3. Remove the console front panel and disconnect the connector (AB9).
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
6. Measure the voltage between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 2 (+) — Chassis ground (−):
   (3AG) No. 4 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Replace the airbag main harness along with body harness.

5. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1813 displayed?

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 6.

6. CHECK FOR ANY OTHER DTC ON DISPLAY.

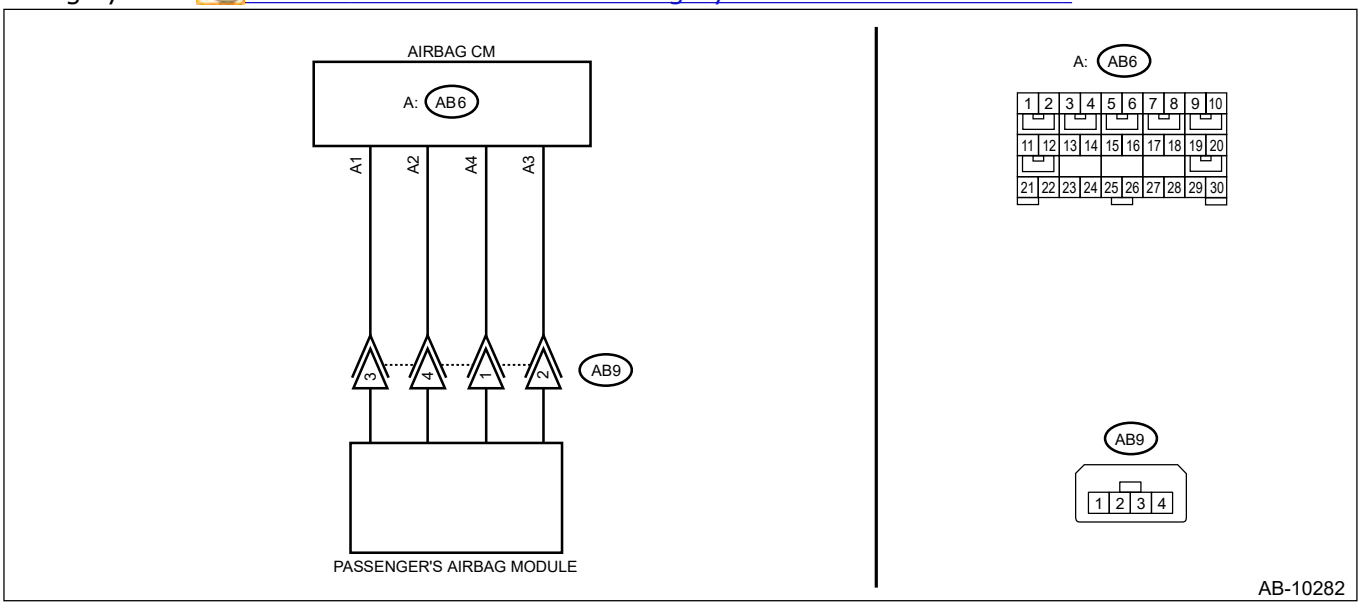
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1815 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness circuit (passenger's side) is shorted.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Connect the connectors (AB6, AB17, AB18) to the connector (1AG) in the test harness AG, and disengage the short mechanism of the connectors (AB6, AB17, AB18).
6. Disconnect the passenger's airbag module connector (AB9).
7. Using a probe, measure the resistance between the terminals of connector (AB9). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 3 — (AB9) No. 4:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Disconnect the test harness AG from the connectors (AB6, AB17, AB18).
2. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
3. Connect the connectors (AB7) and (AB2).
4. Connect the connector (AB66) to the driver's knee airbag module.
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1815 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1815 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

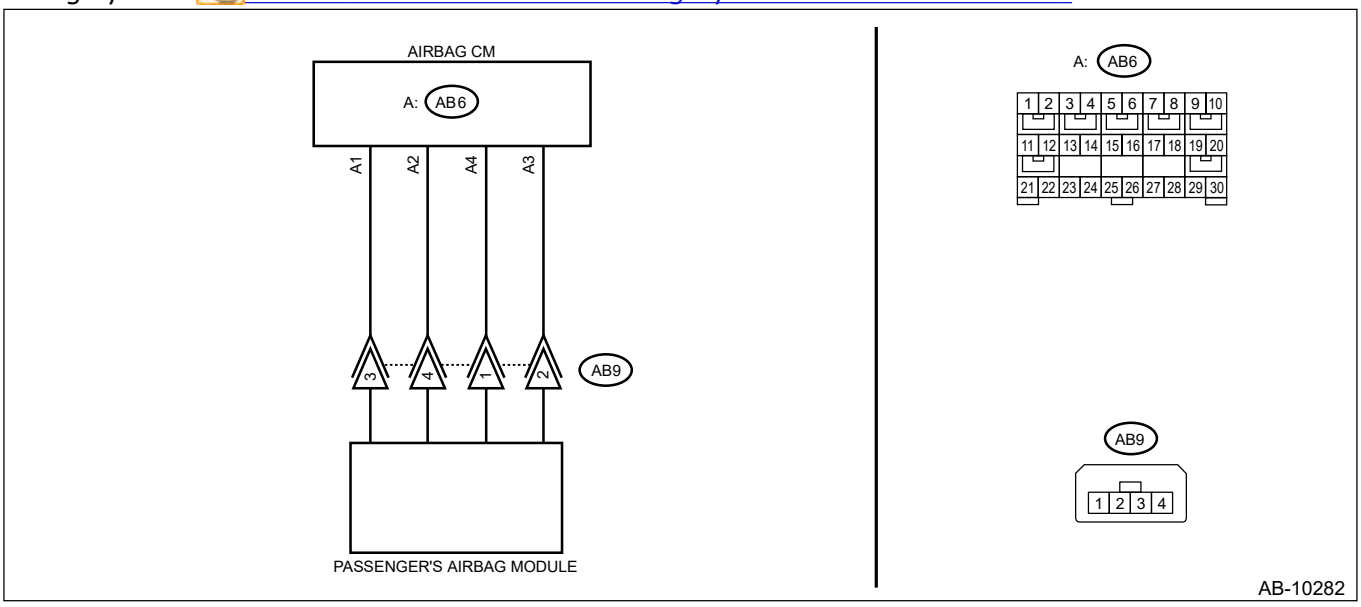
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1816 OPEN IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is open.
- Airbag module harness (passenger's side) circuit is open.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Disconnect the passenger's airbag module connector (AB9).
6. Using a probe, measure the resistance between the terminals of connector (AB9). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 3 — (AB9) No. 4:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
2. Connect the connectors (AB7) and (AB2).
3. Connect the connector (AB66) to the driver's knee airbag module.
4. Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 3 — (AB9) No. 4:
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1816 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1816 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

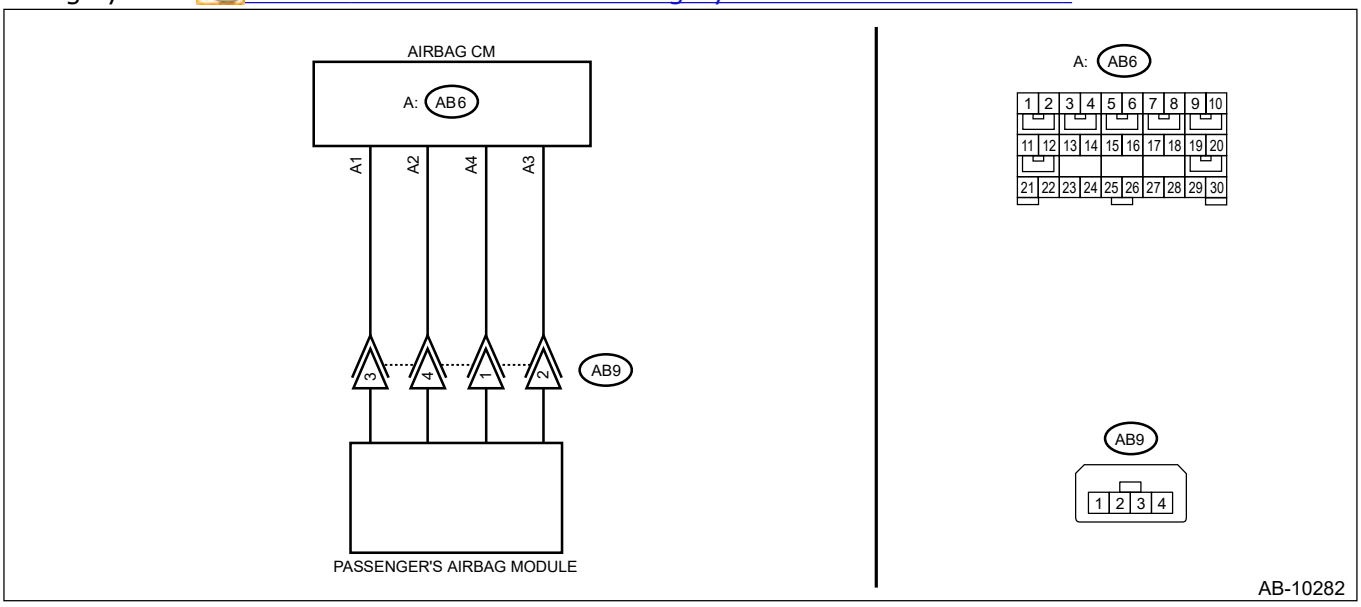
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1817 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to ground.
- Airbag module harness (passenger's side) circuit is shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Disconnect the passenger's airbag module connector (AB9).
6. Using a probe, measure the resistance between the connector (AB9) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 3 — Chassis ground:

   (AB9) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
2. Connect the connectors (AB7) and (AB2).
3. Connect the connector (AB66) to the driver's knee airbag module.
4. Connect the battery ground terminal and turn the ignition switch to ON.
5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1817 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1817 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

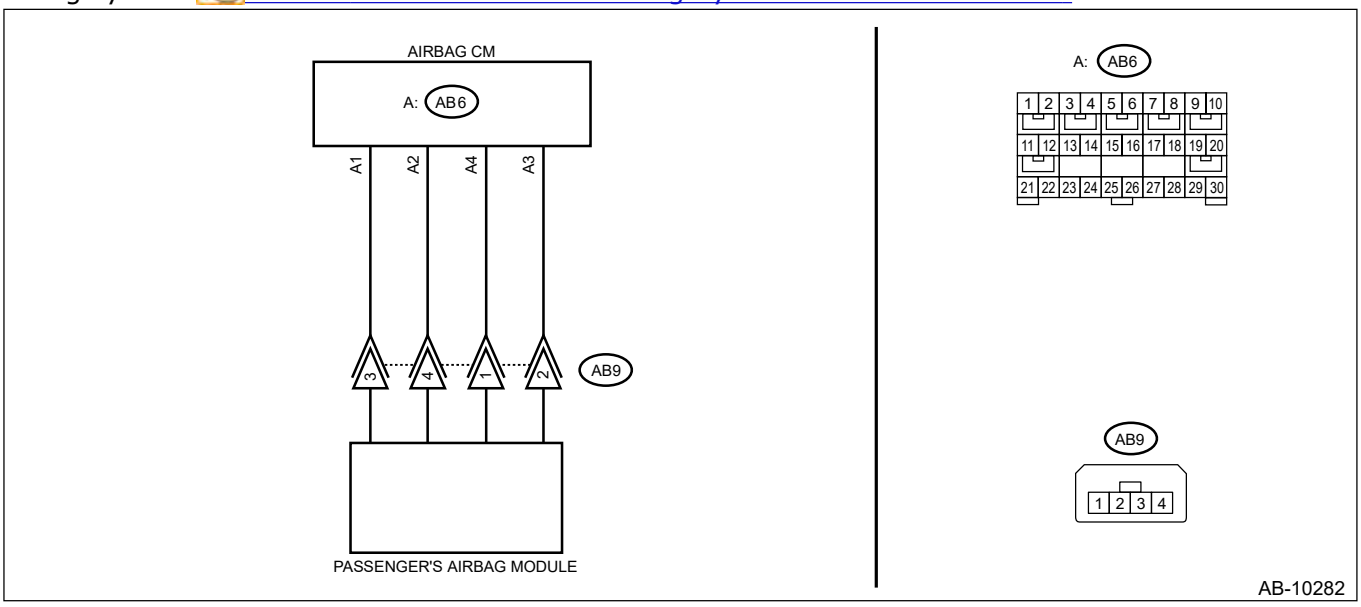
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1818 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (passenger's side) circuit is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB7) and (AB2).
3. Disconnect the connector (AB66) from the driver's knee airbag module.
4. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
5. Disconnect the passenger's airbag module connector (AB9).
6. Using a probe, measure the voltage between the connector (AB9) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB9) No. 3 (+) — Chassis ground (−):

   (AB9) No. 4 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Replace the airbag main harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
3. Connect the connectors (AB7) and (AB2).
4. Connect the connector (AB66) to the driver's knee airbag module.
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1818 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module>REMOVAL.
No	Go to 4.

4. CHECK PASSENGER'S AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the passenger's airbag module connector (AB9).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1818 displayed? (Current malfunction)

Yes	Replace the passenger's airbag module. Ref. to AIRBAG SYSTEM>Passenger's Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

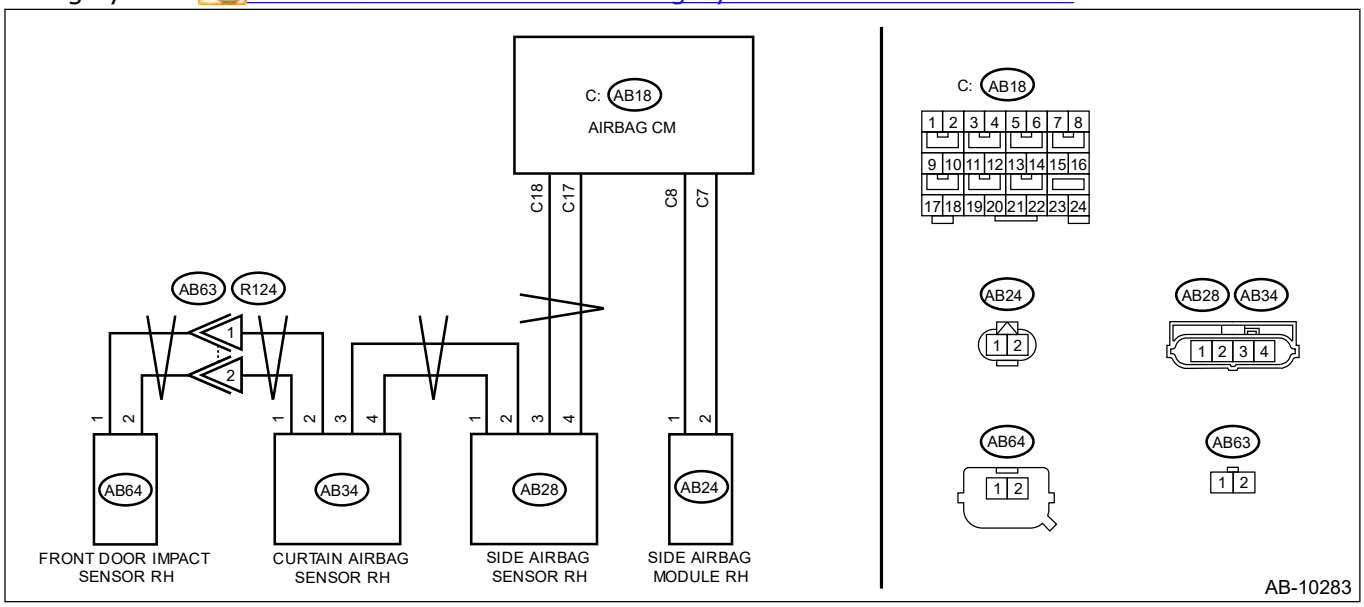
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1820 SHORT IN SIDE AIRBAG RH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness RH circuit is shorted.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

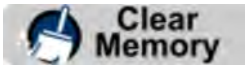
2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (SHORTED BETWEEN LINES).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB22) from seat cushion airbag module RH.
4. Disconnect the connector (AB24) from side airbag module RH.
5. Disconnect the connector (AB33) from curtain airbag module RH.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between terminals of connector (AB24) of side airbag module RH.

Caution:

Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.

Connector & terminal



(AB24) No. 1 — (AB24) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module RH connector (AB24).
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1820 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1820 displayed? (Current malfunction)

Yes	Replace the side airbag module RH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.

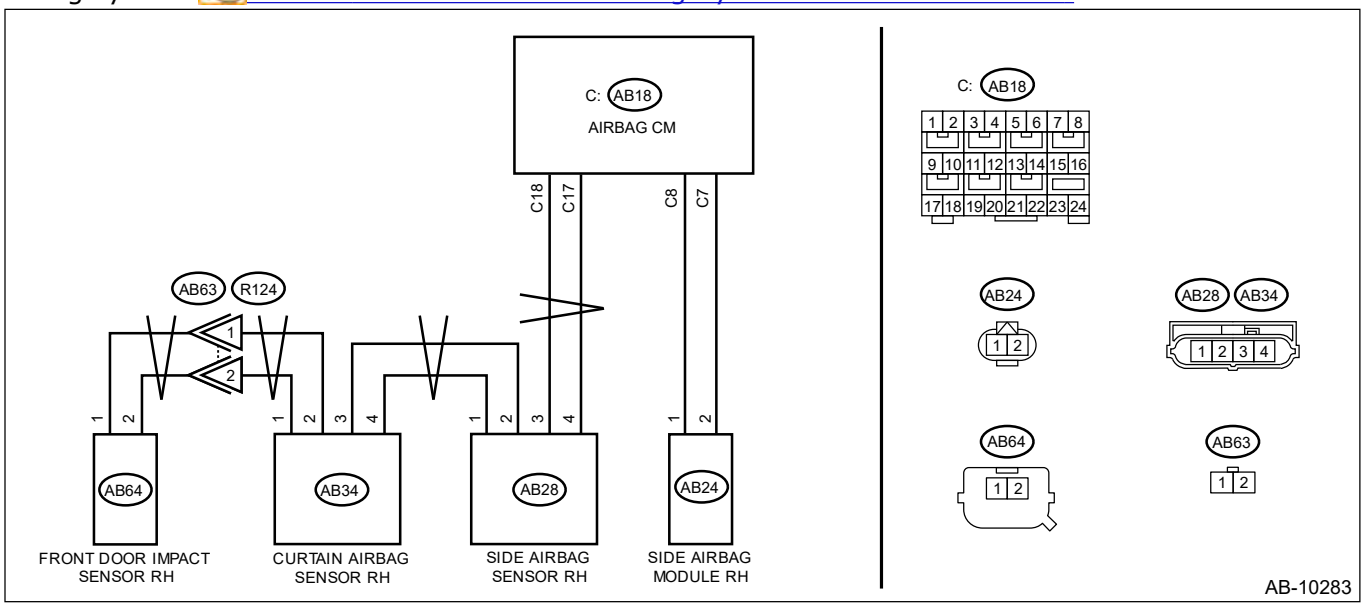
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1821 OPEN IN SIDE AIRBAG RH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness RH circuit is open.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB24) from side airbag module RH.
5. Disconnect the connector (AB33) from curtain airbag module RH.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Measure the resistance between terminals of connector (AB24) of side airbag module RH.

Caution:

Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.

Connector & terminal

(AB24) No. 1 — (AB24) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module RH connector (AB24).
2. Using test harness AT, short the terminals No. 1 and No. 2 of connector (AB24).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1821 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1821 displayed? (Current malfunction)

Yes	Replace the side airbag module RH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

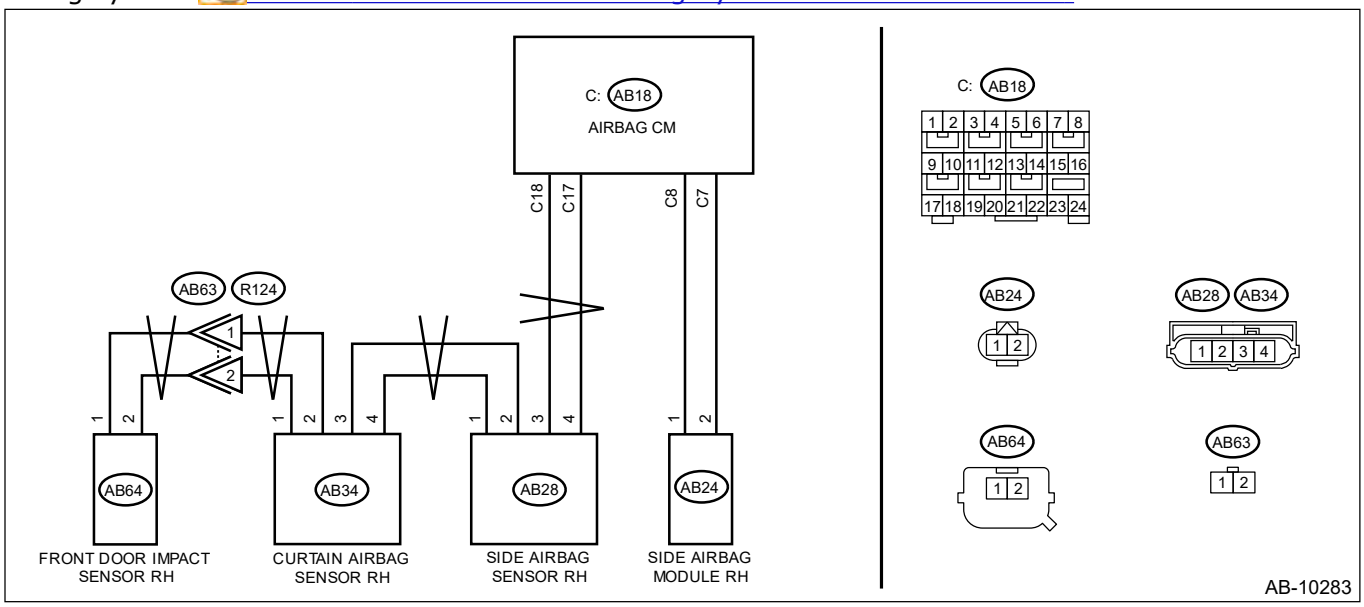
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1822 SHORT IN SIDE AIRBAG RH (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness RH circuit is shorted to ground.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (SHORTED TO GROUND).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connector (AB24) from side airbag module RH.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between connector (AB24) of side airbag module RH and chassis ground.

Caution:

Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT.

Connector & terminal

(AB24) No. 1 — Chassis ground:

(AB24) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module RH connector (AB24).
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1822 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1822 displayed? (Current malfunction)

Yes	Replace the side airbag module RH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

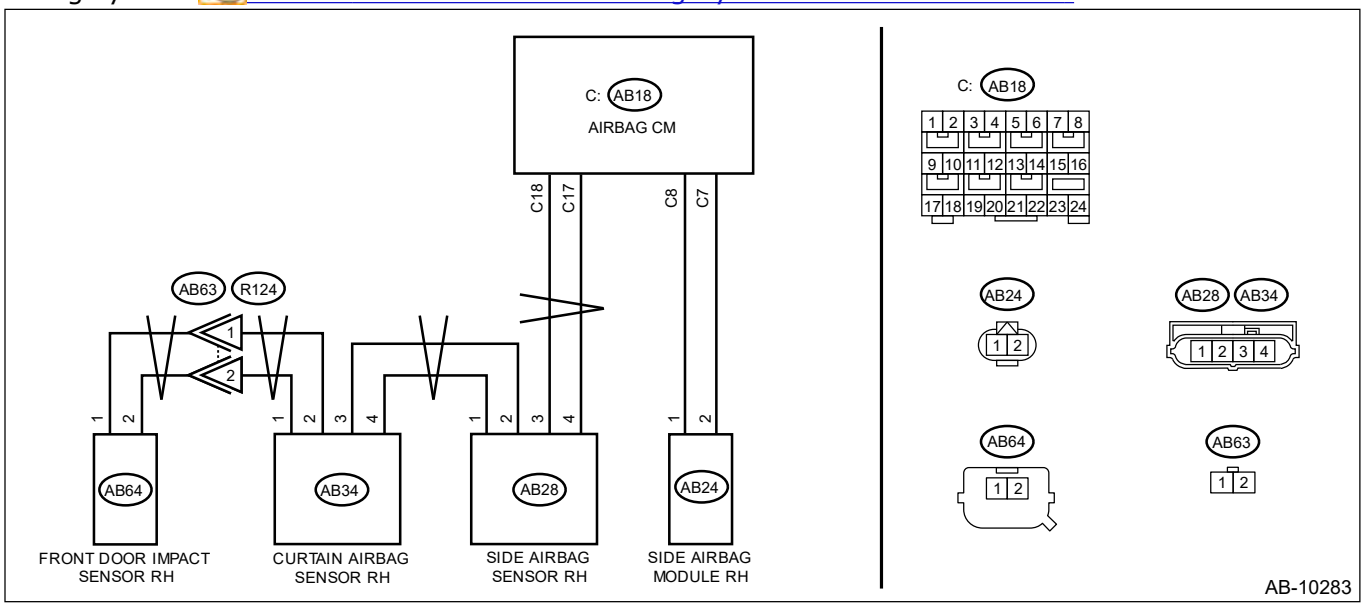
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1823 SHORT IN SIDE AIRBAG RH (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness RH is shorted to power supply.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH) (SHORTED TO POWER SUPPLY).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB24) from side airbag module RH.
5. Disconnect the connector (AB33) from curtain airbag module RH.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Measure the voltage between connector (AB24) of side airbag module RH and chassis ground.

Caution:

Connect the terminal in test harness AT to connector (AB24) terminal, and apply the tester to test harness AT.

Connector & terminal

(AB24) No. 1 (+) — Chassis ground (−):

(AB24) No. 2 (+) — Chassis ground (−):

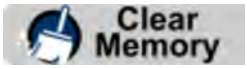
Is the voltage less than 1 V?

Yes	 Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module RH connector (AB24).
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B1823 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1823 displayed? (Current malfunction)

Yes	Replace the side airbag module RH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

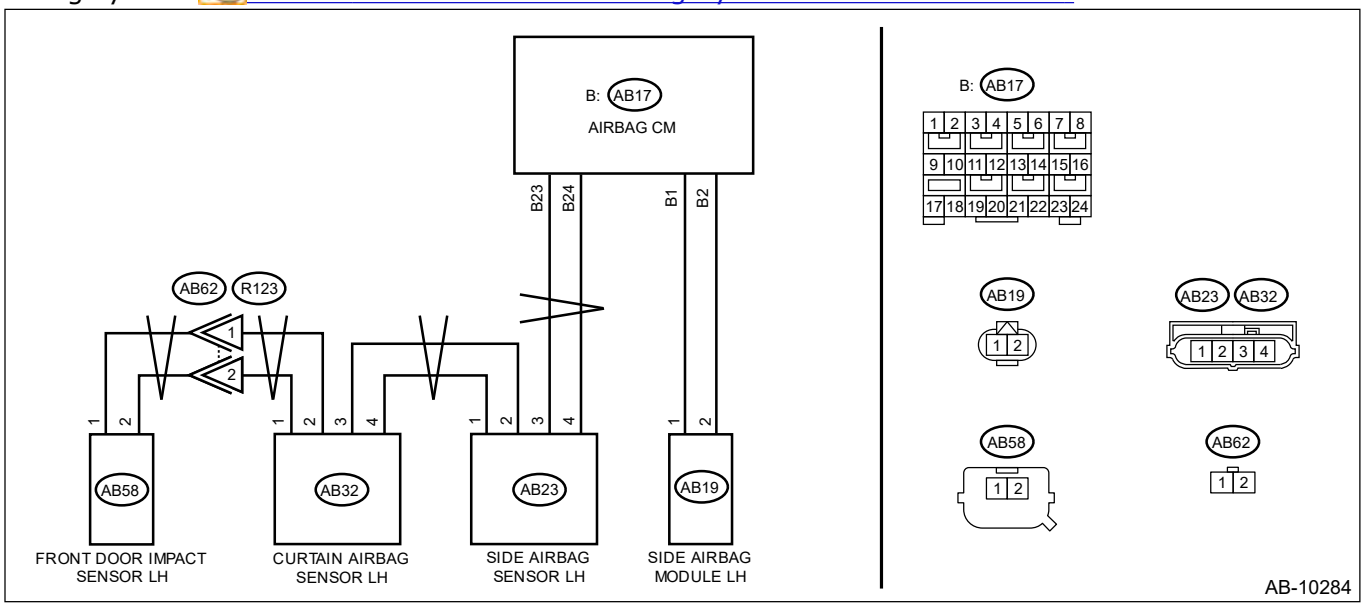
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1825 SHORT IN SIDE AIRBAG LH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness LH circuit is shorted.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

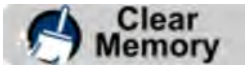
2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (SHORTED BETWEEN LINES).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between terminals of connector (AB19) of side airbag module LH.

Caution:

Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.

Connector & terminal



(AB19) No. 1 — (AB19) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module LH connector (AB19).
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1825 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1825 displayed? (Current malfunction)

Yes	Replace the side airbag module LH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

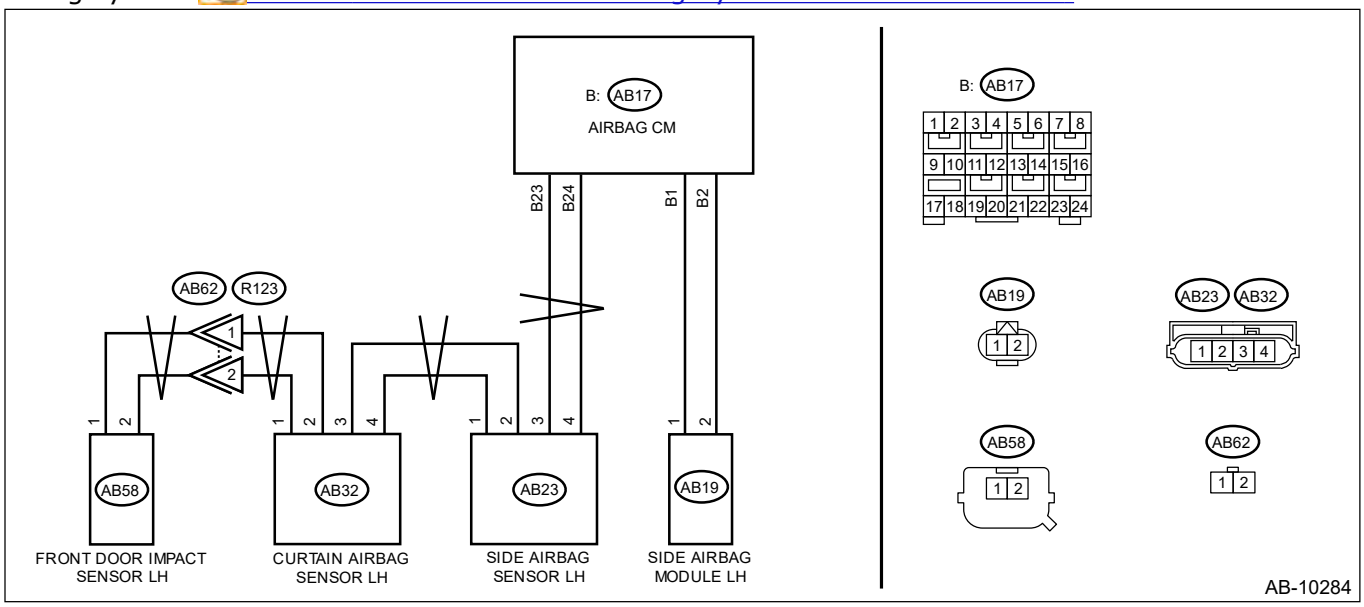
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1826 OPEN IN SIDE AIRBAG LH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness LH circuit is open.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Note:

Before starting work, prepare two sets of TEST HARNESS AT (98299CA020).

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Measure the resistance between terminals of connector (AB19) of side airbag module LH.

Caution:

Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT. Two sets of test harness AT are required.

Connector & terminal

(AB19) No. 1 — (AB19) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module LH connector (AB19).
2. Using test harness AT, short the terminals No. 1 and No. 2 of connector (AB19).
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1826 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1826 displayed? (Current malfunction)

Yes	Replace the side airbag module LH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

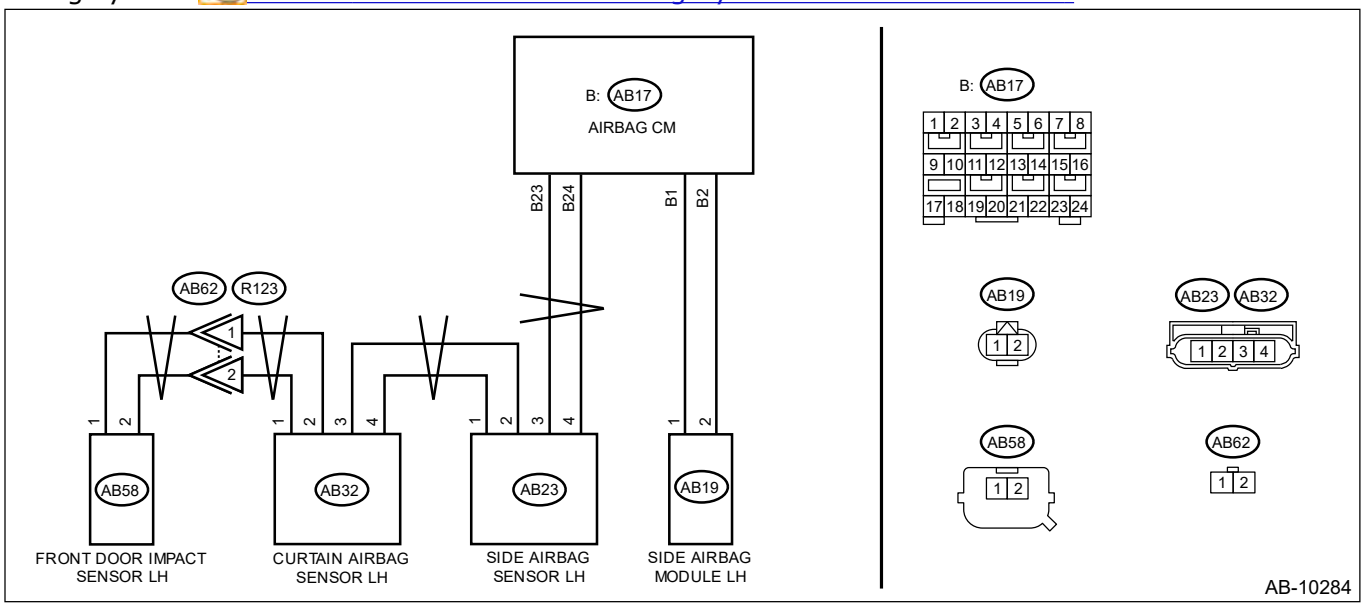
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1827 SHORT IN SIDE AIRBAG LH (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness LH circuit is shorted to ground.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (SHORTED TO GROUND).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Measure the resistance between connector (AB19) of side airbag module LH and chassis ground.

   Caution:

   Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT.

   Connector & terminal

   (AB19) No. 1 — Chassis ground:

   (AB19) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module LH connector (AB19).
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1827 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1827 displayed? (Current malfunction)

Yes	Replace the side airbag module LH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

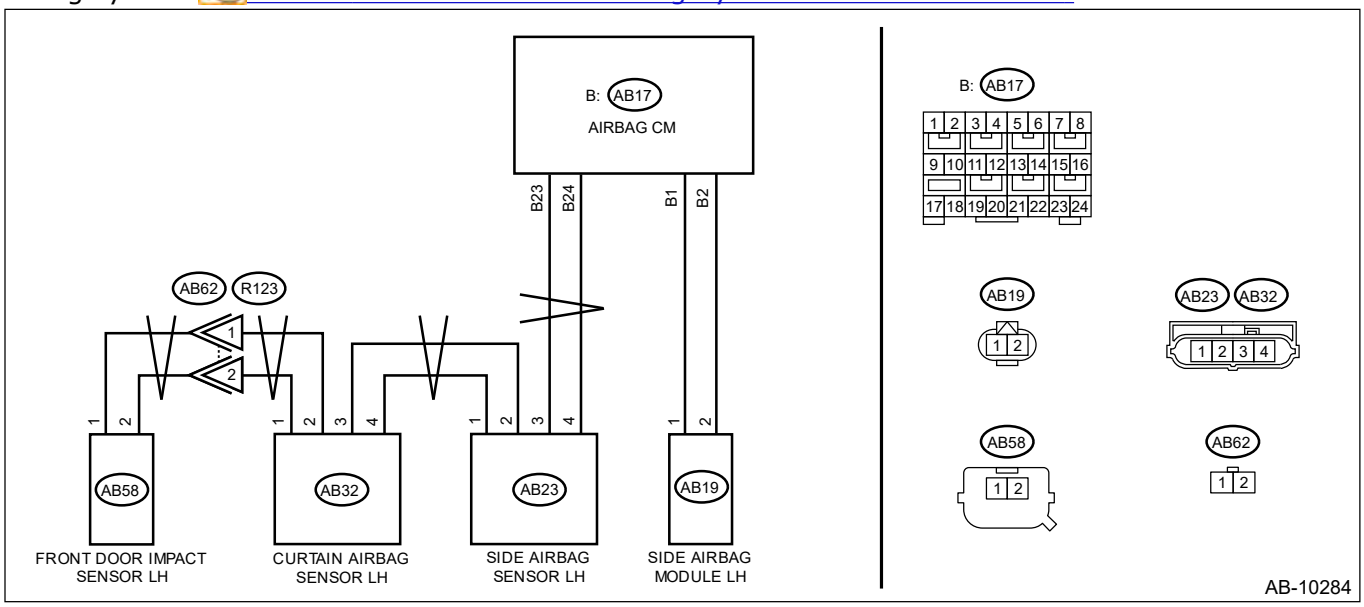
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1828 SHORT IN SIDE AIRBAG LH (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Side airbag harness LH is shorted to power supply.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH) (SHORTED TO POWER SUPPLY).

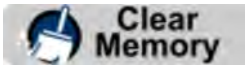
1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Measure the voltage between connector (AB19) of side airbag module LH and chassis ground.

Caution:

Connect the terminal in test harness AT to connector (AB19) terminal, and apply the tester to test harness AT.

Connector & terminal

(AB19) No. 1 (+) — Chassis ground (−):



(AB19) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors other than side airbag module LH connector (AB19).
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1828 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SIDE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1828 displayed? (Current malfunction)

Yes	Replace the side airbag module LH. Ref. to AIRBAG SYSTEM>Side Airbag Module>REMOVAL.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

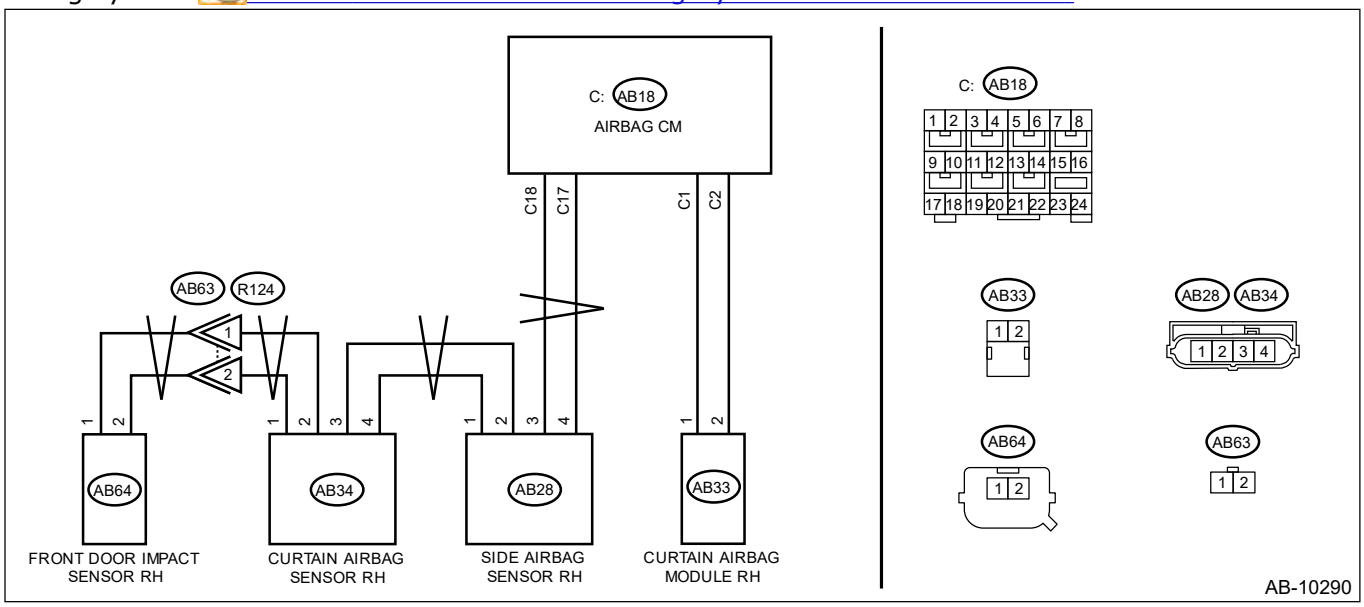
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1830 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness RH circuit is shorted.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB33) from curtain airbag module RH.
3. Connect the connector (1N) in the test harness N to the connector (AB33).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the curtain airbag module RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB24) from side airbag module RH.
5. Disconnect the airbag resistor from test harness N.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between connector (3AG) terminals in test harness AG.
   Connector & terminal
   (3AG) No. 17 — (3AG) No. 19:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1830 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

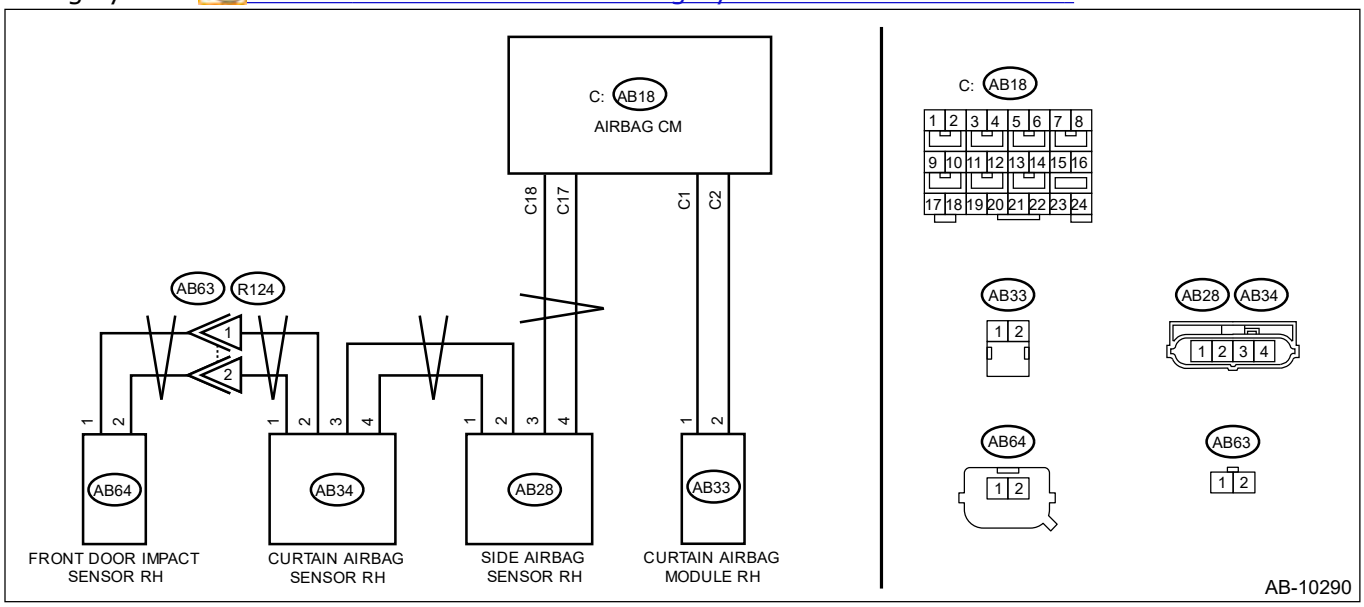
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1831 OPEN IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness RH circuit is open.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB33) from curtain airbag module RH.
3. Connect the connector (1N) in the test harness N to the connector (AB33).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the curtain airbag module RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB24) from side airbag module RH.
5. Disconnect the airbag resistor from test harness N.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N.

   Connector & terminal

   (3AG) No. 19 — (2N) No. 1:

   (3AG) No. 17 — (2N) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1831 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

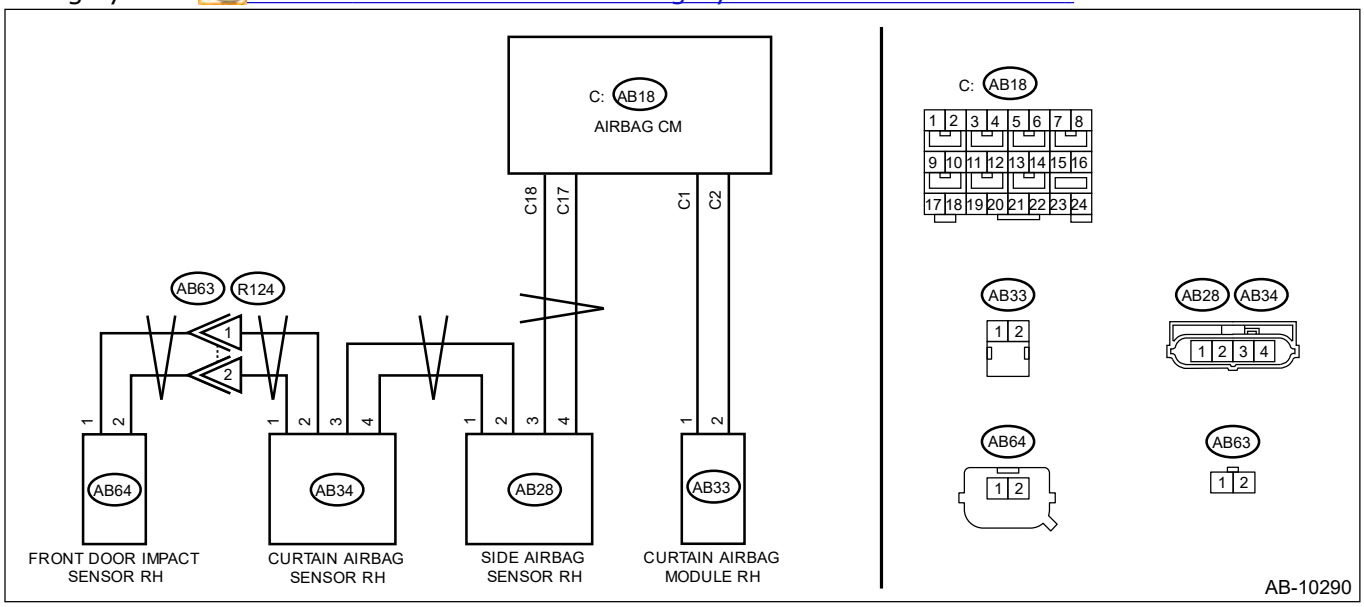
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1832 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness RH circuit is shorted to ground.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33).
3. Connect the airbag resistor to the connector (2N) of test harness N.
4. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the curtain airbag module RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB24) from side airbag module RH.
5. Disconnect the airbag resistor from test harness N.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 17 — Chassis ground:
   (3AG) No. 19 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1832 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

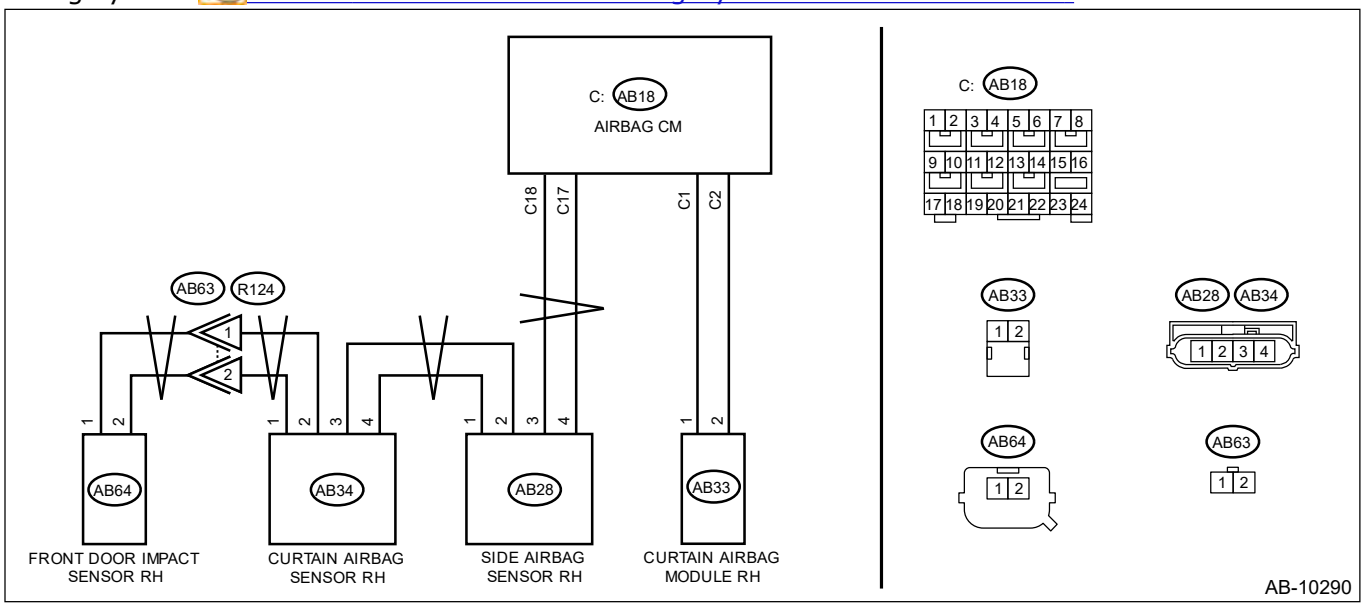
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1833 SHORT IN CURTAIN SHIELD AIRBAG RH SQUIB CIRCUIT (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness RH is shorted to power supply.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33).
3. Connect the airbag resistor to the connector (2N) of test harness N.
4. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the curtain airbag module RH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
4. Disconnect the connector (AB24) from side airbag module RH.
5. Disconnect the airbag resistor from test harness N.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Connect the battery ground terminal and turn the ignition switch to ON.
9. Measure the voltage between connector (3AG) in the test harness AG and chassis ground.

Connector & terminal

(3AG) No. 17 (+) — Chassis ground (−):

(3AG) No. 19 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1833 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

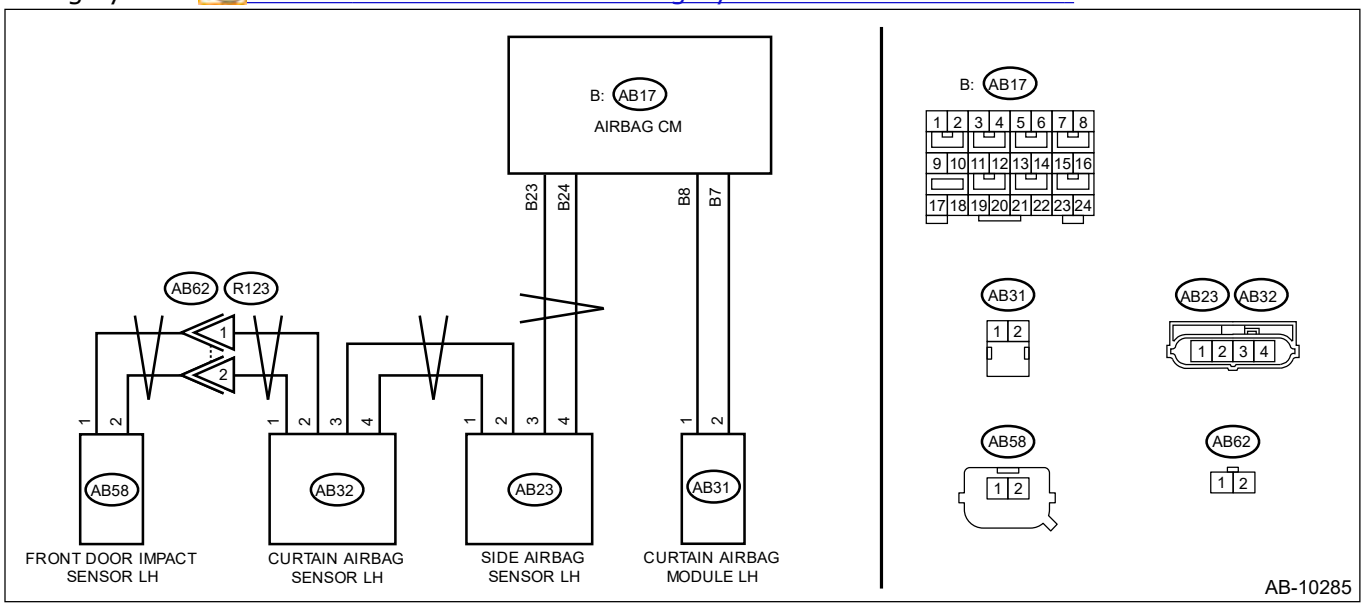
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1835 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness LH circuit is shorted.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB31) from curtain airbag module LH.
3. Connect the connector (1N) in the test harness N to the connector (AB31).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the curtain airbag module LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the airbag resistor from test harness N.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) terminals in test harness AG.
   Connector & terminal
   (3AG) No. 11 — (3AG) No. 13:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1835 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

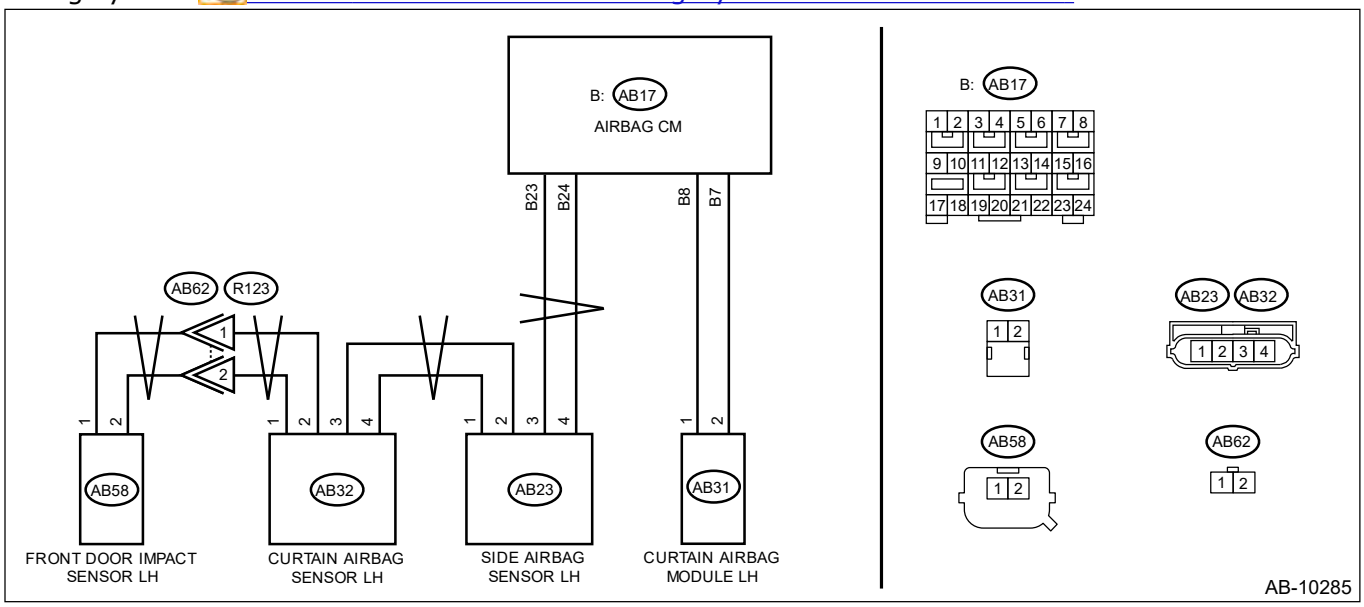
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1836 OPEN IN CURTAIN AIRBAG LH SQUIB CIRCUIT

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness LH circuit is open.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB31) from curtain airbag module LH.
3. Connect the connector (1N) in the test harness N to the connector (AB31).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the curtain airbag module LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the airbag resistor from test harness N.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N.

   Connector & terminal

   (3AG) No. 11 — (2N) No. 2:

   (3AG) No. 13 — (2N) No. 1:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1836 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

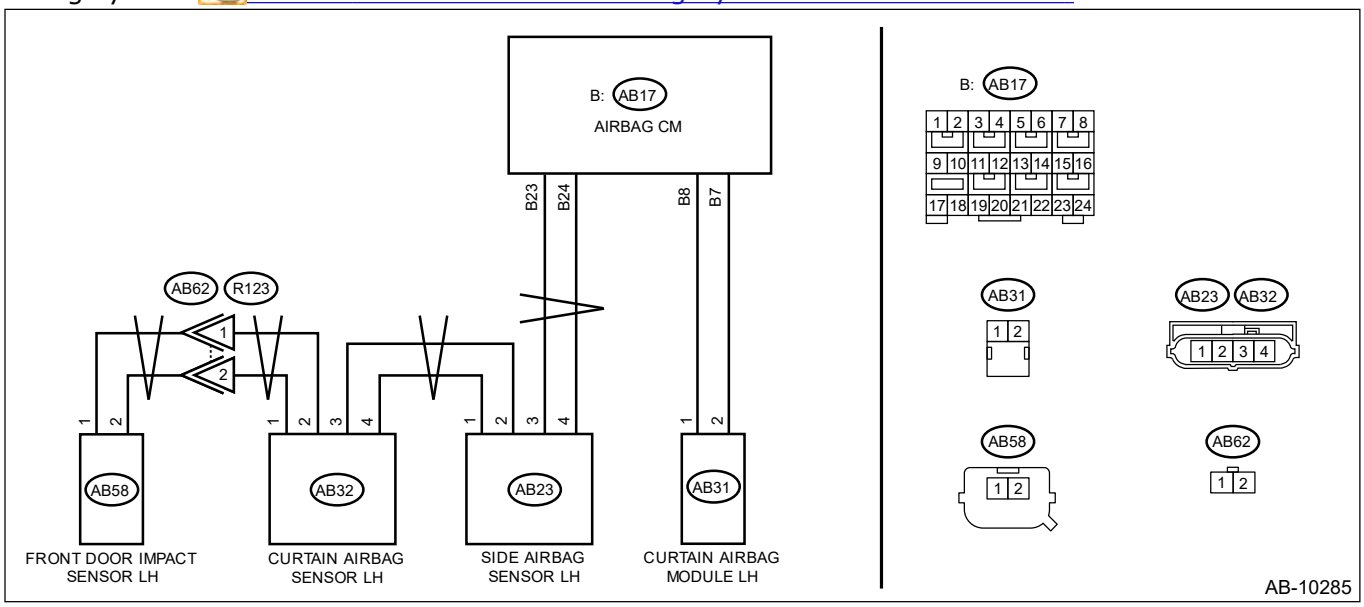
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1837 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness LH circuit is shorted to ground.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31).
3. Connect the airbag resistor to the connector (2N) of test harness N.
4. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the curtain airbag module LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the airbag resistor from test harness N.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 11 — Chassis ground:
   (3AG) No. 13 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1837 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

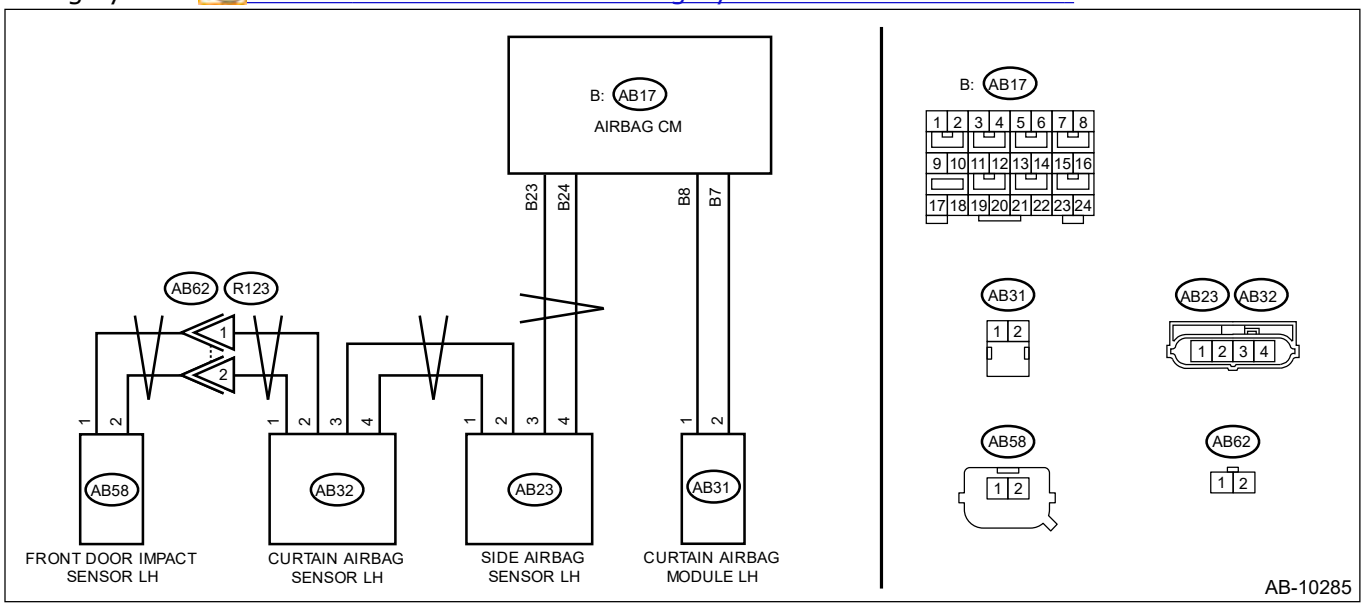
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1838 SHORT IN CURTAIN SHIELD AIRBAG LH SQUIB CIRCUIT (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Curtain airbag harness LH is shorted to power supply.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK CURTAIN AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31).
3. Connect the airbag resistor to the connector (2N) of test harness N.
4. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the curtain airbag module LH. Ref. to AIRBAG SYSTEM>Curtain Airbag Module.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the airbag resistor from test harness N.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Connect the battery ground terminal and turn the ignition switch to ON.
8. Measure the voltage between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 11 (+) — Chassis ground (−):
   (3AG) No. 13 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1838 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

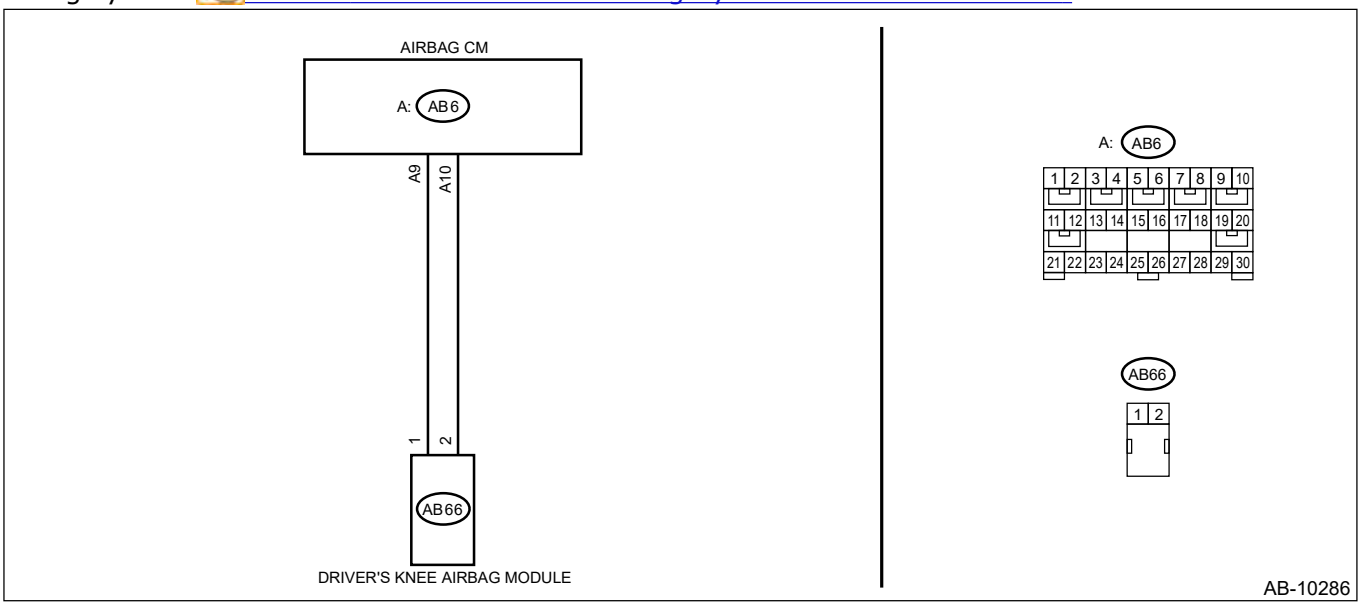
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1860 SHORT IN DRIVER'S KNEE AIRBAG

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted.
- Knee airbag module harness circuit is shorted.
- Knee airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the knee airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK KNEE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB66) from knee airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB66).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
No	Go to 3.

3. CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
4. Remove the console front panel and disconnect the connector (AB9).
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) terminals in test harness AG.
   Connector & terminal
   (3AG) No. 14 — (3AG) No. 16:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag main harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1860 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

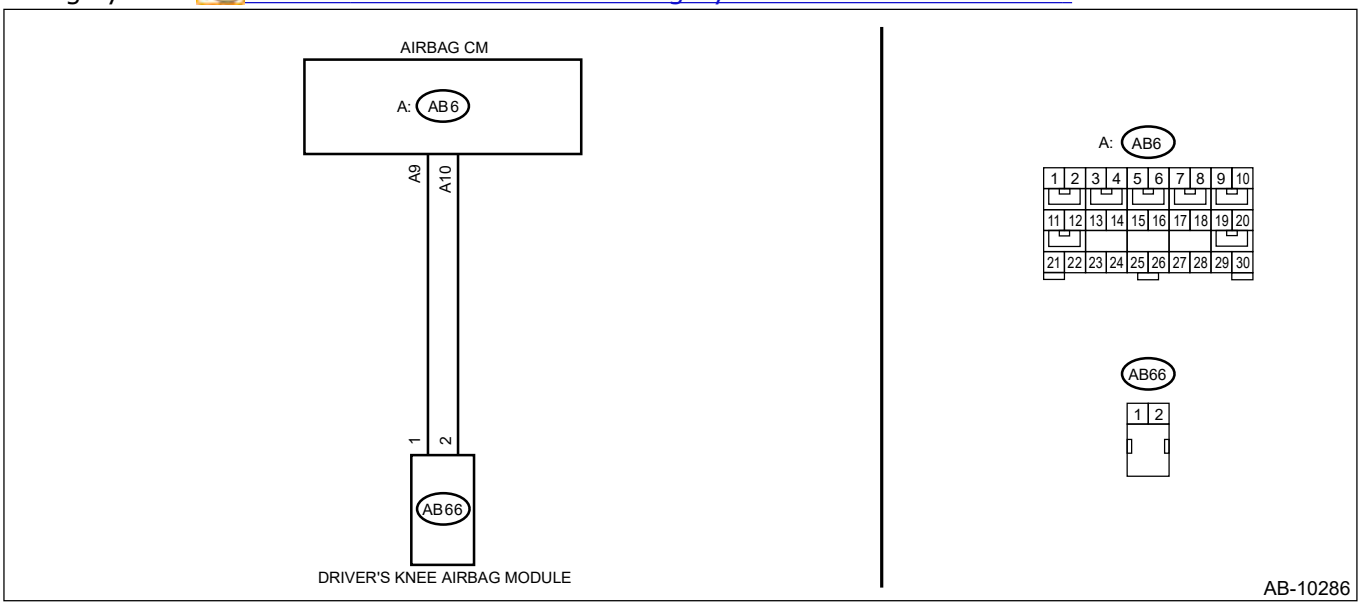
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1861 OPEN IN DRIVER'S KNEE AIRBAG

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is open.
- Knee airbag module harness circuit is open.
- Knee airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the knee airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK KNEE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB66) from knee airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB66).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
No	Go to 3.

3. CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
4. Remove the console front panel and disconnect the connector (AB9).
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N.

   Connector & terminal

   (3AG) No. 14 — (2N) No. 1:

   (3AG) No. 16 — (2N) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the airbag main harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1861 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

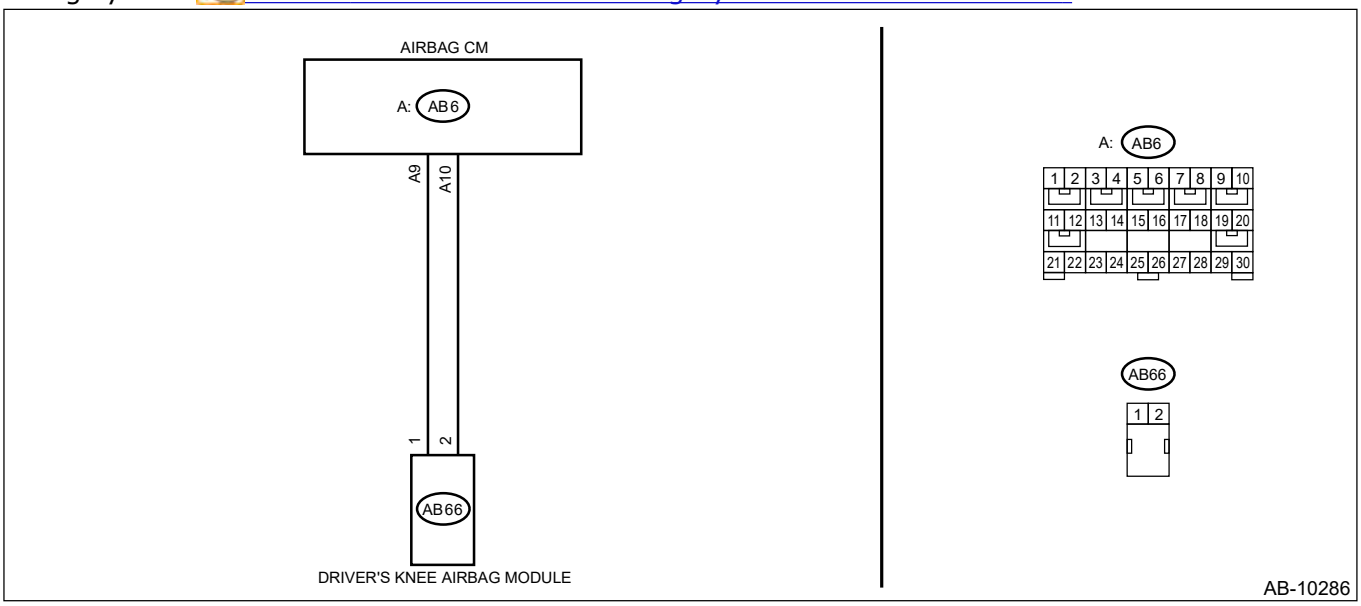
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1862 SHORT IN DRIVER'S KNEE AIRBAG (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to ground.
- Knee airbag module harness circuit is shorted to ground.
- Knee airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the knee airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK KNEE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB66) from knee airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB66).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
No	Go to 3.

3. CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
4. Remove the console front panel and disconnect the connector (AB9).
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 14 — Chassis ground:
   (3AG) No. 16 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag main harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1862 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

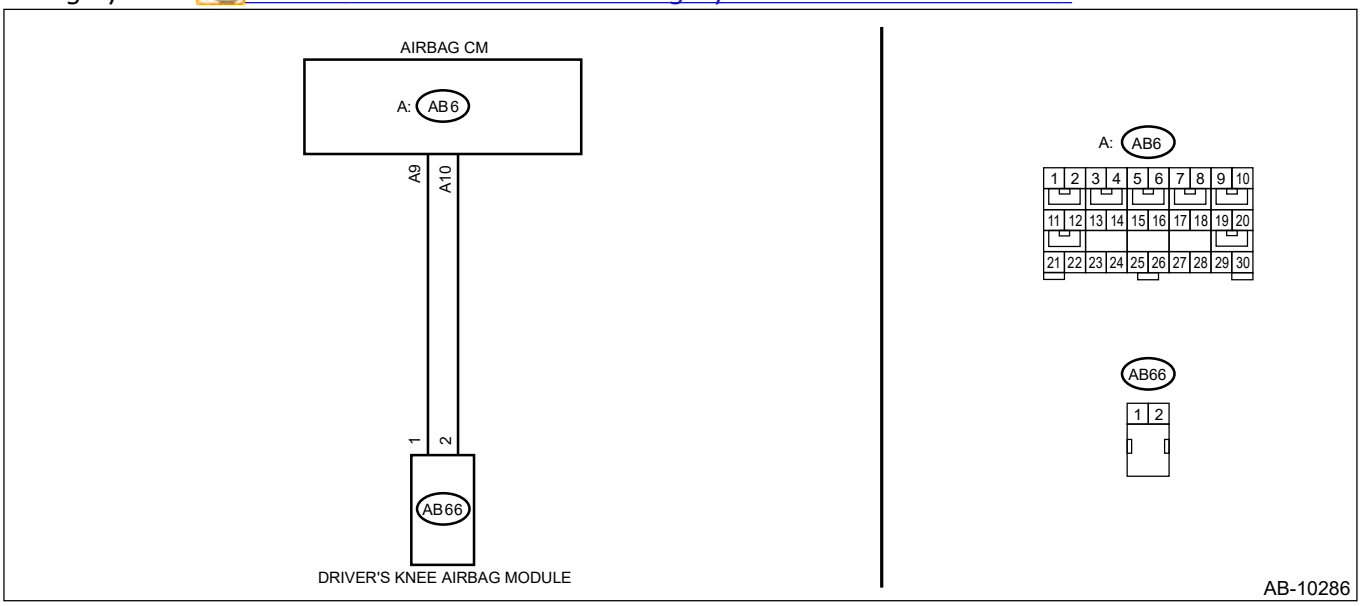
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1863 SHORT IN DRIVER'S KNEE AIRBAG (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Knee airbag module harness circuit is shorted to power supply.
- Knee airbag module is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the knee airbag module.

Is there poor contact?

Yes	Replace the airbag harness.
No	Go to 2.

2. CHECK KNEE AIRBAG MODULE.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB66) from knee airbag module.
3. Connect the connector (1N) in the test harness N to the connector (AB66).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the knee airbag module. Ref. to AIRBAG SYSTEM>Knee Airbag Module>REMOVAL.
No	Go to 3.

3. CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2).
4. Remove the console front panel and disconnect the connector (AB9).
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Connect the battery ground terminal and turn the ignition switch to ON.
8. Measure the voltage between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 14 (+) — Chassis ground (-):
   (3AG) No. 16 (+) — Chassis ground (-):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Replace the airbag main harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1863 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

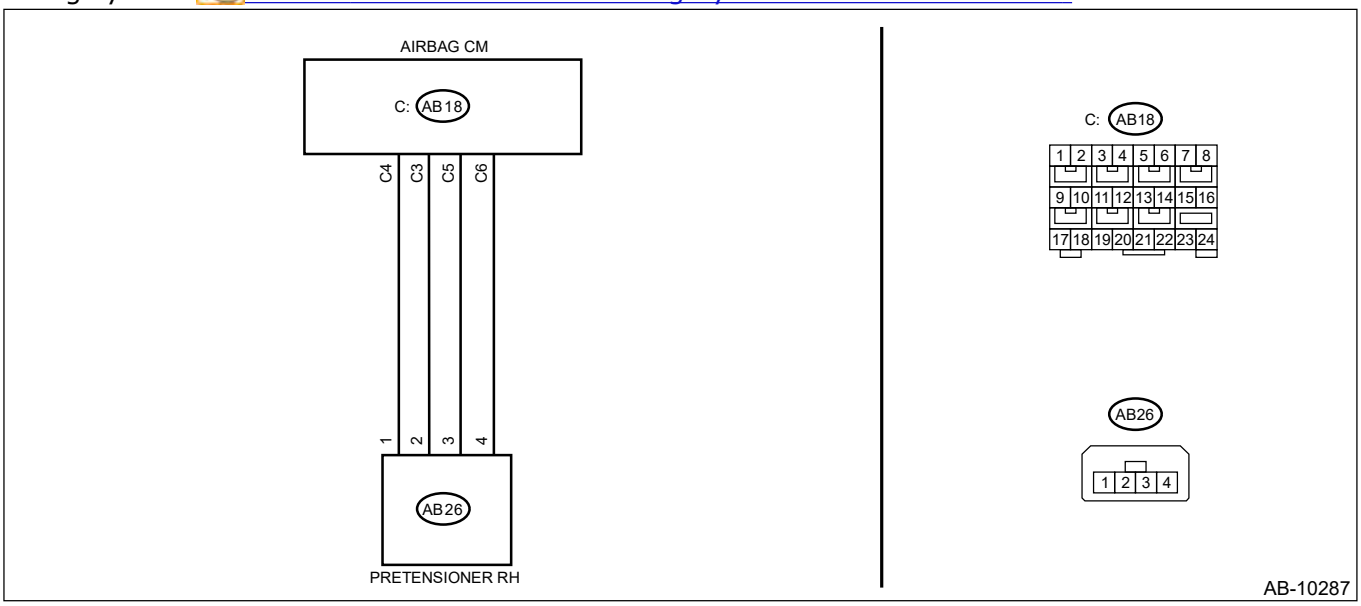
Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

DTC B1900 SHORT IN FRONT P/T RH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH circuit is shorted.
- Pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB24) from side airbag module RH.
3. Disconnect the connector (AB33) from curtain airbag module RH.
4. Disconnect the connector (AB26) from seat belt pretensioner RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Using a probe, measure the resistance between the terminals of connector (AB26). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 1 — (AB26) No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all the connectors other than (AB26) of seat belt pretensioner RH.
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1900 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1900 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

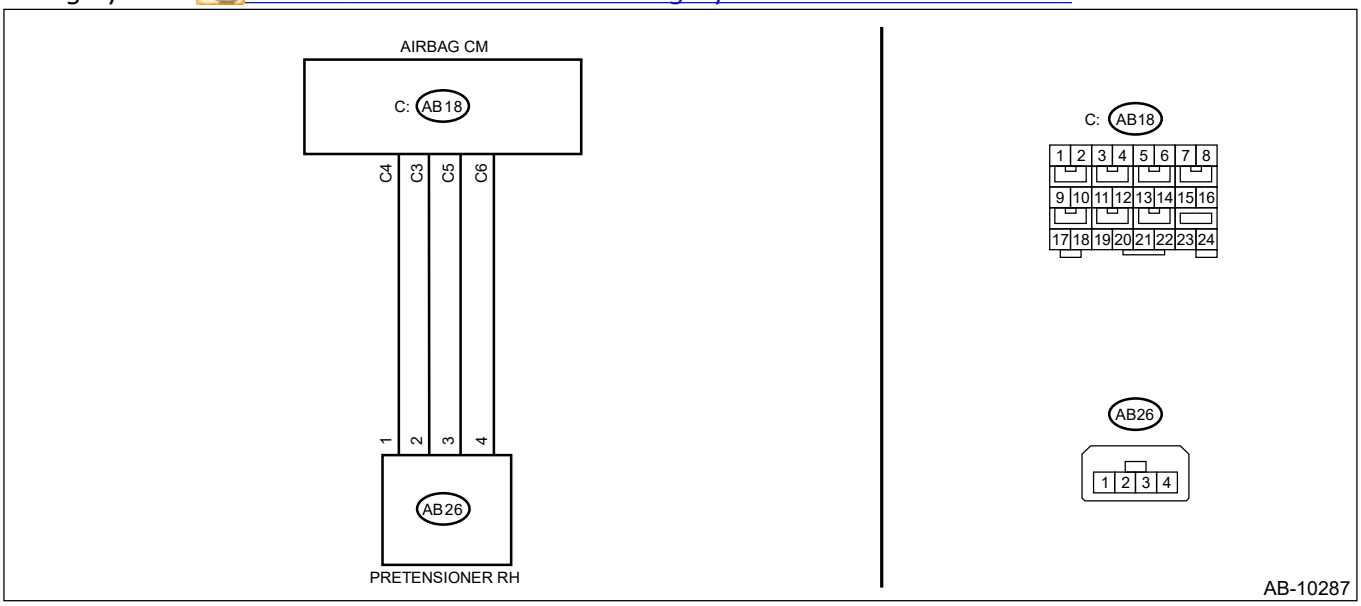
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1901 OPEN IN FRONT P/T RH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH circuit is open.
- Pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB24) from side airbag module RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Using a probe, measure the resistance between the terminals of connector (AB26). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 1 — (AB26) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
2. Connect the connector (AB24) to side airbag module RH.
3. Connect the connector (AB33) to curtain airbag module RH.
4. Using a probe, short the terminals No. 1 and No. 2 of connector (AB26). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 1 — (AB26) No. 2:
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   DTC Check

Is DTC B1901 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect the connector (AB26) of seat belt pretensioner RH.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1901 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

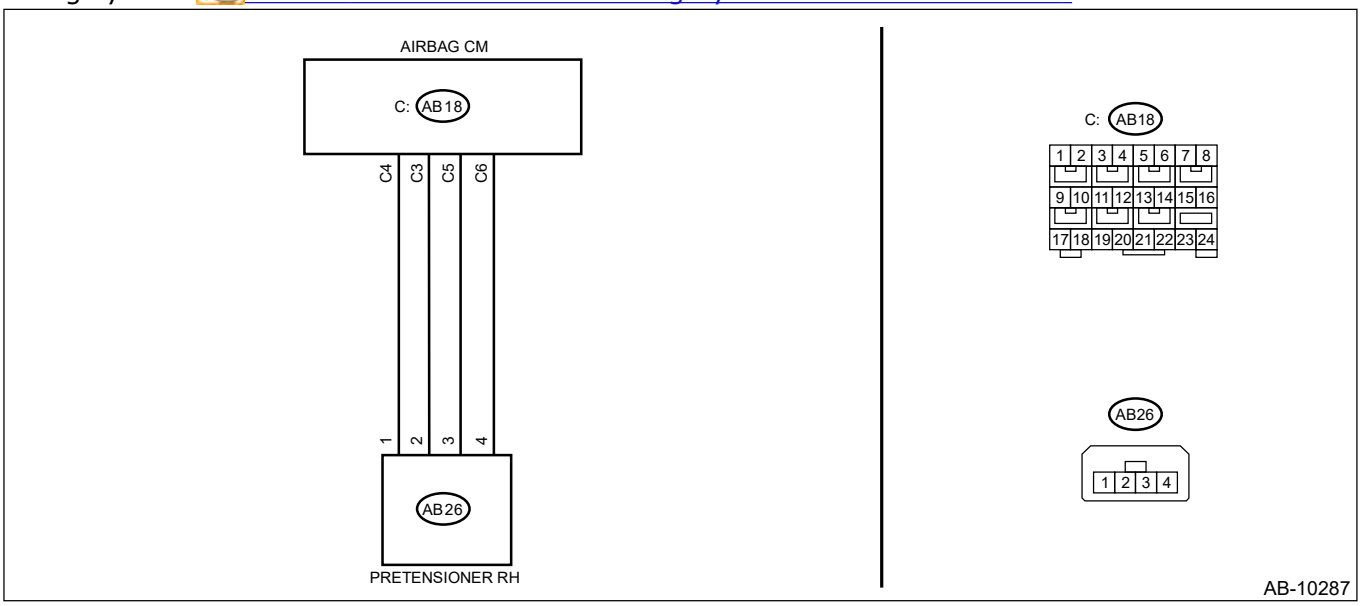
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1902 SHORT IN FRONT P/T RH (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH circuit is shorted to ground.
- Pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB24) from side airbag module RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Using a probe, measure the resistance between the connector (AB26) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 1 — Chassis ground:

   (AB26) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all the connectors other than (AB26) of seat belt pretensioner RH.
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1902 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1902 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

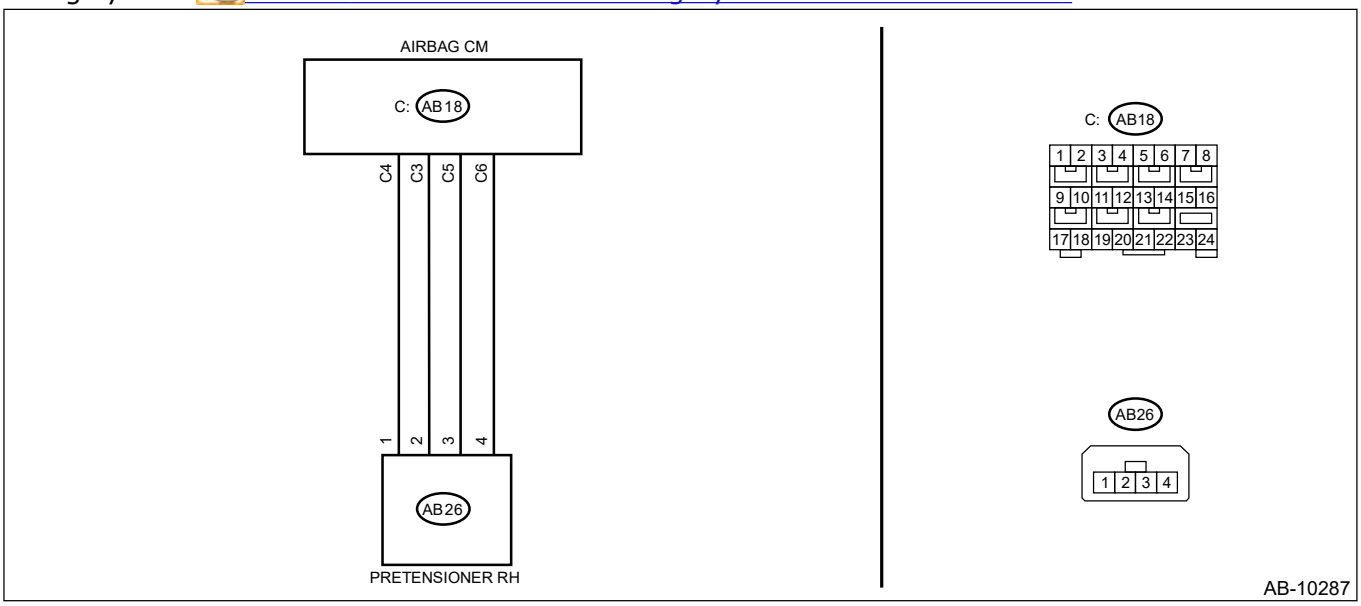
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1903 SHORT IN FRONT P/T RH (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH circuit is shorted to power supply.
- Pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Disconnect the connector (AB24) from side airbag module RH.
3. Disconnect the connector (AB26) from seat belt pretensioner RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Using a probe, measure the voltage between the connector (AB26) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 1 (+) — Chassis ground (−):

   (AB26) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all the connectors other than (AB26) of seat belt pretensioner RH.
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1903 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1903 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

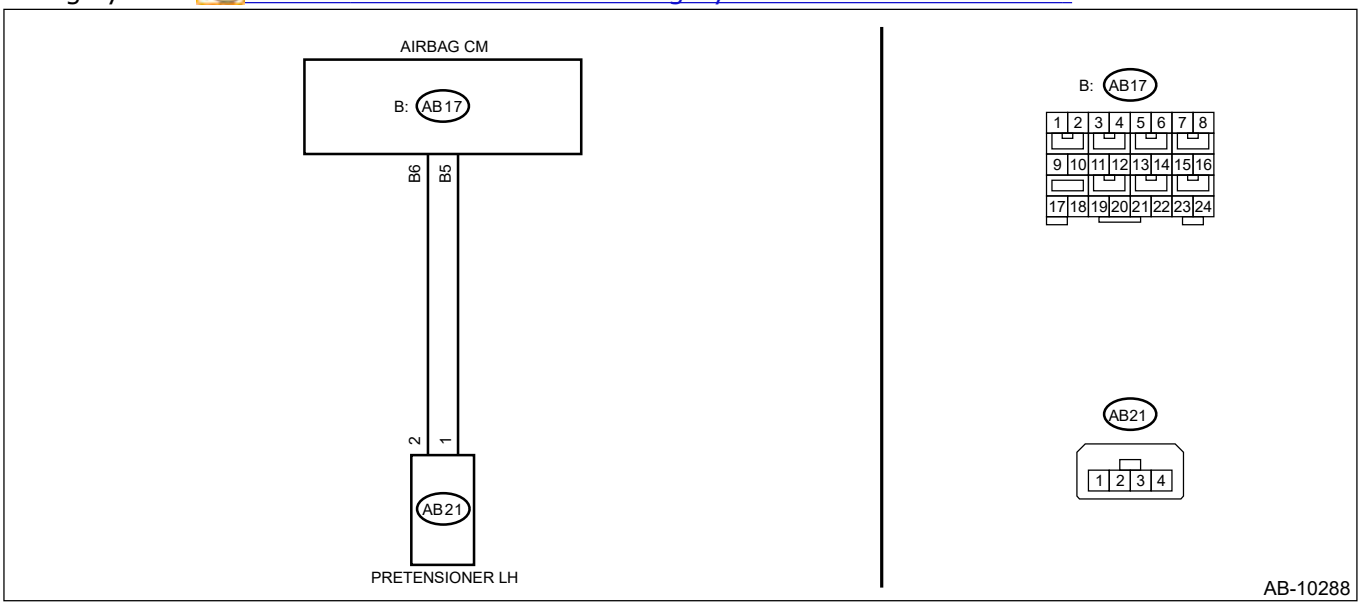
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1905 SHORT IN FRONT P/T LH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness LH circuit is shorted.
- Pretensioner LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Connect the connector (1N) in the test harness N to the connector (AB21).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the seat belt pretensioner LH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from the connector (2N) of test harness N.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) terminals in test harness AG.
   Connector & terminal
   (3AG) No. 10 — (3AG) No. 12:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1905 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

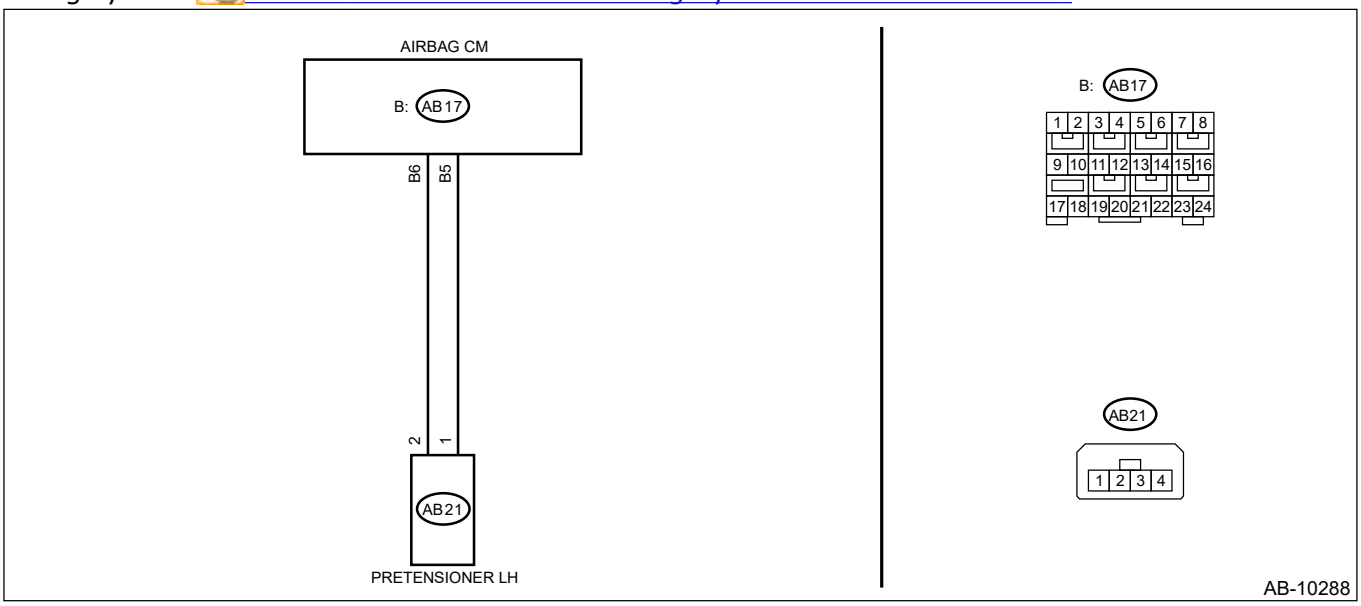
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1906 OPEN IN FRONT P/T LH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness LH circuit is open.
- Pretensioner LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Connect the connector (1N) in the test harness N to the connector (AB21).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the seat belt pretensioner LH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from the connector (2N) of test harness N.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N.

