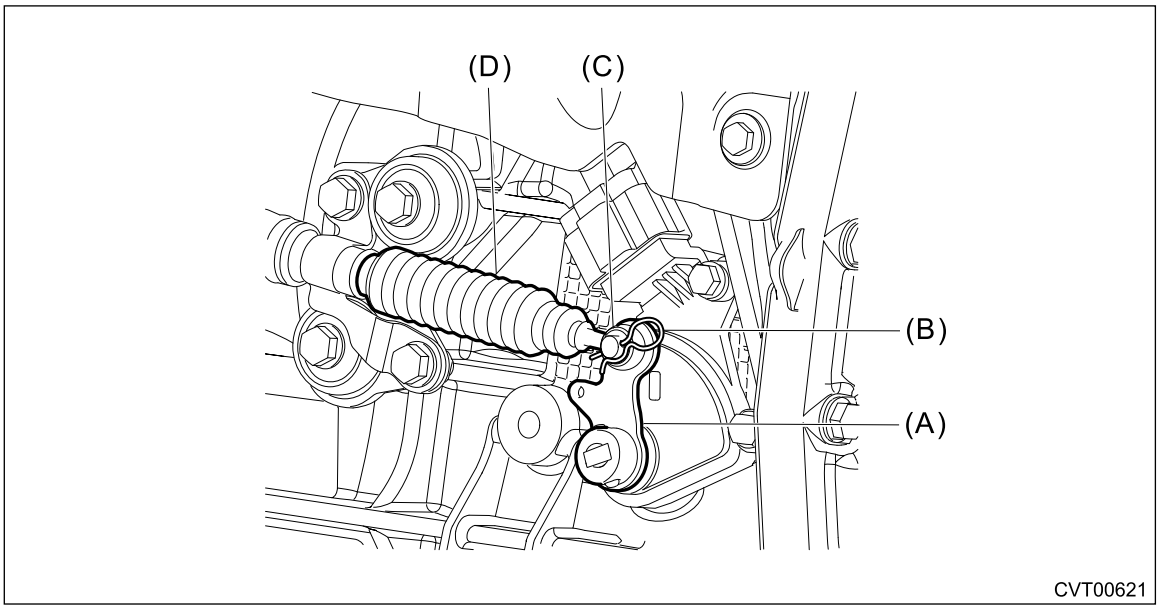
2. Install the select cable to the shifter arm.

3. Install the plate assembly to transmission.

Tightening torque:

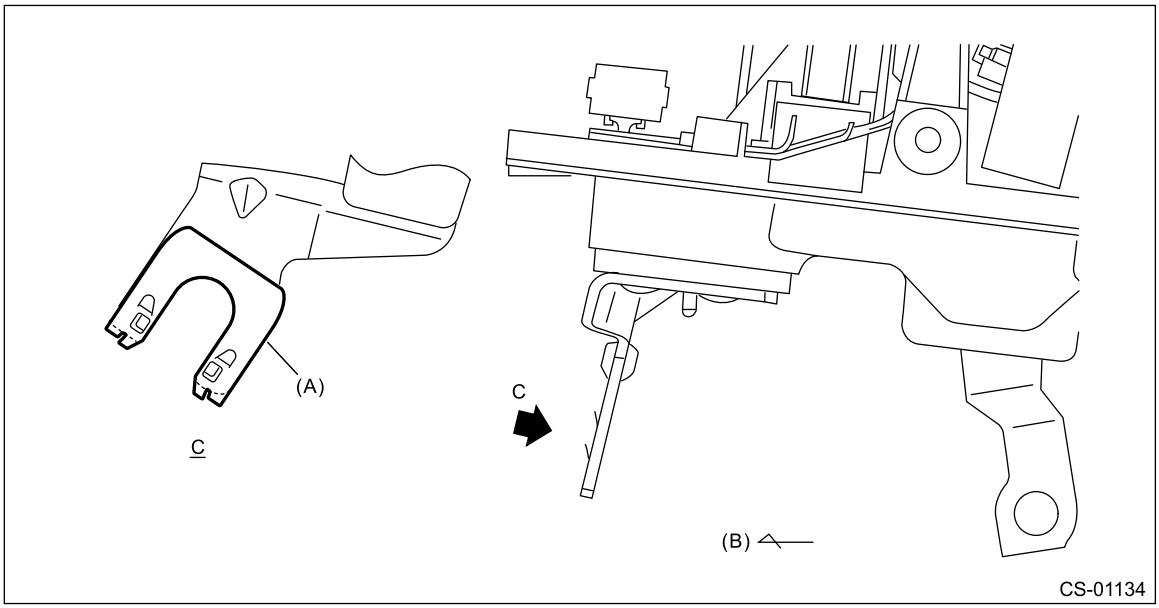


25 N·m (2.5 kgf-m, 18.4 ft-lb)



4. Install the washer and snap pin to the shifter arm.

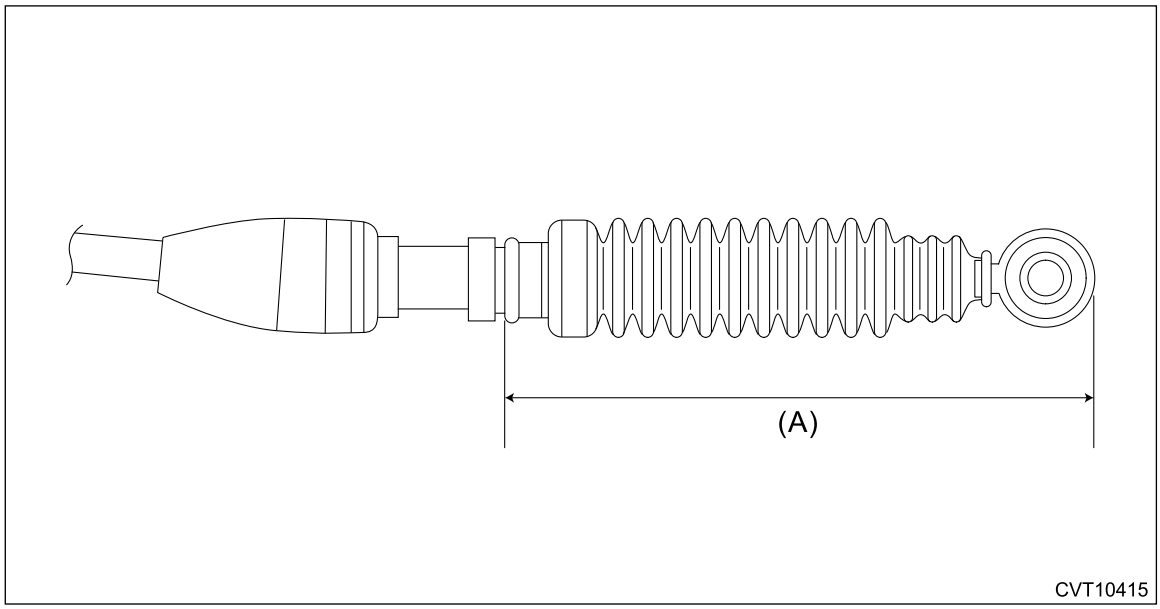
Caution:

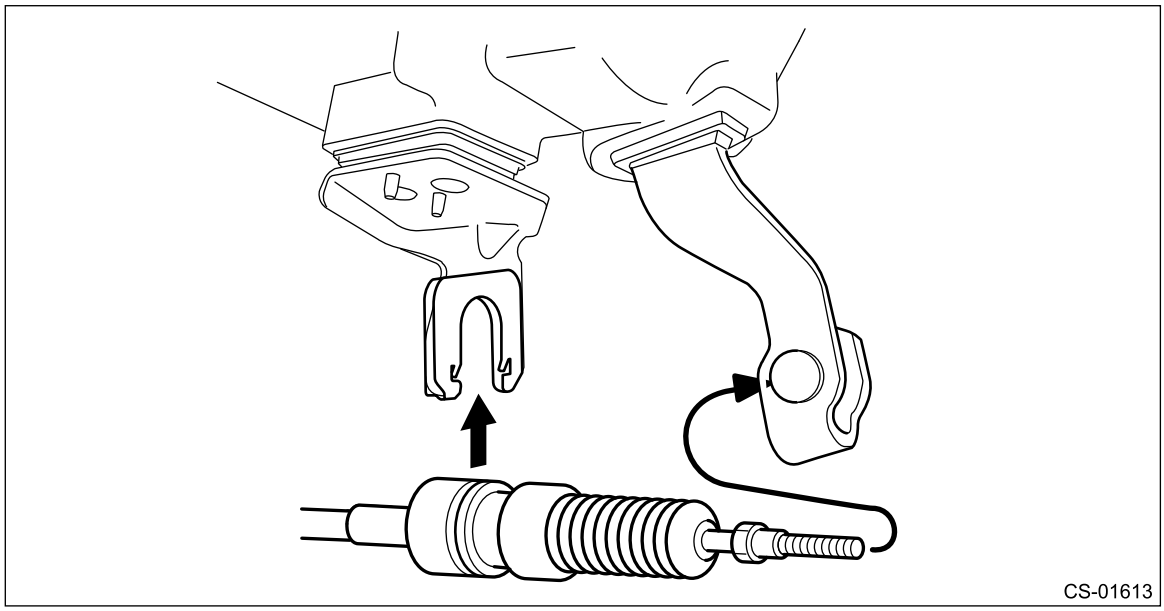


Do not apply excessive load while holding the part (A).

(A) Shifter arm
(B) Snap pin
(C) Washer
(D) Select cable

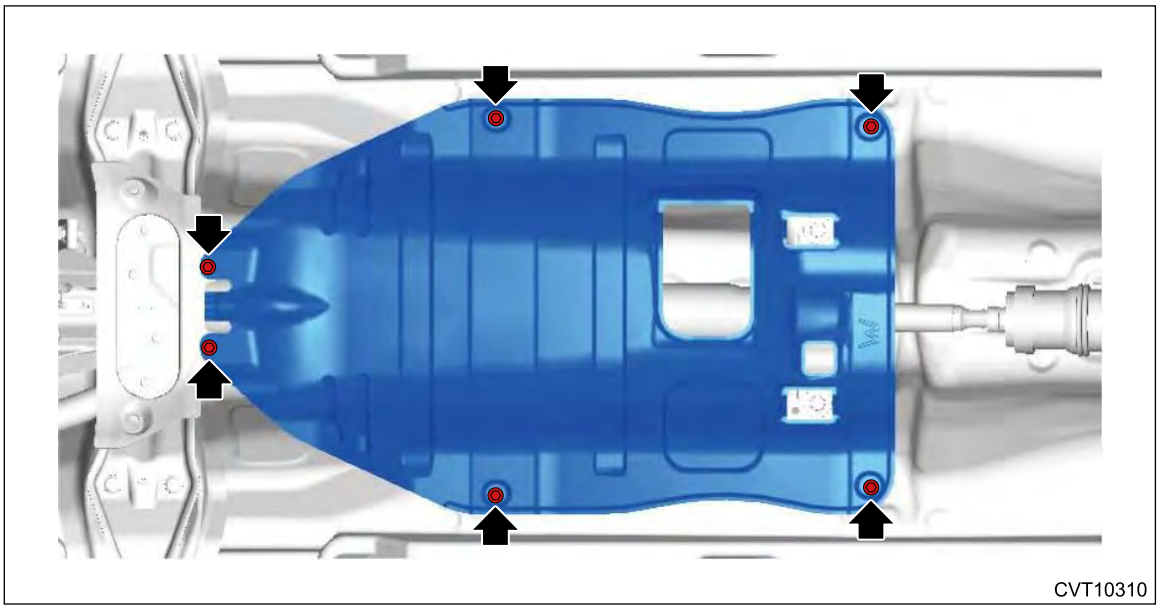
5. Install new clamp paying attention to the installing direction.





(A) Clamp
(B) Forward

6. Insert the tip of inner cable into connector hole of select lever, and fix the cable to bracket.



Caution:

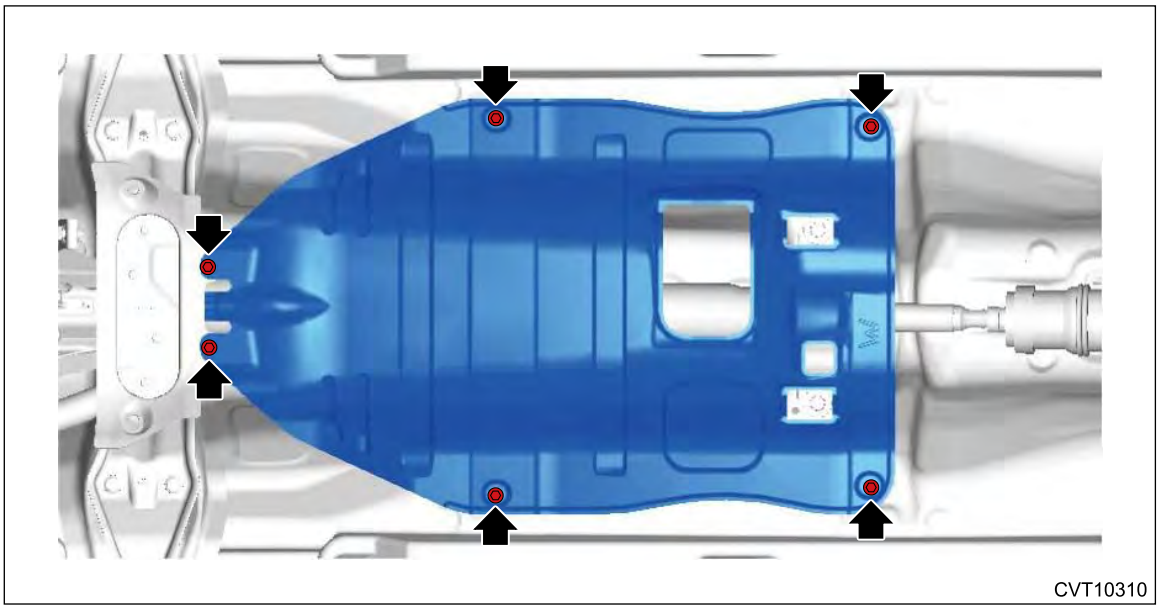
Do not apply excessive load while holding the part (A).

7. Shift the select lever to the “N” range, and then adjust the select cable position. Ref. to CONTROL SYSTEMS>Select Cable>ADJUSTMENT.
8. Install the center exhaust cover.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)

9. Lower the vehicle.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

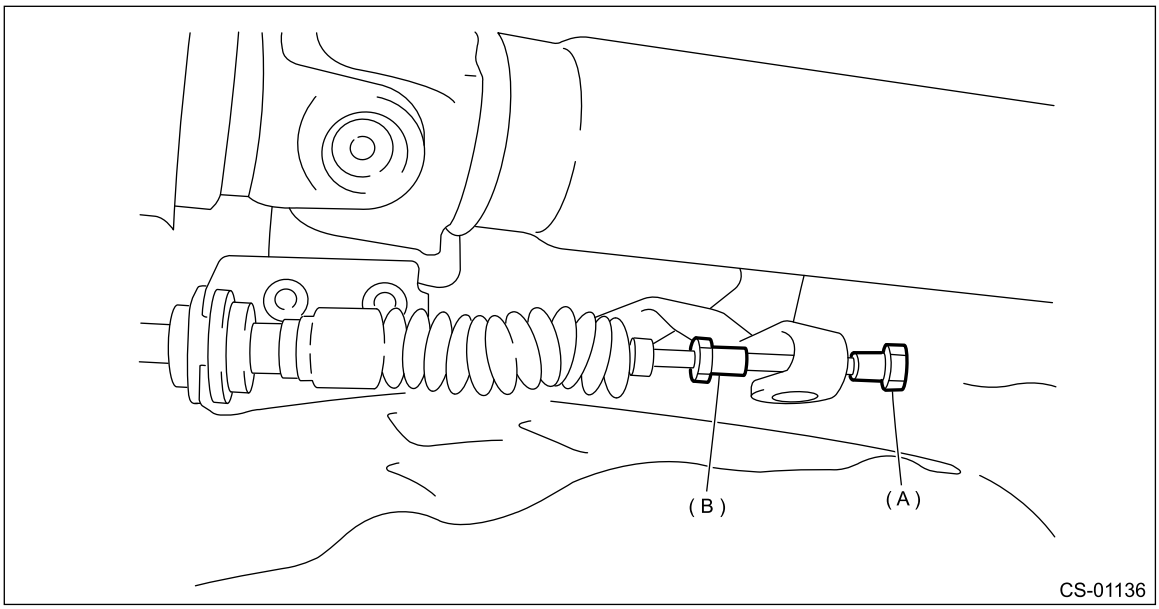
CONTROL SYSTEMS > Select Cable

INSPECTION



Check the removed cable and replace or adjust if damaged, rusty or malfunctioning.

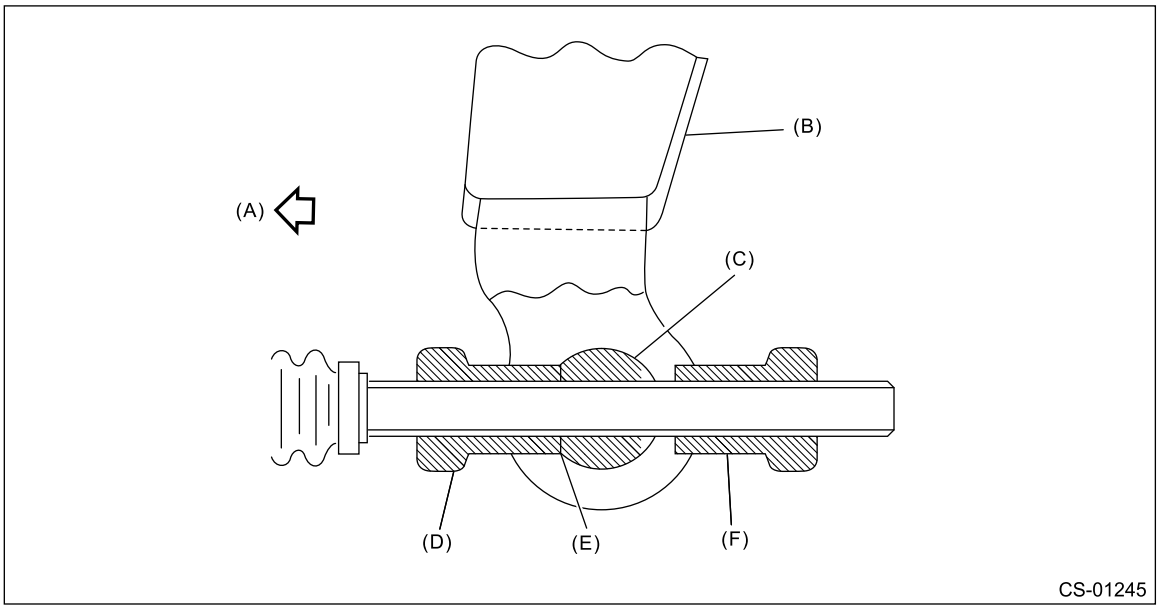
1. Check the cable for smooth operation.
2. Check the inner cable for damage and rust.
3. Check the outer cable for damage, bends and cracks.
4. Check the boot for damage, cracks and deterioration.
5. Move the select lever from “P” to “D” range. Check the existence of feel to contact the detents in each range. If the detents cannot be felt or the position pointer is improperly aligned, adjust the cable.
6. Check if the starter motor rotates when the select lever is set to “P” range.
7. Check the back-up light illumination when the select lever is in “R” range.
8. Check the parking lock operation when the select lever is in “P” range.



CONTROL SYSTEMS > Select Cable

ADJUSTMENT

1. Shift the select lever to “N” range.
2. Lift up the vehicle.
3. Remove the center exhaust cover.

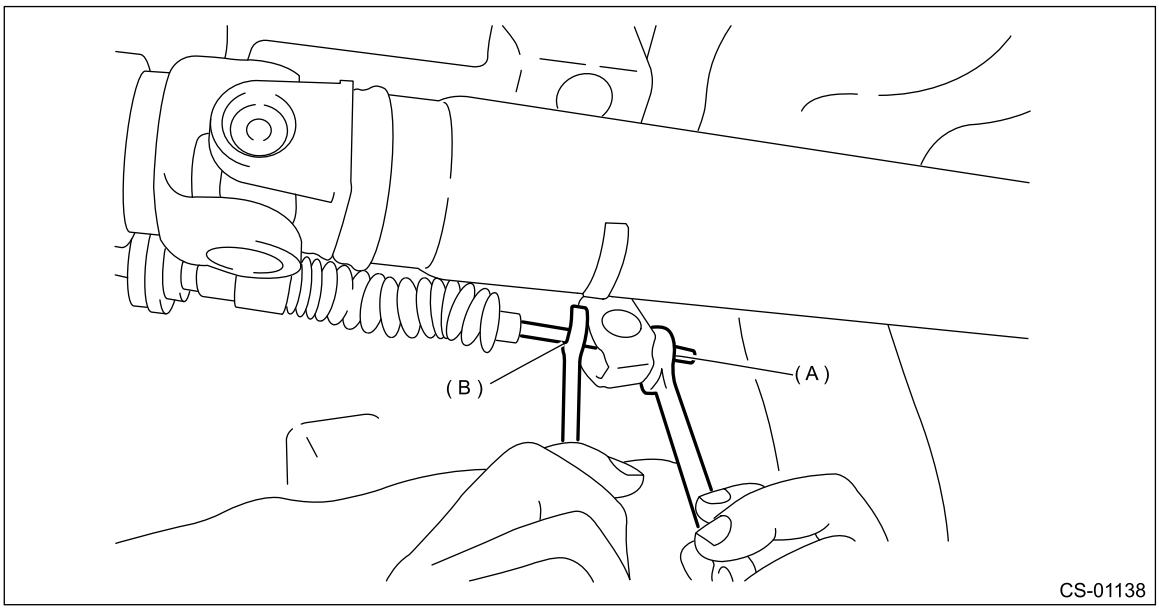


4. Loosen the adjusting nuts on both sides.

(A) Adjusting nut A

(B) Adjusting nut B

5. Turn adjusting nut B until it lightly touches the connector.



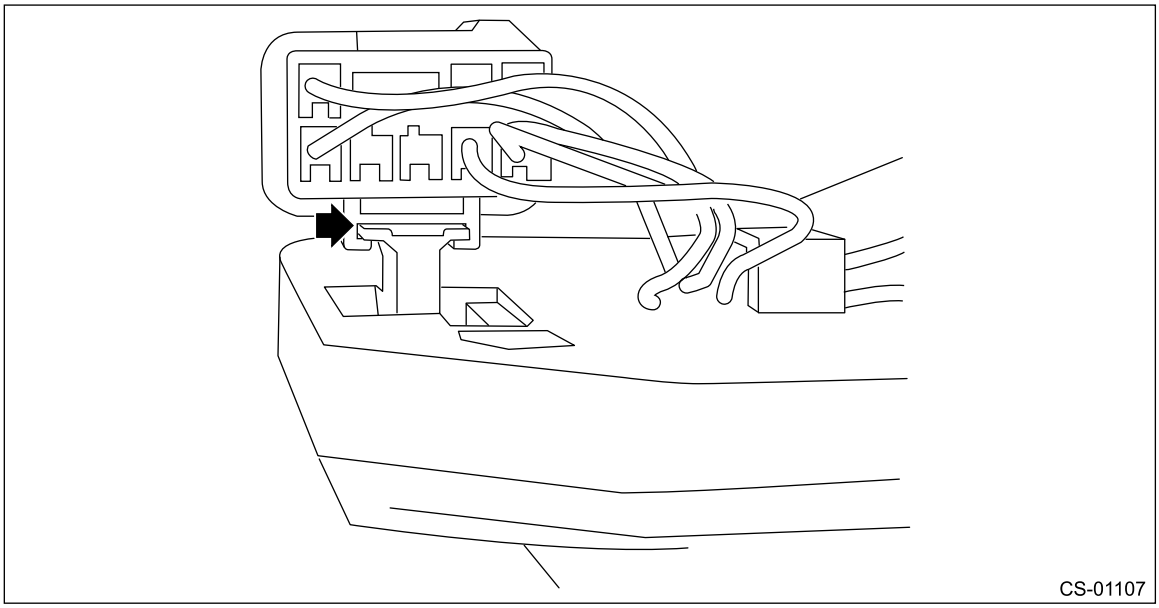
(A) Forward side
(B) Select lever
(C) Connector
(D) Adjusting nut B
(E) Contact point
(F) Adjusting nut A

6. Set a spanner wrench to adjusting nut B so that it does not rotate, and then tighten the adjusting nut A.

Tightening torque:

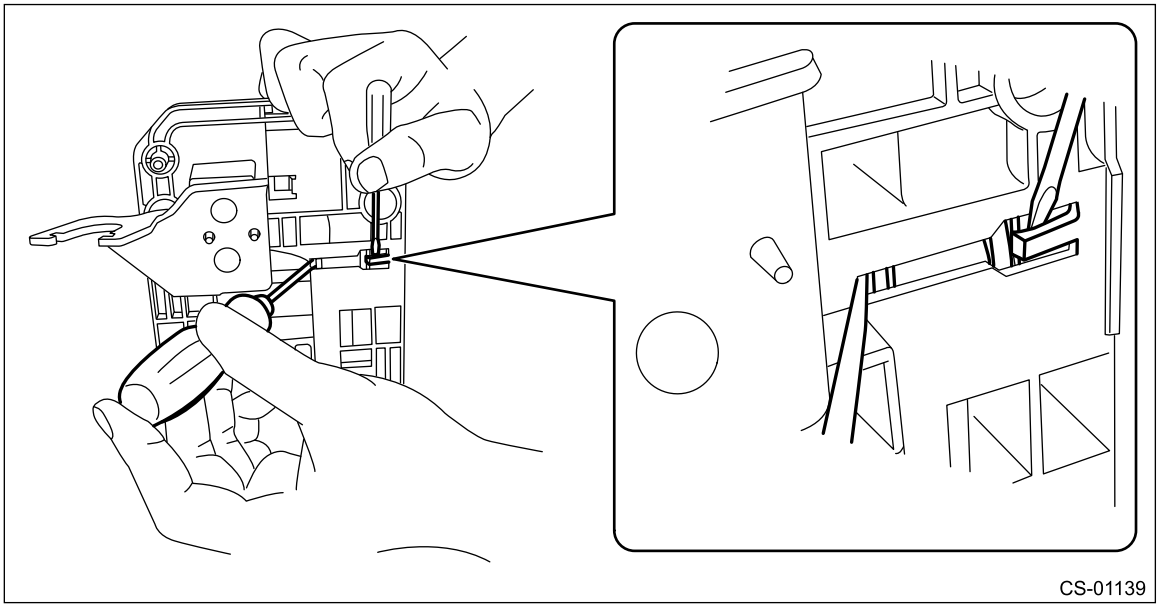
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

(A) Adjusting nut A
(B) Adjusting nut B



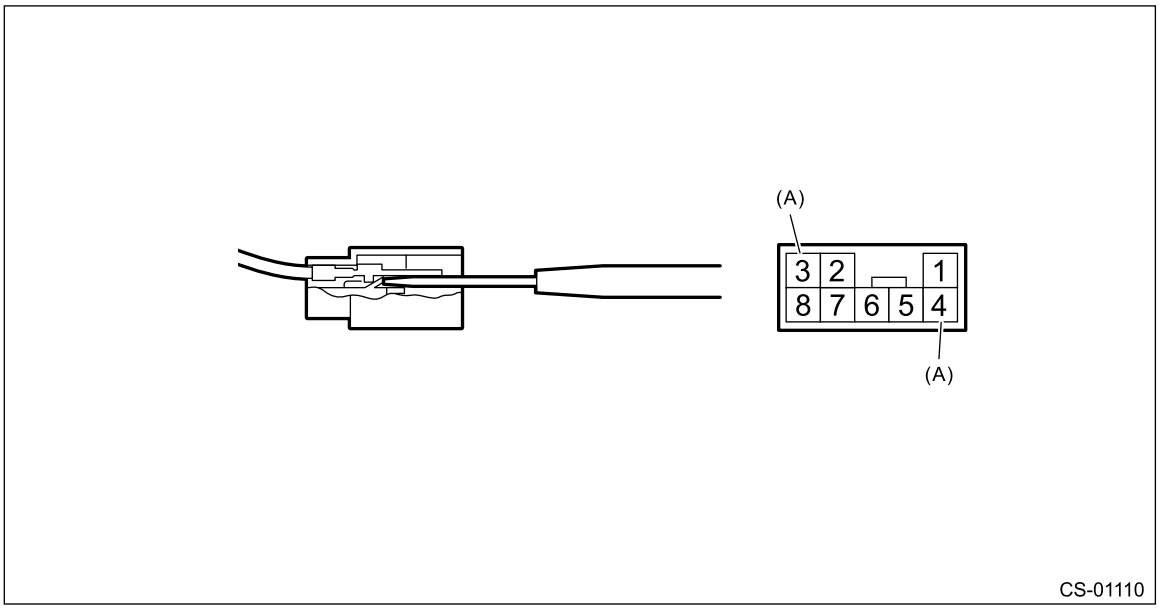
7. After the completion of adjustment, confirm that the select lever operates normally at all ranges.

8. Install in the reverse order of removal.



REMOVAL

1. SOLENOID UNIT



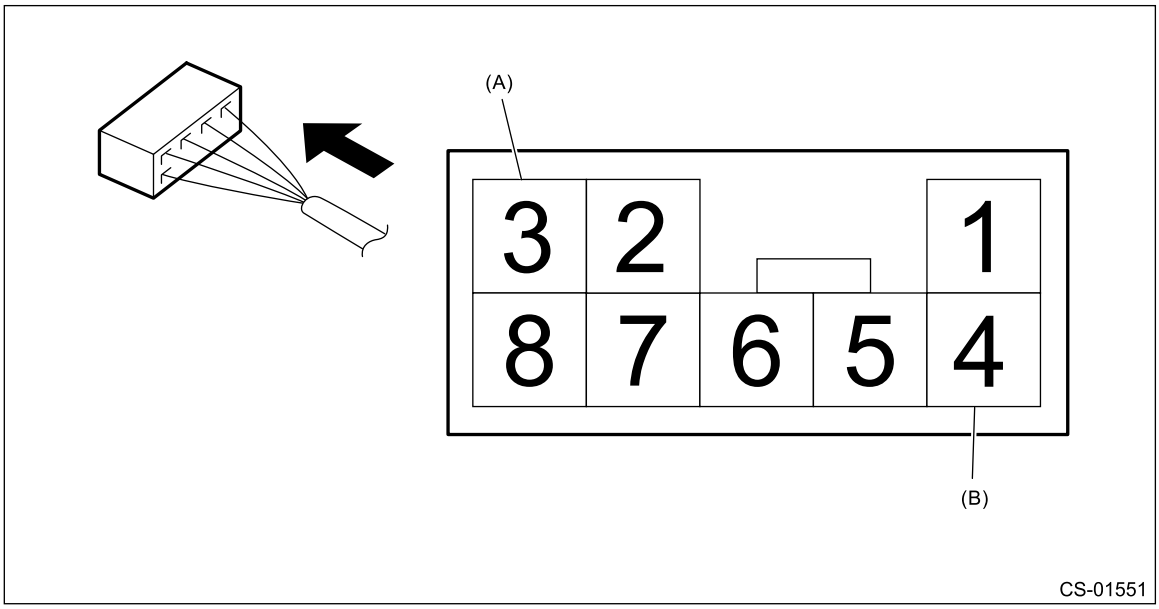
1. Remove the AT select lever. Ref. to CONTROL SYSTEMS>Select Lever>REMOVAL.
2. Remove the spacer and gasket. Ref. to CONTROL SYSTEMS>Select Lever>DISASSEMBLY.
3. Using a flat tip screwdriver with a thin tip, remove the harness connector from the plate COMPL.

4. Raise the claw using a flat tip screwdriver with a thin tip, and remove the solenoid unit from the plate COMPL.

5. Remove the terminal of the solenoid unit using a flat tip precision screwdriver with a tip width of 1.3 mm (0.05 in) or less, KTC connector terminal tool ECC-1T or equivalent.

(A) Solenoid unit terminals

2. “P” RANGE SWITCH



For the removal of “P” range switch, refer to the procedure for AT select lever. Ref. to CONTROL SYSTEMS>Select Lever>DISASSEMBLY.

CONTROL SYSTEMS > AT Shift Lock Solenoid and “P” Range Switch

INSTALLATION

1. SOLENOID UNIT

1. Clean all the parts before assembly.
2. Insert the solenoid unit terminals to the harness connector.

(A) Solenoid unit (color code: blue)

(B) Solenoid unit (color code: black)

3. Install the solenoid unit.

4. Install the harness connector to the plate COMPL.
5. Install the spacer plate and the gasket. Ref. to CONTROL SYSTEMS>Select Lever>ASSEMBLY > CLIP ASSEMBLY.
6. Install the select lever. Ref. to CONTROL SYSTEMS>Select Lever>INSTALLATION.

2. "P" RANGE SWITCH

For the installation of "P" range switch, refer to the procedure for AT select lever. Ref. to CONTROL SYSTEMS>Select Lever>ASSEMBLY > CLIP ASSEMBLY.

INSPECTION

1. CHECK SOLENOID UNIT.

Measure the resistance of solenoid unit connector terminals.

Terminals

No. 4 — No. 3:

Is the resistance 27.6 — 30.5 Ω?

Yes — Go to 2.

No — Replace the solenoid unit. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and “P” Range Switch.

2. CHECK SOLENOID UNIT.

Connect the battery to the solenoid unit connector terminals, and then operate the solenoid.

Terminals

No. 3 (+) — No. 4 (−):

Does the solenoid unit operate normally?

Yes — Go to 3.

No — Replace the solenoid unit. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and “P” Range Switch.

3. CHECK “P” RANGE SWITCH.

1. Shift the select lever to “P” range.
2. Measure the resistance between “P” range switch connector terminals.

Terminals

No. 1 — No. 2:

Is the resistance less than 1 Ω?

Yes — Go to 4.

No — Replace the “P” range switch. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and “P” Range Switch.

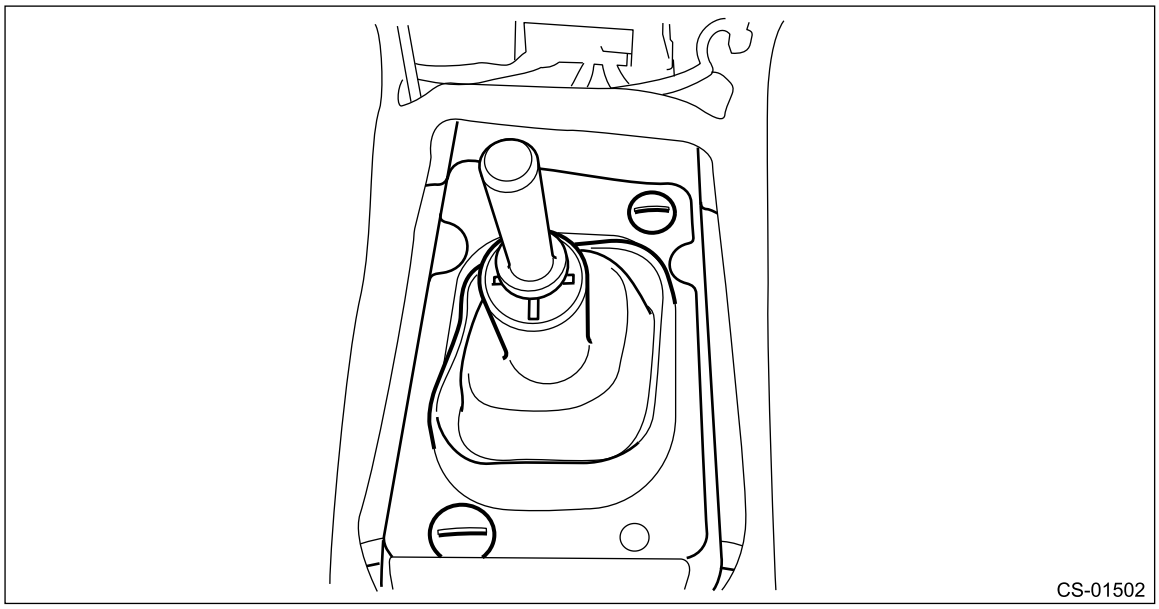
4. CHECK “P” RANGE SWITCH.

1. Set the select lever to other than “P” range.
2. Measure the resistance between “P” range switch connector terminals.

Terminals

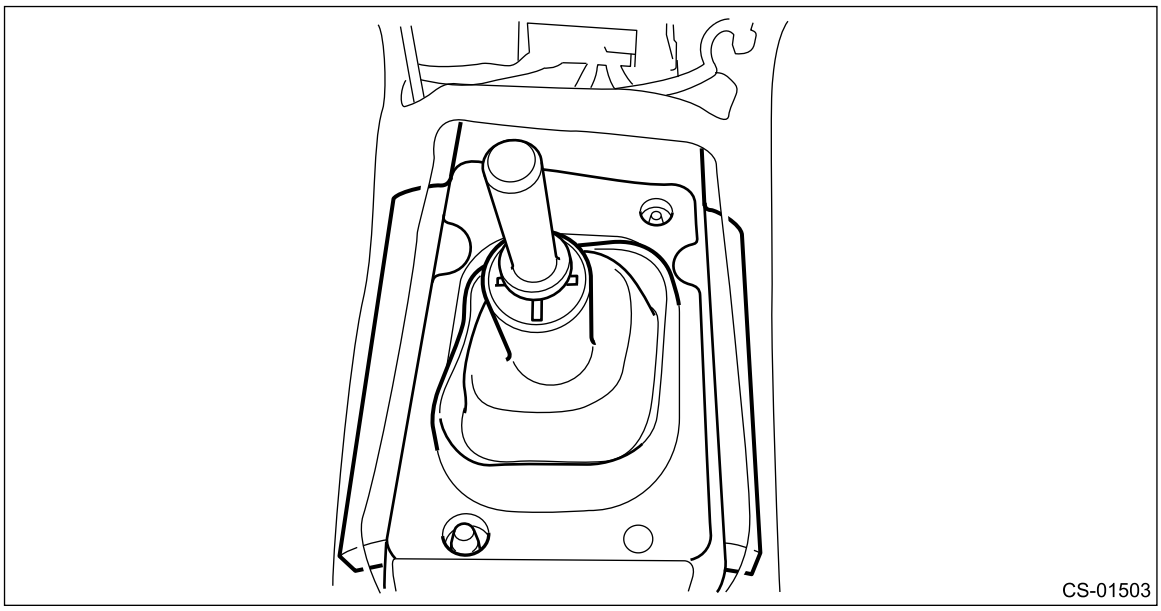
No. 1 — No. 2:

Is the resistance 1 MΩ or more?



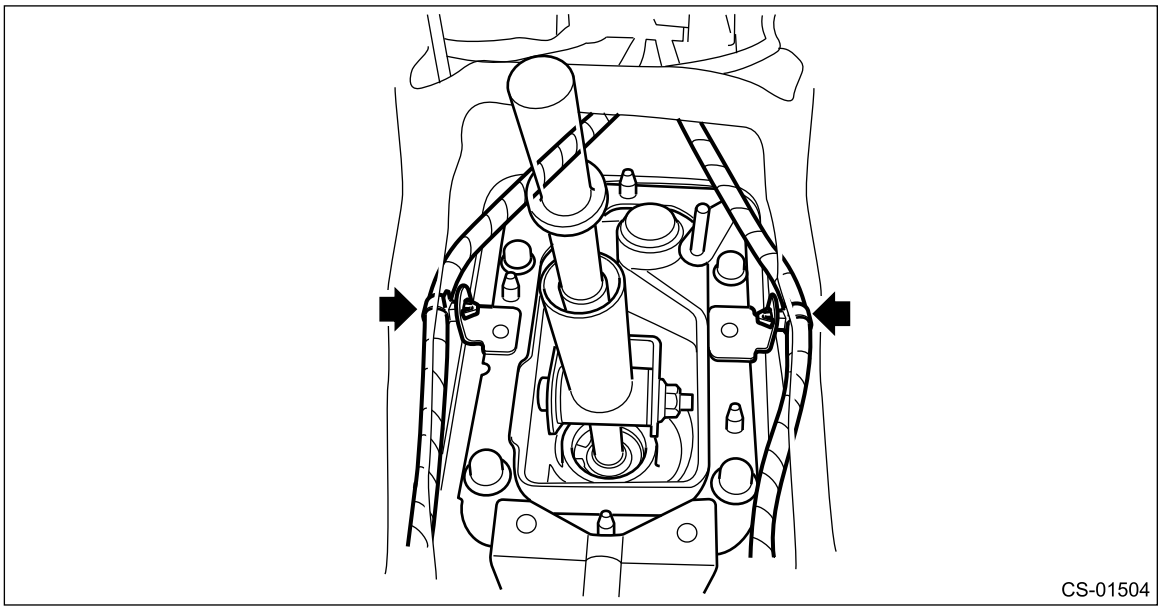
Yes	Normal.
No	Replace the “P” range switch. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and “P” Range Switch.

NOTE

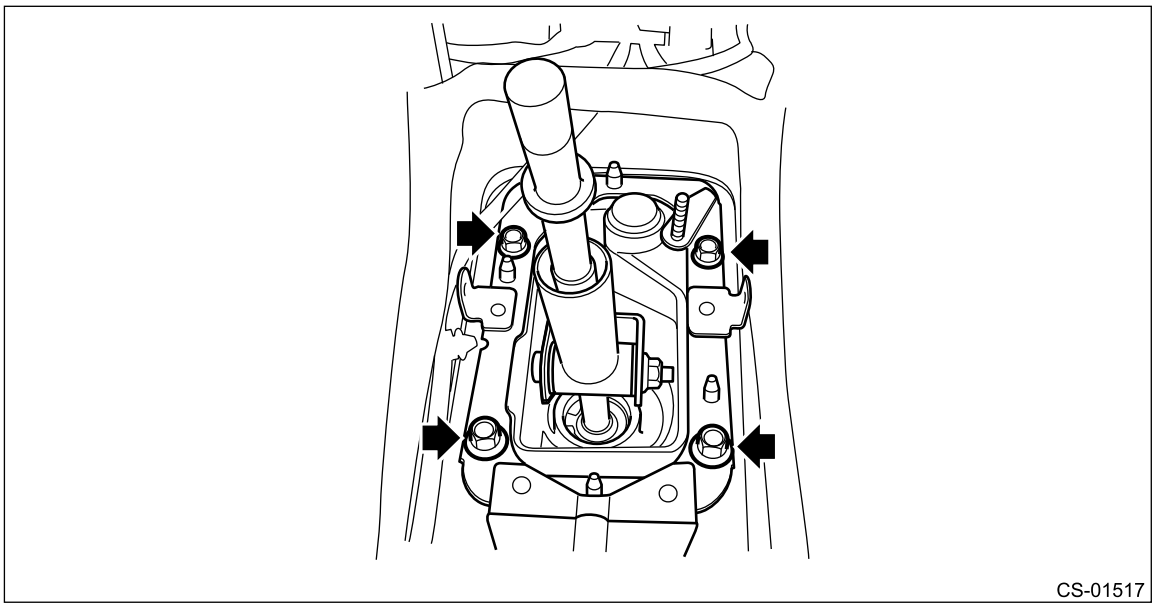


Refer to “Body Integrated Unit” for removal and installation procedure. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

REMOVAL

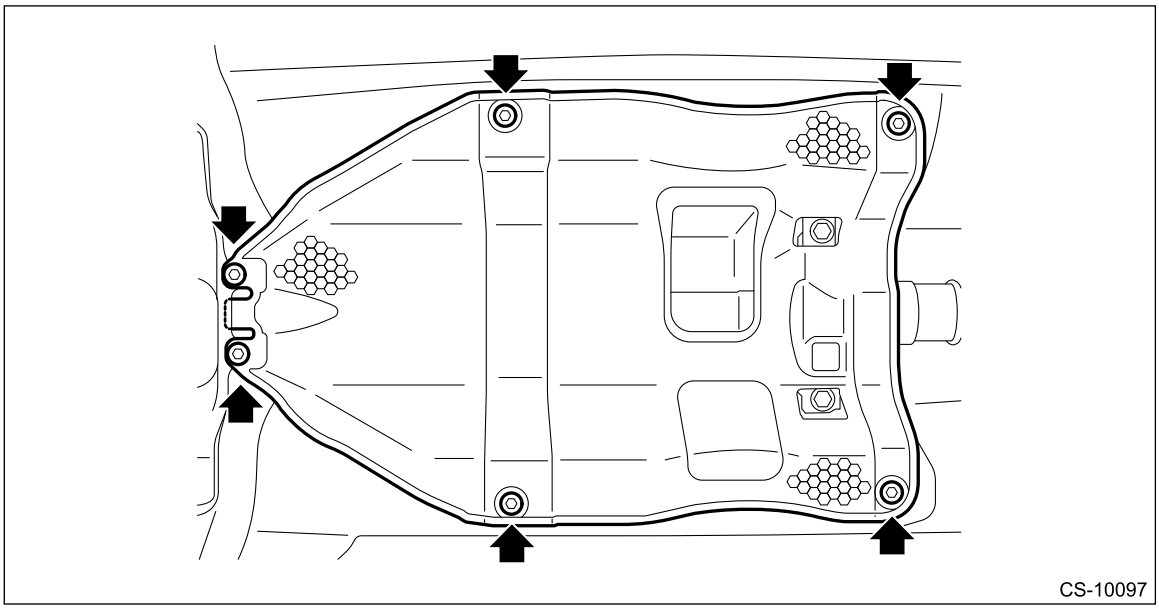


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the gear shift knob by turning it counterclockwise.
3. Remove the front console panel. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
4. Remove the panel center LWR LH and RH. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
5. Remove the clamp.

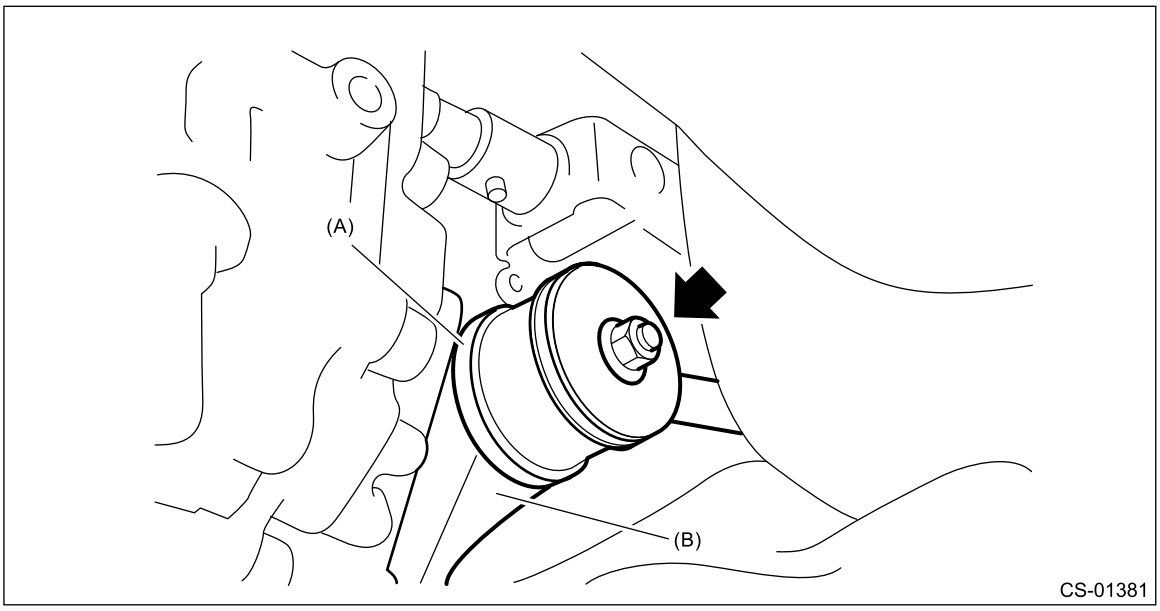


6. Remove the boot and insulator assembly.

7. Remove the harness clamp from the plate COMPL.

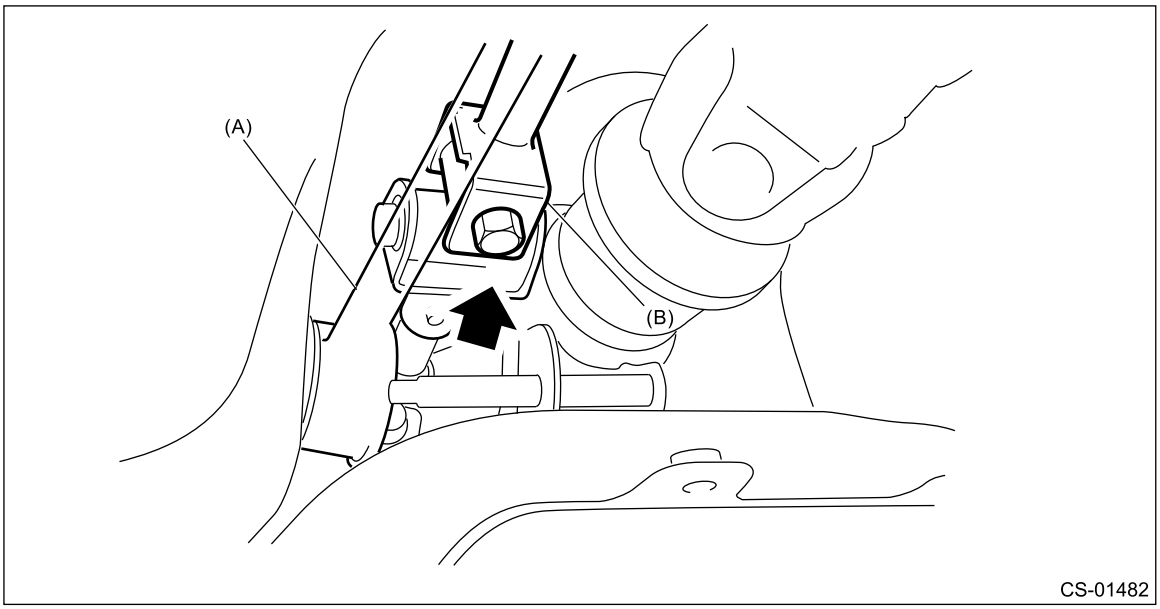


8. Remove the plate COMPL from the vehicle body.



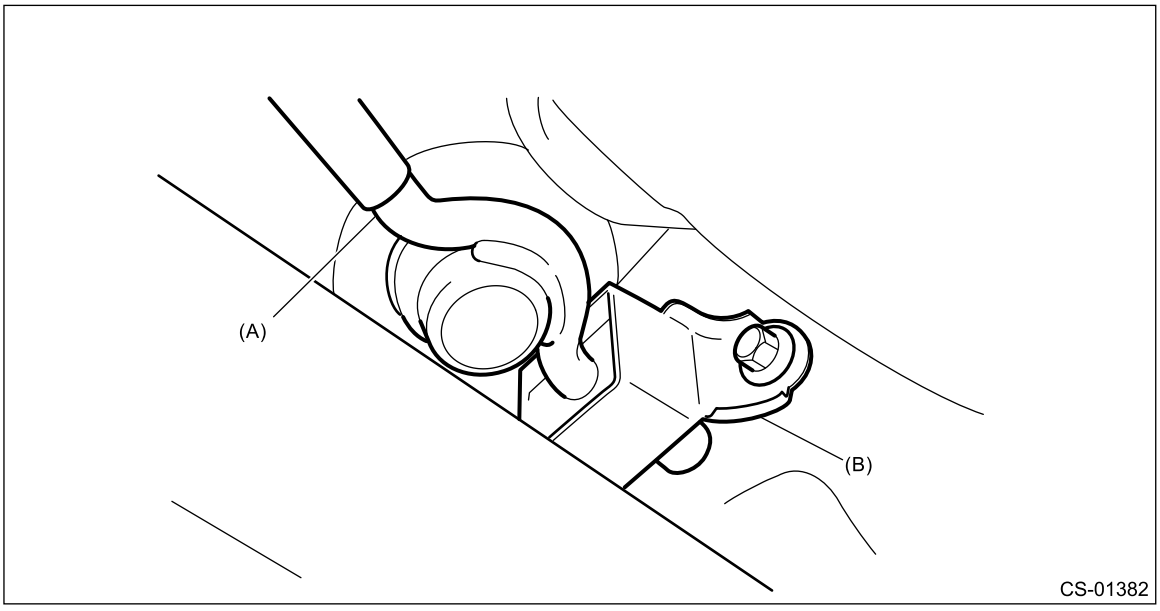
9. Lift up the vehicle.

10. Remove the center exhaust cover.



11. Remove the stay from the shift bracket.

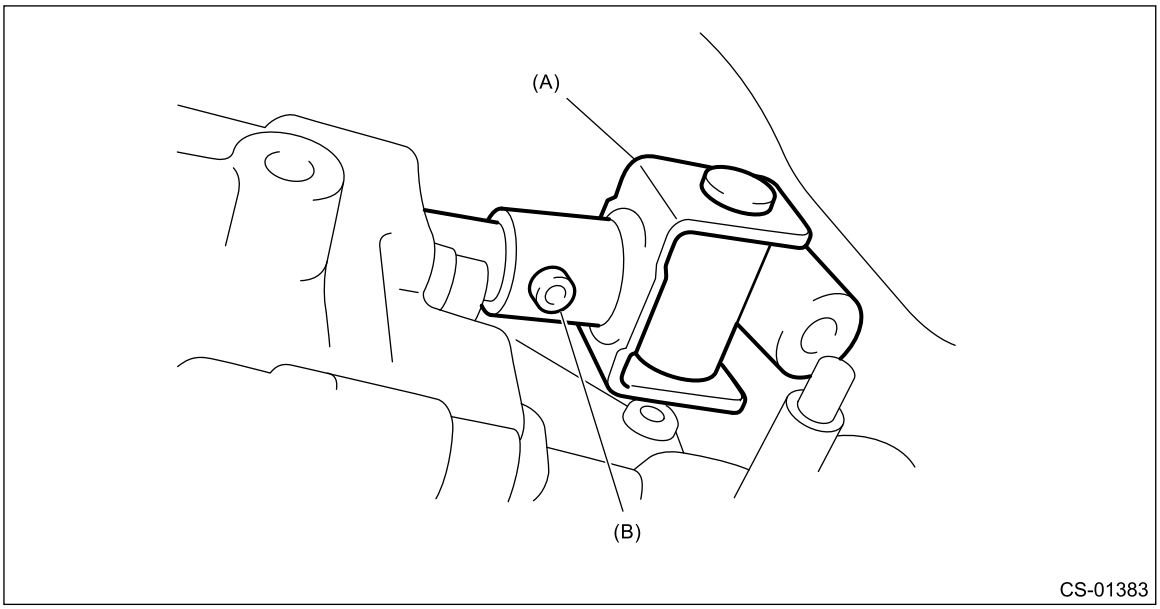
(A) Stay
(B) Shift bracket



12. Remove the rod from joint.

(A) Stay

(B) Rod

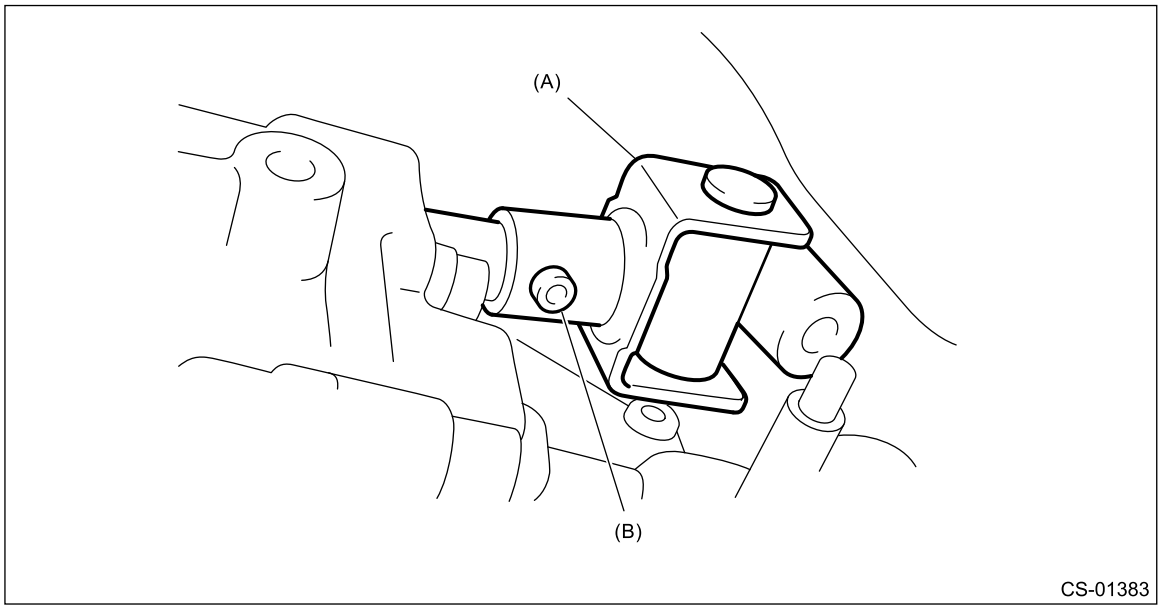


13. Remove the cushion rubber from the vehicle body.

(A) Stay

(B) Cushion rubber

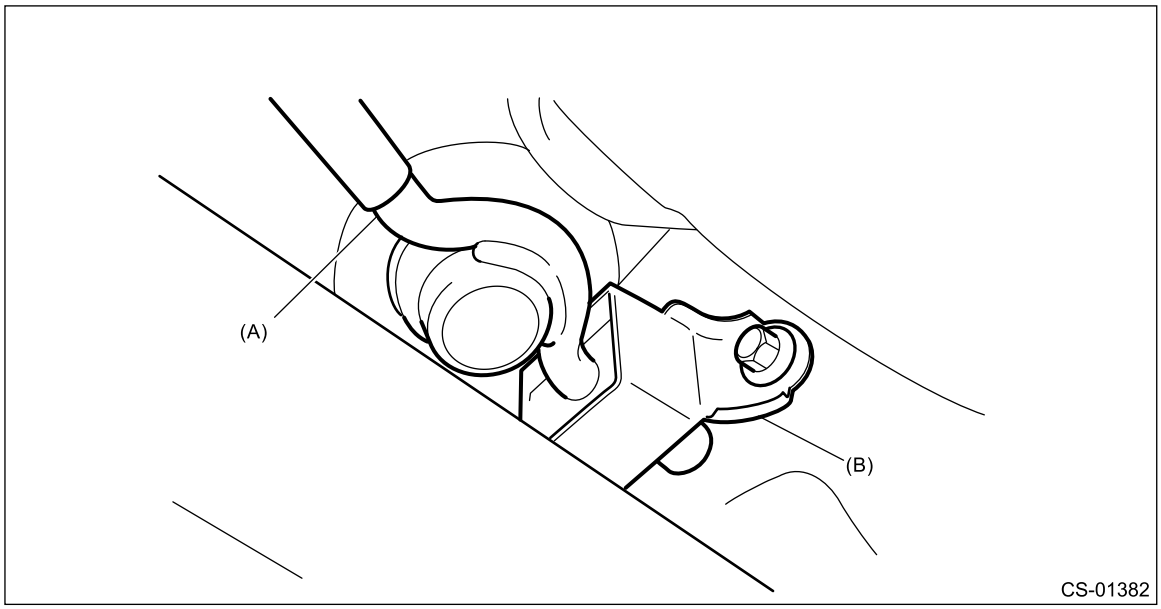
14. Extract the spring pin and remove the joint.



(A) Joint
(B) Spring pin

15. Remove the gear shift lever from the bottom of the vehicle.

CONTROL SYSTEMS > MT Gear Shift Lever



INSTALLATION

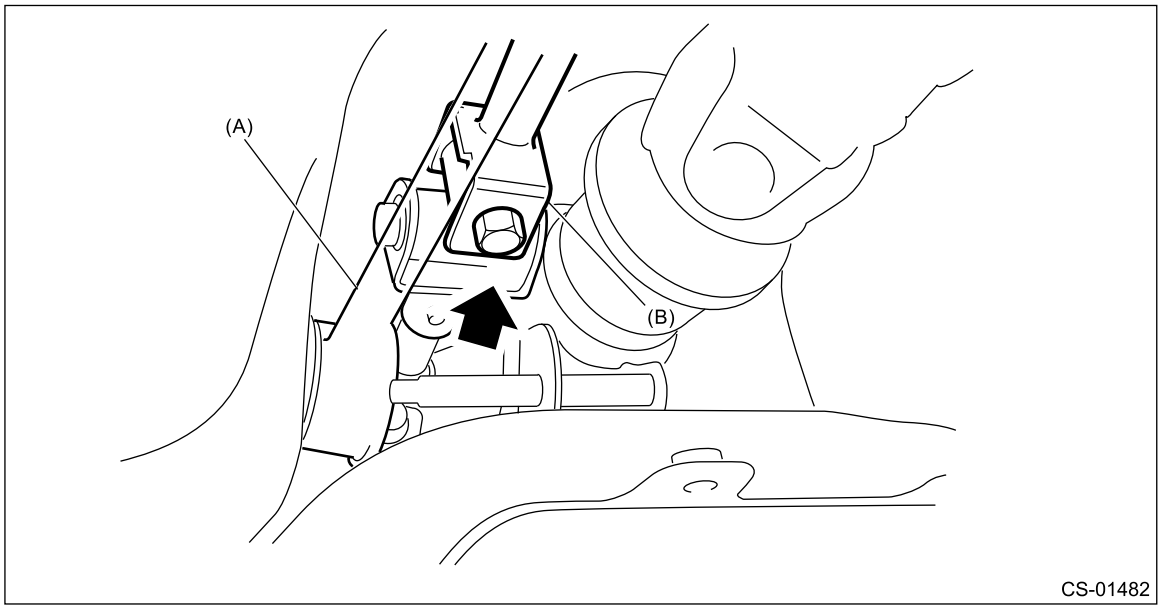
1. Insert the gear shift lever from the underside of the vehicle.
2. Install the joint to the transmission and secure with a spring pin.

(A) Joint
(B) Spring pin

3. Mount the cushion rubber on the vehicle body.
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

(A) Stay

(B) Cushion rubber



4. Connect the rod to the joint.

Note:

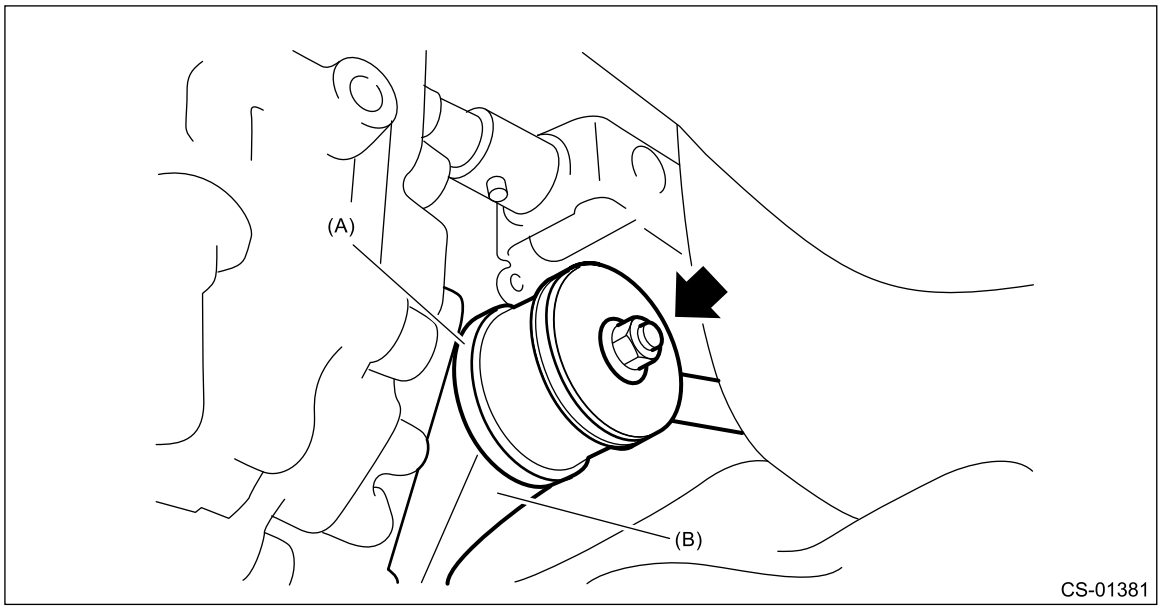
Use a new self-locking nut.

Tightening torque:

12 N·m (1.2 kgf-m, 8.9 ft-lb)

(A) Stay

(B) Rod



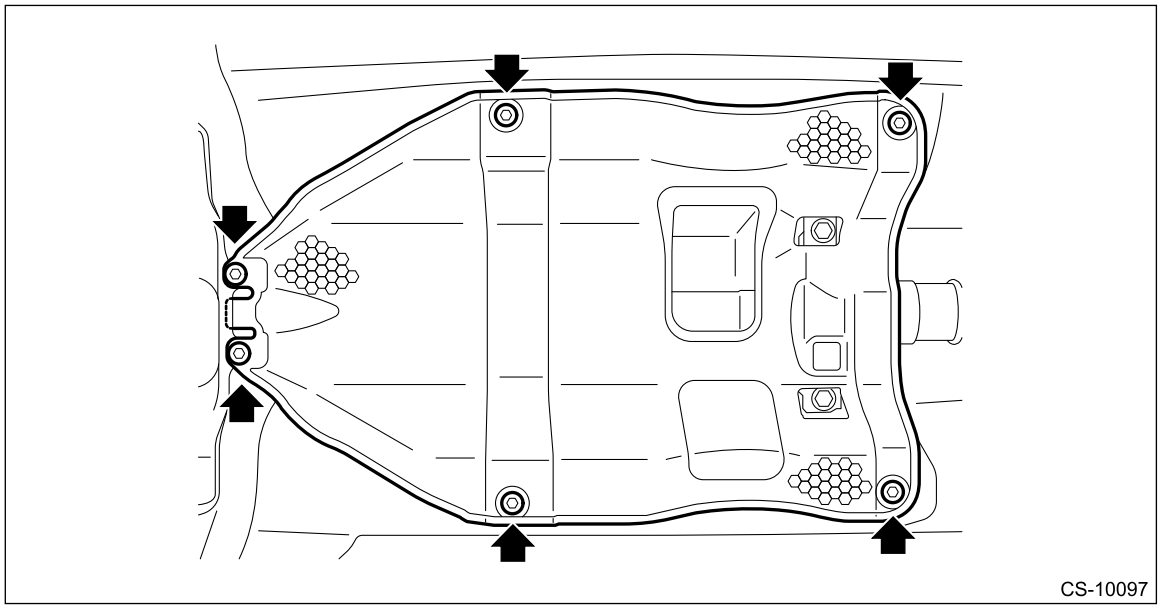
5. Connect the stay to the shift bracket, and tighten the self-locking nut.

Note:

Use a new self-locking nut.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Stay

(B) Shift bracket

6. Install the center exhaust cover.

Tightening torque:

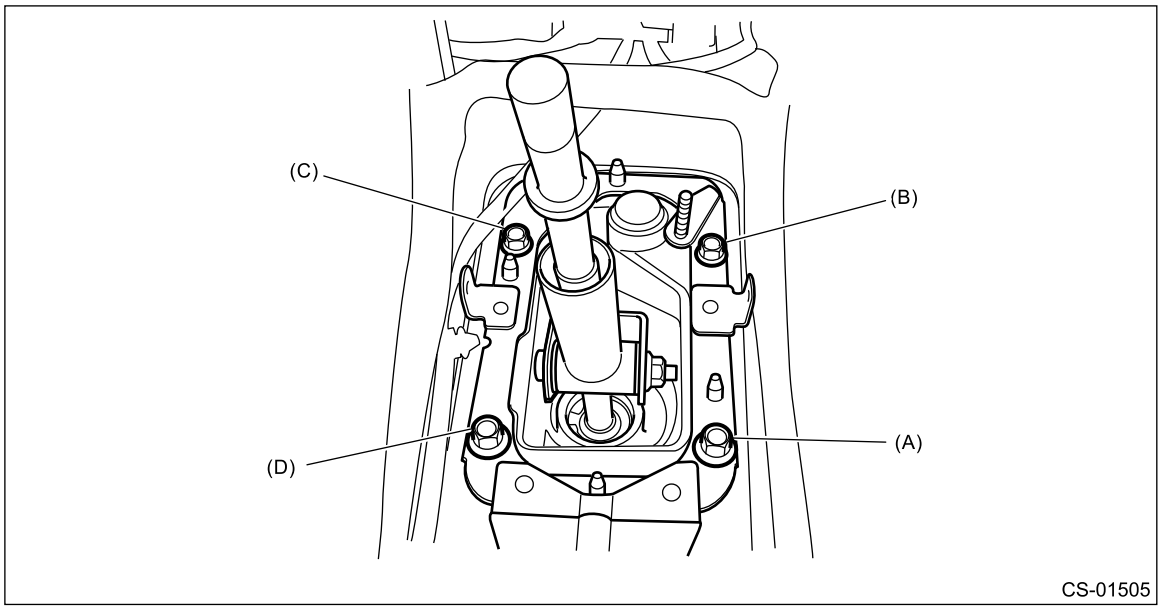
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7. Lower the vehicle.

8. Install the plate COMPL to the body.

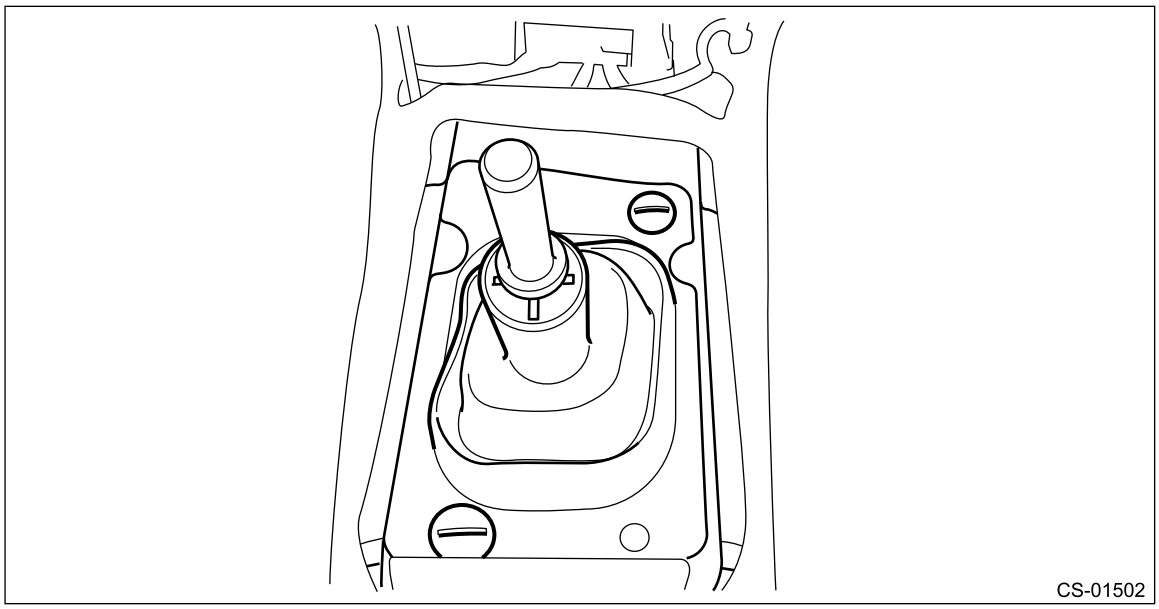
Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)



(1) Set the plate COMPL to the vehicle.

(2) Temporarily tighten the bolt (A).

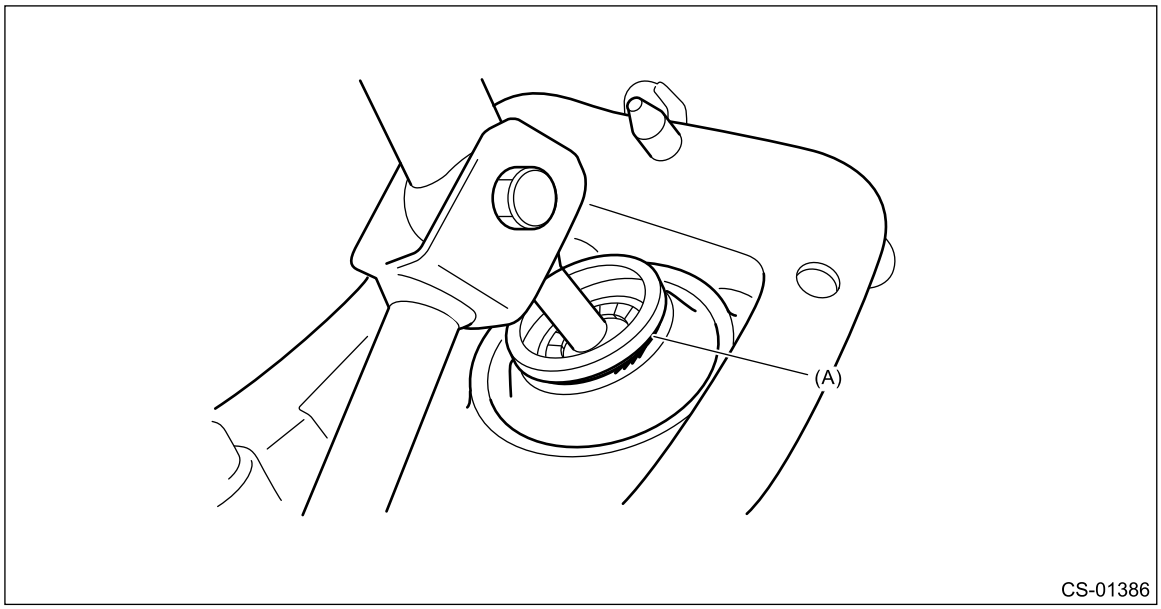


(3) Tighten the bolt (B).

(4) Tighten the bolt (A).

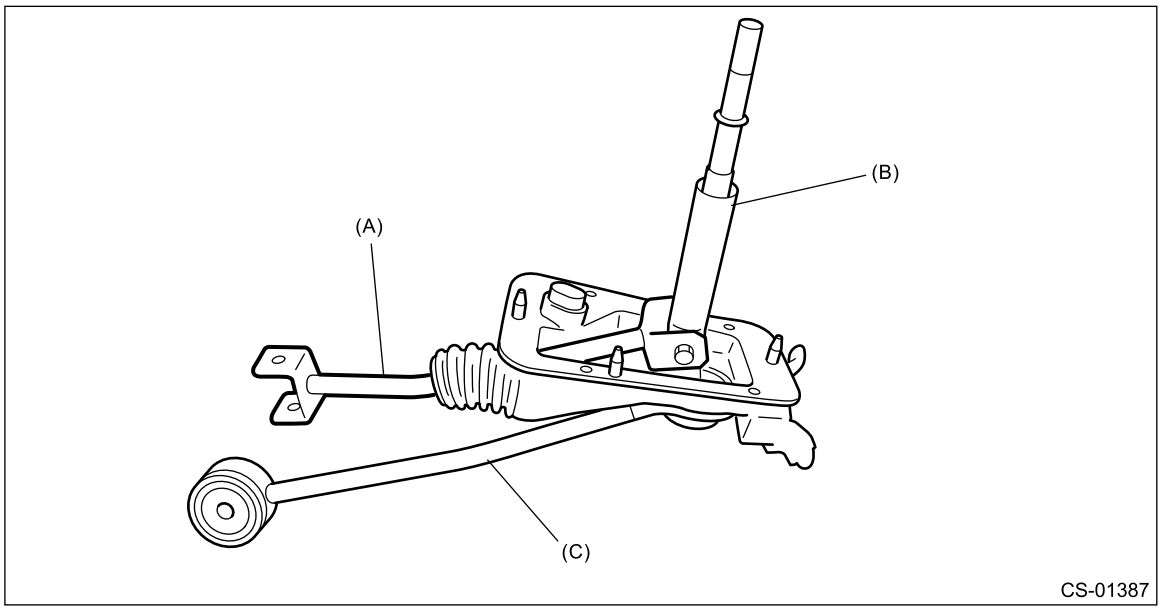
(5) Tighten the bolts (C) and (D).

9. Install the harness clamp to the plate.
10. Install the boot and insulator assembly, and secure with a clamp.



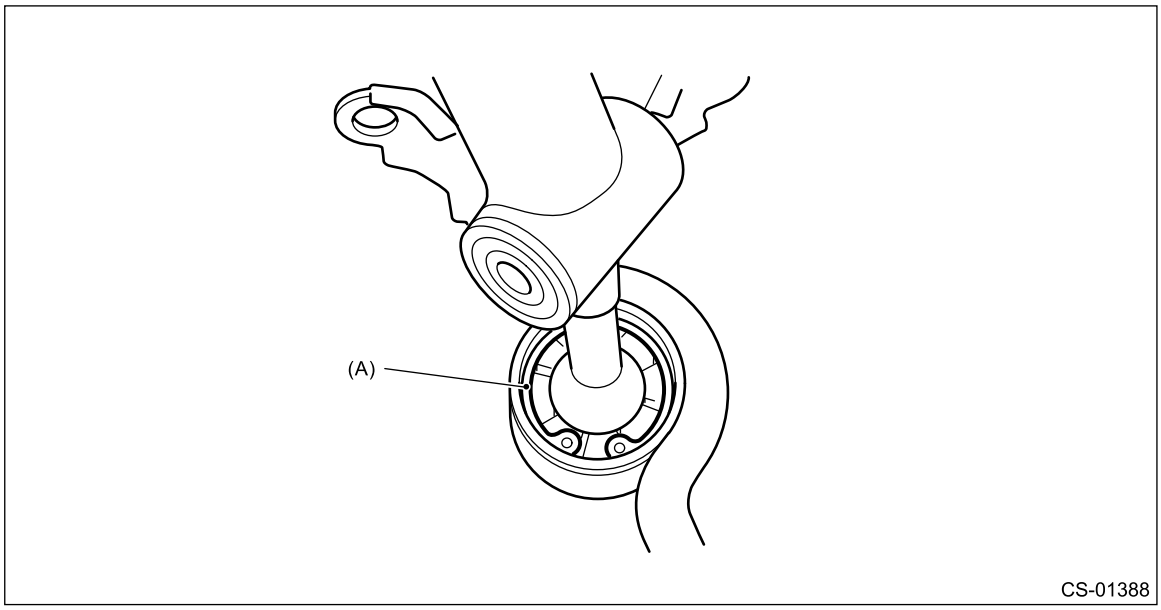
11. Install the panel center LWR LH and RH. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
12. Install the front console panel. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
13. Install the gear shift knob by turning it clockwise.
14. Make sure the gears can be shifted accurately into each gear.
15. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

CONTROL SYSTEMS > MT Gear Shift Lever



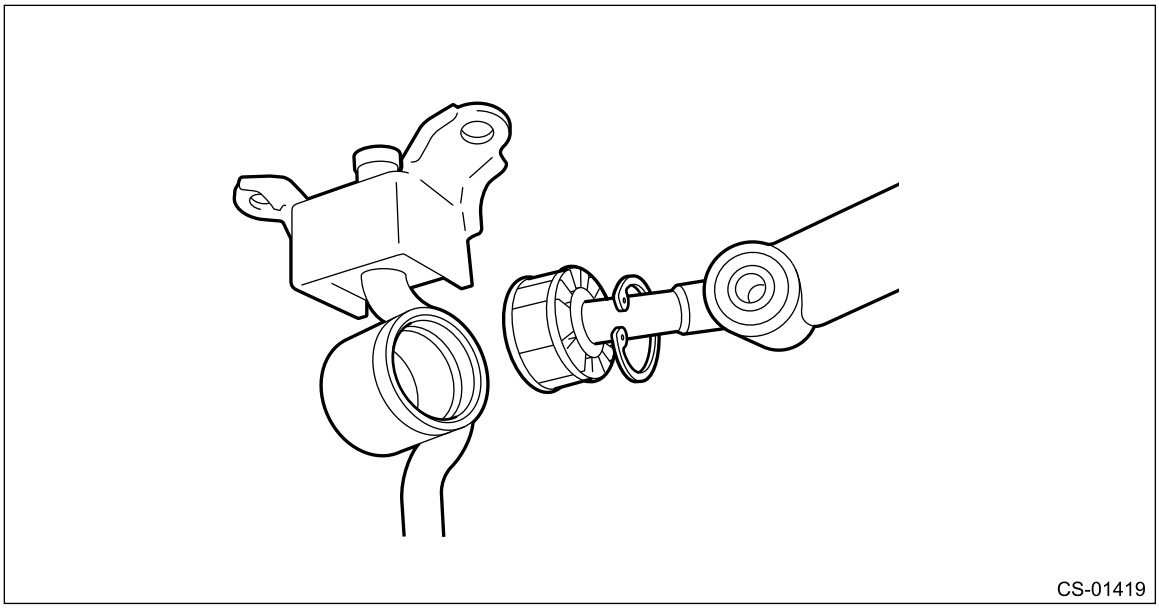
DISASSEMBLY

1. Remove the lock wires.



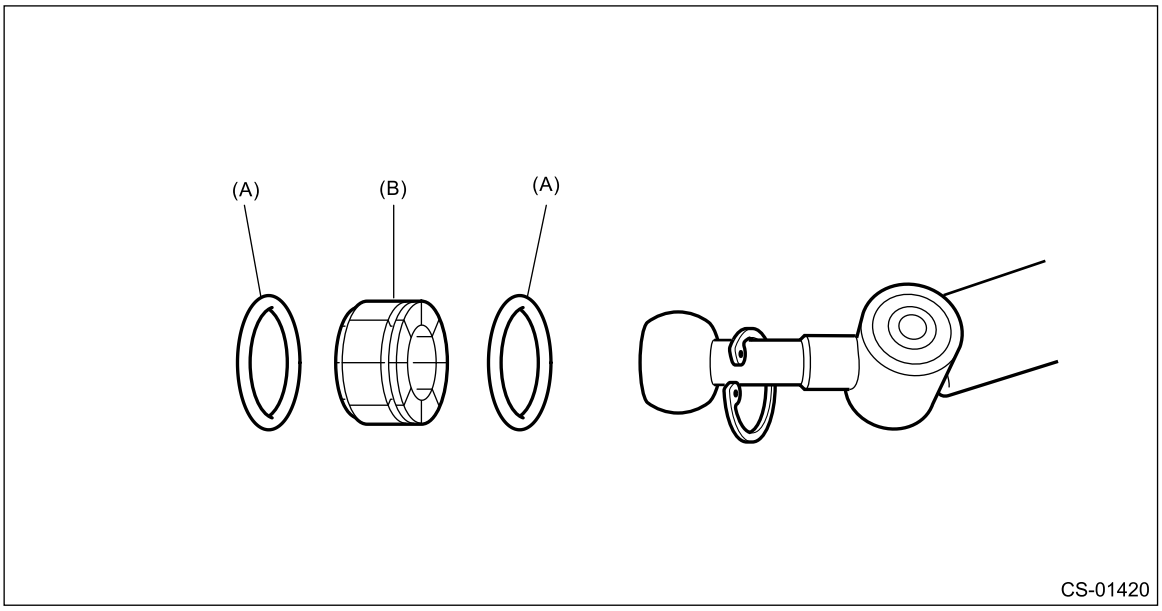
(A) Lock wire

2. Remove the rod from gear shift lever.



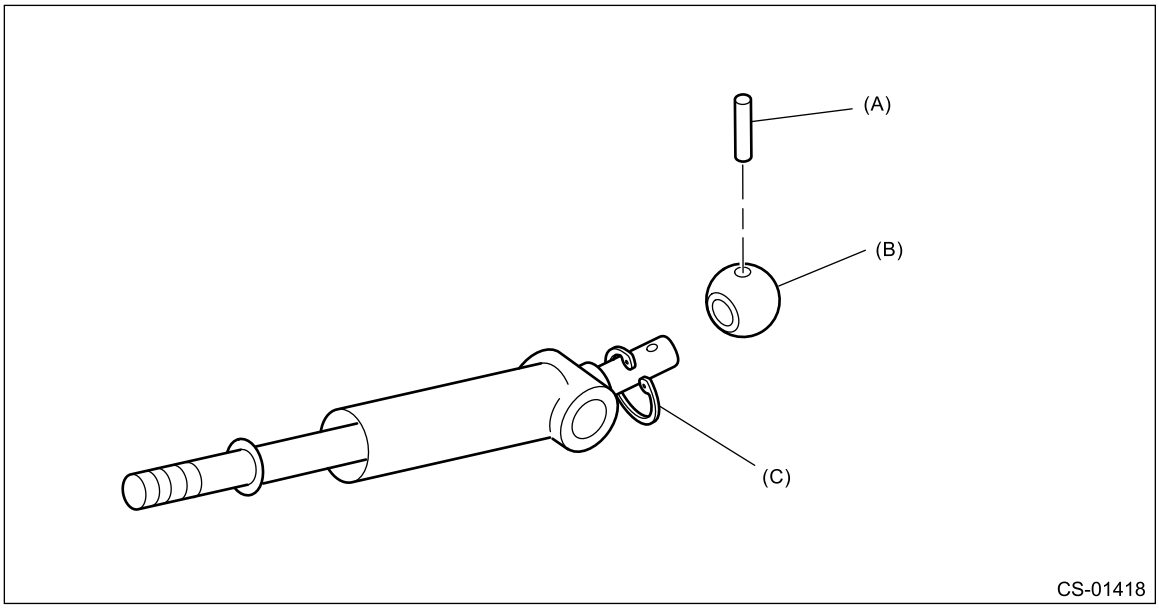
(A) Rod
(B) Lever
(C) Stay

3. Separate the rod and inner boot.
4. Remove the snap ring from the stay.



(A) Snap ring

5. Separate the gear shift lever and the stay.

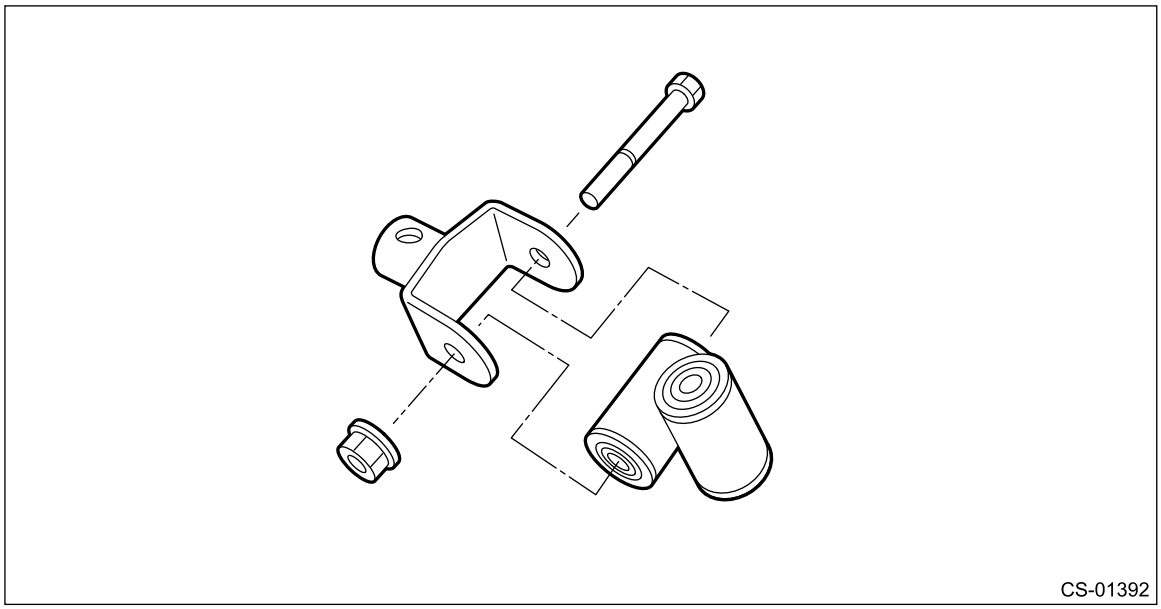


6. Remove the boot and bushing from the gear shift lever.

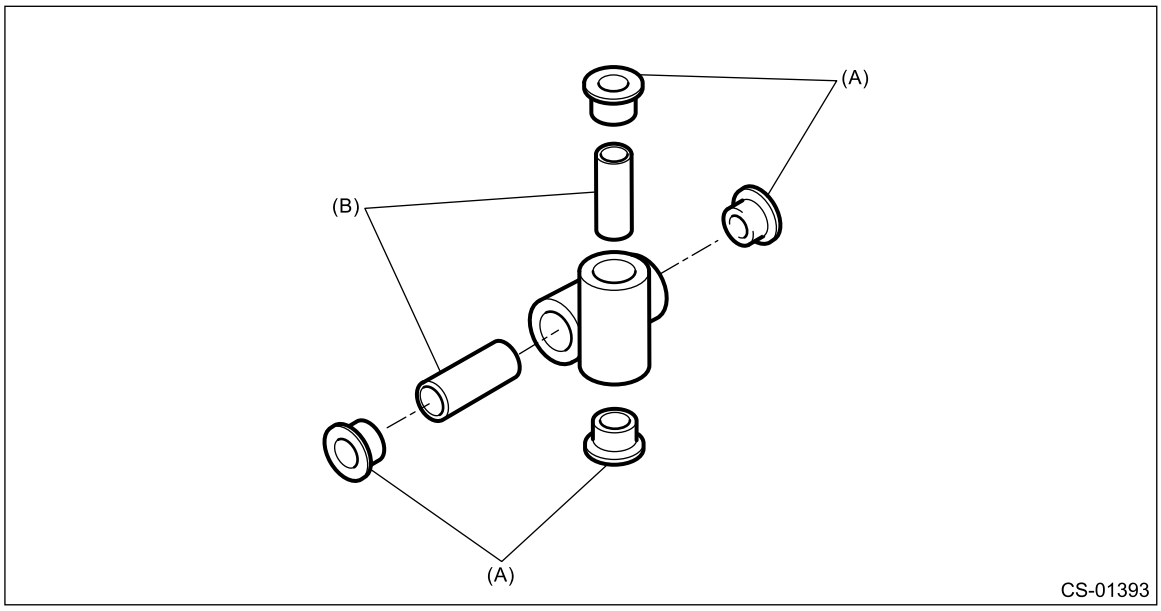
(A) O-ring

(B) Bushing

7. Remove the spring pin, and then remove the bushing and snap ring.



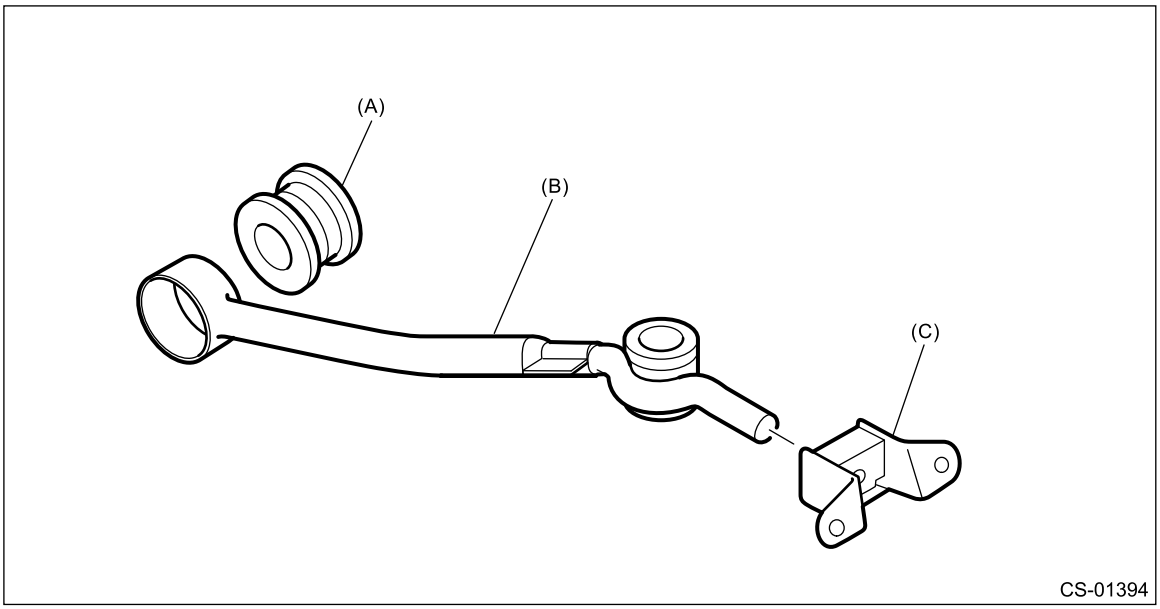
(A) Spring pin



(B) Bushing

(C) Snap ring

8. Remove the boss from the joint.



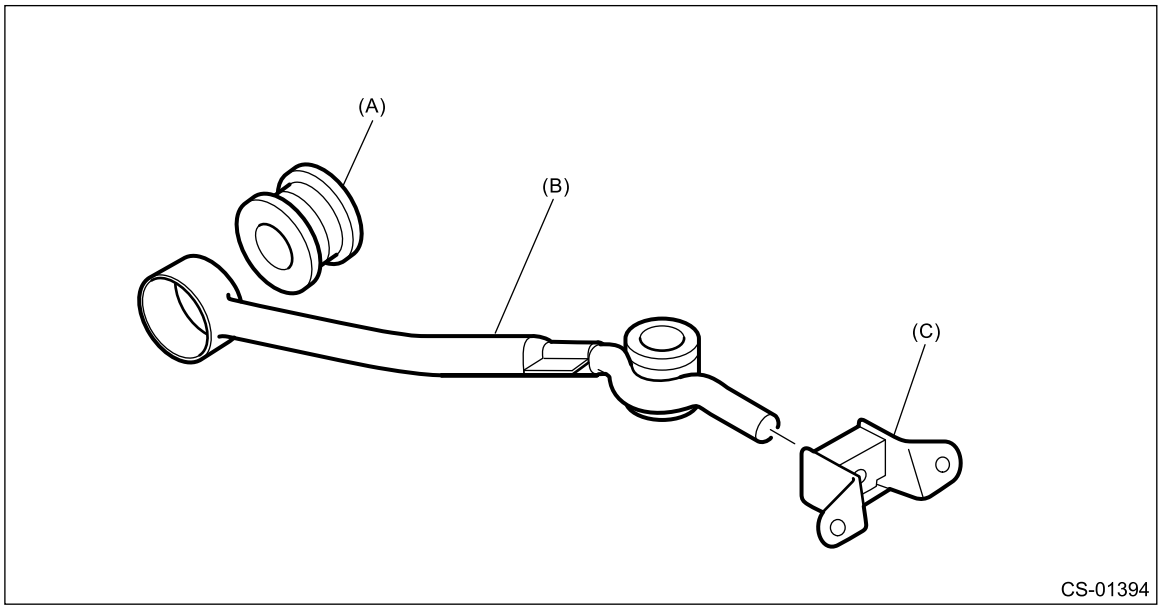
9. Remove the bushing and spacer from the boss.

(A) Bushing

(B) Spacer

10. Remove the bushing and cushion rubber from the stay.

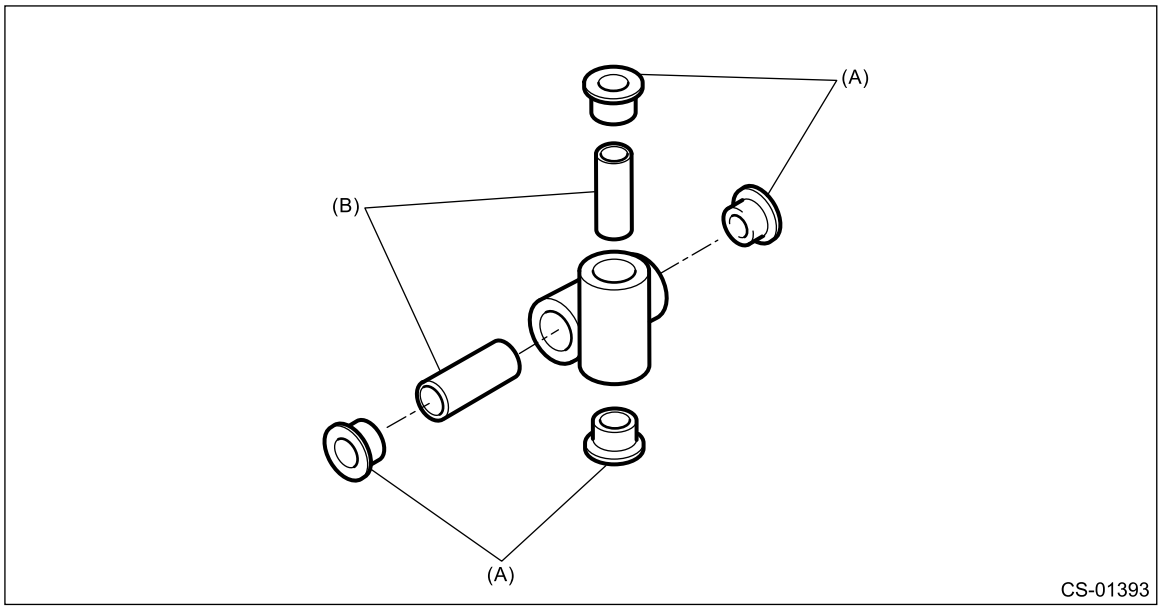
(A) Bushing B
(B) Stay
(C) Cushion rubber



CONTROL SYSTEMS > MT Gear Shift Lever

ASSEMBLY

Note:



- **Clean all the parts before assembly.**
- **Apply NIGTIGHT LYW No. 2 grease or equivalent to each part. Ref. to CONTROL SYSTEMS>General Description>COMPONENT > 5MT GEAR SHIFT LEVER.**

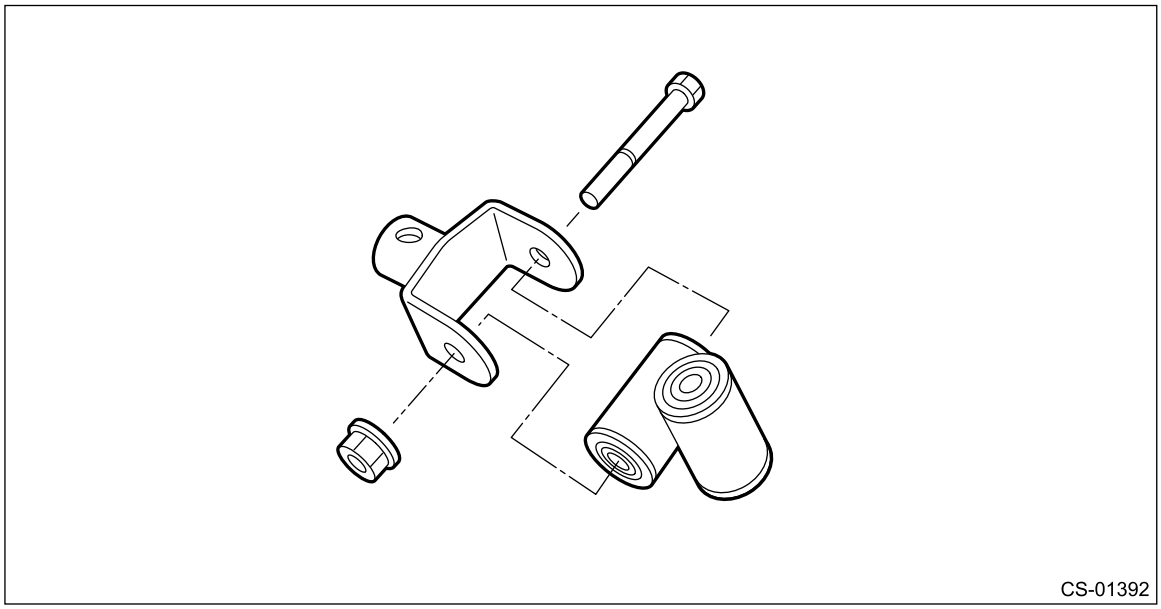
1. Mount the bushing and cushion rubber to the stay.

(A) Bushing
(B) Stay
(C) Cushion rubber

2. Install the bushing and spacer to boss.

(A) Bushing

(B) Spacer

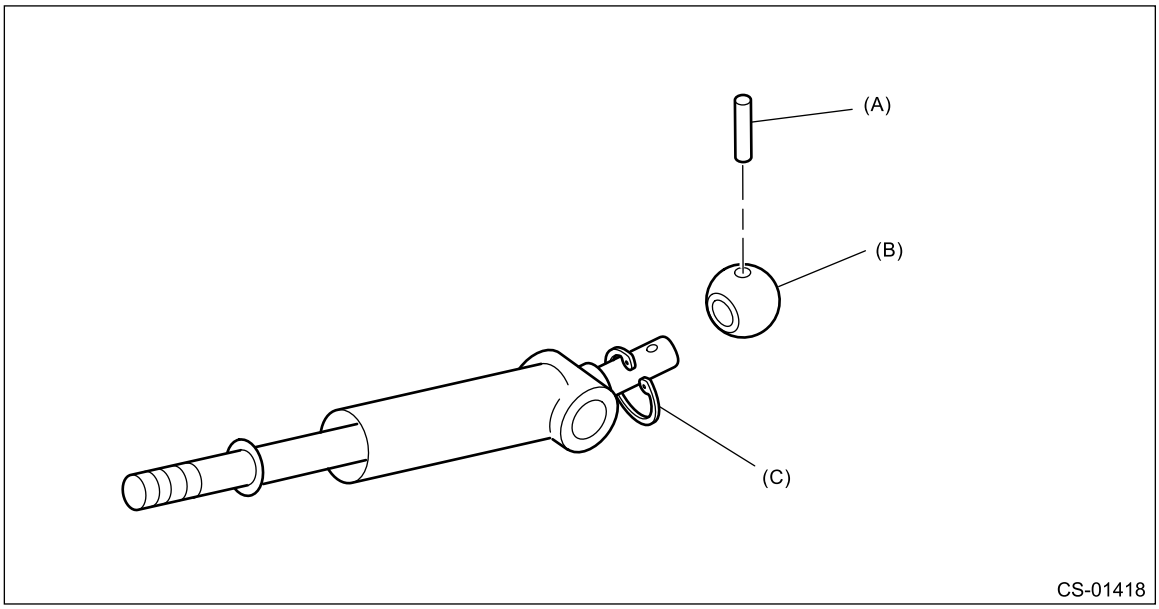


3. Install the boss to the joint.

Note:

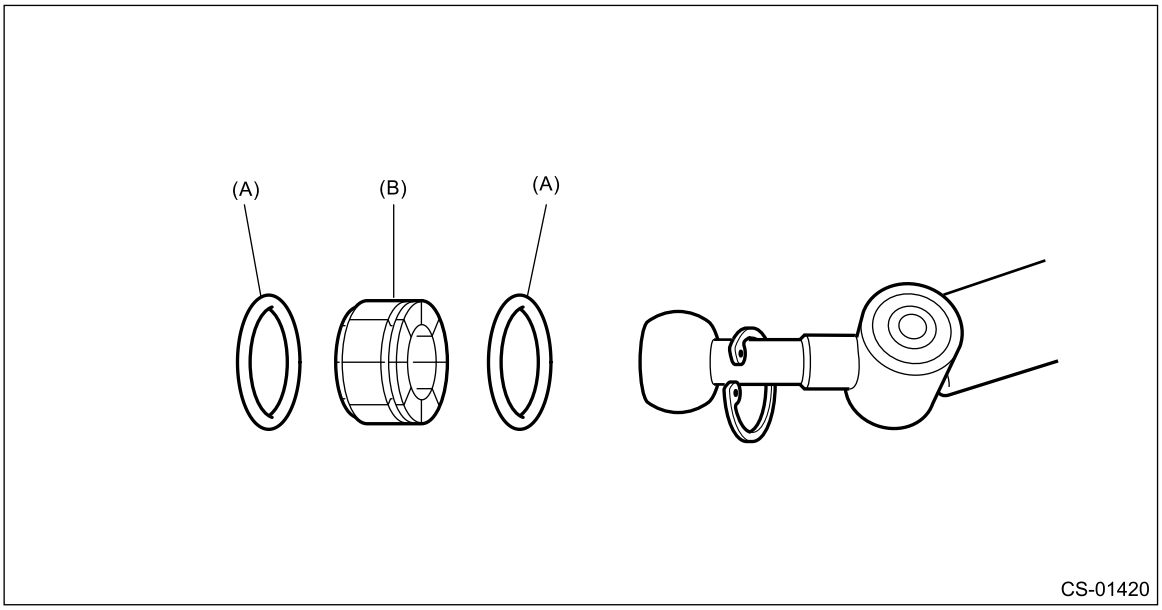
Use a new self-locking nut.

Tightening torque:



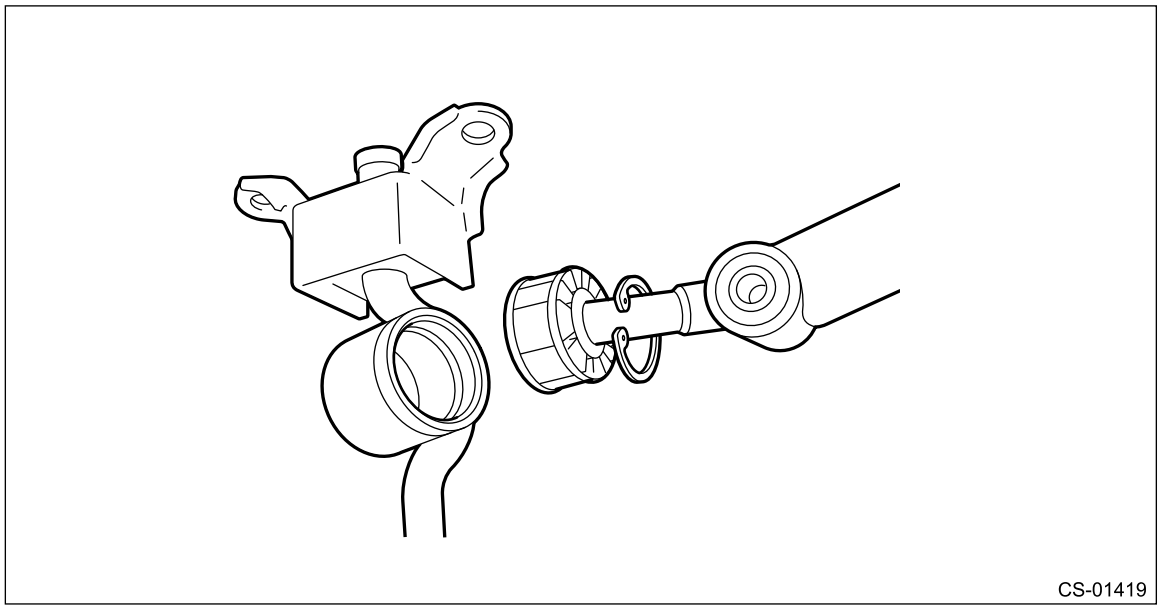
12 N·m (1.2 kgf-m, 8.9 ft-lb)

4. Install the snap ring to gear shift lever and install the bushing.



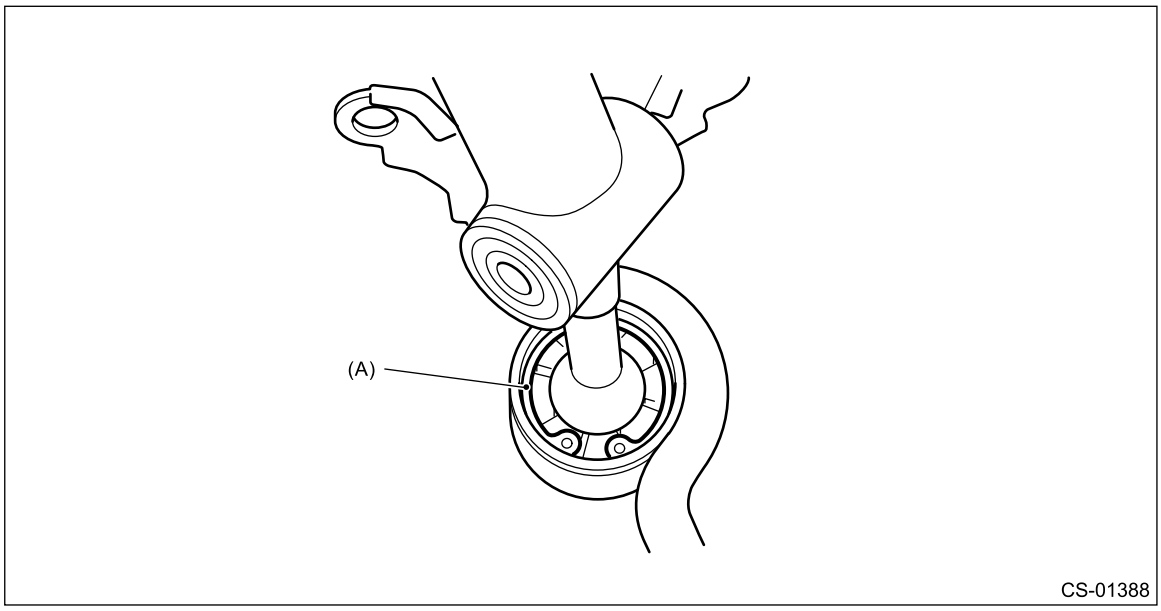
Note:

Apply grease to the bushing.



(A) Spring pin
(B) Bushing
(C) Snap ring

5. Apply grease to the bushing and O-ring, and then install to gear shift lever.



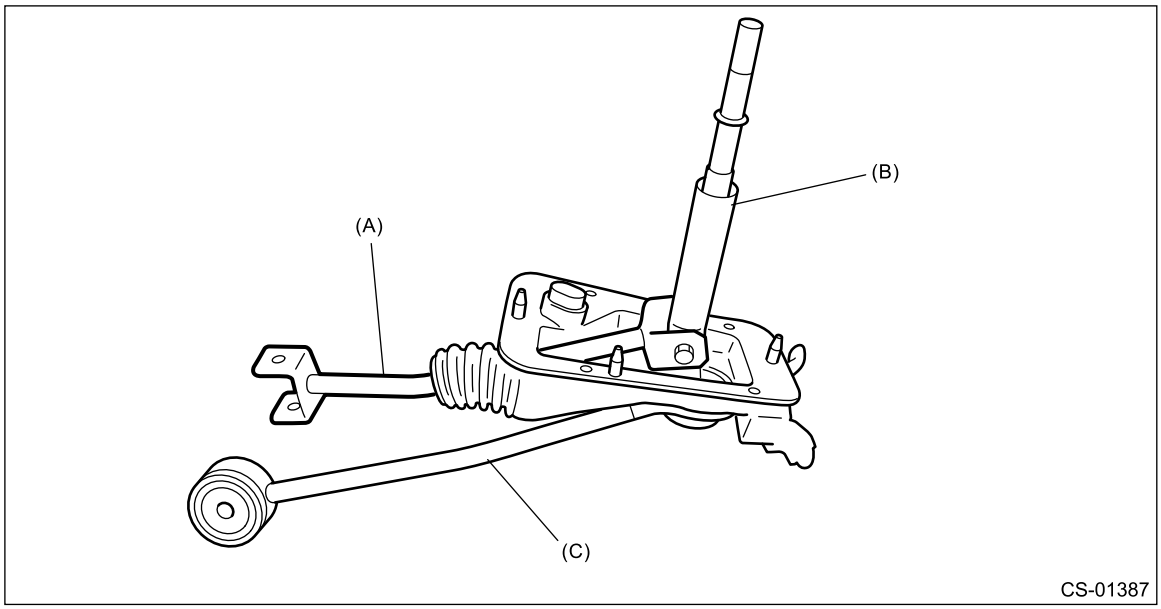
(A) O-ring
(B) Bushing

6. Apply sufficient grease into boss, and then install the gear shift lever to the stay.

7. Install the snap ring.

(A) Snap ring

8. Insert the gear shift lever and rod into boot hole.



9. Install the rod.

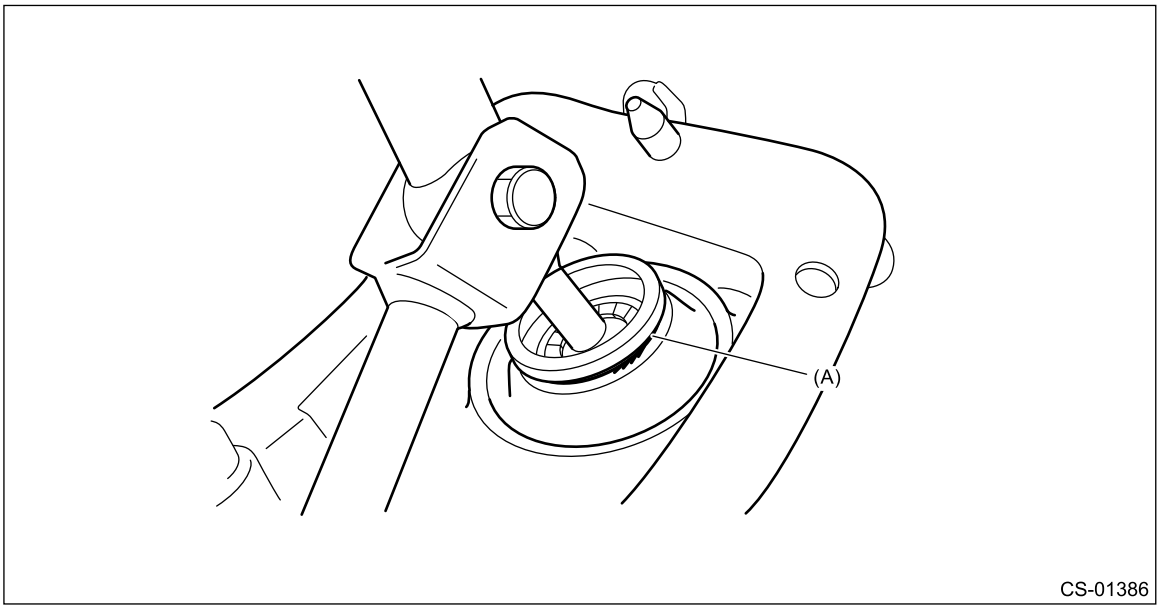
Note:

Use a new self-locking nut.

Tightening torque:

12 N·m (1.2 kgf-m, 8.9 ft-lb)

(A) Rod

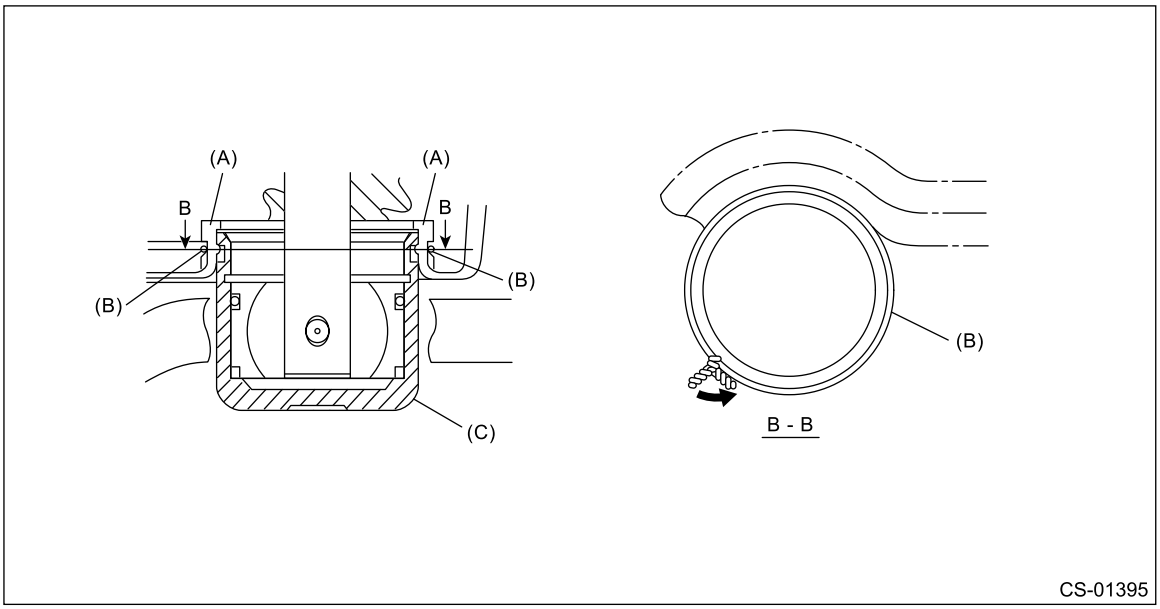


(B) Lever

(C) Stay

10. Install the lock wire.

Note:



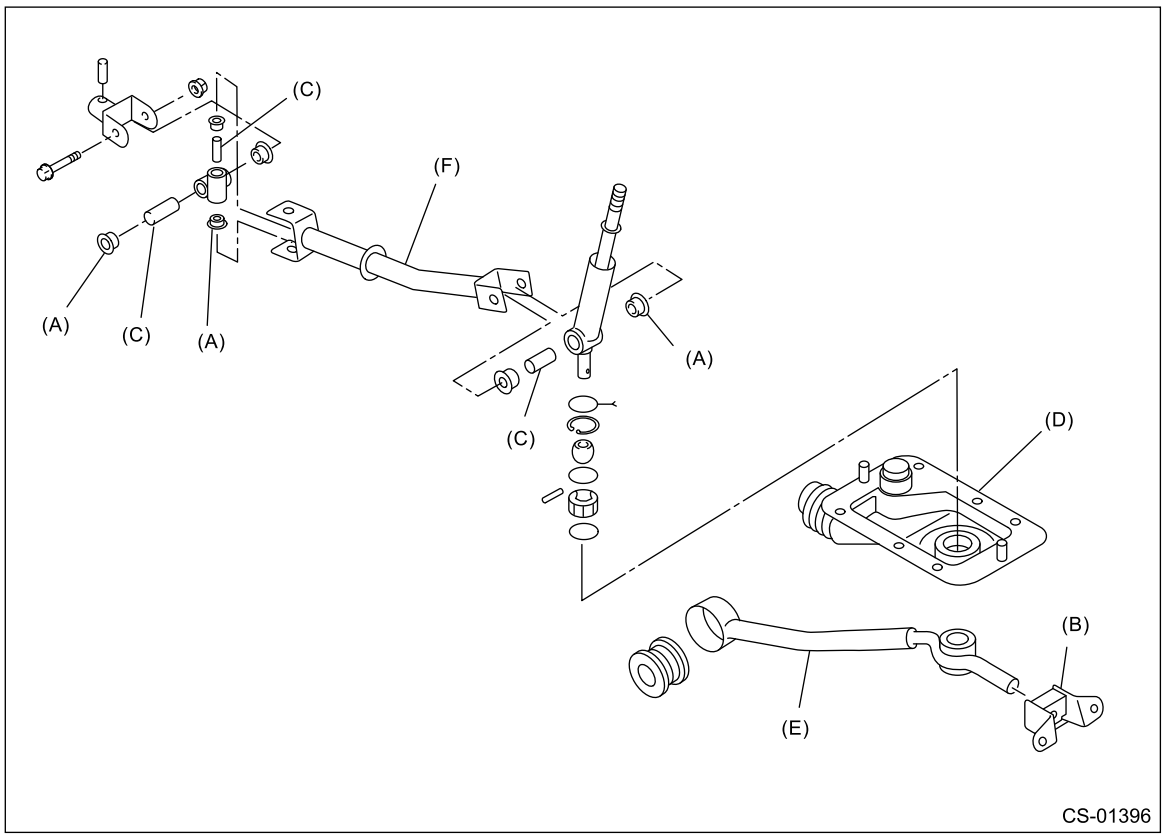
Use a new lock wire.

(A) Lock wire

Note:

- **Install the lock wire to the stay groove.**
- **Bend the extra wire to the same direction of lock wire winding.**

(A) Inner boot



(B) Lock wire

(C) Stay

CONTROL SYSTEMS > MT Gear Shift Lever

INSPECTION

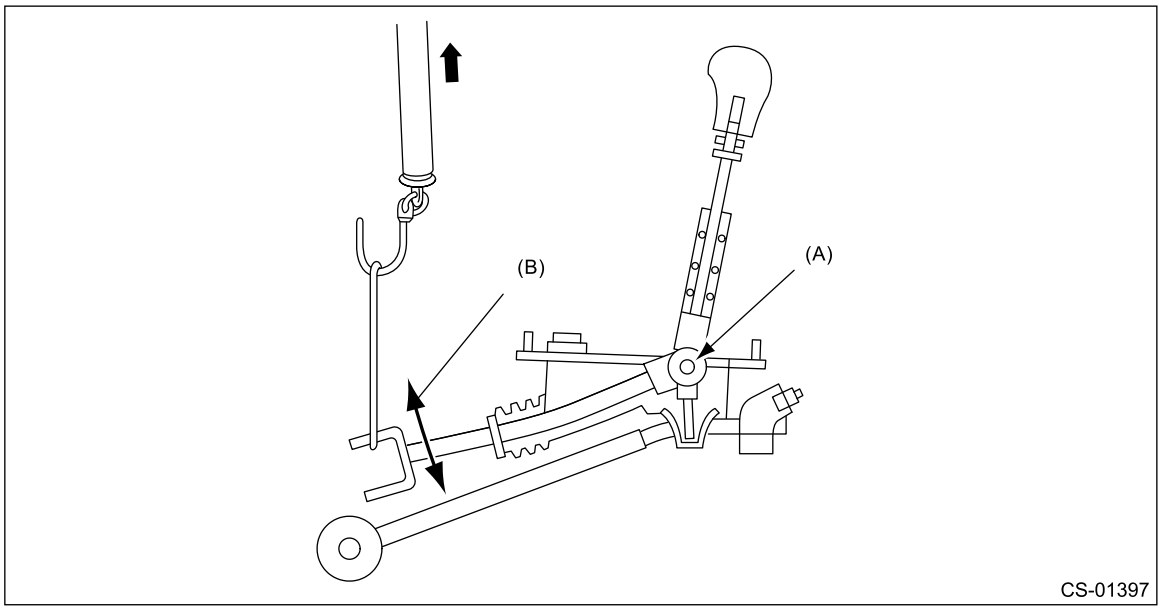
1. Check the parts (bushing, cushion rubber, spacer, boot, stay and rod, etc.) for deformation, damage and wear. If necessary, correct or replace faulty parts. Compare the removed parts with new parts to judge if there are damages or not.

(A) Bushing

(B) Cushion rubber

(C) Spacer

(D) Boot



(E) Stay

(F) Rod

2. Check the swing torque of rod linked with the gear shift lever. If the torque exceeds the specifications, replace the bushing or retighten nuts.

Swing torque:

3.7 N (0.38 kgf, 0.83 lbf) or less

(A) Pivot

(B) Swing torque

INSPECTION

Symptoms	Possible cause	Corrective action
Select lever	Starter does not run.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	Back-up light does not illuminate.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	AT shift lock system does not operate normally.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	Manual mode can not be set.	Inspect the mode switch and select lever, or inspect the circuit.
	Up-shift is not engaged at manual mode.	Check the shift-up switch and circuit.
	Down-shift is not engaged at manual mode.	Check the shift-down switch and circuit.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)

5MT

1. General Description

21. General Diagnostic Table

SPECIFICATION

1. MANUAL TRANSMISSION AND DIFFERENTIAL

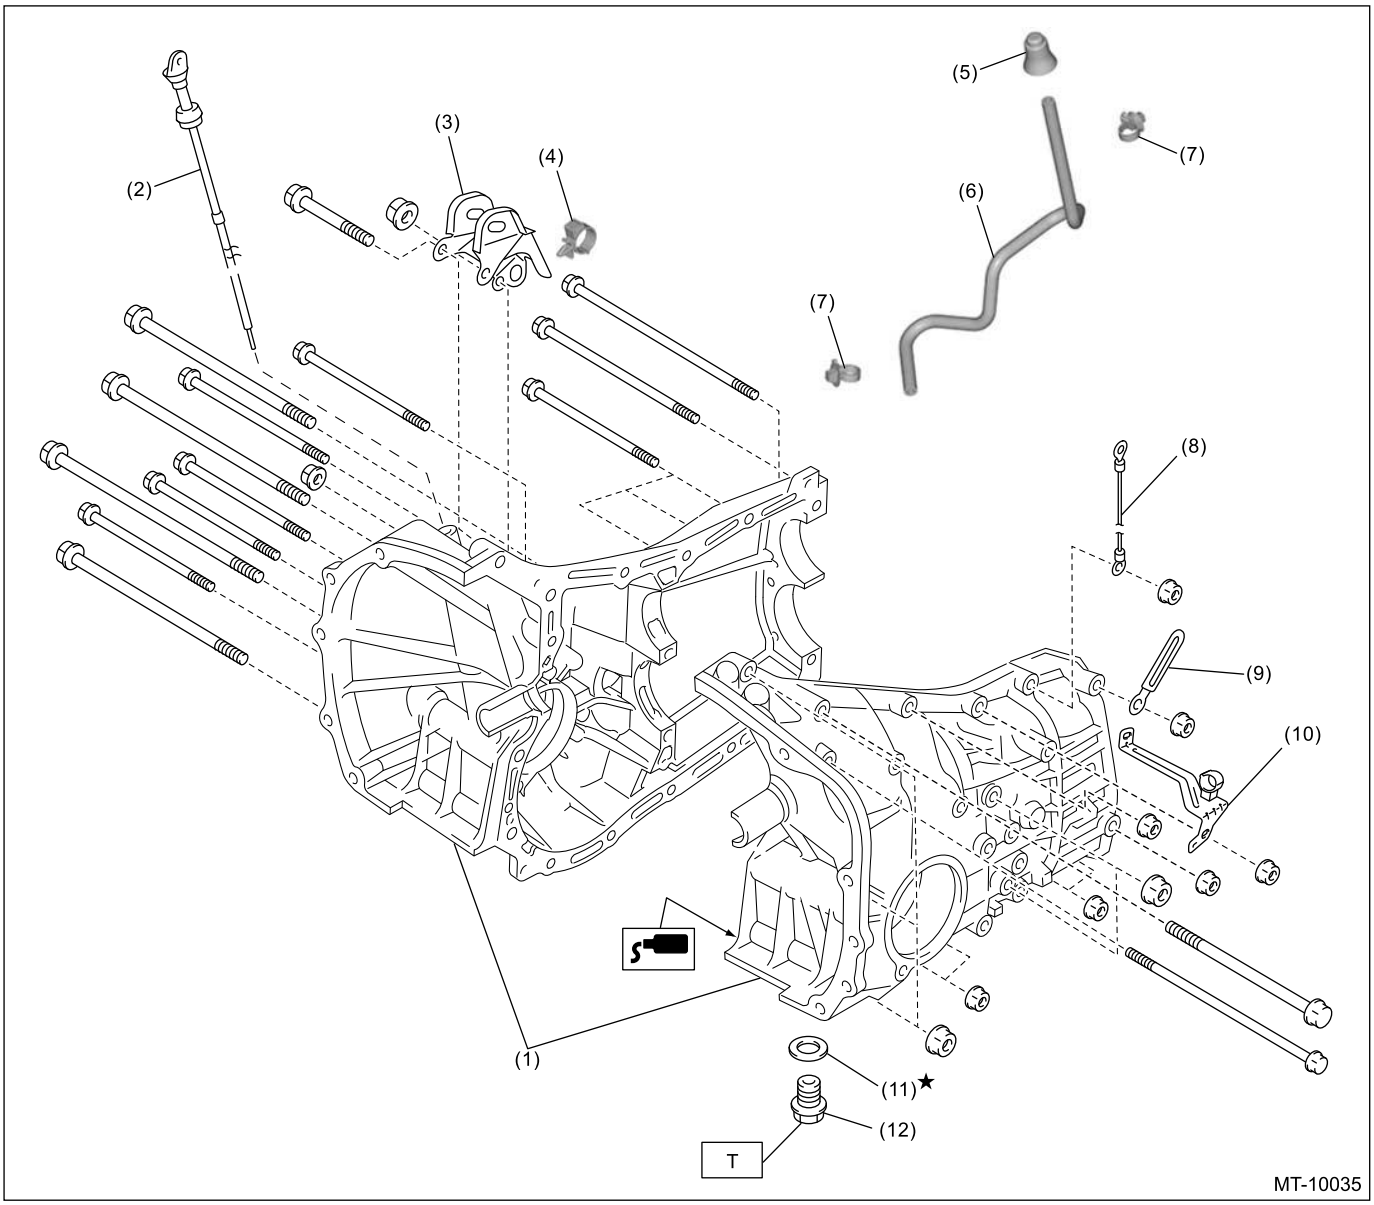
Model			2.0 L
Type			5-forward speeds and 1-reverse (all stage with synchromesh)
Transmission gear ratio		1st	3.454
		2nd	1.888
		3rd	1.296
		4th	0.972
		5th	0.738
		Rev.	3.333
Front reduction gear	Final	Type of gear	Hypoid
		Gear ratio	4.111
Rear reduction gear	Transfer	Type of gear	Helical
		Gear ratio	1.000
Front differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2)
Center differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2 and viscous coupling)
Transmission gear oil			SUBARU GEAR OIL EXTRA MT or equivalent
Transmission gear oil capacity			3.5 L (3.7 US qt, 3.1 Imp qt)

2. TRANSMISSION GEAR OIL

Caution:

If an alternative gear oil is used, you may not have expected functionality and performance.

Recommended oil:



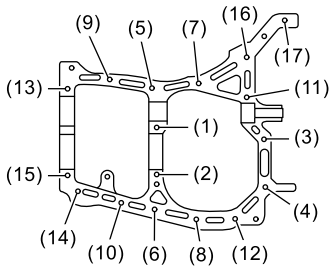
SUBARU GEAR OIL EXTRA MT

Alternative:

GL-5 (75W-90)

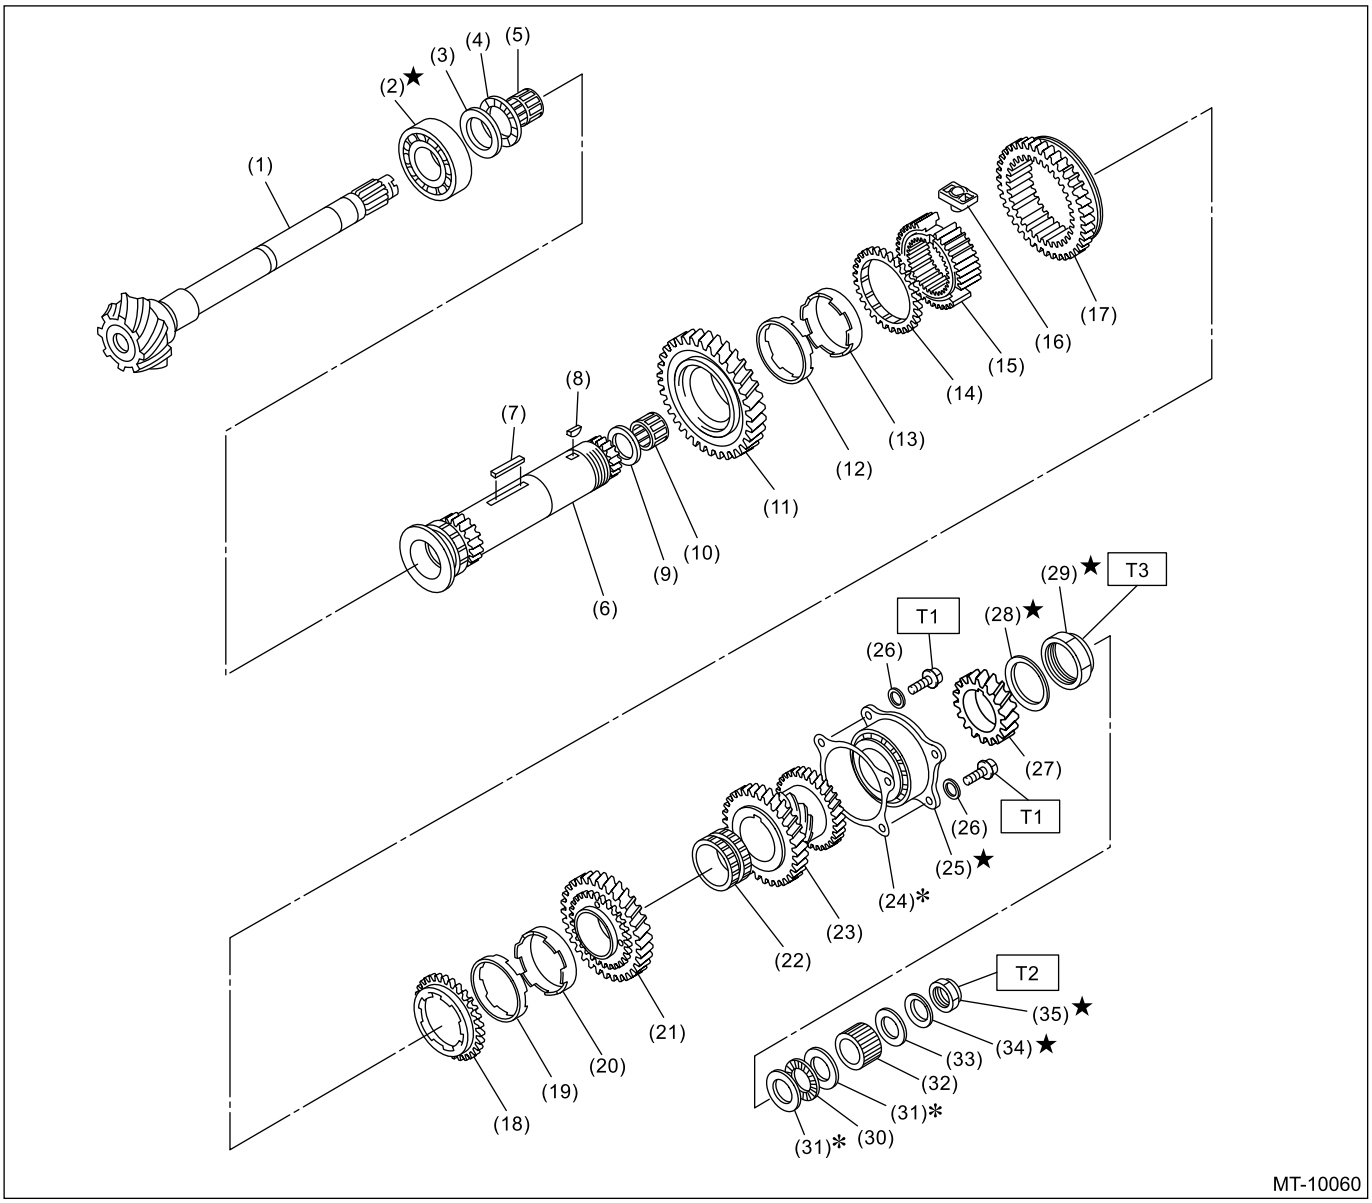
COMPONENT

1. TRANSMISSION CASE



(1) Transmission case ASSY
(2) Oil level gauge
(3) Pitching stopper bracket
(4) Clamp
(5) Air breather cap
(6) Air breather hose
(7) Clip
(8) Transmission radio ground cord
(9) Harness clip
(10) Harness bracket
(11) Gasket
(12) Drain plug

Tightening torque: N·m (kgf-m, ft-lb)



T: 44 (4.5, 32.5) (aluminum gasket, silver)
70 (7.1, 51.6) (copper gasket, brown)
70 (7.1, 51.6) (metal gasket, black)

Transmission case tightening torque

Bolt No.	Bolt size mm	Tightening torque: N·m (kgf-m, ft-lb)

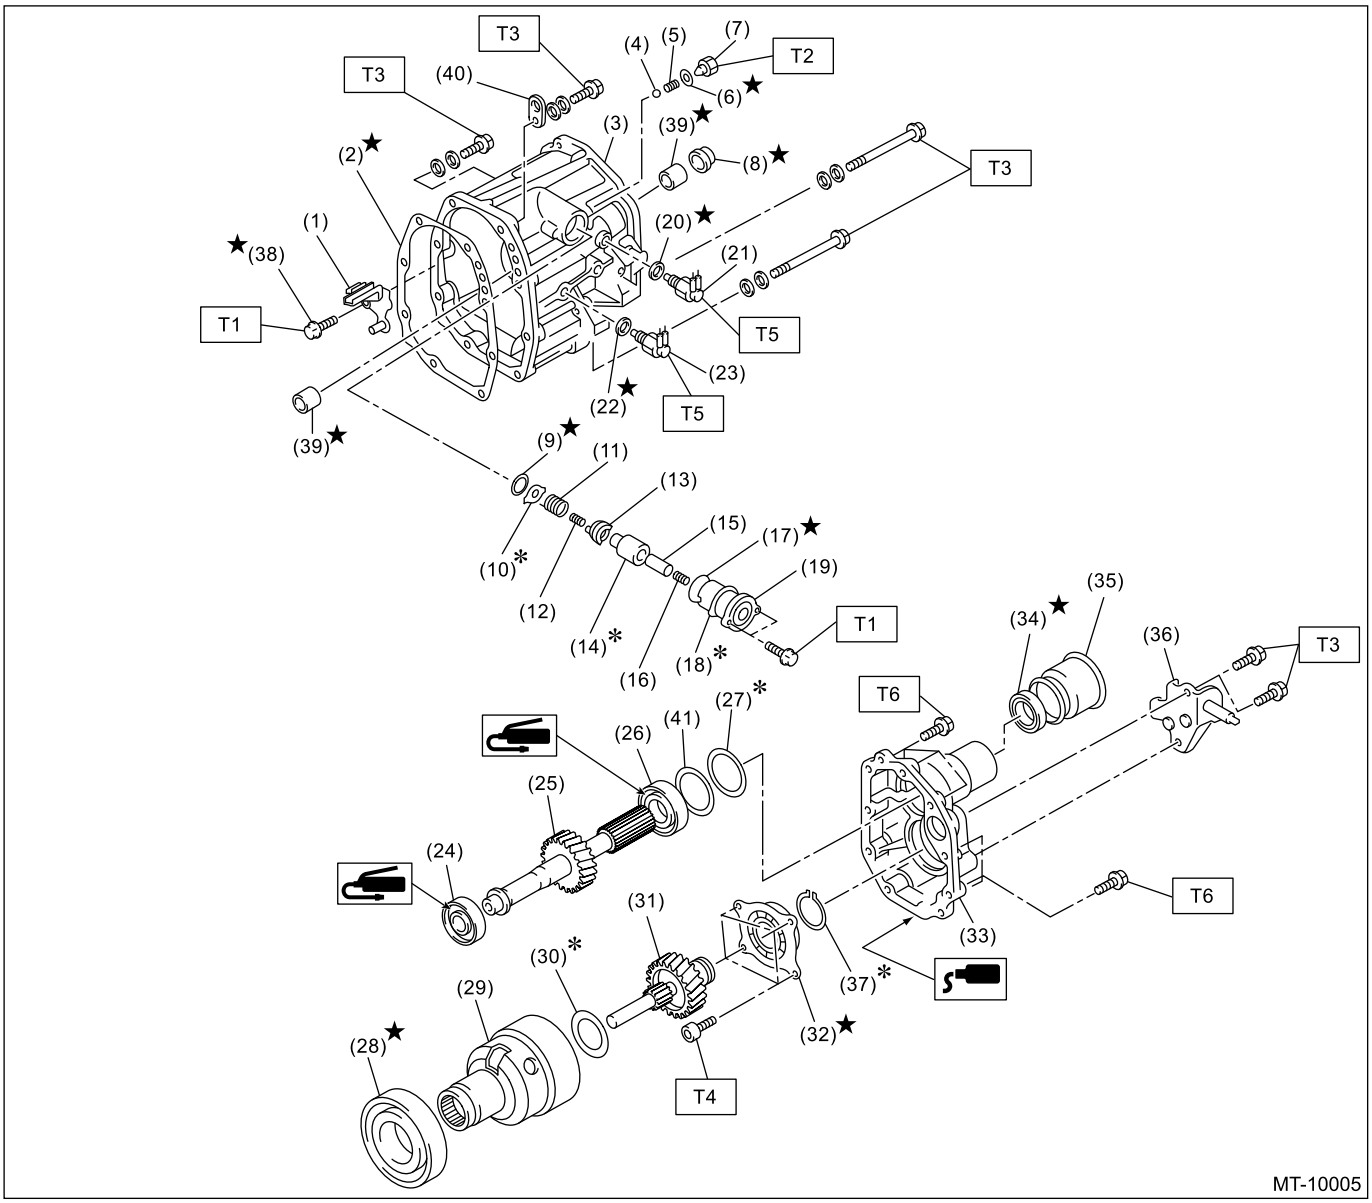
(31) Reverse idler gear
(32) Adjusting washer

Tightening torque: N·m (kgf-m, ft-lb)

T: 120 (12.2, 88.5)

4. SHIFTER FORK AND SHIFTER ROD

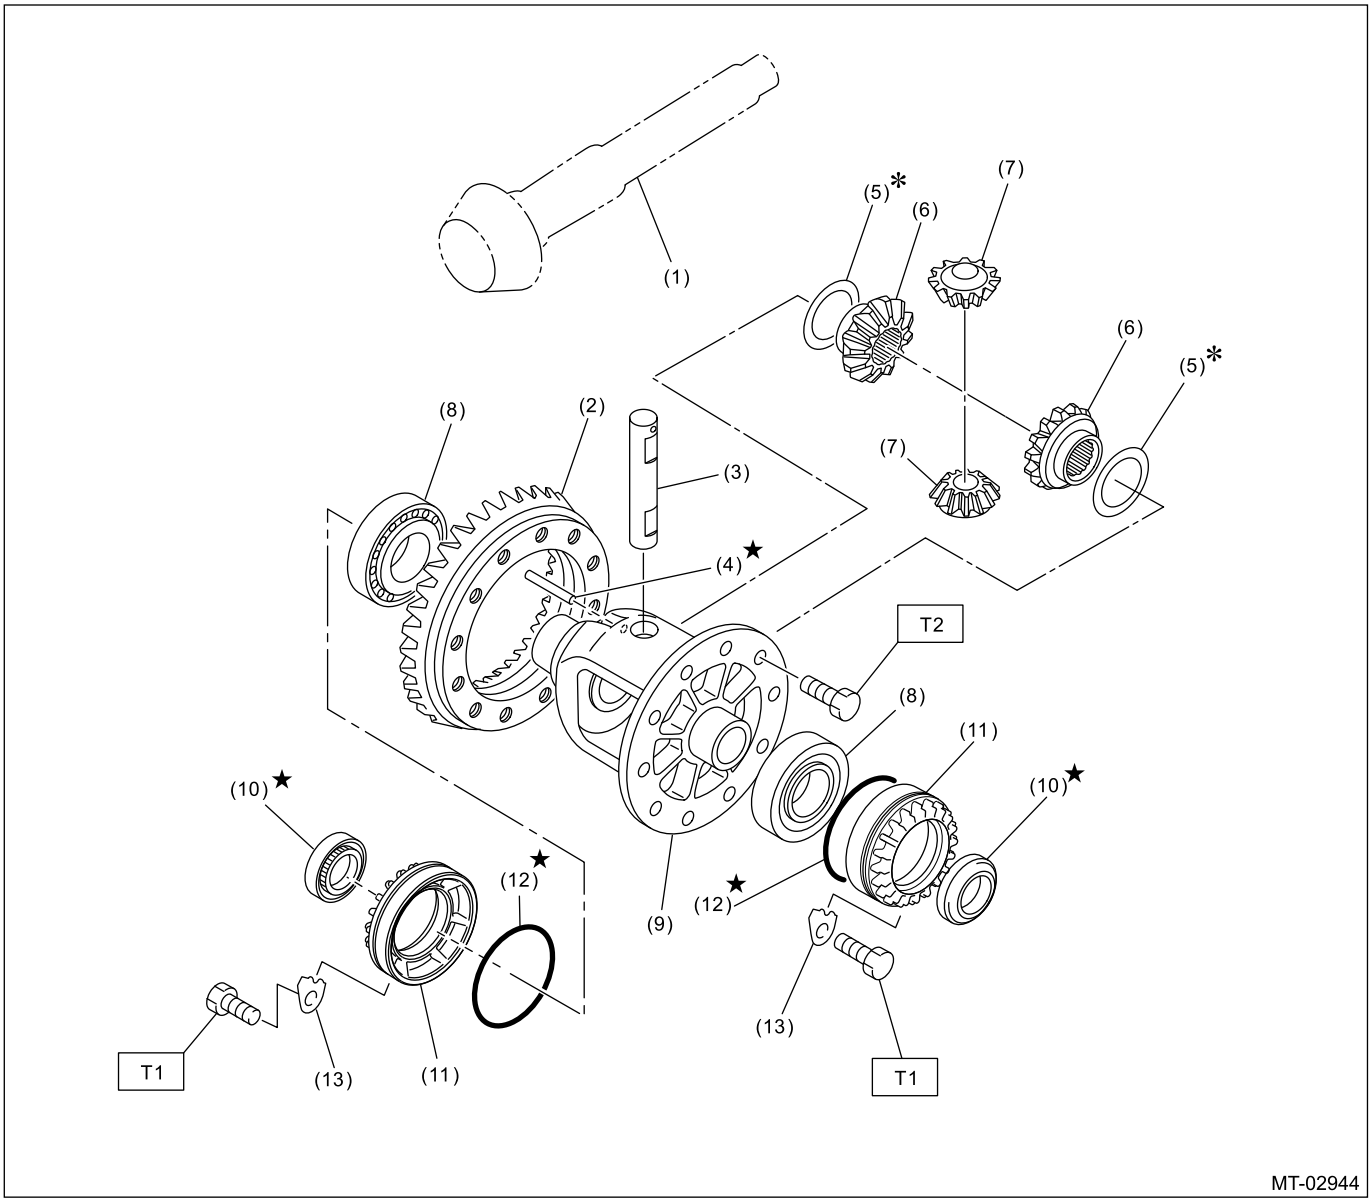


(1) Shifter arm
(2) 5th shifter fork
(3) Straight pin
(4) Reverse fork rod
(5) Checking ball plug
(6) Gasket
(7) Checking ball spring
(8) Check ball
(9) 3rd-4th fork rod
(10) Interlock plunger
(11) 1st-2nd fork rod
(12) 3rd-4th shifter fork
(13) 1st-2nd shifter fork
(14) Check ball
(15) Checking ball spring
(16) Snap ring (outer)
(17) Reverse fork rod arm
(18) Reverse shifter lever

Tightening torque: N·m (kgf-m, ft-lb)

T: 20 (2.0, 14.8)

5. TRANSFER CASE AND EXTENSION



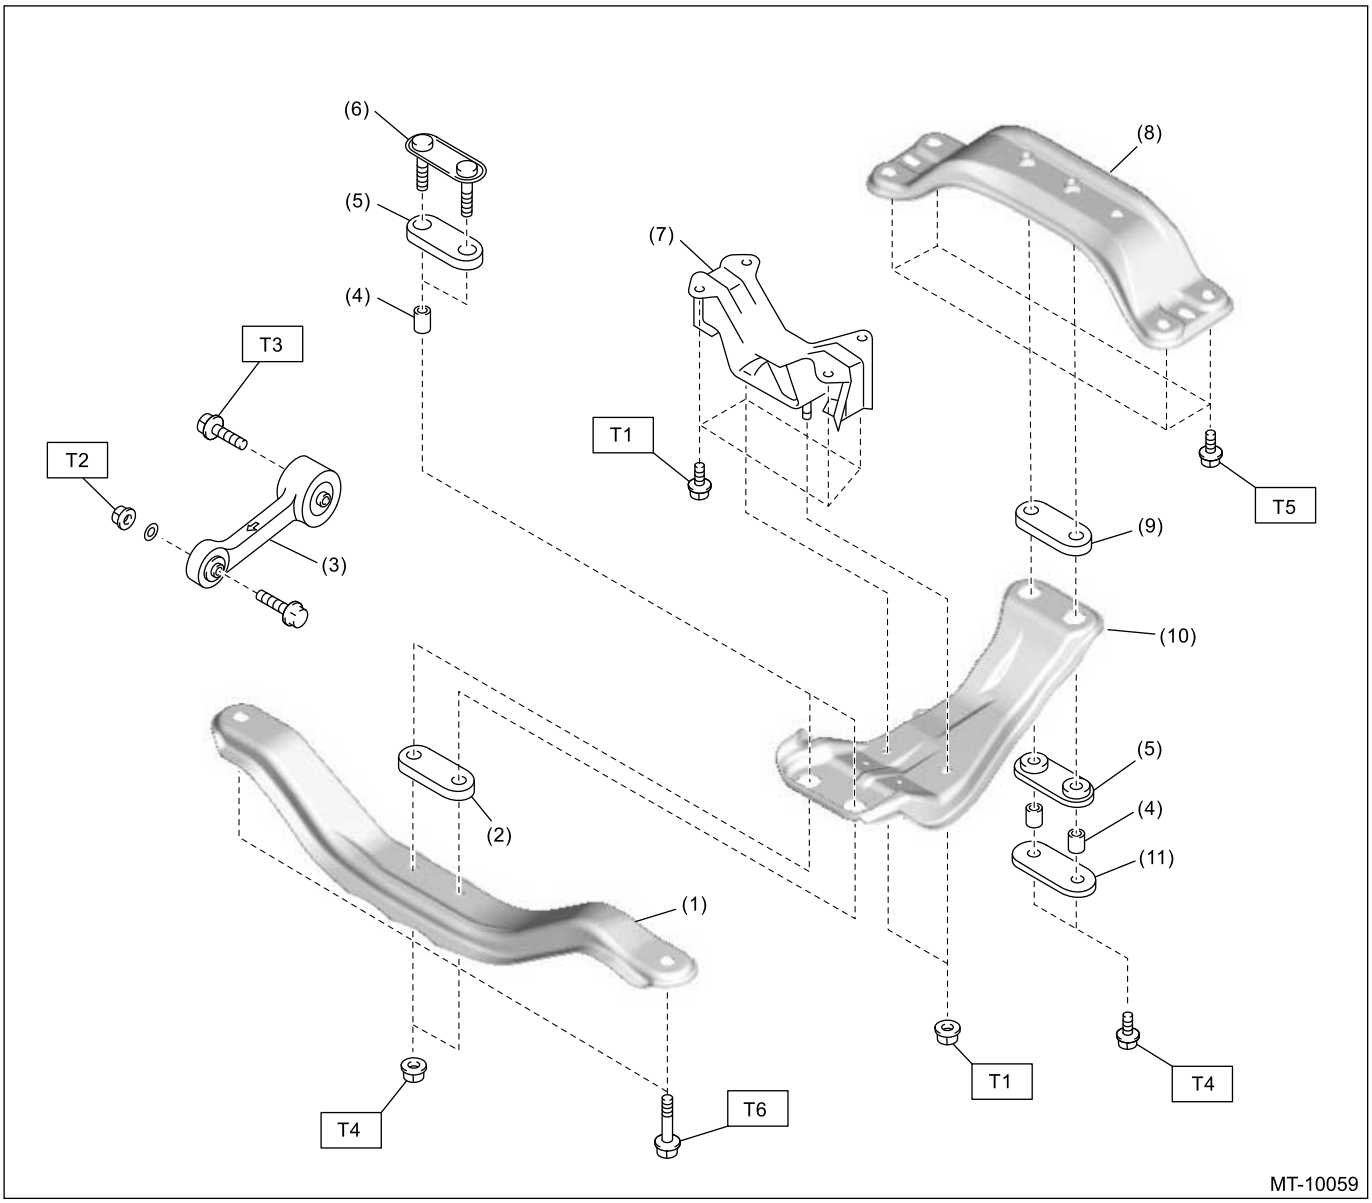
(1) Oil guide
(2) Gasket
(3) Transfer case
(4) Ball
(5) Reverse accent spring
(6) Gasket
(7) Plug
(8) Oil seal
(9) Snap ring (inner)
(10) Reverse check plate
(11) Reverse check spring
(12) Reverse return spring
(13) Reverse check cam
(14) Reverse accent shaft
(15) Return spring cap
(18) Adjusting select shim
(19) Reverse check sleeve
(20) Gasket
(21) Neutral position switch
(22) Gasket
(23) Back-up light switch
(24) Taper roller bearing (transfer case side)
(25) Transfer driven gear
(26) Taper roller bearing (extension case side)
(27) Adjusting washer
(28) Ball bearing
(29) Center differential
(30) Adjusting washer
(31) Transfer drive gear
(32) Ball bearing
(35) Dust cover
(36) Shift bracket
(37) Snap ring
(38) Precoat bolt
(39) Roller bearing
(40) Transmission hanger
(41) Dish plate

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6.4 (0.7, 4.7)
T2: 9.75 (1.0, 7.2)
T3: 24.5 (2.5, 18.1)
T4: 26 (2.7, 19.2)
T5: 32.3 (3.3, 23.8)
T6: 40 (4.1, 29.5)

(16) Return spring
(17) O-ring
(33) Extension case
(34) Oil seal

6. FRONT DIFFERENTIAL



(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Pinion shaft
(4) Straight pin
(5) Adjusting washer
(6) Differential bevel gear
(7) Differential bevel pinion
(8) Taper roller bearing
(9) Differential case
(10) Oil seal
(11) Differential side retainer
(12) O-ring
(13) Retainer lock plate

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 62 (6.3, 45.7)

7. TRANSMISSION MOUNTING

(1) Front crossmember
(2) Front cushion rubber
(3) Pitching stopper
(4) Spacer
(5) Rear cushion rubber
(6) Front plate
(7) Transmission cushion rubber
(8) Rear crossmember
(9) Rear cushion rubber
(10) Center crossmember
(11) Rear plate

Tightening torque: N·m (kgf-m, ft-lb)

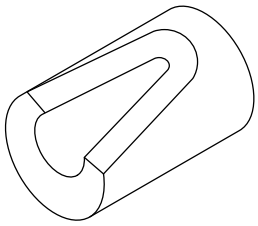
T1: 35 (3.6, 25.8)
T2: 50 (5.1, 36.9)
T3: 58 (5.9, 42.8)
T4: 70 (7.1, 51.6)
T5: 75 (7.6, 55.3)
T6: 140 (14.3, 103.3)

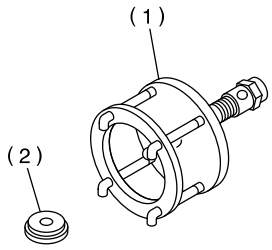
CAUTION

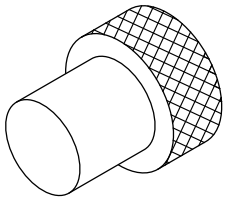
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, disassemble by using a plastic hammer. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine gear oil, grease or equivalent. Do not mix gear oil, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolving surfaces before installation.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When pressing-in the oil seal, make sure that the oil seal lip portion and outer surface are not damaged or tilted.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the hypoid driven gear and drive pinion shaft as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

PREPARATION TOOL

1. SPECIAL TOOL







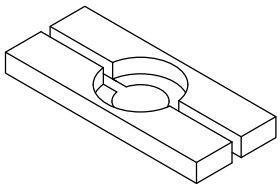


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
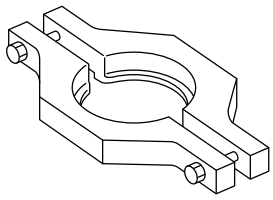
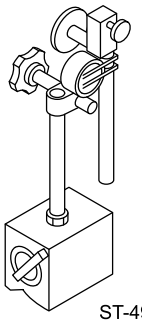
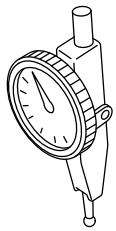
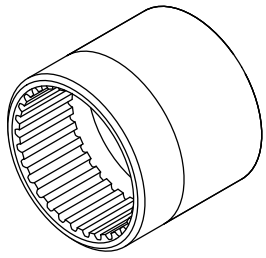
 ST-399411700	399411700	ACCENT BALL INSTALLER	Used for installing reverse fork rod arm.
 ST-899524100	899524100	PULLER SET	Used for removing the front differential taper roller bearing. (1) Puller (2) Cap
 ST-399780104	399780104	WEIGHT	Used for adjusting preload on the front differential taper roller bearing.
 ST-498077000	498077000	REMOVER	• Used for removing the roller bearing of the drive pinion shaft assembly. • Used for removing the taper roller bearing of transfer driven gear.









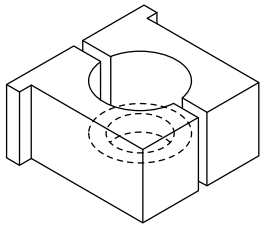


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
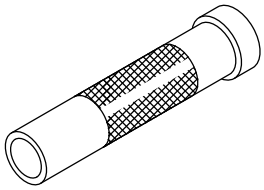
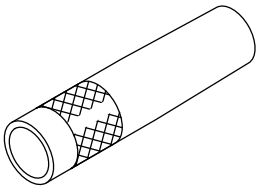
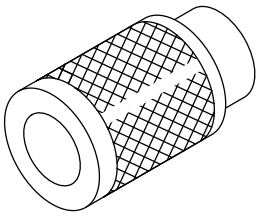
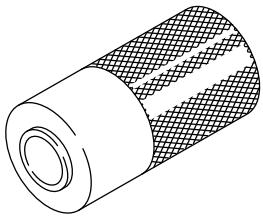
 ST-498077300	498077300	REMOVER	Used for removing the center differential ball bearing.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with MAGNET BASE (498247001).
 ST-498427100	498427100	STOPPER	• Used for removing and installing the drive pinion shaft assembly lock nut. • Used for measuring the backlash of hypoid driven gear. • Used for adjusting preload on the front differential taper roller bearing.
 ST-498937000	498937000	TRANSMISSION HOLDER	Used for removing and installing the main shaft assembly lock nut.









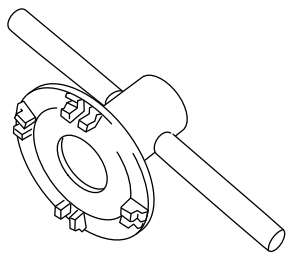


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
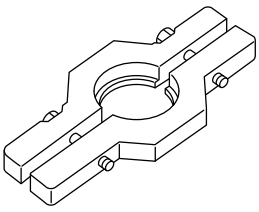
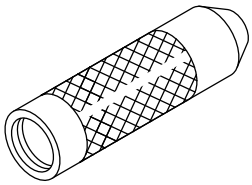
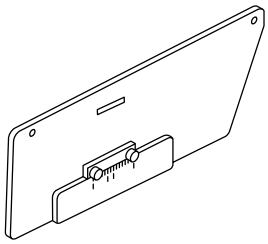
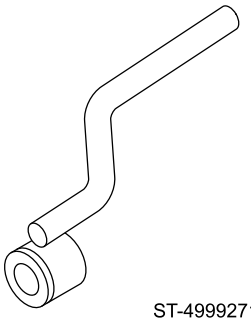
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the drive pinion shaft assembly washer. • Used for installing the front differential taper roller bearing inner race.
 ST-499277200	499277200	INSTALLER	• Used for installing the drive pinion shaft assembly washer. • Used for installing the 2nd driven gear bushing, 3rd-4th driven gear, double taper roller bearing and 5th driven gear.
 ST-499757002	499757002	INSTALLER	Used for removing the double taper roller bearing and driven gear of the drive pinion shaft assembly.
 ST-927640000	927640000	INSTALLER	Used for installing the taper roller bearing (transfer case side) of transfer driven gear.
 ST18630AA010	18630AA010	WRENCH COMPL RETAINER	• Used for removing and installing the differential side retainer. • Used for adjusting preload on the front differential taper roller bearing. • Used for adjusting the backlash of hypoid driven gear. • WRENCH ASSY (499787000) can also be used.









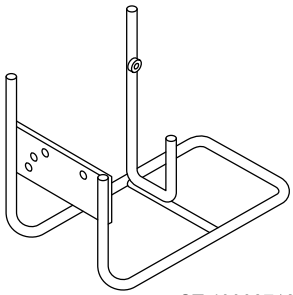


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
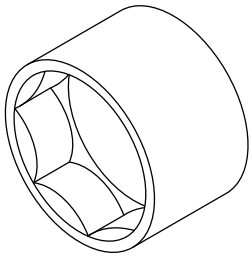
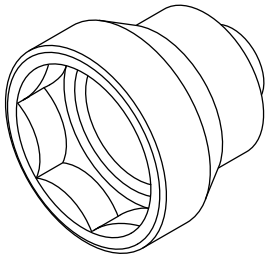
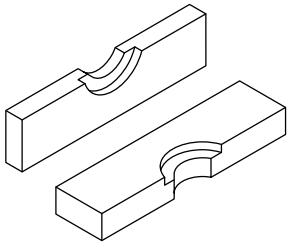
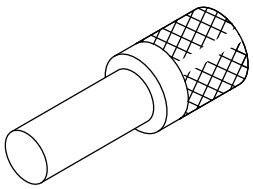
 ST-499857000	499857000	5TH DRIVEN GEAR REMOVER	Used for removing the 5th driven gear.
 ST-499877000	499877000	RACE 4-5 INSTALLER	• Used for installing the 4th needle bearing race. • Used together with REMOVER (899714110). • Used for installing the double ball bearing of the main shaft assembly. • Used for installing the 5th gear thrust washer and needle bearing race.
 ST-499917500	499917500	DRIVE PINION GAUGE ASSY	Used for adjusting the drive pinion shaft assembly shim.
 ST-499927100	499927100	HANDLE	Used for backlash adjustment of the front differential hypoid driven gear and preload adjustment of the taper roller bearing.
 ST-499937100	499937100	TRANSMISSION STAND	Used for disassembling and assembling the transmission.









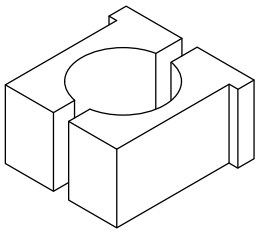


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
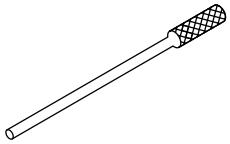
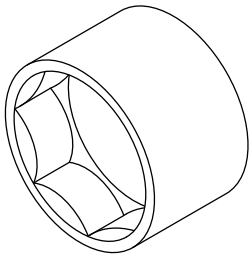
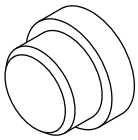
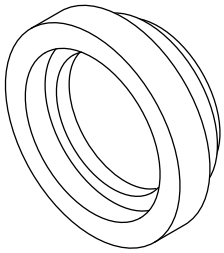
 ST-499987003	499987003	SOCKET WRENCH (35)	Used for removing and installing the main shaft assembly lock nut.
 ST-499987300	499987300	SOCKET WRENCH (50)	Used for removing and installing the driven shaft lock nut.
 ST-899714110	899714110	REMOVER	Used for removing and installing the parts of main shaft assembly and driven shaft.
 ST-899864100	899864100	REMOVER	• Used for removing the parts of the main shaft assembly. • Used for installing the transfer case roller bearing. • Used for removing the transfer driven gear taper roller bearing (transfer case side). • Used for installing the transfer driven gear taper roller bearing (extension case side).
 ST-899884100	899884100	HOLDER	• Used for removing and installing the drive pinion shaft assembly lock nut. • Used for removing and installing the driven shaft lock nut. • Used for measuring the starting torque of the drive pinion shaft assembly.









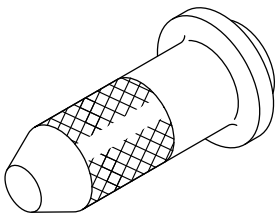


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
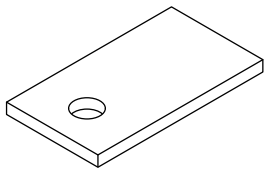
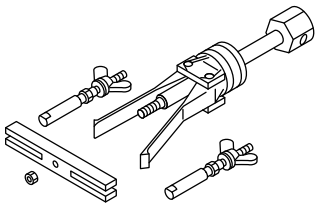
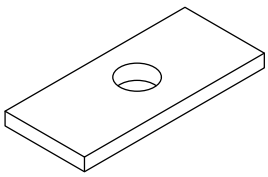
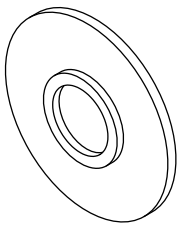
 ST-899904100	899904100	STRAIGHT PIN REMOVER	Used for removing and installing the straight pin.
 ST-899988608	899988608	SOCKET WRENCH (27)	• Used for removing and installing the drive pinion shaft assembly lock nut. • Used for measuring the starting torque of the drive pinion shaft assembly.
 ST-398497701	398497701	SEAT	• Used for installing the front differential taper roller bearing. • Used together with BUSHING 1-2 INSTALLER (499277100).
 ST-499587000	499587000	INSTALLER	Used for installing the driven shaft parts.
 ST-498057300	498057300	INSTALLER	Used for installing the oil seal of extension case.









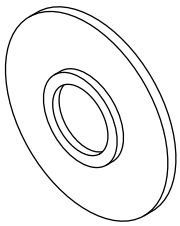


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
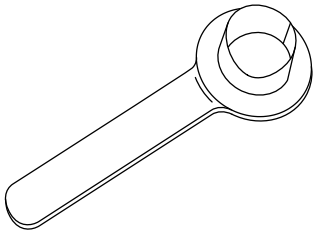
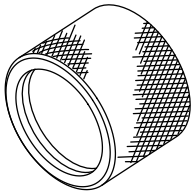
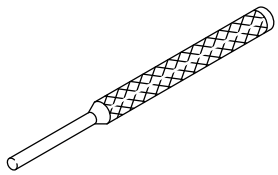
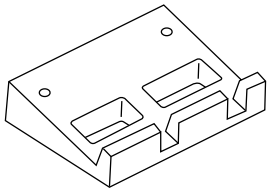
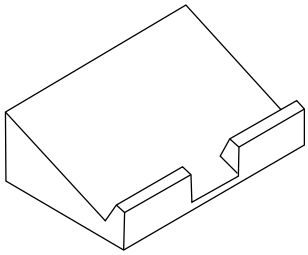
 ST-498255400	498255400	PLATE	Used for measuring the hypoid driven gear backlash.
 ST-398527700	398527700	PULLER ASSY	• Used for removing the oil seal of extension case. • Used for removing the taper roller bearing outer race of front differential. • Used for removing the oil seal of differential side retainer.
 ST-398643600	398643600	GAUGE	Used for adjusting the extension end play.
 ST-398177700	398177700	INSTALLER	Used for installing the ball bearing of the transfer drive gear.
 ST-498175500	498175500	INSTALLER	Used for installing the taper roller bearing of transfer driven gear (extension case side).

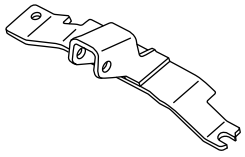


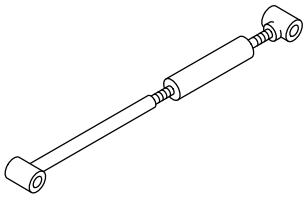












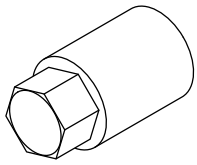


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
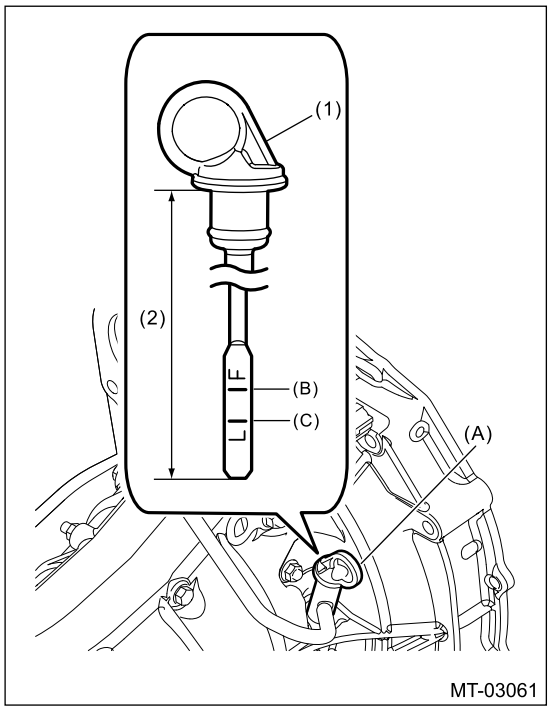
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting the oil seal from damage when inserting the front drive shaft.
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST-398791700	398791700	REMOVER	Used for removing and installing the straight pin.
 ST-498267200	498267200	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.
 ST-498267300	498267300	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST41099AA012	41099AA012	ENGINE SUPPORT BRACKET	• Used for supporting engine. • Used together with ENGINE SUPPORT (41099AA020). • ENGINE SUPPORT BRACKET (41099AA010) or ENGINE SUPPORT BRACKET (41099AA011) can also be used.
 ST41099AA020	41099AA020	ENGINE SUPPORT	• Used for supporting engine. • Used together with ENGINE SUPPORT BRACKET (41099AA012).
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	Used for tightening the strut mount self-locking nut.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
TORX® bit T70	Used for removing and installing the drain plug.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transmission Gear Oil

INSPECTION

1. Park the vehicle on a level surface.
2. Turn the ignition switch to OFF, and wait until the engine cools.
3. Remove the oil level gauge and wipe it clean.
4. Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted in the proper direction.
5. Pull out the oil level gauge again, and check the oil level. If it is below the lower level, check for oil leakage and add oil through the oil level gauge hole to bring the level up to the upper level.

Caution:

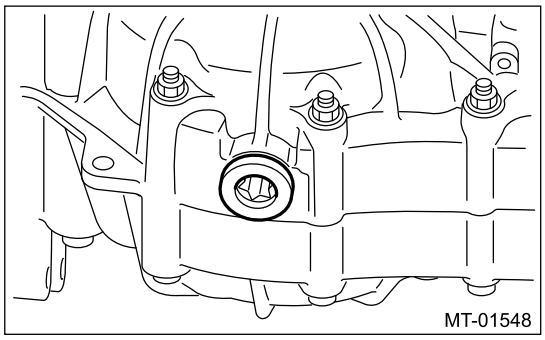
Since the length of the oil level gauge varies depending on models and destinations, make sure to use the appropriate oil level gauge.

(A) Oil level gauge
(B) Upper level
(C) Lower level
(1) Gray
(2) 195.9 mm (7.71 in)

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transmission Gear Oil

REPLACEMENT

1. Pull out the oil level gauge.
2. Lift up the vehicle.
3. Using the TORX® bit T70, remove the drain plug, and drain the gear oil completely.



Caution:

- **Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.**
- **Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.**

4. Replace the gasket with a new part and install the drain plug using the TORX® bit T70.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

5. Lower the vehicle.
6. Pour gear oil through the oil level gauge hole.

Caution:

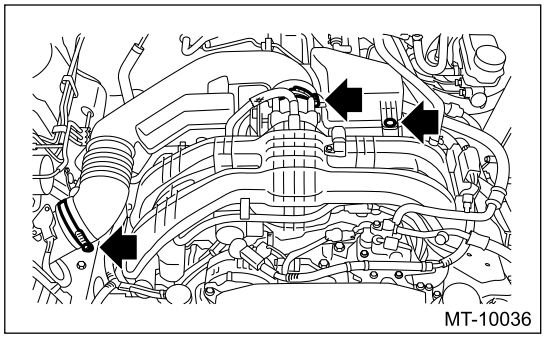
Note that you may experience poor functionality and performance if an alternative gear oil is used.

Recommended gear oil:

SUBARU GEAR OIL EXTRA MT

Alternative:

GL-5 (75W-90)

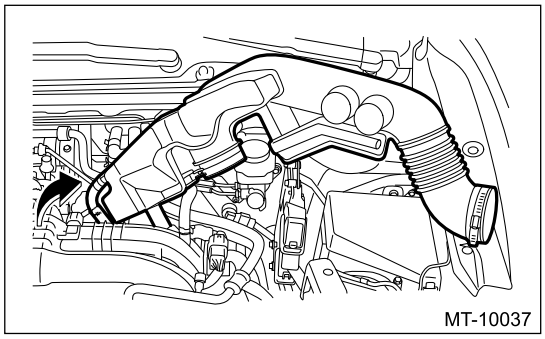


Gear oil capacity:

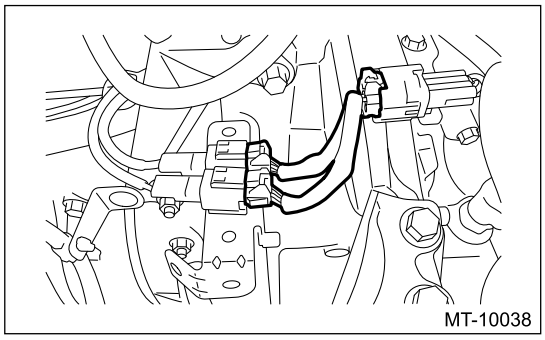
3.5 L (3.7 US qt, 3.1 Imp qt)

7. Check the gear oil amount, and confirm that it is within the specification.

REMOVAL

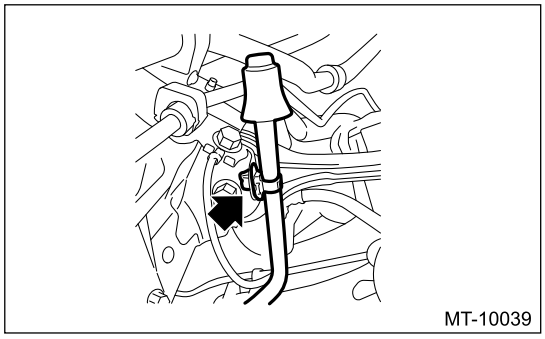


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.

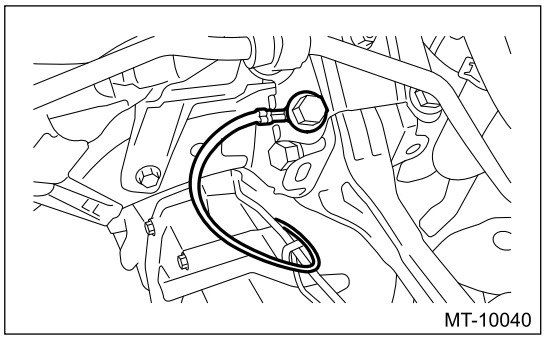


3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

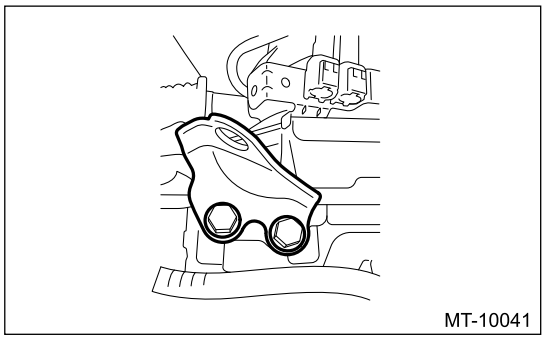
Caution:



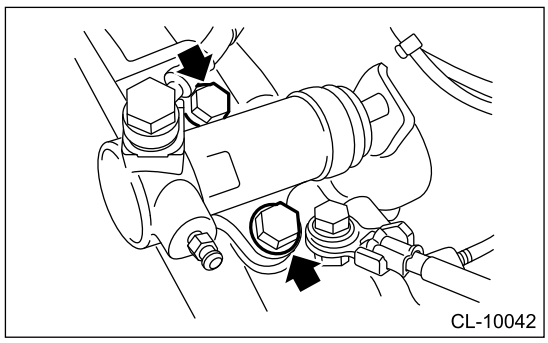
Be careful not to pull out the PCV hose.



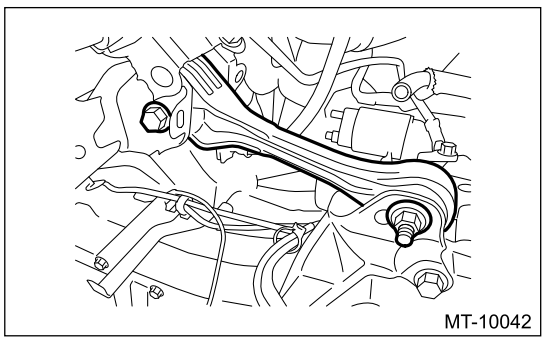
4. Remove the coupling harness.



5. Remove the clips and remove the air breather hose.

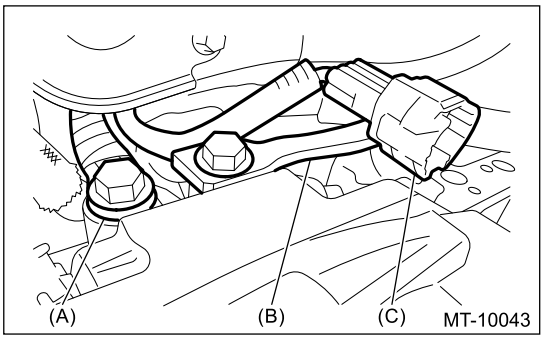


6. Disconnect the transmission radio ground cord terminal.



7. Remove the engine hanger rear.

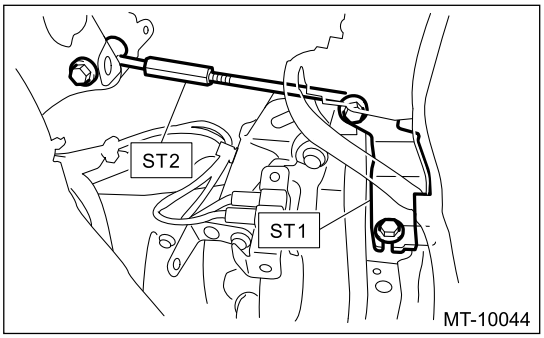
8. Remove the operating cylinder and suspend on a wire.



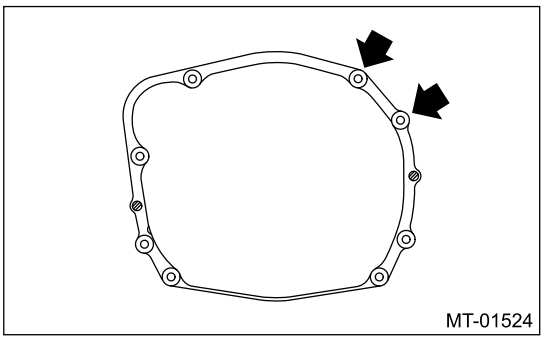
9. Remove the pitching stopper.

10. Disconnect the engine ground terminal.

11. Remove the engine harness stay and MT docking connector together as a unit.



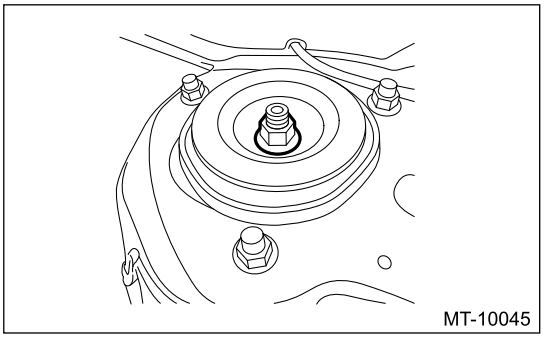
(A) Engine ground terminal
(B) Engine harness stay
(C) MT docking connector



12. Set the ST.

Special Tool:

ST1: 41099AA012 ENGINE SUPPORT BRACKET
ST2: 41099AA020 ENGINE SUPPORT



13. Remove the bolts which hold upper side of transmission to engine.

14. Remove the starter. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>REMOVAL.

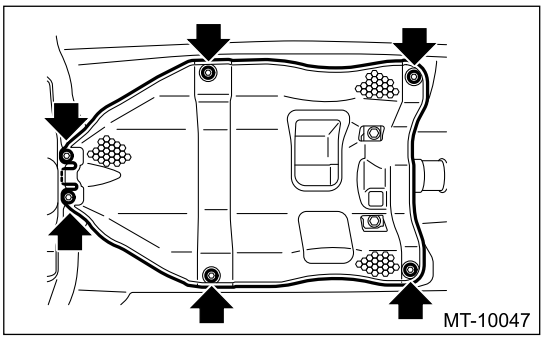
15. Loosen the self-locking nut of the strut mount by three turns.

16. Remove the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.

17. Lift up the vehicle.

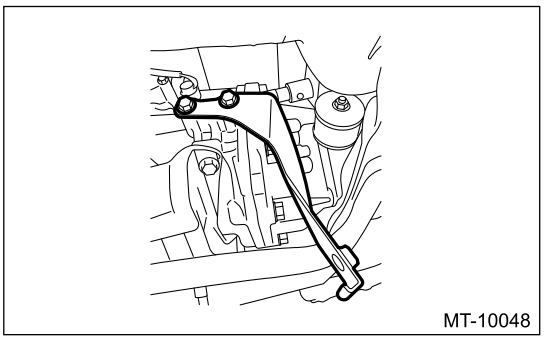
18. Remove the crossmember support - rear.

代替画像1



この画像は代替画像です

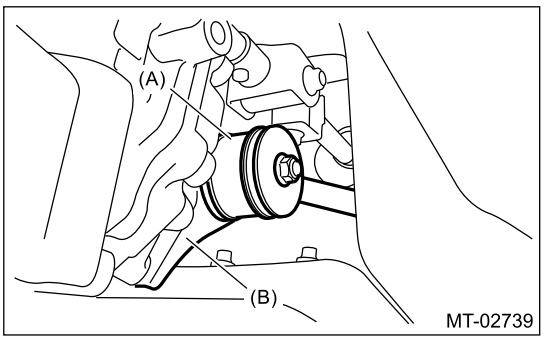
19. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.



20. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.

21. Drain transmission gear oil completely. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil>REPLACEMENT.

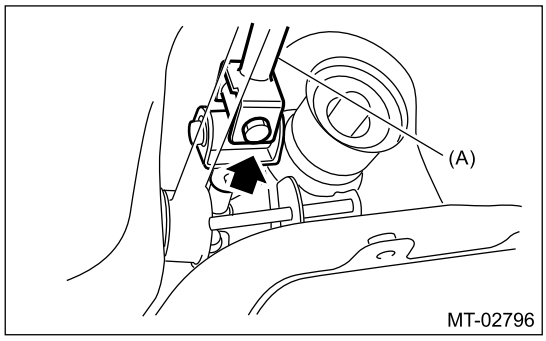
22. Remove the center exhaust cover.



23. Remove the hanger bracket.

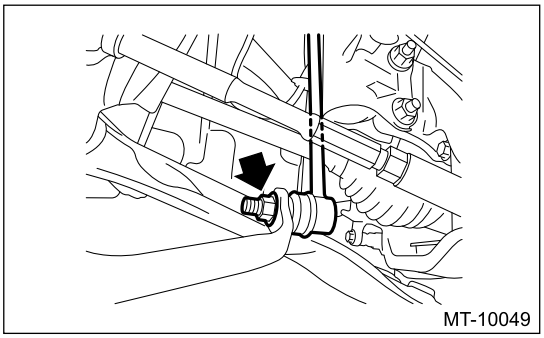
24. Remove the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.

25. Remove the gear shift rod and stay.



(1) Remove the stay.

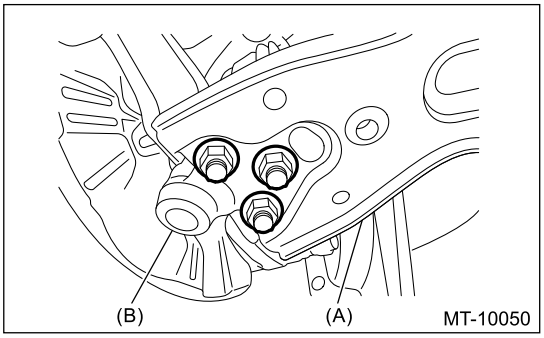
(A) Stay



(B) Shift bracket

(2) Remove the gear shift rod.

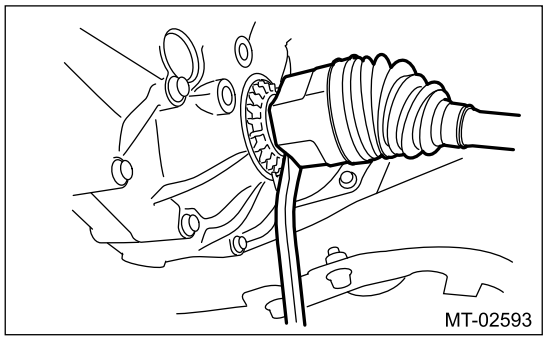
(A) Gear shift rod



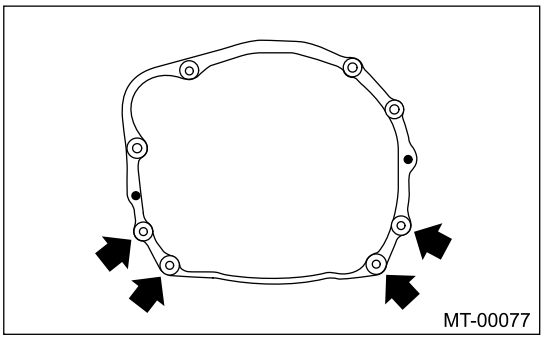
26. Disconnect the stabilizer link.

27. Remove the nuts at 3 places, and separate the front arm from the ball joint.

Note:



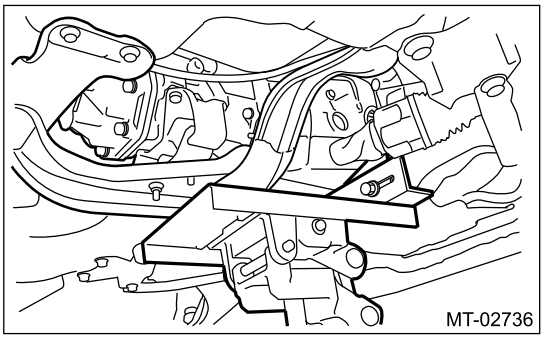
- **To prevent damage of the front arm ball joint boot, place a wooden block, etc. between front arm and ball joint.**
- **Mark the engaging position of the ball joint and front arm assembly before loosening the flange nuts. Doing so will facilitate aligning the position when assembling and lessen adjusting allowance for wheel alignment.**



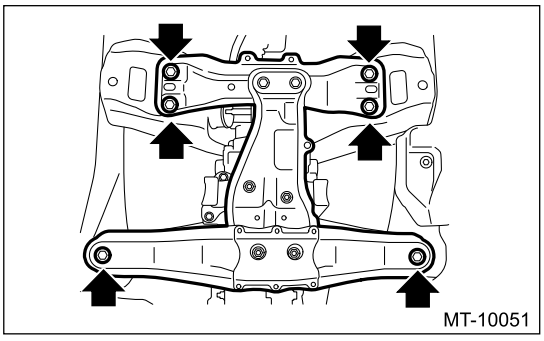
(A) Front arm

(B) Ball joint

28. Using a crowbar, separate the front drive shaft.



29. Remove the bolts and nuts which hold lower side of transmission to engine.



30. Set the transmission jack.

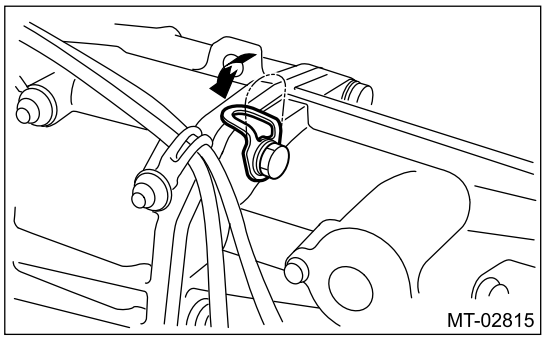
Caution:

Always support the transmission case with a transmission jack.

31. Remove the front crossmember and the rear crossmember.

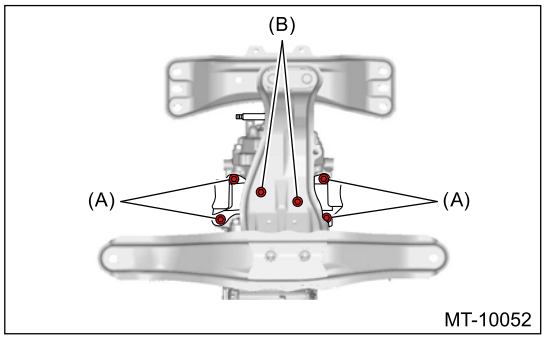
32. While lowering the transmission jack, tighten the turnbuckle of the ENGINE SUPPORT (41099AA020), and incline the engine unit rearward.

33. Remove the transmission assembly.



Caution:

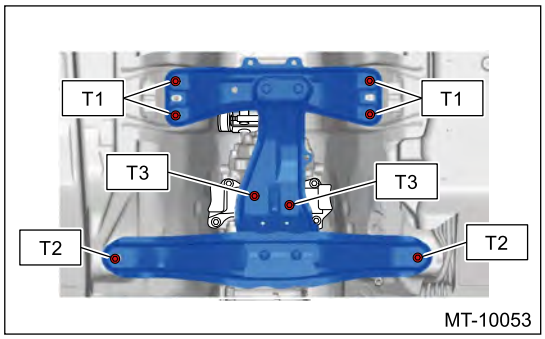
Move the transmission jack towards the rear until the main shaft is withdrawn from the clutch cover.



34. Remove the transmission cushion rubber.

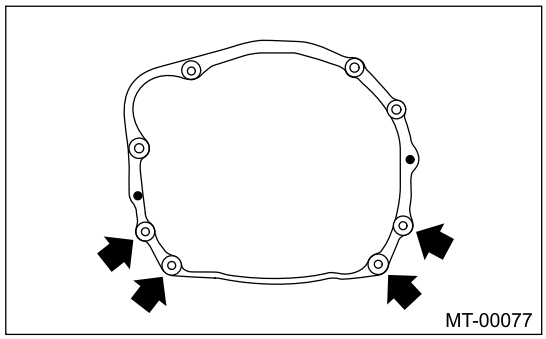
INSTALLATION

1. Replace the differential side retainer oil seal with a new part. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Differential Side Retainer Oil Seal>REPLACEMENT.
   Caution:
   Be sure to replace the oil seal after removing the front drive shaft.
   Note:
   When a new oil seal has been installed, replacement is not required.
2. Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.
   Caution:
   Do not apply excessive load or impact to the transmission case.



3. Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
4. Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).
   Tightening torque:
   Bolt (A)
   35 N·m (3.6 kgf-m, 25.8 ft-lb)

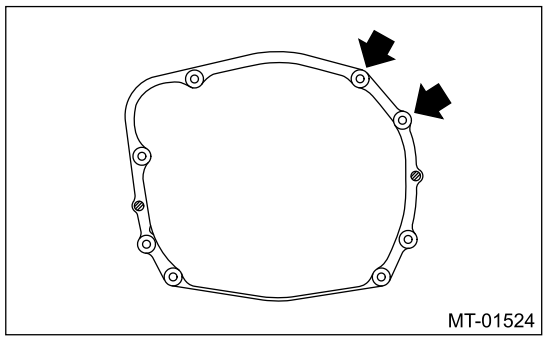
5. Install the transmission assembly onto the engine.
   (1) Lift up the transmission gradually using a transmission jack.
   (2) Engage at the spline section.
   Caution:
   Be careful not to hit the main shaft against the clutch cover.
6. While raising the transmission jack, loosen the turnbuckle of the ENGINE SUPPORT (41099AA020), and set the engine unit to the original position.
7. Install the front crossmember and rear crossmember.
8. Tighten the transmission cushion rubber mounting nut.
   Tightening torque:
   T1: 75 N·m (7.6 kgf-m, 55.3 ft-lb)
   T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)



T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

9. Take out the transmission jack.
10. Tighten the bolts and nuts which hold the lower side of transmission to the engine.

Tightening torque:



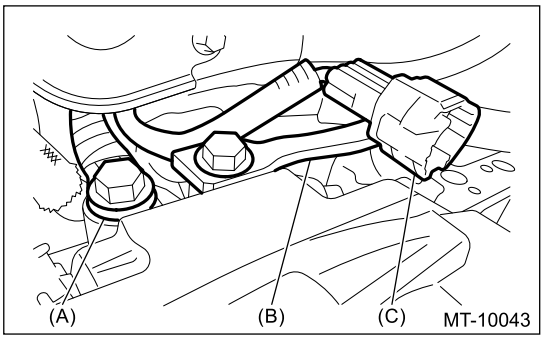
50 N·m (5.1 kgf-m, 36.9 ft-lb)

11. Lower the vehicle.
12. Install the starter. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Starter>INSTALLATION.
13. Tighten the bolts which hold the upper side of the transmission to the engine.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

14. Remove the ENGINE SUPPORT BRACKET (41099AA012) and ENGINE SUPPORT (41099AA020).
15. Install the engine ground terminals.



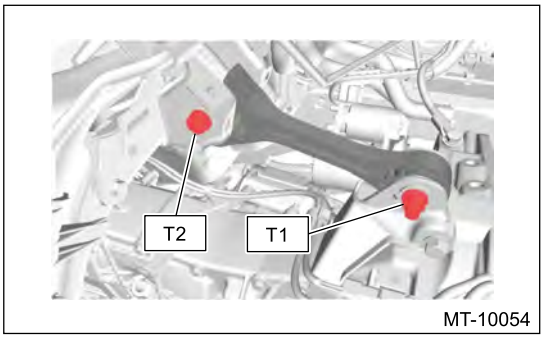
Tightening torque:

19 N·m (1.9 kgf-m, 14.0 ft-lb)

16. Install the engine harness stay and MT docking connector together as a unit.

Tightening torque:

19 N·m (1.9 kgf-m, 14.0 ft-lb)



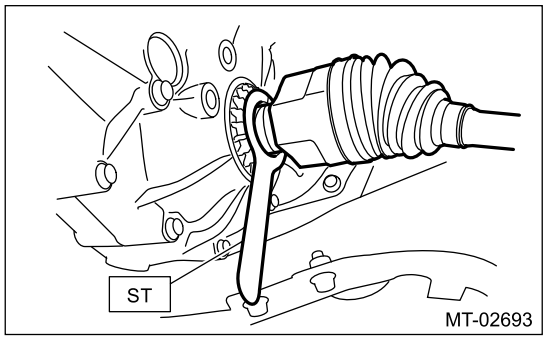
(A) Engine ground terminal
(B) Engine harness stay
(C) MT docking connector

17. Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

18. Lift up the vehicle.

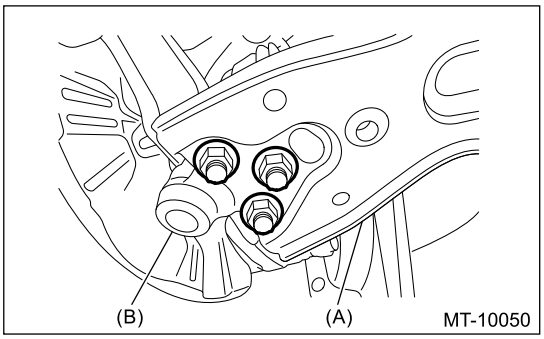


19. Set the OIL SEAL PROTECTOR (28399SA010) to differential side retainer.

20. Replace the circlip of the front drive shaft with a new part.

21. Install the front drive shaft and remove the ST.

Special Tool:

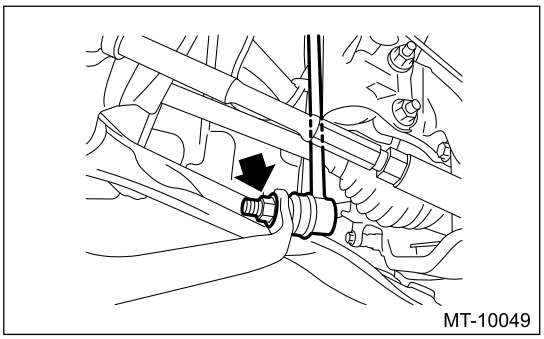


ST: 28399SA010 OIL SEAL PROTECTOR

22. Connect the front arm to the ball joint, and tighten the nuts at three places.

Tightening torque:

100 N·m (10.2 kgf-m, 73.8 ft-lb)



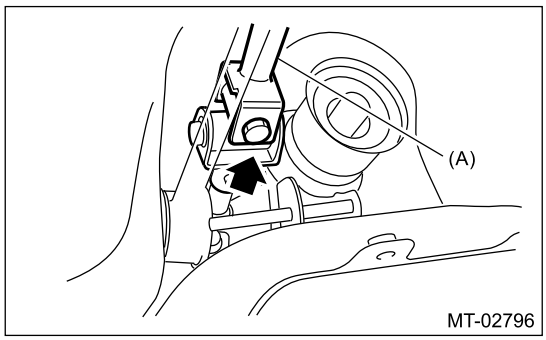
(A) Front arm

(B) Ball joint

23. Replace the flange nut with a new part, and install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)

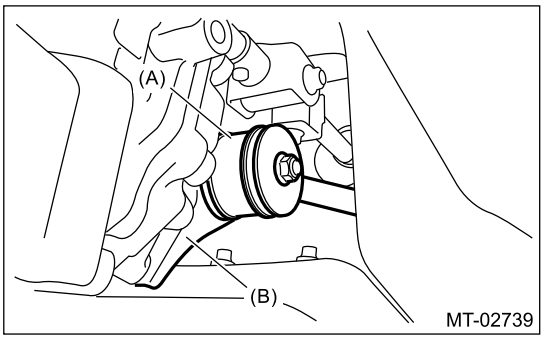


24. Attach the gear shift rod and stay.

(1) Replace the self-locking nut with a new part, and install the gear shift rod.

Tightening torque:

12 N·m (1.2 kgf-m, 8.9 ft-lb)



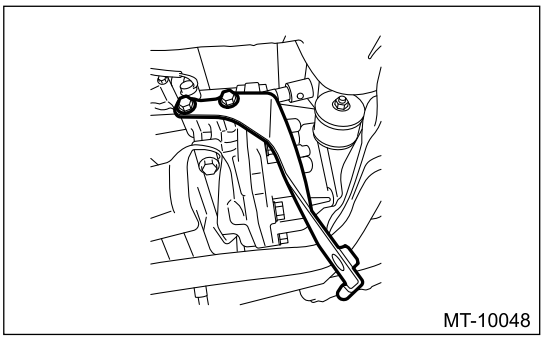
(A) Gear shift rod

(2) Replace the self-locking nut with a new part, and install the stay.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

(A) Stay

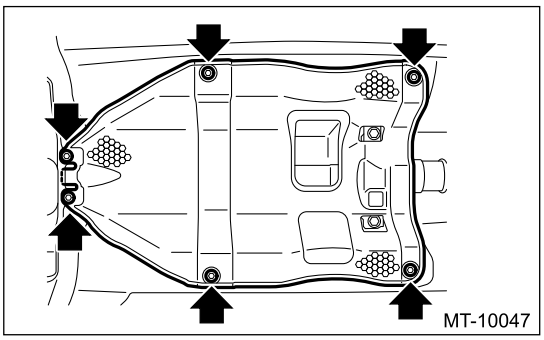


(B) Shift bracket

25. Install the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.

26. Install the hanger bracket.

Tightening torque:

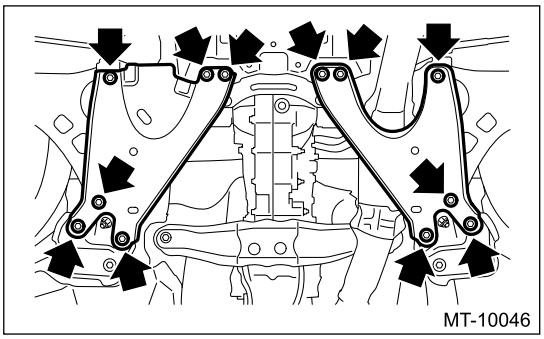


23 N·m (2.3 kgf-m, 17.0 ft-lb)

27. Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)



28. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.

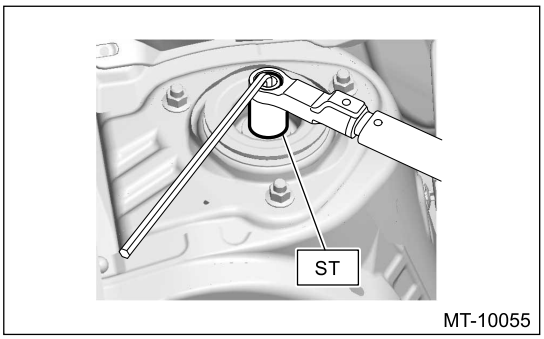
29. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.

30. Install the crossmember support - rear.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

31. Lower the vehicle.

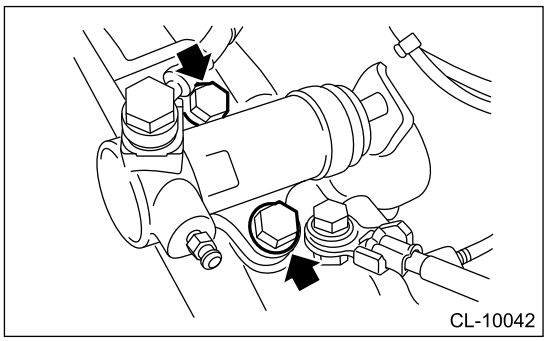


32. Using the ST, tighten the strut mount self-locking nut.

Special Tool:

ST: 20399AG000 STRUT MOUNT SOCKET

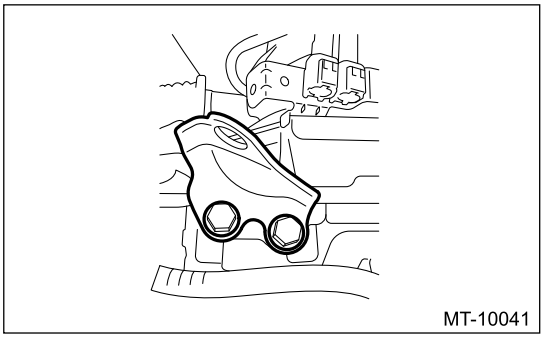
Tightening torque:



55 N·m (5.6 kgf-m, 40.6 ft-lb)

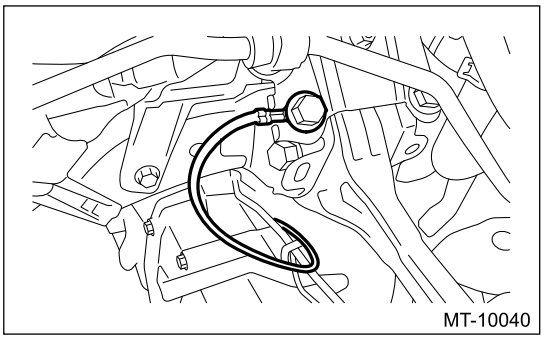
33. Install the operating cylinder.

Tightening torque:



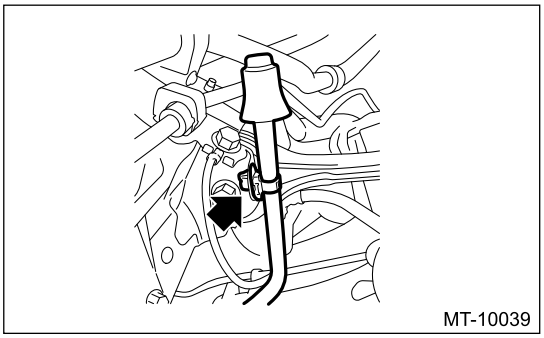
37 N·m (3.8 kgf-m, 27.3 ft-lb)

34. Install the engine hanger rear.

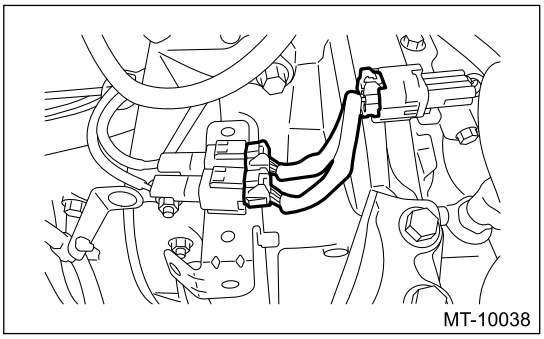


Tightening torque:

36 N·m (3.7 kgf-m, 26.6 ft-lb)



35. Install the transmission radio ground cord terminal.



Tightening torque:
32.3 N·m (3.3 kgf-m, 23.8 ft-lb)

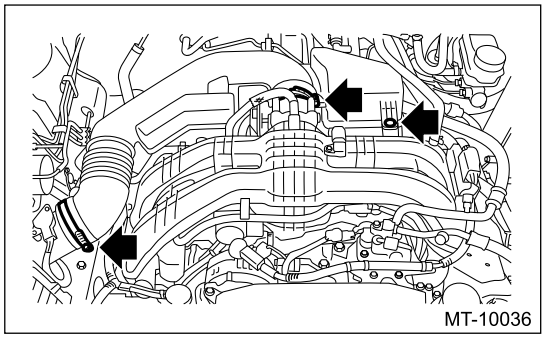
36. Install the air breather hose.

37. Install the coupling harness.

38. Pour in transmission gear oil and check the oil level. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil.

39. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.

40. Install the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.

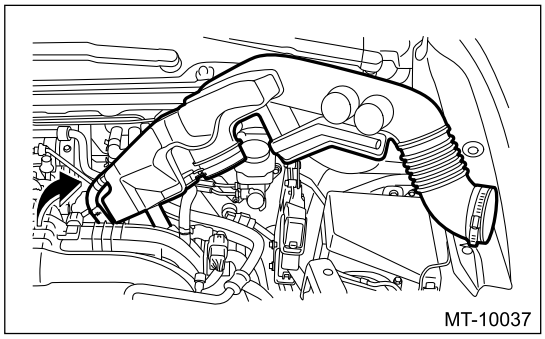


41. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

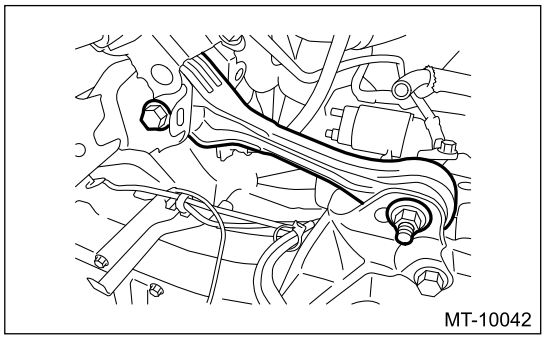
42. Inspect the wheel alignment and adjust if necessary. Ref. to FRONT SUSPENSION>Wheel Alignment.

REMOVAL

1. PITCHING STOPPER



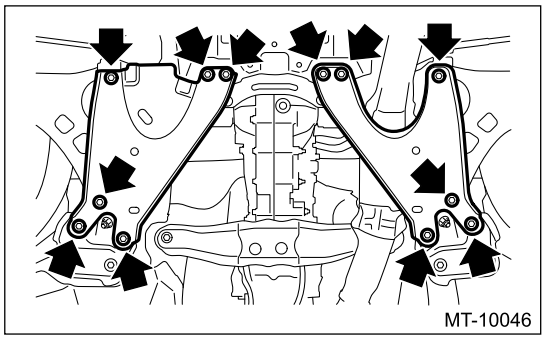
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.



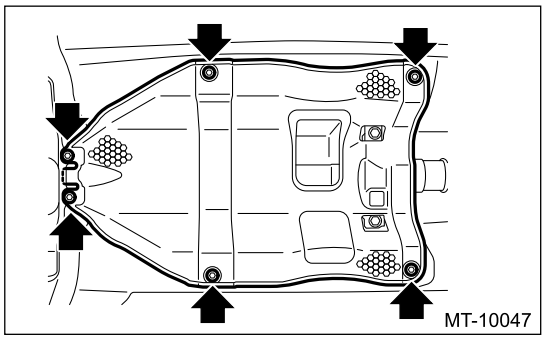
3. Remove the air intake boot, and place it aside so that it does not interfere with the work.

Caution:

Be careful not to pull out the PCV hose.

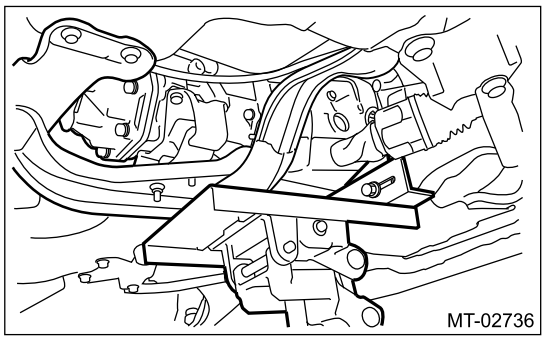


4. Remove the pitching stopper.

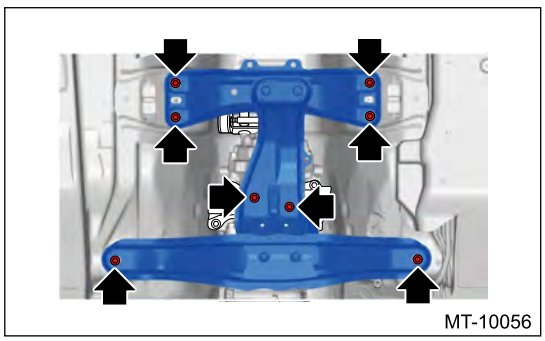


2. CROSSMEMBER AND CUSHION RUBBER

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the crossmember support - rear.



4. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
5. Remove the center exhaust cover.

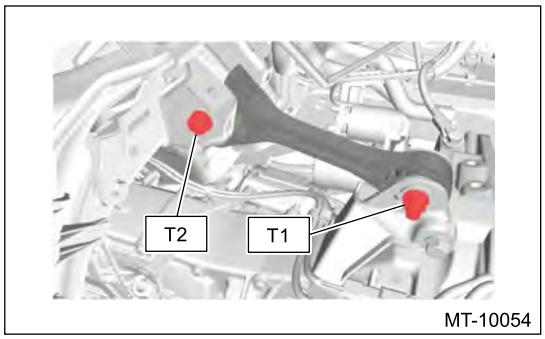


6. Set the transmission jack.

Caution:

Always support the transmission case with a transmission jack.

7. Remove the front crossmember and the rear crossmember.

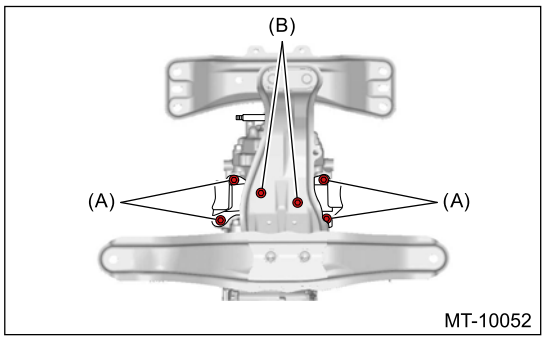


8. Remove the transmission cushion rubber.

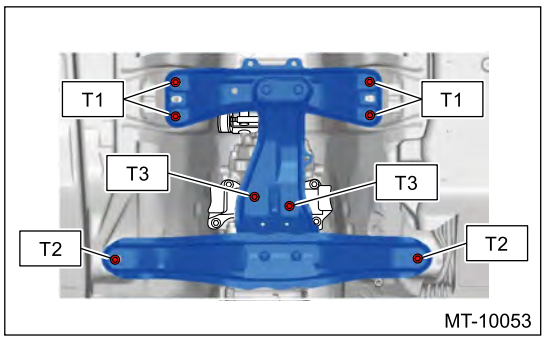
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transmission Mounting System

INSTALLATION

1. PITCHING STOPPER



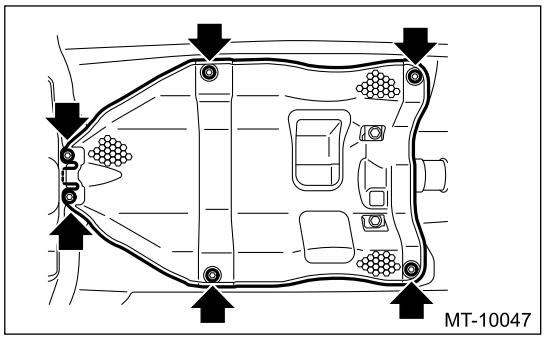
1. Install the pitching stopper.
   Tightening torque:
   T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
   T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



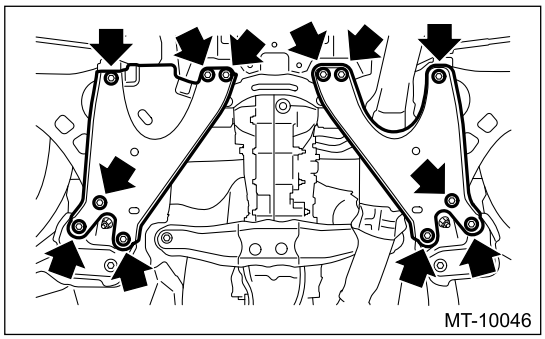
2. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. CROSSMEMBER AND CUSHION RUBBER

1. Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
2. Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).
   Tightening torque:
   Bolt (A)
   35 N·m (3.6 kgf-m, 25.8 ft-lb)



3. Install the front crossmember and rear crossmember.
4. Tighten the transmission cushion rubber mounting nut.
   Tightening torque:
   T1: 75 N·m (7.6 kgf-m, 55.3 ft-lb)
   T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)
   T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)



5. Take out the transmission jack.

6. Install the center exhaust cover.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)

7. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
8. Install the crossmember support - rear.
   Tightening torque:
   70 N·m (7.1 kgf-m, 51.6 ft-lb)

9. Lower the vehicle.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transmission Mounting System

INSPECTION

Check the following; repair or replace the faulty parts.

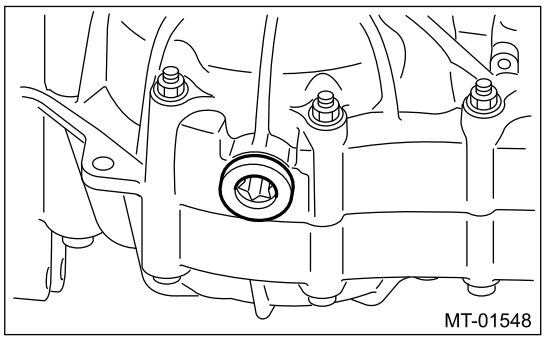
1. PITCHING STOPPER

Check the pitching stopper for bends or damage. Check that the rubber is not stiff, cracked or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER

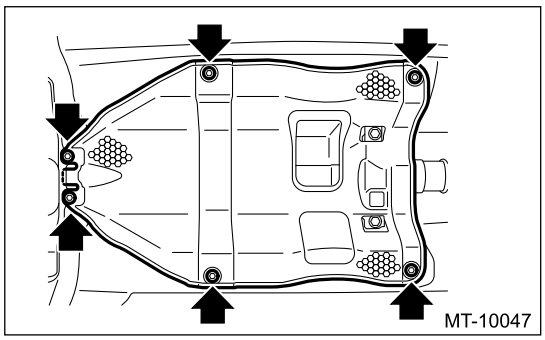
Check the crossmember for bending or damage. Check that the cushion rubber does not have hardening, cracks or other damages.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Oil Seal



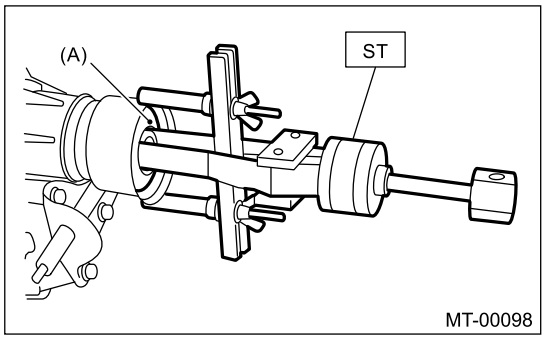
INSPECTION

Check for leakage of transmission gear oil from the oil seal. If there is oil leakage, replace the oil seal with the new part and check the propeller shaft.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Oil Seal

REPLACEMENT

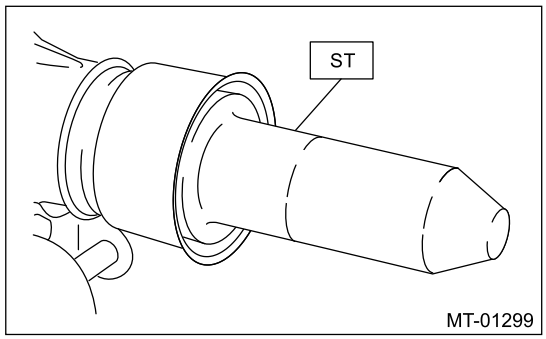


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Clean the transmission exterior.
4. Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.
   Caution:
   - **Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.**
   - **Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.**
5. Replace the gasket with a new part and install the drain plug using the TORX® bit T70.
   Tightening torque:
   44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
   70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
   70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

6. Remove the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>REMOVAL.
7. Remove the center exhaust cover.

8. Remove the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>REMOVAL.
9. Using the ST, remove the oil seal.
   Special Tool:
   ST: 398527700 PULLER ASSY

(A) Oil seal



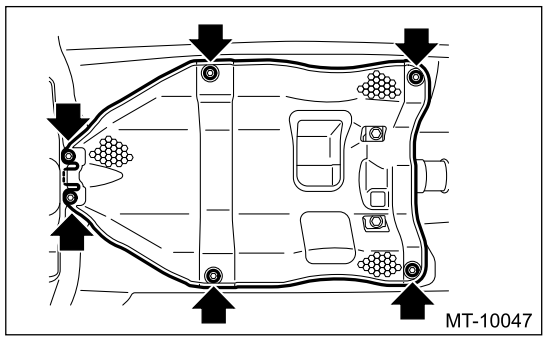
10. Using the ST, install a new oil seal.

Note:

When grease is not applied to the oil seal lips, apply the transmission gear oil to the oil seal lips.

Special Tool:

ST: 498057300 INSTALLER



11. Install the propeller shaft. Ref. to DRIVE SHAFT SYSTEM>Propeller Shaft>INSTALLATION.

12. Install the center exhaust cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

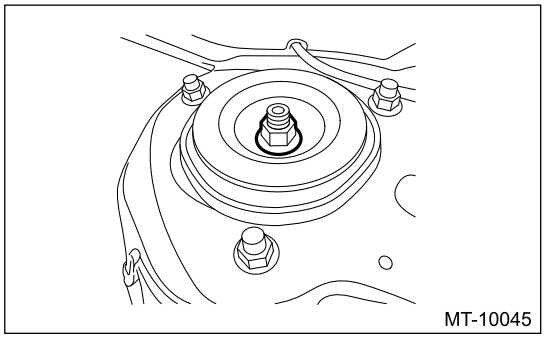
13. Install the rear exhaust pipe. Ref. to EXHAUST(H4DO)>Rear Exhaust Pipe>INSTALLATION.

14. Lower the vehicle.

15. Pour in transmission gear oil and check the oil level. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil.

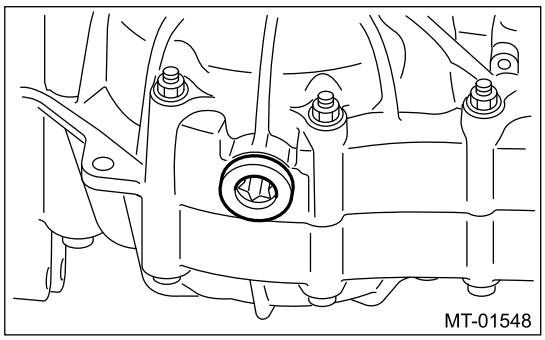
16. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Differential Side Retainer Oil Seal



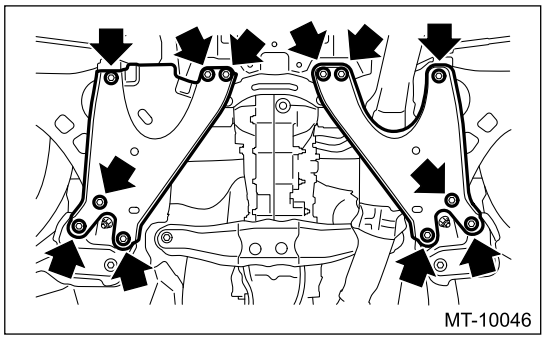
INSPECTION

Check for transmission gear oil leaks at differential side retainer oil seal area. If there is oil leakage, replace the oil seal with the new part and check the drive shaft.



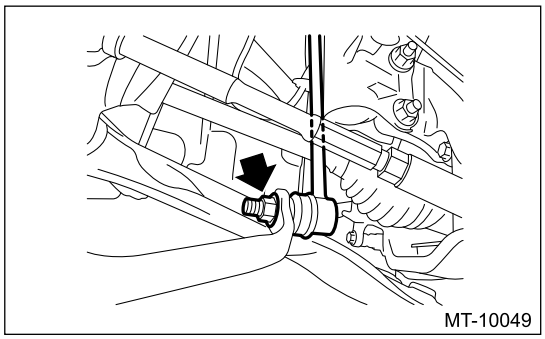
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Differential Side Retainer Oil Seal

REPLACEMENT



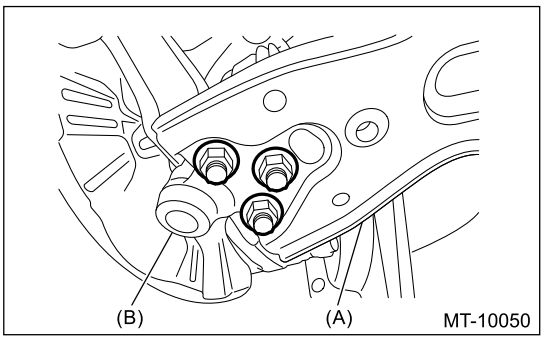
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Loosen the self-locking nut of the strut mount by three turns.

3. Remove the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>REMOVAL.
4. Lift up the vehicle.
5. Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.
   Caution:
   - **Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.**
   - **Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.**
6. Replace the gasket with a new part and install the drain plug using the TORX® bit T70.
   Tightening torque:
   44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
   70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
   70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



7. Remove the crossmember support - rear.

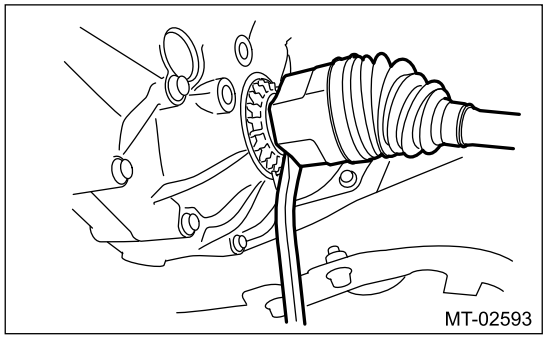
8. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.



9. Disconnect the stabilizer link.

10. Remove the nuts at 3 places, and separate the front arm from the ball joint.

Note:



- **● To prevent damage of the front arm ball joint boot, place a wooden block, etc. between front arm and ball joint.**
- **● Mark the engaging position of the ball joint and front arm assembly before loosening the flange nuts. Doing so will facilitate aligning the position when assembling and lessen adjusting allowance for wheel alignment.**

(A) Front arm

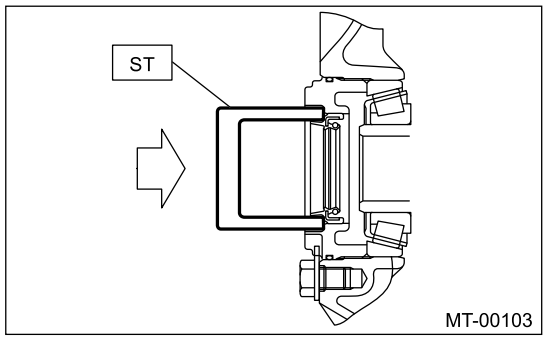
(B) Ball joint

11. Using a crowbar, separate the front drive shaft.

12. Using the PULLER ASSY (398527700), remove the differential side retainer oil seal.

Caution:

If removing the oil seal with a flat tip screwdriver, be careful not to scratch the differential side retainer.

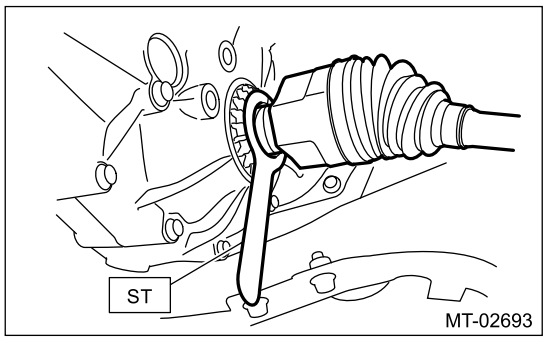


13. Using the ST, install a new differential side retainer oil seal by lightly tapping with a plastic hammer.

Caution:

- **Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.**
- **Check the identification marks (R, L) during the installation so as not to mix up the oil seal RH and LH.**

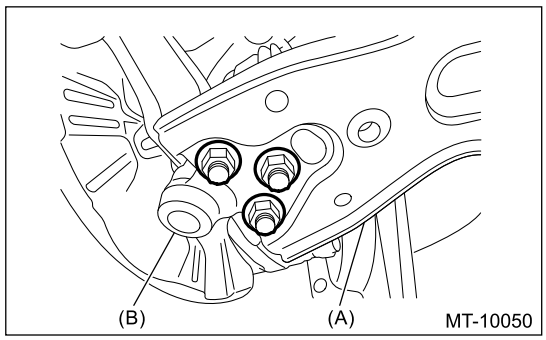
Special Tool:



ST: 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

14. Set the OIL SEAL PROTECTOR (28399SA010) to differential side retainer.
15. Replace the circlip of the front drive shaft with a new part.
16. Install the front drive shaft and remove the ST.

Special Tool:

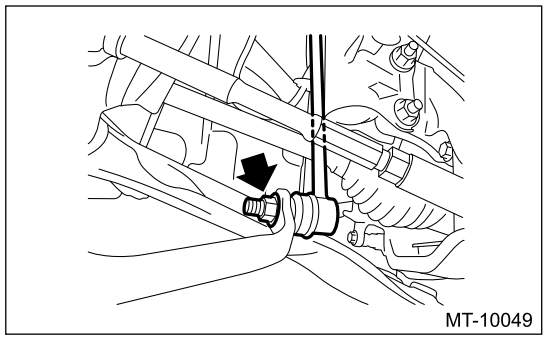


ST: 28399SA010 OIL SEAL PROTECTOR

17. Connect the front arm to the ball joint, and tighten the nuts at three places.

Tightening torque:

100 N·m (10.2 kgf-m, 73.8 ft-lb)



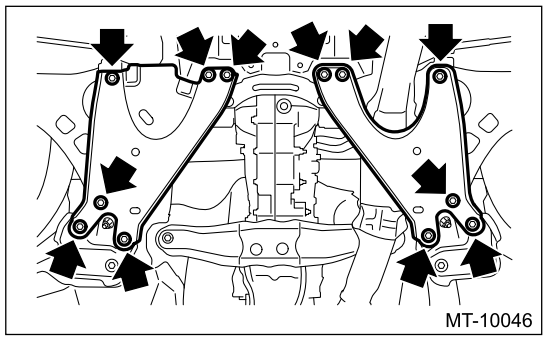
(A) Front arm

(B) Ball joint

18. Replace the flange nut with a new part, and install the stabilizer link.

Tightening torque:

60 N·m (6.1 kgf-m, 44.3 ft-lb)



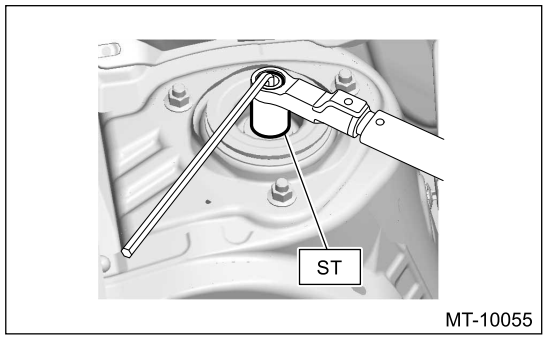
19. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.

20. Install the crossmember support - rear.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

21. Lower the vehicle.



22. Using the ST, tighten the strut mount self-locking nut.

Special Tool:

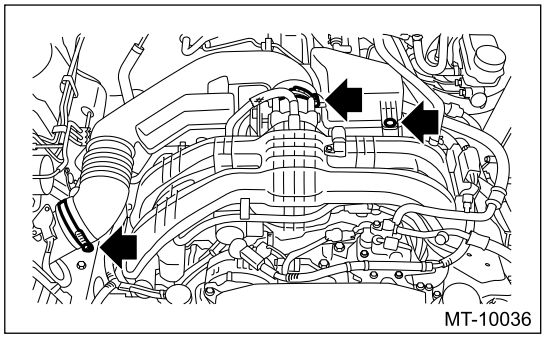
ST: 20399AG000 STRUT MOUNT SOCKET

Tightening torque:

55 N·m (5.6 kgf-m, 40.6 ft-lb)

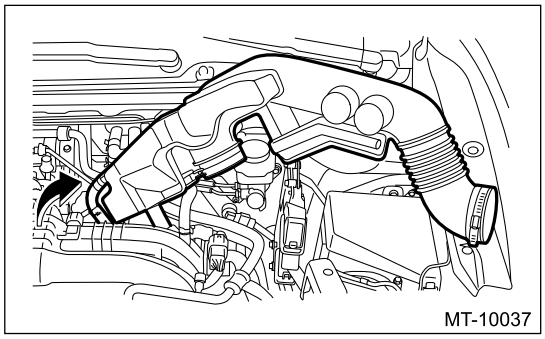
23. Pour in transmission gear oil and check the oil level. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Gear Oil>REPLACEMENT.

24. Install the front tires. Ref. to WHEEL AND TIRE SYSTEM>Tire and Wheel>INSTALLATION.



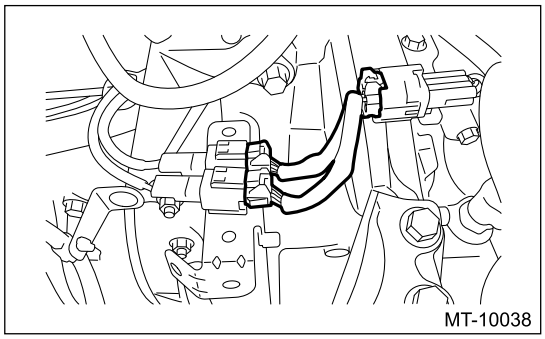
25. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

26. Inspect the wheel alignment and adjust if necessary. Ref. to FRONT SUSPENSION>Wheel Alignment.

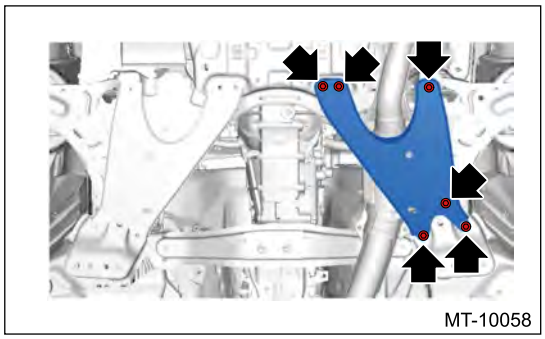


REMOVAL

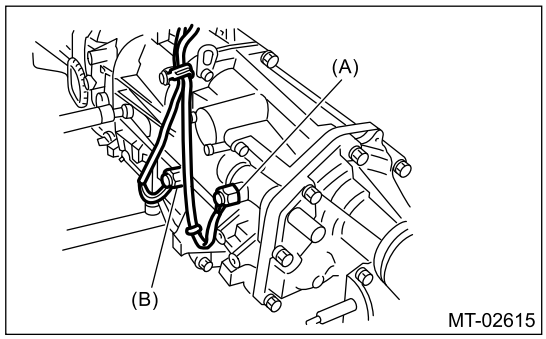
1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.



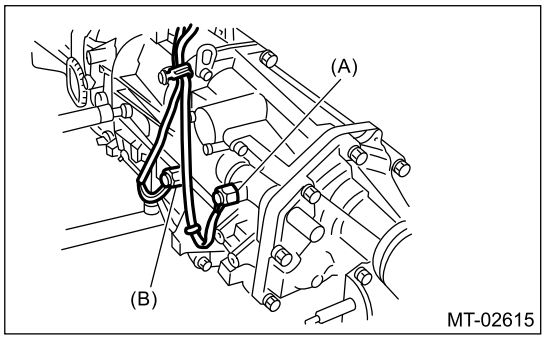
3. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.



4. Remove the coupling harness.

5. Remove the harness connector from bracket.
6. Lift up the vehicle.
7. Remove the crossmember support - rear LH.

8. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
9. Remove the harness from each clip.
10. Remove the back-up light switch & neutral position switch with the harness.



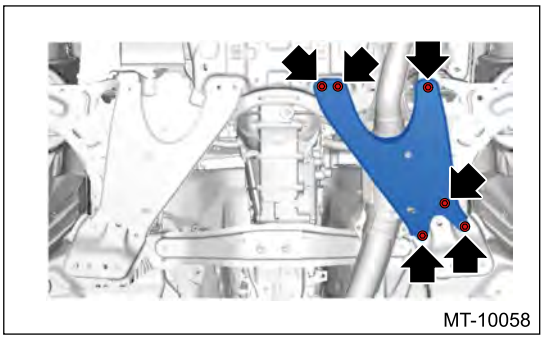
(A) Neutral position switch
(B) Back-up light switch

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Switches and Harness

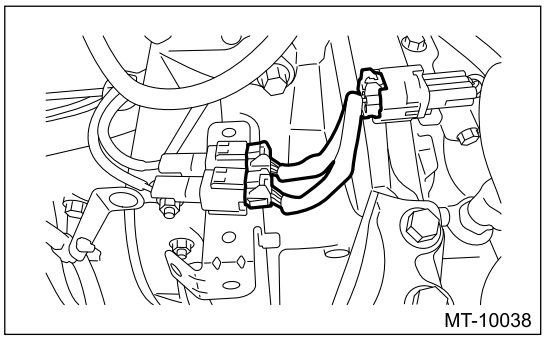
INSTALLATION

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

1. Replace the gasket with a new part, and install the back-up light switch & neutral position switch together with the harness.
   Tightening torque:
   32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



(A) Neutral position switch
(B) Back-up light switch

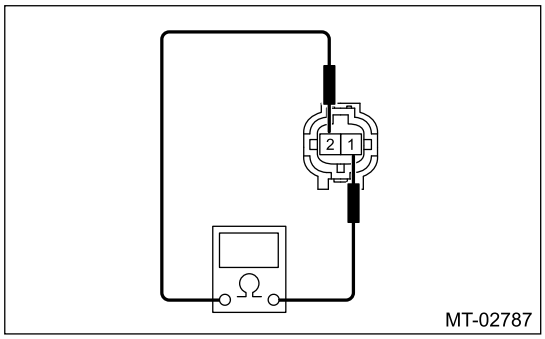


2. Secure the harness on each clip.
3. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
4. Install the crossmember support - rear LH.

Tightening torque:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

5. Lower the vehicle.
6. Secure the harness connector to the bracket.
7. Install the coupling harness.



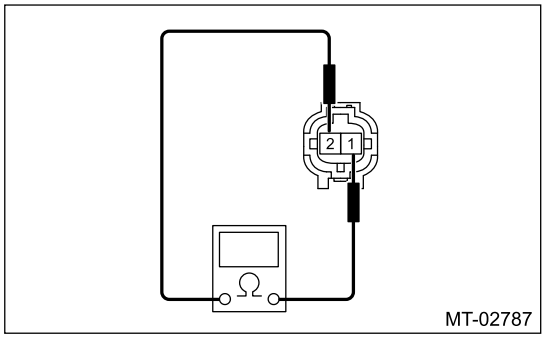
8. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Switches and Harness

INSPECTION

1. BACK-UP LIGHT SWITCH

1. Turn the ignition switch to OFF.
2. Disconnect the back light switch connector.
3. Measure the resistance between the back-up light switch terminals.

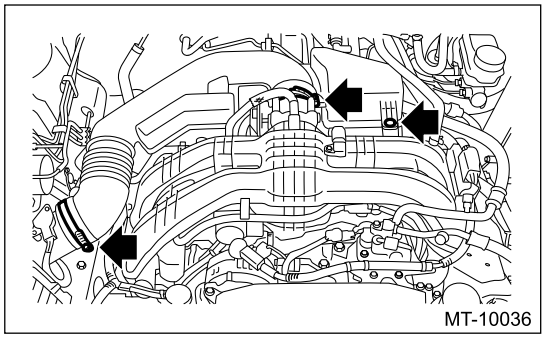


Gear shift position	Terminal No.	Standard
Reverse position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4. Replace faulty parts.

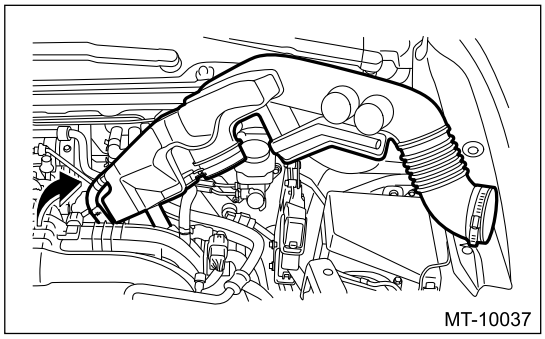
2. NEUTRAL POSITION SWITCH

1. Turn the ignition switch to OFF.
2. Disconnect the connector of neutral position switch.
3. Measure the resistance between neutral position switch terminals.



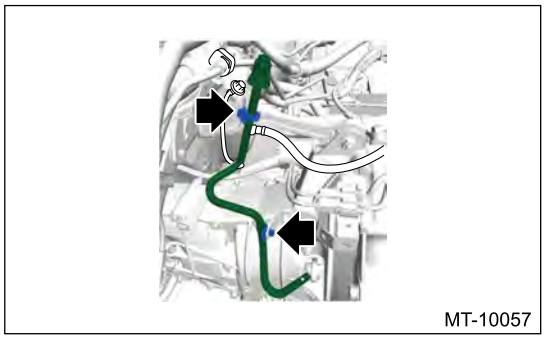
Gear shift position	Terminal No.	Standard
Neutral position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4. Replace faulty parts.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Air Breather Hose

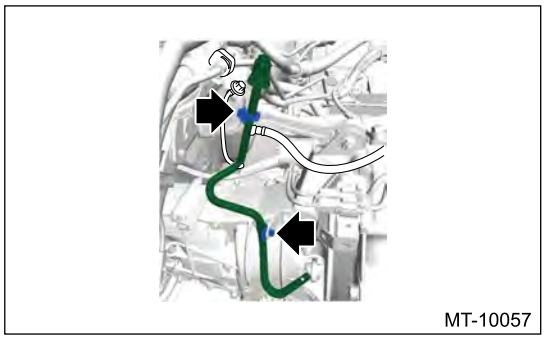
REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clip from the air intake boot, and loosen the clamp.

3. Remove the air intake boot, and place it aside so that it does not interfere with the work.
   Caution:
   Be careful not to pull out the PCV hose.

4. Remove the clips and remove the air breather hose.



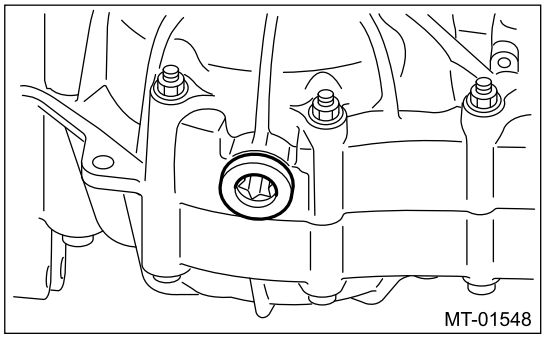
5. Remove the air breather cap.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Air Breather Hose

INSTALLATION

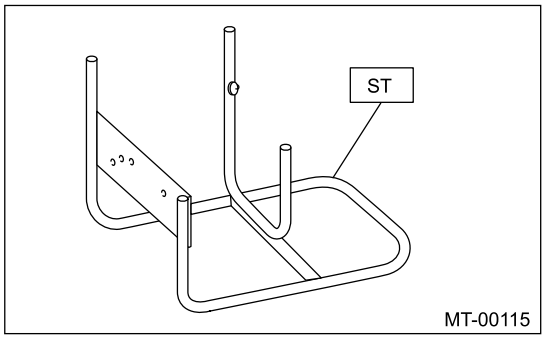
1. Install the air breather cap.
2. Install the air breather hose.

3. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Air Breather Hose

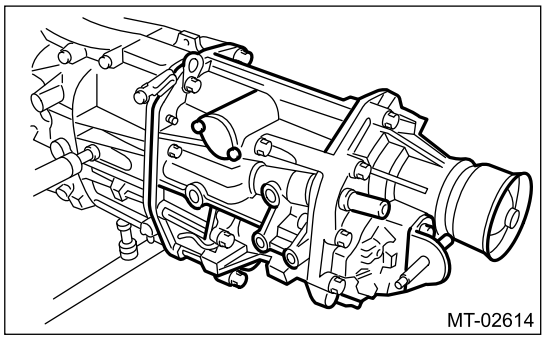
INSPECTION



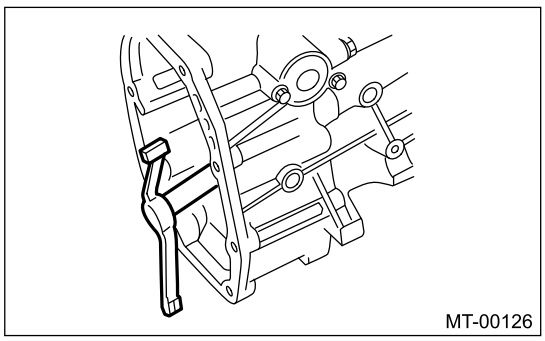
Check the hose for peeling, crack or clogging.

PROCEDURE

1. Clean oil, grease, dirt and dust from the transmission.
2. When transmission gear oil remains in the transmission, using the TORX® bit T70 to remove the drain plug, and drain the gear oil completely.
3. Replace the gasket with a new part and install the drain plug using the TORX® bit T70.
   Tightening torque:
   44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
   70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
   70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

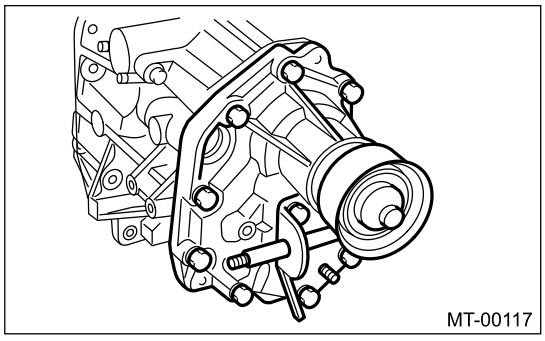


4. Install the transmission to the ST.
   Special Tool:
   ST: 499937100 TRANSMISSION STAND

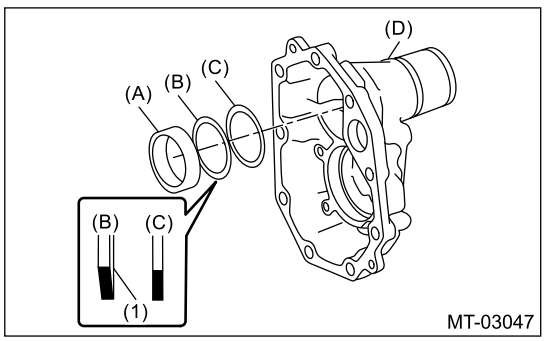


5. Apply transmission gear oil to rotating parts before assembly.
6. All disassembled parts, if to be reused, should be reinstalled in the original positions.
7. Gaskets, lock washers and lock nuts must be replaced with new ones.
8. Apply liquid gasket to the specified areas to prevent leakage.

REMOVAL

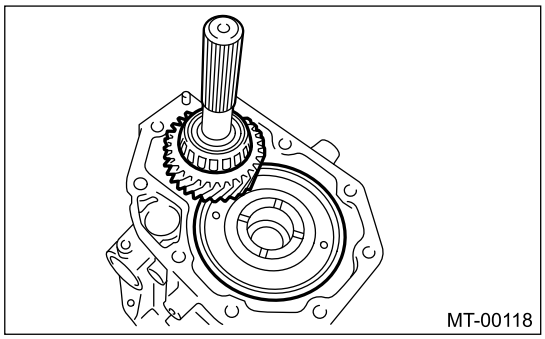


1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.
3. Remove the transfer case together with the extension case assembly.



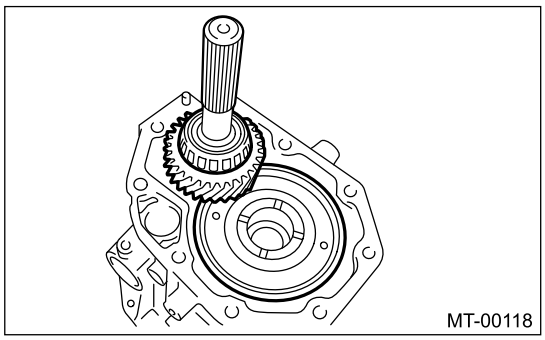
4. Remove the gasket.
5. Remove the shifter arm.

6. Remove the extension case assembly.

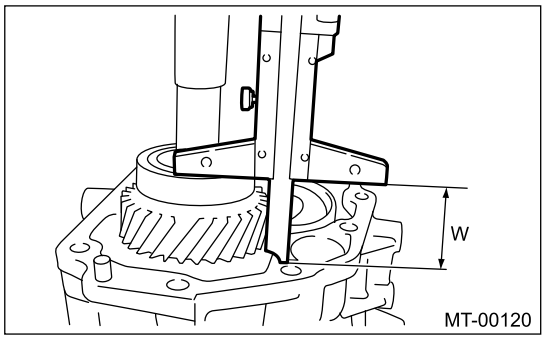


7. Remove the taper roller bearing (extension case side) outer race, dish plate and adjusting washer.

(A) Taper roller bearing (extension case side) outer race
(B) Dish plate
(C) Adjusting washer
(D) Extension case
(1) Paint side



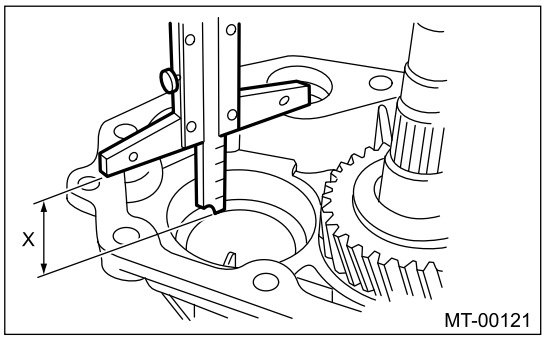
8. Remove the center differential and transfer driven gear.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Case and Extension Case Assembly

INSTALLATION

1. Clean the mating surfaces of the transmission case, transfer case and extension case.
2. Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).
   Grease:
   NICHIMOLY N-130 or equivalent
3. Install the center differential and the transfer driven gear.



4. Install the taper roller bearing (extension case side) outer race to the transfer driven gear.
5. While pressing the taper roller bearing (extension case side) outer race horizontally, rotate the transfer driven gear for ten turns.
6. Measure the height “W” between transfer case and taper roller bearing (transfer case side) on the transfer driven gear.

7. Measure the depth “X” of taper roller bearing insertion part of the extension case.

Note:

Measure while the taper roller bearing (extension case side) outer race, dish plate and adjusting washer are removed.

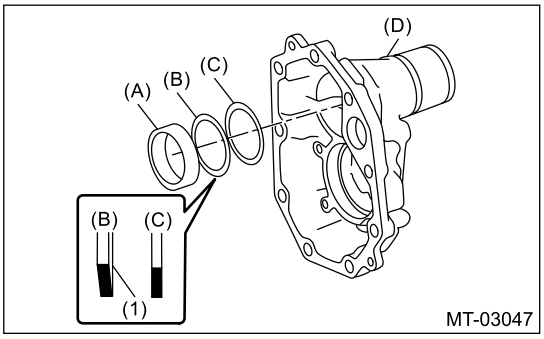
8. Calculate the adjusting washer thickness “T” using the following calculation.

T = X − W − (1.715 — 1.765 mm (0.686 — 0.706 in))

X: Depth of taper roller bearing insertion part of extension case

W: Height between transfer case and taper roller bearing (transfer case side) on transfer driven gear

9. Select the adjusting washer with the nearest value in the following table.



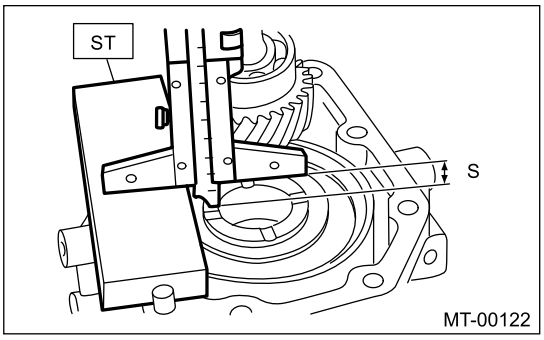
Adjusting washer (61 × 50 × T)	
Part No.	**Thickness mm (in)**
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)

Adjusting washer (61 × 50 × T)	
Part No.	**Thickness mm (in)**
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0571)

10. Install the selected adjusting washer, dish plate and taper roller bearing (extension case side) outer race.

Caution:

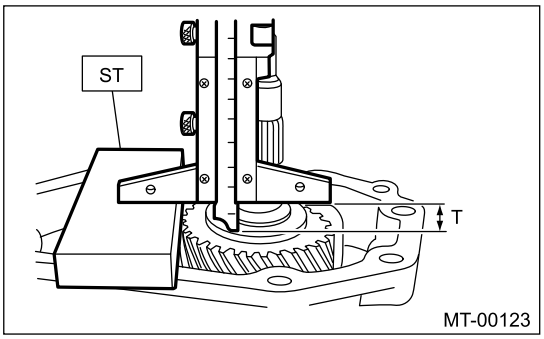
Pay attention to the orientation of the dish plate.



(A) Taper roller bearing (extension case side) outer race
(B) Dish plate
(C) Adjusting washer
(D) Extension case
(1) Paint side

11. Measure the depth "S" between transfer case + ST and center differential.

Special Tool:



ST: 398643600 GAUGE

12. Measure the height "T" between the extension case + ST and transfer drive gear.

Special Tool:

ST: 398643600 GAUGE

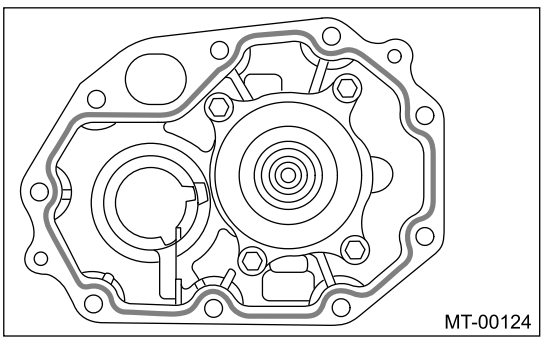
13. Calculate the adjusting washer thickness "U" using the following calculation.
U = S + T − 30 mm (1.18 in) − (0.15 — 0.35 mm (0.0059 — 0.0138 in))
S: Depth between transfer case + ST and center differential
T: Height between the extension case + ST and transfer drive gear
30 mm (1.18 in): Thickness of ST (× 2 pieces)
0.15 — 0.35 mm (0.0059 — 0.0138 in): Clearance

14. Select a suitable adjusting washer in the following table.

Specification:

Clearance:

0.15 — 0.35 mm (0.0059 — 0.0138 in)

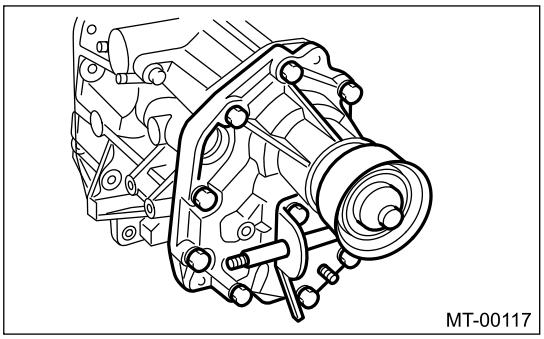


Adjusting washer	
Part No.	**Thickness mm (in)**
803036050	0.9 (0.035)
803036054	1.0 (0.039)
803036051	1.1 (0.043)
803036055	1.2 (0.047)
803036052	1.3 (0.051)
803036056	1.4 (0.055)
803036053	1.5 (0.059)
803036057	1.6 (0.063)
803036058	1.7 (0.067)
803036080	1.8 (0.071)
803036081	1.9 (0.075)

15. Install the adjusting washer to center differential.

16. Apply an appropriate amount of liquid gasket.

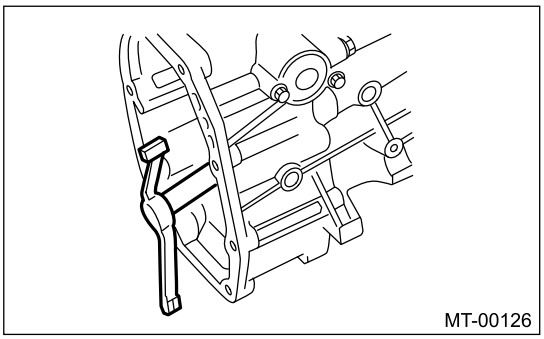
Liquid gasket:



THREE BOND 1215B or equivalent

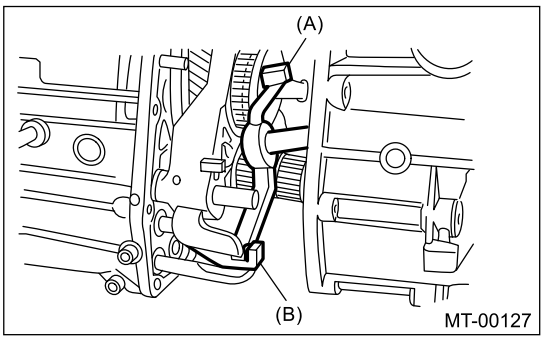
17. Install the extension case assembly.

Tightening torque:



40 N·m (4.1 kgf-m, 29.5 ft-lb)

18. Install the shifter arm.

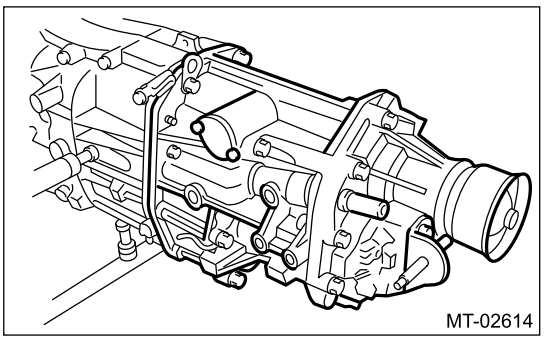


Note:

Apply transmission gear oil to the oil seal lips.

19. Install a new gasket.

20. Hook the shifter arm.



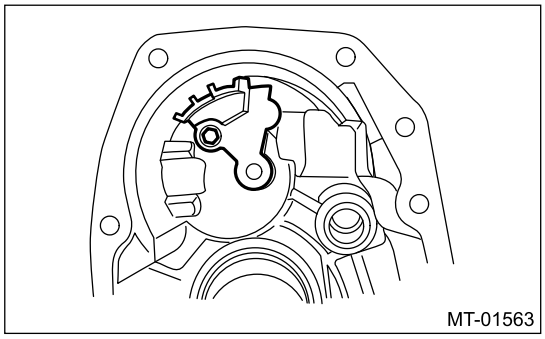
(A) Shifter arm

(B) 3rd-4th fork rod

21. Install the transfer case together with the extension case assembly.

Tightening torque:

24.5 N·m (2.5 kgf-m, 18.1 ft-lb)



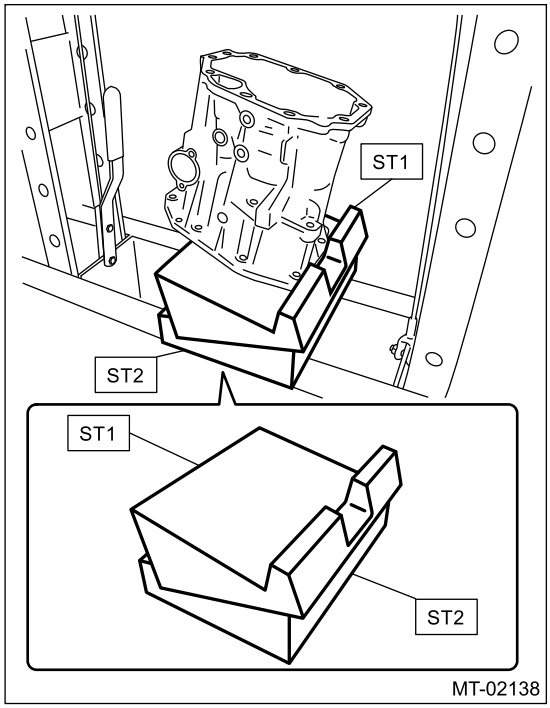
22. Install the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>INSTALLATION.
23. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Case and Extension Case Assembly

DISASSEMBLY

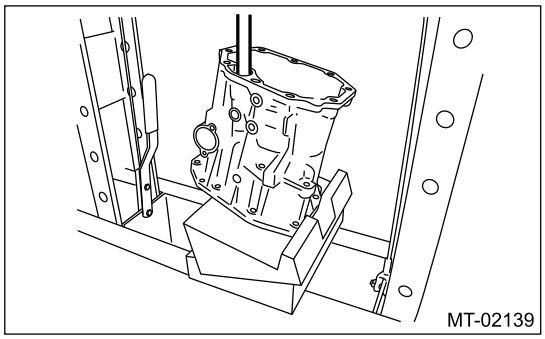
1. TRANSFER CASE

1. Remove the reverse check sleeve assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Check Sleeve>REMOVAL.
2. Remove the oil guide.



3. Remove the oil seal.
4. Set the ST1, ST2 and transfer case to the press.

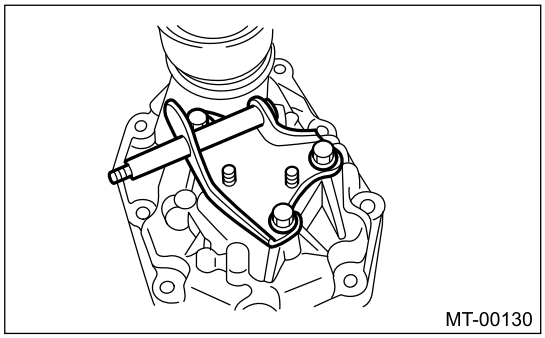
Note:



- **Set the ST2 under the ST1.**
- **Set the transfer case so that the hole for shifter arm is positioned vertically.**

Special Tool:

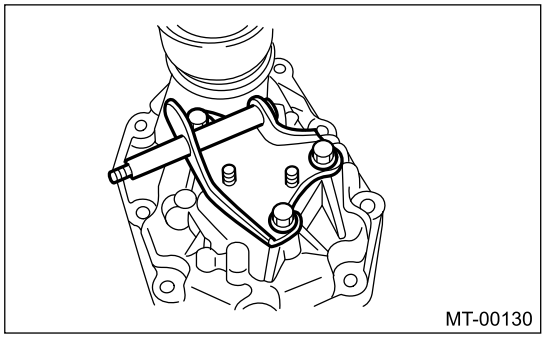
ST1: 498267300 CYLINDER HEAD TABLE
ST2: 498267200 CYLINDER HEAD TABLE



5. Remove the roller bearing by using a round bar of 22 mm (0.87 in) or 23 mm (0.91 in).

2. EXTENSION CASE

1. Remove the transfer drive gear assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Drive Gear>REMOVAL.
2. Remove the shift bracket.



3. Remove the oil seal from the extension case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Oil Seal>REPLACEMENT.
4. Remove the dust cover.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Case and Extension Case Assembly

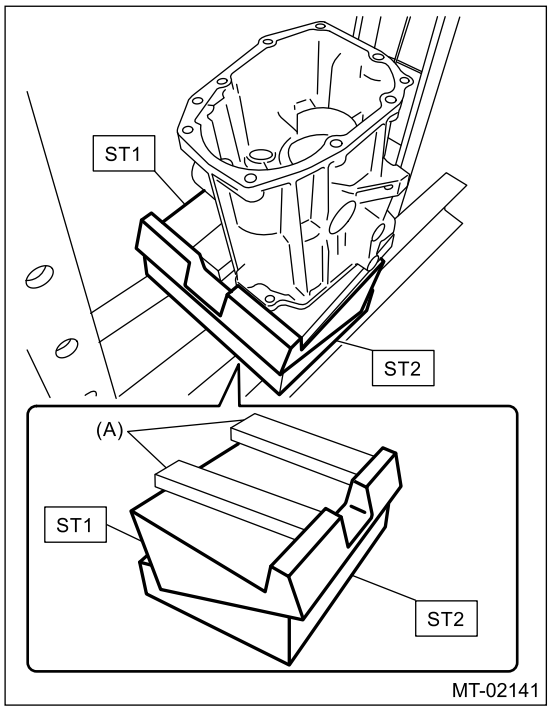
ASSEMBLY

1. EXTENSION CASE

1. Install a new oil seal to the extension case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Oil Seal>REPLACEMENT.
2. Install the dust cover.
3. Install the shift bracket.
   Tightening torque:
   24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

4. Install the transfer drive gear to the extension case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Drive Gear>INSTALLATION.

2. TRANSFER CASE



1. Set the ST1, ST2, steel plate and transfer case to the press.

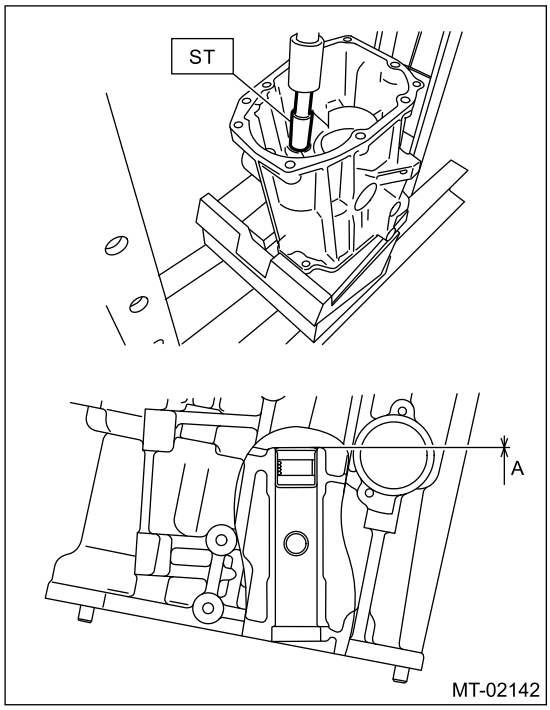
Note:

- **Set the ST2 under the ST1.**
- **Set the transfer case so that the hole for shifter arm is positioned vertically.**
- **Insert the steel plate, which is thicker than the exposed length of the transfer case knock pin, between the ST and transfer case.**
- **Set the iron plate so that the transfer case knock pin does not ride on the iron plate.**

Special Tool:

ST1: 498267300 CYLINDER HEAD TABLE
ST2: 498267200 CYLINDER HEAD TABLE

(A) Iron plate



2. Press-fit the roller bearing using the ST.

Press-fit depth:

A: 0±0.2 mm (0±0.01 in) from the end of transfer case

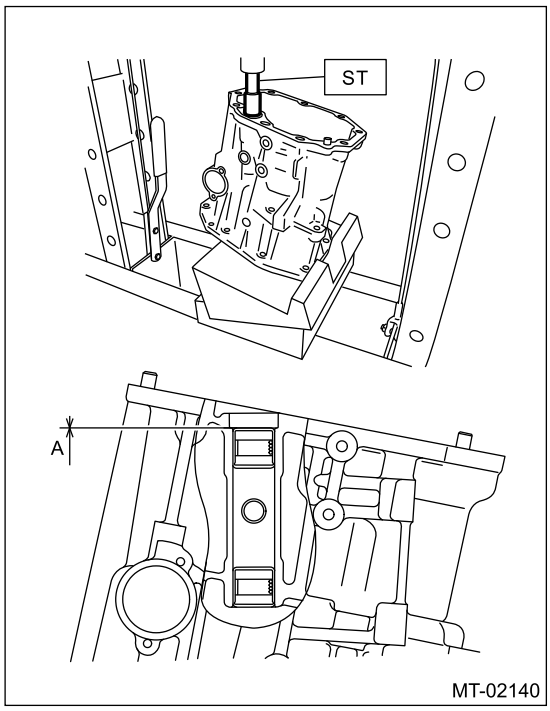
Special Tool:

ST: 899864100 REMOVER

3. Remove the iron plate, and turn over the transfer case.

Note:

Set the transfer case so that the hole for shifter arm is positioned vertically.



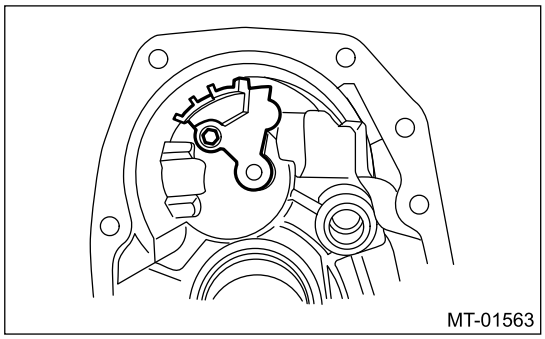
4. Press-fit the roller bearing using the ST.

Press-fit depth:

A: 0±0.2 mm (0±0.01 in) from the end of transfer case

Special Tool:

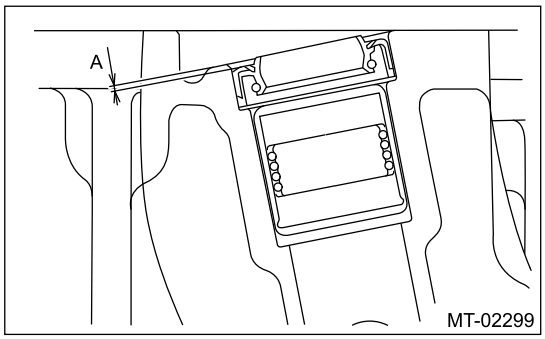
ST: 899864100 REMOVER



5. Install the shifter arm to the transfer case, and make sure that the shift arm moves smoothly.

6. Replace the precoat bolt with a new part, and Install the oil guide.

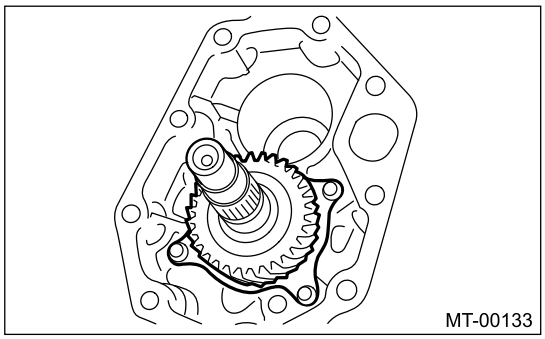
Tightening torque:



6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

7. Install the reverse check sleeve assembly to the transfer case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Check Sleeve>INSTALLATION.
8. Install a new oil seal.

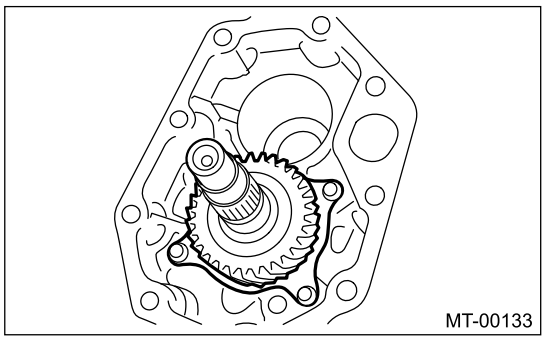
Press-fit depth:



A: 1±0.2 mm (0.04±0.01 in) from the end of transfer case

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Drive Gear

REMOVAL

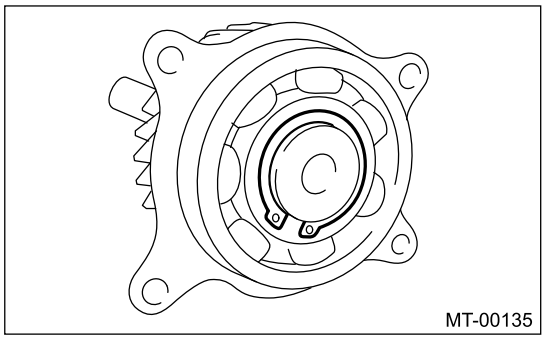


1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.
3. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
4. Remove the extension case assembly.
5. Remove the transfer driven gear.
6. Remove the transfer drive gear.

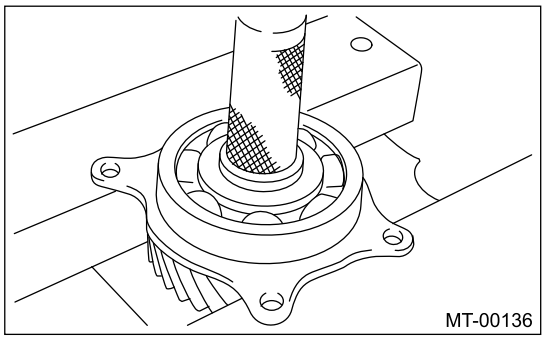
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Drive Gear

INSTALLATION

1. Install the transfer drive gear.
   Tightening torque:
   26 N·m (2.7 kgf-m, 19.2 ft-lb)



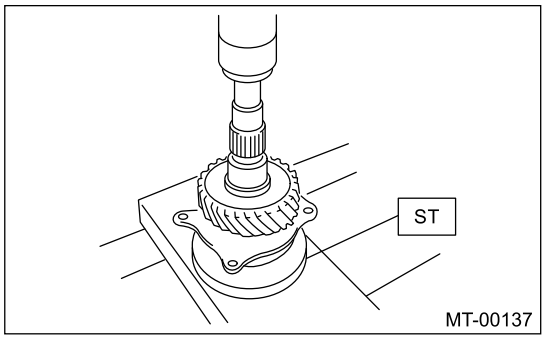
2. Select the adjusting washer. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
3. Install the transfer driven gear.
4. Install the transfer case and the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
5. Install the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>INSTALLATION.
6. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Drive Gear

DISASSEMBLY

1. Remove the snap ring.



2. Remove the ball bearing.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Drive Gear

ASSEMBLY

1. Set the ST against the inner race of a new ball bearing, and install the transfer drive gear.
   Caution:
   Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
   Special Tool:
   ST: 398177700 INSTALLER

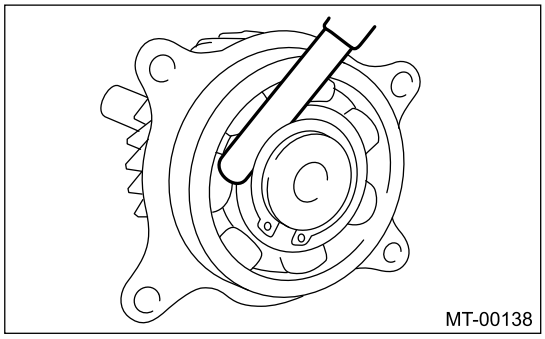
2. Install the snap ring on the transfer drive gear.
3. Inspect the clearance between the snap ring and the ball bearing. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Drive Gear>INSPECTION.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Drive Gear

INSPECTION

1. Ball bearing
   Replace the bearings in the following cases.

- In case of broken or rusty bearings
- In case of worn or damaged bearings
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.



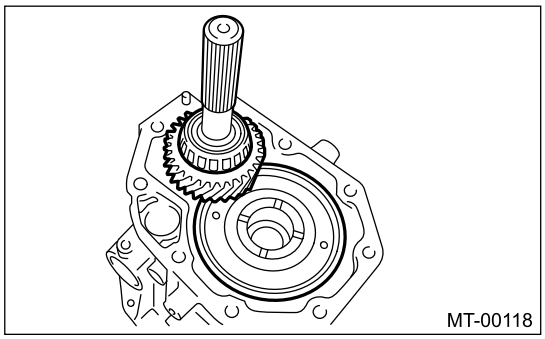
2. Transfer drive gear

If the drive gear tooth surface and shaft are excessively broken or damaged, replace the drive gear.

3. Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

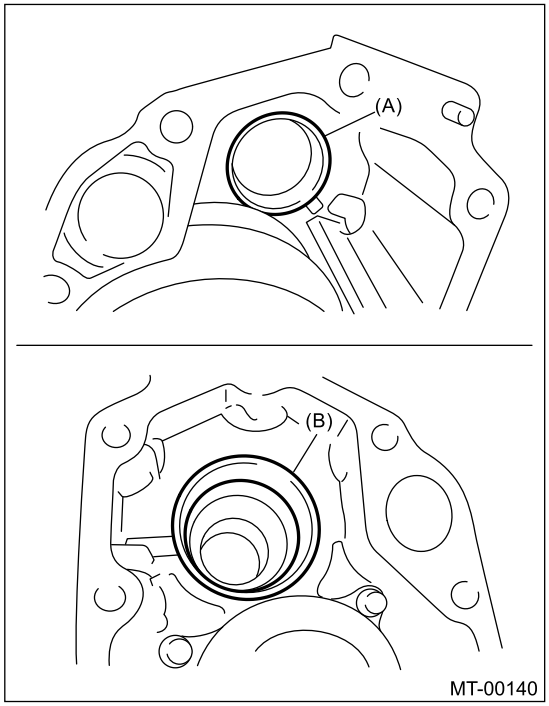
Specification:

0.01 — 0.15 mm (0.0004 — 0.0059 in)



If the measurement is not within specification, select a suitable snap ring and replace it.

Snap ring (outer-30)	
Part No.	**Thickness mm (in)**
805030041	1.53 (0.0602)
805030042	1.65 (0.0650)
805030043	1.77 (0.0697)

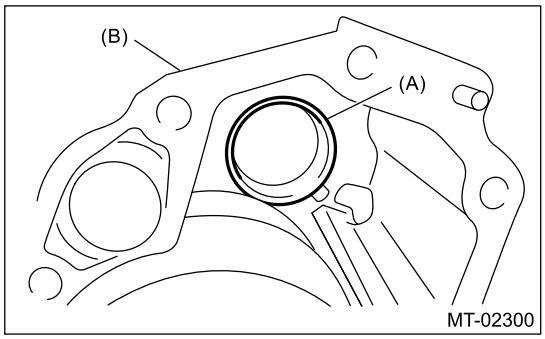


MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Driven Gear

REMOVAL

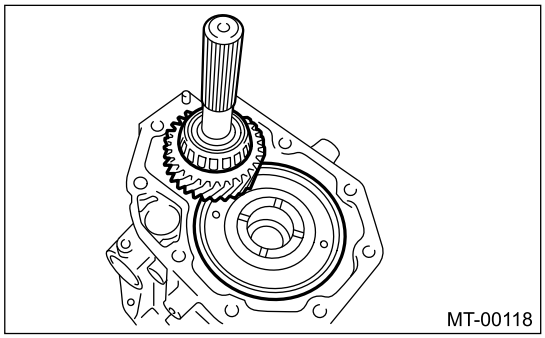
1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.
3. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
4. Remove the extension case assembly.
5. Remove the transfer driven gear.

6. Remove the taper roller bearing outer race.



(A) Taper roller bearing (transfer case side) outer race
(B) Taper roller bearing (extension case side) outer race

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Driven Gear

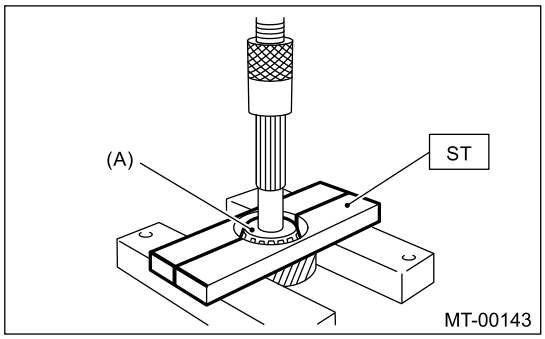


INSTALLATION

1. Install the taper roller bearing (transfer case side) outer race.

(A) Taper roller bearing (transfer case side) outer race
(B) Transfer case

2. Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).
Grease:
NICHIMOLY N-130 or equivalent
3. Install the transfer driven gear.

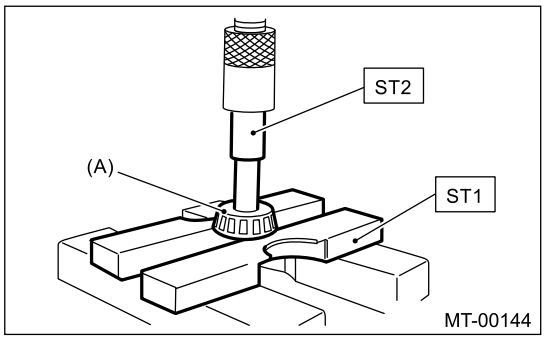


4. Select the adjusting washer. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
5. Install the transfer case and the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
6. Install the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>INSTALLATION.
7. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Driven Gear

DISASSEMBLY

1. Using the ST, remove the taper roller bearing (extension case side).
Special Tool:
ST: 498077000 REMOVER



(A) Taper roller bearing (extension case side)

2. Using ST1 and ST2, remove the taper roller bearing (transfer case side).

Special Tool:

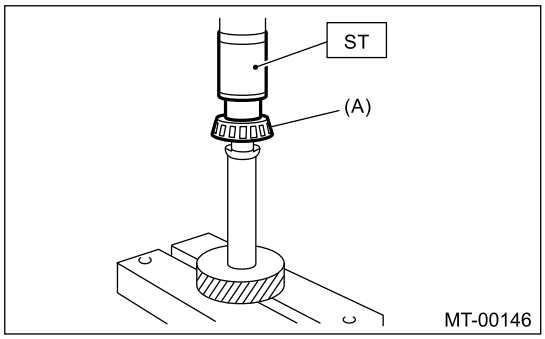
ST1: 498077000 REMOVER

ST2: 899864100 REMOVER

(A) Taper roller bearing (transfer case side)

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Driven Gear

ASSEMBLY



1. Using the ST, install the taper roller bearing (transfer case side).

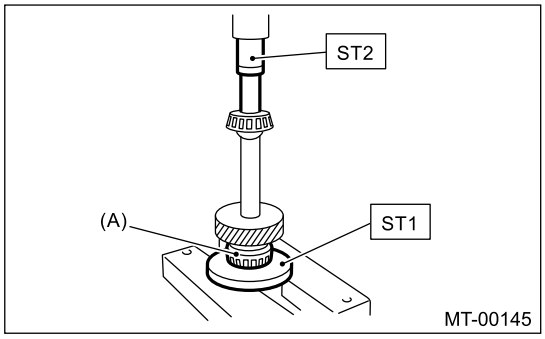
Caution:

- **Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).**
- **Be careful when handling, because the outer race and inner race of the taper roller bearing are used as a set.**

Special Tool:

ST: 927640000 INSTALLER

(A) Taper roller bearing (transfer case side)



2. Using the ST, install the taper roller bearing (extension case side).

Caution:

- **Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).**
- **Be careful when handling, because the outer race and inner race of the taper roller bearing are used as a set.**

Special Tool:

ST1: 498175500 INSTALLER
ST2: 899864100 REMOVER

(A) Taper roller bearing (extension case side)

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transfer Driven Gear

INSPECTION

1. Taper roller bearing
   Replace the bearings in the following cases.
   - In case of broken or rusty bearings
   - In case of worn or damaged bearings
   - When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
2. Transfer driven gear
   If the tooth face of driven gear and the shaft are excessively broken or damaged, replace the driven gear.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Center Differential

REMOVAL

1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.
3. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
4. Remove the extension case assembly.
5. Remove the transfer driven gear. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Driven Gear>REMOVAL.
6. Remove the center differential.

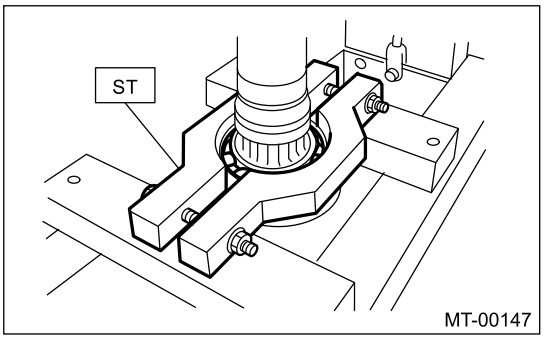
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Center Differential

INSTALLATION

1. Attach the center differential to transfer case.
2. Install the transfer driven gear. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Driven Gear>INSTALLATION.
3. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
4. Install the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>INSTALLATION.
5. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Center Differential

DISASSEMBLY



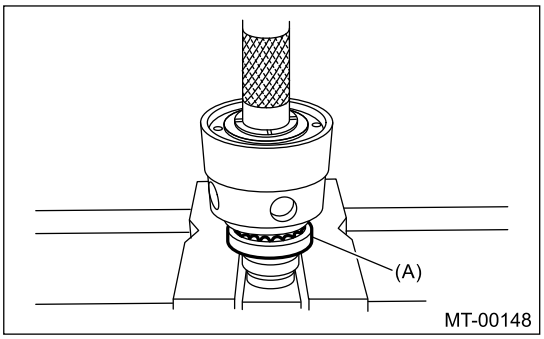
Remove the ball bearing using the ST.

Caution:

Center differential is a non-disassembled part which should not be disassembled.

Special Tool:

ST: 498077300 REMOVER



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Center Differential

ASSEMBLY

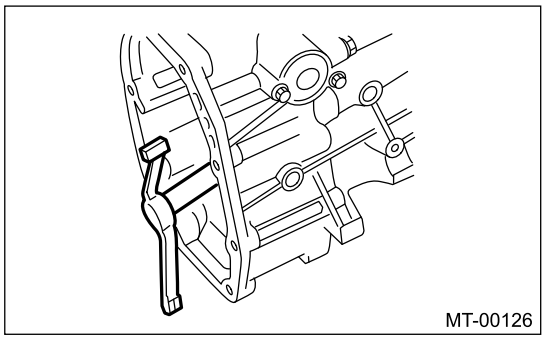
Install new ball bearings.

Caution:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

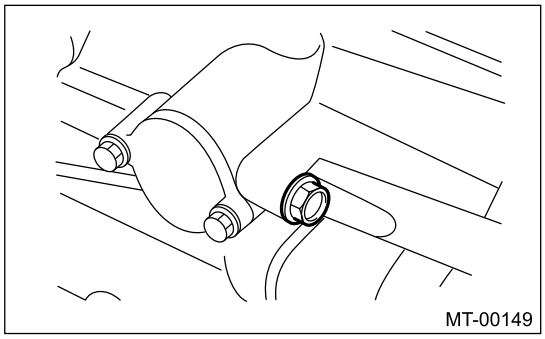
(A) Ball bearing

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Center Differential



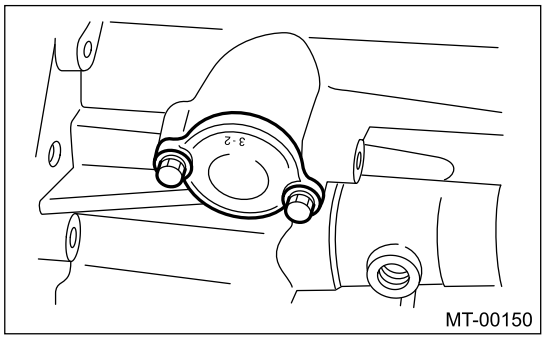
INSPECTION

1. Ball bearing
   Replace the bearings in the following cases.
   - In case of broken or rusty bearings
   - In case of worn or damaged bearings
   - When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
   - When bearing has other defects.
2. Center differential
   If there is wear or damage, replace the center differential assembly.



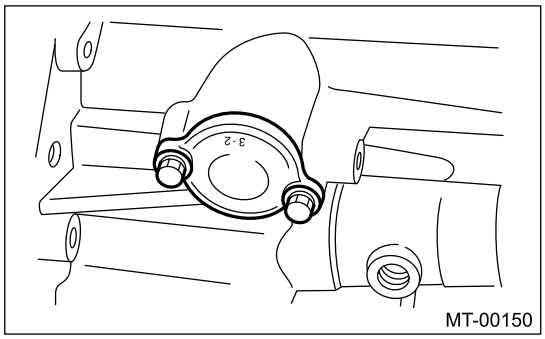
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Check Sleeve

REMOVAL

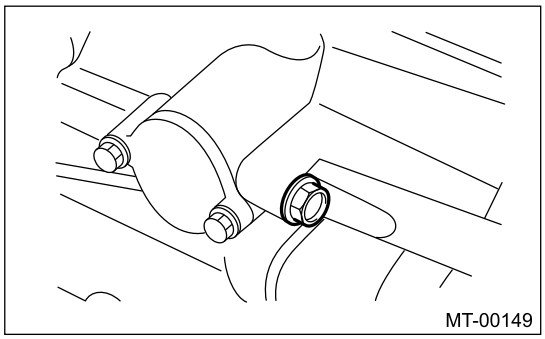


1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
3. Remove the shifter arm.

4. Remove the plug, gasket, reverse accent spring, and reverse check ball.

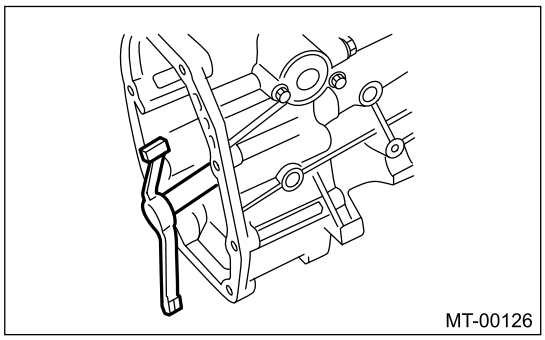


5. Remove the reverse check sleeve.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Check Sleeve

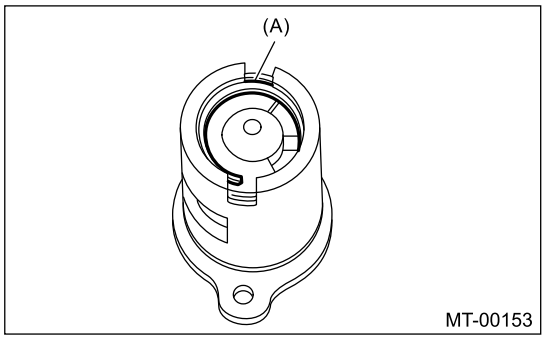
INSTALLATION



1. Install the reverse check sleeve.
   Tightening torque:
   6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

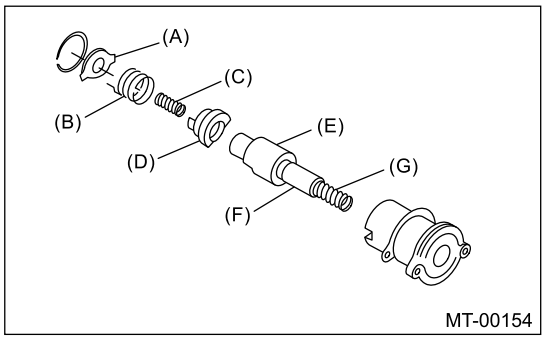
2. Install the reverse check ball, reverse accent spring, new gasket, and plug.
   Tightening torque:
   9.75 N·m (1.0 kgf-m, 7.2 ft-lb)

3. Install the shifter arm.
   Note:
   Apply transmission gear oil to the oil seal lips.



4. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
5. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Check Sleeve



DISASSEMBLY

1. Cover the reverse check sleeve with cloth, and remove the snap ring by using screwdriver.
   Note:
   If the snap ring is deformed or the spring repulsive force is not enough, replace with a new snap ring.

(A) Snap ring

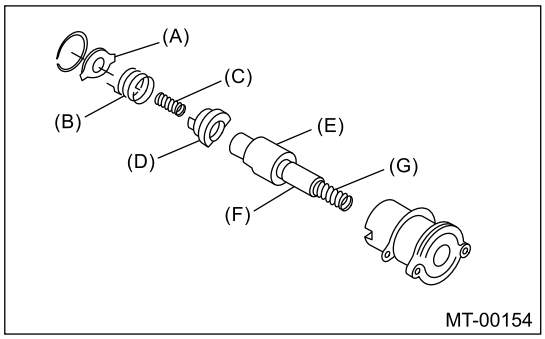
2. Remove the reverse check plate, reverse check spring, reverse check cam, return spring (5th-Reverse), reverse accent shaft, return spring cap, and return spring (1st-2nd).

(A) Reverse check plate
(B) Reverse check spring
(C) Return spring (5th-Reverse)
(D) Reverse check cam
(E) Reverse accent shaft
(F) Return spring cap
(G) Return spring (1st-2nd)

3. Remove the O-rings.

Caution:

Be careful not to damage the adjusting select shim between reverse check sleeve assembly and case.



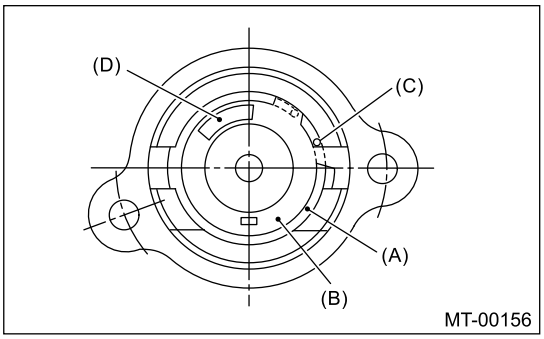
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Check Sleeve

ASSEMBLY

1. Install the return spring (1st-2nd), return spring cap, reverse accent shaft, reverse check cam, return spring (5th-Reverse) and reverse check spring.

Caution:

Be sure to insert the curved part of reverse check spring into the check cam groove.



(A) Reverse check plate
(B) Reverse check spring
(C) Return spring (5th-Reverse)
(D) Reverse check cam
(E) Reverse accent shaft
(F) Return spring cap
(G) Return spring (1st-2nd)

2. Hook the curved part of reverse check spring onto the reverse check plate.
3. Rotate the cam so that the protrusion on the reverse check cam is located at the plate opening.
4. While fixing the cam to that position, attach the reverse check plate to the reverse check sleeve, and secure with snap ring.
5. Replace the O-ring with a new part, and insert it into the sleeve groove.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Check Sleeve

INSPECTION

- Make sure the cutout of the reverse accent shaft is aligned with the opening in the reverse check sleeve.
- Turn the cam by hand to check for smooth rotation.
- Move the cam and shaft all the way toward the plate, and make sure it releases.
  If the cam does not return properly, replace the reverse check spring. If the shaft does not return, check for scratches on the inner surface of sleeve. If the sleeve is in good order, replace the spring.

(A) Snap ring
(B) Reverse check plate
(C) Reverse check spring
(D) Reverse check cam

- Select a suitable reverse accent shaft and reverse check plate. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Check Sleeve>ADJUSTMENT.

ADJUSTMENT

1. NEUTRAL POSITION ADJUSTMENT

1. Shift the gear into 3rd gear position.
2. Because of the return spring, until the arm contacts the stopper the shifter arm will feel lighter moving towards 1st/2nd gear and heavier towards the reverse gear.
3. Make adjustment so that the heavy stroke (reverse side) is a little heavier than the lighter stroke (1st/2nd side).
4. To adjust, remove the bolts holding the reverse check sleeve assembly to the case, and move the sleeve assembly outward, then place an adjustment shim between the sleeve assembly and the case to adjust the clearance.

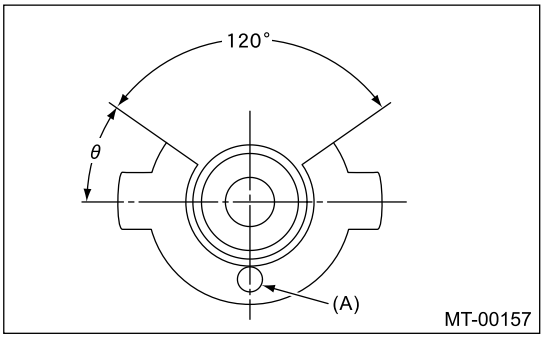
Caution:

Be careful not to damage the O-ring when placing shims.

Note:

- **When the shim is removed, the neutral position will move closer to reverse; when the shim is added, the neutral position will move closer to 1st gear.**
- **If it is not possible to adjust the clearance with only shims, replace the reverse accent shaft and re-adjust.**

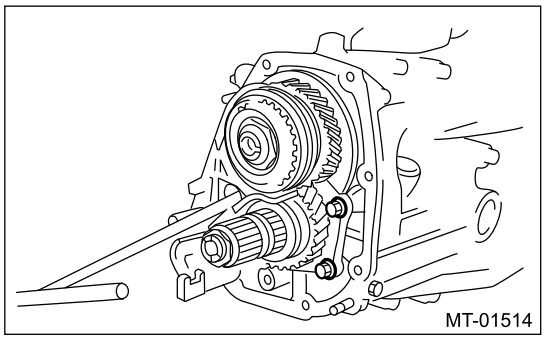
Adjusting shim	
Part No.	**Thickness mm (in)**
32190AA000	0.15 (0.0059)
32190AA010	0.30 (0.0118)



Reverse accent shaft		
Part No.	**Mark**	**Content**
32188AA130	S	Neutral position is closer to 1st gear.
32188AA140	T	Specification
32188AA150	U	Neutral position is closer to reverse gear.

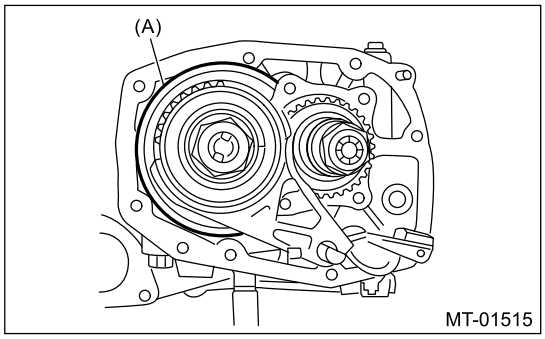
2. REVERSE CHECK PLATE ADJUSTMENT

1. Shift the shifter arm to “5th” and then to reverse to see if the reverse check mechanism operates properly.
2. Also check to see if the arm returns to neutral when released from the reverse position. If the arm does not return properly, replace the reverse check plate.



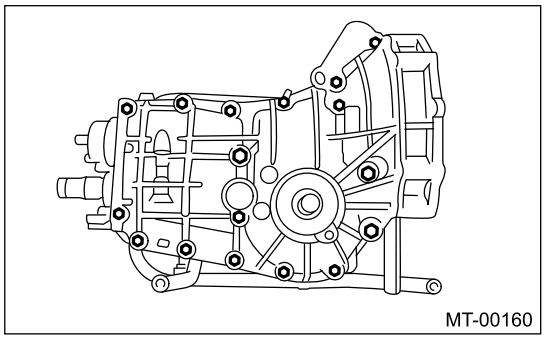
Reverse check plate			
Part No.	**(A): No.**	**Angleθ**	**Content**
32189AA001	0	28°	Arm stops closer to 5th gear.
32189AA011	1	31°	Arm stops closer to 5th gear.

Reverse check plate			
Part No.	**(A): No.**	**Angle θ**	**Content**
32189AA021	2	34°	Arm stops in the center.
32189AA031	3	37°	Arm stops closer to reverse gear.
32189AA041	4	40°	Arm stops closer to reverse gear.



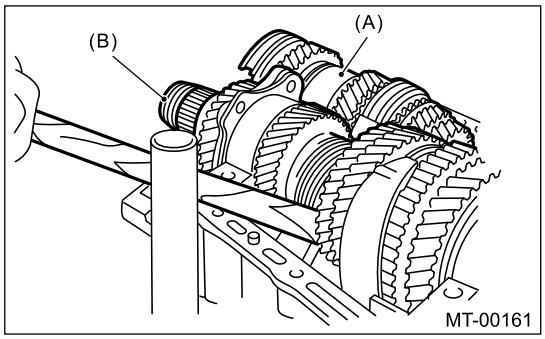
REMOVAL

1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the clutch release lever and the release bearing. Ref. to CLUTCH SYSTEM>Release Bearing and Lever>REMOVAL.
3. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
4. Remove the bearing mounting bolt.



5. Remove the main shaft rear plate.

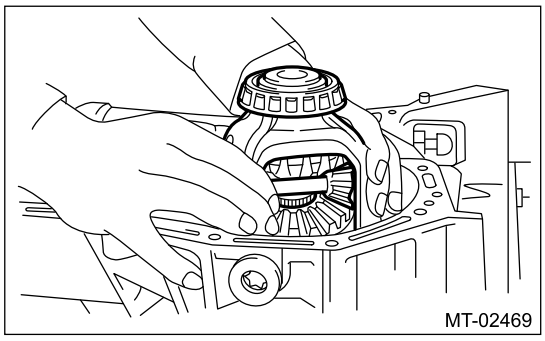
(A) Main shaft rear plate



6. Remove the bolts and nuts, and separate the transmission case.

7. Remove the drive pinion shaft assembly.

Note:



Use a hammer handle, etc. to remove if too tight.

(A) Main shaft ASSY

(B) Drive pinion shaft ASSY

8. Remove the main shaft assembly.
9. Remove the front differential assembly.

10. Remove the differential side retainers and taper roller bearing outer races. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>REMOVAL.

Caution:

Do not confuse the right and left taper roller bearing outer races.

11. Remove the reverse idler gear. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Idler Gear>REMOVAL.
12. Remove the shifter fork and rod. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Shifter Fork and Rod>REMOVAL.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transmission Case

INSTALLATION

1. Wipe off grease, oil and dust on the mating surfaces of transmission cases with cleaning solvent.
2. Install the reverse idler gear. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Idler Gear>INSTALLATION.
3. Install the shifter fork and rod. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Shifter Fork and Rod>INSTALLATION.
4. Select the drive pinion shim. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>INSTALLATION.
5. Install the taper roller bearing outer race to the transmission case LH side, and install the differential side retainer with the O-ring removed.
6. Install the front differential assembly.
7. Install the main shaft assembly.

Note:

Align the needle bearing knock pin hole to the transmission case knock pin.

8. Install the selected drive pinion shims and drive pinion shaft assembly.

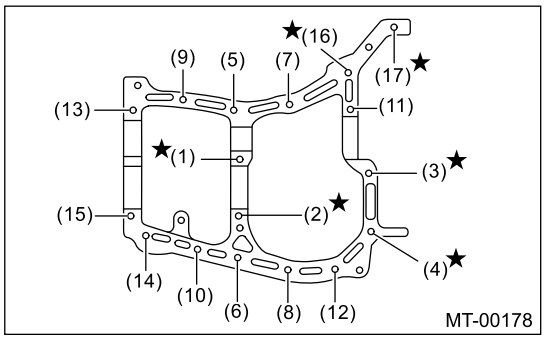
Note:

Align the roller bearing knock pin hole to the transmission case knock pin.

9. Align the transmission cases with each other, and tighten them with 17 mounting bolts.

Caution:

- **Insert bolts (11) and (16) from the LH side of the transmission case.**
- **Match the cases together so that the drive pinion shims are not caught between the cases.**



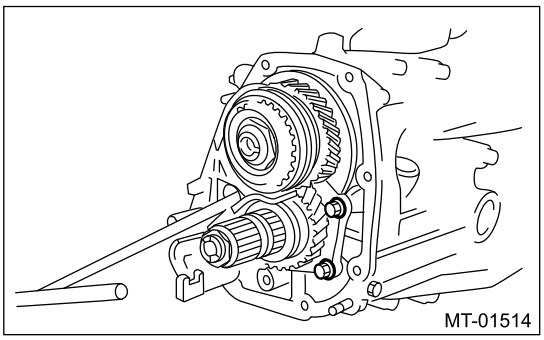
Tightening torque:

8 mm bolt

25 N·m (2.5 kgf-m, 18.4 ft-lb)

★ **10 mm bolt**

39 N·m (4.0 kgf-m, 28.8 ft-lb)

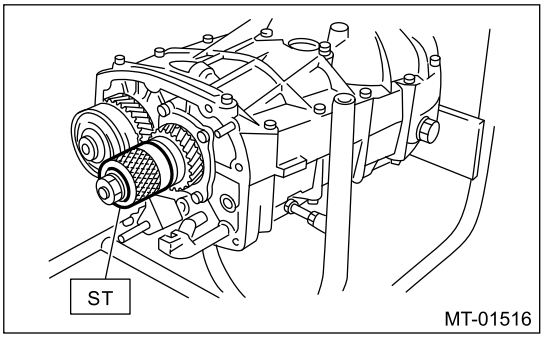


10. Install the taper roller bearing outer race to the RH side of the transmission case.

11. Tighten the bearing mounting bolts.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)

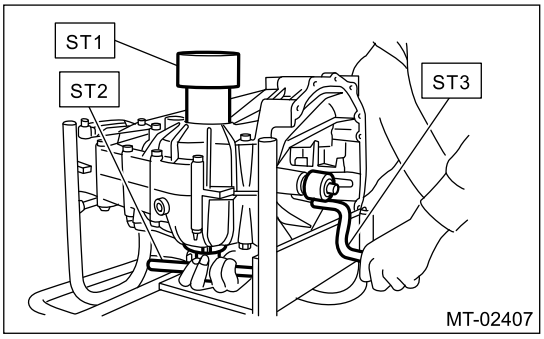


12. Adjust the backlash of the hypoid driven gear and the preload of the taper roller bearing.

(1) Install the ST to the drive pinion shaft assembly.

Special Tool:

ST: 498427100 STOPPER

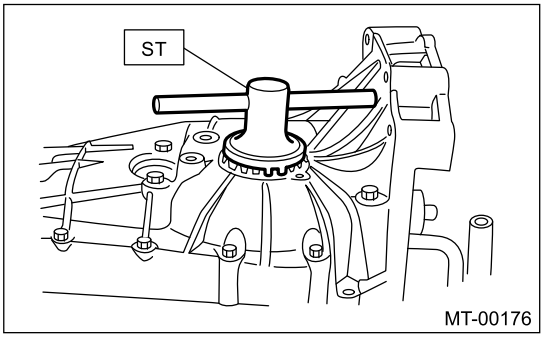


(2) Place the transmission case with the LH side facing downward, and put ST1 on the taper roller bearing outer race.

(3) Screw-in the differential side retainer from the bottom into LH side case using ST2. Fit the ST3 on the main shaft. Shift the gear into 4th or 5th, and turn the shaft several times. Screw in the side retainer while rotating the ST3 until a slight resistance is felt on ST2.
This is the contact point of the hypoid driven gear and the drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

Special Tool:

ST1: 399780104 WEIGHT
ST2: 18630AA010 WRENCH COMPL RETAINER
ST3: 499927100 HANDLE



(4) Remove the WEIGHT, and screw in the differential side retainer without the O-ring into the RH side of the transmission case, and stop at the point where a slight resistance is felt.

Note:

In this condition, the backlash between hypoid driven gear and drive pinion shaft is zero.

Special Tool:

ST: 18630AA010 WRENCH COMPL RETAINER

(5) Loosen the differential side retainer on the LH side of the transmission case by 3 notches, and turn the side retainer on the RH side of the transmission case by 3 notches in order to apply backlash.

(6) Screw in the differential side retainer of the RH side of the transmission case additionally by 1 notch in order to apply preload on taper roller bearing.

(7) Temporarily tighten the retainer lock plates LH and RH, and put marks on both the differential side retainer and lock plate for later readjustment.

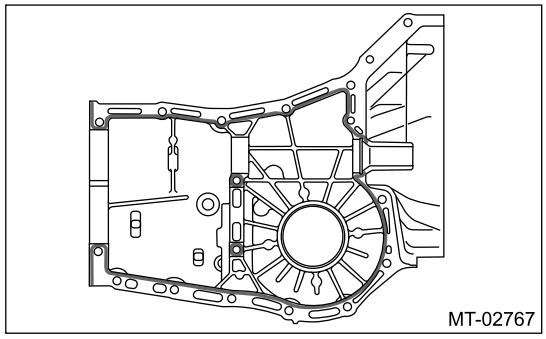
Note:

If it is hard to install the lock plates, reverse the sides and install them.

(8) Turn the main shaft several times while tapping around the differential side retainer lightly with a plastic hammer.

13. Inspect and adjust backlash and tooth contact of the hypoid driven gear. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>INSPECTION.

14. Separate the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>REMOVAL.



15. Check each shifter fork. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Shifter Fork and Rod>INSPECTION.

16. Select a main shaft rear plate. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>ADJUSTMENT.

17. Apply liquid gasket, then join the transmission cases with each other.

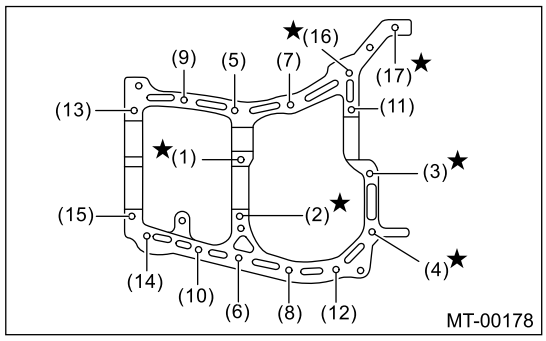
Liquid gasket:

THREE BOND 1215B or equivalent

18. Tighten 17 bolts with brackets and clips as shown in the figure.

Caution:

- **Insert bolts (11) and (16) from the LH side of the transmission case.**
- **Match the cases together so that the drive pinion shims are not caught between the cases.**

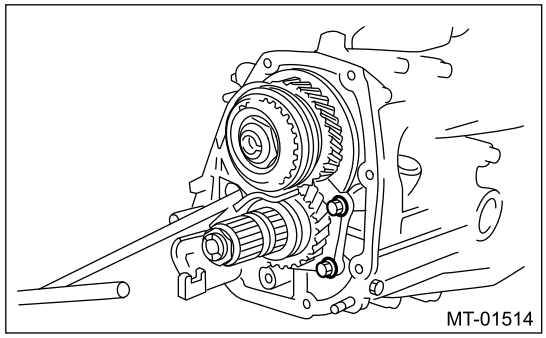


Tightening torque:

8 mm bolt

25 N·m (2.5 kgf-m, 18.4 ft-lb)

★ **10 mm bolt**



39 N·m (4.0 kgf-m, 28.8 ft-lb)

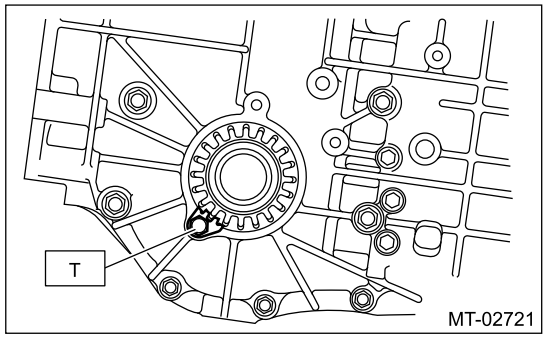
19. Tighten the bearing mounting bolts.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)

20. Remove the retainer lock plate, and loosen the differential side retainer until the groove of the O-ring appears. Fit a new O-ring into the groove and tighten the side retainer into the position

where it was not loosened.



Note:

- **When loosening the side retainer, record the number of the turns made.**
- **Perform this for both left and right side retainers.**
- **Apply transmission gear oil to O-ring.**

21. Install the retainer lock plate.

Tightening torque:

T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

22. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.

23. Install the clutch release lever and release bearing. Ref. to CLUTCH SYSTEM>Release Bearing and Lever>INSTALLATION.

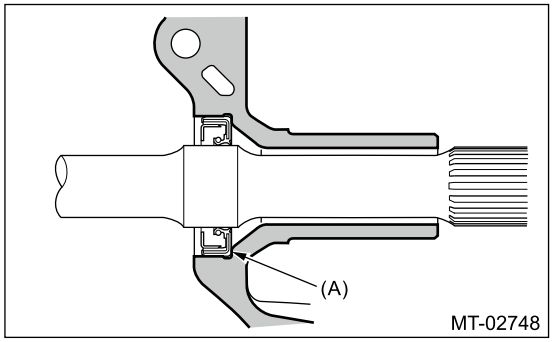
24. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Transmission Case

INSPECTION

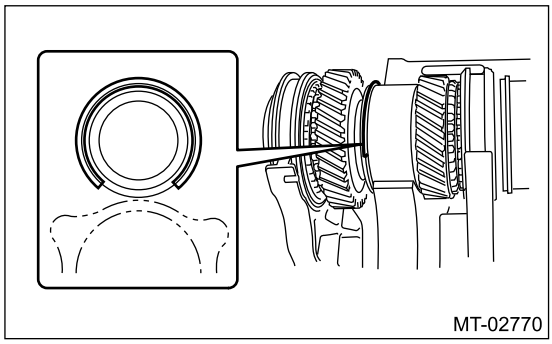
Check the transmission case for cracks, damage, or oil leaks.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Main Shaft Assembly



REMOVAL

1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
3. Remove the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>REMOVAL.
4. Remove the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>REMOVAL.
5. Remove the main shaft assembly.



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Main Shaft Assembly

INSTALLATION

1. Attach the needle bearing and new oil seal to the front of the main shaft assembly.
   Note:
   - **Wrap the clutch splined section with vinyl tape to prevent damage to the oil seal.**
   - **Apply NICHIMOLY N-130 or the equivalent to the sealing lip of the oil seal.**
2. Fit the knock pin hole of the needle bearing outer race to the transmission case knock pin, and install the main shaft assembly.
   Note:
   - **Align the end face of the seal with surface (A) when installing the oil seal.**

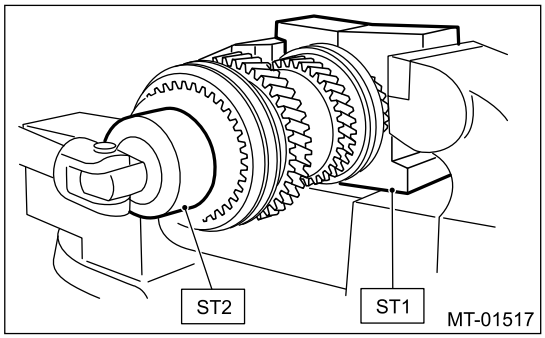
   - **Face the cutout portion of the snap ring for the ball bearing to the drive pinion shaft assembly.**

3. Install the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>INSTALLATION.
4. Check each shifter fork. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Shifter Fork and Rod>INSPECTION.

5. Select a main shaft rear plate. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>ADJUSTMENT.
6. Install the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>INSTALLATION.
7. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
8. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

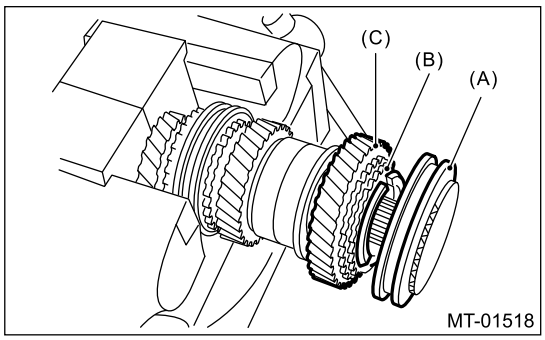
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Main Shaft Assembly

DISASSEMBLY



1. Put vinyl tape around main shaft spline to protect the oil seal from damage. Then pull out the oil seal and needle bearing by hand.
2. Remove the lock nut and lock washer.

Note:



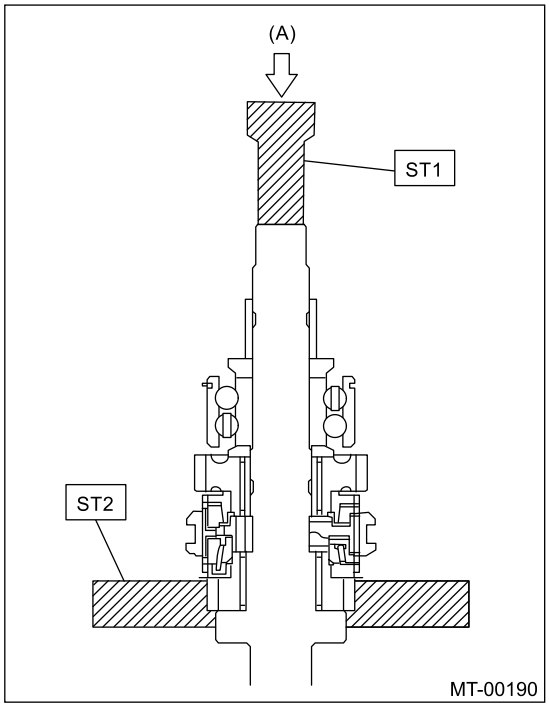
Flatten the lock nut tab before removing the lock nut.

Special Tool:

ST1: 498937000 TRANSMISSION HOLDER
ST2: 499987003 SOCKET WRENCH (35)

3. Remove the 5th hub & sleeve No. 2, baulk lever, 5th baulk ring, and 5th drive gear & needle bearing.

(A) 5th hub & sleeve No. 2
(B) 5th baulk ring
(C) 5th drive gear



4. Using ST1 and ST2, remove the rest of the parts.

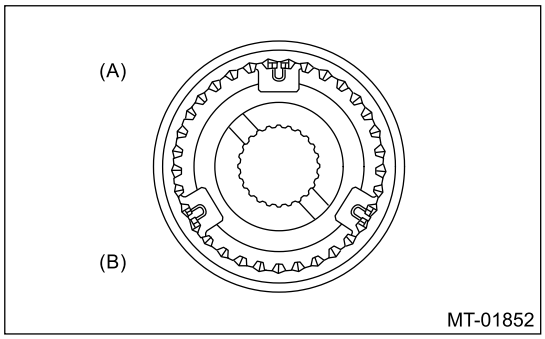
Caution:

- **When replacing the sleeve & hub, replace them as a set.**
- **Do not disassemble the sleeve & hub; the engaging point is pre-determined.**
- **If it is necessary to disassemble, mark the engaging points on the splines beforehand.**

Special Tool:

ST1: 899864100 REMOVER
ST2: 899714110 REMOVER

(A) Press



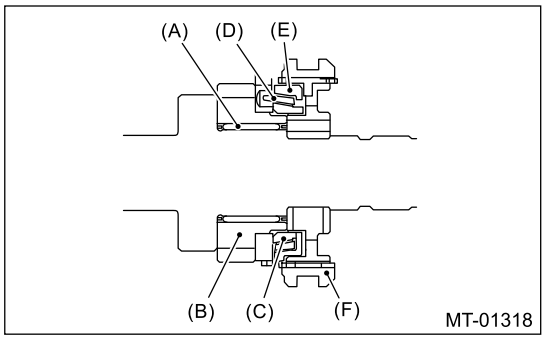
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Main Shaft Assembly

ASSEMBLY

1. When the sleeve & hub assemblies have been disassembled, reassemble by aligning the alignment marks.

Note:

Position the open ends of the spring 120° apart.



(A) 3rd-4th coupling sleeve & synchronizer hub ASSY

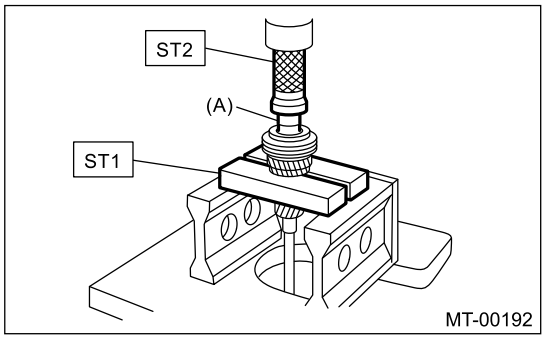
(B) 3rd gear side

2. Install the 3rd drive gear, outer baulk ring, 3rd synchro cone, inner baulk ring, 3rd needle bearing, and sleeve & hub assembly.

Note:

Align the groove of the baulk ring with the 3rd-4th shifting insert.

(A) 3rd needle bearing
(B) 3rd drive gear
(C) Inner baulk ring
(D) 3rd synchro cone
(E) Outer baulk ring
(F) Sleeve & hub ASSY



3. Install the 4th needle bearing race using ST1, ST2 and a press.

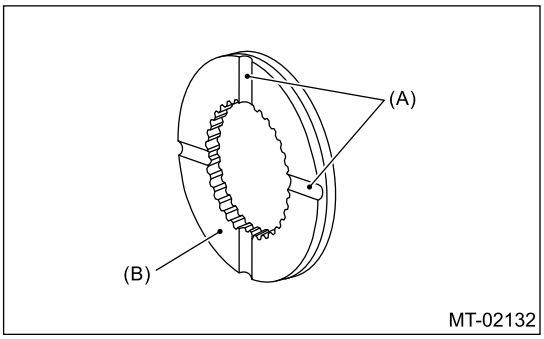
Caution:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

Special Tool:

ST1: 899714110 REMOVER
ST2: 499877000 RACE 4-5 INSTALLER

(A) 4th needle bearing race



4. Install the 4th baulk ring, 4th needle bearing, 4th drive gear, and 4th gear thrust washer to the main shaft.

Caution:

Make sure the thrust washer is facing the correct direction.

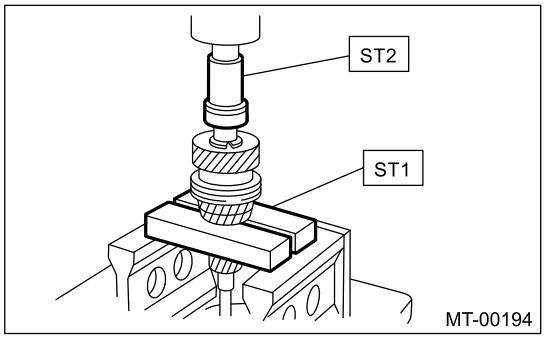
Note:

Align the 4th baulk ring and hub & sleeve assembly with the key groove.

(A) Groove

(B) Face this surface to the 4th gear side.

5. Press-fit a new double ball bearing using the ST1, ST2 and a press.

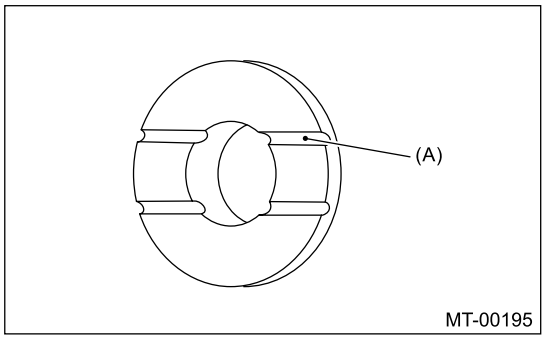


Caution:

- **Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).**
- **Install the snap ring side of the double ball bearing facing the 5th drive gear side.**

Special Tool:

ST1: 899714110 REMOVER

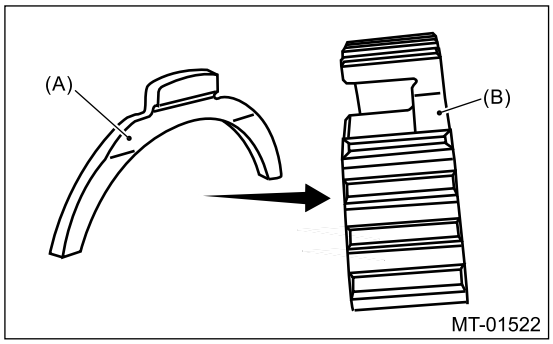


ST2: 499877000 RACE 4-5 INSTALLER

6. Using the REMOVER (899714110) and RACE 4-5 INSTALLER (499877000), install the 5th gear thrust washer and 5th needle bearing race onto the rear section of the main shaft.

Caution:

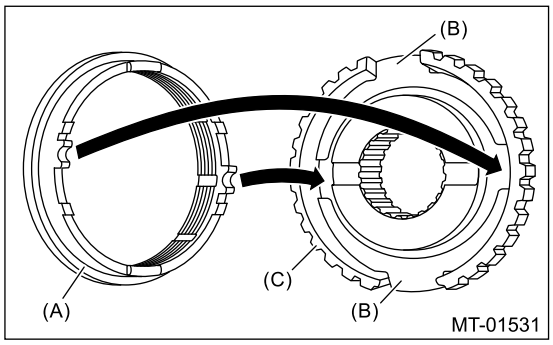
- **Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).**
- **Make sure the thrust washer is facing the correct direction.**



(A) Face this surface to the 5th gear side.

7. Install the rest of the parts to the rear section of the main shaft.

Caution:



- **Install the baulk lever so that the concave side faces toward the 5th hub.**

(A) Baulk lever

(B) 5th hub

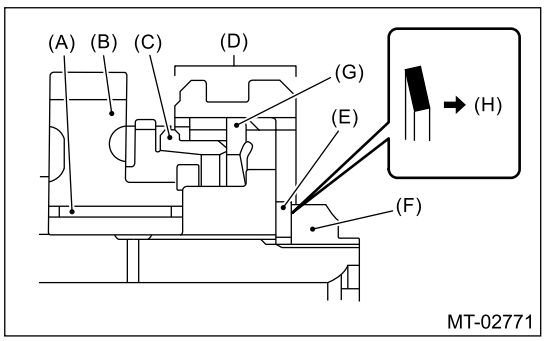
- **Align the protruded section of the 5th baulk ring between the baulk levers.**

(A) 5th baulk ring

(B) Baulk lever

(C) 5th hub

8. Install a new lock washer.



Caution:

Make sure the lock washer is facing the correct direction.

9. Tighten a new lock nut using the SOCKET WRENCH (35) (499987003) and TRANSMISSION HOLDER (498937000).

Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)

(A) 5th needle bearing

(B) 5th drive gear

(C) 5th baulk ring

(D) 5th hub & sleeve No. 2

(E) Lock washer

(F) Lock nut

(G) Baulk lever

(H) Nut side

10. Crimp lock nuts in two locations after tightening.

Caution:

When crimping the lock nut, be careful not to crack it.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Main Shaft Assembly

INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.

1. Bearing

Replace the bearings in the following cases.

- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- When bearing has other defects.

2. Bushing (each gear)

Replace the bushing in following cases.

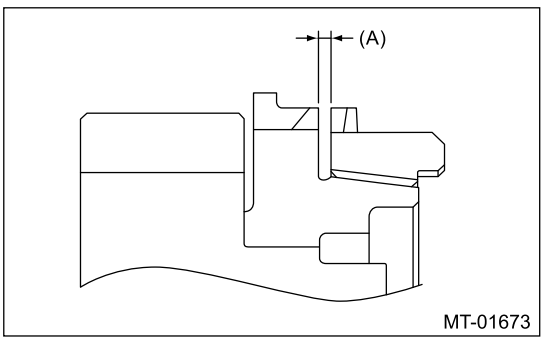
- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3. Gear

Replace gears in the following cases.