   Connector & terminal

   (3AG) No. 10 — (2N) No. 1:

   (3AG) No. 12 — (2N) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1906 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

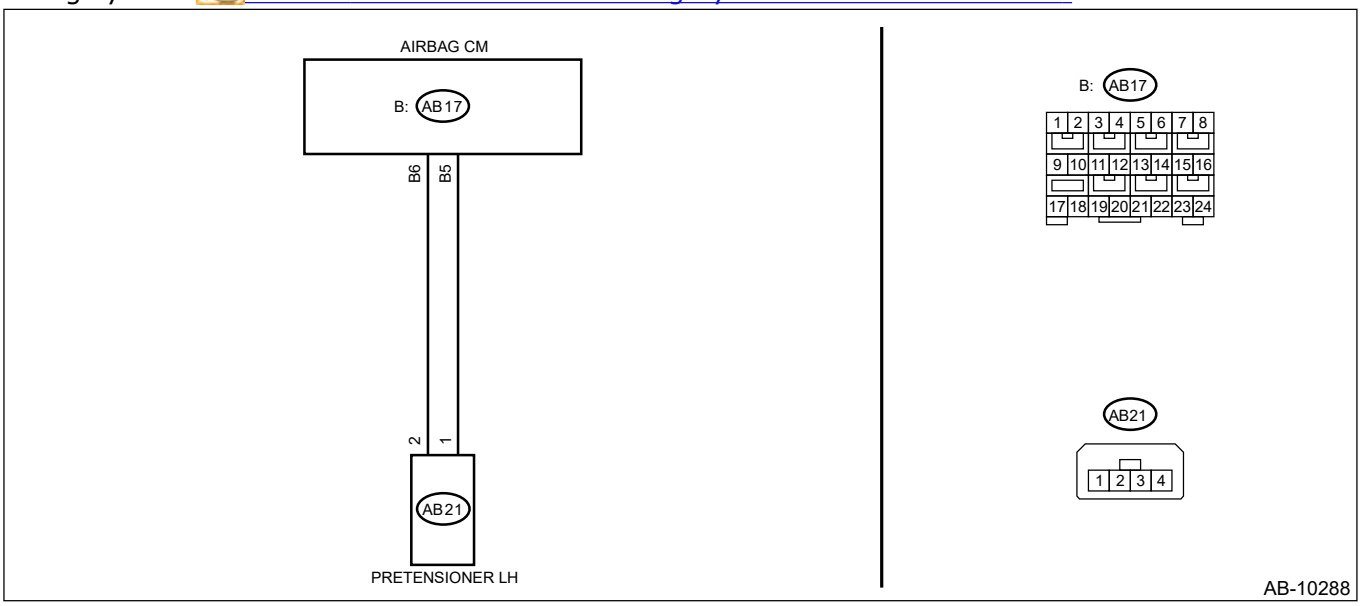
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1907 SHORT IN FRONT P/T LH (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness LH circuit is shorted to ground.
- Pretensioner LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Connect the connector (1N) in the test harness N to the connector (AB21).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the seat belt pretensioner LH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from the connector (2N) of test harness N.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Measure the resistance between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 10 — Chassis ground:
   (3AG) No. 12 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1907 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

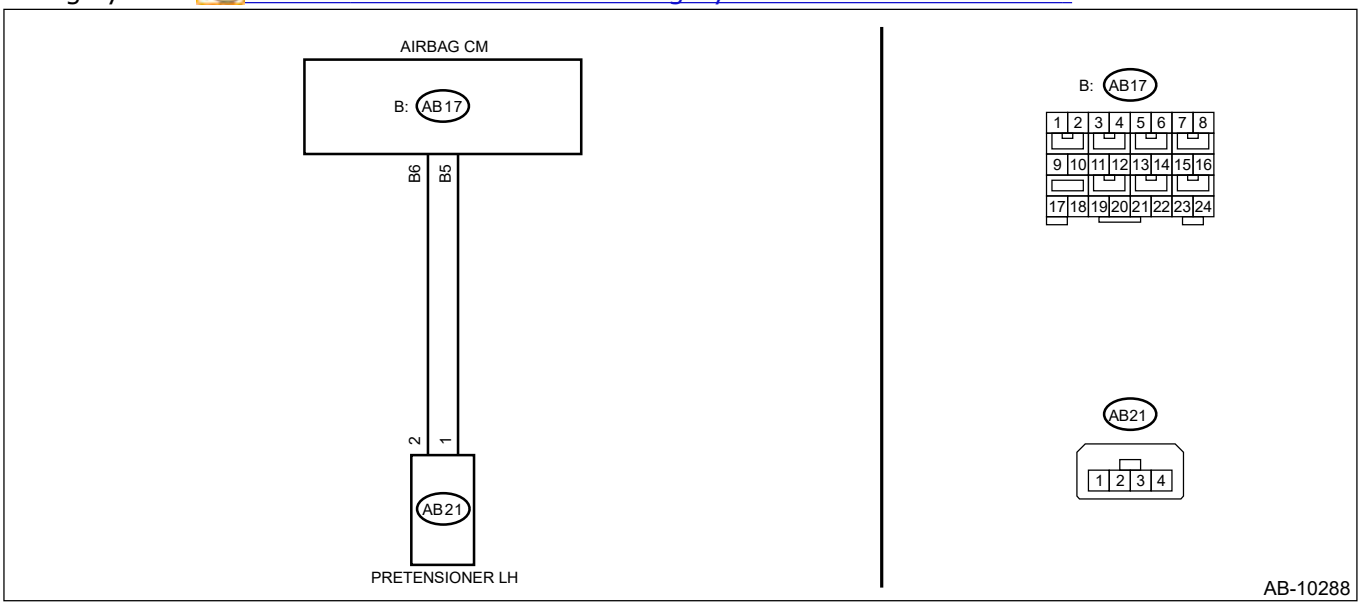
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1908 SHORT IN FRONT P/T LH (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness LH circuit is shorted to power supply.
- Pretensioner LH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB21) from seat belt pretensioner LH.
3. Connect the connector (1N) in the test harness N to the connector (AB21).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for six seconds and go off?

Yes	Replace the seat belt pretensioner LH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from the connector (2N) of test harness N.
3. Disconnect the connector (AB19) from side airbag module LH.
4. Disconnect the connector (AB31) from curtain airbag module LH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Connect the battery ground terminal and turn the ignition switch to ON.
8. Measure the voltage between connector (3AG) in the test harness AG and chassis ground.
   Connector & terminal
   (3AG) No. 10 (+) — Chassis ground (−):
   (3AG) No. 12 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1908 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

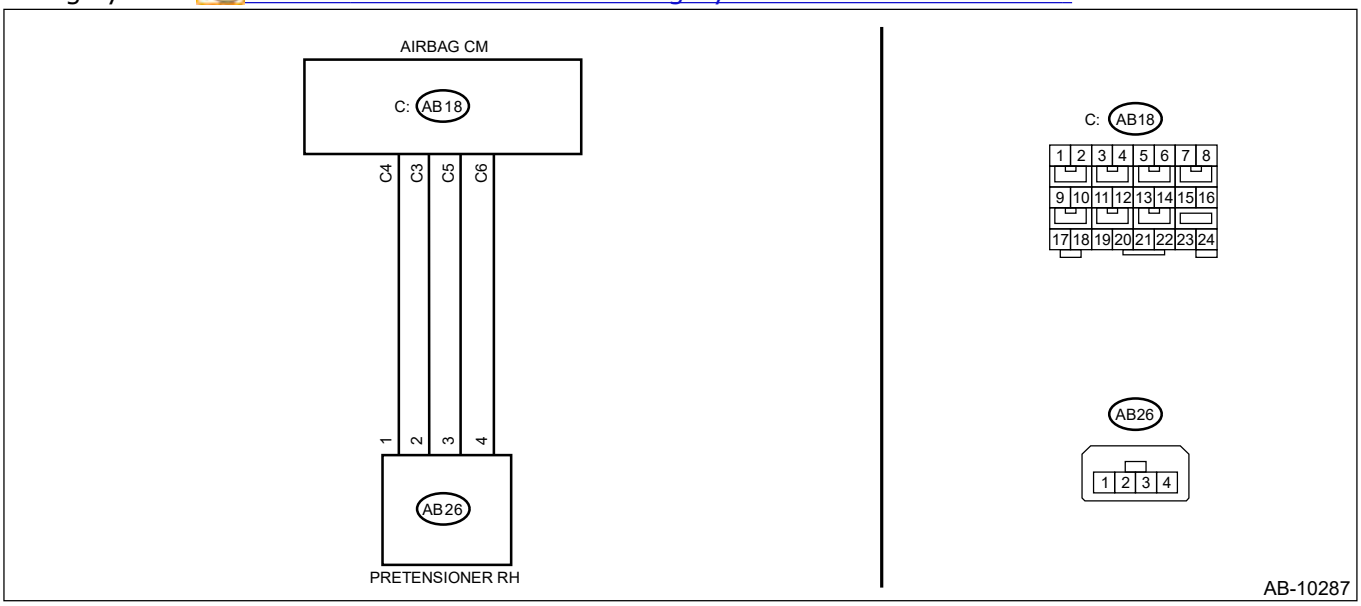
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1910 SHORT IN FRONT P/T RH(ADAPTIVE)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH (adaptive) circuit is shorted.
- Pretensioner RH (adaptive) is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB24) from side airbag module RH.
3. Disconnect the connector (AB33) from curtain airbag module RH.
4. Disconnect the connector (AB26) from seat belt pretensioner RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Using a probe, measure the resistance between the terminals of connector (AB26). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 3 — (AB26) No. 4:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all the connectors other than (AB26) of seat belt pretensioner RH.
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1910 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1910 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

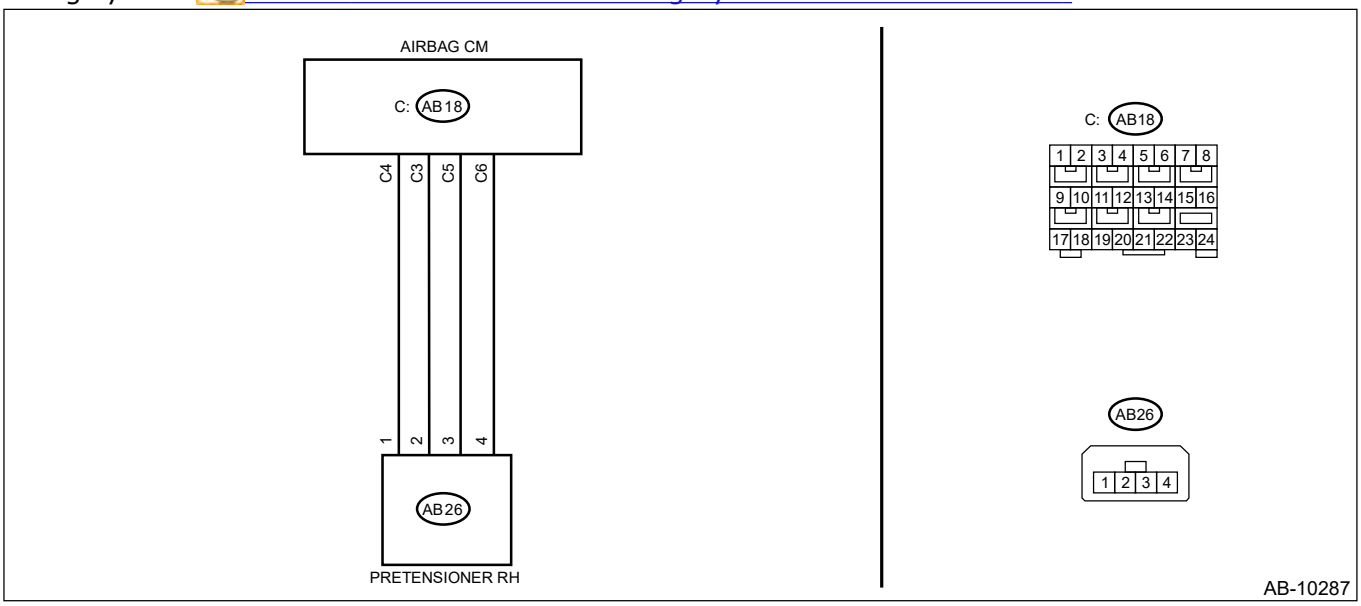
Is any other DTC displayed?

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1911 OPEN IN FRONT P/T RH (ADAPTIVE)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH (adaptive) circuit is open.
- Pretensioner RH (adaptive) is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB24) from side airbag module RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
7. Using a probe, measure the resistance between the terminals of connector (AB26). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 3 — (AB26) No. 4:

Is the resistance less than 10 MΩ?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect the connectors (AB6, AB17, AB18) and the airbag control module.
2. Connect the connector (AB24) to side airbag module RH.
3. Connect the connector (AB33) to curtain airbag module RH.
4. Using a probe, short the terminals No. 3 and No. 4 of connector (AB26). Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 3 — (AB26) No. 4:
5. Connect the battery ground terminal and turn the ignition switch to ON.
6. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
7. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   DTC Check

Is DTC B1911 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect the connector (AB26) of seat belt pretensioner RH.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1911 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

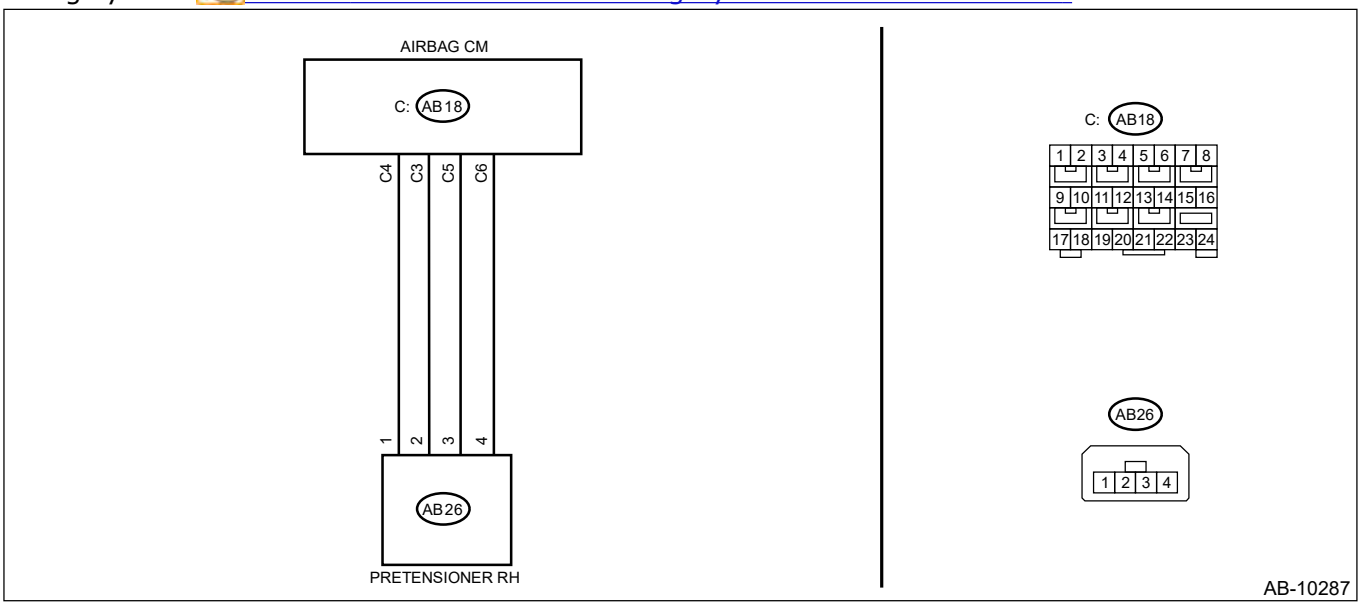
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1912 SHORT IN FRONT P/T RH(ADAPTIVE/TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH (adaptive) circuit is shorted to ground.
- Pretensioner RH (adaptive) is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB26) from seat belt pretensioner RH.
3. Disconnect the connector (AB24) from side airbag module RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Using a probe, measure the resistance between the connector (AB26) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 3 — Chassis ground:

   (AB26) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all the connectors other than (AB26) of seat belt pretensioner RH.
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1912 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1912 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

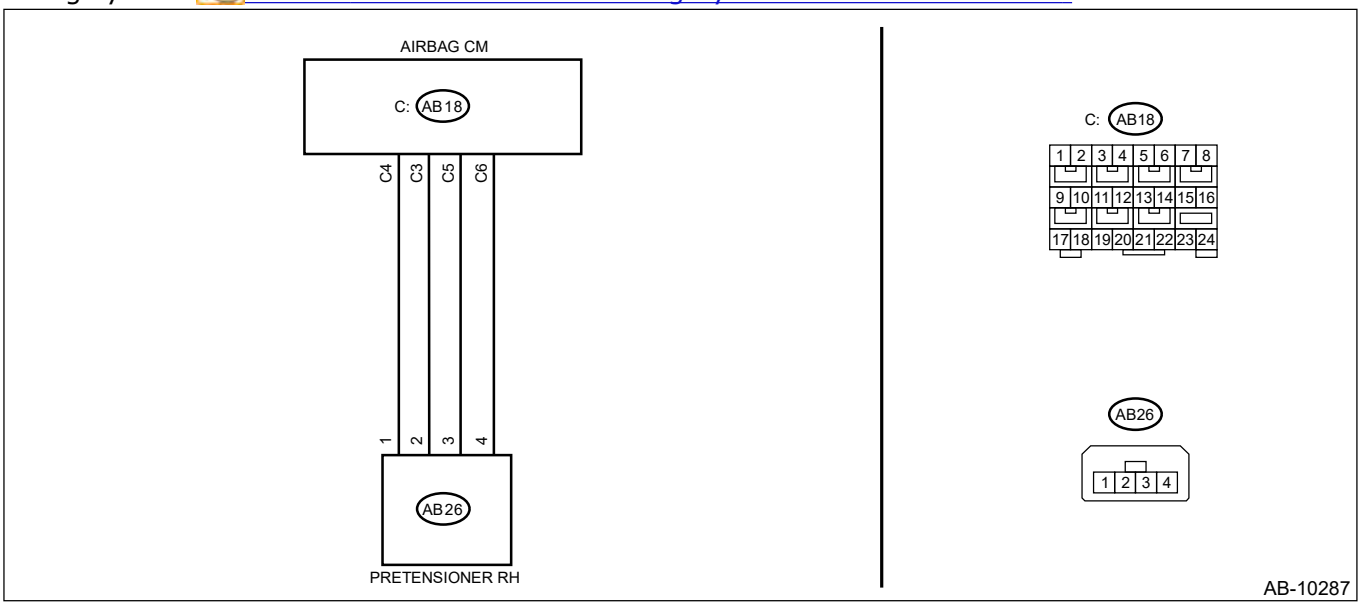
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1913 SHORT IN FRONT P/T RH(ADAPTIVE/TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Seat belt pretensioner harness RH (adaptive) circuit is open.
- Pretensioner RH (adaptive) is faulty.
- Pretensioner harness RH (adaptive) is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK AIRBAG REAR HARNESS (SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB24) from side airbag module RH.
3. Disconnect the connector (AB26) from seat belt pretensioner RH.
4. Disconnect the connector (AB33) from curtain airbag module RH.
5. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
6. Using a probe, measure the voltage between the connector (AB26) and chassis ground. Ref. to AIRBAG(DIAGNOSTICS)>General Description>PREPARATION TOOL > HOW TO USE PROBE.

   Caution:

   When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.

   Connector & terminal

   (AB26) No. 3 (+) — Chassis ground (−):

   (AB26) No. 4 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Replace the airbag rear harness along with body harness.

3. CHECK AIRBAG CONTROL MODULE.

1. Connect all the connectors other than (AB26) of seat belt pretensioner RH.
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1913 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 4.

4. CHECK SEAT BELT PRETENSIONER RH.

1. Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more.
2. Connect all connectors.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

5. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
6. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1913 displayed? (Current malfunction)

Yes	Replace the seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

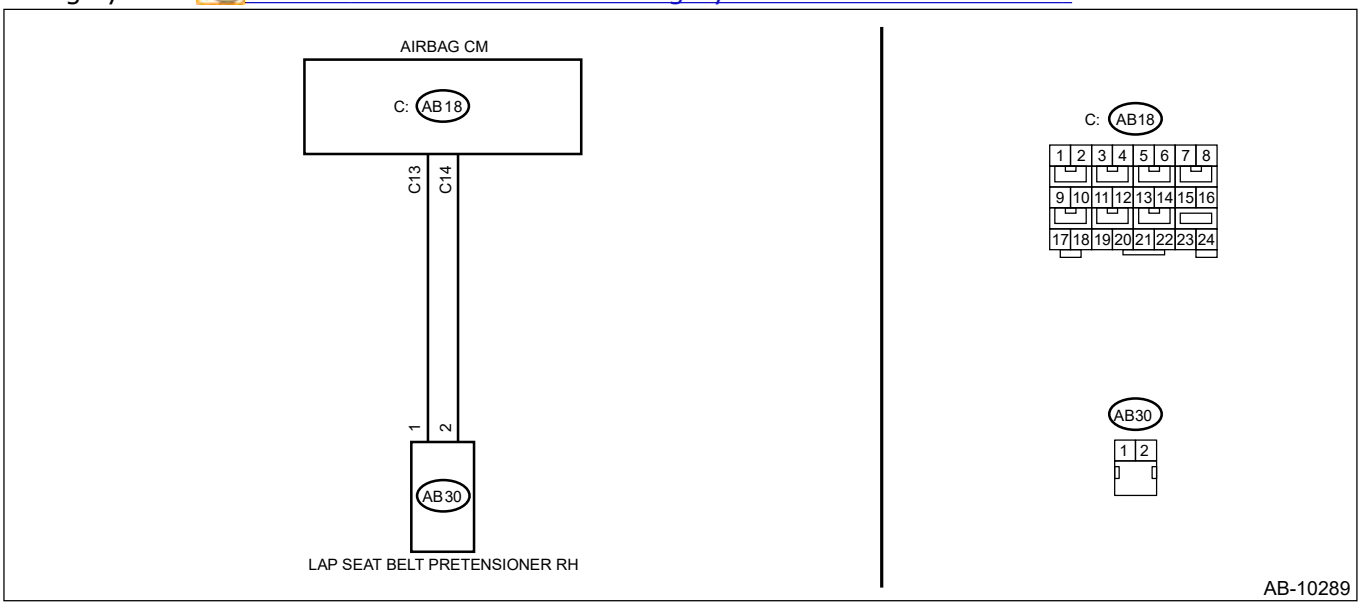
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B19F0 SHORT IN FRONT P/T 2 RH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Lap seat belt pretensioner harness RH circuit is shorted.
- Lap seat belt pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK LAP SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
3. Connect the connector (1N) in the test harness N to the connector (AB30).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the lap seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT OUTER - FRONT.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Disconnect the connector (AB31) from curtain airbag module RH.
4. Disconnect the connector (AB19) from side airbag module RH.
5. Disconnect the connector (AB21) from seat belt pretensioner.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between connector (6AG) terminals in test harness AG.
   Connector & terminal
   (6AG) No. 7 — (6AG) No. 5:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B19F0 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

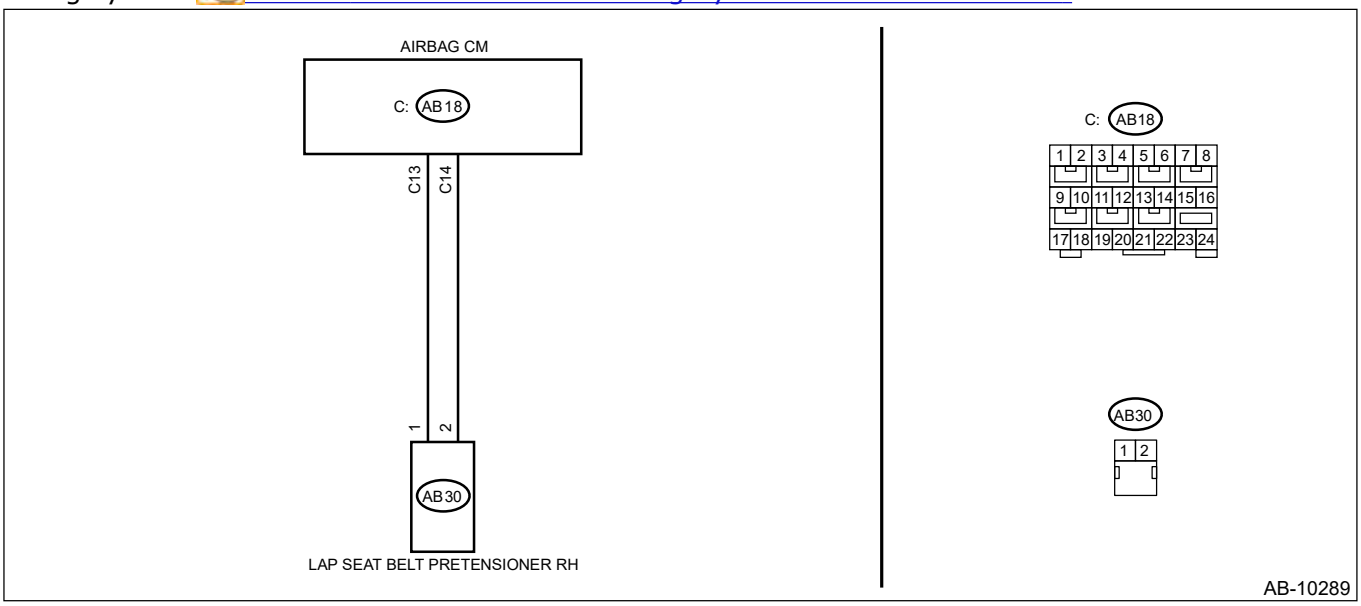
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B19F1 OPEN IN FRONT P/T 2 RH

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Lap seat belt pretensioner harness RH circuit is open.
- Lap seat belt pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK LAP SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
3. Connect the connector (1N) in the test harness N to the connector (AB30).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the lap seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT OUTER - FRONT.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (SIDE AIRBAG HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Disconnect the connector (AB31) from curtain airbag module RH.
4. Disconnect the connector (AB19) from side airbag module RH.
5. Disconnect the connector (AB21) from seat belt pretensioner.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N.

   Connector & terminal

   (6AG) No. 7 — (2N) No. 1:

   (6AG) No. 5 — (2N) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B19F1 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

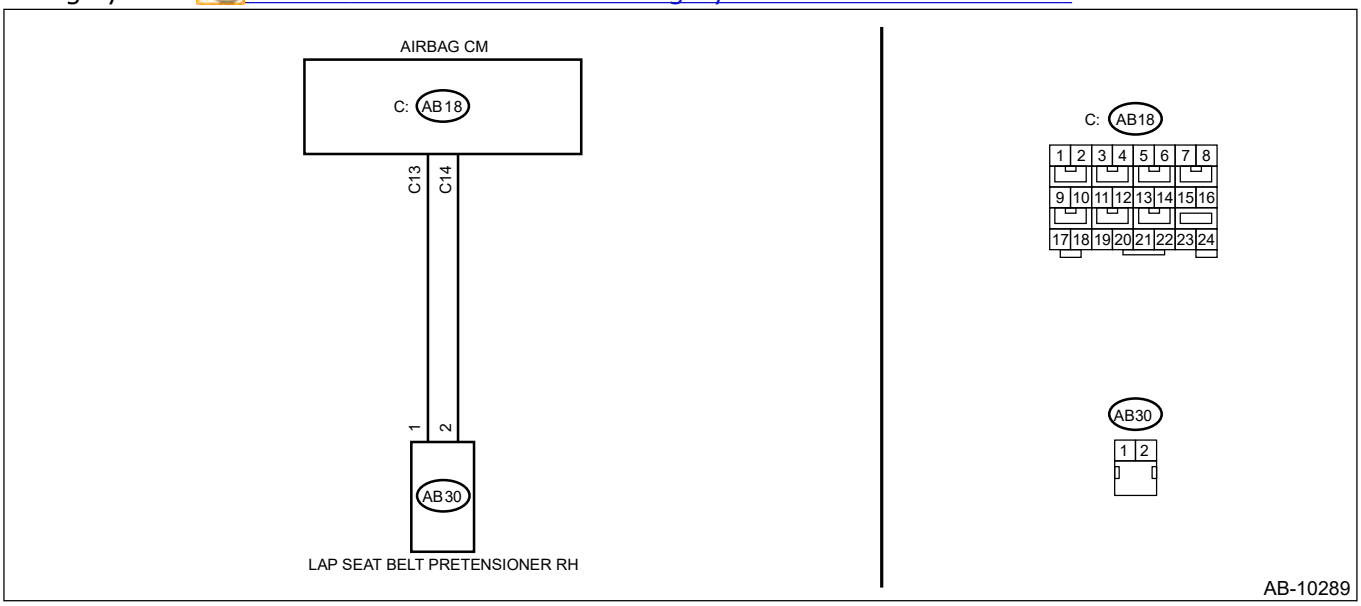
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B19F2 SHORT IN FRONT P/T 2 RH (TO GROUND)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Lap seat belt pretensioner harness RH circuit is shorted to ground.
- Lap seat belt pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK LAP SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
3. Connect the connector (1N) in the test harness N to the connector (AB30).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the lap seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT OUTER - FRONT.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Disconnect the connector (AB31) from curtain airbag module RH.
4. Disconnect the connector (AB19) from side airbag module RH.
5. Disconnect the connector (AB21) from seat belt pretensioner.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Measure the resistance between connector (6AG) in the test harness AG and chassis ground.
   Connector & terminal
   (6AG) No. 7 — Chassis ground:
   (6AG) No. 5 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B19F2 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

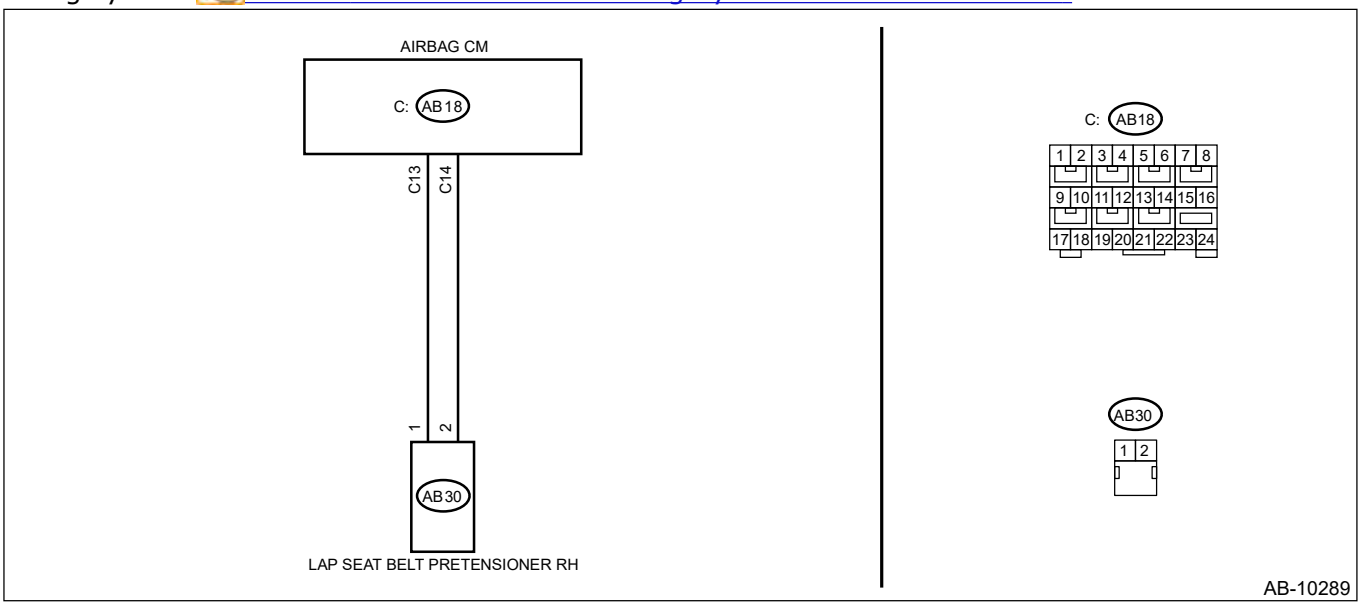
Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B19F3 SHORT IN FRONT P/T 2 RH (TO +B)

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Lap seat belt pretensioner harness RH circuit is shorted to power supply.
- Lap seat belt pretensioner RH is faulty.
- Airbag control module is faulty.

Wiring diagram:

Airbag system Ref. to WIRING SYSTEM>Airbag System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.

Is there poor contact?

Yes	Replace the airbag rear harness along with body harness.
No	Go to 2.

2. CHECK LAP SEAT BELT PRETENSIONER.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB30) from the lap seat belt pretensioner RH.
3. Connect the connector (1N) in the test harness N to the connector (AB30).
4. Connect the airbag resistor to the connector (2N) of test harness N.
5. Connect the battery ground terminal and turn the ignition switch to ON.

Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the lap seat belt pretensioner RH. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT OUTER - FRONT.
No	Go to 3.

3. CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the airbag resistor from test harness N.
3. Disconnect the connector (AB31) from curtain airbag module RH.
4. Disconnect the connector (AB19) from side airbag module RH.
5. Disconnect the connector (AB21) from seat belt pretensioner.
6. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
7. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
8. Connect the battery ground terminal and turn the ignition switch to ON.
9. Measure the voltage between connector (6AG) in the test harness AG and chassis ground.

Connector & terminal

(6AG) No. 7 (+) — Chassis ground (−):

(6AG) No. 5 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Replace the airbag rear harness along with body harness.

4. CHECK AIRBAG CONTROL MODULE.

1. Connect all connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Airbag]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to AIRBAG(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B19F3 displayed? (Current malfunction)

Yes	Replace the airbag control module. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Go to 5.

5. CHECK FOR ANY OTHER DTC ON DISPLAY.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any other DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for other displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Finish the diagnosis.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Diagnosis start condition:
Ignition voltage remains at 10 V or more for 1 second.
DTC detecting condition:
Detected when malfunction occurs in CAN line.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:

Detected when CAN data from VDC CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:

Detected when CAN data from combination meter does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:

Detected when CAN data from VDC CM is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

AIRBAG(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC detecting condition:

Detected when CAN data from combination meter is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

OCCUPANT DETECTION(DIAGNOSTICS)

OD(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Airbag Connector
6. Control Module I/O Signal
7. Inspection Mode
8. Warning Light Illumination Pattern
9. Diagnostic Procedure for Subaru Select Monitor Communication
10. Data Monitor
11. Rezero
12. Diagnostic Trouble Code (DTC)
13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Airbag].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1650 or B1655 displayed? (Current malfunction)

Yes	Record the DTC, and Go to 7.
No	Go to 5.

5. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Occupant Detection].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 6.
No	Check the communication circuit. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

6. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, and Go to 7.
No	Currently, it is normal.

7. PERFORM DIAGNOSIS.

1. Perform the diagnosis according to the displayed DTC.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Airbag] or [Occupant Detection]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Inspection Mode.
5. Using the Subaru Select Monitor, read the DTCs of [Airbag] or [Occupant Detection]. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 7 until DTC is not shown.
No	Finish the diagnosis.

OCCUPANT DETECTION(DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="5">Occupant Detection Check List for Interview　　Date of Vehicle Bring-in　　Year　　Month　　Day</td></tr>

OCCUPANT DETECTION(DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG SYSTEM

Before performing diagnosis, refer to "CAUTION" in "General Description" in AIRBAG SYSTEM. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. OCCUPANT DETECTION SYSTEM

1. When any of the following operation has been done, be sure to perform [Rezeroing] of occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.
   - Replacing occupant detection system
   - Removing and disassembling passenger's seat
   - Loosening passenger's seat bolt
2. The load sensor of the occupant detection system (passenger seat only) is fixed to the cushion frame assembly. Never remove the load sensor from the cushion frame assembly.
3. The cushion pad, cushion cover, occupant detection control module and seat harness can be replaced as a single unit. When the cushion frame assembly is replaced, the occupant detection control module, seat harness and load sensor are assembled. When replacing the cushion frame assembly, do not touch the load sensor to avoid electrical damage.
4. If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
5. Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.
6. Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.
7. Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 60 seconds or more. Occupant detection control module may be damaged.
8. Every occupant detection system-related part is a precision part. Do not drop them.
9. Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
10. Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.
11. Refer to CAUTION in Airbag System when repairing the occupant detection system. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

OCCUPANT DETECTION(DIAGNOSTICS) > General Description

INSPECTION

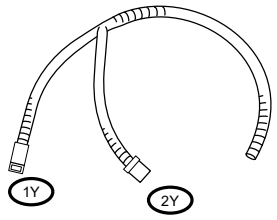
Before performing diagnostics, check the following item which might affect occupant detection system problems.

1. BASIC INSPECTION

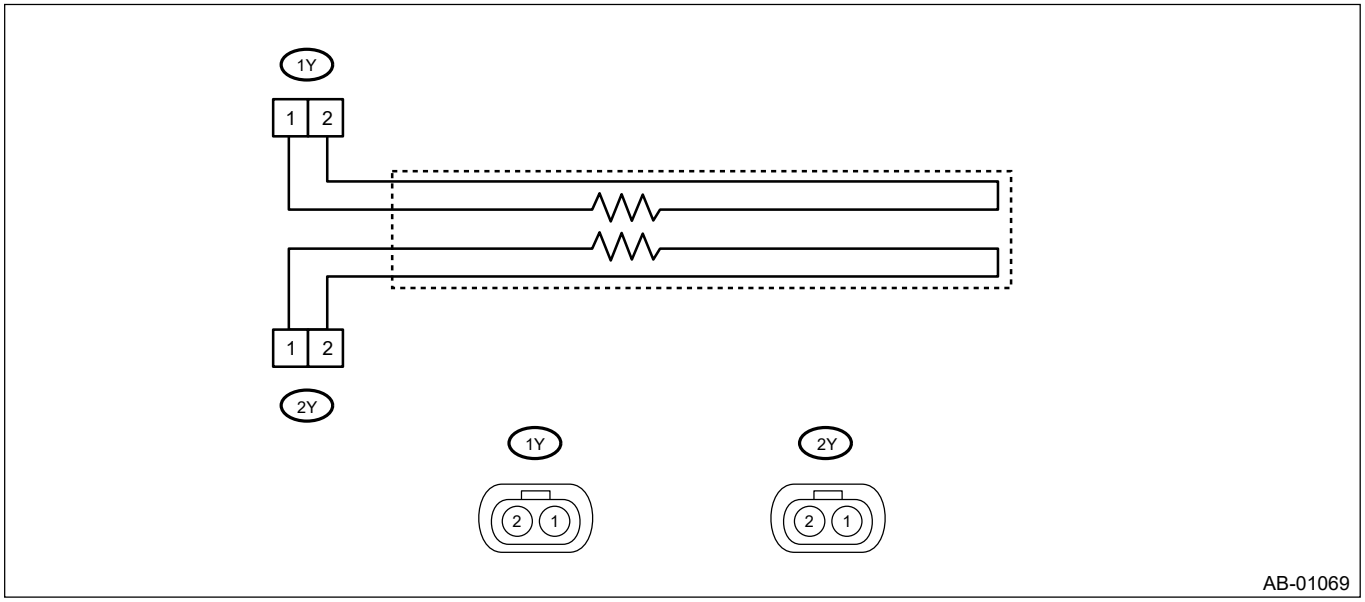
1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the main and other fuses, harnesses and connectors. Also check grounding.

OCCUPANT DETECTION(DIAGNOSTICS) > General Description

PREPARATION TOOL



Caution:
To measure the voltage and resistance of airbag system and occupant detection system components, be sure to use the specified test harness.



1. SPECIAL TOOL

- Subaru Select Monitor

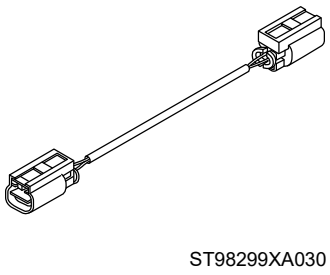


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
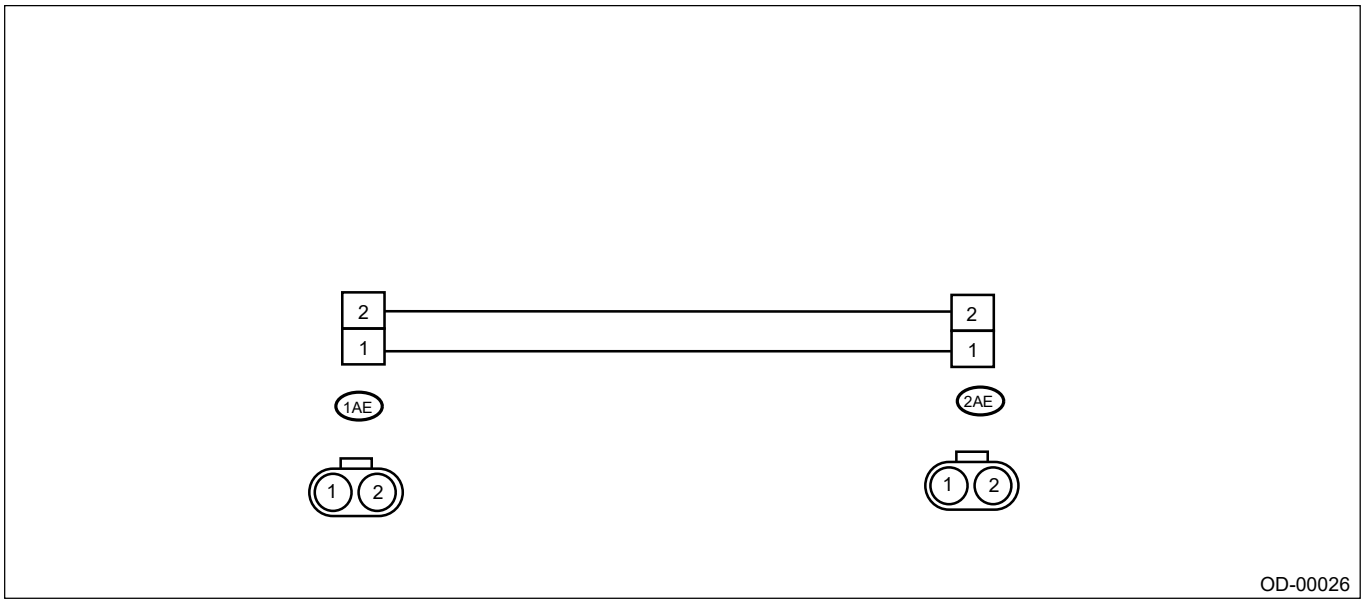
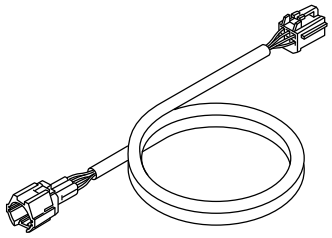
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



- TEST HARNESS Y

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG040	98299AG040	TEST HARNESS Y	Used for troubleshooting seat belt buckle switch.



- TEST HARNESS AE

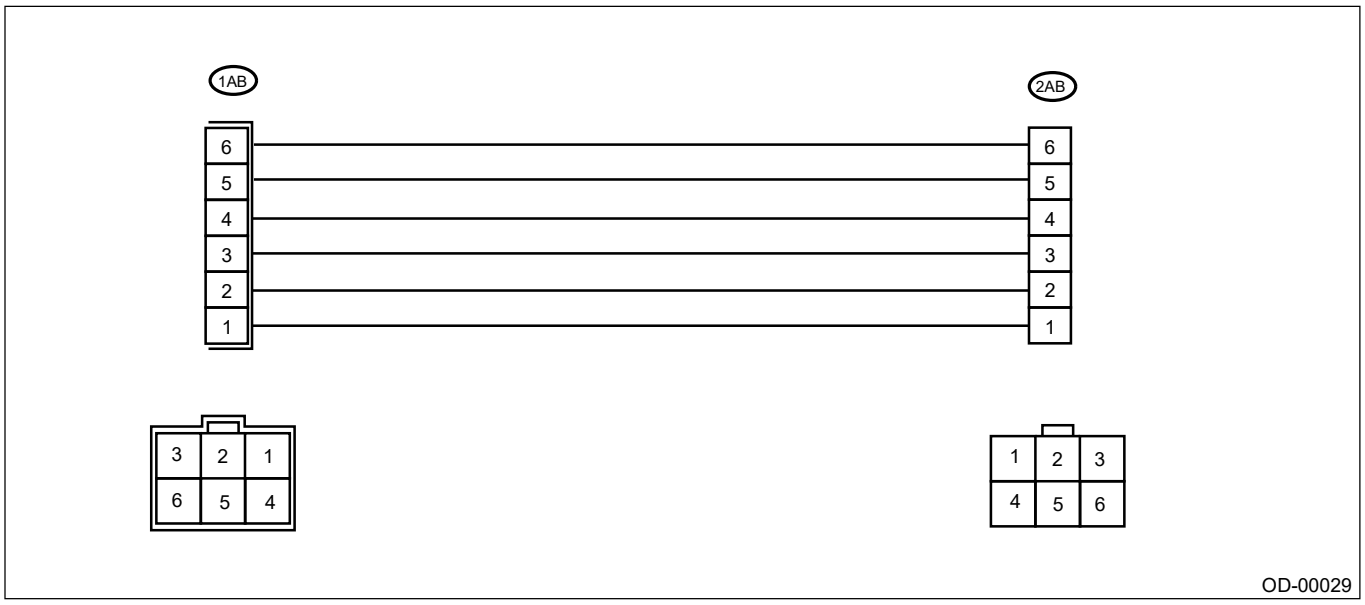


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
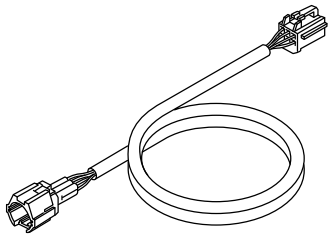
 ST98299XA030	98299XA030	TEST HARNESS AE	TEST HARNESS Y adapter harness. Used for troubleshooting seat belt buckle switch.



- TEST HARNESS AB

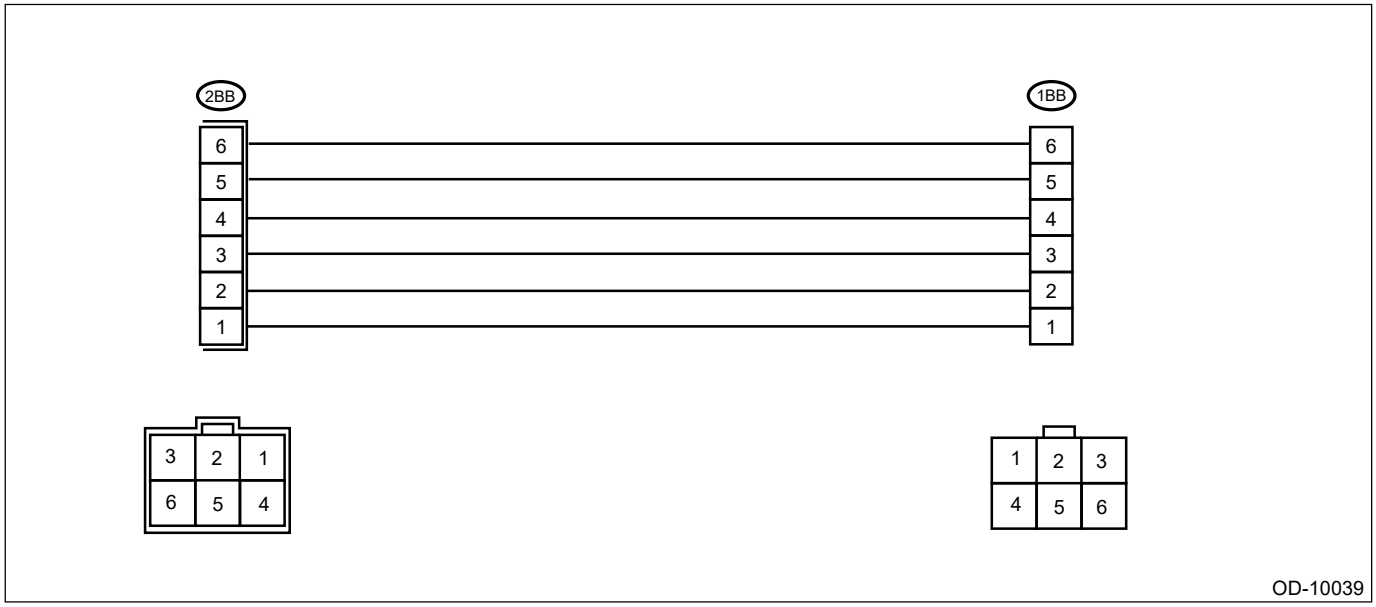


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

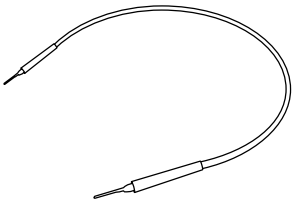
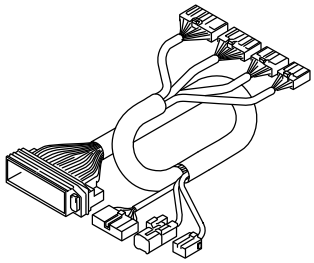
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299XA000	98299XA000	TEST HARNESS AB	Used when measuring voltage and resistance of occupant detection system.



- TEST HARNESS BB

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299XA000	98299FL020 (Newly adopted tool)	TEST HARNESS BB	Used when measuring voltage and resistance of occupant detection system.



• TEST HARNESS BC

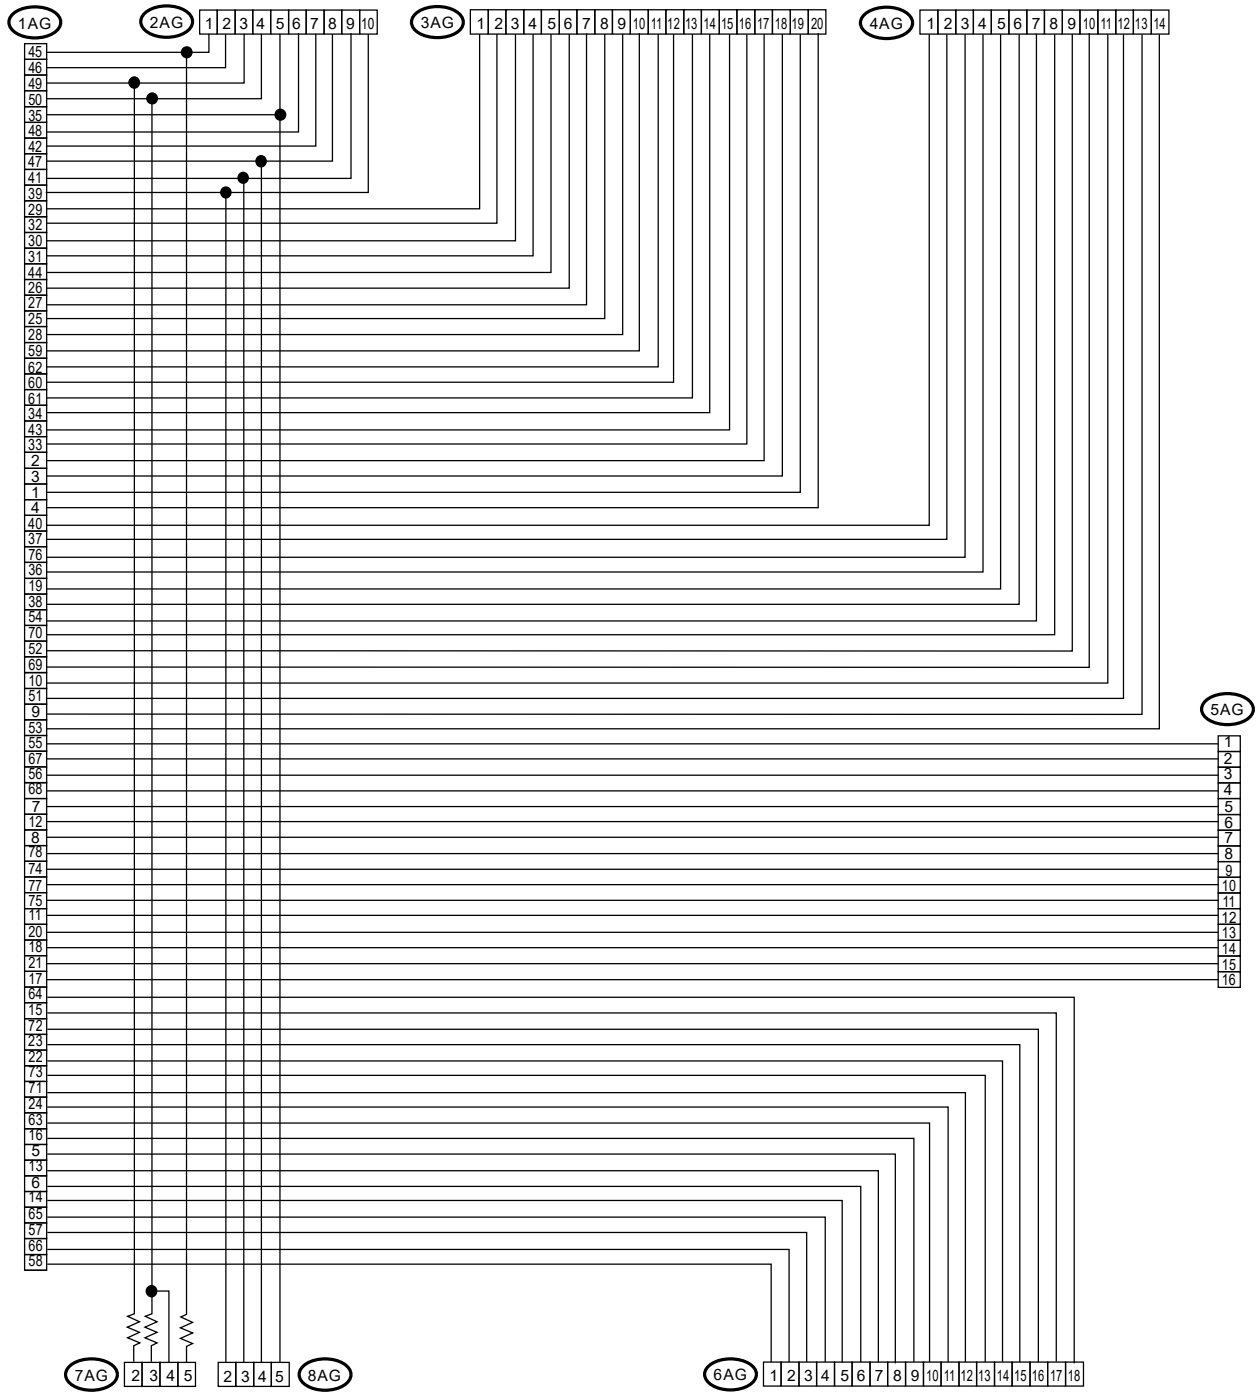


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
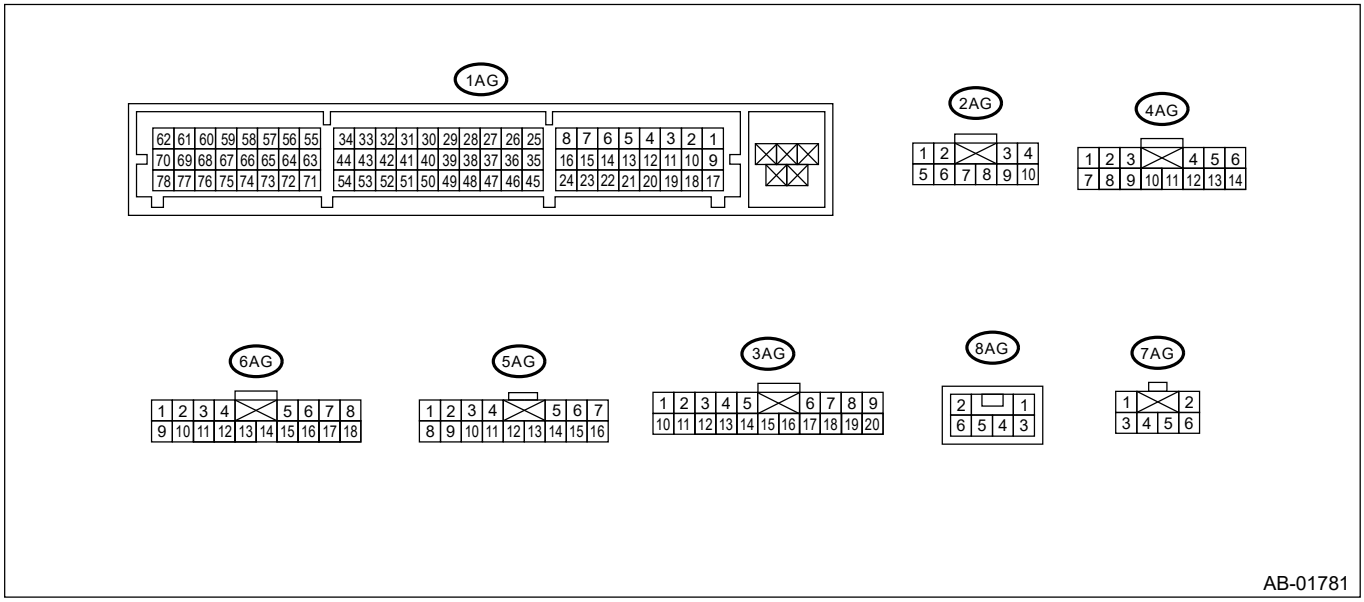
 ST98299AL020	98299FL030 (Newly adopted tool)	TEST HARNESS BC	Used when measuring voltage and resistance of occupant detection system. Two sets may be required.



• TEST HARNESS AG

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

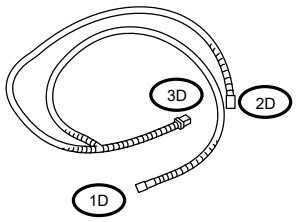


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG070	98299AG070	TEST HARNESS AG	Used when measuring voltage and resistance of airbag control module.

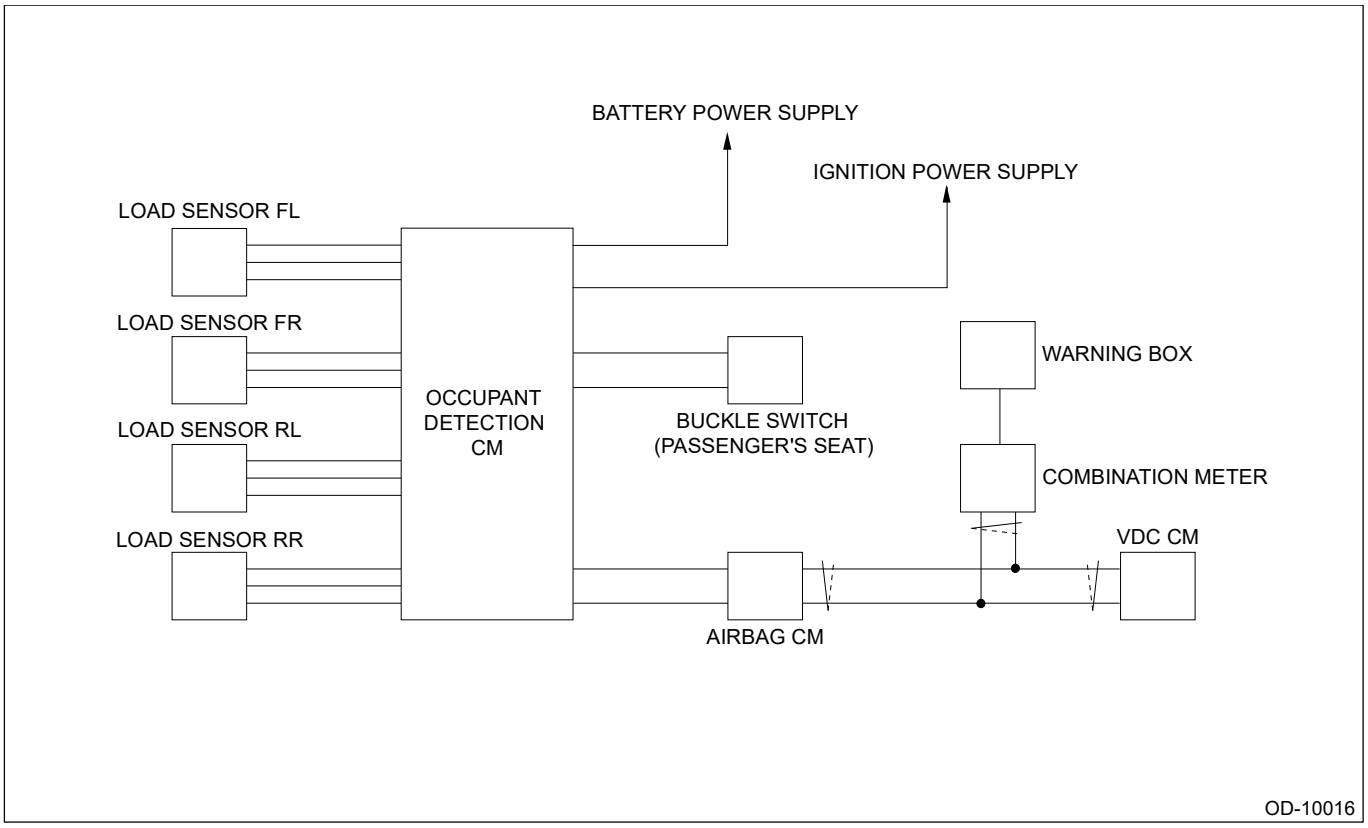
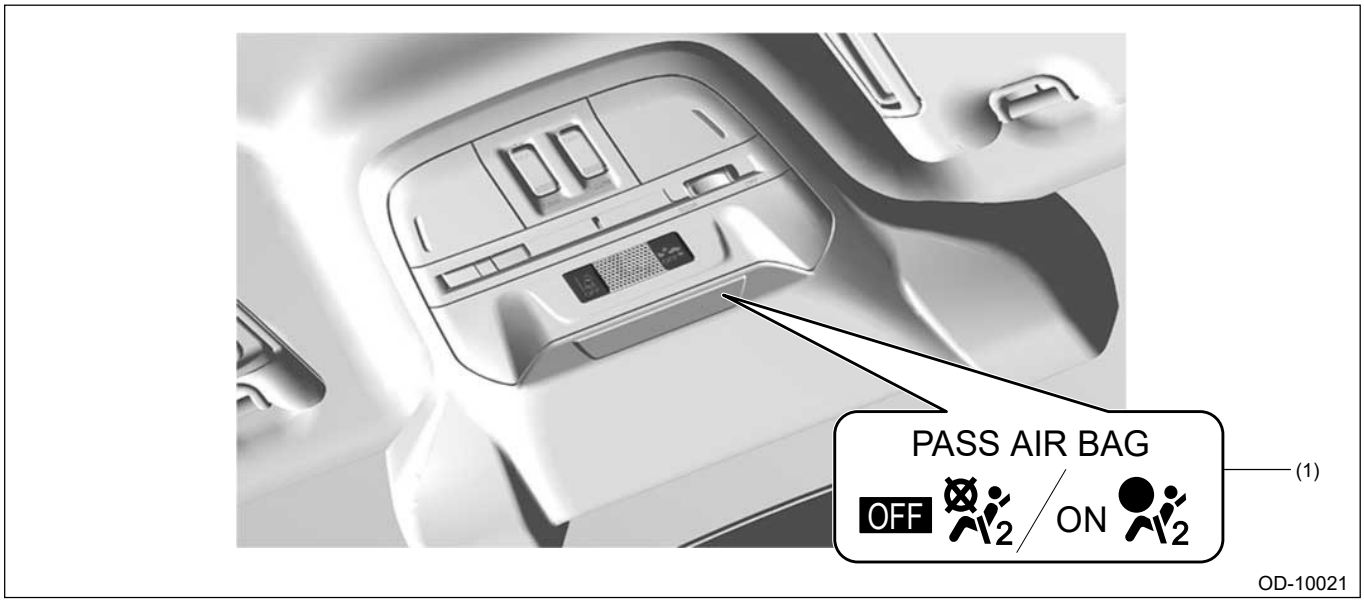
- TEST HARNESS D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG060	98299AG060	TEST HARNESS D	Used for troubleshooting seat belt buckle switch.



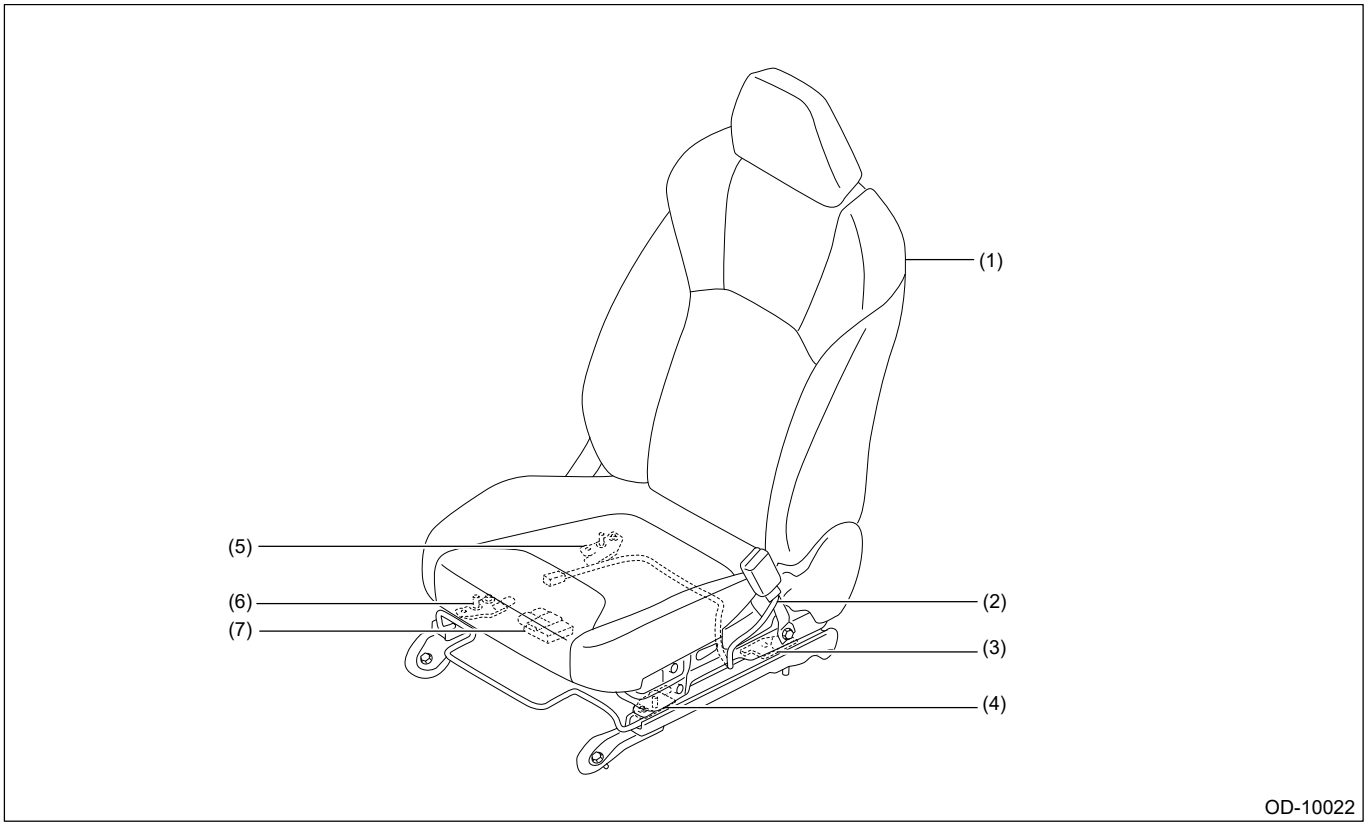
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Inspection weight	Used for sensitivity inspection after Rezero operation. Prepare an inspection weight of 30 to 40 kg in total. If it is a weight of which the accuracy has been verified (within ±0.5%), there is no need of measuring the actual value using a digital scale. **Note:** **The combination of 98399AG000 and 98399AG010 (total weight: 35.812 kg) can be used.**
Digital scale	Used only for sensitivity inspection after Rezero operation, using an inspection weight of which the actual weight is not verified or unknown.



OCCUPANT DETECTION(DIAGNOSTICS) > General Description

SYSTEM BLOCK DIAGRAM



OCCUPANT DETECTION(DIAGNOSTICS) > Electrical Component Location

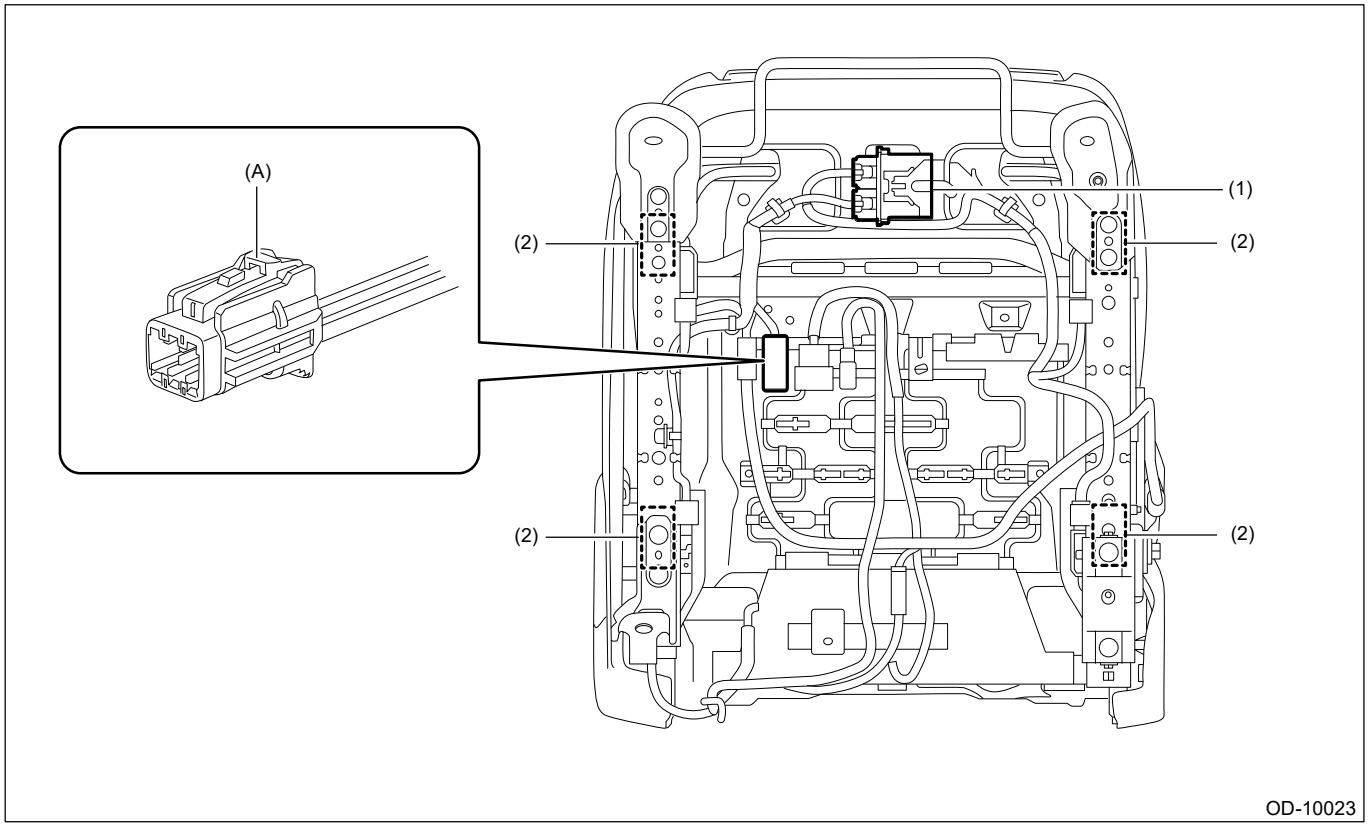
LOCATION

(1) Airbag ON/OFF indicator

(1) Passenger's seat
(2) Buckle switch
(3) Load sensor 3 (RL)
(4) Load sensor 1 (FL)
(5) Load sensor 4 (RR)
(6) Load sensor 2 (FR)
(7) Occupant detection control module

PROCEDURE

1. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)



1. How to disconnect:

Press the lock arm (A) and disconnect the connector.

Caution:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

- Back face of passenger's seat

(A) Lock arm

(1) Occupant detection control module

(2) Load sensor

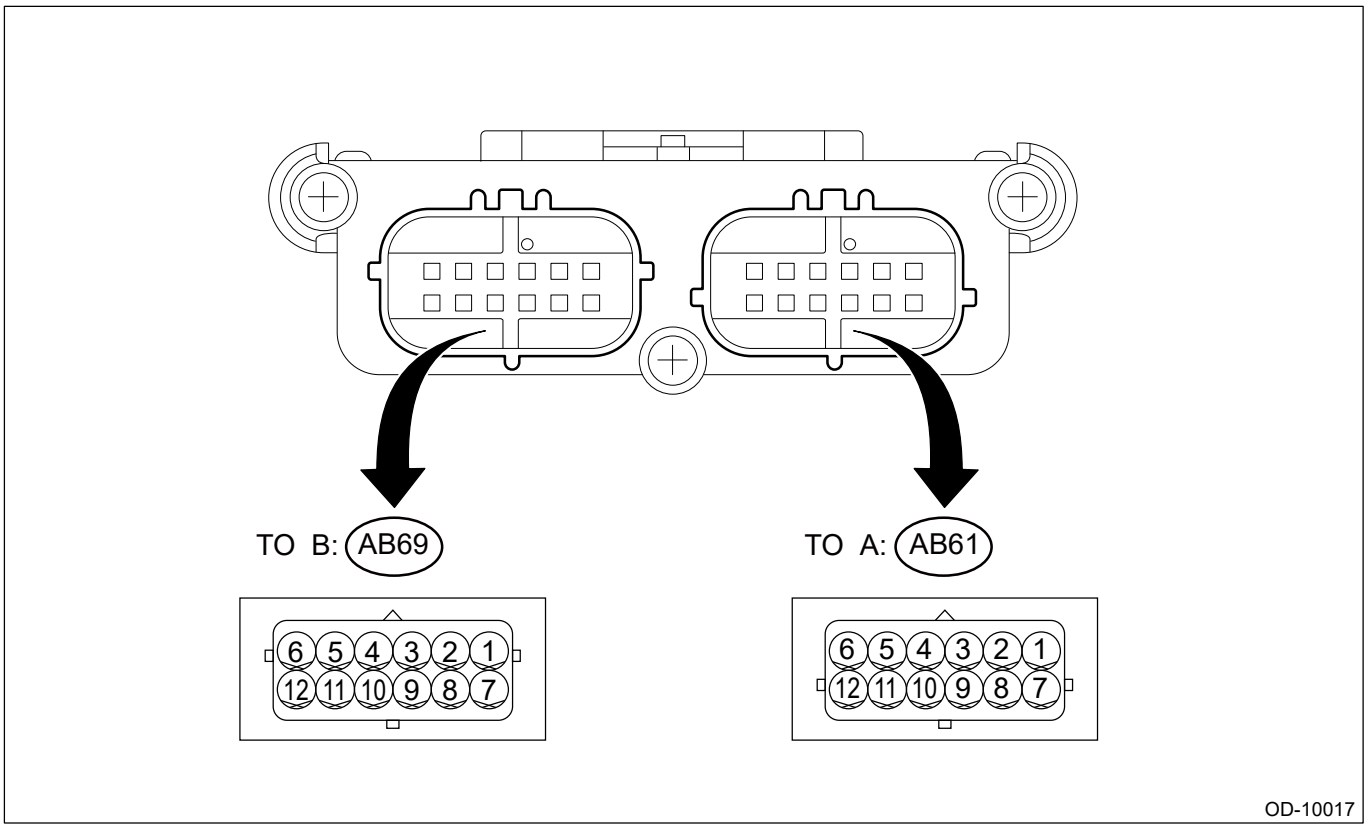
2. How to connect:

Holding the connector, push it in securely until a clicking sound is heard.

Caution:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

2. AIRBAG CONTROL MODULE



Refer to the airbag system section. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > AIRBAG CONTROL MODULE.

3. BUCKLE SWITCH RH

Refer to the airbag system section. Ref. to AIRBAG SYSTEM>Airbag Connector>PROCEDURE > BUCKLE SWITCH RH.

OCCUPANT DETECTION(DIAGNOSTICS) > Control Module I/O Signal

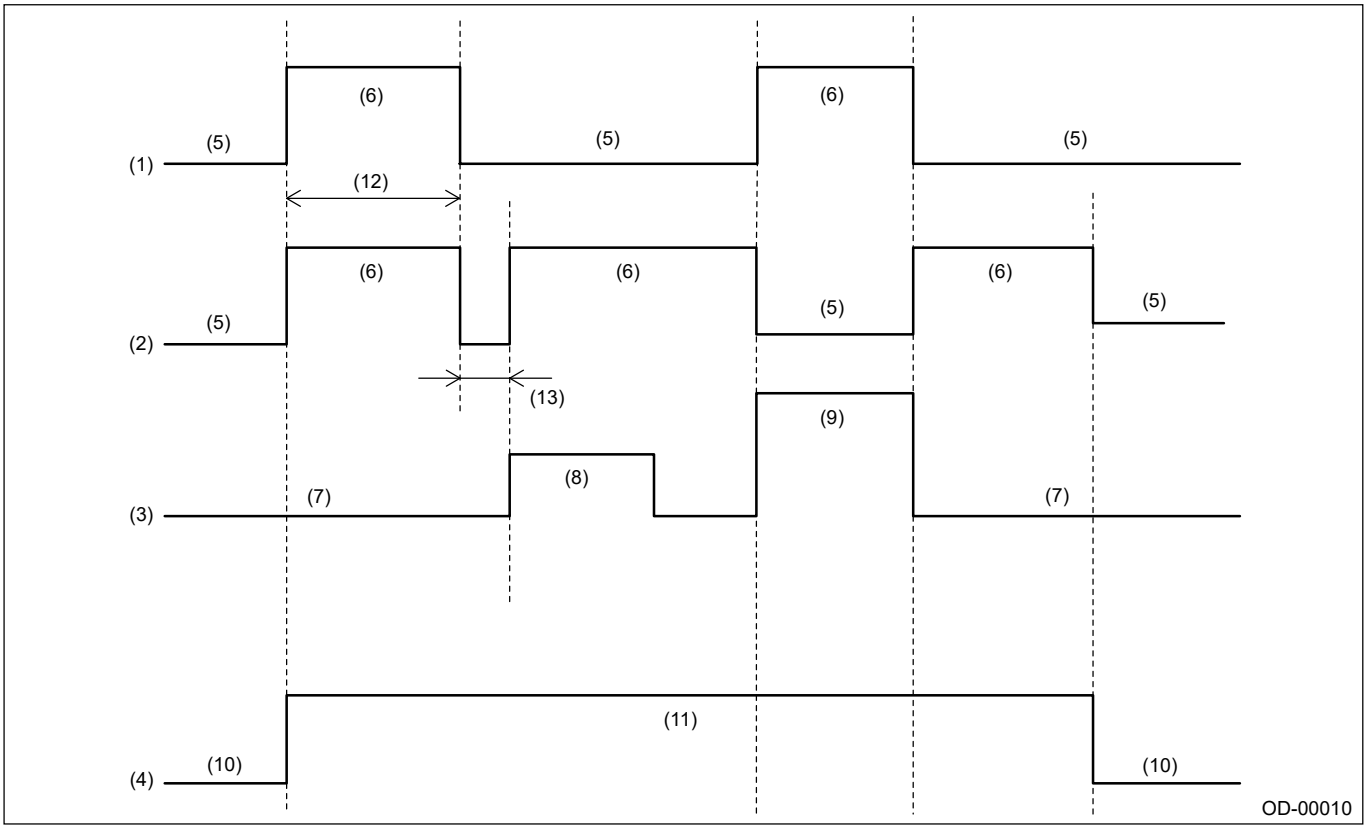
OCCUPANT DETECTION(DIAGNOSTICS) > Inspection Mode

PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

OCCUPANT DETECTION(DIAGNOSTICS) > Warning Light Illumination Pattern



INSPECTION

1. AIRBAG WARNING LIGHT

Note:

Refer to AIRBAG (DIAGNOSTICS). Ref. to AIRBAG(DIAGNOSTICS)>Warning Light Illumination Pattern.

2. PASSENGER'S AIRBAG ON/OFF INDICATOR

(1) Passenger's airbag ON indicator light	(6) Light ON	(10) OFF
(2) Passenger's airbag OFF indicator light	(7) Empty	(11) ON
(3) Occupant seating	(8) Child	(12) Approx. 6 seconds
(4) Ignition switch	(9) Adult	(13) Approx. 2 seconds
(5) Light OFF		

OCCUPANT DETECTION(DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT DOES NOT ILLUMINATE

1. AIRBAG WARNING LIGHT

Note:
Refer to AIRBAG (DIAGNOSTICS). Ref. to AIRBAG(DIAGNOSTICS)>Warning Light Illumination Pattern.

2. PASSENGER'S AIRBAG ON/OFF INDICATOR

Detecting condition:

- Passenger's airbag ON/OFF indicator malfunction
- Airbag control module to combination meter circuit is shorted or open.
- Grounding circuit is faulty.
- Connector connection is improper.
- Airbag control module is faulty.
- Occupant detection control module is faulty.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1661 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B1661. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1661 PASSENGER'S AIRBAG ON/OFF INDICATOR FAILURE.
No	Go to 2.

2. CHECK WARNING BOX.

Check for poor contact of the warning box connector.

Is there poor contact of connector?

Yes	Repair or replace the poor contact.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any DTC other than DTC B1661 displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. REZERO.

Perform [Rezero]. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

Does the passenger's airbag indicator illuminate?

Yes	Finish the diagnosis.
No	Replace the cushion frame assembly. Ref. to SEATS>Front Seat>DISASSEMBLY.