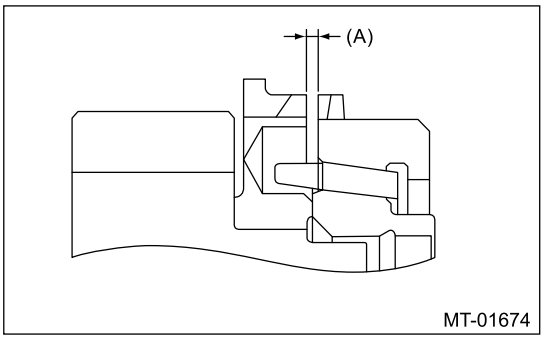
- Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4. Baulk ring, synchro cone



Replace the baulk ring and synchro cone in the following cases.

- When the inner surface and end face are damaged.
- When the baulk ring inner surface is abnormally or partially worn down.
- When the contact surface of the baulk ring insert section is cracked or abnormally worn.
- If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.



Specification:

0.5 mm (0.020 in) or more

Single cone

Double cone

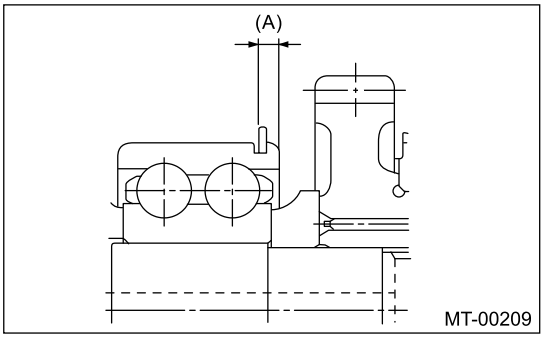
- Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

5. Shifting insert
Replace the shifting insert if deformed, excessively worn or defective in any way.

6. Coupling sleeve and synchronizer hub
- Check the slipping condition of the coupling sleeve.
- Check the splines on the coupling sleeve and synchronizer hub for wear.

7. Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

8. Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

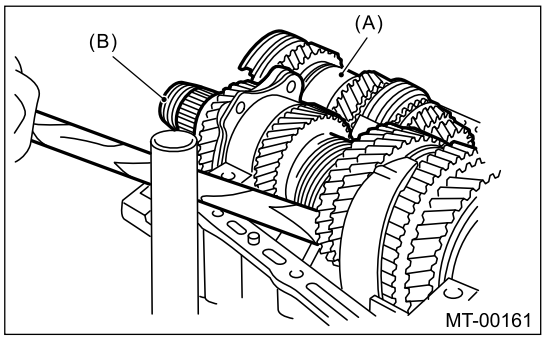


MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Main Shaft Assembly

ADJUSTMENT

Selection of main shaft rear plate:
Measure the protrusion amount (A) of ball bearing from transmission main case surface, and select a suitable plate in the following table.

Note:
Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and moving flange of bearing.

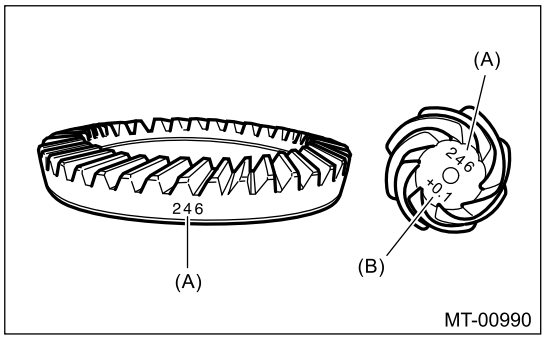


Dimension (A) mm (in)	Part No.	Mark
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 4.00 (0.1524 — 0.1575)	32294AA051	2

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Drive Pinion Shaft Assembly

REMOVAL

1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
3. Remove the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>REMOVAL.
4. Remove the drive pinion shaft assembly.
   Note:
   Use a hammer handle, etc. to remove if too tight.



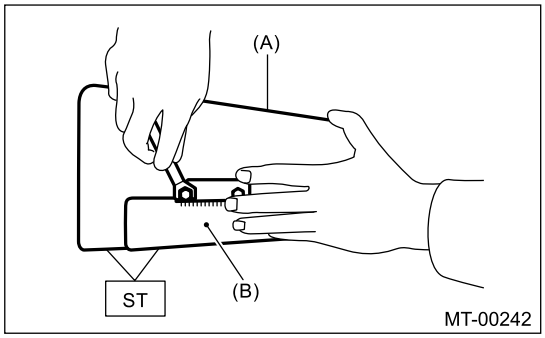
(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

5. Remove the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>REMOVAL.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Drive Pinion Shaft Assembly

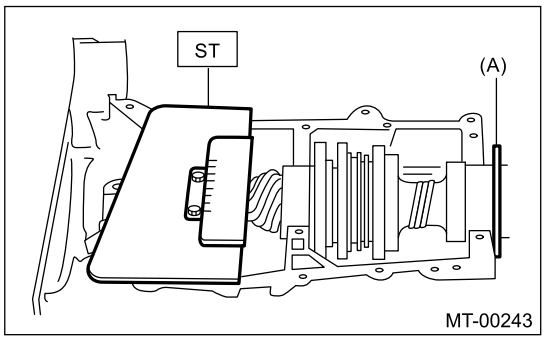
INSTALLATION

1. Remove the front differential assembly.
2. Hypoid gear set match mark/No.: The number (A) on top of the drive pinion, and the number on the hypoid driven gear are set numbers for the two gears. Use a pair having the same numbers. The figure (B) below shows a number for shim adjustment. If no number is shown, the value is zero.



(A) Set number
(B) Number for shim adjustment

3. Place the drive pinion shaft assembly on transmission main case RH without shim and tighten the



bearing mounting bolts.

4. Adjust the ST.
   (1) Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.
   Special Tool:
   ST: 499917500 DRIVE PINION GAUGE ASSY

   (A) Plate
   (B) Scale

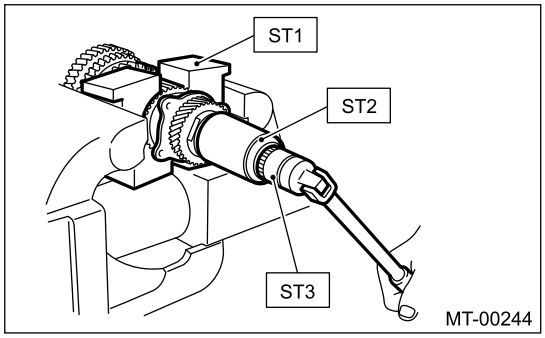
   (2) Tighten the two bolts.
5. Position by inserting the knock pin of DRIVE PINION GAUGE ASSY (499917500) into the knock hole of transmission case.
6. Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.
   Special Tool:
   ST: 499917500 DRIVE PINION GAUGE ASSY

   (A) Adjust the clearance to zero without drive pinion shims.

7. The thickness of drive pinion shims shall be determined by adding the value indicated on drive pinion to the value indicated on the DRIVE PINION GAUGE ASSY (499917500). (Add if the number on drive pinion is prefixed by +, and subtract if the number is prefixed by −.)
8. Select one to three drive pinion shim(s) from the following table for the value determined as described above, and take the shim(s) whose thickness is closest to the said value.

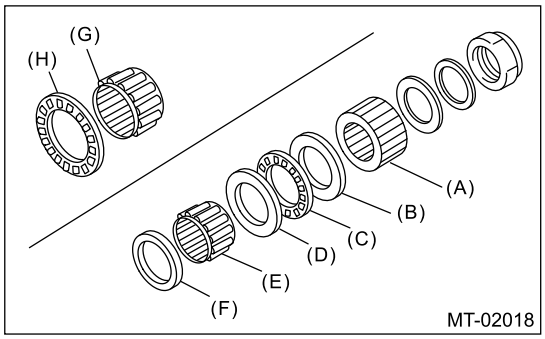
Drive pinion shim	
Part No.	**Thickness mm (in)**
32295AA031	0.150 (0.0059)
32295AA041	0.175 (0.0069)
32295AA051	0.200 (0.0079)
32295AA061	0.225 (0.0089)

Drive pinion shim	
Part No.	**Thickness mm (in)**
32295AA071	0.250 (0.0098)
32295AA081	0.275 (0.0108)
32295AA091	0.300 (0.0118)
32295AA101	0.500 (0.0197)



9. Install the front differential assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>INSTALLATION.
10. Fit the transmission case knock pin to the knock pin hole of the roller bearing and install the drive pinion shaft assembly.
11. Install the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>INSTALLATION.
12. Check each shifter fork. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Shifter Fork and Rod>INSPECTION.
13. Install the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>INSTALLATION.
14. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
15. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

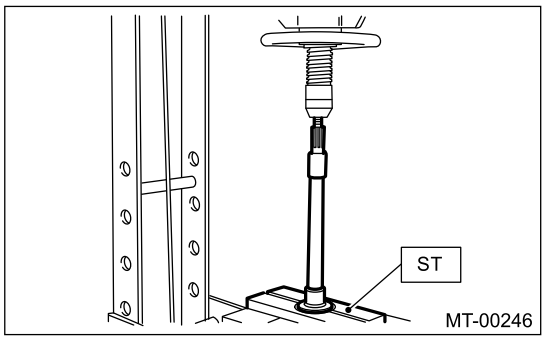
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Drive Pinion Shaft Assembly



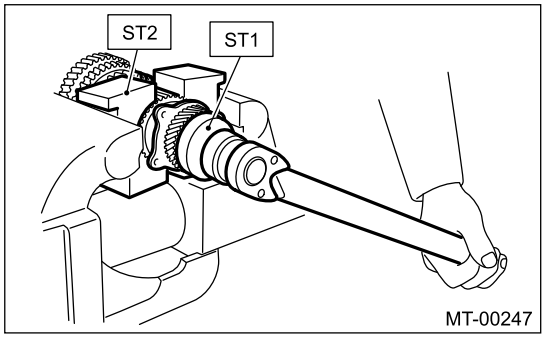
DISASSEMBLY

Note:
Attach a cloth to the end of driven shaft (on the frictional side of the thrust needle bearing) to prevent damage during disassembly or reassembly.

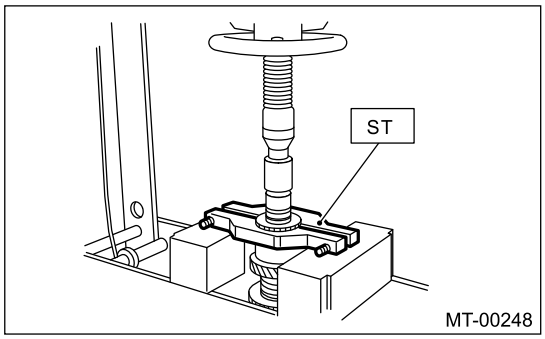
1. Flatten the tab of the lock nut. Remove the lock nut using the ST1, ST2 and ST3.
   Special Tool:
   ST1: 899884100 HOLDER
   ST2: 498427100 STOPPER
   ST3: 899988608 SOCKET WRENCH (27)



2. Remove the lock washer, washer, differential bevel gear sleeve, adjusting washers No. 1, No. 2 and thrust bearing.
3. Pull out the drive pinion shaft, and remove the needle bearing and drive pinion collar from driven shaft.
4. Remove the needle bearing and thrust bearing from drive pinion shaft.



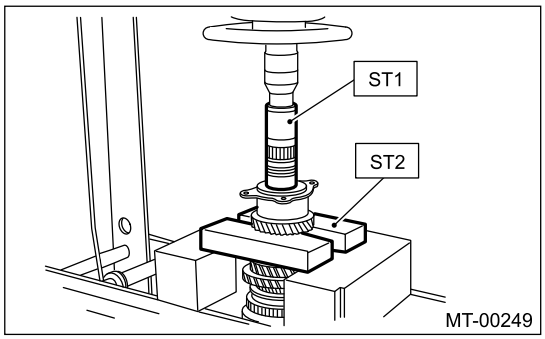
(A) Differential bevel gear sleeve
(B) Adjusting washer No. 1 (25 × 37.5 × t)
(C) Thrust bearing (25 × 37.5 × 3)
(D) Adjusting washer No. 2 (25 × 37.5 × t)
(E) Needle bearing (25 × 30 × 20)
(F) Drive pinion collar
(G) Needle bearing (30 × 37 × 23)
(H) Thrust bearing (33 × 50 × 3)



5. Remove the roller bearing and washer using ST and a press.
Special Tool:
ST: 498077000 REMOVER

6. Flatten the tab of the lock nut. Remove the lock nut and lock washer using ST1 and ST2.
Special Tool:
ST1: 499987300 SOCKET WRENCH (50)
ST2: 899884100 HOLDER

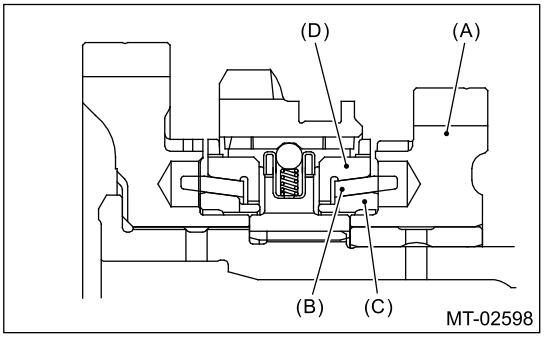
7. Remove the 5th driven gear using ST.
Special Tool:
ST: 499857000 5TH DRIVEN GEAR REMOVER



8. Remove the woodruff key.

9. Remove the double taper roller bearing and 3rd-4th driven gear using ST1 and ST2.

Special Tool:

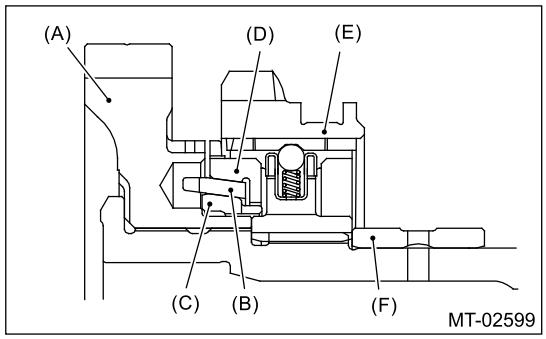


ST1: 499757002 INSTALLER

ST2: 899714110 REMOVER

10. Remove the key.

11. Remove the 2nd driven gear, inner baulk ring, synchro cone and outer baulk ring.



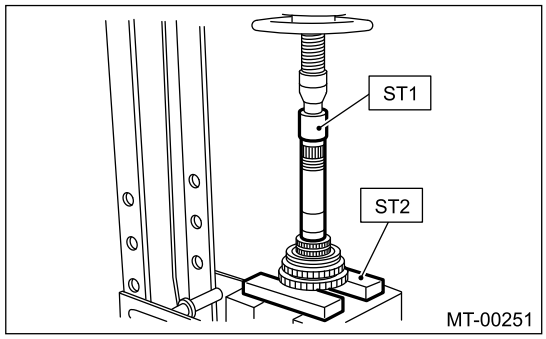
(A) 2nd driven gear

(B) Synchro cone

(C) Inner baulk ring

(D) Outer baulk ring

12. Remove the 1st driven gear, inner baulk ring, synchro cone, outer baulk ring, 2nd driven gear bushing, and gear & hub assembly using ST1 and ST2.



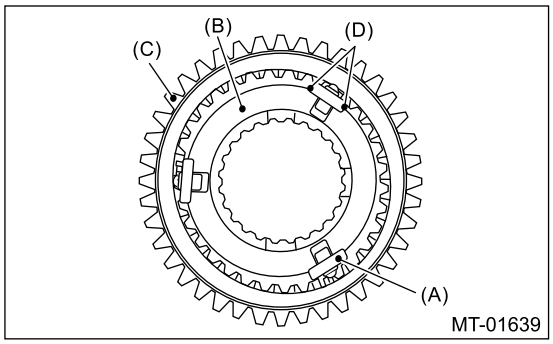
(A) 1st driven gear
(B) Synchro cone
(C) Inner baulk ring
(D) Outer baulk ring
(E) Gear & hub
(F) 2nd driven gear bushing

Caution:

- **If gears or hubs are necessary to replace, replace with a new gear & hub assembly as a set.**
- **Since the gear & hub assembly must engage at the specified position, avoid disassembly as much as possible.**
- **If it is necessary to disassemble, mark the engaging points on the splines beforehand.**

Special Tool:

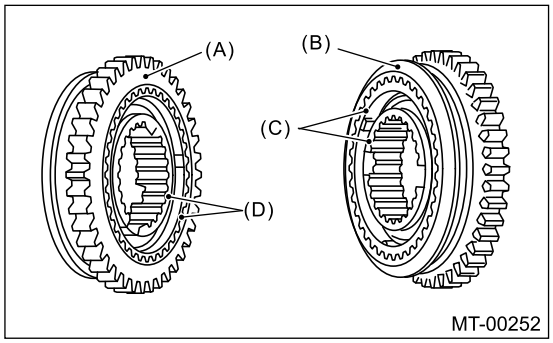
ST1: 499757002 INSTALLER
ST2: 899714110 REMOVER



MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Drive Pinion Shaft Assembly

ASSEMBLY

1. Install the sleeve and the gear and hub assembly by matching the alignment marks.



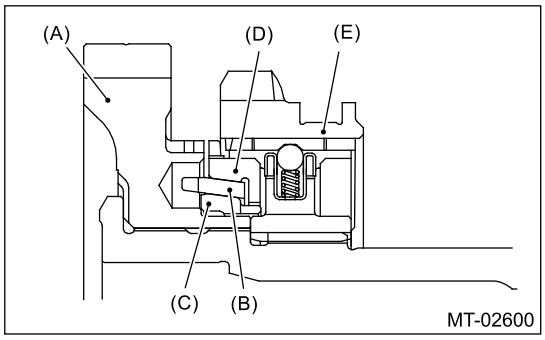
Note:

- **Make sure that there is no large clearance at both sides of the 1st-2nd shifting insert after assembly.**

(A) 1st-2nd shifting insert
(B) 1st-2nd synchronizer hub
(C) Reverse driven gear
(D) There is no large clearance at this part.

- **Use the new gear & hub assembly, if replacing the gear or hub.**

(A) 1st gear side
(B) 2nd gear side
(C) Flush surface
(D) Stepped surface



2. Install the 1st driven gear, inner baulk ring, synchro cone, outer baulk ring, and gear & hub assembly.

Caution:

Make sure the gear & hub assembly is facing the correct direction.

Note:

Align the baulk ring and gear & hub assembly with the key groove.

(A) 1st driven gear
(B) Synchro cone

(C) Inner baulk ring

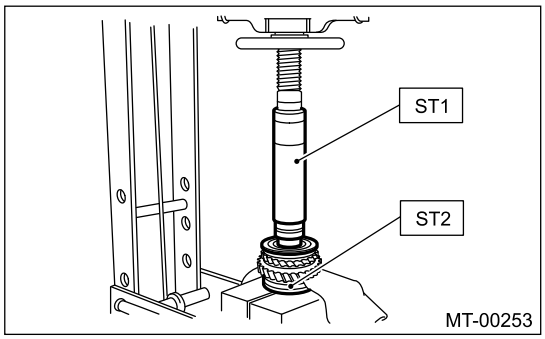
(D) Outer baulk ring

(E) Gear & hub

3. Install the 2nd driven gear bushing using the ST1, ST2 and a press.

Caution:

Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

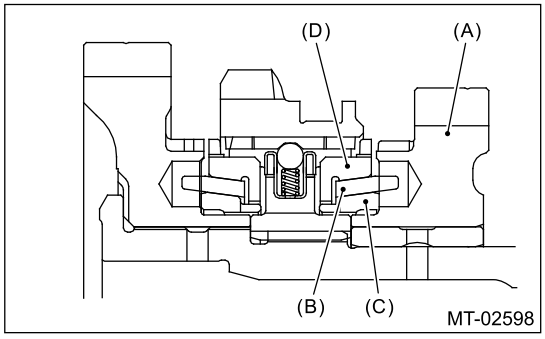


Note:

- **Attach a cloth to the end of the driven shaft to prevent damage.**
- **When press fitting, align the oil holes of the shaft and bushing.**

Special Tool:

ST1: 499277200 INSTALLER



ST2: 499587000 INSTALLER

4. Attach and insert the 2nd driven gear, inner baulk ring, synchro cone and outer baulk ring.

Note:

Align the groove of the baulk ring with the 1st-2nd shifting insert.

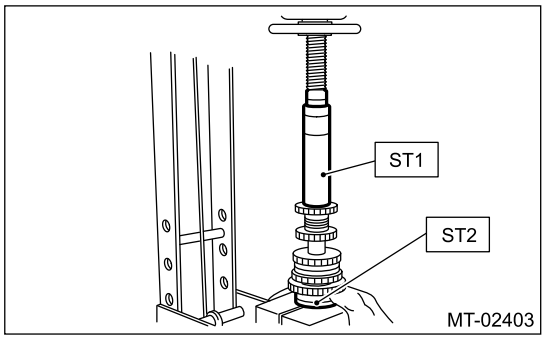
(A) 2nd driven gear

(B) Synchro cone

(C) Inner baulk ring

(D) Outer baulk ring

5. After installing key on driven shaft, install the 3rd-4th driven gear using the ST1, ST2 and a press.



Caution:

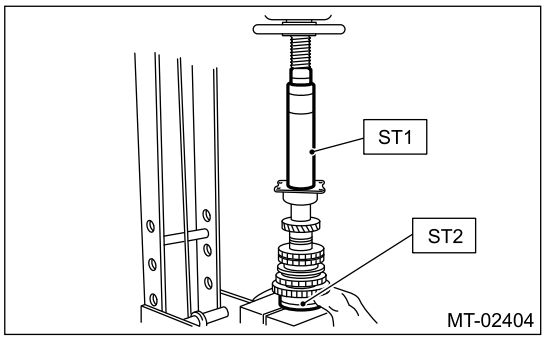
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

Special Tool:

ST1: 499277200 INSTALLER

ST2: 499587000 INSTALLER

6. Install a new double taper roller bearing using the ST1, ST2 and a press.



Caution:

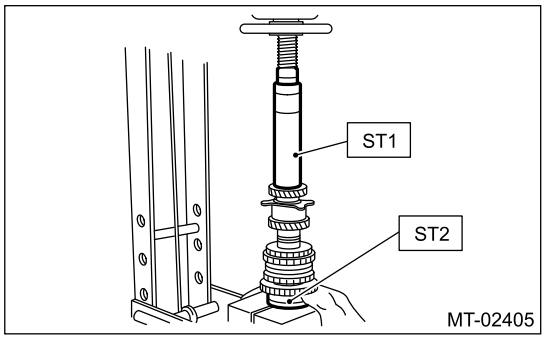
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

Special Tool:

ST1: 499277200 INSTALLER

ST2: 499587000 INSTALLER

7. Position the woodruff key in groove of the rear of driven shaft. Install the 5th driven gear using the ST1, ST2 and a press.



Caution:

- **Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).**
- **Face the groove for identification of the 5th driven gear toward the nut.**

Special Tool:

ST1: 499277200 INSTALLER

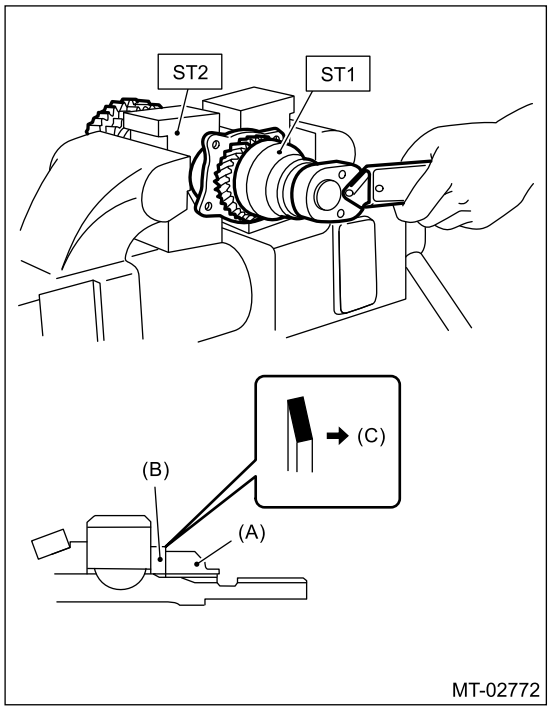
ST2: 499587000 INSTALLER

8. Install a new lock washer.

Caution:

Make sure the lock washer is facing the correct direction.

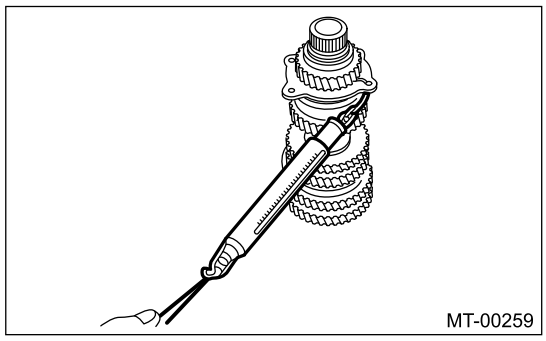
9. Tighten a new lock nut using the ST1 and ST2.



Tightening torque:

260 N·m (26.5 kgf-m, 191.8 ft-lb)

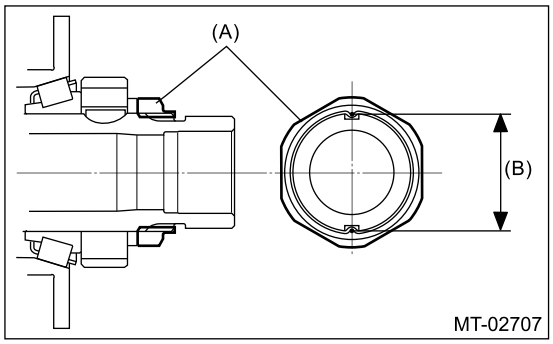
Special Tool:



ST1: 499987300 SOCKET WRENCH (50)

ST2: 899884100 HOLDER

(A) Lock nut
(B) Lock washer
(C) Nut side

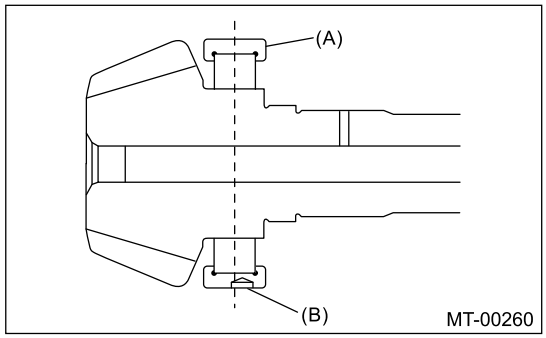


10. Using a spring scale, check that the starting torque of the double taper roller bearing is 0.1 — 1.5 N (0.01 — 0.15 kgf, 0.02 — 0.34 lbf).

11. Crimp the lock nut at two locations so that the dimension of (B) becomes 41.1 mm (1.62 in) or less.

Caution:

When crimping the lock nut, be careful not to crack it.



(A) Lock nut

(B) Outer dimension after crimping

12. Install a new roller bearing.

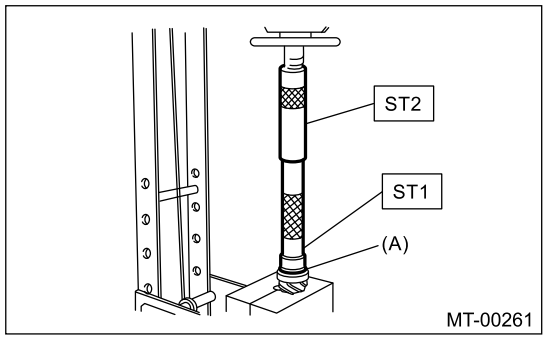
Note:

Install with the knock pin hole of the roller bearing outer race facing the rear side.

(A) Roller bearing

(B) Knock pin hole

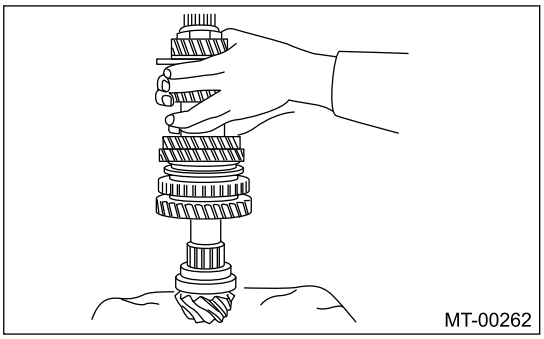
13. Install the washer using the ST1, ST2 and a press.



Caution:

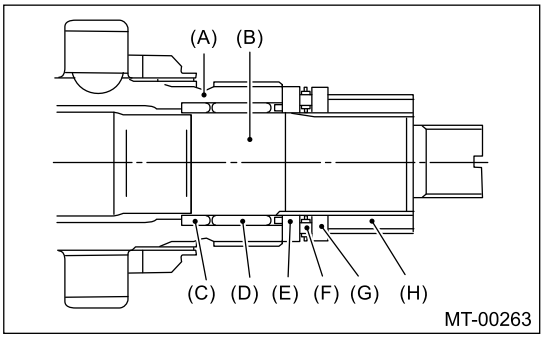
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

Special Tool:



ST1: 499277100 BUSHING 1-2 INSTALLER

ST2: 499277200 INSTALLER



(A) Washer

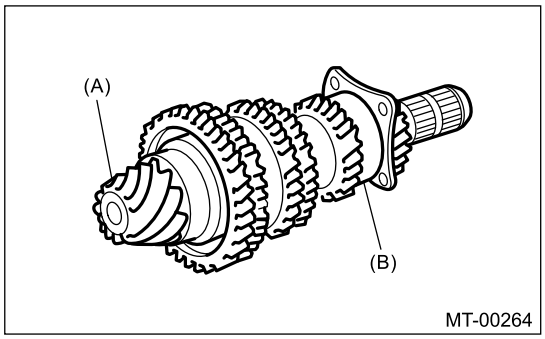
14. Install the thrust bearing and needle bearing and install the driven shaft assembly.

15. Install the drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in this order.

(A) Driven shaft
(B) Drive pinion shaft
(C) Drive pinion collar
(D) Needle bearing (25 × 30 × 20)
(E) Adjusting washer No. 2 (25 × 36 × t)
(F) Thrust bearing (25 × 37.5 × 3)
(G) Adjusting washer No. 1 (25 × 36 × t)
(H) Differential bevel gear sleeve

16. Adjust the thrust bearing preload. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>ADJUSTMENT > THRUST BEARING PRELOAD.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Drive Pinion Shaft Assembly



INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.

1. Bearing

Replace the bearings in the following cases.

- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- The double taper roller bearing on the rear side of the drive pinion shaft should be checked for smooth rotation before the drive pinion shaft assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.

(A) Drive pinion shaft

(B) Double taper roller bearing

- When bearing has other defects.

2. Bushing (each gear)

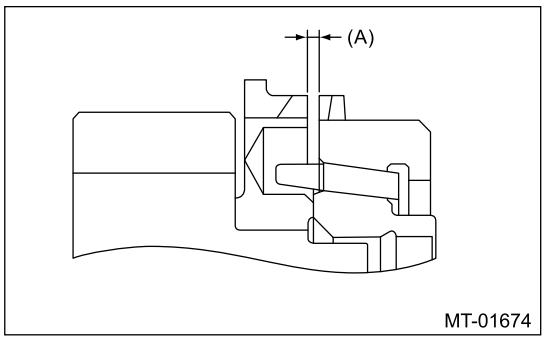
Replace the bushing in following cases.

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3. Gear

Replace gears in the following cases.

- Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.



4. Baulk ring, synchro cone

Replace the baulk ring and synchro cone in the following cases.

- When the inner surface and end face are damaged.
- When the baulk ring inner surface is abnormally or partially worn down.
- When the contact surface of the baulk ring insert section is cracked or abnormally worn.
- If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

  Specification:

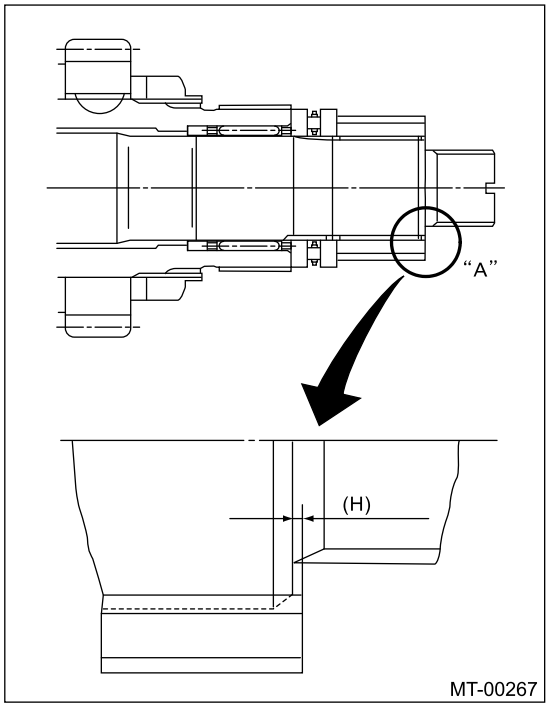
  0.5 mm (0.020 in) or more

- Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

5. Coupling sleeve and synchronizer hub

- Check the slipping condition of the coupling sleeve.
- Check the splines on the coupling sleeve and synchronizer hub for wear.

6. Shifting insert



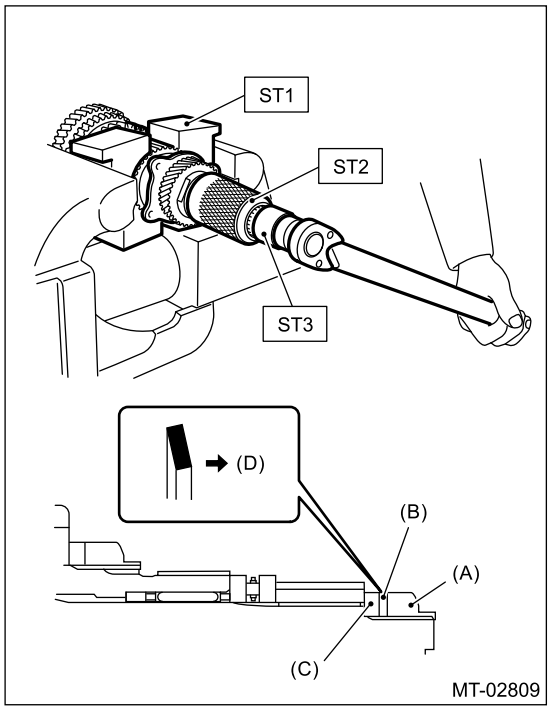
Replace the shifting insert if deformed, excessively worn or defective in any way.

1. THRUST BEARING PRELOAD

1. Select a suitable adjusting washer No. 1 so that dimension (H) will be zero in a visual check. Position the washer (18.3× 30 × t) and a new lock washer (18 × 30 × 2).

Caution:

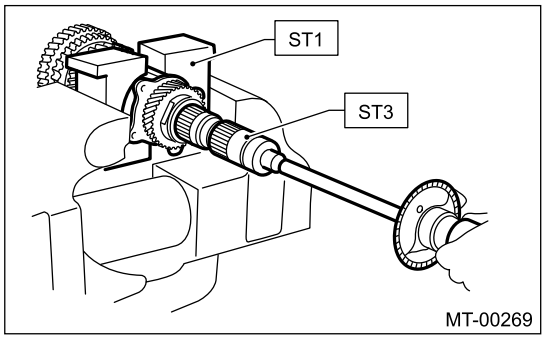
Make sure the lock washer is facing the correct direction.



2. Tighten a new lock nut using the ST1, ST2 and ST3.

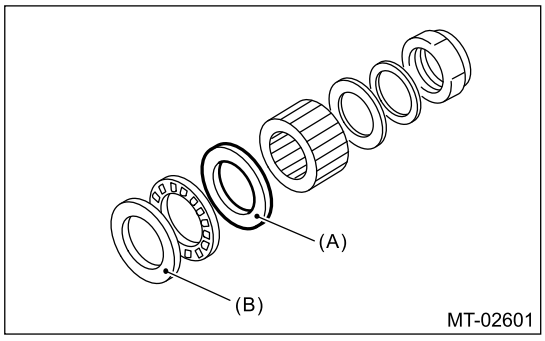
Tightening torque:

120 N·m (12.2 kgf-m, 88.5 ft-lb)



Special Tool:

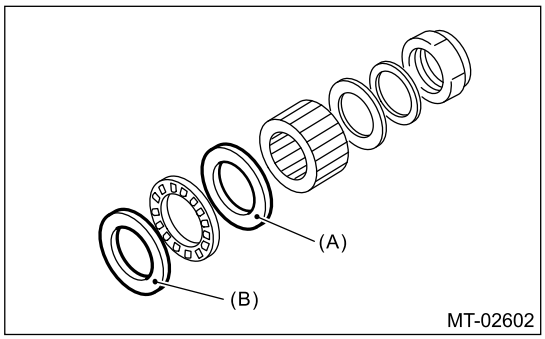
ST1: 899884100 HOLDER
ST2: 498427100 STOPPER
ST3: 899988608 SOCKET WRENCH (27)



(A) Lock nut
(B) Lock washer
(C) Washer
(D) Nut side

3. After removing the ST2, measure the starting torque using torque driver.
Specification:
0.3 — 0.8 N·m (0.03 — 0.08 kgf-m, 0.22 — 0.59 ft-lb)
Special Tool:
ST1: 899884100 HOLDER
ST3: 899988608 SOCKET WRENCH (27)

4. If the starting torque is not within the standard value, select new adjusting washer No. 1 and recheck starting torque.



(A) Adjusting washer No. 1

(B) Adjusting washer No. 2

Adjusting washer No. 1	
Part No.	**Thickness mm (in)**
803025051	3.925 (0.1545)
803025052	3.950 (0.1555)
803025053	3.975 (0.1565)
803025054	4.000 (0.1575)
803025055	4.025 (0.1585)
803025056	4.050 (0.1594)
803025057	4.075 (0.1604)

5. If the specified starting torque cannot be obtained by the selection of adjusting washer No. 1, select adjusting washer No. 2 from the list below. Repeat steps 1) through 4) to adjust starting torque.

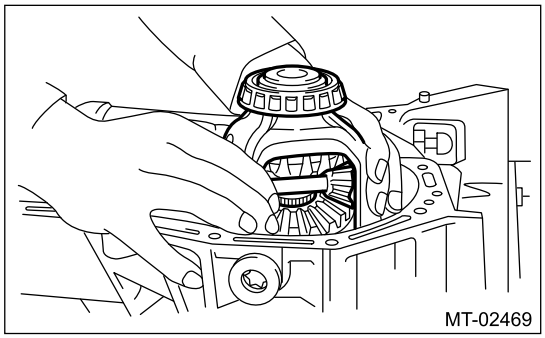
(A) Adjusting washer No. 1

(B) Adjusting washer No. 2

Starting torque	**Dimension H**	**Adjusting washer No. 2**
Low	Small	Select thicker one.
High	Large	Select thinner one.

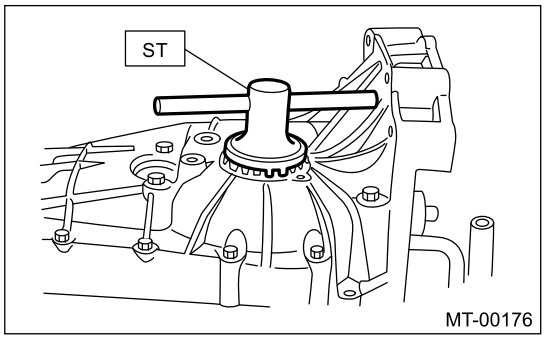
Adjusting washer No. 2	
Part No.	**Thickness mm (in)**
803025059	3.850 (0.1516)
803025054	4.000 (0.1575)
803025058	4.150 (0.1634)

6. Recheck that the starting torque is within the specified range, then crimp the lock nut at four positions.



Caution:

When crimping the lock nut, be careful not to crack it.

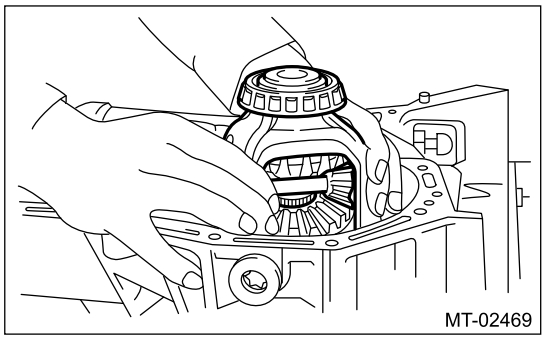


MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Front Differential Assembly

REMOVAL

1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
3. Remove the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>REMOVAL.
4. Remove the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>REMOVAL.
5. Remove the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>REMOVAL.
6. Remove the front differential assembly.
   Caution:
   - **Do not confuse the right and left taper roller bearing outer races.**
   - **Be careful not to damage the oil seal of differential side retainer.**

7. Remove the differential side retainers using the ST.
   Special Tool:
   ST: 18630AA010 WRENCH COMPL RETAINER



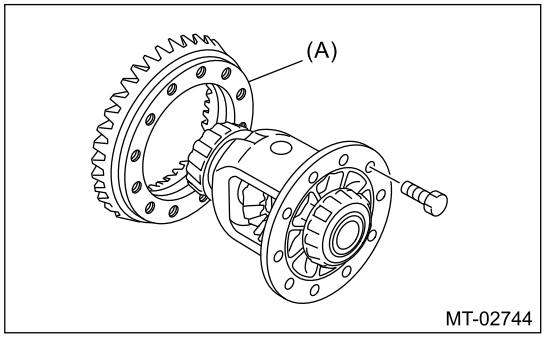
8. Remove the taper roller bearing outer race from the transmission case using the PULLER ASSY (398527700).

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Front Differential Assembly

INSTALLATION

1. Install the differential side retainers using the WRENCH COMPL RETAINER (18630AA010).
2. Install the taper roller bearing outer race to the transmission case.
3. Install the front differential assembly.

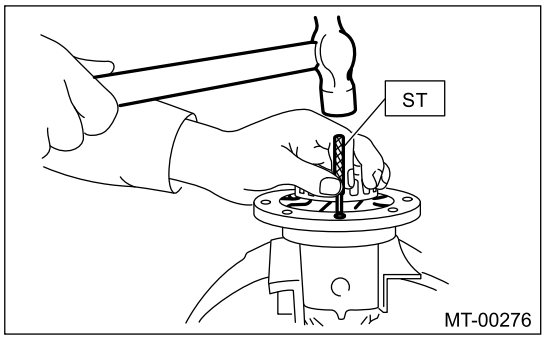
Caution:
Be careful not to bend the seal lips of oil seal.



4. Install the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>INSTALLATION.
5. Install the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>INSTALLATION.
6. Install the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>INSTALLATION.
7. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
8. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

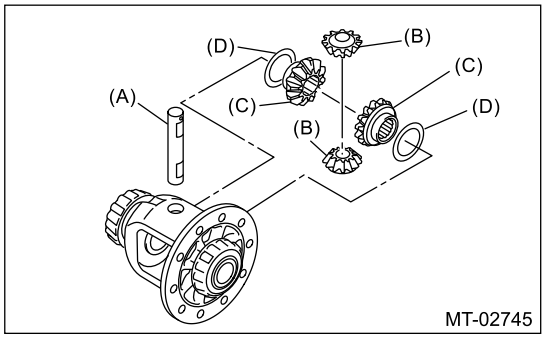
MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Front Differential Assembly

DISASSEMBLY



1. DIFFERENTIAL CASE ASSEMBLY

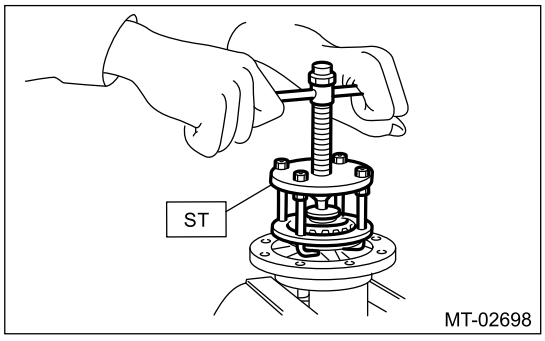
1. Remove the twelve bolts and remove hypoid driven gear.



(A) Hypoid driven gear

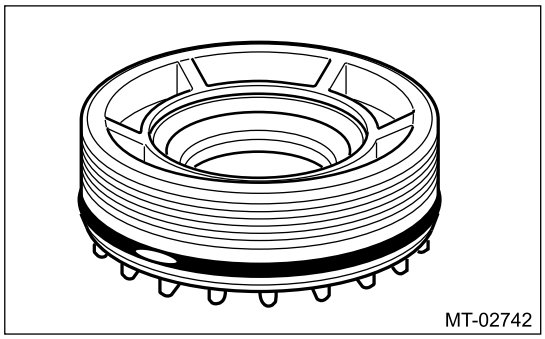
2. Drive out the straight pin from differential assembly toward hypoid driven gear side.
Special Tool:
ST: 899904100 STRAIGHT PIN REMOVER

3. Pull out the pinion shaft, and remove the differential bevel pinion, differential bevel gear and adjusting washer.



(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Adjusting washer

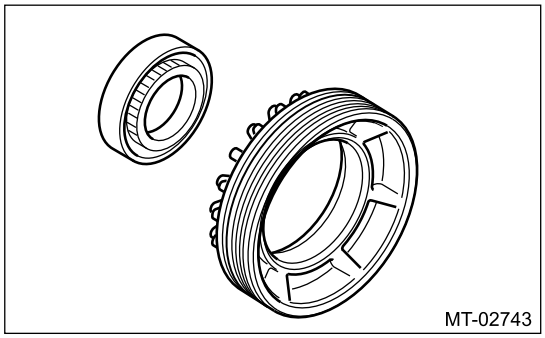
4. Using the ST, remove the taper roller bearing.



Special Tool:

ST: 899524100 PULLER SET

2. DIFFERENTIAL SIDE RETAINER



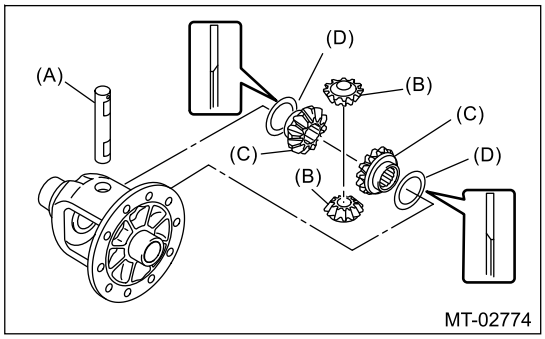
1. Remove the O-rings.

2. Remove the oil seal.

Note:

Remove it using a flat tip screwdriver wrapped with cloth or tape, etc.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Front Differential Assembly



ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1. Install the differential bevel gear and differential bevel pinion together with adjusting washer, and insert the pinion shaft.

Caution:

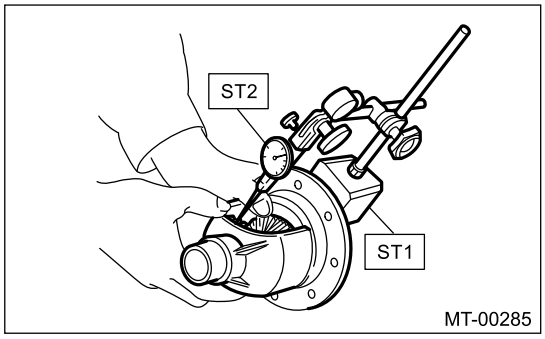
Face the chamfered side of adjusting washer toward bevel gear.

(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Adjusting washer

2. Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>ADJUSTMENT > DIFFERENTIAL BEVEL PINION GEAR BACKLASH.

Note:

Be sure the bevel pinion gear teeth contact adjacent gear teeth during measurement.



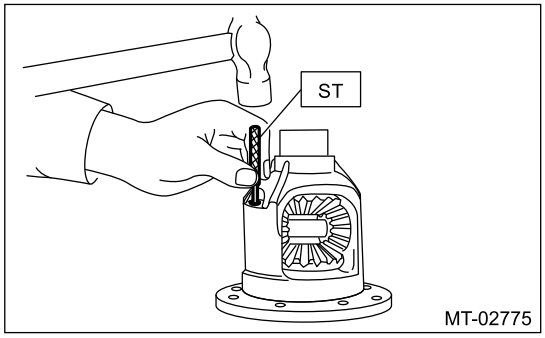
Specification:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

Special Tool:

ST1: 498247001 MAGNET BASE

ST2: 498247100 DIAL GAUGE



3. Align the pinion shaft and differential case with each hole, and drive a new straight pin into the holes from the hypoid driven gear side using the ST.

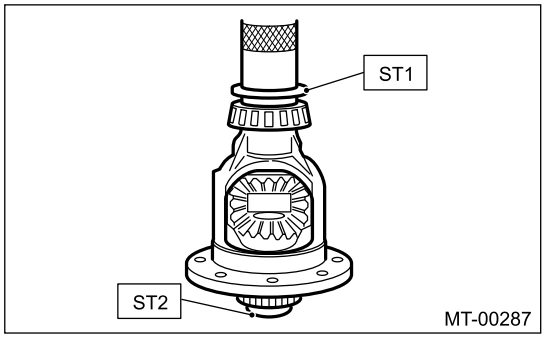
Caution:

After driving, crimp the area around the hole, and make sure that the straight pin will not come out.

Special Tool:

ST: 899904100 STRAIGHT PIN REMOVER

4. Install the taper roller bearing.

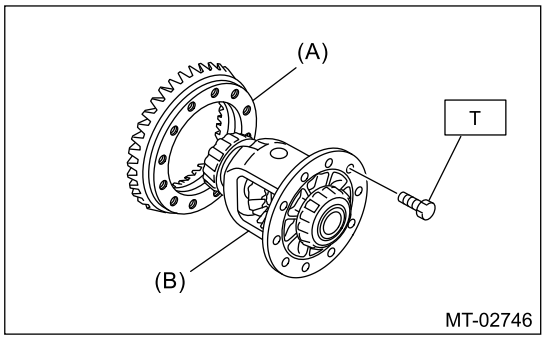


Caution:

- **Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).**
- **Be careful when handling because the taper roller bearing and the outer race are used as a set.**

Special Tool:

ST1: 499277100 BUSHING 1-2 INSTALLER



ST2: 398497701 SEAT

5. Install the hypoid driven gear using twelve bolts.

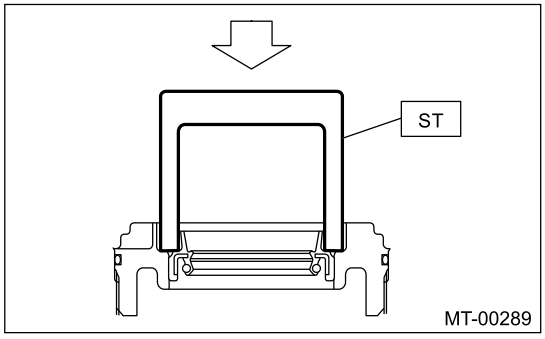
Tightening torque:

T: 62 N·m (6.3 kgf-m, 45.7 ft-lb)

(A) Hypoid driven gear

(B) Differential case

2. DIFFERENTIAL SIDE RETAINER

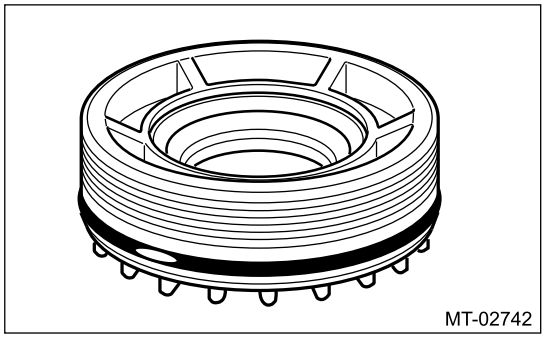


1. Using the ST, install a new oil seal by lightly tapping with a plastic hammer.

Caution:

- **Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.**
- **Check the identification marks (R, L), and attach the oil seal RH and LH.**

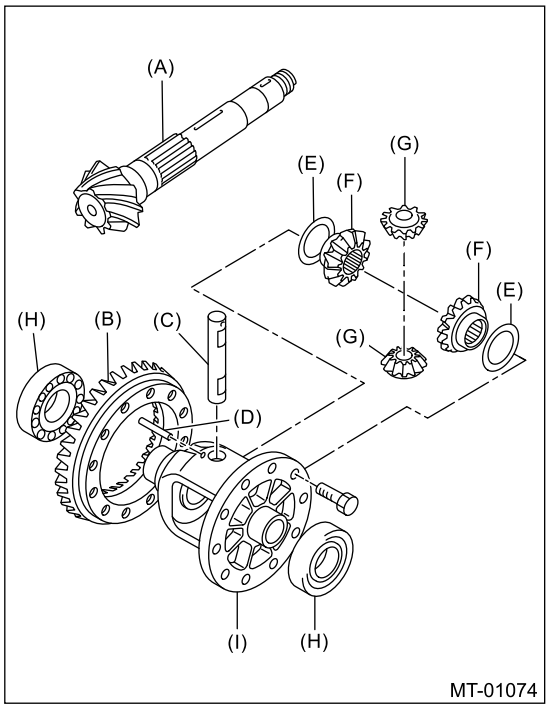
Special Tool:



ST: 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

2. Install a new O-ring.

Note:



- **Apply transmission gear oil to O-ring.**
- **Do not stretch or damage the O-ring.**
- **Install the O-ring after adjusting the backlash of the hypoid driven gear and the preload of the taper roller bearing.**

INSPECTION

Repair or replace the differential gear in the following cases:

- When the hypoid driven gear and drive pinion shaft tooth surfaces are damaged, excessively worn, or seized.
- When the roller bearing on the drive pinion shaft has a worn or damaged roller path.
- When there is damage, wear or seizure of the differential bevel pinion, differential bevel gear, adjusting washer, pinion shaft or straight pin.
- When the differential case sliding surfaces are worn or damaged.

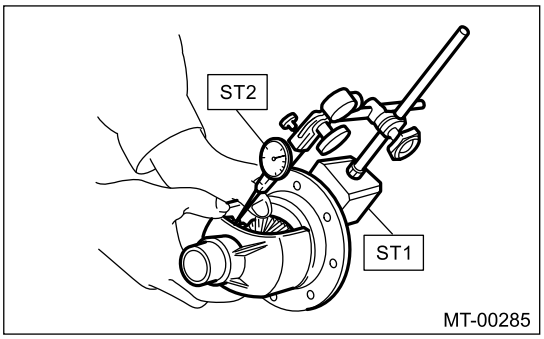
(A) Drive pinion shaft
(B) Hypoid driven gear
(C) Pinion shaft
(D) Straight pin
(E) Adjusting washer
(F) Differential bevel gear
(G) Differential bevel pinion
(H) Taper roller bearing
(I) Differential case

1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>ADJUSTMENT.

Note:

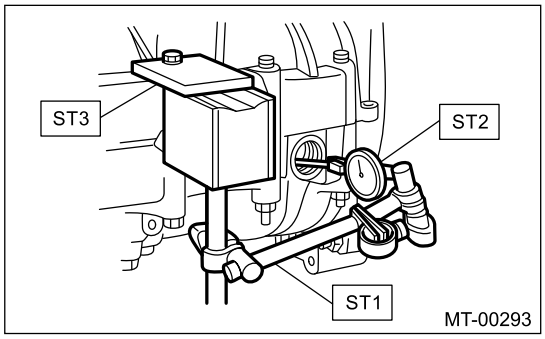
Be sure the bevel pinion gear teeth contact adjacent gear teeth during measurement.



Specification:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

Special Tool:

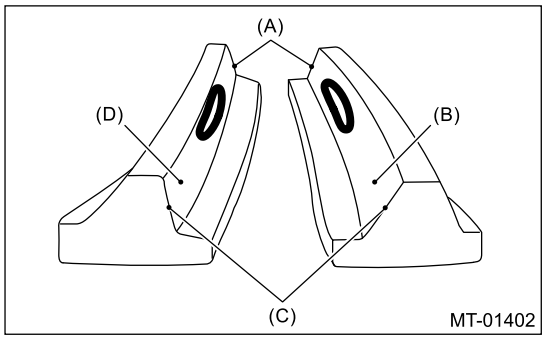


ST1: 498247001 MAGNET BASE

ST2: 498247100 DIAL GAUGE

2. HYPOID DRIVEN GEAR BACKLASH

1. Set the ST1, ST2 and ST3. Insert the needle through drain plug hole so that the needle comes in contact with the tooth surface on the right corner, and check the backlash.
   Special Tool:
   ST1: 498247001 MAGNET BASE
   ST2: 498247100 DIAL GAUGE
   ST3: 498255400 PLATE



2. Install SUBARU genuine axle shafts to both sides, rotate in the inversion direction so that the gauge contacts the tooth surface, and read the dial gauge.
   Note:
   If the backlash is outside the specified range, adjust it by turning the differential side retainer RH.
   Specification:
   0.13 — 0.18 mm (0.0051 — 0.0071 in)

Part No. 38415AA100 Axle shaft

3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

Check tooth contact of hypoid driven gear as follows: Apply a thin uniform coat of red lead on both teeth surfaces on 3 or 4 teeth of the driven gear. Rotate the main shaft to move the driven gear back and forth until a definite contact pattern is developed on the driven gear, and judge whether face contact is correct. When the contact pattern is not correct, adjust. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>ADJUSTMENT.

- Tooth contact is correct.

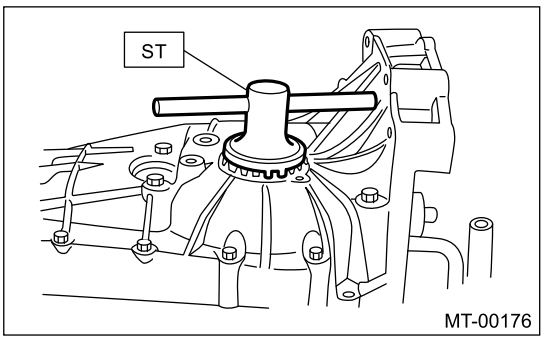
(A) Toe
(B) Coast side
(C) Heel
(D) Drive side

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Front Differential Assembly

ADJUSTMENT

1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

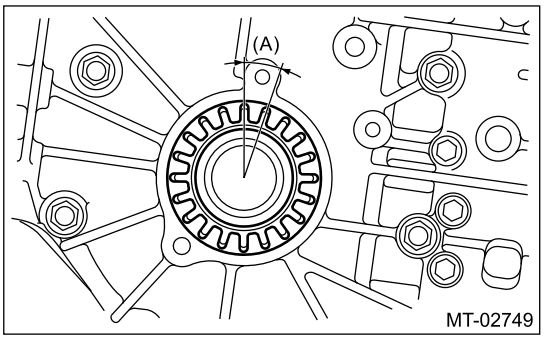
1. Disassemble the front differential assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>DISASSEMBLY.
2. Select the adjusting washer from the table and install.



Adjusting washer	
Part No.	**Thickness mm (in)**
803038021	0.925 — 0.950 (0.0364 — 0.0374)
803038022	0.975 — 1.000 (0.0384 — 0.0394)
803038023	1.025 — 1.050 (0.0404 — 0.0413)

3. Adjust until the standard value is obtained.
   Specification:
   0.13 — 0.18 mm (0.0051 — 0.0071 in)

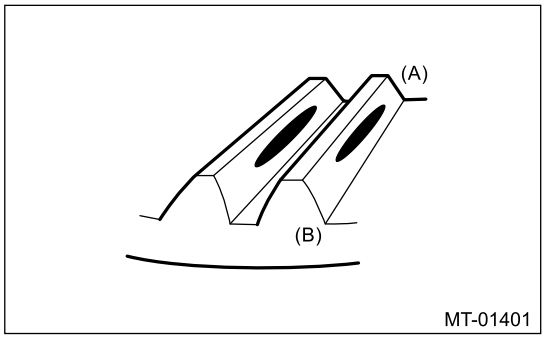
2. HYPOID DRIVEN GEAR BACKLASH



Adjust by turning the differential side retainer RH.

Special Tool:
ST: 18630AA010 WRENCH COMPL RETAINER

Note:

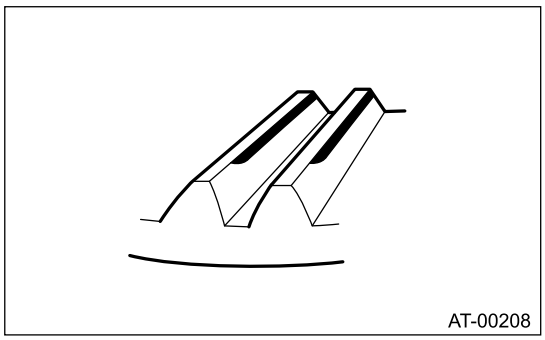


Each time the side retainer rotates by one notch (A), the backlash changes by 0.05 mm (0.020 in).

3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

1. Adjust until correct teeth contact is obtained.
2. Check tooth contact, and perform the adjustment as follows.
   - Correct tooth contact

     Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)



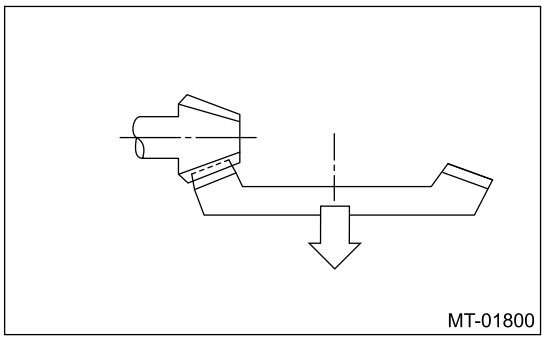
(A) Toe side

(B) Heel side

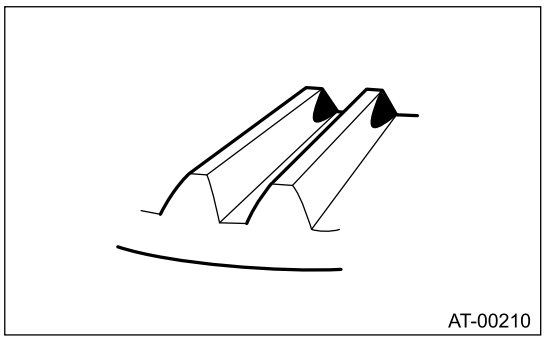
   - Face contact

     Check item: Backlash is too large.

     Contact pattern

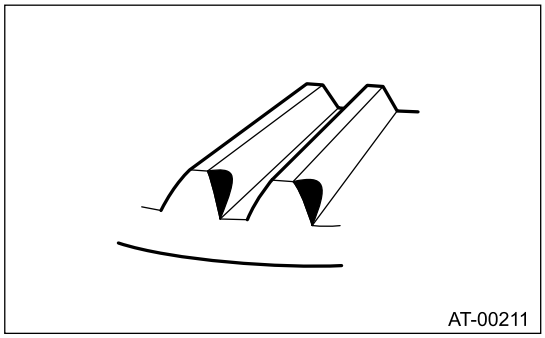


Corrective action: Tighten the differential side retainer to move the driven gear closer to the drive pinion shaft.



- Flank contact
  Check item: Backlash is too small.
  Contact pattern

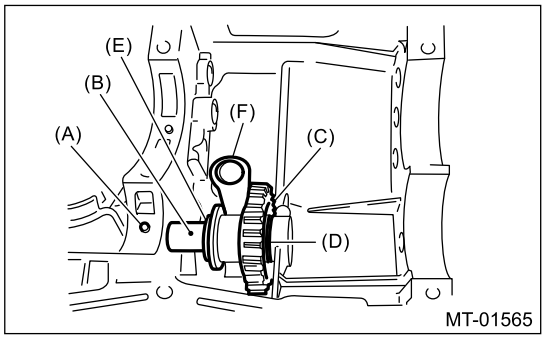
  Corrective action: Loosen the differential side retainer to move the driven gear away from the drive pinion shaft.



- Toe contact (inside contact)
  Check item: Teeth contact area is too small.
  Contact pattern

  Corrective action: Increase the thickness of drive pinion shim and tighten the differential side retainer to move the driven gear closer to the drive pinion shaft according to the procedure for bringing drive pinion shaft away from driven gear.

- Heel contact (outside end contact)
  Check item: Teeth contact area is too small.
  Contact pattern

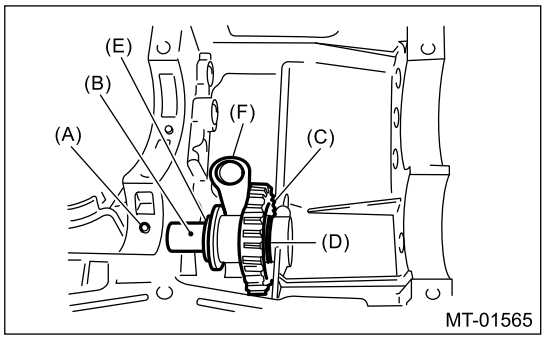


Corrective action: Reduce thickness of the drive pinion shim according to the procedures for moving the drive pinion shaft closer to driven gear. Also loosen the differential side retainer to move the driven gear away from the drive pinion shaft.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Idler Gear

REMOVAL

1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.
3. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
4. Remove the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>REMOVAL.
5. Remove the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>REMOVAL.
6. Remove the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>REMOVAL.
7. Remove the front differential assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>REMOVAL.
8. Remove the shifter forks and rods. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Shifter Fork and Rod>REMOVAL.
9. Pull out the straight pin, and remove the reverse idler gear shaft, adjusting washer, reverse idler gear and washer.



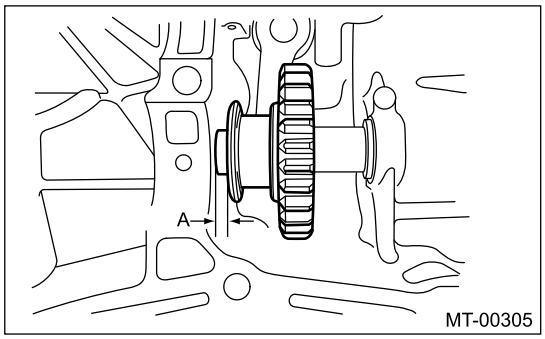
(A) Straight pin
(B) Reverse idler gear shaft
(C) Reverse idler gear
(D) Adjusting washer
(E) Reverse idler gear washer
(F) Reverse shifter lever

10. Remove the reverse shifter lever.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Idler Gear

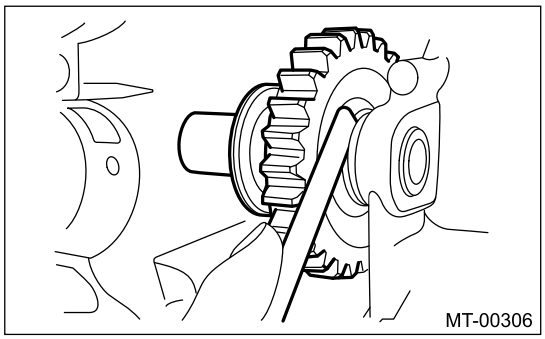
INSTALLATION

1. Install the reverse shifter lever, adjusting washer, reverse idler gear, reverse idler gear shaft and washer, and secure them with a new straight pin.
   Caution:
   Be sure to install the reverse idler gear shaft from rear side.



(A) Straight pin
(B) Reverse idler gear shaft
(C) Reverse idler gear
(D) Adjusting washer
(E) Reverse idler gear washer
(F) Reverse shifter lever

2. Check and adjust clearance between the reverse idler gear and the timing case wall surface. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Idler Gear>INSPECTION.
3. Install the shifter forks and rods. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Shifter Fork and Rod>INSTALLATION.
4. Install the front differential assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>INSTALLATION.
5. Install the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>INSTALLATION.
6. Install the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>INSTALLATION.
7. Install the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>INSTALLATION.
8. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
9. Install the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>INSTALLATION.
10. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

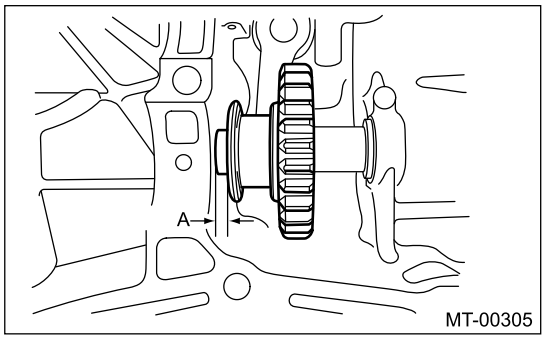


MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Idler Gear

INSPECTION

1. Move the reverse shifter rod toward the reverse side. Check the clearance A between the reverse idler gear and the transmission case wall surfaces.
   If the value is out of specification, select the appropriate reverse shifter lever and adjust. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Idler Gear>ADJUSTMENT.
   Specification:
   6.0 — 7.5 mm (0.236 — 0.295 in)

2. After installing a suitable reverse shifter lever, shift into neutral. Check the clearance between the reverse idler gear and the transmission case wall surfaces.
   If the value is out of specification, select the appropriate adjusting washer and adjust. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Reverse Idler Gear>ADJUSTMENT.
   Specification:
   0 — 0.5 mm (0 — 0.020 in)

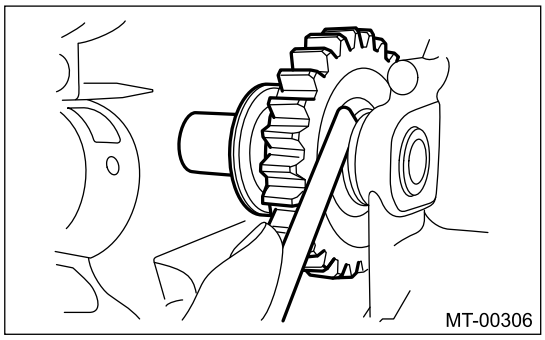


3. Check the reverse idler gear and shaft for damage. Replace if it is damaged.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Reverse Idler Gear

ADJUSTMENT

1. Select the appropriate reverse shifter lever from the table below, and adjust the clearance A between the reverse idler gear and transmission case wall.
   Specification:
   6.0 — 7.5 mm (0.236 — 0.295 in)

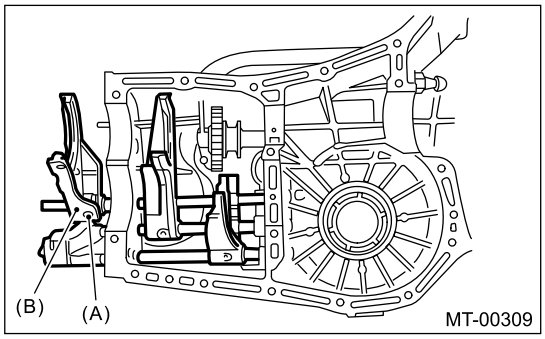


Reverse shifter lever		
Part No.	**Mark**	**Content**
32820AA070	7	Far from case wall
32820AA080	8	Specification

Reverse shifter lever		
Part No.	**Mark**	**Content**
32820AA090	9	Closer to case wall

2. Select the appropriate adjusting washer from the table below, and adjust the clearance between the reverse idler gear and transmission case wall.

Specification:

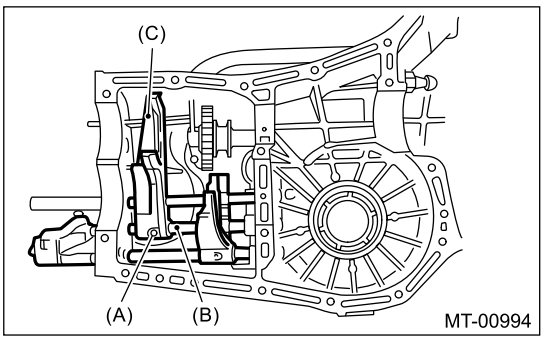


0 — 0.5 mm (0 — 0.020 in)

Adjusting washer	
Part No.	**Thickness mm (in)**
803020151	0.4 (0.016)
803020152	1.1 (0.043)
803020153	1.5 (0.059)
803020154	1.9 (0.075)
803020155	2.3 (0.091)

REMOVAL

1. Remove the manual transmission assembly from the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>REMOVAL.
2. Remove the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>REMOVAL.
3. Remove the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>REMOVAL.
4. Remove the transmission case. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transmission Case>REMOVAL.
5. Remove the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>REMOVAL.
6. Remove the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>REMOVAL.
7. Remove the front differential assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>REMOVAL.
8. Drive out the straight pin by tapping it with the REMOVER (398791700), and remove the 5th shifter fork.



(A) Straight pin
(B) 5th shifter fork

9. Remove the check ball plugs, check ball springs and check balls.
10. Drive out the straight pin by tapping with the REMOVER (398791700), and remove the 3rd-4th fork rod and 3rd-4th shifter fork.

Caution:

- **When removing the 3rd-4th fork rod, keep other fork rods in neutral.**
- **When driving out the straight pin, remove it toward the inside of case so that it does not hit against the case.**

(A) Straight pin

(B) 3rd-4th fork rod

(C) 3rd-4th shifter fork

11. Drive out the straight pin by tapping with the REMOVER (398791700), and pull out the 1st-2nd fork rod and 1st-2nd shifter fork.
12. Remove the snap ring (outer), and pull out the reverse fork rod from the reverse fork rod arm. Then take out the check ball, check ball spring, and interlock plunger from the reverse fork rod arm. And then remove the reverse fork rod.

    Caution:

    When pulling out the reverse fork rod arm, be careful not to let the ball pop out of arm.
13. Remove the reverse shifter lever.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Shifter Fork and Rod

INSTALLATION

1. Install the check ball spring and check ball to the reverse fork rod arm, and press-in the ACCENT BALL INSTALLER (399411700).
2. Install the reverse fork rod through the hole on the rear of the transmission case. Press out the ACCENT BALL INSTALLER (399411700) using the reverse fork rod, and fix with outer snap ring.
3. Install the interlock plunger to reverse fork rod arm.

    Note:

    Apply grease to plunger to prevent it from falling.
4. Position the check balls, check ball springs and new gaskets in the reverse fork rod hole on the left side of transmission case, and tighten the check ball plugs.

    Tightening torque:

    20 N·m (2.0 kgf-m, 14.8 ft-lb)
5. Install the 1st-2nd fork rod to the 1st-2nd shifter fork through the hole on the rear of the transmission case.

    Caution:

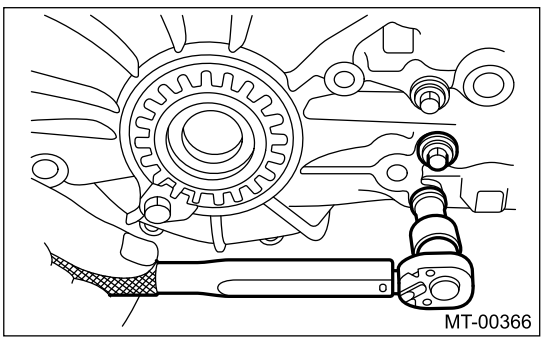
    - **Set the reverse fork rod to neutral.**
    - **Check that the positions of interlock plunger is correct.**
6. Align the holes in the 1st-2nd fork rod and the 1st-2nd shifter fork, and drive a new straight pin into these holes using the REMOVER (398791700).
7. Install the interlock plunger (thin) onto the 3rd-4th fork rod.

    Note:

    Apply grease to plunger to prevent it from falling.
8. Install the 3rd-4th fork rod to the 3rd-4th shifter fork and reverse fork rod arm through the hole on the rear of the transmission case.
9. Align the holes in the 3rd-4th fork rod and the 3rd-4th shifter fork, and drive a new straight pin into these holes using the REMOVER (398791700).

    Caution:

    - **Set the reverse fork rod and the 1st-2nd fork rod to neutral.**
    - **Check that the positions of interlock plunger is correct.**



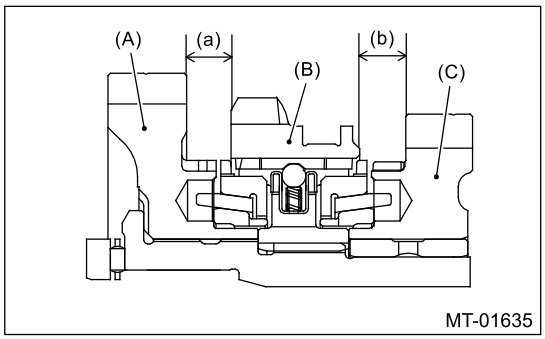
(A) Straight pin
(B) 3rd-4th fork rod
(C) 3rd-4th shifter fork

10. Install the 5th shifter fork onto the rear of reverse fork rod.
11. Align the holes in the 5th shifter fork and the reverse fork rod, and drive a new straight pin using the REMOVER (398791700).

(A) 5th shifter fork
(B) Reverse fork rod
(C) Straight pin

12. Position the check balls, check ball springs and new gaskets to the 3rd-4th fork rod and 1st-2nd fork rod holes, and install the check ball plugs.
Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

13. Install the front differential assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Front Differential Assembly>INSTALLATION.
14. Install the main shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Main Shaft Assembly>INSTALLATION.
15. Install the drive pinion shaft assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Drive Pinion Shaft Assembly>INSTALLATION.
16. Install the transmission case. Ref. to MANUAL TRANSMISSION AND

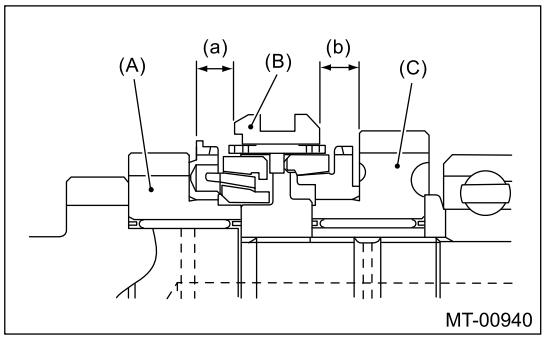


DIFFERENTIAL(5MT)>Transmission Case>INSTALLATION.

17. Install the transfer case together with the extension case assembly. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Transfer Case and Extension Case Assembly>INSTALLATION.
18. Install the back-up light switch and the neutral position switch. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>INSTALLATION.
19. Install the manual transmission assembly to the vehicle. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Manual Transmission Assembly>INSTALLATION.

MANUAL TRANSMISSION AND DIFFERENTIAL(5MT) > Shifter Fork and Rod

INSPECTION

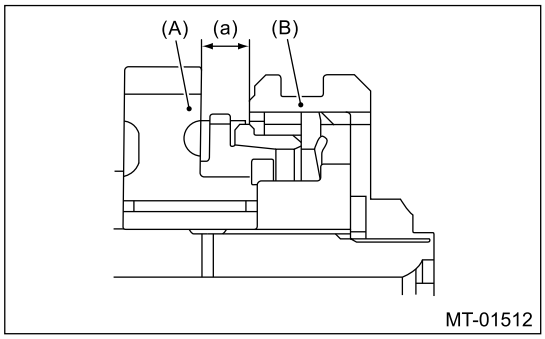


1. Check the shifter fork and fork rod for damage. Replace if it is damaged.
2. Gearshift mechanism
   Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.
3. Inspect the clearances (a) and (b) between 1st, 2nd driven gear and reverse driven gear. If it is outside the standard value, replace the shifter fork as required.
   Specification:
   9.5 mm (0.374 in)

(A) 1st driven gear
(B) Reverse driven gear
(C) 2nd driven gear

1st-2nd shifter fork		
Part No.	**Mark**	**Content**
32804AA060	1	Approaches 1st gear by 0.2 mm (0.008 in).
32804AA070	No mark	Specification
32804AA080	3	Approaches 2nd gear by 0.2 mm (0.008 in).

4. Inspect the clearances (a) and (b) between the 3rd, 4th drive gear and the coupling sleeve. If it is outside the standard value, replace the shifter fork as required.
   Specification:
   9.3 mm (0.366 in)



(A) 3rd drive gear
(B) Coupling sleeve
(C) 4th drive gear

3rd-4th shifter fork		
Part No.	**Mark**	**Content**
32810AA061	1	Approaches 4th gear by 0.2 mm (0.008 in).
32810AA071	No mark	Specification
32810AA101	3	Approaches 3rd gear by 0.2 mm (0.008 in).

5. Inspect the clearance (a) between 5th drive gear and coupling sleeve. If it is outside the standard value, replace the shifter fork as required.

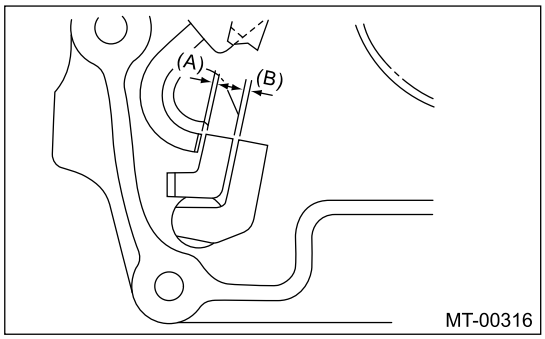
Specification:

9.3 mm (0.366 in)

(A) 5th drive gear
(B) Coupling sleeve

5th shifter fork		
Part No.	**Mark**	**Content**
32812AA201	7	Approaches 5th gear by 0.2 mm (0.008 in).
32812AA211	No mark	Specification
32812AA221	9	Moves from the 5th gear by 0.2 mm (0.008 in).

6. Inspect the rod end clearances (A) and (B). If it is outside the standard value, replace the fork rod or shifter fork as required.



Specification:

Clearance (A):

0.5 — 1.3 mm (0.020 — 0.051 in)

Clearance (B):

0.4 — 1.4 mm (0.016 — 0.055 in)

(A) 3rd-4th — 5th

(B) 1st-2nd — 3rd-4th

INSPECTION

1. MANUAL TRANSMISSION

Symptoms	Possible cause	Corrective action
1. Gears are difficult to intermesh. **Note:** **The cause for difficulty in shifting gears can be classified into two types: One is a defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, a defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.**	(a) Worn, damaged or burred chamfer at internal spline of the sleeve and reverse driven gear	Replace.
	(b) Worn, damaged or burred chamfer of gear spline	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact or wear between baulk ring and gear cone	Repair or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper adjustment	Replace.
	(b) Loose engine mounting bolts	Tighten.
	(c) Worn shifter fork or broken shifter check ball spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Synchronizer hub tooth step wear	Replace.
	(g) Worn 1st driven gear and driven shaft	Replace.
	(h) Worn 2nd driven gear and bushing	Replace.
	(i) Worn 3rd drive gear and needle bearing	Replace.
	(j) Worn 4th drive gear and needle bearing	Replace.

Symptoms	Possible cause	Corrective action
	(k) Worn 5th drive gear and needle bearing	Replace.
	(l) Worn reverse idler gear and bushing	Replace.
3. Noise emitted from transmission **Note:** **If a noise is heard when the vehicle is parked with its engine idling and if a noise ceases when the clutch is disengaged, it may be considered that the noise is coming from the transmission.**	(a) Insufficient or improper lubrication	Lubricate with specified oil or replace.
	(b) Worn or damaged gears and bearings **Note:** **If the trouble is only wear of the gear teeth surfaces, only a high whirring noise will occur at high speeds, but if any part is broken, rhythmical clicking sounds will be heard even at low speeds.**	Replace.

2. DIFFERENTIAL

Symptoms	Possible cause	Corrective action
1. Broken differential (case, gear, bearing, etc.) **Note:** **Noise will occur, and eventually the differential will not be able to operate due to broken pieces obstructing the gear revolution.**	(a) Insufficient or improper oil	Disassemble the differential and replace broken components. At the same time check other components for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load and improper use of the clutch	Readjust the preload and backlash of the bearing, and the contact surface of gear.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of the drive pinion and the hypoid driven gear	Adjust.
	(e) Excessive backlash of a vehicle under severe operating conditions due to worn differential side gear, adjusting washer or differential pinion	Add recommended oil to the specified level. Do not use vehicle under severe operating conditions.
	(f) Loose hypoid driven gear clamping bolts	Tighten.
2. Differential and hypoid gear noises Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise	(a) Insufficient oil	Replenish or replace with the specified amount of recommended oil.

Symptoms	Possible cause	Corrective action
is the first indication of trouble. However, noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises. • Gear noise when driving: If noise increases as the vehicle speed increases, it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise when coasting: Damaged gears due to misadjusted bearings and incorrect shim adjustment • Bearing noise when driving or coasting: Cracked, broken or damaged bearings • Noise mainly when turning: Noise from differential side gear, differential pinion or differential pinion shaft, etc.	(b) Improper adjustment of hypoid driven gear and drive pinion	Check the tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust the bearing preload.
	(d) Loose roller bearing	Readjust the backlash of the hypoid driven gear to drive pinion, and check the tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.
	(f) Worn adjusting washer and differential pinion shaft	Replace.

POWER ASSISTED SYSTEM (POWER STEERING)

PS

1. General Description
2. Relay and Fuse
3. Power Steering System
4. Steering Wheel
5. Steering Heater System
6. Universal Joint
7. Steering Column
8. Electric Power Steering Gearbox
9. Power Steering Control Module
10. General Diagnostic Table

SPECIFICATION

Whole system	Minimum turning radius:	m (ft)	5.4 (17.72)
	Steering angle	Inner wheel	37.8°±1.5°
		Outer wheel	32.9°±1.5°
	Steering wheel diameter:	mm (in)	370 (14.57)
	Lock-to-lock revolution number		2.5
Gearbox	Type		Rack & pinion type
	Backlash		0 (automatic adjusting)
Motor (Temperature 20°C (68°F))	Rated voltage:	V	12
	Rated torque:	N·m (kgf-m, ft-lb)	5.07 (0.52 , 3.74)
	Rated revolution speed:	r/min	790
	Rated current:	A	85
	Rated output:	W	419

Steering wheel

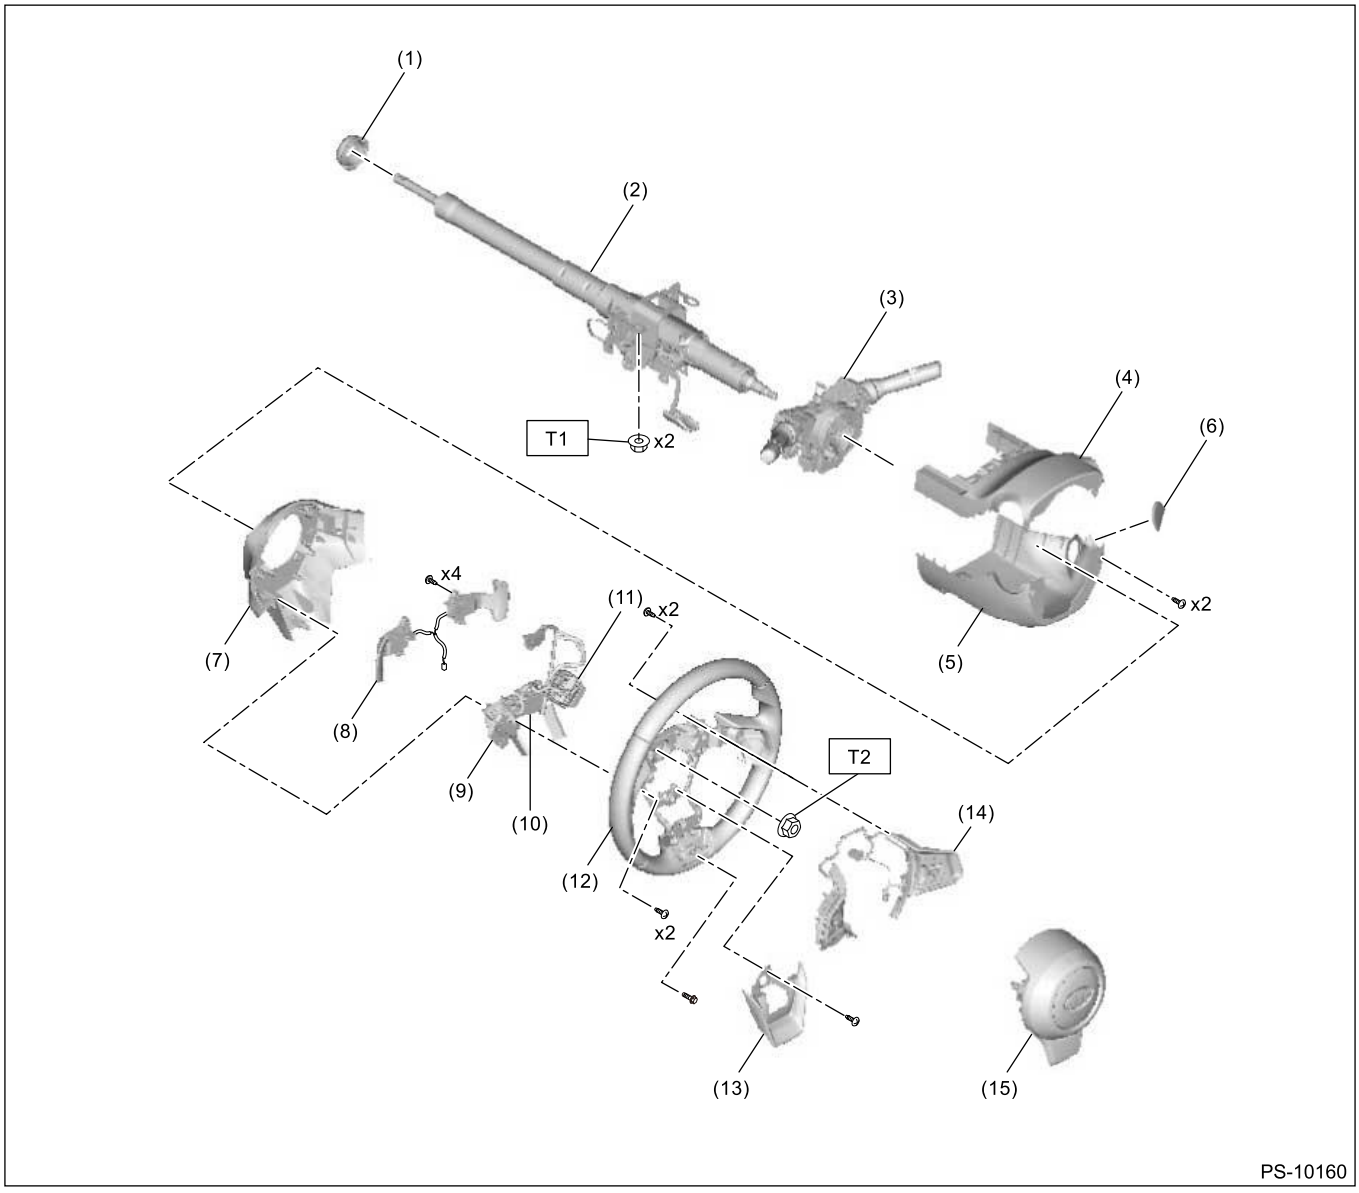
Free play:	mm (in)	17 (0.67) or less

Column assembly & steering

Clearance: Between steering wheel and cover assembly - column	mm (in)	4 — 6 (0.16 — 0.24) or less

Steering gearbox

Sliding resistance:	N (kgf, lbf)	360 (37, 81) or less Difference between right and left sliding resistance: 20% or less
Rack shaft play in radial direction: mm (in)	Right-turn steering	Both amplitudes: 0.6 (0.024) or less
	Left-turn steering	Both amplitudes: 0.6 (0.024) or less
Input shaft play: mm (in)	In radial direction	Both amplitudes: 0.6 (0.024) or less
	In axial direction	0.27 (0.0106) or less
Rotational resistance:	N (kgf, lbf)	Maximum allowable value: 20 (2, 4.5) or less Difference between right and left sliding resistance: 20% or less



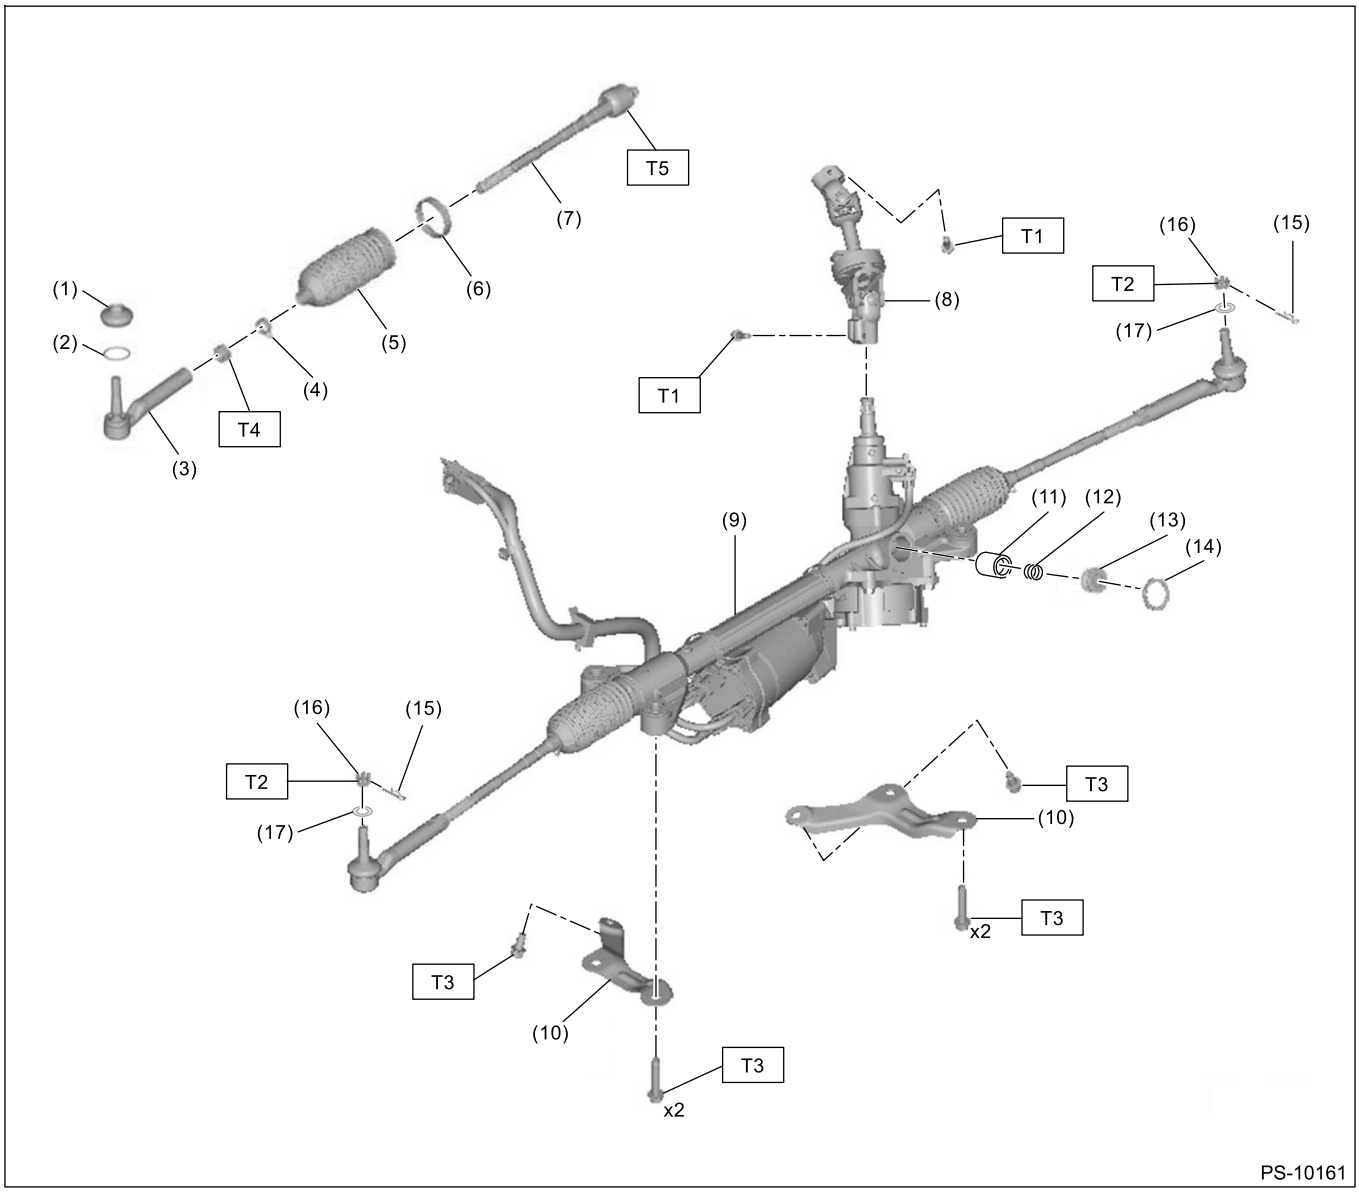
Steering effort (with power steering assist)

At standstill on paved road with engine idling:	N (kgf, lbf)	31 (3.2, 7) or less

At standstill on paved road with engine stalled:	N (kgf, lbf)	294.2 (30, 66.2) or less

COMPONENT

1. STEERING WHEEL AND COLUMN



(1) Bushing
(2) Column ASSY - steering
(3) Switch ASSY - combination
(4) Cover ASSY - column UPR
(5) Cover ASSY - column LWR
(6) Cap - key cylinder (model with keyless access with push button start)
(7) Cover - steering wheel LWR
(8) Paddle shift
(9) MID switch (multi information display switch)
(10) Steering heater unit (model with steering heater)
(11) Steering heater switch (model with steering heater)
(12) Steering wheel
(13) Cover - spoke
(14) Satellite switch
(15) Airbag module

Tightening torque: N·m (kgf-m, ft-lb)

T1: 20 (2, 14.8)

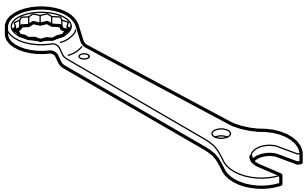
T2: 39 (4, 28.8)

2. STEERING GEARBOX

(1)	Dust seal	(9)	Steering gearbox ASSY	(17)	Washer
(2)	Clip - boot tie-rod end	(10)	Stiffener		
(3)	Tie-rod end	(11)	Pad - pressure	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Clip - boot tie-rod	(12)	Spring - gear box	***T1: 24 (2.4, 17.7)***	
(5)	Boot - steering gear box	(13)	Adjusting screw	***T2: 27 (2.8, 19.9)***	
(6)	Band - boot	(14)	Lock nut	***T3: 60 (6.1, 44.3)***	
(7)	Tie-rod	(15)	Cotter pin	***T4: 85 (8.7, 62.7)***	
(8)	Universal joint assembly - steering	(16)	Lock nut	***T5: 90 (9.2, 66.4)***	

POWER ASSISTED SYSTEM (POWER STEERING) > General Description

CAUTION



- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.

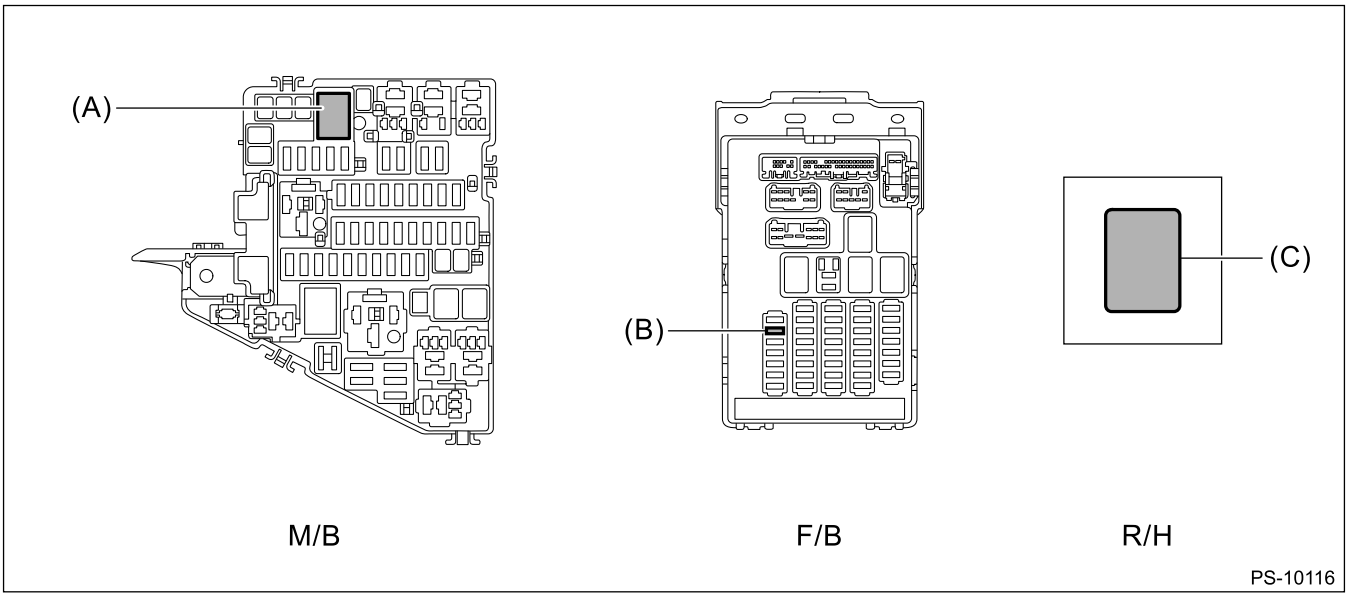
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.
- When the wheel alignment has been adjusted, perform the following adjustment.
  - Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.
  - VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

POWER ASSISTED SYSTEM (POWER STEERING) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34099PA100	34099PA100	SPANNER	Used when measuring the rotational resistance of gearbox assembly.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



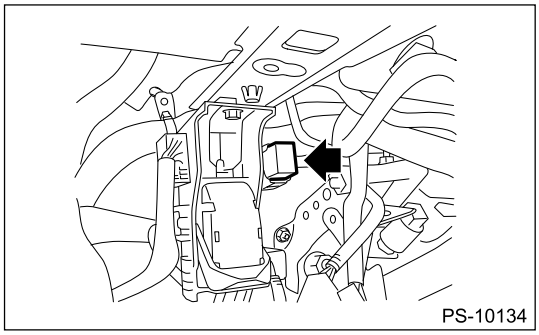
2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.

TOOL NAME	REMARKS
Circuit tester	Used for measuring voltage, resistance and current.
DST-i	Used together with Subaru Select Monitor 4.
C-clamp	Used when inspecting steering gearbox assembly.

POWER ASSISTED SYSTEM (POWER STEERING) > Relay and Fuse

LOCATION



Main fuse box (M/B)	SBF fuse 80 A (power steering CM)	(A)
Fuse & relay box (F/B)	Fuse 7.5 A (power steering CM)	(B)
Relay holder (R/H)	Steering heater relay	(C)

POWER ASSISTED SYSTEM (POWER STEERING) > Relay and Fuse

REMOVAL

1. STEERING HEATER RELAY

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL.
5. Remove the steering heater relay.

POWER ASSISTED SYSTEM (POWER STEERING) > Relay and Fuse

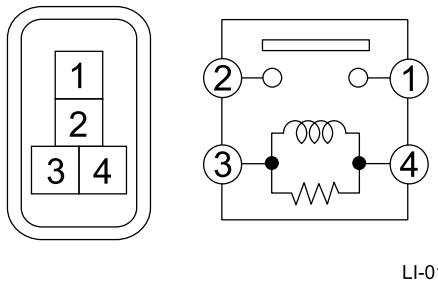
INSTALLATION

1. STEERING HEATER RELAY

1. Install the steering heater relay. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Install the body integrated unit (fuse & relay box).
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
4. Install the cover assembly - instrument panel LWR driver.
5. Connect the battery ground terminal.

INSPECTION

1. CHECK FUSE



1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

Note:

If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1. Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2. Replace the relay if the inspection result is not within the standard value.

POWER ASSISTED SYSTEM (POWER STEERING) > Power Steering System

WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. Ref. to WIRING SYSTEM>Electric Power Steering System.

POWER ASSISTED SYSTEM (POWER STEERING) > Power Steering System

ELECTRICAL SPECIFICATION

Refer to Control Module I/O Signal of “POWER STEERING (DIAGNOSTICS)”. Ref. to POWER STEERING (DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

POWER ASSISTED SYSTEM (POWER STEERING) > Power Steering System

INSPECTION

Refer to “POWER STEERING (DIAGNOSTICS)”. Ref. to POWER STEERING (DIAGNOSTICS)>Basic Diagnostic Procedure.

POWER ASSISTED SYSTEM (POWER STEERING) > Power Steering System

NOTE

For procedure of each component in the power steering system, refer to the respective section.

- Steering wheel: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel.
- Universal joint assembly - steering: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint.
- Steering column: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column.
- Electric power steering gearbox: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.
- Power steering control module (with built-in gearbox): Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Power Steering Control Module.

REMOVAL

Caution:

Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Set the tire to the straight-ahead position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
4. Remove the steering wheel.

   Caution:

   - **Always use the steering wheel puller for removal to avoid deforming the steering wheel.**
   - **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**

   Preparation tool:

   Steering wheel puller

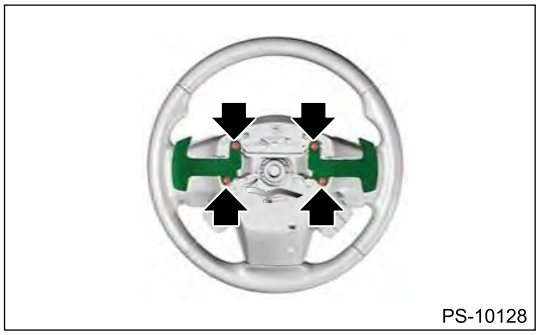
   (1) Disconnect the connector and remove the nut.

   (2) Put an alignment mark (a) using a ruler as shown in the figure, and remove the steering wheel.

(A) Model with steering heater

INSTALLATION

Caution:



- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**
- **If the steering wheel and steering angle sensor are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**

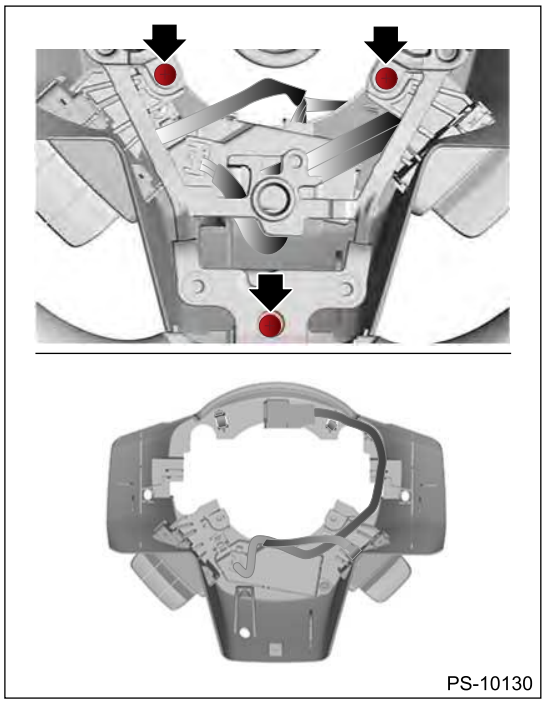
1. Align the center position of the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>ADJUSTMENT.
2. Install the steering wheel.
   Tightening torque:
   Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)
   Clearance:
   Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
3. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

POWER ASSISTED SYSTEM (POWER STEERING) > Steering Wheel

DISASSEMBLY

1. Remove the screws on the back of the steering wheel.
   - Model without paddle shift: upper side two locations
   - Model with paddle shift: four locations

2. Disconnect the connector and remove the paddle shift switch. (Model with paddle shift)
3. Release the claws and remove the screws, then detach the cover - spoke.

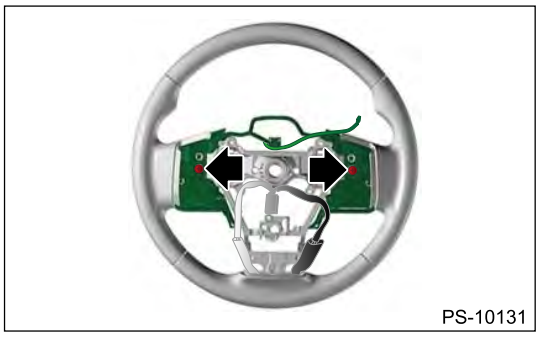


4. Remove the cover - steering wheel LWR.

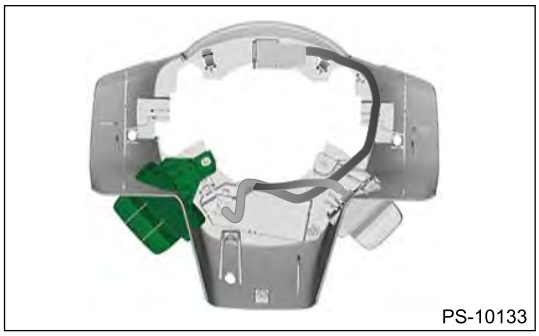
Caution:

Carefully remove the cover - steering wheel LWR and the steering wheel. Do not pull with excessive force. Otherwise, heat wire between cover - steering wheel LWR and steering wheel may be damaged. (Model with steering heater)

(1) Remove the connectors and screws. (Model with MID switch and model with steering heater switch)

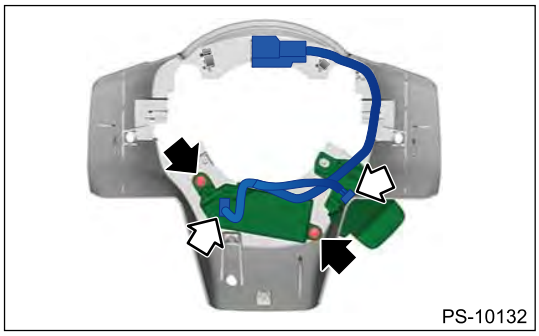


(2) Release the claws and harness clips, and detach the cover - steering wheel LWR.



Note:

For model with steering heater, disconnect the connector with the cover - steering wheel LWR removed from steering wheel, and remove the steering heater unit. Also, remove the heater elements RH and LH secured with double-sided tape from the cover - steering wheel LWR.

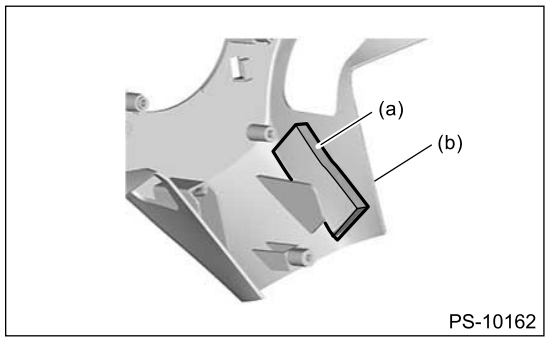


5. Release the claws and remove the screws, then detach the satellite switch.

6. Release the claws, and then remove the MID switch. (Model with MID switch)

7. Release the connector, screws and claws, and remove the steering heater switch and steering heater unit. (Model with steering heater)

ASSEMBLY



Caution:

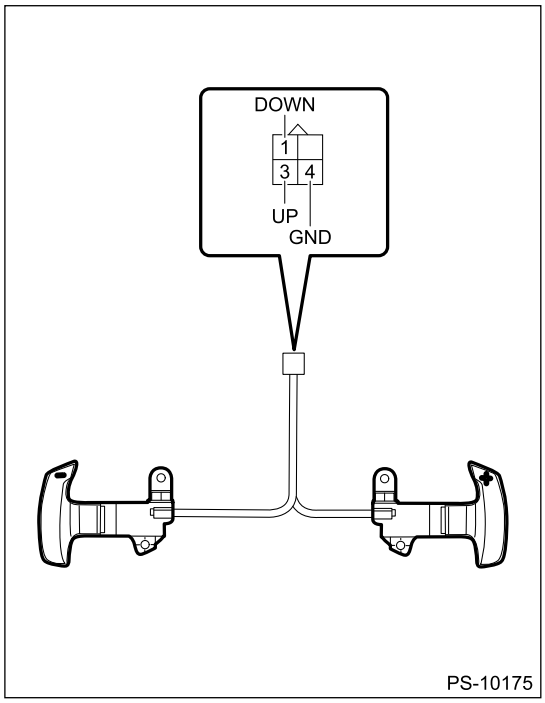
- **Securely install the switch and the cover - steering wheel LWR. Improper insertion of the pins or claws of the switch and the cover - steering wheel LWR may cause improper installation.**
- **When installing the heater steering wheel and the cover - steering wheel LWR for models with steering heater, be careful of the following:**
  - **– Attach the heater element to the cover - steering wheel LWR so that it is not twisted or does not interfere with switches.**
  - **– Be careful not to allow the heater element to be caught in steering frame, unit and cover - steering wheel LWR.**

1. Install the MID switch.
2. Install the steering heater switch and steering heater unit to the cover - steering wheel LWR. (Model with steering heater)
3. Install the satellite switch.
4. Install the cover - steering wheel LWR.

Note:

Secure the heater element on the cover - steering wheel LWR using double-sided tape. Refer to the figure below to attach the heater element and double-sided tape symmetrically.

(a) Heater element and double-sided tape



(b) Cover - steering wheel LWR

5. Install the cover - spoke.
6. Install the paddle shift switch. (Model with paddle shift)
7. Install the screws at two locations on upper back side of the steering wheel. (Model without paddle shift)

INSPECTION

1. PADDLE SHIFT SWITCH

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester

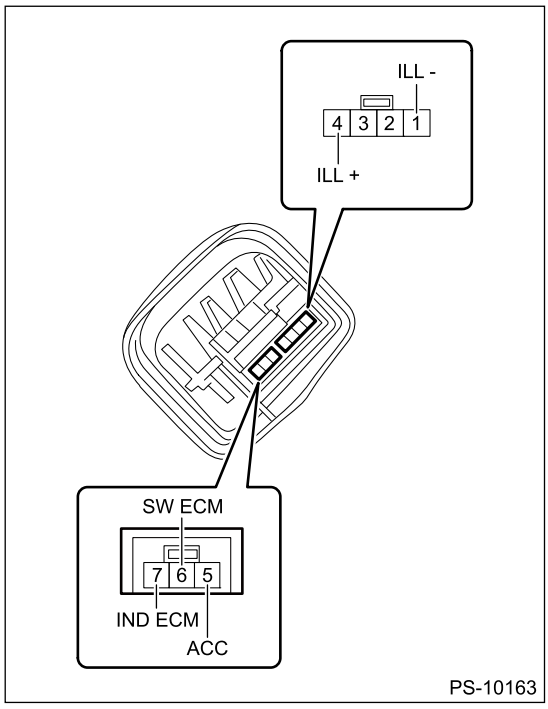
Terminal No.	Inspection conditions	Standard
3 — 4	Operate the + side of paddle shift assembly and hold it.	Less than 10 Ω
1 — 4	Operate the − side of paddle shift assembly and hold it.	Less than 10 Ω
1 — 4 3 — 4	Do not operate the paddle shift assembly.	Is the resistance 1 MΩ or more?

2. Replace the paddle shift switch if the inspection result is not within the standard value.

2. SATELLITE SWITCH ASSEMBLY

- Audio (navigation) switch: Ref. to ENTERTAINMENT & MONITORING>Switches and Harness>INSPECTION > SATELLITE SWITCH ASSEMBLY.
- EyeSight steering switch: Ref. to EyeSight>Switches and Harness>INSPECTION > EYESIGHT STEERING SWITCH.
- Cruise control command switch: Ref. to CRUISE CONTROL SYSTEM>Cruise Control Command Switch>INSPECTION.

3. SWITCH ASSEMBLY - STEERING



Refer to “Multi information display switch” of “INSTRUMENTATION/DRIVER INFO” section. Ref. to INSTRUMENTATION/DRIVER INFO>Switches and Harness>INSPECTION > MULTI-FUNCTION DISPLAY SWITCH.

4. STEERING HEATER SWITCH

1. Measure the resistance between connector terminals.

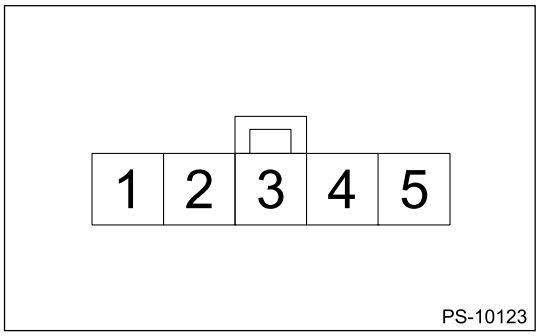
Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
5 — 6	Operate the switch and hold it.	Less than 1 Ω
	Do not operate the switch.	1 MΩ or more

2. Apply battery voltage between the connector terminals to check lighting condition of illumination and indicator inside the switch.

Terminal No.	Inspection conditions	Standard
4 (+) — 1 (−)	Apply battery voltage.	Illumination (mark) turns on.
5 (+) — 7 (−)		Indicator turns on.
4 (+) — 1 (−) 5 (+) — 7 (−)	Apply battery voltage simultaneously.	Illumination (mark) and indicator turn on in dimmed condition at one level.



3. Replace the steering heater switch if the inspection result is not within the standard value.

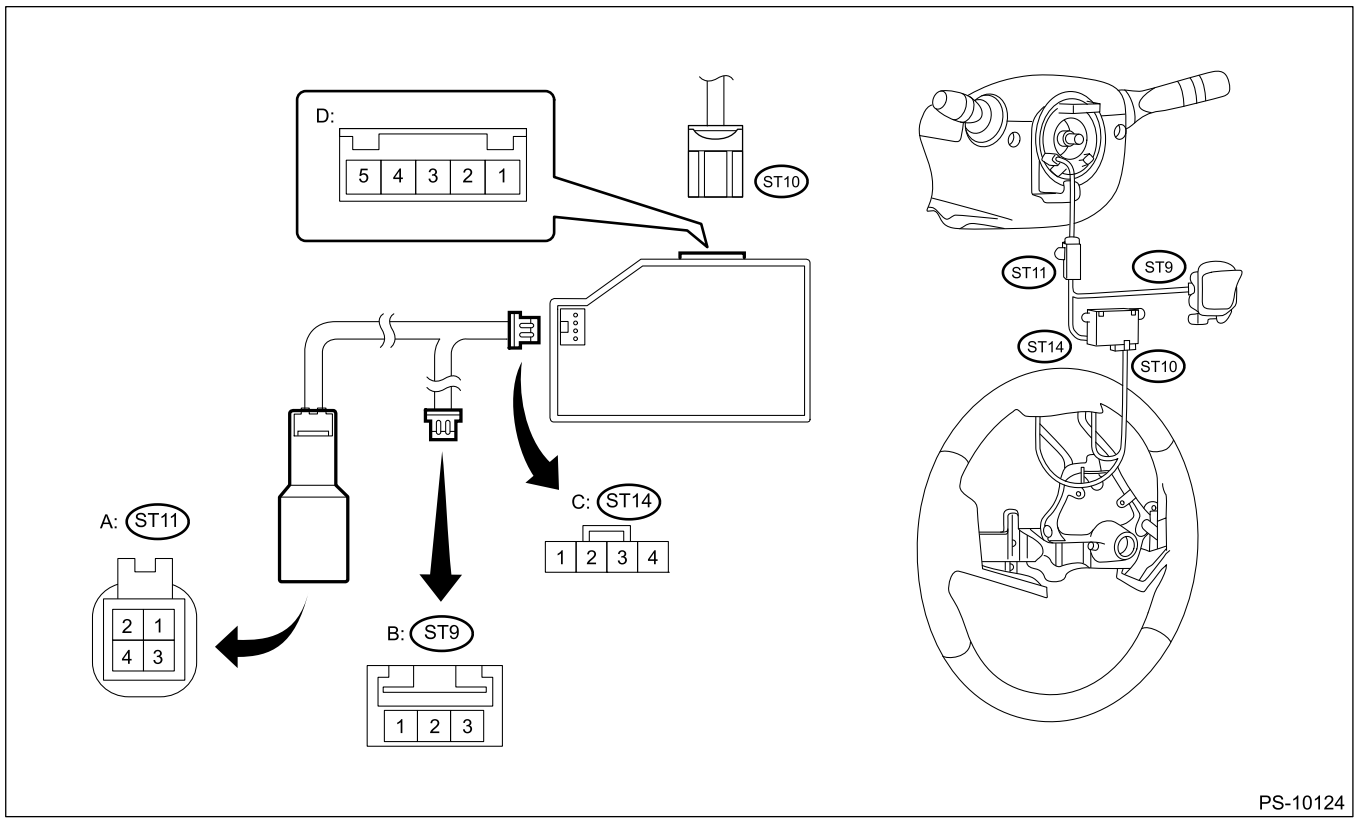
5. STEERING WHEEL HEATER

1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
Thermistor: 2 — 3	Outside temperature: 10 — 30°C	8.13 — 18.43 kΩ
Thermostat: 5 — 1		1.8 — 2.4 Ω



2. Replace the steering wheel if the inspection result is not within the standard value.

WIRING DIAGRAM

Refer to "STEERING HEATER SYSTEM" in the wiring diagram. Ref. to WIRING SYSTEM>Steering Heater System>WIRING DIAGRAM.

ELECTRICAL SPECIFICATION

1. STEERING HEATER UNIT

Terminal No.	Contents	Measuring condition	Standard
A No. 1	Not used	—	—
A No. 2	Not used	—	—
A No. 3 ←→ Chassis ground	Heater unit GND	Always	Less than 1 Ω
A No. 4 ←→ Chassis ground	Heater unit power supply input	Ignition switch ON	10 — 14 V
B No. 1 ←→ Chassis ground	Heater switch power supply input	Ignition switch ON	10 — 14 V
B No. 2 ←→ Chassis ground	Heater switch input	Turn the ignition switch to ON, and press and hold the heater switch.	9 — 14 V
B No. 3	Indicator light output	—	*
D No. 1 ←→ Chassis ground	Heater GND	Ignition switch ON, heater switch ON	Less than 1 V

Terminal No.	Contents	Measuring condition	Standard
D No. 2 ←→ Chassis ground	Thermistor input	Ignition switch ON, heater switch ON	1.5 — 4.5 V
D No. 3 ←→ Chassis ground	Thermistor GND	Ignition switch ON, heater switch ON	Less than 1 V
D No. 5 ←→ Chassis ground	Heater output	Ignition switch ON, heater switch ON	9 — 14 V

*: Illuminates when the ignition switch and heater switch are turned to ON.

Note:

Connect the each connector of the unit before checking.

POWER ASSISTED SYSTEM (POWER STEERING) > Steering Heater System

INSPECTION

1. CHECK STEERING HEATER SYSTEM

Symptoms	Reference
The steering heater does not operate.	Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Heater System>INSPECTION > THE STEERING HEATER DOES NOT OPERATE.
The temperature of steering heater increases excessively.	Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>INSPECTION > STEERING WHEEL HEATER.
The steering heater does not stop.	Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>INSPECTION > STEERING HEATER SWITCH.

2. THE STEERING HEATER DOES NOT OPERATE

1. CHECK POWER SUPPLY INPUT.

1. Disconnect the battery ground terminal, and wait for 60 seconds or more.
2. Disconnect the connector between steering roll connector and steering heater unit.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Measure the steering roll connector voltage.

   Connector & terminal

   (ST12) No. 4 (+) — No. 3 (−)

Is the voltage 10 — 14 V?

Yes — Go to 2.

No — Go to 5.

2. CHECK STEERING HEATER SWITCH.

Check the steering heater switch. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>INSPECTION > STEERING HEATER SWITCH.

Is the steering heater switch OK?

Yes	Go to 3.
No	Replace the steering heater switch. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>DISASSEMBLY.

3. CHECK STEERING HEATER UNIT.

Check the steering heater unit. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Heater System>ELECTRICAL SPECIFICATION > STEERING HEATER UNIT.

Is the steering heater unit OK?

Yes	Go to 4.
No	Replace the steering heater unit. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>DISASSEMBLY.

4. CHECK STEERING WHEEL.

Check the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>INSPECTION > STEERING WHEEL HEATER.

Is the steering wheel OK?

Yes	It is possible that temporary poor contact occurs. Restore the parts and check it again.
No	Replace the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel.

5. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse No. 33 in the fuse & relay box.

Is the fuse OK?

Yes — Go to 6.

No — Replace the fuse.

6. CHECK RELAY.

Check the steering heater relay. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Relay and Fuse.

Is the steering heater relay OK?

Yes — Go to 7.

No — Replace the steering heater relay.

7. CHECK BATTERY VOLTAGE.

Measure the battery voltage.

Is the battery OK?

Yes — Go to 8.

No — Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

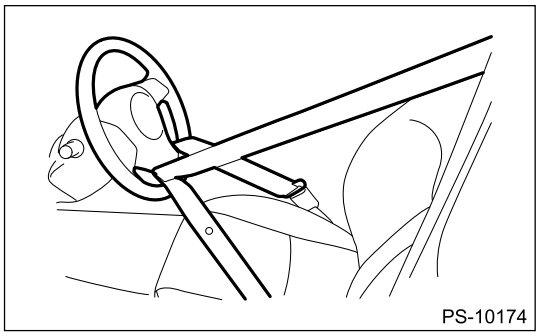
8. CHECK ROLL CONNECTOR (HEATER).

Measure the resistance between steering roll connectors (heater part). Ref. to COMMUNICATION SYSTEM>Horn Switch>INSPECTION > CHECK STEERING ROLL CONNECTOR.

Is the steering roll connector OK?

Yes	It is possible that temporary poor contact occurs. Restore the parts and check it again.
No	Replace the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector.

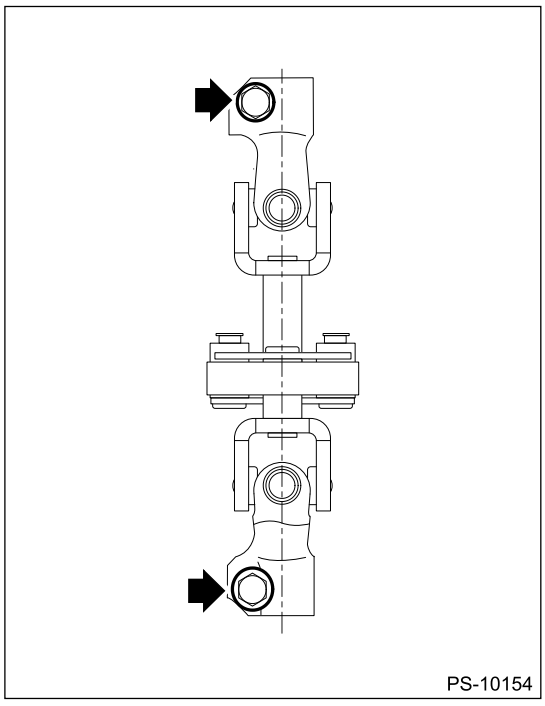
POWER ASSISTED SYSTEM (POWER STEERING) > Steering Heater System



NOTE

For procedure of each component in the steering heater system, refer to the respective section.

- Steering wheel
  - Removal: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
  - Installation: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>INSTALLATION.
- Steering heater switch
  - Disassembly: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>DISASSEMBLY.
  - Assembly: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>ASSEMBLY.



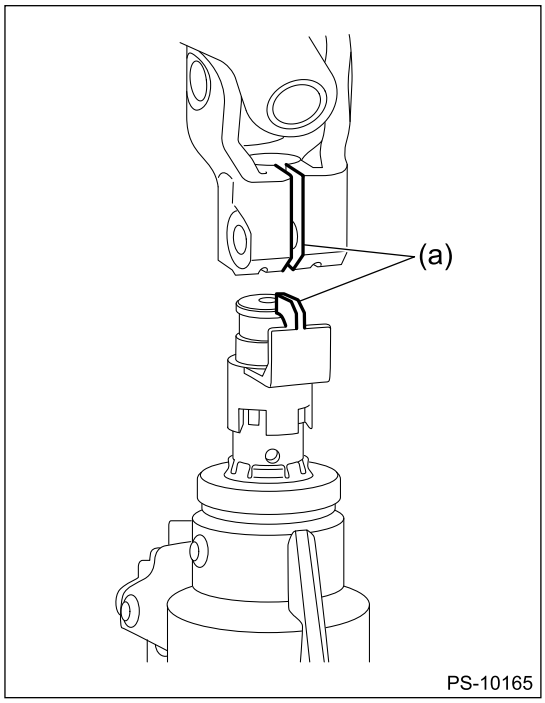
REMOVAL

1. Set the steering wheel to the straight-ahead position.
2. Adjust the tilt position of the steering column to the neutral position.
   Caution:
   Always place the tilt lever to the lock position after the steering column is adjusted.
3. Prevent the steering wheel from turning using the seat belt.

4. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
5. Remove the universal joint assembly - steering.
   (1) Place alignment marks on the universal joint assembly - steering.
   Note:
   Place alignment marks on the following positions.
   - **Between the column assembly - steering and the universal joint assembly - steering**
   - **Between the steering gearbox assembly and the universal joint assembly - steering (only when the guide is not installed)**

   (2) Remove the bolt, and remove the universal joint assembly - steering.
   Caution:
   Do not remove the guide camera.

INSTALLATION



1. Before installation, check the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSPECTION.
2. Adjust the tilt position of the steering column to the neutral position.
   Caution:
   Always place the tilt lever to the lock position after the steering column is adjusted.
3. Install the universal joint assembly - steering.
   Caution:
   - **Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If another cutout portions (d) are used for alignment, the bolt of the universal joint assembly - steering cannot be assembled.**
   - **Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.**
   - **When tightening the mounting bolts of the universal joint assembly - steering, always tighten the gearbox side bolts first.**
   - **Always place the tilt lever to the lock position after the steering column is adjusted.**

   (1) Match the alignment marks that have been marked when removing with the column shaft (c) and the cutout portion (a) at the serrations of the yoke (b).
   (2)Connect the universal joint assembly - steering with the column shaft.

(A) Column shaft side (B) Gearbox side

(3) Install the universal joint assembly - steering to the serrations of the gearbox assembly by matching the guide (a) cutout portion or the alignment marks that have been marked when removing.

(4) Tighten the bolts on the gearbox side first, and then the column shaft side.

Tightening torque:

24 N·m (2.4 kgf-m, 17.7 ft-lb)

Clearance:

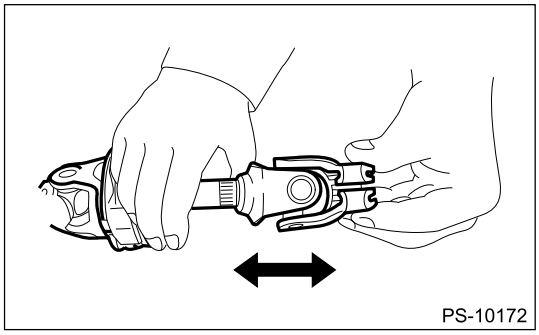
Universal joint assembly - steering coupling to adjacent parts: 15 mm (0.59 in) or more

4. Unfasten the seat belt and make the steering wheel turn freely.
5. Install the under cover - front.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

POWER ASSISTED SYSTEM (POWER STEERING) > Universal Joint

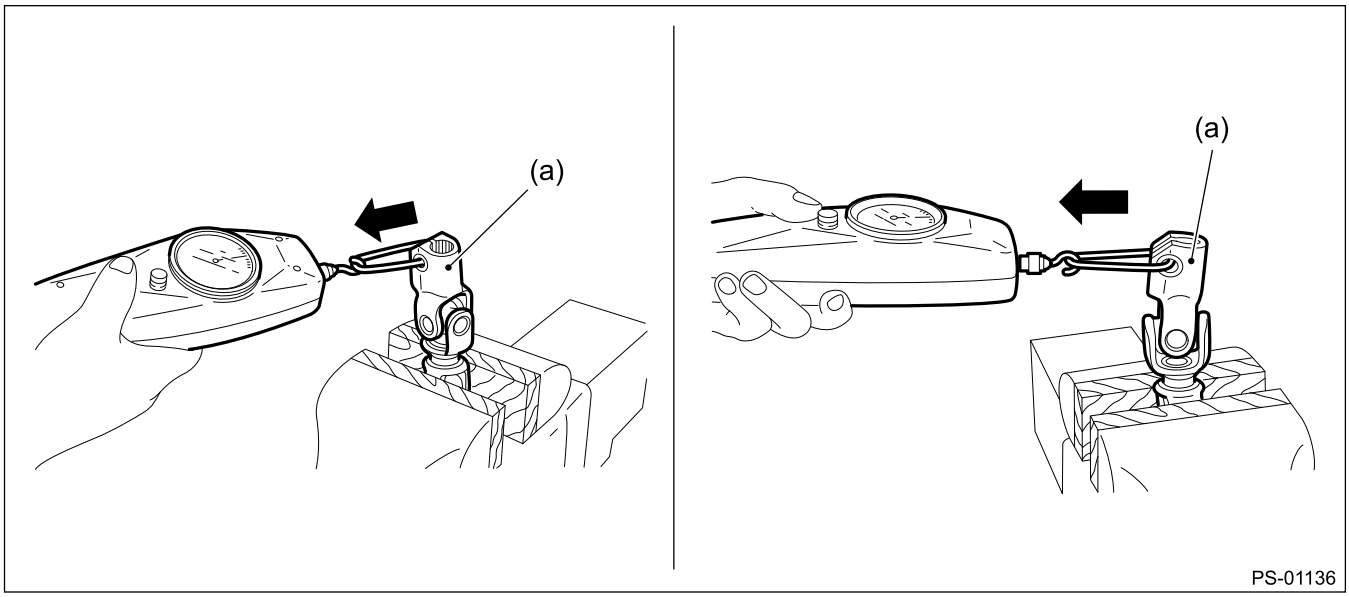


INSPECTION

Check for wear, damage or any other faults.

1. Check the universal joint assembly - steering for excessive looseness.

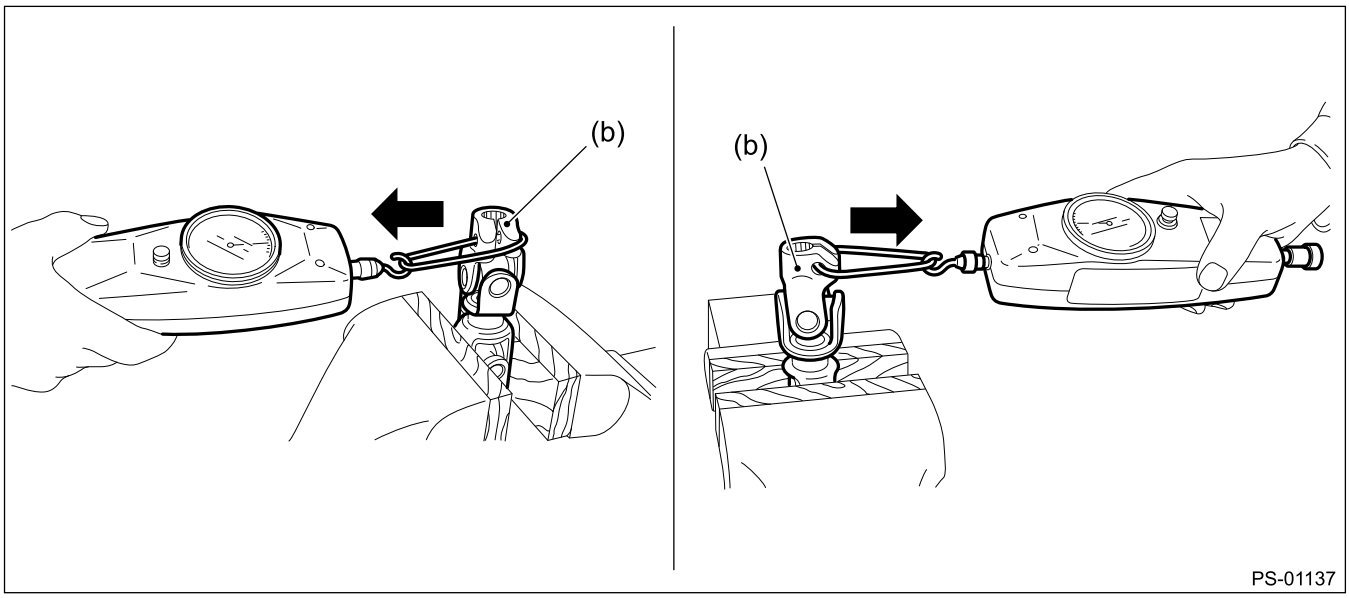
Service limit:



Play of the universal joint assembly - steering: 0 mm (0 in)

2. Measure the swing load of the universal joint assembly - steering.

(1) Place the universal joint assembly - steering between wooden blocks and fix it on a vise.



(2) With the yoke (a) of gearbox side facing up, measure the swing load in two directions.

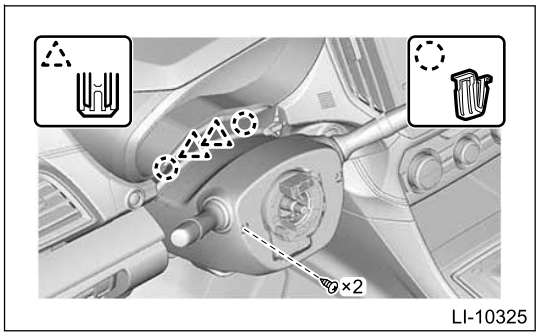
Service limit:

Maximum load: 4.5 N (0.46 kgf, 1.01 lbf) or less

(3) With the yoke (b) of the column assembly - steering side facing up, measure the swing load in two directions.

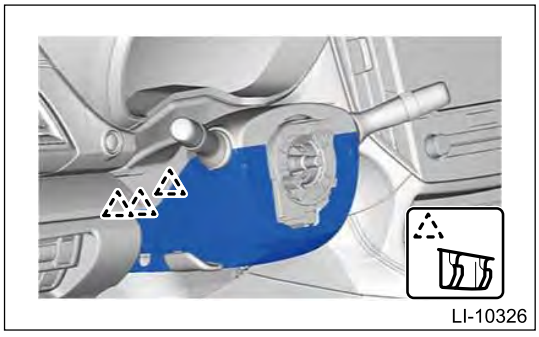
Service limit:

Maximum load: 5.4 N (0.55 kgf, 1.21 lbf) or less



(4) Replace as necessary, if it is found defective.

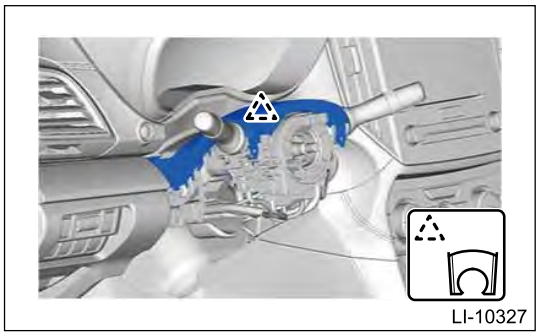
REMOVAL



Caution:

Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Adjust the tilt position of the steering column to the neutral position and the telescopic position to the longest position.
   Caution:
   Always place the tilt lever to the lock position after the steering column is adjusted.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
4. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
5. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
6. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
7. Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.
   (2) Remove the screws.



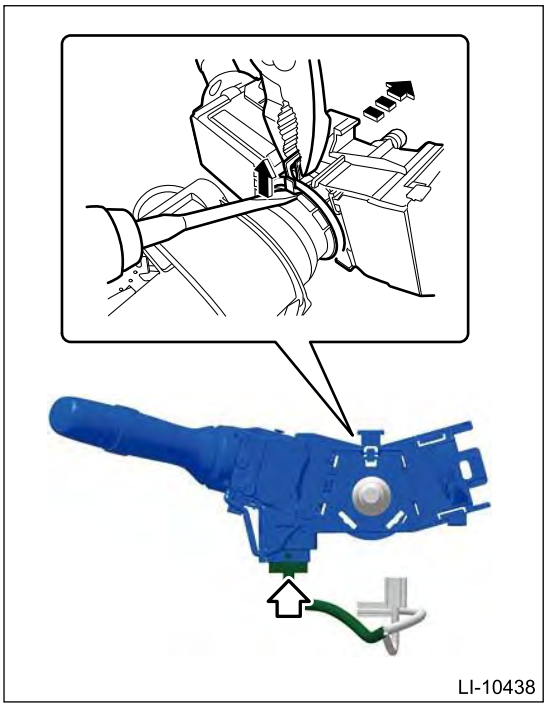
(3) Release the claw, and remove the cover assembly - column LWR as shown in the figure.

Note:

- **Release the claws on RH side in the same procedure as on the LH side.**
- **For model with keyless access with push button start, remove the cap - key cylinder.**

(4) Release the claw, and remove the cover assembly - column UPR as shown in the figure.

8. Remove the switch assembly - combination turn dimmer.



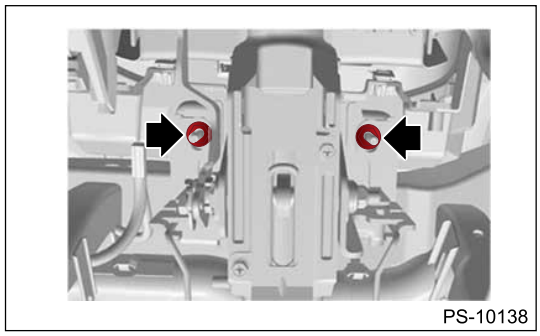
(1) Disconnect the connector.

(2) Using pliers, loosen the clamp.

(3) With the clamp loosened, release the claw using a flat tip screwdriver wrapped with a protection tape, and remove the switch assembly - combination turn dimmer.

Caution:

Do not pry off forcibly. Otherwise, the claws may be damaged.



9. Remove all connectors from the column assembly - steering.

10. Remove the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>REMOVAL.

Caution:

To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.

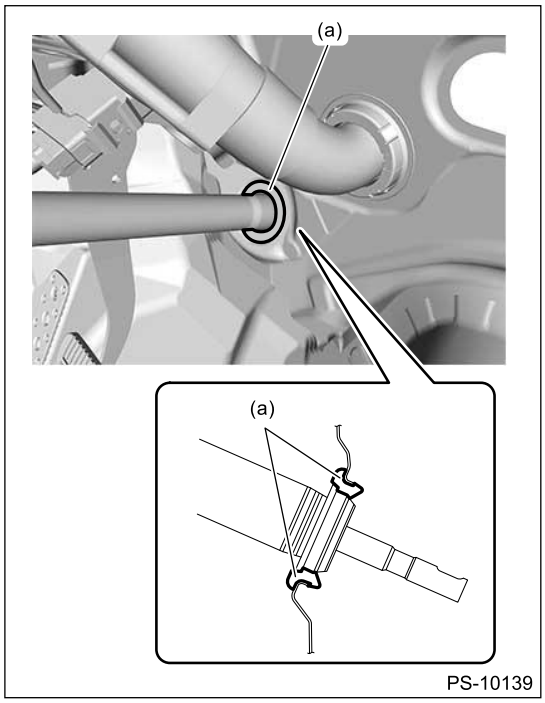
11. Remove the nut under the beam COMPL - steering securing the column assembly - steering.

12. Pull out the column assembly - steering from the hole on toe board.

Caution:

Do not loosen the tilt lever when the column assembly - steering is not secured to the vehicle.

13. Remove the ignition key lock. Ref. to SECURITY AND LOCKS>Ignition Key Lock>REPLACEMENT.



POWER ASSISTED SYSTEM (POWER STEERING) > Steering Column

INSTALLATION

Caution:

- **When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**
- **Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Install the bushing (a) to the toe board from the passenger compartment side.

2. Insert the end of the column assembly - steering into the toe board bushing.

3. Tighten the column assembly - steering installation nut located under the beam COMPL - steering

with the tilt lever fixed.

Tightening torque:

20 N·m (2 kgf-m, 14.8 ft-lb)

4. Install the ignition key lock. Ref. to SECURITY AND LOCKS>Ignition Key Lock>REPLACEMENT.
5. Install the switch assembly - combination.
6. Connect all the connectors under the instrument panel.
7. Install the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSTALLATION.

Caution:

- **Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.**
- **Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.**
- **Always place the tilt lever to the lock position after the steering column is adjusted.**

8. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
9. Install the cover assembly - instrument panel LWR driver.
10. Install the cover assembly - column.
11. Align the center position of the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>ADJUSTMENT.
12. Install the steering wheel.

Tightening torque:

Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:

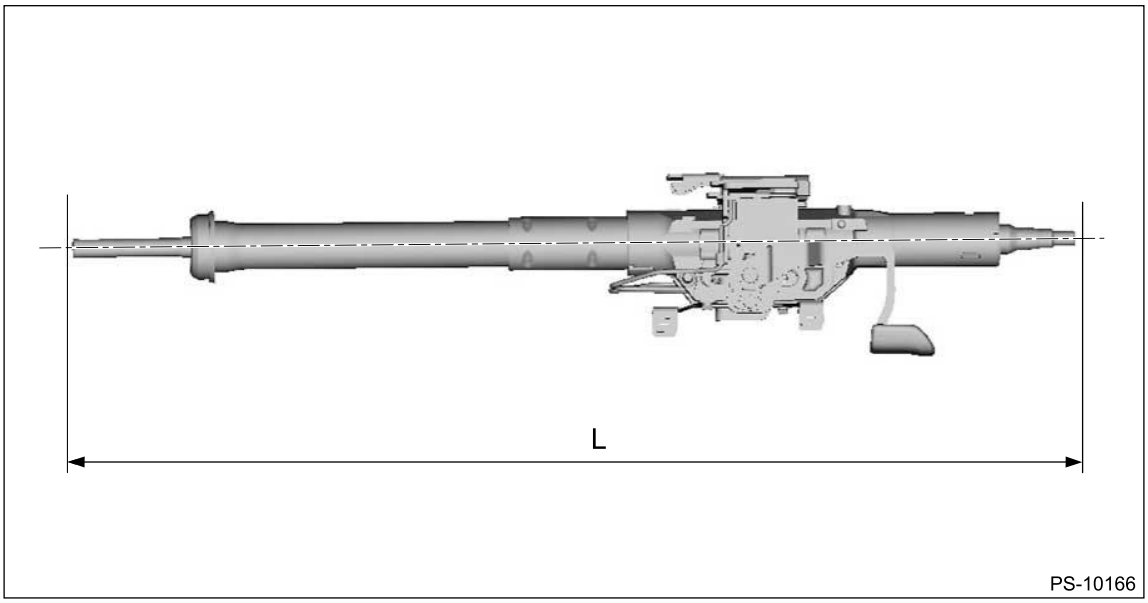
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

13. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
14. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

POWER ASSISTED SYSTEM (POWER STEERING) > Steering Column

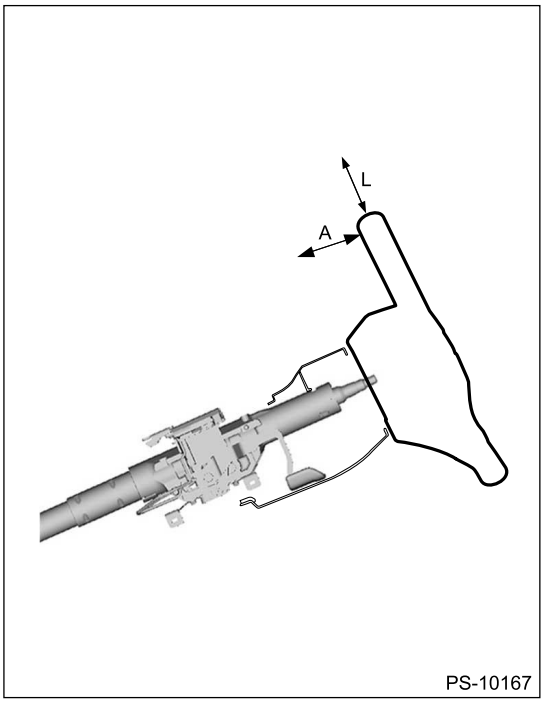
INSPECTION

1. UNIT INSPECTION



Check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

- Measure the whole length of the column assembly - steering.



Standard: Overall length L

Tilt and telescopic column (measure while minimized)

$806.5^{+1.5}_{-1.5}$ mm ($31.75^{+0.059}_{-0.059}$ in)

- Check the steering wheel deflection in axial and vertical directions.
  Specification:
  Axial deflection A (deflection of steering wheel)
  Less than 6 mm (0.24 in)
  Vertical deflection L (runout of steering wheel)
  Less than 17 mm (0.68 in)

2. INSPECTION OF AIRBAG SYSTEM

Refer to “AIRBAG SYSTEM” section for airbag inspection procedure. Ref. to AIRBAG SYSTEM>Driver’s Airbag Module>INSTALLATION.

REMOVAL

Caution:

- **The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.**
- **Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the power steering control module connector when removing or installing. If a foreign matter enters, completely remove it.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Lift up the vehicle, and then remove the front wheels.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the crossmember support - rear and the crossmember support - front. Ref. to FRONT SUSPENSION>Crossmember Support>REMOVAL.
5. Remove the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>REMOVAL.
6. Remove the stabilizers. Ref. to FRONT SUSPENSION>Stabilizer>REMOVAL > STABILIZER.
7. Disconnect the tie-rod end.

   Note:

   Securely hook the tie-rod ball joint puller (e) to the collar (f).

   (1) Pull out the cotter pin (a).

   (2) Remove the castle nut (b) and washer (c).

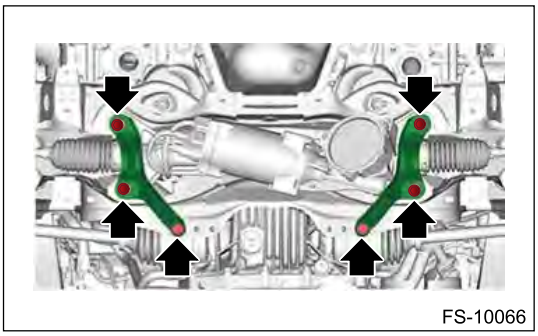
   (3) Using a tie-rod ball joint puller (e), detach the tie-rod end (d).

   Preparation tool:

   Tie-rod ball joint puller

8. Remove the front arm assembly. Ref. to FRONT SUSPENSION>Front Arm>REMOVAL.
9. Remove the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>REMOVAL.

10. Disconnect the power steering harness connector and harness clamp.



11. Remove the steering gearbox assembly from the crossmember COMPL.

Caution:

When lowering the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.

(1) Support the steering gearbox assembly from the bottom side using a transmission jack.

(2) Remove the bolts securing the steering gearbox assembly and stiffener to the crossmember COMPL.

(3) Lower the transmission jack slowly, and lower the steering gearbox assembly.

POWER ASSISTED SYSTEM (POWER STEERING) > Electric Power Steering Gearbox

INSTALLATION

Caution:

- **When raising the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.**
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Make sure that there is no gap between the housing assembly - front axle and the collar.**
- **If the collar is removed from the housing assembly - front axle, replace the housing assembly - front axle with a new part.**

1. Install the steering gearbox assembly and stiffener to the crossmember COMPL.

Tightening torque:

Refer to “COMPONENT” of “General Description” for the tightening torque. Ref. to FRONT SUSPENSION>General Description>COMPONENT > FRONT SUSPENSION.

2. Install the connector and harness clamp of the power steering control module.
3. Install the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSTALLATION.
4. Install the front arm assembly. Ref. to FRONT SUSPENSION>Front Arm>INSTALLATION.
5. Install the tie-rod end.

   Note:
   - **Do not forget to install the washer.**
   - **When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.**

   Tightening torque:
   27 N·m (2.7 kgf-m, 19.9 ft-lb)
6. Insert a new cotter pin and secure the castle nut.
7. Install the stabilizer. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
8. Install the front exhaust pipe. Ref. to EXHAUST(H4DO)>Front Exhaust Pipe>INSTALLATION.
9. Install the crossmember support - front and the crossmember support - rear. Ref. to FRONT SUSPENSION>Crossmember Support>INSTALLATION.
10. Install the under cover - front.

    Tightening torque:
    18 N·m (1.8 kgf-m, 13.3 ft-lb)
11. Install the front wheels and lower the vehicle.

    Tightening torque:
    120 N·m (12.2 kgf-m, 88.5 ft-lb)
12. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
13. After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

    Caution:

    When the wheel alignment has been adjusted, perform the following adjustment.

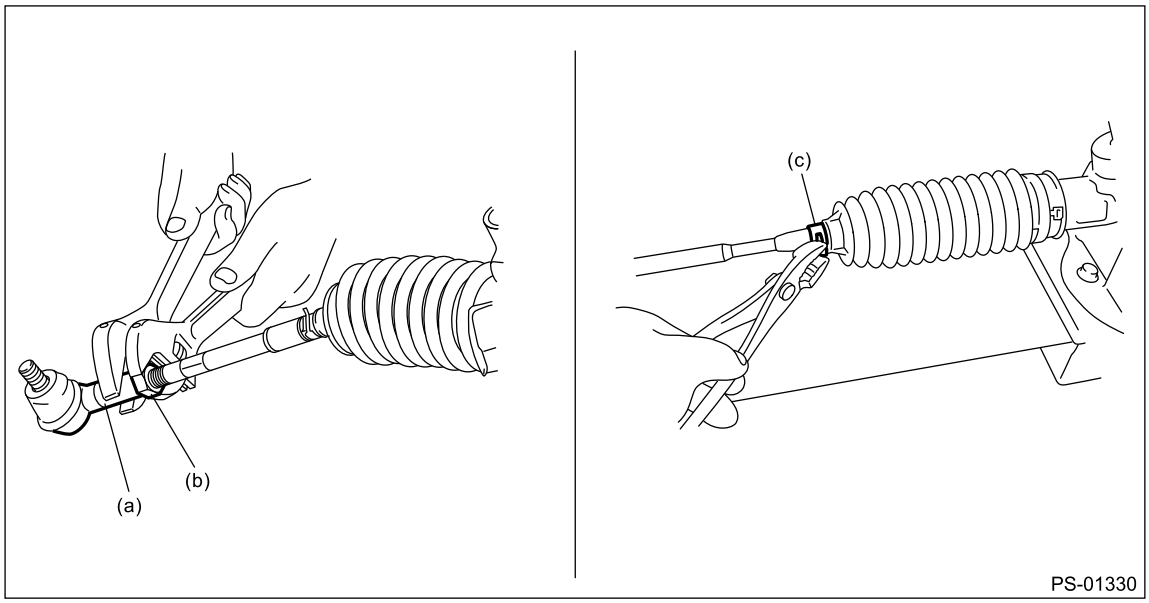
    – Lane keep assist learning value clear (model with EyeSight): Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.

    – VDC sensor midpoint setting mode: Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

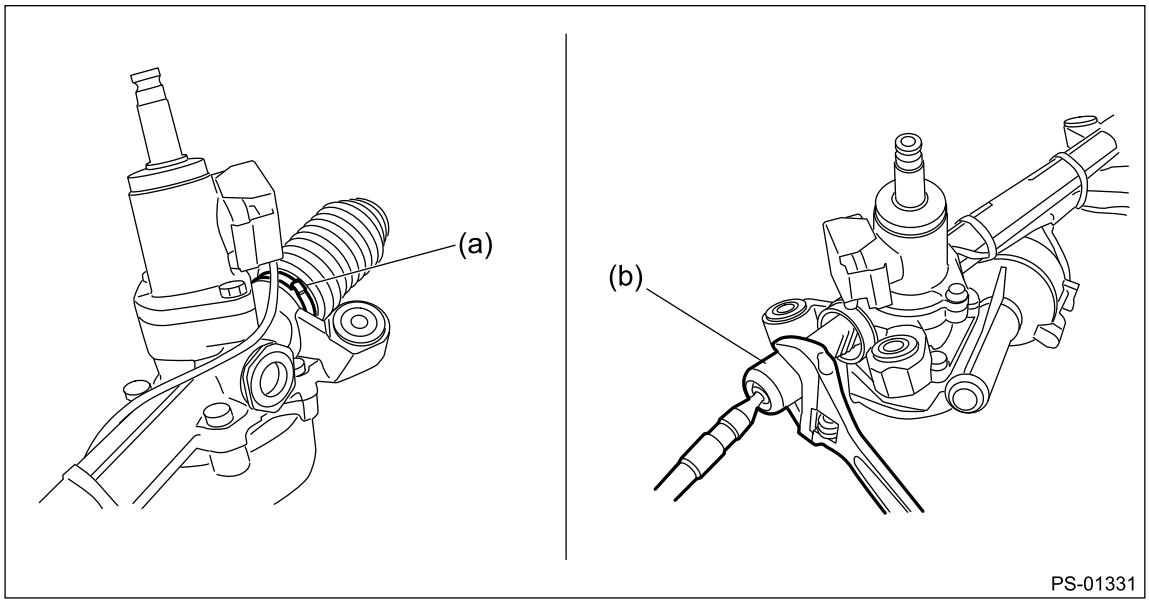
    Tightening torque:
    85 N·m (8.7 kgf-m, 62.7 ft-lb)

    Note:

    When adjusting toe-in, hold the boot - steering gearbox as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.



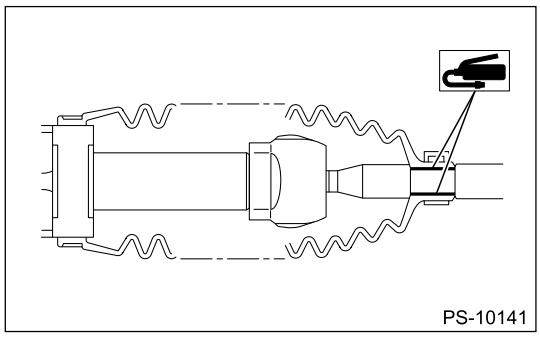
DISASSEMBLY



Caution:

- **Nut for fixing the rack is on the driver's side only. When removing the tie-rod on the passenger's side, turn over the boot - steering gearbox on the driver's side, and fix the rack during operation.**
- **When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.**

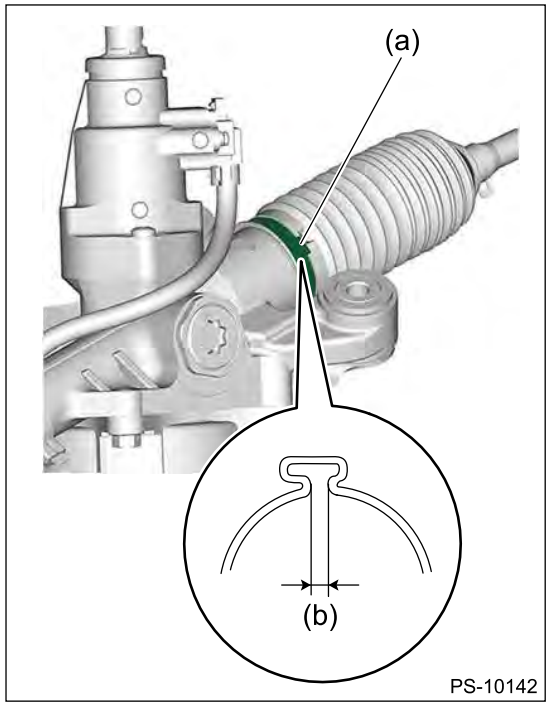
1. Remove the tie-rod end (a) and lock nut (b) from the steering gearbox assembly.
2. Remove the clip - boot tie-rod (c) located outside the boot - steering gearbox using the pliers, and then slide the boot - steering gearbox to the tie-rod end side.



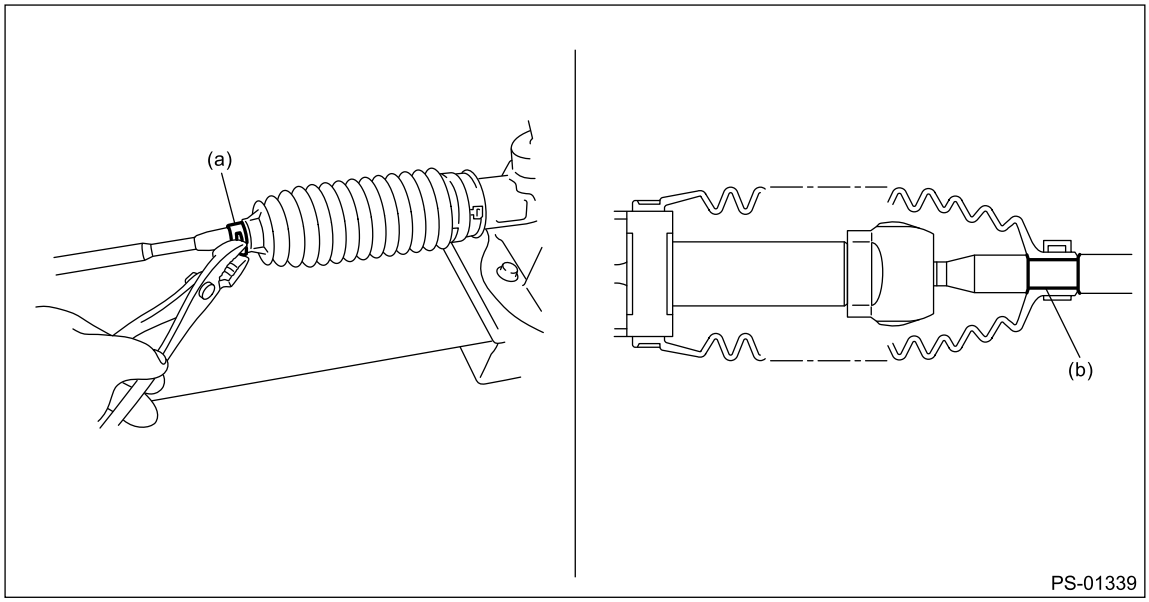
3. Remove the tie-rod (b) from the gearbox assembly.
   (1) Using a flat tip screwdriver, remove the band - boot (a) from the boot - steering gearbox.
   Note:
   Replace the boot - steering gearbox or the band - boot (a) if there is damage, cracks or deterioration.
   (2) Remove the tie-rod (b).

POWER ASSISTED SYSTEM (POWER STEERING) > Electric Power Steering Gearbox

ASSEMBLY



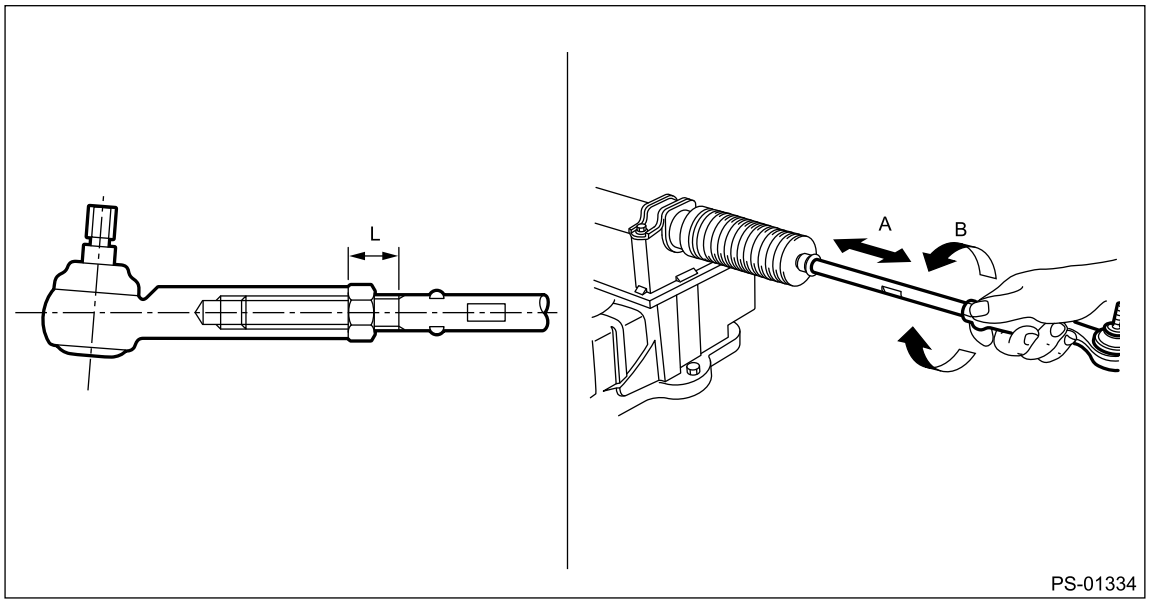
1. Install the tie-rod into rack.
   Tightening torque:
   90 N·m (9.2 kgf-m, 66.4 ft-lb)
   Note:
   Check the mating face of rack and tie-rod for foreign matter such as dust etc.
2. Apply a coat of grease to the tie-rod groove, and then install the boot - steering gearbox to the housing.
   Caution:
   Assemble the small end of the boot - steering gearbox in the tie-rod groove first, and then assemble the large end of the boot - steering gearbox in the housing.
   Note:
   Make sure that the boot - steering gearbox is installed without unusual inflation or deflation.



3. Using the boot clamp pliers, crimp the boot so that the clearance (b) of the band - boot (a) crimp portion becomes 2 mm (0.08 in) or less.

Note:

Use a new band - boot.



4. Fix the end of the boot - steering gearbox with clip - boot tie-rod (a).
5. After installation, check that the end of the boot - steering gearbox is installed to the groove (b) of the tie-rod.

6. If the tie-rod end has been removed, screw in lock nut and tie-rod end to the threaded portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

   Installed tie-rod length L:

   17 mm (0.67 in)
7. Inspect the steering gearbox assembly as follows:
   1. "A" Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
   2. "B" Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
   3. Finally, make sure that the boot - steering gearbox is installed in the specified position without inflating.

8. Remove the steering gearbox assembly from ST.

POWER ASSISTED SYSTEM (POWER STEERING) > Electric Power Steering Gearbox

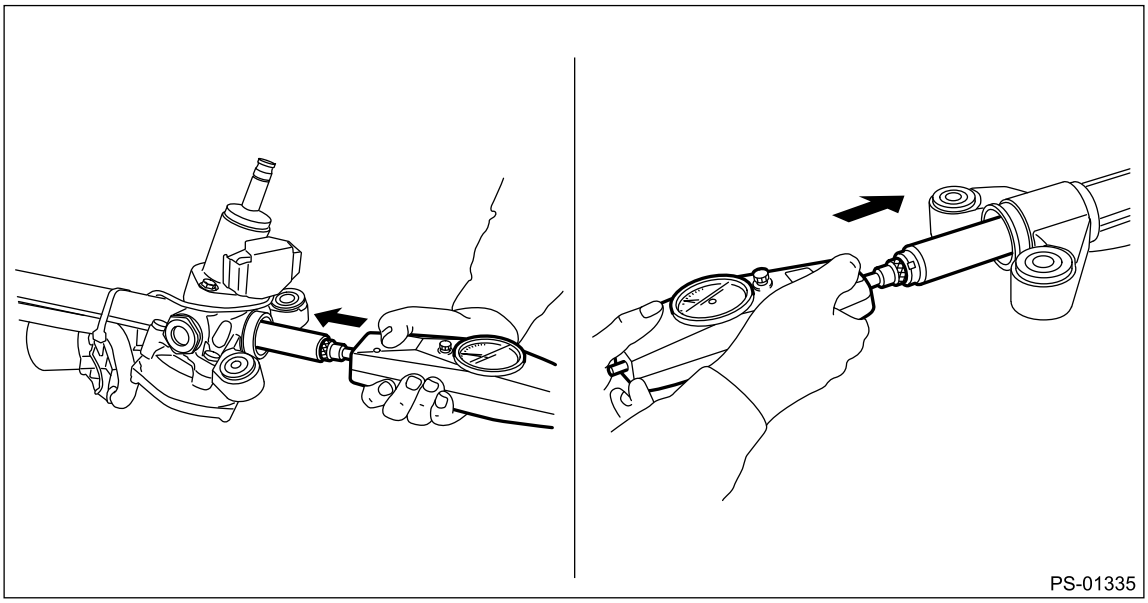
INSPECTION

1. UNIT INSPECTION

Check components for wear, damage or other faults. Adjust or replace if necessary.

2. LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.



Note:

When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.

Rack shaft sliding resistance:

Limit: 360 N (37 kgf, 81 lbf) or less

Difference between right and left sliding resistance: 20% or less

3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

Note:

- **When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.**
- **When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.**
  - **– Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.**
  - **– Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))**

Right-turn steering:

Service limit:

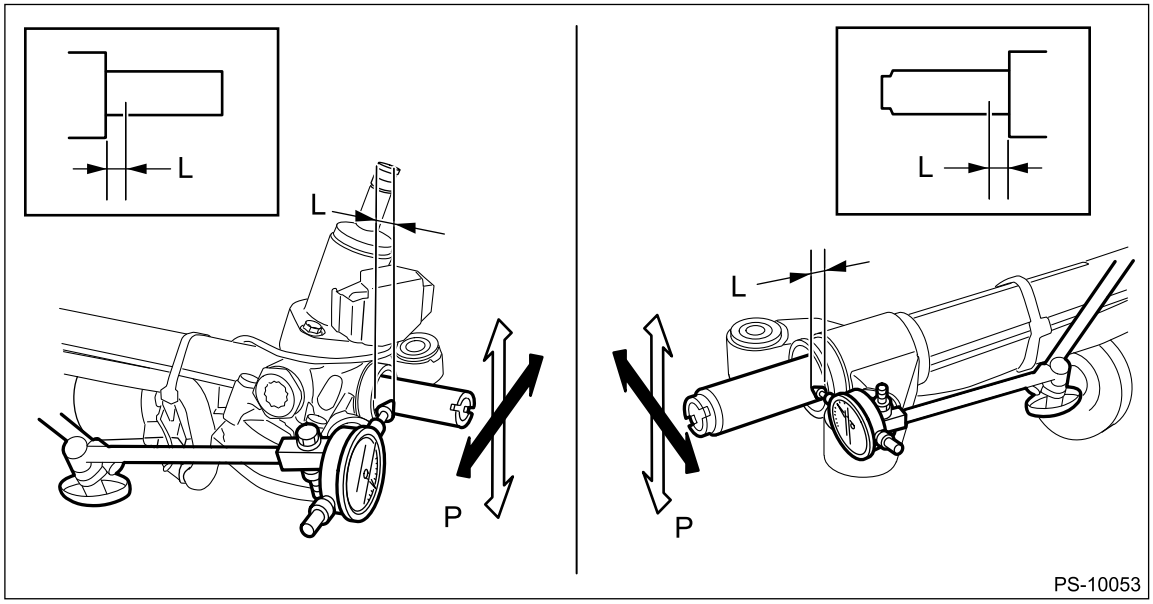
Both amplitudes: 0.6 mm (0.024 in) or less

Left-turn steering:

Service limit:

Both amplitudes: 0.6 mm (0.024 in) or less

Condition:



L: 5 mm (0.2 in)

Rack shaft end P: 98 N (10 kgf, 22 lbf)

Note:

<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.

4. INPUT SHAFT PLAY

Note:

- **When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.**
- **When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.**
  - **– Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.**
  - **– Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))**

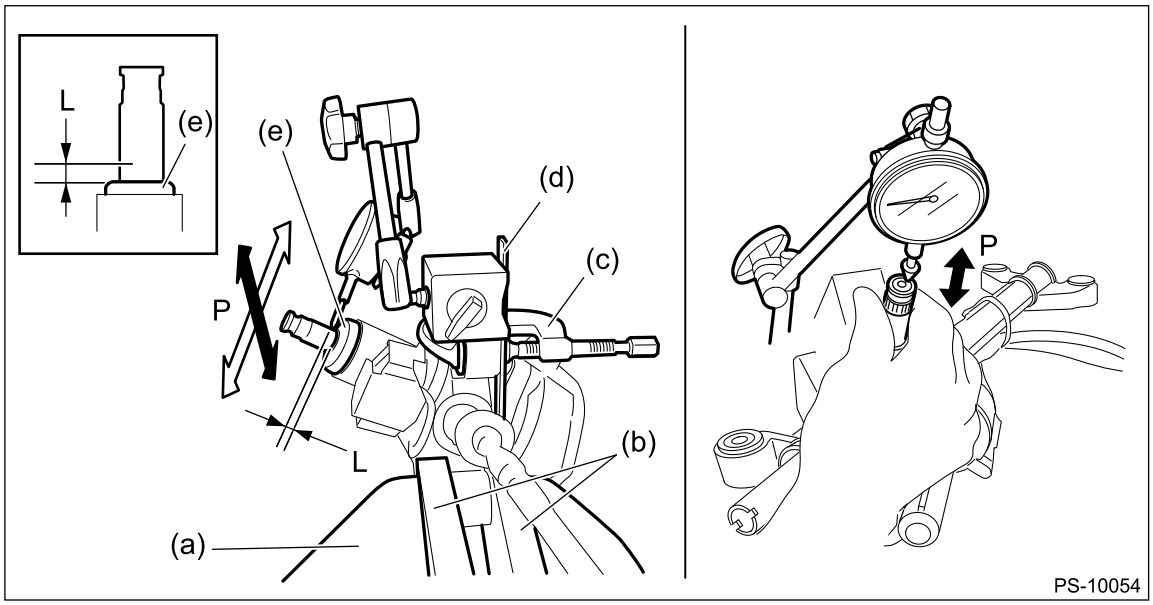
In radial direction:

Limit of both amplitudes: 0.6 mm (0.024 in) or less

Condition: Input shaft tip P = 98 N (10 kgf, 22 lbf)

L: 5 mm (0.2 in) from dust cover

In axial direction:



Service limit: 0.27 mm (0.0106 in) or less

Condition: Input shaft tip P = 20 — 49 N (2 — 5 kgf, 4 — 11 lbf)

Note:

<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.

(a) Vise

(b) Wooden block

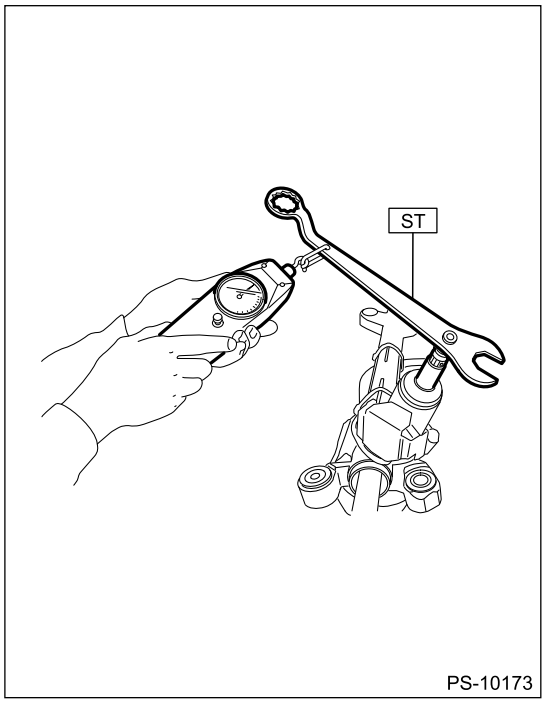
(c) C-clamp

(d) Iron plate

(e) Dust cover

5. ROTATIONAL RESISTANCE OF GEARBOX

1. Using the ST, measure the rotational resistance of the steering gearbox assembly.



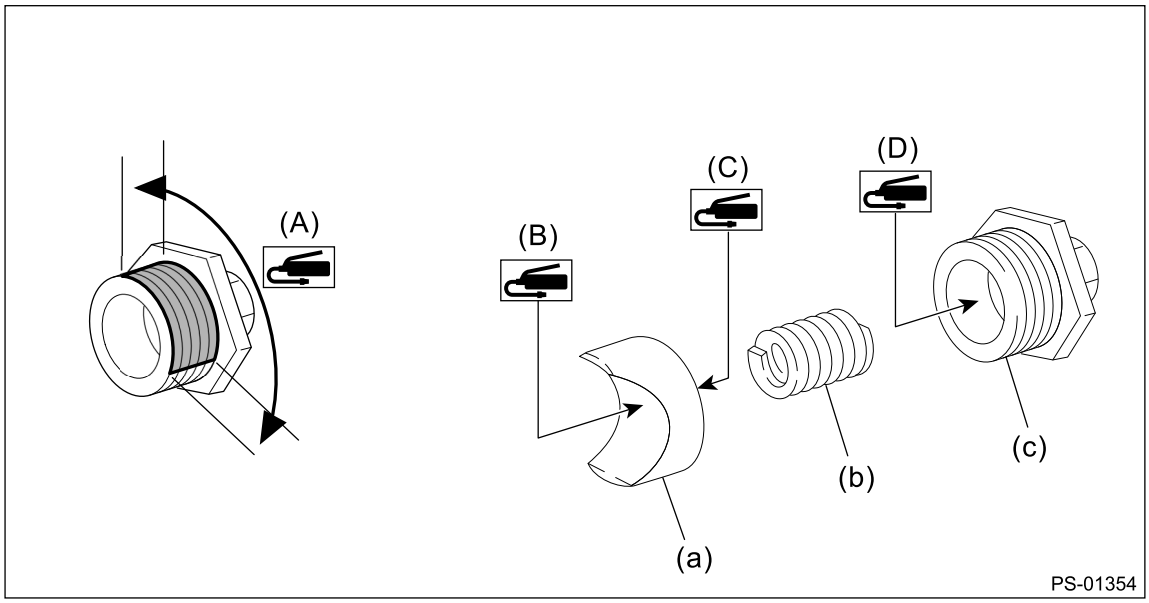
Preparation tool:

ST: SPANNER (34099PA100)

Service limit:

Maximum allowable resistance: 20 N (2 kgf, 4.5 lbf) or less

Difference between right and left rotational resistance: 20% or less

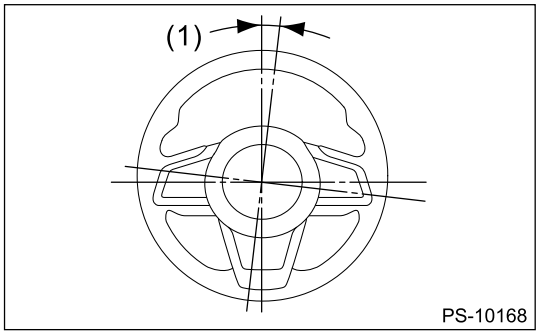


POWER ASSISTED SYSTEM (POWER STEERING) > Electric Power Steering Gearbox

ADJUSTMENT

1. GEARBOX BACKLASH ADJUSTMENT

1. Remove the steering gearbox assembly. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox>REMOVAL.
2. Loosen the lock nut and adjusting screw.
3. Apply a coat of grease to the sliding surface (B) of the pad - pressure (a) and seating surface (C) of spring - gearbox (b), and then insert the pad - pressure (a) into steering body.
4. Charge the adjusting screw (c) with grease (D), and then insert the spring - gearbox (b) into adjusting screw. Then install on the steering body.
   Grease:
   Multemp AC-P
5. Apply liquid gasket to 1/3 or more (A) of entire perimeter of adjusting screw thread (c).
   Liquid gasket:
   THREE BOND 1324G



6. Tighten the adjusting screw to 35 N·m(3.6 kgf-m, 25.8 ft-lb), then loosen it.
7. Tighten the adjusting screw to 6 N·m(0.6 kgf-m, 4.4 ft-lb).
8. Loosen the adjusting screw by 20°.
9. While fixing the adjusting screw, tighten the lock nuts.
   Tightening torque:
   49.4 N·m(5.04 kgf-m, 36.4 ft-lb)

2. FRONT WHEEL ALIGNMENT ADJUSTMENT

1. Adjust the front toe. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT > FRONT WHEEL TOE-IN.
2. Check the steering angle of the wheels.
   Standard of steering angle:

Inner wheel	***37.8°±1.5°***
Outer wheel	***32.9°±1.5°***

3. When the steering wheel is in the following condition, perform the steering wheel installation over again.
   - When wheels are set in the straight ahead position, the steering wheel spokes are not horizontal.
   - Error is more than 5° on the periphery of the steering wheel.

(1) Within 5°

4. If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle. Also check that there are no abnormal steering effort, failure of the steering wheel to return or other faults.

5. Perform the VDC sensor midpoint setting mode. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

POWER ASSISTED SYSTEM (POWER STEERING) > Power Steering Control Module

REMOVAL

Note:

Power steering control module is integrated with the electric power steering gearbox.
Since the power steering control module is a non-disassemble part, it cannot be removed.

POWER ASSISTED SYSTEM (POWER STEERING) > Power Steering Control Module

INSTALLATION

Note:

Power steering control module is integrated with the electric power steering gearbox.
The power steering control module is a non-disassemble part.

POWER ASSISTED SYSTEM (POWER STEERING) > Power Steering Control Module

INSPECTION

Note:

Power steering control module is integrated with the electric power steering gearbox.
Refer to "POWER STEERING (DIAGNOSTICS)" for inspection. **Ref. to POWER STEERING (DIAGNOSTICS)>Basic Diagnostic Procedure.**

INSPECTION

Trouble	Possible cause	Corrective action
• Steering effort is heavy in all ranges. • Steering effort is heavy at stand still. • Steering wheel vibrates when turning.	1. Tire and wheel • Improper tire out of specifications • Improper wheel out of specification • Tires not properly inflated	Replace or reinflate the tire and wheel.
	2. Measure the steering wheel effort. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>General Diagnostic Table>INSPECTION > MEASUREMENT OF STEERING EFFORT.	Adjust or replace the faulty parts.
• Vehicle leads to one side or the other. • Returning force of steering wheel to center is poor. • Steering wheel vibrates when turning.	1. Tire and wheel • Flat tire • Mixed use of different tires • Mixed use of different wheels • Abnormal wear of tire • Unequal tread remaining • Unequal pressure of tire	Adjust, repair or replace the tire and wheel.
	2. Front wheel alignment • Improper or unequal caster • Improper or unequal toe-in • Loose suspension connections	Adjust or retighten.
	3. Measure the steering wheel effort. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>General Diagnostic Table>INSPECTION > MEASUREMENT OF STEERING EFFORT.	Adjust or replace the faulty parts.

Note:

When performing repeated steering operation with the vehicle at standstill, the steering effort may be temporarily heavy because the heat generated in the system activates the power steering protection control. This is not a malfunction caused by the steering system. After a while, it will return to normal steering effort. (In this case, the steering warning light will not come on and there will be no DTC.)

1. NOISE AND VIBRATION

Note:

- **When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.**
- **There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.**

Trouble	Possible cause	Corrective action
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary.

Trouble	Possible cause	Corrective action
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Noise emitted from inside of the gearbox	Replace the gearbox assembly.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust the backlash. When the noise remains after adjustment, replace the gearbox assembly.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (intermittent) While engine is running. (While operating the steering.)	Fault inside of gearbox	Replace the gearbox assembly.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running. (with/without steering turned)	Excessive play in steering, looseness of suspension parts	Retighten.

2. MEASUREMENT OF STEERING EFFORT

1. CHECK STEERING WARNING LIGHT.

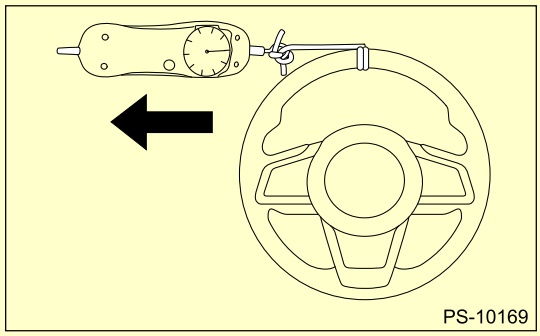
Does the steering warning light illuminate?

Yes — Using Subaru Select Monitor, read the DTC and inspect according to it. For detailed operation procedures, refer to “Application help”.

No — Go to 2.

2. CHECK STEERING WARNING LIGHT.

1. Using Subaru Select Monitor, display the data of [EPS operating condition].
2. Connect the Subaru Select Monitor, and turn the steering wheel. (One lock to lock)



Is the [EPS operating condition] normal without displaying any DTC code?

Yes — Go to 3.

No — If the [EPS operating condition] is “Assist limitation”, stop the engine for approx. 30 minutes and perform the procedures from step 1 again.

3. CHECK STEERING EFFORT.

1. Stop the vehicle on paved road.
2. Set the tire air pressure to the specification.
3. Start the engine.
4. Run the engine at idle.
5. Install a spring scale on the steering wheel tangent.
6. Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.

Is the steering effort less than 31 N (3.2 kgf, 7.0 lbf)?

Yes — Go to 4.

No — Go to 8.

4. CHECK STEERING EFFORT.

1. Stop the engine.
2. Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.

Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?

Yes — Go to 5.

No — Perform the inspection or adjustment around the suspension part.

5. CHECK TORQUE SENSOR OUTPUT VALUE.

1. Display the data of [Torque sensor main output] and [Torque sensor sub output] using Subaru Select Monitor.
2. Read the value of torque sensor.
   Note:
   When measuring, place the steering wheel at the center position.

Is the torque value ±0.75 N·m(0.08 kgf-m,0.05 ft-lb)?

Yes — Go to 6.

No — Replace the gearbox assembly. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

6. CHECK TORQUE SENSOR OUTPUT VALUE.

1. Remove the universal joint assembly - steering.
2. Display the data of [Torque sensor main output] and [Torque sensor sub output] using Subaru Select Monitor.
3. Read the value of torque sensor.

Is the torque value ±0.75 N·m(0.08 kgf-m,0.05 ft-lb)?

Yes — Go to 7.

No — Replace the gearbox assembly. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

7. CHECK TORQUE SENSOR OUTPUT VALUE.

1. Remove the universal joint assembly - steering.
   Note:
   Check that the universal joint assembly - steering moves up and down smoothly without installing the bolt. Then tighten the bolts first on the gearbox side and then on the column shaft side.
2. Display the data of [Torque sensor main output] and [Torque sensor sub output] using Subaru Select Monitor.
3. Read the value of torque sensor.

Is the torque value ±0.75 N·m(0.08 kgf-m,0.05 ft-lb)?

Yes — Go to 8.

No — Check the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

8. CHECK STEERING WHEEL EFFORT.

1. Remove the universal joint assembly - steering.
2. Measure the steering wheel effort.

Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?

Yes — Go to 9.

No — Replace the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

9. CHECK STEERING WHEEL EFFORT.

Measure the steering wheel effort.

Is the difference of steering effort between right and left less than 20%?

Yes — Go to 10.

No — Replace the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column.

10. CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.

Measure the swing torque of joint. (Yoke of column assembly - steering side) Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSPECTION.

Is the swing torque of the universal joint assembly - steering less than 5.4 N (0.55 kgf, 1.21 lbf)?

Yes — Go to 11.

No — Replace the universal joint assembly - steering with a new part. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint.

11. CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.

Measure the swing torque of joint. (Yoke of gearbox side) Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSPECTION.

Is the swing torque of the universal joint assembly - steering less than 4.5 N (0.46 kgf, 1.01 lbf)?

Yes — Go to 12.

No — Replace the universal joint assembly - steering with a new part. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint.

12. CHECK FRONT WHEEL.

Check the front wheels.

Does the front wheels have unsteady revolution or rattling, or does the brake drag?

Yes — Inspect, readjust and replace if necessary.

No — Go to 13.

13. CHECK TIE-ROD ENDS.

Remove the tie-rod ends.

Does the tie-rod ends of suspension have unsteady revolution or rattling?

Yes — Inspect and replace if necessary.

No — Go to 14.

14. CHECK BALL JOINT.

Remove the ball joint.

Does the ball joints of suspension have unsteady revolution or rattling?

Yes — Inspect and replace if necessary.

No — Go to 15.

15. CHECK GEARBOX.

Measure the rotating of gearbox.
Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox>INSPECTION > LIMIT.

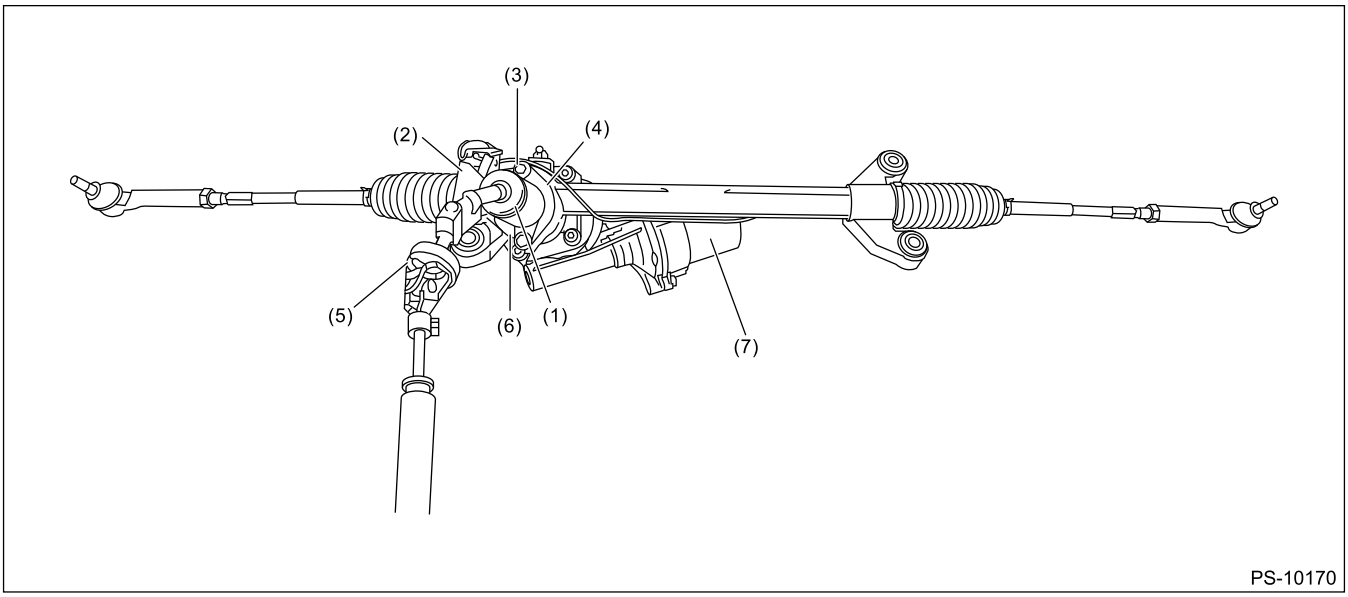
Is the rotational resistance of the steering gearbox less than 20 N (2 kgf, 4.5 lbf)? Is the difference between the right and left rotational resistances less than 20%?

Yes — Go to 16.

No — Replace the gearbox assembly. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

16. CHECK GEARBOX.

Measure the sliding of gearbox.



Is the sliding resistance of the steering gearbox less than 360 N (36.7 kgf, 80.9 lbf)? Is the difference between the right and left sliding resistances less than 20%?

Yes	Steering effort is normal.
No	Replace the gearbox assembly. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox.

3. INSPECTION OF CLEARANCE

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

Location	Minimum allowance mm (in)
(1) Stub housing to DOJ (MT model)	15 (0.59)
(2) Torque sensor to Crossmember	5 (0.2)
(3) Worm wheel housing to Crossmember	There must be no contact
(4) Stub housing to Engine mount	10 (0.39)
(5) Universal joint column side yoke to master cylinder (closest point of approach when the universal joint turns by 360°)	5 (0.2)
(6) Wheel housing to Exhaust pipe	13 (0.51)
(7) Cylinder to Crossmember	There must be no contact

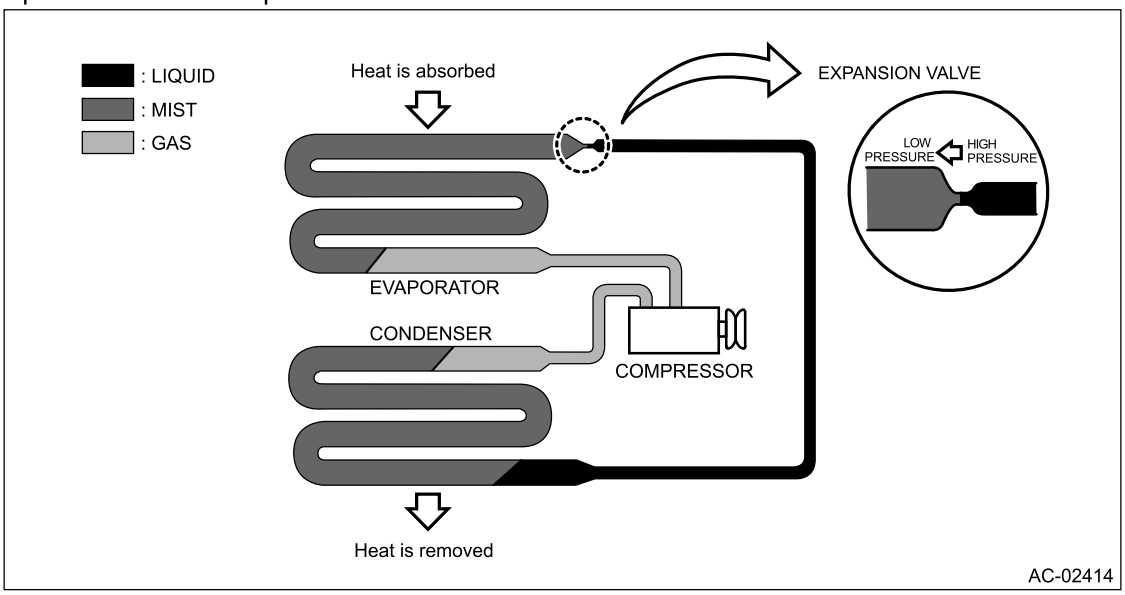
SPECIFICATION

1. HEATER SYSTEM

Item		Specifications	Condition
Heating capacity		5 kW (4,299 kcal/h, 17,059 BTU/h) or more	• Air flow control switch: FOOT • Temperature control dial: HI (MAX HOT) • Temperature difference between hot water and inlet air: 65°C (149°F) • Hot water flow rate: 360 L (95.1 US gal, 79.2 Imp gal)/h
Air flow rate		300 m^3 (10,596 cu ft)/h or more	FOOT mode (FRESH), MAX HOT at 12.5 V
Max air flow rate		480 m^3 (16,954 cu ft)/h or more	• Temperature control dial: LO (MAX COOL) • Fan dial: HI (MAX) • FRESH/RECIRC switch: RECIRC
Heater core	Size (width × height × thickness)	263.9× 120 × 27 mm (10.39 × 4.72 × 1.06 in)	—
Blower motor	Motor type	Magnet	—
	Power consumption	260 W or less	12 V
	Fan type	Sirocco fan	—
	Size (diameter × height)	137 × 60 mm (5.39 × 2.36 in)	—

2. A/C SYSTEM



Item		Specifications
Type of air conditioner		Reheat air-mix type
Cooling capacity		5 kW (4,299 kcal/h, 17,059 BTU/h) or more
Refrigerant		HFC-134a (CH_2 FCF_3) [0.475±0.025 kg (1.05±0.06 lb)]
Compressor	Type	Manual A/C model: Scroll, constant volume (SCSA08H) Auto A/C model: Swash plate, variable volume (TSE14F)
	Discharge	Manual A/C model: 74.5 cc (4.55 cu in)/rev Auto A/C model: 140.6 cc (8.58 cu in)/rev
	Max. permissible speed	Manual A/C model: 9,000 r/min Auto A/C model: 6,000 r/min
Magnet clutch (manual A/C model only)	Type	Dry, single-disc type
	Power consumption	35 W

Item			Specifications
Pulley		Type of belt	V-belt 6 PK
		Pulley dia. (effective dia.)	Manual A/C model: 100 mm (3.94 in) Auto A/C model: 110 mm (4.33 in)
		Pulley ratio	Manual A/C model: 1.43 Auto A/C model: 1.3
Condenser		Type	Corrugated fin (sub cool type)
		Core face area	0.214 m^2 (2.304 sq ft)
		Core thickness	11.5 mm (0.45 in)
		Radiation area	4.694 m^2 (50.53 sq ft)
Receiver drier		Effective inner capacity	220 cm^3 (13.42 cu in)
Expansion valve		Type	Block type
Evaporator		Type	Double tank
		Size (width × height × thickness)	279.7× 191 × 38 mm (11.01 × 7.52 × 1.5 in)
Blower fan		Fan type	Sirocco fan
		Size (outer diameter × height)	137 × 60 mm (5.39 × 2.36 in)
		Power consumption	260 W or less
Condenser fan (sub fan)		Motor type	Magnet
		Power consumption	120 W
		Fan outer diameter	300 mm (11.8 in)
Radiator fan (main fan)		Motor type	Magnet
		Power consumption	120 W
		Fan outer diameter	300 mm (11.8 in)
Idle speed	MPFI model	No load	CVT model: 775±100 r/min MT model: 700±100 r/min
		A/C ON	800 — 900±50 r/min
Pressure Switch (Triple Pressure Switch) (manual A/C model only)	Low-pressure switch operating pressure	ON → OFF	196±20 kPa (2±0.2 kgf/cm^2, 28.4±2.9 psi)
		OFF → ON	225^{+25}_{-29} kPa ($2.29^{+0.25}_{-0.3}$ kgf/cm^2, $32.6^{+3.6}_{-4.2}$ psi)
	High-pressure switch operating pressure	ON → OFF	$3{,}140^{+50}_{-200}$ kPa ($32.02^{+0.51}_{-2.04}$ kgf/cm^2, $455.4^{+7.25}_{-29}$ psi)
		OFF → ON	2,475±325 kPa (25.24±3.31 kgf/cm^2, 358.87±47.12 psi)
	Middle-pressure switch operating pressure	ON → OFF	1,370±120 kPa (13.97±1.22 kgf/cm^2, 198.6±17.4 psi)

	Item		Specifications
		OFF → ON	1,770±80 kPa (18.05±0.82 kgf/cm^2, 256.6±11.6 psi)

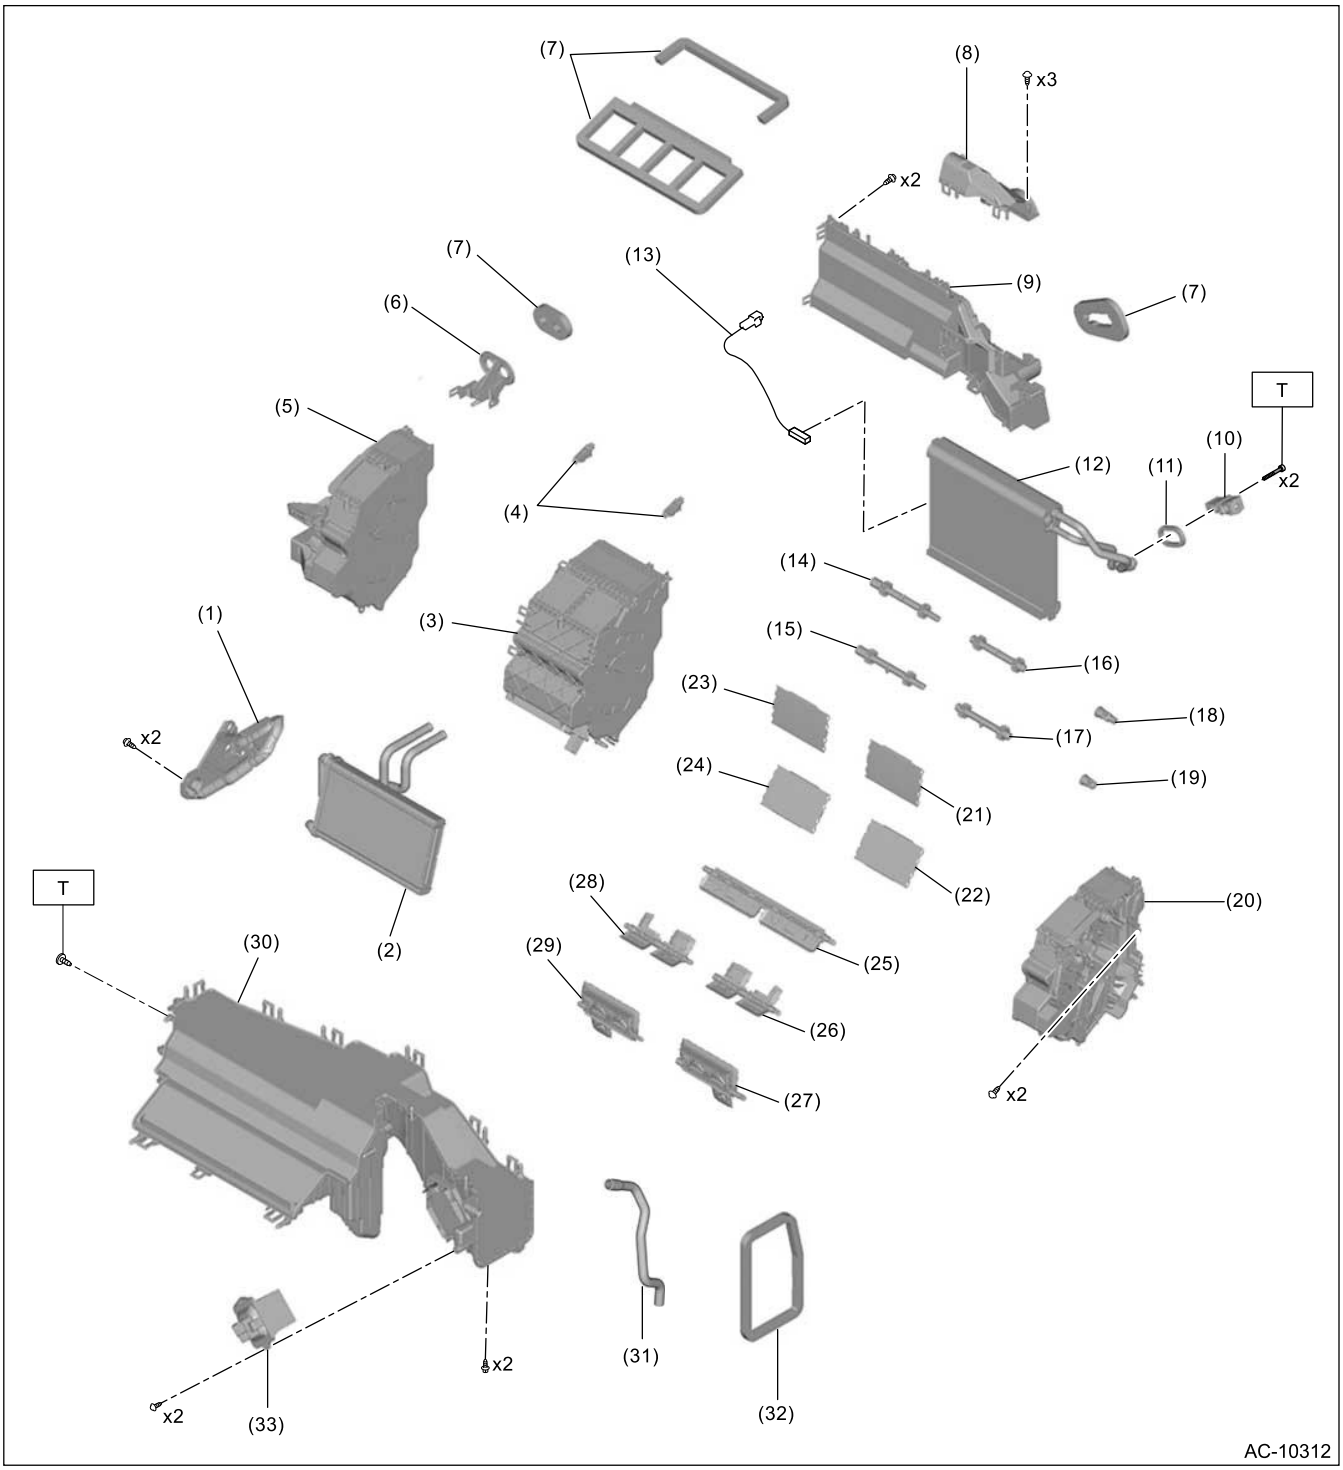
3. BASIC OPERATION

The cooling system cools down the compartment by using the pipes connecting parts and cycling the evaporable liquid (refrigerant) within the sealed system in a repeated process of "vaporization — liquefaction — re-vaporization".

Item	Operation
Compressor	Sucks and pressurizes the low temperature, low pressure refrigerant gas that was vaporized at the evaporator by absorbing heat from the compartment, and sends the high temperature, high pressure refrigerant gas to the condenser.
Condenser	Cools the high temperature, high pressure refrigerant gas sent from the compressor for condense and liquefaction.
Expansion valve	• Sprays the high temperature, high pressure liquid refrigerant from the small hole in order to let the refrigerant expand rapidly to turn it into low temperature, low pressure mist. • The refrigerant amount is adjusted according to the refrigerant vaporization condition in the evaporator.
Evaporator	The evaporator turns into a low temperature condition when the mist refrigerant that was turned into a low temperature, low pressure condition at the expansion valve is vaporized in large quantity in the evaporator. Passing air flow through the low temperature evaporator emits cold air.

AIR CONDITIONER > General Description

LOCATION



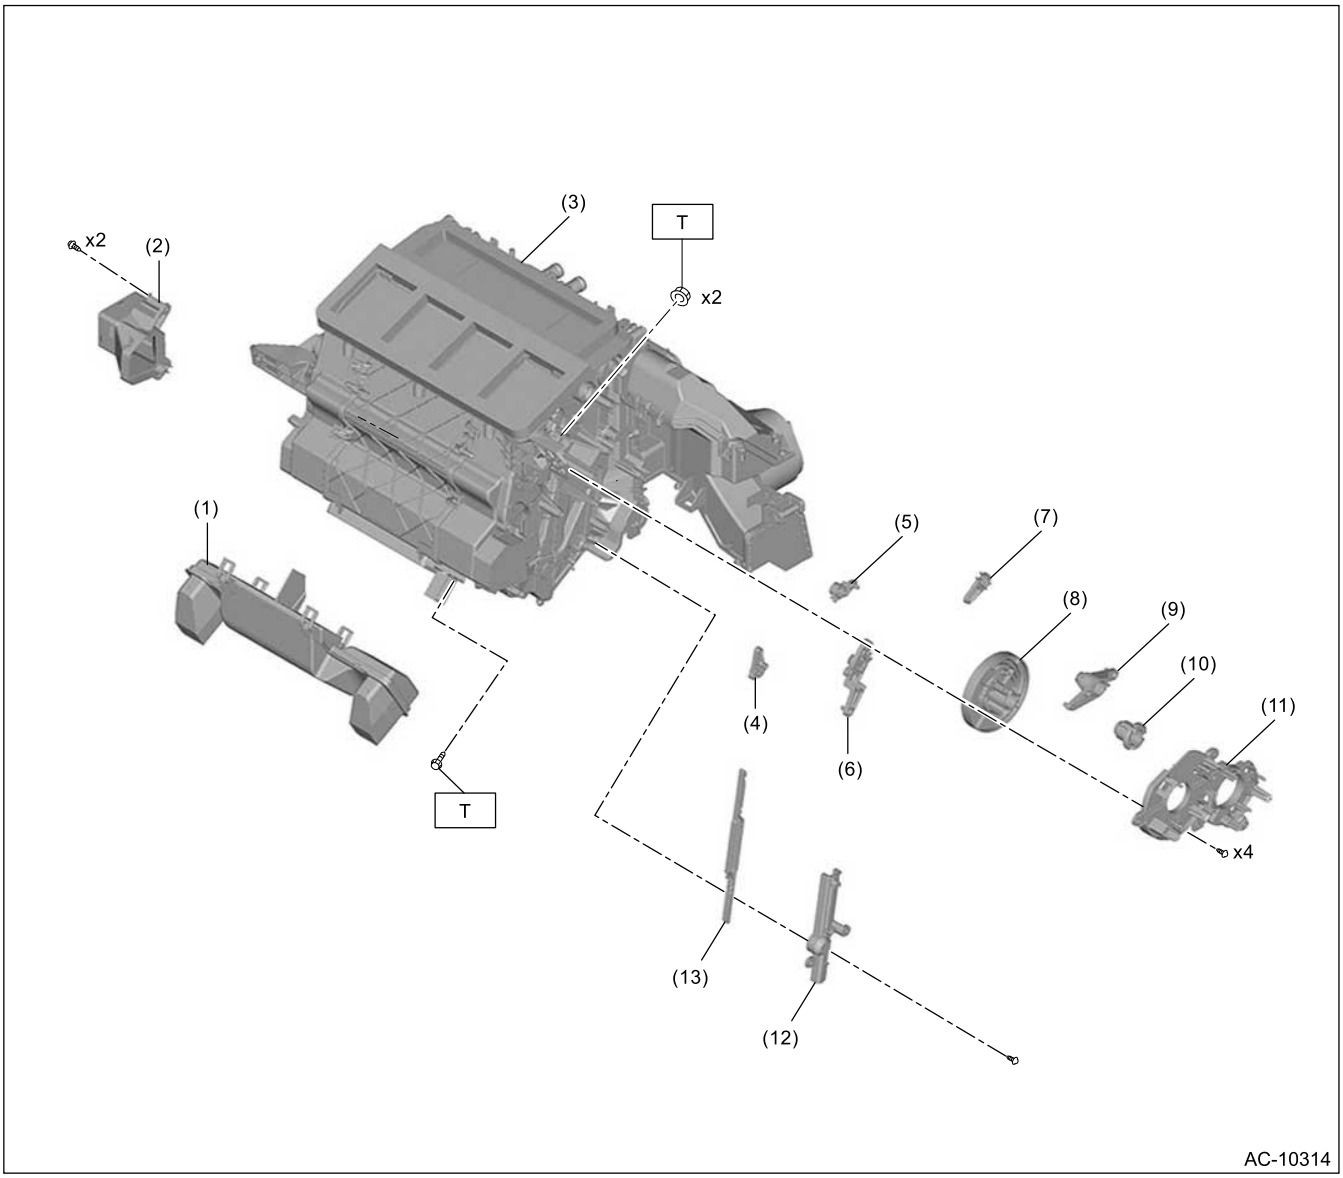
For location, refer to "Electrical Component Location" for "AIR CONDITIONER (DIAGNOSTICS)" section.
Ref. to AIR CONDITIONER(DIAGNOSTICS)>Electrical Component Location.

AIR CONDITIONER > General Description

COMPONENT

1. HEATER COOLING UNIT

• MANUAL A/C MODEL



(1)	Cover - heater pipe	(13)	Evaporator sensor	(25)	Shutter - defroster
(2)	Heater core	(14)	Shaft - mix LH UPR	(26)	Shutter - vent RH
(3)	Case - heater unit CTR	(15)	Shaft - mix LH LWR	(27)	Shutter - foot RH

∗1: For models with left/right independent air conditioning function only

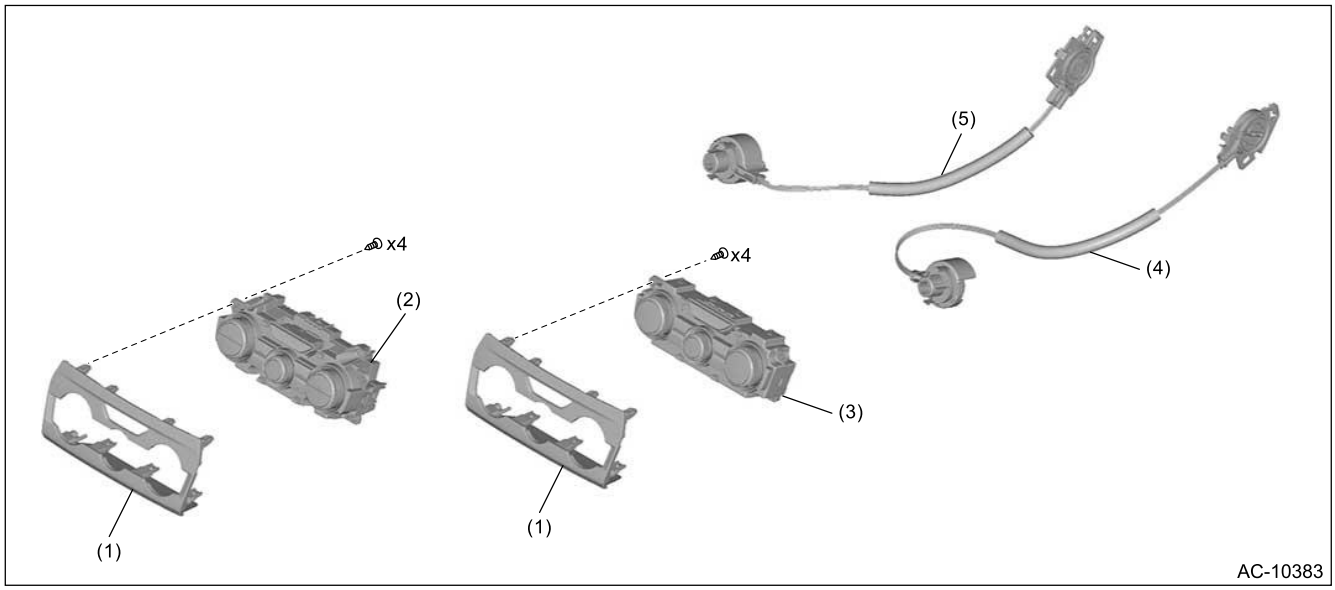
2. BLOWER MOTOR UNIT



(1) Motor - actuator intake
(2) Tapping screw ASSY
(3) Link plate
(4) Link lever
(5) Case - blower intake LH
(6) Packing
(7) Shutter - blower
(8) Case - blower intake RH
(9) Case upper - blower
(10) Packing - blower
(11) Case lower - blower
(12) Blower motor ASSY
(13) Filter
(14) Filter cover

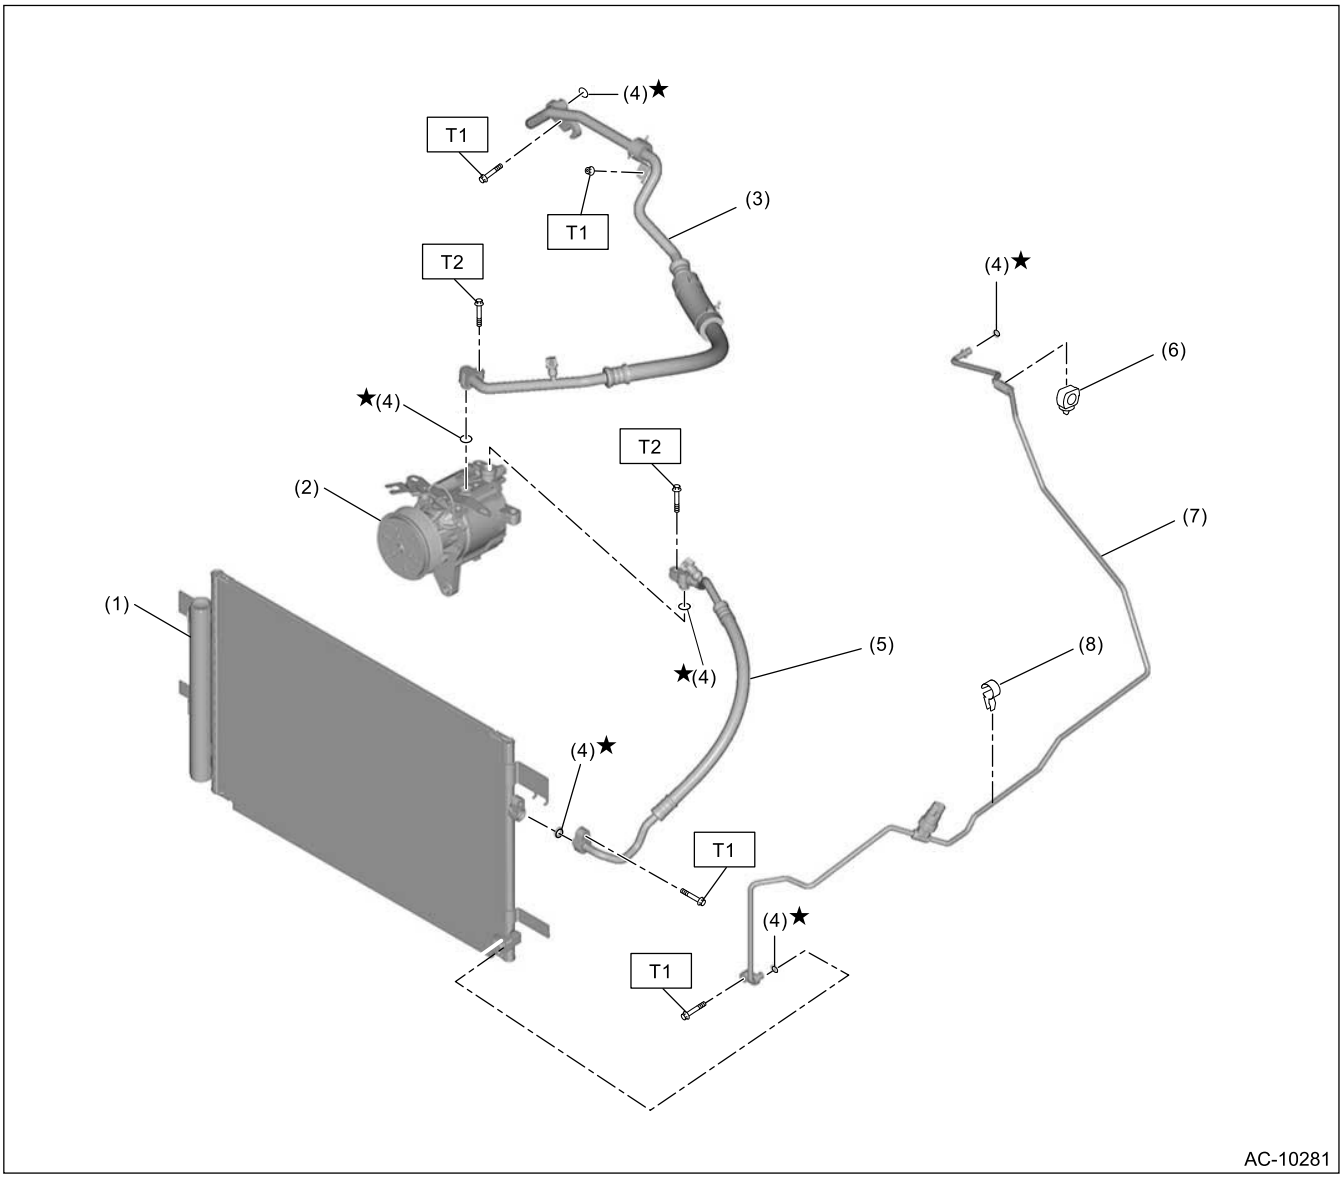
Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

3. CONTROL PANEL

(1) Panel ASSY - heater

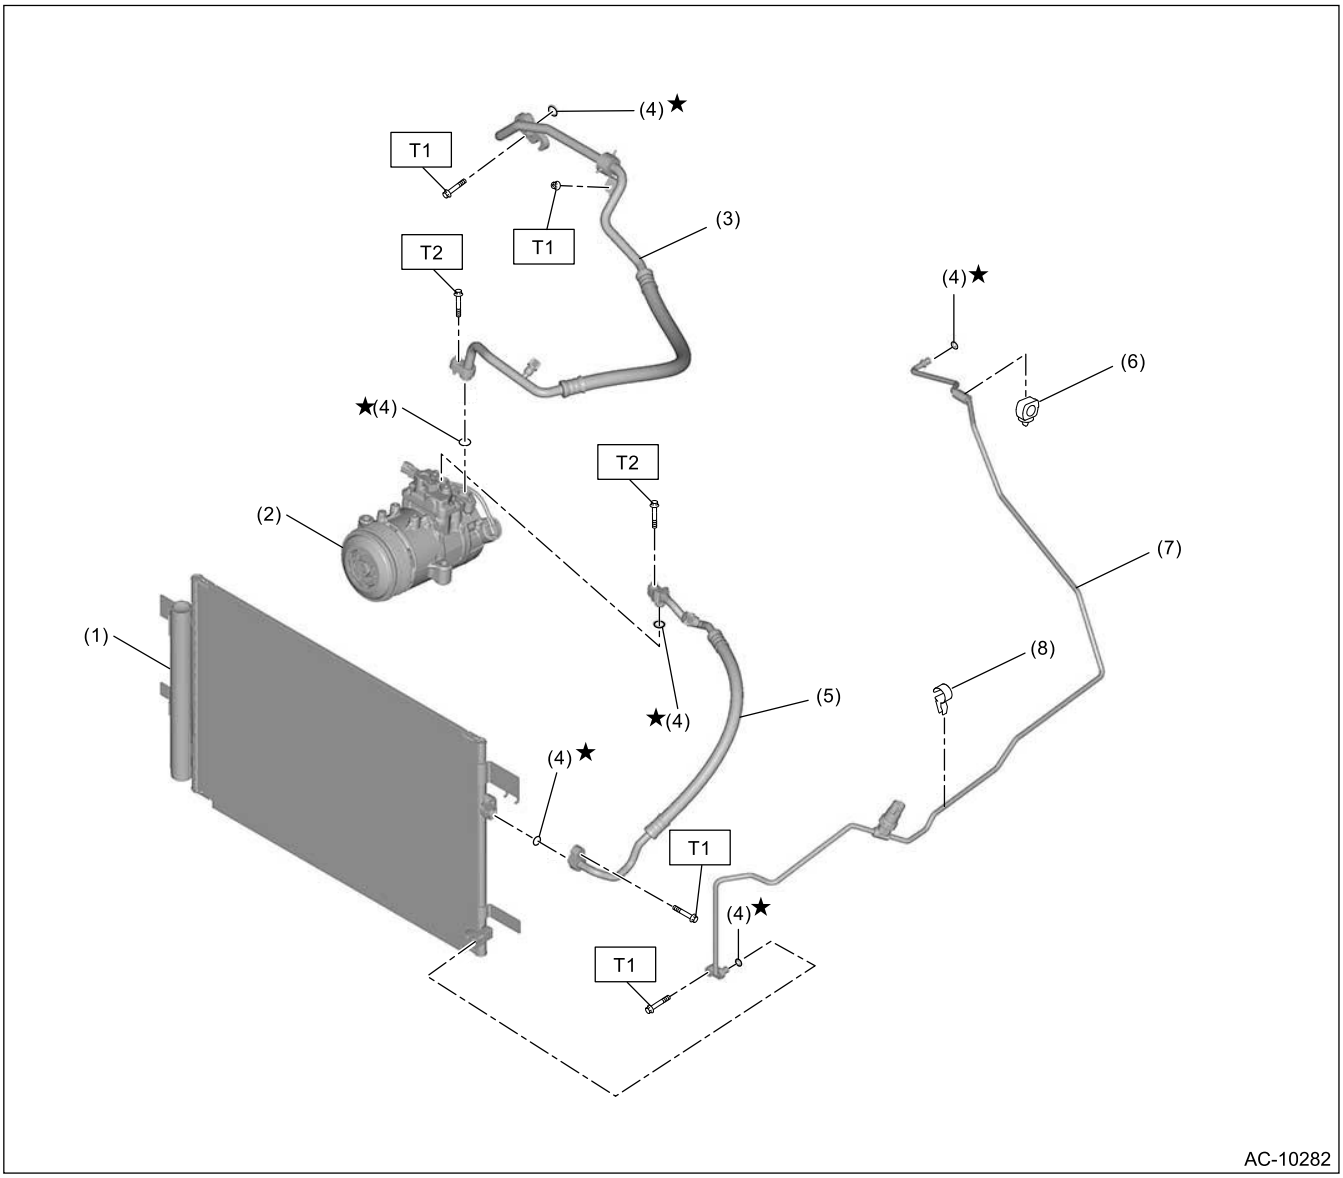
(2) Heater control ASSY (auto A/C model)



(3) Heater control ASSY (manual A/C model)

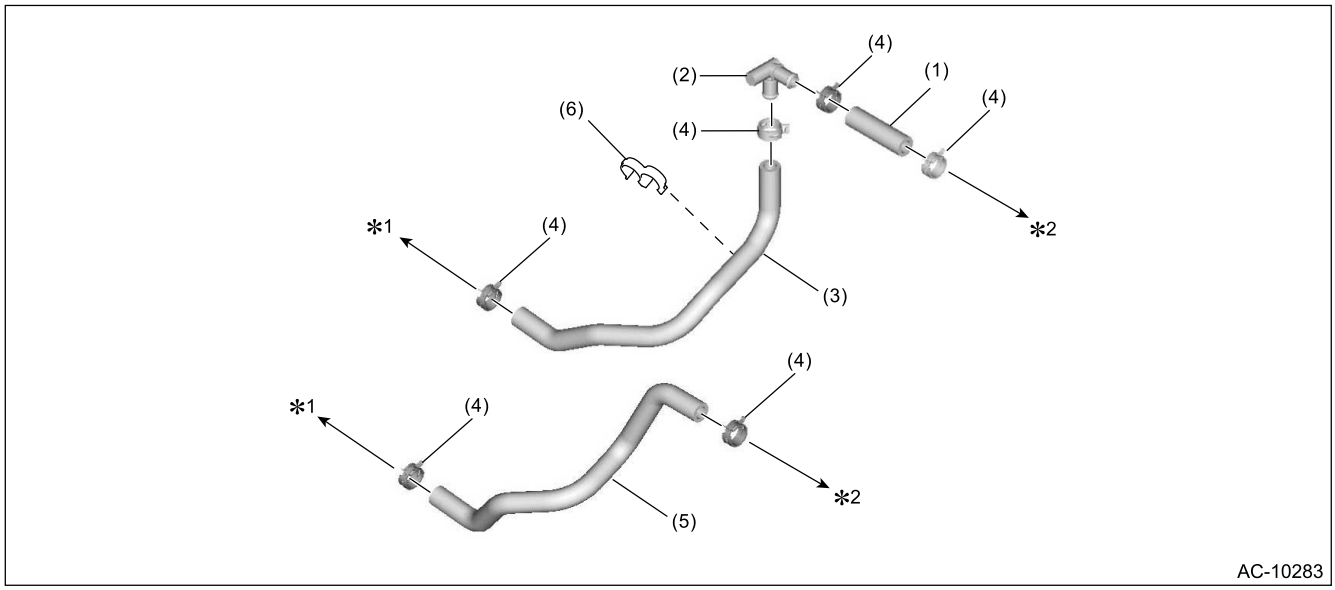
(4) Cable - temperature

(5) Cable - mode



4. AIR CONDITIONING UNIT

- **MANUAL A/C MODEL**

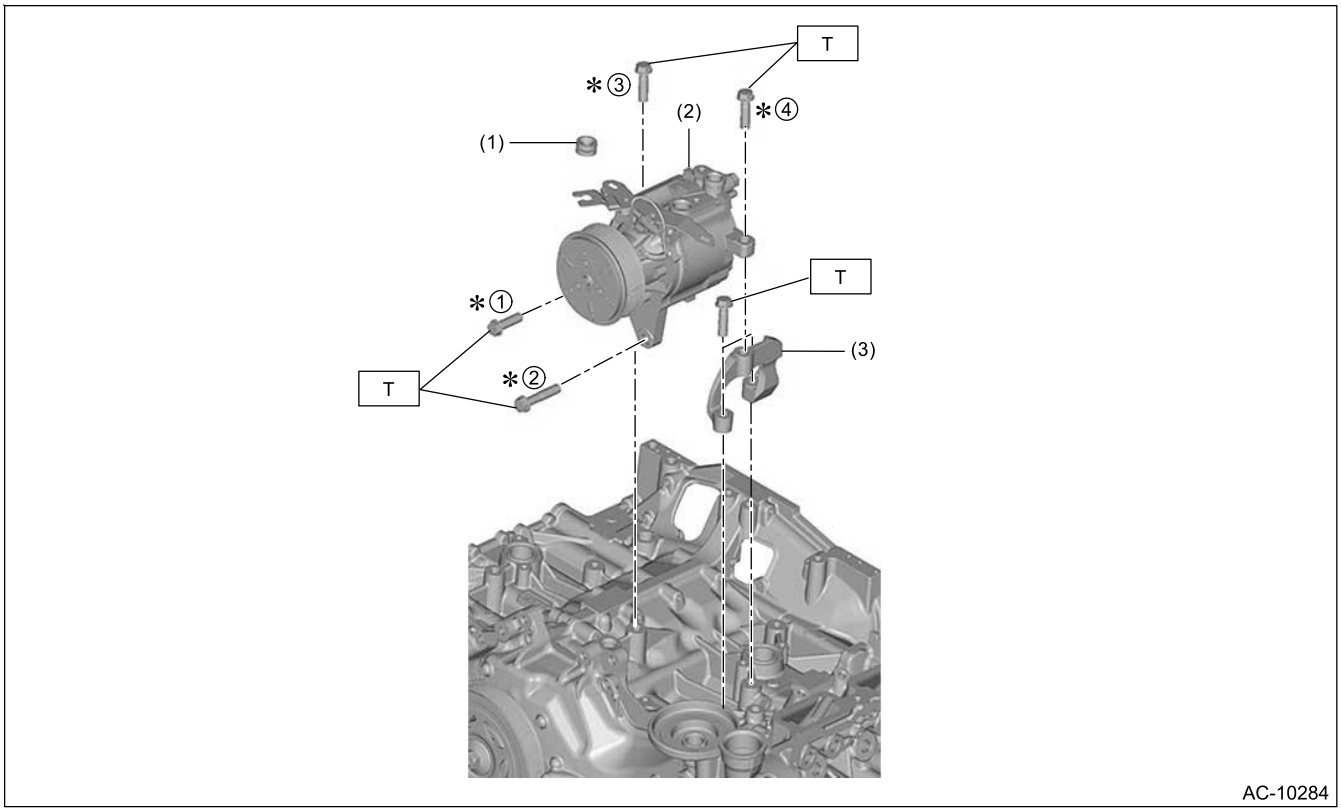


(1)	Condenser ASSY - air conditioner	(5)	Hose - pressure discharge	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Compressor ASSY	(6)	Clip	***T1: 7.5 (0.8, 5.5)***	
(3)	Hose - pressure suction	(7)	Pipe - evaporator cooling	***T2: 10 (1, 7.4)***	
(4)	Seal O-ring	(8)	Clip - pipe		

- **AUTO A/C MODEL**

(1)	Condenser ASSY - air conditioner	(5)	Hose - pressure discharge	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Compressor ASSY	(6)	Clip	***T1: 7.5 (0.8, 5.5)***
(3)	Hose - pressure suction	(7)	Pipe - evaporator cooling	***T2: 10 (1, 7.4)***
(4)	Seal O-ring	(8)	Clip - pipe	

5. HEATER HOSE

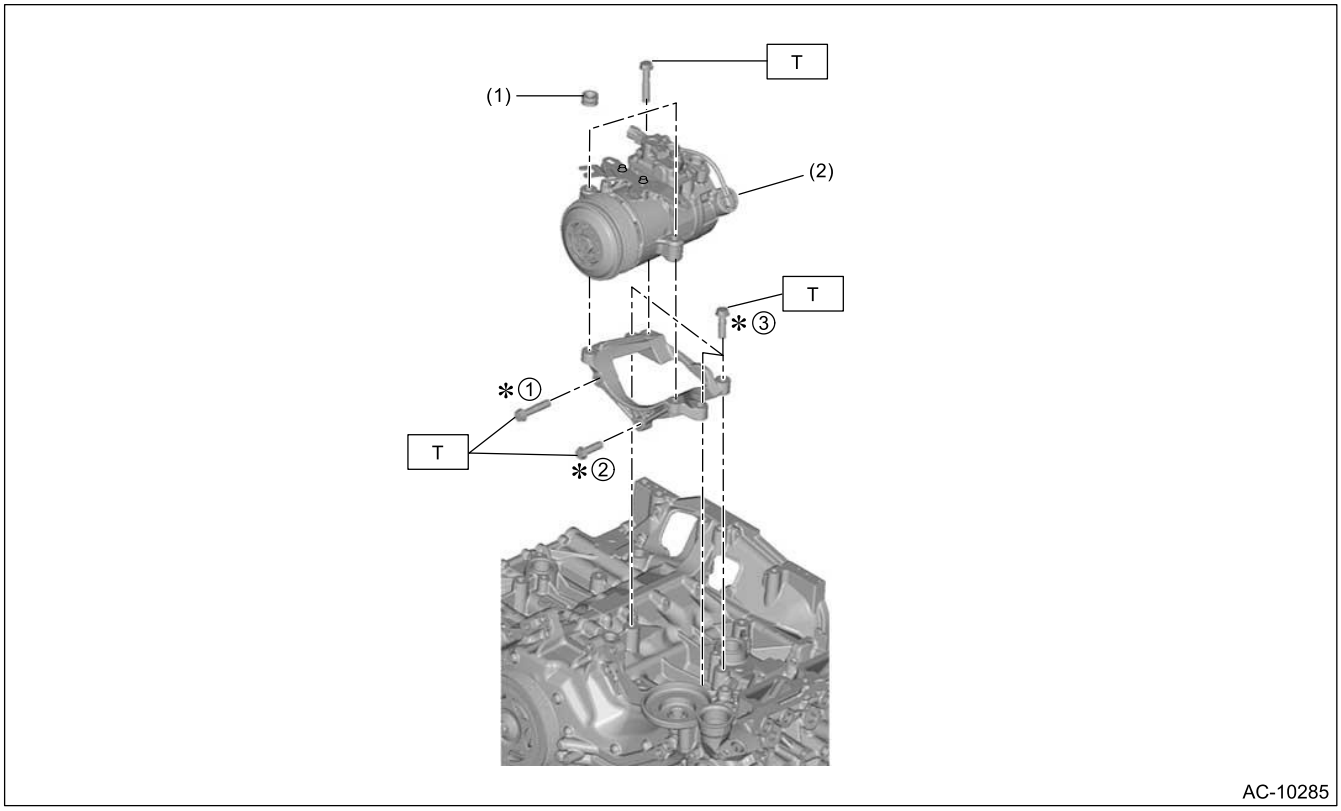


(1) Hose - heater outlet A
(2) Hose - heater drain
(3) Hose - heater outlet B
(4) Clamp
(5) Hose - heater inlet
(6) Clip

*1: Engine side
*2: Heater core side

6. COMPRESSOR

- **MANUAL A/C MODEL**



(1) Grommet
(2) Compressor ASSY
(3) Bracket - air conditioner

Tightening torque: N·m (kgf-m, ft-lb)

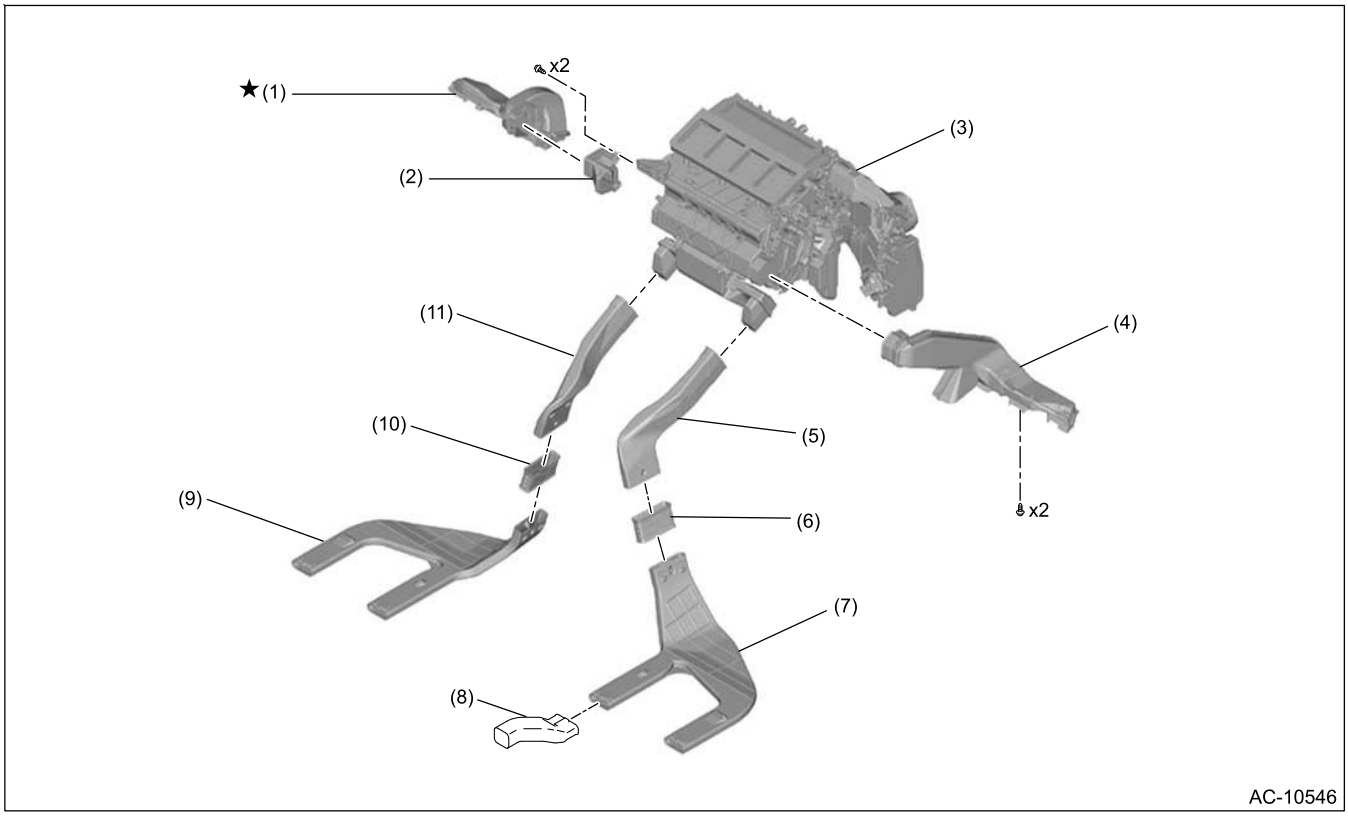
T: 36 (3.7, 26.6)

*: Tighten the compressor assembly in the numerical order as shown in the figure.

● **AUTO A/C MODEL**

(1) Grommet

(2) Compressor ASSY



(3) Bracket - air conditioner

Tightening torque: N·m (kgf-m, ft-lb)

T: 36 (3.7, 26.6)

*: Tighten the bracket - air conditioner in the numerical order as shown in the figure.

7. HEATER DUCT

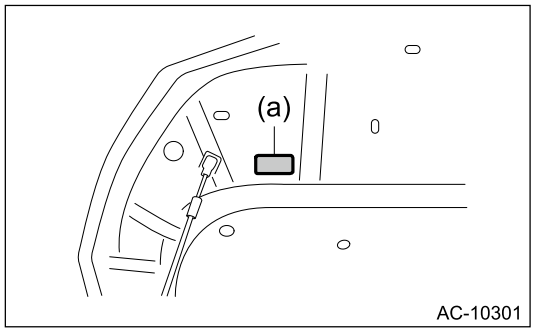
(1) Duct - foot driver
(2) Spacer - foot
(3) Heater unit ASSY
(4) Duct - foot passenger
(5) Duct - rear heater front RH
(6) Duct - joint RH
(7) Duct - rear heater rear RH
(8) Duct - extension*1
(9) Duct - rear heater rear LH
(10) Duct - joint LH
(11) Duct - rear heater front LH

*1: Model with power amplifier

8. HEATER VENT DUCT AND GRILLE

Note:

For exploded view of the heater vent duct and air vent grille that are secured on the instrument panel, refer to "Instrument Panel" of "EXTERIOR/INTERIOR TRIM" section.
Ref. to EXTERIOR/INTERIOR TRIM>General Description>COMPONENT > INSTRUMENT PANEL.



AIR CONDITIONER > General Description

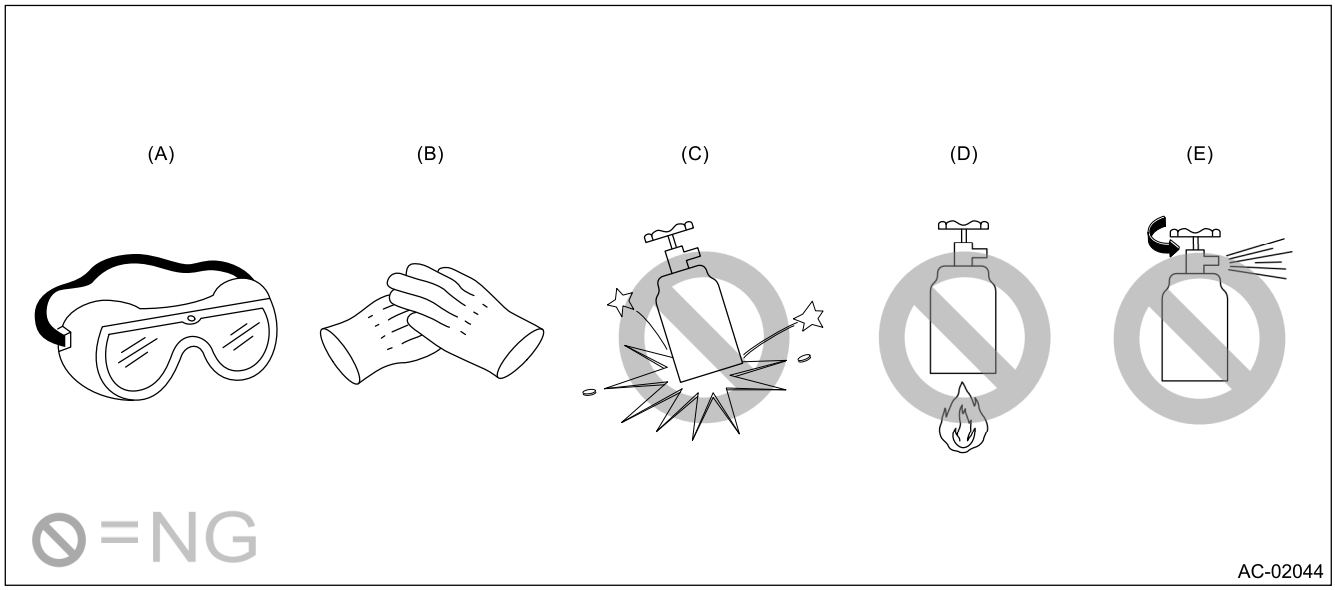
CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.

1. HFC-134A A/C SYSTEM

- Since the components are different from those for the conventional CFC-12 system, use refrigerant oil, compressor oil, etc. dedicated to the HFC-134a system.
- Before maintenance, check A/C system identification using the label (a) which is installed to the vehicle.

2. COMPRESSOR OIL

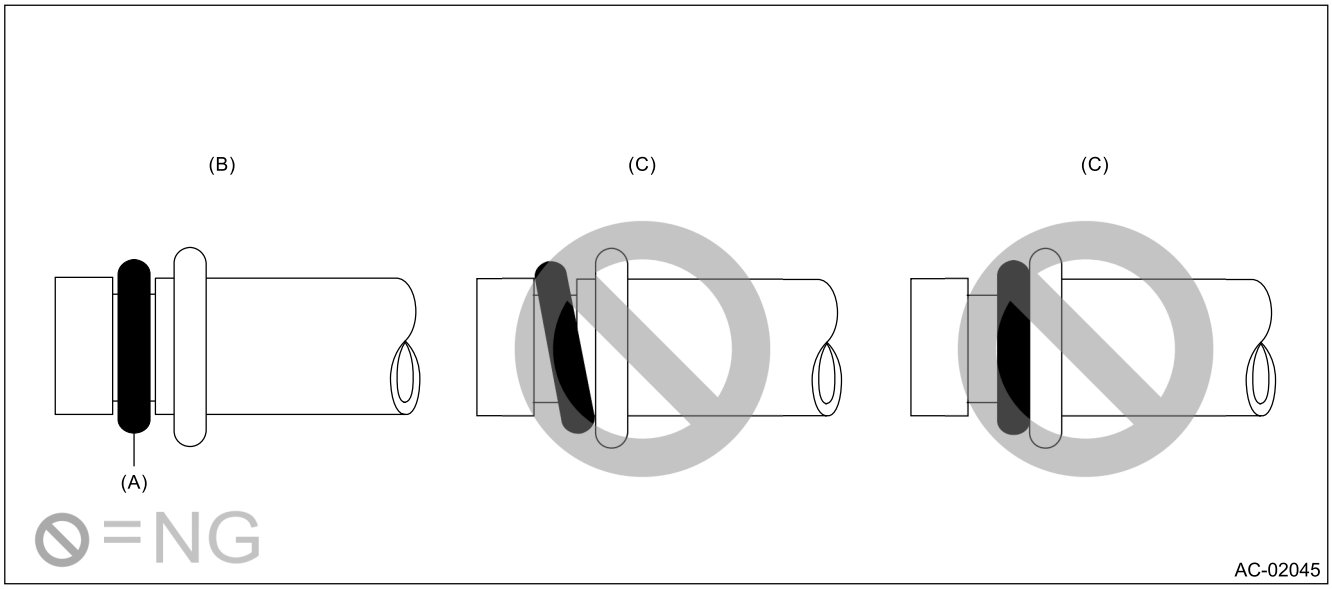


- HFC-134a compressor oil has no compatibility with that of CFC-12 system.
- Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use DH-PR (ZXL200PG).
- Do not mix multiple compressor oils.
  If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
  On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.
- Compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

- CFC-12 refrigerant cannot be used in a HFC-134a A/C system. HFC-134a refrigerant, also cannot be used in a CFC-12 A/C system.
- If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

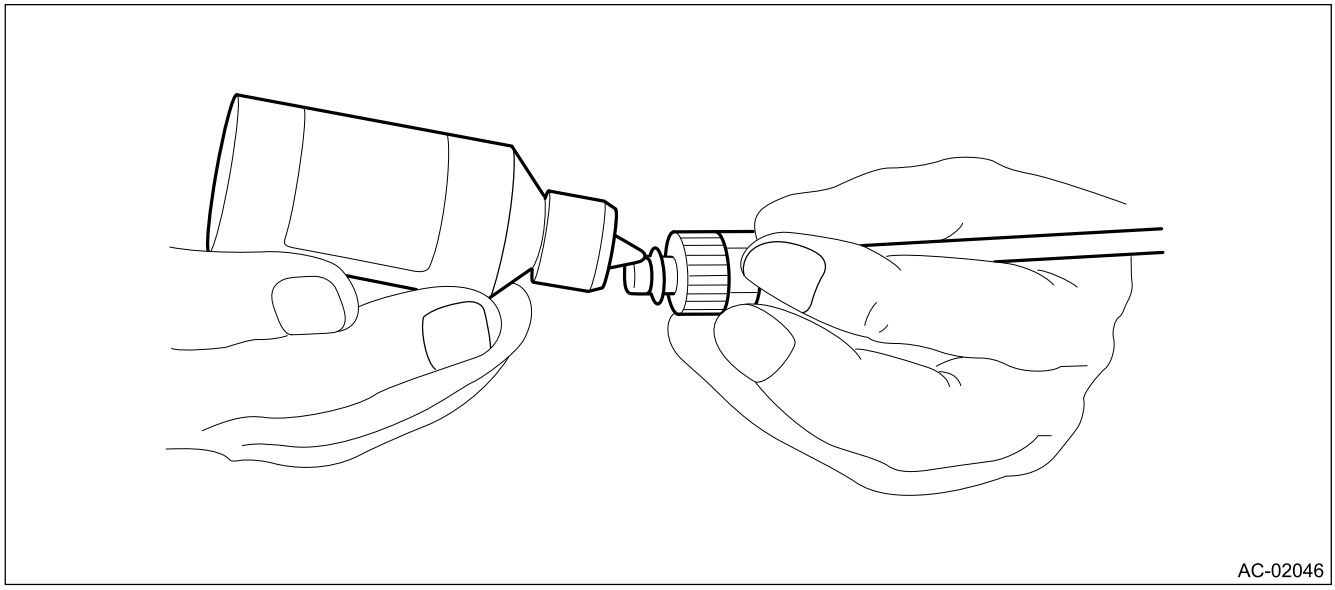
4. HANDLING OF REFRIGERANT



- The refrigerant boils at approx. −30°C (−22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite.
  If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eyes with plenty of water, and receive medical treatment from an eye doctor.
- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of 40°C (104°F) or less.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant container.)
- When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
- Provide good ventilation and do not work in a closed area.
- In order to prevent global warming, avoid releasing refrigerant into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.

(A) Goggles
(B) Gloves
(C) Do not apply impact.
(D) No direct heat on container
(E) Do not discharge

5. O-RING CONNECTIONS



- Always use a new O-ring.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform work without using gloves or waste cloths.
- Apply compressor oil to O-rings to avoid sticking, before installation.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of the O-ring and deformation of the pipe end.
- If the work is interrupted before completing pipe connections, recap the pipes, components and fittings with a plug or tape to prevent foreign matter from entering.
- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings straight against the pipe groove.

(A) O-ring
(B) OK
(C) NG

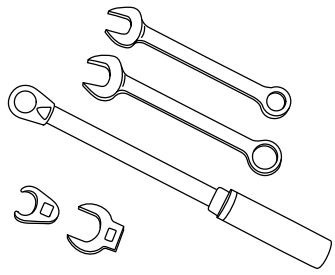
- Use compressor oil specified in the service manual to lubricate the O-rings.
  Apply oil to the top and sides of O-rings before installation.

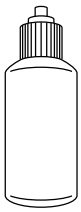
Apply compressor oil to the pipe grooves.

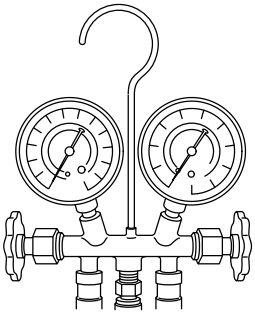
- After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
- If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

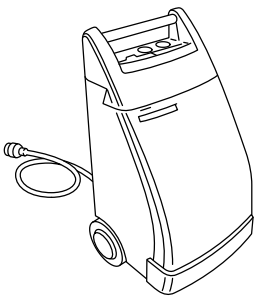
AIR CONDITIONER > General Description

PREPARATION TOOL

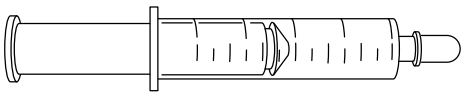


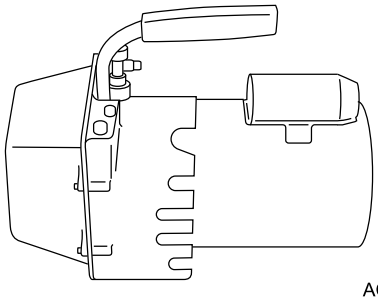


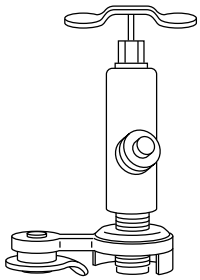




1. SPECIAL TOOL







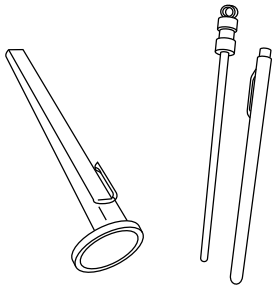


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
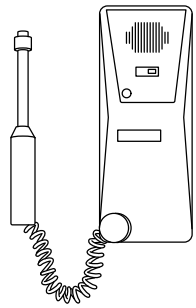
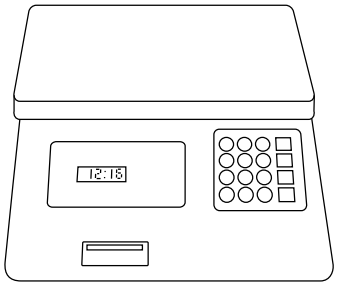
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**





2. GENERAL TOOL

Caution:
When working on vehicles with a HFC-134a system, only use HFC-134a specified tools and parts. Do not mix CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor itself may be damaged.
In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the type of tool and screw, and the replacement valves used are different. The gas leak detectors for the HFC-134a and CFC-12 system must also not be interchanged.

	HFC-134a	CFC-12
Tool and screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

TOOL NAME/ILLUSTRATION	REMARKS
Circuit tester	Used for measuring resistance and voltage.
DST-i	Used together with Subaru Select Monitor 4.
Clip remover	Used for removing clips.
Wrench  AC-00213	Various **WRENCHES** will be required to service any A/C system. 7 — 40 N·m (0.7 — 4.1 kgf-m, 5 — 30 ft-lb) torque wrench and various crowfoot wrenches will be needed. Open end or flare nut wrenches will be needed to affix the pipe and hose fittings.
Applicator bottle  AC-00012	A small **APPLICATOR BOTTLE** is recommended to apply compressor oil to the various parts. It can be available at a hardware store.
Manifold gauge set  AC-00013	A **MANIFOLD GAUGE SET** (with hoses) is available at either a refrigerant supplier or an automotive equipment supplier.
Refrigerant recovery system  AC-00014	A **REFRIGERANT RECOVERY SYSTEM** is used for the recovery and recycling of A/C system refrigerant after contaminants and moisture have been removed from the refrigerant.

TOOL NAME/ILLUSTRATION	REMARKS
Syringe  AC-00015	A graduated plastic **SYRINGE** will be needed to add oil into the system again. A syringe can be available at a pharmacy or drug store.
Vacuum pump  AC-00016	A **VACUUM PUMP** is necessary (for a good working condition), and may be available at either a refrigerant supplier or an automotive equipment supplier.
Can tap  AC-00017	A **CAN TAP** for refrigerant cans is available at an automotive equipment supplier.
Thermometer/hygrometer  AC-00018	A Pocket **THERMOMETER/HYGROMETER** is available at either a industrial hardware store or a refrigerant supplier.

TOOL NAME/ILLUSTRATION	REMARKS
Electronic leak detector  AC-00019	An **ELECTRONIC LEAK DETECTOR** can be available at either a specialty tool supplier or an A/C equipment supplier.
Weight scale  AC-00020	A **WEIGHT SCALE** such as an electronic charging scale or a bathroom scale with digital display will be needed, if a 13.6 kg (30 lb) refrigerant container is used.

AIR CONDITIONER > Air Conditioning System

WIRING DIAGRAM

Refer to “Air Conditioning System” in the wiring diagram.

- Manual A/C model: Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM > MANUAL A/C.
- Auto A/C model: Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM > AUTO A/C.

AIR CONDITIONER > Air Conditioning System

ELECTRICAL SPECIFICATION

For the specification (electrical component), refer to “Control Module I/O Signal” of “AIR CONDITIONER (DIAGNOSTICS)” section. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

AIR CONDITIONER > Air Conditioning System

INSPECTION

For inspection, refer to “Basic Diagnostic Procedure” of “AIR CONDITIONER (DIAGNOSTICS)” section. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Basic Diagnostic Procedure.

AIR CONDITIONER > Air Conditioning System

NOTE

For procedure of each component in the air conditioning system, refer to the respective section.

- Blower motor unit assembly: Ref. to AIR CONDITIONER>Blower Motor Unit Assembly.
- Blower motor: Ref. to AIR CONDITIONER>Blower Motor.
- Power transistor: Ref. to AIR CONDITIONER>Power Transistor.
- Control panel: Ref. to AIR CONDITIONER>Control Panel.
- Compressor: Ref. to AIR CONDITIONER>Compressor.
- Condenser: Ref. to AIR CONDITIONER>Condenser.
- Heater and cooling unit: Ref. to AIR CONDITIONER>Heater and Cooling Unit.
- Evaporator: Ref. to AIR CONDITIONER>Evaporator.
- Expansion valve: Ref. to AIR CONDITIONER>Expansion Valve.
- Hose & pipe: Ref. to AIR CONDITIONER>Hose and Pipe.
- Pressure switch (triple pressure switch): Ref. to AIR CONDITIONER>Pressure Switch (Triple Pressure Switch).
- Pressure sensor: Ref. to AIR CONDITIONER>Pressure Sensor.
- Ambient sensor: Ref. to AIR CONDITIONER>Ambient Sensor.
- Sunload sensor (auto A/C model): Ref. to AIR CONDITIONER>Sunload Sensor (Auto A/C Model).
- In-vehicle sensor (auto A/C model): Ref. to AIR CONDITIONER>In-Vehicle Sensor (Auto A/C Model).
- Evaporator sensor: Ref. to AIR CONDITIONER>Evaporator Sensor.
- Intake door actuator: Ref. to AIR CONDITIONER>FRESH/RECIRC Door Actuator.
- Mode door actuator: Ref. to AIR CONDITIONER>Mode Door Actuator.
- Air mix door actuator: Ref. to AIR CONDITIONER>Air Mix Door Actuator.

PROCEDURE

1. CHECK REFRIGERANT GAS PRESSURE

1. Prepare the vehicle.

   Note:

   Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.

   - Place the vehicle in the shade and windless condition, and open the front hood.
   - Open the front windows and close all doors.

2. Check the refrigerant pressure.

   Preparation tool:

   Manifold gauge set

   (1) Connect the manifold gauge set, and start the engine.

   (2) Set the vehicle to the following conditions.

Item	Condition
Engine	Warmed up (Engine coolant temperature indicator light: OFF)
Air vent grille	Shutter is fully open.
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Fan dial	5/7 level

   (3) In the condition of step (2), idle the engine for 30 minutes.

   (4) Read the gauge values on both high pressure side and low pressure side of the manifold gauge.

3. Measure the air vent grille outlet opening temperature, ambient temperature and humidity.

   Preparation tool:

   Thermometer and hygrometer

   Note:

   For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

4. Check that the high and low pressures and outlet opening temperature for ambient temperature and humidity is within the standard value described in the chart below.

   - Manual A/C model

- Auto A/C model

5. Refer to "DIAGNOSIS WITH SYMPTOM" if the inspection result is not within the standard value. Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > INSPECTION WITH PRESSURE SYMPTOM.

AIR CONDITIONER > Refrigerant Pressure with Manifold Gauge Set

INSPECTION

1. INSPECTION WITH PRESSURE SYMPTOM

Symptoms	Reference
Both high and low pressure sides are low	Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > BOTH HIGH AND LOW PRESSURE SIDES ARE LOW.
Both high and low pressure sides are high	Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH.

Symptoms	Reference
High and low pressure sides are equal, high-pressure side is low	Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW.
High-pressure side is high	Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > HIGH-PRESSURE SIDE IS HIGH.
Low-pressure side is low	Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > LOW-PRESSURE SIDE IS LOW.
Low-pressure side is high	Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > LOW-PRESSURE SIDE IS HIGH.

2. BOTH HIGH AND LOW PRESSURE SIDES ARE LOW

1. CHECK REFRIGERANT LEAKS.

Check the refrigerant for leaks. Ref. to AIR CONDITIONER>Refrigerant Leak Check>INSPECTION.

Note:

When high-pressure side is less than 0.69 MPa: Go to step 2.

Are there refrigerant leaks?

Yes — Repair the refrigerant leaking points.

No — Go to 2.

2. FILL PROPER AMOUNT OF REFRIGERANT.

Drain all refrigerant, and refill proper amount of refrigerant.

- Recovery: Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
- Fill: Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

Is refrigerant pressure within the standard value?

Yes — Refrigerant pressure is normal.

No — Perform corresponding “INSPECTION WITH PRESSURE SYMPTOM”.

3. BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH

1. FILL PROPER AMOUNT OF REFRIGERANT.

Drain all refrigerant, and refill proper amount of refrigerant.

- Recovery: Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
- Fill: Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

Is refrigerant pressure within the standard value?

Yes	Refrigerant pressure is normal.
No	Perform corresponding “INSPECTION WITH PRESSURE SYMPTOM”.

4. HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW

1. CHECK REFRIGERANT LEAKS.

Check the refrigerant for leaks. Ref. to AIR CONDITIONER>Refrigerant Leak Check>INSPECTION.

Note:

When high-pressure side is less than 0.69 MPa: Go to step 2.

Are there refrigerant leaks?

Yes	Repair the refrigerant leaking points.
No	Go to 2.

2. FILL PROPER AMOUNT OF REFRIGERANT.

Drain all refrigerant, and refill proper amount of refrigerant.

- Recovery: Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
- Fill: Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

Is refrigerant pressure within the standard value?

Yes	Refrigerant pressure is normal.
No	Inspect the compressor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)).

5. HIGH-PRESSURE SIDE IS HIGH

1. CHECK CONDENSER.

Check the condenser. Ref. to AIR CONDITIONER>Condenser>INSPECTION.

Is condenser OK?

Yes	Go to 2.
No	Clean or replace the condenser.

2. CHECK RADIATOR FAN.

Check the radiator fan system. Ref. to COOLING(H4DO)>Radiator Fan System.

Is radiator fan system normal?

Yes	Go to 3.
No	Repair the radiator fan system or replace the faulty parts.

3. FILL PROPER AMOUNT OF REFRIGERANT.

Drain all refrigerant, and refill proper amount of refrigerant.

- Recovery: Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
- Fill: Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

Is refrigerant pressure within the standard value?

Yes	Refrigerant pressure is normal.
No	Check the high-pressure hose and condenser for kinks or clogging, and replace if defective.

6. LOW-PRESSURE SIDE IS LOW

1. CHECK REFRIGERANT LEAKS.

Check the refrigerant for leaks. Ref. to AIR CONDITIONER>Refrigerant Leak Check>INSPECTION.

Note:

When high-pressure side is less than 0.69 MPa: Go to step 2.

Are there refrigerant leaks?

Yes	Repair the refrigerant leaking points.
No	Go to 2.

2. FILL PROPER AMOUNT OF REFRIGERANT.

Drain all refrigerant, and refill proper amount of refrigerant.

- Recovery: Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
- Fill: Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

Is refrigerant pressure within the standard value?

Yes	Refrigerant pressure is normal.
No	Go to 3.

3. REPLACE EXPANSION VALVE.

Replace the expansion valve. Ref. to AIR CONDITIONER>Expansion Valve>REMOVAL.

Is refrigerant pressure within the standard value?

Yes	Refrigerant pressure is normal.
No	Inspect the compressor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE. (VARIABLE)).

7. LOW-PRESSURE SIDE IS HIGH

1. FILL PROPER AMOUNT OF REFRIGERANT.

Drain all refrigerant, and refill proper amount of refrigerant.

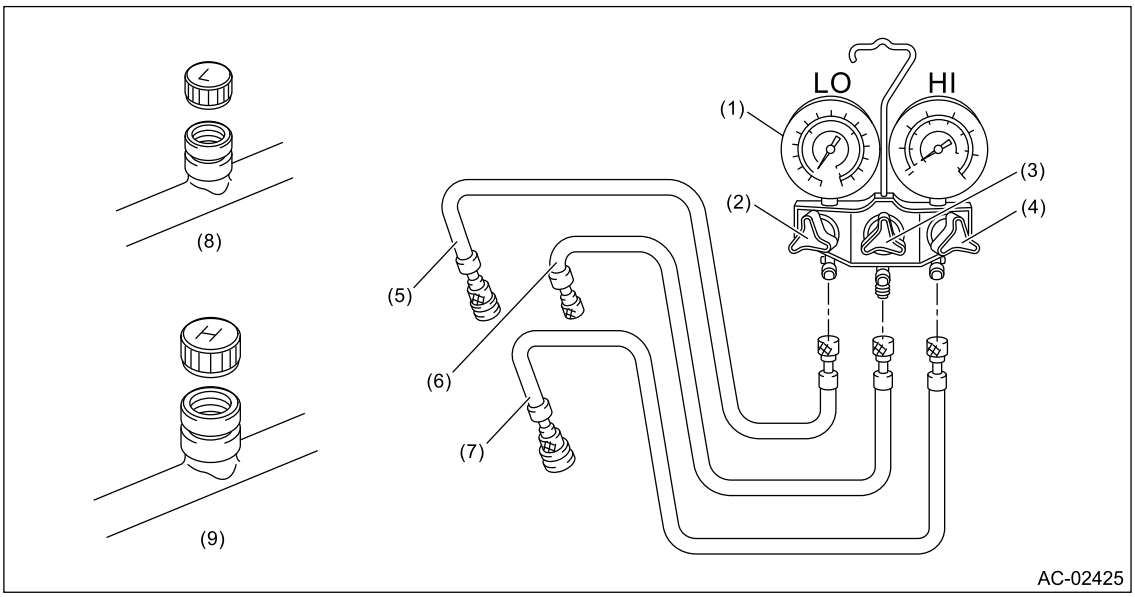
- Recovery: Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
- Fill: Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

Is refrigerant pressure within the standard value?

Yes	Refrigerant pressure is normal.
No	Go to 2.

2. REPLACE EXPANSION VALVE.

Replace the expansion valve. Ref. to AIR CONDITIONER>Expansion Valve>REMOVAL.



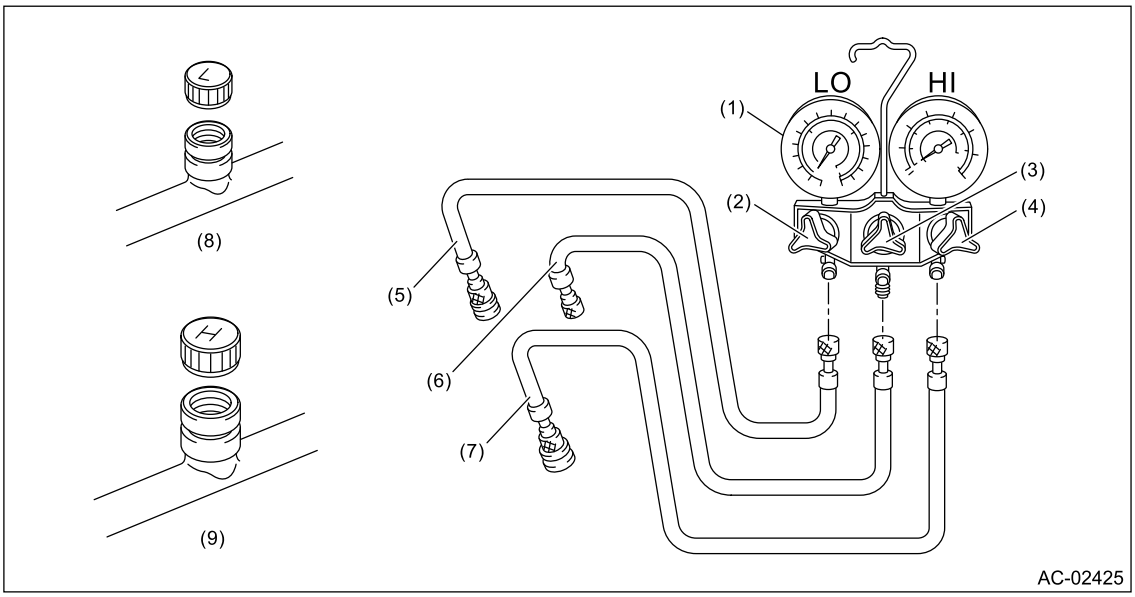
Is refrigerant pressure within the standard value?

Yes	Refrigerant pressure is normal.
No	Replace the evaporator. Ref. to AIR CONDITIONER>Evaporator>REMOVAL.

PROCEDURE

Caution:

- **During operation, be sure to wear protective goggles and protective gloves.**
- **Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.**
- **When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.**
- **Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.**



(1) Manifold gauge
(2) Low pressure valve
(3) Center valve
(4) High pressure valve
(5) Low-pressure hose
(6) Center manifold hose (vacuum pump and charge)
(7) High-pressure hose
(8) Low-pressure side service port
(9) High-pressure side service port

1. Perform compressor oil return operation. Ref. to AIR CONDITIONER>Compressor Oil>PROCEDURE.
2. Turn the ignition switch to OFF.
3. Attach the manifold gauge set.
   Preparation tool:
   Manifold gauge set
   (1) Check that all valves are fully closed.
   (2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.
   Caution:
   Confirm that the connections are secure.
   (3) Connect the center hose to the refrigerant recovery system.
   Preparation tool:
   Refrigerant recovery system
4. Follow the operation manual attached to the refrigerant recovery system to collect the refrigerant.

PROCEDURE

Caution:

- **While working, be sure to wear protective goggles and protective gloves.**
- **Air in the cycle can cause insufficient air conditioning, and water in the cycle can cause clogging in the cycle (icing) and rust. To remove this air and water content, use a vacuum pump to perform evacuation before filling with refrigerant. By making the inside of the cycle a vacuum, the water content will evaporate even at normal temperatures, and can be removed.**

(1) Manifold gauge
(2) Low pressure valve
(3) Center valve
(4) High pressure valve
(5) Low-pressure hose
(6) Center manifold hose (vacuum pump and charge)
(7) High-pressure hose
(8) Low-pressure side service port
(9) High-pressure side service port

1. Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

(1) Check that all valves are fully closed.

(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

Caution:

Confirm that the connections are secure.

(3) Connect the center manifold hose of the manifold gauge to the vacuum pump.

Preparation tool:

Vacuum pump

2. Perform evacuation.

Caution:

Make sure to perform evacuation using a vacuum pump.

(1) Open the low-pressure side valve, high-pressure side valve and center valve.

(2) Operate the vacuum pump.

(3) Perform evacuation for 5 minutes or more, and when the low pressure gauge needle reaches −0.1 MPa (−1 kgf/cm^2, −14 psi), close the center manifold hose valve, and stop the vacuum pump.

(4) Leave alone for 5 to 10 minutes after closing the low pressure valve and high pressure valve, and check whether there is any change in the low pressure gauge needle indication.
If the needle position changes, this indicates a leak. Check the pipe and hose connections, and repair the location with the problem.
After repair, retry charging the refrigerant from the step 1).

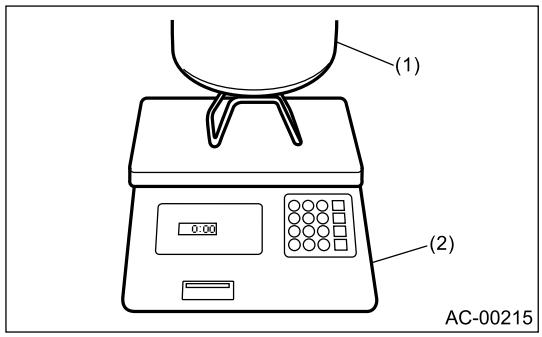
(5) If there is no leakage, continue evacuation for additional 20 — 30 minutes, close all valves and then stop the vacuum pump.

3. Charge refrigerant.

(1) Follow the can tap operation manual to attach it to the refrigerant can.

Preparation tool:

Can tap



(2) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

Preparation tool:

Weight scale

Note:

When 13.6 kg (30 lb) refrigerant container (1) is used, measure the amount of refrigerant with a refrigerant charging scale (2), and connect with the center manifold hose.

(3) Open the tap valve of the supply container (refrigerant can or refrigerant container).

(4) Loosen the center manifold hose connection on the manifold gauge for a few seconds (if there is a purge valve on the manifold gauge, push this instead) to allow the air in the center manifold hose to be bled by the refrigerant pressure.

(5) Open the low pressure valve and high pressure valve of the manifold gauge to fill with refrigerant.

Note:

If the supply container is empty, close all manifold gauge valves and the tap valve of the supply container, and replace the empty supply container with a new one. After replacing with a new supply container, perform air purge, and resume the filling operation.

(6) If the low pressure gauge indicates approximately 0.2 MPa (2 kgf/cm^2, 29 psi) or refrigerant filling efficiency drops, close the low pressure and high pressure valves.

(7) Check that the low pressure valve and high pressure valve are closed, turn off the A/C switch and start the engine.

Caution:

- **When filling operation is performed with the engine running, do not open the high pressure valve. Always fill from the low pressure valve.**
- **Except for the magnet clutch type, do not start the engine before charging refrigerant.**

(8) To prevent damage to the compressor, push the A/C switch ON-OFF quickly a few times.

(9) Set the vehicle to the following conditions.

Item	Condition
Engine speed	1,500 r/min
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
Fan dial	HI (MAX)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Window	OPEN

(10) Open the low pressure valve, check the refrigerant pressure with a manifold gauge and fill with refrigerant up to the specified amount. Ref. to AIR CONDITIONER>Refrigerant Pressure with Manifold Gauge Set>INSPECTION > INSPECTION WITH PRESSURE SYMPTOM.

4. Using an electronic leak detector (leak tester), check for refrigerant leaks in the system. Ref. to AIR CONDITIONER>Refrigerant Leak Check>INSPECTION.
5. After filling with refrigerant, close all valves and remove the manifold gauge set.
6. Attach cap to the service port of the low pressure side and high pressure side.

INSPECTION

1. Attach the manifold gauge set.

   Preparation tool:

   Manifold gauge set

   (1) Check that all valves are fully closed.

   (2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

   Caution:

   Confirm that the connections are secure.

   (3) Start the engine, operate the A/C system for approx. 10 minutes, and check that the high-pressure side indicates 0.69 MPa (7 kgf/cm^2, 100 psi) or more.

2. Stop the engine to start the leak test.

   Preparation tool:

   Electronic leak detector (leak tester)

Items	Condition	Corrective action
Pipe	Check the connections of pipe and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between pressure switch or pressure sensor and high-pressure pipe.	Replace the pressure switch or pressure sensor.
	Check the connection between pipe and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
Condenser	Check the welded part of condenser and core.	Replace the condenser.
Hose (high-pressure)	Check the connection between hose (high-pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (high-pressure) and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **Caution:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (high pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.

Items	Condition	Corrective action
Compressor	Check the compressor pulley and vicinity of shaft seal. **Caution:** **Some shaft seals will show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.**	Replace the compressor.
Hose (low-pressure)	Check the connection between hose (low pressure) and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (low pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **Caution:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (low pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Evaporator	Remove the drain hose from the heater case, and check the end part for 10 seconds or more.	Replace the evaporator.
	Check the air vent grille. **Note:** **Turn the ignition switch to ON, and run the blower at high speed for approx. 1 minute. Stop the blower to check the air vent grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that position for at least 10 seconds.**	Replace the evaporator.

LOCATION

Main fuse box (M/B)	Fuse 15 A (blower motor relay)	(A)
	Fuse 15 A (blower motor relay)	(B)
Relay holder (R/H)	A/C relay	(C)
Relay & fuse box (F/B)	Fuse 15 A (blower motor relay)	(D)
	Fuse 7.5 A (A/C control panel)	(E)
	Fuse 7.5 A (A/C control panel)	(F)
Blower motor unit (B/U)	Blower motor relay	(G)

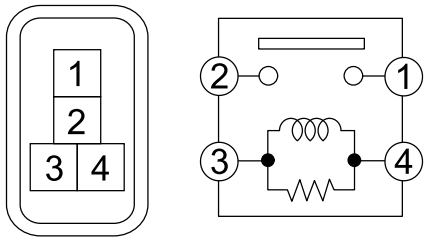
Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

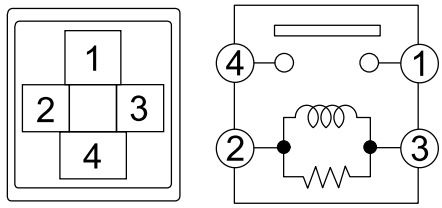
1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.



Note:

If the fuse is blown again, check the system wiring harness.



2. CHECK RELAY

1. Measure the resistance between relay terminals.
   - A/C relay

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	

Terminal No.	Inspection conditions	Standard	Circuit
	Apply battery voltage between terminals 3 and 4.	Less than 1 Ω	 LI-01273

- Blower motor relay

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	 AC-02796
	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

2. Replace the relay if the inspection result is not within the standard value.

PROCEDURE

Note:

Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

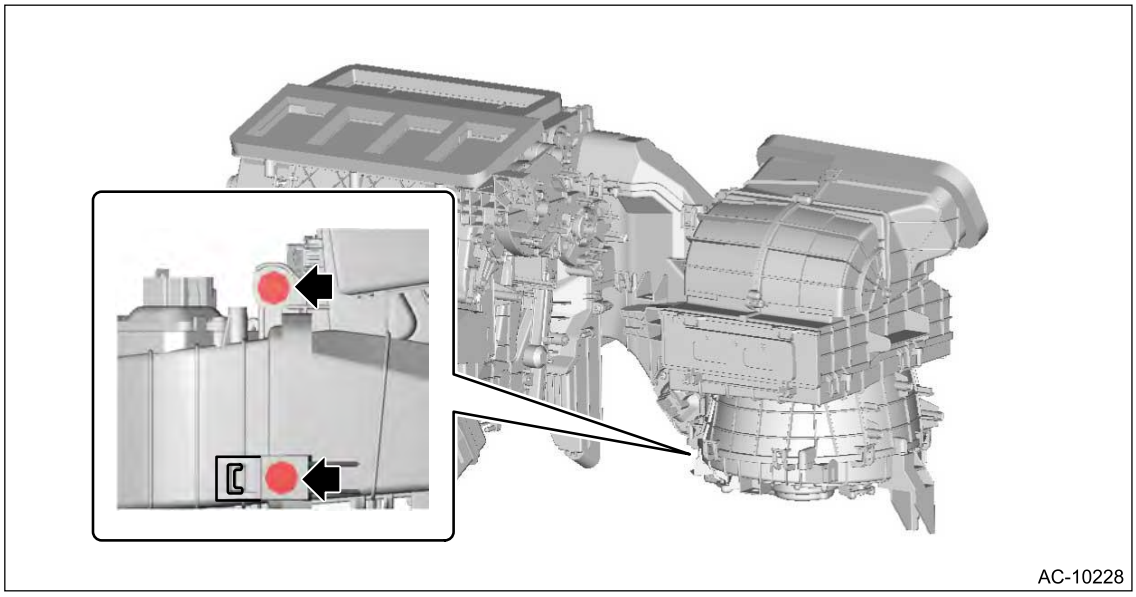
1. Increase the engine speed to 1,500 r/min.
2. Turn the A/C switch to ON.
3. Turn the temperature control dial to LO (MAX COOL).
4. Turn the FRESH/RECIRC switch to RECIRC position.
5. Turn the fan dial to HI (MAX).
6. Leave in this condition for 10 minutes.

ADJUSTMENT

- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor) and install the new compressor.

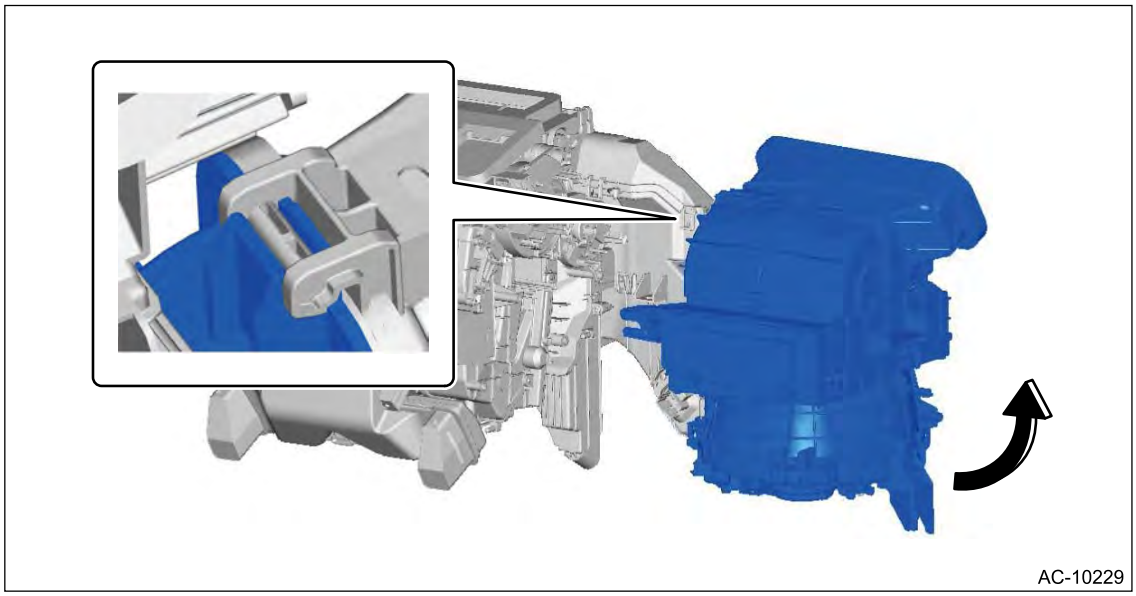
Note:

Since the hygroscopicity of compressor oil is high, perform this series of works quickly.



AIR CONDITIONER > Blower Motor Unit Assembly

REMOVAL



Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

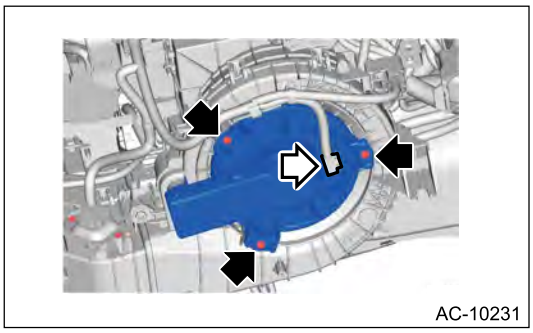
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the heater and cooling unit assembly. Ref. to AIR CONDITIONER>Heater and Cooling Unit>REMOVAL.
3. Remove the blower motor unit assembly.
   (1) Release the claws and remove the screws.

(2) Release the guide, and remove the blower motor unit assembly as shown in the figure.

AIR CONDITIONER > Blower Motor Unit Assembly

INSTALLATION

Caution:



- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

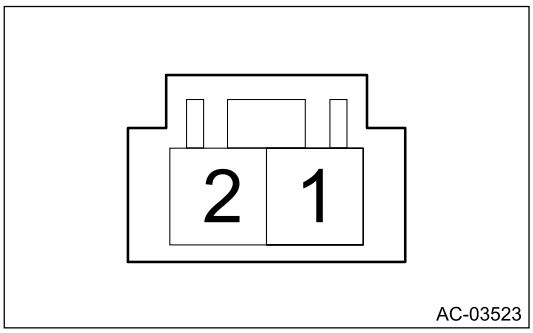
1. Install the blower motor unit assembly.
2. Install the heater and cooling unit assembly. Ref. to AIR CONDITIONER>Heater and Cooling Unit>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Blower Motor

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the duct - foot passenger. Ref. to AIR CONDITIONER>Heater Duct>REMOVAL.
4. Remove the blower motor assembly.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the blower motor assembly.

AIR CONDITIONER > Blower Motor



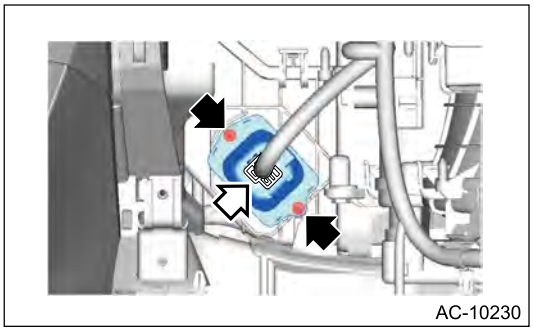
INSTALLATION

1. Install the blower motor assembly.
2. Install the duct - foot passenger.
3. Install the pocket assembly and the back panel - pocket.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Blower Motor

INSPECTION

1. Check the motor operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
2 (+) — 1 (−)	Apply battery voltage.	Rotation

2. If the blower motor does not operate normally, replace the blower motor assembly.

AIR CONDITIONER > Power Transistor

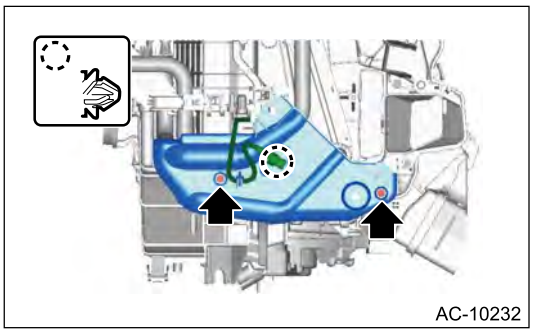
REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the power transistor.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the power transistor.

AIR CONDITIONER > Power Transistor

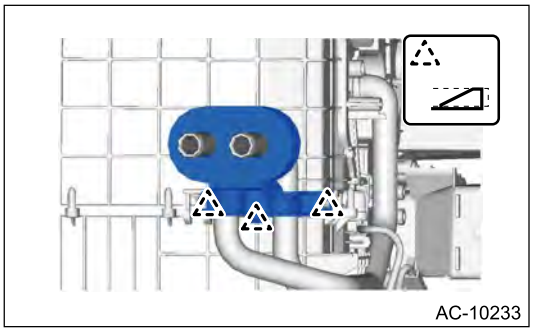
INSTALLATION

1. Install the power transistor.
2. Install the pocket assembly and the back panel - pocket.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



AIR CONDITIONER > Heater Core

REMOVAL

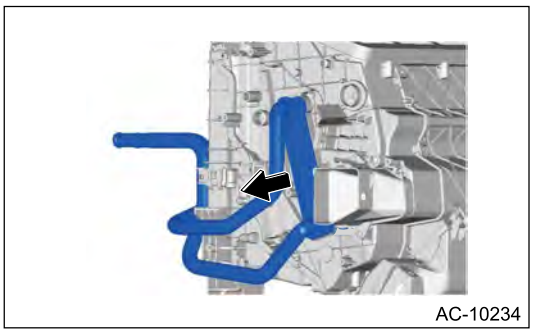


Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the battery ground cable and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the heater and cooling unit assembly. Ref. to AIR CONDITIONER>Heater and Cooling Unit>REMOVAL.
3. Remove the cover - heater pipe.
   (1) Remove the screws.
   (2) Remove connector clamp and harness, and remove the cover - heater pipe.

AC-10232



4. Remove the clamp - heater pipe.
   (1) Release the claws, and remove the clamp - heater pipe.

AC-10233

Note:

Do not remove the packing.

5. Remove the heater core as shown in the figure.

AC-10234

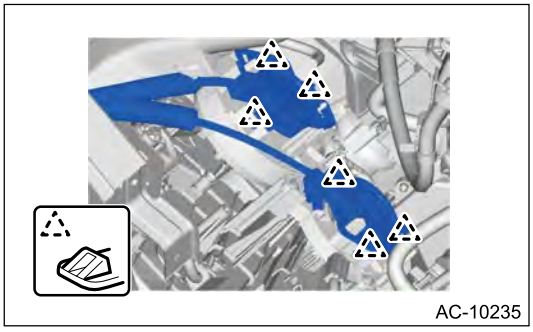
AIR CONDITIONER > Heater Core

INSTALLATION

Caution:

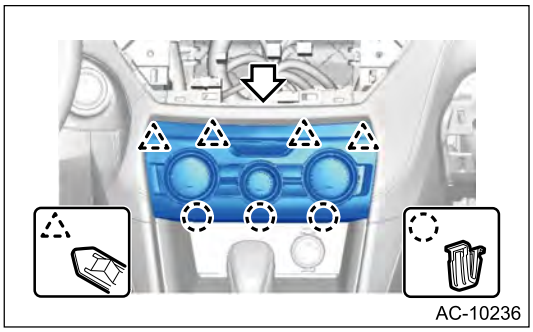
- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Attach the heater core.
2. Install the clamp - heater pipe.
3. Install the cover - heater pipe.
4. Install the heater and cooling unit assembly. Ref. to AIR CONDITIONER>Heater and Cooling Unit>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



REMOVAL

1. MANUAL A/C MODEL



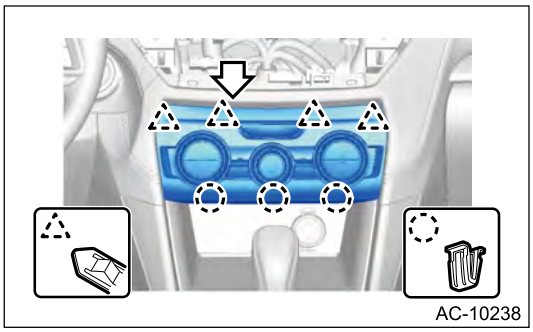
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
5. Remove the heater control assembly.
   (1) Release the claw, and disconnect the cable - mode and the cable - temperature.

   Caution:

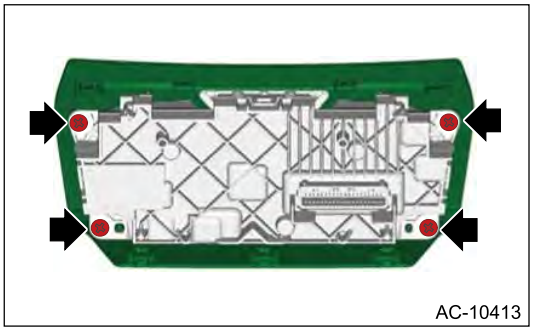
   Check the dial position before disconnecting the cable.

   (2) Disconnect the connector.
   (3) Press the heater control assembly from behind to release the clips and claws, and then remove the heater control assembly.

   (4) Remove the screws and remove the panel assembly - heater.



6. Remove the cable - mode and the cable - temperature.
   (1) Release the claw, and disconnect the cable - mode and the cable - temperature.



2. AUTO A/C MODEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the heater control assembly.
   (1) Disconnect the connector.
   (2) Press the heater control assembly from behind to release the clips and claws, and then remove the heater control assembly.

(3) Remove the screws and remove the panel assembly - heater.

AIR CONDITIONER > Control Panel

INSTALLATION

1. MANUAL A/C MODEL

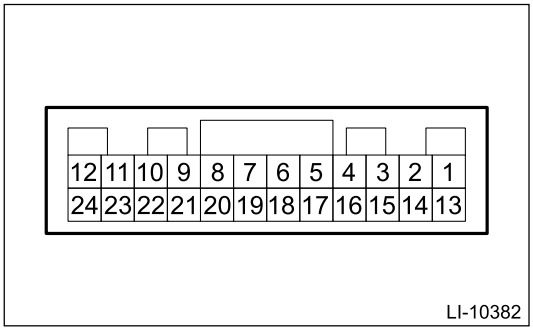
1. Install the cable - mode and the cable - temperature.
2. Install the panel assembly - heater.
3. Install the heater control assembly.

Caution:

Install the heater control assembly so that each cable position and heater control assembly dial position are the same.

4. Install the pocket assembly and the back panel - pocket.
5. Install the audio assembly or navigation assembly.
6. Install the grille assembly - CTR ventilation.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. AUTO A/C MODEL



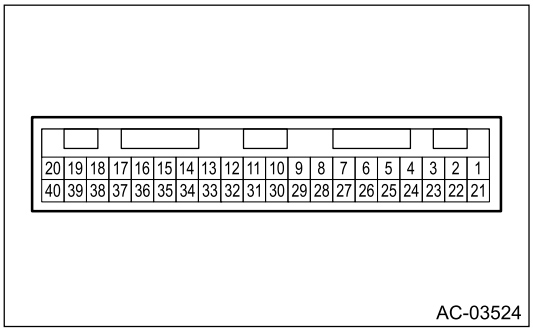
1. Install the panel assembly - heater.
2. Install the heater control assembly.
3. Install the audio assembly or navigation assembly.
4. Install the grille assembly - CTR ventilation.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Control Panel

INSPECTION

1. MANUAL A/C MODEL

1. Check the illumination operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
4 (+) — 5 (−)	Apply battery voltage.	Light ON

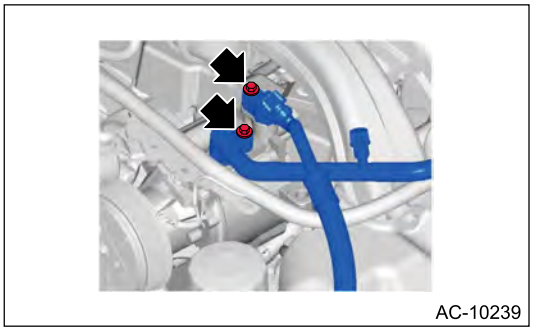
2. If it does not operate normally, replace the heater control assembly.

2. AUTO A/C MODEL

1. Check the illumination operation when battery voltage is applied between the connector terminals.

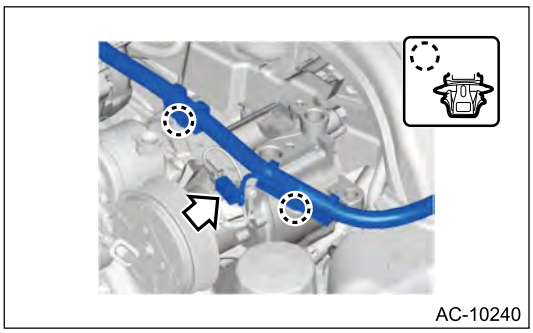
Terminal No.	Inspection conditions	Specification
39 (+) — 29 (−)	Apply battery voltage.	Light ON

2. If it does not operate normally, replace the heater control assembly.



REMOVAL

1. MANUAL A/C MODEL

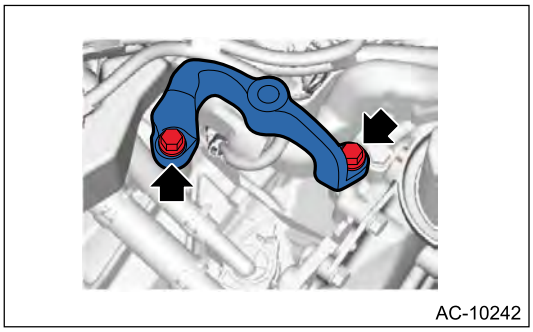


1. Perform compressor oil return operation. Ref. to AIR CONDITIONER>Compressor Oil>PROCEDURE.
2. Turn the A/C switch to OFF and stop the engine.
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
5. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL.
6. Detach the hose - pressure suction and the hose - pressure discharge.
   (1) Remove the bolts and detach the hose - pressure suction.
   (2) Remove the bolts and remove the hose - pressure discharge.

   Caution:

   Seal the disconnected hose and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.

AC-10239



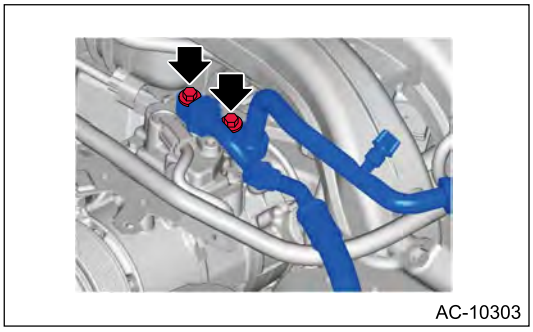
7. Remove the compressor assembly.
   (1) Remove the harness clip and connector.

AC-10240

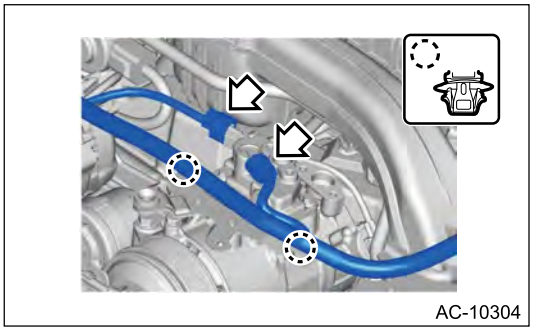
   (2) Remove the bolts and remove the compressor assembly.

AC-10241

8. Remove the bracket - air conditioner.
   (1) Remove the bolts and remove the bracket - air conditioner.

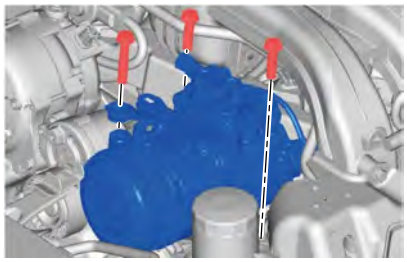


2. AUTO A/C MODEL

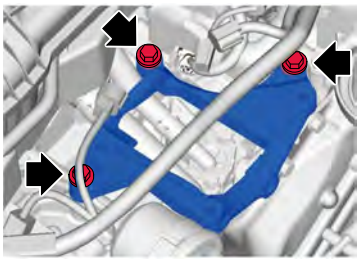


1. Perform compressor oil return operation. Ref. to AIR CONDITIONER>Compressor Oil>PROCEDURE.
2. Turn the A/C switch to OFF and stop the engine.
3. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
5. Remove the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>REMOVAL.
6. Detach the hose - pressure suction and the hose - pressure discharge.
   (1) Remove the bolts and detach the hose - pressure suction.
   (2) Remove the bolts and remove the hose - pressure discharge.

Caution:



Seal the disconnected hose and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.



7. Remove the compressor assembly.
   (1) Remove the harness clip and connector.

   (2) Remove the bolts and remove the compressor assembly.

AC-10305

8. Remove the bracket - air conditioner.
   (1) Remove the bolts and remove the bracket - air conditioner.

AC-10243

AIR CONDITIONER > Compressor

INSTALLATION

1. MANUAL A/C MODEL

Caution:

- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **After replacing the compressor assembly, adjust the amount of the compressor oil. Ref. to AIR CONDITIONER>Compressor Oil>ADJUSTMENT.**

1. Install the bracket - air conditioner.
   Tightening torque:
   36 N·m (3.7 kgf-m, 26.6 ft-lb)
2. Install the compressor assembly.
   Tightening torque:
   36 N·m (3.7 kgf-m, 26.6 ft-lb)
   Note:
   Tighten the compressor assembly in the numerical order as shown in the figure. Ref. to AIR CONDITIONER>General Description>COMPONENT > COMPRESSOR.
3. Install the hose - pressure suction and the hose - pressure discharge.
   Tightening torque:
   10 N·m (1 kgf-m, 704 ft-lb)
4. Install the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
6. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

2. AUTO A/C MODEL

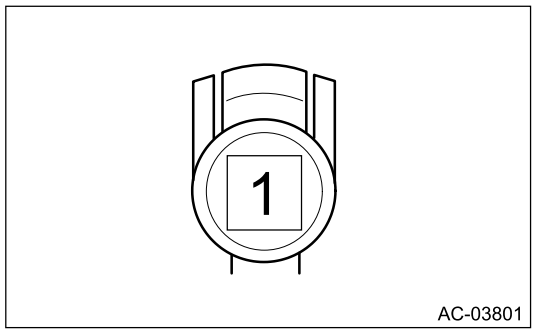
Caution:

- **After installing the compressor, do not start the engine until the A/C system is charged with refrigerant.**
- **If the engine is started with no refrigerant charge, replace the compressor assembly.**
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **After replacing the compressor assembly, adjust the amount of the compressor oil. Ref. to AIR CONDITIONER>Compressor Oil>ADJUSTMENT.**

1. Install the bracket - air conditioner.
   Tightening torque:
   36 N·m (3.7 kgf-m, 26.6 ft-lb)
   Note:
   Tighten the bracket - air conditioner in the numerical order as shown in the figure. Ref. to AIR CONDITIONER>General Description>COMPONENT > COMPRESSOR.
2. Install the compressor assembly.
   Tightening torque:
   36 N·m (3.7 kgf-m, 26.6 ft-lb)
3. Install the hose - pressure suction and the hose - pressure discharge.
   Tightening torque:
   10 N·m (1 kgf-m, 704 ft-lb)
4. Install the V-belts. Ref. to MECHANICAL(H4DO)>V-belt>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
6. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.
7. After installing the compressor assembly, perform a break-in operation according to the following steps.
   Note:
   Do not increase the engine speed to and above 4,000 r/min unless the break-in operation finishes.
   (1) Check that all connectors are locked securely.
   (2) Reset the heater control assembly. (Disconnect and then connect the connector)
   (3) Attach a delivery (test) mode fuse to the main fuse box.
   (4) Using the Subaru Select Monitor, perform the break-in operation.
   Note:
   For detailed operation procedures, refer to "Application help".
   1. Connect the Subaru Select Monitor.
   2. On [Start] display, select [Diagnosis].
   3. On [Select Vehicle] display, enter vehicle information and select [OK].
   4. On [Main Menu] display, select [Each System].
   5. On [Select System] display, select [Air Conditioner], and then select [Next].
   6. On [Select Function] display, select [Work Support].
   7. Select [Variable compressor break-in drive].mode from the work support list, and display [Break-in variable compressor drive, finish status] by following the procedure.
   8. Start and idle the engine at or below 1,800 r/min. (The compressor operation is automatically changed to the break-in drive mode.)
   9. When [Break-in variable compressor drive, finish status] changes from [incomplete] to [ON], stop the engine.

   Caution:
   If the engine may have been started with no refrigerant charge, check for any diagnosis code (DTC) using Subaru Select Monitor. If the code B14A8 (REFRIGERANT NOT SEALED DRIVE ERROR) is output, replace the compressor assembly.
   (5) Remove the delivery (test) mode fuse from the main fuse box.

(6) The break-in operation finishes.



8. Check that the air conditioner system operates normally.

AIR CONDITIONER > Compressor

INSPECTION

1. MANUAL A/C MODEL

- **CHECK MAGNET CLUTCH CLEARANCE**
  1. Check the clearance of entire circumference around the drive plate and pulley.
     Specification:
     0.3 — 0.6 mm (0.0118 — 0.0236 in)
  2. Replace the compressor assembly if the inspection result is not within the standard.
- **MAGNET CLUTCH OPERATION INSPECTION**
  1. Check the magnet clutch operation when battery voltage is applied to the connector terminal.

Terminal No.	Inspection conditions	Specification
1 (+) — chassis ground (−)	Apply battery voltage.	Engaged

  2. If it does not operate normally, replace the compressor assembly.

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
3. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
4. Remove the lock assembly - front hood. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>REMOVAL.
5. Remove the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
6. Remove the bracket - bumper UPR and radiator upper frame. Ref. to COOLING(H4DO)>Radiator>REMOVAL.
7. Detach the hose - pressure discharge and the pipe - evaporator cooling.
   (1) Remove the bolts and remove the hose - pressure discharge.
   (2) Remove the bolt, and detach the pipe - evaporator cooling.

   Caution:

   Seal the disconnected hose, pipe and engaging part of condenser assembly with a plug or vinyl tape to prevent foreign matter from entering.

8. Remove the condenser assembly - air conditioner.
   (1) Release the hook and remove the guide.
   (2) Remove the condenser assembly - air conditioner as shown in the figure.

   Caution:

   Be careful not to damage the condenser and radiator fin. If a damaged fin is found, repair it using a thin screwdriver.

AIR CONDITIONER > Condenser

INSTALLATION

Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **If the condenser assembly - air conditioner has been replaced, add an appropriate amount of compressor oil. Ref. to AIR CONDITIONER>Compressor Oil>ADJUSTMENT.**

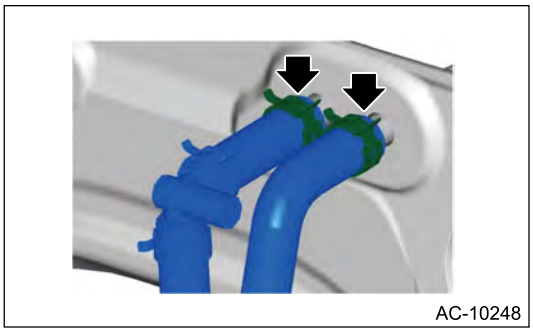
1. Install the condenser assembly - air conditioner.
2. Install the hose - pressure discharge and the pipe - evaporator cooling.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the bracket - bumper UPR and radiator upper frame. Ref. to COOLING(H4DO)>Radiator>INSTALLATION.
4. Install the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
5. Install the lock assembly - front hood. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>INSTALLATION.
6. Install the air intake duct.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
8. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

AIR CONDITIONER > Condenser

INSPECTION

1. Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.
2. If any oil leak is found, replace the condenser assembly - air conditioner.

REMOVAL



Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the battery ground cable and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
3. Drain the coolant from the radiator. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT > DRAINING OF ENGINE COOLANT.
4. Move the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>REMOVAL.

   Note:

   With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body.
5. Remove the expansion valve - cooling. Ref. to AIR CONDITIONER>Expansion Valve>REMOVAL.
6. Disconnect the hose - heater outlet and the hose - heater inlet.
   (1) Loosen the clamp, and detach the hose - heater outlet.
   (2) Loosen the clamp, and detach the hose - heater inlet.

   Note:

   Put alignment marks to hoses, clamps, etc.
7. Remove the instrument panel assembly and the beam COMPL - steering. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Assembly>REMOVAL.
8. Remove the duct - rear heater front. Ref. to AIR CONDITIONER>Heater Duct>REMOVAL > FRONT.
9. Remove the duct - foot. Ref. to AIR CONDITIONER>Heater Duct>REMOVAL > FOOT.
10. Remove the heater and cooling unit assembly.
    (1) Remove the hose - drain.
    (2) Remove the bolt and remove the heater and cooling unit assembly.

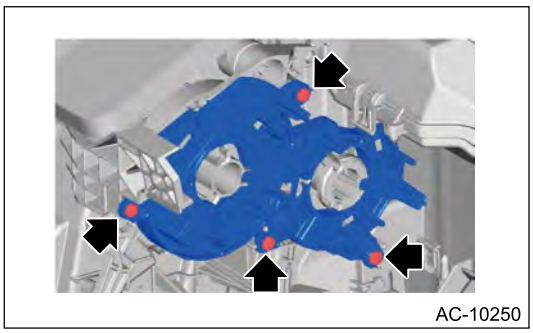
11. Remove the blower motor unit assembly. Ref. to AIR CONDITIONER>Blower Motor Unit Assembly>REMOVAL.

AIR CONDITIONER > Heater and Cooling Unit

INSTALLATION

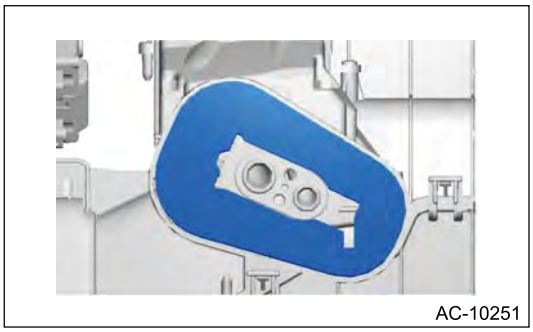
Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**



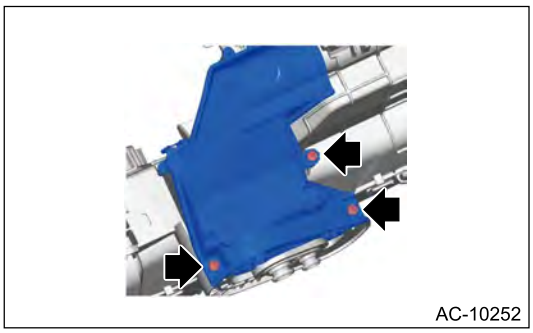
1. Install the blower motor unit assembly.
2. Install the heater and cooling unit assembly.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the hose - drain.
4. Install the duct - foot.
5. Install the duct - rear heater front.
6. Install the instrument panel assembly and the beam COMPL - steering. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Assembly>INSTALLATION.
7. Install the hose - heater outlet and the hose - heater inlet.
8. Install the expansion valve - cooling. Ref. to AIR CONDITIONER>Expansion Valve>INSTALLATION.
9. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
11. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.
12. Fill engine coolant. Ref. to COOLING(H4DO)>Engine Coolant>REPLACEMENT.

REMOVAL



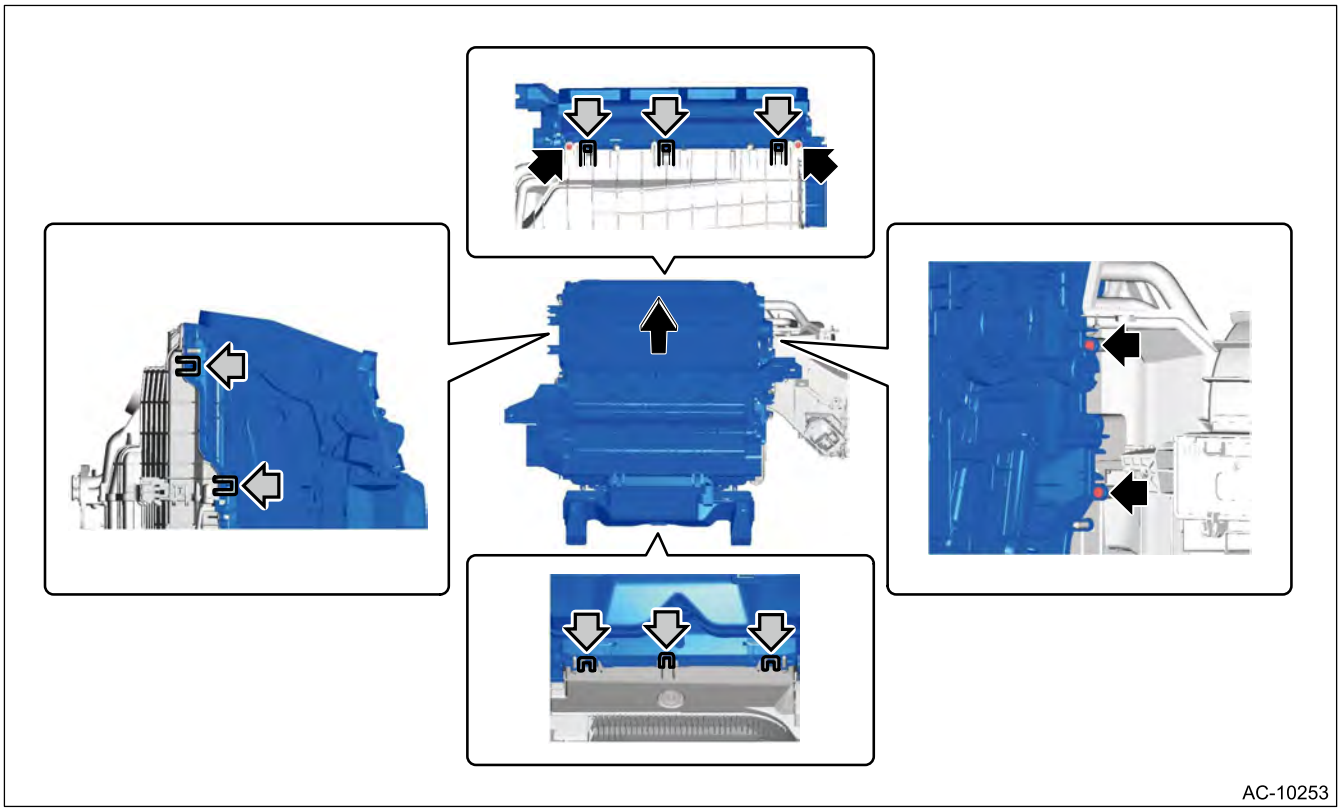
Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.



1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the heater and cooling unit assembly. Ref. to AIR CONDITIONER>Heater and Cooling Unit>REMOVAL.
3. Remove the heater core. Ref. to AIR CONDITIONER>Heater Core>REMOVAL.
4. Remove the motor - actuator mix LH and RH. (auto A/C model) Ref. to AIR CONDITIONER>Air Mix Door Actuator>REMOVAL.
5. Remove the bracket - cable. (manual A/C model)
   (1) Remove the screws, and then remove the bracket - cable.

AC-10250



6. Remove the cover - evaporator.
   (1) Remove the packing.

AC-10251

   (2) Remove the screws and lock to remove the cover - evaporator.

AC-10252

7. Remove the case assembly - heater unit.
   (1) Remove the screws.
   (2) Remove the lock, and remove the case assembly - heater unit.

8. Remove the evaporator assembly - cooling as shown in the figure.

9. Remove the evaporator sensor. Ref. to AIR CONDITIONER>Evaporator Sensor>REMOVAL.

AIR CONDITIONER > Evaporator

INSTALLATION

Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **If the evaporator has been replaced, add an appropriate amount of compressor oil to the compressor. Ref. to AIR CONDITIONER>Compressor Oil>ADJUSTMENT.**
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Install the evaporator sensor to the specified location. Ref. to AIR CONDITIONER>Evaporator Sensor>INSTALLATION.

2. Install the evaporator assembly - cooling.
3. Install the case assembly - heater unit.
4. Install the cover - evaporator.
5. Install the bracket - cable. (manual A/C model)
6. Install the motor - actuator mix LH and RH. (auto A/C model) Ref. to AIR CONDITIONER>Air Mix Door Actuator>INSTALLATION.
7. Attach the heater core.
8. Install the heater and cooling unit assembly. Ref. to AIR CONDITIONER>Heater and Cooling Unit>INSTALLATION.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Evaporator

INSPECTION

1. Check the evaporator fin for dust. Blow with compressed air or flush fins with water as needed.
2. If any oil leak is found from the evaporator, replace the evaporator assembly - cooling.

AIR CONDITIONER > Expansion Valve

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
3. Move the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>REMOVAL.

   Note:

   With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body.
4. Disconnect the hose - pressure suction and the pipe - evaporator cooling.

   (1) Remove the bolts and nuts, and detach the hose - pressure suction.

   (2) Remove the clips, and detach the pipe - evaporator cooling.

   Caution:

   Seal the engaging parts of the disconnected hose, pipe and expansion valve - cooling with a plug or vinyl tape to prevent foreign matter from entering.

5. Remove the expansion valve - cooling.

   (1) Remove the bolt, and remove the expansion valve - cooling.

   Caution:

   Seal the engaging parts of the pipe and expansion valve - cooling with a plug or vinyl tape to prevent foreign matter from entering.

   Preparation tool:

   Hexagon wrench: 4 mm (0.16 in)

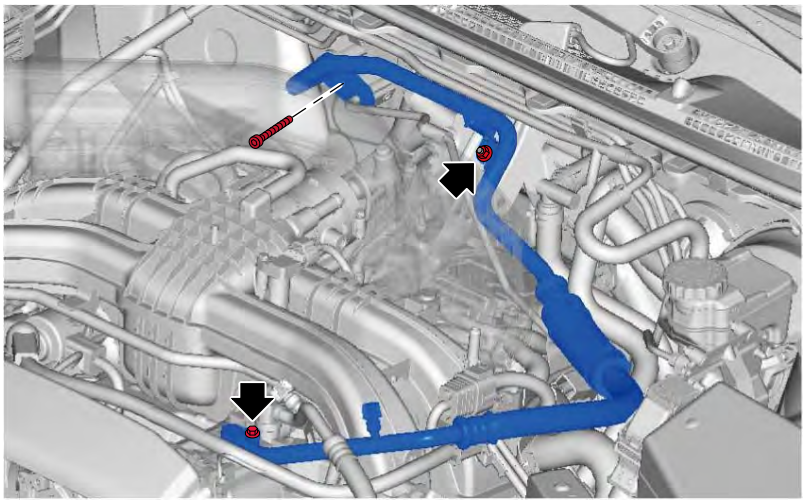
AIR CONDITIONER > Expansion Valve

INSTALLATION

Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**

1. Install the expansion valve - cooling.
   Preparation tool:
   Hexagon wrench: 4 mm (0.16 in)
   Tightening torque:
   3.5 N·m (0.4 kgf-m, 2.6 ft-lb)
2. Install the hose - pressure suction and the pipe - evaporator cooling.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.



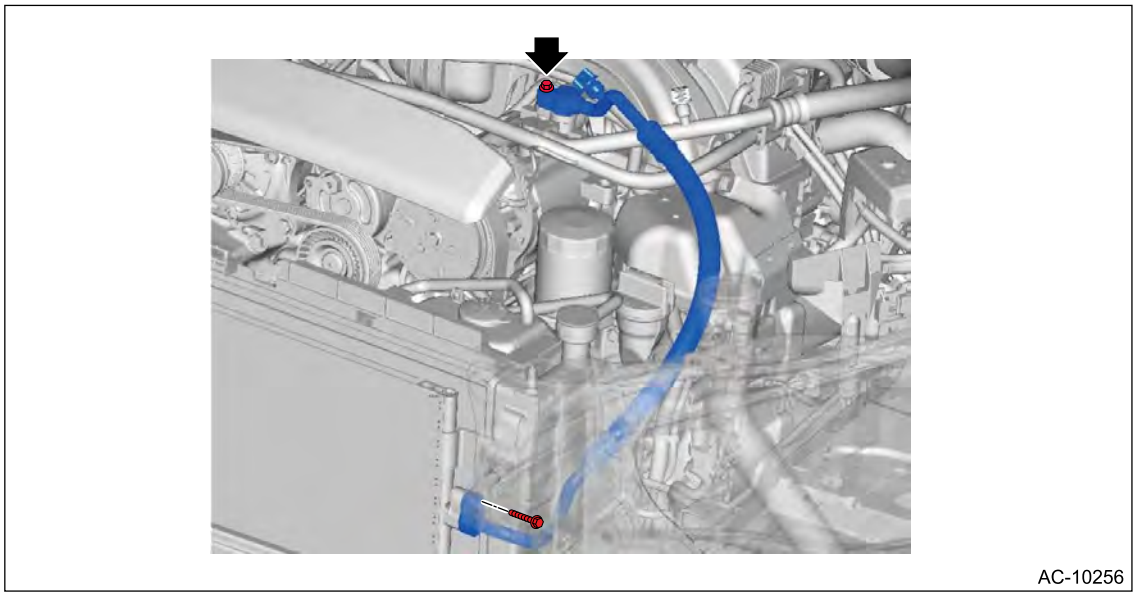
REMOVAL

1. LOW-PRESSURE HOSE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
3. With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body, and move the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>REMOVAL.
4. Remove the hose - pressure suction.
   (1) Remove the nut.
   (2) Remove the bolts and remove the hose - pressure suction.

Caution:

- **Do not apply excessive force to the hose.**
- **Seal the engaging parts of the disconnected hose, compressor assembly and expansion valve - cooling with a plug or vinyl tape to prevent foreign matter from entering.**



AC-10255

2. HIGH-PRESSURE HOSE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
3. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
4. Remove the lock assembly - front hood. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>REMOVAL.
5. Remove the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
6. Remove the bracket - bumper UPR and radiator upper frame. Ref. to COOLING(H4DO)>Radiator>REMOVAL.
7. Remove the hose - pressure discharge.
   (1) Remove the bolts, and remove the hose - pressure discharge.

Caution:

- **Do not apply excessive force to the hose.**
- **Seal the engaging parts of the disconnected hose, compressor assembly and condenser assembly - air conditioner with a plug or vinyl tape to prevent foreign matter from entering.**

3. A/C PIPE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Using the refrigerant recovery system, discharge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Recovery Procedure>PROCEDURE.
3. Remove the battery and battery box. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>REMOVAL.
4. Move the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>REMOVAL.

   Note:

   With the PCV hose connected, remove the air intake boot from the air cleaner case (rear) and throttle body.
5. Remove the hose - pressure suction. Ref. to AIR CONDITIONER>Hose and Pipe>REMOVAL > LOW-PRESSURE HOSE.
6. Remove the hose - pressure discharge. Ref. to AIR CONDITIONER>Hose and Pipe>REMOVAL > HIGH-PRESSURE HOSE.
7. Remove the pipe - evaporator cooling.

   Caution:

   - **Do not apply excessive force to the pipe.**
   - **Seal the engaging parts of the disconnected pipe, expansion valve - cooling and condenser assembly - air conditioner with a plug or vinyl tape to prevent foreign matter from entering.**
   - **Do not pull the harness and cable forcibly.**

   (1) Remove the clamp and remove the vacuum hose.
   (2) Release the claws, and remove the battery cable bracket and engine harness bracket.
   (3) Disconnect the battery box connector, and detach the harness clip.
   (4) Disconnect the upper connector of the engine control module (ECM). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
   (5) Disconnect the connector of the pressure switch or pressure sensor.
   (6) Remove the bolt, and detach the pipe - evaporator cooling.

(7) Remove the clip - pipe and the clip, and remove the pipe - evaporator cooling.

AIR CONDITIONER > Hose and Pipe

INSTALLATION

1. LOW-PRESSURE HOSE

Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. Ref. to AIR CONDITIONER>Compressor Oil>ADJUSTMENT.**
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.**

1. Install the hose - pressure suction.
   Tightening torque:
   Air conditioning unit: Ref. to AIR CONDITIONER>General Description>COMPONENT > AIR CONDITIONING UNIT.
2. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

2. HIGH-PRESSURE HOSE

Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. Ref. to AIR CONDITIONER>Compressor Oil>ADJUSTMENT.**
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.**

1. Install the hose - pressure suction discharge.
   Tightening torque:
   Air conditioning unit: Ref. to AIR CONDITIONER>General Description>COMPONENT > AIR CONDITIONING UNIT.
2. Install the bracket - bumper UPR and radiator upper frame. Ref. to COOLING(H4DO)>Radiator>INSTALLATION.
3. Install the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
4. Install the lock assembly - front hood. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>INSTALLATION.
5. Install the air intake duct.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
7. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

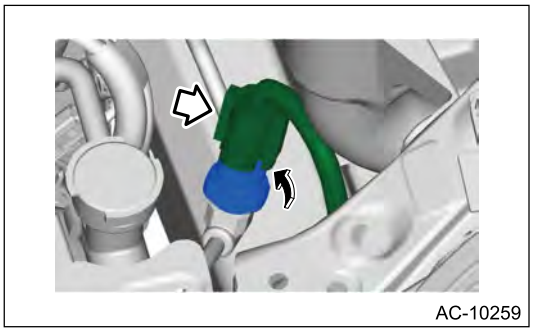
3. A/C PIPE

Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **If the hose and pipe has been replaced, add an appropriate amount of compressor oil to the compressor. Ref. to AIR CONDITIONER>Compressor Oil>ADJUSTMENT.**
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **When connecting pipes, do not apply an excessive force to them. After installation, check that the pipes are not damaged.**

1. Install the pipe - evaporator cooling.
   (1) Install the pipe - evaporator cooling.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
   (2) Connect the connector of the pressure switch or pressure sensor.
   (3) Connect the upper connector of the engine control module (ECM). Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>INSTALLATION.
   (4) Connect the connector and harness of the battery box.
   (5) Install the engine harness bracket.
   (6) Install the battery cable bracket.
   (7) Install the vacuum hose.
2. Install the hose - pressure suction discharge. Ref. to AIR CONDITIONER>Hose and Pipe>INSTALLATION > HIGH-PRESSURE HOSE.
3. Install the hose - pressure suction. Ref. to AIR CONDITIONER>Hose and Pipe>INSTALLATION > LOW-PRESSURE HOSE.
4. Install the air intake boot. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Boot>INSTALLATION.
5. Install the battery and battery box. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSTALLATION.
6. Charge refrigerant. Ref. to AIR CONDITIONER>Refrigerant Charging Procedure>PROCEDURE.