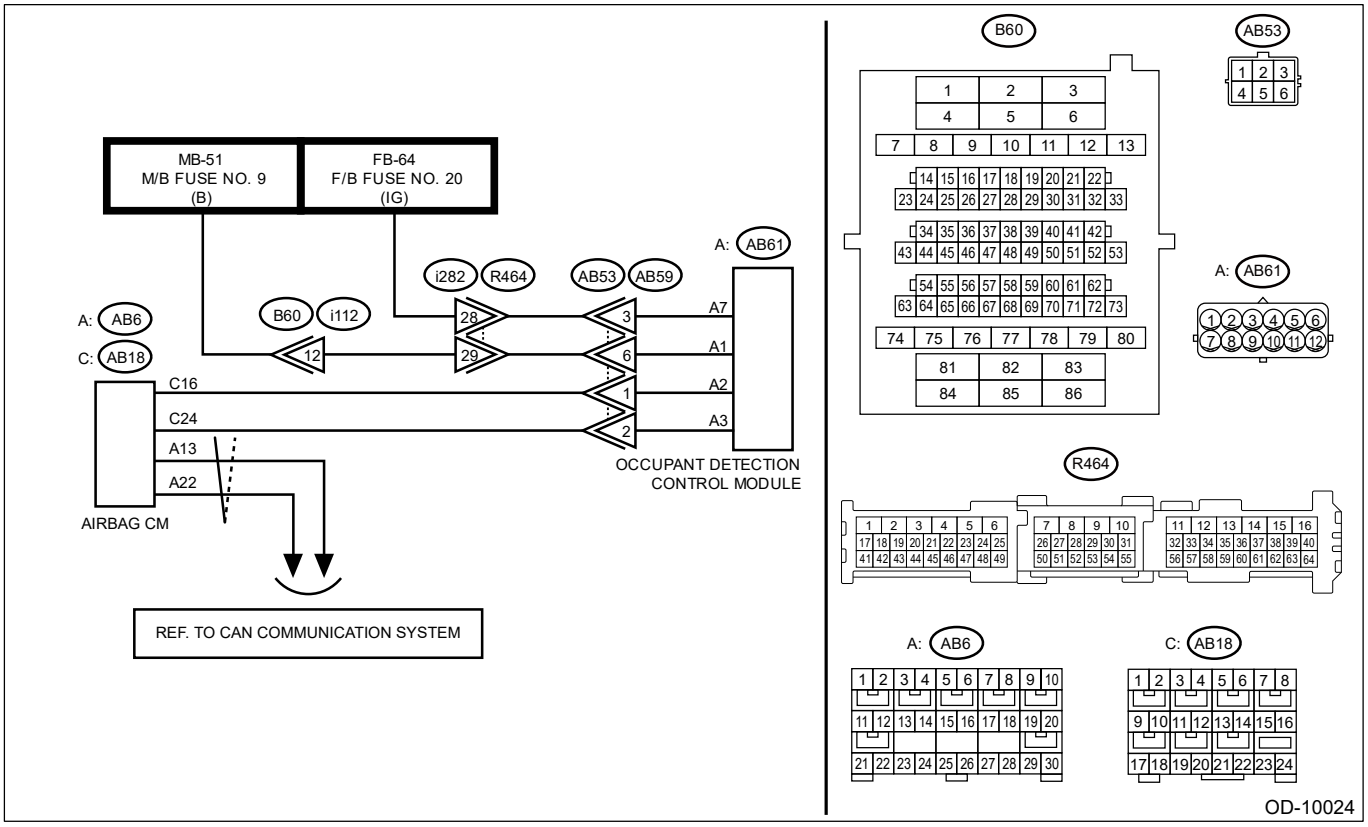
OCCUPANT DETECTION(DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT REMAINS ON

Note:

For the diagnostic procedures, refer to "WARNING LIGHT DOES NOT ILLUMINATE." Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Warning Light Illumination Pattern>WARNING LIGHT DOES NOT ILLUMINATE.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication



INSPECTION

1. COMMUNICATION WITH [Airbag] IS IMPOSSIBLE

Detecting condition:
Defective harness connector
Trouble symptom:
Communication is impossible between [Airbag] and Subaru Select Monitor.
Note:
Refer to AIRBAG (DIAGNOSTICS). Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

2. COMMUNICATION WITH [Occupant Detection] IS IMPOSSIBLE

Note:
The occupant detection system communicates with the Subaru Select Monitor via the airbag control module.
Detecting condition:
Defective harness connector between airbag control module and occupant detection control module
Trouble symptom:
Communication is impossible between the airbag control module and the occupant detection control module.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.
Note:
Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).
Wiring diagram:
Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

1. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check whether the communication with [Airbag] can be executed normally.

Is communication with [Airbag] possible?

Yes	Go to 5.
No	Go to 2.

2. CHECK SUBARU SELECT MONITOR COMMUNICATION.

Using the Subaru Select Monitor, check whether the communication with [Body Control] can be executed normally.

Is communication with [Body Control] possible?

Yes	Refer to AIRBAG (DIAGNOSTICS). Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.
No	Go to 3.

3. CHECK SUBARU SELECT MONITOR.

Connect the Subaru Select Monitor to another vehicle to check whether the communication can be executed normally.

Does the Subaru Select Monitor communicate?

Yes	Go to 4.
No	Repair or replace the Subaru Select Monitor.

4. CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.

Check for malfunction in harness between data link connector and body integrated unit on vehicle to be diagnosed.

Is the check result OK?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair or replace the faulty harness.

5. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (OPEN CIRCUIT IN IGNITION POWER SUPPLY).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and leave it for 60 seconds or more.
2. Disconnect the connector (AB61) of occupant detection control module.
3. Connect the battery ground terminal and turn the ignition switch to ON.
4. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

   Caution:

   Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC.

   Connector & terminal

   (AB61) No. 7 (+) — Chassis ground (−):

Is the voltage 11 V or more?

Yes	Go to 7.
No	Go to 6.

6. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (OPEN CIRCUIT IN IGNITION POWER SUPPLY).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and leave it for 60 seconds or more.
2. Disconnect the connector (AB59) of seat harness.
3. Connect the connector (1AB) in the test harness AB to the connector (AB53).
4. Connect the battery ground terminal and turn the ignition switch to ON.
5. Using a tester, measure the voltage between connector (2AB) in test harness AB and chassis ground.

   Connector & terminal

   (2AB) No. 3 (+) — Chassis ground (−):

Is the voltage 11 V or more?

Yes	Replace the seat harness.
No	Check rear harness, bulkhead wiring harness, instrument panel wiring harness in this order, and replace the faulty harness.

7. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (SHORT CIRCUIT IN IGNITION POWER SUPPLY).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and leave it for 60 seconds or more.
2. Using a tester, measure the resistance between occupant detection control module connectors.

Caution:

Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB61) No. 7 — (AB61) No. 1 — 12 (except for No. 7):

Is the resistance 1 MΩ or more?

Yes	Go to 9.
No	Go to 8.

8. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (SHORT CIRCUIT IN IGNITION POWER SUPPLY).

1. Disconnect the connector (AB59) of seat harness.
2. Connect the connector (1AB) in the test harness AB to the connector (AB53).
3. Using a tester, measure the resistance between terminals in test harness AB connector (2AB).

Connector & terminal

(2AB) No. 3 — (2AB) No. 1 — 6 (except for No. 3):

Is the resistance 1 MΩ or more?

Yes	Replace the seat harness.
No	Check rear harness, bulkhead wiring harness, instrument panel wiring harness in this order, and replace the faulty harness.

9. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (OPEN CIRCUIT IN GROUND).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB6, AB17, AB18) from airbag CM.
3. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
4. Using a tester, measure the resistance in harness between occupant detection control module connector and connector (6AG) in test harness AG.

   Caution:

   Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC.

   Connector & terminal

   (AB61) No. 2 — (6AG) No. 9:

   (AB61) No. 3 — (6AG) No. 11:

Is the resistance less than 10 Ω?

Yes	Go to 11.
No	Go to 10.

10. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (OPEN CIRCUIT IN GROUND).

1. Disconnect the connector (AB59) of seat harness.
2. Connect the connector (1AB) in the test harness AB to the connector (AB53).
3. Using a tester, measure the resistance between the test harness AB connector (2AB) and the test harness AG connector (6AG).

   Connector & terminal

   (2AB) No. 1 — (6AG) No. 9:

   (2AB) No. 2 — (6AG) No. 11:

Is the resistance less than 10 Ω?

Yes	Replace the seat harness.
No	Check rear harness, bulkhead wiring harness, instrument panel wiring harness in this order, and replace the faulty harness.

11. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (SHORT CIRCUIT IN GROUND).

Using a tester, measure the resistance between connectors in test harness AG.

Connector & terminal

(6AG) No. 9 — All terminals in test harness AG (except for (6AG) No. 9):

(6AG) No. 11 — All terminals in test harness AG (except for (6AG) No. 11):

Is the resistance 1 MΩ or more?

Yes	Go to 13.
No	Go to 12.

12. CHECK HARNESS IN OCCUPANT DETECTION CONTROL MODULE (SHORT CIRCUIT IN GROUND).

1. Disconnect the connector (AB59) of seat harness.
2. Using a tester, measure the resistance between connectors in test harness AG.

   Connector & terminal

   (6AG) No. 9 — All terminals in test harness AG (except for (6AG) No. 9):

   (6AG) No. 11 — All terminals in test harness AG (except for (6AG) No. 11):

Is the resistance 1 MΩ or more?

Yes	Replace the seat harness.
No	Check rear harness, bulkhead wiring harness, instrument panel wiring harness in this order, and replace the faulty harness.

13. CHECK FOR POOR CONTACT.

Check for poor contact of connector of occupant detection system.

Is the check result OK?

Yes	Replace the occupant detection control module.
No	Repair or replace the connector. (Replace the harness without repairing the airbag system connector.)

OCCUPANT DETECTION(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Data Monitor>LIST.**

OCCUPANT DETECTION(DIAGNOSTICS) > Data Monitor

LIST

Items to be displayed	Contents	Standard/Unit	Note
Front Passenger Seat Status	Display the status of passenger seat's occupant.	When status is not confirmed: Unknown When the seat is unoccupied or when child restraint seat is installed: Empty or Child When occupant is adult: Adult or Child	—
Front Passenger Seatbelt Status	Display the status of passenger's seat buckle switch.	When status is not confirmed or when buckle switch is faulty: Unknown or fault When buckle switch is not engaged: Unbelted When buckle switch is engaged: Belted	—
Front-Left Sensor Load Value	Load value of occupant detection sensor is displayed.	−75.85 — 104.73 kg	—
Front-Right Sensor Load Value	Load value of occupant detection sensor is displayed.	−75.85 — 104.73 kg	—

Items to be displayed	Contents	Standard/Unit	Note
Rear-Left Sensor Load Value	Load value of occupant detection sensor is displayed.	−75.85 — 104.73 kg	—
Rear-Right Sensor Load Value	Load value of occupant detection sensor is displayed.	−75.85 — 104.73 kg	—
Total Load Value	Total load value of occupant detection sensor is displayed.	−303.40 — 418.94 kg	Set the weight for sensitivity inspection, and check that the load value is nearly equal to it.
Check1	Information for development	—	Not used.

OCCUPANT DETECTION(DIAGNOSTICS) > Rezero

OPERATION

Note:

When any of the following operation has been done, be sure to perform [Rezeroing] of occupant detection system. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

- **Replacing occupant detection system**
- **Removing and disassembling passenger's seat**
- **Loosening passenger's seat bolt**

Caution:

[Rezero] operation must be completed thoroughly.

1. Park empty vehicle on a level surface.
2. Check that all harness and connectors are connected.
3. Check the following items to adjust the condition of the vehicle.
   - Adjust the seat backrest to be fully upright. (For models with power seats, press the power seat button until the backrest comes to a stop.)
   - Do not place anything on the top of the seat cushion.
   - Sit on the seat cushion to smooth the seat surface.
   - Check that the passenger's seat belt is not inserted into the buckle, not tense or not stuck.
   - Check that ambient temperature is in a range from 0 — 40°C (32 — 104°F).
4. Connect the Subaru Select Monitor.
5. Turn the ignition switch to OFF, then turn it to ON again.

   Note:

   - **This operation is performed to readjust the standard of occupant detection sensor.**
   - **Do not touch the seat until the Rezero is completed. If you have touched the seat even if only once, perform operations from the step 3) again.**
6. On [Start] display, select [Diagnosis].
7. On [Vehicle selection] display, input the target vehicle information and select [OK].
8. On [Main Menu] display, select [Each System].
9. On [Select System] display, select [Occupant Detection].
10. On [Occupant Detection] display, select [DTC].
11. – After replacement of passenger's seat

    Check that no DTC other than DTC B178C is displayed in current malfunction. When B178B is recorded, this means that [Rezero] for passenger's seat was not performed at seat factory. In this case, replace the passenger's seat. When any other DTC is displayed, perform the diagnosis according to the DTC.

    – After replacement of the occupant detection control module

    Check that no DTC other than DTC B178B and B178C is displayed in current malfunction. When DTC other than B178B and B178C is displayed, perform the diagnosis according to the DTC.

    – When collision detection DTC is recorded

    Check that no DTC other than DTC B1783, B1784, B1785 and B1786 is displayed in current malfunction. Perform the diagnosis according to the DTC.
12. On [Occupant Detection] display, select [Work Support].
13. On [Work Support] display, select [Rezero].
14. After [See service manual. And check vehicle condition for successfully completing.] is displayed on

the screen, check the vehicle condition and select [Next].

15. When [Rezero] is performed after replacing the occupant detection control module and passenger's seat, [Calibration error has occurred. See service manual.] is displayed on the screen. In this case, check the replacement status described in step 11, and select [Next].

16. [Rezeroing Adjust the passenger seat to the condition shown in service manual.] is displayed on the screen. Slide the passenger's seat all the way to the front, check that the backrest is adjusted to the most upright position, and select [Next].

17. When [Rezeroing Unbelt the passenger seatbelt.] is displayed, make sure the passenger's seatbelt is disconnected from the buckle and select [Next].

18. When [Rezeroing Confirm ambient temperature Between 0 and 40°C. (32 and 104°F)] is displayed on the screen, check that ambient temperature at the seat is in a range from 0 — 40°C (32 — 104°F) and select [Next].

19. When [Rezeroing Empty the passenger seat. Turn ignition OFF, and within 10 seconds, turn ignition ON again.] is displayed on the screen, turn the ignition switch to OFF and then ON again while the passenger's seat is empty, make sure that airbag OFF indicator illuminates and airbag ON indicator does not illuminate, and then select [Next].

Note:

After selecting [Next], [In process... Please wait for a while without touching vehicle.] is displayed. Do not touch or rock the vehicle while the message is displayed.

20. When the sensor rezero adjustment is complete successfully, [Rezeroing is successfully completed. Press "OK" to END.] is displayed. Select [OK].

Note:

- **When [Rezeroing is Unsuccessful.] is displayed during sensor rezero adjustment, select [OK] and perform the process according to the displayed error code. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero>LIST.**
- **When [Diagnostic code check. Some troubles occur. See service manual. Press "OK" to END.] is displayed during sensor rezero adjustment, select [OK] and read DTC of [Occupant Detection]. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).**
  When DTC is displayed, perform the diagnosis according to the DTC, and then perform sensor rezero adjustment. When DTC is not displayed, check the seat and vehicle status and then perform the sensor rezero adjustment again. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

21. [Next, execute sensor sensitivity check.] is displayed on the screen. Select [OK].

22. After [See service manual. And check vehicle condition for successfully completing.] is displayed on the screen, check the vehicle condition.

23. After [Sensitivity check Adjust the passenger seat to the condition shown in service manual.] is displayed on the screen, check that the passenger's seat does not change from the state confirmed in step 16), and select [Next].

24. When [Sensitivity check Unbelt the passenger seatbelt.] is displayed, make sure the passenger's seatbelt is disconnected from the buckle and select [Next].

25. When [Sensitivity check Confirm ambient temperature Between 0 and 40°C. (32 and 104° F)] is displayed on the screen, check that ambient temperature at the seat is in a range from 0 — 40°C (32 — 104°F) and select [Next].

26. When [Sensitivity check Empty the passenger seat.] is displayed on the screen, make sure the passenger's seat is empty and select [Next].

27. After [According to service manual, prepare the weight / SST whose mass is prescribed for sensitivity check, or measure mass of the weight by high-precision electronic scale] is displayed on the screen, prepare an inspection weight of 30 kg to 40 kg in total, and check that there is no dirt or foreign matter on it.

- If the prepared inspection weight is a weight of which the accuracy has been verified (within ±0.5%), only record the total weight since there is no need of measuring the actual value using a digital scale.
- If the weight value of prepared weight is not verified or the accuracy is unknown, prepare a digital scale and make sure that there is no dirt or foreign matter on it and that the indication is 0 g (kg) when the power is turned on. Then measure and record the total value.

Then select [OK].

Note:

If 98399AG000 and 98399AG010 are used together, also check that there is no dirt, foreign matter or damage on them, but there is no need of measuring.

28. When [Input the total mass value of the prepared weight / SST, or input the measured value of measuring the weight. (Unit: kg)] is displayed on the screen, input the total mass of weight recorded in step 27) and select [Enter].

Note:

If 98399AG000 and 98399AG010 are used together, input the total specified weight value: 35.812 kg.

29. After [Prepare•mass value of the measured weight] is displayed on the screen, check the input value and select [OK].
30. After [Put the prepared weight on the seat according to service manual.] is displayed on the screen, set the inspection weight on the center of passenger's seat surface, and select [OK].
    Note:
    After selecting [OK], [In process... Please wait for a while without touching vehicle.] is displayed. Do not touch or rock the vehicle while the message is displayed.
31. When [Sensitivity check is finished. Read Value : **** kg The mass of weight : **** kg] is displayed on the screen, select [OK] and turn the ignition switch OFF to exit.
32. When [Sensitivity check fail. See service manual. Press "OK" to END.] is displayed during sensor sensitive inspection, select [OK] and perform the operation from the beginning. If failure, error code is displayed. Check the error code and fix it. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

OCCUPANT DETECTION(DIAGNOSTICS) > Rezero

LIST

Code	Contents	Causes	Action to take
0020H	Timeout due to unstable load	Occupant detection control module judged the current situation as error because the over-specified load change occurred during rezeroing.	Perform rezeroing again at a stable place where vehicle vibration hardly occurs.
0021H	FL sensor upper limit error	Rezeroing cannot be executed because the load value of FL sensor exceeds the upper limit of rezero adjustment range.	Check that the seat is in proper position and fixed securely, and perform rezeroing again. If the same code appears again, replace the seat assembly. Ref. to SEATS>Front Seat.
0022H	FL sensor lower limit error	Rezeroing cannot be executed because the load value of FL sensor exceeds the lower limit of rezero adjustment range.	Check that the seat is in proper position and fixed securely, and perform rezeroing again. If the same code appears again, replace the seat assembly. Ref. to SEATS>Front Seat.
0023H	FR sensor upper limit error	Rezeroing cannot be executed because the load value of FR sensor exceeds the upper limit of rezero adjustment range.	Check that the seat is in proper position and fixed securely, and perform rezeroing again. If the same code appears again, replace the seat assembly. Ref. to SEATS>Front Seat.
0024H	FR sensor lower limit error	Rezeroing cannot be executed because the load value of FR sensor exceeds the lower limit of rezero adjustment range.	Check that the seat is in proper position and fixed securely, and perform rezeroing again. If the same code appears again, replace the seat assembly. Ref. to SEATS>Front

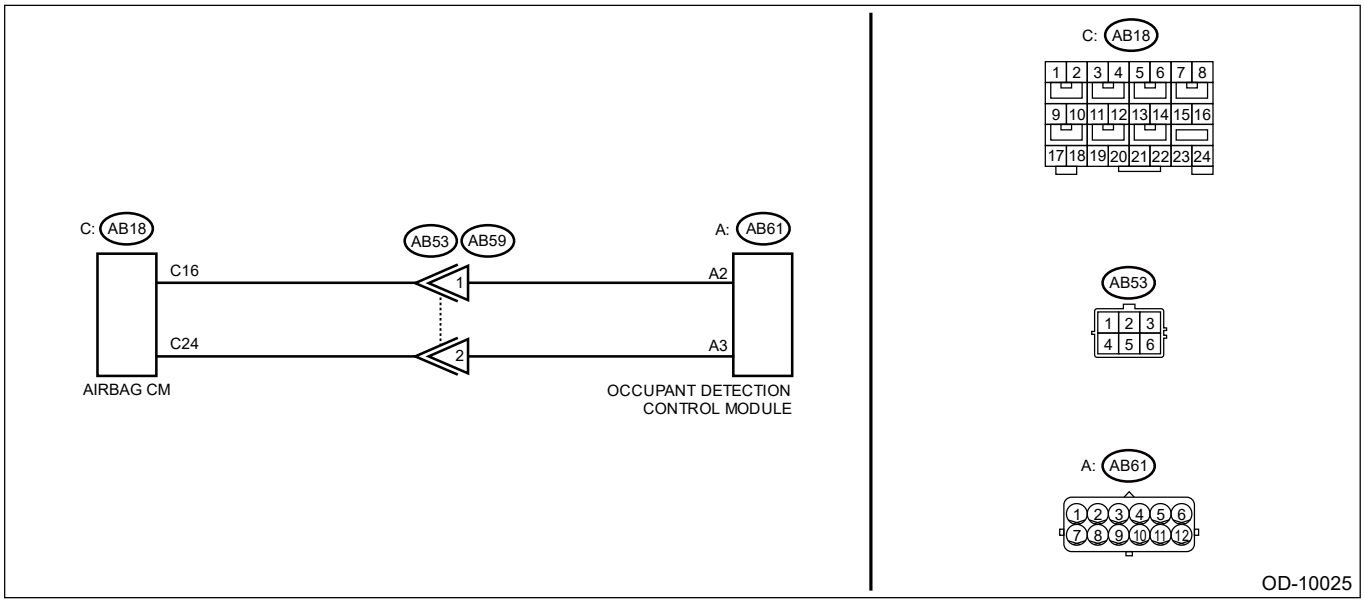
OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION

Diagnosis start condition:



When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.
- Seat harness is defective.
- Fuse is blown.
- Rear airbag harness is faulty.

Wiring diagram:

Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).

1. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any DTC other than DTC B1650 displayed? (Current malfunction)

Yes	Perform the diagnosis for displayed DTC other than DTC B1650.
No	Go to 2.

2. CHECK SEAT HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB61) from occupant detection control module.
3. Disconnect the connector (AB59) of seat harness and rear harness.
4. Connect the connector (1BB) in the test harness BB to the connector (AB59).
5. Using a tester, measure the resistance between occupant detection control module connector and connector (2BB) in test harness BB.

   Caution:

   Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC.

   Connector & terminal

   (AB61) No. 2 — (2BB) No. 1:

   (AB61) No. 3 — (2BB) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the seat harness. After replacement, if DTC B1650 is displayed, Go to 5.

3. CHECK SEAT HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Using a tester, measure the resistance between occupant detection control module connector and chassis ground, and between occupant detection control module connector terminals.

Caution:

Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB61) No. 2 — All terminals other than (AB61) No. 2:
(AB61) No. 3 — All terminals other than (AB61) No. 3:
(AB61) No. 2 — Chassis ground:
(AB61) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the seat harness. After repairing, if DTC B1650 is displayed, Go to 4.

4. CHECK SEAT HARNESS (BATTERY SHORT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

   Caution:

   Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC.

   Connector & terminal

   (AB61) No. 2 (+) — Chassis ground (−):
   (AB61) No. 3 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Replace the seat harness. After repairing, if DTC B1650 is displayed, Go to 4.

5. CHECK REAR HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
3. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
4. Connect the connector (1AB) in the test harness AB to the connector (AB53).
5. Measure the resistance between connector (6AG) in the test harness AG and connector (2AB) in the test harness AB.

   Connector & terminal

   (2AB) No. 1 — (6AG) No. 9:

   (2AB) No. 2 — (6AG) No. 11:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Replace the rear harness. After replacement, if DTC B1650 is displayed, replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module.

6. CHECK REAR HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Measure the resistance between connector (6AG) in the test harness AG and chassis ground, and between connectors in the test harness AG.

Connector & terminal

(6AG) No. 9 — All terminals in test harness AG (except for (6AG) No. 9):

(6AG) No. 11 — All terminals in test harness AG (except for (6AG) No. 11):

(6AG) No. 9 — Chassis ground:

(6AG) No. 11 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Replace the rear harness. After repairing, if DTC B1650 is displayed, replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module.

7. CHECK REAR HARNESS (BATTERY SHORT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Using a tester, measure the voltage between connector (6AG) in test harness AG and chassis ground.
   Connector & terminal
   (6AG) No. 9 (+) — Chassis ground (−):
   (6AG) No. 11 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Replace the rear harness. After repairing, if DTC B1650 is displayed, replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1655 FRONT BUCKLE SWITCH RH FAILURE

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Buckle switch RH failure (open, short, unit failure), seat harness malfunction (open, short), occupant detection system failure
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC for [Airbag ECU Malfunction] displayed? (Current malfunction)

Yes	Perform the diagnosis for [Airbag ECU Malfunction]. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1000 AIRBAG ECU MALFUNCTION.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

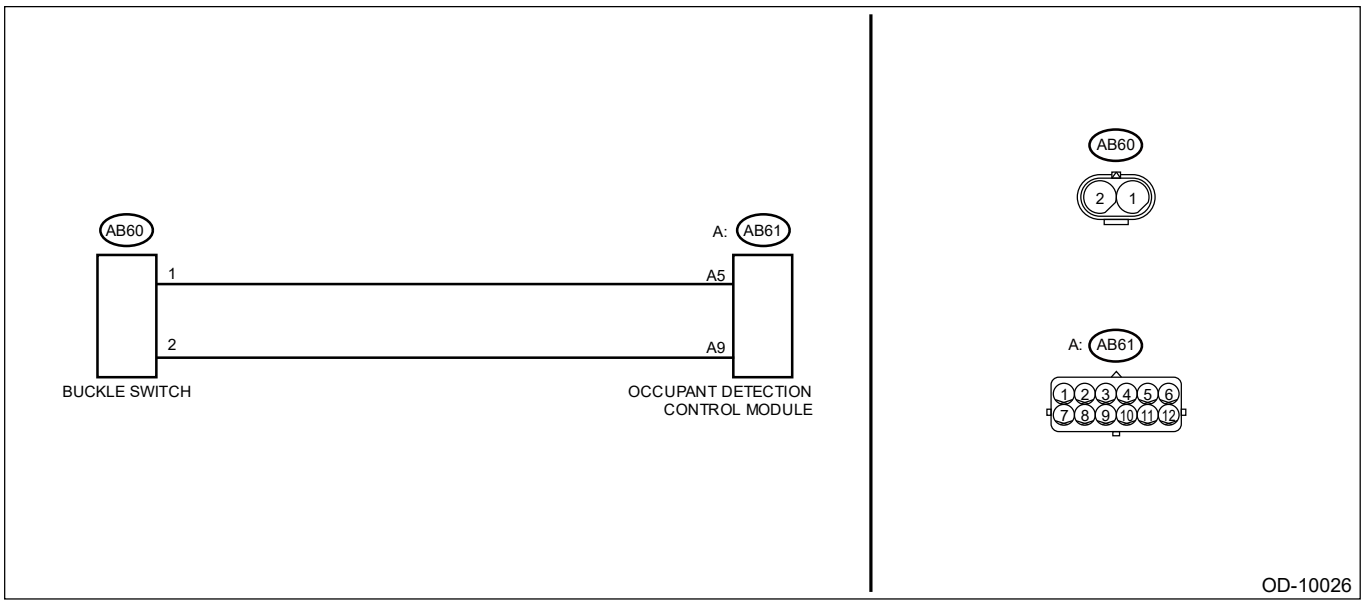
Is DTC B1650 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B1650. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1771 displayed? (Current malfunction)



Yes	Perform the diagnosis of DTC B1771. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1771 BUCKLE SWITCH.
No	Replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1771 BUCKLE SWITCH

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Open circuit, ground short circuit or short circuit to power supply in buckle switch harness
- Buckle switch malfunction (Communication circuit failure)
- Occupant detection control module buckle communication circuit malfunction

Trouble symptom:
Communication fails between occupant detection control module and buckle switch.
Wiring diagram:
Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).

1. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

PBCU DTC Check

Is any of DTC B177F, B1800, B1801, B1782, B1788, B178A or B1795 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B177F, B1800, B1801, B1782, B1788, B178A or B1795.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1655 displayed? (Current malfunction)

Yes	Go to 3.
No	Replace the occupant detection control module.

3. CHECK SEAT HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB61) from occupant detection control module.
3. Disconnect the connector (AB60) from the passenger's buckle switch.
4. Connect the connector (2D) in the test harness D to the connector (AB60).
5. Using a tester, measure the resistance between occupant detection control module connector and connector (3D) in test harness D.

   Caution:

   Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC.

   Connector & terminal

   (AB61) No. 5 — (3D) No. 5:

   (AB61) No. 9 — (3D) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Replace the seat harness.

4. CHECK SEAT HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Using a tester, measure the resistance between occupant detection control module connector and chassis ground, and between occupant detection control module connector terminals.

Caution:

Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB61) No. 5 — All terminals other than (AB61) No. 5:
(AB61) No. 9 — All terminals other than (AB61) No. 9:
(AB61) No. 5 — Chassis ground:
(AB61) No. 9 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Replace the seat harness.

5. CHECK SEAT HARNESS (BATTERY SHORT).

1. Connect the battery ground terminal and turn the ignition switch to ON.
2. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

   Caution:

   Connect the terminal in test harness BC to connector (AB61) terminal, and apply the tester to test harness BC.

   Connector & terminal

   (AB61) No. 5 (+) — Chassis ground (-):
   (AB61) No. 9 (+) — Chassis ground (-):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Replace the seat harness.

6. CHECK CONNECTOR.

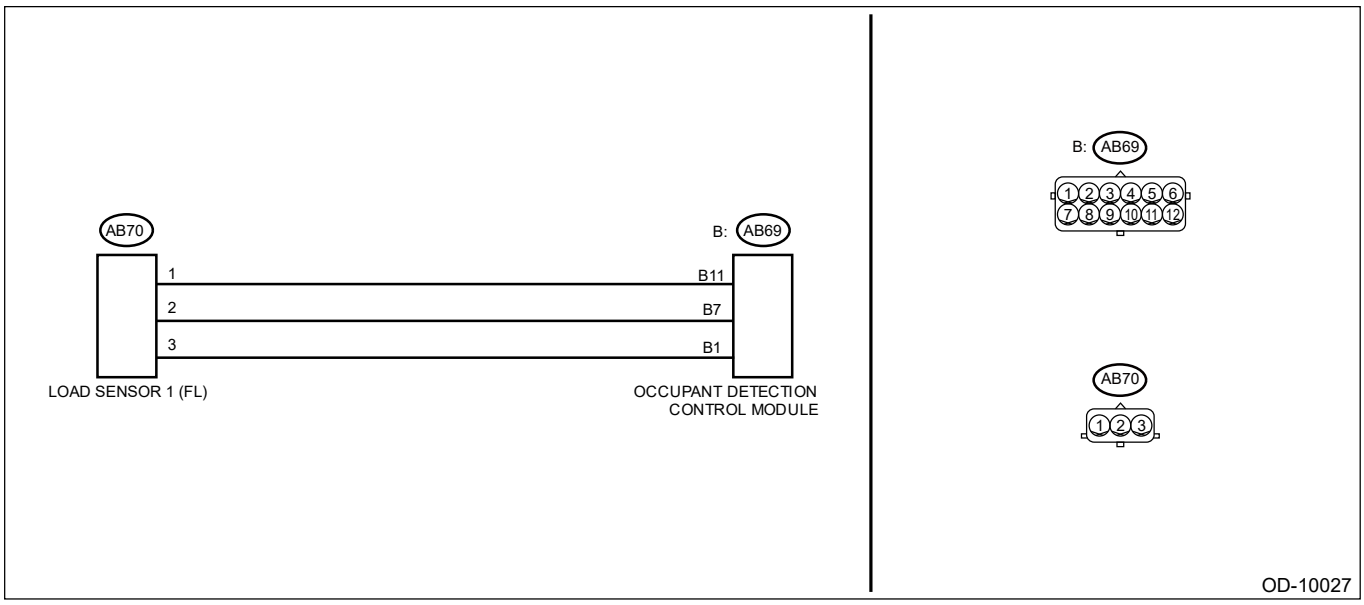
1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Check for poor contact in occupant detection control module connector and passenger's buckle switch connector.

Is the check result OK?

Yes	Go to 7.
No	Repair or replace the poor contact part.

7. CHECK PASSENGER'S SEAT BUCKLE SWITCH.

1. Disconnect the test harness D and test harness BC.
2. Connect the occupant detection control module connector.
3. Connect the test harness AE and test harness connector Y to buckle switch connector (AB60).
4. Connect the battery ground terminal and turn the ignition switch to ON.



Does the airbag warning light illuminate for 6 seconds and go off?

Yes	Replace the buckle switch. Ref. to SEAT BELT SYSTEM>Front Seat Belt>REMOVAL > SEAT BELT OUTER - FRONT.
No	Replace the occupant detection control module.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B177F FRONT LEFT OCCUPANT DETECTION SENSOR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Occupant detection sensor malfunction
Wiring diagram:
Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).

1. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is any of DTC B1771, B1788, B178A or B1795 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1771, B1788, B178A or B1795. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK SEAT HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB69) from occupant detection control module.
3. Disconnect connector (AB70) from the load sensor FL.
4. Using a tester, measure the resistance between occupant detection control module connector and load sensor FL connector.

Caution:

Connect the terminal in test harness BC to connector (AB69) and connector (AB70) terminals, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 1 — (AB70) No. 3:
(AB69) No. 7 — (AB70) No. 2:
(AB69) No. 11 — (AB70) No. 1:

Is the resistance less than 10 Ω?

Yes	 Go to 3.
No	Replace the seat harness.

3. CHECK SEAT HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Using a tester, measure the resistance between occupant detection control module connector and chassis ground, and between occupant detection control module connector terminals.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 1 — All terminals other than (AB69) No. 1:
(AB69) No. 7 — All terminals other than (AB69) No. 7:
(AB69) No. 11 — All terminals other than (AB69) No. 11:
(AB69) No. 1 — Chassis ground:
(AB69) No. 7 — Chassis ground:
(AB69) No. 11 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the seat harness.

4. CHECK SEAT HARNESS (BATTERY SHORT).

1. Connect the battery ground terminal and turn the ignition switch to ON.
2. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

   Caution:

   Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC.

   Connector & terminal

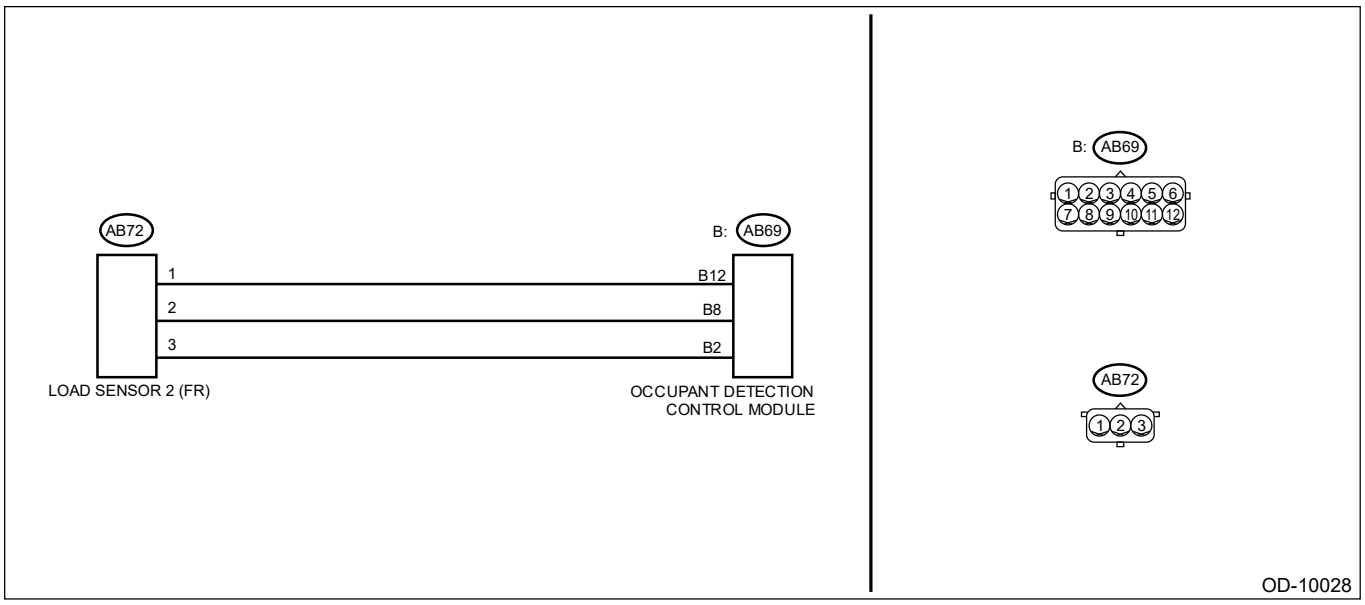
   (AB69) No. 1 (+) — Chassis ground (-):
   (AB69) No. 7 (+) — Chassis ground (-):
   (AB69) No. 11 (+) — Chassis ground (-):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Replace the seat harness.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Check for poor contact in occupant detection control module connector and load sensor connector.
3. Disconnect the test harness BC, and connect all the connectors.
4. Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B177F displayed? (Current malfunction)

Yes	Replace the cushion frame assembly. Ref. to SEATS>Front Seat.
No	Finish the diagnosis.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1780 FRONT RIGHT OCCUPANT DETECTION SENSOR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Occupant detection sensor malfunction
Wiring diagram:
Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).

1. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is any of DTC B1771, B1788, B178A or B1795 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1771, B1788, B178A or B1795. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK SEAT HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB69) from occupant detection control module.
3. Disconnect connector (AB72) from the load sensor FR.
4. Using a tester, measure the resistance between occupant detection control module connector and load sensor FR connector.

Caution:

Connect the terminal in test harness BC to connector (AB69) and connector (AB72) terminals, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 2 — (AB72) No. 3:
(AB69) No. 8 — (AB72) No. 2:
(AB69) No. 12 — (AB72) No. 1:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the seat harness.

3. CHECK SEAT HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Using a tester, measure the resistance between occupant detection control module connector and chassis ground, and between occupant detection control module connector terminals.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 2 — All terminals other than (AB69) No. 2:
(AB69) No. 8 — All terminals other than (AB69) No. 8:
(AB69) No. 12 — All terminals other than (AB69) No. 12:
(AB69) No. 2 — Chassis ground:
(AB69) No. 8 — Chassis ground:
(AB69) No. 12 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the seat harness.

4. CHECK SEAT HARNESS (BATTERY SHORT).

1. Connect the battery ground terminal and turn the ignition switch to ON.
2. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

   Caution:

   Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC.

   Connector & terminal

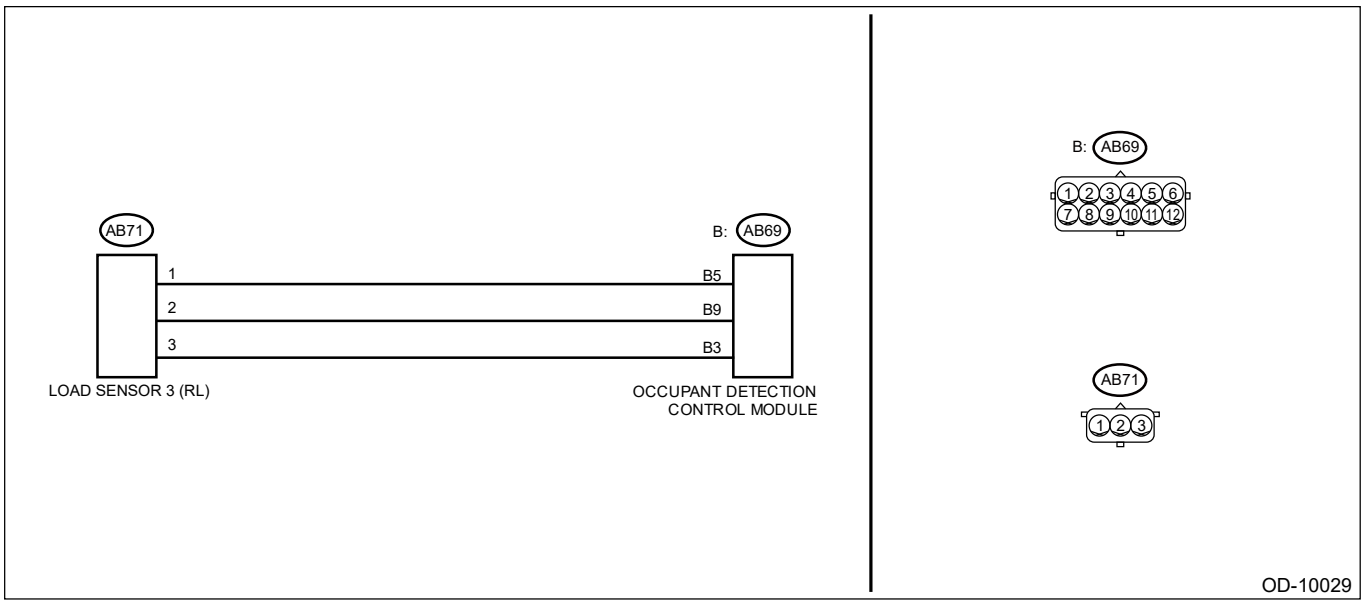
   (AB69) No. 2 (+) — Chassis ground (−):
   (AB69) No. 8 (+) — Chassis ground (−):
   (AB69) No. 12 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Replace the seat harness.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Check for poor contact in occupant detection control module connector and load sensor connector.
3. Disconnect the test harness BC, and connect all the connectors.
4. Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B1780 displayed? (Current malfunction)

Yes	Replace the cushion frame assembly. Ref. to SEATS>Front Seat.
No	Finish the diagnosis.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1781 REAR LEFT OCCUPANT DETECTION SENSOR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Occupant detection sensor malfunction
Wiring diagram:
Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).

1. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is any of DTC B1771, B1788, B178A or B1795 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1771, B1788, B178A or B1795. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK SEAT HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB69) from occupant detection control module.
3. Disconnect connector (AB71) from the load sensor RL.
4. Using a tester, measure the resistance between occupant detection control module connector and load sensor RL connector.

Caution:

Connect the terminal in test harness BC to connector (AB69) and connector (AB71) terminals, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 3 — (AB71) No. 3:
(AB69) No. 9 — (AB71) No. 2:
(AB69) No. 5 — (AB71) No. 1:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the seat harness.

3. CHECK SEAT HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Using a tester, measure the resistance between occupant detection control module connector and chassis ground, and between occupant detection control module connector terminals.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 3 — All terminals other than (AB69) No. 3:
(AB69) No. 9 — All terminals other than (AB69) No. 9:
(AB69) No. 5 — All terminals other than (AB69) No. 5:
(AB69) No. 3 — Chassis ground:
(AB69) No. 9 — Chassis ground:
(AB69) No. 5 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the seat harness.

4. CHECK SEAT HARNESS (BATTERY SHORT).

1. Connect the battery ground terminal and turn the ignition switch to ON.
2. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

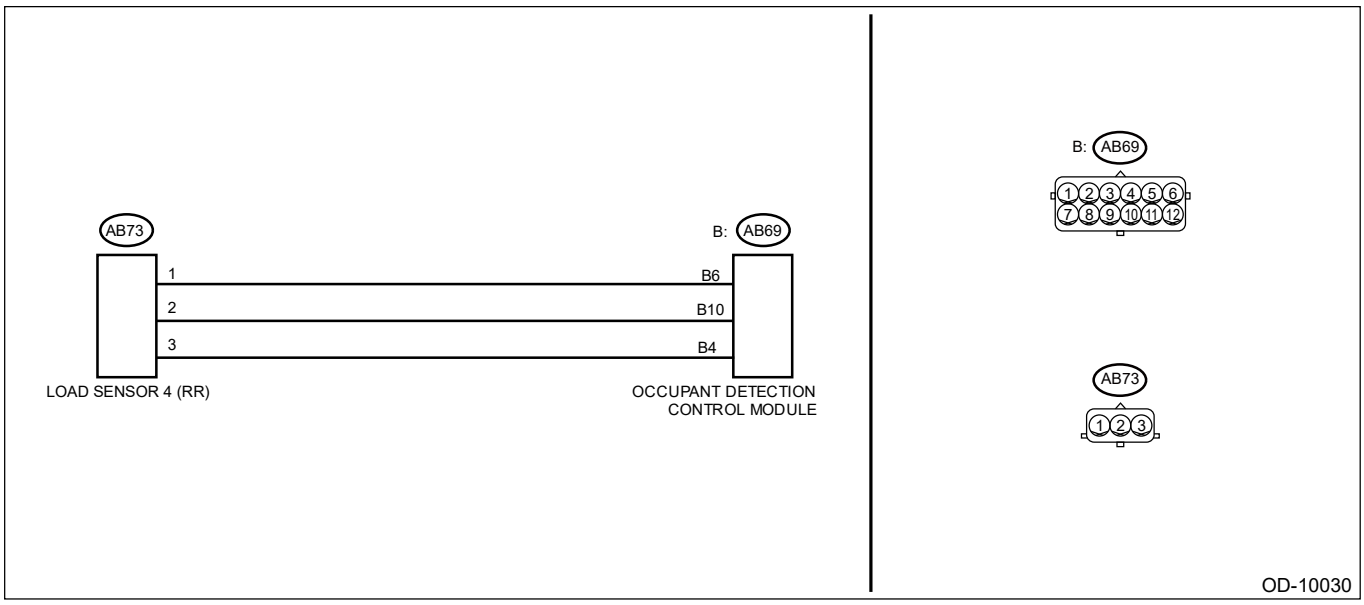
(AB69) No. 3 (+) — Chassis ground (−):
(AB69) No. 9 (+) — Chassis ground (−):
(AB69) No. 5 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Replace the seat harness.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Check for poor contact in occupant detection control module connector and load sensor connector.
3. Disconnect the test harness BC, and connect all the connectors.
4. Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B1781 displayed? (Current malfunction)

Yes	Replace the cushion frame assembly. Ref. to SEATS>Front Seat.
No	Finish the diagnosis.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1782 REAR RIGHT OCCUPANT DETECTION SENSOR

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Occupant detection sensor malfunction
Wiring diagram:
Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).

1. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is any of DTC B1771, B1788, B178A or B1795 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1771, B1788, B178A or B1795. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK SEAT HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB69) from occupant detection control module.
3. Disconnect connector (AB73) from the load sensor RR.
4. Using a tester, measure the resistance between occupant detection control module connector and load sensor RR connector.

Caution:

Connect the terminal in test harness BC to connector (AB69) and connector (AB73) terminals, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 4 — (AB73) No. 3:
(AB69) No. 10 — (AB73) No. 2:
(AB69) No. 6 — (AB73) No. 1:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Replace the seat harness.

3. CHECK SEAT HARNESS (SHORTED BETWEEN LINES AND SHORTED TO GROUND).

Using a tester, measure the resistance between occupant detection control module connector and chassis ground, and between occupant detection control module connector terminals.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB69) No. 4 — All terminals other than (AB69) No. 4:
(AB69) No. 10 — All terminals other than (AB69) No. 10:
(AB69) No. 6 — All terminals other than (AB69) No. 6:
(AB69) No. 4 — Chassis ground:
(AB69) No. 10 — Chassis ground:
(AB69) No. 6 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the seat harness.

4. CHECK SEAT HARNESS (BATTERY SHORT).

1. Connect the battery ground terminal and turn the ignition switch to ON.
2. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

Caution:

Connect the terminal in test harness BC to connector (AB69) and connector (AB73) terminals, and apply the tester to test harness BC.

Connector & terminal

(AB69) No. 4 (+) — Chassis ground (−):
(AB69) No. 10 (+) — Chassis ground (−):
(AB69) No. 6 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Replace the seat harness.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Check for poor contact in occupant detection control module connector and load sensor connector.
3. Disconnect the test harness BC, and connect all the connectors.
4. Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1782 displayed? (Current malfunction)

Yes	Replace the cushion frame assembly. Ref. to SEATS>Front Seat.
No	Finish the diagnosis.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1783 FRONT LEFT OCCUPANT DETECTION SENSOR COLLISION DETECTION

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Load sensor detects a collision.
Trouble symptom:
Occupant judgment of occupant detection control module stops.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK AIRBAG SYSTEM OPERATION.

Check the operation status of the airbag system.

Is there any airbag system operated?

Yes	Replace the seat assembly. Ref. to SEATS>Front Seat. Perform inspection referring to inspection part after collision. Ref. to AIRBAG SYSTEM>Inspection Locations after a Collision.
No	Go to 2.

2. PERFORM [Rezero].

Perform [Rezero]. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.

Is [Rezero] completed?

Yes	Go to 3.
No	Perform operation according to an error code displayed when [Rezero] fails. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero>LIST.

3. CHECK OCCUPANT DETECTION CONTROL MODULE.

1. Using the Subaru Select Monitor, perform the clear memory of [Occupant Detection]. Ref. to COMMON(diag)>Clear memory.

2. Execute the inspection mode. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Inspection Mode.
3. Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1783, B1784, B1785 or B1786 displayed? (Current malfunction)

Yes	Replace the occupant detection control module.
No	Currently, it is normal.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1784 FRONT RIGHT OCCUPANT DETECTION SENSOR COLLISION DETECTION

Note:

For details on DTC B1784, refer to DTC B1783. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1783 FRONT LEFT OCCUPANT DETECTION SENSOR COLLISION DETECTION.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1785 REAR LEFT OCCUPANT DETECTION SENSOR COLLISION DETECTION

Note:

For details on DTC B1785, refer to DTC B1783. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1783 FRONT LEFT OCCUPANT DETECTION SENSOR COLLISION DETECTION.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1786 REAR RIGHT OCCUPANT DETECTION SENSOR COLLISION DETECTION

Note:

For details on DTC B1786, refer to DTC B1783. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1783 FRONT LEFT OCCUPANT DETECTION SENSOR COLLISION DETECTION.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1787 VEHICLE SPEED INFORMATION

Diagnosis start condition:

When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- VDC malfunction
- CAN communication failure
- Occupant detection control module malfunction

Trouble symptom:

Occupant judgment of occupant detection control module stops.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Turn the ignition switch to ON.
3. Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1787 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

DTC Check

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
No	Go to 3.

3. CHECK VDC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC related to vehicle speed displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Replace the occupant detection control module.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

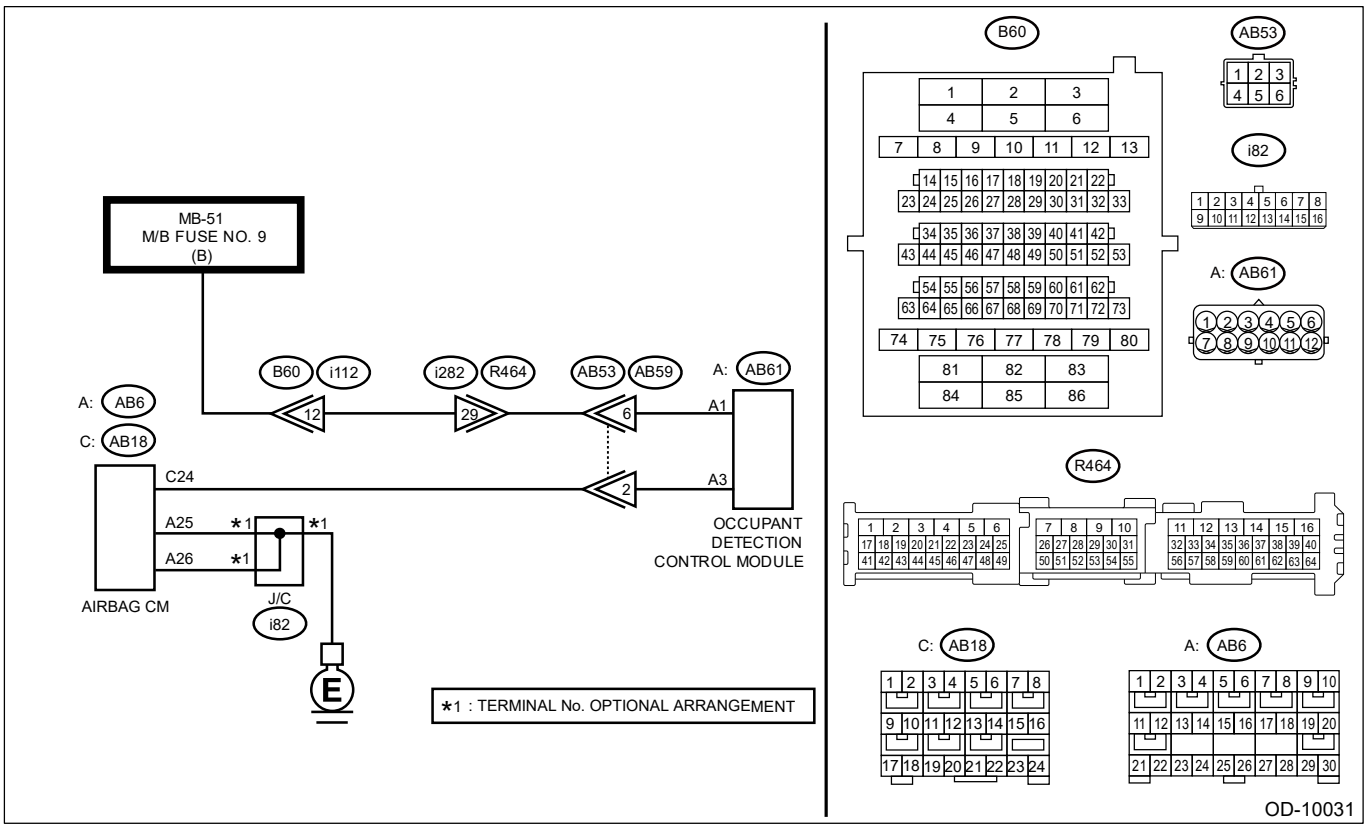
DTC B1788 OCCUPANT DETECTION SENSOR POWER SUPPLY

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
Occupant detection control module malfunction
Trouble symptom:
Occupant judgment of occupant detection control module stops.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any of DTC 177F, B1780, B1781 or B1782 displayed? (Current malfunction)



Yes	Replace the cushion frame assembly. Ref. to SEATS>Front Seat.
No	Replace the occupant detection control module.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1789 +B POWER SUPPLY

Diagnosis start condition:
When the ignition voltage is 10 V — 16 V
DTC detecting condition:
- Poor contact in harness between occupant detection CM and battery
- Battery malfunction
- Occupant detection control module malfunction

Trouble symptom:
Occupant judgment of occupant detection control module stops.
Wiring diagram:
Occupant detection system Ref. to WIRING SYSTEM>Occupant Detection System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

Note:

Before starting work, prepare two sets of TEST HARNESS BC (98299FL030).

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Charge or replace the battery.

2. CHECK FUSE.

Check the fuse of occupant detection control module.

Is the fuse OK?

Yes	Go to 3.
No	Replace the fuse. If the replaced fuse blows out easily, repair or replace the short circuit in the harness between battery and occupant detection control module.

3. CHECK OCCUPANT DETECTION CONTROL MODULE CONNECTOR.

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Confirm that the connector of the occupant detection control module (AB61) is securely connected.

Is the connector of the occupant detection control module securely connected?

Yes	Go to 4.
No	Reconnect the connector of the occupant detection control module.

4. CHECK HARNESS (OPEN CIRCUIT BETWEEN BATTERY AND OCCUPANT DETECTION CONTROL MODULE).

1. Disconnect the connector (AB61) of occupant detection control module.
2. Connect the battery ground terminal and turn the ignition switch to ON.
3. Using a tester, measure the voltage between occupant detection control module connector and chassis ground.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC.

Connector & terminal

(AB61) No. 1 (+) — Chassis ground (-):

Is the voltage 10 V or more?

Yes	Go to 8.
No	Go to 5.

5. CHECK HARNESS (OPEN CIRCUIT BETWEEN BATTERY AND REAR HARNESS).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Disconnect the connector (AB59) of seat harness.
3. Connect the connector (1AB) in the test harness AB to the connector (AB53).
4. Connect the battery ground terminal and turn the ignition switch to ON.
5. Using a tester, measure the voltage between connector (2AB) in test harness AB and chassis ground.

Connector & terminal

(2AB) No. 6 (+) — Chassis ground (-):

Is the voltage 10 V or more?

Yes	Go to 6.
No	Check rear harness, instrument panel wiring harness, bulkhead wiring harness in this order, and replace the faulty harness.

6. CHECK SEAT HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect the connector (1BB) in the test harness BB to the connector (AB59).
3. Using a tester, measure the resistance between occupant detection control module connector and connector (2BB) in test harness BB.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC.

Connector & terminal

(AB61) No. 1 — (2BB) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 7.
No	Replace the seat harness.

7. CHECK SEAT HARNESS (SHORT).

Using a tester, measure the resistance between occupant detection control module connector and chassis ground, and between occupant detection control module connector terminals.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC. Two sets of test harness BC are required.

Connector & terminal

(AB61) No. 1 — Chassis ground:

(AB61) No. 1 — All terminals other than (AB61) No. 1:

Is the resistance 1 MΩ or more?

Yes	Go to 8.
No	Replace the seat harness.

8. CHECK HARNESS (OPEN CIRCUIT BETWEEN OCCUPANT DETECTION CONTROL MODULE AND GROUND).

1. Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 60 seconds or more.
2. Connect all the connectors other than (AB61) of occupant detection control module.
3. Using a tester, measure the resistance between occupant detection control module connector (AB61) and chassis ground.

Caution:

Connect the terminal in test harness BC to connector (AB69) terminal, and apply the tester to test harness BC.

Connector & terminal

(AB61) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 11.
No	Go to 9.

9. CHECK HARNESS (OPEN CIRCUIT BETWEEN REAR HARNESS AND GROUND).

1. Disconnect the connector (AB59) of seat harness.
2. Connect the connector (1AB) in the test harness AB to the connector (AB53).
3. Using a tester, measure the resistance between connector (2AB) in test harness AB and chassis ground.

Connector & terminal

(2AB) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Replace the seat harness.
No	Go to 10.

10. CHECK HARNESS (OPEN CIRCUIT BETWEEN AIRBAG CM AND GROUND).

1. Disconnect the connectors (AB6, AB17, AB18) from airbag control module.
2. Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18).
3. Using a tester, measure the resistance between connector (2AG) in test harness AG and chassis ground.

Connector & terminal

(2AG) No. 4 — Chassis ground:

(2AG) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 11.
No	Check for poor contact in grounding point. If faulty, repair it.

11. CHECK POOR CONTACT OF CONNECTORS.

Check for poor contact in the connector of the occupant detection control module.

Is there poor contact?

Yes	Repair or replace the connector. (Replace the harness without repairing the airbag system connector.)
No	Replace the occupant detection control module.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B178A ECU INTERNAL CIRCUIT FAULT

Note:

For details on DTC B178A, refer to DTC B1788. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1788 OCCUPANT DETECTION SENSOR POWER SUPPLY.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B178B SEAT FACTORY CALIBRATION UNCOMPLETED

Diagnosis start condition:

When the ignition voltage is 10 V — 16 V

DTC detecting condition:

Sensor rezero adjustment was not performed at seat factory.

Note:

This DTC is detected only when replacing the occupant detection control module. When this DTC is detected at replacement of passenger's seat, this means that [Rezeroing] for the passenger's seat assembly was not performed at seat factory before shipping. In this case, replace the passenger's seat assembly.

Trouble symptom:

Occupant judgment of occupant detection control module stops.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK OPERATION.

Confirm which one was replaced, occupant detection control module or passenger's seat.

Is it the occupant detection control module that was replaced?

Yes	Perform [Rezeroing]. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.
No	Replace the passenger's seat assembly.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B178C VEHICLE FACTORY CALIBRATION UNCOMPLETED

Diagnosis start condition:

When the ignition voltage is 10 V — 16 V

DTC detecting condition:

- [Rezeroing] for the occupant detection system was not performed at vehicle factory.
- [Rezeroing] was not performed after replacing the occupant detection control module.
- [Rezeroing] was not performed after replacing the passenger's seat assembly.

Trouble symptom:

Occupant judgment of occupant detection control module stops.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>General Description>CAUTION.

1. PERFORM [Rezeroing].

1. Perform [Rezeroing]. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Rezero.
2. Using the Subaru Select Monitor, perform the clear memory of [Occupant Detection]. Ref. to COMMON(diag)>Clear memory.

3. Execute the inspection mode. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Inspection Mode.
4. Read the DTC of [Occupant Detection] using the Subaru Select Monitor. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B178C displayed? (Current malfunction)

Yes	Replace the occupant detection control module.
No	[Rezeroing] was not performed.

OCCUPANT DETECTION(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT

Note:

For details on DTC B1795, refer to DTC B1788. Ref. to OCCUPANT DETECTION(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1788 OCCUPANT DETECTION SENSOR POWER SUPPLY.

CRUISE CONTROL (DIAGNOSTICS)

CC(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Control Module I/O Signal
6. Diagnostic Procedure for Subaru Select Monitor Communication
7. Real-time Diagnosis
8. Cancel Code
9. Diagnostic Procedure with Cancel Code
10. Diagnostics with Phenomenon

CRUISE CONTROL (DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. CHECK MALFUNCTION INDICATOR LIGHT.

Make sure the malfunction indicator light illuminates.

Does the malfunction indicator light illuminate?

Yes	Go to 6.
No	Go to 3.

3. CHECK CRUISE INDICATOR LIGHT.

Make sure the cruise indicator light blinks.

Does the cruise indicator light blink?

Yes	Go to 8.
No	Go to 4.

4. CHECK CRUISE SWITCH OPERATION.

Check the CRUISE switch operation. (Check the illumination of the CRUISE indicator.)

Is the CRUISE switch turned to ON? (Does the CRUISE indicator illuminate?)

Yes	Go to 5.
No	Go to phenomenon 1. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

5. CHECK CRUISE CONTROL SET OPERATION.

Check the cruise control setting operation.

Can the cruise control be set while driving at 40 km/h (25 MPH) or more?

Yes	Go to 9.
No	Go to 8.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC related to engine or ABS/VDC displayed? (Current malfunction)

Yes	Record the DTC. Go to 7.
No	Go to phenomenon 2. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

7. CHECK FREEZE FRAME DATA.

Using the Subaru Select Monitor, check the Freeze Frame Data or Information in Trouble State.

Was the Freeze Frame Data or Information in Trouble State recorded?

Yes	Record the data. Perform the inspection according to the engine or ABS/VDC related DTC.
No	Perform the inspection according to the engine or ABS/VDC related DTC.

8. CHECK CANCEL CODE.

Read the cancel codes using the Subaru Select Monitor. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Cancel Code.

Note:

- **Do not turn the ignition switch to OFF after the cruise control is deactivated.**
- **Do not operate the cruise control command switch after the cruise control is deactivated.**

If the above is performed, the cancel code will be cleared.

Is a cancel code displayed?

Yes	Perform the diagnosis according to the cancel code. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Cancel Code>LIST.
No	Go to 9.

9. INSPECTION OF SET INDICATOR.

Check the illumination of the SET indicator.

Does the SET indicator illuminate?

Yes	Go to 10.
No	Go to phenomenon 3. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

10. CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED.

Make sure the vehicle speed is held within set speed.

Is the vehicle speed kept within the setting speed ±3 km/h (±2 MPH)? (Confirm that on a level road.)

Yes	Go to 11.
No	Go to phenomenon 4. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

11. CHECK RES/+ OPERATION.

Check the RES/+ switch operation.

Does the vehicle speed increase or return to set speed after RES/+ switch has been pressed?

Yes	Go to 12.
No	Go to phenomenon 5. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

12. CHECK SET/− OPERATION.

Check the SET/− switch operation.

Does the vehicle speed decrease after SET/− switch has been pressed?

Yes	Go to 13.
No	Go to phenomenon 6. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

13. CANCEL OPERATION CHECK.

Check the CANCEL switch operation.

Is the cruise control released after CANCEL switch has been pressed?

Yes	Go to 14.
No	Go to phenomenon 7. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

14. CHECK CRUISE CONTROL RELEASE OPERATION.

Check the cruise control release operation.

Is the cruise control released after brake pedal has been depressed?

Yes	Go to 15.
No	Go to phenomenon 8. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

15. CHECK CRUISE CONTROL RELEASE OPERATION.

Check the cruise control release operation.

Is the cruise control released after shifting to the neutral position?

Yes	Go to 16.
No	Go to phenomenon 9. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

16. CHECK CRUISE CONTROL RELEASE OPERATION.

Check the cruise control release operation.

Is the cruise control released after depressing the clutch pedal?

Yes	Finish the diagnosis.
No	Go to phenomenon 10. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>DIAGNOSTIC PROCEDURE WITH PHENOMENON.

CRUISE CONTROL (DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="4">Cruise Control Check List for Interview Date of Vehicle Bring-in Year Month Day</td></tr>

CRUISE CONTROL (DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. CRUISE CONTROL

- When performing the entire diagnosis or cruise control diagnosis, first start the engine and wait until initial illumination of the ABS/VDC warning light completes. (If you start the diagnostics before performing the above procedures, the cancel code "43" is recorded and CRUISE indicator does not illuminate even though the CRUISE switch is pressed.)
- When performing diagnosis, observe the legal speed limit on the road.
- The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
- Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.
- When removing the parts related to cruise control, refer to the caution of the cruise control system. Ref. to CRUISE CONTROL SYSTEM>General Description>CAUTION.

CRUISE CONTROL (DIAGNOSTICS) > General Description

GENERAL DESCRIPTION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor.
The on-board diagnosis function operates in two categories, which are used depending on the type of problems.

1. Cruise Control Cancel Conditions Diagnosis:
   (1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.
   (2) Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.
   Caution:
   - **In the cruise control memory, not only the cruise control "cancel" occurred (although the "cancel" operation is not entered by the driver), but also the "cancel" condition input by the driver is stored.**
   - **The latest memory content (latest code) is cleared when ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.**
2. Real-time diagnosis:
   Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.
   (1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.
   (2) Monitor the signal conditions from switches and sensors.

CRUISE CONTROL (DIAGNOSTICS) > General Description

INSPECTION

Before performing diagnosis, check the following items which might affect cruise control problems.

1. BASIC INSPECTION

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the main and other fuses, harnesses and connectors. Also check grounding.

CRUISE CONTROL (DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

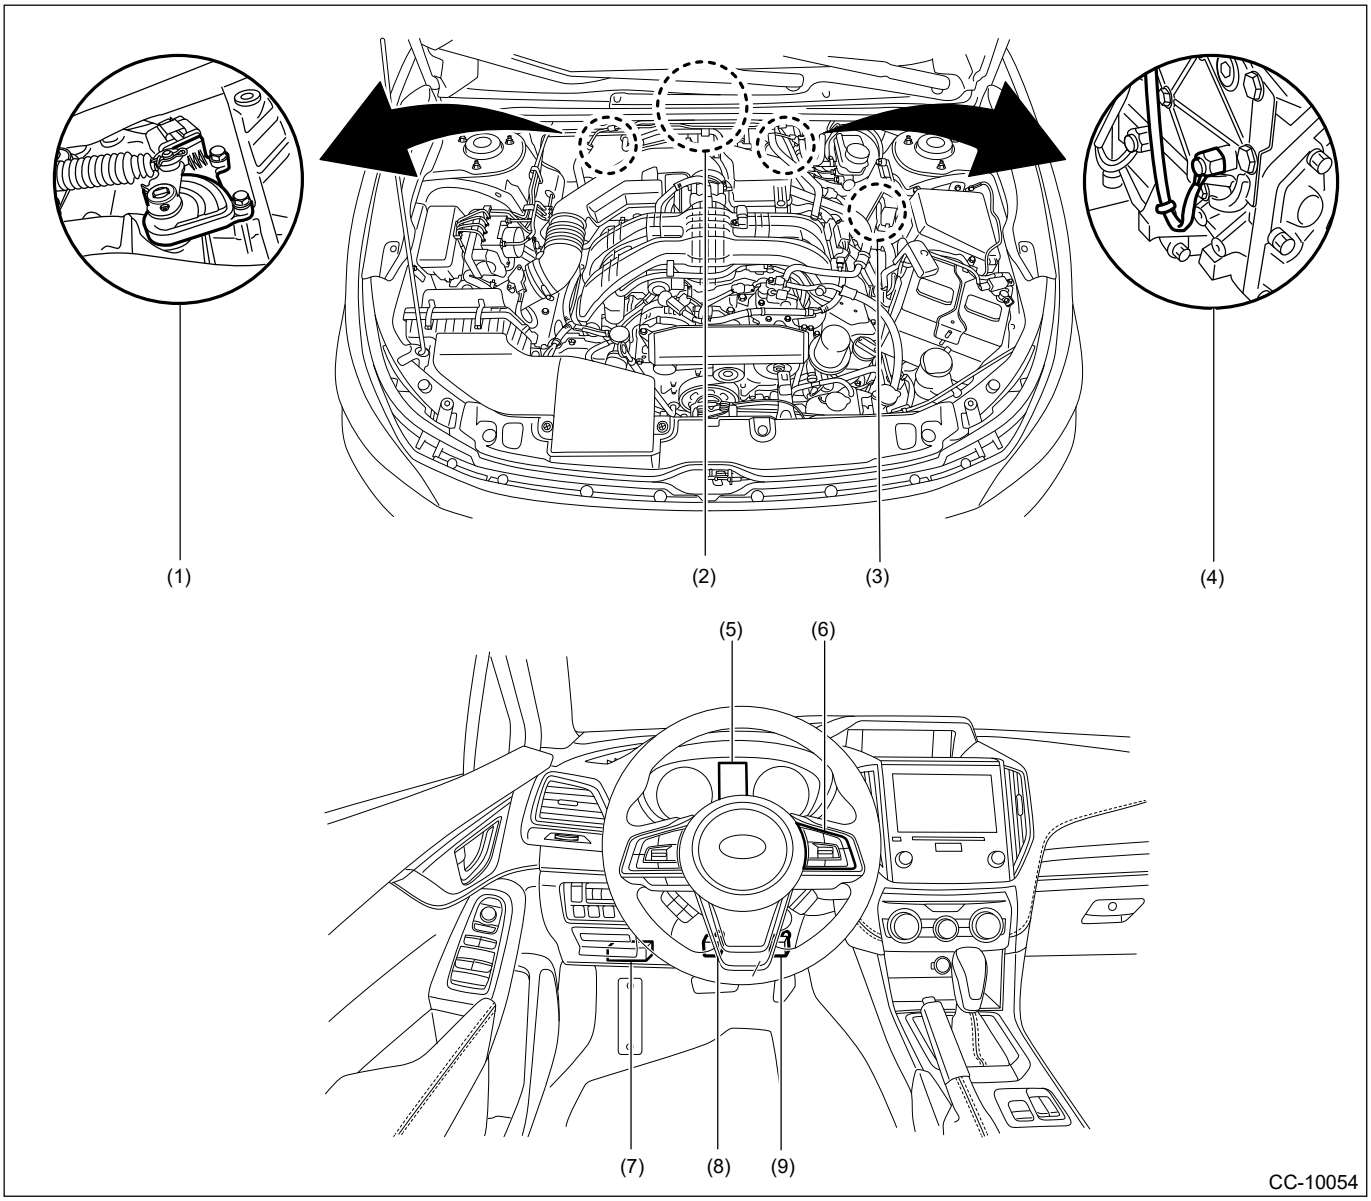

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used for Subaru Select Monitor 4.

CRUISE CONTROL (DIAGNOSTICS) > Electrical Component Location

LOCATION

(1) Inhibitor switch (CVT model)
(2) Transmission control module (TCM) (CVT model)
(3) Engine control module (ECM)
(4) Neutral position switch (MT model)
(5) Cruise indicator light and cruise set indicator light
(6) Cruise control command switch
(7) Data link connector
(8) Clutch switch (MT model)
(9) Stop light & brake switch

ELECTRICAL SPECIFICATION

For details on the input/output signals for the engine control module, refer to ENGINE (DIAGNOSTICS).

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Trouble symptom:

Cannot communicate with [Engine Control System].

Detecting condition:

- Defective connector
- Power supply circuit malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Note:

For diagnostic procedure, refer to the diagnosis for the engine.

CRUISE CONTROL (DIAGNOSTICS) > Real-time Diagnosis

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Select Vehicle] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Engine], and then select [Next].
5. On [Select Function] display, select [Data Monitor].
6. Make sure that normal display is shown when operated as follows:
   - Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
   - Turn the “CRUISE” switch to ON.
   - Turn the “CANCEL” switch to ON.
   - Turn the “SET/−” switch to ON.
   - Turn the “RES/+” switch to ON.
   - Depress or release the clutch switch.
   - Place the shift lever in any position other than neutral.

   Note:

   For detailed operation procedures, refer to “Application help”.

CRUISE CONTROL (DIAGNOSTICS) > Cancel Code

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Select Vehicle] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Engine], and then select [Next].
5. Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

   Note:

   When performing the entire diagnosis or cruise control diagnosis, first start the engine and wait until initial illumination of the ABS/VDC warning light completes. (If you start the diagnostics before performing the above procedures, the cancel code "43" is recorded and CRUISE indicator does not illuminate even though the CRUISE switch is pressed.)

   Caution:

   - **When performing diagnosis, observe the legal speed limit on the road.**
   - **The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.**
   - **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**
6. When the set speed is canceled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, selecting the [Cancel Code] on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.

   Note:

   The [Current] and [The past] are contained in the cancel code. The latest code recognized during current test drive is displayed in [Current]. Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in [The past].
7. Perform the clear memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory>OPERATION.

   Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on [Engine]. Ref. to COMMON(diag)>Clear memory>OPERATION.

   Note:

   - **The latest code will be cleared by turning ignition switch to OFF.**
   - **For detailed operation procedures, refer to "Application help".**
   - **For details on cancel codes, refer to List of Cancel Code. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Cancel Code>LIST.**

CRUISE CONTROL (DIAGNOSTICS) > Cancel Code

LIST

1. LIST OF CANCEL CODE

Note:

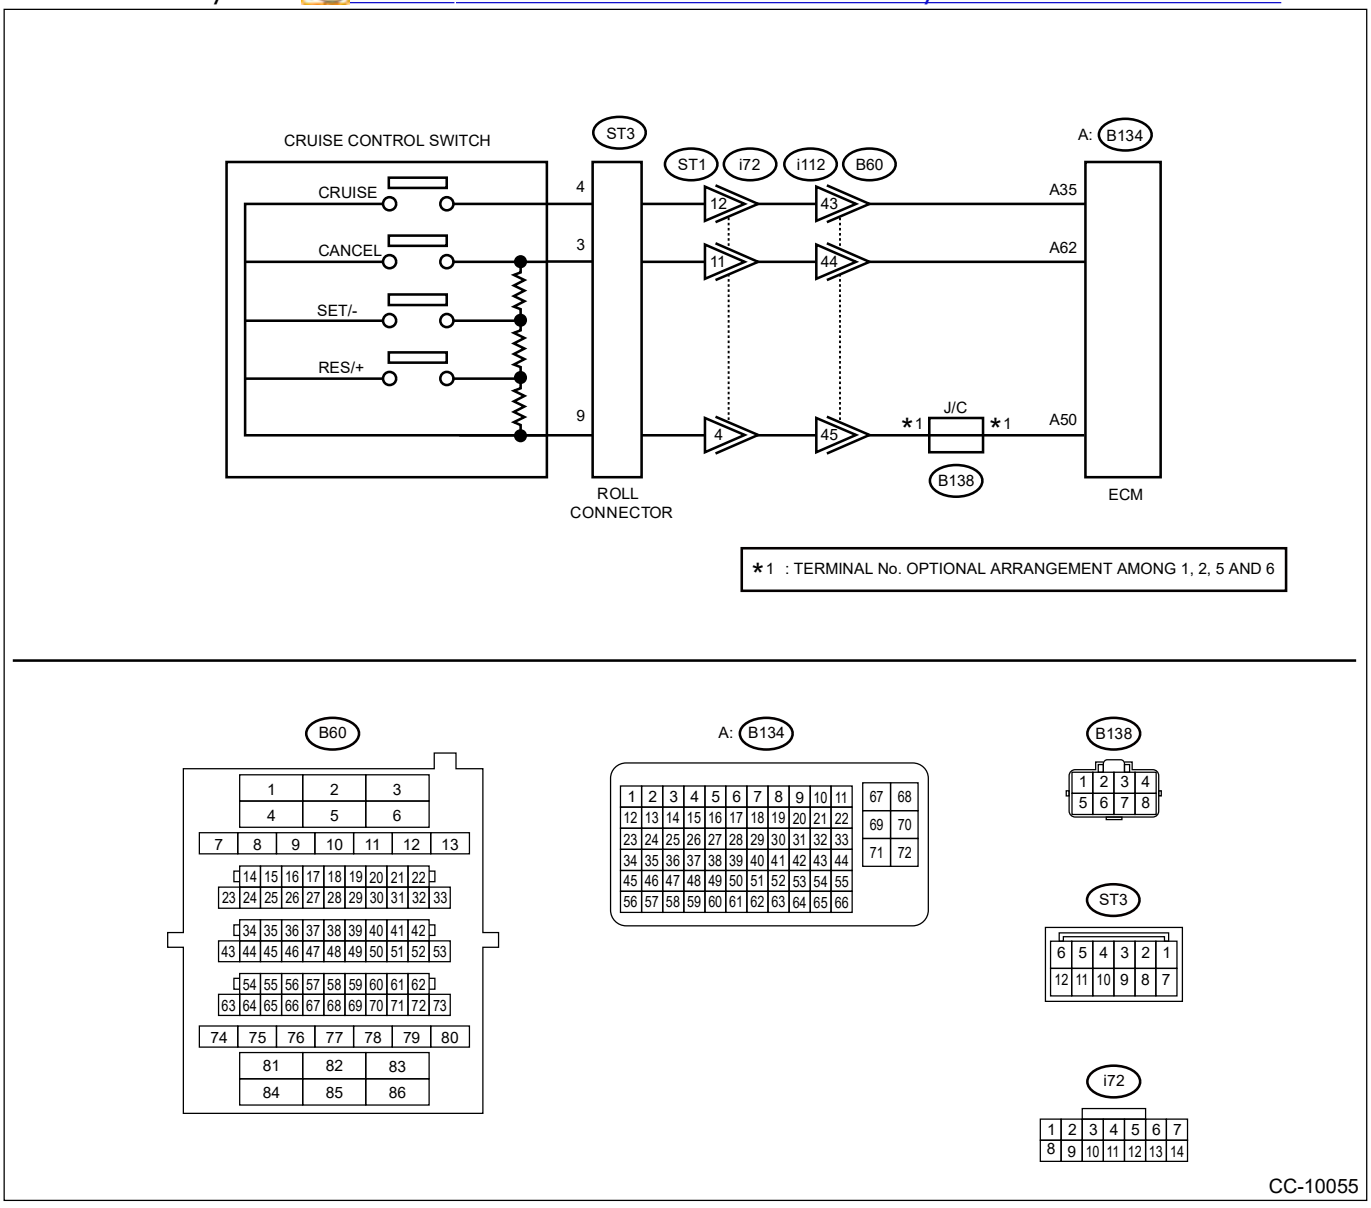
- **The cancel code is registered even when cancel is performed intentionally by the driver.**
- **Cancel codes are cleared if the ignition switch is turned to OFF.**
- **If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.**
- **If the cruise indicator light is flashing, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.**
- **To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.**

Code	Description & trouble part	Reference
11	Main switch	This code is displayed without operating the CRUISE switch. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.
12	Stop & Brake switch	This code is displayed without depressing the brake pedal. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>12.
13	Clutch switch	This code is displayed without depressing the clutch pedal. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>13.
14	Neutral switch	This code is displayed without shifting to neutral position. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>14.
15	Cancel switch	This code is displayed without operating the cancel switch. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>15.
16	Ignition switch	This code is displayed without operating the ignition switch. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>16.
21	Abnormality of switches when Ignition switch on	This code is displayed when the ignition switch is turned to ON without operating the cruise control command switch. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>21.
22	Abnormality of change in vehicle speed	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>22.
24	Abnormality of switches related to cruise control	This code is displayed with normal operation. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>24.
31	Abnormal engine speed Signal	Cruise in 2nd shift position or more. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>31.

Code	Description & trouble part	Reference
32	Cruse Control out of Range	This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>32.
34	Prohibition of cruise control at continuing big Accel. angle	This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>34.
35	Prohibition of cruise control at vehicle speed F/B malfunction	This code is displayed when driving condition is not suitable for cruise control. Eliminate the probable cause, and perform the cruise set operation again. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>35.
41	VDC/TCS Operating	This code is displayed when driving condition is not suitable for cruise control. Eliminate the probable cause, and perform the cruise set operation again. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>41.
43	ABS/VDC Failure	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>43.
44	Body Integrated unit Failure	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>44.
45	Meter Failure	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>45.
49	TCM Failure	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>49.
61	Brake Switch Failure	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>61.
62	Neutral Switch Failure	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>62.
63	Abnormality 1 of change in vehicle speed	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>63.
64	Engine Sensor Failure 1	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>64.
65	Abnormality 1 of switches related to cruise control	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>65.
66	Cruise Control Calculation Error	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>66.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

11



When CRUISE switch is pressed, or a malfunction related to CRUISE switch occurs, this is detected.

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

Cruise control system Ref. to WIRING SYSTEM>Cruise Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.

1. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
2. Disconnect the cruise control command switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between connector terminal and chassis ground.
   Connector & terminal
   (ST3) No. 3 (+) — Chassis ground (−):
   (ST3) No. 4 (+) — Chassis ground (−):

Is the voltage 5 V or more?

Yes	Go to 2.
No	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.

2. CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Using the tester, measure the resistance between cruise control command switch connector and chassis ground.
   Connector & terminal
   (ST3) No. 9 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Check for open circuit between cruise control command switch, ECM, and chassis ground and check the ECM.

3. PERFORM UNIT INSPECTION OF CRUISE CONTROL COMMAND SWITCH.

Measure the resistance between switch terminals when the cruise control command switch is not depressed.

Terminals

No. 3 — No. 9:

Is the resistance approx. 4 kΩ?

Yes	Go to 4.
No	Replace the cruise control command switch. Ref. to CRUISE CONTROL SYSTEM>Cruise Control Command Switch.

4. PERFORM UNIT INSPECTION OF CANCEL SWITCH.

1. Turn the ignition switch to OFF.
2. Remove the cruise control command switch. Ref. to CRUISE CONTROL SYSTEM>Cruise Control Command Switch.
3. Measure the resistance between switch terminals with the CANCEL switch pressed.

   Terminals

   No. 3 — No. 9:

Is the resistance approx. less than 1 Ω when the CANCEL switch is pressed?

Yes	Go to 5.
No	Replace the cruise control command switch. Ref. to CRUISE CONTROL SYSTEM>Cruise Control Command Switch.

5. PERFORM UNIT INSPECTION OF SET/− SWITCH.

Measure the resistance between the switch terminals with the SET/− switch pressed.

Terminals

No. 3 — No. 9:

Is the resistance approx. 250 Ω when the SET/− switch is pressed?

Yes	Go to 6.
No	Replace the cruise control command switch. Ref. to CRUISE CONTROL SYSTEM>Cruise Control Command Switch.

6. CHECK RES/+ SWITCH CIRCUIT.

Measure the resistance between the switch terminals with the RES/+ switch pressed.

Terminals

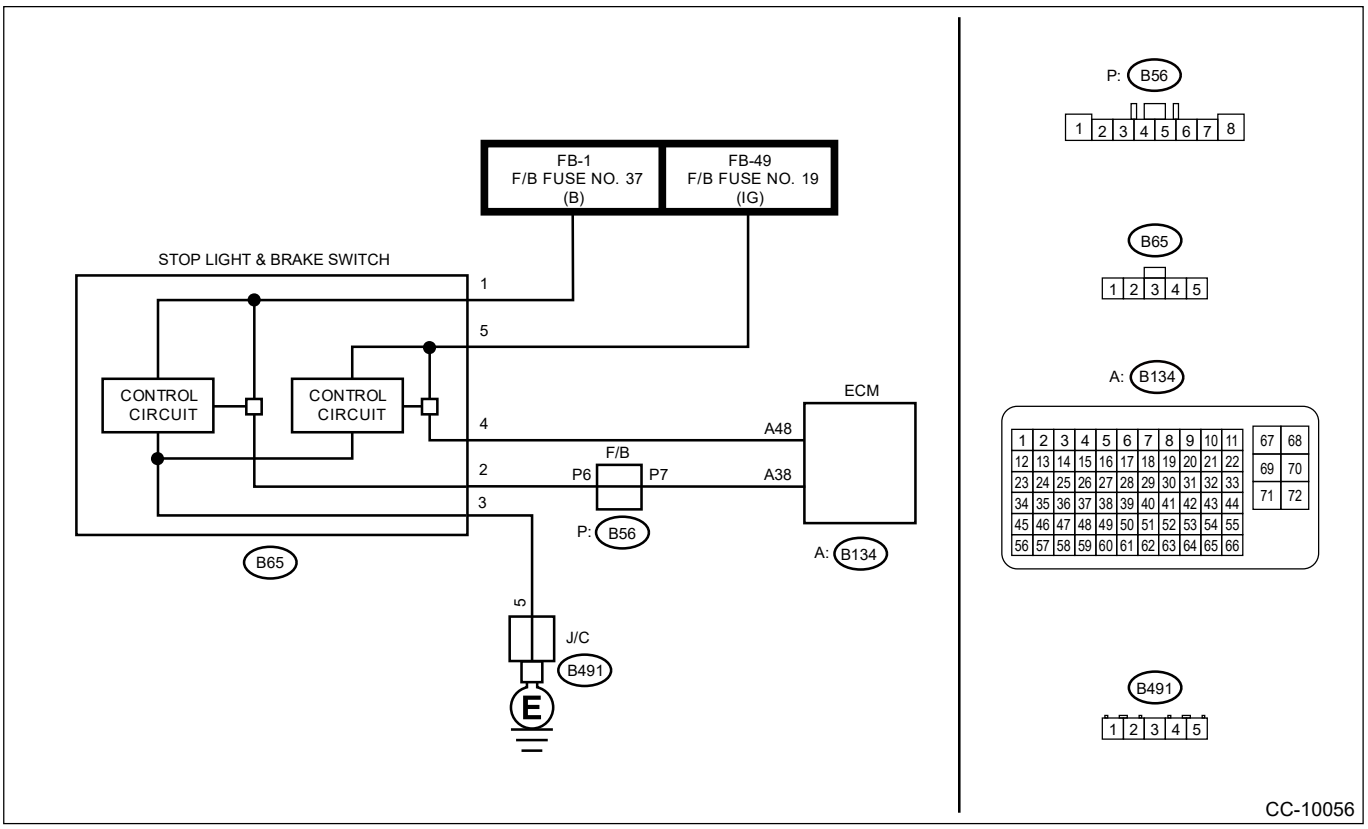
No. 3 — No. 9:

Is the resistance approx. 1,500 Ω when the RES/+ switch is pressed?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the cruise control command switch. Ref. to CRUISE CONTROL SYSTEM>Cruise Control Command Switch.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

12



Detected when the brake pedal is depressed, or the error related to the stop light & brake switch occurred.

Trouble symptom:

- Cruise control cannot be set.
- Cruise control cannot be released.

Wiring diagram:

Cruise control system Ref. to WIRING SYSTEM>Cruise Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. PERFORM UNIT INSPECTION OF STOP LIGHT & BRAKE SWITCH.

Check the stop light & brake switch. Ref. to CRUISE CONTROL SYSTEM>Stop Light & Brake Switch.

Are the check results for the stop light & brake switch unit, and installation position OK?

Yes	Go to 2.
No	Replace the stop light & brake switch. Or adjust the installation position.

2. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the stop light & brake switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between the stop light & brake switch connector and chassis ground.
   Connector & terminal
   (B65) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	• Check fuse No. 37 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.

3. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

Measure the voltage between the stop light & brake switch connector and chassis ground.
Connector & terminal
(B65) No. 5 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	• Check fuse No. 19 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.

4. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Measure the resistance between the ECM connector and stop light & brake switch connector.
   Connector & terminal
   (B65) No. 4 — (B134) No. 48:
   (B65) No. 2 — (B134) No. 38:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair the harness.

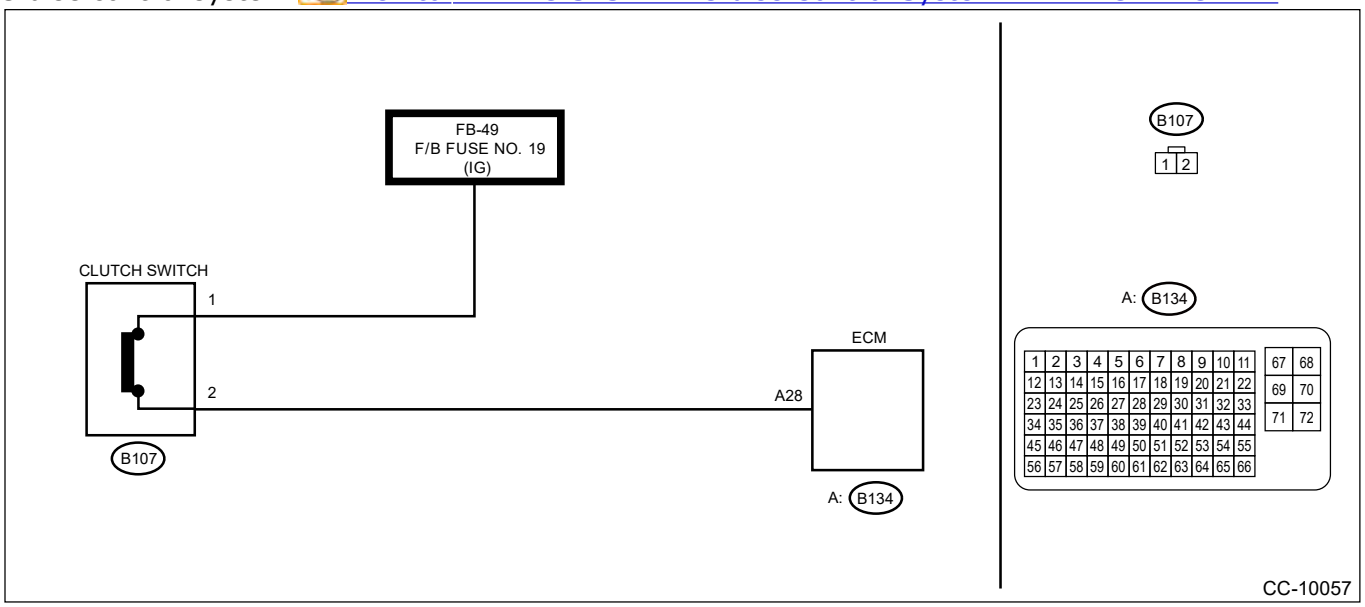
5. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

1. Connect the stop light & brake switch connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground both when the brake pedal is depressed and when not depressed.
   Connector & terminal
   (B134) No. 48 (+) — Chassis ground (−):
   (B134) No. 38 (+) — Chassis ground (−):

Does the voltage appear in (B134) No. 42 when the brake pedal is depressed? (0 V when the brake pedal is not depressed)
Does the voltage appear in (B134) No. 44 when the brake pedal is not depressed? (0 V when the brake pedal is depressed)

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the stop light & brake switch. Ref. to CRUISE CONTROL SYSTEM>Stop Light & Brake Switch.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code



13

Detected when clutch pedal is depressed or malfunction related to clutch switch occurs.
Trouble symptom:
- Cruise control cannot be set.

- Cruise control cannot be released.

Wiring diagram:

Cruise control system Ref. to WIRING SYSTEM>Cruise Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. PERFORM UNIT INSPECTION OF CLUTCH SWITCH.

Check the clutch switch. Ref. to CRUISE CONTROL SYSTEM>Clutch Switch.

Is the check result of the clutch switch unit and installation position OK?

Yes	Go to 2.
No	Replace the clutch switch. Or adjust the installation position.

2. CHECK CLUTCH SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the clutch switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between the clutch switch connector and chassis ground.
   Connector & terminal
   (B107) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	• Check the fuse No. 19 (fuse & relay box). • Check open or shorted circuit of harness between clutch switch and fuse & relay box.

3. CHECK CLUTCH SWITCH CIRCUIT.

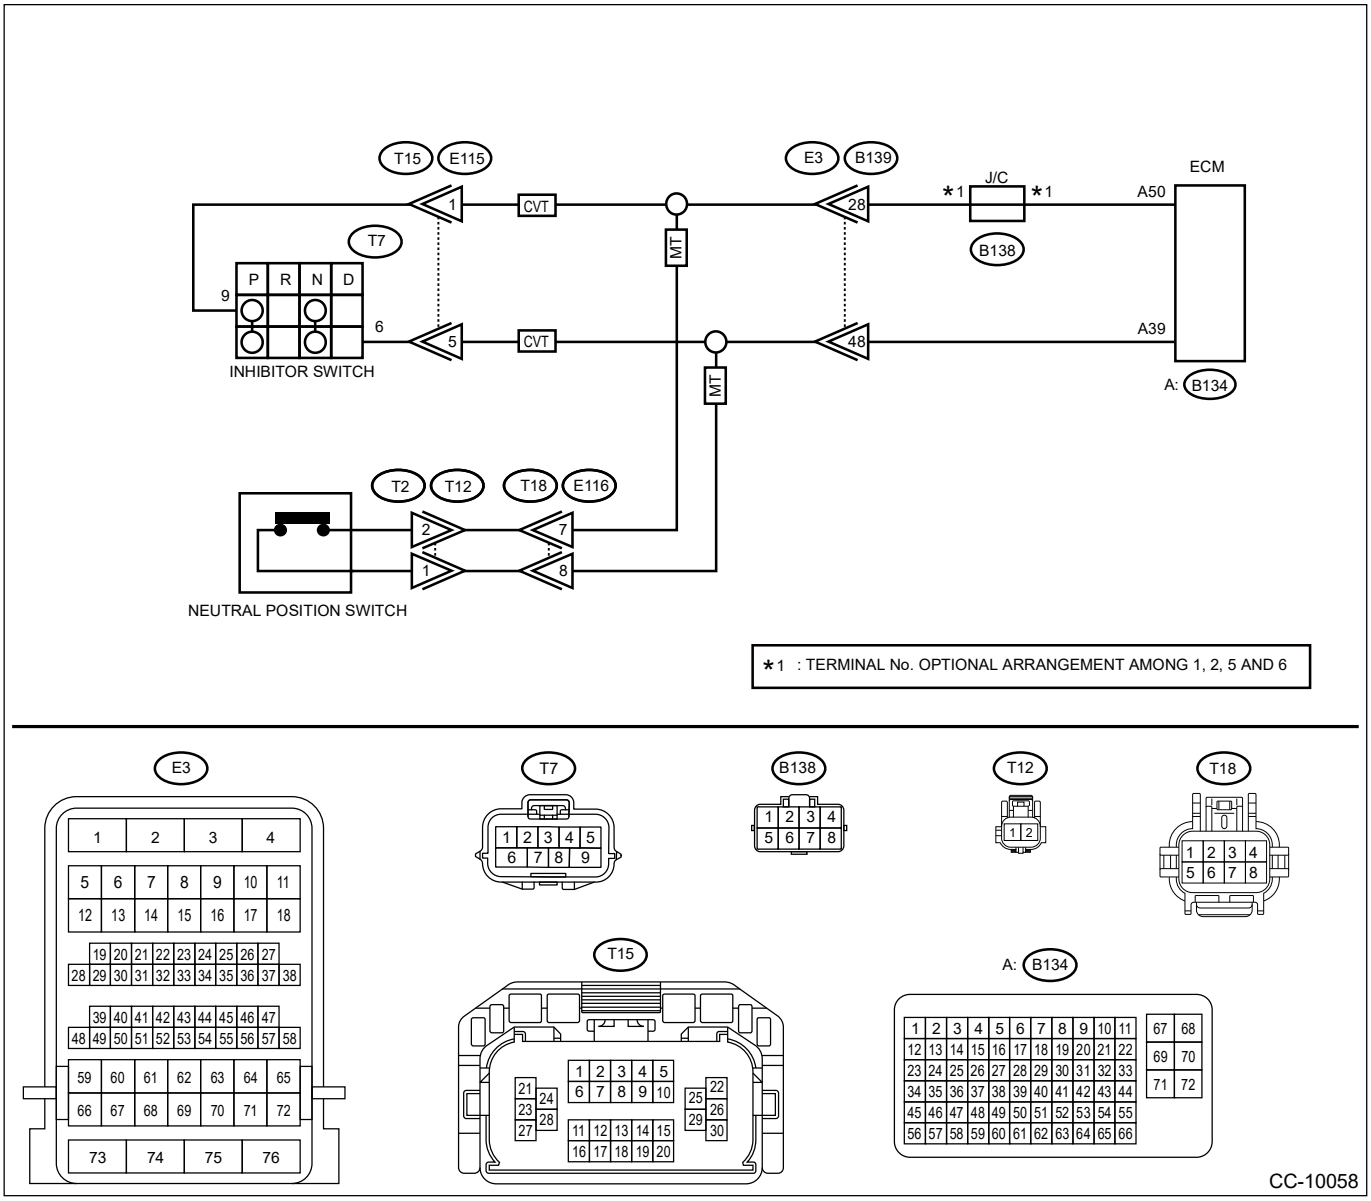
1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Measure the resistance between clutch switch connector and ECM connector.
   Connector & terminal
   (B107) No. 2 — (B134) No. 28:

Is the resistance less than 10 Ω?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Repair the harness.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

14



Detected when the select lever is shifted to the neutral position, or when an error related to the neutral position switch occurs.

Trouble symptom:

Cruise control cannot be set.

Wiring diagram:

Cruise control system Ref. to WIRING SYSTEM>Cruise Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK TRANSMISSION TYPE.

Is the transmission type CVT?

Yes	Go to 2.
No	Go to 5. (MT model)

2. CHECK INHIBITOR SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the inhibitor switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between inhibitor switch connector and chassis ground.
   Connector & terminal
   (T7) No. 6 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Check for open or short circuit in the harness between inhibitor switch connector and ECM.

3. CHECK INHIBITOR SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Measure the resistance between inhibitor switch connector and ECM.
   Connector & terminal
   (T7) No. 9 — (B134) No. 50:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Repair the harness.

4. PERFORM UNIT INSPECTION OF INHIBITOR SWITCH.

Remove and check the inhibitor switch. Ref. to CRUISE CONTROL SYSTEM>Inhibitor Switch.

Is the inhibitor switch OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the inhibitor switch.

5. CHECK NEUTRAL POSITION SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the neutral position switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between neutral position switch connector and chassis ground.
   Connector & terminal
   (T12) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 6.
No	Check for open or short in the harness between neutral position switch and ECM.

6. CHECK NEUTRAL POSITION SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Measure the resistance between neutral position switch connector and ECM.
   Connector & terminal
   (T12) No. 2 — (B134) No. 50:

Is the resistance less than 10 Ω?

Yes	Go to 7.
No	Repair the harness.

7. PERFORM UNIT INSPECTION OF NEUTRAL POSITION SWITCH.

Remove and check the neutral position switch. Ref. to CRUISE CONTROL SYSTEM>Neutral Position Switch.

Is the neutral position switch OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the neutral position switch.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

15

Detected when CANCEL switch is pressed or malfunction related to CRUISE switch occurs.

Trouble symptom:

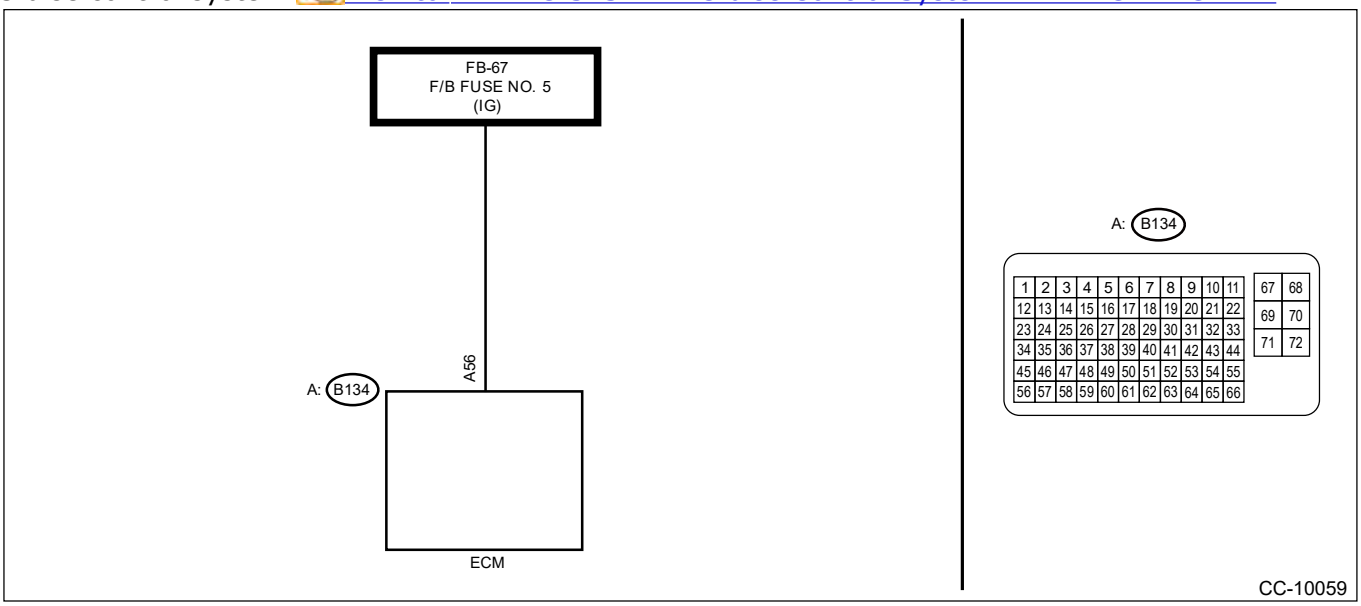
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.

Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

16



Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.

Trouble symptom:

Cruise control cannot be set.

Wiring diagram:

Cruise control system Ref. to WIRING SYSTEM>Cruise Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK IGNITION SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between ECM connector and chassis ground.
   Connector & terminal
   (B134) No. 56 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Check for poor contact of ECM connector.
No	• Check fuse No. 5 (fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

21

Cruise control command switch malfunction is detected.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

22

Malfunction related to vehicle speed sensor is detected.
Diagnosis:
Open or short circuit in the vehicle speed sensor system.
Trouble symptom:
Cruise control cannot be set. (Cancelled immediately.)
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK ABS OR VDC WARNING LIGHT.

1. Turn the ignition switch to ON.
2. After the initial operation of the combination meter finished, check if the ABS or VDC warning light stays illuminated.

Does the warning light stay illuminated?

Yes	Check the VDCCM. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 2.

2. CHECK DTC OF LAN COMMUNICATION CIRCUIT.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC displayed?

Yes	Perform inspection according to the displayed DTC.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

24

Switch malfunction related to cruise control is detected.

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.

Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

31

Malfunction related to engine speed signal is detected.

Abnormal increase of engine speed is detected.

Gear is placed in 1st (only for MT vehicles) or Reverse position.
Drive with the gear in 2nd position or higher, and perform the cruise setting again. It is normal if the cancel code is not detected.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

32

Detected outside the system operation vehicle speed range.
Increase the vehicle speed to the speed available for cruise set and perform the cruise set operation again.
If the cancel code is detected even when the cruise setting is performed again, perform the diagnosis for 22.
Refer to 22 for diagnostic procedure.
Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>22.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

34

The vehicle was driven at higher speed than the set vehicle speed for a long time (approximately 10 minutes) during cruise driving.
The cancel code is detected when the vehicle was driven for a long time at the higher speed than the speed available for cruise set through the accelerator operation.
Perform the cruise setting again. It is normal if the cancel code is not detected.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

35

Detected when the vehicle speed feedback is not possible.
Set vehicle speed cannot be maintained because of some reasons (steep uphill, parking brake forgotten to be returned to the home position, etc.) during cruise driving.
The cancel code is detected when the driving condition is not suitable for cruise control.
Eliminate the probable cause, and perform the cruise set operation again.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

41

VDC/TCS/EPB is operated.
Vehicle dynamics control (VDC) or TCS/EPB is operated during cruise driving or cruise setting. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

43

- Detected that part or all of the functions of ABS/VDC are not able to function.
  Detected that part or all of the functions of ABS/VDC are not able to function during cruise driving or cruise set operation. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.
- CRUISE indicator does not illuminate even though you pressed the CRUISE switch before starting the

engine.
Detected when the CRUISE switch is pressed during the initial diagnosis of ABS/VDC. It is normal if the CRUISE indicator illuminates when you press the CRUISE switch again after starting the engine and confirming that the initial illumination of the ABS/VDC warning light has been ended.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

44

Body integrated unit malfunction is detected.
Body integrated unit malfunction is detected during cruise driving or cruise setting operation.
Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

45

Combination meter malfunction is detected.
Combination meter malfunction is detected during cruise driving or cruise setting operation.
Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

49

Automatic transmission malfunction is detected.
Automatic transmission malfunction is detected during cruise driving or cruise setting operation. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

61

Malfunction in the stop light & brake switch is detected.
Trouble symptom:
- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to 12 for diagnostic procedure.
Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>12.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

62

Neutral position switch malfunction is detected.
Trouble symptom:
Cruise control cannot be set.
Refer to 14 for diagnostic procedure.
Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>14.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

63

Malfunction of vehicle speed signal variation is detected.
Trouble symptom:
Cruise control cannot be set. (Cancelled immediately.)
Refer to 22 for diagnostic procedure.
Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>22.
Note:
This cancel code may be detected when the vehicle suddenly started with VDC OFF on low μ road surface. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

64

- Malfunction related to engine is detected.
- Abnormal decrease in engine speed is detected during cruise driving.

If the malfunction indicator light remains on or blinks, perform the diagnosis for engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure.
If the malfunction indicator is not remaining on/blinking, this cancel code may be detected due to malfunction of the ECM. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal. (Temporary malfunction)

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

65

Cruise control command switch malfunction is detected.
When the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

66

- Cruise control calculation malfunction is detected.
- Abnormal increase in target cruising vehicle speed is detected.
- Abnormal condition is detected in which cruise control is not deactivated even after the brake pedal is depressed.

If the malfunction indicator light remains on or blinks, perform the diagnosis for engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure.
If the malfunction indicator is not remaining on/blinking, this cancel code may be detected due to malfunction of the ECM. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal. (Temporary malfunction)

CRUISE CONTROL (DIAGNOSTICS) > Diagnostics with Phenomenon

DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check Item	Note
1	CRUISE switch is not turned ON. (CRUISE indicator does not illuminate.) Or cruise control was canceled without operating the CRUISE switch.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.
		(4) Check the CRUISE indicator.	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.
2	Cruise control cannot be set. Or cruise control is cancelled without releasing operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.
		(4) Check stop light switch and brake switch.	Ref. to BRAKE>Stop Light Switch. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>12.
		(5) Check clutch switch.	Ref. to CLUTCH SYSTEM>Clutch Switch. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>13.
		(6) Check the neutral position switch.	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>14. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>62.
		(7) Check vehicle speed sensor.	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>22.
3	SET indicator does not illuminate.	Check the SET indicator.	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostics with Phenomenon>CHECK CRUISE INDICATOR

	Phenomenon	Check Item	Note
			LIGHT AND CRUISE SET INDICATOR LIGHT.
4	Vehicle speed is not held within set speed ±3 km/h (±2 MPH).	Check the vehicle speed sensor.	Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>22.
5	Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	(1) Perform the real-time diagnosis. (2) Check the RES/+ switch.	Check the input signal of cruise control system. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.
6	Vehicle speed does not decrease after SET/− switch has been pressed.	(1) Perform the real-time diagnosis. (2) Check the SET/− switch.	Check the input signal of cruise control system. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.
7	Cruise control is not released after CANCEL switch has been pressed.	(1) Perform the real-time diagnosis. (2) Check the CANCEL switch.	Check the input signal of cruise control system. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>11.
8	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis. (2) Check stop light switch and brake switch.	Check the input signal of cruise control system. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>12. Ref. to BRAKE>Stop Light Switch>INSTALLATION.
9	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis. (2) Check the neutral position switch.	Check the input signal of cruise control system. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>14. Ref. to CRUISE CONTROL SYSTEM>Neutral Position Switch.
10	Cruise control is not released after clutch pedal has been depressed.	(1) Perform the real-time diagnosis. (2) Check clutch switch.	Check the input signal of cruise control system. Ref. to CRUISE CONTROL (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>13. Ref. to CLUTCH SYSTEM>Clutch Switch>INSTALLATION > CLUTCH SWITCH.

CRUISE CONTROL (DIAGNOSTICS) > Diagnostics with Phenomenon

CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

Trouble symptom:
Cruise control can be set, but the CRUISE indicator and SET indicator do not illuminate.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to CRUISE CONTROL (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.

Using the Subaru Select Monitor, perform [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.
- [CRUISE indicator]
- [SET indicator]

Do the CRUISE & SET indicators illuminate?

Yes	Go to 2.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is LAN system OK?

Yes	Perform the inspection according to the diagnosis for LAN system.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

18. ECM Cancel Code(s) Display
19. Diagnostic Procedure with ECU Cancel Code
20. Diagnostics with Phenomenon

PROCEDURE

Caution:

- **Start the diagnosis after the engine has started. (Cruise control main switch does not turn on even if it is pressed before the engine starts.)**
- **When performing diagnosis, observe the legal speed limit on the road.**
- **ECM cancel code, ACC cancel code and lane keep assist code are not the diagnostic trouble codes (DTCs). These codes will also appear when the cruise control or the active lane keep is cancelled by the driver's operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**
- **Be sure to record the following data before performing the Clear Memory. (Data must be obtained before inspection because the Clear Memory operation deletes previous faults and temporary stop history.)**
  - **– All diagnostic trouble codes (DTCs)**
  - **– DTC of stereo camera (current malfunction, past malfunction)**
  - **– Freeze frame data of stereo camera**
  - **– ACC cancel code of stereo camera**
  - **– Lane keep assist code of stereo camera**
  - **– EyeSight temporary stop code of stereo camera**
  - **– Data monitor of stereo camera**
    (To obtain the data concerning camera adjustment information, previous trouble or temporary stop history, all data must be measured for two — three seconds after the engine has started.)
- **When a temporary stop occurs, stereo camera may be affected by a small amount of dirt that would not be perceived by the driver. In this case, cleaning the windshield glass is effective. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > WINDSHIELD GLASS AND DASHBOARD.**

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to EyeSight (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [EyeSight].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Perform diagnosis according to the procedures in the diagnostics with phenomenon. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to EyeSight (DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown. Go to 5.
No	Finish the diagnosis.

EyeSight (DIAGNOSTICS) > Check List for Interview

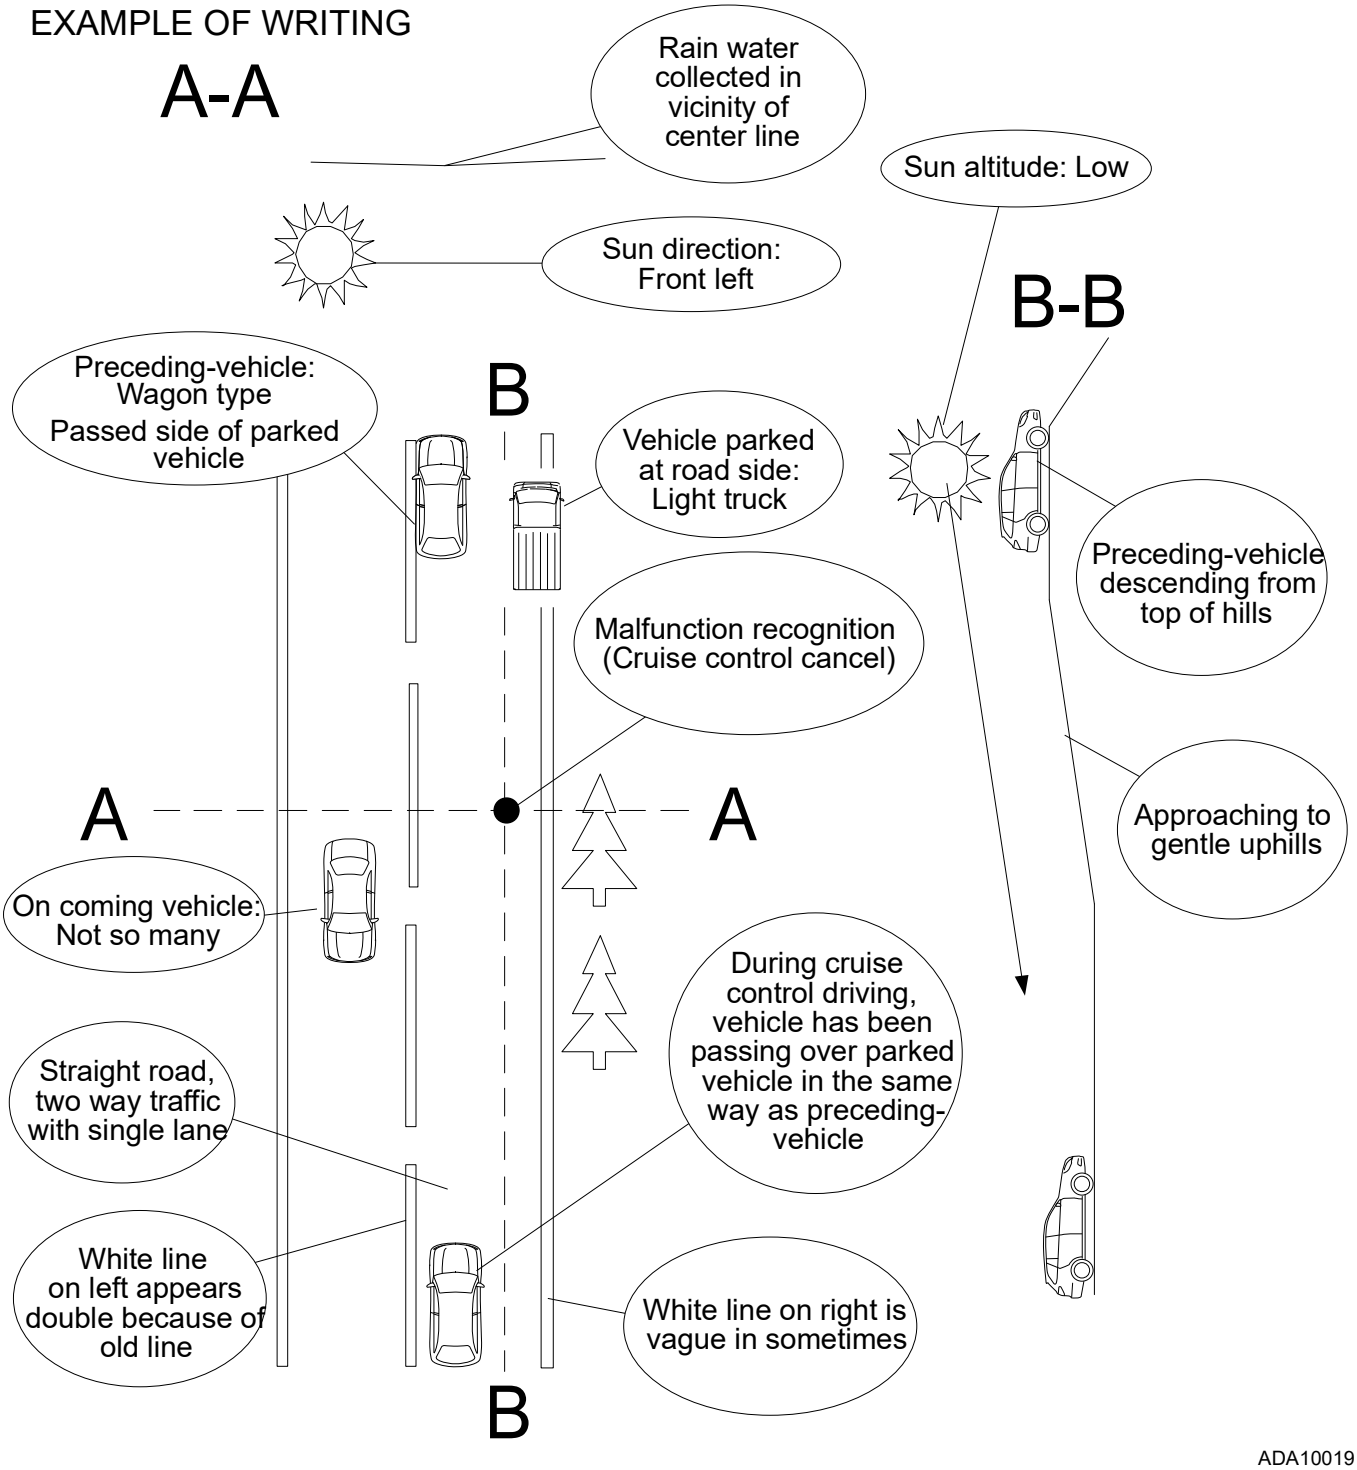
CHECK

Inspect the following items regarding the vehicle's state.

Writer/Inspector	Writer's name		
	Inspector's Name		
Vehicle information	Car accessory equipment condition	Car accessory is installed to the windshield glass.	No/Yes (Position:)
		Other	No/Yes (Accessory's name:)
	Is there any modification for the following items?	Suspension?	Not changed / Changed (Specifically:)
		Headlight?	Not changed / Changed (Specifically:)
		Tire size?	Not changed / Changed (Specifically:)
		Front wiper?	Not changed / Changed (Specifically:)
	How is the condition around camera?	Is there any scratch or damage on the windshield glass?	No/Yes (Specifically:)
		Are antennas, etc. attached on the prohibited area?	No/Yes (Specifically:)
		Is wide mirror or accessory attached?	No/Yes (Specifically:)
	How is the surface condition of the windshield glass?	Presence of oil film, fogging, dirt and/or glass coating	No/Yes (Specifically:)
	How is the condition of the dashboard?	Is there anything that can be easily reflected against the windshield glass on the dashboard?	No/Yes (Specifically:)
	How is the deterioration of the wiper?	Does any streak or uneven wiping area remain in front of the camera?	No/Yes (Specifically:)

	How is the condition of the tire?	Is there any wear? Is there any excessive wear difference?	No/Yes (Specifically:)
		Is the air pressure proper?	Proper/Improper (Specifically:)
	How is the condition of the camera lens filter?	Is there finger print adhesion or cracks on the lens filter?	No/Yes (Specifically:)
Description of malfunction	What kind of malfunction has been detected?	Failure/temporary stop/faulty operation of adaptive cruise control/faulty operation of pre-collision brake/other faulty operations	
	What kind of DTC and/or cancel code is displayed?		
	How is the meter display?	EyeSight warning light	Off/On/Blink
		Pre-collision brake OFF indicator light	Off/On
		Lane departure warning OFF indicator light	Off/On
		Multi information display	• {Temporary stop Camera view defectiveness} • {Temporary stop Camera temperature range outside} • {Temporary stop}

Occurrence conditions	Occurrence date		Occurrence location	
	Vehicle speed at occurrence	Approx. km/h (MPH)	Occurrence timing	During driving / during stopping / continues after engine has started
	Road type	Express way / limited highway / main highway / general road	Weather	Fine/cloudy/rainy/snowy/other
	Road condition ①	Dry/slippery (Rainy • compacted snow • icy road)	Ambient air temperature	Approx. ° C(°F)
	Road condition ②	Asphalt / gravel / earth and sand / other	Position of solar radiation	Described in the detailed chart when the weather is fine.



Road shape	Uphill / downhill / bank / roll / uneven surface	Time elapsed after engine start	Immediately after engine start/within 5 minutes after engine start/more than 5 minutes after engine start
Wiper operation status	OFF/INT /LO/HI/AUTO	Light on status	Off / LO On / HI On
Curb weight	Number of passengers: ( ), Did the vehicle carry heavy load? (No/Yes (Approx. kg))		
Detailed chart (Refer to the example of description.)			

In case of malfunction caused by temporary stop or faulty operation, describe the details by referring to the example below so that the following conditions can be recognized. (Images taken with a digital camera, etc. are acceptable.)

- Road shape (straight, curve, tunnel, number of lane, etc.)
- Road grade and it’s change
- Presence of white line, guardrails and/or side wall (degree of clarity)
- Position of the sun
- Presence and shape of preceding vehicle, oncoming vehicle, vehicle running on the next lane or pedestrian

- Presence and shape of surrounding building or structure
- Traveled course of own vehicle and preceding vehicle

EXAMPLE OF WRITING

ADA10019

EyeSight (DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. EYESIGHT

- Do not hold the camera unit of the stereo camera.
- Do not touch the lens on the stereo camera.
- Do not clean the lens of the stereo camera.
- When cleaning the windshield glass, use care so that the glass cleaner, etc. does not come in contact with the lens of the stereo camera.
- Do not make an impact or apply excessive force to the stereo camera.
- Do not disassemble the stereo camera.
- Do not change the installation position of the stereo camera or do not modify the surrounding structure.
- If the stereo camera or windshield glass is removed or replaced, always adjust or check the stereo camera.
- When lifting up the vehicle to rotate the tires, turn off the pre-crash function.
- Stereo camera axis may be displaced even in a minor collision. So be sure to adjust the stereo camera even when the EyeSight warning light is not illuminated or when the "Stereo Camera Temporary Stop" is not displayed on the multi-information display.
- When removing the stereo camera cover assembly, cover it with a copy paper or similar dust-free paper to avoid any interference to the camera lens, and tape the paper while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. Ref. to EyeSight>Stereo Camera>REMOVAL.

EyeSight (DIAGNOSTICS) > General Description

GENERAL DESCRIPTION

For on-board diagnosis function of the EyeSight, use the Subaru Select Monitor.
The on-board diagnosis function operates in three categories, which are used depending on the type of problems.

1. Diagnosis with diagnostic trouble code (DTC):
   When the electrical failure occurs in the EyeSight, DTC is detected from the stereo camera. If the DTC is detected, the relevant DTC is displayed by illuminating or blinking the EyeSight warning light. To check the details concerning the DTC, use the Subaru Select Monitor.
2. Diagnosis with cancel code and lane keep assist code:
   (1) This category of diagnosis requires actual driving of the vehicle in order to determine the cause in such a case when the set speed is cancelled during cruise control driving or the control is cancelled during active lane keep driving although any cancel condition is not entered.
   (2) With ECM cancel code and stereo camera ACC cancel code, cancel condition (Code No.) is stored when detected during cruise control driving. With lane keep assist code of stereo camera, cancel condition (Code No.) is stored if active lane keeping does not operate or if control cancel occurs

during active lane keep driving.

Caution:

- **With ECM cancel code, not only the cruise control "cancel" occurred (although the driver does not input the "cancel" operation), but also the "cancel" condition input by the driver is stored.**
- **The latest memory contents of the ECM cancel code (latest code) is cleared when the ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.**

3. Real-time diagnosis:

Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.

(2) Monitor the signal conditions from switches and sensors.

INSPECTION

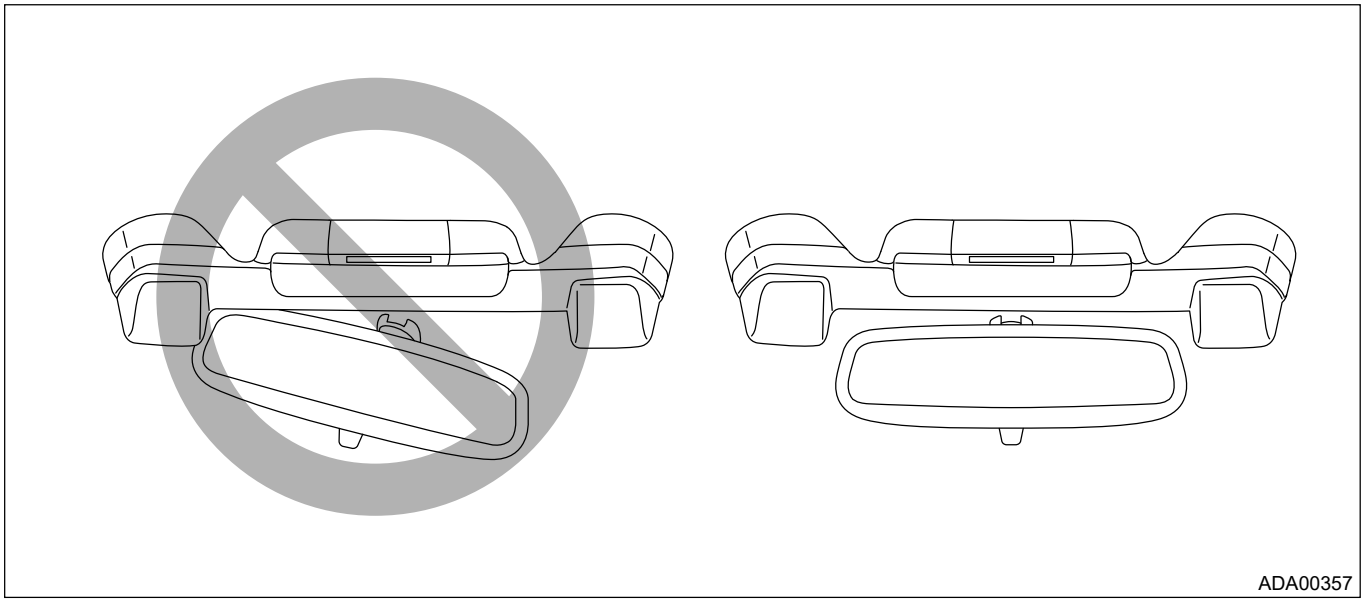
1. BATTERY

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

2. WINDSHIELD GLASS AND DASHBOARD

Remove the windshield glass and dashboard in front of the stereo camera. Ref. to CAUTION > CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EYESIGHT.

3. REAR VIEW MIRROR



Check the rear view mirror condition.

Standard:

The rear view mirror other than genuine parts shall not be used. (Wide mirrors shall not be used)

The visibility of the stereo camera shall not be blocked.

— This will affect the visibility of the stereo camera, causing the system not to operate correctly.

4. FRONT WIPER

Check the wiping condition of windshield glass.

Standard:

Use Subaru genuine part only for wiper blade body and blade rubber.

— Using the part other than genuine part will affect the recognition of the stereo camera, which may cause the function not to operate correctly.

Do not continue to use damaged blade rubber.

— The windshield glass may be damaged. If the wiping performance decreases or any distinct streak is found, replace it as soon as possible.

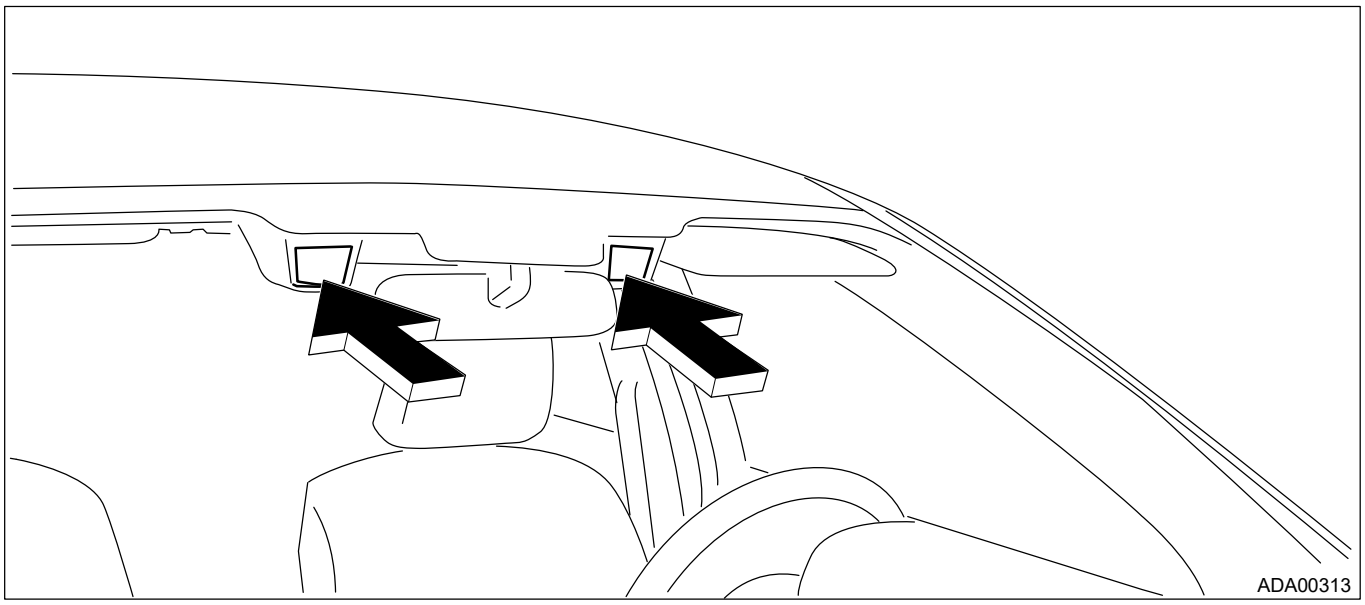
Note:

Clean the windshield glass if there is an oil film or any dirt on the surface.

5. TIRE INFLATION PRESSURE

Check the tire air pressure.

Standard:



Adjust to the specified air pressure. Ref. to WHEEL AND TIRE SYSTEM>General Description>SPECIFICATION.

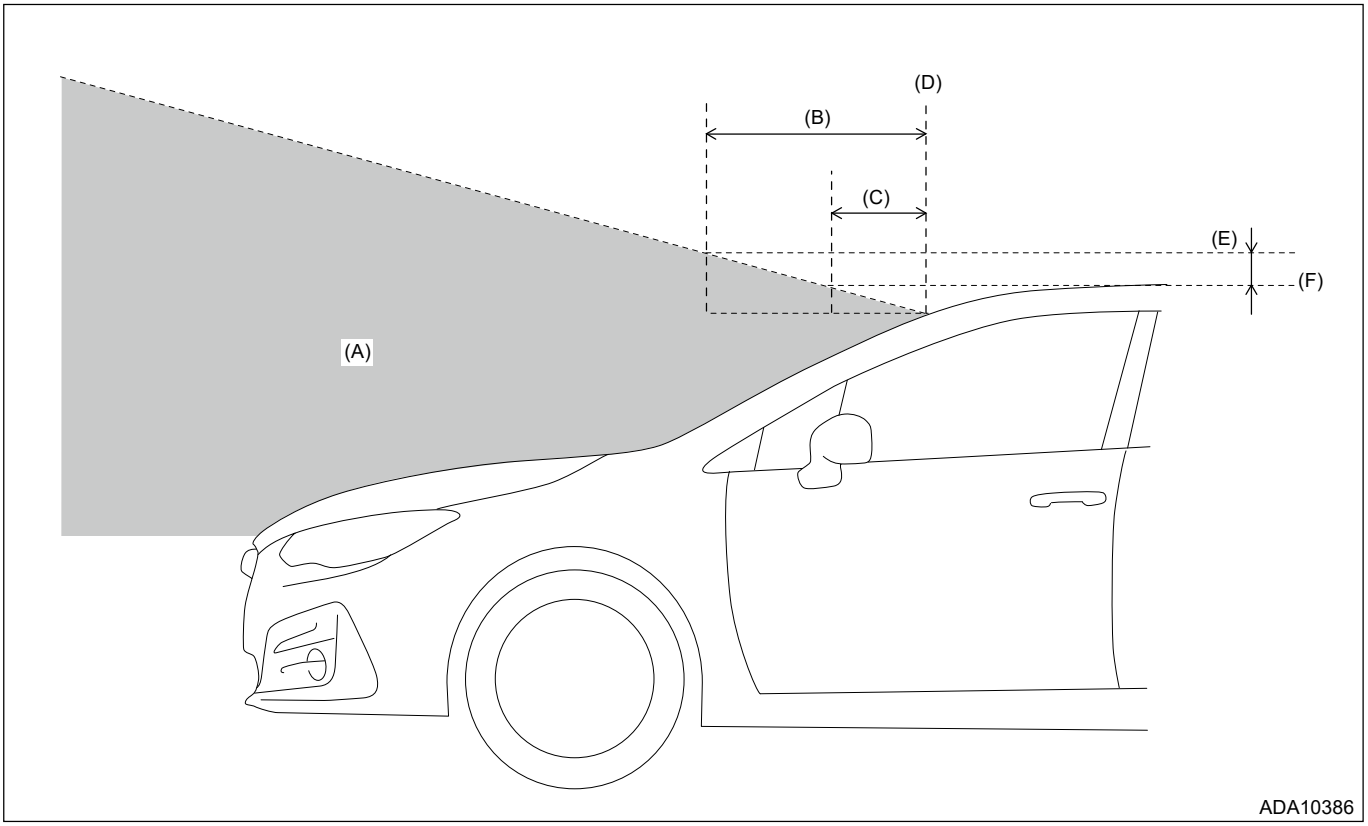
Do not install worn tire or tires with excessive wear difference.

Install tires with specified size.

6. STEREO CAMERA

Through the windshield glass, check if there are any fingerprints or faults such as crack found on lens filters at the left and right camera lenses of the stereo camera.

Note:



- **Do not remove the camera or camera cover to check the lens.**
- **When spider's web or insects are found within the camera view or inside the lens hood, remove it by blowing air etc. while taking care not to touch the lens surface. Do not use a hand or a cloth.**
- **Thin and uniform adhesion of dust, dirt or tobacco stains to the lens filter surface resulting from normal use will not be an obstacle. Do not attempt to clean in such cases.**
- **If an oil film such as a fingerprint or any excessive dirt adheres, or if the lens filter cracks, replace the stereo camera. Ref. to EyeSight>Stereo Camera.**
- **If the fingerprint adhesions or cracks occur on the lens filter, the following failures may arise.**
  - **The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the headlight of the oncoming vehicle.**
  - **The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the brake light operation of the preceding vehicle.**
  - **All the functions of the EyeSight may be suspended by the self-diagnosis function equipped with the camera.**
  - **When the lens filter is broken, the vehicle may not be able to detect the preceding vehicle or obstacle all day and all night.**
- **Do not clean the lens filter with any cleaner. It is quite difficult to uniformly clean both of the right and left lenses, and such an attempt just ends up spreading dirt and will cause problems as same as those from oil film.**

7. LOAD ON THE ROOF

Check that load on the roof is not sticking out to the front of the stereo camera.

Standard:

The load on the roof is placed outside the prohibited area (A) shown in the figure below.

(A) Prohibited area
(B) 880 mm (34.6 in)
(C) 520 mm (20.5 in)
(D) Windshield glass upper end
(E) 100 mm (3.9 in)
(F) Highest surface of the roof

EyeSight (DIAGNOSTICS) > Inspection Mode

PROCEDURE

Turn the ignition switch to ON, wait for 10 seconds or more.
(This is the duration of time during which the EyeSight starts and prohibits diagnosis)

EyeSight (DIAGNOSTICS) > Warning Light Illumination Pattern

INSPECTION

- EyeSight warning indicator (yellow).
  - Illuminates or blinks when error occurs in EyeSight system.
- EyeSight temporary stop indicator light (white)
  - Illuminates when EyeSight system is stopped temporarily.
  - When the ignition switch is on, it illuminates if the cruise control main switch or the lane keep switch is depressed within approximately 7 seconds after the engine starts, and goes off when approximately 7 seconds have elapsed since the engine started.
- Lane departure warning OFF indicator light
  - Illuminates when the lane departure warning and the sway warning are OFF.
  - Illuminates when the ignition switch is turned ON, and in approximately 7 seconds after engine starts, and it goes off or illuminates depending on the current status (ON or OFF).
- Pre-collision brake OFF indicator light
  - Illuminates when pre-collision brake, AT rapid start prevention control are OFF.
  - Illuminates when the ignition switch is turned ON, and goes off in approximately 7 seconds since the engine started.

Note:

- **When warning indicators and/or indicators are faulty, refer to Diagnostics with Phenomenon.** **Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon.**

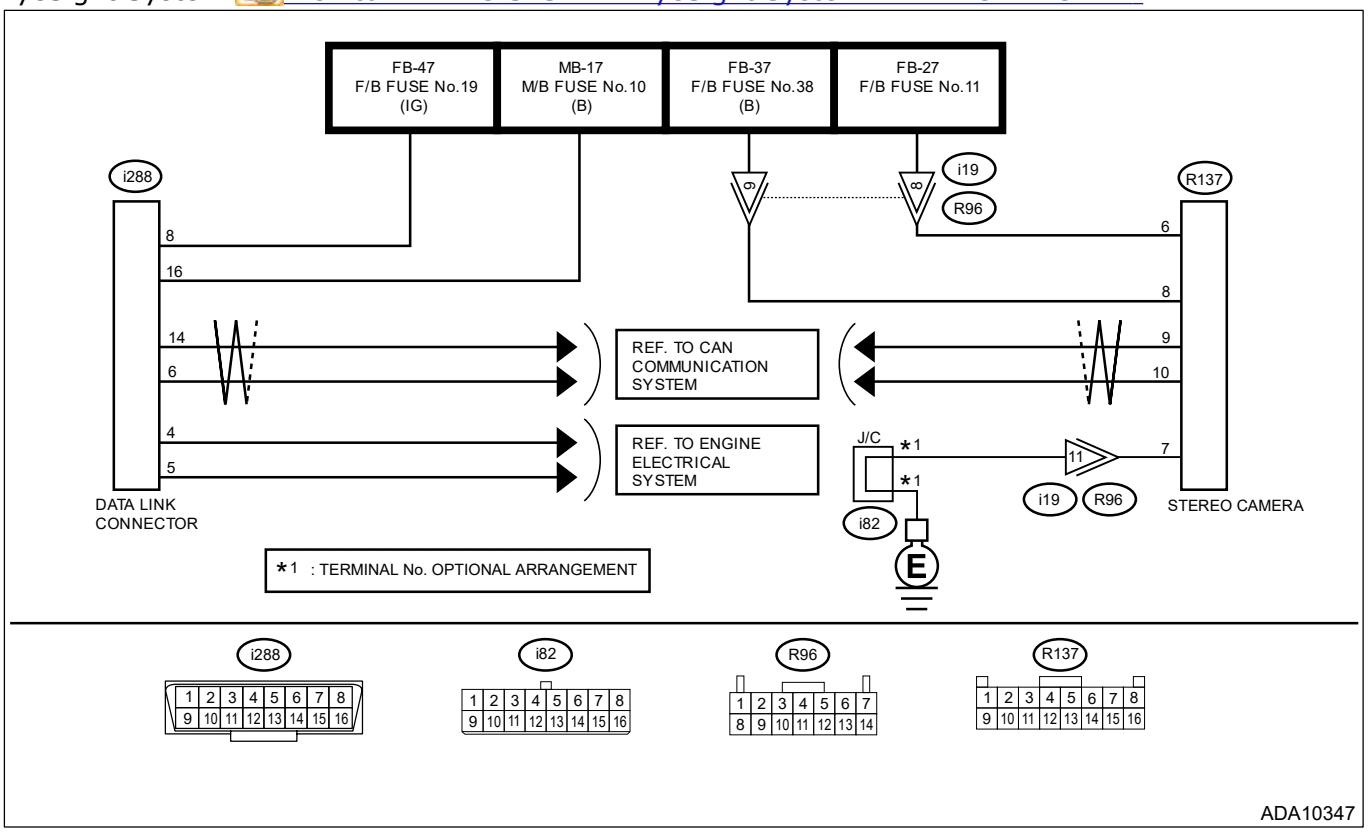
EyeSight (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Communication error with stereo camera

Detecting condition:

- Defective connector
- Power supply circuit malfunction
- Defective stereo camera
- Defective CAN system
- Defective Subaru Select Monitor



Trouble symptom:

- EyeSight warning light blinks.

Wiring diagram:

CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK SUBARU SELECT MONITOR.

1. Connect the Subaru Select Monitor to another vehicle.
2. Check communication condition between Subaru Select Monitor and vehicle.

Is communication performed normally?

Yes	Go to 2.
No	Subaru Select Monitor unit or diagnosis cable is faulty.

2. CHECK COMMUNICATION FOR INITIALIZING ERROR.

Perform the communication for initializing with each module by connecting the Subaru Select Monitor. (For systems whose module can communicate with diagnostic devices)

Note:

By performing [CAN bus check], confirmation of minimal connection modules is possible. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN bus check.

Is the communication possible with all modules?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	When the communication fails with all modules, Go to 3. When the communication fails with particular module only, perform the inspection using the check sheet of communication for initializing. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication>INSPECTION > CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING.

3. CHECK DATA LINK CONNECTOR (OPEN CIRCUIT).

Use a tester to check for continuity in the ground circuit.

Connector & terminal

(i288) No. 4 — Chassis ground:

(i288) No. 5 — (B134) No. 50:

Is there continuity?

Yes	Go to 4.
No	Repair or replace the open circuit.

4. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Using a tester, check the power supply of data link connector.

Connector & terminal

(i288) No. 8 (+) — Chassis ground (−):

(i288) No. 16 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Check the power supply circuits to the data link connector. (including the fuses)

EyeSight (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to EyeSight (DIAGNOSTICS)>Data Monitor>LIST.**

EyeSight (DIAGNOSTICS) > Data Monitor

LIST

Items to be displayed	Content	Standard/Unit	Note
Camera ID	Display of serial No. inside the stereo camera	—	—
Control Software Version	Control software version	—	—
Recognition software version	Recognition software version	—	—
Model registration information	Display of displacement and vehicle model	—	—
ECU Power Supply Voltage (IG)	Display of input voltage of stereo camera	V	—
Initial Aiming Completion Status	Initial aiming completion flag	Exit (After factory shipping, when stereo camera is replaced or adjusted, [Not Finish] is displayed.)	—
Aiming Completion Status	Aiming completion flag	Not Finish (After factory shipping, when stereo camera is replaced or adjusted, [Exit] is displayed.)	—
Trip Count	Total count of ignition switch ON	Time	—
Trip Meter	Odometer value	• km • mile	—
Engine Speed	Engine speed	rpm	—
Accel. Opening Angle	Acceleration opening angle signal	%	—
ETC Throttle angle signal	Electronic throttle control opening angle signal	%	—

Items to be displayed	Content	Standard/Unit	Note
Steering Angle Sensor Value (Right +) (Left -)	Steering angle sensor value signal	deg	—
Longitudinal G Sensor Value (Deceleration +) (Acceleration -)	Longitudinal acceleration	m/s^2	—
Brake Fluid Target Pressure	Target value of brake fluid pressure	MPa	—
Master Cylinder Actual Fluid Pressure	Brake pressure	MPa	—
Right Front Wheel W/C Actual Fluid Pressure	Right front wheel cylinder fluid pressure	MPa	—
Left Front Wheel W/C Actual Fluid Pressure	Left front wheel cylinder fluid pressure	MPa	—
Target torque	Target torque command signal	Nm	—
Engine Torque	Actual engine shaft torque value	Nm	—
AT rapid start prevention, engine torque down command value	AT false start prevention control, engine torque down command value Or AT false start (reverse) prevention control, engine torque down command value	Nm	—
Warning Code(Beep)	Warning code (with alarm)	• No alarm • Pre-Collision Brake (2nd Braking) • Pre-Collision Brake(1st Braking) or Brake More Warning or F... • Reverse Throttle Override Control(Speed Limits Warning) • Reverse Throttle Override Control(Definitely Stepping Warning) • Red Light Signal Alarm • Pre-Collision Brake	—

Items to be displayed	Content	Standard/Unit	Note
		(Stopped Warning) • Lane Departure Warning (Right) • Lane Departure Warning (Left) • Lane Sway Warning • Lead Vehicle Start Alert • Notification Sound(HALT/FAIL /Function OFF) • Detection/Lost of Vehicle Beep • ACC Cancel • L_Keep Cancel	
Brake SW Input	Brake switch signal status	• OFF • ON	—
Brake Lamp SW (BIU)	Brake light switch signal status	• OFF • ON	—
Brake Lamp SW (VDC)	Brake light switch status	• OFF • ON	—
Current Gear Position	Current gear position signal	• P • R • Auto N • 6 • 5 • 4 • 3 • 2 • 1 • N	—
SI Drive mode	SI-DRIVE mode (display)	• Light Off • S# • I • S	—
Trip Count [count]	Number of ignition ON	Time	—
Count	Original counts identification information	—	—
Time Count [msec]	Elapsed time after ignition switch is turned to ON	ms	—
Automatic adjustment status	Automatic adjustment status	—	—

Items to be displayed	Content	Standard/Unit	Note
Lane recognition status	Display of lane recognition status	• Other than following: 00 • Recognizing traffic lanes on both sides at 40 km/h or more: 03 • Recognizing traffic lanes on both sides at 65 km/h or more (ALK recognition standby): 05	—
Preceding vehicle distance	Display of distance from preceding vehicle	m	—
EyeSight Temporary 0 Count	Occurrence count of EyeSight temporary stop 0	Time	Refer to the LIST OF CONTENTS FOR CAMERA TEMPORARY STOP. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code>LIST > LIST OF CONTENTS FOR CAMERA TEMPORARY STOP.
EyeSight Temporary 1 Count	Occurrence count of EyeSight temporary stop 1	Time	
EyeSight Temporary 2 Count	Occurrence count of EyeSight temporary stop 2	Time	
EyeSight Temporary 3 Count	Occurrence count of EyeSight temporary stop 3	Time	
EyeSight Temporary 4 Count	Occurrence count of EyeSight temporary stop 4	Time	
EyeSight Temporary 5 Count	Occurrence count of EyeSight temporary stop 5	Time	
EyeSight Temporary 6 Count	Occurrence count of EyeSight temporary stop 6	Time	
EyeSight Temporary 7 Count	Occurrence count of EyeSight temporary stop 7	Time	
EyeSight Temporary 8 Count	Occurrence count of EyeSight temporary stop 8	Time	
EyeSight Temporary 9 Count	Occurrence count of EyeSight temporary stop 9	Time	
EyeSight Temporary 10 Count	Occurrence count of EyeSight temporary stop 10	Time	
EyeSight Temporary 11 Count	Occurrence count of EyeSight temporary stop 11	Time	
EyeSight Temporary 12 Count	Occurrence count of EyeSight temporary stop 12	Time	
EyeSight Temporary 13 Count	Occurrence count of EyeSight temporary stop 13	Time	

Items to be displayed	Content	Standard/Unit	Note
EyeSight Temporary 14 Count	Occurrence count of EyeSight temporary stop 14	Time	
EyeSight Temporary 15 Count	Occurrence count of EyeSight temporary stop 15	Time	
EyeSight Temporary 16 Count	Occurrence count of EyeSight temporary stop 16	Time	
EyeSight Temporary 17 Count	Occurrence count of EyeSight temporary stop 17	Time	
EyeSight Temporary 18 Count	Occurrence count of EyeSight temporary stop 18	Time	
EyeSight Temporary 19 Count	Occurrence count of EyeSight temporary stop 19	Time	
EyeSight Temporary 20 Count	Occurrence count of EyeSight temporary stop 20	Time	
EyeSight Temporary 21 Count	Occurrence count of EyeSight temporary stop 21	Time	
EyeSight Temporary 22 Count	Occurrence count of EyeSight temporary stop 22	Time	
EyeSight Temporary 23 Count	Occurrence count of EyeSight temporary stop 23	Time	
EyeSight Temporary 24 Count	Occurrence count of EyeSight temporary stop 24	Time	
EyeSight Temporary 25 Count	Occurrence count of EyeSight temporary stop 25	Time	
EyeSight Temporary 26 Count	Occurrence count of EyeSight temporary stop 26	Time	
EyeSight Temporary 27 Count	Occurrence count of EyeSight temporary stop 27	Time	
EyeSight Temporary 28 Count	Occurrence count of EyeSight temporary stop 28	Time	
EyeSight Temporary 29 Count	Occurrence count of EyeSight temporary stop 29	Time	
EyeSight Temporary 30 Count	Occurrence count of EyeSight temporary stop 30	Time	
EyeSight Temporary 31 Count	Occurrence count of EyeSight temporary stop 31	Time	
Camera Failure Check 1	Camera failure supplementary information	—	—
Camera Failure Check 2			

Items to be displayed	Content	Standard/Unit	Note
Camera Failure Check 3			
Camera Failure Check 4			
Camera Failure Check 5			
Cruise Control Main Status (ECM→EyeSight)	Status of the cruise control main switch (cruise switch)	• OFF • ON	—
Cruise Control Main Display (ECM→EyeSight)	CRUISE indicator ON request signal	• Light Off • Light On	—
Main Cruise Control Display (EyeSight→Combination Meter)	CRUISE indicator ON signal	• Light Off • ON(White) • ON(Green) • Green Flashing	—
Cruise Control SW (EyeSight→ECM)	Status of the EyeSight steering switch (EyeSight → ECM)	• OFF • Main ON • SET/- (Deep) ON • RES/+ (Deep) ON • Cancel ON • Open	—
Cruise Control SW Voltage (Port14)	Cruise control switch input voltage value on Port 14	V	Normal range of the voltage value when each switch is operated Refer to Control Module I/O Signal (R137) No. 14 ←→ (R137) No. 15. Ref. to EyeSight (DIAGNOSTICS)>Control Module I/O Signal.

Items to be displayed	Content	Standard/Unit	Note
Cruise Control SW Voltage (Port16)	Cruise control switch input voltage value on Port 16	V	Normal range of the voltage value when each switch is operated Refer to Control Module I/O Signal (R137) No. 16 ←→ (R137) No. 15. Ref. to EyeSight (DIAGNOSTICS)>Control Module I/O Signal.
Cruise Control Set Status (ECM→EyeSight)	Status of the cruise control set status	• Release • Set	—
Cruise Control Mode	Cruise control mode signal	• ACC Mode • CC Mode	—
Pre-Collision Brake OFF Display Signal	Pre-collision brake OFF indicator light illumination command signal	• OFF • ON	—
Pre-Collision Brake OFF SW	Pre-collision brake OFF switch status	• OFF • ON • Open Load	—
Pre-crash brake function	ON/OFF status of pre-collision brake function	• OFF • ON	—
Lane Departure Warning Display Signal	Lane departure warning OFF indicator light illumination command signal	• OFF • ON	—
Lane Departure Warning Function	ON/OFF status of the lane departure warning function	• OFF • ON	—
Lane Departure Warning OFF SW	Lane departure warning OFF switch status	• OFF • ON • Open Load	—
Vehicle Speed Set Display	Cruise control set vehicle speed set value	• km/h • MPH	—

Items to be displayed	Content	Standard/Unit	Note
Cruise Control Set Speed	Set vehicle speed value for cruise control	• km/h • MPH	—
Drive Wheel Average Speed	Average wheel speed signal	km/h	—
CVT Target Revolution Speed Control Signal	CVT target revolution speed command signal	• No • Pre-Collision BA Operation	—
CVT Target Revolution Speed Value	CVT target revolution speed	rpm	—
Turbine Revolution Speed	AT turbine speed signal	rpm	—
Driver Torque Request	Torque value requested by driver	Nm	—
Accelerator wide opening judgment status	Signal that judges the accelerator opening angle to be “wide”	• Not established • Established	—
Intake Manifold Pressure Absolute	Engine intake manifold pressure	mmHg	—
Gear Ratio Actual	Current total reduction ratio signal	—	—
Barometric Pressure	Atmospheric pressure signal	mmHg	—
Adaptive Cruise Control Brake Control Status	Brake control permission signal for adaptive cruise control	• OFF • ON	—
Adaptive Cruise Control Braking Signal	Actuation signal of brake control	• Not performed • Perform	—
Adaptive Cruise Control Braking (ACC or Driver) Status (for CVT)	Adaptive cruise control braking (driver or control) signal (for CVT)	• Brakes non-enforcement • Braking applied	—
Brake Lamp Command	Brake lamp light up command signal	• No • Pre-Collision BA Operation	—
Adaptive Cruise Control Function	EyeSight function presence information (adaptive cruise control)	• No • Pre-Collision BA Operation	—
Left Front Wheel Speed (Pulse)	Front left wheel speed pulse signal (raw pulse value)	—	—
Right Front Wheel Speed (Pulse)	Front right wheel speed pulse signal (raw pulse value)	—	—

Items to be displayed	Content	Standard/Unit	Note
Left Rear Wheel Speed (Pulse)	Rear left wheel speed pulse signal (raw pulse value)	—	—
Right Rear Wheel Speed (Pulse)	Rear right wheel speed pulse signal (raw pulse value)	—	—
HOLD Display	HOLD display illumination signal (stop and hold)	• Light Off • Light On	—
READY Display	READY indicator illumination signal	• Light Off • Light On	—
Preceding vehicle distance	Preceding vehicle distance signal	Unit: m • 0 <= x < 5 • 5 <= x < 10 • 10 <= x < 15 • 15 <= x < 20 • 20 <= x < 25 • 25 <= x < 30 • 30 <= x < 35 • 35 <= x < 40 • 40 <= x < 45 • 45 <= x < 50 • 50 <= x < 55 • 55 <= x < 60 • 60 <= x < 65 • 65 <= x < 70 • 70 <= x < 75 • 75 <= x	—
Self-Vehicle Display	Display of your own vehicle	• Light Off • Light On	—
Vehicle Distance Setting Display	Vehicle distance setting indicator signal	• No Display • Distance(1st Step) • Distance(2nd Step) • Distance(3rd Step) • Distance(4th Step)	—
Preceding vehicle indication	Preceding vehicle indicator signal	• Light Off • Light On	—
Front left wheel speed	Front left wheel speed signal	km/h	—
Front right wheel speed	Front right wheel speed signal	km/h	—
Rear left wheel speed	Rear left wheel speed signal	km/h	—

Items to be displayed	Content	Standard/Unit	Note
Rear right wheel speed	Rear right wheel speed signal	km/h	—
EPB Activate Request	Electronic parking brake activate request	• No • Pre-Collision BA Operation	—
Adaptive Cruise Control Stop Hold Status	Signal of stop and hold status before reservation	• OFF • Stop is held	—
EPB Hill Hold Prohibited	Hill hold prohibition signal	• ON • OFF	—
Idle SW for EPB Control	Idle switch signal for electronic parking brake control	• OFF • ON	—
ACC/CC/MSL Mode	ACC/CC/MSA mode status	• ACC • CC • MSL	—
EyeSight Screen Migration Information	EyeSight display transition information	• Normal Display • EyeSight Screen Display	—
All Cylinder Fuel Cut Status	Fuel cut signal	• Normal • Cut	—
Low Speed Following	Low speed following mode signal	• No • Yes	—
Adaptive cruise control compulsory cancellation	Adaptive cruise control forced cancel signal	• No • Yes	—
Display for Adaptive Cruise Control Cancel Reason	Display for adaptive cruise control cancel reason	• No Display • Road Surface Steep Slope • MT Engine Speed (Low) • MT Speed (Low) • MT Gear Position • Other • Setting Disable • Step Strongly Brake • EyeSight during Startup • MT Engine Speed (High) • MT Speed (High) • Setting disable for	—

Items to be displayed	Content	Standard/Unit	Note
		Road Surface Steep Slope	
EyeSight Deceleration Request (VDC)	Deceleration request reception status signal from stereo camera	• Not yet received • Reception	—
Parking Brake Signal	Parking brake switch signal status	• OFF • ON	—
Driver Brake Detection	Driver brake detection signal	• OFF • ON	—
Driver Door Status	Driver’s door switch signal status	• Close • Open	—
Passenger Door Front Status	Passenger’s door switch signal status	• Close • Open	—
Right Rear Door Status	Right rear door switch signal status	• Close • Open	—
Left Rear Door Status	Left rear door switch signal status	• Close • Open	—
Driver's seat belt status	Status of driver’s seat belt	• ON • ON	—
VDC Over Steer Control	VDC operating status signal 1	—	—
VDC Under Steer Control	VDC operating status signal 2	—	—
ABS operation	Operating status signal of ABS	• Not Operate • Operate	—
TCS Operating Condition	Operating status signal of TCS	• Not Operate • Operate	—
RMI Operation	RMI operation signal	• Not during control • During control	—
Brake control actuate	Brake operation permission signal	• Not performed • Perform	—
Ignition SW ON Count When Pre-Collision Throttle Management at The Latest	Ignition switch ON count when AT false start prevention control is activated (the latest)	Time	—
Ignition SW ON Count When Pre-Collision Throttle Management at The 1 Time before	Ignition switch ON count when AT false start prevention control is activated (1 time before)	Time	—

Items to be displayed	Content	Standard/Unit	Note
Ignition SW ON Count When Pre-Collision Throttle Management at The 2 Time before	Ignition switch ON count when AT false start prevention control is activated (2 times before)	Time	—
Ignition SW ON Count When Following Distance Warning at The Latest	Ignition switch ON count when the vehicle distance alarm is activated (the latest)	Time	—
Ignition SW ON Count When Following Distance Warning at The 1 Time before	Ignition switch ON count when the vehicle distance alarm is activated (1 time before)	Time	—
Ignition SW ON Count When Following Distance Warning at The 2 Time before	Ignition switch ON count when the vehicle distance alarm is activated (2 times before)	Time	—
Ignition SW ON Count When Pre-Collision 1st Braking at The Latest	Ignition switch ON count when the pre-collision 1st braking is operated (at the latest)	Time	—
Ignition SW ON Count When Pre-Collision 1st Braking at The 1 Time before	Ignition switch ON count when the pre-collision 1st braking is operated (1 time before)	Time	—
Ignition SW ON Count When Pre-Collision 1st Braking at The 2 Time before	Ignition switch ON count when the pre-collision 1st braking is operated (2 times before)	Time	—
Ignition SW ON Count When Pre-Collision 1st Braking at The 3 Time before	Ignition switch ON count when the pre-collision 1st braking is operated (3 times before)	Time	—
Ignition SW ON Count When Pre-Collision 2nd Braking at The Latest	Ignition switch ON count when the pre-collision 2nd braking is operated (at the latest)	Time	—
Ignition SW ON Count When Pre-	Ignition switch ON count when the pre-collision 2nd braking is operated (1 time	Time	—

Items to be displayed	Content	Standard/Unit	Note
Collision 2nd Braking at The 1 Time before	before)		
Ignition SW ON Count When Pre-Collision 2nd Braking at The 2 Time before	Ignition switch ON count when the pre-collision 2nd braking is operated (2 times before)	Time	—
Ignition SW ON Count When Pre-Collision 2nd Braking at The 3 Time before	Ignition switch ON count when the pre-collision 2nd braking is operated (3 times before)	Time	—
Pre-Collision Brake Assist Command	Pre-collision brake assist command signal	• No • Pre-Collision BA Operation	—
Pre-Collision Brake Assist Operation	Pre-collision brake assist request reception status	• Not Operate • Operate	—
Pre-Collision Brake Action	Pre-collision brake command signal	• No • Pre-Collision BA Operation	—
Pre-crash brake operation	Pre-collision brake operation status	• Not Operate • Operate	—
Pre-Collision Brake Assist Threshold	Pre-collision brake threshold	• Normal • Threshold 1 • Threshold 2 • No request	—
Risk Avoidance Assist standby Command	Pre-collision steering assist, command signal	• Normal VDC State • AvoidRiskCmd	—
Risk Avoidance Assist Standby Status	Pre-collision steering assist stand-by status	• Normal VDC State • AvoidRiskStb	—
Risk Avoidance Assist State	Pre-collision steering assist, characteristic signal	• Normal • Parameter 1 • Parameter 2 • Invalid	—
Rear Wheel Slip Control Operation	Rear wheel slip detection signal	• Not operating • ON	—
VDC Health Check In	Information during VDC integrity confirmation	• OFF • ON	—
Brake-based torque vectoring presence/absence information	Brake-based torque vectoring presence/absence information	• Without DTV (15 inch brake) • With DTV (16 inch brake)	—

Items to be displayed	Content	Standard/Unit	Note
EyeSight Initialization(RAB)	Signal notifying the RAB CM of whether the EyeSight has already started	• Undefined • Completed	—
RAB Function Setting Existence	Reverse Automatic Braking function, presence/absence information of the RAB alarm function (RAB → EyeSight)	• EPB not Setup • Setting	—
RAB Fail Indication(EyeSight →RAB)	RAB function stop command information to RAB CM due to EyeSight failure	• No Indication • Indication	—
RAB Sonar System Failure(RAB→EyeSight)	Reverse Automatic Braking function, failure status of the RAB alarm function (RAB → EyeSight)	• Normal • Sonar Failure • System Failure • Undefined	—
RAB OFF Indication(EyeSight →RAB)	Reverse Automatic Braking function forced stop signal to RAB CM due to an EyeSight temporary stop etc.	• RAB ON • RAB Force OFF	—
Recession Control Permission(RAB)	Information of whether the Reverse Automatic Braking control is executable or not	• Prohibition • Permit	—
RAB Acceleration Suppression Control State(EyeSight→RAB)	Acceleration suppression control status of EyeSight by the command from RAB CM	• No Control • Precom • Recruitment	—
RAB Brake Control State(EyeSight→RAB)	Brake control status of EyeSight by the command from RAB CM	• No Control • Precompression • Brake Control In • Stopped and Held • Gradual Decrease	—
RAB Setting Information	Reverse Automatic Braking function, presence/absence information of the RAB alarm function (EyeSight → RAB)	• OFF • ON	—
Sonar System Image Display(RAB)	RAB display hide status notification for MFD	• Display • Not Display	—
RAB Function OFF Information	Reverse Automatic Braking function OFF status	• ON • OFF	—
Audible Alarm function OFF Information(RAB)	RAB alarm function OFF status	• ON • OFF	—
RAB Sonar System Failure(EyeSight→RAB)	Reverse Automatic Braking function, failure status of the RAB alarm function (EyeSight → RAB)	• Normal • Sonar Failure • System Failure • Undefined	—

Items to be displayed	Content	Standard/Unit	Note
Sonar System HALT(RAB)	Reverse Automatic Braking function, temporary stop status of the RAB alarm function (EyeSight → RAB)	• Normal • Fouling • Detection Error • Undefined	—
RAB Function pause Do Not Disturb	Disabled status of the Reverse Automatic Braking function temporary OFF switch for MFD	• Ready • Do Not Disturb	—
RAB Alarm pause Do Not Disturb	Disabled status of the RAB alarm function temporary OFF switch for MFD	• Ready • Do Not Disturb	—
Rear Sonar Distance Alarm Information (Rear Left Corner)	Rear sonar: Distance alert information of RLCorner (left corner, 3 stages)	• No Obstacle • Far • Middle • Short	—
Rear Sonar Distance Alarm Information (Rear Right Corner)	Rear sonar: Distance alert information of RRCorner (right corner, 3 stages)	• No Obstacle • Far • Middle • Short	—
Rear Sonar Distance Alarm Information (Rear Left Corner)	Rear sonar: Distance alert information of RLSide (left side, 3 stages)	• No Obstacle • Far • Middle • Short	—
Rear Sonar Distance Alarm Information (Rear Right Corner)	Rear sonar: Distance alert information of RRSide (left side, 3 stages)	• No Obstacle • Far • Middle • Short	—
Rear Sonar Distance Alarm Information (Rear Center)	Rear sonar: Distance alert information of RCenter (center, 4 stages)	• No Obstacle • Far • Middle • Short	—
RAB Alarm Level	Reverse Automatic Braking function, alarm sound level information of the RAB alarm function	• OFF • Level1 • Level2 • Level3 • Continuous Sound	—
RAB Alarm Interrupt Display Instruction	Alarm interruption display information when the Reverse Automatic Braking function is activated	• No display • Backward Note • Encourage Stepping Brake • Undefined	—
Active Lane Keep System	Lane keep assist function presence/absence signal	• No • ON	—

Items to be displayed	Content	Standard/Unit	Note
Active Lane Keep System Main Display	Lighting request of lane keep display	• Light Off • ON(White) • ON(Green) • Green Flashing	—
Display for Lane Keep Assist Cancel Reason	Display of the lane keep assist canceling reason	• No Display • Sharp_Curve • Let Go • Other • Speed Low • Speed High	—
Left-Line Display	Left-line display	• Light Off • Light On • Blink	—
Right-Line Display	Right-line display	• Light Off • Light On • Blink	—
Left-Line Color	Left-line color	• Sub • White • Other	—
Right-Line Color	Right-line color	• Sub • White • Other	—
Warning Code(Display)	Warning code (display only, without alarm)	• No alarm • LKSA Warning(Handle-free operation) • MT Shift Up Request • MT Shift Down Request • Encourage MT Gear Input • Accelerator Operation Priority In	—
EyeSight Function Presence Information (ACC Acceleration Characteristic)	Information of presence/absence of ACC acceleration characteristics customization function	• ACC Acceleration Characteristic Customize None • ACC Acceleration Characteristic Customize There	—

Items to be displayed	Content	Standard/Unit	Note
EyeSight Customize Current Value Setting(ACC Acceleration Characteristic) (EyeSight→Combination Meter)	Current setup information of ACC acceleration characteristics	• Lv.1(ECO) • Lv.2(Comfort) • Lv.3(Standard) • Lv.4(Dynamic)	—
Turn SW (Left)	Operation status of left turn switch	• OFF • ON	—
Turn SW (Right)	Operation status of right turn switch	• OFF • ON	—
Calibration (EPS)	Calibration signal	• Not set • Set	—
Steering Control Active	Lane keep control operation instruction	• Not Operate • Operate	—
Steering Assistance Operation Status	Lane keep control operation status	• Normal • Assist stop • Assist limitation	—
EyeSight Recognition Status (EPS)	EyeSight recognition status signal	• Not Detect • Detect	—
Absolute Steering Angle Detection	Absolute angle detection signal (not used)	• No • Yes	—
Steer Angle Sensor Op	Steering angle sensor signal	deg	—
Yaw Rate Value (Right -) (Left +)	Yaw rate value signal	rad/sec	—
Lateral G Sensor Value (Right -) (Left +)	Lateral acceleration signal	m/s^2	—
Steering Control Torque Target	Steering control instruction signal	Nm	—
Additional Steering Torque(Active Lane Keep System)	Additional steering torque signal (lane keep)	Nm	—
EPS Motor Operation Current	Motor operation current value	A	—
EPS Torque	Torque sensor main value	Nm	—
EPS Torque (Detailed)	Torque sensor value (resolution improved)	Nm	—
Target Current Value (EPS)	Final target current value	Arms	—

Items to be displayed	Content	Standard/Unit	Note
EPS Motor Absolute Angle	Motor absolute angle	deg	—
EPS Motor Operation Current (Steering Support High Speed)	Motor operation current value (high speed steering support)	Arms	—
HBA(EyeSight) Function Presence Information	HBA function presence/absence information	• No • HBA of EyeSight • HBA other than EyeSight	—
Light Auto Switch Configuration Information	Light switch at Auto	• OFF • ON	—
Dimmer Switch High	Dimmer switch at High	• OFF • ON	—
Dimmer Switch Pass	Dimmer switch at Pass	• OFF • ON	—
Driver Throttle Input Override Control	Instruction signal of AT false start prevention control Or instruction signal of AT false start (reverse) prevention control	• No • Pre-Collision BA Operation	—
Adaptive Cruise Control Torque Down	Torque down prohibition signal of stereo camera	• ON • OFF	—
Initial inspection distance accuracy rate	Accuracy rate of initial inspection distance	%	—
Initial inspection distance	Initial inspection distance	—	—
Initial Optical Axis (X-Axis)	Initial optical axis (X-axis)	pix	—
Initial Optical Axis (X-Axis2)	Initial optical axis (X-axis 2)	pix	—
Initial Optical Axis (Y-Axis)	Initial optical axis (Y-axis)	pix	—
Initial left image, rotation deviation correction value	Initial left image, rotation deviation correction value	—	—
Initial left image, vertical deviation correction value	Initial left image, vertical deviation correction value	—	—
Initial Right Image Rotation Deviation Correction Value	Initial right image, rotation deviation correction value	—	—

Items to be displayed	Content	Standard/Unit	Note
Initial distance correction value	Initial distance correction value	—	—
Initial Invalid Distance Data Count	Number of initial invalid distance data	—	—
Initial Other Inspection	Another initial inspection	—	—
Initial Error Code	Initial error code	—	—
D C-Ratio	Accuracy rate of inspection distance	%	—
Distance	Inspection distance	—	—
Optical Axis (X-Axis)	Optical axis (X-axis)	pix	—
Optical Axis (X-Axis2)	Optical axis (X-axis 2)	pix	—
Optical Axis (Y-Axis)	Optical axis (Y-axis)	pix	—
Left image, rotation deviation correction value	Left image, rotation deviation correction value	—	—
Left image, vertical deviation correction value	Left image, vertical deviation correction value	—	—
Right Image Rotation Deviation Correction Value	Right image, rotation deviation correction value	—	—
Distance correction value	Distance correction value	—	—
Ineffective distance data count	Number of invalid distance data	—	—
Other Inspection	Other inspection	—	—
Error Code	Error code detailed information	—	—
Camera Battery Open Status (+B)	Display of stereo camera battery (+B circuit) status	• Connect • Open Load	—
Image ON/OFF status	ON/OFF status of present image sensor	• OFF • ON	—
Camera Temperature (Current)	Current temperature display of stereo camera internal circuit	Celsius	—
Camera temperature, operation status	Camera temperature and operation status	• Normal • High temperature • Low temperature	—
Camera Temperature (Previous Maximum Value)	Display of stereo camera internal circuit temperature (past MAX value)	Celsius	—

Items to be displayed	Content	Standard/Unit	Note
Ignition SW ON Count When Camera Temperature (Previous Maximum Value)	Ignition switch ON count when stereo camera internal circuit temperature is displayed (past MAX value)	Time	—
Camera Temperature (Previous Minimum Value)	Display of stereo camera internal circuit temperature (past MIN value)	Celsius	—
Ignition SW ON Count When Camera Temperature (Previous Minimum Value)	Ignition switch ON count when stereo camera internal circuit temperature is displayed (past MIN value)	Time	—
EyeSight Temporary 0 Continuation Count	Continuation count of EyeSight temporary stop 0	Time	—
EyeSight Temporary 1 Continuation Count	Continuation count of EyeSight temporary stop 1	Time	—
EyeSight Temporary 2 Continuation Count	Continuation count of EyeSight temporary stop 2	Time	—
EyeSight Temporary 3 Continuation Count	Continuation count of EyeSight temporary stop 3	Time	—
EyeSight Temporary 4 Continuation Count	Continuation count of EyeSight temporary stop 4	Time	—
EyeSight Temporary 5 Continuation Count	Continuation count of EyeSight temporary stop 5	Time	—
EyeSight Temporary 6 Continuation Count	Continuation count of EyeSight temporary stop 6	Time	—
EyeSight Temporary 7 Continuation Count	Continuation count of EyeSight temporary stop 7	Time	—
EyeSight HALT Code	EyeSight halt code signal	• No HALT • E1-1(No Camera View) • E2(Out of Temp. Range) • E3(Other) • HALT Notice	—
Ambient Air Temperature(Indication)	Ambient air temperature signal	Celsius	—
Head lamp : Clearance light	Headlight small signal status	• Light Off • Light On	—

Items to be displayed	Content	Standard/Unit	Note
Headlight SW (LO)	Headlight LO switch operation status	• OFF • ON	—
Head lamp : High Beam	Headlight Hi beam signal status	• Light Off • Light On	—
Wiper SW (Front)	Front wiper switch operation status	• OFF • ON	—
VDC OFF SW	VDC OFF signal	• OFF • ON	—
VDC "OFF" Indicator Status	VDC OFF indicator status	• Light Off • Light On	—
EyeSight Input Control Suspended Status (EPS)	Overheat protection limit signal	• No • Yes	—
Ambient Air Temperature(Diagnosis)	Ambient temperature for diagnosis	Celsius	—
Camera Failure Real-Time Check (At The Time of Failure)	Camera failure real-time information at the time of failure	—	—
Camera Temperature (At The Time of Failure)	Camera temperature sensor at the time of failure	Celsius	—
Image ON/OFF Status/Sensor Ready Status (At The Time of Failure)	Image ON/OFF status at the time of failure	• OFF • ON	—
Adaptive Cruise Control Failure (EyeSight→Combination Meter)	Stereo camera failure signal for combination meter	• Normal • FAIL	—
VDC Sensor Failure	VDC sensor failure signal	• Normal • FAIL	—
ABS System Failure	ABS system failure signal	• Normal • FAIL	—
Vehicle Speed Sensor Failure	Vehicle speed sensor failure signal	• Normal • FAIL	—
Adaptive Cruise Control Failure (EyeSight→VDC)	Failure signal of stereo camera to VDC control module	• Normal • FAIL	—
EyeSight Reception (VDC)	Failure signal of stereo camera	• Not yet received • Reception	—

Items to be displayed	Content	Standard/Unit	Note
Hill Descent Control Status	Hill descent control status signal	• System OFF • Waiting • Operating • Infinitive	—
Hill Start Assist Operation Status	Hill start assist operation status signal	• Not Operate • Operate	—
EyeSight Failure	EyeSight failure signal	• Normal • FAIL	—
Engine Failure	Engine failure signal	• Normal • FAIL	—
Transmission Failure	TCM failure signal	• Normal • FAIL	—
EyeSight Failure (EPS→EyeSight)	Failure signal of EPS	• Normal • FAIL	—
EyeSight Failure (EPS→EyeSight)	Failure signal for EyeSight (EPS)	• Normal • FAIL	—
Adaptive Cruise Control Failure (EyeSight→EPS)	Stereo camera failure signal for EPS control module	• Normal • FAIL	—
ETC Failure	Electronic throttle control failure signal	• Normal • FAIL	—
EEPROM Failure	Failure signal of combination meter	• Normal • FAIL	—
Brake Lamp SW Fail Status	Brake light switch failure signal	• Normal • FAIL	—
Brake Lamp Relay Drive	Brake light relay drive status signal	• Not Operating • Function check is in progress! Press Exit to abort.	—
EyeSight Communication Error (VDC)	Stereo camera communication failure signal	• Normal • FAIL	—
Judgment of Lost Communication with Adaptive Cruise Control ECM CAN	No-receive signal of EyeSight CAN data	• Normal • Not Receive	—
EyeSight Received Data (ECM)	NG signal of stereo camera data	• Normal • FAIL	—
Steering Angle Sensor Status	Steering angle sensor status	• Normal • FAIL	—

Items to be displayed	Content	Standard/Unit	Note
Steering Angle Sensor Error Code	Steering angle sensor error code signal	• Normal • Failure EEPROM • IG Voltage Drop • Counter Overflow • ROM Trouble • Random Access Memory (RAM) Error • Magnetometric Sensor Trouble	—
EyeSight Customization Change Request (Combination Meter→EyeSight)	EyeSight customization change request signal	• No • Pre-Collision BA Operation	—
EyeSight Customization Reset Request (Combination Meter→EyeSight)	EyeSight customization reset request signal	• No • Pre-Collision BA Operation	—
Pedestrian Airbag Presence Information (Combination Meter → EyeSight)	Pedestrian protection A/B presence/absence information	• No • Yes	—
EyeSight Customize Change Setting(Combination Meter → EyeSight)	Current setup information of ACC acceleration characteristics	• Lv.1(ECO) • Lv.2(Comfort) • Lv.3(Standard) • Lv.4(Dynamic)	—
CVT 8-speed Mode Control	CVT multi-stage speed control signal when EyeSight operates	• Not Operate • Operate	—
Lock up status	Lock up information	• Converter • Slip Lock Up • Lock-Up	—
Brake Lamp Status	Brake light state signal	• Light Off • Light On	—
Brake Vectoring Control Operation	Active torque vectoring control operation status	• Not Operate • Operate	—
Shift Position	Shift position information	• " "(blank) • D • N • R	—

Items to be displayed	Content	Standard/Unit	Note
		• P • L	
Manual Mode Information(TCU→EyeSight)	Manual mode information	• Non-Manual Mode • Manual Mode	—
Automatic Neutral Control(TCU→EyeSight)	Automatic neutral controlled signal	• Not Operate • Operate	—
Speedometer / Distance Display Unit	Speedometer / distance display unit	• km/h • mile	—
EyeSight Specification	EyeSight judgment signal	• No • Yes	—
Vehicle Height	Vehicle height information	• Unknown • OBK • Standard	—
Fuel type	Fuel type	• Gasoline • Diesel	—
Engine Displacement	Engine displacement	• 1500cc • 2000cc • 2500cc • 3000cc • 3600cc • 1600cc	—
Number of Cylinders	Number of cylinder for engine	• 4 Cylinder • 6 Cylinder	—
Turbo	Presence or absence of turbo	• Turbo • NA	—
Vehicle Type	Vehicle type information signal	• Impreza Type • Forester Type • Exiga Type • Legacy/Outback Type • WRX Type	—
Destination	Destination code signal	• Japan • U.S(U4,U5,U6) • Canada(C0) • EURO(Left) (EC,EA,E2,EL) • General(Left)(K4) & Latin America(C4) • Middle & Near	—

EyeSight (DIAGNOSTICS) > Freeze Frame Data

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Freeze Frame Data.**
- **For details on freeze frame data, refer to the list. Ref. to EyeSight (DIAGNOSTICS)>Freeze Frame Data>LIST.**
- **Freeze frame data is cleared by Clear Memory. Ref. to COMMON(diag)>Clear memory.**

EyeSight (DIAGNOSTICS) > Freeze Frame Data

LIST

Note:

Freeze frame data is stored for three DTCs. Allocation of the three DTCs are as follows:

- **DTC that occurred first.**
- **DTC that occurred first during the latest driving cycle (from IGN ON to IGN OFF).**
- **DTC that occurred first during the second latest driving cycle.**
- **However, DTCs will be stored in order of occurrence until these three DTCs are stored.**

Items to be displayed	Content	Standard/Unit	Note
ECU Power Supply Voltage (IG)	Display of input voltage of stereo camera	V	—
Engine Speed	Engine speed	rpm	—
Accel. Opening Angle	Acceleration opening angle signal	%	—
Brake Fluid Target Pressure	Target value of brake fluid pressure	MPa	—
Master Cylinder Actual Fluid Pressure	Brake pressure	MPa	—
Right Front Wheel W/C Actual Fluid Pressure	Right front wheel cylinder fluid pressure	MPa	—
Left Front Wheel W/C Actual Fluid Pressure	Left front wheel cylinder fluid pressure	MPa	—
Brake SW Input	Brake switch signal status	• OFF • ON	—
Brake Lamp SW (BIU)	Brake light switch signal status	• OFF • ON	—
Brake Lamp SW (VDC)	Brake light switch status	• OFF • ON	—
Trip Count [count]	Number of ignition ON	Time	—
Brake Lamp Command	Brake lamp light up command signal	• No • Pre-Collision BA Operation	—

Items to be displayed	Content	Standard/Unit	Note
EPB Activate Request	Electronic parking brake activate request	• No • Pre-Collision BA Operation	—
Idle SW for EPB Control	Idle switch signal for electronic parking brake control	• OFF • ON	—
Driver Brake Detection	Driver brake detection signal	• OFF • ON	—
Brake control actuate	Brake operation permission signal	• No • Perform	—
Pre-Collision Brake Assist Command	Pre-collision brake assist command signal	• No • Pre-Collision BA Operation	—
Pre-Collision Brake Action	Pre-collision brake command signal	• No • Pre-Collision BA Operation	—
Risk Avoidance Assist standby Command	Pre-collision steering assist, command signal	• Normal VDC State • AvoidRiskCmd	—
Adaptive Cruise Control Torque Down	Torque down prohibition signal of stereo camera	• ON • OFF	—
Hill Descent Control Status	Hill descent control status signal	• System OFF • Waiting • Operating • Infinitive	—
Engine Failure	Engine failure signal	• Normal • FAIL	—
Brake Lamp SW Fail Status	Brake light switch failure signal	• Normal • FAIL	—

EyeSight (DIAGNOSTICS) > Real-time Diagnosis

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [EyeSight], and then select [Enter].
5. On [Select Function] display, select [Data monitor].
6. Check that the display changes and the contents are correct when performing the operations as follows.
   - Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
     – Item [Brake Lamp SW (BIU)][Brake SW Input][Brake Lamp SW (VDC)]
   - Turn the cruise switch to ON.
     – Item [Cruise Control SW Voltage (Port14)][Cruise Control SW Voltage (Port16)]
   - Turn the {SET/−} switch to ON.
     – Item [Cruise Control SW Voltage (Port14)][Cruise Control SW Voltage (Port16)]
   - Turn the {RES/+} switch to ON.
     – Item [Cruise Control SW Voltage (Port14)][Cruise Control SW Voltage (Port16)]
   - Turn the “F.D. Set+” switch to ON.
     – Item [Cruise Control SW Voltage (Port14)][Cruise Control SW Voltage (Port16)]
   - Turn the “Following distance -” switch to ON.
     – Item [Cruise Control SW Voltage (Port14)][Cruise Control SW Voltage (Port16)]
   - Turn the “Lane keep” switch to ON.
     – Item [Cruise Control SW Voltage (Port14)][Cruise Control SW Voltage (Port16)]
   - Operate the shift lever.
     – Item [Current gear position]
   - Press and hold the pre-collision brake OFF switch.
     – Item [Pre-Collision Brake OFF Indicator]
   - Press and hold the lane departure warning OFF switch.
     – Item [Lane Departure Warning OFF Indicator]

   Note:
   For detailed operation procedures, refer to “Application help”.