AIR CONDITIONER > Hose and Pipe



INSPECTION

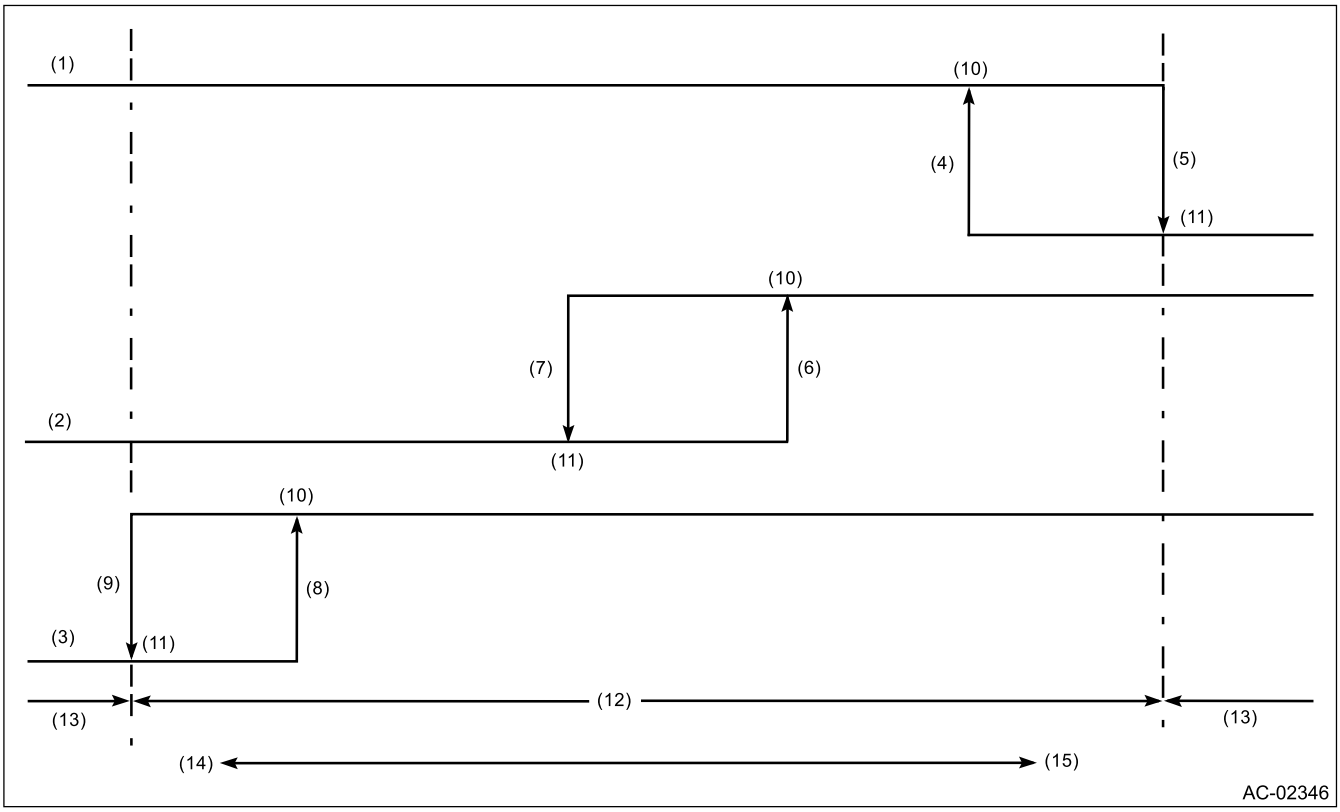
1. Check the hoses for cracks, damage and expansion. If there is a malfunction, replace the hose - pressure suction or the hose - pressure discharge.
2. Check the pipes for crack or damage. If there is a malfunction, replace the pipe - evaporator cooling.

AIR CONDITIONER > Pressure Switch (Triple Pressure Switch)

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pressure switch.
   (1) Disconnect the connector.
   (2) Remove the pressure switch as shown in the figure.
   Caution:
   - **Do not deform the pipe.**
   - **Seal the engaging parts of the disconnected pipe and pressure switch with a plug or vinyl tape to prevent foreign matter from entering.**

AIR CONDITIONER > Pressure Switch (Triple Pressure Switch)



INSTALLATION

1. Install the pressure switch.
   Tightening torque:
   10.8 N·m (1.1 kgf-m, 8 ft-lb)
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Pressure Switch (Triple Pressure Switch)

INSPECTION

1. Connect the manifold gauge to the service valve on the high-pressure side.
2. Disconnect the pressure switch connector.
3. Start the air conditioner, and check the operating pressure of switch by turning the compressor (magnet clutch) to ON/OFF. Operation of each switch is as follows.

(1) High pressure switch

(2) Middle pressure switch

(3) Low pressure switch

(4) 2,475±325 kPa (25.24±3.31 kg/cm^2, 358.9±47.1 psi)

(5) $3{,}140^{+50}_{-200}$ kPa ($32.02^{+0.51}_{-2.04}$ kg/cm^2, $455.3^{+7.2}_{-29}$ psi)

(6) 1,770±80 kPa (18.05±0.82 kg/cm^2, 256.6±11.6 psi)

(7) 1,370±120 kPa (13.97±1.22 kg/cm^2, 198.6±17.4 psi)

(8) 225^{+25}_{-29} kPa ($2.29^{+0.25}_{-0.3}$ kg/cm^2, $32.6^{+3.6}_{-4.2}$ psi)

(9) 196±20 kPa (2±0.2 kg/cm^2, 28.4±2.9 psi)

(10) ON

(11) OFF

(12) Operative range of compressor

(13) Inoperative range of compressor

(14) Low pressure

(15) High pressure

Note:

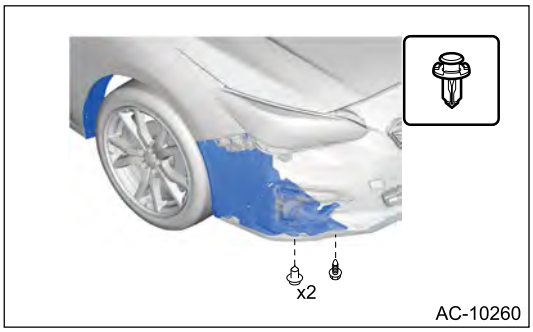
- **High pressure switch turns the compressor (magnet clutch) to OFF when the refrigerant pressure becomes extremely high to prevent the evaporator, air conditioner piping and expansion valve from getting damaged, etc.**
- **The middle pressure switch is used to effectively control the radiator fan output by judging high load/low load in normal pressure range.**
- **The low pressure switch detects a refrigerant shortage and deactivates the compressor (magnet clutch) if the refrigerant pressure is abnormally low. (Because any further compressor operation in such a state may lead to compressor seizure)**

AIR CONDITIONER > Pressure Sensor

NOTE

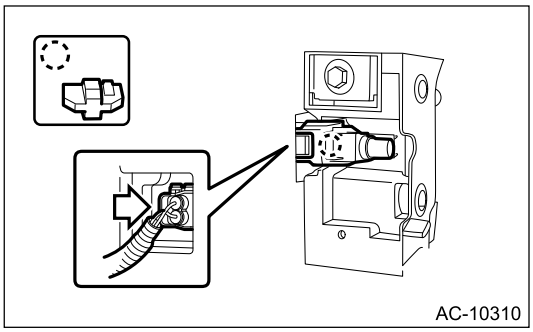
For pressure sensor operation procedures, refer to “Pressure Switch (Triple Pressure Switch)” section.
Ref. to AIR CONDITIONER>Pressure Switch (Triple Pressure Switch).

AIR CONDITIONER > Pressure Sensor



INSPECTION

1. Perform a diagnosis code (DTC) check by connecting the Subaru Select Monitor. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.
   Note:
   For detailed operation procedures, refer to “Application help”.
2. If the following diagnosis code (DTC) is displayed, refer to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)” in “AIR CONDITIONER (DIAGNOSTICS)” section.
   - DTC B14A3 (REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN): Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14A3 REFRIGERANT PRESSURE SENSOR CIRCUIT OPEN.
   - DTC B14A4 (REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT-CIRCUIT): Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B14A4 REFRIGERANT PRESSURE SENSOR CIRCUIT SHORT-CIRCUIT .

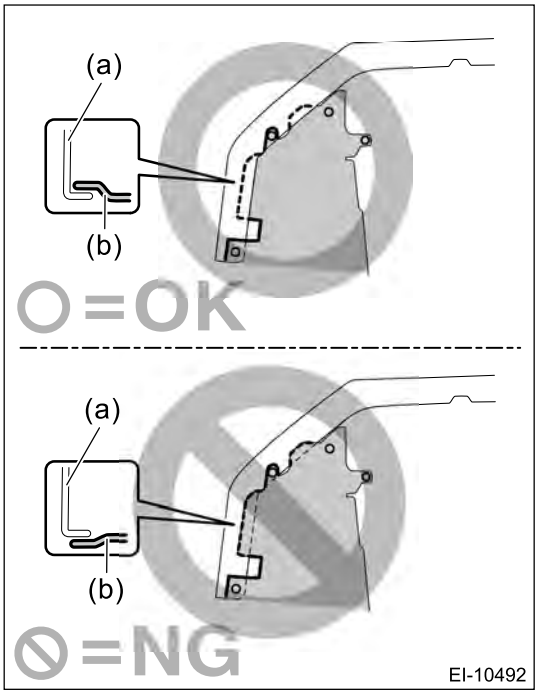


AIR CONDITIONER > Ambient Sensor

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the screw and clips, and turn over the mud guard - front.

5. Disconnect the connector and remove the ambient sensor.
   (1) Disconnect the connector.
   (2) Release the claws and remove the ambient sensor.



AIR CONDITIONER > Ambient Sensor

INSTALLATION

Caution:

Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).

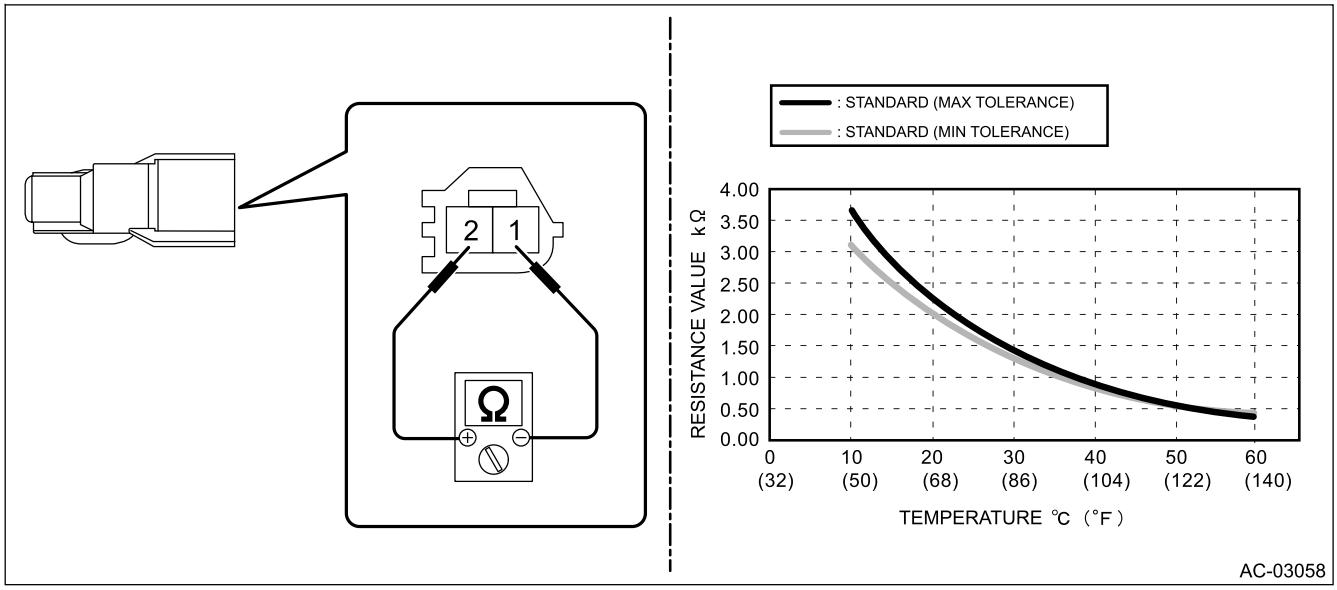
1. Install the ambient sensor.
2. Install the mud guard - front.
3. Install the under cover - front.

   Tightening torque:

   18 N·m (1.8 kgf-m, 13.3 ft-lb)
4. Lower the vehicle.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Ambient Sensor

INSPECTION



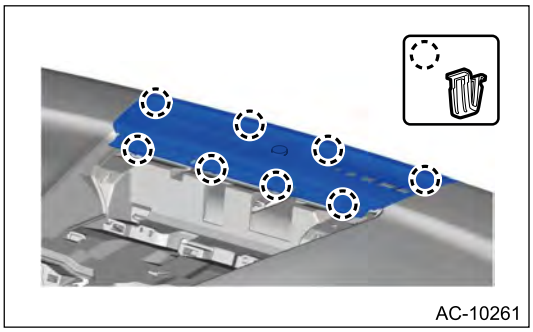
1. Visually check the ambient sensor for dirt or damage, and clean or replace as necessary.
2. Measure the resistance between connector terminals.

   Caution:

   During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

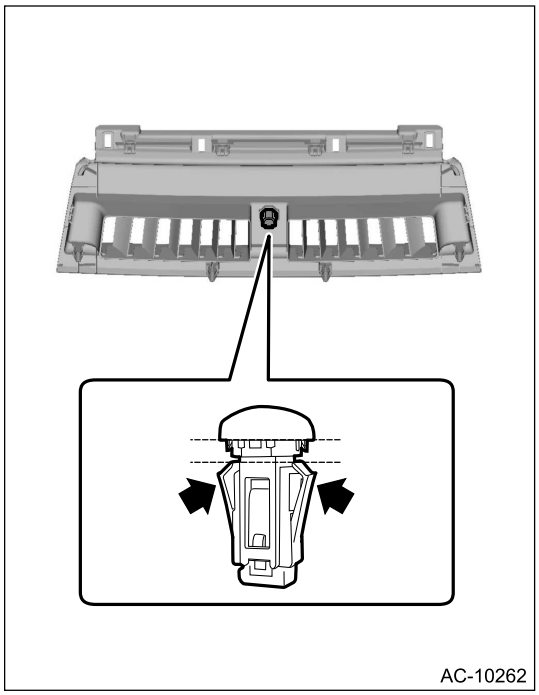
   Preparation tool:

   Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.12 — 3.7 kΩ
	15°C	2.49 — 2.88 kΩ
	20°C	2 — 2.26 kΩ
	25°C	1.62 — 1.79 kΩ
	30°C	1.32 — 1.42 kΩ
	35°C	1.08 — 1.14 kΩ
	40°C	0.89 — 0.92 kΩ
	45°C	0.74 — 0.75 kΩ
	50°C	0.62 — 0.62 kΩ
	55°C	0.52 — 0.51 kΩ
	60°C	0.44 — 0.42 kΩ

3. Replace the ambient sensor if the inspection result is not within the standard value.



AIR CONDITIONER > Sunload Sensor (Auto A/C Model)

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the multi-function display. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD)>REMOVAL.
3. Remove the grille - front defroster.
   (1) Release the clips.

   (2) Disconnect the connector and remove the grille - front defroster.
4. Remove the sunload sensor.
   (1) Release the claws and remove the sunload sensor.

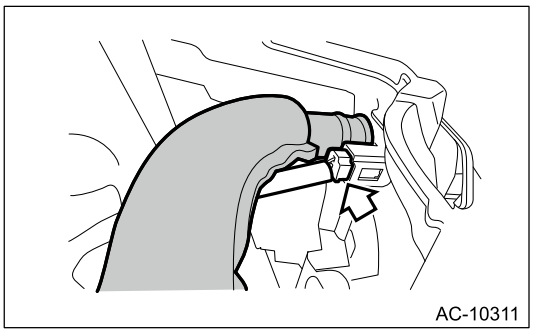
AIR CONDITIONER > Sunload Sensor (Auto A/C Model)

INSTALLATION

1. Install the sunload sensor.
2. Install the grille - front defroster.
3. Install the multi-function display. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD)>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

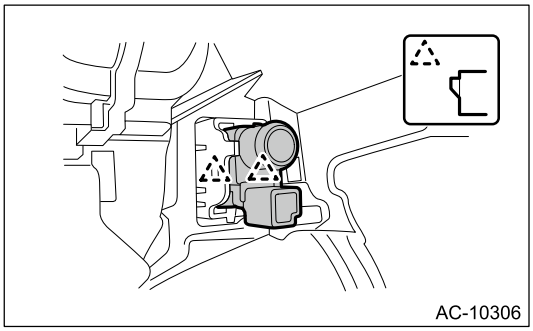
AIR CONDITIONER > Sunload Sensor (Auto A/C Model)

INSPECTION



1. Check if there is anything that affects sensing, around the sunload sensor.
   (1) Is the sunload sensor free from any object that disturbs sensing?
   (2) Is the windshield glass free from any object such as sticker or film that disturbs sensing?
   - **Yes** → Go to step 2.
   - **No** → Remove everything that affects sensing.
2. Check the sunload sensor using the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (1) Connect the Subaru Select Monitor.
   (2) On [Start] display, select [Diagnosis].
   (3) On [Select Vehicle] display, enter vehicle information and select [OK].
   (4) On [Select multiple system] display, select [Air Conditioner], and then select [Next].
   (5) On [Select Function] display, select [Data Monitor].
   (6) From the data monitor item list, select [Quantity of Sunload].
   (7) Cover the sunload sensor with cloth and the like to avoid direct light. Does [Quantity of Sunload] indicate [0 W/m^2]?
   - **Yes** → Go to step 3.
   - **No** → Replace the sunload sensor.
3. From step 2), expose the sunload sensor to light.
   (1) Place intense light such as incandescent light at 300 mm (11.81 in) or less from the sunload sensor.
   (2) Does [Quantity of Sunload] show [2,000 W/m^2] or less?
   Caution:
   The value changes depending on the angle of light.
   - **Yes** → The sunload sensor is normal.
   - **No** → Replace the sunload sensor.

AIR CONDITIONER > In-Vehicle Sensor (Auto A/C Model)



REMOVAL

Caution:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the in-vehicle sensor.
   (1) Disconnect the aspirator hose and connector.

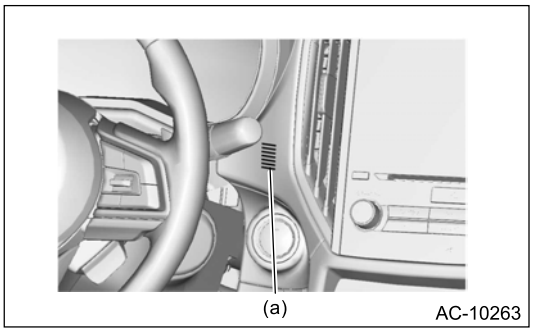
   (2) Release the claws and remove the in-vehicle sensor.

AIR CONDITIONER > In-Vehicle Sensor (Auto A/C Model)

INSTALLATION

Caution:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Install the in-vehicle sensor.
2. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
3. Install the cover assembly - instrument panel LWR driver.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



AIR CONDITIONER > In-Vehicle Sensor (Auto A/C Model)

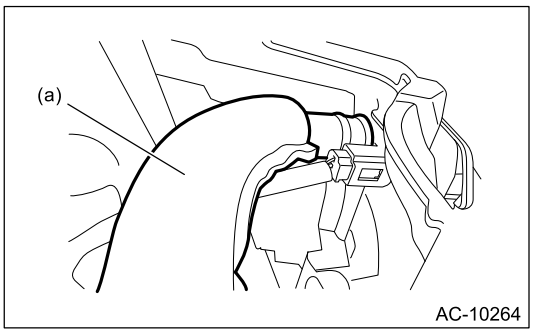
INSPECTION

1. Set the vehicle to the following conditions.

Item	Condition
Ignition switch	ON
A/C switch	ON
Temperature adjustment dial	HI (MAX HOT)
Air flow control dial or switch	DEF
Fan dial	HI (MAX)

2. Check the suction port (a) for in-vehicle sensor of the cover assembly - instrument panel LWR driver.

(1) Put a strip of paper close to the front side of the suction port (a).



(2) Can you see the paper moving towards the port and the air being sucked into the port?

Caution:

Be careful not to let the paper get sucked into the port.

- **Yes** → Go to step 5.
- **No** → Go to step 3.

3. Remove the cover assembly - instrument panel LWR driver, and check the aspirator hose (a).

(1) Are the in-vehicle sensor and aspirator hose connected securely?

(2) Is the aspirator hose free from any kinks or cracks?

- **Yes** → Go to step 4.
- **No** → Repair or replace the aspirator hose if necessary.

4. Check if there is anything that affects sensing, around the in-vehicle sensor.

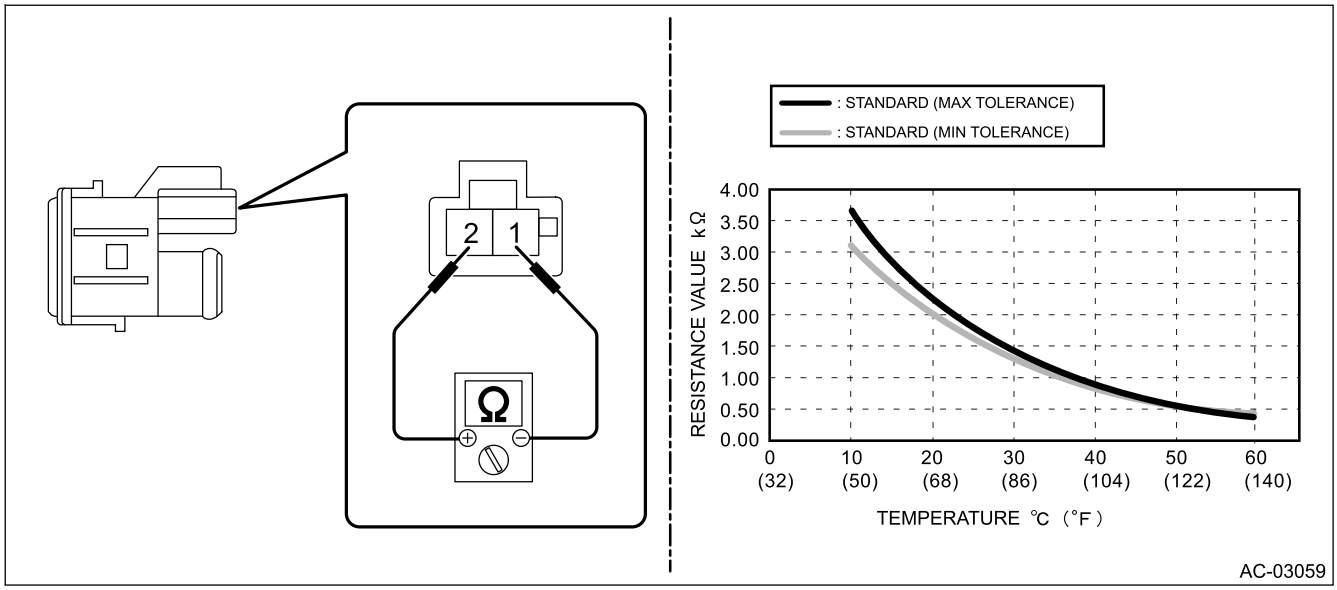
(1) Is the in-vehicle sensor hole free from clogging?

(2) Is the peripheral area of in-vehicle sensor free from any heat-producing parts?

- **Yes** → Go to step 5.
- **No** → Remove everything that affects sensing.

5. Check in-vehicle sensor.

(1) Disconnect the connector.



(2) Measure the resistance between connector terminals.

Caution:

During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

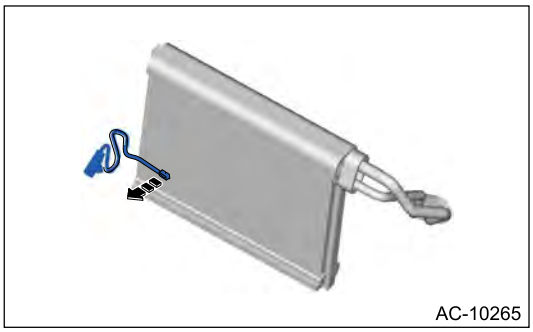
Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.12 — 3.7 kΩ
	15°C	2.49 — 2.88 kΩ
	20°C	2 — 2.26 kΩ
	25°C	1.62 — 1.79 kΩ
	30°C	1.32 — 1.42 kΩ
	35°C	1.08 — 1.14 kΩ
	40°C	0.89 — 0.92 kΩ
	45°C	0.74 — 0.75 kΩ
	50°C	0.62 — 0.62 kΩ
	55°C	0.52 — 0.51 kΩ
	60°C	0.44 — 0.42 kΩ

(3) Is the resistance within the standard?

- **Yes** → The in-vehicle sensor is normal.
- **No** → Replace the in-vehicle sensor.



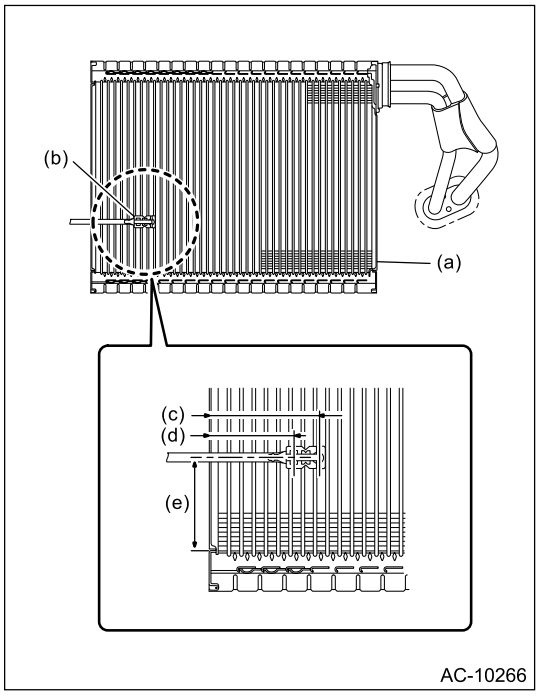
AIR CONDITIONER > Evaporator Sensor

REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the evaporator assembly - cooling. Ref. to AIR CONDITIONER>Evaporator>REMOVAL.
3. Remove the evaporator sensor.
   (1) Remove the evaporator sensor as shown in the figure.



AIR CONDITIONER > Evaporator Sensor

INSTALLATION

Caution:

- **Since the auto A/C model uses the variable displacement compressor, be careful of the following items.**
  – Do not start the engine before charging refrigerant.
  – If the engine is started with no refrigerant charge, replace the compressor assembly.
- **Replace the O-rings with new parts, and then apply compressor oil to install completely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Install the evaporator sensor at the position shown in the figure below.

(a) Evaporator
(b) Evaporator sensor
(c) 61.1 mm (2.41 in)
(d) 48 mm (1.89 in)
(e) 50 mm (1.97 in)

2. Install the evaporator assembly - cooling. Ref. to AIR CONDITIONER>Evaporator>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Evaporator Sensor

INSPECTION

1. Prepare the vehicle.
   Note:
   Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.
   - Place the vehicle in the workshop or in the shade and windless condition.
   - Open all windows.
2. Set the vehicle to the following conditions.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
A/C switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Fan dial	5/7 level

3. Using the Subaru Select Monitor, check the evaporator sensor.

Note:

For detailed operation procedures, refer to "Application help".

(1) Connect the Subaru Select Monitor.

(2) On [Start] display, select [Diagnosis].

(3) On [Select Vehicle] display, enter vehicle information and select [Confirmed].

(4) On [Select System] display, select [Air Conditioner], and then select [Confirmed].

(5) On [Select Function] display, select [Data Monitor].

(6) From the data monitor item list, select [Evaporator Temperature Target].

(7) Idle the engine for 15 minutes, and then compare the air flow outlet temperature with [Evaporator Temperature Target].

Preparation tool:

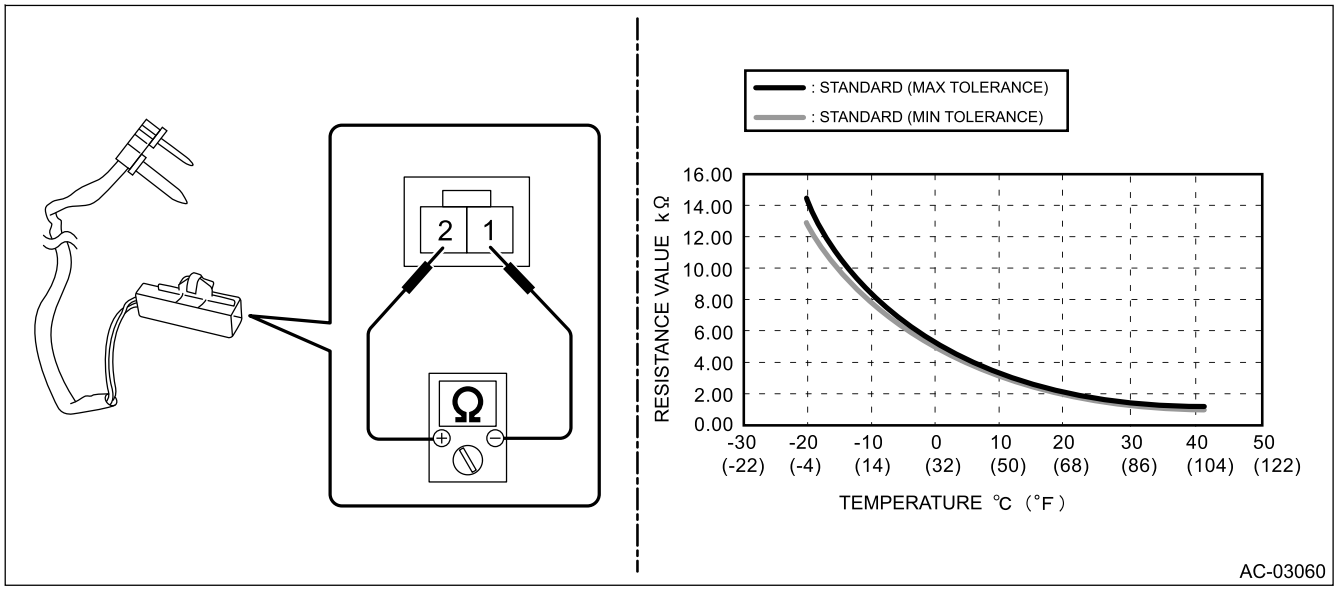
Thermometer and hygrometer

Note:

For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

(8) Is the difference between outlet opening temperature and [Evaporator Temperature Target] by 3°C (5.4°F) or more?

- **Yes** → Go to step 4.
- **No** → Evaporator sensor is normal.



4. Check the evaporator sensor.

(1) Disconnect the connector.

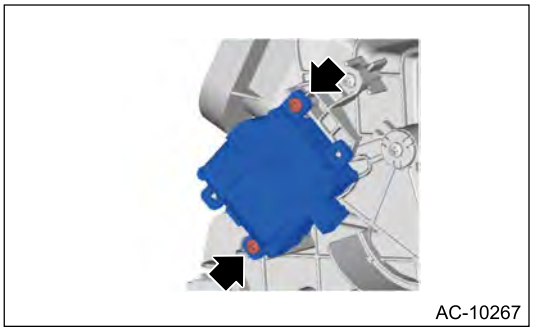
(2) Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	−20°C	13.584 — 14.541 kΩ
	−15°C	10.34 — 10.946 kΩ
	−10°C	7.938 — 8.313 kΩ
	−5°C	6.143 — 6.366 kΩ
	0°C	4.79 — 4.914 kΩ
	5°C	3.718 — 3.829 kΩ
	10°C	2.889 — 3.031 kΩ
	15°C	2.247 — 2.435 kΩ
	20°C	1.785 — 1.952 kΩ

Terminal No.	Inspection conditions	Standard
	25°C	1.427 — 1.574 kΩ
	30°C	1.149 — 1.278 kΩ
	35°C	0.931 — 1.044 kΩ
	40°C	0.759 — 0.858 kΩ



(3) Is the resistance within the standard?

- **Yes** → Evaporator sensor is normal.
- **No** → Replace the evaporator sensor.

AIR CONDITIONER > FRESH/RECIRC Door Actuator

REMOVAL

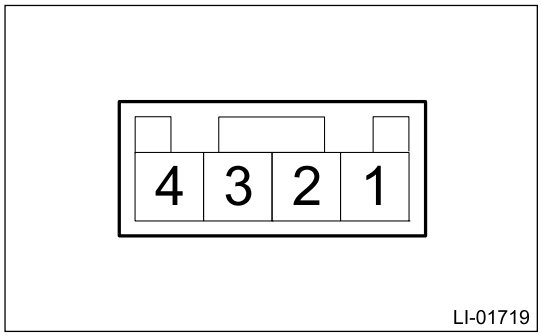
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the motor - actuator intake.
   (1) Disconnect the connector.
   (2) Remove the screws, and remove the motor - actuator intake.

AIR CONDITIONER > FRESH/RECIRC Door Actuator

INSTALLATION

1. When replacing the link plate with a new part, apply a thin coat of grease evenly to the contact area inside the rail of link plate by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.
   Note:
   After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.
   Preparation items:
   Genuine part: SUBARU genuine grease (72129AJ000)
2. Install the motor - actuator intake.
3. Install the pocket assembly and the back panel - pocket.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > FRESH/RECIRC Door Actuator



INSPECTION

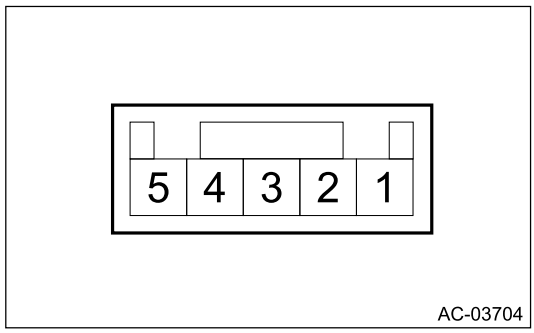
1. ACTUATOR LINK

1. Visually check the operating range of the link, and remove the foreign matter if any.
2. Operate the FRESH/RECIRC switch, and check that the link operates normally.
3. If it does not operate normally as the result of inspection, perform a unit inspection of motor - actuator intake.

2. CHECK ACTUATOR

- **MANUAL A/C MODEL**
  1. Check the actuator operation when battery voltage is applied between the connector terminals.
     Caution:
     Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
4 (+) — 2 (−)	Apply battery voltage.	FRESH
4 (+) — 1 (−)		RECIRC



2. If it does not operate normally as the result of inspection, replace the motor - actuator intake.

- **AUTO A/C MODEL**

1. Check the actuator operation when battery voltage is applied between the connector terminals.

Caution:

Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
4 (+) — 5 (−)	Apply battery voltage.	FRESH
5 (+) — 4 (−)		RECIRC

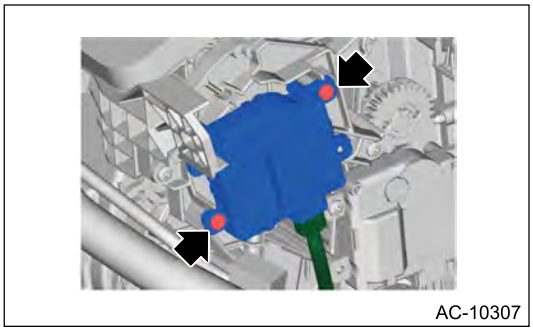
2. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Always	4.2 — 7.8 Ω

3. Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.



Terminal No.	Inspection conditions	Standard
2 (+) — 1 (−)	FRESH	Approx. 1.9 V
	RECIRC	Approx. 4.5 V

4. If it is found defective as a result of inspection, replace the motor - actuator intake.

AIR CONDITIONER > Mode Door Actuator

REMOVAL

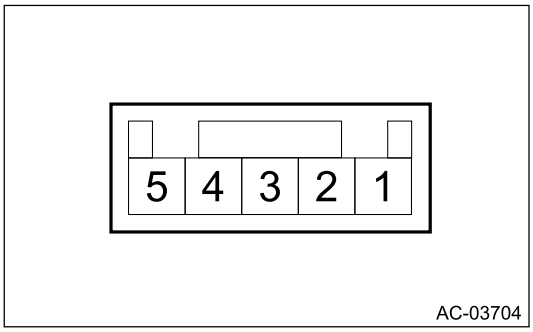
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the motor - actuator mode.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the motor - actuator mode.

AIR CONDITIONER > Mode Door Actuator

INSTALLATION

1. When replacing the link - mode with a new part, apply a thin coat of grease evenly to the contact area inside the rail of link - mode by using approx. 5 mm (0.2 in) width and approx. 0.1 g (0.004 oz) of grease squeezed out from a tube.
   Note:
   After installing the actuator, perform 3 — 5 times of adaptation for the grease to fit in.
   Preparation items:
   Genuine part: SUBARU genuine grease (72129AJ000)
2. Install the motor - actuator mode.
3. Install the pocket assembly and the back panel - pocket.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Mode Door Actuator



INSPECTION

1. ACTUATOR LINK

1. Visually check the operating range of the link, and remove the foreign matter if any.
2. Operate the air flow control dial or switch to check that the link operates normally.
3. If it does not operate normally as the result of inspection, perform a unit inspection of motor - actuator mode.

2. CHECK ACTUATOR OPERATION

1. Check the actuator operation when battery voltage is applied between the connector terminals.
   Caution:
   Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

Terminal No.	Inspection conditions	Operating position
4 (+) — 5 (−)	Apply battery voltage.	DEF
5 (+) — 4 (−)		FACE

2. Measure the resistance between connector terminals.

Preparation tool:

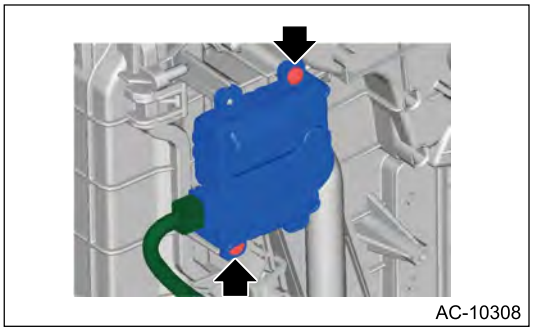
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Always	4.2 — 7.8 Ω

3. Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (−)	FACE	Approx. 4.5 V
	DEF	Approx. 0.5 V

4. Replace the motor - actuator mode if it is found defective as a result of inspection.



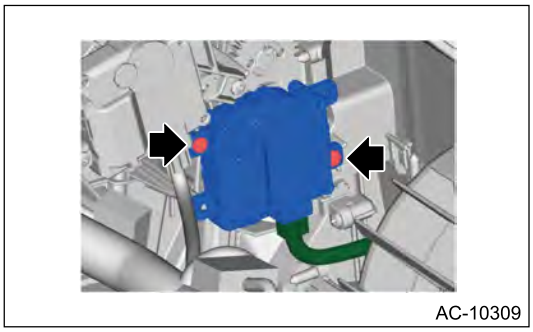
REMOVAL

1. DRIVER'S SIDE

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **If reusing the motor - actuator mix, perform the following procedures to prevent incorrect installation.**
  1. **While the part is installed to the vehicle, turn the temperature control dial to the MAX COOL position.**
  2. **Wait for 30 seconds in the condition 1, and remove the motor - actuator mix.**

1. Disconnect the battery ground cable and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the motor - actuator mix.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the motor - actuator mix.



2. PASSENGER'S SIDE

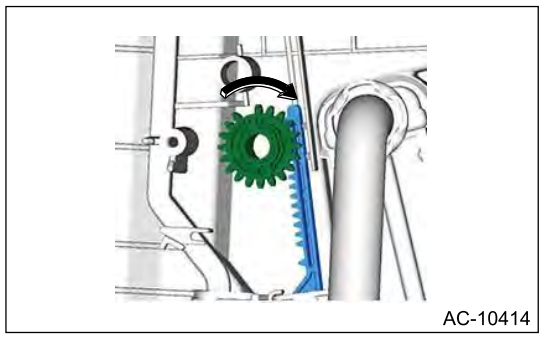
Caution:

If reusing the motor - actuator mix, perform the following procedures to prevent incorrect installation.

1. **While the part is installed to the vehicle, turn the temperature control dial to the MAX COOL position.**
2. **Wait for 30 seconds in the condition 1, and remove the motor - actuator mix.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the motor - actuator mix.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the motor - actuator mix.

AIR CONDITIONER > Air Mix Door Actuator



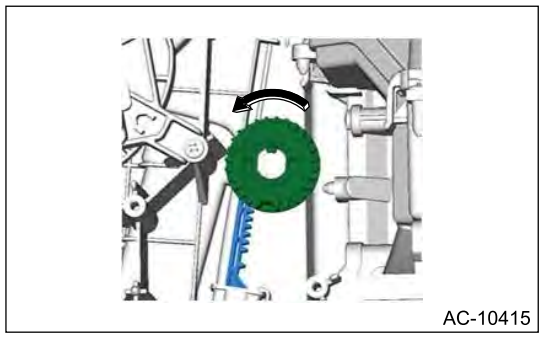
INSTALLATION

1. DRIVER'S SIDE

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Rotate the gear - mix slowly in the arrow direction shown in the figure until it stops.
   Caution:
   - **Do not rotate excessively.**
   - **Be sure to prevent dust or other foreign matters from contacting the greased gear portion.**



2. Install the motor - actuator mix.
   Note:
   Install it so that the gear position is not displaced.
3. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
4. Install the cover assembly - instrument panel LWR driver.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. PASSENGER'S SIDE

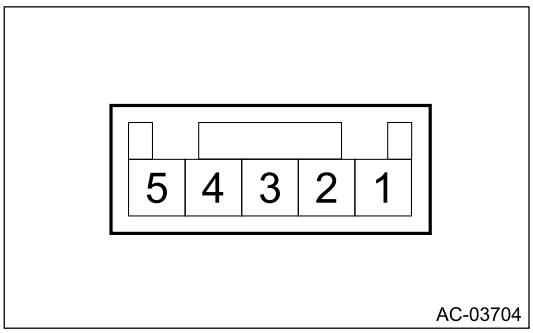
1. Rotate the gear - mix slowly in the arrow direction shown in the figure until it stops.

Caution:

- **Do not rotate excessively.**
- **Be sure to prevent dust or other foreign matters from contacting the greased gear portion.**

2. Install the motor - actuator mix.
   Note:
   Install it so that the gear position is not displaced.
3. Install the pocket assembly and the back panel - pocket.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Air Mix Door Actuator



INSPECTION

1. ACTUATOR LINK

1. Visually check the operating range of the link, and remove the foreign matter if any.
2. Operate the temperature control dial to check that the link operates normally.
3. If it does not operate normally as the result of inspection, perform a unit inspection of motor - actuator mix.

2. CHECK ACTUATOR OPERATION

1. Check the actuator operation when battery voltage is applied between the connector terminals.
   Caution:
   Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.

- Driver's side

Terminal No.	Inspection conditions	Operating position
5 (+) — 4 (−)	Connect battery to the terminals	COOL
4 (+) — 5 (−)		HOT

- Passenger's side

Terminal No.	Inspection conditions	Operating position

Terminal No.	Inspection conditions	Operating position
5 (+) — 4 (−)	Connect battery to the terminals	HOT
4 (+) — 5 (−)		COOL

2. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Always	4.2 — 7.8 Ω

3. Connect the connector, turn the ignition switch to ON, and check the voltage between actuator terminals.

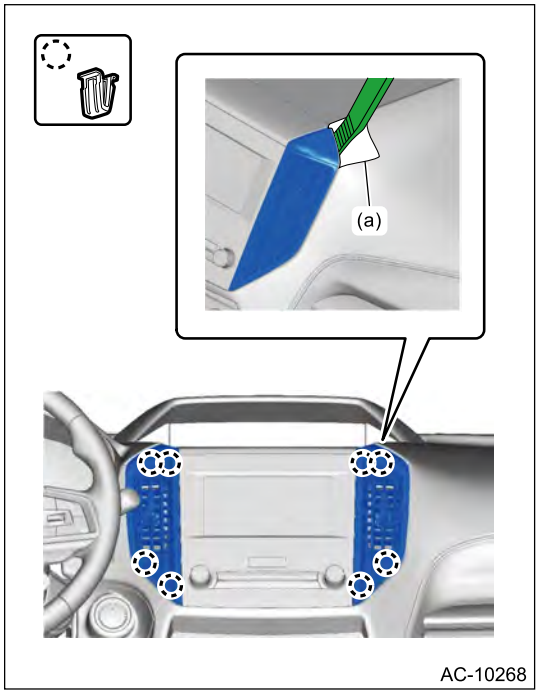
- Driver’s seat

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (−)	HOT	Approx. 0.5 V
	COOL	Approx. 4.5 V

- Passenger’s seat

Terminal No.	Inspection conditions	Standard
2 (+) — 3 (−)	HOT	Approx. 0.5 V
	COOL	Approx. 4.5 V

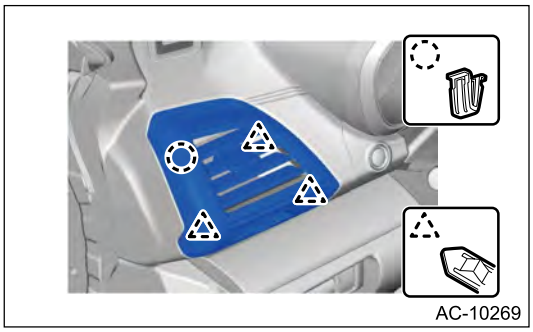
4. Replace the motor - actuator mix if it is found defective as a result of inspection.



REMOVAL

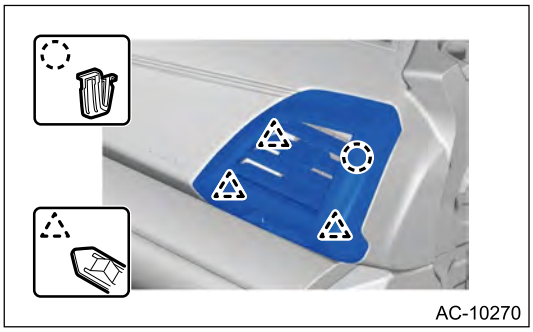
1. CENTER GRILLE ASSEMBLY

1. Remove the grille assembly - CTR ventilation.
   (1) Attach the protective tape (a).
   (2) Release the clips, and then remove the grille assembly - CTR ventilation LH and RH.



Caution:

Wrap a remover, etc. with protective tape or cloth. Use a remover, etc. by pressing it in the instrument panel side so that the grille assembly - CTR ventilation should not be damaged.



2. SIDE GRILLE ASSEMBLY

1. Remove the grille assembly - ventilation.
   (1) Release the claws and clips, then detach the grille assembly - ventilation.
   - LH side

   - RH side

AIR CONDITIONER > Air Vent Grille

INSTALLATION

1. CENTER GRILLE ASSEMBLY

Caution:

After installing the grille assembly, check that the grille assembly is inserted correctly into the air vent duct.

1. Install the grille assembly - CTR ventilation.

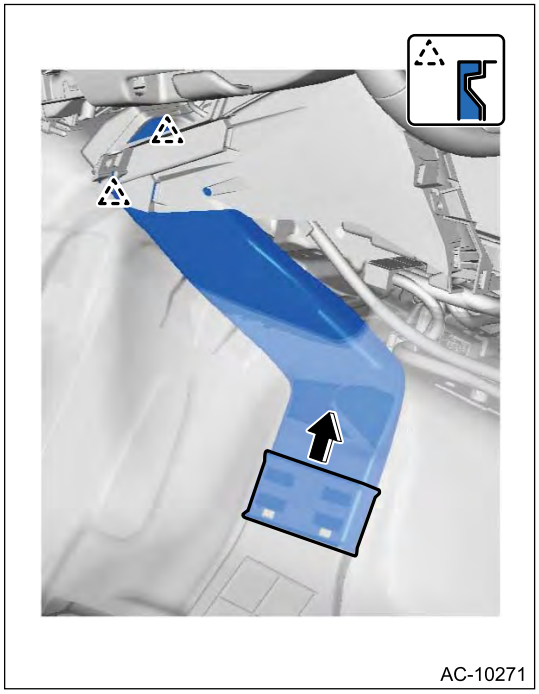
2. SIDE GRILLE ASSEMBLY

Caution:

After installing the grille assembly, check that the grille assembly is inserted correctly into the air vent duct.

1. Install the grille assembly - ventilation.

AIR CONDITIONER > Air Vent Grille



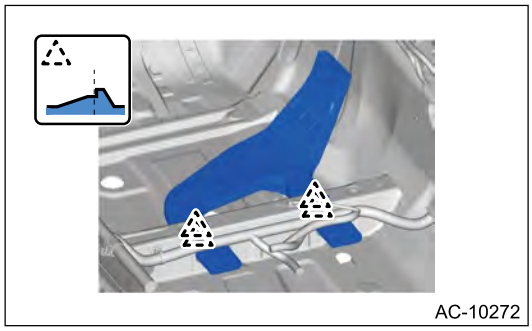
INSPECTION

1. Check that the direction and the amount of air can be adjusted smoothly. Replace the grille assembly if faulty.
2. Check that the adjustment can be maintained in each position. Replace the grille assembly if faulty.

REMOVAL

1. FRONT

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
3. Remove the cover assembly - instrument panel LWR driver INN. (When removing LH side) Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
4. Remove the pocket assembly and the back panel - pocket. (When removing RH side) Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
5. Remove the duct - rear heater front.
   (1) Remove the slide lock.
   (2) Release the claws, and remove the duct - rear heater front.



2. REAR

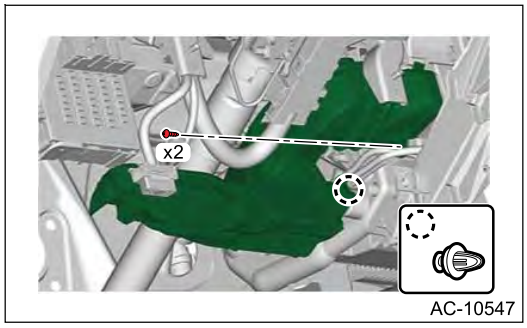
Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the duct - rear heater front. Ref. to AIR CONDITIONER>Heater Duct>REMOVAL > FRONT.
3. Remove the front seats. Ref. to SEATS>Front Seat>REMOVAL.
4. Turn over the floor mat. Ref. to EXTERIOR/INTERIOR TRIM>Floor Mat>REMOVAL.
5. Remove the duct - rear heater rear.
   (1) Release the clips, and remove the adapter cord.
   (2) Release the claws, and then remove the duct - rear heater rear.

Note:

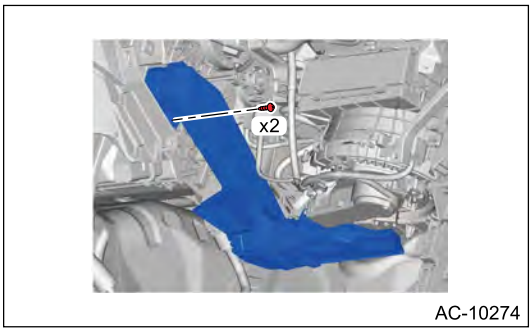
For models with power amplifier, remove the extension duct.



3. FOOT

LH SIDE

Caution:



Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the duct - foot driver.
   (1) Remove the screw, release the claws, which secure the spacer - foot and then remove the duct - foot driver together with the spacer - foot.
   Caution:
   If the duct - foot has been removed from the spacer - foot, replace the duct - foot with a new part. If the duct - foot is reused, the retention power of the claw and clip deteriorates and it may come off.

RH SIDE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the duct - foot passenger.
   (1) Remove the screws and remove the duct - foot passenger.

AIR CONDITIONER > Heater Duct

INSTALLATION

1. FRONT

1. Install the duct - rear heater front.
2. Install the pocket assembly and the back panel - pocket.
3. Install the cover assembly - instrument panel LWR driver INN.
4. Install the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. REAR

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Install the duct - rear heater rear.
2. Install the floor mat. Ref. to EXTERIOR/INTERIOR TRIM>Floor Mat>INSTALLATION.
3. Install the front seat. Ref. to SEATS>Front Seat>INSTALLATION.
4. Install the duct - rear heater front.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

3. FOOT

LH SIDE

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

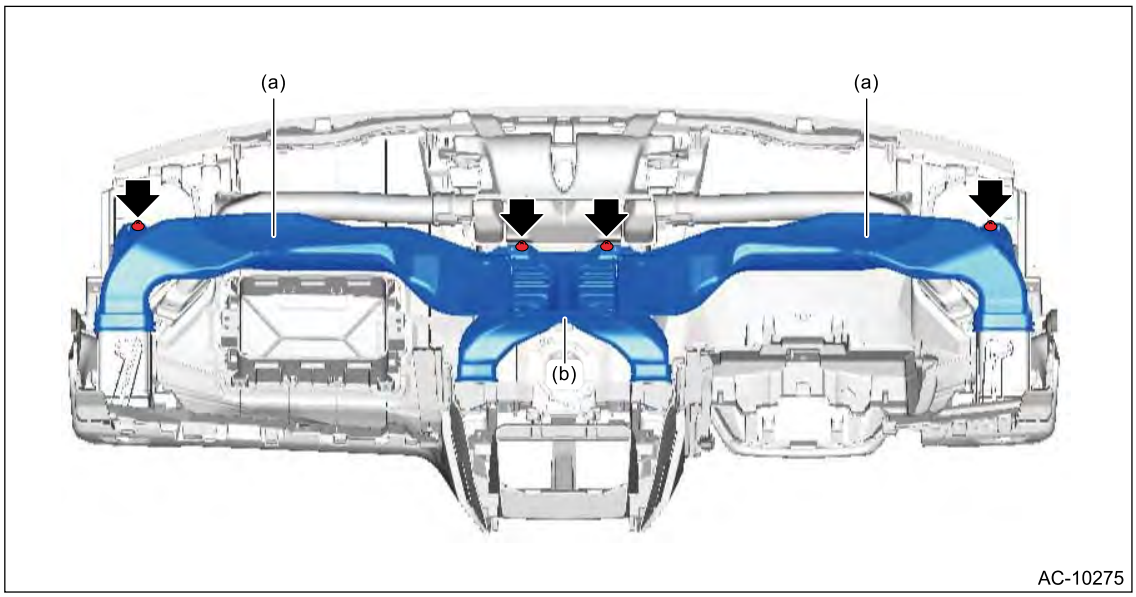
1. Install the duct - foot driver.
2. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>INSTALLATION.
3. Install the cover assembly - instrument panel LWR driver.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

RH SIDE

1. Install the duct - foot passenger.
2. Install the pocket assembly and the back panel - pocket.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

INSPECTION

1. Check installation condition of duct. Connect the duct properly if defective.
2. Check that no foreign matter is mixed in the duct. Remove the foreign matter if any.



AIR CONDITIONER > Heater Vent Duct

REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the instrument panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Assembly>REMOVAL.
3. Remove the duct - center vent and the duct - side ventilation.
   (1) Remove the screws and remove the duct - side ventilation LH and RH (a).
   (2) Remove the duct - center vent (b).

AIR CONDITIONER > Heater Vent Duct

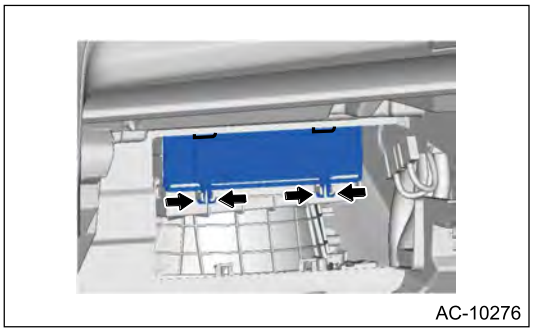
INSTALLATION

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

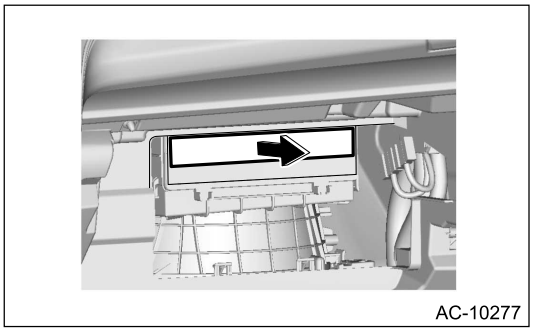
1. Install the duct - center vent and the duct - side ventilation.
2. Install the instrument panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Assembly>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIR CONDITIONER > Heater Vent Duct



INSPECTION

1. Check installation condition of duct. Connect the duct properly if defective.
2. Check that no foreign matter is mixed in the duct. Remove the foreign matter if any.



AIR CONDITIONER > A/C Filter

REPLACEMENT

1. Remove the pocket assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
2. Remove the filter.
   (1) Release the lock and guide, and remove the filter cover.

   (2) Remove the filter as shown in the figure.

Note:
Pull out while tilting the front side of the filter downward to prevent dirt or dust from falling inside the case.

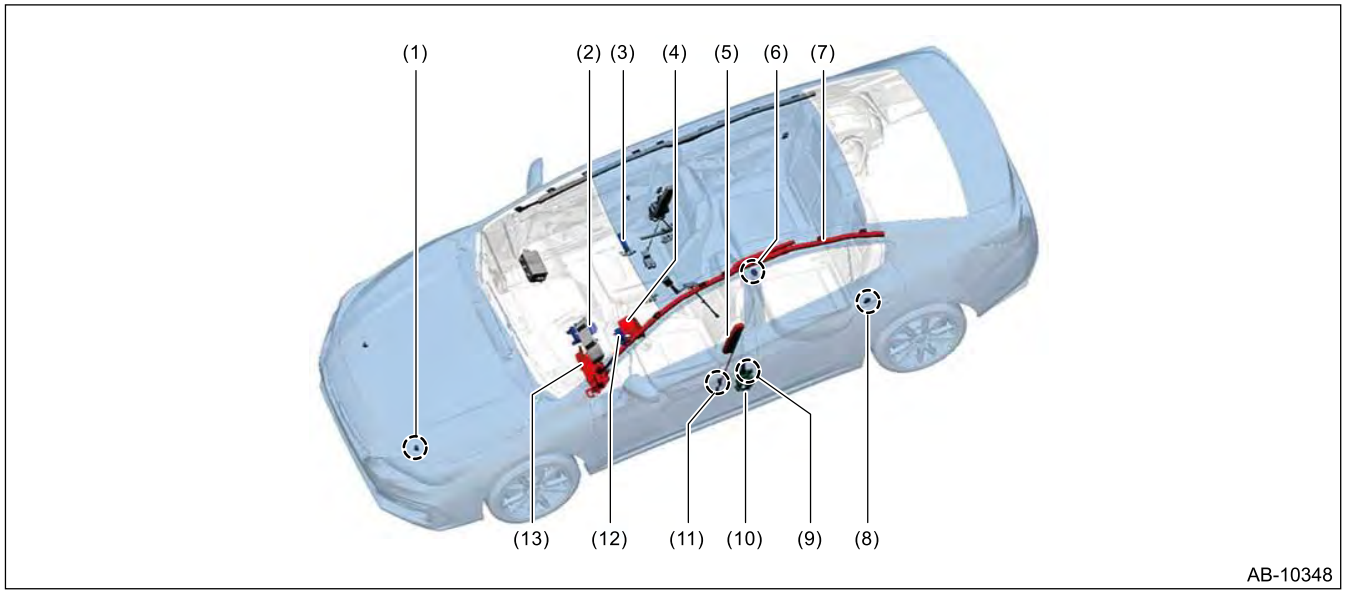
3. Install new filter and filter cover.
4. Install the pocket assembly.

AIR CONDITIONER > A/C Filter

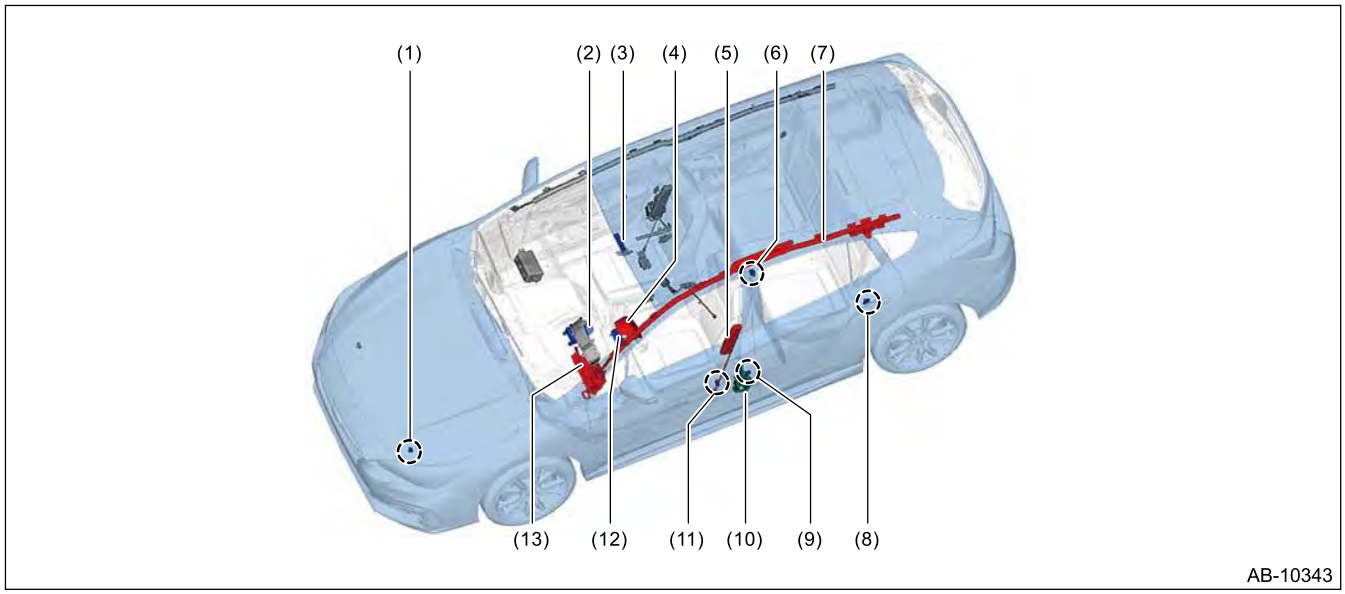
INSPECTION

Check the A/C filter for dust or dirt, and clean or replace as necessary.

INSPECTION

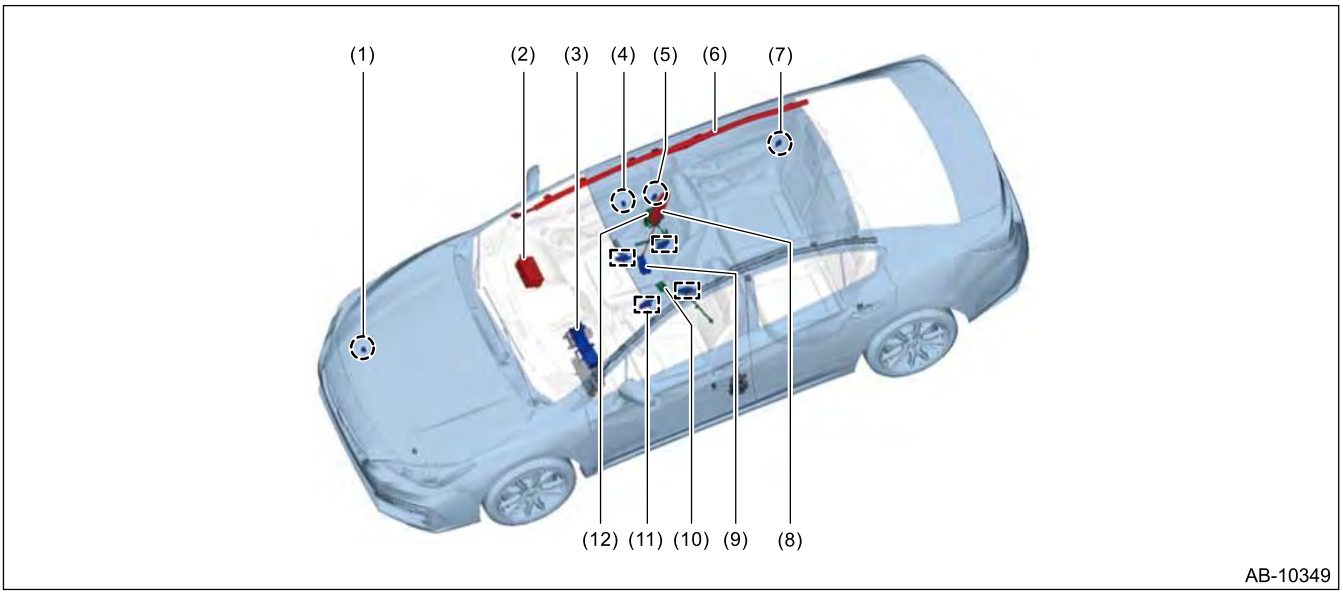


For the diagnostics with phenomenon, refer to “Diagnostics with Phenomenon” of “AIR CONDITIONER (DIAGNOSTICS)”. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostics with Phenomenon.

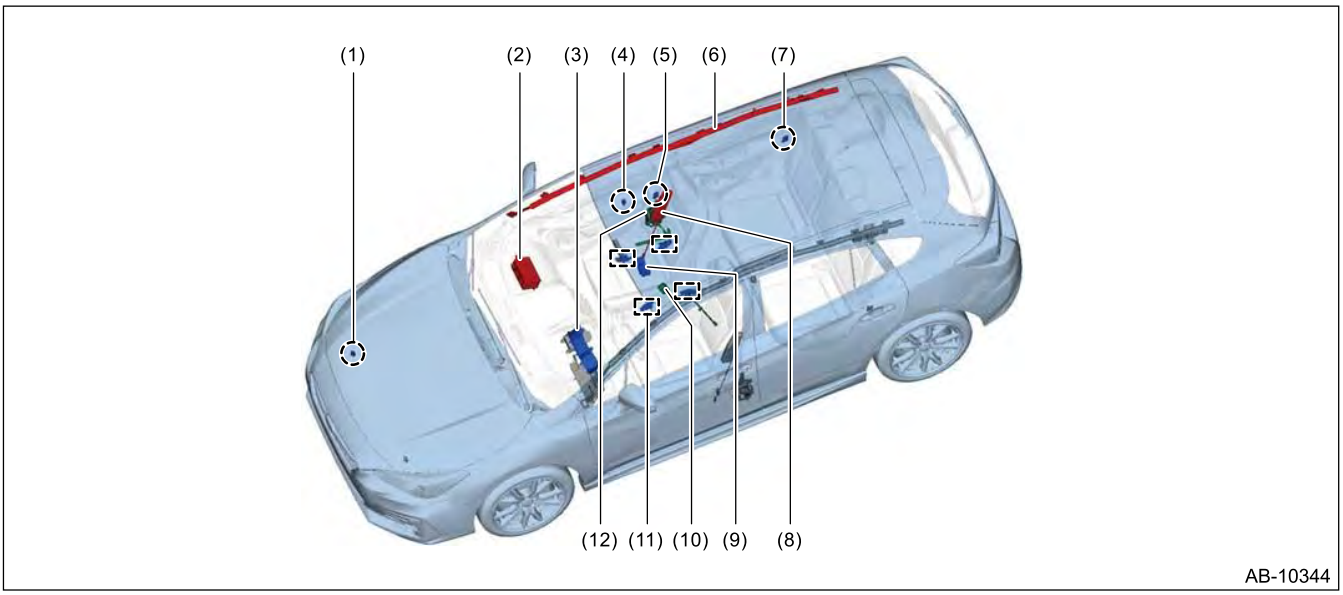


AIRBAG SYSTEM

AB

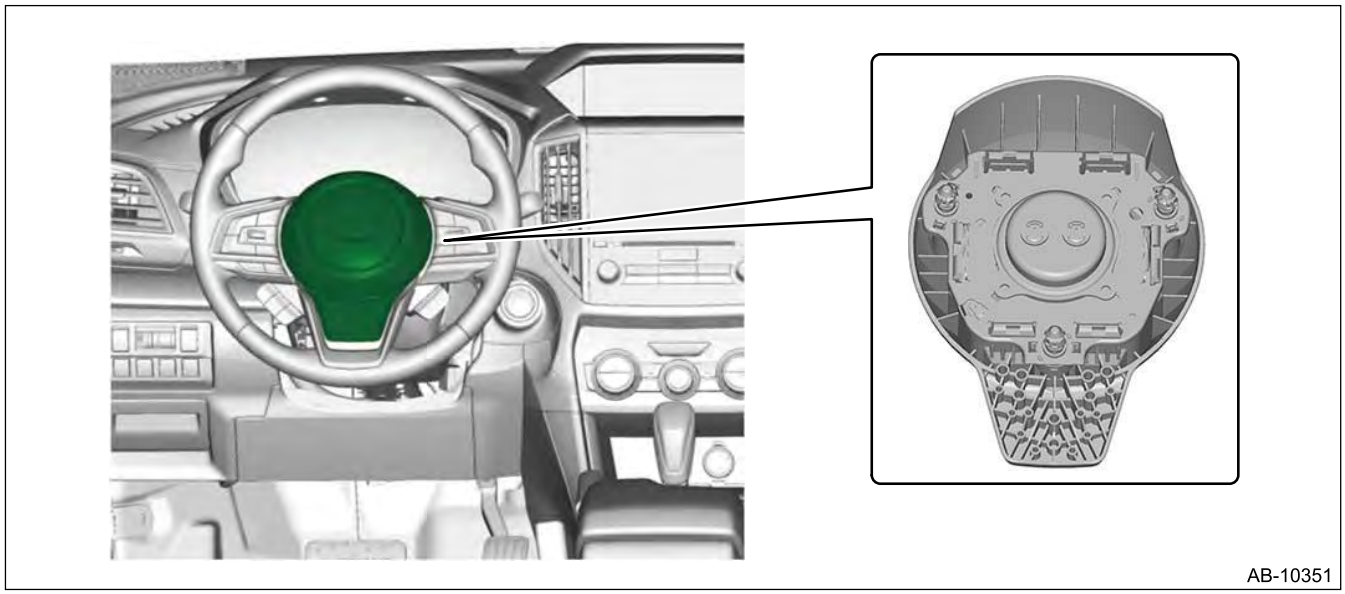


1. General Description
2. Airbag Connector
3. Inspection Locations after a Collision
4. Driver’s Airbag Module
5. Knee Airbag Module
6. Passenger’s Airbag Module
7. Side Airbag Module
8. Curtain Airbag Module
9. Airbag Control Module
10. Front Sub Sensor
11. Front Door Impact Sensor
12. Side Airbag Sensor
13. Curtain Airbag Sensor
14. Satellite Safing Sensor
15. Roll Connector
16. Airbag Module Disposal (Deployment Processing on Vehicle)

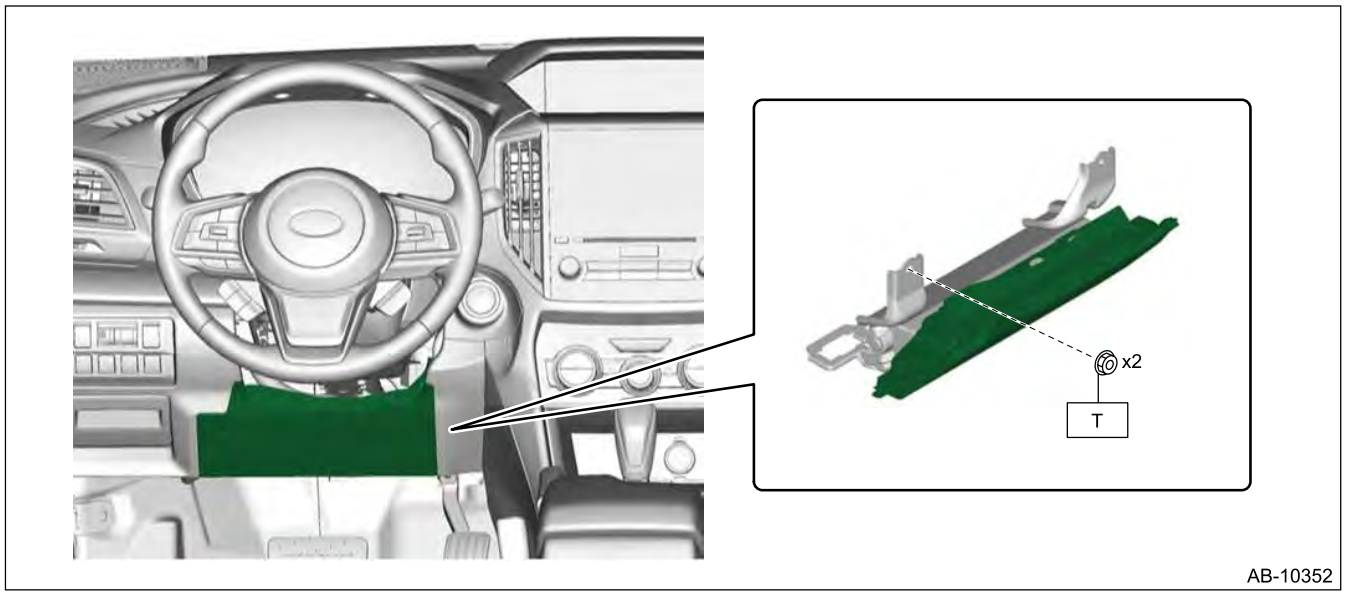


COMPONENT

(1) Front sub sensor LH
(2) Airbag control module
(3) Airbag ON/OFF indicator light (in warning box)
(4) Driver's airbag module
(5) Side airbag module LH
(6) Satellite safing sensor
(7) Curtain airbag module LH
(8) Curtain airbag sensor LH
(9) Side airbag sensor LH
(10) Seat belt pretensioner LH
(11) Front door impact sensor LH
(12) Steering roll connector
(13) Knee airbag module



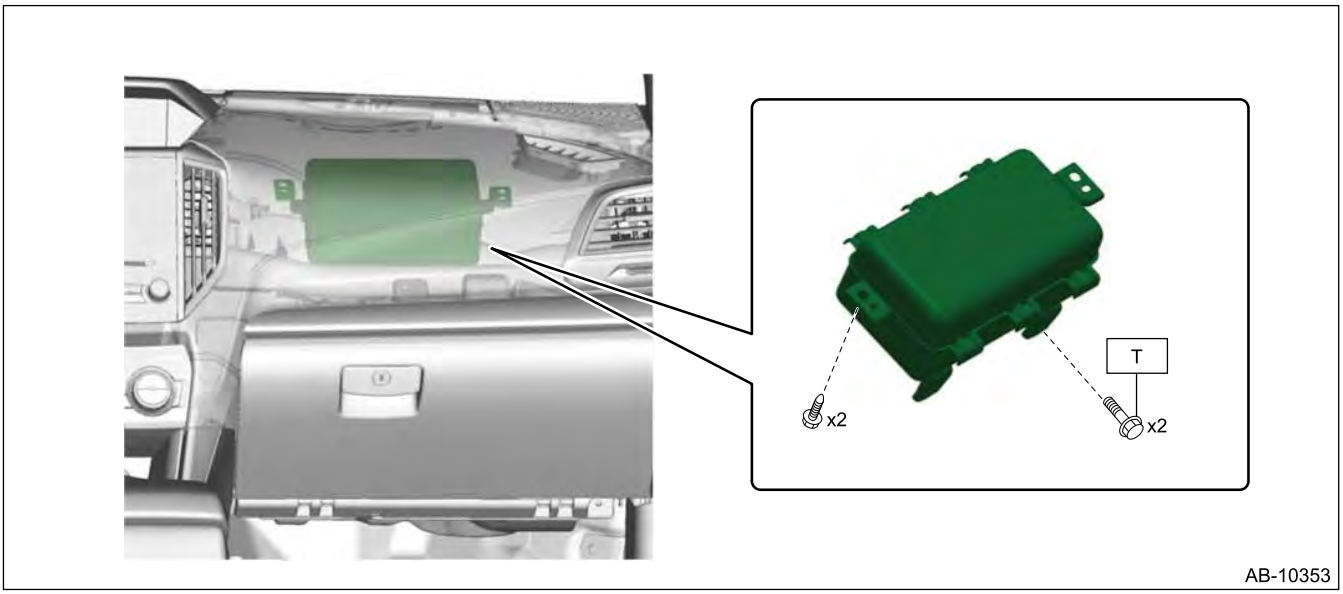
(1) Front sub sensor RH
(2) Passenger's airbag module
(3) Airbag warning light (in combination meter)
(4) Front door impact sensor RH
(5) Side airbag sensor RH
(6) Curtain airbag module RH
(7) Curtain airbag sensor RH
(8) Side airbag module RH
(9) Occupant detection control module
(10) Buckle switch RH
(11) Occupant detection sensor
(12) Seat belt pretensioner RH & lap seat belt pretensioner RH



Note:

For detailed layout drawings on the occupant detection control module and occupant detection sensor, refer to "OCCUPANT DETECTION (DIAGNOSTICS)". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Electrical Component Location>LOCATION.

1. DRIVER'S AIRBAG MODULE

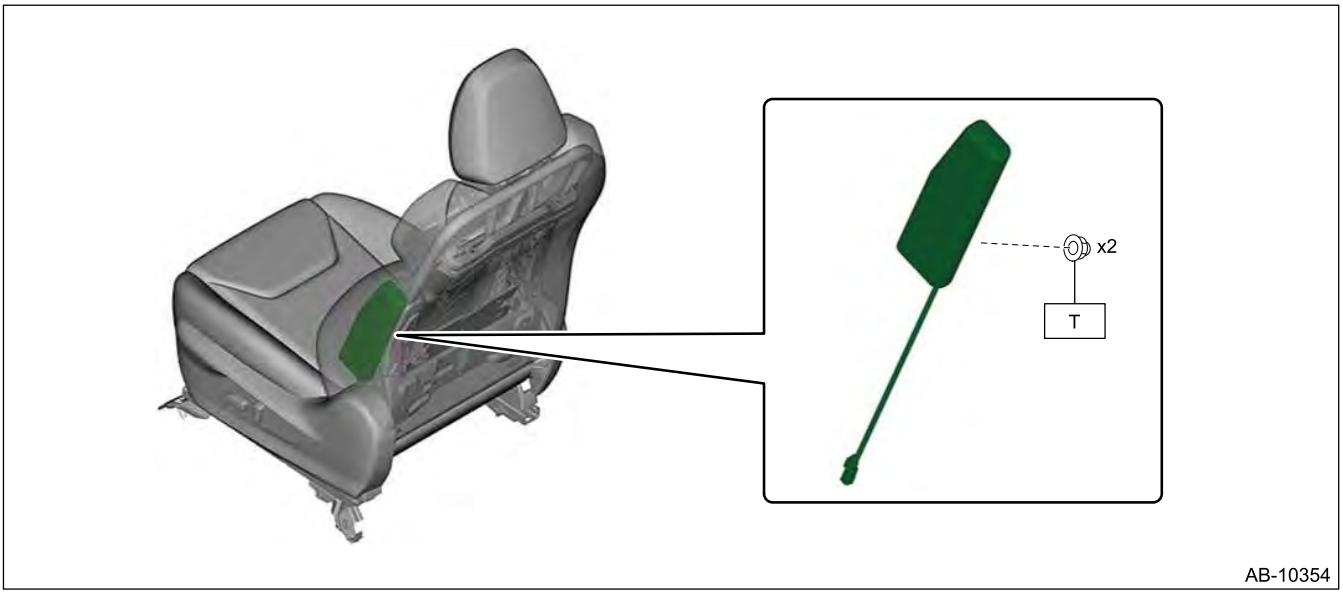


2. KNEE AIRBAG MODULE

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

3. PASSENGER'S AIRBAG MODULE



Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

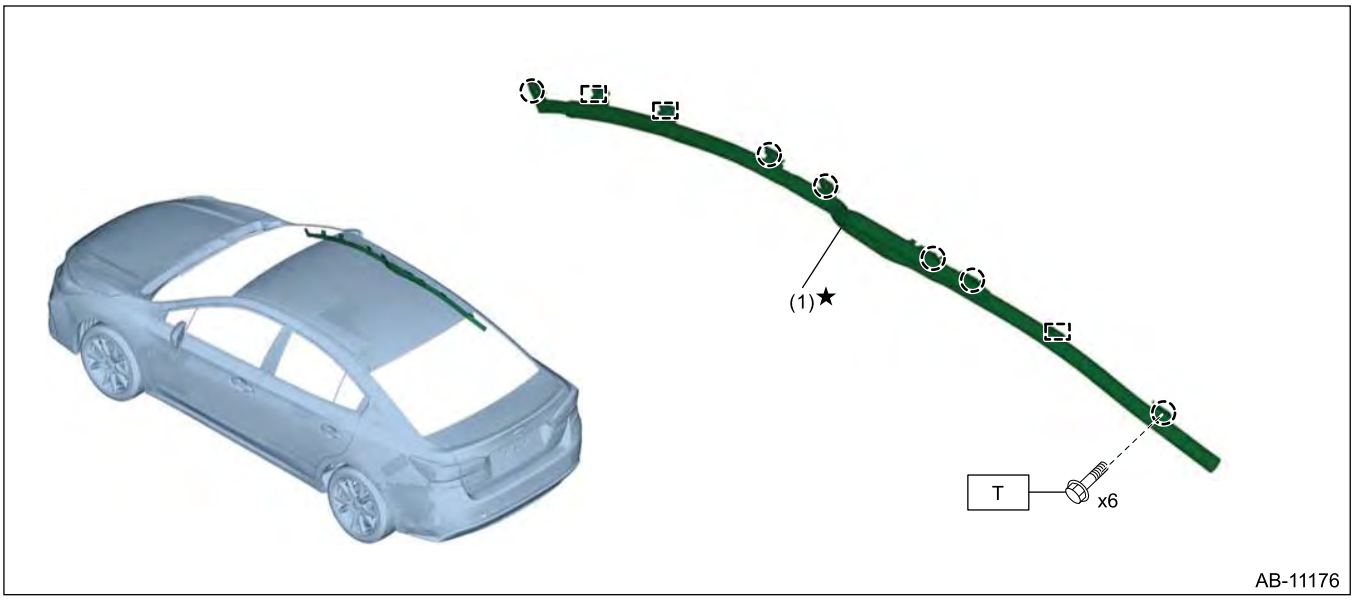
4. SIDE AIRBAG MODULE

Caution:

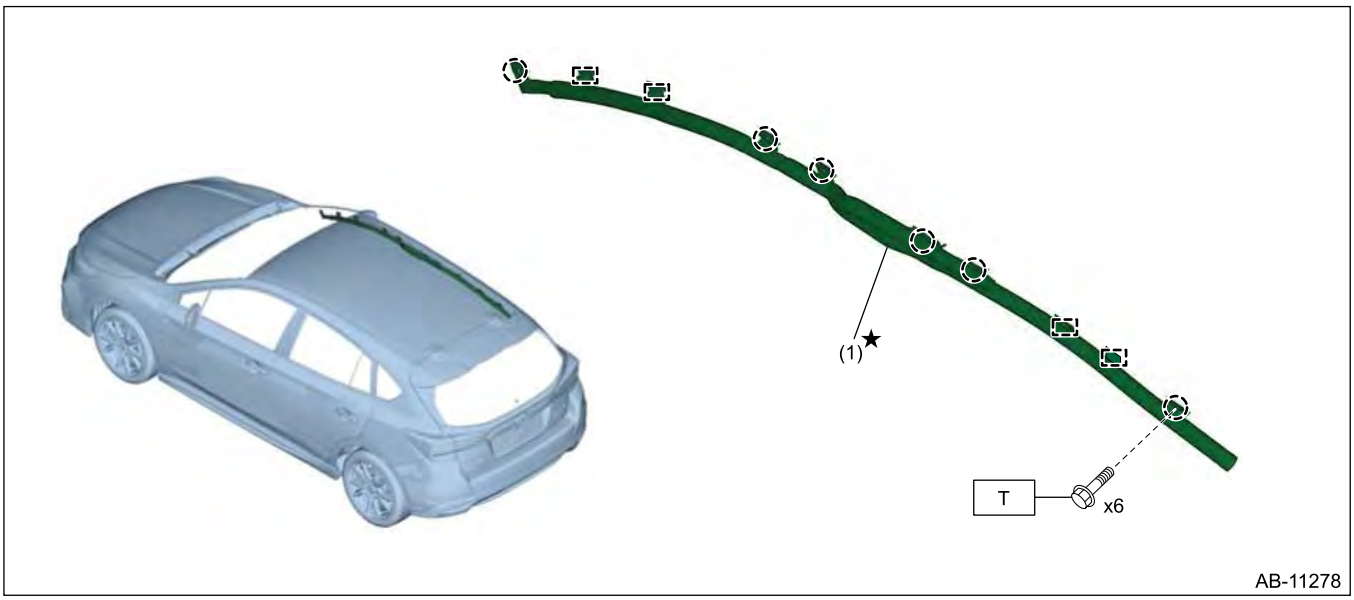
Do not reuse mounting nuts.

Tightening torque: N·m (kgf-m, ft-lb)

T: 6 (0.6, 4.4)



Note:



For operation procedures on side airbag module removal/installation, refer to the "SEATS" section.

5. CURTAIN AIRBAG MODULE

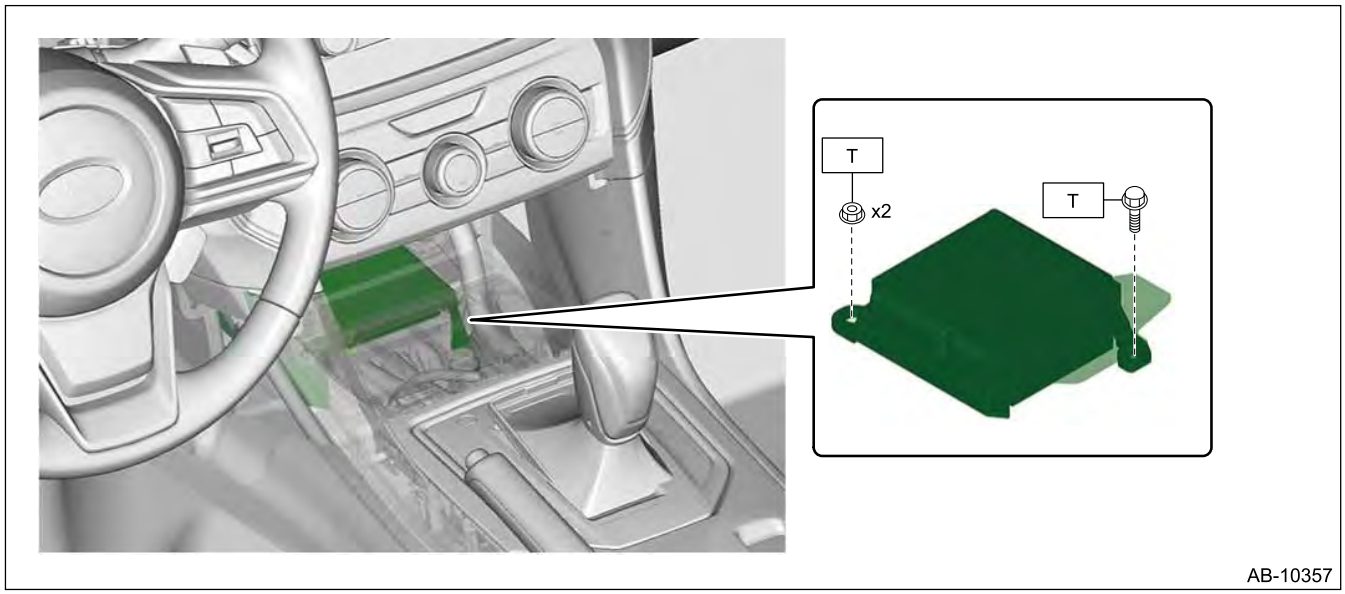
Caution:

The curtain airbag module cannot be reused if removed from the vehicle once, even if it has not operated yet.

(1) Clip

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)



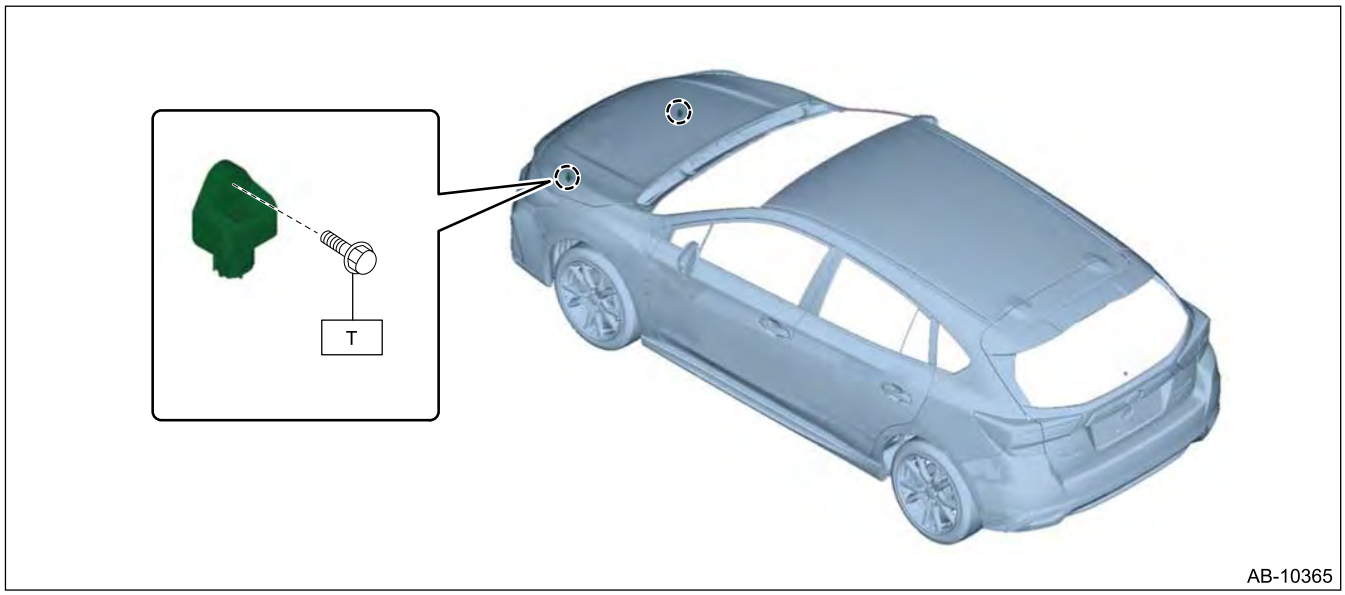
Note:

Mounting bolts can be reused.

6. AIRBAG CONTROL MODULE

Caution:

Do not reuse mounting bolts and nuts.



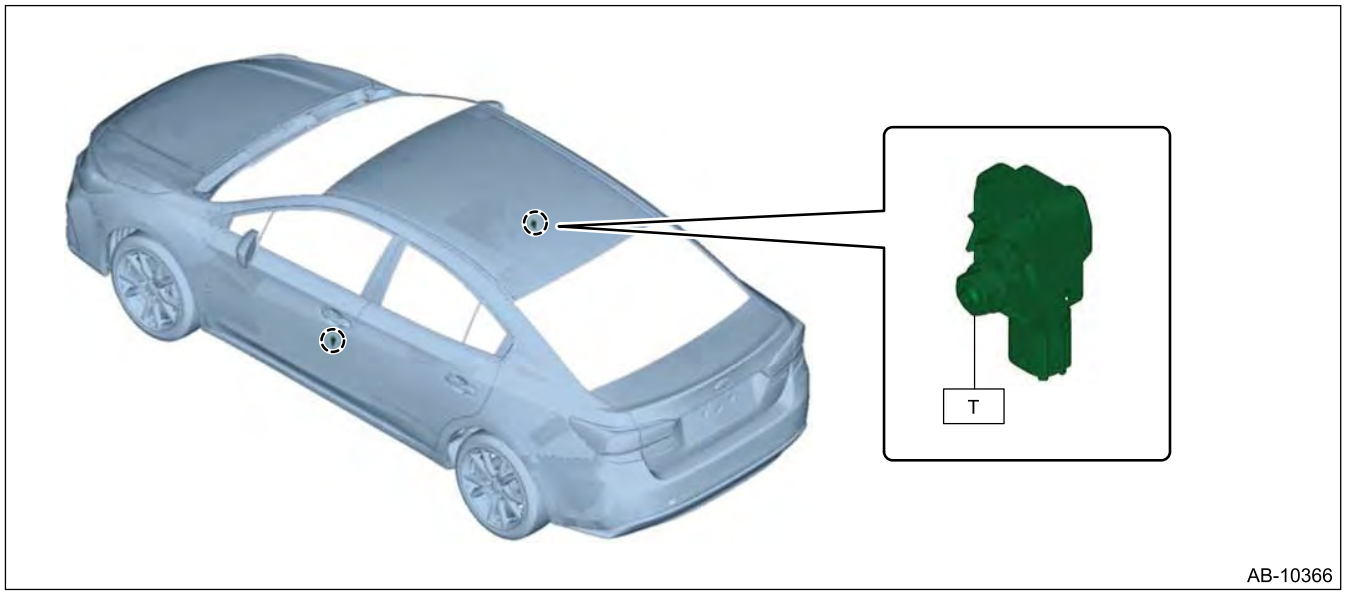
Tightening torque: N·m (kgf-m, ft-lb)

T: 25 (2.5, 18.4)

7. FRONT SUB SENSOR

Caution:

Do not reuse mounting bolts.



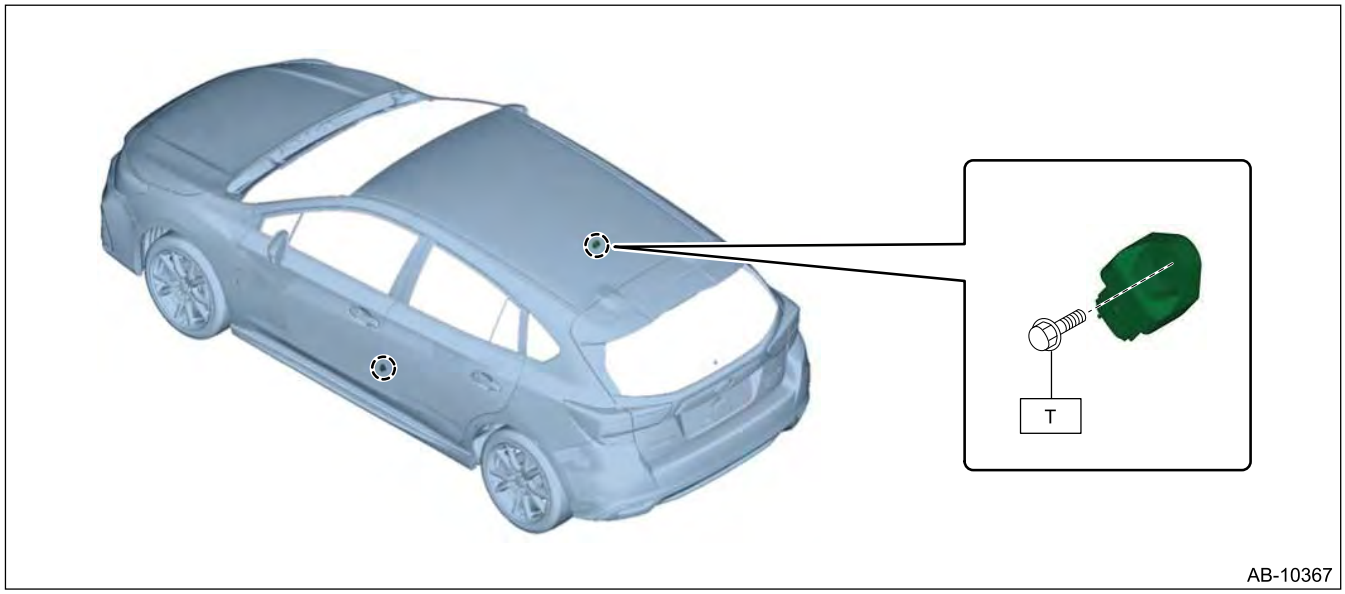
Tightening torque: N·m (kgf-m, ft-lb)

T: 13 (1.3, 9.6)

8. FRONT DOOR IMPACT SENSOR

Caution:

- **The nuts cannot be removed from the front door impact sensor. Do not remove the mounting nuts.**
- **Do not reuse the front door impact sensor if it is once removed.**



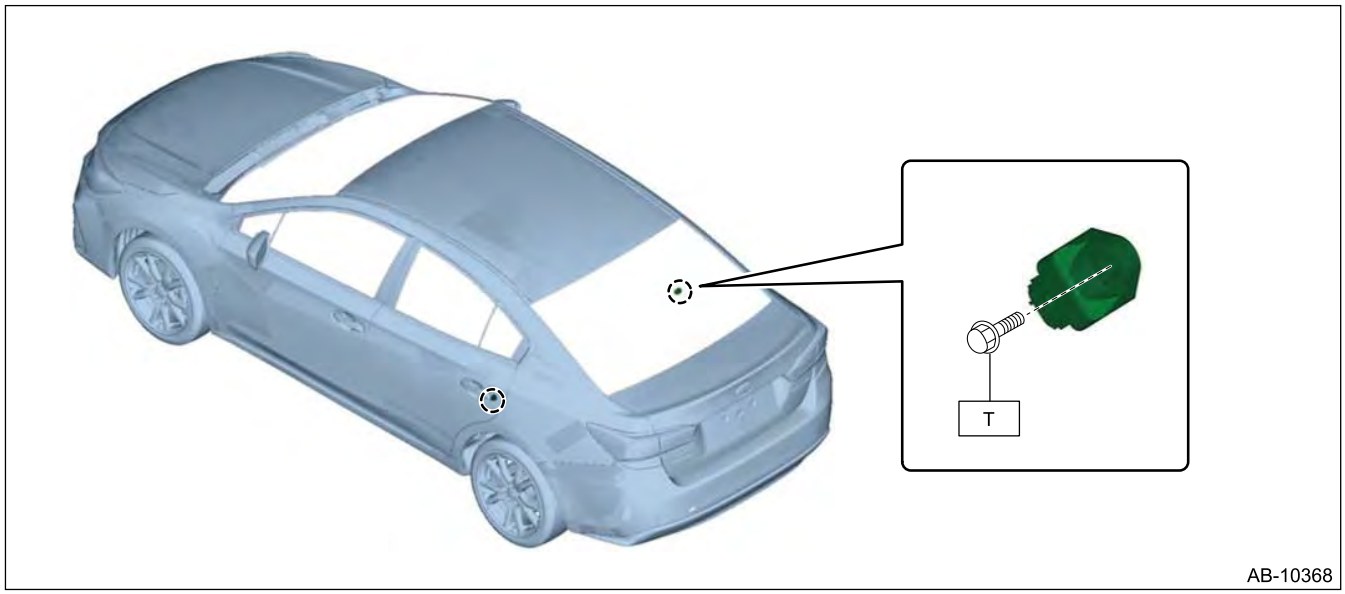
Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

9. SIDE AIRBAG SENSOR

Caution:

Do not reuse mounting bolts and nuts.



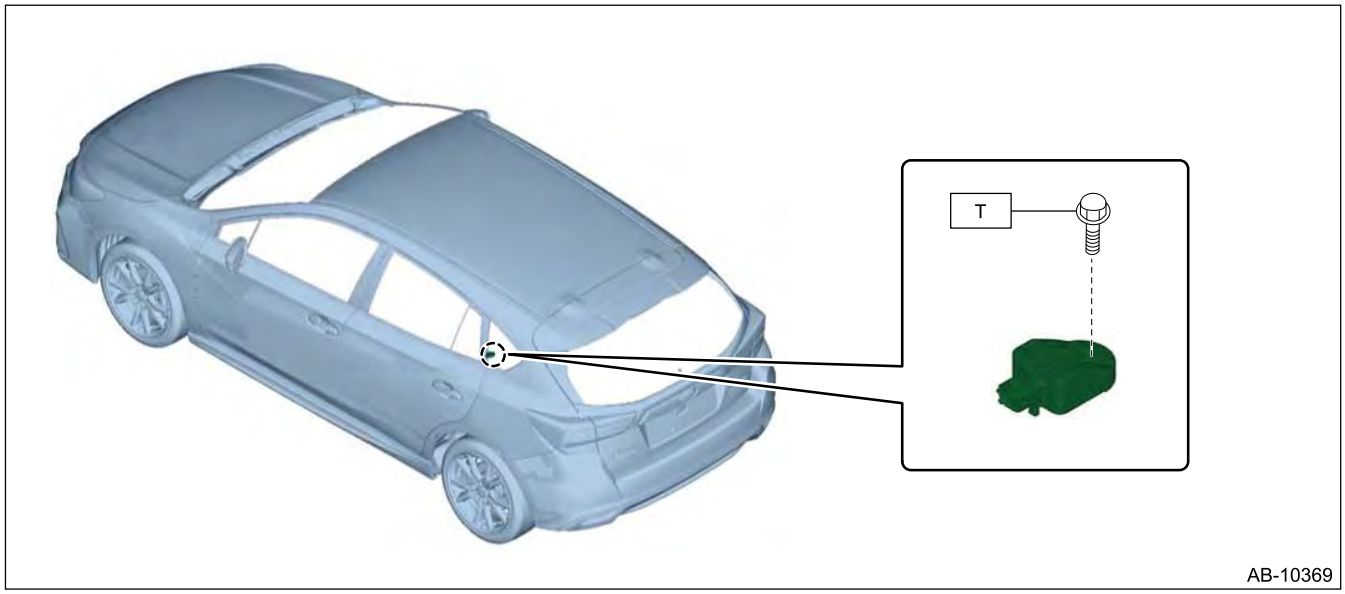
Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

10. CURTAIN AIRBAG SENSOR

Caution:

Do not reuse mounting bolts and nuts.

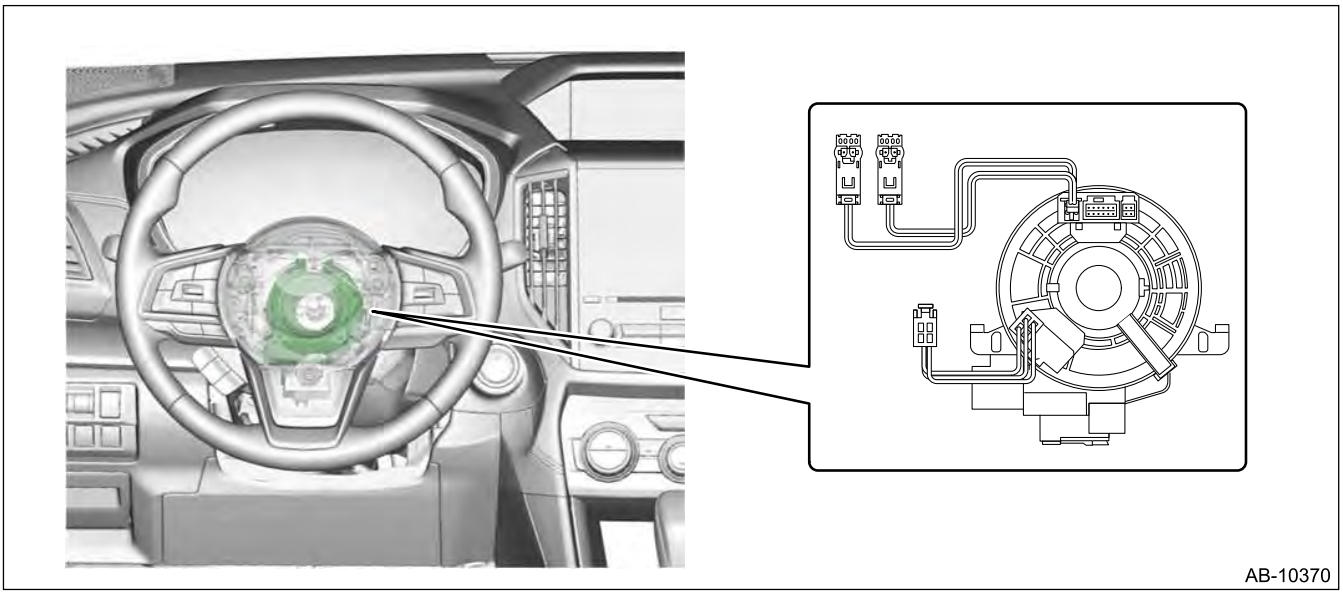


Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

11. SATELLITE SAFING SENSOR

Caution:

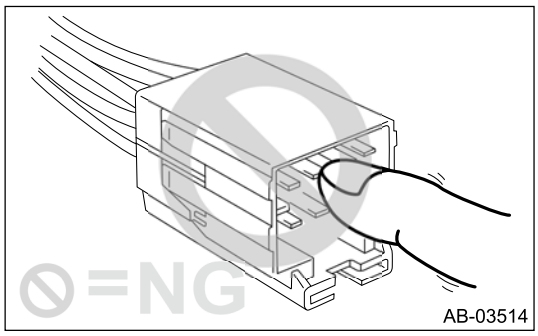


Do not reuse mounting bolts and nuts.

Tightening torque: N·m (kgf-m, ft-lb)

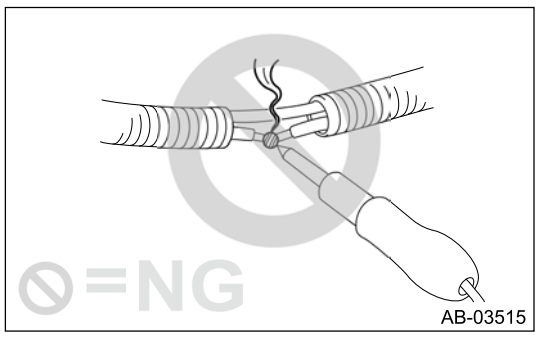
T: 7.5 (0.8, 5.5)

12. STEERING ROLL CONNECTOR



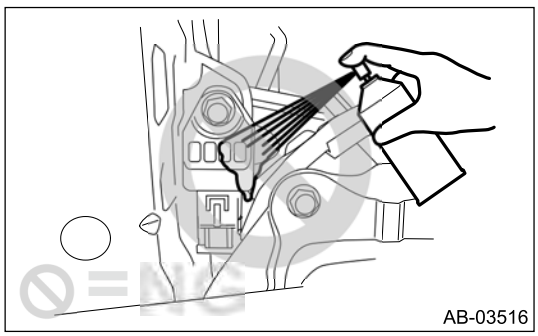
13. SEAT BELT PRETENSIONER

For the seat belt pretensioner, refer to the “SEAT BELT SYSTEM” section. Ref. to SEAT BELT SYSTEM>General Description.



CAUTION

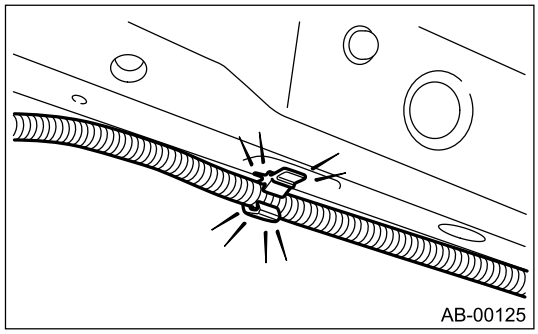
1. BEFORE STARTING ALL WORKS



- Before performing vehicle maintenance, turn the ignition switch to OFF and wait for 60 seconds or more after disconnecting the negative terminal from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
- The airbag system (including pretensioner) is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
- When performing an operation with the airbag system parts including pretensioners exposed, do not apply any impact to airbag modules and sensors.
- If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.

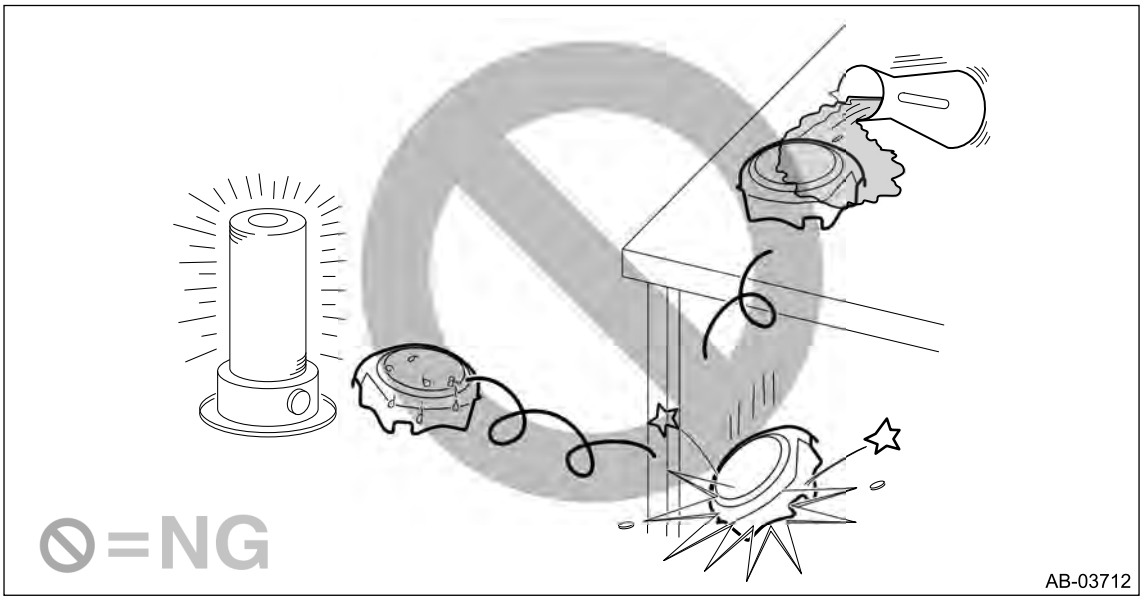
- When painting or performing sheet metal work on the vehicle, remove the following parts. Performing the work without removing the parts may cause secondary malfunction.



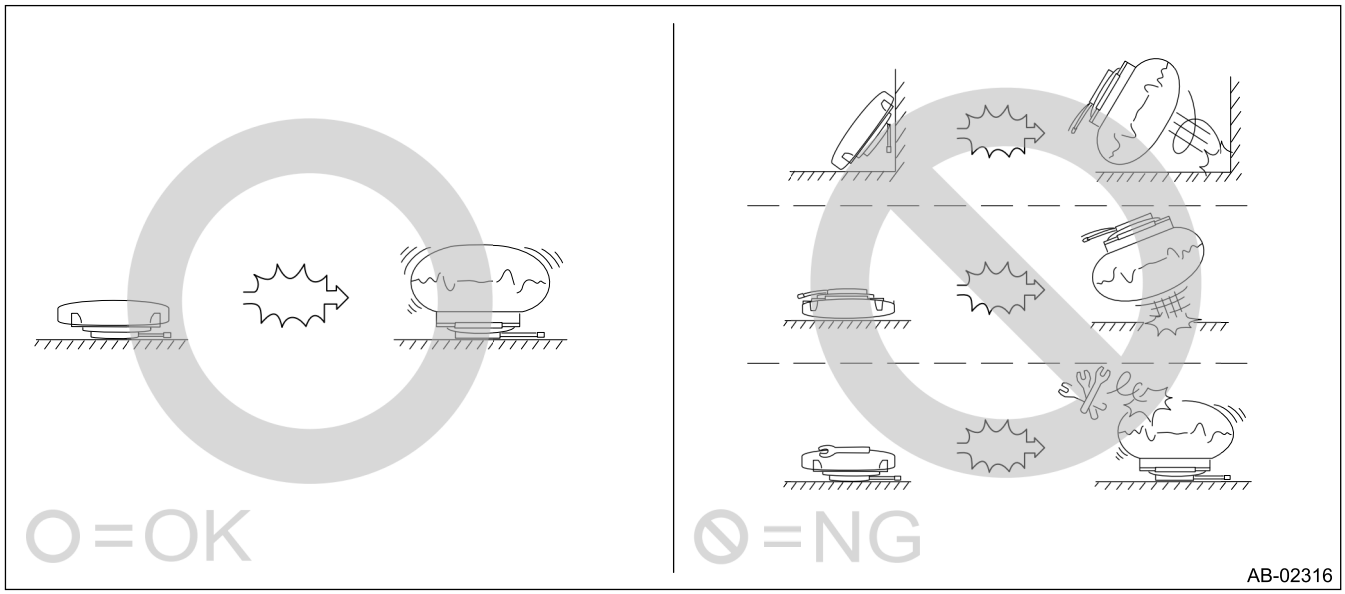
– Front part of the vehicle including the front wheel apron, front fender and radiator panel side
  - Front sub sensor of airbag system

    - Wiring harness
  - Side or its vicinity of the vehicle including the side sill, center pillar and front and rear doors
    - Front door impact sensor
    - Side airbag sensor
    - Curtain airbag sensor
    - Satellite safing sensor
    - Wiring harness
- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

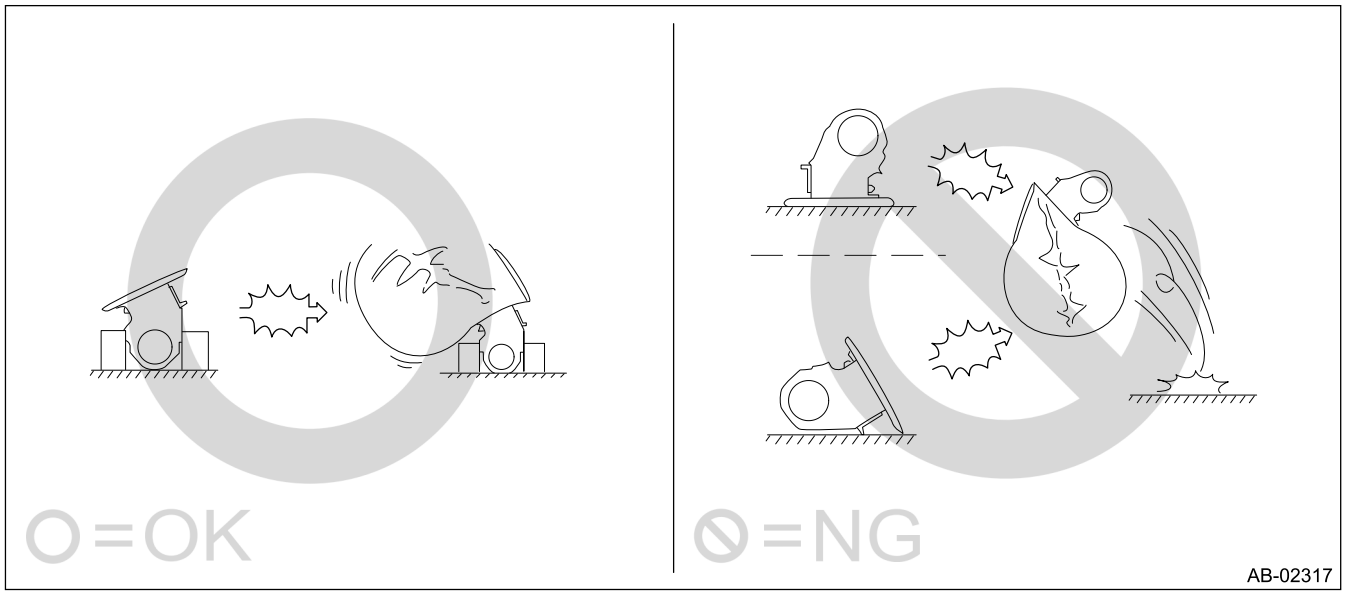
2. BEFORE STARTING PARTS REPLACEMENT



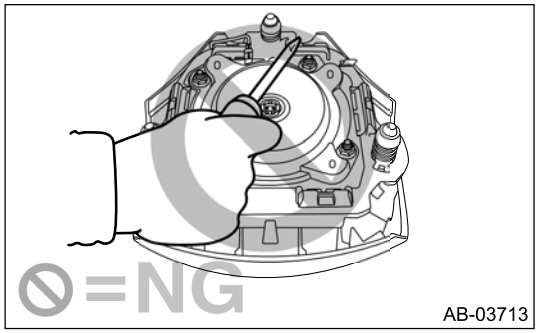
- If the following parts are deformed or damaged, replace with new parts.
  - Airbag sensors
  - Airbag modules and brackets
  - Airbag control module
  - Pretensioners and brackets
  - Harnesses
  - Cover - satellite safing
  - Plate - door UPR
- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.



- Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
- Never reuse any activated airbag module and pretensioner.
- Do not discard undeployed airbag or pretensioner. For the disposal procedures, refer to “Airbag Module Disposal”.
- Do not reuse the bolts and nuts when the following parts are removed. Always replace with the specified new bolts and nuts.
  - Airbag control module
  - Front door impact sensor
  - Front sub sensor
  - Side airbag sensor
  - Curtain airbag sensor
  - Satellite safing sensor
- When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.
- After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.



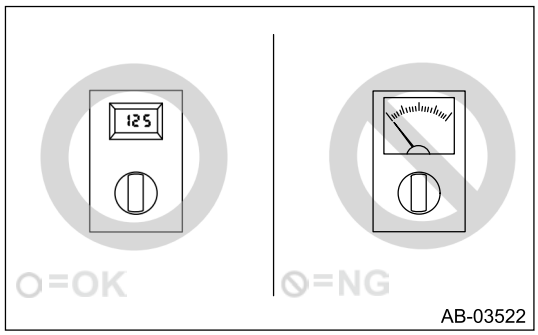
- Observe the following; the airbag system component or the internal parts of seat belt pretensioner may be damaged or the reliability may be greatly lowered.
  - Do not drop or otherwise apply impact.
  - Do not store it under high temperature environment at 85°C (185°F) or more, or do not near it to open flames.
  - Do not allow water, oil or grease to come in contact.



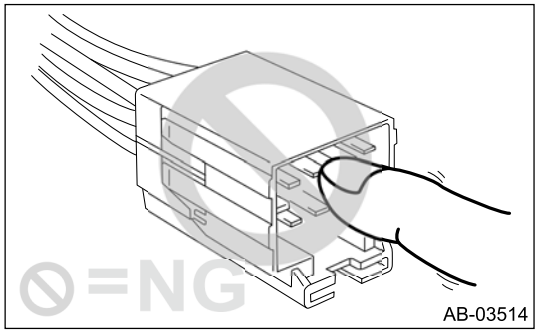
- When storing a removed airbag module, observe the following items. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.
  - Do not place the airbag module with the pad side facing downward.
  - Do not place any objects on the airbag module.
  - Do not pile up the airbag module.
  - Driver’s airbag module

- Passenger’s airbag module and side airbag module

- Do not disassemble the airbag modules and pretensioners.

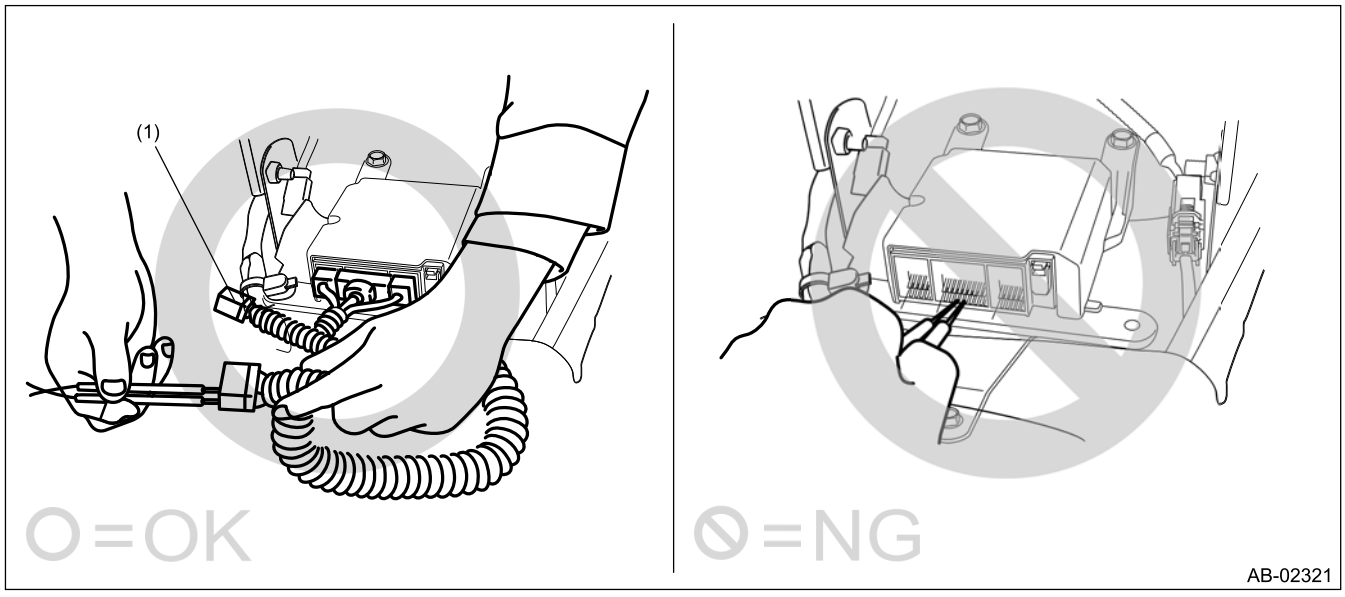


- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

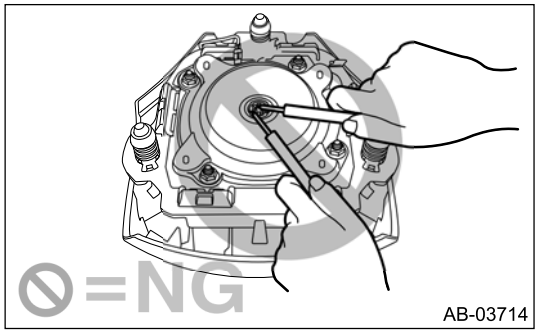


3. BEFORE STARTING TROUBLESHOOTING

- Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.

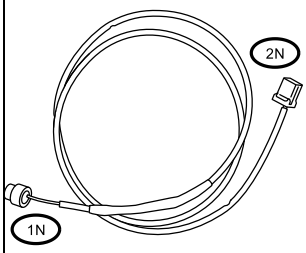


- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

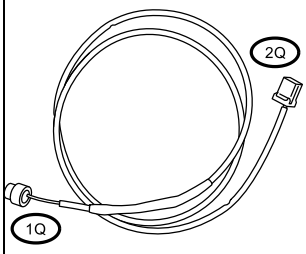


- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.

- When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

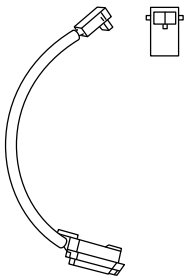


- Do not check the continuity of airbag modules and pretensioners.



PREPARATION TOOL

1. SPECIAL TOOL



- TEST HARNESS N

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA000	98299SA000	TEST HARNESS N	Used for unit inspection of steering roll connector.

- TEST HARNESS Q

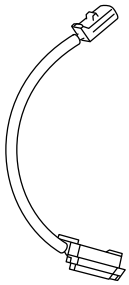


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA040	98299SA040	TEST HARNESS Q	Used for unit inspection of steering roll connector.

- TEST HARNESS ADAPTER D

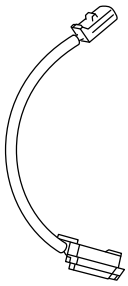

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of knee airbag module. • Used for operation process of curtain airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER AM

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FJ000	98299FJ000	TEST HARNESS ADAPTER AM	• Used for operation process of passenger’s airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER K

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FG010	98299FG010	TEST HARNESS ADAPTER K	• Used for operation process of side airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

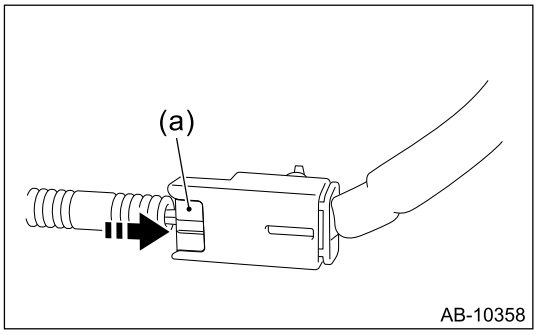
- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of airbag module. • Used together with each test harness adapter.

2. GENERAL TOOL

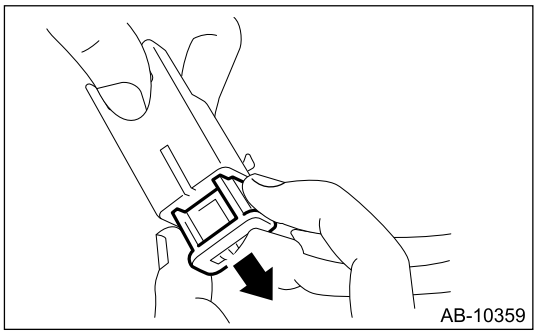
TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.
TORX® T40	Used for removing and installing the beam COMPL - steering.
Circuit tester	Used for measuring resistance, voltage and current.

PROCEDURE



1. POWER SUPPLY

1. How to disconnect:

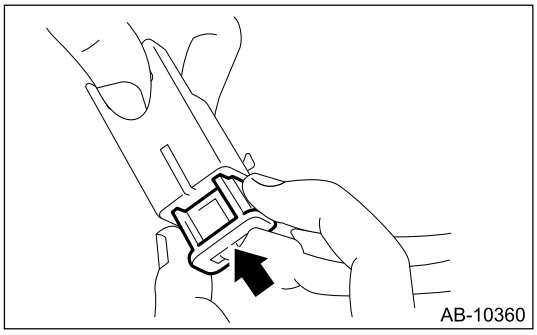


Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the slide lock (a) in the direction of arrow.

(2) With the slide lock pushed, disconnect the connector.

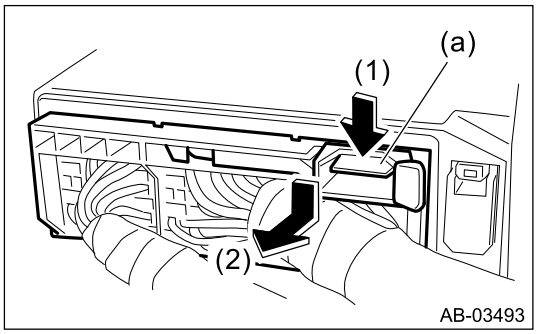


2. How to connect:

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

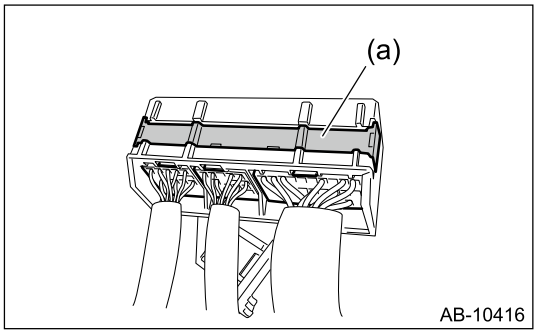
Holding the connector, push it in securely until a clicking sound is heard.



2. AIRBAG CONTROL MODULE

1. How to disconnect:

(1) Push the lock lever plate (a).



(2) While holding down the lock lever plate (a), pull the lever toward you.

2. How to separate:

(1) Remove the lock plate (a) behind the integrated connector.

(2) Release the lock levers of the connectors, and pull out the connectors.

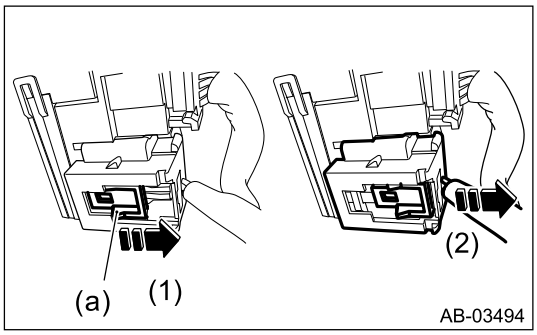
3. How to connect:

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Insert the connector and push the lock lever in securely.

3. DRIVER'S AIRBAG MODULE (ROLL CONNECTOR)



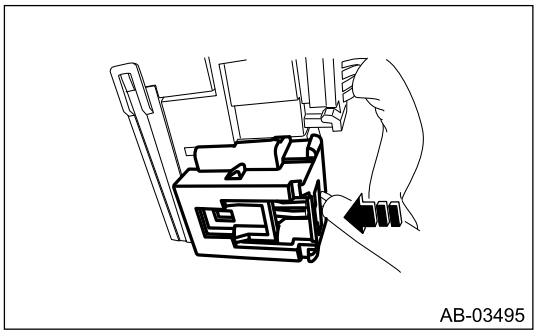
1. How to disconnect:

Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.

(2) With the slide lock pulled, disconnect the connector.



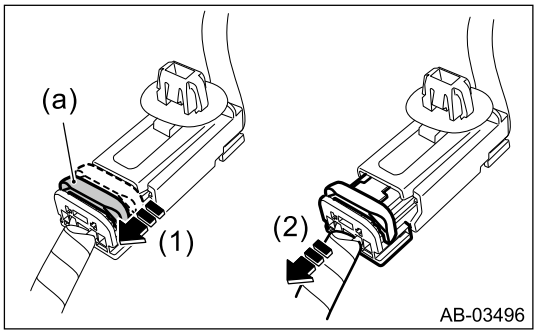
2. How to connect:

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

4. PASSENGER'S AIRBAG MODULE AND PRETENSIONER



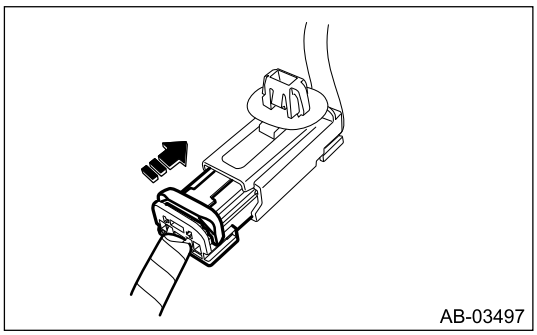
1. How to disconnect:

Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.

(2) With the slide lock pulled, disconnect the connector.

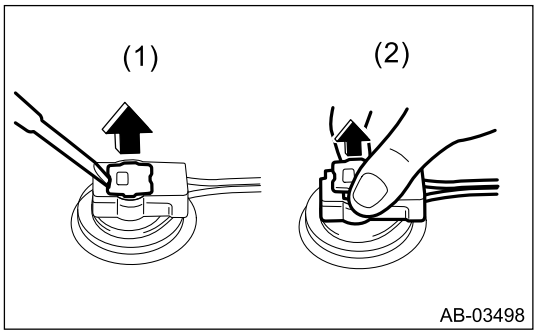


2. How to connect:

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

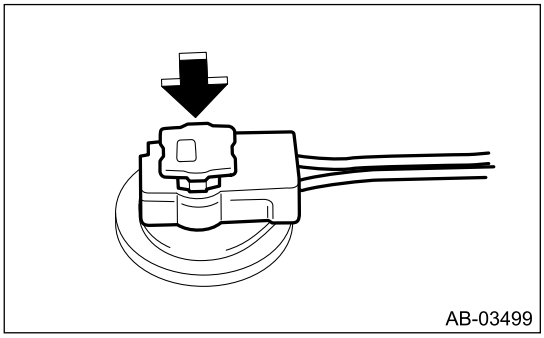
Holding the connector, push it in securely until a clicking sound is heard.



5. DRIVER'S AIRBAG MODULE AND CURTAIN AIRBAG MODULE

1. How to disconnect:

(1) Using a flat tip screwdriver, pry the push lock upward to unlock.



(2) Pull the connector to disconnect from the airbag module assembly or the retractor assembly.

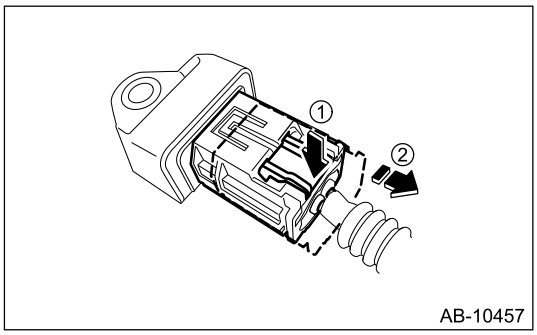
2. How to connect:

Caution:

- **Be sure to insert the connector in until it is locked.**
- **Press in the push lock securely. Then pull it gently to make sure that it is locked.**

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

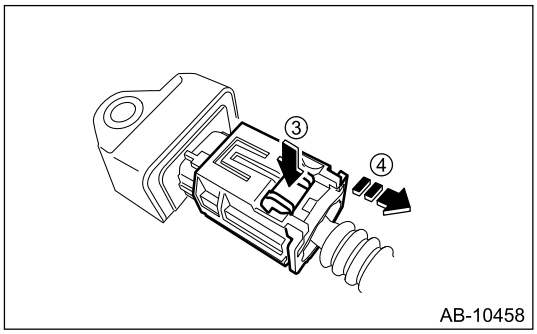
6. FRONT SUB SENSOR AND SATELLITE SAFING SENSOR



1. How to disconnect:

Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

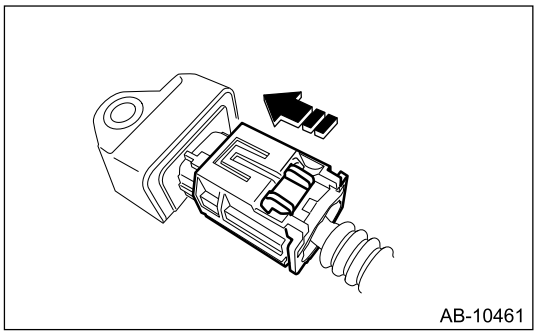


(1) Push the lock arm.

(2) Holding outer part, pull it one step in the direction of arrow.

(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

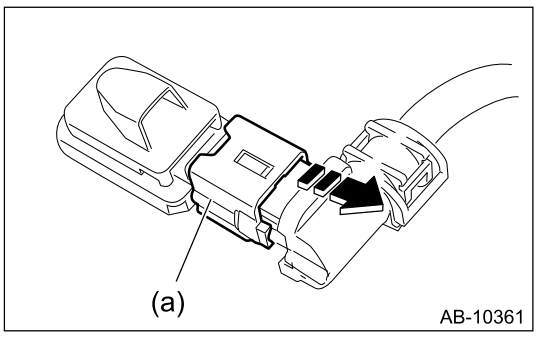


2. How to connect:

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.



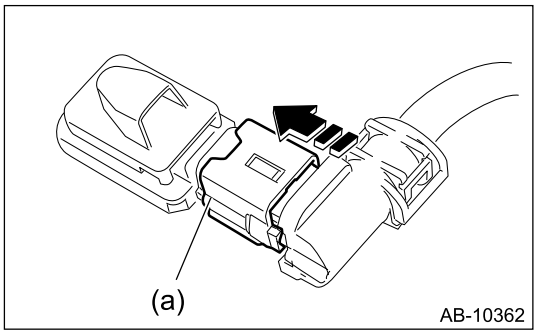
7. FRONT DOOR IMPACT SENSOR

1. How to disconnect:

Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

Holding outer part (a), pull it in the direction of arrow.



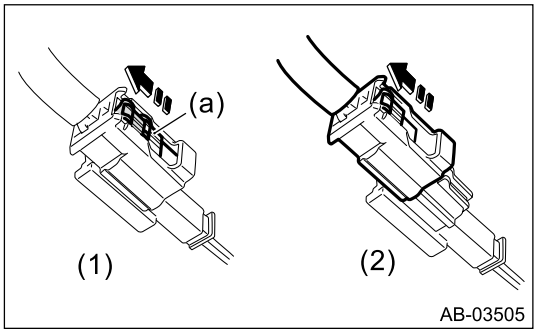
2. How to connect:

Caution:

- **The outer part (a) returns to the original position. Therefore do not touch the outer part.**
- **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

8. FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND DOOR HARNESS)



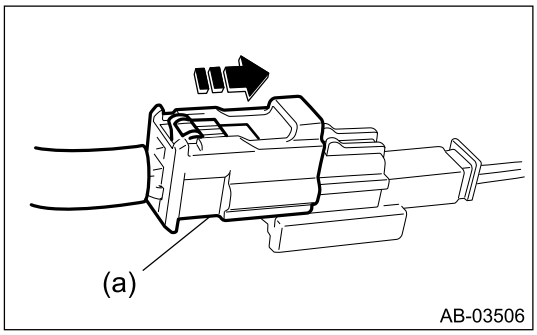
1. How to disconnect:

Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.

(2) With the slide lock pulled, disconnect the connector.

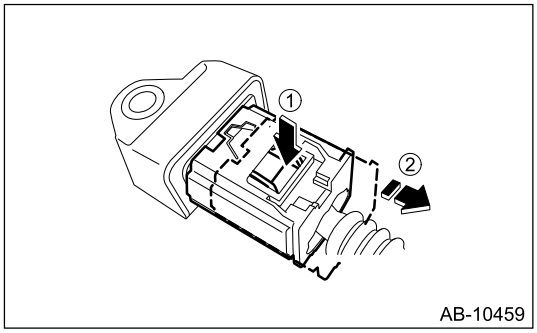


2. How to connect:

Caution:

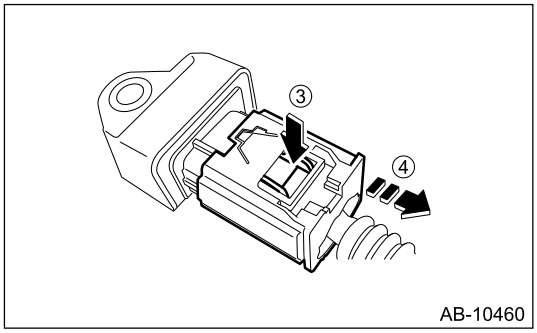
- **The outer part (a) returns to the original position. Therefore do not touch the outer part.**
- **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.



9. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

1. How to disconnect:

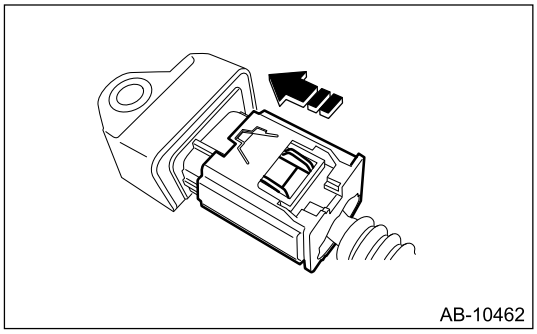


Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock arm.
(2) Holding outer part, pull it one step in the direction of arrow.

(3) Push the lock arm again.
(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

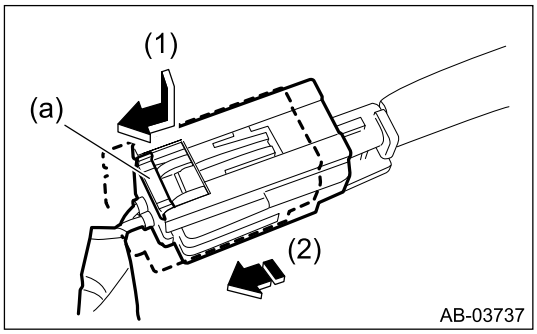


2. How to connect:

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

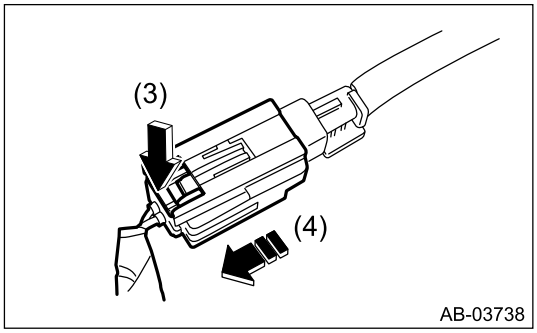
Holding the connector, push it in securely until a clicking sound is heard.



10. SIDE AIRBAG MODULE

1. How to disconnect:

Caution:



When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the lock arm (a) one step while pushing.
(2) Holding outer part, pull it one step in the direction of arrow.

(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.

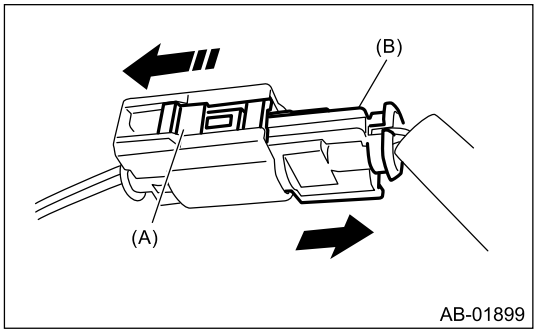
2. How to connect:

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.

11. BUCKLE SWITCH RH



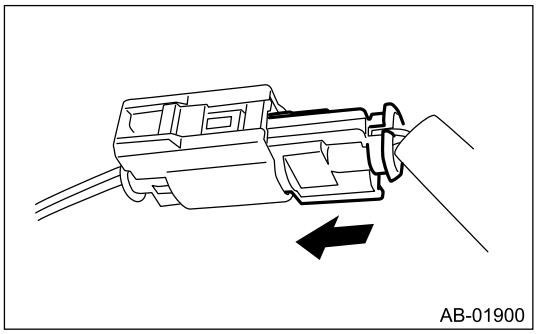
1. How to disconnect:

Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Move the slide lock (A) in the direction of arrow and hold it.

(2) While holding the slide lock (A), pull the connector (B) in the direction of arrow.

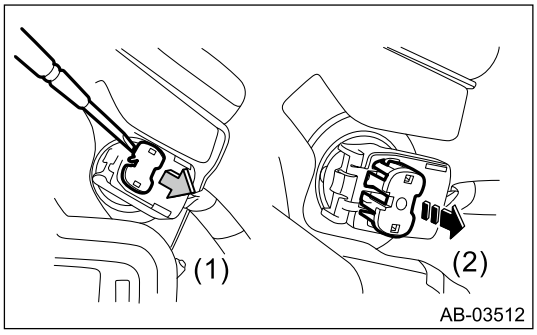


2. How to connect:

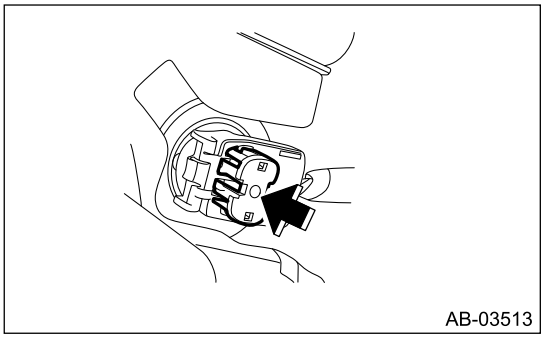
Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

Holding the connector, push it in securely until a clicking sound is heard.



12. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)



Refer to "OCCUPANT DETECTION SYSTEM" section. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Airbag Connector>PROCEDURE > OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS).

13. KNEE AIRBAG MODULE AND PASSENGER'S LAP SEAT BELT PRETENSIONER

1. How to disconnect:
   (1) Using a flat tip screwdriver, pry the push lock upward to unlock.
   (2) Pull the connector to disconnect from the airbag module assembly.

2. How to connect:
   Caution:
   - **Be sure to insert the connector in until it is locked.**
   - **Press in the push lock securely. Then pull it gently to make sure that it is locked.**

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

1. DRIVER'S AIRBAG MODULE ASSEMBLY

1. Frontal collision (driver's airbag module assembly activated)
   1. Replace the following parts with new ones.
      - Airbag control module
      - Driver's airbag module
      - Knee airbag module
      - Passenger's airbag module (if deployed)
      - Curtain airbag module (right and left / if deployed)
      - Seat belt pretensioner (right and left)
      - Lap seat belt pretensioner (passenger's side only)
      - Locking tongue (front seat only) (right and left)
      - Front sub sensor (right and left)
      - Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
      - Steering wheel
      - Column assembly - steering
      - Roll connector
      - Trim panel - roof assembly (if the curtain airbag is deployed)
      - Trim panel of each pillar (if the curtain airbag is deployed)
   2. Visually inspect the following items and replace any damaged part with a new one.
      - Universal joint assembly - steering
      - Steering gearbox
      - Beam COMPL - steering
      - Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
      - Harnesses and connectors on body side that are linked to the replaced parts
2. Frontal collision (driver's airbag module not activated)
   Visually inspect the following items and replace any damaged or cracked part with a new one.
   Specially inspect the damage of airbag module body, mounting bracket and harness connector.
   - Driver's airbag module
   - Knee airbag module
   - Passenger's airbag module
   - Seat belt pretensioner (right and left)
   - Lap seat belt pretensioner (passenger's side only)
   - Locking tongue (front seat only) (right and left)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module)
   - Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
3. No frontal collision
   - Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.

- Passenger’s seat occupant detection system (Perform the inspection following the diagnostic procedure in the “OCCUPANT DETECTION (DIAGNOSTICS)” section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

2. KNEE AIRBAG MODULE

1. Frontal collision (knee airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver’s airbag module
   - Knee airbag module
   - Passenger’s airbag module (if deployed)
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Lap seat belt pretensioner (passenger’s side only)
   - Locking tongue (front seat only) (right and left)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger’s airbag module) (if passenger’s airbag module is deployed)
   - Steering wheel
   - Column assembly - steering
   - Roll connector
   - Trim panel - roof assembly (if the curtain airbag is deployed)
   - Trim panel of each pillar (if the curtain airbag is deployed)
2. Visually inspect the following items and replace any damaged part with a new one.
   - Universal joint assembly - steering
   - Steering gearbox
   - Beam COMPL - steering
   - Passenger’s seat occupant detection system (Perform the inspection following the diagnostic procedure in the “OCCUPANT DETECTION (DIAGNOSTICS)” section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
   - Harnesses and connectors on body side that are linked to the replaced parts

2. Frontal collision (knee airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver’s airbag module
- Knee airbag module
- Passenger’s airbag module
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger’s side only)
- Locking tongue (front seat only) (right and left)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger’s airbag module)
- Passenger’s seat occupant detection system (Perform the inspection following the diagnostic procedure in the “OCCUPANT DETECTION (DIAGNOSTICS)” section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

3. No frontal collision

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger’s seat occupant detection system (Perform the inspection following the diagnostic procedure in the “OCCUPANT DETECTION (DIAGNOSTICS)” section.) Ref. to OCCUPANT

DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

3. PASSENGER'S AIRBAG MODULE

1. Frontal collision (passenger's airbag module activated)
   1. Replace the following parts with new ones.
      - Airbag control module
      - Driver's airbag module
      - Knee airbag module
      - Passenger's airbag module
      - Curtain airbag module (right and left / if deployed)
      - Seat belt pretensioner (right and left)
      - Lap seat belt pretensioner (passenger's side only)
      - Locking tongue (front seat only) (right and left)
      - Front sub sensor (right and left)
      - Instrument panel assembly (because it is integrated with passenger's airbag module)
      - Steering wheel
      - Column assembly - steering
      - Roll connector
      - Trim panel - roof assembly (if the curtain airbag is deployed)
      - Trim panel of each pillar (if the curtain airbag is deployed)
   2. Visually inspect the following items and replace any damaged part with a new one.
      - Universal joint assembly - steering
      - Steering gearbox
      - Beam COMPL - steering
      - Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
      - Harnesses and connectors on body side that are linked to the replaced parts
2. Frontal collision (passenger's airbag module not activated)
   Visually inspect the following items and replace any damaged or cracked part with a new one.
   Specially inspect the damage of airbag module body, mounting bracket and harness connector.
   - Driver's airbag module
   - Knee airbag module
   - Passenger's airbag module
   - Seat belt pretensioner (right and left)
   - Lap seat belt pretensioner (passenger's side only)
   - Locking tongue (front seat only) (right and left)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module)
   - Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
3. No frontal collision
   - Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
   - Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

4. SIDE AIRBAG MODULE

1. Side impact (side airbag module activated)
   1. Replace the following parts with new ones.
      - Airbag control module
      - Satellite safing sensor
      - Cover - satellite safing
      - Front door impact sensor (collision side)
      - Plate - door UPR (collision side)
      - Seat belt pretensioner (collision side / if deployed)
      - Lap seat belt pretensioner (if deployed)
      - Locking tongue (front seat only) (if deployed)
      - Side airbag module (collision side)
      - Side airbag sensor (collision side)
      - Curtain airbag module (collision side)
      - Curtain airbag sensor (collision side)
      - Pad assembly - front seat backrest (collision side)
      - Frame assembly - front seat cushion (collision side)
      - Frame assembly - front backrest (collision side)
      - Cover COMPL - front backrest (collision side)
      - Trim panel - roof assembly
      - Trim panel for each pillar (collision side)
   2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
      - Headrest assembly
      - Bushing - lock headrest
      - Slide rail assembly - OUT
      - Slide rail assembly - INN
      - Cover - hinge front seat (OUT/INN)
      - Knob - lifter
      - Lever - reclining
      - Seat belt pretensioner (if not deployed)
      - Lap seat belt pretensioner (if not deployed)
      - Locking tongue (if not deployed)
      - Passenger’s seat occupant detection system (Perform the inspection following the diagnostic procedure in the “OCCUPANT DETECTION (DIAGNOSTICS)” section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
      - Harnesses and connectors on body side that are linked to the replaced parts
2. Side impact (side airbag module not activated)

   Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one.

   Specially inspect the damage of airbag module body, mounting bracket and harness connector.
   - Pad assembly - front seat backrest
   - Frame assembly - front backrest
   - Cover COMPL - front backrest
   - Satellite safing sensor
   - Cover - satellite safing
   - Front door impact sensor
   - Plate - door UPR
   - Side airbag module
   - Side airbag sensor
   - Curtain airbag module

- Curtain airbag sensor
- Seat belt pretensioner (if not deployed)
- Lap seat belt pretensioner (if not deployed)
- Locking tongue (if not deployed)
- Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

3. No side impact

- Visually inspect the airbag modules for contamination and replace any faulty part with a new one.
- Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

5. CURTAIN AIRBAG MODULE

1. Side impact or roll over (curtain airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Satellite safing sensor
   - Cover - satellite safing
   - Side airbag module (collision side)
   - Curtain airbag module (collision side)
   - Seat belt pretensioner (collision side / if deployed)
   - Lap seat belt pretensioner (if deployed)
   - Locking tongue (front seat only) (if deployed)
   - Front door impact sensor (collision side)
   - Plate - door UPR (collision side)
   - Side airbag sensor (collision side)
   - Curtain airbag sensor (collision side)
   - Pad assembly - front seat backrest (collision side)
   - Frame assembly - front seat cushion (collision side)
   - Frame assembly - front backrest (collision side)
   - Cover COMPL - front backrest (collision side)
   - Trim panel - roof assembly
   - Trim panel for each pillar (collision side)
   - Airbag bracket (model with sunroof) (collision side)
2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
   - Assist rail - front and rear
   - Bracket - assist rail front and rear
   - Passenger's seat occupant detection system (Perform the inspection following the diagnostic procedure in the "OCCUPANT DETECTION (DIAGNOSTICS)" section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
   - Harnesses and connectors on body side that are linked to the replaced parts

2. Side impact (curtain airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one.

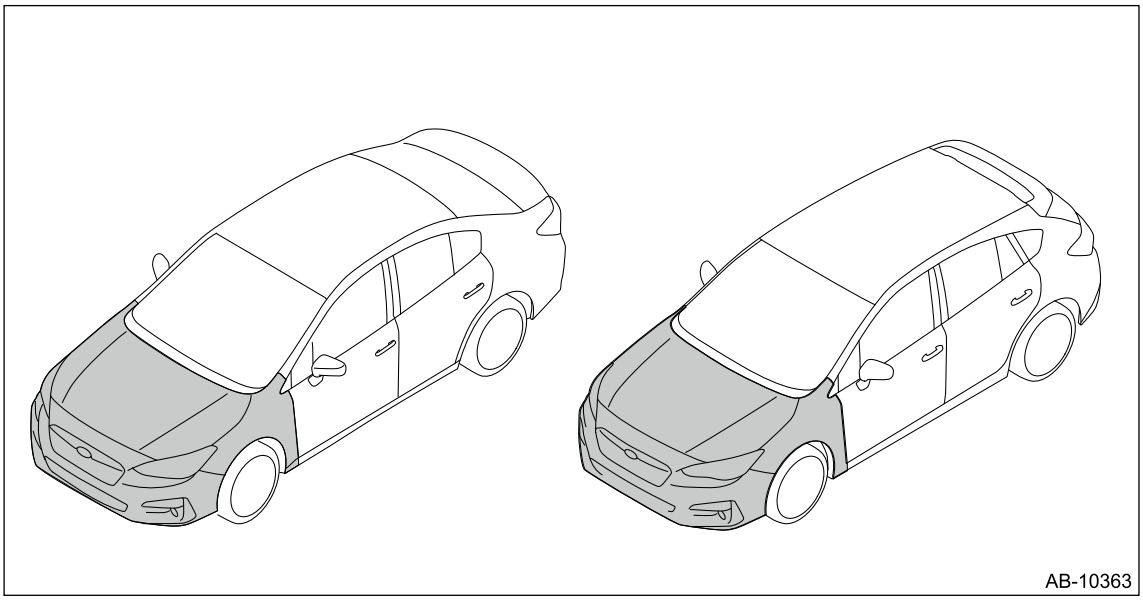
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Trim panel - roof assembly
- Trim panel for each pillar
- Curtain airbag module

- Satellite safing sensor
- Cover - satellite safing
- Front door impact sensor
- Plate - door UPR
- Side airbag sensor
- Curtain airbag sensor
- Seat belt pretensioner (if not deployed)
- Lap seat belt pretensioner (if not deployed)
- Locking tongue (if not deployed)
- Passenger’s seat occupant detection system (Perform the inspection following the diagnostic procedure in the “OCCUPANT DETECTION (DIAGNOSTICS)” section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

3. No side impact

- Visually inspect the airbag covers for damage or contamination and replace any faulty part with a new one.
- Passenger’s seat occupant detection system (Perform the inspection following the diagnostic procedure in the “OCCUPANT DETECTION (DIAGNOSTICS)” section.) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

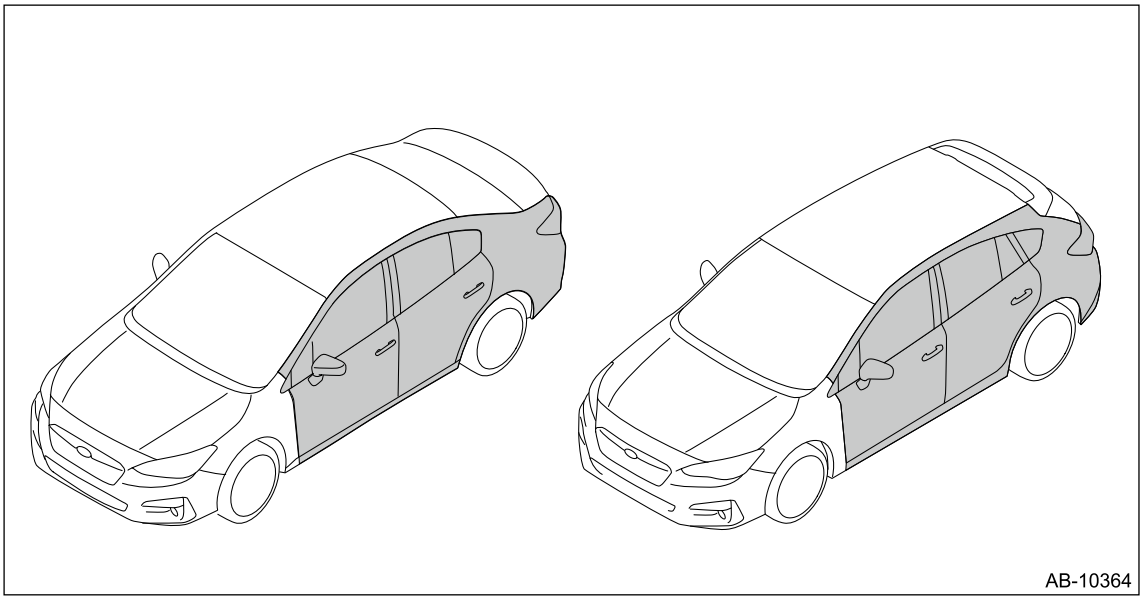


6. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver’s airbag module has been activated.
- Knee airbag module has been activated.
- Passenger’s airbag module has been activated.
- Side airbag module has been activated.
- Curtain airbag module has been activated.
- Seat belt pretensioner has been activated.
- Lap seat belt pretensioner has been activated.
- Locking tongue has been activated.

7. FRONT SUB SENSOR



If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver’s airbag module, knee airbag module, passenger’s airbag module and curtain airbag module have been activated.

8. FRONT DOOR IMPACT SENSOR, SATELLITE SAFING SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front door impact sensor, plate - door UPR, side airbag sensor, satellite safing sensor, sensor cover and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag module or curtain airbag module has been activated. (Operating side)

9. ROLL CONNECTOR

Check for the following, and replace the damaged parts such as cracks, deformation, etc. with new parts.

- Combination switch
- Steering roll connector

10. CHECK STEERING SYSTEM

For steering wheel, column assembly - steering, universal joint assembly - steering, and steering gearbox, check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

- Check the following items for the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>INSPECTION.
  - Mounting conditions and deflection of front and rear, upward and downward directions of the steering wheel and column assembly - steering.
  - Deflection of front and rear, upward and downward directions, and mounting condition to vehicle body of the column assembly - steering. (After a collision, absorbing part of the column assembly - steering may have been operated.)
- Check for deflection and the swing load of the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSPECTION.
- Check the following items for the steering gearbox. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Electric Power Steering Gearbox>INSPECTION.
  - Rack sliding resistance and deflection
  - Input shaft play
  - Rotational resistance of gearbox

11. PASSENGER'S SEAT

Caution:
Do not disassemble the frame assembly - front cushion, slide rail and load sensor, which are integrated in an assembly component. If scratches, cracks or deformation are detected, be sure to replace the part as an assembly.

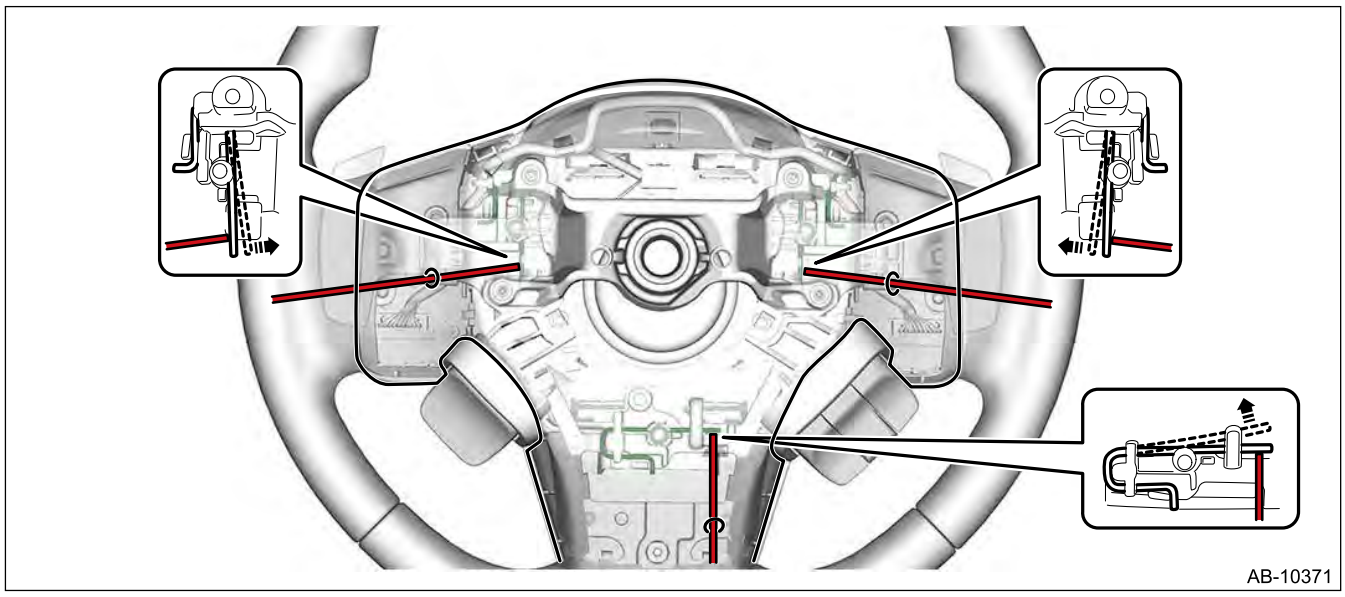
1. Check for the following, and replace the damaged parts with new parts.
   - Body or bracket of the seat belt inner - front is scratched, cracked or deformed.
   - Frame assembly - front backrest is cracked or deformed.
   - Headrest assembly for deformation or play.
   - If the cover - front cushion and the cover COMPL - front backrest is damaged or frayed, replace the cover with a new part.
   - If the cover - front cushion and the seat heater are replaced, replace the cover hang wire with a new part.
2. When the passenger's seat is removed (including the case that the bolts are loosened), perform «Rezero» of the occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.
3. When the passenger's seat cover COMPL - front seat has been removed or replaced, make sure that the occupant detection system operates normally.
4. Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.

12. INSPECTION OF OTHER PARTS

Check for the following parts, and replace the damaged parts with new parts.

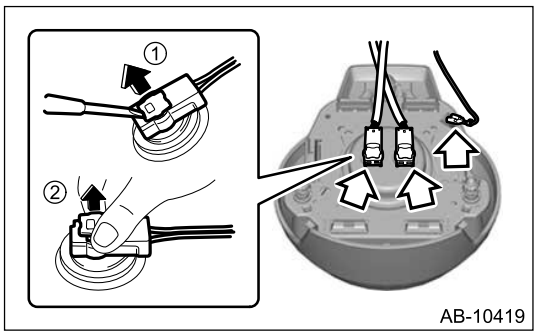
1. Check the following parts equipped with the direct type connector for damage, and also check each harness for pinch and connector damage. Replace the main harness as a unit if damage is found.
   - Driver's airbag module
   - Knee airbag module

- Curtain airbag module
- Pretensioner

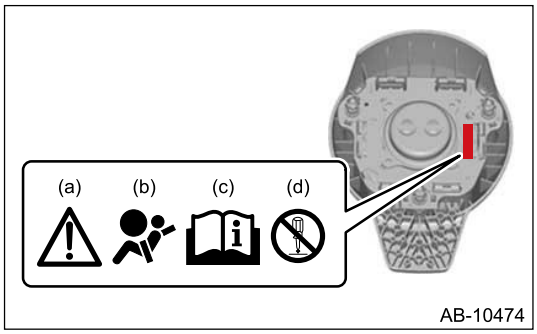


2. Check the seat cushion, backrest, slide rail and headrest for installation condition and looseness.
3. If any break or fray is found in the cover COMPL - front backrest of the driver’s seat or passenger’s seat, the side airbag system may not operate normally. In this case, replace the cover COMPL - front backrest with a new part.
4. If the securing clip mounting area of curtain airbag module or the bracket - assist rail is deformed or cracked, replace the defective part.

REMOVAL



Caution:



Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Position the front wheels straight ahead.
2. Turn the ignition switch to OFF.
3. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Remove the driver's airbag module.
   (1) Using a hexagon wrench etc. wrapped by protective tape, insert the snap pins and release the locks (three locations).

(2) Disconnect the horn harness and airbag connector, and remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > DRIVER'S AIRBAG MODULE AND CURTAIN AIRBAG MODULE.

Meaning of pictograms indicated on the label

(a) Flammable explosive substance encapsulated parts; be careful of handling.

(b) Indicates that this part is an airbag module.

(c) Before handling, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" in the service manual.
For the disposal procedures of the airbag modules, refer to "Airbag Module Disposal".

(d) Do not disassemble the airbag module.

AIRBAG SYSTEM > Driver's Airbag Module

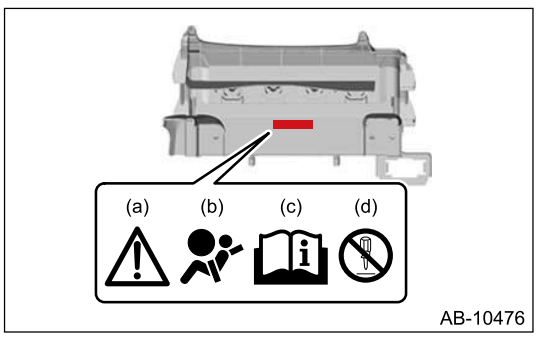
INSTALLATION

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Airbag module is cracked or deformed.
   - Harness and/or connector is cracked, deformed or open.
   - Harness wire is exposed.
   - The steering wheel is in the way, making it difficult to install the airbag module.
   - The clearance between the driver's airbag module and steering wheel is not constant.
2. Install the driver's airbag module.
   Caution:
   - **Make sure that the snap pin is securely placed inside the guide before installing the airbag module.**
   - **Be sure to insert the connector in completely until it is locked.**
   - **Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.**
   - **After the airbag module is installed, make sure that the airbag module locks (three positions) are securely locked.**

   (1) Connect the airbag connector to the airbag module securely.
   (2) Connect the horn harness.
   (3) Press in the locks (three positions) to install the airbag module.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



REMOVAL

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
4. Remove the nuts to remove the knee airbag module and disconnect the harness connector. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > KNEE AIRBAG MODULE AND PASSENGER'S LAP SEAT BELT PRETENSIONER.
   (1) Disconnect the connector of knee airbag module. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > KNEE AIRBAG MODULE AND PASSENGER'S LAP SEAT BELT PRETENSIONER.
   (2) Remove the data link connector.
   (3)Remove the nuts, and remove the knee airbag module.

Meaning of pictograms indicated on the label

(a) Flammable explosive substance encapsulated parts; be careful of handling.

(b) Indicates that this part is an airbag module.

(c) Before handling, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” in the service manual.
For the disposal procedures of the airbag modules, refer to “Airbag Module Disposal”.

(d) Do not disassemble the airbag module.

AIRBAG SYSTEM > Knee Airbag Module

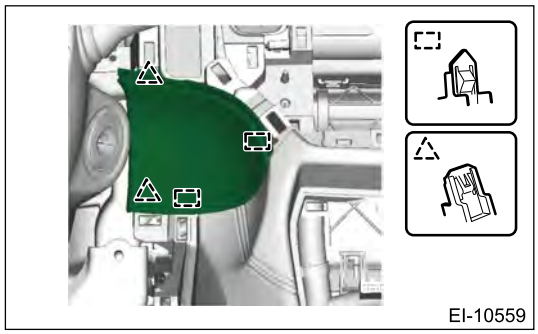
INSTALLATION

Caution:

- **Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Airbag module is cracked or deformed.
   - Knee airbag module bracket is cracked or deformed.
   - Harness and/or connector is cracked, deformed or open.
   - Harness wire is exposed.
   - Depending on the condition of the beam COMPL - steering, installation of the knee airbag module is difficult.
2. Install the knee airbag module.
   Caution:
   - **Be sure to insert the connector in completely until it is locked.**
   - **Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.**

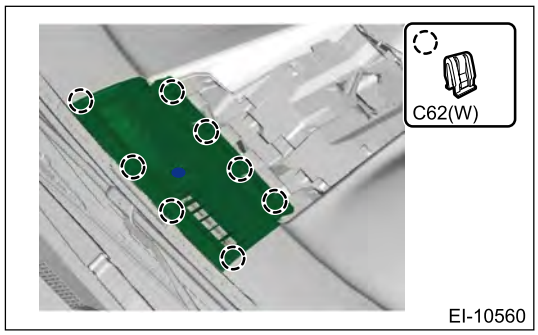
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the data link connector.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



REMOVAL

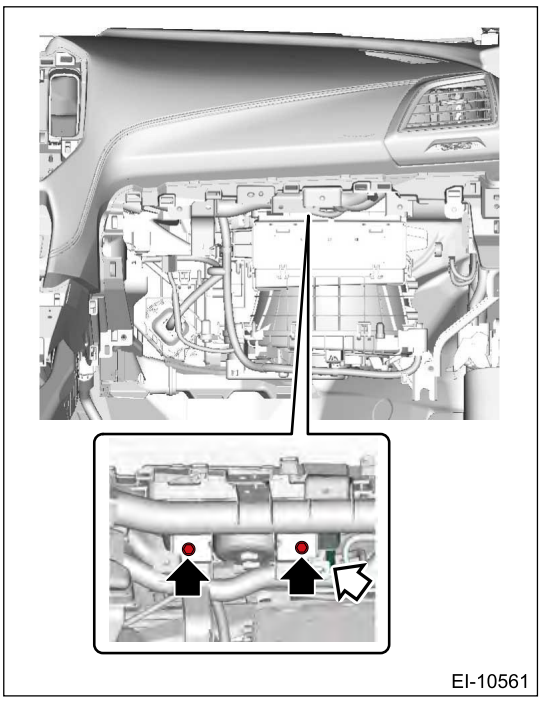
Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

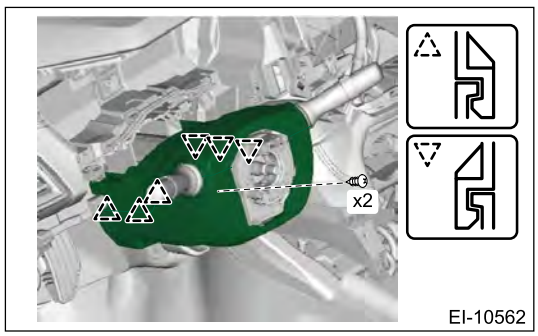


1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

   Note:
   - **On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.**
   - **For the power seat model, remove the console box before removing the battery ground terminal.**
3. Remove the boot - hand brake, the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
4. Remove the center grille assembly. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
5. Remove the panel - center UPR, and remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
6. Remove the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>REMOVAL.
7. Remove the panel center LWR, and remove the tray - center UPR. Ref. to EXTERIOR/INTERIOR TRIM>Center Console>REMOVAL.
8. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
9. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
10. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
11. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
12. Remove the visor assembly - combination meter, the cover assembly - visor LWR, and the combination meter assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.
13. Release the claws and clips, and remove the cover - starter SW. (Models without the keyless access with push button start)

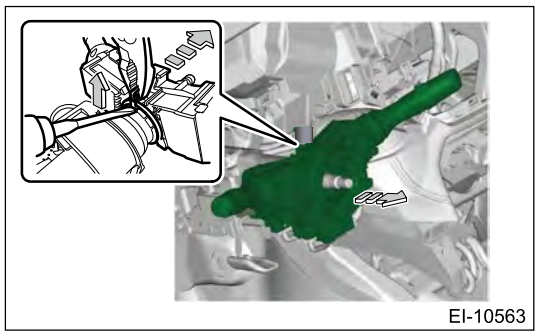


14. Remove the panel - starter SW and the push button ignition switch. (Model with keyless access with push button start) Ref. to SECURITY AND LOCKS>Push Button Ignition Switch>REMOVAL.
15. Remove the trim panel - front pillar UPR on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.

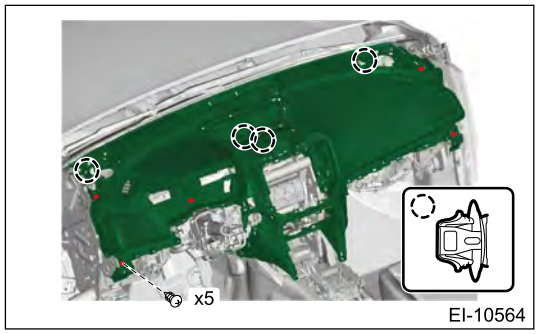


16. Remove the grille speaker side and the speaker assembly - tweeter on the left and right sides. Ref. to ENTERTAINMENT & MONITORING>Front Speaker>REMOVAL > TWEETER.
17. Remove the glove box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
18. Remove the multi-function display assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD)>REMOVAL.
19. Remove the grille - front defroster.
    (1) Release the clips, and then raise the grille - front defroster.
    (2) Disconnect the sunload sensor connector, and remove the grille - front defroster.

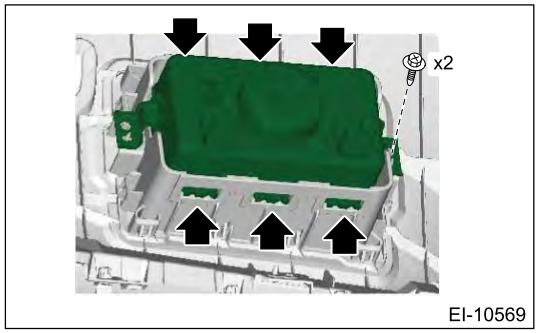
20. Remove the bolts of the passenger's airbag module, and disconnect the connector. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > PASSENGER'S AIRBAG MODULE AND PRETENSIONER.



21. Remove the screws and release the claws, then detach the cover assembly - column.



22. Remove the switch assembly - combination.



(1) Disconnect each connector, and loosen the clamp to release the claws.
(2) Pull out the switch assembly - combination from the column assembly - steering.

23. Remove the panel COMPL - instrument.
(1) Remove the harness clamp of the speaker assembly - tweeter.
(2) Release the clamps of the sunload sensor and multi-function display harnesses, and pull them out toward yourself.
Note:
Confirm the harness routing of the sunload sensor and multi-function display harnesses.
(3) Remove the screws, and remove the panel COMPL - instrument.

24. Remove the tapping screws and release the claws, and remove the passenger's airbag module.

25. For handling of the removed airbag module, refer to "CAUTION". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

AIRBAG SYSTEM > Passenger's Airbag Module

INSTALLATION

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**
- **When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.**

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Passenger's airbag lid (instrument panel surface) is cracked or deformed.
   - Airbag module is cracked or deformed.
   - Harness and/or connector is cracked, deformed or open.
   - Harness wire is exposed.
   - Mounting bracket is cracked or deformed.
2. Install the panel COMPL - instrument. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Assembly>INSTALLATION.
3. Install the switch assembly - combination and the cover assembly - column.
4. Install the panel - starter SW and the push button ignition switch. (Model with keyless access with push button start)
5. Install the cover - starter SW. (Models without the keyless access with push button start)
6. Install the combination meter assembly, the cover assembly - visor LWR, and the visor assembly - combination meter.
7. Install the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>INSTALLATION.
8. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
9. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
10. Install the cover assembly - instrument panel LWR driver.
11. Install the glove box assembly.
12. Install the trim panel - front pillar UPR on the left and right sides.
13. Install the grille speaker side on the left and right sides.
14. Install the tray - center UPR and the panel center LWR.
15. Install the heater control assembly.
16. Install the panel center LWR on the left and right sides.
17. Install the console box assembly.
    Tightening torque:
    6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
18. Install the cover assembly - front.
19. Install the mat - center tray, the tray - center LWR, and the boot - hand brake.
20. Install the multi-function display assembly.
21. Install the audio assembly or navigation assembly.
22. Install the panel - center UPR.
23. Install the center grille assembly.
24. Install the cover - instrument panel side on the left and right sides.
25. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
    Note:
    After connecting the battery ground terminal, place the select lever in the "P" position.

REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

   Note:

   For models with power seat, remove the slide rail installing bolt before removing the battery ground terminal.

   After the bolts are removed, slide the seat to the middle position in order to make it easier to take out of the vehicle.
3. Remove the front seats. Ref. to SEATS>Front Seat>REMOVAL.
4. Remove the seat belt inner - front. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT INNER - FRONT.
5. Separate the backrest assembly and the seat cushion assembly. Ref. to SEATS>Front Seat>DISASSEMBLY.
6. Remove the side airbag module.

   Caution:

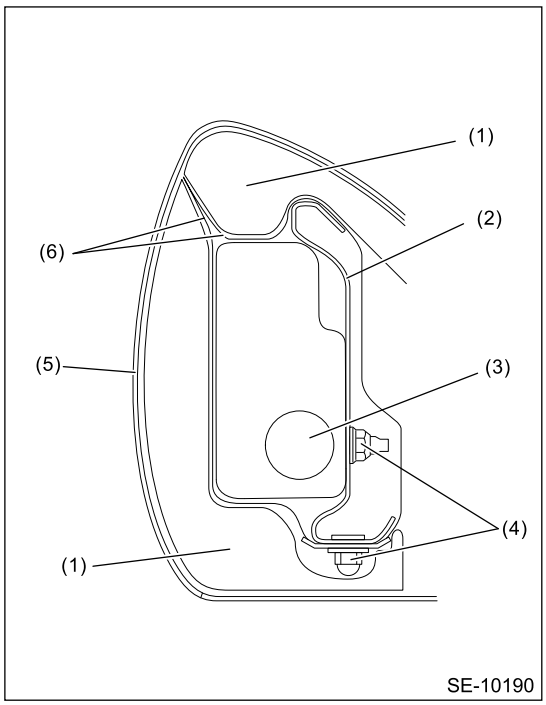
   Do not open the protective cover of the side airbag module. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

   (1) Remove the plastic fastener at the back side (bottom) of backrest assembly.

   (2) Open the fastener at the rear side of backrest assembly.

   (3) Remove the hexagon cap nut and nuts.

   (4) While taking care not to damage the airbag protective cover, remove the side airbag module.



AIRBAG SYSTEM > Side Airbag Module

INSTALLATION

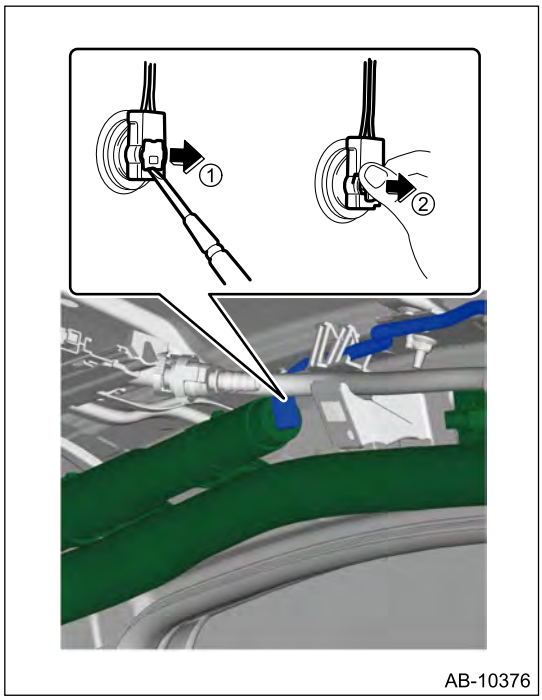
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Make sure that the side airbag module is installed as shown in the figure.**

(1) Pad ASSY - front seat backrest
(2) Frame ASSY - front backrest
(3) Side airbag module inflator
(4) Nut
(5) Cover COMPL - front backrest
(6) Side airbag guide cloth

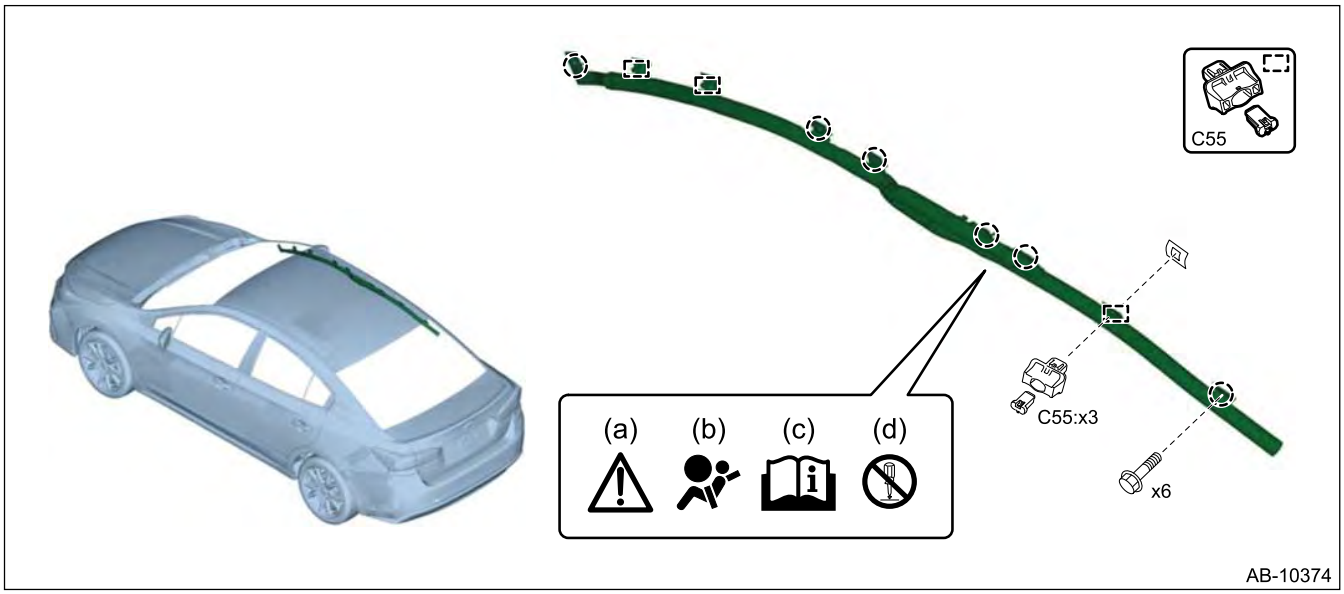
- **Be careful not to stain or damage the cover COMPL - front backrest during assembly.**
- **Do not reuse hog rings.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.**

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Make sure that there is no foreign matter on side airbag module.
   - Front seat, airbag module and mounting bracket are damaged or deformed.
   - Harness and/or connector is cracked, deformed or open.
   - Harness wire is exposed.
2. Install the side airbag module to the frame assembly - front backrest.
   Tightening torque:
   6 N·m (0.6 kgf-m, 4.4 ft-lb)
3. Assemble the front seat. Ref. to SEATS>Front Seat>ASSEMBLY.
   Caution:
   After restoring the seat, operate the reclining and sliding mechanisms to check that the side airbag harness is not caught.
4. Install the seat belt inner - front. Ref. to SEAT BELT SYSTEM>Front Seat Belt>INSTALLATION > SEAT BELT INNER - FRONT.
5. Install the front seat assembly to the body. Ref. to SEATS>Front Seat>INSTALLATION.
   Caution:
   If the passenger's seat bolts are loosened or the seat is removed, be sure to perform [Rezero] for the occupant detection system after installing the seat to the vehicle.

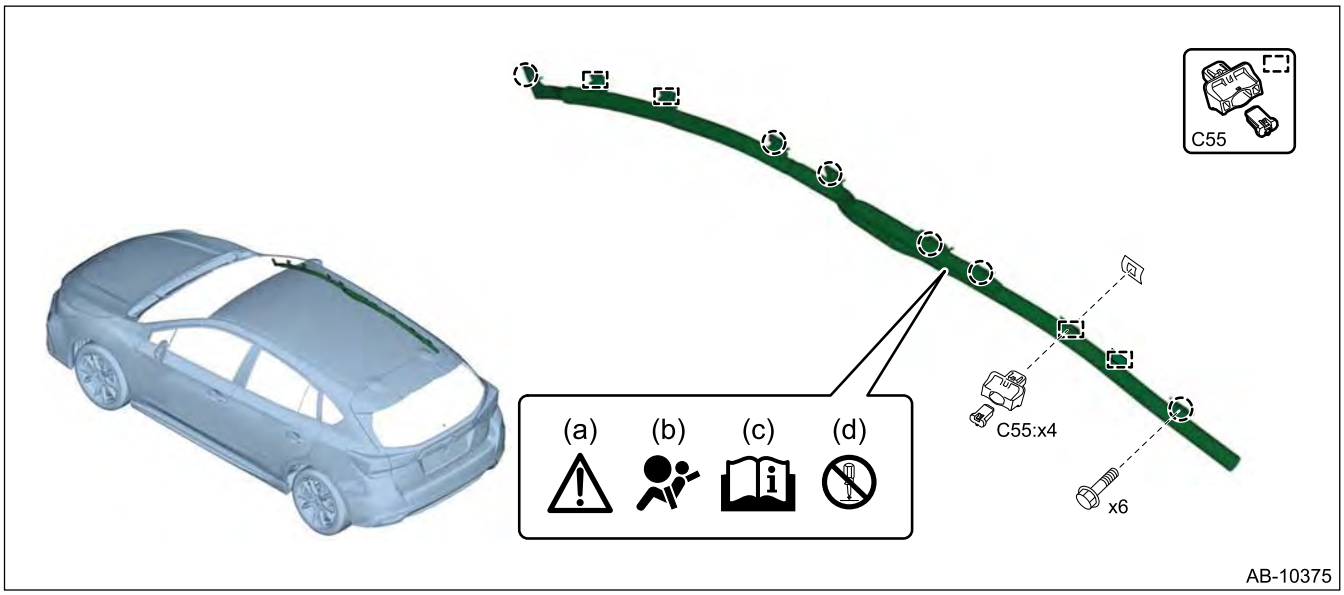


6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
7. Perform [Rezeroing] for the occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

REMOVAL



Note:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.



1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   - **On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.**
   - **For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.**
3. Remove the trim panel - roof assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL.
4. Remove the curtain airbag module.
   Caution:
   - **Be careful not to damage the curtain airbag module during removal.**
   - **Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.**
   - **Do not reuse the curtain airbag module of which clips have been removed.**
   - **Remove the modules in order starting from the vehicle front.**

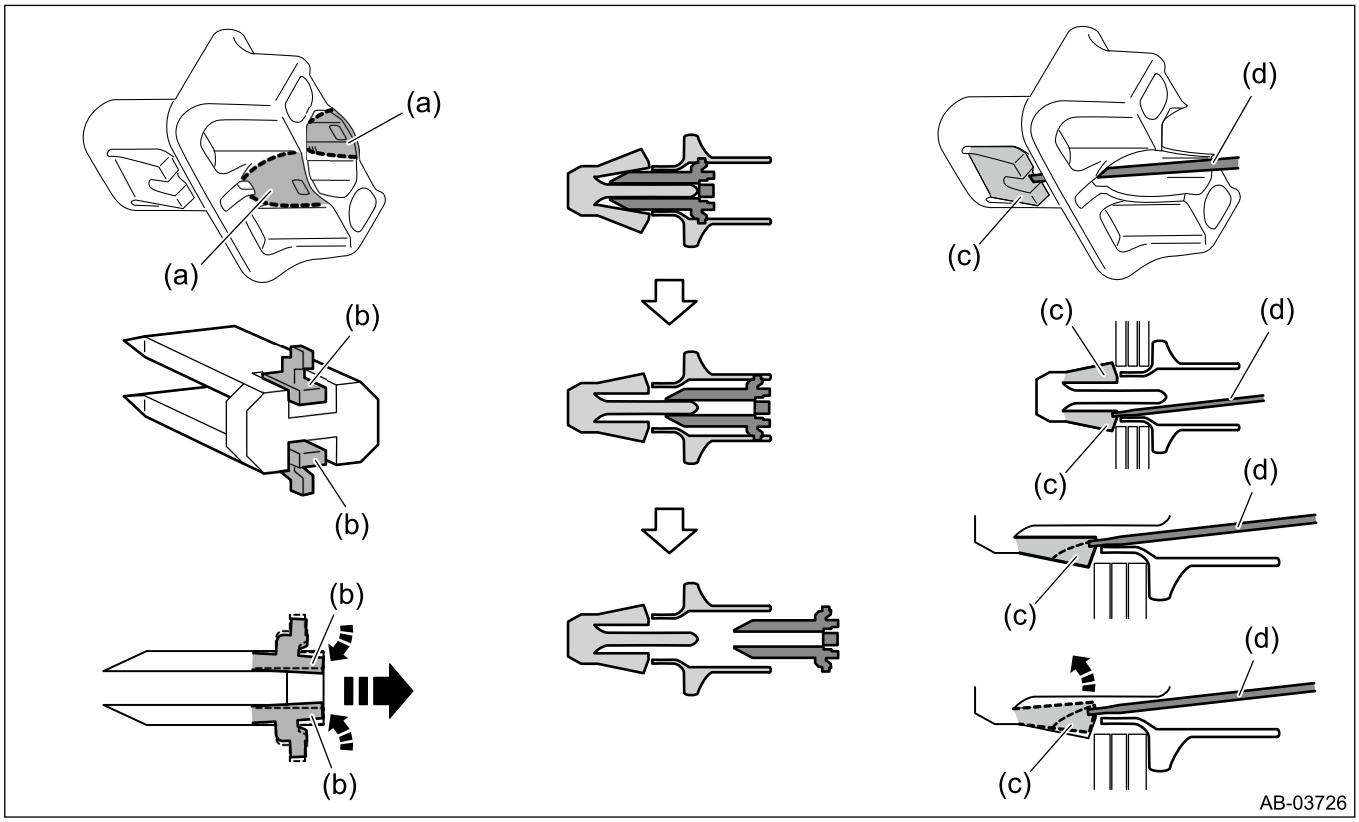
   (1) Disconnect the curtain airbag module connector. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > DRIVER'S AIRBAG MODULE AND CURTAIN AIRBAG MODULE.

(2)Remove all the bolts and clips, and remove the curtain airbag module.

Meaning of pictograms indicated on the label

(a) Flammable explosive substance encapsulated parts; be careful of handling.

(b) Indicates that this part is an airbag module.



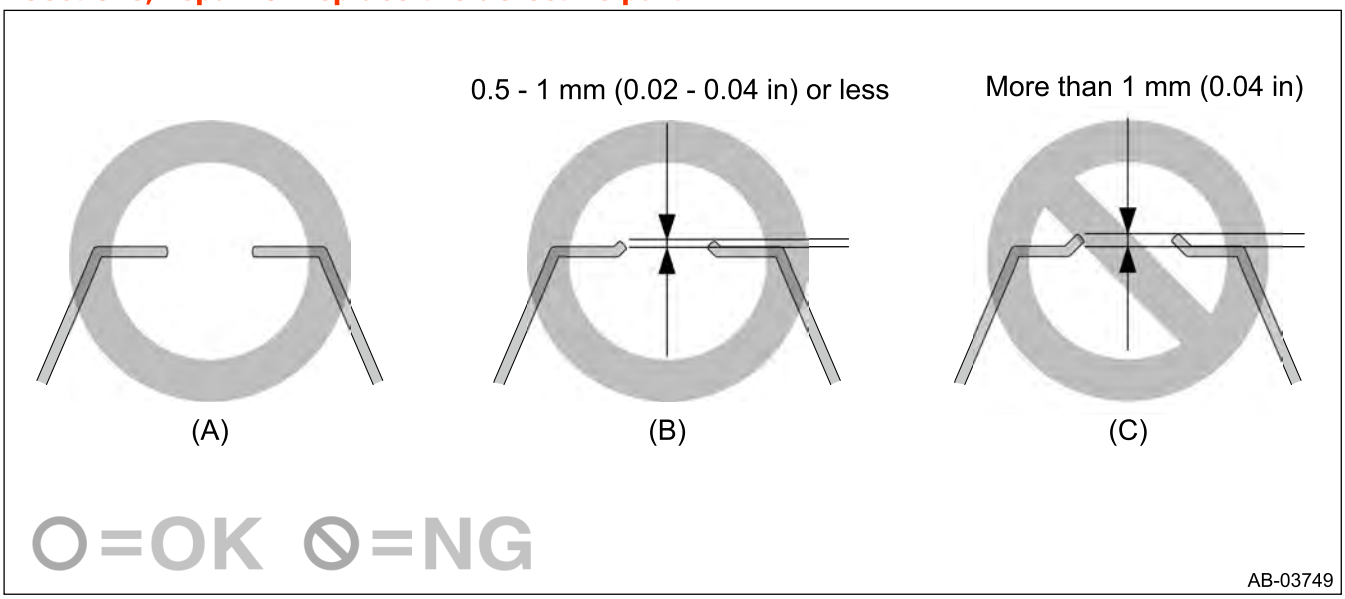
(c) Before handling, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" in the service manual.
For the disposal procedures of the airbag modules, refer to "Airbag Module Disposal".

(d) Do not disassemble the airbag module.

Note:

Remove the securing clip of curtain airbag module in the following procedures.

1. **Using a pair of nippers, cut off the clip base (a).**
2. **Remove the clip - pin while holding the lock (b) with needle nose pliers.**
3. **Release the locks (c) of the clips - bushing at two locations at the top and bottom completely using thin flat head screwdriver (d), and remove the clip - bushing.**



AIRBAG SYSTEM > Curtain Airbag Module

INSTALLATION

Caution:

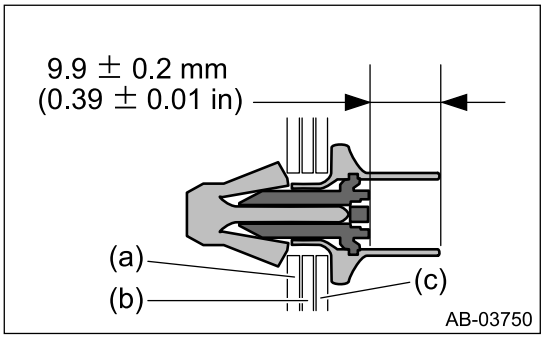
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **When installing the curtain airbag module, install a specified part at specified place.**
- **Be careful not to damage the curtain airbag module during installation.**
- **Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.**
- **Make sure that there are no foreign matter on airbag module.**
- **Do not reuse the curtain airbag module of which clips have been removed.**
- **If deformation or crack is found in the bracket - assist rail by visual check, replace the defective part.**
- **If deformation is found in the clip mounting holes of the side rail and rear quarter metal sections, repair or replace the defective part.**

(a) If no deformation is found, install the curtain airbag module with a new securing clip.

(b) If the amount of deformation is 0.5 to 1 mm (0.02 to 0.04 in), correct the deformed section to be flat and install the curtain airbag module with a new securing clip.

(c) If deformation is 1 mm (0.04 in) or more, replace the deformed part together with the panel. Refer to the repair manual for body panel replacement.

- **When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.**
- **Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.**
- **For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. Ref. to EyeSight>Stereo Camera>INSTALLATION.**



1. Before installation, inspect the following items and replace any faulty part with a new one.

- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

2. Install the curtain airbag module.

Caution:

- **Be sure to insert the connector in completely until it is locked.**
- **Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.**
- **Do not reuse the curtain airbag module of which clips have been removed.**
- **Install a new clip - bushing securely, and press the clip - pin securely into the clip - bushing.**
  After pressing the clip - pin securely, make sure that the heights of clip - bushing top surface and the clip - pin top surface are 9.9±0.2 mm (0.39±0.01 in).

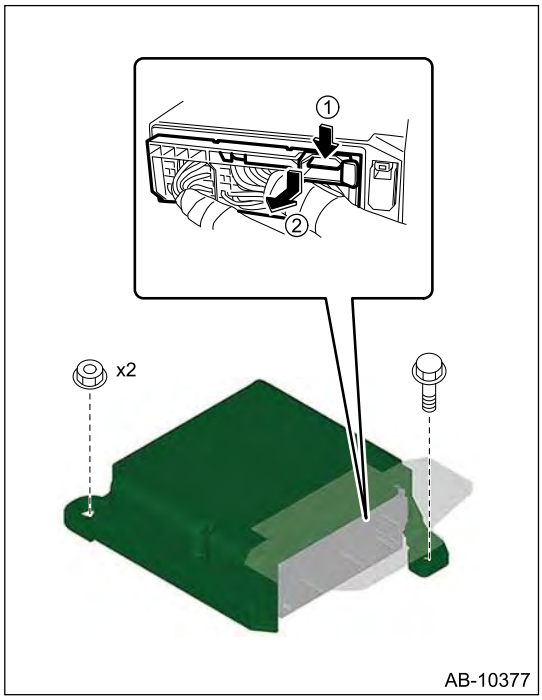
(a) Body panel

(b) Plastic cover or plastic spacer

(c) Airbag module tab portion

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



3. Install the trim panel roof - assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

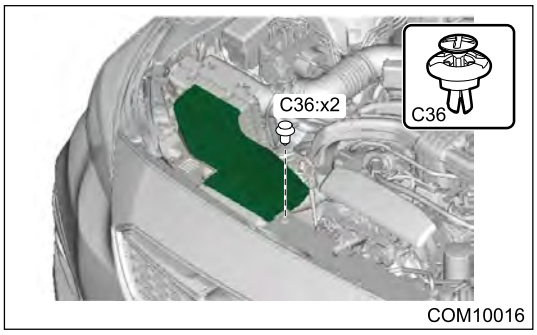
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not disassemble the airbag control module.**
- **If the airbag control module is deformed or if there is any trace of water on the module, replace the airbag control module with a new one.**
- **Do not drop the airbag control module.**
- **After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.**

1. Turn the ignition switch to OFF.
   Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
2. Remove the center grille assembly. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the panel - center UPR, and remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>REMOVAL.
5. Remove the boot - hand brake, the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
6. Remove the panel center LWR, and remove the tray - center UPR. Ref. to EXTERIOR/INTERIOR TRIM>Center Console>REMOVAL.
7. Remove the airbag control module.
   (1) Disconnect the connector from airbag control module. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > AIRBAG CONTROL MODULE.
   (2) Remove the bolt and nuts and remove the airbag control module.

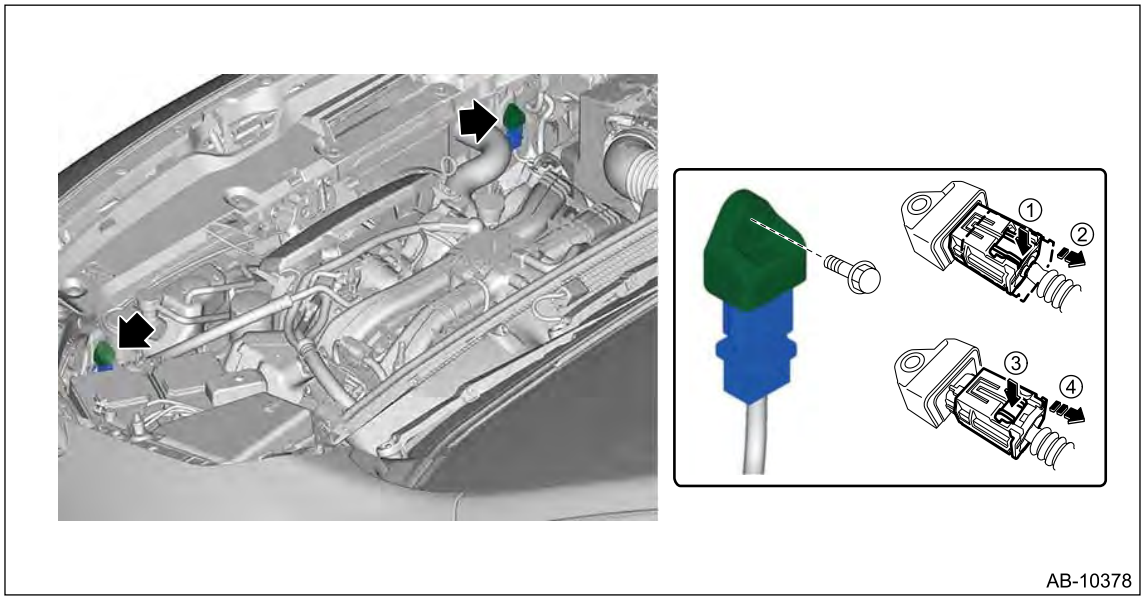
AIRBAG SYSTEM > Airbag Control Module

INSTALLATION



1. Before installation, inspect the following items and replace any faulty part with a new part.
   - Control module is deformed.
   - Control module connector is damaged.
2. Install the airbag control module.
   Caution:
   Do not reuse the bolt and nut.
   Always replace with the specified new bolts and nuts.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
3. Install the tray - center UPR.
4. Install the panel center LWR.
5. Install the console box assembly, the cover assembly - front and the boot - hand brake.
   Tightening torque:
   Console box: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
6. Install the heater control assembly.
7. Install the audio assembly or navigation assembly.
8. Install the panel - center UPR.
9. Install the center grille assembly.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
    Note:
    For CVT models, after connecting the battery ground terminal, place the select lever in the P position.

REMOVAL



Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the front sub sensor.
   (1) Remove the clips and remove the duct - air intake. (When removing the sensor RH)

   (2) Remove the bolt, and then detach the front sub sensor.
   (3) Disconnect the connector of front sub sensor. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > FRONT SUB SENSOR AND SATELLITE SAFING SENSOR.

INSTALLATION

1. Before installation, inspect the following items and replace any faulty part with a new part.
   - Front sub sensor damage
   - Connector damage
2. Install the front sub sensor.

Caution:

- **Do not reuse the bolt and nut.**
  Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

Tightening torque:

13 N·m (1.3 kgf-m, 9.6 ft-lb)

3. Install the duct - air intake. (RH side only)
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **When the front door impact sensor is removed, always replace it with a new front door impact sensor. If it is reused, sealing capability on the contacting surface of door panel may be insufficient and impact pressure may not be detected correctly.**

1. Operate the power window switch to close the front door glass.
2. Turn the ignition switch to OFF.
3. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
5. Remove the sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL.
6. Remove the front door impact sensor.

   Caution:

   - **Do not reuse the front door impact sensor if it is once removed. Be sure to replace the front door impact sensor with a new part.**
   - **The nuts cannot be removed from the front door impact sensor. Do not remove the mounting nuts.**

   (1) Remove the plate - door UPR (a).

   Caution:

   If the clip is damaged, replace it with a new part because the panel assembly - front door may be deformed.

   (2) Loosen the nuts, and remove the front door impact sensor with the claws (b) pressed.

   (3) Disconnect the airbag connector and remove the front door impact sensor. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > FRONT DOOR IMPACT SENSOR.

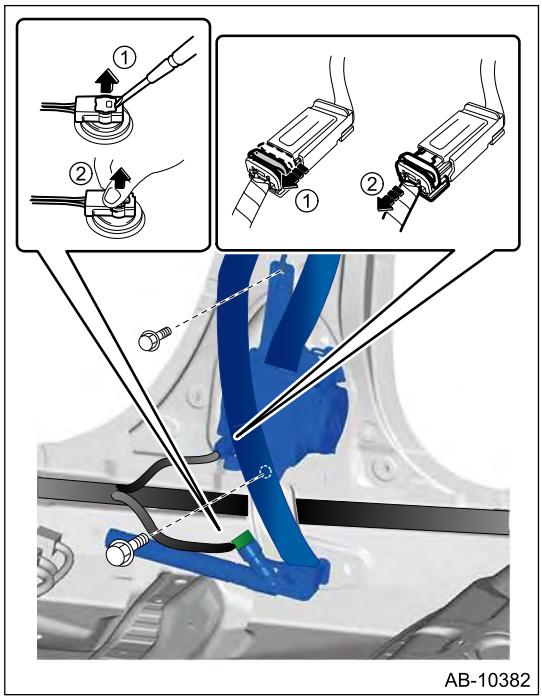
INSTALLATION

1. Before installation, inspect the following items and replace any faulty part with a new part.
   - The front door impact sensor or connector is damaged.
   - Inner panel area of the panel assembly - front door is deformed.
   - Side airbag module has been activated.
2. Install the front door impact sensor.

   Caution:
   - **Do not reuse the front door impact sensor if it is once removed. Be sure to replace the front door impact sensor with a new part.**
   - **The nuts cannot be removed from the front door impact sensor. Do not remove the mounting nuts.**
   - **Thoroughly clean the sensor mounting area before installing the front door impact sensor.**
   - **When the front door impact sensor is installed, be sure to fix the claws of the front door impact sensor into the door panel.**

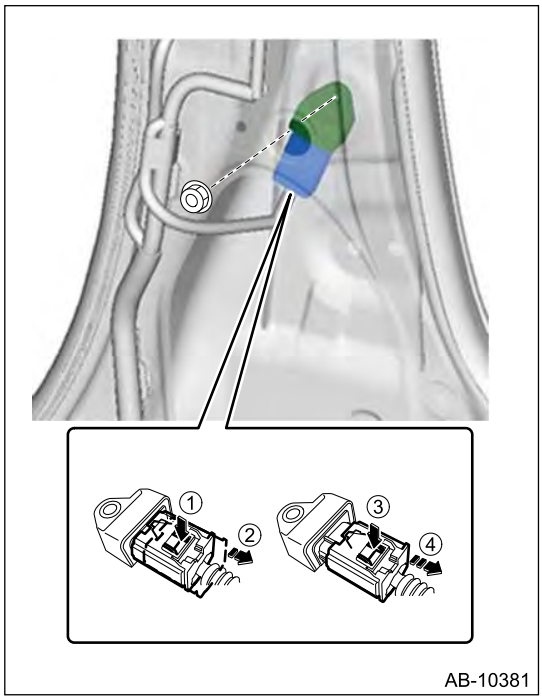
   Tightening torque:

   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the plate - door UPR.
4. Install the sealing cover.
5. Install the trim panel - front door.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



REMOVAL

Caution:



- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Move the seat all the way forward, from which the side airbag sensor is to be removed.
   Note:
   This is to remove the seat belt retractor assembly.
2. Turn the ignition switch to OFF.
3. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
4. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
5. Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
6. Remove the seat belt retractor. (On the side where the side airbag sensor is removed)
   (1) Turn over the floor mat to disconnect the belt tension sensor connector. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > PASSENGER'S AIRBAG MODULE AND PRETENSIONER.
   Note:
   Also disconnect the connector of the passenger's lap seat belt pretensioner. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > DRIVER'S AIRBAG MODULE AND CURTAIN AIRBAG MODULE.
   (2) Remove the bolt to remove the seat belt retractor.

7. Remove the nuts and then remove the side airbag sensor. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR.

AIRBAG SYSTEM > Side Airbag Sensor

INSTALLATION

1. Before installation, inspect the following items and replace any faulty part with a new part.
   - The side airbag sensor, sensor bracket, or connector are damaged.
   - Side airbag module has been activated.
2. Install the side airbag sensor.

Caution:

- **Do not reuse the bolt and nut.**
  Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3. Install the seat belt retractor.

   Tightening torque:

   Front seat belt: Ref. to SEAT BELT SYSTEM>General Description>COMPONENT > FRONT SEAT BELT.
4. Install the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR.
5. Install the rear seat cushion assembly.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

AIRBAG SYSTEM > Curtain Airbag Sensor

REMOVAL

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the cover side sill rear - INN, and remove the trim panel - rear pillar LWR or the trim panel - rear apron.
   - 4 door model: Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 4 DOOR MODEL.
   - 5 door model: Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
5. Remove the nuts and then remove the curtain airbag sensor. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR.

AIRBAG SYSTEM > Curtain Airbag Sensor

INSTALLATION

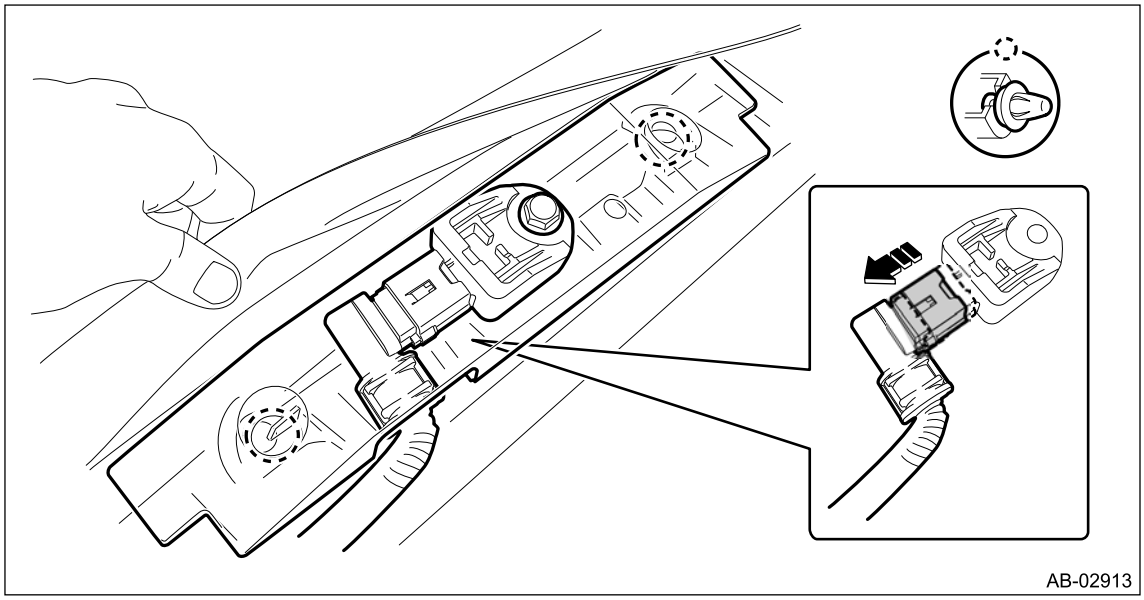
1. Before installation, inspect the following items and replace any faulty part with a new one.
   - Curtain airbag sensor or connector is damaged.
   - Curtain airbag module has been activated.
2. Install the curtain airbag sensor.

Caution:

- **Do not reuse the bolt and nut.**
  Always replace with the specified new bolts and nuts.
- **When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.**

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



3. Install the cover side sill - rear INN, and install the trim panel - rear pillar LWR or the trim panel - rear apron.
4. Install the rear seat cushion assembly.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the satellite safing sensor.
   (1) Remove the clip, and remove the cover - satellite safing.
   (2) Remove the bolts and then remove the satellite safing sensor. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > FRONT DOOR IMPACT SENSOR.

INSTALLATION

1. Before installation, inspect the following items and replace any faulty part with a new one.
   - The satellite safing sensor connector is damaged.
   - The cover - satellite safing is damaged.
   - Side airbag or curtain airbag has been activated.
2. Install the satellite safing sensor.
   Caution:
   - **Do not reuse the bolt and nut.**
     Always replace with the specified new bolts and nuts.
   - **When installing the cover - satellite safing, push the cover securely until it contacts the floor panel.**
   - **If the cover - satellite safing is too loose at its mounting portion to remove easily, replace with a new cover - satellite safing.**
   - **After installing the cover - satellite safing, make sure that the sensor harness does not get caught.**

Tightening torque:

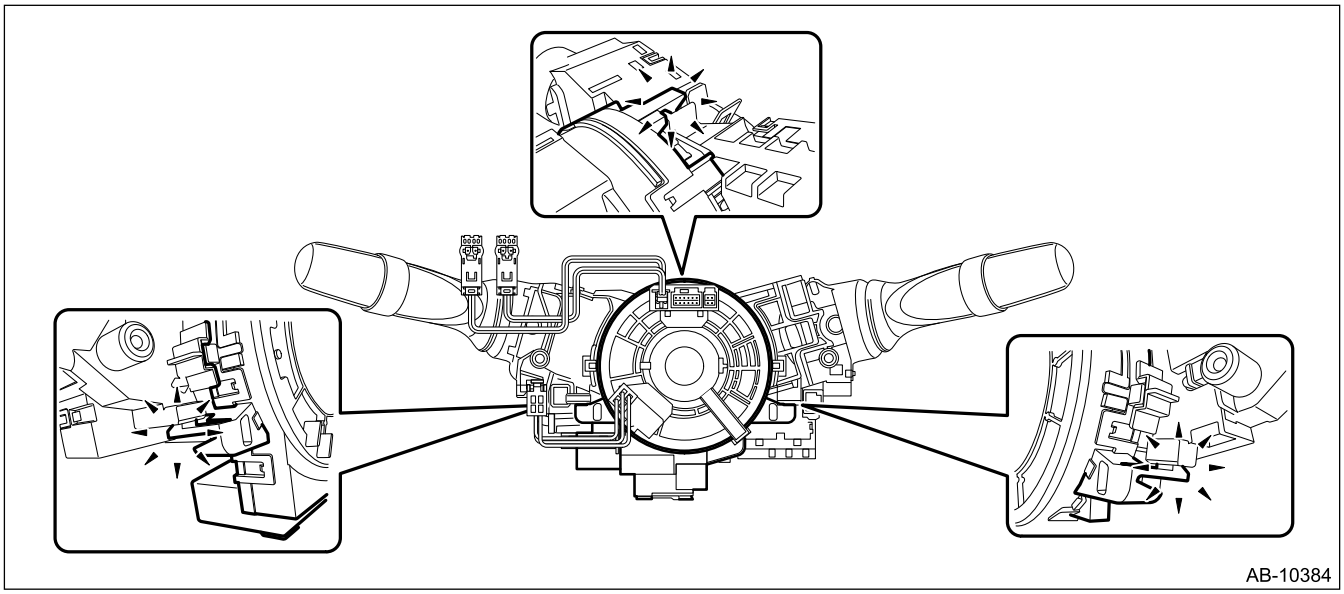
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3. Install the rear seat cushion assembly.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.



1. Position the front wheels straight ahead.
2. Turn the ignition switch to OFF.
3. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
5. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
6. Remove the cover assembly - column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
7. Remove the roll connector.

   Caution:

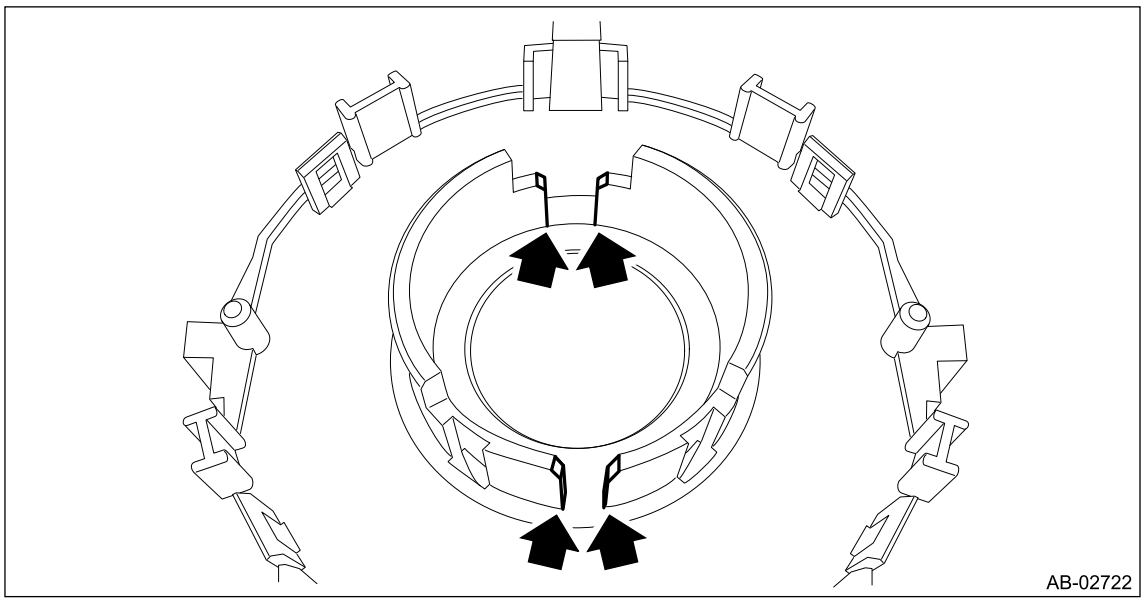
   Make sure that the roll connector is not turned from the original position.

   (1) Disconnect the connector under the roll connector.

   (2) Release the claws and remove the roll connector.

(3) Release the claws and separate the roll connector (a) and steering angle sensor (b).

AIRBAG SYSTEM > Roll Connector



INSTALLATION

Caution:

If the steering wheel and steering angle sensor (steering roll connector) are removed, be sure to perform the following operations.

- **Align the center position of the steering roll connector.**
- **Perform the neutral position setting of the steering angle sensor.**

1. Before attaching a new roll connector, apply a thin coat of grease contained in the connector onto the areas shown by the arrows.

2. Install the roll connector.
3. Align the center position of the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>ADJUSTMENT.
4. Install the cover assembly - column.
5. Install the steering wheel.

   Tightening torque:

   Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

6. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
8. Perform the neutral position setting of the steering angle sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

AIRBAG SYSTEM > Roll Connector

INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Combination switch is cracked or deformed.
- Roll connector is cracked or deformed.

2. UNIT INSPECTION OF ROLL CONNECTOR

Caution:

- **Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.**
- **When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.**

1. Adjust the roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>ADJUSTMENT.
2. Set the roll connector to the central position.
3. Connect the test harness to the connector E and connector F.

   Preparation tool:

   TEST HARNESS N (98299SA000)
   TEST HARNESS Q (98299SA040)

   - Connector E-TEST HARNESS N (1N)
   - Connector F-TEST HARNESS Q (1Q)
4. With the following conditions, check the resistance between the test harness connector terminals.
   - Perform the check with the roll connector centered (front wheels direct straightforward).
   - Rotate the roll connector counterclockwise from the center (front wheels direct straightforward) to an end stop. Then, perform the check while rotating it clockwise to approximately 4.5 turns.

   Preparation tool:

   Circuit tester

Terminal No.	Inspection conditions	Standard
(2N) No. 1 — (2N) No. 2	Always	Less than 1 Ω
(2Q) No. 1 — (2Q) No. 2:	Always	Less than 1 Ω

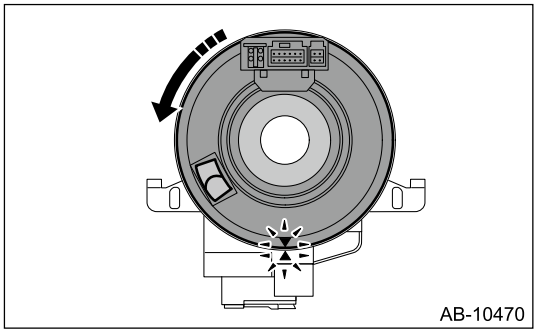
Note:

The connector D is designed to short the terminals D1/D2 and D3/D4 when disconnected.

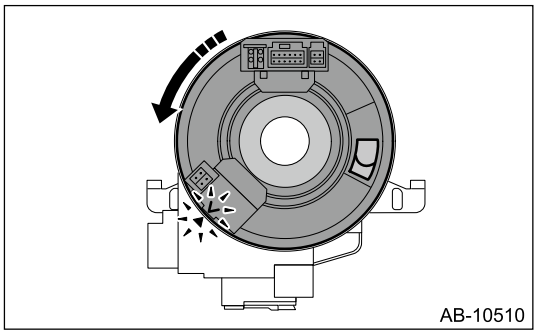
5. Replace the roll connector with a new part if the inspection result is not within the standard value.

AIRBAG SYSTEM > Roll Connector

ADJUSTMENT

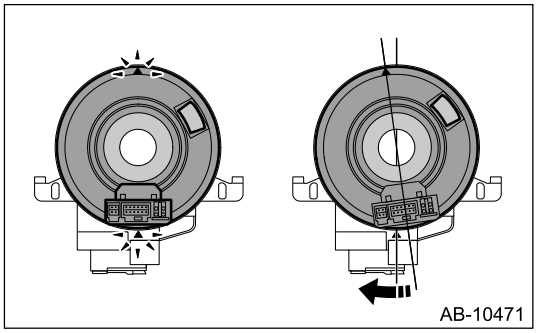


1. NEUTRAL POSITION ADJUSTMENT

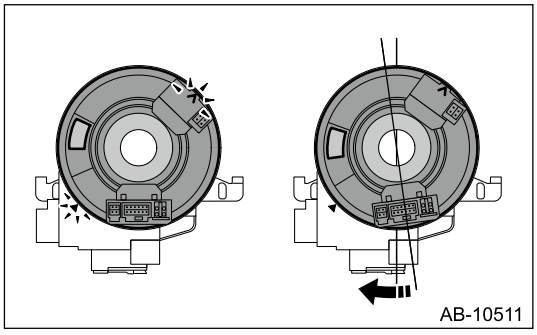


Caution:

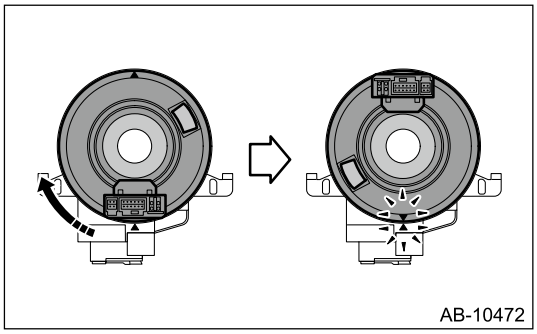
- **Do not rotate the roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.**
- **When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.**

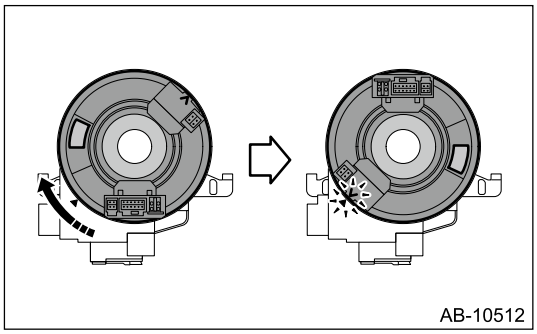


1. Check that front wheels are positioned in straight ahead direction.

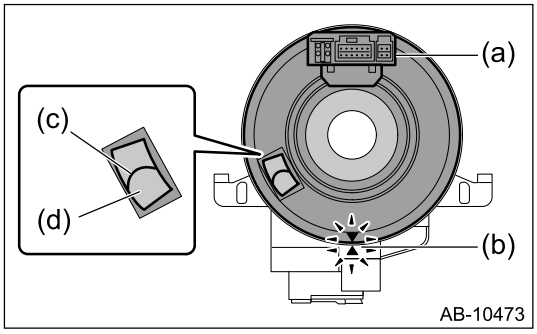


2. Be sure to slowly rotate the roll connector counterclockwise until it stops.

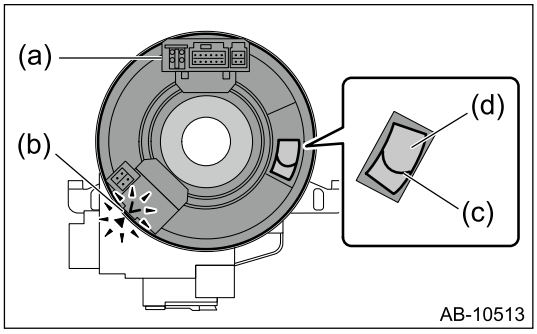




3. If the connector passes the lowermost position when it stops rotating, return the connector to the lowermost position.



4. Make sure that the connector is at the lowermost position, and then rotate the roll connector clockwise by approx. 2.5 turns to return the connector to the uppermost position. The mark "▲" will be aligned.



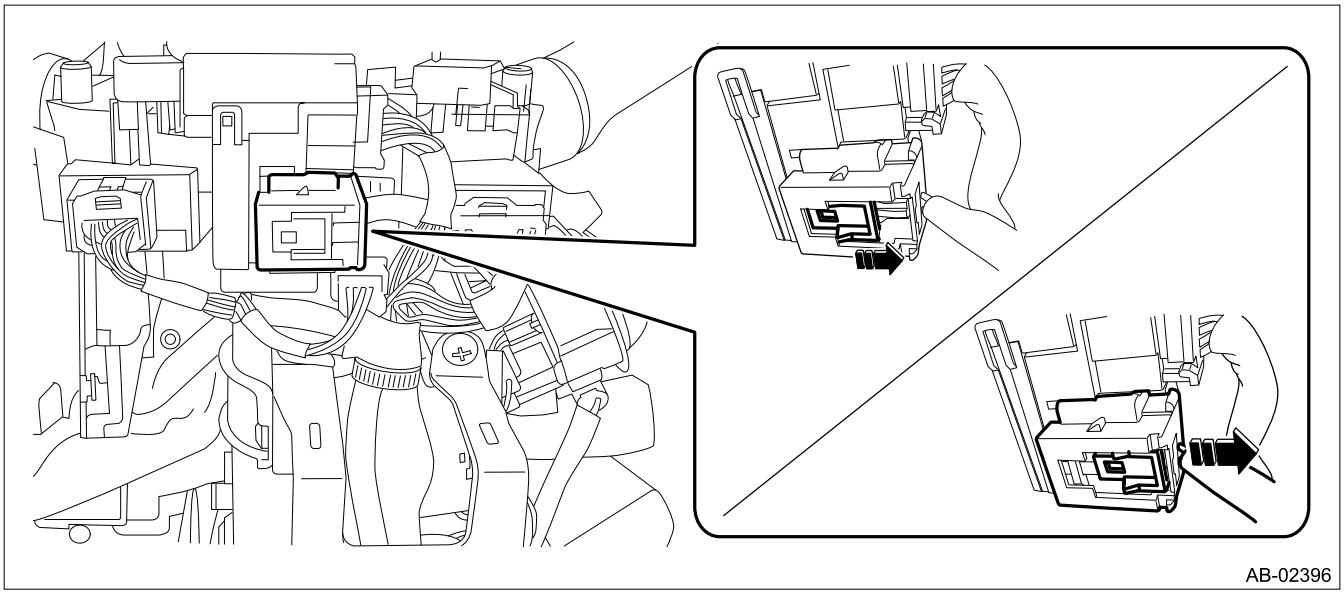
5. Check the following items to make sure that the spiral cable SUB ASSY is at the neutral position.

- The connector (a) is at the uppermost position.
- The alignment mark (b) is aligned.
- The top (c) of the flat cable U-turn section can be seen from the sight glass (d).

PROCEDURE

Warning:

Make sure to follow the instructions below. Otherwise, personal injuries may occur.

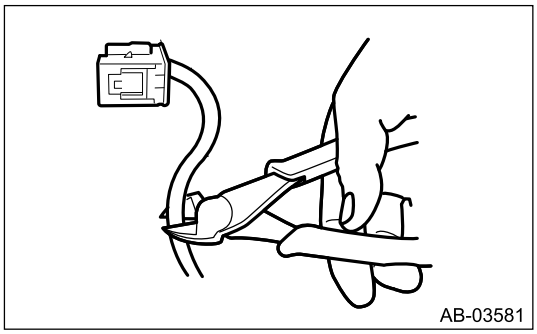


- **Before discarding an airbag module, always perform an operation process to prevent any false activation.**
- **Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.**
- **Do not touch the airbag module just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.**

Caution:

- **Airbag module operation process should be performed on a flat place in safety area. Do not perform the process outdoors when there is rain or strong wind.**
- **Activating an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within 5 m (16 ft) radius of the disposal site.**
- **After activating the airbag module, smoke may arise. Therefore, it must be activated in a well-ventilated place with no smoke detector nearby.**
- **Do not expose the activated airbag module to water.**
- **Wrap the activated airbag module in a sealed vinyl bag when discarding.**
- **If it is impossible to perform an airbag module operation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.**

1. DRIVER'S AIRBAG MODULE

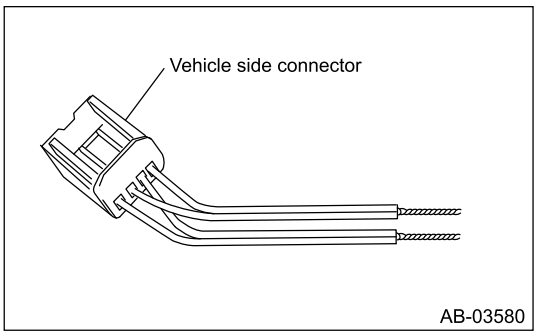


1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the cover assembly - column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
4. Disconnect the driver's airbag module connector.

5. Cut off the body harness approx. 70 mm (2.76 in) from the edge of the removed body side connector.

   Preparation tool:

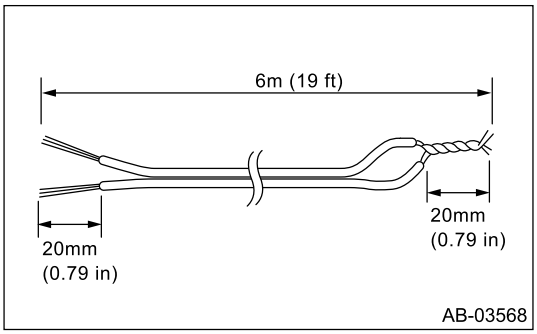
   Nippers



6. Peel off the shield (approx. 20 mm (0.79 in)) from the four harnesses of the removed body side connector.

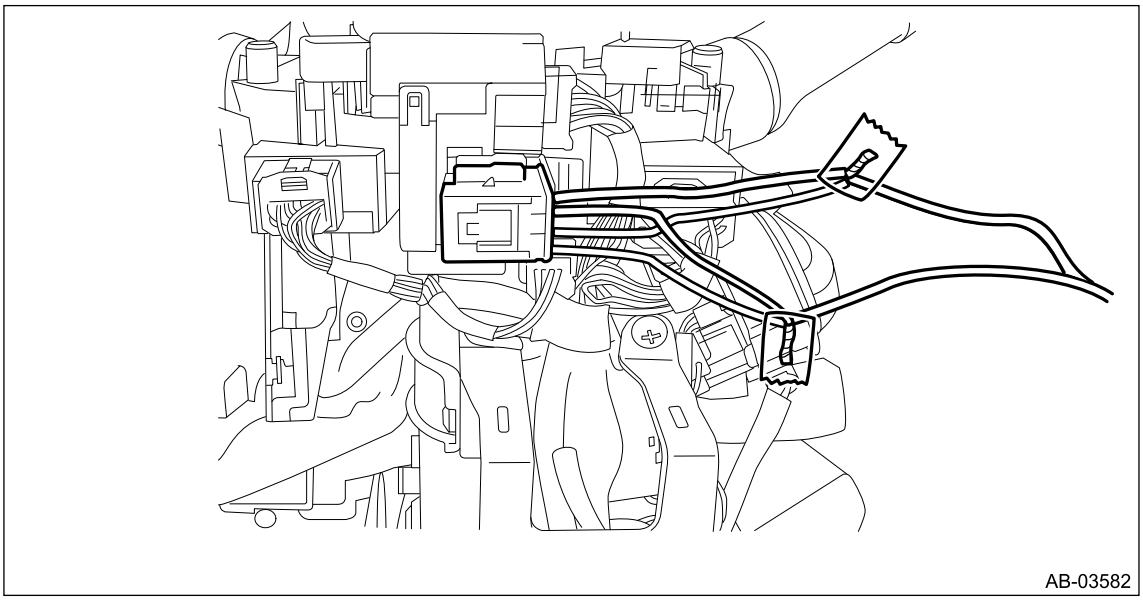
Preparation tool:

Wire stripper



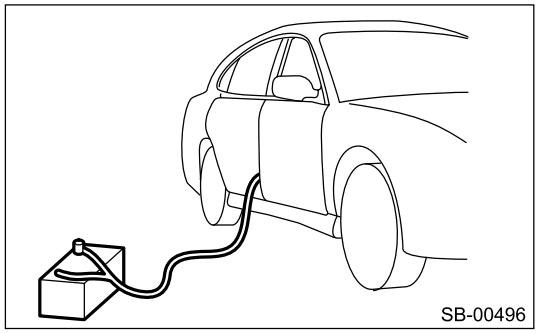
7. Twist the end of harness as shown in the figure.

8. Prepare two vinyl-shielded parallel wires of 6 m (19 ft) long. Peel off the shield of both ends approx. 20 mm (0.79 in) and twist one end together into shorted condition.



9. The other end, not shorted, will be connected to harnesses of repaired body connector as shown in the figure, and insulated with vinyl tape.

Note:

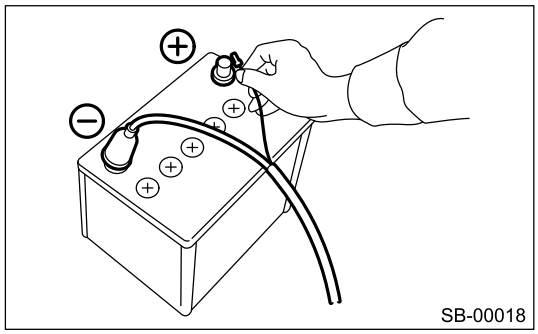


No concern about polarity.

10. After completing the connecting work, connect the body side connector to the connector of the airbag connector lower side again.

11. Bring the vinyl wire for operation out of the vehicle and make sure there is no person in the vehicle.

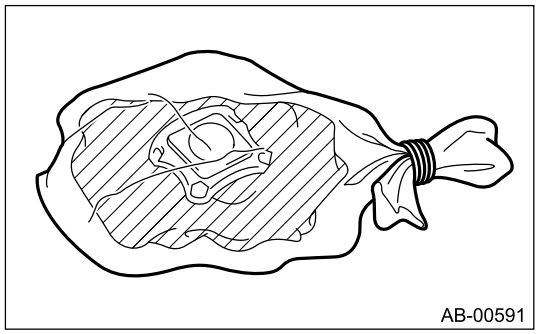
12. Extend the wiring of AIRBAG DEPLOYMENT TOOL to the limit, and close all the windows and sunroof completely.



13. Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.

14. Connect the AIRBAG DEPLOYMENT TOOL alligator clip to the battery negative (−) terminal.

15. Connect the other cable of AIRBAG DEPLOYMENT TOOL to the battery positive (+) terminal, and activate the airbag module.



Caution:

- **After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated airbag module to water.**

16. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.

17. Place the activated airbag module in a sealed vinyl bag, then discard.

2. KNEE AIRBAG MODULE

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
4. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
5. Short the terminal to the alligator clip furnished as AIRBAG DEPLOYMENT TOOL.

   Caution:

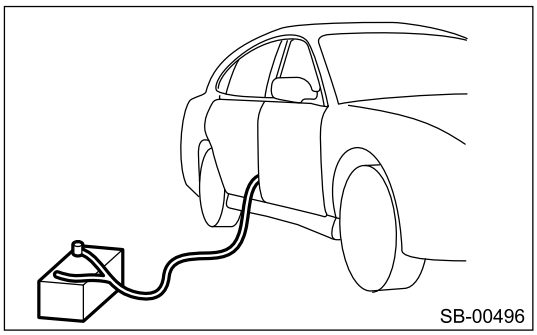
   The AIRBAG DEPLOYMENT TOOL should be kept shorted on the terminals until just before activation of airbag module.

   Preparation tool:

   ST: AIRBAG DEPLOYMENT TOOL (98299PA030)
6. Connect the AIRBAG DEPLOYMENT TOOL (A) and TEST HARNESS ADAPTER D (B).

   Preparation tool:

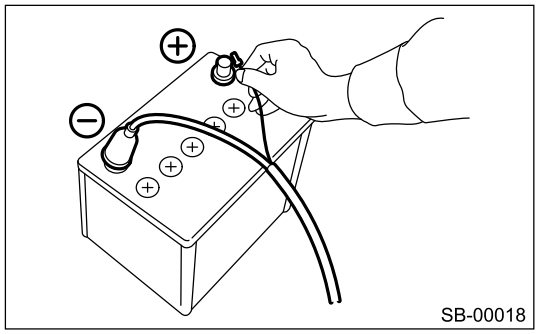
   ST: TEST HARNESS ADAPTER D (98299SA010)



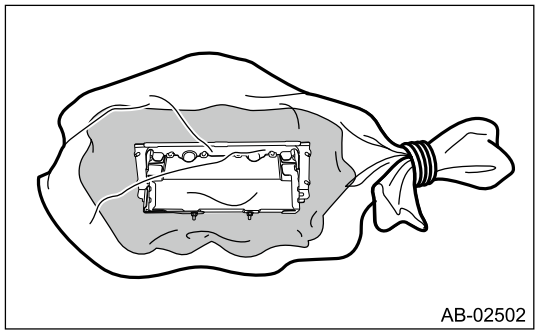
7. Connect the TEST HARNESS ADAPTER D to the knee airbag module and install the knee airbag module to the vehicle again.

   Tightening torque:

   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8. Make sure there is no one inside the vehicle.



9. Extend the wiring of AIRBAG DEPLOYMENT TOOL to the limit, and close all the windows and sunroof completely.

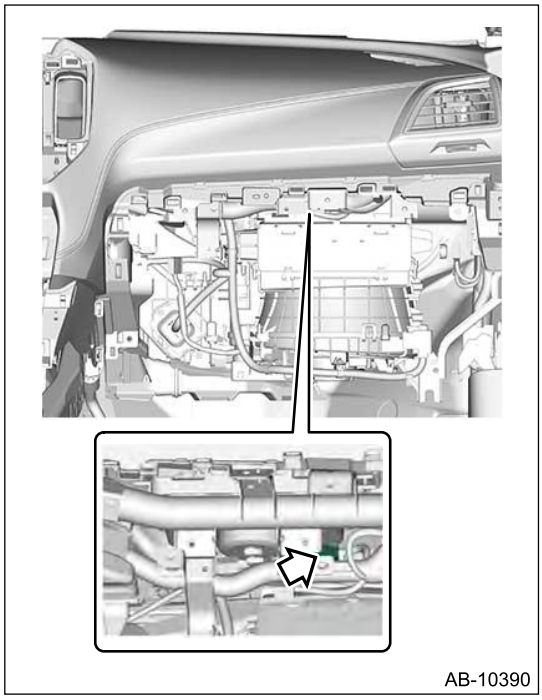


10. Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11. Connect the AIRBAG DEPLOYMENT TOOL alligator clip to the battery negative (−) terminal.
12. Connect the other cable of AIRBAG DEPLOYMENT TOOL to the battery positive (+) terminal, and activate the airbag module.

Caution:

- **After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated airbag module to water.**

13. Remove the bolts and remove knee airbag module.
14. Place the activated airbag module in a sealed vinyl bag, then discard.



Note:

When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.

3. PASSENGER'S AIRBAG MODULE

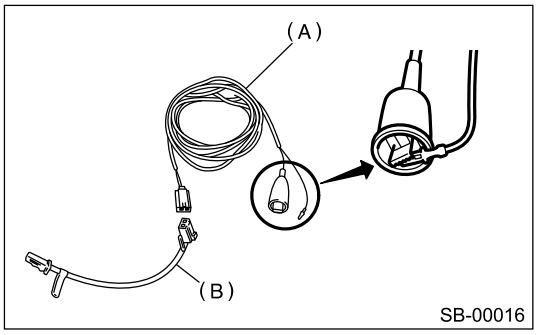
1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the glove box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
4. Disconnect the passenger's airbag module connector. Ref. to AIRBAG SYSTEM>Airbag

Connector>PROCEDURE > PASSENGER'S AIRBAG MODULE AND PRETENSIONER.

5. Short the terminal to the alligator clip furnished as AIRBAG DEPLOYMENT TOOL.

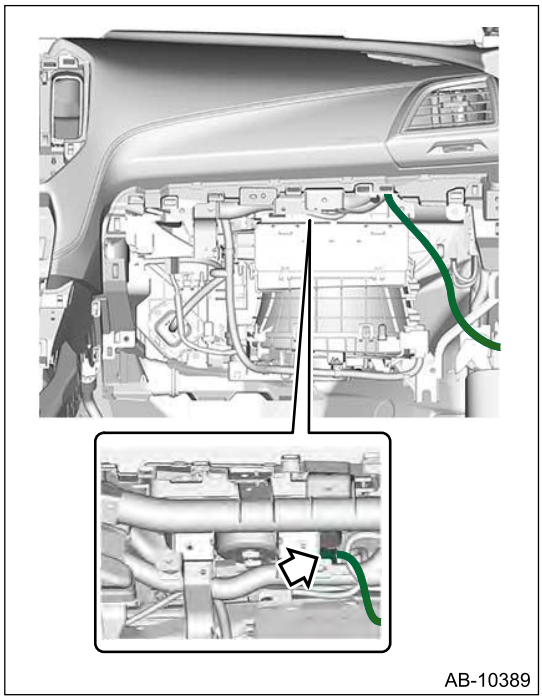
Caution:

The AIRBAG DEPLOYMENT TOOL should be kept shorted on the terminals until just before activation of airbag module.



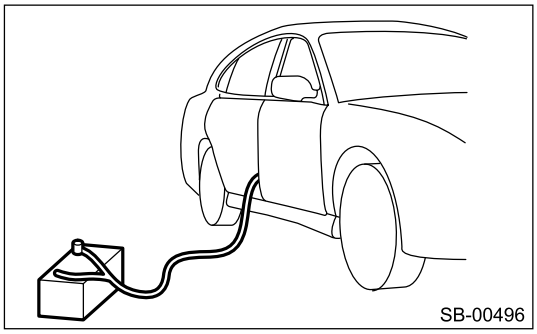
Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)



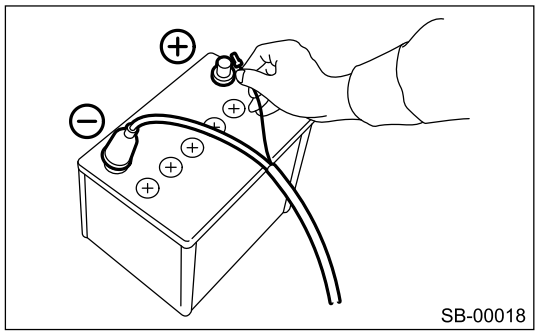
6. Connect the AIRBAG DEPLOYMENT TOOL (A) and TEST HARNESS ADAPTER AM (B).

Preparation tool:



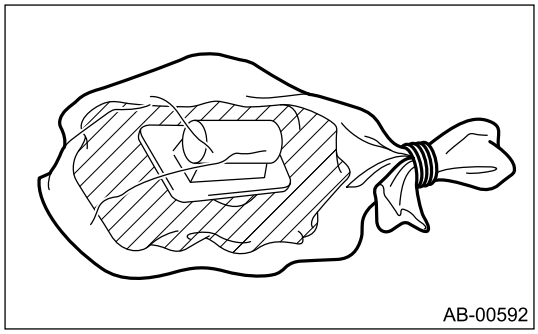
ST: TEST HARNESS ADAPTER AM (98299FJ000)

7. Connect the TEST HARNESS ADAPTER AM to the airbag connector.



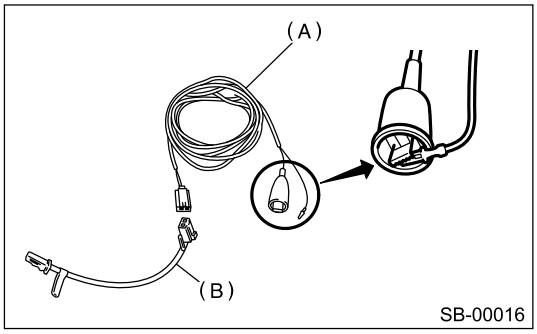
8. Make sure there is no one inside the vehicle.
9. Extend the wiring of AIRBAG DEPLOYMENT TOOL to the limit, and close all the windows and sunroof completely.

10. Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11. Connect the AIRBAG DEPLOYMENT TOOL alligator clip to the battery negative (−) terminal.
12. Connect the other cable of AIRBAG DEPLOYMENT TOOL to the battery positive (+) terminal, and activate the airbag module.



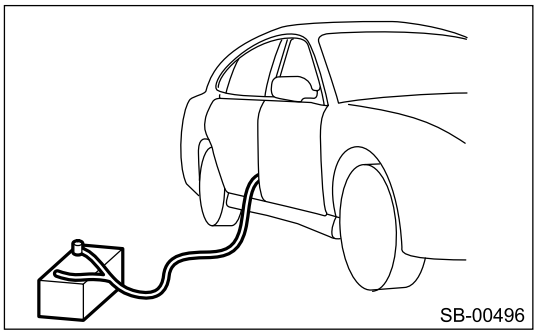
Caution:

- **After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated airbag module to water.**



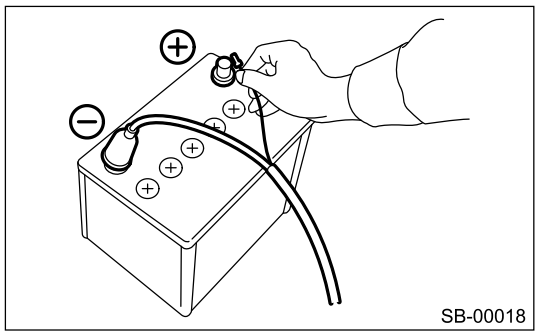
13. Remove the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.

14. Place the activated airbag module in a sealed vinyl bag, then discard.

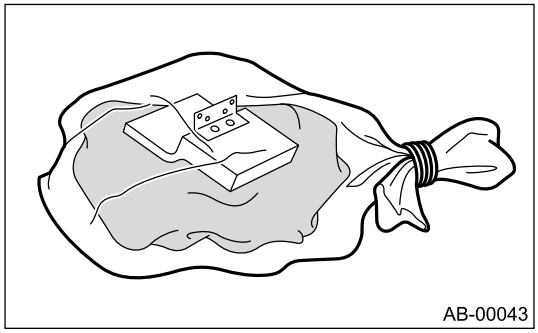


4. SIDE AIRBAG MODULE

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Disconnect the side airbag module connector under the front seat cushion. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > SIDE AIRBAG MODULE.
4. Adjust both the front seat and front seat backrest to the center positions.
5. Short the terminal to the alligator clip furnished as AIRBAG DEPLOYMENT TOOL.
   Caution:
   The AIRBAG DEPLOYMENT TOOL should be kept shorted on the terminals until just before activation of airbag module.
   Preparation tool:
   ST: AIRBAG DEPLOYMENT TOOL (98299PA030)
6. Connect the AIRBAG DEPLOYMENT TOOL (A) and test harness adapter AR (B).
   Preparation tool:
   ST: TEST HARNESS ADAPTER AR (98299CA000)



7. Connect the test harness adapter AR to the side airbag module connector (yellow).
   Caution:
   Do not place any object on front seat.
8. Make sure there is no one inside the vehicle.
9. Extend the wiring of AIRBAG DEPLOYMENT TOOL to the limit, and close all the windows and sunroof completely.



10. Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11. Connect the AIRBAG DEPLOYMENT TOOL alligator clip to the battery negative (−) terminal.
12. Connect the other cable of AIRBAG DEPLOYMENT TOOL to the battery positive (+) terminal, and activate the airbag module.

Caution:

- **After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated airbag module to water.**

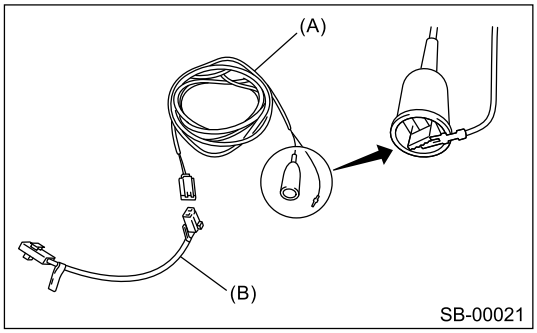
13. Remove the side airbag module. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
14. Place the activated airbag module in a sealed vinyl bag, then discard.

5. CURTAIN AIRBAG MODULE

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the roof trim. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL.
4. Disconnect the curtain airbag module connector. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE.
5. Short the terminal to the alligator clip furnished as AIRBAG DEPLOYMENT TOOL.

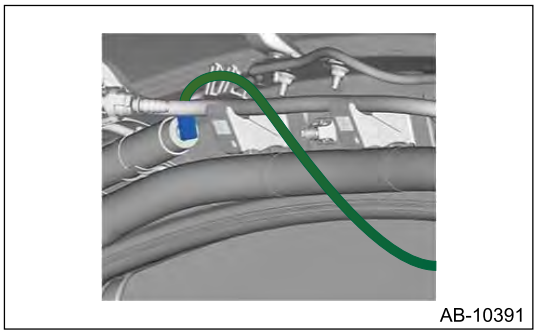
Caution:

The AIRBAG DEPLOYMENT TOOL should be kept shorted on the terminals until just before activation of airbag module.



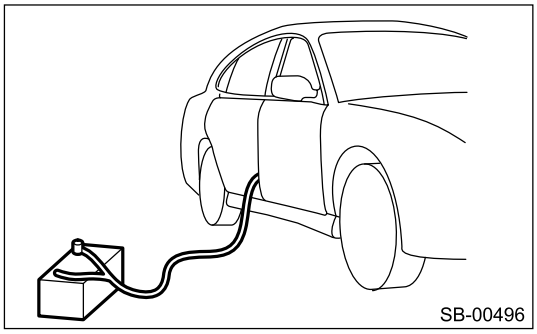
Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)



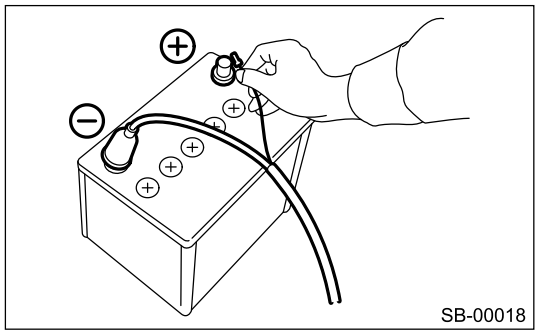
6. Connect the AIRBAG DEPLOYMENT TOOL (A) and TEST HARNESS ADAPTER D (B).

Preparation tool:

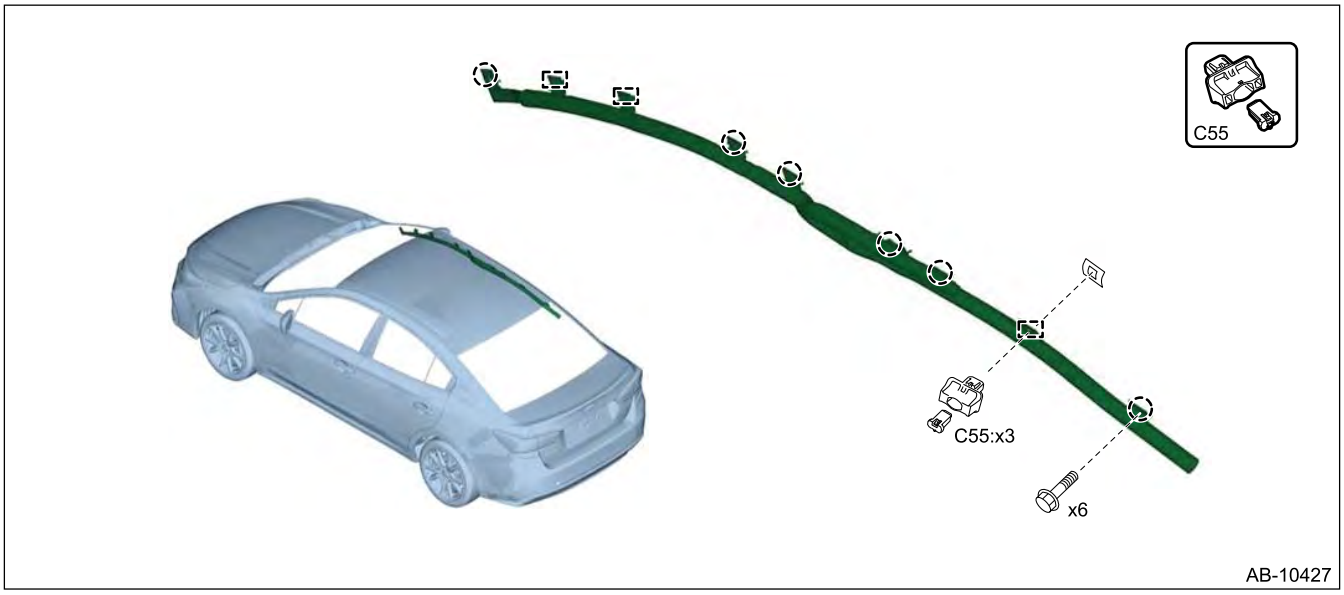


ST: TEST HARNESS ADAPTER D (98299SA010)

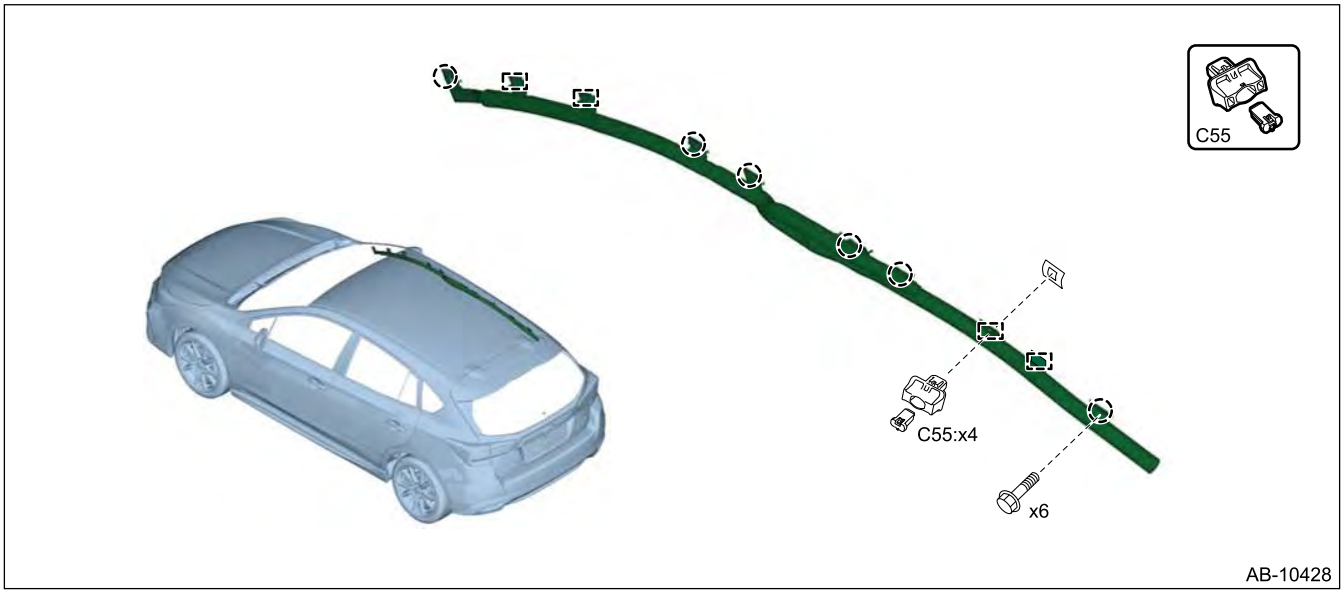
7. Connect the TEST HARNESS ADAPTER D to the curtain airbag module.



8. Make sure there is no one inside the vehicle.
9. Extend the wiring of AIRBAG DEPLOYMENT TOOL to the limit, and close all the windows and sunroof completely.

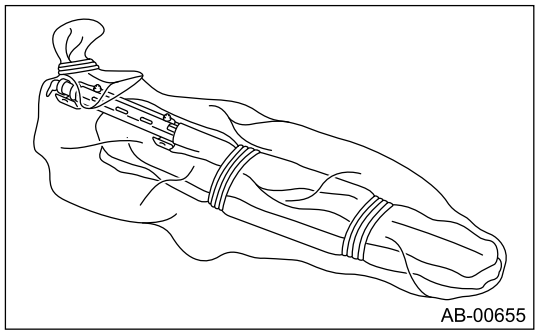


10. Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11. Connect the AIRBAG DEPLOYMENT TOOL alligator clip to the battery negative (−) terminal.
12. Connect the other cable of AIRBAG DEPLOYMENT TOOL to the battery positive (+) terminal, and activate the airbag module.



Caution:

- **After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated airbag module to water.**

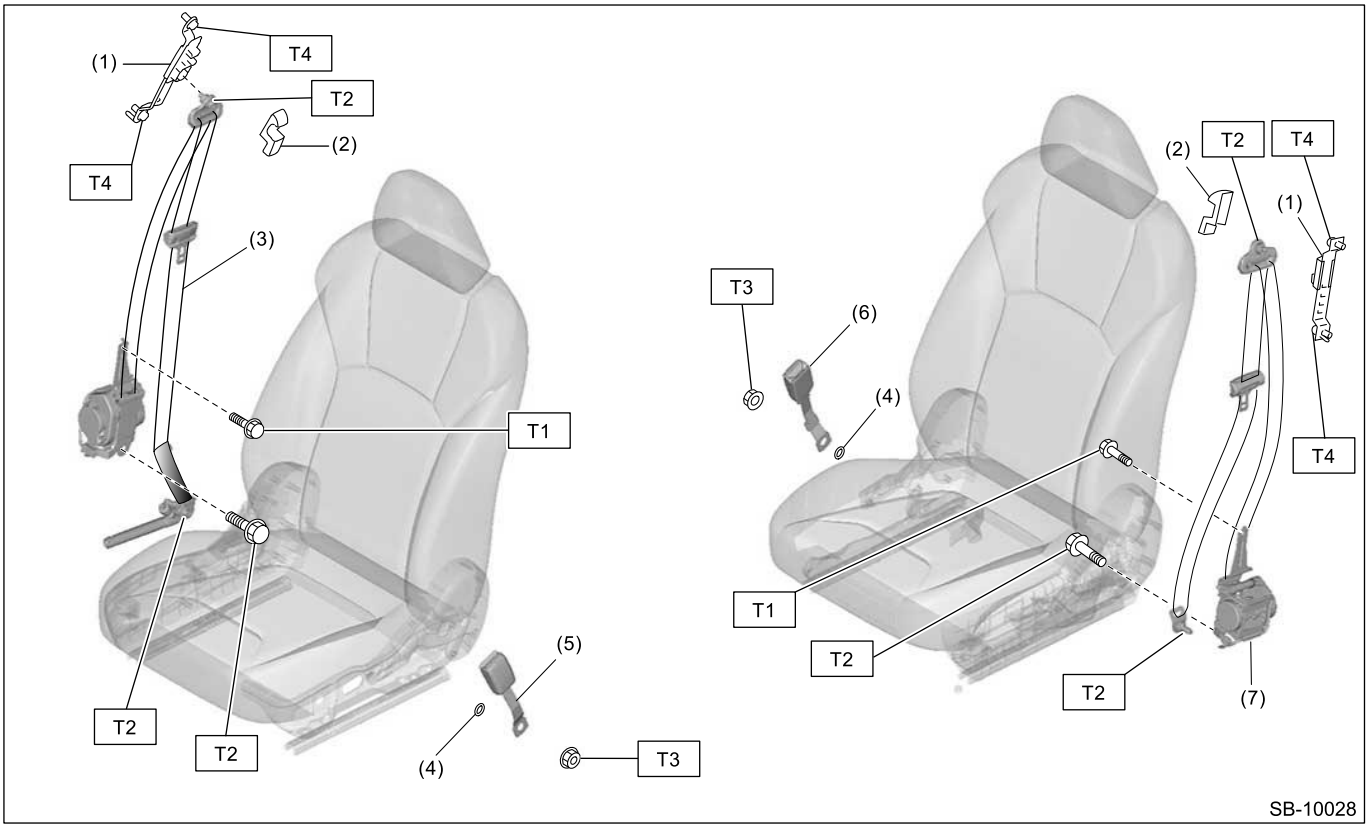


13. Remove the bolts and clips, and remove the curtain airbag module.

14. Place the activated airbag module in a sealed vinyl bag, then discard.

Note:

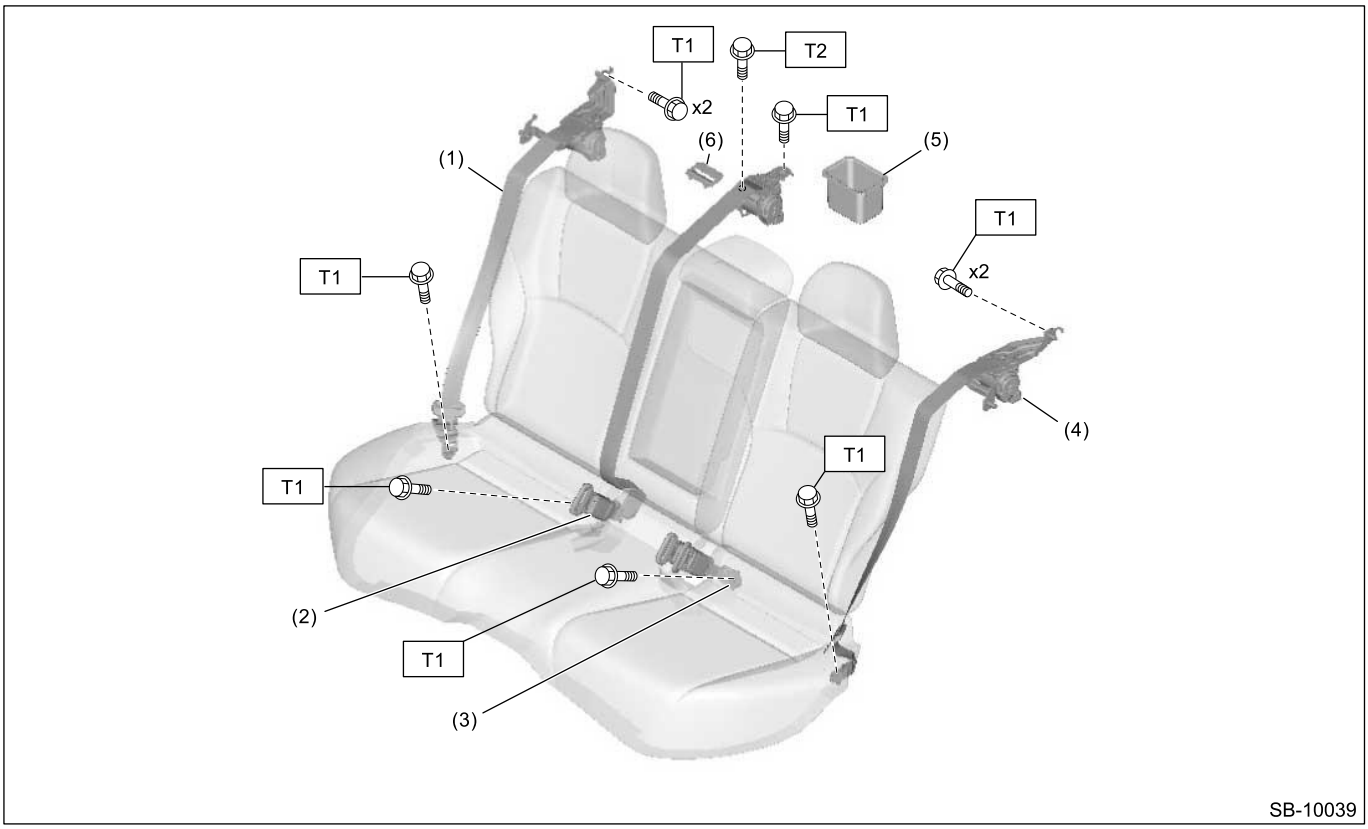
When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.



SEAT BELT SYSTEM

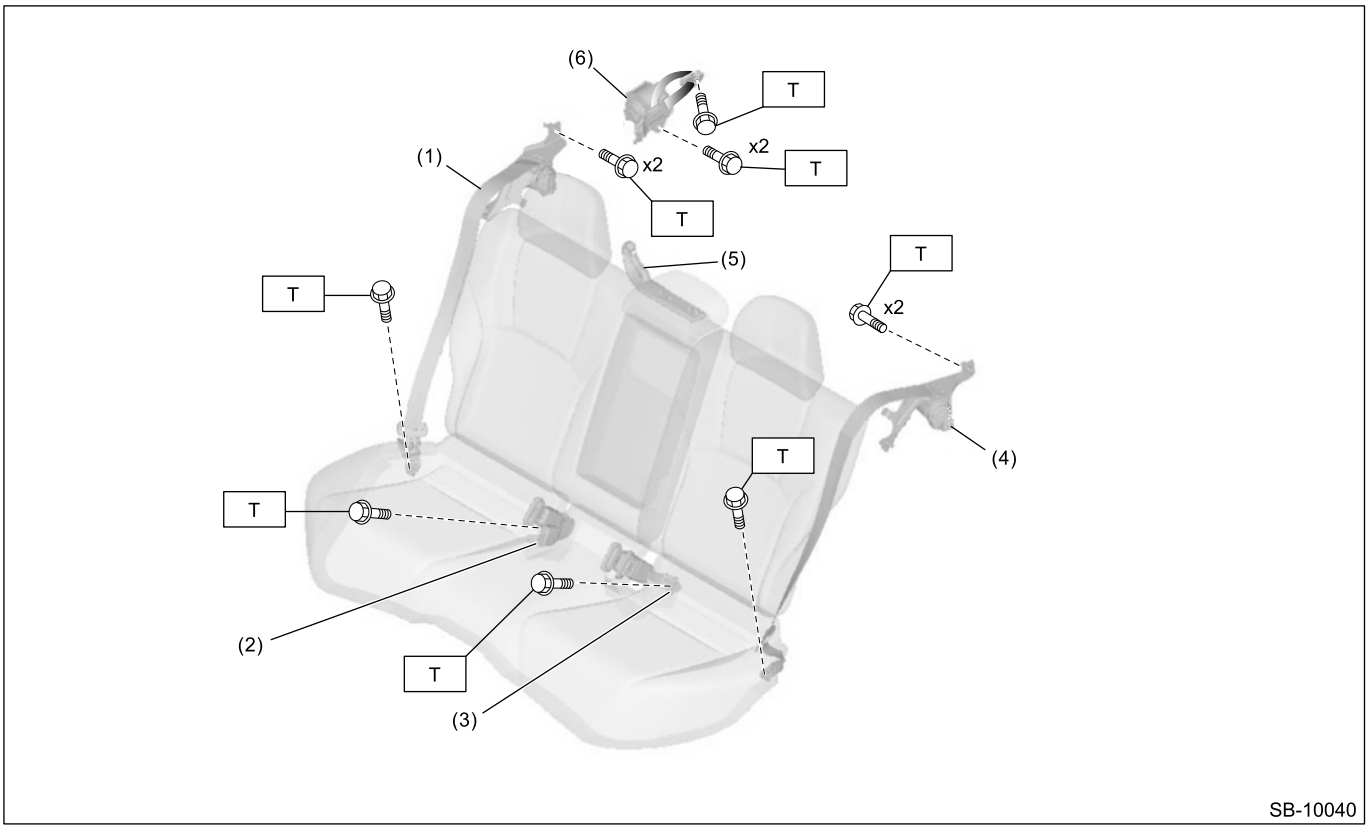
SB

1. General Description
2. Pretensioner Connector
3. Inspection Locations after a Collision
4. Seat Belt Warning System
5. Front Seat Belt
6. Rear Seat Belt
7. Disposal of Pretensioner



COMPONENT

1. FRONT SEAT BELT



(1)	Adjuster ASSY - seat belt	(6)	Seat belt inner - front LH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Cover through	(7)	Seat belt outer - front LH	***T1: 7.5 (0.8, 5.5)***
(3)	Seat belt outer - front RH (only on passenger's side with lap seat belt pretensioner)			***T2: 30 (3.1, 22.1)***
(4)	Wave washer			***T3: 38 (3.9, 28)***
(5)	Seat belt inner - front RH			***T4: 53 (5.4, 39.1)***

2. REAR SEAT BELT (4 DOOR MODEL)

(1)	Seat belt outer - rear RH	(4)	Seat belt outer - rear LH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Seat belt - rear shoulder CTR	(5)	Cover - ELR	***T1: 30 (3.1, 22.1)***
(3)	Seat belt - CTR LH	(6)	Cover - belt rear	***T2: 53 (5.4, 39.1)***

3. REAR SEAT BELT (5 DOOR MODEL)

(1) Seat belt outer - rear RH

(2) Seat belt - CTR RH

(3) Seat belt - CTR LH

(4) Seat belt outer - rear LH

(5) Belt guide CTR

(6) Seat belt - rear shoulder CTR

Tightening torque: N·m (kgf-m, ft-lb)

T: 30 (3.1, 22.1)

CAUTION

For details of the following precautions for seat belt pretensioner, refer to “AIRBAG SYSTEM” section.
Ref. to AIRBAG SYSTEM>General Description>CAUTION.

- Before performing vehicle maintenance, turn the ignition switch to OFF and wait for 60 seconds or more after disconnecting the negative terminal from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
- Do not drop or apply any impact to the pretensioner.
- Do not allow oil, grease or water to come in contact with the pretensioner.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new genuine part.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new genuine parts.
- When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not reuse a seat belt with deployed pretensioner.
- Before disposal, make sure to perform an operation process to the pretensioners. Ref. to SEAT BELT SYSTEM>Disposal of Pretensioner>PROCEDURE.
- If material from the pretensioner enters the eyes or contacts skin during operation process, wash it away with clean water, and then consult a doctor.

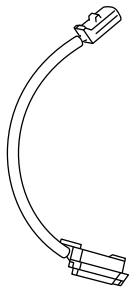
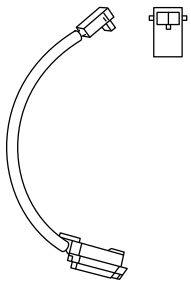
- TEST HARNESS Y

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
	98299AG040	TEST HARNESS Y	Used for troubleshooting seat belt buckle switch.



- AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module.



- TEST HARNESS ADAPTER AM

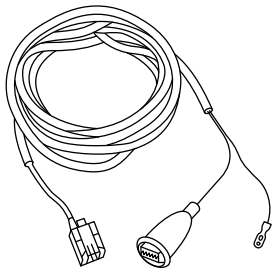


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FJ000	98299FJ000	TEST HARNESS ADAPTER AM	• Used for operation process of pretensioner. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of lap seat belt pretensioner. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of pretensioner. • Used together with each test harness adapter.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

PROCEDURE

For connectors of seat belt pretensioner, lap seat belt pretensioner and buckle switch RH, refer to “Airbag Connector” of “AIRBAG SYSTEM” section or “OCCUPANT DETECTION SYSTEM” section.

- Airbag system: Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE.
- Occupant detection system: Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Airbag Connector>PROCEDURE.

INSPECTION

Refer to “Inspection Locations after a Collision” of “AIRBAG SYSTEM” section. Ref. to AIRBAG SYSTEM>Inspection Locations after a Collision.

WIRING DIAGRAM

Refer to "Seat Belt Warning System" in the wiring diagram. Ref. to WIRING SYSTEM>Seat Belt Warning System>WIRING DIAGRAM.

INSPECTION

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **When inspecting the airbag main harness, disconnect the connectors of the driver's airbag module, passenger's airbag module and knee airbag module for safety reasons.**
- **When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.**

Trouble symptom:

- Driver's side seat belt warning light does not illuminate or it remains illuminating.
- Warning buzzer does not beep.

1. CHECK FUNCTION.

1. Sit on the driver's seat and passenger's seat and disconnect the seat belts of the both.
2. Turn the ignition switch to ON (engine OFF).
3. Check the illumination of the driver's seat belt warning light in the combination meter, and the passenger's seat belt warning light in the warning box, and the sounding of the buzzer.

Do the driver's warning light and passenger's warning light blink and the buzzer sound while blinking?

Yes Go to 2.

No Go to 8.

2. CHECK FUNCTION.

1. Wait until the buzzer sound stops in step 1. (For approximately six seconds after starting sounding)
2. Connect and disconnect the seat belts of the driver's and passenger's.
3. Check the illumination of the driver's seat belt warning light in the combination meter and the passenger's seat belt warning light in the warning box.

Do the seat belts warning light illuminate ←→ go off according to the operation?

Yes — Go to 3.

No — Go to 4.

3. CHECK FUNCTION.

1. Wait until the buzzer sound stops in step 2. (For approximately six seconds after starting sounding)
2. Start the engine, and set the vehicle speed at 20 km/h (12 MPH) or more.
3. Check the seat belt warning lights of the driver's and the passenger's, and if the warning buzzer sounds.

Do the driver's warning light and passenger's warning light blink and the buzzer sound while blinking?

Yes — Go to 4.

No — Go to 9.

4. CHECK HARNESS.

1. Disconnect the negative terminal from the battery, and wait for 60 seconds or more.
2. Disconnect the connectors of the combination meter and the driver's seat belt buckle switch.
3. Check for short circuit to battery, open circuit and short circuit to ground between the combination meter and the driver's seat belt buckle switch.
   Connector & terminal
   (i10) No. 4 — (R108) No. 1:

Is the harness normal?

Yes — Go to 5.

No — Repair or replace the harness.

5. CHECK HARNESS.

Measure the resistance between the driver's seat belt buckle switch and chassis ground.
Connector & terminal
(R108) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 6.

No — Repair or replace the harness.

6. CHECK DRIVER'S SEAT BELT BUCKLE SWITCH.

Measure the resistance between the connector terminals of the driver's seat belt switch when the driver's seat belt is fastened and detached.
Connector & terminal
(R108) No. 1 — (R108) No. 2:

Is the resistance when the belt is fastened 1 MΩ or more, and less than 10 Ω when the belt is detached?

Yes — Go to 7.

No — Replace the seat belt inner - front LH. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT OUTER - FRONT.

7. CHECK DATA MONITOR.

1. Sit in the passenger's seat.
2. Using Subaru Select Monitor, select [Data monitor] and display the data of [Belt Buckle Switch RH].
   Note:
   For detailed operation procedures, refer to "Application help".
3. Fasten and detach the passenger's side seat belt buckle, and read the data of the seat belt switch. Ref. to COMBINATION METER (DIAGNOSTICS)>Data Monitor>OPERATION.

Does the seat belt switch display [Belted] ←→ [Unbelted] according to the operation of the seat belt buckle?

Yes — Go to 9.

No — Go to 8.

8. CHECK AIRBAG SYSTEM AND OCCUPANT DETECTION SYSTEM.

Perform the check in accordance with the diagnostic procedure DTC B1650 of the airbag system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION.

Is the inspection result normal?

Yes — Go to 9.

No — Repair or replace with new parts according to DTC B1650.

9. CHECK PASSENGER'S SEAT BUCKLE SWITCH.

Perform the check in accordance with the diagnostic procedure DTC B1655 of the occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1655 FRONT BUCKLE SWITCH RH FAILURE.

Is the inspection result normal?

Yes — Go to 10.

No — Repair or replace with new parts according to DTC B1655.

10. CHECK AIRBAG CONTROL MODULE AND COMBINATION METER.

Perform the inspection according to the basic diagnostic procedure for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the inspection result normal?

Yes — Go to 11.

No — Repair or replace with new parts according to the diagnostic procedure.

11. CHECK WARNING BOX POWER SUPPLY VOLTAGE.

1. Disconnect the warning box connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between the ignition power supply and the warning box.
   Connector & terminal
   (R161) No. 3 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes — Go to 12.

No — Check the harness for open or short between the fuse and the warning box.

12. CHECK WARNING BOX GROUND CIRCUIT.

1. Turn the ignition switch to OFF.
2. Measure the resistance between the warning box and chassis ground.
   Connector & terminal
   (R161) No. 1 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 13.

No — Repair or replace the harness.

13. CHECK HARNESS BETWEEN WARNING BOX AND COMBINATION METER.

1. Disconnect the harness of the warning box and the combination meter.
2. Measure the resistance between warning box and combination meter.
   Connector & terminal
   (R161) No. 2 — (i10) No. 12:

Is the resistance less than 10 Ω?

Yes — Go to 14.

No — Repair or replace the harness.

14. CHECK COMMUNICATION STATUS BETWEEN WARNING BOX AND COMBINATION METER.

1. Remove the warning box, and install a properly operating warning box (new warning box).
2. Connect the connector and then turn the ignition switch to ON.
   Connector & terminal
   (R161) No. 2 — (i10) No. 12:

Is the warning box properly displayed?

Yes — Replace the warning box.

No — Replace the combination meter case assembly.

REMOVAL

1. SEAT BELT OUTER - FRONT

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**
- **Do not drop or subject the pretensioner to any impact.**
- **Since the pretensioner and bracket are integrated as a unit, do not disassemble them.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

   Note:

   For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
3. Tilt the front seat backrest assembly forward, and move the front seat all the way forward.

   Caution:

   For the power seat, move the seat, disconnect the battery ground cable, and then wait for 60 seconds or more before starting work.
4. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
5. Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. (On the side where seat belt assembly is removed) Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
6. Remove the seat belt outer - front.
   (1) Turn over the floor mat to disconnect the belt tension sensor connector. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > PASSENGER'S AIRBAG MODULE AND PRETENSIONER.

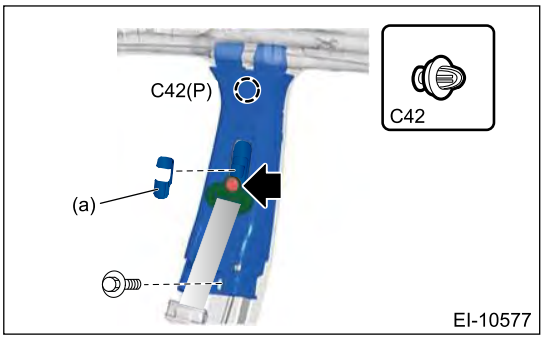
   Note:

   Also disconnect the connector of the passenger's lap seat belt pretensioner. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > KNEE AIRBAG MODULE AND PASSENGER'S LAP SEAT BELT PRETENSIONER.

   (2) Remove the cover through, and remove the seat belt anchor bolt.
   (3) Remove the bolt to remove the seat belt retractor.
   (4) Remove the lower anchor bolt, and remove the seat belt outer - front.
   - Driver's side

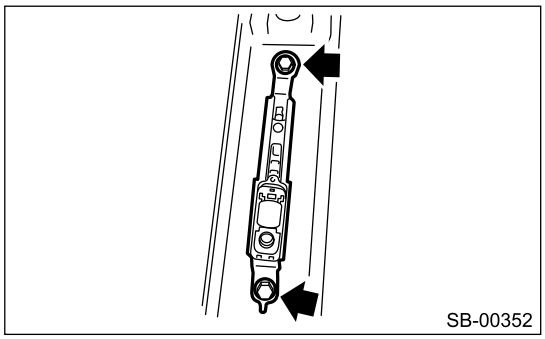
- Passenger’s side

7. Remove the adjuster assembly - seat belt.



(1) Remove the cover through (a), and remove the seat belt anchor bolt.

(2) Remove the bolt on the lower side of the trim panel - center pillar UPR.



(3) Remove the clip by pulling the upper part of the trim toward you, and while lowering the entire trim, remove the trim panel - center pillar UPR.

Caution:

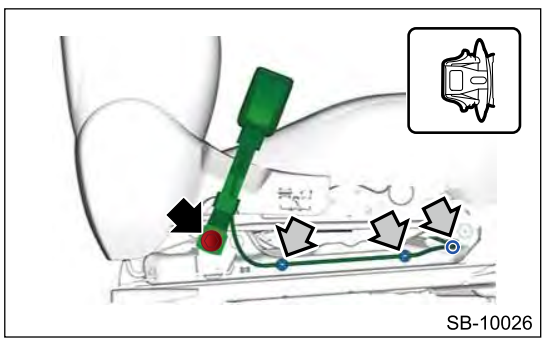
Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.

(4) Remove the bolts, and then remove the adjuster assembly - seat belt.

2. SEAT BELT INNER - FRONT

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.



1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

   Note:

   For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
3. Remove the front seats. Ref. to SEATS>Front Seat>REMOVAL.
4. Remove the seat belt inner - front.

   (1) Remove the clip for the inner seat belt harness located under the seat cushion.

   (2) Remove the nut, and remove the seat belt inner - front.

SEAT BELT SYSTEM > Front Seat Belt

INSTALLATION

1. SEAT BELT OUTER - FRONT

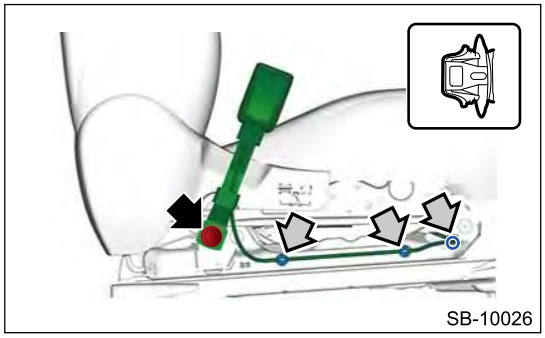
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **The parts of the driver and passenger sides are not the same. Before installation, make sure that the correct part is used.**
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belt can be pulled out and retracted smoothly.**
- **Make sure that the seat belt harness is not caught anywhere. Wrong harness rooting may cause the harness short from pinch.**
- **Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.**

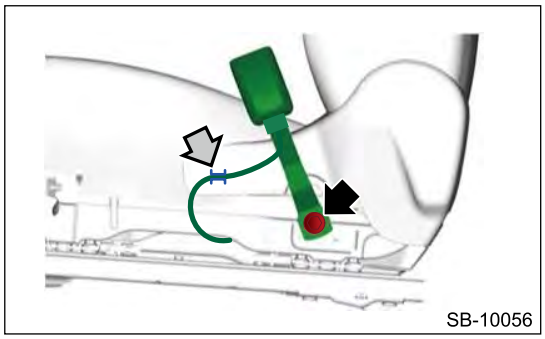
1. Before installation, perform a unit inspection of retractor. Ref. to SEAT BELT SYSTEM>Front Seat Belt>INSPECTION.
2. Install the adjuster assembly - seat belt and the seat belt outer - front.
   Tightening torque:
   Front seat belt: Ref. to SEAT BELT SYSTEM>General Description>COMPONENT > FRONT SEAT BELT.
3. Install the trim panel - center pillar UPR.
   Tightening torque
   Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4. Install the trim panel - center pillar LWR, cover side sill - front INN, and cover side sill - rear INN.

Note:

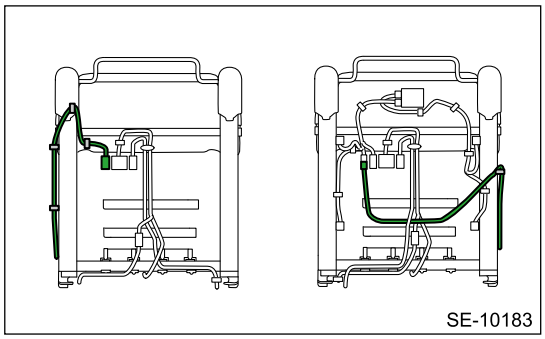
Assemble the trim panel - center pillar LWR and the trim panel - center pillar UPR securely.



5. Install the rear seat cushion assembly.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
7. After installation, check the following points.
   - The seat belt is not twisted.
   - The seat belt can be pulled out and retracted smoothly.
   - The adjuster assembly - seat belt can be moved smoothly.
   - Check that the airbag warning light lights up for approximately 6 seconds and then turns off when connecting the battery ground cable and turning the ignition switch to ON.



2. SEAT BELT INNER - FRONT



Caution:

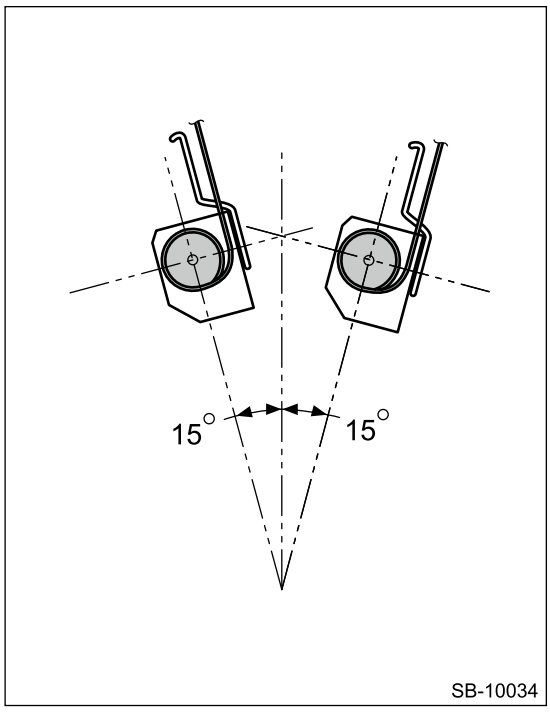
- **Before installation, make sure that the correct part is used.**
- **During installation, make sure that the seat belts are not twisted.**
- **Check that there is no pinching of the seat belt harness. Wrong harness rooting may cause the harness short from pinch.**
- **Do not forget the wave washer, when installing front seat inner belt assembly.**
- **If the passenger's seat is removed, be sure to perform [Rezero] for the occupant detection system after installing the seat to the vehicle.**

1. Install the seat belt inner - front.
   (1) Install the wave washer, seat belt inner - front and nut in order and then tighten the nut.
   Tightening torque:
   53 N·m (5.4 kgf-m, 39.1 ft-lb)
   (2) Locate the seat belt harness and retain it with a harness clip.

2. Install the seat assembly to the body. Ref. to SEATS>Front Seat>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
4. If the passenger's seat is removed, make sure to perform [Rezero] in the occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

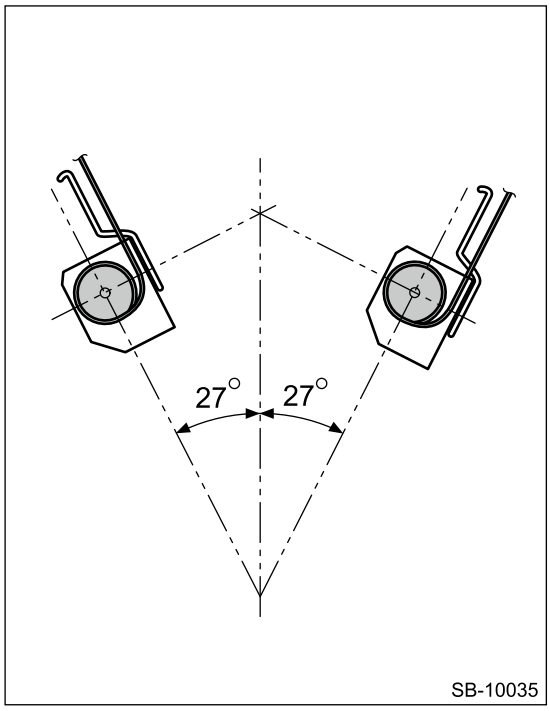
SEAT BELT SYSTEM > Front Seat Belt

INSPECTION



1. VISUAL INSPECTION

Check for the following, and replace with new parts if necessary.



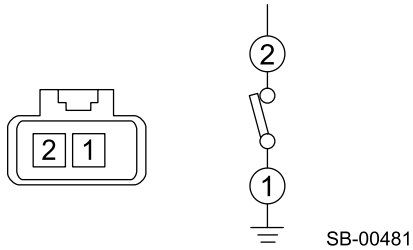
- Pretensioner is cracked or deformed.
- Adjuster assembly - seat belt is cracked or deformed.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - front is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

1. Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2. Tilt the retractor from the upright posture and check the following points.
   - It does not lock if the inclination angle is 15° or less.

- It remains locked if the inclination angle is 27° or more.

3. If the ELR lock mechanism does not operate properly, replace the seat belt outer - front with a new part.



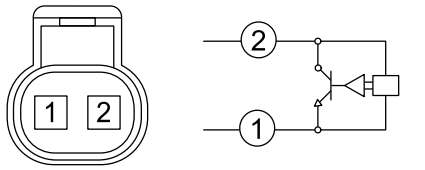
3. SEAT BELT SWITCH INSPECTION

Preparation tool:

Circuit tester

- Driver's seat

  Measure the resistance between the terminals when the seat belt inner - front is in each of the following operation conditions.



Terminal No.	Inspection conditions	Standard	Circuit
2 — 1	Tongue plate inserted	1 MΩ or more	
2 — 1	Tongue plate detached	1 Ω or less	

  Replace the seat belt inner - front if the inspection result is not within the standard.

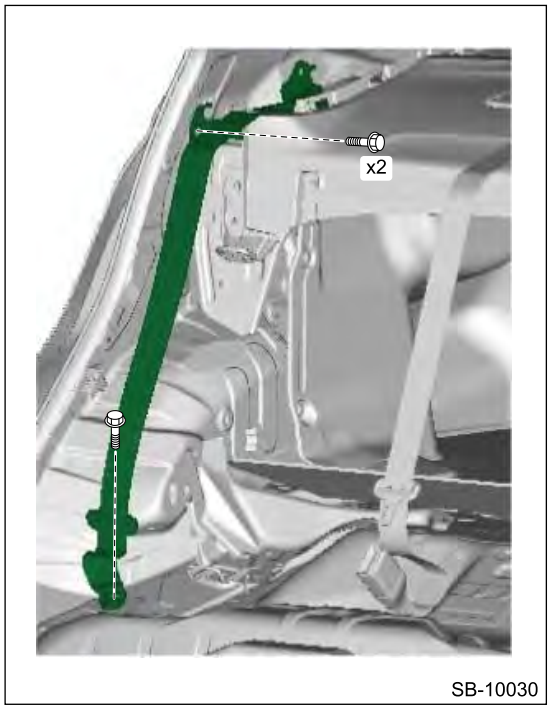
- Passenger's seat

  Measure the current value between the terminals when the seat belt inner - front is in each of the following operation conditions.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Tongue plate inserted	12 — 18 mA	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Tongue plate detached	4 — 7 mA	 SB-00482

Replace the seat belt inner - front if the inspection result is not within the standard.



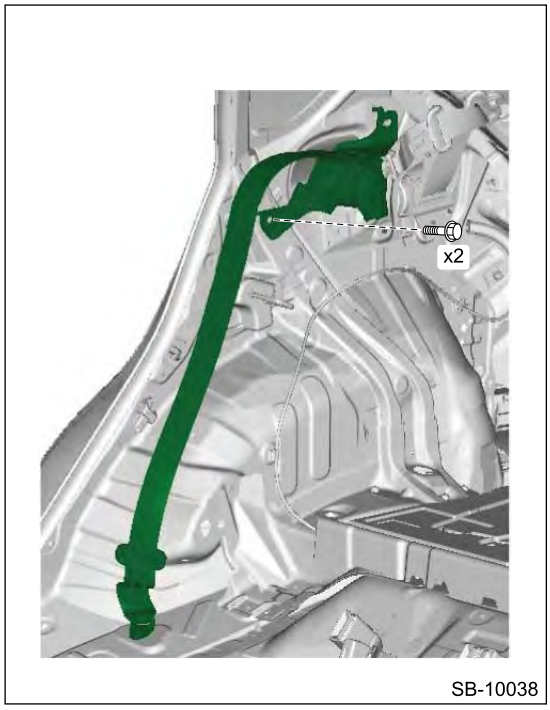
REMOVAL

1. SEAT BELT OUTER - REAR RH AND LH (4 DOOR MODEL)

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the cover side sill - rear INN. (On the side where seat belt assembly is removed) Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
5. Remove the trim panel - rear pillar LWR and the trim panel - rear pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 4 DOOR MODEL.
6. Remove the bolts, and remove the seat belt outer - rear.

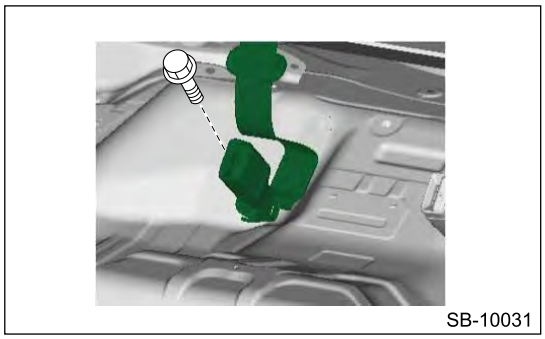


2. SEAT BELT OUTER - REAR RH AND LH (5 DOOR MODEL)

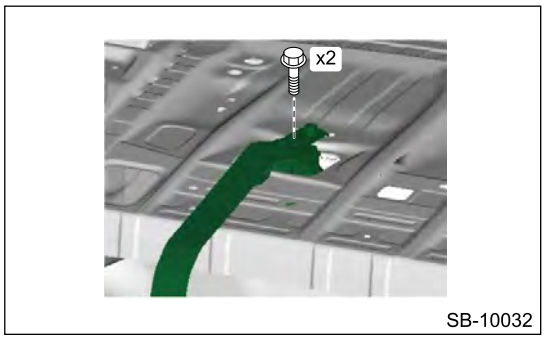
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the rear quarter trim. (On the side where seat belt assembly is removed) Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
5. Remove the bolts, and remove the seat belt outer - rear.



3. SEAT BELT - REAR SHOULDER CTR (4 DOOR MODEL)



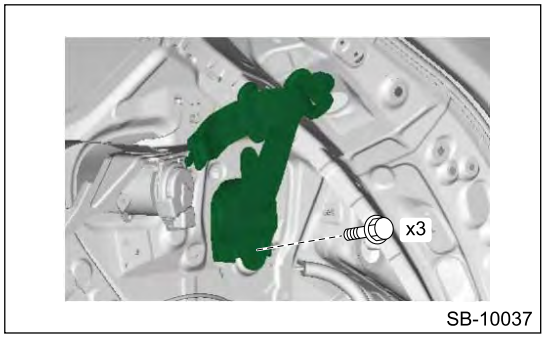
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the side sill cover - rear INN, trim panel - rear pillar LWR, and trim panel - rear pillar UPR on the RH and LH sides. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL.
5. Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.

SB-10031

6. Remove the trim panel - rear shelf assembly. Ref. to EXTERIOR/INTERIOR TRIM>Rear Shelf Trim>REMOVAL.
7. Remove the bolts, and remove the seat belt - rear shoulder CTR.



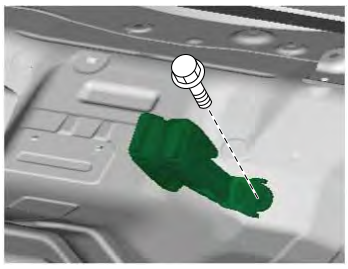
SB-10032

4. SEAT BELT - REAR SHOULDER CTR (5 DOOR MODEL)

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the rear quarter trim RH. (On the side where seat belt assembly is removed) Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
5. Remove the bolts, and remove the seat belt - rear shoulder CTR.



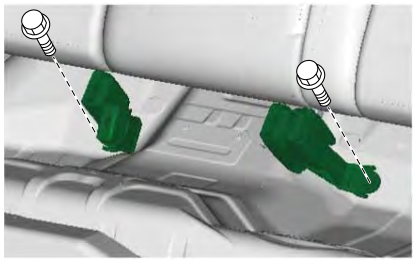
SB-10037

5. SEAT BELT - CTR LH (4 DOOR MODEL)

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the bolts, and remove the seat belt - CTR LH.



SB-10033

6. SEAT BELT - CTR RH AND LH (5 DOOR MODEL)

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the bolts, and remove the seat belt - CTR RH and LH.

SB-10036

SEAT BELT SYSTEM > Rear Seat Belt

INSTALLATION

1. SEAT BELT OUTER - REAR RH AND LH (4 DOOR MODEL)

1. Before installation, perform a unit inspection of retractor. Ref. to SEAT BELT SYSTEM>Rear Seat Belt>INSPECTION.
2. Install the seat belt outer - rear.

   Caution:
   - **During installation, make sure that the seat belts are not twisted.**
   - **After installation, make sure that the seat belts are smoothly extended and wound.**

   Tightening torque:

   Refer to "COMPONENT" of "General Description" for the tightening torque. : Ref. to SEAT BELT SYSTEM>General Description>COMPONENT > REAR SEAT BELT (4 DOOR MODEL).
3. Install the trim panel - rear pillar LWR, trim panel - rear pillar UPR, and cover side sill - rear INN.
4. Install the rear seat cushion assembly.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
6. After installation, check the following points.
   - The seat belt is not twisted.
   - The seat belt can be pulled out and retracted smoothly.

2. SEAT BELT OUTER - REAR RH AND LH (5 DOOR MODEL)

1. Before installation, perform a unit inspection of retractor. Ref. to SEAT BELT SYSTEM>Rear Seat Belt>INSPECTION.
2. Install the seat belt outer - rear.

   Caution:
   - **During installation, make sure that the seat belts are not twisted.**
   - **After installation, make sure that the seat belts are smoothly extended and wound.**

   Tightening torque:

   Rear seat belt: Ref. to SEAT BELT SYSTEM>General Description>COMPONENT > REAR SEAT BELT (5 DOOR MODEL).
3. Install the rear quarter trim.
4. Install the cover side sill - rear INN.
5. Install the rear seat cushion assembly.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
7. After installation, check the following points.
   - The seat belt is not twisted.
   - The seat belt can be pulled out and retracted smoothly.

3. SEAT BELT - REAR SHOULDER CTR (4 DOOR MODEL)

1. Install the retractor of seat belt - rear shoulder CTR.

   Tightening torque:

   Refer to "COMPONENT" of "General Description" for the tightening torque. : Ref. to SEAT BELT SYSTEM>General Description>COMPONENT > REAR SEAT BELT (4 DOOR MODEL).
2. Install the trim panel assembly - rear shelf.
3. Install the lower anchor of seat belt - rear shoulder CTR.

   Caution:
   - **During installation, make sure that the seat belts are not twisted.**
   - **After installation, make sure that the seat belts are smoothly extended and wound.**

   Tightening torque:

   30N·m (3.1 kgf-m, 22.1 ft-lb)
4. Install the trim panel - rear pillar LWR, trim panel - rear pillar UPR, and cover side sill - rear INN.
5. Install the rear seat cushion assembly.

6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
7. After installation, check the following points.
   - The seat belt is not twisted.
   - The seat belt can be pulled out and retracted smoothly.

4. SEAT BELT - REAR SHOULDER CTR (5 DOOR MODEL)

1. Install the seat belt - rear shoulder CTR.
   Tightening torque:
   Rear seat belt: Ref. to SEAT BELT SYSTEM>General Description>COMPONENT > REAR SEAT BELT (5 DOOR MODEL).
2. Install the rear quarter trim.
3. Install the rear seat cushion assembly.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
5. After installation, check the following points.
   - The seat belt is not twisted.
   - The seat belt can be pulled out and retracted smoothly.

5. SEAT BELT - CTR LH (4 DOOR MODEL)

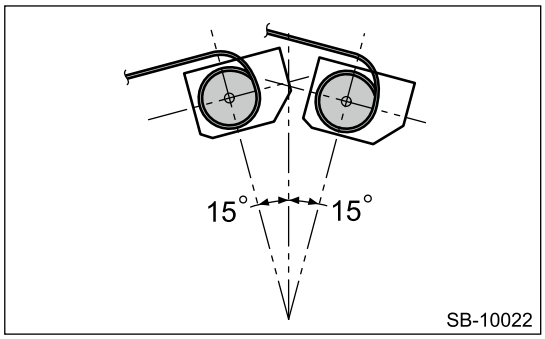
1. Install the seat belt - CTR LH.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
2. Install the rear seat cushion assembly.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
4. After installation, check the following points.
   - The seat belt is not twisted.
   - The seat belt engagement can be performed smoothly.

6. SEAT BELT - CTR RH AND LH (5 DOOR MODEL)

1. Install the seat belt - CTR RH and LH.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
2. Install the rear seat cushion assembly.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
4. After installation, check the following points.
   - The seat belt is not twisted.
   - The seat belt engagement can be performed smoothly.

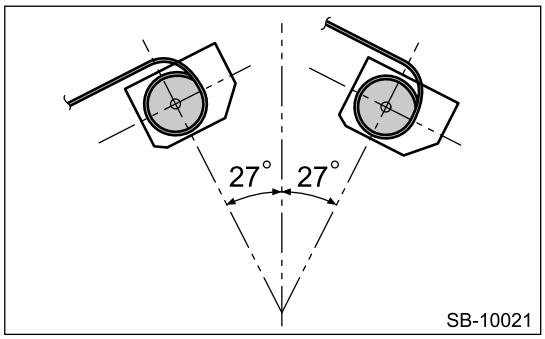
SEAT BELT SYSTEM > Rear Seat Belt

INSPECTION



1. VISUAL INSPECTION

Check for the following, and replace with new parts if necessary.



- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - rear is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

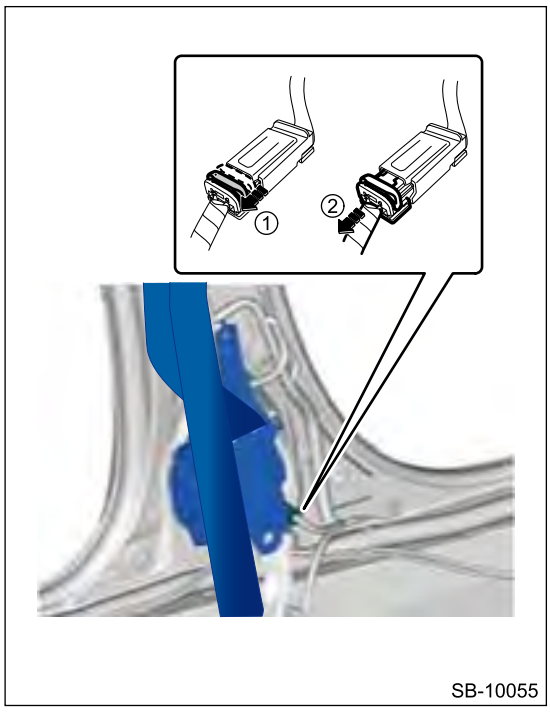
1. Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2. Tilt the retractor from the upright posture and check the following points.
   - It does not lock if the inclination angle is 15° or less.

   - It remains locked if the inclination angle is 27° or more.

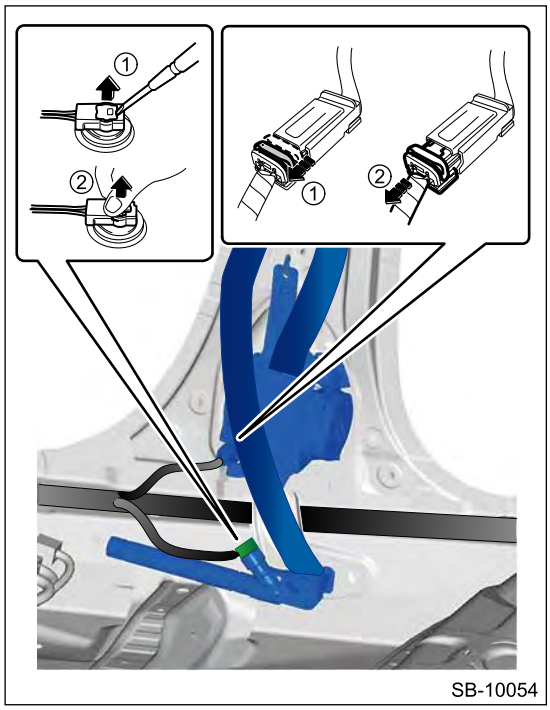
3. If the ELR lock mechanism does not operate properly, replace the seat belt outer - rear with a new part.

PROCEDURE

Warning:



Make sure to follow the instructions below. Otherwise, personal injuries may occur.



- **Before discarding a pretensioner, always perform an activation process to prevent any false activation.**
- **Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.**
- **Do not touch the pretensioner just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.**

Caution:

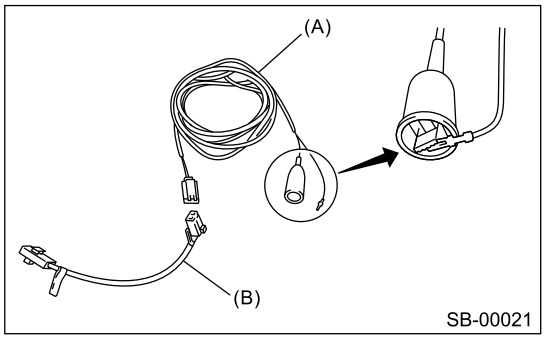
- **Perform a pretensioner operation process in a safe, level place. Do not perform the process outdoors when there is a strong rain or wind.**
- **Do not drop or damage the pretensioner.**
- **A large explosive noise will occur when the pretensioner is deployed. Warn persons in the area, and do not allow anyone to approach a radius of 5 m (16 ft) from the discard location.**
- **After activating the pretensioner, smoke may arise. Therefore, always perform an operation process in a well-ventilated place without any smoke sensor.**
- **Do not expose the activated pretensioner to water.**
- **Wrap the activated pretensioner in a sealed vinyl bag when discarding.**
- **If it is impossible to perform a pretensioner activation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.**

1. Fold the backrest all the way forward, and move the front seat all the way forward.
2. Turn the ignition switch to OFF.
3. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
   Ref. to REPAIR CONTENTS>NOTE > SAFETY.
4. Disconnect connector of the pretensioner.

5. Short the alligator clip and terminal of the airbag deployment tool together.

Caution:

Short the airbag deployment tool terminals until just before the pretensioner operation process.

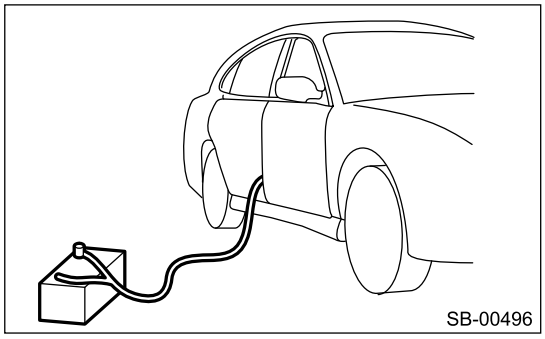


Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6. Connect airbag deployment tool (A) and test harness adapter AM (B).

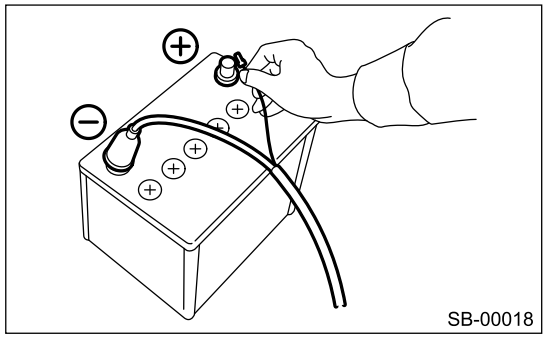
Preparation tool:



ST: TEST HARNESS ADAPTER AM (98299FJ000)

7. Connect the test harness adapter AM connector to the pretensioner.

8. Make sure there is no one inside the vehicle.



9. Extend the wiring of the airbag deployment tool to its limit, and completely close all the windows and sunroof.

10. Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.
11. Connect the airbag deployment tool alligator clip to the battery negative (−) terminal.
12. Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

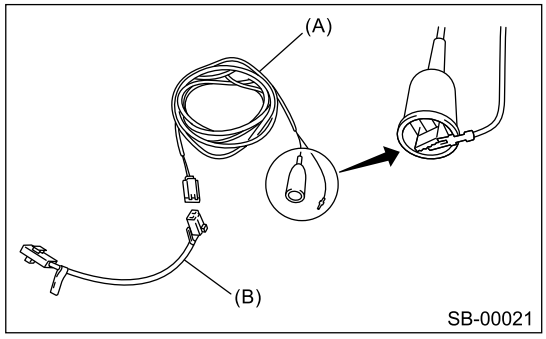
Caution:

- **After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated pretensioner to water.**

13. Perform operation process of lap seat belt pretensioner from steps 14) to 22) for the passenger's side.
14. Disconnect the connector from the lap seat belt pretensioner.
15. Short the alligator clip and terminal of the airbag deployment tool together.

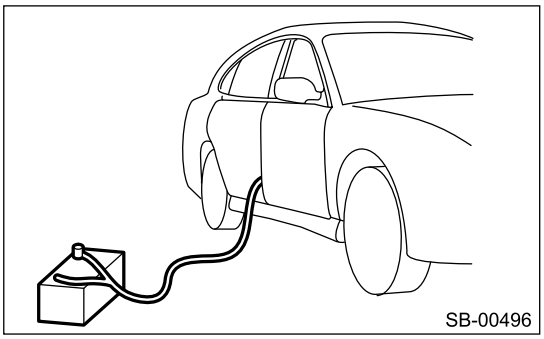
Caution:

Short the airbag deployment tool terminals until just before the pretensioner operation process.



Preparation tool:

ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

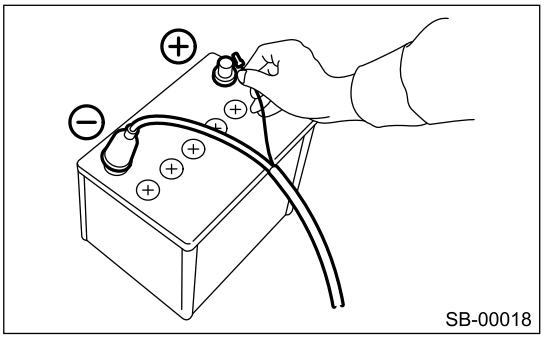


16. Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:

ST: TEST HARNESS ADAPTER D (98299SA010)

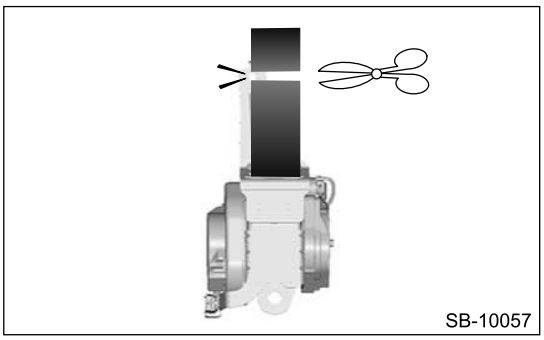
17. Connect the test harness adapter D connector to the lap seat belt pretensioner.
18. Make sure there is no one inside the vehicle.
19. Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



20. Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.

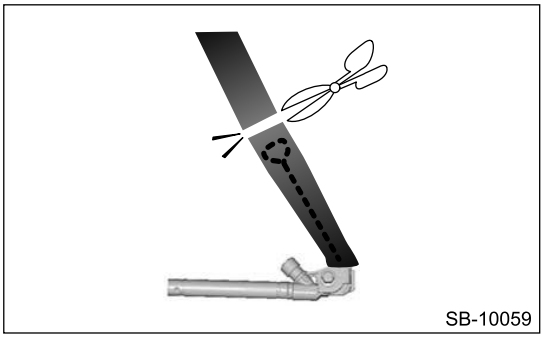
21. Connect the airbag deployment tool alligator clip to the battery negative (−) terminal.

22. Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

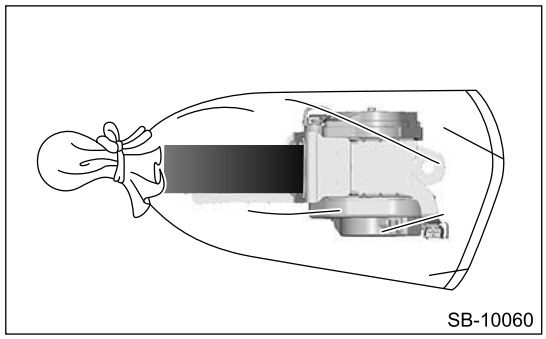


Caution:

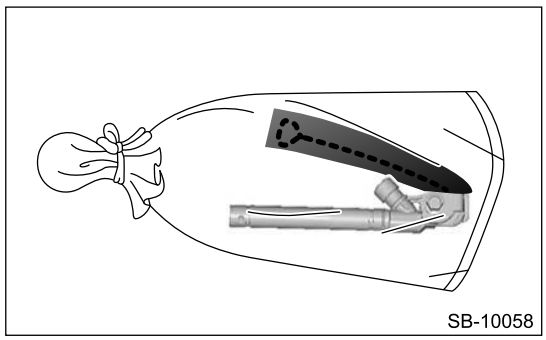
- **After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated pretensioner to water.**



23. Remove the seat belt outer - front. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL.



24. Cut the seat belt at a position as close as possible to the seat belt retractor.



25. Cut the seat belt at a position as close as possible to the lap seat belt pretensioner.

26. Place the activated pretensioner in a sealed vinyl bag, then discard.

SB-10060

SB-10058

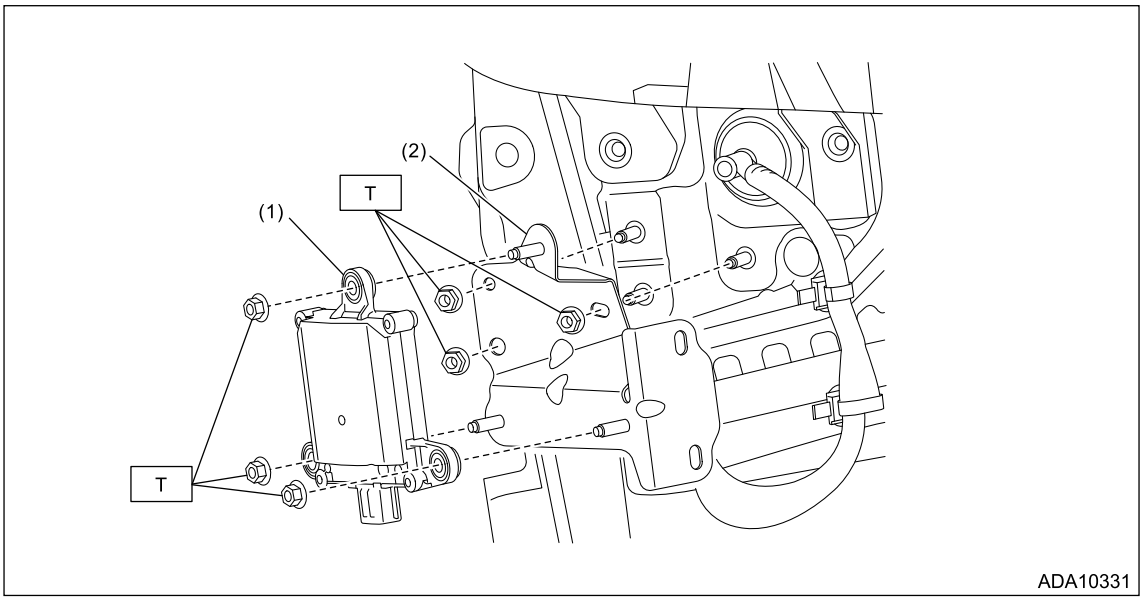
Blind Spot Detection/Rear Cross Traffic Alert

RVD

1. General Description
2. Relay and Fuse
3. Blind Spot Detection/Rear Cross Traffic Alert
4. Radar Sensor
5. Switches and Harness
6. Combination Meter
7. Outer Mirror Assembly
8. Diagnostics with Phenomenon

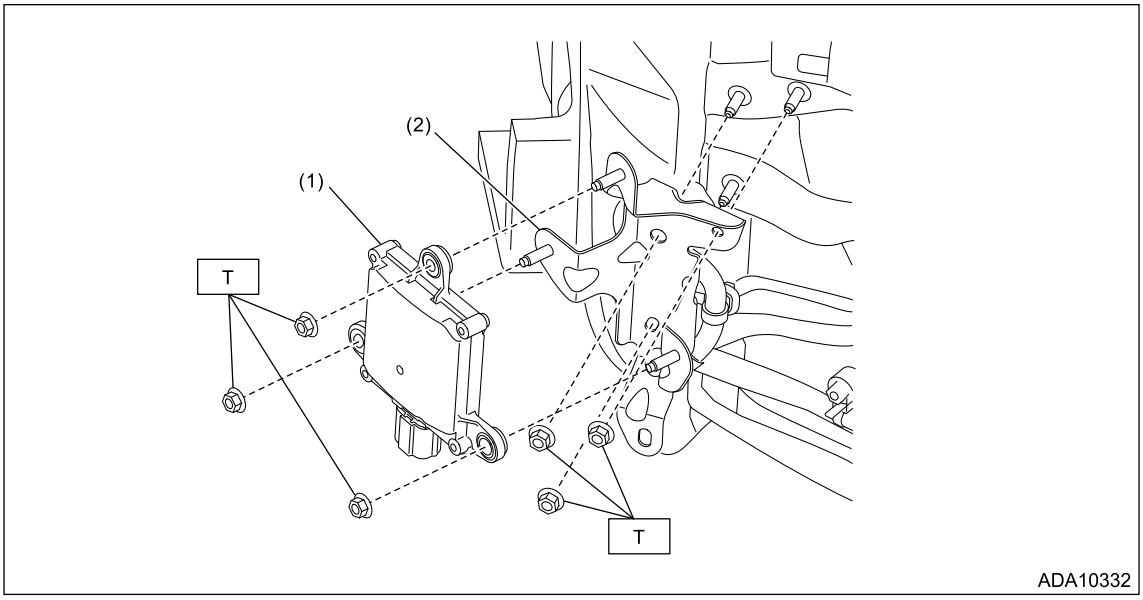
Blind Spot Detection/Rear Cross Traffic Alert > General Description

LOCATION



For location, refer to “LOCATION” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Electrical Component Location>LOCATION.

Blind Spot Detection/Rear Cross Traffic Alert > General Description



COMPONENT

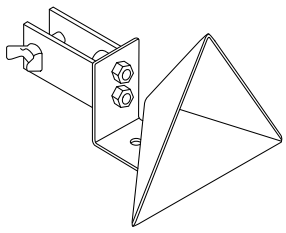
1. RADAR SENSOR

- 4 door model

- 5 door model

(1) Radar sensor (master & slave) (2) Radar bracket

Tightening torque: N·m (kgf-m, ft-lb)

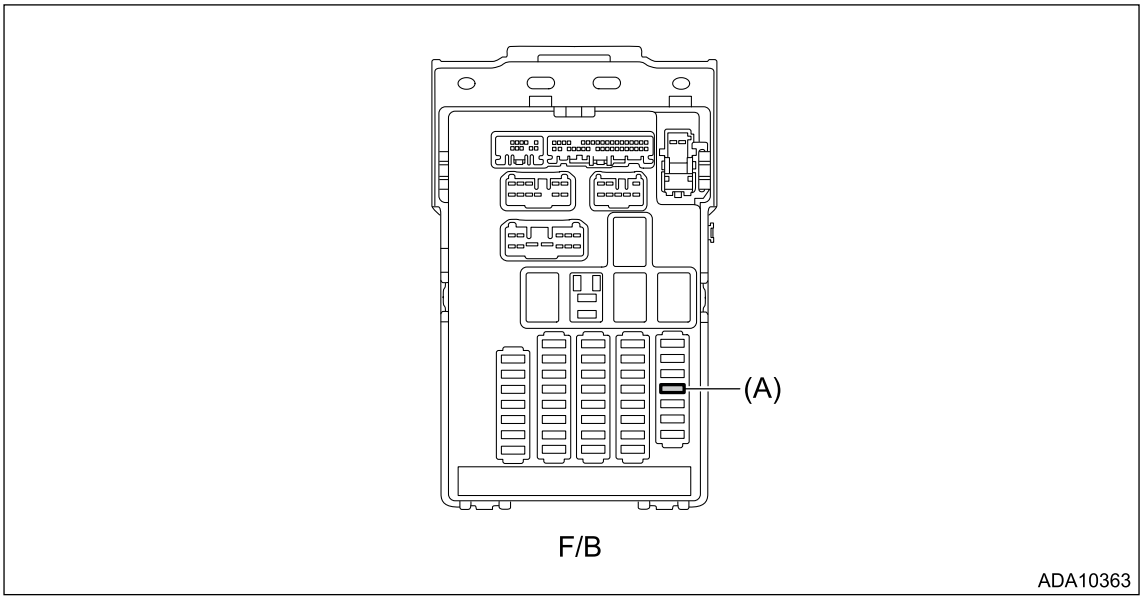


T: 7.5 (0.8, 5.5)

CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
- For precautions for rear vehicle detection function, refer to "CAUTION" in "Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)" section. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>General Description>CAUTION.

PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87699AL00A	87699AL00A	Radar reflector	Used for adjusting the radar axis of the radar sensor. **Note: Attach the radar reflector to a round pole with a diameter of approx. 20 mm (0.79 in) or a 20-mm (0.79 in) square pole.**
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Clip remover	Used for removing clips.
Measure (5 m (16 ft) or more)	Used for adjusting the radar axis of the radar sensor.
Leveling line	
Plumb bob	
Packing tape	
Stand, tripod, etc.	

LOCATION

Fuse & relay box (F/B)	Fuse 10 A (radar sensor LH (master), radar sensor RH (slave))	(A)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

   Note:

   If the fuse is blown again, check the system wiring harness.

Blind Spot Detection/Rear Cross Traffic Alert > Blind Spot Detection/Rear Cross Traffic Alert

WIRING DIAGRAM

Refer to "Blind Spot Detection/Rear Cross Traffic Alert system" in the wiring diagram. Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

Blind Spot Detection/Rear Cross Traffic Alert > Blind Spot Detection/Rear Cross Traffic Alert

ELECTRICAL SPECIFICATION

For electrical specification, refer to "Control Module I/O Signal" of "Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)" section. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Control Module I/O Signal.

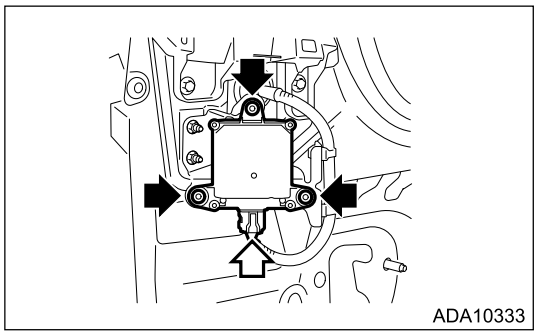
Blind Spot Detection/Rear Cross Traffic Alert > Blind Spot Detection/Rear Cross Traffic Alert

INSPECTION

For inspection, refer to "Basic Diagnostic Procedure" of "Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)" section. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Basic Diagnostic Procedure.

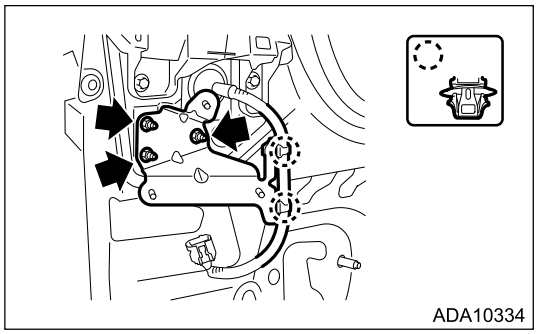
Blind Spot Detection/Rear Cross Traffic Alert > Blind Spot Detection/Rear Cross Traffic Alert

NOTE



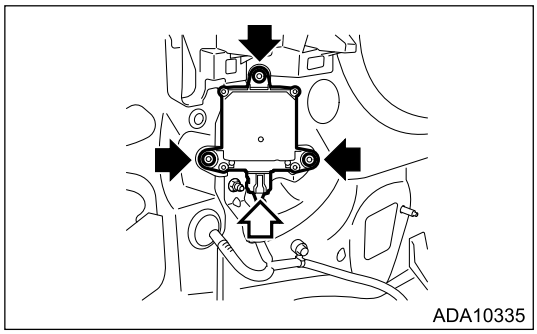
For procedure of each component in the Blind Spot Detection/Rear Cross Traffic Alert system, refer to the respective sections.

- Radar sensor: Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
- BSD/RCTA OFF switch: Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Switches and Harness.
- Combination meter: Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Combination Meter.
- Outer mirror assembly: Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Outer Mirror Assembly.



REMOVAL

1. RADAR SENSOR LH (MASTER)



- **4 DOOR MODEL**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
  2. Remove the bumper face - rear. Ref. to EXTERIOR/INTERIOR TRIM>Rear Bumper>REMOVAL > 4 DOOR MODEL.
  3. Remove the radar sensor LH (master).
     (1) Disconnect the connector.
     (2) Remove the nut and remove the radar sensor LH (master).

  4. Remove the radar bracket.
     (1) Remove the harness clamp.
     (2) Remove the nut and remove the radar bracket.

- **5 DOOR MODEL**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
  2. Remove the bumper face - rear. Ref. to EXTERIOR/INTERIOR TRIM>Rear Bumper>REMOVAL > 5 DOOR MODEL.
  3. Remove the radar sensor LH (master).
     (1) Disconnect the connector.
     (2) Remove the nut and remove the radar sensor LH (master).

4. Remove the radar bracket.
   (1) Remove the harness clamp.
   (2) Remove the nut and remove the radar bracket.

2. RADAR SENSOR RH (SLAVE)

Note:
For the procedure of radar sensor RH (slave), refer to "RADAR SENSOR LH (MASTER)".