EyeSight (DIAGNOSTICS) > Clear Active Lane Keep System Learning Value

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [EyeSight], and then select [Enter].
5. On [Select Function] display, select [Work Support].
6. On [Work Support] display, select [Clear Active Lane Keep System Learning Value].

   Note:

   - **When suspension parts are replaced or wheel alignment is adjusted, perform [Clear Active Lane Keep System Learning Value].**
   - **For detailed operation procedures, refer to "Application help".**

EyeSight (DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [EyeSight], and then select [Enter].
5. On [Select Function] display, select [DTC].

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**
- **For details on DTCs, refer to the list. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.**
- **Up to ten codes can be stored. When more than ten codes are output, they will not be stored.**
- **The same code is stored only once, and even when the same code occurs several times, information will not be updated.**

U1233	Lost Communication with RAB Control Module	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE.
U1534	Invalid Data Received from Sonar ECU	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2801 TCM ABNORMAL

Detected when error occurs in the automatic transmission.
When lost communication with TCM and TCM abnormal occur simultaneously, perform diagnosis for lost communication with TCM first.

Note:

Check the automatic transmission. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2802 ETC ABNORMAL

Detected when error occurs in the electronic throttle control.

Note:

Perform check of the ECM. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2806 ECM ABNORMAL

Detected when error occurs in the engine control module (ECM).

Note:

Perform check of the ECM. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2807 ECM ABNORMAL

Detected when cruise indicator illumination request from ECM and ON/OFF information of cruise function do not match.

Note:

- **Perform check of the ECM. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.**
- **Check the ECM cruise control cancel code. Ref. to EyeSight (DIAGNOSTICS)>ECM Cancel Code(s) Display.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2809 VDC MALFUNCTION

Detected when error occurs in the VDC. (VDC failure)
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

Note:

Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B280A VDC ECHO BACK DISAGREEMENT

Detected when error occurs in the VDC. (VDC brake control malfunction 1)
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

Note:

Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B280B VDC BRAKE FLUID PRESSURE

Detected when error occurs in the VDC. (VDC brake control malfunction 3)

Note:

Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B280F COMBINATION METER MALFUNCTION

Malfunction is detected in the combination meter.

DTC detecting condition:

Defective combination meter

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Combination meter does not illuminate.

Note:

Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2810 INCOMPATIBLE WITH EYESIGHT (COMBINATION METER)

Detected when the combination meter, which is not designed exclusively for EyeSight is installed.

DTC detecting condition:

Incorrect specifications of combination meter

Trouble symptom:

All functions of EyeSight system do not operate.

Note:

Replace the combination meter with the one designed for EyeSight. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2811 EPS ABNORMAL

Malfunction is detected in the electric power steering.

Note:

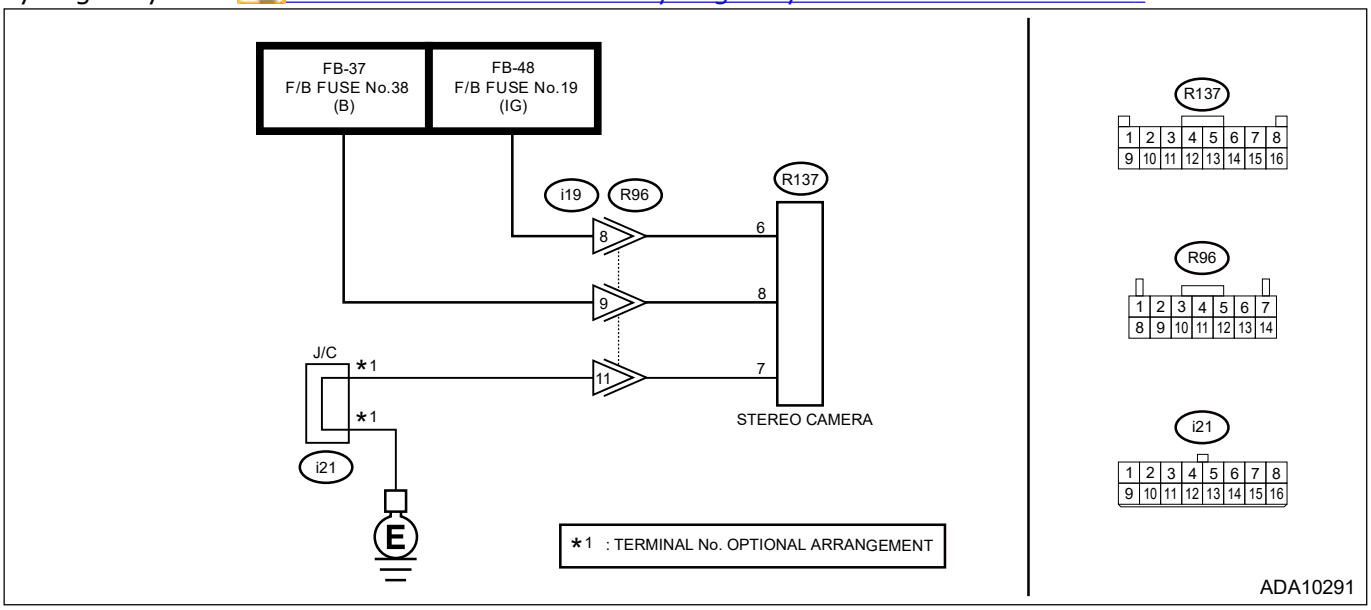
Check the electric power steering. Ref. to POWER STEERING (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2814 POWER SUPPLY LOW VOLTAGE

Detected when the status of 7.0 V or less continues approximately for 5 seconds and is judged to be low-voltage malfunction, or when the +B harness of the stereo camera is broken.

DTC detecting condition:



- Input voltage to stereo camera is out of specifications.
- Defective stereo camera control harness (open circuit in +B harness)
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Cruise indicator light blinks.
- Malfunction indicator light illuminates.
- VDC warning light illuminates.
- ATF temperature warning light illuminates.

Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK GENERATOR.

1. Start the engine and idle for a while.
2. Measure the voltage between generator terminal B and chassis ground.
   Connector & terminal
   Generator terminal B (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Check the generator. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Generator.

2. CHECK BATTERY TERMINAL.

Turn the ignition switch to OFF.

Is the battery terminal connected securely?

Yes	Go to 3.
No	Tighten the battery terminal securely.

3. CHECK FUSE.

Check fuses No. 19 and No. 38 in the fuse & relay box. Ref. to EyeSight>Relay and Fuse.

Is the fuse OK?

Yes	Go to 4.
No	Replace the defective fuse. When the replaced fuse blows out easily, check the short circuit in harness.

4. CHECK HARNESS (POWER SUPPLY CIRCUIT).

1. Disconnect the stereo camera.
2. Turn the ignition switch to ON.
3. Measure the voltage between connector of stereo camera and chassis ground.
   Connector & terminal
   (R137) No. 6 (+) — Chassis ground (−):
   (R137) No. 8 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 5.
No	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.

5. CHECK HARNESS (GROUND CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery.
3. Measure the resistance between stereo camera and chassis ground.
   Connector & terminal
   (R137) No. 7 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.

6. CHECK POOR CONTACT OF CONNECTORS.

Check stereo camera connector.

Is there poor contact of connector?

Yes	Repair the connector.
No	Go to 7.

7. CHECK STEREO CAMERA.

1. Connect all connectors and battery terminals securely.
2. Start the engine, drive the vehicle at 40 km/h (24.9 MPH) or more, stop the vehicle and then stop the engine.
3. After 3 seconds or more have elapsed, restart the engine.
4. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

5. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2814 or B2815 displayed?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2815 POWER SUPPLY HIGH VOLTAGE

Detected when the status for the battery voltage of 16 V or more continues approximately for 5 seconds and is judged to be abnormally high voltage.
Refer to DTC B2814 for DTC detecting condition, trouble symptom and diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2814 POWER SUPPLY LOW VOLTAGE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2817 BRAKE LAMP

DTC detecting condition:
- Defective brake light relay
- Defective brake light switch
- Defective VDC

Trouble symptom:
- All functions of EyeSight system do not operate.

- EyeSight warning light illuminates.
- Brake light does not go off or illuminate.

Note:

When this DTC is detected, check VDC system. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B281B STEERING ANGLE SENSOR FAIL

DTC detecting condition:

Defective steering angle sensor

Trouble symptom:

All functions of EyeSight system do not operate.

Note:

When this DTC is detected, check VDC system. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B281C INCOMPATIBLE WITH EYESIGHT (EPS)

Detected when the EPS CM which is not exclusively for EyeSight is installed.

DTC detecting condition:

Incorrect specifications of EPS CM.

Trouble symptom:

All functions of EyeSight system do not operate.

Note:

Replace the EPS CM with the one exclusively designed for EyeSight. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Power Steering Control Module.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B281E RAB CONTROL MODULE

Detected when error occurs in sonar or RAB CM.

DTC detecting condition:

- Defective RAB CM.
- Defective unit that is cooperatively controlled with stereo camera.

Trouble symptom:

- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.
- All functions of EyeSight system do not operate. (Functions terminated due to a cooperative control unit failure)
- EyeSight warning light illuminates. (Functions terminated due to a cooperative control unit failure)

1. CHECK DTCS (DETERMINING A FAILURE OF COOPERATIVE CONTROL UNIT).

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC other than DTC B281E displayed?

Yes	Perform the diagnosis for DTC other than DTC B281E.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Finish the diagnosis.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B281F REVERSE AUTOMATIC BRAKING OVERRIDE

DTC detecting condition:
Defective RAB CM.
Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.

Note:
Check the Reverse Automatic Braking when this DTC is displayed. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2821 REVERSE AUTOMATIC BRAKING CONTROL PROHIBITION

DTC detecting condition:
Defective RAB CM.
Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.

Note:
Check the Reverse Automatic Braking when this DTC is displayed. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2822 TCM DATA ABNORMAL

DTC detecting condition:
Detected when there are no AT turbine speed inputs during driving and the TCM is determined as abnormal. Detected when all of the following conditions are met:
- Drive wheels' average wheel speed is 15 km/h or more.
- Engine speed is 1000 rpm or more.
- Turbine speed is 0 or less.

Trouble symptom:
- Standing start problems
- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.

1. CHECK DTC.

Read the DTC of [Transmission] using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

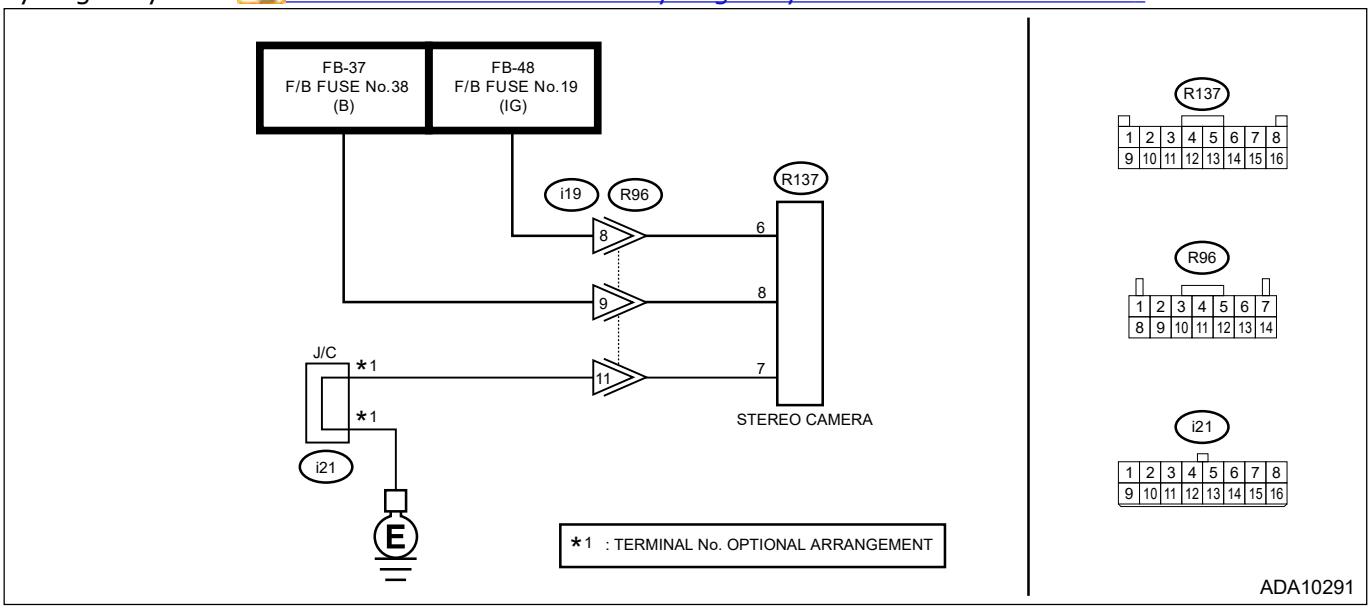
Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A0 VEHICLE MODEL JUDGMENT

Detected when the model code for stereo camera and the model code used for CAN data are different.
DTC detecting condition:



- Defective CAN system
- Defective stereo camera
- In the aiming operation, there is an open circuit in the +B harness of the stereo camera.
- In the completion of the aiming operation, the switching from IGN OFF to IGN ON takes place too early, and the recording of the model information has not yet been finished.

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK RELATED CM.

Check the part number of the ECM, TCM, VDC CM and combination meter.

Is each CM a genuine part?

Yes	Go to 2.
No	Replace the non-genuine CM with a genuine one.

2. CHECK STEREO CAMERA.

1. Remove the camera cover.
2. Check the part number of the stereo camera.

Is the stereo camera genuine?

Yes	Go to 3.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 4.
No	Perform the diagnosis for LAN system.

4. CHECK MODEL REGISTRATION INFORMATION.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [EyeSight].
Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Model registration information]

Does vehicle and [Model registration information] correspond?

Yes	Perform the adjustment or inspection of the camera. Ref. to EyeSight>Camera Adjustment, Inspection.
No	Go to 5.

5. CHECK FUSE.

Check fuses No. 19 and No. 38 in the fuse & relay box. Ref. to EyeSight>Relay and Fuse.

Is the check result OK?

Yes	Go to 6.
No	Replace the defective fuse. When the replaced fuse blows out easily, check the short circuit in harness.

6. CHECK HARNESS (POWER SUPPLY CIRCUIT).

1. Disconnect the stereo camera.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between connector of stereo camera and chassis ground.

Connector & terminal

(R137) No. 6 (+) — Chassis ground (−):

(R137) No. 8 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 7.
No	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.

7. CHECK HARNESS (GROUND CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the ground cable from battery.
3. Using a tester, measure the resistance between stereo camera and chassis ground.
   Connector & terminal
   (R137) No. 7 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 8.
No	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.

8. CHECK POOR CONTACT OF CONNECTORS.

Check stereo camera connector.

Is there poor contact of connector?

Yes	Repair the connector.
No	Go to 9.

9. CHECK STEREO CAMERA.

1. Connect all connectors and battery terminals securely.
2. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B28A0 displayed?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A1 EYESIGHT COMMUNICATION(ECM)

Detected when the engine control module (ECM) detects the malfunction of stereo camera, or when the stereo camera or ECM is assembled incorrectly.

DTC detecting condition:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Incorrect assembly of stereo camera (when the stereo camera designed for EyeSight (Ver. 2) type vehicle is installed to the EyeSight (Ver. 3) type vehicle, etc.)
- Incorrect assembly of ECM (when the ECM designed for another model is installed, etc.)

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

1. CHECK ECM.

Check the part number of the ECM.

Is the ECM genuine?

Yes	Go to 2.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.

2. CHECK STEREO CAMERA.

1. Remove the camera cover.
2. Check the part number of the stereo camera.

Is the stereo camera genuine?

Yes	Go to 3.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

3. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 4.
No	Perform the diagnosis for LAN system.

4. CHECK ECM.

Perform the diagnosis for the engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 5.
No	Perform the diagnosis for the engine.

5. CHECK CONNECTOR.

Check the ECM connector and the stereo camera connector.

Is the check result OK?

Yes	Go to 6.
No	Repair or replace the connector.

6. CHECK STEREO CAMERA.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC other than DTC B28A1 displayed?

Yes	Perform the diagnosis for DTC other than DTC B28A1.
No	Go to 7.

7. CHECK STEREO CAMERA.

1. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B28A1 displayed?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A2 EYESIGHT COMMUNICATION(VDC)

Detected when the VDC control module (VDCCM) detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective VDC control module (VDCCM)
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the diagnosis of DTCs for LAN system.

2. CHECK VDC.

Perform the diagnosis for VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 3.
No	Perform the diagnosis for VDC.

3. CHECK CONNECTOR.

Check the VDC connector and the stereo camera connector.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the connector.

4. CHECK STEREO CAMERA.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC other than DTC B28A2 displayed?

Yes	Perform the diagnosis for DTC other than DTC B28A2.
No	Go to 5.

5. CHECK STEREO CAMERA.

1. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B28A2 displayed?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A3 EYESIGHT COMMUNICATION(METER)

Detected when the combination meter detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective combination meter

- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Perform the diagnosis of DTCs for LAN system.
No	Go to 2.

2. CHECK COMBINATION METER.

Perform the diagnosis for combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 3.
No	Perform the diagnosis for combination meter.

3. CHECK CONNECTOR.

Check the combination meter connector and the stereo camera connector.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the connector.

4. CHECK STEREO CAMERA.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC other than DTC B28A3 displayed?

Yes	Perform the diagnosis for DTC other than DTC B28A3.
No	Go to 5.

5. CHECK STEREO CAMERA.

1. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B28A3 displayed?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A4 EYESIGHT COMMUNICATION(EPS)

Detected when the power steering control module (EPS CM) detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective EPS CM

- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the diagnosis for LAN system.

2. CHECK EPS CM.

Perform the diagnosis for the power steering system. Ref. to POWER STEERING (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 3.
No	Perform the diagnosis for the power steering system.

3. CHECK CONNECTOR.

Check the EPS CM connector and the stereo camera connector.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the connector.

4. CHECK STEREO CAMERA.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC other than DTC B28A4 displayed?

Yes	Perform the diagnosis for DTC other than DTC B28A4.
No	Go to 5.

5. CHECK STEREO CAMERA.

1. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B28A4 displayed?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A5 ENGINE TORQUE LIMITER CONTROL PROHIBIT

Detected when abnormal data is transmitted from stereo camera to engine control module (ECM) and the engine control module (ECM) prohibits the AT rapid start prevention control, or when the engine control module (ECM) prohibits the AT rapid start prevention control.

DTC detecting condition:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Defective combination meter
- Incorrect assembly of combination meter (when the combination meter that is not for EyeSight is installed.)

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

1. CHECK COMBINATION METER.

Check the part number of the combination meter.

Is the combination meter genuine?

Yes	Go to 2.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Perform the diagnosis for LAN system.
No	Go to 3.

3. CHECK ECM.

Perform the diagnosis for the engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 4.
No	Perform the diagnosis for the engine.

4. CHECK CONNECTOR.

Check the ECM connector and the stereo camera connector.

Is the check result OK?

Yes	Go to 5.
No	Repair or replace the connector.

5. CHECK STEREO CAMERA.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC other than DTC B28A5 displayed?

Yes	Perform the diagnosis for DTC other than DTC B28A5.
No	Go to 6.

6. CHECK STEREO CAMERA.

1. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B28A5 displayed?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1

Detected when communication error occurs inside the stereo camera.
DTC detecting condition:
Communication error occurs inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.

1. CHECK RESTARTING.

1. Turn the ignition switch to OFF.
2. Start the engine.
3. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC 28A6 displayed after restarting the engine?
(When malfunction is detected after restarting the engine, 0 is registered in IG counter. Other values can be regarded as DTCs detected in the past.)

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Temporary poor communication have occurred. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A7 STEREO CAMERA RECOGNITION(TARGET)

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

Note:

If the same DTC is still detected after restarting the engine, replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A8 INTERNAL STEREO CAMERA COMMUNICATION 2

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

Note:

If the same DTC is still detected after restarting the engine, replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28A9 STEREO CAMERA SYNCHRONIZED RECOGNITION DATA

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

Note:

If the same DTC is still detected after restarting the engine, replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28AA STEREO CAMERA MICROCOMPUTER 1

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.
DTC detecting condition:
Communication error occurs due to malfunction of microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28AB STEREO CAMERA MICROCOMPUTER 2

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.
DTC detecting condition:
Communication error occurs due to malfunction of microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.
For the diagnostic procedure, refer to DTC B28A6. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28AC STEREO CAMERA ASIC

Detected when communication error occurs due to malfunction of ASIC.
DTC detecting condition:
Communication error occurs due to malfunction of ASIC.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28AD STEREO CAMERA IMAGE RECOGNITION

Detected when improper image recognition occurs in the microcomputer inside the stereo camera.
DTC detecting condition:
Improper image recognition occurs in the microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.

For the diagnostic procedure, refer to DTC B28A6. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28AE INTERNAL STEREO CAMERA POWER SUPPLY

Detected when improper power supply inside the stereo camera occurs.
DTC detecting condition:
Improper power supply inside the stereo camera occurs.
Trouble symptom:
All functions of EyeSight system do not operate.
For the diagnostic procedure, refer to DTC B28A6. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28AF STEREO CAMERA ADJUSTMENT INCOMPLETE

Detected when adjustment or inspection of stereo camera has not been completed normally.
DTC detecting condition:
- Operation is aborted during adjustment or inspection of the stereo camera.
- After the replacement of the stereo camera, adjustment or inspection of camera has not yet been performed.

Trouble symptom:
All functions of EyeSight system do not operate.
For diagnostic procedure, perform adjustment/inspection of camera. Ref. to EyeSight>Camera Adjustment, Inspection. When the adjustment or inspection of camera is performed, and if it is not completed successfully, replace the camera. Ref. to EyeSight>Stereo Camera.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B1 STEREO CAMERA AUTOMATIC ADJUSTMENT

Detected when the optical axis of stereo camera is deviated in lateral direction or when the fluctuation range of automatic adjustment value has expanded.
Note:
Perform the adjustment of the stereo camera. Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE.
If the same DTC is still detected after adjustment, replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B2 STEREO CAMERA HIGH TEMPERATURE

Detected when the temperature of the stereo camera excessively increases.

Note:

When this DTC is detected, performing adjustment or inspection of the camera will not return it to the normal state. In this case, always replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B3 STEREO CAMERA LOW TEMPERATURE

Detected when the temperature of the stereo camera excessively decreases.

Note:

When this DTC is detected, performing adjustment or inspection of the camera will not return it to the normal state. In this case, always replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B5 +B CIRCUIT OPEN

Detected when there is an open circuit in power supply line.

Note:

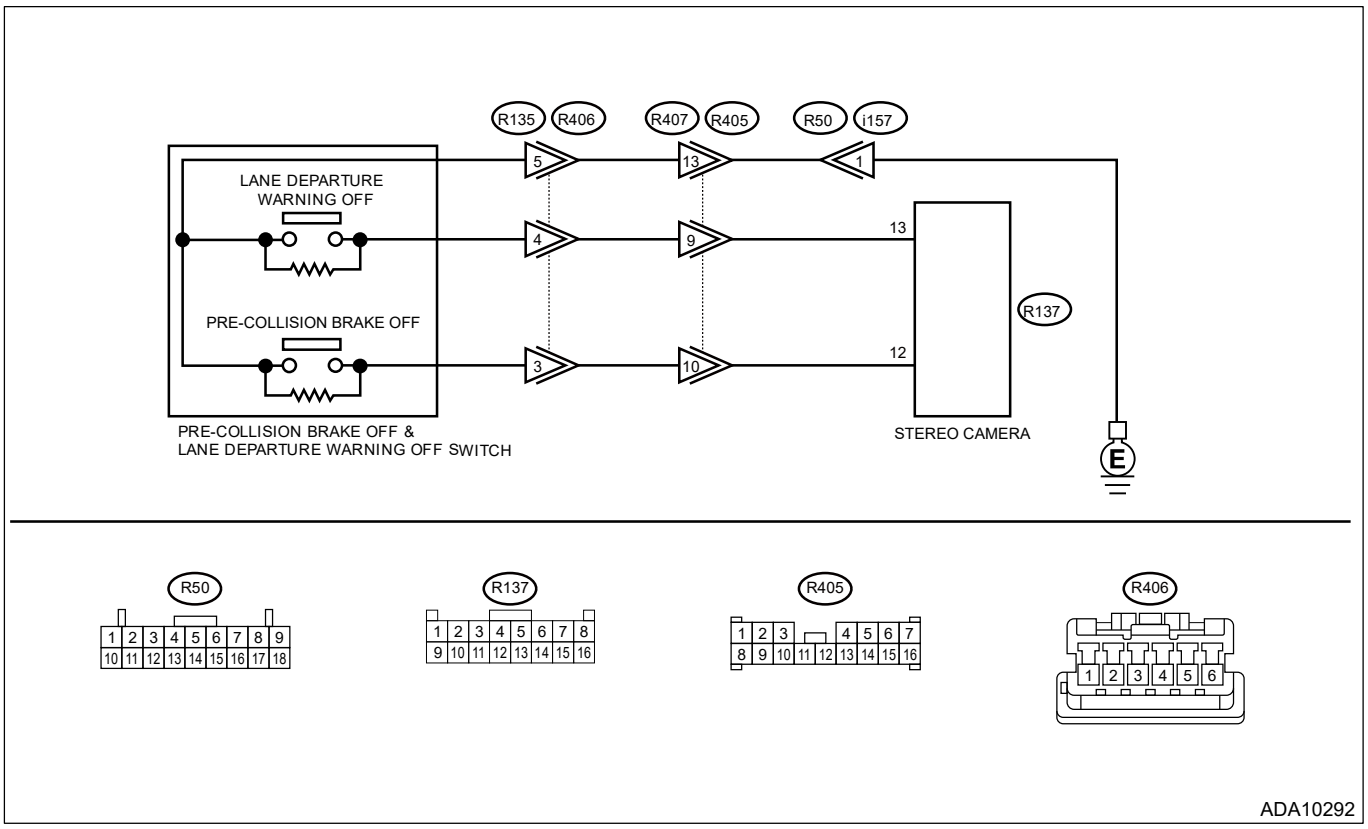
Refer to DTC B2814 for diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2814 POWER SUPPLY LOW VOLTAGE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B6 PRE-COLLISION OFF SWITCH

Detected when pre-collision brake OFF switch circuit is not installed, open-circuited or is stuck to ON.

DTC detecting condition:



- Wiring of pre-collision brake OFF switch is not connected.
- Pre-collision brake OFF switch circuit is open.
- Pre-collision brake OFF switch circuit stays ON for 45 seconds or more.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [EyeSight].
Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

Data Monitor

- Pre-Collision Brake OFF SW Status (BIU)

Does the display change according to ON/OFF operation of the pre-collision brake OFF switch?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK HARNESS.

1. Disconnect the stereo camera connector and the pre-collision brake OFF switch connector.
2. Using the tester, measure the resistance between the stereo camera connector and pre-collision brake OFF switch connector as well as chassis ground.
   Connector & terminal
   (R406) No. 3 — (R137) No. 12:
   (R406) No. 5 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace an open circuit in harness between the stereo camera connector and pre-collision brake OFF switch connector.

3. CHECK HARNESS.

Using the tester, measure the resistance between the pre-collision brake OFF switch connector and chassis ground.
Connector & terminal
(R406) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

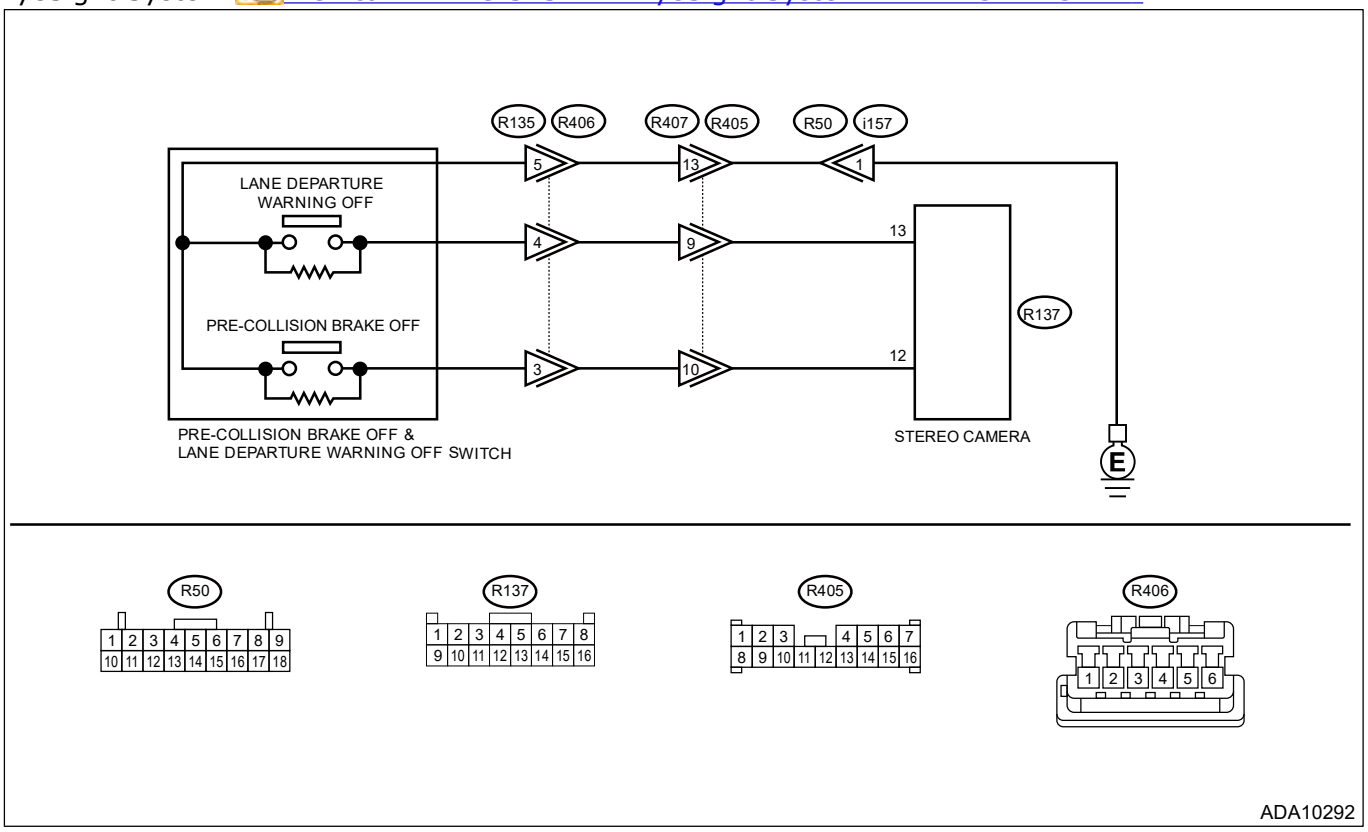
Yes	Check the pre-collision brake OFF switch. Ref. to EyeSight>Switches and Harness>INSPECTION.
No	Repair or replace the short circuit to ground in harness between the stereo camera connector and pre-collision brake OFF switch connector.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B7 LDP OFF SWITCH

Detected when lane departure warning OFF switch circuit is not installed, open-circuited, or is stuck to ON.

DTC detecting condition:



- Wiring of lane departure warning OFF switch is not connected.
- Lane departure warning OFF switch circuit is open.
- Lane departure warning OFF switch circuit stays ON for 45 seconds or more.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [EyeSight].
Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Lane Departure Warning OFF SW (BIU)]

Does the display change according to the lane departure warning OFF switch ON/OFF operation?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK HARNESS.

1. Disconnect the stereo camera connector and the lane departure warning OFF switch connector.
2. Using the tester, measure the resistance between the stereo camera connector and lane departure warning OFF switch connector.
   Connector & terminal
   (R406) No. 4 — (R137) No. 13:
   (R406) No. 5 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace an open circuit in harness between the stereo camera connector and lane departure warning OFF switch connector.

3. CHECK HARNESS.

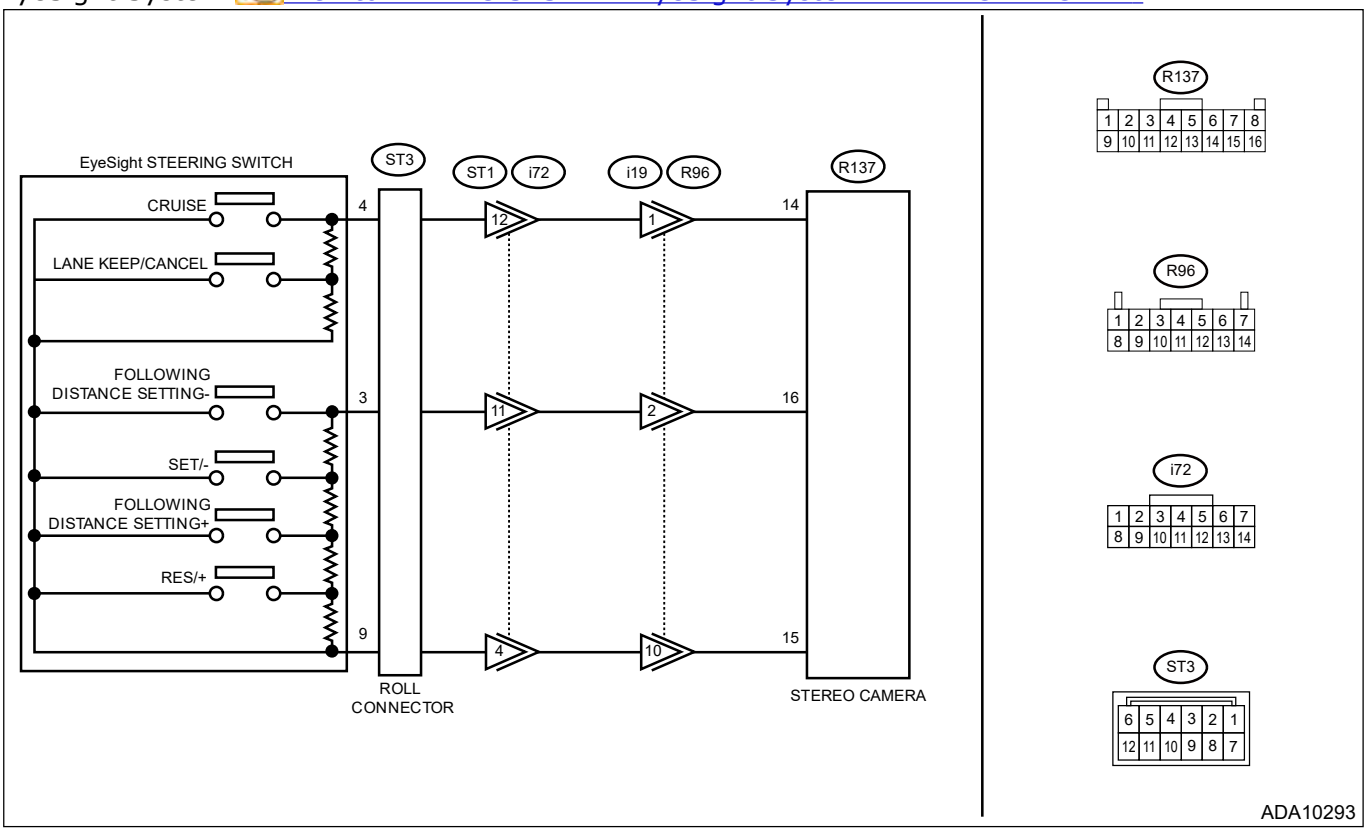
Using the tester, measure the resistance between the lane departure warning OFF switch connector and chassis ground.
Connector & terminal
(R406) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Check the lane departure warning OFF switch. Ref. to EyeSight>Switches and Harness>INSPECTION.
No	Repair or replace the short circuit to ground in harness between the stereo camera connector and lane departure warning OFF switch connector.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B8 EYESIGHT STEERING SWITCH 1



Detected when EyeSight steering switch is not installed or has malfunction, or when the harness is faulty or open-circuited or in stuck ON condition.
DTC detecting condition:
- Wiring of the EyeSight steering switch is not connected.
- EyeSight steering switch circuit is open.
- EyeSight steering switch circuit stays ON.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [EyeSight].
Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Cruise Control SW Voltage (Port14)]
- [Cruise Control SW Voltage (Port16)]

Is the voltage according to the pressed EyeSight steering switch displayed?

Yes — Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

Note:

In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

No — Go to 2.

2. CHECK HARNESS.

1. Disconnect the stereo camera connector and EyeSight steering switch connector.
2. Using the tester, measure the resistance between stereo camera connector and EyeSight steering switch connector.

Connector & terminal

(ST3) No. 4 — (R137) No. 14:
(ST3) No. 3 — (R137) No. 16:
(ST3) No. 9 — (R137) No. 15:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace an open circuit in harness between the stereo camera connector and the EyeSight steering switch connector.

3. CHECK HARNESS.

Using the tester, measure the resistance between EyeSight steering switch connector and chassis ground.

Connector & terminal

(ST3) No. 4 — Chassis ground:
(ST3) No. 3 — Chassis ground:
(ST3) No. 9 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Check the EyeSight steering switch. Ref. to EyeSight>Switches and Harness>INSPECTION.
No	Repair or replace the short circuit to ground in harness between the stereo camera connector and the EyeSight steering switch connector.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28B9 EYESIGHT STEERING SWITCH 2

Detected when steering switch for EyeSight is not installed, is open-circuited or is stuck to ON.
Refer to DTC B28B8 for diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28B8 EyeSight STEERING SWITCH 1.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B28BA STEERING ANGLE AND STEREO CAMERA CORRELATION MISALIGNED

- Detected when the center point of the steering angle sensor is misaligned.
- Detected when the alignment is extremely misaligned.

DTC detecting condition:

- Defective wheel alignment
- Defective VDC CM
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

Note:

- **Prior confirmation is required to check if the work related to alignment has been performed or there is an accident history.**
- **Using the Subaru Select Monitor, display the [Data monitor] of [EyeSight], and record the value of [Active Lane Keep System Control Learning Value 3 (Steering Wheel Angles Offset)] in advance. Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.**

1. CHECK DTC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC related to steering angle sensor displayed?

Yes	Perform the diagnosis according to DTC, and Go to 2.
No	Go to 2.

2. CHECK DRIVING CONDITION.

Check the driving condition.

Is the steering wheel obviously tilted when the vehicle is in the straight ahead position? (Check if it is obviously tilted at the closest point between the column cover and the steering wheel.)

Yes	Perform the wheel alignment adjustment Ref. to FRONT SUSPENSION>Wheel Alignment., Go to 3.
No	Go to 3.

3. CHECK CURRENT DATA.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [EyeSight]. Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

- [Steering Angle Sensor Signal]

Note:
Do not check with [Steering Angle Sensor Value (Right +) (Left -)].

2. Check the value when the vehicle is in the straight ahead position.

Is the value within −2 — +2 deg?

Yes	Go to 4.
No	Perform [VSC(VDC) Centering Mode] of VDC. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE. Repeat the step 3. Go to 3.

4. CHECK JOB CONTENT.

Check the job contents performed so far. (To identify whether the problem belongs to the vehicle or the stereo camera.)

Is one of the following actions performed: steering angle sensor diagnosis, wheel alignment adjustment or VDC sensor centering mode?

Yes	Go to 5.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.

5. LANE KEEP ASSIST LEARNING VALUE CLEAR.

1. Perform [Clear Active Lane Keep System Learning Value]. Ref. to EyeSight (DIAGNOSTICS)>Clear Active Lane Keep System Learning Value.
2. Turn the ignition switch OFF → ON.
3. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [EyeSight]. Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

- [Active Lane Keep System Control Learning Value 3 (Steering Wheel Angles Offset)]

Is the value of [Active Lane Keep System Control Learning Value 3 (Steering Wheel Angles Offset)] 0?

Yes	Go to 6.
No	Performing [Clear Active Lane Keep System Learning Value] is not complete. Go to 7.

6. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [EyeSight]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B28BA displayed?

Yes	Clearing the memory is not complete. Go to 7.
No	Currently, it is normal. Finish the diagnosis.

7. CHECK SUBARU SELECT MONITOR CONNECTION.

Check the connection of Subaru Select Monitor.

Is there any fault in the harness and connection between Subaru Select Monitor and stereo camera?

Yes	Replace the harness or repair the connection. In case that the step 5 is not performed Go to 5. In case that the step 5 has been performed Go to 6.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when malfunction occurs in CAN line. (Bus off)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Detected when CAN data from engine control module (ECM) is not transmitted to stereo camera.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM is not transmitted to stereo camera.
When lost communication with TCM and TCM abnormal occur simultaneously, perform diagnosis for lost communication with TCM first.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM is not transmitted to stereo camera.
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal

or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

Detected when CAN data from steering angle sensor is not transmitted to stereo camera.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

Detected when CAN data from VDC is not transmitted to stereo camera.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data from EPS CM is not transmitted to stereo camera.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from body integrated unit is not transmitted to stereo camera.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter is not transmitted to stereo camera.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Failure counter diagnosis of engine control module (ECM)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0402 INVALID DATA RECEIVED FROM TCM

Failure counter diagnosis of automatic transmission control module (TCM)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Failure counter diagnosis of VDC control module (VDC CM)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

Failure counter diagnosis of EPS CM

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Failure counter diagnosis of body integrated unit

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Failure counter diagnosis of combination meter

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

Failure counter diagnosis of steering angle sensor

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF

Detected when the bus off status (the stereo camera detects the failure and is disconnected from the local CAN line) occurs.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE

Detected when CAN data from RAB CM did not reach the stereo camera.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU

Failure counter diagnosis of RAB CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

EyeSight (DIAGNOSTICS) > EyeSight HALT Code

OPERATION

If the EyeSight pause code is detected from the stereo camera, all the functions of the EyeSight excluding the conventional cruise control stop temporarily and cannot be used. When the failure is resolved, the function starts operating.

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [EyeSight], and then select [Enter].
5. On [Select Function] display, select [Cancel Code].
6. On [Cancel Code] display, select [EyeSight HALT Code].

Note:

- **For detailed operation procedures, refer to "Application help".**
- **Temporary stop is not released even if the lane departure warning OFF switch or pre-collision brake OFF switch is pressed.**
- **Depending on the situation, temporary stop may not be released even if the ignition switch is turned off.**
- **Up to 20 codes can be stored.**
- **Stored codes will be cleared by Clear Memory. Ref. to COMMON(diag)>Clear memory.**
- **For details on EyeSight temporary stop codes, refer to List of EyeSight temporary stop code. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code>LIST.**

EyeSight (DIAGNOSTICS) > EyeSight HALT Code

LIST

- List of EyeSight temporary stop code

EyeSight HALT Code	Item	Contents of diagnosis	Note
E5	Stereo Camera Temporary Stop	The operation stopped temporarily due to vertical deviation of the optical axis of the stereo camera. (During CRUISE MAIN ON, "Halt" is displayed in the multi-information display.)	Perform inspection concerning the item for E5 of the "CHECK LIST (CAMERA TEMPORARY STOP)". Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code>LIST > CHECK LIST (CAMERA TEMPORARY STOP). This code may be displayed when the rear of the vehicle is lowered by the overload. When the failure is resolved, and the operation returns from the temporary stop status after driving for a while, it is normal. If this code is displayed in an ordinary use under which the vehicle is not tilted, readjust

EyeSight HALT Code	Item	Contents of diagnosis	Note
			the stereo camera. Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE. If the same cancel code is still detected after readjustment, replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
CC		Temporary stop was performed due to the bad weather, backlight, fogged window or dirty window interfering with the recognition function of the stereo camera. And this code may be displayed also when the front of the camera is blocked by the hand or when it is very dark around the vehicle or when the vehicle is surrounded by the blanket of snow and nothing can be seen from the stereo camera. (During CRUISE MAIN ON, "Temporary stop Camera view defectiveness" is displayed in the multi-information display.)	Investigate the following items No. 1 and No. 2, and check that the possible cause of the temporary stop is applied either to No. 1 or No. 2. 1. Perform inspection concerning the item for CC and CD of the "CHECK LIST (CAMERA TEMPORARY STOP)". Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code>LIST > CHECK LIST (CAMERA TEMPORARY STOP). When there is a relevant item in the check list, it can be the cause of malfunction. 2. Read the temporary stop count stored in the temporary stop count of data monitor, and check the cause of the temporary stop occurred in the past from "LIST OF CONTENTS FOR CAMERA TEMPORARY STOP: 0 — 23 COUNTS". Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code>LIST > LIST OF CONTENTS FOR CAMERA TEMPORARY STOP.
CD			When the causes of the temporary stop for No. 1 and No. 2 correspond, drive the vehicle for a while after the cause of the temporary stop has been eliminated. If the operation returns from the temporary stop status, it is normal. (However, when the occurrence and cancellation••• of the temporary stop take place repeatedly, the temporary stop status is held to prevent the irritation, delaying the

EyeSight HALT Code	Item	Contents of diagnosis	Note
			return of the operation.) When this is not the case, check the stereo camera and its periphery. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > WINDSHIELD GLASS AND DASHBOARD. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > FRONT WIPER. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > STEREO CAMERA.
CE		The temperature of the stereo camera became excessively high or low, and the operation stopped temporarily. (During CRUISE MAIN ON, "Temporary stop Camera temperature range outside" is displayed in the multi-information display.)	Perform inspection concerning the item for CE of the "CHECK LIST (CAMERA TEMPORARY STOP)". Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code>LIST > CHECK LIST (CAMERA TEMPORARY STOP). When the operation returns from the temporary stop status after the failure is resolved, it is normal. When the operation does not return from the temporary status even if driving the vehicle for a while after the failure has been resolved, replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
33		Detected when engine speed is 300 rpm or less. (Not detected at an initial ignition switch ON.) (During CRUISE MAIN ON, "Halt" is displayed in the multi-information display.)	Detected when the engine speed drops below 300 rpm after the engine has started once. If the same EyeSight temporary stop code is detected again when the engine is restarted, check the ECM. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Basic Diagnostic Procedure>PROCEDURE.
C0	Pre-Collision Second Braking Activation	The operation stopped temporarily because the pre-collision secondary brake operated three	This code may be displayed when the pre-collision brake is operated intentionally. Turn the ignition switch to OFF, and restart after a while. If the

EyeSight HALT Code	Item	Contents of diagnosis	Note
		times between engine starting and stopping. (This is not a normal driving operation, or the system may be malfunctioning.) (During CRUISE MAIN ON, "Halt" is displayed in the multi-information display.)	operation returns from the temporary stop status, it is normal. When temporary stop status continues with a code other than C0 after restart, perform diagnosis according to the code. When temporary stop status continues with the code of C0 after restart, the stereo camera may be malfunctioning. Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
A0	CAN Diagnosis	The voltage dropped below 10 V immediately after IGN ON. (During CRUISE MAIN ON, "Halt" is displayed in the multi-information display.)	This code may be displayed when the engine is not started for a while with the ignition switch ON and when the engine has started after that. This is a normal operation. If this is not the case, the supply voltage may be malfunctioning. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2814 POWER SUPPLY LOW VOLTAGE.
A1	ECM Reprogramming	The operation stopped temporarily because the control module (CM) is being reprogrammed. (During CRUISE MAIN ON, "Halt" is displayed in the multi-information display.)	After the completion of the reprogramming operation, turn the ignition to OFF and restart. If the operation returns from the temporary stop status, it is normal.
F9	EPS Input Control Suspended	The operation stopped temporarily because an assist limitation (overheat prevention control) was operated in order to prevent the electric power steering malfunction due to overheat.	This code may be displayed when the steering wheel is operated repeatedly while the vehicle is stopped or running in very low speed. After stopping the engine, leave the vehicle for approximately 30 minutes to cool down, and restart the engine. If the operation returns from the temporary stop status, it is normal.
		The operation stopped temporarily because of an electric power steering	This code may be displayed when battery power is low. Replace or charge the battery, and restart the

EyeSight HALT Code	Item	Contents of diagnosis	Note
		voltage decrease.	engine. If the operation returns from the temporary stop status, it is normal.
		The operation stopped temporarily because of an electric power steering bus off.	Electric power steering detected a failure and was disconnected from CAN line.
FA	EPS Input Control Suspended	The operation stopped temporarily because the center point of steering angle sensor deviated.	This code may be displayed when the center point of steering angle sensor deviates when removing and installing the steering etc. If the system returns from the temporary stop status after inspecting/adjusting the center point and driving the vehicle for a while, it is normal.
		The operation stopped temporarily because there was an excessive deviation in the alignment. (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	This code may be displayed when vehicle underbody parts are damaged by a car accident etc, or when the underbody parts are replaced. If the system returns from the temporary stop status after replacing the parts and driving the vehicle for a while, it is normal.

1. CHECK LIST (CAMERA TEMPORARY STOP)

Even when the set status of the adaptive cruise control is canceled or when a temporary stop status occurs, the EyeSight temporary stop code will not be retained for the following conditions.

- When the VDC operation is stopped by pressing the VDC OFF switch
- When the pre-collision brake operation is stopped by pressing the pre-collision brake OFF switch
- When the lane departure warning is stopped by pressing the lane departure warning OFF switch
- Immediately after the engine start

When these cases does not apply but the EyeSight temporary stop code is displayed, perform the inspection according to the following items.

Item Name			**Yes/ No**	
[1]: EyeSight temporary stop code [CC, CD] (At this time, “Temporary stop Camera view defectiveness” is displayed in the multi-information display.)				
1	Check that the current status applies to the condition that are difficult to be recognized by the stereo camera.			
	1	It was bad weather (heavy rain, snowstorm, dense fog; especially when the oil film adheres to the windshield glass, the glass coating agent is used, or when the old wiper is used).	Yes	No
	2	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	3	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently.	Yes	No
	4	The windshield glass is covered with fog, snow, dirt, frost or sandy dust, and either of them blocks the visibility of the stereo camera.	Yes	No
	5	The vehicle was tilted excessively by the heavy load.	Yes	No
	6	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
	7	The field of view was insufficient due to water or snow raised by the preceding vehicle or oncoming vehicle, or the moisture, sand, smoke or sandy dust blown in the wind.	Yes	No
	8	The vehicle passed through the outlet or inlet of a tunnel.	Yes	No
	9	The rearmost area of preceding vehicle was small (trailer, etc.), low or uneven.	Yes	No
	10	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes	No
	11	The object was a plate of glass, mirror wall or door.	Yes	No
	12	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	13	The vehicle passed through the banners, flags, drooping branches or grass.	Yes	No

	Item Name	Yes/No	
14	The vehicle drove on the steep uphills or steep downhills.	Yes	No
15	Front of the camera was blocked by the hand.	Yes	No
16	It was very dark and there was no obstacle around the vehicle.	Yes	No
17	The surrounding ground surface was similarly colored. (There is snow as far as the eye can see.)	Yes	No
18	Dirt such as fingerprint adhered to the lens portion of the stereo camera.	Yes	No
19	Stable recognition was difficult because of reflection to the windshield glass.	Yes	No
20	The stereo camera was subject to impact, and the displacement or distortion occurred.	Yes	No

[2]: EyeSight temporary stop code [CE] (At this time, “Temporary stop Camera temperature range outside” is displayed in the multi-information display.)

1 Check that the current status applies to the condition that the temperature of the stereo camera becomes excessively high or low.

1	The compartment temperature was high. (For example: The vehicle was left under the scorching sun.) Or the compartment temperature was low. (For example: The vehicle was left under the frigid environment.)	Yes	No

[3]: EyeSight temporary stop code [E5] (At this time, “Temporary stop” is displayed in the multi-information display.)

1 Check that the current status applies to the condition that the vertical deviation occurs on the stereo camera optical axis.

1	The vehicle was tilted excessively by the heavy load.	Yes	No
2	The vehicle drove on the steep uphills or steep downhills.	Yes	No
3	The stereo camera was subject to impact, and the displacement or distortion occurred.	Yes	No

[4]: EyeSight temporary stop code [33] (At this time, “Temporary stop” is displayed in the multi-information display.)

1	Check that the current status applies to the condition that the engine speed drops to 300 rpm or below.	Yes	No

[5]: EyeSight temporary stop code [C0] (At this time, “Temporary stop” is displayed in the multi-information display.)

1	Check that the current status applies to the condition that the pre-collision secondary brake operated three times between starting and stopping of engine.	Yes	No

[6]: EyeSight temporary stop code [A0] (At this time, “Temporary stop” is displayed in the multi-information display.)

Item Name		Yes/No	
1	Check that the current status applies to the condition that the voltage dropped below 10 V immediately after the ignition ON.	Yes	No

[7]: EyeSight temporary stop code [A1] (At this time, “Temporary stop” is displayed in the multi-information display.)

1	Check that the control module (CM) is currently being reprogrammed.	Yes	No

[8]: EyeSight temporary stop code [F9] (At this time, “Temporary stop” is displayed in the multi-information display.)

1	Check that the current status applies to the condition that the steering wheel is operated repeatedly when the vehicle stops or moves very slowly.	Yes	No

[9]: EyeSight temporary stop code [FA] (At this time, “Temporary stop” is displayed in the multi-information display.)

1	Check that this is applied to the condition that the wheel alignment is extremely misaligned.	Yes	No
2	Check that this is applied to the condition that the center point of the steering angle sensor is misaligned.	Yes	No

2. LIST OF CONTENTS FOR CAMERA TEMPORARY STOP

Read the camera temporary stop count from Data Display & Save of Subaru Select Monitor, estimate the possible cause of the temporary stop according to the chart below. (After clearing the memory, the number of occurrences for each temporary stop is accumulated.)

Items to be displayed	**Main causes**	**Possible conditions for temporary stop (including events occurring less frequently)**
EyeSight Temporary 0 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 1 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, very dark and no obstacle around the vehicle, unpatterned wall, blanket of snow around the vehicle and no obstacle is found
EyeSight Temporary 2 Count	Fogged window glass, frost on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 3 Count	Backlight	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 4 Count	Water raised by preceding vehicle	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 5 Count	Dirty window glass, fogged window glass, oil film on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle

Items to be displayed	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
EyeSight Temporary 6 Count	Storm of rain	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 7 Count	Object on the dashboard reflected against the windshield glass	Object on the dashboard reflected against the windshield glass, snowstorm
EyeSight Temporary 8 Count	Dirty window glass, bad weather	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, object on the dashboard reflected against the windshield glass, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water drop raised by preceding vehicle, steep slope, continuous sharp curve, banner, grass, preceding vehicle with large uneven surface (trailer, etc.), preceding vehicle driving in the night without illuminating the tail light, preceding vehicle with snow adhered, use of the window washer
EyeSight Temporary 9 Count	Not used	—
EyeSight Temporary 10 Count	Not used	—
EyeSight Temporary 11 Count	Not used	—
EyeSight Temporary 12 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 13 Count	Not used	—
EyeSight Temporary 14 Count	Not used	—
EyeSight Temporary 15 Count	Not used	—
EyeSight Temporary 16 Count	Not used	—

Items to be displayed	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
EyeSight Temporary 17 Count	Not used	—
EyeSight Temporary 18 Count	Not used	—
EyeSight Temporary 19 Count	Not used	—
EyeSight Temporary 20 Count	Not used	—
EyeSight Temporary 21 Count	The vehicle is tilted excessively by the heavy load.	• The vehicle is tilted excessively by the heavy load. • The vehicle drives on the steep uphills or steep downhills. • The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 22 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 23 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 24 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 25 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 26 Count	Dirty window glass left for a long time	Dirty window glass, fogged window glass, frost on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens
EyeSight Temporary 27 Count	Not used	—
EyeSight Temporary 28 Count	Can’t see anything in a complete darkness.	The vehicle drove in a complete darkness with the headlight turned off. Or, the camera was blinded when driving.
EyeSight Temporary 29 Count	Not used	—
EyeSight Temporary 30 Count	Not used	—
EyeSight Temporary 31 Count	In a high temperature of 70°C (158°F) or more or in a low	—

Items to be displayed	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
	temperature of −10°C (14°F) or less	

EyeSight (DIAGNOSTICS) > ACC Cancel Code(s) Display

OPERATION

When the ACC cancel code is detected from the stereo camera, the cruise control will be cancelled.

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [EyeSight], and then select [Enter].
5. On [Select Function] display, select [Cancel Code].
6. On [Cancel Code] display, select [ACC Cancel Code(s) Display].

Note:

- **For detailed operation procedures, refer to "Application help".**
- **Up to 8 codes can be stored. When more than eight codes are output, the oldest code will be deleted to store the latest code.**
- **Stored codes will be cleared by Clear Memory. Ref. to COMMON(diag)>Clear memory.**
- **For details on ACC cancel codes, refer to List of ACC cancel code. Ref. to EyeSight (DIAGNOSTICS)>ACC Cancel Code(s) Display>LIST.**

EyeSight (DIAGNOSTICS) > ACC Cancel Code(s) Display

LIST

- List of ACC cancel code(s)

ACC Cancel Code(s) Display	Item	Contents of diagnosis
02	ACC Mode:Maintaining Standstill Position	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle.
04	ACC Mode:Stereo Camera Temporary Stop	Displayed when the cruise control is canceled by the EyeSight temporarily stop while driving in the adaptive cruise mode.
08	Common:Vehicle Speed Sensor Abnormal	Displayed when the cruise control is canceled due to a wheel speed sensor malfunction.
09	Common: Brake operation	Displayed when the cruise control is canceled by the brake operation of the driver.
0 A	Common: Pre-crash brake	Displayed when the cruise control is canceled because the AT manual mode is selected or paddle operation is performed.
0C	Common:VDC SW OFF	Displayed when the VDC function is turned OFF by the VDC OFF switch and the cruise control is canceled.
0D	Common:Any Door is Opened	Displayed when the cruise control is canceled because either of the driver's door, passenger's door, or rear doors is opened.

ACC Cancel Code(s) Display	Item	Contents of diagnosis
0E	Common:Driver Seat Belt Unfastened	Displayed when the cruise control is canceled because the driver’s seat belt is unfastened.
0F	Common:EPB Activation	Displayed when the cruise control is canceled because the EPB is activated.
10	Common:EPB Special Mode	Displayed when the cruise control is canceled by an irregular operation of a driver, which repeats activation/deactivation of the EPB.
12	Common:AT Gear Range	Displayed in the following situations: The driver performed the SET or RES operation to drive the vehicle either in the adaptive cruise mode or in the constant speed mode, but that operation was not accepted because it was done immediately after shifting into D range.
13	Common:Steep Sloping Road	Displayed when the road surface was judged to be too steep and therefore the cruise control is canceled.
14	Common:ABS Activation	Displayed when the cruise control is canceled because the ABS is activated.
15	Common:Steering Angle Excessive	Displayed when the cruise control is canceled because the steering wheel is fully turned.
16	ACC Mode:Vehicle Stop Judgement	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode.
17	Common:Parking Brake Activation	Displayed when the cruise control is cancelled because the parking brake is applied.
18	ACC Mode:Automatic Stop Cancellation	Displayed when the cruise control is cancelled under the following situations: The own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode, and the driver repeats the SET or RES operation and the automatic brake control continues for 120 seconds.
19	Common:X-Mode	Displayed when the cruise control is canceled because the X mode is activated.
1A	Common:TSM Activation	This item is displayed when the cruise control is cancelled by the operation of TSM commanded by VDC.
1B	Common:VDC Activation	Displayed when the cruise control is canceled because the VDC is activated.
1C	Common:Cancel SW Operation	This item is displayed when the cruise control is canceled by the operation of CANCEL switch.
1D	Common:Cruise SW OFF	This item is displayed when the cruise control is canceled by turning the cruise switch OFF.

ACC Cancel Code(s) Display	Item	Contents of diagnosis
1E	CC Mode:Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the constant speed mode.
1F	ACC Mode:Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the adaptive cruise mode.
20	Common:FF Slip Cancel	Displayed when the cruise control is canceled because tires slip in front-wheel drive vehicle.

Note:

- **“Adaptive cruise mode”: Adaptive cruise control**
- **“Constant speed mode”: Conventional cruise control**
- **“Common”: Adaptive cruise control and conventional cruise control**

EyeSight (DIAGNOSTICS) > Lane Departure Prevention Assist Deactivate Code(s) Display

OPERATION

Lane Departure Prevention Deactivate Code(s) Display: The lane departure prevention deactivate code is output, when the lane keep (lane departure prevention) is canceled during the operation or the standby state is canceled.

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [EyeSight], and then select [Enter].
5. On [Select Function] display, select [Cancel Code].
6. On [Cancel Code] display, select [Lane Departure Prevention Assist Deactivate Code(s) Display].

Note:

- **For detailed operation procedures, refer to "Application help".**
- **Up to 8 codes can be stored. When more than eight codes are output, the oldest code will be deleted to store the latest code.**
- **Stored codes will be cleared by Clear Memory. Ref. to COMMON(diag)>Clear memory.**
- **For details on lane keep assist codes, refer to List of lane keep assist code. Ref. to EyeSight (DIAGNOSTICS)>Lane Departure Prevention Assist Deactivate Code(s) Display>LIST.**

EyeSight (DIAGNOSTICS) > Lane Departure Prevention Assist Deactivate Code(s) Display

LIST

- List of lane keep assist code

Code	Item	Contents of diagnosis
04	Lateral Acceleration is Large	Detected when control output value exceeds the controllable range by a driving operation such as rounding a curve at high speed or making a sharp turn.
0C	Lane Recognition Prohibition(Environmental Factor)	Detected when a driving lane width is narrowed.
18	Out of Control Return Possibility Range	Detected when lane departure prevention control continues for a predetermined time.
26	Real Yaw Rate Excessive	Detected when actual yaw rate exceeds the maximum value of target yaw rate by a specified amount.
37	Yaw Rate Sensor Abnormal(Control)	Detected when the difference between actual yaw rate and expected yaw rate becomes the specified value or more.
50	Camera Adjustment Abnormal 1	Detected when the accuracy of camera learning values is not sufficient. Usually detected after replacing the camera and performing an aiming, and resolved by an automatic adjustment while driving.

Code	Item	Contents of diagnosis
52	Yaw Rate Sensor Abnormal(Recognition)	Detected when the vehicle weaves all over the road or when the camera condition is not good and therefore white lines are not correctly recognized.

EyeSight (DIAGNOSTICS) > ECM Cancel Code(s) Display

OPERATION

1. On [Select System] display, select [Engine Control System].
2. Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.
   Caution:
   - **When performing diagnosis, observe the legal speed limit on the road.**
   - **The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.**
   - **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**
3. When the set speed is canceled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, select [Cancel Code(s) Display] on the engine malfunction diagnosis screen.
   Note:
   The [Current] and [The past] are contained in the cancel code. The latest code recognized during current test drive is displayed in [Current]. Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in [The past].
4. Using the Subaru Select Monitor, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.
   Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.
   Note:
   - **For detailed operation procedures, refer to "Application help".**
   - **The latest code will be cleared by turning ignition switch to OFF.**
   - **For details on cancel codes, refer to List of ECM cruise control cancel code. Ref. to EyeSight (DIAGNOSTICS)>ECM Cancel Code(s) Display>LIST.**

EyeSight (DIAGNOSTICS) > ECM Cancel Code(s) Display

LIST

- List of ECM cruise control cancel code(s)
  When the cruise control is cancelled, the ECM outputs the following cancel codes.

Cancel Code	Item	Contents of diagnosis	Note
11	Main Switch	Main switch of the EyeSight steering switch is turned to OFF, and the cruise control is released.	This code is displayed without operating the main switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>11.

Cancel Code	Item	Contents of diagnosis	Note
12	Stop & Brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This DTC is displayed without depressing the brake pedal. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12.
14	Neutral Position Switch	Neutral position switch is turned to ON, and then the cruise control is released.	This code is displayed without shifting to neutral position. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>14.
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This DTC is displayed without operating the cancel switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>15.
16	Ignition Switch	Ignition switch is turned to OFF, and then the cruise control is released.	This DTC is displayed without operating the ignition switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>16.
21	Abnormality of switches when Ignition switch on	When the ignition switch is turned to ON, each switch of the EyeSight steering switch is already turned ON.	This code is displayed when turning ignition switch to ON without operating the EyeSight steering switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure

Cancel Code	Item	Contents of diagnosis	Note
			with ECU Cancel Code>21.
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>22.
24	Abnormality of switches related to cruise control	Open circuit of the EyeSight steering switch is detected during cruise driving. (The system is judged as model without cruise control.)	This DTC is displayed with normal operation. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>24.
31	Engine Speed	• Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st or Reverse position.	Cruise in 2nd shift position or more. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>31.
32	Cruse Control out of Range	• Vehicle speed exceeds the controllable range during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed.	This DTC is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>32.
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>34.
35	Prohibition of cruise control at vehicle speed F/B	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.)	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure

Cancel Code	Item	Contents of diagnosis	Note
	malfunction	during cruise driving.	with ECU Cancel Code>35.
41	VDC/TCS Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>41.
43	ABS/VDC Failure	When the cruise switch is ON, ABS or vehicle dynamics control (VDC) system malfunction is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>43.
44	Body Integrated unit Failure	When the cruise switch is ON, body integrated unit system malfunction is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>44.
45	Meter Failure	When the cruise switch is ON, combination meter malfunction is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>45.
47	Adaptive cruise control ECM abnormal	When the cruise switch is ON, stereo camera malfunction is detected.	Check the DTCs related to stereo camera.
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>49.
53	Adaptive cruise control compulsory cancellation	Stereo camera detects the release command of the cruise control during cruise driving or cruise setting operation.	Check the stereo camera. Check the ACC cancel code. Ref. to EyeSight (DIAGNOSTICS)>ACC Cancel Code(s) Display.
54	Release SW	Brake control module detects the brake pedal operation by the driver during cruise driving or cruise setting operation.	If this code is detected when the brake pedal is not depressed intentionally, check

Cancel Code	Item	Contents of diagnosis	Note
			the release switch.
55	Adaptive cruise control reception data abnormal	When the cruise switch is ON, malfunction is detected in the reception data from the stereo camera.	Check the cancel code of stereo camera.
61	Brake Switch Failure	Malfunction in the stop light & brake switch is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>61.
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>62.
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected. This code may be displayed by a sudden starting of the vehicle on a road with low μ and with the VDC OFF. In this case, restart the engine and perform the cruise setting again. If the cancel code is not displayed, the vehicle is in normal status.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>63.
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>64.
65	Abnormality 1 of switches related to cruise control	Malfunction of EyeSight steering switch is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	Check EyeSight steering switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>65.
66	Cruise Control Calculation Error	Malfunction of the cruise control calculation (microcomputer) is detected.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>66.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

11

When CRUISE switch is pressed, or a malfunction related to CRUISE switch occurs, this is detected.

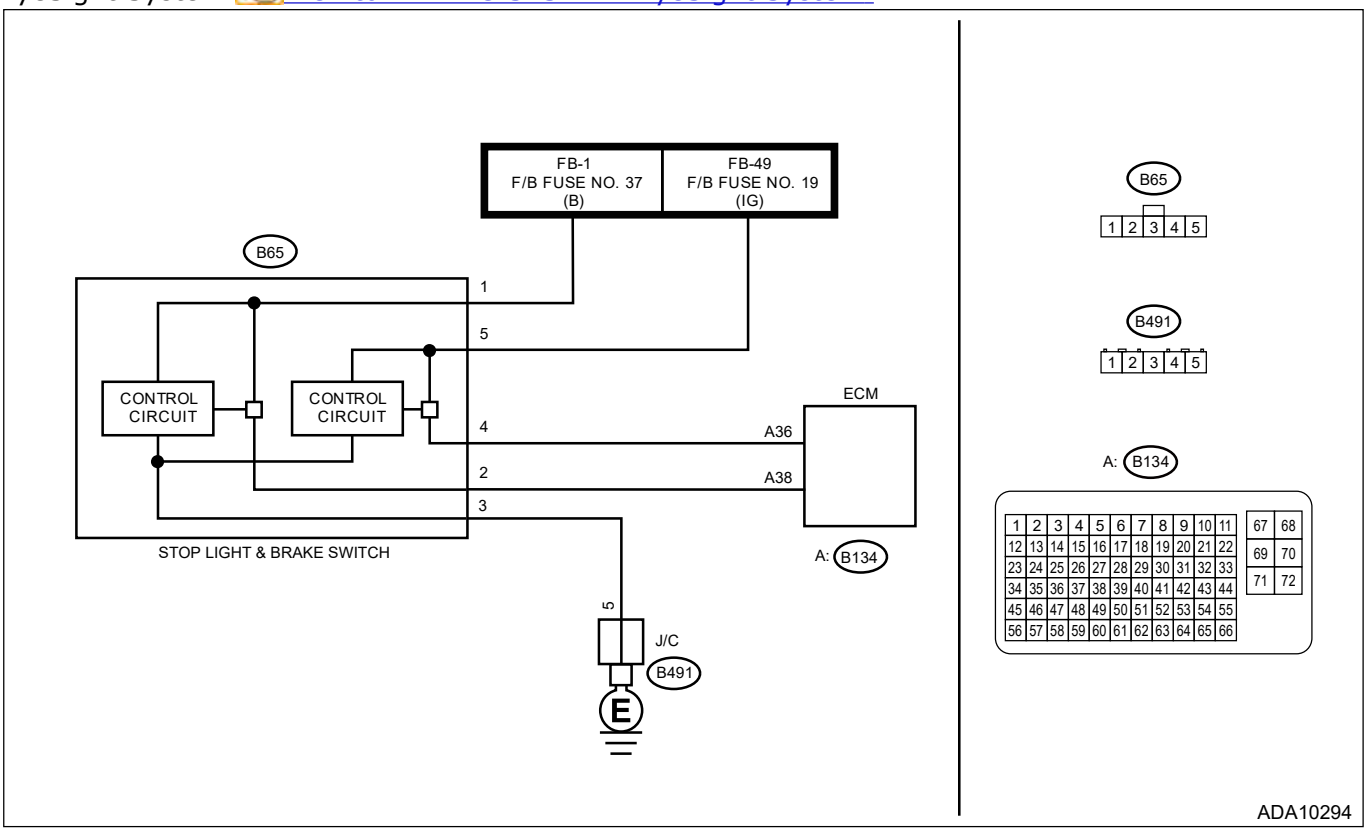
Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Check EyeSight steering switch. Ref. to EyeSight>Switches and Harness.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

12



Detected when the brake pedal is depressed, or the error related to the stop light & brake switch occurred.

Trouble symptom:

- Cruise control cannot be set.
- Cruise control cannot be released.

Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System.

1. CHECK STOP LIGHT & BRAKE SWITCH.

Check the stop light & brake switch. Ref. to CRUISE CONTROL SYSTEM>Stop Light & Brake Switch.

Is the check result for the stop light & brake switch installation position OK?

Yes	Go to 2.
No	Replace the stop light & brake switch. Or adjust the installation position.

2. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the stop light & brake switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between connector terminal and chassis ground.
   Connector & terminal
   (B65) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	• Check the fuse No. 37 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.

3. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

Measure the voltage between connector terminal and chassis ground.

Connector & terminal

(B65) No. 3 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 4.
No	• Check fuse No. 19 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.

4. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Measure the resistance between ECM connector terminal and stop light & brake switch connector terminal.

   Connector & terminal

   (B65) No. 4 — (B134) No. 36:

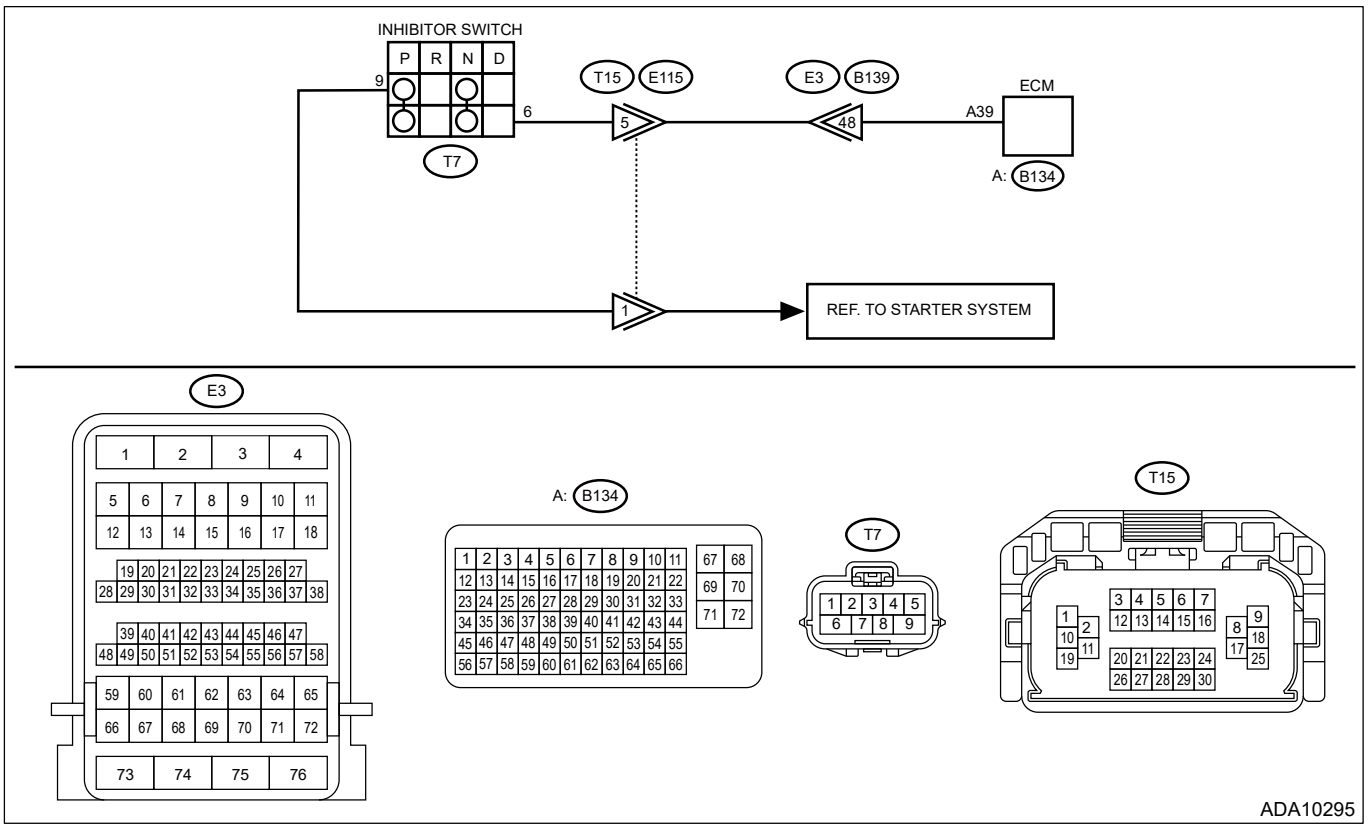
   (B65) No. 2 — (B134) No. 38:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair the harness.

5. CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.

1. Connect the stop light & brake switch connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and chassis ground both when the brake pedal is depressed and when not depressed.
   Connector & terminal
   (B134) No. 36 (+) — Chassis ground (−):
   (B134) No. 38 (+) — Chassis ground (−):



Does the voltage appear in (B134) No. 36 when the brake pedal is depressed? (0 V when the brake pedal is not depressed)
Does the voltage appear in (B134) No. 38 when the brake pedal is not depressed? (0 V when the brake pedal is depressed)

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the stop light & brake switch. Ref. to CRUISE CONTROL SYSTEM>Stop Light & Brake Switch.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

14

Detected when the select lever is shifted to the neutral position, or when an error related to the neutral position switch occurs.
Trouble symptom:
Cruise control cannot be set.
Wiring diagram:
EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK INHIBITOR SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the inhibitor switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between connector terminal and chassis ground.

Connector & terminal

(T7) No. 6 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	• Check the fuse. • Check for open or short circuit in the harness between inhibitor switch and ECM.

2. CHECK INHIBITOR SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the starter motor connector.
3. Measure the resistance between the inhibitor switch connector terminal and the starter motor.
   Connector & terminal
   (T7) No. 9 — Starter motor:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair the harness.

3. CHECK INHIBITOR SWITCH.

Remove and check the inhibitor switch. Ref. to CRUISE CONTROL SYSTEM>Inhibitor Switch.

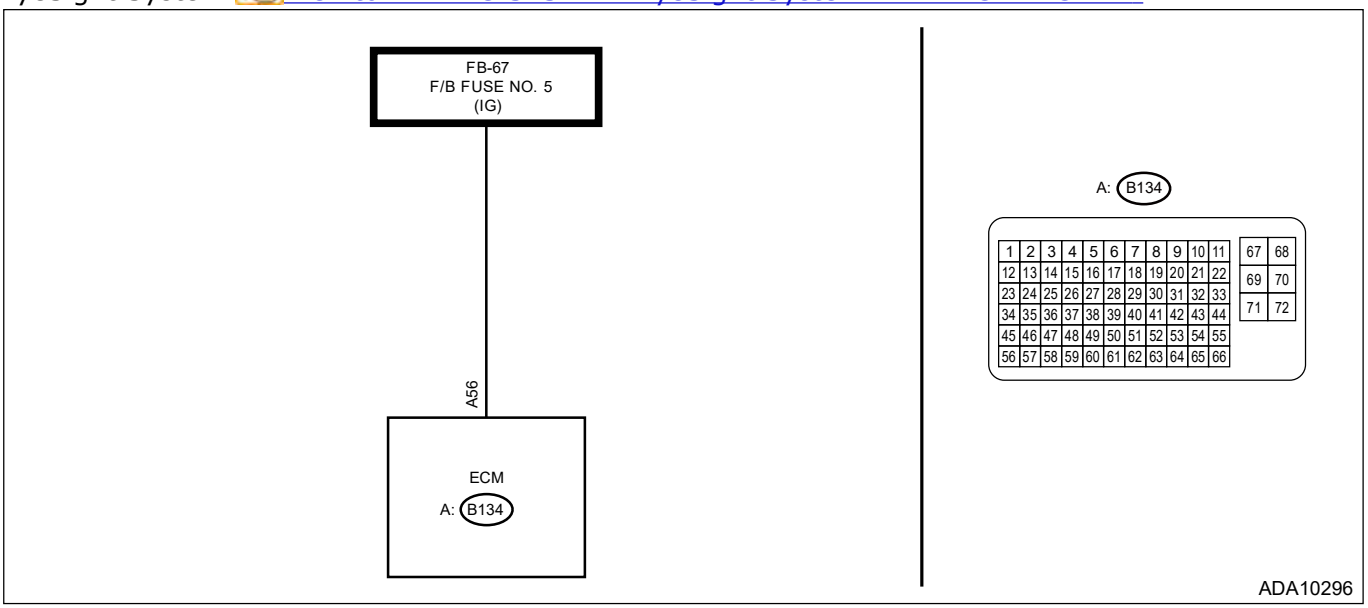
Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the inhibitor switch.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

15

Detected when CANCEL switch is pressed or malfunction related to CRUISE switch occurs.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.



Refer to 11 for diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>11.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

16

Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.
Trouble symptom:
Cruise control cannot be set.
Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK IGNITION SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between connector terminal and chassis ground.
   Connector & terminal
   (B134) No. 56 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Check for poor contact of ECM connector.
No	• Check fuse No. 5 (fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

21

Malfunction of EyeSight steering switch is detected.

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>11.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

22

Malfunction related to vehicle speed sensor is detected.
Diagnosis:
Open or short circuit in the vehicle speed sensor system.
Trouble symptom:
Cruise control cannot be set. (Cancelled immediately.)

1. CHECK ABS OR VDC WARNING LIGHT.

1. Turn the ignition switch to ON.
2. After the initial operation of the combination meter finished, check if the ABS or VDC warning light stays illuminated.

Does the warning light stay illuminated?

Yes	Check the VDCCM. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 2.

2. CHECK DTC OF LAN COMMUNICATION CIRCUIT.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform a check according to the displayed DTC.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

24

Switch malfunction related to cruise control is detected.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with

ECU Cancel Code>11.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

31

Malfunction related to engine speed signal is detected.
Abnormal increase of engine speed is detected.
Gear is placed in 1st (only for MT vehicles) or Reverse position.
Drive with the gear in 2nd position or higher, and perform the cruise setting again. It is normal if the cancel code is not detected.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

32

Detected outside the system operation vehicle speed range.
Increase the vehicle speed to the speed available for cruise set and perform the cruise set operation again.
If the cancel code is detected even when the cruise setting is performed again, perform the diagnosis for 22.
Refer to 22 for diagnostic procedure.
Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>22.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

34

The vehicle was driven at higher speed than the set vehicle speed for a long time (approximately 10 minutes) during cruise driving.
The cancel code is detected when the vehicle was driven for a long time at the higher speed than the speed available for cruise set through the accelerator operation.
Perform the cruise setting again. It is normal if the cancel code is not detected.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

35

Detected when the vehicle speed feedback is not possible.
Set vehicle speed cannot be maintained because of some reasons (steep uphill, parking brake forgotten to be returned to the home position, etc.) during cruise driving.
The cancel code is detected when the driving condition is not suitable for cruise control.
Eliminate the probable cause, and perform the cruise set operation again.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

41

VDC/TCS/EPB is operated.
Vehicle dynamics control (VDC) or TCS/EPB is operated during cruise driving or cruise setting.
Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

43

ABS/VDC malfunction is detected.
VDC malfunction is detected during cruise driving or cruise setting. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

44

Body integrated unit malfunction is detected.
Body integrated unit system malfunction is detected during cruise driving or cruise setting operation.
Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

45

Combination meter malfunction is detected.
Combination meter malfunction is detected during cruise driving or cruise setting operation.
Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

49

Automatic transmission malfunction is detected.
Automatic transmission malfunction is detected during cruise driving or cruise setting operation.
Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

61

Malfunction in the stop light & brake switch is detected.
Trouble symptom:
- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to 12 for diagnostic procedure.
Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

62

Neutral position switch malfunction is detected.
Trouble symptom:
Cruise control cannot be set.
Refer to 14 for diagnostic procedure.
Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>14.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

63

Malfunction of vehicle speed signal variation is detected.
Trouble symptom:
Cruise control cannot be set. (Cancelled immediately.)
Refer to 22 for diagnostic procedure.
Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>22.
Note:
This cancel code may be detected when the vehicle suddenly started with VDC OFF on low μ road surface. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

64

- Malfunction related to engine is detected.
- Abnormal decrease in engine speed is detected during cruise driving.

If the malfunction indicator light remains on or blinks, perform the diagnosis for engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure.
If the malfunction indicator is not remaining on/blinking, this cancel code may be detected due to malfunction of the ECM. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal. (Temporary malfunction)

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

65

Malfunction of EyeSight steering switch is detected.
When the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>11.

EyeSight (DIAGNOSTICS) > Diagnostic Procedure with ECU Cancel Code

66

- Cruise control calculation malfunction is detected.
- Abnormal increase in target cruising vehicle speed is detected.
- Abnormal condition is detected in which cruise control is not deactivated even after the brake pedal is depressed.

If the malfunction indicator light remains on or blinks, perform the diagnosis for engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure.
If the malfunction indicator is not remaining on/blinking, this cancel code may be detected due to

malfunction of the ECM. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal. (Temporary malfunction)

EyeSight (DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

Symptoms	Reference
CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.
Check EyeSight steering switch.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.
Check EyeSight temporary stop.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > TEMPORARY STOP OF EYESIGHT.
Cruise control was cancelled without operating the cruise switch.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL WAS CANCELLED WITHOUT OPERATING THE CRUISE SWITCH.
Cruise control switch is not turned to ON. (CRUISE indicator light does not illuminate)	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL SWITCH IS NOT TURNED TO ON. (CRUISE INDICATOR LIGHT DOES NOT ILLUMINATE).
Cruise control is cancelled without releasing operation.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL IS CANCELLED WITHOUT RELEASING OPERATION.
Cruise control cannot be set.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL CANNOT BE SET.
SET indicator does not illuminate.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > SET INDICATOR DOES NOT ILLUMINATE.
Vehicle speed is not held within set speed ±3 km/h (±2 MPH) on a level road.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > VEHICLE SPEED IS NOT HELD WITHIN SET SPEED ±3 KM/H (±2 MPH) ON A LEVEL ROAD.
Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > VEHICLE SPEED DOES NOT INCREASE OR DOES NOT RETURN TO SET SPEED AFTER RES/+ SWITCH HAS BEEN PRESSED.
Vehicle speed does not decrease after SET/− switch has been pressed.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > VEHICLE SPEED DOES NOT DECREASE AFTER SET/− SWITCH HAS BEEN PRESSED.

Symptoms	Reference
Cruise control is not deactivated after the cruise switch is pressed.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL IS NOT DEACTIVATED AFTER THE CRUISE SWITCH IS PRESSED.
Following distance does not change, even after the following distance switch is pressed.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > FOLLOWING DISTANCE DOES NOT CHANGE, EVEN AFTER THE FOLLOWING DISTANCE SWITCH IS PRESSED.
Cruise control is not released after brake pedal has been depressed.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL IS NOT RELEASED AFTER BRAKE PEDAL HAS BEEN DEPRESSED.
Cruise control is not released after shifting to the neutral position.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL IS NOT RELEASED AFTER SHIFTING THE SHIFTING LEVER TO THE NEUTRAL POSITION.
Acceleration or deceleration does not occur according to the preceding vehicle. The preceding vehicle is difficult to be detected. Braking force is weaker than usual. Alarm for requiring more brake pedal force does not sound.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ACCELERATION OR DECELERATION DOES NOT OCCUR ACCORDING TO THE PRECEDING VEHICLE. THE PRECEDING VEHICLE IS DIFFICULT TO BE DETECTED. BRAKING FORCE IS WEAKER THAN USUAL. ALARM FOR REQUIRING MORE BRAKE PEDAL FORCE DOES NOT SOUND.
Pre-collision brake does not operate / Pre-collision brake operates but brake force is not sufficient to stop / Pre-collision brake operates but brake force is not sufficient to stop. Or the pre-collision brake assist does not operate.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PRE-COLLISION BRAKE DOES NOT OPERATE / PRE-COLLISION BRAKE OPERATES BUT BRAKE FORCE IS NOT SUFFICIENT TO STOP / PRE-COLLISION BRAKE OPERATES BUT BRAKE FORCE IS NOT SUFFICIENT TO STOP. OR THE PRE-COLLISION BRAKE ASSIST DOES NOT OPERATE.
Pre-collision brake operates improperly / Pre-collision brake is not released / Pre-collision brake assist operates improperly.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PRE-COLLISION BRAKE OPERATES IMPROPERLY / PRE-COLLISION BRAKE IS NOT RELEASED / PRE-COLLISION BRAKE ASSIST OPERATES IMPROPERLY.
Pre-collision brake OFF indicator light does not go off / Pre-collision brake OFF indicator light illuminates automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT GO OFF / PRE-COLLISION BRAKE OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY.
Pre-collision brake OFF indicator light does not go off / Pre-collision brake OFF indicator light illuminates automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT GO OFF / PRE-COLLISION BRAKE OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY.

Symptoms	Reference
Pre-collision brake OFF indicator light does not illuminate / Pre-collision brake OFF indicator light goes off automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT ILLUMINATE / PRE-COLLISION BRAKE OFF INDICATOR LIGHT GOES OFF AUTOMATICALLY.
AT rapid start prevention control does not operate / AT rapid start prevention control is released automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AT RAPID START PREVENTION CONTROL DOES NOT OPERATE / AT RAPID START PREVENTION CONTROL IS RELEASED AUTOMATICALLY.
AT rapid start prevention control operates improperly / AT rapid start prevention control is not released.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AT RAPID START PREVENTION CONTROL OPERATES IMPROPERLY / AT RAPID START PREVENTION CONTROL IS NOT RELEASED.
Lane departure warning does not operate / Lane departure warning is released automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LANE DEPARTURE WARNING DOES NOT OPERATE / LANE DEPARTURE WARNING IS RELEASED AUTOMATICALLY.
Lane departure warning operates improperly / Lane departure warning is not released.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LANE DEPARTURE WARNING OPERATES IMPROPERLY / LANE DEPARTURE WARNING IS NOT RELEASED.
Lane departure warning OFF indicator light does not go off / Lane departure warning OFF indicator light illuminates automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LANE DEPARTURE WARNING OFF INDICATOR LIGHT DOES NOT GO OFF / LANE DEPARTURE WARNING OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY.
Lane departure warning OFF indicator light does not illuminate / Lane departure warning OFF indicator light goes off automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LANE DEPARTURE WARNING OFF INDICATOR LIGHT DOES NOT ILLUMINATE / LANE DEPARTURE WARNING OFF INDICATOR LIGHT GOES OFF AUTOMATICALLY.
Sway warning does not operate / Sway warning is released automatically.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > SWAY WARNING DOES NOT OPERATE / SWAY WARNING IS RELEASED AUTOMATICALLY.
Sway warning operates improperly / Sway warning is not released.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > SWAY WARNING OPERATES IMPROPERLY / SWAY WARNING IS NOT RELEASED.
Forward vehicle’s start monitoring function does not operate.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > FORWARD VEHICLE’S

Symptoms	Reference
	START MONITORING FUNCTION DOES NOT OPERATE.
Forward vehicle’s start monitoring function operates improperly / Forward vehicle’s start monitoring function is not released.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > FORWARD VEHICLE’S START MONITORING FUNCTION OPERATES IMPROPERLY / FORWARD VEHICLE’S START MONITORING FUNCTION IS NOT RELEASED.
Lane keep switch is not turned to ON. (Lane keep indicator light does not illuminate in white.)	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LANE KEEP SWITCH IS NOT TURNED TO ON. (LANE KEEP INDICATOR LIGHT DOES NOT ILLUMINATE IN WHITE.).
Lane keep (lane departure prevention) cannot be ready (lane indicator does not illuminate) / Lane keep (lane departure prevention) does not operate (lane keep indicator does not illuminate in green) / Though lane keep (lane departure prevention) is operating, the vehicle departs out of the lane due to poor assistance.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LANE KEEP (LANE DEPARTURE PREVENTION) CANNOT BE READY (LANE INDICATOR DOES NOT ILLUMINATE) / LANE KEEP (LANE DEPARTURE PREVENTION) DOES NOT OPERATE (LANE KEEP INDICATOR DOES NOT ILLUMINATE IN GREEN) / THOUGH LANE KEEP (LANE DEPARTURE PREVENTION) IS OPERATING, THE VEHICLE DEPARTS OUT OF THE LANE DUE TO POOR ASSISTANCE.
Lane keep (lane departure prevention) is cancelled without releasing operation.	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LANE KEEP (LANE DEPARTURE PREVENTION) IS CANCELLED WITHOUT RELEASING OPERATION.
Check list (adaptive cruise control)	Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK LIST (ADAPTIVE CRUISE CONTROL).

EyeSight (DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION

1. CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

Trouble symptom:

Adaptive cruise control or conventional cruise control can be set, but adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light do not illuminate.

1. CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.

Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

Does adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light illuminate?

Yes	Go to 2.
No	Replace the meter case assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 3.
No	Perform the diagnosis for LAN system.

3. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

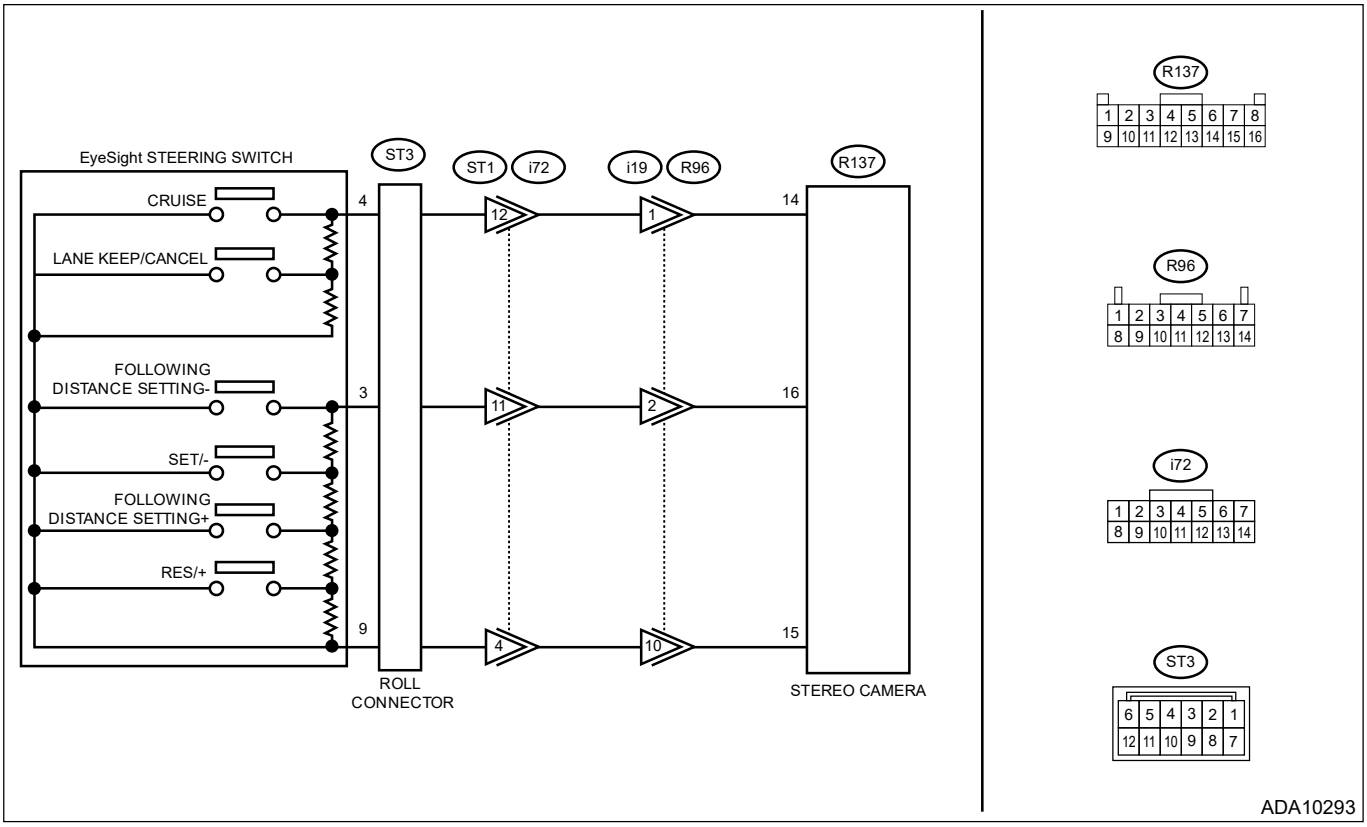
Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK EYESIGHT STEERING SWITCH.

Check EyeSight steering switch. Ref. to EyeSight>Switches and Harness.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Replace the EyeSight steering switch. Ref. to EyeSight>Switches and Harness.



2. CHECK EYESIGHT STEERING SWITCH

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

EyeSight System Ref. to WIRING SYSTEM>EyeSight System>WIRING DIAGRAM.

1. CHECK EYESIGHT STEERING SWITCH CIRCUIT.

1. Remove the driver's airbag module. Ref. to AIRBAG SYSTEM>Driver's Airbag Module>REMOVAL.
2. Disconnect the EyeSight steering switch connector.
3. Turn the ignition switch to ON.
4. Measure the voltage between connector terminal and chassis ground.

Connector & terminal

(ST3) No. 3 (+) — Chassis ground (−):

(ST3) No. 4 (+) — Chassis ground (−):

Is the voltage 5 V or more?

Yes	Go to 2.
No	Check for open/short circuit or poor contact in the harness between EyeSight steering switch and stereo camera and in the steering roll connector.

2. CHECK EYESIGHT STEERING SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Remove the EyeSight steering switch. Ref. to EyeSight>Switches and Harness.
3. Measure the resistance between connector terminal and chassis ground.
   Connector & terminal
   (ST3) No. 9 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Check for open circuit between EyeSight steering switch and chassis ground.

3. CHECK EYESIGHT STEERING SWITCH.

Check EyeSight steering switch. Ref. to EyeSight>Switches and Harness.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.
No	Replace the EyeSight steering switch. Ref. to EyeSight>Switches and Harness.

3. TEMPORARY STOP OF EYESIGHT

1. CHECK FOR PRESENCE OF TEMPORARY STOP CODES.

Check for the presence of the temporary stop codes. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.

Is a temporary stop code displayed?

Yes	Check EyeSight temporary stop code. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.
No	Temporary stop does not occur. Make sure to interview with the customer, and also confirm that no DTCs are recorded.

4. CRUISE CONTROL WAS CANCELLED WITHOUT OPERATING THE CRUISE

SWITCH

1. CHECK FOR PRESENCE OF CANCEL CODE.

Check for the presence of ECM cancel codes. Ref. to EyeSight (DIAGNOSTICS)>ECM Cancel Code(s) Display.

Is a cancel code displayed?

Yes	Perform the diagnosis for the displayed cancel code. Ref. to EyeSight (DIAGNOSTICS)>ECM Cancel Code(s) Display.
No	Go to 2.

2. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	Go to 4.
No	Go to 3.

3. CHECK EYESIGHT STEERING SWITCH.

Check the EyeSight steering switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the faulty portion of the steering switch.

4. CHECK COMBINATION METER.

Check the indicator readings using the active test of combination meter [All lamps lighted]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

Is the check result OK?

Yes	Go to 5.
No	Replace the meter case assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

5. INSPECTION OF CRUISE INDICATOR.

Check the CRUISE indicator. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Repair or replace the faulty portion according to the inspection result.

5. CRUISE CONTROL SWITCH IS NOT TURNED TO ON. (CRUISE INDICATOR LIGHT DOES NOT ILLUMINATE)

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	Go to 3.
No	Go to 2.

2. CHECK EYESIGHT STEERING SWITCH.

Check EyeSight steering switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the faulty portion of the steering switch.

3. INSPECTION OF CRUISE INDICATOR.

Check the CRUISE indicator. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Repair or replace the faulty portion according to the inspection result.

6. CRUISE CONTROL IS CANCELLED WITHOUT RELEASING OPERATION

Note:

- **Do not turn the ignition switch to OFF after the cruise control is deactivated.**
- **Do not operate the EyeSight steering switch after the cruise control is deactivated.**

If the above is performed, the cancel code the ECM will be cleared.

1. CHECK FOR PRESENCE OF CANCEL CODE.

Check for the presence of ECM cancel codes. Ref. to EyeSight (DIAGNOSTICS)>ECM Cancel Code(s) Display.

Is a cancel code displayed?

Yes	Perform the diagnosis for the displayed cancel code. Ref. to EyeSight (DIAGNOSTICS)>ECM Cancel Code(s) Display.
No	Go to 2.

2. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	Go to 6.
No	• When EyeSight steering switch signal is faulty, Go to 3. • When the stop light switch or brake switch signal is faulty, Go to 4. • When the sift lever signal is faulty, Go to 5.

3. CHECK EYESIGHT STEERING SWITCH.

Check the EyeSight steering switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion of the steering switch.

4. INSPECTION OF STOP LIGHT SWITCH AND BRAKE SWITCH.

Check stop light switch and brake switch. Ref. to BRAKE>Brake Pedal. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the stop light switch or brake switch.

5. CHECK NEUTRAL POSITION SWITCH.

Check the neutral position switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>62.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the neutral position switch.

6. INSPECTION OF VEHICLE SPEED SENSOR.

Check the vehicle speed sensor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>22.

Is the check result OK?

Yes	Replace the VDCCM. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Repair or replace the faulty portion of the vehicle speed sensor.

7. CRUISE CONTROL CANNOT BE SET

Note:

- **Do not turn the ignition switch to OFF after the cruise control is deactivated.**
- **Do not operate the EyeSight steering switch after the cruise control is deactivated.**

If the above is performed, the cancel code the ECM will be cleared.

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	Go to 5.
No	• When EyeSight steering switch signal is faulty, Go to 2. • When the stop light switch or brake switch signal is faulty, Go to 3. • When the sift lever signal is faulty, Go to 4.

2. CHECK EYESIGHT STEERING SWITCH.

Check the EyeSight steering switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion of the steering switch.

3. INSPECTION OF STOP LIGHT SWITCH AND BRAKE SWITCH.

Check stop light switch and brake switch. Ref. to BRAKE>Brake Pedal. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the stop light switch or brake switch.

4. CHECK NEUTRAL POSITION SWITCH.

Check the neutral position switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>62.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the neutral position switch.

5. INSPECTION OF VEHICLE SPEED SENSOR.

Check the vehicle speed sensor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>22.

Is the check result OK?

Yes	Replace the VDCCM. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Repair or replace the faulty portion of the vehicle speed sensor.

8. SET INDICATOR DOES NOT ILLUMINATE

1. INSPECTION OF SET INDICATOR.

Check the SET indicator. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

9. VEHICLE SPEED IS NOT HELD WITHIN SET SPEED ±3 KM/H (±2 MPH) ON A

LEVEL ROAD

1. INSPECTION OF VEHICLE SPEED SENSOR.

Check the vehicle speed sensor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>22.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

10. VEHICLE SPEED DOES NOT INCREASE OR DOES NOT RETURN TO SET SPEED AFTER RES/+ SWITCH HAS BEEN PRESSED

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. INSPECTION OF RES/+ SWITCH.

Check the RES/+ switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the steering switch.

11. VEHICLE SPEED DOES NOT DECREASE AFTER SET/− SWITCH HAS BEEN PRESSED

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK SET/− SWITCH.

Check the SET/− switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the steering switch.

12. CRUISE CONTROL IS NOT DEACTIVATED AFTER THE CRUISE SWITCH IS PRESSED

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. INSPECTION OF CRUISE SWITCH.

Check the cruise switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the steering switch.

13. FOLLOWING DISTANCE DOES NOT CHANGE, EVEN AFTER THE FOLLOWING DISTANCE SWITCH IS PRESSED

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. INSPECTION OF FOLLOWING DISTANCE SWITCH.

Check the following distance switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion of the steering switch.

14. CRUISE CONTROL IS NOT RELEASED AFTER BRAKE PEDAL HAS BEEN DEPRESSED

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. INSPECTION OF STOP LIGHT SWITCH AND BRAKE SWITCH.

Check stop light switch and brake switch. Ref. to BRAKE>Brake Pedal. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

15. CRUISE CONTROL IS NOT RELEASED AFTER SHIFTING THE SHIFTING LEVER TO THE NEUTRAL POSITION

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	The circuit has returned to a normal condition at this time. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK NEUTRAL POSITION SWITCH.

Check the neutral position switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>12. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with ECU Cancel Code>62.

Is the check result OK?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

16. ACCELERATION OR DECELERATION DOES NOT OCCUR ACCORDING TO THE PRECEDING VEHICLE. THE PRECEDING VEHICLE IS DIFFICULT TO BE DETECTED. BRAKING FORCE IS WEAKER THAN USUAL. ALARM FOR REQUIRING MORE BRAKE PEDAL FORCE DOES NOT SOUND

1. CHECK USING CHECK LIST.

Using CHECK LIST (ADAPTIVE CRUISE CONTROL), check the condition and respond to it. Check list (adaptive cruise control) Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK LIST (ADAPTIVE CRUISE CONTROL).

- Check that the current status applies to the condition that the use of adaptive cruise control is not desired.
- Check that the current status applies to the condition or the object that is hard to be recognized by the stereo camera.
- Check that the current status applies to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake.
- Check that the current status applies to the condition that brake force may become poor.
- Check that the current status applies to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance.

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Go to 2.

2. INSPECTION OF WINDSHIELD GLASS AND DASHBOARD.

Check the windshield glass and the dashboard. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > WINDSHIELD GLASS AND DASHBOARD.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the faulty portion according to the inspection result.

3. INSPECTION OF FRONT WIPER.

Check the front wiper. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > FRONT WIPER.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the faulty portion according to the inspection result.

4. CHECK STEREO CAMERA.

Check the stereo camera. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > STEREO CAMERA.

Is the check result OK?

Yes	Go to 5.
No	Repair or replace the faulty portion according to the inspection result.

5. CHECK BRAKE.

Bleed air from brake system. Ref. to BRAKE>Air Bleeding>PROCEDURE > BRAKE LINE.

Is the check result OK?

Yes	Go to 6.
No	Repair or replace the faulty portion according to the inspection result.

6. ADJUST OPTICAL AXIS OF THE STEREO CAMERA.

Perform optical axis adjustment of the stereo camera. Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

17. PRE-COLLISION BRAKE DOES NOT OPERATE / PRE-COLLISION BRAKE OPERATES BUT BRAKE FORCE IS NOT SUFFICIENT TO STOP / PRE-COLLISION BRAKE OPERATES BUT BRAKE FORCE IS NOT SUFFICIENT TO STOP. OR THE PRE-COLLISION BRAKE ASSIST DOES NOT OPERATE

1. CHECK PRE-COLLISION BRAKE OFF INDICATOR LIGHT.

Check the pre-collision brake OFF indicator light.

Is the pre-collision brake OFF indicator light off?

Yes	Go to 2.
No	This is normal. Operate the brake OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in “Pre-collision brake OFF indicator light does not go off”.

2. CHECK USING CHECK LIST.

Using CHECK LIST (PRE-COLLISION BRAKE), check the followings and respond to it.
- Does it apply to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision with the pre-collision brake?
- Does it apply to the condition that there is a high possibility that the pre-collision brake does not operate due to the recognition status of the stereo camera?
- Does it apply to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired?
- Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

18. PRE-COLLISION BRAKE OPERATES IMPROPERLY / PRE-COLLISION BRAKE IS NOT RELEASED / PRE-COLLISION BRAKE ASSIST OPERATES IMPROPERLY

1. CHECK USING CHECK LIST.

Using CHECK LIST (PRE-COLLISION BRAKE), check the followings and respond to it.
- Does it apply to the condition that turning OFF of the pre-collision brake is desired?
- Does it apply to the condition that the pre-collision brake may operate?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

19. PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT GO OFF / PRE-COLLISION BRAKE OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY

1. CHECK CONDITION OF OCCURRENCE.

Interview the customer to check if it occurs when the engine is started.

Does it occur when starting the engine?

Yes	This is normal. (Light illumination for a while after the engine start is normal.)
No	Go to 2.

2. CHECK FOR PRESENCE OF TEMPORARY STOP CODES.

Check for the presence of the temporary stop codes. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.

Is a temporary stop code displayed?

Yes	Check EyeSight temporary stop code. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.
No	Go to 3.

3. INSPECTION OF PRE-COLLISION BRAKE OFF SWITCH.

Check the pre-collision brake OFF switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28B6 PRE-COLLISION OFF SWITCH.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

20. PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT GO OFF / PRE-COLLISION BRAKE OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY

1. CHECK CONDITION OF OCCURRENCE.

Interview the customer to check if it occurs when the engine is started.

Does it occur when starting the engine?

Yes	This is normal. (Light illumination for a while after the engine start is normal.)
No	Go to 2.

2. CHECK FOR PRESENCE OF TEMPORARY STOP CODES.

Check for the presence of the temporary stop codes. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.

Is a temporary stop code displayed?

Yes	Check EyeSight temporary stop code. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.
No	Go to 3.

3. INSPECTION OF PRE-COLLISION BRAKE OFF SWITCH.

Check the pre-collision brake OFF switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28B6 PRE-COLLISION OFF SWITCH.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

21. PRE-COLLISION BRAKE OFF INDICATOR LIGHT DOES NOT ILLUMINATE / PRE-COLLISION BRAKE OFF INDICATOR LIGHT GOES OFF AUTOMATICALLY

1. CHECK CONDITION OF OCCURRENCE.

Interview the customer to check if it occurs when the engine is started.

Does it occur when starting the engine?

Yes	This is normal. (Light illumination for a while after the engine start is normal.)
No	Go to 2.

2. INSPECTION OF PRE-COLLISION BRAKE OFF SWITCH.

Check the pre-collision brake OFF switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28B6 PRE-COLLISION OFF SWITCH.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

22. AT RAPID START PREVENTION CONTROL DOES NOT OPERATE / AT RAPID START PREVENTION CONTROL IS RELEASED AUTOMATICALLY

1. CHECK PRE-COLLISION BRAKE OFF INDICATOR LIGHT.

Check the pre-collision brake OFF indicator light.

Is the pre-collision brake OFF indicator light off?

Yes	Go to 2.
No	This is normal. Operate the brake OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in “Pre-collision brake OFF indicator light does not go off”.

2. CHECK USING CHECK LIST.

Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it.

- Does it apply to the condition that the AT rapid start prevention control may not operate?
- Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

23. AT RAPID START PREVENTION CONTROL OPERATES IMPROPERLY / AT RAPID START PREVENTION CONTROL IS NOT RELEASED

1. CHECK USING CHECK LIST.

Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it.

- Does it apply to the condition that turning OFF of the AT rapid start prevention control is desired?
- Does it apply to the condition that the AT rapid start prevention control may operate?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

24. LANE DEPARTURE WARNING DOES NOT OPERATE / LANE DEPARTURE WARNING IS RELEASED AUTOMATICALLY

1. INSPECTION OF LANE DEPARTURE WARNING OFF INDICATOR LIGHT.

Check the lane departure warning OFF indicator light.

Is the lane departure warning OFF indicator light off?

Yes	Go to 2.
No	This is normal. Operate the lane departure warning OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in “Lane departure warning OFF indicator light does not go off”.

2. CHECK USING CHECK LIST.

Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE’S START MONITORING FUNCTION), check the following and respond to it.

- Does it apply to the condition that the lane departure warning does not operate or is difficult to operate?
- Does it apply to the condition that the lane departure warning OFF indicator light illuminates?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

25. LANE DEPARTURE WARNING OPERATES IMPROPERLY / LANE DEPARTURE WARNING IS NOT RELEASED

1. CHECK USING CHECK LIST.

Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it.

- Does it apply to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

26. LANE DEPARTURE WARNING OFF INDICATOR LIGHT DOES NOT GO OFF / LANE DEPARTURE WARNING OFF INDICATOR LIGHT ILLUMINATES AUTOMATICALLY

1. CHECK CONDITION OF OCCURRENCE.

Interview the customer to check if it occurs when the engine is started.

Does it occur when starting the engine?

Yes	This is normal. (Light illumination for a while after the engine start is normal.)
No	Go to 2.

2. CHECK FOR PRESENCE OF TEMPORARY STOP CODES.

Check for the presence of the temporary stop codes. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.

Is a temporary stop code displayed?

Yes	Check EyeSight temporary stop code. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.
No	Go to 3.

3. CHECK LANE DEPARTURE WARNING OFF SWITCH.

Check the lane departure warning OFF switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28B7 LDP OFF SWITCH.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

27. LANE DEPARTURE WARNING OFF INDICATOR LIGHT DOES NOT ILLUMINATE / LANE DEPARTURE WARNING OFF INDICATOR LIGHT GOES OFF AUTOMATICALLY

1. CHECK CONDITION OF OCCURRENCE.

Interview the customer to check if it occurs when the engine is started.

Does it occur when starting the engine?

Yes	This is normal. (Light illumination for a while after the engine start is normal.)
No	Go to 2.

2. CHECK LANE DEPARTURE WARNING OFF SWITCH.

Check the lane departure warning OFF switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B28B7 LDP OFF SWITCH.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion according to the inspection result.

28. SWAY WARNING DOES NOT OPERATE / SWAY WARNING IS RELEASED AUTOMATICALLY

1. INSPECTION OF LANE DEPARTURE WARNING OFF INDICATOR LIGHT.

Check the lane departure warning OFF indicator light.

Is the lane departure warning OFF indicator light off?

Yes	Go to 2.
No	This is normal. Operate the lane departure warning OFF switch to deactivate. When the indicator remains on after the deactivation, perform the diagnosis described in "Lane departure warning OFF indicator light does not go off".

2. CHECK USING CHECK LIST.

Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it.

- Does it apply to the condition that the sway warning may not operate?
- Does it apply to the condition that the lane departure warning OFF indicator light illuminates?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

29. SWAY WARNING OPERATES IMPROPERLY / SWAY WARNING IS NOT RELEASED

1. CHECK CONDITION OF OCCURRENCE.

Interview the customer to check if it occurs when the engine is started.

Does it occur when starting the engine?

Yes	This is normal. (Light illumination for a while after the engine start is normal.)
No	Go to 2.

2. CHECK USING CHECK LIST.

Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it.

- Does it apply to the condition that the sway warning may operate improperly?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

30. FORWARD VEHICLE'S START MONITORING FUNCTION DOES NOT OPERATE

1. CHECK USING CHECK LIST.

Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it.

- Does it apply to the condition that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

31. FORWARD VEHICLE'S START MONITORING FUNCTION OPERATES IMPROPERLY / FORWARD VEHICLE'S START MONITORING FUNCTION IS NOT RELEASED

1. CHECK USING CHECK LIST.

Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it.

- Does it apply to the condition that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

32. LANE KEEP SWITCH IS NOT TURNED TO ON. (LANE KEEP INDICATOR LIGHT DOES NOT ILLUMINATE IN WHITE.)

1. PERFORM REAL TIME DIAGNOSIS.

Check the input signal of cruise control system. Ref. to EyeSight (DIAGNOSTICS)>Real-time Diagnosis.

Is the check result OK?

Yes	Go to 3.
No	Go to 2.

2. CHECK LANE KEEP SWITCH.

Check the lane keep switch. Ref. to EyeSight (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK EYESIGHT STEERING SWITCH.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the faulty portion of the steering switch.

3. CHECK COMBINATION METER.

Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.
No	Repair or replace the faulty portion of the combination meter.

33. LANE KEEP (LANE DEPARTURE PREVENTION) CANNOT BE READY (LANE INDICATOR DOES NOT ILLUMINATE) / LANE KEEP (LANE DEPARTURE PREVENTION) DOES NOT OPERATE (LANE KEEP INDICATOR DOES NOT ILLUMINATE IN GREEN) / THOUGH LANE KEEP (LANE DEPARTURE PREVENTION) IS OPERATING, THE VEHICLE DEPARTS OUT OF THE LANE DUE TO POOR ASSISTANCE

1. CHECK FOR PRESENCE OF LANE DEPARTURE PREVENTION DEACTIVATION CODES.

Check for the presence of ECM lane departure prevention deactivation codes. Ref. to EyeSight (DIAGNOSTICS)>Lane Departure Prevention Assist Deactivate Code(s) Display.

Is a lane departure prevention deactivation code displayed?

Yes	Perform the diagnosis for the displayed lane departure prevention deactivation code. Ref. to EyeSight (DIAGNOSTICS)>Lane Departure Prevention Assist Deactivate Code(s) Display.
No	Go to 2.

2. CHECK USING CHECK LIST.

Using CHECK LIST (LANE KEEP), check the following and respond to it.
- Does it apply to the condition that use of lane keeping is not desired?
- Does it apply to the condition or the object that is hard to be recognized by the stereo camera?
- Does it apply to the road condition that the white line is difficult to be recognized?

Is there a relevant item in the check list?

Yes	When there is a relevant item, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.
No	Go to 3.

3. INSPECTION OF WINDSHIELD GLASS AND DASHBOARD.

Check the windshield glass and the dashboard. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > WINDSHIELD GLASS AND DASHBOARD.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the faulty portion according to the inspection result.

4. INSPECTION OF FRONT WIPER.

Check the front wiper. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > FRONT WIPER.

Is the check result OK?

Yes	Go to 5.
No	Repair or replace the faulty portion according to the inspection result.

5. CHECK OPTICAL AXIS OF HEADLIGHT.

Check the optical axis of the headlight. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.

Is the check result OK?

Yes	Go to 6.
No	Repair or replace the faulty portion according to the inspection result.

6. CHECK STEREO CAMERA.

Check the stereo camera. Ref. to EyeSight (DIAGNOSTICS)>General Description>INSPECTION > STEREO CAMERA.

Is the check result OK?

Yes	Go to 7.
No	Repair or replace the faulty portion according to the inspection result.

7. CHECK TIRE AND WHEEL ALIGNMENT.

Check the tires and wheel alignment.

Is the check result OK?

Yes	Go to 8.
No	Repair or replace the faulty portion according to the inspection result.

8. ADJUST OPTICAL AXIS OF THE STEREO CAMERA.

Perform optical axis adjustment of the stereo camera. Perform optical axis adjustment of the stereo camera. Ref. to EyeSight>Camera Adjustment, Inspection>PROCEDURE.

Was the fault fixed after adjusting the optical axis?

Yes	The current state is normal.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

34. LANE KEEP (LANE DEPARTURE PREVENTION) IS CANCELLED WITHOUT RELEASING OPERATION

1. CHECK CONDITION OF OCCURRENCE.

Interview the customer to check if it was canceled by the cancel conditions described in OM.

Is it cancelled by the cancel conditions (releasing of lane departure prevention function) described in the OM?

Yes	This is normal.
No	Go to 2.

2. CHECK FOR PRESENCE OF LANE DEPARTURE PREVENTION DEACTIVATION CODES.

Check for the presence of ECM lane departure prevention deactivation codes. Ref. to EyeSight (DIAGNOSTICS)>Lane Departure Prevention Assist Deactivate Code(s) Display.

Is a lane departure prevention deactivation code displayed?

Yes	Perform the diagnosis for the displayed lane departure prevention deactivation code. Ref. to EyeSight (DIAGNOSTICS)>Lane Departure Prevention Assist Deactivate Code(s) Display.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera>REMOVAL.

35. CHECK LIST (ADAPTIVE CRUISE CONTROL)

Item Name			Yes/No	
[1]: When the vehicle does not accelerate or decelerate according to the preceding vehicle, or when it is difficult to detect the preceding vehicle.				
1	Check that the current status applies to the condition that the use of adaptive cruise control is not desired.			
	1	Tire pressure is not correct.	Yes	No
	2	The vehicle is equipped with the temporary spare tire.	Yes	No
	3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	4	The vehicle is equipped with the tires out of specification.	Yes	No
	5	The suspension has been modified.	Yes	No
	6	The vehicle is equipped with the tire chain.	Yes	No
	7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes	No
	8	The driving of own vehicle is unstable due to an accident or failure.	Yes	No
	9	The brake warning light illuminates.	Yes	No
	10	Vehicle is tilted by the heavy load.	Yes	No
	11	Passenger capacity is exceeded.	Yes	No
	12	The vehicle is towing the trailer or other vehicle.	Yes	No
	13	The vehicle drives on the general road (other than limited highway). (Depending on the road environment (complicated roads etc.), the vehicle may not be able to drive according to the traffic condition, which may lead to the traffic accident.)	Yes	No
	14	The vehicle drives on the sharp bend.	Yes	No
	15	The vehicle drives on the slippery roads such as icy road or snow-covered road. (Tires can spin, losing the vehicle control.)	Yes	No
	16	The vehicle drives under the traffic condition that the certain vehicle distance is difficult to be maintained due to frequent acceleration and deceleration. (The vehicle may not be able to drive according to the traffic condition.)	Yes	No
	17	There is a steep downhill. (The vehicle may drive at higher speed than the set vehicle speed.)	Yes	No
	18	The vehicle performs adaptive driving while recognizing the preceding vehicle on the steep downhills. (Brake can be overheated.)	Yes	No
	19	The vehicle drives on the road with repeated steep uphills and downhills or crossover. (The vehicle may not be able to recognize the preceding vehicle or may recognize the road surface, and appropriate control may not be performed.)	Yes	No
	20	The vehicle is entering the interchange, service area, parking area, junction or tollgate. (The vehicle may not be able to recognize the preceding vehicle.)	Yes	No

Item		Name	Yes/No
	21	When the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changes.	Yes No
	22	There are water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or sand or smoke blown in the wind, or moisture in front of own vehicle. (The vehicle may not be able to recognize the preceding vehicle or may recognize the water, and appropriate control may not be performed.)	Yes No
	23	The windshield glass is covered with fog, snow, dirt, frost or sandy dust.	Yes No
	24	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently. (The vehicle may not be able to recognize the preceding vehicle, and appropriate control may not be performed.)	Yes No
	25	Canoes etc. loaded on the roof block the visibility of the stereo camera.	Yes No
2		Check that the current status applies to the condition or the object that is hard to be recognized by the stereo camera.	
	1	That was a vehicle with large speed difference (low-speed driving vehicle, stopping vehicle, oncoming vehicle).	Yes No
	2	That was a cutting-in vehicle.	Yes No
	3	That was a motorcycle, bicycle, pedestrian or animal, etc.	Yes No
	4	It was dim in the evening or in the morning.	Yes No
	5	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes No
	6	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes No
	7	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes No
	8	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes No
	9	There was an object extremely close to the bumper of the own vehicle.	Yes No
3		Check that the current status applies to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake.	
	1	The vehicle began adaptive cruise control from the condition that the vehicle distance was short immediately after the preceding vehicle was cut in.	Yes No
	2	The vehicle drives on the curve, outlet and inlet of the curve, or the road with many curves in succession. (Recognition may not be performed properly, because the preceding vehicle is out of recognition area.)	Yes No
	3	The position against the preceding vehicle deviated laterally.	Yes No
	4	There were some objects just near the road side.	Yes No
	5	The speed difference against the preceding vehicle was large.	Yes No

Item Name		Yes/No
6	Other vehicle cut ahead of the own vehicle.	Yes No
7	The vehicle distance was extremely short.	Yes No
8	The own vehicle swayed in the vehicle lane.	Yes No
9	The road surface was uneven due to roll or unpaved track.	Yes No
10	The vehicle drove on the narrow lane because of the lane closure or construction work.	Yes No
11	The driving of own vehicle was unstable due to an accident or failure.	Yes No
12	The own vehicle was loaded with the extremely heavy load in the luggage compartment or on the rear seat.	Yes No

[2]: When braking force is weaker than usual.

1 Check that the current status applies to the condition that brake force may become poor.

1	The vehicle status (loading amount, passenger, etc.) was inappropriate.	Yes No
2	The road surface was very steep, slippery, sharp turn, or uneven.	Yes No
3	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes No
4	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes No
5	The symptom occurred between immediately after engine started and after a while the vehicle started driving. (Completion of warming up operation can be used as an indication.)	Yes No
6	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes No
7	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes No

[3]: When the alarm for requiring more brake pedal force does not sound.

1 Check that the current status applies to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance.

1	The speed difference between own vehicle and preceding vehicle (when the vehicle speed of the own vehicle was approximately the same as that of the preceding vehicle) was small.	Yes No
2	The vehicle speed of the preceding vehicle was faster than that of the own vehicle (when the vehicle distance was getting longer).	Yes No
3	Other vehicle cut in extremely close to the own vehicle.	Yes No
4	The preceding vehicle decelerated abruptly.	Yes No
5	There are many continuous uphills and downhills.	Yes No

36. CHECK LIST (PRE-COLLISION BRAKE)

Item Name	Yes/No
[1]: When pre-collision brake did not operate, or when vehicle could not stop safely before collision in spite of pre-collision brake operation.	

Item	Name	Yes/No
1	Check that the current status applies to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision in spite of pre-collision brake operation.	
1	Conditions such as the followings occurred: 1) Vehicle speed difference with the preceding vehicle is small. 2) Distance from the preceding vehicle is long. 3) Lateral deviation (offset amount) is large.	Yes No
2	The vehicle status (loading amount, number of passenger, etc.) was inappropriate.	Yes No
3	The road surface was very steep, slippery, sharp turn, or uneven.	Yes No
4	There was problem for the frontal visibility. (Rain, snow, fog, smoke, etc.)	Yes No
5	The objects were livestock, animals, guardrail, telephone pole, tree, fence, wall, etc.	Yes No
6	The object was motorcycle, bicycle, or pedestrian. However, the system could not recognize the object due to surrounding brightness, motion, posture, and/or angle.	Yes No
7	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes No
8	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes No
9	The vehicle is towing the trailer or other vehicle.	Yes No
10	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes No
11	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes No
12	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes No
2	Check that the current status applies to the condition that there is a high possibility that the pre-collision brake does not operate depending on the recognition status of the stereo camera.	
1	It was bad weather (heavy rain, snowstorm, dense fog).	Yes No
2	The field of view was insufficient due to water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or the moisture, sand or smoke blown in the wind.	Yes No
3	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes No
4	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes No
5	The vehicle approached the motorcycle, bicycle or pedestrian in the night.	Yes No
6	It was dark in the evening or in the morning.	Yes No
7	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes No
8	There was a wall in front of the stopping vehicle.	Yes No

Item	Name	Yes/No
9	There was an object close to the vehicle.	Yes No
10	That was a vehicle stopped sideways.	Yes No
11	That was a vehicle which was oncoming or driving in reverse.	Yes No
12	The object was small seen from the stereo camera. (Small animals, infants, person squatting down or lying down)	Yes No
13	The preceding vehicle made a sharp turn, or performed abrupt acceleration or deceleration.	Yes No
14	Other vehicle, motorcycle, bicycle or pedestrian existed extremely close to the bumper of the own vehicle.	Yes No
15	The speed difference was 5 km/h (3.1 MPH) or less. (The control is performed in close distance. Depending on the objects shape and size, the rear end surface may be outside the camera visibility area.)	Yes No
16	Other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes No
17	The own vehicle changed the vehicle lane, and followed the preceding vehicle right behind.	Yes No
18	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes No
19	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes No
20	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes No
21	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes No
22	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes No
23	Other vehicle, motorcycle, bicycle or pedestrian existed out of the illuminating area of the headlight.	Yes No
24	The vehicle drove on the sharp turn, steep uphills or steep downhills.	Yes No
25	The road surface was uneven due to roll or unpaved track.	Yes No
26	The vehicle passed through the outlet or inlet of a tunnel.	Yes No
27	The object was fence or wall.	Yes No
28	The object was a plate of glass, mirror wall or door.	Yes No
3	Check that the current status applies to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired.	
1	Tire pressure is not correct.	Yes No
2	The vehicle is equipped with the temporary spare tire.	Yes No
3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes No
4	The vehicle is equipped with the tires out of specification.	Yes No
5	The suspension has been modified.	Yes No
6	The vehicle is equipped with the tire chain.	Yes No

Item Name			Yes/No
	7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes No
	8	The driving status of own vehicle is unstable due to an accident or failure.	Yes No
	9	The brake warning light illuminates.	Yes No
	10	Vehicle is tilted by the heavy load. Or, passenger capacity is exceeded.	Yes No
4	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the pre-collision brake does not operate.)		
	1	The pre-collision brake is turned off, using the pre-collision brake OFF switch.	Yes No
	2	Approximately for 7 seconds after the engine has started.	Yes No
	3	EyeSight is malfunctioning.	Yes No
	4	EyeSight is stopped temporarily.	Yes No
[2]: When pre-collision brake operated improperly.			
1	Check that the current status applies to the condition that turning OFF of the pre-collision brake is desired.		
	1	The vehicle is towed.	Yes No
	2	The vehicle is loaded on the carrier car.	Yes No
	3	The chassis dynamometer or free roller is used.	Yes No
	4	The vehicle is lifted up, engine is started and the tire is spun.	Yes No
	5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes No
	6	The vehicle performs sporty driving on the circuit.	Yes No
	7	When the vehicle uses the movable type car wash machine.	Yes No
2	Check that the current status applies to the condition that the pre-collision brake may operate.		
	1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes No
	2	The vehicle drives close to the preceding vehicle.	Yes No
	3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes No
	4	The vehicle passes through the moisture or mass of smoke.	Yes No
	5	When the exhaust gas emitted from the preceding vehicle is visible clearly at cold weather.	Yes No
	6	There is an obstacle on the curve or crossing.	Yes No
	7	The vehicle passes through close to other vehicle or obstacle.	Yes No
	8	The vehicle parks close to the wall in front or to other vehicle.	Yes No

37. CHECK LIST (AT RAPID START PREVENTION CONTROL)

Item Name	Yes/No
[1]: When AT rapid start prevention control did not operate.	

Item	Name	Yes/No
1	Check that the current status applies to the condition that the AT rapid start prevention control may not operate.	
1	Conditions such as the followings occurred: 1) Distance from the front object is long. 2) Vehicle speed difference is small. 3) Lateral deviation (offset amount) is large.	Yes No
2	It was bad weather (heavy rain, snowstorm, dense fog).	Yes No
3	The visibility was insufficient due to sand or smoke blown in the air.	Yes No
4	The vehicle approached the object in the evening, in the morning or in the night.	Yes No
5	The vehicle approached the object in the dark place (e.g. closed-in parking lot).	Yes No
6	The height of the object was low. (low wall, low guardrail, vehicle with low height etc.)	Yes No
7	The object was small seen from the stereo camera. (Small animals, infants, person squatting down or lying down)	Yes No
8	The object or rearmost area of the preceding vehicle (trailer, etc.) was small. Or the vehicle approached them too close. (The system triggers the operation by recognizing the area other than the rearmost section, resulting in insufficient control.)	Yes No
9	The object such as other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes No
10	The own vehicle changed the vehicle lane when it started, and approached right behind the object.	Yes No
11	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes No
12	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes No
13	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes No
14	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes No
15	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes No
16	The object existed out of the illuminating area of the headlight.	Yes No
17	The vehicle drove on the sharp turn, steep uphills or steep downhills.	Yes No
18	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes No
19	The object was a plate of glass, mirror wall or door.	Yes No
20	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes No
2	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the AT rapid start prevention control does not operate.)	

Item Name			Yes/No	
	1	The pre-collision brake was turned off, using the pre-collision brake OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No

[2]: When AT rapid start prevention control operated improperly.

1	Check that the current status applies to the condition that the releasing of the AT rapid start prevention control is desired.			
	1	The vehicle is towed.	Yes	No
	2	The vehicle is loaded on the carrier car.	Yes	No
	3	The chassis dynamometer or free roller is used.	Yes	No
	4	The vehicle is lifted up, engine is started and the tire is spun.	Yes	No
	5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes	No
	6	The vehicle performs sporty driving on the circuit.	Yes	No
2	Check that the current status applies to the condition that the AT rapid start prevention control may operate.			
	1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes	No
	2	The vehicle drives close to the preceding vehicle.	Yes	No
	3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes	No
	4	The vehicle passes through the moisture or mass of smoke.	Yes	No
	5	There is an obstacle on the curve or crossing.	Yes	No
	6	The vehicle passes through close to other vehicle or obstacle.	Yes	No
	7	The vehicle parks close to the wall in front or to other vehicle.	Yes	No

38. CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION)

Item Name			Yes/No	
[1]: When the lane departure warning did not operate.				
1	Check that the current status applies to the condition that the lane departure warning does not operate or is difficult to operate.			
	1	The lane departure warning is turned off.	Yes	No
	2	The vehicle speed of the own vehicle is approximately less than 50 km/h (31 MPH).	Yes	No
	3	That was approximately 7 seconds period after the lane departure warning had occurred once.	Yes	No
	4	The steering wheel was turned fully or rapidly.	Yes	No
	5	The brake pedal is depressed.	Yes	No

Item Name			Yes/No	
	6	The vehicle is accelerated by depressing the accelerator pedal.	Yes	No
	7	The vehicle distance from the preceding vehicle is short.	Yes	No
	8	That was approximately 7 seconds period while the turn signal indicator was operating or after the lever was returned.	Yes	No
	9	The vehicle has not returned inside the vehicle lane after the operation of the lane departure warning.	Yes	No
	10	The width of the vehicle lane is narrow.	Yes	No
	11	The vehicle lane is difficult to be recognized seen from the stereo camera. (The lane division line (white line, etc.) does not exist or is almost disappearing. Or the color of the lane division line is similar to that of the road surface, which is difficult to be recognized. Or the lane division line is narrow, etc.)	Yes	No
	12	The preceding vehicle performed crash avoidance action to avoid the obstacle, and the own vehicle performed steering operation after the preceding vehicle.	Yes	No
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the lane departure warning does not operate.)			
	1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When the lane departure warning malfunctioned.				
1	Check that the current status applies to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate.			
	1	There was the tire track on the wet road or snow-covered road.	Yes	No
	2	There was the boundary line between snow-covered area and asphalt or on the trace of road repair.	Yes	No
	3	There was the double vehicle lane.	Yes	No
	4	The shadow of the guardrail was detected by mistake.	Yes	No
[3]: When the sway warning did not operate.				
1	Check that the current status applies to the condition that the sway warning may not operate.			
	1	The vehicle drove on the road with many curves in succession.	Yes	No
	2	The vehicle speed changed greatly.	Yes	No
	3	That was immediately after the vehicle lane had changed.	Yes	No
	4	The vehicle lane was difficult to be recognized seen from the stereo camera. (The lane division line (white line, etc.) does not exist or is almost disappearing. Or the color of the lane division line is similar to that of the road surface, which is difficult to be recognized. Or the lane division line is narrow, etc.)	Yes	No

Item	Name		Yes/No
	5	That was immediately after the sway had begun.	Yes No
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the sway warning does not operate.)		
	1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes No
	2	Approximately for 7 seconds after the engine has started.	Yes No
	3	EyeSight is malfunctioning.	Yes No
	4	EyeSight is stopped temporarily.	Yes No
[4]: When the sway warning malfunctioned.			
1	Check that the current status applies to the condition that the sway warning may operate.		
	1	That was after the sway had stopped.	Yes No
	2	The driver lost concentration on driving the vehicle due to fatigue or looking away.	Yes No
[5]: When the forward vehicle’s start monitoring function did not operate or when it malfunctioned.			
1	Check that the current status applies to the condition that the forward vehicle’s start monitoring function does not operate even when the preceding vehicle has already started, or that the forward vehicle’s start monitoring function operates even when the preceding vehicle has not yet started.		
	1	The motorcycle cut in the space between the own vehicle and the stopped preceding vehicle.	Yes No
	2	The vehicle could not recognize the preceding vehicle properly due to the weather condition or road shape.	Yes No
	3	The stereo camera lost sight of the preceding vehicle.	Yes No
	4	The driver did not depress the brake pedal with select lever in D, M or N range. (At this time, forward vehicle’s start monitoring function does not operate.)	Yes No
	5	The forward vehicle’s start monitoring function was turned OFF via the customization function.	Yes No

39. CHECK LIST (ACTIVE LANE KEEP)

Item	Name		Yes/No
1	Check that the current status applies to the condition that use of lane keeping is not desired.		
	1	An object was placed on the dashboard.	Yes No
	2	Tire pressure is not correct.	Yes No
	3	The vehicle is equipped with the temporary spare tire.	Yes No
	4	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes No
	5	The vehicle is equipped with the tires out of specification.	Yes No
	6	The flat tire is repaired using the temporary repair kit.	Yes No
	7	The suspension (including STI parts) has been modified.	Yes No

Item	Name	Yes/No	
8	Wheel balance is abnormal (balance weight falls off, slides off, etc.).	Yes	No
9	Wheel alignment is out of the specified value.	Yes	No
10	The steering wheel has been replaced with a non-genuine part.	Yes	No
11	The steering wheel is off-center.	Yes	No
12	The lighting devices, such as headlights and fog lights, have been modified.	Yes	No
13	An abnormal vibration can be felt on the steering wheel.	Yes	No
14	The steering wheel operation is heavier than usual.	Yes	No
15	An error occurs, for example, no display appears in the combination meter or no alarm sounds.	Yes	No
16	The headlight cannot illuminate the road surface sufficiently because the headlight is dirty, attached with ice, snow or mud, or the optical axis is deviated.	Yes	No
17	The driving status of own vehicle was unstable due to an accident or failure.	Yes	No
18	The vehicle carried heavy load.	Yes	No
19	Passenger capacity was exceeded.	Yes	No
20	The vehicle towed another vehicle.	Yes	No
21	The vehicle drove on a general road (other than limited highways).	Yes	No
22	The vehicle drove on a road with sharp curves, such as an urban highway.	Yes	No
23	The vehicle drove on a slippery road such as icy roads or snow-covered roads.	Yes	No
24	The vehicle drove on a lane restricted road or a temporary road due to road construction.	Yes	No
25	The vehicle drove on a road where obsolete white lines did not disappear completely.	Yes	No
26	On the road surface there were some snow, puddles, snow melting agent, cracks, road repair traces, obsolete white lines.	Yes	No
27	The vehicle entered the interchange, service area, parking area, junction or tollgate.	Yes	No
28	The vehicle drove on a road where the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changed.	Yes	No
29	The vehicle drove on a road where there was some water or sandy dust raised by a preceding vehicle or oncoming vehicle, or sand or smoke blown in the wind, or moisture in front of own vehicle.	Yes	No
30	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
31	The raindrops, water drops or dirt on the windshield glass were not wiped off sufficiently.	Yes	No
32	Canoes etc. loaded on the roof block the visibility of the stereo camera.	Yes	No
33	The vehicle drove immediately after the stereo camera was replaced or adjusted.	Yes	No
2	Check that the current status applies to the condition or the object, such as a white line, that is hard to be recognized by the stereo camera.		
1	The vehicle drove when it was dark in the evening or in the morning.	Yes	No

Item		Name	Yes/No	
	2	The vehicle drove under the road condition, such as rainy or snowy weather, that the white line was difficult to be recognized.	Yes	No
	3	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	4	The vehicle was exposed to the intense light (backlight such as sunlight or headlight) from the front of the vehicle.	Yes	No
	5	The vehicle drove on a road where the driving lane was yellow.	Yes	No
	6	The vehicle drove on a road where the color of the lane division line was similar to the color of the road surface, which was difficult to be recognized.	Yes	No
	7	The vehicle drove on a road where the width of the lane division line was narrow.	Yes	No
	8	The vehicle drove on a road where the lane division line did not exist or almost disappeared.	Yes	No
	9	The vehicle drove on a road where the width of the driving lane was narrow.	Yes	No
	10	The vehicle drove on a road where there was a fork lane, such as an interchange outlet of the highway, or an intersection.	Yes	No
	11	The vehicle drove on a road where the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changed.	Yes	No
	12	The vehicle drove on a road where the white line had a special shape, such as a double line.	Yes	No
	13	The vehicle drove under the condition that the white line was difficult to be recognized due to the short distance to the preceding vehicle.	Yes	No
	14	Another vehicle cut in ahead of the vehicle from the next lane, or the preceding vehicle changed the driving lane.	Yes	No
	15	The vehicle drove on a road where the curve shape changed suddenly.	Yes	No
	16	A shadow of the guardrail formed on the white line.	Yes	No
3		Check that the current status applies to the condition that sufficient performance of lane keeping cannot be achieved.		
	1	The vehicle was subjected to cross wind.	Yes	No
	2	The vehicle is equipped with winter tires or non-genuine tires.	Yes	No
	3	The vehicle drove on a uphill or a downhill where the road surface gradient suddenly changed.	Yes	No
	4	The vehicle drove on an uneven, rolling or jointed road surface.	Yes	No
	5	The vehicle drove on a road where the road surface cross gradient changed suddenly or was large.	Yes	No
	6	The acceleration or deceleration speed was large.	Yes	No
	7	The vehicle drove immediately after the tire was replaced or the tire air pressure was changed.	Yes	No
	8	The vehicle drove immediately after the vehicle weight was extremely changed.	Yes	No
	9	The vehicle drove immediately after the stereo camera was repaired, adjusted or replaced.	Yes	No

Item	Name	Yes/No
10	The vehicle drove immediately after the suspension or steering system was repaired or replaced.	Yes No
11	The vehicle drove immediately after the engine was started at a low outside temperature.	Yes No

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

RVD(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Control Module I/O Signal
6. Inspection Mode
7. Diagnostic Procedure for Subaru Select Monitor Communication
8. Data Monitor
9. Freeze Frame Data
10. Active Test
11. Diagnostic Trouble Code (DTC)
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
13. Cancel Code
14. Diagnostic Procedure with Cancel Code
15. Diagnostics with Phenomenon

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Check List for Interview.

2. PERFORM BASIC INSPECTION.

Perform basic inspection.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)].
   Note:
   For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC AND CANCEL CODE.

Using the Subaru Select Monitor, read the DTCs and cancel codes of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC). Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Cancel Code.

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

DTC Check

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

DTC Check

Is any DTC or cancel code displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Perform diagnosis according to the procedures in the diagnostics with phenomenon. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostics with Phenomenon.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs or cancel codes. (Perform the diagnosis for the side that displayed DTCs or cancel codes.) Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Cancel Code>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Clear memory.
   •[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

   •[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

4. Execute the inspection mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.
5. Using the Subaru Select Monitor, read the DTCs or cancel codes of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC). Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Cancel Code.
   •[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

   •[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

Is any DTC or cancel code displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown. Go to 5.
No	Finish the diagnosis.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="2">Blind Spot Detection/Rear Cross Traffic Alert

CAUTION

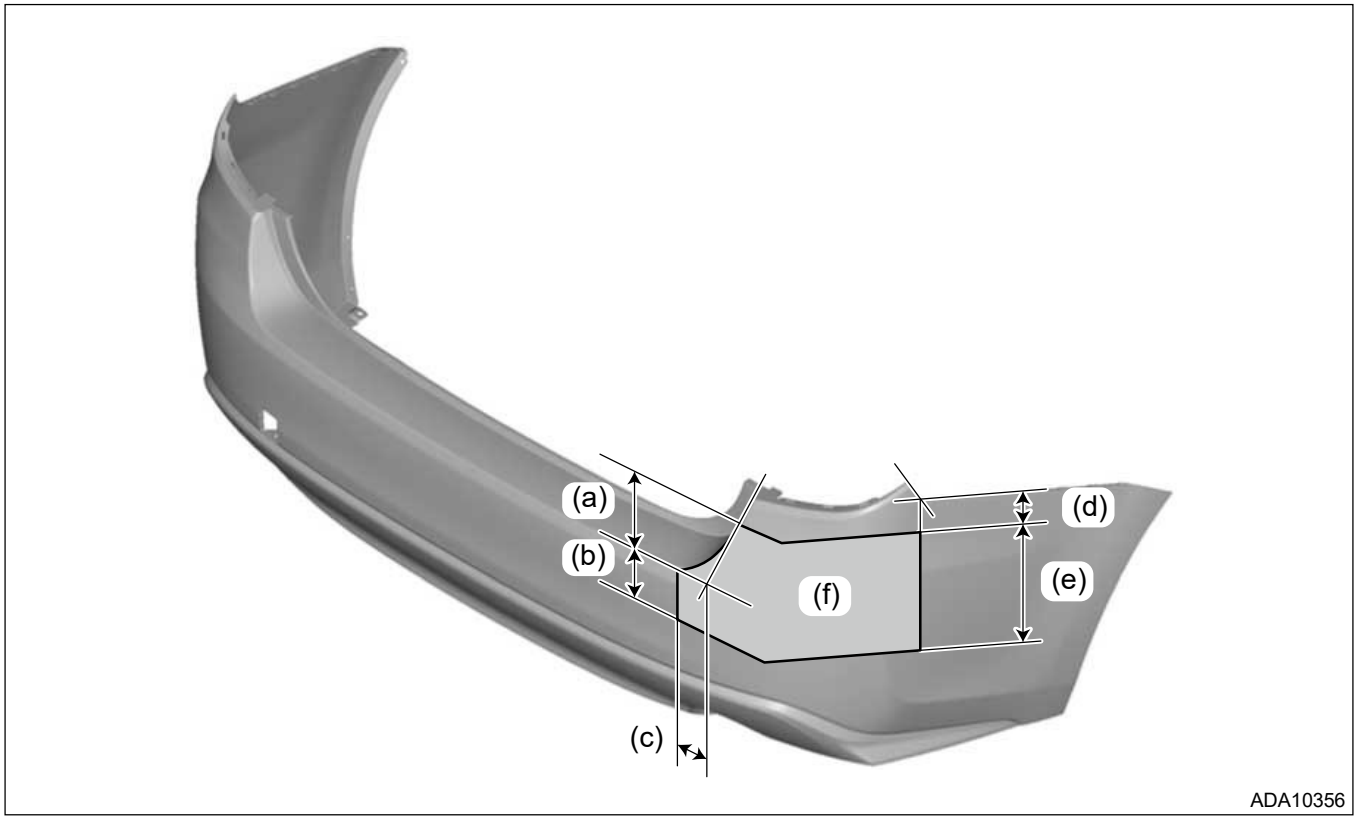
1. BSD/RCTA

1. In some cases, BSD/RCTA may not work correctly under the following conditions.
   - In bad weather such as heavy rain, fog, snow, sand storm, etc.
   - When ice, snow, dirt, etc. cover the rear bumper.
   - When the rear bumper has scratches or deformation in the area of the radar sensor.
   - When a difference of vehicle speeds between your own vehicle and another vehicle within the detection range is too large.
   - When there is another vehicle remaining within the detection range while your own vehicle starts from stationary state.
   - While driving on a steep slope with a series of uphills and downhills.
   - While driving on a wet road with such as puddles.
   - When more than one vehicle is approaching one after another with a short distance.
   - When vehicle speed of your own vehicle is almost the same as that of the vehicle within the detection range.
   - When a difference of the vehicle heights between your own vehicle and another vehicle in the next lane is too large.
   - Immediately after operating the BSD/RCTA OFF switch.
   - On wide lanes, when another vehicle of the next lane drives along the opposite edge so the distance is too large for the detection.
2. Basically, BSD/RCTA does not detect the following types of vehicle as well as objects other than vehicles; however, it may detect them depending on circumstances.
   - Oncoming vehicle
   - Small motorcycle, bike, pedestrian, etc.
   - Vehicle following behind on the same lane
   - Stationary objects such as guardrail, wall, sign and parked vehicle
   - Another vehicle driving on two lanes away
3. BSD/RCTA may perform unnecessary detection in the following conditions.
   - When guardrails or walls are close enough to be within the detection range.
   - When distance from the vehicle behind is short.
   - On narrow lanes, when another vehicle driving on two lanes away enters the detection range.
4. Radar sensors of BSD/RCTA are each located on LH and RH sides. Always observe the followings for proper operation of the system.
   - Always clean the vicinity of radar sensors.
   - Do not give a strong impact to the radar sensor areas. Displacement of the radar sensors may result in improper operation of the system such that it may not detect the vehicle entering the detection range.
   - Do not disassemble the radar sensors.
   - Do not scratch or deform the bumper areas with the radar sensors.

Note:

Replace the rear bumper in the following cases.

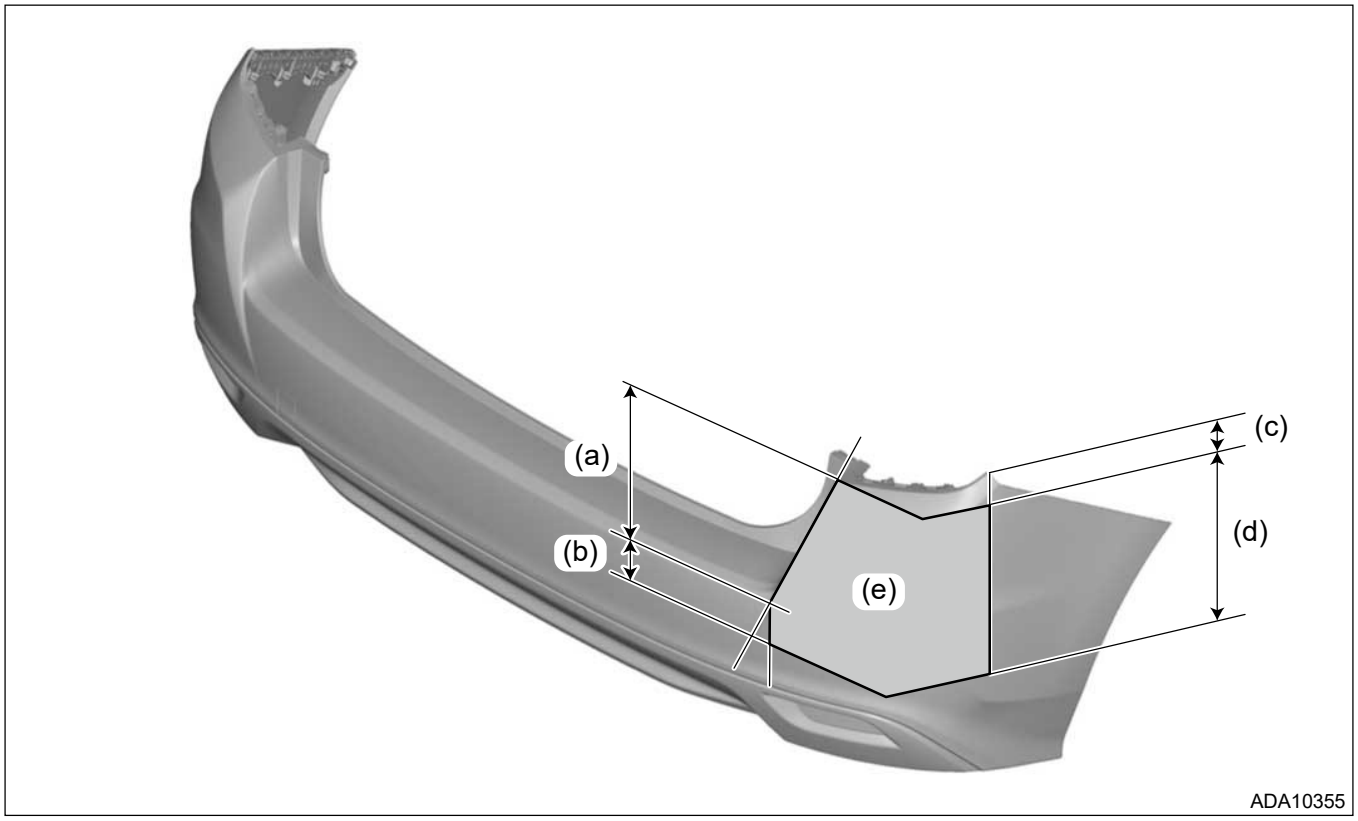
– When there is any collision trace or dent inside the radar projection area.



– When there is any scuffed (chipped off) section inside the radar projection area on the resin bumper.

– When there is any crack inside the radar projection area.

Note:



Radar projection area

- **Sedan model**

(a) 130 mm (5.1 in)
(b) 100 mm (3.9 in)
(c) 40 mm (1.6 in)
(d) 50 mm (1.9 in)
(e) 230 mm (9.1 in)
(f) Radar projection area

- **5 door model**

(a) 180 mm (7.1 in)
(b) 50 mm (2.0 in)
(c) 40 mm (1.6 in)
(d) 230 mm (9.1 in)
(e) Radar projection area

For other flaws, perform the sensor readjustment. If no problem is found, replacement is unnecessary.

- Do not put a sticker, etc. on/around the radar sensors.
- Do not retrofit the radar sensors or the bumper close to the radar sensors.
- Do not repaint the radar sensors or the bumper close to the radar sensors.

Note:

If there is any painting defect inside the radar projection area, replace the rear bumper without trying to repair it.

- Do not give a strong impact, force or drop-off to the radar sensors because they are precision devices.
- Do not reuse the radar sensors that were affected by strong impact, force, or fell off.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items that might provoke the problems related to BSD/RCTA.

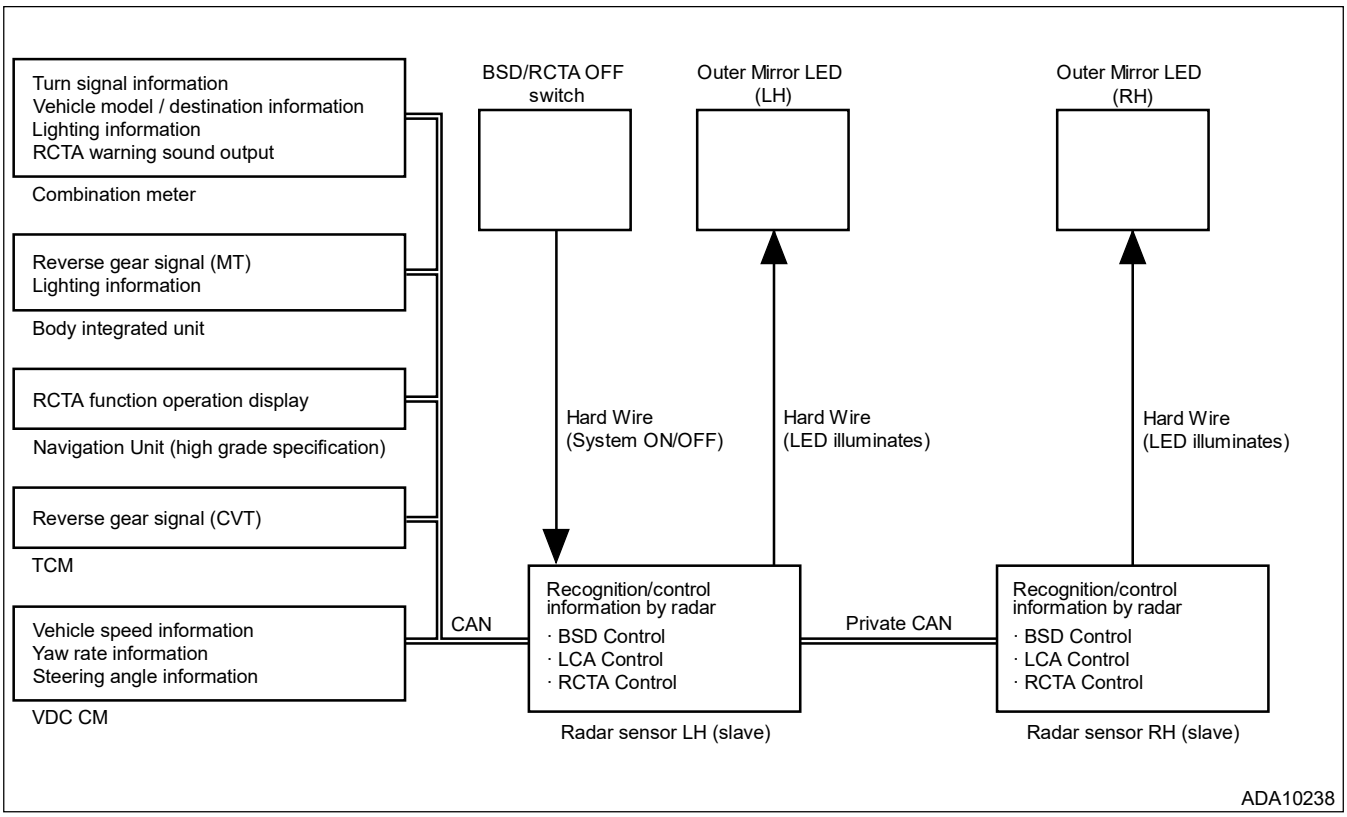
1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.
2. Check the relay and fuse condition. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Relay and Fuse.
3. Check the connecting condition of harness and connector. Also check grounding.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

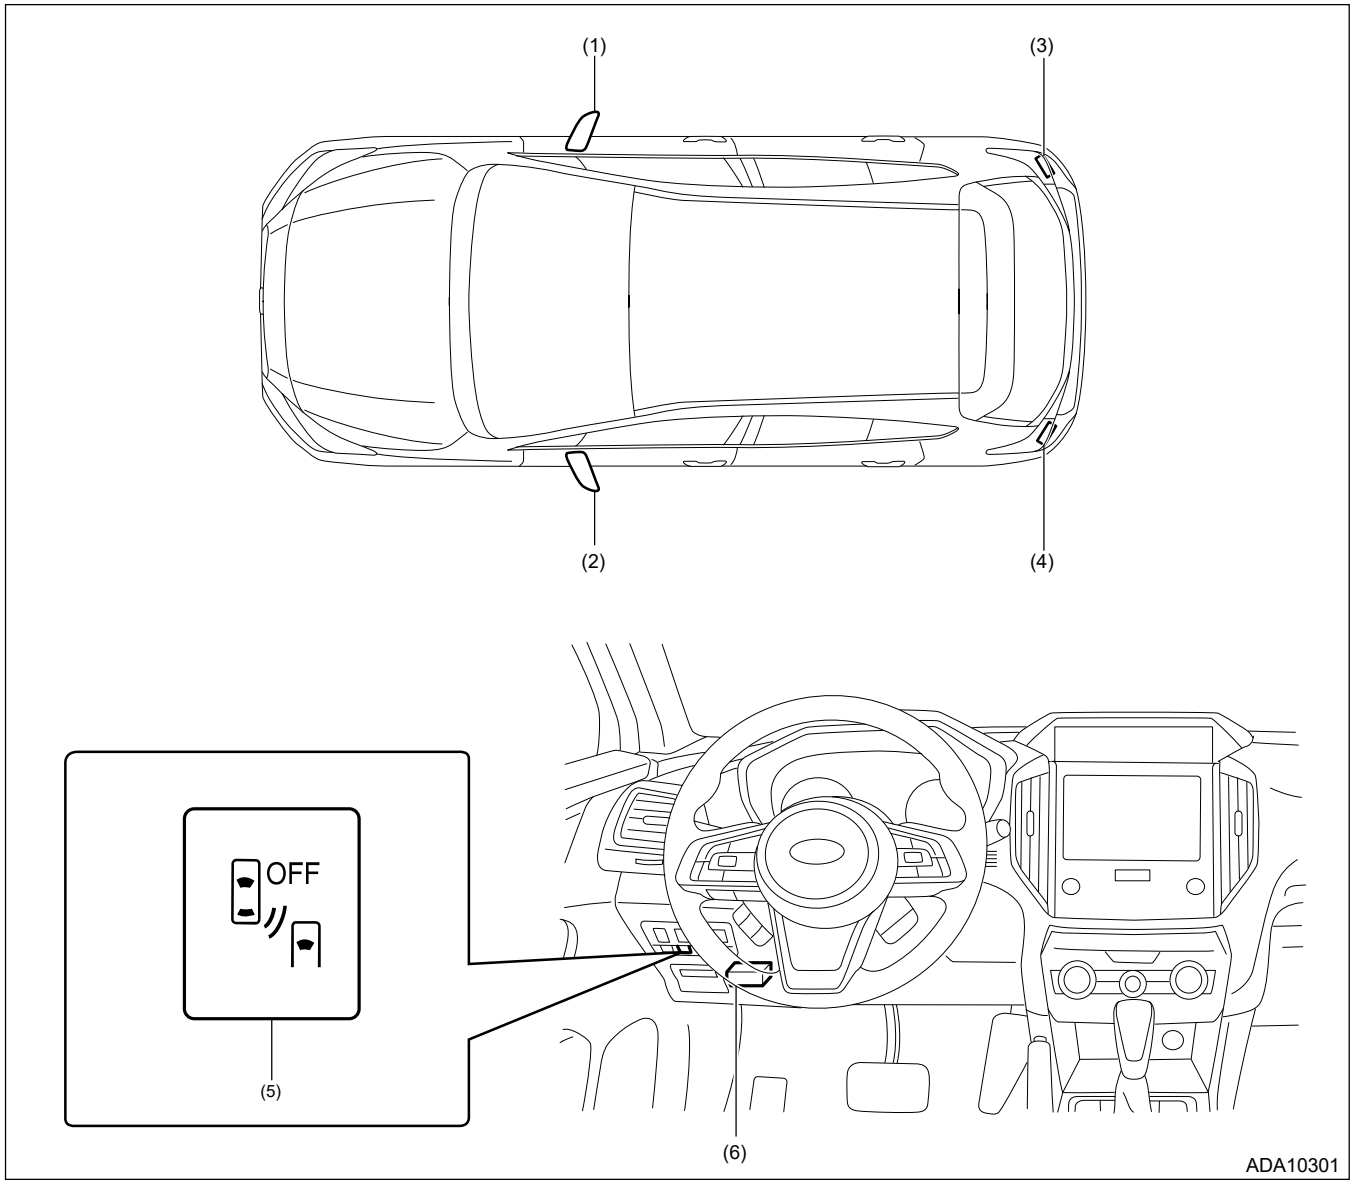
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > General Description



SYSTEM BLOCK DIAGRAM

- BSD/RCTA system is configured by the following components.
- There is a control ECM in the radar sensor main body, which performs the vehicle identification and the alert judgment control.
- The LH/RH radar sensors are identified as Master/Slave for control purposes. They are connected by the private CAN to execute the controls through mutual communication. The radar on the Master side receives the input from the vehicle CAN and the BSD/RCTA OFF switch, so information necessary for control can be obtained from other modules via the vehicle CAN.
- The outer mirror LED is directly driven by the signal from the radar sensor.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Inspection Mode

OPERATION

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B2304	Rear RADAR ON-OFF Switch Stuck	—
B2311	Rear RADAR Detect TCM	—
B2313	Rear RADAR Detect VDC	—
B2327	Rear RADAR internal failure (internal electric circuit)	—
B2350	Rear RADAR Communication error between Master and Slave	—
B2351	Rear RADAR Lost Communication between Master and Slave	—
B2352	RADAR ASSY B&S reprogramming error	—
U0073	Control Module Communication Bus Off	—
U0101	LOST COMMUNICATION WITH TCM	—
U0122	Lost Communication With Vehicle Dynamics Control Module	—
U0140	Lost Communication With Body Control Module	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0402	INVALID DATA RECEIVED FROM TCM	—
U0416	Invalid Data Received From VDC	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—

1. Using the Subaru Select Monitor, perform the clear memory of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Clear memory.
2. Read the DTC of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Start the engine and wait for 30 seconds or more.
4. Read the DTC of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

2. INSPECTION MODE 2

DTC	Item	Note
B2300	REAR RADAR CIRCUIT LOW	—
B2301	REAR RADAR CIRCUIT HIGH	—

1. Using the Subaru Select Monitor, perform the clear memory of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Clear memory.
2. Read the DTC of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Start the engine.
4. Using the Subaru Select Monitor, execute the following items under the [Active Test] of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Active Test.
   - [Door mirror indicator active test]
5. Read the DTC of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

3. INSPECTION MODE 3

DTC	Item	Note
B2329	REAR RADAR AXIS ALIGNMENT INCOMPLETE	—

1. Using the Subaru Select Monitor, perform the clear memory of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Clear memory.
2. Read the DTC of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Perform the adjustment of radar axis.

4. Read the DTC of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

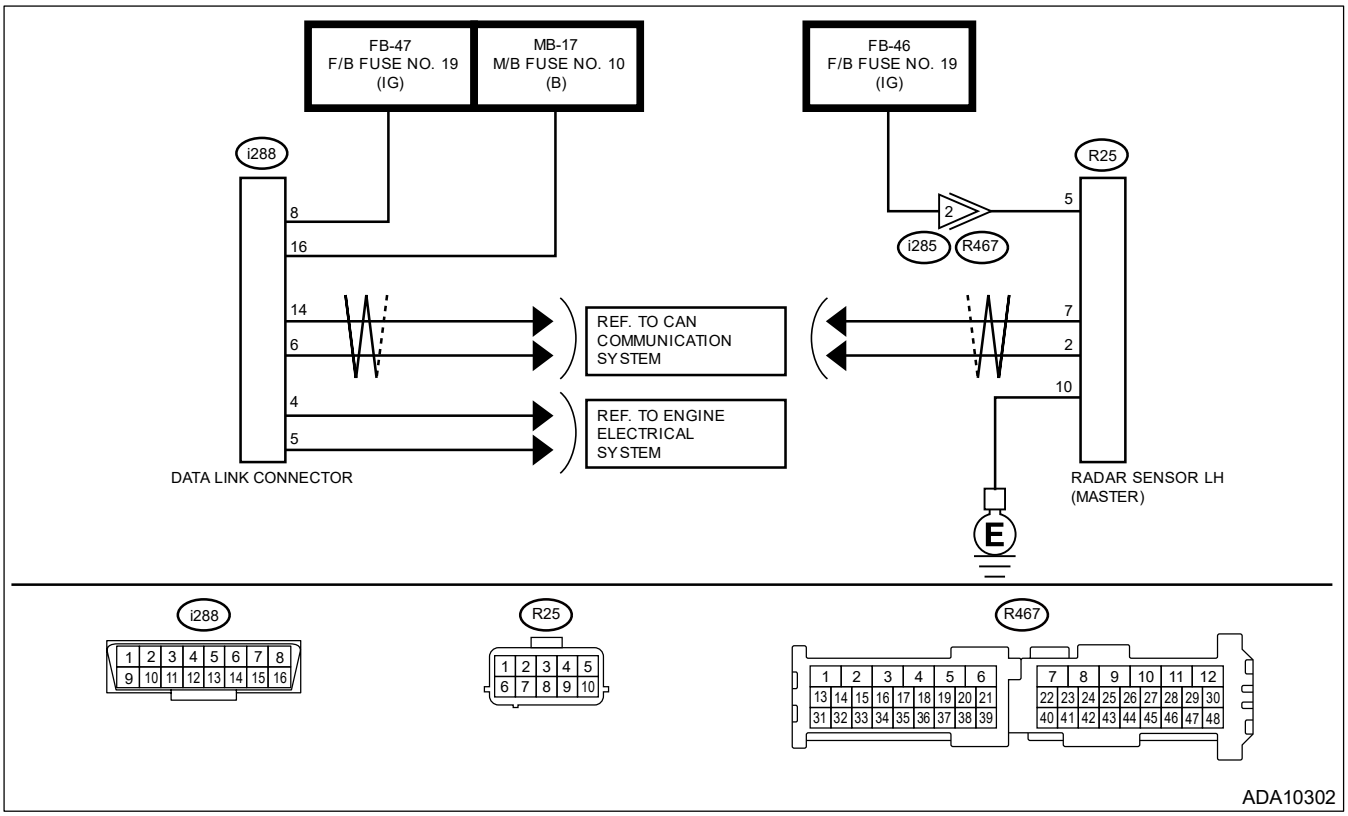
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

When communication with the radar sensor is impossible

Detecting condition:



- Defective harness connector
- Power supply circuit malfunction
- Defective radar sensor
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between radar sensor and Subaru Select Monitor.

Wiring diagram:

BSD/RCTA system Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse for radar sensor LH. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Relay and Fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse — radar sensor LH.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the radar sensor LH connector.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground.

   Connector & terminal

   (R25) No. 5 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the open circuit of harness between fuse — radar sensor LH connector.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Using a tester, measure the resistance between radar sensor LH connector (harness side) and chassis ground.
   Connector & terminal
   (R25) No. 10 – Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit in harness between radar sensor and chassis ground.

4. CHECK LAN SYSTEM.

1. Connect the radar sensor LH connector.
2. Inspect LAN system. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

5. CHECK SUBARU SELECT MONITOR.

1. Connect the select monitor to another vehicle.
2. Check whether the communication for initializing can be executed normally.

Is communication normal?

Yes	Go to 6.
No	Repair or replace the select monitor.

6. CHECK RADAR SENSOR.

Communicate with the radar sensor.

Is communication possible?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the radar sensor LH. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

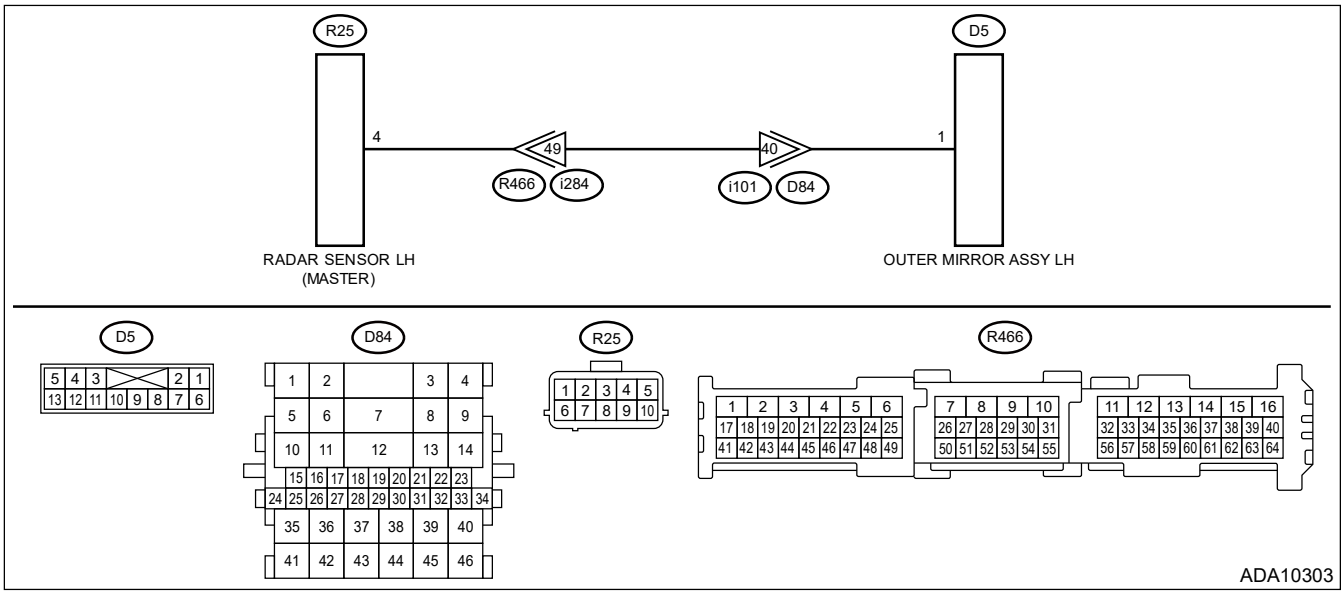
U0422	Invalid Data Received From Body Control Module	Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE.
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2300 REAR RADAR CIRCUIT LOW

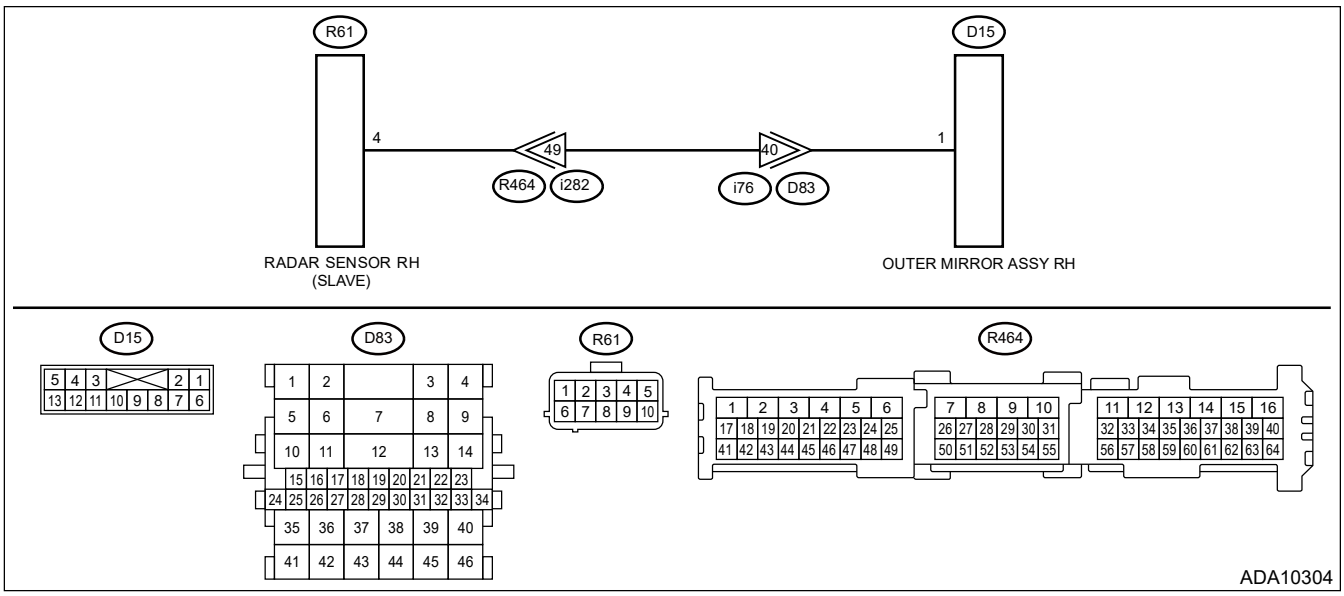
DTC detecting condition:

- Short circuit to ground in the harness between radar sensor — outer mirror assembly.
- Ground short circuit of the harness in outer mirror assembly module (Malfunction of the outer mirror assembly)
- Defective radar sensor



Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.



Wiring diagram:

BSD/RCTA system Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

- Radar sensor LH

- Radar sensor RH

Note:

Check and replace the side that displayed the DTC.

1. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

DTC Check

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

DTC Check

Is DTC B2327 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B2327. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT).
No	Go to 2.

2. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

Is DTC B2300 displayed? (Current malfunction)

Yes	Go to 3.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK OUTER MIRROR ASSEMBLY INDICATOR.

Using the Subaru Select Monitor, execute the following items under the [Active Test] of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Active Test.

• [Door mirror indicator active test]

Does the outer mirror assembly indicator illuminate?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

1. Disconnect the radar sensor connector.
2. Disconnect the outer mirror assembly connector.
3. Using a tester, measure the resistance between radar sensor connector (harness side) and the chassis ground.

Connector & terminal

Radar sensor LH

(R25) No. 4 — Chassis ground:

Radar sensor RH

(R61) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the short to ground in harness between radar sensor connector and outer mirror assembly connector.

5. CHECK CONNECTOR.

Check the radar sensor connector and the outer mirror assembly connector. (Insecure connection, poor contact, etc.)

Is the check result OK?

Yes	Go to 6.
No	Repair the connector.