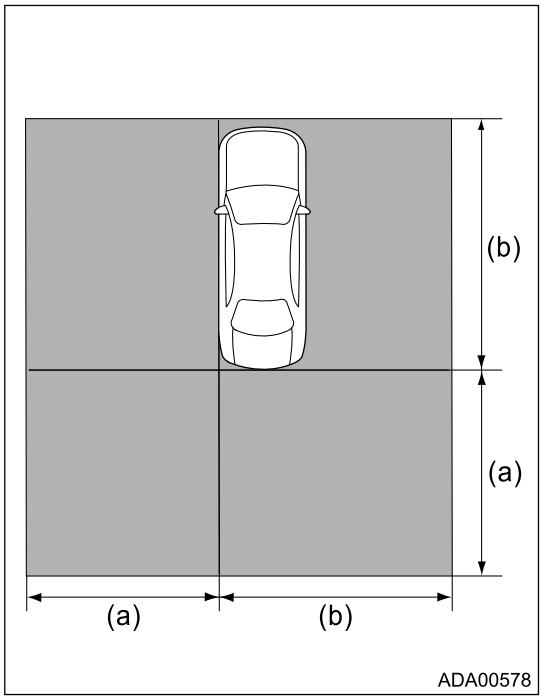
Blind Spot Detection/Rear Cross Traffic Alert > Radar Sensor

INSTALLATION

1. Install the radar bracket.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the radar sensor.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the bumper face - rear.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
5. Perform the adjustment of the radar sensor radar axis. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor>ADJUSTMENT > RADAR AXIS ADJUSTMENT.

Blind Spot Detection/Rear Cross Traffic Alert > Radar Sensor

ADJUSTMENT



1. RADAR AXIS ADJUSTMENT

Caution:
- **After removal/installation or replacement of the radar sensor, perform the radar axis adjustment.**
- **The procedure for the master is only shown here. However the procedure for the slave can also be done in the same way as the master.**

1. Before performing the inspection, check the following items.
   - The inflation pressure of tires is correct.
   - The vehicle does not have load.
   - Vehicle's fuel tank is fully filled.
2. Place the vehicle on a level surface, where approximately 5 m (16.41 ft) square area can be secured behind the vehicle.

Caution:

- **No metallic objects around the vehicle and on the floor in the area.**
- **Do not let in objects other than the radar reflector (ST), persons and metallic objects inside the area.**

(a) Approx. 4 m (13.12 ft)

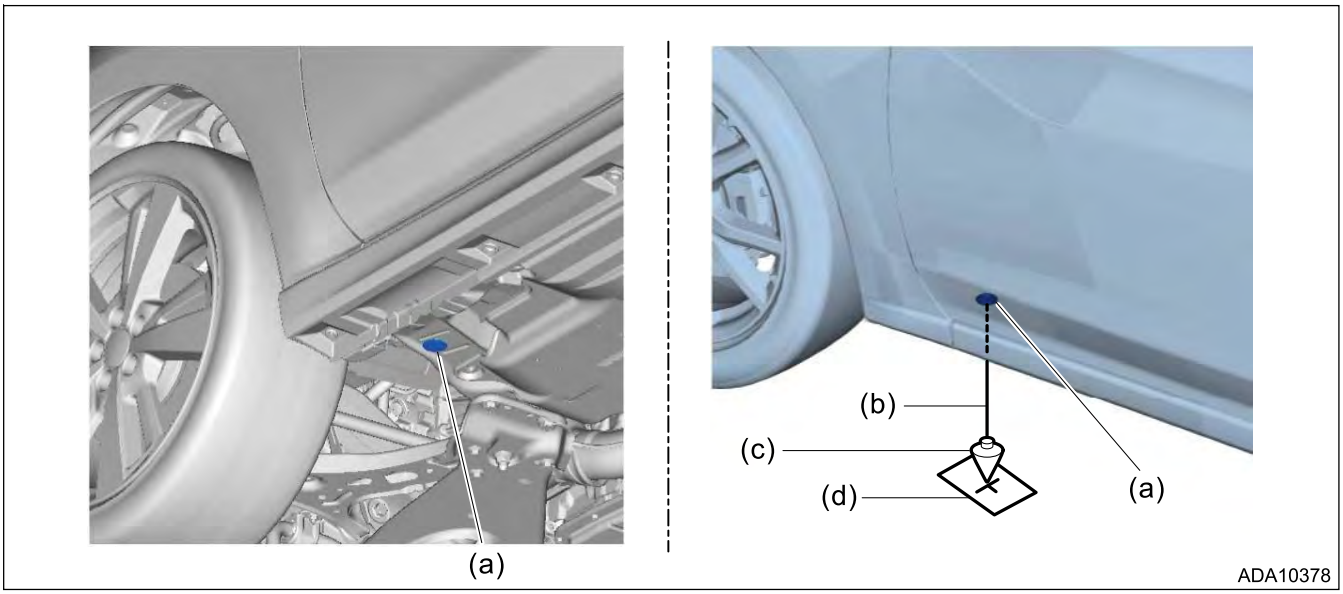
(b) Approx. 5 m (16.41 ft)

Note:

The illustration shows the secured area for adjusting the radar axis on the master side.

3. Prepare the Subaru Select Monitor, measure, leveling line, plumb bob, packing tape, RADAR REFLECTOR (ST), and stand or tripod for fixing the RADAR REFLECTOR.

Preparation tool:



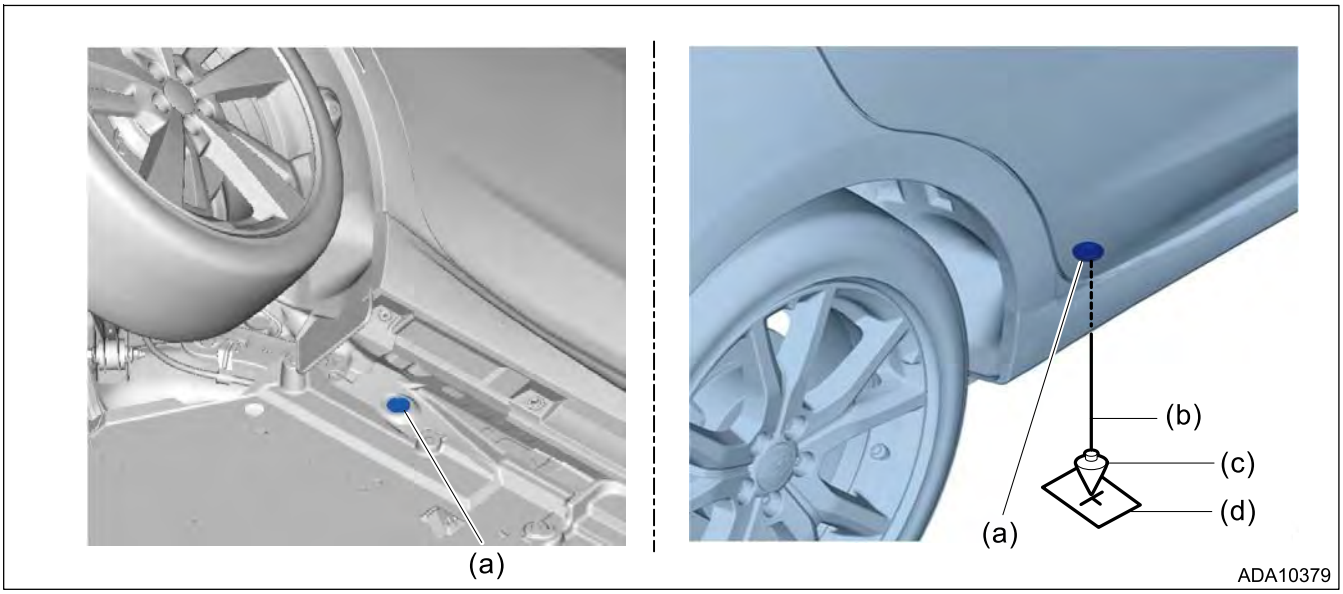
ST: RADAR REFLECTOR (87699AL00A)

4. Set up the radar reflector.

Note:

The following procedure explains the method of setting the radar reflector so that the distance between radar reflector and radar sensor is 1,500 mm (4.92 ft) and the radar is positioned at an angle of 50 degree.

(1) Suspend the plumb bob from the center of the front hole cap, and mark the position where the plumb bob touches the ground. (Point A)



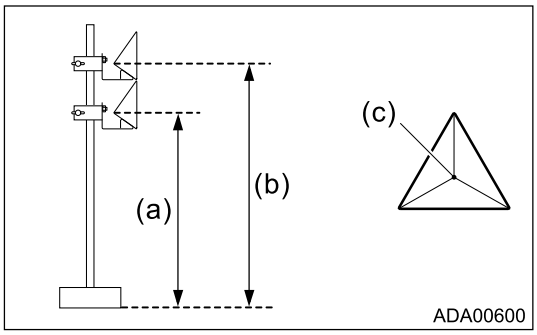
(a) Front hole cap
(b) Leveling line
(c) Plumb bob
(d) Point A

Note:

Stick the packing tape etc. on the floor, then make a marking on the tape.

(2) Suspend the plumb bob from the center of the rear hole cap, and mark the position where the plumb bob touches the ground. (Point B)

(a) Rear hole cap
(b) Leveling line
(c) Plumb bob
(d) Point B



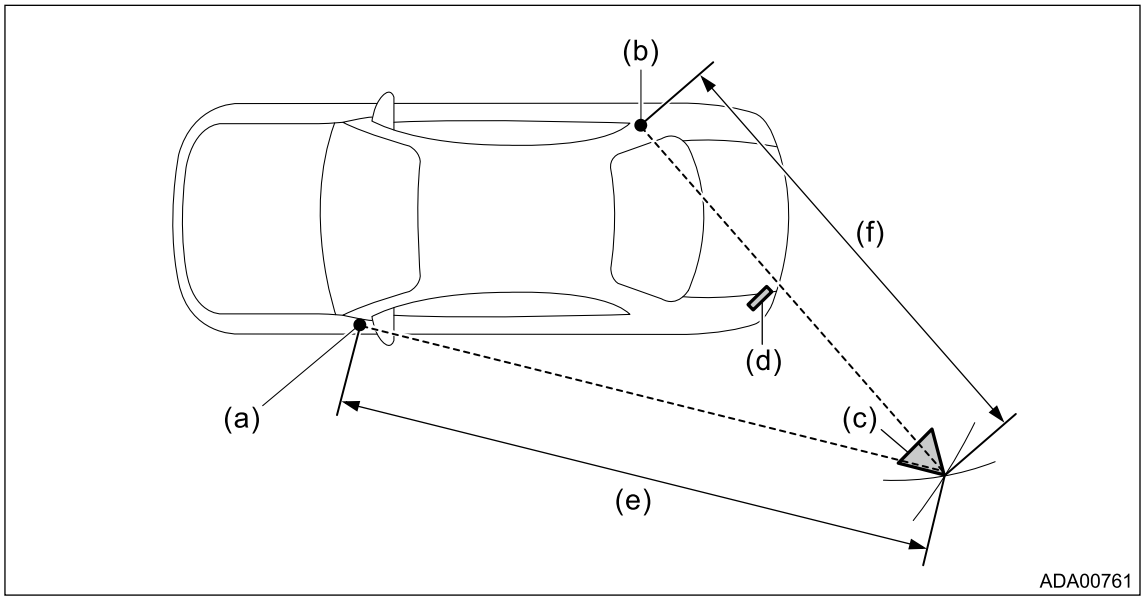
Note:

Stick the packing tape etc. on the floor, then make a marking on the tape.

(3) Stretch a leveling line to draw an arc with the marked point A as a pivot.
(4) Stretch a leveling line to draw an arc with the marked point B as a pivot.
(5)Set up the radar reflector at the cross point.

Caution:

When setting up the radar reflector, adjust the height so that the center of the pyramid points at the radar sensor as shown in the figure.



(a) 4 door model: 645.5±10 mm (25.41±0.39 in)

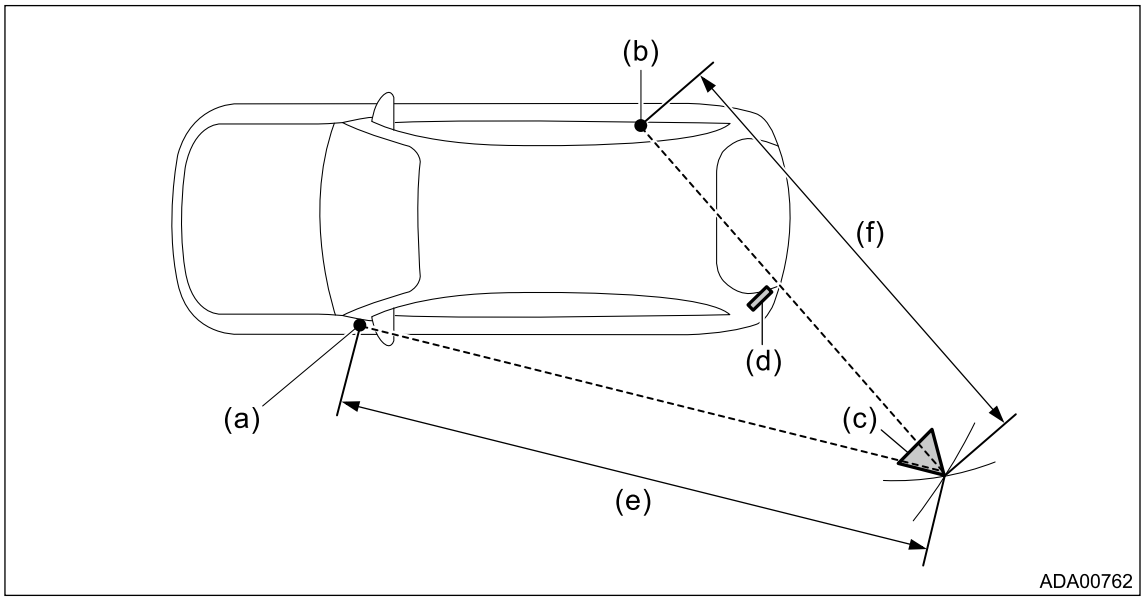
(b) 5 door model: 684.5±10 mm (26.45±0.39 in)

(c) Center of pyramid

- **4 door model**

(a) Point A

(b) Point B



(c) Radar reflector

(d) Radar sensor

(e) 4,310 mm (14.15 ft)

(f) 3,435 mm (11.27 ft)

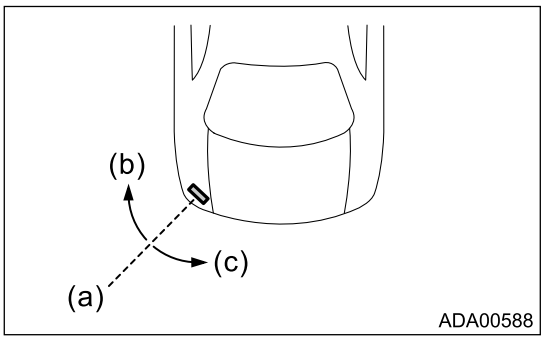
- **5 door model**

(a) Point A
(b) Point B
(c) Radar reflector
(d) Radar sensor
(e) 4,130 mm (13.56 ft)
(f) 3,330 mm (10.93 ft)

5. Connect the Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".



6. Turn the ignition switch to ON and wait for 10 seconds.

7. Perform radar axis adjustment.

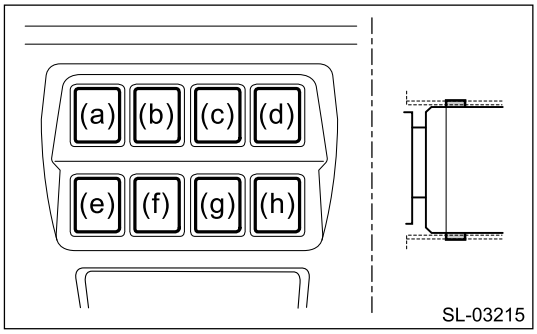
(1) On [Start] display, select [Diagnosis].
(2) On [Vehicle selection] display, enter vehicle information and select [OK].
(3) On [Main Menu] display, select [Each System].
(4) On [Select System] display, select [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)], and then select [Next].
(5) On [Select Function] display, select [Work Support].
(6) On the work support item list, select [RADAR Alignment].
(7) Follow the messages displayed on the Subaru Select Monitor screen when working.

Note:

Deviation of radar axis direction is indicated by + (plus) or − (minus).

(a) Center of radar
(b) + (plus)
(c) − (minus)

(8) If the result is out of permissive range, it is assumed that the radar reflector position may be incorrect or the radar bracket or its installation location on the vehicle may be deformed. Check



the set position of the radar reflector, radar bracket and other attachment, and perform the radar axis adjustment again.

Blind Spot Detection/Rear Cross Traffic Alert > Switches and Harness

REMOVAL

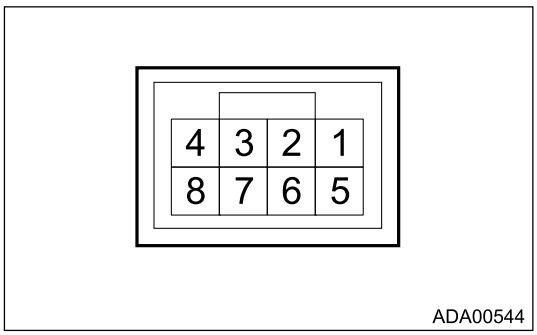
BSD/RCTA OFF switch

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > SAFETY.
2. Remove the cover assembly - instrument panel LWR driver OUT. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the BSD/RCTA OFF switch.
   (1) Release the claws and remove the BSD/RCTA OFF switch (f).

Blind Spot Detection/Rear Cross Traffic Alert > Switches and Harness

INSTALLATION

BSD/RCTA OFF switch



1. Install the BSD/RCTA OFF switch.
2. Install the cover assembly - instrument panel LWR driver OUT.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > SAFETY.

Blind Spot Detection/Rear Cross Traffic Alert > Switches and Harness

INSPECTION

BSD/RCTA OFF switch

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester

Terminal No.	Inspection conditions	Standard
6 — 8	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
1 (+) — 4 (−)	Apply battery voltage.	Light ON

3. Replace the BSD/RCTA OFF switch if it is found defective.

NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

NOTE

For the operation procedures for the outer mirror assembly, refer to “GLASS/WINDOWS/MIRRORS” section. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly.

INSPECTION

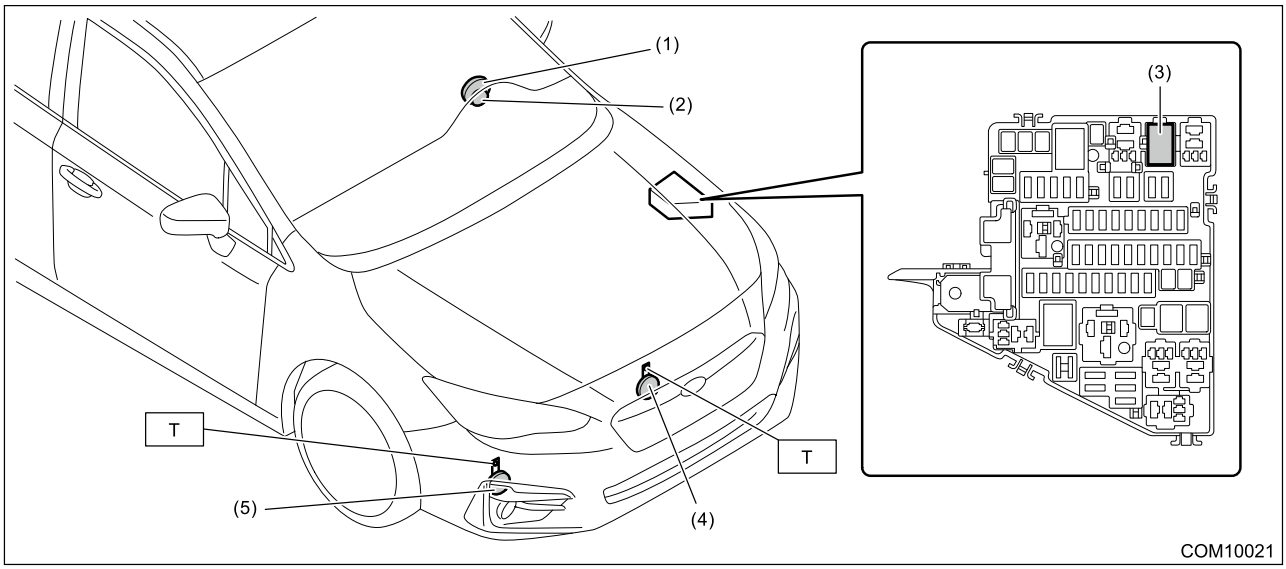
For diagnostics with phenomenon, refer to “Diagnostics with Phenomenon” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostics with Phenomenon.

BODY STRUCTURE

BS

1. General Description

SPECIFICATION



Refer to “Body Repair Manual” for general description of body structure, reference points and reference dimensions.

COMMUNICATION SYSTEM

COM

1. General Description
2. Relay and Fuse
3. Horn System
4. Horn
5. Horn Switch

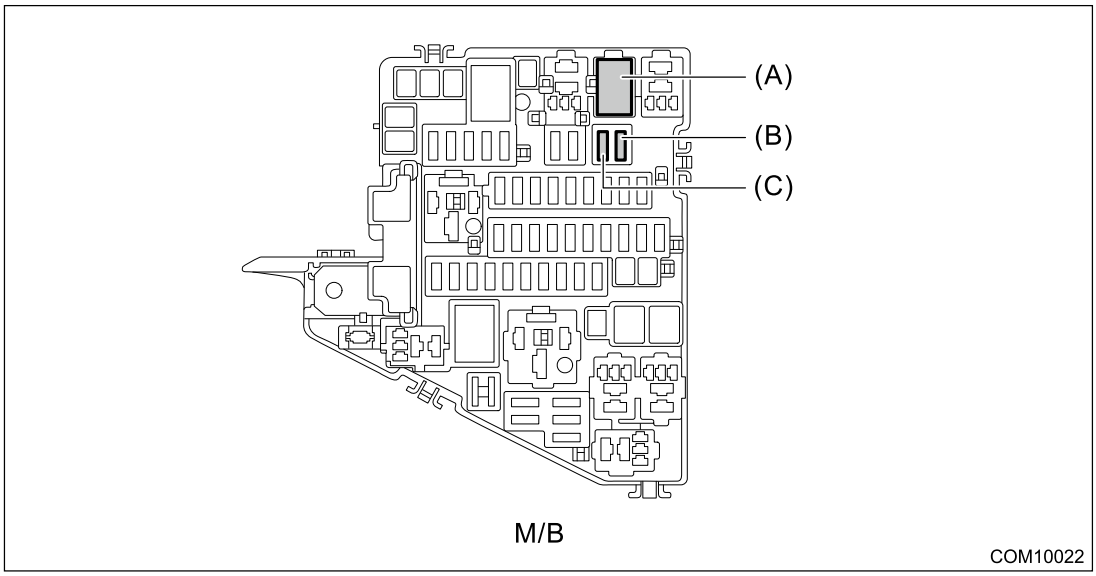
COMPONENT

(1) Horn switch (driver's airbag module ASSY)
(2) Roll connector
(3) Horn relay
(4) Horn ASSY - Hi
(5) Horn ASSY - Lo

Tightening torque: N·m (kgf-m, ft-lb)

T: 18 (1.8, 13.3)

CAUTION



- Before performing vehicle maintenance, turn the ignition switch to OFF and disconnect the negative terminal from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
- When replacing the parts provided with memory functions such as audio, MFD, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM".
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column. Ref. to AIRBAG SYSTEM>General Description>CAUTION.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT.

PREPARATION TOOL

1. GENERAL TOOL

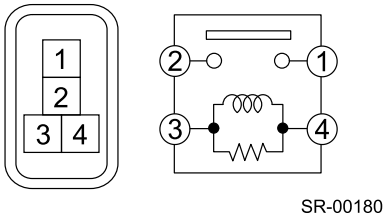
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

LOCATION

Main fuse box (M/B)	Horn relay	(A)
	Fuse 7.5 A (horn assembly - Hi)	(B)
	Fuse 7.5 A (horn assembly - Lo)	(C)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.



INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1. Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2. Replace the relay if the inspection result is not within the standard value.

COMMUNICATION SYSTEM > Horn System

WIRING DIAGRAM

Refer to "Horn System" in the wiring diagram. Ref. to WIRING SYSTEM>Horn System>WIRING DIAGRAM.

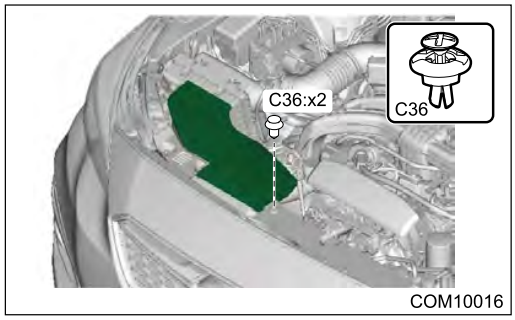
COMMUNICATION SYSTEM > Horn System

INSPECTION

Symptoms	Inspection steps
Horn does not sound	1. Check the fuse.
	2. Check the horn relay.
	3. Check the roll connector.
	4. Check the horn switch.
	5. Check the horn assembly.
	6. Check the harness.

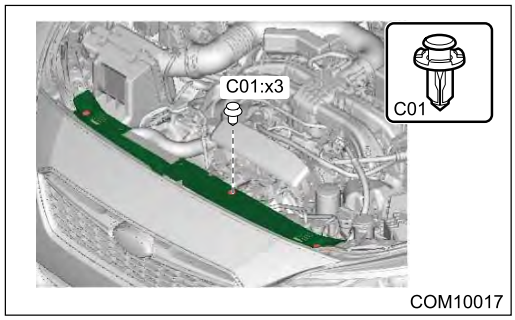
COMMUNICATION SYSTEM > Horn System

NOTE



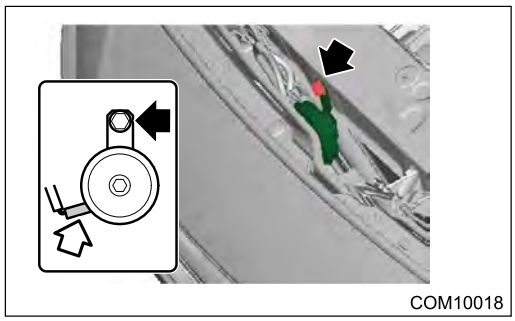
For procedure of each component in the horn system, refer to the respective section.

- Horn: Ref. to COMMUNICATION SYSTEM>Horn.
- Horn switch: Ref. to COMMUNICATION SYSTEM>Horn Switch.



REMOVAL

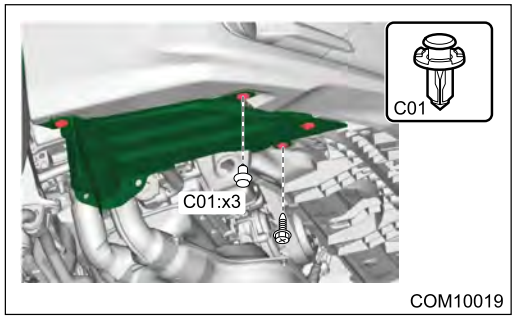
1. HORN ASSEMBLY - HI



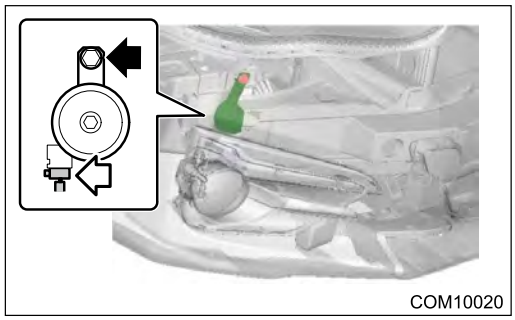
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clips and remove the duct - air intake.

3. Remove the clips, and remove the cover UPR - front.

4. Remove the horn assembly - Hi.
   (1) Disconnect the connector.
   (2) Remove the bolt, and remove the horn assembly - Hi.



2. HORN ASSEMBLY - LO

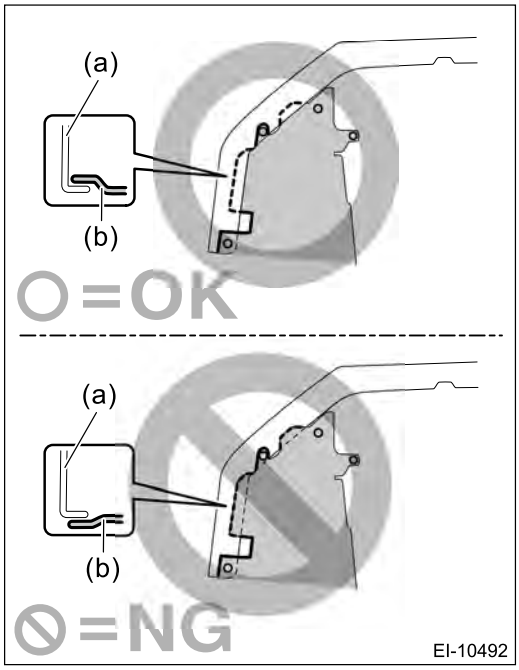


Caution:

When removing the horn, do not remove the bumper face - front. Bracket connection portion of the bumper face may become damaged.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the screw and clips, and turn over the mud guard - front on the right side.

5. Remove the horn assembly - Lo.
   (1) Disconnect the connector.
   (2) Remove the bolt, and remove the horn assembly - Lo.



COMMUNICATION SYSTEM > Horn

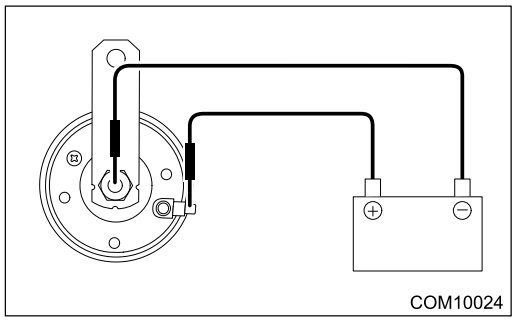
INSTALLATION

Caution:

Install the mud guard - front so that the front end of the mud guard (b) (excluding the clip fixed portion) comes inside the bumper face (a).

1. Install the horn assembly.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
2. Install the mud guard - front. (Horn assembly - Lo)
3. Install the under cover - front. (Horn assembly - Lo)

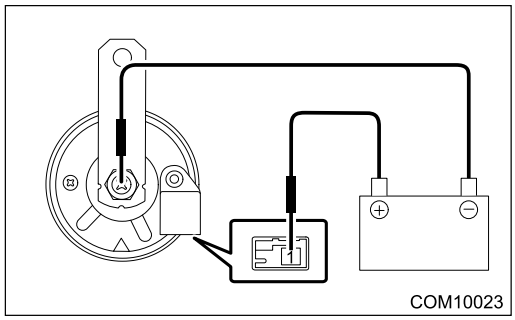
Tightening torque:



18 N·m (1.8 kgf-m, 13.3 ft-lb)

4. Lower the vehicle. (Horn assembly - Lo)
5. Install the cover UPR - front. (Horn assembly - Hi)
6. Install the duct - air intake. (Horn assembly - Hi)
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

COMMUNICATION SYSTEM > Horn



INSPECTION

1. Remove the horn assembly (Hi side & Lo side). Ref. to COMMUNICATION SYSTEM>Horn>REMOVAL.
2. Check the horn sounds when applying the battery voltage to the horn assembly.
   - Horn assembly - Hi side

Terminal No.	Inspection conditions	Specification
Connector terminal (+) — Horn case (−)	Connect battery to the terminals	Sounds

   - Horn assembly - Lo side

Terminal No.	Inspection conditions	Specification
1 (+) — Horn case (−)	Connect battery to the terminals	Sounds

3. If it does not operate normally, replace the horn assembly.

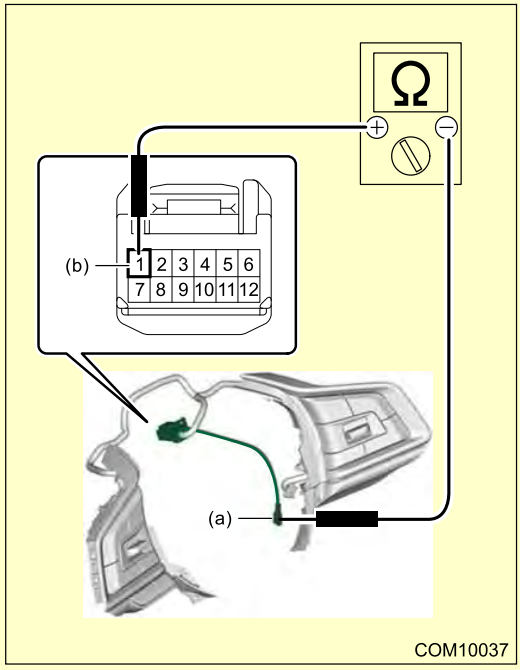
NOTE

Horn switch is a unit with the driver's airbag module. For operation procedures, refer to "Driver's Airbag Module" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>Driver's Airbag Module.

INSPECTION

1. CHECK HORN SWITCH

Caution:



Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. CHECK HORN SWITCH.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
4. Check that the connection of the horn switch harness connector is correct.
5. Measure the resistance between connectors.

Preparation tool:

Circuit tester

(a) Ground terminal (b) Horn switch terminal

Terminal No.	Standard
Horn switch terminal — ground terminal	Less than 1 Ω

Is the measured value within the standard value?

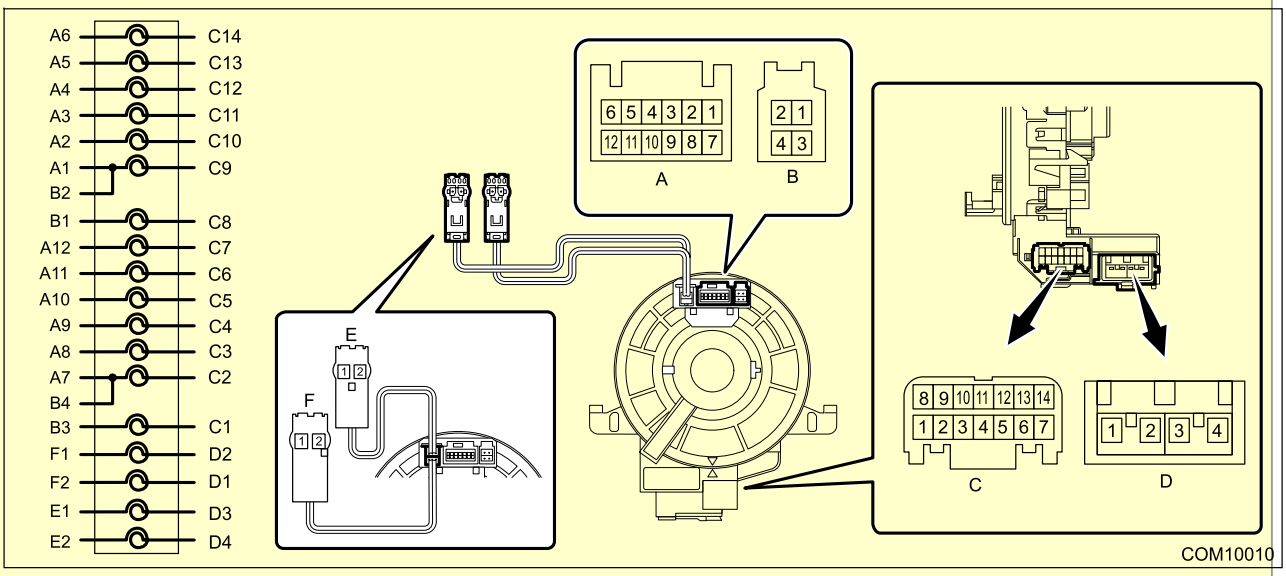
Yes — Check the driver's airbag module.

No — It is possible that there is an open circuit in horn harness (horn switch terminal — ground terminal). Replace the satellite switch assembly.

2. CHECK STEERING ROLL CONNECTOR

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **If the steering wheel and steering angle sensor (steering roll connector) are removed, be sure to perform the following operations.**
  – Align the center position of the steering roll connector.
  – Perform the neutral position setting of the steering angle sensor.



1. CHECK STEERING ROLL CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
   Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>REMOVAL.
4. Measure the resistance between connectors.

   Preparation tool:

   Circuit tester

   - Without steering heater

   - With steering heater

Terminal No.	Inspection conditions	Standard
A1 — C9	Always	Less than 1 Ω

Is the measured value within the standard value?

Yes — The steering roll connector is normal.

Replace the steering roll connector.

No

CRUISE CONTROL SYSTEM

CC

6. Combination Meter
7. Stop Light & Brake Switch
8. Clutch Switch
9. Inhibitor Switch
10. Neutral Position Switch
11. Diagnostics with Phenomenon

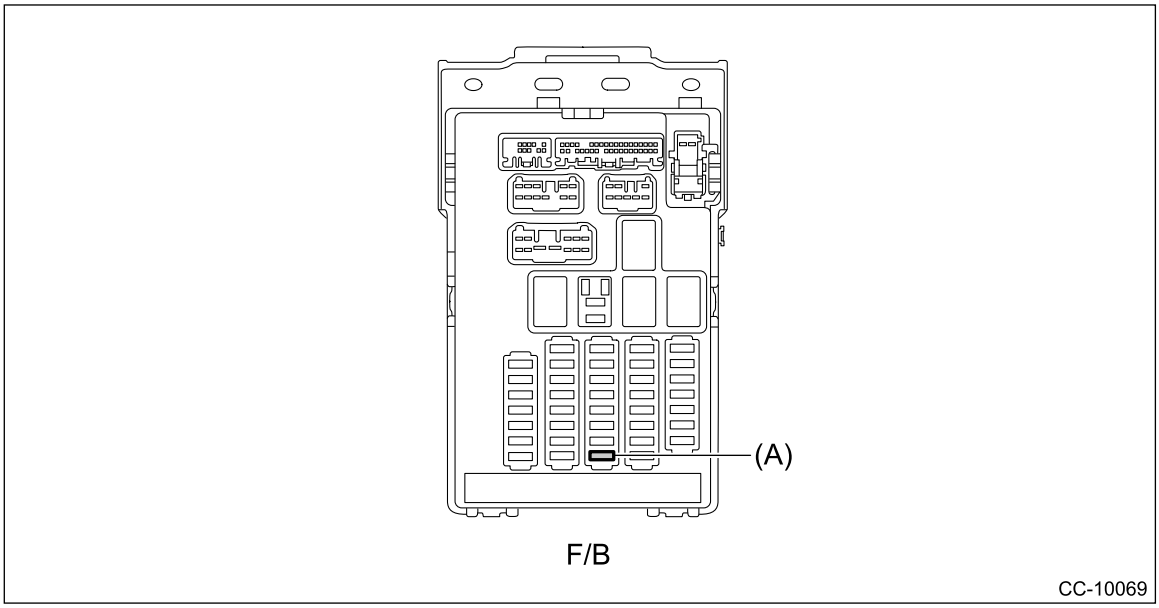
CRUISE CONTROL SYSTEM > General Description

LOCATION

For location, refer to “LOCATION” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Electrical Component Location>LOCATION.

CRUISE CONTROL SYSTEM > General Description

CAUTION



- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the parts provided with memory functions such as audio, MFD, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. Ref. to AIRBAG SYSTEM>General Description>CAUTION.
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

CRUISE CONTROL SYSTEM > General Description

PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

LOCATION

Relay & fuse box (F/B)	Fuse 7.5 A (stop light and brake switch)	(A)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

   Note:

   If the fuse is blown again, check the system wiring harness.

CRUISE CONTROL SYSTEM > Cruise Control System

WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. Ref. to WIRING SYSTEM>Cruise Control System>WIRING DIAGRAM.

CRUISE CONTROL SYSTEM > Cruise Control System

ELECTRICAL SPECIFICATION

For electrical specification, refer to “Control Module I/O Signal” of “ENGINE (DIAGNOSTICS)” section.
Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Control Module I/O Signal.

CRUISE CONTROL SYSTEM > Cruise Control System

INSPECTION

For inspection, refer to “Basic Diagnostic Procedure” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)”.
Ref. to CRUISE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

CRUISE CONTROL SYSTEM > Cruise Control System

NOTE

For operation procedures of each component of the cruise control system, refer to the respective section.

- Control module: Ref. to CRUISE CONTROL SYSTEM>Control Unit.
  Note:
  System control of the cruise control is performed by each module. For procedure, refer to the following sections.
  - Engine control module (ECM): Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
  - Transmission control module (TCM): Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
- Cruise control command switch: Ref. to EyeSight>Switches and Harness.
- Combination meter: Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
- Stop light and brake switch: Ref. to BRAKE>Stop Light Switch.
- Clutch switch: Ref. to CLUTCH SYSTEM>Clutch Switch.
- Inhibitor switch: Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.
- Neutral position switch: Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness.

NOTE

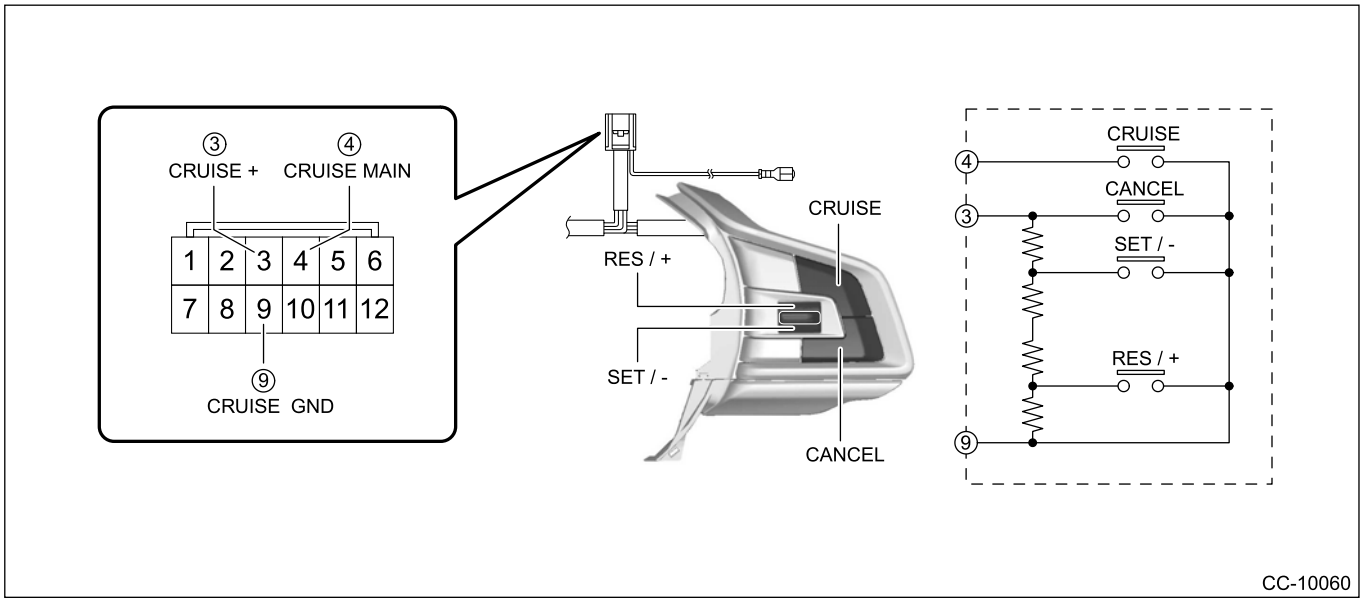
System control of the cruise control is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
- Transmission control module (TCM): Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).

CRUISE CONTROL SYSTEM > Cruise Control Command Switch

NOTE

For the operation procedures for cruise control command switch assembly, refer to “EyeSight” section.
Ref. to EyeSight>Switches and Harness.



CRUISE CONTROL SYSTEM > Cruise Control Command Switch

INSPECTION

1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 9	CANCEL SET/− RES/+	All OFF	Approx. 4,020Ω
	CANCEL	ON	Less than 1 Ω
	SET/−	ON	Approx. 250 Ω
	RES/+	ON	Approx. 1,470Ω
4 — 9	CRUISE (MAIN)	OFF	3 MΩ or more
		ON	Less than 1 Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (−)	Apply battery voltage.	Light ON

3. Replace the cruise control command switch assembly if it is found defective.

NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. Ref. to BRAKE>Stop Light Switch.

NOTE

For the operation procedures for clutch switch, refer to “CLUTCH SYSTEM” section. Ref. to CLUTCH SYSTEM>Clutch Switch.

NOTE

For the operation procedures for inhibitor switch, refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.

NOTE

For the operation procedures for neutral position switch, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness.

INSPECTION

For diagnostics with phenomenon, refer to “Diagnostics with Phenomenon” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon.

(3)	Circlip			

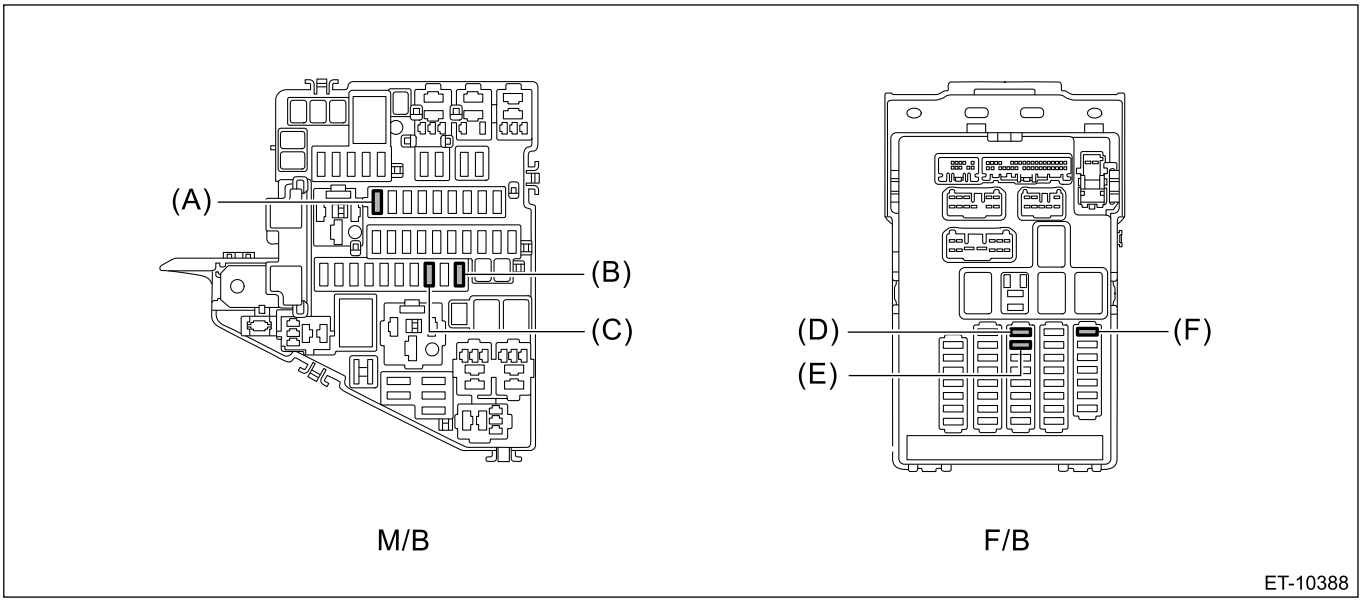
ENTERTAINMENT & MONITORING > General Description

CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

ENTERTAINMENT & MONITORING > General Description

PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

DESCRIPTION	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Clip remover	Used for removing clips.

LOCATION

Main fuse box (M/B)	Fuse 10 A (data communication module*1)	(A)
	Fuse 30 A (audio)	(B)
	Fuse 20 A (power amplifier)	(C)
Relay & fuse box (F/B)	Fuse 20 A (front accessory power supply socket)	(D)
	Fuse 15 A (rear accessory power supply socket)	(E)
	Fuse 15 A (audio, external connection terminal, data communication module*1)	(F)

*1: Model with telematics

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

1. CHECK FUSE

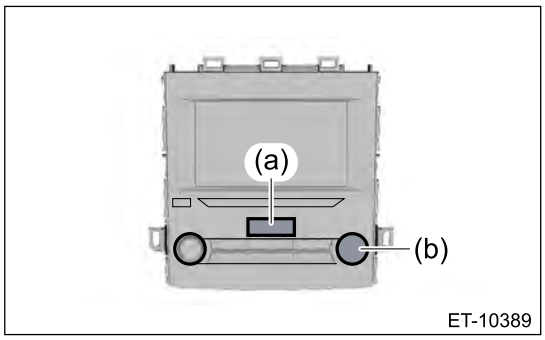
1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

   Note:

   If the fuse is blown again, check the system wiring harness.

WIRING DIAGRAM

1. AUDIO

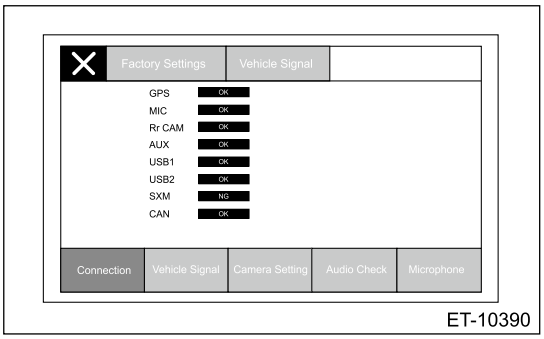


Refer to “Audio System” in the wiring diagram.

- Model without amplifier and without telematics: Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM > WITHOUT AUDIO AMPLIFIER & WITHOUT TELEMATICS.
- Model without amplifier and with telematics: Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM > WITHOUT AUDIO AMPLIFIER & WITH TELEMATICS.
- Model with amplifier and without telematics: Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM > WITH AUDIO AMPLIFIER & WITHOUT TELEMATICS.
- Model with amplifier and telematics: Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM > WITH AUDIO AMPLIFIER & WITH TELEMATICS.

OPERATION

1. CHECK CONNECTIONS WITH LINE DIAG MODE

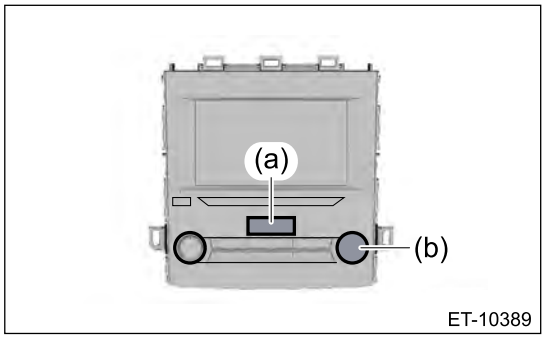


1. Turn the ignition switch to ACC.
2. Press the button (b) twice with the button (a) pressed.

Note:

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

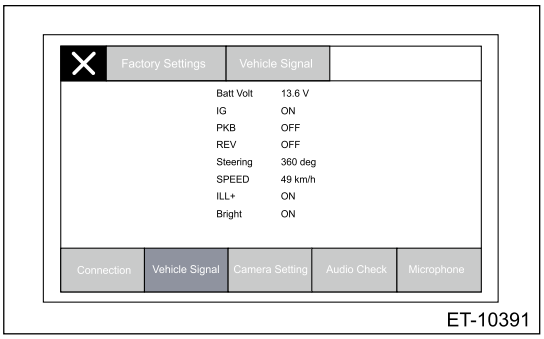
3. {Line Diag} screen is displayed.
4. Check the connection status with the {Connection} in the {Line Diag} screen.



Item	Content	Inspection
GPS	GPS antenna connection	Check that the display shows OK. (Models with GPS antenna only)

Item	Content	Inspection
MIC	MIC connection	Check whether the map light illuminates. Check that the display shows OK.
Rr CAM	Rr CAM Video signal	Check that the display shows OK.
AUX	AUX connection	Connect the pin jack for check into the AUX terminal, and check that the display shows OK.
USB1	USB connection	Connect the memory for check into the USB terminal, and check that the display shows OK.
USB2		
SXM	SXM connection	Check that the display shows OK. (Models with SXM only)
CAN	CAN connection	Check that the display shows OK.

2. CHECK VEHICLE SIGNALS WITH LINE DIAG MODE

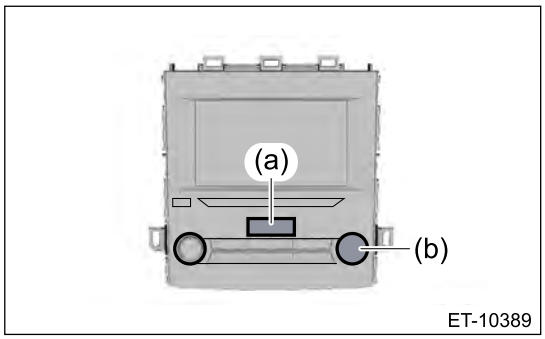


1. Turn the ignition switch to ACC.
2. Press the button (b) twice with the button (a) pressed.

Note:

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

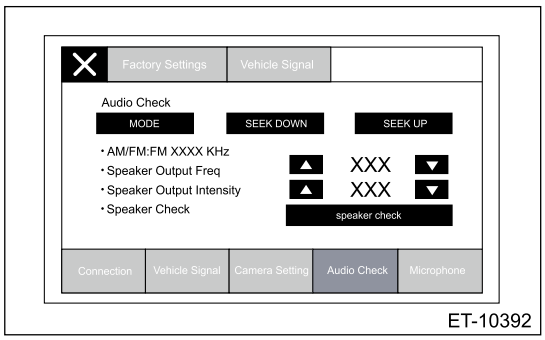
3. {Line Diag} screen is displayed.
4. Check the signal status with the {Vehicle Signal} in the {Line Diag} screen.



Item	Content	Inspection
ILL+	Illumination signal	Turn the lighting switch to ON, and check that the display shows OK.
SPEED	Speed pulse signal	Input the vehicle speed of 9 km/h or more, and check that the display shows OK.
PKB	Parking brake signal	Pull the parking brake, and check that the display shows OK.

Item	Content	Inspection
REV	Reverse signal	Place the select lever or gear shift lever in reverse, and check that the display shows OK.
IG	IGN signal	Check that the display shows ON.
Batt Volt	Battery voltage	Check that the battery voltage is displayed.
Steering	Steering angle	Check that the steering operation is reflected on the display.
Bright	Bright signal	Check that the display shows OK.

3. CHECK SPEAKER OUTPUT WITH LINE DIAG MODE AND ANTENNA CONNECTION



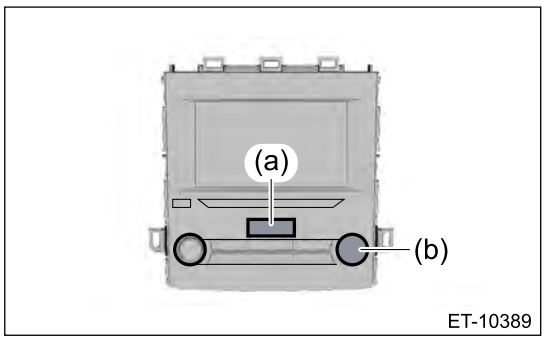
1. Turn the ignition switch to ACC.
2. Press the button (b) twice with the button (a) pressed.

Note:

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

3. {Line Diag} screen is displayed.
4. Perform the speaker output check and antenna connection check with the {Audio Check} in the {Line Diag} screen.

Item	Content	Inspection
MODE	Radio band switching	Check that the radio band (AM/DM) can be switched.
SEEK UP/DOWN	SEEK UP/DOWN operation	Check that SEEK UP/DOWN adjusted can be performed.
Speaker Check	Speaker check operation	• 4 speakers: Front left → rear left → rear right → front right speakers will sound in this order for 0.5 seconds each. • 6 speakers: Tweeter left → front left → rear left → rear right → front right → tweeter right speakers will sound in this order for 0.5 seconds each.

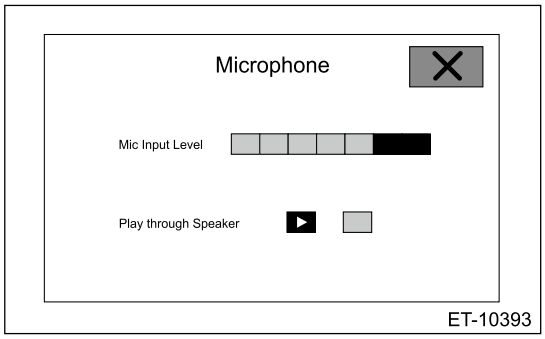


Note:

The sound volume during the speaker check is different depending on the speakers.

- **Standard speaker: Sounds at the maximum volume.**
- **Brand speaker: Sounds at 30 steps.**

4. CHECK MICROPHONE WITH LINE DIAG MODE



1. Turn the ignition switch to ACC.
2. Press the button (b) twice with the button (a) pressed.

Note:

Pressing the button (a) for 3 seconds or more, or turning the ignition switch from the OFF to ACC position can exit the diagnostic mode.

3. {Line Diag} screen is displayed.
4. Check the microphone level with the {Microphone} in the {Line Diag} screen.

Check that the microphone input level varies depending on the sound and voice.

ENTERTAINMENT & MONITORING > Audio System

INSPECTION

1. BASIC INSPECTION

For basic inspection, refer to “Basic Diagnostic Procedure” in “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. Ref. to INFOTAINMENT(DIAGNOSTICS) >Basic Diagnostic Procedure.

2. SYSTEM BLOCK DIAGRAM

For system block diagram, refer to “System Block Diagram” in “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>SYSTEM BLOCK DIAGRAM.

3. MODULE I/O SIGNAL

For the specification (electrical component), refer to “Control Module I/O Signal” of “INFOTAINMENT SYSTEM (DIAGNOSTICS)”. Ref. to INFOTAINMENT(DIAGNOSTICS) >Control Module I/O

Signal>ELECTRICAL SPECIFICATION.

ENTERTAINMENT & MONITORING > Audio System

NOTE

For procedure of each component in the audio system, refer to the respective sections.

- Audio unit: Ref. to ENTERTAINMENT & MONITORING>Audio.
- Power amplifier: Ref. to ENTERTAINMENT & MONITORING>Power Amplifier.
- Front speaker
  - Tweeter (instrument panel): Ref. to ENTERTAINMENT & MONITORING>Front Speaker>REMOVAL > TWEETER.
  - Door speaker: Ref. to ENTERTAINMENT & MONITORING>Front Speaker>REMOVAL > DOOR SPEAKER.
- Rear speaker: Ref. to ENTERTAINMENT & MONITORING>Rear Speaker.
- Antenna: Ref. to ENTERTAINMENT & MONITORING>Antenna.
- Switches and harness: Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.
- External connection terminal: Ref. to ENTERTAINMENT & MONITORING>External Connection Terminal.
- Rearview camera: Ref. to ENTERTAINMENT & MONITORING>Rearview Camera System.

ENTERTAINMENT & MONITORING > Navigation System

WIRING DIAGRAM

Refer to “Navigation System” in the wiring diagram.

- Model without telematics: Ref. to WIRING SYSTEM>Navigation System>WIRING DIAGRAM > WITHOUT TELEMATICS.
- Model with telematics: Ref. to WIRING SYSTEM>Navigation System>WIRING DIAGRAM > WITH TELEMATICS.

ENTERTAINMENT & MONITORING > Navigation System

OPERATION

For operation, refer to “Audio System”. Ref. to ENTERTAINMENT & MONITORING>Audio System>OPERATION.

ENTERTAINMENT & MONITORING > Navigation System

INSPECTION

For inspection, refer to “Audio System”. Ref. to ENTERTAINMENT & MONITORING>Audio System>INSPECTION.

ENTERTAINMENT & MONITORING > Navigation System

NOTE

For procedure of each component in the navigation system, refer to the respective section.

- Navigation unit: Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
- GPS antenna: Ref. to ENTERTAINMENT & MONITORING>Antenna.

ENTERTAINMENT & MONITORING > Telematics System

WIRING DIAGRAM

Refer to “Telematics System” in the wiring diagram.

- WITHOUT AUDIO AMPLIFIER: Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM > WITHOUT AUDIO AMPLIFIER.
- WITH AUDIO AMPLIFIER WITHOUT NAVIGATION SYSTEM: Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM > WITH AUDIO AMPLIFIER WITHOUT NAVIGATION SYSTEM.
- WITH AUDIO AMPLIFIER WITH NAVIGATION SYSTEM: Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM > WITH AUDIO AMPLIFIRE WITH NAVIGATION SYSTEM.

ENTERTAINMENT & MONITORING > Telematics System

OPERATION

1. REGISTRATION (COMM CHECK)

Caution:

Do not press and hold the i-button for more than two seconds during communication check, or settings will return to factory mode in poor radio wave environment. If the settings has returned to factory mode, perform the communication check again. To check the mode status, see “Subscription Status” in the current data display on Subaru Select Monitor.

1. Replace the data communication module with a new part.
2. Check that the LED of overhead console or stereo camera cover assembly illuminates in green.
3. Press and hold the i-button for 2 seconds or more.

Note:

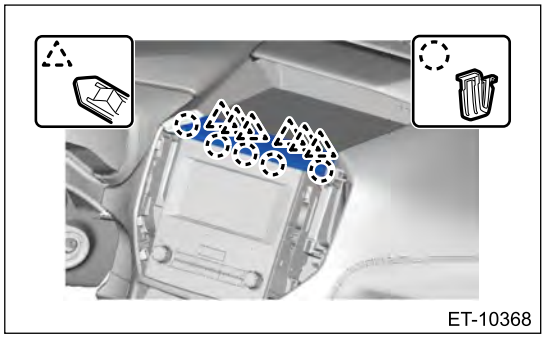
When the subscription is completed, the telematics system will automatically activate.

ENTERTAINMENT & MONITORING > Telematics System

INSPECTION

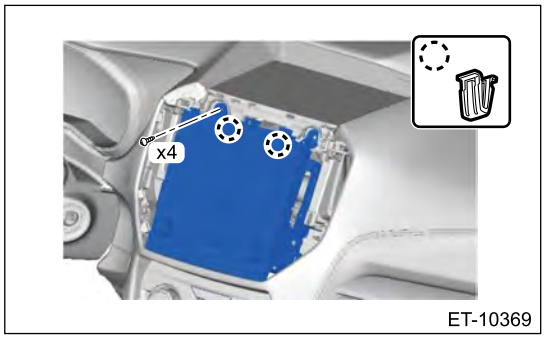
For inspection, refer to “Basic Diagnostic Procedure” in “TELEMATICS SYSTEM (DIAGNOSTICS)”. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

ENTERTAINMENT & MONITORING > Telematics System



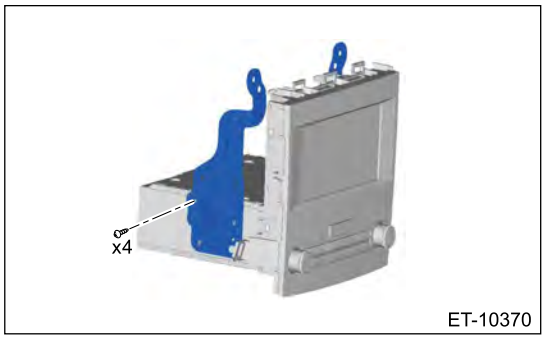
NOTE

For procedure of each component in the telematics system, refer to the respective section.



- Data communication module: Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
- Antenna: Ref. to ENTERTAINMENT & MONITORING>Antenna.
- Switches and harness: Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the panel - center UPR.
   (1) Release the clips and claws, then detach the panel - center UPR.

4. Remove the audio assembly.
   (1) Remove the screws.
   (2) Release the clips and disconnect the connector, and then remove the audio assembly.

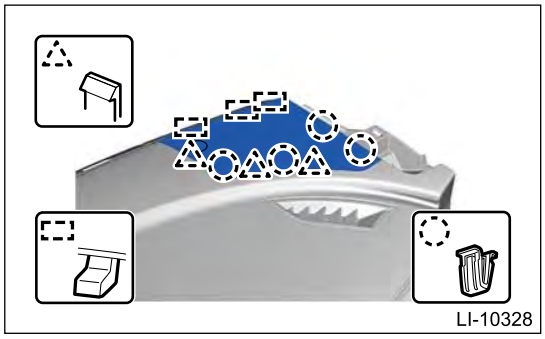
5. Remove the audio bracket.
   (1) Remove the screws, and then remove the audio bracket.

Note:

- **Remove the screws on RH side in the same procedure as on the LH side.**
- **For models with telematics, the data communication module is attached on the upper side of the audio assembly.**

INSTALLATION

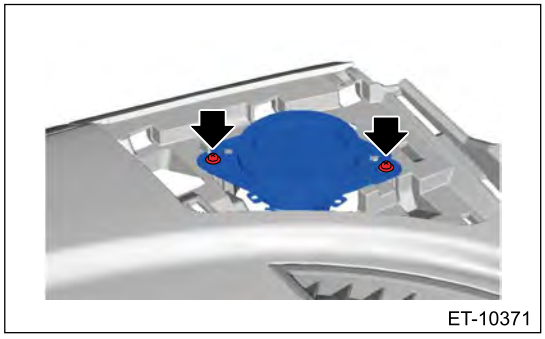
Caution:



Do not allow harness and cables to interfere with or get caught by other parts.

1. Install the audio bracket.
2. Install the audio assembly.
3. Install the panel - center UPR.
4. Install the grille assembly - CTR ventilation.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

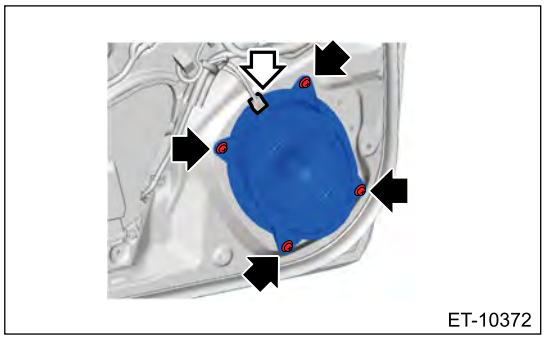
REMOVAL



1. TWEETER

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - front pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.
3. Remove the grille speaker side.
   (1) Release the clips, hooks and claws, then detach the grille speaker side.

Note:
For the grille speaker side RH, disconnect the light control sensor connector.



4. Remove the speaker assembly - tweeter.
   (1) Remove the screws.
   Preparation tool:
   Stubby screwdriver

   (2) Disconnect the connector and remove the speaker assembly - tweeter.

2. DOOR SPEAKER

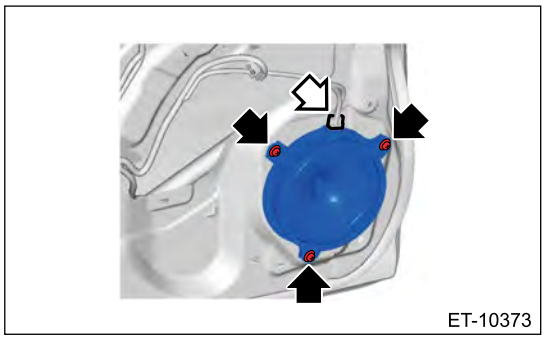
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the speaker assembly - front.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the speaker assembly - front.

ENTERTAINMENT & MONITORING > Front Speaker

INSTALLATION

1. TWEETER

1. Install the speaker assembly - tweeter.
2. Install the grille speaker side.
3. Install the trim panel - front pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



2. DOOR SPEAKER

1. Install the speaker assembly - front.
2. Install the trim panel - front door.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

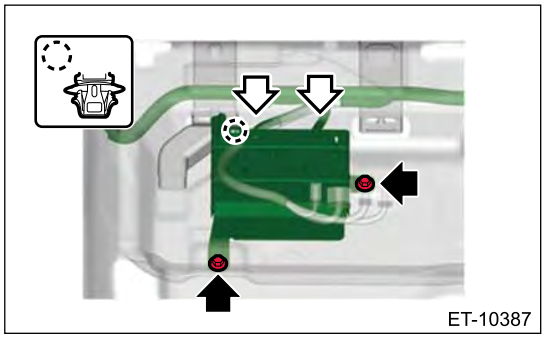
ENTERTAINMENT & MONITORING > Rear Speaker

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
3. Remove the speaker assembly - rear.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the speaker assembly - rear.

ENTERTAINMENT & MONITORING > Rear Speaker

INSTALLATION



1. Install the speaker assembly - rear.
2. Install the trim panel - rear door.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

ENTERTAINMENT & MONITORING > Power Amplifier

REMOVAL

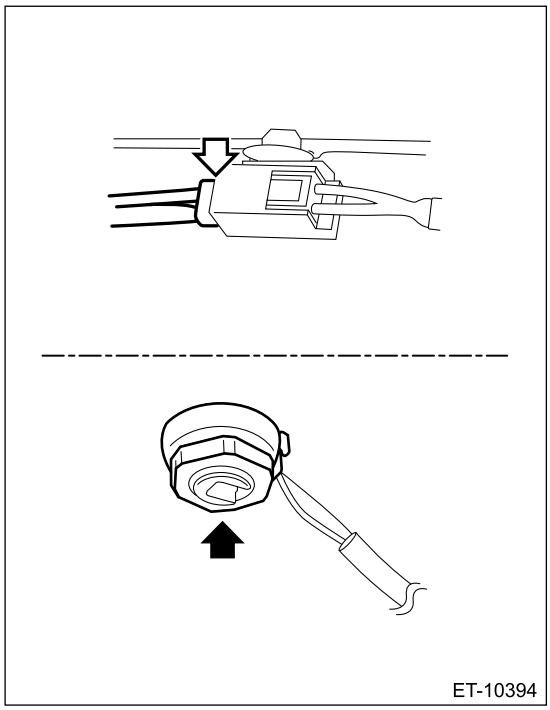
Note:
Remove the power amplifier assembly after sliding the passenger's seat back and forth as necessary.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the power amplifier assembly.
   (1) Remove the harness clip, and disconnect each connector.
   (2) Remove the nut and remove the power amplifier assembly.

ENTERTAINMENT & MONITORING > Power Amplifier

INSTALLATION

1. Install the power amplifier assembly.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



REMOVAL

1. ROOF ANTENNA/TELEMATICS ANTENNA

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lower the trim panel - roof assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL.

   Note:

   Procedures for the trim panel - roof assembly is performed inside the vehicle.
3. Remove the antenna assembly - radio or telematics.
   (1) Disconnect the connector.
   (2) Remove the nut, and remove the antenna assembly - radio or the telematics.

2. ANTENNA FEEDER CORD

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
5. Remove the panel center LWR LH. Ref. to EXTERIOR/INTERIOR TRIM>Center Console.
6. Remove the cover side sill - front LH and the cover side sill - front INN LH. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
7. Turn over the floor mat. Ref. to EXTERIOR/INTERIOR TRIM>Floor Mat>REMOVAL.
8. Lower the trim panel - roof assembly in the same manner as the removal procedure of the antenna assembly - radio or the telematics. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL.

9. Remove the cord assembly - antenna feeder.

3. TELEMATICS SUB ANTENNA

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
5. Remove the combination meter assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.
6. Remove the GPS antenna assembly. Ref. to ENTERTAINMENT & MONITORING>Antenna>REMOVAL > GPS ANTENNA.

   Note:

   Remove the antenna only. Do not pull the cord.
7. Remove the telematics sub antenna.

   (1) Attach a string to the telematics sub antenna connector and the GPS antenna assembly connector on the main body side.

   Note:

   - **A string makes operation easier during installation.**
   - **The telematics sub antenna is integrated into the GPS antenna assembly cord.**

   (2) Remove the bolts, cord clips and clamps, and pull out the telematics sub antenna from the combination meter side.

   (3) After the telematics sub antenna has been pulled out, remove the string attached to the connector in step (1).

   Note:

   Leave the attached string inside the instrument panel, and use it during installation.

4. GPS ANTENNA

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.

Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
5. Remove the combination meter assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.
6. Remove the GPS antenna assembly.
   (1) Disconnect the connector.
   (2) Remove screws and remove the GPS antenna assembly.
   (3) Tie a string to the GPS antenna assembly connector on the main body side.
   Note:
   - **A string makes operation easier during installation.**
   - **For models with telematics, GPS antenna assembly cord cannot be removed as a single unit because it is integrated with the telematics sub antenna.**
   (4) Remove the cord clip and clamp, and pull out the GPS antenna assembly cord from the combination meter side.

   (5) When the GPS antenna assembly is pulled out, remove the string attached to the connector in step (3).
   Note:
   Leave the attached string inside the instrument panel, and use it during installation.

ENTERTAINMENT & MONITORING > Antenna

INSTALLATION

1. ROOF ANTENNA/TELEMATICS ANTENNA

1. Install the antenna assembly - radio or the telematics.
   Tightening torque:
   4.5 N·m (0.46 kgf-m, 3.3 ft-lb)
2. Install the trim panel - roof assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof

Trim>INSTALLATION.

3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. ANTENNA FEEDER CORD

1. Install the cord assembly - antenna feeder and the trim panel - roof assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>INSTALLATION.
2. Install the floor mat. Ref. to EXTERIOR/INTERIOR TRIM>Floor Mat>INSTALLATION.
3. Install the cover side sill - front LH and the cover side sill - front INN LH.
4. Install the panel center LWR LH.
5. Install the cover assembly - instrument panel LWR driver.
6. Install the audio assembly or navigation assembly.
7. Install the grille assembly - CTR ventilation.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

3. TELEMATICS SUB ANTENNA

1. Install the telematics sub antenna.

   Tightening torque:

   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

   Note:

   Install the telematics sub antenna by using the sting left inside the parts to pull the part into the instrument panel.
2. Install the GPS antenna assembly.
3. Install the combination meter assembly.
4. Install the cover assembly - instrument panel LWR driver.
5. Install the audio assembly or navigation assembly.
6. Install the grille assembly - CTR ventilation.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

4. GPS ANTENNA

1. Install the GPS antenna assembly and GPS antenna assembly cord.

Note:

Install the GPS antenna assembly cord by using the sting left inside the parts to pull the part into the instrument panel.

2. Install the combination meter assembly.
3. Install the cover assembly - instrument panel LWR driver.
4. Install the audio assembly or navigation assembly.
5. Install the grille assembly - CTR ventilation.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

1. SATELLITE SWITCH ASSEMBLY

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Set the tire to the straight-ahead position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
4. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
5. Remove the satellite switch assembly. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>DISASSEMBLY.

2. TELEMATICS BUTTON

The telematics button is a single unit with the spot map light or the stereo camera cover assembly. For operation procedures, refer to "LIGHTING SYSTEM" section. Ref. to LIGHTING SYSTEM>Spot Map Light.

INSTALLATION

1. SATELLITE SWITCH ASSEMBLY

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**
- **If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**
- **Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.**

1. Install the satellite switch assembly. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>DISASSEMBLY.
2. Align the center position of the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>ADJUSTMENT.
3. Install the steering wheel.
   Tightening torque:

39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:

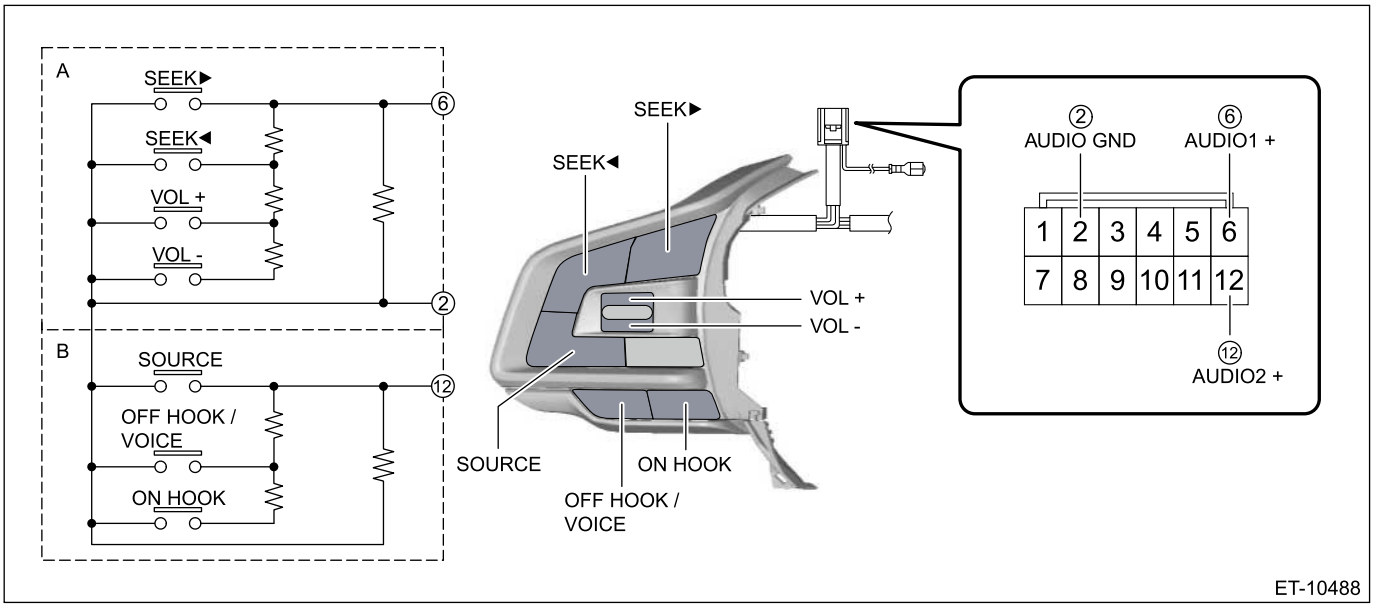
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

4. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. TELEMATICS BUTTON

The telematics button is a single unit with the spot map light or the stereo camera cover assembly. For operation procedures, refer to "LIGHTING SYSTEM" section. Ref. to LIGHTING SYSTEM>Spot Map Light.

ENTERTAINMENT & MONITORING > Switches and Harness



INSPECTION

1. SATELLITE SWITCH ASSEMBLY

1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

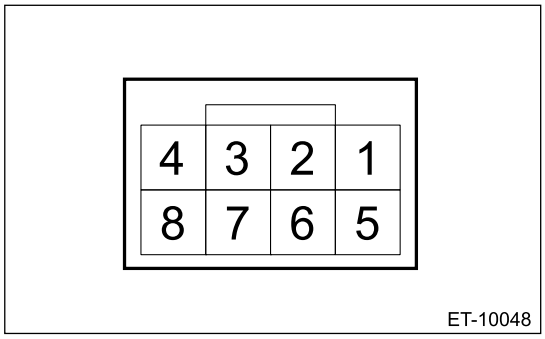
Terminal No.	Inspection conditions		Standard
6 — 2	SEEK (›) SEEK (‹) VOL (+) VOL (−)	A circuit is all OFF.	Approx. 100 kΩ
	SEEK (›)	ON	Less than 1 Ω
	SEEK (‹)	ON	Approx. 330 Ω
	VOL (+)	ON	Approx. 1,000Ω
	VOL (−)	ON	Approx. 3,110Ω
12 — 2	SOURCE OFF HOOK/VOICE ON HOOK	B circuit is all OFF.	Approx. 100 kΩ
	SOURCE	ON	Less than 1 Ω

Terminal No.	Inspection conditions		Standard
	OFF HOOK/VOICE	ON	Approx. 330 Ω
	OFF HOOK	ON	Approx. 1,000Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (−)	Apply battery voltage.	Light ON

3. If it is found to be defective as a result of the measurement, replace the satellite switch assembly.



2. TELEMATICS BUTTON

1. Check the button.

(1)Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

- SOS button

Terminal No.	Inspection conditions	Standard
6 — 1	OFF	Approx. 1.6 kΩ
	ON	Less than 1 Ω

- i-button

Terminal No.	Inspection conditions	Standard
3 — 1	OFF	Approx. 1.6 kΩ
	ON	Less than 1 Ω

(2)Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
8 (+) — 2 (−)	Apply battery voltage.	Light ON

2. Check the indicator.

(1)Apply battery voltage between the connector terminals to check the lighting condition of the indicator.

Terminal No.	Indicator	Specification
4 (+) — 1 (−)	Apply battery voltage.	Illuminating in green
7 (+) — 1 (−)		Illuminating in red

3. If it is found to be defective as a result of the inspection, replace the spot map light or stereo

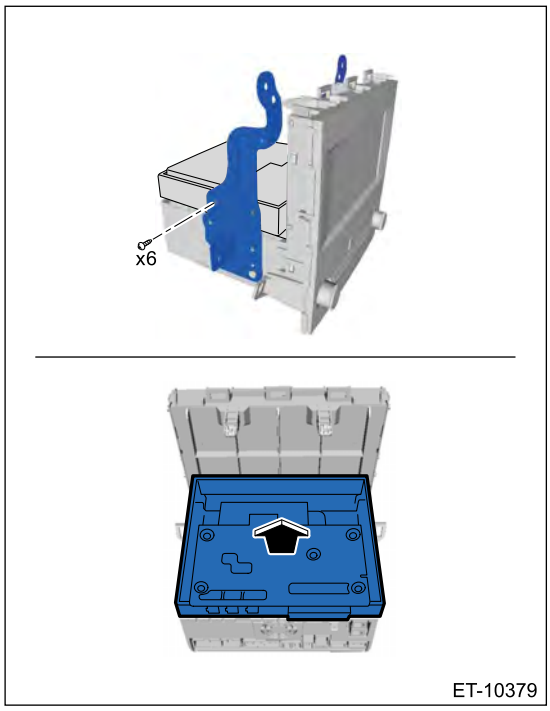
camera cover assembly.

NOTE

The microphone is integrated in the spot map light or stereo camera cover assembly.
For operation procedures, refer to “LIGHTING SYSTEM” section. Ref. to LIGHTING SYSTEM>Spot Map Light.

NOTE

For the operation procedures for navigation assembly, refer to “Audio” section. Ref. to ENTERTAINMENT & MONITORING>Audio.



REMOVAL

1. DATA COMMUNICATION MODULE

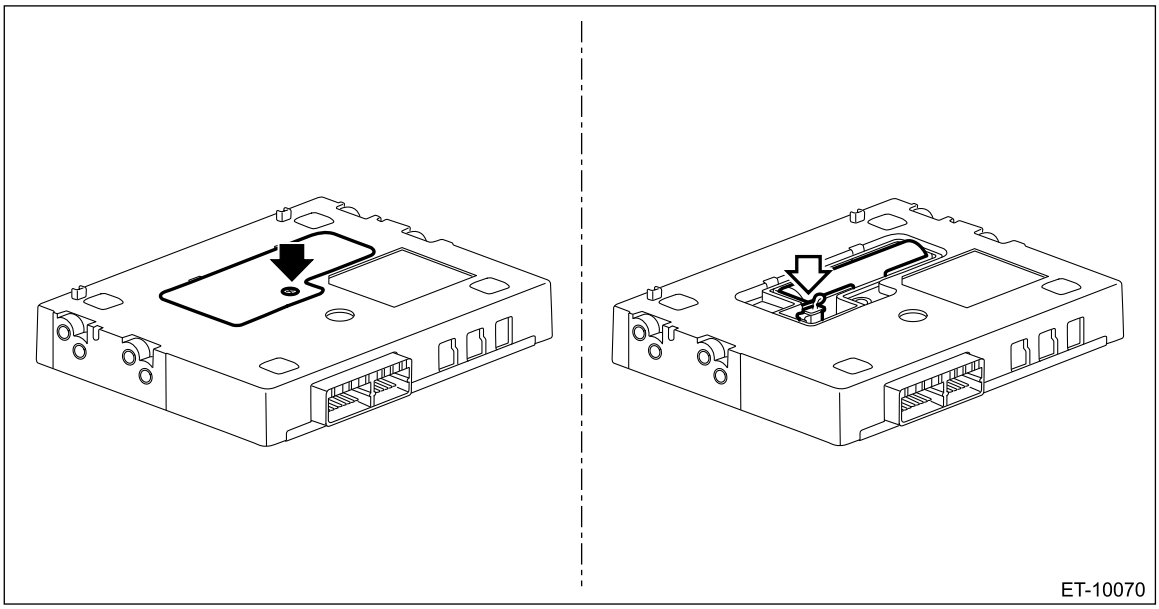
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the data communication module.
   (1) Remove the screws.
   (2) Remove the audio bracket or navigation bracket, and then remove the data communication module.

   Caution:

   Do not drop or apply any impact to the data communication module.

Note:

Remove the screws on RH side in the same procedure as on the LH side.



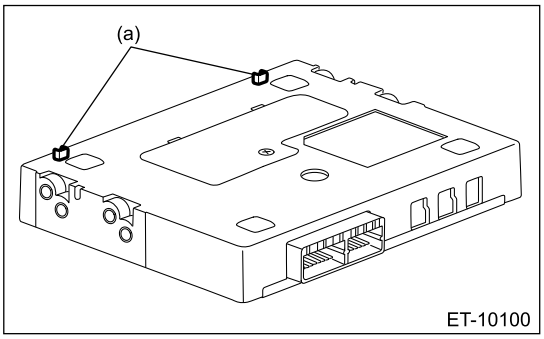
2. BACKUP BATTERY

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the data communication module. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module>REMOVAL > DATA COMMUNICATION MODULE.
3. Remove the backup battery.
   (1) Remove the screws, and then remove the battery cover.

   Preparation tool:

   TORX® T10

   (2) Disconnect the connector and remove the backup battery.



ENTERTAINMENT & MONITORING > Data Communication Module

INSTALLATION

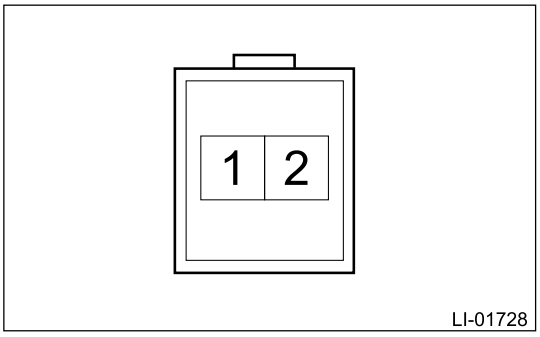
1. DATA COMMUNICATION MODULE

1. Install the data communication module.
   Note:
   Align the positioning pin (a) of the data communication module with the positioning hole of the audio assembly or navigation assembly.

2. Install the audio assembly or navigation assembly.
3. Install the grille assembly - CTR ventilation.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Perform the registration if the data communication module is replaced with a new part. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION.
6. Check LED lighting status of spot map light or stereo camera cover assembly. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Check List for Interview>CHECK > LED ILLUMINATION STATUS LIST.

2. BACKUP BATTERY

1. Install the backup battery.
2. Install the battery cover.
   Tightening torque:
   0.3 N·m (0.03 kgf-m, 0.2 ft-lb)



3. Install the data communication module. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module>INSTALLATION > DATA COMMUNICATION MODULE.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

ENTERTAINMENT & MONITORING > Data Communication Module

INSPECTION

1. BACKUP BATTERY

1. Measure the voltage between connector terminals.
   Preparation tool:
   Circuit tester

Terminal No.	Standard
1 (+) — 2 (−)	2 V or more

2. Replace the backup battery if the inspection result is not within the standard value.

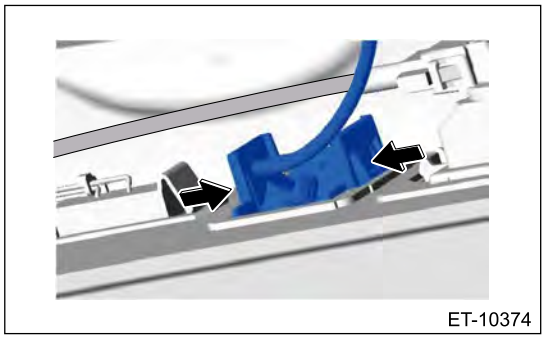
WIRING DIAGRAM

Refer to "Rearview Camera System" in the wiring diagram.

- 4 door model: Ref. to WIRING SYSTEM>Rearview Camera System>WIRING DIAGRAM > 4 DOOR MODEL.
- 5 door model: Ref. to WIRING SYSTEM>Rearview Camera System>WIRING DIAGRAM > 5 DOOR MODEL.

REMOVAL

1. 4 DOOR MODEL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the rearview camera assembly.

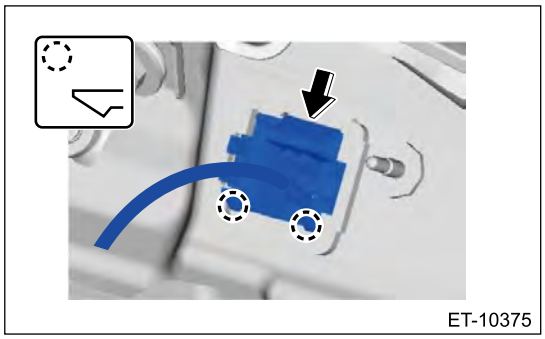
   Caution:

   Do not drop or apply any impact to the rearview camera because it is a precision equipment.

   (1) Disconnect the connector.

   (2) Disconnect the claws and then remove the rearview camera assembly.

2. 5 DOOR MODEL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the garnish assembly - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Garnish>REMOVAL.
4. Remove the rearview camera assembly.

   Caution:

   Do not drop or apply any impact to the rearview camera because it is a precision equipment.

   (1) Disconnect the connector.

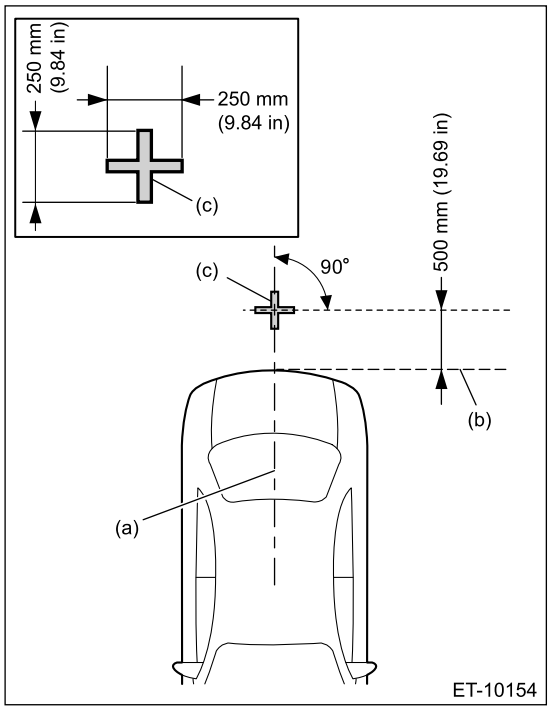
   (2) Release the claw and hook, and then remove the rearview camera assembly.

ENTERTAINMENT & MONITORING > Rearview Camera System

INSTALLATION

1. 4 DOOR MODEL

1. Install the rearview camera assembly.
   Note:
   Press-in the hook of the rearview camera assembly until a locking sound is heard.
2. Install the trim panel - trunk lid.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Confirm the marker position. Ref. to ENTERTAINMENT & MONITORING>Rearview Camera System>INSPECTION.



2. 5 DOOR MODEL

1. Install the rearview camera assembly.
   Note:
   Align the claws on the lower side of the rearview camera assembly with the panel, and press-in the hook on the upper side until a locking sound is heard.
2. Install the garnish assembly - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Garnish>INSTALLATION.
3. Remove the trim panel - rear gate.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Confirm the marker position. Ref. to ENTERTAINMENT & MONITORING>Rearview Camera System>INSPECTION.

ENTERTAINMENT & MONITORING > Rearview Camera System

INSPECTION

1. Park the vehicle at the level place where there are enough area at the rear of the vehicle.
2. Attach the tape as the target point for standard at the floor rearward of the vehicle as shown in the figure below.
   Note:
   Standard tape width is about 30 — 50 mm (1.18 — 1.97 in) and brilliant color shall be used.

(A) Vehicle body center line

(B) Rear edge of bumper

(C) Target point

3. Confirm the following before checking the corresponding items.

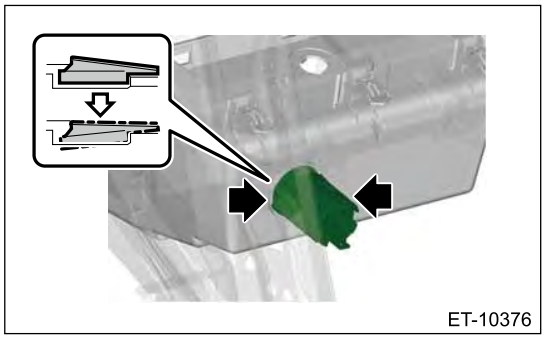
(1) Rearview camera image is not displayed. (Audio and navigation screens are displayed normally.)

1. Check the connecting condition of the back sensor. Ref. to ENTERTAINMENT & MONITORING>Audio System>OPERATION > CHECK VEHICLE SIGNALS WITH LINE DIAG MODE.
2. Check the rear view camera connection status. Ref. to ENTERTAINMENT & MONITORING>Audio System>OPERATION > CHECK CONNECTIONS WITH LINE DIAG MODE.

(2) Marker position is not aligned or displayed.

The rearview camera or its installation location on the vehicle may be deformed. Check the rearview camera and its installation location on the vehicle, and repair or replace if necessary.

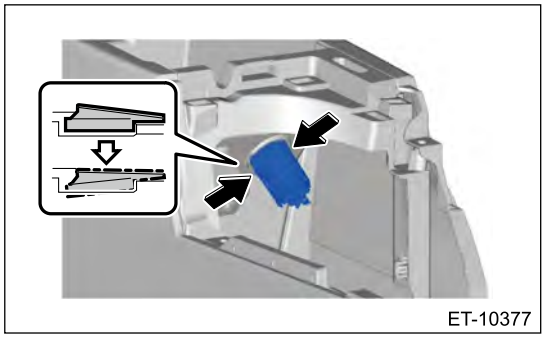
WIRING DIAGRAM



Refer to "Accessory Power Supply Socket System" in the wiring diagram.

- Front: Ref. to WIRING SYSTEM>Front Accessory Power Supply Socket System>WIRING DIAGRAM.
- Rear: Ref. to WIRING SYSTEM>Rear Accessory Power Supply Socket System>WIRING DIAGRAM.

REMOVAL



1. FRONT

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>REMOVAL.
5. Remove the socket assembly.
   (1) Disconnect the connector.
   (2) While releasing the claw, press it in from the rear to remove the socket assembly.

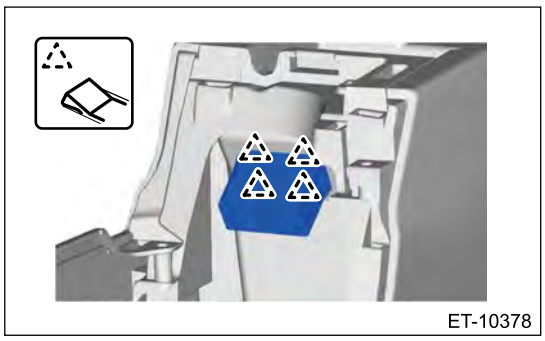
2. REAR

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
3. Remove the socket assembly.
   (1) While releasing the claw, press it in from the rear to remove the socket assembly.

INSTALLATION

1. FRONT

1. Install the socket assembly.
   Note:
   Align the groove of the tray - center UPR with the claw of the socket assembly.
2. Install the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>INSTALLATION.
3. Install the audio assembly or navigation assembly.
4. Install the grille assembly - CTR ventilation.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



2. REAR

1. Install the socket assembly.
   Note:
   Align the groove of the console box assembly with the claw of the socket assembly.
2. Install the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

ENTERTAINMENT & MONITORING > External Connection Terminal

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
3. Remove the unit assembly - AUX.
   (1) While pressing the claw, press it in from the rear to remove the unit assembly - AUX.

ENTERTAINMENT & MONITORING > External Connection Terminal

INSTALLATION

1. Install the unit assembly - AUX.
2. Install the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

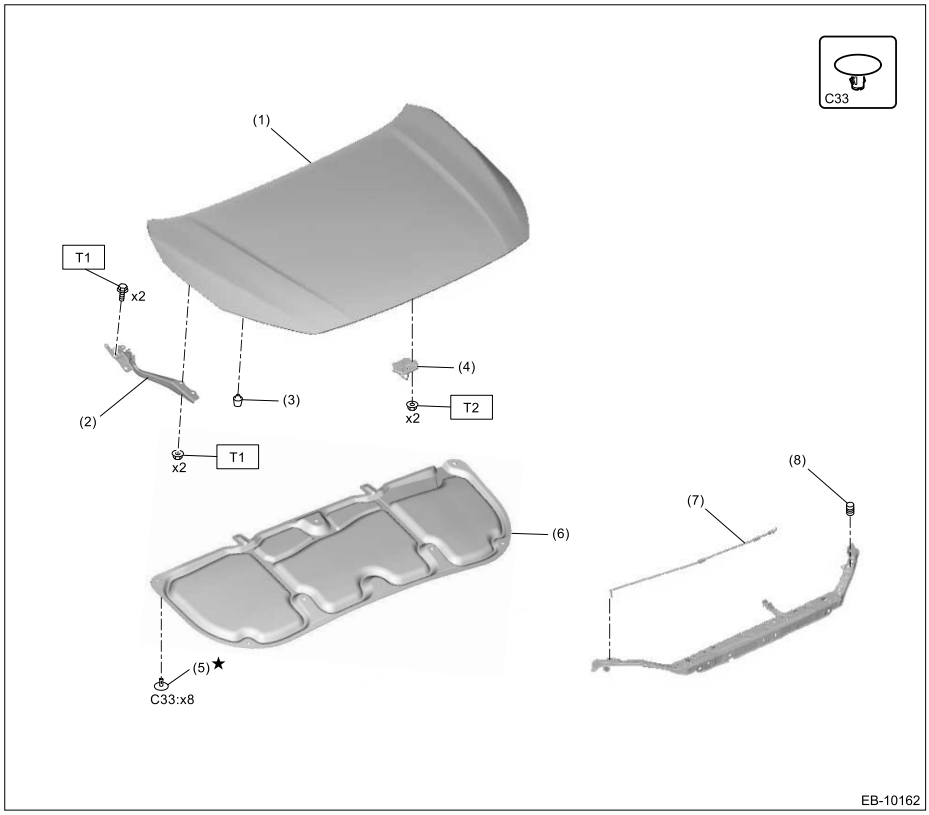
NOTE

For the diagnostics with phenomenon, refer to the “INFOTAINMENT SYSTEM (DIAGNOSTICS)” section.

Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon.

NOTE

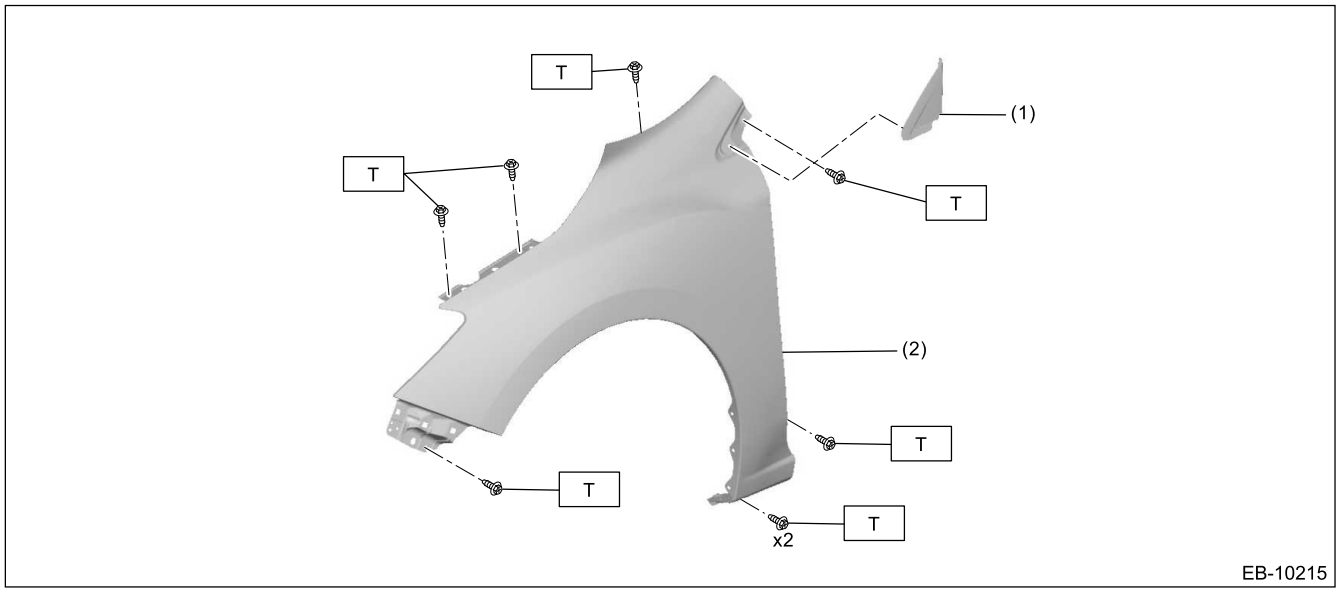
For the service diagnostic mode, refer to the “INFOTAINMENT SYSTEM (DIAGNOSTICS)” section.
Ref. to INFOTAINMENT(DIAGNOSTICS) >Service Diagnostics Mode.



EXTERIOR BODY PANELS

EB

1. General Description
2. Front Hood
3. Front Fender
4. Front Door
5. Sealing Cover
6. Rear Door
7. Door Sash Tape
8. Trunk Lid
9. Rear Gate
10. Weather Strip

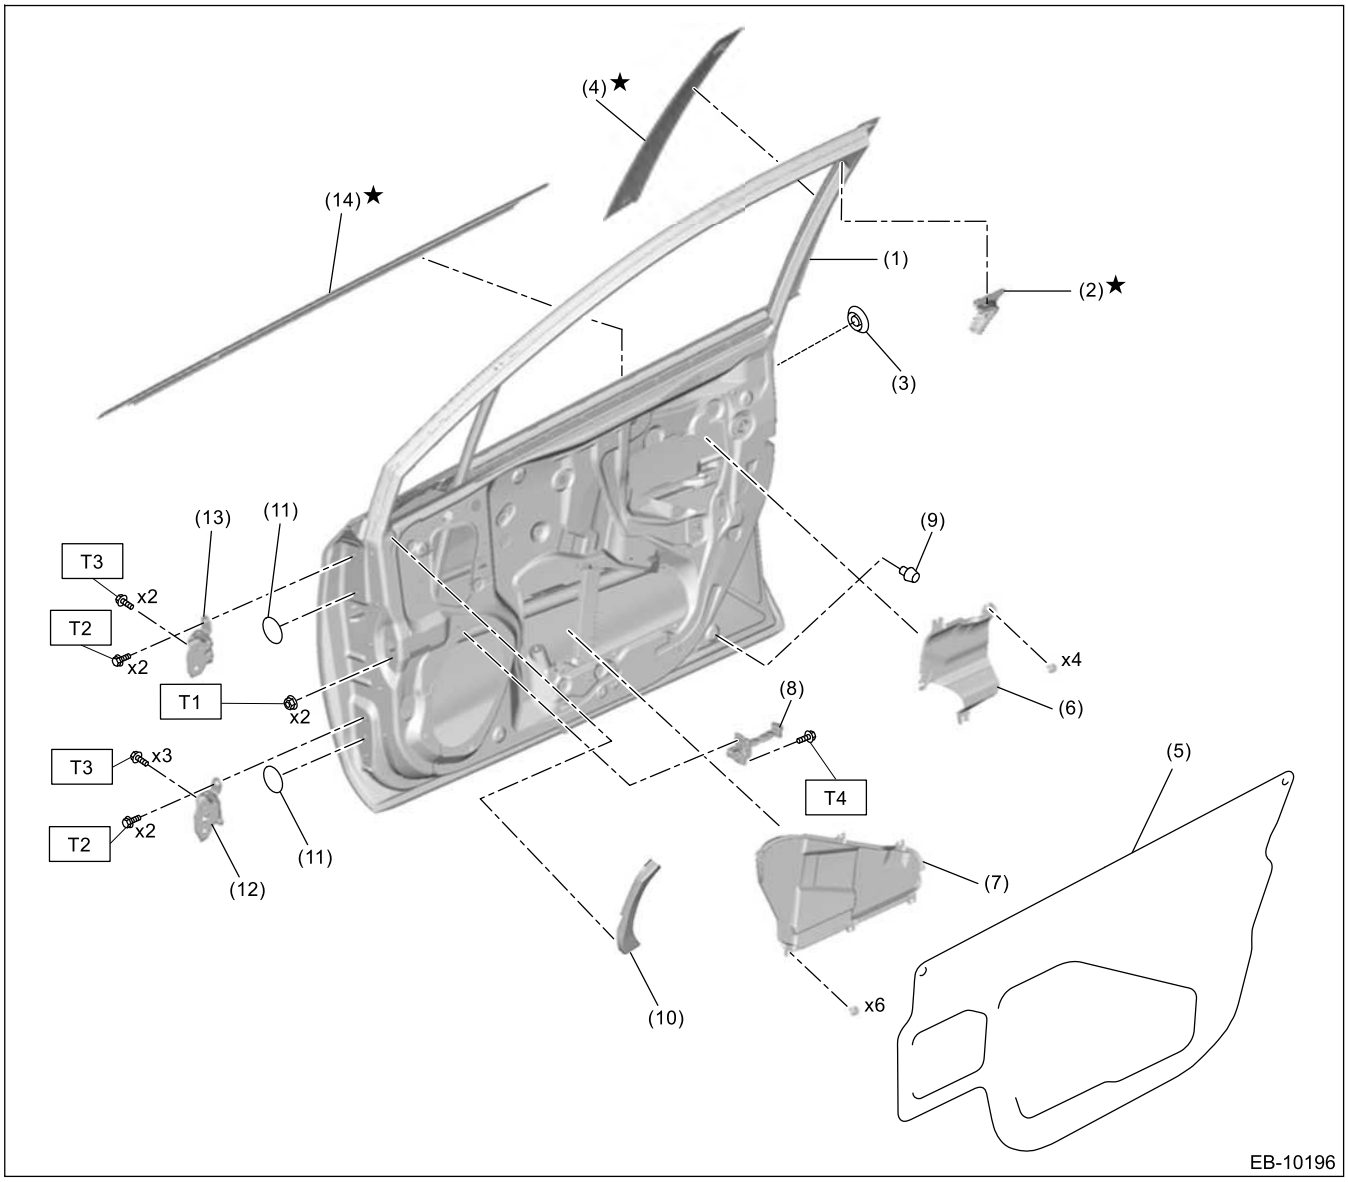


COMPONENT

1. FRONT HOOD

(1)	Hood COMPL - front	(5)	Clip	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Hinge COMPL - front hood	(6)	Insulator - front hood	***T1: 25 (2.5, 18.4)***
(3)	Stopper - front hood	(7)	Stay ASSY - front hood	***T2: 33 (3.4, 24.3)***
(4)	Striker - front hood	(8)	Buffer - front hood	

2. FRONT FENDER

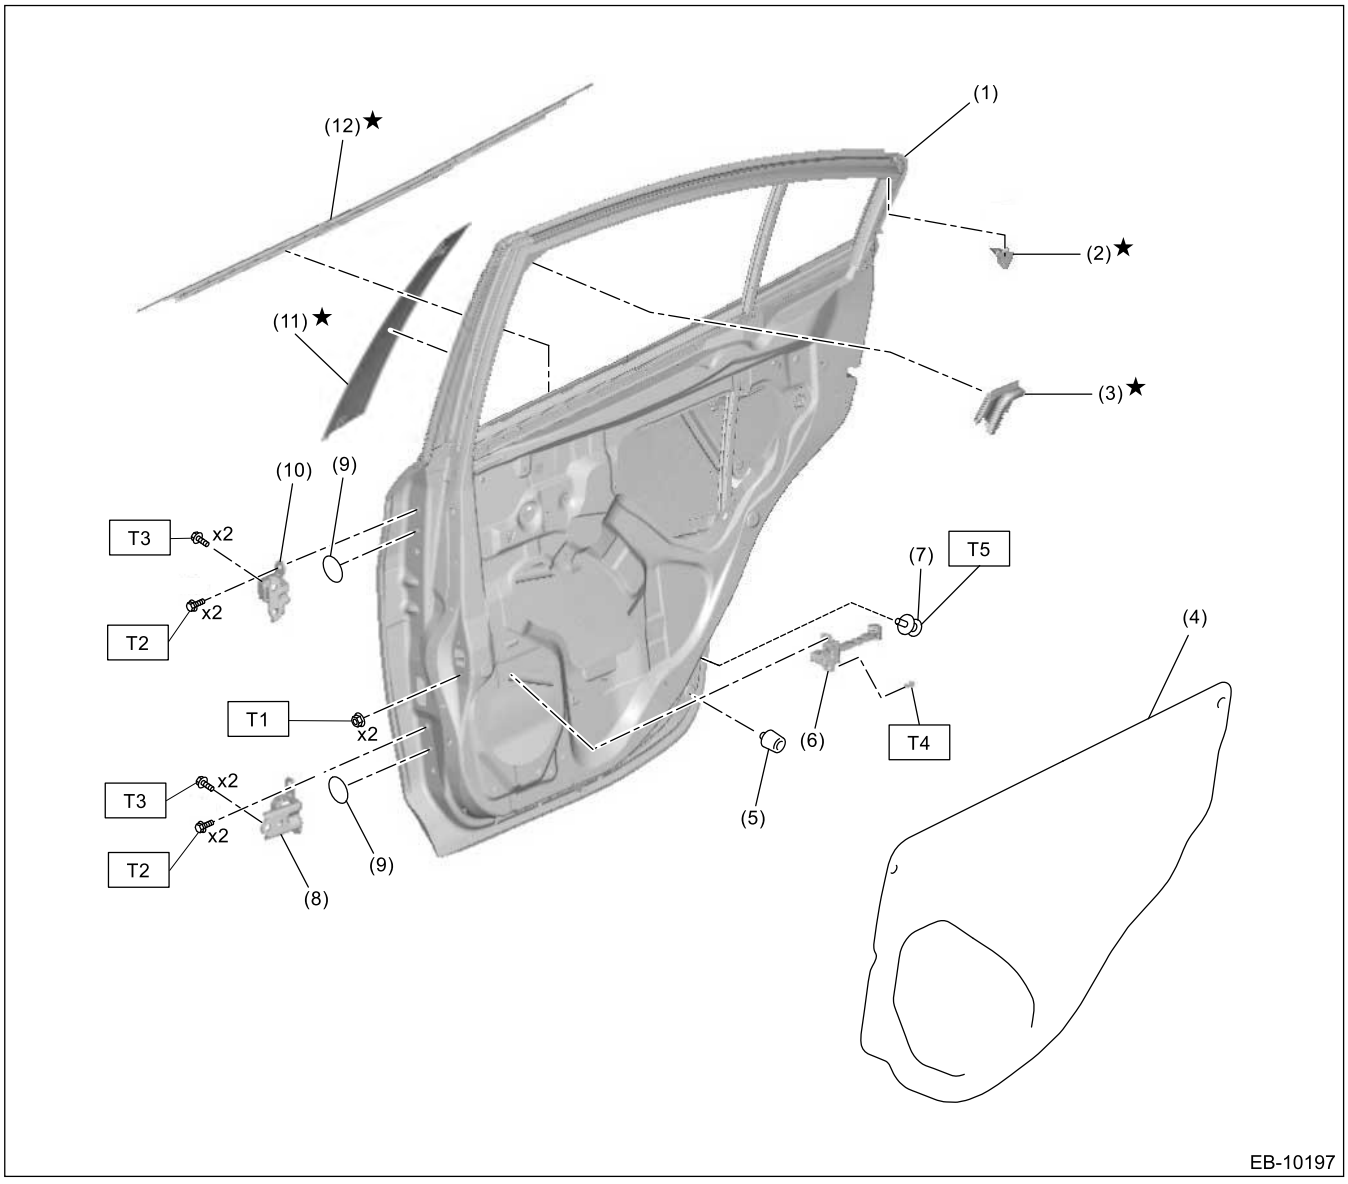


(1) Cover - A pillar ASSY

(2) Fender - front

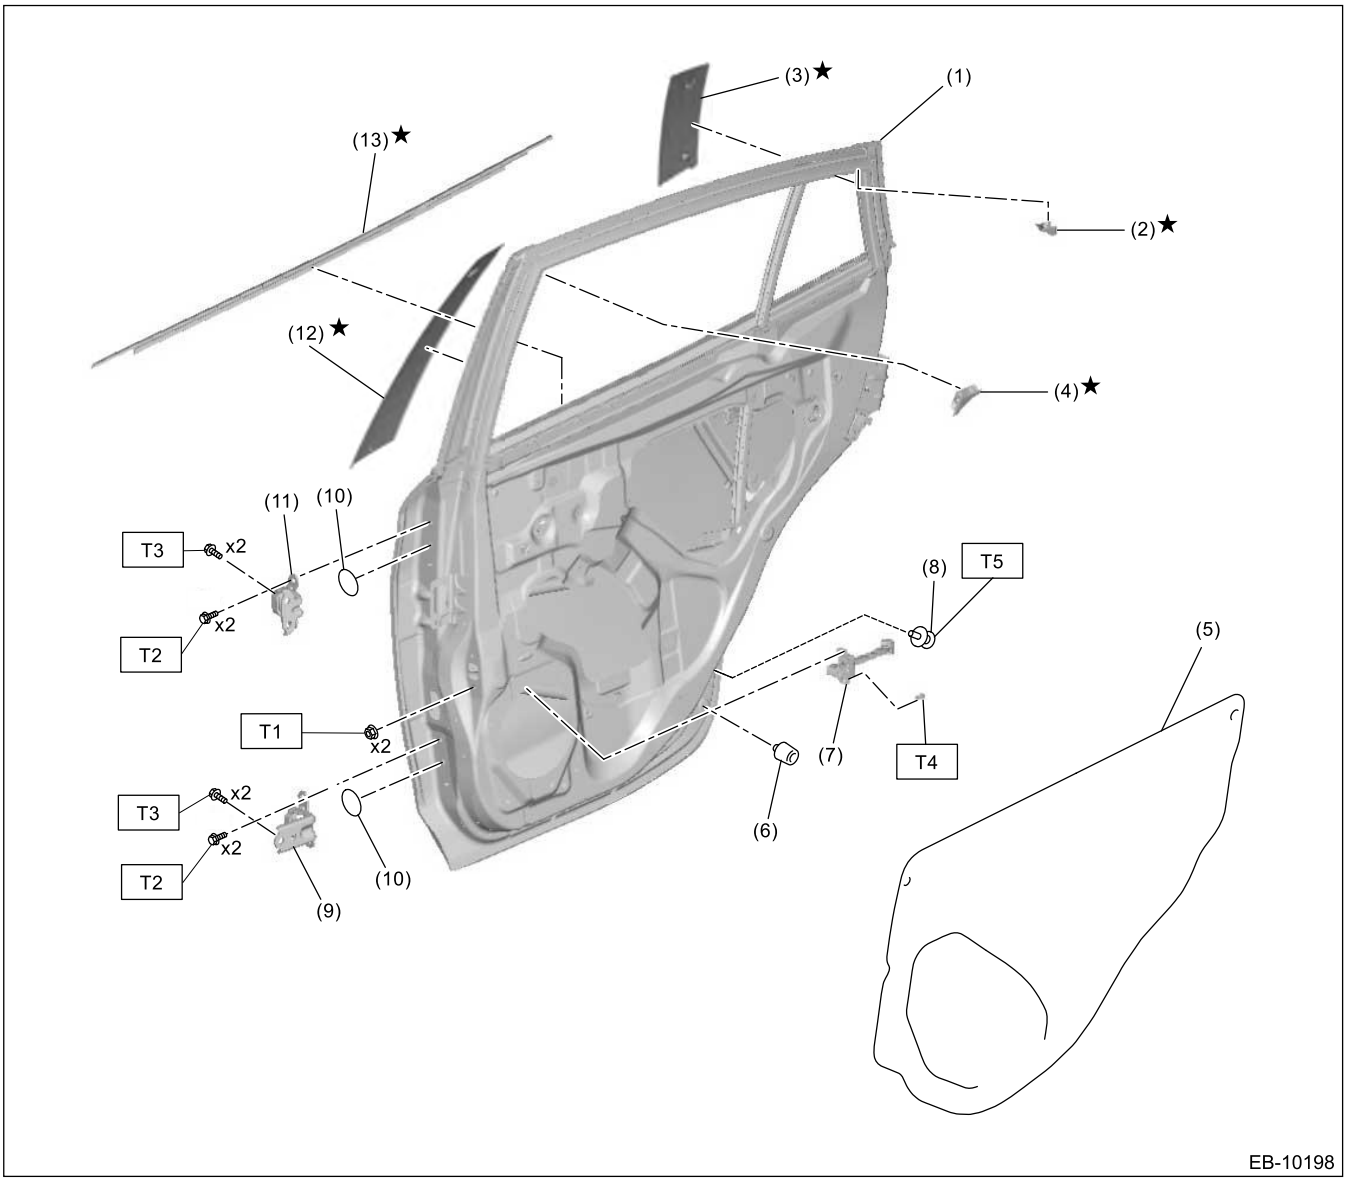
Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)



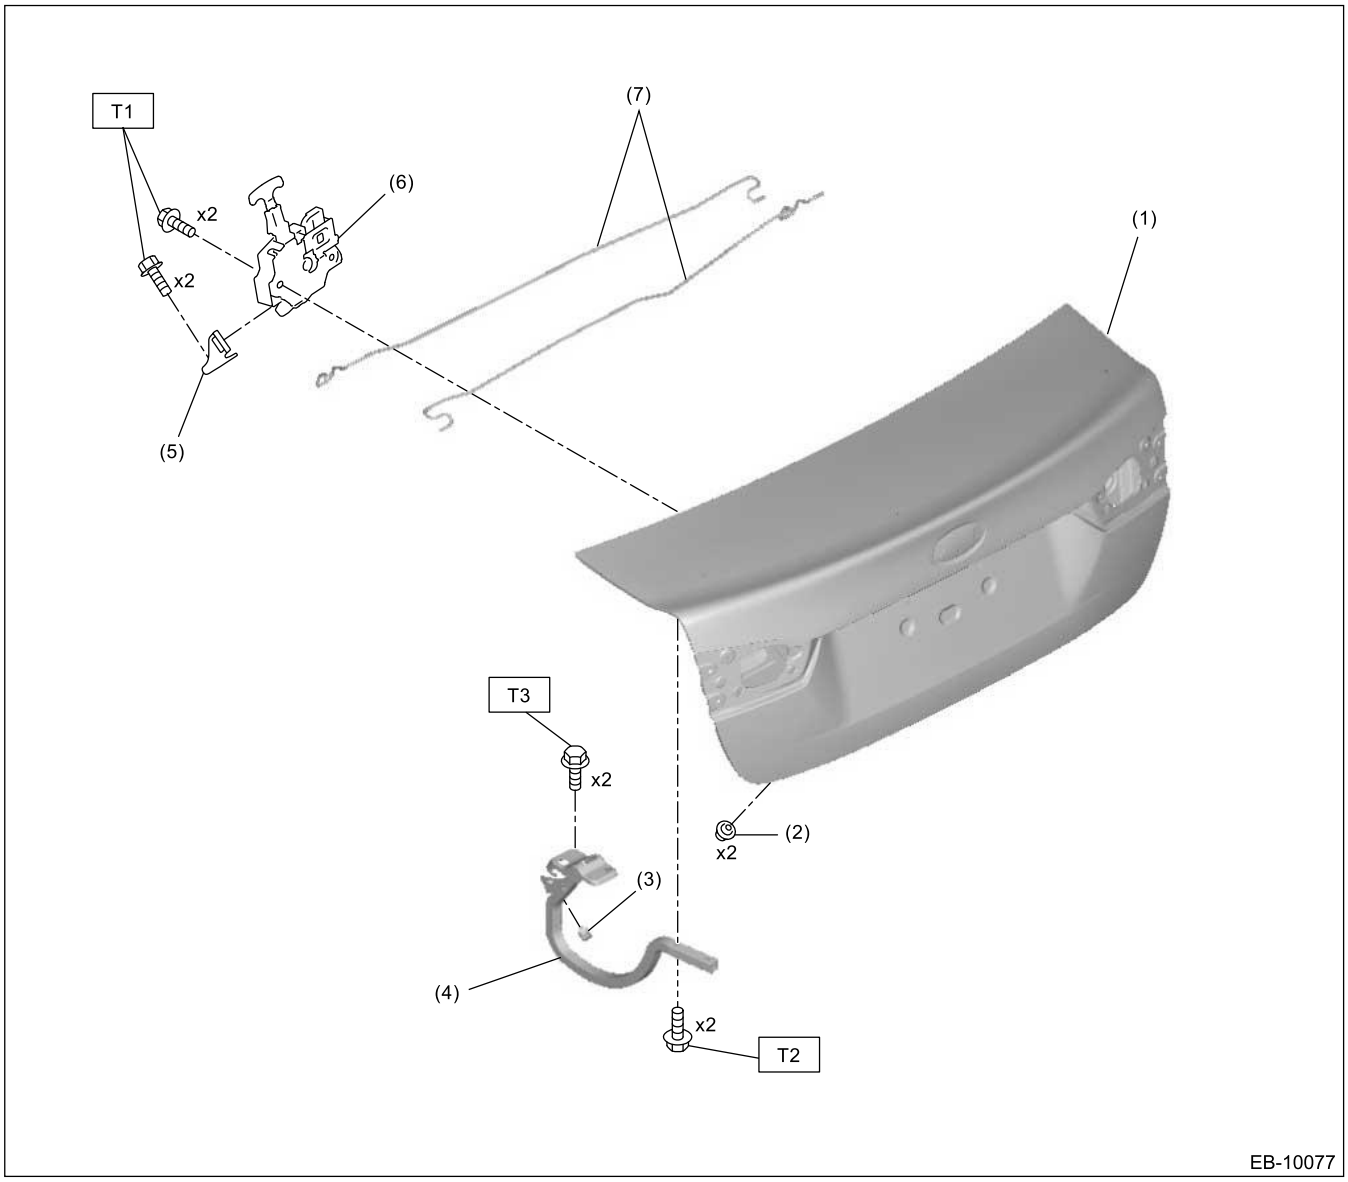
3. FRONT DOOR

(1)	Panel ASSY - front door	(8)	Checker ASSY - front door	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Cover B pillar - front door INN	(9)	Stopper rubber	***T1: 7.5 (0.8, 5.5)***	
(3)	Plug	(10)	Cover sash - inner front	***T2: 25 (2.5, 18.4)***	
(4)	Cover B pillar - front	(11)	Grommet	***T3: 30 (3.1, 22.1)***	
(5)	Sealing cover	(12)	Lower hinge - front door	***T4: 33 (3.4, 24.3)***	
(6)	Plate - door UPR	(13)	Upper hinge - front door		
(7)	Plate - door LWR	(14)	Weather strip outer - front door		



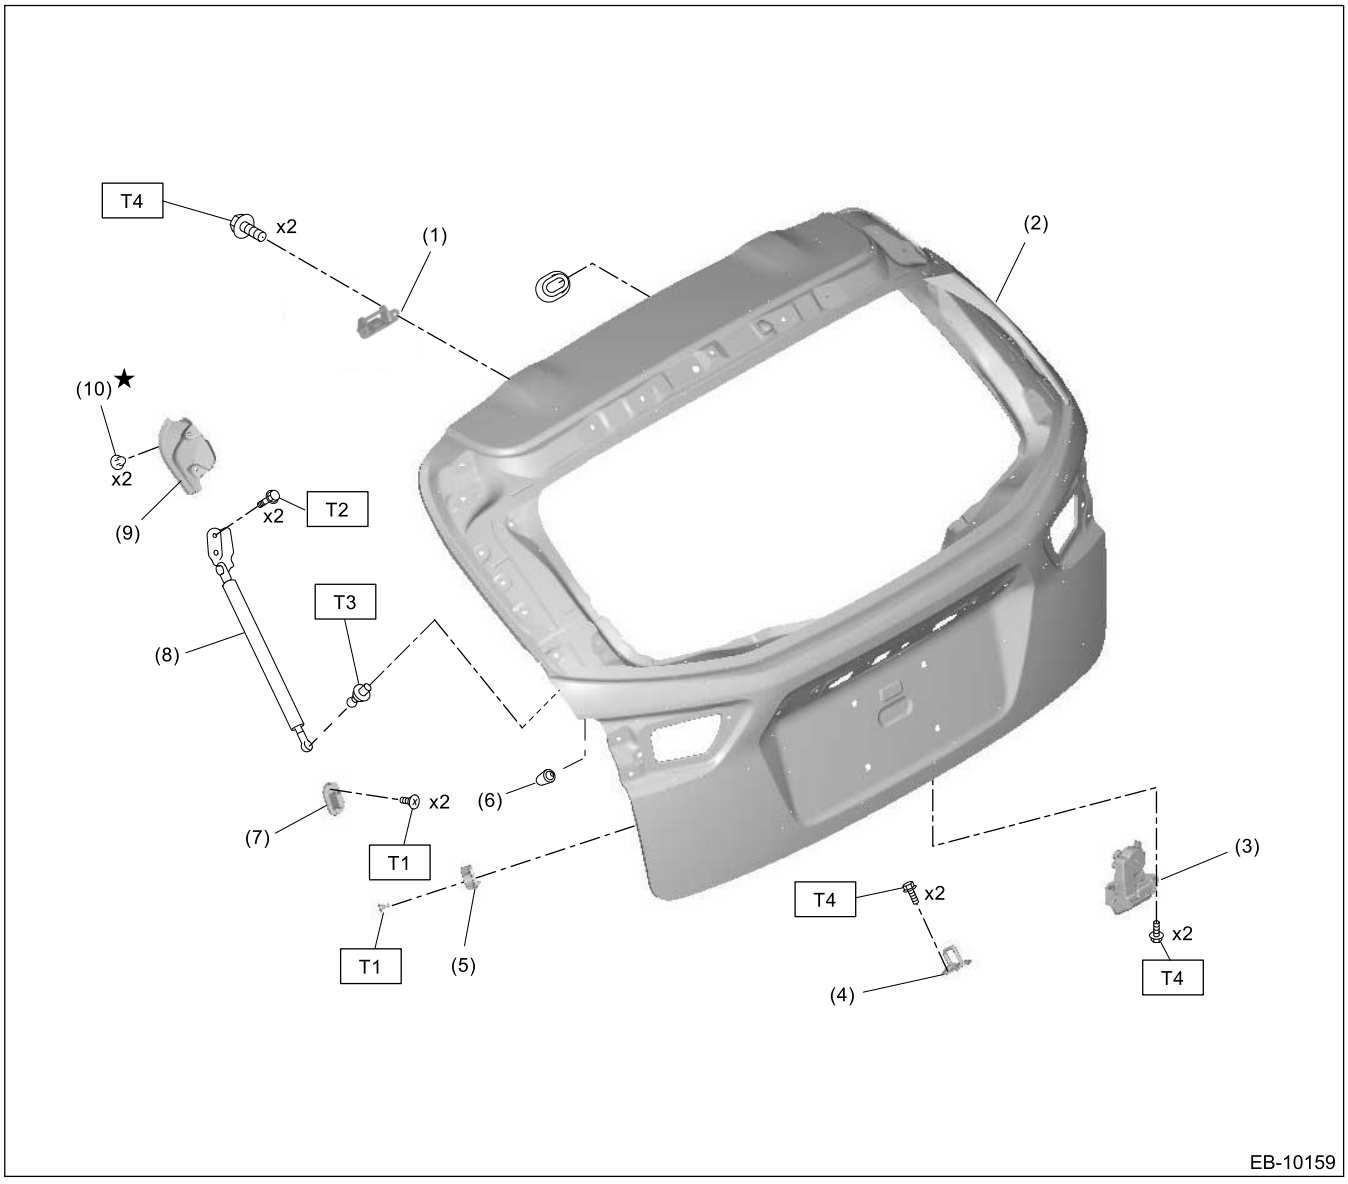
4. REAR DOOR

- 4 door model



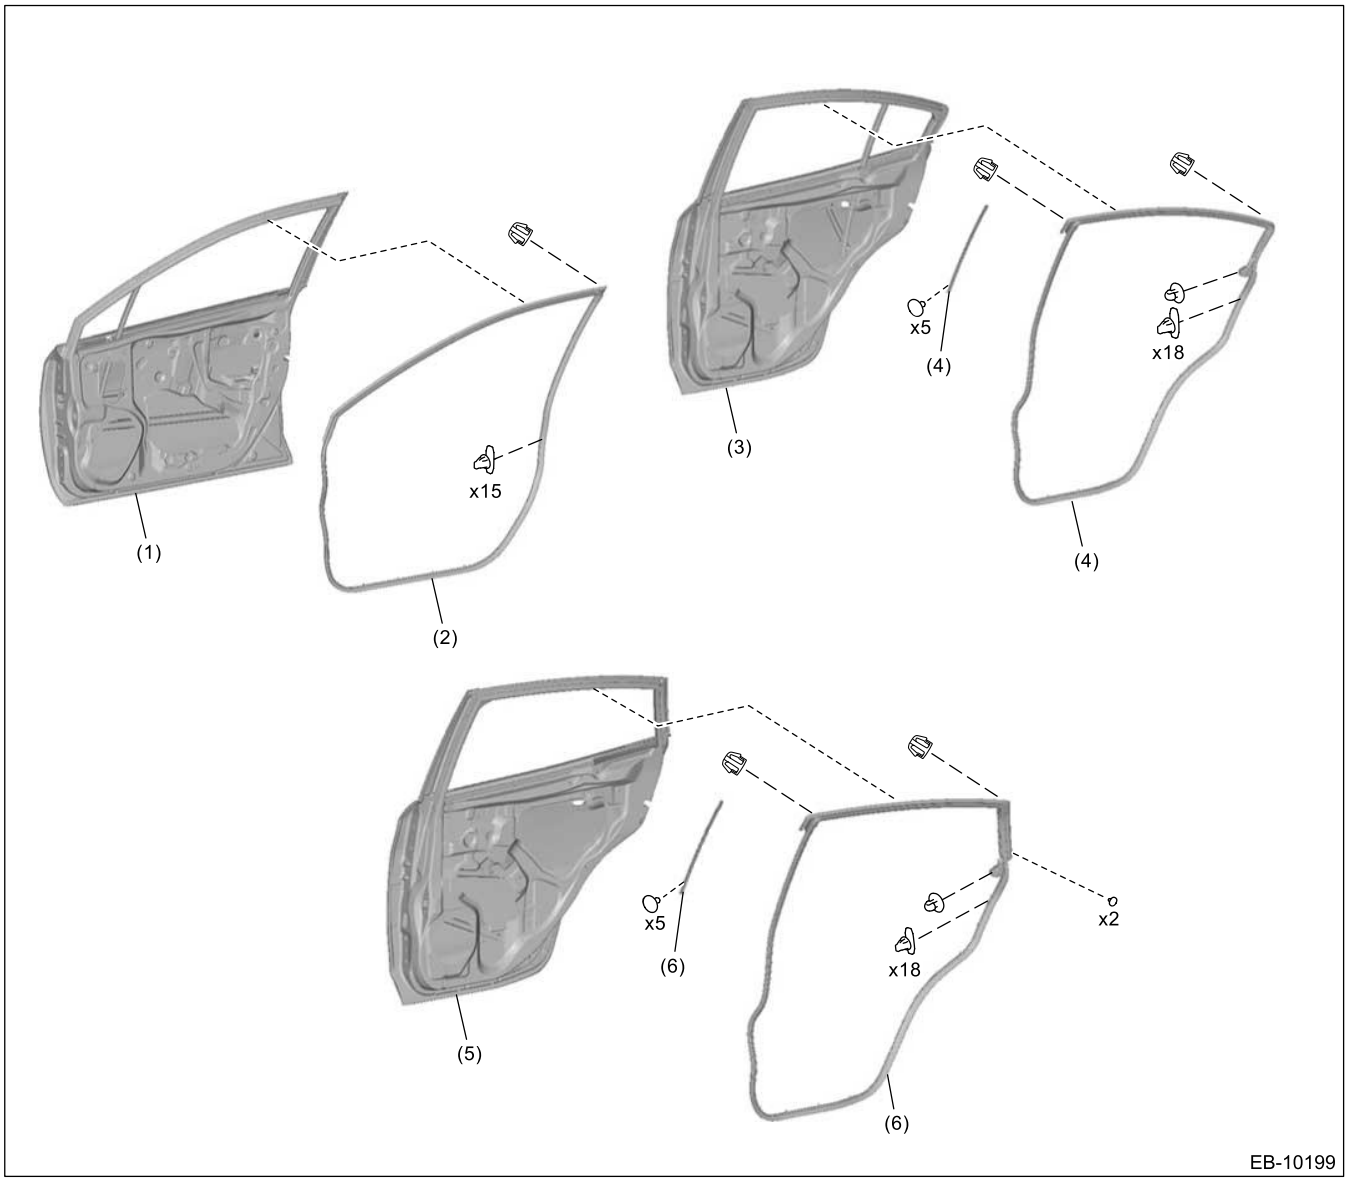
(1)	Panel ASSY - rear door	(7)	Catcher - rear door	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Cover C pillar - rear door INN	(8)	Lower hinge - rear door	***T1: 7.5 (0.8, 5.5)***	
(3)	Cover B pillar - rear door INN	(9)	Grommet	***T2: 25 (2.5, 18.4)***	
(4)	Sealing cover	(10)	Upper hinge - rear door	***T3: 30 (3.1, 22.1)***	
(5)	Stopper rubber	(11)	Cover B pillar - rear	***T4: 33 (3.4, 24.3)***	
(6)	Checker ASSY - rear door	(12)	Weather strip outer - rear door	***T5: 38 (3.9, 28)***	

- 5 door model



(1)	Panel ASSY - rear door	(8)	Catcher - rear door	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Cover C pillar - rear door INN	(9)	Lower hinge - rear door	***T1: 7.5 (0.8, 5.5)***	
(3)	Cover C pillar	(10)	Grommet	***T2: 25 (2.5, 18.4)***	
(4)	Cover B pillar - rear door INN	(11)	Upper hinge - rear door	***T3: 30 (3.1, 22.1)***	
(5)	Sealing cover	(12)	Cover B pillar - rear	***T4: 33 (3.4, 24.3)***	
(6)	Stopper rubber	(13)	Weather strip outer - rear door	***T5: 38 (3.9, 28)***	
(7)	Checker ASSY - rear door				

5. TRUNK LID PANEL



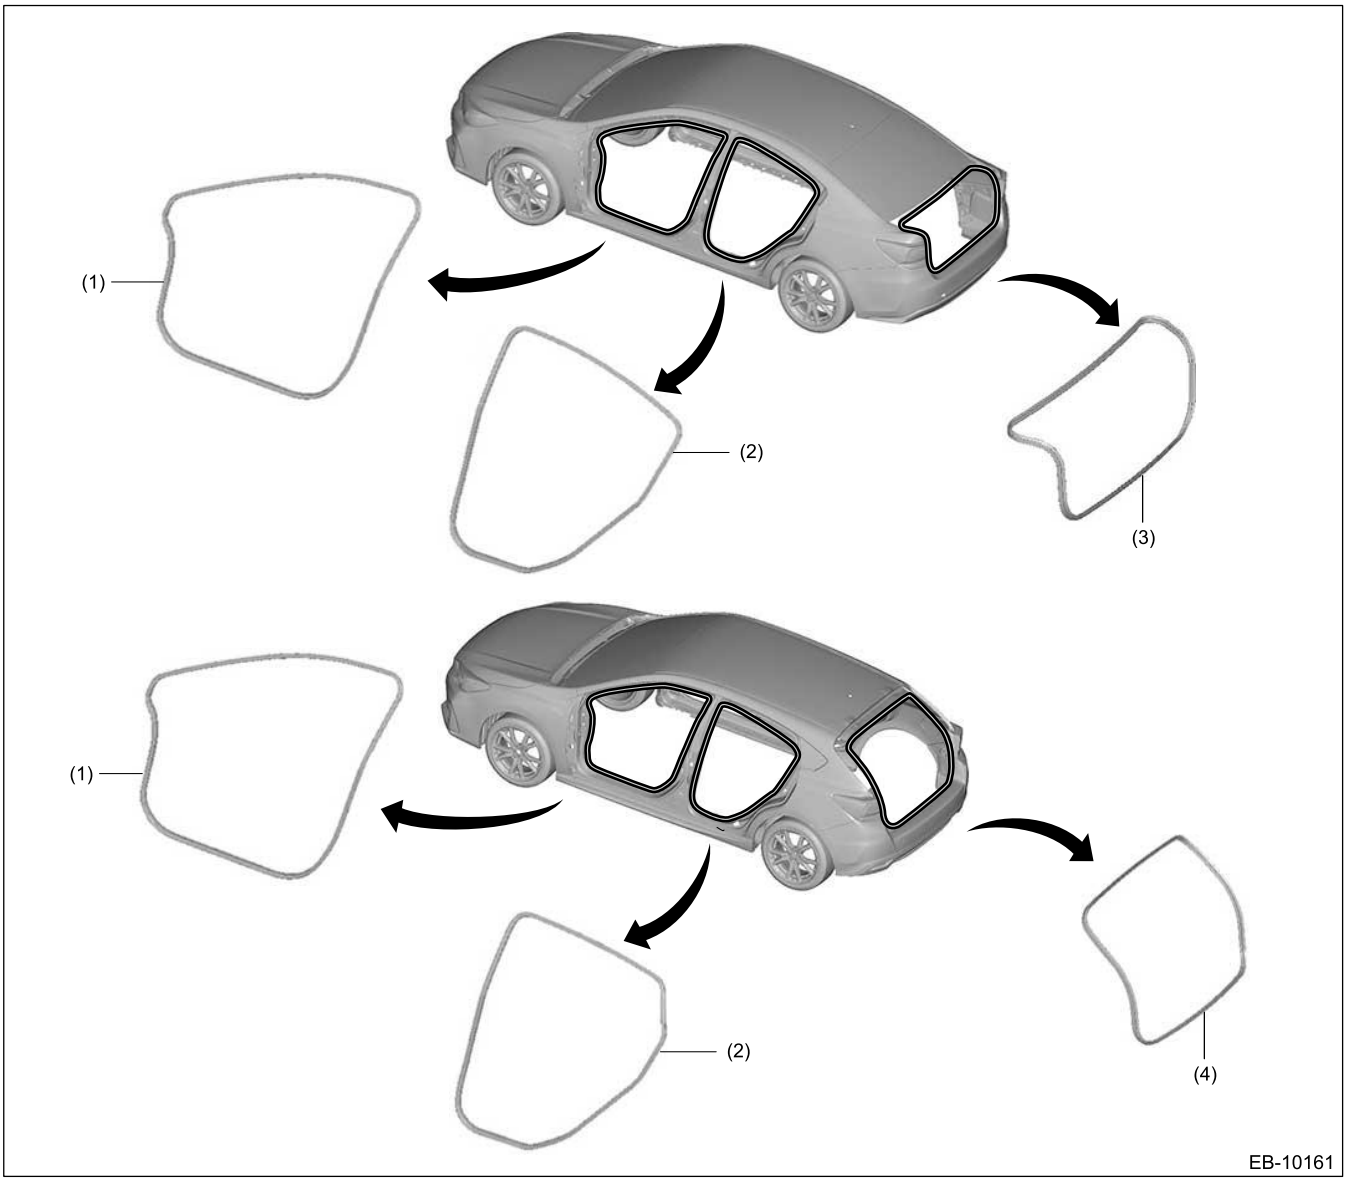
(1) Trunk lid COMPL	(5) Striker - trunk	***Tightening torque: N·m (kgf-m, ft-lb)***
(2) Stopper - trunk lid	(6) Lock ASSY - trunk lid	***T1: 7.5 (0.8, 5.5)***
(3) Stopper - trunk	(7) Torsion bar - trunk lid	***T2: 14 (1.4, 10.3)***
(4) Trunk lid arm ASSY		***T3: 18 (1.8, 13.3)***

6. REAR GATE

(1)	Hinge - rear gate	(6)	Stopper - rear gate	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Panel - rear gate	(7)	Buffer - body side	***T1: 7.5 (0.8, 5.5)***	
(3)	Latch & actuator - rear gate	(8)	Stay ASSY - rear gate	***T2: 16(1.6, 11.8)***	
(4)	Striker - rear gate	(9)	Drip - rear gate	***T3: 20 (2, 14.8)***	
(5)	Buffer - rear gate	(10)	Clip	***T4: 25 (2.5, 18.4)***	

7. WEATHER STRIP

(1) Panel ASSY - front door



(2) Weather strip - front door

(3) Panel ASSY - rear door (4 door model)

(4) Weather strip - rear door (4 door model)

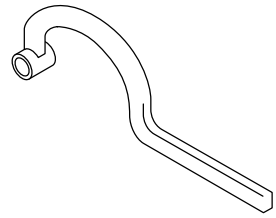
(5) Panel ASSY - rear door (5 door model)

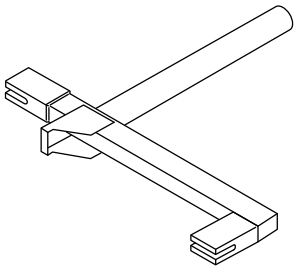
(6) Weather strip - rear door (5 door model)

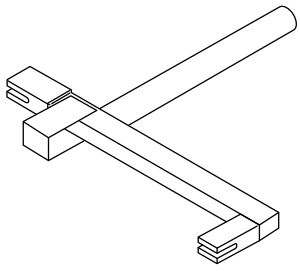
(1) Weather strip - body side flange front

(2) Weather strip - body side flange rear

(3) Weather strip - trunk lid (4 door model)







(4) Weather strip - rear gate (5 door model)

CAUTION

Exterior body panels are heavy. When removing or installing, do not drop and damage the panels. Do not damage the panel painting surface.

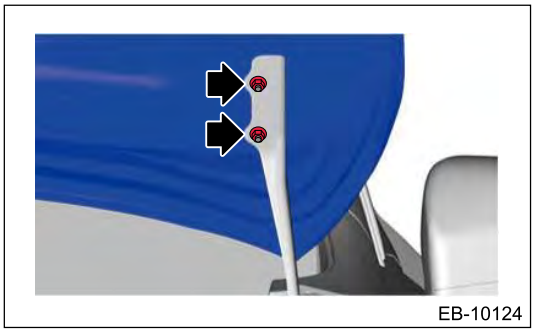
PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925610000	925610000	WRENCH	Used for removing and installing door hinge.
 ST927780000	927780000	REMOVER	• Used for removing and installing the trunk torsion bar. • REMOVER (99099FJ000) can also be used.
 ST-99099FJ000	99099FJ000	REMOVER	• Used for removing and installing the trunk torsion bar. • REMOVER (927780000) can also be used.

2. GENERAL TOOL

TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips.



EXTERIOR BODY PANELS > Front Hood

REMOVAL

Caution:

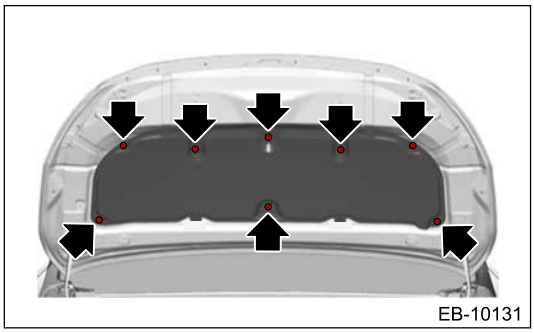
The hood COMPL - front is heavy. When removing and installing it, always work in a team of two or more persons.

1. Open the hood COMPL - front.
2. Remove the nut on the hood COMPL - front side, and remove the hood COMPL - front.

EXTERIOR BODY PANELS > Front Hood

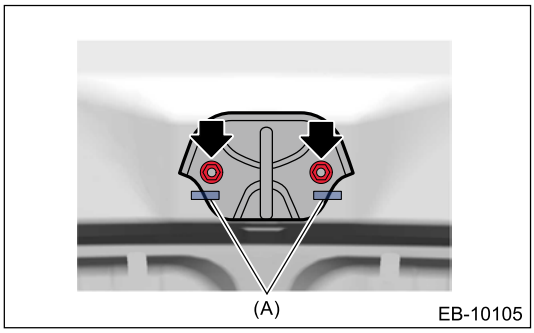
INSTALLATION

1. Install the hood COMPL - front.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
2. Adjust the clearance around the hood COMPL - front. Ref. to EXTERIOR BODY PANELS>Front Hood>ADJUSTMENT.



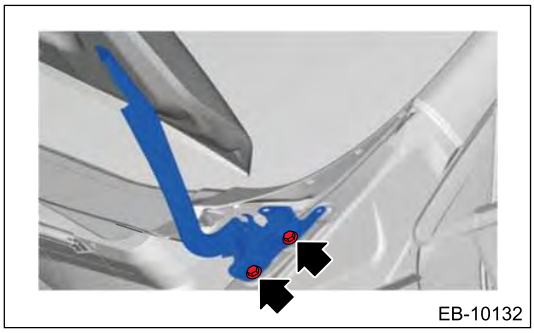
EXTERIOR BODY PANELS > Front Hood

DISASSEMBLY



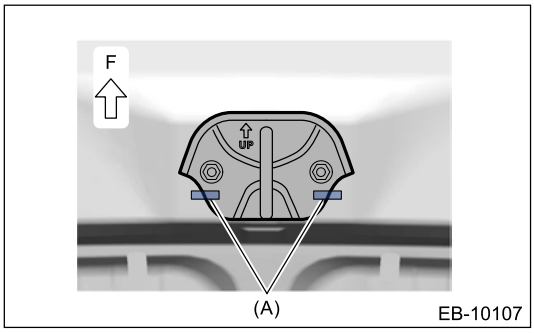
Caution:

The hood COMPL - front is heavy. When removing or installing the hood COMPL - front and the hinge COMPL - front hood, be sure to work in a group of two or more.



1. Remove the clips, and remove the insulator - front hood.

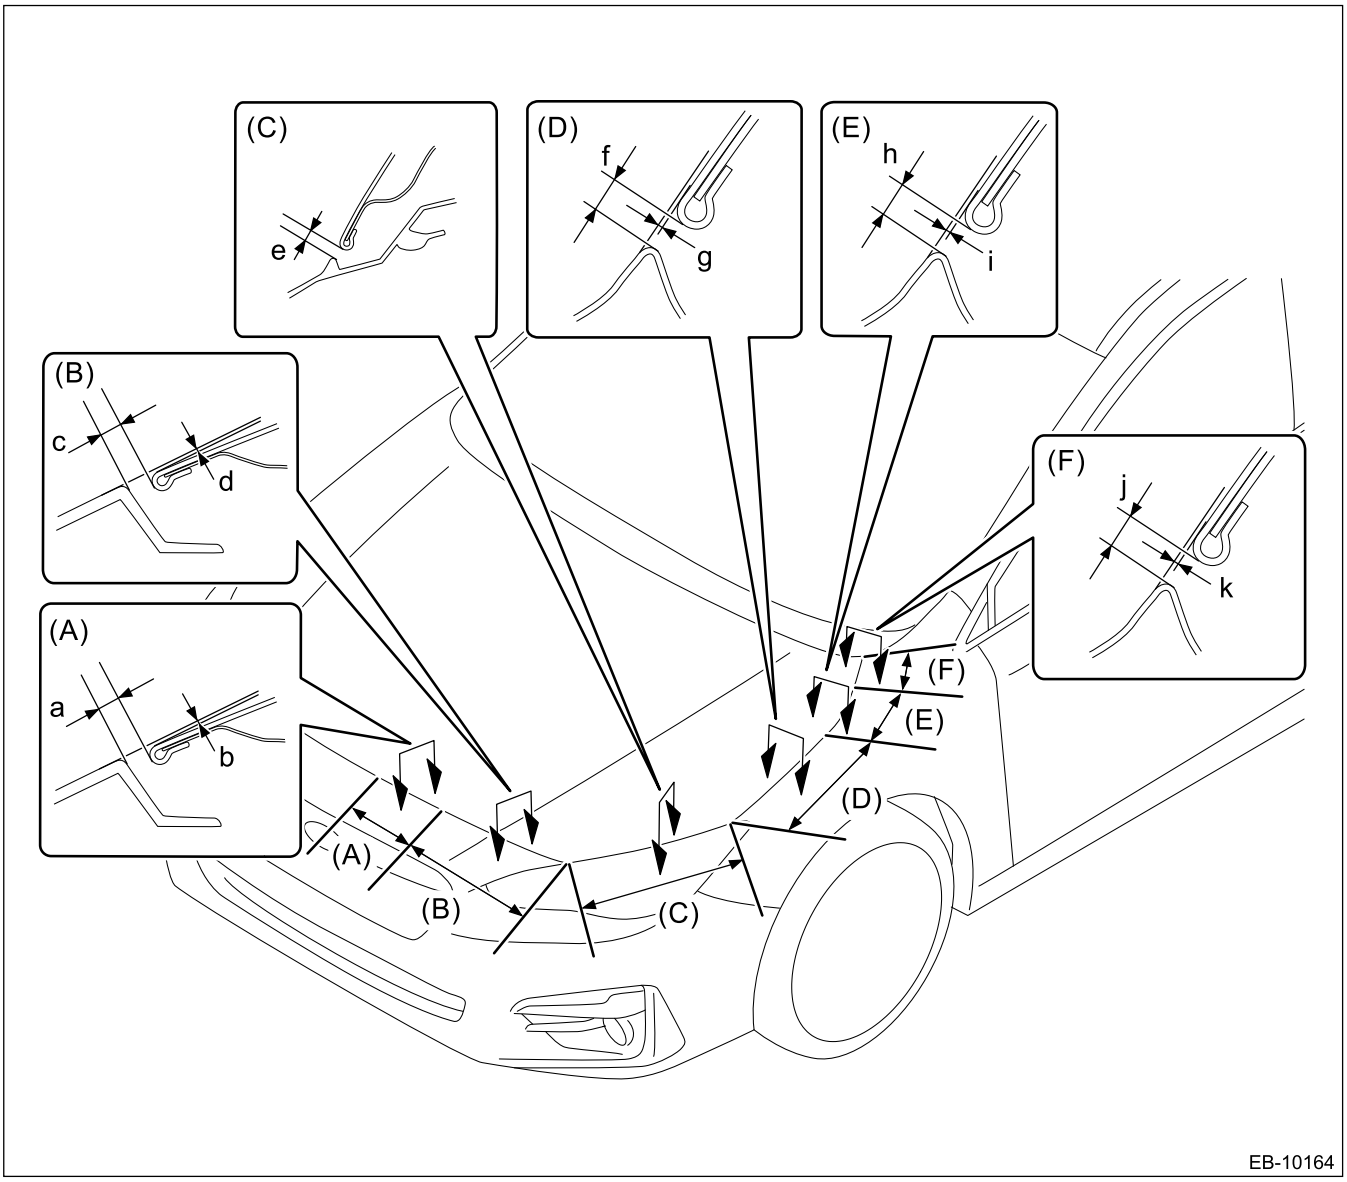
2. Make alignment marks (A), and remove the striker - front hood from the hood COMPL - front.



3. Remove the hinge COMPL - front hood from the body.

EXTERIOR BODY PANELS > Front Hood

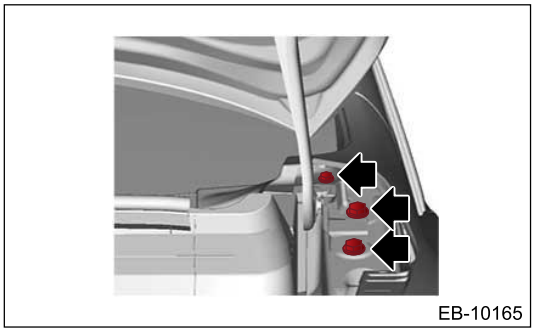
ASSEMBLY



1. Install the hinge COMPL - front hood.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
2. Install the insulator - front hood.
3. Align the alignment marks (A), and install the striker - front hood to the hood COMPL - front.
   Caution:
   When installing the striker - front hood, make sure that the front and rear sides are positioned in a correct direction.
   Note:
   It is not necessary to adjust the striker - front hood because there is no span of adjustable range.
   Tightening torque:
   33 N·m (3.4 kgf-m, 24.3 ft-lb)

EXTERIOR BODY PANELS > Front Hood

ADJUSTMENT



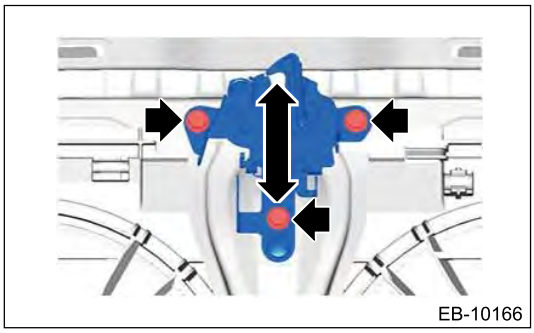
Adjust the clearance around the hood COMPL - front as follows.

Part		Standard
A	Hood COMPL - front to Bumper face - front	3.5 ± 1.7 mm (0.14 ± 0.07 in)
B	Surface level gap between Hood COMPL - front and Bumper face - front	0.7 ± 1.2 mm (0.03 ± 0.05 in)
C	Hood COMPL - front to Bumper face - front	3.5 ± 1.7 mm (0.14 ± 0.07 in)
D	Surface level gap between Hood COMPL - front and Bumper face - front	1±1.2 mm (0.04±0.05 in)
E	Hood COMPL - front to Light assembly - head	3±1.7 mm (0.12±0.07 in)
F	Hood COMPL - front to Fender - front	3.5±1mm (0.14±0.04 in)
G	Surface level gap: Hood COMPL - front to Fender - front	0±1mm (0±0.04 in)
H	Hood COMPL - front to Fender - front	3±1mm (0.12±0.04 in)
I	Surface level gap: Hood COMPL - front to Fender - front	0±1mm (0±0.04 in)
J	Hood COMPL - front to Fender - front	4±1mm (0.16±0.04 in)
K	Surface level gap: Hood COMPL - front to Fender - front	-0.5±1mm (-0.02±0.04 in)

1. Adjust the horizontal position of the hood COMPL - front.

(1) Loosen the attaching nuts of the hinge COMPL - front hood on the left and right sides.

(2) Adjust the horizontal clearance of the hood COMPL - front, and tighten the attaching nuts of the hinge COMPL - front hood.

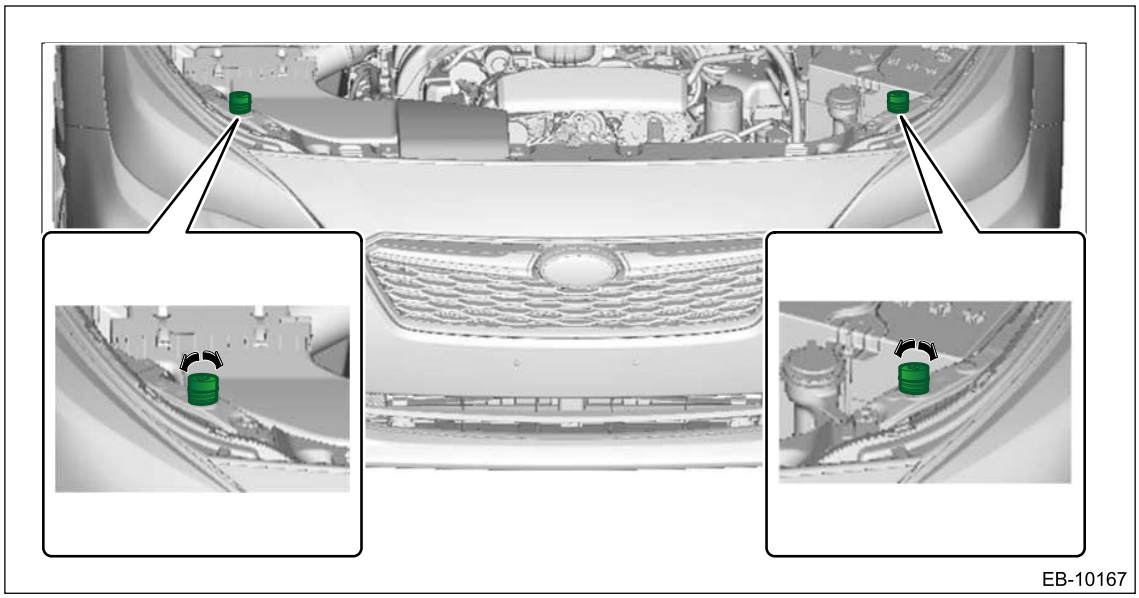


Tightening torque:

25 N·m (2.55 kgf-m, 18.4 ft-lb)

2. Adjust the front end height of the hood COMPL - front.

(1) Loosen the bolts on the lock assembly - front hood.

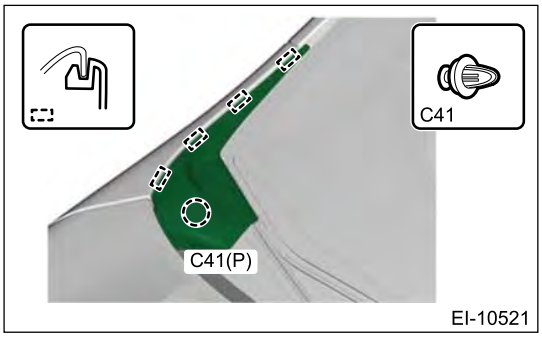


(2) Adjust the lock assembly - front hood by moving it up and down.

Tightening torque:

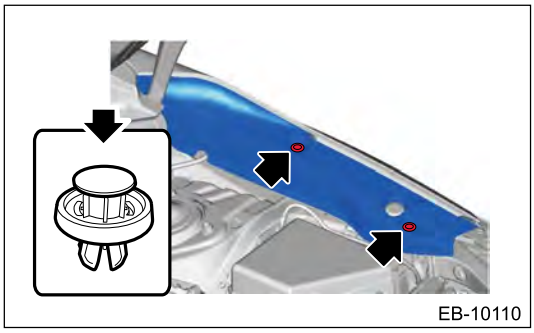
33 N·m (3.4 kgf-m, 24.3 ft-lb)

3. Rotate the buffer - front hood of the hood COMPL - front to adjust the height.



REMOVAL

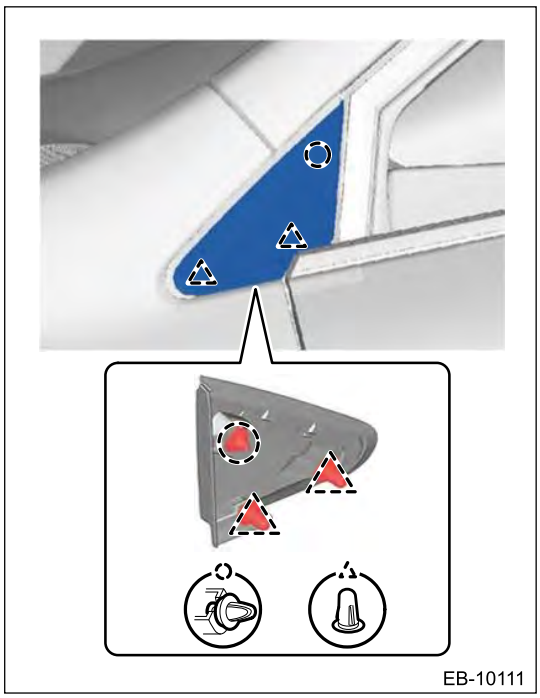
1. FENDER PANEL



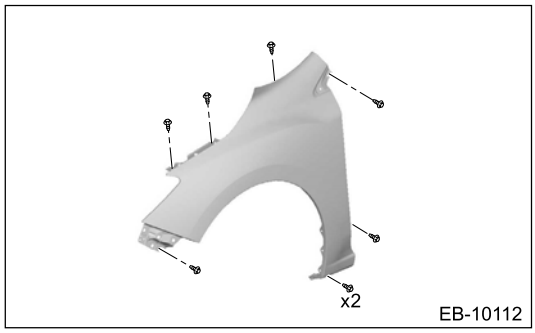
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Remove the light assembly - head. Ref. to LIGHTING SYSTEM>Headlight Assembly>REMOVAL.
4. Release the clips and claws, and then remove the cowl panel - on the left and right sides.

   Caution:

   Pulling with excessive force may damage the cowl panel - side. If it is difficult to remove, use a plastic remover or equivalent tool.



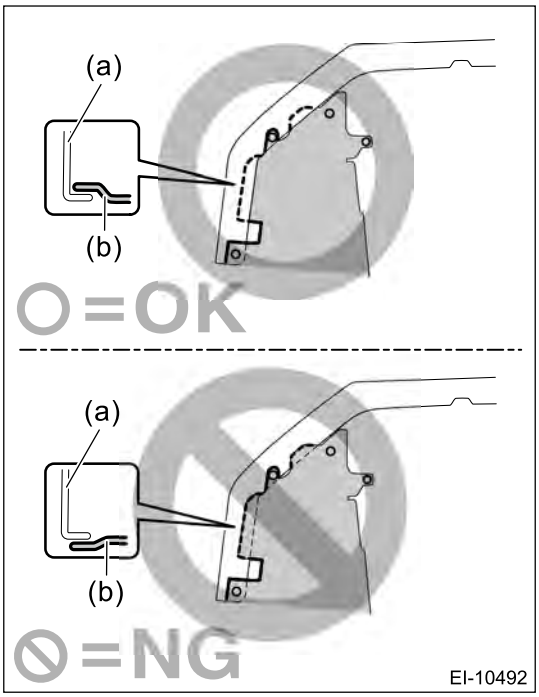
5. Remove the cover - front fender.



6. Remove the insulator - fender rear. (If equipped)

7. Remove the mud guard - front. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>REMOVAL.
8. Remove the spoiler assembly - side. Ref. to EXTERIOR/INTERIOR TRIM>Side Garnish>REMOVAL.
9. Remove the cover - A pillar assembly.

10. Remove the fender - front.



EXTERIOR BODY PANELS > Front Fender

INSTALLATION

1. FENDER PANEL

Caution:

Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).

1. Install the fender - front.

   Tightening torque:

   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

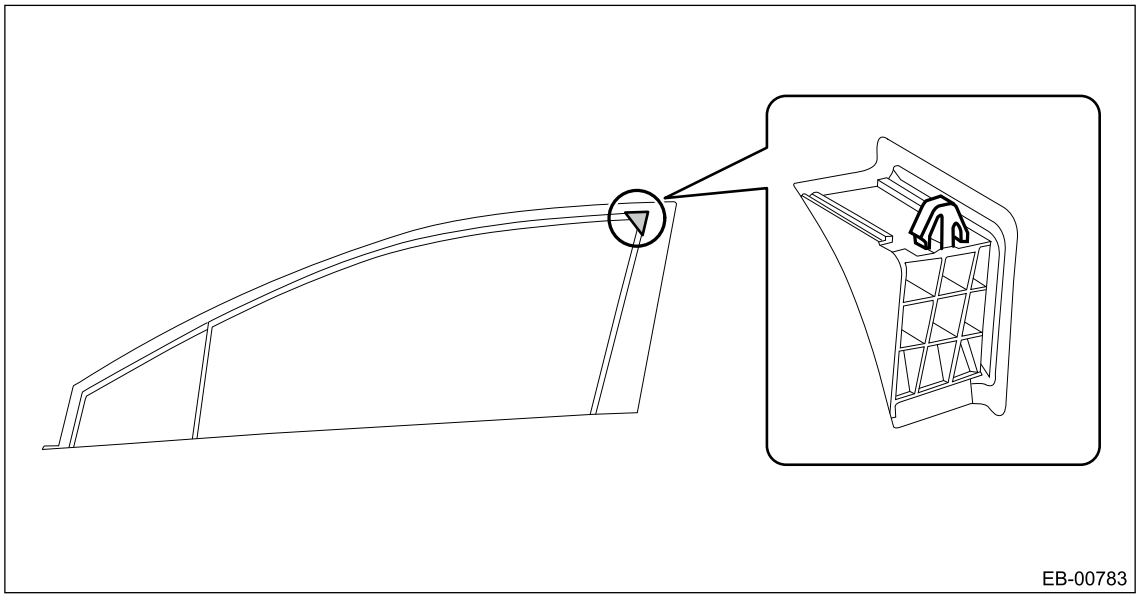
   Note:

   When installing the fender - front, make sure that a uniform clearance is created around it.

   - **Fender - front to Hood COMPL - front: Ref. to EXTERIOR BODY PANELS>Front Hood>ADJUSTMENT.**
   - **Fender - front to Panel assembly - front door: Ref. to EXTERIOR BODY PANELS>Front Door>ADJUSTMENT.**

1. Install the cover - A pillar assembly.
2. Install the spoiler assembly - side.
3. Install the mud guard - front.
4. Install the insulator - fender rear. (If equipped)

(1) Push the insulator - fender rear (a) so that the front side comes back of the reinforce - front panel side (b) end.



5. Install the cover - front fender.
6. Install the cowl panel - side.
7. Install the light assembly - head.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8. Install the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
10. Adjust the headlight beam and fog light beam.
    - Adjust the headlight beam. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT > HEADLIGHT BEAM ADJUSTMENT.
    - Adjust the fog light beam. (Model with fog light) Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>ADJUSTMENT > FOG LIGHT AIMING.

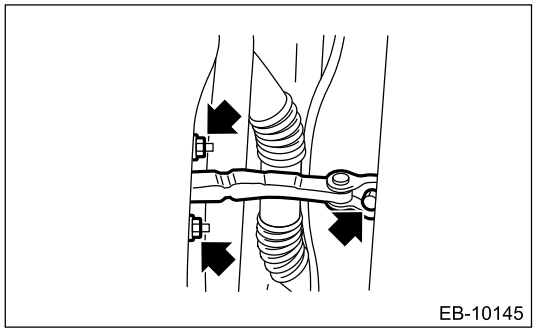
REMOVAL

1. FRONT DOOR PANEL

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the front sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > FRONT SEALING COVER.
4. Remove the outer mirror assembly. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly>REMOVAL.
5. Remove the front door speaker assembly. Ref. to ENTERTAINMENT & MONITORING>Front Speaker>REMOVAL > DOOR SPEAKER.
6. Remove the glass assembly - front door and the glass - front door partition. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>REMOVAL.
7. Remove the running channel - front door. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>REMOVAL > FRONT DOOR PARTITION GLASS.
8. Remove the cover B pillar - front door INN.
   Caution:
   - **Always replace with a new part, because engagement of the claw weakens.**
   - **Do not damage the sash or sash tape OUT while removing.**

9. Remove the door sash tape and the cover B pillar - front. Ref. to EXTERIOR BODY PANELS>Door Sash Tape>REMOVAL.
10. Remove the regulator and motor assembly - front. Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly>REMOVAL.
11. Remove the sash assembly - partition. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>REMOVAL > FRONT DOOR PARTITION GLASS.
12. Remove the latch and actuator assembly - front. Ref. to SECURITY AND LOCKS>Door Latch & Door Lock Actuator Assembly>REMOVAL > FRONT.
13. Remove the handle - door outer. Ref. to SECURITY AND LOCKS>Door Outer Handle>REMOVAL > FRONT.
14. Remove the weather strip - front door. Ref. to EXTERIOR BODY PANELS>Weather

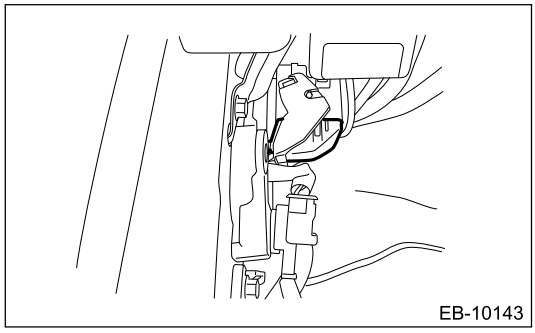
Strip>REPLACEMENT.



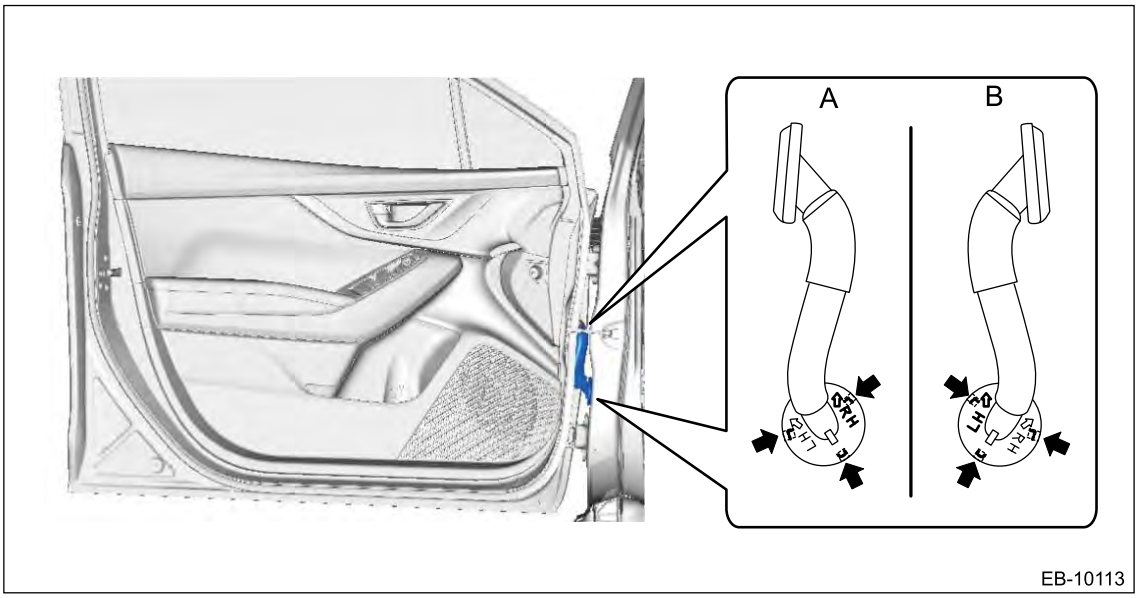
15. Remove the clips and the upper hooks, and remove the cover sash - inner front.

Caution:

Do not pull the cover sash - inner front forcibly. Doing so may damage the hook portion of the cover sash - inner front.



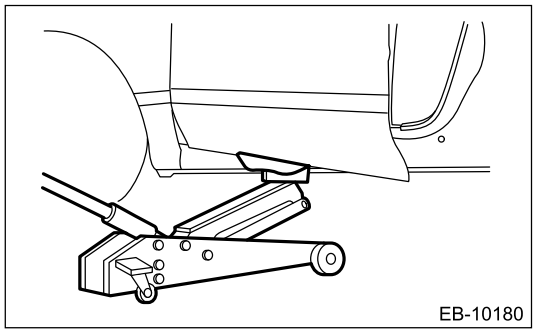
16. Remove the bolts and nuts, and then detach the checker assembly - front door.



17. Remove the cover side sill - front INN and cover side sill - front. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.

18. Disconnect the front door harness connectors.

(1) Disconnect the connector of door harness from body harness.



(2) Push in the claws to remove the grommet, and pull out the door harness connector.

A	Left door
B	Right door

19. Before removing the panel assembly - front door, make the following preparations.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.

Caution:

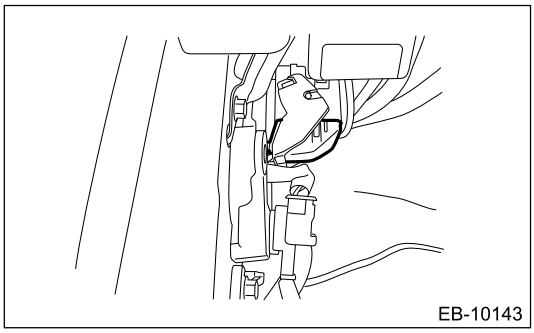
Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.

20. Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door and the lower hinge - front door to remove the panel assembly - front door.

Caution:

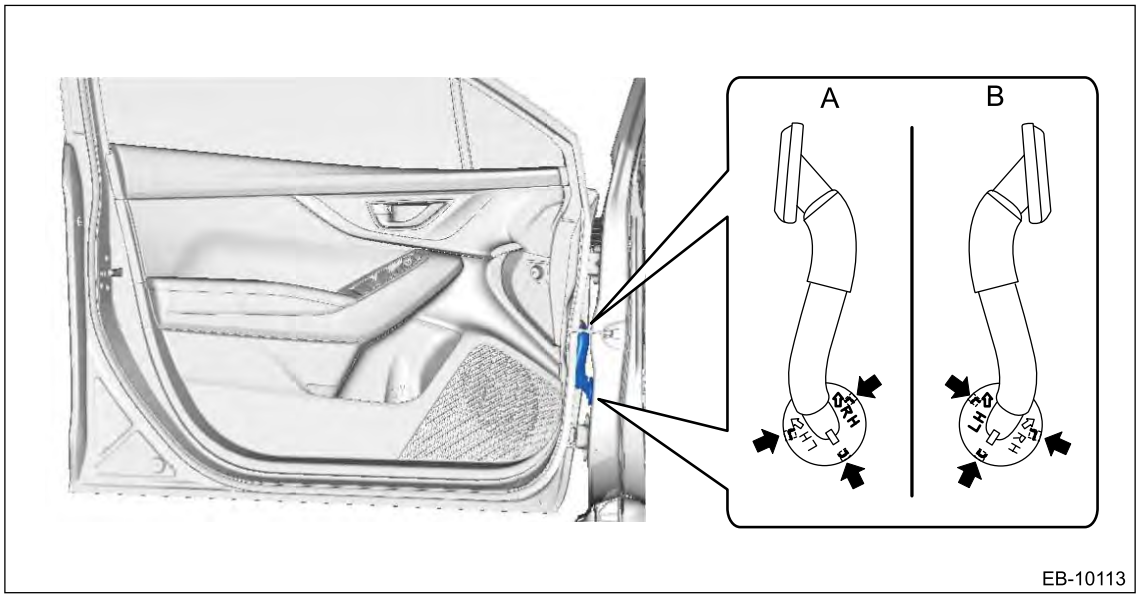
The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.

21. Remove the door hinge from vehicle.



2. FRONT DOOR HINGE

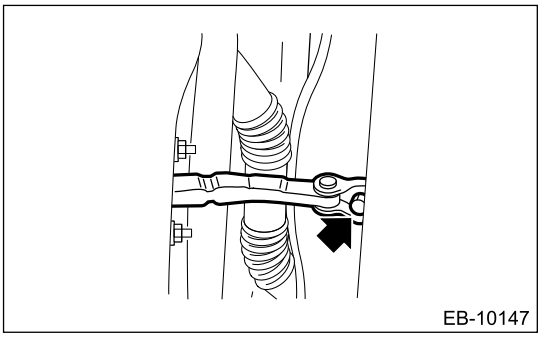
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.



2. Remove the cover side sill - front INN and cover side sill - front. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.

3. Disconnect the front door harness connectors.

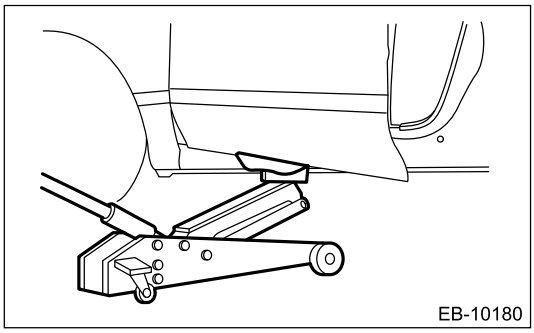
(1) Disconnect the connector of door harness from body harness.



(2) Push in the claws to remove the grommet, and pull out the door harness connector.

A	Driver's side
B	Passenger's side

4. Remove the bolts on the vehicle side to disconnect the checker assembly - front door.



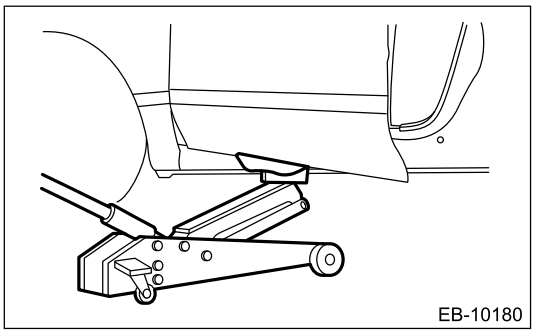
5. Before removing the door hinge, make the following preparations.

Caution:

- **The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.**
- **Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.**

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.

(2) Support the panel assembly - front door with the jack to protect it from damage.



6. Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door or the lower hinge - front door.
   Caution:
   Do not remove the upper hinge - front door and the lower hinge - front door at the same time.
7. Remove the hinge - front door from the vehicle.

EXTERIOR BODY PANELS > Front Door

INSTALLATION

1. FRONT DOOR PANEL

1. Put a wooden block and the like on a jack and place the panel assembly - front door on it.

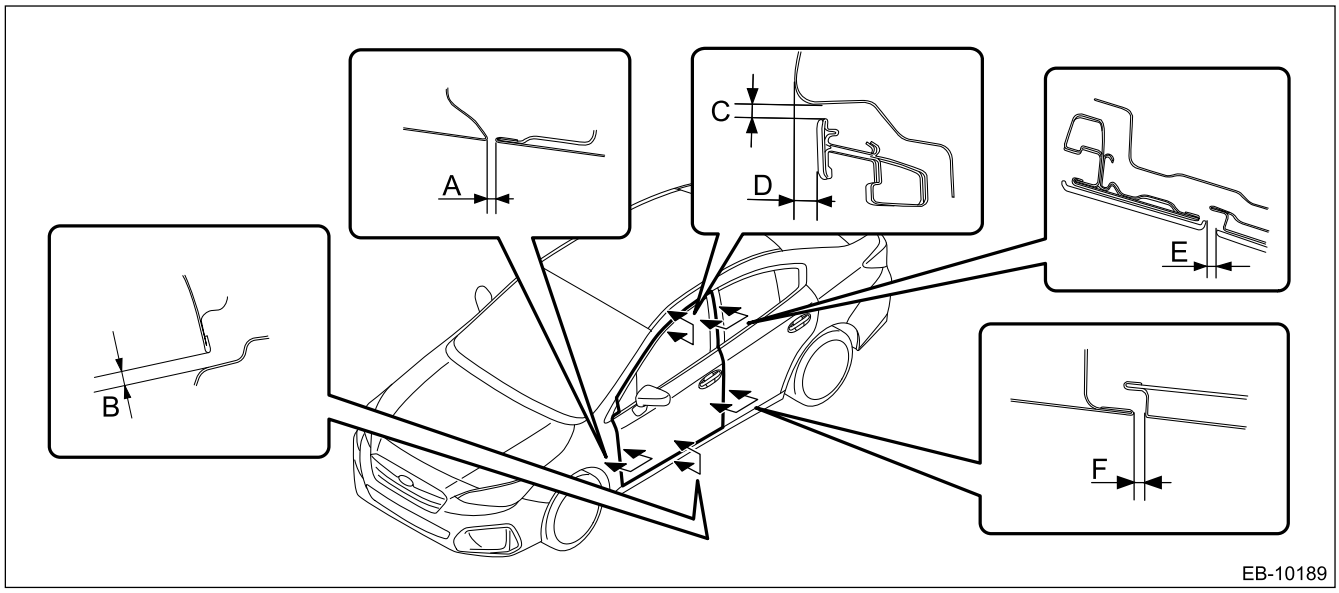
2. Apply grease to the sliding area of door hinges, and install to vehicle.
3. Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.
   Note:
   - **When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.**
   - **Perform installation while paying attention to the assembly direction of the grommet.**
4. Adjust the clearance around the panel assembly - front door. Ref. to EXTERIOR BODY PANELS>Front Door>ADJUSTMENT.
5. Tighten the mounting bolts of the panel assembly - front door to the specified torque.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
6. Tighten the bolts and nuts of the checker assembly - front door.
   Tightening torque:
   Refer to "COMPONENT" of "General Description". Ref. to Target Not Found
7. Attach the door sash tape. Ref. to EXTERIOR BODY PANELS>Door Sash Tape>INSTALLATION.
8. Install the cover B pillar - front.
9. Before installing each part, check the following items.
   - Rod of the latch and actuator assembly - front is free from deformation.

- Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
- Cable of the latch and actuator assembly - front is free from deformation such as fray.
- Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.

10. Install door internal parts in the reverse order of removal.
    - Cover sash - inner front
    - Weather strip - front door
    - Handle - door outer
      Tightening torque:
      7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
    - Latch & actuator assembly - front
      Tightening torque:
      6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
    - Regulator & motor assembly - front for the front door
      Tightening torque:
      7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
    - Sash ASSY - partition
      Tightening torque:
      7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
    - Install the cover B pillar - front door INN.
      Caution:
      - **Always replace with a new part, because engagement of the claw weakens.**
      - **Do not damage the sash or sash tape INN while installing.**
    - Running channel - front door
      Caution:
      Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash assembly - partition.
    - Glass assembly - front door, and glass - front door partition
      Tightening torque:
      7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11. Connect door harness connector, and install the cover side sill - front. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>INSTALLATION.
12. Install the front door speaker assembly.
13. Install the outer mirror assembly.
    Tightening torque:
    7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
14. Install the front sealing cover.
15. Install the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>INSTALLATION.
16. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

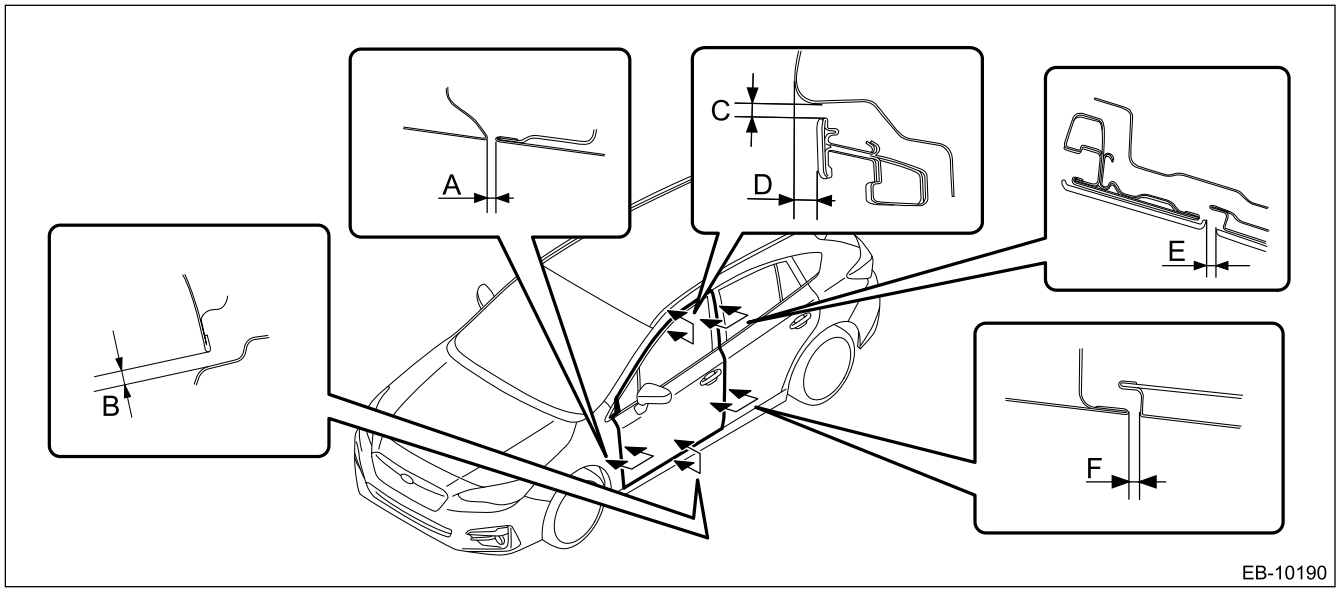
2. FRONT DOOR HINGE

1. Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
2. Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.
   Note:
   When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.



3. Adjust the clearance around the panel assembly - front door. Ref. to EXTERIOR BODY PANELS>Front Door>ADJUSTMENT.
4. Tighten the bolts of the panel assembly - front door to the specified torque.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
5. Connect door harness connector, and install the cover side sill - front. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>INSTALLATION.
6. Tighten the bolts and nuts of the checker assembly - front door.
   Tightening torque:
   Refer to "COMPONENT" of "General Description". Ref. to Target Not Found
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

EXTERIOR BODY PANELS > Front Door



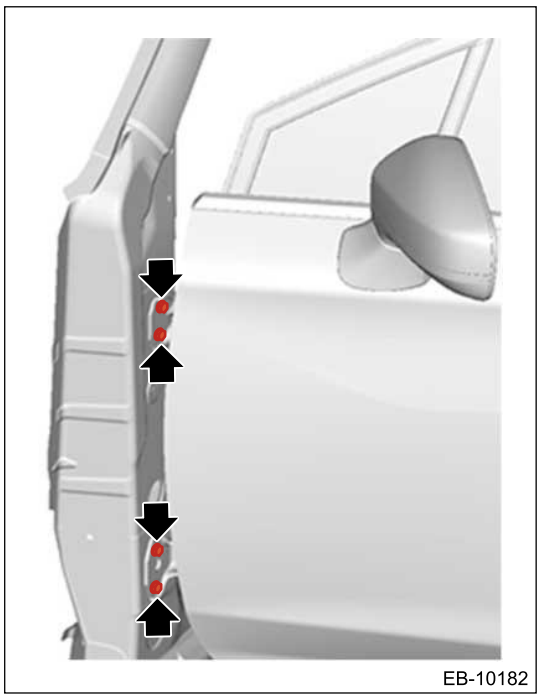
ADJUSTMENT

Adjust the clearance around the panel assembly - front door as follows.

- 4 door model

- 5 door model

	Part	Standard
A	Fender - front to Panel assembly - front door	3.9±0.9 mm (0.16±0.04 in)
B	Panel assembly - front door to Panel - side outer	6±1 mm (0.24±0.04 in)
C	Panel - side outer to Front door sash	5.1+1.5 ,-1 mm (0.2+0.06,-0.04 in)
D	Surface level gap between Panel - side outer to Front door sash	1.9±1.5 mm (0.07±0.06 in)
E	Cover B pillar - front to Cover B pillar - rear	5.8±1.7 mm (0.23±0.07 in)
F	Panel assembly - front door to Panel assembly - rear door	4±1 mm (0.16±0.04 in)



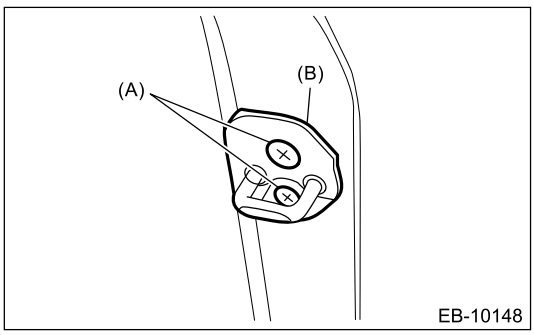
1. Adjust the vertical and horizontal positions of the panel assembly - front door.

(1) Using ST, loosen the bolts on vehicle side of the upper hinge - front door.

Preparation tool:

ST: WRENCH (925610000)

(2) Turn over the mud guard - front, and loosen the bolts on vehicle side of the lower hinge - front door.



(3) Adjust the vertical and horizontal clearance of the panel assembly - front door.

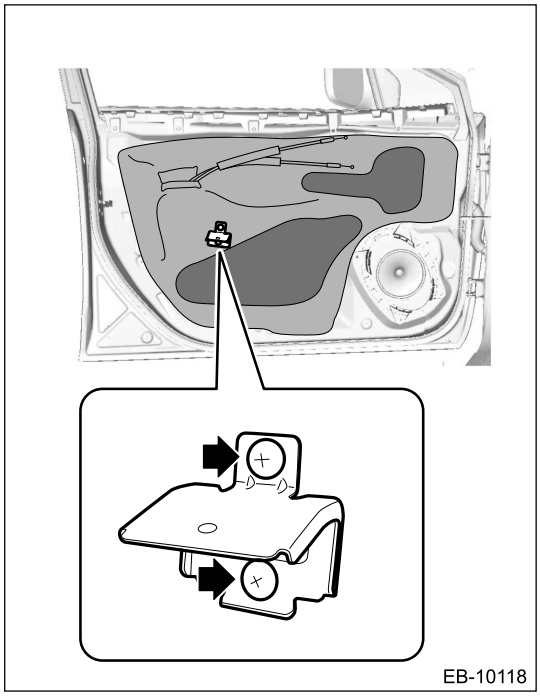
2. Adjust the surface level gap between the panel assembly - front door and the panel assembly - rear door.

Caution:

Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

(1) Loosen the screws (A).

(2) Tap the striker - front door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - front door and the front end of the panel assembly - rear door.



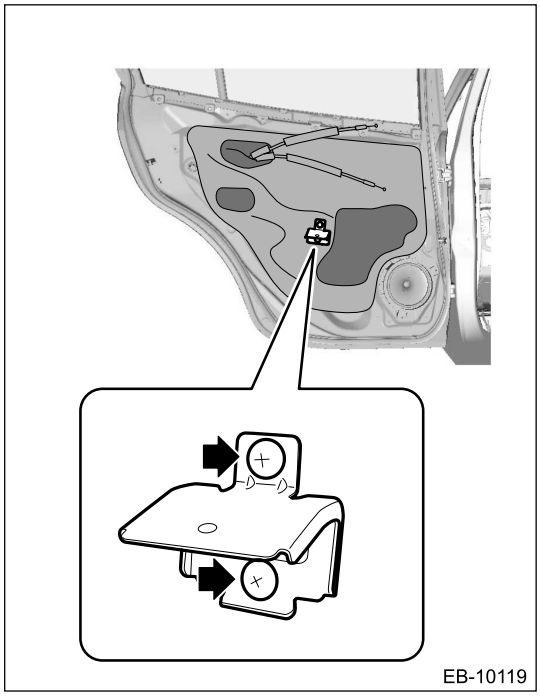
REMOVAL

1. FRONT SEALING COVER

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the front sealing cover.

   Caution:
   - **Carefully remove the butyl tape. Excessive force will easily break the cover.**
   - **If the front sealing cover gets broken, replace it with a new part.**
   - **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

   (1) Remove the screw to remove the bracket - door trim front.
   (2) Disconnect connectors.
   (3) Carefully remove the butyl tape to remove the front sealing cover.



2. REAR SEALING COVER

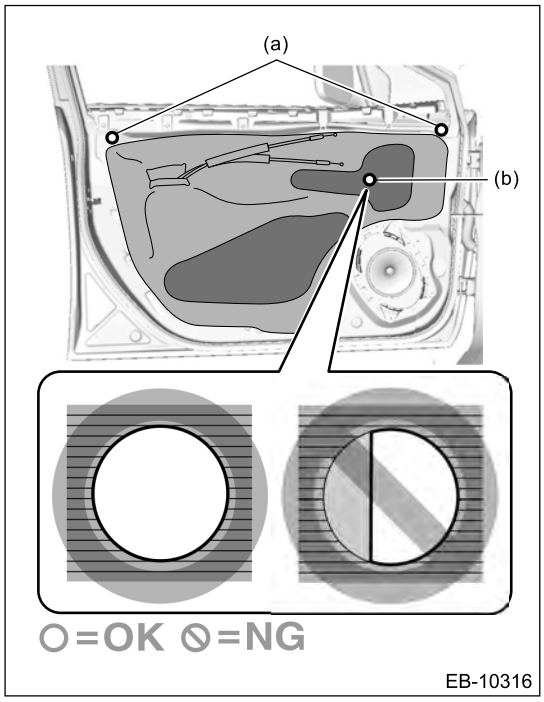
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
3. Remove the rear sealing cover.

   Caution:
   - **Carefully remove the butyl tape. Excessive force will easily break the cover.**
   - **If the rear sealing cover gets broken, replace it with a new part.**
   - **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

   (1) Remove the screw to remove the bracket - door trim rear.
   (2) Disconnect connectors.

(3) Carefully remove the butyl tape to remove the rear sealing cover.

EXTERIOR BODY PANELS > Sealing Cover



INSTALLATION

Caution:

- **If the sealing cover gets broken, replace it with a new part.**
- **Attach the sealing cover, keeping it from becoming wrinkled.**
- **If the sealing cover position is not aligned, it may cause improper door trim installation or water leakage.**
- **Apply a butyl tape evenly.**
- **Breaks in the bead will allow water leakage and contamination.**

1. FRONT SEALING COVER

1. Install the front sealing cover.
   (1) Install while aligning the reference holes located in the front and rear of the sealing cover with the reference projections (a) of the panel assembly - front door.
   (2) Check that the installation hole (b) of the trim panel - front door is not blocked.

(3) When replacing the sealing cover, use the butyl tape.

Preparation items:

Butyl tape: 3M Butyl Tape 8626 or equivalent

(4) Forcefully push the butyl tape portion to prevent any floating on surface.

2. Install the trim panel - front door.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

2. REAR SEALING COVER

1. Install the rear sealing cover.

(1) When replacing the sealing cover, use the butyl tape.

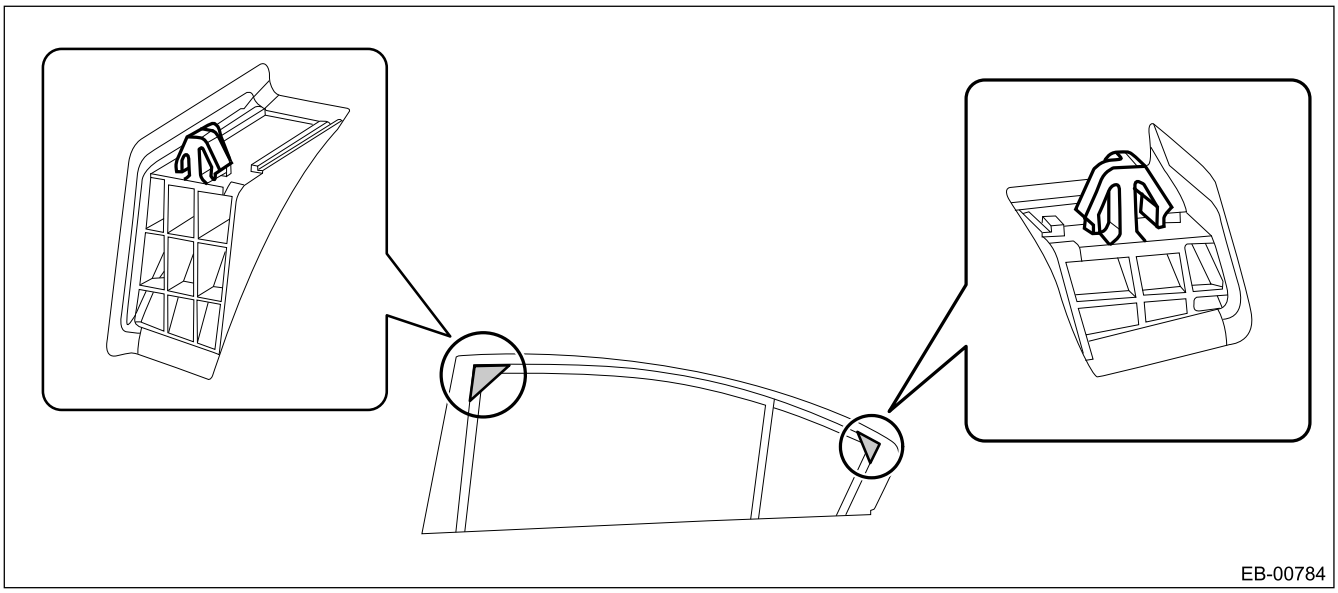
Preparation items:

Butyl tape: 3M Butyl Tape 8626 or equivalent

(2) Forcefully push the butyl tape portion to prevent any floating on surface.

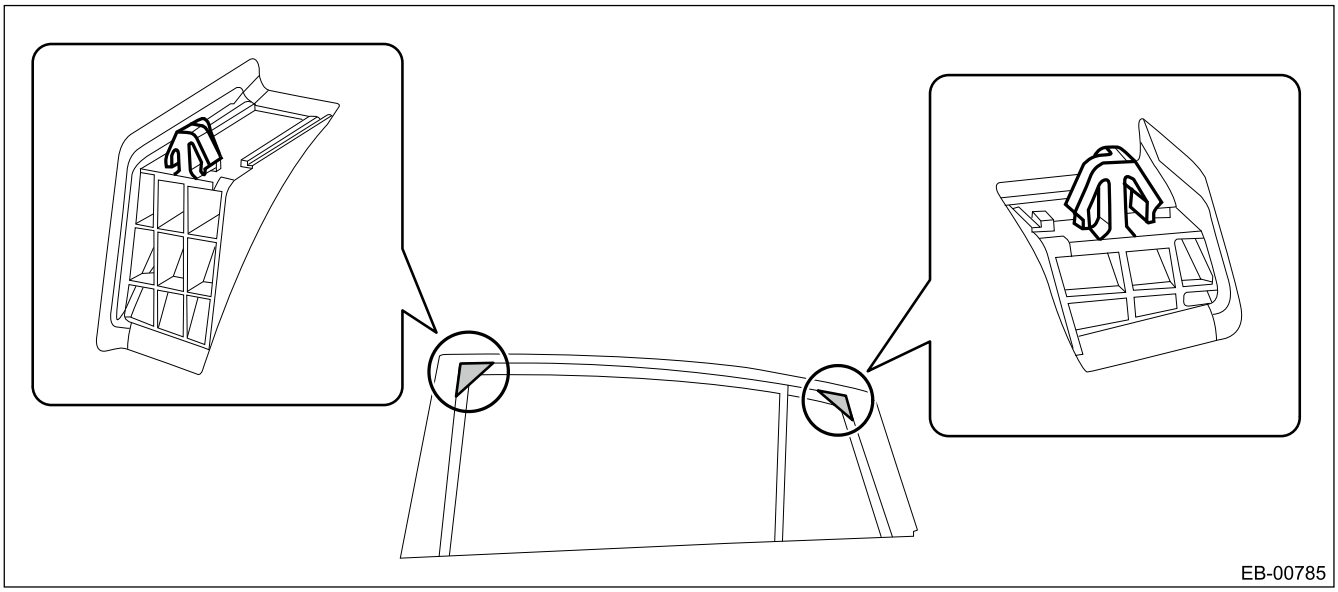
2. Install the trim panel - rear door.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

EXTERIOR BODY PANELS > Sealing Cover



INSPECTION

If the sealing cover gets damaged, replace it with a new part.

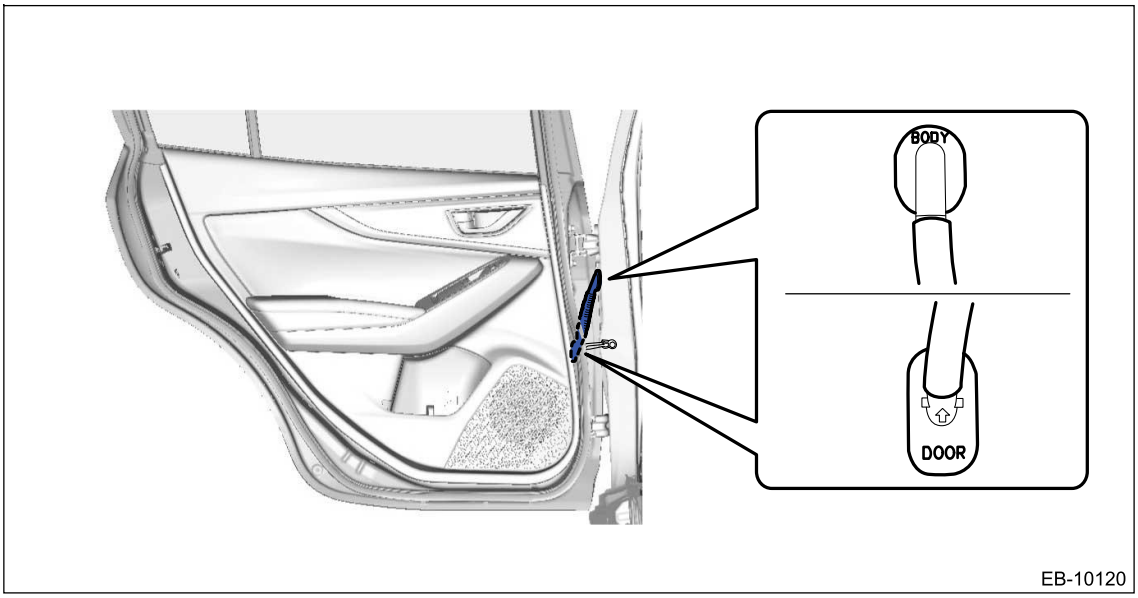


REMOVAL

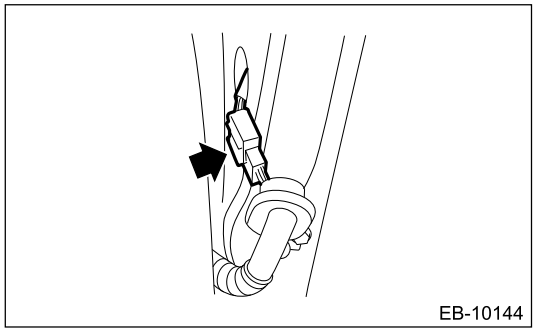
1. REAR DOOR PANEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
3. Remove the rear sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > REAR SEALING COVER.
4. Remove the cover B pillar - rear door INN and the cover C pillar - rear door INN.
   Caution:
   - **Always replace with a new part, because engagement of the claw weakens.**
   - **Do not damage the sash or sash tape OUT while removing.**
   - 4 door model

   - 5 door model



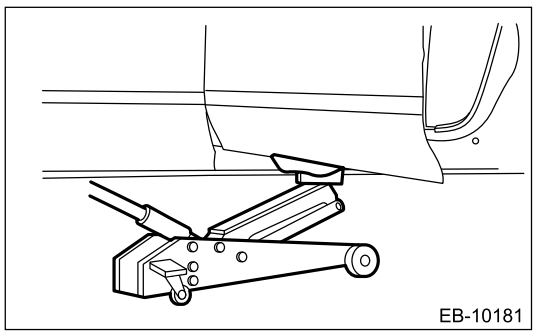
5. Remove the rear door speaker assembly. Ref. to ENTERTAINMENT & MONITORING>Rear Speaker>REMOVAL.



6. Remove the sash assembly - rear partition and the glass assembly - rear door. Ref. to GLASS/WINDOWS/MIRRORS>Rear Door Glass>REMOVAL.
7. Remove the door sash tape, the cover B pillar - rear and the cover C pillar (5 door model). Ref. to EXTERIOR BODY PANELS>Door Sash Tape>REMOVAL.
8. Remove the regulator - rear. Ref. to GLASS/WINDOWS/MIRRORS>Rear Regulator and Motor Assembly>REMOVAL.
9. Remove the latch and actuator assembly - rear. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly>REMOVAL.
10. Remove the cover - handle rear outer. Ref. to SECURITY AND LOCKS>Door Outer Handle>REMOVAL > REAR.
11. Remove the weather strip - rear door. Ref. to EXTERIOR BODY PANELS>Weather Strip>REPLACEMENT.
12. Remove the bolts and nuts, and then detach the checker assembly - rear door.

13. Disconnect the rear door harness connectors.
    (1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.

    (2) Disconnect the rear door harness connectors.

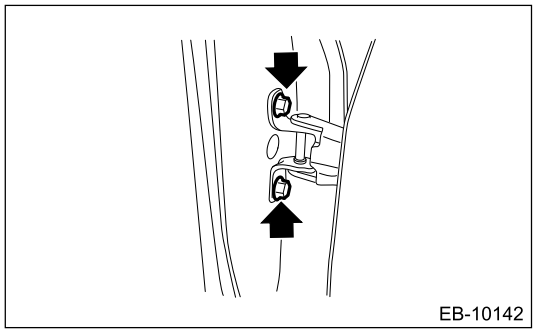


14. Before removing the panel assembly - rear door, make the following preparations.

Caution:

Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.

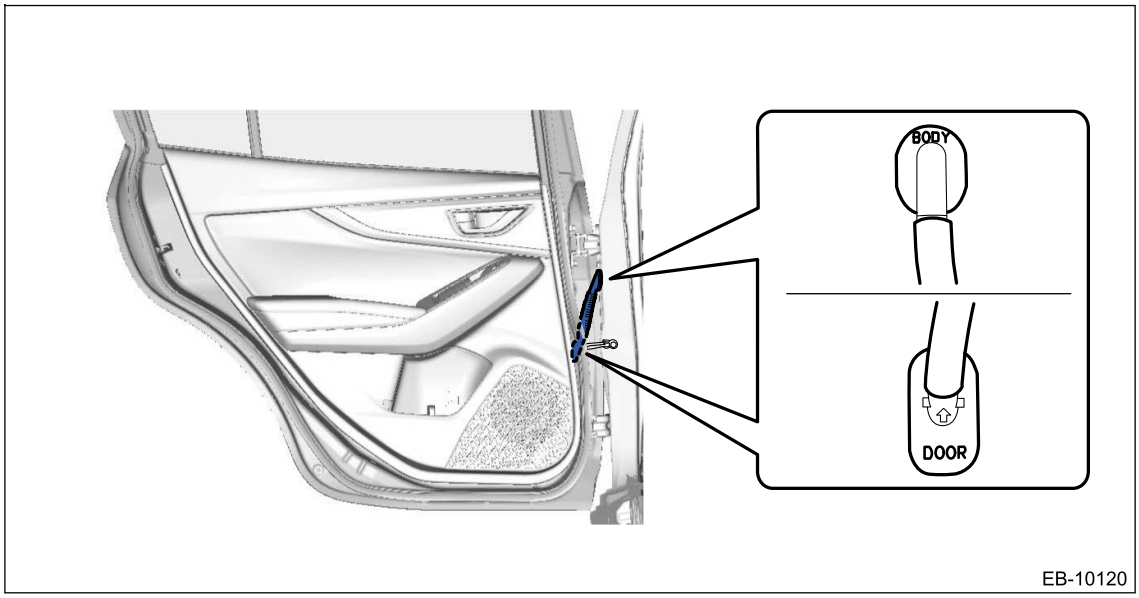


(2) Support the panel assembly - rear door with the jack to protect it from damage.

15. Remove the door-side bolts for the upper hinge - rear door and the lower hinge - rear door to remove the panel assembly - rear door.

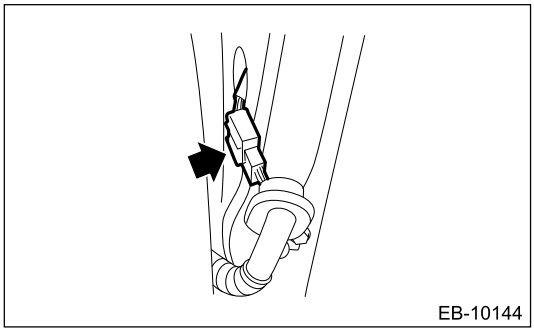
Caution:

The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.



16. Remove the door hinge from vehicle. Ref. to EXTERIOR BODY PANELS>Rear Door>REMOVAL > REAR DOOR HINGE.

2. REAR DOOR HINGE

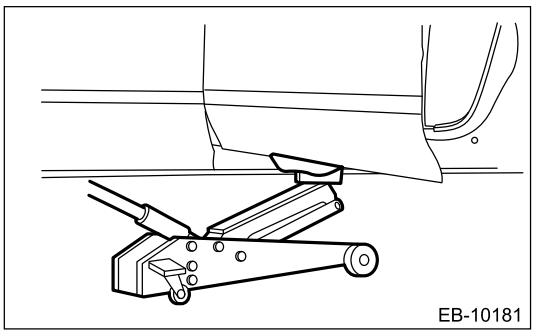


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

2. Disconnect the rear door harness connectors.

(1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.

(2) Disconnect the rear door harness connectors.



3. Before removing the panel assembly - rear door, make the following preparations.

Caution:

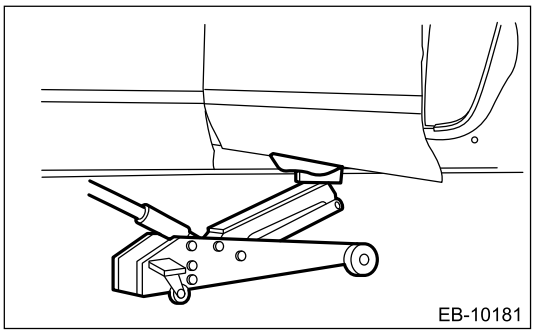
- **The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.**
- **Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.**

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.

(2) Support the panel assembly - rear door with the jack to protect it from damage.

4. Remove the bolts on the side of the panel assembly - rear door of the upper hinge - rear door or the lower hinge - rear door.

Caution:



Do not remove the upper hinge - rear door and the lower hinge - rear door at the same time.

5. Remove the hinge - rear door from the vehicle.

INSTALLATION

1. REAR DOOR PANEL

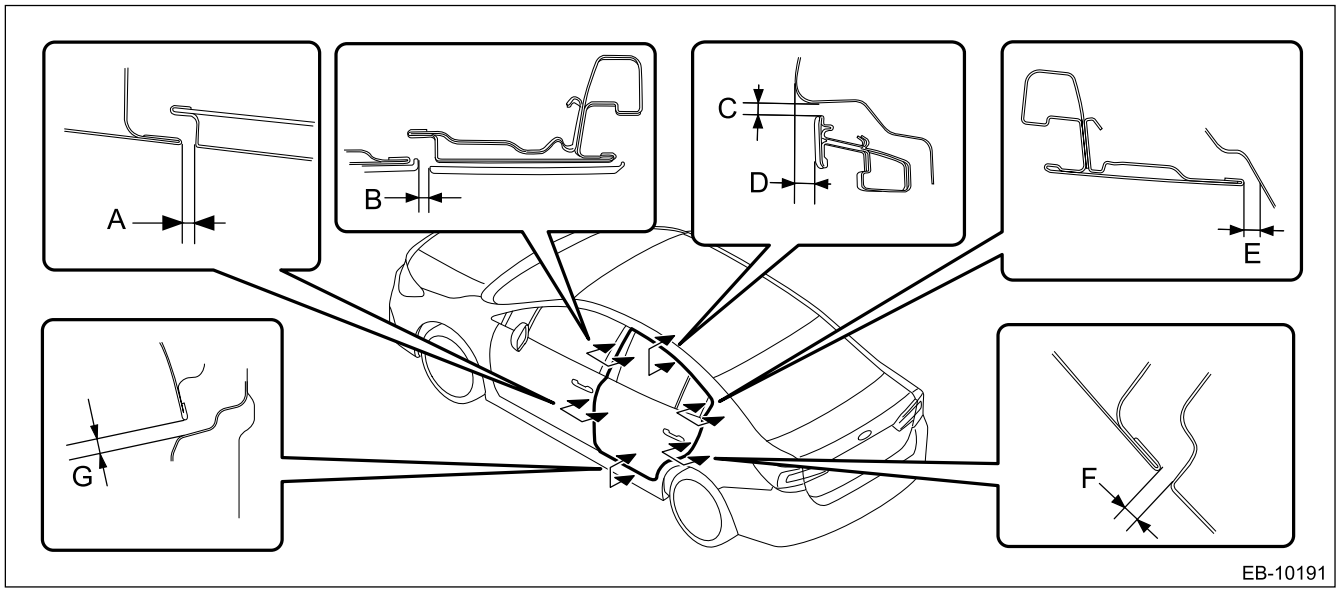
1. Put a wooden block and the like on a jack and place the panel assembly - rear door on it.

2. Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.
   Note:
   - **When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.**
   - **Perform installation while paying attention to the assembly direction of the grommet.**
3. Adjust the clearance around the panel assembly - rear door. Ref. to EXTERIOR BODY PANELS>Rear Door>ADJUSTMENT.
4. Tighten the mounting bolts of the panel assembly - rear door to the specified torque.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
5. Tighten the bolts and nuts of the checker assembly - rear door.
   Tightening torque:
   Refer to "COMPONENT" of "General Description". Ref. to Target Not Found
6. Connect the door harness connector, and install the harness grommet.
7. Attach the door sash tape. Ref. to EXTERIOR BODY PANELS>Door Sash Tape>INSTALLATION.
8. Install the cover B pillar - rear and the cover C pillar (5 door model).
9. Before installing each part, check the following items.
   - Is the lever of the frame assembly - rear door outer is free from deformation?
   - Is grease applied sufficiently to the rod joints of the latch and actuator assembly - rear?
   - Is the cable of the latch and actuator assembly - rear free from deformation such as fray?
   - Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?
10. Install door internal parts in the reverse order of removal.
    - Weather strip - rear door
    - Handle - door outer
      Tightening torque:
      7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
    - Latch & actuator assembly - rear
      Tightening torque:
      6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
      Note:
      Make sure the child safety lock works correctly after installation.
    - Regulator & motor assembly - rear for the rear door
      Tightening torque:
      7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Sash assembly - rear partition, and glass assembly - rear door
  Tightening torque:
  7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Running channel - rear door
  Caution:
  Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash assembly - partition.

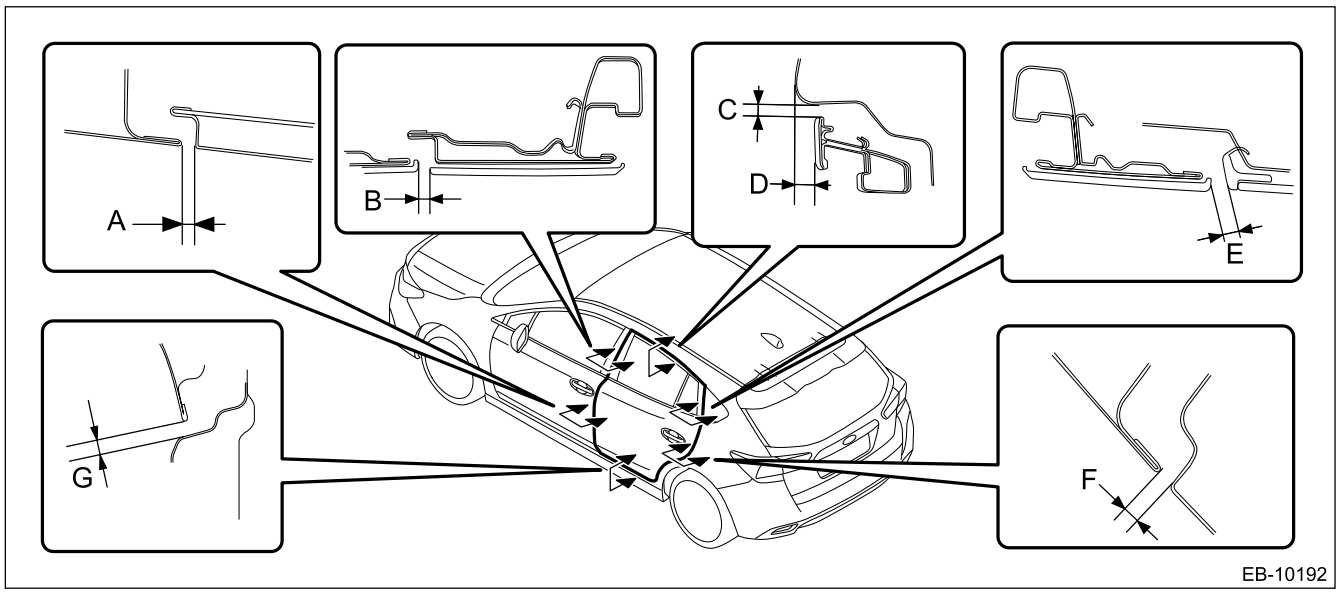
11. Install the cover B pillar - rear door INN and the cover C pillar - rear door INN.
    Caution:
    - **Always replace with a new part, because engagement of the claw weakens.**
    - **Do not damage the sash or sash tape INN while installing.**
12. Install the rear door speaker assembly.
13. Install the rear sealing cover.
14. Install the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>INSTALLATION.
15. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

2. REAR DOOR HINGE



1. Apply grease to the sliding area of door hinges, and install to vehicle.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
2. Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.
   Note:
   When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
3. Adjust the clearance around the panel assembly - rear door. Ref. to EXTERIOR BODY PANELS>Rear Door>ADJUSTMENT.
   Note:
   When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
4. Tighten the bolts of the panel assembly - rear door to the specified torque.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
5. Connect door harness connector.
6. Tighten the bolts on the vehicle side of the checker assembly - rear door.
   Tightening torque:
   Refer to “COMPONENT” of “General Description”. Ref. to Target Not Found
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

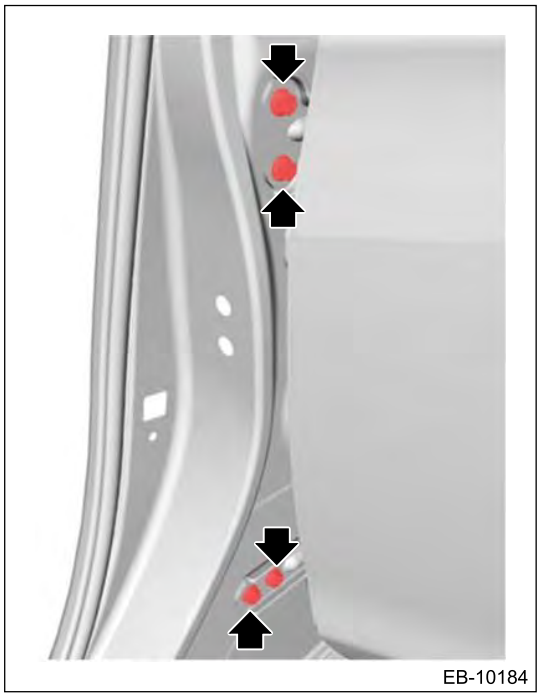
EXTERIOR BODY PANELS > Rear Door



ADJUSTMENT

Adjust the clearance around the panel assembly - rear door as follows.

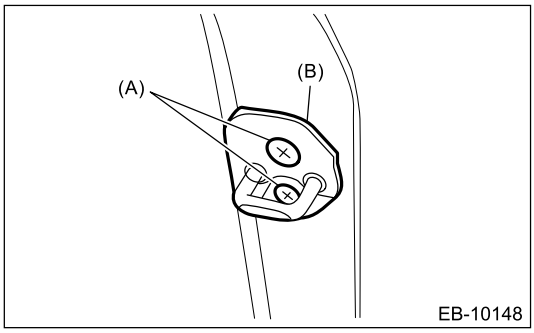
- 4 door model



- 5 door model

Part		Standard
A	Panel assembly - front door to Panel assembly - rear door	4±1 mm (0.16±0.04 in)
B	Front door sash to Rear door sash	5.8±1.7 mm (0.23±0.07 in)
C	Panel - side outer to Rear door sash	5.1+1.5,−1 mm (0.2+0.06,−0.04 in)
D	Surface level gap between Panel - side outer to Rear door sash	2.7 ± 1.5 mm (0.11 ± 0.06 in)
E	Rear door sash to Panel - side outer	5.5±2.1 mm (0.22±0.08 in)
F	Panel assembly - rear door to Panel - side outer	3.9±0.9 mm (0.16±0.04 in)
G	Panel assembly - rear door to Panel - side outer	6±1 mm (0.24±0.04 in)

1. Adjust the vertical and horizontal positions of the panel assembly - rear door.
(1) Loosen the body side bolts of the upper hinge - rear door and the lower hinge - rear door.
(2) Adjust the vertical and horizontal clearance of the panel assembly - rear door.



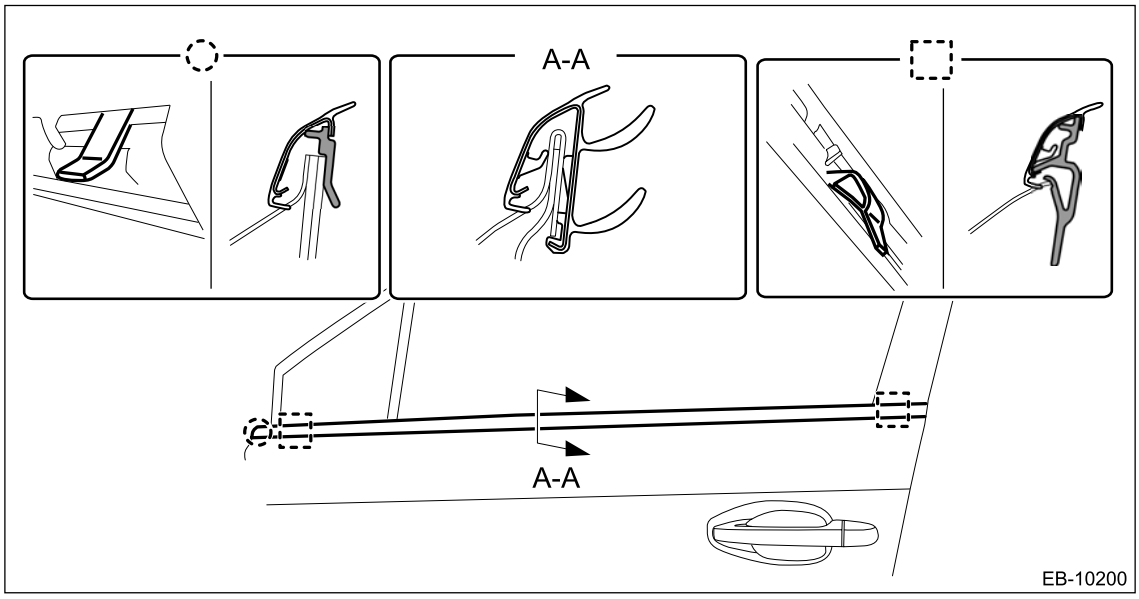
2. Adjust the surface level gap between the panel assembly - rear door and the body.

Caution:

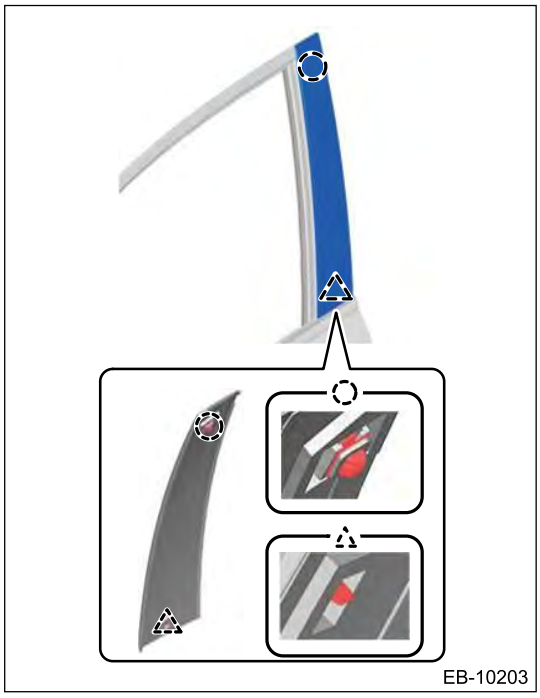
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

(1) Loosen the screws (A).

(2) Tap the striker - rear door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - rear door and the rear quarter.



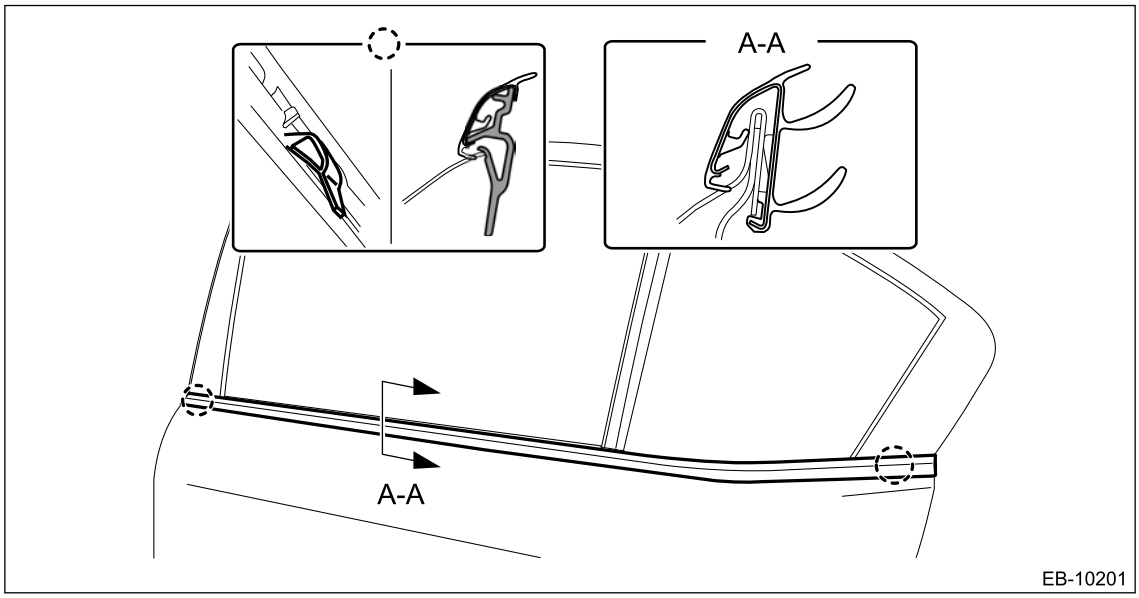
REMOVAL



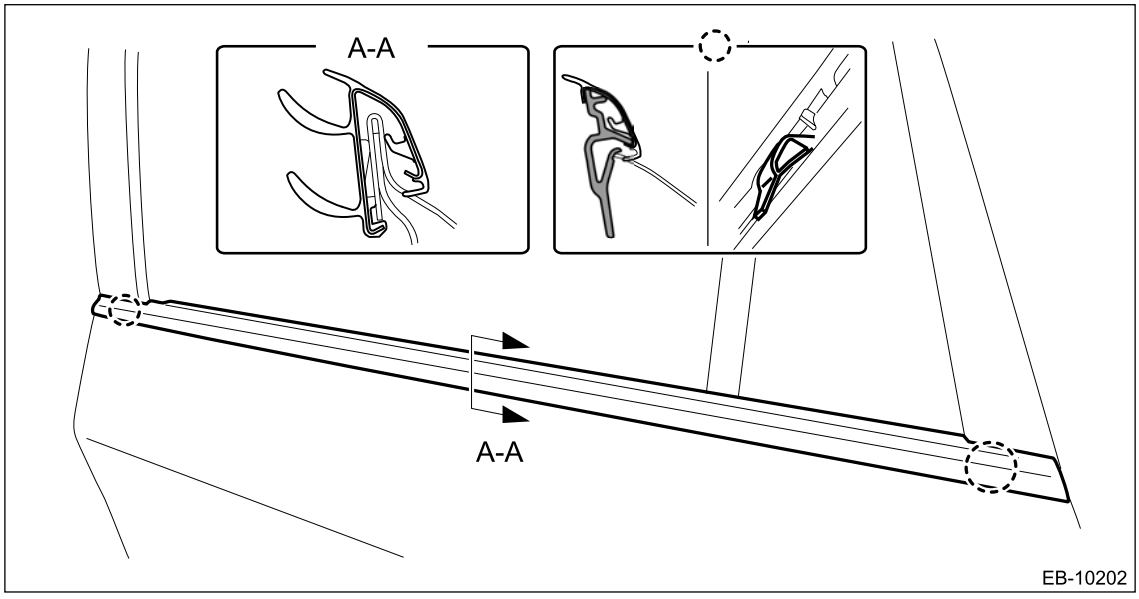
1. FRONT DOOR

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the outer mirror assembly. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly>REMOVAL.
4. Remove the front sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > FRONT SEALING COVER.
5. Remove the glass assembly - front door and the glass - front door partition. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>REMOVAL.
6. Remove the running channel - front door.
7. Remove the weather strip outer - front door.

   Caution:
   - **When removing the weather strip outer, be careful not to damage the vehicle.**
   - **Do not reuse the weather strip outer. Always replace with a new part.**



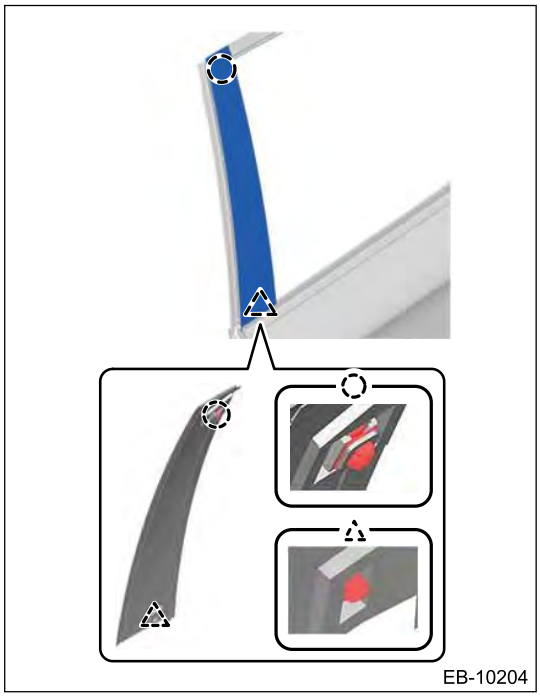
8. Remove the cover B pillar - front.



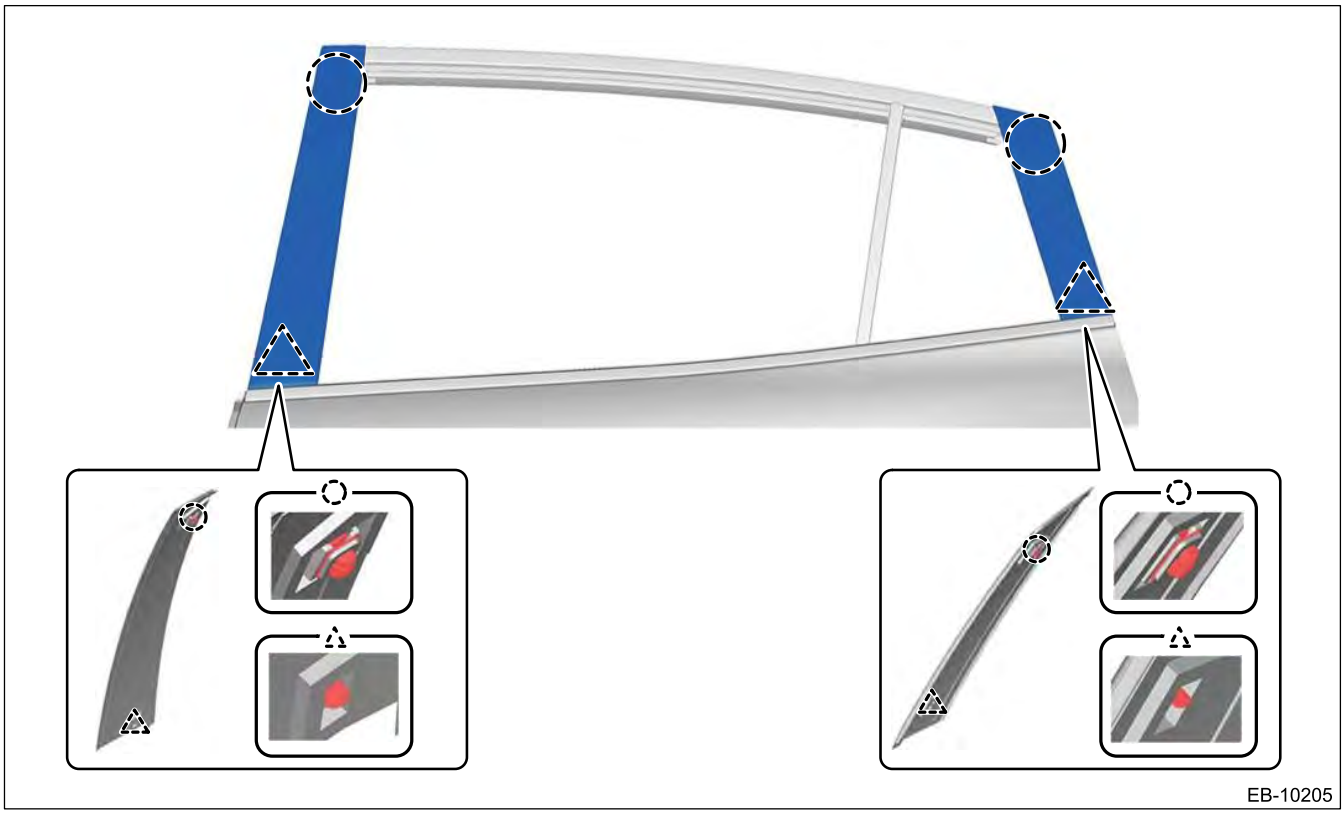
9. Peel the door sash tape from the door sash.
   Note:
   - **If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier.**
     Use a household hairdryer. Do not use industrial dryers.
   - **If tape residue is remaining on the door sash, wipe clean.**

2. REAR DOOR

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
3. Remove the rear sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > REAR SEALING COVER.
4. Remove the glass assembly - rear door. Ref. to GLASS/WINDOWS/MIRRORS>Rear Door Glass>REMOVAL.
5. Remove the running channel - rear door.
6. Remove the weather strip outer - rear door.
   Caution:
   - **When removing the weather strip outer, be careful not to damage the vehicle.**
   - **Do not reuse the weather strip outer. Always replace with a new part.**
   - 4 door model



- 5 door model



7. Remove the cover B pillar - rear and the cover C pillar (5 door model).

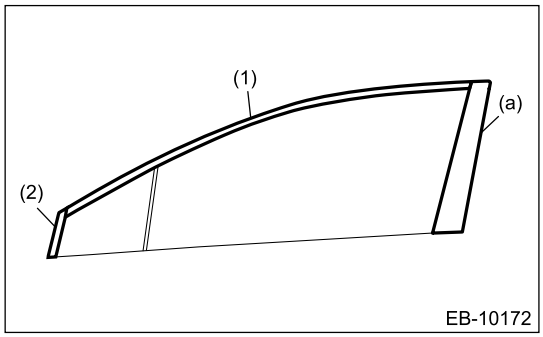
- 4 door model

(a) Cover B pillar - rear

- 5 door model

(a) Cover B pillar - rear (b) Cover C pillar

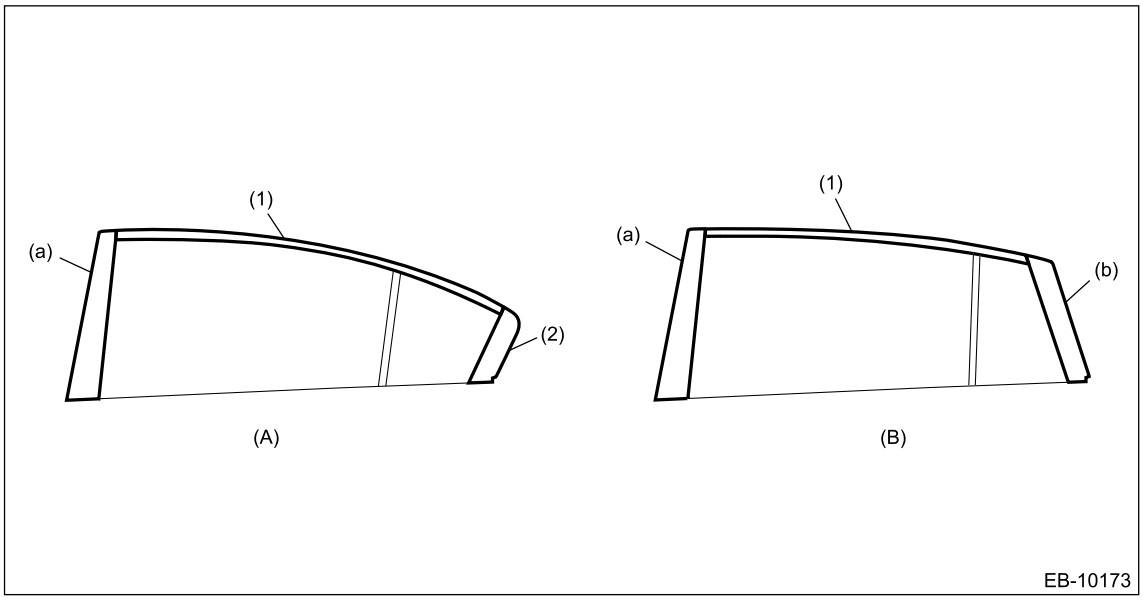
8. Peel the door sash tape from the door sash.



Note:

- **If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier.**
  Use a household hairdryer. Do not use industrial dryers.
- **If tape residue is remaining on the door sash, wipe clean.**

INSTALLATION

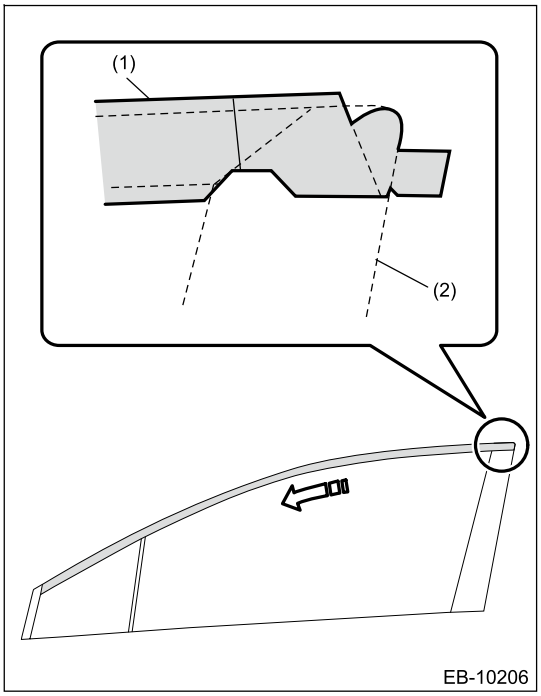


Caution:

- **Do not reuse the removed door sash tape. Replace it with a new tape.**
- **Press evenly along the sash when applying the tape using a spatula or similar object to make sure no bubbles are formed.**
  If air bubbles are formed, reapply the tape.
- **If the tape is wrinkled, etc. during application, replace the tape.**
- **Be sure to press the ends of the tape firmly to adhere securely. If the tape comes off at the ends or where folded, the adhesive strength is weakened and the tape may peel off.**
- **There are locations where the tape ends will overlap each other. When applying the tape, be careful of the order of their application.**
  - **Front**

(a) Cover B pillar - front

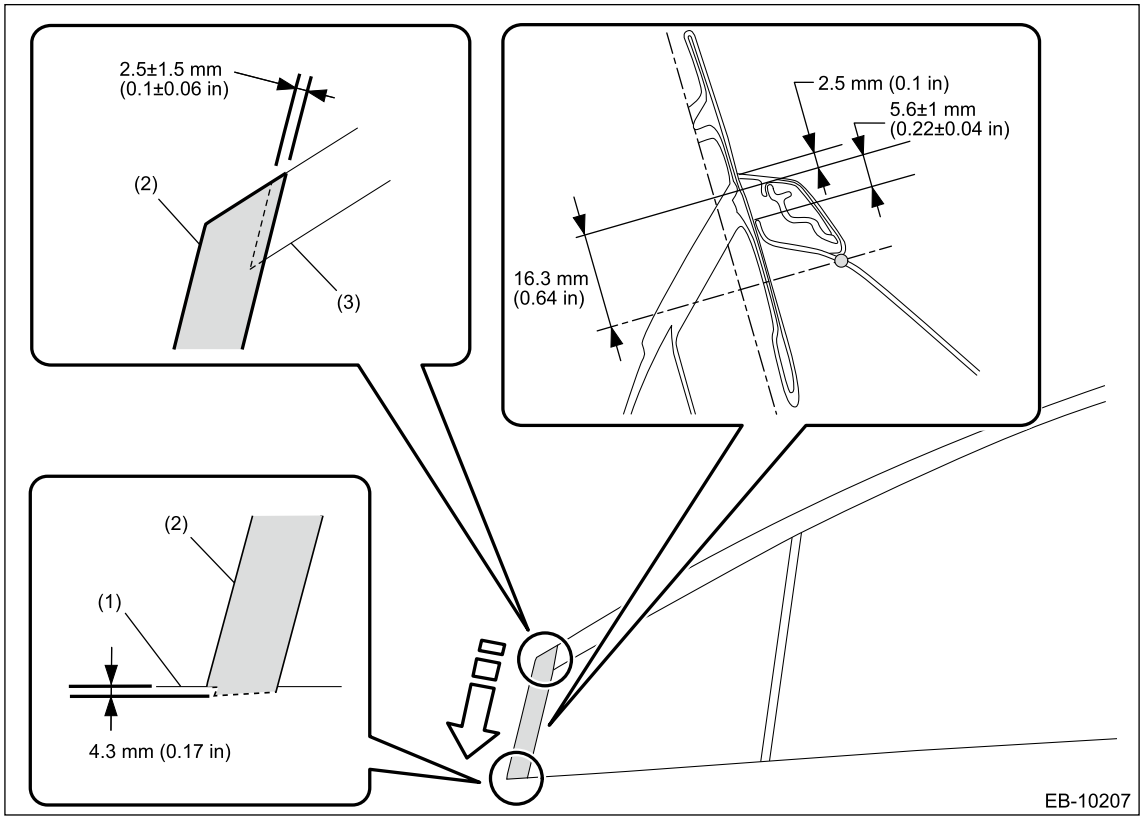
- **Rear**



(A) 4 door model
(B) 5 door model
(a) Cover B pillar - rear
(b) Cover C pillar

- **Do not reuse the weather strip outer. Always replace with a new part.**

1. FRONT DOOR (4 DOOR MODEL)

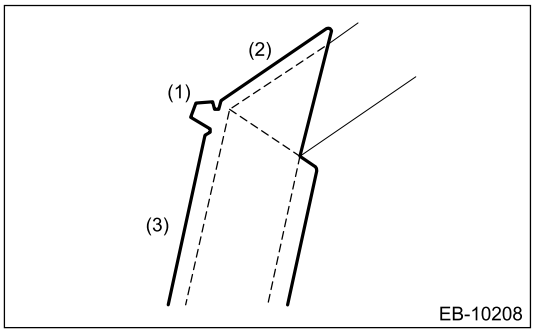


1. Apply the front door sash tape - medium from the rear of the vehicle towards the front.

(1) Front door sash tape - medium

(2) Cover B pillar - front

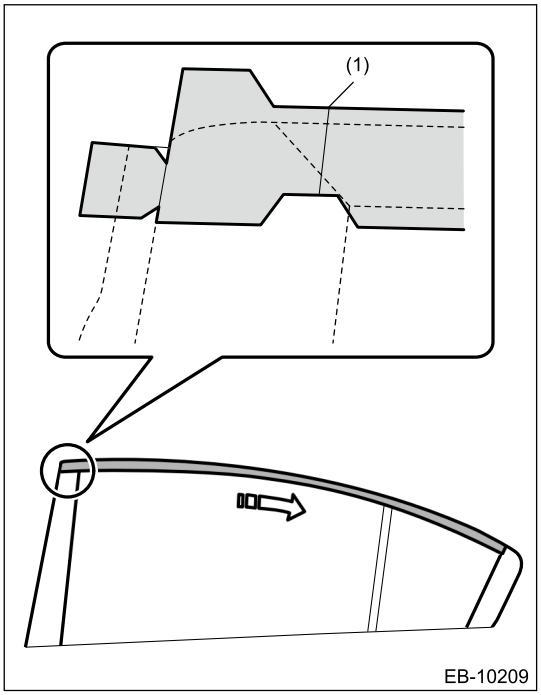
2. Apply the front door sash tape - front from the top of the vehicle towards the bottom.



(1) End of panel outer

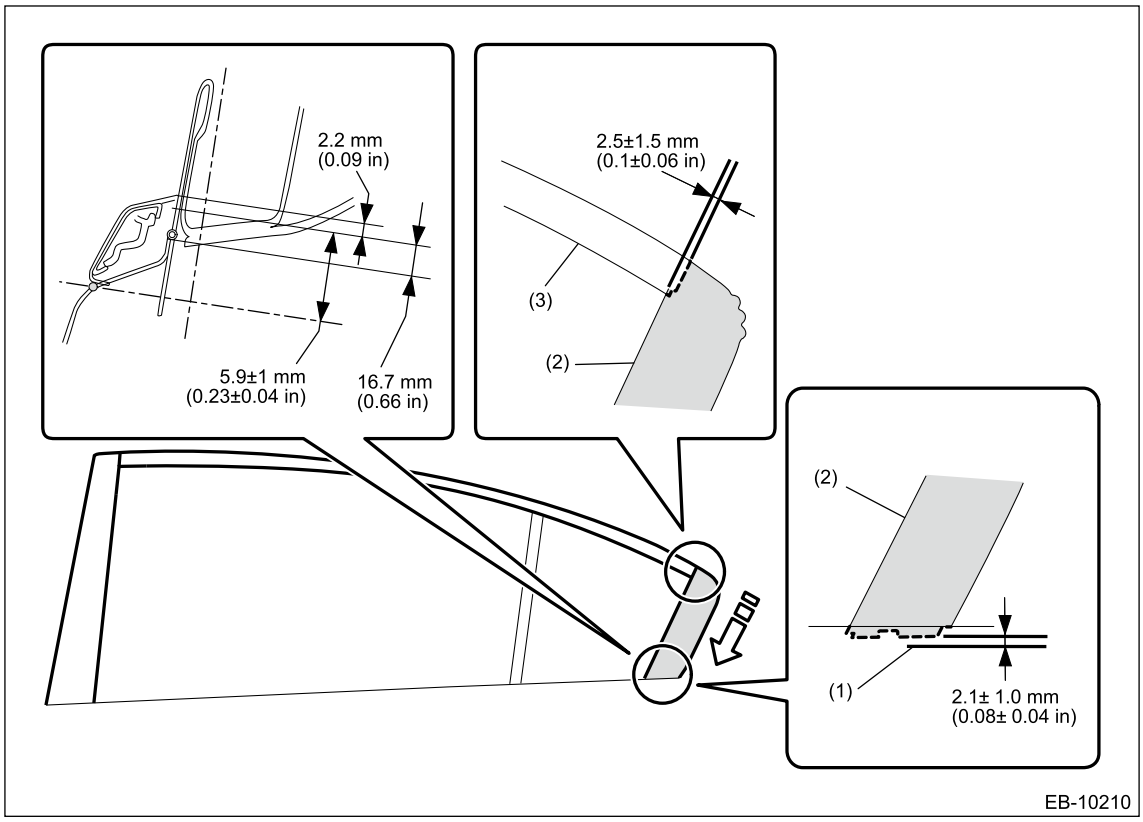
(2) Front door sash tape - front

(3) Front door sash tape - medium



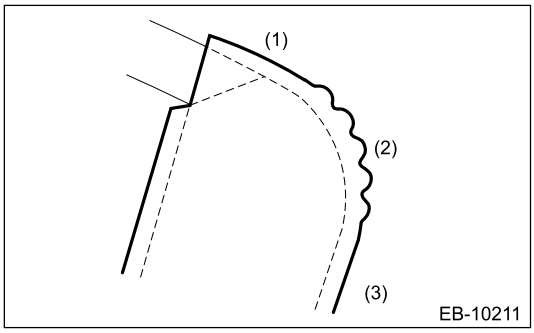
3. Fold the corners at the door upper end area in the order of (1) — (3).

4. Install the cover B pillar - front.
5. Install the weather strip outer - front door.
6. Install the running channel - front door.
7. Install the glass assembly - front door.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8. Install the front sealing cover.
9. Install the outer mirror assembly.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
10. Install the trim panel - front door.
11. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.



2. REAR DOOR (4 DOOR MODEL)

1. Apply the rear door sash tape - medium from the front of the vehicle towards the rear.



(1) Rear door sash tape - medium

2. Apply the rear door sash tape - rear from the top of the vehicle towards the bottom.

(1) End of panel outer (2) Rear door sash tape - rear (3) Rear door sash tape - medium

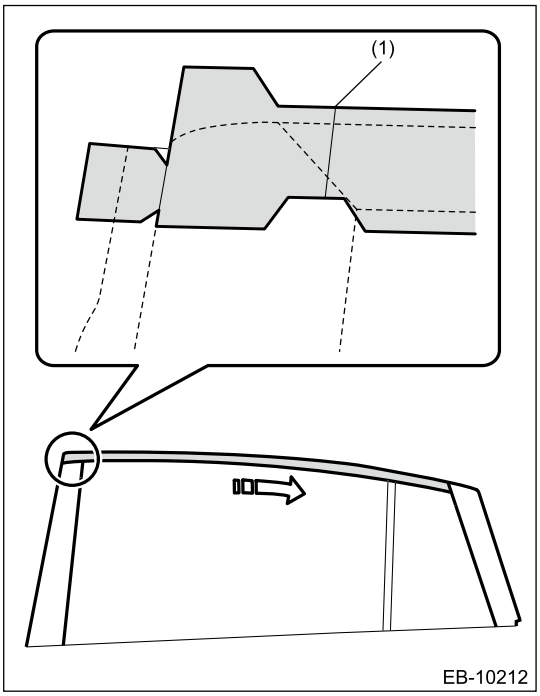
3. Fold the corners at the door upper end area in the order of (1) — (3).

4. Install the cover B pillar - rear.
5. Install the weather strip outer - rear door.
6. Install the running channel - rear door.
7. Install the glass assembly - rear door.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8. Install the rear sealing cover.
9. Install the trim panel - rear door.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.



3. REAR DOOR (5 DOOR MODEL)

OUTER SASH TAPE

1. Apply the rear door sash tape - medium from the front of the vehicle towards the rear.

Note:

Apply the end of the tape to the position shown in the figure.

(1) Rear door sash tape - medium

REMOVAL

1. TORSION BAR

Caution:

Trunk lid COMPL is heavy. When removing and installing it, always work in a team of two or more persons.

1. Remove the trunk room trim. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
2. Remove the torsion bar - trunk lid.

   Caution:

   During removal and installation, handle the torsion bar - trunk lid carefully, because it will generate reactive force.

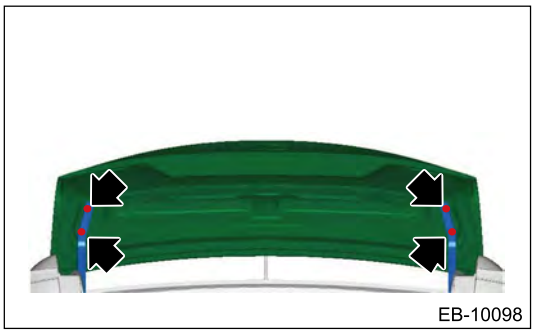
   Preparation tool:

   ST: REMOVER (99099FJ000) and REMOVER (927780000)

   (1) Remove the torsion bar - trunk lid on the LH side from the hinge link (a).

   (2) Remove the torsion bar - trunk lid on the RH side from the hinge link (b).

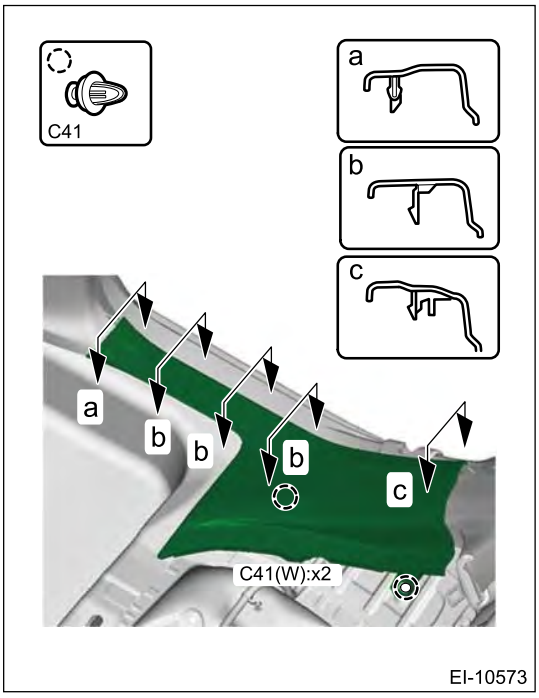
2. TRUNK LID PANEL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trunk room trim. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the lock assembly - trunk lid. Ref. to SECURITY AND LOCKS>Trunk Lid Latch and Actuator Assembly>REMOVAL.
4. Disconnect the connector to remove the trunk lid harness.

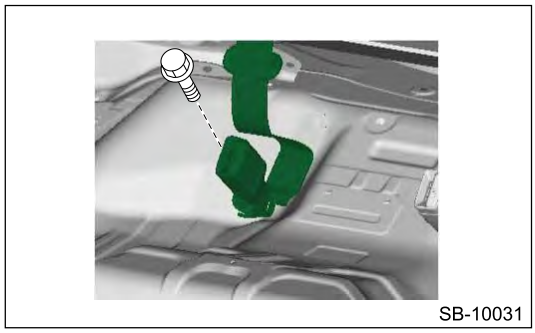
5. Remove the rear finisher light assembly. Ref. to LIGHTING SYSTEM>Rear Finisher Light Assembly>REMOVAL > 4 DOOR MODEL.
6. Remove the rearview camera assembly. Ref. to ENTERTAINMENT & MONITORING>Rearview Camera System>REMOVAL.
7. Detach the rear spoiler. Ref. to EXTERIOR/INTERIOR TRIM>Rear Spoiler>REMOVAL.
8. Remove the trunk lid COMPL.

Caution:



Trunk lid COMPL is heavy. When removing and installing it, always work in a team of two or more persons.

9. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
10. Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.

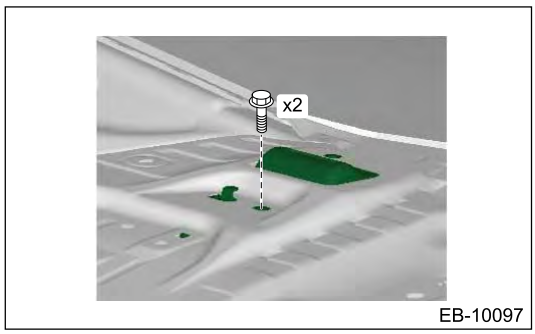


Caution:

Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.

11. Remove the trim panel - rear pillar UPR and trim panel - rear pillar LWR on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL.

12. Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.



13. Remove the trim panel assembly - rear shelf. Ref. to EXTERIOR/INTERIOR TRIM>Rear Shelf Trim>REMOVAL.

14. Remove the trunk lid arm assembly.

(1) Remove the torsion bar - trunk lid from the trunk lid arm. Ref. to EXTERIOR BODY PANELS>Trunk Lid>REMOVAL > TORSION BAR.

(2) Remove the left and right bolts, then remove the trunk lid arm assembly.

EXTERIOR BODY PANELS > Trunk Lid

INSTALLATION

1. Install the trunk lid arm assembly.

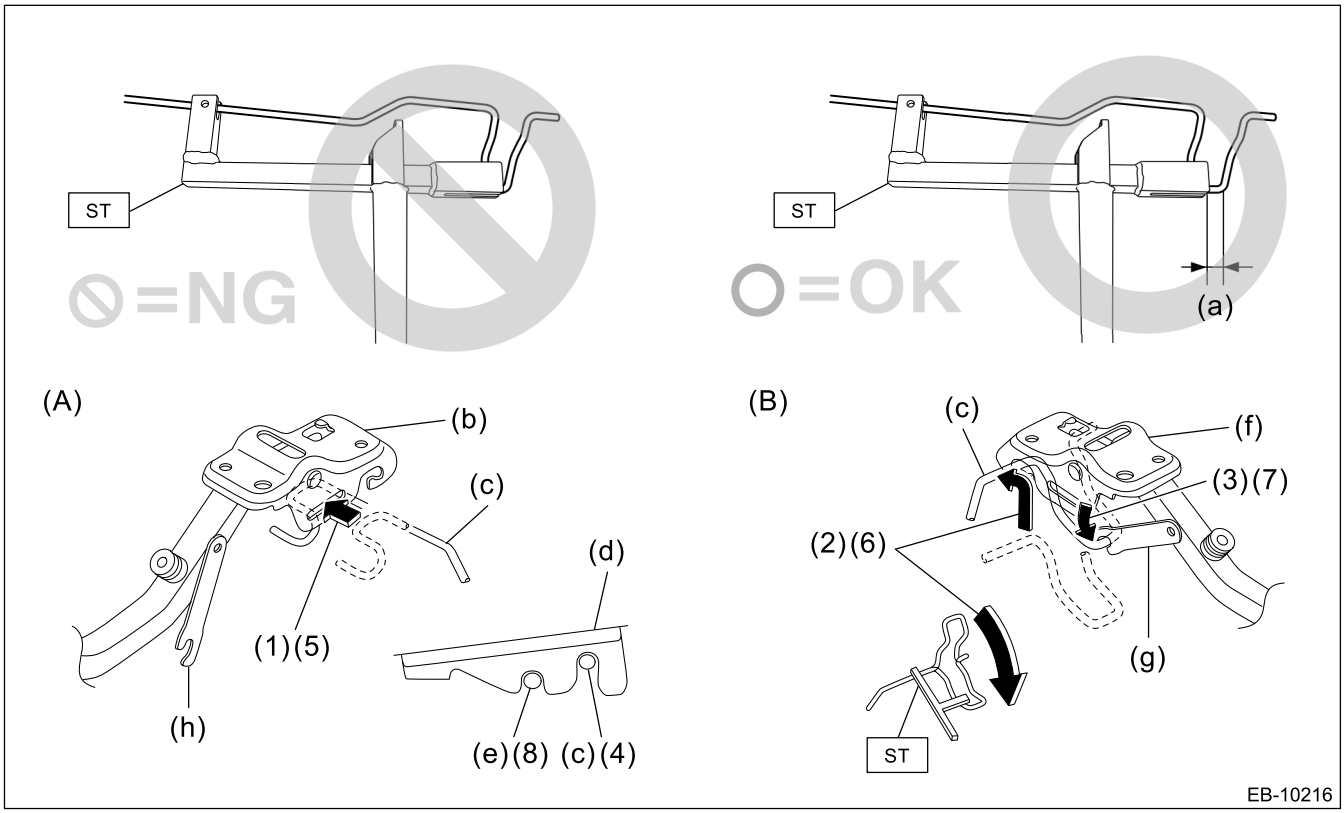
Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

2. Install the trim panel assembly - rear shelf.
3. Install the lower anchor of seat belt - rear shoulder CTR.

Tightening torque:

30 N·m (3.1 kgf-m, 22.1 ft-lb)



4. Install the trim panel - rear pillar UPR and the trim panel - rear pillar LWR.
5. Install the side sill cover - rear INN.
6. Install the rear seat cushion assembly.
7. Install the torsion bar - trunk lid.

Caution:

- **When performing installation, pay close attention to the original marks and shapes of the torsion bar - trunk lid on the RH and LH sides.**
- **When installing the remover to the torsion bar - trunk lid, leave a slight clearance (a).**

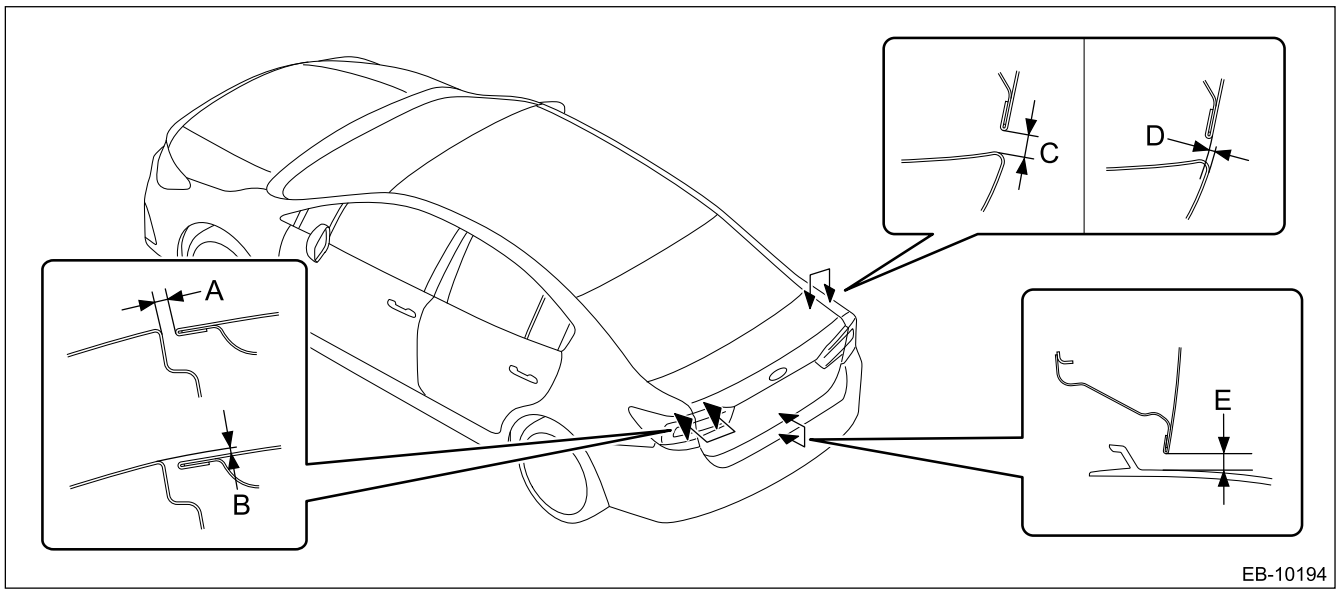
Preparation tool:

ST: REMOVER (99099FJ000) and REMOVER (927780000)

(A) Left Hand
(B) Right Hand

(a) Clearance
(b) Hinge bracket LH
(c) Torsion bar - trunk lid LH
(d) Bracket - torsion bar
(e) Torsion bar - trunk lid RH
(f) Hinge bracket RH
(g) Hinge link RH
(h) Hinge link LH

(1) Insert the left end of the torsion bar - trunk lid LH (c) into the hole of the hinge bracket LH (b).
(2) Using the ST, hook the right end of the torsion bar - trunk lid LH (c) on the hinge bracket RH (f).
(3) Hook the hinge link RH (g) on the torsion bar - trunk lid LH (c).
(4) Tuck it in the cutout of bracket - torsion bar (d).
(5) Insert the right end of the torsion bar - trunk lid RH (e) into the hole of the hinge bracket RH (f).
(6) Using the ST, hook the left end of the torsion bar - trunk lid RH (e) on the hinge bracket LH (b).
(7) Hook the hinge link LH (h) on the torsion bar - trunk lid RH (e).

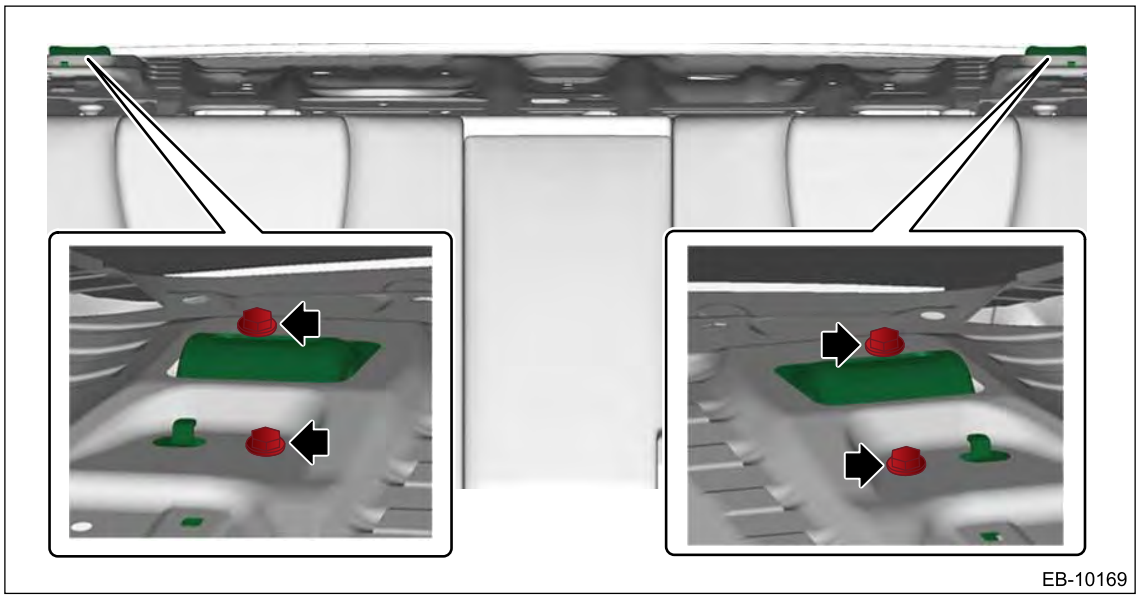


(8) Tuck it in the cutout of bracket - torsion bar (d).

8. Install the trunk lid COMPL.
   Tightening torque:
   14 N·m (1.4 kgf-m, 10.3 ft-lb)
9. Install the rear spoiler.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
10. Install the rearview camera assembly. Ref. to ENTERTAINMENT & MONITORING>Rearview Camera System>INSTALLATION.
11. Install the rear finisher light assembly. Ref. to LIGHTING SYSTEM>Rear Finisher Light Assembly>INSTALLATION > 4 DOOR MODEL.
12. Install the trunk lid harness.
13. Install the lock assembly - trunk lid.
    Tightening torque:
    7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
14. Apply grease to the rotating area of hinges and the bracket - torsion bar in the vehicle center.
15. Install while paying attention to make a uniform clearance around the trunk lid COMPL. Ref. to EXTERIOR BODY PANELS>Trunk Lid>ADJUSTMENT.
    Tightening torque:
    Refer to "COMPONENT" of "General Description". Ref. to Target Not Found
16. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

EXTERIOR BODY PANELS > Trunk Lid

ADJUSTMENT

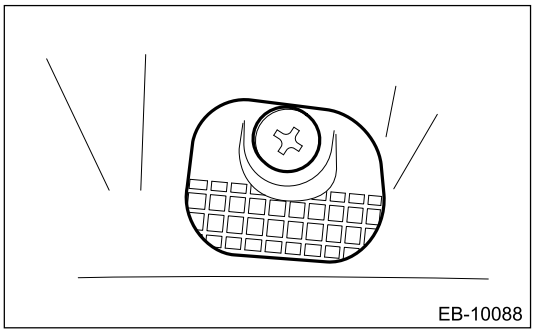


Adjust the clearance around the trunk lid COMPL as follows.

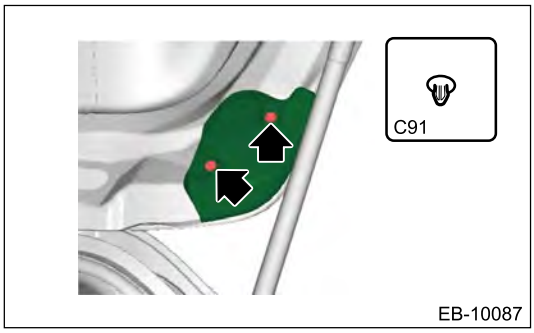
	Part	Standard
A	Trunk lid COMPL and Panel - side outer	3.5±1 mm (0.14±0.04 in)
B	Surface level gap between Trunk lid COMPL and Panel - side outer	−0.5±1 mm (−0.02±0.04)
C	Trunk lid COMPL and Panel - side outer	3.5±1 mm (0.14±0.04 in)
D	Surface level gap between Trunk lid COMPL and Panel - side outer	−0.5±1 mm (−0.02±0.04)

E	Trunk lid COMPL to Bumper face - rear	7.5 ± 1.5 mm (0.3 ± 0.06 in)

1. Adjust the horizontal position of the trunk lid COMPL.
(1) Loosen the mounting bolt.
(2) Adjust the horizontal clearance of the trunk lid COMPL.

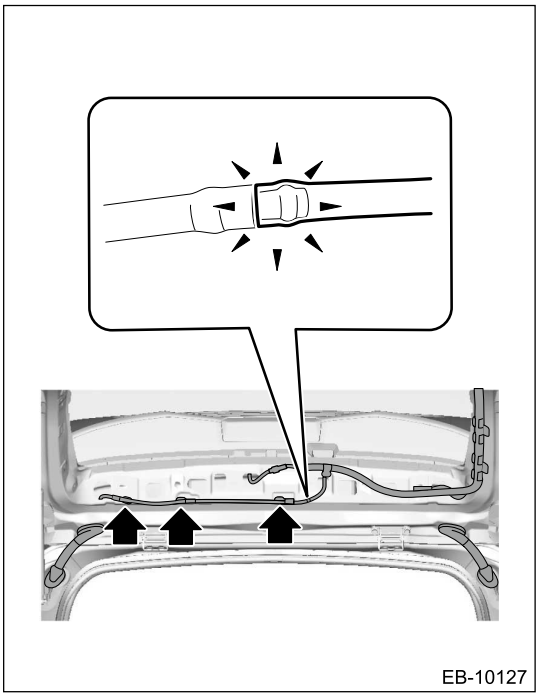


2. Adjust the surface level gap between the trunk lid COMPL and the body.
(1) Remove the trim panel - trunk rear.
(2) Loosen the bolt.
(3) Tap the striker - trunk using a plastic hammer to adjust the surface level gap between the trunk lid COMPL and the body.



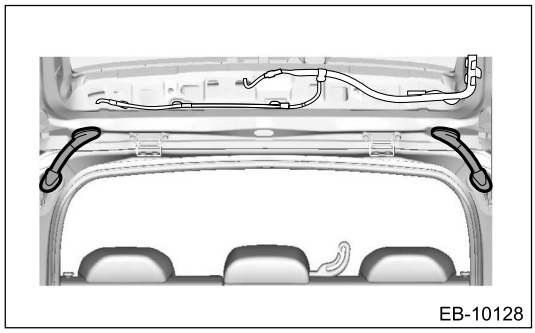
REMOVAL

1. REAR GATE PANEL

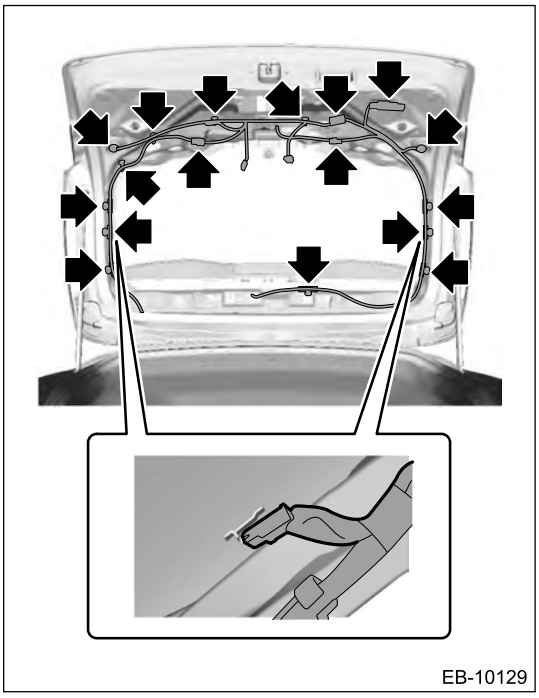


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - rear gate and the garnish assembly - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Garnish>REMOVAL.
3. Remove the light assembly - rear finisher. Ref. to LIGHTING SYSTEM>Rear Finisher Light Assembly>REMOVAL.
4. Remove the license plate light. Ref. to LIGHTING SYSTEM>License Plate Light>REMOVAL.
5. Remove the arm assembly - rear wiper and the motor assembly - rear wiper. Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Motor>REMOVAL.
6. Remove the rear gate latch and actuator - rear gate. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly>REMOVAL.
7. Remove the buffer - rear gate.

8. Remove the clips, and remove the drip - rear gate.



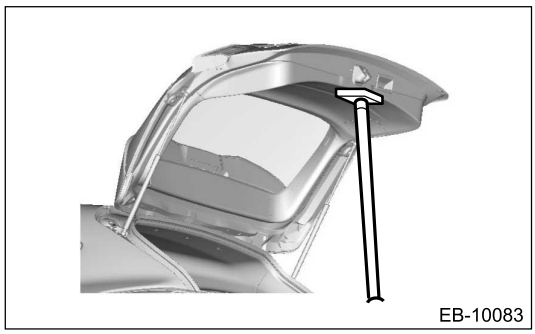
9. Remove the roof spoiler. Ref. to EXTERIOR/INTERIOR TRIM>Roof Spoiler>REMOVAL.
10. Disconnect the hose assembly - rear washer.
    (1) Disconnect the joint portion of the hose assembly - rear washer.
    (2) Remove the clip.



11. Remove the nozzle and hose assembly - rear washer. Ref. to WIPER AND WASHER SYSTEMS>Rear Washer>REMOVAL.

12. Remove the rubber duct connection.

13. Disconnect the connector, and then pull out the harness from the panel - rear gate shown in the figure (a).

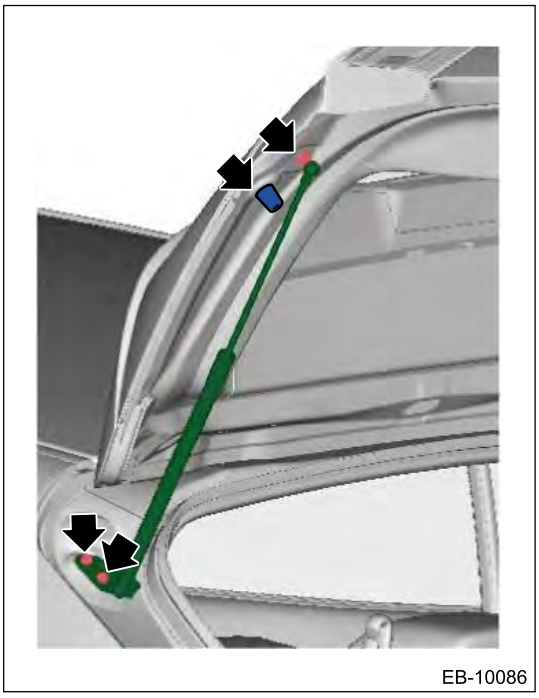


14. Remove the harness clip from the panel - rear gate.

15. Remove the rear gate glass. Ref. to GLASS/WINDOWS/MIRRORS>Rear Gate Glass>REMOVAL.

16. Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using a prop or the like.

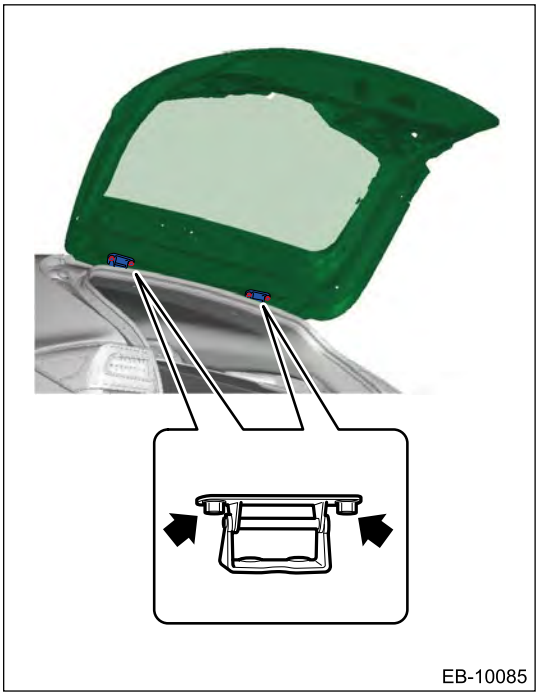
Caution:



If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

17. Remove the stay assembly - rear gate.

(1) Remove the stopper - rear gate and remove the attachment section on the side of the stay assembly - rear gate.



(2) Remove the mounting bolts on the body side.

18. Remove the bolts of the hinge - rear gate, and remove the panel - rear gate.

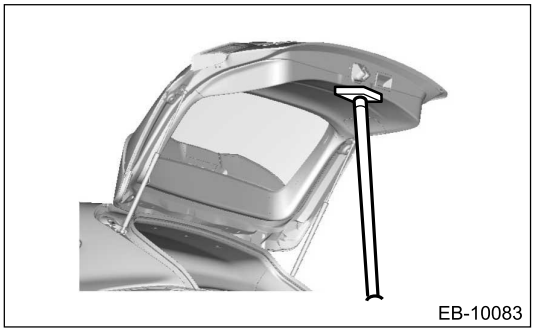
Caution:

The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

19. Remove the hinge - rear gate from the vehicle.

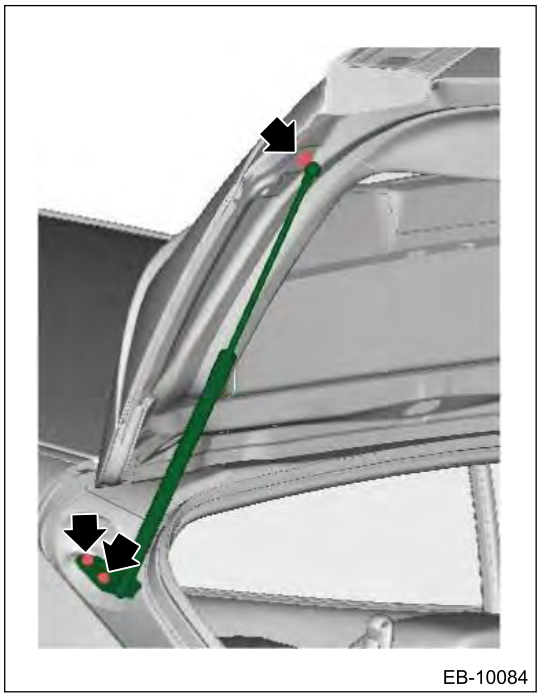
2. REAR GATE DAMPER STAY

Caution:



- **Do not damage piston rods and oil seals.**
- **Never disassemble cylinders: They contain gas.**
- **The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.**

1. Before removing the stay assembly - rear gate, prevent the panel - rear gate from closing by using



a prop or the like.

Caution:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

2. Remove the mounting bolts and remove the stay assembly - rear gate.

EXTERIOR BODY PANELS > Rear Gate

INSTALLATION

1. REAR GATE PANEL

Caution:

The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

1. Install the hinge - rear gate to the vehicle body.
2. Temporarily install the panel - rear gate to the hinge - rear gate.

   Note:

   When installing, make sure that a uniform clearance is created around the panel - rear gate.
3. Adjust the clearance around the panel - rear gate. Ref. to EXTERIOR BODY PANELS>Rear Gate>ADJUSTMENT.
4. Tighten the bolts of the hinge - rear gate.

Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

5. Install the stay assembly - rear gate.

Caution:

Before installing, degrease the bracket surface of stay assembly - rear gate.

Tightening torque:

Refer to "COMPONENT" of "General Description". Ref. to Target Not Found

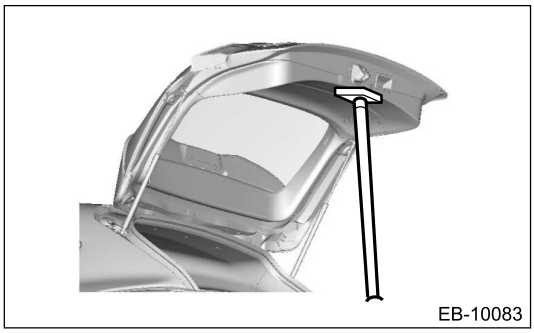
6. Install the rear gate glass. Ref. to GLASS/WINDOWS/MIRRORS>Rear Gate Glass>INSTALLATION.
7. Install the harness clip and the harness.
8. Install the light assembly - rear finisher. Ref. to LIGHTING SYSTEM>Rear Finisher Light Assembly>INSTALLATION.
9. Install the license plate light. Ref. to LIGHTING SYSTEM>License Plate Light>INSTALLATION > 5 DOOR MODEL.
10. Install the nozzle and hose assembly - rear washer. Ref. to WIPER AND WASHER SYSTEMS>Rear Washer>INSTALLATION.
11. Connect the hose assembly - rear washer.
12. Install the garnish assembly - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Garnish>INSTALLATION.
13. Install the drip - rear gate.
14. Install the arm assembly - rear wiper and the motor assembly - rear wiper. Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Motor>INSTALLATION.
15. Attach the buffer - rear gate and the stopper - rear gate.

Tightening torque:

Refer to "COMPONENT" of "General Description". Ref. to Target Not Found

16. Install the latch and actuator - rear gate. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly>INSTALLATION.

2. REAR GATE DAMPER STAY



Caution:

The panel - rear gate is heavy. When removing and installing it, always work in a team of two or more persons.

1. Prevent the panel - rear gate from closing using prop or the like.

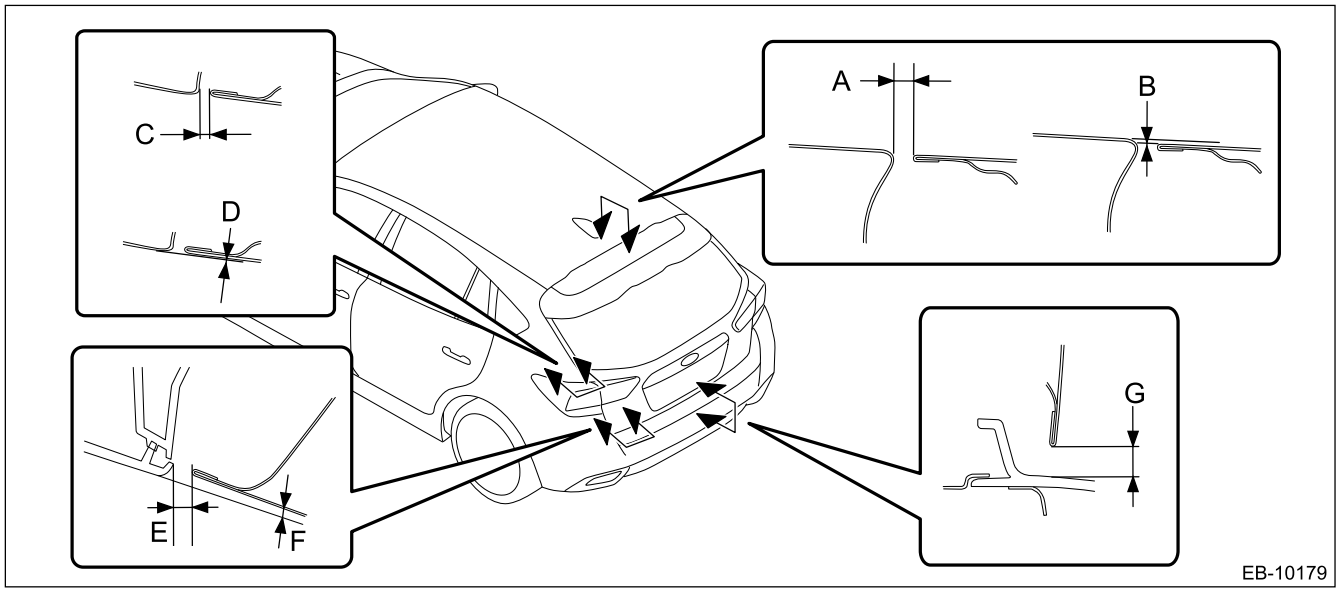
Caution:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the panel - rear gate with secure material to prevent injury or damage.

2. Install the stay assembly - rear gate.

Caution:

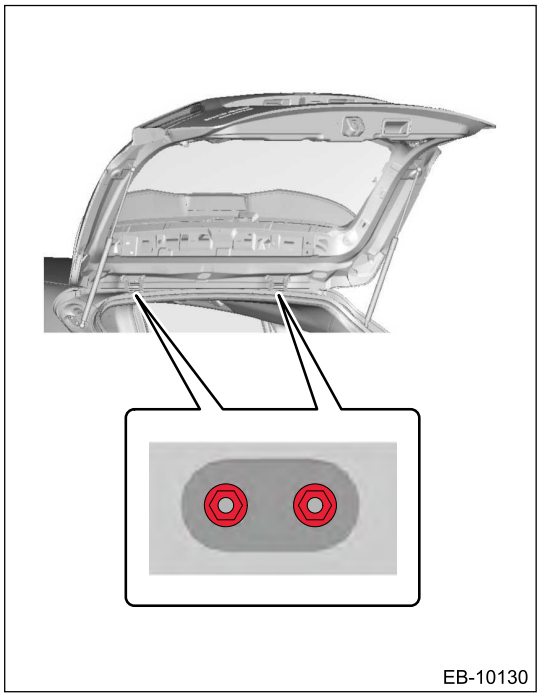
Before installing, degrease the bracket surface of stay assembly - rear gate.



Tightening torque:

Refer to “COMPONENT” of “General Description”. Ref. to Target Not Found

EXTERIOR BODY PANELS > Rear Gate

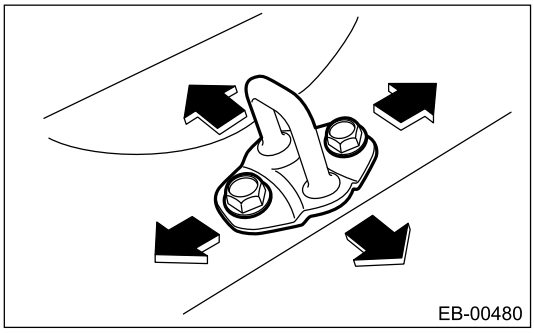


ADJUSTMENT

Adjust the clearance around the panel - rear gate as follows.

Part		Standard
A	Panel - rear gate to Roof panel	6±1 mm (0.24±0.04in)
B	Surface level gap: Panel - rear gate to Roof panel	1±1 mm (0.04±0.04 in)
C	Panel - rear gate to Panel - side outer	4.6±1 mm (0.18±0.04in)
D	Surface level gap: Panel - rear gate to Panel - side outer	2.2±1 mm (0.09±0.04in)
E	Panel - rear gate to Light assembly - rear combination	5±1.5 mm (0.2±0.06in)
F	Surface level gap: Panel - rear gate to Light assembly - rear combination	3.5 ± 1.6 mm (0.14 ± 0.06 in)
G	Panel - rear gate to Bumper face - rear	8±1.8 mm (0.31±0.07in)

1. Adjust the vertical and horizontal positions of the panel - rear gate.



(1) Loosen the mounting bolts of the hinge - rear gate.
(2) Adjust the vertical and horizontal clearance of the panel - rear gate.

Tightening torque:

25 N·m (2.55 kgf-m, 18.4 ft-lb)

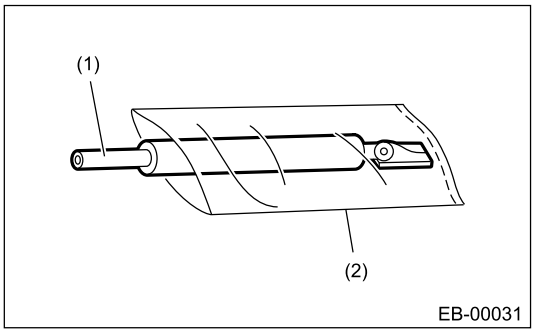
2. Adjust the surface level gap between the panel - rear gate and the body.

(1) Remove the trim panel - rear skirt.
(2) Loosen the bolt.
(3) Tap the striker - rear gate using a plastic hammer to adjust the surface level gap between the panel - rear gate and the body.

Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

EXTERIOR BODY PANELS > Rear Gate



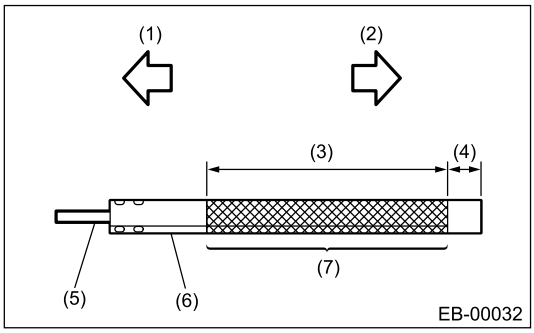
DISPOSAL

1. REAR GATE DAMPER STAY

Caution:

Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.

1. Cover with a vinyl sack as shown in the figure.



(1) Stay ASSY - rear gate

(2) Vinyl sack

Note:

Prevent the vinyl sack from being caught by drill cutting edge.

2. Lift the body side slightly with piston rods fully extended, and secure the body side with vise. Make a hole of 2 — 3 mm (0.08 — 0.12 in) diameter at a point 6 — 196 mm (0.24 — 7.72 in) from the body side by using a sander or saw, and bleed the gas in the rear gate damper stay completely.

(1) Door side

(2) Body side

(3) 196 mm (7.72 in)

(4) 6 mm (0.24 in)

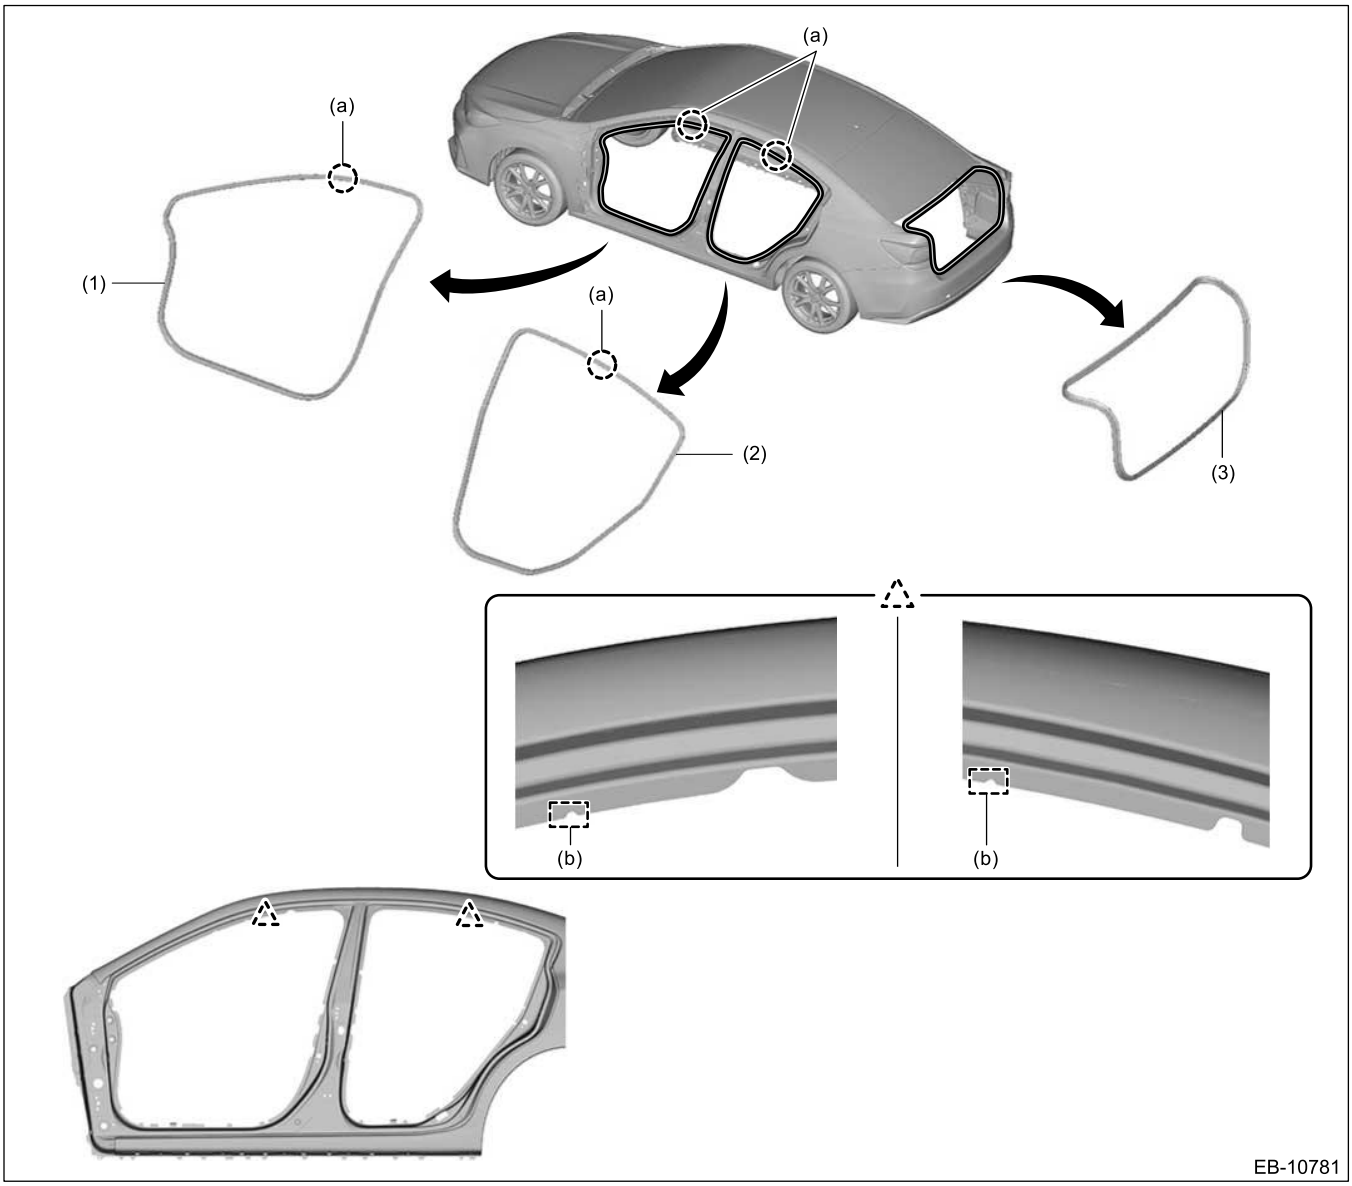
(5) Piston rod

(6) Cylinder

(7) Portion to be drilled

REPLACEMENT

1. FLANGE



1. Remove each weather strip by pulling the rubber part. Be careful not to tear the rubber.
   - Weather strip - body side flange
   - Weather strip - trunk lid (4 door model)
   - Weather strip - rear gate (5 door model)

   Note:
   - **While removing the weather strip - trunk lid, be careful not to allow adhesive to contact the trim panel - trunk side.**
   - **While removing the weather strip - rear gate, be careful not to allow adhesive to contact the trim panel - roof assembly.**
2. Install each weather strip.
   - Weather strip - body side flange
   - Weather strip - trunk lid (4 door model)
   - Weather strip - rear gate (5 door model)

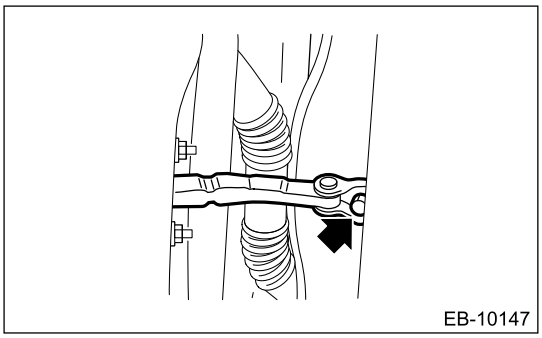
   Note:

   When installing the weather strip - body side flange, install so that the alignment mark (a) and the cutout portion on the body side (b) are aligned.

- 4 door model

(a) Alignment mark
(b) Cutout portion
(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - trunk lid

- 5 door model

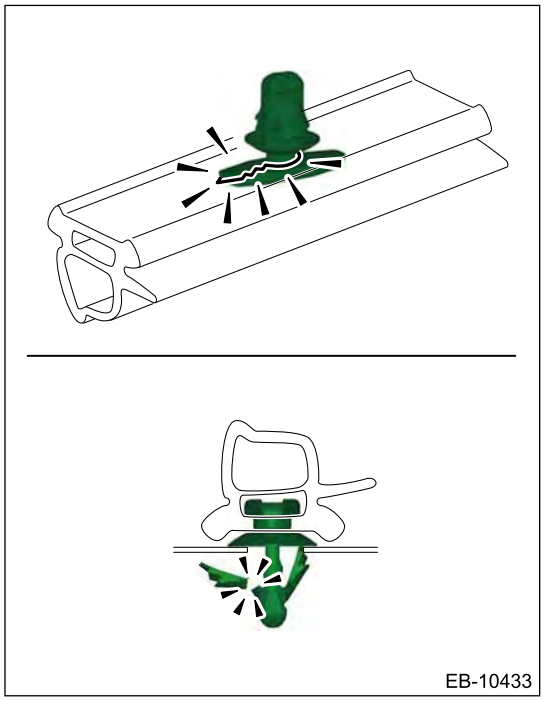


(a) Alignment mark
(b) Cutout portion
(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - rear gate

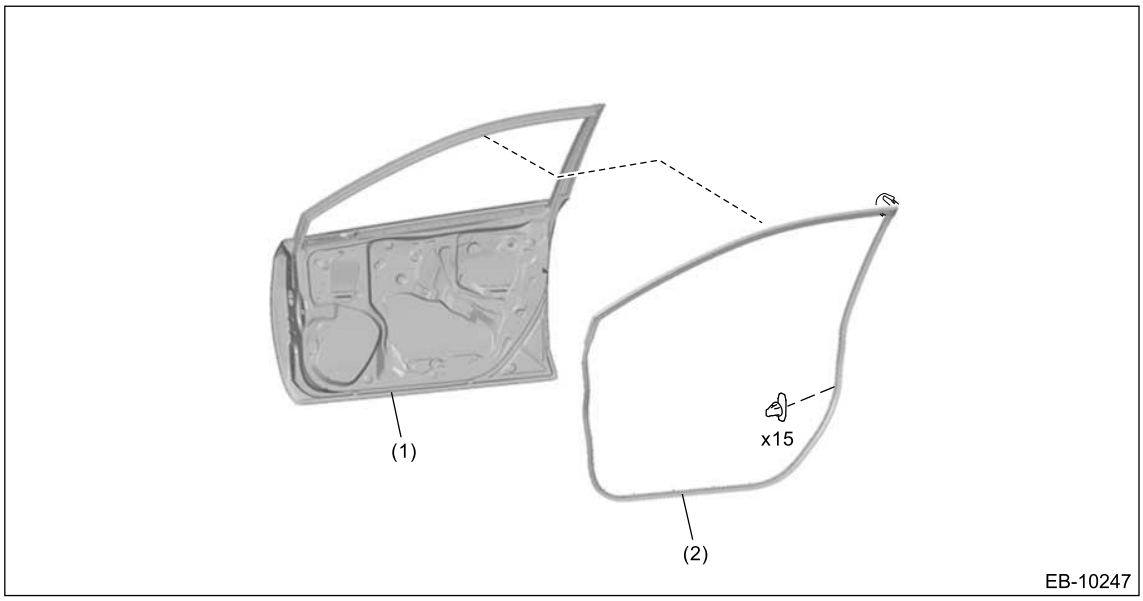
2. FRONT DOOR

1. Remove the bolt from the checker assembly - front door.

Caution:



Cover the removed checker assembly - front door with waste cloth to prevent damage.



2. Remove the weather strip after removing the clip. Be careful not to tear the rubber.

Caution:

- **The weather strip may tear if being pulled. Also, the weather strip clip may be damaged if being removed with excessive force.**

- **When fragments of the damaged clip fall in the door panel, be sure to remove them.**

(1) Panel ASSY - front door (2) Weather strip - front door

3. Install each weather strip.

Caution:

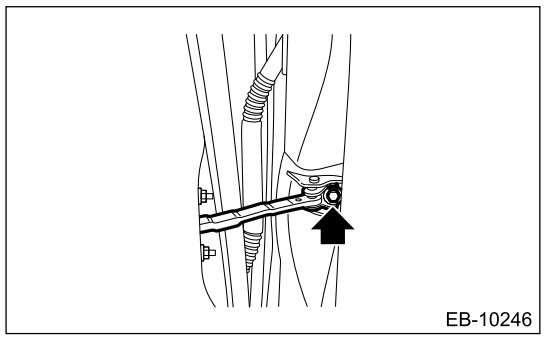
- **Replace the damaged weather strip clip with a new part.**
- **When fragments of the clip fall in the door panel, be sure to remove them.**

4. Install the checker assembly - front door.

Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)

3. REAR DOOR

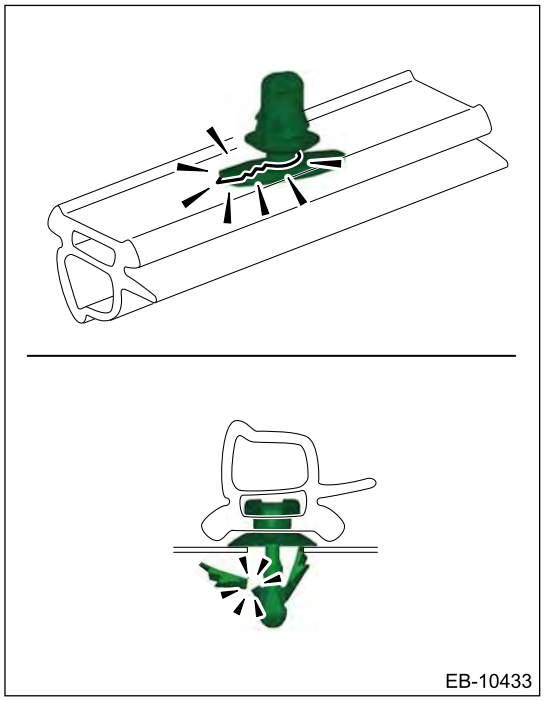


1. Remove the rear door trim. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR

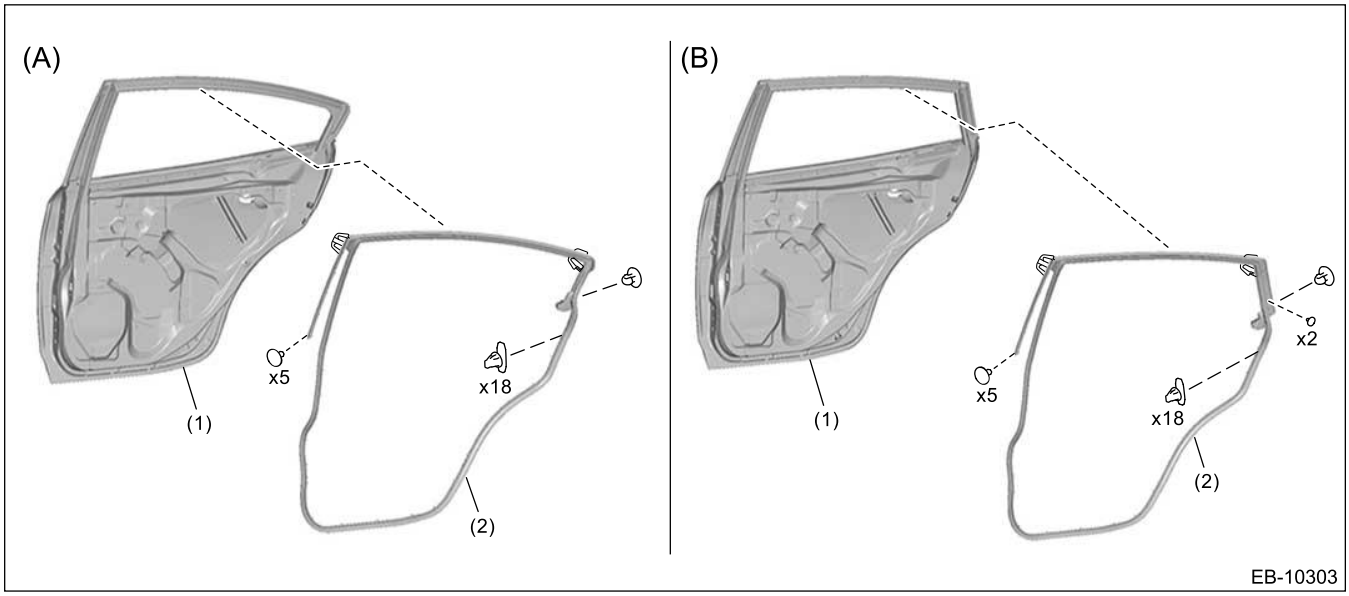
DOOR.

2. Remove the bolt from the checker assembly - rear door.

Caution:



Cover the removed checker assembly - rear door with waste cloth to prevent damage.



3. Remove the weather strip after removing the clip. Be careful not to tear the rubber.

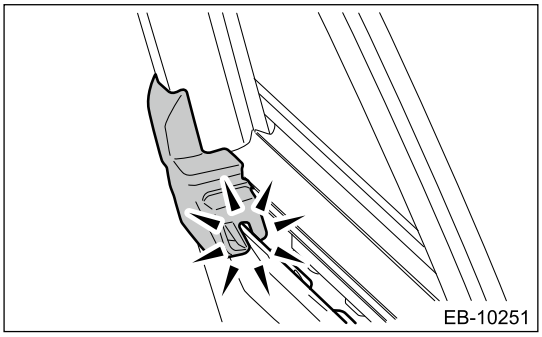
Caution:

- **The weather strip may tear if being pulled. Also, the weather strip clip may be damaged if being removed with excessive force.**

- **When fragments of the damaged clip fall in the door panel, be sure to remove them.**

(A) 4 door model

(B) 5 door model



(1) Panel ASSY - rear door

(2) Weather strip - rear door

4. Install each weather strip.

Caution:

- **Replace the damaged weather strip clip with a new part.**
- **When fragments of the clip fall in the door panel, be sure to remove them.**
- **Do not forget to install the weather strip to the door panel.**

5. Install the checker assembly - rear door.

Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)

6. Install the rear door trim. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>INSTALLATION.

Note:

When the clearance between the door trim upper rear end and the weather strip is not uniform, perform installation of the weather strip again.

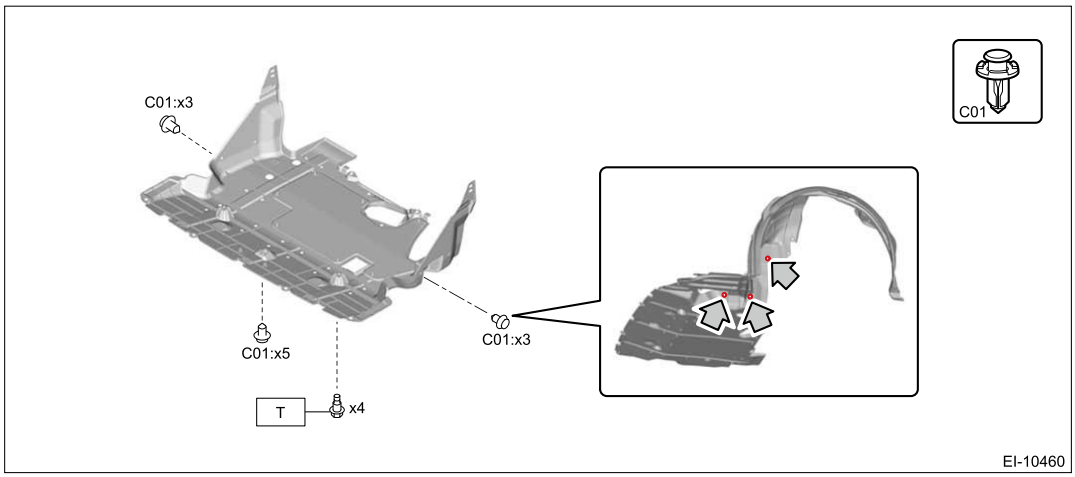
COMPONENT

Note:

- **The alphabet mark beside the clips in the figure indicate the colors of the clips.**
- **The clips with the same shape may have different engaging forces depending on their colors. Always use the specified parts when installing.**
- **The alphabets of color codes are used in the wiring diagram.**

Color code	Collar	Color code	Collar	Color code	Collar
B	Black	R	Red	Br	Brown
G	Green	V	Violet	Gr	Gray
L	Blue	W	White	Lg	Light green
Or	Orange	Y	Yellow	Sb	Light blue
P	Pink	Be	Beige		

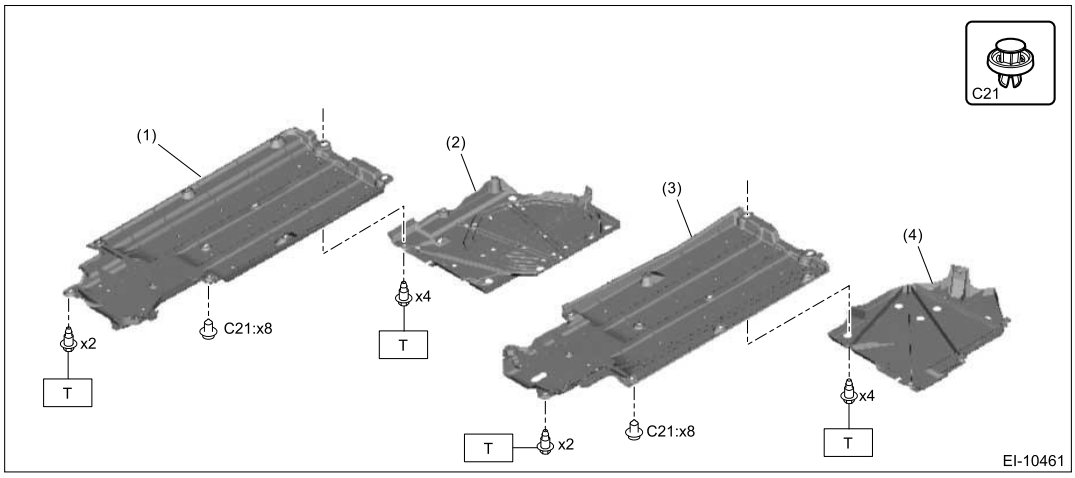
1. MUD GUARD



(1) Mud guard - front RH
(2) Plate air flap - front RH
(3) Mud guard - front LH
(4) Plate air flap - front LH
(5) Plate air flap - rear RH
(6) Mud guard - rear RH
(7) Mud guard - rear LH
(8) Plate air flap - rear LH

Note:

For model with the spoiler assembly - side sill, the number of clips is different.



2. FRONT UNDER COVER

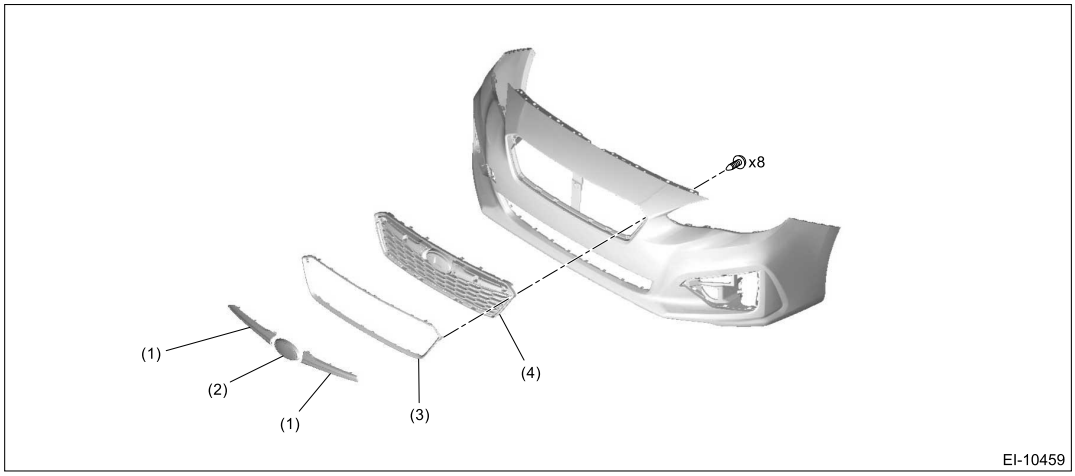
Tightening torque: N·m (kgf-m, ft-lb)

T: 18 (1.8, 13.3)

3. FLOOR UNDER PROTECTOR

(1) Floor under protector RH
(2) Fuel tank protector RH
(3) Floor under protector LH
(4) Fuel tank protector LH

Tightening torque: N·m (kgf-m, ft-lb)

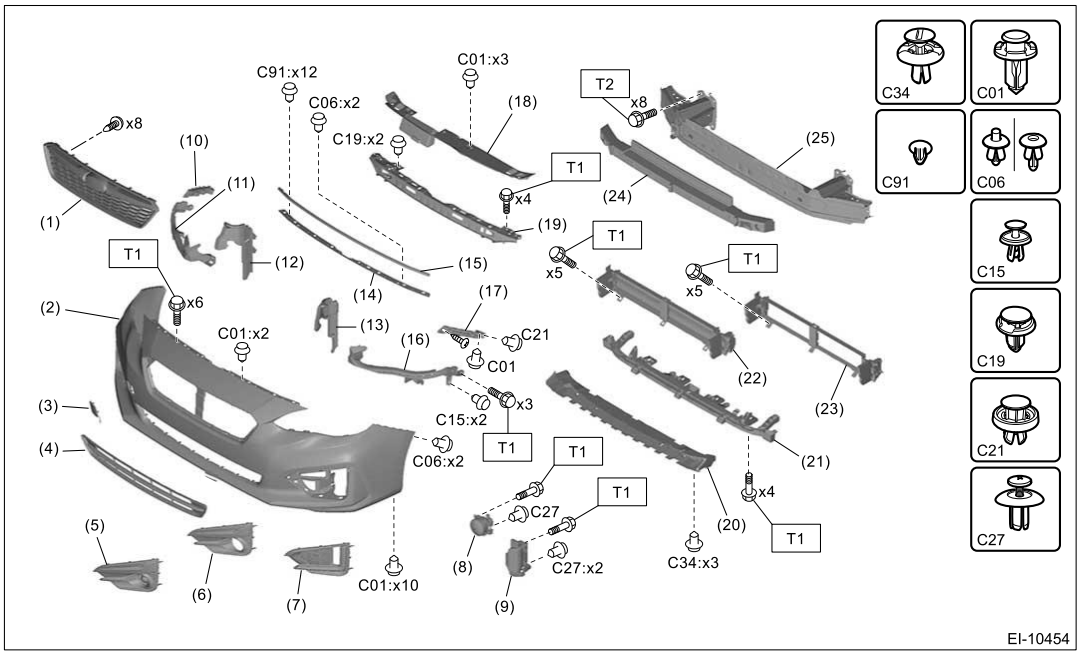


T: 7.5 (0.8, 5.5)

Note:

For detailed exploded view of the fuel tank protector, refer to "Fuel Tank" in "FUEL INJECTION" section.

4. FRONT GRILLE

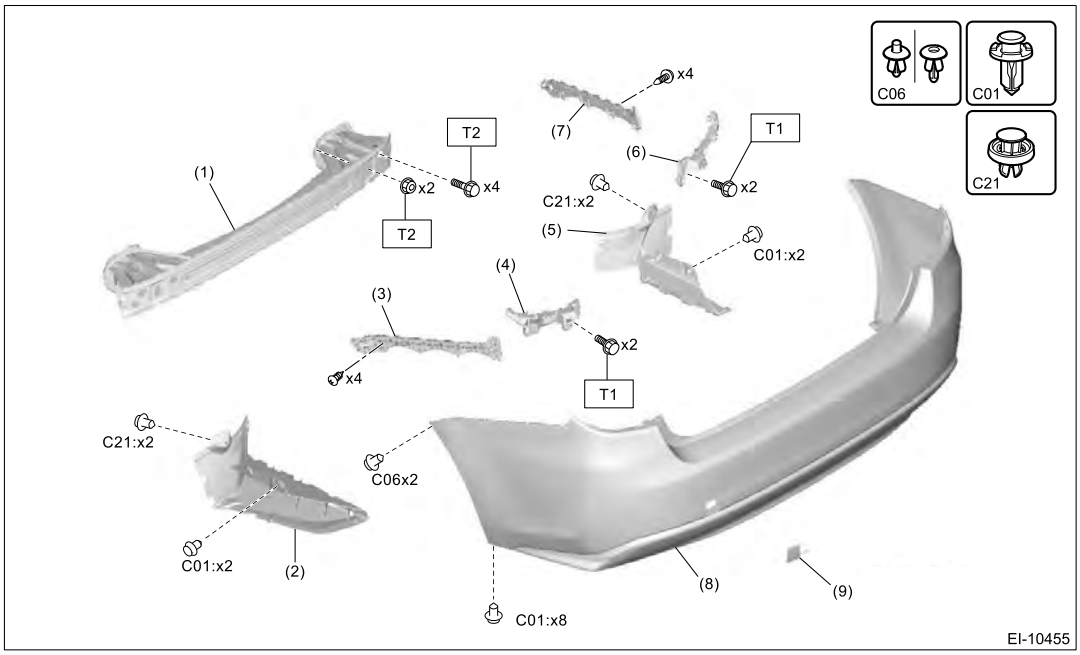


- 4 door model and 5 door model

(1) Molding - wing
(2) Ornament
(3) Molding - ring
(4) Base - front grille

5. FRONT BUMPER

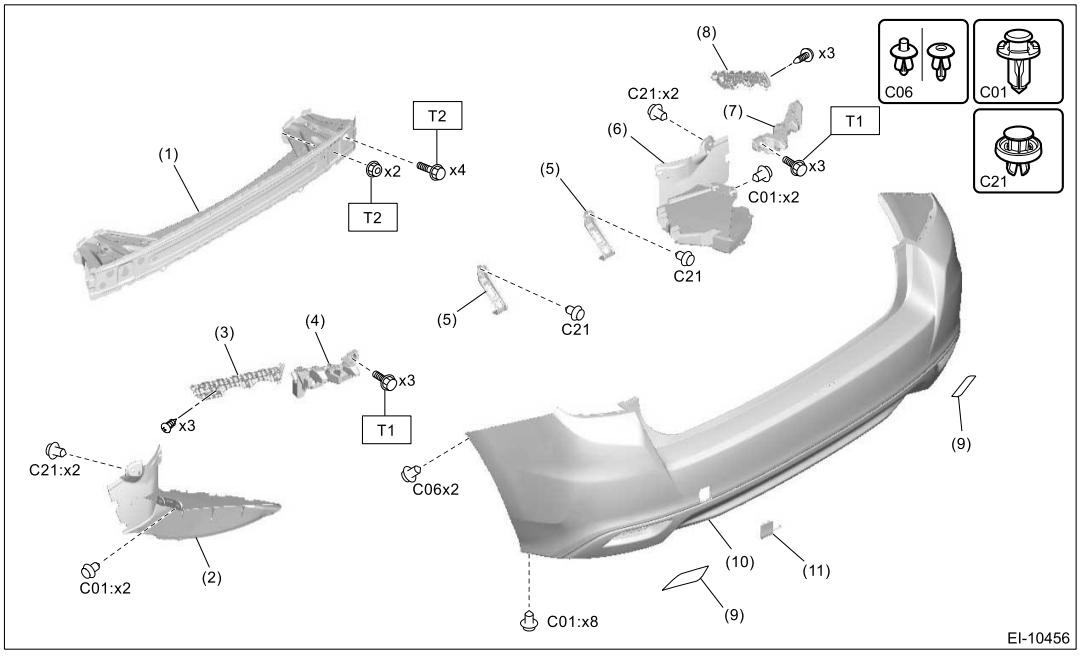
- 4 door model and 5 door model



(1) Front grille ASSY	(11) Bracket - front bumper corner RH	(21) Bracket center LWR - front
(2) Bumper face - front	(12) Air guide RH	(22) Active grille shutter
(3) Cover hook - front	(13) Air guide LH	(23) Frame ASSY - active grille shutter (model without ACT GS)
(4) Cover intake - front	(14) Plate UPR - front	(24) Energy absorber foam
(5) Cover - fog light A (model without fog light)	(15) Sealing bumper - front	(25) Bumper beam COMPL - front
(6) Cover - fog light A (model with fog light)	(16) Bracket - front bumper corner LH	
(7) Cover - fog light B (model with DRL)	(17) Bracket - front bumper side LH	***Tightening torque: N·m (kgf-m, ft-lb)***
(8) Light ASSY - fog	(18) Cover UPR - front	***T1: 7.5 (0.8, 5.5)***
(9) Light ASSY - DRL	(19) Bracket - bumper UPR	***T2: 33 (3.4, 24.3)***
(10) Bracket - front bumper side RH	(20) Energy absorber LWR - front	

Note:

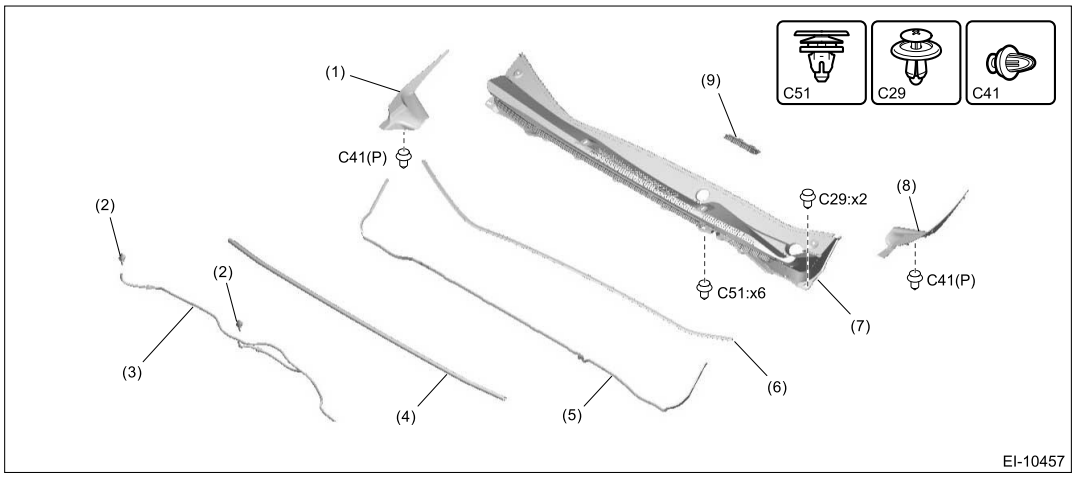
∗: For detailed exploded view of the active grille shutter and ambient sensor, refer to "Active Grille Shutter" in "COOLING" section. Ref. to COOLING(H4DO)>General Description>COMPONENT > ACTIVE GRILLE SHUTTER.