6. CHECK OUTER MIRROR ASSEMBLY.

Perform unit-check for the outer mirror assembly. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly.

Is the check result OK?

Yes	Go to 7.
No	Replace the outer mirror assembly. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly.

7. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

Is DTC B2300 displayed? (Current malfunction)

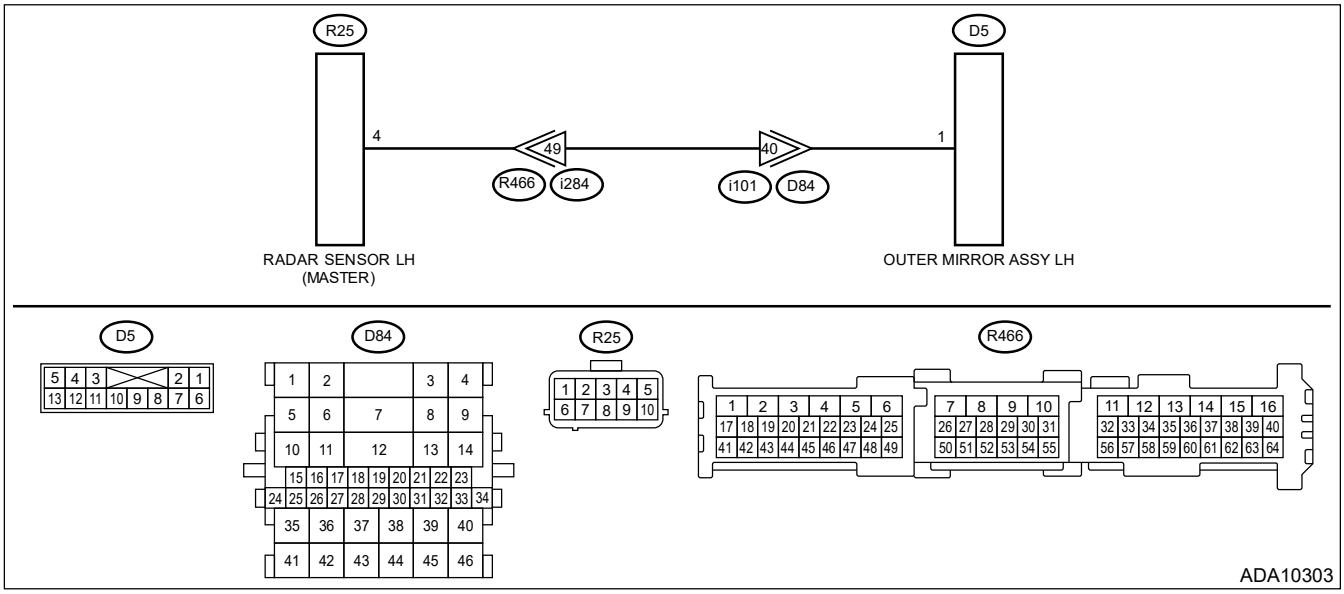
Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2301 REAR RADAR CIRCUIT HIGH

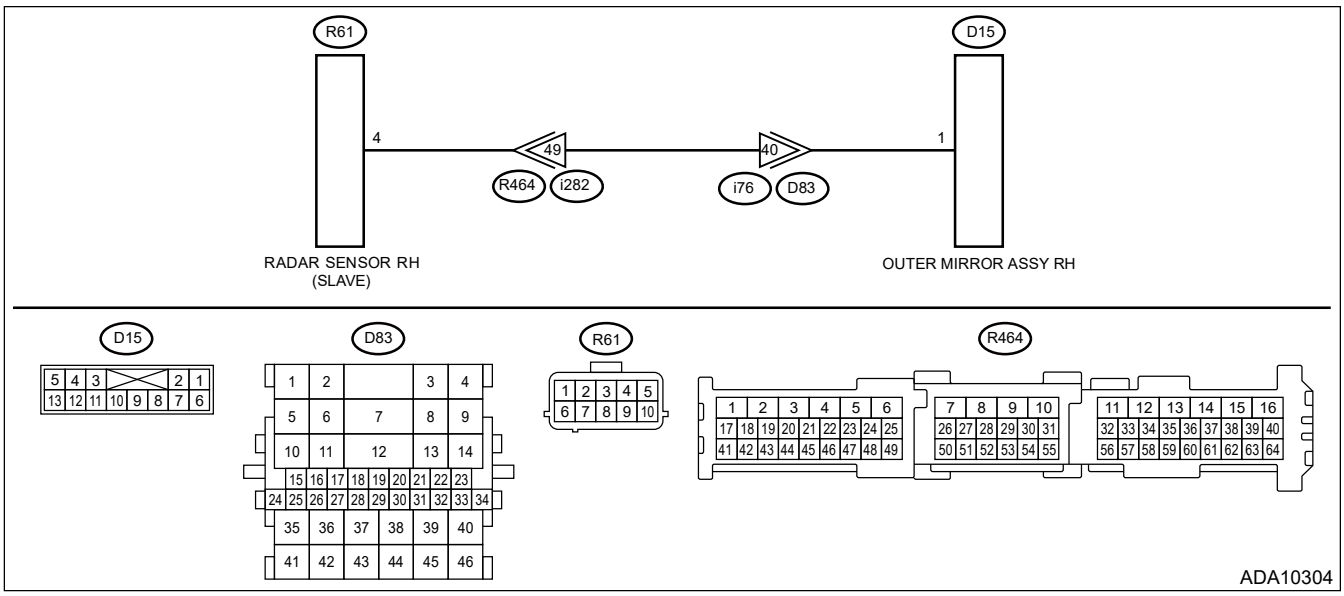
DTC detecting condition:

- Open circuit or short circuit to power supply in harness between radar sensor — outer mirror assembly.
- Open circuit or short circuit to power supply of harness in the outer mirror assembly module. (Malfunction of the outer mirror assembly)
- Open circuit or short circuit to power supply of harness between outer mirror assembly — ground.
- Defective radar sensor



Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.



Wiring diagram:

BSD/RCTA system Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

- Radar sensor LH

- Radar sensor RH

Note:

Check and replace the side that displayed the DTC.

1. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

DTC Check

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

DTC Check

Is DTC B2327 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B2327. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT).
No	Go to 2.

2. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

Is DTC B2301 displayed? (Current malfunction)

Yes	Go to 3.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK OUTER MIRROR ASSEMBLY INDICATOR.

Using the Subaru Select Monitor, execute the following items under the [Active Test] of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Active Test.

• [Door mirror indicator active test]

Does the outer mirror assembly indicator illuminate?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the radar sensor connector.
2. Disconnect the outer mirror assembly connector.
3. Using a tester, measure the resistance between radar sensor connector (harness side) and outer mirror assembly connector (harness side).

Connector & terminal

Radar sensor LH

(R25) No. 4 — (D5) No. 1

Radar sensor RH

(R61) No. 4 — (D15) No. 1

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair the open circuit of harness between radar sensor connector and outer mirror assembly connector.

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between radar sensor connector (harness side) and the chassis ground.

Connector & terminal

Radar sensor LH

(R25) No. 4 (+) — Chassis ground (−):

Radar sensor RH

(R61) No. 4 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair the short circuit to power supply in harness between radar sensor connector and outer mirror assembly connector.

6. CHECK CONNECTOR.

Check the radar sensor connector and the outer mirror assembly connector. (Insecure connection, poor contact, etc.)

Is the check result OK?

Yes	Go to 7.
No	Repair the connector.

7. CHECK OUTER MIRROR ASSEMBLY.

Perform unit-check for the outer mirror assembly. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly.

Is the check result OK?

Yes	Go to 8.
No	Replace the outer mirror assembly. Ref. to GLASS/WINDOWS/MIRRORS>Outer Mirror Assembly.

8. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

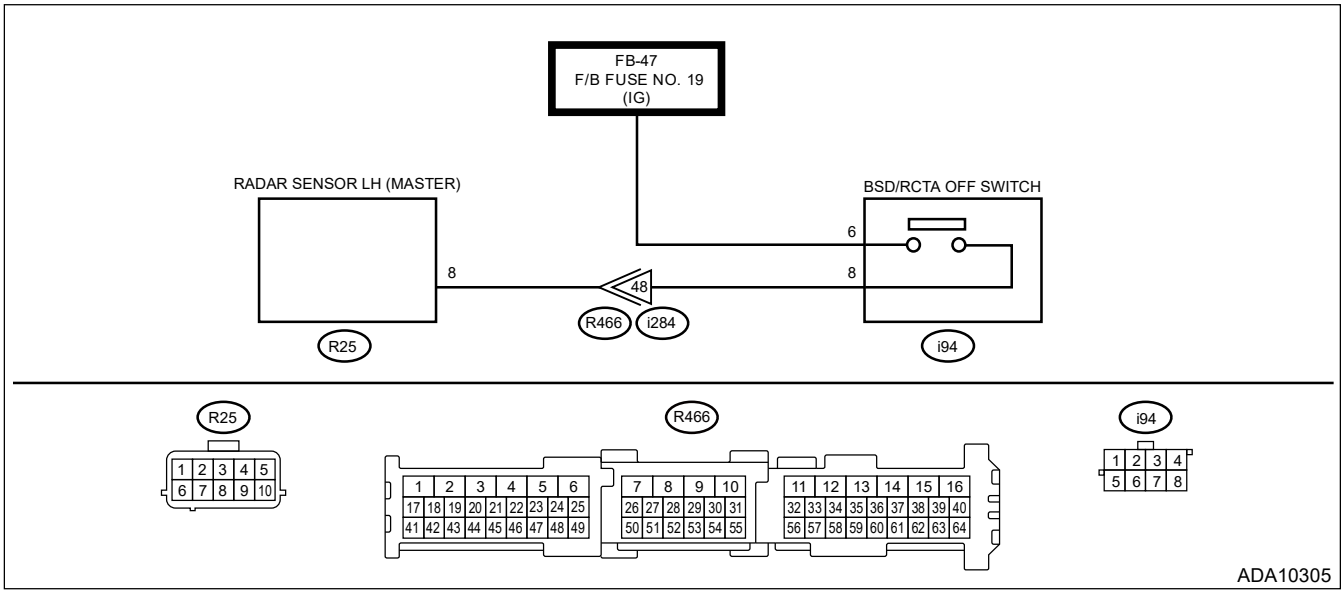
Is DTC B2301 displayed? (Current malfunction)

Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2304 REAR RADAR ON-OFF SWITCH STUCK

DTC detecting condition:



- BSD/RCTA OFF switch is stuck to ON. (Switch malfunction)
- Switch was left pressed for a prolonged time.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

BSD/RCTA system Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

1. CHECK METER DISPLAY.

1. Turn the ignition switch to ON.
2. Check the display of OFF indicator in the combination meter LCD display.

Does the display change according to operation of BSD/RCTA OFF switch?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** • **Temporary poor contact of connector, temporary open or short circuit of harness may be the cause.** • **User may have kept pressing the switch for 30 seconds or more.**
No	Go to 2.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [SRVD System ON-OFF flag]

Does the display change according to operation of BSD/RCTA OFF switch?

Yes	Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. INSPECTION OF SWITCH UNIT.

Perform unit inspection of the BSD/RCTA OFF switch. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Switches and Harness.

Is the check result OK?

Yes	Go to 4.
No	Replace the BSD/RCTA OFF switch. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Switches and Harness.

4. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

Is the check result OK?

Yes	Go to 5.
No	Charge or replace the battery.

5. CHECK FUSE.

Check the fuse of BSD/RCTA OFF switch. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Relay and Fuse.

Is the check result OK?

Yes	Go to 6.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — the SRVD OFF switch.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the BSD/RCTA OFF switch connector.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between BSD/RCTA OFF switch connector and chassis ground.

   Connector & terminal

   (i94) No. 6 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 7.
No	Repair the open circuit of harness between the fuse — the BSD/RCTA OFF switch.

7. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the radar sensor LH connector.
3. Using a tester, measure the resistance between BSD/RCTA OFF switch connector and radar sensor LH connector (harness side).

   Connector & terminal

   (i94) No. 8 — (R25) No. 8:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair the open circuit of harness between BSD/RCTA OFF switch — radar sensor LH.

8. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the BSD/RCTA OFF switch connector (harness side) and the chassis ground.

Connector & terminal

(i94) No. 8 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 9.
No	Repair the short circuit to ground in harness between BSD/RCTA OFF switch — radar sensor LH.

9. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the BSD/RCTA OFF switch connector (harness side) and the chassis ground.

   Connector & terminal

   (i94) No. 8 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 10.
No	Repair the short circuit to power supply in harness between BSD/RCTA OFF switch — radar sensor LH.

10. CHECK CONNECTOR.

Check the radar sensor LH connector. (Insecure connection, poor contact, etc.)

Is the check result OK?

Yes	Go to 11.
No	Repair the connector.

11. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

Is DTC B2304 displayed? (Current malfunction)

Yes	Replace the radar sensor LH. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2311 REAR RADAR DETECT TCM

DTC detecting condition:
Automatic transmission fails.
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- AT OIL TEMP light blinks in the combination meter.

Note:
Check and replace the side that displayed the DTC.

1. CHECK TRANSMISSION.

Check the transmission. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis of the transmission.

2. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

Is DTC B2311 displayed? (Current malfunction)

Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2313 REAR RADAR DETECT VDC

DTC detecting condition:
Vehicle dynamics control (VDC) fails.
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- VDC warning light illuminates in the combination meter.

Note:
Check and replace the side that displayed the DTC.

1. CHECK VDC.

Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the VDC diagnosis.

2. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

Is DTC B2313 displayed? (Current malfunction)

Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)

DTC detecting condition:
Defective radar sensor
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Note:
Check and replace the side that displayed the DTC.

1. CHECK BSD/RCTA.

1. Using the Subaru Select Monitor, perform the clear memory of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Clear memory.
   •[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

   •[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

2. Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   •[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

   •[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

Is DTC B2327 displayed? (Current malfunction)

Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2329 REAR RADAR AXIS ALIGNMENT INCOMPLETE

DTC detecting condition:
Axis adjustment of the radar sensor has failed.
(Forced termination of the Subaru Select Monitor, improper location of the target reflector, or deviation of the radar sensor due to impact.)
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.

- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Note:

Check and replace the side that displayed the DTC.

1. CHECK REAR BUMPER.

Check the rear bumper. (Stickered, trace of repainting, etc.)

Is the check result OK?

Yes	Go to 2.
No	Replace or repair the bumper. Ref. to EXTERIOR/INTERIOR TRIM>Rear Bumper. Go to 2.

2. CHECK RADAR SENSOR BRACKET.

1. Remove the rear bumper. Ref. to EXTERIOR/INTERIOR TRIM>Rear Bumper.
2. Check the mounting bracket of the radar sensor as well as its installation position. (Visible damage, deformation, etc.) Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.

Is the check result OK?

Yes	Go to 3.
No	Replace the mounting bracket of the radar sensor, or repair the installation position. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor. Go to 3.

3. ADJUSTMENT OF RADAR SENSOR AXIS.

1. Install the rear bumper.
2. Perform the adjustment of radar axis. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor>ADJUSTMENT.
3. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

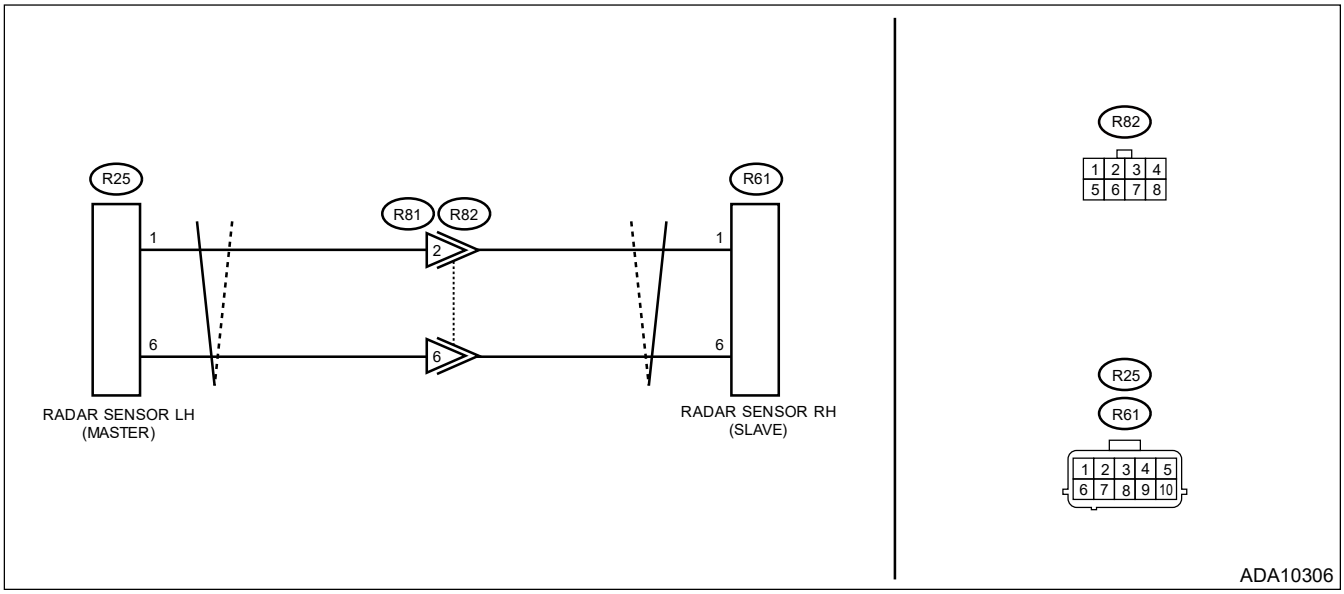
Is DTC B2329 displayed? (Current malfunction)

Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2350 REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE

DTC detecting condition:



- Defective harness for CAN communication between radar sensor LH — radar sensor RH.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

BSD/RCTA system Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

DTC Check

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

DTC Check

Is DTC B2350 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the radar sensor connectors LH and RH.
2. Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side).
   Connector & terminal
   (R25) No. 1 — (R61) No. 1:
   (R25) No. 6 — (R61) No. 6:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.

3. CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground.

Connector & terminal

(R25) No. 1 — (R25) No. 6:

(R25) No. 1 — Chassis ground:

(R25) No. 6 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground.

   Connector & terminal

   (R25) No. 1 (+) — Chassis ground (−):

   (R25) No. 6 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.

5. CHECK RADAR SENSOR. (INTERNAL IMPEDANCE).

Using a tester, measure the internal impedance between radar sensor LH and radar sensor RH terminals.

Terminals

Radar sensor LH
No. 1 — No. 6:
Radar sensor RH
No. 1 — No. 6:

Is the resistance approximately 120 Ω?

Yes	Go to 6.
No	Replace the radar sensor RH or radar sensor LH. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.

6. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Using the Subaru Select Monitor, perform the clear memory of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Clear memory.
   - [Blind Spot Detection/Rear Cross Traffic Alert(RH)]

   - [Blind Spot Detection/Rear Cross Traffic Alert(LH)]

3. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

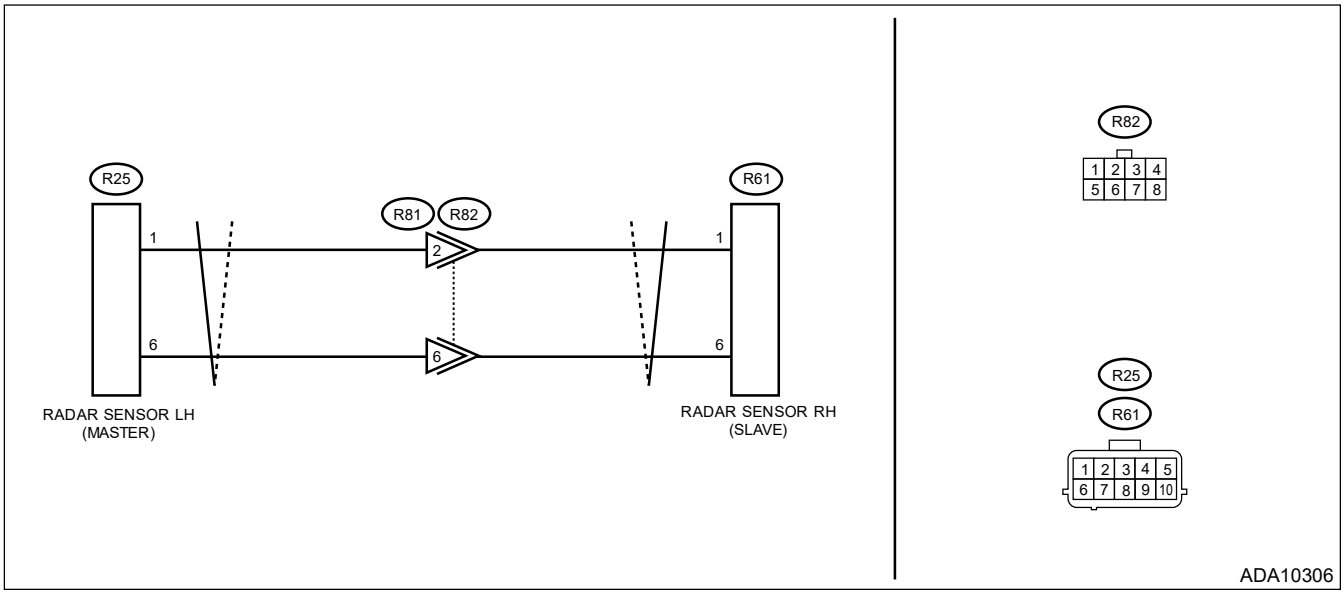
Is DTC B2350 displayed? (Current malfunction)

Yes	Replace the radar sensor on the opposite side of the sensor that displayed the DTC. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2351 REAR RADAR LOST COMMUNICATION BETWEEN MASTER AND SLAVE

DTC detecting condition:



- Defective harness for CAN communication between radar sensor LH — radar sensor RH.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

BSD/RCTA system Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

Is DTC B2351 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the radar sensor connectors LH and RH.
2. Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side).
   Connector & terminal
   (R25) No. 1 — (R61) No. 1:
   (R25) No. 6 — (R61) No. 6:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.

3. CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground.

Connector & terminal

(R25) No. 1 — (R25) No. 6:

(R25) No. 1 — Chassis ground:

(R25) No. 6 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground.

   Connector & terminal

   (R25) No. 1 (+) — Chassis ground (−):

   (R25) No. 6 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.

5. CHECK RADAR SENSOR. (INTERNAL IMPEDANCE).

Using a tester, measure the internal impedance between radar sensor LH and radar sensor RH terminals.

Terminals

Radar sensor LH

No. 1 — No. 6:

Radar sensor RH

No. 1 — No. 6:

Is the resistance approximately 120 Ω?

Yes	Go to 6.
No	Replace the radar sensor RH or radar sensor LH. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.

6. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Using the Subaru Select Monitor, perform the clear memory of Blind Spot Detection/Rear Cross Traffic Alert(RH) or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Clear memory.
   - [Blind Spot Detection/Rear Cross Traffic Alert(RH)]

   - [Blind Spot Detection/Rear Cross Traffic Alert(LH)]

3. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

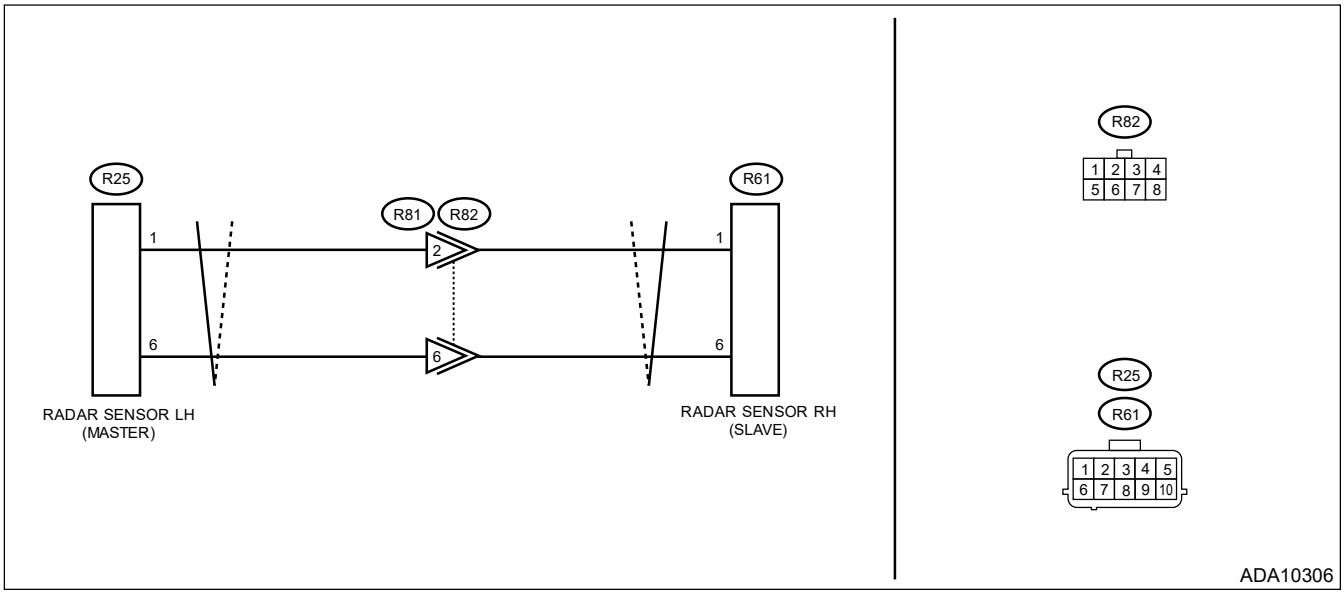
Is DTC B2351 displayed? (Current malfunction)

Yes	Replace the radar sensor on the side that displayed the DTC. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2352 RADAR ASSY B&S REPROGRAMMING ERROR

DTC detecting condition:



- Defective harness for CAN communication between radar sensor LH — radar sensor RH.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

BSD/RCTA system Ref. to WIRING SYSTEM>Blind Spot Detection/Rear Cross Traffic Alert>WIRING DIAGRAM.

1. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

•[Blind Spot Detection/Rear Cross Traffic Alert(RH)]

•[Blind Spot Detection/Rear Cross Traffic Alert(LH)]

Is DTC B2352 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the radar sensor connectors LH and RH.
2. Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side).
   Connector & terminal
   (R25) No. 1 — (R61) No. 1:
   (R25) No. 6 — (R61) No. 6:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.

3. CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground.

Connector & terminal

(R25) No. 1 — (R25) No. 6:

(R25) No. 1 — Chassis ground:

(R25) No. 6 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground.

   Connector & terminal

   (R25) No. 1 (+) — Chassis ground (−):

   (R25) No. 6 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.

5. CHECK RADAR SENSOR. (INTERNAL IMPEDANCE).

Using a tester, measure the internal impedance between radar sensor LH and radar sensor RH terminals.

Terminals

Radar sensor LH

No. 1 — No. 6:

Radar sensor RH

No. 1 — No. 6:

Is the resistance approximately 120 Ω?

Yes	Go to 6.
No	Replace the radar sensor RH or radar sensor LH. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.

6. CHECK BSD/RCTA.

1. Restore the vehicle to its original state.
2. Using the Subaru Select Monitor, perform the clear memory of Blind Spot Detection/Rear Cross Traffic Alert(RH) or Blind Spot Detection/Rear Cross Traffic Alert(LH). Ref. to COMMON(diag)>Clear memory.
   - [Blind Spot Detection/Rear Cross Traffic Alert(RH)]

   - [Blind Spot Detection/Rear Cross Traffic Alert(LH)]

3. Perform the Inspection Mode. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Inspection Mode.

Is DTC B2352 displayed? (Current malfunction)

Yes	Replace the radar sensor on the side that displayed the DTC. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with

Diagnostic Trouble Code (DTC)

DTC U0402 INVALID DATA RECEIVED FROM TCM

Received error data from TCM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Received error data from VDC CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Received error data from BIU.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Received error data from combination meter.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Cancel Code

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)], and then select [Enter].
5. On [Select Function] display, select [Cancel Code].

   Note:
   - **For detailed operation procedures, refer to "Application help".**
   - **For details concerning cancel codes, refer to the List of Cancel Codes. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Cancel Code>LIST.**

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Cancel Code

LIST

Code	Item	Contents of diagnosis
B2320	Rear RADAR Low Voltage (less than 9V)	Temporarily stops because the voltage supplied to radar drops to or below 9 V. Returns to normal when the voltage becomes normal.
B2321	Rear RADAR High Voltage (more than 16V)	Temporarily stops because the voltage supplied to radar rises to or above 16 V. Returns to normal when the voltage becomes normal.
B2328	Rear RADAR internal failure (RADAR misalignment)	Deviation of the radar axis prevents normal detection. Returns to normal when the radar axis becomes normal. When B2328 is frequently detected, perform "Diagnostic Procedure with Cancel Code". Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Procedure with Cancel Code>DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT).
B2340	RADAR ASSY B&S out of operation temperature range	Temporarily stops because the temperature is outside the operative range (−40°C (−40°F) — 85°C (185°F)). Returns to normal when the ambient temperature falls within the operative range.
B2341	Rear RADAR degradation of detecting performance	Temporarily stops because some obstacles blocked radar waves of the back and side radar. Returns to normal when the transmission and reception of radar signals becomes normal.

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS) > Diagnostic Procedure with Cancel Code

DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT)

Detecting condition:

- Excessive impact was given to the installation area of the radar sensor, which resulted in deviation of the radar sensor axis.
- Mounting bracket for the radar sensor is deformed.
- Defective radar sensor

TROUBLE SYMPTOMS:

- All functions of BSD/RCTA are temporarily suspended.
- The icon indicating function suspended will be displayed in the combination meter LCD display.
- Function-suspended confirmation will be displayed for approx. two seconds on LCD display in the combination meter.

Note:

If DTC B2328 is detected repeatedly, check or replace the part corresponding to the cancel code.

1. CHECK REAR BUMPER.

Check the rear bumper. (Stickered, trace of repainting, etc.)

Is the check result OK?

Yes	Go to 2.
No	Replace or repair the bumper. Ref. to EXTERIOR/INTERIOR TRIM>Rear Bumper. Go to 2.

2. CHECK RADAR SENSOR BRACKET.

1. Remove the rear bumper. Ref. to EXTERIOR/INTERIOR TRIM>Rear Bumper.
2. Check the mounting bracket of the radar sensor as well as its installation position. (Visible damage, deformation, etc.) Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.

Is the check result OK?

Yes	Go to 3.
No	Replace the mounting bracket of the radar sensor, or repair the installation position. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor. Go to 3.

3. ADJUSTMENT OF RADAR SENSOR AXIS.

1. Install the rear bumper.
2. Perform the adjustment of radar axis. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor>ADJUSTMENT.
3. Read the [Cancel Code] of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)] using the Subaru Select Monitor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Cancel Code.

Is B2328 displayed?

Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
15. Cancel Code

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Reverse Automatic Braking].

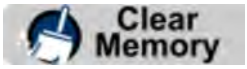
Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and go to next. Go to 5.
No	Reverse Automatic Braking is normal.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Reverse Automatic Braking]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Basic Diagnostic Procedure.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown.
No	Finish the diagnosis.

Reverse Automatic Braking(DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

Reverse Automatic Braking(DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform the inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. Turn the ignition switch to ON, and wait for 6 seconds or more. (*1)
2. Confirm that the RAB warning light (RAB malfunction indicator light) of MID in the combination meter is off.
3. Read the DTC and check that the DTC is not displayed. (*2)

*1: Even with normal condition, “RAB warning light (RAB OFF indicator light)” illuminates for 6 seconds after turning the ignition switch to ON, and then goes off after 6 seconds.

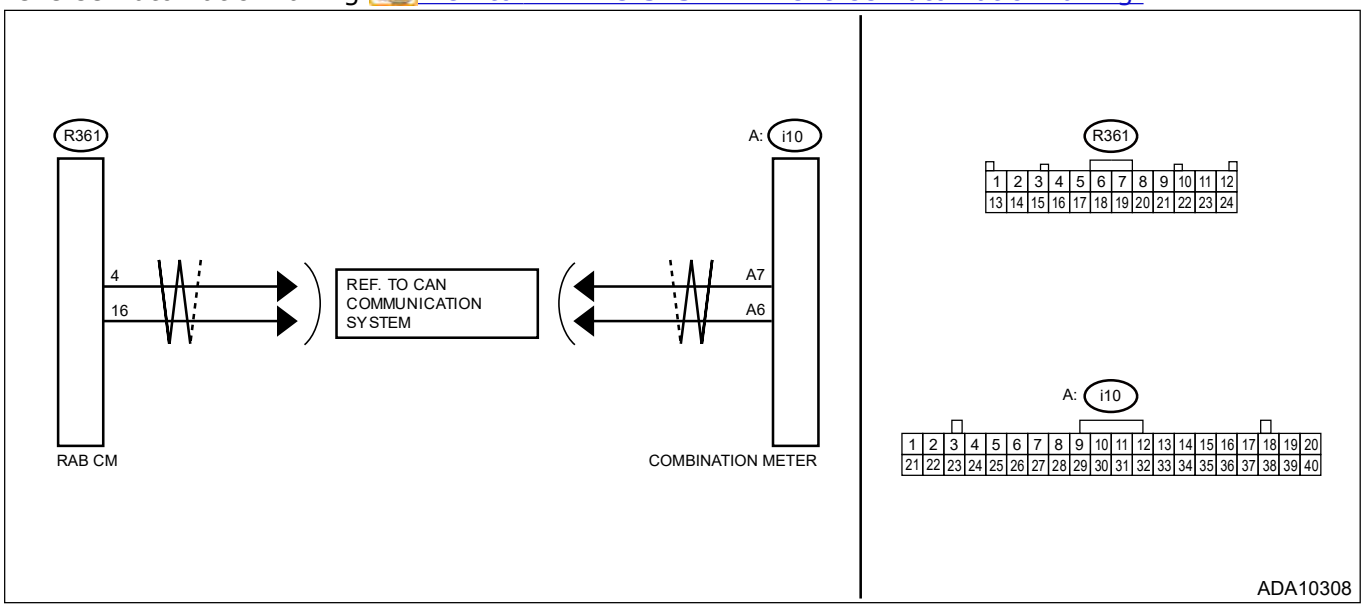
*2: Perform all DTC diagnosis within 3 seconds after the ignition switch is turned to ON. It is not necessary to shift the gear in the R range to operate the function.

Reverse Automatic Braking(DIAGNOSTICS) > Warning Light Illumination Pattern

INSPECTION

- When the Reverse Automatic Braking is error
  "RAB" illuminates in MID in the combination meter.
- When the Reverse Automatic Braking is stopped temporarily
  "RAB OFF" illuminates in MID in the combination meter.

Note:



Even with normal condition, "RAB warning light (RAB OFF indicator light)" illuminates for 6 seconds after turning the ignition switch to ON, and then goes off after 6 seconds.

Reverse Automatic Braking(DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT DOES NOT ILLUMINATE

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

1. CHECK OTHER INDICATOR.

Turn the ignition switch to ON.

Do other indicators illuminate?

Yes	Go to 2.
No	Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. ACTIVE TEST FOR THE COMBINATION METER.

Using the Subaru Select Monitor, perform [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [All lamps lighted]

Does the indicator illuminate?

Yes	Go to 3.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

3. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 4.

4. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Perform the inspection according to the diagnosis for LAN system.

Reverse Automatic Braking(DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT REMAINS ON

Note:

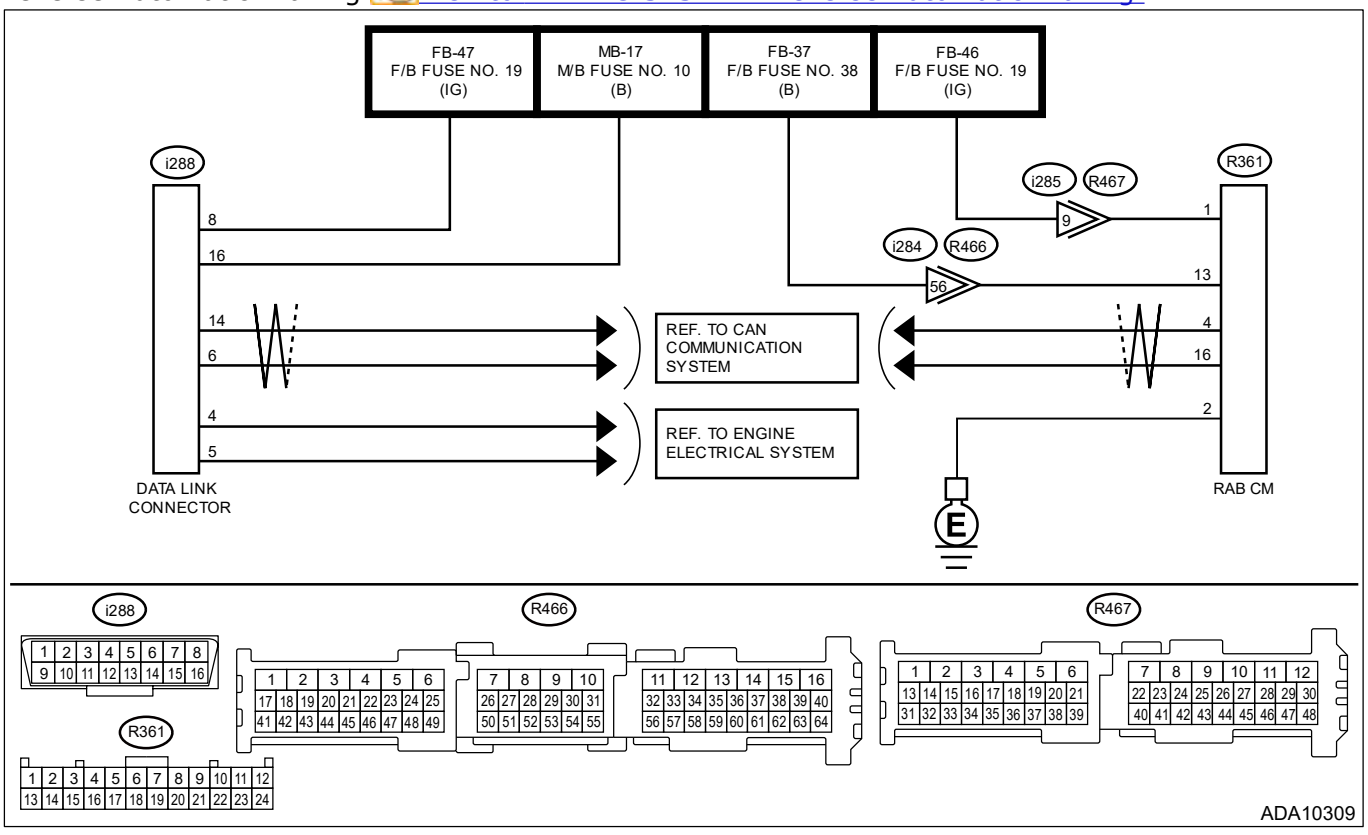
For the diagnostic procedures, refer to "WARNING LIGHT DOES NOT COME ON". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Warning Light Illumination Pattern>WARNING LIGHT DOES NOT ILLUMINATE.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Trouble symptom:



Cannot communicate with [Reverse Automatic Braking].

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective RAB CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

1. CHECK FUSE.	no →	Perform the instructed procedures.

yes ↓

2. CHECK POWER SUPPLY CIRCUIT (OPEN).	no →	Perform the instructed procedures.

yes

3. CHECK GROUND CIRCUIT (OPEN). → no → Perform the instructed procedures.

yes

4. CHECK LAN SYSTEM. → no → Perform the instructed procedures.

yes

5. CHECK SUBARU SELECT MONITOR. → no → Perform the instructed procedures.

yes

6. CHECK RAB CM. → yes → Perform the instructed procedures.

6. CHECK RAB CM. → no → Perform the instructed procedures.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse — RAB CM.

2. CHECK POWER SUPPLY CIRCUIT (OPEN).

1. Disconnect the RAB CM connector.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between the RAB CM connector and chassis ground.
   Connector & terminal
   (R361) No. 1 (+) — Chassis ground (−):
   (R361) No. 13 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the open circuit in the harness between fuse and RAB CM connector.

3. CHECK GROUND CIRCUIT (OPEN).

1. Turn the ignition switch to OFF.
2. Using a tester, measure the resistance between the RAB CM connector and chassis ground.
   Connector & terminal
   (R361) No. 2 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between RAB CM connector and chassis ground.

4. CHECK LAN SYSTEM.

1. Connect the RAB CM connector.
2. Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

5. CHECK SUBARU SELECT MONITOR.

Connect the Subaru Select Monitor to another vehicle.

Is the communication possible with the vehicle?

Yes	Go to 6.
No	Replace or repair the Subaru Select Monitor.

6. CHECK RAB CM.

Communicate with [Reverse Automatic Braking] using the select monitor.

Is communication possible?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.

Reverse Automatic Braking(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Data Monitor>LIST.**

Reverse Automatic Braking(DIAGNOSTICS) > Data Monitor

Reverse Automatic Braking(DIAGNOSTICS) > Freeze Frame Data

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Freeze Frame Data.**
- **For details on freeze frame data, refer to the list. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Freeze Frame Data>LIST.**
- **The system conditions when malfunction occurred (when DTC code was confirmed) can be stored up to 15 conditions.**

Reverse Automatic Braking(DIAGNOSTICS) > Freeze Frame Data

LIST

Item	Contents	Standard/Unit	Note
Trip Count	Time stamp information. Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>CAUTION > TIME STAMP.	time	-
Count		-	-
Time Count		ms	-
Battery Voltage	System information	0 — 24.5 V	-
[Ignition Voltage]	System information	0 — 17.85 V	-
Sonar	System information	0 — 24.5 V	-
RAB Operation Times	System information	0 — 255 times (in one IGN_ON)	-
RAB Cancel Times	System information	0 — 255 times (in one IGN_ON)	-
Stop Hold Cancel Times	System information	0 — 255 times (in one IGN_ON)	-
FAIL times	System information	0 — 255 times (in one IGN_ON)	-
HALT times	System information	0 — 255 times (in one IGN_ON)	-
RR Sonar Sensitivity	System information	–128 — 127	-
RRC Sonar Sensitivity	System information	–128 — 127	-
RL Sonar Sensitivity	System information	–128 — 127	-
RLC Sonar Sensitivity	System information	–128 — 127	-
RAB Detection Distance(Coordinate:X)	Sonar sensor detection information	0 — 510 cm	-
RAB Detection Distance(Coordinate:Y)	Sonar sensor detection information	–255 — 254 cm	-
RR Sonar Detection Distance	Sonar sensor detection information	0 — 510 cm	-

RRC Sonar Detection Distance	Sonar sensor detection information	0 — 510 cm	-
RL Sonar Detection Distance	Sonar sensor detection information	0 — 510 cm	-
RLC Sonar Detection Distance	Sonar sensor detection information	0 — 510 cm	-
Drive Wheel Average Speed	Vehicle information	0 — 3686.4 km/h	-
Wheel Speed for Fail Safe	Vehicle information	0 — 3686.4 km/h	-
Driver Brake Detection	Vehicle information	• ON • OFF	-
Vehicle Height Sensor Voltage	Vehicle information	0 — 5.1 V	-
Ambient Air Temperature	Vehicle information	–40 — 87°C	-
Shift Position	Vehicle information	-	-
EPB Equipment Information	Operation instruction from EyeSight	• Vehicle without EPB • Vehicle with EPB	-
EyeSight Initialization(RAB)	Operation instruction from EyeSight	• During initialization of EyeSight • Initialization completion	-
Recession Control Permission(RAB)	Operation instruction from EyeSight	• Can not Reverse Control • Permit	-
RAB Fail Indication(EyeSight→RAB)	Operation instruction from EyeSight	• No failure • NG	-
RAB OFF Indication(EyeSight→RAB)	Operation instruction from EyeSight	• RAB ON • RAB Force OFF	-
RAB Acceleration Suppression Control State(EyeSight→RAB)	Operation instruction from EyeSight	• No Control • Precom • Recruitment	-
RAB Brake Control State(EyeSight→RAB)	Operation instruction from EyeSight	• No Control • Precompression • Brake Control In • Stop holding • Recruitment	-
RAB Precompression Control	Braking control instruction from RAB CM	• No • Yes	-
RAB Acceleration Suppression Value	Braking control instruction from RAB CM	0 — 2.55 G	-
RAB Acceleration Suppression Control	Braking control instruction from RAB CM	• No • Yes	-
Deceleration Braking Instruction	Braking control instruction from RAB CM	0 — 2.55 G	-
Recession Pre-Collision Brake Control	Braking control instruction from RAB CM	• No • RAB activated	-

RAB Function OFF Information	HMI control instruction from RAB CM	• ON • OFF	-
Audible Alarm function OFF Information(RAB)	HMI control instruction from RAB CM	• ON • OFF	-
Sonar System HALT(RAB)	HMI control instruction from RAB CM	• NORMAL • Extraneous Matter on Sonar • Detection Abnormality	-
RAB Sonar System Failure(EyeSight→RAB)	HMI control instruction from RAB CM	• NORMAL • Sonar Failure • System Failure	-
RAB Function pause Do Not Disturb	HMI control instruction from RAB CM	• Ready • Do Not Disturb	-
RAB Alarm pause Do Not Disturb	HMI control instruction from RAB CM	• Ready • Do Not Disturb	-
Rear Sonar Distance Alarm Information (Rear_Center)	HMI control instruction from RAB CM	• No Obstacle • Far • Middle • Short • Closest Approach	-
Rear Sonar Distance Alarm Information (Rear Right Corner)	HMI control instruction from RAB CM	• No Obstacle • Far • Middle • Short	-
Rear Sonar Distance Alarm Information (Rear Left Corner)	HMI control instruction from RAB CM	• No Obstacle • Far • Middle • Short	-
RAB Alarm Level	HMI control instruction from RAB CM	• OFF • LEVEL1 • Level2 • Level3 • LEVEL4 • LEVEL5	-
RAB Alarm Interrupt Display Instruction	HMI control instruction from RAB CM	• No display • Backward Note • Encourage Stepping Brake	-
RAB Function Pause Information(MFD)	HMI settings instruction from MFD/navigation	• ON • OFF	-
RAB Alarm Pause Information(MFD)	HMI settings instruction from MFD/navigation	• ON • OFF	-

RAB Function Pause Information Change Request(MFD)	HMI settings instruction from MFD/navigation	• support • no support	-
RAB Function ON/OFF Information(MET)	HMI settings instruction from the combination meter	• ON • OFF	-
RAB Alarm ON/OFF Information(MET)	HMI settings instruction from the combination meter	• ON • OFF	-
RAB Function ON/OFF Information Change Request(MET)	HMI settings instruction from the combination meter	• support • no support	-

Reverse Automatic Braking(DIAGNOSTICS) > Customize

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, enter vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Reverse Automatic Braking] and select [Enter].
5. On [Select Function] display, select [Customize] and select [Next].

Note:

For detailed operation procedures, refer to "Application help".

Reverse Automatic Braking(DIAGNOSTICS) > Customize

LIST

Item	Initial setting value	Setting value	Contents
RAB Function ON/OFF Information(SSM)	Always ON	Always ON Always OFF	ON/OFF of the RAB function can be selected.

Reverse Automatic Braking(DIAGNOSTICS) > Work Support

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select Reverse Automatic Braking and select [Enter].
5. On [Select Function] display, select [Work Support] and select [Next].

Note:

For detailed operation procedures, refer to "Application help".

Reverse Automatic Braking(DIAGNOSTICS) > Work Support

LIST

Item	Contents
RAB Operation Record Data Save	When ignition switch ON counts of "Latest", "1 block before", "2 blocks before" ... "4 blocks before" all shows "0", it can be judges that there is no data. The display shows the latest data and the data in the previous 4 times in the order of their occurrence. Blue letter means that the data exists, and black letter means that there is no data. Select the blue letters and read out the details.
ECU Initialize	RAB CM is reset to the factory settings.
ECM part number display	RAB CM part number is displayed.
Software information display	Software information is displayed.

Sensitivity of each sonar sensor can NOT be adjusted.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**
- **For details on DTCs, refer to the list. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.**

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

INVALID DATA RECEIVED FROM EyeSight.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C00 SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
10 ms
Recovery conditions:
Ignition switch OFF → ON
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are DTCs other than DTC B2C00 displayed? (Current malfunction)

Yes	Perform the diagnosis for DTC other than DTC B2C00. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C01 RR SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is a DTC other than DTC B2C01 displayed? (Current malfunction)

Yes	Perform the diagnosis for DTC other than DTC B2C01. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C02 RRC SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is a DTC other than DTC B2C02 displayed? (Current malfunction)

Yes	Perform the diagnosis for DTC other than DTC B2C02. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C03 RL SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is a DTC other than DTC B2C03 displayed? (Current malfunction)

Yes	Perform the diagnosis for DTC other than DTC B2C03. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

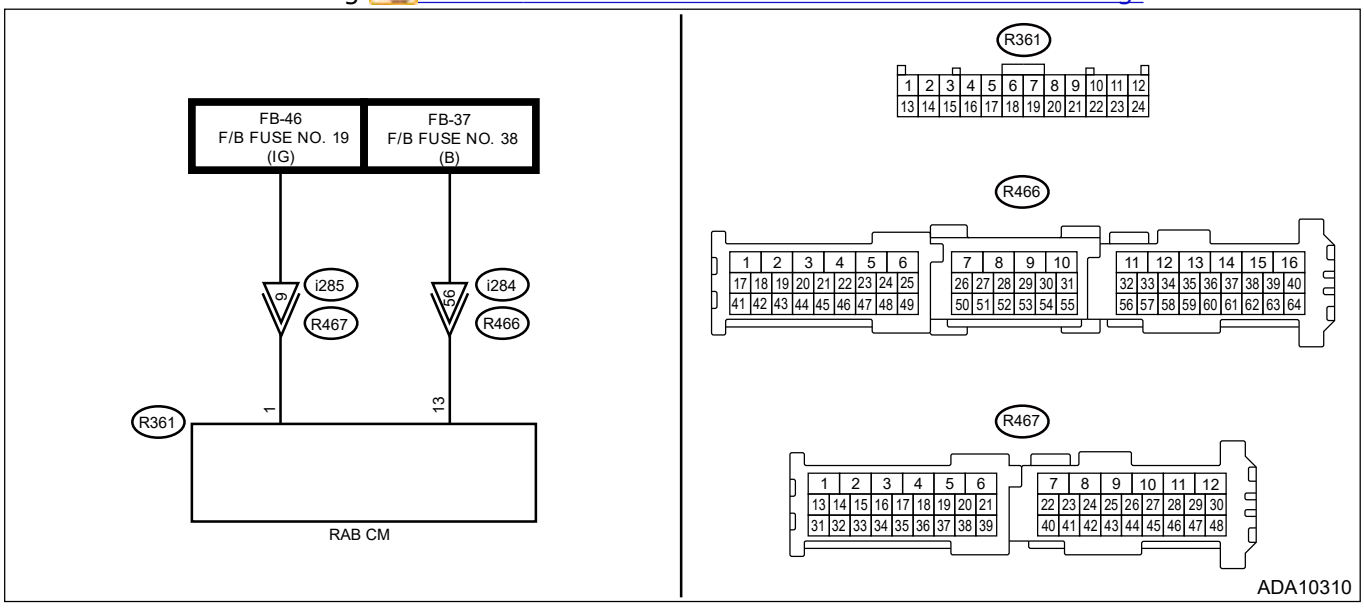
DTC B2C04 RLC SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check



Is a DTC other than DTC B2C04 displayed? (Current malfunction) Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

Yes	Perform the diagnosis for DTC other than DTC B2C04.
No	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C05 SONAR CONTROL MODULE POWER SUPPLY

Outline of diagnosis:
Voltage supply to the ignition power supply terminal and the battery power supply terminal was 16 V or more.
Time needed for diagnosis:
200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the RAB CM connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C05 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK RAB CM POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the RAB CM connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the RAB CM connector and chassis ground.
   Connector & terminal
   (R361) No. 1 (+) — Chassis ground (−):
   (R361) No. 13 (+) — Chassis ground (−):

Is the voltage 16 V or less?

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Check the harness between the RAB CM connector and power supply.

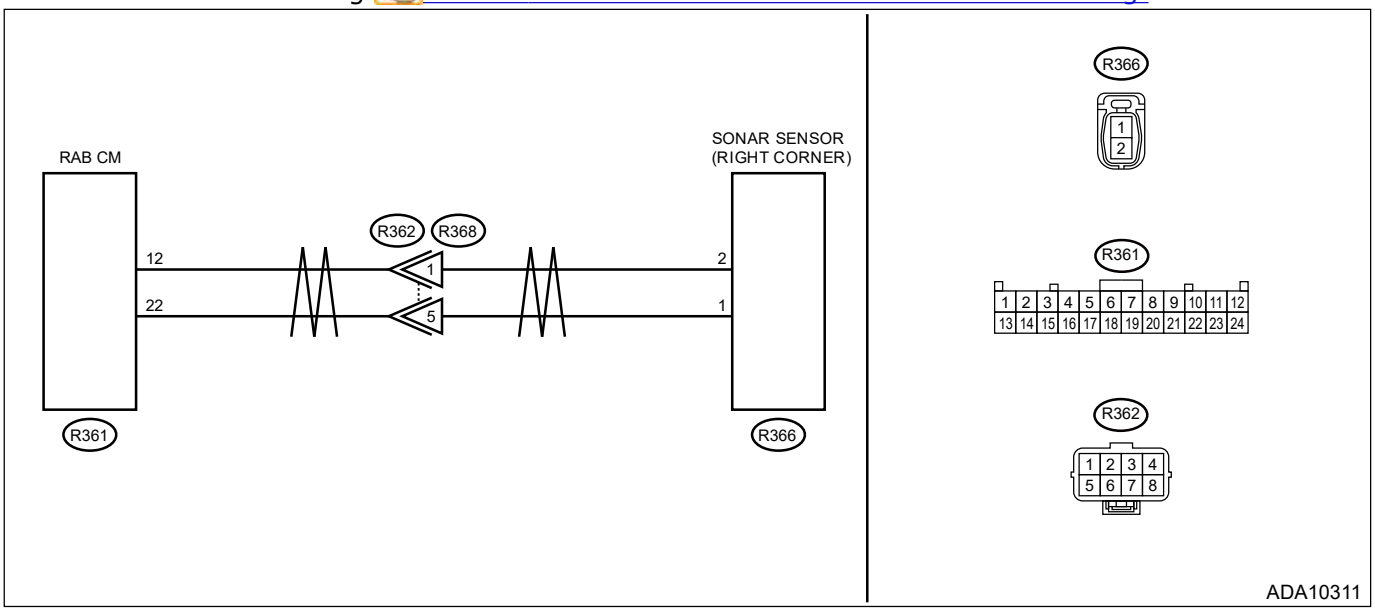
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C06 RR SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:

Sonar sensor (right corner) harness is open.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C06 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right corner) connector and the RAB CM connector.
3. Using a tester, measure resistance value of the harness between the sonar sensor (right corner) connector and RAB CM connector.
   Connector & terminal
   (R361) No. 12 — (R366) No. 2:
   (R361) No. 22 — (R366) No. 1:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

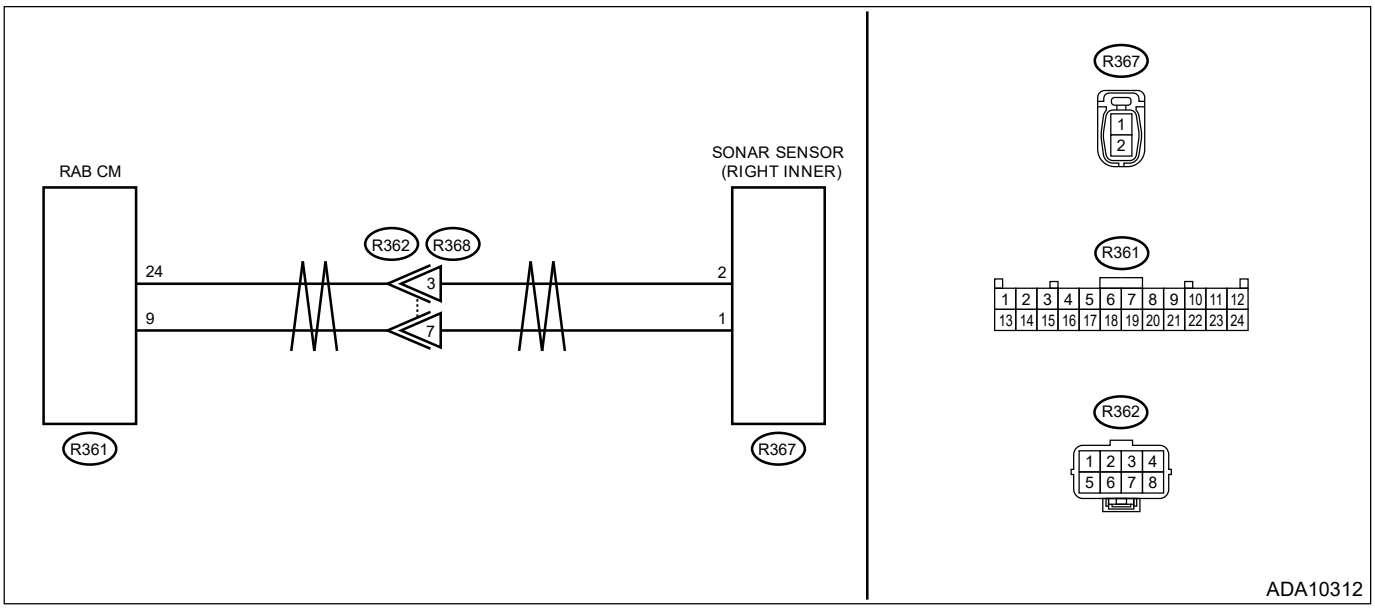
1. Switch the sonar sensor (right corner) and sonar sensor (right inner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C06 displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C07 RR SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT



Note:

For the diagnostic procedure, refer to DTC B2C06. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C06 RR SONAR SENSOR CIRCUIT / NO SIGNAL.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C08 RRC SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (right inner) harness is open.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2C08 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right inner) connector and the RAB CM connector.
3. Using a tester, measure resistance value of the harness between the sonar sensor (right inner) connector and RAB CM connector.

Connector & terminal

(R361) No. 24 — (R367) No. 2:
(R361) No. 9 — (R367) No. 1:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (right inner) and sonar sensor (right corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C08 displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C09 RRC SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

Note:

For the diagnostic procedure, refer to DTC B2C08. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C08 RRC SONAR SENSOR CIRCUIT / NO SIGNAL.

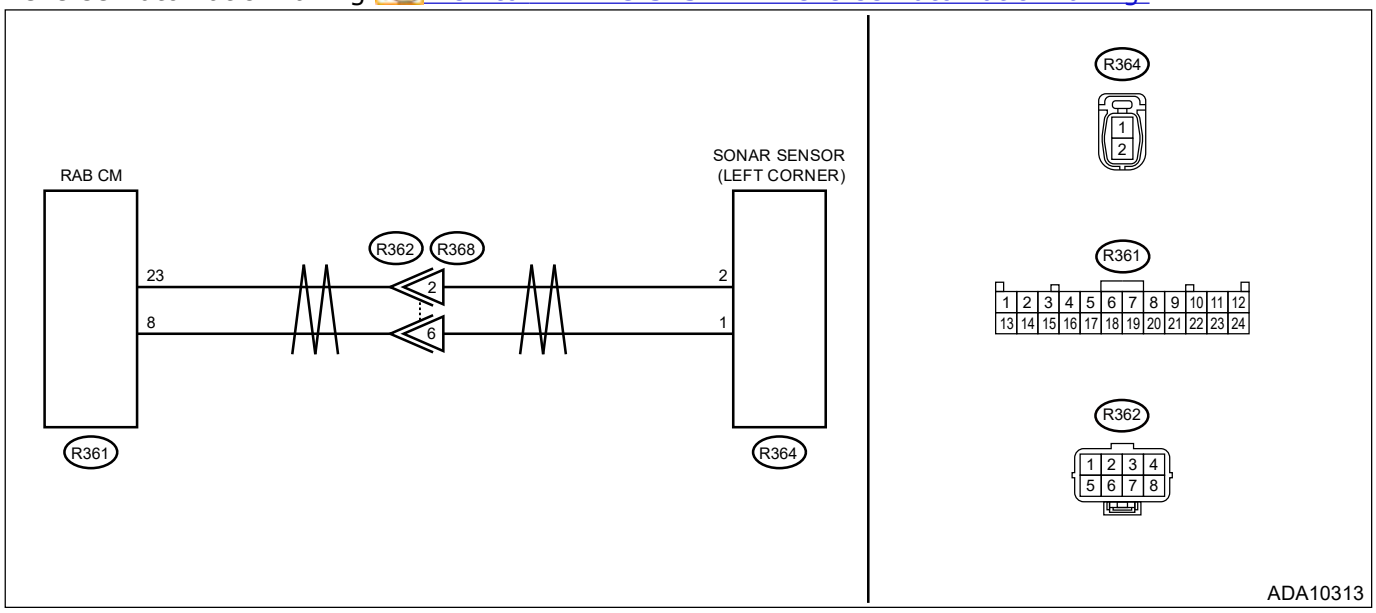
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C0A RL SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:

Sonar sensor (left corner) harness is open.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C0A displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left corner) connector and the RAB CM connector.
3. Using a tester, measure resistance value of the harness between the sonar sensor (left corner) connector and RAB CM connector.
   Connector & terminal
   (R361) No. 8 — (R364) No. 1:
   (R361) No. 23 — (R364) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (left corner) and sonar sensor (left inner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C0A displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C0B RL SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

Note:

For the diagnostic procedure, refer to DTC B2C0A. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C0A RL SONAR SENSOR CIRCUIT / NO SIGNAL.

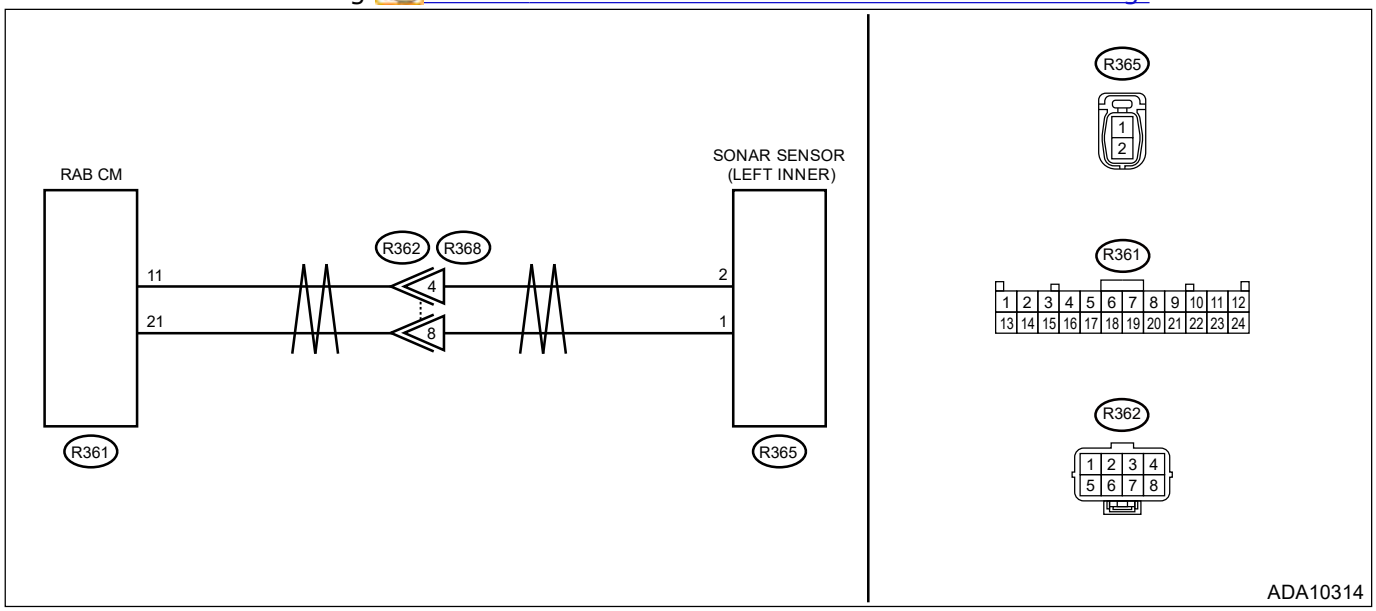
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C0C RLC SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:

Sonar sensor (left inner) harness is open.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C0C displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left inner) connector and the RAB CM connector.
3. Using a tester, measure resistance value of the harness between the sonar sensor (left inner) connector and RAB CM connector.
   Connector & terminal
   (R361) No. 11 — (R365) No. 2:
   (R361) No. 21 — (R365) No. 1:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

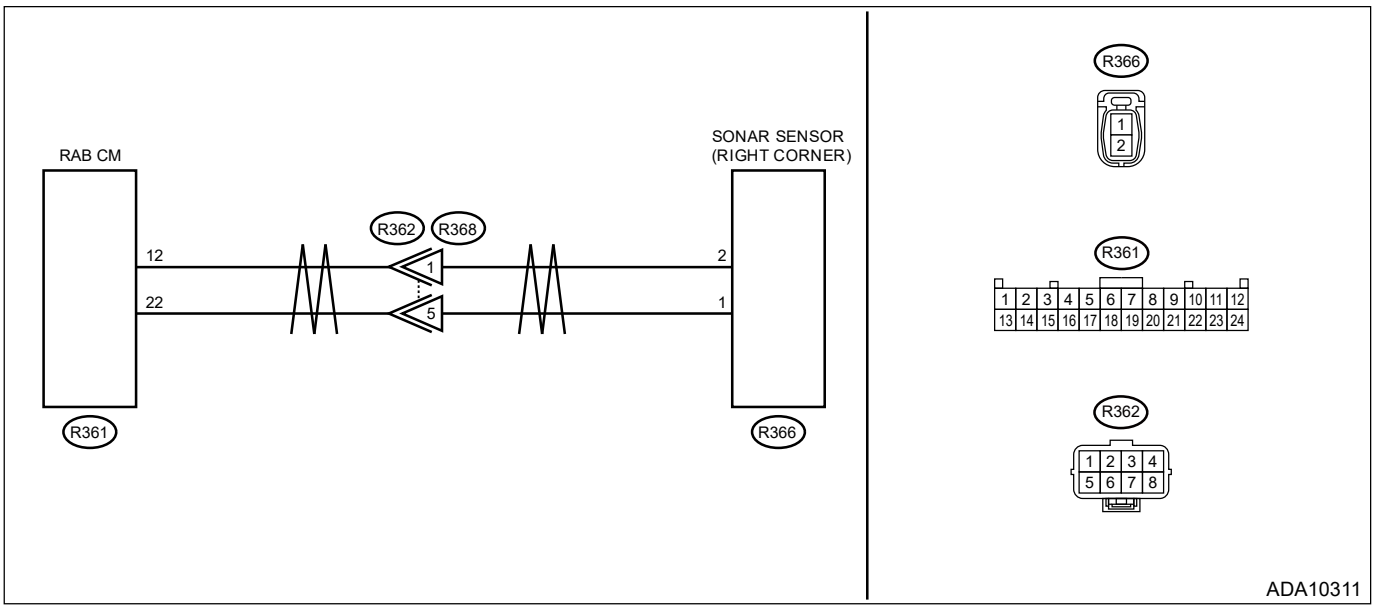
1. Switch the sonar sensor (left inner) and sonar sensor (left corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C0C displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C0D RLC SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT



Note:

For the diagnostic procedure, refer to DTC B2C0C. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C0C RLC SONAR SENSOR CIRCUIT / NO SIGNAL.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C0E RR SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (right corner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2C0E displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right corner) connector and the RAB CM connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between sonar sensor (right corner) connector and chassis ground.
   Connector & terminal
   (R366) No. 2 (+) — Chassis ground (-):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Turn the ignition switch to OFF.
2. Switch the sonar sensor (right corner) and sonar sensor (right inner).
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   DTC Check

Is DTC B2C0E displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

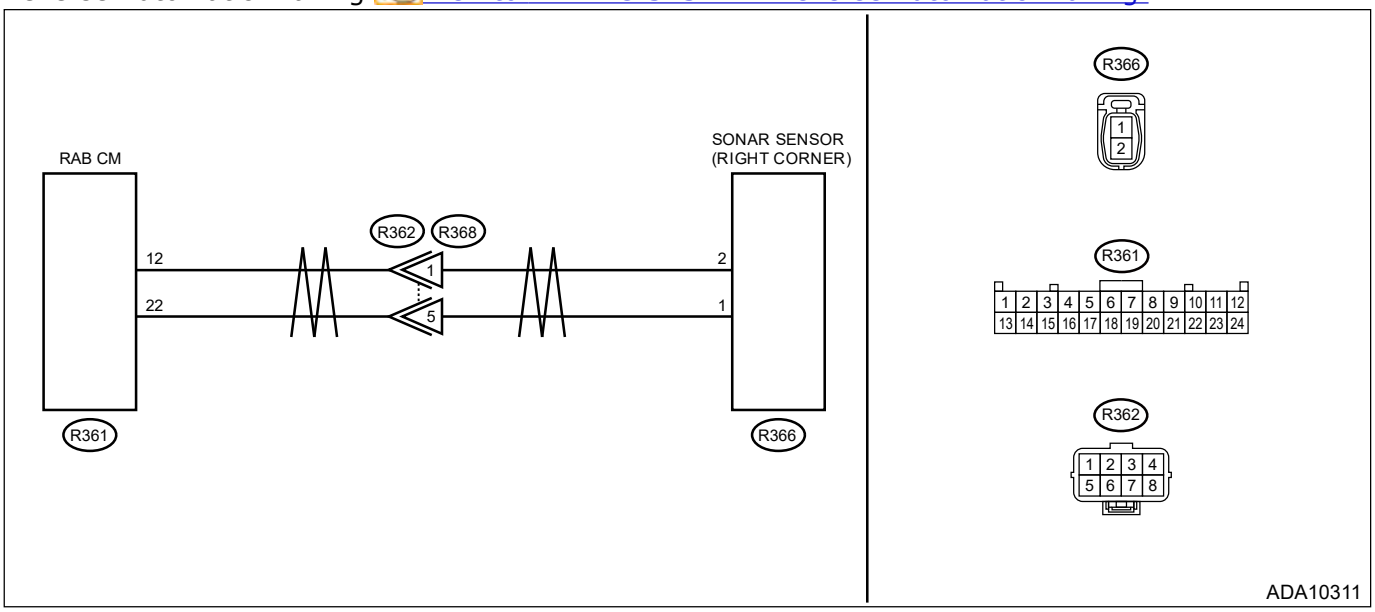
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C0F RR SONAR HARNESS LOW

Outline of diagnosis:

Sonar sensor (right corner) harness is shorted to ground.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C0F displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).

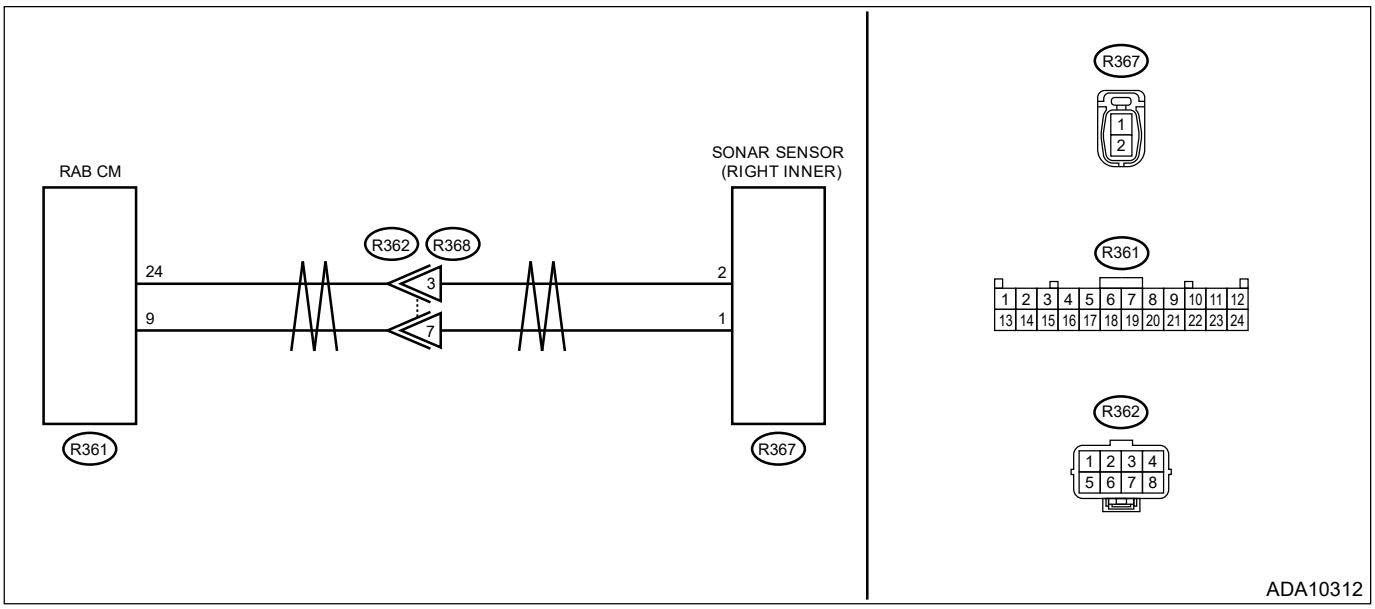
1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right corner) connector and the RAB CM connector.
3. Using a tester, measure the resistance between sonar sensor (right corner) connector and chassis ground.
   Connector & terminal
   (R366) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (right corner) and sonar sensor (right inner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B2C0F displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C10 RRC SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (right inner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2C10 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right inner) connector and the RAB CM connector.
3. Using a tester, measure the voltage between sonar sensor (right inner) connector and chassis ground.
   Connector & terminal
   (R367) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (right inner) and sonar sensor (right corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   DTC Check

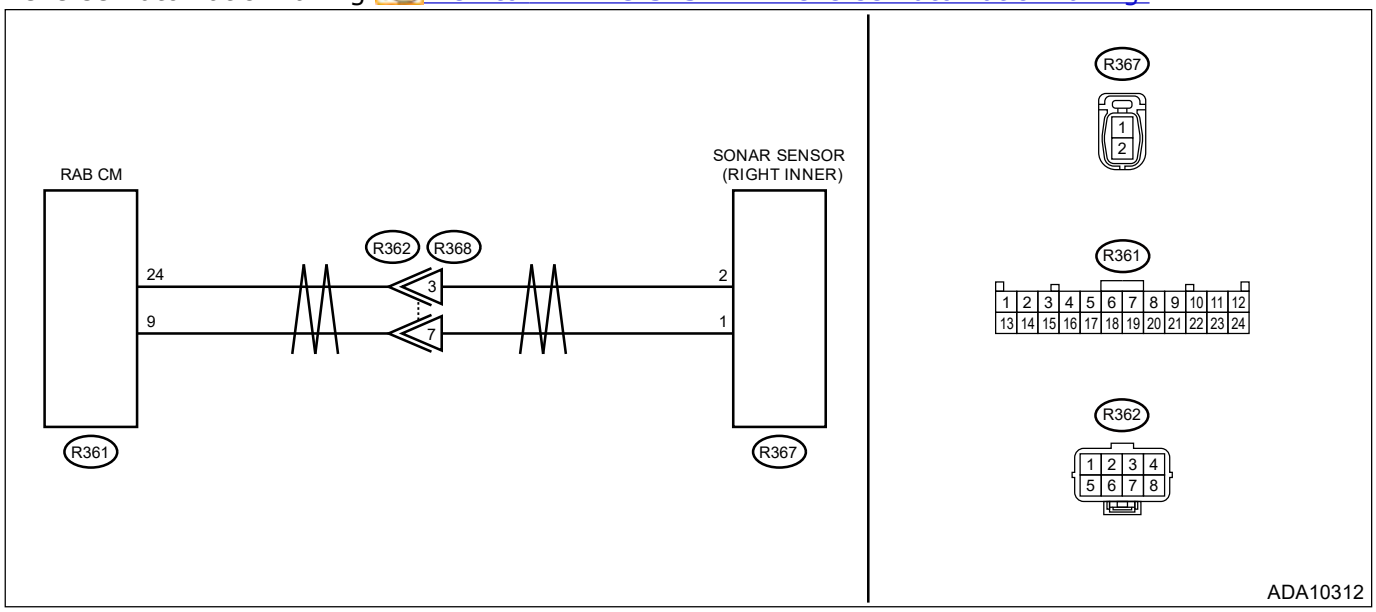
Is DTC B2C10 displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C11 RRC SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (right inner) harness is shorted to ground.
Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C11 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).

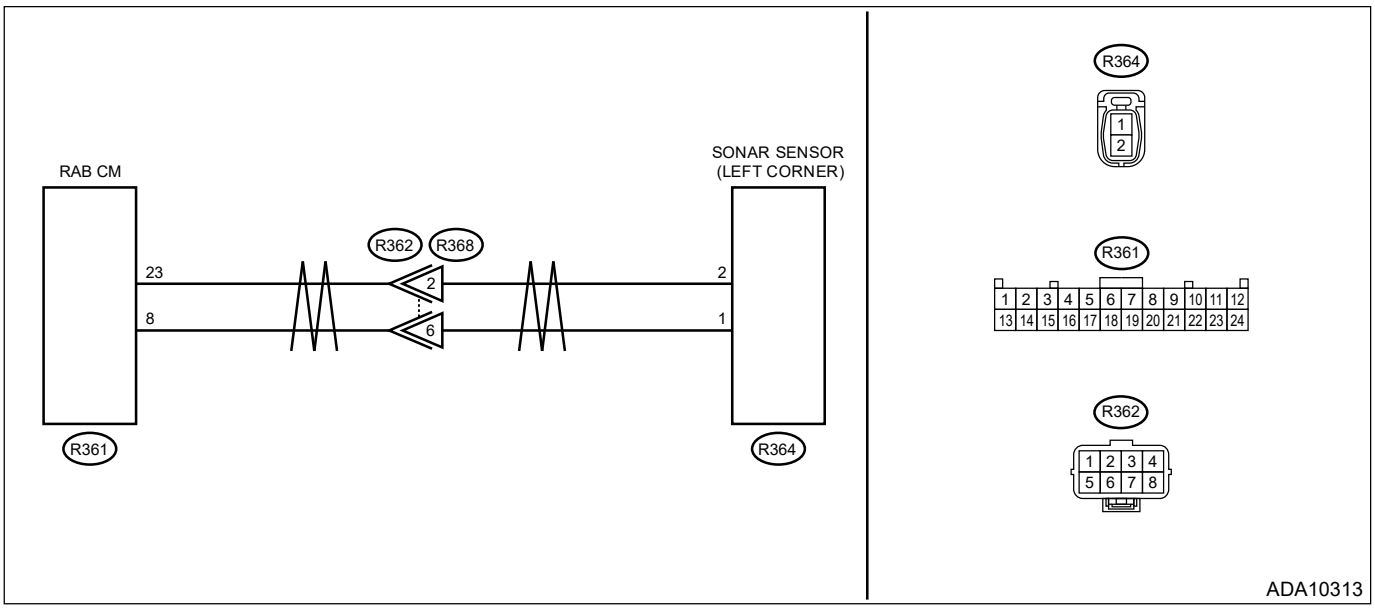
1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right inner) connector and the RAB CM connector.
3. Using a tester, measure the resistance between sonar sensor (right inner) connector and chassis ground.
   Connector & terminal
   (R367) No. 2 — Chassis ground:

Is the resistance less than 1 MΩ?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (right inner) and sonar sensor (right corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B2C11 displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C12 RL SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2C12 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left corner) connector and the RAB CM connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between sonar sensor (left corner) connector and chassis ground.
   Connector & terminal
   (R364) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (left corner) and sonar sensor (left inner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   DTC Check

Is DTC B2C12 displayed? (Current malfunction)

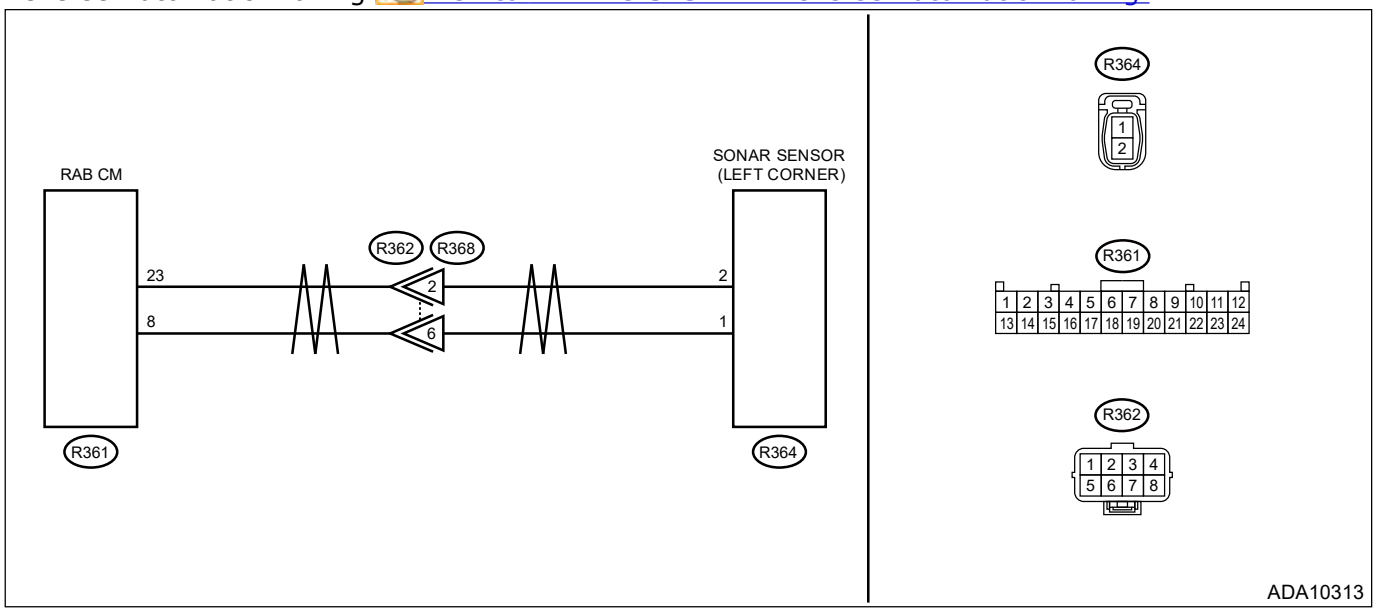
Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C13 RL SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to ground.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C13 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).

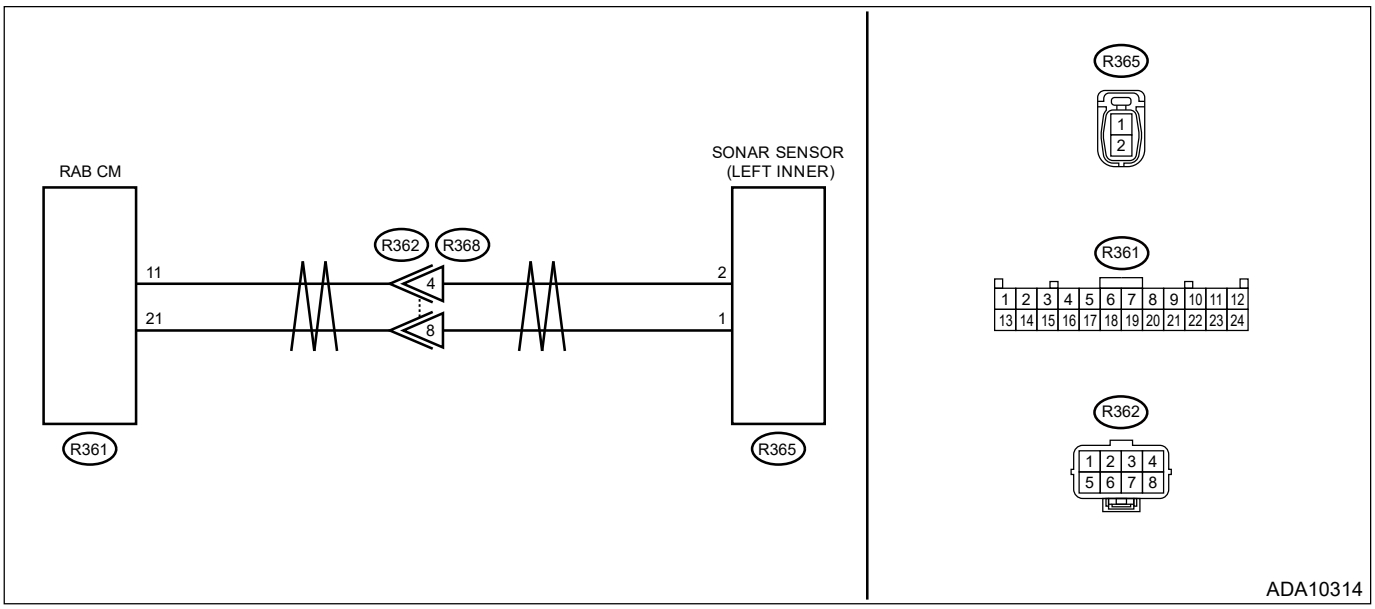
1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left corner) connector and the RAB CM connector.
3. Using a tester, measure the resistance between sonar sensor (left corner) connector and chassis ground.
   Connector & terminal
   (R364) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (left corner) and sonar sensor (left inner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B2C13 displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C14 RLC SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (left inner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2C14 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left inner) connector and the RAB CM connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between sonar sensor (left inner) connector and chassis ground.
   Connector & terminal
   (R365) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (left inner) and sonar sensor (left corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   DTC Check

Is DTC B2C14 displayed? (Current malfunction)

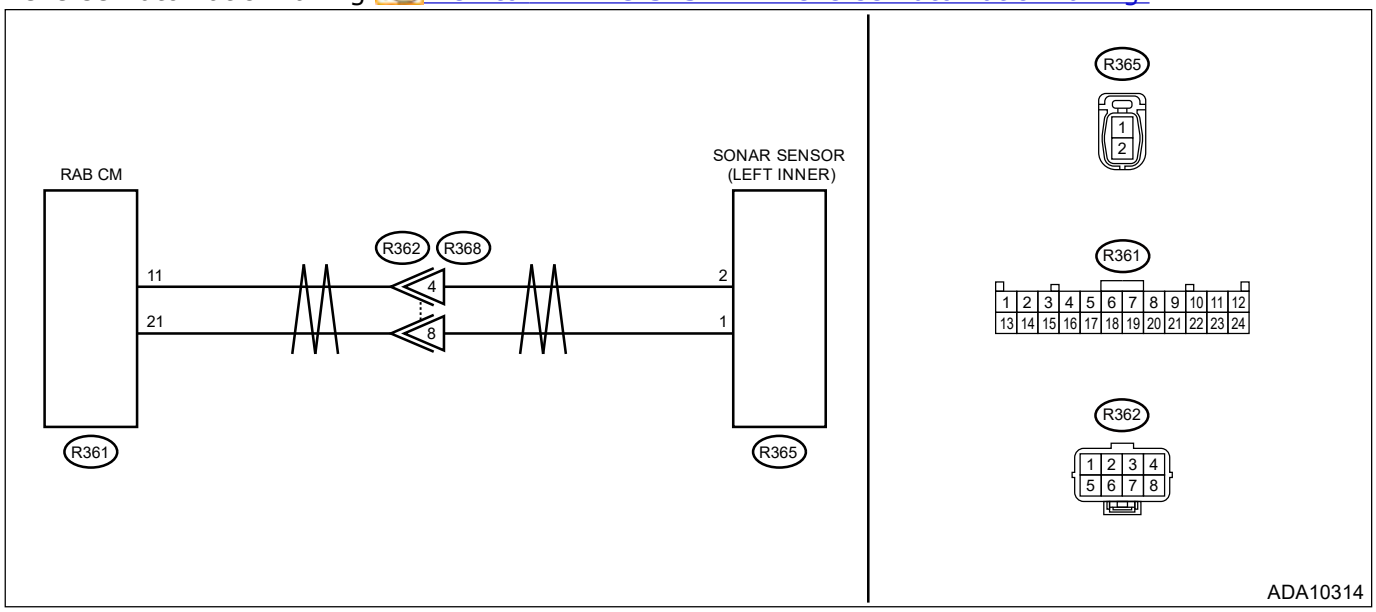
Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C15 RLC SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (left inner) harness is shorted to ground.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C15 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left inner) connector and the RAB CM connector.
3. Using a tester, measure the resistance between sonar sensor (left inner) connector and chassis ground.
   Connector & terminal
   (R365) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 3.
No	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

3. CHECK SONAR SENSOR.

1. Switch the sonar sensor (left inner) and sonar sensor (left corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C15 displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C16 RRC SONAR HARNESS HIGH / RRC SONAR CONTROL MODULE CIRCUIT

Note:

For the diagnostic procedure, refer to DTC B2C10. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C10 RRC SONAR HARNESS HIGH.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C17 RLC SONAR HARNESS HIGH / RLC SONAR CONTROL MODULE CIRCUIT

Note:

For the diagnostic procedure, refer to DTC B2C14. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C14 RLC SONAR HARNESS HIGH.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C18 RR SONAR HARNESS HIGH / RR SONAR CONTROL MODULE CIRCUIT

Note:

For the diagnostic procedure, refer to DTC B2C0E. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C0E RR SONAR HARNESS HIGH.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C19 RL SONAR HARNESS HIGH / RL SONAR CONTROL MODULE CIRCUIT

Note:

For the diagnostic procedure, refer to DTC B2C12. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C12 RL SONAR HARNESS HIGH.