6. REAR BUMPER

- 4 door model

(1)	Bumper beam COMPL - rear	(6)	Bracket - rear bumper corner RH	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Cover - side LWR LH	(7)	Bracket - rear bumper side RH	***T1: 7.5 (0.8, 5.5)***	
(3)	Bracket - rear bumper side LH	(8)	Bumper face - rear	***T2: 53 (5.4, 39.1)***	
(4)	Bracket - rear bumper corner LH	(9)	Cover - rear bumper		
(5)	Cover - side LWR RH				



- 5 door model

(1)	Bumper beam COMPL - rear	(6)	Cover - side LWR RH	(11)	Cover - rear bumper
(2)	Cover - side LWR LH	(7)	Bracket - rear bumper corner RH

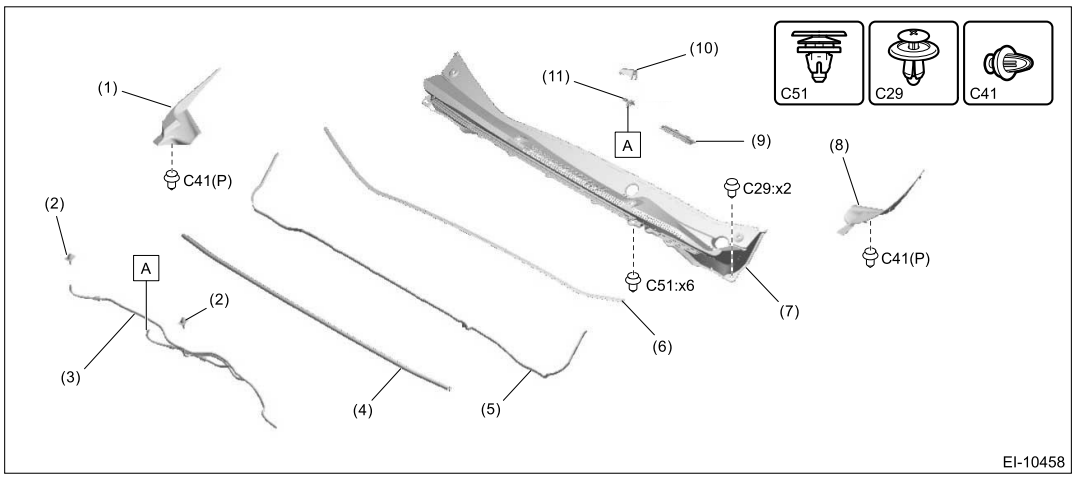
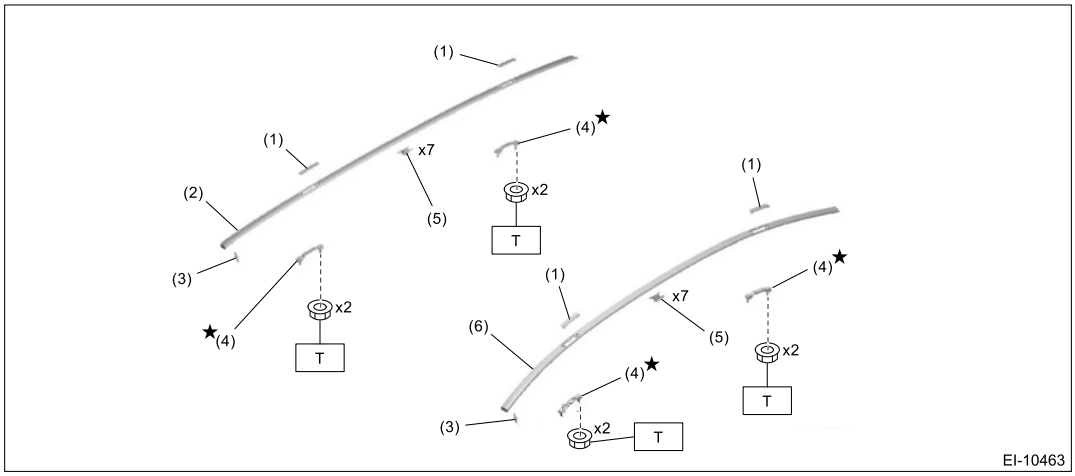
(5)	Bracket LWR - rear	(10)	Bumper face - rear	***T2: 53 (5.4, 39.1)***	



7. COWL PANEL

- Models without EyeSight

(1) Cowl panel - side RH
(2) Nozzle - windshield washer
(3) Hose - windshield washer
(4) Seal - cowl
(5) Gasket
(6) Protector - cowl
(7) Cowl panel
(8) Cowl panel - side LH
(9) Cover - cowl

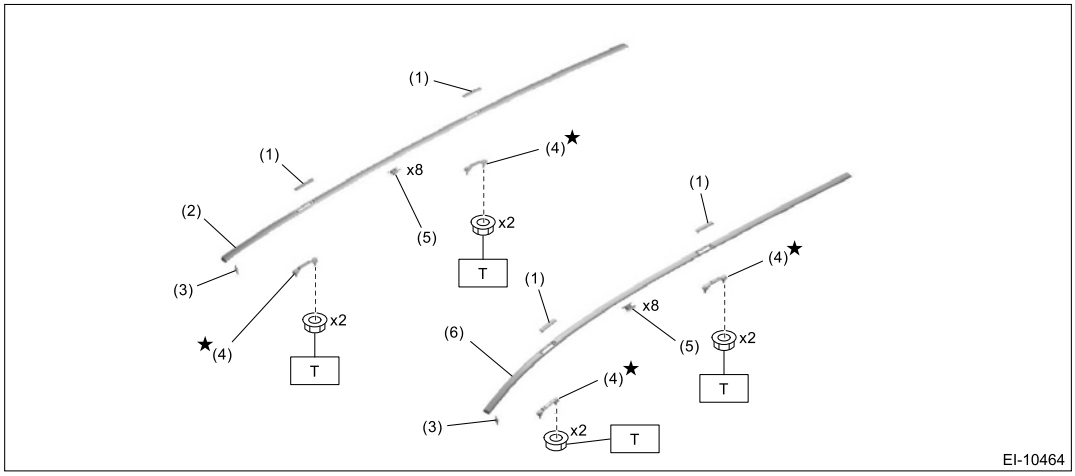


- Models with EyeSight

(1) Cowl panel - side RH
(2) Nozzle - windshield washer
(3) Hose - windshield washer
(4) Seal - cowl
(5) Gasket
(6) Protector - cowl
(7) Cowl panel
(8) Cowl panel - side LH
(9) Cover - cowl
(10) Cover - joint
(11) Joint - washer hose

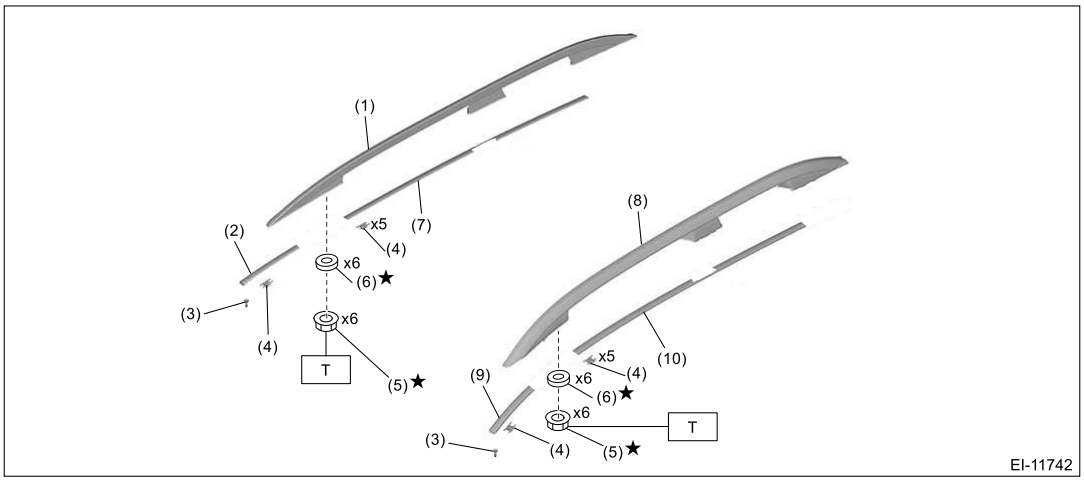
8. ROOF MOLDING

- 4 door model



(1) Cap - lid
(5) Carrier BRKT

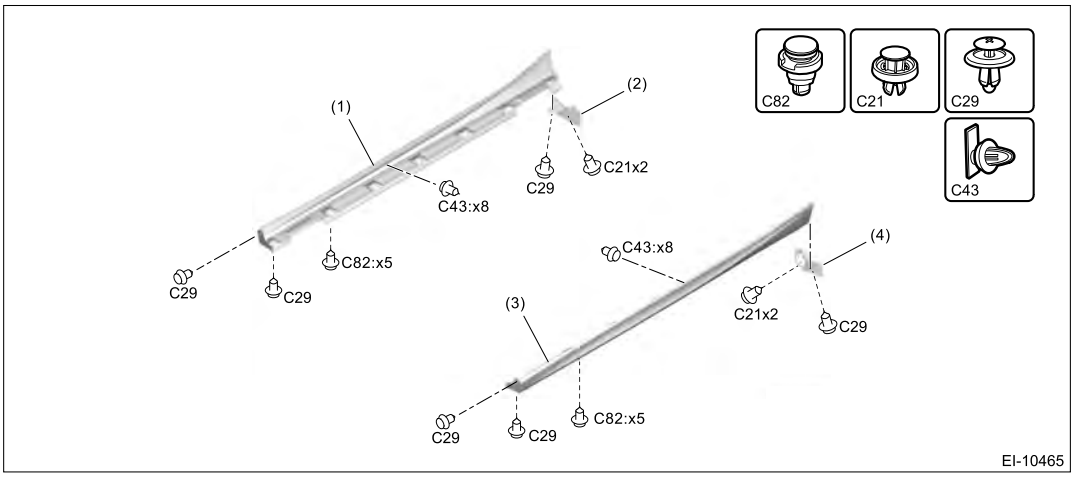
Tightening torque: N·m (kgf-m, ft-lb)



(3) Molding - roof RH
(4) Rivet
(7) Fastener
(8) Molding - roof LH
T: 7.5 (0.8, 5.5)

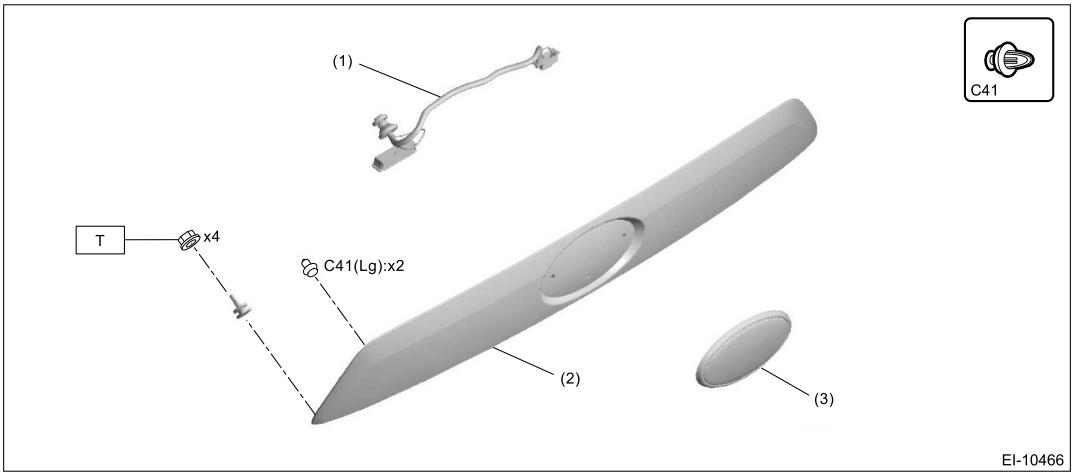
- 5 door model

(1) Cap - lid
(2) Molding - roof RH
(3) Rivet
(4) Carrier BRKT
(5) Fastener
(6) Molding - roof LH
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)



9. ROOF RAIL

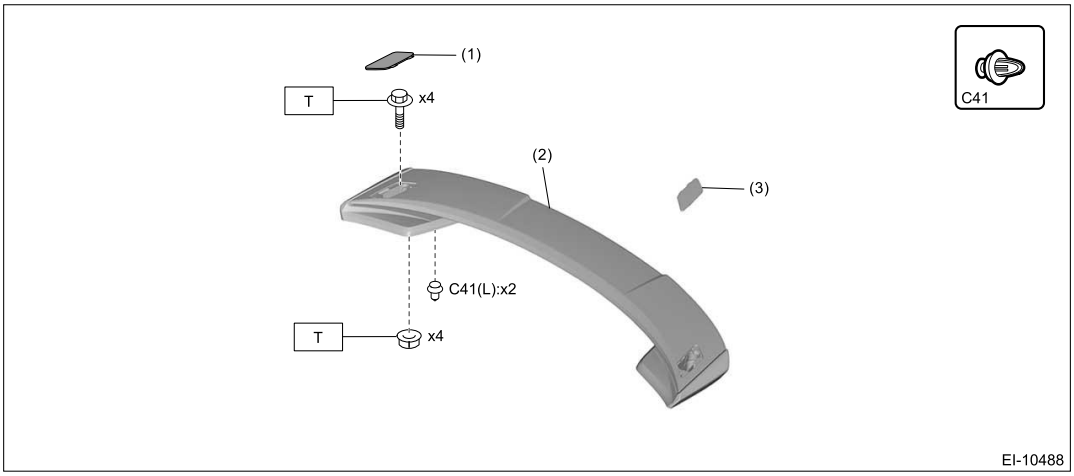
(1) Roof rail ASSY RH
(2) Molding - roof front RH
(3) Rivet
(4) Fastener
(5) Self-locking nut
(6) Gasket
(7) Molding - roof rear RH
(8) Roof rail ASSY LH
(9) Molding - roof front LH
(10) Molding - roof rear LH
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.76, 5.5)



10. SIDE GARNISH & SIDE SPOILER

- 4 door model and 5 door model

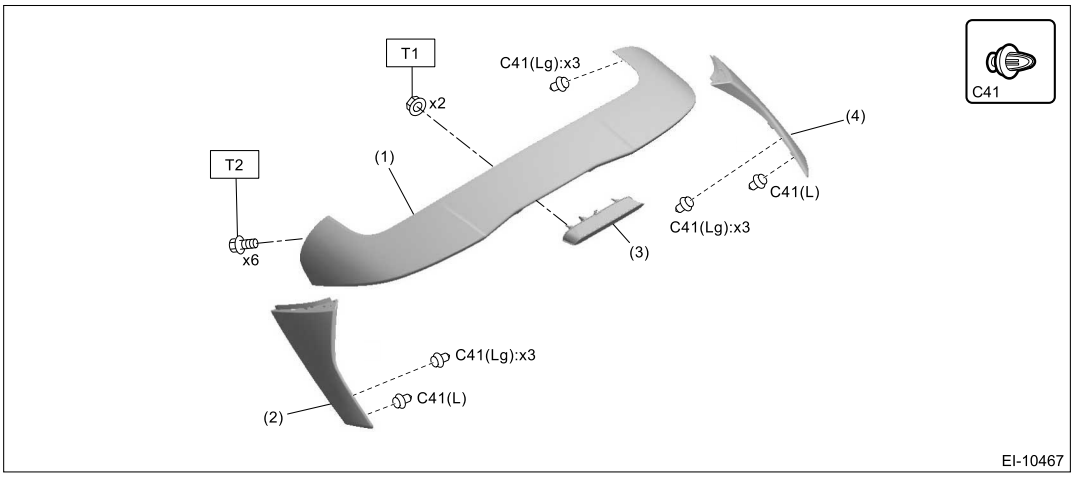
(1) Spoiler ASSY - side sill RH
(2) Plate air flap - rear RH
(3) Spoiler ASSY - side sill LH
(4) Plate air flap - rear LH



11. REAR GATE GARNISH

(1) Rear lock button harness (model with keyless access)
(2) Garnish ASSY - rear gate
(3) Ornament

Tightening torque: N·m (kgf-m, ft-lb)
T: 4.5 (0.46, 3.3)

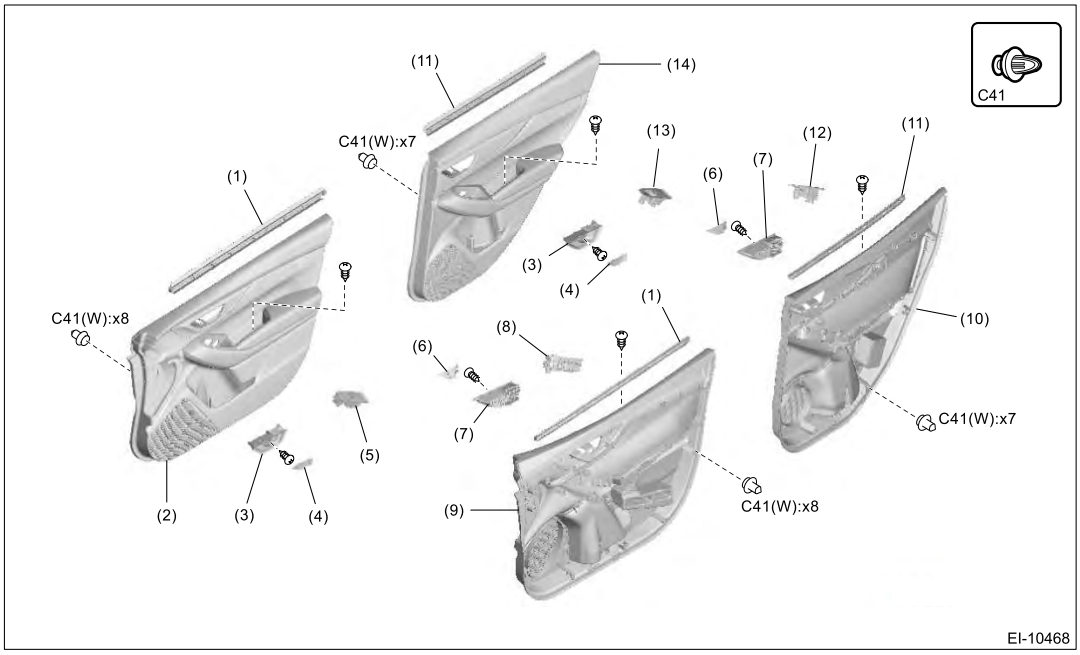


12. REAR SPOILER

(1) Cap - rear spoiler RH
(2) Rear spoiler ASSY
(3) Cap - rear spoiler LH

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

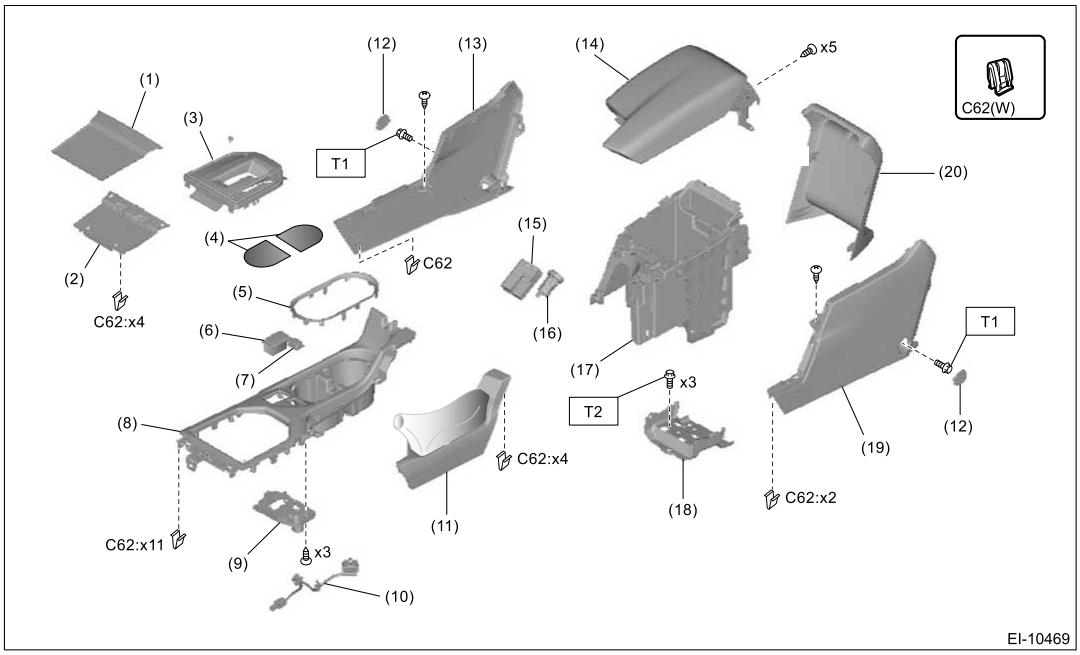
13. ROOF SPOILER



(1) Spoiler ASSY - roof CTR
(2) Spoiler ASSY - roof LH
(3) Light ASSY - high-mounted
(4) Spoiler ASSY - roof RH

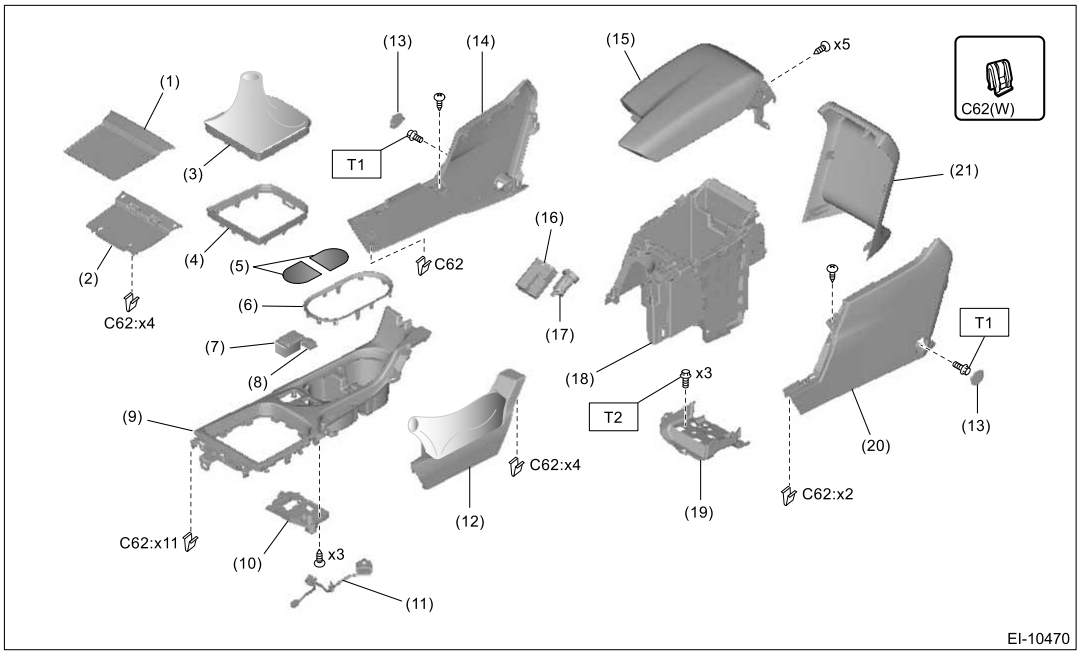
Tightening torque: N·m (kgf-m, ft-lb)

T1: 4.5(0.5,3.3)
T2: 7.5 (0.8, 5.5)



14. DOOR TRIM

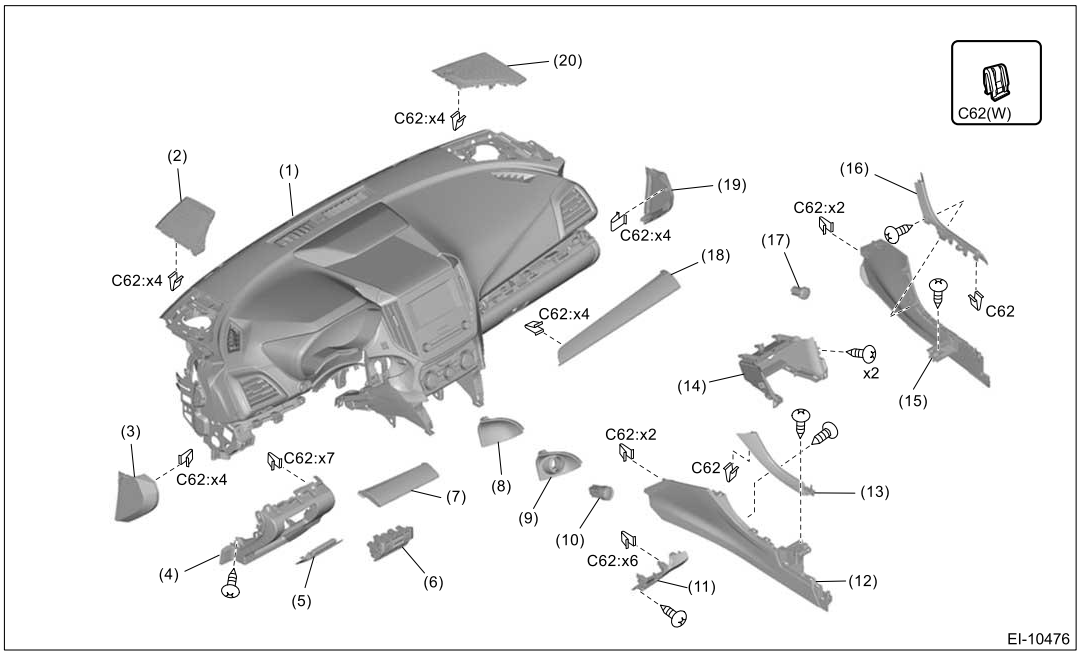
(1) Weather strip - front door INN
(2) Trim panel - front door RH
(3) Remote ASSY - door INN RH
(4) Cover - remote door RH
(5) Switch ASSY - power window sub front
(6) Cover - remote door LH
(7) Remote ASSY - door INN LH
(8) Switch ASSY - power window main
(9) Trim panel - front door LH
(10) Trim panel - rear door LH
(11) Weather strip - rear door INN
(12) Switch ASSY - power window SUB rear LH
(13) Switch ASSY - power window SUB rear RH
(14) Trim panel - rear door RH



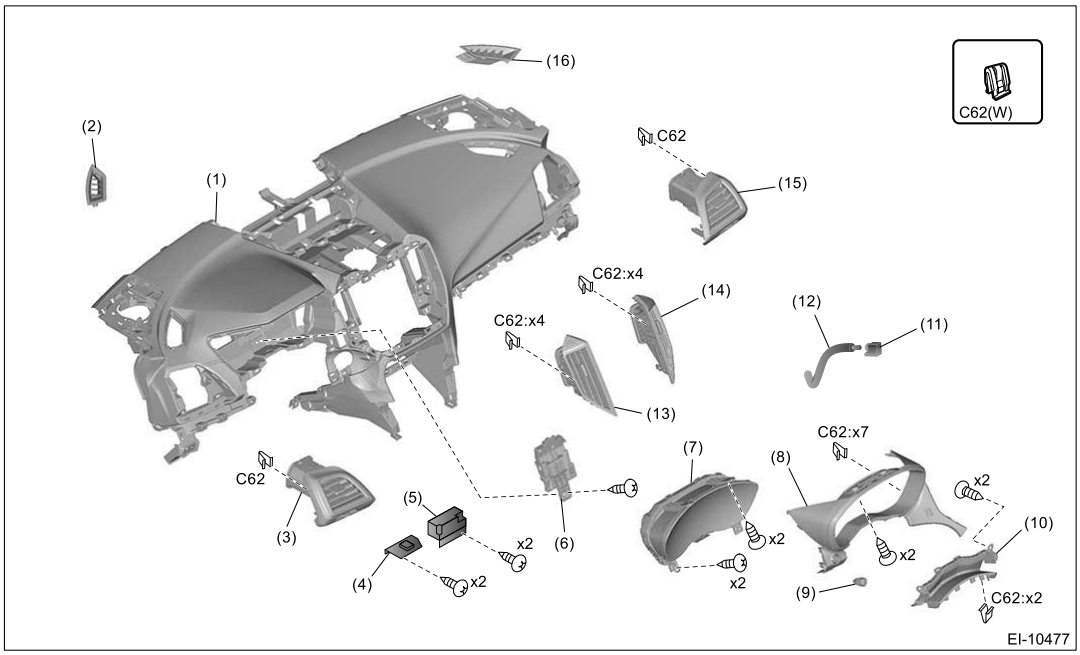
15. CONSOLE BOX

- CVT model

(1) Mat - center tray	(9) Switch case	(17) Pocket - console
(2) Tray - center LWR	(10) Adapter cord - console	(18) Bracket - console B
(3) Cover - selector	(11) Boot - hand brake	(19) Outer cover - console box LH
(4) Mat - cup holder	(12) Cap - console box	(20) End cover - console box
(5) Ring - cup holder	(13) Outer cover - console box RH	
(6) Switch - seat heater	(14) Lid ASSY - console box	***Tightening torque: N·m (kgf-m, ft-lb)***
(7) Cover	(15) AUX unit	***T1: 6.5 (0.7, 4.8)***
(8) Cover ASSY - front CVT	(16) Accessory socket	***T2: 18 (1.8, 13.3)***



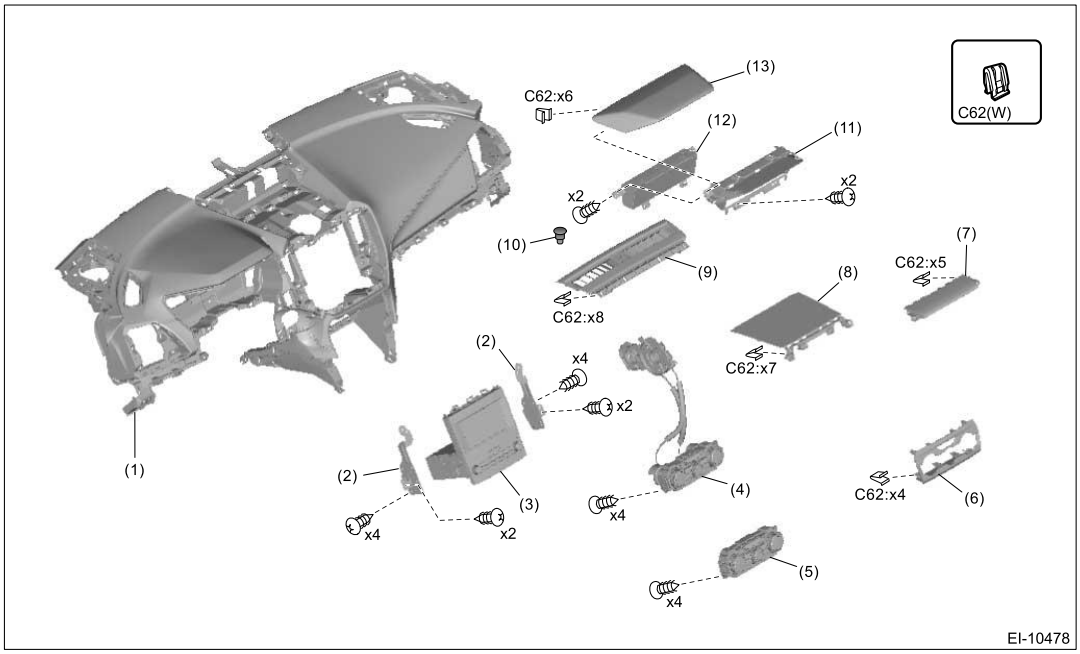
- MT model



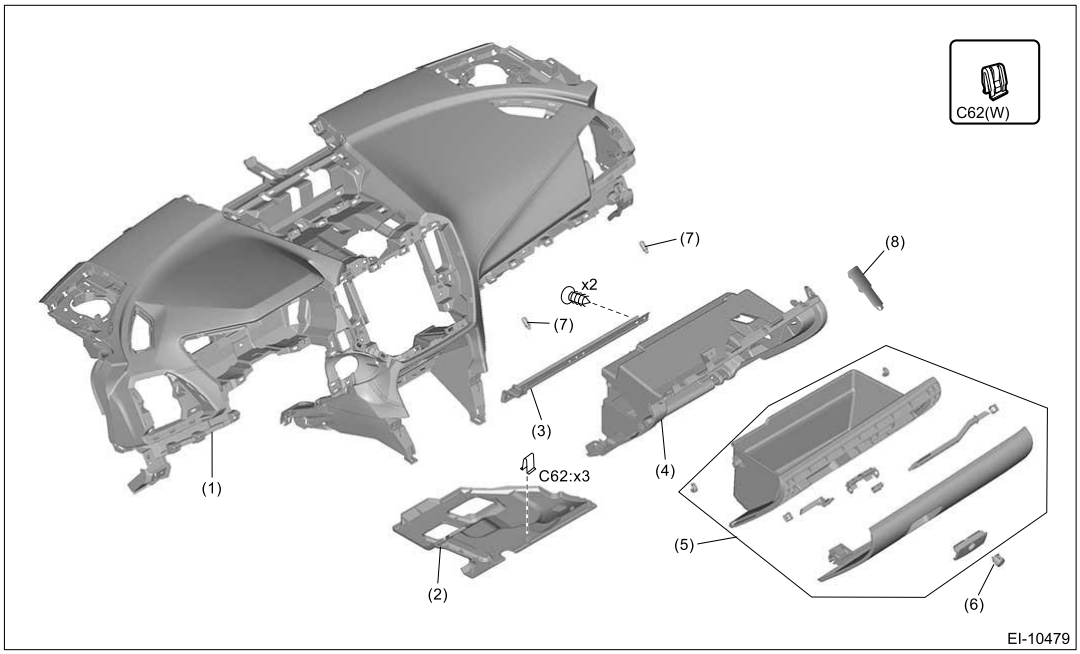
(1) Mat - center tray	(10) Switch case	(19) Bracket - console B
(2) Tray - center LWR	(11) Adapter cord - console	(20) Outer cover - console box LH
(3) Boot - shift knob	(12) Boot - hand brake	(21) End cover - console box
(4) Ring - shift knob	(13) Cap - console box	
(5) Mat - cup holder	(14) Outer cover - console box RH	***Tightening torque: N·m (kgf-m, ft-lb)***
(6) Ring - cup holder	(15) Lid ASSY - console box	***T1: 6.5 (0.7, 4.8)***
(7) Switch - seat heater	(16) AUX unit	***T2: 18 (1.8, 13.3)***

(8) Cover
(9) Cover ASSY - front MT
(17) Accessory socket
(18) Pocket - console

16. INSTRUMENT PANEL

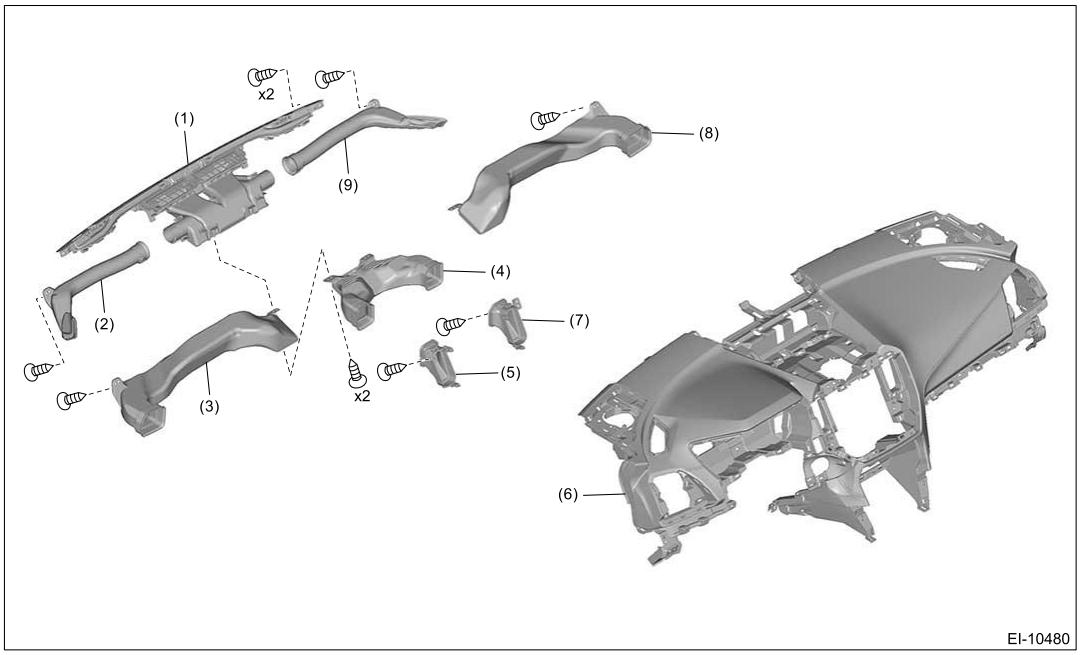


(1) Instrument panel ASSY
(2) Grille speaker side LH
(3) Cover - instrument panel side LH
(4) Cover ASSY - instrument panel LWR driver OUT
(5) Lid ASSY - fuse box
(6) Switch ASSY - instrument panel
(7) Ornament panel - driver
(8) Cover - starter SW
(9) Panel - starter SW
(10) Push button ignition switch
(11) Cover ASSY - instrument panel LWR driver INN
(12) Panel center LWR LH
(13) Ornament panel - console LH
(14) Tray - center UPR
(15) Panel center LWR RH
(16) Ornament panel - console RH
(17) Socket ASSY
(18) Ornament panel - passenger
(19) Cover - instrument panel side RH
(20) Grille speaker side RH



(1) Panel COMPL - instrument
(2) Grille defroster - front LH
(7) Combination meter ASSY
(8) Visor ASSY - combination
(13) Grille ASSY - CTR ventilation LH
(14) Grille ASSY - CTR ventilation

meter



(3) Grille ASSY - ventilation LH
(4) Antenna ASSY - GPS
(5) SUB antenna ASSY - telematics
(6) Reinforcement - combination meter
(9) Switch ASSY - trip reset
(10) Cover ASSY - visor LWR.
(11) In-vehicle sensor (auto A/C model only)
(12) Aspirator hose (auto A/C model only)
RH
(15) Grille ASSY - ventilation RH
(16) Grille defroster - front RH

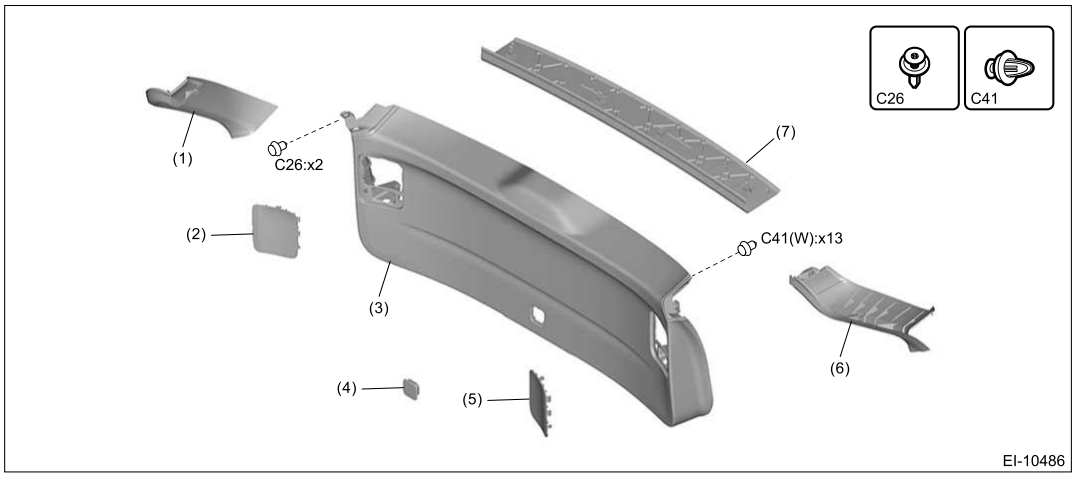
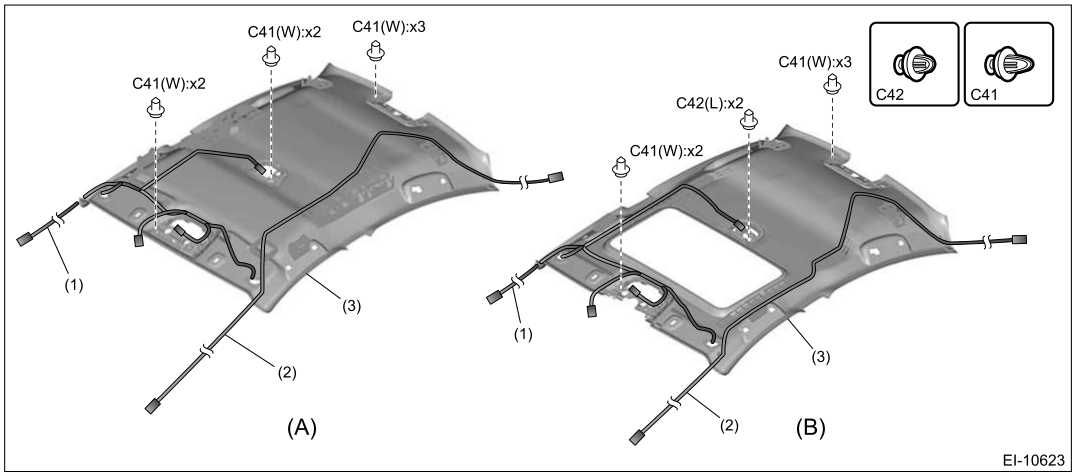
(9) Trim panel - rear pillar UPR
(10) Holder - belt (RH side only)
(11) Trim panel - rear apron
(12) Luggage hook
(13) Cap - rear suspension
(14) Lid - rear apron
(15) Hook



Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

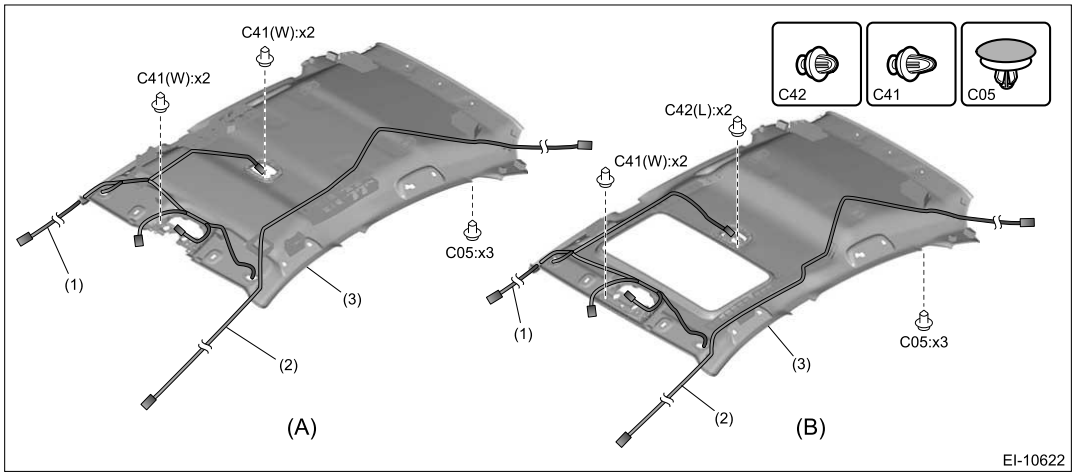
(1) Spacer - rear floor CTR
(2) Spacer - rear floor side RH
(3) Holder
(4) Spacer - rear floor side LH
(5) Mat - rear floor
(6) Trim panel - rear skirt



18. REAR GATE TRIM

(1) Trim panel - rear gate pillar side RH
(2) Cap - rear gate RH
(3) Trim panel - rear gate LWR
(4) Cap - emergency
(5) Cap - rear gate LH
(6) Trim panel - rear gate pillar side LH
(7) Trim panel - rear gate UPR

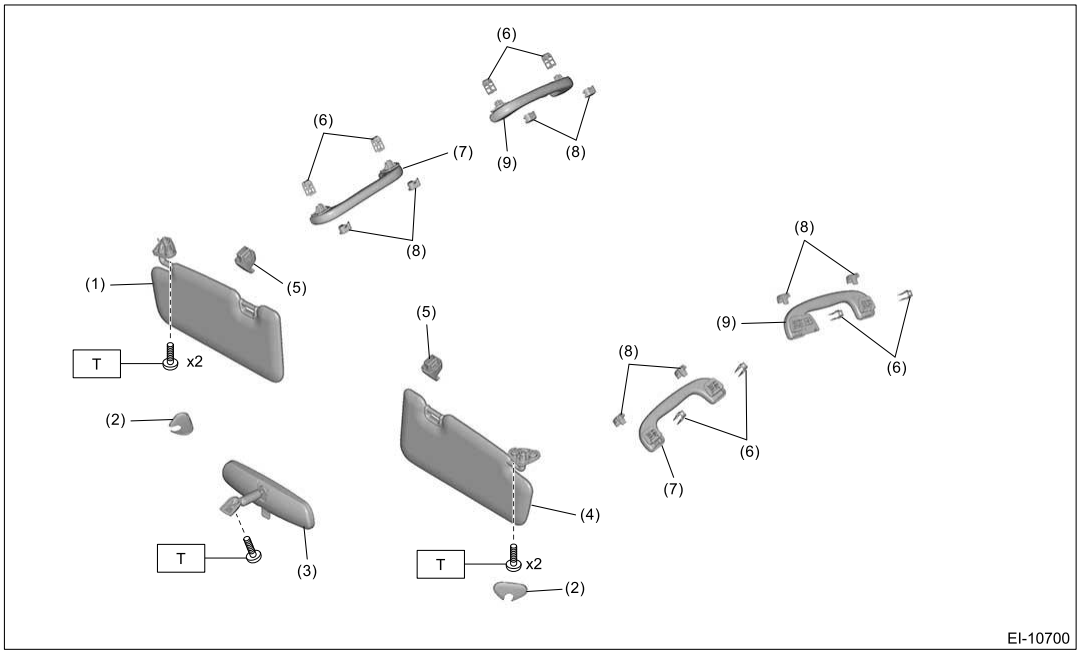
19. ROOF TRIM



- 4 door model

(A) Normal roof type
(B) Sunroof type

(1) Cord - roof
(2) Cord ASSY - antenna feeder
(3) Trim panel - roof ASSY



- 5 door model

(A) Normal roof type
(B) Sunroof type

(1) Cord - roof (2) Cord ASSY - antenna feeder (3) Trim panel - roof ASSY

20. ROOM INNER PARTS

(1) Sun visor ASSY RH
(2) Cap - sun visor
(3) Mirror ASSY rearview inner
(4) Sun visor ASSY LH
(5) Hook - sun visor
(6) Steel clip
(7) Assist rail - front
(8) Cap - assist rail
(9) Assist rail - rear

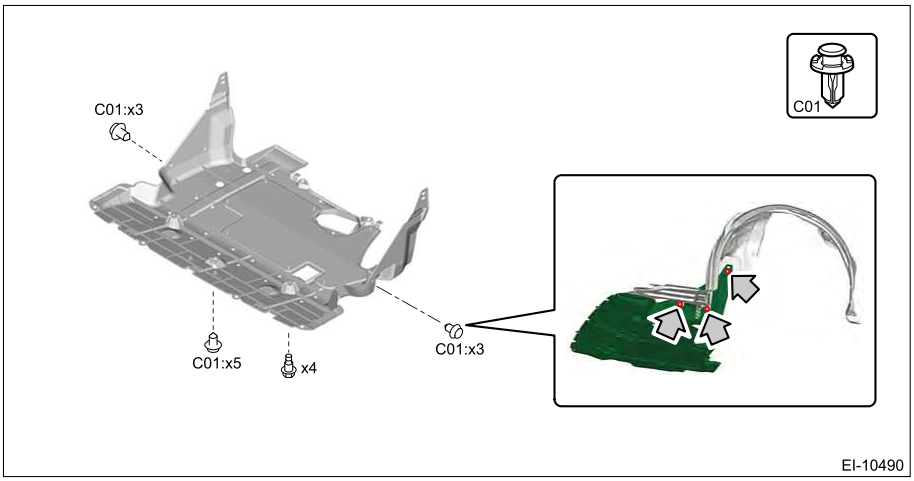
Tightening torque: N·m (kgf-m, ft-lb)

T: 2 (0.2, 1.5)

Note:

For exploded view of the inner mirror, refer to "Rearview Mirror" in "GLASS/WINDOWS/MIRRORS" section.
Ref. to GLASS/WINDOWS/MIRRORS>General Description>COMPONENT > REAR VIEW MIRROR.

EXTERIOR/INTERIOR TRIM > General Description



PREPARATION TOOL

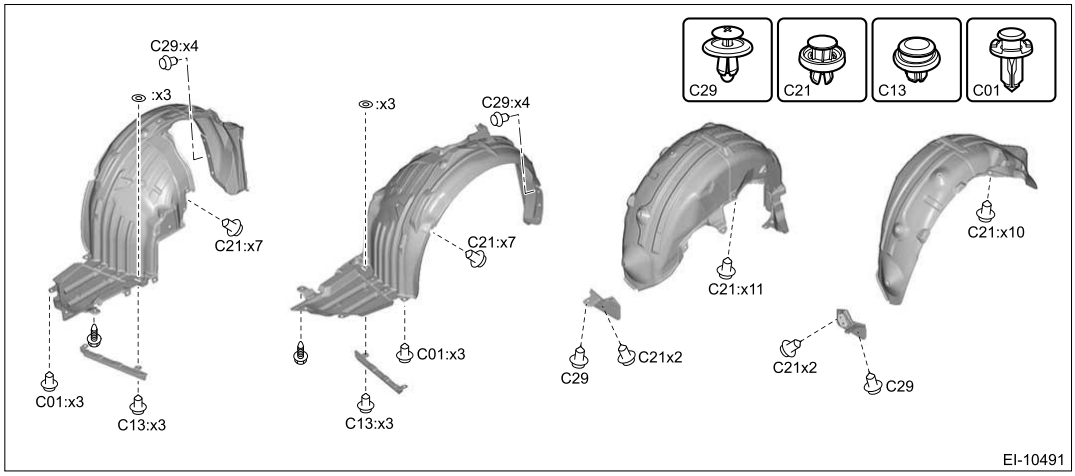
TOOL NAME	REMARKS
Clip remover	Used for removing trim. • KTC AP201-10A • KTC AP201-N • KTC AP203-10A • KTC AP20L-10B Or equivalent.
Clip clamp pliers	Used for removal of various clips and clamps. • KTC CCP-190 Or equivalent.
TORX® T20	Used for removing and installing the mirror assembly - inner rearview.

EXTERIOR/INTERIOR TRIM > Front Under Cover

REMOVAL

1. Lift up the vehicle.
2. Remove the bolts and clips, and remove the under cover - front.

EXTERIOR/INTERIOR TRIM > Front Under Cover



INSTALLATION

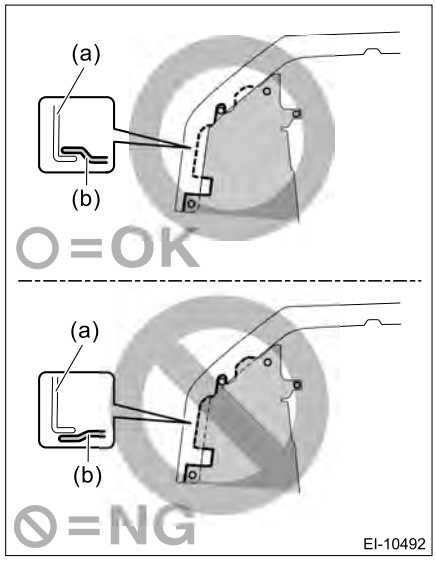
1. Install the under cover - front.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
2. Lower the vehicle.

EXTERIOR/INTERIOR TRIM > Mud Guard

REMOVAL

1. Lift up the vehicle.
2. Remove the wheels.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the screws and clips, and remove the mud guard and air flap.

Note:



For model with the spoiler assembly - side sill, the number of clips is different.

EXTERIOR/INTERIOR TRIM > Mud Guard

INSTALLATION

Caution:

Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).

1. Install the mud guard - front.
2. Install the wheel.

   Tightening torque:

   Wheel nut: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
3. Lower the vehicle.

EXTERIOR/INTERIOR TRIM > Floor Under Protector

REMOVAL

1. Lift up the vehicle.
   Caution:
   Do not use a plate type lift.
2. Remove the bolts, and remove the fuel tank protector.
3. Remove the bolts and clips, and remove the floor under protector.

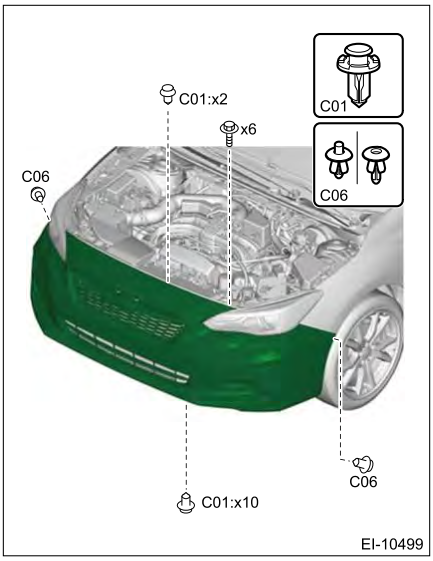
EXTERIOR/INTERIOR TRIM > Floor Under Protector

INSTALLATION

1. Install the floor under protector and fuel tank protector.
   Tightening torque:
   Refer to "COMPONENT" of "General Description". Ref. to EXTERIOR/INTERIOR TRIM>General Description>COMPONENT > FLOOR UNDER PROTECTOR.
2. Lower the vehicle.

NOTE

Refer to “FUEL INJECTION” section for removal and installation procedure of the fuel tank protector.

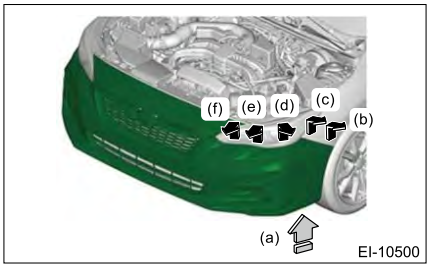


NOTE

For removal/installation procedures of front grille assembly, refer to “DISASSEMBLY” or “ASSEMBLY” in “FRONT BUMPER”.

REMOVAL

1. BUMPER FACE



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the bumper face - front.
   (1) Remove the bolt and clip.

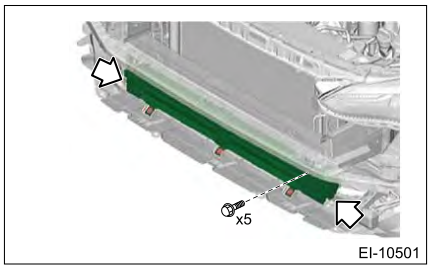
(2) While pushing up the lower side (a) of the bumper face - front, release the engagement in the order from (b) to (f).

Caution:

Do not pull forcibly. It may damage the flange section on the bumper face - front side when it comes off from the claws of the bracket - front bumper.

(3) Disconnect the connector of the fog light assembly or the daytime light assembly.

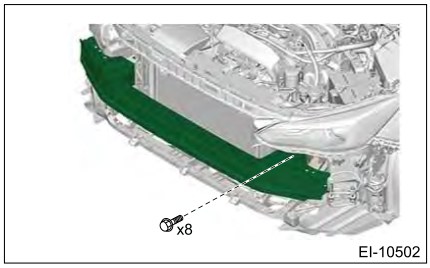
Note:



Detach the opposite side in the same manner.

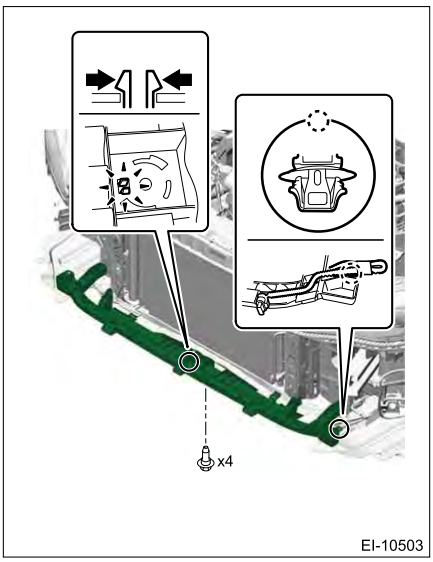
(4) Remove the bumper face while pulling up the center part of the bumper.

2. BUMPER BEAM



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the bumper face - front.
3. Remove the energy absorber.
4. Remove the bolts and disconnect the connector, and remove the active grille shutter.

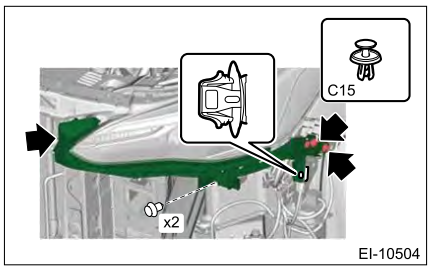
Note:



For models without active grille shutter, remove the frame assembly - active grille shutter.

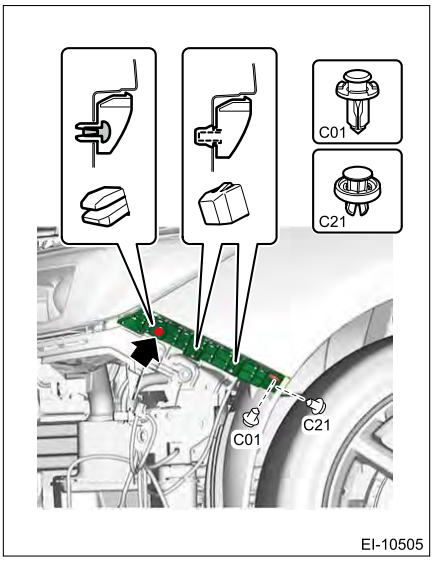
5. Remove the bolts, and remove the bumper beam COMPL - front.

3. BUMPER BRACKET



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the bumper face - front.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the bracket center LWR - front.
   (1) Remove the active grille shutter harness clamp.
   (2) Remove the bolts, and remove the bracket center LWR - front.

Note:

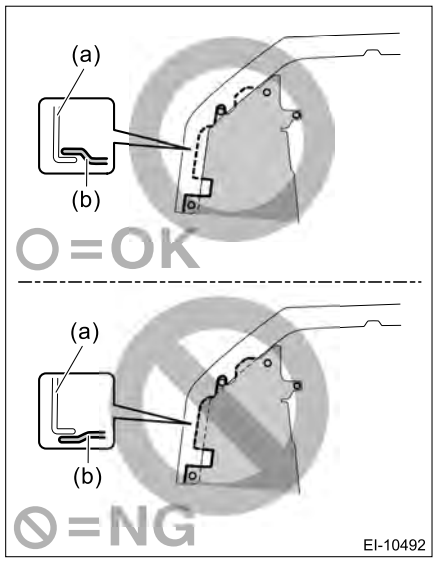


Release the claws if the under cover is mounted.

5. Remove the bolts and clips, and remove the bracket - front bumper corner.
   (1) Remove the keyless buzzer.
   (2) Remove the bolts and clips, and remove the bracket - front bumper corner.

6. Remove the bracket - front bumper side.

(1) Remove the screws.
(2) Remove the claws from behind the fender COMPL - front, and remove the bracket - front bumper side.



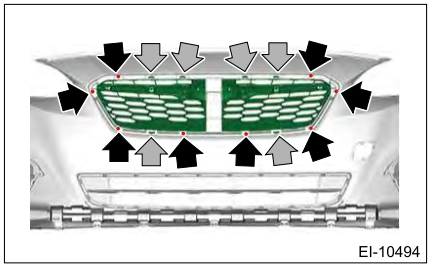
EXTERIOR/INTERIOR TRIM > Front Bumper

INSTALLATION

Caution:

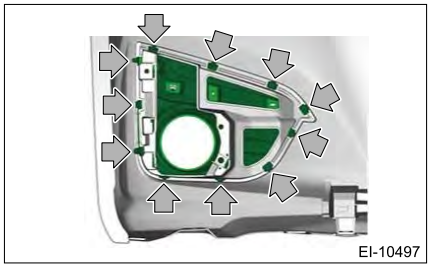
- **Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.**
- **Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).**

1. Install the fog light assembly - front. Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>INSTALLATION.
2. Install the bracket - front bumper side.
3. Install the bracket - front bumper corner.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4. Install the bracket - front center LWR.
   Tightening torque:
   9.5 N·m (1 kgf-m, 7 ft-lb)
5. Install the under cover - front.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
6. Install the bumper beam COMPL - front.
   Tightening torque:



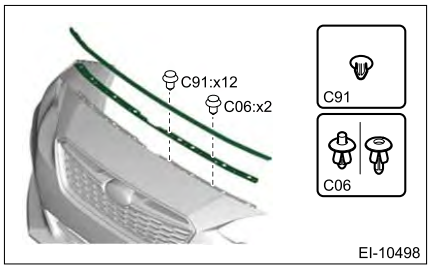
33 N·m (3.4 kgf-m, 24.3 ft-lb)

7. Install the active grille shutter.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8. Install the energy absorber.
9. Install the bumper face - front.
   Tightening torque:
   Plate UPR - front: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
11. Adjust the headlight beam and fog light beam.
    - Adjust the headlight beam. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT > HEADLIGHT BEAM ADJUSTMENT.
    - Adjust the fog light beam. (Model with fog light) Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>ADJUSTMENT > FOG LIGHT AIMING.

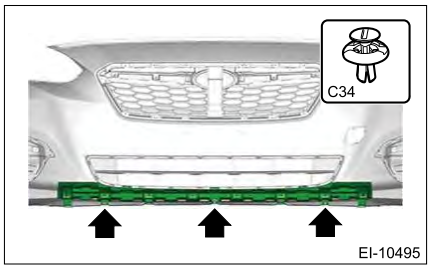


EXTERIOR/INTERIOR TRIM > Front Bumper

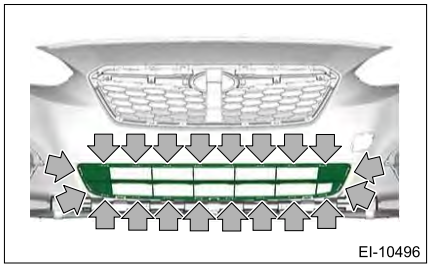
DISASSEMBLY



1. Remove the front grille assembly.
   (1) Remove the screws on the back side.
   (2) Release the claws, and remove the front grille assembly.
   - 4 door model and 5 door model



2. Remove the fog light assembly - front or the light assembly - daytime running. Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>REMOVAL.
3. Release the claws, and then remove the cover - fog light.

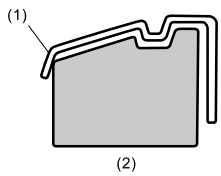


4. Remove the clips, and remove the sealing bumper - front and the plate UPR - front.

5. Remove the clips, and remove the energy absorber LWR - front.

6. Release the claws, and then remove the cover intake - front.

EXTERIOR/INTERIOR TRIM > Front Bumper



ASSEMBLY

1. Install the cover intake - front.
2. Install the energy absorber LWR - front.
3. Remove the clips, and install the sealing bumper - front and the plate UPR - front.
4. Install the cover - fog light.
5. Install the fog light assembly - front or the light assembly - daytime running.
6. Install the front grille assembly.

EXTERIOR/INTERIOR TRIM > Front Bumper

REPAIR

1. COATING METHOD FOR PP BUMPER

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>1</td><td>Bumper installation</td><td>Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.</td><td>Cross section of bumper

(1) Bumper
(2) Paint worktable</td></tr>
<tr><td>2</td><td>Degreasing/cleaning</td><td colspan="2">Clean all parts to be painted with appropriate cleaning solvent, normal alcohol, etc. to remove dirt, oil, grease, etc.</td></tr>
<tr><td>3</td><td>Primer paint</td><td colspan="2">Apply primer to all parts to be painted, using spray gun. Use primer (clear).</td></tr>
<tr><td>4</td><td>Drying</td><td colspan="2">Dry at normal temperature. [10 — 15 min. at 20°C (68°F)]
In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc.
Therefore, if dust or dirt must be removed, use ordinary alcohol etc.</td></tr>
<tr><td rowspan="2">5</td><td rowspan="2">Top coat paint (I)</td><td>Non-colored</td><td>Metallic paint</td></tr>
<tr><td colspan="2"></td></tr>
</table>

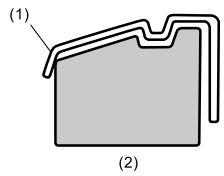
Process No.	Process name	Job contents	
		Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 µ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)	Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 µ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
6	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
7	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minute intervals. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 µ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
8	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If the temperature is higher than 80°C (176°F), PP may be deformed. Keep maximum temperature at 80°C (176°F) or less.	
9	Inspection	Check paint.	

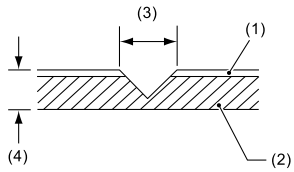
2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

Note:

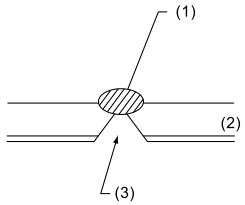
If grained PP bumper surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter.

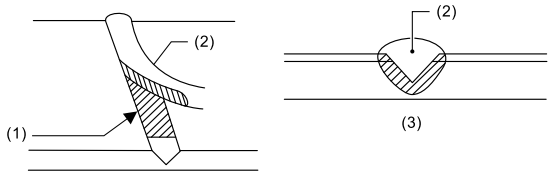
Repair methods are outlined below, based on a classification of the extent of damage.

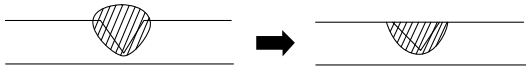




1. Minor damage causing only a change in the luster of the bumper due to a light touch
Almost restorable.







Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with No. 500 sand paper in a “feathering” motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using soft cloth (such as flannel). Recommended wax: Tire wax or equivalent	Perform either the same procedures as for the resin section or the process in step 18 and subsequent in section 3, depending on the degree and nature of damage.
		Polish the waxed area with clean cloth after 5 — 10 minutes.	

2. Deep damage caused by scratching with fences etc.
A dent cannot be repaired but a whitened or swelled part can be removed.

Process No.	Process name	Job contents	
1	Cleaning	Clean the damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the repairing area with No. 100 — 500 sand paper.	
4	Finish	Resin section	Coated section
		Same as step 3 in section "1".	Perform the step 12 and subsequent operations in section "3".

3. Deep damage such as a break or hole that requires filling
Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

Process No.	Process name	Job contents	
1	Bumper removal	Remove the bumper as required.	
2	Removal of parts	Remove the parts built into bumper as required.	
3	Bumper placement	Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.	Cross section of bumper  EI-00234 (1) Bumper (2) Paint worktable
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using an appropriate solvent (appropriate cleaning solvent or alcohol, etc.).	
5	Cutting	If the damage is a crack or a hole, cut a guide slit of 20 — 30 mm (0.79 — 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.	 EI-00235 (1) Paint surface (2) PP base surface (3) 20 — 30 mm (0.79 — 1.18 in) (4) 3 mm (0.12 in)
6	Sanding (I)	Grind the beveled surface with sand paper (No. 40 — 60) to smooth finish.	
7	Cleaning	Clean the sanded surface with the same solvent as used in process No. 4.	
8	Temporary welding	Grind the side opposite to the beveled area with sand paper (No. 40 — 60) and clean using a solvent. Temporarily spot-weld the side, using PP welding rod and heater gun.	

Process No.	Process name	Job contents
		 EI-00236 (1) Welded point (Use heater gun and PP welding rod) (2) PP base surface (3) Beveled section **Note:** • **Do not melt welding rod until it flows out. This results in reduced strength.** • **Leave the welded spot unattended until it cools completely.**
9	Welding	Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.
		 EI-00237 (1) Welding rod (2) Melt hatched area (3) Section **Note:** • **Melt the sections indicated by hatched area.** • **Do not melt the welding rod until it flows out, in order to provide strength.** • **Always keep the heater gun 1 — 2 cm (0.4 — 0.8 in) away from the welding spot.** • **Leave the welded spot unattended until it cools completely.**
10	Sanding (II)	Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it with a rotating speed of less than 1,500 r/min and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.
		 EI-00042
		Sand the welded spot smooth with No. 240 sand paper.
11	Cleaning/degreasing	Completely clean the entire coated area, using solvent similar to that used in process No. 4.
12	Primer coating	Apply a coat of primer for bumpers to the repaired surface and its surrounding areas. Mask these areas, if necessary. **Note:** **Be sure to apply a coat of primer using a spray gun at a pressure of 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi).**

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>13</td><td>Leave unattended</td><td colspan="2">Leave the repaired area unattended at 20°C (68°F) for 10 — 15 minutes until primer is half-dry.
Note:
If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since it could melt the coated area.)</td></tr>
<tr><td>14</td><td>Surfacer coating</td><td colspan="2">Apply a coat of surfacer for PP bumpers to the repaired area two or three times at an interval of 3 — 5 minutes.
For surfacer/hardener mixture, viscosity and paint thickness, observe the specifications of the surfacers to be used.</td></tr>
<tr><td>15</td><td>Drying</td><td colspan="2">Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].</td></tr>
<tr><td>16</td><td>Sanding (III)</td><td colspan="2">Sand the coated surface and its surrounding areas using No. 400 sand paper and water.</td></tr>
<tr><td>17</td><td>Cleaning/degreasing</td><td colspan="2">Same as process No. 12.</td></tr>
<tr><td rowspan="2">18</td><td rowspan="2">Top coat (I)</td><td>Non-colored</td><td>Metallic paint</td></tr>
<tr><td>Use a “block” coating method.
For paint/hardener mixture, observe the specifications recommended by the manufacturers.
• Viscosity: 11 — 13 sec./20°C (68°F)
• Coating film thickness: 40 — 50 μ
• Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)</td><td>Use a “block” coating method.
For paint/hardener mixture, observe the specifications recommended by the manufacturers.
• Viscosity: 11 — 13 sec./20°C (68°F)
• Coating film thickness: 20 — 30 μ
• Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)</td></tr>
<tr><td>19</td><td>Leave unattended</td><td>Not required.</td><td>Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry.
Note:
Be careful to keep dust or dirt from coming in contact with the affected area.</td></tr>
<tr><td>20</td><td>Top coat (II)</td><td>Not required.</td><td>Apply a clear coat three times at an interval of 3 to 5 minutes.
For paint/hardener mixture, observe the specifications recommended by the manufacturers.
• Viscosity: 10 — 13 sec./20°C (68°F)
• Coating film thickness: 20 — 30 μ
• Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)</td></tr>
<tr><td>21</td><td>Drying</td><td colspan="2">Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F).
Note:
Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.</td></tr>
<tr><td>22</td><td>Inspection</td><td colspan="2">Carefully check the condition of the repaired area.</td></tr>
<tr><td>23</td><td>Parts installation</td><td colspan="2">Install parts on the bumper in reverse order of removal.</td></tr>

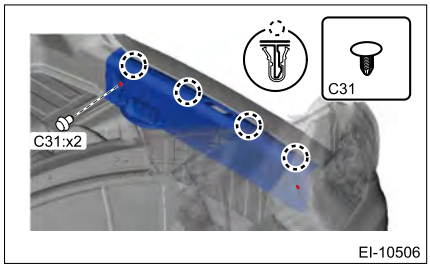
</table>

REMOVAL

1. 4 DOOR MODEL

- **BUMPER FACE**



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trunk room mat.
3. Remove the trim panel - trunk rear.

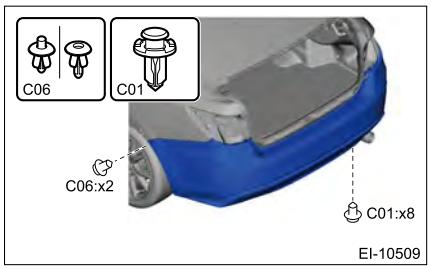
   Caution:

   Pull up the trim panel - trunk rear vertically. If it is pulled up obliquely, the claws may be damaged.

   (1) Remove the clip.

   (2) Release the claws, and remove the trim panel - trunk rear.

4. Remove the clips, and turn over the trim panel - trunk side.



5. Remove the rear combination light assembly. Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly>REMOVAL > 4 DOOR MODEL.
6. Remove the bumper face - rear.

   Caution:

   - **Pulling with excessive force may damage the bracket or bumper face.**
   - **For models with Reverse Automatic Braking, the connector of the cord assembly - sonar is secured on the bumper beam COMPL.**

     Pulling the bumper face with excessive force may break the harness.

   (1) Remove the clips, and remove the bumper face - rear.

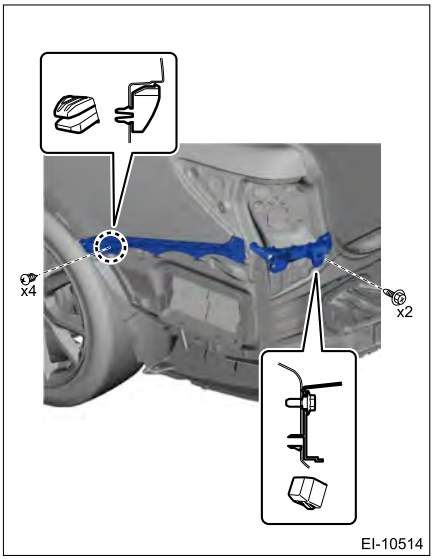
   (2) Detach (b) and (c) while pulling up (a) of the bumper face - rear.

   (3) Detach (e) while pulling up (d) of the bumper face - rear.

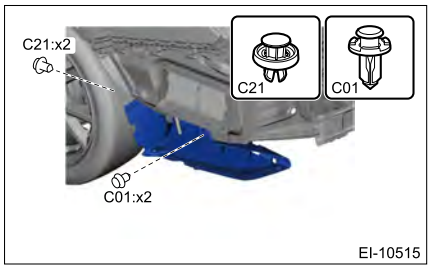
   (4) Perform the same procedures when detaching (f) to (h) on the opposite side.

   (5) While pulling up the center part of the bumper face - rear, carefully pull it toward you to detach (i) to (k) in this order.

   (6) For models with Reverse Automatic Braking, disconnect the connector (gray arrow section) located on the bumper beam COMPL.



- **BUMPER BEAM**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
  2. Remove the bumper face - rear.
  3. Remove the bolts and nuts, and remove the bumper beam COMPL - rear.

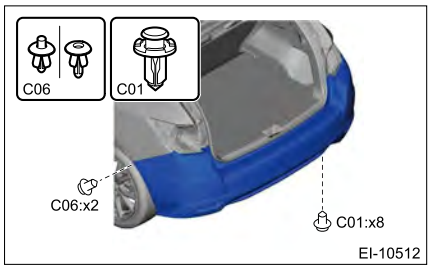


- **BRACKET**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
  2. Remove the bumper face - rear.
  3. Remove bumper brackets.

     (1) Remove the bracket - front bumper corner.
     1. Remove the screws.
     2. Release the claws, and then remove the bracket - front bumper corner.

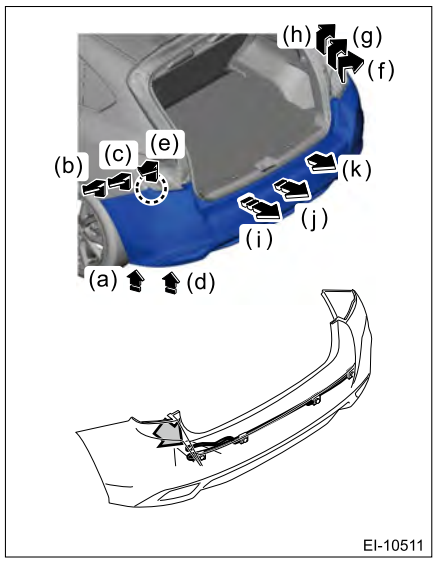
     (2) Remove the bracket - rear bumper side.
     1. Remove the screws.
     2. Turn over the trim panel - trunk side, and remove by detaching the claws from the inside of the trunk.

(3) Remove the clips, and remove the cover - side LWR.



- **SONAR SENSOR & HARNESS**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
  2. Remove the bumper face - rear.
  3. If removing the following parts, refer to "Sensor & Harness" of the "Reverse Automatic Braking" section. Ref. to REVERSE AUTOMATIC BRAKING>Sensor and Harness>REMOVAL.
     - Cord assembly - sonar
     - Sonar - sensor

2. 5 DOOR MODEL



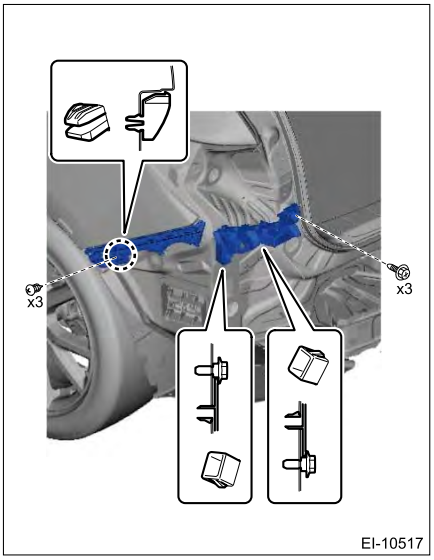
- **BUMPER FACE**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
  2. Remove the rear combination light assembly. Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly>REMOVAL > 5 DOOR MODEL.
  3. Remove the bumper face - rear.

     Caution:
     - **Pulling with excessive force may damage the bracket or bumper face.**
     - **For models with Reverse Automatic Braking, the connector of the cord assembly - sonar is secured on the bumper beam COMPL.**
       Pulling the bumper face with excessive force may break the harness.

     (1) Remove the clips, and remove the bumper face - rear.

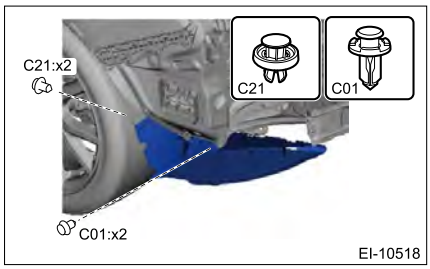
     (2) Detach (b) and (c) while pulling up (a) of the bumper face - rear.
     (3) Detach (e) while pulling up (d) of the bumper face - rear.
     (4) Perform the same procedures when detaching (f) to (h) on the opposite side.
     (5) While pulling up the center part of the bumper face - rear, carefully pull it toward you to detach (i) to (k) in this order.
     (6) For models with Reverse Automatic Braking, disconnect the connector (gray arrow section) located on the bumper beam COMPL.

- **BUMPER BEAM**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
  2. Remove the bumper face - rear.
  3. Remove the bolts and nuts, and remove the bumper beam COMPL - rear.



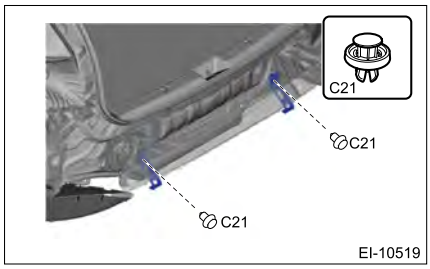
- **BRACKET**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
  2. Remove the bumper face - rear.
  3. Remove bumper brackets.

(1) Remove the bracket - front bumper corner.



1. Remove the screws.
2. Release the claws, and then remove the bracket - front bumper corner.

(2) Remove the bracket - rear bumper side.



1. Remove the trim panel - rear apron. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
2. Remove the screws.
3. Release the claws from the inside of the panel, and remove the bracket - rear bumper side.

(3) Remove the clips, and remove the cover - side LWR.

(4) Remove the clips, and remove the bracket LWR - rear.

- **SONAR SENSOR & HARNESS**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
  2. Remove the bumper face - rear.
  3. If removing the following parts, refer to "Sensor & Harness" of the "Reverse Automatic Braking" section. Ref. to REVERSE AUTOMATIC BRAKING>Sensor and Harness>REMOVAL.
     - Cord assembly - sonar
     - Sonar - sensor

EXTERIOR/INTERIOR TRIM > Rear Bumper

INSTALLATION

1. 4 DOOR MODEL

Caution:

Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1. If installing the following parts, refer to "Sensor & Harness" of the "Reverse Automatic Braking" section. Ref. to REVERSE AUTOMATIC BRAKING>Sensor and Harness>INSTALLATION.
   - Sonar - sensor
   - Cord assembly - sonar
   - Holder - sonar
2. Install each bumper bracket.
3. Install the bumper beam COMPL - rear.
   Tightening torque:
   53 N·m (5.4 kgf-m, 39.1 ft-lb)
4. Install the bumper face - rear.
   Caution:
   For models with Reverse Automatic Braking, securely fasten the connector of the cord assembly - sonar.
   Note:
   If the bumper face - rear comes off too easily, adjust the hook of the center bracket side.
5. Install the light assembly - rear combination.
   Caution:
   Replace the gasket - rear combination with a new part. If a gasket is reused, water leakage may occur.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6. Install the trim panel - trunk rear and trunk room mat.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. 5 DOOR MODEL

Caution:

Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1. If installing the following parts, refer to "Sensor & Harness" of the "Reverse Automatic Braking" section. Ref. to REVERSE AUTOMATIC BRAKING>Sensor and Harness>INSTALLATION.
   - Sonar - sensor
   - Cord assembly - sonar
   - Holder - sonar
2. Install each bumper bracket.
3. Install the trim panel - rear apron.
4. Install the bumper beam COMPL - rear.

Tightening torque:

53 N·m (5.4 kgf-m, 39.1 ft-lb)

5. Install the bumper face - rear.

Caution:

For models with Reverse Automatic Braking, securely fasten the connector of the cord assembly - sonar.

Note:

If the bumper face - rear comes off too easily, adjust the hook of the center bracket side.

6. Install the light assembly - rear combination.

Tightening torque:

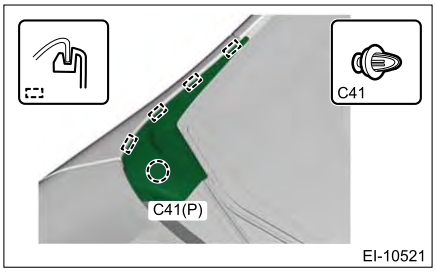
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EXTERIOR/INTERIOR TRIM > Rear Bumper

REPAIR

Refer to the description concerning repair in “Front Bumper” section. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REPAIR.

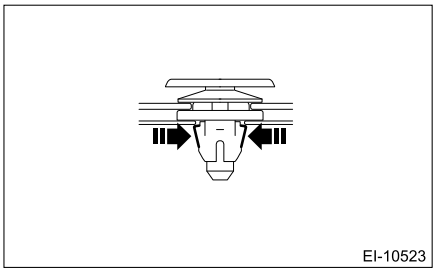


EXTERIOR/INTERIOR TRIM > Cowl Panel

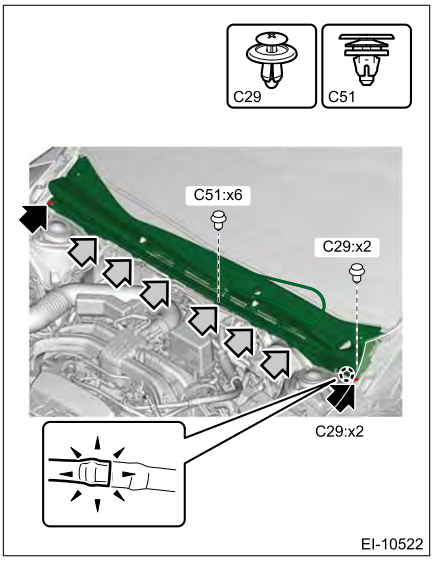
REMOVAL

1. Remove the arm assembly - windshield wiper. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.
2. Release the clips and claws, and then remove the cowl panel - on the left and right sides.

Caution:



Pulling with excessive force may damage the cowl panel - side. If it is difficult to remove, use a plastic remover or equivalent tool.



3. Remove the cowl panel assembly.

Caution:

- **Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.**
- **When removing the clip from the cowl panel center, push the claw of the clip from both sides.**
  - **Be careful not to apply excessive force when pulling the clip, as the clip may become damaged.**
  - **If pushing the claw of the clip is difficult, turning the claw position will facilitate the operation.**

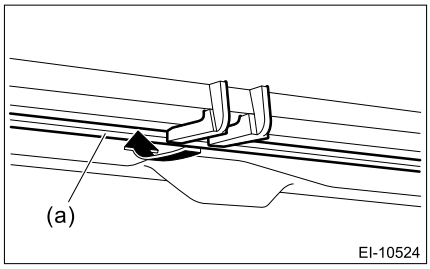
(1) Disconnect the washer hose.
(2) Remove the clip.
(3) Remove the cowl panel assembly by pulling it out towards the front of the vehicle.

(4) Remove the washer nozzle and washer hose as required. Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose>REMOVAL.

EXTERIOR/INTERIOR TRIM > Cowl Panel

INSTALLATION

Caution:



Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

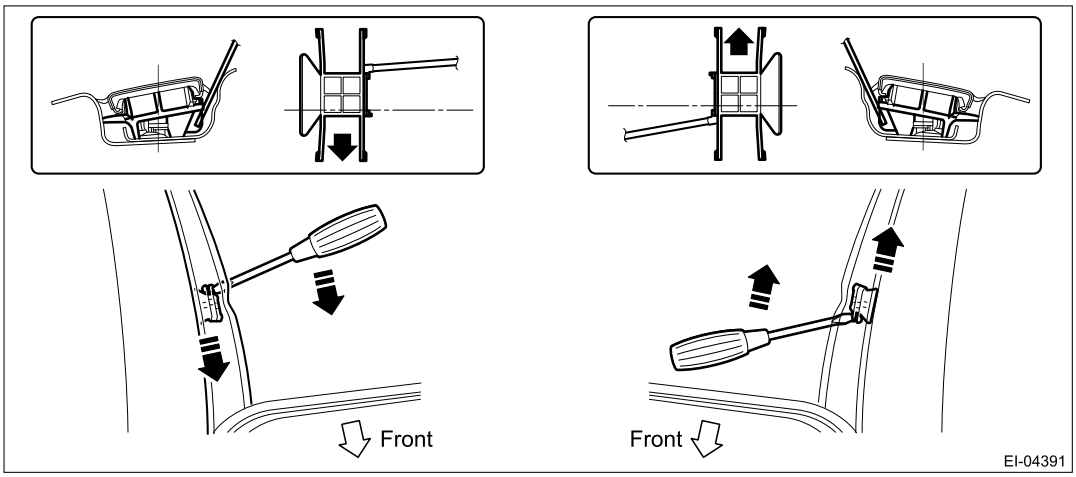
1. Install the cowl panel assembly.

Caution:

If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.

(1) Hook the claw of the cowl panel on the lower end (a) of the windshield glass.

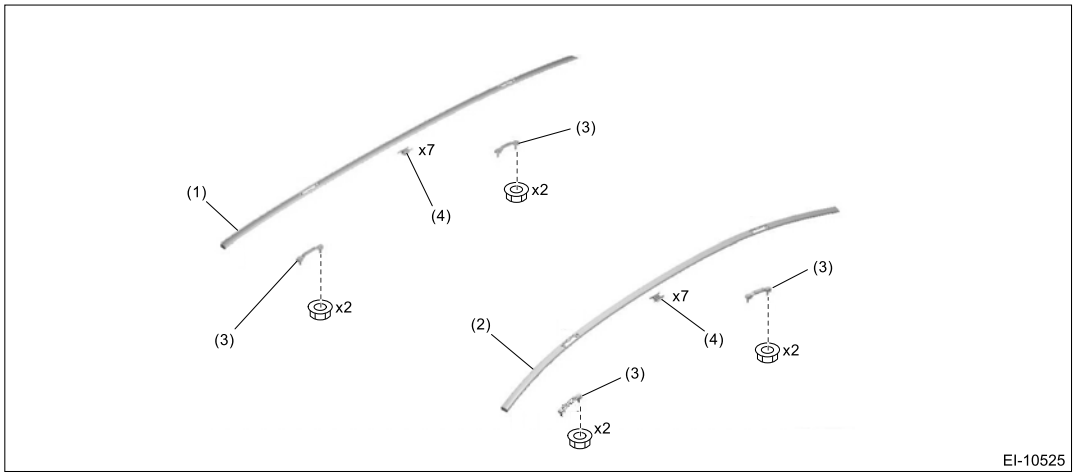
(2) Align the center protrusion of the cowl panel assembly to the cutout portion of the vehicle side, then install the cowl panel assembly.



(3) Attach the clip and connect the washer hose.

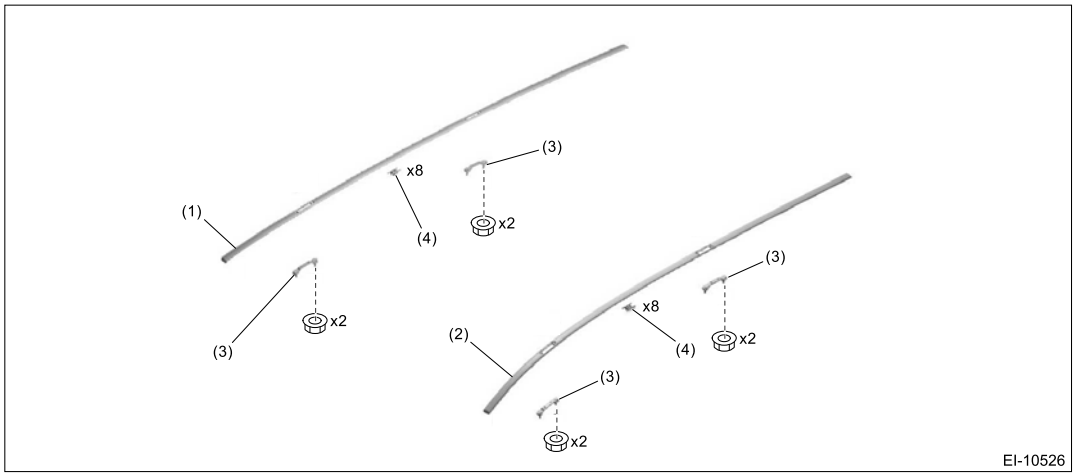
2. Install the cowl panel - side.
3. Install the arm assembly - windshield wiper. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>INSTALLATION.
4. If the washer nozzles have been removed from the cowl panel assembly, adjust the washer spray positions. Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose>ADJUSTMENT.

REMOVAL



Caution:
Be careful not to damage the body.

1. Turn over the front end of the molding - roof.
2. Slide the inner fastener in the direction of the arrow using a thin flat tip screwdriver or a precision screwdriver, then remove the fastener from the stud on the vehicle side.

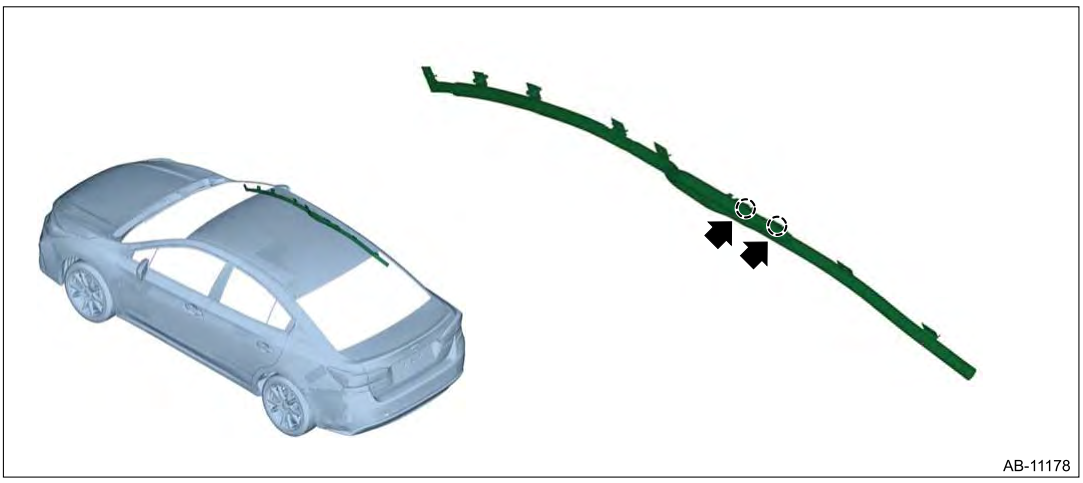


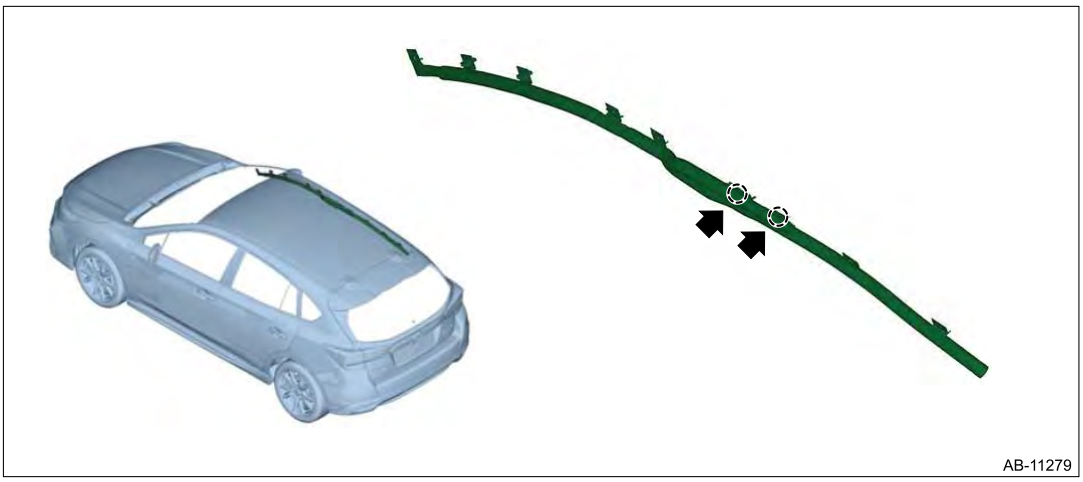
Right side: Slide towards the front of the vehicle.
Left side: Slide towards the rear of the vehicle.

- 4 door model, 7 locations per side

(1) Molding - roof RH
(2) Molding - roof LH
(3) Carrier BRKT
(4) Fastener

- 5 door model, 8 locations per side





(1) Molding - roof RH
(2) Molding - roof LH
(3) Carrier BRKT
(4) Fastener

3. Pull up the molding - roof, and remove from the vehicle.
4. When removing the carrier BRKT, remove the bolts (2 places) that secure the trim panel - roof and the curtain airbag module.
   (1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   (2) Remove the trim panel - roof. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL.
   (3) Remove the bolts (2 places) securing the curtain airbag module.

Caution:

- **Do not remove the clips securing the curtain airbag module. If any of the clips are removed, the curtain airbag module may not deploy properly in collision.**
  If the clip is removed, replace the curtain airbag module assembly.
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Be careful not to damage the curtain airbag module during removal.**

   (4) Remove the nuts, and remove the carrier BRKT.

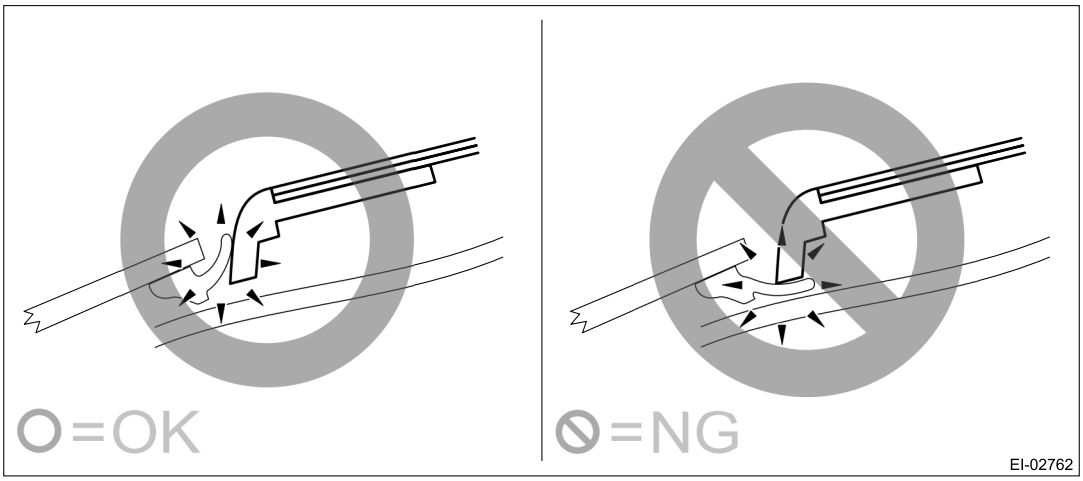
EXTERIOR/INTERIOR TRIM > Roof Molding

INSTALLATION

1. Install the carrier BRKT.

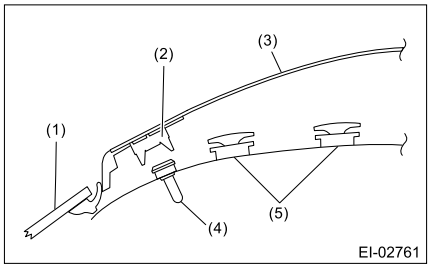
Caution:

Always replace the carrier BRKT and self-locking nut with a new part when the carrier BRKT is removed. If the carrier BRKT and self-locking nut are reused, water leakage may occur.



Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



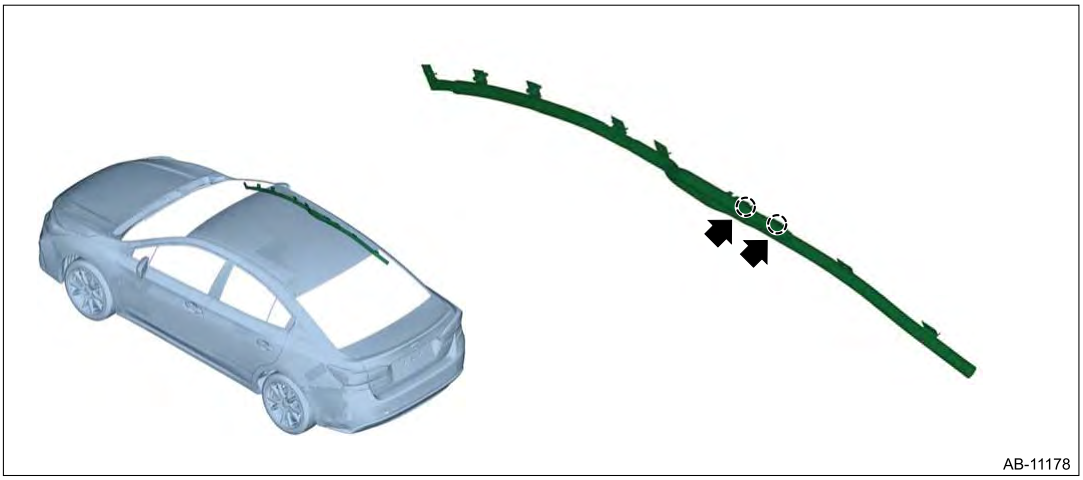
2. Install the curtain airbag module. Ref. to AIRBAG SYSTEM>Curtain Airbag Module>INSTALLATION.
3. Install the trim panel - roof. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>INSTALLATION.
4. Remove the clips from the molding - roof, and attach to the studs on the vehicle.

Caution:

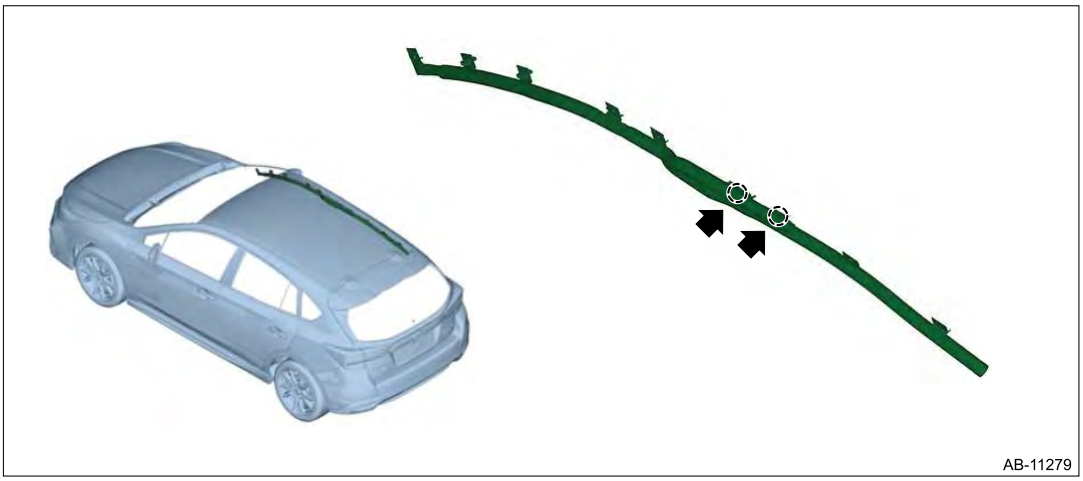
- **Always replace the clips that were damaged during removal of the molding - roof with new parts.**
- **While installing the molding - roof, be careful not to catch the glass molding with the tip of the front side and rear side.**

5. Push the front end of the molding - roof against the front window, and attach the forward positioning clip onto the rivet on the body.

(1) Windshield
(2) Positioning clip
(3) Molding - roof
(4) Rivet
(5) Fastener

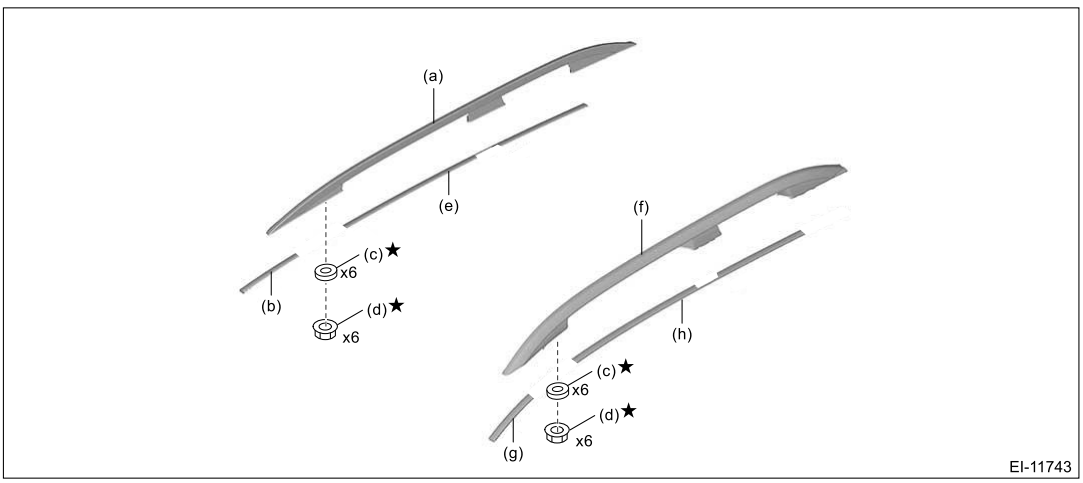


6. While pushing down the molding - roof from above, fit the molding - roof and the fastener.



7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL



1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - roof. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL > 5 DOOR MODEL.
3. Remove the bolts (2 places) securing the curtain airbag module.

   Caution:
   - **Do not remove the clips securing the curtain airbag module. If any of the clips are removed, the curtain airbag module may not deploy properly in collision.**
     If the clip is removed, replace the curtain airbag module assembly.
   - **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
   - **Be careful not to damage the curtain airbag module during removal.**

4. Remove the six attachment nuts and remove the roof rail.

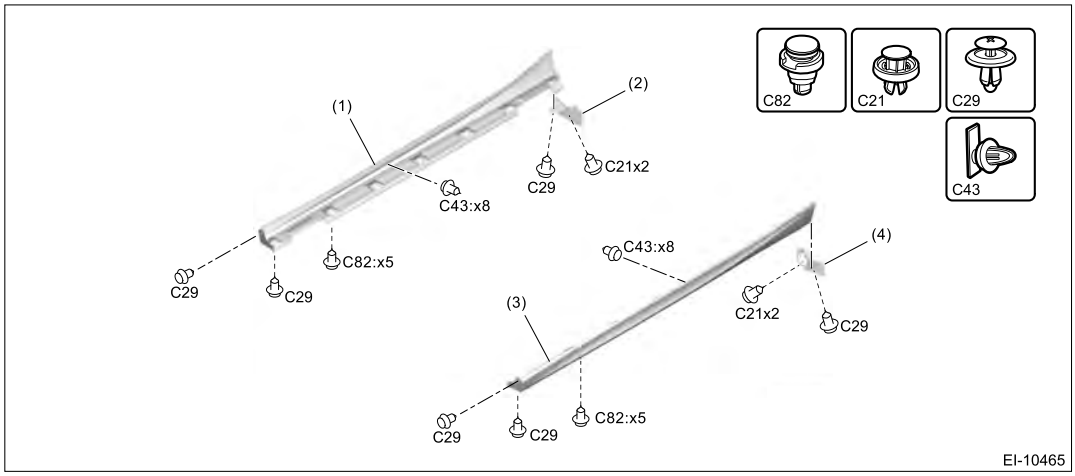
(a) Roof rail ASSY RH
(b) Molding - roof front RH
(c) Gasket
(d) Self-locking nut
(e) Molding - roof rear RH
(f) Roof rail ASSY LH
(g) Molding - roof front LH
(h) Molding - roof rear LH

EXTERIOR/INTERIOR TRIM > Roof Rail

INSTALLATION

Caution:

- **When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.**
- **Be sure to replace the self-locking nut and gasket with new ones. If the self-locking nut and gasket are reused, water leakage may occur.**



Install each part in the reverse order of removal.

1. Install the roof rail.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the curtain airbag module. Ref. to AIRBAG SYSTEM>Curtain Airbag Module>INSTALLATION.
3. Install the trim panel - roof. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EXTERIOR/INTERIOR TRIM > Side Garnish

REMOVAL

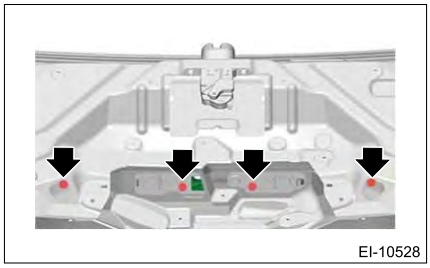
1. Remove the clips and remove the spoiler assembly - side sill.

(1) Spoiler ASSY - side sill RH
(2) Plate air flap - rear RH
(3) Aero flap - rear RH
(4) Plate air flap - rear LH

EXTERIOR/INTERIOR TRIM > Side Garnish

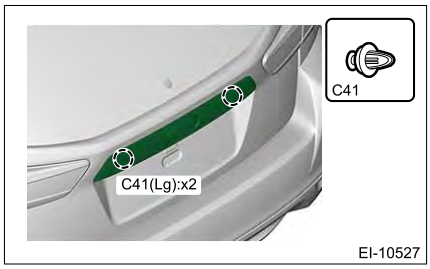
INSTALLATION

Caution:



Make sure that there is a gasket attached on the clip of the spoiler assembly or garnish assembly. If a gasket is not attached, water leakage may occur.

Install the spoiler assembly - side sill.



EXTERIOR/INTERIOR TRIM > Rear Gate Garnish

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear gate trim. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the garnish assembly - rear gate.
   (1) Remove the nuts.

   (2) Remove the clips and remove the garnish assembly - rear gate.

4. As necessary, remove each part from the garnish assembly - rear gate.
   - Switch - opener rear gate: Ref. to SECURITY AND LOCKS>Rear Gate Opener Button>REMOVAL.

EXTERIOR/INTERIOR TRIM > Rear Gate Garnish

INSTALLATION

Caution:
- **Make sure that there is a gasket attached on the clip of the spoiler assembly or garnish assembly and bolt. If a gasket is not attached, water leakage may occur.**
- **Make sure that the harness grommet is securely installed. If not properly installed, this may cause leaks or noises.**

1. Install each part.
   - Switch - opener rear gate: Ref. to SECURITY AND LOCKS>Rear Gate Opener Button>INSTALLATION.
2. Install the garnish assembly - rear gate.
   Tightening torque:
   Garnish assembly - rear gate: 4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
3. Install the rear gate trim.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

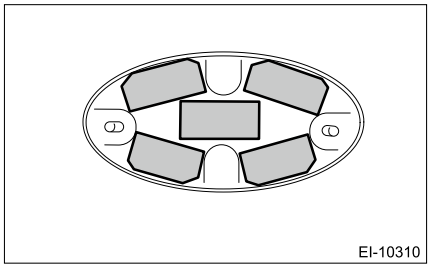
EXTERIOR/INTERIOR TRIM > Rear Gate Garnish

REPLACEMENT

1. ORNAMENT

1. Press the ornament from the back of garnish, and remove the ornament.
   Caution:
   - **Be careful not to damage the surface of garnish assembly during operation.**
   - **Do not reuse the ornament.**
2. Remove the double-sided tape remaining on the garnish side, then clean the adhesive surface.
   Caution:
   - **If even a slight amount of double-sided tape remains on the adhesive surface, it may lead to improper adhesion.**
   - **Do not use any solvents that may damage the garnish coating.**
3. Degrease the mounting surface of ornament with appropriate cleaning solvent or alcohol.
4. Apply primer to the ornament mounting surfaces of garnish.
   Preparation items:

Primer: 3M K-520, K-500 or equivalent



5. Install the ornament.

Caution:

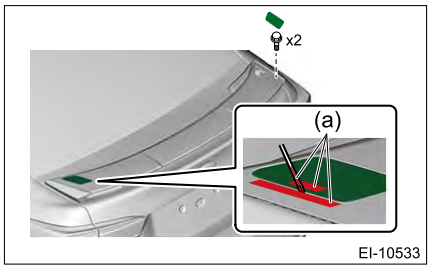
Affix so that there should be no gap between garnish assembly and ornament.

Preparation items:

Double-sided tape: 3M GT7112 (t1.2) or equivalent

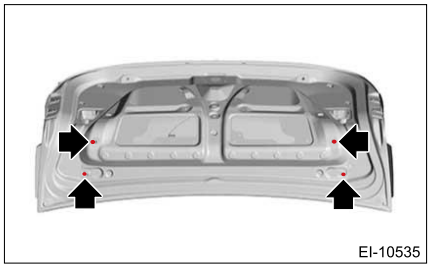
EXTERIOR/INTERIOR TRIM > Rear Spoiler

REMOVAL



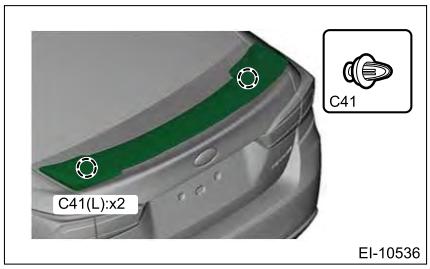
1. Remove the trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
2. Detach the rear spoiler assembly.

Caution:



- **Be careful not to damage the vehicle body during removal and installation.**
- **When removing the nut, be careful not to drop the nut inside the trunk lid panel.**
- **The reactive force of trunk lid increases when the rear spoiler is removed.**

(1) Attach protective tape (a) to the rear spoiler assembly, the cap - rear spoiler, and a screwdriver.



(2) Remove the cap - rear spoiler, and remove the bolts.

(3) Remove the nut from the inside of the trunk lid.

(4) Disengage the clips and remove the rear spoiler assembly.

EXTERIOR/INTERIOR TRIM > Rear Spoiler

INSTALLATION

1. Clean the trunk lid and spoiler attachment surface before installation.

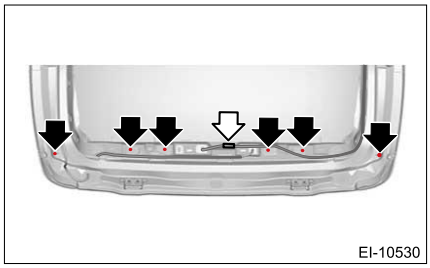
Caution:

Make sure that there is a gasket attached on the clip and bolt of the spoiler assembly or garnish assembly. If a gasket is not attached, water leakage may occur.

2. Install the rear spoiler assembly.

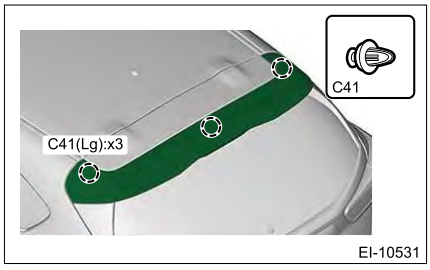
Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

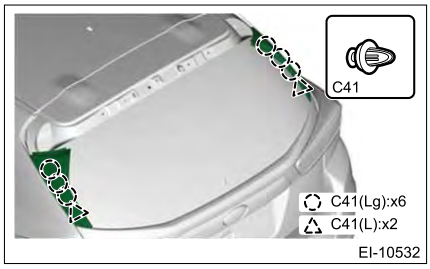


EXTERIOR/INTERIOR TRIM > Roof Spoiler

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate UPR. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the clips, and remove the drip - rear gate.



4. Remove the roof spoiler assembly.
   (1) Disconnect the connector of high-mounted stop light.
   (2) Remove the bolt.

   (3) Remove the clips and remove the spoiler assembly - roof CTR.

   (4) Remove the clips and remove the spoiler assembly - roof LH/RH.

EXTERIOR/INTERIOR TRIM > Roof Spoiler

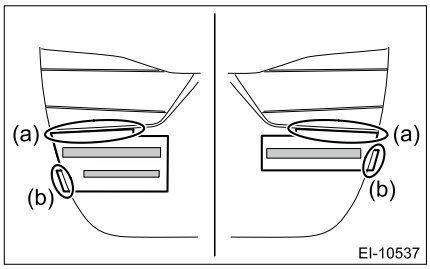
INSTALLATION

Caution:

- **Make sure that there is a gasket attached on the clip and bolt of the spoiler assembly or garnish assembly. If a gasket is not attached, water leakage may occur.**
- **Make sure the bolt is tightened securely because improper installation may cause the water leakage.**

1. Install the roof spoiler.
   Tightening torque:
   4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2. Install the drip - rear gate.
3. Install the trim panel - rear gate UPR and the trim panel - rear gate pillar side. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>INSTALLATION.

4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

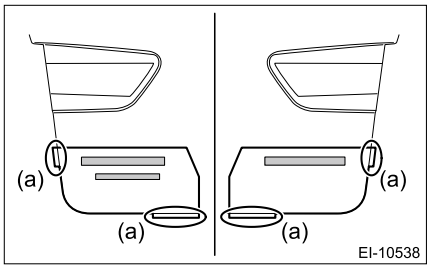


NOTE

Refer to “EXHAUST” section for removal and installation procedure of the heat shield cover.

INSTALLATION

1. LETTER MARK

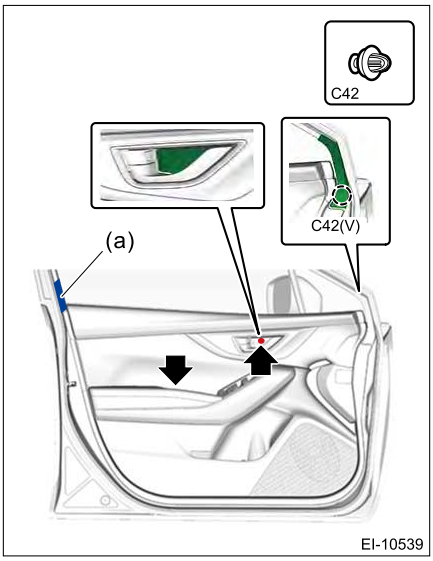


- 4 door model
  Align the end of application tape with the end of panel, then adhere the letter mark.

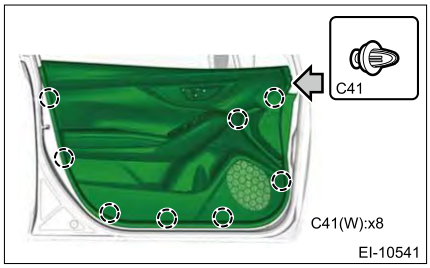
(a) Fit along the R terminal of the finisher light.

(b) Bend the application board, and fit along the end of the trunk panel.

- 5 door model
  Align the end of application tape with the end of panel and the rounded end, then adhere the letter mark.



(a) Bend the application board, and fit along the end of the rear gate panel.



REMOVAL

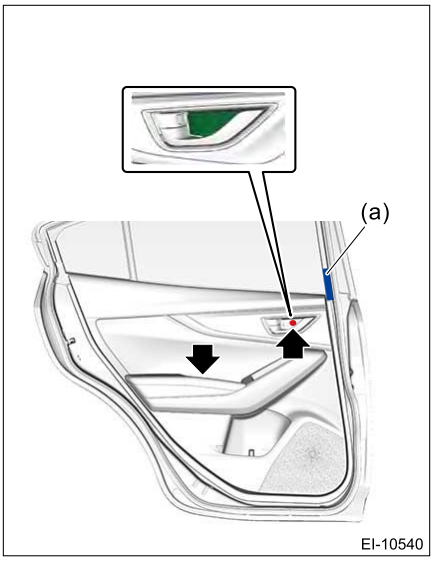
1. FRONT DOOR

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - front door.
   (1) Attach the protective tape (a).
   (2) Remove the cover of the inner handle, and remove the screw.
   (3) Open the hand cup cover and remove the screw.
   (4) Remove the clips, and remove the cover sash - front.

   (5) Remove the clips, and remove the trim panel - front door from the panel assembly - front door.

Note:
It is easier to remove the door trim if the removal is performed from the gray arrow section.

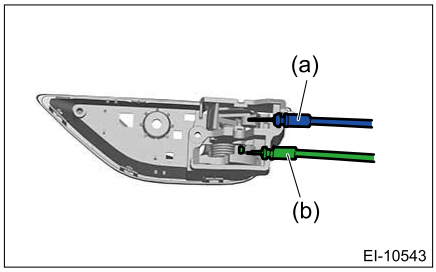
   (6) Remove the cable from the remote assembly - door.



(a) Door lock cable
(b) Door open cable

   (7) Disconnect the harness connector and remove the trim panel - front door.
3. Remove each part as required.
   - Remote assembly - door:
   - Switch - power window main: Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch>REMOVAL > MAIN SWITCH.
   - Weather strip - door INN: Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>DISASSEMBLY.

2. REAR DOOR



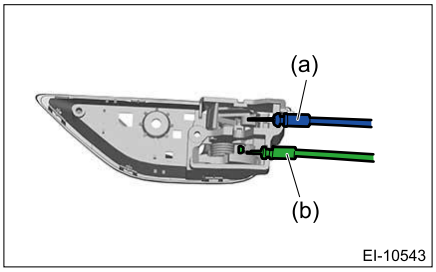
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - front door.
   (1) Attach the protective tape (a).
   (2) Remove the cover of the inner handle, and remove the screw.
   (3) Open the hand cup cover and remove the screw.

(4) Remove the clips, and remove the trim panel - rear door from the panel assembly - rear door.

(5) Remove the cable from the remote assembly - door.

(a) Door lock cable
(b) Door open cable

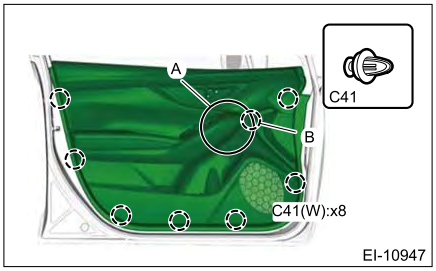
(6) Disconnect the harness connector and remove the trim panel - rear door.



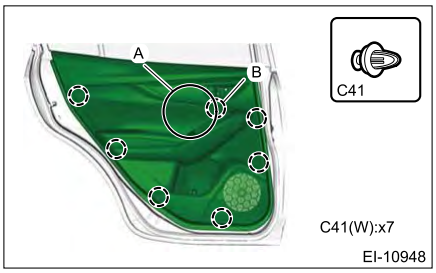
3. Remove each part as required.
   - Remote assembly - door:
   - Switch - power window sub: Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch>REMOVAL > SUB-SWITCH.
   - Weather strip - door INN: Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>DISASSEMBLY.

EXTERIOR/INTERIOR TRIM > Door Trim

INSTALLATION



1. Before installation, check the following items.
   - Cable is free from deformation such as fray.
   - Grease is applied sufficiently to cable joints.
     If grease is insufficient, add it as necessary before assembling the cable.
   - Make sure that the sealing cover is securely installed. Ref. to EXTERIOR BODY PANELS>Sealing Cover>INSTALLATION.



2. Install the removed parts to the trim panel - door.
3. Install the trim panel - door.
   (1) Attach the harness connector.
   (2) Install the cable to the remote assembly - door.
   Note:
   Attach the door lock cable (a) to the upper side, and attach the door open cable (b) to the lower side.

(a) Door lock cable
(b) Door open cable

   (3) Insert the upper portion of the trim panel - door into the window shoulder portion of the panel assembly - door.
   Note:
   For an easier procedure, attach the front side first.
   (4) Check if the screw position is correct, and slowly push in the trim (A) portion in order to securely install the clip (B) to the panel.
   Note:
   When insertion of the clip is not possible, check the installation status of the clip and clip hole of the trim panel - door.

   (5) Attach the remaining clips and tighten the screws.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EXTERIOR/INTERIOR TRIM > Door Trim

DISASSEMBLY

1. Remove the trim panel - door.
2. Disengage the rivets and claws, and remove the weather strip - door INN from the trim panel - door.

(a) Rivet (b) Claw

Note:

Remove the rivets with a rivet cutter or nipper, etc.

EXTERIOR/INTERIOR TRIM > Door Trim

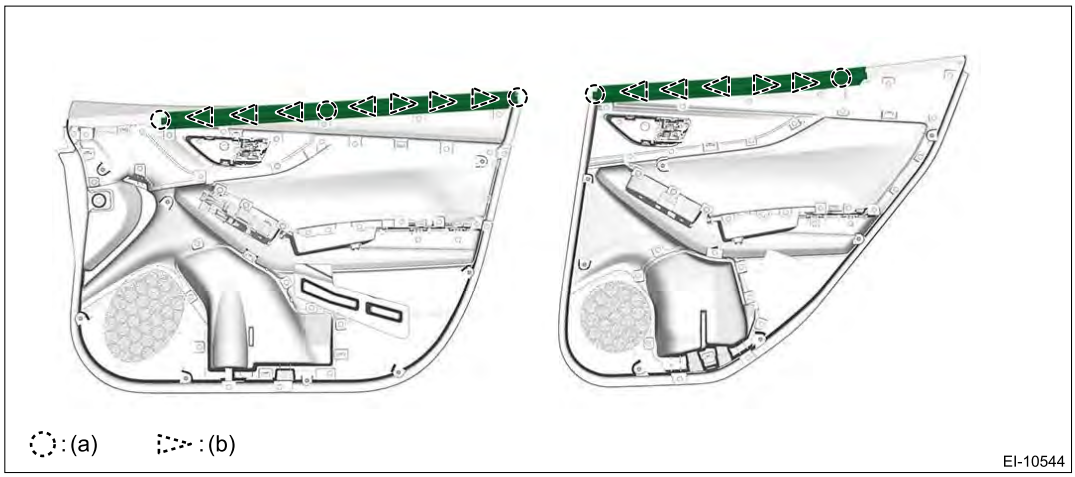
ASSEMBLY

1. Bend the claws while pushing the weather strip - door INN against the trim panel - door.

Caution:

Beware of the direction of folding the claws.

2. Install the rivet.



Caution:

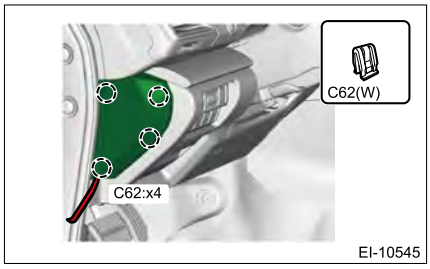
Set the height of rivet crimped section as 3 mm (0.12 in). If the crimp is not sufficient, press it with pliers, etc. in order not to interfere the trim panel - door.

Preparation tool and item:

Hand riveter (corresponding to ⌀3.2 mm (0.13 in))

Rivet

(a) Rivet (b) Direction of folding claws

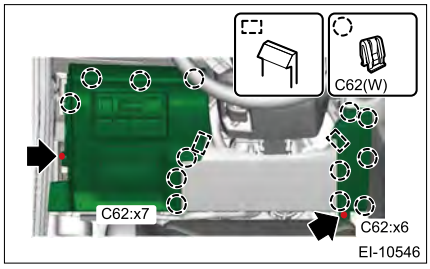


3. After installing the weather strip - door INN, perform the following checks.

- Make sure there are no gaps between the weather strip - door INN and the trim panel - door.
- Make sure there are no looseness when pulling the weather strip - door INN lightly.

EXTERIOR/INTERIOR TRIM > Instrument Panel Lower Cover

REMOVAL



1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the clips, and remove the cover - instrument panel side LH.

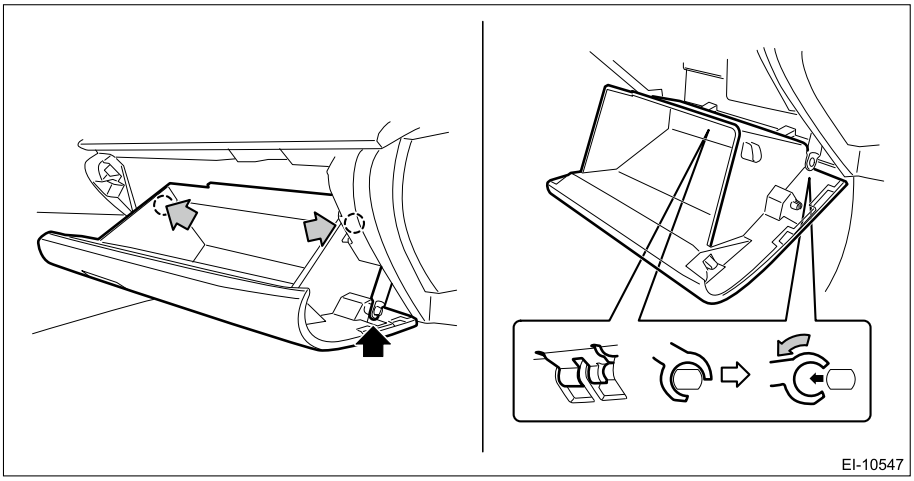
Note:

- **Use a plastic remover.**
- **If removing is difficult, remove the weather strip, then remove the part from the gap using a plastic remover.**

3. Remove the cover assembly - instrument panel LWR driver INN and OUT.
   (1) Remove the screws and release the clips and claws.
   (2) Disconnect each connector, and remove the cover assembly - instrument panel LWR driver INN and OUT.

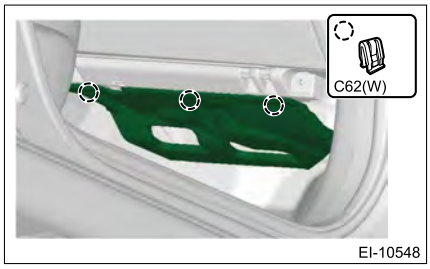
EXTERIOR/INTERIOR TRIM > Instrument Panel Lower Cover

INSTALLATION



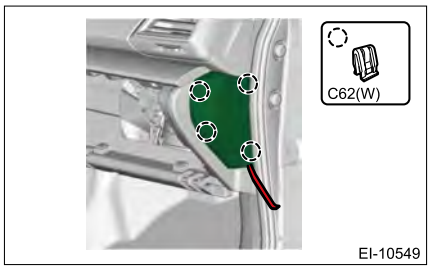
1. Install the cover assembly - instrument panel LWR driver INN and OUT.
2. Install the cover - instrument panel side LH.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL



Note:

Refer to "Security and Locks" section for key cylinder replacement. Ref. to SECURITY AND LOCKS>Key Lock Cylinders>REPLACEMENT > GLOVE BOX LID.

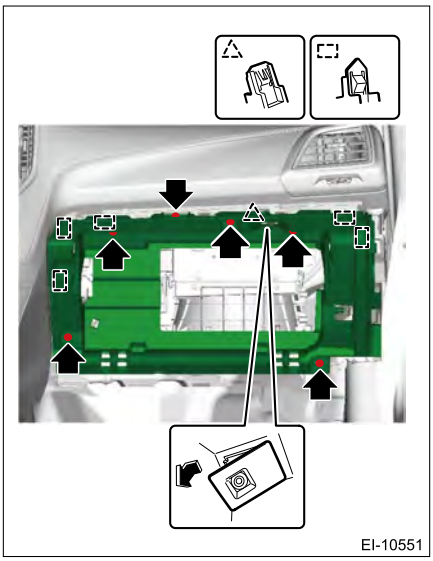


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly.
   (1) Remove the damper COMPL - pocket.
   (2) Release the stoppers and remove the pocket assembly by pulling it toward you.

3. Remove the back panel - pocket.
   (1) Release the clips, and remove the under cover assembly - passenger.

   (2) Remove the clips, and remove the cover - instrument panel side RH.

Note:



- **Use a plastic remover.**
- **If removing is difficult, remove the weather strip, then remove the part from the gap using a plastic remover.**

   (3) Release the clips, and remove the ornament - panel assembly passenger.

   (4) Remove the glove box light LED, and disconnect the connector.

(5) Release the claws and remove the screws, then remove the back panel - pocket.

EXTERIOR/INTERIOR TRIM > Glove Box

INSTALLATION

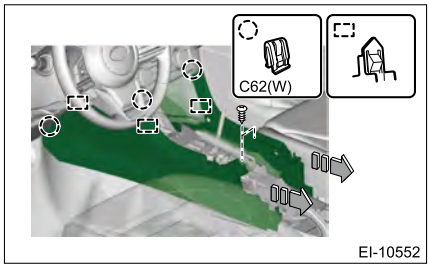
1. Install the back panel - pocket.
2. Connect the connector, and install the glove box light LED.
3. Install the ornament - panel assembly passenger.
   Caution:
   Make sure that the directions of the clip and claw, and insert until a clicking sound is heard.
4. Install the under cover assembly - passenger.
5. Install the pocket assembly.
6. Install the cover - instrument panel side RH.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EXTERIOR/INTERIOR TRIM > Centor Cluster

REMOVAL

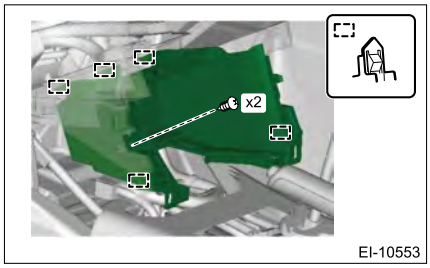
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the center grille assembly. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the panel - center UPR, and remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.

EXTERIOR/INTERIOR TRIM > Centor Cluster



INSTALLATION

1. Install the audio assembly or navigation assembly.
2. Install the panel - center UPR.
3. Install the center grille assembly.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



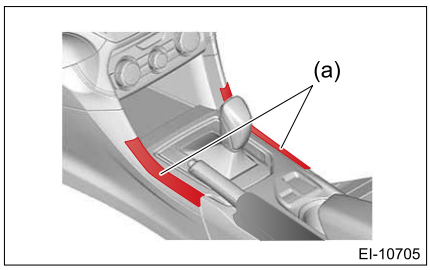
EXTERIOR/INTERIOR TRIM > Center Console

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   - **On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.**
   - **On power seat models, move the front seat all the way forward before disconnecting the battery ground cable.**
2. Remove the center grille assembly. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the panel - center UPR, and remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>REMOVAL.
5. Remove the boot - hand brake, the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
6. Remove the left and right panel center LWR.
   (1) Remove the screws.
   (2) Release the claws and clips, and then pull the panel center LWR to remove.

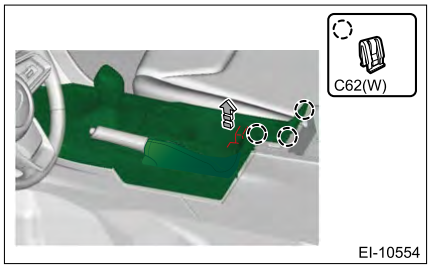
7. Remove the tray - center UPR.
   (1) Disconnect the connector and remove the screw.
   (2) Release the claws, and then remove the tray - center UPR.

EXTERIOR/INTERIOR TRIM > Center Console



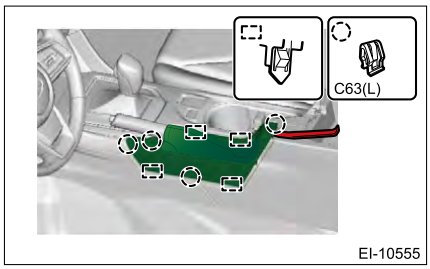
INSTALLATION

1. Install the tray - center UPR.
2. Install the panel center LWR.
3. Install the console box assembly, the cover assembly - front and the boot - hand brake.
   Tightening torque:
   Console box: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
4. Install the heater control assembly.
5. Install the audio assembly or navigation assembly.
6. Install the panel - center UPR.
7. Install the center grille assembly.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

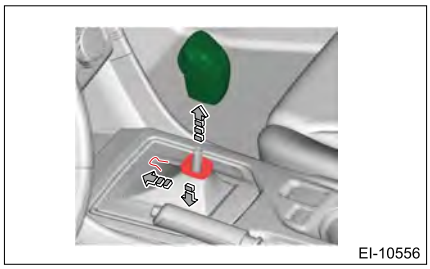


Note:
After connecting the battery ground terminal, place the select lever in the "P" position.

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   - **On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.**
   - **On power seat models, move the front seat all the way forward before disconnecting the battery ground cable.**
2. Affix protective tape (a) to the ornament panel - console.



3. Remove the boot - hand brake.
   (1) Pull up the cup holder, and release the engagement of the clip at the end of the cover assembly - front.

   (2) Release the engagement of claws and clips, and then remove the boot - hand brake.

4. Remove the cover assembly - front.
   Caution:
   - **Remove the mat - center tray and the tray - center LWR together with the cover assembly - front. Removing the mat - center tray first may damage the parts.**
   - **For models with smart keyless access with push button start, the interior antenna is installed behind the tray - center LWR. Be careful not to damage the harness when removing the cover assembly - front.**
   (1) Remove the shift knob. (MT model)
   (2) Remove the select lever knob. (CVT model) Ref. to CONTROL SYSTEMS>Select Lever>REMOVAL.

   (3) Remove the screws and release the clips, then detach the cover assembly - front.

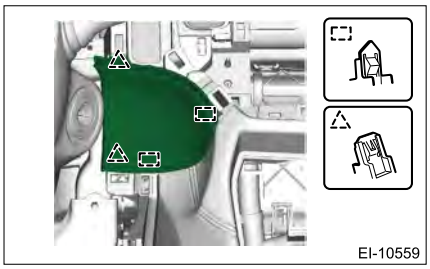
(4) Disconnect the harness connector.
(5) Remove the mat - center tray and the tray - center LWR.

5. Remove the console box assembly.
(1) Remove the caps and remove the bolts.
(2) Remove the screws and release the clip.
(3) Disconnect the harness connector, and remove the console box assembly.

6. Disassemble the cover assembly - front and the console box assembly as required.

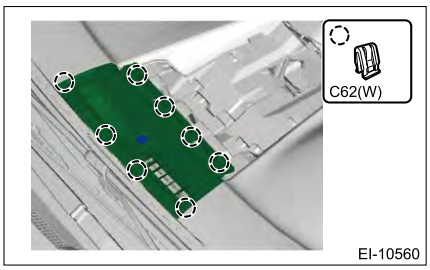
EXTERIOR/INTERIOR TRIM > Console Box

INSTALLATION



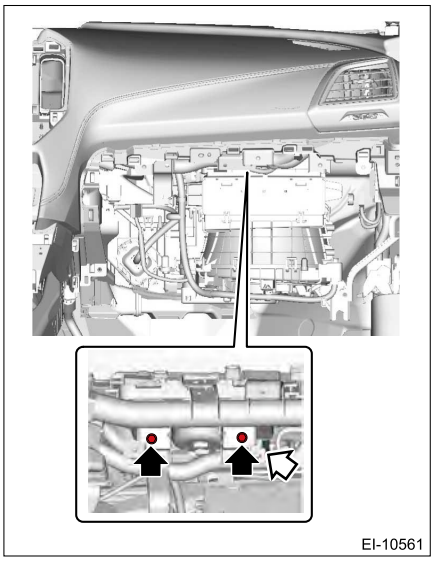
1. Assemble the cover assembly - front and the console box assembly.
2. Install the console box assembly.
Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
3. Install the cover assembly - front.
4. Install the mat - center tray and the tray - center LWR.
5. Install the shift knob or selector knob.
6. Install the boot - hand brake.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
Note:
After connecting the battery ground terminal, place the select lever in the "P" position.

REMOVAL

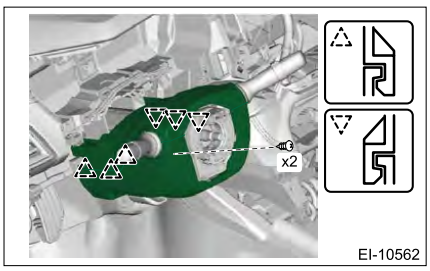


Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.**

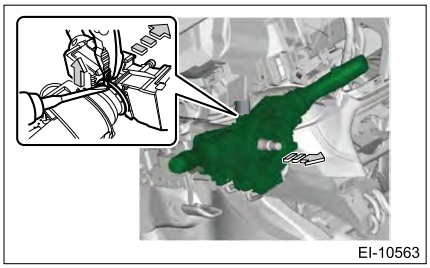


1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   - **On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.**
   - **For the power seat model, remove the console box before removing the battery ground terminal.**
2. Remove the boot - hand brake, the cover assembly - front and the console box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
3. Remove the center grille assembly. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
4. Remove the panel - center UPR, and remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
5. Remove the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>REMOVAL.
6. Remove the panel center LWR, and remove the tray - center UPR. Ref. to EXTERIOR/INTERIOR TRIM>Center Console>REMOVAL.
7. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Assembly>REMOVAL.
8. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
9. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
10. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
11. Remove the visor assembly - combination meter, the cover assembly - visor LWR, and the combination meter assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.
12. Release the claws and clips, and remove the cover - starter SW. (Models without the keyless access with push button start)



13. Remove the panel - starter SW and the push button ignition switch. (Model with keyless access with push button start) Ref. to SECURITY AND LOCKS>Push Button Ignition Switch>REMOVAL.
14. Remove the trim panel - front pillar UPR on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.
15. Remove the grille speaker side and the speaker assembly - tweeter on the left and right sides. Ref. to ENTERTAINMENT & MONITORING>Front Speaker>REMOVAL > TWEETER.
16. Remove the glove box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
17. Remove the multi-function display assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD)>REMOVAL.
18. Remove the grille - front defroster.
    (1) Release the clips, and then raise the grille - front defroster.
    (2) Disconnect the sunload sensor connector, and remove the grille - front defroster.

19. Remove the bolts of the passenger's airbag module, and disconnect the connector. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > PASSENGER'S AIRBAG MODULE AND PRETENSIONER.



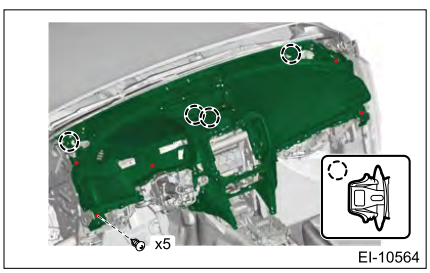
20. Remove the screws and release the claws, then detach the cover assembly - column.

21. Remove the switch assembly - combination.

(1) Disconnect each connector, and loosen the clamp to release the claws.

(2) Pull out the switch assembly - combination from the column assembly - steering.

22. Remove the panel COMPL - instrument.



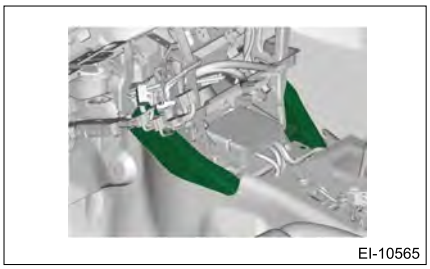
(1) Remove the harness clamp of the speaker assembly - tweeter.

(2) Release the clamps of the sunload sensor and multi-function display harnesses, and pull them out toward yourself.

Note:

Confirm the harness routing of the sunload sensor and multi-function display harnesses.

(3) Remove the screws, and remove the panel COMPL - instrument.



23. Remove the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>REMOVAL.

24. Remove the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.

25. Remove the cover side sill - front INN and cover side sill - front on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.

26. Remove the body side weather strip - flange front.

27. Remove the duct assembly - rear floor.

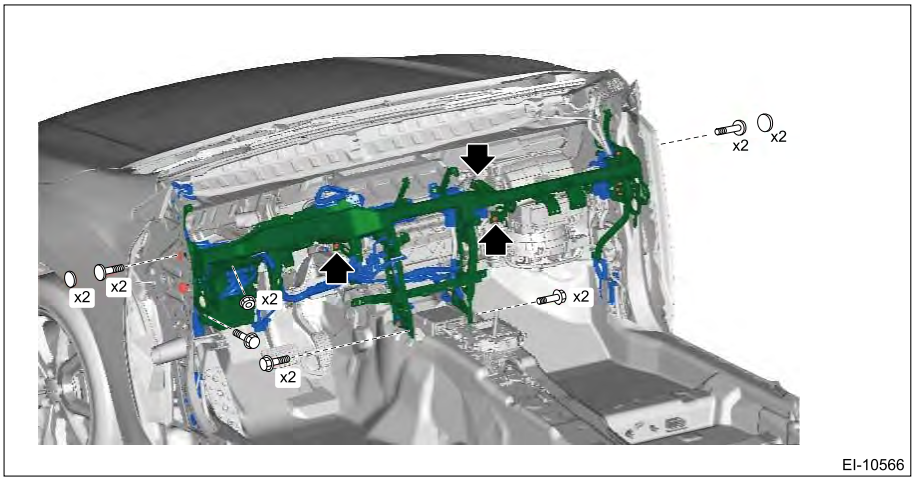
28. Remove the beam COMPL - steering.

Caution:

The beam COMPL - steering is heavy. Always work in a team of two persons when removing them from the vehicle, so as not to damage the vehicle interior.

(1) Remove the fuse box.

(2) Disconnect all harness clamps and connectors of the instrument panel harness.

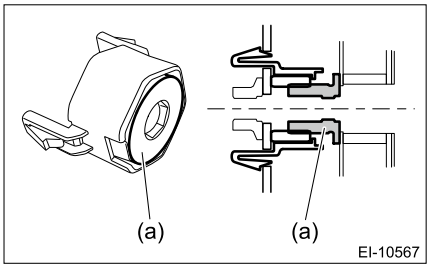


(3) Release all lock points for the ground bolt, heater & cooling unit assembly and the beam COMPL - steering.

(4) Remove the cap - bolt, and remove the TORX® bolt.

PREPARATION TOOL

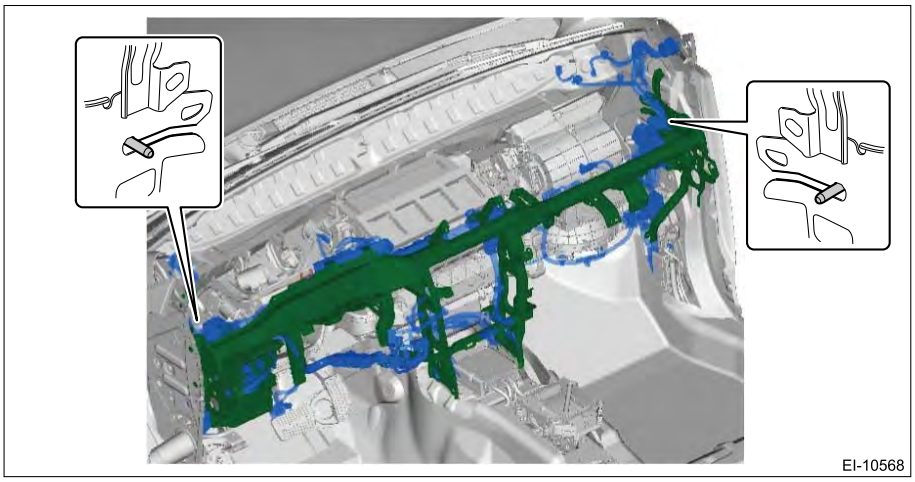
TORX® T40



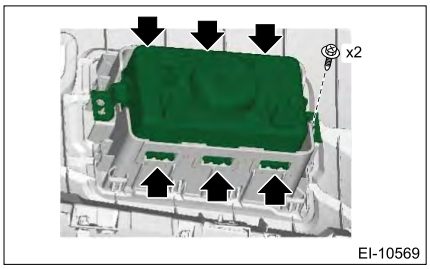
(5) Remove the bolts at the floor center.

(6) Loosen the adjuster portion (a) of the adjuster - clip space. (only passenger's side of beam COMPL - steering)

PREPARATION TOOL



Hexagon wrench: 8 mm (0.31 in)

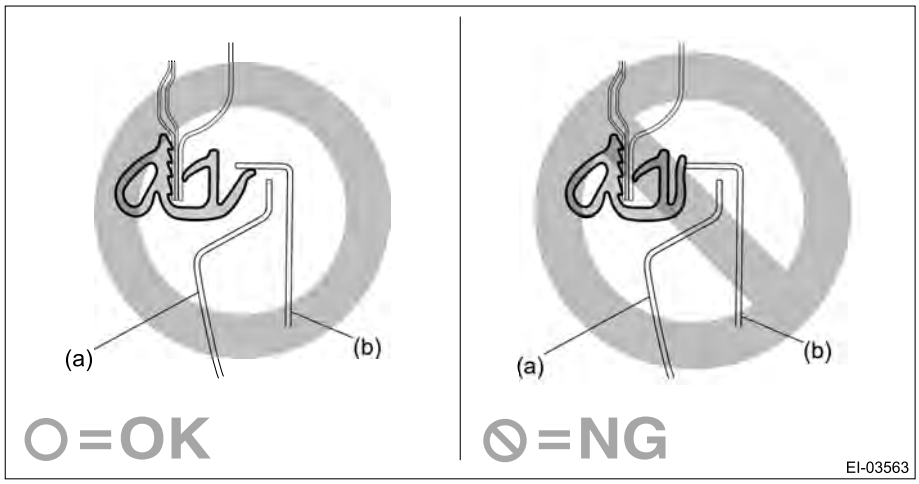


(7) Slightly lift it up to detach the left and right pins, and then pull it toward you to remove together with the beam COMPL - steering.

Caution:

- **Check that all lock points for the harness clamps, harness connectors and the beam COMPL - steering have been released completely.**
- **The instrument panel assembly and the beam COMPL - steering are heavy. Always work in a team of two persons when removing them from the vehicle, so as not to damage the vehicle interior.**

29. Remove the tapping screws and release the claws, and remove the passenger's airbag module.



30. Remove the ventilation duct as required.

EXTERIOR/INTERIOR TRIM > Instrument Panel Assembly

INSTALLATION

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **When installing the cover - instrument panel side (a), make sure that the body side weather strip - flange front does not come inside the panel COMPL - instrument (b).**

- **When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.**
- **Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.**
- **Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.**

1. Attach each part until the panel COMPL - instrument is assembled.

Note:

Method of installing insulator

- **Adhesive**

  Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.
- **Double-sided tape**

  Use commercial double-sided tape. (Use strong double-sided adhesive tape.)

2. Install the beam COMPL - steering.

(1) Place the beam COMPL - steering on the vehicle, and check that the pins on both sides are inserted securely and the harness is routed properly. Connect each connector.

(2) Secure the beam COMPL - steering to the heater and cooling unit assembly.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

(3) Install the ground bolt and fuse box.

Tightening torque:

Ground bolt: 13 N·m (1.3 kgf-m, 9.6 ft-lb)

Fuse box, relay box: 7.5N·m (0.8 kgf-m, 5.5 ft-lb)

(4) Temporarily tighten the bolts of the beam COMPL - steering.

(5) Tighten the adjuster portion (a) of the adjuster - clip space. (Only RH side of the beam COMPL - steering)

Preparation tool:

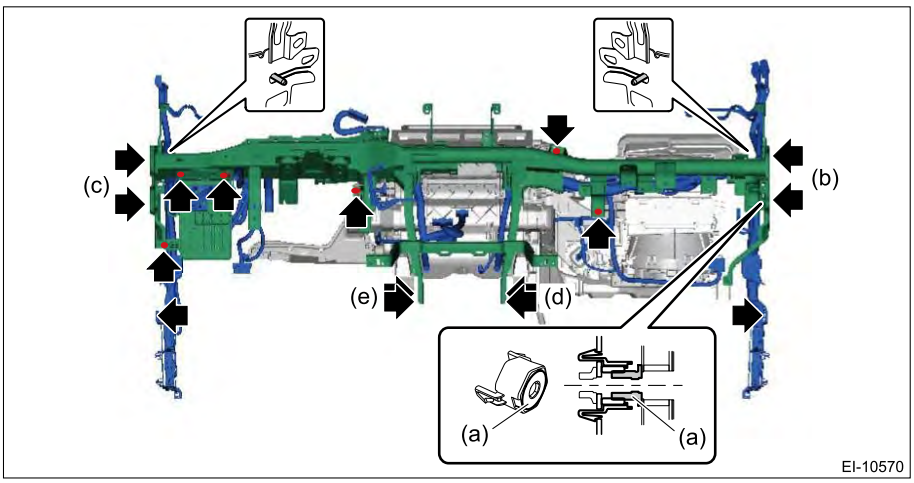
Hexagon wrench: 8 mm (0.31 in)

Note:

When the TORX® bolt is tightened after setting the adjuster portion (a) of the adjuster - clip space to the free position, the adjuster is secured at the position where there is no gap to the body, and then the TORX® bolt is tightened.

Tightening torque:

Adjuster - clip space: 0.8 — 4 N·m (0.08 — 0.4 kgf-m, 0.6 — 3 ft-lb)



(6) Tighten the beam COMPL - steering in the order from (b) to (e) to the specified torque.

Preparation tool:

TORX® T40

Tightening torque:

Refer to "COMPONENT" of "General Description". Ref. to EXTERIOR/INTERIOR TRIM>General Description>COMPONENT > INSTRUMENT PANEL.

3. Install the duct - rear floor.
4. Install the column assembly - steering.

Tightening torque:

Column assembly - steering: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>General Description>COMPONENT > STEERING WHEEL AND COLUMN.

5. Install the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSTALLATION.
6. Install the panel COMPL - instrument.

Caution:

Be careful not to allow the harness to be caught.

(1) Align the matching pins on the body side (three locations - one in the center and the remaining two on both sides) with the panel COMPL - instrument.

(2) Route each connector of the sunload sensor and multi-function display harnesses in the specified position.

(3) Secure the clamps of the speaker assembly - tweeter, sunload sensor and multi-function display harnesses.

7. Install the sunload sensor and the grille - front defroster.
8. Install the passenger's airbag module, and connect the connector.

Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

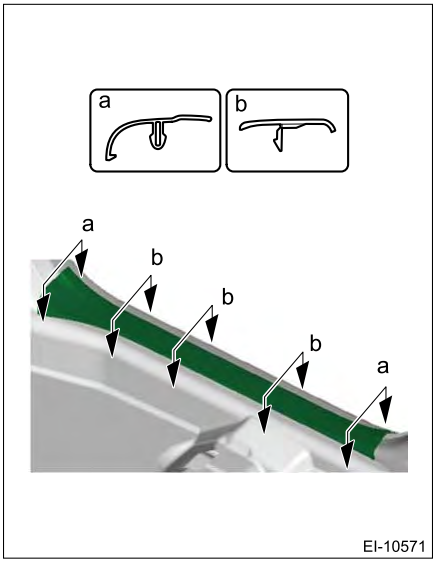
9. Install the switch assembly - combination and the cover assembly - column.
10. Install the panel - starter SW and the push button ignition switch. (Model with keyless access with push button start)
11. Install the cover - starter SW. (Models without the keyless access with push button start)
12. Install the combination meter assembly, the cover assembly - visor LWR, and the visor assembly - combination meter.
13. Install the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>INSTALLATION.
14. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
15. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
16. Install the cover assembly - instrument panel LWR driver.
17. Install the glove box assembly.
18. Install the trim panel - front pillar UPR on the left and right sides.
19. Install the grille speaker side on the left and right sides.
20. Install the tray - center UPR and the panel center LWR.
21. Install the heater control assembly.
22. Install the panel center LWR on the left and right sides.
23. Install the console box assembly.

Tightening torque:

6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

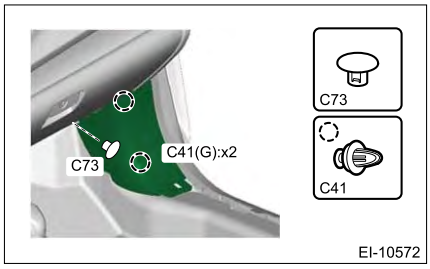
24. Install the cover assembly - front.
25. Install the mat - center tray, the tray - center LWR, and the boot - hand brake.
26. Install the multi-function display assembly.
27. Install the audio assembly or navigation assembly.
28. Install the panel - center UPR.
29. Install the center grille assembly.
30. Install the body side weather strip - flange front.
31. Install the cover side sill - front on the left and right sides.
32. Install the cover side sill - front INN on the left and right sides.
33. Install the cover - instrument panel side on the left and right sides.
34. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

Note:



After connecting the battery ground terminal, place the select lever in the "P" position.

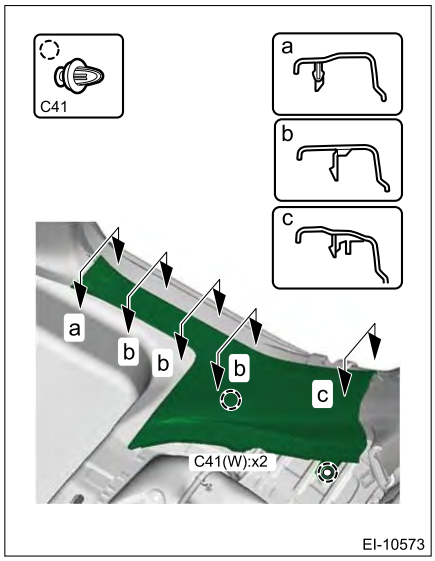
REMOVAL



Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

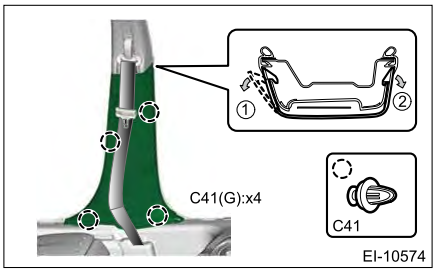
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Release the claws, and then remove the cover side sill - front INN.
   Caution:
   Do not pull with excessive force. Doing so may damage the claws of the cover side sill - front INN.



3. Remove the clips, and remove the cover side sill - front.

4. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
5. Release the clips and claws, and then remove the cover side sill - rear INN.

Caution:



Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.

6. Remove the trim panel - center pillar LWR.
   (1) Release the clip by pulling the trim panel - center pillar LWR toward you.
   (2) Expand the claws of the trim panel - center pillar LWR outward, and remove it from the trim panel - center pillar UPR.

   Caution:

   Do not expand the trim panel - center pillar LWR excessively. Doing so may damage the trim.

Note:

First release the claw located to the front of the vehicle.

7. Disconnect the claws and remove the cover - catcher.

Note:

Remove the cover - catcher using a plastic remover.

8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EXTERIOR/INTERIOR TRIM > Lower Inner Trim

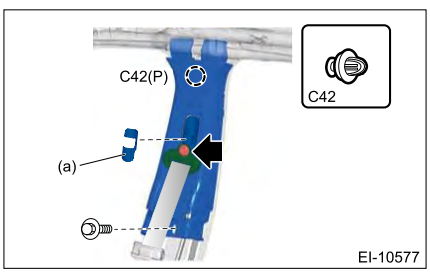
INSTALLATION

1. Install the cover - catcher.
2. Install the trim panel - center pillar LWR.

   Note:

   Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.
3. Install the cover side sill - rear INN.
4. Install the rear seat cushion assembly.
5. Install the cover side sill - front.
6. Install the cover side sill - front INN.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL



Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the left and right grille speaker sides. Ref. to ENTERTAINMENT & MONITORING>Front Speaker>REMOVAL > TWEETER.
3. Remove the trim panel - front pillar UPR.
   (1) Pull the trim panel - front pillar UPR towards the center of the vehicle to release the clips.
   (2) Rotate the trim panel - front pillar UPR in the arrow direction.
   (3) Release the hook at the end of the tether clip, and remove the trim panel - front pillar UPR.
   Caution:
   - **Do not use any tool when releasing the hook at the end of the trim panel - front pillar UPR.**
   - **Be careful not to damage the surface of the trim panel - front pillar UPR and the curtain airbag module.**

4. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
5. Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
6. Remove the trim panel - center pillar UPR.
   (1) Remove the cover through (a), and remove the seat belt anchor bolt.
   (2) Remove the bolt on the lower side of the trim panel - center pillar UPR.
   (3) Remove the clip by pulling the upper part of the trim toward you, and while lowering the entire trim, remove the trim panel - center pillar UPR.
   Caution:
   Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.

INSTALLATION

Caution:

- **When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.**
- **Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.**
- **Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.**
- **Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.**

1. Install the trim panel - front pillar UPR.

   Caution:

   When engaging the trim panel - front pillar UPR into the tether clips, do not use any tools. If the tether clip is damaged, always replace it with a new tether clip.

   (1) Hook the tip of the tether clip on the trim panel - front pillar UPR.

   (2) Rotate the trim panel - front pillar UPR in the arrow direction as shown in the figure.

   (3) Insert the claw at the end of the trim panel - front pillar UPR, and engage the clip.

2. Install the trim panel - center pillar UPR.

   Tightening torque

   Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

   Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

3. Install the trim panel - center pillar LWR, cover side sill - front INN, and cover side sill - rear INN.

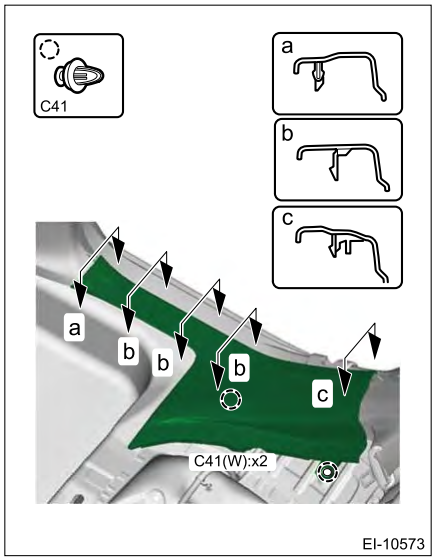
   Note:

   Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.

4. Install the rear seat cushion assembly.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

1. 4 DOOR MODEL



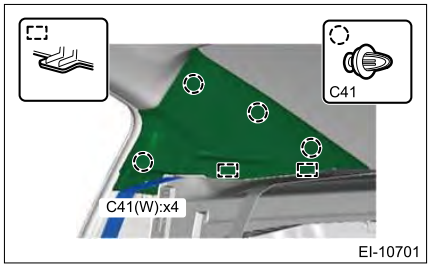
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
3. Release the clips and claws, and then remove the cover side sill - rear INN.

   Caution:

   Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.



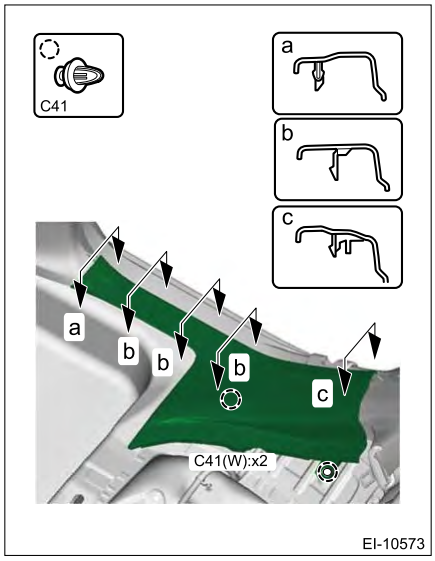
4. Remove the trim panel - rear pillar LWR.
   (1) Remove the clips, and turn over the trim panel - trunk side.
   (2) Remove the clips, and remove the trim panel - rear pillar LWR.

   Caution:

   Forcibly removing the clips near the seat belt lower anchor bolts may deform or damage the clip base. Use a clip remover for operation.

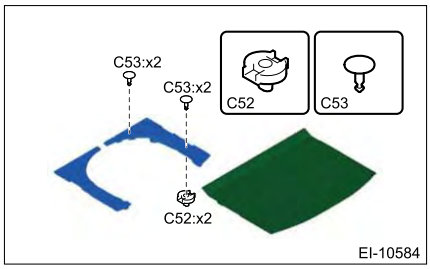
5. Remove the clips, and remove the trim panel - rear pillar UPR.

2. 5 DOOR MODEL



Caution:

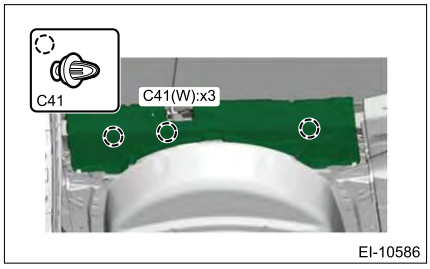
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**



1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
3. Release the clips and claws, and then remove the cover side sill - rear INN.

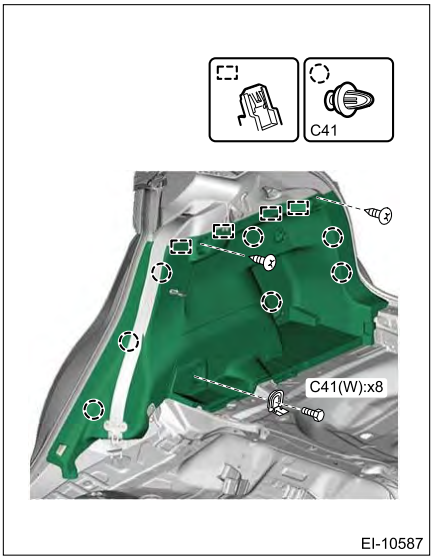
   Caution:

   Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.



4. Remove the mat - rear floor and the spacer - rear floor side.

5. Remove the clips, and remove the trim panel - rear skirt.



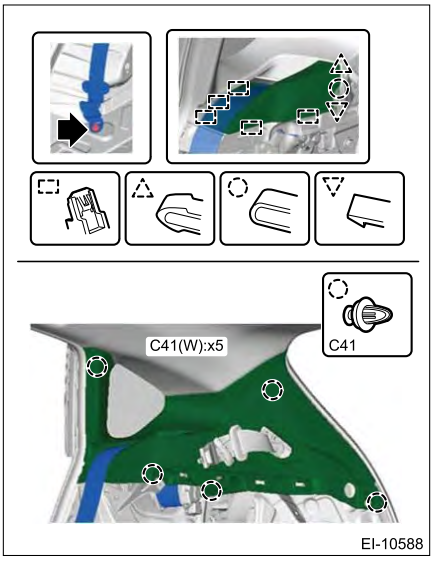
6. Remove the spacer - rear floor CTR.
   (1) Tilt the backrest forward and remove the clips, and then turn over the backrest backside mat.
   (2) Release the clips, then detach the spacer - rear floor CTR.

7. Remove the trim panel - rear apron.
   (1) Remove the screws and bolts.
   (2) Disengage the claws and clips, and remove the trim panel - rear apron.

Caution:

Forcibly removing the clips near the seat belt lower anchor bolts may deform or damage the clip base. Use a clip remover for operation.

Note:



For LH side, disconnect the connector of the luggage light.

8. Remove the trim panel - rear pillar UPR.
   (1) Remove the lower anchor bolts of seat belts.
   (2) Remove the belt cover.

Note:

If the belt cover cannot be removed, remove the trim panel - rear pillar UPR first.

   (3) Disengage the claws and clips, and remove the trim panel - rear apron.

EXTERIOR/INTERIOR TRIM > Rear Quarter Trim

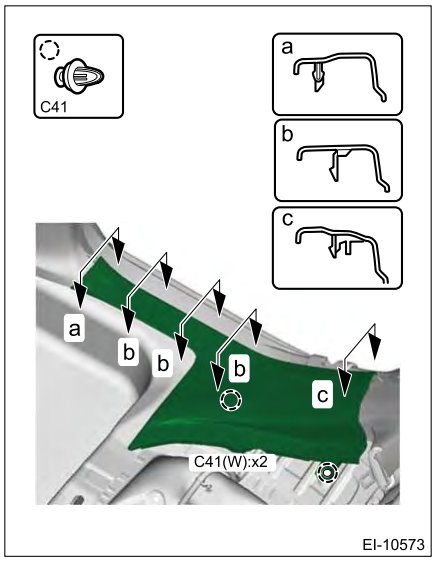
INSTALLATION

1. 4 DOOR MODEL

1. Install the trim panel - rear pillar UPR.
2. Install the trim panel - rear pillar LWR.
3. Install the cover side sill - rear INN.
4. Install the rear seat cushion assembly. Ref. to SEATS>Rear Seat>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

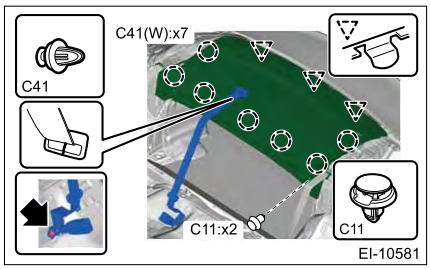
2. 5 DOOR MODEL

1. Install the trim panel - rear pillar UPR.
2. Install the trim panel - rear apron.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the lower anchor bolts of seat belts.
   Tightening torque:
   33 N·m (3.4 kgf-m, 24.3 ft-lb)
4. Install the spacer - rear floor CTR.
5. Install the clips of the backrest backside mat.
6. Install the trim panel - rear skirt.
7. Install the mat - rear floor and the spacer - rear floor.
8. Install the cover side sill - rear INN.
9. Install the rear seat cushion assembly.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



EXTERIOR/INTERIOR TRIM > Rear Shelf Trim

REMOVAL

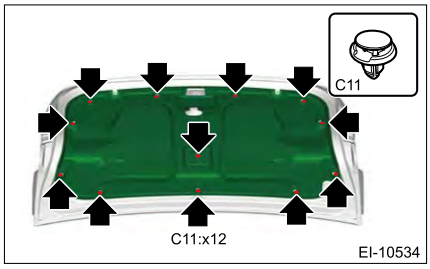


Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

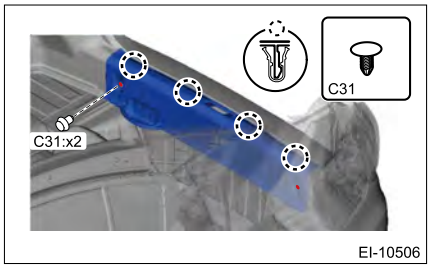
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
3. Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.
   Caution:
   Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.

4. Remove the trim panel - rear pillar UPR and trim panel - rear pillar LWR on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL.
5. Remove the trim panel assembly - rear shelf.
   (1) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.
   (2) Release the clips, and raise the rear shelf panel assembly.
   (3) Release the belt guide, and guide the anchor of the seat belt - rear shoulder CTR to behind the trim panel - rear shelf assembly.
   (4) Remove the trim panel assembly - rear shelf.



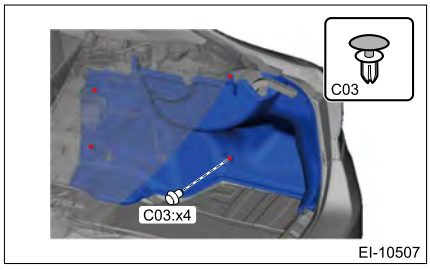
EXTERIOR/INTERIOR TRIM > Rear Shelf Trim

INSTALLATION



1. Install the trim panel assembly - rear shelf.
2. Install the lower anchor of seat belt - rear shoulder CTR.
   Tightening torque:
   30 N·m (3.1 kgf-m, 22.1 ft-lb)
3. Install the trim panel - rear pillar UPR and the trim panel - rear pillar LWR.
4. Install the side sill cover - rear INN.
5. Install the rear seat cushion assembly.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

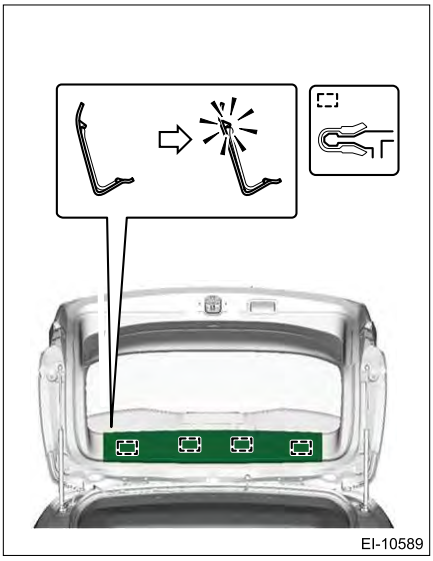
REMOVAL



1. Remove the clips, and remove the trim panel - trunk lid.

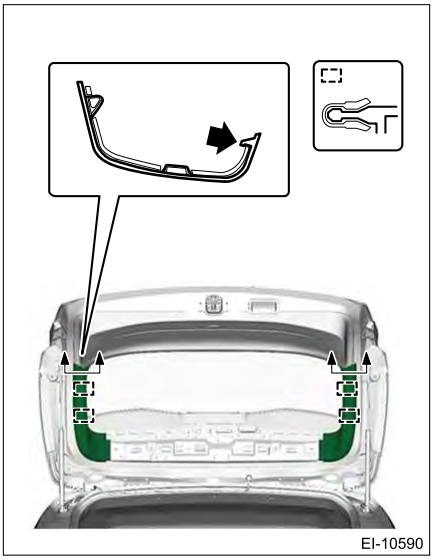
2. Tilt the backrest assembly forward.
3. Remove the trunk room mat.
4. Remove the trim panel - trunk rear.
   (1) Remove the clip.
   (2) Release the claws, and remove the trim panel - trunk rear.

5. Remove the clips, and remove the trim panel - trunk side.



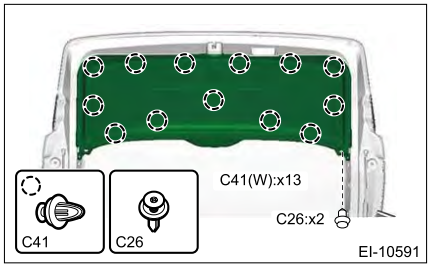
INSTALLATION

1. Install the trim panel - trunk side.
2. Install the trim panel - trunk rear.
3. Install the trim panel - trunk lid.
4. Install the trunk room mat.



EXTERIOR/INTERIOR TRIM > Rear Gate Trim

REMOVAL



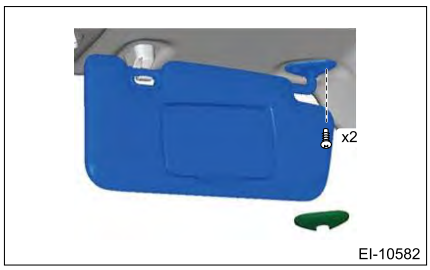
1. Remove the trim panel - rear gate UPR.
   (1) Remove the claws on the trim edge.
   (2) Release the claws in the center of trim, and remove the trim panel - rear gate UPR.

2. Remove the trim panel - rear gate pillar side.
   (1) Release the claws.
   (2) Remove the claws on the bottom of trim, and remove the trim panel - rear gate pillar side.

3. Remove the trim panel - rear gate LWR.
   (1) Remove the clips on both ends.
   (2) Release the clips, and remove the trim panel - rear gate LWR.

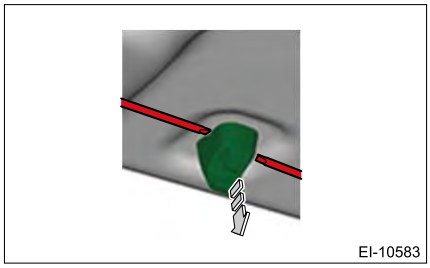
EXTERIOR/INTERIOR TRIM > Rear Gate Trim

INSTALLATION



1. Install the trim panel - rear gate LWR.

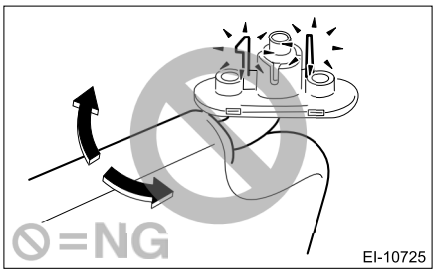
2. Install the trim panel - rear gate pillar side.
3. Install the trim panel - rear gate UPR.



EXTERIOR/INTERIOR TRIM > Sun Visor

REMOVAL

1. Disconnect the ground cable from battery. (Only model with vanity mirror light) Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the sun visor assembly.
   (1) Remove the cap - sun visor, and then remove the screws.
   (2) Disconnect the connector. (Only model with vanity mirror light)
   (3) Disconnect the connector and remove the sun visor assembly.



3. Remove the hook - sun visor.
   (1) Press both sides using a flat tip screwdriver.
   (2) Remove the hook - sun visor by pulling it toward you.

EXTERIOR/INTERIOR TRIM > Sun Visor

INSTALLATION

1. Install the hook - sun visor.
2. Install the sun visor assembly.
   Caution:
   Do not rotate the sun visor assembly when it is temporarily installed. The claw for temporary installation may be damaged.

   Tightening torque:
   2N·m (0.2 kgf-m, 1.5 ft-lb)
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EXTERIOR/INTERIOR TRIM > Assist Grip

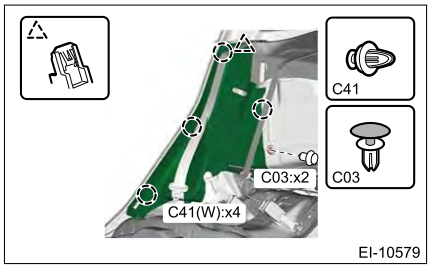
REMOVAL

1. Pull up the cap (b) while pulling the knob (a) toward you with a flat tip screwdriver or similar tool wrapped with a protection tape.
2. Pull the assist grip toward yourself (toward the vehicle center) to remove.

EXTERIOR/INTERIOR TRIM > Assist Grip

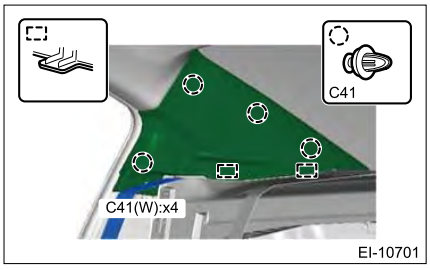
INSTALLATION

1. Pinch the metal clip with pliers, and remove it from the assist grip BRKT.
2. Install the metal clip to the assist grip side.
3. Install the cap to the assist grip.
   Note:
   If the metal clip is not inserted to the end, the cap cannot be installed.
4. Install the assist grip to the vehicle.



REMOVAL

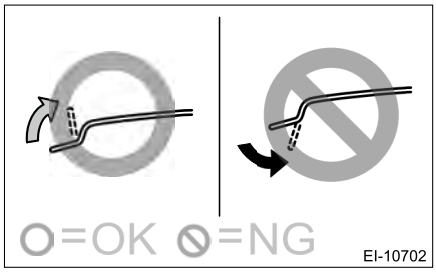
1. 4 DOOR MODEL



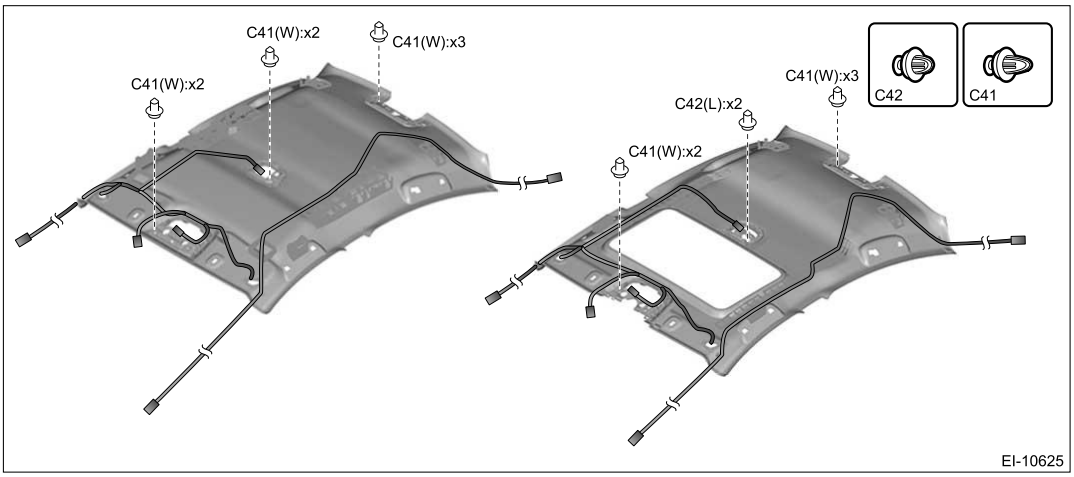
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Adjust the passenger's seat position.
   (1) Remove the headrest.
   (2) Move the passenger's seat to the front-most position, and move the backrest to the front-most position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   - **On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.**
   - **For model with power seat, adjust the passenger's seat to the specified position, and remove the driver's seat and then disconnect the battery ground terminal.**
3. Remove the driver's seat. Ref. to SEATS>Front Seat>REMOVAL.
4. Remove the console box assembly and the cover - shift lever. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
5. Cover the following areas to protect from damage.
   - Steering wheel surface
   - Instrument panel surface
   - Glove box surface
6. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
7. Remove the lower inner trim on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
8. Remove the upper inner trim on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.
9. Remove the trim panel - rear pillar LWR.
   (1) Remove the clips, and turn over the trim panel - trunk side.
   (2) Remove the clips, and remove the trim panel - rear pillar LWR.

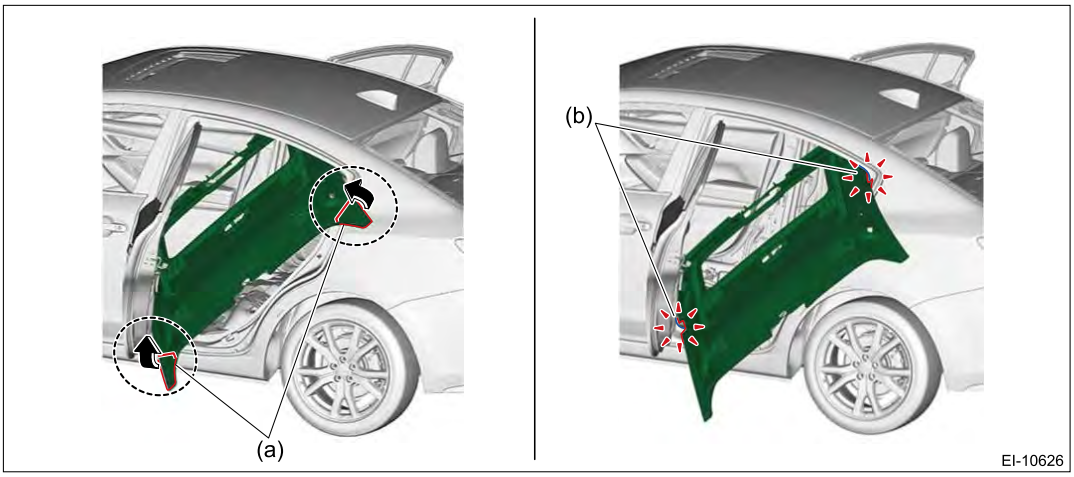


10. Remove the clips, and remove the trim panel - rear pillar UPR.



11. Remove the following parts from the driver's side rear door.
    - Rear door trim assembly: Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
    - Rear speaker assembly: Ref. to ENTERTAINMENT & MONITORING>Rear Speaker>REMOVAL.
12. Remove the light assembly - map. (Models without EyeSight) Ref. to LIGHTING SYSTEM>Spot Map Light>REMOVAL.
13. Remove the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
14. Remove the left and right sun visor assembly. Ref. to EXTERIOR/INTERIOR TRIM>Sun Visor>REMOVAL.
15. Remove the light assembly - room. Ref. to LIGHTING SYSTEM>Room Light>REMOVAL.
16. Remove the light assembly - high-mounted. Ref. to LIGHTING SYSTEM>High-mounted Stop Light>REMOVAL > 4 DOOR MODEL.
17. Remove all assist rails. Ref. to EXTERIOR/INTERIOR TRIM>Assist Grip>REMOVAL.
18. Remove the garnish - roof. (Model with sunroof)
19. Remove the trim panel - roof assembly.

Caution:



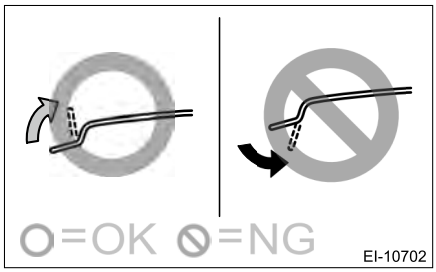
When taking out the trim panel - roof assembly from the vehicle, be sure to fold it to the roof side. Do not fold it to the cabin side. Otherwise it may be wrinkled.

(1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.
(2) Remove the clip.
(3) Remove the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

(4) While folding the rear end of the trim panel - roof assembly to the roof side along with the mark-off line (a), take the part out of the vehicle.
(5) Align the recess (b) on the center pillar of the trim panel - roof assembly with the flange of the door opening, and bend the entire trim to take it out of the vehicle.

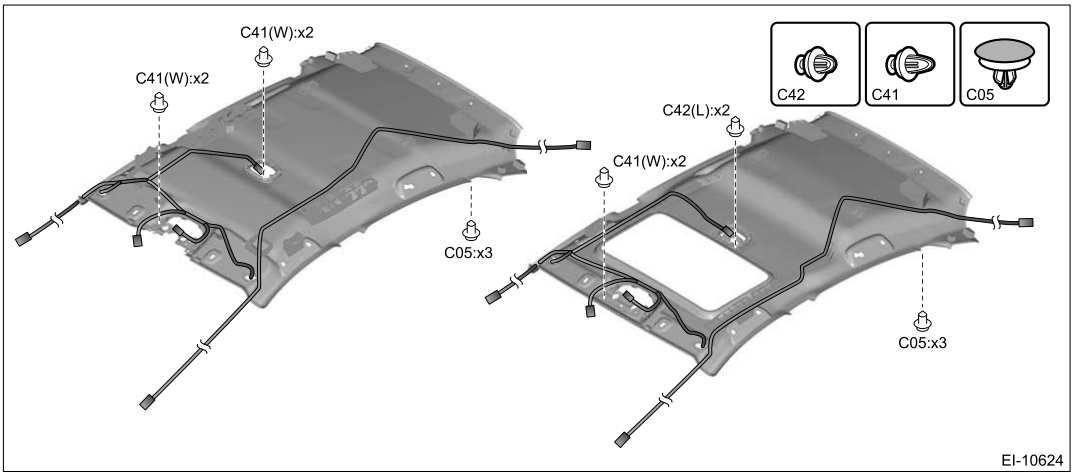
2. 5 DOOR MODEL

Caution:



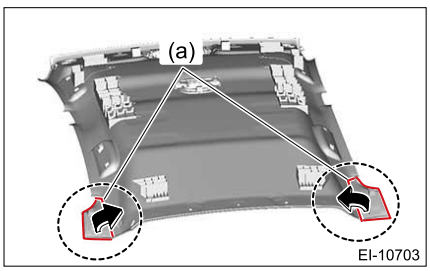
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Adjust the front seat position.
(1) Remove the headrest.
(2) Move the seat to the front-most position and tilt the backrest rearward.



2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the lower inner trim on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
5. Remove the upper inner trim on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.
6. Remove the right and left trim panels - rear apron and rear quarter trims UPR. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
7. Remove the light assembly - map. (Models without EyeSight) Ref. to LIGHTING SYSTEM>Spot Map Light>REMOVAL.
8. Remove the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
9. Remove the left and right sun visor assembly. Ref. to EXTERIOR/INTERIOR TRIM>Sun Visor>REMOVAL.
10. Remove the light assembly - room. Ref. to LIGHTING SYSTEM>Room Light>REMOVAL.
11. Remove all assist rails. Ref. to EXTERIOR/INTERIOR TRIM>Assist Grip>REMOVAL.
12. Remove the garnish - roof. (Model with sunroof)
13. Remove the trim panel - roof assembly.

Caution:



When taking out the trim panel - roof assembly from the vehicle, be sure to fold it to the roof side. Do not fold it to the cabin side. Otherwise it may be wrinkled.

(1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.
(2) Remove the clip.
(3) Remove the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

(4) While folding the rear end of the trim panel - roof assembly to the roof side along with the mark-off line (a), take the part out of the vehicle.

EXTERIOR/INTERIOR TRIM > Roof Trim

INSTALLATION

Caution:

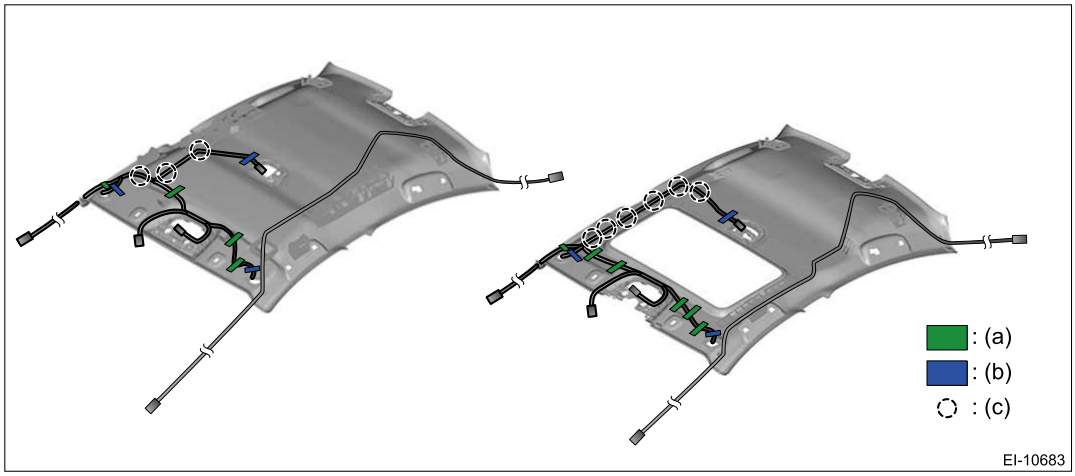
- **For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. Ref. to EyeSight>Stereo Camera>INSTALLATION.**
- **When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.**
- **Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.**
- **Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.**
- **Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.**

1. Install the trim panel - roof assembly.

(1) Attach the feeder cord and roof cord to the roof trim.

Caution:

Route each cord carefully. The cord may interfere, thus preventing normal deployment of the curtain airbag when necessary.



Preparation items:

Part No.: 86359SC000/TAPE

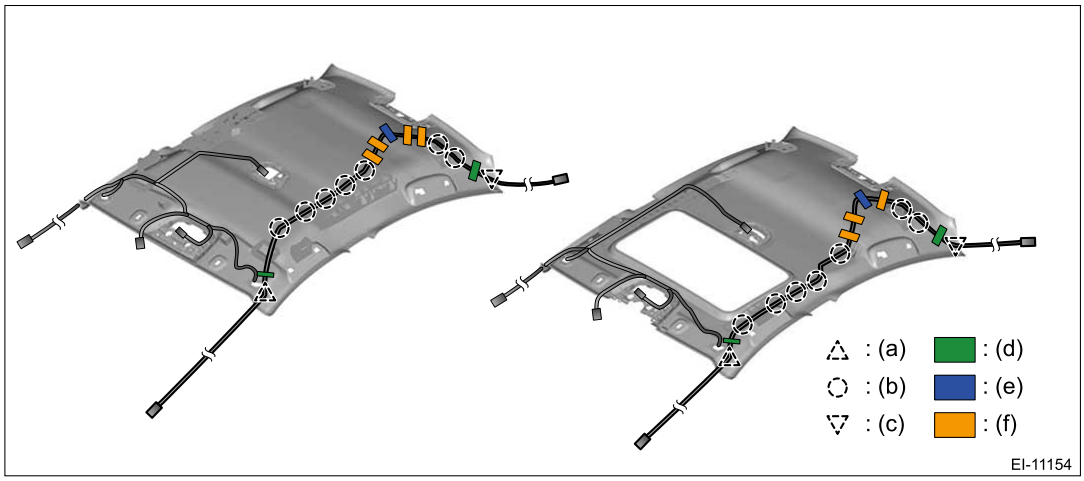
- Roof cord (4 door model, 5 door model)

Note:

Use the tape (service parts) by cutting it into 80 mm × 20 mm (3.2 in × 0.8 in).

(a) Affix with tape while aligning with the trim mark-off line.

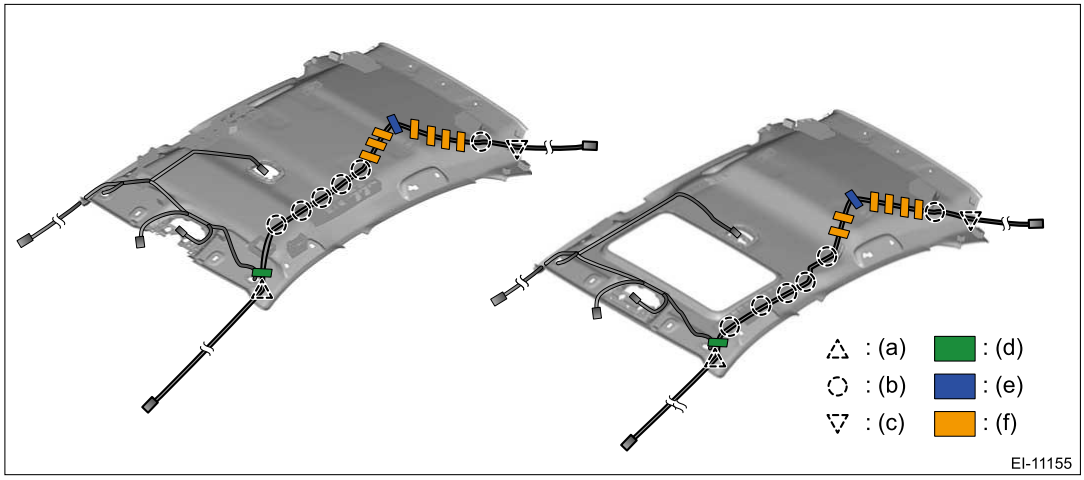
(b) Align the marking (white tape) of the cord with the clamp to secure.



(c) Secure the cord to the roof pad clamp.

- Feeder cord

Note:



Use the tape (service parts) by cutting it into 80 mm × 50 mm (3.2 in × 2 in).

– 4 door model

(a) Place the clamp between the polyurethane sections to secure.
(b) Secure the cord to the roof pad clamp.
(c) Align the marking (tape) on the cord with the trim end.
(d) Affix with tape while aligning with the trim mark-off line.
(e) Adjust the excess cord and secure it with tape.
(f) Secure with several pieces of tape with a pitch of 100 mm (3.9 in) or less.

– 5 door model

(a) Place the clamp between the polyurethane sections to secure.
(b) Secure the cord to the roof pad clamp.
(c) Align the marking (tape) on the cord with the trim end.
(d) Affix with tape while aligning with the trim mark-off line.
(e) Adjust the excess cord and secure it with tape.
(f) Secure with several pieces of tape with a pitch of 100 mm (3.9 in) or less.

(2) Bring the trim panel - roof assembly inside the vehicle.
(3) Secure the trim panel - roof assembly with the clips and with the weather strip - body side flange.

2. Install the assist rail.
3. Install the light assembly - high-mounted. (4 door model)
4. Install the light assembly - room.
5. Install the sun visor assembly.
6. Install the stereo camera cover assembly. (Models with EyeSight)
7. Install the light assembly - map. (Models without EyeSight)
8. Install the garnish - roof. (Model with sunroof)
9. Install the trim panel - rear pillar UPR. (4 door model)
10. Install the trim panel - rear apron and the rear quarter trim UPR. (5 door model)

Tightening torque:

Trim panel - rear apron: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

11. Install the upper inner trim.

Tightening torque:

Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

12. Install the lower inner trim.
13. Install the rear seat cushion assembly.
14. Install the following parts from the driver's side rear door. (4 door model)
    - Rear door trim assembly: Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>INSTALLATION.
    - Rear speaker assembly: Ref. to ENTERTAINMENT & MONITORING>Rear Speaker>INSTALLATION.
15. Install the console box assembly and cover - shift lever. (4 door model)

Tightening torque:

Console box: 6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

16. Install the driver's seat. (4 door model)

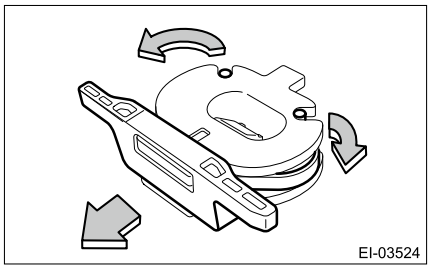
Tightening torque:

53 N·m (5.4 kgf-m, 39.1 ft-lb)

17. Connect the battery ground terminal.

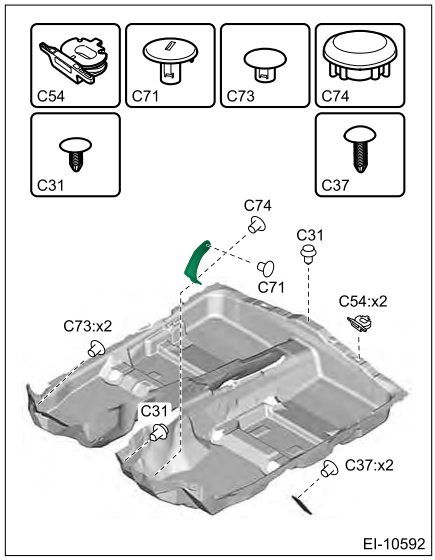
Note:

After connecting the battery ground terminal, place the select lever in the "P" position.



EXTERIOR/INTERIOR TRIM > Floor Mat

REMOVAL

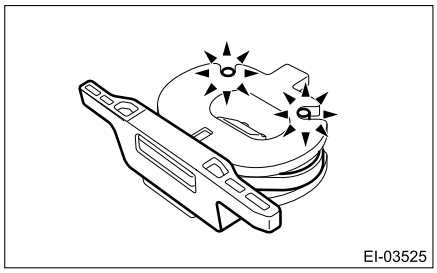


Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
2. Remove the front seat assembly. Ref. to SEATS>Front Seat>REMOVAL.
3. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
4. Remove the console box assembly, the cover - shift lever and the panel center LWR. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
5. Remove the lower inner trim on the left and right sides. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
6. Remove the pull handle cover. Ref. to SECURITY AND LOCKS>Remote Openers>REMOVAL > FUEL FLAP OPENER.
7. Remove the knobs of the hook - seat cushion rear.

8. Take out the floor mat from the vehicle.
   (1) Remove the clips from the floor mat.
   (2) Remove the mat hook on both sides.
   (3) Fold down the floor mat and take it out from the vehicle.



EXTERIOR/INTERIOR TRIM > Floor Mat

INSTALLATION

Caution:

- **If the passenger’s seat is removed, be sure to perform [Rezeroing] for the occupant detection system after installing the seat to the vehicle.**
- **Make sure that the knobs of the hook - seat cushion rear are securely installed.**

1. Bring the floor mat into the vehicle, and secure with the clips.
2. Install the hook - seat cushion rear.
3. Install the pull handle cover.
4. Install the lower inner trim.
5. Install the console box assembly, the cover - shift lever and the panel center LWR.
6. Install the rear seat cushion assembly.
7. Install the front seat.

   Tightening torque:

   53 N·m (5.4 kgf-m, 39.1 ft-lb)
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

   Note:

   After connecting the battery ground terminal, place the select lever in the “P” position.
9. Perform [Rezeroing] for the occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

(2) Camera plate
(3) Stereo camera
(4) Stereo camera cover ASSY
(5) Cap

Tightening torque: N·m (kgf-m, ft-lb)

T: 5.5±1 (0.56±0, 4.1±0.7)

EyeSight > General Description

CAUTION

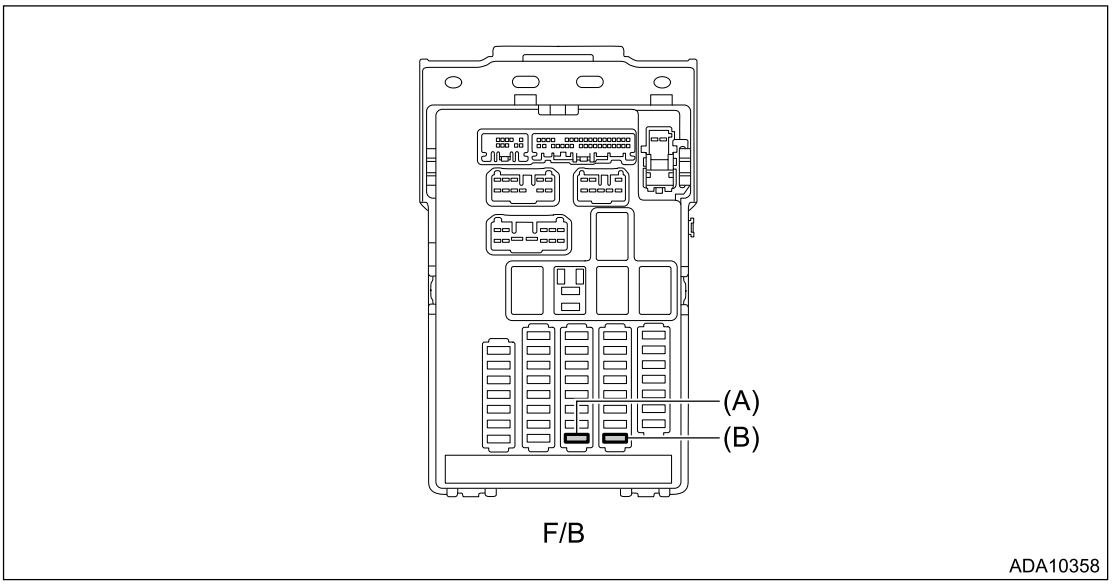
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC.

Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

- If the damage is found in the glass repair prohibited area, always replace the glass. Damage, dirt, aftermarket part installation or sticker attachment in the prohibited area can affect the recognition of stereo camera, and thereby the EyeSight function may not operate properly. Ref. to CAUTION > CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EYESIGHT.
- When the suspension-related components have been removed, installed or replaced, or the wheel alignment is adjusted, perform "Clear Active Lane Keep System Learning Value". Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value>OPERATION.

EyeSight > General Description

PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87599VA000	87599VA000	RANDOM CHART	Used for adjusting stereo camera.
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Clip remover	Used for removing clips.
Measure (5 m (16 ft) or more)	Used for adjusting stereo camera.
Leveling line	
Plumb bob	
Packing tape	

LOCATION

Relay & fuse box (F/B)	Fuse 7.5 A (stop light and brake switch, brake light relay)	(A)
	Fuse 7.5 A (stereo camera)	(B)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

   Note:

   If the fuse is blown again, check the system wiring harness.

EyeSight > EyeSight System

WIRING DIAGRAM

Refer to "EyeSight System" in the wiring diagram. Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

EyeSight > EyeSight System

ELECTRICAL SPECIFICATION

For electrical specification, refer to "Control Module I/O Signal" of "EyeSight (DIAGNOSTICS)" section. Ref. to EyeSight (DIAGNOSTICS)>Control Module I/O Signal.

EyeSight > EyeSight System

INSPECTION

For inspection, refer to "Basic Diagnostic Procedure" of "EyeSight (DIAGNOSTICS)" section. Ref. to EyeSight (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight > EyeSight System

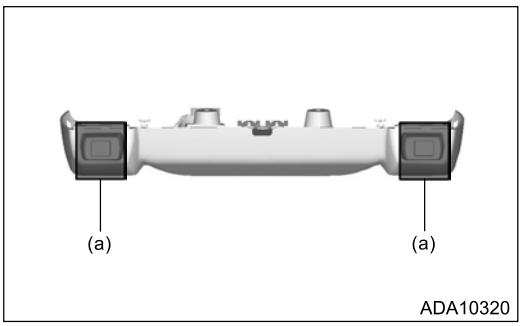
NOTE

For procedure of each component in the EyeSight system, refer to the respective section.

- Control module: Ref. to EyeSight>Control Unit.
  Note:
  System control of the EyeSight is performed by each module. For procedure, refer to the following sections.
  - **Engine control module (ECM): Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Engine Control Module (ECM).**
  - **Transmission control module (TCM): Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).**
  - **VDC control module & hydraulic control unit (VDCCM&H/U): Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).**
  - **Stereo camera: Ref. to EyeSight>Stereo Camera.**
  - **Power steering control module: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Power Steering Control Module.**
  - **Body integrated unit: Ref. to SECURITY AND LOCKS>Body Integrated Unit.**
  - **Reverse Automatic Braking CM: Ref. to REVERSE AUTOMATIC BRAKING>Reverse Automatic Braking CM.**
- Combination meter: Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
- Stop light and brake switch: Ref. to BRAKE>Stop Light Switch.
- Switches and harness: Ref. to EyeSight>Switches and Harness.
- Roll connector (steering angle sensor): Ref. to AIRBAG SYSTEM>Roll Connector.
- Multi-function display (MFD): Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).

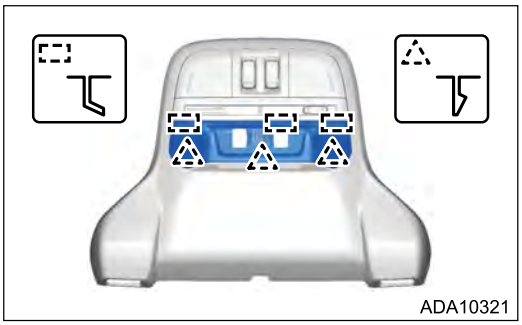
NOTE

System control of the EyeSight is performed by each module. For procedure, refer to the following sections.



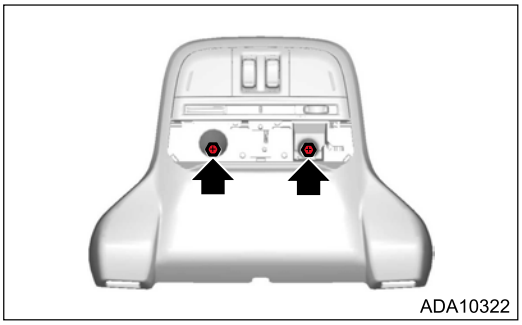
- Engine control module (ECM): Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
- Transmission control module (TCM): Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
- VDC control module & hydraulic control unit (VDCCM&H/U): Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
- Stereo camera: Ref. to EyeSight>Stereo Camera.
- Power steering control module: Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Power Steering Control Module.
- Body integrated unit: Ref. to SECURITY AND LOCKS>Body Integrated Unit.
- Reverse Automatic Braking CM: Ref. to REVERSE AUTOMATIC BRAKING>Reverse Automatic Braking CM.

REMOVAL



Caution:

- **When the stereo camera or windshield glass has been replaced, removed or installed, always perform the adjustment and inspection of the camera. (When the stereo camera has been replaced with a new part, the camera remains in a failed state until adjustment and inspection are performed.)**
- **Since the stereo camera is a precision equipment, install the protective cover before handling it. (New stereo camera is equipped with a protective cover as a service part.)**
- **During removal, do not hold at the left and right cameras.**
- **Do not apply any impact to the stereo camera. (Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.)**
- **Do not disassemble the stereo camera.**
- **Attach the protective cover to the replacement part, put it into the box in the same way as the other parts and return it.**
- **Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.**
- **When removing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.**
  Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.

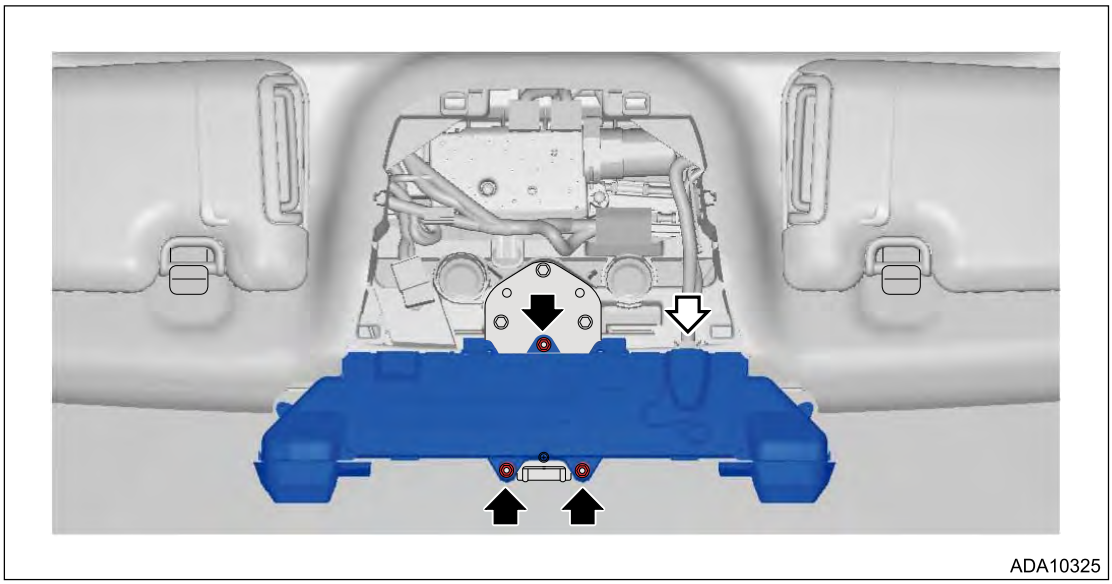


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Attach dust-free paper (a) such as copy paper to the stereo camera cover assembly.

3. Remove the stereo camera cover assembly.
   (1) Disconnect the claws and hooks and remove the cap.

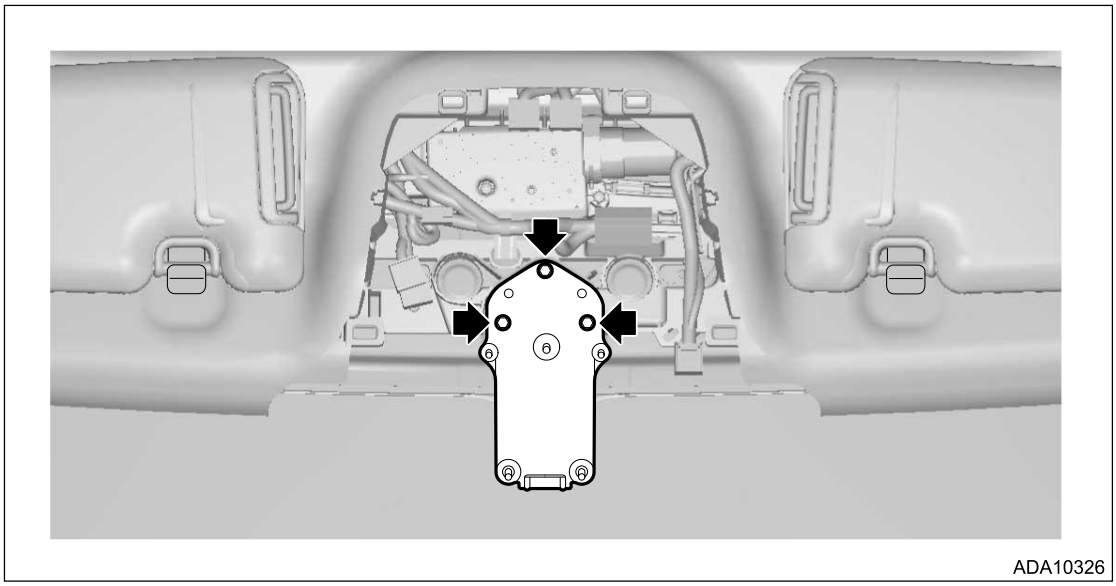
   (2) Remove the bolt.

(3) Pull down the rear of the stereo camera cover assembly, and then release the clips.
(4) Release the hook on the front side of stereo camera cover assembly.



(5) Disconnect the connectors, and remove the stereo camera cover assembly.

4. Remove the stereo camera.



Caution:

Handle the stereo camera with special care.

(1) Disconnect the connector.
(2) Remove the nuts, and then remove the stereo camera.

5. Remove the bolts, then remove the camera plate.

EyeSight > Stereo Camera

INSTALLATION

Caution:

- **Do not remove the protective cover until just before installing the stereo camera cover assembly. Using the bolt and nut, install the stereo camera with the protective cover attached, connect the connectors, and then remove the protective cover.**
- **Do not apply any impact to the stereo camera. (Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.)**
- **During installation, do not hold at the left and right cameras.**
- **Do not change the installation position of the stereo camera or do not modify the surrounding structure.**
- **Remove the protective cover, install the stereo camera cover assembly, and then perform adjustment and inspection of the stereo camera. Ref. to EyeSight>Camera Adjustment, Inspection.**
- **Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.**
- **When installing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.**
  Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.
- **When installing the stereo camera cover assembly, take care so that the harness does not interfere with the stereo camera or does not get caught.**
- **Do not allow the stereo camera cover assembly to come in contact with the stereo camera. Install the stereo camera cover assembly precisely so that it will not block the visibility of the camera.**
- **Because the stereo camera is incompatible, be sure to check the part number before installation.**

1. Attach the camera plate.
   Tightening torque:
   5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

Note:

Align the positioning pins of camera plate to the positioning holes of front rail.

2. Install the stereo camera.

Tightening torque:

5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

Note:

Align the positioning holes of stereo camera to the positioning pins of camera plate.

3. Install the stereo camera cover assembly.

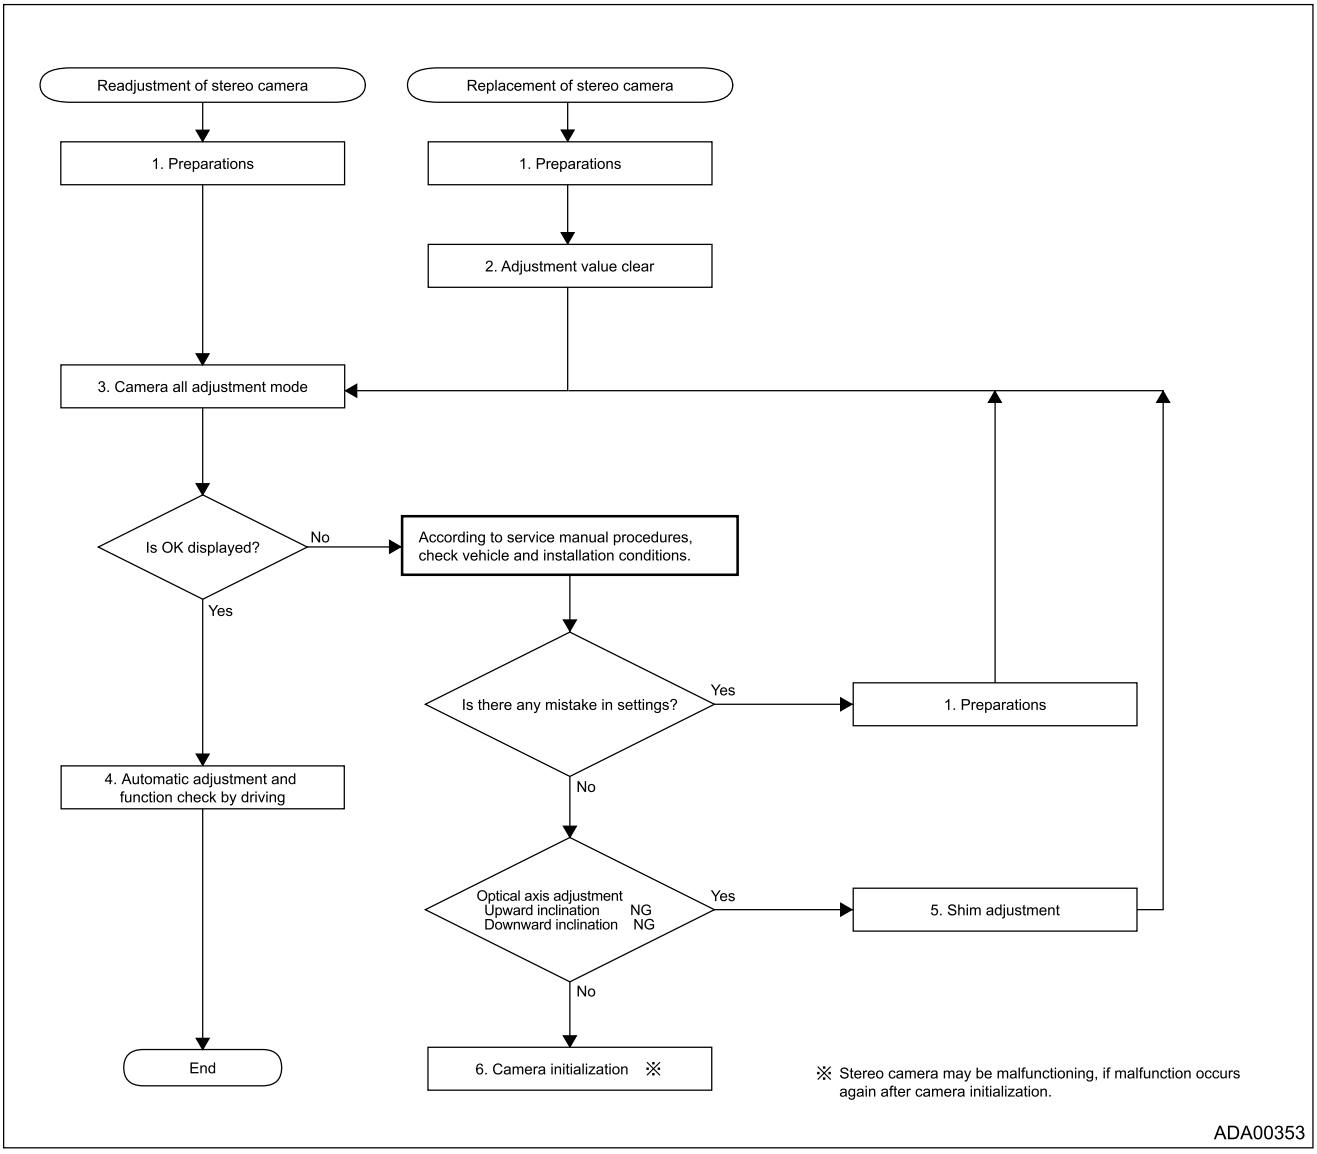
Tightening torque:

5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Remove the paper affixed on the stereo camera cover assembly.
6. Perform the adjustment or inspection of the stereo camera. Ref. to EyeSight>Camera Adjustment, Inspection.

PROCEDURE

Caution:



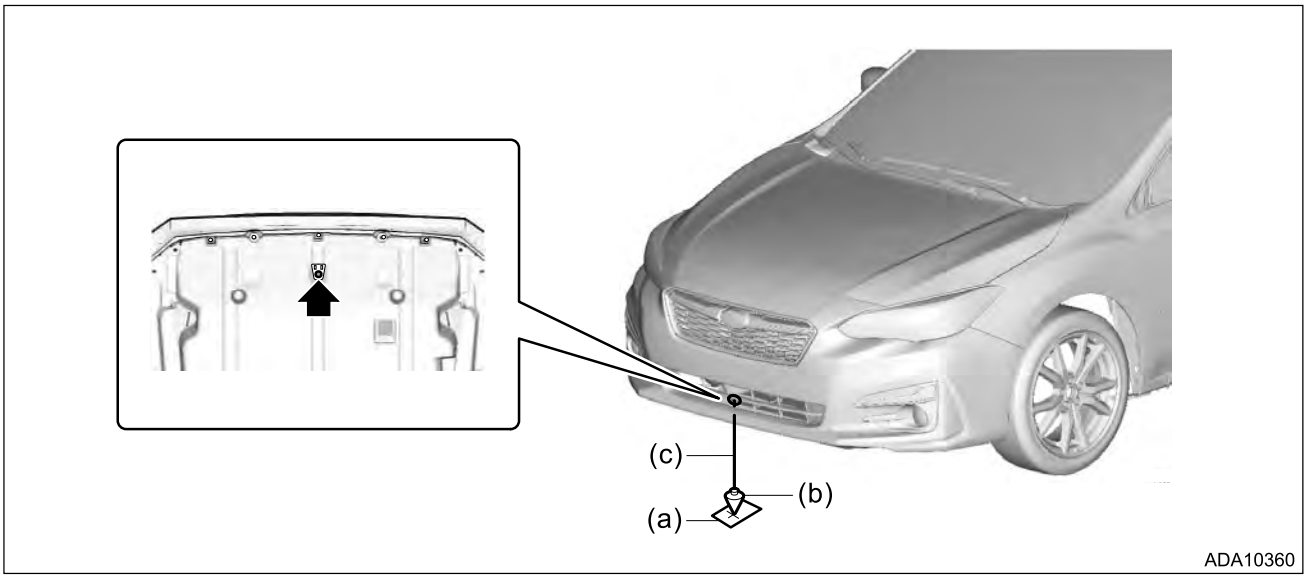
- **Perform the camera adjustment and inspection at curb weight without passengers.**
- **Handle RANDOM CHART (ST) carefully so as not to break it with the adhesive force of the tape.**

Perform inspection or adjustment according to the following procedures.

- Readjustment of stereo camera
  Perform the adjustment in the following order: [1. Preparations] → [3. Camera all adjustment mode (replacement/removal)] → [4. Automatic adjustment and function check by driving].
- Replacement of stereo camera
  Perform the replacement in the following order: [1. Preparations] → [2. Adjustment value clear] → [3. Camera all adjustment mode (replacement/removal)] → [4. Automatic adjustment and function check by driving].

  Note:

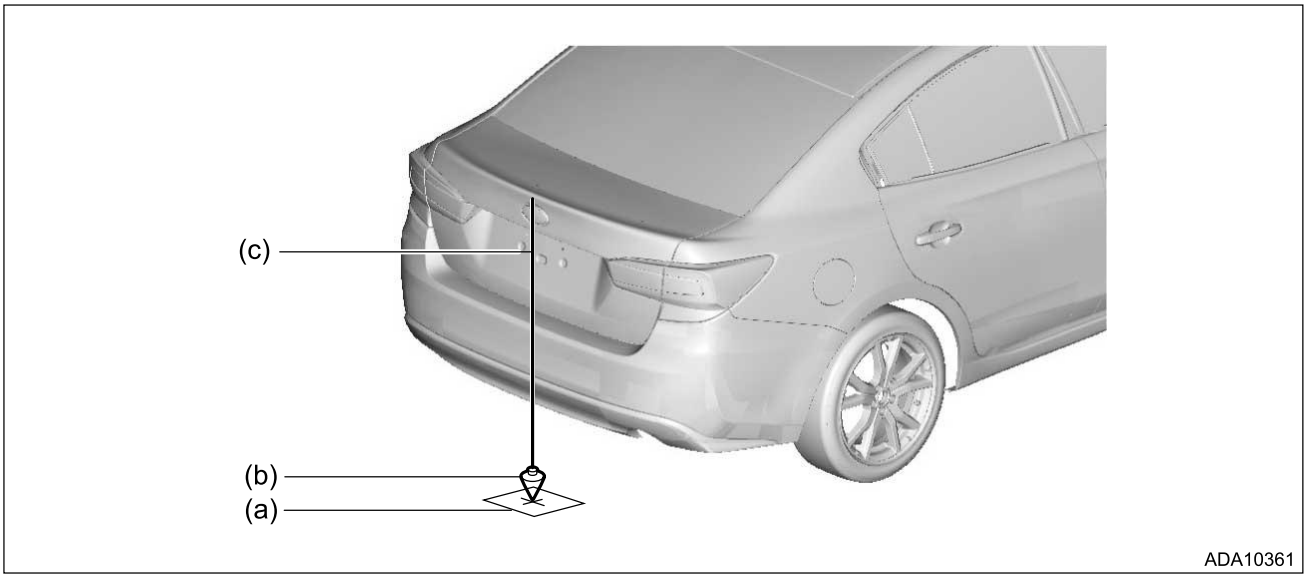
  When the stereo camera or windshield glass has been removed or installed, always perform readjustment of the stereo camera.



1. PREPARATIONS

Perform the preparation of the adjustment and inspection for the stereo camera.

- **WHEN PERFORMING ADJUSTMENT OR INSPECTION BY AFFIXING RANDOM CHART ONTO PARTITION**

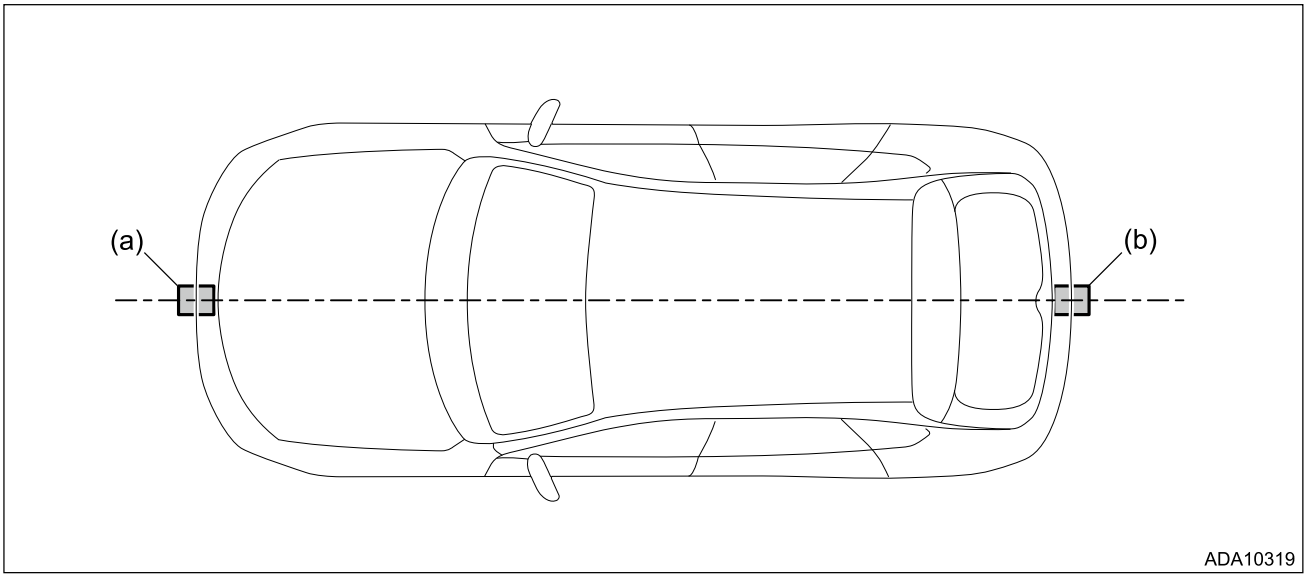


1. Before preparation, check the following items.
   (1) The headlight is off.
   (2) The vehicle is parked on a level surface.
   (3) The inflation pressure of tires is correct.
   (4) The vehicle does not have load.
   (5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.
   Note:
   When the front wheels are not directed to the straight ahead position, adjust the alignment. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.
2. Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and RANDOM CHART (ST).
   Preparation tool:
   ST: RANDOM CHART (87599VA000)
3. Place the vehicle on a level surface, where approximately 5 m (16.41 ft) space can be secured in front of the vehicle.
4. Suspend the plumb bob with leveling line from front center position of vehicle (center clip of under cover), and mark the position where the plumb bob touches the ground. (Point A)

(a) Point A (b) Plumb bob (c) Leveling line

Note:
Stick the packing tape etc. on the floor, then make a marking on the tape.

5. Suspend the plumb bob with leveling line from rear center position of vehicle (center of rear ornament), and mark the position where the plumb bob touches the ground. (Point B)



(a) Point B (b) Plumb bob (c) Leveling line

Note:

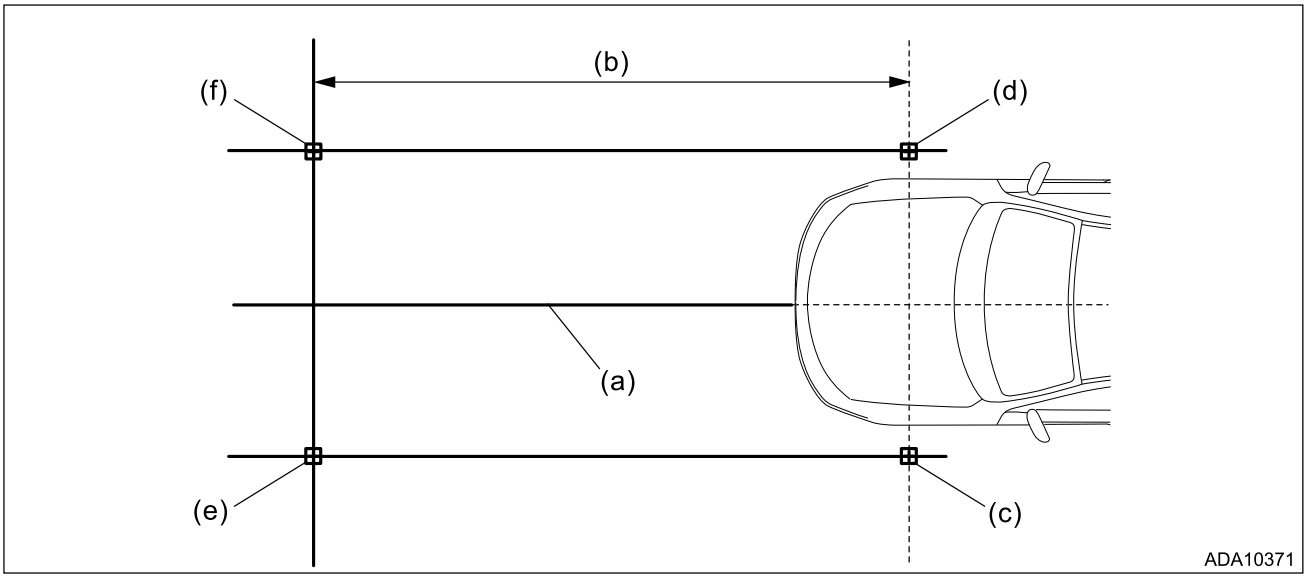
- **Stick the packing tape etc. on the floor, then make a marking on the tape.**
- **For 5 door model, mark in the same manner as 4 door model.**

6. Strain approximately 5 m (16.41 ft) leveling line from the marking point B through the marking point A toward front of the vehicle, and fix it with packing tape. (A-B line)

(a) Point A (b) Point B

Note:

Confirm that there is no wet condition or unevenness on the floor, to strain the leveling line correctly.



7. Mark the installation position of the partition.

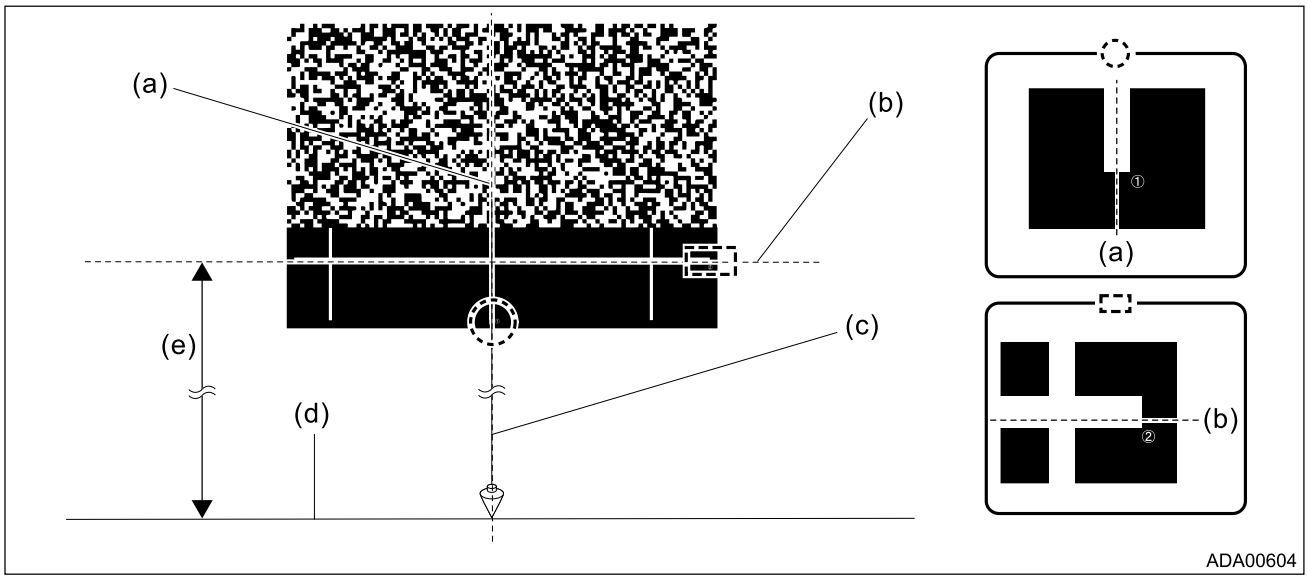
(1) Suspend the plumb bob from the center of each front wheel, and mark the point C and point D.

(2) Strain the leveling lines from the point C and point D toward the front of vehicle parallel to the vehicle body center line (A-B line), and fix the leveling lines with packing tape.

(3) Make markings at the points 4,000 mm (13 ft, 1 1/2 in) ahead of the vehicle from the point C and point D. (Point E and point F)

(4) Strain the leveling line so that it passes through the point E and point F. (E-F line)

(a) Vehicle body center line (A-B line)
(b) 4,000 mm (13 ft, 1 1/2 in)
(c) Point C
(d) Point D
(e) Point E
(f) Point F



8. Place the partition and RANDOM CHART.

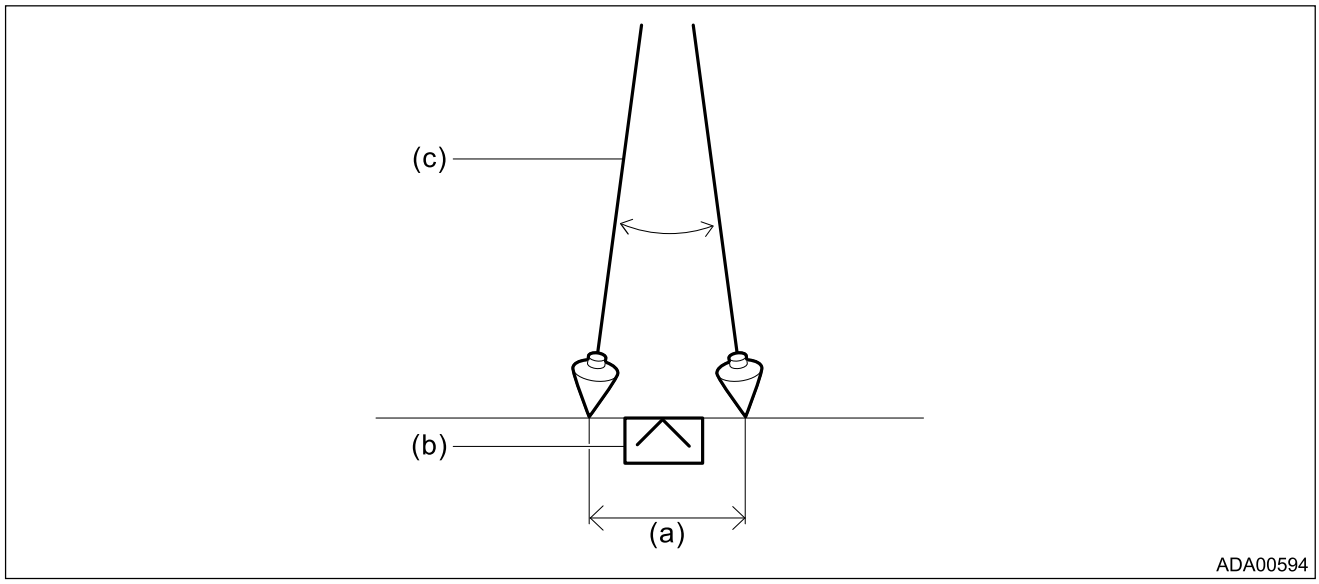
Caution:

- **Affix the RANDOM CHART onto the vertical partition with flat surface.**
- **When affixing the RANDOM CHART using tape, place the tape within 10 mm (0.39 in) from the edge of the CHART. In this case, do not affix with lustrous tapes which may reflect the light.**
- **Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.**
- **The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)**

(1) Using the plumb bob, attach the RANDOM CHART on the wall or partition, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).

(2) Adjust the partition so that it is parallel to E-F line.

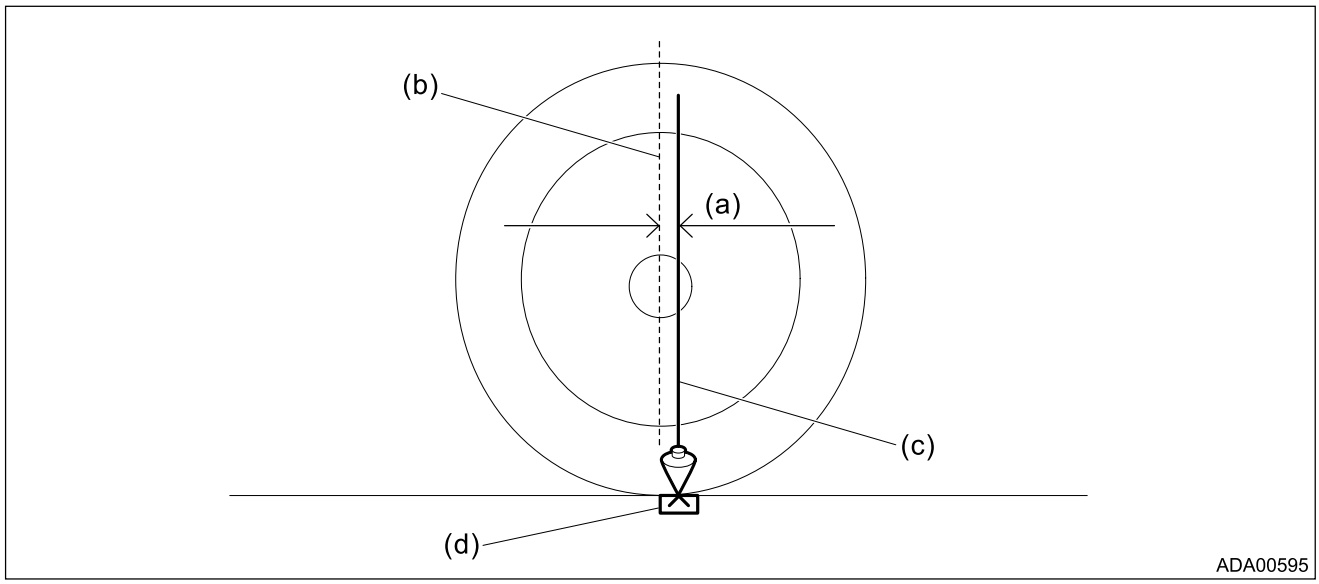
(a) ① = Setting reference
(c) Plumb bob
(e) 1,000 mm (3 ft, 3 3/8 in)



(vertical line) and vehicle body center line (A-B line)

(b) ② = Setting reference (horizontal line)

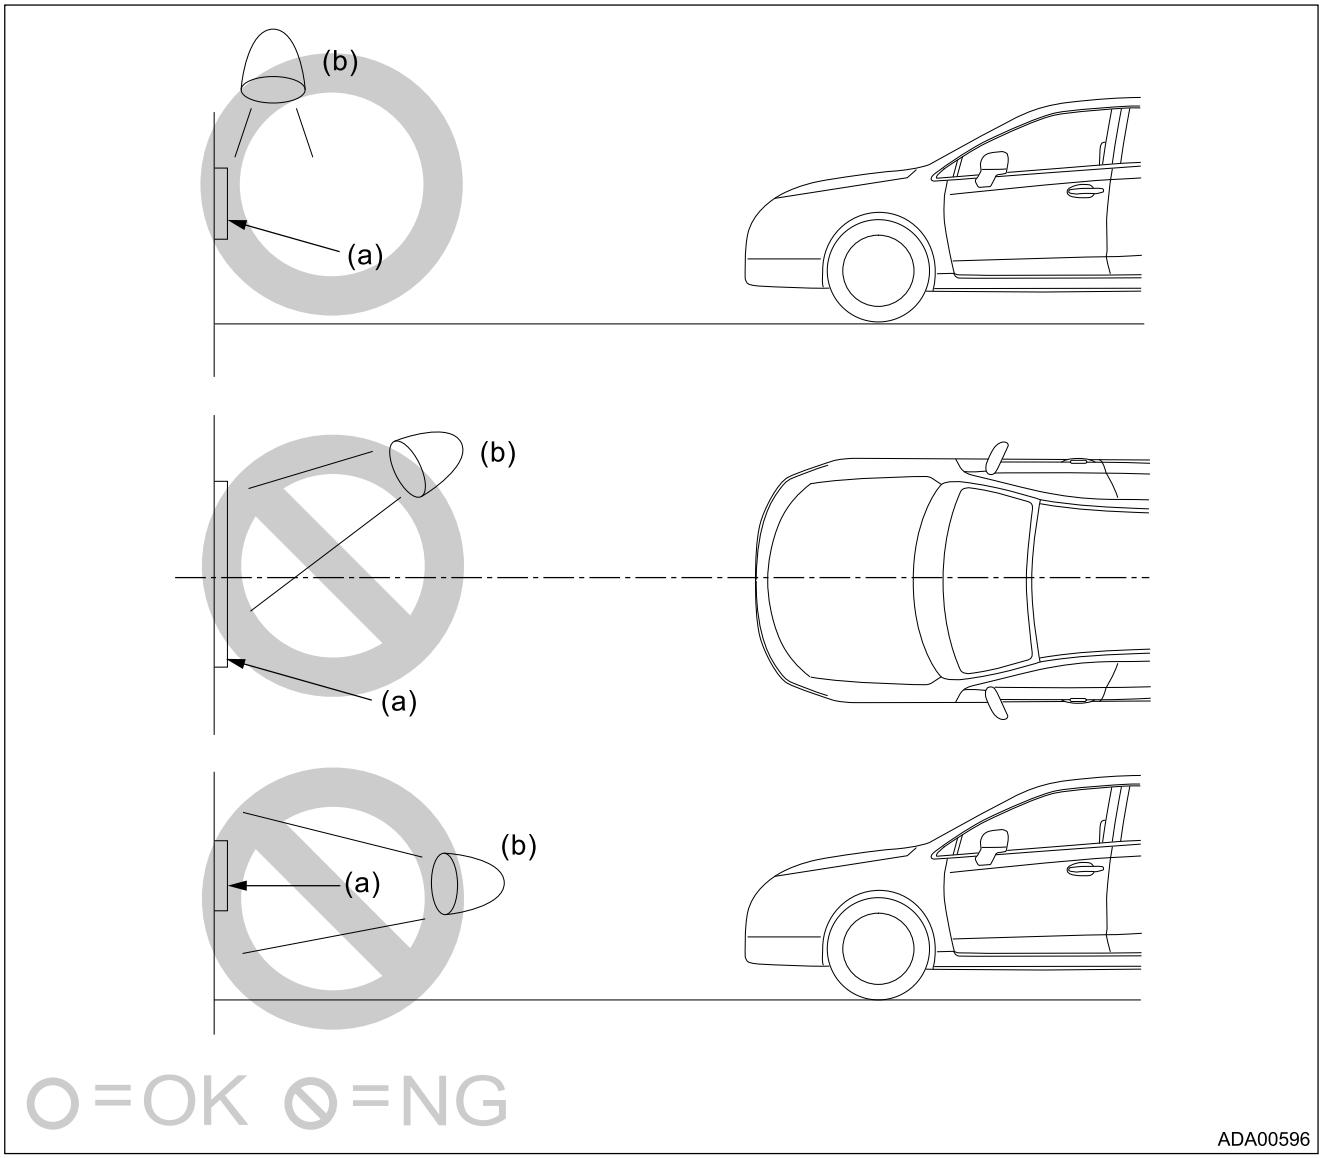
(d) E-F line



Caution:

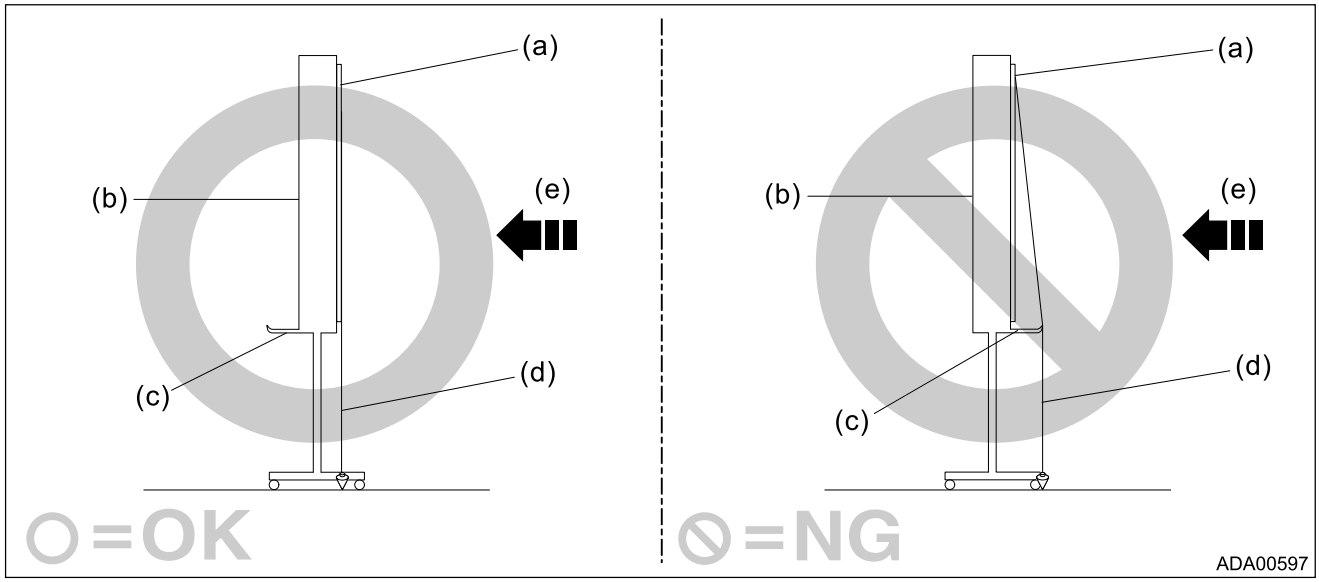
- **Centering accuracy of the plumb bob shall be ±4 mm (±0.16 in) or less.**

(a) ±4 mm (±0.16 in) (b) Marking (c) Plumb bob



- **Positioning accuracy of the measure shall be ±2 mm (±0.08 in) or less.**
- **Centering accuracy of the tire shall be ±4 mm (±0.16 in) or less.**

(a) ±4 mm (±0.16 in) (c) Plumb bob (d) Marking



(b) Tire center line

- **Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)**

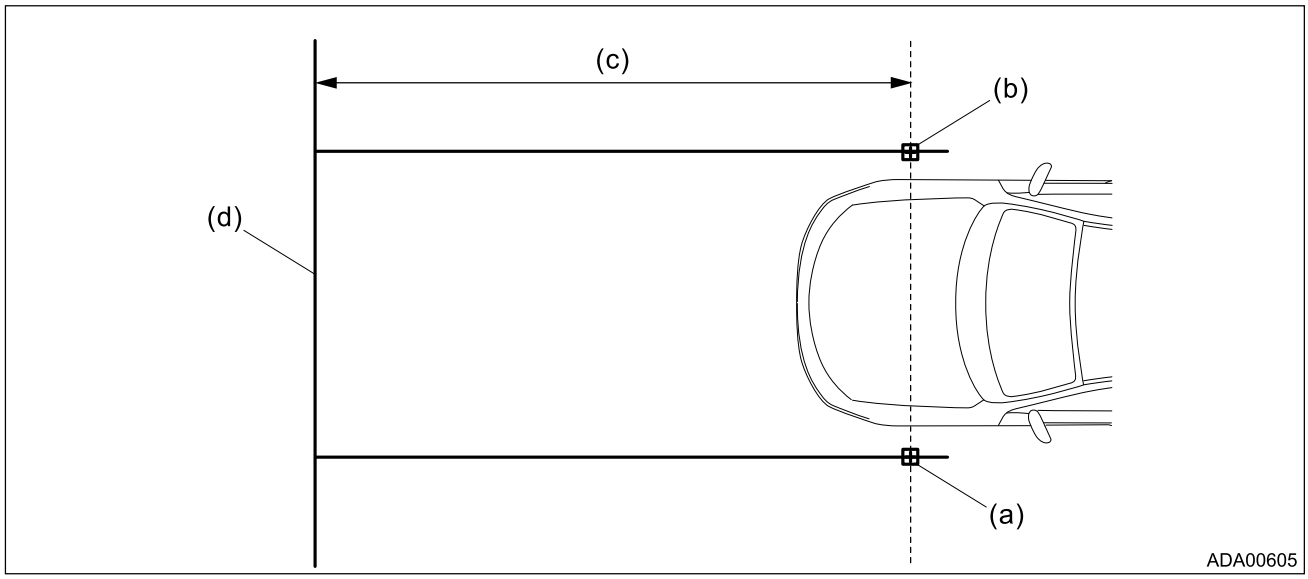
(a) RANDOM CHART (b) Lighting

- **When using a white board as a partition, affix the RANDOM CHART on the flat surface without protrusion such as penholder. When suspending the plumb bob, suspend it vertically from the RANDOM CHART by avoiding protrusion.**

(a) RANDOM CHART
(b) White board
(c) Protrusion (penholder, etc.)
(d) Plumb bob
(e) Vehicle travel direction

9. Turn the ignition switch to OFF.
10. Check the windshield glass and the dashboard. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > WINDSHIELD GLASS AND DASHBOARD.
Caution:
If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.
11. Connect the Subaru Select Monitor.
Note:
For detailed operation procedures, refer to "Application help".
12. Turn the ignition switch to ON.
13. Wait for 10 seconds.
14. On [Start] display, select [Diagnosis].
15. On [Vehicle selection] display, enter vehicle information and select [OK].
16. On [Main Menu] display, select [Each System].
17. On the [Select System] display, select [EyeSight], and then select [Next] while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on the stereo camera cover assembly at the same time.
Note:
If [EyeSight] is selected without pressing two switches at the same time, the camera adjustment items are not displayed in [Work Support]. (for preventing misoperation) Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In that case, repeat from the selection of [EyeSight].
18. On [Select Function] display, select [Work Support].
19. From the work support item list, select and perform camera adjustment or other inspections.
Note:
- **When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.**
- **After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.**

WHEN PERFORMING ADJUSTMENT OR INSPECTION BY AFFIXING RANDOM CHART ONTO WALL

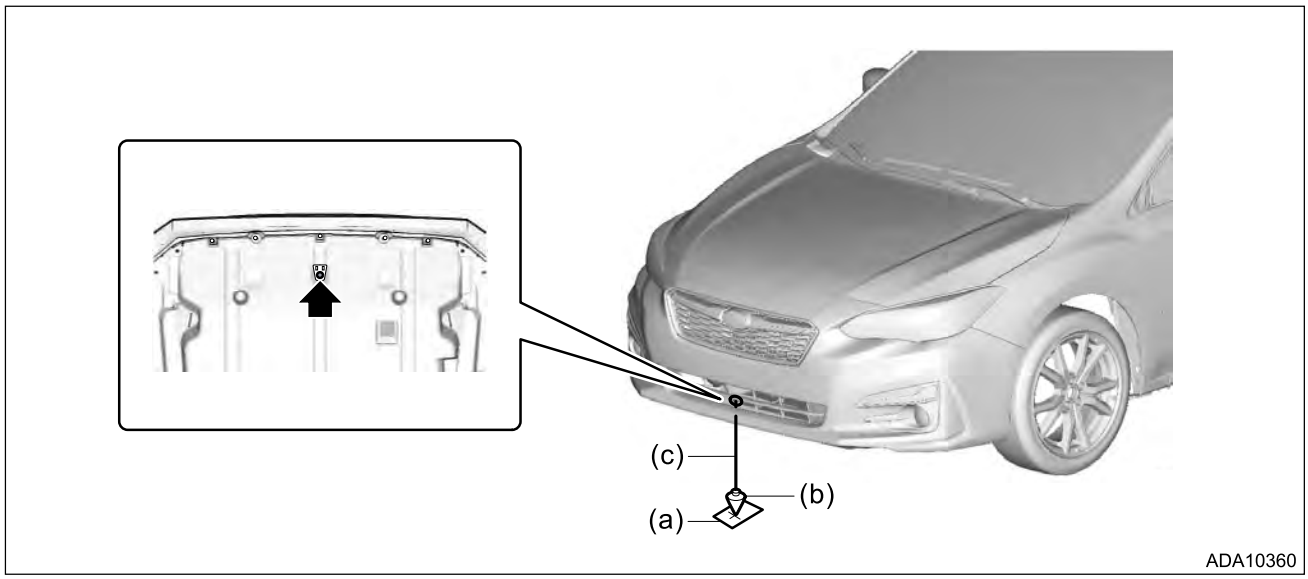


1. Before preparation, check the following items.
(1) The headlight is off.
(2) The vehicle is parked on a level surface.
(3) The inflation pressure of tires is correct.
(4) The vehicle does not have load.
(5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.
Note:
When the front wheels are not directed to the straight ahead position, adjust the alignment. Ref. to FRONT SUSPENSION>Wheel Alignment>ADJUSTMENT.
2. Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and RANDOM CHART (ST).
Preparation tool:
ST: RANDOM CHART (87599VA000)
3. Mark the park position of the vehicle.

(1) Strain the leveling line so that it is at right angles to wall on which the RANDOM CHART is affixed, and fix the leveling line with packing tape.
(2) Make a marking 4,000 mm (13 ft, 1 1/2 in) away from the wall where the leveling line is fixed. (Point A and point B)

Note:

Stick the packing tape etc. on the floor, then make a marking on the tape.

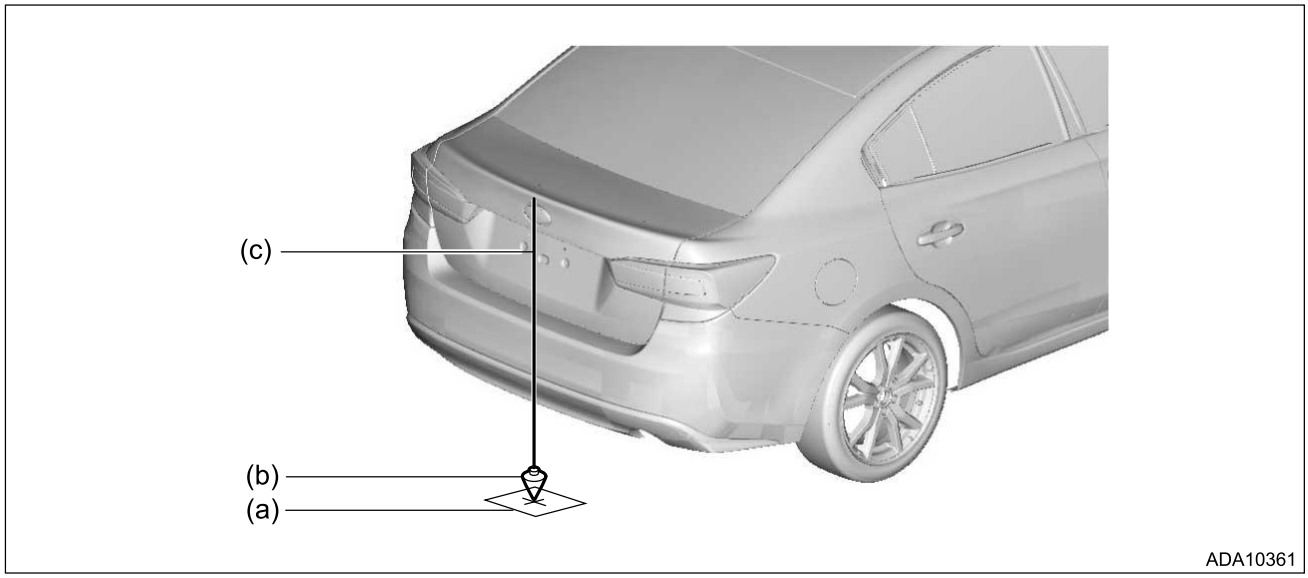


(3) Strain the leveling line so that it passes through the point A and point B. (A-B line)

(a) Point A
(b) Point B
(c) 4,000 mm (13 ft, 1 1/2 in)
(d) Wall

4. Suspend the plumb bob from the center of each front wheel of the vehicle, and place the vehicle so that it is aligned with the leveling line (A-B line).

5. Suspend the plumb bob with leveling line from front center position of vehicle (center clip of under cover), and mark the position where the plumb bob touches the ground. (Point C)

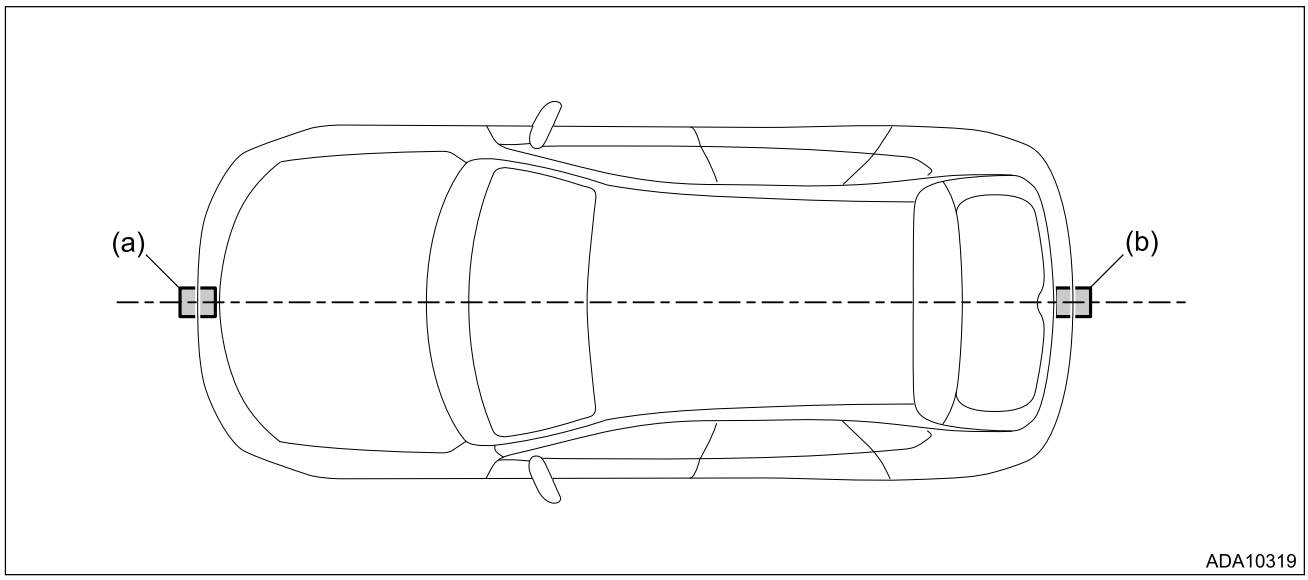


(a) Point C
(c) Plumb bob
(e) Leveling line

Note:

Stick the packing tape etc. on the floor, then make a marking on the tape.

6. Suspend the plumb bob with leveling line from rear center position of vehicle (center of rear ornament), and mark the position where the plumb bob touches the ground. (Point D)

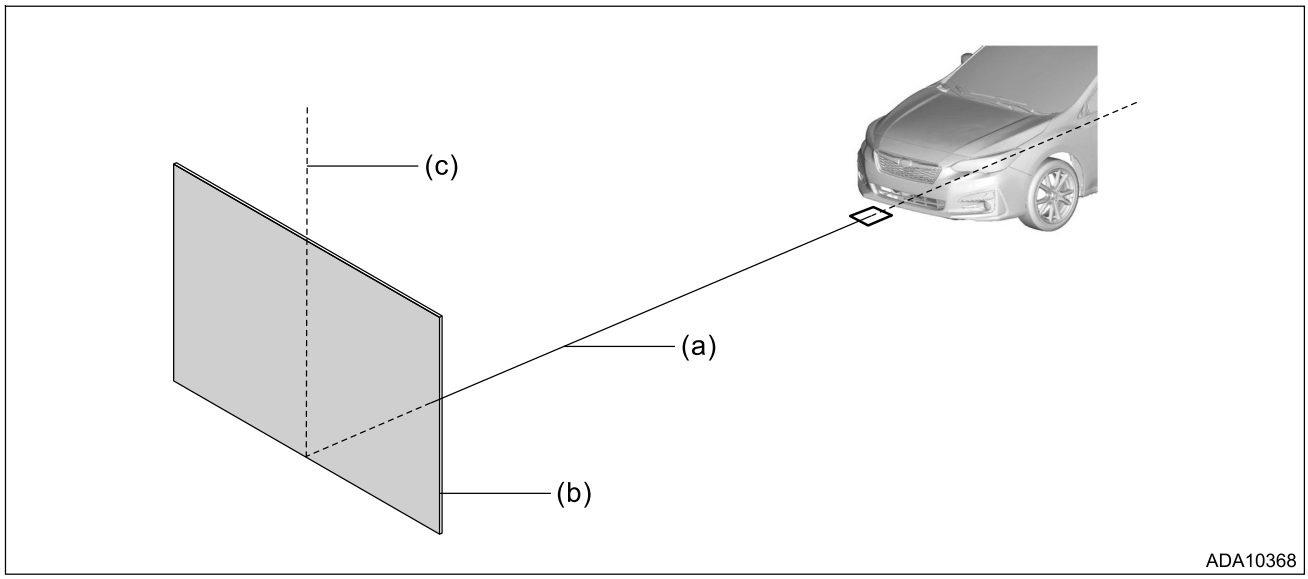


(a) Point D (b) Plumb bob (c) Leveling line

Note:

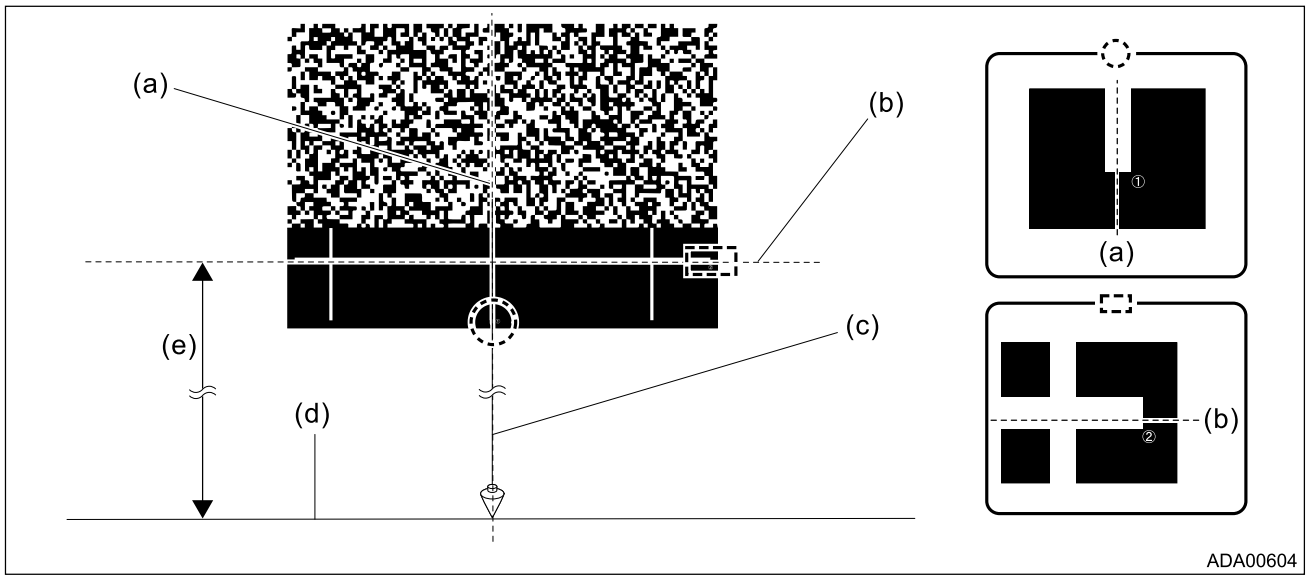
- **Stick the packing tape etc. on the floor, then make a marking on the tape.**
- **For 5 door model, mark in the same manner as 4 door model.**

7. Strain the leveling line from the making point D through the marking point C to the wall, and fix it with packing tape. (C-D line)



(a) Point C (b) Point D

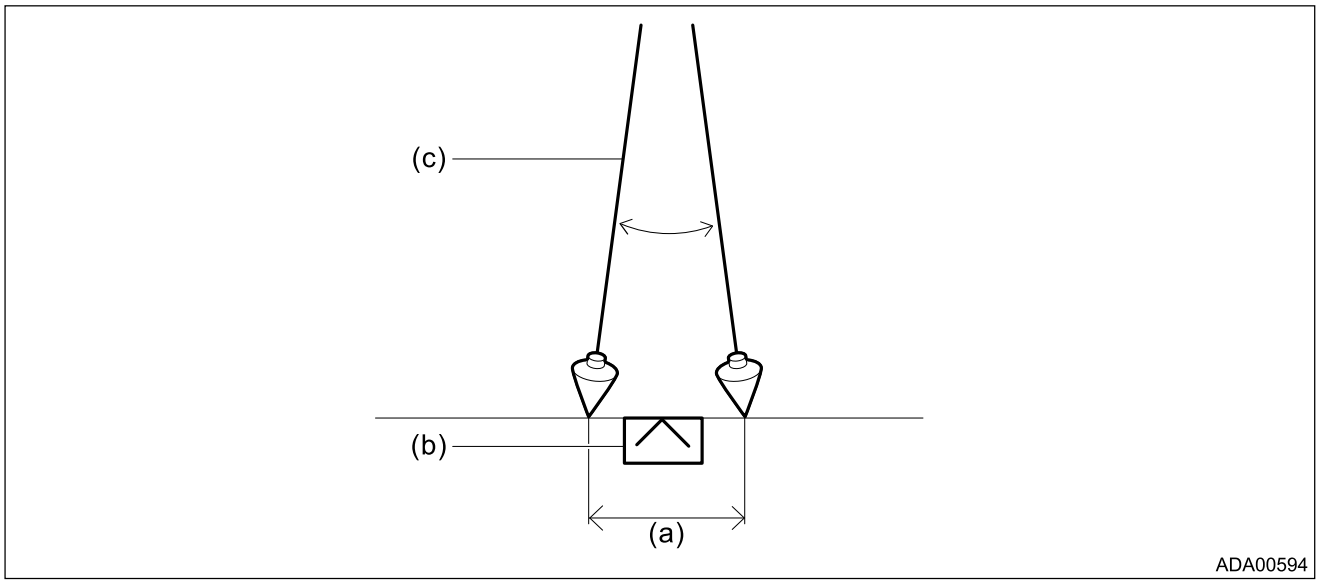
8. Place the RANDOM CHART.



Caution:

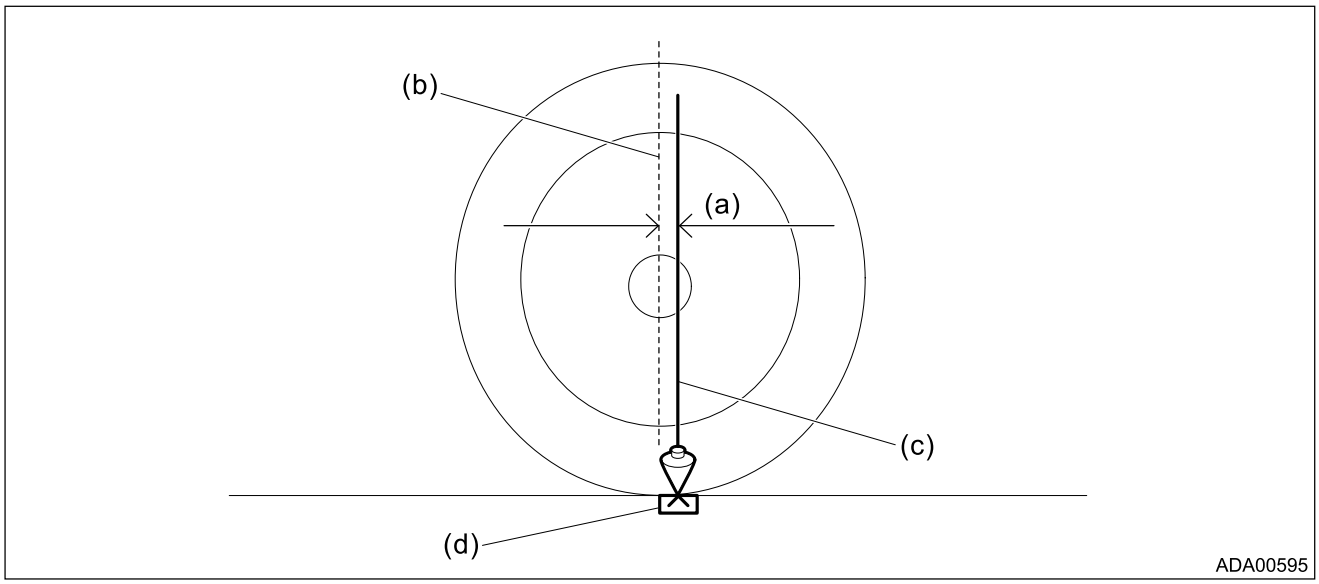
- **Affix the RANDOM CHART onto the vertical wall, etc. with flat surface.**
- **When affixing the RANDOM CHART using tape, place the tape within 10 mm (0.39 in) from the edge of the CHART. In this case, do not affix with lustrous tapes which may reflect the light.**
- **Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.**
- **The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)**

(1)Using the plumb bob, attach the RANDOM CHART on a wall, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).



(a) Vehicle body center line (C-D line)
(b) Wall
(c) Setting reference (vertical line)

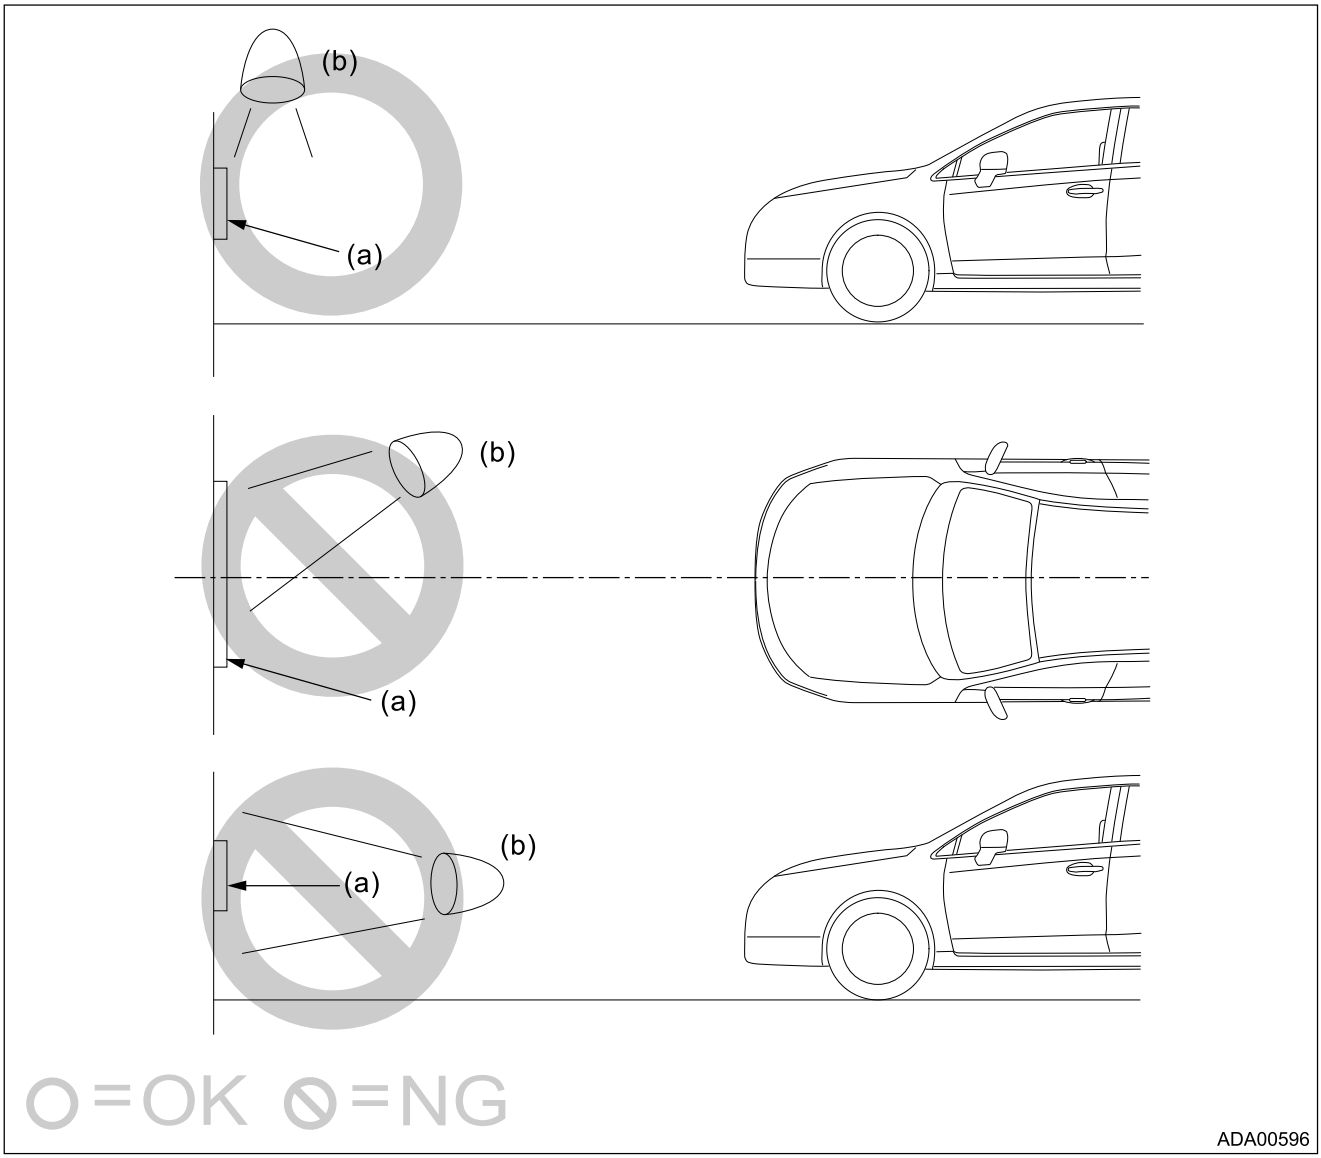
(a) ① = Setting reference (vertical line) and vehicle body center line (C-D line)
(b) ② = Setting reference (horizontal line)
(c) Plumb bob
(d) Floor
(e) 1,000 mm (3 ft, 3 3/8 in)



Caution:

- **Centering accuracy of the plumb bob shall be ±4 mm (±0.16 in) or less.**

(a) ±4 mm (±0.16 in) (b) Marking (c) Plumb bob



- **Positioning accuracy of the measure shall be ±2 mm (±0.08 in) or less.**
- **Centering accuracy of the tire shall be ±4 mm (±0.16 in) or less.**

(a) ±4 mm (±0.16 in) (c) Plumb bob (d) Marking

(b) Tire center line

- **Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)**

(a) RANDOM CHART (b) Lighting

9. Turn the ignition switch to OFF.

10. Check the windshield glass and the dashboard. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > WINDSHIELD GLASS AND DASHBOARD.

Caution:

If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.

11. Connect the Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

12. Turn the ignition switch to ON.

13. Wait for 10 seconds.

14. On [Start] display, select [Diagnosis].

15. On [Vehicle selection] display, enter vehicle information and select [Set].

16. On [Main Menu] display, select [Each System].

17. On the [Select System] display, select [EyeSight], and then select [Next] while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on the stereo camera cover assembly at the same time.

Note:
If [EyeSight] is selected without pressing two switches at the same time, the camera adjustment items are not displayed in [Work Support]. (for preventing misoperation) Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In that case, repeat from the selection of [EyeSight].

18. On [Select Function] display, select [Work Support].
19. From the work support item list, select and perform camera adjustment or other inspections.

Note:
- **When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.**
- **After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.**

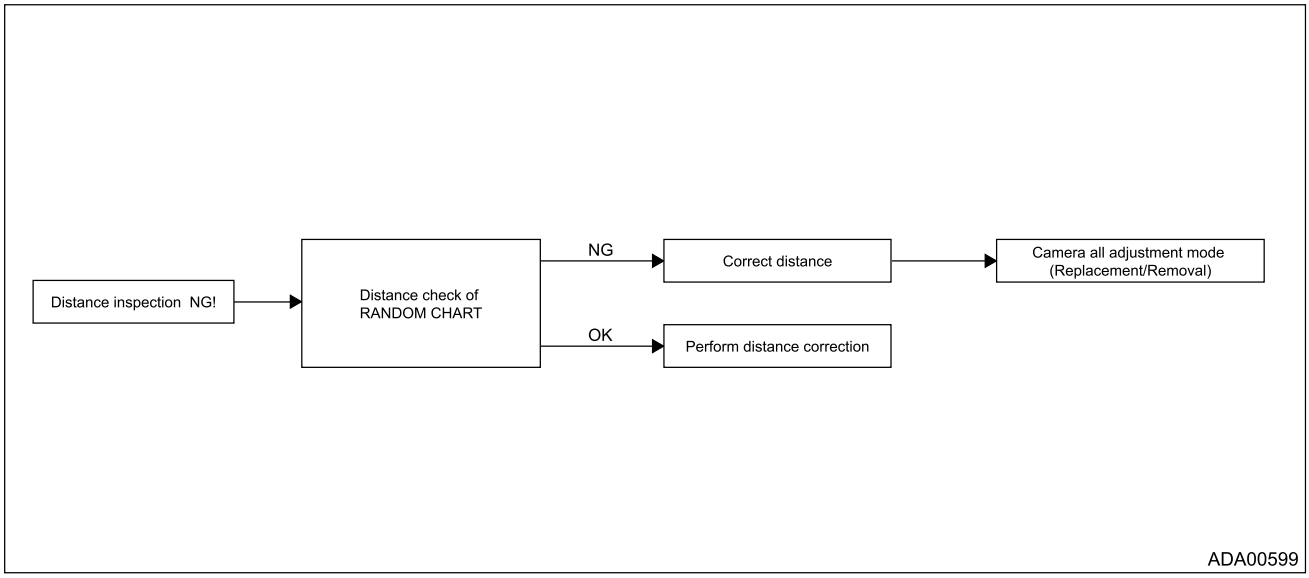
2. ADJUSTMENT VALUE CLEAR

Perform when replacing stereo camera. (Do not perform when performing stereo camera re-adjustment and inspection)

1. On the work support item list, select [Clear adjustment value].
2. When [Make the following adjustment/inspection. Please push OK if ready. CAUTION! - Please confirm because the chart position height differs according to the model (vehicle height). - Set the ignition switch to OFF after press Cancel at the end of adjustment/inspection mode.] is displayed, select [OK] if preparation is ready.
3. After [Clear the adjustment value. CAUTION! Perform this only under the conditions listed in the service manual.] is displayed, select [OK].
4. When [Clearing adjustment value...] is displayed, wait until it finishes.
5. When the adjustment value clear is finished correctly, and [Adjustment value clear OK! Adjustment value clear is completed. Please to IG OFF more than 5 seconds. (CODE &BYTE03)] is displayed, select [OK] to finish.
6. Turn the ignition switch to OFF and wait for approx. 5 seconds or more.

   Caution:
   If the ignition switch OFF period is short, the adjustment value clear can not be performed correctly.
7. Next, perform the camera all adjustment mode (replacement/removal). Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL).

3. CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL)



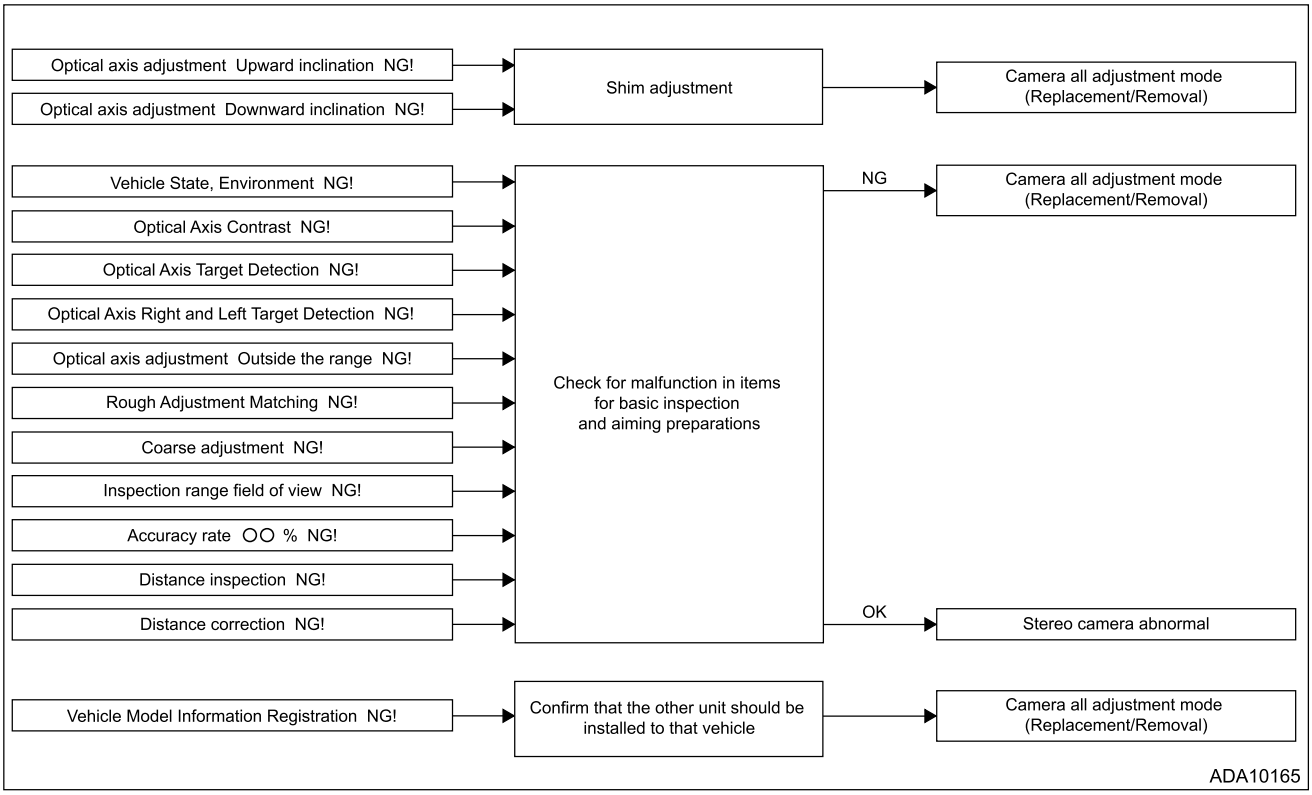
Perform this procedure when the stereo camera is replaced or re-adjustment is necessary (when stereo camera malfunctioning, when stereo camera reinstalled, when windshield glass replaced).

Caution:
- **When the stereo camera is replaced, be sure to perform the Clear adjustment value first. When {Clear adjustment value} was skipped, restart the procedure from {Clear adjustment value} again. Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > ADJUSTMENT VALUE CLEAR.**
- **Perform the camera adjustment and inspection at curb weight without passengers.**
- **When the camera all adjustment mode is performed, the procedures must be completed correctly to the end. Otherwise, the warning is displayed on the meter LCD when the vehicle moves.**

1. On the work support item list, select [Camera all adjustment mode (replacement/removal)].
2. When [Make the following adjustment/inspection. Please push OK if ready. CAUTION! - Please confirm

because the chart position height differs according to the model (vehicle height). - Set the ignition switch to OFF after press Cancel at the end of adjustment/inspection mode.] is displayed, select [OK] if preparation is ready.

3. When [In process...] is displayed, wait until it finishes.
4. When the accuracy rate inspection is finished correctly, and [Accuracy rate ○○% OK!] is displayed, select [OK] to go to step 9).
5. When [Distance inspection NG! Distance inspection abnormal. Reconfirm distance from vehicle to chart. If distance is OK, press "OK" to continue. Perform distance correction & accuracy rate check If distance is NG, press "Cancel". Correct distance installation and start over again (CODE 03-2)] is displayed, refer to the NOTE below.



Note:

Distance check and adjustment of RANDOM CHART Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > PREPARATIONS.

6. When [Perform distance correction. CAUTION! Perform only at the time of distance inspection NG (CODE 03-2).] is displayed, select [OK]. When the distance correction is finished correctly, and [Distance correction OK! Distance correction has been completed normally. Perform accuracy rate inspection again.] is displayed, select [OK] and go to the accuracy rate inspection.
7. When [Perform accuracy rate inspection.] is displayed, select [OK]. When the accuracy rate inspection is finished correctly, and [Accuracy rate &INT03% OK! Camera inspection has been completed normally. To save and apply adjustment, inspection results, turn OFF ignition SW more than 5 seconds.] is displayed, select [OK] to go to the next step.
8. When [○○ NG!] is displayed during adjustment, refer to the NOTE below.

Caution:

For details on the displayed items, refer to the following list. Check the list items, and if the same NG item is displayed even when aiming is performed again, replace the stereo camera.

LIST

Error code	Display	Check items on error	Remarks
1401	[Vehicle State • Environment NG!]	Check body integrated unit.	—
1402	[Vehicle Model Information Registration NG!]	Confirm the part numbers of EyeSight system components, and reconfirm that the unit should be installed to that vehicle. To confirm the components, check each item.	—
1403	[Optical Axis Contrast NG!]	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the stereo camera. 3. Stereo camera and camera plate are assembled with no gap. 4. Random chart for ver. 3 must be used. 5. There should be no obstacles that blocks the random chart. 6. Random chart must be set correctly for the vehicle. 7. Grid pattern of random chart should not be dirty or damaged. 8. Lighting circumstance for random chart should be normal. 9. Make sure that the headlight is off. 10. There should be no objects (reflection) on the instrument panel. 11. Dirt should not adhere to the windshield or the lens filter of the stereo camera.	Highly relevant with the check items 1 to 12.
1404	[Optical Axis Target Detection NG!]		Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1405	[Optical Axis Target Detection NG!]		Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1406	[Optical Axis Right and Left Target Detection NG!]		Highly relevant with the check items 1 to 12.

Error code	Display	Check items on error	Remarks
1407	[Out of the Optical Axis Adjustment Range NG!]	12. There should be no crack on the windshield. **Note:** **Detecting measures for the error codes 1403, 1404, 1405, 1406 and 1407 are different. Check items on error with high relevance are shown in the remarks.**	Highly relevant with the check items 3 and 6.
1408	[Optical axis adjustment Upward inclination NG!]	1. Random chart must be set correctly for the vehicle. 2. Aiming is performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns downward.	—
1409	[Optical axis adjustment Downward inclination NG!]	1. Random chart must be set correctly for the vehicle. 2. Aiming is performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns upward.	—
140 A	[Rough Adjustment Matching NG!]	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the stereo camera. 3. Stereo camera and camera plate are assembled with no gap. 4. There should be no obstacles that blocks the random chart. 5. Random pattern of random chart should not be dirty or damaged. 6. Lighting circumstance for random chart should be normal. 7. There should be no objects (reflection) on the instrument panel. 8. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 9. There should be no crack on the windshield.	Highly relevant with the check items 1 to 9.
140 B	[Coarse adjustment NG!]		Highly relevant with the check items 3, 5, 7 and 9.

Error code	Display	Check items on error	Remarks
140C	[Coarse adjustment NG!]	**Note:** **Detecting measures for the error codes 140A, 140B and 140C are different. Check items on error with high relevance are shown in the remarks.**	Highly relevant with the check items 3, 5, 7 and 9.
140E	[Inspection range field of view NG!]	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the random chart. 3. Random pattern of random chart should not be dirty or damaged. 4. Lighting circumstance for random chart should be normal. 5. There should be no objects (reflection) on the instrument panel. 6. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 7. There should be no crack on the windshield. 8. Windshield for EyeSight should be assembled.	—
140F	[Distance inspection NG!]	1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—
1410	[Accuracy rate 00% NG!]	1. Lighting circumstance for random chart should be normal. 2. Random pattern of random chart should not be dirty or damaged. 3. There should be no objects (reflection) on the instrument panel. 4. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 5. There should be no crack on the windshield.	—
1501	[Distance correction NG!]	When [Distance inspection NG!] is displayed and distance correction is performed without inspection, check the following. 1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—

Note:

- **Shim adjustment: Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > SHIM ADJUSTMENT.**
- **Basic inspection items: Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION.**
- **Aiming preparation items: Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > PREPARATIONS.**

9. Turn the ignition switch to OFF and wait for approx. 10 seconds. (time necessary to save adjustment and inspection result)

   Caution:

   - **If the ignition switch OFF period after adjustment and inspection finished is short, the adjustment and inspection result cannot be saved correctly. The warning is displayed on the meter LCD, when the vehicle moves.**
   - **When aiming begins, normal recognition process stops and the warning is displayed on the meter LCD. The warning display will be cleared by turning the ignition switch OFF → ON.**
   - **If the steering wheel is operated many times during adjustment and inspection preparation, the power steering control module is overheated. Therefore, you may have to wait for at least 10 seconds after turning the ignition switch to OFF.**

10. Turn the ignition switch to ON. Make sure the [Aiming Completion Status] of [Data Monitor] is [Exit] using Subaru Select Monitor.
11. Perform the {Clear Memory}, and turn the ignition switch to OFF.
12. Subsequently perform the automatic adjustment and function check by a test driving. Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING.

4. AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING

Caution:

Make sure to perform the automatic adjustment and function check by driving after replacing or readjusting the stereo camera and windshield for securing the stereo camera recognition accuracy.

Note:

The automatic adjustment and function check by driving can adjust the stereo camera more in detail in addition to the stereo camera adjustment using RANDOM CHART.

1. Perform this procedure after finishing stereo camera adjustment and inspection.
2. Connect the Subaru Select Monitor.

   Note:

   For detailed operation procedures, refer to “Application help”.
3. On [Start] display, select [Diagnosis].
4. On [Select Vehicle] display, enter vehicle information and select [Confirmed].
5. On [Main Menu] display, select [Each System].
6. On [Select System] display, select [EyeSight], and then select [Next].
7. On [Select Function] display, select [Data monitor].
8. From the data monitor item list, select [Automatic Adjustment Status].
9. Drive the vehicle until [Automatic adjustment status] displays [0F], [1F], [2F] or [3F].

Caution:

- **For the automatic adjustment, drive the vehicle on straight road with white lines on both sides at a speed of 40 km/h (25 MPH) or more for at least five minutes, while maintaining distance from the preceding vehicle 40 m (132 ft) or more.**
- **Maintain the following conditions until [Automatic Adjustment Status] displays [0F], [1F], [2F] or [3F].**
  – Turn the active lane keep and cruise main to OFF.
  – Hold down the pre-collision brake OFF switch for two seconds to turn OFF the pre-collision brake function.

Display	Contents	Unit of measure	Note (at idling)
[Automatic adjustment status]	Index for automatic adjustment operation performed by the driving test after the completion of the optical axis adjustment	—	[0F], [1F], [2F] or [3F] is displayed when completed.

Note:

- **It may takes long until [0F], [1F], [2F] or [3F] is displayed depending on the road condition etc.**
- **For new vehicles, [00] may be displayed. It is not necessary to drive the vehicle before delivery because high-accuracy aiming has been performed at vehicle shipment.**

10. From the data monitor item list, display [Lane recognition status] to check if any of the following appears.

Note:

When driving does not continue until [0F], [1F], [2F] or [3F] is displayed, it may take long before recognition completes.

- Recognizing white lines on both sides during driving at 40 km/h (25 MPH) or more: [03]
- Recognizing white lines on both sides with lane width 3 m (10 ft) or more during driving at 65 km/h (40 MPH) or more: [05]

Display	Contents	Unit of measure	Note (at idling)
[Lane Recognition Status]	Display of lane recognition status	—	Recognized when vehicle lane can be seen by 20 m (66 ft) or more.

11. From the data monitor item list, display [Preceding vehicle distance] to check if the distance from the preceding vehicle is approximately the same.

5. SHIM ADJUSTMENT

1. Turn the ignition switch to OFF.

2. Detach the stereo camera cover assembly, and remove the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

3. Remove the stereo camera plate, and insert the shim into the vehicle body and camera plate.

Preparation items:

Genuine part: Shim (washer) (031105000)

Note:

- **Inserting the shim into the vehicle front side makes camera downward.**
- **Inserting the shim into the vehicle rear side makes camera upward.**
- **There is a case that the shim may be inserted at the production line, but it is not abnormal.**

4. Install the stereo camera plate.

Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

5. Install the stereo camera and stereo camera cover assembly. Ref. to EyeSight>Stereo Camera>INSTALLATION.
6. Perform the camera all adjustment mode (replacement/removal). Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL).

6. CAMERA INITIALIZATION

This is a recovery measures prepared for the data failure caused by the low battery voltage during data storage to inside the stereo camera.

Caution:
Do not usually perform camera initialization because it will clear the aiming data and/or DTCs.

Perform the camera initialization only when the aiming result is NG even if the vehicle is placed correctly as shown in the flowchart described in "A: Procedure". After camera initialization, perform the aiming in the same procedure as for camera replacement.

1. Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
2. Turn the ignition switch to ON.
3. Wait for 10 seconds.
4. On [Start] display, select [Diagnosis].
5. On [Select Vehicle] display, enter vehicle information and select [Confirmed].
6. On [Main Menu] display, select [Each System].
7. On [Select System] display, select [EyeSight], and then select [Confirmed].
8. On [Select Function] display, select [DTC].
9. Select [Clear memory] while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on the stereo camera cover at the same time.
10. Turn the ignition switch to OFF.
11. Wait for 5 seconds.
12. Next, perform the clear adjustment value. Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE > ADJUSTMENT VALUE CLEAR.

REMOVAL

1. PRE-COLLISION BRAKE OFF & LANE DEPARTURE WARNING OFF SWITCH

The pre-collision brake OFF & lane departure warning OFF switch is integrated in the stereo camera cover assembly. For operation procedure, replace the stereo camera cover assembly. Ref. to EyeSight>Stereo Camera.

2. EYESIGHT STEERING SWITCH

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Set the tire to the straight-ahead position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
4. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
5. Remove the EyeSight steering switch. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>DISASSEMBLY.

INSTALLATION

1. PRE-COLLISION BRAKE OFF & LANE DEPARTURE WARNING OFF SWITCH

The pre-collision brake OFF & lane departure warning OFF switch is integrated in the stereo camera cover assembly. For operation procedure, replace the stereo camera cover assembly. Ref. to EyeSight>Stereo Camera.

2. EYESIGHT STEERING SWITCH

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**
- **Make sure that the steering roll connector is not turned from the original position.**
- **If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**
- **Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.**

1. Install the EyeSight steering switch.
2. Align the center position of the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>ADJUSTMENT.
3. Install the steering wheel.

   Tightening torque:

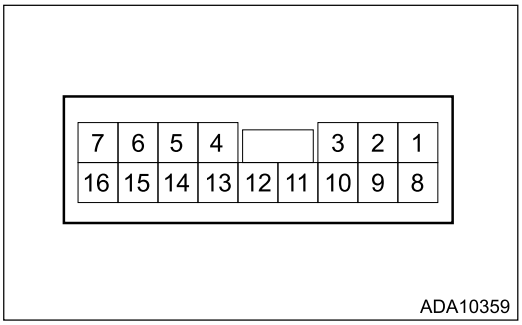
   39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:

Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

4. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

EyeSight > Switches and Harness



INSPECTION

1. PRE-COLLISION BRAKE OFF SWITCH AND LANE DEPARTURE WARNING OFF SWITCH

1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

- Pre-collision brake OFF switch

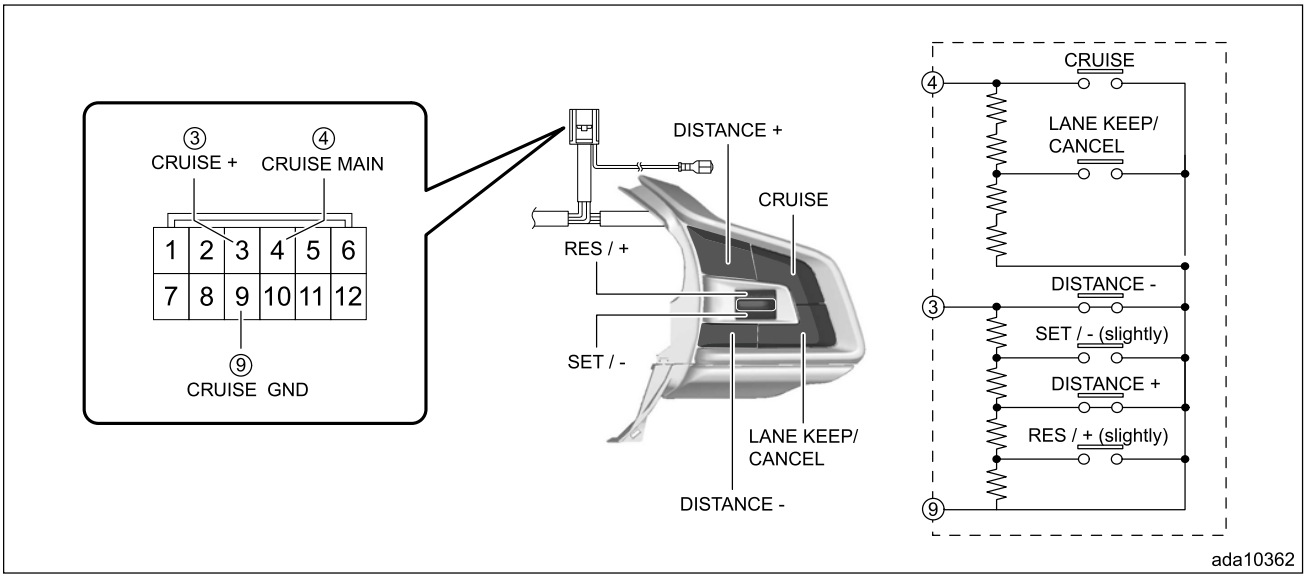
Terminal No.	Inspection conditions	Standard
10 — 13	OFF	Approx. 1 kΩ
	ON	Less than 1 Ω

- Lane departure warning OFF switch

Terminal No.	Inspection conditions	Standard
9 — 13	OFF	Approx. 1 kΩ
	ON	Less than 1 Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
8 (+) — 12 (−)	Apply battery voltage.	Light ON



3. Replace the stereo camera cover assembly if faulty is found in the inspection.

2. EYESIGHT STEERING SWITCH

1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 9	DISTANCE− SET/− DISTANCE+ RES/+	All OFF	Approx. 4,020Ω
	DISTANCE−	ON	Less than 1 Ω
	SET/−	ON	Approx. 250 Ω
	DISTANCE+	ON	Approx. 680 Ω
	RES/+	ON	Approx. 1,470Ω
4 — 9	CRUISE LANE KEEP/CANCEL	All OFF	Approx. 4,020Ω
	CRUISE	ON	Less than 1 Ω
	LANE KEEP/CANCEL	ON	Approx. 680 Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (−)	Apply battery voltage.	Light ON

3. Replace the EyeSight steering switch if it is found defective.

NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section.
Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

NOTE

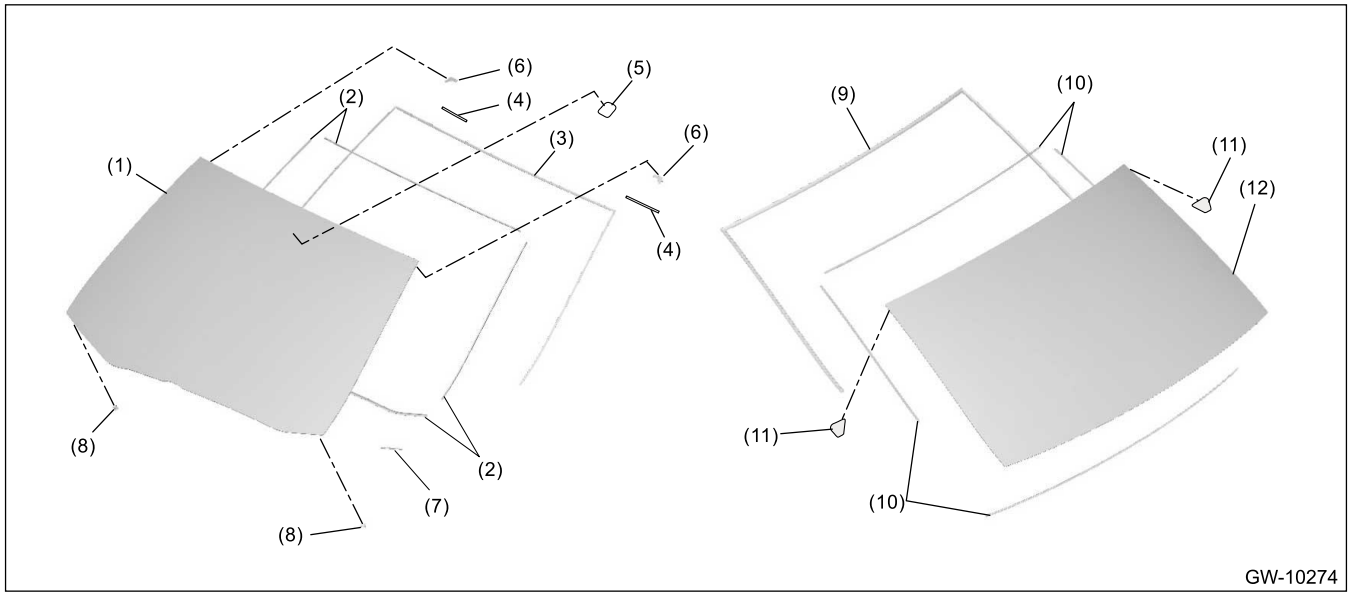
For the operation procedures for stop light and brake switch, refer to “BRAKE” section. Ref. to BRAKE>Stop Light Switch.

NOTE

For the operation procedures for roll connector (steering angle sensor), refer to “AIRBAG SYSTEM” section.
Ref. to AIRBAG SYSTEM>Roll Connector.

INSPECTION

For diagnostics with phenomenon, refer to “Diagnostics with Phenomenon” of “EyeSight (DIAGNOSTICS)” section. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon.



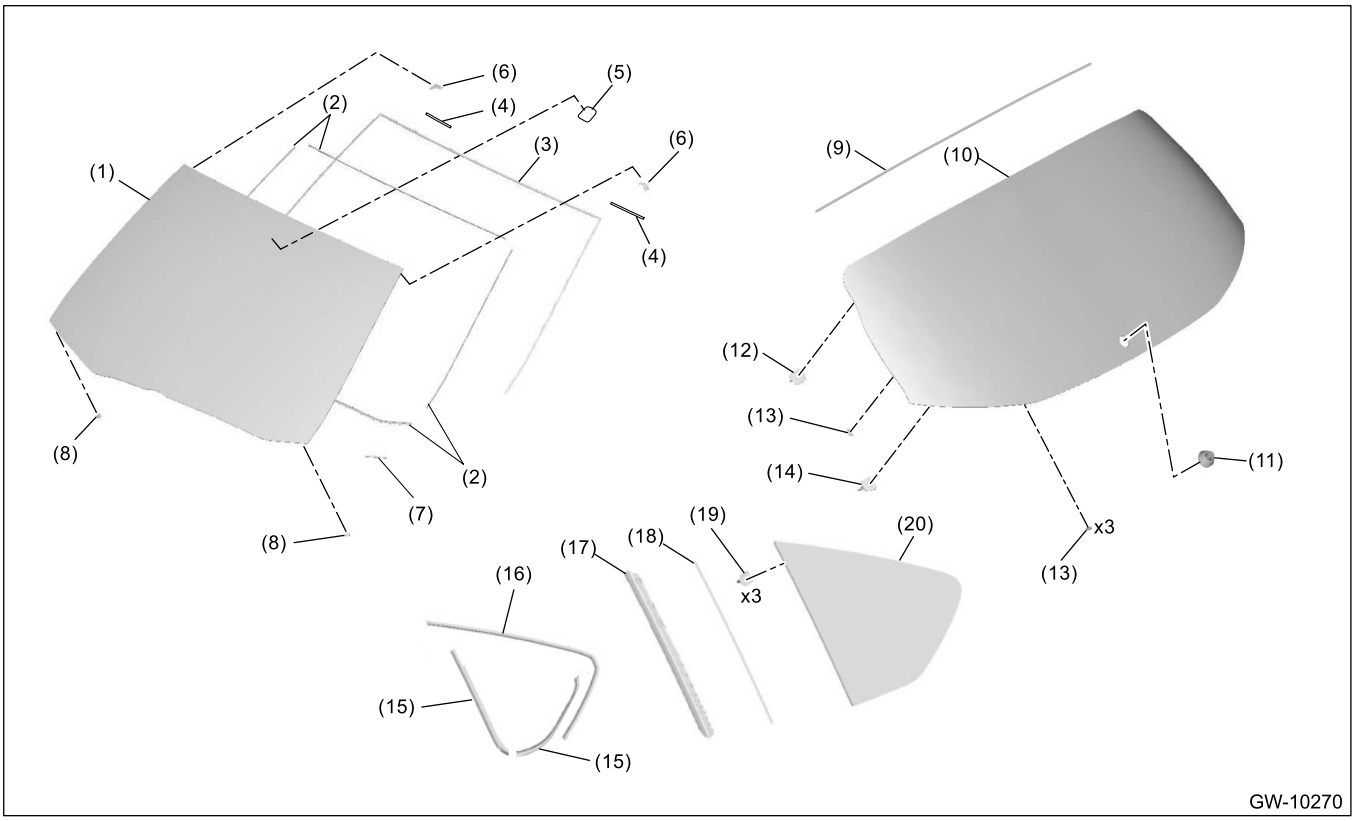
GLASS/WINDOWS/MIRRORS

GW

1. General Description
2. Relay and Fuse
3. Power Window System
4. Power Window Control Switch
5. Front Door Glass
6. Front Regulator and Motor Assembly
7. Remote Control Mirror System
8. Outer Mirror Assembly
9. Remote Control Mirror Switch
10. Rearview Mirror
11. Rear Door Glass
12. Rear Regulator and Motor Assembly
13. Windshield Glass
14. Rear Window Glass
15. Rear Gate Glass
16. Rear Window Defogger System
17. Rear Quarter Glass
18. Wiper Deicer System

COMPONENT

1. FIXED GLASS (4 DOOR MODEL)

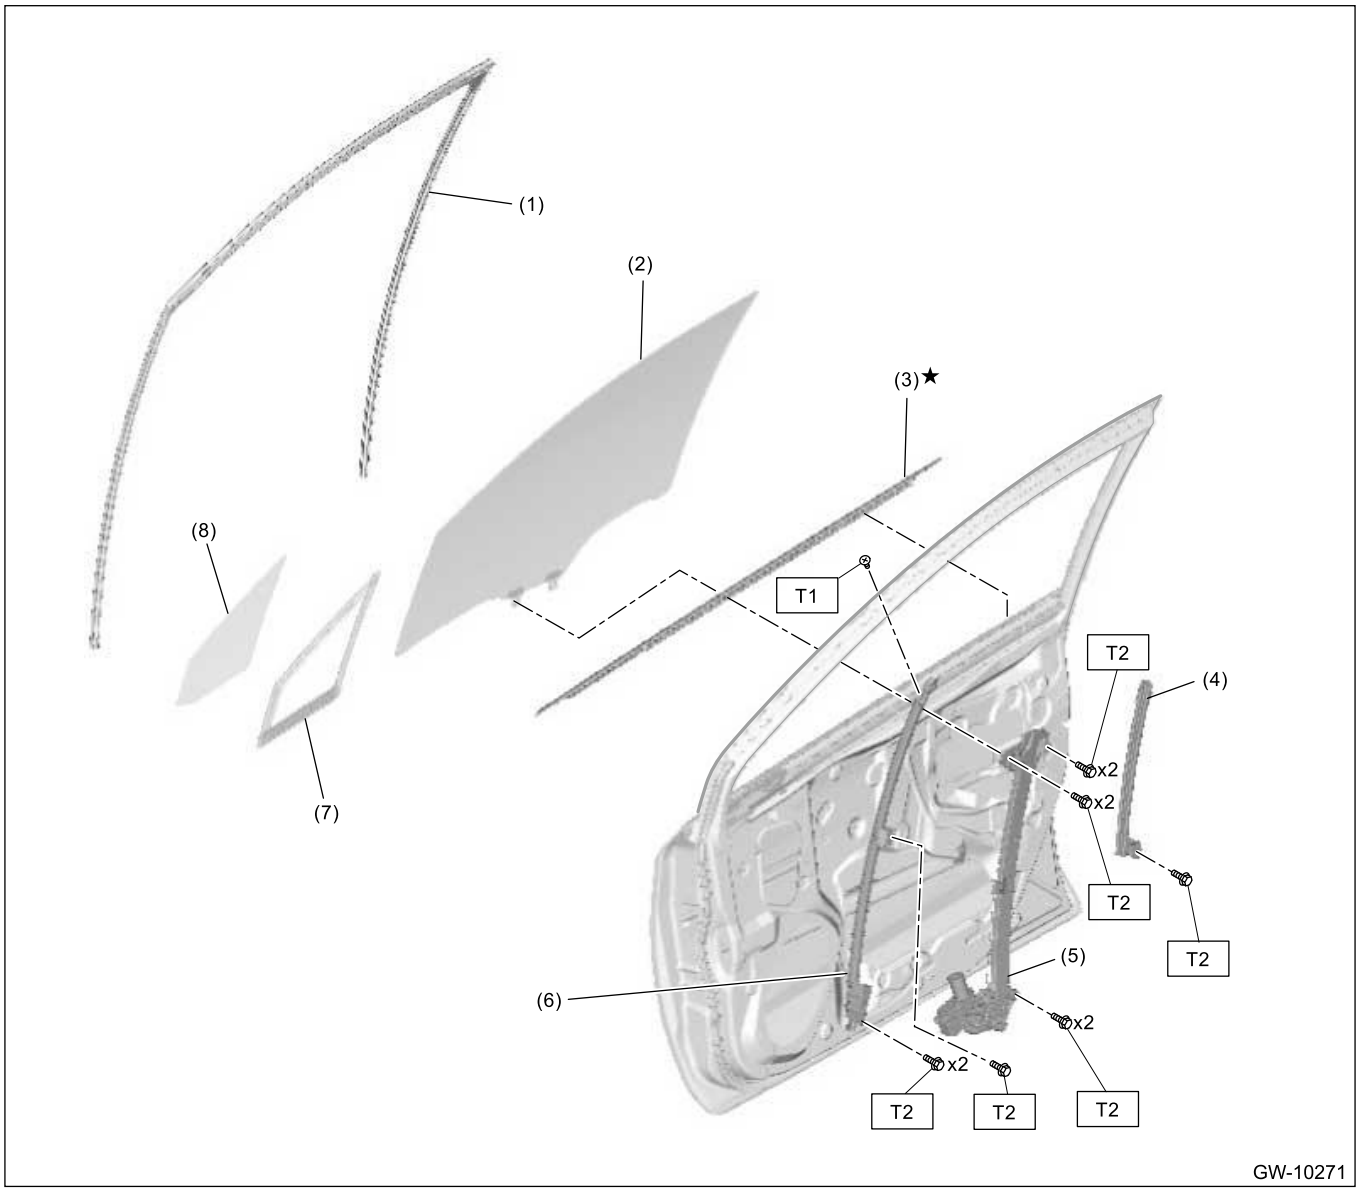


(1) Glass - front window	(6) Locating pin - front window	(11) Locating pin - rear window
(2) Dam rubber - front	(7) Seal - lower VIN	(12) Glass - rear window
(3) Molding - front window	(8) Seal - lower	
(4) Seal - upper	(9) Molding - rear window	
(5) Base - inner mirror	(10) Dam rubber - rear	

Note:

Base - inner mirror cannot be removed from the glass - front window.

2. FIXED GLASS (5 DOOR MODEL)

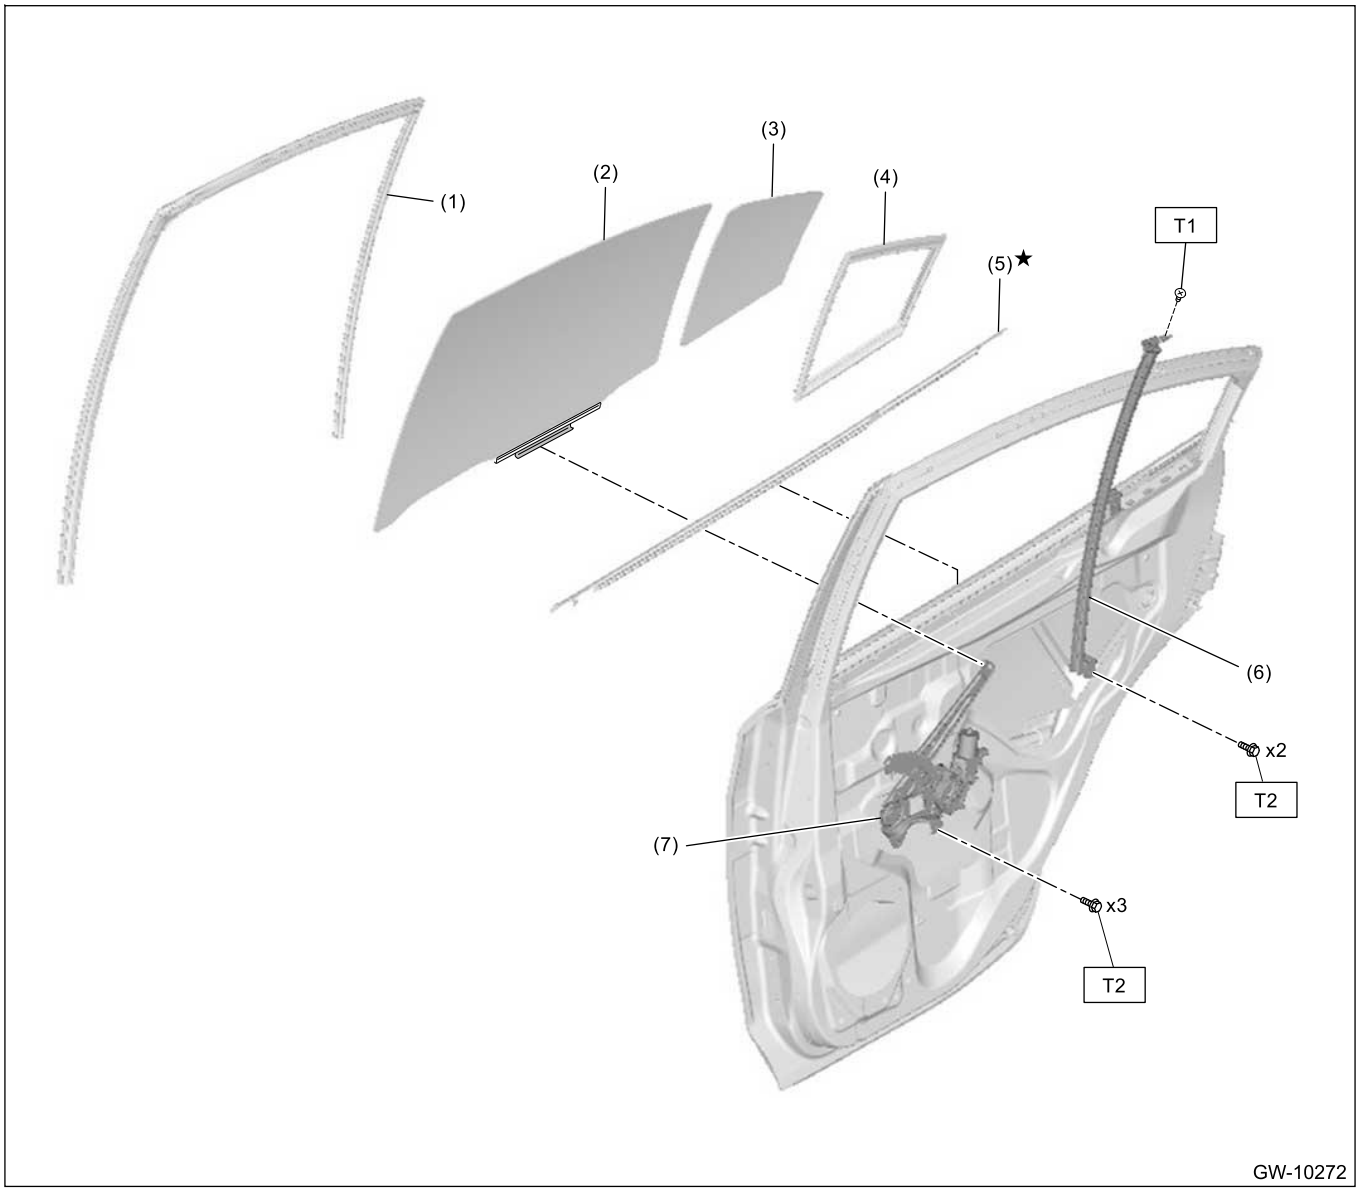


(1) Glass - front window
(2) Dam rubber - front
(3) Molding - front window
(4) Seal - upper
(5) Base - inner mirror
(6) Locating pin - front window
(7) Seal - lower VIN
(8) Seal - lower
(9) Dam rubber - rear gate
(10) Glass - rear gate
(11) Cap - pivot
(12) Locating pin - rear gate
(13) Spacer - rear gate
(14) Holder - rear gate
(15) Dam rubber B - rear quarter
(16) Dam rubber A - rear quarter
(17) Molding - rear quarter
(18) Molding tape - rear quarter
(19) Locating pin - rear quarter
(20) Glass - rear quarter

Note:

Base - inner mirror cannot be removed from the glass - front window.

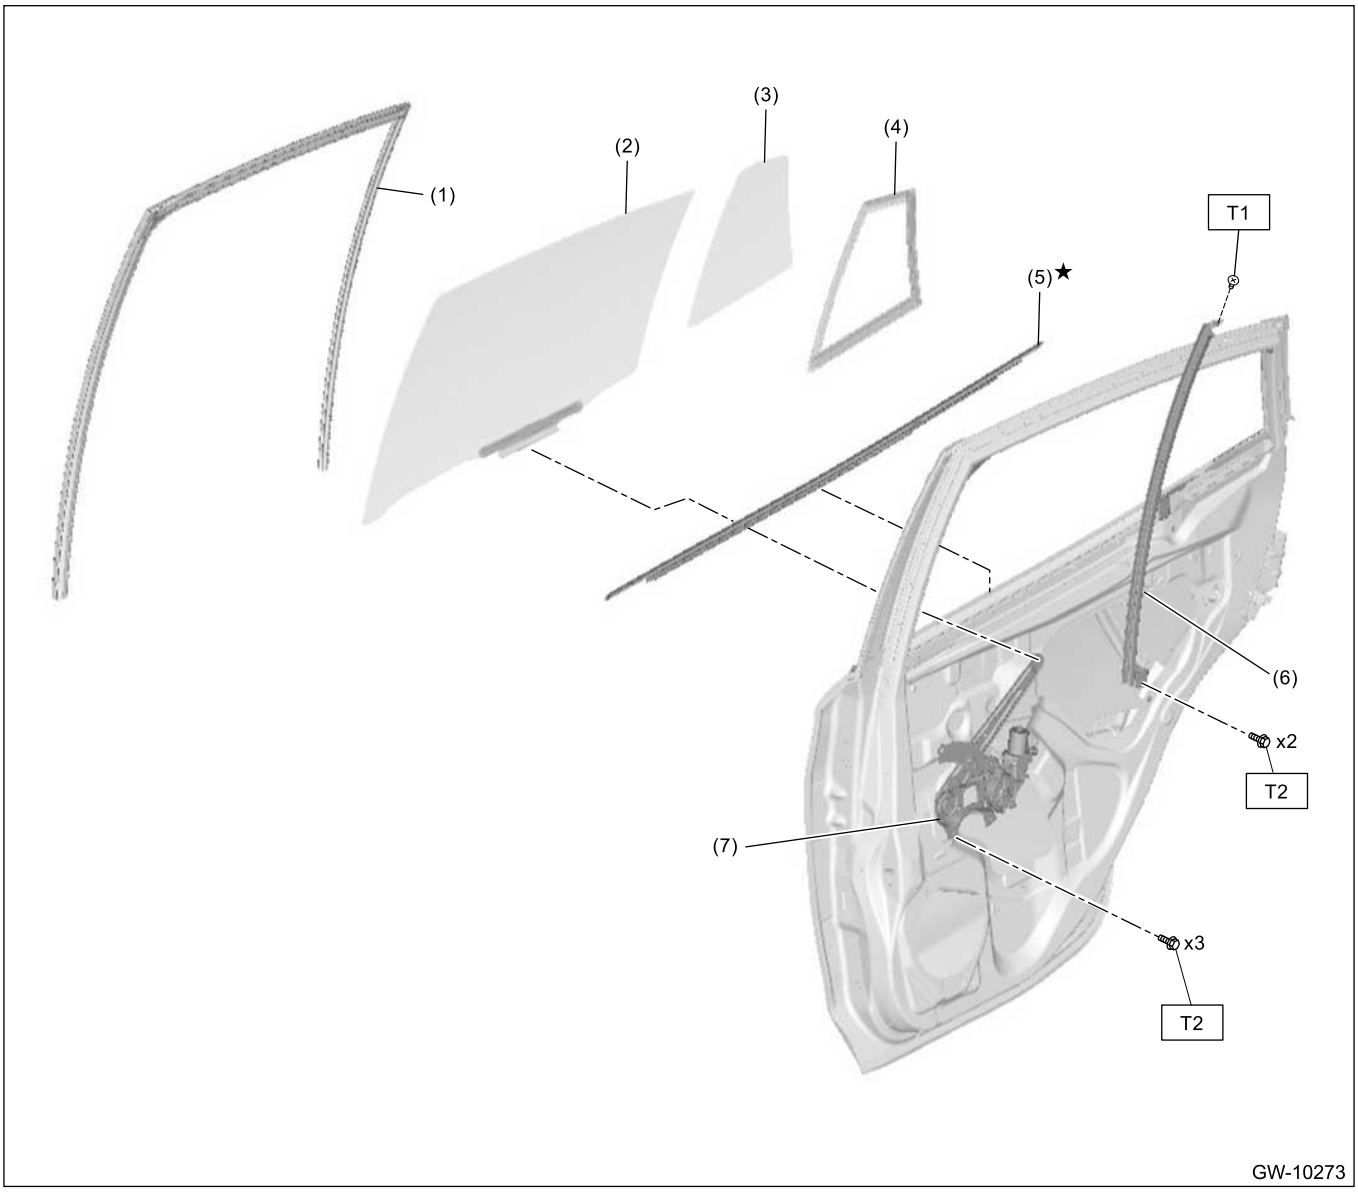
3. FRONT DOOR GLASS



(1) Running channel - front door
(2) Glass ASSY - front door
(3) Weather strip outer - front door
(4) Sash ASSY - lower
(5) Regulator & motor ASSY - front
(6) Sash ASSY - partition
(7) Weather strip - front door partition
(8) Glass - front door partition

Tightening torque: N·m (kgf-m, ft-lb)

T1: 2.2 (0.2, 1.6)
T2: 7.5 (0.8, 5.5)

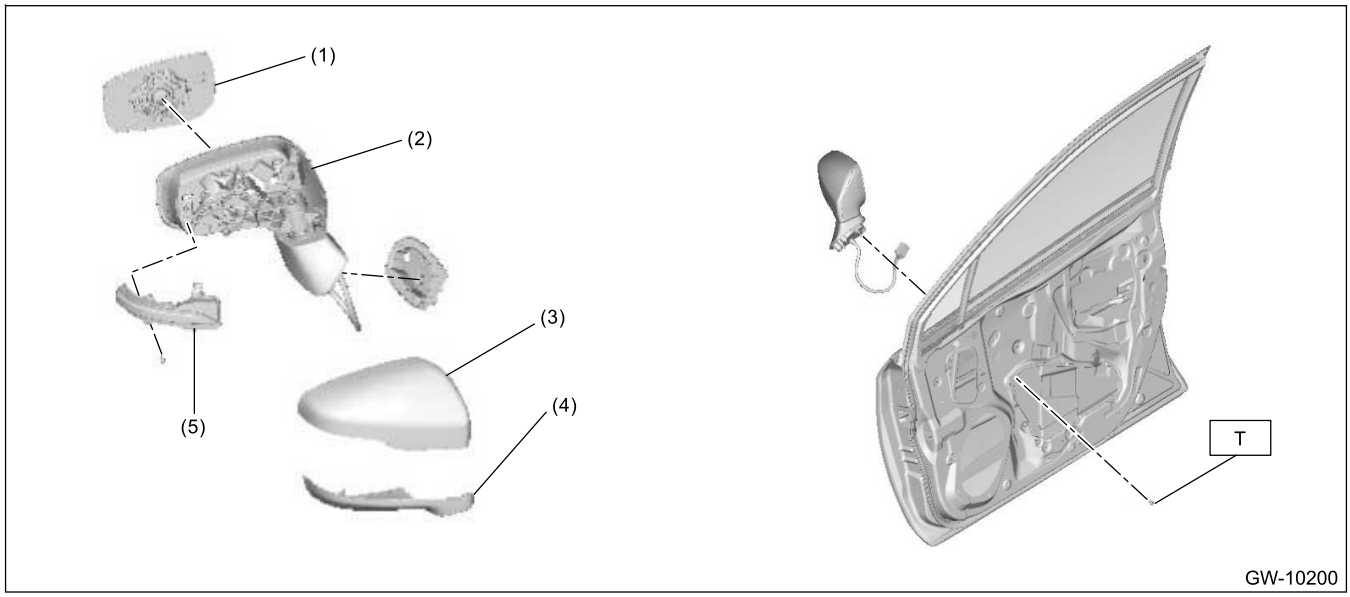


4. REAR DOOR GLASS

- 4 door model

(1)	Running channel - rear door	(5)	Weather strip outer - rear door	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Glass ASSY - rear door	(6)	Sash ASSY - rear partition	***T1: 2.2 (0.2, 1.6)***
(3)	Glass - rear door partition	(7)	Regulator & motor ASSY - rear	***T2: 7.5 (0.8, 5.5)***
(4)	Weather strip - rear door partition			

- 5 door model

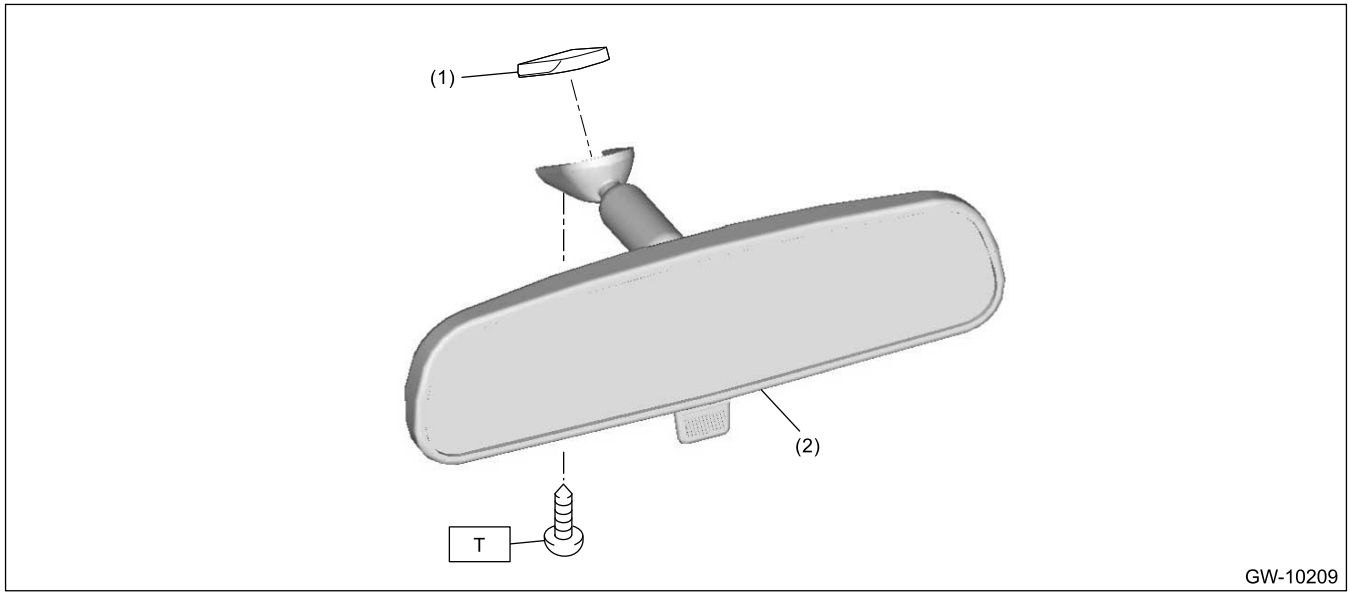


(1) Running channel - rear door
(2) Glass ASSY - rear door
(3) Glass - rear door partition
(4) Weather strip - rear door partition
(5) Weather strip outer - rear door
(6) Sash ASSY - rear partition
(7) Regulator & motor ASSY - rear

Tightening torque: N·m (kgf-m, ft-lb)

T1: 2.2 (0.2, 1.6)
T2: 7.5 (0.8, 5.5)

5. OUTER MIRROR



(1) Mirror - repair
(2) Mirror unit - door
(3) Cover - cap outer mirror
(4) Cover - cap outer mirror lower
(5) Light ASSY - side turn mirror

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

6. REAR VIEW MIRROR

(1) Base - inner mirror
(2) Mirror ASSY - inner rearview

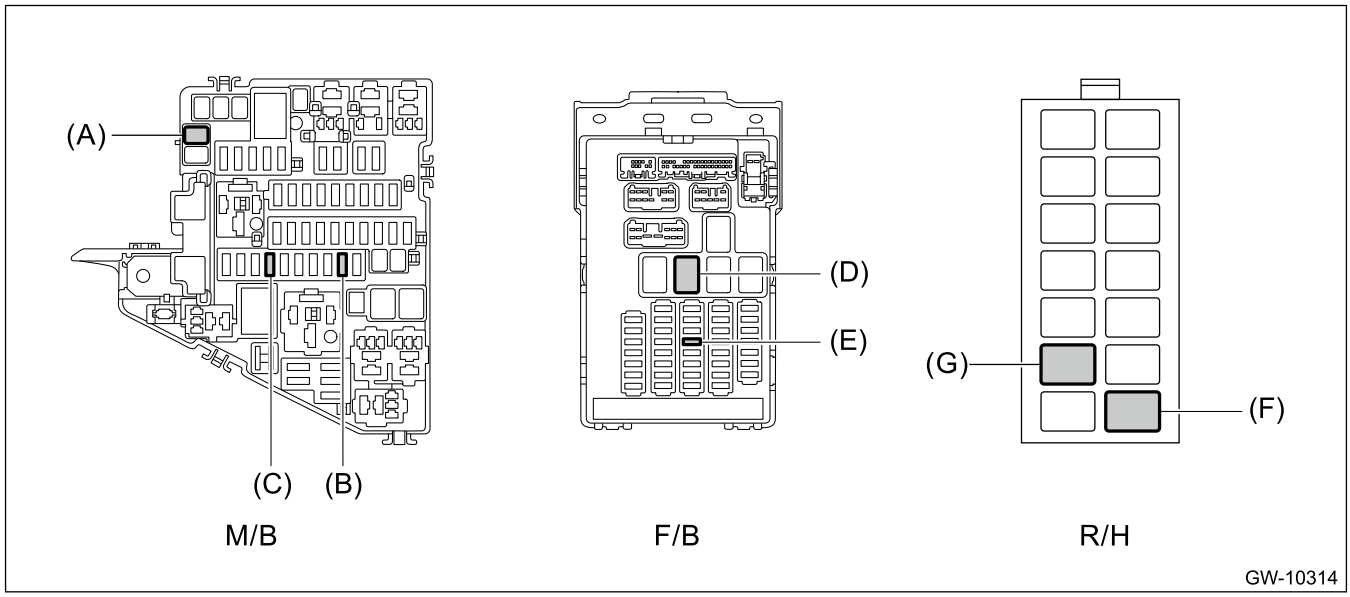
Tightening torque: N·m (kgf-m, ft-lb)

T: 2 (0.2, 1.5)

CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
- Avoid impact and damage to the glass.

PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Piano wire	Used for removing the window glass.
Cutter knife	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.

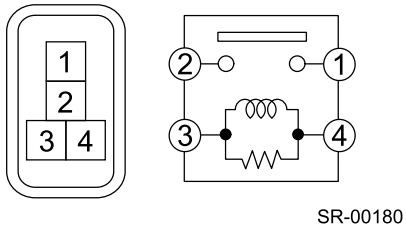
LOCATION

Main fuse box (M/B)	Slow blow fuse (power window)	(A)
	Fuse 25 A (rear defogger, mirror heater)	(B)
	Fuse 10 A (wiper deicer)	(C)
Fuse & relay box (F/B)	Power window relay	(D)
	Fuse 7.5 A (remote control mirror)	(E)
Relay holder (R/H)	Rear defogger relay Mirror heater relay	(F)
	Wiper deicer relay	(G)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION



1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1. Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	 SR-00180

2. Replace the relay if the inspection result is not within the standard value.

GLASS/WINDOWS/MIRRORS > Power Window System

WIRING DIAGRAM

Refer to “Power Window System” in the wiring diagram. Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

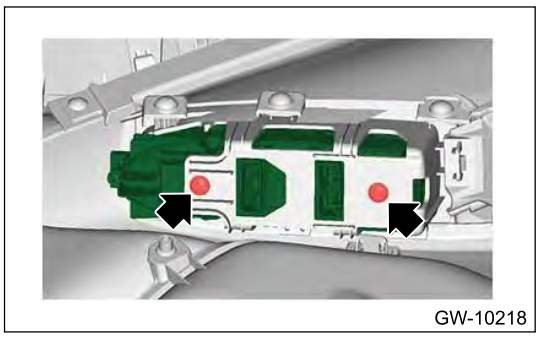
GLASS/WINDOWS/MIRRORS > Power Window System

INSPECTION

For inspection, refer to “Basic Diagnostic Procedure” of “POWER WINDOW (DIAGNOSTICS)” section.
Ref. to POWER WINDOW(DIAGNOSTICS) >Basic Diagnostic Procedure.

GLASS/WINDOWS/MIRRORS > Power Window System

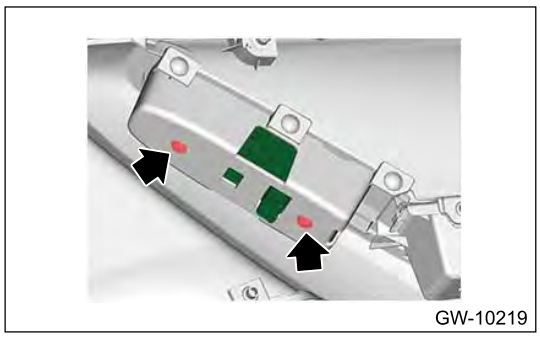
NOTE



For procedure of each component in the power window system, refer to the respective section.

- Power window control switch: Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch.
- Front door glass: Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass.
- Front regulator and motor assembly: Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
- Rear door glass: Ref. to GLASS/WINDOWS/MIRRORS>Rear Door Glass.
- Rear regulator and motor assembly: Ref. to GLASS/WINDOWS/MIRRORS>Rear Regulator and Motor Assembly.

REMOVAL



1. MAIN SWITCH

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the screws and remove the switch - power window main.

GW-10218

2. SUB-SWITCH

- **SWITCH - POWER WINDOW SUB FRONT**
  For removal of the switch - power window sub front on the passenger's seat, refer to the removal procedure of the switch - power window main. Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch>REMOVAL > MAIN SWITCH.
- **SWITCH - POWER WINDOW SUB REAR**
  1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
  2. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
  3. Remove the screws and remove the switch - power window sub rear.

GW-10219

INSTALLATION

Caution:

- **After installing the switch - power window main, always perform the initial setting. Failure to do so may cause the improper activation of auto-reverse operation for pinching hazard prevention. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION.**
- **Use protective paper to avoid damage to the trim panel.**

1. MAIN SWITCH

1. Install the panel - power window main switch to the trim panel - front door.
2. Install the trim panel - front door.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

2. SUB-SWITCH

- **SWITCH - POWER WINDOW SUB FRONT**
  For installation of the switch - power window sub front on the passenger's seat, refer to the installation procedure of the switch - power window main. Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch>INSTALLATION > MAIN SWITCH.
- **SWITCH - POWER WINDOW SUB REAR**
  1. Install the panel - power window sub switch rear to the trim panel - rear door.
  2. Install the trim panel - rear door.
  3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

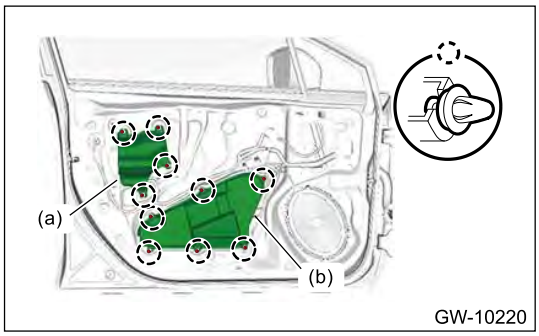
GLASS/WINDOWS/MIRRORS > Power Window Control Switch

INSPECTION

Caution:

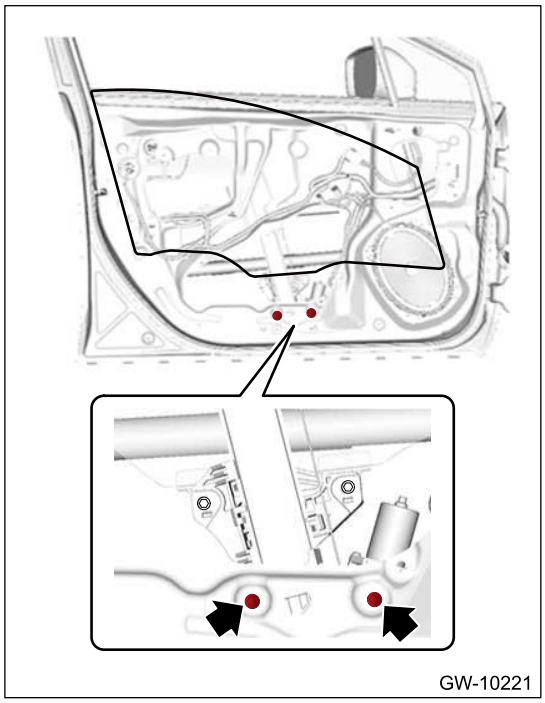
Since the power window switch is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester may damage the power window switch circuit.

For power window system inspection, refer to "POWER WINDOW (DIAGNOSTICS)" section. Ref. to POWER WINDOW(DIAGNOSTICS) >Basic Diagnostic Procedure.



REMOVAL

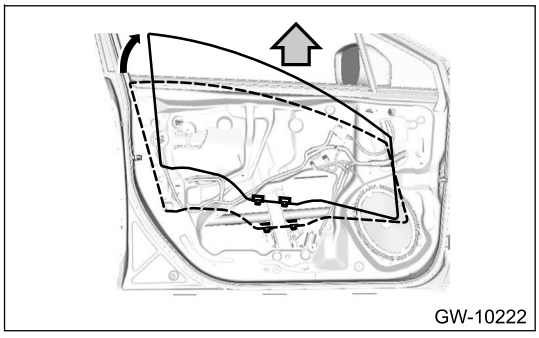
1. FRONT DOOR GLASS



1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the front sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > FRONT SEALING COVER.
4. Remove the plate - door UPR (a) and plate - door LWR (b).

   Caution:

   If it is removed with an excessive force, the panel assembly - front door may be deformed. Also, if the clip is damaged, replace it with a new clip.



5. Remove the glass assembly - front door.
   (1) Connect the switch - power window, and connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   (2) Turn the ignition switch to ON, and operate the switch - power window to move the glass assembly - front door to the position where the mounting bolts can be seen.
   (3) Turn the ignition switch to OFF, then disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
   (4) Remove the mounting bolts from the glass assembly - front door.

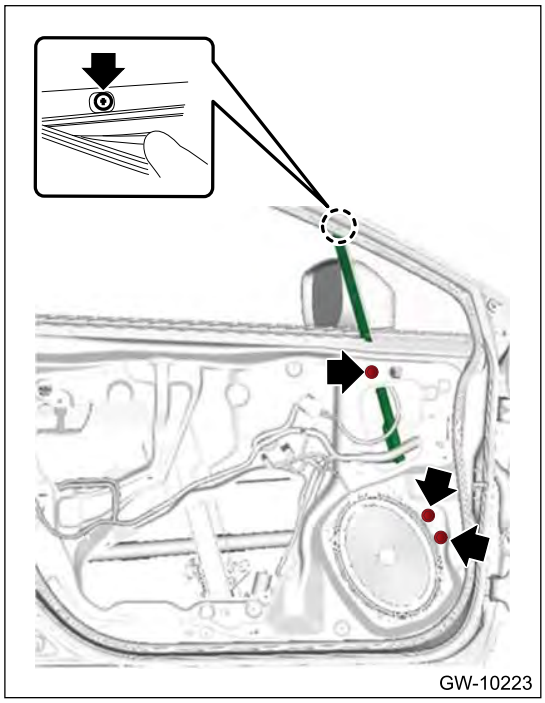
(5) While tilting the glass, remove the glass assembly - front door.

Caution:

Avoid impact and damage to the glass assembly - front door.

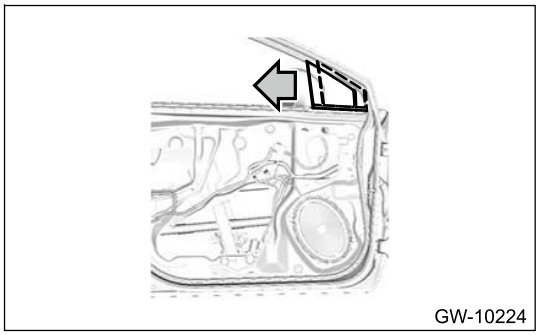
2. FRONT DOOR PARTITION GLASS

1. Remove the front door glass. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>REMOVAL > FRONT DOOR GLASS.
2. Remove the glass - front door partition.



Caution:

Do not damage the sash or sash tape OUT while removing.



(1) Partially turn over the running channel - front door.

(2) Turn over the weather strip - door, and remove the screws.

(3) Remove the bolts, and remove the sash assembly - partition while lowering it.

(4) Remove the glass - front door partition.

GLASS/WINDOWS/MIRRORS > Front Door Glass

INSTALLATION

1. FRONT DOOR GLASS

1. Install the glass assembly - front door.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the plate - door UPR and plate - door LWR.
3. Install the front sealing cover.
4. Install the trim panel - front door.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

2. FRONT DOOR PARTITION GLASS

1. Temporarily assemble the running channel - front door to the sash assembly - partition.
   Note:
   Assemble so that the end face of the running channel - front door is aligned with the mounting surface of the sash assembly - partition on vehicle side.
2. Install the glass - front door partition and the sash assembly - partition temporarily assembled.

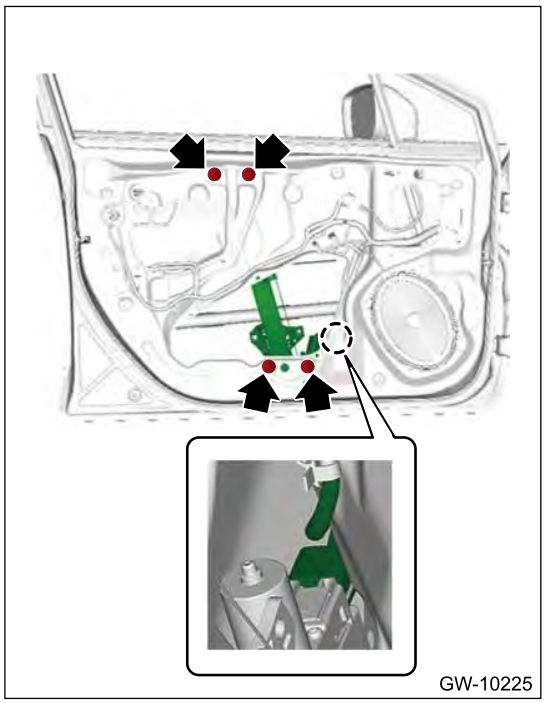
Caution:

Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash assembly - partition.

Note:

- **Engage the claws on top of the sash assembly - partition with the panel assembly - front door.**
- **Install the glass - front door partition so that its molding part does not come off.**

Tightening torque:



7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3. Install the glass assembly - front door. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>INSTALLATION > FRONT DOOR GLASS.

GLASS/WINDOWS/MIRRORS > Front Regulator and Motor Assembly

REMOVAL

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the front sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > FRONT SEALING COVER.
4. Remove the glass assembly - front door. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>REMOVAL > FRONT DOOR GLASS.
5. Remove the regulator and motor assembly - front.
   (1) Disconnect the motor - front connector.
   (2) Remove the bolts, and then remove the regulator and motor assembly - front.

GLASS/WINDOWS/MIRRORS > Front Regulator and Motor Assembly

INSTALLATION

1. Install the regulator and motor assembly - front.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the glass assembly - front door. Ref. to GLASS/WINDOWS/MIRRORS>Front Door Glass>INSTALLATION > FRONT DOOR GLASS.
3. Install the front sealing cover.
4. Install the trim panel - front door.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

GLASS/WINDOWS/MIRRORS > Front Regulator and Motor Assembly

INSPECTION

For motor - front inspection, refer to “POWER WINDOW (DIAGNOSTICS)” section. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

WIRING DIAGRAM

Refer to "Remote Control Mirror System" in the wiring diagram. Ref. to WIRING SYSTEM>Remote Control Mirror System>WIRING DIAGRAM.

INSPECTION

1. SYMPTOM CHART

Symptoms	Inspection order
All function does not operate.	1. Check the fuse. 2. Check the remote control mirror switch. 3. Check the wiring harness.
One side of the mirror motor does not operate.	1. Check the remote control mirror switch. 2. Check the mirror motor. 3. Check the wiring harness.
Mirror heater does not operate.	1. Check the rear defogger switch. 2. Check the rear defogger relay. 3. Check the mirror heater. 4. Check the wiring harness. 5. Check body integrated unit.

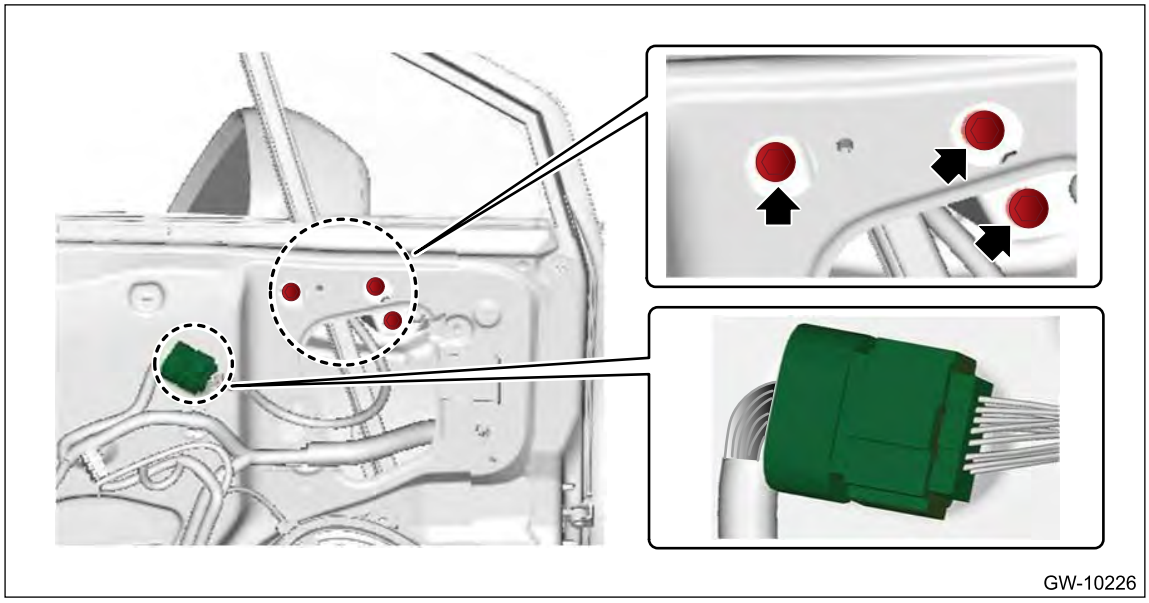
Note:

The mirror heater operates with the rear window defogger at the same time. Refer to "INSPECTION" of "Rear Window Defogger System" for details. Ref. to GLASS/WINDOWS/MIRRORS>Rear Window Defogger System>INSPECTION.

NOTE

For procedure of each component in the remote control mirror system, refer to the respective section.

- Outer mirror assembly: Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly.
- Remote control mirror switch: Ref. to GLASS/WINDOWS/MIRRORS>Remote Control Mirror Switch.



GLASS/WINDOWS/MIRRORS > Outer Mirror Assembly

REMOVAL

Refer to "DISASSEMBLY" for removal procedures of scalp cap and mirror face. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly>DISASSEMBLY.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Turn over the front sealing cover.
   Caution:
   - **Carefully remove the butyl tape. Excessive force will easily break the front sealing cover.**
   - **If the front sealing cover gets broken, replace it with a new part.**
   - **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

   (1) Remove the connector clip that is installed on the panel assembly - front door, and disconnect the connector.
   (2) Carefully remove and turn over the front sealing cover within the area where the operation can be performed.
4. Remove the bolts to remove outer mirror assembly.

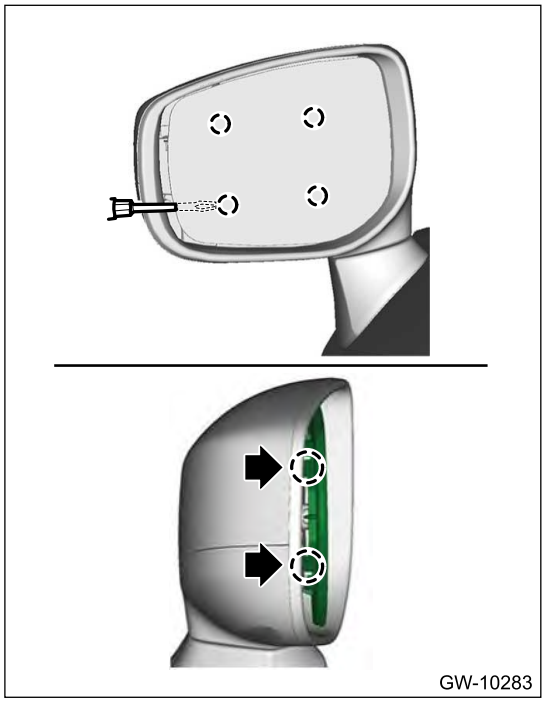
GLASS/WINDOWS/MIRRORS > Outer Mirror Assembly

INSTALLATION

Caution:
Be careful not to catch the harness in between the parts.

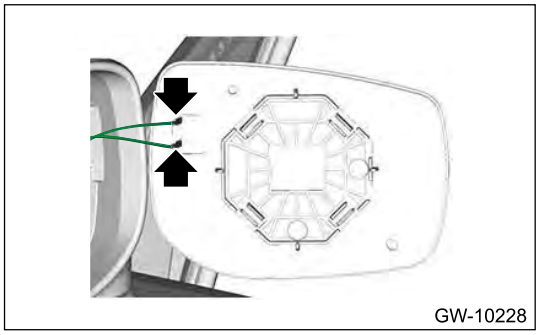
1. Install the outer mirror assembly.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the front sealing cover.
3. Install the trim panel - front door.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND

TERMINAL REMOVAL OR INSTALLATION.



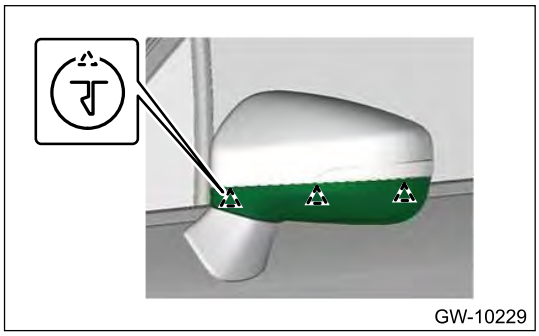
GLASS/WINDOWS/MIRRORS > Outer Mirror Assembly

DISASSEMBLY



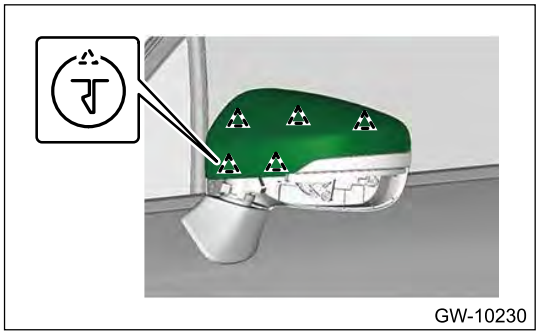
Caution:

When removing the mirror - repair, be careful not to damage the back surface of mirror - repair with a flat tip screwdriver.



1. Operate the remote control mirror switch to face the mirror - repair upward.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Remove the mirror - repair.
   (1) Insert a flat tip screwdriver or similar tool into the tool insertion opening shown in the figure, release the engagement and take the mirror - repair outward to remove.

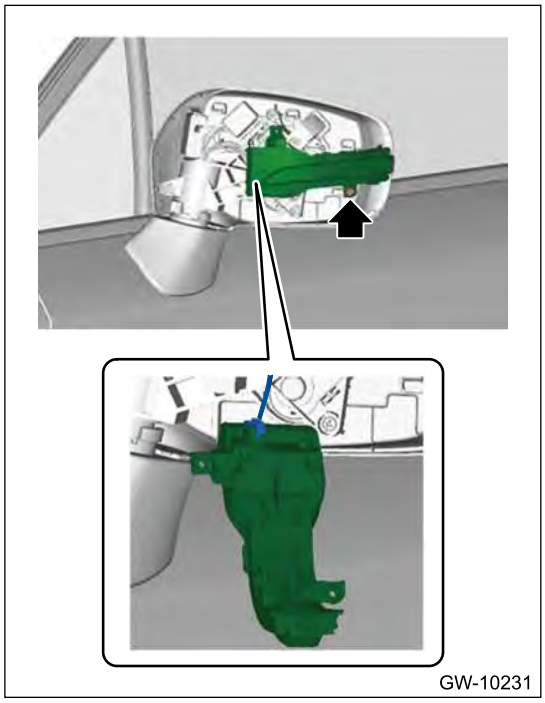
   (2) Disconnect connectors. (Model with mirror heater and Blind Spot Detection/Rear Cross Traffic Alert system)



4. Release the claws, and then remove the cover - cap outer mirror lower.

5. Release the claws, and then remove the cover - cap outer mirror.

Caution:



Be careful not to apply excessive force when removing the cover - cap outer mirror, as the lower hooks may become damaged.

6. Remove the light assembly - side turn mirror. (Model with side turn signal light)

(1) Remove the screws and pull out the light assembly - side turn mirror to the front of the vehicle.

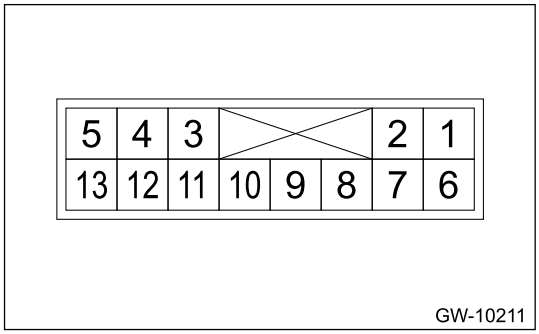
(2) Disconnect the connector and remove the light assembly - side turn mirror.

GLASS/WINDOWS/MIRRORS > Outer Mirror Assembly

ASSEMBLY

Caution:

- **Be careful not to catch the harness in between the parts.**
- **When installing the mirror - repair, insert the connector and clip securely.**



1. Install the light assembly - side turn mirror. (Model with side turn signal light)
2. Install the cover - cap outer mirror.
3. Install the cover - cap outer mirror lower.
4. Check that all the claws are securely engaged.
5. Install the mirror - repair in the reverse order of disassembly.

GLASS/WINDOWS/MIRRORS > Outer Mirror Assembly

INSPECTION

1. CHECK MOTOR OPERATION

1. Apply battery voltage between the outer mirror connector terminals and check the mirror operation.

Terminal No.	Inspection conditions	Switch position
—	—	OFF
4 (+) — 3 (−)	Apply battery voltage between terminals.	UP
3 (+) — 4 (−)	Apply battery voltage between terminals.	DOWN
5 (+) — 4 (−)	Apply battery voltage between terminals.	LEFT
4 (+) — 5 (−)	Apply battery voltage between terminals.	RIGHT

2. If it does not operate normally, replace the outer mirror assembly.

2. CHECK OPERATION OF Blind Spot Detection/Rear Cross Traffic Alert INDICATOR

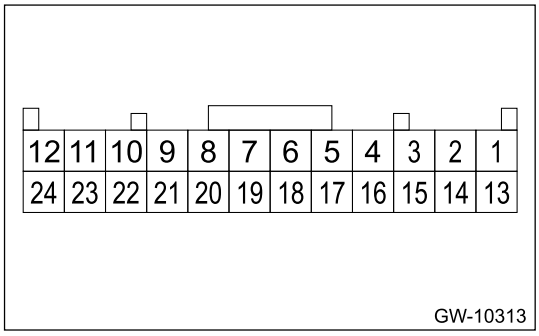
1. Check the Blind Spot Detection/Rear Cross Traffic Alert system. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Basic Diagnostic Procedure.
2. Check the outer mirror assembly.
   (1) Check that the BSD/RCTA indicator on the mirror surface illuminates normally when the BSD/RCTA OFF switch is turned ON while it is installed to the vehicle.
   (2) If it does not illuminate normally, replace the mirror - repair.
   (3) Check that it illuminates normally again. If it does not illuminate normally, replace the outer mirror assembly.

GLASS/WINDOWS/MIRRORS > Remote Control Mirror Switch

REMOVAL

1. The remote control mirror switch is integrated into the switch - power window main. Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch>REMOVAL > MAIN SWITCH.

GLASS/WINDOWS/MIRRORS > Remote Control Mirror Switch



INSTALLATION

1. The remote control mirror switch is integrated into the switch - power window main. Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch>INSTALLATION > MAIN SWITCH.

GLASS/WINDOWS/MIRRORS > Remote Control Mirror Switch

INSPECTION

1. Check the resistance between switch - door mirror terminals.
   Preparation tool:
   Circuit tester

- Changeover switch RH

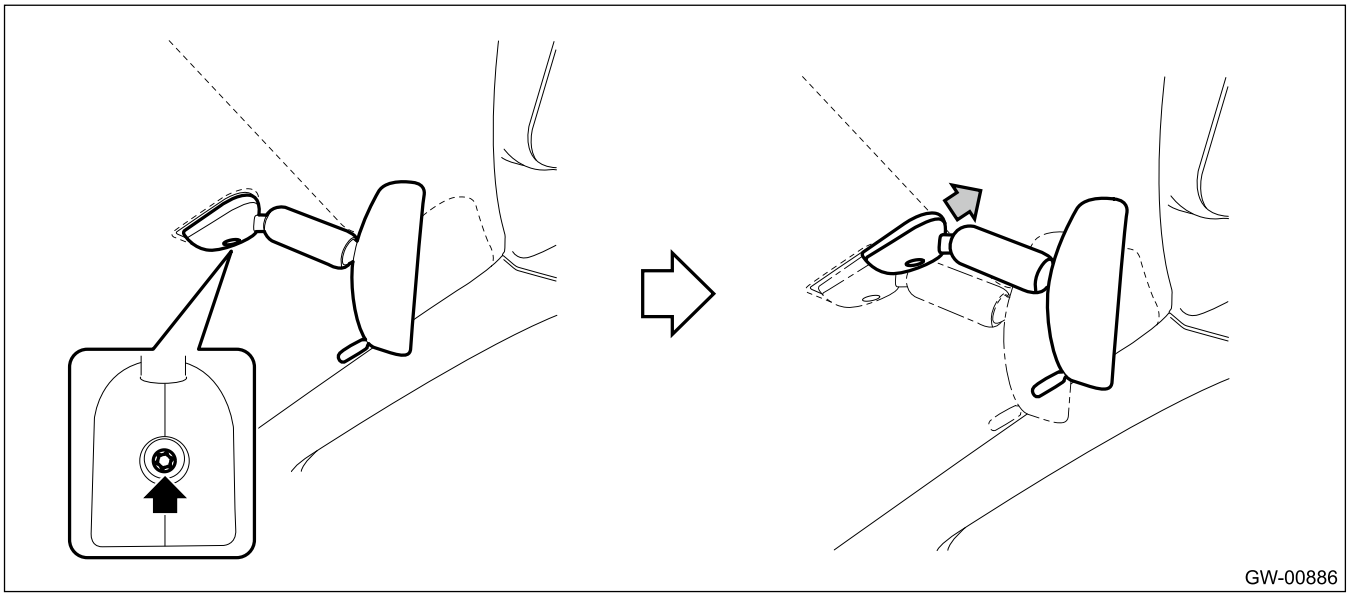
Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
12 — 18 17 — 1	UP	Less than 1 Ω
12 — 17 18 — 1	DOWN	Less than 1 Ω
12 — 16 18 — 1	LEFT	Less than 1 Ω
12 — 18 16 — 1	RIGHT	Less than 1 Ω

- Changeover switch LH

Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
12 — 21 20 — 1	UP	Less than 1 Ω
12 — 20 21 — 1	DOWN	Less than 1 Ω
12 — 19 21 — 1	LEFT	Less than 1 Ω

Terminal No.	Inspection conditions	Standard
12 — 21 19 — 1	RIGHT	Less than 1 Ω

2. If the inspection result is not within the standard, replace the switch - door mirror.



GLASS/WINDOWS/MIRRORS > Rearview Mirror

REMOVAL

Caution:

Be careful not to damage the mirror surface and the glass - front window.

1. Remove the TORX® screws, and slide the mirror assembly - inner rearview to remove.
   Preparation tool:
   TORX® T20

2. If the mirror mounting is damaged, replace the windshield glass.

GLASS/WINDOWS/MIRRORS > Rearview Mirror

INSTALLATION

Caution:

When tightening the mounting TORX® screw, be sure to observe the tightening torque. Otherwise, the mount may be damaged in over-torque conditions.

1. Slide the mirror assembly - inner rearview to the mirror mount to install.
   Note:
   If the mirror mounting is damaged, replace the windshield glass.
   Tightening torque:
   2N·m (0.2 kgf-m, 1.5 ft-lb)

GLASS/WINDOWS/MIRRORS > Rearview Mirror

INSPECTION

Check that the mirror assembly - inner rearview and base - inner mirror for damage.

REMOVAL

1. Operate the switch - power window sub rear to move the glass assembly - rear door to the lowest position.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
3. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
4. Remove the rear sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > REAR SEALING COVER.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
6. Remove the glass assembly - rear door.

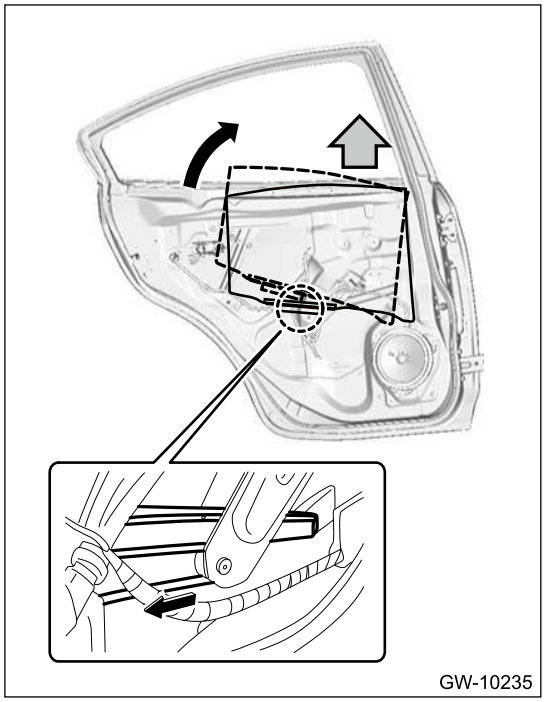
   Caution:

   Do not damage the sash or sash tape OUT while removing.

   (1) Partially turn over the running channel - rear door.

   (2) Turn over the weather strip - door, and remove the screws.

   (3) Remove the bolts, and remove the sash assembly - rear partition while lowering it.



(4) Remove the glass - rear door partition.

(5) While tilting the glass assembly - rear door, remove the guide from the roller of the regulator and motor assembly - rear, then remove the glass assembly - rear door.

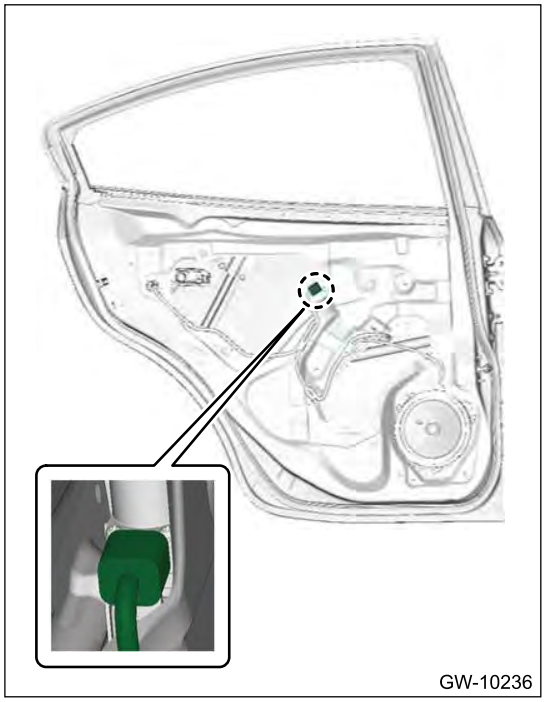
Caution:

Avoid impact and damage to the glass assembly - rear door.

(6) Remove the running channel - rear door.

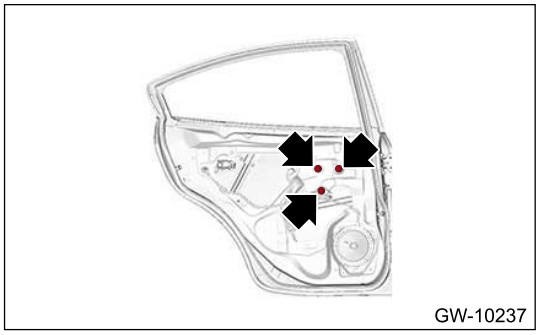
GLASS/WINDOWS/MIRRORS > Rear Door Glass

INSTALLATION



1. Install the glass assembly - rear door.
   Caution:
   Avoid impact and damage to the glass assembly - rear door.
2. Temporarily assemble the running channel - rear door to the sash assembly - rear partition.
   Note:
   Assemble so that the end face of the running channel - rear door is aligned with the mounting surface of the sash assembly - rear partition on vehicle side.
3. Install the glass - rear door partition and the sash assembly - rear partition temporarily assembled.
   Caution:
   Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash assembly - rear partition.
   Note:
   - **Engage the claws on top of the sash assembly - partition with the panel assembly - rear door.**
   - **Install the glass - rear door partition so that its molding part does not come off.**

   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4. Install the rear sealing cover.
5. Install the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>INSTALLATION.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.



GLASS/WINDOWS/MIRRORS > Rear Regulator and Motor Assembly

REMOVAL

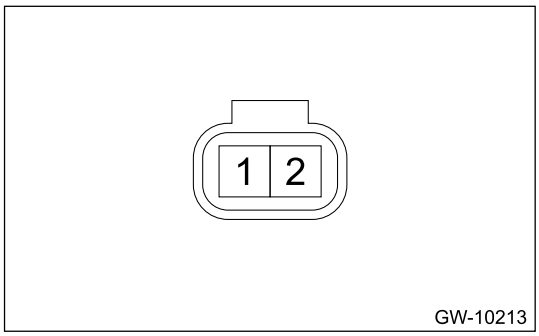
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
3. Remove the rear sealing cover. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > REAR SEALING COVER.
4. Remove the glass assembly - rear door. Ref. to GLASS/WINDOWS/MIRRORS>Rear Door Glass>REMOVAL.
5. Remove the regulator and motor assembly - rear.
   (1) Disconnect the connector of the motor - rear.

   (2) Remove the bolts, and then remove the regulator and motor assembly - rear.

GLASS/WINDOWS/MIRRORS > Rear Regulator and Motor Assembly

INSTALLATION

1. Install the regulator and motor assembly - rear.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the glass assembly - rear door. Ref. to GLASS/WINDOWS/MIRRORS>Rear Door



Glass>INSTALLATION.

3. Install the rear sealing cover.
4. Install the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

GLASS/WINDOWS/MIRRORS > Rear Regulator and Motor Assembly

INSPECTION

1. Check the motor operation when battery voltage is applied between terminals of the motor - rear connector.

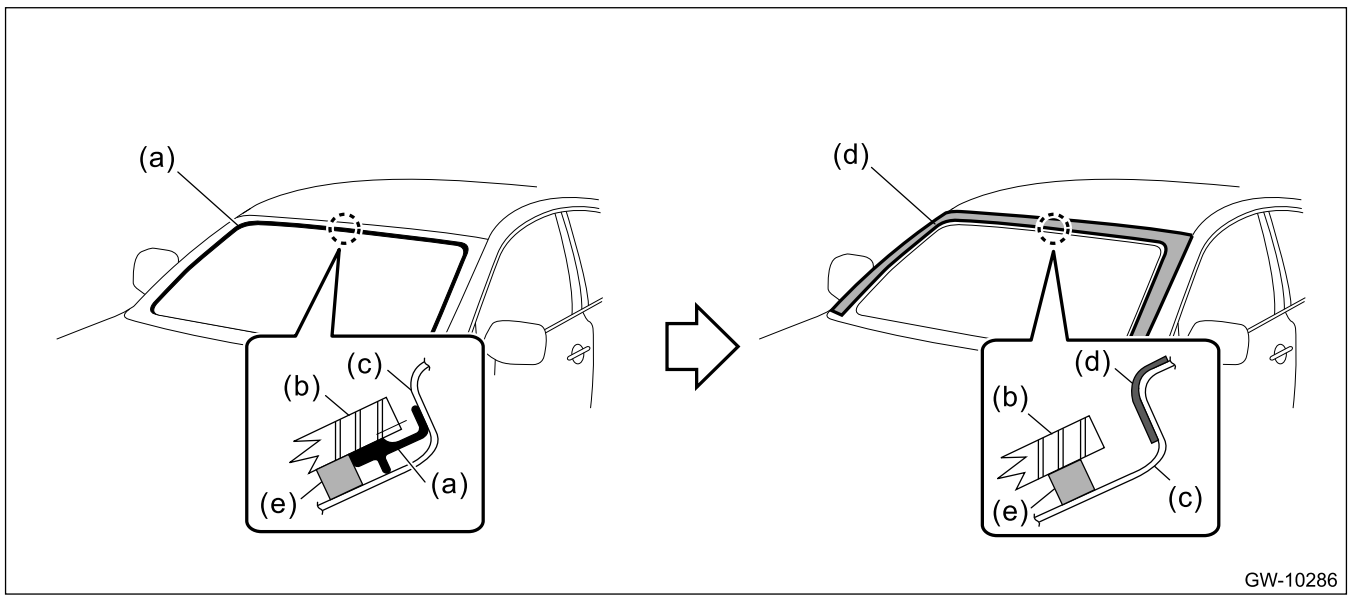
- LH side

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (−)	Apply battery voltage between terminals.	Increase
1 (+) — 2 (−)	Apply battery voltage between terminals.	Decrease

- RH side

Terminal No.	Inspection conditions	Standard
2 (+) — 1 (−)	Apply battery voltage between terminals.	Increase
1 (+) — 2 (−)	Apply battery voltage between terminals.	Decrease

2. If it does not operate properly as a result of inspection, replace the regulator and motor assembly - rear.



REMOVAL

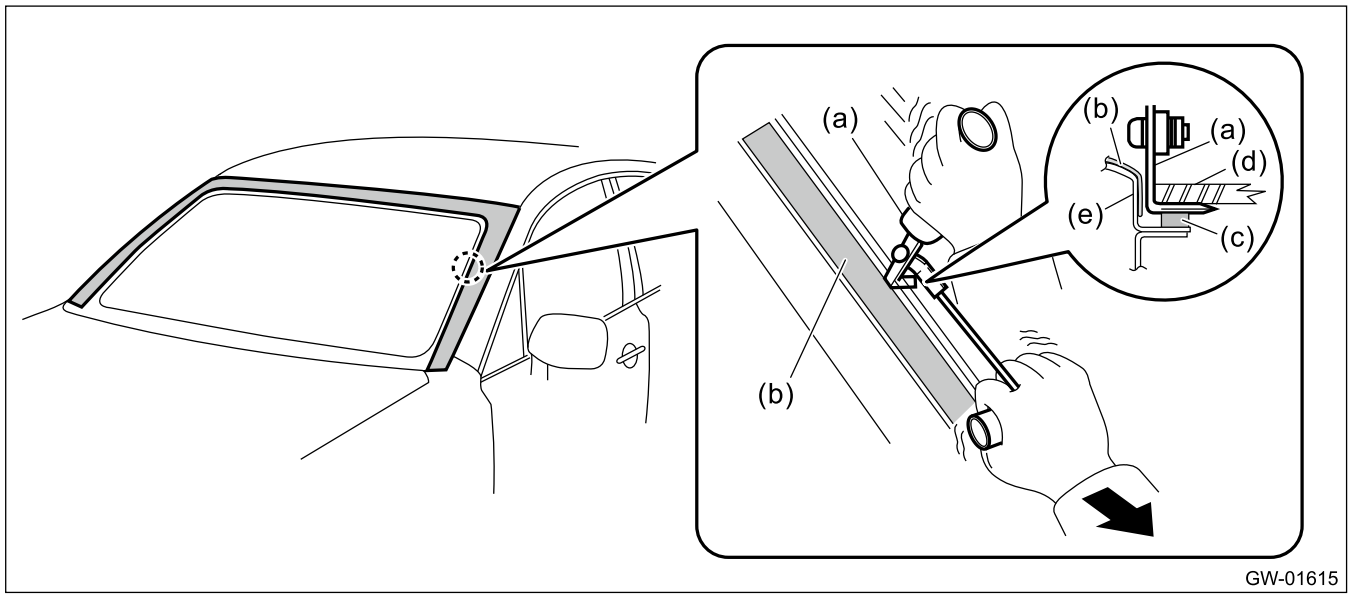
Caution:

- **For model with EyeSight, always remove the glass - front window after the stereo camera is removed.**
- **For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)**
- **For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera. Inspection: Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION. Adjustment and check: Ref. to EyeSight>Camera Adjustment, Inspection.**
- **If the damage is found in the glass repair prohibited area, always replace the glass. Damage, dirt, aftermarket part installation or sticker attachment in the prohibited area can affect the recognition of each camera, and thereby the EyeSight and high beam assist functions may not operate properly. Ref. to CAUTION > CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EYESIGHT.**

1. WHEN USING WINDSHIELD GLASS KNIFE

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.
3. Remove the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>REMOVAL.
4. Disconnect the wiper deicer connector. (Models with wiper deicer)
5. Remove the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
6. Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive



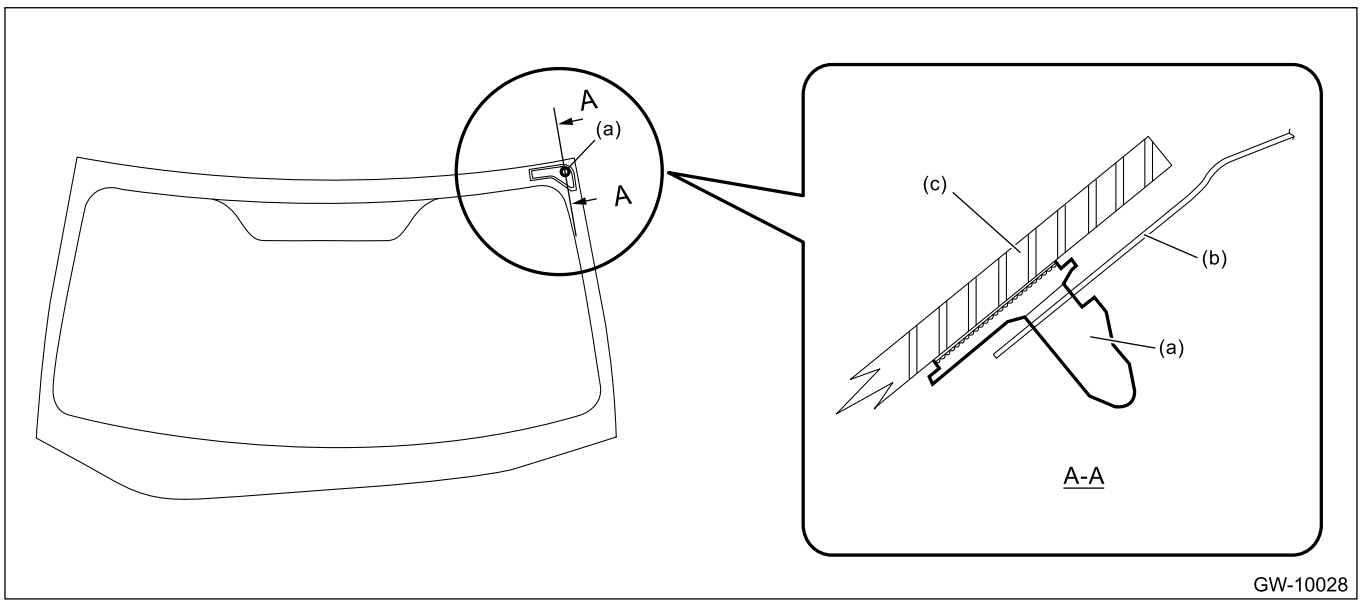
7. Remove the glass - front window.

(1) Apply sufficient amount of soapy water to the adhesive part and insert the windshield glass knife.

(2) While holding the edges of the knife and the glass - front window at a right angle, move the windshield glass knife parallel to the edge of the glass - front window, and cut the adhesive along the surface and the edge of the glass - front window.

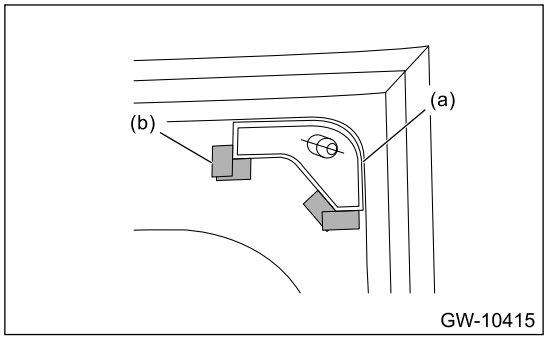
Caution:

- **Cutting of adhesive part should be started from an area with wider gap between the glass - front window and the body.**
- **Never twist the windshield glass knife.**



(a) Windshield glass knife
(c) Adhesive
(e) Body panel
(b) Protective tape
(d) Glass - front window

(3) Disconnect the locating pin - front window, and remove the glass - front window.



Note:

The locating pin - front window are bonded to the corners of the glass - front window. Use piano wire to disconnect the pins.

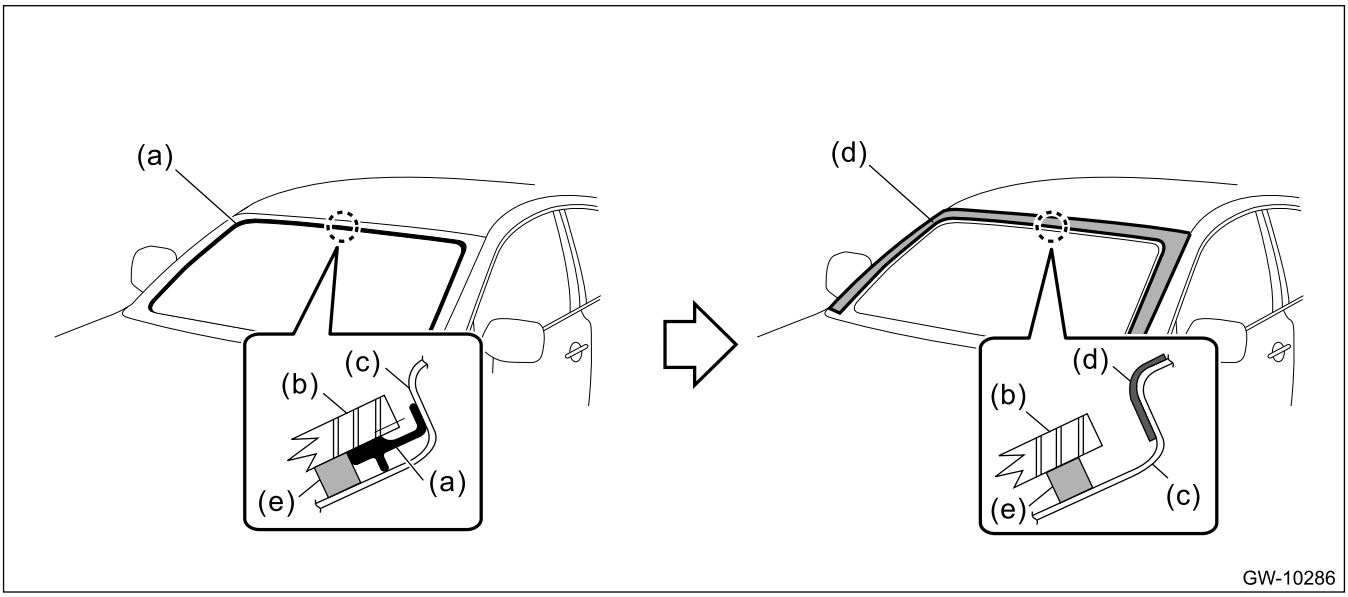
(a) Locating pin - front window
(b) Body panel
(c) Glass - front window

8. Remove the locating pin. (When reusing the glass)
   (1)Attach tape to the locating pin outer surface to identify the installation position.

(a) Locating pin - front window (b) Tape

   (2) Using a scraper, etc., remove locating pins (2 places).

Caution:



- **Do not remove the tape because it is used as reference during installation.**
- **Be careful not to damage the glass - front window during operation.**

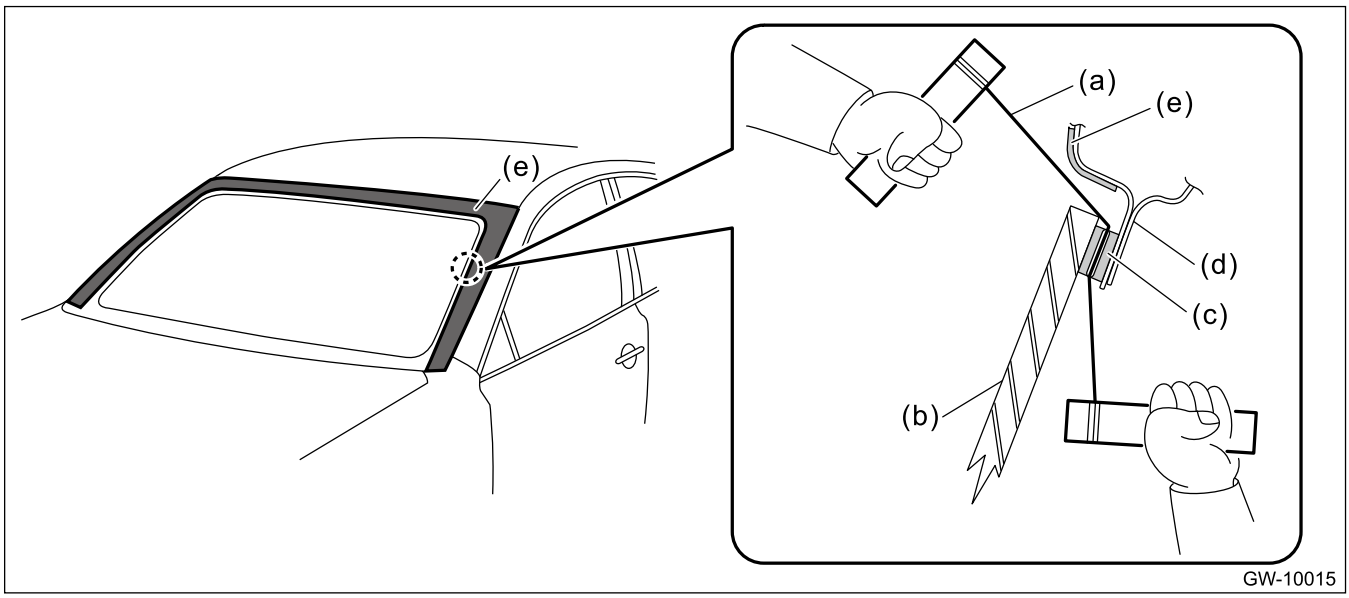
2. WHEN USING PIANO WIRE

Caution:

- **Do not tightly pull the piano wire against the glass - front window edge.**
- **Apply protective tape, etc, and be careful that the inner and outer components of the vehicle are not damaged.**
- **Do not cross piano wires. Otherwise they may be cut.**

1. Disconnect the ground cable from battery. (Models with wiper deicer) Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - front pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.
3. Remove the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>REMOVAL.
4. Disconnect the wiper deicer connector. (Models with wiper deicer)
5. Remove the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
6. Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive

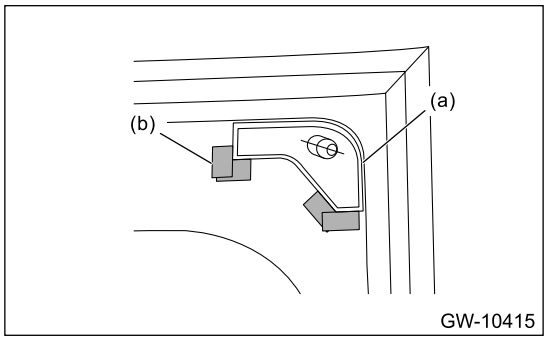


7. Remove the glass - front window.

(1) Using a drill, make a hole in the adhesive part.

(2) Pass the piano wire through the hole, and pull the wire ends alternately to cut off the adhesive part and locating pin.

Caution:



Attach a piece of wood to both piano wire ends.

(a) Piano wire
(b) Glass - front window
(c) Adhesive
(d) Body panel
(e) Protective tape

8. Remove the locating pin. (When reusing the glass)

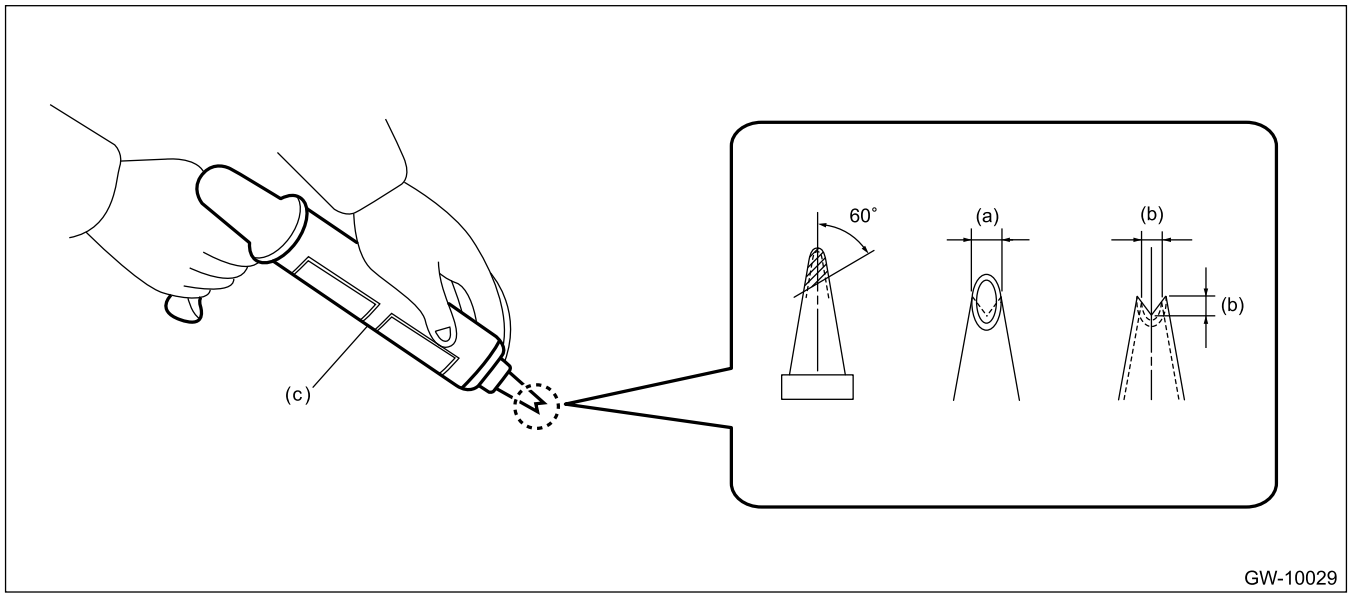
(1) Attach tape to the locating pin outer surface to identify the installation position.

(a) Locating pin - front window (b) Tape

(2) Using a scraper, etc., remove locating pins (2 places).

Caution:

- **Do not remove the tape because it is used as reference during installation.**
- **Be careful not to damage the glass - front window during operation.**



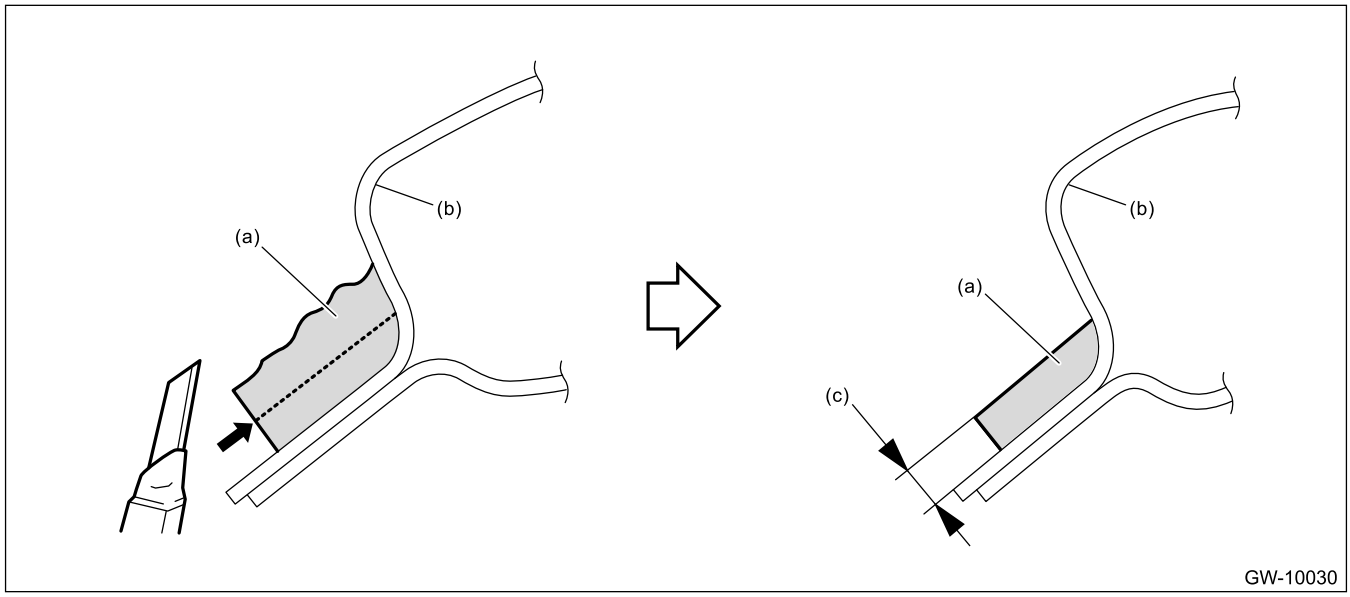
GLASS/WINDOWS/MIRRORS > Windshield Glass

INSTALLATION

Caution:

- **For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)**
- **For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera. Inspection: Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION. Adjustment and check: Ref. to EyeSight>Camera Adjustment, Inspection.**
- **If the damage is found in the glass repair prohibited area, always replace the glass. Damage, dirt, aftermarket part installation or sticker attachment in the prohibited area can affect the recognition of each camera, and thereby the EyeSight and high beam assist functions may not operate properly. Ref. to CAUTION > CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EYESIGHT.**

1. Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.



(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2. Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

Caution:

- **Be careful not to damage the body and paint surface.**
- **Be sure to keep some amount of old adhesive.**

(a) Adhesive (b) Body panel (c) 2 mm (0.08 in)

3. Clean the glass - front window and the body.

(1) Using a scraper, remove adhesive and double-sided tape left on the glass - front window. (When reusing the glass)

(2) Clean the glass - front window and the body with alcohol or appropriate cleaning solvent to completely eliminate cutting powder, dust and dirt.

4. Install the locating pin. (When reusing the glass)

(1) Using a sponge, apply primer to the locating pin installation position on the glass - front window.

Preparation items

Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent

Note:

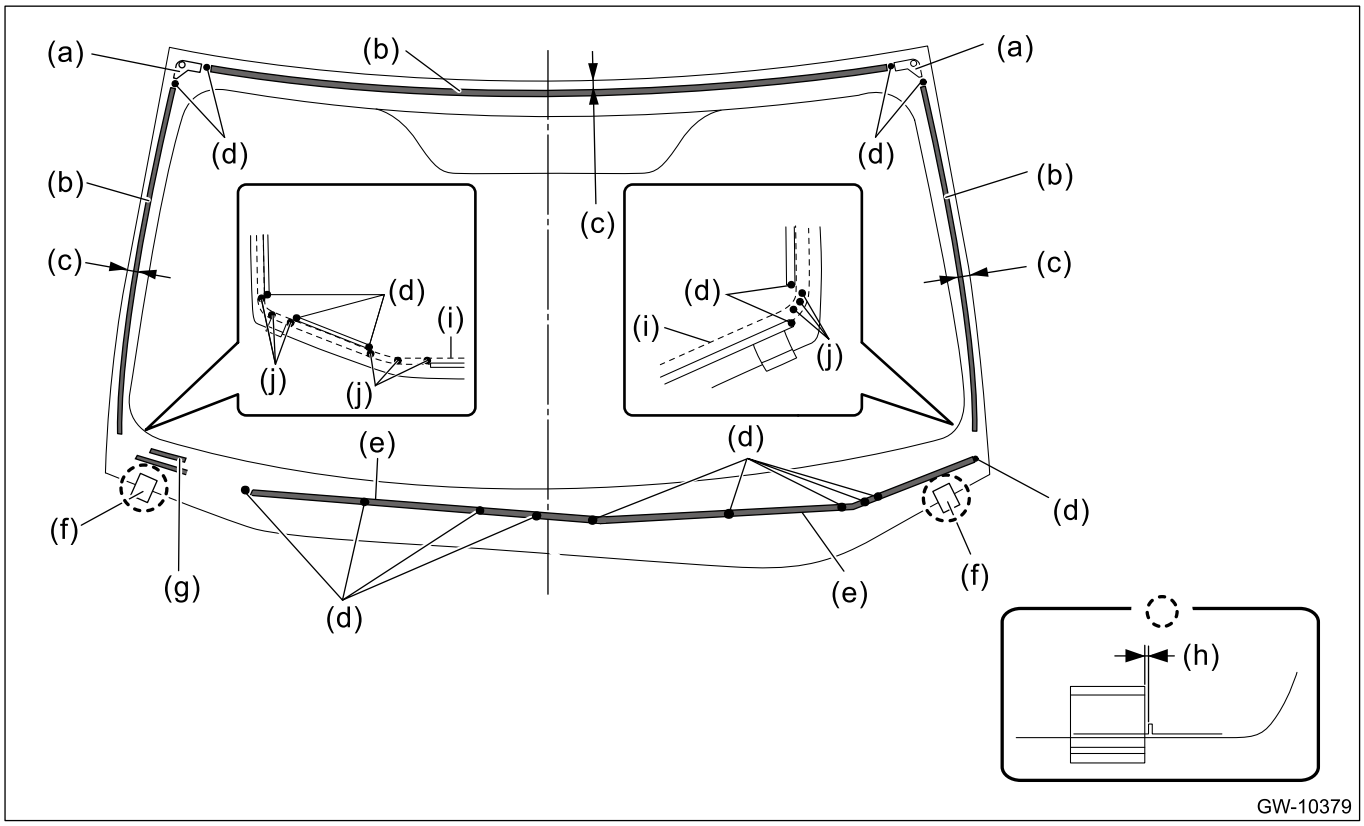
- **Let primer dry for about one hour before installing the locating pin.**
- **Do not touch the surface coated with primer.**

(2) Apply adhesive to the locating pin adhesive surface.

Preparation items:

Adhesive: Dow Automotive ESSEX U-400HV or equivalent

(3) Install two locating pins (2 places) to the positions marked with tapes, and remove the tapes.



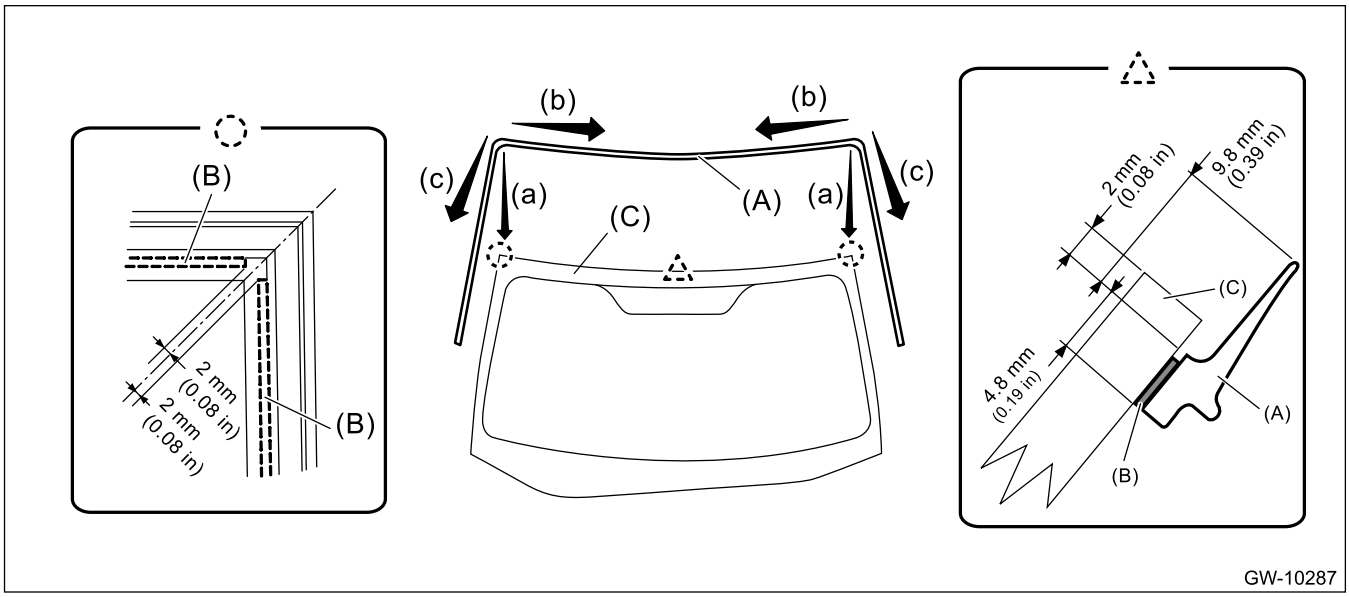
Caution:

Always use new locating pins.

5. Attach the dam rubber - front to the glass - front window.

Caution:

- **Install the driver's side dam rubber - front lower along with the dam rubber set mark on the glass side.**
- **Attach the passenger's side dam rubber - front lower straight between the dam rubber set marks while aligning with the dam rubber set mark.**



(a)	Locating pin - front window	(e)	Dam rubber - front lower	(i)	Adhesive
(b)	Dam rubber - front upper	(f)	Seal - lower	(j)	Adhesive application mark
(c)	19.8 mm (0.78 in)	(g)	VIN plate confirmation window		
(d)	Dam rubber set mark	(h)	0+5 mm (0+0.2 in)		

6. Attach the molding - front window to the glass - front window.

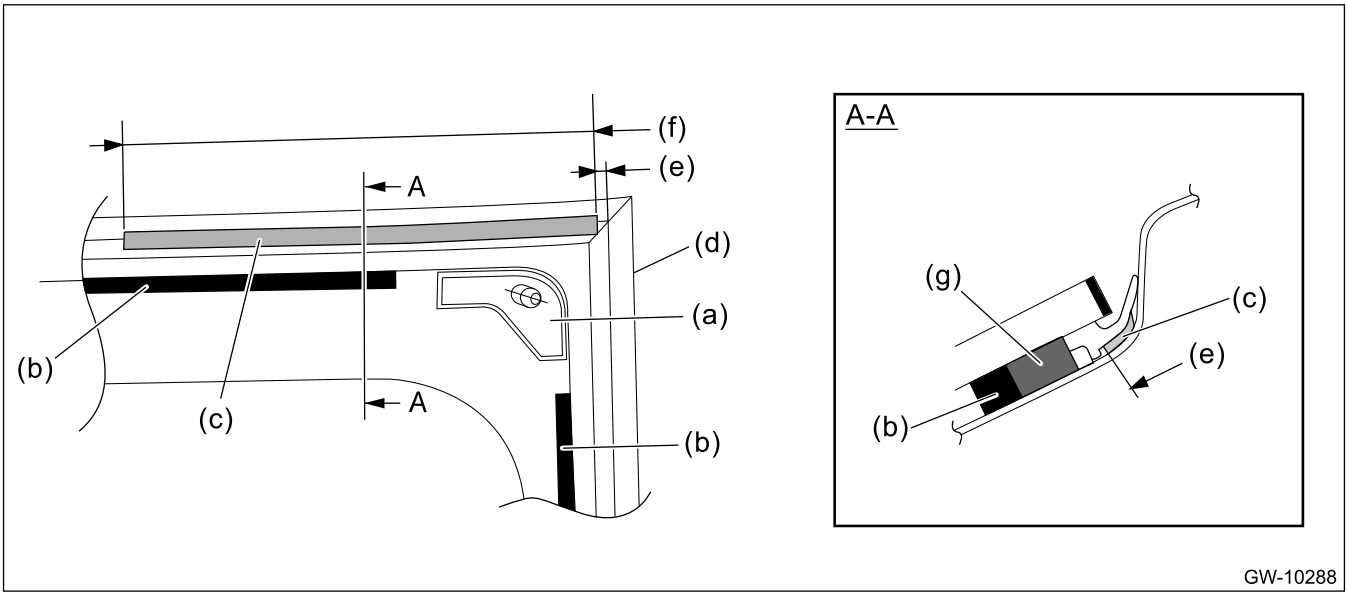
Caution:

Be careful to attach the molding - front window so that the molding has no loose or undulating part.

(1) Using a sponge, apply primer to the molding installation surface in the glass - front window side.

Preparation items

Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent



(2) Align the molding - front window (A) to the upper ends (a) of the glass - front window (C).

(3) Install the molding - front window from both corners of the upper edge toward the center (b).

(4) Install the molding - front window from both corners of the upper edge toward the lower side (c).

(5) Firmly apply the double sided tape (B) of the molding - front window evenly to the surface of the glass - front window.

7. Attach the seal - upper to the molding - front window.

(a) Locating pin - front window
(b) Dam rubber - front upper
(c) Seal - upper
(d) Molding - front window
(e) 0+5 mm (0+0.2 in)
(f) 165 mm (6.5 in)
(g) Adhesive

8. Install the glass - front window.

(1) Apply the primer to the adhesive surface of glass - front window side and body side using sponge.

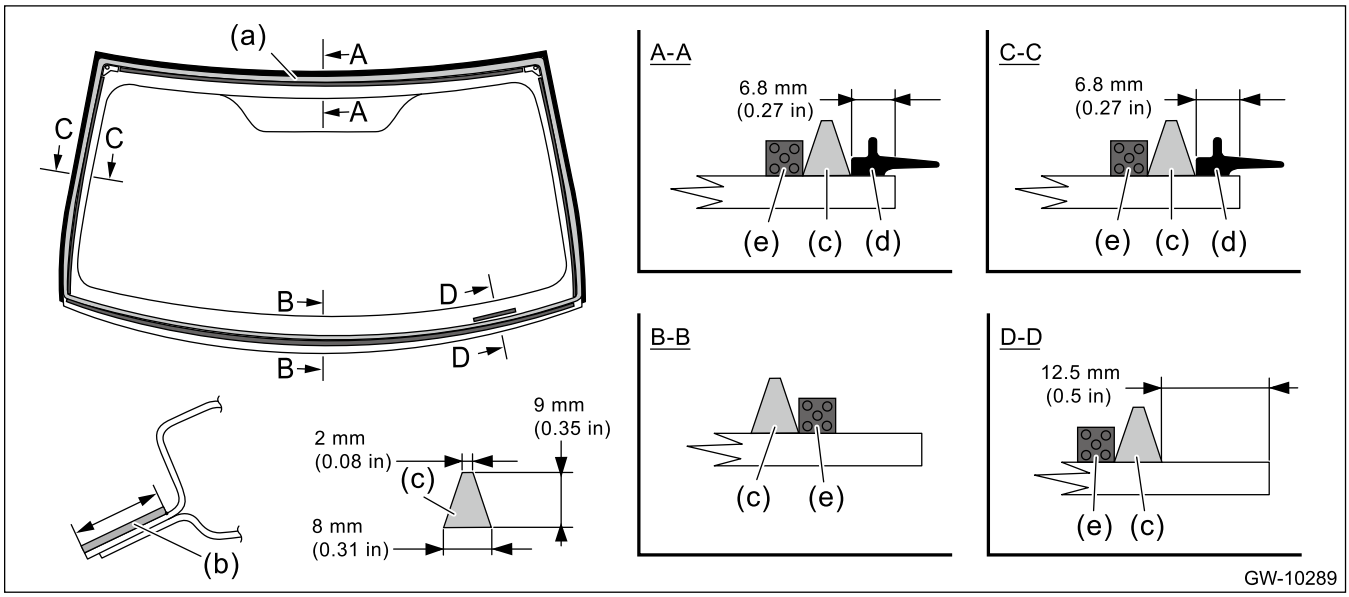
Caution:

Do not apply primer to adhesive remaining on the body side.

Preparation items:

Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent

Painted surface primer: Dow Automotive ESSEX U-413 or equivalent



Note:

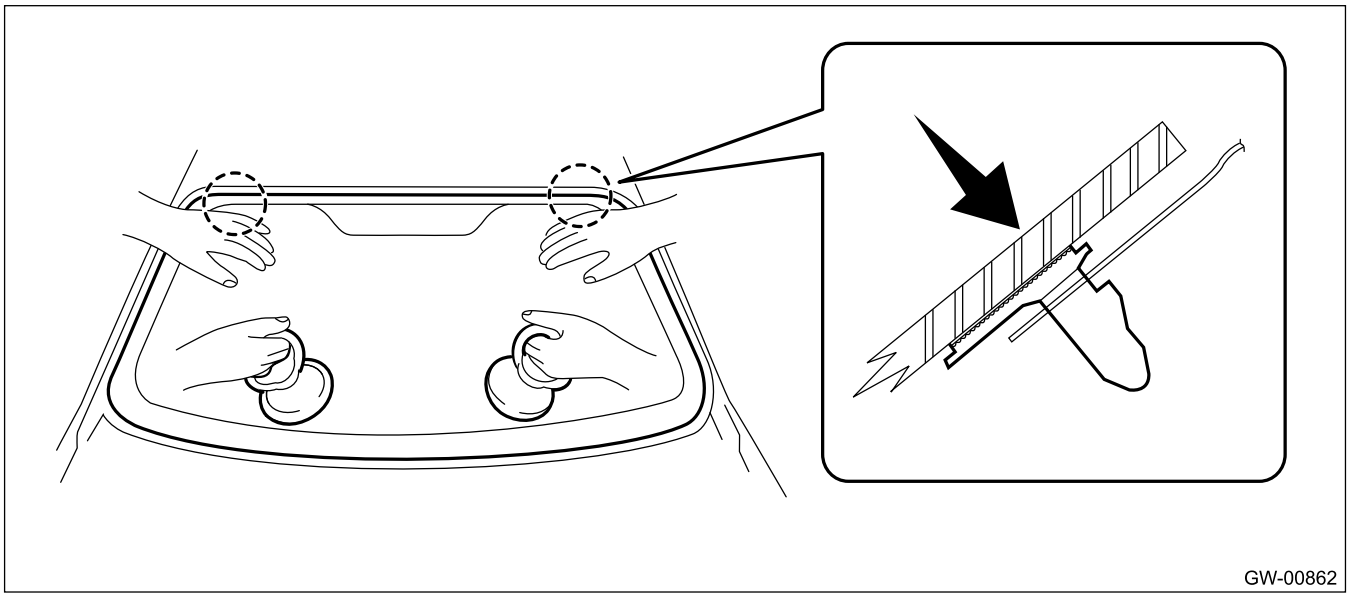
- **Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.**
- **Let primer dry for about ten minutes before installing the glass - front window.**
- **Do not touch the surface coated with primer.**

(2)Apply adhesive to the end back surface of the glass - front window.

Preparation items:

Adhesive: Dow Automotive ESSEX U-400HV or equivalent

(a) Application of primer (glass side)



(b) Application of primer (body side)

(c) Adhesive

(d) Molding - front window

(e) Dam rubber - front

(3) Fit the locating pins - front window to the vehicle body using suction rubber cups to install the glass - front window.

(4) Lightly press the entire perimeter of the glass - front window for tight fit.

(5) Make flush the adhesive surface jutted out using spatula.

9. After completion of all work, allow the vehicle to stand for about 24 hours.

Note:

- **When opening/closing the door after the glass - front window was bonded, always lower the glass assembly - door first, and then open/close it carefully.**
- **Move the vehicle slowly.**
- **For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.**

10. Connect the wiper deicer connector. (Models with wiper deicer)

11. Install the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>INSTALLATION.

12. Install the stereo camera cover and stereo camera assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>INSTALLATION.

13. Install the trim panel - front pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>INSTALLATION.

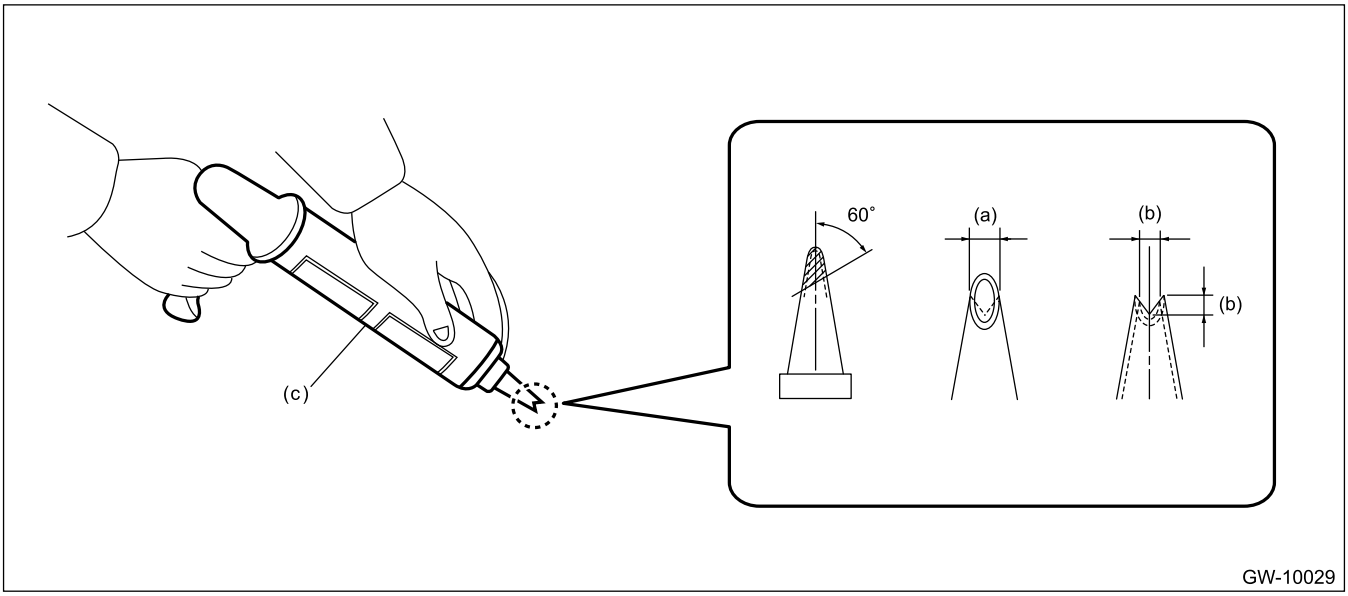
14. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

15. After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

Note:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

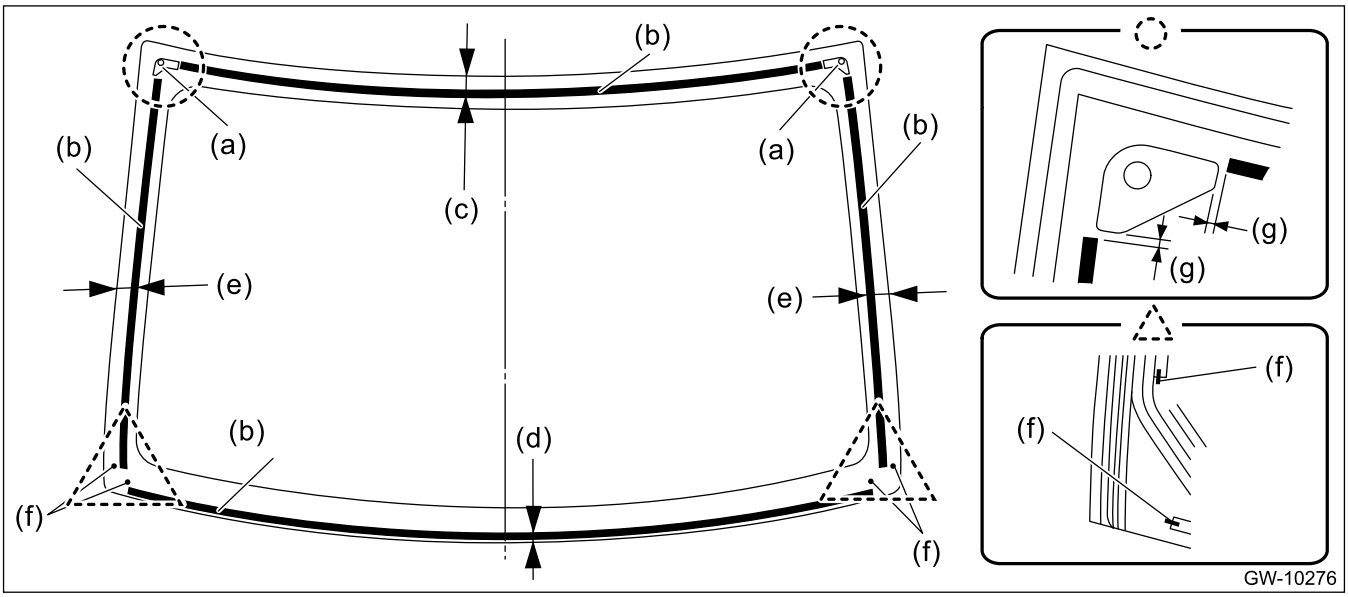
GLASS/WINDOWS/MIRRORS > Rear Window Glass



REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Disconnect the rear defogger connector.
3. Remove the glass - rear window in the same procedure as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>REMOVAL.

GLASS/WINDOWS/MIRRORS > Rear Window Glass

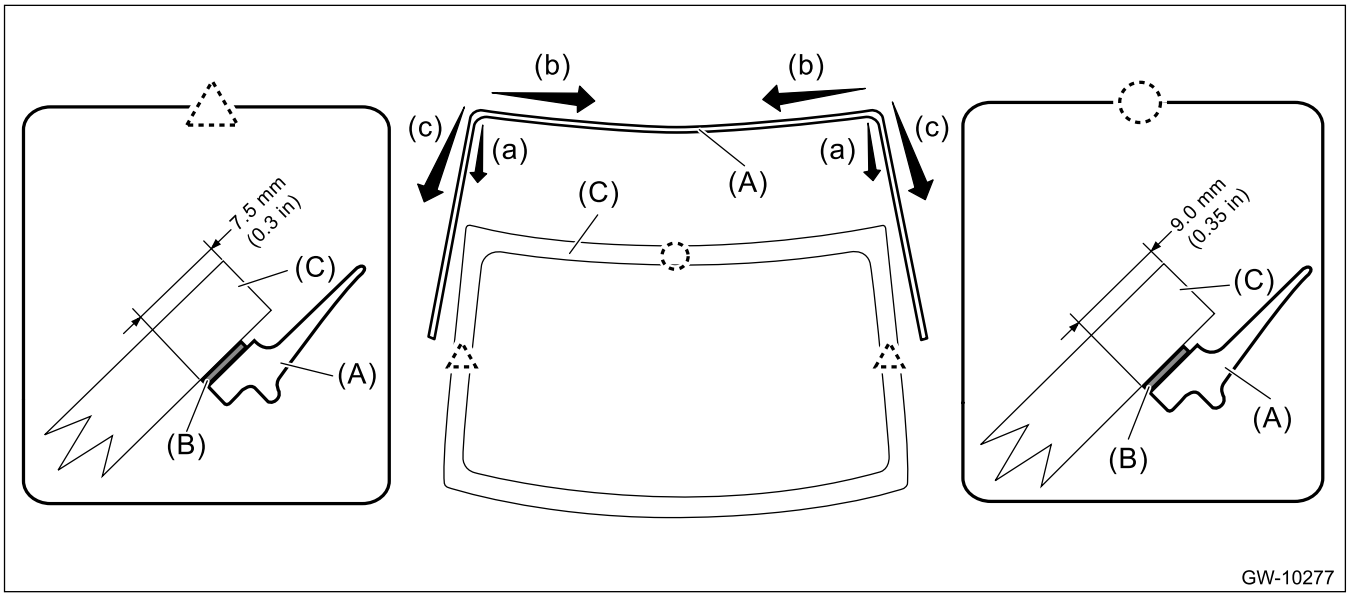


INSTALLATION

1. Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2. Smoothen and clean the adhesive surfaces of the glass - rear window and body using the same procedures as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>INSTALLATION.
3. Attach the dam rubber - rear to the glass - rear window.



(a) Locating pin - rear window
(b) Dam rubber - rear
(c) 22 mm (0.87 in)
(d) 10.6 mm (0.42 in)
(e) 20.5 mm (0.81 in)
(f) Dam rubber set mark (Ag print)
(g) 3 mm (0.12 in)

4. Attach the molding - rear window to the glass - rear window.

Caution:

Be careful to attach the molding - rear window so that the molding has no loose or undulating part.

(1) Using a sponge, apply primer to the molding installation surface in the glass - rear window side.

Preparation items

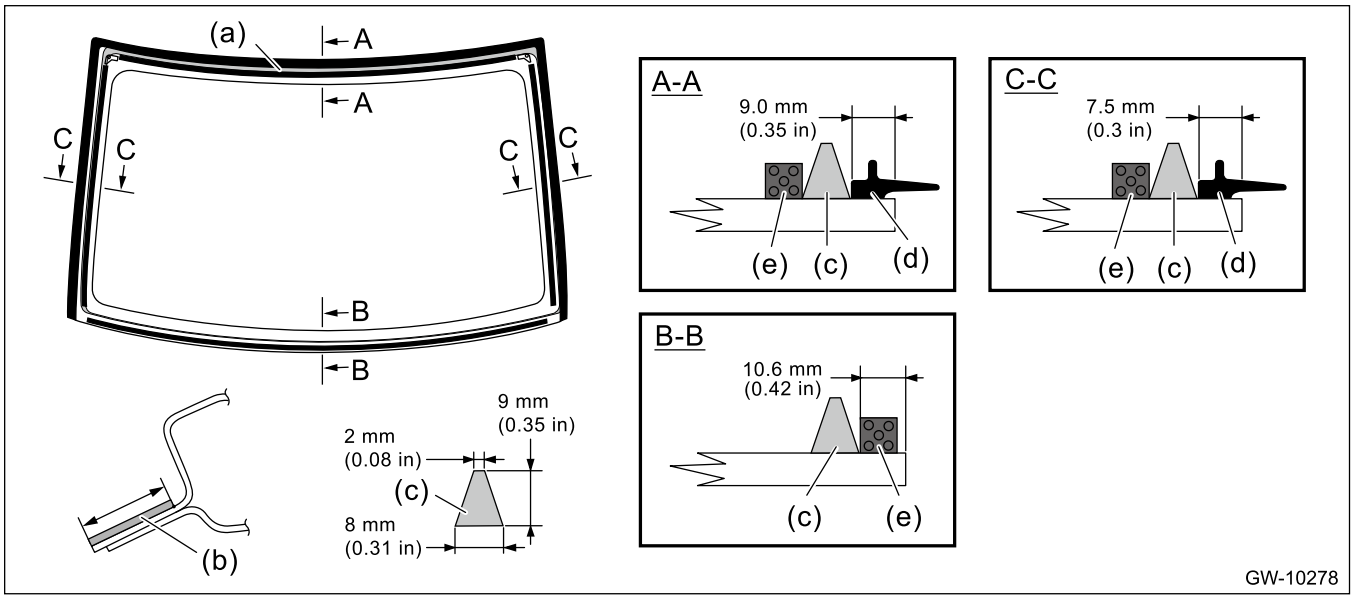
Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent

(2) Align the molding - rear window (A) to the upper ends (a) of the glass - rear window (C).

(3) Install the molding - rear window from both corners of the upper edge toward the center (b).

(4) Install the molding - rear window from both corners of the upper edge toward the lower side (c).

(5) Firmly apply the double sided tape (B) of the molding - rear window evenly to the surface of the glass - rear window.



5. Install the glass - rear window in the same procedure as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>INSTALLATION.

(1) Apply the primer to the adhesive surface of glass - rear window side and body side using sponge.

(2)Apply adhesive to the end back surface of the glass - rear window.

Caution:

Do not apply primer to adhesive remaining on the body side.

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Molding - rear window
(e) Dam rubber - rear

(3) Insert the locating pins - rear window into the roof panel holes, and install the glass - rear window.
(4) Lightly press the entire perimeter of the glass - rear window for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

6. After completion of all work, allow the vehicle to stand for about 24 hours.

Note:

- **When opening/closing the door after the glass - rear window was bonded, always lower the glass assembly - door first, and then open/close it carefully.**
- **Move the vehicle slowly.**
- **For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.**

7. Connect the rear defogger connector.

8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

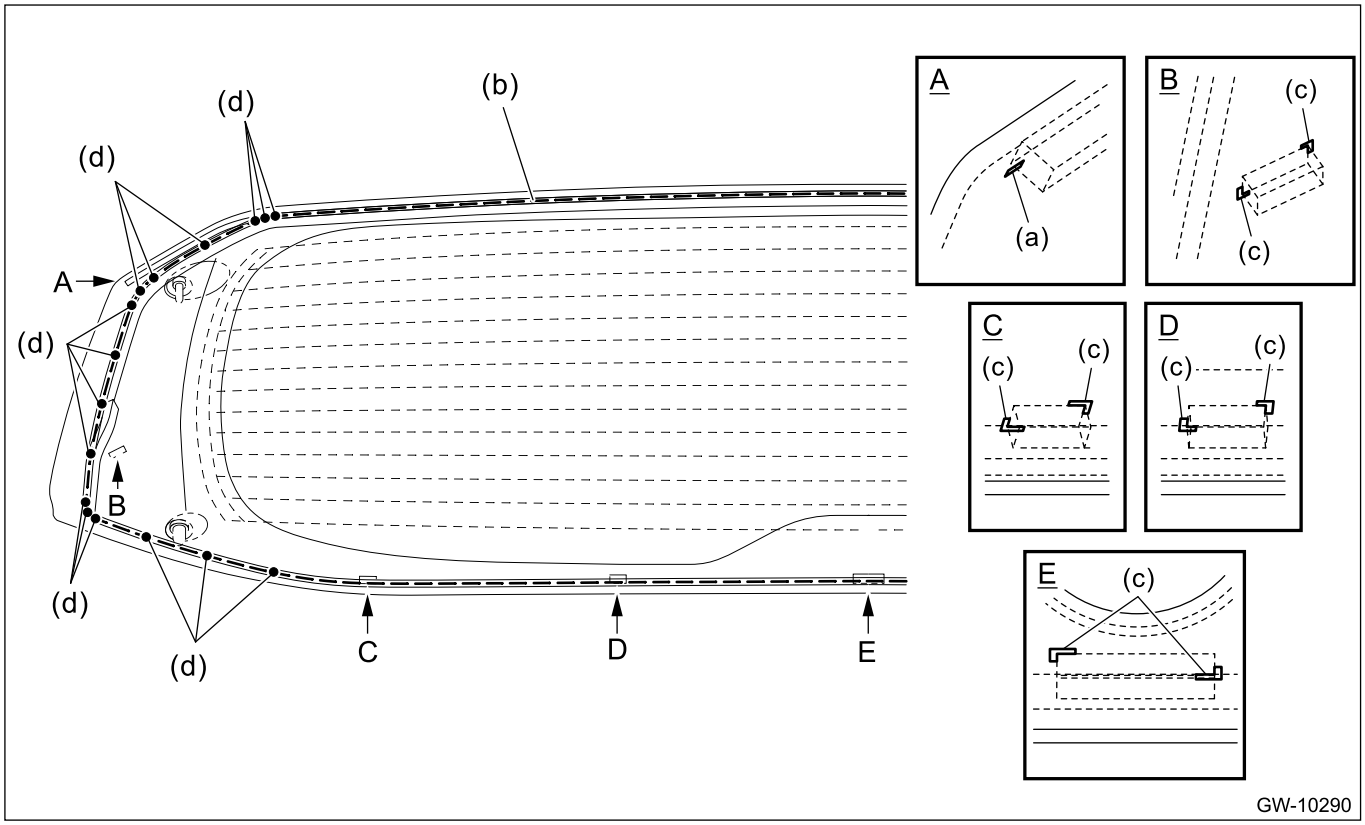
9. After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

Note:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

GLASS/WINDOWS/MIRRORS > Rear Gate Glass

REMOVAL



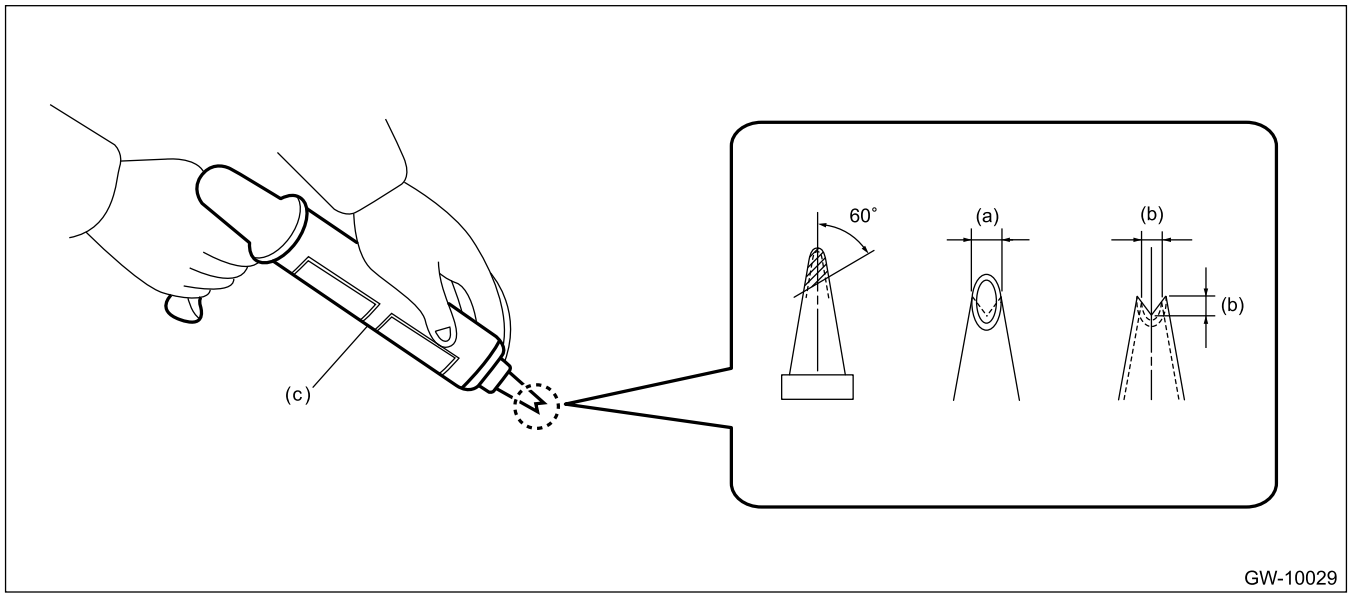
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - rear gate and the motor assembly - rear wiper. Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Motor>REMOVAL.
3. Remove the roof spoiler. Ref. to EXTERIOR/INTERIOR TRIM>Roof Spoiler>REMOVAL.
4. Disconnect the rear defogger connector.
5. Remove the glass - rear gate in the same procedure as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>REMOVAL.

GLASS/WINDOWS/MIRRORS > Rear Gate Glass

INSTALLATION

Note:

Use the markings on the glass to apply adhesive and primer, and to install the dam rubber - rear gate and the spacer - rear gate.

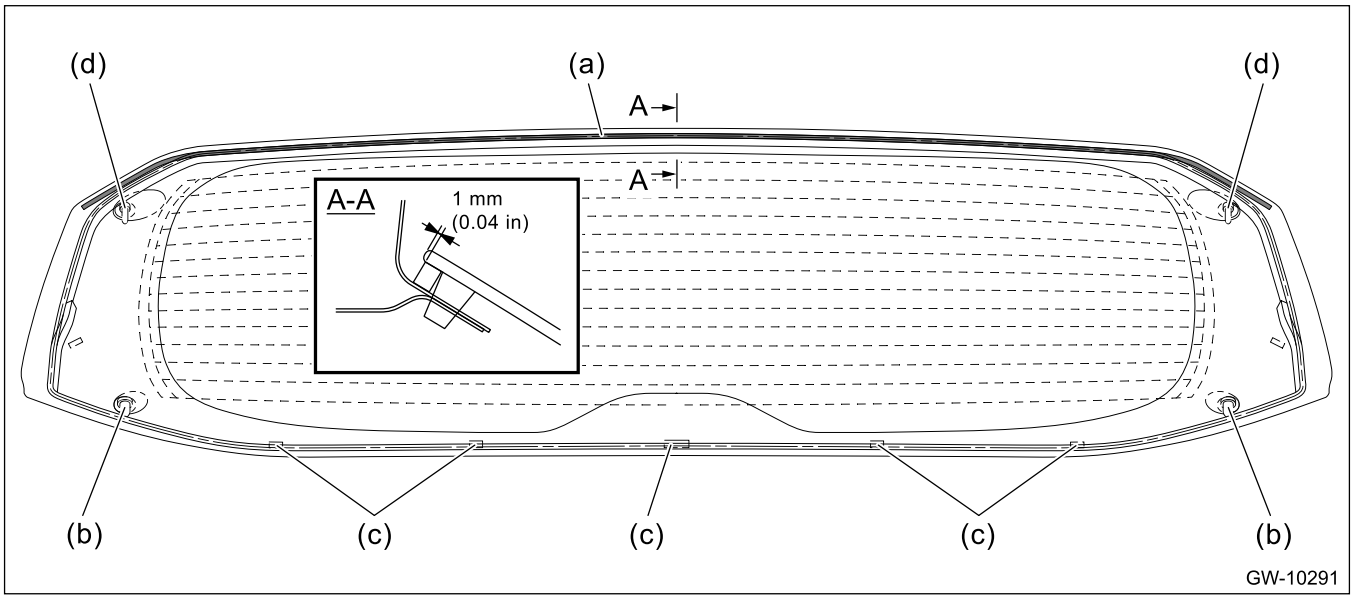


(a) Marking for dam rubber - rear gate application (Ag print)

(b) Center line for adhesive

(c) Marking for spacer - rear gate application (Ag print)

(d) Marking for primer application



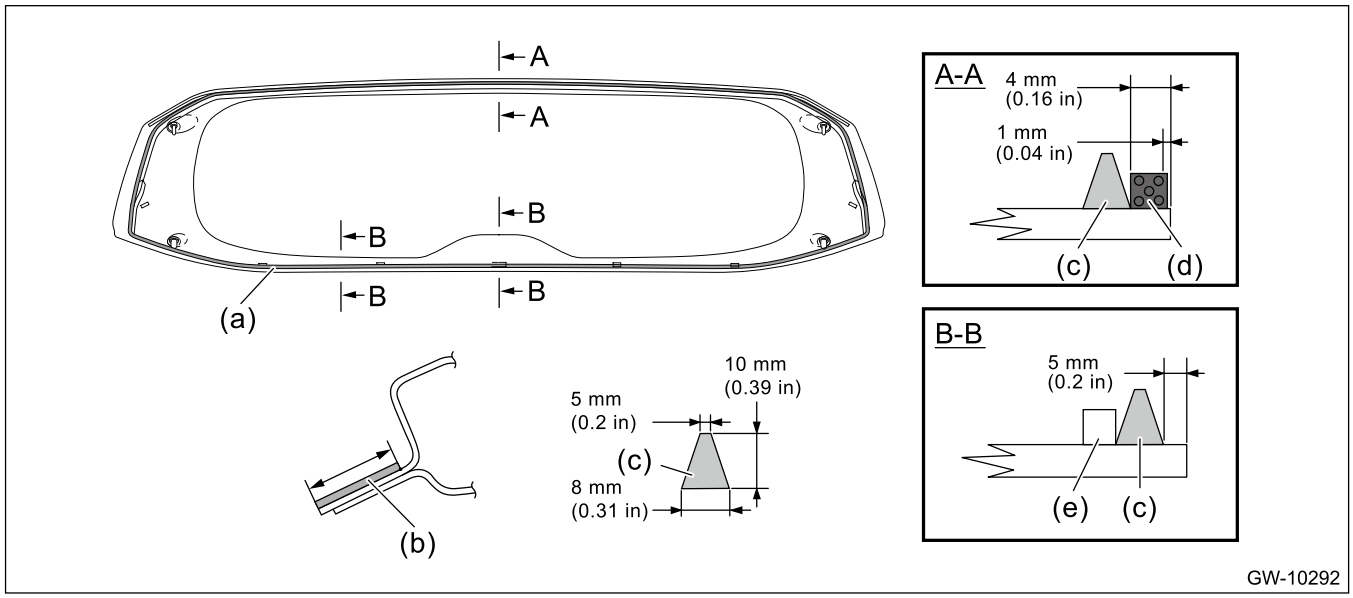
1. Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2. Smoothen and clean the adhesive surfaces of the glass - rear gate and body using the same procedures as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>INSTALLATION.

3. Attach the dam rubber - rear gate to the glass - rear gate.

(a) Dam rubber - rear gate (c) Spacer - rear gate (d) Locating pin - rear gate
(b) Holder - rear gate



4. Install the glass - rear gate.

(1) Apply the primer to the adhesive surface of glass - rear gate side and body side using sponge.

(2)Apply adhesive to the glass - rear gate end back surface.

Caution:

Do not apply primer to adhesive.

(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Dam rubber - rear gate
(e) Spacer - rear gate

(3) Attach the clip to the holder - rear gate of the glass - rear gate.
(4) Insert the locating pins - rear gate into the rear gate panel holes, and install the glass - rear gate.
(5) Lightly press the entire perimeter of the glass - rear gate for tight fit.
(6) Make flush the adhesive surface jutted out using spatula.

5. After completion of all work, allow the vehicle to stand for about 24 hours.

Note:

- **When opening/closing the door after the glass - rear gate was bonded, always lower the glass assembly - door first, and then open/close it carefully.**
- **Move the vehicle slowly.**
- **For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.**

6. Connect the rear defogger connector.

7. Install the motor assembly - rear wiper and the arm assembly - rear wiper. Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Motor>INSTALLATION.

Tightening torque:

Motor assembly - rear wiper and arm assembly - rear wiper: Ref. to WIPER AND WASHER SYSTEMS>General Description>COMPONENT > REAR WIPER.

8. Install the roof spoiler. Ref. to EXTERIOR/INTERIOR TRIM>Roof Spoiler>INSTALLATION.

9. Install the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>INSTALLATION.

10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

11. After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

Note:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

WIRING DIAGRAM

Refer to "Rear Defogger System" in the wiring diagram. Ref. to WIRING SYSTEM>Rear Defogger System>WIRING DIAGRAM.

INSPECTION

1. SYSTEM INSPECTION

Symptoms	Inspection order
Rear window defogger does not operate.	1. Check the fuse. 2. Check the rear defogger relay. 3. Check the rear window defogger switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

Note:

Rear window defogger system can be customized using the Subaru Select Monitor, when the customize setting [Auto A/C Setting] of the body integrated unit is set to With.

System name	Initial setting	Customize setting
Rr Defogger op. mode	Normal	Continuous*

***: When the battery voltage remains at 10 V or less for 30 seconds, the continuous operation is suspended and turned to the normal operation.**

2. CHECK WITH SUBARU SELECT MONITOR

Caution:

Before performing inspection, check whether the rear defogger operation mode setting is either in initial setting or customize setting.

1. Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.

(1) Connect the Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

(2) Turn the ignition switch to ON.

(3) On [Start] display, select [Diagnosis].

(4) On [Select Vehicle] display, input the target vehicle information and select [Set].

(5) On [Main Menu] display, select [Each System].

(6) On [Select System] display, select [Body Control], and then select [Enter].

(7) On [Select Function] display, select [Data monitor].

(8) From the data monitor item list, select [Auto A/C Setting].

(9) Check the vehicle equipment and the settings of body integrated unit.

If correct, go to (10).

If not correct, go to (13).

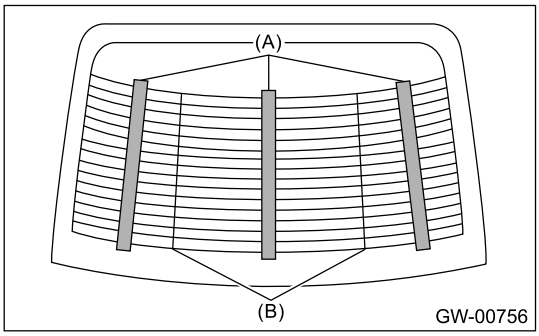
(10) From the data monitor item list, select [Rr Defogger output].

(11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.

(12) On [Select Function] display, select [Customize].
(13) From the Customize item list, select [Auto A/C Setting] and match the auto A/C ECM setting to the actual vehicle equipment.

2. Check the operation with rear window defogger switch ON.
   - When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
   - When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
3. When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION



Caution:

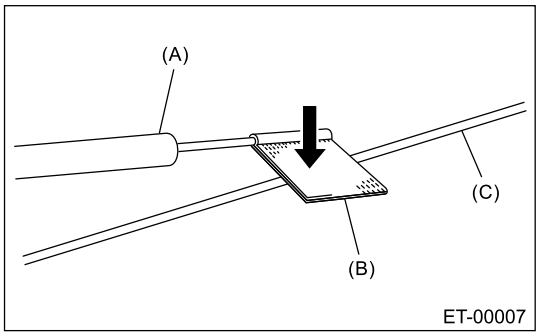
When wiping off the stain on glass with cloth, use a dry and soft cloth and move it in the direction of the heat wire extension to avoid damage to the heat wire.

1. Prepare the following checking items.
   - Liquid crystal thermograph sheet (approximate Size: 300 × 300 mm (11.8 × 11.8 in) and thermal temperature: 35 — 40°C (95 — 104°F))
   - Aluminum foil
2. Turn the ignition switch to ON.
3. Turn the defogger switch to ON.
4. Push the liquid crystal thermograph sheet from the outside of the glass.

   Note:

   Use the liquid crystal thermograph sheet every range it is separated with the separate line.

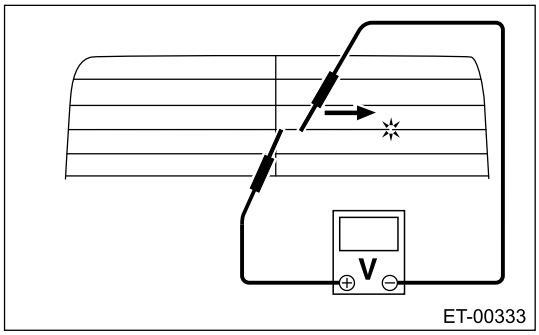
(A) Liquid crystal thermograph sheet
(B) Separate line



5. Determine the faulty heat wire by checking the color of the liquid crystal thermograph sheet.

Liquid crystal thermograph sheet	Criteria
Change occurred (red → blue)	Normal
No change (black)	Open

Note:



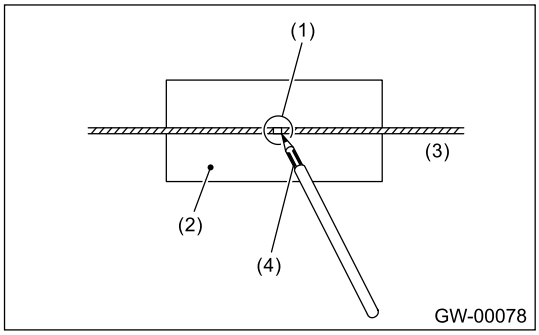
- **Check from the inside of the glass - rear window if the liquid crystal thermograph sheet does not change.**
- **The time for the color change may differ depends on the surface temperature of the glass.**

6. Wrap a piece of aluminum foil around the tip of tester probe and press it against the heat wire with your finger.

(A) Tester probe
(B) Aluminum foil
(C) Heat wire

7. To both ends of the section that has been found to include an open in the step 5), apply the tester positive (+) probe and the negative (−) probe.
8. Move the tester probe on the negative (−) side slowly along the heat wire. If voltage changes from zero while moving the tester probe, heat wire is open at the voltage change point.

9. Repair the heat wire that determines the place of the open circuit. Ref. to GLASS/WINDOWS/MIRRORS>Rear Window Defogger System>REPAIR.



GLASS/WINDOWS/MIRRORS > Rear Window Defogger System

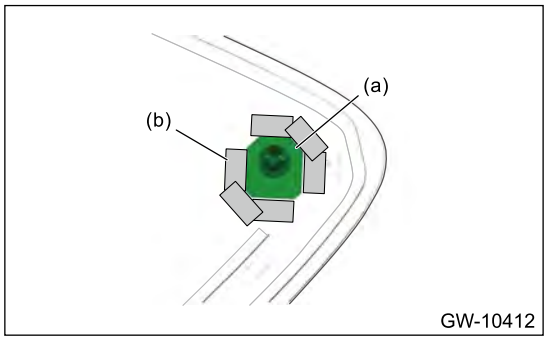
REPAIR

1. Clean the broken portion with alcohol or appropriate cleaning solvent.
2. Mask both side of wire with masking tape.
3. Apply the conductive silver composition to the broken portion.

Preparation items:

Conductive silver composition: DUPONT No. 4817 or equivalent

(1) Broken portion
(2) Masking tape
(3) Broken wire



(4) Conductive silver composition

4. After repair, check the wire.

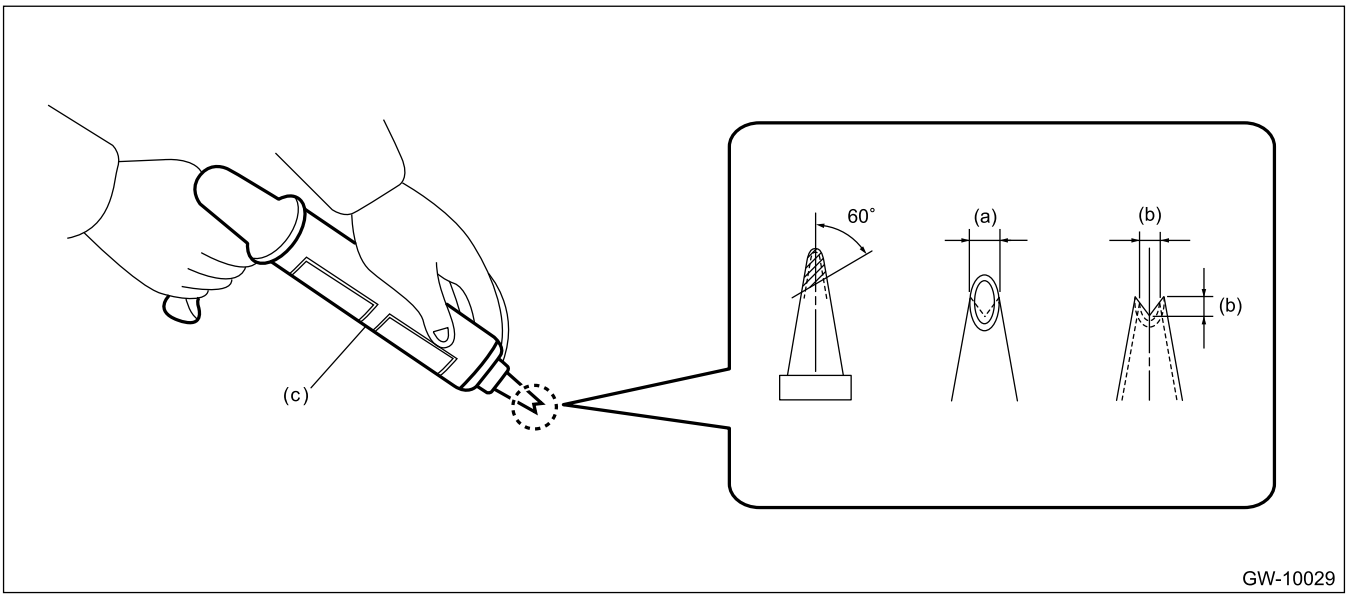
GLASS/WINDOWS/MIRRORS > Rear Quarter Glass

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.
2. Remove the trim panel - rear pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
3. Remove the glass - rear quarter in the same procedure as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>REMOVAL.
4. Remove the locating pin. (When reusing the glass)
   (1)Attach tape to the locating pin outer surface to identify the installation position.

(a) Locating pin - rear quarter (b) Tape

(2) Using a scraper, etc., remove locating pins (3 places).



Caution:

- **Do not remove the tape because it is used as reference during installation.**
- **Be careful not to damage the glass - rear quarter.**

GLASS/WINDOWS/MIRRORS > Rear Quarter Glass

INSTALLATION

1. Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.

(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2. Smoothen and clean the adhesive surfaces of the glass - rear quarter and body using the same

procedures as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>INSTALLATION.

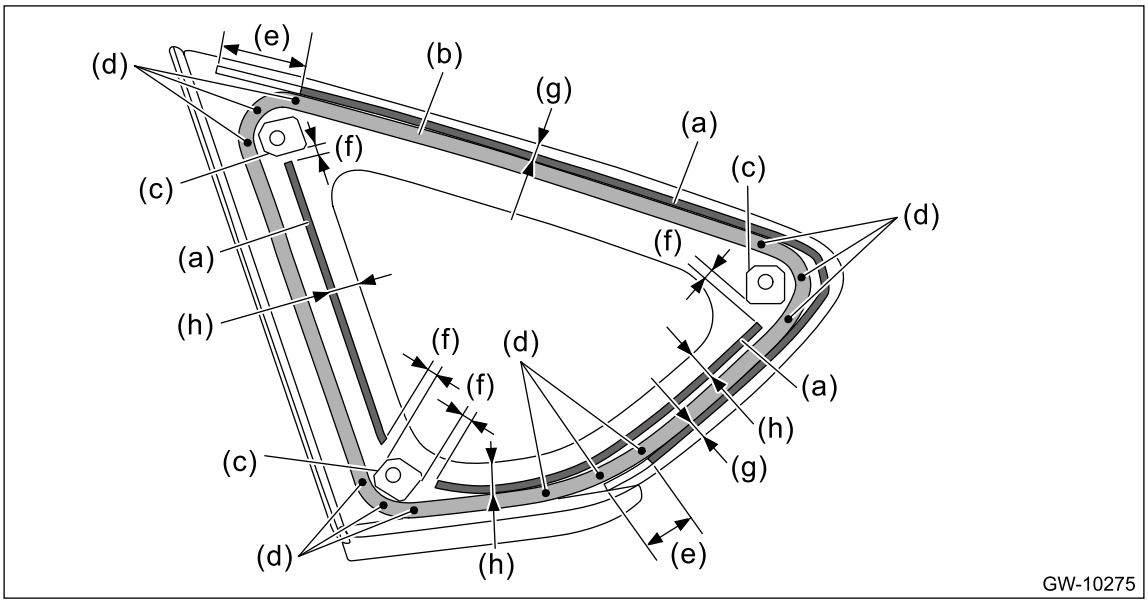
3. Install the locating pin. (When reusing the glass)

(1) Using a sponge, apply primer to the locating pin installation position on the glass - rear quarter.

Preparation items

Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent

Note:



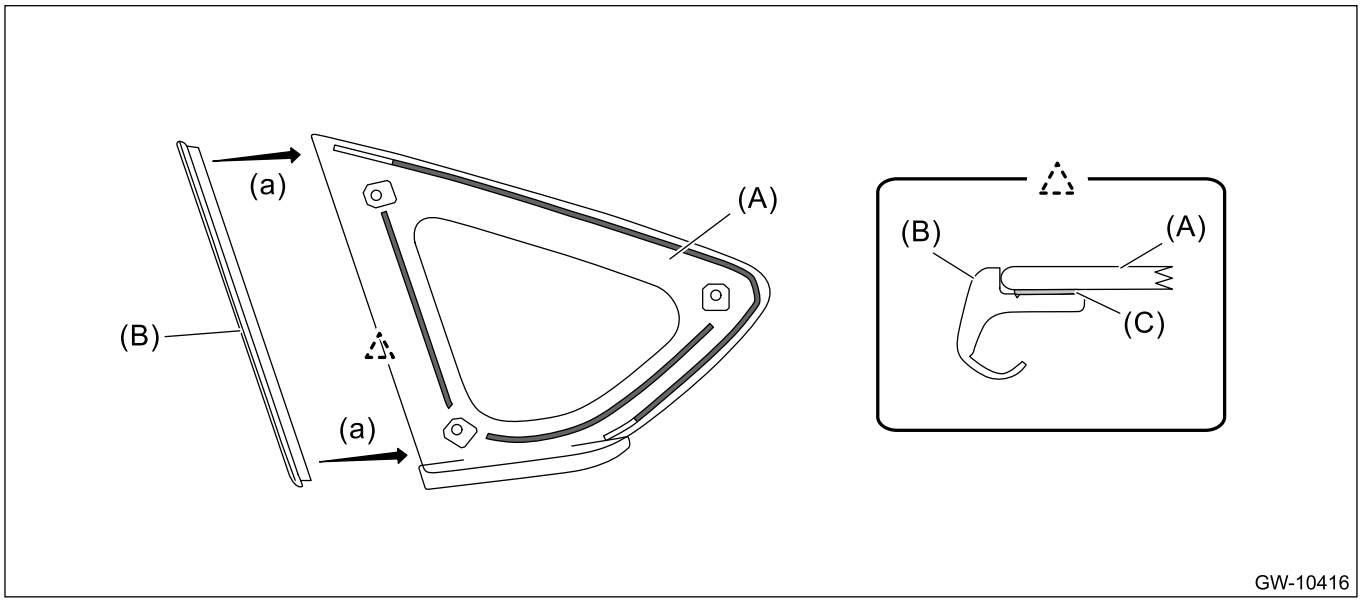
- **Let primer dry for about one hour before installing the locating pin.**
- **Do not touch the surface coated with primer.**

(2) Install two locating pins (3 places) to the positions marked with tapes, and remove the tapes.

Caution:

Always use new locating pins.

4. Attach the dam rubber - rear to the glass - rear quarter.



(a)	Dam rubber - rear quarter	(d)	Adhesive application mark (ceramic through hole)	(g)	8 mm (0.31 in)
(b)	Adhesive application area	(e)	Dam rubber edge position range	(h)	14 mm (0.55 in)
(c)	Locating pin - rear quarter	(f)	5 mm (0.2 in)		

5. Attach the molding - rear quarter to the glass - rear quarter.

Caution:

Be careful to attach the molding - rear quarter so that the molding has no loose or undulating part.

(1) Using a sponge, apply primer to the molding installation surface in the glass - quarter side.

Preparation items

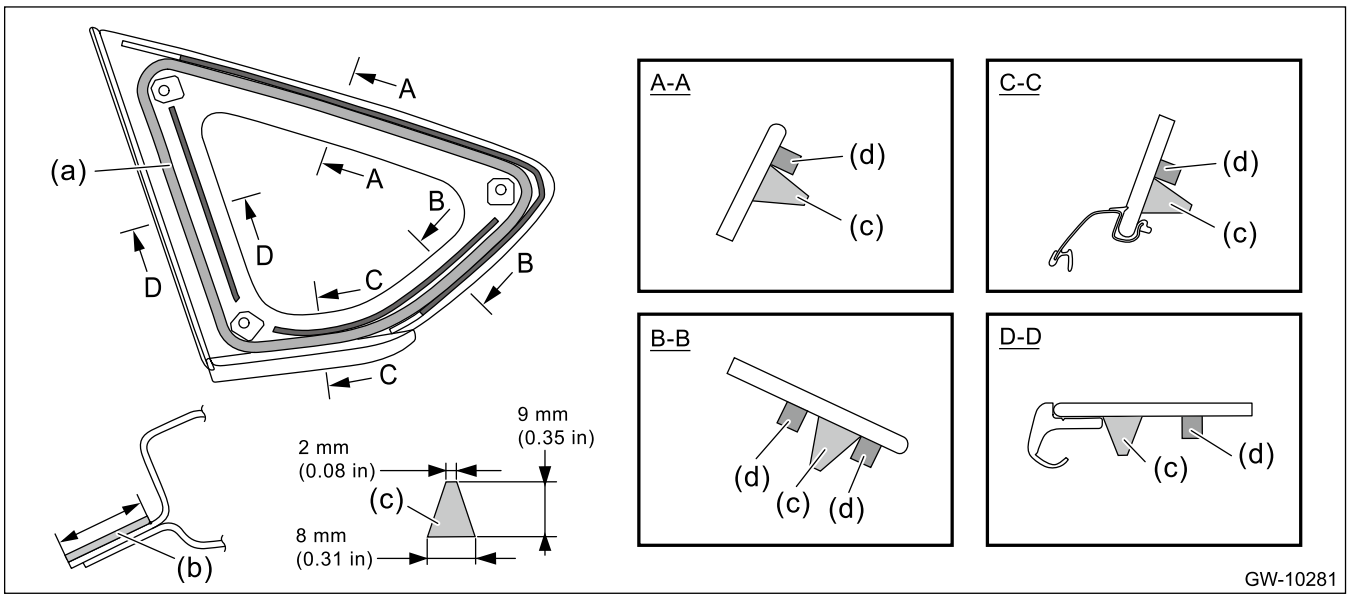
Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent

Note:

- **Let primer dry for about ten minutes before installing the molding - rear quarter.**
- **Do not touch the surface coated with primer.**

(2) Align the molding - rear quarter (A) to the front (a) of the glass - rear quarter (B).

(3) Firmly apply the double sided tape (C) of the molding - rear quarter evenly to the surface of the glass - rear quarter.



6. Install the glass - rear quarter in the same procedure as for the glass - front window. Ref. to GLASS/WINDOWS/MIRRORS>Windshield Glass>INSTALLATION.

(1) Apply the primer to the adhesive surface of glass - rear quarter side and body side using sponge.

(2)Apply adhesive to the glass - rear quarter end back surface.

Caution:

Do not apply primer to adhesive remaining on the body side.

(a) Application of primer (glass side)

(c) Adhesive

(d) Dam rubber - rear quarter

(b) Application of primer (body side)

(3) Insert the locating pins - rear quarter into the side panel holes, and install the glass - rear quarter.
(4) Lightly press the entire perimeter of the glass - rear quarter for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

7. After completion of all work, allow the vehicle to stand for about 24 hours.

Note:

- **When opening/closing the door after the glass - rear quarter was bonded, always lower the glass assembly - door first, and then open/close it carefully.**
- **Move the vehicle slowly.**
- **For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.**

8. Install the trim panel - rear pillar UPR. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>INSTALLATION.

9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE>BATTERY>GROUND TERMINAL REMOVAL OR INSTALLATION.

10. After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

Note:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

WIRING DIAGRAM

Refer to “Wiper Deicer System” in the wiring diagram. Ref. to WIRING SYSTEM>Wiper Deicer System.

INSPECTION

1. SYSTEM INSPECTION

Note:

- **The wiper deicer does not operate when the ambient temperature becomes 5°C (41°F) or more.**
- **The wiper deicer operates with the rear window defogger at the same time.**
- **It is possible to perform a forced operation if you keep holding the rear window defogger switch for 3 seconds or more.**

Symptoms	Inspection order
Wiper deicer does not operate.	1. Check the fuse. 2. Check the wiper deicer relay. 3. Check the wiper deicer switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

Note:

- **Wiper deicer system can be customized using the Subaru Select Monitor, when the customize setting [Auto A/C Setting] of the body integrated unit is set to With.**
- **Set the system using the Rr Defogger op. mode, and setting will be the same as rear defogger system setting.**

System name	Initial setting	Customize setting
Rr Defogger op. mode	Normal	Continuous*

***: When one of the following conditions occurs, the continuous operation is suspended and turned to the normal operation.**

- **Ambient temperature at 5°C (41°F) or more continues for 10 seconds.**
- **Malfunction occurs on ambient sensor.**
- **Vehicle speed of 15 km/h (9 MPH) or less continues 15 minutes (OFF when conditions are met)**
- **Malfunction occurs in CAN communication.**
- **Battery voltage remains at 10 V or less for 30 seconds.**
- **SI-DRIVE [I] mode driving continues for 10 seconds.**

2. CHECK WITH SUBARU SELECT MONITOR

Caution:

Before performing the inspection, check the following settings.

- **Wiper deicer setting → “support”. If “no support”, set to “support” using customize setting.**
- **Rear defogger operation mode setting → initial setting or customize setting.**

1. Check the input signal when the rear window defogger switch is operated using Subaru Select

Monitor.
(1) Connect the Subaru Select Monitor to data link connector.
Note:
For detailed operation procedures, refer to “Application help”.
(2) Turn the ignition switch to ON.
(3) On [Start] display, select [Diagnosis].
(4) On [Select Vehicle] display, input the target vehicle information and select [Set].
(5) On [Main Menu] display, select [Each System].
(6) On [Select System] display, select [Body Control], and then select [Enter].
(7) On [Select Function] display, select [Data monitor].
(8) From the data monitor item list, select [Auto A/C Setting].
(9) Check the vehicle equipment and the settings of body integrated unit.
If correct, go to (10).
If not correct, go to (13).
(10) From the data monitor item list, select [Rr Defogger output].
(11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
(12) On [Select Function] display, select [Customize].
(13) From the Customize item list, select [Auto A/C Setting] and match the auto A/C ECM setting to the actual vehicle equipment.

2. Check the operation with rear window defogger switch ON.
   - When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
   - When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
3. When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION

Refer to “HEAT WIRE INSPECTION” of “Rear Window Defogger System”. Ref. to GLASS/WINDOWS/MIRRORS>Rear Window Defogger System>INSPECTION > HEAT WIRE INSPECTION.

Note:
Heat wire inspection needs removing/installing procedure of instrument panel assembly.

GLASS/WINDOWS/MIRRORS > Wiper Deicer System

REPAIR

Refer to “REPAIR” of “Rear Window Defogger System”. Ref. to GLASS/WINDOWS/MIRRORS>Rear Window Defogger System>REPAIR.

Note:
Heat wire repair needs removing/installing procedure of instrument panel assembly.

SPECIFICATION

1. COMBINATION METER ASSEMBLY

Note:

Specifications of the combination meter vary depending on the market and the grade.

- Model with normal meter

Meter, display	Operation method, display method	Drive control	When checking the indicator needle operation/needle reading operation
Speedometer	Stepping motor type	Combination meter	—
Tachometer			
ECO gauge			
ABS warning light	LED	Combination meter	On/Off
STEERING warning light			
AT oil temperature warning light			
Driver’s seat belt warning light			
Door warning light			
Tire pressure warning light			
AWD warning light			
Hill start assist warning light / hill start assist OFF indicator light			
VDC warning light / VDC operation indicator light			
VDC OFF indicator light			
High beam indicator light			
Front fog light indicator light			
Malfunction indicator light			
Airbag warning light			
Engine oil level warning light			
Washer fluid level warning light			
Oil pressure warning light			
Charge warning light			
Turn signal indicator light			
Parking brake/brake fluid level warning light			
Meter illumination back light			Light ON
LCD back light			
Fuel level warning light			On/Off (area near the E mark is illuminated)
Engine coolant temperature warning light (red)			On (red)/Off

Meter, display	Operation method, display method	Drive control	When checking the indicator needle operation/needle reading operation
Engine coolant temperature indicator light (blue)			Off/On (blue)
Security indicator light		Body integrated unit	Turns on or off according to module control
ODO indicator	LCD	Combination meter	—
Trip indicator			
Select lever / shift position indicator			
Cruise control system indicator • Constant speed cruise • SET • Set speed			

- Model with color TFT meter

Meter, display	Operation method, display method	Drive control	When checking the indicator needle operation/needle reading operation
Speedometer	Stepping motor type	Combination meter	—
Tachometer			
ABS warning light	LED	Combination meter	On/Off
STEERING warning light			
AT oil temperature warning light			
Driver’s seat belt warning light			
Tire pressure warning light			
AWD warning light			
Hill start assist warning light / hill start assist OFF indicator light			
VDC warning light / VDC operation indicator light			
VDC OFF indicator light			
High beam indicator light			
Front fog light indicator light			
Lighting indicator light			
Fuel level warning light			
Malfunction indicator light			
Airbag warning light			
Oil pressure warning light			

Meter, display	Operation method, display method	Drive control	When checking the indicator needle operation/needle reading operation
Charge warning light			
Lane departure warning OFF indicator light			
Pre-collision brake OFF indicator light			
Turn signal indicator light			
Parking brake/brake fluid level warning light			
Meter illumination back light			Light ON
LCD back light			
Engine coolant temperature warning light (red)			On (red)/Off
Engine coolant temperature indicator light (blue)			Off/On (blue)
Security indicator light		Body integrated unit	Turns on or off according to module control
ODO indicator	TFT	Combination meter	—
Trip indicator			
Select lever / shift position indicator			
Information (intervention) display			
Warning and indicator display • Door partially latched • Engine oil level • BSD/RCTA • BSD/RCTA OFF • SRF OFF • Washer fluid level • Low ambient temperature • High Beam Assist • Access key • RAB • RAB OFF • LED low beam • SRH OFF • Auto leveler			
FUEL meter			
Cruise control system indicator • Constant speed cruise • SET • Set speed			

Meter, display	Operation method, display method	Drive control	When checking the indicator needle operation/needle reading operation
EyeSight system indicator • Adaptive cruise • Constant speed cruise • READY • Preceding vehicle • Following distance setting • Set speed • Traffic lane • EyeSight warning • EyeSight temporary stop • Lane keep			

2. MULTI FUNCTION DISPLAY

Note:

Specifications of the multi-function display vary depending on the market and the grade.

- Normal type

Display	Display method
Cruising distance, average/instantaneous fuel economy, continuous driving time, average vehicle speed, ambient temperature, current time	LCD

- High grade type

Display	Display method
Preventive safety screen, EyeSight screen, Favorite screen, audio screen, fuel economy screen, clock screen, setting shift screen, interruption screen, air conditioner screen, setting screen, diagnosis screen, weather screen∗1, TBT & direction screen∗2	TFT

∗1: Model with XM

∗2: Model with navigation system

3. WARNING BOX

Display	Display method
Passenger’s airbag ON indicator light	LED
Passenger’s airbag OFF indicator light	
Passenger’s seat belt warning light	

LOCATION

1. COMBINATION METER SYSTEM

For location, refer to “Electrical Component Location” for “COMBINATION METER (DIAGNOSTICS)” section. Ref. to COMBINATION METER (DIAGNOSTICS)>Electrical Component Location.

2. MULTI-FUNCTION DISPLAY (MFD) SYSTEM

For location, refer to “Electrical Component Location” for “MULTI-FUNCTION DISPLAY (DIAGNOSTICS)” section. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Electrical Component Location.

INSTRUMENTATION/DRIVER INFO > General Description

CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the parts provided with memory functions such as audio, MFD, record the memory contents before disconnecting the battery ground cable.
- Use gloves to avoid damage to and get fingerprints on the glass surface. Wipe off using a soft cloth, if the part is contaminated.
- If any immobilizer related part has been replaced, make sure to register the immobilizer.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. Ref. to AIRBAG SYSTEM>General Description>CAUTION.
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

INSTRUMENTATION/DRIVER INFO > General Description

PREPARATION TOOL

1. SPECIAL TOOL

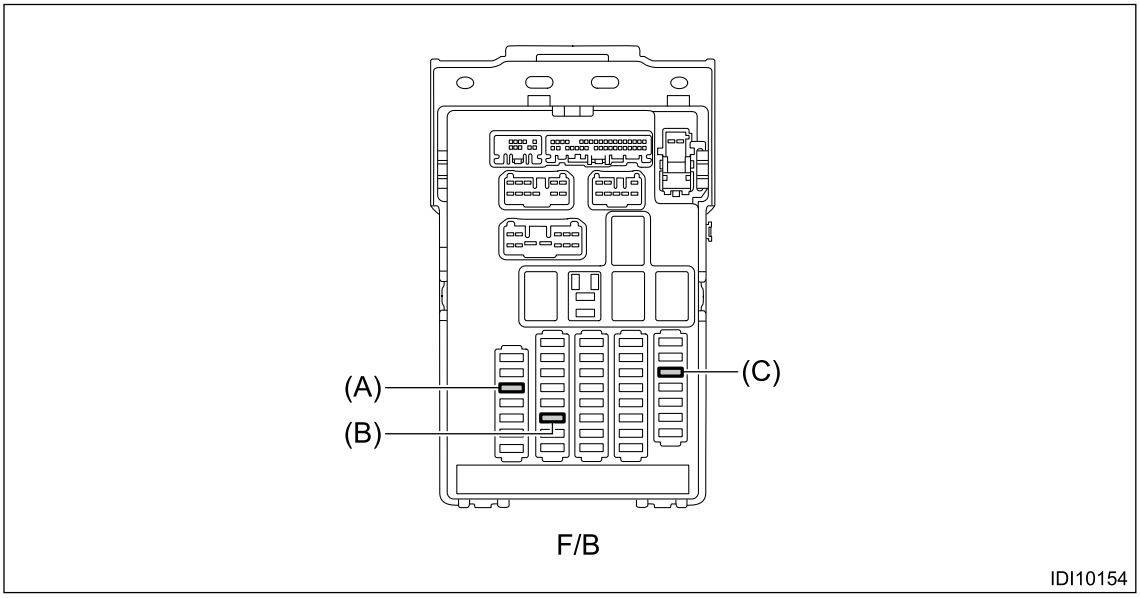

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Clip remover	Used for removing clips.

INSTRUMENTATION/DRIVER INFO > Relay and Fuse

LOCATION

Relay & fuse box (F/B)	Fuse 7.5 A (combination meter, MFD)	(A)
	Fuse 10 A (MFD)	(B)
	Fuse 7.5 A (combination meter)	(C)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSTRUMENTATION/DRIVER INFO > Relay and Fuse

INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

Note:

If the fuse is blown again, check the system wiring harness.

INSTRUMENTATION/DRIVER INFO > Combination Meter System

WIRING DIAGRAM

Refer to “Combination Meter System” in the wiring diagram.

- Models with normal meters: Ref. to WIRING SYSTEM>Combination Meter System>WIRING DIAGRAM > NORMAL METER MODEL.
- Model with color TFT meter: Ref. to WIRING SYSTEM>Combination Meter System>WIRING DIAGRAM > COLOR TFT METER MODEL.

INSTRUMENTATION/DRIVER INFO > Combination Meter System

ELECTRICAL SPECIFICATION

For the specification (electrical component), refer to “Control Module I/O Signal” of “COMBINATION METER (DIAGNOSTICS)” section. Ref. to COMBINATION METER (DIAGNOSTICS)>Control Module I/O Signal.

INSTRUMENTATION/DRIVER INFO > Combination Meter System

OPERATION

1. SELF-DIAGNOSIS DISPLAY MODE

The combination meter self-diagnosis can be performed as a single unit according to the following procedure.
When the self-diagnosis display mode operates, it switches in the order of [1. Meter pointer operation check]→[2. Meter pointer indication check]→[3. LCD/TFT display check].

1. Procedure

   Caution:

   - **Perform the steps described in (1) through (4) within 10 seconds.**
   - **There are two methods. Follow either of the methods.**

   – Method with lighting switch

(1)	Within 3 seconds after turning the ignition switch to ON, set the parking (tail) light switch or the headlight switch to ON.
(2)	While the switch is in ON, press the trip reset switch three times.
(3)	Turn the parking (tail) light switch or the headlight switch to OFF, and press the trip reset switch three times.
(4)	Turn the parking (tail) light switch or the headlight switch to ON, and press the trip reset switch three times.

   – Method with seat belt

(1)	Unfasten → fasten the driver’s seat belt within 3 seconds after the ignition switch is turned to ON.
(2)	With the driver’s seat belt fastened, press the trip reset switch three times.
(3)	Unfasten the driver’s seat belt, and then press the trip reset switch three times.
(4)	Fasten the driver’s seat belt again, and then press the trip reset switch three times.

2. Go to the self-diagnosis display mode.

   Caution:

   If the procedure is not performed properly, turn the ignition switch from ON to OFF to stop the operation halfway, and then proceed from step (1) to (4).

Note:

- **Turn the ignition switch to OFF (ACC OFF) to cancel the self-diagnosis function.**
- **When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once the vehicle starts driving, the self-diagnosis function is deactivated automatically.**
- **If the self-diagnosis function is not deactivated, the check items in operation are displayed. After the check items 1 to 3 are displayed, the check item 1 is displayed repeatedly.**
- **The buzzer sounds when the check item is switched, to indicate that the item is switched and make sure that the buzzer sounds.**

1. METER POINTER OPERATION CHECK

In meter pointer operation check, the meter operation, warning /indicator light, illumination and LCD/TFT are checked.

1. After a buzzer sounds for 0.5 seconds and "STEP1" is displayed on LCD/TFT, the meter pointer operation check mode is initiated.

Time (sec)	Meter indicator	LCD/TFT display, illumination	Warning light/ indicator light
6	MIN indication ↓ MAX indication	ILL1 (Min. brightness) ↓*4 ILL6 (Max. brightness)	*1, *2, *3
6	MAX indication ↓ MIN indication	ILL6 (Max. brightness) ↓*4 ILL1 (Min. brightness)	

*1: Warning lights and indicator lights controlled by the meter drive circuit are illuminated. Ref. to INSTRUMENTATION/DRIVER INFO>General Description>SPECIFICATION.

*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. Ref. to INSTRUMENTATION/DRIVER INFO>General Description>SPECIFICATION.

*3: Engine coolant temperature warning light illuminates in red.

*4: Display for one second for each level.

2. METER POINTER INDICATION CHECK

In meter pointer indication check, the meter operation, warning /indicator light and LCD/TFT are checked.

Note:

ILL indication illuminates at the same brightness as immediately before entering "Meter pointer indication check".

1. Press the trip reset switch.
2. After a buzzer sounds for 0.5 seconds and "STEP2" is displayed on LCD/TFT, the meter pointer indication check mode is initiated.

Time (sec)	Speedometer (km/h)	Tachometer (r/min)	ECO gauge	Warning light/ indicator light
1.5	0	0	Lowest point	The following lights

Time (sec)	Speedometer (km/h)	Tachometer (r/min)	ECO gauge	Warning light/ indicator light
1.5	0	0	−Max	are lit.∗ 1 • Engine coolant temperature indicator light (blue) • Fuel level warning light (near the E mark)∗2
1.5	40	1,000	0	
1.5	100	4,000	+Max	
1.5	40	1,000	0	
1.5	0	0	−Max	

*1: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. Ref. to INSTRUMENTATION/DRIVER INFO>General Description>SPECIFICATION.

*2: Model with normal meter

3. LCD/TFT DISPLAY CHECK

Check the LCD/TFT display.

Note:

- **The meter needle indicate 0 or the lowest position.**
- **ILL indication illuminates at the same brightness as immediately before entering "LCD/TFT display check".**
- **For model with normal meter, after No. 14 is displayed in the illumination order, the display is repeated from No. 1 again.**
- **For model with color TFT meter, after No. 8 is displayed in the illumination order, the display is repeated from No. 1 again. The version display contents of the illumination order No. 1 varies depending on the vehicle.**

1. Press the trip reset switch.
2. After a buzzer sounds for 0.5 seconds and "STEP3" is displayed on LCD/TFT, the LCD/TFT display check mode is initiated.
   - Model with normal meter

2. DEMONSTRATION MODE (MODEL WITH COLOR TFT METER ONLY)

The demonstration mode screen of the combination meter can be displayed according to the following procedure.

Caution:

- **To avoid battery discharge, perform the operation under the following condition.**
  – Perform the operation while the battery is being charged.
  – While performing the operation and displaying the demonstration mode, close all doors and do not operate any electrical parts.
- **To display the demonstration mode, set the Demonstration mode permission / fault permission of the user customize mode to permission. For detailed operation procedures, refer to "Application help".**
- **When the demonstration mode display is completed, make sure to set "Demonstration mode permission / fault permission" of the user customize mode to "fault permission". Do not deliver the vehicle to the customer with "Demonstration mode permission / fault permission" set to "permission".**
- **Even if the backup fuse is removed, the demonstration mode can be initiated.**

1. Procedure

Caution:

While the ignition switch is OFF (ACC OFF) and the odo/trip meter is not displayed, perform the steps described in (1) through (4) within 10 seconds.

(1)	Press the trip reset switch once.
(2)	Press the i/SET switch three times within three seconds after the operation (1) above is performed.
(3)	Press the trip reset switch once, and press the i/SET switch three times.
(4)	Press the trip reset switch once, and press the i/SET switch three times.

2. The demonstration mode is initiated.

Caution:

If the procedure is not performed properly, turn the ignition switch from ON to OFF to stop the operation halfway, and then proceed from step (1) to (4).

Note:

The demonstration mode will be cancelled in the following condition.
When resuming the operation after cancellation, the demonstration mode is displayed.
However, the resuming can only be accepted after approx. 1 minute.

- **At the completion of the "goodbye screen" display that is shown 60 minutes after the demonstration mode is initiated**
- **When the ignition switch is turned to ON**
- **When the i/SET switch is turned to ON for two seconds**
- **When the battery voltage is low**
- **When the interruption screens except for the followings and the door open warning light illuminate**
  - **– Low keyless transmitter battery warning**
  - **– Key left warning**
  - **– Light-on warning**
  - **– Door open warning**
  - **– Fuel level warning**

3. VARIANT WORK

Perform when replacing with a new combination meter assembly.

- When the combination meter before replacement can communicate with Subaru Select Monitor ([Read Control module setting information] is workable): Perform the operation procedure A.
- When the combination meter before replacement cannot communicate with Subaru Select Monitor ([Read Control module setting information] is not workable): Perform the operation procedure B.

Caution:

When incorrect information is written by [Reading and Writing of the ECU Configuration Information and Odometer Value], [Write ECU setting save data] and [Write ECU setting 12 columns of models], a new combination meter cannot be used because correct information is not displayed. Obtain another new combination meter and write information again.

Item		Contents
[Read Control module setting information]		Read the setting information from the combination meter before replacement, and save it to the Subaru Select Monitor. *1
[Write Control module setting information]	[Write ECU setting save data]	Write the setting information saved by [Read Control module setting information] to the new combination meter. *2
	[Write ECU setting 12 columns of models]	Using applied models and option codes, write the setting information to the new combination meter. *2
[Reading and Writing of the ECU Configuration Information and Odometer Value]		Read the setting information and odometer value from the combination meter before replacement, and write them to the new combination meter.

*1: Odometer value reading and storing are not possible

*2: Odometer value writing is not possible

OPERATION PROCEDURE A

Caution:

- **Carry-over of the odometer value is possible only once. If failed, odometer carry-over cannot be performed anymore.**
- **When odometer value reading is performed, the odometer displays "------" and continued use of the combination meter assembly is impossible.**
- **When the power supply of the Subaru Select Monitor is turned OFF during work, the odometer value data is cleared and carry-over becomes impossible. Be careful of the state of power supply connection of Subaru Select Monitor.**

1. Read and store the setting information and odometer value.
   (1) Connect the Subaru Select Monitor and then turn the ignition switch to ON.
   (2) On [Start] screen, select [Diagnosis].
   (3) On [Select Vehicle] screen, enter vehicle information and select [OK].
   (4) On [Main Menu] screen, select [Each System].
   (5) On [Select System] screen, select [Combination Meter], and then select [Next].
   (6) On [Select Function] screen, select [Work Support], and then select [Reading and Writing of the ECU Configuration Information and Odometer Value].
   (7) Save under a new name according to the display screen.
   (8) When [Do you read the Odometer Value? Odometer of the Meter is locked] is displayed, click the [YES] button.
   (9) Confirm that [Read the Odometer Value] is displayed, and then turn the ignition switch to OFF.
2. Replace the combination meter assembly with a new part. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
   Caution:
   Do not perform the following. Otherwise, saved odometer values will be cleared.
   - **Turn the power supply of Subaru Select Monitor to OFF.**
   - **Communication between Subaru Select Monitor and DST-i is lost. (USB cable is disconnected)**

   Note:
   The data link connector can be removed. If it is interfering with the work, move it outside the vehicle.
3. Write the setting information and odometer value.
   Note:
   When the odometer value writing operation is completed correctly, the odometer value is automatically cleared from the Subaru Select Monitor.
   (1) [Did you replace the Meter?] is displayed. Click the [YES] button.
   (2) When [Do you write Odometer Value?] is displayed, click the [YES] button.
   (3) When [Completed the writing of Odometer Value. Write the ECU Configuration Information] is displayed, click the [OK] button.
   (4) Select the file saved with [Reading and Writing of the ECU Configuration Information and Odometer Value], and click the [Execution] button.
   (5) When [Write?] is displayed, select the [YES] button.
   (6) Confirm that [Write operation was completed.] is displayed, and click the [OK] button.
4. Check if the combination meter assembly operates normally.

OPERATION PROCEDURE B

Note:
With [Write ECU setting 12 columns of models], carry-over of odometer value cannot be performed.

1. Replace the combination meter assembly with a new part. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
2. Write the vehicle data.
   (1) Connect the Subaru Select Monitor and then turn the ignition switch to ON.
   (2) On [Start] screen, select [Diagnosis].
   (3) On [Vehicle selection] screen, enter vehicle information and select [OK].
   (4) On [Main Menu] screen, select [Each System].
   (5) On [Select System] screen, select [Combination Meter], and then select [Next].
   (6) On [Select Function] screen, select [Work Support], and then select [Write Control module setting information].
   (7) From the item list, select [Write ECU setting 12 columns of models]. Enter the applied model (7 digits) and click the [OK] button. Ref. to IDENTIFICATION > IDENTIFICATION NUMBER & LABEL LOCATIONS.
   (8) Enter the option code (4 digits) and click the [OK] button. Ref. to IDENTIFICATION > IDENTIFICATION NUMBER & LABEL LOCATIONS.
   (9) Confirm the vehicle information on [Write ECU setting 12 columns of models] screen, and click the [OK] button.
   (10) When [Write?] is displayed, select the [YES] button.
   (11) Confirm that [Write operation is complete.] is displayed, and click the [OK] button.
3. Check if the combination meter assembly operates normally.

INSTRUMENTATION/DRIVER INFO > Combination Meter System

INSPECTION

1. COMBINATION METER

For inspection, refer to "Basic Diagnostic Procedure" of "COMBINATION METER (DIAGNOSTICS)" section. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. BUZZER

1. Using the Subaru Select Monitor, perform the active test for buzzer. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.
   Note:
   For detailed operation procedures, refer to "Application help".
2. If no buzzer sounds, replace the combination meter assembly.

3. SWITCH

Illumination intensity does not change even when the illumination control switch is operated.
Note:
Illumination intensity does not change even when the illumination control switch is operated with the lighting switch OFF.

1. CHECK CURRENT DATA.

Display the data of [Bright switch input state] and [Illumination control switch input state] using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Do the display change as [OFF] ← [ON] and the value range from 0 to 100 when the bright switch and illumination control switch are operated?

Yes — Replace the combination meter assembly.

No — Go to 2.

2. CHECK ILLUMINATION CONTROL SWITCH UNIT.

Check the illumination control switch. Ref. to INSTRUMENTATION/DRIVER INFO>Switches and Harness>INSPECTION > ILLUMINATION CONTROL SWITCH.

Is the switch normal?

Yes — Go to 3.

No — Replace the illumination control switch.

3. CHECK HARNESS.

1. Disconnect the connectors of combination meter assembly and illumination control switch.
2. Measure the resistance between the combination meter assembly and the illumination control switch.

Connector & terminal

(i10) No. 29 — (i79) No. 6:
(i10) No. 30 — (i79) No. 5:
(i10) No. 31 — (i79) No. 4:
(i10) No. 32 — (i79) No. 1:

Is the resistance less than 1 Ω?

Yes — Replace the combination meter assembly.

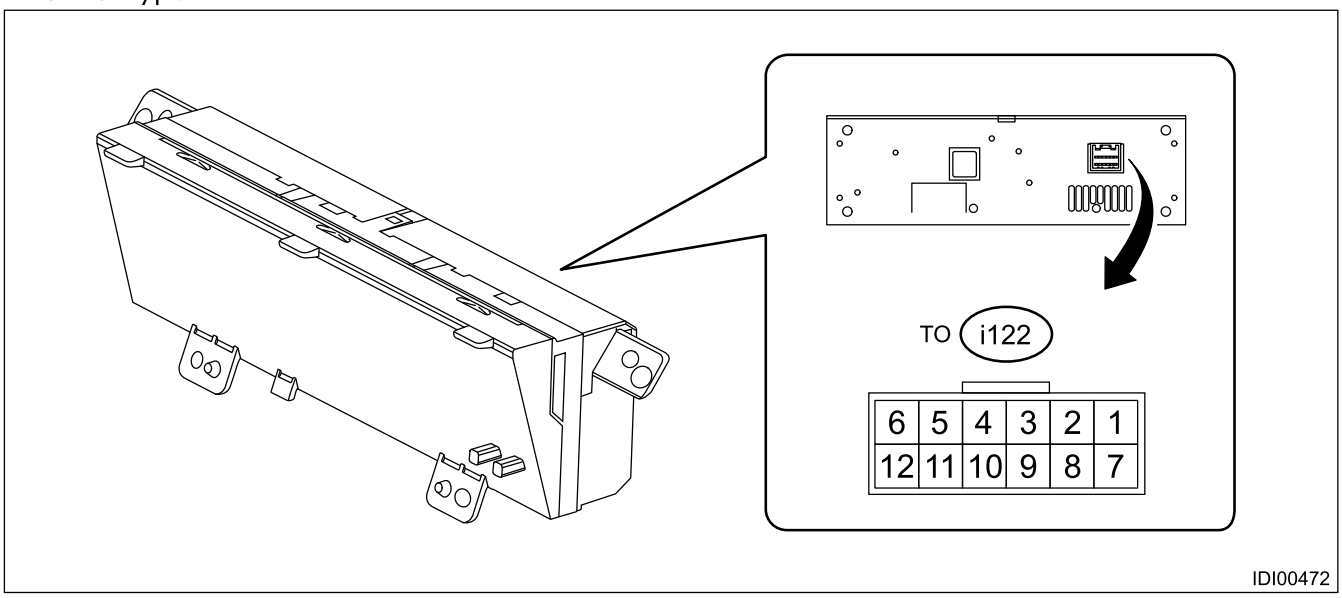
No — Repair or replace the harness.

NOTE

For procedure of each component in the combination meter system, refer to the respective section.

- Combination meter assembly: Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
- Switches and harness: Ref. to INSTRUMENTATION/DRIVER INFO>Switches and Harness.

WIRING DIAGRAM



Refer to "Multi-function Display (MFD) System" in WI section.

- Normal type: Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM > STANDARD MFD.
- High grade type: Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM > HIGH GRADE MFD.

ELECTRICAL SPECIFICATION

1. MULTI FUNCTION DISPLAY

- Normal type

Terminal No.	Item	Measuring condition	Standard
1 (+B) ←→ Chassis ground	Voltage	Always	10 — 14 V
2 (IG) ←→ Chassis ground	Voltage	IG OFF → ON	0 V → 10 — 14 V
3 (GND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω
4 (MFD SW+) ←→ Chassis ground	Voltage	SW OFF → ON	0 V → 10 — 14 V
8 (U-ART com.)	—	Cannot be measured	—

- High grade type
  For the specification (electrical component), refer to the "Control Module I/O Signal" of the "MULTI-FUNCTION DISPLAY(DIAGNOSTICS)" section. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

OPERATION

1. DIAGNOSTIC MODE (HIGH GRADE TYPE ONLY)

The settings of the multi-function display can be changed by performing the following procedures to display the diagnostic mode.

Caution:

- **To avoid battery discharge, perform the procedure while charging the battery.**
- **While performing the work, close the front hood and all doors, and do not operate any electrical parts.**
- **Display can not be switched to diagnostic mode if the illumination control dial is set to the position for the dimming cancel function (maximum brightness).**

1. Procedure

Caution:

Perform the steps described in (2) through (5) within 10 seconds.

(1)	Within 3 seconds after turning the ignition switch to ON, set the parking (tail) light switch or the headlight switch to ON.
(2)	While the switch is in ON, press the MFD (INFO) switch three times.
(3)	Turn the parking (tail) light switch or the headlight switch to OFF, and press the MFD (INFO) switch three times.
(4)	Turn the parking (tail) light switch or the headlight switch to ON again, and press the MFD (INFO) switch three times.
(5)	Turn the parking (tail) light switch or the headlight switch to OFF again, and press the MFD (INFO) switch three times.
(6)	Go to “Diagnostic mode”.

Note:

- **Except for the demonstration display setting of the diagnostic mode, the display will terminate by turning the ignition switch to OFF (ACC OFF) or by selecting “Back” from the menu screen.**
- **The demonstration display setting of the diagnostic mode will terminate by starting the engine or removing the battery. Even if the ignition switch is turned to OFF (ACC OFF), then to ON again, the diagnostic mode will not terminate.**
- **To select other menus from the demonstration display setting, terminate the diagnostic mode by starting the engine or removing the battery, then access to the diagnostic mode again.**

2. Display menu

Change the display and settings from each menu.

Menu	Item	Content
Demonstration display setting	—	Shows demonstration display.
Vehicle status confirmation	• CAN communication	Displays the connection and status of input signals.
	• USB	
	• Camera 1 connection	
	• Camera 2 connection	
	• +B	
	• +IGN	
	• Operation button	
Key operation sound	Key operation sound	Select “ON” or “OFF”, then select “Set” to determine.

Menu	Item	Content
Back	—	Finish the diagnostic mode.

INSTRUMENTATION/DRIVER INFO > Multi-function Display (MFD) System

INSPECTION

- Normal type
  Refer to the following inspection steps. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD) System>INSPECTION > SYMPTOM CHART.
- High grade type
  For inspection, refer to “Basic Diagnostic Procedure” of “MULTI-FUNCTION DISPLAY (DIAGNOSTICS)” section. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Basic Diagnostic Procedure.

1. SYMPTOM CHART

Symptoms	Repair order	Note
No display is shown.	1. Power supply 2. Ground circuit 3. Communication circuit harness 4. MFD	Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD) System>INSPECTION > CHECK POWER SUPPLY AND GROUND CIRCUIT AND COMMUNICATION CIRCUIT.
Ambient air temperature/fuel economy displays do not appear.	1. Power supply 2. Ground circuit 3. MFD	Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD) System>INSPECTION > CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT.
Only ambient air temperature display is not displayed.	1. Power supply 2. Harness 3. Ambient sensor 4. Communication circuit 5. MFD	Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD) System>INSPECTION > CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT.
Only fuel economy display is not displayed.	1. Setting 2. MFD	Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD) System>INSPECTION > CHECK COMMUNICATION CIRCUIT OF FUEL ECONOMY SYSTEM.

2. CHECK POWER SUPPLY AND GROUND CIRCUIT AND COMMUNICATION CIRCUIT

1. CHECK POWER SUPPLY.

1. Disconnect the MFD connector.
2. Measure the voltage between MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes — Go to 2.

No — Check the harness for open or short between the fuse and MFD.

2. CHECK GROUND CIRCUIT.

Measure the resistance between MFD connector and chassis ground.
Connector & terminal
(i122) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 3.

No — Repair or replace the harness.

3. CHECK HARNESS BETWEEN MFD AND COMBINATION METER ASSEMBLY.

1. Disconnect the connector of combination meter assembly.
2. Check the harness between MFD and combination meter assembly.
   Connector & terminal
   (i122) No. 8 — (i10) No. 11:

Is harness normal?

Yes — Go to 4.

No — Repair or replace the harness.

4. CHECK MFD.

1. Remove the MFD.
2. Attach the clock to another vehicle on which the clock display operates normally, and check its operation.

Is MFD normal?

Yes — Replace the meter - main assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

No — Replace MFD.

3. CHECK CLOCK SYSTEM COMMUNICATION CIRCUIT

1. CHECK POWER SUPPLY.

1. Disconnect the MFD connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 2 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes — Go to 2.

No — Repair or replace the harness.

2. CHECK GROUND CIRCUIT.

Measure the resistance between MFD connector and chassis ground.
Connector & terminal
(i122) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 3.

No — Repair or replace the harness.

3. CHECK MFD.

1. Remove the MFD.
2. Attach the clock to another vehicle on which the clock display operates normally, and check its operation.

Is MFD normal?

Yes	Repair the poor contact of connector.
No	Replace MFD.

4. CHECK AMBIENT TEMPERATURE METER SYSTEM COMMUNICATION CIRCUIT

1. CHECK AMBIENT SENSOR POWER SUPPLY.

1. Disconnect the ambient sensor connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between the ambient sensor connector and chassis ground.
   Connector & terminal
   (B480) No. 2 (+) — Chassis ground (−):

Is the voltage 4 V or more?

Yes	Go to 2.
No	Check the harness for open or short between the fuse and ambient sensor.

2. CHECK HARNESS BETWEEN AMBIENT SENSOR AND COMBINATION METER ASSEMBLY.

1. Disconnect the connector of combination meter assembly.
2. Check harness between ambient sensor and combination meter assembly.
   Connector & terminal
   (B480) No. 1 — (i10) No. 24:
   (B480) No. 2 — (i10) No. 23:

Is harness normal?

Yes	Go to 3.
No	Repair or replace the harness.

3. CHECK AMBIENT SENSOR.

Check the ambient sensor.

Is the ambient sensor operating properly? Ref. to AIR CONDITIONER>Ambient Sensor>INSPECTION.

Yes — Go to 4.

No — Replace the ambient sensor.

4. CHECK AMBIENT TEMPERATURE DISPLAY.

1. Connect the combination meter assembly connector.
2. Install the 3 kΩ resistance between connector terminals of the ambient sensor.
3. Turn the ignition switch to ON.

Connector & terminal

(B480) No. 1 — No. 2:

Does the ambient temperature display 25°C (77°F)?

Yes — Repair the poor contact between the ambient sensor and harness connector.

No — Go to 5.

5. CHECK CURRENT DATA.

Display the [Ambient Air Temperature] data using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to “Application help”.

Is the ambient temperature of 25°C (77°F) output?

Yes — Go to 6.

No — Replace the meter - main assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

6. CHECK MFD.

1. Remove the MFD.
2. Attach the ambient temperature display to another vehicle on which the ambient temperature display operates normally to check its operation.

Does the ambient temperature display 25°C (77°F)?

Yes	Replace MFD.
No	Replace the meter - main assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

5. CHECK COMMUNICATION CIRCUIT OF FUEL ECONOMY SYSTEM

1. CHECK FUEL ECONOMY DISPLAY OFF MODE.

Check that the mode display changes when the MFD (INFO) switch is operated.
(Display changes in the following order: cruising distance → average fuel economy → instantaneous fuel economy → continuous driving time → average vehicle speed → blank display)

Is fuel economy displayed?

Yes	MFD is normal.
No	Go to 2.

2. CHECK MFD.

1. Remove the MFD.
2. Attach the fuel economy display to another vehicle on which the fuel economy display operates normally to check its operation.

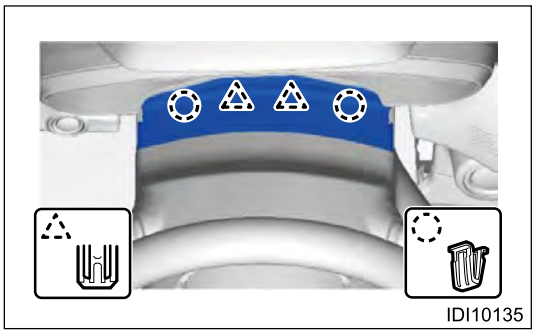
Is the fuel economy display correct?

Yes	Replace the meter - main assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Replace MFD.

INSTRUMENTATION/DRIVER INFO > Multi-function Display (MFD) System

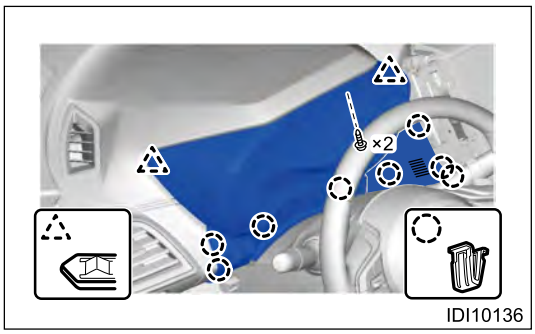
NOTE

For procedure of each component in the Multi-Function Display (MFD) system, refer to the respective section.



- Multi-function display (MFD): Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
- Multi-function display switch: Ref. to INSTRUMENTATION/DRIVER INFO>Switches and Harness.

REMOVAL



Caution:

When the combination meter assembly is replaced, perform the variant work. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > VARIANT WORK.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Release the lock, tilt the steering column to the lowest end and fully extend the column by the telescopic system.
3. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
4. Remove the grille assembly - CTR ventilation LH. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
5. Remove the visor assembly - combination meter.
   (1) Release the clips and claws of the cover assembly - visor LWR.

   (2) Release the screws, clips and claws.

   (3) Disconnect the connector, and remove the visor assembly - combination meter.
6. Remove the combination meter assembly.

   Caution:

   Be careful not to damage the meter glass or instrument panel.

   (1) Remove the screws.

(2) Pull the combination meter assembly toward you and disconnect the connector.

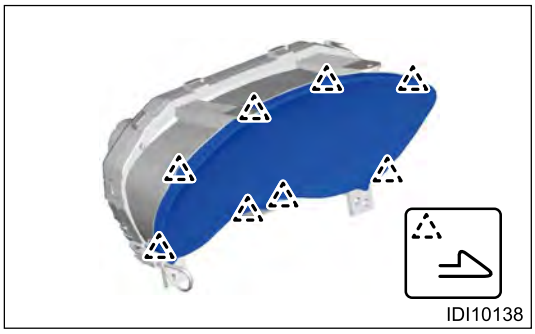
INSTRUMENTATION/DRIVER INFO > Combination Meter

INSTALLATION

Caution:

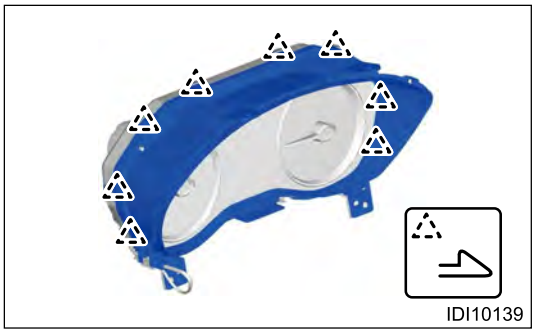
- **Make sure the electrical connector is connected securely.**
- **Make sure that each meter operates normally.**
- **For the model without keyless access with push button start except for C5 model, when the combination meter assembly is replaced, perform the registration of immobilizer. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **When the combination meter assembly is replaced, perform the variant work. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > VARIANT WORK.**

1. Install the combination meter assembly.
2. Install the visor assembly - combination meter.
3. Install the grille assembly - CTR ventilation LH.
4. Install the cover assembly - instrument panel LWR driver.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



INSTRUMENTATION/DRIVER INFO > Combination Meter

DISASSEMBLY



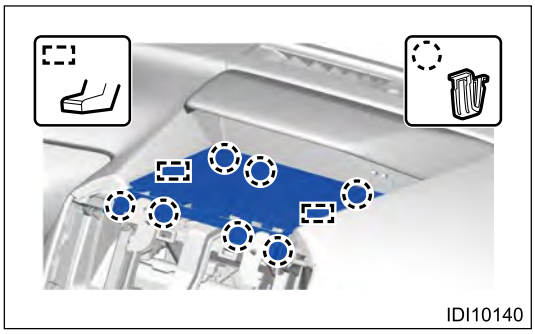
Caution:

- **Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.**
- **Be sure not to touch the meter indicator needle.**
- **Because LED components are used for all of warning lights and indicator lights, they are not removable from the meter - main assembly.**

1. Remove the glass - combination meter.
   (1) Release the claws, and then remove the glass - combination meter.

2. Remove the visor - combination meter.
   (1) Release the claws, and then remove the visor - combination meter.

INSTRUMENTATION/DRIVER INFO > Combination Meter



ASSEMBLY

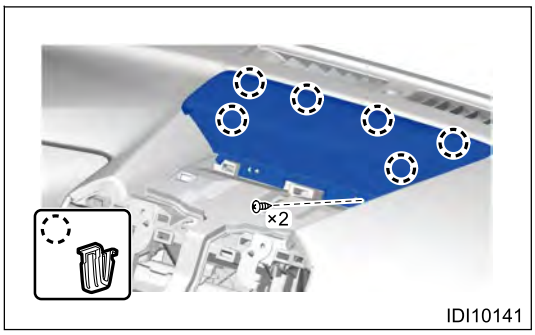
1. Install the visor - combination meter.
2. Install the glass - combination meter.

INSTRUMENTATION/DRIVER INFO > Multi-function Display (MFD)

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
3. Remove the panel - center UPR, and remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
4. Remove the cover - center UPR.
   (1) Release the clip and hook, and then remove the cover - center UPR.

Note:



Lightly push up the back of the cover - center UPR, hook the finger to the end portion and pull it toward you to remove it.

5. Remove the multi-function display.

Caution:

Be careful not to damage the multi-function display or instrument panel.

(1) Remove the screws and release the clip.
(2) Pull the multi-function display assembly toward yourself, and disconnect the connector.

(3) Remove the screws and then remove the multi-function display.

INSTRUMENTATION/DRIVER INFO > Multi-function Display (MFD)

INSTALLATION

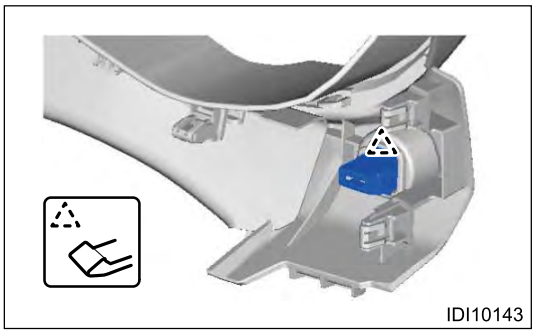
Caution:

- **Make sure the electrical connector is connected securely.**
- **Make sure that the multi-function display operates normally.**

1. Install the multi-function display.
2. Install the cover - center UPR.
3. Install the audio assembly or navigation assembly.
4. Install the panel - center UPR.
5. Install the grille assembly - CTR ventilation.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

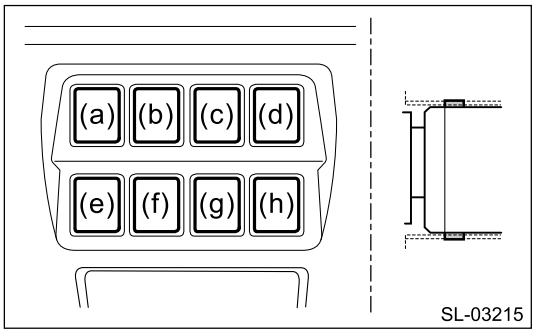
1. MULTI INFORMATION DISPLAY SWITCH



Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Set the tire to the straight-ahead position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
4. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
5. Remove the switch assembly - steering (MID). Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>DISASSEMBLY.



2. TRIP RESET SWITCH

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the visor assembly - combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.
4. Remove the switch - meter.
   (1) Release the claws, and remove the switch - meter.

3. ILLUMINATION CONTROL SWITCH

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver OUT. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the illumination control switch.
   (1) Release the claws and remove the illumination control switch (b).

4. MULTI-FUNCTION DISPLAY SWITCH

The multi-function display switch is integrated into the satellite switch assembly. For the operation procedures, refer to the "ENTERTAINMENT & MONITORING" section. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

INSTRUMENTATION/DRIVER INFO > Switches and Harness

INSTALLATION

1. MULTI INFORMATION DISPLAY SWITCH

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**
- **If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**
- **Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.**

1. Install the switch assembly - steering (MID).
2. Align the center position of the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>ADJUSTMENT.
3. Install the steering wheel.
   Tightening torque:
   39 N·m (4 kgf-m, 28.8 ft-lb)
   Clearance:
   Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. TRIP RESET SWITCH

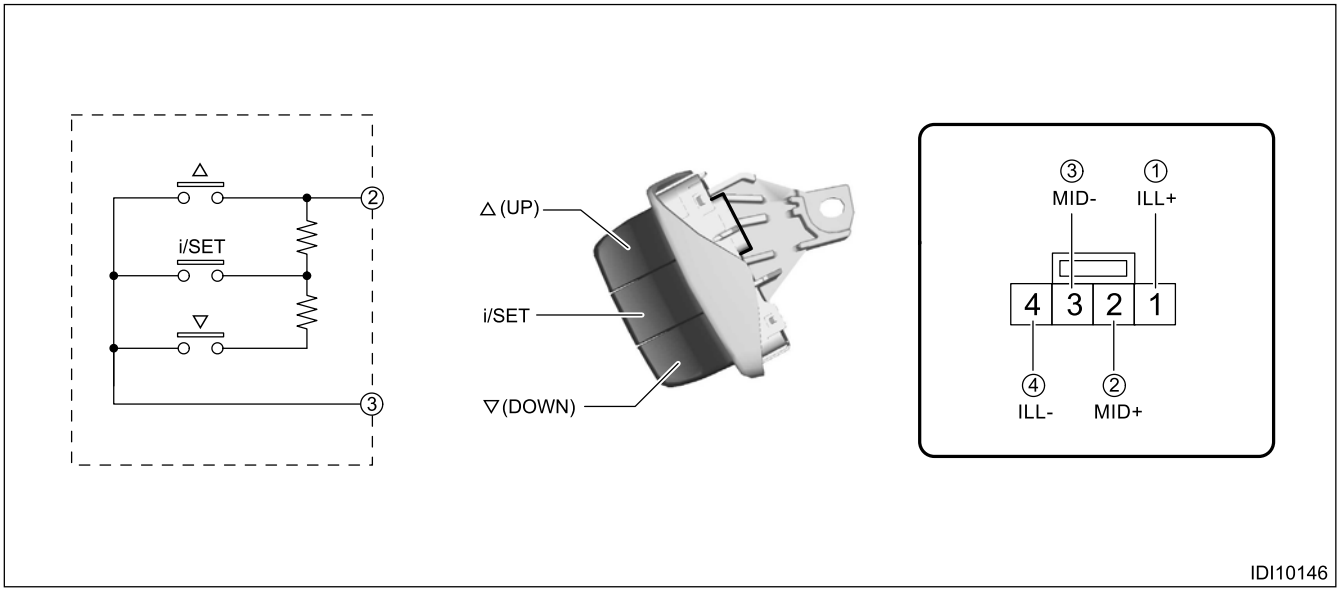
1. Install the switch - meter.
2. Install the visor assembly - lower.
3. Install the cover assembly - instrument panel LWR driver.

4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

3. ILLUMINATION CONTROL SWITCH

1. Install the illumination control switch.
2. Install the cover assembly - instrument panel LWR driver OUT.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

4. MULTI-FUNCTION DISPLAY SWITCH



The multi-function display switch is integrated into the satellite switch assembly. For the operation procedures, refer to the "ENTERTAINMENT & MONITORING" section. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

INSTRUMENTATION/DRIVER INFO > Switches and Harness

INSPECTION

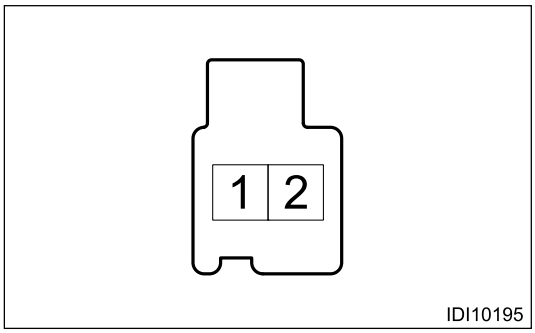
1. MULTI INFORMATION DISPLAY SWITCH

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester

Terminal No.	Inspection conditions		Standard
3 — 2	△ (UP) i/SET ▽ (DOWN)	All OFF	Approx. 1 MΩ or more
	△ (UP)	ON	Less than 1 Ω
	i/SET	ON	Approx. 1,000 Ω
	▽ (DOWN)	ON	Approx. 3,700 Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
1 (+) — 4 (−)	Apply battery voltage.	Light ON



3. Replace the switch assembly - steering (MID) if it is found defective.

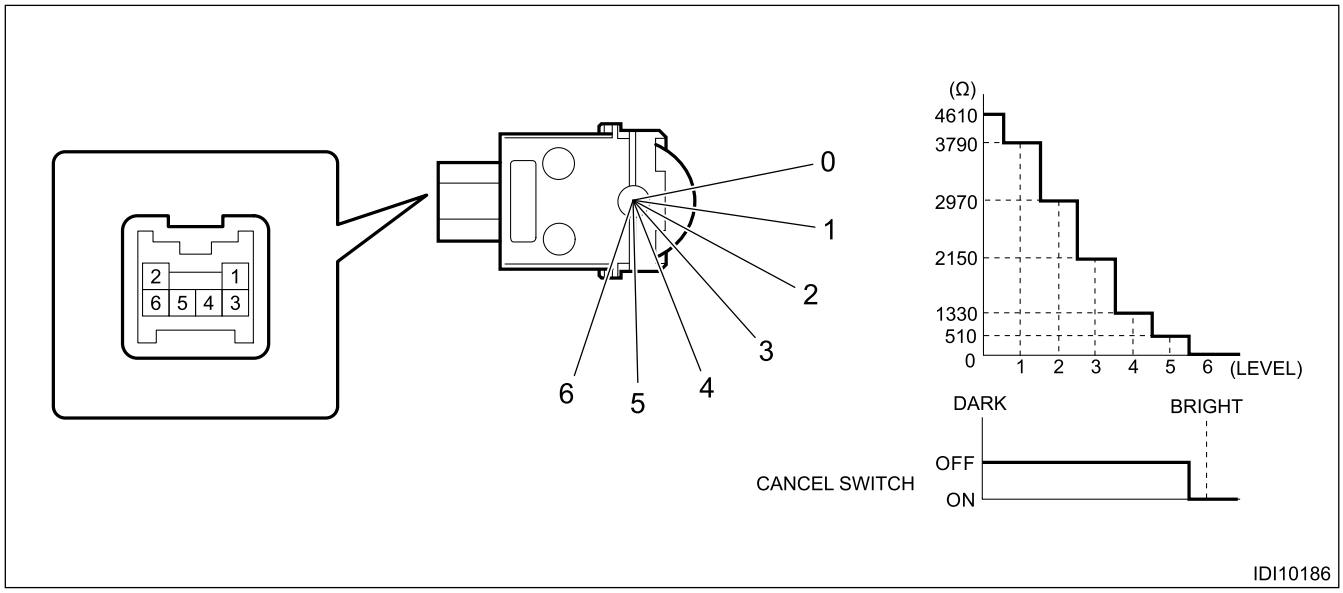
2. TRIP RESET SWITCH

1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω



2. Replace the switch - meter if it is found defective.

3. ILLUMINATION CONTROL SWITCH

1. Measure the resistance between connector terminals.

Preparation tool:

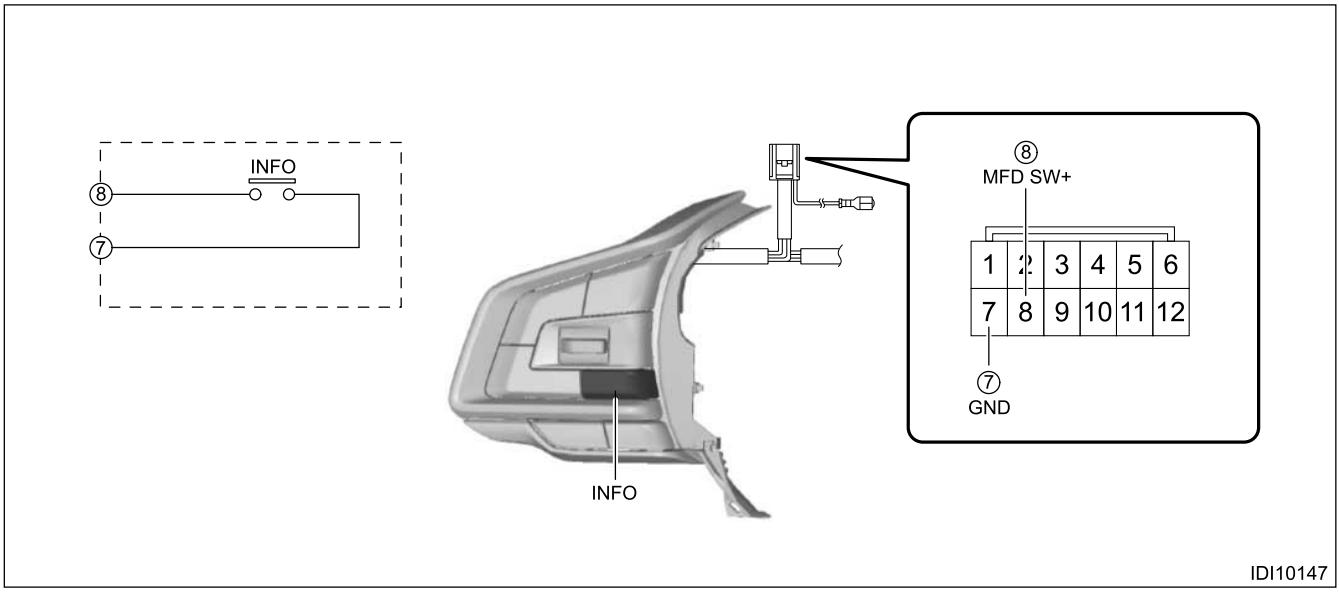
Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 6	Bright switch OFF	10 kΩ or more
	Bright switch ON	Less than 1 Ω
4 — 6	Always	Approx. 4,710 Ω
5 — 6	Illumination control switch upward fully open	Approx. 510 Ω
	Illumination control switch downward fully open	Approx. 4,610 Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination

inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (−)	Apply battery voltage.	Light ON



3. Replace the illumination control switch if it is found defective.

4. MULTI-FUNCTION DISPLAY SWITCH

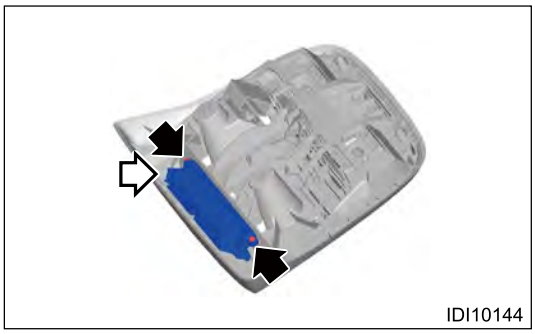
1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions		Standard
8 — 7	INFO	OFF	3 MΩ or more
		ON	Less than 1 Ω

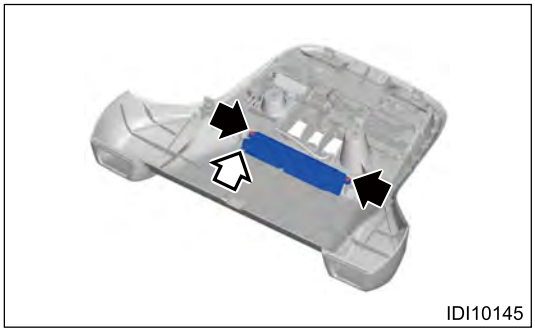
2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.



Terminal No.	Inspection conditions	Specification
10 (+) — 11 (−)	Apply battery voltage.	Light ON

3. If it is found to be defective as a result of the inspection, replace the satellite switch (INFO).

REMOVAL



1. MODELS WITHOUT EYESIGHT

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the overhead console. Ref. to LIGHTING SYSTEM>Spot Map Light>REMOVAL.
3. Remove the warning box.
   (1) Disconnect the connector.
   (2) Remove the screws, and remove the warning box.

2. MODELS WITH EYESIGHT

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the stereo camera cover assembly. Ref. to EyeSight>Stereo Camera>REMOVAL.
3. Remove the warning box.
   (1) Disconnect the connector.
   (2) Remove the screws, and remove the warning box.

INSTALLATION

1. MODELS WITHOUT EYESIGHT

Caution:

- **Make sure the electrical connector is connected securely.**
- **Make sure that each indicator operates normally.**

1. Install the warning box.
2. Install the overhead console. Ref. to LIGHTING SYSTEM>Spot Map Light>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. MODELS WITH EYESIGHT

Caution:

- **Make sure the electrical connector is connected securely.**
- **Make sure that each indicator operates normally.**

1. Install the warning box.
2. Install the stereo camera cover assembly. Ref. to EyeSight>Stereo Camera>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

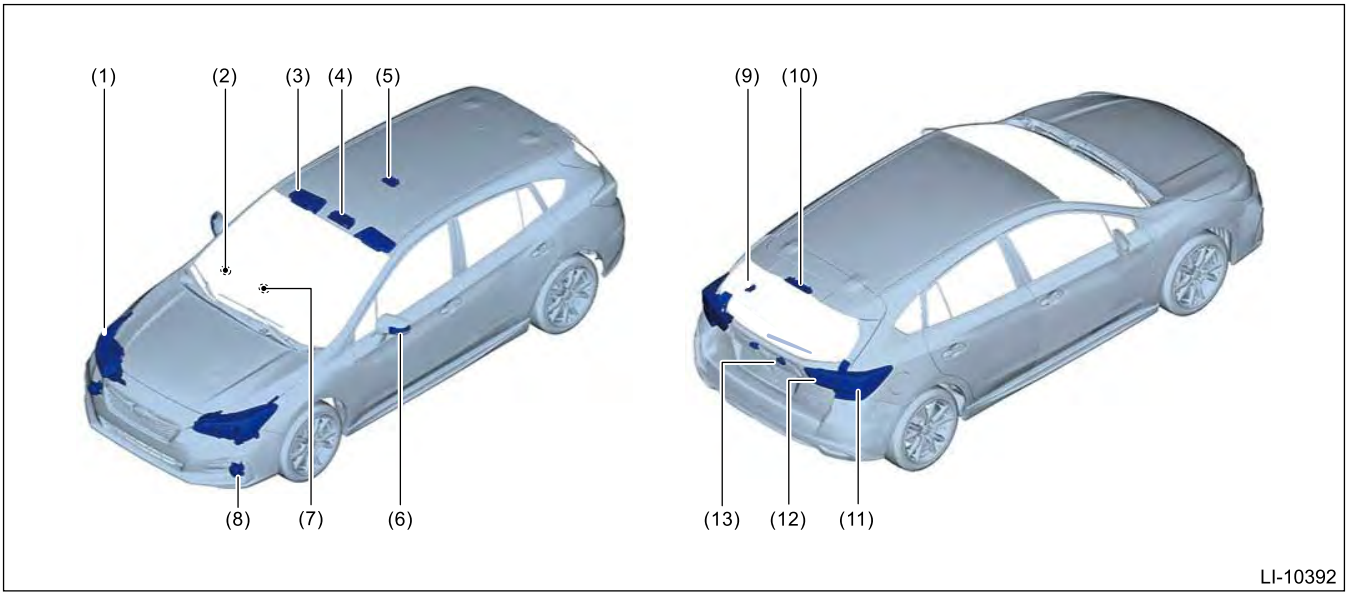
34. Door Switch
35. SRF OFF Switch
36. SRH OFF Switch

SPECIFICATION

- 4 door model



No.	Description		Capacity and wattage	Type
(1)	Headlight (halogen type)	Low beam	12 V — 55 W	H11
		High beam	12 V — 60 W	HB3
		Parking light / front turn signal light	12 V — 8 / 28 W	744NA
		Side marker light	12 V — 5 W	W5W
	Headlight (LED type)	Low beam / high beam	12.5 V — 23 W (LED)	*
		Front turn signal light	12 V — 28 W	744NA
		Daytime running light / parking light	12 V — 11.8 /0.9 W (LED)	*
		Side marker light	12 V — 5 W	W5W
(2)	Glove box light		12 V — 1.4 W (LED)	*
(3)	Vanity mirror light		12 V — 2 W	—
(4)	Spot map light		12 V — 8 W	—
(5)	Room light		12 V — 8 W	—
(6)	Side turn signal light		12 V — 0.4 W (LED)	*
(7)	Pocket light		12 V — 1.4 W (LED)	*
(8)	Front fog light	Model without SRF	12 V — 19 W	H16
		Model with SRF	12 V — 55 W	H11
	Daytime running light		12 V — 1.9 W (LED)	*
(9)	Trunk room light		12 V — 3.8 W	SAE#194
(10)	High-mounted stop light	Normal glass	12 V — 0.7 W (LED)	*
		Privacy glass	12 V — 2 W (LED)	*
(11)	Rear combination light	Tail light / side marker light	12 V — 5 W	W5W
		Stop light	13.5 V — 2 W (LED)	*

No.	Description		Capacity and wattage	Type
		Turn signal light	12 V — 21 W	WY21W
(12)	Rear finisher light	Back-up light	12 V — 21 W	W21W
(13)	License plate light		12 V — 5 W	W5W

*: Non-disassembly type

- 5 door model

No.	Description		Capacity and wattage	Type
(1)	Headlight (halogen type)	Low beam	12 V — 55 W	H11
		High beam	12 V — 60 W	HB3
		Parking light / front turn signal light	12 V — 8 / 28 W	744NA
		Side marker light	12 V — 5 W	W5W
	Headlight (LED type)	Low beam / high beam	12.5 V — 23 W (LED)	*
		Front turn signal light	12 V — 28 W	744NA
		Daytime running light / parking light	12 V — 11.8 /0.9 W (LED)	*
		Side marker light	12 V — 5 W	W5W
(2)	Glove box light		12 V — 1.4 W (LED)	*

(13)	License plate light		12 V — 5 W	W5W

*: Non-disassembly type

LIGHTING SYSTEM > General Description

CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.
- Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
- Always replace with a bulb that is the same model and wattage as those of the old one.

LIGHTING SYSTEM > General Description

PREPARATION TOOL

1. SPECIAL TOOL

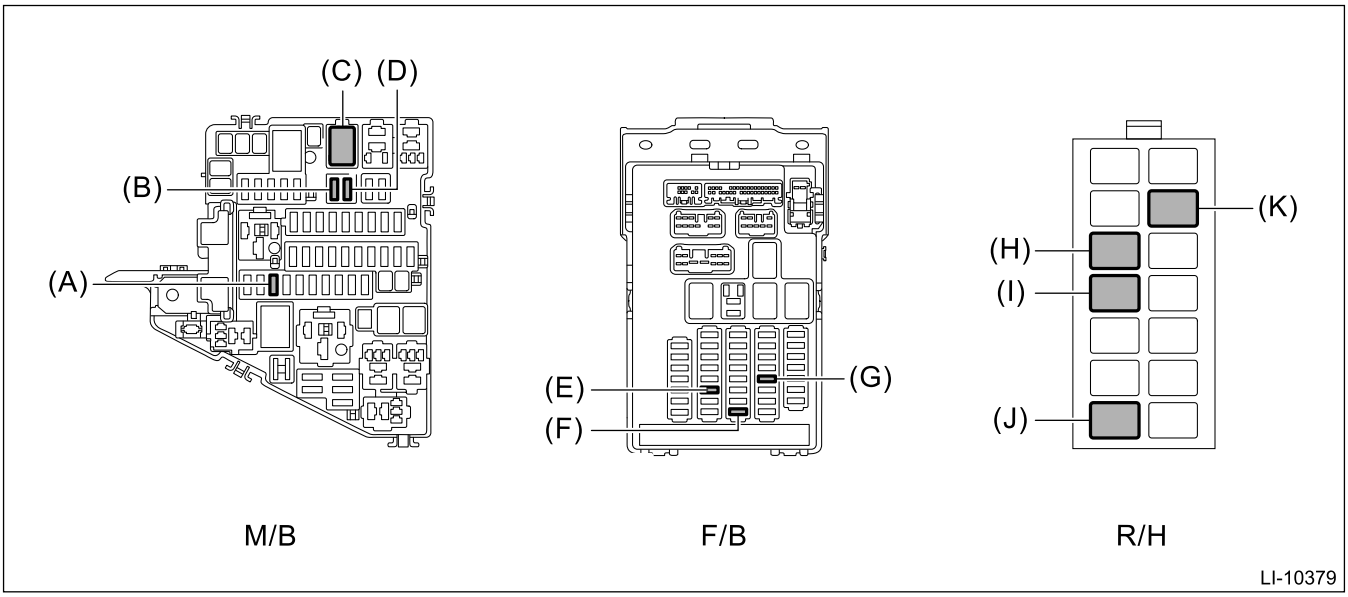

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

TOOL NAME	REMARKS
DST-i	Used together with Subaru Select Monitor 4.
Clip remover	Used for removing clips.

LOCATION

Main fuse box (M/B)	Fuse 15 A (front fog light relay)	(A)
	Fuse 15 A (front combination light LH)	(B)
	Headlight relay LO	(C)
	Fuse 15 A (front combination light RH)	(D)
Relay & fuse box (F/B)	Fuse 10 A (luggage room light, trunk room light)	(E)
	Fuse 7.5 A (stop light and brake switch)	(F)
	Fuse 10 A (daytime running light relay)	(G)
Relay holder (R/H)	Front fog light relay RH*2	(H)
	Front fog light relay LH*2	(I)
	Front fog light relay*1	
	Daytime running light relay	(J)
	Stop light relay	(K)

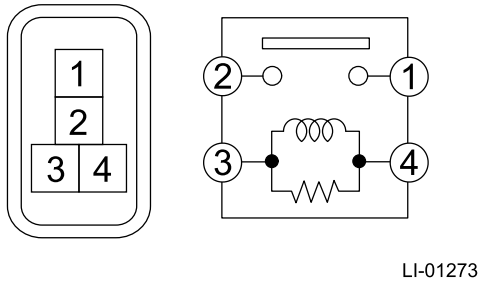
*1: Model without SRF
*2: Model with SRF

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

1. CHECK FUSE



1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

Note:

If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1. Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2. Replace the relay if the inspection result is not within the standard value.

WIRING DIAGRAM

Refer to "Headlight System and Day Time Running Light System" in the wiring diagram. Ref. to WIRING SYSTEM>Headlight System and Daytime Running Light System>WIRING DIAGRAM.

INSPECTION

1. CHECK HALOGEN HEADLIGHT SYSTEM

Trouble symptom:
Headlight does not illuminate.

1. CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.

1. Turn the ignition switch to ON.
2. Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).

Do the headlight and tail light illuminate?

Yes	The headlight system is normal.
No	Go to 2.

2. CHECK BULB.

Check the headlight bulb.

Is the bulb normal?

Yes	Go to 3.
No	Replace the headlight bulb.

3. CHECK CURRENT DATA.

Display the data of [Lighting I Switch Input] and [Lighting II Switch Input] using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Does the display switch between [OFF] ←→ [ON] when the lighting switch is moved to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?

Yes — Go to 6.

No — Go to 4.

4. CHECK COMBINATION SWITCH (LIGHT).

1. Turn the ignition switch to OFF.
2. Check the combination switch (light). Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

Is the combination switch (light) normal?

Yes — Go to 5.

No — Replace the combination switch (light).

5. CHECK HARNESS.

1. Disconnect the connectors of body integrated unit and combination switch (light).
2. Check the harness between body integrated unit and combination switch (light).

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.

- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

6. CHECK CURRENT DATA.

1. Turn the ignition switch to ON.
2. Display the data of [Lighting I Lamp Output] and [Lighting II Lamp Output] using Subaru Select Monitor.

Does the display switch between [OFF] ←→ [ON] when the lighting switch is moved to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 7.

7. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Check the harness between body integrated unit and headlight and between body integrated unit and tail light.

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

2. CHECK LED HEADLIGHT SYSTEM

Trouble symptom:
Headlight does not illuminate, or headlight is weak.

1. CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.

1. Turn the ignition switch to ON.
2. Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).

Do the headlight and tail light illuminate?

Yes	The headlight system is normal.
No	Go to 2.

2. CHECK BULB.

Display the data of [LED HEADLAMP(RH) error Signal] and [LED HEADLAMP(LH) error Signal] using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Is «ON» displayed?

Yes	Go to 3.
No	Replace the headlight assembly.

3. CHECK CONNECTOR CONNECTION.

Check that the headlight connector is connected.

Is the connector connected?

Yes	Go to 4.
No	Connect the connector. When it does not illuminate even though the switch is turned to ON: Go to 4.

4. CHECK HARNESS.

1. Disconnect the headlight connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between the headlight connector and chassis ground.

Connector & terminal

LH side

(B487) No. 1 (+) — Chassis ground (−):

(B487) No. 3 (+) — Chassis ground (−):

RH side

(B477) No. 1 (+) — Chassis ground (−):

(B477) No. 3 (+) — Chassis ground (−):

Is the voltage 10 — 13.5 V?

Yes — Go to 5.

No — Go to 6.

5. CHECK HEADLIGHT.

Apply battery voltage between headlight unit connector terminals.

Terminals

Low beam

No.3 (+) — No. 4 (−):

High beam

No.1 (+) — No. 2 (−):

Does the headlight (low beam and high beam) come on at normal brightness?

Yes — Go to 6.

No — Replace the headlight. Ref. to LIGHTING SYSTEM>Headlight Assembly.
Perform inspection for the malfunction signal line if the [LED HEADLAMP(RH) error Signal] and [LED HEADLAMP(LH) error Signal] do not illuminate in step 2). If short circuit to power supply occurs, repair or replace the harness.

6. CHECK CURRENT DATA.

1. Turn the ignition switch to ON.
2. Display the data of [Lighting I Lamp Output] and [Lighting II Lamp Output] using Subaru Select Monitor.

Does the display switch between [OFF] ←→ [ON] when the lighting switch is moved to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?

Yes — Go to 9.

No — Go to 7.

7. CHECK COMBINATION SWITCH (LIGHT).

1. Turn the ignition switch to OFF.
2. Check the combination switch (light). Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

Is the combination switch (light) normal?

Yes — Go to 8.

No — Replace the combination switch (light). Ref. to LIGHTING SYSTEM>Combination Switch (Light).

8. CHECK HARNESS.

1. Disconnect the connector of body integrated unit.
2. Check the harness between body integrated unit and combination switch (light).

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

9. CHECK CURRENT DATA.

1. Turn the ignition switch to ON.
2. Display the data of [Lighting I Lamp Output] and [Lighting II Lamp Output] using Subaru Select Monitor.

Does the display switch between [OFF] ←→ [ON] when the lighting switch is moved to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 10.

10. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector and the headlight and tail light connectors.
3. Check the harness between body integrated unit and headlight and between body integrated unit and tail light.

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

3. AUTO HEADLIGHT SYSTEM CHECK

Note:

Check each headlight system before checking the auto headlight system.

- **Halogen headlight: Ref. to LIGHTING SYSTEM>Headlight System>INSPECTION > CHECK HALOGEN HEADLIGHT SYSTEM.**
- **LED headlight: Ref. to LIGHTING SYSTEM>Headlight System>INSPECTION > CHECK LED HEADLIGHT SYSTEM.**

1. CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.

1. Turn the ignition switch to ON.
2. Make the light control sensor vicinity dark.
3. Set the lighting switch to AUTO position.
4. Make the light control sensor vicinity bright.
5. Turn the lighting switch to the OFF position and turn to the AUTO position again.

Do the parking light, headlight and tail light illuminate?

Yes — The auto headlight system is normal.

No — Go to 2.

2. CHECK CURRENT DATA.

1. Display the [Illumination Sensor Output] data using Subaru Select Monitor.
2. Measure the voltage when the area around the light control sensor, which was dark, becomes bright.

Note:

For detailed operation procedures, refer to "Application help".

Illumination sensor output

Dark condition: Approx. 0.6 V or less

Bright condition: Approx. 3 V or more

Is the voltage output according to the brightness?

Yes — Go to 5.

No — Go to 3.

3. CHECK LIGHT CONTROL SENSOR.

Check the light control sensor. Ref. to LIGHTING SYSTEM>Light Control Sensor>INSPECTION.

Is the light control sensor normal?

Yes — Go to 4.

No — Replace the light control sensor.

4. CHECK HARNESS.

1. Disconnect the connectors from body integrated unit and light control sensor.
2. Check the harness between body integrated unit and light control sensor.
   Connector & terminal
   (i171) No. 8 — (i89) No. 1:
   (i171) No. 28 — (i89) No. 2:
   (i171) No. 34 — (i89) No. 3:

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

5. CHECK CURRENT DATA.

Display the [Lighting AUTO input] data using Subaru Select Monitor.

Does the display change as [OFF] ←→ [ON] when the lighting switch is moved to AUTO position?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 6.

6. CHECK COMBINATION SWITCH (LIGHT).

1. Turn the ignition switch to OFF.
2. Check the combination switch (light). Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

Is the combination switch (light) normal?

Yes — Go to 7.

No — Replace the combination switch (light).

7. CHECK HARNESS.

1. Disconnect the connectors of body integrated unit and combination switch (light).
2. Check the harness between body integrated unit and combination switch (light).

Is harness normal?

Yes	Check the body integrated unit and replace it if defective. • Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure. • Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair or replace the harness.

4. CHECK OF WELCOME LIGHTING SYSTEM

Trouble symptom:
Welcome lighting does not illuminate.

1. CHECK BODY INTEGRATED UNIT SETTING.

Display the data of [Welcome Light Off Delay Time(Approaching)] or [Welcome Light Off Delay Time(Exiting)] using Subaru Select Monitor.

Note:
For detailed operation procedures, refer to "Application help".

Is the setting other than [OFF]?

Yes	Go to 2.
No	Turn the setting to other than [OFF].

2. CHECK BODY INTEGRATED UNIT SETTING.

Display the [Illumination Sensor Setting] data using Subaru Select Monitor.

Is the setting in the [Exist]?

Yes	Go to 3.
No	Turn the setting to [Support].

3. CHECK AUTO HEADLIGHT.

1. Set the lighting switch to AUTO position.
2. Make the light control sensor vicinity dark.
3. Turn the ignition switch to ON.

Do the parking light, tail and headlight illuminate?

Yes — Go to 4.

No — Check the auto headlight system. Ref. to LIGHTING SYSTEM>Headlight System>INSPECTION > AUTO HEADLIGHT SYSTEM CHECK.

4. CHECK DOOR LOCK.

Operate the door lock using the keyless transmitter or the access key.

Do the lock and unlock operate properly?

Yes — Go to 5.

No
- Check keyless entry system. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Basic Diagnostic Procedure.
- Check the keyless access with push button start system. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Basic Diagnostic Procedure.

5. CHECK BODY INTEGRATED UNIT.

1. Display the [IGN voltage] data using Subaru Select Monitor.
2. Turn the ignition switch to ON.

Is the voltage 10 — 15 V?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

5. CHECK OF WELCOME LIGHTING SYSTEM

Trouble symptom:
Welcome lighting does not go off.

1. CHECK BODY INTEGRATED UNIT SETTING.

Display the data of [Welcome Light Off Delay Time(Approaching)] or [Welcome Light Off Delay Time(Exiting)] using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Is the illumination time setting correct?

Yes — Go to 2.

No — Set the illumination time.

2. CHECK THE LIGHTS.

Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).

Do the parking light, tail light and headlight illuminate?

Yes — Go to 3.

No — Check the combination switch (light) and each light circuit.

3. CHECK BODY INTEGRATED UNIT.

Display the [Driver's door SW input] data using Subaru Select Monitor.

Does the display switch between [OFF] ←→ [ON] when driver's door is opened/closed?

Yes — Go to 4.

No — Check the door switch. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR SWITCH.

4. CHECK DOOR LOCK.

Operate the door lock using the keyless transmitter or the access key.

Do the lock and unlock operate properly?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No
- Check keyless entry system. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Basic Diagnostic Procedure.
- Check the keyless access with push button start system. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Basic Diagnostic Procedure.

6. CHECK WIPER INTERLOCK HEADLIGHT SYSTEM

Trouble symptom:
The headlights do not go off when the wiper is deactivated, or the headlights do not turn on when the wiper is activated.

1. CHECK HEADLIGHT SYSTEM.

Check the operation of the headlight system.

Is the headlight system normal?

Yes — Go to 2.

No — Check and repair the headlight system.
- Halogen headlight: Ref. to LIGHTING SYSTEM>Headlight System>INSPECTION > CHECK HALOGEN HEADLIGHT SYSTEM.
- LED headlight: Ref. to LIGHTING SYSTEM>Headlight System>INSPECTION > CHECK LED HEADLIGHT SYSTEM.

2. CHECK BODY INTEGRATED UNIT SETTING.

Display the [Illumination Sensor Setting] data using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Is the setting in the [Support]?

Yes — Go to 3.

No — Turn the setting to [Support].

3. CHECK BODY INTEGRATED UNIT.

1. Display the [IGN voltage] data using Subaru Select Monitor.
2. Turn the ignition switch to ON.

Is the voltage 10 — 15 V?

Yes — Go to 6.

No — Go to 4.

4. CHECK HARNESS.

Measure the voltage between F/B fuse No. 5 and chassis ground.

Is the voltage 10 V or more?

Yes — Repair or replace the harness between the body integrated unit and the ignition switch.

No — Go to 5.

5. CHECK CONNECTOR.

Check the connector or terminal of the body integrated unit for poor contact.

Is there any fault?

Yes — Repair or replace the connector and harness.

No — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

6. CHECK BODY INTEGRATED UNIT.

Display the [Lighting AUTO input] data using Subaru Select Monitor.

Does the display change as [OFF] ←→ [ON] when the lighting switch is moved to AUTO position?

Yes — Go to 11.

No — Go to 7.

7. CHECK BODY INTEGRATED UNIT.

Measure the voltage between the body integrated unit connector and chassis ground.

Connector & terminal

(i81) No. 20 (+) — Chassis ground (−):

Does the voltage change as OFF (9 to 16 V) ←→ ON (less than 1 V) when the lighting switch is moved to the AUTO position?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 8.

8. CHECK HARNESS.

1. Disconnect the connectors of the combination switch (light) and the body integrated unit.
2. Check the harness between the combination switch (light) and the body integrated unit.
   Connector & terminal
   (i73) No. 12 — (i81) No. 20:

Is the resistance less than 10 Ω?

Yes — Go to 9.

No — Repair or replace the harness between the combination switch (light) and the body integrated unit.

9. CHECK HARNESS.

Check the harness between the combination switch (light) and chassis ground.
Connector & terminal
(i73) No. 19 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 10.

No — Repair or replace the harness between the combination switch (light) and chassis ground.

10. CHECK COMBINATION SWITCH (LIGHT).

Check the combination switch (light). Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

Is the combination switch (light) normal when the combination switch (light) is moved to AUTO position?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Replace the combination switch (light).

11. CHECK BODY INTEGRATED UNIT.

Display the [Fr wiper input] data using Subaru Select Monitor.

Does the display switch between [OFF] ←→ [ON] when the combination switch (wiper) is operated to INT/LO/HI?

Yes — Go to 16.

No — Go to 12.

12. CHECK BODY INTEGRATED UNIT.

Measure the voltage between the body integrated unit connector and chassis ground.

Connector & terminal

(B280) No. 1 (+) — Chassis ground (−):

Does the voltage switch between OFF (less than 1 V) ←→ ON (9 to 16 V) when the combination switch (wiper) is operated to INT/LO/HI?

Yes — Check the body integrated unit and replace it if defective.

- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 13.

13. CHECK HARNESS.

1. Disconnect the connectors of the front wiper motor and the body integrated unit.
2. Check the harness between the front wiper motor and the body integrated unit.

Connector & terminal

(B8) No. 1 — (B280) No. 6:

Is the resistance less than 10 Ω?

Yes — Go to 14.

No — Repair or replace the harness between the front wiper motor and the body integrated unit.

14. CHECK HARNESS.

Check the harness between the front wiper motor and chassis ground.

Connector & terminal

(B8) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 15.

No — Repair or replace the harness between the he front wiper motor and chassis ground.

15. CHECK FRONT WIPER MOTOR.

Check the continuity between front wiper motor terminals.

Connector & terminal

(B8) No. 3 — (B8) No. 5:

Is there continuity?

Yes — Check the body integrated unit and replace it if defective.

- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Replace the front wiper motor. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Motor and Link.

16. CHECK BODY INTEGRATED UNIT.

Display the [Front washer switch input] data using Subaru Select Monitor.

Does the display switch between [OFF] ←→ [ON] when the front washer switch on the combination switch (wiper) is operated?

Yes — Check the connection status of the harness and connector that may have a temporary poor contact.

No — Go to 17.

17. CHECK BODY INTEGRATED UNIT.

Measure the voltage between the body integrated unit connector and chassis ground.

Connector & terminal

(i81) No. 12 (+) — Chassis ground (−):

Does the voltage switch between OFF (less than 1 V) ⟷ ON (9 to 16 V) when the front washer switch on the combination switch (wiper) is operated?

Yes — Check the body integrated unit and replace it if defective.

- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 18.

18. CHECK HARNESS.

1. Disconnect the connectors of the combination switch (wiper) and the body integrated unit.
2. Check the harness between the combination switch (wiper) and the body integrated unit.

Connector & terminal

(i68) No. 3 — (i81) No. 12:

Is the resistance less than 10 Ω?

Yes — Go to 19.

No — Repair or replace the harness between the combination switch (wiper) and the body integrated unit.

19. CHECK HARNESS.

Check the harness between the combination switch (wiper) and chassis ground.

Connector & terminal

(i68) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 20.

No — Repair or replace the harness between the combination switch (wiper) and chassis ground.

20. CHECK COMBINATION SWITCH (WIPER).

Check the continuity between terminals when the front washer switch on the combination switch (wiper) is pressed.

Connector & terminal

(i68) No. 3 — (i68) No. 2:

Is there continuity?

Yes — Check the body integrated unit and replace it if defective.

- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Replace the combination switch (wiper). Ref. to WIPER AND WASHER SYSTEMS>Combination Switch (Wiper).

7. CHECK LIGHTING SWITCH

For inspection, refer to "Combination Switch (Light)". Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

8. CHECK DIMMER & PASSING SWITCH

For inspection, refer to "Combination Switch (Light)". Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

LIGHTING SYSTEM > Headlight System

NOTE

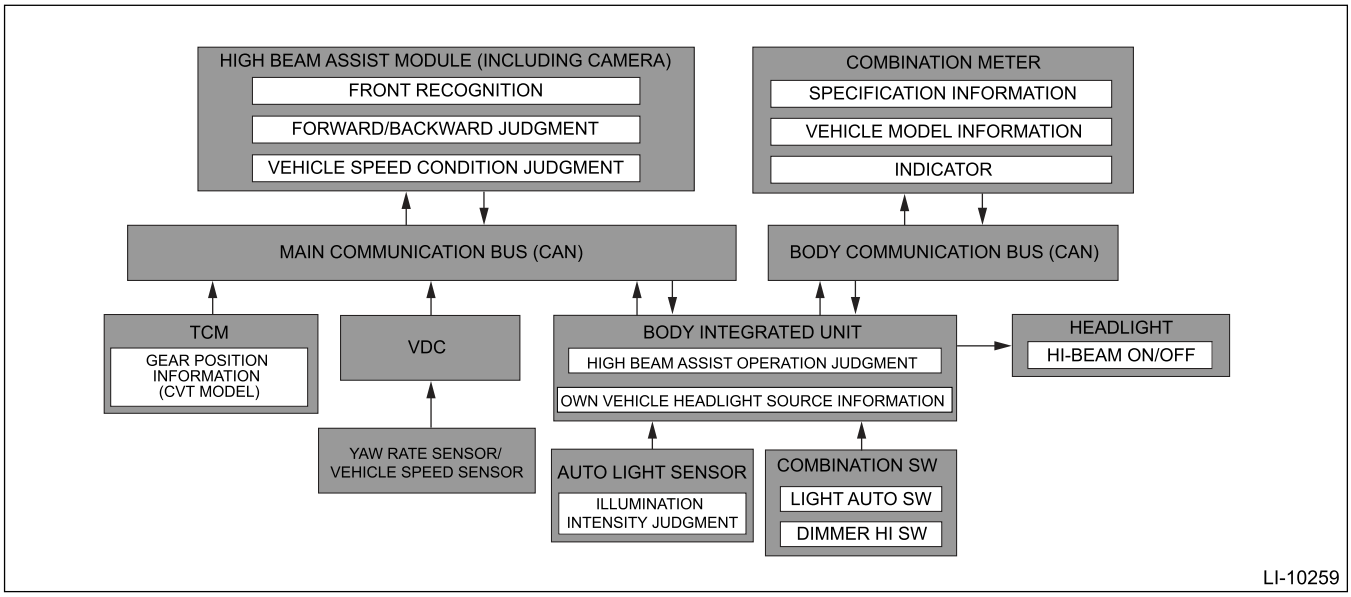
For operation procedures of each component of the headlight system, refer to the respective section.

- Headlight assembly: Ref. to LIGHTING SYSTEM>Headlight Assembly.
- Headlight bulb: Ref. to LIGHTING SYSTEM>Headlight Assembly>DISASSEMBLY.
- Combination switch (light): Ref. to LIGHTING SYSTEM>Combination Switch (Light).
- Combination switch (wiper): Ref. to WIPER AND WASHER SYSTEMS>Combination Switch (Wiper).
- Light control sensor: Ref. to LIGHTING SYSTEM>Light Control Sensor.

LIGHTING SYSTEM > High Beam Assist System

WIRING DIAGRAM

Refer to “Headlight System and Day Time Running Light System” in the wiring diagram. Ref. to WIRING SYSTEM>Headlight System and Daytime Running Light System>WIRING DIAGRAM.



LIGHTING SYSTEM > High Beam Assist System

INSPECTION

1. BASIC INSPECTION

For inspection, refer to “Diagnostics with Phenomenon” of “BODY CONTROL SYSTEM (DIAGNOSTICS)”. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostics with Phenomenon.

2. SYSTEM BLOCK DIAGRAM

Note:

The high beam assist system uses the stereo cameras of the EyeSight system to recognize the conditions in front of the vehicle, and automatically switches the high beam and low beam of the headlight.

LIGHTING SYSTEM > High Beam Assist System

NOTE

For operation procedures of each component of the headlight system, refer to the respective section.

- Headlight assembly: Ref. to LIGHTING SYSTEM>Headlight Assembly.
- Headlight bulb: Ref. to LIGHTING SYSTEM>Headlight Assembly>DISASSEMBLY.
- Combination switch (light): Ref. to LIGHTING SYSTEM>Combination Switch (Light).
- Light control sensor: Ref. to LIGHTING SYSTEM>Light Control Sensor.
- Body integrated unit: Ref. to SECURITY AND LOCKS>Body Integrated Unit.
- Stereo camera: Ref. to EyeSight>Stereo Camera.

WIRING DIAGRAM

Refer to "Headlight System and Day Time Running Light System" in the wiring diagram. Ref. to WIRING SYSTEM>Headlight System and Daytime Running Light System>WIRING DIAGRAM.

INSPECTION

1. CHECK DAYTIME RUNNING LIGHT SYSTEM (HALOGEN HEADLIGHT MODEL)

1. CHECK HEADLIGHT ILLUMINATION.

1. Turn the ignition switch to ON.
2. Turn the lighting switch to the switch II (HEAD) position.
3. Turn the dimmer & passing switch to the switch UP position.

Does the headlight (high beam) illuminate? Ref. to SECURITY AND LOCKS>Body Integrated Unit.

Yes — Go to 2.

No — Check the combination switch (light) and headlight bulb.

2. CHECK BODY INTEGRATED UNIT.

Read the DTC of body integrated unit using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Is DTC displayed?

Yes — Perform the diagnosis according to DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

No — Go to 3.

3. CHECK CURRENT DATA.

Display the following items using Subaru Select Monitor.
- [Parking Position Switch]
- [Shift Position]
- [Lighting II Switch Input]

Is the input signal normal?

Yes — Go to 4.

No — Check the defective part.

4. CHECK DAYTIME RUNNING LIGHT.

1. Turn the ignition switch to OFF.
2. Check the daytime running light. Ref. to LIGHTING SYSTEM>Day Time Running Light Assembly>INSPECTION.

Is the daytime running light normal?

Yes — Go to 5.

No — Replace the daytime running light.

5. CHECK HARNESS.

1. Disconnect the connectors of the body integrated unit and daytime running light.
2. Check each harness.

Is harness normal?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

2. CHECK DAYTIME RUNNING LIGHT SYSTEM (LED HEADLIGHT MODEL)

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse on the upstream of the daytime running light relay.

Is the fuse OK?

Yes	Go to 2.
No	Replace the fuse.

2. CHECK RELAY.

Check the daytime running light relay. Ref. to LIGHTING SYSTEM>Relay and Fuse>INSPECTION.

Is the relay OK?

Yes	Go to 3.
No	Replace the relay.

3. CHECK HEADLIGHT ILLUMINATION.

1. Turn the ignition switch to ON.
2. Turn the lighting switch to the switch II (HEAD) position.
3. Turn the dimmer & passing switch to the switch UP position.

Does the headlight (high beam) illuminate?

Yes	Go to 4.
No	Check the combination switch (light) and headlight bulb.

4. CHECK BODY INTEGRATED UNIT.

Read the DTC of body integrated unit using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Is DTC displayed?

Yes — Perform the diagnosis according to DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

No — Go to 5.

5. CHECK CURRENT DATA.

Display the following items using Subaru Select Monitor.

- [Parking Position Switch]
- [Shift Position]
- [Lighting II Switch Input]

Is the input signal normal?

Yes — Go to 6.

No — Check the defective part.

6. CHECK DAYTIME RUNNING LIGHT ILLUMINATION.

1. Disconnect the headlight connector.
2. Apply battery voltage to the DRL terminal input of the headlight unit.

Terminals

NO. 7 (+) — NO. 9 (−):

Does the daytime running light illuminate?

Yes — Go to 7.

No — Replace the headlight.

7. CHECK HARNESS.

1. Disconnect the connectors of body integrated unit, daytime running light relay and headlight.
2. Check each harness.

Is harness normal?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair or replace the harness.

LIGHTING SYSTEM > Day Time Running Light System

NOTE

For operation procedures of each component of the daytime running light system, refer to the respective section.

- Headlight assembly: Ref. to LIGHTING SYSTEM>Headlight Assembly.
- Headlight bulb: Ref. to LIGHTING SYSTEM>Headlight Assembly>DISASSEMBLY.
- Daytime running light assembly: Ref. to LIGHTING SYSTEM>Day Time Running Light Assembly.
- Combination switch (light): Ref. to LIGHTING SYSTEM>Combination Switch (Light).

LIGHTING SYSTEM > Clearance Light and Illumination Light System

WIRING DIAGRAM

Refer to “Clearance Light and Illumination Light System” in the wiring diagram. Ref. to WIRING SYSTEM>Clearance Light and Illumination Light System>WIRING DIAGRAM.

LIGHTING SYSTEM > Clearance Light and Illumination Light System

INSPECTION

1. CHECK LIGHTING SWITCH

For inspection, refer to “Combination Switch (Light)”. Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

LIGHTING SYSTEM > Clearance Light and Illumination Light System

NOTE

For operation procedures of each component of the clearance light & illumination light system, refer to the respective sections.

- Headlight assembly: Ref. to LIGHTING SYSTEM>Headlight Assembly.
- Combination switch (light): Ref. to LIGHTING SYSTEM>Combination Switch (Light).
- Clearance light bulb: Ref. to LIGHTING SYSTEM>Headlight Assembly>DISASSEMBLY.
- Rear combination light assembly: Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly.
- Tail light/stop light bulb: Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly>DISASSEMBLY.
- License plate light: Ref. to LIGHTING SYSTEM>License Plate Light.
- LED illumination light: Ref. to LIGHTING SYSTEM>LED Illumination Light.
- Ignition switch illumination: Ref. to LIGHTING SYSTEM>Ignition Switch Illumination.

WIRING DIAGRAM

Refer to “Front Fog Light System” in the wiring diagram.

- Model without SRF: Ref. to WIRING SYSTEM>Front Fog Light System>WIRING DIAGRAM > WITHOUT SRF.
- Model with SRF: Ref. to WIRING SYSTEM>Front Fog Light System>WIRING DIAGRAM > WITH SRF.

INSPECTION

1. CHECK STEERING RESPONSIVE FOG LIGHT SYSTEM

For inspection, refer to “Basic Diagnostic Procedure” of “HEADLIGHT / FOGLIGHT (DIAGNOSTICS)” section. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK FRONT FOG LIGHT SWITCH

For inspection, refer to “Combination Switch (Light)”. Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

NOTE

For operation procedures of each component of the front fog light system, refer to the respective section.

- Combination switch (light): Ref. to LIGHTING SYSTEM>Combination Switch (Light).
- Front fog light assembly: Ref. to LIGHTING SYSTEM>Front Fog Light Assembly.
- Front fog light bulb: Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>DISASSEMBLY.

WIRING DIAGRAM

Refer to "Turn Signal Light and Hazard Light System" in the wiring diagram. Ref. to WIRING SYSTEM>Turn Signal Light and Hazard Light System>WIRING DIAGRAM.

INSPECTION

1. CHECK HAZARD LIGHT OPERATION

1. CHECK HAZARD LIGHT OPERATION.

1. Turn the hazard switch to ON.
2. Check that the hazard light operates properly.

Does the hazard light blink?

Yes — The hazard light system is normal.

No — Go to 2.

2. CHECK BULB.

Check the hazard (turn signal) light bulb.

Is the bulb normal?

Yes — Go to 3.

No — Replace the hazard (turn signal) light bulb.

3. CHECK CURRENT DATA.

Display the [Hazard switch Input] data using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Does the display change as [OFF] ←→ [ON], when the hazard switch is turned to ON?

Yes — Go to 6.

No — Go to 4.

4. CHECK HAZARD SWITCH.

Check the hazard switch. Ref. to LIGHTING SYSTEM>Hazard Switch>INSPECTION.

Is the hazard switch normal?

Yes — Go to 5.

No — Replace the hazard switch.

5. CHECK HARNESS.

1. Disconnect the connectors of body integrated unit and hazard switch.
2. Check the harness between body integrated unit and hazard switch.

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

6. CHECK CURRENT DATA.

Display the data of [Left turn signal output] and [Right turn signal output] using Subaru Select Monitor.

Does the display change as [OFF] ←→ [ON], when the hazard switch is turned to ON?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 7.

7. CHECK HARNESS.

1. Disconnect the connectors of body integrated unit and each turn signal light.
2. Check the harness between body integrated unit and each turn signal light.

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

2. CHECK TURN SIGNAL LIGHT SYSTEM

1. CHECK TURN SIGNAL LIGHT OPERATION.

1. Turn the ignition switch to ON.
2. Turn the turn signal light switch LH and RH to ON.

Does the turn signal light blink?

Yes — The turn signal light system is normal.

No — Go to 2.

2. CHECK CURRENT DATA.

Display the data of [Left turn signal input] and [Right turn signal input] using Subaru Select Monitor.

Note:
For detailed operation procedures, refer to “Application help”.

Does the display change as [OFF] ←→ [ON], when the turn signal switch is turned to ON?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Go to 3.

3. CHECK TURN SIGNAL SWITCH.

Check the turn signal switch. Ref. to LIGHTING SYSTEM>Hazard Switch>INSPECTION.

Is the turn signal switch OK?

Yes — Go to 4.

No — Replace the combination switch (light).

4. CHECK HARNESS.

1. Disconnect the connectors of body integrated unit and combination switch (light).
2. Check the harness between body integrated unit and combination switch (light).

Is harness normal?

Yes — Check the body integrated unit and replace it if defective.
- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

3. CHECK OF LANE CHANGE SIGNAL

Trouble symptom:
Lane change signal function does not operate.

1. CHECK HAZARD LIGHT SYSTEM.

Check the hazard light system. Ref. to LIGHTING SYSTEM>Turn Signal Light and Hazard Light System>INSPECTION > CHECK HAZARD LIGHT OPERATION.

Is the hazard light system normal?

Yes — Go to 2.

No — Repair the hazard light system.

2. CHECK TURN SIGNAL LIGHT SYSTEM.

Check the turn signal light system. Ref. to LIGHTING SYSTEM>Turn Signal Light and Hazard Light System>INSPECTION > CHECK TURN SIGNAL LIGHT SYSTEM.

Is the turn signal light system normal?

Yes	Go to 3.
No	Repair the turn signal light system.

3. CHECK BODY INTEGRATED UNIT SETTING.

Display the [Lane change signal setting] data using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Is the setting in the [Support]?

Yes	Check the body integrated unit and replace it if defective. • Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure. • Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Turn the setting to [Support].

4. CHECK TURN SIGNAL SWITCH

For inspection, refer to "Combination Switch (Light)". Ref. to LIGHTING SYSTEM>Combination Switch (Light)>INSPECTION.

5. CHECK HAZARD SWITCH

For inspection, refer to "Hazard Switch". Ref. to LIGHTING SYSTEM>Hazard Switch>INSPECTION.

LIGHTING SYSTEM > Turn Signal Light and Hazard Light System

NOTE

For operation procedures of each component of the turn signal and hazard light system, refer to the respective sections.

- Headlight assembly: Ref. to LIGHTING SYSTEM>Headlight Assembly.
- Combination switch (light): Ref. to LIGHTING SYSTEM>Combination Switch (Light).
- Front turn signal light bulb: Ref. to LIGHTING SYSTEM>Headlight Assembly>DISASSEMBLY.
- Side turn signal light assembly: Ref. to LIGHTING SYSTEM>Side Turn Signal Light Assembly.
- Rear combination light assembly: Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly.
- Rear turn signal light bulb: Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly>DISASSEMBLY.

- Hazard switch: Ref. to LIGHTING SYSTEM>Hazard Switch.

WIRING DIAGRAM

Refer to “Back-up Light System” in the wiring diagram.

- 4 door model: Ref. to WIRING SYSTEM>Back-up Light System>WIRING DIAGRAM > 4 DOOR MODEL.
- 5 door model: Ref. to WIRING SYSTEM>Back-up Light System>WIRING DIAGRAM > 5 DOOR MODEL.

INSPECTION

1. CHECK BACK-UP LIGHT SWITCH (MT model)

For inspection, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness>INSPECTION > BACK-UP LIGHT SWITCH.

2. CHECK INHIBITOR SWITCH (CVT MODEL)

For inspection, refer to “Inhibitor Switch” in “CONTINUOUSLY VARIABLE TRANSMISSION” section. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch>INSPECTION.

NOTE

For operation procedures of each component of the back-up light system, refer to the respective section.

- Rear finisher light assembly: Ref. to LIGHTING SYSTEM>Rear Finisher Light Assembly.
- Back-up light bulb: Ref. to LIGHTING SYSTEM>Rear Finisher Light Assembly>DISASSEMBLY.

LIGHTING SYSTEM > Stop Light System

WIRING DIAGRAM

Refer to “Stop Light System” in the wiring diagram.

- 4 door model: Ref. to WIRING SYSTEM>Stop Light System>WIRING DIAGRAM > 4 DOOR MODEL.
- 5 door model: Ref. to WIRING SYSTEM>Stop Light System>WIRING DIAGRAM > 5 DOOR MODEL.

LIGHTING SYSTEM > Stop Light System

INSPECTION

1. CHECK STOP LIGHT SWITCH

For inspection, refer to “Stop Light Switch” in “BRAKE” section. Ref. to BRAKE>Stop Light Switch>INSPECTION.

LIGHTING SYSTEM > Stop Light System

NOTE

For operation procedures of each component of the stop light system, refer to the respective section.

- Rear combination light assembly: Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly.
- Tail light/stop light bulb: Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly>DISASSEMBLY.
- High-mounted stop light: Ref. to LIGHTING SYSTEM>High-mounted Stop Light.

LIGHTING SYSTEM > Interior Light System

WIRING DIAGRAM

Refer to “Interior Light System” in the wiring diagram. Ref. to WIRING SYSTEM>Interior Light System>WIRING DIAGRAM.

LIGHTING SYSTEM > Interior Light System

INSPECTION

1. CHECK DOOR SWITCH

For inspection, refer to “Door Switch”. Ref. to LIGHTING SYSTEM>Door Switch>INSPECTION.

2. CHECK TRUNK LID LATCH SWITCH

For inspection, refer to “Trunk Lid Latch and Actuator Assembly” in “SECURITY AND LOCKS” section. Ref. to SECURITY AND LOCKS>Trunk Lid Latch and Actuator Assembly>INSPECTION > ACTUATOR.

3. CHECK REAR GATE LATCH SWITCH

For inspection, refer to “Rear Gate Latch and Actuator Assembly” in “SECURITY AND LOCKS” section. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly>INSPECTION > ACTUATOR.

LIGHTING SYSTEM > Interior Light System

NOTE

For operation procedures of each component of the interior light system, refer to the respective section.

- Spot map light: Ref. to LIGHTING SYSTEM>Spot Map Light.
- Room light: Ref. to LIGHTING SYSTEM>Room Light.
- Trunk room light: Ref. to LIGHTING SYSTEM>Trunk Room Light.
- Luggage room light: Ref. to LIGHTING SYSTEM>Luggage Room Light.
- LED illumination light: Ref. to LIGHTING SYSTEM>LED Illumination Light.
- Vanity mirror light: Ref. to LIGHTING SYSTEM>Vanity Mirror Light.
- Door switch: Ref. to LIGHTING SYSTEM>Door Switch.

LIGHTING SYSTEM > Auto Headlight Beam Leveler System

WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

LIGHTING SYSTEM > Auto Headlight Beam Leveler System

ELECTRICAL SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM

For the specification (electrical component), refer to “Control Module I/O Signal” of “HEADLIGHT / FOGLIGHT (DIAGNOSTICS)” section. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

LIGHTING SYSTEM > Auto Headlight Beam Leveler System

INSPECTION

1. CHECK AUTO HEADLIGHT BEAM LEVELER SYSTEM

For inspection, refer to “Basic Diagnostic Procedure” of “HEADLIGHT / FOGLIGHT (DIAGNOSTICS)” section. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Basic Diagnostic Procedure.

PROCEDURE

When parts related to the auto headlight beam leveler system are removed or replaced, perform the following procedures to initialize or reinitialize.

Note:

Before performing initialization or reinitialization, check the following:

- **The vehicle is parked on a level surface.**
- **The inflation pressure of tires is correct.**
- **The vehicle does not have load.**
- **Vehicle's fuel tank is fully filled.**
- **Refer to the following chart to determine whether to initialize or reinitialize.**

Initialization	When the auto headlight beam leveler CM was replaced with a new module.
Reinitialization	• When the auto headlight beam leveler CM was replaced with a part from another vehicle. • When suspension parts have been removed or replaced. (Crossmember, front arm, sub frame, lateral link, housing, strut etc.) • When the vehicle height sensor has been replaced or removed.

Caution:

If the indicator does not flash three times or the headlight beam does not operate, it can be assumed that there is an open circuit or faulty wiring in the harness of the auto headlight beam leveler CM, vehicle height sensors or headlight assembly. Perform inspection and repair according to the inspection results, then perform initialization/reinitialization again.

- **Initialization: Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE > INITIALIZATION.**
- **Reinitialization: Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE > REINITIALIZATION.**

1. INITIALIZATION

1. Check that the indicator in the meter is flashing twice repeatedly.
2. Bounce the vehicle several times to normalize the suspension.
3. Make certain that someone is seated in the driver's seat.
4. Turn the ignition switch to ON, and within 1.5 to 20 seconds, turn the headlight switch OFF → ON three times.
5. Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that initialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
6. Perform beam adjustment for the headlight. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.

2. REINITIALIZATION

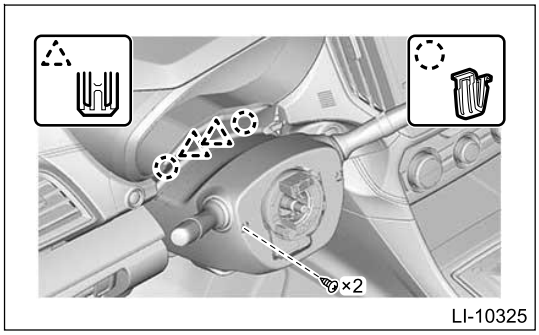
1. Bounce the vehicle several times to normalize the suspension.
2. Make certain that someone is seated in the driver's seat.
3. Turn the ignition switch to ON, and within 1.5 to 10 seconds, turn the headlight switch OFF → ON five or more successive times.
4. Check that the headlight beam drops once, then returns to normal.
5. After confirming 4), turn the ignition switch to OFF (ACC OFF) within 30 seconds.

6. Turn the ignition switch to ON again, and within 1.5 to 10 seconds, turn the headlight switch OFF → ON five or more successive times.
7. Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that reinitialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
8. Perform beam adjustment for the headlight. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.

LIGHTING SYSTEM > Auto Headlight Beam Leveler System

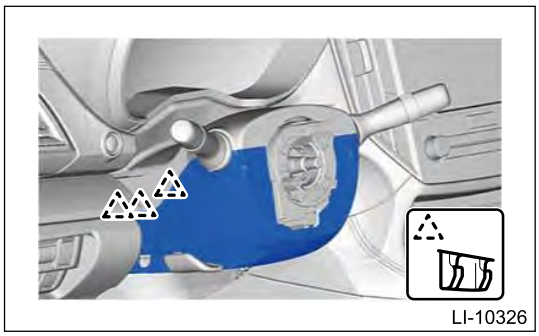
NOTE

For operation procedures of each component of the auto headlight beam leveler system, refer to the respective section.



- Headlight assembly: Ref. to LIGHTING SYSTEM>Headlight Assembly.
- Auto headlight beam leveler CM: Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
- Vehicle height sensor: Ref. to LIGHTING SYSTEM>Rear Height Sensor.

REMOVAL

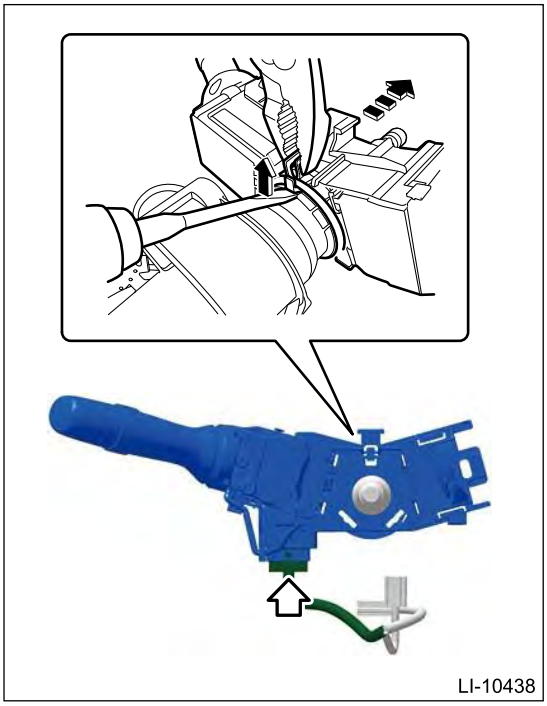


Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Set the tire to the straight-ahead position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
4. Remove the steering wheel. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Wheel>REMOVAL.
5. Remove the cover assembly - column.
   (1) Remove the clip, and remove the cover assembly - visor LWR.
   (2) Remove the screws.

   (3) Release the claws and remove the cover assembly - column LWR.



Note:

- **Release the claws on RH side in the same procedure as on the LH side.**
- **For models with keyless access with push button start, remove the cap - key cylinder.**

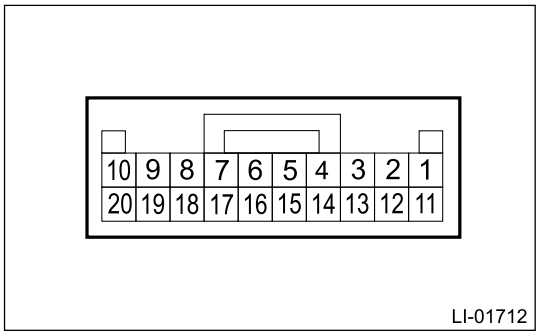
   (4) Release the claws and remove the cover assembly - column UPR.

6. Remove the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>REMOVAL.
7. Remove the switch assembly - combination wiper select. Ref. to WIPER AND WASHER SYSTEMS>Combination Switch (Wiper)>REMOVAL.
8. Remove the switch assembly - combination turn dimmer.
   (1) Disconnect the connector.
   (2) Using pliers, loosen the clamp.
   (3) With the clamp loosened, release the claw using a flat tip screwdriver wrapped with a protection tape, and remove the switch assembly - combination turn dimmer.
   Caution:
   Do not pry off forcibly. Otherwise, the claws may be damaged.

LIGHTING SYSTEM > Combination Switch (Light)

INSTALLATION

Caution:



- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**
- **If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**

1. Install the switch assembly - combination turn dimmer.
2. Install the switch assembly - combination wiper select.
3. Install the steering roll connector. Ref. to AIRBAG SYSTEM>Roll Connector>INSTALLATION.
4. Install the cover assembly - column.
5. Install the steering wheel.
   Tightening torque:
   39 N·m (4 kgf-m, 28.8 ft-lb)
   Clearance:
   Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
6. Install the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>INSTALLATION.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LIGHTING SYSTEM > Combination Switch (Light)

INSPECTION

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester

- Lighting switch

Terminal No.	Inspection conditions	Standard
18 — 12 19 — 12 20 — 12	Switch OFF	1 MΩ or more
19 — 12	Switch AUTO	Less than 1 Ω
18 — 12	Switch 1 (TAIL/PARKING)	Less than 1 Ω
18 — 12 20 — 12	Switch 2 (HEAD)	Less than 1 Ω

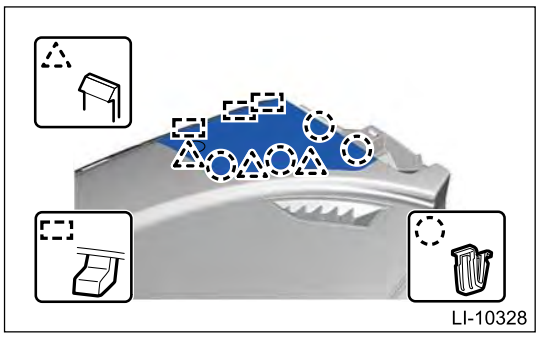
- Dimmer & passing switch

Terminal No.	Inspection conditions	Standard
11 — 12 17 — 12	Switch PASS	Less than 1 Ω
11 — 12	Switch UP	Less than 1 Ω

- Turn signal switch

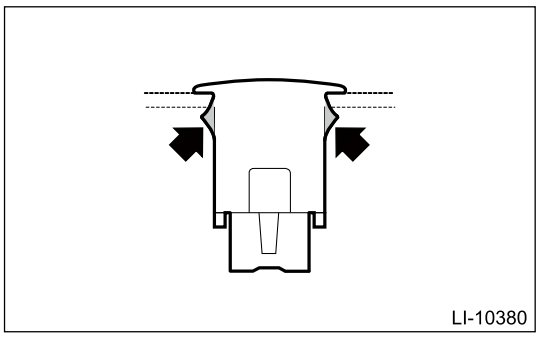
Terminal No.	Inspection conditions	Standard
13 — 12	Switch TURN (RH)	Less than 1 Ω
15 — 12	Switch TURN (LH)	Less than 1 Ω

- Front fog light switch



Terminal No.	Inspection conditions	Standard
4 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2. Replace the switch assembly - combination turn dimmer if the inspection result is not within the standard value.



LIGHTING SYSTEM > Light Control Sensor

REMOVAL

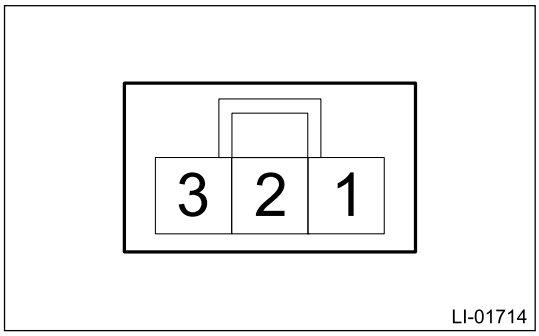
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - front pillar UPR RH. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>REMOVAL.
3. Remove the grille speaker side RH.
   (1) Release the clips, hooks and claws.
   (2) Disconnect the connector and remove the grille speaker side RH.

4. Remove the light control sensor.
   (1) Release the claws, and then remove the light control sensor.

LIGHTING SYSTEM > Light Control Sensor

INSTALLATION

1. Install the light control sensor.
2. Install the grille speaker side RH.
3. Install the trim panel - front pillar UPR RH. Ref. to EXTERIOR/INTERIOR TRIM>Upper Inner Trim>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



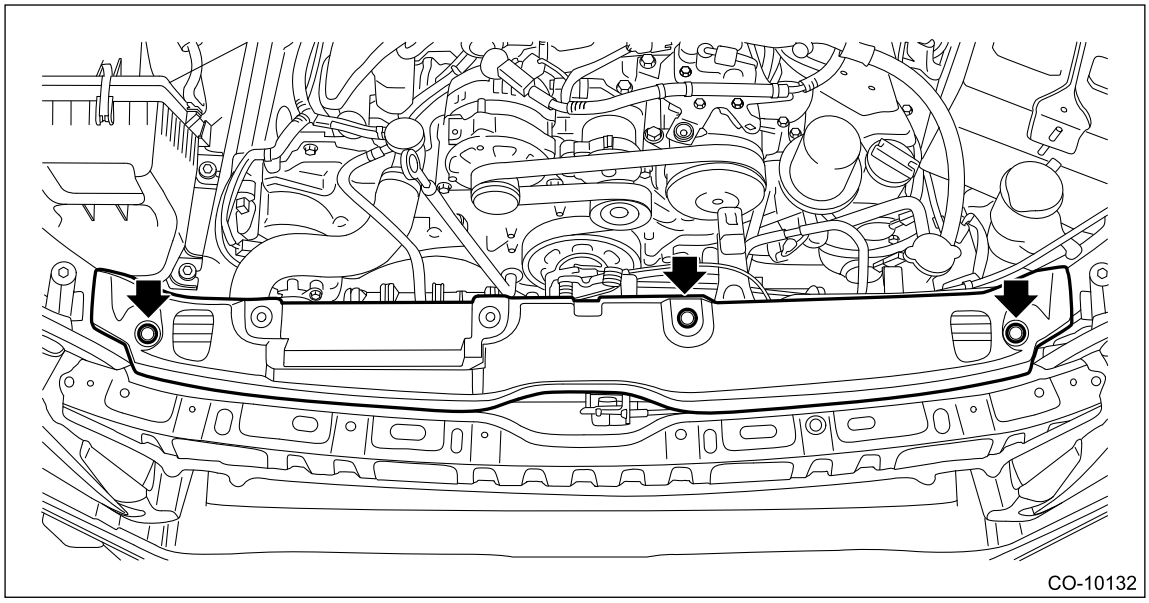
LIGHTING SYSTEM > Light Control Sensor

INSPECTION

1. Connect the connector.
2. Turn the ignition switch to ON, and set the lighting switch to the AUTO position.
3. Measure the voltage between connector terminals.

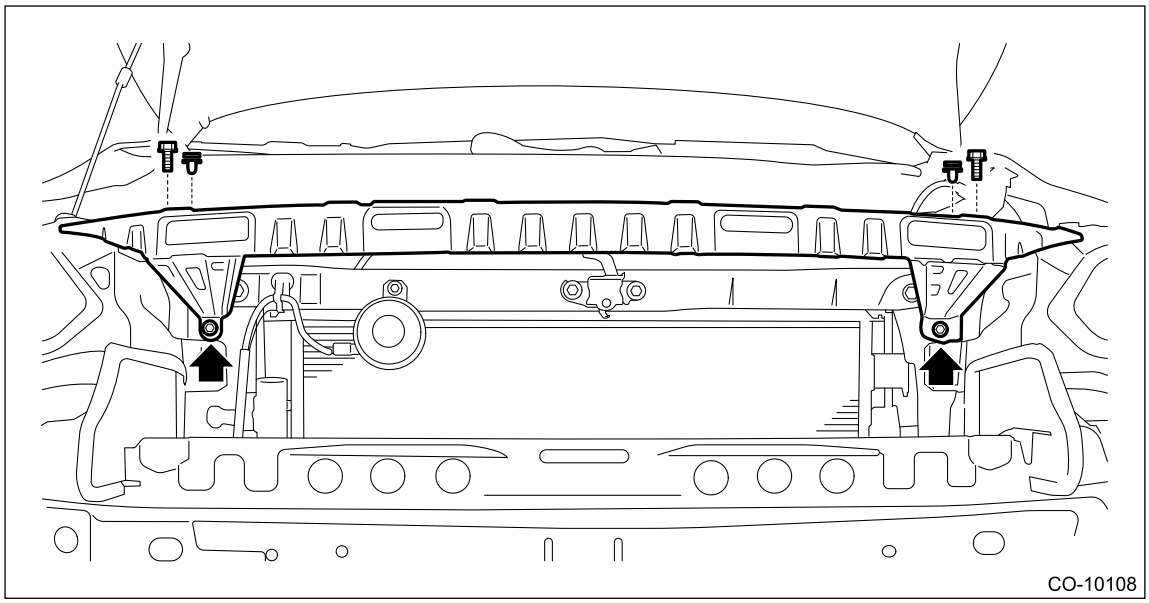
   Preparation tool:

   Circuit tester



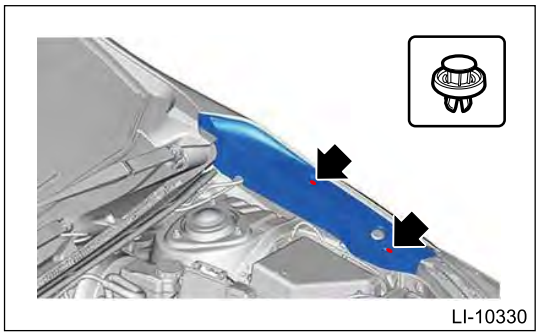
Terminal No.	Inspection conditions	Standard
2 (+) — 1 (−)	Measure the voltage when the area around the light control sensor, which was dark, becomes bright.	Dark condition: Approx. 0.6 V or less
		Bright condition: Approx. 3 V or more

4. Replace the light control sensor if the inspection result is not within the standard value.

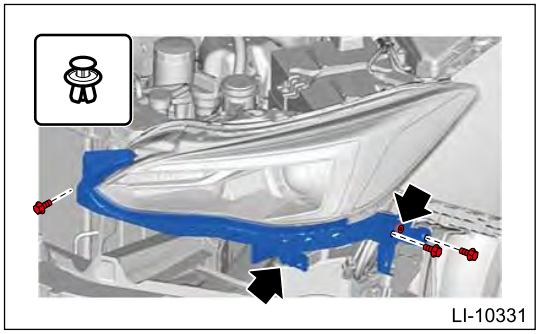


REMOVAL

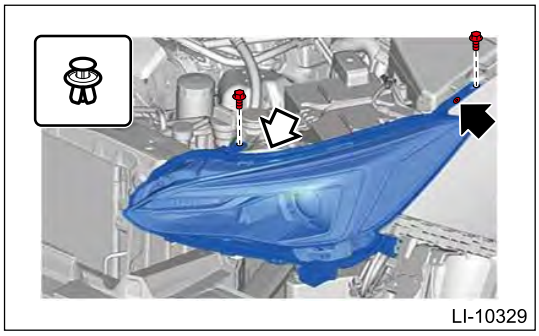
Caution:
Do not perform work with wet hands, because there is a possibility of electrical shock.



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
3. Remove the cover UPR - front.
   (1) Remove the clips, and remove the cover UPR - front.



4. Remove the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
5. Remove the bracket - bumper UPR.
   (1) Remove the bolts and clips, and remove the bracket - bumper UPR.



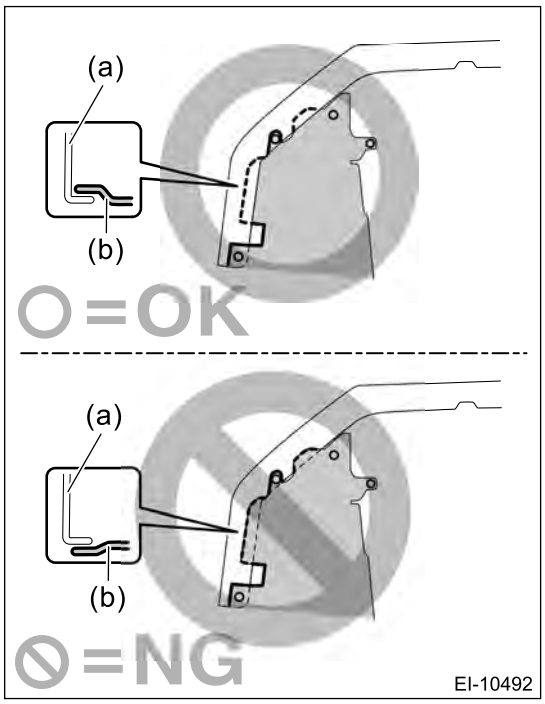
6. Remove the cover - front fender.
   (1) Remove the clip, and remove the cover - front fender.

LI-10330

7. Remove the keyless buzzer. (When the light assembly - head on the left side is removed) Ref. to SECURITY AND LOCKS>Keyless Buzzer>REMOVAL.
8. Remove the bracket - front bumper corner.
   (1) Remove the clip.
   (2) Remove the bolts, and then remove the bracket - front bumper corner.

LI-10331

9. Remove the light assembly - head.
   Caution:
   Be careful not to damage the light assembly - head and the fender COMPL - front.
   (1) Disconnect the connector.
   (2) Remove the bolts and clips, and remove the light assembly - head.



LI-10329

LIGHTING SYSTEM > Headlight Assembly

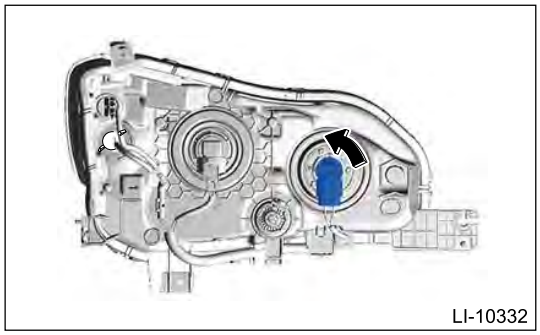
INSTALLATION

Caution:

- **Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).**

- **Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.**

1. Install the light assembly - head.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the bracket - front bumper corner.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the keyless buzzer. (When the light assembly - head on the left side is removed)
4. Install the cover - front fender.
5. Install the bracket - bumper UPR.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6. Install the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
7. Install the cover UPR - front.
8. Install the air intake duct.
9. Check and adjust the clearance between the hood COMPL - front and the light assembly - head. Ref. to EXTERIOR BODY PANELS>Front Hood>ADJUSTMENT.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
11. Adjust the headlight beam and fog light beam.
    - Adjust the headlight beam. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT > HEADLIGHT BEAM ADJUSTMENT.
    - Adjust the fog light beam. (Model with fog light) Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>ADJUSTMENT > FOG LIGHT AIMING.

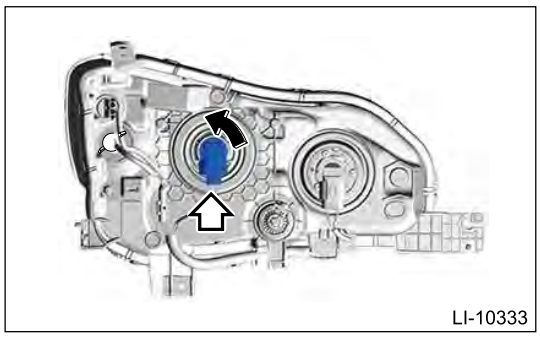


DISASSEMBLY

Caution:

- **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
- **Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**
- **When removing with the light assembly - head installed, turn over the mud guard - front and remove each bulb.**
  - **– Halogen headlight: Remove the parking light bulb / turn signal light bulb and side marker light bulb.**
  - **– LED headlight: Remove the side marker light bulb.**

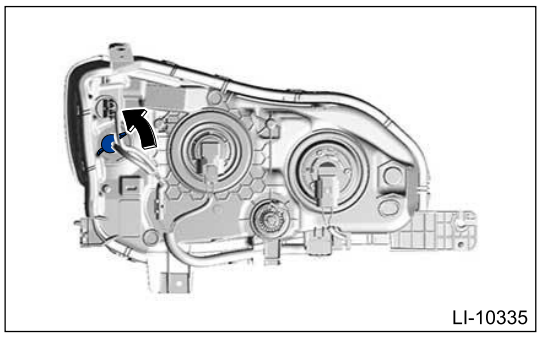
1. HIGH BEAM BULB



- **HALOGEN TYPE**
  1. Disconnect the connector.
  2. Rotate in the direction of arrow shown in the figure to remove the high beam bulb.

- **LED TYPE**
  Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

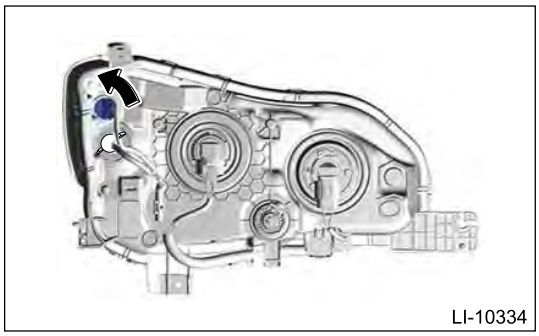
2. LOW BEAM BULB



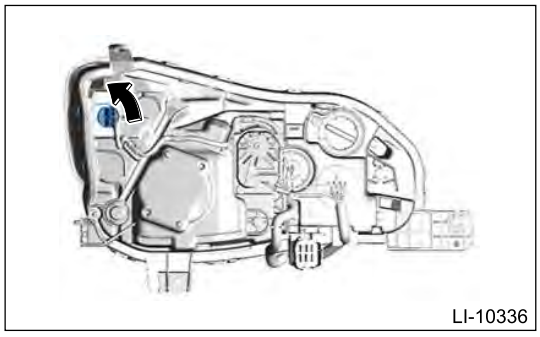
- **HALOGEN TYPE**
  1. Disconnect the connector.
  2. Rotate in the direction of arrow shown in the figure to remove the low beam bulb.

- **LED TYPE**
  Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

3. PARKING LIGHT BULB



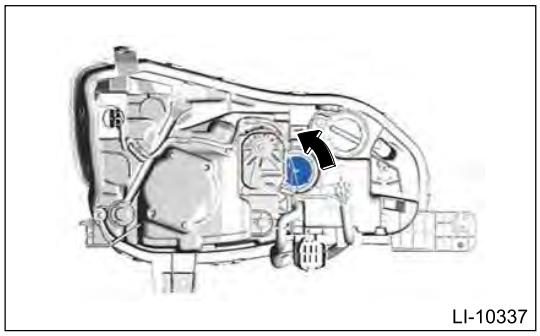
- **HALOGEN TYPE**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the parking light bulb.



- **LED TYPE**
  Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

4. SIDE MARKER LIGHT BULB

- **HALOGEN TYPE**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the side marker light bulb.



- **LED TYPE**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the side marker light bulb.

5. TURN SIGNAL LIGHT BULB

- **HALOGEN TYPE**
  It is integrated with the parking light bulb. For operation procedures, refer to “Parking Light Bulb”.
- **LED TYPE**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the turn signal light bulb.

ASSEMBLY

Caution:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. HIGH BEAM BULB

- **HALOGEN TYPE**
  1. Install the high beam bulb.
  2. Connect the connector.
- **LED TYPE**

  Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

2. LOW BEAM BULB

- **HALOGEN TYPE**
  1. Install the low beam bulb.
  2. Connect the connector.
- **LED TYPE**

  Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

3. PARKING LIGHT BULB

- **HALOGEN TYPE**
  1. Install the parking light bulb.
  2. Install the bulb socket.
- **LED TYPE**

  Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

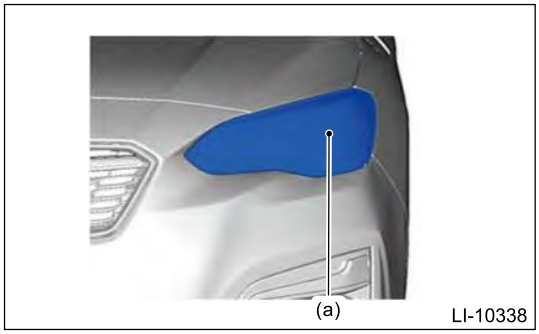
4. SIDE MARKER LIGHT BULB

- **HALOGEN TYPE**
  1. Install the side marker light bulb.
  2. Install the bulb socket.
- **LED TYPE**
  1. Install the side marker light bulb.
  2. Install the bulb socket.

5. TURN SIGNAL LIGHT BULB

- **HALOGEN TYPE**
  It is integrated with the parking light bulb. For operation procedures, refer to "Parking Light Bulb".
- **LED TYPE**
  1. Install the turn signal light bulb.
  2. Install the bulb socket.

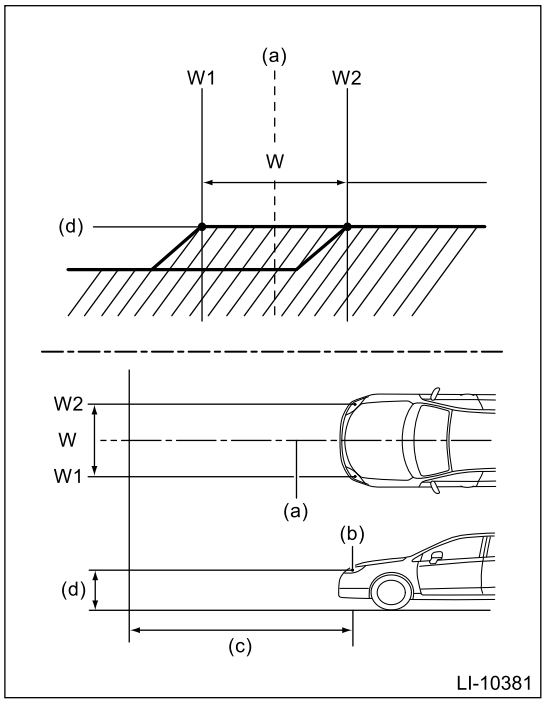
LIGHTING SYSTEM > Headlight Assembly



ADJUSTMENT

1. HEADLIGHT BEAM ADJUSTMENT

Caution:



- **Turn off the light before adjusting the headlight beam level. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.**
- **When blocking the light emitted from the headlight, use a light shield or equivalent. Do not apply the tape on the lens or place the cloth over it. It may raise the temperature in the light and cause deformation/bubble formations of the plastic lens.**

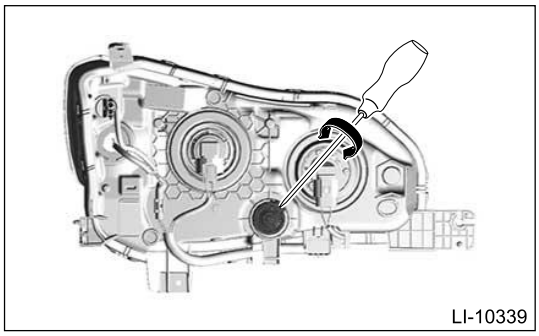
1. Before checking the headlight beam level, be sure of the following:
   - Check the area around the headlight for any scratches, damage or other type of deformation.
   - The vehicle is parked on a level surface.
   - The inflation pressure of tires is correct.
   - The vehicle does not have load.
   - Vehicle's fuel tank is fully filled.
2. Set the headlight beam leveler switch to "0" position. (Model with manual leveler)
3. Bounce the vehicle several times to normalize the suspension.
4. Make certain that someone is seated in the driver's seat.
5. Measure the distance of the light source centers and the height of the light source centers for the low beam.

(a) Light source center

6. Adjust the headlight beam.
   (1) Place the vehicle with the front end facing to the measurement panel, open the front hood, and then illuminate the low beam.

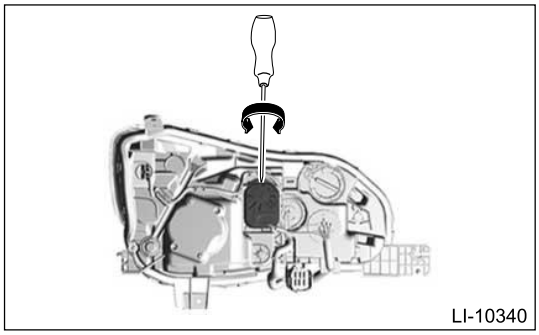
(a) Vehicle center

(b) Light source center



(c) 3 m (10 ft)

(d) Height of light source center



W mm (in)
Halogen type: 1,320 (51.97)
LED type: 1,376 (54.17)

(2) Adjust the beam level by turning the aiming screw.

- Halogen type

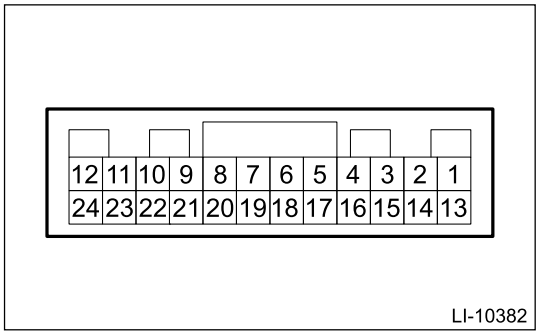
- LED type

LIGHTING SYSTEM > Hazard Switch

NOTE

The switch - hazard is integrated into the heater control assembly. For operation procedures, refer to the "AIR CONDITIONER" section. Ref. to AIR CONDITIONER>Control Panel.

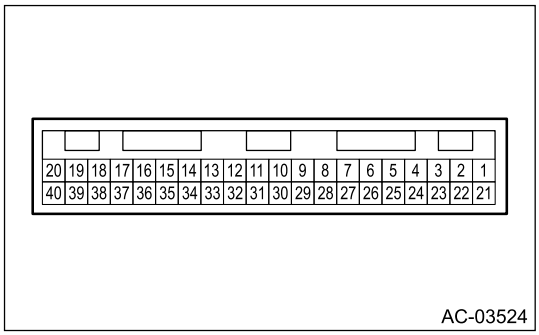
LIGHTING SYSTEM > Hazard Switch



INSPECTION

1. Measure the resistance between connector terminals.

Preparation tool:

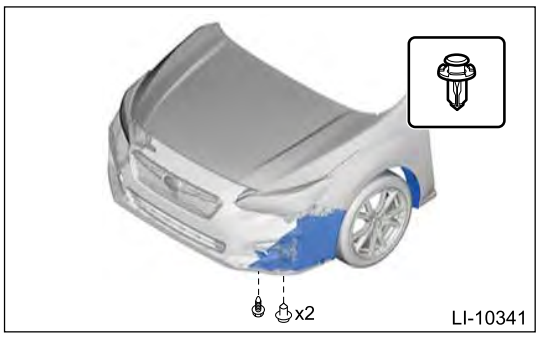


Circuit tester

- Manual A/C model

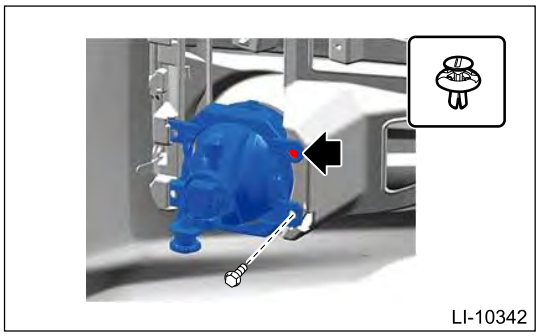
Terminal No.	Inspection conditions	Standard
12 — 18	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

- Auto A/C model



Terminal No.	Inspection conditions	Standard
26 — 10	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2. Replace the heater control assembly if it is found defective.



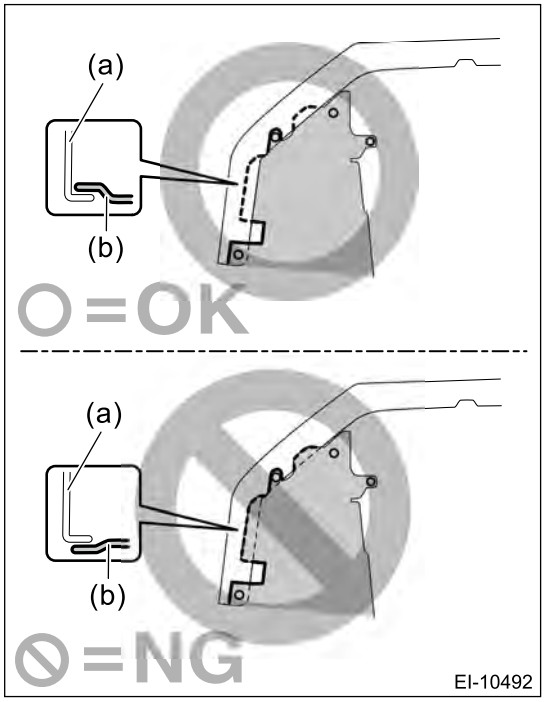
LIGHTING SYSTEM > Front Fog Light Assembly

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Turn over the mud guard - front.
   (1) Remove the clip.
   (2) Remove the screws, and turn over the mud guard - front.

5. Remove the fog light assembly - front.
   (1) Disconnect the connector.
   (2) Remove the bolt and clip.
   (3) Remove the guides, then remove the fog light assembly - front.

Note:



Perform the same procedures for the models with SRF.

LIGHTING SYSTEM > Front Fog Light Assembly

INSTALLATION

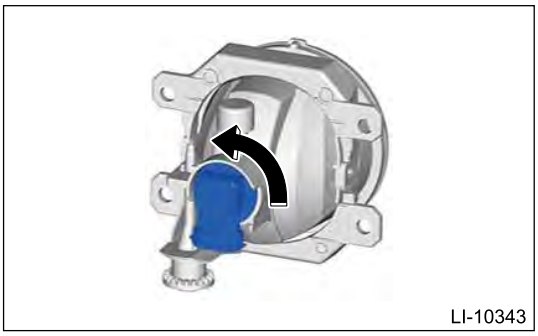
Caution:

Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).

1. Install the fog light assembly - front.
2. Install the mud guard - front.
3. Install the under cover - front.

   Tightening torque:

   18 N·m (1.8 kgf-m, 13.3 ft-lb)
4. Lower the vehicle.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
6. Adjust the fog light beam. Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>ADJUSTMENT > FOG LIGHT AIMING.



LIGHTING SYSTEM > Front Fog Light Assembly

DISASSEMBLY

Caution:

- **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
- **Do not leave the fog light assembly - front without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**
- **When removing with the bumper face - front installed, turn over the mud guard - front and remove the front fog light bulbs.**

Rotate in the direction of arrow shown in the figure to remove the front fog light bulb.

Note:

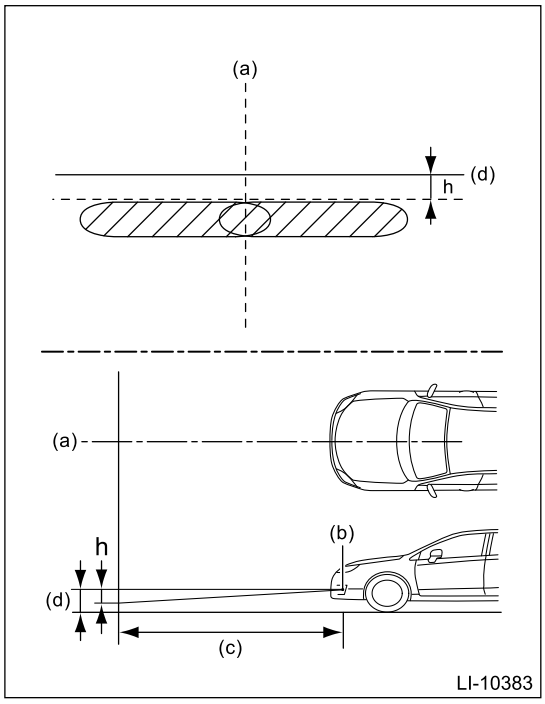
Perform the same procedures for the models with SRF.

LIGHTING SYSTEM > Front Fog Light Assembly

ASSEMBLY

Caution:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



Install the front fog light bulb.

LIGHTING SYSTEM > Front Fog Light Assembly

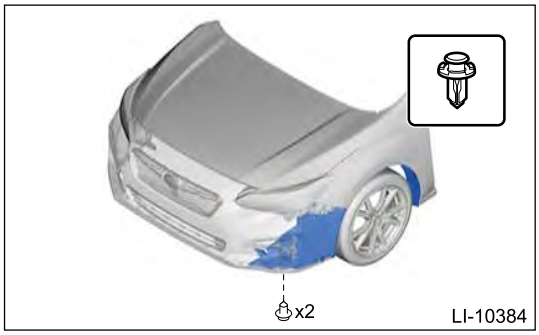
ADJUSTMENT

1. FOG LIGHT AIMING

1. Before checking the fog light beam level, be sure of the following:
   - Check the area around the fog light for any scratches, damage or other type of deformation.
   - The vehicle is parked on a level surface.
   - The inflation pressure of tires is correct.
   - The vehicle does not have load.
   - Vehicle’s fuel tank is fully filled.
2. Bounce the vehicle several times to normalize the suspension.
3. Make certain that someone is seated in the driver’s seat.
4. Place the vehicle with the front end facing to the measurement panel.

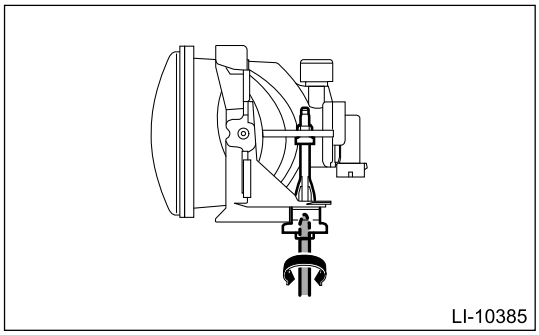
(a) Vehicle center

(b) Bulb center marking



(c) 3 m (10 ft)

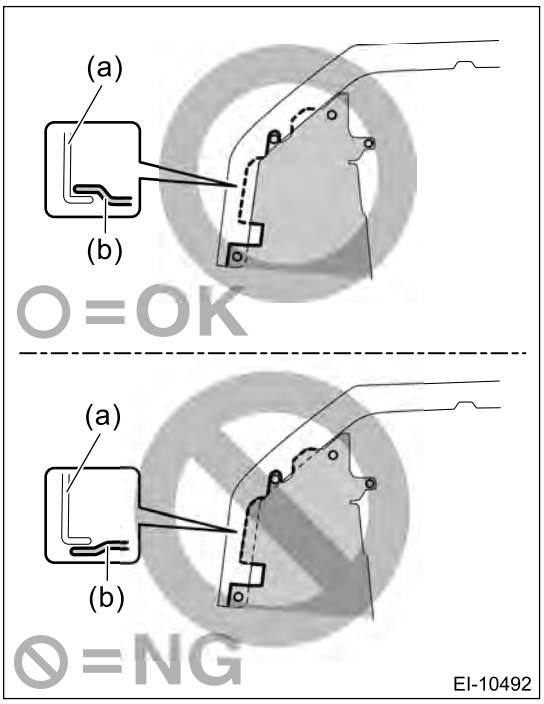
(d) Height of fog light center



h mm (in) at 3 m (10 ft)
45 (1.77)

5. Adjust the fog light beam.

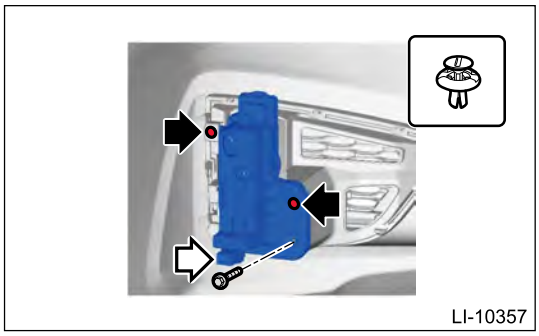
(1) Remove the clips, and turn over the mud guard - front.



(2) Adjust the beam level by turning the aiming screw.

(3) Install the mud guard - front.

Caution:

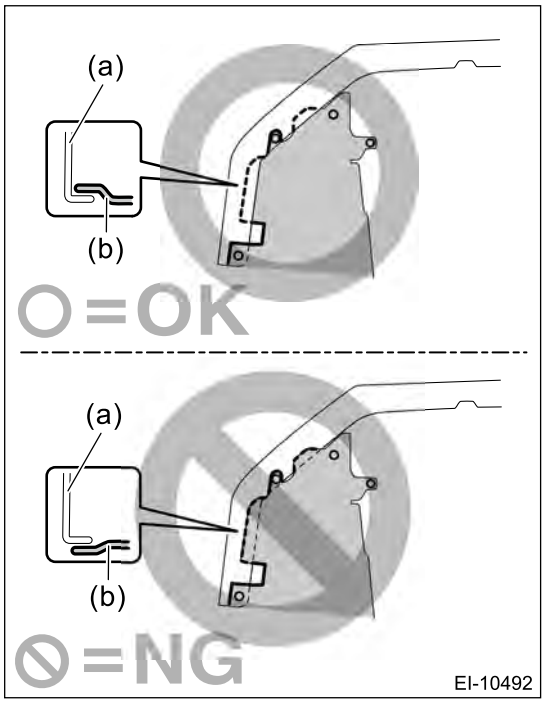


Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).

LIGHTING SYSTEM > Day Time Running Light Assembly

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Remove the daytime running light assembly.
   (1) Disconnect the connector.
   (2) Remove the bolt and clip, and remove the daytime running light assembly.



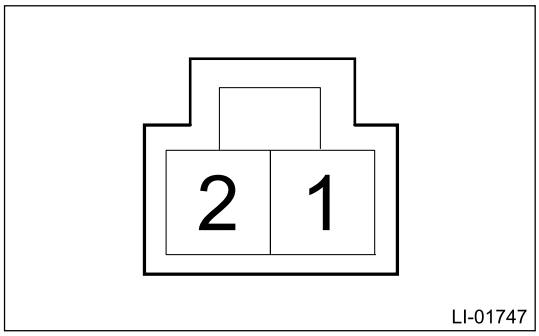
LIGHTING SYSTEM > Day Time Running Light Assembly

INSTALLATION

Caution:

- **Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).**

- **Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.**



1. Install the daytime running light assembly.
   Tightening torque:
   7.5 N·m(0.8 kgf-m, 5.5 ft-lb)

2. Install the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LIGHTING SYSTEM > Day Time Running Light Assembly

INSPECTION

1. Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (−)	Apply battery voltage.	Light ON

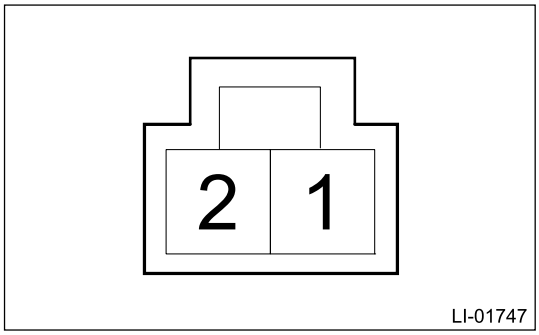
2. Replace the daytime running light assembly if it is found defective.
Note:
Since the daytime running light assembly uses LED (Light Emitting Diode), replace the daytime running light assembly if the light does not illuminate.

LIGHTING SYSTEM > Side Turn Signal Light Assembly

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - side turn mirror. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly>DISASSEMBLY.

LIGHTING SYSTEM > Side Turn Signal Light Assembly



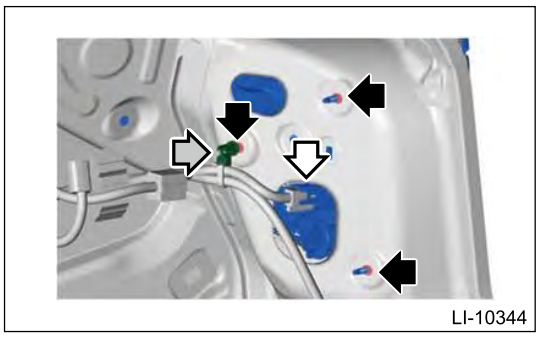
INSTALLATION

1. Install the light assembly - side turn mirror. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly>ASSEMBLY.
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LIGHTING SYSTEM > Side Turn Signal Light Assembly

INSPECTION

1. Apply battery voltage between the connector terminals to check the lighting condition of the light.

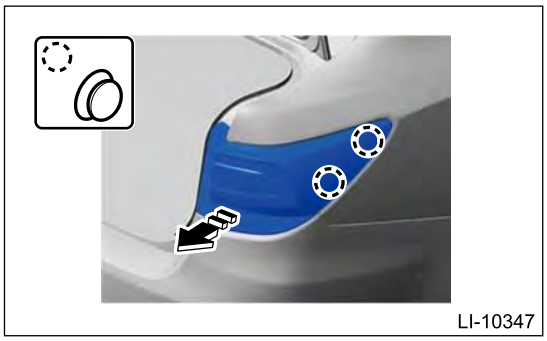


Terminal No.	Inspection conditions	Specification
1 (+) — 2 (−)	Apply battery voltage.	Light ON

2. Replace the light assembly - side turn mirror if faulty is found in the inspection.
   Note:
   Since LED (Light Emitting Diode) is used for the light, replace the light assembly - side turn mirror if the light does not illuminate.

REMOVAL

1. 4 DOOR MODEL

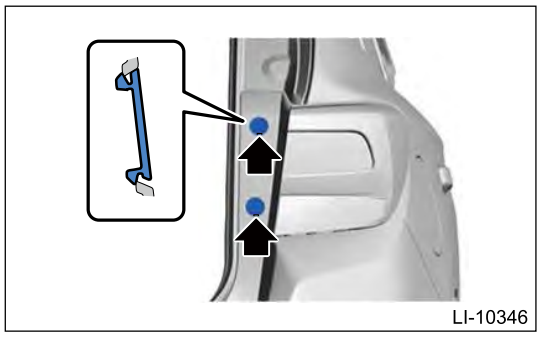


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - trunk side. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the light assembly - rear combination.
   (1) Disconnect the connector.
   (2) Remove the harness clips and nuts.

   (3) Release the clips, and remove the light assembly - rear combination as shown in the figure.

Caution:

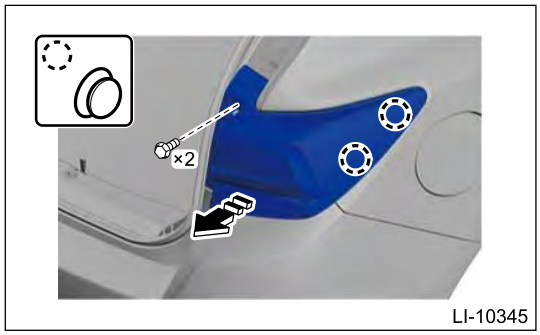
Be careful not to damage the clips.



2. 5 DOOR MODEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - rear combination.
   (1) Release the claws and then remove the grommet.

Caution:



When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(2) Release the bolts and clips, then pull out the light assembly - rear combination to the rear of the vehicle as shown in the figure.

Caution:

Be careful not to damage the clips.

(3) Disconnect the connector and remove the light assembly - rear combination.

LIGHTING SYSTEM > Rear Combination Light Assembly

INSTALLATION

1. 4 DOOR MODEL

1. Replace the light assembly gasket with a new part.
2. Install the light assembly - rear combination.

   Caution:

   Be careful not to catch the harness in between the parts.

   Tightening torque:

   4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
3. Install the trim panel - trunk side.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. 5 DOOR MODEL

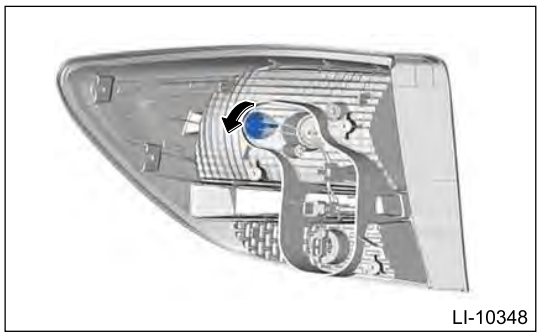
1. Install the light assembly - rear combination.

   Caution:

   Be careful not to catch the harness in between the parts.

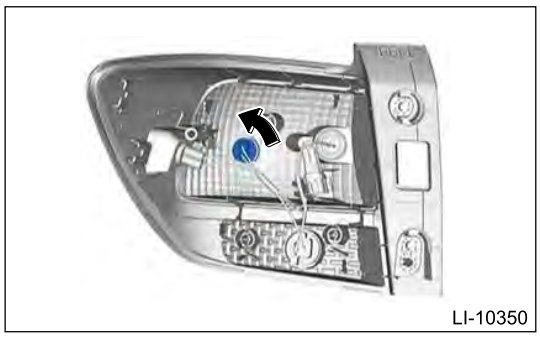
   Tightening torque:

   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the grommet.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



DISASSEMBLY

Caution:

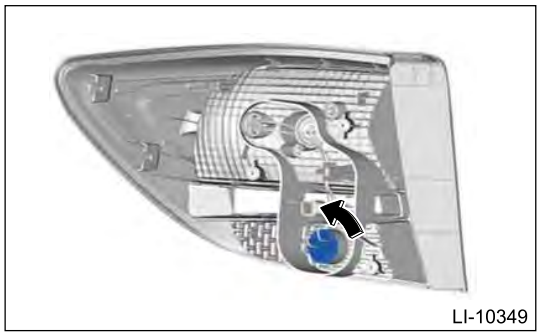


- **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
- **Do not leave the light assembly - rear combination without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**
- **For 4 door model, when removing with the light assembly - rear combination installed, turn over the trim panel - trunk side and remove each bulb.**

1. TAIL LIGHT BULB

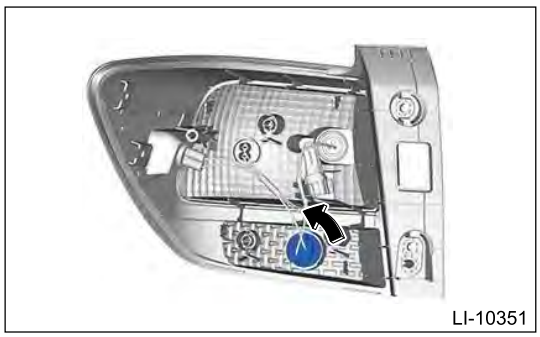
- **4 DOOR MODEL**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the tail light bulb.

- **5 DOOR MODEL**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the tail light bulb.



2. STOP LIGHT BULB

Note:



Since the LED type is a non-disassembled part, it cannot be removed. Replace the light assembly - rear combination if defective.

3. TURN SIGNAL LIGHT BULB

- **4 DOOR MODEL**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the turn signal light bulb.

- **5 DOOR MODEL**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the turn signal light bulb.

4. SIDE MARKER LIGHT BULB

- **4 DOOR MODEL**
  It is integrated with the tail light bulb. For operation procedures, refer to “Tail Light Bulb”.
- **5 DOOR MODEL**
  1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
  2. Remove the side marker light bulb.

LIGHTING SYSTEM > Rear Combination Light Assembly

ASSEMBLY

Caution:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. TAIL LIGHT

- **4 DOOR MODEL**
  1. Install the tail light bulb.
  2. Install the bulb socket.

- **5 DOOR MODEL**
  1. Install the tail light bulb.
  2. Install the bulb socket.

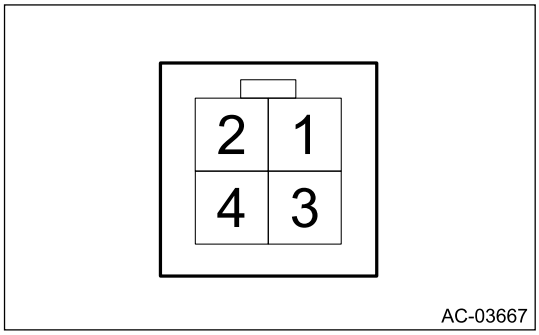
2. STOP LIGHT BULB

Note:

Since the LED type is a non-disassembled part, it cannot be removed. Replace the light assembly - rear combination if defective.

3. TURN SIGNAL LIGHT BULB

- **4 DOOR MODEL**
  1. Install the turn signal light bulb.
  2. Install the bulb socket.
- **5 DOOR MODEL**
  1. Install the turn signal light bulb.
  2. Install the bulb socket.



4. SIDE MARKER LIGHT BULB

- **4 DOOR MODEL**

  It is integrated with the tail light bulb. For operation procedures, refer to “Tail Light Bulb”.
- **5 DOOR MODEL**
  1. Install the side marker light bulb.
  2. Install the bulb socket.

INSPECTION

1. Apply battery voltage between the connector terminals to check the lighting condition of the light.

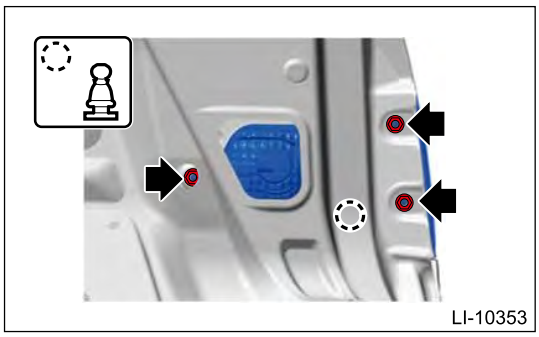
- 4 door model

Terminal No.	Inspection conditions	Specification
3 (+) — 2 (−)	Apply battery voltage.	Stop light on
1 (+) — 2 (−)		Tail / side marker light on
4 (+) — 2 (−)		Turn signal light on

- 5 door model

Terminal No.	Inspection conditions	Specification
2 (+) — 4 (−)	Apply battery voltage.	Stop light on
1 (+) — 4 (−)		Tail / side marker light on
3 (+) — 4 (−)		Turn signal light on

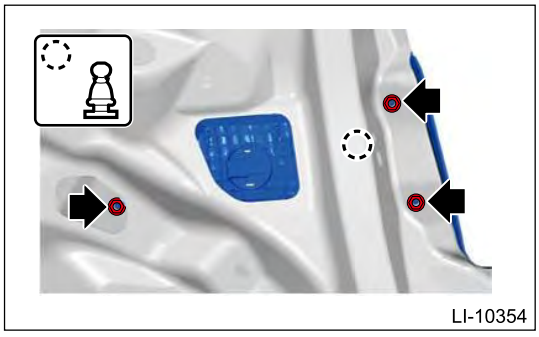
2. Replace the harness and bulb if it is found defective.



Note:

Since LED (Light Emitting Diode) is used for the stop light, replace the light assembly - rear combination if the light does not illuminate.

REMOVAL



1. 4 DOOR MODEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the light assembly - finisher rear.
   (1) Disconnect the connector.
   (2) Release the nuts and pins, then remove the light assembly - finisher rear.

2. 5 DOOR MODEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the light assembly - finisher rear.
   (1) Disconnect the connector.
   (2) Release the nuts and pins, then remove the light assembly - finisher rear.

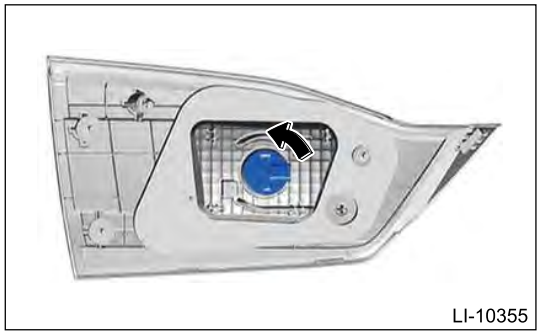
INSTALLATION

1. 4 DOOR MODEL

1. Replace the light assembly gasket with a new part.
2. Install the light assembly - finisher rear.
   Tightening torque:
   4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
3. Install the trim panel - trunk lid.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

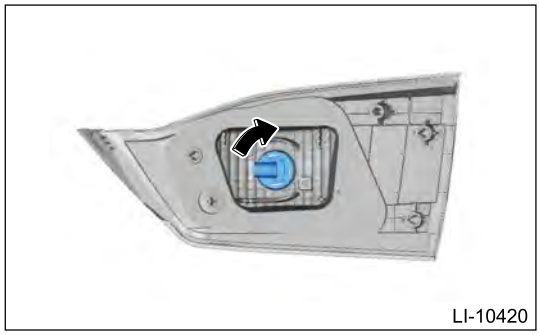
2. 5 DOOR MODEL

1. Replace the light assembly gasket with a new part.
2. Install the light assembly - finisher rear.
   Tightening torque:
   4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
3. Install the trim panel - rear gate.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



LIGHTING SYSTEM > Rear Finisher Light Assembly

DISASSEMBLY



Caution:

- **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
- **Do not leave the light assembly - finisher rear without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**
- **When removing with the light assembly - finisher rear installed, remove each bulb in the following procedures.**
  – 4 door model: Turn over the trim panel - trunk side and remove the bulb.
  – 5 door model: Remove the bulb inspection cover and remove the bulb.

1. Rotate in the direction of arrow shown in the figure to remove the bulb socket.
2. Remove the back-up light bulb.
   - 4 door model
     – RH side

     – LH side

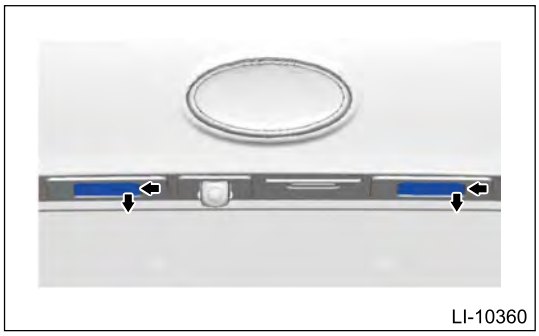
   - 5 door model
     – RH side

– LH side

LIGHTING SYSTEM > Rear Finisher Light Assembly

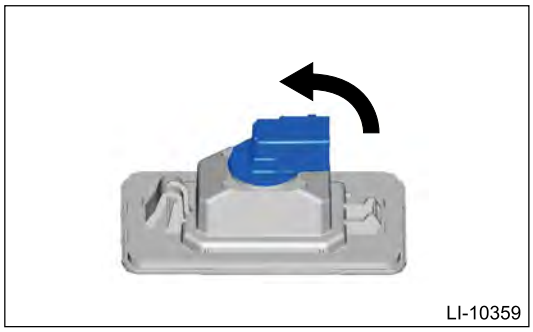
ASSEMBLY

Caution:



Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. Install the back-up light bulb.
2. Install the bulb socket.



REMOVAL

1. 4 DOOR MODEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the license plate light.
   (1) Release the claws as shown in the figure, and pull out the license plate light.

   (2) Disconnect the connector, and remove the license plate light.
3. Remove the license plate light bulb.
   Caution:
   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
   (1) Rotate the bulb socket in the direction of arrow shown in the figure to remove the license plate light bulb.

2. 5 DOOR MODEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the license plate light.
   (1) Release the claws as shown in the figure, and pull out the license plate light.

   (2) Disconnect the connector, and remove the license plate light.
3. Remove the license plate light bulb.

Caution:

Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

(1) Rotate the bulb socket in the direction of arrow shown in the figure to remove the license plate light bulb.

LIGHTING SYSTEM > License Plate Light

INSTALLATION

1. 4 DOOR MODEL

1. Install the license plate light bulb.

   Caution:

   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2. Install the license plate light.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. 5 DOOR MODEL

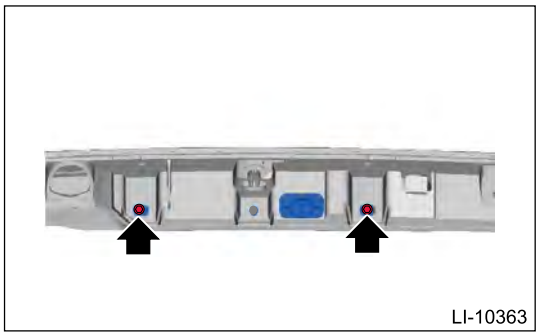
1. Install the license plate light bulb.

   Caution:

   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2. Install the license plate light.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

1. 4 DOOR MODEL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - high-mounted.
   (1) Release the clips.

   (2) Disconnect the connector and remove the light assembly - high-mounted.

2. 5 DOOR MODEL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the roof spoiler. Ref. to EXTERIOR/INTERIOR TRIM>Roof Spoiler>REMOVAL.
4. Remove the light assembly - high-mounted.
   (1) Remove the nuts and remove the light assembly - high-mounted.

INSTALLATION

1. 4 DOOR MODEL

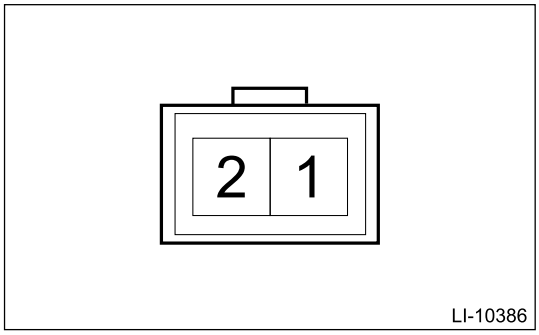
1. Install the light assembly - high-mounted.
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. 5 DOOR MODEL

Caution:
Make sure the bolt is tightened securely because improper roof spoiler installation may cause water leakage.

1. Install the light assembly - high-mounted.

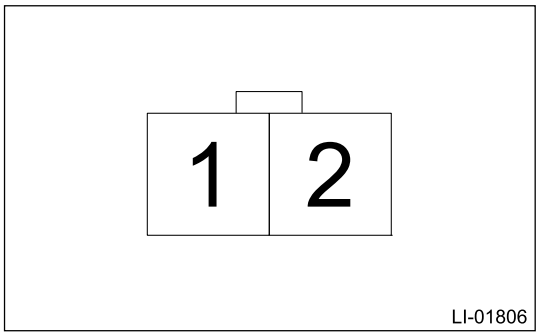
Tightening torque:



4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

2. Install the roof spoiler. Ref. to EXTERIOR/INTERIOR TRIM>Roof Spoiler>INSTALLATION.
3. Install the trim panel - rear gate.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LIGHTING SYSTEM > High-mounted Stop Light



INSPECTION

1. Apply battery voltage between the connector terminals to check the lighting condition of the light.
   - 4 door model

Terminal No.	Inspection conditions	Specification
2 (+) — 1 (−)	Apply battery voltage.	Light ON

   - 5 door model

Terminal No.	Inspection conditions	Specification
1 (+) — 2 (−)	Apply battery voltage.	Light ON

2. Replace the light assembly - high-mounted if faulty is found in the inspection.

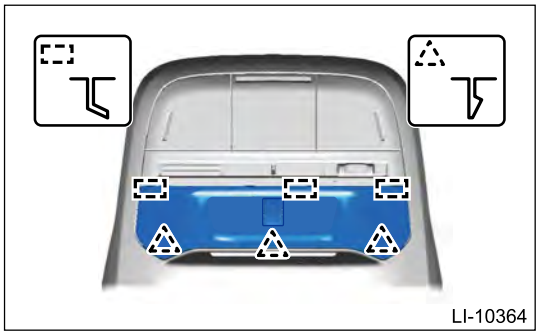
Note:

Since LED (Light Emitting Diode) is used for the high-mounted stop light, replace the light assembly - high-mounted if the light does not illuminate.

REMOVAL

1. MODELS WITHOUT EYESIGHT

Note:



Do not remove the light assembly - map if removing the bulb only.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - map.

   Caution:

   When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

   (1) Release the claws and then remove the cap.

   (2) Remove the screws and release the clip.

   (3) Disconnect the connector and remove the light assembly - map.
3. Remove the map light bulb.

   Caution:

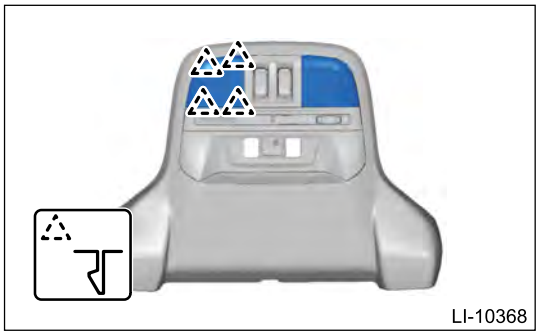
   - **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
   - **When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.**

   (1) Release the claws and remove the lens.

(2) Remove the map light bulb.

2. MODELS WITH EYESIGHT

Note:



- **The light assembly - map is a single unit with the stereo camera cover assembly. If defective, replace the stereo camera cover assembly. Ref. to EyeSight>Stereo Camera.**
- **Do not remove the stereo camera cover assembly if removing the bulb only.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the map light bulb.

   Caution:

   - **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
   - **When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.**

   (1) Release the claws and remove the lens.

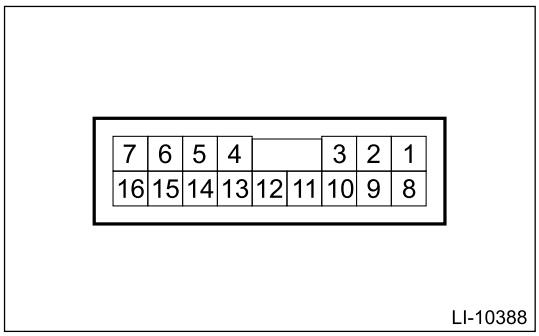
(2) Remove the map light bulb.

LIGHTING SYSTEM > Spot Map Light

INSTALLATION

1. MODELS WITHOUT EYESIGHT

1. Install the map light bulb and lens.
   Caution:
   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2. Install the light assembly - map.
3. Install cap.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



2. MODELS WITH EYESIGHT

1. Install the map light bulb and lens.
   Caution:
   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LIGHTING SYSTEM > Spot Map Light

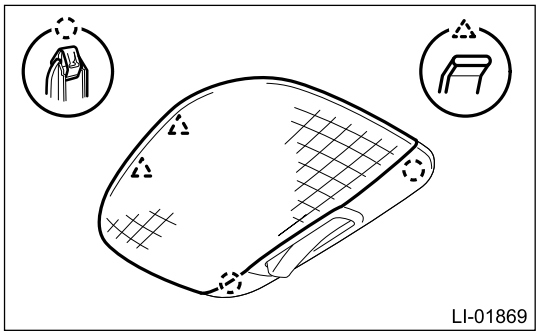
INSPECTION

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester

- Light switch

Terminal No.	Inspection conditions	Standard
1 — 13	Switch OFF	1 MΩ or more
	Switch ON	Approx. 18 Ω

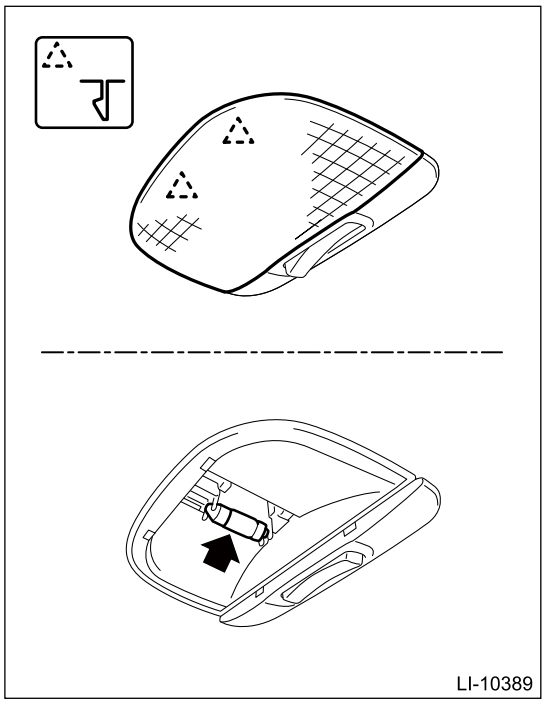
- Door switch



Terminal No.	Inspection conditions	Specification
1 — 4	Switch door	Continuity exists

2. Replace the light assembly - map if it is found defective.

REMOVAL



Note:
Do not remove the light assembly - room if removing the bulb only.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - room.
   (1) Remove the clips, and remove the hook.

   (2) Disconnect the connector and remove the light assembly - room.
3. Remove the room light bulb.
   Caution:
   - **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
   - **When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.**

   (1) Release the claws and remove the lens.
   (2) Remove the room light bulb.

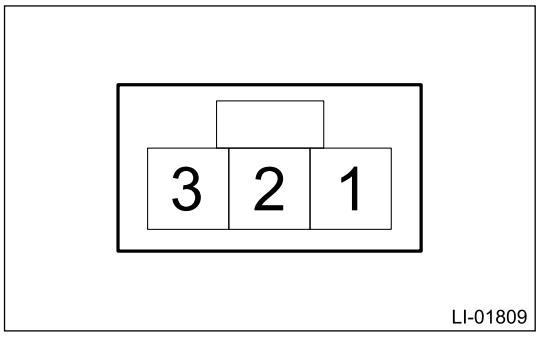
INSTALLATION

1. Install the room light bulb and lens.

   Caution:

   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

2. Install the light assembly - room.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



LIGHTING SYSTEM > Room Light

INSPECTION

1. Measure the resistance between connector terminals.

   Preparation tool:

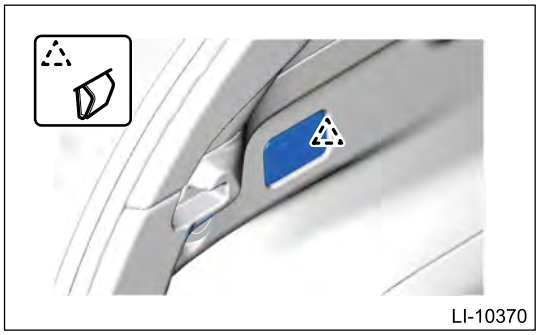
   Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω
2 — 3	Switch door	Less than 1 Ω

2. Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
3 (+) — 1 (−) 3 (+) — 2 (−)	Switch OFF	Light OFF
	Switch ON	Light ON
	Switch door	Light ON

3. Replace the light assembly - room if faulty is found in the inspection.



REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - luggage room.

   Caution:

   - **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
   - **When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.**

   (1) Release the claws and remove the main body of the light assembly - luggage room.

   (2) Disconnect the connector.

   (3) Remove the light assembly - luggage room and the bulb.

INSTALLATION

1. Install the luggage room light bulb.

   Caution:

   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2. Install the light assembly - luggage room.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

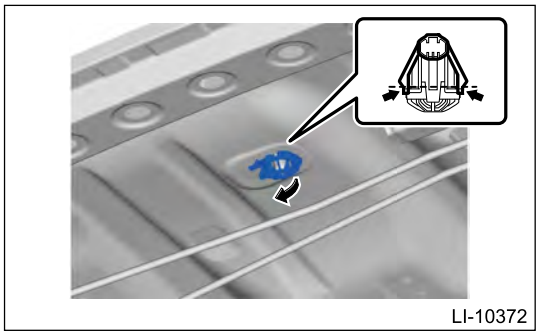
INSPECTION

1. Measure the resistance between connector terminals.

   Preparation tool:

   Circuit tester

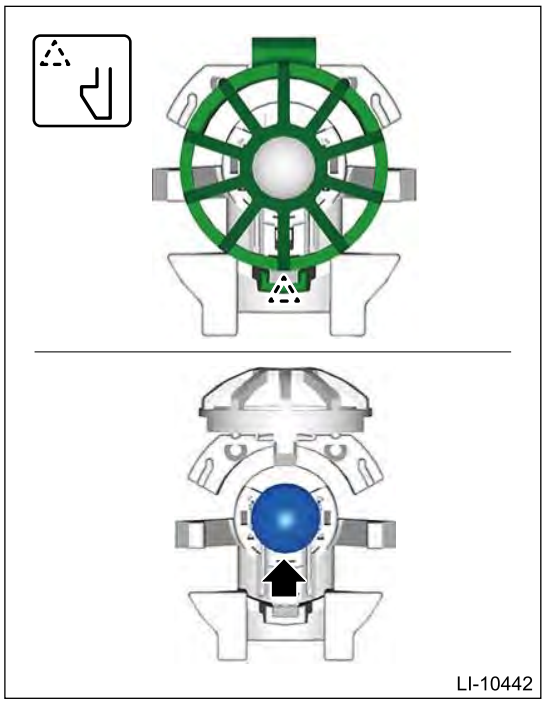
Terminal No.	Inspection conditions	Standard
1 — 2	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω



2. Replace the light assembly - luggage room if the inspection result is not within the standard value.

REMOVAL

Note:



Do not remove the light assembly - trunk room if removing the bulb only.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - trunk room.
   (1) Release the claws and pull out the light assembly - trunk room as shown in the figure.

   (2) Disconnect the connector and remove the light assembly - trunk room.
3. Remove the trunk room light bulb.
   Caution:
   - **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
   - **When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.**

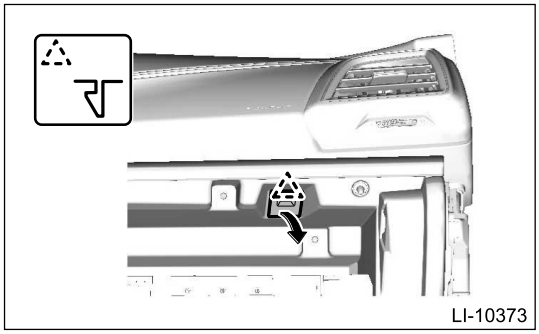
   (1) Release the claws, and open the bulb cover.
   (2) Remove the trunk room light bulb.

INSTALLATION

1. Install the trunk room light bulb and bulb cover.
   Caution:
   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2. Install the light assembly - trunk room.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

1. GLOVE BOX LIGHT



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the light - pocket cover.

   Caution:

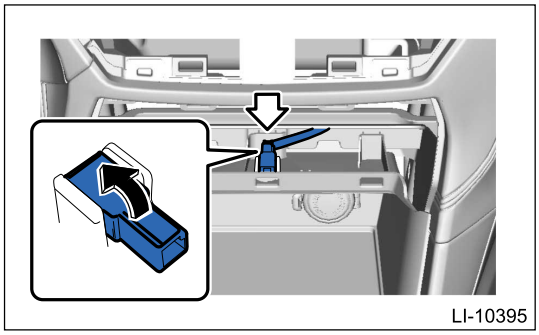
   When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

   (1) Release the claws.

   (2) Disconnect the connector, and remove the light - pocket cover.

4. Remove the light - pocket.

   (1) Release the claws, and remove the light - pocket.



2. POCKET LIGHT

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. (manual A/C model) Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the grille assembly - CTR ventilation. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
4. Remove the audio assembly or navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Audio>REMOVAL.
5. Remove the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>REMOVAL.
6. Remove the light - pocket.

   Caution:

   When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Disconnect the connector.
(2) Release the claws, and remove the light - pocket.

LIGHTING SYSTEM > LED Illumination Light

INSTALLATION

1. GLOVE BOX LIGHT

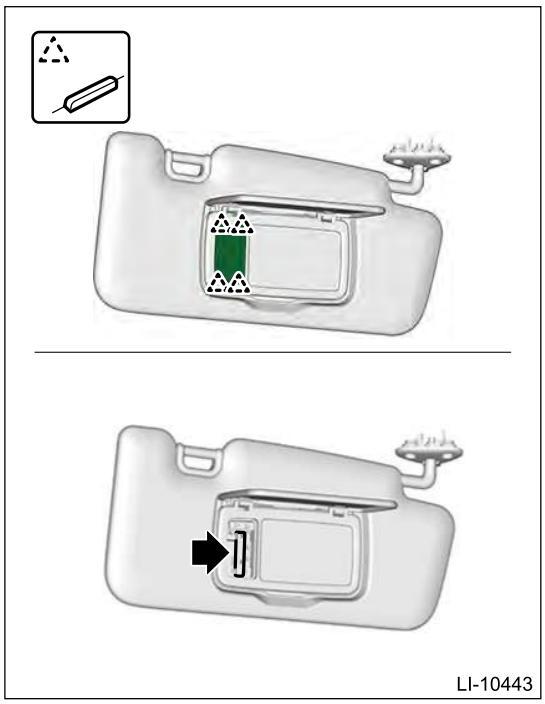
1. Install the light - pocket.
2. Install the light - pocket cover.
3. Install the pocket assembly.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. POCKET LIGHT

1. Install the light - pocket.
2. Install the heater control assembly. Ref. to AIR CONDITIONER>Control Panel>INSTALLATION.
3. Install the audio assembly or navigation assembly.
4. Install the grille assembly - CTR ventilation.
5. Install the pocket assembly and the back panel - pocket. (manual A/C model)
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

Note:



- **The vanity mirror light is integrated into the sun visor assembly. Replace the sun visor assembly if faulty. Ref. to EXTERIOR/INTERIOR TRIM>Sun Visor>REMOVAL.**
- **Do not remove the sun visor assembly if removing the bulb only.**

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the sun visor assembly. Ref. to EXTERIOR/INTERIOR TRIM>Sun Visor>REMOVAL.
3. Remove the vanity mirror light bulb.

   Caution:

   - **Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.**
   - **When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.**

   (1) Release the claws and remove the lens.
   (2) Remove the vanity mirror light bulb.

INSTALLATION

1. Install the vanity mirror light bulb and lens.

   Caution:

   Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2. Install the sun visor assembly.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

NOTE

The ignition switch illumination is integrated into the immobilizer antenna assembly. For operation procedures, refer to the "SECURITY AND LOCKS" section. Ref. to SECURITY AND LOCKS>Immobilizer Antenna.

INSPECTION

1. CHECK IGNITION SWITCH ILLUMINATION.

1. Turn the ignition switch to ON.
2. Check the lighting condition of the ignition switch illumination.

Does the ignition switch illumination blink?

Yes	Check the function setting of body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit.
No	Go to 2.

2. CHECK IGNITION SWITCH ILLUMINATION OPERATION.

1. Turn the ignition switch to OFF.
2. Open and close the driver's side door.

When door is opened/closed, does the ignition switch illumination switch between ON ←→ OFF?

Yes	Ignition switch illumination is normal.
No	Go to 3.

3. CHECK CURRENT DATA.

Display the [Driver's door SW input] data using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Does the display change as [ON] ←→ [OFF], when the door is opened/closed?

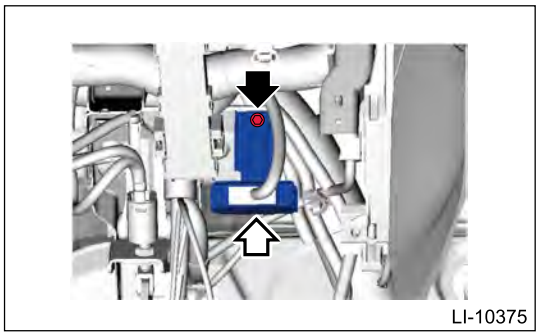
Yes	Go to 4.
No	Check the door switch circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR SWITCH.

4. CHECK CURRENT DATA.

Display the [key illumination lamp o/p] data using Subaru Select Monitor.

Does the display change as [ON] ←→ [OFF], when the door is opened/closed?

Yes	Check the ignition switch illumination circuit, and repair or replace the harness.
No	Check the body integrated unit and replace it if defective. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.



LIGHTING SYSTEM > Auto Headlight Beam Leveler Control Module

REMOVAL

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Disconnect the battery ground cable and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the auto headlight beam leveler CM.
   (1) Disconnect the connector.
   (2) Remove the bolts, and pull out the auto headlight beam leveler CM.

LIGHTING SYSTEM > Auto Headlight Beam Leveler Control Module

INSTALLATION

Caution:

Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. Install the auto headlight beam leveler CM.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
3. Install the cover assembly - instrument panel LWR driver.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Perform initialization and reinitialization of the auto headlight beam leveler system. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

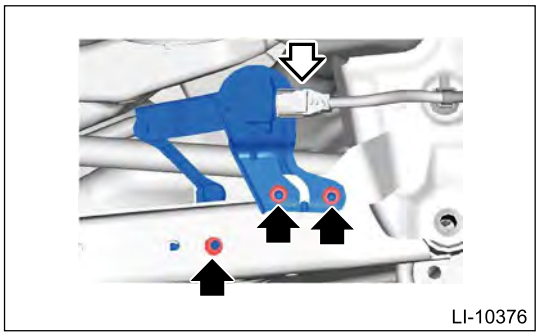
LIGHTING SYSTEM > Rear Height Sensor

REMOVAL

Caution:

Always remove the sensor assembly - headlight beam leveler before removing any parts related to the suspension.

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the sensor assembly - headlight beam leveler.

   Caution:

   Do not disassemble the sensor and lever.

   (1) Disconnect the connector.

   (2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.

LIGHTING SYSTEM > Rear Height Sensor

INSTALLATION

Caution:

Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

1. Install the sensor assembly - headlight beam leveler.

   Tightening torque:

   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Lower the vehicle.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Perform reinitialization of the auto headlight beam leveler system. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE > REINITIALIZATION.

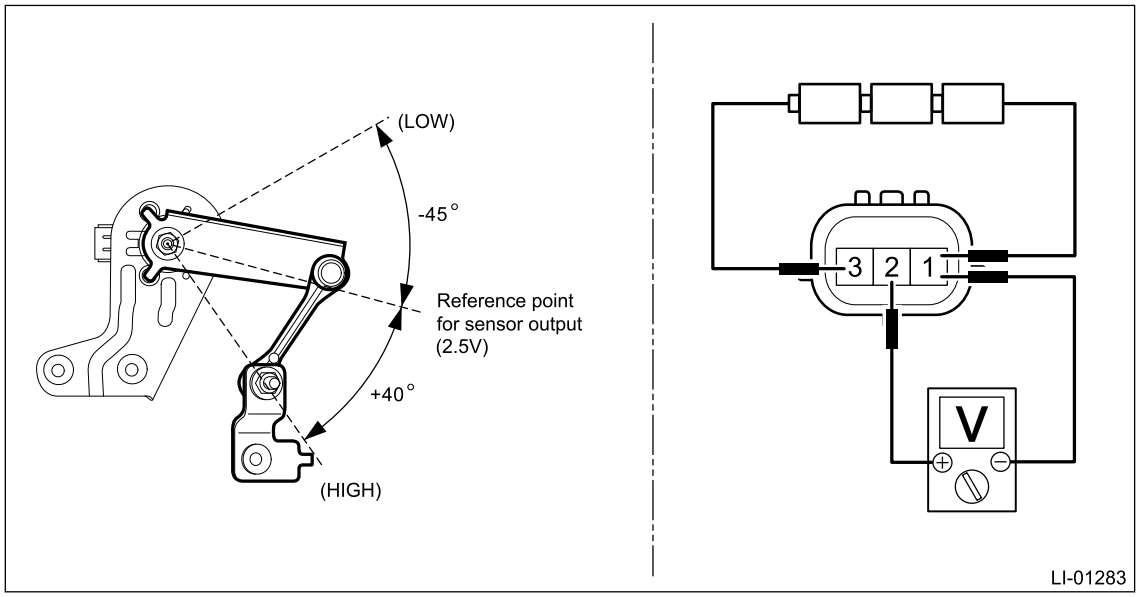
   Note:

   When replacing the rear vehicle height sensor with a new part, perform the initialization. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE > INITIALIZATION.

LIGHTING SYSTEM > Rear Height Sensor

INSPECTION

1. Connect three dry cell batteries (1.5 V) in series.



Note:

- **Use new dry-cell batteries.**
- **Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 — 5.2 V.**
- **For power supply, 5 V DC constant voltage power source can also be used.**

2. Connect the dry-cell battery positive terminal to the connector terminal No. 3, and the dry-cell battery ground terminal to the connector terminal No. 1.
3. With voltage applied, measure the voltage between connector terminals when the sensor link is moved slowly up and down.

Preparation tool:

Circuit tester

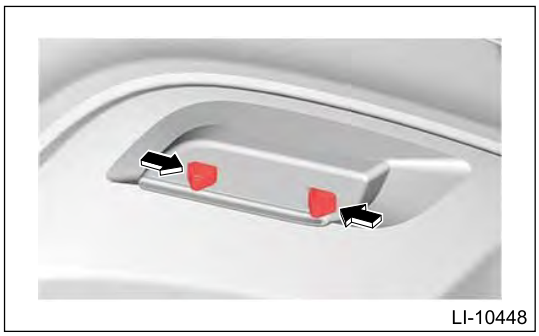
Terminal No.	Inspection conditions	Standard
2 (+) — 1 (−)	Move the link within the operation range.	Approx. 0.5 — 4.1 V

Note:

When the link is moved upward from the standard output position, the sensor output varies to the 0.5 V side. When the link is moved downward, the sensor output varies to the 4.1 V side.

4. Replace the sensor assembly - headlight beam leveler if the inspection result is not within the standard value.

REMOVAL



1. 4 DOOR MODEL

Note:

The reflex reflector is integrated into the rear combination light assembly. For operation procedures, refer to "Rear Combination Light Assembly". Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly>REMOVAL > 4 DOOR MODEL.

2. 5 DOOR MODEL

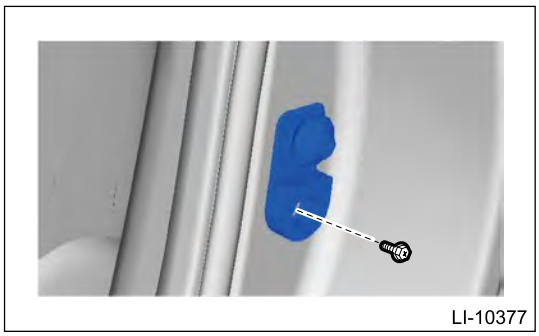
1. Remove the reflex reflector assembly.
(1) From behind the bumper face - rear, release the claws.
(2) Remove the reflex reflector assembly.

INSTALLATION

1. 4 DOOR MODEL

Note:

The reflex reflector is integrated into the rear combination light assembly. For operation procedures, refer to "Rear Combination Light Assembly". Ref. to LIGHTING SYSTEM>Rear Combination Light Assembly>INSTALLATION > 4 DOOR MODEL.



2. 5 DOOR MODEL

1. Install the reflex reflector assembly.

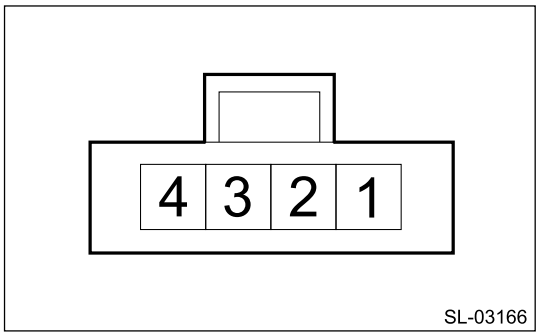
LIGHTING SYSTEM > Door Switch

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the switch assembly - door.
   (1) Remove the screws, and pull out the switch assembly - door toward you.

   (2) Disconnect the connector and remove the switch assembly - door.

LIGHTING SYSTEM > Door Switch



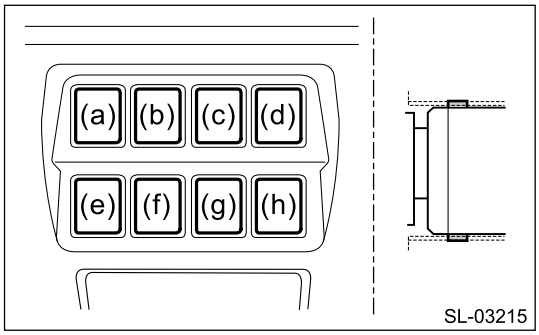
INSTALLATION

1. Install the switch assembly - door.
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LIGHTING SYSTEM > Door Switch

INSPECTION

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	When the switch is not pressed	Less than 1 Ω
	When the switch is pressed	1 MΩ or more

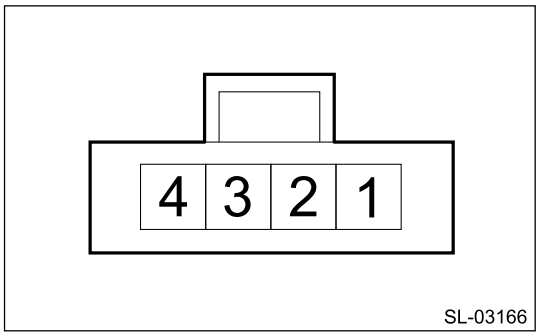
2. Replace the switch assembly - door if the inspection result is not within the standard value.

LIGHTING SYSTEM > SRF OFF Switch

REMOVAL

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver OUT. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the SRF OFF switch.
   (1) Release the claws and remove the SRF OFF switch (d).

LIGHTING SYSTEM > SRF OFF Switch



INSTALLATION

1. Install the SRF OFF switch.
2. Install the cover assembly - instrument panel LWR driver OUT.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

LIGHTING SYSTEM > SRF OFF Switch

INSPECTION

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 4	OFF	1 MΩ or more
	ON	Less than 1 Ω

2. Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (−)	Apply battery voltage.	Light ON

3. Replace the SRF OFF switch if it is found defective.

NOTE

For the operation and inspection procedures of the SRH OFF switch, refer to “SRF OFF Switch”. Ref. to LIGHTING SYSTEM>SRF OFF Switch.

REVERSE AUTOMATIC BRAKING

RAB

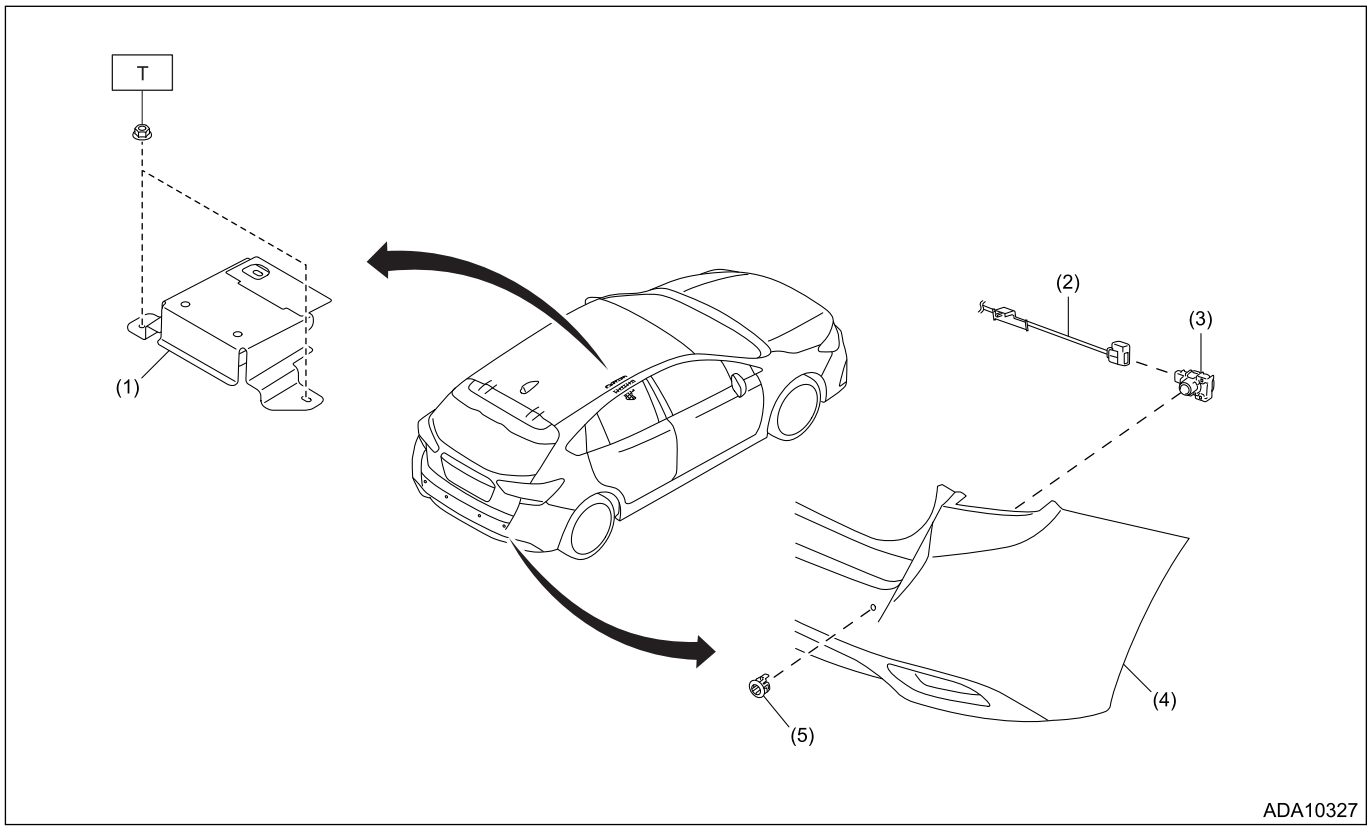
1. General Description
2. Relay and Fuse
3. Reverse Automatic Braking
4. Reverse Automatic Braking CM
5. Sensor and Harness
6. Control Unit
7. Stereo Camera
8. Combination Meter
9. Multi-function Display (MFD)
10. Audio

REVERSE AUTOMATIC BRAKING > General Description

NOTE

Using the EyeSight brake control, the Reverse Automatic Braking detects obstacles with the Reverse Automatic Braking CM and sonar sensor to operate the system.

REVERSE AUTOMATIC BRAKING > General Description



LOCATION

For location, refer to “LOCATION” in the “Reverse Automatic Braking (DIAGNOSTICS)” section.
Ref. to REVERSE AUTOMATIC BRAKING (DIAGNOSTICS)>Electrical Component Location>LOCATION.

REVERSE AUTOMATIC BRAKING > General Description

COMPONENT

1. REVERSE AUTOMATIC BRAKING CM AND SONAR SENSOR

(1)	Reverse Automatic Braking CM	(4)	Bumper face - rear	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Cord ASSY - sonar	(5)	Bezel - sonar	***T: 7.5 (0.8, 5.5)***	
(3)	Sonar sensor				

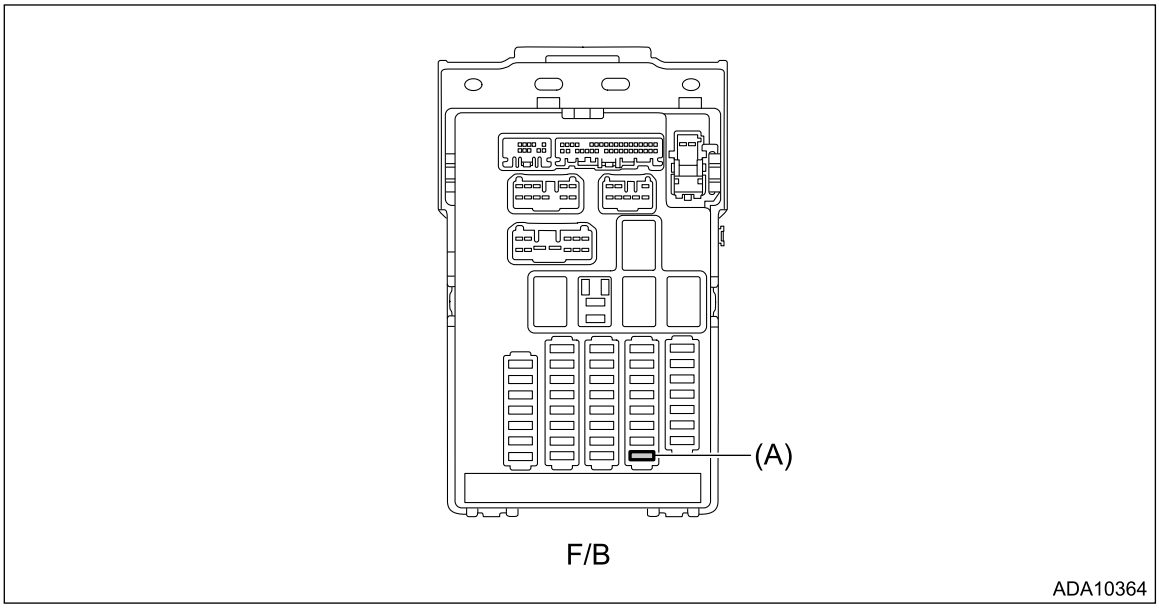
REVERSE AUTOMATIC BRAKING > General Description

CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents

specified by a customer, record the memory contents before disconnecting the battery ground cable.

- For precautions for Reverse Automatic Braking, refer to “CAUTION” in “Reverse Automatic Braking (DIAGNOSTICS)” section. Ref. to REVERSE AUTOMATIC BRAKING (DIAGNOSTICS)>General Description>CAUTION.



REVERSE AUTOMATIC BRAKING > General Description

PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing clips.
Angle gauge	Used for inspecting height and angle of the sonar sensor.
Try square	
Measure	
Leveling line	
Plumb bob	
Packing tape	

LOCATION

Fuse & relay box (F/B)	Fuse 7.5 A (RAB CM)	(A)

Note:

- **Refer to "LOCATION" of the "EyeSight" section because the Reverse Automatic Braking uses the EyeSight system control. Ref. to EyeSight>Relay and Fuse>LOCATION.**
- **For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.**

INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

   Note:

   If the fuse is blown again, check the system wiring harness.

REVERSE AUTOMATIC BRAKING > Reverse Automatic Braking

WIRING DIAGRAM

Refer to "Reverse Automatic Braking" in the wiring diagram. Ref. to WIRING SYSTEM>Reverse Automatic Braking>WIRING DIAGRAM.

REVERSE AUTOMATIC BRAKING > Reverse Automatic Braking

ELECTRICAL SPECIFICATION

For electrical specification, refer to "Control Module I/O Signal" of "Reverse Automatic Braking (DIAGNOSTICS)" section. Ref. to REVERSE AUTOMATIC BRAKING (DIAGNOSTICS)>Control Module I/O Signal.

REVERSE AUTOMATIC BRAKING > Reverse Automatic Braking

INSPECTION

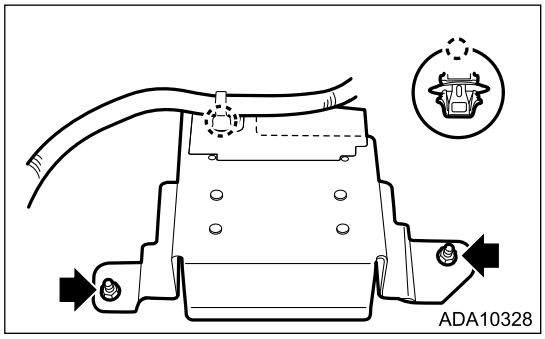
For inspection, refer to "Basic Diagnostic Procedure" of "Reverse Automatic Braking (DIAGNOSTICS)" section. Ref. to REVERSE AUTOMATIC BRAKING (DIAGNOSTICS)>Basic Diagnostic Procedure.

REVERSE AUTOMATIC BRAKING > Reverse Automatic Braking

NOTE

For procedure of each component in the Reverse Automatic Braking, refer to the respective section.

- Control module: Ref. to REVERSE AUTOMATIC BRAKING>Control Unit.
  Note:
  System control of the Reverse Automatic Braking is performed by each module. For procedure, refer to the following sections.
  - Engine control module (ECM): Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
  - Transmission control module (TCM): Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
  - VDC control module (VDC CM): Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
  - Body integrated unit: Ref. to SECURITY AND LOCKS>Body Integrated Unit.
  - Reverse Automatic Braking CM: Ref. to REVERSE AUTOMATIC BRAKING>Reverse Automatic Braking CM.
- Sensor and harness: Ref. to REVERSE AUTOMATIC BRAKING>Sensor and Harness.
- Stereo camera: Ref. to EyeSight>Stereo Camera.
- Combination meter: Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
- Multi-function display (MFD): Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
- Audio (navigation): Ref. to ENTERTAINMENT & MONITORING>Audio.



REVERSE AUTOMATIC BRAKING > Reverse Automatic Braking CM

REMOVAL

Note:

The Reverse Automatic Braking CM is installed under the front seat LH. Remove the Reverse Automatic Braking CM after sliding the front seat LH as necessary.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the Reverse Automatic Braking CM.
   (1) Remove the nut to remove the harness clip.
   (2) Disconnect the connector and remove the Reverse Automatic Braking CM.

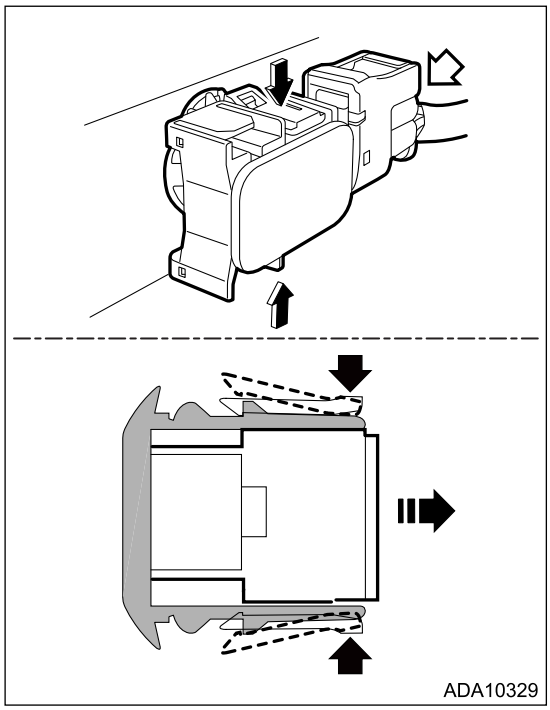
REVERSE AUTOMATIC BRAKING > Reverse Automatic Braking CM

INSTALLATION

1. Install the Reverse Automatic Braking CM.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

REMOVAL

1. SONAR SENSOR

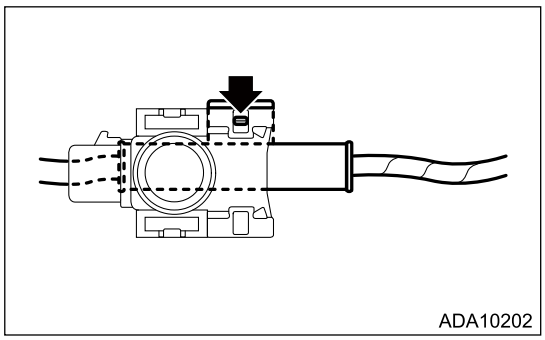


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the bumper face - rear. Ref. to EXTERIOR/INTERIOR TRIM>Rear Bumper>REMOVAL.
3. Remove the sonar sensor.

Caution:

When reusing the sensor, make sure to place a mark on the sensor and the bumper face - rear or others, and surely return each sensor to the original position before removed.

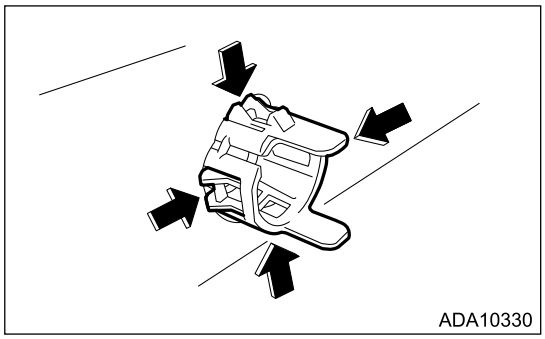
(1) Disconnect the connector.



(2) Release the claws and then remove the sonar sensor.

Note:

- **The sonar sensors are equipped at four portions on the bumper face - rear.**
- **The figure indicates the sonar sensor (right corner). Remove the rest of the sensors in the same manner.**



(3) Using a flat tip screwdriver wrapped with a protection tape, release the lock from the front side of the sonar sensor to remove the cord assembly - sonar.

Note:

Use a flat tip screwdriver with an appropriate size for the insertion opening.

(4) Release the claws, and then remove the bezel - sonar.

REVERSE AUTOMATIC BRAKING > Sensor and Harness

INSTALLATION

1. SONAR SENSOR

Caution:

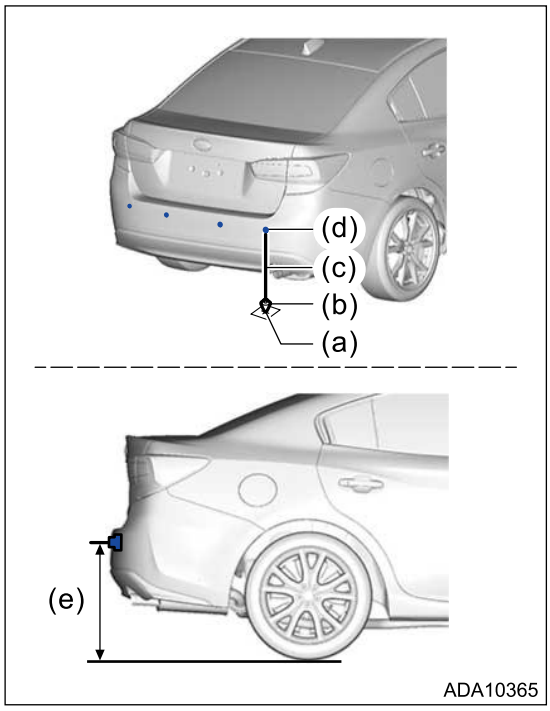
When reusing the sensor, make sure to align the mark on the sensor and the bumper face - rear or others, and surely return each sensor to the original position before removed.

1. Install the bezel - sonar.
2. Install the sonar sensor.
3. Install the cord assembly - sonar.
4. Install the bumper face - rear.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
6. When the bumper face - rear and the sonar sensor are replaced, check the installation height and angle. Ref. to REVERSE AUTOMATIC BRAKING>Sensor and Harness>INSPECTION > SONAR SENSOR.

REVERSE AUTOMATIC BRAKING > Sensor and Harness

INSPECTION

1. SONAR SENSOR



HEIGHT AND ANGLE INSPECTION

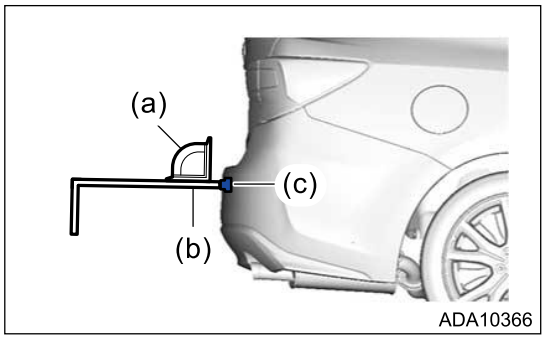
Caution:

Perform the inspection for each sonar sensor at curb weight.

1. Before performing measurement, check the following items.
   (1) The vehicle is parked on a level surface.
   (2) The inflation pressure of tires is correct.
   (3) The vehicle does not have load.
   (4) Check the area around the sensor and rear bumper for any scratches or other type of deformation.
2. Prepare the measure, plumb bob, leveling line, angle gauge and try square.
3. Measure installation height of the sonar sensor.
   (1) Suspend the plumb bob with leveling line from the sensor, and mark the position where the plumb bob touches the ground. (Point A)
   Note:
   Stick the packing tape etc. on the floor, then make a marking on the tape.

(2) Measure the height from the sensor to the marked Point A.

(a) Point A
(b) Plumb bob
(c) Leveling line
(d) Sonar sensor



(3) Confirm that sensor installation height is within the acceptable limit.

Specification:

4 door model: 555 — 605 mm (21.85 — 23.82 in)
5 door model: 545 — 595 mm (21.46 — 23.43 in)

4. Measure the installation angle of the sonar sensor.

(1) Using an angle gauge and try square, measure the installation angle as shown in the figure.

(a) Angle gauge
(b) Try square
(c) Sonar sensor

Note:

Use the measurement tools while placing them perpendicularly to the sonar sensor.

(2) Confirm that sensor installation angle is within the acceptable limit.

Specification:

4 door model: 0.5° — 5.5 °

5 door model: 2.5° — 7.5 °

5. If the inspection result is not within the standard value, the rear bumper, bezel - sonar or sonar sensor may be improperly installed or deformed. Check the installation status of each part, and perform inspection again.

NOTE

System control of the Reverse Automatic Braking is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
- Transmission control module (TCM): Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
- VDC control module (VDC CM): Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
- Body integrated unit: Ref. to SECURITY AND LOCKS>Body Integrated Unit.
- Reverse Automatic Braking CM: Ref. to REVERSE AUTOMATIC BRAKING>Reverse Automatic Braking CM.

NOTE

For the operation procedures for the stereo camera, refer to “EyeSight” section. Ref. to EyeSight>Stereo Camera.

NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

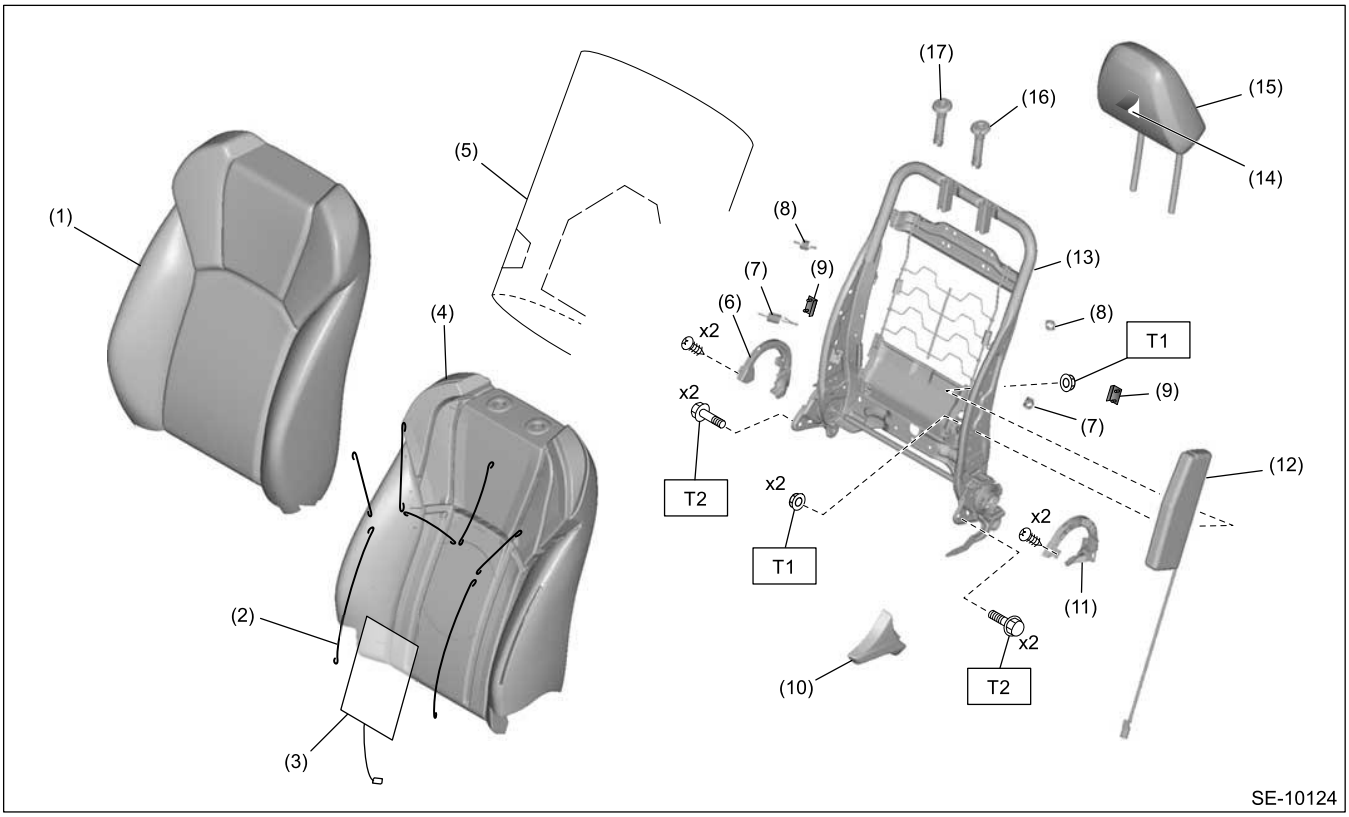
NOTE

For the operation procedures for Multi-Function Display (MFD), refer to “INSTRUMENTATION/DRIVER INFO” section. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD) System.

NOTE

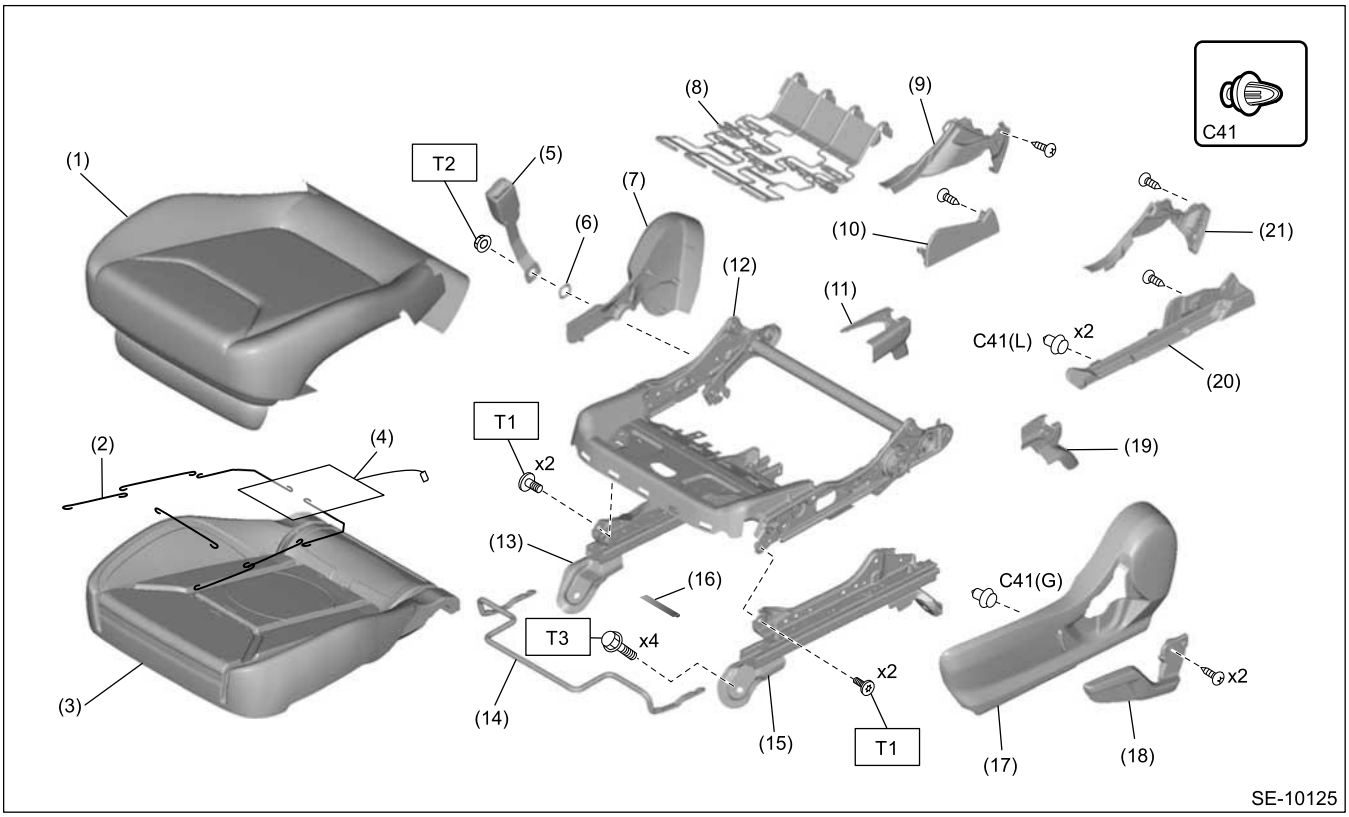
For the operation procedures for the audio (navigation), refer to “ENTERTAINMENT & MONITORING” section. Ref. to ENTERTAINMENT & MONITORING>Audio.

SEATS



SE

1. General Description
2. Front Seat
3. Rear Seat
4. Power Seat System
5. Seat Heater System

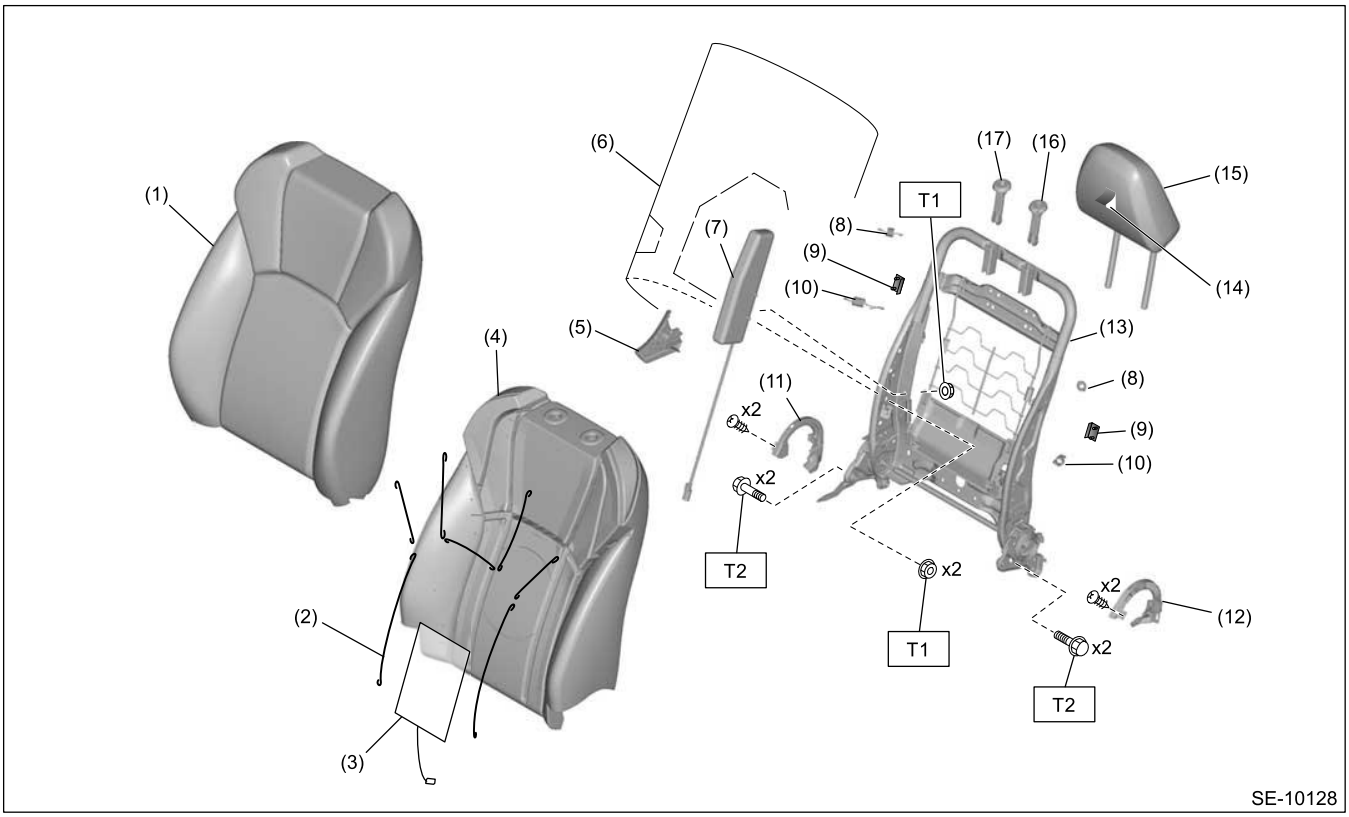


COMPONENT

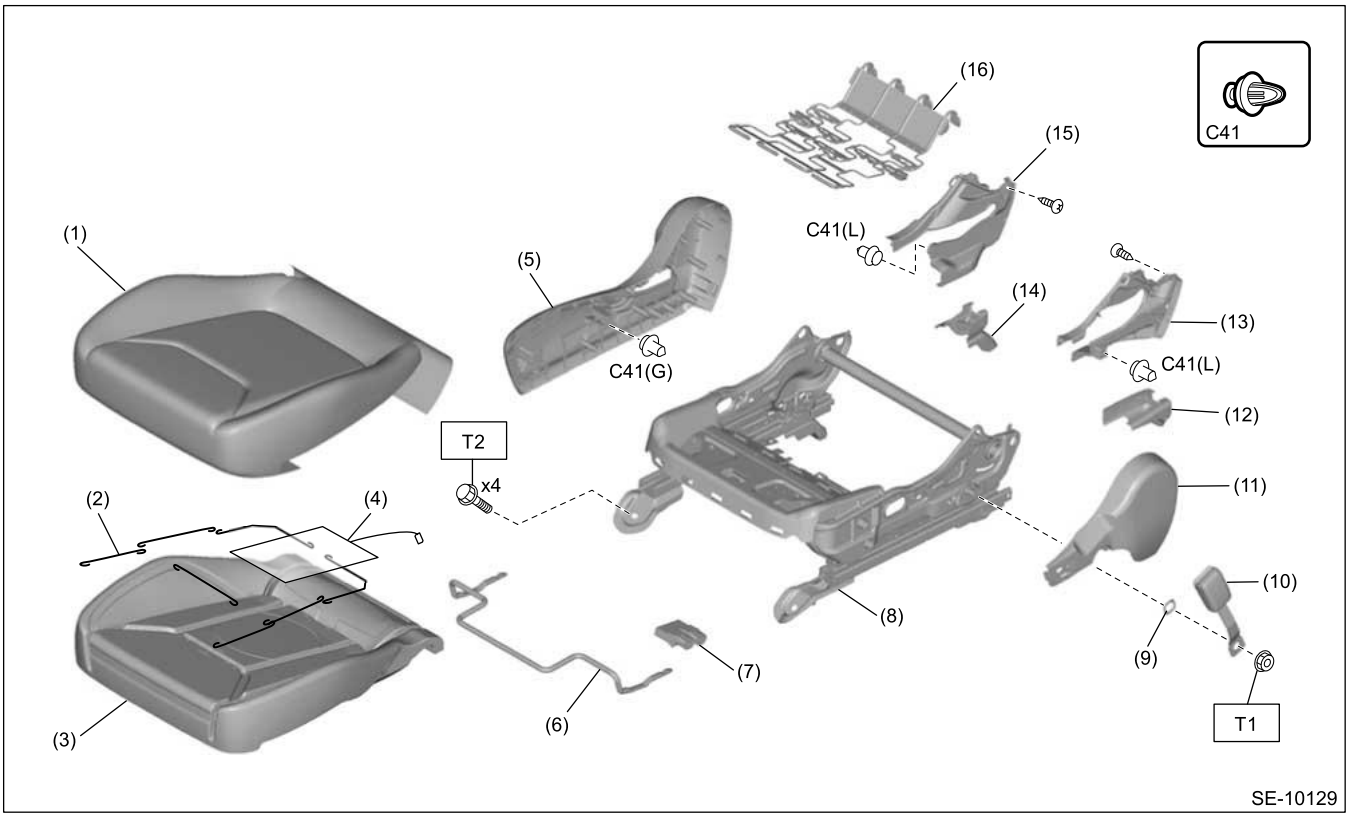
1. FRONT SEAT

- Manual seat LH

(1) Cover COMPL - front seat backrest	(8) Hook spring UPR	(15) Headrest ASSY - front
(2) Wire set - front seat backrest	(9) Cover - hook spring	(16) Bushing - lock headrest
(3) Heater unit - front seat backrest	(10) Lever - reclining	(17) Bushing - free headrest
(4) Pad ASSY - front seat backrest	(11) Cover - hinge front seat OUT	
(5) Silencer cover	(12) Side airbag module	***Tightening torque: N·m (kgf-m, ft-lb)***
(6) Cover - hinge base front seat INN	(13) Frame ASSY - front seat backrest	***T1: 6 (0.6, 4.4)***
(7) Hook spring LWR	(14) Cover - front headrest	***T2: 52 (5.3, 38.4)***



(1) Cover - front seat cushion
(2) Wire set - front seat cushion
(3) Pad ASSY - front seat cushion
(4) Heater unit - front seat cushion
(5) Seat belt inner - front
(6) Wave washer
(7) Cover - hinge front seat INN
(8) Panel - front wire
(9) Cover - frame front seat cushion INN
(10) Cover - slide rail INN
(11) Cover - bolt rear INN
(12) Frame ASSY - front seat cushion
(13) Slide rail ASSY INN
(14) Lever - slide rail
(15) Slide rail ASSY OUT
(16) Cover - hinge front seat OUT
(17) Knob - lifter
(18) Cover - bolt rear OUT
(19) Cover - slide rail OUT
(20) Cover - frame front seat cushion OUT



Tightening torque: N·m (kgf-m, ft-lb)

T1: 17.6 (1.8, 13)
T2: 38 (3.9, 28)
T3: 53 (5.4, 39.1)

- Manual seat RH

(1) Cover COMPL - front seat backrest	(8) Hook spring UPR	(15) Headrest ASSY - front
(2) Wire set - front seat backrest	(9) Cover - hook spring	(16) Bushing - lock headrest
(3) Heater unit - front seat backrest	(10) Hook spring LWR	(17) Bushing - free headrest

(14) Cover - slide rail OUT
(15) Cover - frame front seat cushion OUT
(16) Cover - bolt rear INN
(17) Cover - slide rail INN
(18) Cover - frame front seat cushion INN
(19) Panel - front wire

Tightening torque: N·m (kgf-m, ft-lb)

T1: 38 (3.9, 28)
T2: 53 (5.4, 39.1)

2. REAR SEAT

(1) Striker - backrest rear RH (4 door model)

(2) Striker - backrest rear RH (5 door model)

(3) Lock ASSY - backrest rear RH

(4) Knob - backrest rear

(5) Knob - guide

(6) Wire set - rear backrest

(7) Cover COMPL - rear backrest RH

(8) Pad ASSY - rear seat backrest RH

(9) Frame ASSY - rear backrest RH

(10) Bushing - rear armrest RH

(14) Wire set - rear cushion

(15) Armrest ASSY - rear center (with armrest)

(16) Bushing - rear armrest LH (with armrest)

(17) Hinge ASSY - backrest center

(18) Flange bolt

(19) Cover - armrest (with armrest)

(20) Cover COMPL - rear backrest LH

(21) Pad ASSY - rear seat backrest LH

(22) Frame ASSY - rear backrest LH

(23) Bushing - backrest hinge

(27) Bushing - free headrest

(28) Headrest ASSY - rear

(29) Bushing - lock headrest CTR

(30) Bushing - free headrest CTR

(31) Belt guide - rear seat (5 door model only)

(32) Headrest ASSY - rear CTR

Tightening torque: N·m (kgf-m, ft-lb)

T1: 14.7 (1.5, 10.8)

T2: 22.7 (2.3, 16.7)

(with armrest)

(11) Cover - rear cushion

(12) Pad and frame ASSY & rear cushion

(13) Hook - seat cushion rear

(24) Lock ASSY - backrest rear LH

(25) Tether anchor cover (5 door model only)

(26) Bushing - lock headrest

T3: 24.5 (2.5, 18.1)

T4: 29 (3, 21.4)

T5: 33 (3.4, 24.3)

CAUTION

When removing the front seat from the vehicle, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Long nose pliers	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
Circuit tester	Used for measuring resistance, voltage and current.
TORX® T50	Used for removing and installing the slide rail of manual type driver’s seat.

REMOVAL

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **When any of the following operation has been done, be sure to perform [Rezeroing] of occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.**
  - **Replacing occupant detection system**
  - **Removing and disassembling passenger's seat**
  - **Loosening passenger's seat bolt**

1. Remove the headrest assembly - front.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

   Note:

   For models with power seat, remove the slide rail installing bolt before removing the battery ground cable.
3. Remove the slide rail assembly installing bolt.

   Caution:

   Install the front seat with low head bolts. Use a suitable tool to prevent bolt damage.

   (1) Tilt the backrest assembly forward and move the front seat to the front most position.

   (2) Remove the cover - bolt rear, and remove the bolts.

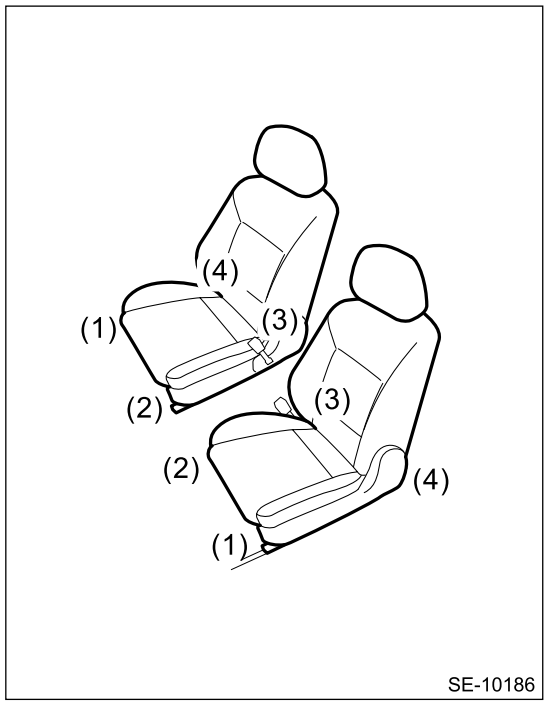
   Note:

   The illustration shows the LH side.

   (3) Move the front seat to the rearmost position, and remove the bolts.

   Note:

   - **After the bolts are removed, slide the seat to the middle position in order to make it easier to take out of the vehicle.**
   - **For the power seat models, disconnect the battery ground terminal.**
4. Disconnect the connector under the front seat.
   - Seat belt warning light connector (driver's seat)
   - Occupant detection system harness connector (passenger's seat) Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Airbag Connector>PROCEDURE > OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS).
   - Side airbag connector Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > SIDE AIRBAG MODULE.
   - Seat heater connector (manual seat) (model with seat heater)
   - Seat harness connector & power seat connector (power seat)



- Buckle switch RH connector (passenger's seat) Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > BUCKLE SWITCH RH.

5. Take out the front seat from the vehicle.
   Caution:
   Be careful not to damage the body.

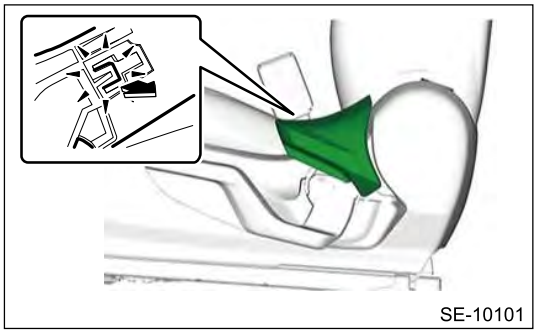
SEATS > Front Seat

INSTALLATION

1. Bring the front seat inside the vehicle.
2. Connect the connectors located under the front seat.
3. Install the seat assembly.
   Caution:
   - **Install the front seat with low head bolts. Use a suitable tool to prevent bolt damage.**
   - **Tighten the slide rail assembly installing bolts in the order as shown in the figure, in several steps by gradually increasing the torque until they reach the specified torque.**

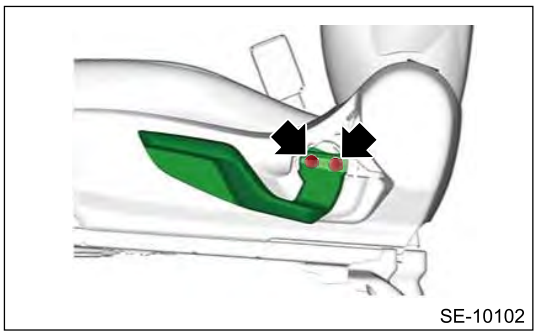
   Tightening torque:
   53 N·m (5.4 kgf-m, 39.1 ft-lb)
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Install the headrest assembly - front.
6. Perform [Rezeroing] for the occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

SEATS > Front Seat



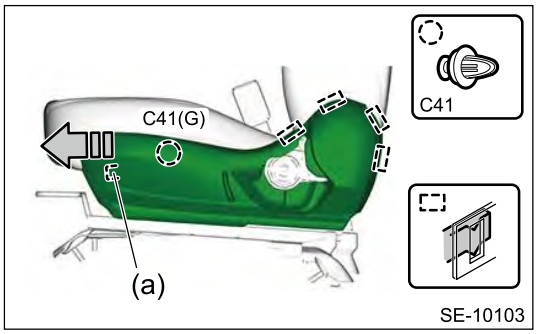
DISASSEMBLY

1. MANUAL SEAT



Caution:

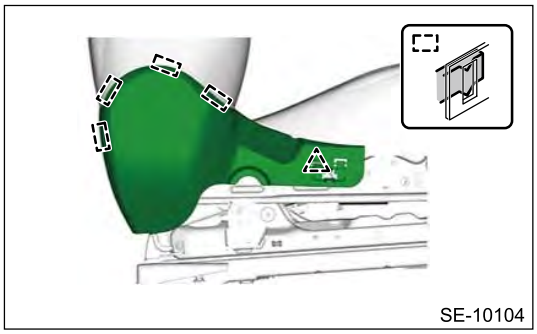
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **The load sensor of the occupant detection system (passenger seat only) is fixed to the cushion frame assembly. Never remove the load sensor from the cushion frame assembly.**
- **The cushion pad, cushion cover, occupant detection control module and seat harness can be replaced as a single unit. When the cushion frame assembly is replaced, the occupant detection control module, seat harness and load sensor are assembled. When replacing the cushion frame assembly, do not touch the load sensor to avoid electrical damage.**
- **If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.**
- **Before assembling, make sure how the harnesses such as side airbag harness and seat belt inner - front harness are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.**
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**



1. Remove the front seat from vehicle. Ref. to SEATS>Front Seat>REMOVAL.
2. Remove the lever - reclining.
   (1) Pull up the lever - reclining and release the claws on the back.
   (2) Pull out the lever - reclining.

3. Remove the screws and remove the knob - lifter.

4. Remove the cover - hinge front seat OUT.
   (1) Release the claw in the rear section of the cover - hinge front seat OUT.
   (2) Release the clips.
   (3) Release the claw (a) in the front section of the cover - hinge front seat OUT, then remove the cover - hinge front seat OUT.

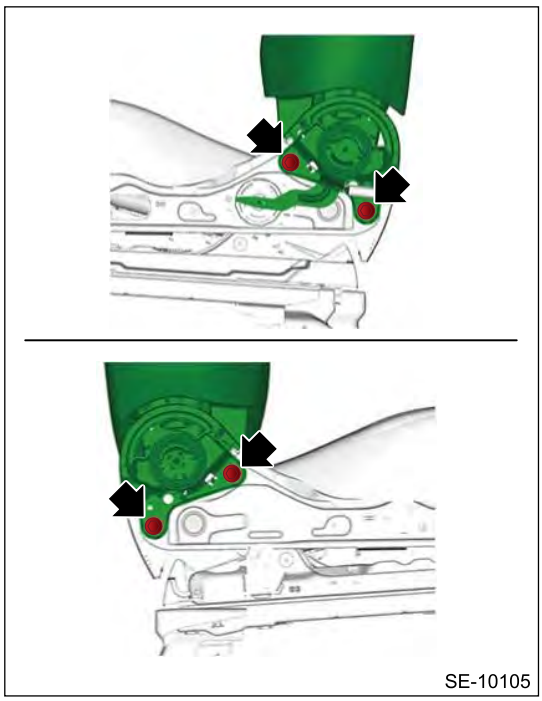


5. Remove the seat belt inner - front. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT INNER - FRONT.

6. Remove the cover - hinge front seat INN.

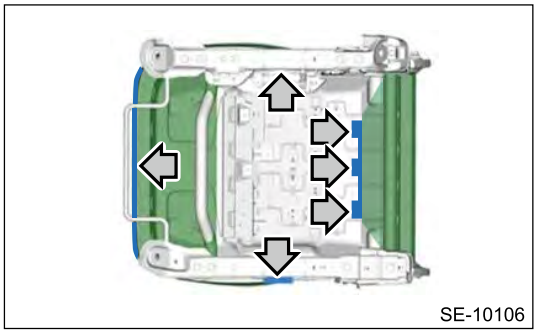
(1) Release the claw in the rear section of the cover - hinge front seat INN.

(2) Release the clips in the front section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.



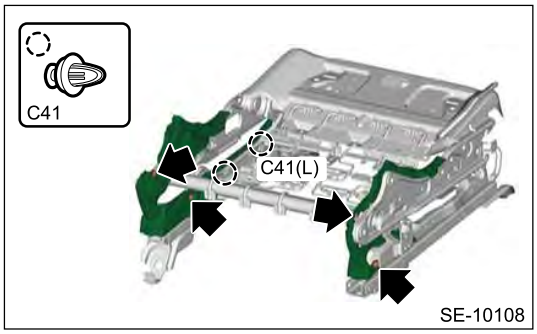
7. Separate the backrest assembly and the seat cushion assembly.

(1) Remove the harness on the back side of the seat cushion assembly.



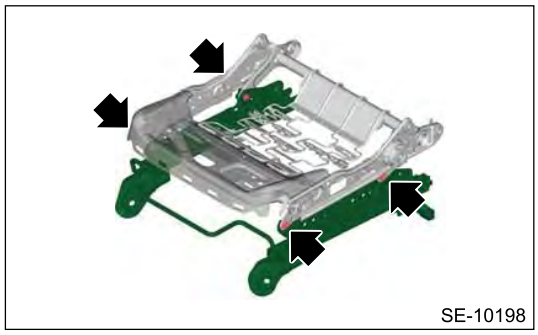
- Side airbag harness
- Seat heater harness (with seat heater)

(2) Remove the bolts from reclining hinge of both sides.

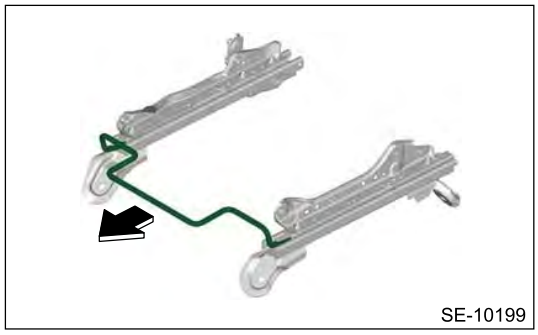


(3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.

8. Remove the pad assembly - front seat cushion and the cover - front cushion.
(1) Unfasten the J-fastener on the front side.
(2) Detach the plastic hooks on the right, left and rear.
(3) Remove the pad assembly - front seat cushion and the cover - front cushion from the seat cushion assembly.

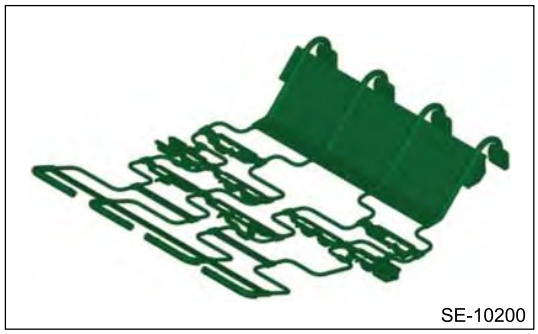


9. Remove the screws and clips to remove the covers.
(1) Remove the cover - frame front seat cushion.
(2) Remove the cover - slide rail.



10. Remove the bolts, then remove the slide rail.

Preparation tool:

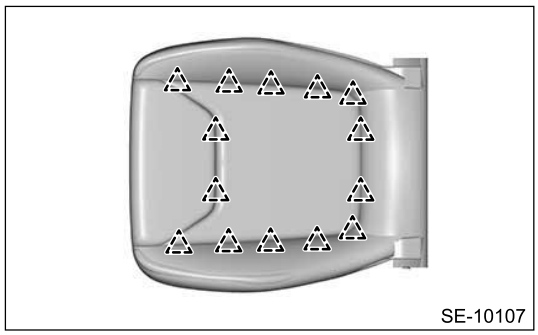


TORX® T50

11. Remove the lever - slide rail by pulling out from the slide rail.

12. Remove the panel - front wire.

13. Remove the cover - front cushion.



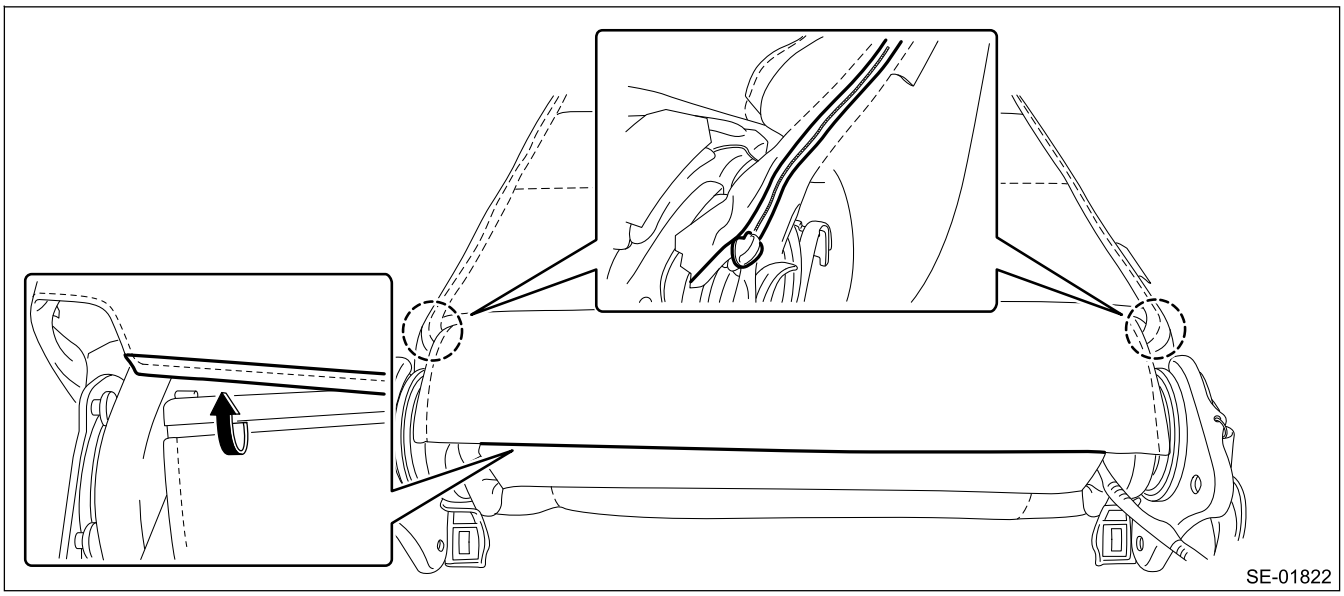
Caution:

- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**

Preparation items:

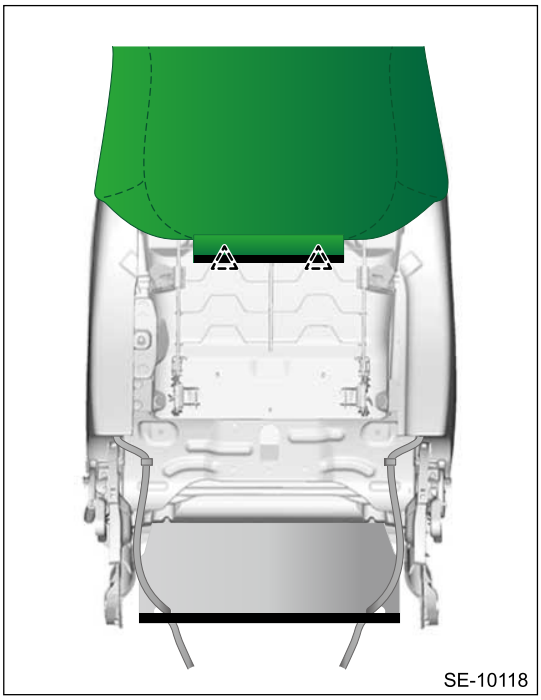
Double-sided tape: NITTO DENKO 501L or equivalent

(1) Remove the hog ring.

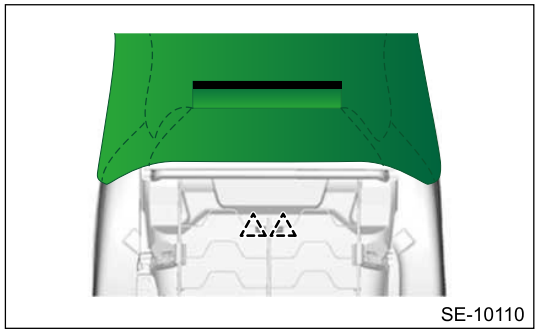


(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.

(3) Remove the seat heater module from the pad assembly as necessary.



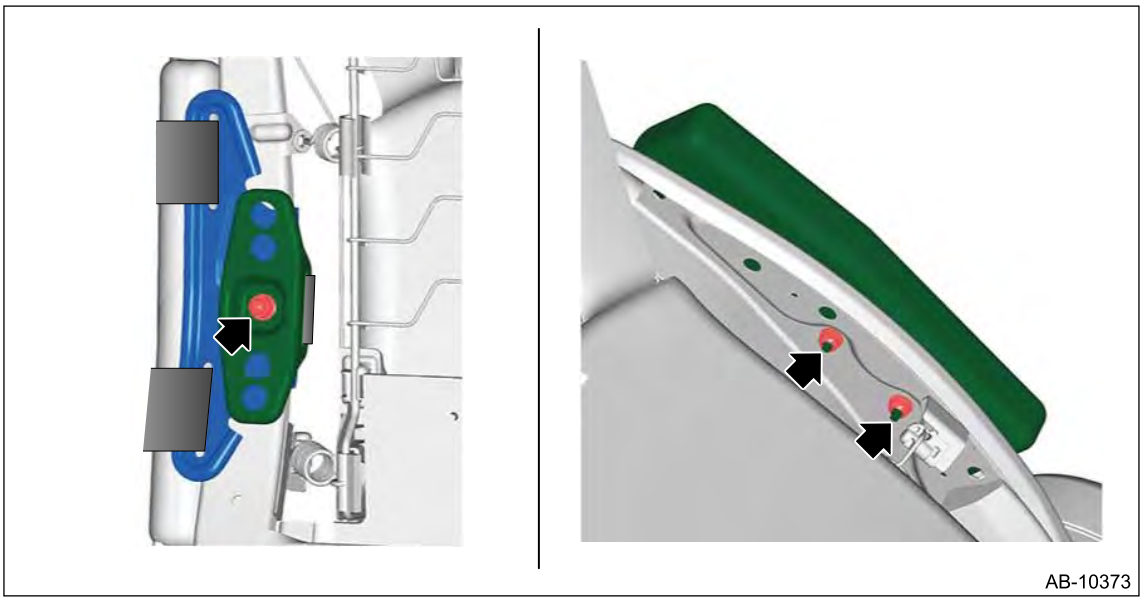
14. Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.



(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.

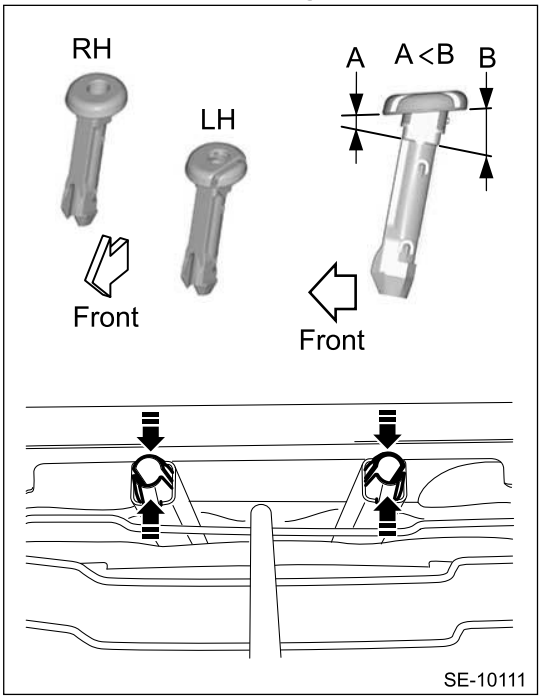
(2) Open the fastener at the rear side of backrest assembly.

(3) Remove the hog ring.



15. Remove the side airbag module.

Caution:

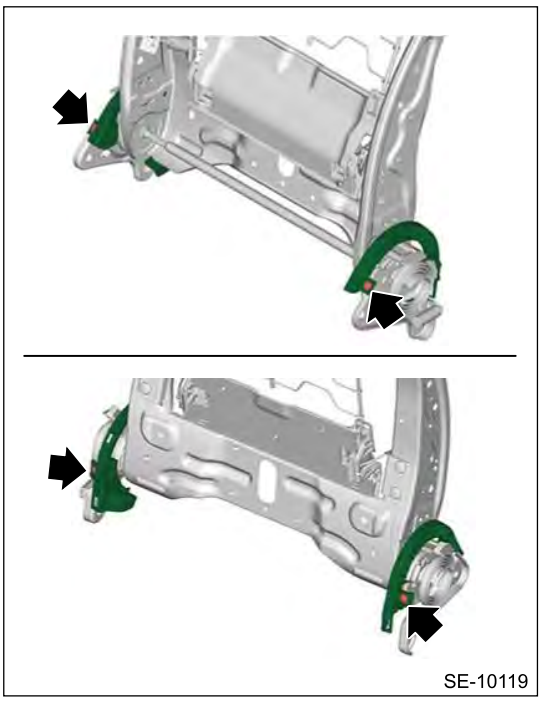


Do not open the protective cover of the side airbag. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

(1) Remove the hexagon cap nut and nuts.

(2) While taking care not to damage the airbag protective cover, remove the side airbag module.

16. Remove the bushing - headrest.



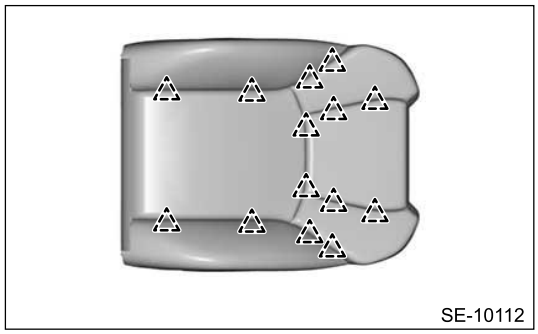
Note:

Catch the tip of the bushing - headrest with pliers and push it outward from the inside of seat to remove it.

17. Pull out the frame assembly - front backrest.

18. Remove the screws and detach the cover - hinge base.

19. Remove the cover COMPL - front backrest.



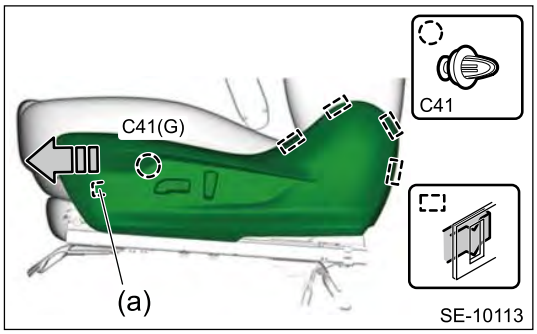
Caution:

- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**

Preparation items:

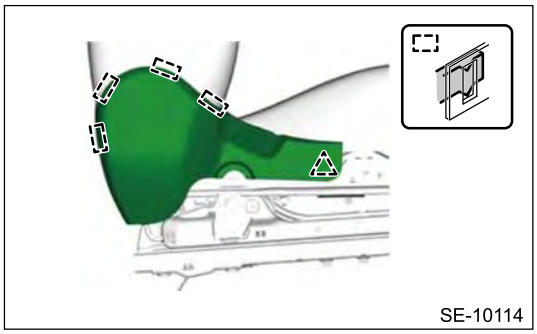
Double-sided tape: NITTO DENKO 501L or equivalent

(1) Remove the hog ring.



(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.
(3) Remove the seat heater module from the pad assembly as necessary.

2. POWER SEAT

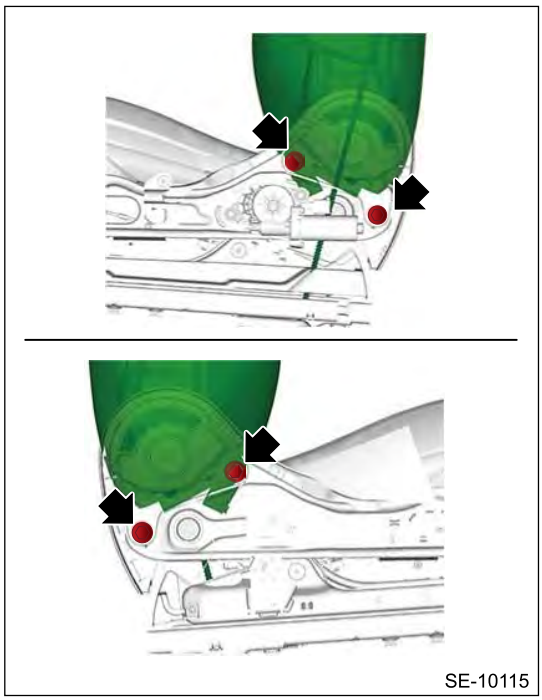


Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Before assembling, make sure how the harnesses such as side airbag harness and seat belt inner - front harness are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.**
- **If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.**
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**

1. Remove the front seat from vehicle. Ref. to SEATS>Front Seat>REMOVAL.
2. Disconnect the connectors from the backside of seat cushion.
3. Remove the cover - hinge front seat OUT.
   (1) Release the claw in the upper section of the cover - hinge front seat OUT.
   (2) Release the clips, and release the claws (a) in the front section of the cover - hinge front seat OUT.
   (3) Disconnect the power seat switch connector, and remove the cover - hinge front seat OUT.

4. Remove the seat belt inner - front. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT INNER - FRONT.
5. Remove the cover - hinge front seat INN.
   (1) Release the claw in the rear section of the cover - hinge front seat INN.
   (2) Release the clips in the front section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.



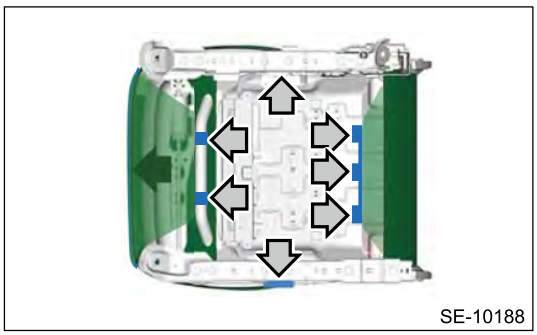
6. Separate the backrest assembly and the seat cushion assembly.

(1) Remove the harness on the back side of the seat cushion assembly.

- Side airbag harness
- Reclining motor harness
- Seat heater harness (with seat heater)

(2) Remove the bolts from reclining hinge of both sides.

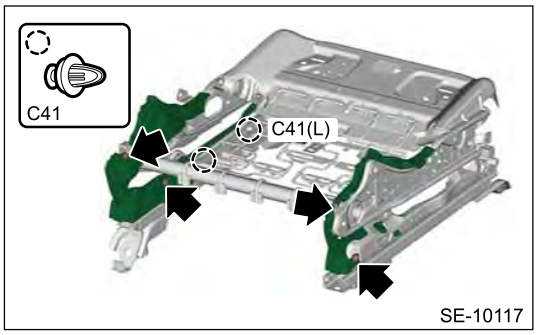
(3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.



7. Remove the pad assembly - front seat cushion and the cover - front cushion.

(1) Remove the plastic hook on the front side, and remove the J-fastener.

(2) Detach the plastic hooks on the right, left and rear.



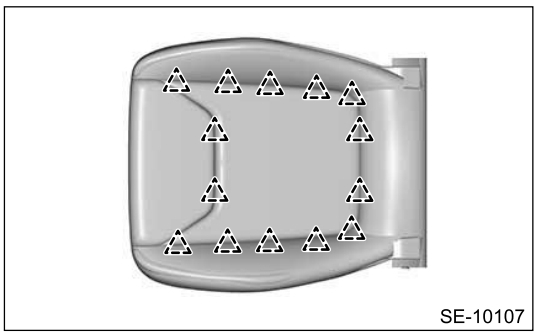
(3) Remove the pad assembly - front seat cushion and the cover - front cushion from the seat cushion assembly.

8. Remove the screws and clips to remove the covers.

(1) Remove the cover - frame front seat cushion.

(2) Remove the cover - slide rail.

9. Remove the cover - front cushion.



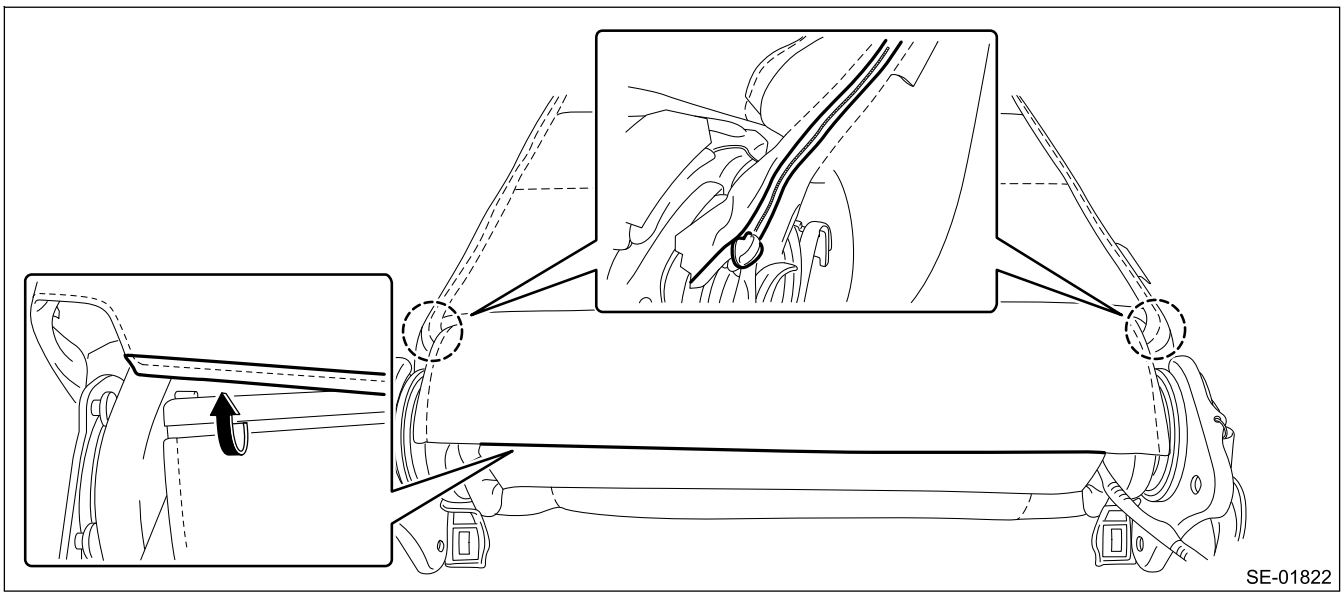
Caution:

- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**

Preparation items:

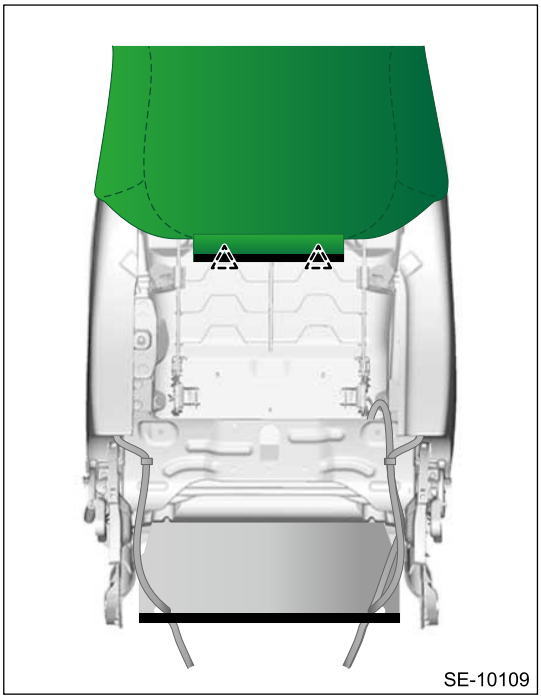
Double-sided tape: NITTO DENKO 501L or equivalent

(1) Remove the hog ring.

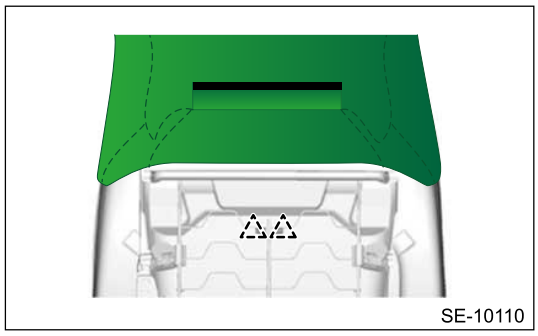


(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.

(3) Remove the seat heater module from the pad assembly as necessary.



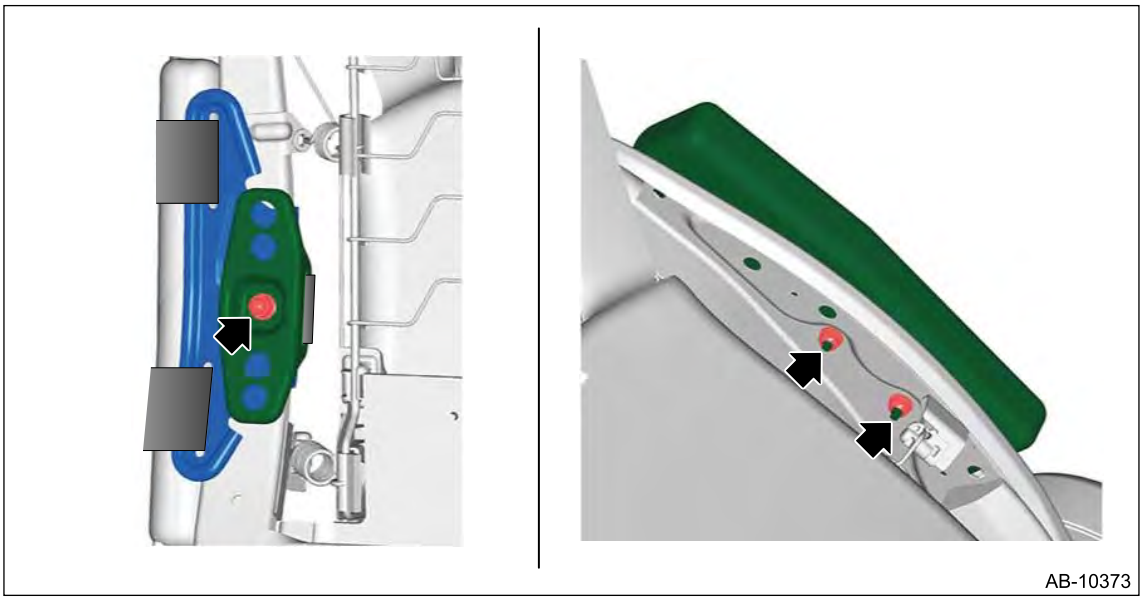
10. Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.



(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.

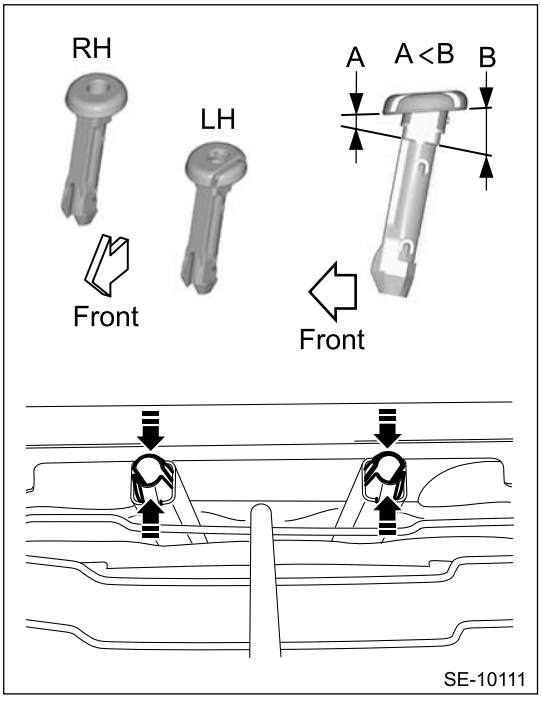
(2) Open the fastener at the rear side of backrest assembly.

(3) Remove the hog ring.



11. Remove the side airbag module.

Caution:

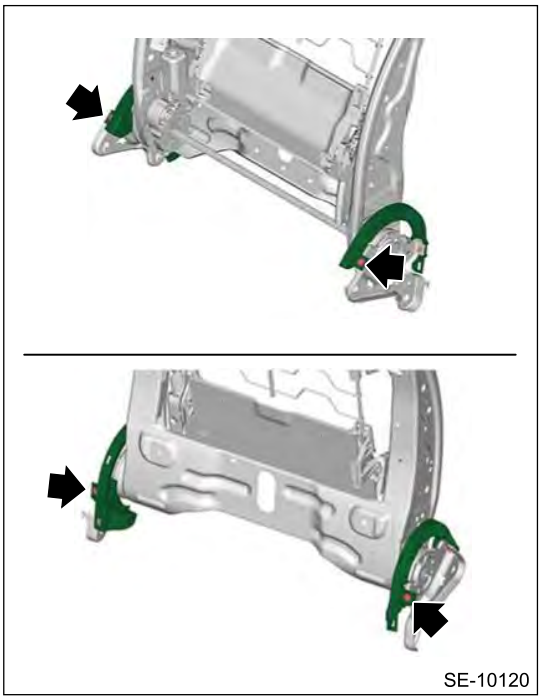


Do not open the protective cover of the side airbag. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

(1) Remove the hexagon cap nut and nuts.

(2) While taking care not to damage the airbag protective cover, remove the side airbag module.

12. Remove the bushing - headrest.



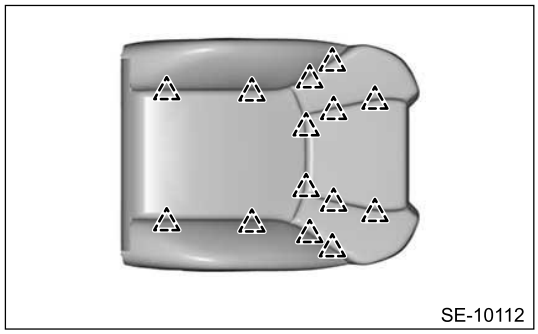
Note:

Catch the tip of the bushing - headrest with pliers and push it outward from the inside of seat to remove it.

13. Pull out the frame assembly - front backrest.

14. Remove the screws and detach the cover - hinge base.

15. Remove the cover COMPL - front backrest.



Caution:

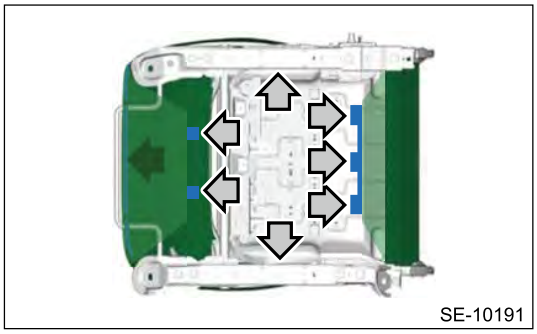
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**

Preparation items:

Double-sided tape: NITTO DENKO 501L or equivalent

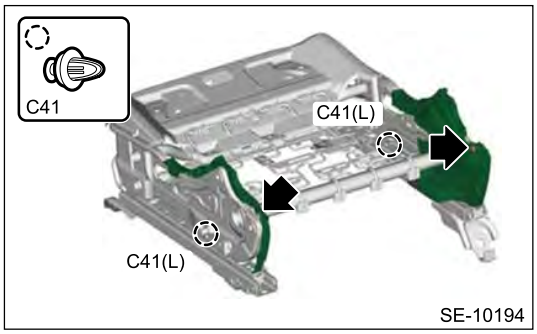
(1) Remove the hog ring.

(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.



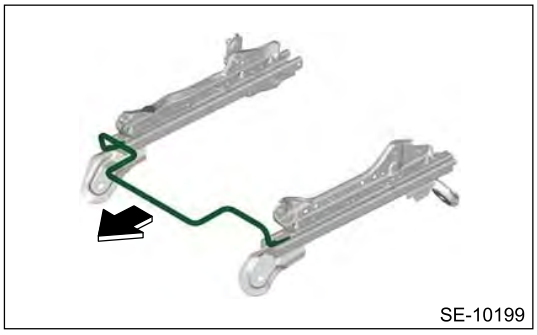
(3) Remove the seat heater module from the pad assembly as necessary.

3. PASSENGER'S SEAT

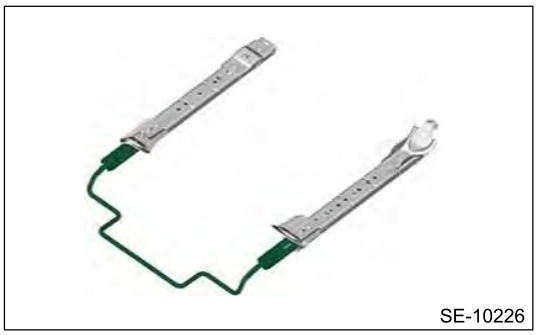


Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **The load sensor of the occupant detection system is fixed to the cushion frame assembly. Never remove the load sensor from the cushion frame assembly.**
- **The cushion pad, cushion cover, occupant detection control module and seat harness can be replaced as a single unit. When the cushion frame assembly is replaced, the occupant detection control module, seat harness and load sensor are assembled. When replacing the cushion frame assembly, do not touch the load sensor to avoid electrical damage.**
- **If the cover - front cushion is removed, make sure to replace the hang wire on the cover - front cushion side with a new wire.**
- **When removing or replacing the seat, perform "Occupant Detection System Inspection" after installing the seat to check if the occupant detection system operates normally. Ref. to PRE-DELIVERY INSPECTION>PRE-DELIVERY INSPECTION (PDI) PROCEDURE > SEAT.**
- **Before assembling, make sure how the harnesses such as side airbag harness and seat belt inner - front harness are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.**
- **If the seat heater module is removed, replace the seat cushion pad with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**



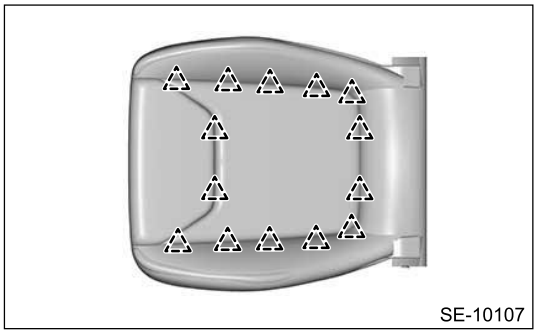
1. Remove the front seat (passenger's side) from vehicle. Ref. to SEATS>Front Seat>REMOVAL.
2. For the following operation, refer to the disassembly procedures for the driver's seat. Ref. to SEATS>Front Seat>DISASSEMBLY > MANUAL SEAT.
   - Separating the backrest assembly and the seat cushion assembly
   - Disassembling the backrest assembly
3. Remove the pad assembly - front seat cushion and the cover - front cushion.
   (1) Remove the plastic hook on the front side, and remove the J-fastener.
   (2) Detach the plastic hooks on the right, left and rear.
   (3) Remove the pad assembly - front seat cushion and the cover - front cushion from the seat cushion assembly.



4. Remove the screws and clips to remove the covers.
   (1) Remove the cover - frame front seat cushion.
   (2) Remove the cover - slide rail.

5. Remove the lever - slide rail by pulling out from the slide rail.

6. Remove the cover - front cushion.



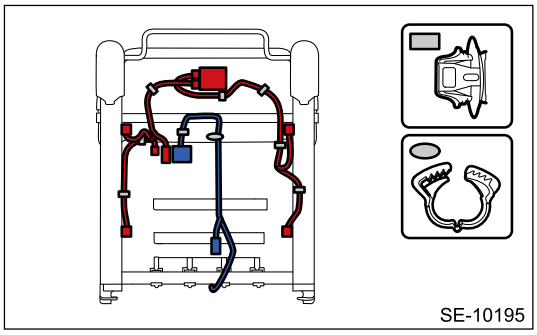
Caution:

- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.**

Preparation items:

Double-sided tape: NITTO DENKO 501L or equivalent

(1) Remove the hog ring.



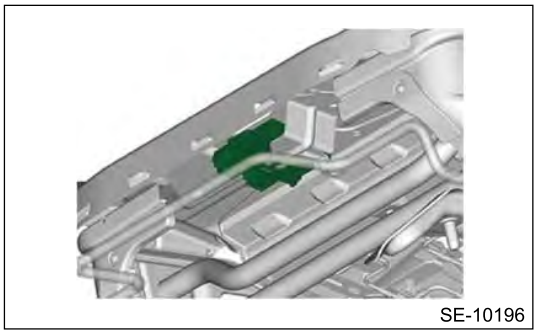
(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.

(3) Remove the seat heater module from the pad assembly as necessary.

7. Remove the seat harness.

Caution:

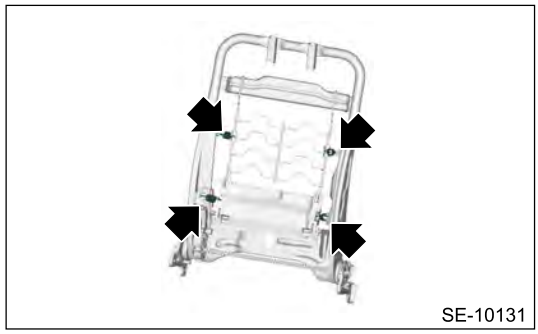
- **Do not remove the load sensor.**
- **Do not touch the load sensor. Otherwise, the load sensor may be damaged due to possible static electricity.**



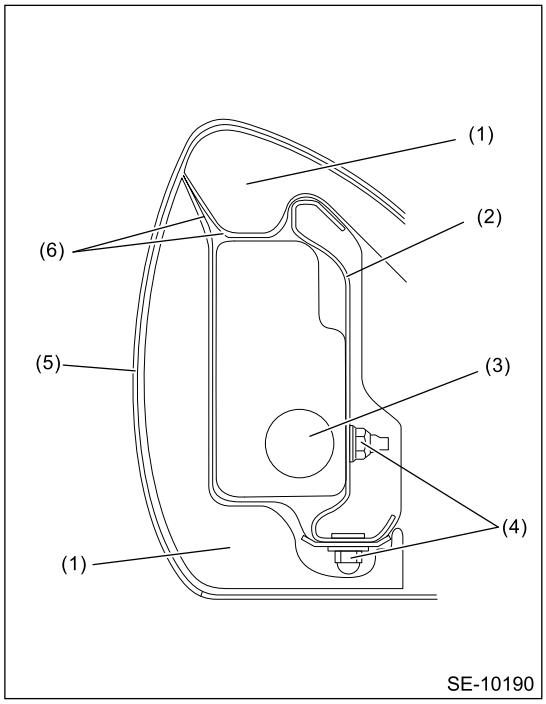
8. Remove the occupant detection control module.

Caution:

If the occupant detection control module is removed from the bracket, do not reuse it. Once removed from the bracket, the engaging force of the claw is reduced, and it may come off from the bracket due to vibration while driving.



(1) Release the claws, and remove it from the bracket.



ASSEMBLY

Caution:

- **Do not confuse the harness routing of the side airbag harness and the seat belt inner - front harness, etc. Assembling with harnesses improperly routed may cause the harness to get caught and short out.**
- **If the hook spring of the frame assembly - front backrest is deformed or comes off due to the deformation, replace the hook spring with a new part.**

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Make sure that the side airbag module is installed as shown in the figure.**

(1) Pad ASSY - front seat backrest
(2) Frame ASSY - front backrest
(3) Side airbag module inflator
(4) Nut
(5) Cover COMPL - front backrest
(6) Side airbag guide cloth

Besides, if the cover COMPL - front backrest is not installed securely, the side airbag may not be activated properly, therefore keep strictly to the following procedures.

- **Do not reuse the mounting bolts and nuts of the air bag module.**
  Always replace with the specified new bolts and nuts.
- **Be careful not to stain or damage the cover COMPL - front backrest during assembly.**
- **Do not reuse the hog ring and hang wire.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.**

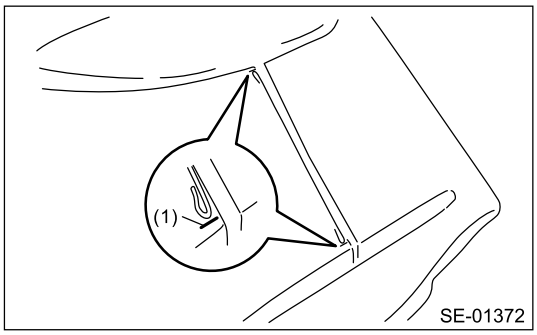
1. Install a new occupant detection control module. (Passenger's side only)

Caution:

If the occupant detection control module is removed from the bracket, do not reuse it. Once removed from the bracket, the engaging force of the claw is reduced, and it may come off from the bracket due to vibration while driving.

2. Install the seat heater module.

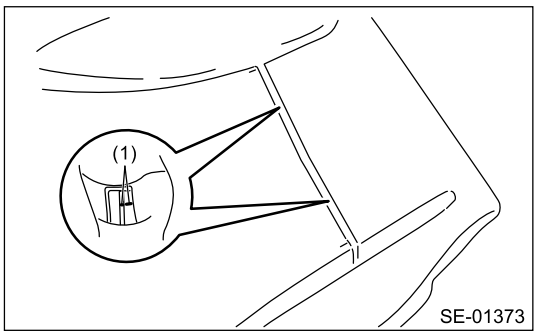
Caution:



If the seat heater module is reused, remove the polyurethane section and double-sided tape from the reverse side completely. Be sure to use new double-sided tape.

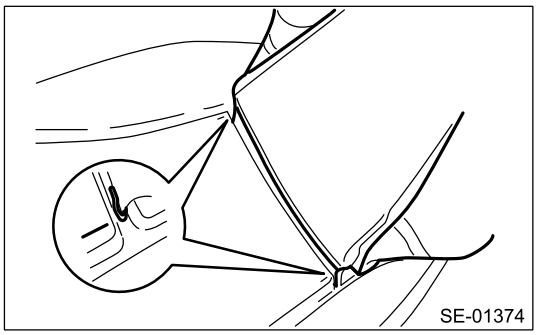
Preparation items:

Double-sided tape: NITTO DENKO 501L or equivalent



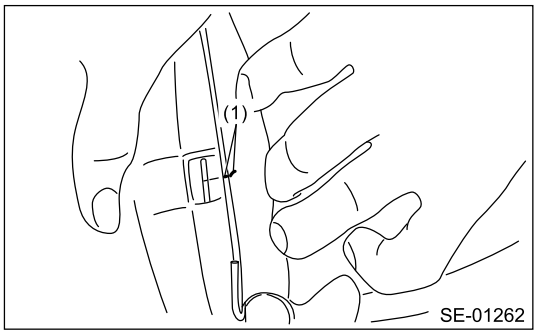
3. Make sure that there is no foreign matter on side airbag module.
4. Assemble the seat cover.

(1) Adjust so that the left and right clearances between wire and seat pad become equal, and mark the seat pad.



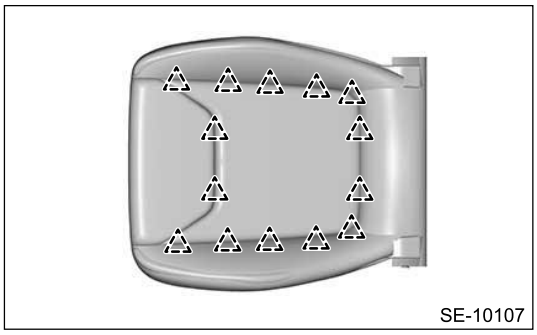
(1) Marking

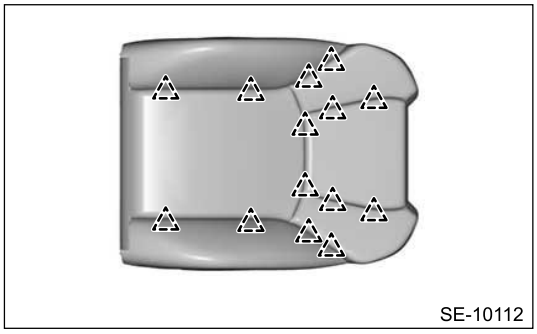
(2) Mark the center of the wire on the pad side to which the hog ring is attached.



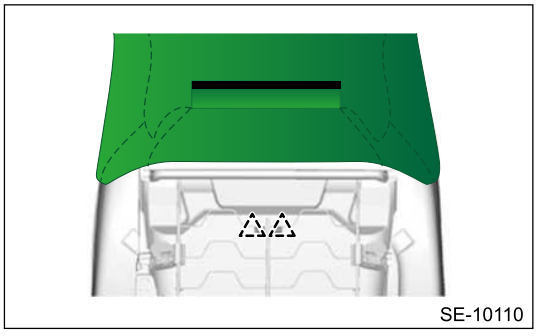
(1) Marking

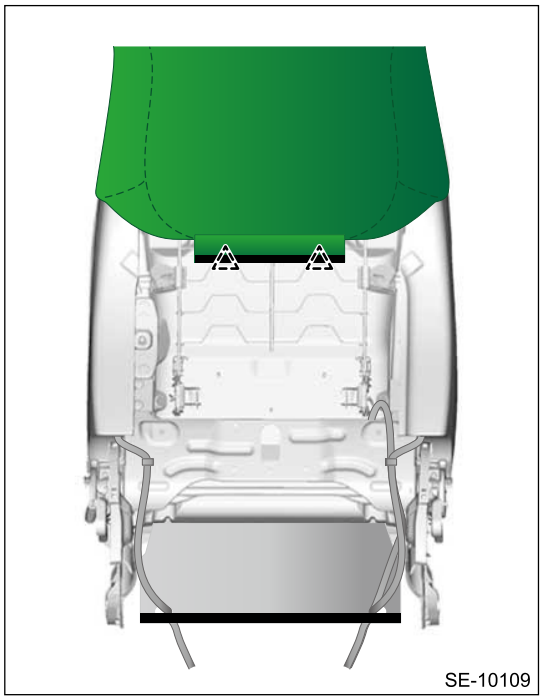
(3) Insert the wire into the seat cover, and align the wire with the position marked in step 1).





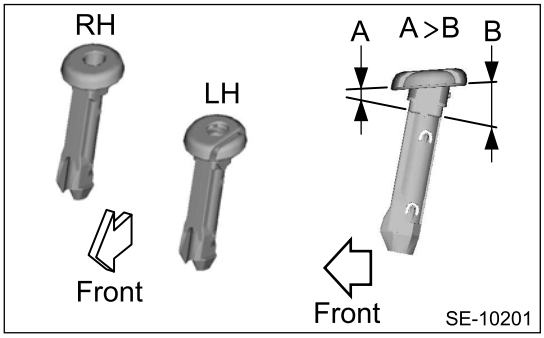
(4) Mark the wire on the seat cover side according to the markings on the seat pad.





(1) Marking

(5) Perform steps (1) to (4) for all sections to which the hog rings are attached.
(6) Make sure that all hog rings are attached securely.



5. Assemble remaining parts in the reverse order of disassemble.

Note:

- **Check the shape and front/rear directions before assembling the headrest bushing.**

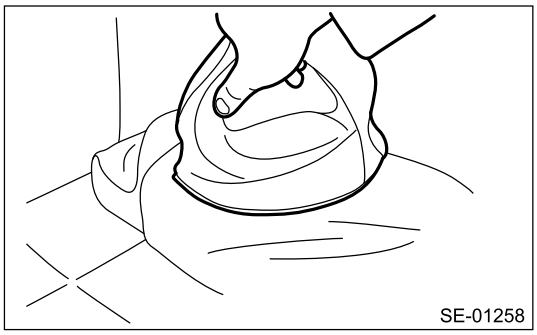
- **When installing the seat belt inner - front, follow the procedures described in the seat belt section. Ref. to SEAT BELT SYSTEM>Front Seat Belt>INSTALLATION.**
- **Install the backrest assembly and seat cushion assembly in the following procedure.**
  1. **Temporarily tighten the four reclining hinge bolts.**
  2. **Place the backrest in the most upright position.**
  3. **Tighten the reclining hinge bolts in order from (1) to (4) two or three times, until they reach the specified torque.**

Tightening torque:

Refer to "COMPONENT" of "General Description". Ref. to SEATS>General Description>COMPONENT > FRONT SEAT.

6. If any wrinkles are found after the assembly of the seat cover, finish the seat cover with iron.

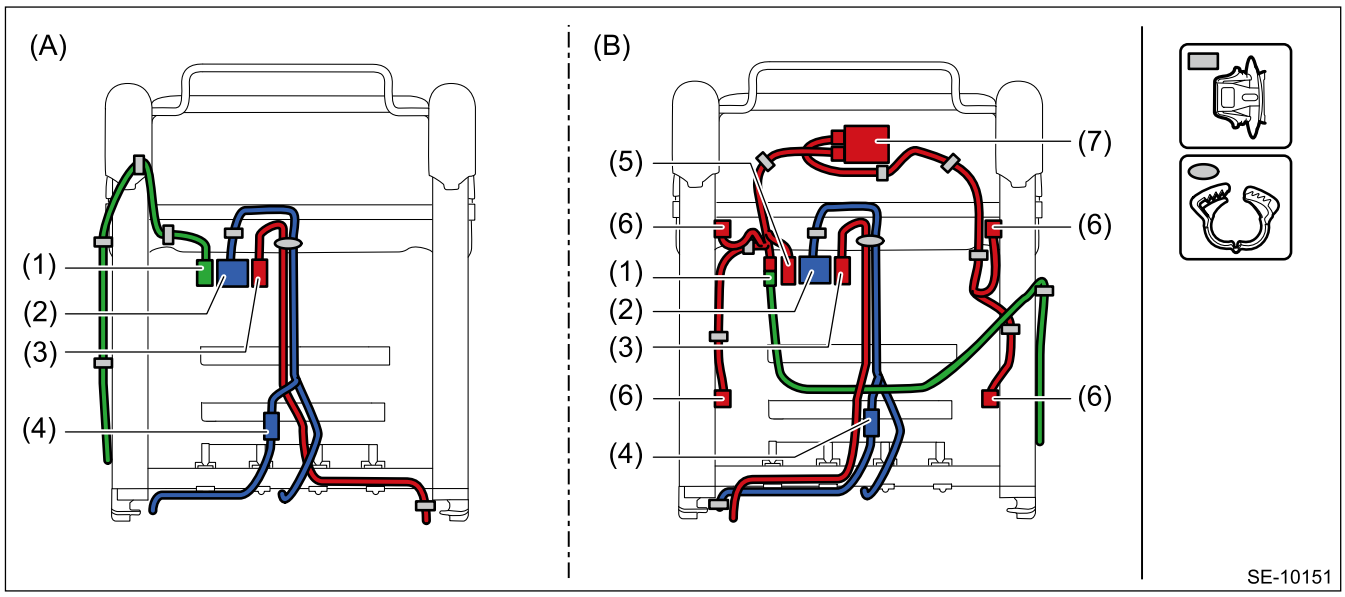
(1) Place the wet towel on wrinkles.



(2) Touch up with warm iron.

Caution:

Keep moving the iron, otherwise the seat cover surface can be damaged.



Note:

This method is available for genuine leather, synthetic leather, cloth, etc.

7. Install connectors located under the front seat.

- Manual seat

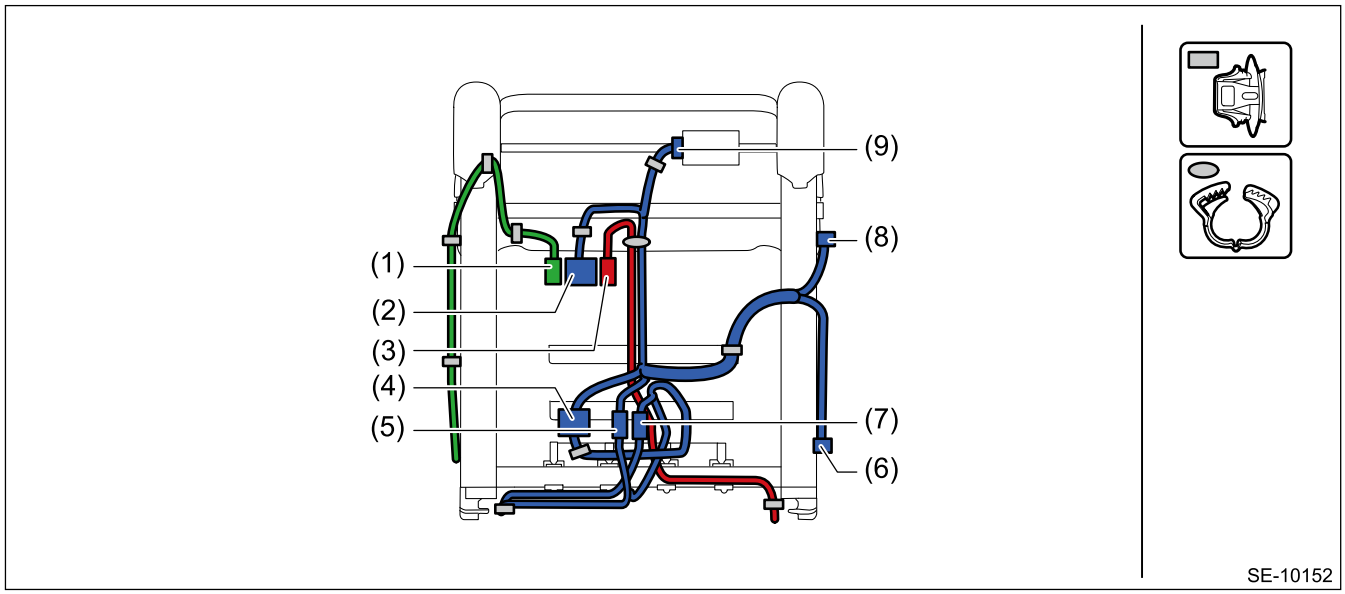
(A) Driver's seat

(B) Passenger's seat

(1) Seat belt switch connector

(2) Seat heater connector

(3) Side airbag connector



(4) Seat backrest heater connector

(5) Occupant detection connector

(6) Load sensor connector

(7) Occupant detection control module

- Power seat

(1)	Seat belt switch connector	(4)	Power seat connector	(7)	Seat backrest heater connector
(2)	Seat harness (power & heater) connector	(5)	Reclining motor harness connector	(8)	Power seat switch connector
(3)	Side airbag connector	(6)	Lifter motor	(9)	Slide motor connector

8. Install the seat assembly. Ref. to SEATS>Front Seat>INSTALLATION.

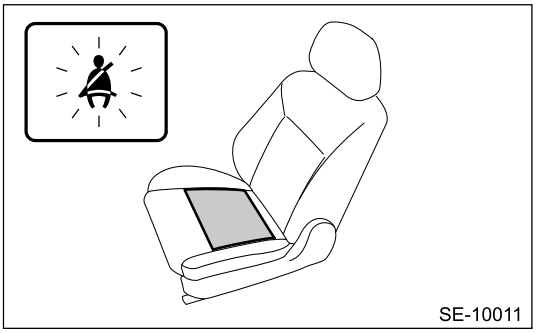
Caution:

For the passenger's seat, be sure to perform [Rezeroing] for the occupant detection system after installing the seat assembly. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

SEATS > Front Seat

INSPECTION

1. SEAT COVER



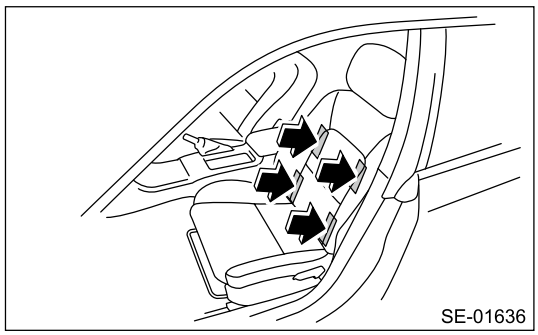
Check that there is no tear or fray on the cover COMPL - front backrest and the cover - front cushion.

Note:

If the door side of the cover COMPL - front backrest is torn or frayed, the side airbag may not be deployed properly. In this case, replace the cover COMPL - front backrest with a new part.

2. CHECK ILLUMINATION OF PASSENGER'S SEAT BELT WARNING LIGHT

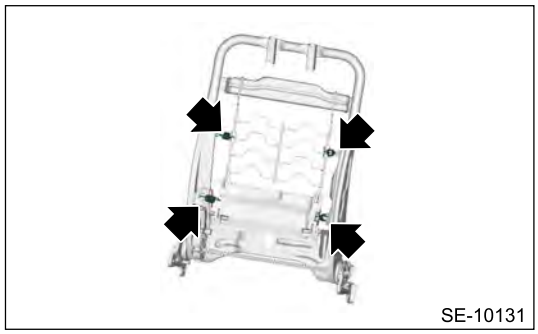
Check that the passenger's seat belt warning light illuminates when the passenger's seat is occupied.



If it does not illuminate, check the seat belt warning system and the occupant detection system.

- Seat belt warning system: Ref. to SEAT BELT SYSTEM>Seat Belt Warning System.
- Occupant detection system: Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Basic Diagnostic Procedure.

3. HOOK SPRING



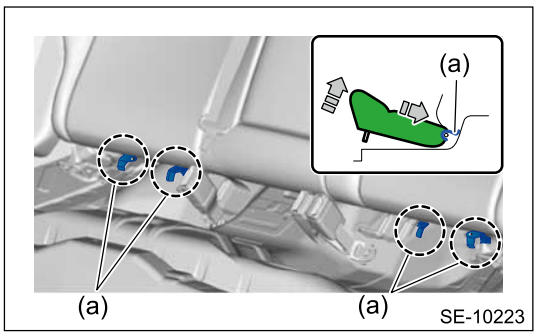
Check the flat mat hook spring by applying weight to the backrest assembly.

Note:

If the appropriate stiffness is not obtained by applying weight to the backrest assembly, the hook spring may be disengaged.

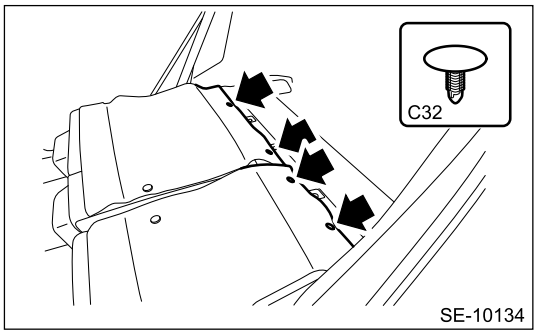
If it is due to the deformation of the hook spring, replace the hook spring with a new part.

REMOVAL



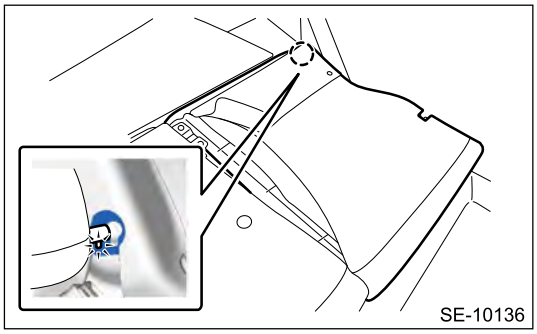
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.**



1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear seat cushion assembly.
   (1) While pushing the corners of the rear seat cushion from above, pull the knob of the hook - seat cushion rear towards yourself.
   (2) While pulling the knob towards yourself, disconnect the hooks by lifting up the rear seat cushion.

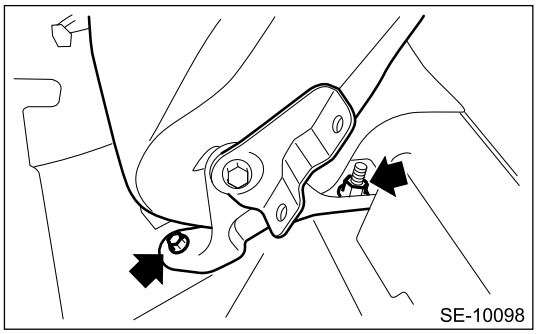
   (3) Remove the hook (a) by pushing it back while lifting the front side of the rear seat cushion, and remove the rear seat cushion.



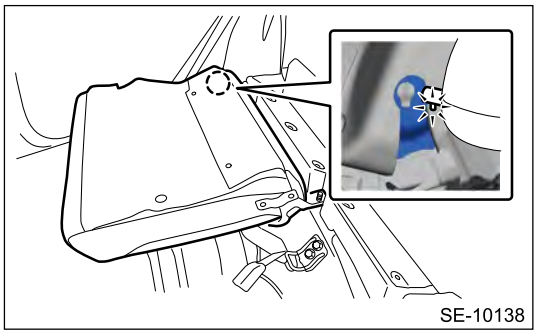
3. Remove the backrest assembly LH.
   (1) Tilt the backrest assembly forward.
   (2) Remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.

(3) Turn over the cover COMPL - rear backrest LH to remove the bolts.

(4) While raising the backrest assembly LH, remove the backrest assembly LH from the hinge assembly.



Note:



The backrest assembly cannot be removed unless pin positions on the hinge assembly side and backrest assembly side are aligned.

4. Remove the backrest assembly RH.

(1) Remove the bolts and nuts.

(2) While raising the backrest assembly RH, remove the backrest assembly RH from the hinge assembly.

Note:

The backrest assembly cannot be removed unless pin positions on the hinge assembly side and backrest assembly side are aligned.

SEATS > Rear Seat

INSTALLATION

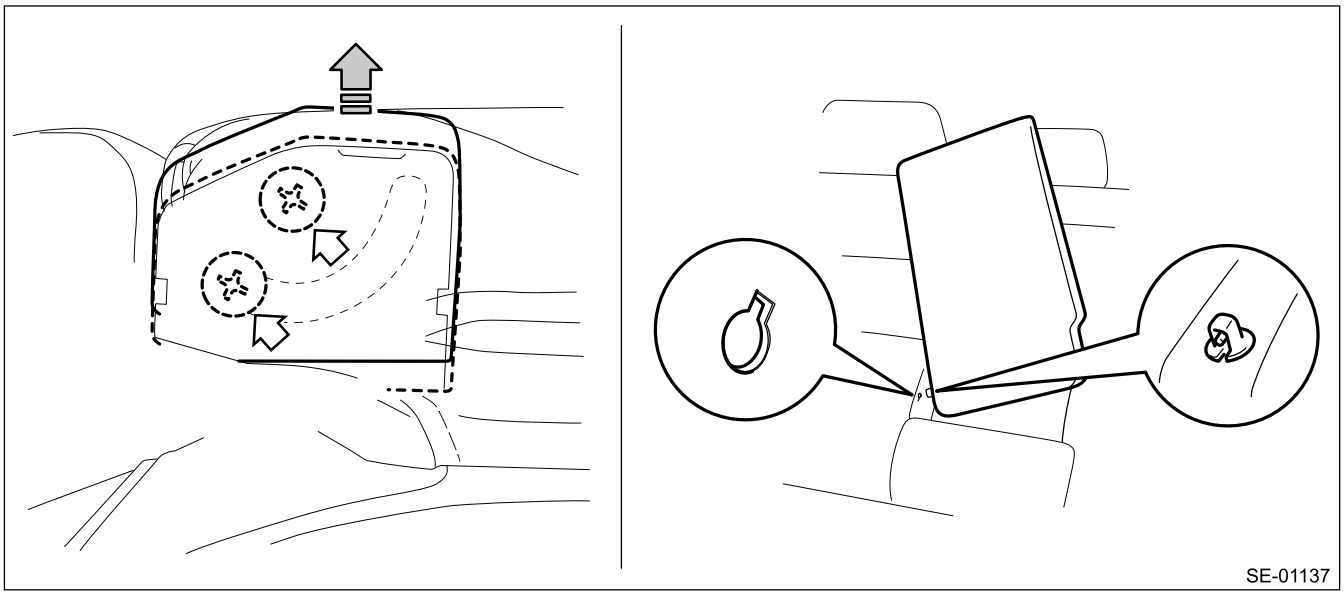
1. Install the backrest assembly RH and LH.

   Tightening torque:

   Refer to "COMPONENT" of "General Description" for the tightening torque. Ref. to SEATS>General Description>COMPONENT > REAR SEAT.

   Note:

   - **After installing the backrest assembly, make sure that each seat belt operates normally.**
   - **Make sure that they are properly secured on each hook on the vehicle side.**
2. Install the rear seat cushion assembly.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



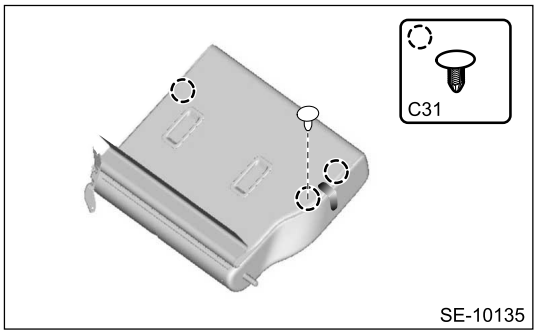
SEATS > Rear Seat

DISASSEMBLY

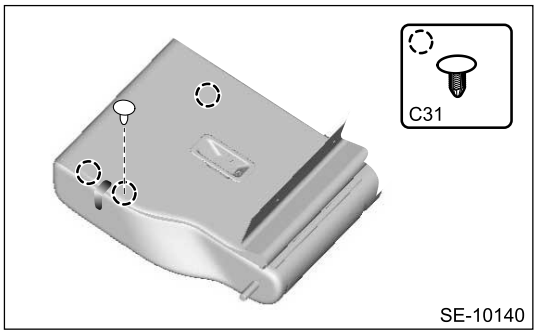
1. Remove the rear seat. Ref. to SEATS>Rear Seat>REMOVAL.
2. Remove the headrest assembly - rear backrest.
3. Remove the armrest assembly - rear center. (Models with armrest)

   (1) Remove the cover - armrest by pulling it in the direction of the arrow (black).

   (2) Remove the screws and remove the armrest assembly - rear center.



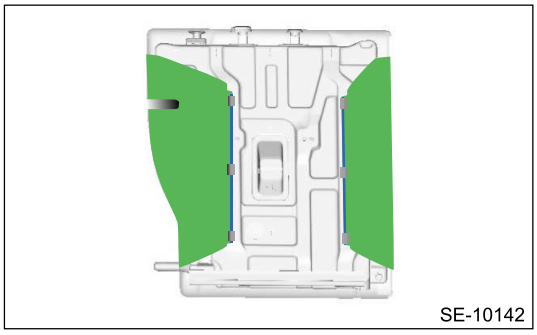
Note:

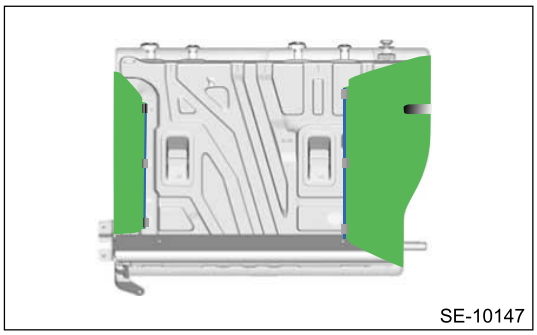


The armrest assembly - rear center cannot be detached unless pin positions on the RH side of the backrest assembly and on the center side of the armrest assembly - rear are aligned.

4. Remove the knob - backrest. (Screw-in type)

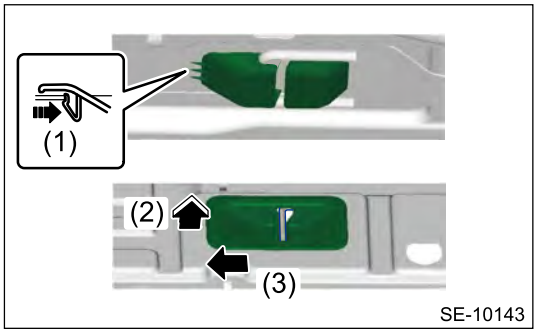
5. Remove the clips on the backside of the cover COMPL - rear backrest.





6. Detach the plastic fastener at the bottom of backrest assembly and turn over the cover COMPL - rear backrest.

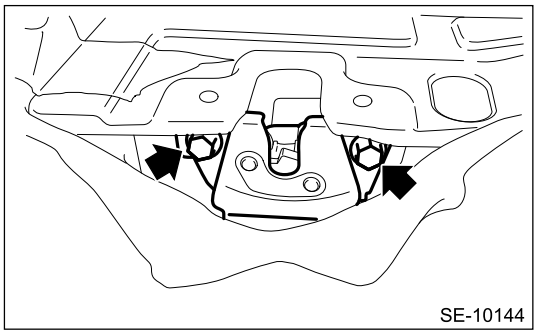
7. Remove the plastic hooks on the back side of the backrest assembly.



8. Remove the tether anchor cover from the inside of back board. (5 door model)

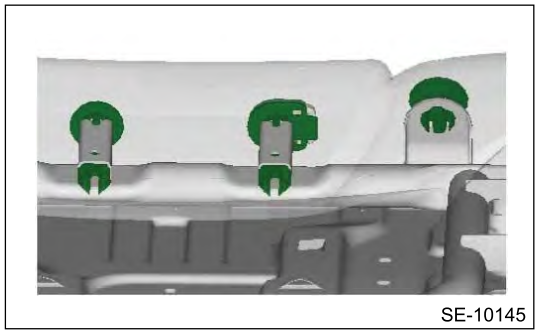
Caution:

Pay attention to the burrs on the panel edge.



Note:

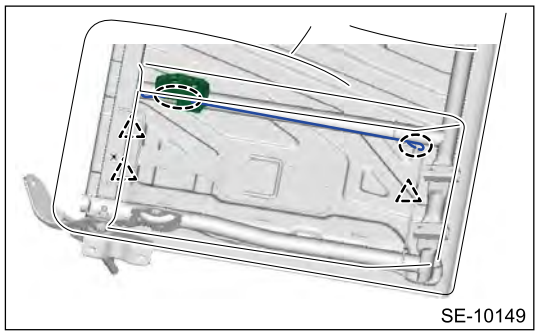
Turn over the backrest assembly. While pulling up the pad and cover, remove the tether anchor cover.



9. Remove the lock assembly - rear backrest rear.

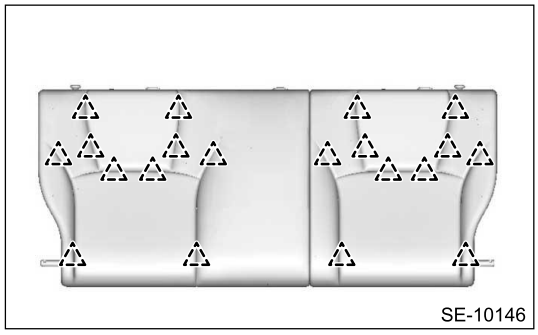
Caution:

Pay attention to the burrs on the panel edge.



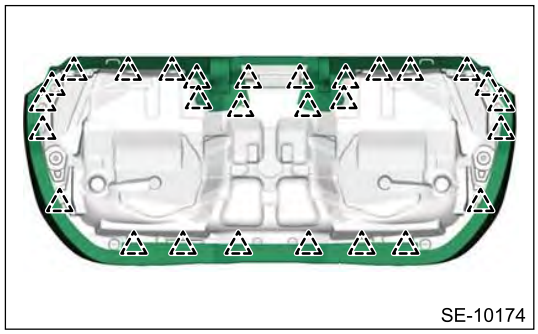
10. Remove the bushing - headrest and the bushing - lock assembly.

Note:

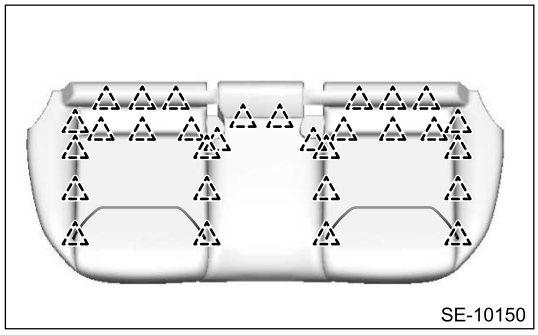


Catch the tip of the bushing - headrest with pliers and push it outward from the inside of seat to remove it.

11. For the backrest LH, remove the hog ring and wire clamp. (Models with armrest)



12. Remove the frame assembly - rear backrest.



13. Remove the hog rings, then remove the cover COMPL - rear backrest.

14. Remove the hog rings on the back side of the rear seat cushion assembly.

15. Remove the hog rings, then remove the cover - rear cushion.

SEATS > Rear Seat

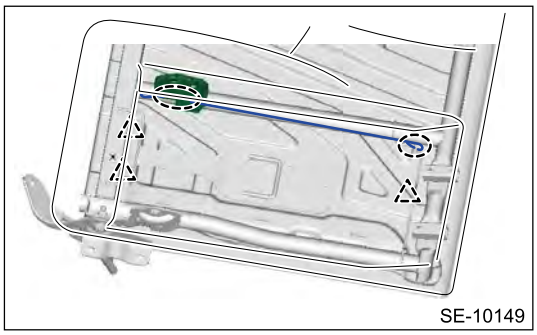
ASSEMBLY

Caution:

- **Do not reuse the hog ring and hang wire.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - rear backrest.**

1. Assemble the cover COMPL - rear backrest and the cover - rear cushion in the same manner as for the front seat. Ref. to SEATS>Front Seat>ASSEMBLY.

2. Install the hog rings on the back side of the rear seat cushion assembly.

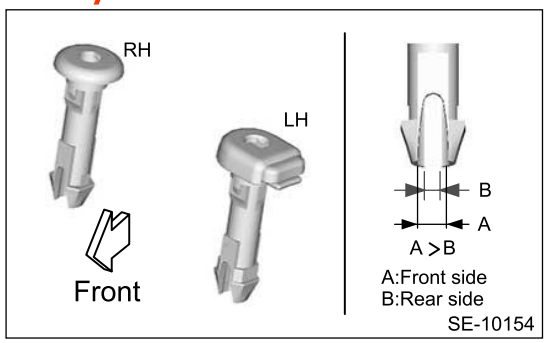


3. Install the hog rings and wire clip, then install the cover COMPL - rear backrest.

Note:

- **Do not contaminate or damage the cover COMPL - rear backrest and the cover - rear cushion.**
- **While installing the hog rings, prevent the cover COMPL - rear backrest and the cover - rear cushion from getting wrinkled.**

4. Install the frame assembly - rear backrest.



5. For the backrest LH, install the hog ring and wire clamp. (Models with armrest)

6. Install the bushing - headrest and the bushing - lock assembly.

Caution:

Pay attention to the orientation of the bushing - headrest.

7. Install the lock assembly - rear backrest rear.

   Tightening torque:

   Refer to "COMPONENT" of "General Description". Ref. to SEATS>General Description>COMPONENT > REAR SEAT.
8. Install the plastic hooks on the back side of the backrest assembly.
9. Install the clips on the backside of the cover COMPL - rear backrest.
10. Install the knob - backrest. (Screw-in type)
11. Install the tether anchor cover. (5 door model)
12. Install the armrest. (Models with armrest)

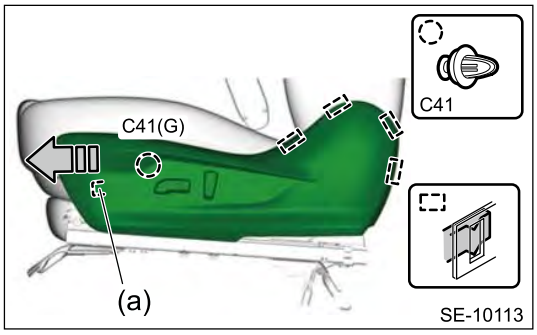
    Tightening torque:

    Refer to "COMPONENT" of "General Description". Ref. to SEATS>General Description>COMPONENT > REAR SEAT.
13. Install the headrest assembly - rear backrest.
14. Before installation, check the following items.
    - No tear and fray on the cover COMPL - rear backrest and the cover - rear cushion.
15. Install the rear seat. Ref. to SEATS>Rear Seat>INSTALLATION.

SEATS > Rear Seat

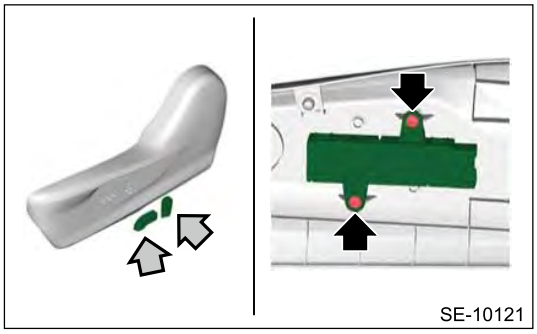
INSPECTION

1. SEAT COVER



Check that there is no tear or fray on the cover COMPL - rear backrest and the cover - rear cushion.

REMOVAL



Caution:
When removing the front seat, disconnect the ground cable from the battery before disconnecting the airbag system and the occupant detection system harness connector, and wait for 60 seconds before starting the operation.

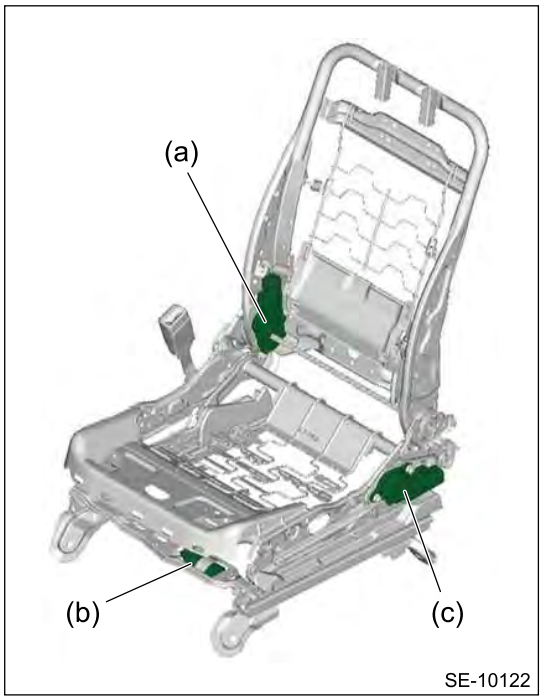
1. POWER SEAT SWITCH

1. Remove the seat from vehicle. Ref. to SEATS>Front Seat>REMOVAL.
2. Remove the cover - hinge front seat OUT.
   (1) Release the claw in the upper section of the cover - hinge front seat OUT.
   (2) Release the clips, and release the claws (a) in the front section of the cover - hinge front seat OUT.
   (3) Disconnect the power seat switch connector, and remove the cover - hinge front seat OUT.

3. Remove the power seat switch assembly.
   (1) Remove the knob - power seat.
   (2) Remove the screws to remove the power seat switch assembly.

INSTALLATION

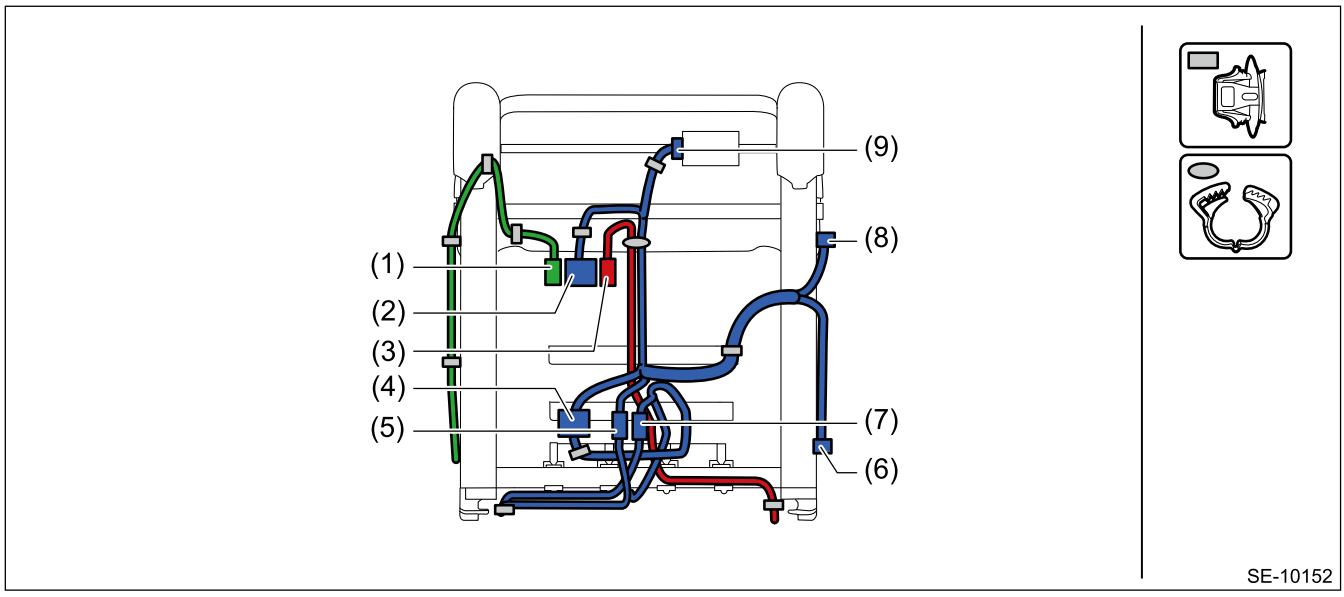
1. Install the power seat switch assembly.
2. Install the cover - hinge front seat OUT.
3. Install the knob - power seat.
4. Install the seat assembly. Ref. to SEATS>Front Seat>INSTALLATION.



INSPECTION

1. WIRING DIAGRAM

Refer to “Power Seat” in WI section. Ref. to WIRING SYSTEM>Power Seat System>WIRING DIAGRAM.

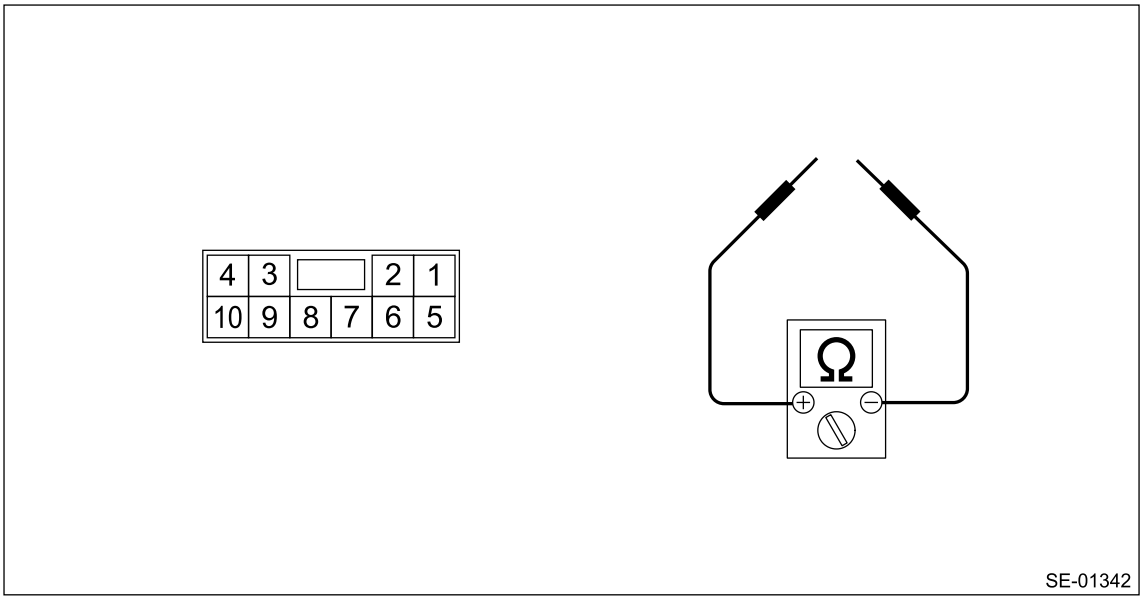


2. NOTE

MOTOR LAYOUT

(a) Reclining motor
(b) Slide motor
(c) Lifter motor

HARNESS LAYOUT



(1) Seat belt switch connector
(2) Seat harness connector
(3) Side airbag connector
(4) Power seat connector
(5) Reclining motor harness connector
(6) Lifter motor
(7) Seat backrest heater connector
(8) Power seat switch connector
(9) Slide motor connector

3. TROUBLE SYMPTOM

Symptoms	Criteria
All functions do not operate. Ref. to SEATS>Power Seat System>INSPECTION > ALL FUNCTIONS DO NOT OPERATE.	• Power seat switch • Power seat harness • Body harness
A part of function does not operate. Ref. to SEATS>Power Seat System>INSPECTION > SOME MOTORS DO NOT OPERATE.	• Power seat switch • Power seat harness • Relevant motor

4. CHECK POWER SEAT SWITCH

Measure resistance between terminals while operating each switch.

Switch position	Terminal No.	Standard
Slide forward	1 and 8 4 and 7	Less than 10 Ω
Slide rearward	1 and 7 4 and 8	Less than 10 Ω
Lifter up	1 and 6 4 and 9	Less than 10 Ω
Lifter down	1 and 9 4 and 6	Less than 10 Ω
Reclining forward	1 and 10 4 and 5	Less than 10 Ω
Reclining rearward	1 and 5 4 and 10	Less than 10 Ω

Replace the power seat switch if the inspection result is not within the standard value.

5. ALL FUNCTIONS DO NOT OPERATE

1. CHECK SEAT FUNCTIONS.

Operate each power seat switch and check that each power seat function operates normally.

Does all function fail to operate?

Yes — Go to 2.

No — Check the motor which does not operate. Ref. to SEATS>Power Seat System>INSPECTION > SOME MOTORS DO NOT OPERATE.

2. CHECK FUSE.

Check the power seat fuse inside the fuse box.

Is the fuse blown out?

Yes — Replace the appropriate fuse.

No — Go to 3.

3. CHECK POWER SUPPLY CIRCUIT.

1. Disconnect the power seat switch connector.
2. Measure the voltage between harness connector and chassis ground.
   Connector & terminal
   (R200) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes — Go to 4.

No — Check body harness.

4. CHECK POWER SUPPLY CIRCUIT.

Measure the resistance between power seat switch harness connector and chassis ground.
Connector & terminal
(R200) No. 1 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Replace the power seat switch assembly.

No — Check body harness.

6. SOME MOTORS DO NOT OPERATE

- **Slide operation failure**

1. CHECK SWITCH.

1. Disconnect the power seat switch connector.
2. Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. Ref. to SEATS>Power Seat System>INSPECTION > CHECK POWER SEAT SWITCH.

Is the inspection result normal?

Yes — Go to 2.

No — Replace the power seat switch assembly.

2. CHECK HARNESS.

1. Disconnect the slide motor connector.
2. Measure the resistance between power seat switch connector and slide motor connector.
   Connector & terminal
   (R200) No. 8 — (R202) No. 5:
   (R200) No. 7 — (R202) No. 1:

Is the resistance less than 10 Ω?

Yes — Go to 3.

No — Check power seat harness.

3. CHECK SLIDE MOTOR.

1. Connect the power seat switch connector and slide motor connector.
2. Apply 12 V to the slide motor and check the motor rotation.
   Connector & terminal
   (R202) No. 5 (+) — (R202) No. 1 (−):
   (R202) No. 1 (+) — (R202) No. 5 (−):

Does the motor rotate normally?

Yes	Check for temporary poor contact or mechanical trouble in slide rail.
No	Slide motor problem. Replace the seat cushion frame assembly.

- **Malfunction of lifter operation**

1. CHECK SWITCH.

1. Disconnect the power seat switch connector.
2. Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. Ref. to SEATS>Power Seat System>INSPECTION > CHECK POWER SEAT SWITCH.

Is the inspection result normal?

Yes	Go to 2.
No	Replace the power seat switch assembly.

2. CHECK HARNESS.

1. Disconnect the lifter motor connector.
2. Measure the resistance between power seat switch connector and lifter motor connector.
   Connector & terminal
   (R200) No. 6 — (R204) No. 6:
   (R200) No. 9 — (R204) No. 4:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Check power seat harness.

3. CHECK LIFTER MOTOR.

1. Connect the power seat switch connector and lifter motor connector.
2. Apply 12 V to the lifter motor and check the motor rotation.
   Connector & terminal
   (R204) No. 6 (+) — (R204) No. 4 (−):
   (R204) No. 4 (+) — (R204) No. 6 (−):

Does the motor rotate normally?

Yes	Check for temporary poor contact or mechanical trouble in lifter mechanism.
No	Lifter motor problem. Replace the seat cushion frame assembly.

- **Malfunction of reclining operation**

1. CHECK SWITCH.

1. Disconnect the power seat switch connector.
2. Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. Ref. to SEATS>Power Seat System>INSPECTION > CHECK POWER SEAT SWITCH.

Is the inspection result normal?

Yes	Go to 2.
No	Replace the power seat switch assembly.

2. CHECK HARNESS.

1. Disconnect the reclining motor connector.
2. Measure the resistance between power seat switch connector and reclining motor connector.
   Connector & terminal
   (R200) No. 10 — (R201) No. 6:
   (R200) No. 5 — (R201) No. 4:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Check power seat harness.

3. CHECK RECLINING MOTOR.

1. Connect the power seat switch connector and reclining motor connector.
2. Apply 12 V to the reclining motor and check the motor rotation.

Connector & terminal

(R201) No. 6 (+) — (R201) No. 4 (−):

(R201) No. 4 (+) — (R201) No. 6 (−):

Does the motor rotate normally?

Yes	Check for temporary poor contact or mechanical trouble in reclining hinge.
No	Reclining motor problem. Replace the backrest frame assembly.

REMOVAL

1. SEAT HEATER UNIT

Caution:

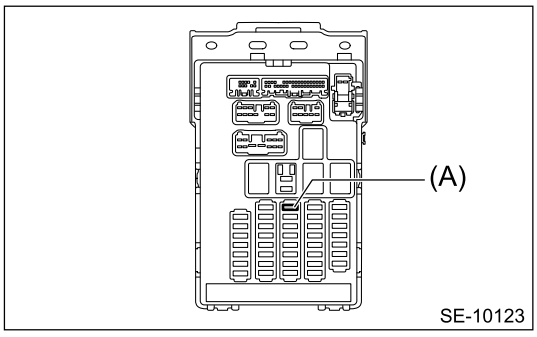
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.**

Preparation items:

Double-sided tape: NITTO DENKO 501L or equivalent

1. Remove the front seats. Ref. to SEATS>Front Seat>REMOVAL.
2. Remove the backrest cover of front seat and seat cushion cover. Ref. to SEATS>Front Seat>DISASSEMBLY.
3. Remove the seat heater module.

2. SEAT HEATER SWITCH



1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

   Note:

   On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
2. Remove the cover assembly - front. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
3. Release the claws, and remove the seat heater switch from the back of the cover assembly - front.

3. SEAT HEATER RELAY AND FUSE

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the glove box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
4. Remove the seat heater relay and fuse.
   (1) Remove the relay & fuse box bolts.
   (2) Remove the seat heater relay from the relay holder.

Relay & fuse box	Fuse 20 A	(A)

INSTALLATION

1. SEAT HEATER UNIT

1. Install the seat heater module.
   Caution:
   - **If the seat heater module is removed, replace the pad assembly with a new part.**
   - **If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.**

   Preparation items:
   Double-sided tape: NITTO DENKO 501L or equivalent
2. Assemble the backrest cover of front seat and seat cushion cover. Ref. to SEATS>Front Seat>ASSEMBLY.
3. Install the front seat. Ref. to SEATS>Front Seat>INSTALLATION.

2. SEAT HEATER SWITCH

1. Install the seat heater switch.
2. Install the console box assembly.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   After connecting the battery sensor terminal, place the select lever in the "P" position.

3. SEAT HEATER RELAY AND FUSE

1. Install the seat heater relay & fuse.
2. Install the glove box assembly.
3. Install the cover assembly - instrument panel LWR driver.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SEATS > Seat Heater System

INSPECTION

1. WIRING DIAGRAM

Refer to "Seat Heater System" in the wiring diagram. Ref. to WIRING SYSTEM>Seat Heater System>WIRING DIAGRAM.

2. DIAGNOSTIC CHART

Symptoms	Repair order
Seat heater does not operate.	1. Check the fuse. Ref. to SEATS>Seat Heater System>INSPECTION > CHECK SEAT HEATER FUSE.
	2. Check the seat heater system power supply and ground circuit. Ref. to SEATS>Seat Heater System>INSPECTION > CHECK POWER SUPPLY AND GROUND CIRCUIT.
	3. Check the seat heater module. Ref. to SEATS>Seat Heater System>INSPECTION > SEAT HEATER UNIT.
	4. Check the seat heater switch circuit. Ref. to SEATS>Seat Heater System>INSPECTION > SEAT HEATER SWITCH.

3. CHECK SEAT HEATER FUSE

1. CHECK FUSE.

Remove the seat heater fuse, and then visually check.

Is the fuse blown out?

Yes — Check the power supply and ground circuit.

No — Check the power supply and ground circuit.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK POWER SUPPLY CIRCUIT.

1. Disconnect the harness connector of seat heater switch.
2. Turn the ignition switch to ON.
3. Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal

(AD27) No. 7 (+) — Chassis ground (−):

Is the voltage 12 V or more?

Yes — Go to 2.

No — Check the harness between the seat heater switch and fuse.

2. CHECK GROUND CIRCUIT.

Measure the resistance between harness connector terminal and chassis ground.
Measure the resistance between harness connector terminal and chassis ground.

Connector & terminal

(AD27) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 3.

No — Repair the harness.

3. CHECK GROUND CIRCUIT.

Measure the resistance between seat heater switch terminals.

Connector & terminal

(AD27) No. 7 — (AD27) No. 2:

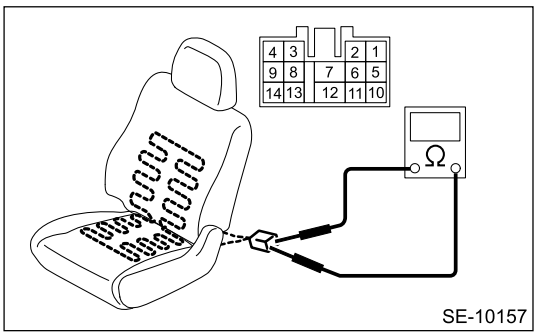
Is the resistance less than 10 Ω?

Yes	The power supply and ground circuit are OK.
No	Replace the seat heater switch. Ref. to SEATS>Seat Heater System>REMOVAL > SEAT HEATER SWITCH.

5. SEAT HEATER UNIT

1. Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

Connector & terminal

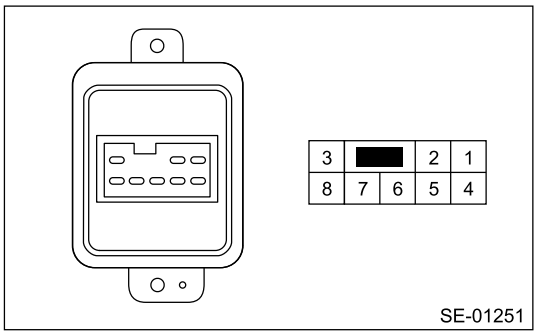


HI

No. 6 — No. 12:

No. 2 — No. 12:

LOW



No. 2 — No. 12:

2. If no continuity exists, replace the seat heater module with a new part. Ref. to SEATS>Front Seat>DISASSEMBLY.

6. SEAT HEATER SWITCH

1. Inspect the continuity between the seat heater switch terminals.

Connector & terminal

HI

No. 7 — No. 2:

No. 7 — No. 4:
No. 7 — No. 8:
No. 2 — No. 1:
No. 2 — No. 3:

LOW

No. 7 — No. 1:
No. 7 — No. 2:
No. 7 — No. 3:

2. If no continuity exists, replace the seat heater switch with a new part. Ref. to SEATS>Seat Heater System>REMOVAL > SEAT HEATER SWITCH.

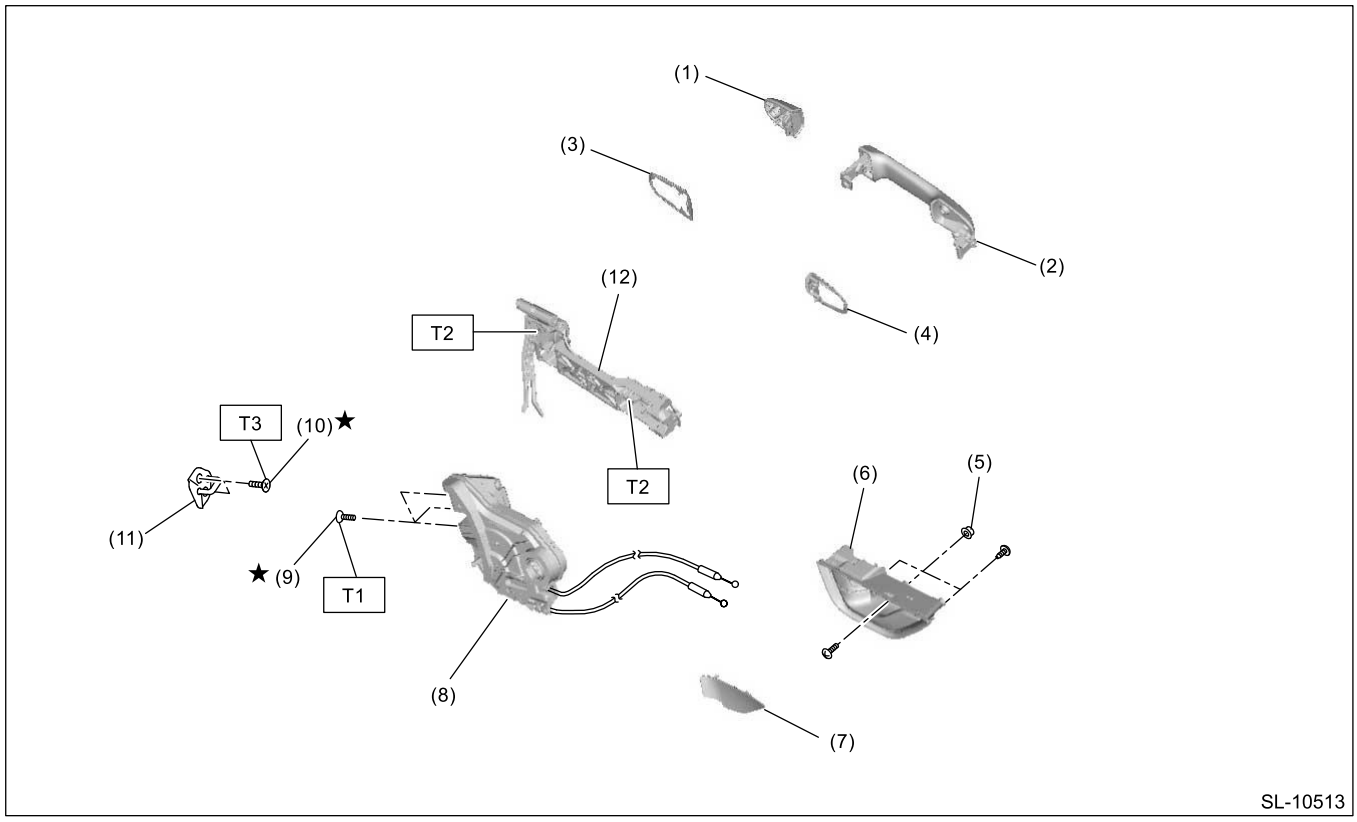
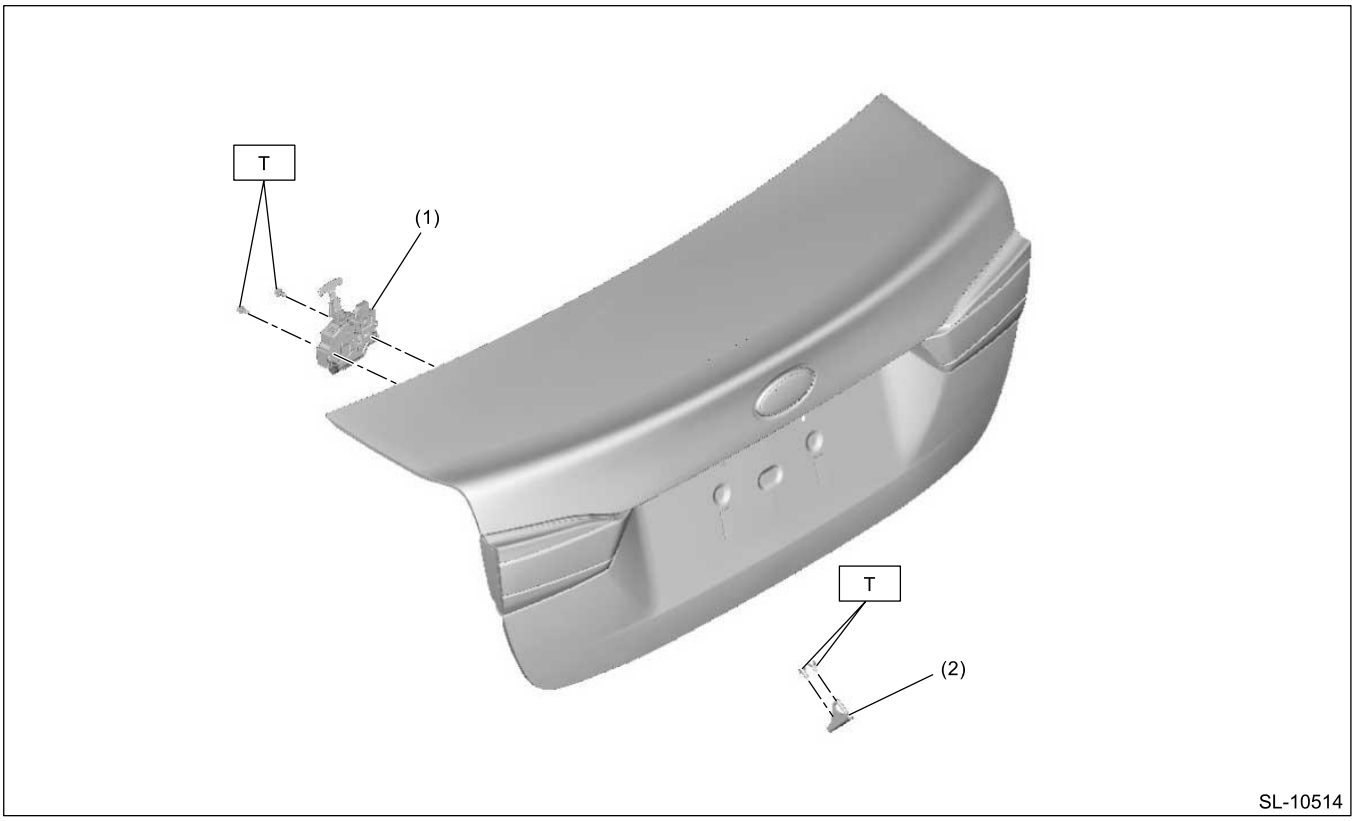
SECURITY AND LOCKS > General Description

COMPONENT



1. DOOR LOCK ASSEMBLY

- Front

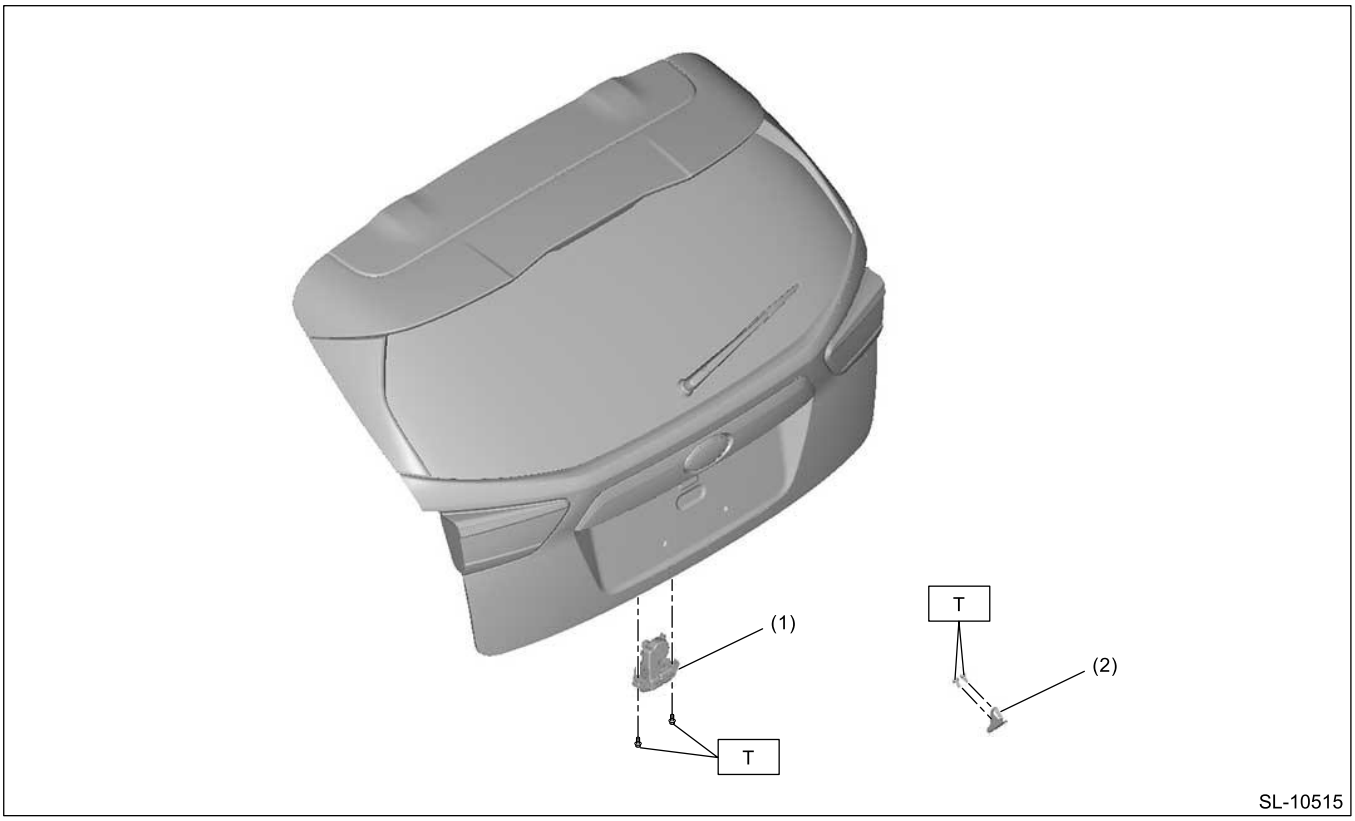


(1) Cover - handle front outer (passenger's seat)	(8) Remote ASSY - door	(15) Key lock - door (driver's seat only)
(2) Handle - door outer (model with keyless access with push button start)	(9) Cover - remote door	
(3) Cover - handle front outer (driver's seat)	(10) Latch & actuator ASSY - front	***Tightening torque: N·m (kgf-m, ft-lb)***
(4) Handle - door outer (keyless entry model)	(11) TORX® bolt	***T1: 6.5 (0.7, 4.8)***
(5) Spacer - door handle outer B	(12) TORX® bolt	***T2: 7.5 (0.8, 5.5)***
(6) Spacer - door handle outer A	(13) Striker - door	***T3: 18 (1.8, 13.3)***
(7) Grommet - screw	(14) Frame ASSY - front door outer	

- Rear

(1)	Cover - handle rear outer	(7)	Cover - remote door	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Handle - door outer	(8)	Latch & actuator ASSY - rear	***T1: 6.5 (0.7, 4.8)***
(3)	Spacer - door handle outer B	(9)	TORX® bolt	***T2: 7.5 (0.8, 5.5)***
(4)	Spacer - door handle outer A	(10)	TORX® bolt	***T3: 18 (1.8, 13.3)***
(5)	Grommet - screw	(11)	Striker - door	
(6)	Remote ASSY - door	(12)	Frame ASSY - rear door outer	

2. TRUNK LID LOCK



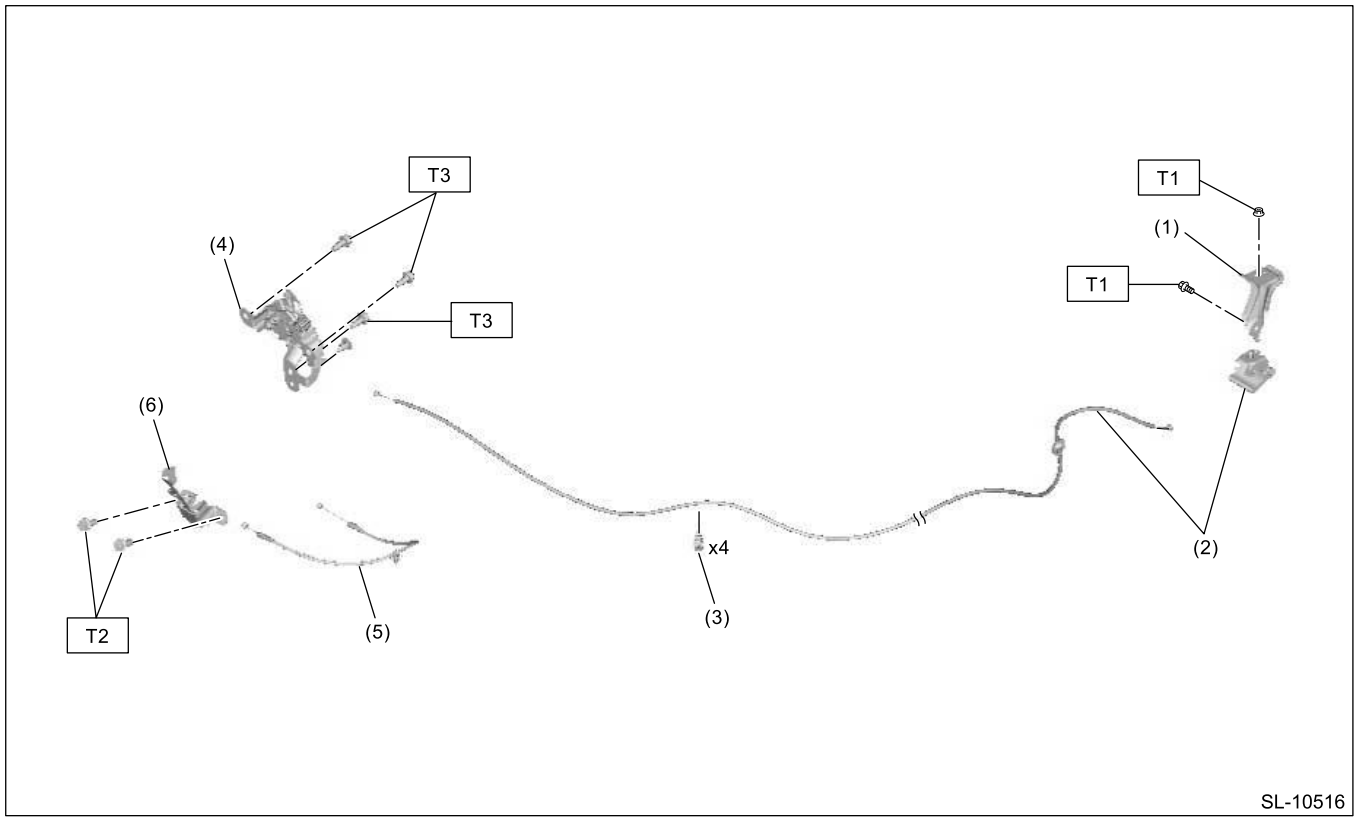
(1) Lock ASSY - trunk lid

(2) Striker - trunk lid

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

3. REAR GATE LOCK

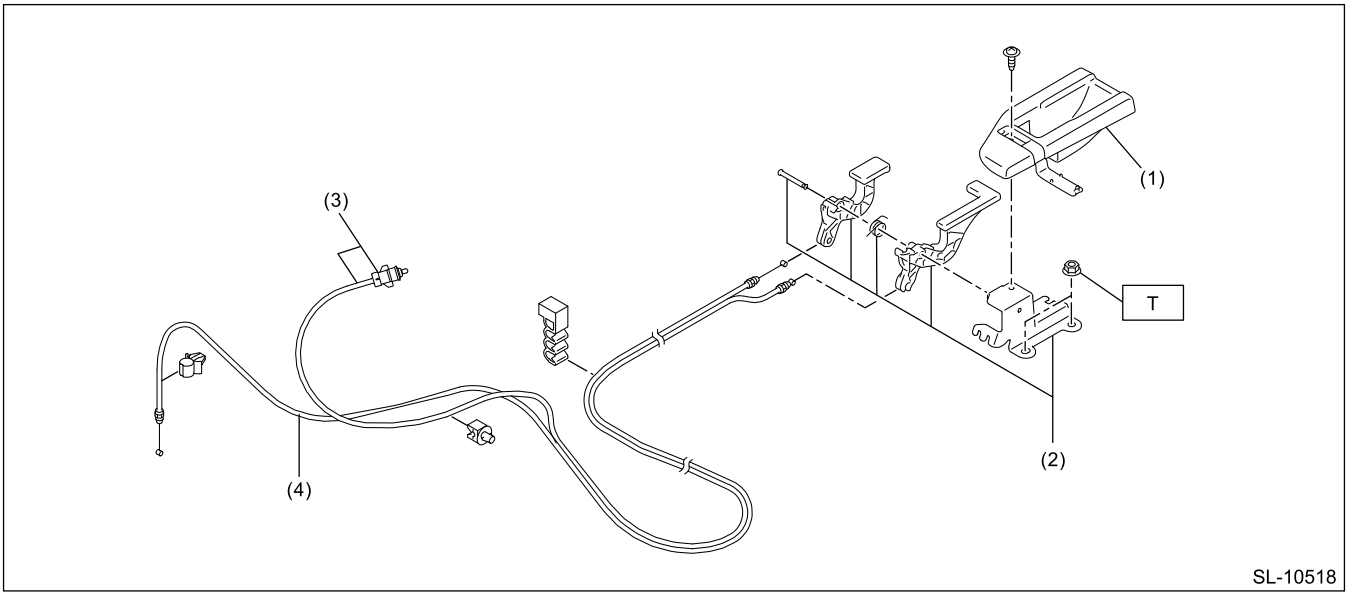


(1) Latch & actuator - rear gate (2) Striker - rear gate

Tightening torque: N·m (kgf-m, ft-lb)

T: 25 (2.5, 18.4)

4. FRONT HOOD LOCK



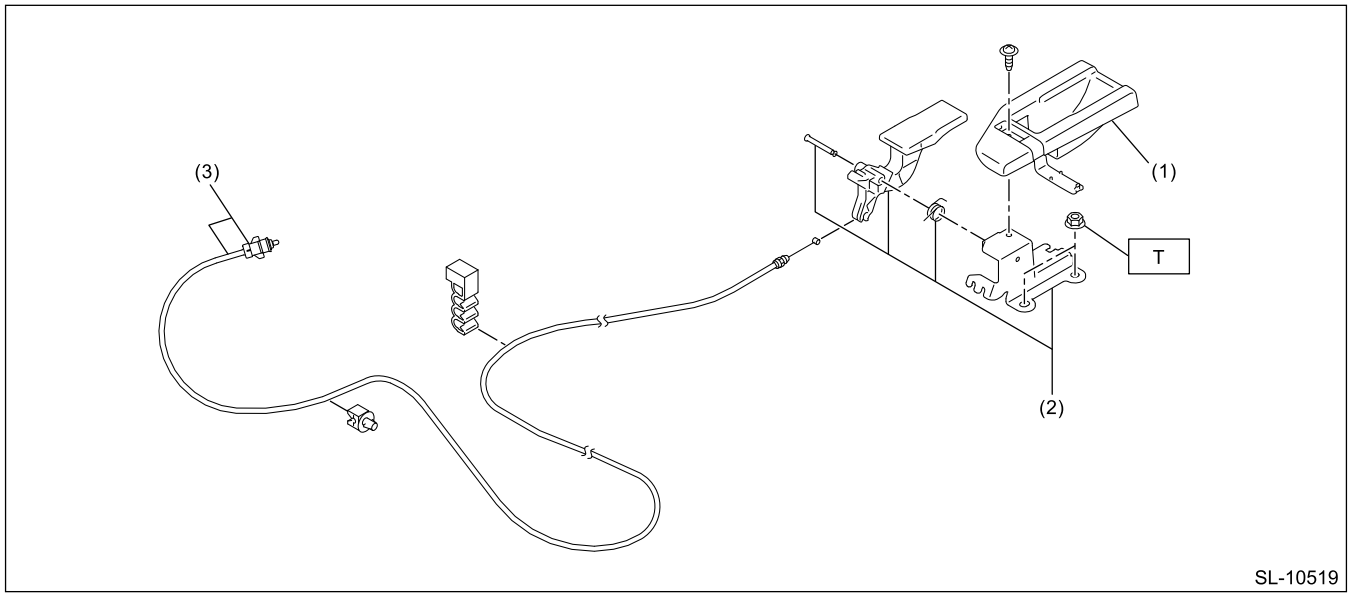
(1) Bracket - opener handle
(2) Cable - front hood
(3) Clip
(4) Lock ASSY - front hood
(5) Cable - safety
(6) Lever ASSY - safety

Tightening torque: N·m (kgf-m, ft-lb)

T1: 7.5 (0.8, 5.5)
T2: 18 (1.8, 13.3)
T3: 33 (3.4, 24.3)

5. REMOTE OPENER

- 4 door model

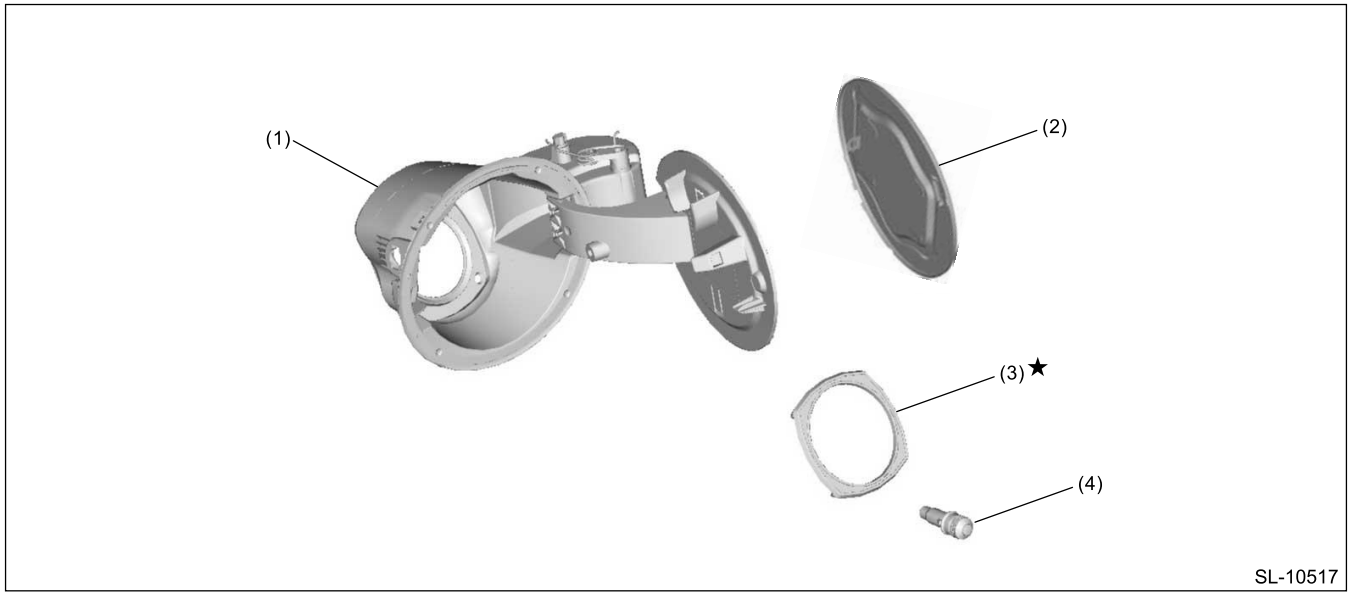


(1) Cover - handle
(2) Pull handle - opener
(3) Cable ASSY - fuel
(4) Cable ASSY - trunk lid

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

- 5 door model



(1) Cover - handle
(2) Pull handle - opener
(3) Cable ASSY - fuel

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

6. FUEL FLAP

(1) Saucer - COMPL
(2) Flap - COMPL fuel
(3) Ring clip
(4) Lifter

SECURITY AND LOCKS > General Description

CAUTION

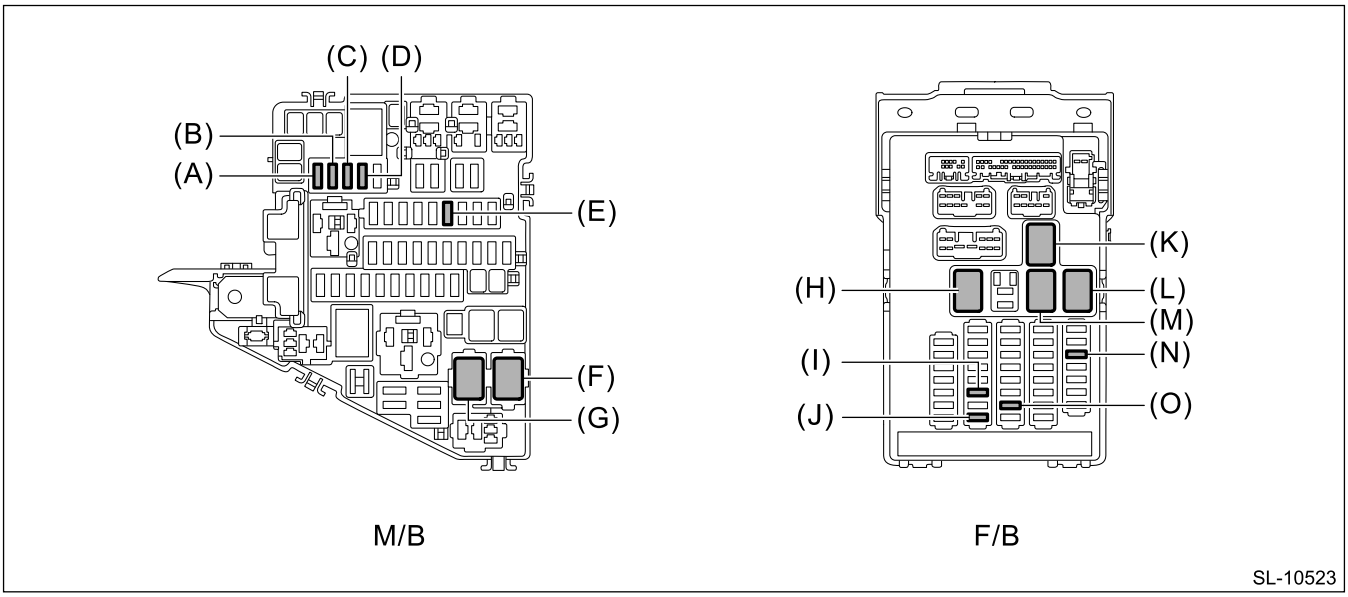
- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- If any immobilizer related part has been replaced, make sure to register the immobilizer.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.

- Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.
- Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.

- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.

SECURITY AND LOCKS > General Description

PREPARATION TOOL



1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Drill	Used for replacing ignition key lock.
Reverse tap	Used for replacing ignition key lock.
TORX® T30	Used for removing and installing the latch & actuator assembly, door outer handle cover and frame assembly.
Clip remover	Used for removing clips.

LOCATION

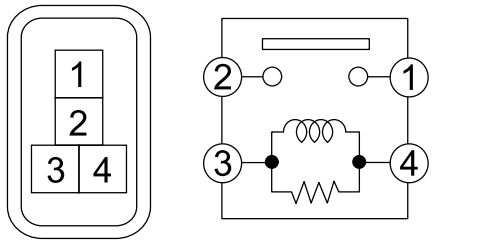
Main fuse box (M/B)	Fuse 10 A (body integrated unit)	(A)
	Fuse 10 A (body integrated unit)	(B)
	Fuse 10 A (body integrated unit)	(C)
	Fuse 10 A (body integrated unit)	(D)
	Fuse 15 A (body integrated unit)	(E)
	Starter cut relay	(F)
	Starter relay	(G)
Relay & fuse box (F/B)	IG 2 relay	(H)
	Fuse 10 A (body integrated unit, immobilizer antenna)	(I)
	Fuse 7.5 A (key warning switch, keyless access CM, steering lock CM)	(J)
	IG 1 relay	(K)
	Accessory relay 1	(L)
	Accessory relay 2	(M)
	Fuse 7.5 A (body integrated unit, immobilizer antenna)	(N)
	Fuse 7.5 A (body integrated unit)	(O)

Note:

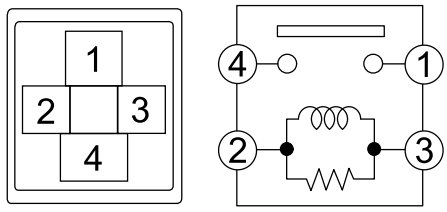
For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

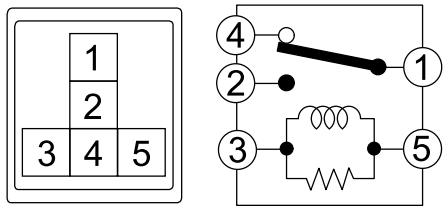
1. CHECK FUSE



1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.



Note:



If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1. Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	 AC-02796
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01566
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2. Replace the relay if the inspection result is not within the standard value.

SECURITY AND LOCKS > Door Lock Control System

WIRING DIAGRAM

For wiring diagrams related to the door lock control system, refer to the following items.

- Keyless entry system: Ref. to WIRING SYSTEM>Keyless Entry System>WIRING DIAGRAM.
- Keyless access with push button start system: Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

SECURITY AND LOCKS > Door Lock Control System

ELECTRICAL SPECIFICATION

1. BODY INTEGRATED UNIT

For the specification (electrical component), refer to "Control Module I/O Signal" of "BODY CONTROL SYSTEM (DIAGNOSTICS)" section. Ref. to BODY CONTROL(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

SECURITY AND LOCKS > Door Lock Control System

INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
The door lock control system does not operate.	1. Remove and visually inspect the following fuses. • No. 14 (in fuse & relay box) • No. 26 (in fuse & relay box) • No. 13 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK POWER SUPPLY AND GROUND CIRCUIT.
	2. Check the power supply and ground circuit for body integrated unit.	Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK POWER SUPPLY AND GROUND CIRCUIT.
	3. Check the door lock switch and the circuit.	Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR LOCK SWITCH.
	4. Check the door switch and the circuit.	Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR SWITCH.

Symptoms	Repair order	Reference
	5. Check the opener switch and the circuit.	Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK REAR GATE OPENER BUTTON CIRCUIT.
	6. Check the door lock actuator and the circuit.	Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR LOCK ACTUATOR AND CIRCUIT.
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR LOCK ACTUATOR AND CIRCUIT.

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK POWER SUPPLY.

1. Disconnect the connector of body integrated unit.
2. Measure the voltage between the body integrated unit connector and chassis ground.
   Connector & terminal
   (B152) No. 3 (+) — Chassis ground (−):
   (B280) No. 1 (+) — Chassis ground (−):
   (B281) No. 7 (+) — Chassis ground (−):
   (B287) No. 4 (+) — Chassis ground (−):

Is the voltage 9 V or more?

Yes — Go to 2.

No — Check the harness for open or short circuit between body integrated unit and fuse.

2. CHECK GROUND CIRCUIT.

Measure the resistance between the body integrated unit connector and chassis ground.
Connector & terminal
(i84) No. 4 — Chassis ground:
(B287) No. 1 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — The power supply and ground circuit are OK.

No — Repair or replace the harness.

3. CHECK DOOR LOCK SWITCH

1. CHECK DATA MONITOR.

Display the [Manual lock SW input] data using Subaru Select Monitor.
Note:
For detailed operation procedures, refer to "Application help".

Does the display change as [OFF] ←→ [ON] when each door lock switch is moved to LOCK?

Yes — Go to 2.

No — Go to 3.

2. CHECK DOOR LOCK SWITCH.

From the condition in step 1), operate each door lock switch (driver's and passenger's) in the UNLOCK direction.

Does the display switch between [OFF] ←→ [ON]?

Yes — The door lock switch is OK.

No — Go to 4.

3. CHECK REMOTE CONTROL MIRROR SWITCH (DOOR LOCK SWITCH).

1. Disconnect the remote control mirror switch (door lock switch) connector.
2. Check the continuity between terminals when moving the remote control mirror switch (door lock switch) in the LOCK direction.
   Connector & terminal
   Driver's side
   (D149) No. 9 — (D7) No. 1:
   Passenger's side
   (D125) No. 7 — (D125) No. 3:

Did the indicator change from "No continuity" (1 MΩ or more) to "Continuity exists" (less than 10 Ω)?

Yes — Go to 4.

No — Replace the remote control mirror switch (door lock switch).

4. CHECK REMOTE CONTROL MIRROR SWITCH (DOOR LOCK SWITCH).

Check the continuity between terminals when moving the remote control mirror switch (door lock switch) in the UNLOCK direction.

Connector & terminal
Driver's side
(D149) No. 8 — (D7) No. 1:
Passenger's side
(D125) No. 2 — (D125) No. 3:

Did the indicator change from "No continuity" (1 MΩ or more) to "Continuity exists" (less than 10 Ω)?

Yes — Go to 5.

No — Replace the remote control mirror switch (door lock switch).

5. CHECK HARNESS.

Measure the resistance between the remote control mirror switch (door lock switch) connector and chassis ground.

Connector & terminal

Driver's side

(D149) No. 1 — Chassis ground:

Passenger's side

(D125) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 6.

No — Repair or replace the harness.

6. CHECK HARNESS.

Check the harness between body integrated unit and remote control mirror switch (door lock switch).

Connector & terminal

Driver's side

(D149) No. 9 — (i171) No. 32:

(D149) No. 8 — (i171) No. 12:

Passenger's side

(D125) No. 7 — (i171) No. 32:

(D125) No. 2 — (i171) No. 12:

Is harness normal?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Repair or replace the harness.

4. CHECK DOOR SWITCH

1. CHECK DATA MONITOR.

Display the following items using Subaru Select Monitor.

- [Driver's door SW input]
- [P-door SW input]
- [Rear right door SW input]
- [Rear left door SW input]
- [R Gate SW input]

Note:

For detailed operation procedures, refer to "Application help".

Does the display switch between [OFF] ←→ [ON] when each door, trunk lid, or rear gate is opened/closed?

Yes — The door switches, trunk lid latch switch or rear gate latch switch are normal.

No — Go to 2.

2. CHECK HARNESS.

1. Disconnect the connector of body integrated unit.
2. Disconnect the connector of the door switch, trunk lid latch switch or rear gate latch switch that the display does not change.
3. Check the harness between body integrated unit and defective switch.

Connector & terminal

Front door LH
(i171) No. 39 — (R9) No. 2:

Front door RH
(i171) No. 13 — (R12) No. 2:

Rear door LH
(i171) No. 14 — (R22) No. 2:

Rear door RH
(i171) No. 27 — (R16) No. 2:

Trunk lid
(i171) No. 15 — (R186) No. 3:

Rear gate
(i171) No. 15 — (D46) No. 3:

Is harness normal?

Yes — Go to 3.

No — Repair or replace the harness.

3. CHECK HARNESS.

Measure the resistance between the faulty switch connector and chassis ground.

Connector & terminal

Front door LH

(R9) No. 1 — Chassis ground:

Front door RH

(R12) No. 1 — Chassis ground:

Rear door LH

(R22) No. 1 — Chassis ground:

Rear door RH

(R16) No. 1 — Chassis ground:

Trunk lid

(R186) No. 2 — Chassis ground:

Rear gate

(D46) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 4.

No — Repair or replace the harness.

4. CHECK DOOR SWITCH.

Measure the resistance between faulty switch terminals.

Terminals

Front LH door switch

No. 2 — No. 1:

Front RH door switch

No. 2 — No. 1:

Rear LH door switch

No. 2 — No. 1:

Rear RH door switch

No. 2 — No. 1:

Trunk lid latch switch

No. 3 — No. 2:

Rear gate latch switch

No. 3 — No. 4:

Is the resistance 1 MΩ or more when the door switch is pushed and the trunk lid is closed?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Replace the faulty parts.

- Door switches
- Trunk lid latch and actuator assembly
- Rear gate latch and actuator assembly

5. CHECK REAR GATE OPENER BUTTON CIRCUIT

1. CHECK DATA MONITOR.

Display the [R Gate Release SW input] data using Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>OPERATION.

Note:

For detailed operation procedures, refer to "Application help".

Does the display change to [OFF] ←→ [ON], when the rear gate opener button is operated?

Yes — Rear gate opener button is normal.

No — Go to 2.

2. CHECK HARNESS.

1. Disconnect the connectors of body integrated unit and rear gate opener button.
2. Check the harness between the body integrated unit and rear gate opener button.

Connector & terminal

Model without keyless access with push button start

(i171) No. 6 — (D47) No. 1:

Model with keyless access with push button start

(i171) No. 6 — (D77) No. 1:

Is harness normal?

Yes — Go to 3.

No — Repair or replace the harness.

3. CHECK HARNESS.

Measure the resistance between the rear gate opener button connector and chassis ground.

Connector & terminal

Model without keyless access with push button start

(D47) No. 2 — Chassis ground:

Model with keyless access with push button start

(D77) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 4.

No — Repair or replace the harness.

4. CHECK REAR GATE OPENER BUTTON.

Measure the resistance between terminals both when the rear gate opener button is pressed and when not pressed.

Terminals

No. 1 — No. 2:

Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?

Yes — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

No — Replace the rear gate opener button.

6. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

1. CHECK HARNESS (DOOR LOCK).

1. Disconnect the body integrated unit and each door lock actuator connector.
2. Check the harness between body integrated unit and each door lock actuator.

Connector & terminal

Front door LH

(i265) No. 4 — (D72) No. 4:

Front door RH

(i265) No. 4 — (D18) No. 4:

Rear door LH

(i266) No. 5 — (D26) No. 4:

Rear door RH

(i266) No. 4 — (D32) No. 4:

Is harness normal?

Yes — Go to 2.

No — Repair or replace the harness.

2. CHECK HARNESS (DOOR UNLOCK).

Check the harness between body integrated unit and each door lock actuator.

Connector & terminal

Front door LH

(i84) No. 6 — (D72) No. 1:

Front door RH

(i265) No. 2 — (D18) No. 1:

Rear door LH

(i266) No. 9 — (D26) No. 1:

Rear door RH

(i266) No. 3 — (D32) No. 1:

Is harness normal?

Yes — 4 door model: Go to 5.
5 door model: Go to 3.

No — Repair or replace the harness.

3. CHECK HARNESS (REAR GATE UNLOCK).

Check the harness between the body integrated unit and rear gate lock actuator.

Connector & terminal

(i266) No. 7 — (D46) No. 1:

Is harness normal?

Yes — Go to 4.

No — Repair or replace the harness.

4. CHECK HARNESS (REAR GATE UNLOCK).

Measure the resistance between the rear gate lock actuator connector and chassis ground.

Connector & terminal

(D46) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 7.

No — Repair or replace the harness.

5. CHECK HARNESS (TRUNK UNLOCK).

Check the harness between the body integrated unit and trunk lid lock actuator.

Connector & terminal

(i266) No. 7 — (R186) No. 1:

Is harness normal?

Yes — Go to 6.

No — Repair or replace the harness.

6. CHECK HARNESS (TRUNK UNLOCK).

Measure the resistance between the trunk lid lock actuator connector and chassis ground.

Connector & terminal

(R186) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 7.

No — Repair or replace the harness.

7. CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.

1. Connect the body integrated unit connector.
2. Measure the voltage between terminals of the body integrated unit when operating the door lock switch to LOCK direction.

Connector & terminal

Front door LH

(i265) No. 6 (+) — (i84) No. 6 (−):

Front door RH

(i265) No. 7 (+) — (i265) No. 2 (−):

Rear door LH

(i266) No. 5 (+) — (i266) No. 9 (−):

Rear door RH

(i266) No. 4 (+) — (i266) No. 3 (−):

Does the voltage change from less than 1 V → 9 V or more? (During lock output)

Yes — Go to 8.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

8. CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.

Measure the voltage between terminals of the body integrated unit when operating the door lock switch to UNLOCK direction.

Connector & terminal

Front door LH

(i84) No. 6 (+) — (i265) No. 6 (−):

Front door RH

(i265) No. 2 (+) — (i265) No. 7 (−):

Rear door LH

(i266) No. 9 (+) — (i266) No. 5 (−):

Rear door RH

(i266) No. 3 (+) — (i266) No. 4 (−):

Does the voltage change from less than 1 V → 9 V or more? (During unlock output)

Yes — Go to 9.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

9. CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.

Measure the voltage between body integrated unit and chassis ground when operating the rear gate opener button.

Connector & terminal

(i266) No. 7 (+) — Chassis ground (−):

Does the voltage change from less than 1 V → 9 V or more? (During unlock output)

Yes — Go to 10.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

10. CHECK DOOR LOCK ACTUATOR.

Check the door lock actuator. Ref. to SECURITY AND LOCKS>Door Latch & Door Lock Actuator Assembly>INSPECTION.

Is the door lock actuator OK?

Yes
- 4 door model: Go to 12.
- 5 door model: Go to 11.

No — Replace the door latch and door lock actuator assembly.

11. CHECK REAR GATE LOCK ACTUATOR.

Check the rear gate lock actuator. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly.

Is the rear gate lock actuator normal?

Yes — Check the connection status of the harness and connector that may have a temporary poor contact.

No — Replace the rear gate latch and actuator assembly.

12. CHECK TRUNK LID LOCK ACTUATOR.

Check the trunk lid lock actuator. Ref. to SECURITY AND LOCKS>Trunk Lid Latch and Actuator Assembly.

Is trunk lid lock actuator normal?

Yes	Check the connection status of the harness and connector that may have a temporary poor contact.
No	Replace the trunk lid latch & actuator assembly.

SECURITY AND LOCKS > Keyless Entry System

WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. Ref. to WIRING SYSTEM>Keyless Entry System>WIRING DIAGRAM.

SECURITY AND LOCKS > Keyless Entry System

ELECTRICAL SPECIFICATION

For the specification (electrical component), refer to “Control Module I/O Signal” of “KEYLESS ENTRY (DIAGNOSTICS)” section. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Control Module I/O Signal>ELECTRICAL SPECIFICATION.

SECURITY AND LOCKS > Keyless Entry System

INSPECTION

For inspection, refer to “Basic Diagnostic Procedure” of “KEYLESS ENTRY (DIAGNOSTICS)” section. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Basic Diagnostic Procedure.

WIRING DIAGRAM

Refer to "Keyless Access With Push Button Start System" in WI section. Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

ELECTRICAL SPECIFICATION

For the specification (electrical component), refer to "Control Module I/O Signal" of "KEYLESS ACCESS WITH PUSH BUTTON START (DIAGNOSTICS)" section. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

INSPECTION

1. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

For inspection, refer to "Basic Diagnostic Procedure" of "KEYLESS ACCESS WITH PUSH BUTTON START (DIAGNOSTICS)" section. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Basic Diagnostic Procedure.

2. IGNITION/ACC CHANGE FUNCTION CHECK

1. Check push button ignition switch function
   (1) Check the change control through push button ignition switch, brake pedal operation, and shift position.
   - CVT model

Shift lever position	Brake pedal operation	Push button ignition switch operation
P	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → Ignition switch OFF
P	Released	Engine running → Ignition switch OFF
P	Depressed	Ignition switch OFF → Engine started
P	Depressed	ACC ON → Engine started
P	Depressed	Ignition switch ON → Engine started
P	Depressed	Engine running → Ignition switch OFF
N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
N	Released	Engine running → ACC ON
N	Depressed	Ignition switch OFF → Engine started
N	Depressed	ACC ON → Engine started
N	Depressed	Ignition switch ON → Engine started
N	Depressed	Engine running → ACC ON
Except for P and N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
Except for P and N	Released	Engine running → ACC ON
Except for P and N	Depressed	Ignition switch OFF → Ignition switch ON

Shift lever position	Brake pedal operation	Push button ignition switch operation
Except for P and N	Depressed	ACC ON → Ignition switch ON
Except for P and N	Depressed	Engine running → ACC ON

- MT model

Shift lever position	Brake pedal operation	Push button ignition switch operation
—	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → Ignition switch OFF
	Released	Engine running → Ignition switch OFF
	Depressed	Ignition switch OFF → Engine started
	Depressed	ACC ON → Engine started
	Depressed	Ignition switch ON → Engine started
	Depressed	Engine running → Ignition switch OFF

(2) Check the changeover functions other than push button ignition switch operation.
With ACC ON or the ignition switch ON, and the shift lever in "P" position, check that ACC is ON or Ignition switch is ON → Ignition switch is OFF when the vehicle is left for 1 hour or more.

(3) If the inspection result indicates an improper operation, check the push button start system.
Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>LIST > POWER SUPPLY SWITCHING SYSTEM.

2. Check power status display

(1) Check the power indicator display of the push button ignition switch.

Note:

∗1: Key collation is normal, and the stop light switch (CVT) is ON.

Indicator display

Push button ignition switch status	Indicator lighting status
Ignition switch OFF (except for condition ∗1)	Light OFF
ACC ON (except for condition ∗1)	Orange light
Ignition switch ON (except for condition ∗1)	Orange light
Engine start standby (∗1)	Green light
After engine is started	Light OFF

(2)If the inspection result indicates an improper operation, check the push button start system.
Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>LIST > POWER SUPPLY SWITCHING SYSTEM.

Note:

The indicator blinks if any of the following malfunctions are detected.

Detected malfunction	Indicator lighting status
Steering lock stuck	Green blinking
Steering lock CM internal malfunction	Orange blinking
Keyless access CM internal malfunction	Orange blinking
Vehicle speed signal malfunction	Orange blinking

SECURITY AND LOCKS > Security System

WIRING DIAGRAM

Refer to “Security System” in the wiring diagram. Ref. to WIRING SYSTEM>Security System>WIRING DIAGRAM.

SECURITY AND LOCKS > Security System

ELECTRICAL SPECIFICATION

For the specification (electrical component), refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. Ref. to BODY CONTROL(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

SECURITY AND LOCKS > Security System

INSPECTION

1. BASIC DIAGNOSTIC PROCEDURE

1. INITIAL CHECK.

Check the keyless entry system or keyless access with push button start system.

Does the keyless entry system or keyless access with push button start system operate normally?

Yes — Go to 2.

No — Check the keyless entry system or keyless access with push button start system.

- Keyless entry system: Ref. to KEYLESS ENTRY(DIAGNOSTICS) >General Description>INSPECTION.
- Keyless access with push button start system: Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>INSPECTION.

2. CHECK SECURITY ON/OFF SETTING.

1. Remove the key from ignition switch or turn the ignition switch to OFF, and close all doors.
2. Check the status of security indicator light.
3. Press the LOCK button of the keyless transmitter or access key.
4. Check the security indicator light blinking patterns.

Is the security indicator light blinking patterns as follows?
• Before pressing the LOCK button: Blinks once within 3 seconds
• After pressing the LOCK button: When monitoring lag is set to 0 second, blinks twice within 0.5 seconds in 2 second intervals. When monitoring lag is set to 30 seconds: Blinks once every 0.4 seconds continuously for 30 seconds, then blinks twice every 0.5 seconds at 2 second intervals.

Yes — Go to 4.

No — Go to 3.

3. CHANGE SETTING OF SECURITY SYSTEM.

Change the setting of security system to ON using Subaru Select Monitor. Ref. to SECURITY AND LOCKS>Security System>INSPECTION > SECURITY SYSTEM ON/OFF SETTING.

Is setting change completed correctly?

Yes — Go to 4.

No — Check Subaru Select Monitor communication, and if there is no problem, replace the body integrated unit.

- Inspection: Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.
- Replacement: Ref. to SECURITY AND LOCKS>Body Integrated Unit.

4. CHECK SECURITY SYSTEM OPERATION.

1. Remove the key from ignition switch or turn the ignition switch to OFF, and close all doors.
2. Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds.
3. Check the security indicator light blinking patterns.

Does the security indicator light blink twice within 0.5 seconds in 2 second intervals?

Yes — Go to 5.

No — Check the security indicator light. Ref. to IMMOBILIZER (DIAGNOSTICS)>Warning Light Illumination Pattern>INSPECTION.

5. CHECK SECURITY ALARM OPERATION.

1. Operate the driver's door lock switch to the UNLOCK side.
2. Open any door, trunk lid or rear gate.

Does the security alarm operate when opening any door, trunk lid, or rear gate?

Yes — Go to 6.

No — Check the following parts. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

- Door switches
- Trunk lid latch switch
- Rear gate latch switch

6. CHECK SECURITY ALARM OPERATION.

Check the security alarm operation status.

During the operation, does the horn keep sounding and the hazard light blink?

Yes — Go to 7.

No — Check the following parts.

- Horn: Ref. to SECURITY AND LOCKS>Security System>INSPECTION > CHECK HORN.
- Hazard light: Ref. to SECURITY AND LOCKS>Security System>INSPECTION > CHECK HAZARD LIGHT OPERATION.

7. CHECK SECURITY ALARM CANCEL OPERATION.

Press the LOCK button of the transmitter or access key while the security alarm is operating.

Do the horn sound and the blinking of the hazard light stop?

Yes — Go to 8.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

8. CHECK SECURITY SYSTEM CONDITION MEMORY.

1. Remove the key from ignition switch or turn the ignition switch to OFF, and close all doors.
2. Open the front hood.
3. Press the LOCK button on the keyless transmitter or access key, then wait for 30 seconds.
4. Disconnect the ground cable from battery.
5. Connect the ground cable to battery.
6. Check the status of security indicator light.

Does the security indicator light blinks twice within 0.5 seconds at 2 second intervals?

Yes — Go to 9.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

9. CHECK SECURITY SYSTEM MANUAL ON/OFF SETTING.

1. Press the UNLOCK button of the keyless transmitter or access key.
2. Change the setting of security system. Ref. to SECURITY AND LOCKS>Security System>INSPECTION > SECURITY SYSTEM ON/OFF SETTING.

Is setting change completed correctly?

Yes — Restore the security system settings to those before the diagnosis and finish the diagnosis.

No — Check the following parts.

- Ignition switch circuit: Ref. to SECURITY AND LOCKS>Ignition Key Lock>INSPECTION.
- Door lock switch circuit: Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR LOCK SWITCH.

Note:
If the horn sounds when the security is turned on (monitor condition) using the keyless transmitter or access key, check the function setting of the body integrated unit. As a cause, it is possible that the impact sensor present (ON) / not present (OFF) setting is set to ON in the customization function though there is no impact sensor. Ref. to BODY CONTROL(DIAGNOSTICS)>Customize.

2. CHECK SECURITY SYSTEM CONDITION MEMORY

1. Pull out the key from the ignition switch, or turn the ignition switch to OFF.
2. Close all the doors, trunk lid and rear gate.
3. Open the front hood.
4. Press the LOCK button of the keyless transmitter or access key.
   Note:
   Wait until the security indicator light blinks twice within 0.5 seconds at 2 second intervals.
   If the 30 second monitoring lag has been set, wait for 30 seconds.
5. Disconnect the battery ground terminal, and then reconnect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
6. Check that the security indicator light blinks twice within 0.5 seconds at 2 second intervals. When it does not blink, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

3. SECURITY SYSTEM ON/OFF SETTING

Note:
It can be set by [Security Alarm Setup] in unit customizing using Subaru Select Monitor. For detailed operation procedures, refer to "Application help".

1. Close all doors, trunk lid and rear gate, and sit down on the driver seat. Press the UNLOCK button of the keyless transmitter or access key.
2. Turn the ignition switch to ON.
3. Press the central door unlock switch and open the driver's door simultaneously. (Keep the central door unlock switch pressed down.)
4. When the condition in step 3) continues for 10 seconds, the system switches to a mode reverse to the current mode.

Setting	Horn activation	Meter display*1	Meter display*2
ON → OFF	2 times	[AL_OF]	[AL_oF]
OFF → ON	1 time	[AL_ON]	[AL_on]

*1: Model with color TFT meter
*2: Model with normal meter

4. CHECK DOOR SWITCH

For operation procedure, refer to "CHECK DOOR SWITCH" of "Keyless Entry System". Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > CHECK DOOR SWITCH.

5. CHECK SECURITY INDICATOR LIGHT CIRCUIT

For operation procedures, refer to "Warning Light Illumination Pattern" of "IMMOBILIZER (DIAGNOSTICS)" section. Ref. to BODY CONTROL(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

6. CHECK HORN

1. CHECK HORN OPERATION.

Check the horn sounds when the horn switch is pushed.

Does the horn sound?

Yes — Go to 2.

No — Check the horn circuit.

2. CHECK BODY INTEGRATED UNIT.

Select and perform the [Horn Output] using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Does the horn sound?

Yes — Horn circuit is OK.

No — Go to 3.

3. CHECK HORN RELAY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector of body integrated unit.
3. Remove the horn relay.
4. Check the harness between body integrated unit and horn relay.

Connector & terminal

(B280) No.24 — Horn relay No.4:

Is harness normal?

Yes — Check body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.

No — Repair or replace the harness.

7. CHECK HAZARD LIGHT OPERATION

For operation procedures, refer to "CHECK HAZARD LIGHT SYSTEM" of "LIGHTING SYSTEM". Ref. to LIGHTING SYSTEM>Turn Signal Light and Hazard Light System>INSPECTION > CHECK HAZARD

LIGHT OPERATION.

8. CHECK IGNITION SWITCH CIRCUIT

1. CHECK DATA MONITOR.

Display the data of [Battery Voltage] and [Ignition Power Supply Voltage] using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

Does the [Ignition Power Supply Voltage] indicate 0 V when the ignition switch is OFF, and fall within a range of ±1 V from the [Battery Voltage] when the ignition switch is ON?

Yes — The ignition switch input circuit is OK.

No — Go to 2.

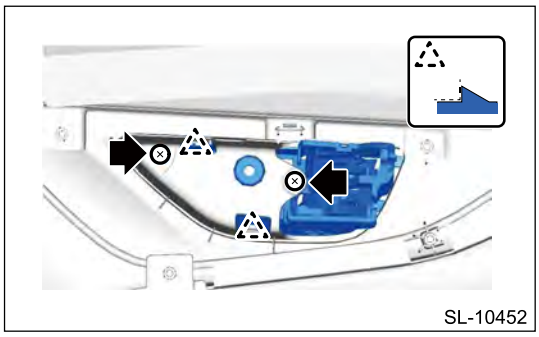
2. CHECK IGNITION SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector of body integrated unit.
3. Turn the ignition switch to ON.
4. Measure the voltage between the body integrated unit connector and chassis ground.

Connector & terminal

(B281) No. 3 (+) — Chassis ground (−):

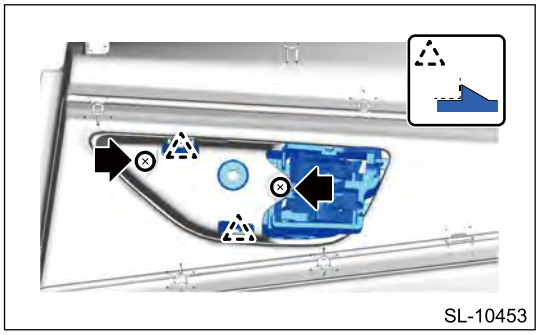
Is the voltage 10 V or more?



Yes — Check body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.

No — Check the harness for open or short circuit between body integrated unit and fuse.

REMOVAL



1. FRONT

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
3. Remove the remote assembly - front door.
   (1) Remove the screws.
   (2) Release the claws and guides, and remove the remote assembly - front door.

2. REAR

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
3. Remove the remote assembly - rear door.
   (1) Remove the screws.
   (2) Release the claws and guides, and remove the remote assembly - rear door.

INSTALLATION

1. FRONT

1. Before installation, check the following items.
   - Cable is free from deformation such as fray.
   - Grease is applied sufficiently to cable joints.
     If grease is insufficient, add it as necessary before assembling the cable.
2. Install the remote assembly - front door.
3. Install the trim panel - front door.

4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. REAR

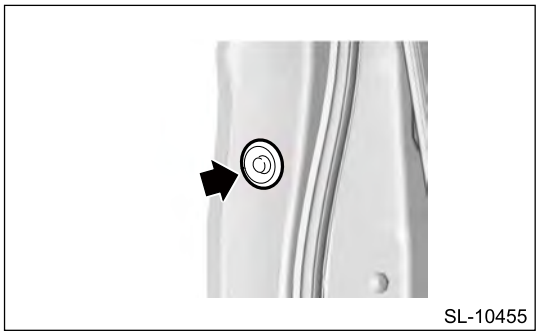
1. Before installation, check the following items.
   - Cable is free from deformation such as fray.
   - Grease is applied sufficiently to cable joints.
     If grease is insufficient, add it as necessary before assembling the cable.
2. Install the remote assembly - rear door.
3. Install the trim panel - rear door.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Door Inner Remote

INSPECTION

Check if the remote inner handle operates normally.

- If the lever is faulty, replace the remote assembly - door.
- If the cable is deformed, replace the latch & actuator assembly.

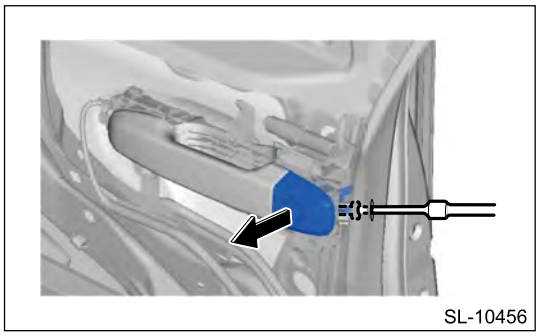


REMOVAL

1. FRONT

1. Raise the glass assembly - front door to the top position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
4. Remove the sealing cover - front door. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > FRONT SEALING COVER.
5. Remove the plate - door UPR.
   (1) Release the clips, and remove the plate - door UPR.

SL-10454



6. Remove the cover - handle front outer.
   (1) Remove the plug at the rear end of the panel assembly - front door.

SL-10455

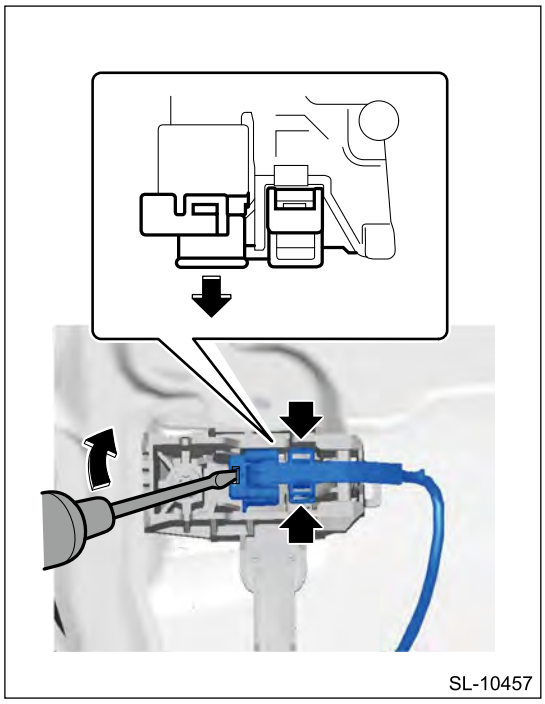
   (2) Loosen the TORX® bolt and remove the cover - handle front outer.

Preparation tool:

TORX® T30

SL-10456

Note:



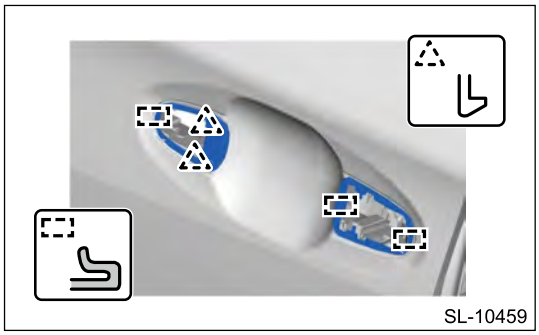
Since the key cylinder is not installed to the RH side, release the claws, and then remove the cover - handle front outer.

7. Remove the handle - front door outer.

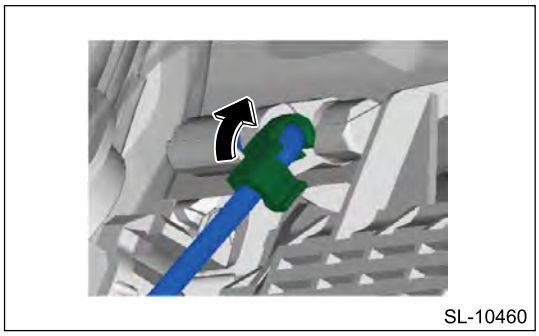
Note:

Do not apply excessive force to remove the handle - front door outer from the frame assembly - front door.

(1) For model with keyless access with push button start, disconnect the harness clip and exterior antenna (touch sensor) connector using a flat tip screwdriver or similar tool wrapped with protection tape.



(2) Remove the handle - front door outer by pulling it toward yourself and to the rear as shown in the figure.

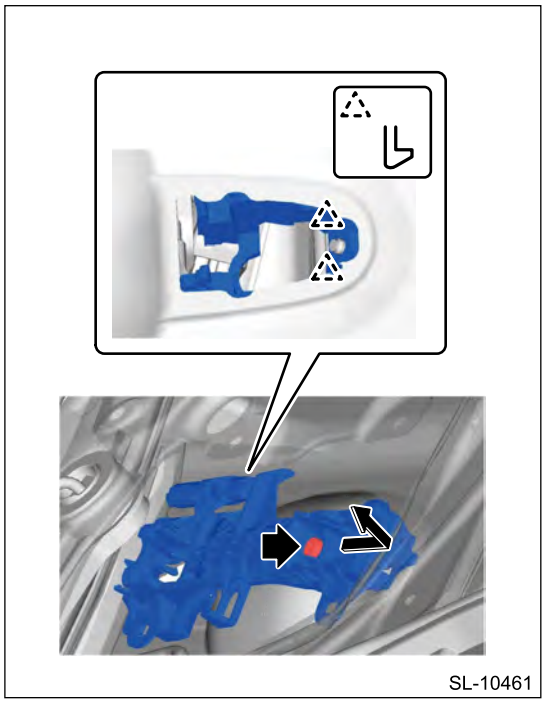


8. Remove the spacer - door handle outer.

(1) Release the claws and hooks, and remove the spacer - door handle outer A and B.

9. Remove the frame assembly - front door outer.

(1) Remove the rod clamp and remove the rod.



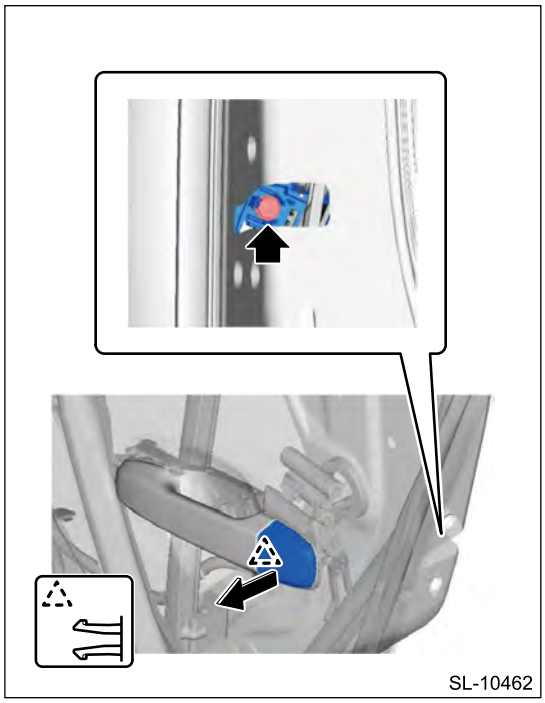
(2) Loosen the TORX® bolt.

Preparation tool:

TORX® T30

(3) Release the claws, and remove the frame assembly - front door outer as shown in the figure.

2. REAR



1. Raise the glass assembly - rear door to the top position.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
4. Remove the sealing cover - rear door. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > REAR SEALING COVER.
5. Remove the latch and actuator assembly - rear. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly>REMOVAL.
6. Remove the cover - handle rear outer.

(1) Loosen the TORX® bolt.

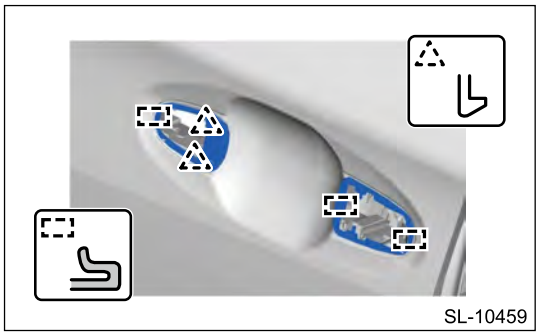
Preparation tool:

TORX® T30

(2) Release the claws, and then remove the cover - handle rear outer.

7. Remove the handle - rear door outer.

Caution:

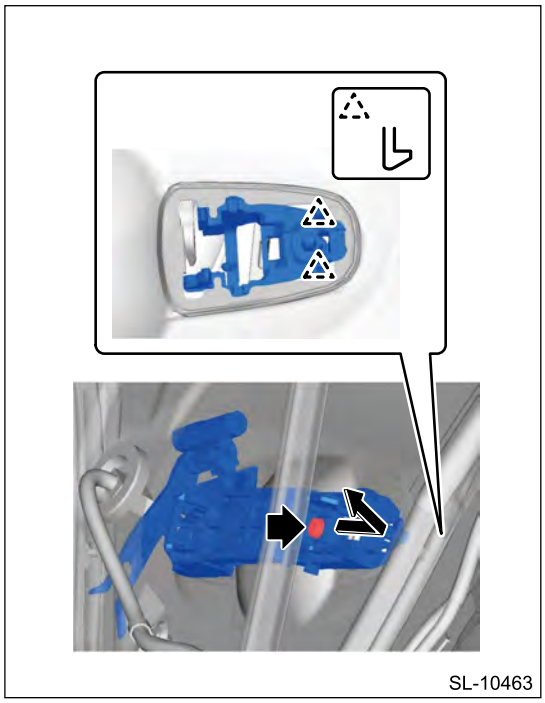


Do not apply excessive force to remove the handle - rear door outer from the frame assembly - rear door.

(1) Remove the handle - rear door outer by pulling it toward yourself and to the rear as shown in the figure.

8. Remove the spacer - door handle outer.

(1) Release the claws and hooks, and remove the spacer - door handle outer A and B.



9. Remove the frame assembly - rear door outer.

(1) Loosen the TORX® bolt and remove the frame assembly - rear door outer as shown in the figure.

Preparation tool:

TORX® T30

SECURITY AND LOCKS > Door Outer Handle

INSTALLATION

1. FRONT

1. Before installation, check the following items.
   - Rod is free from deformation.
   - Grease is applied sufficiently to rod joints.
     If grease is insufficient, add it as necessary before assembling the rod.
2. Install the frame assembly - front door outer.
   Preparation tool:
   TORX® T30
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the spacer - door handle outer A and B.
4. Install the handle - front door outer.
5. Install the cover - handle front outer.
   Caution:
   - **When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.**
   - **After installation, perform the operation check using the key.**

   Preparation tool:
   TORX® T30
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6. Install the plate - door UPR.
7. Install the sealing cover - front door.
8. Install the trim panel - front door.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. REAR

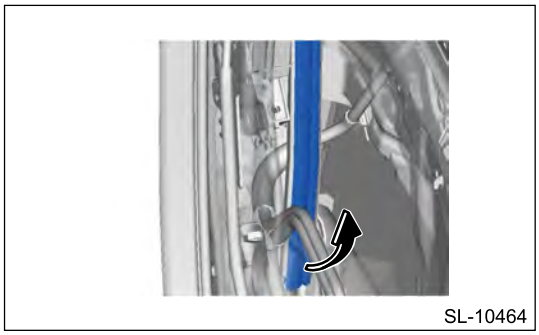
1. Before installation, check the following items.
   - Lever is free from deformation.
   - Grease is applied sufficiently to lever joints.
     If grease is insufficient, add it as necessary before assembling the lever.
2. Install the frame assembly - rear door outer.
   Preparation tool:
   TORX® T30
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the spacer - door handle outer A and B.
4. Install the handle - rear door outer.
5. Install the cover - handle rear outer.
   Preparation tool:
   TORX® T30
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6. Install the latch and actuator assembly - rear. Ref. to SECURITY AND LOCKS>Door Latch & Door Lock Actuator Assembly>INSTALLATION.
7. Install the sealing cover - rear door.
8. Install the trim panel - rear door.
9. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Door Outer Handle

INSPECTION

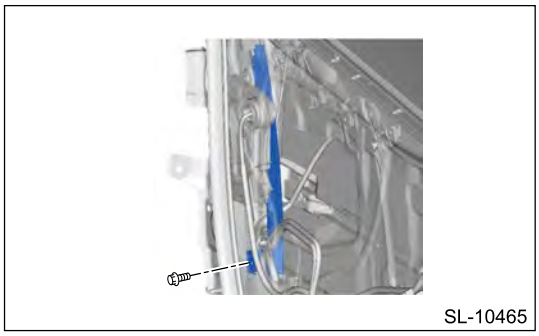
Check if the outer handle operates normally.

- If the handle joint portion is faulty, replace the handle - door outer or the frame assembly - door outer.
- If the rod or lever is deformed, replace the latch & actuator assembly.



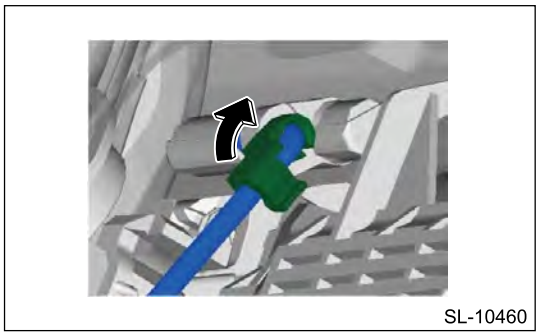
REMOVAL

1. FRONT



1. Raise the glass assembly - front door to the top position.
2. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the trim panel - front door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > FRONT DOOR.
4. Remove the sealing cover - front door. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > FRONT SEALING COVER.
5. Remove the plate - door UPR.
   (1) Release the clips, and remove the plate - door UPR.

SL-10454



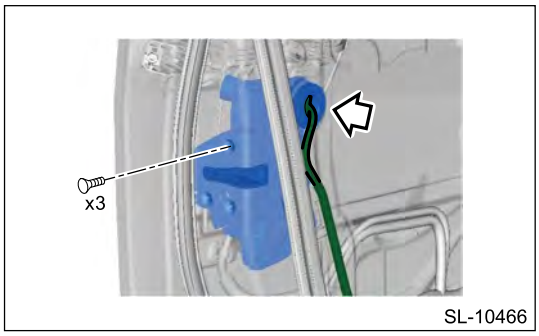
6. Remove the sash COMPL - lower.
   (1) Remove the lower side of the running channel - front door.

SL-10464

   (2) Remove the bolts, and remove the sash COMPL - lower.

SL-10465

7. Remove the latch and actuator assembly - front.
   (1) Remove the rod clamp and remove the rod.



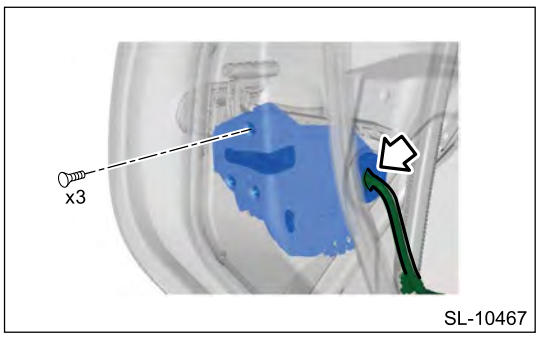
(2) Disconnect the connector.

(3) Remove the TORX® bolts to remove the latch & actuator assembly - front.

Preparation tool:

TORX® T30

2. REAR



1. Raise the glass assembly - rear door to the top position.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the trim panel - rear door. Ref. to EXTERIOR/INTERIOR TRIM>Door Trim>REMOVAL > REAR DOOR.
4. Remove the sealing cover - rear door. Ref. to EXTERIOR BODY PANELS>Sealing Cover>REMOVAL > REAR SEALING COVER.
5. Remove the latch and actuator assembly - rear.

   (1) Disconnect the connector.

   (2) Remove the TORX® bolts to remove the latch & actuator assembly - rear.

   Preparation tool:

   TORX® T30

SECURITY AND LOCKS > Door Latch & Door Lock Actuator Assembly

INSTALLATION

1. FRONT

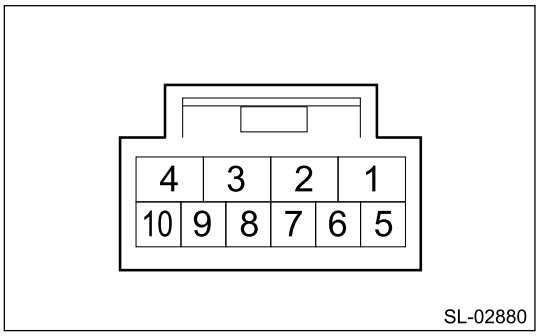
1. Before installation, check the following items.
   - Cable and rod are free from deformation.
   - Grease is applied sufficiently to cable and rod joints.
     If grease is insufficient, add it as necessary before assembling the cable and rod.
2. Install the latch and actuator assembly - front.
   Caution:
   Do not re-use the screws. Always replace with a new part.
   Preparation tool:
   TORX® T30
   Tightening torque:
   6.5 N·m (0.7 kgf-m, 5.2 ft-lb)
3. Install the sash COMPL - lower.
4. Install the plate - door UPR.
5. Install the sealing cover - front door.
6. Install the trim panel - front door.
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. REAR

1. Before installation, check the following items.
   - Cable and lever are free from deformation.
   - Grease is applied sufficiently to cable and lever joints.
     If grease is insufficient, add it as necessary before assembling the cable and lever.
2. Install the latch and actuator assembly - rear.
   Caution:
   Do not re-use the screws. Always replace with a new part.
   Preparation tool:
   TORX® T30
   Tightening torque:
   6.5 N·m (0.7 kgf-m, 5.2 ft-lb)
3. Install the sealing cover - rear door.
4. Install the trim panel - rear door.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Door Latch & Door Lock Actuator Assembly

INSPECTION



1. LATCH

Check if the latch operates normally.

- If latch deformation, abnormal wear, or unsmooth operation is observed, replace the latch & actuator assembly.
- If the cable, rod or lever is deformed, replace the latch & actuator assembly.

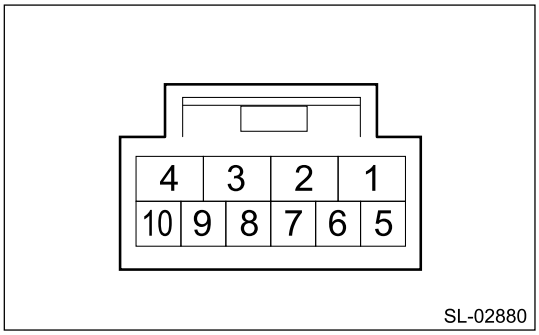
2. LOCK ACTUATOR

- **FRONT**
  1. Check door lock operation
     Check the door lock operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (−)	Apply battery voltage.	LOCK
1 (+) — 4 (−)		UNLOCK

2. Check of position switch (model with keyless access with push button start only)
Measure the resistance between connector terminals.

Preparation tool:



Circuit tester

Terminal No.	Inspection conditions	Standard
8 — 7	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

3. Replace the latch & actuator assembly - front if it is found defective.

- **REAR**

1. Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.

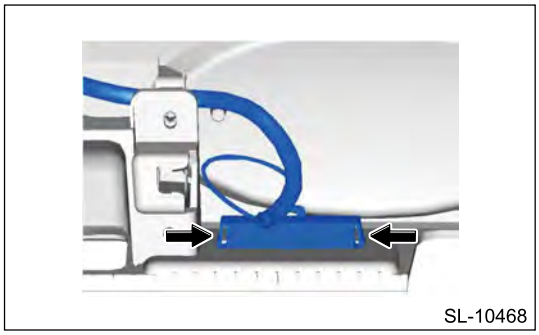
Terminal No.	Inspection conditions	Specification
4 (+) — 1 (−)	Apply battery voltage.	LOCK
1 (+) — 4 (−)		UNLOCK

2. If it does not operate properly as a result of inspection, replace the latch & actuator assembly - rear.

SECURITY AND LOCKS > Rear Gate Opener Button

REMOVAL

Note:



The button - opener rear gate of the model with keyless access with push button start is integrated with the rear lock button. For operation procedures, refer to "Rear Lock Button". Ref. to SECURITY AND LOCKS>Rear Lock Button>REMOVAL.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the garnish assembly - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Garnish>REMOVAL.
4. Remove the button - opener rear gate.

   Caution:

   When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

   (1) Remove the button - opener rear gate by pressing the lock portions on both sides.

SECURITY AND LOCKS > Rear Gate Opener Button

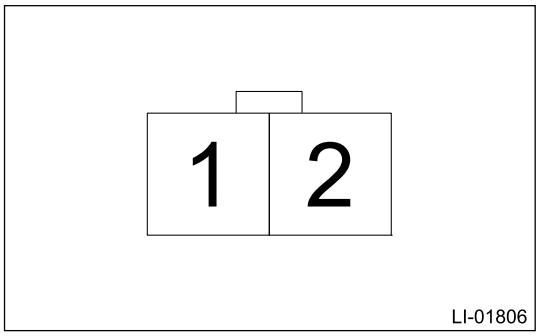
INSTALLATION

Caution:

Make sure that the harness grommet of the garnish assembly - rear gate is securely installed. If not properly installed, this may cause leaks.

1. Install the switch - opener rear gate.
2. Install the garnish assembly - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Garnish>INSTALLATION.
3. Install the trim panel - rear gate.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Rear Gate Opener Button



INSPECTION

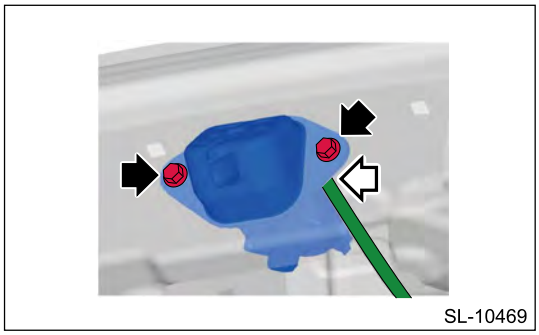
1. Measure the resistance between connector terminals.

   Preparation tool:

   Circuit tester

   - Keyless entry model

- Model with keyless access with push button start



Terminal No.	Inspection conditions	Standard
1 — 2	When the switch is not pressed (CLOSE)	1 MΩ or more
	When the switch is pressed (OPEN)	Less than 5 Ω

2. If the inspection result is not within the standard, replace the button - opener rear gate.

SECURITY AND LOCKS > Rear Gate Latch and Actuator Assembly

REMOVAL

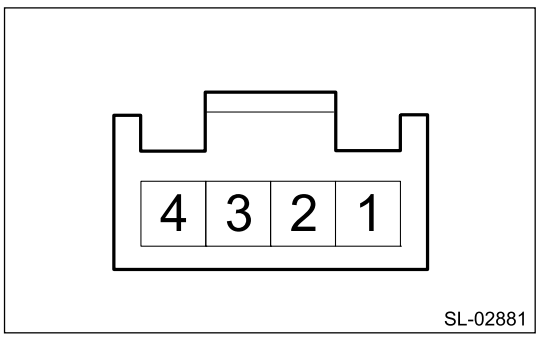
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the latch and actuator - rear gate.
   (1) Disconnect the connector.
   (2) Remove the bolts, and remove the latch and actuator - rear gate.

SECURITY AND LOCKS > Rear Gate Latch and Actuator Assembly

INSTALLATION

1. Install the latch and actuator - rear gate.
   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)
2. Install the trim panel - rear gate.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Rear Gate Latch and Actuator Assembly



INSPECTION

1. LATCH

Check if the latch operates normally.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the latch and actuator - rear gate.

2. ACTUATOR

1. Check door lock operation
   Check the door lock operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Specification

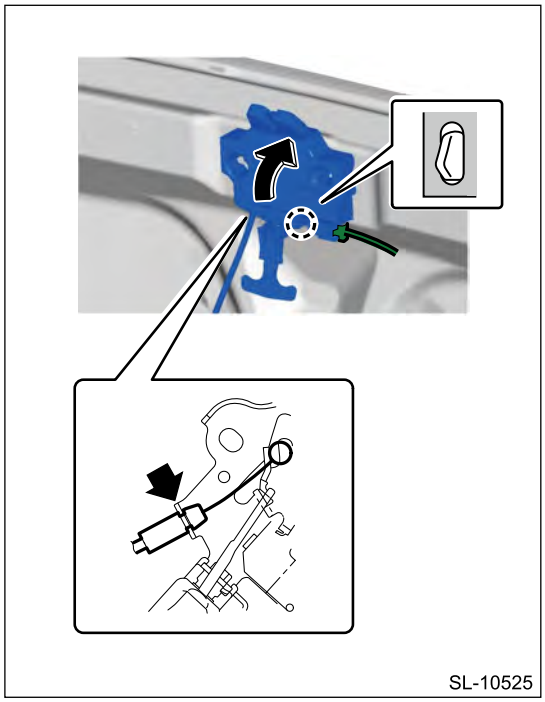
Terminal No.	Inspection conditions	Specification
1 (+) — 2 (−)	Connect battery to the terminals	OPEN

2. Check switch

Measure the resistance between connector terminals.

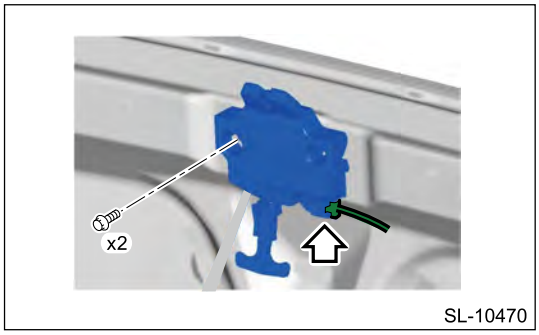
Preparation tool:

Circuit tester



Terminal No.	Inspection conditions	Standard
3 — 4	LOCK	1 MΩ or more
	UNLOCK	Less than 1.5Ω

3. Replace the latch and actuator - rear gate if it is found defective.



SECURITY AND LOCKS > Trunk Lid Latch and Actuator Assembly

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the lock assembly - trunk lid.
   (1) Release the claws, and open the cover of the lock assembly - trunk lid.
   (2) Remove the cable assembly - trunk lid from the lock assembly - trunk lid.

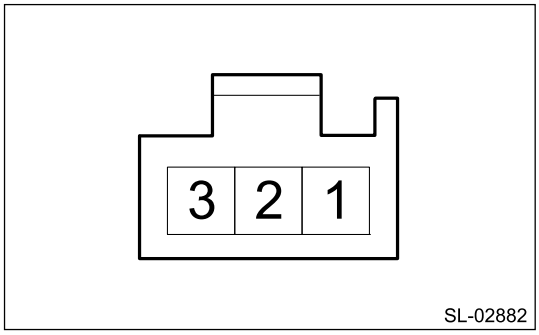
   (3) Disconnect the connector.
   (4) Remove the bolts, then remove the lock assembly - trunk lid.

SECURITY AND LOCKS > Trunk Lid Latch and Actuator Assembly

INSTALLATION

1. Install the lock assembly - trunk lid.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the cable assembly - trunk lid.
3. Install the trim panel - trunk lid.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Trunk Lid Latch and Actuator Assembly



INSPECTION

1. LATCH

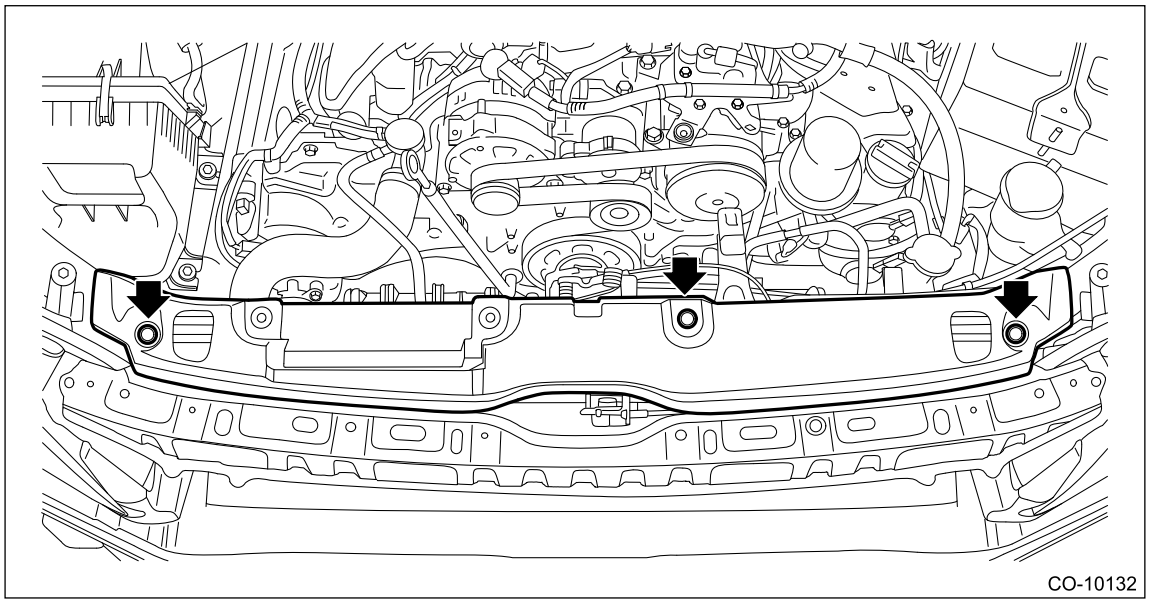
Check if the latch operates normally.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - trunk lid.

2. ACTUATOR

1. Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.

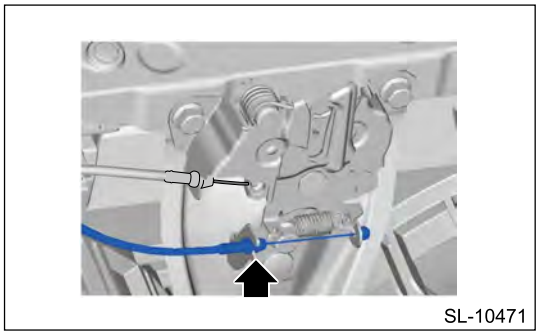
Terminal No.	Inspection conditions	Specification
1 (+) — 2 (−)	Connect battery to the terminals	LOCK → UNLOCK

2. Check switch
Measure the resistance between connector terminals.
Preparation tool:
Circuit tester



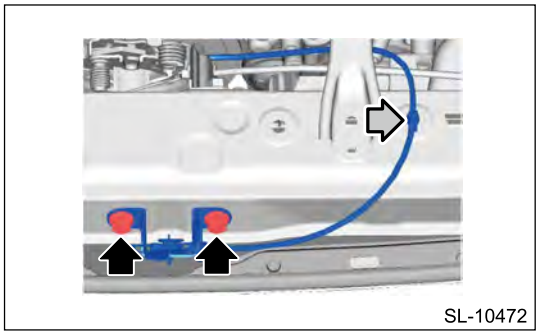
Terminal No.	Inspection conditions	Standard
2 — 3	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

3. Replace the lock assembly - trunk lid if it is found defective.



REMOVAL

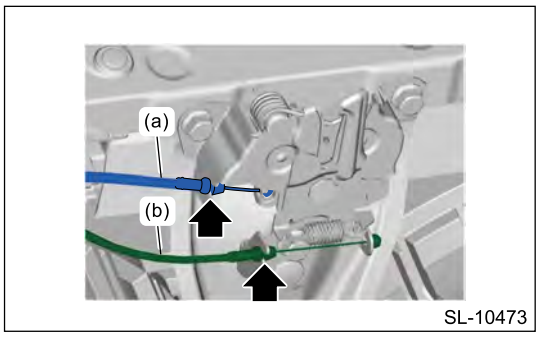
1. LEVER ASSEMBLY



1. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.
2. Remove the cover UPR - front.
   (1) Remove the clips, and remove the cover UPR - front.

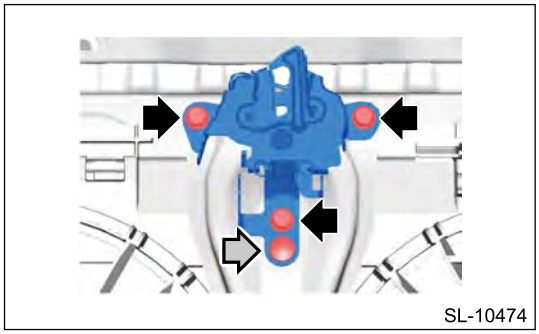
3. Remove the lever assembly - safety.
   (1) Disconnect the cable - safety from the lock assembly - front hood.

   (2) Remove the clip of the cable - safety.
   (3) Remove the bolts, and remove the lever assembly - safety.



2. LOCK ASSEMBLY

1. Remove the air intake duct. Ref. to INTAKE (INDUCTION)(H4DO)>Air Intake Duct>REMOVAL.



2. Remove the cover UPR - front.
   (1) Remove the clips, and remove the cover UPR - front.

3. Remove the lock assembly - front hood.
   (1) Remove the cable - front hood (a) and the cable - safety (b).

   (2) Remove the bolts and clips, and remove the lock assembly - front hood.

SECURITY AND LOCKS > Front Hood Lock Assembly

INSTALLATION

1. LEVER ASSEMBLY

1. Before installation, check the following items.
   - Is the cable deformed?
   - Grease is applied sufficiently to cable joints.
     If grease is insufficient, add it as necessary before assembling the cable.
2. Install the lever assembly - safety.

Tightening torque:

18 N·m (1.8 kgf-m, 13.3 ft-lb)

3. Install the cable - safety.
4. Install the cover UPR - front.
5. Install the air intake duct.

2. LOCK ASSEMBLY

1. Before installation, check the following items.
   - Is the cable deformed?
   - Grease is applied sufficiently to cable joints.

   If grease is insufficient, add it as necessary before assembling the cable.
2. Adjust and install the lock assembly - front hood.

   Note:

   Refer to "ADJUSTMENT" of the lock assembly - front hood. Ref. to SECURITY AND LOCKS>Front Hood Lock Assembly>ADJUSTMENT.

   Tightening torque:

   33 N·m (3.4 kgf-m, 24.3 ft-lb)
3. Install the cable - front hood and the cable - safety.
4. Install the cover UPR - front.
5. Install the air intake duct.
6. Check the clearance and surface level gap between hood COMPL - front and bumper face front, and adjust if it is outside the standard value. Ref. to EXTERIOR BODY PANELS>Front Hood>ADJUSTMENT.

SECURITY AND LOCKS > Front Hood Lock Assembly

ADJUSTMENT

1. Remove the clips of the lock assembly - front hood.

   Note:

   After adjusting the lock assembly - front hood, dispose the clips since they are no longer needed.

   The clips cannot be inserted because the clip holes become smaller due to adjustment.
2. Loosen the bolt, and adjust the lock assembly - front hood while moving it up and down.

   Caution:

   After adjustment, tighten the bolts securely.

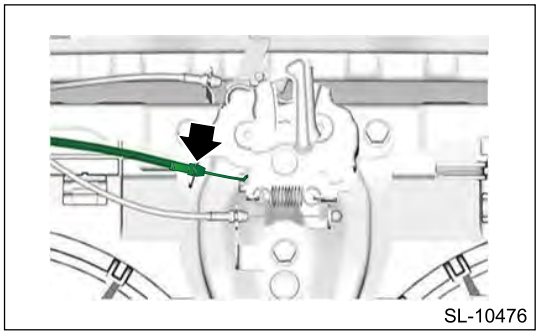
   Tightening torque:

   33 N·m (3.4 kgf-m, 24.3 ft-lb)

Note:

Check the clearance and surface level gap between hood COMPL - front and bumper face front. Ref. to EXTERIOR BODY PANELS>Front Hood>ADJUSTMENT.

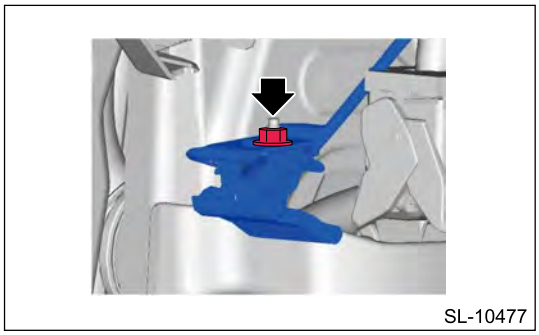
INSPECTION



Check if the lever assembly and lock assembly operate normally.

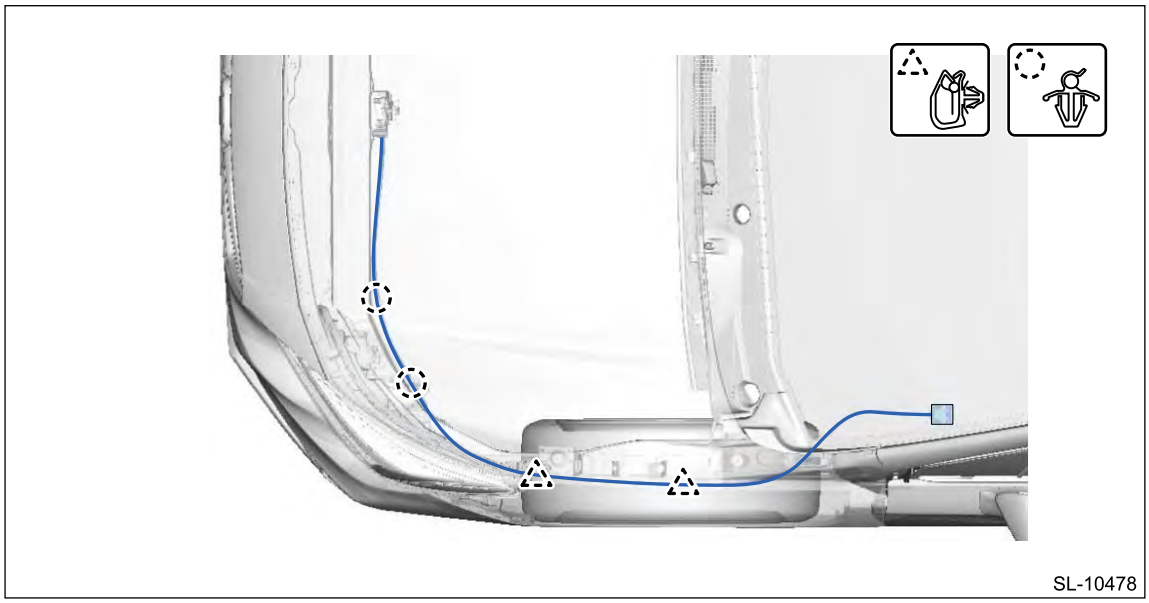
- If deformation or unsmooth operation of the lever is observed, replace the lever assembly - safety.
- If deformation, abnormal wear, or unsmooth lock operation of the latch is observed, replace the lock assembly - front hood.

REMOVAL



1. FRONT HOOD OPENER

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver OUT. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the mud guard - front LH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>REMOVAL.
4. Remove the cable - front hood.
   (1) Remove the cable - front hood from the lock assembly - front hood, and then attach a string to the end of the cable - front hood.



SL-10476

Note:
A string makes operation easier during installation.

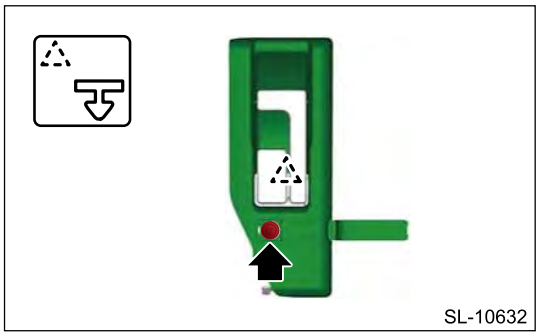
(2) Remove the nut.

SL-10477

(3) Remove the cable clip, and remove the cable - front hood.

(4) Remove the attached string from the end of the cable - front hood.

Note:

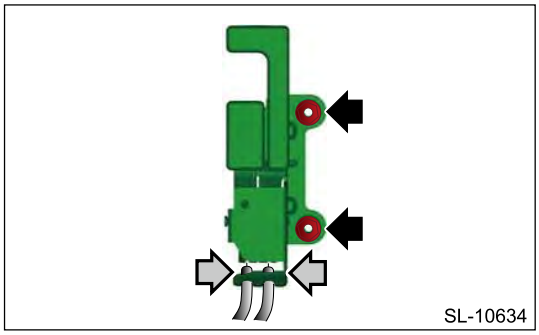


Leave the string attached to the body, and use it during installation.

2. TRUNK LID OPENER

1. Remove the cover - handle.

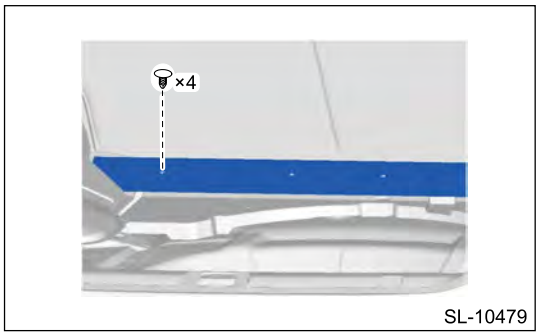
(1) Release the claws, and open the cover.



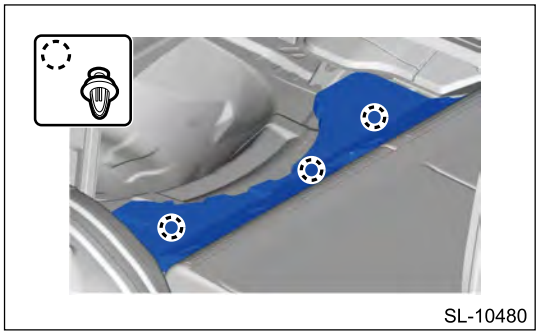
(2) Remove the screws and release the claws, then detach the cover - handle.

2. Remove the pull handle - opener.

(1) Remove the nut.

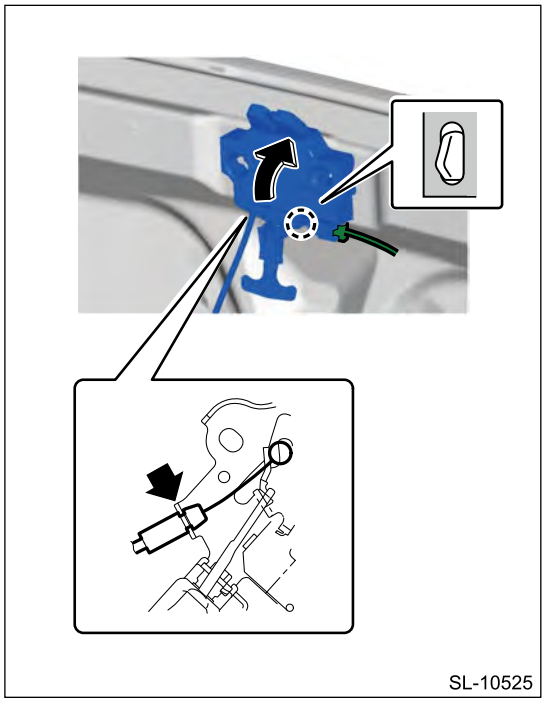


(2) Remove the cable assembly - trunk lid and the cable assembly - fuel from the pull handle - opener.



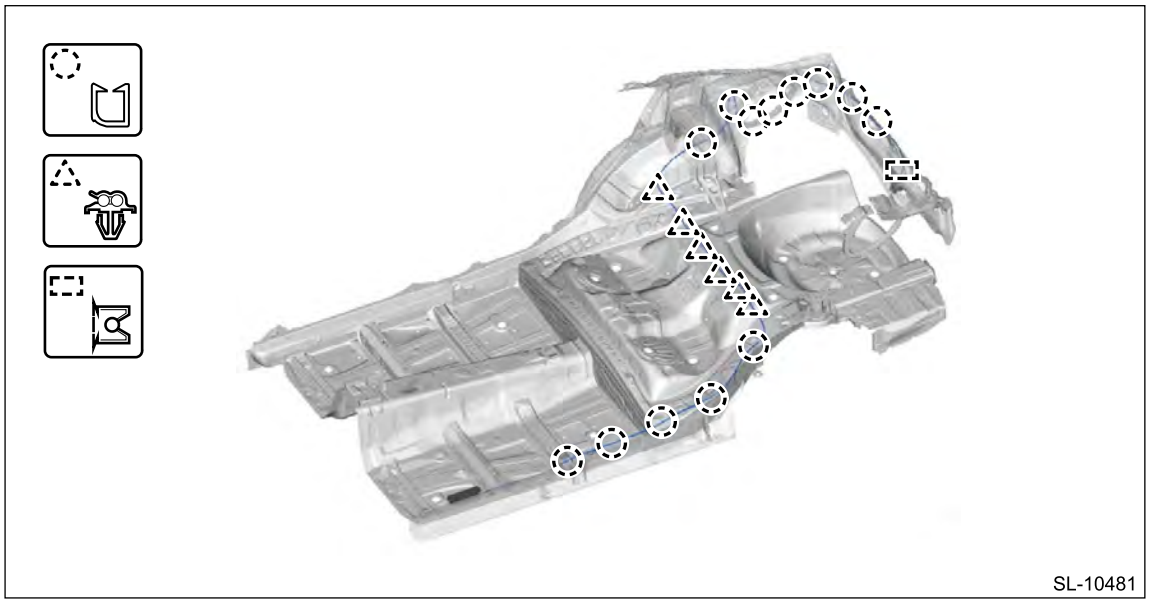
3. Remove the trim panel - trunk mat and the spacer - CTR.

4. Remove the spacer - rear floor front.

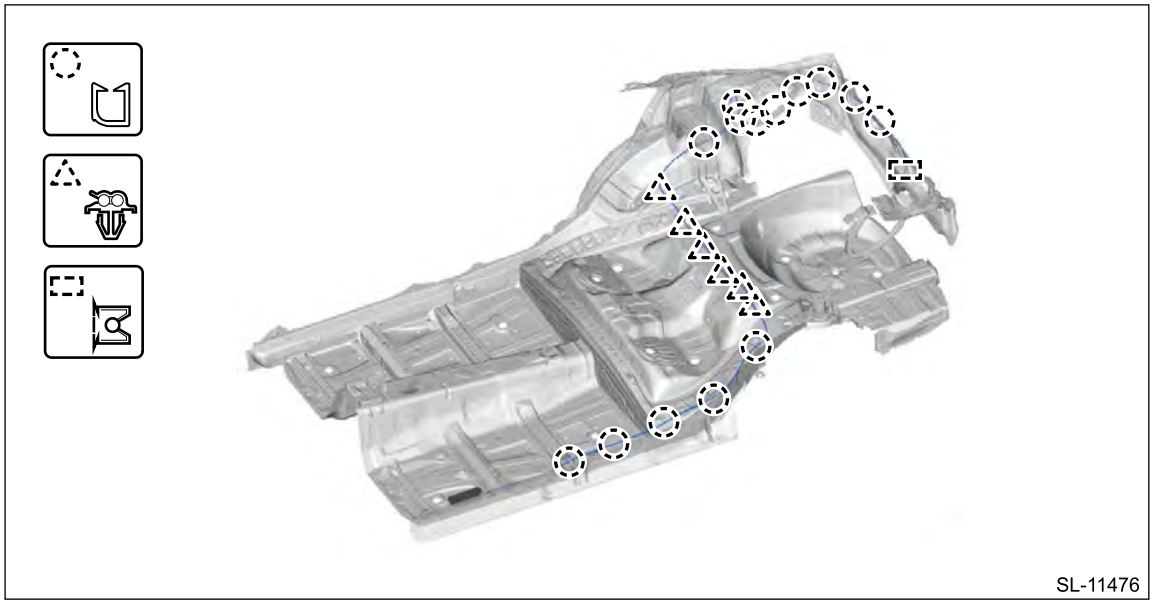


(1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.

(2) Release the clips, then detach the spacer - rear floor front.



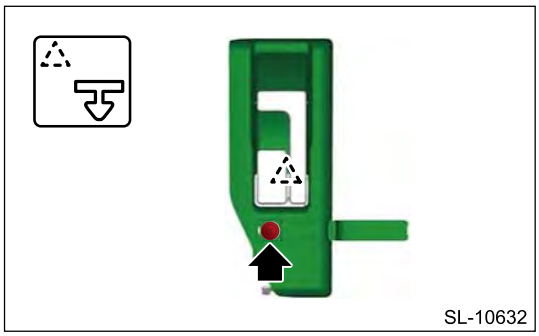
5. Remove the trim panel - trunk side RH and trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
6. Remove the lower inner trim. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
7. Remove the cable assembly - trunk lid.
   (1) Release the claws, and open the cover of the lock assembly - trunk lid.
   (2) Remove the cable assembly - trunk lid from the lock assembly - trunk lid.



(3) Remove the cable clip, and remove the cable assembly - trunk lid.

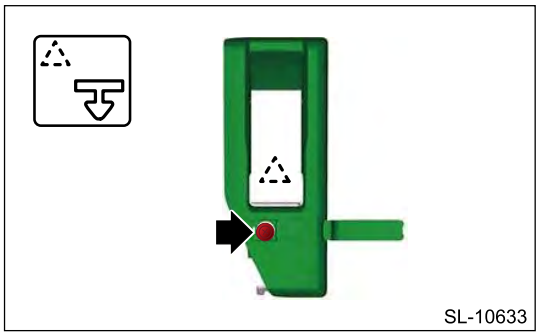
- Type A

- Type B



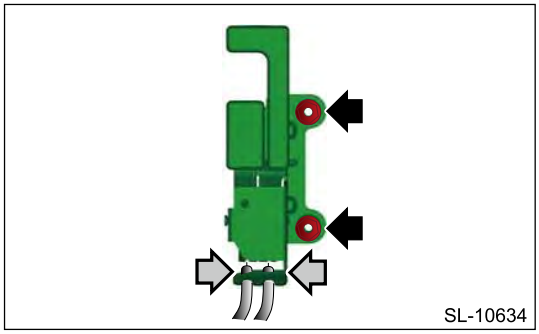
3. FUEL FLAP OPENER

1. Remove the cover - handle.

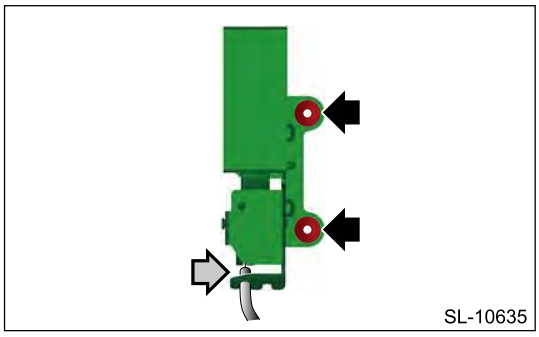


(1) Release the claws, and open the cover.

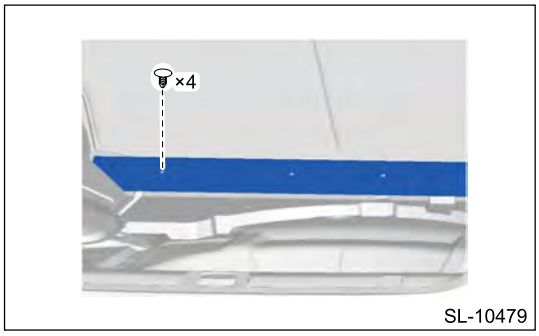
(2) Remove the screws and release the claws, then detach the cover - handle.



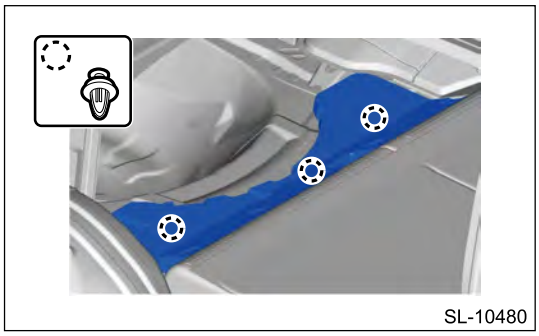
- 4 door model



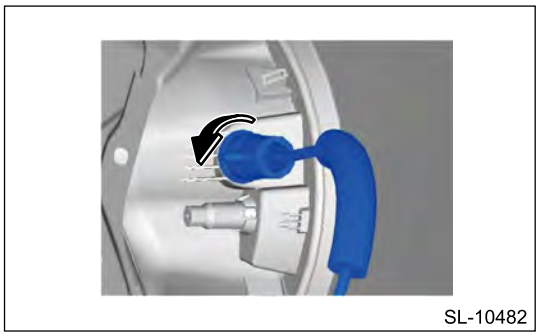
- 5 door model



2. Remove the pull handle - opener.
(1) Remove the nut.
(2) Remove the cable assembly - trunk lid or the cable assembly - fuel from the pull handle - opener.
- 4 door model

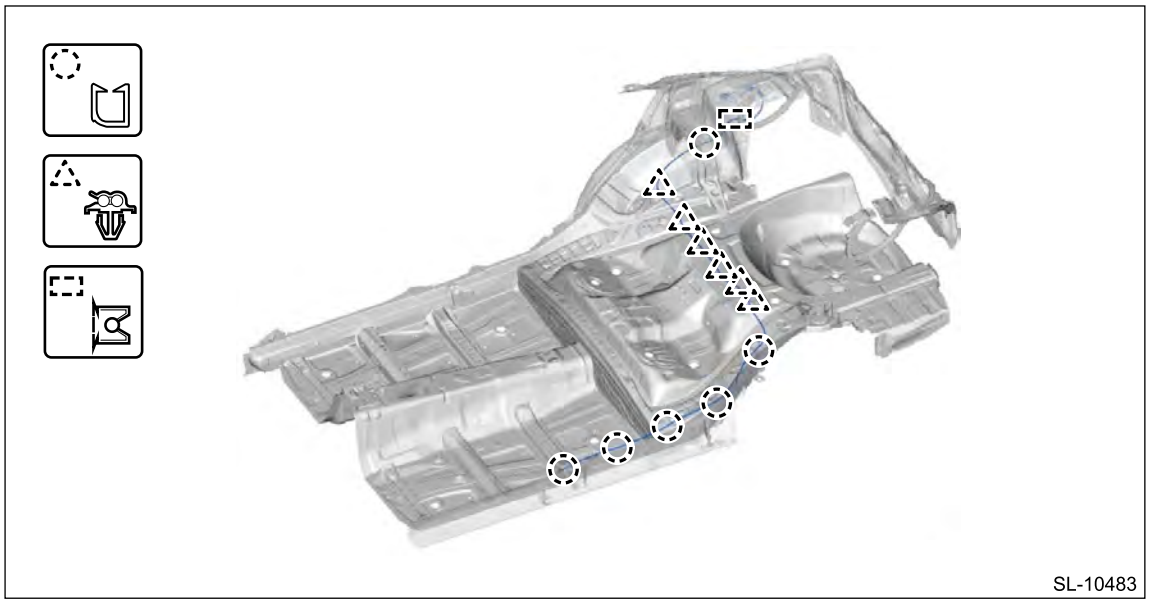


- 5 door model

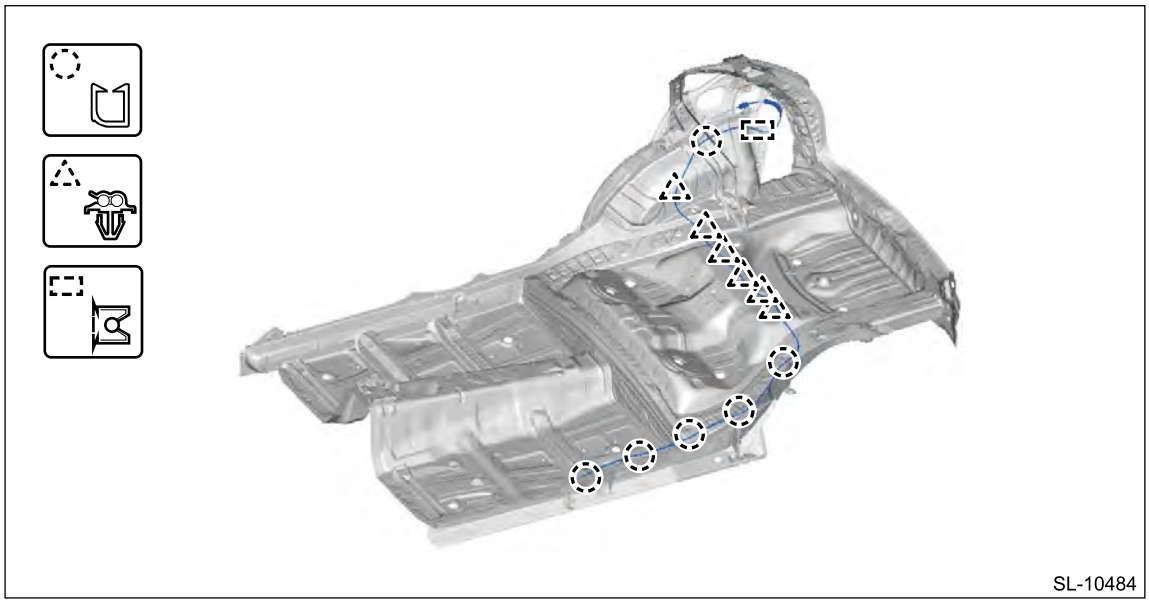


3. Remove the lower inner trim. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>REMOVAL.
4. Remove the trim panel - trunk mat and the spacer - CTR. (4 door model)
5. Remove the mat - floor rear, spacer - side LH, and spacer - side RH. (5 door model)
6. Remove the spacer - rear floor front.
(1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.

(2) Release the clips, then detach the spacer - rear floor front.

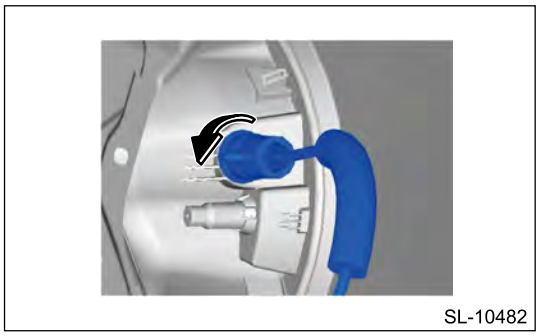


7. Remove the trim panel - trunk side RH. (4 door model) Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
8. Remove the trim panel - rear apron RH. (5 door model) Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
9. Remove the cable assembly - fuel.
   (1) Turn the cable assembly - fuel by 90 degrees, and pull it toward vehicle rear.

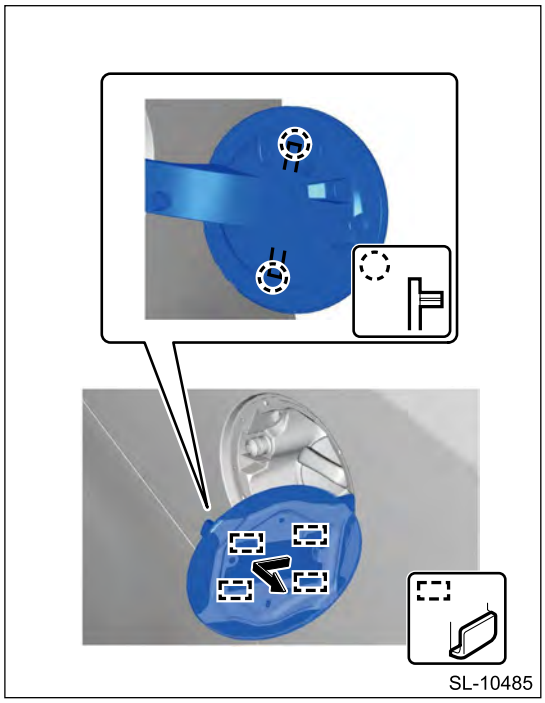


(2) Remove the cable clip, and remove the cable assembly - fuel.

- 4 door model



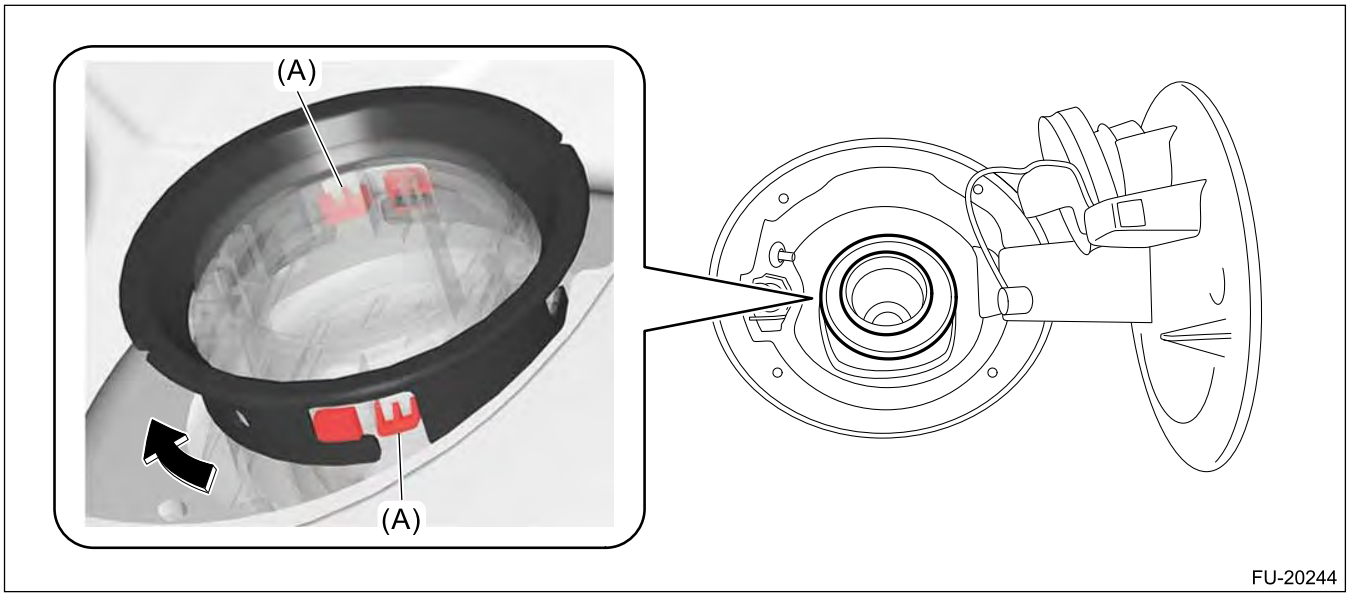
- 5 door model



4. FUEL FLAP

1. Remove the trim panel - trunk side RH. (4 door model) Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
2. Remove the trim panel - rear apron RH. (5 door model) Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL > 5 DOOR MODEL.
3. Remove the cable assembly - fuel.
   (1) Turn the cable assembly - fuel by 90 degrees, and pull it toward vehicle rear.

4. Remove the mud guard - rear RH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>REMOVAL.
5. Remove the drain filter assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Drain Filter>REMOVAL.
6. Remove the flap - COMPL fuel.
   (1) Release the claws using a flat tip screwdriver or similar tool wrapped with protection tape or a cloth.
   (2) With the condition of (1), slide the flap - COMPL fuel to vehicle rear as shown in the figure, and release the guide.



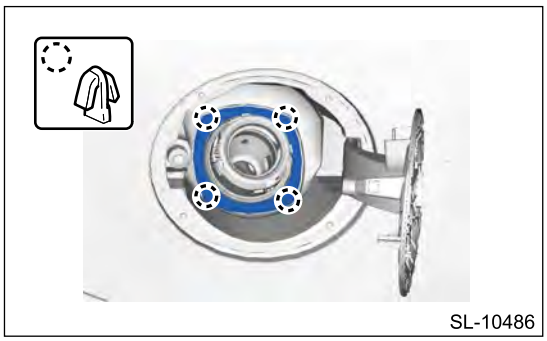
7. Remove the fuel filler cap.

Note:

The clip of the fuel filler cap cannot be reused, therefore, do not remove the clip unless the saucer - COMPL is replaced.

8. Remove the fuel filler pipe protector.

(1) While pressing the claw (A), turn the fuel filler pipe protector in the direction of the arrow to unlock and remove it.

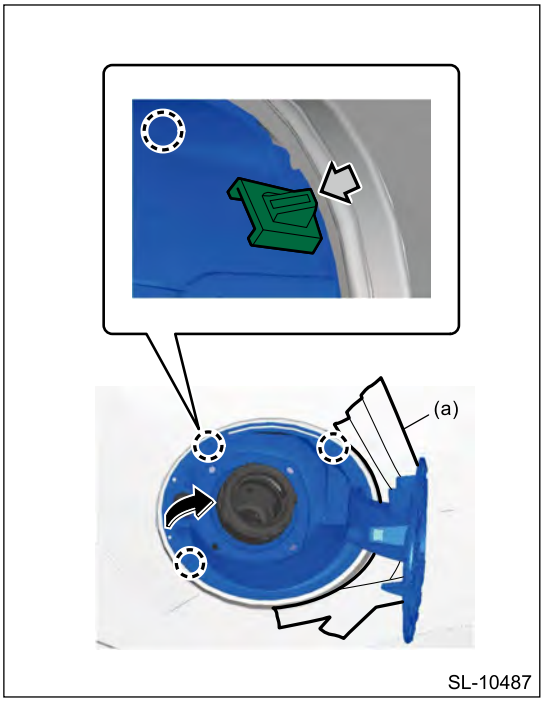


9. Disconnect the ring clips.

(1) Release the claws and then remove the ring clip.

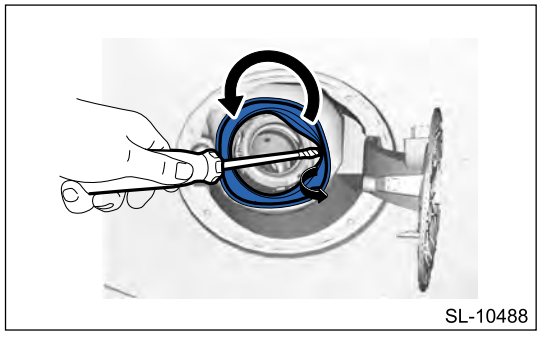
Caution:

Do not reuse the ring clip and replace with a new part, because engagement of the claw weakens.



10. Remove the saucer - COMPL.

Caution:



Be careful not to damage by forcibly prying at the rubber portion with a flat tip screwdriver or similar tool.

(1) Attach the protective tape (a) to the panel side outer.

(2) Release the claws from vehicle inside, and pull out the saucer - COMPL toward yourself.

(3) Remove the rubber portion from the fuel filler pipe using a flat tip screwdriver or similar tool wrapped with protection tape, and pull out the saucer - COMPL while tilting toward vehicle front.

INSTALLATION

1. FRONT HOOD OPENER

1. Before installation, check the following items.
   - Cable is free from deformation such as fray.
2. Install the cable - front hood.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
   Note:
   Pull the string attached to the cable - front hood into the vehicle, and install the cable clip and cable - front hood.
3. Install the mud guard - front LH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>INSTALLATION.
4. Install the cover assembly - instrument panel LWR driver OUT.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. TRUNK LID OPENER

1. Before installation, check the following items.
   - Cable is free from deformation such as fray.
2. Install the cable assembly - trunk lid.
3. Install the lower inner trim. Ref. to EXTERIOR/INTERIOR TRIM>Lower Inner Trim>INSTALLATION.
4. Install the trim panel - trunk side RH and the trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>INSTALLATION.
5. Install the spacer - rear floor front.
6. Install the trim panel - trunk mat and the spacer - CTR.
7. Install the pull handle - opener.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8. Install the cover - handle.

3. FUEL FLAP OPENER

1. Before installation, check the following items.
   - Cable is free from deformation such as fray.
2. Install the cable assembly - fuel.
3. Install the trim panel - rear apron RH. (5 door model) Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>INSTALLATION.
4. Install the trim panel - trunk side RH. (4 door model) Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>INSTALLATION.
5. Install the spacer - rear floor front.
6. Install the mat - floor rear, spacer - side LH, and spacer - side RH. (5 door model)
7. Install the trim panel - trunk mat and the spacer - CTR. (4 door model)
8. Install the lower inner trim.
9. Install the pull handle - opener.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
10. Install the cover - handle.

4. FUEL FLAP

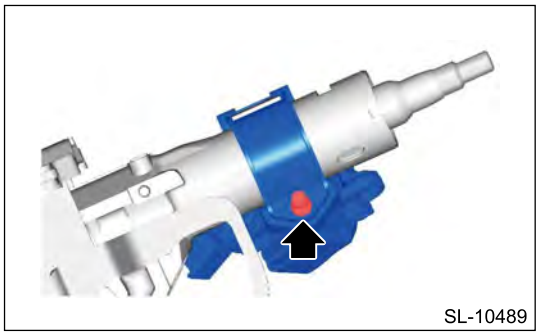
1. Install the saucer - COMPL.
   Note:
   Securely install the rubber portion of the saucer - COMPL to the fuel filler pipe assembly.
2. Attach the ring clips.
   Caution:
   Do not reuse the ring clip and replace with a new part, because engagement of the claw weakens.
3. Install the fuel filler pipe protector.
4. Install the fuel filler cap.
5. Install the flap - COMPL fuel.
6. Install the drain filter assembly. Ref. to EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)(H4DO)>Drain Filter>INSTALLATION.
7. Install the mud guard - rear RH. Ref. to EXTERIOR/INTERIOR TRIM>Mud Guard>INSTALLATION.
8. Install the cable assembly - fuel.
9. Install the trim panel - rear apron RH. (5 door model) Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>INSTALLATION.
10. Install the trim panel - trunk side RH. (4 door model) Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>INSTALLATION.

SECURITY AND LOCKS > Remote Openers

INSPECTION

Check if the front hood, fuel flap and trunk lid operate normally.

- If the lever or cable is deformed, replace the opener or cable assembly.
- If the flap is deformed, replace the flap - COMPL fuel.



SECURITY AND LOCKS > Ignition Key Lock

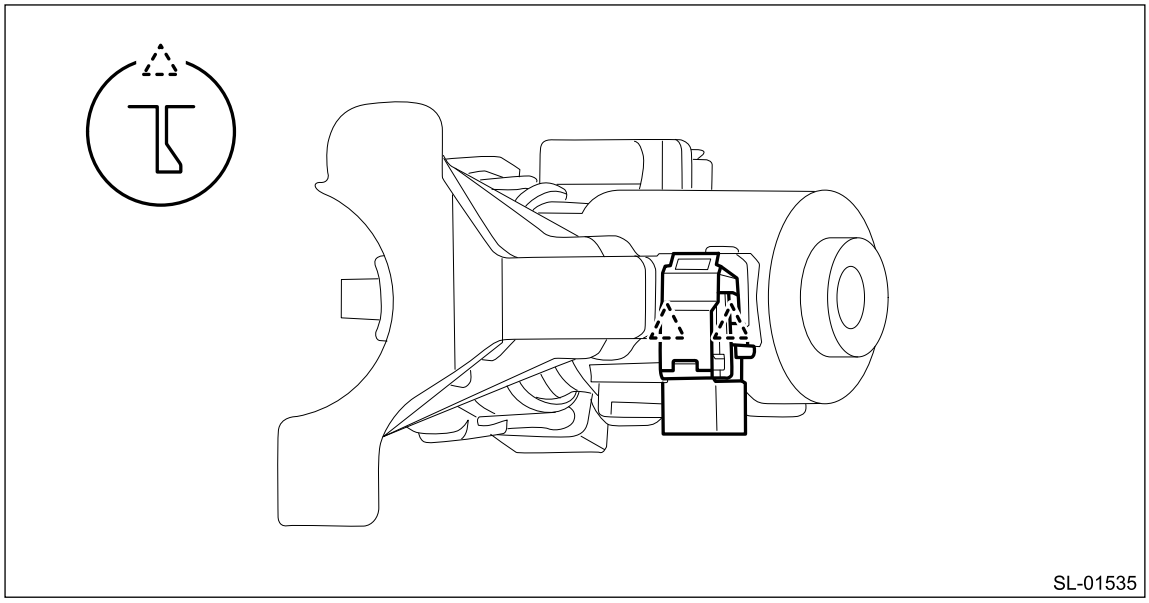
REPLACEMENT

Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**
- **If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>REMOVAL.
5. Remove the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
6. Remove the ignition key lock.
   (1) Secure the column assembly - steering in a vise.
   (2) Use the reverse tap and drill to remove the set bolt and remove the ignition key lock.

7. Install the ignition key lock.
   (1) Secure the ignition key lock to the column assembly - steering.
   (2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).
8. Install the column assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>INSTALLATION.
9. Install the universal joint assembly - steering. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Universal Joint>INSTALLATION.
10. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
11. Install the cover assembly - instrument panel LWR driver.
12. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



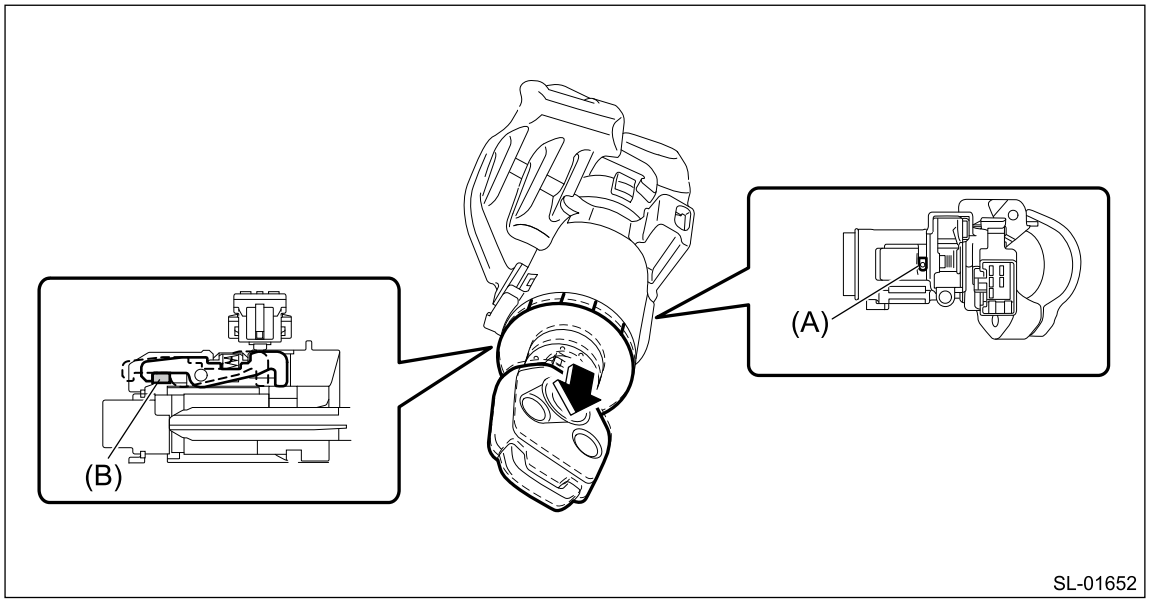
SECURITY AND LOCKS > Ignition Key Lock

DISASSEMBLY

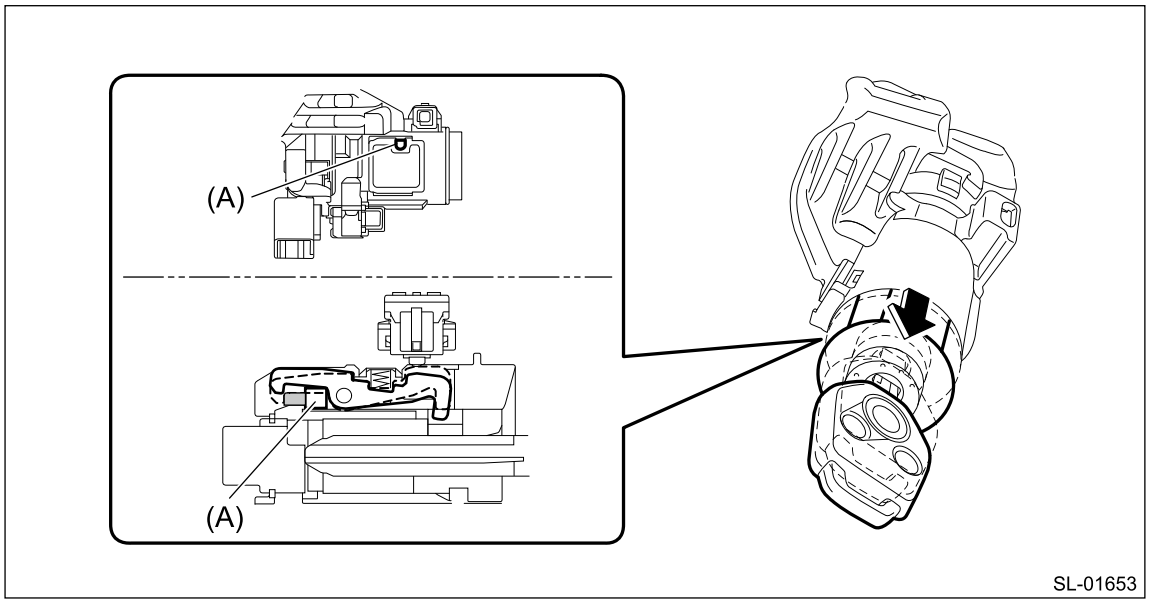
1. Remove the immobilizer antenna assembly. Ref. to SECURITY AND LOCKS>Immobilizer Antenna>REMOVAL.

2. Remove the key warning switch.

(1) Release the claws, and pull the key warning switch downwards to remove.

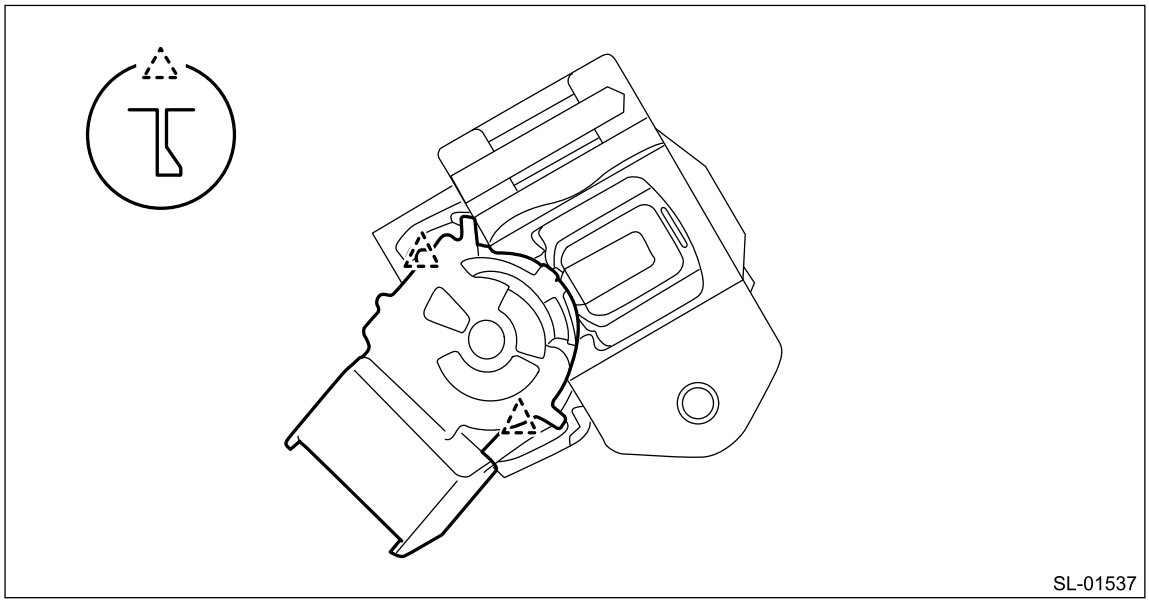


3. Remove the key lock assembly.



(1) Insert the key into the key lock assembly, and turn the key to the ACC position.

(2) Release the lock by inserting a flat tip screwdriver from the steering lock frame hole (A).

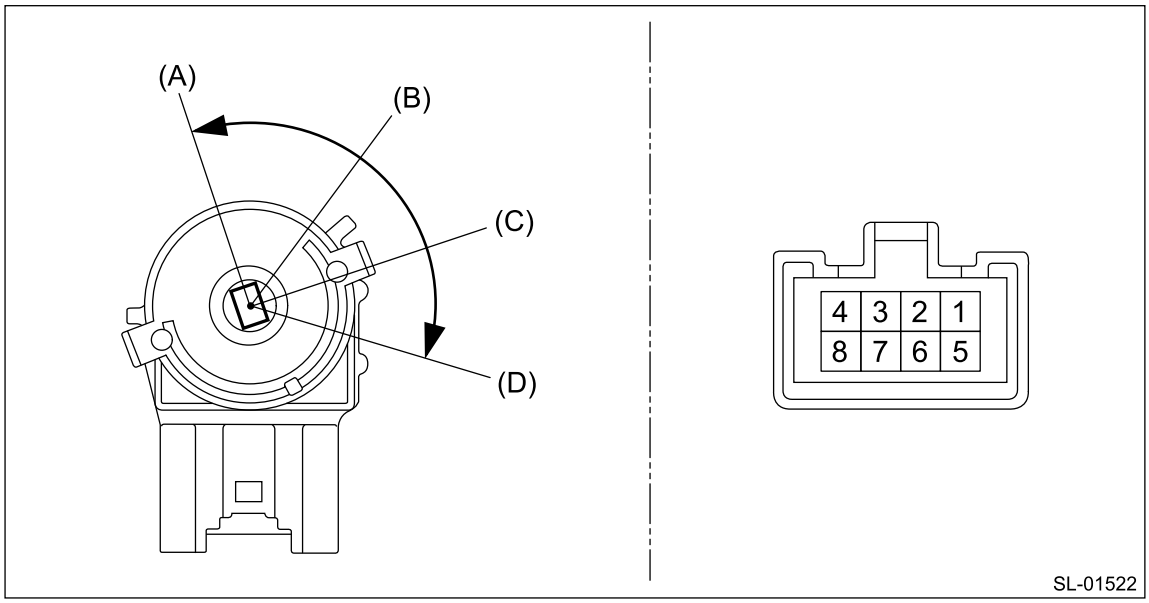


(3) Pull the key lock assembly until the key lock assembly claws touch the steering lock frame stopper (B).

(4) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key lock assembly.

4. Release the claws and remove the ignition switch assembly.

SECURITY AND LOCKS > Ignition Key Lock



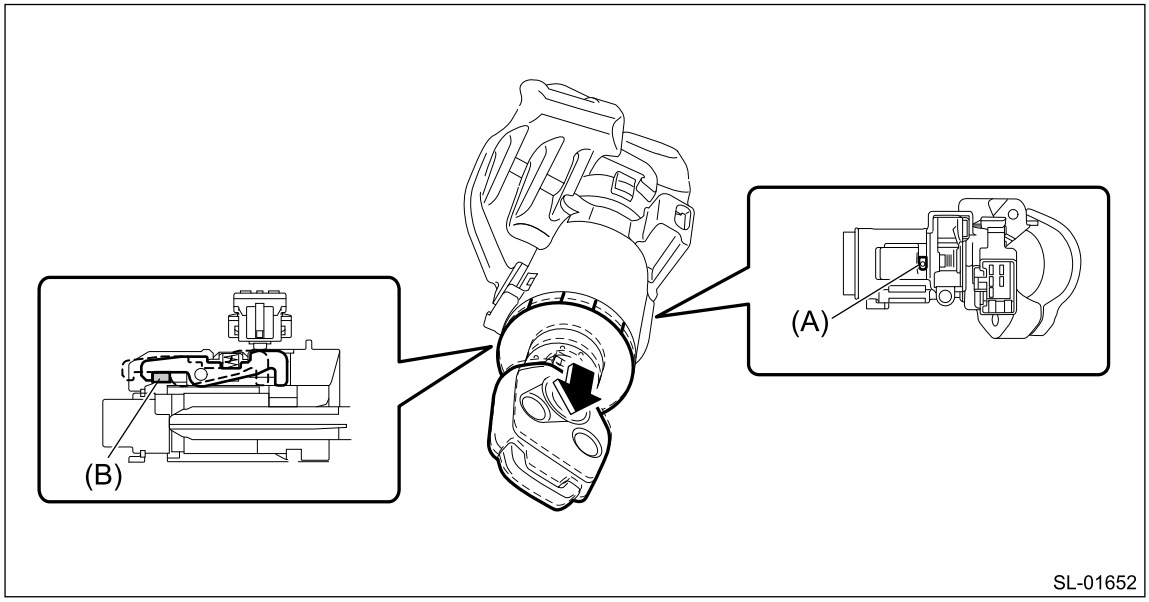
ASSEMBLY

1. Install the ignition switch assembly.
2. Install the key lock assembly.
3. Install the key warning switch.
4. Install the immobilizer antenna assembly.

SECURITY AND LOCKS > Ignition Key Lock

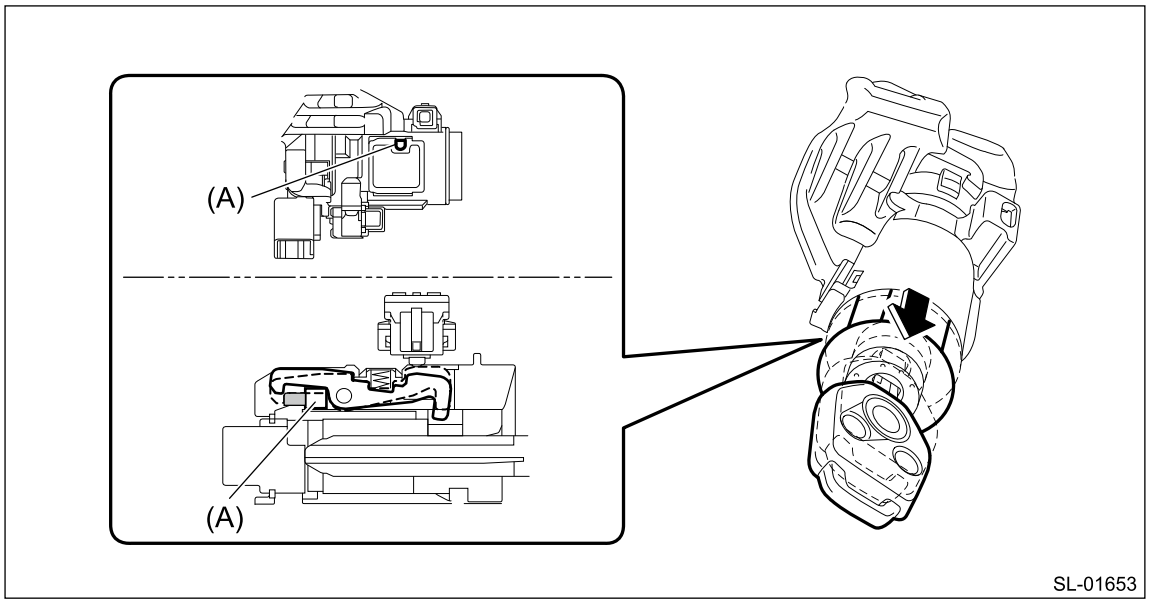
INSPECTION

1. Measure the resistance between connector terminals.
   Preparation tool:
   Circuit tester



Terminal No.	Inspection conditions		Standard
Between all terminals	(A)	LOCK	1 MΩ or more
2 — 4	(B)	ACC	Less than 1 Ω
1 — 2 — 4 5 — 6	(C)	ON	Less than 1 Ω
1 — 3 — 4 5 — 6 — 7	(D)	ST	Less than 1 Ω

2. Replace the ignition switch assembly if the inspection result is not within the standard.

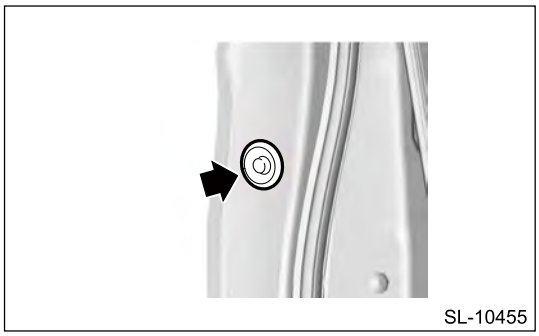


REPLACEMENT

1. STEERING LOCK

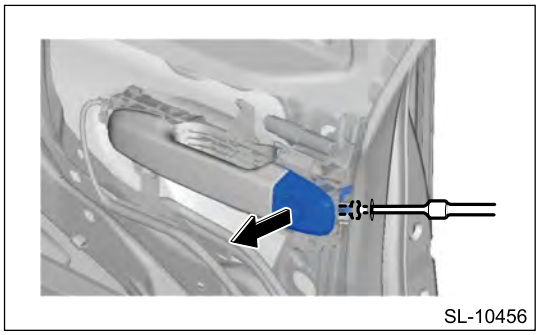
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the immobilizer antenna assembly. Ref. to SECURITY AND LOCKS>Immobilizer Antenna>REMOVAL.
3. Remove the key lock assembly.
   (1) Insert the key into the key lock assembly, and turn the key to the ACC position.
   (2) Release the lock by inserting a flat tip screwdriver from the steering lock frame hole (A).
   (3) Pull the key lock assembly until the key lock assembly claws touch the steering lock frame stopper (B).

   (4) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key lock assembly.



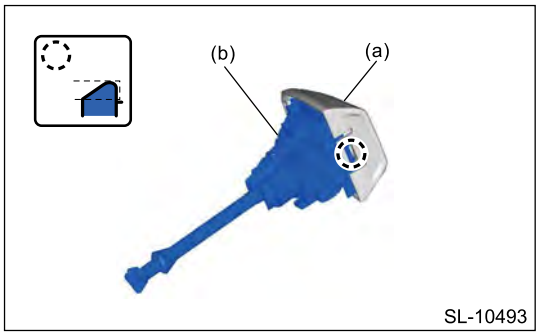
4. Install the key lock assembly.
5. Install the immobilizer antenna assembly. Ref. to SECURITY AND LOCKS>Immobilizer

Antenna>INSTALLATION.



6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

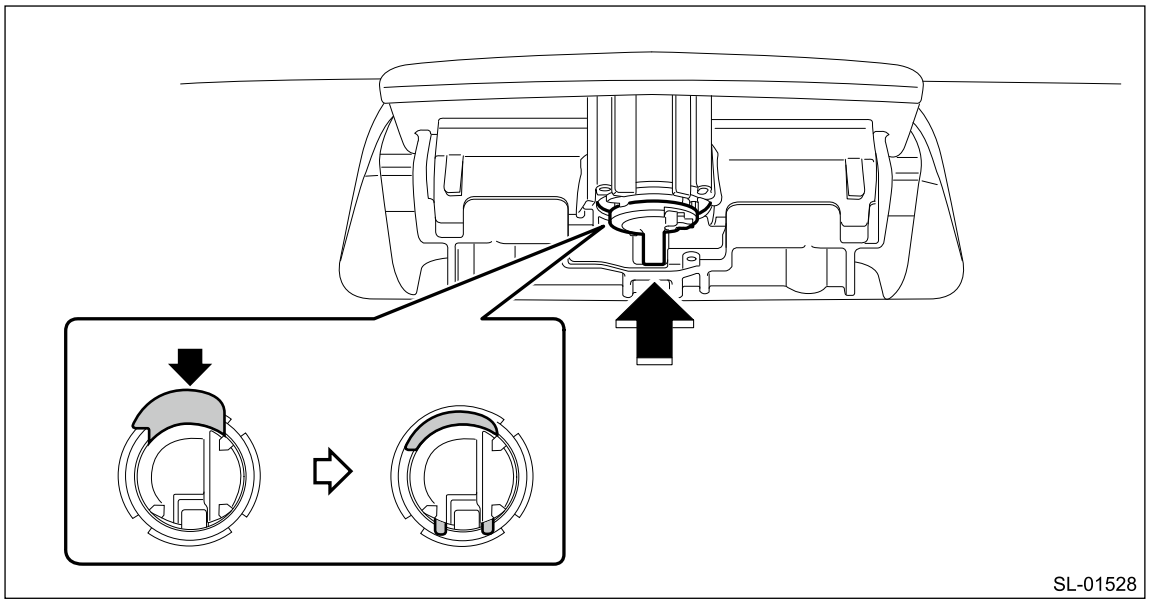
2. FRONT DOOR



1. Raise the glass assembly - front door to the top position.
2. Remove the cover - handle front outer.
   (1) Remove the plug at the rear end of the panel assembly - front door.

   (2) Loosen the TORX® bolt and remove the cover - handle front outer.
   Preparation tool:
   TORX® T30

3. Replace the key cylinder.
   (1) Release the claws.
   (2) Remove the key cylinder (b) from the cover - handle front outer (a), and replace the key cylinder.



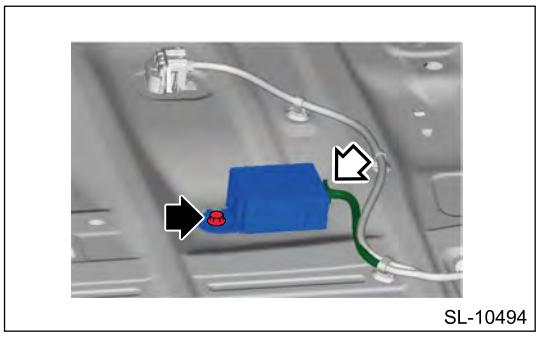
4. Install the cover - handle front outer.
   Caution:
   - **When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.**
   - **After installation, perform the operation check using the key.**

   Preparation tool:
   TORX® T30
   Tightening torque:

7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

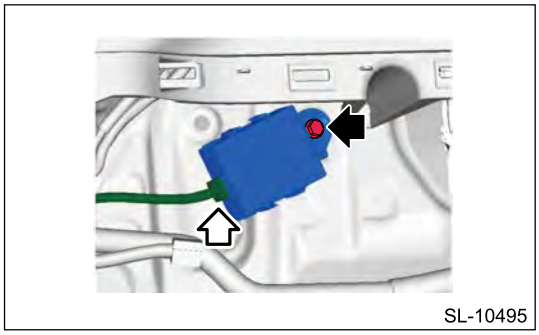
3. GLOVE BOX LID

1. Remove the pocket assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
2. Replace the key cylinder.
   (1) Pull up the lock knob.
   (2) Push out the key cylinder from the pocket assembly while pressing in the metal plate.



3. Install the pocket assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>INSTALLATION.

REMOVAL



1. 4 DOOR MODEL

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel assembly - rear shelf. Ref. to EXTERIOR/INTERIOR TRIM>Rear Shelf Trim>REMOVAL.
3. Remove the keyless entry control module.
   (1) Disconnect the connector.
   (2) Remove the bolt and then remove the keyless entry control module.

2. 5 DOOR MODEL

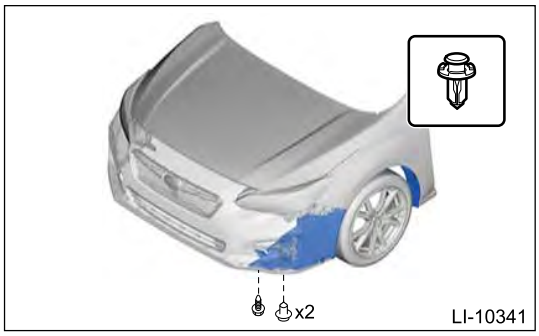
1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear apron LH. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>REMOVAL.
3. Remove the keyless entry control module.
   (1) Disconnect the connector.
   (2) Remove the bolt and then remove the keyless entry control module.

INSTALLATION

1. 4 DOOR MODEL

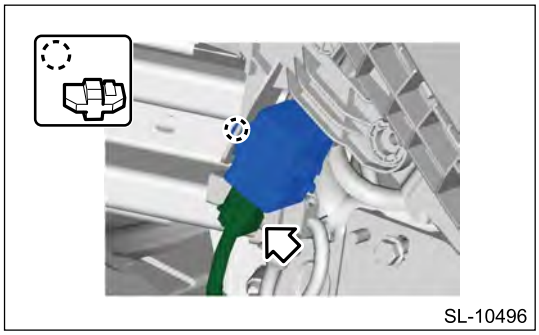
1. Install the keyless entry control module.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the trim panel assembly - rear shelf. Ref. to EXTERIOR/INTERIOR TRIM>Rear Shelf Trim>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

4. When the keyless entry control module is replaced, register the transmitter ID. (Model with TPMS) Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID)>OPERATION.



2. 5 DOOR MODEL

1. Install the keyless entry control module.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the trim panel - rear apron LH. Ref. to EXTERIOR/INTERIOR TRIM>Rear Quarter Trim>INSTALLATION > 5 DOOR MODEL.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. When the keyless entry control module is replaced, register the transmitter ID. (Model with TPMS) Ref. to TIRE PRESSURE MONITOR(DIAGNOSTICS)>Register Transmitter (ID)>OPERATION.

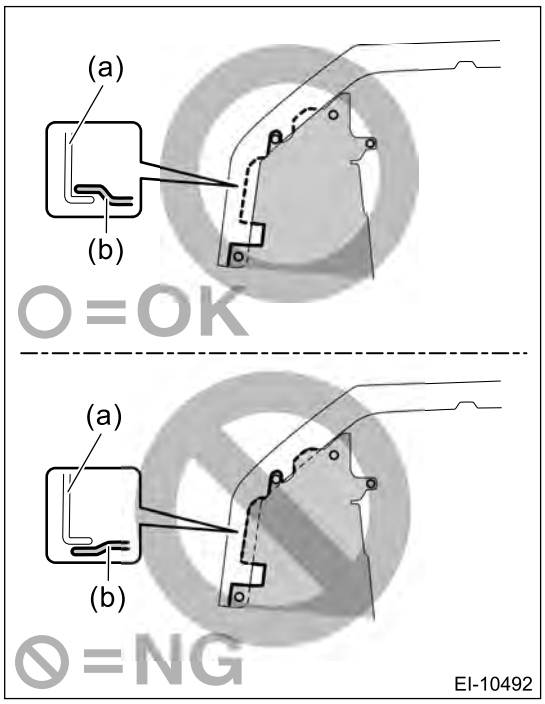


SECURITY AND LOCKS > Keyless Buzzer

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the screw and clips, and turn over the mud guard - front.

5. Remove the keyless buzzer.
   (1) Disconnect the connector.
   (2) Remove the clip and detach the keyless buzzer.



SECURITY AND LOCKS > Keyless Buzzer

INSTALLATION

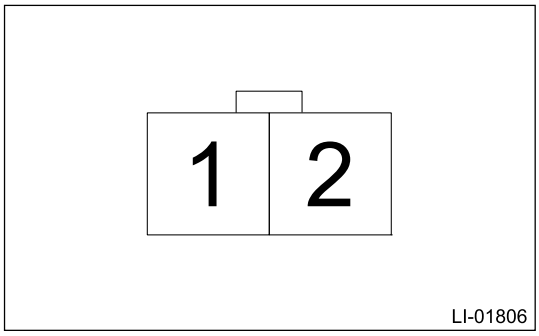
Caution:

Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).

1. Install the keyless buzzer.
2. Install the mud guard - front.
3. Install the under cover - front.

   Tightening torque:

   18 N·m (1.8 kgf-m, 13.3 ft-lb)
4. Lower the vehicle.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



SECURITY AND LOCKS > Keyless Buzzer

INSPECTION

1. Measure the resistance between connector terminals.

   Preparation tool:

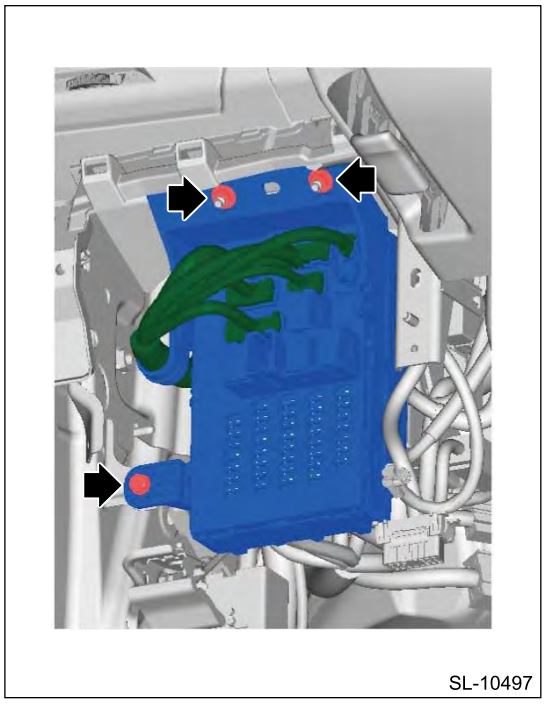
   Circuit tester

Terminal No.	Inspection conditions	Standard
1 — 2	Always	270 — 330 Ω

2. Replace the keyless buzzer if the inspection result is not within the standard value.

NOTE

1. REPLACE BODY INTEGRATED UNIT



1. Check and record the current setting. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit>OPERATION > CONFIRM CURRENT SETTING.
2. Prepare all immobilizer keys already registered. (Models without the keyless access with push button start)
3. Replace the body integrated unit with a new part.
   - Removal: Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL.
   - Installation: Ref. to SECURITY AND LOCKS>Body Integrated Unit>INSTALLATION.
4. Set the current settings as recorded. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit>OPERATION > REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING).
5. Register the immobilizer. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

REMOVAL

Caution:

- **When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.**
- **Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
4. Remove the body integrated unit (fuse & relay box).
   (1) Disconnect connectors.
   (2) Remove the bolts and nuts, and remove the body integrated unit (fuse & relay box).

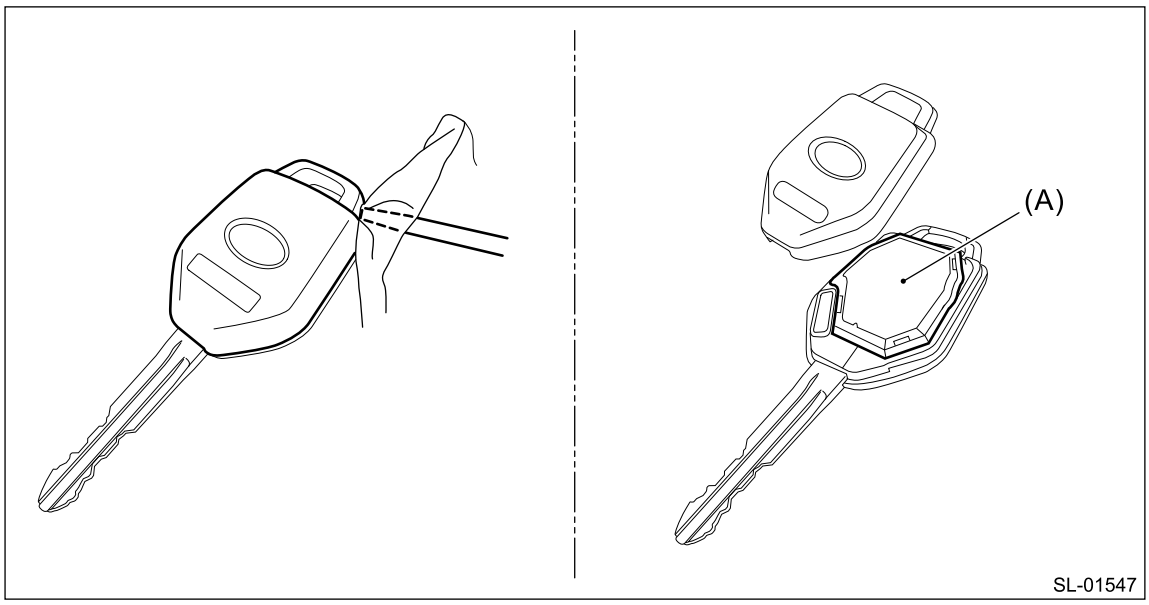
SECURITY AND LOCKS > Body Integrated Unit

INSTALLATION

Caution:

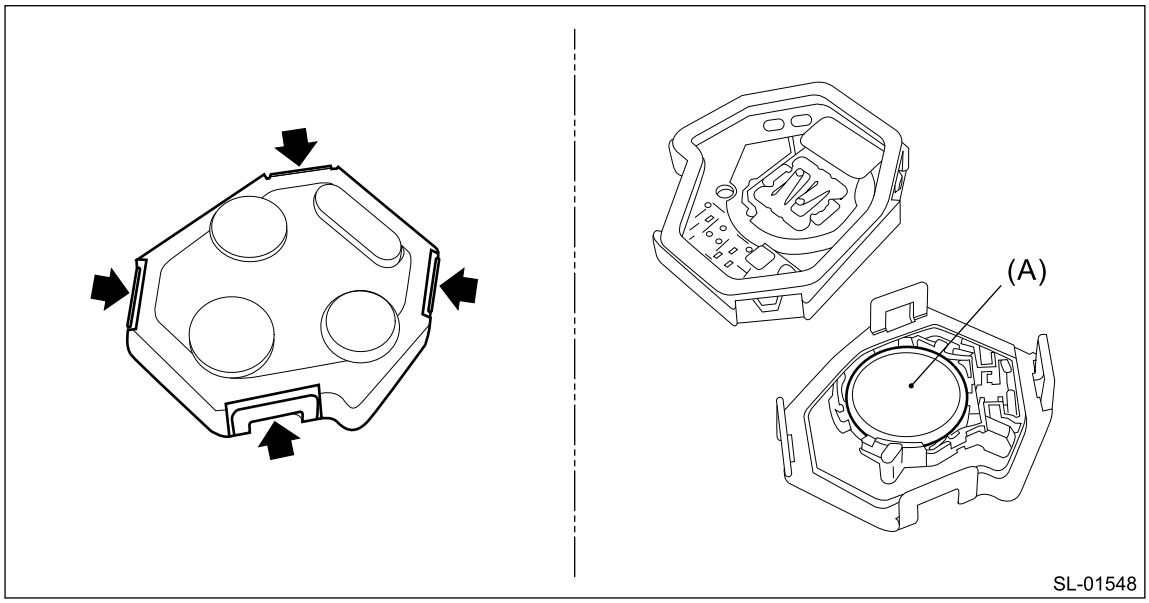
- **When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**

1. Install the body integrated unit (fuse & relay box).
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2. Install the cover assembly - instrument panel LWR driver.
3. Install the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



REMOVAL

1. KEYLESS TRANSMITTER BATTERY



Caution:

To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

1. Take out the transmitter case.
   (1) Release the claws, and then remove the keyless transmitter cover.
   Caution:
   Use a flat tip screwdriver with protective tape or cloth in order not to damage the components.
   (2) Remove the transmitter case (A).

2. Take out the keyless transmitter battery.
   (1) Release the claws, and remove the transmitter case.
   (2) Take out the keyless transmitter battery (A).
   Caution:
   When using a flat tip screwdriver, apply insulation tape around a flat tip screwdriver.

SECURITY AND LOCKS > Keyless Transmitter

INSTALLATION

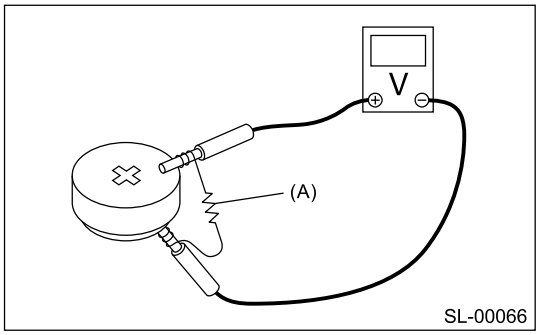
1. KEYLESS TRANSMITTER BATTERY

1. Install the keyless transmitter battery.
2. Install the transmitter.
3. Install the keyless transmitter cover.

SECURITY AND LOCKS > Keyless Transmitter

INSPECTION

1. KEYLESS TRANSMITTER BATTERY



1. Measure the keyless transmitter battery voltage.

   Preparation tool:

   Circuit tester

   Note:

   Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection conditions	Standard
(+) — (−)	Connect resistor (A) 47 Ω	2.5 — 3 V

2. Replace the battery if the inspection result is not within the standard value. (Use CR1620 or

equivalent.)

REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

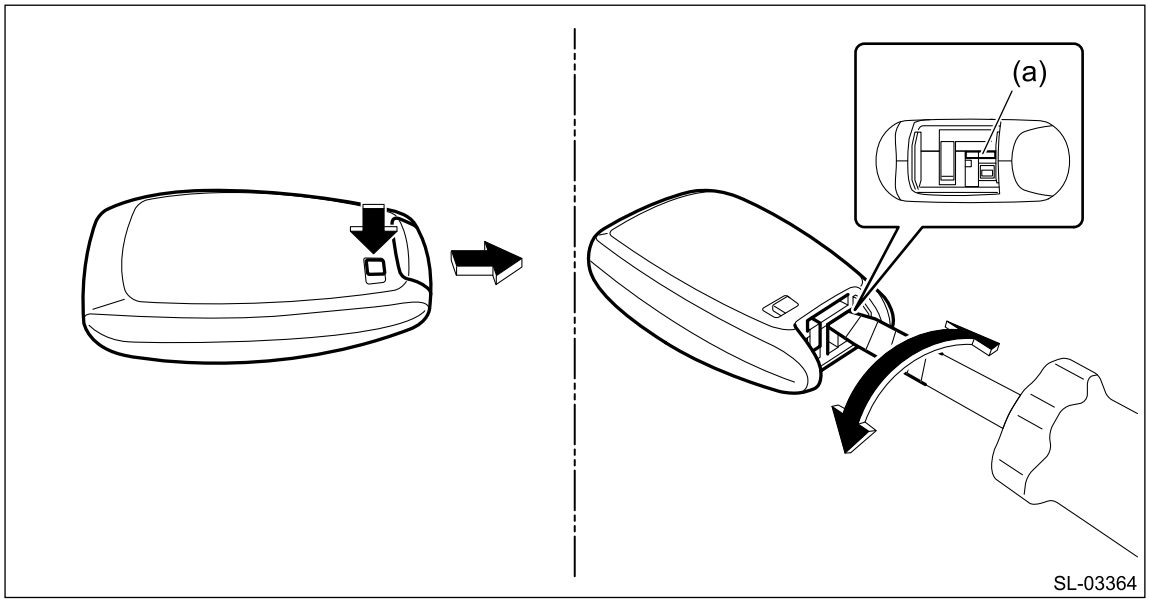
Note:

- **A maximum of four keyless transmitters can be registered for each individual vehicle.**
- **When replacing or adding the keyless transmitter, new registration of transmitter is necessary.**

1. Register the transmitter.
   (1) Connect the Subaru Select Monitor.
   Note:
   For detailed operation procedures, refer to "Application help".
   (2) Turn the ignition switch to ON.
   (3) On [Start] display, select [Diagnosis].
   (4) On [Select Vehicle] display, input the target vehicle information and select [OK].
   (5) On [Main Menu] display, select [Each System].
   (6) On [Select System] display, select [Keyless Entry], and then select [Next].
   (7) On [Select Function] display, select [Work Support].
   (8) On [Work Support] display, select [Keyless ID registration].
   (9) According to the directions on the screen, press the button of the transmitter to be registered in order of Lock → Unlock. (When registration completed: Outside buzzer sounds once.)
   Note:
   - **Repeat the procedure as many times as the number of transmitters to be registered.**
   - **When attempting to register a key that has already been registered, the external buzzer sounds twice.**
   (10) Press the [Exit] button to finish the operations.

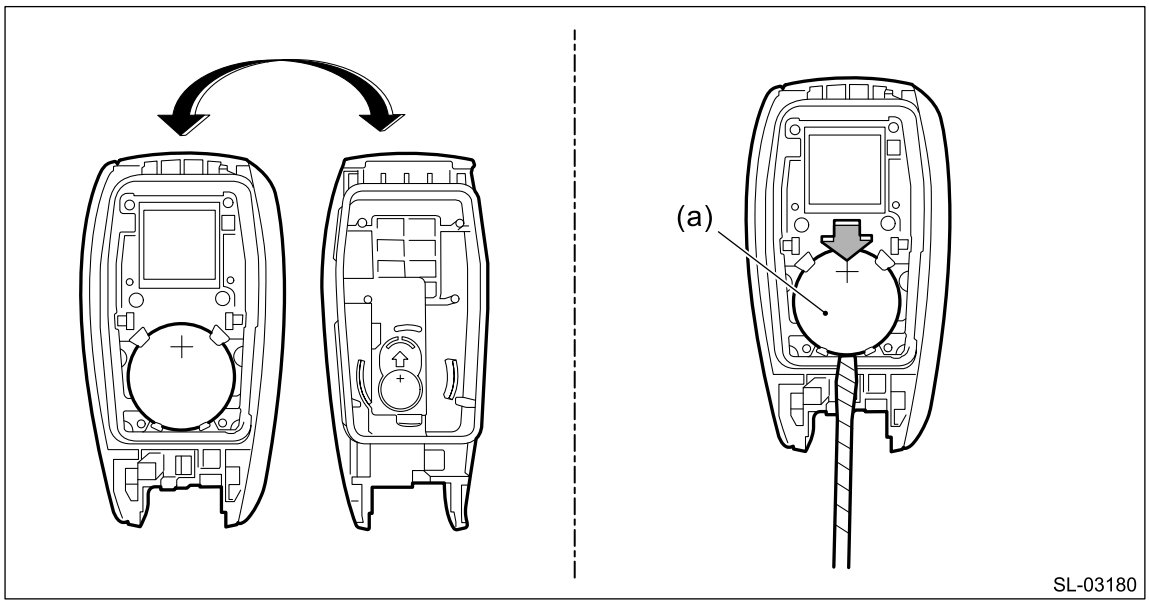
2. CLEAR THE REGISTRATION OF IMMOBILIZER

For detailed immobilizer registration clear, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".



REMOVAL

1. ACCESS KEY BATTERY



Caution:

To prevent static electricity damage to the access key printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the access key.

1. Remove the mechanical key.
   (1) Push the lock button and remove the mechanical key from the access key.
2. Remove the access key battery.
   (1) Insert a flat tip screwdriver end wrapped with insulating tape etc. into the slit (a) of the access key to open the case.

(2) Insert a flat tip screwdriver wrapped with insulating tape, and while holding the upper side of the battery (a), remove the battery (a) from the case.

INSTALLATION

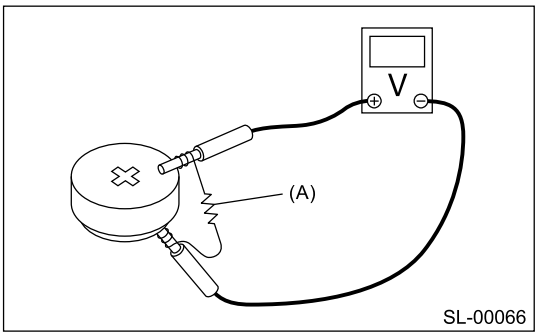
1. ACCESS KEY BATTERY

1. Install the access key battery.
2. Install the mechanical key.

SECURITY AND LOCKS > Access Key

INSPECTION

1. ACCESS KEY BATTERY



Measure the access key battery voltage.

Preparation tool:

Circuit tester

Note:

Complete the measurement within 5 seconds because the battery discharges during measurement.

Battery terminal	Inspection conditions	Standard
(+) — (−)	Connect resistor (A) 47 Ω	2.5 — 3 V

Replace the battery if the inspection result is not within the standard value. (Use CR2032 V or equivalent.)

SECURITY AND LOCKS > Access Key

REPLACEMENT

1. ACCESS KEY REGISTRATION

Note:

- **A maximum of seven access keys can be registered for each individual vehicle.**
- **When replacing or adding an access key, new registration of the access key is necessary.**
- **When the access key has been newly added, it is registered to the immobilizer system at the same time.**

2. CLEARING ACCESS KEY REGISTRATION

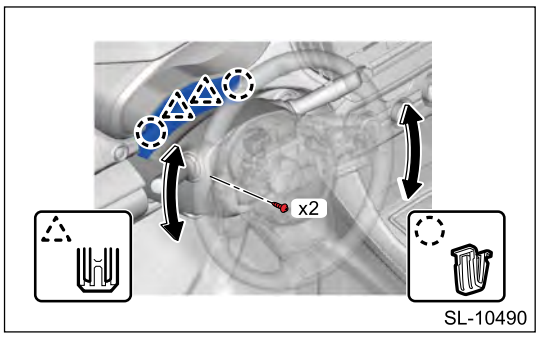
For detailed access key registration clear, refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

NOTE

Caution:

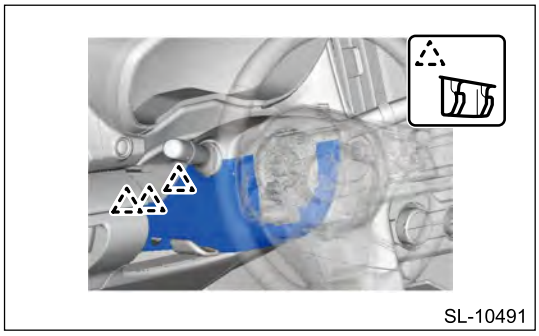
When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type E" described in "REGISTRATION MANUAL FOR IMMOBILIZER".

For removal/installation procedures of immobilizer control module, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".



Note:

Equipped on C5 model with keyless access with push button start.

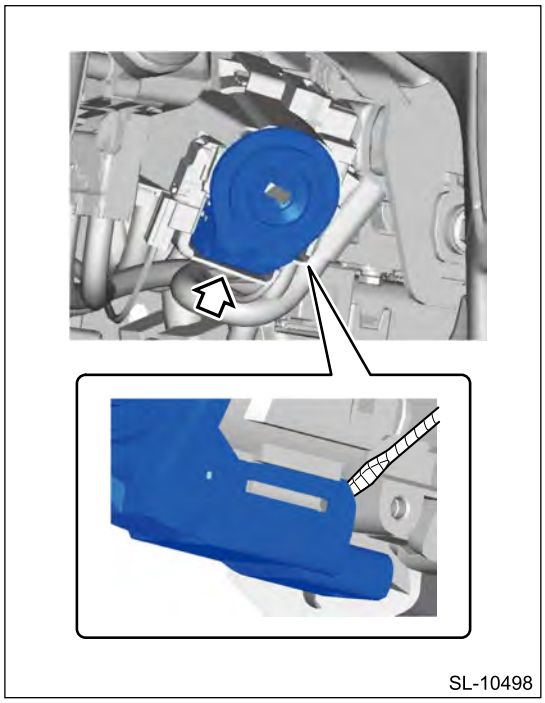


REMOVAL

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work.
   Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - column.
   (1) Remove the clip, and remove the cover assembly - visor LWR.
   (2) Remove the screws by turning the steering wheel to right and left.

   (3) Release the claws and remove the cover assembly - column LWR.



Note:
Release the claws on RH side in the same procedure as on the LH side.

   (4) Release the claws and remove the cover assembly - column UPR.

3. Remove the immobilizer antenna assembly.
   (1) Disconnect the connector.
   (2) Release the claws using a flat tip screwdriver or similar tool wrapped with protection tape, and remove the immobilizer antenna assembly.

Caution:
Do not apply excessive force to disengage the lock of immobilizer antenna assembly. Otherwise they may be broken because those parts are the products made of a plastic.

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START

Note:

Immobilizer antenna is integrated with the switch - push button start. For the operation procedures, refer to "Push Button Ignition Switch". Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.

SECURITY AND LOCKS > Immobilizer Antenna

INSTALLATION

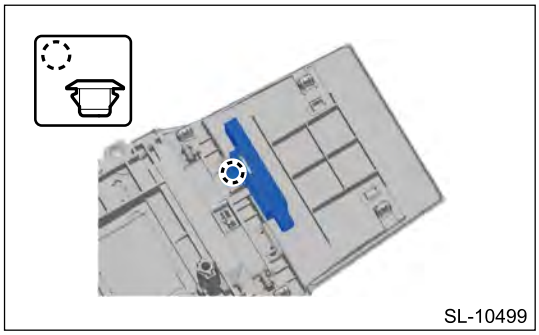
1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1. Install the immobilizer antenna assembly.
2. Install the cover assembly - column.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START

Note:

Immobilizer antenna is integrated with the push button ignition switch. For the operation procedures, refer to "Push Button Ignition Switch". Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.



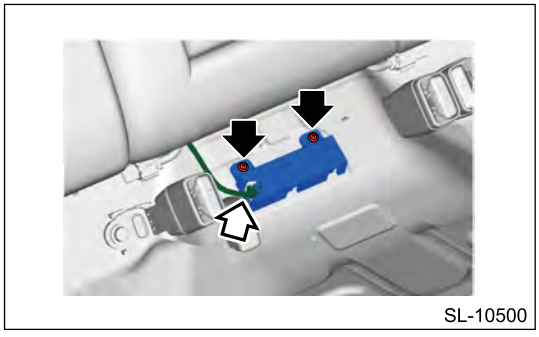
REMOVAL

1. FRONT ANTENNA

Caution:

Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - front. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>REMOVAL.
3. Remove the front antenna assembly - interior.
   (1) Release the clips, and remove the front antenna assembly - interior.



2. CENTER ANTENNA

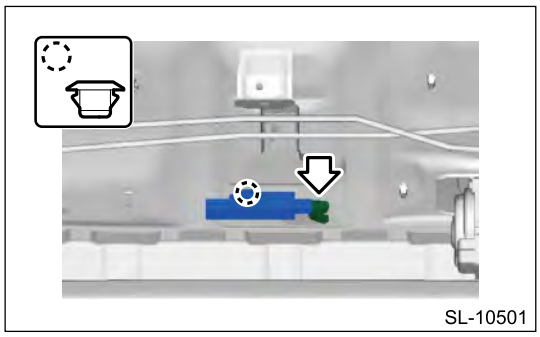
Caution:

When replacing the antenna, do not reuse the tapping screw. Always replace with new tapping screws.

1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear seat cushion assembly. Ref. to SEATS>Rear Seat>REMOVAL.
3. Remove the center antenna assembly - interior.
   (1) Disconnect the connector.
   (2) Remove the screw, and remove the center antenna assembly - interior.

Note:

Do not remove the antenna assembly from the cover. If removed, the antenna assembly and cover mounting becomes loose, causing abnormal noises.



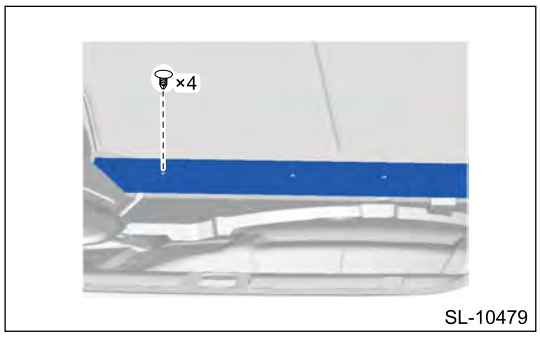
3. REAR ANTENNA

- **4 DOOR MODEL**

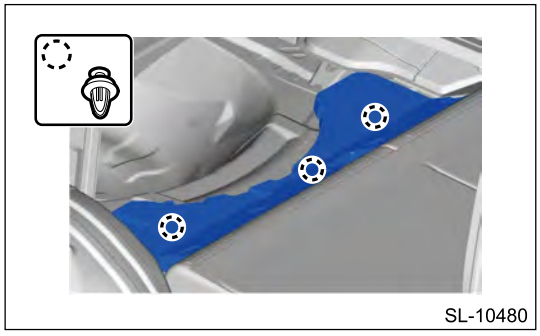
Caution:

Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the rear antenna assembly - interior.
   (1) Disconnect the connector.
   (2) Release the clips, and remove the rear antenna assembly - interior.

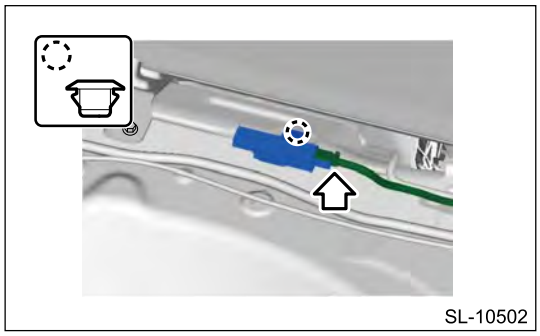


- **5 DOOR MODEL**



Caution:

Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the mat - floor rear, spacer - side LH, and spacer - side RH.
3. Remove the spacer - rear floor front.
   (1) Release the clips, and fold back the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.

   (2) Release the clips, then detach the spacer - rear floor front.

4. Remove the rear antenna assembly - interior.
   (1) Disconnect the connector.
   (2) Release the clips, and remove the rear antenna assembly - interior.

SECURITY AND LOCKS > Keyless Access Indoor Antenna

INSTALLATION

Caution:

- **Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.**
- **When replacing the antenna, do not reuse the tapping screw. Always replace with new tapping screws.**

1. FRONT ANTENNA

1. Install the front antenna assembly - interior.
2. Install the cover assembly - front. Ref. to EXTERIOR/INTERIOR TRIM>Console Box>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. CENTER ANTENNA

1. Install the center antenna assembly - interior.
2. Install the rear seat cushion assembly. Ref. to SEATS>Rear Seat>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

3. REAR ANTENNA

- **4 DOOR MODEL**
  1. Install the rear antenna assembly - interior.
  2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
- **5 DOOR MODEL**
  1. Install the rear antenna assembly - interior.
  2. Install the spacer - rear floor front.
  3. Install the mat - floor rear, spacer - side LH, and spacer - side RH.
  4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Keyless Access Indoor Antenna

INSPECTION

Check the keyless access interior antenna using the Subaru Select Monitor.

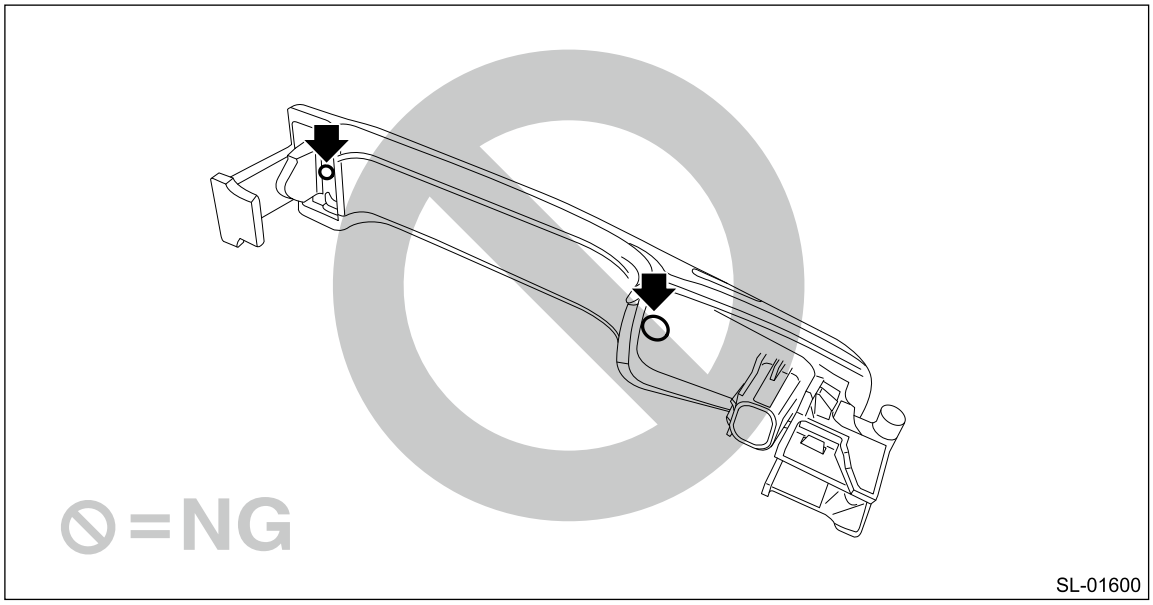
Note:

For detailed operation procedures, refer to "Application help".

1. Check the setting by performing the keyless access with push button start system check. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button

Start Check.

2. Operate the touch sensor of the door handle to check if door lock operates.
3. If the system does not operate normally as the result of inspection, refer to “Diagnostics with Phenomenon” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>LIST > KEYLESS ACCESS SYSTEM.



REMOVAL

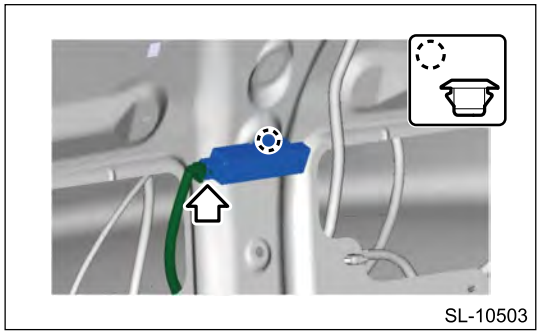
1. FRONT ANTENNA

Caution:

Do not detach the antenna from the handle - door outer.

If replacement is required, replace the handle - door outer assembly as a unit.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the handle - door outer assembly. Ref. to SECURITY AND LOCKS>Door Outer Handle>REMOVAL.



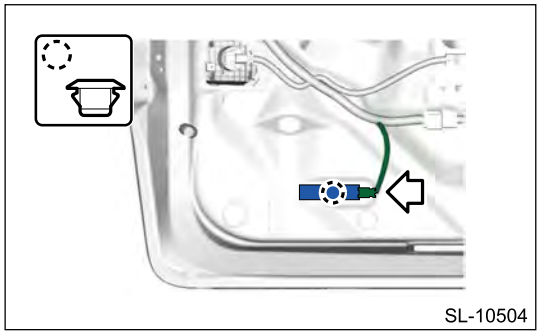
2. REAR ANTENNA

- **4 DOOR MODEL**

Caution:

Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the rear antenna assembly - exterior.
   (1) Disconnect the connector.
   (2) Release the clips, and remove the rear antenna assembly - exterior.



- **5 DOOR MODEL**

Caution:

Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the rear antenna assembly - exterior.
   (1) Disconnect the connector.
   (2) Release the clips, and remove the rear antenna assembly - exterior.

SECURITY AND LOCKS > Keyless Access Outdoor Antenna

INSTALLATION

1. FRONT ANTENNA

1. Install the handle - door outer. Ref. to SECURITY AND LOCKS>Door Outer Handle>INSTALLATION.
2. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

2. REAR ANTENNA

1. Install the rear antenna assembly - exterior.
2. Install the trim panel - trunk lid. (4 door model)
3. Install the trim panel - rear gate. (5 door model)
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Keyless Access Outdoor Antenna

INSPECTION

Check the keyless access exterior antenna using the Subaru Select Monitor.

Note:

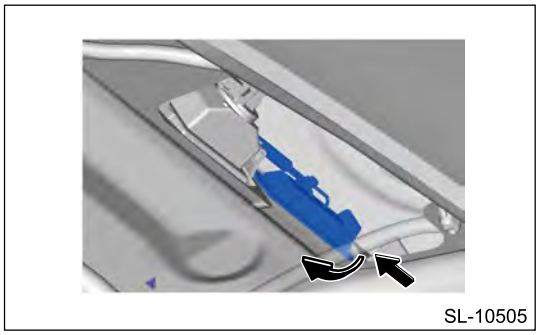
For detailed operation procedures, refer to "Application help".

1. Check the setting by performing the keyless access with push button start system check. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
2. While bringing the access key, operate the trunk opener button to check if the trunk is opened. (4 door model)
3. While bringing the access key, operate the opener switch on the rear gate and the lock request switch to check if the door lock or lock operates. (5 door model)
4. If the system does not operate normally as the result of inspection, refer to "Diagnostics with

Phenomenon” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>LIST > KEYLESS ACCESS SYSTEM.

SECURITY AND LOCKS > Trunk Opener Button

REMOVAL



1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - trunk lid. Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
3. Remove the switch - request.

   Caution:

   When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

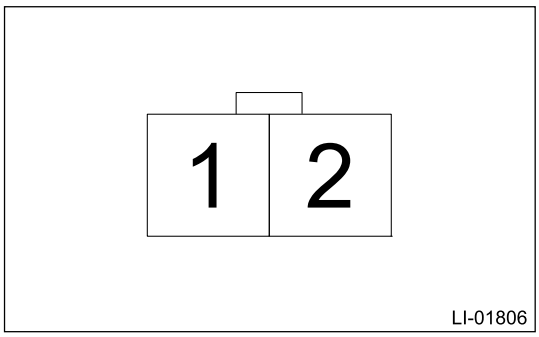
   (1) Disconnect the connector.

   (2) Remove it by pressing the lock portion of the switch - request as shown in the figure.

SECURITY AND LOCKS > Trunk Opener Button

INSTALLATION

1. Install the switch - request.
2. Install the trim panel - trunk lid.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



SECURITY AND LOCKS > Trunk Opener Button

INSPECTION

1. Measure the resistance between connector terminals.

   Preparation tool:

   Circuit tester

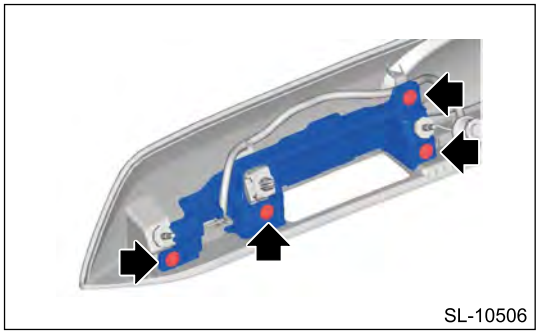
Terminal No.	Inspection conditions	Standard
1 — 2	When the switch is not pressed (CLOSE)	1 MΩ or more
	When the switch is pressed (OPEN)	Less than 1 Ω

2. Replace the switch - request if the inspection result is not within the standard value.

SECURITY AND LOCKS > Rear Lock Button

REMOVAL

Note:



The rear lock button is integrated with the switch - opener rear gate.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the button - opener rear gate. Ref. to SECURITY AND LOCKS>Rear Gate Opener Button>REMOVAL.
3. Remove the switch - request (lock).

   Caution:

   When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.

   (1) Remove the screws, and then remove the garnish switch bracket.

   (2) Remove the switch - request (lock) by pressing the lock portions on both sides.

SECURITY AND LOCKS > Rear Lock Button

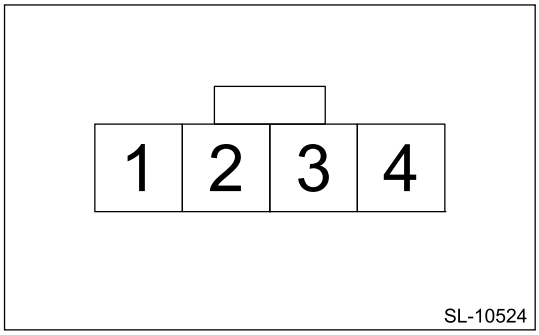
INSTALLATION

Caution:

Make sure that the harness grommet is securely installed.

If not properly installed, this may cause leaks.

1. Install the switch - request (lock).
2. Install the switch - opener rear gate. Ref. to SECURITY AND LOCKS>Rear Gate Opener Button>INSTALLATION.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



SECURITY AND LOCKS > Rear Lock Button

INSPECTION

1. Measure the resistance between connector terminals.

Preparation tool:

Circuit tester

Terminal No.	Inspection conditions	Standard
3 — 4	When the switch is not pressed (CLOSE)	1 MΩ or more
	When the switch is pressed (OPEN)	Less than 5 Ω

2. Replace the switch - request (lock) if the inspection result is not within the standard value.

SECURITY AND LOCKS > Keyless Access CM

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the pocket assembly and the back panel - pocket. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
3. Remove the keyless access CM.

   Caution:

   Be careful to keep water and other foreign materials away from body integrated unit terminals.

   (1) Disconnect the connector.

   (2) Release the claws using a flat tip screwdriver or similar tool wrapped with protection tape.

   (3) Release the guides, and pull out the keyless access CM as shown in the figure.

SECURITY AND LOCKS > Keyless Access CM

INSTALLATION

Caution:

When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type D" described in "REGISTRATION MANUAL FOR IMMOBILIZER".

1. Install the keyless access CM.
2. Install the pocket assembly and the back panel - pocket.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

NOTE

Caution:

When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type D" described in "REGISTRATION MANUAL FOR IMMOBILIZER".

For removal/installation procedures of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

Note:

Equipped on C5 model with keyless access with push button start.

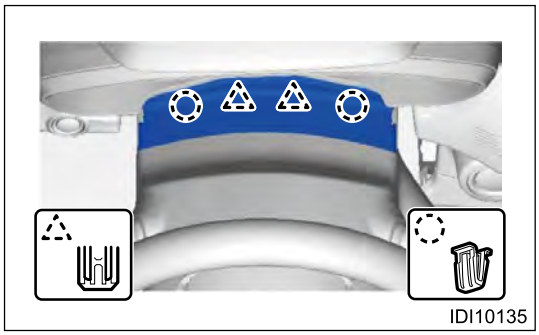
SECURITY AND LOCKS > Steering Lock CM

REPLACEMENT

Caution:

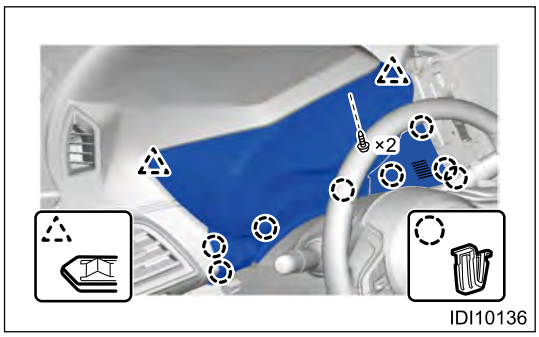
- **When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type D" described in "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **Do not apply any impact to the set bolt by a chisel or punch. Doing so may damage the steering lock CM.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Do not allow harness and connectors to interfere or get tangled up with other parts.**
- **If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.**

For operation procedures of the steering lock CM, refer to "Ignition Key Lock". Ref. to SECURITY AND LOCKS>Ignition Key Lock.



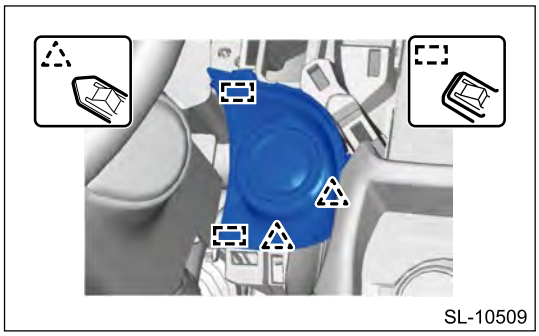
SECURITY AND LOCKS > Steering Lock CM

INSPECTION



For inspection of the steering lock CM, refer to "Diagnostics with Phenomenon" of "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>LIST > STEERING LOCK SYSTEM.

REMOVAL



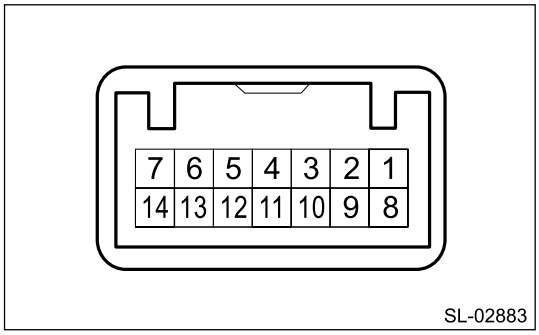
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
3. Remove the grille assembly - CTR ventilation LH. Ref. to AIR CONDITIONER>Air Vent Grille>REMOVAL > CENTER GRILLE ASSEMBLY.
4. Remove the visor assembly - combination meter.
   (1) Release the clips of the cover assembly - visor LWR.

   (2) Release the screws, clips and claws.

   (3) Disconnect the connector, and remove the visor assembly - combination meter.
5. Remove the panel - starter SW.
   (1) Release the claws.
   (2) Detach the connectors and remove the panel - starter SW.

6. Remove the switch - push button start.
   (1) Release the claws, and remove the switch - push button start.

SECURITY AND LOCKS > Push Button Ignition Switch



INSTALLATION

1. Install the switch - push button start.
2. Install the panel - starter SW.
3. Install the visor assembly - combination meter.
4. Install the grille assembly - CTR ventilation LH. Ref. to AIR CONDITIONER>Air Vent Grille>INSTALLATION.
5. Install the cover assembly - instrument panel LWR driver.
6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SECURITY AND LOCKS > Push Button Ignition Switch

INSPECTION

1. Check the continuity between the connector terminals.
   Preparation tool:
   Circuit tester

Terminal No.	Inspection conditions	Specification
4 (COM) — 5 (GND)	Always	Continuity exists
7 (SSW1) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists
2 (SSW2) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists

2. Check the push button ignition switch operation when battery voltage is applied between the connector terminals.

Terminal No.	Inspection conditions	Specification
11 (SWIL) — 5 (GND)	Connect battery to the terminals	Goes off → Red switch illumination light

Terminal No.	Inspection conditions	Specification
12 (INDS) — 5 (GND)		Turns off → Switch indicator lights in green
13 (INDW) — 5 (GND)		Turns off → Switch indicator lights in orange

3. Replace the push button ignition switch if it is found defective.

NOTE

For operation procedures of access buzzer, refer to “Keyless Buzzer” section. Ref. to SECURITY AND LOCKS>Keyless Buzzer.

OPERATION

Disabling/Activating the keyless access system
The following functions are disabled when the keyless access system functions are disabled:

- LOCK function performed by the operation of touch sensor on the door outer handle
- Rear gate LOCK function by rear lock button operation
- UNLOCK function by holding the door handle
- Trunk lid open function by trunk opener button operation in the trunk lid lock condition
- Rear gate open function by rear gate opener button operation in the rear gate lock condition
- Lockout protection function
- Warning function
- Engine starting control using keyless access collation

SECURITY AND LOCKS > Function Setting (Customize)

PROCEDURE

1. STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY DOOR OPEN/CLOSE PROCEDURE

1. Check that the vehicle status is as follows:
   - Ignition switch OFF
   - One window is completely open
   - Keyless access system is activated (or disabled if re-activating)
2. Sit in the driver's seat with the door closed and press the door lock switch to UNLOCK once.
3. Open the driver's door within five seconds.
4. Within 5 seconds, with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
5. Within 10 seconds after finishing step 4), perform the closing → opening operation of the driver's door twice.
6. Within 10 seconds after finishing step 5), with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
7. Within 10 seconds after finishing step 6), perform the closing → opening operation of the driver's door once.
8. Within five seconds after finishing step 7), close the drivers door.

   Note:
   - **Perform the same procedures to re-activate the keyless access system from the disabled condition.**
   - **In step 4) and step 6), press the door lock switch completely. The function may not work properly if the switch is pressed shortly.**

2. STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY USING ACCESS KEY

1. Open the driver's door, and then push the door lock knob forward (LOCK direction).
2. Press the lock button of access key and trunk/rear gate button simultaneously for five seconds or more.
3. The buzzer sounds for two seconds, and the function stops.

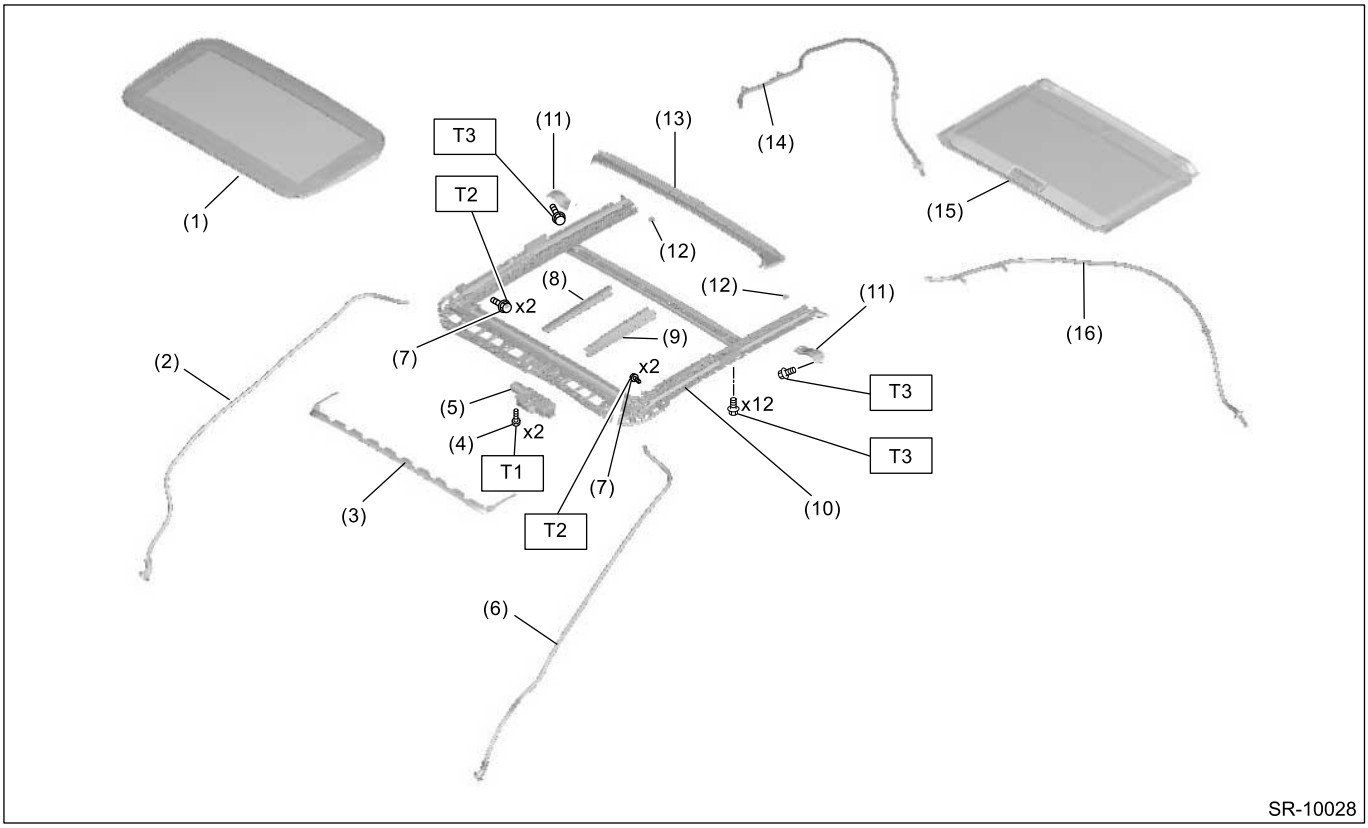
Note:

- **For stopping the keyless access system function by using access key, it is necessary to ask the customer to register the secret code of the secret code keyless entry. (Refer to owner’s manual for details.)**
- **Perform the same procedures to re-activate the keyless access system from the disabled condition.**

INSPECTION

1. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

For the diagnostics with phenomenon for keyless access with push button start system, refer to “Diagnostics with Phenomenon” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon.



SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

SR

1. General Description

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > General Description

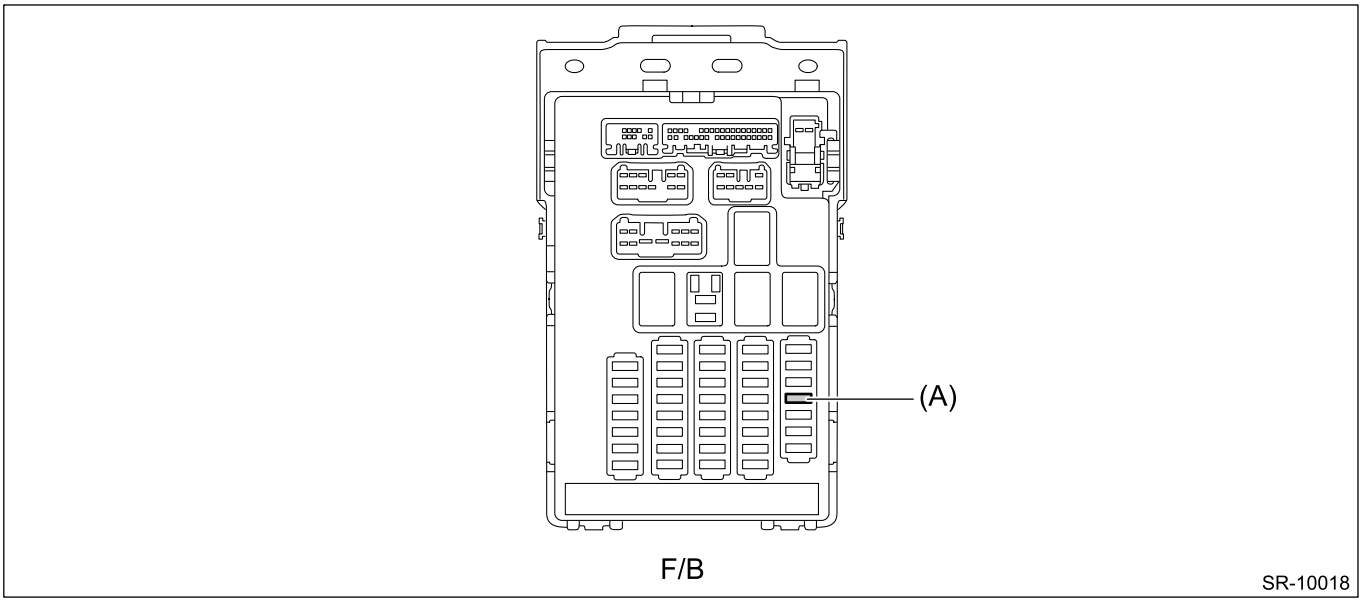
CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > General Description



PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

TOOL NAME	REMARKS
Hexagon wrench	Used for forcibly driving the motor assembly - sunroof. Width across flat 4 mm (0.16 in)
TORX® T25	Used for removing and installing the lid assembly - sunroof and motor assembly - sunroof.

LOCATION

Fuse box (F/B)	Fuse 10 A (IG 2)	(A)

Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.

INSPECTION

1. CHECK FUSE

1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

WIRING DIAGRAM

Refer to "Sunroof Control System" in the wiring diagram. Ref. to WIRING SYSTEM>Sunroof Control System>WIRING DIAGRAM.

INSPECTION

Symptoms	Inspection steps
Water leakage	1. Check the roof panel and the lid assembly - sunroof for improper or poor sealing. 2. Check the drain tube - sunroof for clogging. 3. Check the joints of the rail assembly - sunroof for improper sealing and for proper installation to the body.
Booming noise, wind noise and other noise	1. Check the lid assembly - sunroof and the roof panel for improper clearance. 2. Check the sunshade assembly and the trim panel - roof assembly for improper clearance.
Motor and cable noise	1. Check installing part of motor for looseness. 2. Check gears and bearings for wear. 3. Check cable assembly for wear.
Failure of sunroof (Motor operates properly.)	1. Check guide rail for foreign particles. 2. Check parts for mutual interference. 3. Check slider for improper clinching.
Motor does not rotate or rotate improperly.	1. Check fuse for blown out. 2. Check switch for improper function. 3. Check harness for open or short and terminals for poor connections. 4. Check motor assembly - sun roof for incorrect terminal voltage.
Incorrect reverse operation of the lid assembly - sunroof	Check guide rail for foreign particles.

Incorrect reverse operation of the lid assembly - sunroof while driving on rough road

The lid assembly - sunroof has auto-reverse function. When the lid assembly - sunroof is pushed in the opening direction with a force of 100 N (10.2 kgf, 22.5 lbf), the glass lid moves in reverse and stops.

Therefore, if you operate (open or close) the lid assembly - sunroof while driving on rough road, the vibration may be judged as a force and the lid may incorrectly move in the reverse direction.

When the incorrect reverse operation is occurred repeatedly, perform inspection around the sunroof frame. If there are no problems, perform the initialization operation with following procedure.

OPERATION

1. INITIALIZE OPERATION

Caution:

During initialization, perform the position learning and the sliding learning. Sliding learning mode can not be initiated unless the position learning is performed.

Note:

When initialize operation is performed, it is necessary to press the switch repeatedly as it operates for only at the moment when the switch is pressed, even when the switch is held down.

POSITION IS NOT MEMORIZED (AUTOMATIC OPEN/CLOSE CANNOT BE PERFORMED)

«Position learning»

1. Position the lid assembly - sunroof at the fully tilt up position, and press and hold the tilt up switch for ten seconds.
2. The motion of the glass lid shifts to inching operation until it reaches the mechanical lock position (further tilt up position than the fully tilt up position). After the mechanical lock, it returns to the fully tilt up position and then stops.
3. Release the tilt up switch to finish the position learning.

«Sliding learning»

4. Within six seconds after the position learning is finished, press and hold the tilt up switch again.
5. The lid assembly - sunroof moves to the full close position, full open position, and the full close position successively, and stops at the full close position.
6. Release the tilt up switch and turn the ignition switch to OFF to finish the initializing.

POSITION IS MEMORIZED (AUTOMATIC OPEN/CLOSE CAN BE PERFORMED)

«Position learning»

1. Position the lid assembly - sunroof at the fully tilt up position, and press and hold the tilt up switch for ten seconds.
2. The motion of the glass lid shifts to inching operation until it reaches the mechanical lock position (further tilt up position than the fully tilt up position). After the mechanical lock, it returns to the fully tilt up position and then stops.
3. Release the tilt up switch to finish the position learning.

   Note:

   If the glass lid does not shift to inching operation until it reaches to the mechanical lock position in step 2, perform steps 4 — 6.
4. Position the lid assembly - sunroof at the fully open position, and press and hold the tilt up switch for ten seconds.
5. The motion of the glass lid shifts to inching operation until it reaches the mechanical lock position. After that, it returns to the fully tilt up position and then stops.
6. Release the tilt up switch to finish the position learning.

«Sliding learning»

7. Within six seconds after the position learning is finished, press and hold the tilt up switch again.
8. The lid assembly - sunroof moves to the full close position, full open position, and the full close position successively, and stops at the full close position.
9. Release the tilt up switch and turn the ignition switch to OFF to finish the initializing.

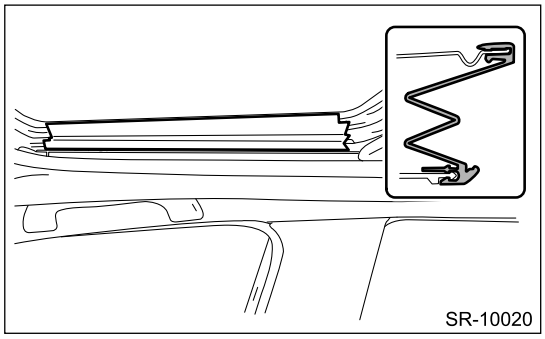
SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Control System

NOTE

For procedure of each component in the sunroof control system, refer to the respective section.

- Glass lid: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Glass Lid.
- Sunroof assembly: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Assembly.
- Sunroof motor: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Motor.

- Sunroof switch: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Switch.
- Sunshade: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunshade.

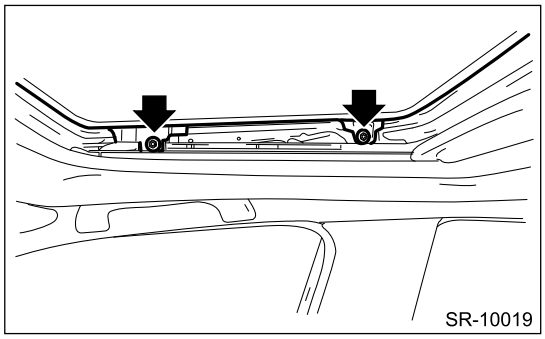


REMOVAL

1. GLASS LID

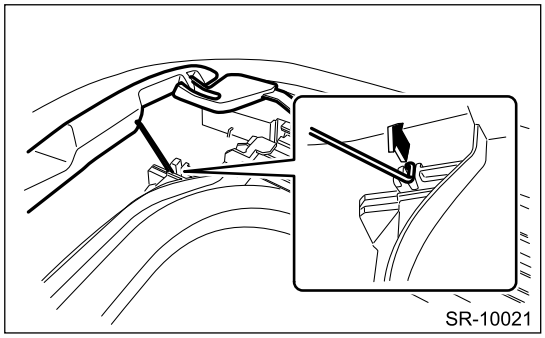
Caution:

Be careful not to damage the lid assembly - sunroof.



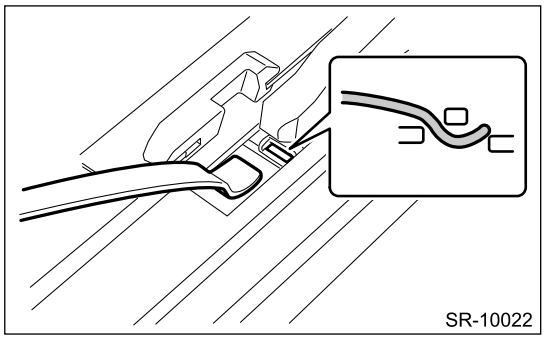
1. Completely close the lid assembly - sunroof, and open the sunshade assembly.
2. Remove the cover - lid.

3. Remove the lid assembly - sunroof.



Preparation tool:

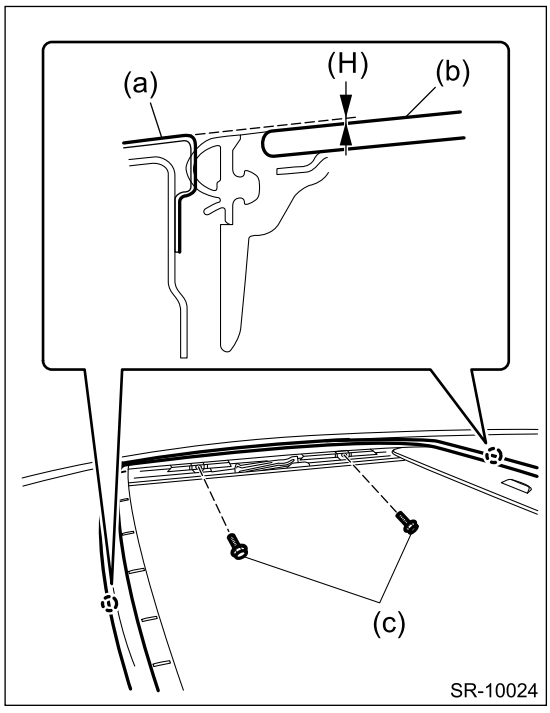
TORX® T25



2. DEFLECTOR ASSEMBLY

1. Open the lid assembly - sunroof and the sunshade assembly.
2. Remove the deflector assembly - sunroof.
   (1) Remove the spring from the rail assembly - sunroof.

   (2) While lifting up the deflector assembly - sunroof, remove the deflector assembly - sunroof from the hook on the rail assembly - sunroof.



SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Glass Lid

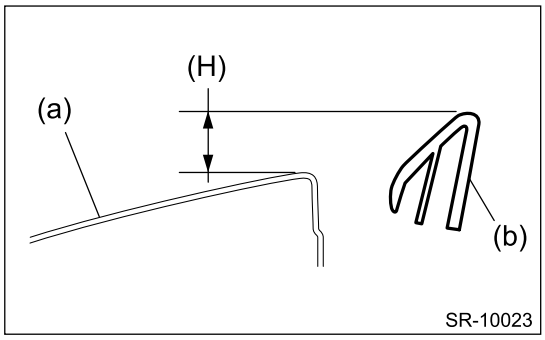
INSTALLATION

1. GLASS LID

1. Using a new TORX® bolt, temporarily install the lid assembly - sunroof.
   Preparation tool:
   TORX® T25
2. Perform the open/close operation checks for the glass lid.
3. Tighten the TORX®bolts to the specified torque while adjusting the height of the lid assembly - sunroof to the specified value.
   Specification:
   Lid assembly - sunroof to Roof panel (H): 0.7±1 mm (0.03±0.04 in)

(a) Roof panel
(b) Lid ASSY - sunroof
(c) TORX® bolt

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)



4. Install the cover - lid.

2. DEFLECTOR ASSEMBLY

1. Install the deflector assembly - sunroof.
2. After installation, measure the height from the roof panel when deflector assembly - sunroof is activated.

Specification:

Deflector assembly - sunroof to Roof panel (H): 13.7 mm (0.54 in)

(a) Roof panel

(b) Deflector ASSY - sunroof

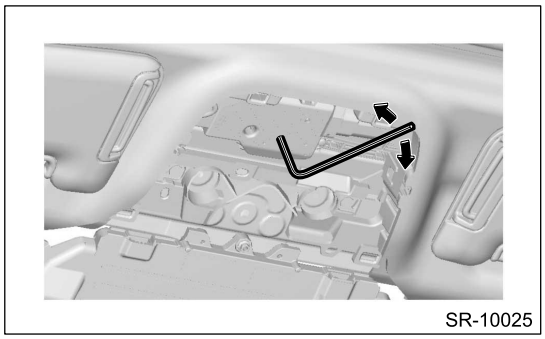
SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Glass Lid

FORCED DRIVE

If the lid assembly - sunroof does not operate or the motor assembly is not supplied with power, move the lid assembly - sunroof using the hexagon wrench.

Preparation tool:

Hexagon wrench: width across flat 4 mm (0.16 in)



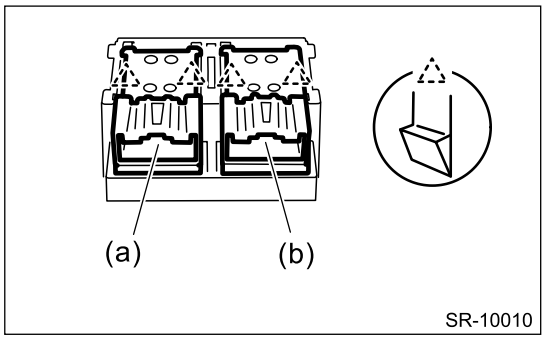
Caution:

After a forced operation, make sure to perform an initialize operation.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - map. (Models without EyeSight) Ref. to LIGHTING SYSTEM>Spot Map Light>REMOVAL.
3. Remove the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
4. Insert the hexagon wrench securely until it touches the motor shaft end.
5. Turn the hexagon wrench, and move the lid assembly - sunroof.
   - Turning right, the lid assembly - sunroof opens.
   - Turning left, the lid assembly - sunroof closes.

   Caution:

   Be careful not to damage the adjacent parts with the rod end when moving the lid assembly - sunroof with the hexagon wrench.



6. Install the light assembly - map. (Models without EyeSight) Ref. to LIGHTING SYSTEM>Spot Map Light>INSTALLATION.
7. Install the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>INSTALLATION.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
9. Perform the initialize operation. Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Control System>OPERATION > INITIALIZE OPERATION.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Switch

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the light assembly - map. (Models without EyeSight) Ref. to LIGHTING SYSTEM>Spot Map Light>REMOVAL.
3. Remove the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
4. Release the claws, and then remove the sunroof switch.

(a) Sunroof switch (tilt)

(b) Sunroof switch (slide)

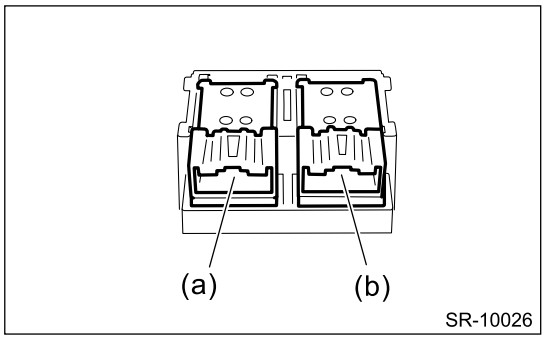
SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Switch

INSTALLATION

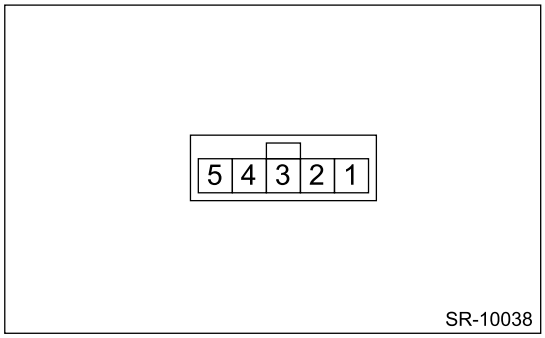
Caution:

For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. Ref. to EyeSight>Stereo Camera>INSTALLATION.

1. Install the sunroof switch.
2. Install the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>INSTALLATION.
3. Install the light assembly - map. (Models without EyeSight)
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Switch



INSPECTION

1. Disconnect the harness connector of sunroof switch.
2. Measure the resistance between connector terminals.

Preparation tool:

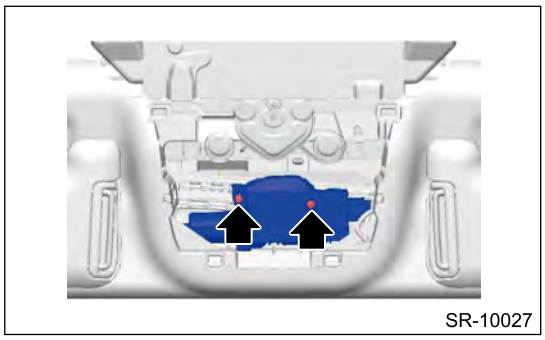
Circuit tester

Terminal No.	Inspection conditions	Standard	Connector
1 — 3	OPEN	Less than 1 Ω	(b): Slide switch
4 — 3	CLOSE	Less than 1 Ω	
4 — 3	Tilt down	Less than 1 Ω	(a): Tilt switch
1 — 3	Tilt up	Less than 1 Ω	

3. Replace the sunroof switch if the inspection result is not within the standard value.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Motor

REMOVAL



1. Completely close the lid assembly - sunroof.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Remove the light assembly - map. (Models without EyeSight) Ref. to LIGHTING SYSTEM>Spot Map Light>REMOVAL.
4. Remove the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
5. Remove the motor assembly - sunroof.
   (1) Disconnect the harness connector.
   (2) Remove the TORX® screws and remove the motor assembly - sunroof.

Caution:

When removing the motor assembly - sunroof, secure the cable assembly so that it does not move.

Preparation tool:

TORX® T25

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Motor

INSTALLATION

Caution:

- **For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. Ref. to EyeSight>Stereo Camera>INSTALLATION.**
- **When installing the motor assembly - sunroof, be careful not to move the cable assembly.**

1. Install the motor assembly - sunroof.
2. Install the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>INSTALLATION.
3. Install the light assembly - map. (Models without EyeSight)
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Perform the initialize operation. Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Control System>OPERATION > INITIALIZE OPERATION.
6. Check the operation of sunroof by following the table below.

Operation	Switch position
(1) Lid assembly - sunroof closes completely.	Close
(2) Lid assembly - sunroof is tilted up to the top position.	Tilt up

Operation	Switch position
(3) Lid assembly - sunroof closes completely.	Tilt down
(4) Lid assembly - sunroof opens completely.	Open
(5) Lid assembly - sunroof closes completely.	Close

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Motor

INSPECTION

Check the auto-reverse mechanism.

Caution:

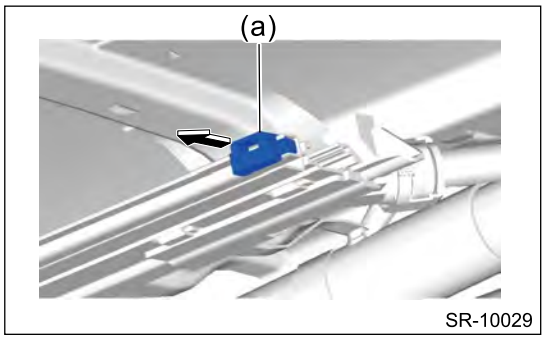
Do not place objects in the way to check the auto-reverse mechanism.

1. Open the lid assembly - sunroof.
2. Push the lid assembly - sunroof in the opening direction with a force of 100 N (10.2 kgf, 22.5 lbf) during auto-closing, and check if the window auto-reverse mechanism operates properly.

   Note:

   If the auto function is cancelled, perform the initialize operation. Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Control System>OPERATION > INITIALIZE OPERATION.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunshade



REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - roof assembly.
   - 4 door model: Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL > 4 DOOR MODEL.
   - 5 door model: Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL > 5 DOOR MODEL.
3. Remove the sunshade assembly.

   Caution:

   Be careful not to damage the sunshade assembly.

   (1) Remove the left and right stopper rubbers (a).

   (2) Attach protective tape (b) on the handle of sunshade assembly.

   (3) Remove the sunshade assembly while pulling the center of the brace downward.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunshade

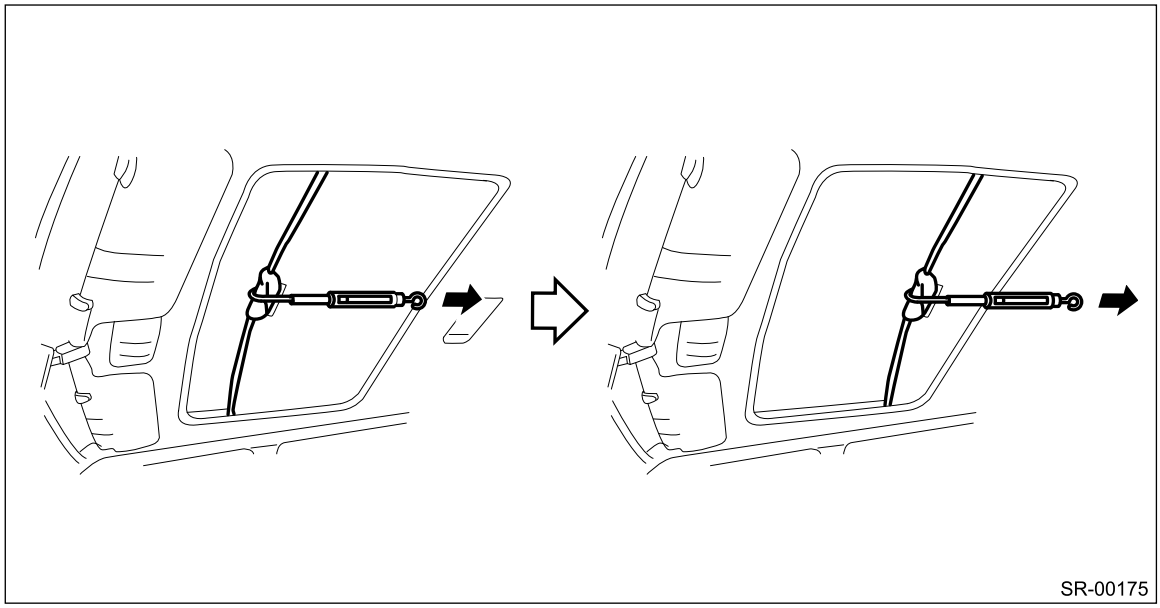
INSTALLATION

Caution:

For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. Ref. to EyeSight>Stereo Camera>INSTALLATION.

1. Attach protective tape on the handle and the edge surface of the sunshade assembly, and install the sunshade assembly.
2. Install the left and right stopper rubbers.
3. Install the trim panel - roof assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>INSTALLATION.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunshade



INSPECTION

1. MOVING LOAD OF SUNSHADE ASSEMBLY

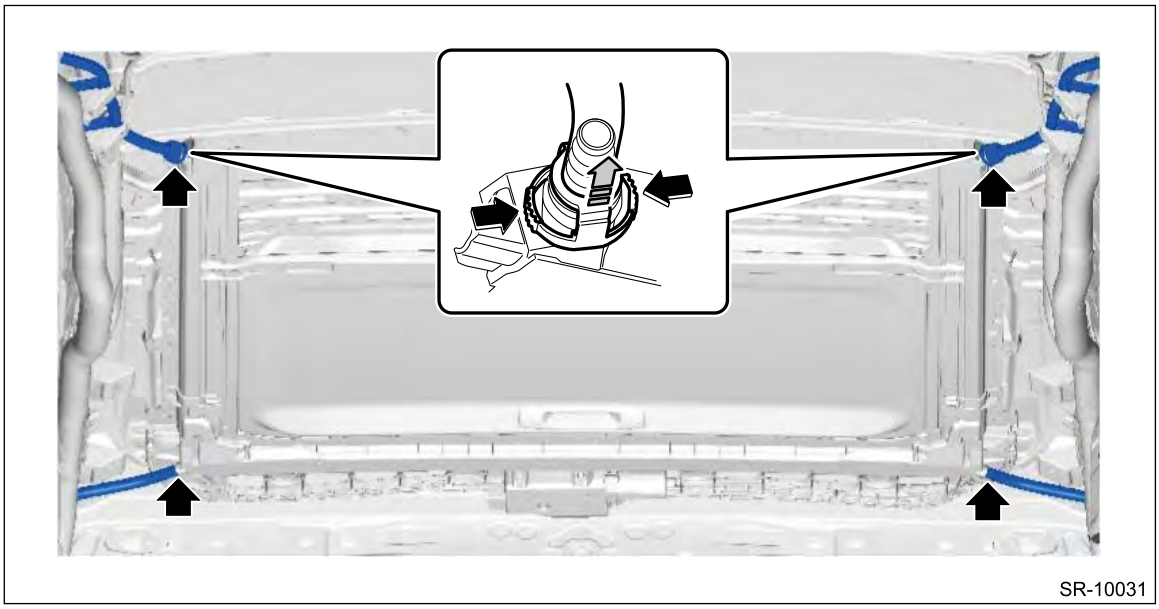
1. Attach a spring scale together with a cloth to the edge of sunshade assembly.
2. Pull the spring scale to check the moving load of the sunshade assembly.

   Moving load of sunshade assembly:

   15.5±9.5 N (1.6 kgf, 3.5 lbf±1 kgf, 2.1 lbf)

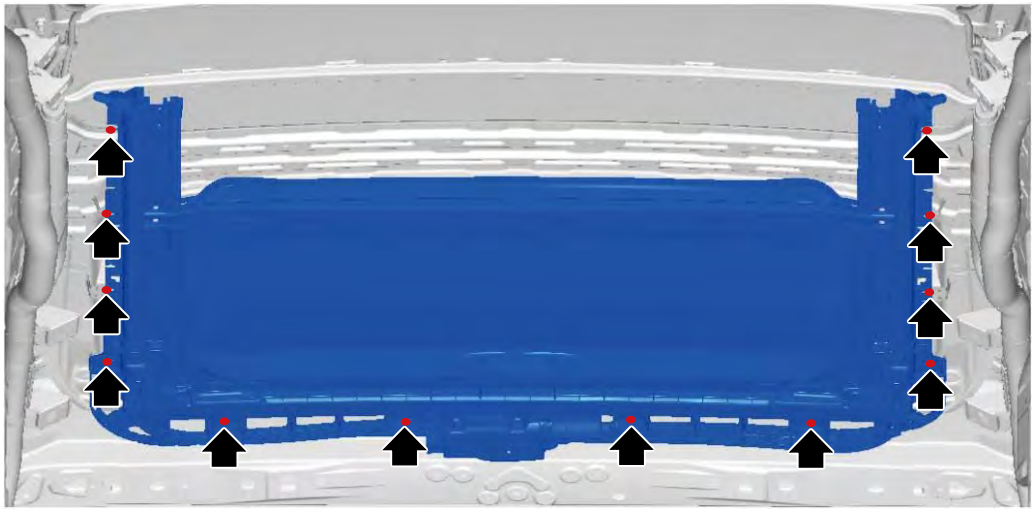
Note:

Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while the sunshade assembly is sliding smoothly.



3. If the inspection result exceeds the standard, check that the sunshade assembly or the rail assembly - sunroof is installed properly. If necessary, replace the sunshade assembly or the rail assembly - sunroof.

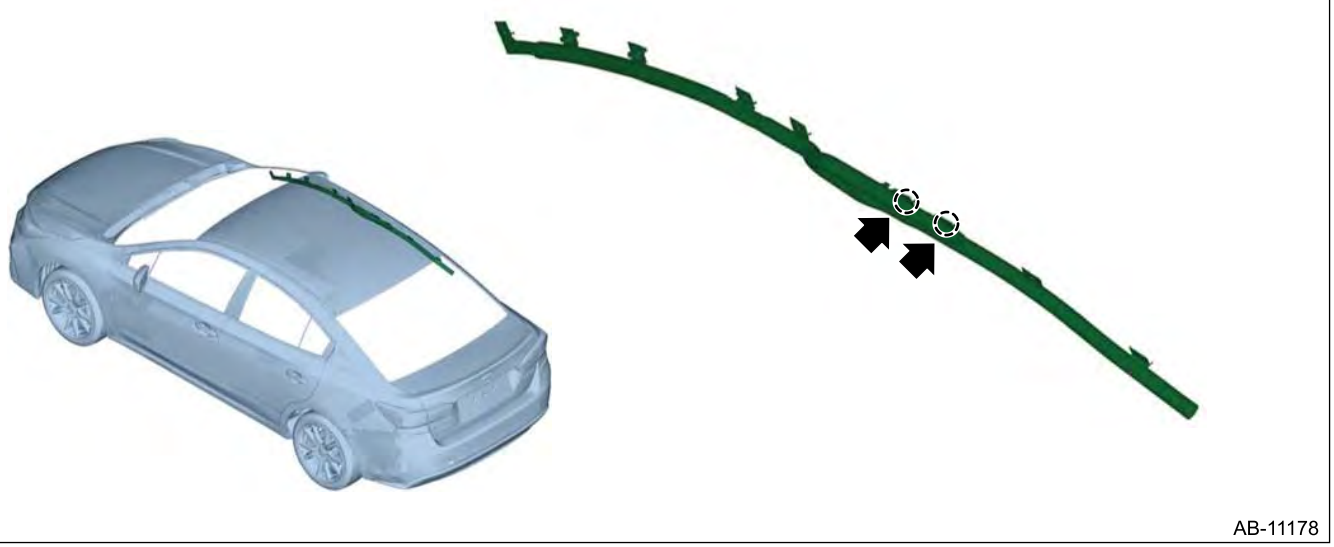
REMOVAL



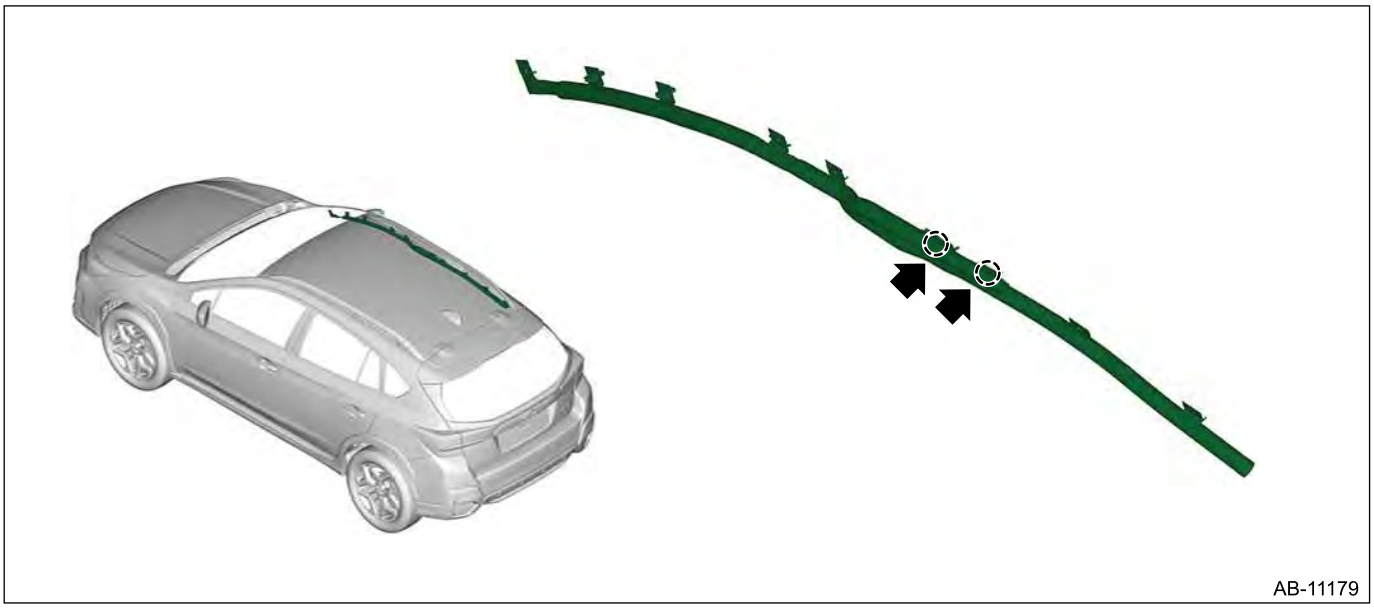
Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **When removing the clip, use great care not to damage the trim panel - roof assembly.**

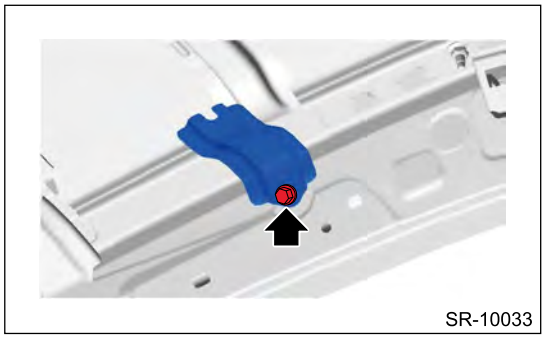
1. Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
   Note:
   Completely close the lid assembly - sunroof, then disconnect the ground cable.
2. Remove the light assembly - map. (Models without EyeSight) Ref. to LIGHTING SYSTEM>Spot Map Light>REMOVAL.
3. Remove the stereo camera cover assembly. (Models with EyeSight) Ref. to EyeSight>Stereo Camera>REMOVAL.
4. Disconnect the connector of the motor assembly - sunroof.
5. Remove the trim panel - roof assembly.
   - 4 door model: Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL > 4 DOOR MODEL.
   - 5 door model: Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>REMOVAL > 5 DOOR MODEL.
6. Remove the drain tube - sunroof.
   Note:
   When removing the drain tube - sunroof completely, perform the step 8).



7. Remove the rail assembly - sunroof.
   (1) Remove the bolt, and then remove the rail assembly - sunroof.



(2) Remove the bolts (2 places) securing the curtain airbag module.

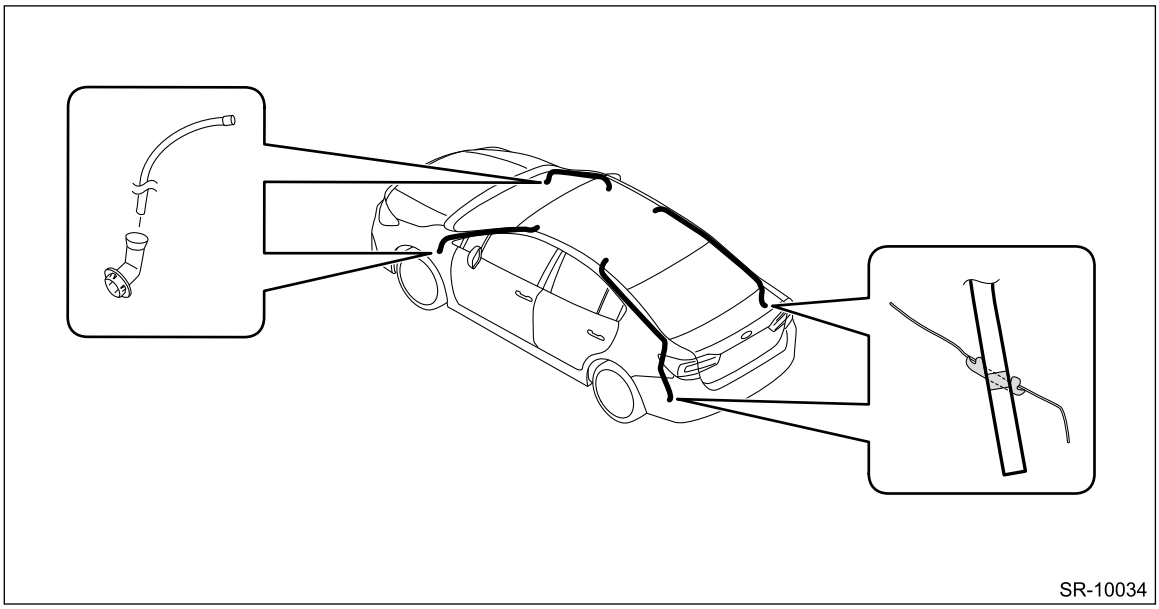


Caution:

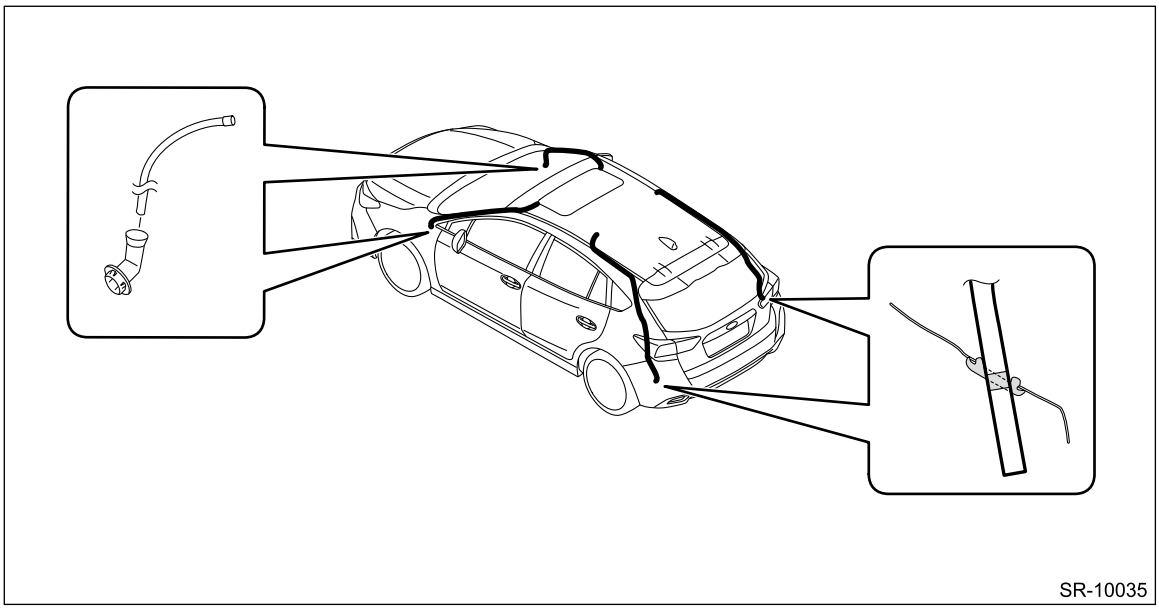
- **Do not remove the clips securing the curtain airbag module. If any of the clips are removed, the curtain airbag module may not deploy properly in collision. If the clip is removed, replace the curtain airbag module assembly.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **Be careful not to damage the curtain airbag module during removal.**

(3) Remove the bolts and then remove the sunroof bracket.

8. Remove the drain tube - sunroof.



Note:



For easy replacement work, attach a string when pulling the drain tube - sunroof.

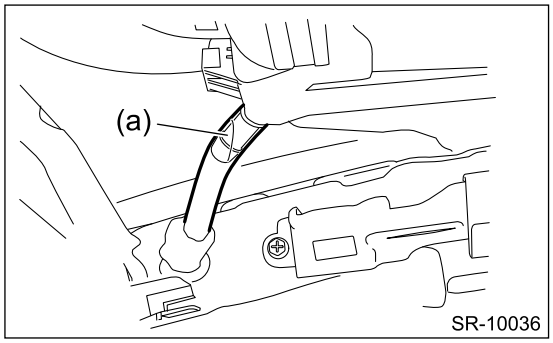
- Front side
  1. Remove the cover assembly - instrument panel LWR driver. Ref. to EXTERIOR/INTERIOR TRIM>Instrument Panel Lower Cover>REMOVAL.
  2. Remove the glove box assembly. Ref. to EXTERIOR/INTERIOR TRIM>Glove Box>REMOVAL.
  3. Turn over the toe board insulator while avoiding to touch the harness around the drain tube.
  4. Remove the clips, and turn over the rear side of the mud guard - front.

     Note:

     Remove the front wheels as necessary.
  5. Remove the front side of drain tube - sunroof.
  6. Remove the drain tube - sunroof.
- Rear side
  1. Remove the mat - trunk and trim panel - trunk side. (4 door model) Ref. to EXTERIOR/INTERIOR TRIM>Trunk Room Trim>REMOVAL.
  2. Remove the bumper face - rear.
  3. Remove the rear side of drain tube - sunroof.
  4. Remove the drain tube - sunroof.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Assembly

INSTALLATION



Caution:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.**
- **For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. Ref. to EyeSight>Stereo Camera>INSTALLATION.**
- **Be careful not to snag the harness.**

1. Install the drain tube - sunroof.
2. Install the rail assembly - sunroof.
   Tightening torque:
   6 N·m (0.6 kgf-m, 4.4 ft-lb)
3. Install the curtain airbag module. Ref. to AIRBAG SYSTEM>Curtain Airbag

Module>INSTALLATION.

4. Install the sunroof bracket.
   Tightening torque:
   6 N·m (0.6 kgf-m, 4.4 ft-lb)
5. Connect the harness connector of the drain tube - sunroof and the motor assembly.
   Caution:
   - **Insert the drain tubes on the front side until they contact all the way to the end (a) of drain pipes.**

   - **For the drain tubes on the rear side, securely insert the resin connector until a clicking sound is heard.**
6. Check for the water leakage for each part and if there is no problem install the following parts.
   - Front side
     1. Mud guard - front
     2. Glove box assembly
     3. Cover ASSY - instrument panel LWR driver
   - Rear side
     1. Mat - trunk and trim panel - trunk side (4 door model)
     2. Bumper face - rear
7. Install the trim panel - roof assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof Trim>INSTALLATION.
8. Using a new TORX® bolt, install the lid assembly - sunroof.
   Preparation tool:
   TORX® T25
   Tightening torque:
   4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
9. Install the cover - lid.
10. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Assembly

DISASSEMBLY

1. Remove the following parts referring the respective procedures.
   - Lid assembly - sunroof: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Glass Lid>REMOVAL > GLASS LID.
   - Deflector assembly: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Glass Lid>REMOVAL > DEFLECTOR ASSEMBLY.
   - Sunshade assembly: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunshade>REMOVAL.
   - Sunroof motor assembly: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Assembly>REMOVAL.

2. Remove the drain plate - sunroof.
   (1) Release the claws on the front side.
   (2) Slide the drain plate - sunroof and remove from the rail section.

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF) > Sunroof Assembly

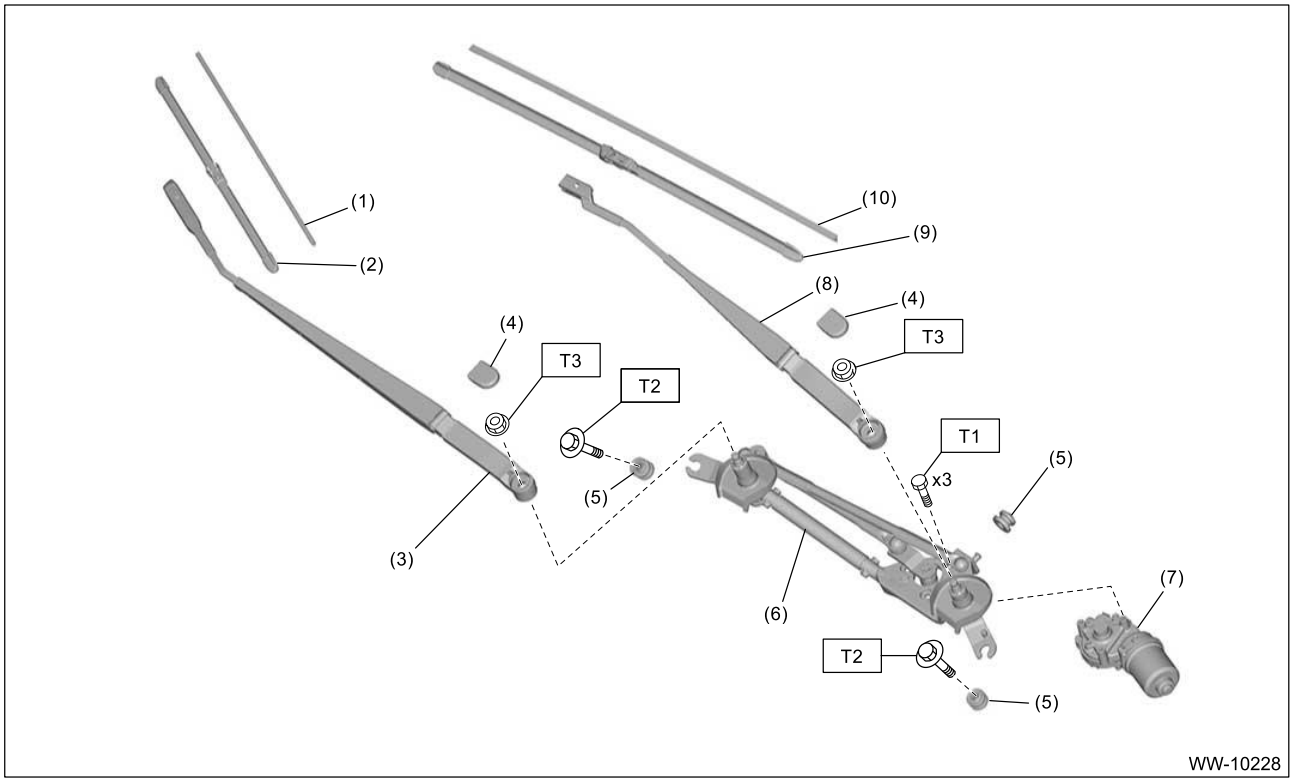
ASSEMBLY

1. Remove the drain plate - sunroof.
2. Remove the following parts referring the respective procedures.
   - Lid assembly - sunroof: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Glass Lid>INSTALLATION > GLASS LID.
   - Deflector assembly: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Glass Lid>INSTALLATION > DEFLECTOR ASSEMBLY.
   - Sunshade assembly: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunshade>INSTALLATION.
   - Sunroof motor assembly: Ref. to SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)>Sunroof Assembly>INSTALLATION.

WIPER AND WASHER SYSTEMS

WW

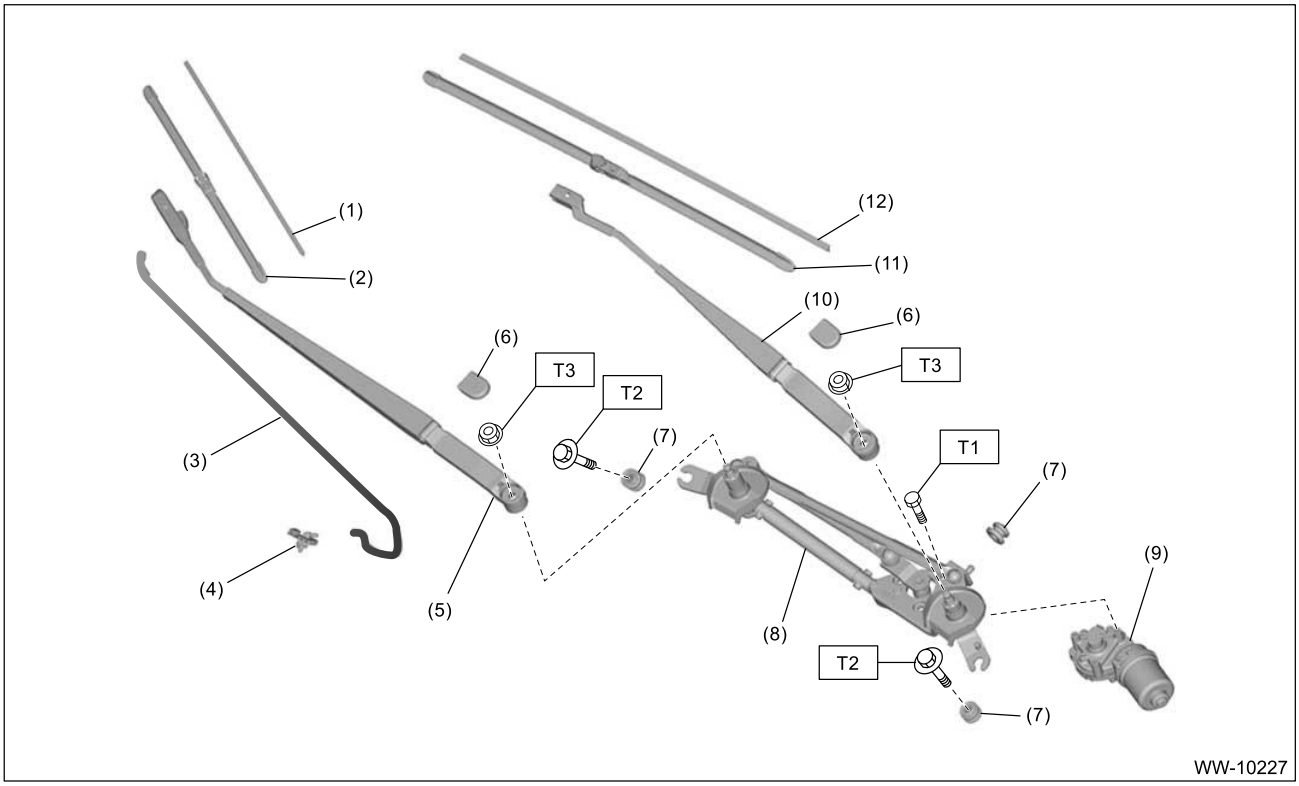
1. General Description
2. Relay and Fuse
3. Wiper and Washer System
4. Combination Switch (Wiper)
5. Wiper Blade
6. Washer Tank and Motor
7. Front Wiper Arm
8. Front Wiper Motor and Link
9. Front Washer Nozzle and Hose
10. Rear Wiper Arm
11. Rear Wiper Motor
12. Rear Washer



SPECIFICATION

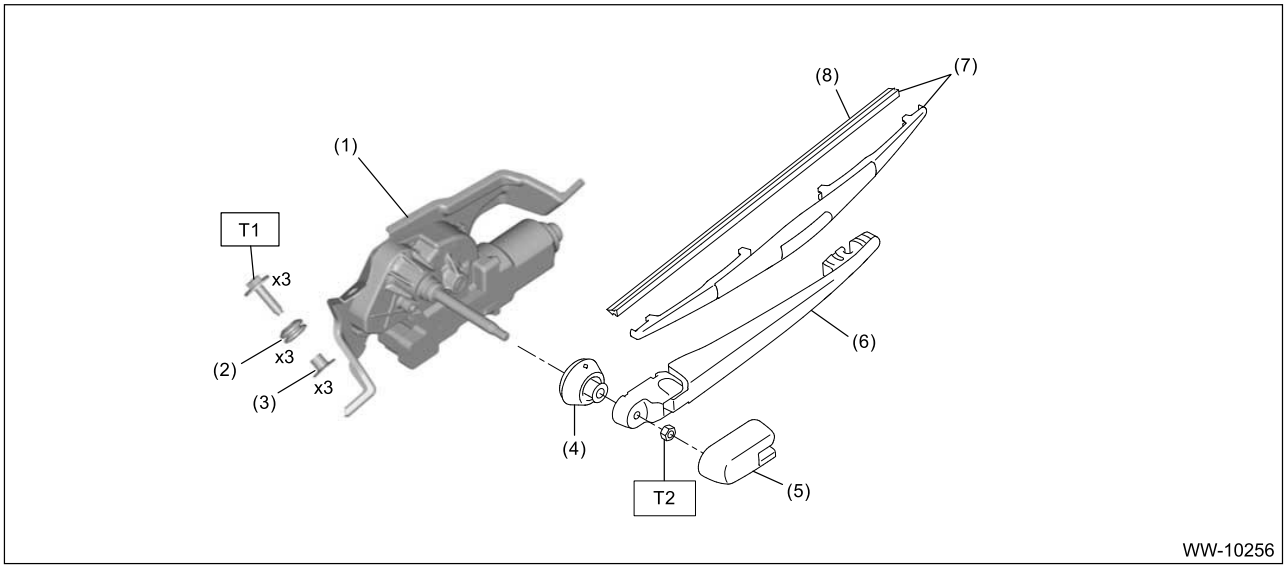
Front wiper motor	Input	12 V — 72 W or less
Rear wiper motor	Input	12 V — 42 W or less
Front washer motor	Pump type	Centrifugal
	Input	12 V — 72 W or less
Rear washer motor	Pump type	Centrifugal
	Input	12 V — 42 W or less

COMPONENT



1. FRONT WIPER

- Models without EyeSight

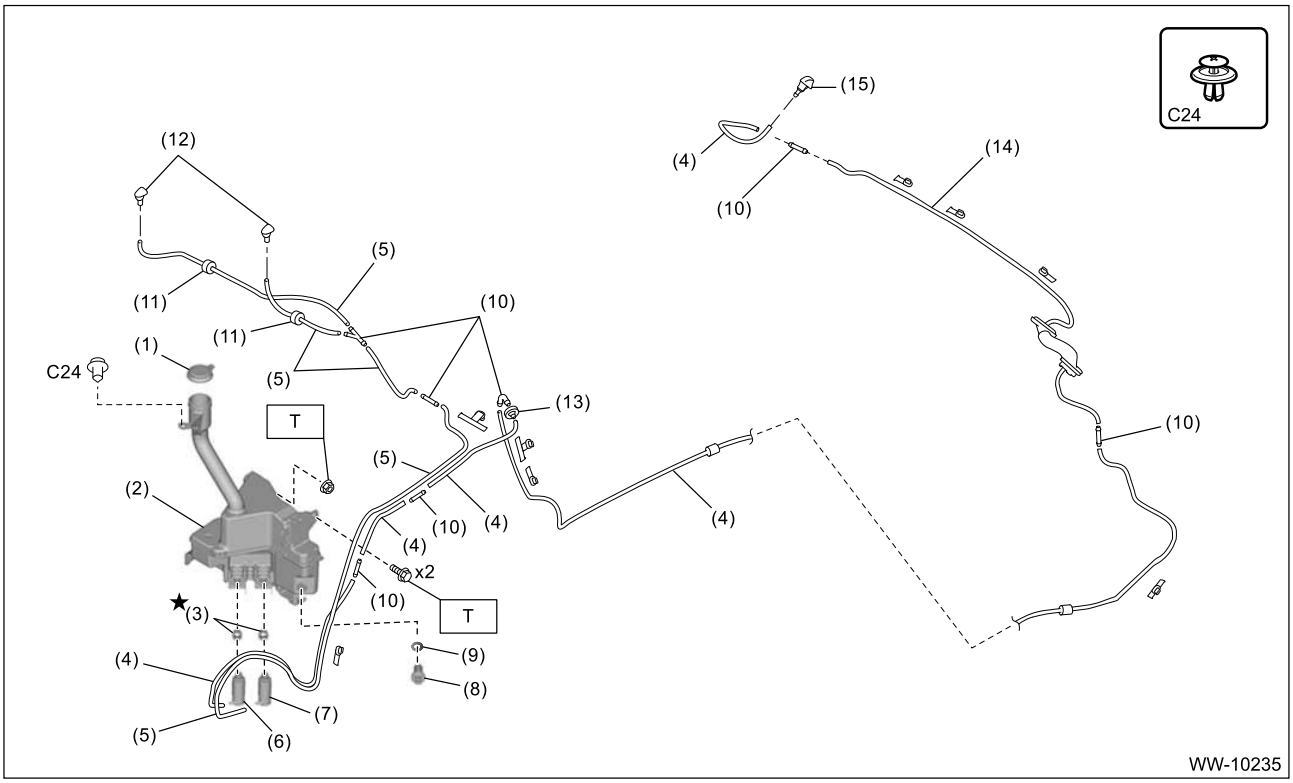


(1)	Rubber ASSY - windshield wiper assistor	(6)	Link ASSY - windshield wiper	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Blade ASSY - windshield wiper assistor	(7)	Motor ASSY - windshield wiper	***T1: 5.5 (0.6, 4.1)***	
(3)	Arm ASSY - windshield wiper assistor	(8)	Arm ASSY - windshield wiper driver	***T2: 6 (0.6, 4.4)***	
(4)	Cover - windshield wiper arm	(9)	Blade ASSY - windshield wiper driver	***T3: 26 (2.7, 19.2)***	
(5)	Busing - wiper link	(10)	Rubber ASSY - windshield wiper driver		

- Models with EyeSight

(1)	Rubber ASSY - windshield wiper assistor	(7)	Busing - wiper link	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Blade ASSY - windshield wiper assistor	(8)	Link ASSY - windshield wiper	***T1: 5.5 (0.6, 4.1)***	
(3)	Hose - wiper arm washer	(9)	Motor ASSY - windshield wiper	***T2: 6 (0.6, 4.4)***	
(4)	Joint - washer hose	(10)	Arm ASSY - windshield wiper driver	***T3: 26 (2.7, 19.2)***	
(5)	Arm ASSY - windshield wiper assistor	(11)	Blade ASSY - windshield wiper driver		
(6)	Cover - windshield wiper arm	(12)	Rubber ASSY - windshield wiper driver		

2. REAR WIPER



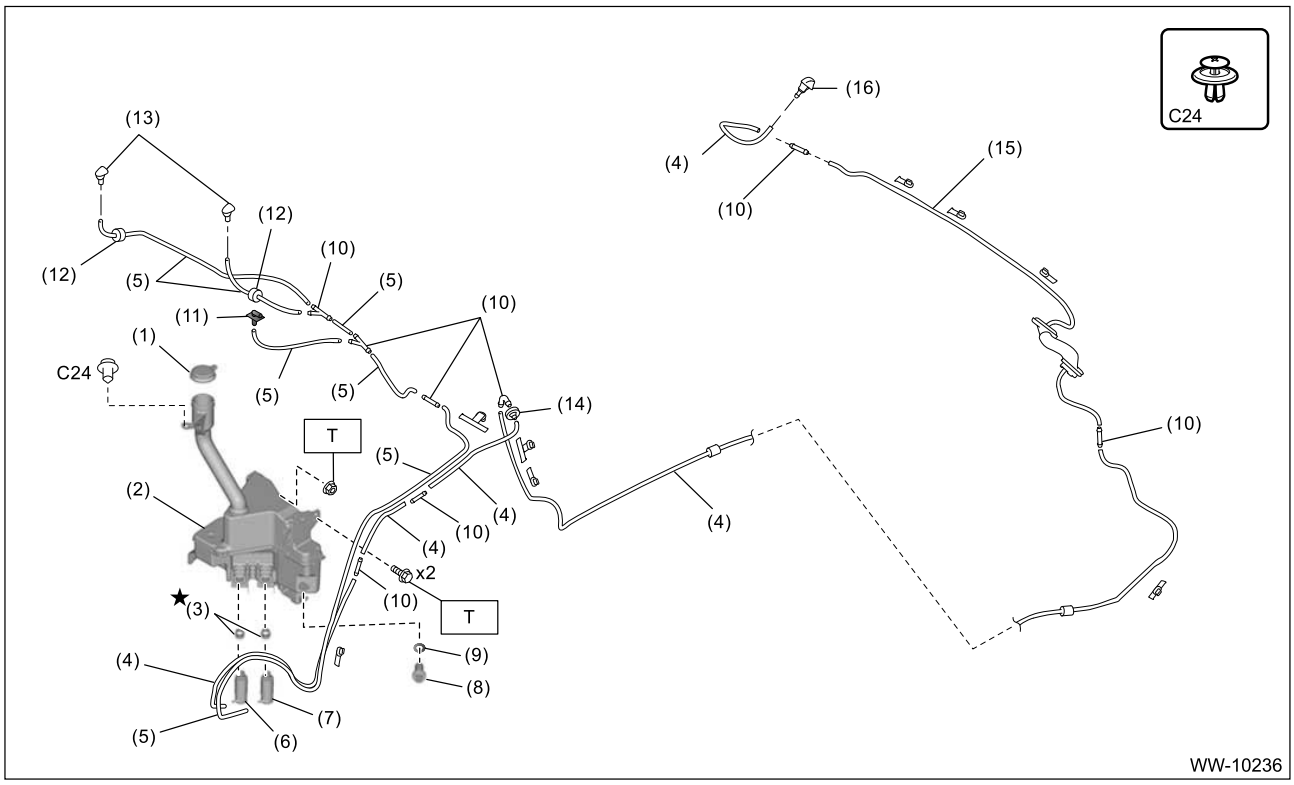
(1) Motor ASSY - rear wiper
(2) Mount rubber
(3) Collar
(4) Cap - pivot wiper
(5) Cover - rear wiper arm
(6) Arm ASSY - rear wiper
(7) Blade ASSY - rear wiper
(8) Rubber ASSY - rear wiper

Tightening torque: N·m (kgf-m, ft-lb)

T1: 7 (0.7, 5.2)
T2: 8 (0.8, 5.9)

3. WASHER TANK

- Models without EyeSight



(1) Cap - windshield washer tank
(2) Tank ASSY - washer
(3) Packing - washer motor
(7) Motor pump ASSY - washer front
(8) Sensor - washer tank
(9) Packing - washer sensor
(13) Grommet - washer hose (5 door model)
(14) Hose ASSY - rear washer (included in rear gate harness ASSY) (5 door model)
(15) Nozzle - rear washer (5 door

model)

(4) Hose - rear washer (5 door model)
(5) Hose - windshield washer
(6) Motor pump ASSY - washer rear (5 door model)
(10) Joint - washer hose
(11) Check valve - windshield washer
(12) Nozzle - windshield washer

Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

- Models with EyeSight

(1) Cap - windshield washer tank
(2) Tank ASSY - washer
(3) Packing - washer motor
(4) Hose - rear washer (5 door model)
(5) Hose - windshield washer
(6) Motor pump ASSY - washer rear (5 door model)
(7) Motor pump ASSY - washer front
(8) Sensor - washer tank
(9) Packing - washer sensor
(10) Joint - washer hose
(11) Joint - arm washer hose
(12) Check valve - windshield washer
(13) Nozzle - windshield washer
(14) Grommet - washer hose (5 door model)
(15) Hose ASSY - rear washer (included in rear gate harness ASSY) (5 door model)
(16) Nozzle - rear washer (5 door model)

Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

CAUTION

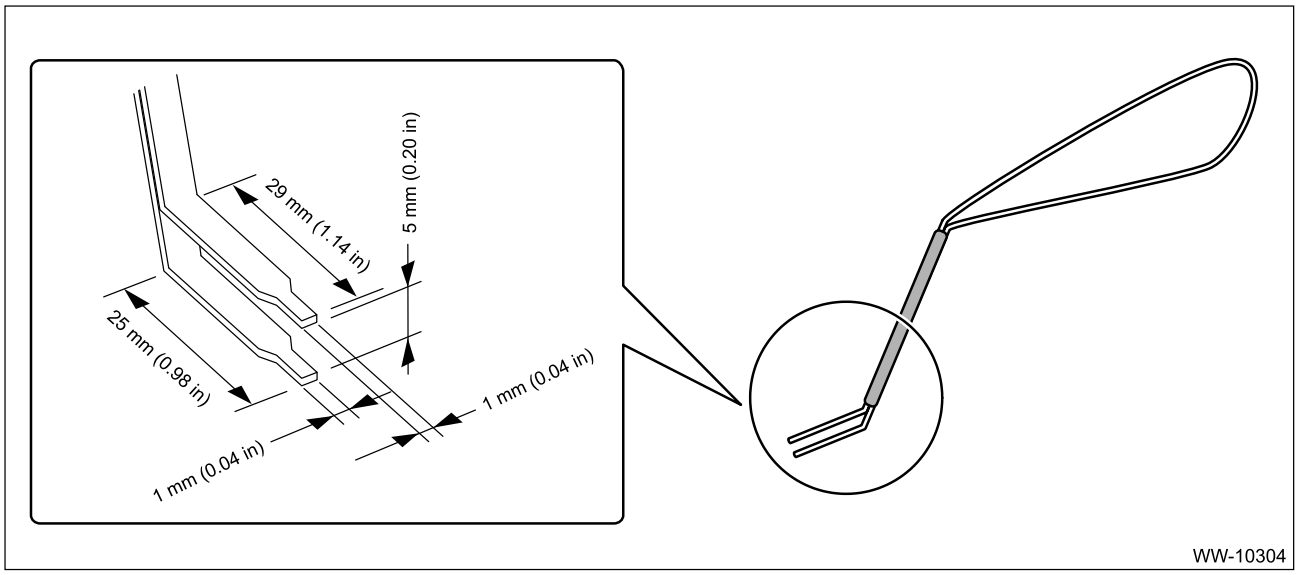
- Before performing vehicle maintenance, turn the ignition switch to OFF and disconnect the negative terminal from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". Ref. to AIRBAG SYSTEM>General Description>CAUTION.
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When connecting the washer hoses, be careful not to cause bend or blockage.
- If even a small amount of silicon oil or grease enters the tank - washer and the washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL



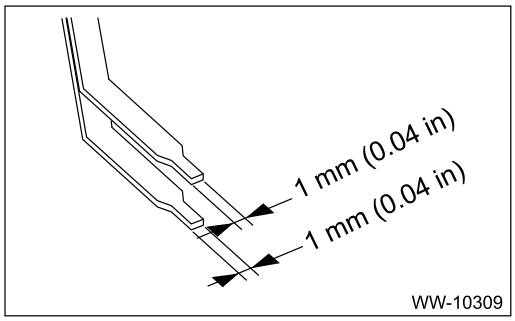
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. HANDMADE TOOL

- **WASHER NOZZLE ADJUSTMENT JIG**

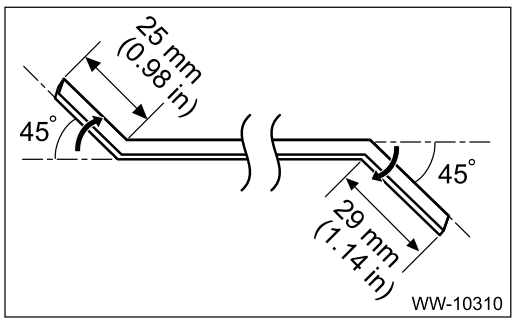
Note:

Referring to the data described below, prepare the materials to make a nozzle - windshield washer adjustment tool.



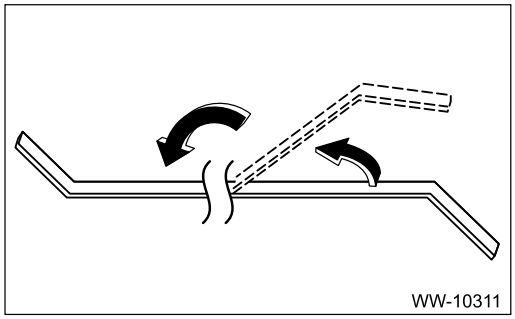
Preparation items:

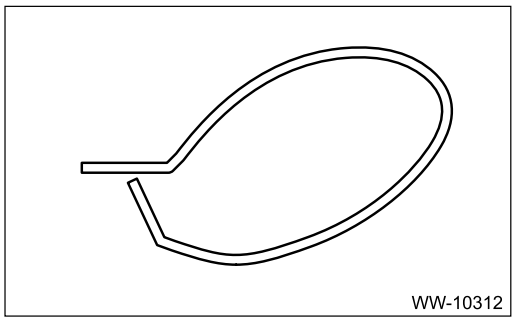
Vertebra of wiper blade which is to be discarded



Vinyl tape

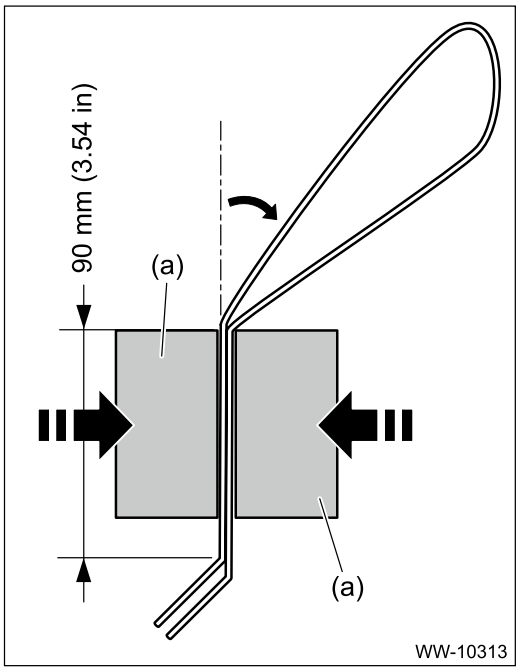
1. Grind the vertebra edge until the width becomes 1 mm (0.04 in).



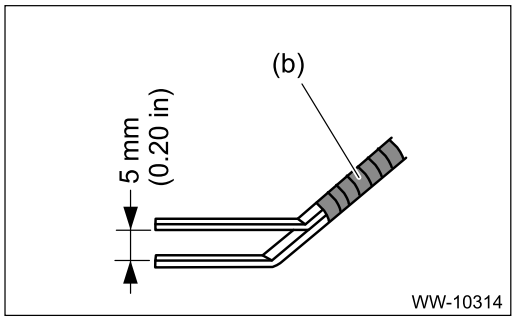


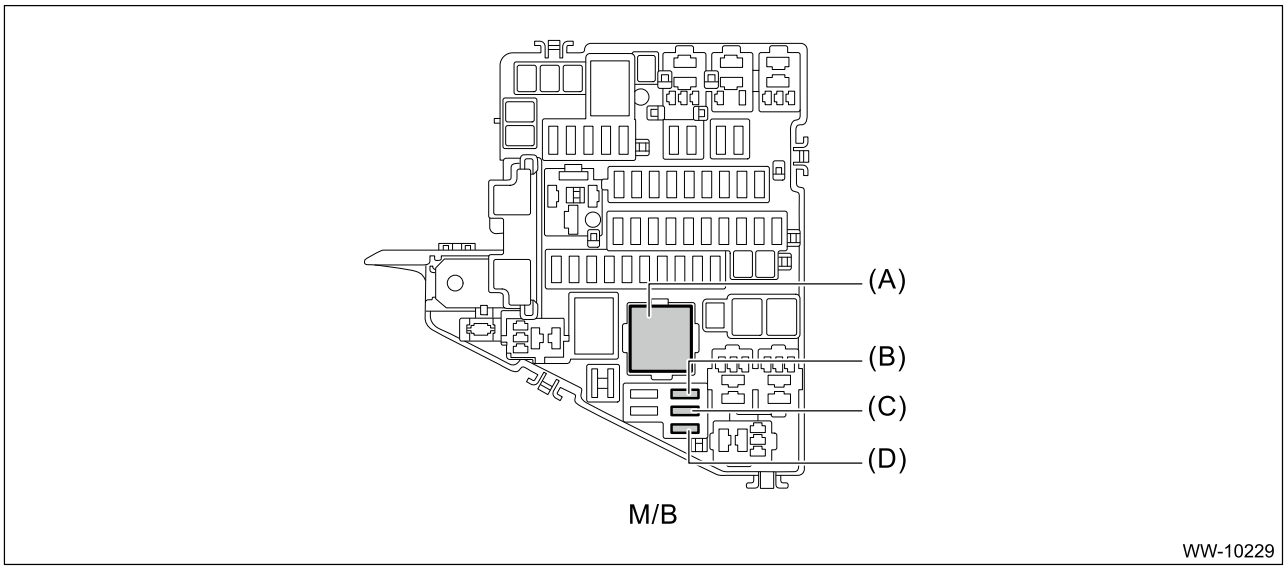
2. Bend the vertebra at the position 25 mm (0.98 in) away from its end by 45°.

3. Bend the vertebra at the position 29 mm (1.14 in) away from the other end by 45°.



4. Double up the vertebra so that the longer end (29 mm (1.14 in)) comes upward.





5. Secure the vertebra with a vise (a) so that the tip clearance between upper and lower becomes 5 mm (0.2 in).
6. Bend the vertebra at the position approximately 90 mm (3.54 in) away from the bending point for the longer end.

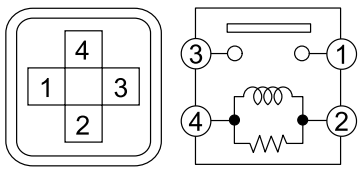
7. Check that the tip clearance between upper and lower is 5 mm (0.2 in), and secure the vertebra with vinyl tape (b).

LOCATION

Main fuse box (M/B)	Wiper relay	(A)
	Fuse 30 A (front wiper)	(B)
	Fuse 15 A (front washer)	(C)
	Fuse 15 A (rear wiper, rear washer)	(D)

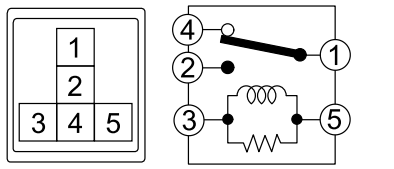
Note:

For other related fuses, refer to the wiring diagram. Ref. to WIRING SYSTEM>Power Supply Circuit.



INSPECTION

1. CHECK FUSE



1. Remove the fuse and inspect visually.
2. If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1. Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 3	Always	1 MΩ or more	
1 — 3	Apply battery voltage between terminals 4 and 2.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01085
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2. Replace the relay if the inspection result is not within the standard value.

WIRING DIAGRAM

1. WIPER AND WASHER (FRONT)

Refer to "Front Wiper and Washer System" in the wiring diagram. Ref. to WIRING SYSTEM>Front Wiper and Washer System>WIRING DIAGRAM.

2. WIPER AND WASHER (REAR)

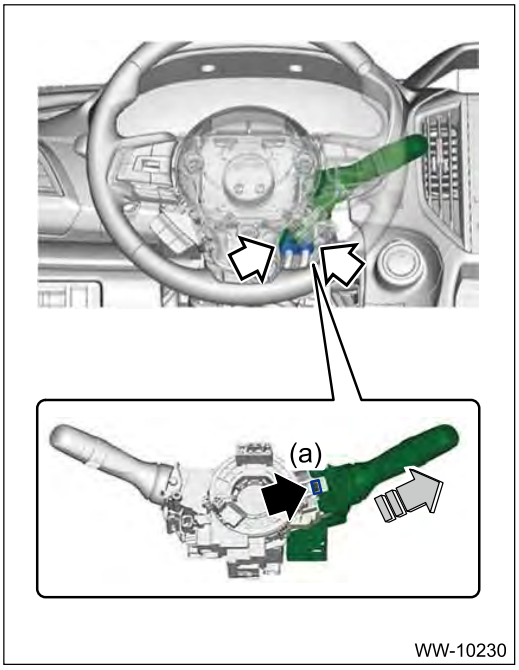
Refer to "Rear Wiper and Washer System" in the wiring diagram. Ref. to WIRING SYSTEM>Rear Wiper and Washer System>WIRING DIAGRAM.

INSPECTION

Symptoms	Repair order
Wiper and washers do not operate.	1. Wiper fuse 2. Combination switch 3. Motor assembly - wiper 4. Wiring harness
Wipers do not operate in LO or HI.	1. Combination switch 2. Motor assembly - wiper 3. Wiring harness
Wipers do not operate in INT.	1. Combination switch 2. Motor assembly - wiper 3. Wiring harness
Washer motor does not operate.	1. Combination switch 2. Motor pump assembly - washer 3. Wiring harness
Wipers do not operate when washer switch is ON.	1. Motor assembly - wiper 2. Wiring harness
Washer fluid spray does not operate properly.	1. Motor pump assembly - washer 2. Hose assembly - washer 3. Nozzle - washer
Wiper chatters or judders during operation.	1. Oil film and dirt on the glass 2. Arm assembly - windshield wiper 3. Motor assembly - wiper

NOTE

For procedure of each component of the wiper and washer system, refer to the respective sections.



- Combination switch (wiper): Ref. to WIPER AND WASHER SYSTEMS>Combination Switch (Wiper).
- Wiper blade: Ref. to WIPER AND WASHER SYSTEMS>Wiper Blade.
- Front wiper arm: Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm.
- Front wiper motor and link: Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Motor and Link.
- Rear wiper arm: Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Arm.
- Rear wiper motor: Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Motor.
- Washer tank and motor pump: Ref. to WIPER AND WASHER SYSTEMS>Washer Tank and Motor.
- Front washer nozzle & hose: Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose.
- Rear washer nozzle: Ref. to WIPER AND WASHER SYSTEMS>Rear Washer.

WIPER AND WASHER SYSTEMS > Combination Switch (Wiper)

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the cover assembly - column. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Steering Column>REMOVAL.
3. Remove the switch assembly - combination wiper select.
   (1) Disconnect the connector.
   (2) Press the claws (a), and pull out the switch assembly - combination wiper select.

Caution:
Do not press the claws with excessive force. They may be damaged.

WIPER AND WASHER SYSTEMS > Combination Switch (Wiper)

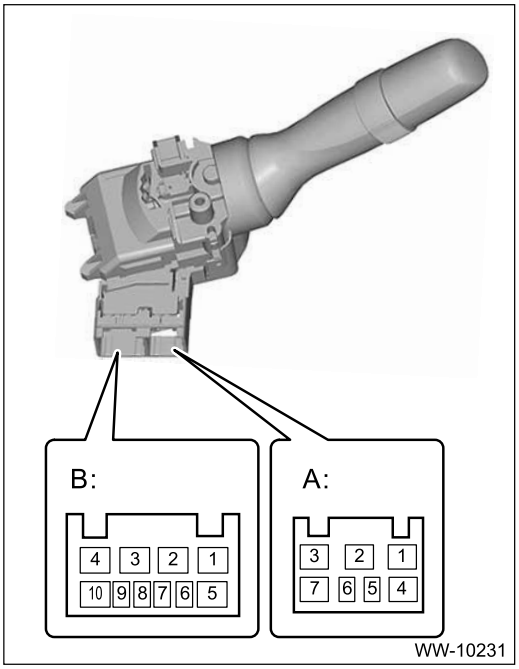
INSTALLATION

1. Install the switch assembly - combination wiper select.
2. Install the cover assembly - column.
3. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

WIPER AND WASHER SYSTEMS > Combination Switch (Wiper)

INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR



Note:
For detailed operation procedures, refer to "Application help".

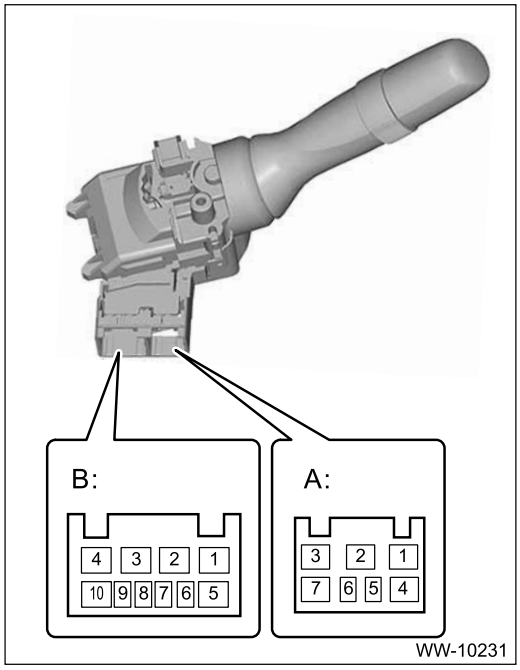
1. Check the input signal when the switch assembly - combination wiper is operated, using the [Data monitor] display. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>LIST.
   - F wiper input
   - R wiper (ON) SW input
   - R wiper (INT) SW input
   - R washer SW input
2. Does the input signal change corresponding to the switch operation?

- **Yes** → Finish the diagnosis.
- **No** → Check the harness.

2. INSPECTION OF SWITCH UNIT

1. Operate the switches to check the continuity between terminals.
   Preparation tool:
   Circuit tester

- Front



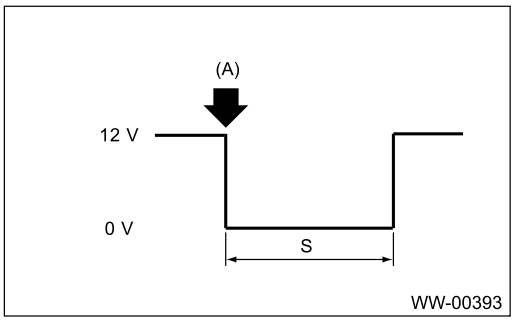
Switch position	Terminal No.	Standard
OFF	B3 and B1	Less than 1 Ω
INT	B3 and B1	Less than 1 Ω
LO	B2 and B3	Less than 1 Ω
HI	B2 and B4	Less than 1 Ω
Washer ON	A3 and A2	Less than 1 Ω

- Rear

Switch position	Terminal No.	Standard
Washer ON (wiper interlock operation)	A7 and A2 B5 and A2	Less than 1 Ω
OFF	A7 and A2 A6 and A2 B5 and A2	1 MΩ or more
LO	A6 and A2	Less than 1 Ω
HI	A7 and A2	Less than 1 Ω
Washer ON	B5 and A2	Less than 1 Ω

2. Replace the switch if the inspection result is not within the standard value.
3. Install the switch assembly - combination wiper select. Ref. to WIPER AND WASHER SYSTEMS>Combination Switch (Wiper)>INSTALLATION.

3. CHECK THE INTERMITTENT OPERATION (INSPECTION OF THE WIPER SWITCH ALONE)



1. Set the voltmeter between terminal No. B2 (+) — No. A2 (−).
2. Connect the battery to connector. (Terminal No. B2 (+), Terminal No. A2 (−))
3. Turn the switch assembly - combination wiper select to INT.
4. Connect the battery (+) to the terminal No. B2 for 5 seconds.
5. Connect the battery (−) to the terminal No. A2, and check the voltage between terminals No. B2 — and No. A2 during intermittent operation.
6. Perform step 1 to 5 above when intermittent control switch is in MIN or MAX, and replace the switch if the operation is not as specified.

Intermittent stationary time

MIN: Approx. 2 seconds

MAX: Approx. 16 seconds

(A): Connect the battery (−) to the terminal No. B2.

S: Intermittent downtime (sec.)

4. REAR WIPER

1. CHECK INPUT OF BODY INTEGRATED UNIT.

Check the input signal when the rear wiper switch is operated using Subaru Select Monitor.

Note:

For detailed operation procedures, refer to "Application help".

1. Turn the ignition switch to ON.
2. Operate the rear wiper switch to each position of ON, INT and Washer ON.

Does the input signal change corresponding to the switch operation?

Yes — Go to 3.

No — Go to 2.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Disconnect the connector of body integrated unit and wiper switch.
4. Measure the resistance between body integrated unit and wiper switch.

Connector & terminal

(i81) No. 19 — (i68) No. 7:
(i81) No. 3 — (i68) No. 6:
(i81) No. 10 — (i69) No. 5:

Is the resistance less than 10 Ω?

Yes — Go to 3.

No — Repair the harness between the body integrated unit and wiper switch.

3. CHECK OUTPUT OF BODY INTEGRATED UNIT.

Check the output signal when the rear wiper switch is operated using Subaru Select Monitor.

1. Turn the ignition switch to ON.
2. Operate the rear wiper switch to ON and Washer ON.
3. When the operation in step (2) is performed, check the output signal of body integrated unit to motor assembly - rear wiper.

When the rear wiper switch is set to ON, is ON output continuous? Also, when the washer is set to ON, is ON output?

Yes — Go to 4.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>NOTE.

4. CHECK OUTPUT OF BODY INTEGRATED UNIT.

Check the output signal when the rear wiper switch is operated using Subaru Select Monitor.

1. Turn the ignition switch to ON.
2. Set the rear wiper switch to INT.
3. When the operation in step (2) is performed, check the output signal of body integrated unit.

When the rear wiper switch is set to INT, is ON/OFF output repeated? (INT OFF time (when vehicle parked): 12 seconds)

Yes — Go to 7.

No — Go to 5.

5. CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND MOTOR ASSEMBLY - REAR WIPER.

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
3. Disconnect the connector of body integrated unit and wiper switch.
4. Measure the resistance between the harness connector terminals of the body integrated unit and the motor assembly - rear wiper.
   Connector & terminal
   (B280) No. 5 — (D43) No. 1:

Is the resistance less than 10 Ω?

Yes — Go to 6.

No — Repair the open circuit of the harness between body integrated unit and the motor assembly - rear wiper.

6. CHECK STOP POSITION CIRCUIT OF MOTOR ASSEMBLY - REAR WIPER.

1. Disconnect the harness connector of the motor assembly - rear wiper.
2. Check the continuity of the stop position circuit for the motor assembly - rear wiper.
   Connector & terminal
   (D43) No. 1 — (D43) No. 4:

Is there continuity between terminals?

Yes — Go to 7.

No — Replace the rear wiper motor assembly.

7. CHECK POWER SUPPLY CIRCUIT OF MOTOR ASSEMBLY - REAR WIPER.

1. Disconnect the harness connector of the motor assembly - rear wiper.
2. Turn the ignition switch to ON.
3. Measure the voltage between the motor assembly - rear wiper harness connector terminal and chassis ground.
   Connector & terminal
   (D43) No. 3 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes — Go to 8.

No — Check the fuse (No. 42 in main fuse box).

8. CHECK GROUND CIRCUIT OF MOTOR ASSEMBLY - REAR WIPER.

1. Turn the ignition switch to OFF.
2. Measure the resistance between the motor assembly - rear wiper harness connector terminal and chassis ground.
   Connector & terminal
   (D43) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes — Go to 9.

No — Repair the open circuit of the motor assembly - rear wiper ground circuit.

9. CHECK HARNESS BETWEEN REAR WIPER RELAY AND MOTOR ASSEMBLY - REAR WIPER.

1. Turn the ignition switch to OFF.
2. Disconnect the harness connector of the rear wiper relay.
3. Disconnect the harness connector of the motor assembly - rear wiper.
4. Measure the resistance between the harness connector terminals of the rear wiper relay and the motor assembly - rear wiper.
   Connector & terminal
   (B225) No. 14 — (D43) No. 2:

Is the resistance less than 10 Ω?

Yes — Go to 10.

No — Repair the open circuit of the harness between body integrated unit and the motor assembly - rear wiper.

10. CHECK OUTPUT OF BODY INTEGRATED UNIT.

1. Connect the harness connector of body integrated unit.
2. Disconnect the connector of the motor assembly - rear wiper.
3. Turn the ignition switch to ON.
4. Measure the voltage between the motor assembly - rear wiper connector and chassis ground.
   Connector & terminal
   (D43) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1.5 V when the rear wiper switch is OFF, and is the voltage 10 V or more when the rear wiper switch is ON?

Yes — Go to 11.

No — Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>NOTE.

11. CHECK OPERATION OF MOTOR ASSEMBLY - REAR WIPER.

1. Remove the motor assembly - rear wiper.
2. Check the motor assembly - rear wiper. Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Motor>INSPECTION.

Does the motor assembly - rear wiper rotate normally?

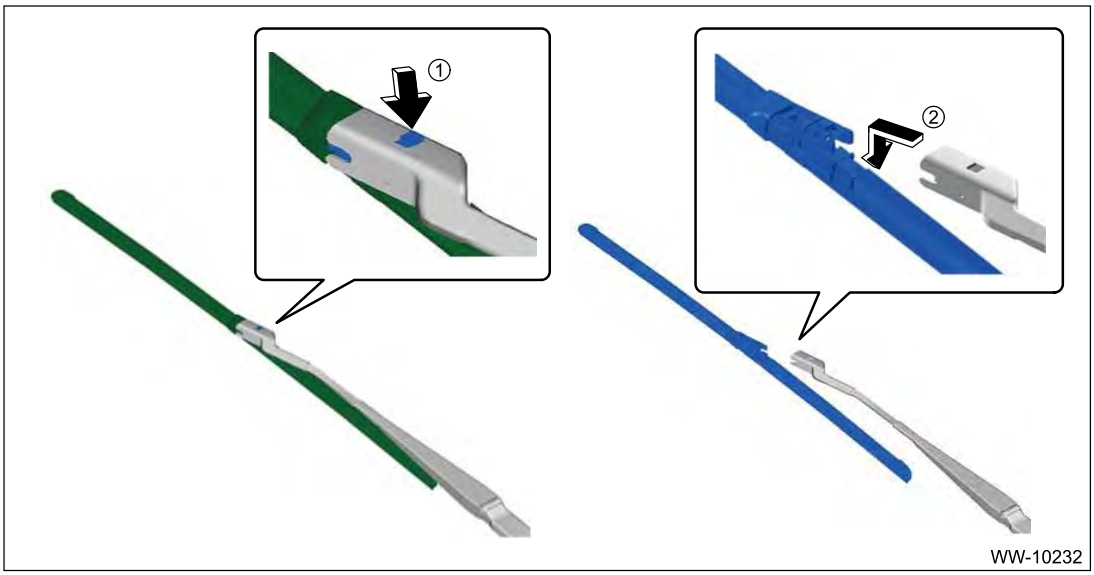
Yes — End.

No — Replace the motor assembly - rear wiper assembly.

Note:

Rear wiper intermittent stopping time

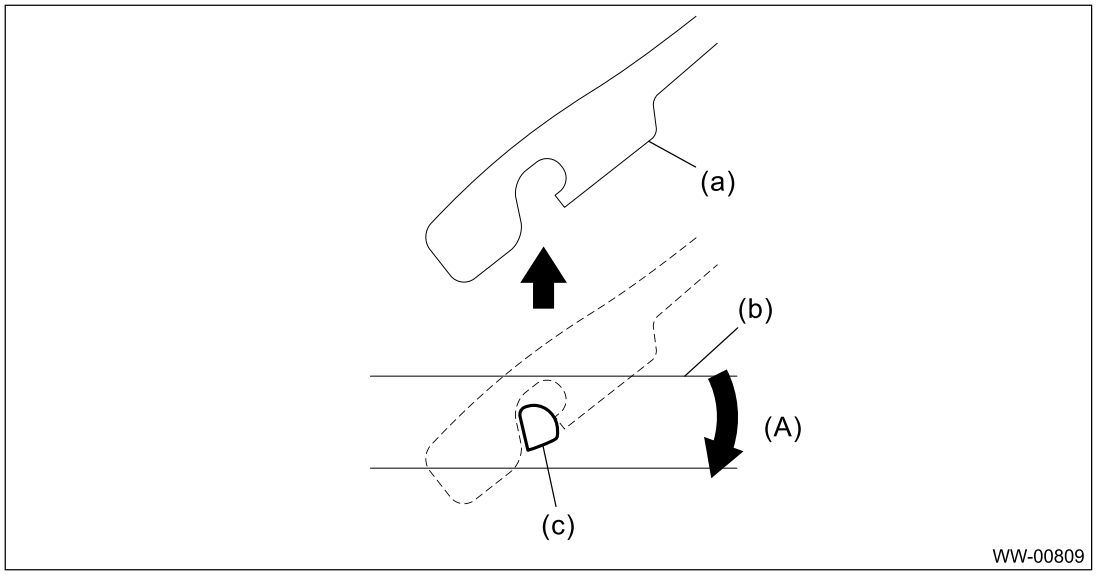
Select lever position	Vehicle speed (km/h (MPH))	Intermittent stopping time (sec.)
Rev.	—	Continuous operation
Except for reverse mode	80 — (50 —)	3
	50 — 80 (31 — 50)	6
	20 — 50 (12 — 31)	9
	0 — 20 (0 — 12)	12



REMOVAL

1. FRONT

Caution:



- **When standing up the arm assembly - windshield wiper, perform the driver's side first in order not to interfere the arms with each other.**
- **When standing up the arm assembly - windshield wiper, make sure to hold the arm portion. Holding the blade portion may cause the blade deformation.**

1. Remove the blade assembly - windshield wiper.
(1) Press the lock button shown as (1).
(2) Pull the blade assembly - windshield wiper in the arrow direction to remove shown as (2).

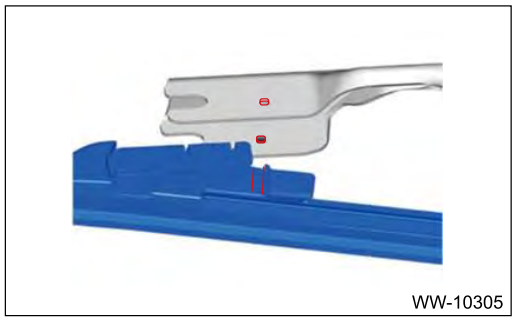
2. REAR

Turn the blade assembly - rear wiper in the direction of arrow (A) and remove it from the arm assembly - rear wiper.

(A) Rubber ASSY - windshield wiper assistor

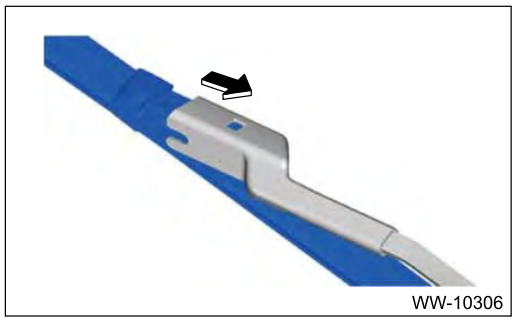
(a) Arm ASSY - rear wiper (b) Blade ASSY - rear wiper (c) Blade ASSY - rear wiper installation portion

WIPER AND WASHER SYSTEMS > Wiper Blade



INSTALLATION

1. FRONT



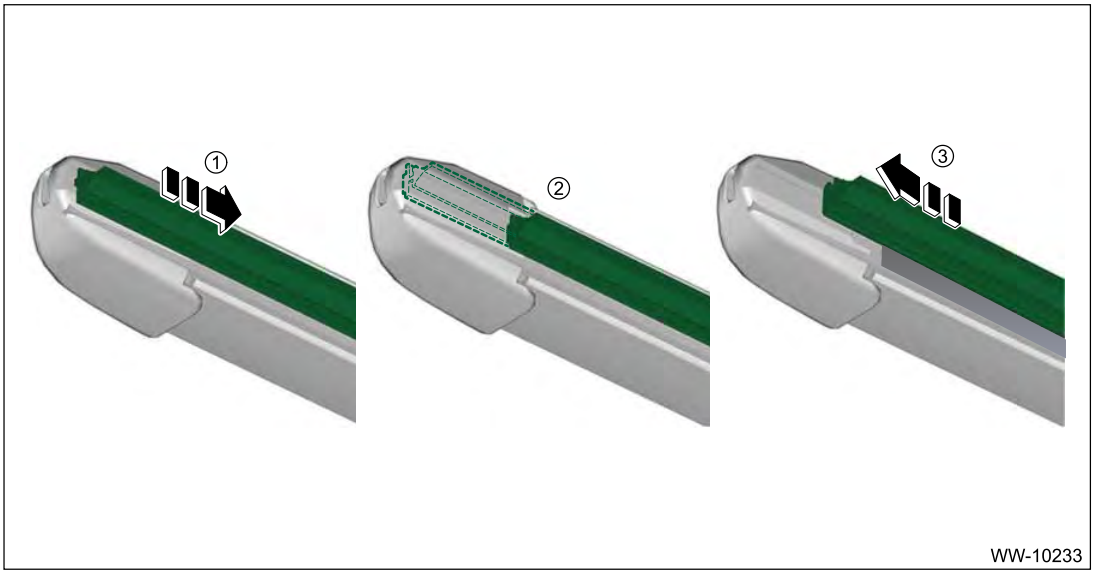
Caution:

After installation, confirm that the lock button is locked securely.

1. Align the protrusion section of arm inner and the groove on the blade side.

2. Slide until the lock button is locked and install the blade assembly.

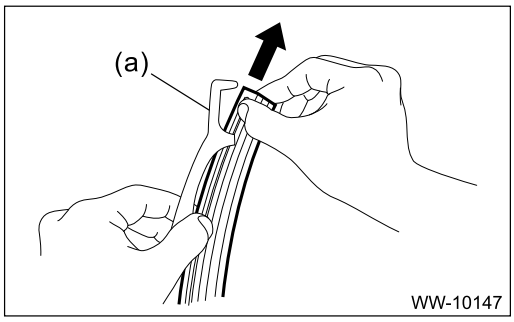
2. REAR



Install each part in the reverse order of removal.

WIPER AND WASHER SYSTEMS > Wiper Blade

DISASSEMBLY



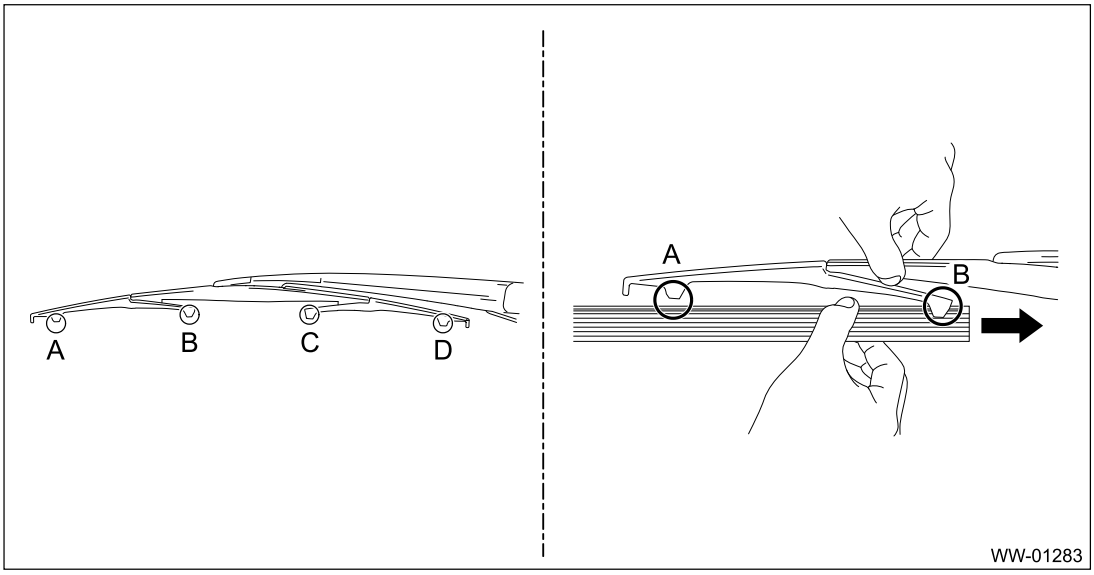
1. FRONT

1. Hold the blade assembly - windshield and pull the rubber assembly - windshield wiper in the arrow direction (1) until the position (2) shown in the figure.
2. Pull out the rubber assembly - windshield wiper from the slit of the blade assembly shown as (3).

2. REAR

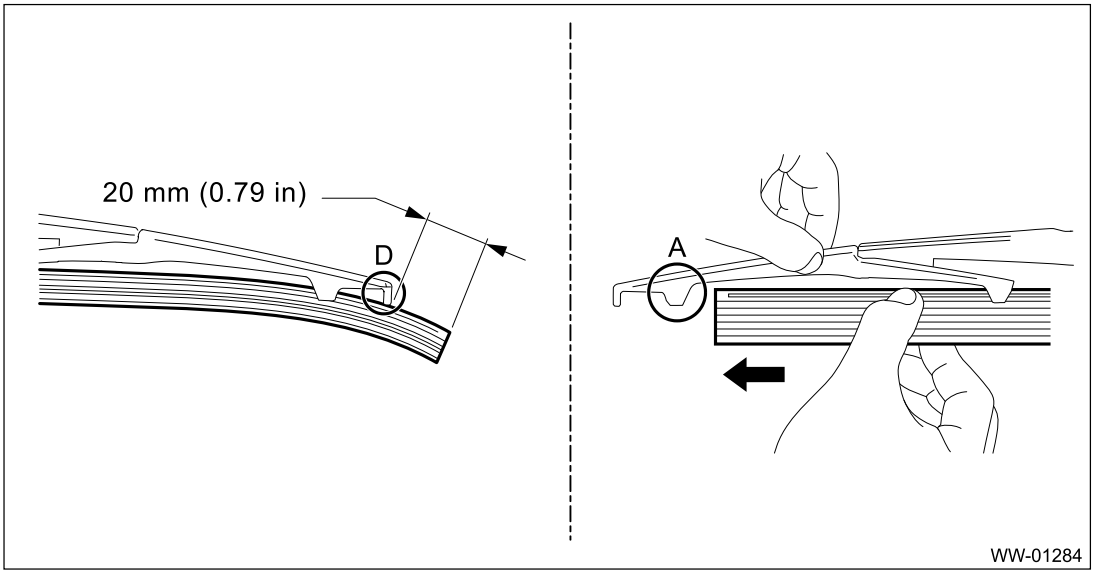
Slightly pull the top of the rubber assembly - rear wiper from the stopper (a), and pull out completely.

WIPER AND WASHER SYSTEMS > Wiper Blade



ASSEMBLY

1. FRONT



Install the rubber assembly - windshield wiper in the reverse order.

2. REAR

1. Insert the rubber assembly - rear wiper into claw (B).

2. Insert the rubber assembly - rear wiper until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).
3. Insert the rubber assembly - rear wiper into claw (A).

WIPER AND WASHER SYSTEMS > Wiper Blade

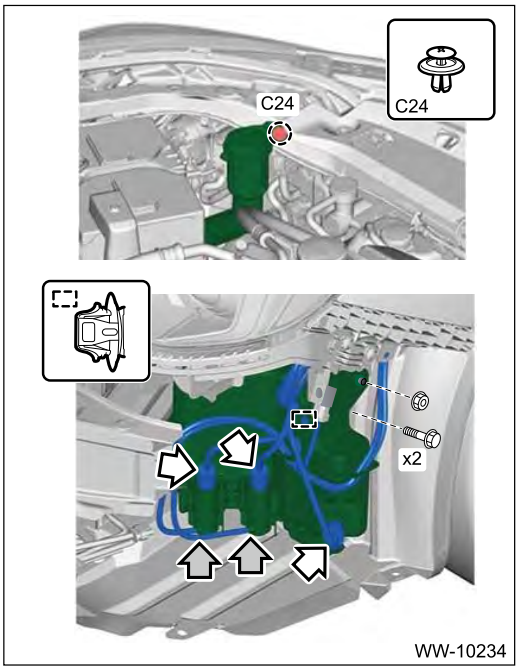
INSPECTION

1. Check and clean the rubber assembly - windshield wiper.
   Caution:
   - **Do not use organic solvent-based cleaner when cleaning rubber parts in order to avoid rubber part deterioration.**
   - **Clean rubber parts using a soft cloth or paper towel dampened with windshield washer fluid or mild synthetic detergent.**

   Replace the rubber assembly - wiper if rubber part hardening, deformation or damage is found.
2. Operate the washer system to check if a chattering sound or insufficient wiping occurs.
3. If a chattering sound or insufficient wiping occurs, perform the following procedures.
   (1) Make sure that the blade assembly - windshield wiper is not deformed and the movable part moves smoothly.
   (2) Remove oil film and dirt from the glass.

Caution:

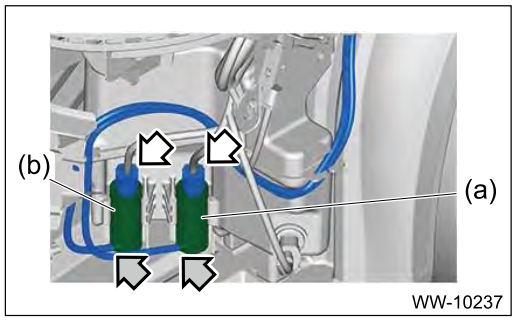
- **When powder-type glass cleaner is used, use after having been dissolved in water sufficiently. If it is used in less water, the glass surface may be damaged.**
- **Clean the glass surface using a soft cloth or sponge with glass cleaner.**



(3) Operate the windshield wiper again. If a chattering sound or insufficient wiping occurs, perform the procedures again.

4. If defective is not improved after performing step 1) to step 3), replace the blade assembly - windshield wiper with a new part.

REMOVAL



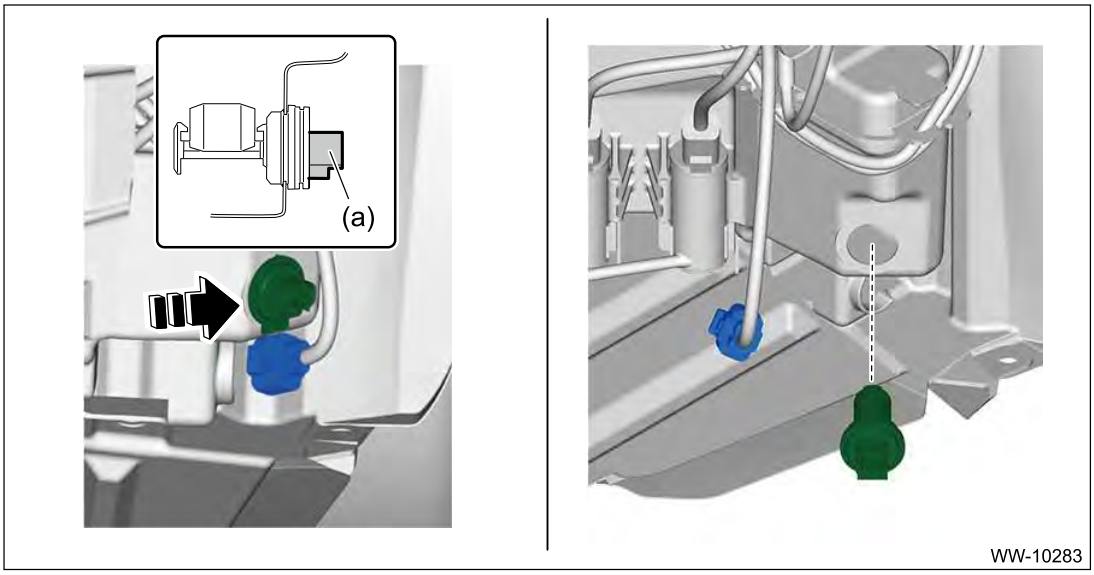
1. WASHER TANK

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>REMOVAL.
3. Remove the tank - washer assembly.
   (1) Remove the clip of the holder - windshield washer tank.
   (2) Disconnect the connector from the motor pump assembly - washer and the sensor - washer tank, and then remove the harness clip.
   (3) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
   (4) Remove the bolt and nuts and remove the tank - washer assembly.

2. WASHER MOTOR PUMP

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the clips and screws, and turn over the mud guard - front LH.
5. Disconnect the connector from the motor pump assembly - washer.
6. Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
7. Remove the motor pump assembly - washer.

(a): Front washer pump motor



(b): Rear washer pump motor

3. WASHER FLUID LEVEL SENSOR

Caution:

Do not hit or apply any impact to the sensor - washer tank, because it has a poor resistance to impact. Sensor internal parts may be damaged when an impact is applied.

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Lift up the vehicle.
3. Remove the under cover - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Under Cover>REMOVAL.
4. Remove the clips and screws, and turn over the mud guard - front LH.
5. Remove the sensor - washer tank.
   (1) Disconnect the connector.
   (2) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
   (3) Push the section (a) in the direction of the arrow with a thick towel or the like to remove the sensor - washer tank.

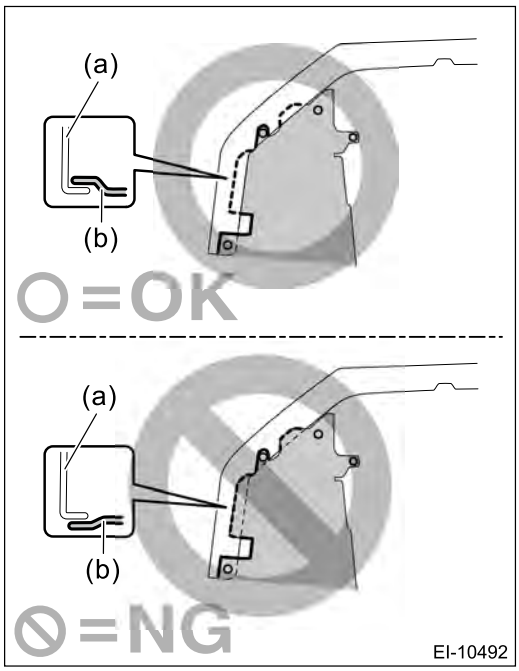
WIPER AND WASHER SYSTEMS > Washer Tank and Motor

INSTALLATION

1. WASHER TANK

Caution:

Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.



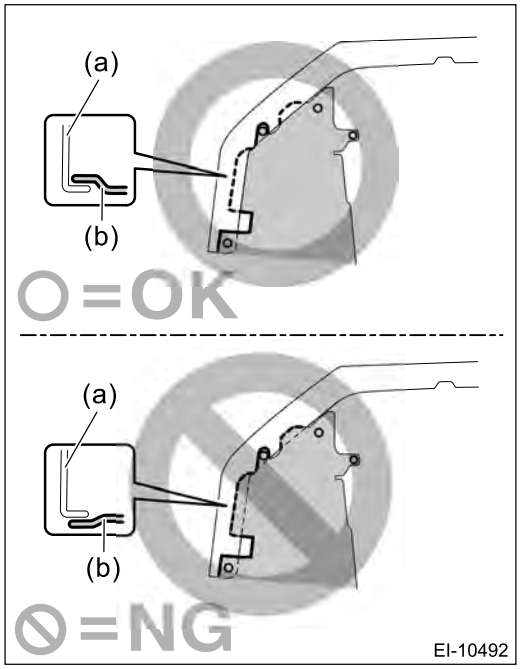
1. Install the tank - washer assembly.
   Tightening torque:
   6.0 N·m (0.6 kgf-m, 4.4 ft-lb)
2. Connect the hose - washer.
3. Connect each connector.
4. Add new washer fluid.
5. Install the bumper face - front. Ref. to EXTERIOR/INTERIOR TRIM>Front Bumper>INSTALLATION.

6. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
7. Adjust the fog light beam. (Model with fog light) Ref. to LIGHTING SYSTEM>Front Fog Light Assembly>ADJUSTMENT > FOG LIGHT AIMING.

2. WASHER MOTOR PUMP

Caution:

- **Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).**

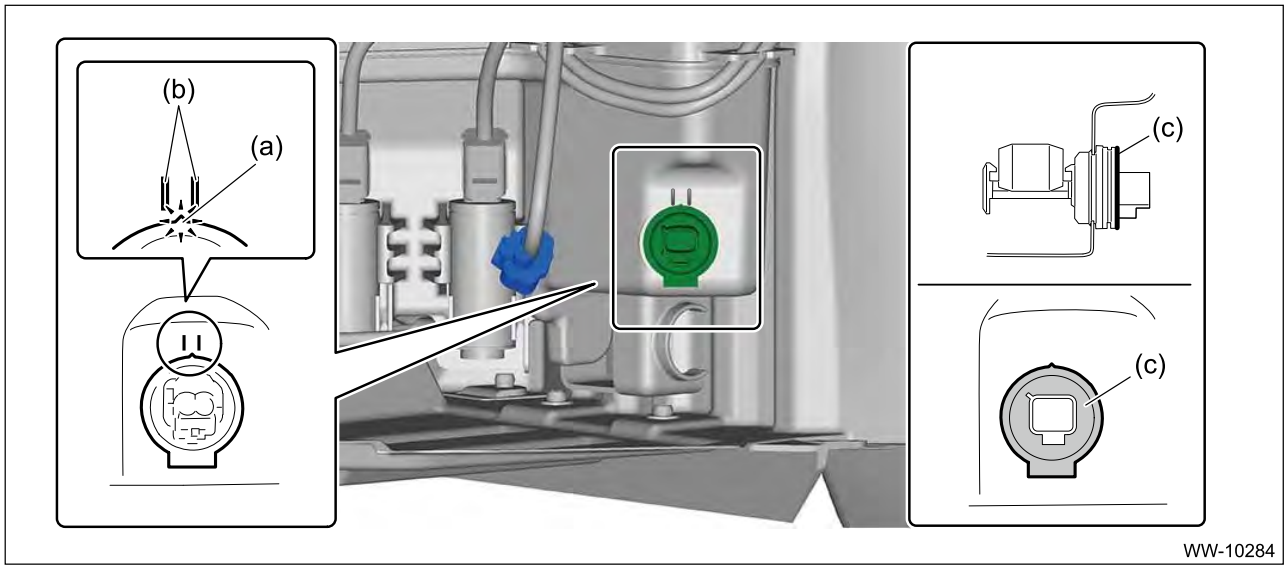


- **Do not reuse the packing - washer motor pump.**

1. Install the motor pump assembly - washer to the tank - washer.
2. Connect the hose - washer.
3. Connect each connector.
4. Add new washer fluid.
5. Install the mud guard - front LH.
6. Install the under cover - front.
   Tightening torque:
   18 N·m (1.8 kgf-m, 13.3 ft-lb)
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

3. WASHER FLUID LEVEL SENSOR

Caution:



Install the mud guard - front so that the front end of the mud guard (b), except for the clip fixing point, comes inside the bumper face (a).

1. Align the protrusion (a) of the sensor - washer tank with a center position of double line marks (b) on the tank - washer side, and push the flat surface (c) to install.

   Caution:

   - **Do not hit or apply any impact to the sensor - washer tank when it is reused, because it has a poor resistance to impact.**
   - **When the installation is difficult, apply washer fluid to the packing. Do not use silicone grease.**

2. After installing the sensor - washer tank, perform the following confirmations.
   - There is no gap between the tank - washer and the packing.
   - There is no gap between the packing and the sensor - washer tank.
   - There is no turn over to the packing and its peripheral area.
3. Connect each connector.
4. Add new washer fluid.
5. Install the mud guard - front LH.
6. Install the under cover - front.

   Tightening torque:

   18 N·m (1.8 kgf-m, 13.3 ft-lb)
7. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.

INSPECTION

1. WASHER PUMP

Apply battery voltage to the connector terminal of the motor pump assembly - washer, and make sure that the motor operates.

2. WASHER FLUID LEVEL SENSOR

1. CHECK CONNECTION STATUS.

Check the connection status of washer fluid level sensor connector.

Does the low washer fluid warning light illuminate after draining the washer fluid? And does the low washer fluid warning light go off after refilling the washer fluid?

Yes	Normal.
No	Go to 2.

2. CHECK INPUT VOLTAGE.

Using a tester, measure the voltage of the washer fluid level sensor connector.

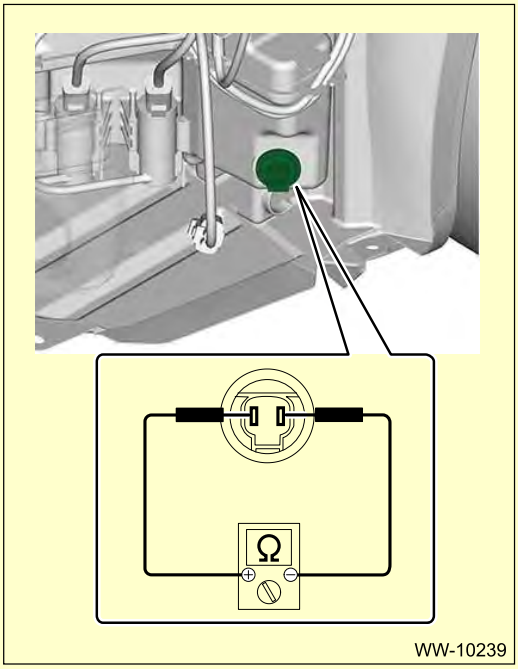
Is the voltage approx. 8.5 V or more?

Yes	Go to 3.
No	Check harness and meter, and replace if necessary.

3. CHECK WARNING LIGHT.

Check low washer warning light in the combination meter.

Does the meter indicator illuminate if you short the washer fluid level sensor connector?



Yes — Go to 4.

No — Check meter, and replace if necessary.

4. CHECK WASHER FLUID LEVEL SENSOR CONTINUITY.

Using a tester, measure the resistance of the washer fluid level sensor.

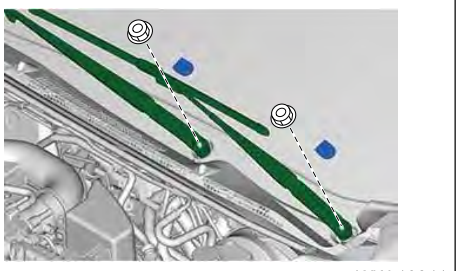
1. Turn over the mud guard.
2. Measure the resistance of the washer fluid level sensor.

Amount of washer fluid in the tank	Standard
No remaining quantity (ON)	Less than 10 Ω
There is remaining quantity (OFF)	1 MΩ or more

Is the resistance within the standard?

Yes — Normal.

No — Replace the washer level sensor.



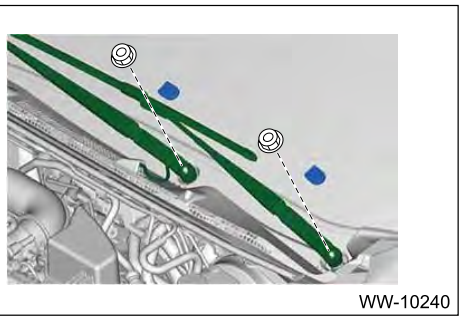
REMOVAL

1. MODELS WITHOUT EYESIGHT

Caution:

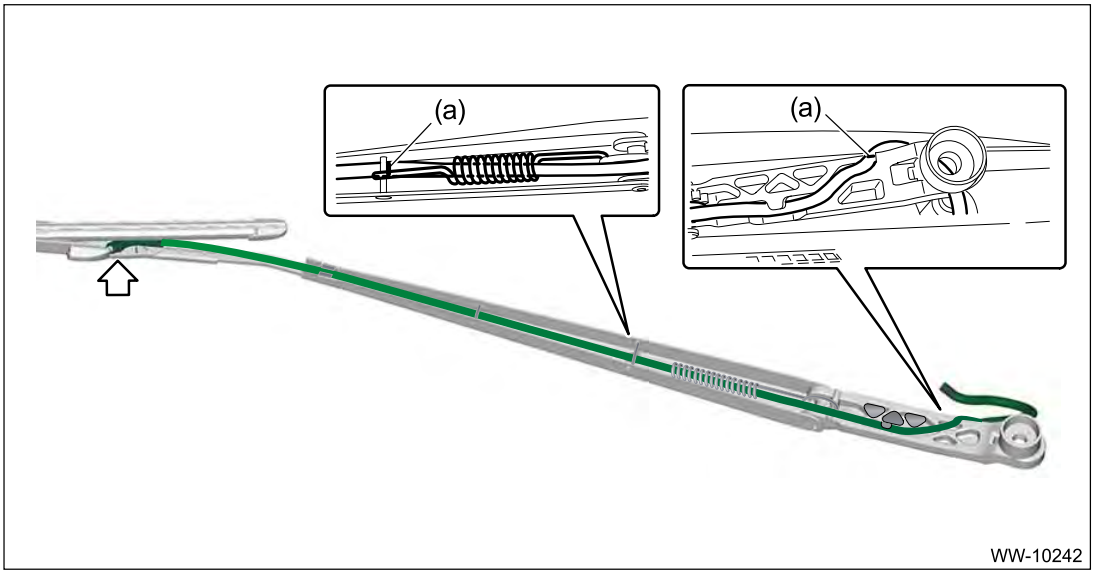
- **When standing up the arm assembly - windshield wiper, perform the driver's side first in order not to interfere the arms with each other.**
- **When standing up the arm assembly - windshield wiper, make sure to hold the arm portion. Holding the blade portion may cause the blade deformation.**

1. Remove the cover - windshield wiper arm.
2. Remove the nuts, and remove the arm assembly - windshield wiper.



WW-10241

2. MODELS WITH EYESIGHT



Caution:

- **When standing up the arm assembly - windshield wiper, perform the driver's side first in order not to interfere the arms with each other.**
- **When standing up the arm assembly - windshield wiper, make sure to hold the arm portion. Holding the blade portion may cause the blade deformation.**

1. Remove the cover - windshield wiper arm.
2. Remove the arm assembly - windshield wiper.
   (1) Remove the nuts, and remove the arm assembly - windshield wiper.

WW-10240

(2) Put alignment marks (a) at two places and disconnect the hose from the nozzle.

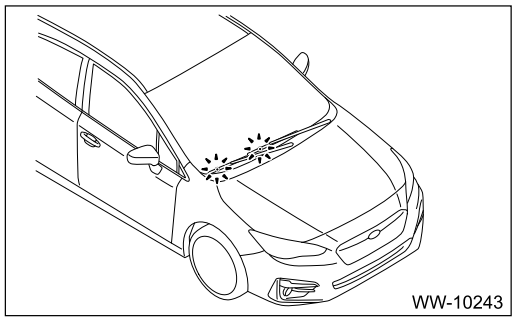
(3) Pull out the hose and remove the arm assembly - windshield wiper assistor.

3. When removing the hose from the joint - washer hose, refer to the removal of "Nozzle - wiper arm washer & hose". Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose>REMOVAL > NOZZLE - WIPER ARM WASHER & HOSE (MODEL WITH EYESIGHT).

Caution:

Do not remove the nozzle - wiper arm washer from the arm assembly - windshield wiper assistor.

If nozzle replacement is required, replace the arm assembly - windshield wiper assistor as a unit.



WIPER AND WASHER SYSTEMS > Front Wiper Arm

INSTALLATION

1. MODELS WITHOUT EYESIGHT

1. Install the arm assembly - windshield wiper.

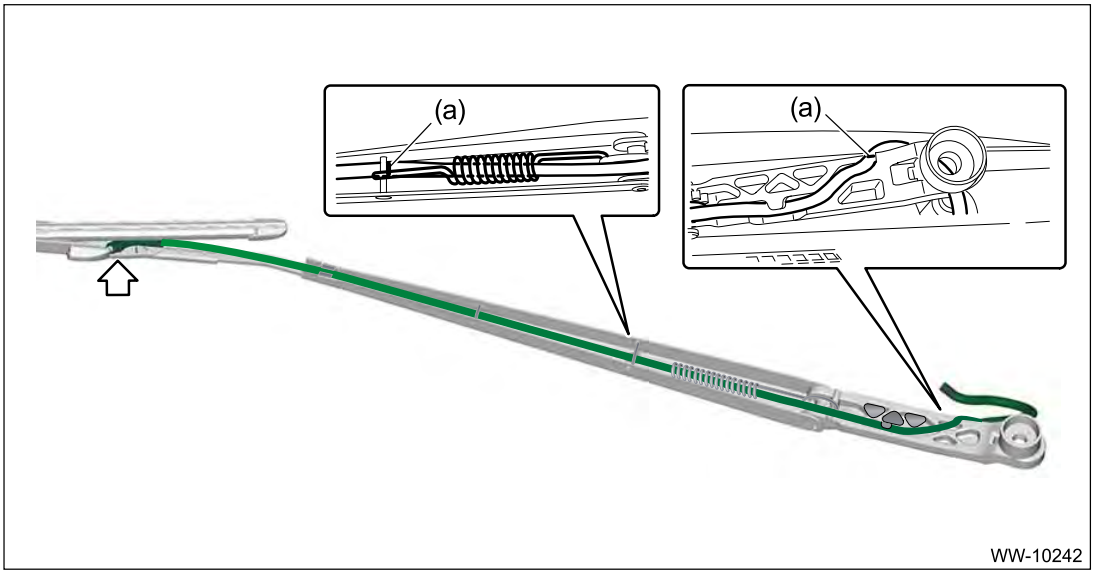
(1) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.

(2) Tighten the arm assembly - windshield wiper to specified torque and install the cap.

Tightening torque:

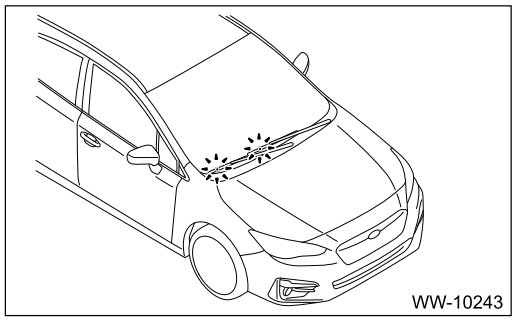
26 N·m (2.7 kgf-m, 19.2 ft-lb)

2. Operate the windshield wiper to check that the stop position is aligned with the point mark.



If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.

2. MODELS WITH EYESIGHT



Caution:

Install firmly so that the hose is not bent, compressed or flattened.

1. When the hose is removed from the joint - washer hose, refer to "Installation" of "Front washer nozzle & hose". Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose>INSTALLATION.
2. Install the arm assembly - windshield wiper.
   (1) Align the alignment mark (a), and install the hose to the arm assembly - windshield wiper assistor.

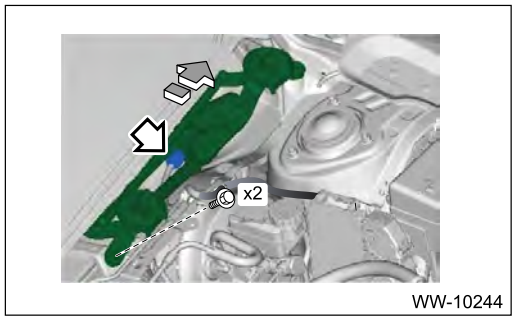
   (2) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.

   (3) Tighten the arm assembly - windshield wiper to specified torque and install the cap.

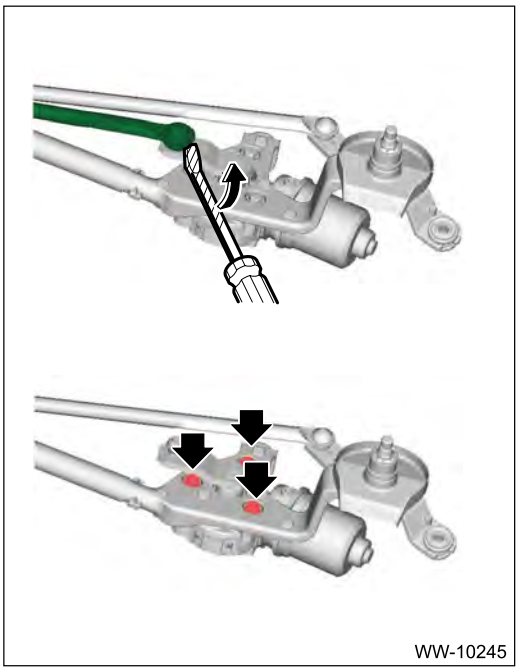
Tightening torque:

26 N·m (2.7 kgf-m, 19.2 ft-lb)

3. Operate the windshield wiper to check that the stop position is aligned with the point mark.
   If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.
4. Make sure that the hose and the cover - joint do not interfere during windshield wiper operation.



REMOVAL

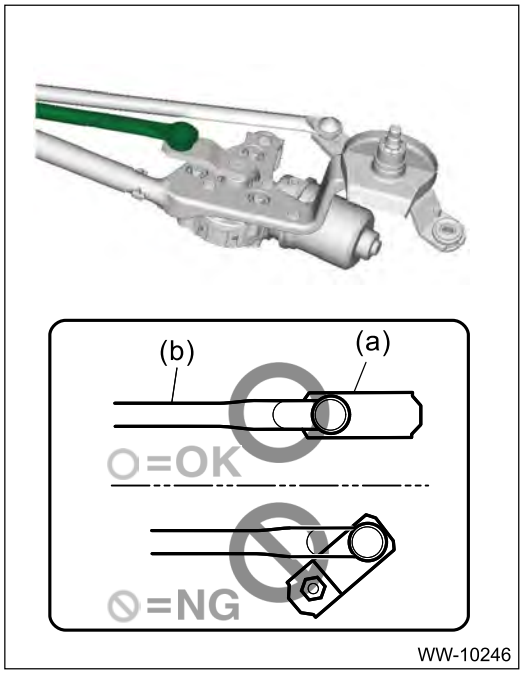


1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the arm assembly - windshield wiper. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.
3. Remove the cowl panel - side and the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>REMOVAL.

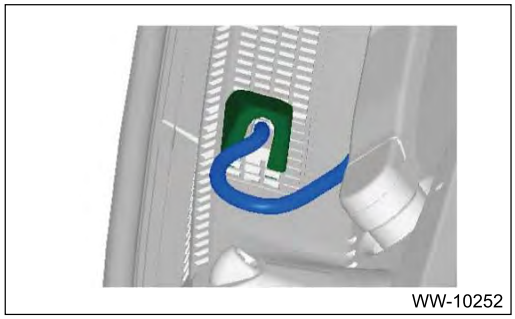
   Caution:

   Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.
4. Remove the link assembly - windshield wiper.
   (1) Remove the bolt.
   (2) Slide the entire link assembly in the arrow direction and remove the link assembly - windshield wiper.
   (3) Disconnect the connector of the motor assembly - windshield wiper and remove the link assembly - windshield wiper.

5. Remove the motor assembly - windshield wiper.
   (1) Using a crowbar wrapped with protective tape, disconnect the link assembly - windshield wiper from the link plate.
   (2) Remove the bolts, and remove the motor assembly - windshield wiper.



INSTALLATION



Caution:

- **If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.**
- **Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.**

1. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Check that the motor assembly - windshield wiper is at the auto stop position.
   Caution:
   During motor operation, do not touch the movable part.
   (1) Connect the harness of front wiper to the motor assembly - windshield wiper.
   (2) Switch the wiper switch to ON/OFF once.
3. Disconnect the ground cable from battery again. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
4. Install the motor assembly - windshield wiper.
   (1) Align the link plate position.
   Caution:
   Install the motor assembly - windshield wiper at the position where the rod (b) and link plate (a) are aligned in a straight line.

   (2) Install the motor assembly - windshield wiper.
   Tightening torque:
   5.5 N·m (0.6 kgf-m, 4.1 ft-lb)
5. Install the link assembly - windshield wiper.
   Tightening torque:
   6 N·m (0.6 kgf-m, 4.4 ft-lb)
6. Install the cowl panel - side and the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>INSTALLATION.
7. Install the arm assembly - windshield wiper. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>INSTALLATION.
8. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
9. Operate the windshield wiper to check that the stop position is aligned with the point mark.
   If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.
10. Make sure that the hose and the cover - joint do not interfere during windshield wiper operation. (Models with EyeSight)

INSPECTION

1. Check that the following operations perform normally.

   Caution:

   Fix the motor to prevent the motor from being shorted by moving during operation.

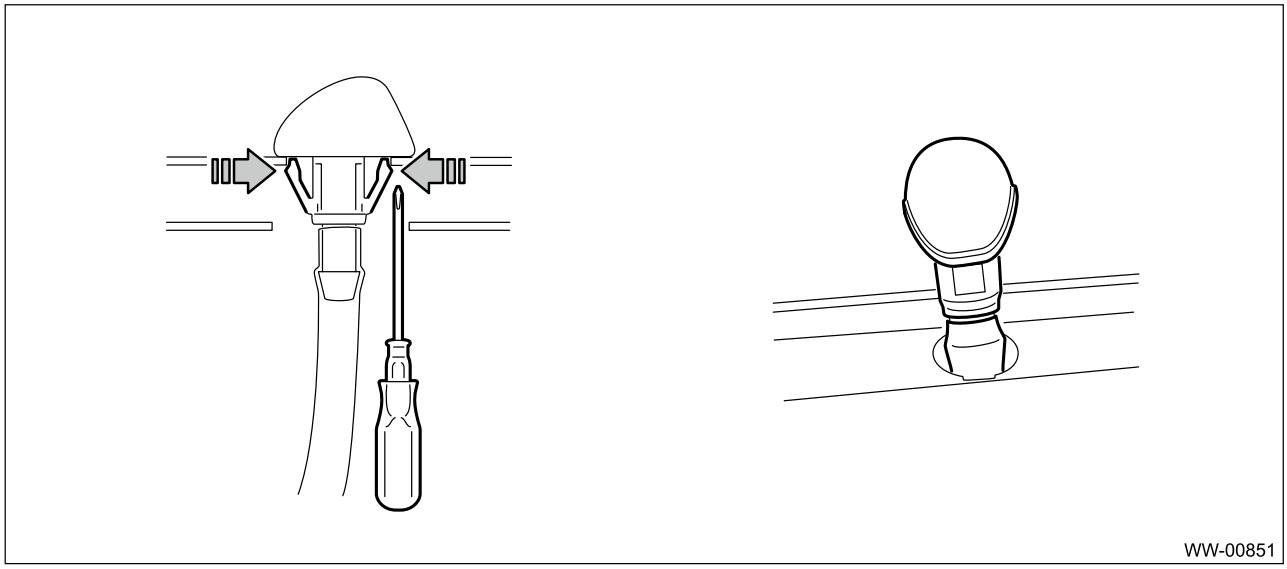
   (1) When the battery is connected to the terminal of connectors, confirm that the motor operates at low speed.

   (2) When the battery is connected to the terminal of connectors, confirm that the motor operates at high speed.

   (3) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating at low speed, and stop the motor assembly - windshield wiper in mid-operation.

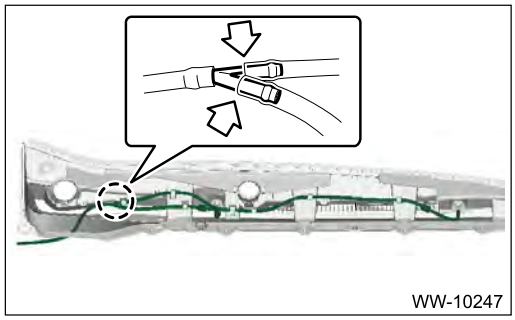
   (4) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.

2. Replace the motor assembly - windshield wiper if it is found defective.



REMOVAL

1. NOZZLE - WINDSHIELD WASHER & HOSE



1. Remove the arm assembly - windshield wiper. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.
2. Remove the cowl panel - side and the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>REMOVAL.

   Caution:

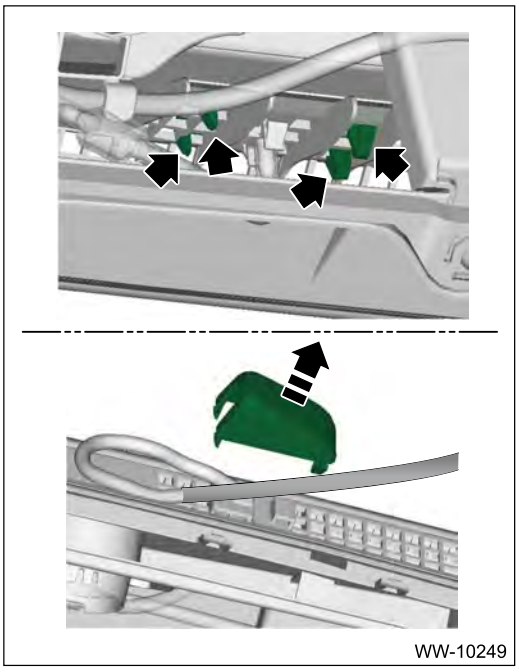
   Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.
3. Remove the nozzle - windshield washer.
   (1) Push the claw using a flat tip screwdriver, etc.
   (2) When the nozzle - windshield washer lifts up, pull out the nozzle - windshield washer using a clip remover, etc.
   (3) Disconnect the hose - windshield washer, and remove the nozzle - windshield washer.

4. Disconnect the hose - windshield washer as necessary.
   - Models without EyeSight

   - Models with EyeSight

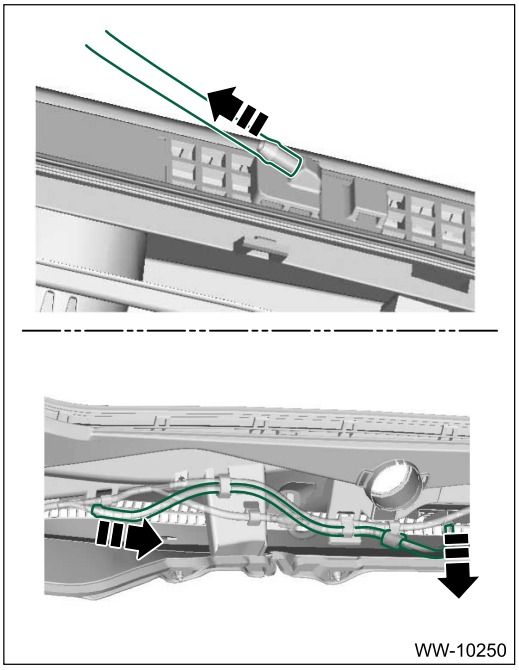
2. NOZZLE - WIPER ARM WASHER & HOSE (MODEL WITH EYESIGHT)

Caution:



Do not remove the nozzle - wiper arm washer from the arm assembly - windshield wiper assistor.

If nozzle replacement is required, replace the arm assembly - windshield wiper assistor as a unit.

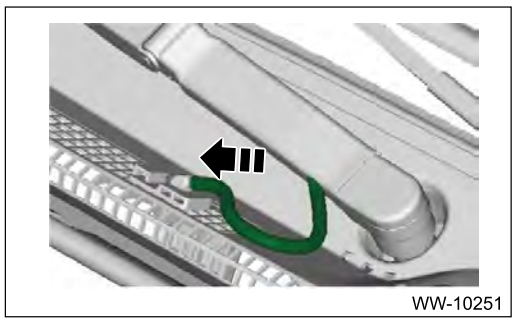


1. Remove the arm assembly - windshield wiper. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.
2. Remove the cowl panel - side and the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>REMOVAL.

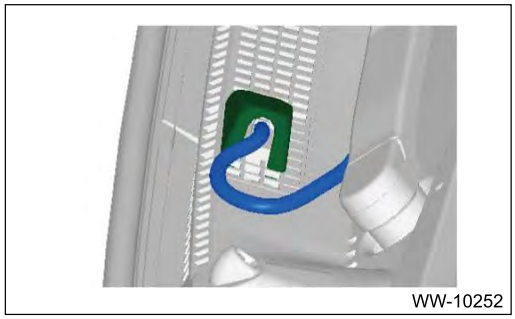
   Caution:

   Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.
3. Release the claws, and remove the cover - joint from cowl panel assembly.

4. Remove the hose - wiper arm washer.



WIPER AND WASHER SYSTEMS > Front Washer Nozzle and Hose



INSTALLATION

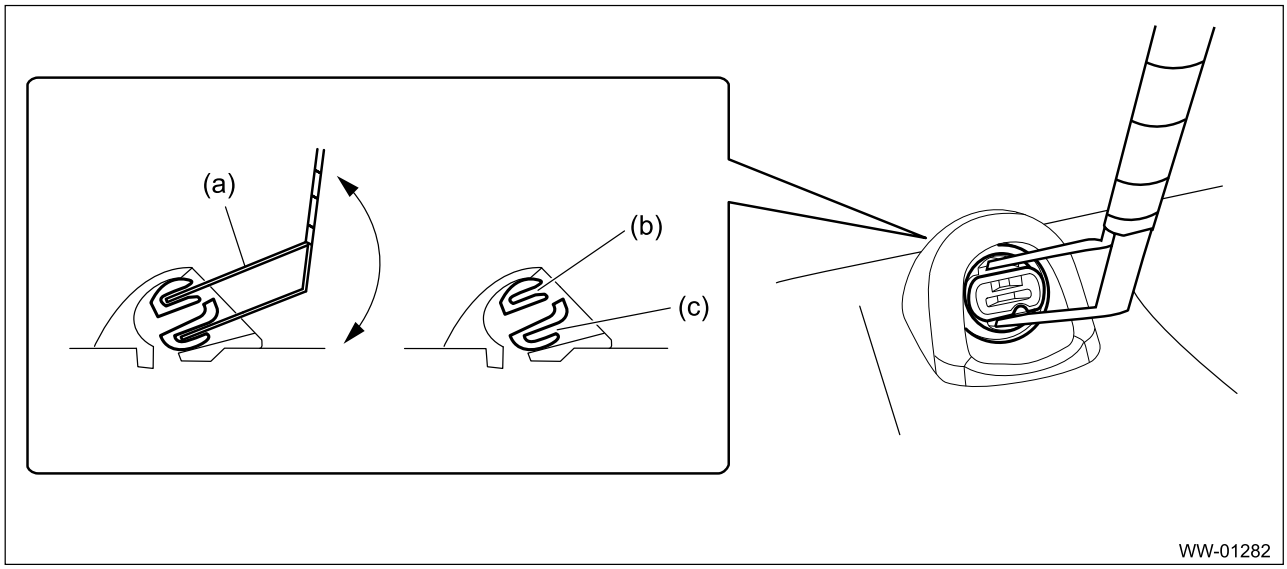
Caution:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1. Install the nozzle - windshield washer.
   (1) Install the nozzle - windshield washer.
   (2) Install the hose - windshield washer.
2. Install the cowl panel - side and the cowl panel assembly. Ref. to EXTERIOR/INTERIOR TRIM>Cowl Panel>INSTALLATION.
3. Install the arm assembly - windshield wiper. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>INSTALLATION.
4. Install the hose to the joint - washer hose. (Models with EyeSight)

5. Install the cover - joint to the cowl panel assembly. (Models with EyeSight)
6. Adjust the position of the nozzle - windshield washer. Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose>ADJUSTMENT.
7. Operate the windshield wiper to check that the stop position is aligned with the point mark.
   If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. Ref. to WIPER AND WASHER SYSTEMS>Front Wiper Arm>REMOVAL.
8. Make sure that the hose and the cover - joint do not interfere during windshield wiper operation. (Models with EyeSight)

WIPER AND WASHER SYSTEMS > Front Washer Nozzle and Hose

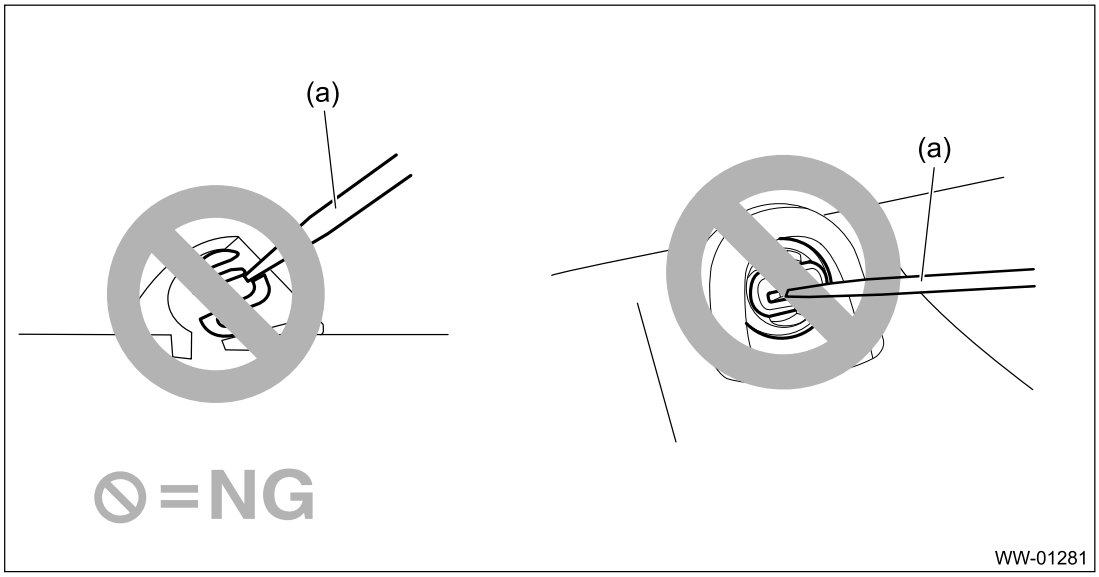
INSPECTION



- Make sure the nozzle - windshield washer and the hose - windshield washer are not clogged.
- Make sure the hose - windshield washer is not bent.
- Check the position of the nozzle - windshield washer. Ref. to WIPER AND WASHER SYSTEMS>Front Washer Nozzle and Hose>ADJUSTMENT.

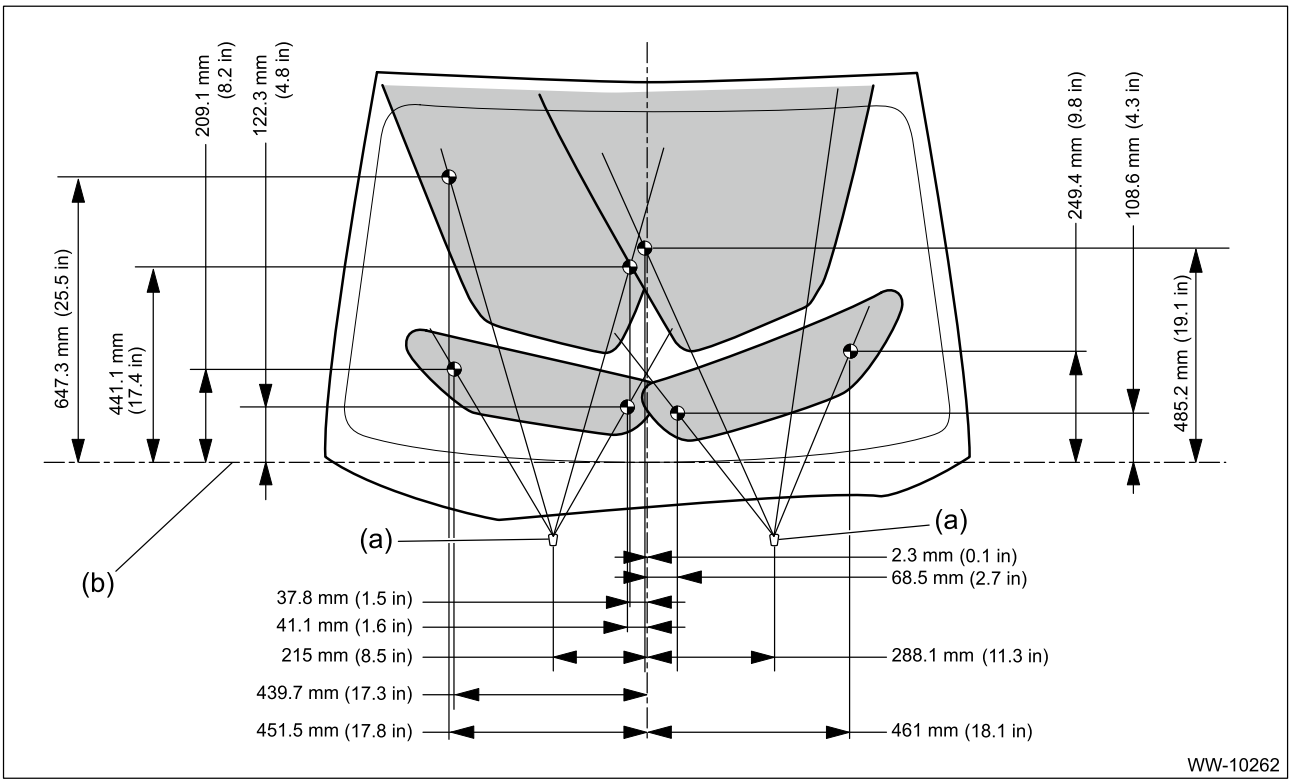
WIPER AND WASHER SYSTEMS > Front Washer Nozzle and Hose

ADJUSTMENT



1. NOZZLE - WINDSHIELD WASHER

1. Turn the wiper switch to OFF position.
2. While the vehicle is at a standstill, insert the washer nozzle adjustment tool (a) into upper side (b) and lower side (c) of the nozzle - windshield washer to perform necessary adjustment.

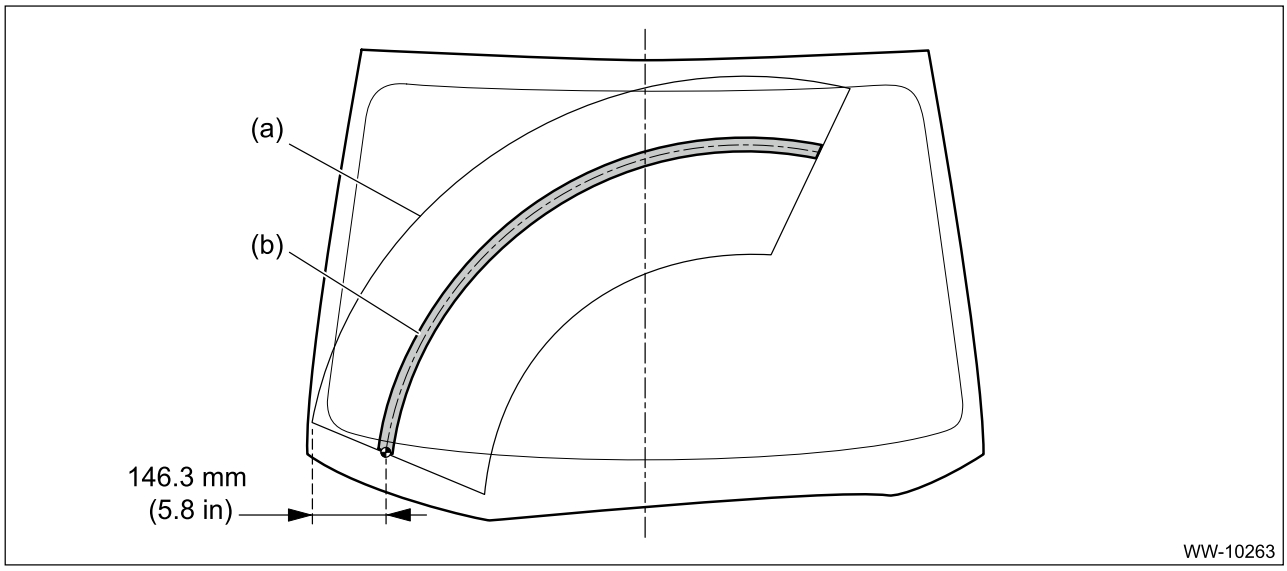


Caution:

Washer nozzle is made of resin. If precision screwdriver (a) or equivalent is inserted into discharge port for adjustment, the discharge port can be deformed, and washer fluid cannot be sprayed.

3. Adjust the washer injection position as shown in the figure.

(a) Nozzle - windshield washer (b) Line extending from ceramic line lower end



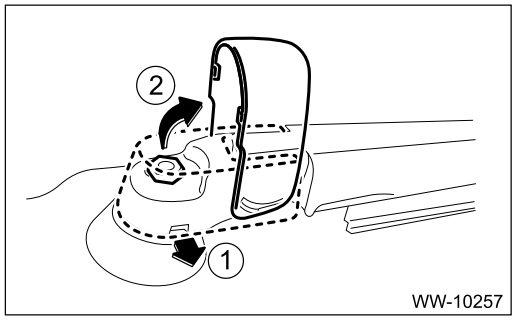
2. NOZZLE - WIPER ARM WASHER (MODEL WITH EYESIGHT)

Caution:

Check and adjust the spray position of the nozzle - wiper arm at the position where the wiper arm stops.

1. Turn the wiper switch to OFF position.

2. While the vehicle is stopped, check that the washer spray position is as shown in the figure.
3. After inspection, if the spray position is really out of the specified range, replace with a new arm assembly - windshield wiper assistor.

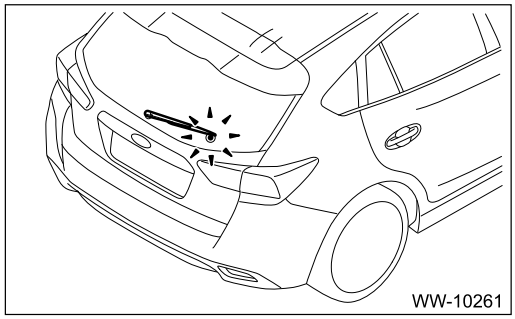


(a) Wiping area of arm ASSY - windshield wiper assistor

(b) Spray area

WIPER AND WASHER SYSTEMS > Rear Wiper Arm

REMOVAL



1. Pull up the cover - rear wiper arm.
2. Remove the nut, and remove the arm assembly - rear wiper.

WIPER AND WASHER SYSTEMS > Rear Wiper Arm

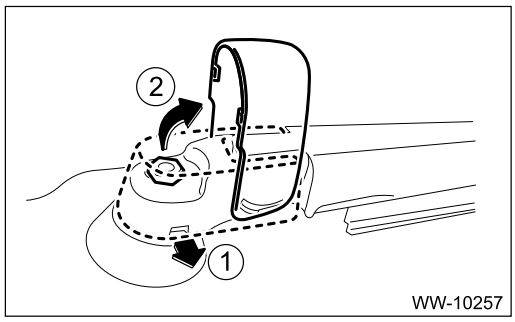
INSTALLATION

1. Install the arm assembly - rear wiper.
   (1) Assemble the blade assembly - rear wiper aligning it with the marking on the glass.

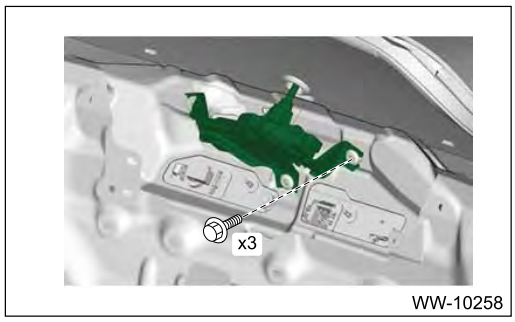
   (2) Tighten the arm assembly - rear wiper to the specified torque, and install the cover - rear wiper arm.
   Tightening torque:
   8 N·m (0.8 kgf-m, 5.9 ft-lb)
2. Operate the wiper to check whether the wiper blade aligns with the point mark. If not, perform installation over again.

WIPER AND WASHER SYSTEMS > Rear Wiper Arm

ADJUSTMENT



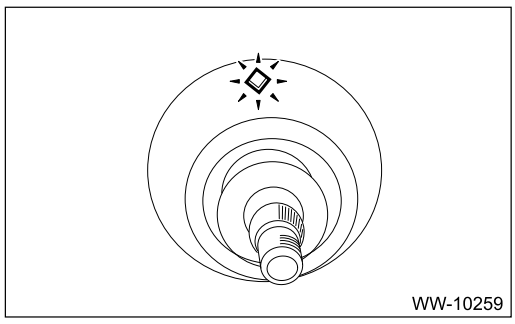
1. Operate the rear wiper once.
2. If the wiper blade is not aligned with the point mark, perform the removal of the rear wiper to align with the marking. Ref. to WIPER AND WASHER SYSTEMS>Rear Wiper Arm>REMOVAL.



WIPER AND WASHER SYSTEMS > Rear Wiper Motor

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>REMOVAL.
3. Remove the arm assembly - rear wiper.
   (1) Remove the cover - rear wiper arm.
   (2) Remove the nut, and remove the arm assembly - rear wiper.



4. Remove the motor assembly - rear wiper.
   (1) Disconnect the harness connector of the motor assembly - rear wiper.
   (2) Remove the bolts, and remove the motor assembly - rear wiper.

WIPER AND WASHER SYSTEMS > Rear Wiper Motor

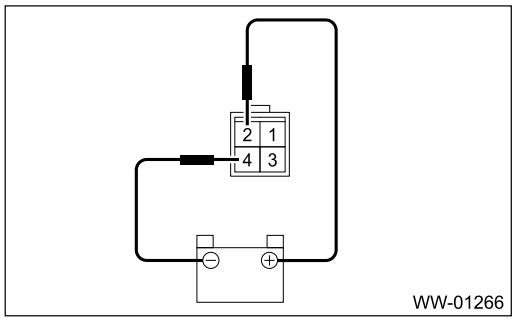
INSTALLATION

1. Check that the mark on the cap - pivot wiper faces up.

2. Install the motor assembly - rear wiper.
   (1) Install the bolts, and install the motor assembly - rear wiper.
   Tightening torque:
   7 N·m (0.7 kgf-m, 5.2 ft-lb)
   (2) Install the harness connector of the motor assembly - rear wiper.
3. Install the arm assembly - rear wiper.
   (1) Install the nuts, and install the arm assembly - rear wiper.
   Tightening torque:
   8 N·m (0.8 kgf-m, 5.9 ft-lb)

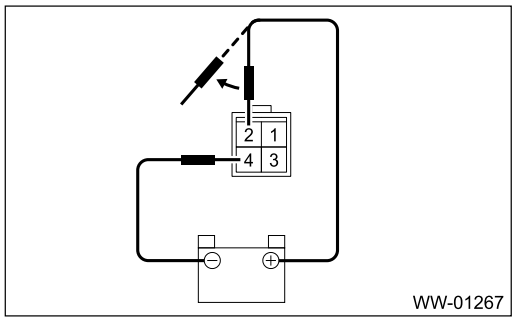
(2) Install the cover - rear wiper arm.

4. Install the rear gate trim. Ref. to EXTERIOR/INTERIOR TRIM>Rear Gate Trim>INSTALLATION.
5. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.



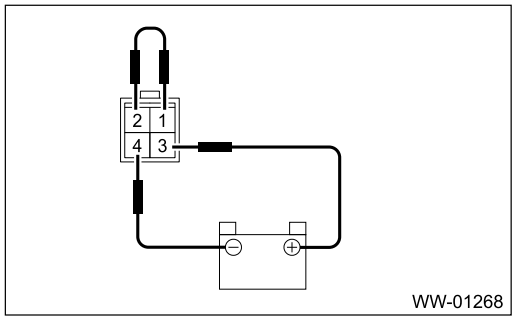
WIPER AND WASHER SYSTEMS > Rear Wiper Motor

INSPECTION



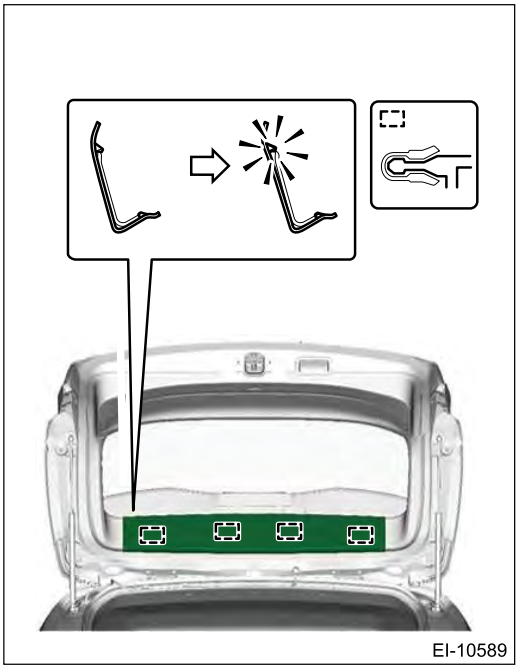
Caution:

Fix the motor to prevent the motor from being shorted by moving during operation.



1. Connect the battery to the motor assembly - rear wiper connector, and check that the motor assembly - rear wiper operates.

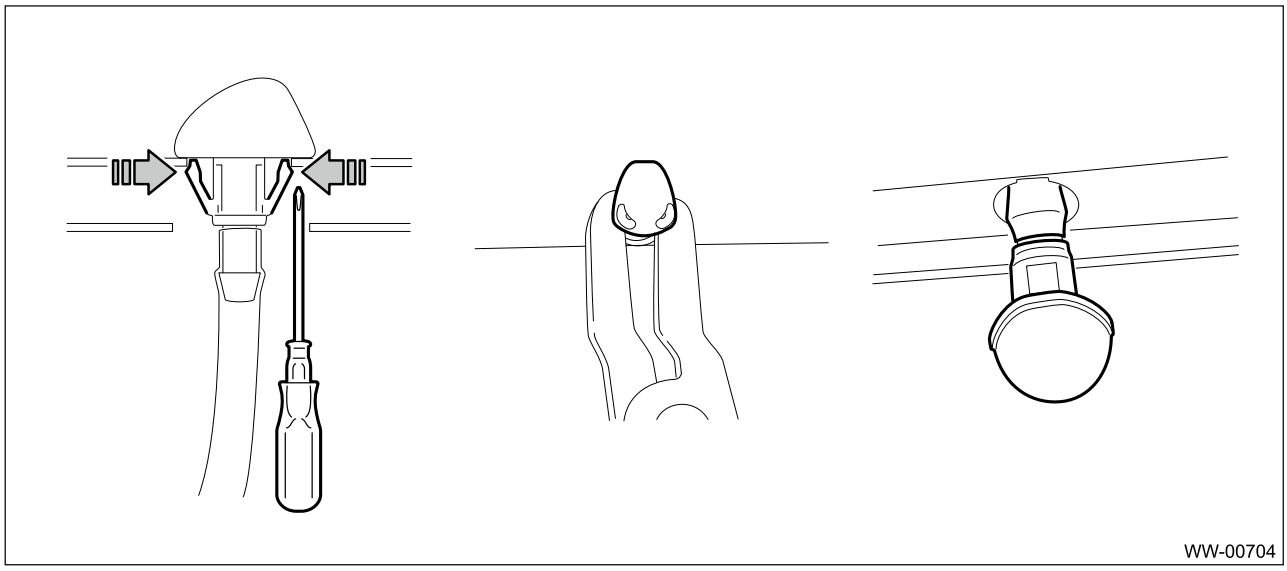
2. Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating, and stop the motor in mid-operation.



3. Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.

REMOVAL

1. Disconnect the ground cable from battery. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
2. Remove the trim panel - rear gate UPR.
   (1) Remove the claws on the trim edge.
   (2) Release the claws in the center of trim, and remove the trim panel - rear gate UPR.



3. Remove the roof spoiler assembly. Ref. to EXTERIOR/INTERIOR TRIM>Roof Spoiler>REMOVAL.
4. Remove the nozzle - rear washer.

   Caution:

   Before removing, apply protective tape to the body panel and used tools not to damage the panel - rear gate.

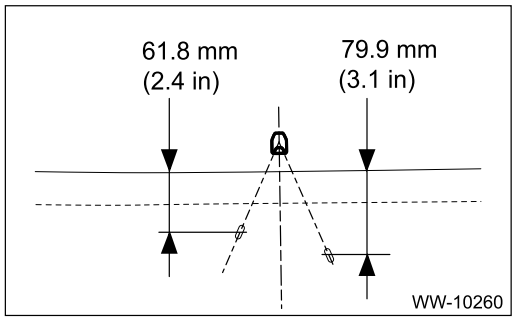
   (1) Push the claw using a flat tip screwdriver, etc.
   (2) When the nozzle - rear washer lifts up, pull out the nozzle - rear washer using a clip remover, etc.
   (3) Disconnect the hose - rear washer, and remove the nozzle - rear washer.

INSTALLATION

1. Install the nozzle - rear washer.
2. Install the roof spoiler assembly.
   Tightening torque:
   7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3. Install the trim panel - rear gate UPR.
4. Connect the battery ground terminal. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. Check the nozzle - rear washer position. Ref. to WIPER AND WASHER SYSTEMS>Rear Washer>INSPECTION > VISUAL INSPECTION.

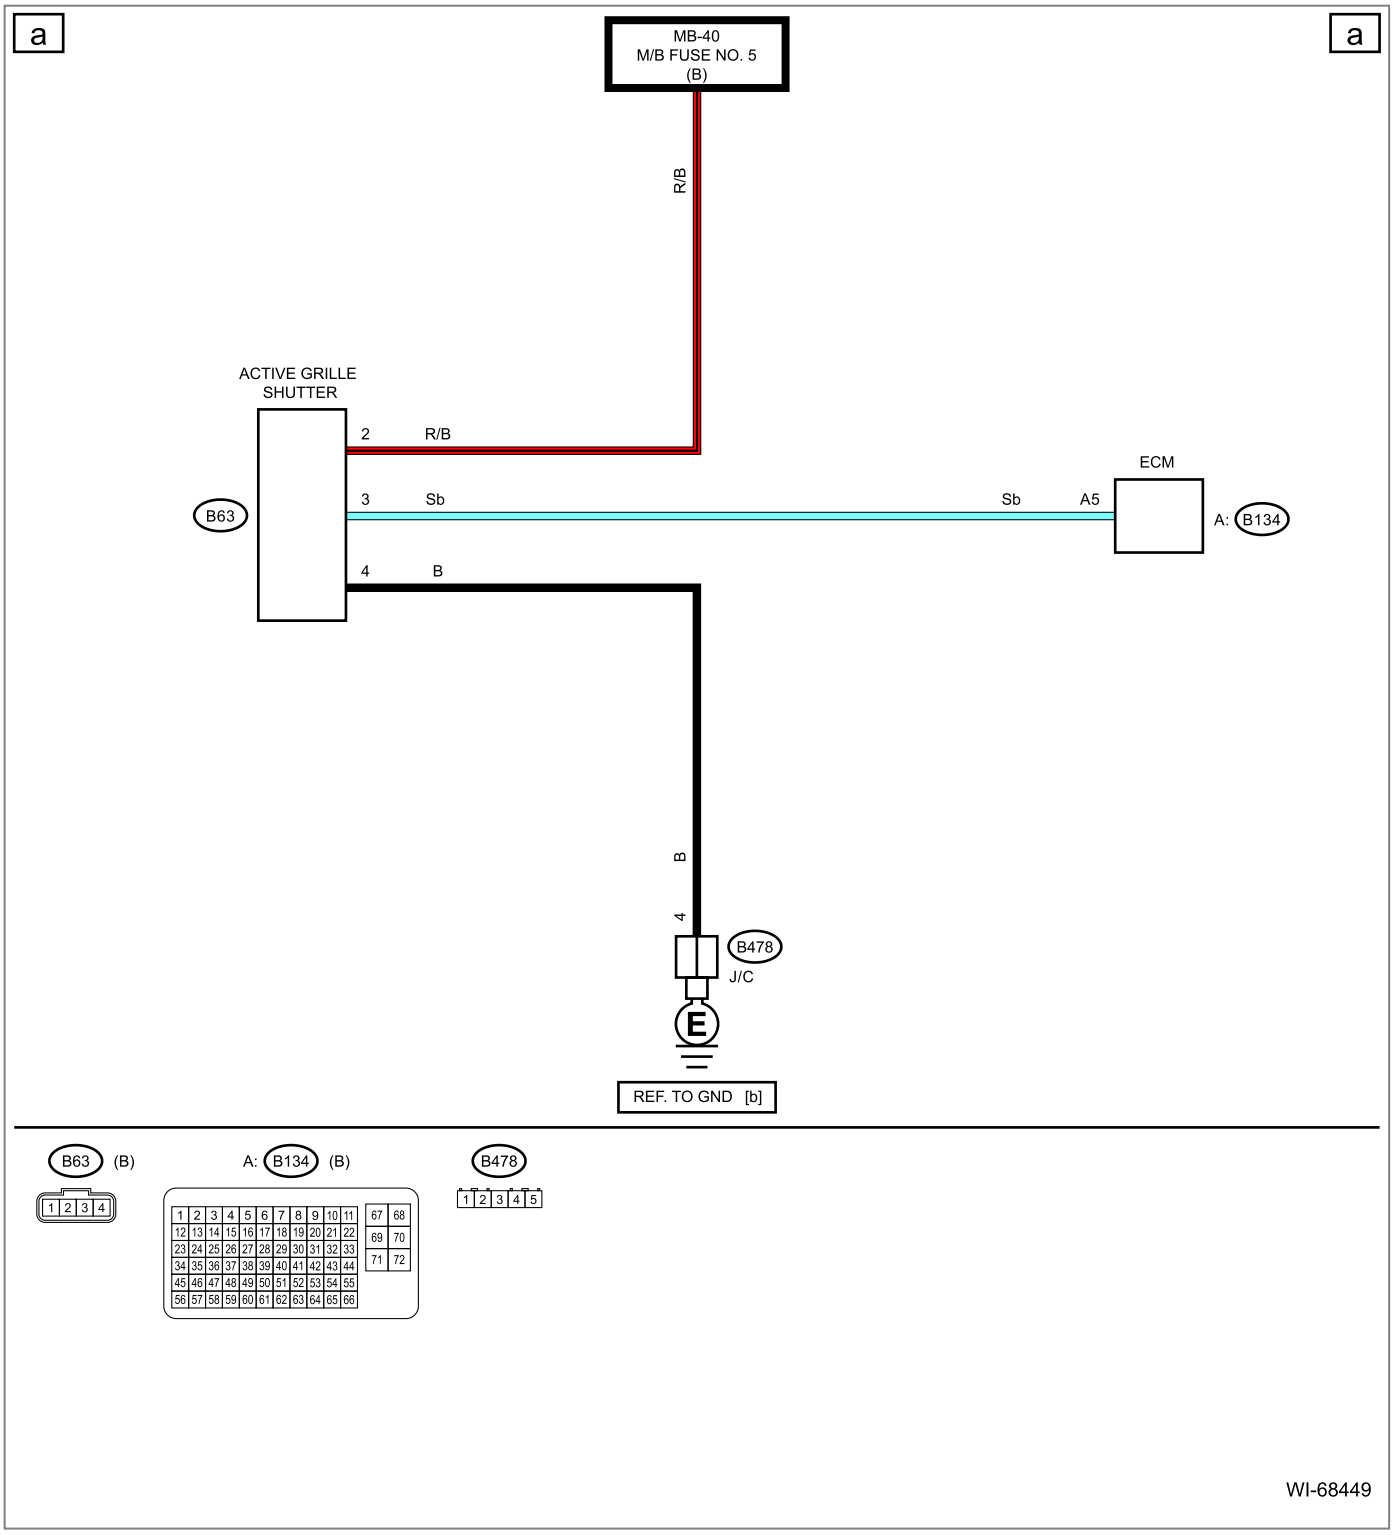
WIPER AND WASHER SYSTEMS > Rear Washer

INSPECTION



1. VISUAL INSPECTION

Check for the following items, and if any malfunction is found, replace the corresponding part.



- Make sure the nozzle - rear washer and the hose - rear washer are not clogged.
- Make sure the hose - rear washer is not bent.

2. INSPECTING THE SPRAY POSITION

1. Turn the wiper switch to OFF position.
2. While the vehicle is stopped, check that the washer spray position is as shown in the figure.
3. After inspection, if the spray position is significantly out of the specified range, replace the nozzle - rear washer with a new part.

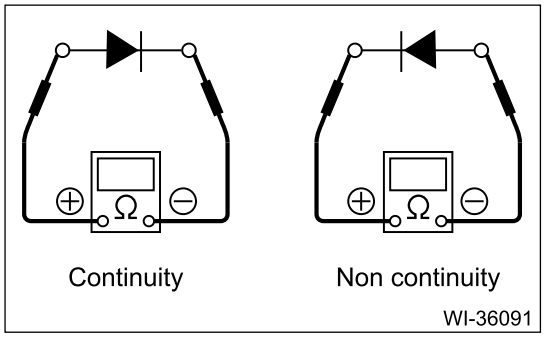
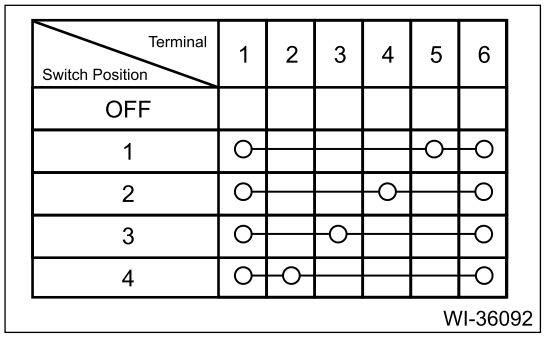
BASIC INSPECTION

1. VOLTAGE MEASUREMENT

1. Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal. Connect the positive lead to the connector or component terminal.
2. Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3. Shift the positive lead contacting the connector (A) to the connector (B). The voltmeter will indicate no voltage.
4. Turn the switch to ON with the positive lead contacting the connector (B).
   The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
5. The circuit is normal. If a problem such as a light failing to illuminate occurs, use the procedures above to track down the malfunction.



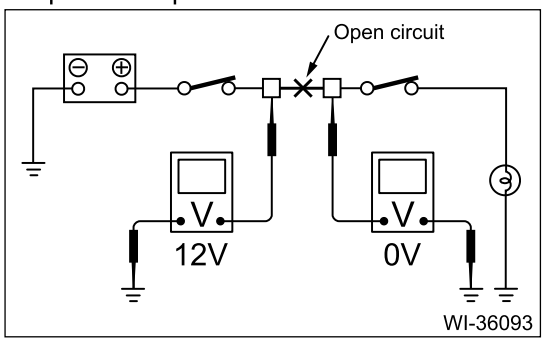
2. CONTINUITY CHECK



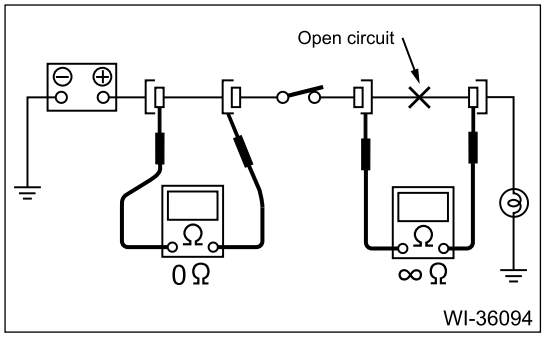
1. Disconnect the battery terminal or connector so there is no voltage between the check points. Contact the leads of an ohmmeter between the check points, and check that there is continuity.
2. When checking the diode continuity using an ohmmeter, allow the positive lead to contact the diode positive side and the negative lead to the negative side. At this time, there must be continuity. Also, when contacting the leads in reverse, there should be no continuity.

   Note:

   Some testers have reverse polarity, therefore, refer to the instruction manual of the tester.

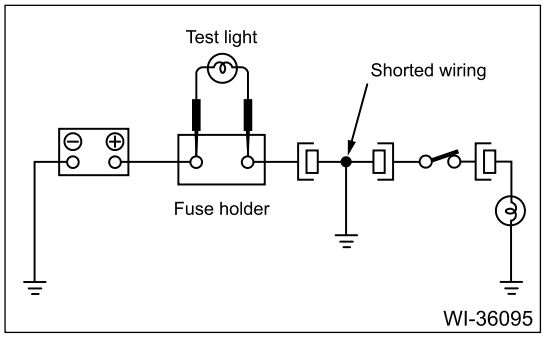


3. When checking switch continuity using an ohmmeter, perform the check while the switch operates. For example, when a switch position is at 3, continuity exists among terminals 1, 3 and 6, as shown below.

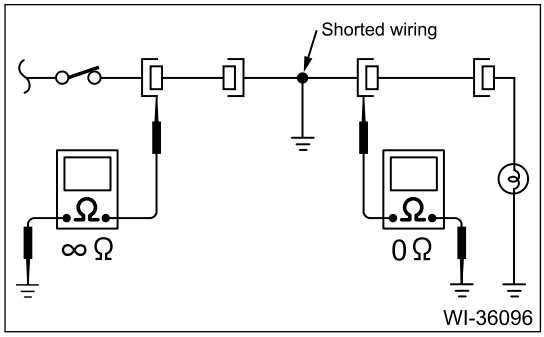


3. HOW TO IDENTIFY AN OPEN CIRCUIT

1. With voltmeter:
   An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previously checked point is open.



2. With ohmmeter:
   Disconnect all connectors affected, and check continuity in the harness between adjacent connectors. When the ohmmeter indicates “infinite”, the harness is open.



4. HOW TO DETERMINE A SHORT CIRCUIT

1. With test light:
   Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time. At that time, always start with the connector located farthest from the power supply. If the test light goes out when a connector is disconnected, the harness between that connector and the next connector (farther from the power supply) is shorted.

2. With ohmmeter:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

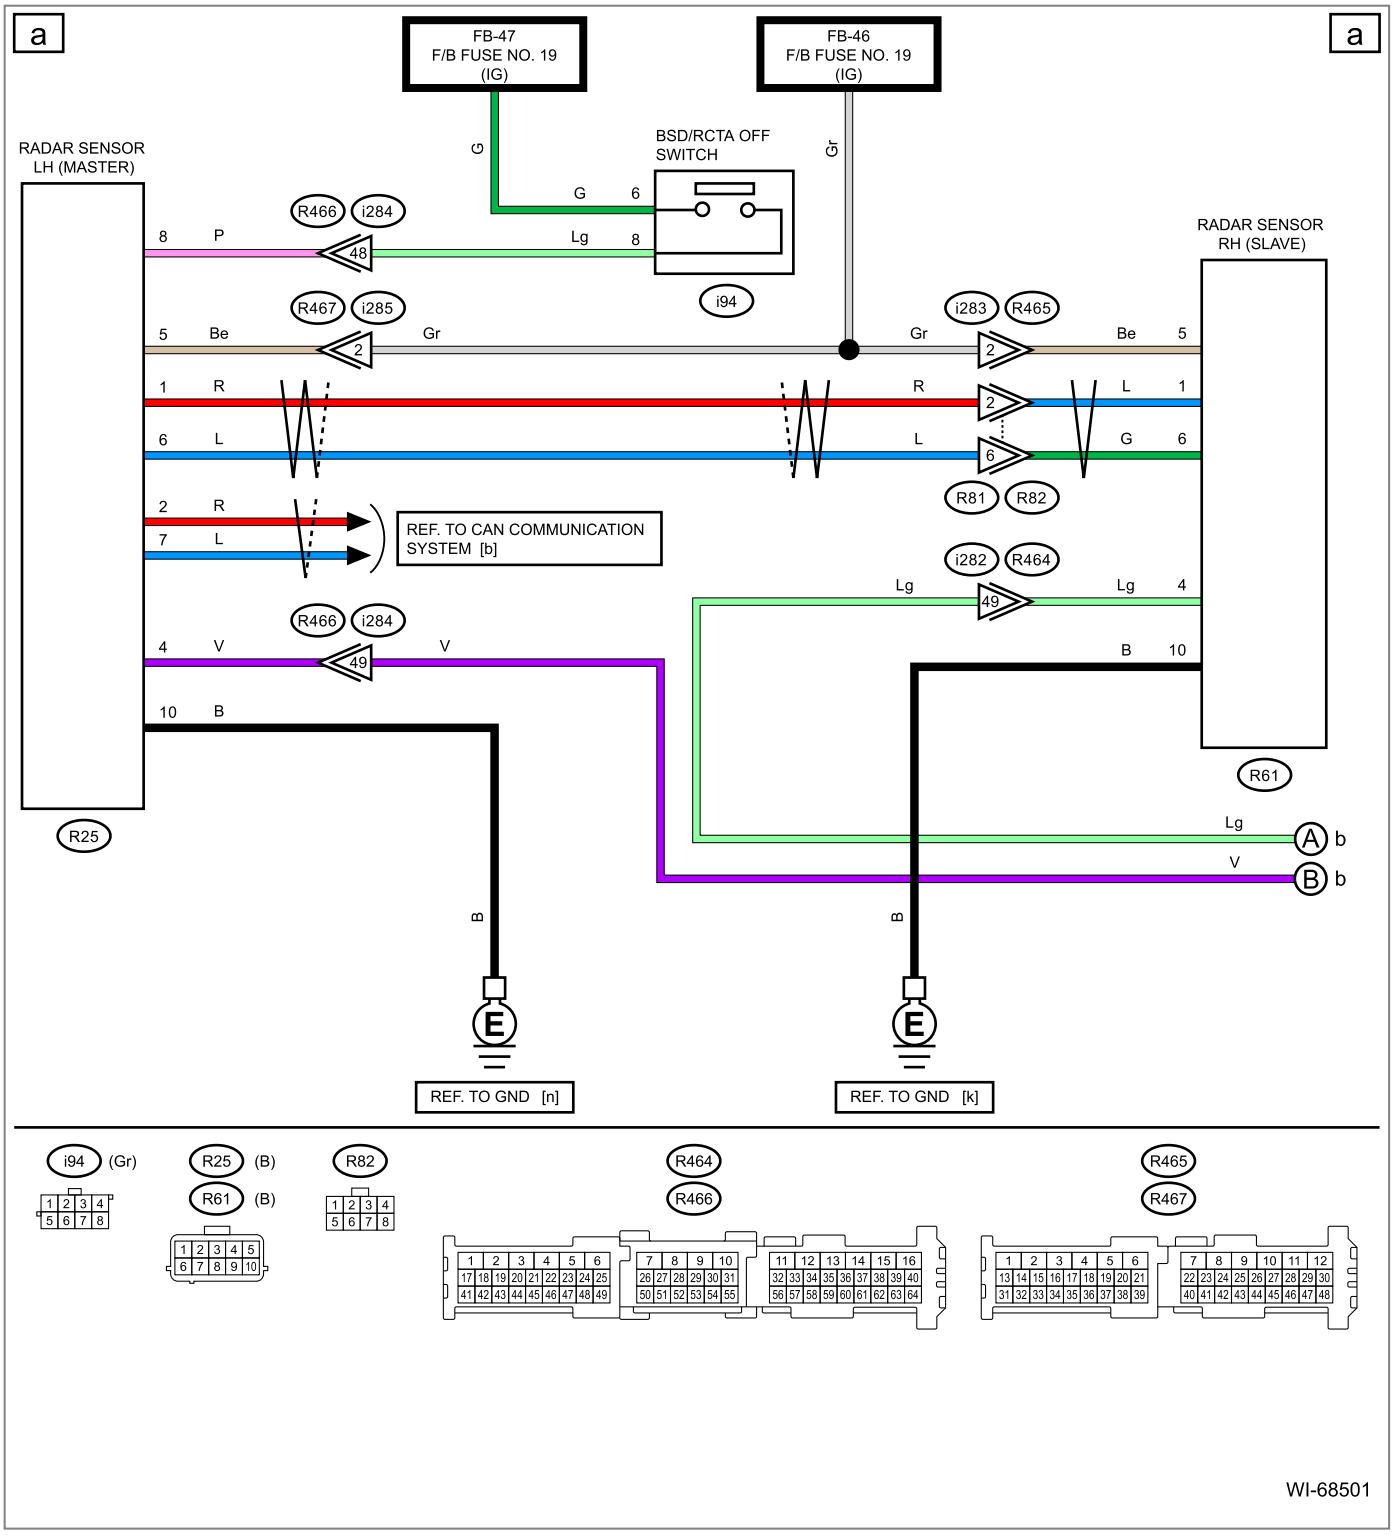
BASIC PROCEDURES

1. GENERAL DESCRIPTION

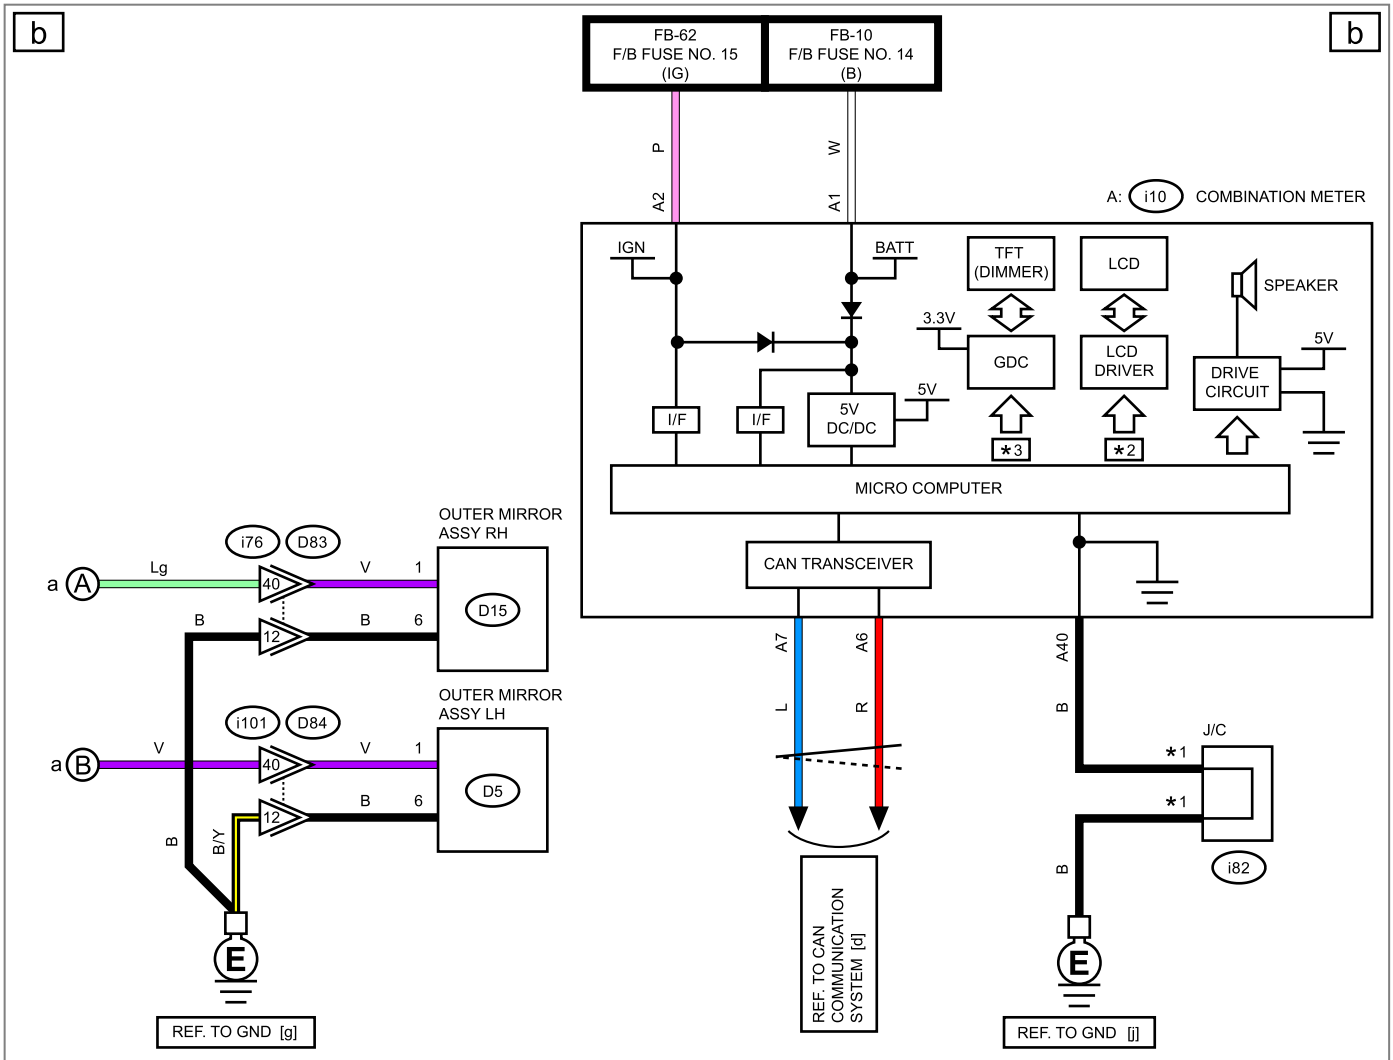
The most important purpose of diagnostics is to quickly determine which fault is the root cause of the symptom, to save time and labor.

2. IDENTIFICATION OF TROUBLE CAUSE

1. Using the diagnostics, narrow down the causes.
2. Refer to the wiring diagram and check the system’s circuit. If necessary, use a voltmeter, ohmmeter, etc.
3. Before replacing component parts, check for fuse blowout, open wiring harness on the power supply circuit and the ground circuit, and poor connectors, switches, relays, etc. If no problem is encountered, check the component parts.

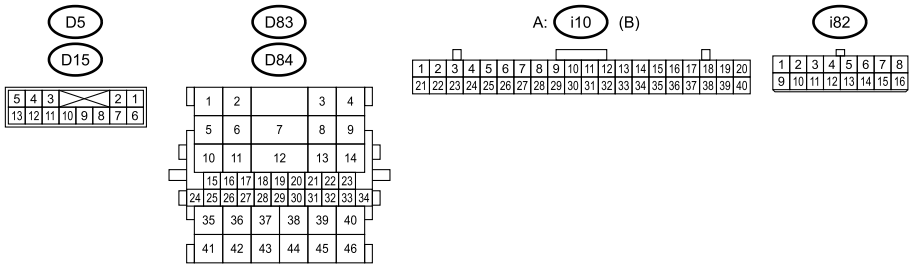


3. SYSTEM OPERATION CHECK



After inspection and repair, ensure that the system operates properly.

HOW TO READ WIRING DIAGRAMS



Refer to HELP on how to read the wiring diagram.

PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

1. Always refer to "CAUTION" and "NOTE" of "General Description" in the same models service manual before starting the diagnostics and repair.
2. Always refer to the cautions of each section when diagnosing and repairing each system and component.
3. The battery cable must be disconnected from the negative terminal after the ignition switch is set to the OFF position, unless otherwise required by the diagnostics.
4. When disconnecting a connector, do not pull the harness, but pull while holding the connector housing.

5. Confirm the locking shape completely before disconnecting a connector. In addition, firmly push in the connector until a click sounds when connecting a connector.
6. When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe (s) to terminals from the harness side.
   If the probe is too thick to gain access to the terminal, do not push it in forcibly but use a mini test lead.
7. When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.
8. To check water-proof connectors (which are not measurable from the harness side), touch tester probes on the terminal side and be very careful not to bend or damage the terminals.

9. Securely fasten the harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.

10. When installing a harness and a component, be careful not to catch them on the harness.
11. Sensors, relays, units, etc., are sensitive to strong impacts. Handle them with extra care so that they are not dropped or mishandled.
12. Because the HID headlight uses high voltage, be sure to confirm that the power supply is turned off before diagnostics and repair. Furthermore, do not perform diagnostics and repair with wet hands because there is a possibility of electrical shock.
13. When inspecting the airbag system, in order to avoid malfunction, always refer to “CAUTION” of “General Description” of the airbag system in the same model’s service manual.

PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

1. Always refer to “CAUTION” and “NOTE” of “General Description” in the same model’s service manual before starting the service.
2. When working under a vehicle which is jacked-up, always be sure to use rigid rack.
3. The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
4. Be sure the workshop is properly ventilated when running the engine.
5. Be careful not to touch the rotating parts such as a belt or a fan while the engine is operating.
6. Be careful not to touch hot metal parts immediately after the engine has been turned on or off.

PROCEDURE

1. ENGINE

1. CHECK ENGINE START FAILURE.

1. Ask the customer when and how the trouble occurred using the interview check list. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Check List for Interview>CHECK.
2. Start the engine.

Does the engine start?

Yes	Go to 2.
No	Inspection using “Diagnostics for Engine Starting Failure” Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon.

2. CHECK ILLUMINATION OF MALFUNCTION INDICATOR LIGHT.

Check the illumination status of malfunction indicator light.

Does the malfunction indicator light illuminate?

Yes	Go to 3.
No	Check using “Diagnostics with Phenomenon”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon.

3. CHECK COMMUNICATION STATUS.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor or general scan tool to the data link connector.
3. Turn the ignition switch to ON, and run the Subaru Select Monitor or general scan tool.

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to the “Subaru Select Monitor”.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Does Subaru Select Monitor or general scan tool communicate with vehicle normally?

Yes	Go to 4.
No	Inspection using “Basic Diagnostic Procedure” of LAN system Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

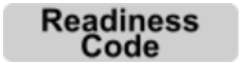
4. CHECK DTC.

Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Note:

- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to "Data Monitor". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

Is DTC displayed on Subaru Select Monitor or general scan tool?



Yes	Record DTC and freeze frame data, then repair the trouble cause. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC). After repair, go to the next step. Go to 5.
No	Repair the related parts. **Note:** **If DTC is not shown on display although the malfunction indicator light illuminates, perform the diagnosis of malfunction indicator light circuit or combination meter. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Warning Light Illumination Pattern.**

5. FINAL CHECK.

1. Connect all connectors.
2. Using the Subaru Select Monitor or a general scan tool, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
4. Read the readiness code of [Engine] using Subaru Select Monitor and check that the concerned DTC is completed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.

5. Using the Subaru Select Monitor or a general scan tool, read the DTC of [Engine]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC displayed on Subaru Select Monitor or general scan tool?

Yes	Check the connection of connector. If there is no faulty connector, perform the diagnosis for the displayed DTCs. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC).
No	Finish the diagnosis.

ENGINE (DIAGNOSTICS)(H4DO) > Check List for Interview

CHECK

1. CHECK LIST NO. 1

Check the following item when problem has occurred.

Note:

Use copies of this page for interviewing customers.

Rear wiper	❑ ON / ❑ OFF		

2. CHECK LIST NO. 2

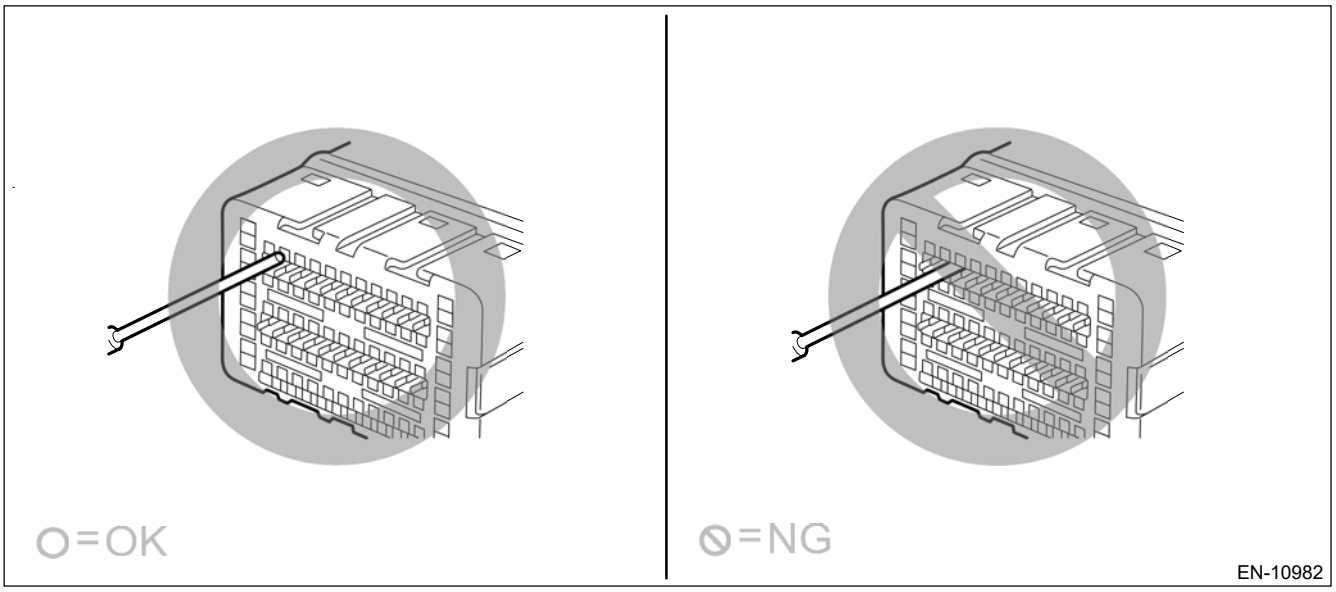
Check the following item about the vehicle's state when the malfunction indicator light turns on.

Note:

Use copies of this page for interviewing customers.

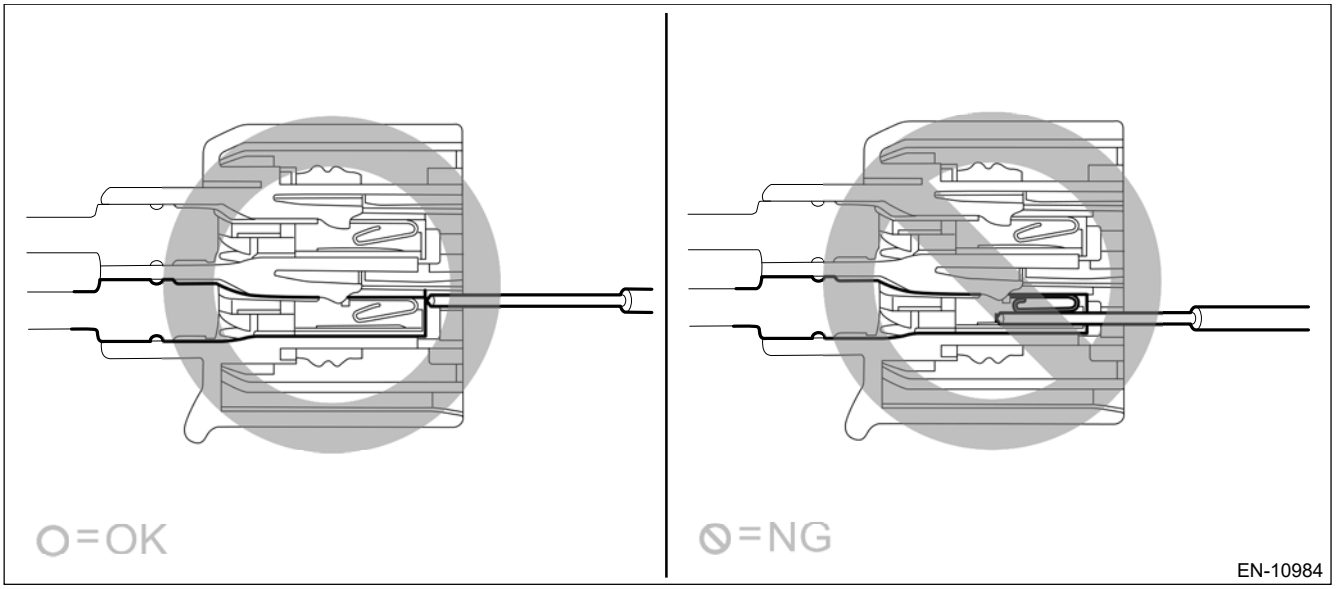
a) Other warning lights or indicators illuminate: ❑ Yes / ❑ No
❑ Fuel level warning light ❑ Charge warning light ❑ Engine coolant temperature warning light ❑ Oil pressure warning light ❑ ATF temperature warning light or Sport indicator light ❑ Driver's control center differential indicator light ❑ ABS warning light ❑ VDC warning light ❑ Cruise indicator light ❑ SI-CRUISE warning light ❑ Immobilizer indicator light ❑ STEERING warning light ❑ Electronic parking brake warning light ❑ Glow indicator light ❑ Sedimenter warning light ❑ Others:
b) Fuel level
• Lack of fuel: ❑ Yes / ❑ No • Indicator position of fuel gauge: • Experienced running out of fuel: ❑ Yes / ❑ No
c) Intentional connecting or disconnecting of harness connectors or spark plug cords: ❑ Yes / ❑ No
• What:
d) Intentional connecting or disconnecting of hoses: ❑ Yes / ❑ No
• What:
e) Installing of other parts except genuine parts: ❑ Yes / ❑ No
• What: • Where:
f) Occurrence of noise: ❑ Yes / ❑ No
• From where: • What kind:
g) Occurrence of smell: ❑ Yes / ❑ No

- From where:
- What kind:



h) Intrusion of water into engine compartment or passenger compartment: ❑ Yes / ❑ No

i) Troubles occurred

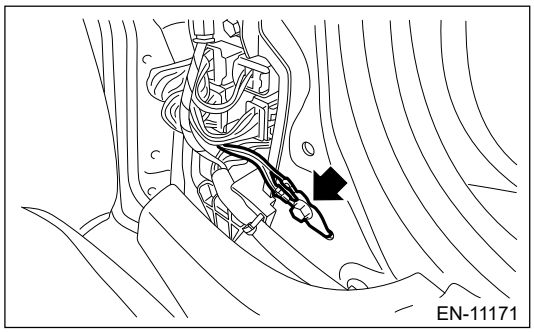


❑ Engine does not start.
❑ Engine stalls during idling.
❑ Engine stalls while driving.
❑ Engine speed decreases.
❑ Engine speed does not decrease.
❑ Rough idling
❑ Poor acceleration
❑ Back fire
❑ After fire
❑ Does not shift.
❑ Excessive shift shock

CAUTION

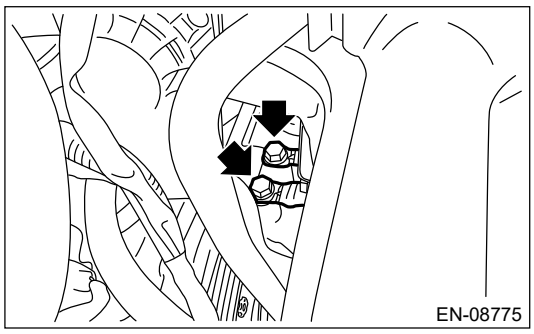
1. Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.
   Caution:
   - **Do not use electrical test equipment on the airbag system circuits.**
   - **Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.**
2. Never connect the battery in reverse polarity. Doing so will damage the ECM instantly, and other parts will also be damaged.
3. Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM etc.
4. After connecting the battery terminals, wait for at least 10 seconds before tuning the ignition switch to ON. Ref. to REPAIR CONTENTS>NOTE > BATTERY.
5. When disconnecting the connectors of the electrical components, always be sure to turn the ignition switch to OFF. Perform the Clear Memory after connecting the connectors. Ref. to COMMON(diag)>Clear memory.
6. When measuring the voltage or resistance of individual sensors or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal.

Never insert the tapered pin into the terminal because it deforms inside which may lead to a malfunction.



Caution:

When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.



Note:

When replacing the ECM of the models with immobilizer, immobilizer system must be registered. For detailed operation procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

7. Take care not to allow water to get into the connectors when servicing or washing the vehicle in rainy weather. Avoid exposure to water even if the connectors are waterproof.
8. Use ECM mounting stud bolts for the grounding point when measuring voltage and resistance inside the passenger compartment.

9. Use the engine ground terminal or engine assembly for the grounding point when measuring the voltage and resistance in engine compartment.

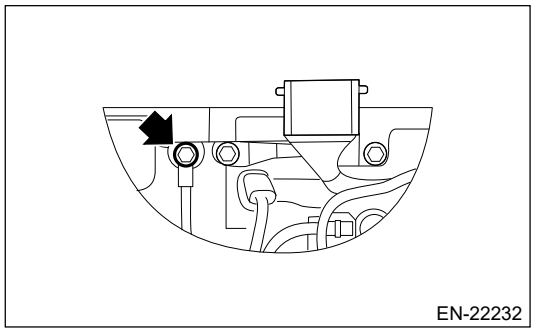
10. All parts related to the engine control system are precision parts. Do not drop or otherwise apply impact. Do not reuse the parts that are dropped accidentally.
11. Observe the following cautions when installing a radio in vehicle.

Caution:

- **The antenna must be kept as far apart as possible from the ECM. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Electrical Component Location>LOCATION > ENGINE UNIT.**
- **The antenna feeder must be placed as far apart as possible from the ECM and engine control system harness.**
- **Carefully adjust the antenna for correct matching.**
- **When mounting a large power type radio, pay special attention to the three items mentioned above.**
- **Incorrect installation of the radio may affect the operation of ECM.**

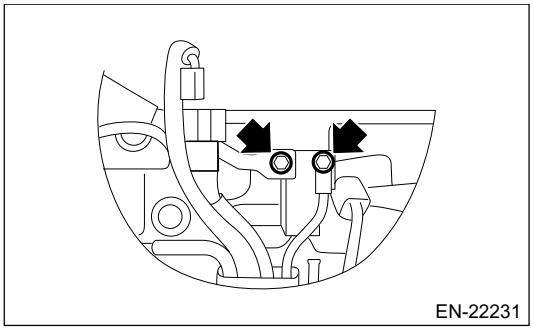
12. When disconnecting the fuel tube, release the fuel pressure. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel>PROCEDURE > RELEASING OF FUEL PRESSURE.
13. Warning lights may illuminate when performing driving test with jacked-up or lifted-up condition, but this is not a system malfunction. The reason for this is the rotating speed difference between the front and rear wheels. When engine control system diagnosis is finished, perform the VDC memory clearance procedure of self-diagnosis function. Ref. to COMMON(diag)>Clear memory>OPERATION.

ENGINE (DIAGNOSTICS)(H4DO) > General Description



INSPECTION

Before performing diagnostics, check the following item which might affect engine problems.



1. BASIC INSPECTION

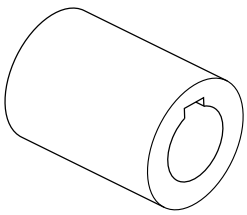
1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.
3. Make sure that the engine ground terminal has no contamination, corrosion or looseness and is properly connected to the engine.

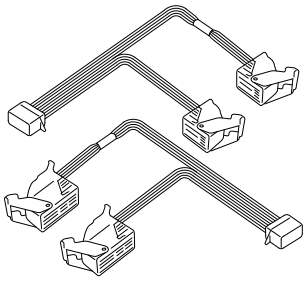
- CVT model

- MT model

2. CHECK NON-PERMANENT OCCURRENCE MALFUNCTIONS

1. Clear the memory. Ref. to COMMON(diag)>Clear memory.
2. Perform the reproduction test.
3. Perform visual inspection of the connectors and the respective terminals and check the connection.
4. Check that excessive force is not applied to the wiring harness and connector.





ENGINE (DIAGNOSTICS)(H4DO) > General Description

NOTE

- The on-board diagnostic (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
- Further, against any failure of sensors that would cause the vehicle to stop running, the fail-safe function is provided to ensure the minimal drivability.
- The OBD system incorporated with the vehicles within this type of engine complies with OBD-II regulations. The OBD system monitors the components and the system malfunction listed in “Engine Section” which affects on emissions.
- When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumination or blinking, a DTC and a freeze frame engine conditions are stored into on-board computer.
- The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction.
- Freeze frame engine condition data are stored until the DTCs are cleared. However when such malfunctions as fuel trim fault and misfire are detected with the freeze frame engine condition data stored, they are rewritten into those related to the fuel trim fault and misfire.
- When the malfunction does not occur again for three consecutive driving cycles*, malfunction indicator light is turned off, but DTC remains at on-board computer.
  *: One driving cycle means the period between the ignition switch ON and the ignition switch OFF after driving.
- When performing diagnosis, connect the Subaru Select Monitor or general scan tool to the vehicle.
- When the ignition is turned ON or the engine is started immediately after replacing the battery or connecting the terminals, DTCs may be detected. Ref. to REPAIR CONTENTS>NOTE > BATTERY. Confirm this by asking the user.

PREPARATION TOOL

1. PREPARATION TOOL

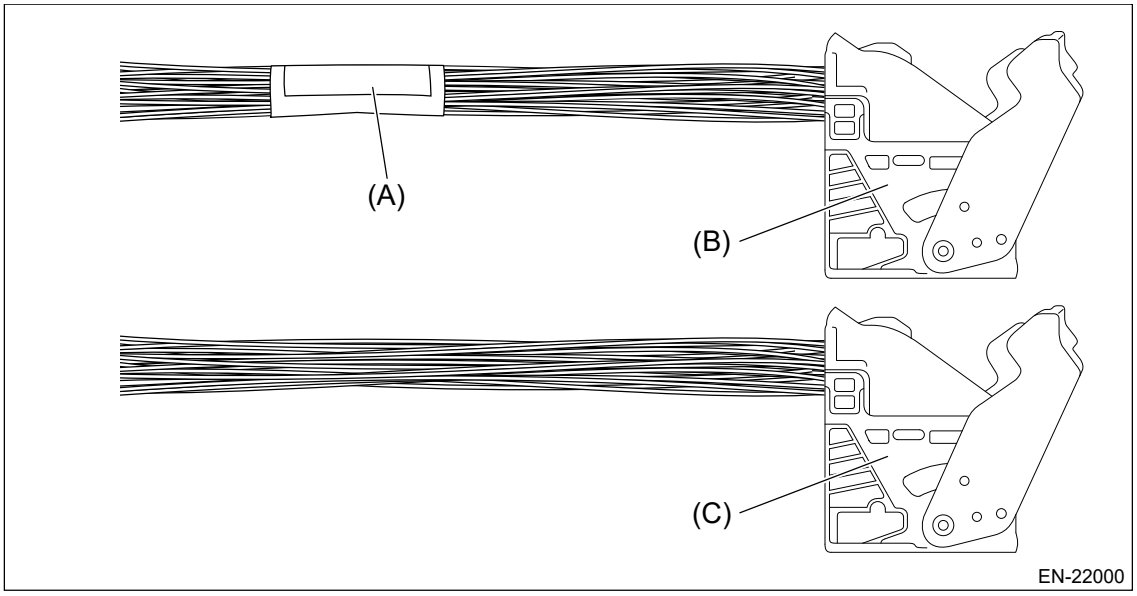


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
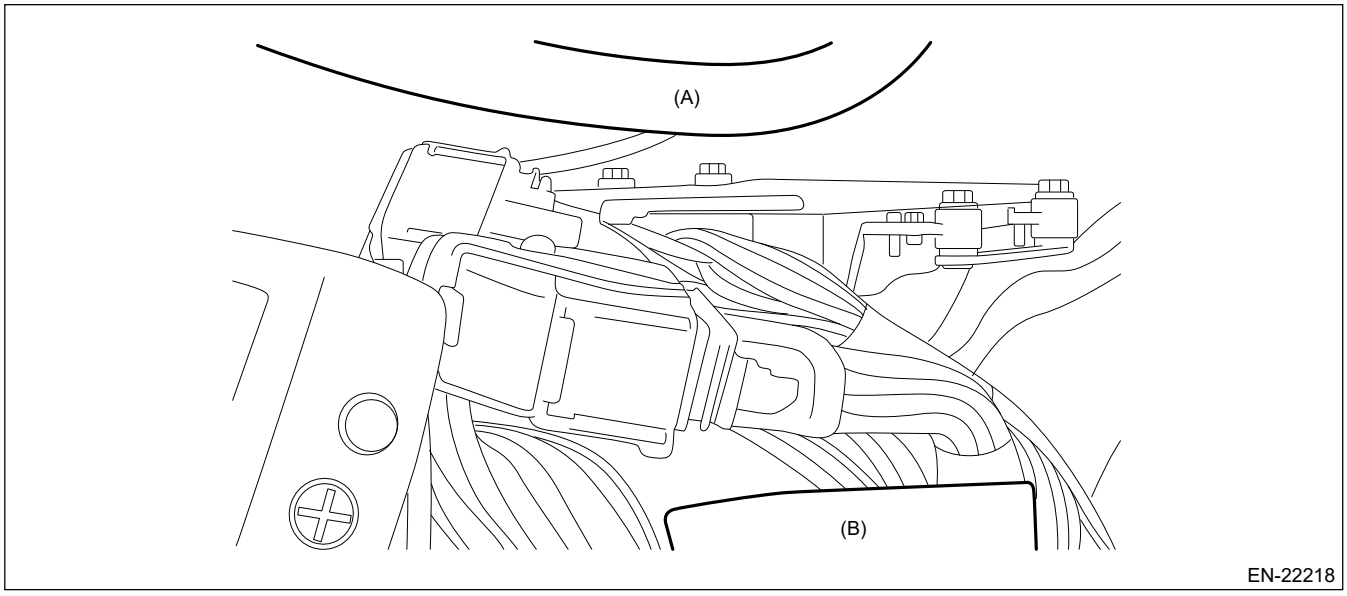
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.**
 ST18252AA000	18252AA000	CRANKSHAFT SOCKET	Used for rotating crankshaft.
 ST18460AA120	18460AA120 (Newly adopted tool)	CHECK BOARD	Used for measuring voltage and resistance of ECM terminals.

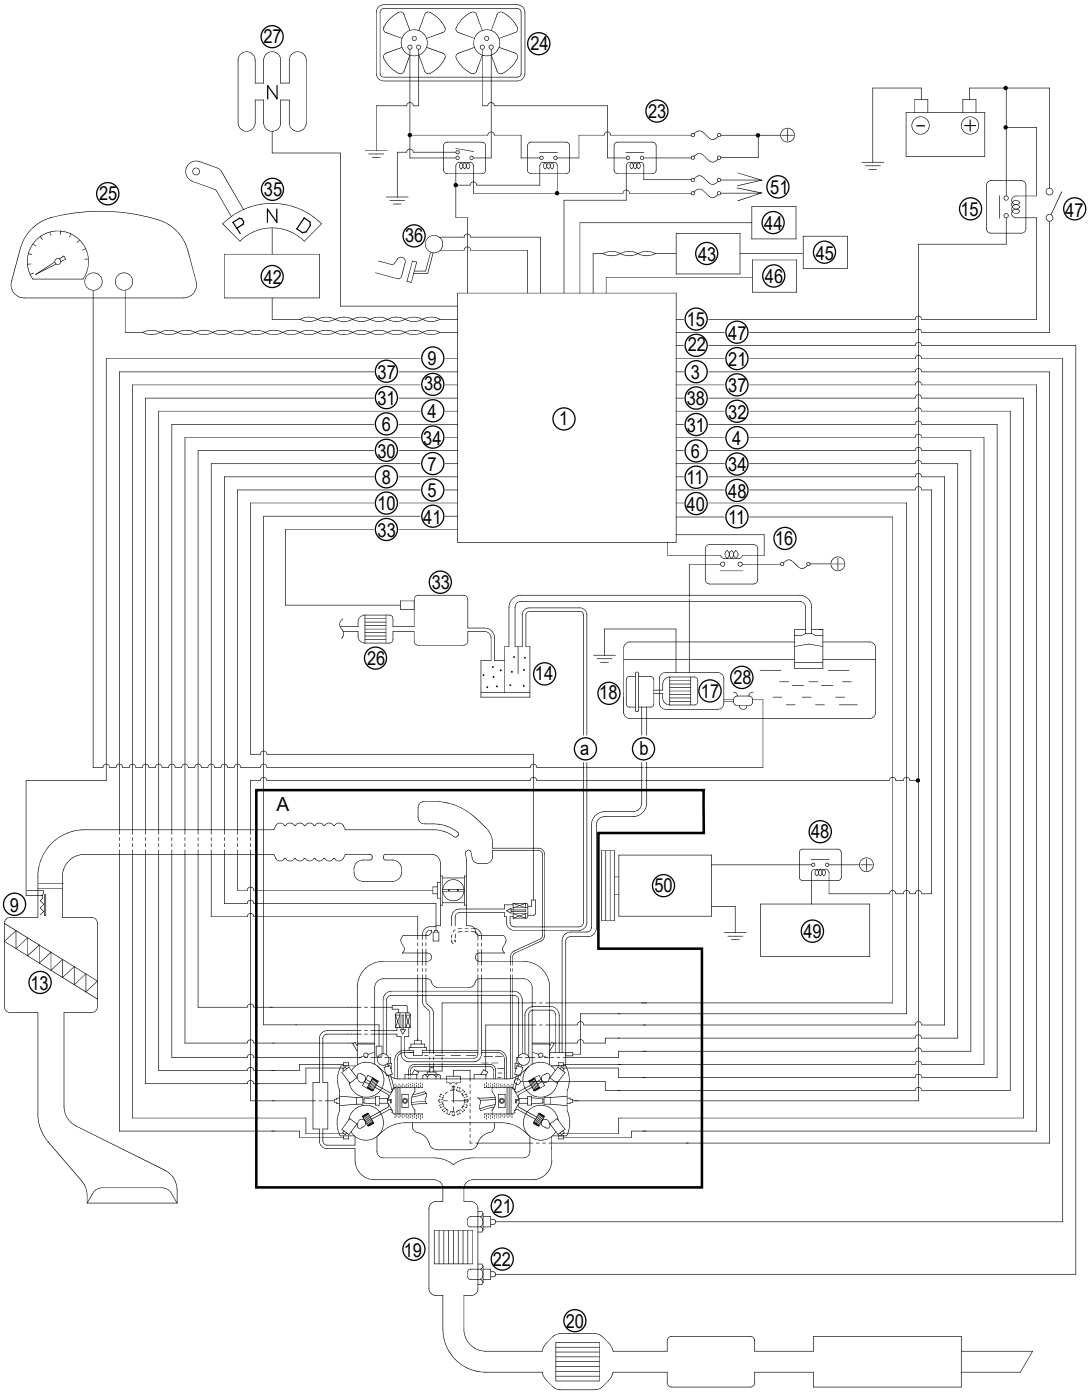
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

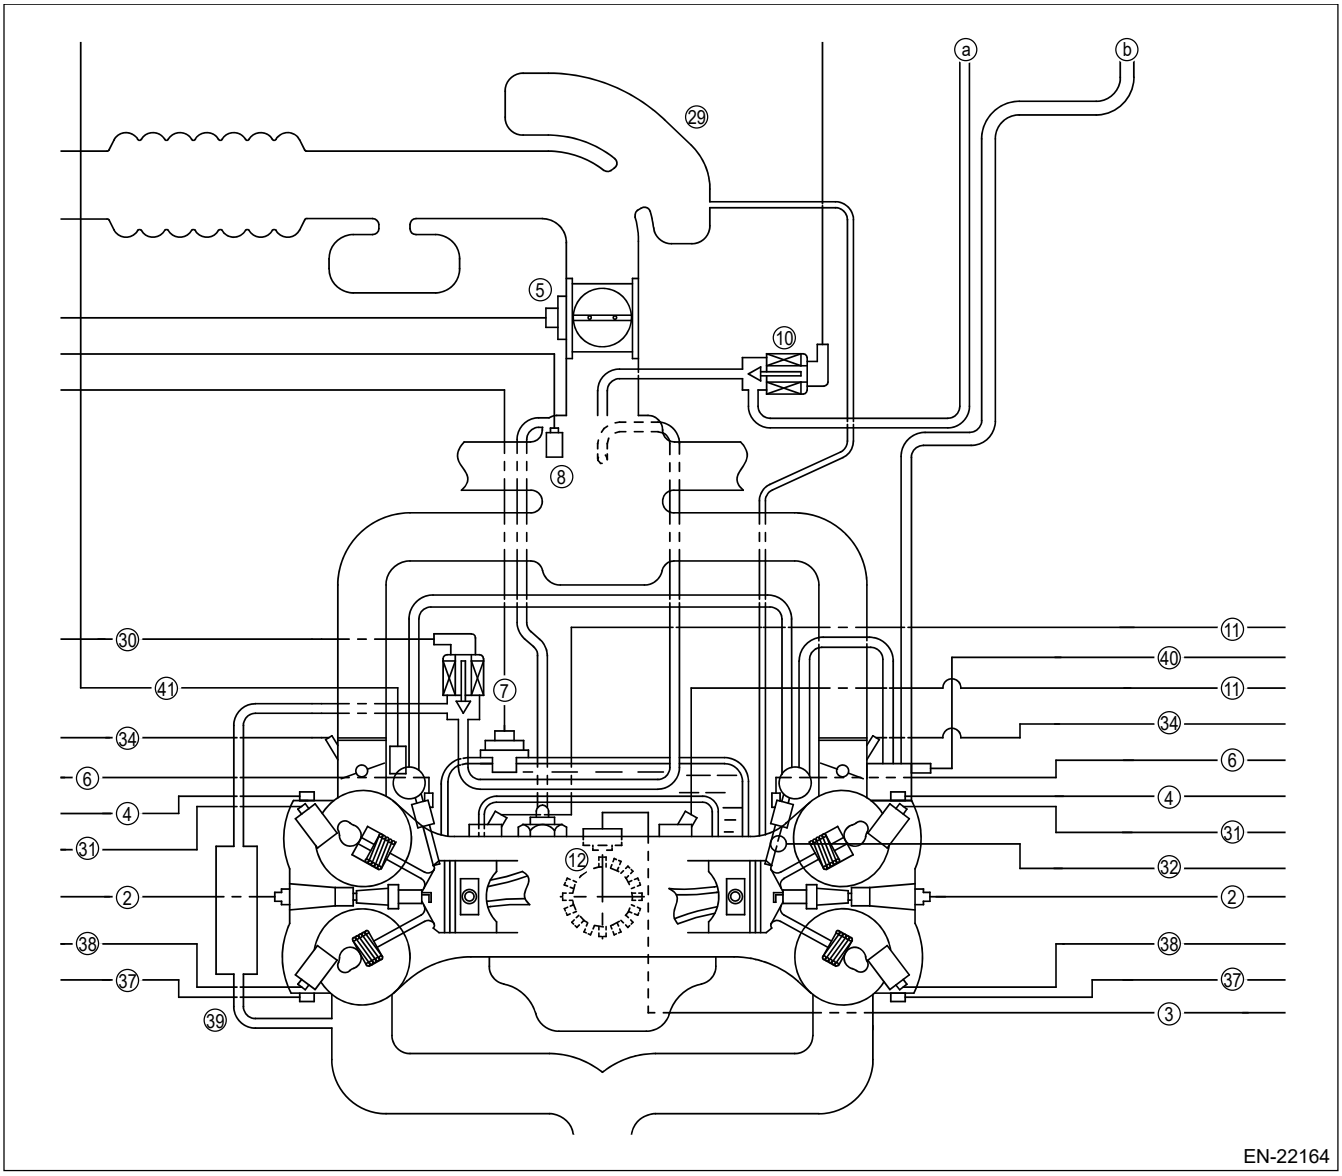


3. HOW TO USE CHECK BOARD

1. Use the check board when measuring the ECM terminal voltage and resistance.
2. Use the connector (B) with part label (A) when measuring the voltage, current and resistance. Connect the connector (C) to the engine control module.



Caution:



- **If you mistakenly insert a taper pin for measurement into the ECM connector (C), do not use the check board again, otherwise a malfunction may (poor contact, etc.) occur on the vehicle.**
- **Affix the check board to the vehicle using tape (B) so that it may not contact the portion (A).**
- **To prevent damage to the connector, when connecting the connector to ECM, insert the connector straight in until it stops, and while maintaining the position, lock the lever.**

ENGINE (DIAGNOSTICS)(H4DO) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

DTC	Item	Condition	Number of driving cycles on the detecting condition
B1570	ANTENNA	—	1

1. PREPARATION FOR THE INSPECTION MODE

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3—10.6 US gal, 4.4—8.8 Imp gal)].
2. After performing the diagnostics and clearing memory, check that no DTC remains. Ref. to COMMON(diag)>Clear memory.

   Note:

   Perform the inspection mode after warming up the engine except when the engine coolant temperature at engine start is specified.

2. SUBARU SELECT MONITOR

1. Clear the memory. Ref. to COMMON(diag)>Clear memory.
2. Read the diagnostic trouble code (DTC) and check that no DTC is displayed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

   Note:

   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis using "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC). After solving the DTC, repeat from step 1).
3. Start the engine, and run the engine at idle for 10 seconds or more.
4. Read the diagnostic trouble code (DTC) and check the DTC. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

   Note:

   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis using "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC). After solving the DTC, repeat from step 1).

3. GENERAL SCAN TOOL

Note:

For detailed operation procedures, refer to the general scan tool operation manual.

1. Clear the memory. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool>OPERATION > MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION).
2. Read the diagnostic trouble code (DTC) and check that no DTC is displayed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool>OPERATION > MODE $07 (INITIAL EMISSION-RELATED POWERTRAIN DTC).

Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC). After solving the DTC, repeat from step 1).

3. Start the engine, and run the engine at idle for 10 seconds or more.
4. Read the diagnostic trouble code (DTC) and check the DTC. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Scan Tool>OPERATION > MODE $07 (INITIAL EMISSION-RELATED POWERTRAIN DTC).

Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Procedure with Diagnostic Trouble Code (DTC). After solving the DTC, repeat from step 1).

4. INSPECTION MODE A

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0087	FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1	Complete diagnosis with inspection mode B or C as well.	1
P0088	FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1	Complete diagnosis with inspection mode B or C as well.	1
P0128	COOLANT THERMOSTAT (COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)	—	2
P0141	O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2	—	2
P014C	A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1	—	2
P014D	A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1	—	2

P015B	A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1	—	2
P0171	SYSTEM TOO LEAN BANK 1	Complete diagnosis with inspection mode B or C as well.	2

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0172	SYSTEM TOO RICH BANK 1	Complete diagnosis with inspection mode B or C as well.	2
P0300	RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED	Complete diagnosis with inspection mode B or C as well.	1
P0301	CYLINDER 1 MISFIRE DETECTED	Complete diagnosis with inspection mode B or C as well.	1
P0302	CYLINDER 2 MISFIRE DETECTED	Complete diagnosis with inspection mode B or C as well.	1
P0303	CYLINDER 3 MISFIRE DETECTED	Complete diagnosis with inspection mode B or C as well.	1
P0304	CYLINDER 4 MISFIRE DETECTED	Complete diagnosis with inspection mode B or C as well.	1
P0420	CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1	—	2
P0459	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT HIGH	—	2
P0562	SYSTEM VOLTAGE LOW	—	1
P0563	SYSTEM VOLTAGE HIGH	—	1
P2096	POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1	Complete diagnosis with inspection mode B or C as well.	2
P2097	POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1	Complete diagnosis with inspection mode B or C as well.	2

DTC	Item	Condition	Number of driving cycles on the detecting condition
P2195	A/F /O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 — SENSOR 1		2
P2196	A/F /O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 — SENSOR 1		2

Warning:

When performing Inspection Mode A on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3—10.6 US gal, 4.4—8.8 Imp gal)].
2. Using the Subaru Select Monitor, clear the memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory.
3. Execute the inspection mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.

   Note:

   Perform the inspection mode after warming up the engine except when the engine coolant temperature at engine start is specified.
4. Drive for 20 minutes or more at a constant speed of 80 km/h (50 MPH) or more.
5. Stop the vehicle and idle for one minute.
6. Read the readiness code of [Engine Control System] using Subaru Select Monitor and check that the concerned DTC is completed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>All Readiness Diagnostic Code(s).
7. Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
8. Read the temporary code using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

5. INSPECTION MODE B

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0087	FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1	Complete diagnosis with inspection mode A or C as well.	1
P0088	FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1	Complete diagnosis with	1

P2097	POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1	Complete diagnosis with inspection mode A or C as well.	2

Warning:

When performing Inspection Mode B on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3—10.6 US gal, 4.4—8.8 Imp gal)].
2. Using the Subaru Select Monitor, clear the memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory.
3. Execute the inspection mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.
   Note:
   Perform the inspection mode after warming up the engine except when the engine coolant temperature at engine start is specified.
4. Drive at 10 km/h (6 MPH) or more.
5. Stop the vehicle and idle for ten minutes.
6. Read the readiness code of [Engine Control System] using Subaru Select Monitor and check that the concerned DTC is completed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>All Readiness Diagnostic Code(s).
7. Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
8. Read the temporary code using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

6. INSPECTION MODE C

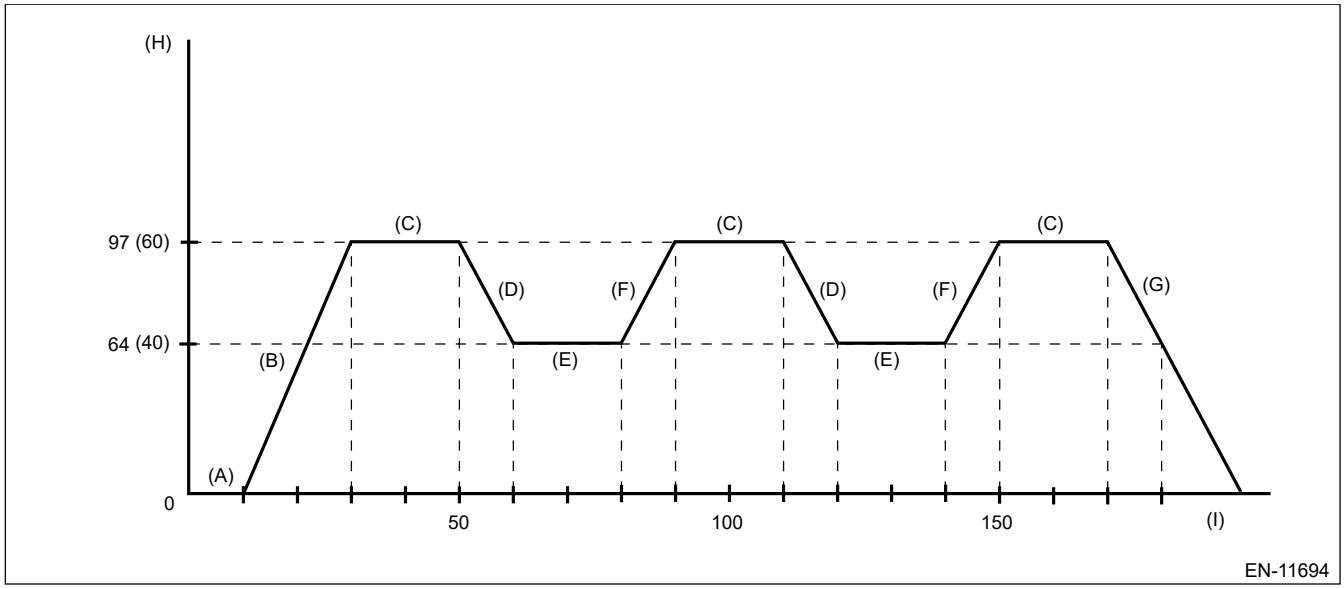
P2271	O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 2	—	2

Warning:



When performing inspection mode C on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3—10.6 US gal, 4.4—8.8 Imp gal)].
2. Using the Subaru Select Monitor, clear the memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory.
3. Execute the inspection mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.

   Note:

   Perform the inspection mode after warming up the engine except when the engine coolant temperature at engine start is specified.
4. Drive according to the drive pattern described below.

(A) Shift the select lever to “P” range or the shift lever to the neutral position, and let the engine idle for 10 seconds or more.	(D) Decelerate with the accelerator pedal fully closed to 64 km/h (40 MPH) or less.	(G) Stop vehicle with the accelerator pedal fully closed.
(B) Accelerate to 97 km/h (60 MPH) or more within 20 seconds.	(E) Drive for 20 seconds or more at 64 km/h (40 MPH) or less.	(H) Vehicle speed km/h (MPH)
(C) Drive for 20 seconds or more at 97 km/h (60 MPH) or more.	(F) Accelerate to 97 km/h (60 MPH) or more within 10 seconds.	(I) Sec.

5. Read the readiness code of [Engine Control System] using Subaru Select Monitor and check that the concerned DTC is completed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>All Readiness Diagnostic Code(s).
6. Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
7. Read the temporary code using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Note:

After driving, use the Subaru Select Monitor to check that “Imbalance Check 3 R” indicates “1” and read the temporary code. If “Imbalance Check 3 R” indicates “0”, the diagnosis has not been completed. In this case, repeat driving until the reading is “1”.

7. INSPECTION MODE F

DTC	Item	Condition	Number of driving cycles on the detecting condition

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0111	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2

Warning:

When performing Inspection Mode F on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3—10.6 US gal, 4.4—8.8 Imp gal)].
2. Using the Subaru Select Monitor, clear the memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory.
3. Execute the inspection mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.

   Note:

   Perform the inspection mode after warming up the engine except when the engine coolant temperature at engine start is specified.
4. With the ignition switch ON (engine stopped), read the values in [Coolant Temp.] and [Intake Air Temp.].
5. If the values from step 1) satisfy the following conditions, idle the engine for two minutes or more.

   Condition:

   |Engine coolant temperature — Intake air temperature|≤ 5°C (9°F)

   Note:

   - **If the conditions are not satisfied, turn the ignition switch to OFF and wait until the parameters are satisfied.**
   - **For CVT models, hold the select lever to “P” range or “N” range at idling, and for MT models, the shift lever in the neutral position at idling.**
6. Drive according to the drive pattern described below.

(A) Vehicle speed
(B) Elapsed time
(1) Idle the engine for 2 minutes or more.
(2) Drive for a total period of 15 minutes or more at a speed of 80 km/h (50 MPH) or more.
(3) Stop the vehicle and idle for 30 seconds or more.
(4) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.
(5) Stop the vehicle and idle for 30 seconds or more.
(6) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.
(7) Stop the vehicle and idle for 30 seconds.

Note:

- **In pattern (2), it is acceptable to decelerate to less than 80 km/h (50 MPH) or to stop the vehicle depending on the traffic conditions. Drive the vehicle at 80 km/h (50 MPH) or more until the total driving time reaches or exceeds 15 minutes.**
- **There is no given transition time between idling and cruising.**
- **Driving at constant speed only on a downhill causes smaller engine load and may result in failure to obtain a right diagnostic result.**
- **If the ignition switch is turned to OFF during inspection mode F, perform this driving cycle again after satisfying the conditions listed in the table.**

7. Read the readiness code of [Engine Control System] using Subaru Select Monitor and check that the concerned DTC is completed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>All Readiness Diagnostic Code(s).

8. Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

9. Read the temporary code using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

8. INSPECTION MODE H

DTC	Item	Condition	Number of driving cycles on

			the detecting condition
P0071	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2
P0116	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2
P0196	ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2

P0451	EVAP SYSTEM (CPC) PRESSURE SENSOR/SWITCH CIRCUIT RANGE/PERFORMANCE	60 seconds have elapsed since ignition switch is OFF.	2
P050A	COLD START IDLE CONTROL SYSTEM PERFORMANCE	—	2
P050B	COLD START IGNITION TIMING PERFORMANCE	—	2

Diagnostic procedure:

1. With the ignition switch ON (engine stopped), read the values in [Engine Coolant Temperature] and [Intake Air Temperature]. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.
2. If the values from step 1) satisfy the following conditions, idle the engine for two minutes or more.
   Condition:
   |Engine coolant temperature — Intake air temperature|≤ 5°C (9°F)
   Note:
   - **If the conditions are not satisfied, turn the ignition switch to OFF and wait until the parameters are satisfied.**
   - **For CVT models, hold the select lever to "P" range or "N" range at idling, and for MT models, the shift lever in the neutral position at idling.**
3. Read the temporary code using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

9. INSPECTION MODE I

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0455	EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)	• [Coolant Temp.] 5 — 45° (41 — 113°F) • [Intake Air Temperature] : 5 — 50°C (41 — 122°F)	2
P0456	EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)		2
P1451	DTC P1451 EVAP SYSTEM CLOG DETECTED (PIPE)		2
P2402	EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT HIGH		1
P2404	EVAP SYSTEM LEAK DETECTION PUMP SENSE CIRCUIT RANGE/PERFORMANCE		2
P2420	EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT HIGH		2

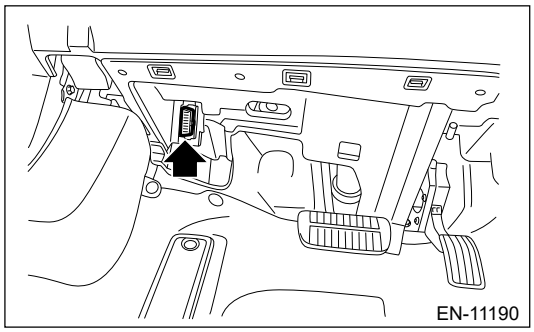
Warning:
When performing Inspection Mode I on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

Caution:
Be careful of the state of the battery when performing the inspection mode I consecutively. Performing the inspection mode I consecutively without the engine running may cause a low battery voltage and battery discharge.

Note:

- **If it is necessary to perform inspection mode I consecutively, drive the vehicle under the following conditions to release accumulated evaporating gas. Performing the inspection mode I consecutively without starting the engine causes a large amount of evaporating gas to accumulate in the canister, which hinders an accurate diagnosis.**
  - **After engine is warmed up**
  - **Drive for 10 minutes or more at a speed of 48 km/h (30 MPH) or more (duration of drive can be an accumulation)**
- **To obtain an accurate diagnostic result, perform the procedures according to the following points.**
  - **Do not refuel gas immediately before performing inspection mode I. There will be a large amount of evaporating gas immediately after refuel, which may cause a less accurate diagnostic performance.**
  - **Do not shake the vehicle while performing inspection mode I. Shaking the vehicle causes evaporating gas to increase inside the fuel tank, which may cause a less accurate diagnostic performance.**
  - **Do not perform any service operation including installation or removal of parts or connectors while performing inspection mode I. Performing service operation could affect on the functions of related parts, which may cause a less accurate diagnostic performance.**
- **Perform MODE $08 when using a general scan tool.**

Diagnostic procedure:



1. Prepare the Subaru Select Monitor kit. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>General Description>PREPARATION TOOL.
2. Prepare PC with Subaru Select Monitor installed.
3. Connect the USB cable to the DST-i and the USB port on the personal computer (dedicated port for the Subaru Select Monitor).

   Note:

   The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.
4. Connect the diagnosis cable to DST-i.
5. Connect the DST-i to the data link connector located in the lower portion of the instrument panel (on the driver's side).

   Caution:

   Do not connect the scan tools except for Subaru Select Monitor and general scan tool.

6. Start the PC.
7. Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor".
8. On [Start] display, select [Generic OBDII].
9. On [Select System] display, select [Evaporative System Leak Test].

10. On [Evaporative System Leak Test] display, select [Evaporative System Leak Test].
11. On [Evaporative System Leak Test is running. Press Cancel to exit this function.] display, click the [OK] button to perform evaporative system leak test.
12. When [Conditions have been enabled to control this function. Turn the ignition switch off to terminate the test.] display appears, wait for 30 minutes without clicking the [OK] button.

Caution:

Do not leave the vehicle for an extended period of time after the test is complete. This may cause early deterioration of the battery or discharged battery.

Note:

- **Clicking [OK] button brings [Evaporative System Leak Test] display back, although the test is continuing.**
- **The Subaru Select Monitor screen does not change after the evaporative system leak test is complete or when the test is aborted by turning off the ignition switch.**
- **If [Test conditions are not correct] display appears, use Subaru Select Monitor to check that the values in [Coolant Temp.] and [Intake Air Temp.] satisfy the conditions. If the conditions are satisfied, make the necessary preparation for the inspection mode again.**
  Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode>PROCEDURE > PREPARATION FOR THE INSPECTION MODE.

13. After 30 minutes passed from the start of step 14), click the [OK] button to return to the [Evaporative System Leak Test] display.
14. Return to the [OBD System] display, and select [OBD Mode test results].
15. Check TID $C1 —$CA of MID $3C in [OBD Mode test results].

Note:

Perform MODE $06 and check when using a general scan tool.

Result of on-board monitor test

Display	Details	REMARKS
$0000 is stored in all Val.	During the evaporative system leak test, the test conditions were not met and the test was canceled.	Once the test conditions are met, perform the test again.
All Val. are stored with values and OK is set to all the results.	Evaporative system leak test is completed correctly.	While the ignition switch is ON, read the pending code using the Subaru Select Monitor.
Some results were no good.	The evaporative system leak test completed successfully but the results were faulty.	While the ignition switch is ON, read the pending code using the Subaru Select Monitor.

16. When the evaporative system leak test is completed correctly, read the pending code with the ignition switch turned to ON position. If the DTC is recorded, check the appropriate DTC. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Note:

- **Perform MODE $07 when using a general scan tool.**
- **The pending code will be cleared by turning ignition switch to OFF.**

10. INSPECTION MODE J

DTC	Item	Condition	Number of

			driving cycles on the detecting condition
P2610	ECM/PCM ENGINE OFF TIMER PERFORMANCE	—	2

Diagnostic procedure:

1. Idle the engine for 15 minutes or more.
2. Turn the ignition switch to OFF.
3. After at least 10 hours passed from the start of step 2), read the temporary code using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

11. INSPECTION MODE N

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0016	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A	[Engine Coolant Temperature]: 80°C (176°F) or more	2
P0017	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B		2
P0018	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A		2
P0019	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B		2

Warning:

When performing Inspection Mode N on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3—10.6 US gal, 4.4—8.8 Imp gal)].
2. Using the Subaru Select Monitor, clear the memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory.
3. Execute the inspection mode. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Inspection Mode.

   Note:

   Perform the inspection mode after warming up the engine except when the engine coolant temperature at engine start is specified.
4. Check the data in condition column of table by using the Subaru Select Monitor or general scan tool.

Note:

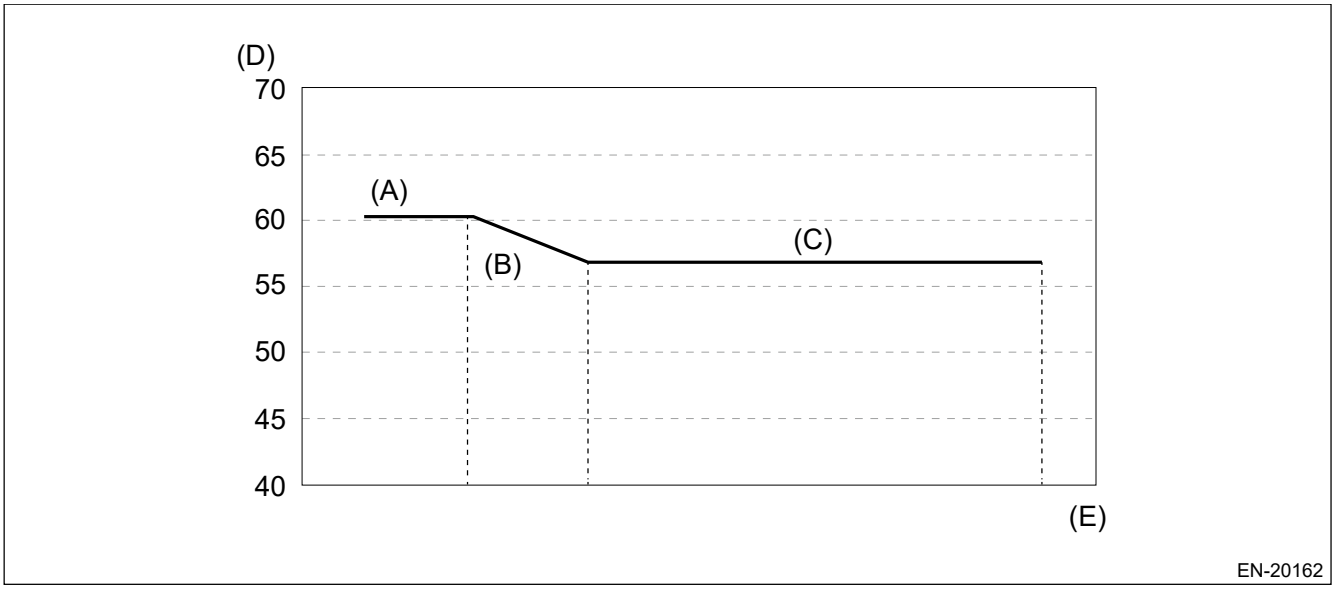
- **SUBARU SELECT MONITOR**
  For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

- **General scan tool**
  For detailed operation procedures, refer to the general scan tool operation manual.

5. While the conditions in the list are satisfied, race the engine at the speed of approx. 2,500 rpm for 40 seconds or more.
6. Start to move the vehicle, then accelerate the vehicle to 50 km/h (31.1 MPH) or more.
7. When the speed reaches 50 km/h (31.1 MPH) or more, release the accelerator pedal, the brake pedal and the clutch pedal (MT model) to decelerate the vehicle without shifting the gear. At this time, select an appropriate gear beforehand so that the engine speed falls within the range from 2500 rpm to 1900 rpm for 5 seconds or more.
   Note:
   - **The vehicle speed does not matter so long as the engine speed can maintain from 2500 rpm to 1900 rpm for 5 seconds or more.**
     Example: On a downhill grade, it can be performed with a low speed gear and at a low vehicle speed.
   - **When it is performed with the electrical load such as the air conditioner, etc. turned OFF or the vehicle driven on a downhill grade, the engine speed decreases slowly. Therefore, the continuous time can be maintained easily.**
8. Bring the vehicle to a stop in a safe place, and idle it for 5 minutes or more.
   Note:
   Driving method while vehicle is driven to a stop at safe place is not restricted.
9. Read the readiness code of [Engine Control System] using Subaru Select Monitor and check that the concerned DTC is completed. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>All Readiness Diagnostic Code(s).
10. Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
11. With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.
    Note:
    - **For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**
    - **In the step 6), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.**

(A) 2500 rpm
(B) 1900 rpm
(C) 40 seconds or more
(D) 5 seconds or more
(E) 5 minutes or more

12. INSPECTION MODE O



DTC	Item	Condition	Number of driving cycles on the detecting condition
P0441	EVAP SYSTEM (CPC) INCORRECT PURGE FLOW	—	2

Diagnostic procedure:

Warning:

When performing Inspection Mode O on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

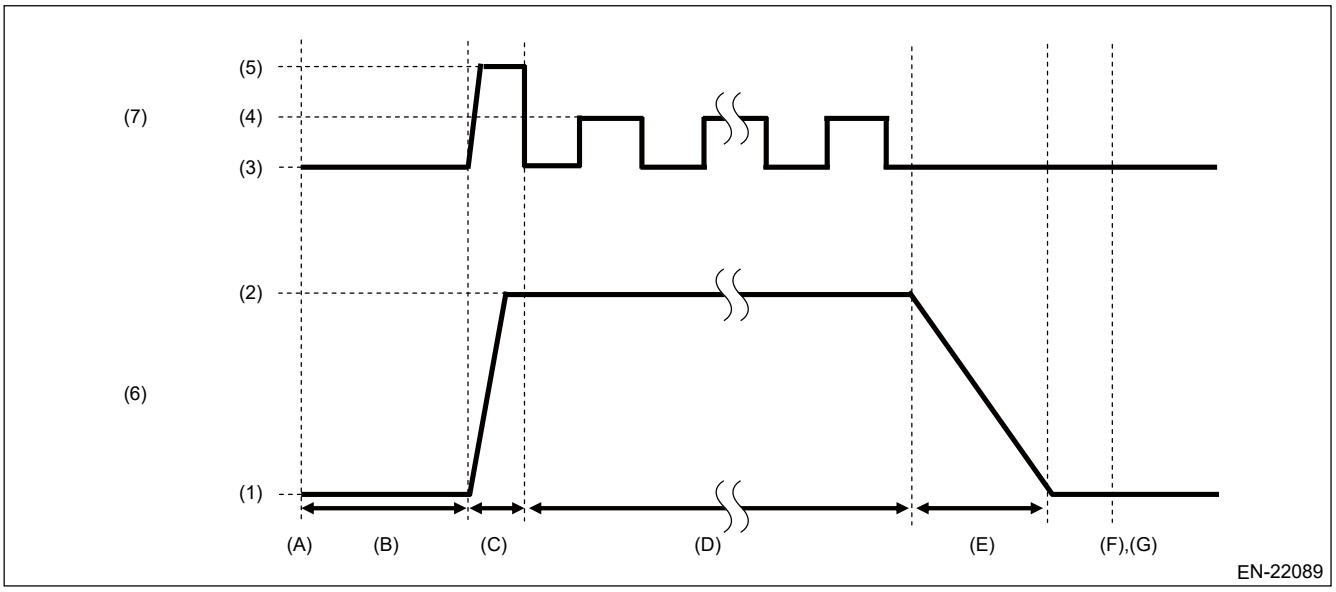
1. Drive according to the drive pattern described below.

(A) Drive the vehicle at 60 km/h (37 MPH) or faster for at least 5 minutes in fully warm-up condition.
(B) Decelerate with the throttle fully closed for at least 3 seconds.
(C) Drive the vehicle at a constant vehicle speed by depressing the accelerator pedal for at least 30 seconds.
(D) Vehicle speed km/h (MPH)
(E) Sec.

2. Park the vehicle on a safe place.
   Note:
   Driving method while vehicle is driven to a stop at safe place is not restricted.
3. With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.
   Note:
   - **For detailed operation procedures, refer to “Data Monitor”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.**
   - **In the step 3), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.**

13. INSPECTION MODE T

DTC	Item	Condition	Number of driving cycles on the detecting condition
P000A	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 1	—	2
P000B	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 1	—	2
P000C	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 2	—	2
P000D	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 2	—	2



DTC	Item	Condition	Number of driving cycles on the detecting condition
P0011	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1	—	2
P0014	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1	—	2
P0021	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2	—	2
P0024	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2	—	2

Warning:

When performing Inspection Mode T on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3—10.6 US gal, 4.4—8.8 Imp gal)].
2. Using the Subaru Select Monitor, clear the memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory.
3. Drive according to the drive pattern described below.

(1) 0 km/h
(2) 60 km/h (37.3 MPH)
(3) 0%
(4) 20%
(5) 30 — 60%
(6) Vehicle speed
(7) Accelerator pedal opening angle
(A) Start the engine after warming up (coolant
(D) While maintaining vehicle speed at 60 km/h (37.3 MPH),
(G) Stop the engine.

temperature of 70°C (158°F)).

(B) Idle the engine for at least three minutes.

(C) Accelerate the vehicle to 60 km/h (37.3 MPH).

repeat the accelerator opening angle 0% (5 seconds) ←→ 20% (5 seconds) for 20 minutes or more.

(E) Fully release the accelerator pedal to decelerate the vehicle for at least 5 seconds.

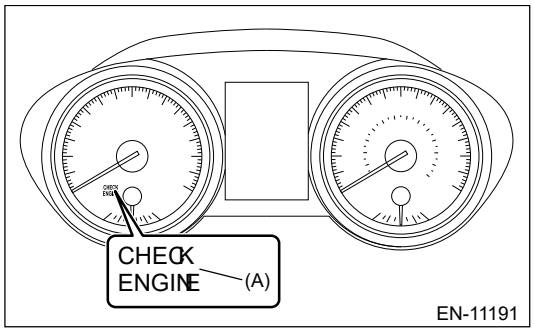
(F) Stop the vehicle. (Driving method while vehicle is driven to a stop at safe place is not restricted)

4. Read the temporary code using the Subaru Select Monitor or general scan tool. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

ENGINE (DIAGNOSTICS)(H4DO) > Warning Light Illumination Pattern

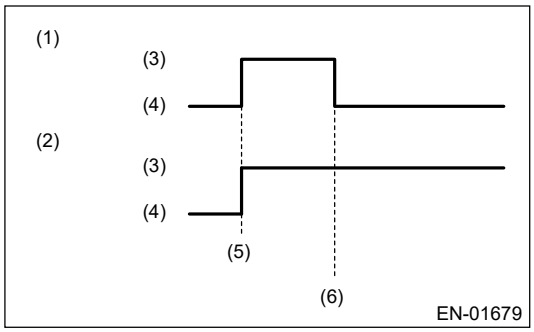
PROCEDURE

1. Activation of malfunction indicator light Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Warning Light Illumination Pattern>ACTIVATION OF MALFUNCTION INDICATOR LIGHT.
↓
2. Malfunction indicator light does not come on Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Warning Light Illumination Pattern>MALFUNCTION INDICATOR LIGHT DOES NOT COME ON.
↓
3. Malfunction indicator light does not go off Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Warning Light Illumination Pattern>MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF.



ENGINE (DIAGNOSTICS)(H4DO) > Warning Light Illumination Pattern

ACTIVATION OF MALFUNCTION INDICATOR LIGHT

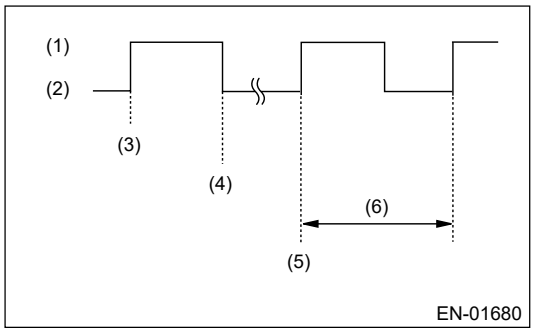


1. When the ignition switch is turned to ON (engine OFF), the malfunction indicator light (A) in the combination meter illuminates.

   Note:

   If the malfunction indicator light does not illuminate, perform diagnostics of the malfunction indicator light circuit or the combination meter circuit. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Warning Light Illumination Pattern>MALFUNCTION INDICATOR LIGHT DOES NOT COME ON.

2. After starting the engine, the malfunction indicator light goes out. If it does not go off, any of the engine and emission control system has malfunction.



(1) No faulty
(2) Trouble occurs
(3) ON
(4) OFF

(5) Ignition switch ON

(6) Engine start

3. If the diagnostic system detects a misfire which could damage the catalyst, the malfunction indicator light will blink at a cycle of 1 Hz.

(1) ON

(2) OFF

(3) Ignition switch ON

(4) Engine start

(5) Misfire start

(6) 1 second

ENGINE (DIAGNOSTICS)(H4DO) > Warning Light Illumination Pattern

MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

Trouble symptom:

When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not illuminate.

1. CHECK DTC.

Read the DTC of LAN system using the Subaru Select Monitor or a general scan tool. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC for LAN system displayed?

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the meter case assembly of combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

ENGINE (DIAGNOSTICS)(H4DO) > Warning Light Illumination Pattern

MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF

Diagnosis:
The malfunction indicator light circuit is shorted.
Trouble symptom:
Although malfunction indicator light comes on when the engine runs, DTC is not shown on the Subaru Select Monitor or general scan tool display.

1. CHECK DTC.

Read the DTC of engine or LAN system using the Subaru Select Monitor or a general scan tool. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC). Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC of engine or LAN system displayed? Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Yes	Check the appropriate DTC using the “Diagnostic Trouble Code (DTC)”. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC)>LIST. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK COMBINATION METER.

Perform the self-diagnosis for combination meter system. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter System>OPERATION > SELF-DIAGNOSIS DISPLAY MODE.

Does the malfunction indicator light illuminate and go off normally?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the meter case assembly of combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

ENGINE (DIAGNOSTICS)(H4DO) > Data Monitor

OPERATION

Note:

- **Refer to “COMMON (diag)”. Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor>LIST.**

ENGINE (DIAGNOSTICS)(H4DO) > Data Monitor

LIST

Display	Contents	Note (at idling)	REMARKS
Engine Speed	Value calculated from crankshaft position sensor output value.	650 rpm	rpm
Air Flow Rate from Mass Air Flow Sensor	Value calculated from air flow sensor output value.	2.5 g/s	g/s or lb/m
Vehicle Speed Sensor	Value calculated from vehicle speed sensor output value.	0 km/h	km/h or MPH
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	13%	%
Accel. Opening Angle	Accelerator pedal opening angle (in percentage) calculated from accelerator pedal position sensor output value.	0.0%	%
A/F Sensor #1	Actual lambda value calculated from the front oxygen (A/F) sensor output value.	1.0	—
Ignition Timing Advance for #1 Cylinder	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	5.5°	°
Coolant Temp.	Value calculated from engine coolant temperature sensor output value.	96°C	°C or °F
Short Term Fuel Trim (B1)	Air fuel ratio correction control value for the front oxygen (A/F) sensor.	0.8%	%
Long Term Fuel Trim (B1)	Air fuel ratio learning control value for the front oxygen (A/F) sensor.	1.6%	%
Learned Ignition Timing	Ignition timing learning value. Advance angle amount or retard angle amount when knocking occurs.	0.0 deg	deg
Mani. Absolute Pressure	Value calculated from the manifold pressure sensor.	32 kPa	kPa, mmHg, inHg or

Display	Contents	Note (at idling)	REMARKS
			psig
Bank 1 - Sensor 2 present at that location	Rear oxygen sensor output voltage value.	0.7V	V
VVT Adv. Ang. Amount R	AVCS advance angle amount for the RH bank on the intake side.	0 deg	deg
VVT Advance Target Angle Amount R	AVCS target advance angle amount for the RH bank on the intake side. This value is compared with the AVCS advance angle amount R to judge if the intake AVCS is operating properly. Response delays during the transition time.	0 deg	deg
VVT Adv. Ang. Amount L	AVCS advance angle amount for the LH bank on the intake side.	0 deg	deg
VVT Advance Target Angle Amount L	AVCS target advance angle amount for the LH bank on the intake side. This value is compared with the AVCS advance angle amount L to judge if the intake AVCS is operating properly. Response delays during the transition time.	0 deg	deg
Exh. VVT Retard Ang. R	AVCS retard angle amount for the RH bank on the exhaust side.	0 deg	deg
Ex VVT Retard Target Angle R	AVCS target retard angle amount for the RH bank on the exhaust side. This value is compared with the AVCS retard angle amount R to judge if the exhaust AVCS is operating properly. Response delays during the transition time.	0 deg	deg
Exh. VVT Retard Ang. L	AVCS retard angle amount for the LH bank on the exhaust side.	0 deg	deg
Ex VVT Retard Target Angle L	AVCS target retard angle amount for the LH bank on the exhaust side This value is compared with the AVCS retard angle amount L to judge if the exhaust AVCS is operating properly. Response delays during the transition time.	0 deg	deg
VVT Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the intake side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	29.9°CA	°CA
VVT Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the intake side.	27.7°CA	°CA

Display	Contents	Note (at idling)	REMARKS
	Controls the angle against a standard angle. Deviation learning is performed based on this standard value.		
VVT Ex Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	29.9°CA	°CA
VVT Ex Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	27.7°CA	°CA
Control module voltage	ECM input power supply voltage.	14.176V	V
Target engine speed	ECM target engine speed.	675 rpm	rpm
Number of Cleaning Executions for VVT Self-recovery	Number of times that the intake AVCS oil control valve cleaning is performed.	—	time
Number of Cleaning Executions for Ex VVT Self-recovery	Number of times that the exhaust AVCS oil control valve cleaning is performed.	—	time
Target Equivalence Ratio	Target air fuel ratio (lambda). It usually becomes 1.0 aiming at a theoretical air fuel ratio.	0.996	—
Oil Temperature	Value calculated from the engine oil temperature sensor output value.	96°C	°C or °F
Intake Air Temp.	Value calculated from the intake air temperature sensor output value.	50°C	°C or °F
Ambient air temperature	Value that ECM estimates by using input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	Ambient air temperature	°C or °F
Ambient Temperature Sensor Signal	Data value of the ambient temperature input to the combination meter via CAN. Ambient temperature used for diagnosis.	—	°C or °F
Ambient Temperature for Control	Data value of the ambient temperature input to the combination meter via CAN. Ambient temperature used for control.	—	°C or °F
Calculated LOAD Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully	15.3%	%

Display	Contents	Note (at idling)	REMARKS
	open is 100%.		
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	14.9%	%
Barometric Pressure	Value calculated from atmospheric pressure sensor output value.	101 kPa	kPa, mmHg, inHg or psig
Mani. Relative Pressure	Value calculated from manifold pressure sensor output value. (Absolute value) (Air intake absolute pressure – Atmospheric pressure)	−69	kPa, mmHg, inHg or psig
Target Throttle Opening Angle	Target throttle opening angle calculated by ECM.	16 deg	deg
Actual Throttle Opening Angle	Actual throttle opening angle. Calculated by ECM based on the throttle sensor input value.	16 deg	deg
Commanded Throttle Actuator Control	Control value of the target throttle opening angle calculated by ECM. Target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	0.0%	%
Relative Throttle Position	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value. The value will be approx. 70% at full open.	1.6%	%
Throttle Motor Voltage	Power supply voltage of the throttle motor. Input value to ECM.	14.2V	V
Main-Throttle Sensor	Voltage value of the main throttle position sensor. Input value to ECM.	0.66V	V
Sub-Throttle Sensor	Voltage value of the sub throttle position sensor. Input value to ECM.	1.52V	V
Throttle Motor Duty	Throttle motor control duty ratio. ECM output value.	−14%	%
Main-Accelerator Sensor	Voltage value of the main accelerator pedal position sensor.	0.66V	V

Display	Contents	Note (at idling)	REMARKS
	Input value to ECM.		
Sub-Accelerator Sensor	Voltage value of the sub accelerator pedal position sensor. Input value to ECM.	0.66V	V
Idle Mass Air Flow	Air volume correction value to maintain the target rotation speed in each water temperature. Corrects air volume when the water temperature changes. It includes values of the feedback correction amount and the learning value.	3.00 g/s	g/s
Idle Mass Air Flow Feedback correct	Air volume compensation value of ISC as a feedback correction to stabilize the idling speed.	0.00 g/s	g/s
ISC Learning Value	Learning control value of ISC. After warming up, learning control is executed to reduce the ISC feedback correction to zero, in order to stabilize the engine speed.	0.55 g/s	g/s
Idle A/C load correct	Air volume correction value when the air conditioner is turned on. ECM corrects the air volume against the target rotation speed when the air conditioner is turned ON.	0.86 g/s	g/s
Electric Load Feedback Val	Air volume correction value when an electric load is turned on. ECM corrects the air volume against the set target rotation speed when the electric load is turned ON.	0.10 g/s	g/s
Idle dirty throttle correct	Calculates the ISC learning values on a long-term basis, and judges as an ISC dirty throttle correction when the learning value increases gradually. When carbon or other dirt accumulates on the ISC throttle and make the throttle dirty, air volume decreases when the throttle is fully closed. The ECM increases the amount of compensation air to keep the rotation speed.	0 g/s	g/s
Fuel Rail Pressure A	Fuel pressure sensor output value set to the high pressure fuel line. Input value to ECM.	3970	kPa
Fuel Rail Pressure B	Fuel pressure sensor output value set to the high pressure fuel line.	4050	kPa

Display	Contents	Note (at idling)	REMARKS
	Input value to ECM.		
Commanded Fuel Rail Pressure A	Target fuel pressure for high pressure fuel line calculated by ECM.	4000	kPa
Commanded Fuel Rail Pressure B	Target fuel pressure for high pressure fuel line calculated by ECM.	4000	kPa
Fuel Level Input	Fuel level sensor output value. Input value to ECM. Total value of main and sub.	—	%
Fuel level resistance	Fuel level sensor resistance value. Input value to ECM.	—	Ω
Commanded Evaporative Purge	Evaporative purge rate displayed by the OBD.	0%	%
CPC Valve Duty Ratio	Purge control solenoid valve control duty ratio. ECM output value.	0%	%
Purge Density Learn Value	Leaning value of the evaporation gas density purged from the canister. ECM displays the estimated leaning value.	0.0 %	%
Evap Purge Flow	Purge ratio when the evaporation gas is purged from the canister. ECM performs a duty drive to the purge solenoid valve. The amount of gas actually purged will vary depending on the vacuum pressure difference before/after the solenoid valve. Purge ratio displayed here shows current purge amount in percentage against the maximum purge amount when the maximum vacuum pressure is applied.	0.0 %	%
ALT Duty	Value calculated by the ECM as an electric power generation voltage. Indicator voltage value from ECM to alternator is under a duty control.	69%	%
Alternator control mode	Control mode of the electric power generation voltage by the alternator. Low: Mode that controls the battery charge Mid: Mode where the battery is not charged and discharged High: Mode that fixes the voltage when the battery is charged or when an electric load is turned on ExHigh: Mode where the battery is charged during deceleration	High/Mid/Smart	—

Display	Contents	Note (at idling)	REMARKS
	Smart: Mode that maintains target SOC and restrains unnecessary power generation Low (Start): Mode that gradually increases the voltage at start Low (Acceleration): Mode that suppresses power generation load when slightly stronger acceleration was judged Low (Deceleration): Mode that suppresses power generation load when the vehicle is decelerated to stop Neutral: Neutral mode passing through the transition to the next mode from ExHigh		
Battery Terminal Voltage	Voltage value between battery terminals input from the battery sensor.	14.0 V	V
Battery Charge/Discharge Current	Battery charge/discharge current value input from the battery sensor. When the value is positive: The current flows to a direction that the battery is charged. When the value is negative: The current flows to a direction that the battery is discharged.	3.6 A	A
Estimated Battery Temperature	Battery temperature input from the battery sensor.	45°C	°C or °F
Remaining battery capacity	Remaining amount of battery estimated by ECM.	89.0%	%
Knocking Correction	Retard angle amount when knocking occurs. Partially learning value of ignition timing learning value.	0.0 deg	deg
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	Cl_normal	—
Fuel system for Bank 2	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	Cl_normal	—
A/F Sensor #1 Current	Front oxygen (A/F) sensor output current value. Input value to ECM.	−0.2 — 0.2 mA	mA
A/F Sensor #1 Resistance	Value calculated from the front oxygen (A/F) sensor output value.	50 Ω	Ω
A/F Correction #3	Sub correction value of A/F feedback control.	0.00%	%
No. of EGR steps	Number of EGR valve steps. Number of stepping motor steps. ECM output value.	0 STEP	STEP

Display	Contents	Note (at idling)	REMARKS
Commanded EGR	Target value as EGR setting value calculated by ECM.	0%	%
EGR Error	Percentage of the difference in actual EGR steps as compared to the target EGR steps. Both a positive value and a negative value mean that it doesn't fulfill the target. When the value is positive: It opens more than the target value. When the value is negative: It opens smaller than the target value.	0%	%
TGV Position Sensor R	Tumble generator valve position sensor RH output value. Input value to ECM.	3.12 V	V
TGV Position Sensor L	Tumble generator valve position sensor LH output value. Input value to ECM.	0.82 V	V
TGV Output	Drive signal to tumble generator valve motor. Set to "ON" when the tumble generator valve is activated (when the duty output is other than 0%). ECM output value.	None	—
TGV Drive	Tumble generator valve drive status. Set to "Open" when the tumble generator valve is open. ECM control status.	Closing direction	—
OCV Duty R	Control duty ratio of the intake side oil control solenoid on the RH bank. ECM output value.	40 — 60%	%
OCV Duty L	Control duty ratio of the intake side oil control solenoid on the LH bank. ECM output value.	40 — 60%	%
OCV Current R	Actual current value of the intake side oil control solenoid on the RH bank. Input value to ECM.	550 — 850 mA	mA
OCV Current L	Actual current value of the intake side oil control solenoid on the LH bank. Input value to ECM.	550 — 850 mA	mA
Exh. OCV Duty R	Control duty ratio of the exhaust side oil control solenoid on the RH bank. ECM output value.	40 — 60%	%
Exh. OCV Duty L	Control duty ratio of the exhaust side oil control solenoid on the LH bank. ECM output value.	40 — 60%	%

Display	Contents	Note (at idling)	REMARKS
Exh. OCV Current R	Actual current value of the exhaust side oil control solenoid on the RH bank. Input value to ECM.	550 — 850 mA	mA
Exh. OCV Current L	Actual current value of the exhaust side oil control solenoid on the LH bank. Input value to ECM.	550 — 850 mA	mA
Roughness Monitor #1	#1 cylinder roughness monitor count value.	0	—
Roughness Monitor #2	#2 cylinder roughness monitor count value.	0	—
Roughness Monitor #3	#3 cylinder roughness monitor count value.	0	—
Roughness Monitor #4	#4 cylinder roughness monitor count value.	0	—
Cylinder Monitor #1	Calculates the rotation speed between certain angles on the #1 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm
Cylinder Monitor #2	Calculates the rotation speed between certain angles on the #2 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm
Cylinder Monitor #3	Calculates the rotation speed between certain angles on the #3 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm
Cylinder Monitor #4	Calculates the rotation speed between certain angles on the #4 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm
Active Grille Shutter Position	Pulse count value of active grille shutter position. Fully open: 100% Fully closed: 0%	—	—

Display	Contents	Note (at idling)	REMARKS
Active Grille Shutter Mechanical Break Status	Mechanical error status of the active grille shutter. During the calibration procedure, if a linkage of the active grille shutter is off, calibration is not performed. Judgment is done by the active grille shutter and the status is sent to ECM.	Normal	—
Active Grille Shutter Sensor Error Status	Judges a malfunction of the active grille shutter opening angle sensor. Judges the sensor malfunction on the pulse counter. Judgment is done by the active grille shutter and the status is sent to ECM.	Normal	—
Active Grille Shutter Voltage Error Status	Judges a malfunction of the power source voltage supplied to the active grille shutter. Judgment is done by the active grille shutter and the status is sent to ECM.	Normal	—
Active Grille Shutter Control Circuit Error Status	Judges a malfunction of the active grille shutter internal circuit (drive motor). Judgment is done by the active grille shutter and the status is sent to ECM.	Normal	—
Active Grille Shutter Stuck Error Status	Judges an abnormal stuck of the active grille shutter. Detects the status where the operation failed because of any foreign matter or ice clogging in the active grille shutter.	Normal	—
Active Grille Shutter Temperature Error Status	Detects internal temperature of the active grille shutter. The judgment is performed to check if the temperature is excessively high. Judgment is done by the active grille shutter and the status is sent to ECM.	Normal	—
Active Grille Shutter Communication Error Status	Communication is performed between the active grille shutter and ECM, and judges the abnormality of the communication status.	Normal	—
Active Grille Shutter Position Commanded Status	Active grille shutter drive instruction status Shutter open: Open Shutter closed: Closed	—	—
Active Grille Shutter Calibration in progress	Status of the active grille shutter calibration. Active grille shutter performs the calibration when the ignition is ON. Set to “ON” when the calibration was performed.	OFF	—

Display	Contents	Note (at idling)	REMARKS
Active Grille Shutter Calibration Commanded Status	Commands from ECM to the active grille shutter.	OFF	—
Active Grille Shutter Calibration Status	Status of the active grille shutter calibration. When completed: Completed When not completed: Not completed **Note:** **Always completed when there is no abnormality in the active grille shutter.**	Completed	—
Active Grille Shutter Warning Status	Warning signal of the active grille shutter. When the active grille shutter has a malfunction, signal is sent to the combination meter to illuminate the warning light.	OFF	—
Active Grille Shutter Control Status 1	Status such as operating factors (air conditioner, radiator fan etc.) or frozen judgment of the active grille shutter controlled by the ECM.	—	—
Active Grille Shutter Control Status 2	Status such as operating factors (air conditioner, radiator fan etc.) or frozen judgment of the active grille shutter controlled by the ECM.	—	—
Trip Count	Time stamp information. Number of times the ignition is ON since the vehicle was manufactured. The number of ignition ON is also recorded when a trouble code is recorded, so the comparison with that number will show you how many times the ignition has turned on since the diagnostic code was recorded.	—	time
Count	Time stamp information. Each unit individually counts the elapsed time since the ignition is turned to ON. Master integrated unit and ECM synchronize with the master time. When synchronized: “Common” When not synchronized: “Originally”	Common	—
Time Count	Time stamp information. Elapsed time after ignition ON. When a trouble code is recorded, the elapsed time after ignition ON is also recorded.	—	ms
Time Since Engine Start	Elapsed time after starting the engine.	—	sec

Display	Contents	Note (at idling)	REMARKS
Timer after start	Elapsed time after starting the engine. This value is used for control.	—	sec
Accumulation Time After Engine Run	Cumulative time after starting the engine. For models with Auto Start Stop, cumulative time after the first engine start. Time is not accumulated while the engine stops due to the Auto Start Stop system.	—	sec
Initial Engine Oil Temp	Oil temperature when starting the engine, which is input to ECM from the oil temperature sensor.	—	°C
Initial Engine Coolant Temp.	Water temperature when starting the engine, which is input to ECM from the water temperature sensor.	—	°C
Initial Intake Air Temp.	Intake air temperature when starting the engine, which is input to ECM from the intake air temperature sensor.	—	°C
Engine Starting Time	Time needed since the cranking started till the judgment of engine start is complete.	0 min	ms
Start Mask Control Check 1	Information that shows whether the start prohibition control is executed on the engine side when starting. Values other than zero means that the control is executed and the engine start is prohibited.	—	—
IG OFF Elapsed Time	The time the vehicle has been left since the engine stopped. This value can be used to check how long the vehicle has been left with the ignition switch ON after the engine stopped.	—	sec
Distance traveled since DTC(s) cleared	Travel distance after DTC clear.	—	km or mile
Engine run time while MIL is illuminated	Engine operating time from when the malfunction indicator light illuminated till when it went off.	—	min
Engine run time since DTC(s) cleared	Elapsed time after DTC clear.	—	min
Number of Warm-ups since DTC(s) cleared	Number of warm ups after DTC clear. 1 cycle is the time from the cold start till warmed up and stop. (Engine start after a warm-up is not counted.)	—	time

Display	Contents	Note (at idling)	REMARKS
Distance Traveled While MIL is Illuminated	Travel distance after the warning light illuminated.	—	km or mile
Odometer	Value of the total cumulative travel distance that ECM calculates from the vehicle speed separately from the odometer in the combination meter. Small difference from the odometer will be possible, but if there is a big difference, ECM or the combination meter may need to be replaced.	—	km
Maximum Engine Speed at the time of Misfire detection caused by out of Fuel	Maximum engine speed during fuel cut by a fuel run-out judgment.	0	rpm
Maximum Intake Air Amount at the time of Misfire detection caused by out of Fuel	Maximum air amount during fuel cut by a fuel run-out judgment.	0	g/s
Number of Misfire detection caused by out of Fuel	Number of the occurrences of fuel run-out judgment.	0	time
Estimated Total Mileage at the time of first Misfire detection caused by out of Fuel	Estimated cumulative travel distance during fuel cut by a fuel run-out judgment.	0	km or mile
Engine Speed at the time of Detection to avoid Preignition caused by out of Fuel	Engine speed at the time of pre-ignition avoidance judgment when the fuel runs out.	0	rpm
Intake Air Mass at the time of Detection to avoid Preignition caused by out of Fuel	Amount of air at the time of pre-ignition avoidance judgment when the fuel runs out.	0	g/s
Number of Preignition Detection caused by out of Fuel	Number of the occurrences of pre-ignition avoidance judgment when the fuel runs out.	0	time

Display	Contents	Note (at idling)	REMARKS
Estimated Total Mileage at the time of first Detection to avoid Preignition caused by out of Fuel	Estimated cumulative travel distance at the time of the first pre-ignition avoidance judgment when the fuel runs out.	0	km or mile
Fuel Cut Elps Time	Elapsed time after experienced high rotation speed.	0 sec	sec
Memorized Cruise Speed	Cruise control system target vehicle speed. (Set speed)	0 km/h	km/h or MPH
Catalyst Temperature (B1-S1)	Estimated temperature of the front catalytic converter.	305.1°C	°C or °F
Type of fuel currently being utilized by the vehicle	Fuel information recorded in the ECM. Not the fuel information currently used.	GAS	—
Auto Trans Neutral Drive Status	Neutral condition. Information input from the inhibitor switch. (CVT model)	NEUT	—
Manual Trans Neutral Gear Status	Neutral condition. Information input from the neutral switch. (MT model)	NEUT	—
Evap System Vapor Pressure	Evaporative emission control system pressure value. Pressure sensor output value.	101.43	kPa
Neutral Position Switch	Neutral switch signal. Signal when in neutral (MT) or in P or N range (AT). Input value to ECM.	ON	—
ETC Motor Relay	Drive signal to the electronic throttle motor relay. Set to “ON” when the drive signal is output. ECM output value.	ON	—
Clutch Switch	Clutch switch signal. Set to “ON” when the clutch switch is ON. (MT model) Input value to ECM.	OFF	—
Stop Light Switch	Stop light switch signal. Set to “ON” when the stop light illuminates. Input value to ECM.	OFF (when OFF)	—

Display	Contents	Note (at idling)	REMARKS
Brake Switch	Brake switch signal. Set to “ON” when the brake pedal is depressed. Input value to ECM.	OFF (when OFF)	—
Idle Switch Signal	Idle signal. Set to “Idle” while idling.	ON	—
Ignition Switch	Ignition switch signal. Set to “ON” when the ignition switch is ON.	ON	—
A/C Mid Pressure Switch	Air conditioner middle pressure switch signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
A/C Compressor Signal	A/C compressor drive signal. Set to “ON output” when the drive signal is output. ECM output value.	OFF (when OFF)	—
Radiator Fan Relay #1	Radiator fan relay drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
Radiator Fan Relay #2	Radiator fan relay drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
A/C Switch	Air conditioner switch signal. Set to “ON” when the air conditioner switch of the heater control is ON. Input value to ECM.	OFF (when OFF)	—
Variable Load Compressor Torque Value	Load value of the variable capacity air compressor. The value that the air conditioner CM estimates and outputs.	—	Nm
Starter Switch	Starter switch signal. Set to “ON” when the starter is ON. Input value to ECM.	OFF	—
Rear Defogger SW	Rear defogger switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Blower Fan SW	Blower fan switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Light Switch	Light switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Front Fog Light Switch	Front fog light switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—

Display	Contents	Note (at idling)	REMARKS
Wiper Switch	Wiper switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Delivery Mode Connector	Delivery mode terminal fuse installation status. Shows the status of delivery mode.	OFF	—
Rear O2 Rich Signal	Rear oxygen sensor output value. Displays “Rich” when the air fuel ratio of rear oxygen sensor is rich. Displays “Lean” when the air fuel ratio of rear oxygen sensor is lean.	Rich/Lean	—
Knocking Signal	Knock sensor output signal. Judges if a knocking occurs or not. Input value to ECM.	None	—
Crankshaft Position Sig.	Crankshaft position sensor output signal. Set to “ON” when the engine is running. Input value to ECM.	ON	—
Camshaft Position Sig.	Camshaft position sensor output signal. Set to “ON” when the engine is running. Input value to ECM.	ON	—
Ban of Torque Down	Torque down prohibition notification signal to the vehicle dynamics control (VDC) module. Set to “OFF” when the prohibition signal is output. ECM output value.	ON	—
Request Torque Down VDC	Torque down request signal transmitted from the vehicle dynamics control (VDC) module. Set to “ON” when the request signal is sent. Input value to vehicle dynamics control (VDC) module.	None	—
Torque Permission Signal	Torque down permission notification signal to the transmission control module. Set to “ON” when the permission signal is output. ECM output value.	ON	—
SET/COAST Switch	Cruise control system SET/COAST SW signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
RESUME/ACCEL Switch	Cruise control system RESUME/ACCEL SW signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—

Display	Contents	Note (at idling)	REMARKS
Main Switch	Cruise control system main switch signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
distance change SW	Distance change switch signal. Displayed only on models with EyeSight.	OFF (when OFF)	—
CC Cancel SW	Cruise control cancel switch signal of the cruise control system. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
Fuel Pump Relay	Fuel pump relay drive signal. Set to “ON” when the drive signal is output. ECM output value.	ON output	—
All Cylinders Fuel cut	Status under the fuel injection amount control where the fuel injection is cut off in all cylinders.	OFF	—
Immobilizer Fuel Cut Status	Status where the fuel injection is cut off by the command from immobilizer.	OFF	—
Shift Pattern Demand for Low Water Temperature	Shift pattern request sent from ECM to the transmission CM. When the water temperature is low, shift pattern change to the low speed side is requested to raise the catalyst temperature faster.	OFF	—
Oil level switch	Oil level switch signal. Set to “LOW level” when the amount of engine oil decreases. Input value to ECM.	HIGH level	—
ELCM switching valve	Leak check valve assembly switching valve drive signal. Set to “Close” when closing the switching valve. ECM output value.	Open	—
ELCM pump	Leak check valve assembly pump drive signal. Set to “ON” when the leak check valve assembly decompression pump is activated. ECM output value.	OFF	—
AT turbine speed	Turbine rotation speed of the transmission. Turbine rotation speed is input from the transmission CM via CAN. (CVT model)	900	—
Lock up status	Lock-up status of the transmission. Lock up status is input from the transmission CM via CAN. (CVT model)	OPEN	—

Display	Contents	Note (at idling)	REMARKS
P/N Signal	P/N status of the transmission. P/N range status is input from the transmission CM via CAN. (CVT model)	—	—
Trailer signal	Trailer towing status. Signal that indicates the presence of trailer towing is input via the integrated unit.	—	—
Ignition Control Check 1	Detailed status of the engine ignition control information.	90	—
Ignition Control Check 2	Detailed status of the engine ignition control information.	75	—
Alternator control check 1	Detailed status of charge control.	91	—
Alternator control check 2	Detailed status of charge control.	90.1	—
Alternator control check 3	Detailed status of charge control.	10.350	—
Alternator control check 4	Detailed status of charge control.	8.970	—
Alternator control check 5	Detailed status of charge control.	100	—
Alternator control check 6	Detailed status of charge control.	0	—
Alternator control check 7	Detailed status of charge control.	14.2	—
Alternator control check 8	Detailed status of charge control.	64	—
Alternator control check 9	Detailed status of charge control.	0	—
Alternator control check 10	Detailed status of charge control.	2	—
Alternator Mechanical Error Status	Status where alternator is judged as having mechanical trouble.	0	—
Alternator Electrical Output Error Status	Status where alternator is judged as having electric abnormality.	0	—
Alternator High Temperature Error Status	Status where alternator is judged as having high temperature malfunction.	0	—
Alternator Communication Error Status	Status where alternator is judged as having communication failure.	0	—

Display	Contents	Note (at idling)	REMARKS
Regulator Temperature	Alternator regulator temperature value.	—	°C
Imbalance Check 1 #1	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 1 #2	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 1 #3	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 1 #4	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 2 #1	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 2 #2	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 2 #3	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 2 #4	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 3 R	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Imbalance Check 4 R	Detailed information of diagnosis for dispersion between cylinders. (Compliance with OBD regulations)	—	—
Malfunction Indicator Lamp (MIL) Status	Malfunction indicator light illumination status. When judged as abnormal, an illumination command signal is sent from ECM to the combination meter.	OFF	—
Number of DTCs	The number of trouble codes recorded in the ECM.	0	—
O2 Sensor #11	Installation status of the front oxygen (A/F) sensor.	Supported	—
O2 Sensor #12	Installation status of the rear oxygen sensor.	Supported	—
Short term fuel trim #12	Air fuel ratio correction control value of the rear oxygen sensor.	0.0%	%

Display	Contents	Note (at idling)	REMARKS
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	1.001	—
A/F Sensor #11	Front oxygen (A/F) sensor output voltage.	2.193V	V
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	1.001	—
A/F Sensor #11	Front oxygen (A/F) sensor current value.	0.00	mA
Absolute Throttle Position B	Shows the sub throttle sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	30.6%	%
Accelerator Pedal Position D	Shows the main accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	13.3%	%
Accelerator Pedal Position E	Shows the sub accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	13.3%	%
Relative Accelerator Pedal Position	Accelerator opening angle with a full close point learning value taken into consideration.	0%	%
Misfire monitoring supported	Support status of the misfire diagnosis.	YES	—
Misfire monitoring ready	Status of the misfire diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Fuel system monitoring(Supp)	Support status of the fuel system diagnosis.	YES	—
Fuel system monitoring(Rdy)	Status of the fuel system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Comprehensive component monitoring supported	Support status of the component diagnosis.	YES	—
Comprehensive component monitoring ready	Status of the component diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Catalyst monitoring supported	Support status of the catalyst diagnosis.	YES	—
Catalyst monitoring ready	Status of the catalyst diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—

Display	Contents	Note (at idling)	REMARKS
Heated catalyst monitoring supported	Support status of the heated catalyst diagnosis.	NO	—
Heated catalyst monitoring ready	Status of the heated catalyst diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Evaporative purge system(Supp)	Support status of the evaporative purge system diagnosis.	NO	—
Evaporative purge system(Rdy)	Status of the evaporative purge system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Secondary air system(Supp)	Support status of the secondary air system diagnosis.	NO	—
Secondary air system(Rdy)	Status of the secondary air system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
A/C system refrigerant(Supp)	Support status of the A/C system refrigerant diagnosis.	NO	—
A/C system refrigerant(Rdy)	Status of the A/C system refrigerant diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Oxygen sensor monitoring supported	Support status of the oxygen sensor diagnosis.	YES	—
Oxygen sensor(Rdy)	Status of the oxygen sensor diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
O2 Heater Diagnosis(Supp)	Support status of the oxygen sensor heater diagnosis.	YES	—
O2 Heater Diagnosis(Rdy)	Status of the oxygen sensor heater diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
EGR system(Supp)	Support status of the EGR diagnosis.	YES	—

Display	Contents	Note (at idling)	REMARKS
EGR system(Rdy)	Status of the EGR diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Misfire monitoring enabled	Shows whether or not the execution condition of misfire diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Misfire monitoring completed	Shows whether or not the continuous misfire diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Fuel system monitoring(Enable)	Shows whether or not the execution condition of fuel system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Fuel system monitoring(Comp)	Shows whether or not the fuel system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Comprehensive component monitoring enabled	Shows whether or not the execution condition of component diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Comprehensive component monitoring completed	Shows whether or not the component diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Catalyst monitoring	Shows whether or not the execution condition of catalyst diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Catalyst monitoring completed	Shows whether or not the catalyst diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—

Display	Contents	Note (at idling)	REMARKS
Heated catalyst monitoring	Shows whether or not the execution condition of heated catalyst diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
Heated catalyst monitoring completed	Shows whether or not the heated catalyst diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Evaporative purge system(Enable)	Shows whether or not the execution condition of evaporative purge system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
Evaporative purge system(Comp)	Shows whether or not the evaporative purge system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Secondary air system(Enable)	Shows whether or not the execution condition of the secondary air system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
Secondary air system(Comp)	Shows whether or not the secondary air system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
A/C system refrigerant(Enable)	Shows whether or not the execution condition of A/C system refrigerant diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
A/C system refrigerant(Comp)	Shows whether or not the A/C system refrigerant diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Oxygen sensor monitoring	Shows whether or not the execution condition of oxygen sensor diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or	YES	—

Display	Contents	Note (at idling)	REMARKS
	is not supported.		
Oxygen sensor monitoring completed	Shows whether or not the oxygen sensor diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
O2 Heater Diagnosis(Enable)	Shows whether or not the execution condition of oxygen heater diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
O2 Heater Diagnosis(Comp)	Shows whether or not the oxygen heater diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
EGR system(Enable)	Shows whether or not the execution condition of EGR diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
EGR system(Comp)	Shows whether or not the EGR diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Generic OBDII	Shows the OBD regulation to be followed. This is the information recorded in the ECM, and it does not mean that the unit automatically judges the compliance to the OBD regulations.	OBD/OBD2	—
O2 Sensor Impedance	Rear oxygen sensor element impedance Input value to ECM.	71	ohm
ETC function safety information 1	ETC malfunction information memory 1	0	—
ETC function safety information 2	ETC malfunction information memory 2	0	—
ETC function safety information 3	ETC malfunction information memory 3	0	—
Functional Safety Check 1	Function safety/malfunction information memory 1	0	—
Functional Safety Check 4	Function safety/malfunction information memory 4	0	—

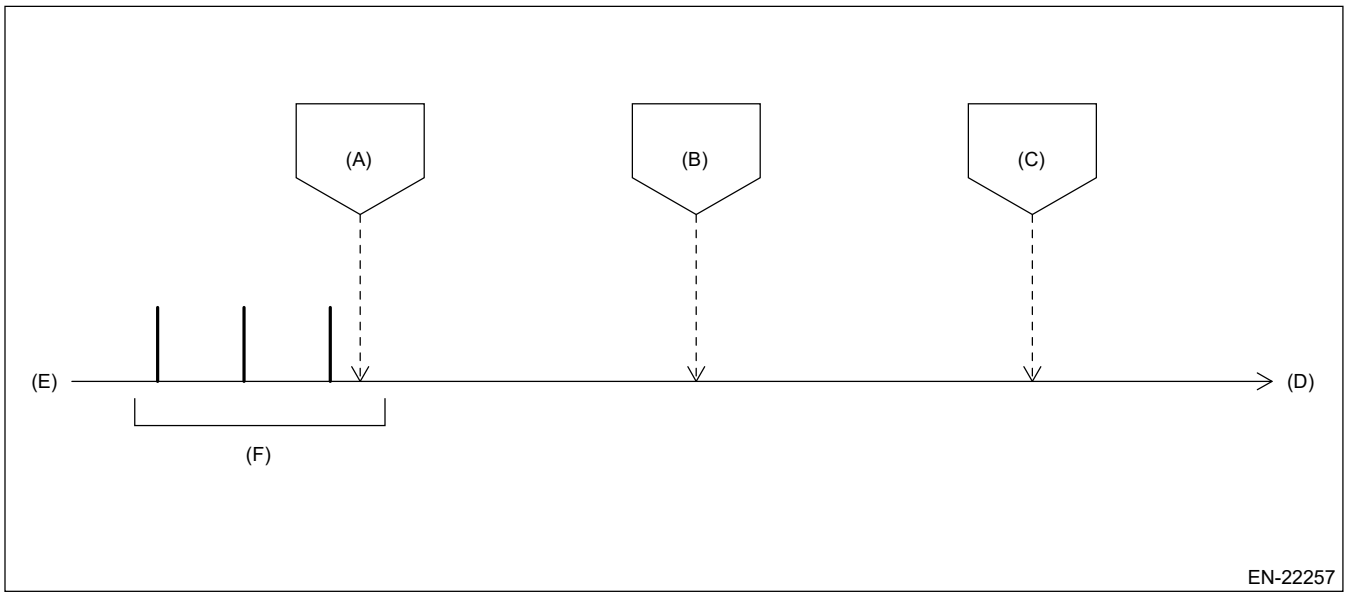
Display	Contents	Note (at idling)	REMARKS
Functional Safety Check 6	Function safety/malfunction information memory 6	0	—
Functional Safety Check 2	Function safety/malfunction information memory 2	0	—
Functional Safety Check 3	Function safety/malfunction information memory 3	0	—
Functional Safety Check 5	Function safety/malfunction information memory 5	0	—
[Functional Safety Check 7]	Function safety/malfunction information memory 7	0	—
Crush Detection Signal	Collision detection signal input value to ECM. ON = Collision detection OFF = Collision not detected	OFF	—
Analytical Engine Speed	Data for analysis	0	rpm
Analytical Load Value	Data for analysis	0	g/rev
Analytical Engine Coolant Temperature	Data for analysis	−40	°C
Analytical Ambient Temperature	Data for analysis	−40	°C
Final Injection Mode	Number of injections to cylinder in one cycle	1 stage injection	—
Split Ratio of Fuel Injection 1	Injection rate at first fuel injection in one cycle	100	%
Split Ratio of Fuel Injection 2	Injection rate at second fuel injection in one cycle	0	%
Split Ratio of Fuel Injection 3	Injection rate at third fuel injection in one cycle	0	%
Split Ratio of Fuel Injection 4	Injection rate at fourth fuel injection in one cycle	0	%
Final valid Injection Quantity	For direct injection engine, fuel injection is performed several times in one cycle. And this is the total injection amount value of that multiple stage injection.	11.25	mm3/st
1st Final Injection Time of Direct Injector	Injection time at first fuel injection in one cycle	2.14	ms
2nd Final Injection Time of Direct Injector	Injection time at second fuel injection in one cycle	0	ms

Display	Contents	Note (at idling)	REMARKS
3rd Final Injection Time of Direct Injector	Injection time at third fuel injection in one cycle	0	ms
4th Final Injection Time of Direct Injector	Injection time at fourth fuel injection in one cycle	0	ms
Starting Timing of 1st final Direct Injection	Timing of starting first fuel injection in one cycle	280	°CA
Starting Timing of 2nd final Direct Injection	Timing of starting second fuel injection in one cycle	0	°CA
Starting Timing of 3rd final Direct Injection	Timing of starting third fuel injection in one cycle	0	°CA
Starting Timing of 4th final Direct Injection	Timing of starting fourth fuel injection in one cycle	0	°CA
Flag Control of Catalyst rapid Warming-up reflect Ignition Timing	Flag that represents the execution status of catalyst warming-up control ON = Under execution OFF = Not executed	ON	—
Analytical Manifold Relative Pressure	Data for analysis	−12.8	kPa
Analytical Ignition Timing Advance for #1 Cylinder	Data for analysis	−64	°CA
Analytical Vehicle Speed	Data for analysis	0	km/h
Analytical Estimated Total Mileage	Data for analysis	0	km
Air conditioner compressor relay output for analysis	Data for analysis	OFF	FLG
Analytical Maximum Number of Ignition Timing Advance	Data for analysis	0	time
Analytical Number of Ignition Timing Advance	Data for analysis	0	time

Display	Contents	Note (at idling)	REMARKS
Analytical Minimum Manifold Negative Pressure	Data for analysis	−12.8	kPa
Analytical Number of Brake Booster Pressure	Data for analysis	0	time
Whole learning compensation value for analysis	Data for analysis	0	—
Current partial learning compensation value for analysis	Data for analysis	−45	—
Analytical Knocking Correction	Data for analysis	−32	deg
Intake air temperature for analysis	Data for analysis	−40	°C
Analytical ISC Learning Value	Data for analysis	−300	g/s
Analytical Idle dirty throttle correct	Data for analysis	−300	g/s
Analytical VVT Advance Angle Amount R	Data for analysis	−50	°CA
Analytical Exhaust VVT Retard Angle R	Data for analysis	−50	°CA
Analytical TGV Drive	Data for analysis	Closing direction	FLG
Analytical Idle Mass Air Flow	Data for analysis	0	g/s
Analytical Brake Booster Relative Pressure	Data for analysis	−12.8	kPa
Analytical Fuel Rail Pressure	Data for analysis	0	kPa
Analytical A/F Sensor #1	Data for analysis	0	—
Completed Flag of Cylinder Discrimination	Flag for completion of cylinder judgment If this flag is not ON, it is possible to judge that the crankshaft position sensor and camshaft position sensor are faulty.	Completed	—

Display	Contents	Note (at idling)	REMARKS
Fuel Increase 1 at the High Temperature Restart	Fuel injection compensation coefficient at restarting with high coolant temperature	0	—
Judgment Flag of Heavy Fuel	Result of heavy mass fuel judgment	Non heavy mass fuel	—
Engine Startup Mode	Mode at engine starting 00 = initial start 01 = Normal restart 02 = Short term engine stall restart 03 = Idling stop restart 04 = Change mind restart	0	—
Current Gear Position	Gear status 00 = P, N range 14 = R range 13 = Auto neutral status 06 = 6th 05 = 5th 04 = 4th 03 = 3rd 02 = 2nd 01 = 1st	0	—
Load Value	Engine load value	25.5	%
Clutch Start SW	Clutch start switch status ON = Clutch depressed status OFF = Clutch not depressed status	0	—
Analytical Barometric Pressure	Data for analysis	0	kPa

ENGINE (DIAGNOSTICS)(H4DO) > Freeze Frame Data



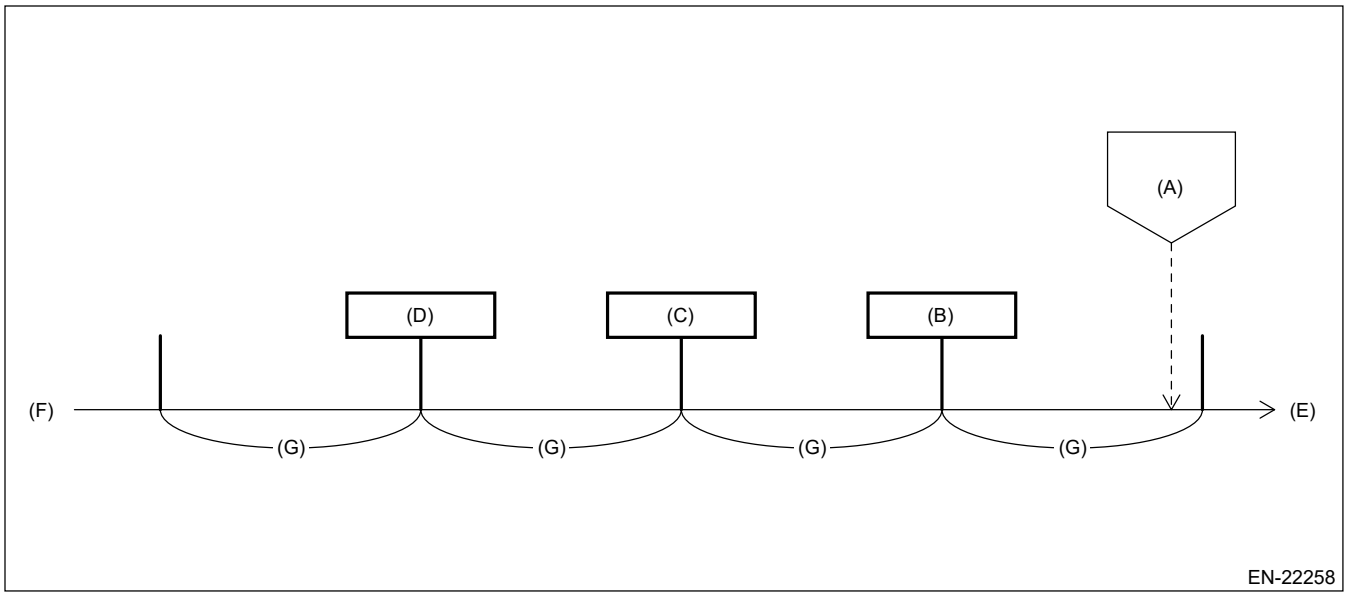
NOTE

1. FREEZE FRAME DATA

ECM records the engine status at detection when it detects DTCs. (Freeze frame data)
Freeze frame data is recorded on up to a second detected DTC, and not recorded on a third detected DTC and later.

Note:

- **As the freeze frame data is recorded with DTC detected, permanent monitoring cannot be performed.**
- **For the first detected DTC, time series freeze frame data is recorded. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data>NOTE > TIME SERIES FREEZE FRAME DATA.**
- **When performing diagnosis, you can utilize the freeze frame data to guess the vehicle status when the DTC was detected.**
- **For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to COMMON(diag)>Freeze Frame Data>OPERATION.**



(A) First detected DTC
(B) Second detected DTC
(C) Third detected DTC and later
(D) Current
(E) Past
(F) Time series freeze frame data

2. TIME SERIES FREEZE FRAME DATA

ECM obtains freeze frame data every 0.5 seconds. When DTC is detected, freeze frame data of [Detect], [1 before] [two blocks before] and [three blocks before] is saved. (Time series freeze frame data)

Note:

- **You can utilize the time series freeze frame data for diagnosis by checking the status of data changes three times earlier than the DTC was detected.**
- **For detailed operation procedures, refer to “Freeze Frame Data”. Ref. to COMMON(diag)>Freeze Frame Data>OPERATION.**