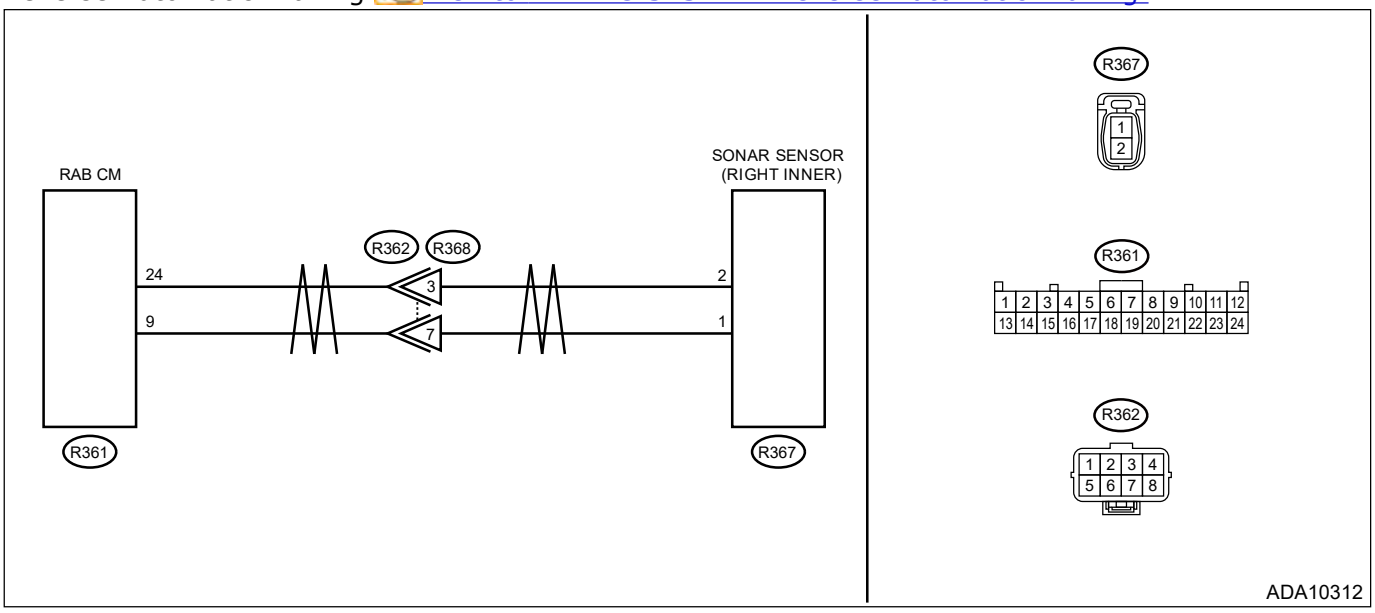
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C1A RRC SONAR SENSOR

Outline of diagnosis:

Sonar sensor (right inner) is faulty.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1A displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK SONAR SENSOR.

1. Switch the sonar sensor (right inner) and sonar sensor (right corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1A displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

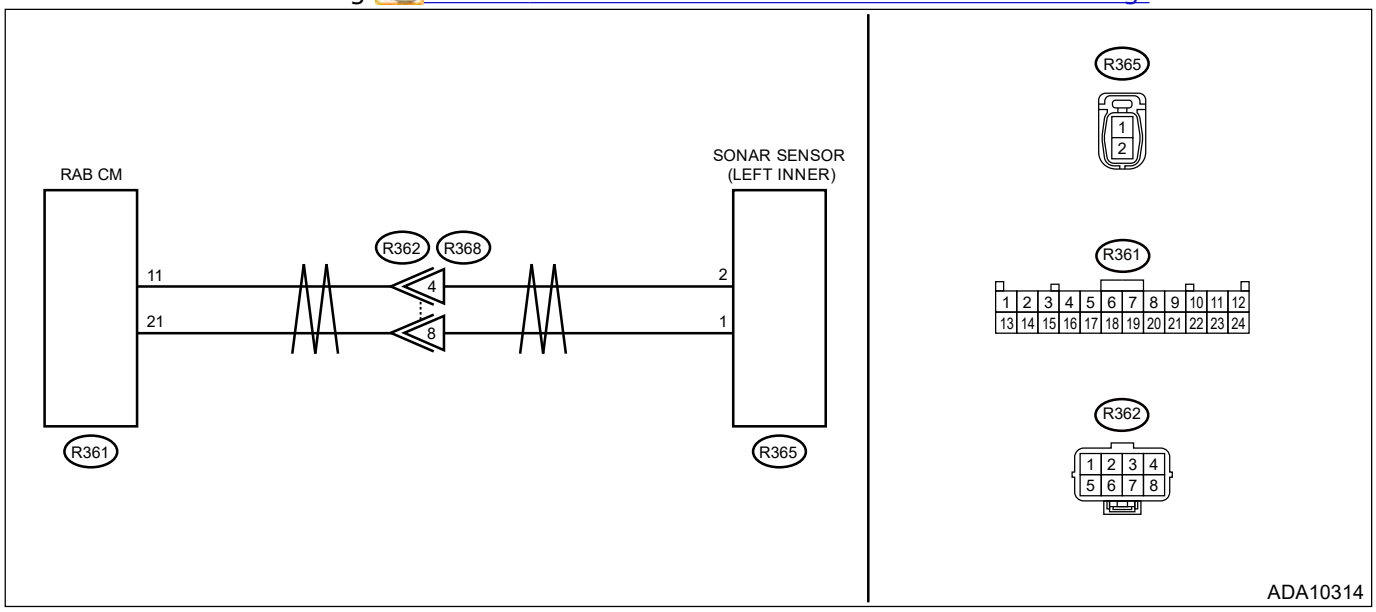
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C1B RLC SONAR SENSOR

Outline of diagnosis:

Sonar sensor (left inner) is faulty.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left inner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1B displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK SONAR SENSOR.

1. Switch the sonar sensor (left inner) and sonar sensor (left corner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1B displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left inner). Ref. to Reverse Automatic Braking>Sensor and Harness.

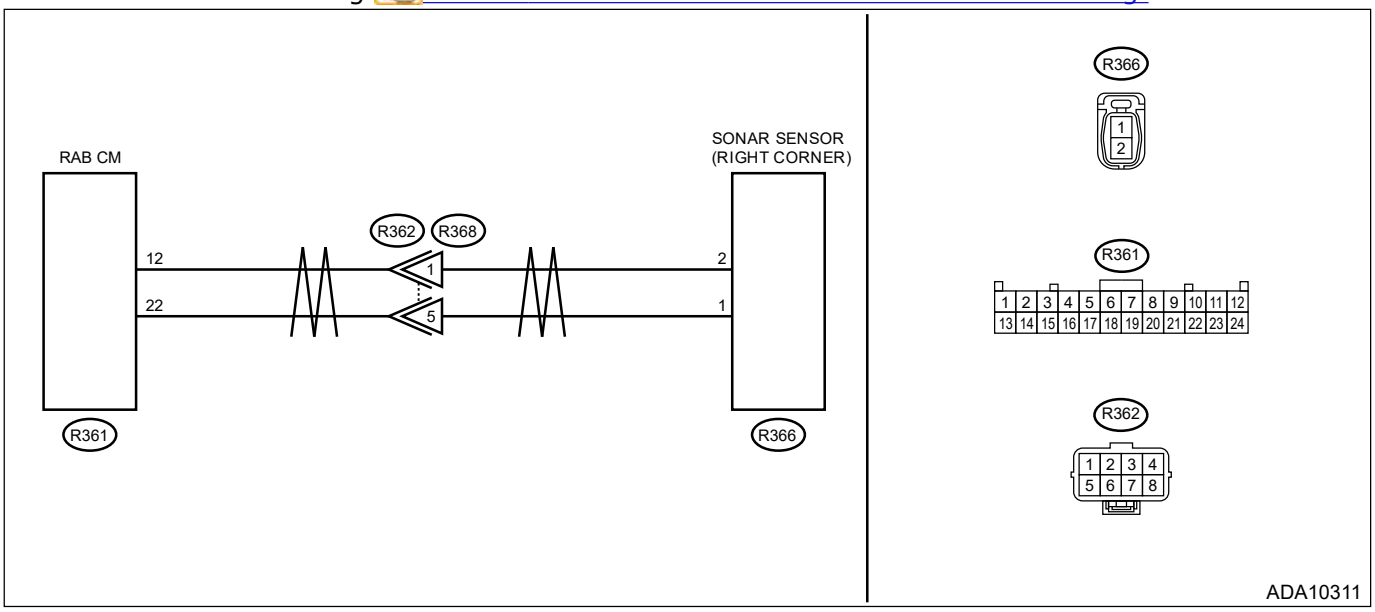
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C1C RR SONAR SENSOR

Outline of diagnosis:

Sonar sensor (right corner) is shorted to power supply.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (right corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1C displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK SONAR SENSOR.

1. Switch the sonar sensor (right corner) and sonar sensor (right inner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1C displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (right corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

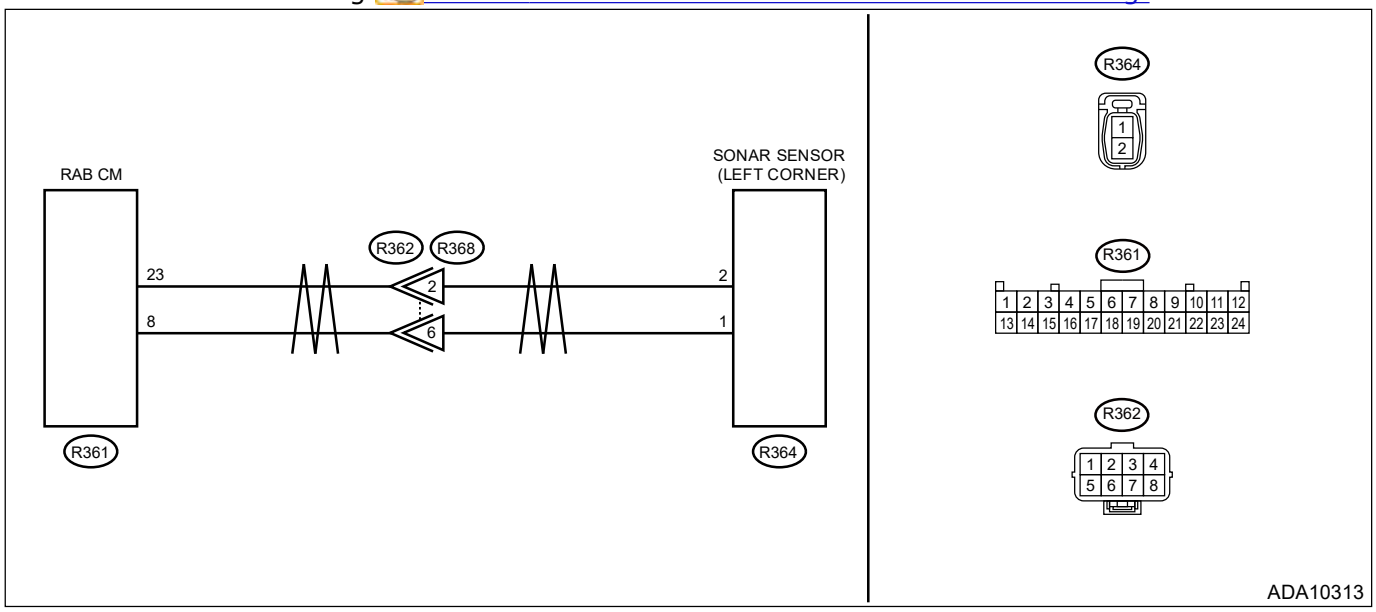
Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C1D RL SONAR SENSOR

Outline of diagnosis:

Sonar sensor (left corner) is shorted to ground.

Time needed for diagnosis:



1200 ms

Recovery conditions:

Ignition switch OFF → ON

Wiring diagram:

Reverse Automatic Braking Ref. to WIRING SYSTEM>Reverse Automatic Braking.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to Reverse Automatic Braking(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the sonar sensor (left corner) connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1D displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK SONAR SENSOR.

1. Switch the sonar sensor (left corner) and sonar sensor (left inner).
2. Connect the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Reverse Automatic Braking] using the Subaru Select Monitor. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2C1D displayed? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the sensor installed as a sonar sensor (left corner). Ref. to Reverse Automatic Braking>Sensor and Harness.

Reverse Automatic Braking(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2C1E RRC SONAR HARNESS LOW / RRC SONAR CONTROL MODULE CIRCUIT

Note:

For the diagnostic procedure, refer to DTC B2C11. Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2C11 RRC SONAR HARNESS LOW.

0X0C	RLC Sonar Dirty HALT II	Substance adhered to the sonar sensor (left inner).
0X0D	RR Sonar Dirty HALT II	Substance adhered to the sonar sensor (right corner).
0X0E	RL Sonar Dirty HALT II	Substance adhered to the sonar sensor (left corner).
0X0F	RRC Sonar Mount Error	Substance adhered to the sonar sensor (right inner).
0X10	RLC Sonar Mount Error	Substance adhered to the sonar sensor (left inner).

IMMOBILIZER (DIAGNOSTICS)

IM(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Inspection Mode
6. Warning Light Illumination Pattern
7. Diagnostic Procedure for Subaru Select Monitor Communication
8. Data Monitor
9. Freeze Frame Data
10. Diagnostic Trouble Code (DTC)
11. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
12. Diagnostics with Phenomenon

PROCEDURE

1. WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

Caution:

When the body integrated unit (except for C5 model) or the immobilizer CM (C5 model) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to IMMOBILIZER (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.

Confirm the number of registered immobilizer key. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is the number of registration 0?

Yes	Register the immobilizer system.
No	Go to 3.

3. CHECK SECURITY INDICATOR LIGHT.

1. Remove the ignition key from ignition switch.
2. Wait at least 60 seconds.

Does the security indicator light blink?

Yes	Go to 4.
No	Check the security indicator light circuit. Ref. to IMMOBILIZER (DIAGNOSTICS)>Warning Light Illumination Pattern.

4. CHECK KEY SWITCH.

Insert the ignition key in the ignition switch. (OFF or ACC)

Does the security indicator light remain blinking?

Yes	Check the key switch circuit. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK KEY SWITCH CIRCUIT.
No	Go to 5.

5. CHECK SECURITY INDICATOR LIGHT.

Check the security indicator light status in the condition of step 4.

Does the security indicator light go off?

Yes	Go to 8.
No	Go to 6.

6. CHECK SECURITY INDICATOR LIGHT.

Turn the ignition switch to ON.

Does the security indicator light go off?

Yes	Go to 8.
No	Go to 7.

7. CHECK ENGINE START.

Turn the ignition switch to START.

Does the starter operate?

Yes	Check the LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 9.

8. CHECK ENGINE START.

Turn the ignition switch to START.

Does the engine start?

Yes	Immobilizer system is normal.
No	Go to 10.

9. CHECK DTC.

Read the following DTCs using Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

- [Body Control] (except for C5 model)
- [Immobilizer] (C5 model)

Note:

Check the Subaru Select Monitor communication if the communication is disabled. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

Are any DTCs displayed?

Yes	Record the DTC, time stamp and freeze frame data, and Go to 11.
No	Replace the body integrated unit (except for C5 model) or the immobilizer CM (C5 model). Ref. to SECURITY AND LOCKS>Body Integrated Unit.

10. CHECK DTC.

Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

Check the Subaru Select Monitor communication if the communication is disabled. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 11.
No	Perform the diagnosis for engine system. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Basic Diagnostic Procedure>PROCEDURE.

11. CHECK FREEZE FRAME DATA.

Check the freeze frame data. Ref. to IMMOBILIZER (DIAGNOSTICS)>Freeze Frame Data.

Are the data recorded?

Yes	Record the data. Go to 12.
No	Go to 12.

12. CHECK DTC.

Check the displayed DTC.

Are DTCs irrelevant to the immobilizer displayed? (Current malfunction)

Yes	Perform the diagnosis according to DTCs irrelevant to the immobilizer first.
No	Go to 13.

13. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC).
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to IMMOBILIZER (DIAGNOSTICS)>Inspection Mode.
5. Read the DTC using Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 13 until DTC is not shown.
No	Finish the diagnosis.

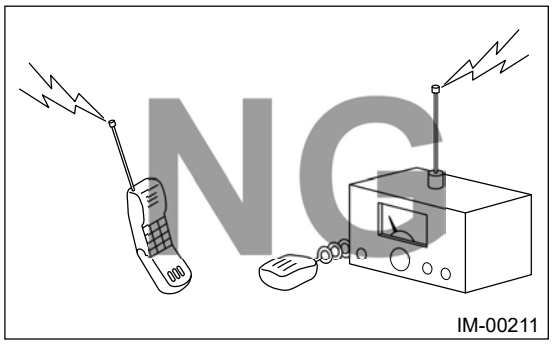
2. WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

Note:

For immobilizer diagnosis of model with the keyless access with push button start system, refer to "Keyless Access with Push Button Start System". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Basic Diagnostic Procedure.

IMMOBILIZER (DIAGNOSTICS) > Check List for Interview

CHECK



Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="4">Immobilizer Check List for Interview Brought in on: MM/DD/YY</td></tr>

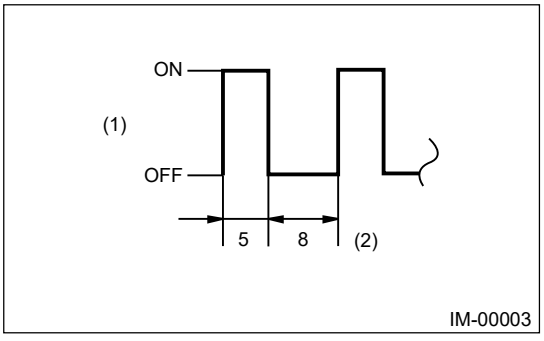
IMMOBILIZER (DIAGNOSTICS) > General Description

CAUTION



- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.

- When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

(1) Ignition switch position

(2) Sec.

- If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
- Before performing the diagnostics, obtain all keys for the vehicle from the owner.

- Do not register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

IMMOBILIZER (DIAGNOSTICS) > General Description

INSPECTION

Before performing diagnosis, check the following items which might be related to immobilizer malfunction.

1. BASIC INSPECTION

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the main and other fuses, harnesses and connectors. Also check for proper grounding.

IMMOBILIZER (DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

IMMOBILIZER (DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1401	COMBINATION METER COLLATION	—
B1402	IMMOBILIZER KEY COLLATION	—
B1407	COMBINATION METER COMMUNICATION	—
B1408	COMBINATION METER NON-VOLATILE MEMORY	—
B1410	TRANSPONDER COMMUNICATION	—
B1411	IMMOBILIZER ANTENNA	—
B1413	IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control] or [Immobilizer]. Ref. to COMMON(diag)>Clear memory.
2. Read the DTC of [Body Control] or [Immobilizer] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Remove the ignition key from the ignition switch, and insert again.
4. Turn the ignition switch OFF → ON, and wait for 10 seconds or more.
5. Read the DTC of [Body Control] or [Immobilizer] using Subaru Select Monitor and check that the DTC is not displayed. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B1412	IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK	—
B1414	IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Immobilizer]. Ref. to

COMMON(diag)>Clear memory.

2. Using the Subaru Select Monitor, read the DTC of [Immobilizer] to check that there is no DTC displayed. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Disconnect and reconnect the battery, and then wait for one minute or more.
4. Turn the ignition switch to ON.
5. Using the Subaru Select Monitor, read the DTC of [Immobilizer] to check that there is no DTC displayed. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

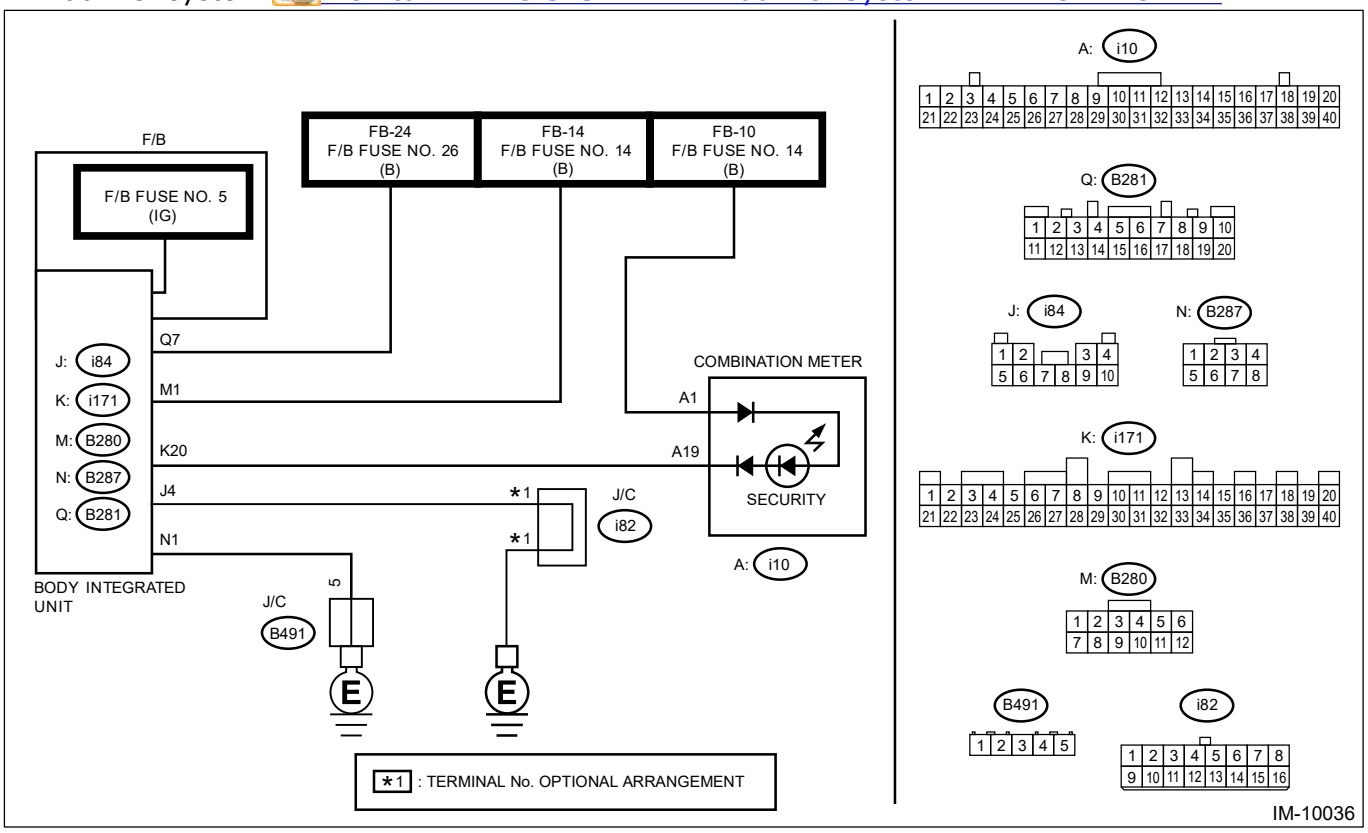
DTC	Item	Note
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	—
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	—
B1576	ECM EEPROM	—
B1577	IMMOBILIZER CM EEPROM	—
B1578	METER	—

Diagnostic procedure:

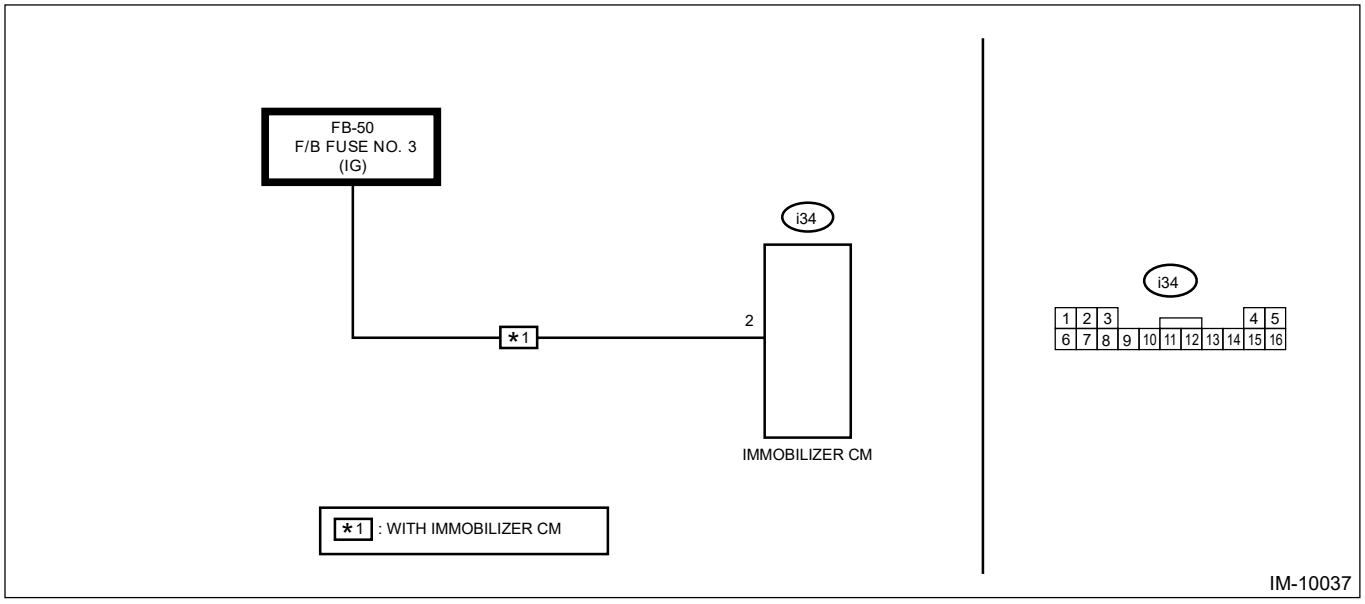
1. Using the Subaru Select Monitor, perform the clear memory of [Engine Control System]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Engine Control System] to check that there is no DTC displayed. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Start the engine, and then run the engine at idle for 10 seconds or more. Or, disconnect and reconnect the battery, then turn the ignition switch OFF → ON, and wait for 10 seconds or more.
4. Using the Subaru Select Monitor, read the DTC of [Engine Control System] to check that there is no DTC displayed. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

IMMOBILIZER (DIAGNOSTICS) > Warning Light Illumination Pattern

INSPECTION



Blinks when the key is removed from the ignition switch.
Goes off when the registered key is inserted into the ignition switch.



IMMOBILIZER (DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT DOES NOT ILLUMINATE

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

When the body integrated unit (except for C5 model) or the immobilizer CM (C5 model) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK FUSE.

1. Remove the ignition key from ignition switch. Or, turn off the power.
2. Check the fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.

2. CONFIRM DESTINATION.

Verify the destination of the vehicle.

Is destination for C5?

Yes	Go to 3.
No	Go to 9.

3. CHECK IMMOBILIZER CM.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Ignition SW input]

Does the display change in accordance with the ignition switch OFF ←→ ON?

Yes	Go to 7.
No	Go to 4.

4. CHECK IGNITION SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Remove the F/B fuse No. 3.
3. Measure the voltage between F/B fuse No. 3 (lower stream side) and chassis ground.
   Connector & terminal
   F/B fuse No. 3 (lower stream side) (+) — Chassis ground (−):

Is the voltage 6 V or more?

Yes	Repair the short circuit to power supply in harness between the immobilizer CM and fuse.
No	Go to 5.

5. CHECK IGNITION SWITCH CIRCUIT.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

- [Ignition SW input]

Is «ON» displayed?

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Go to 6.

6. CHECK IGNITION SWITCH CIRCUIT.

1. Disconnect the connector from immobilizer CM.
2. Measure the resistance between immobilizer CM connector terminal and fuse.
   Connector & terminal
   (i34) No. 2 — F/B fuse No. 3 (lower stream side):

Is the resistance less than 10 Ω?

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Replace the open circuit of harness between the immobilizer CM and fuse.

7. CHECK IMMOBILIZER CM.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [key-lock warning SW]

Does the display change in accordance with the ignition key removal/insertion?

Yes	Go to 8.
No	Check the key switch circuit. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CHECK KEY SWITCH CIRCUIT.

8. CHECK IMMOBILIZER CM.

1. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer]. Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

   - [Immobilizer indicator output]
2. Remove the ignition key from ignition switch.
3. Wait at least 60 seconds.

Is [BLINK] displayed?

Yes	Go to 9.
No	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.

9. CHECK SECURITY INDICATOR LIGHT.

1. Disconnect the connector from body integrated unit.
2. Connect the resistor (100 Ω) between the body integrated unit connector terminal (i171) No. 20 and chassis ground.

Does the security indicator light illuminate?

Yes	Go to 10.
No	Go to 12.

10. CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.

Measure the resistance between the body integrated unit connector terminal and chassis ground.

Connector & terminal

(B287) No. 1 — Chassis ground:

(i84) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 11.
No	Repair the open circuit of the body integrated unit ground circuit.

11. CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.

Measure the voltage between the body integrated unit connector terminal and chassis ground.

Connector & terminal

(B281) No. 7 (+) — Chassis ground (−):

(B280) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Check the harness for open or short circuit between body integrated unit and fuse.

12. CHECK COMBINATION METER CIRCUIT.

1. Remove the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
2. Measure the voltage between combination meter connector terminal and chassis ground.
   Connector & terminal
   (i10) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 13.
No	Check for an open or short circuit in the harness between the combination meter and fuse.

13. CHECK COMBINATION METER CIRCUIT.

Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal.
Connector & terminal
(i171) No. 20 — (i10) No. 19:

Is the resistance less than 10 Ω?

Yes	LED bulb is defective. Replace the combination meter case assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>DISASSEMBLY.
No	Repair the harness or connector.

IMMOBILIZER (DIAGNOSTICS) > Warning Light Illumination Pattern

WARNING LIGHT REMAINS ON

Note:
For the diagnostic procedures, refer to "WARNING LIGHT DOES NOT COME ON". Ref. to IMMOBILIZER (DIAGNOSTICS)>Warning Light Illumination Pattern>WARNING LIGHT DOES NOT ILLUMINATE.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

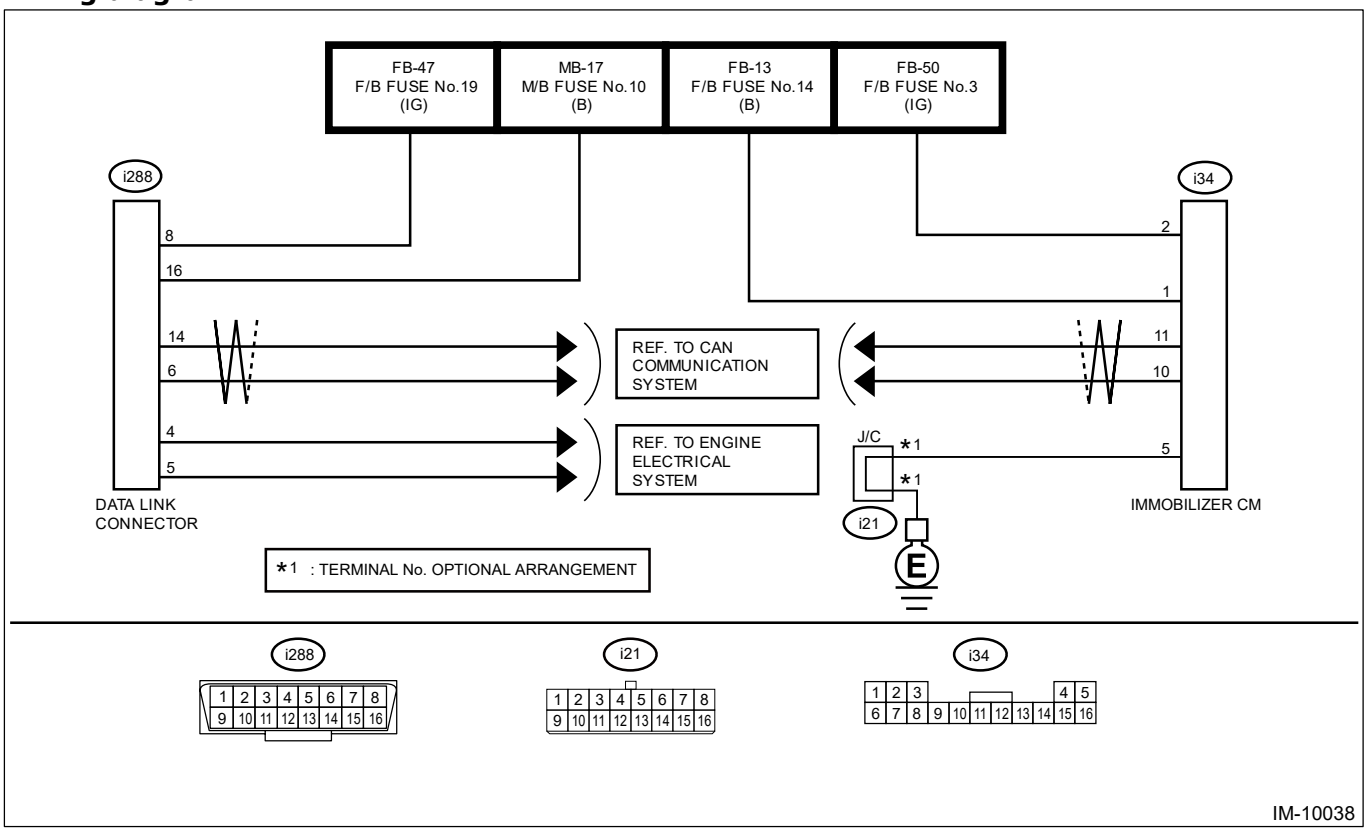
1. Engine Control System

If the communication with [Engine Control System] is not possible, refer to ENGINE (DIAGNOSTICS). Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

2. Body Control

If the communication with [Body Control] is not possible, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

3. Immobilizer



Detecting condition:

- Defective harness
- Power supply circuit malfunction
- Defective immobilizer CM
- Body integrated unit malfunctioning
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication with [Immobilizer] is faulty.

Wiring diagram:

1. CHECK FUSE.

Check the fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery — immobilizer CM.

2. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 3.
No	Perform the inspection according to the diagnosis for LAN system.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [BATT voltage]

Is the display 10 V or more?

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Go to 4.

4. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the immobilizer CM connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the immobilizer CM connector and chassis ground.

Connector & terminal

(i34) No. 2 (+) — Chassis ground (−):

(i34) No. 1 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 5.
No	Repair the open circuit of harness between the immobilizer CM connector and fuse.

5. CHECK HARNESS.

Using a tester, measure the resistance between the immobilizer CM connector and chassis ground.

Connector & terminal

(i34) No. 5 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.

6. CHECK IMMOBILIZER CM.

1. Turn the ignition switch to OFF.
2. Connect the immobilizer CM connector.
3. Perform communication with the immobilizer CM.

Is communication possible?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.

IMMOBILIZER (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor>LIST.**

IMMOBILIZER (DIAGNOSTICS) > Data Monitor

LIST

1. Engine Control System

For data monitor of [Engine Control System], refer to ENGINE (DIAGNOSTICS). Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Data Monitor.

2. Body Control

Note:

Other than for C5

Refer to BODY CONTROL SYSTEM (DIAGNOSTICS) for the data monitor of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

3. Immobilizer

Note:

For C5

Items to be displayed	Content / display range	Standard	Note
Trip Count [count]	Time stamp information	—	—
Count	Time stamp information	—	—
Time Count [msec]	Time stamp information	—	—
BATT voltage	Immobilizer CM battery voltage	6 — 16 V	—
Ignition SW input	Ignition switch status	ON: When the switch is ON OFF: When the switch is OFF	—
key-lock warning SW	Key warning switch status	ON: When the switch is ON OFF: When the switch is OFF	—
Immobilizer indicator output	Security indicator output status	Turn Off: Indicator OFF Blink: Indicator blinking ON: Indicator ON blink (one): Registration of one ignition key	—

Items to be displayed	Content / display range	Standard	Note
		blink (two): Registration of two ignition keys blink (three): Registration of three ignition keys blink (four): Registration of four ignition keys	

IMMOBILIZER (DIAGNOSTICS) > Freeze Frame Data

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Freeze Frame Data.**
- **For details on freeze frame data, refer to the list. Ref. to IMMOBILIZER (DIAGNOSTICS)>Freeze Frame Data>LIST.**

IMMOBILIZER (DIAGNOSTICS) > Freeze Frame Data

LIST

1. Engine Control System

For freeze frame data of [Engine Control System], refer to ENGINE (DIAGNOSTICS). Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Freeze Frame Data.

2. Body Control

Note:

Other than for C5

For freeze frame data of Body Control, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). Ref. to BODY CONTROL(DIAGNOSTICS)>Freeze Frame Data.

3. Immobilizer

Note:

For C5

Item	Content / display range
Trip Count [count]	Time stamp information Ref. to COMMON(diag)>Time Stamp.
Count	
Time [msec]	
Battery Voltage	Immobilizer CM battery voltage
Ignition SW input	Ignition switch status
key-lock warning SW	Key warning switch status
Immobilizer indicator output	Security indicator output status
Immobilizer SET/ UNSET status	Immobilizer SET/UNSET status

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**
- **For details on DTCs, refer to the list. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.**

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

LIST

Note:

If DTCs irrelevant to the immobilizer are displayed, perform diagnosis according to the DTCs irrelevant to the immobilizer first.

1. Engine Control System

Code	Description & trouble part	Reference
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM).
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT.
B1576	ECM EEPROM	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1576 EGI CONTROL MODULE EEPROM.
B1577	IMMOBILIZER CM EEPROM	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1577 IMM CONTROL MODULE EEPROM.
B1578	METER	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1578 METER.

2. Body Control

Note:

Other than for C5

Code	Description & trouble part	Reference	Relation between ECM and DTC

Code	Description & trouble part	Reference	Relation between ECM and DTC
B1401	COMBINATION METER COLLATION	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1401 METER COLLATION.	B1578
B1402	IMMOBILIZER KEY COLLATION	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1402 IMMOBILIZER KEY COLLATION.	B1572
B1407	COMBINATION METER COMMUNICATION	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1407 MET COMMUNICATION.	B1578
B1408	COMBINATION METER NON-VOLATILE MEMORY	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1408 METER NON-VOLATILE MEMORY.	B1578
B1410	TRANSPONDER COMMUNICATION	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1410 TRANSPONDER COMMUNICATION.	B1572
B1411	IMMOBILIZER ANTENNA	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1411 IMMOBILIZER ANTENNA.	B1572

Note:

The starter relay control is performed in immobilizer system. When the body integrated unit detects a nonconformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Therefore, check DTC on the body integrated unit to identify the cause of the engine not starting.

3. Immobilizer

Note:

For C5

Code	Description & trouble part	Reference	Relation between ECM and DTC
B1402	IMMOBILIZER KEY	Ref. to IMMOBILIZER	B1572

Code	Description & trouble part	Reference	Relation between ECM and DTC
	COLLATION	(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1402 IMMOBILIZER KEY COLLATION.	
B1410	TRANSPONDER COMMUNICATION	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1410 TRANSPONDER COMMUNICATION.	B1572
B1411	IMMOBILIZER ANTENNA	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1411 IMMOBILIZER ANTENNA.	B1572
B1412	IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1412 IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK.	—
B1413	IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1413 IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY.	—
B1414	IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY	Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1414 IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY.	B1577

Note:

The starter relay control is performed in immobilizer system. When the immobilizer CM detects a nonconformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Therefore, check DTC on the immobilizer CM to identify the cause of the engine not starting.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1401 METER COLLATION

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Reference code incompatibility between combination meter and body integrated unit

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

Caution:

When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK COMBINATION METER REGISTRATION.

Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

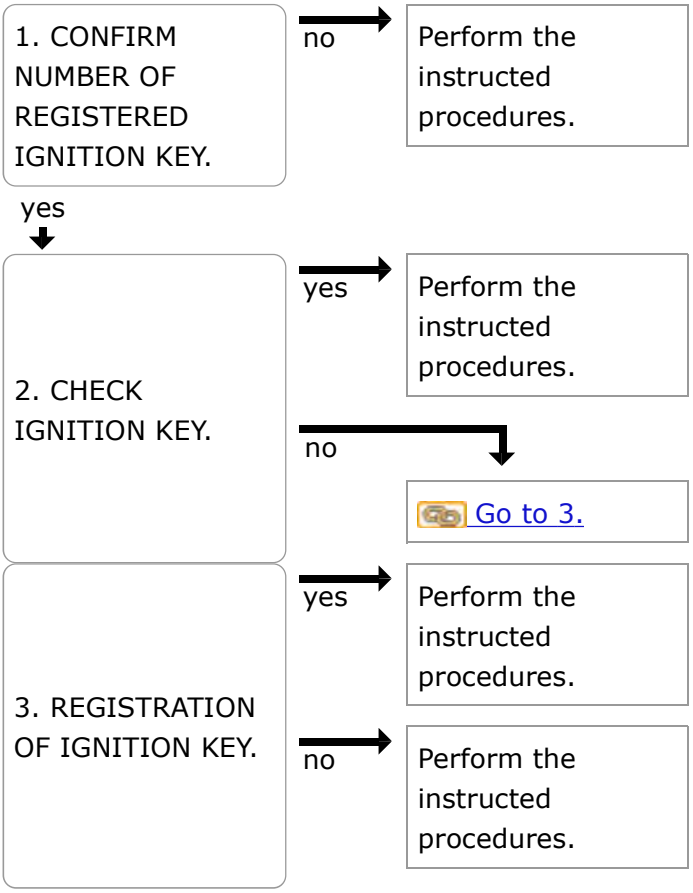
Is registration complete?

Yes	Currently, it is normal. (Combination meter registration is not complete.)
No	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1402 IMMOBILIZER KEY COLLATION

1. OTHER THAN FOR C5



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Use of unregistered key in body integrated unit.

Trouble symptom:
- Engine will not start.
- The security indicator illuminates, when the ignition key is inserted into the ignition switch or when the ignition switch is turned to ON.

Caution:

When the body integrated unit or combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CONFIRM NUMBER OF REGISTERED IGNITION KEY.

Using the Subaru Select Monitor, check the number of registered ignition keys. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is one or more ignition key(s) registered?

Yes	Go to 2.
No	Register the immobilizer.

2. CHECK IGNITION KEY.

1. Prepare all the pre-registered ignition keys.
2. Insert the ignition key in the ignition switch.
3. Turn the ignition switch to ON.
4. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

5. Perform step 2) to 4) with another registered ignition key.

Is DTC B1402 displayed for all ignition keys? (Current malfunction)

Yes	Refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume, and perform the actions for the case that all keys are faulty/lost.
No	Go to 3.

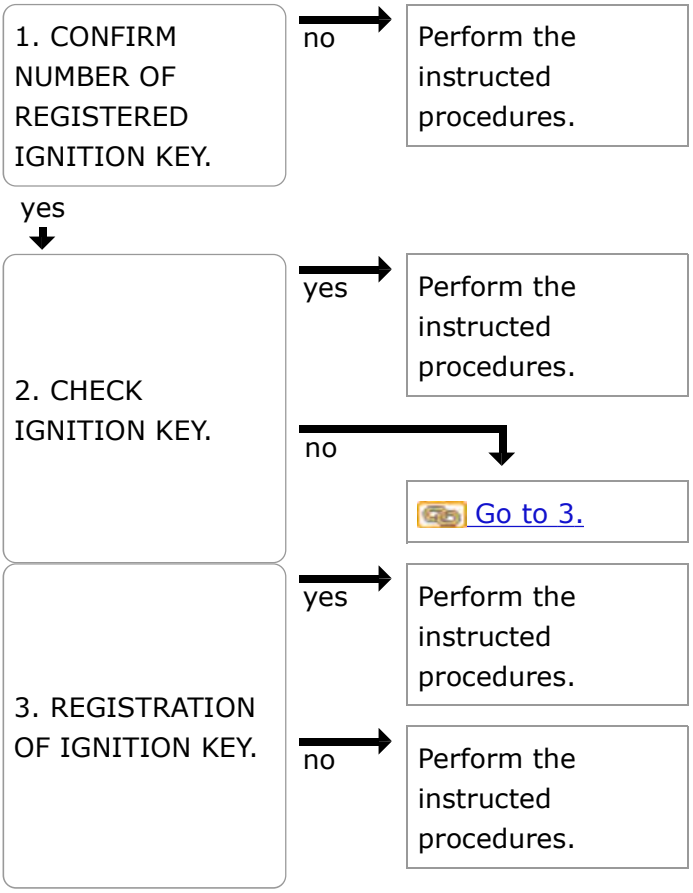
3. REGISTRATION OF IGNITION KEY.

Register the key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is the key registration completed normally?

Yes	Malfunction occurred in ignition key.
No	Replace the ignition key.

2. FOR C5



Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Use of unregistered key in immobilizer CM.

Trouble symptom:
- Engine will not start.
- The security indicator illuminates, when the ignition key is inserted into the ignition switch or when the ignition switch is turned to ON.

Caution:

When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CONFIRM NUMBER OF REGISTERED IGNITION KEY.

Using the Subaru Select Monitor, check the number of registered ignition keys. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is one or more ignition key(s) registered?

Yes	Go to 2.
No	Register the immobilizer.

2. CHECK IGNITION KEY.

1. Prepare all the pre-registered ignition keys.
2. Insert the ignition key in the ignition switch.
3. Turn the ignition switch to ON.
4. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

5. Perform step 2) to 4) with another registered ignition key.

Is DTC B1402 displayed for all ignition keys? (Current malfunction)

Yes	Refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume, and perform the actions for the case that all keys are faulty/lost.
No	Go to 3.

3. REGISTRATION OF IGNITION KEY.

Register the key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is the key registration completed normally?

Yes	Malfunction occurred in ignition key.
No	Replace the ignition key.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1407 MET COMMUNICATION

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Communication failure between body integrated unit and combination meter

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

Caution:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is a DTC other than DTC B1407 displayed for [Body Control]? (Current malfunction)

Yes	Perform the diagnosis for DTC other than B1407.
No	Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1408 METER NON-VOLATILE MEMORY

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Defective combination meter

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

Caution:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK COMBINATION METER REGISTRATION.

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control] and [Combination Meter]. Ref. to COMMON(diag)>Clear memory.

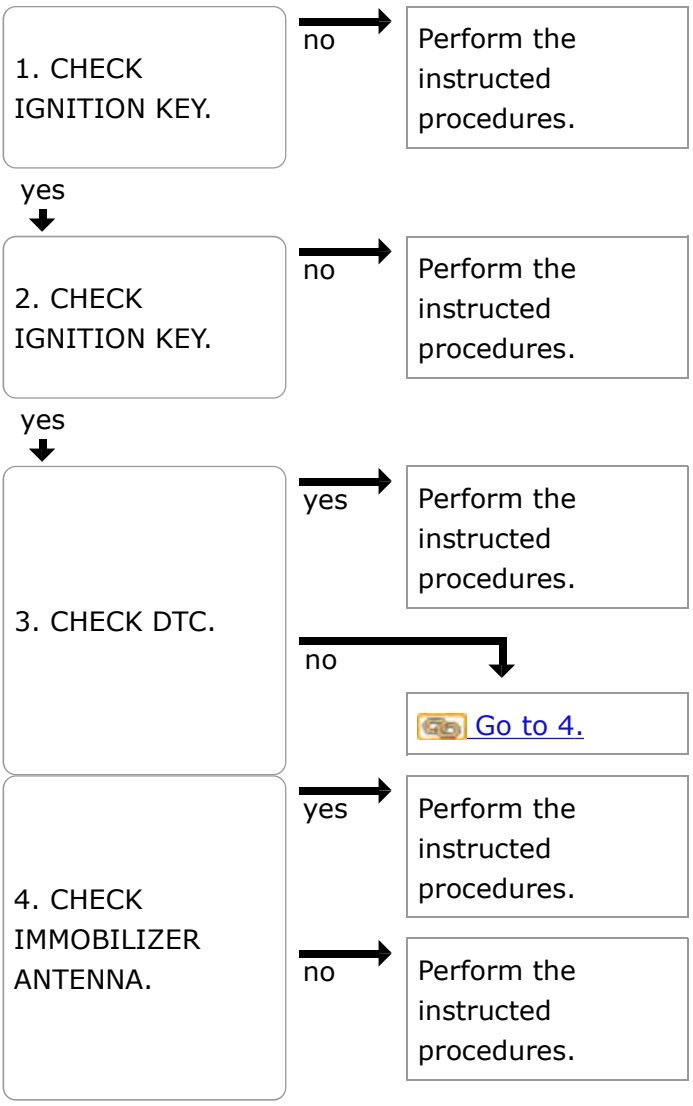
2. Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
3. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1408 displayed? (Current malfunction)

Yes	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1410 TRANSPONDER COMMUNICATION



1. OTHER THAN FOR C5

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
Communication failure between ignition key and body integrated unit

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

Caution:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK IGNITION KEY.
no
Perform the instructed procedures.
yes
2. CHECK IGNITION KEY.
no
Perform the instructed procedures.
yes
3. CHECK DTC.
yes
Perform the instructed procedures.
no
Go to 4.
4. CHECK IMMOBILIZER ANTENNA.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK IGNITION KEY.

1. Remove the ignition key from the ignition switch.
2. Insert the ignition key into the ignition switch, and then turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1410 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **It is possible that the surrounding radio wave environment was poor.**

2. CHECK IGNITION KEY.

1. Prepare a spare ignition key that is already registered.
2. Insert the ignition key into the ignition switch, and then turn the ignition switch to ON.
3. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1410 displayed? (Current malfunction)

Yes	Go to 3.
No	Malfunction occurred in ignition key. Or the key has not been registered.

3. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1411 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B1411. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1411 IMMOBILIZER ANTENNA.
No	Go to 4.

4. CHECK IMMOBILIZER ANTENNA.

1. Insert the ignition key into the ignition switch, and then turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1410 displayed? (Current malfunction)

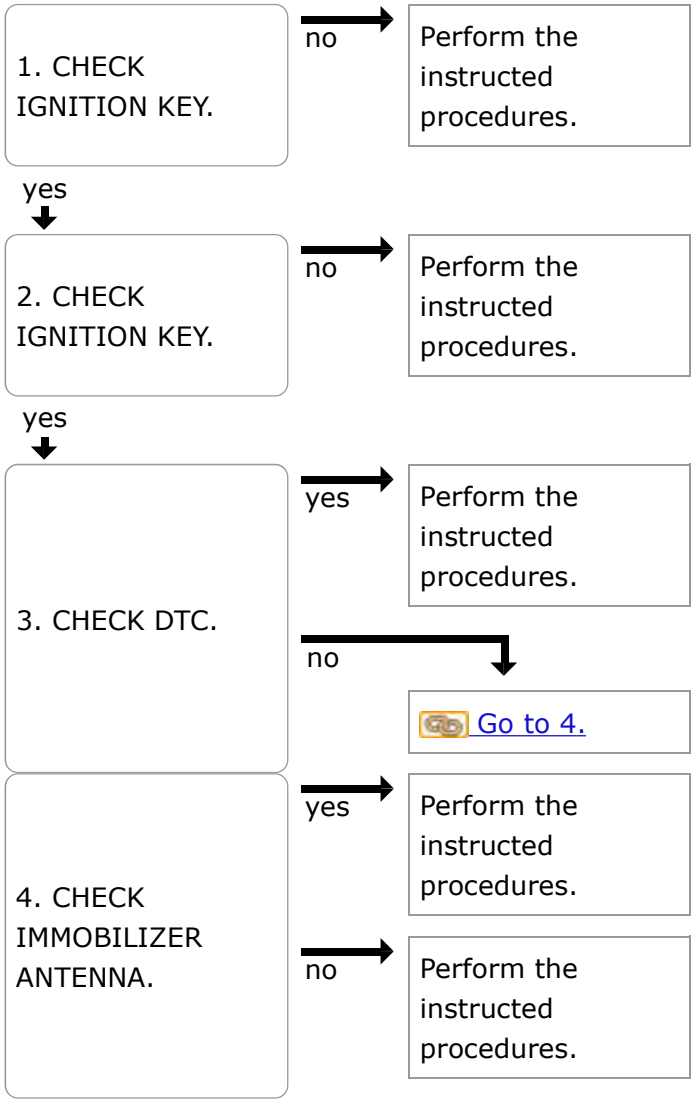
Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Malfunction occurred in the immobilizer antenna, ignition key or body integrated unit.

2. FOR C5

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:



Communication failure between ignition key and immobilizer CM

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

Caution:

When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK IGNITION KEY.

1. Remove the ignition key from the ignition switch.
2. Insert the ignition key into the ignition switch, and then turn the ignition switch to ON.
3. Using the Subaru Select Monitor, perform the clear memory of [Immobilizer]. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1410 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **It is possible that the surrounding radio wave environment was poor.**

2. CHECK IGNITION KEY.

1. Prepare a spare ignition key that is already registered.
2. Insert the ignition key into the ignition switch, and then turn the ignition switch to ON.
3. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1410 displayed? (Current malfunction)

Yes	Go to 3.
No	Malfunction occurred in ignition key. Or the key has not been registered.

3. CHECK DTC.

Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1411 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B1411. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1411 IMMOBILIZER ANTENNA.
No	Go to 4.

4. CHECK IMMOBILIZER ANTENNA.

1. Insert the ignition key into the ignition switch, and then turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Immobilizer]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1410 displayed? (Current malfunction)

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Malfunction occurred in the immobilizer antenna, ignition key or immobilizer CM.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1411 IMMOBILIZER ANTENNA

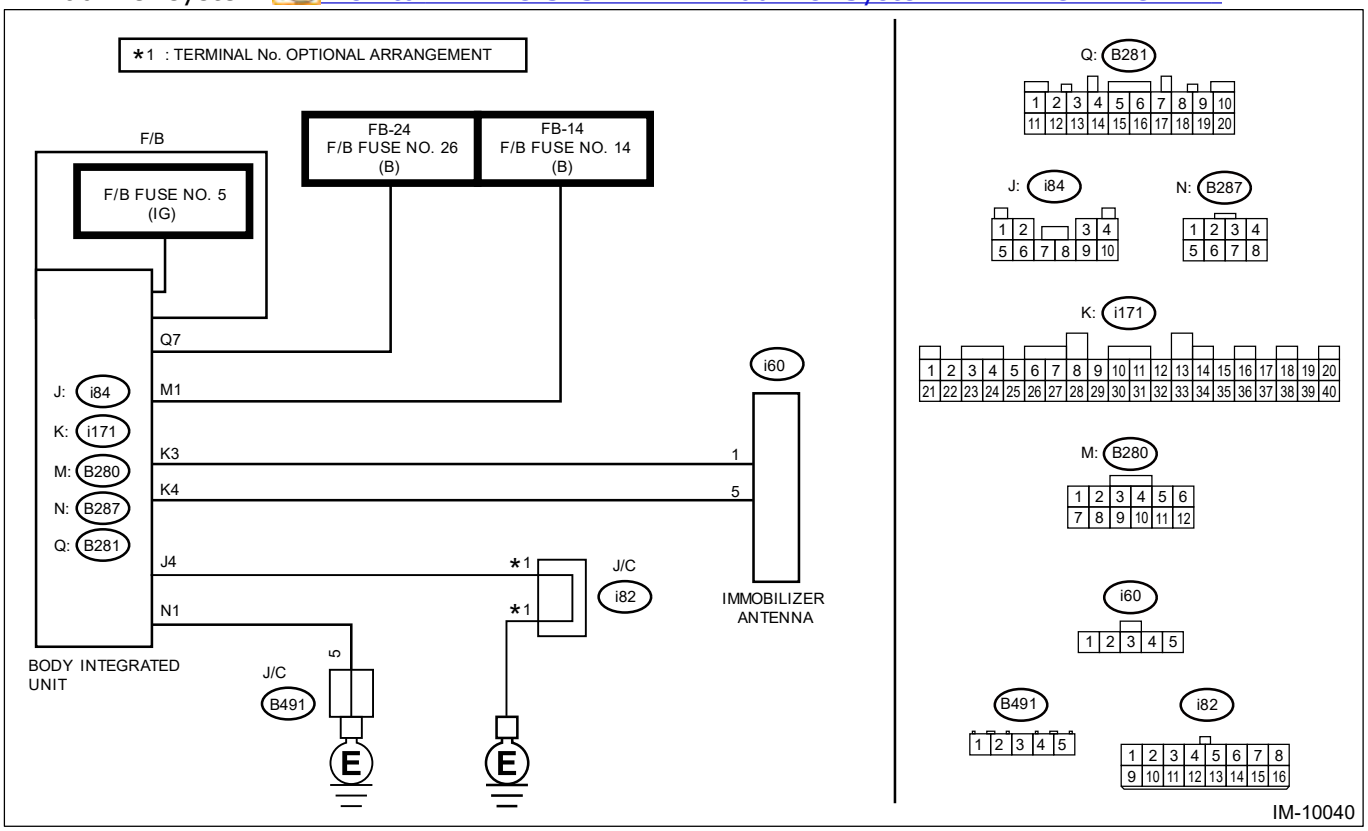
1. OTHER THAN FOR C5

Diagnosis start condition:

- Battery voltage is 10 V or more.

- The remote engine starter was not used to start the engine.

DTC detecting condition:



Received an immobilizer antenna malfunction signal during unit collation

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK FUSE.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK IMMOBILIZER ANTENNA UNIT.	yes →	Perform the instructed procedures.
	no →	Go to 4.
4. CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Body Control].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [BATT voltage (control)]

Is the display 10 V or more?

Yes	Go to 3.
No	Check the power supply circuit for body integrated unit.

3. CHECK IMMOBILIZER ANTENNA UNIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from immobilizer antenna.
3. Using a tester, measure the resistance between the immobilizer antenna connector terminals.
   Connector & terminal
   No. 1 — No. 5:

Is the resistance less than 8 Ω?

Yes	Replace the immobilizer antenna. Ref. to SECURITY AND LOCKS>Immobilizer Antenna.
No	Go to 4.

4. CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).

1. Disconnect the connector from body integrated unit.
2. Measure the resistance between the body integrated unit connector and immobilizer antenna connector.

Connector & terminal

(i171) No. 3 — (i60) No. 1:

(i171) No. 4 — (i60) No. 5:

Is the resistance less than 10 Ω?

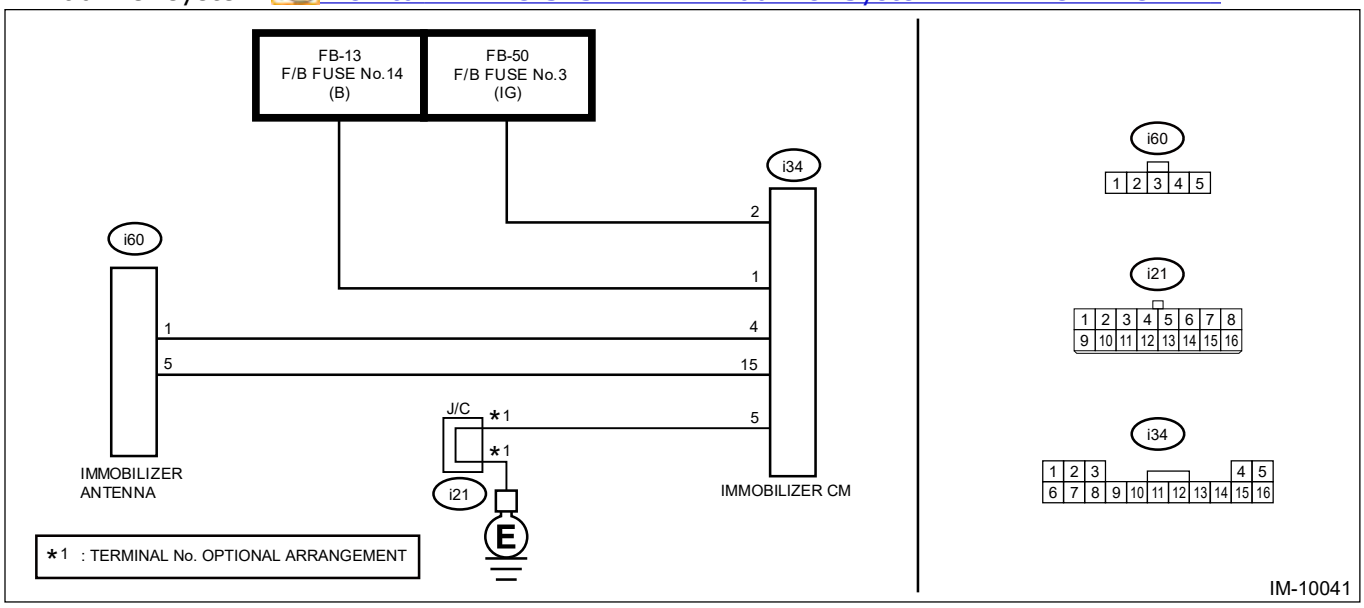
Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair or replace the open circuit of harness between the body integrated unit connector and immobilizer antenna connector.

2. FOR C5

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:



Immobilizer antenna is faulty.

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK FUSE.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK IMMOBILIZER ANTENNA UNIT.
   - yes → Perform the instructed procedures.
   - no → Go to 4.
4. CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).
   - yes → Perform the instructed procedures.
   - no → Perform the instructed procedures.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [BATT voltage]

Is the display 10 V or more?

Yes	Go to 3.
No	Check the power supply circuit of immobilizer CM.

3. CHECK IMMOBILIZER ANTENNA UNIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from immobilizer antenna.
3. Using a tester, measure the resistance between the immobilizer antenna connector terminals.
   Connector & terminal
   No. 1 — No. 5:

Is the resistance less than 8 Ω?

Yes	Replace the immobilizer antenna. Ref. to SECURITY AND LOCKS>Immobilizer Antenna.
No	Go to 4.

4. CHECK IMMOBILIZER ANTENNA COMMUNICATION CIRCUIT (OPEN CIRCUIT).

1. Disconnect the immobilizer CM connector.
2. Measure the resistance between immobilizer CM connector and immobilizer antenna connector.
   Connector & terminal
   (i34) No. 4 — (i60) No. 1:
   (i34) No. 15 — (i60) No. 5:

Is the resistance less than 10 Ω?

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Repair the open circuit of harness between the immobilizer CM connector and immobilizer antenna connector.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1412 IMMOBILIZER CONTROL MODULE CAN REGISTER STUCK

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
- Defective immobilizer CM
- Failed to access the ROM of immobilizer CM

Trouble symptom:
- The security indicator does not blink after the ignition key is turned to OFF.
- The security indicator remains off.

Caution:

When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK DTC.

1. Disconnect the ground cable from battery.
2. Wait for at least 10 seconds.
3. Connect the ground cable to battery.
4. Using the Subaru Select Monitor, perform the clear memory of [Immobilizer]. Ref. to COMMON(diag)>Clear memory.

5. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1412 displayed? (Current malfunction)

Yes	Go to 2.
No	Currently, it is normal.

2. CHECK DTC.

1. Disconnect the ground cable from battery.
2. Wait for at least 10 seconds.
3. Connect the ground cable to battery.
4. Using the Subaru Select Monitor, perform the clear memory of [Immobilizer]. Ref. to COMMON(diag)>Clear memory.

5. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1412 displayed? (Current malfunction)

Yes	Go to 3.
No	Currently, it is normal.

3. CHECK DTC.

1. Disconnect the ground cable from battery.
2. Wait for at least 10 seconds.
3. Connect the ground cable to battery.
4. Using the Subaru Select Monitor, perform the clear memory of [Immobilizer]. Ref. to COMMON(diag)>Clear memory.

5. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1412 displayed? (Current malfunction)

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Currently, it is normal.

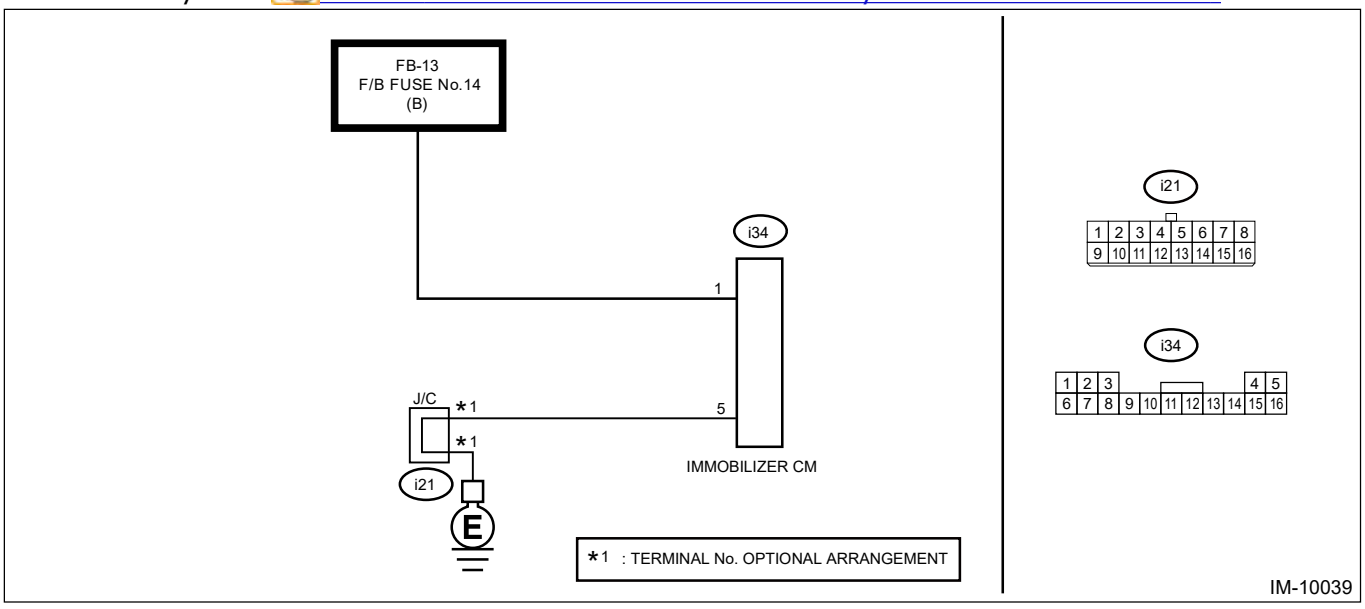
IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1413 IMMOBILIZER CONTROL MODULE BATTERY POWER SUPPLY

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:



Battery voltage for the immobilizer CM was outside the specification for a certain period of time.

Trouble symptom:

The security indicator does not blink after the ignition key is turned to OFF.

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [BATT voltage]

Is the display 10 V or more?

Yes	Go to 3.
No	Go to 5.

3. CHECK DATA MONITOR.

1. Disconnect the ground cable from battery.
2. Wait for at least 10 seconds.
3. Connect the ground cable to battery.
4. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer]. Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Battery Voltage]

Is the display 10 V or more?

Yes	Go to 4.
No	Go to 5.

4. CHECK DTC.

Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1413 displayed? (Current malfunction)

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

5. CHECK IMMOBILIZER CM POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from immobilizer CM.
3. Measure the voltage between immobilizer CM connector and chassis ground.
   Connector & terminal
   (i34) No. 1(+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 6.
No	Repair the open circuit of harness between the immobilizer CM and fuse.

6. CHECK IMMOBILIZER CM GROUND CIRCUIT.

Measure the resistance between immobilizer CM connector and chassis ground.

Connector & terminal

(i34) No. 5(+) — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1414 IMMOBILIZER CONTROL MODULE NON-VOLATILE MEMORY

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:

- Defective immobilizer CM
- Failed to access the ROM in immobilizer CM.

Trouble symptom:

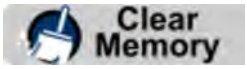
Engine will not start.

Caution:

When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK DTC.

1. Disconnect the ground cable from battery.
2. Wait for at least 10 seconds.
3. Connect the ground cable to battery.
4. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B1414 displayed? (Current malfunction)

Yes	Go to 2.
No	The system has returned to a normal condition at this time. Finish the diagnosis.

2. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Immobilizer]. Ref. to COMMON(diag)>Clear memory.

2. Disconnect the ground cable from battery.
3. Wait for at least 10 seconds.
4. Connect the ground cable to battery.
5. Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1414 displayed? (Current malfunction)

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	The system has returned to a normal condition at this time. Finish the diagnosis.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

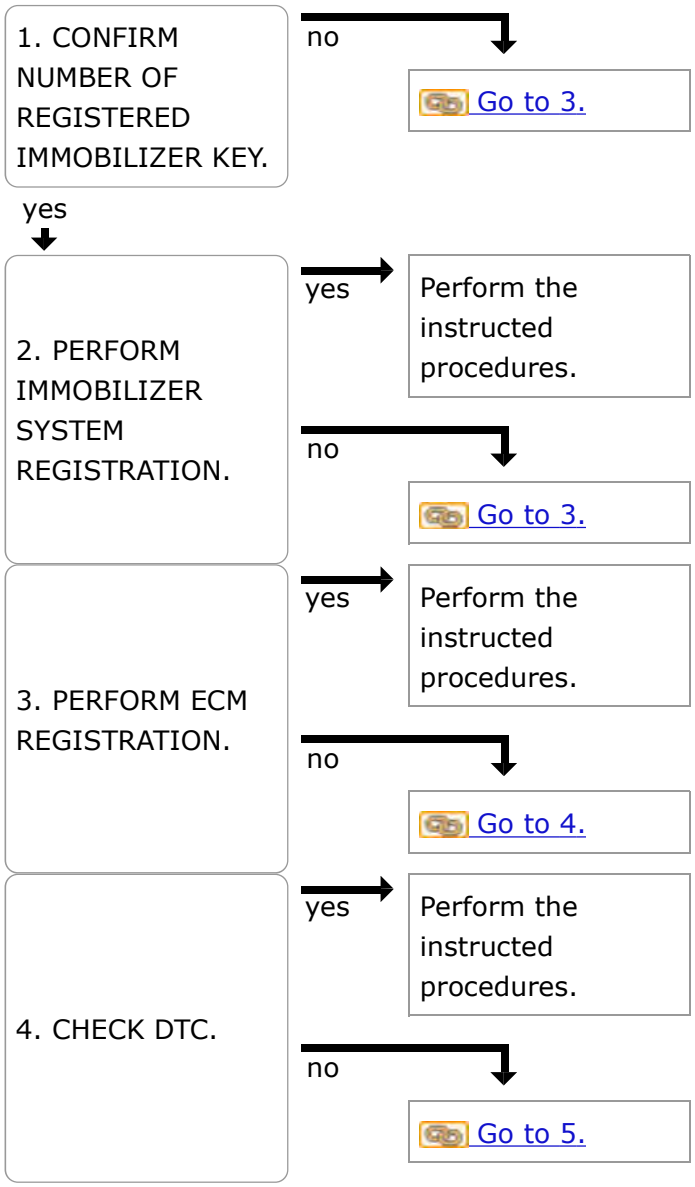
DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

1. OTHER THAN FOR C5

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:



Reference code incompatibility between body integrated unit and ECM

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

Caution:

When the body integrated unit or ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

5. PERFORM ECM REGISTRATION.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.

Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is the number of registration 0?

Yes	Go to 2.
No	Go to 3.

2. PERFORM IMMOBILIZER SYSTEM REGISTRATION.

Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Go to 3.

3. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Go to 4.

4. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [Engine] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are DTCs other than DTC B1571 displayed? (Current malfunction)

Yes	Perform the diagnosis for DTC other than DTC B1571.
No	Go to 5.

5. PERFORM ECM REGISTRATION.

1. Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
2. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

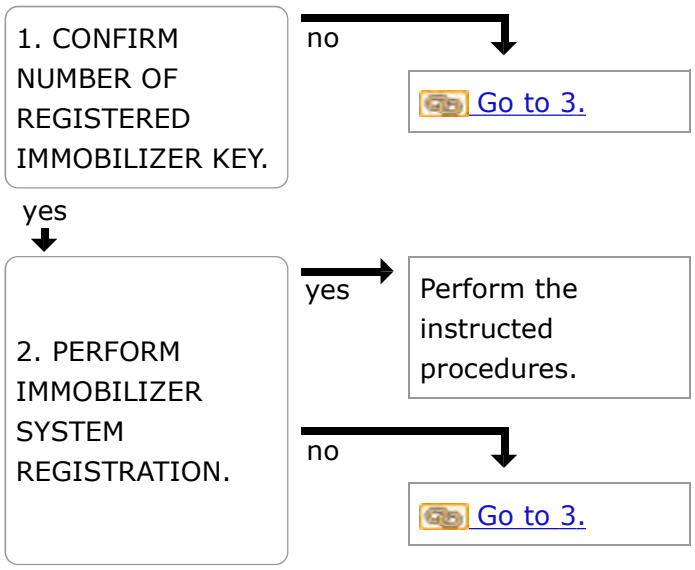
Yes	Finish the diagnosis.
No	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

2. FOR C5

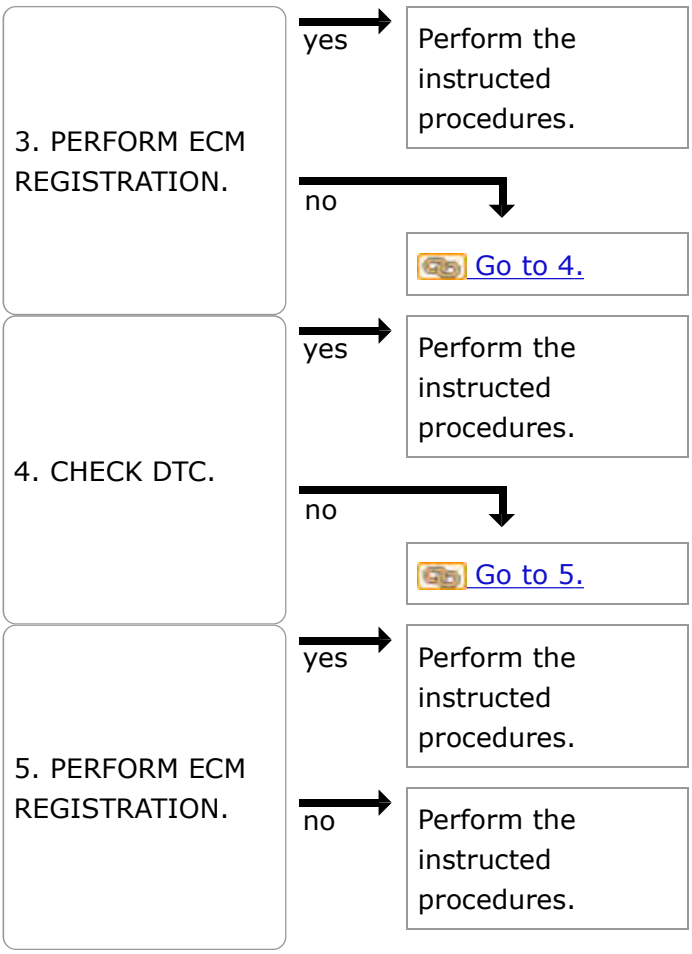
Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:



Reference code incompatibility between immobilizer CM and ECM



Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

Caution:

When the immobilizer CM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.

Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is the number of registration 0?

Yes	Go to 2.
No	Go to 3.

2. PERFORM IMMOBILIZER SYSTEM REGISTRATION.

Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Go to 3.

3. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Go to 4.

4. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [Engine] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are DTCs other than DTC B1571 displayed? (Current malfunction)

Yes	Perform the diagnosis for DTC other than DTC B1571.
No	Go to 5.

5. PERFORM ECM REGISTRATION.

1. Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
2. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

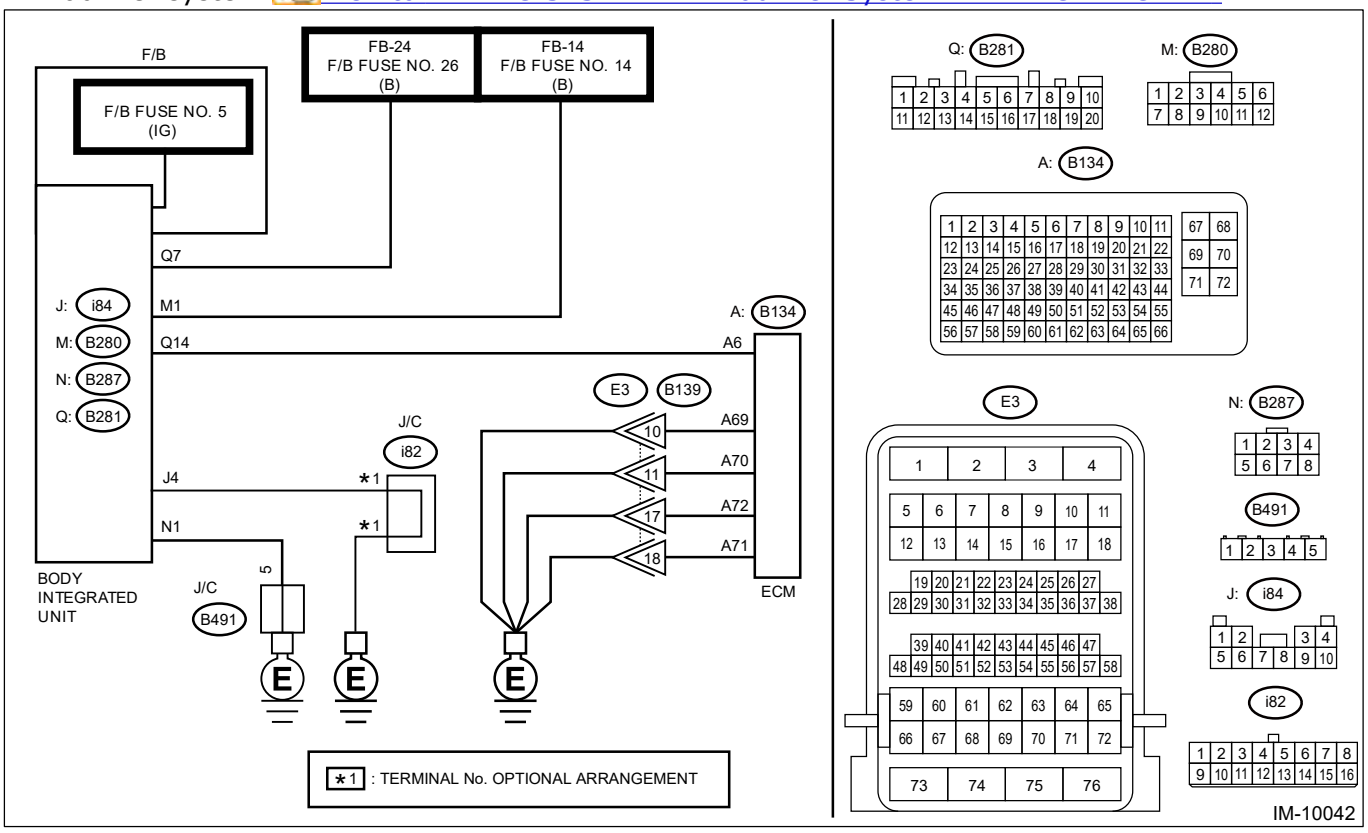
DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. OTHER THAN FOR C5

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

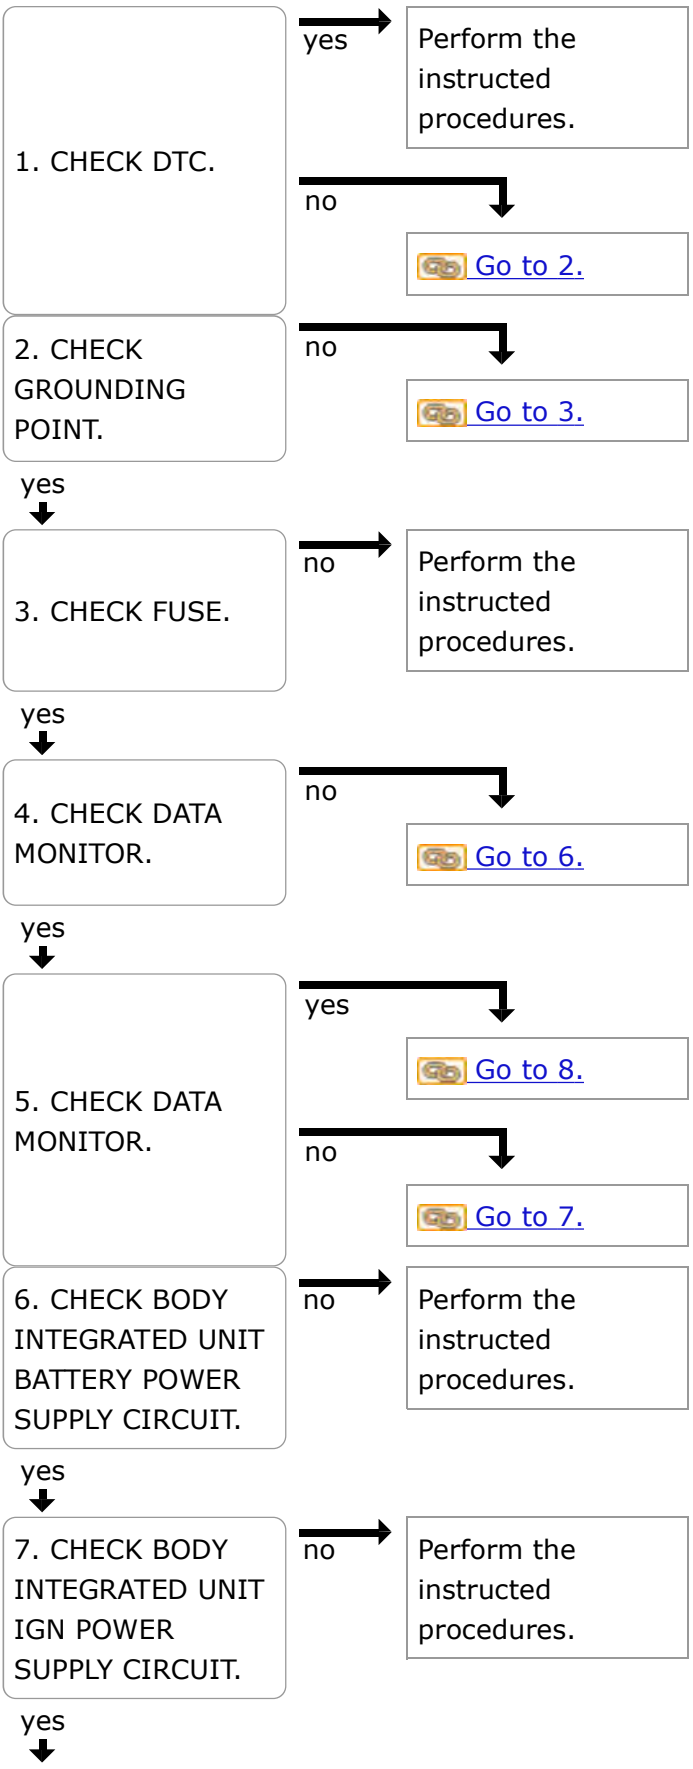
DTC detecting condition:



Communication failure between body integrated unit and ECM

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.



Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

When the body integrated unit or ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK DTC.
yes
Perform the instructed procedures.
no
Go to 2.
2. CHECK GROUNDING POINT.
no
Go to 3.
yes
3. CHECK FUSE.
no
Perform the instructed procedures.
yes
4. CHECK DATA MONITOR.
no
Go to 6.
yes
5. CHECK DATA MONITOR.
yes
Go to 8.
no
Go to 7.
6. CHECK BODY INTEGRATED UNIT BATTERY POWER SUPPLY CIRCUIT.
no
Perform the instructed procedures.
yes
7. CHECK BODY INTEGRATED UNIT IGN POWER SUPPLY CIRCUIT.
no
Perform the instructed procedures.
yes

8. CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

9. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

10. CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND ECM.

no → Perform the instructed procedures.

yes ↓

11. CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

yes → Perform the instructed procedures.

no → Go to 12.

12. CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).

yes → Perform the instructed procedures.

no → Go to 13.

13. CHECK ECM.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC for [Body Control] displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK GROUNDING POINT.

Check the grounding point of the engine ground and chassis ground.

Is there any looseness? Are there any foreign matters caught on the ground or contact surface? Are there any oil-soiled areas?

Yes	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Read the DTC Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)., and when DTC B1572 is still displayed, Go to 3.
No	Go to 3.

3. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.

4. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Body Control].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

- [BATT voltage (control)]

Is the display 10 V or more?

Yes — Go to 5.

No — Go to 6.

5. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Body Control].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

- [IGN voltage]

Is the display 10 V or more?

Yes — Go to 8.

No — Go to 7.

6. CHECK BODY INTEGRATED UNIT BATTERY POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Measure the voltage between body integrated unit connector and chassis ground.
   Connector & terminal
   (B281) No. 7 (+) — Chassis ground (−):
   (B280) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 7.
No	Repair the open or short circuit of harness between the body integrated unit connector and fuse.

7. CHECK BODY INTEGRATED UNIT IGN POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Measure the voltage between F/B fuse No. 5 and chassis ground.
   Connector & terminal
   F/B fuse No. 5 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 8.
No	Repair the open or short circuit of harness between the body integrated unit connector and ignition switch.

8. CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Measure the resistance between body integrated unit connector and chassis ground.
   Connector & terminal
   (B287) No. 1 — Chassis ground:
   (i84) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 9.
No	Repair the open circuit of harness between the body integrated unit connector and chassis ground.

9. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).

1. Disconnect the ECM connector.
2. Measure the resistance between the ECM connector and engine ground.
   Connector & terminal
   (B134) No. 69 — Engine ground:
   (B134) No. 70 — Engine ground:
   (B134) No. 72 — Engine ground:
   (B134) No. 71 — Engine ground:

Is the resistance less than 10 Ω?

Yes	Go to 10.
No	Repair the open circuit in harness between ECM connector and chassis ground.

10. CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND ECM.

1. Disconnect the ECM connector.
2. Measure the resistance between the body integrated unit connector and ECM.
   Connector & terminal
   (B281) No. 14 — (B134) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 11.
No	Repair the open circuit of harness between the body integrated unit connector and ECM.

11. CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Disconnect the body integrated unit connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between ECM connector and engine ground.
   Connector & terminal
   (B134) No. 6 (+) — Chassis ground (-):

Is the voltage 6 V or more?

Yes	Repair the short circuit to power supply in harness between body integrated unit connector and ECM connector.
No	Go to 12.

12. CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).

1. Turn the ignition switch to OFF.
2. Measure the resistance between the ECM connector and engine ground.
   Connector & terminal
   (B134) No. 6 — Chassis ground:
   (B134) No. 6 — Engine ground:

Is the resistance less than 10 Ω?

Yes	Repair the ground short circuit of harness between body integrated unit connector and ECM connector.
No	Go to 13.

13. CHECK ECM.

1. Replace the ECM. (Do not perform ECM registration.) Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
2. Connect all connectors.
3. Turn the ignition switch to ON.
4. Wait for 5 seconds.
5. Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

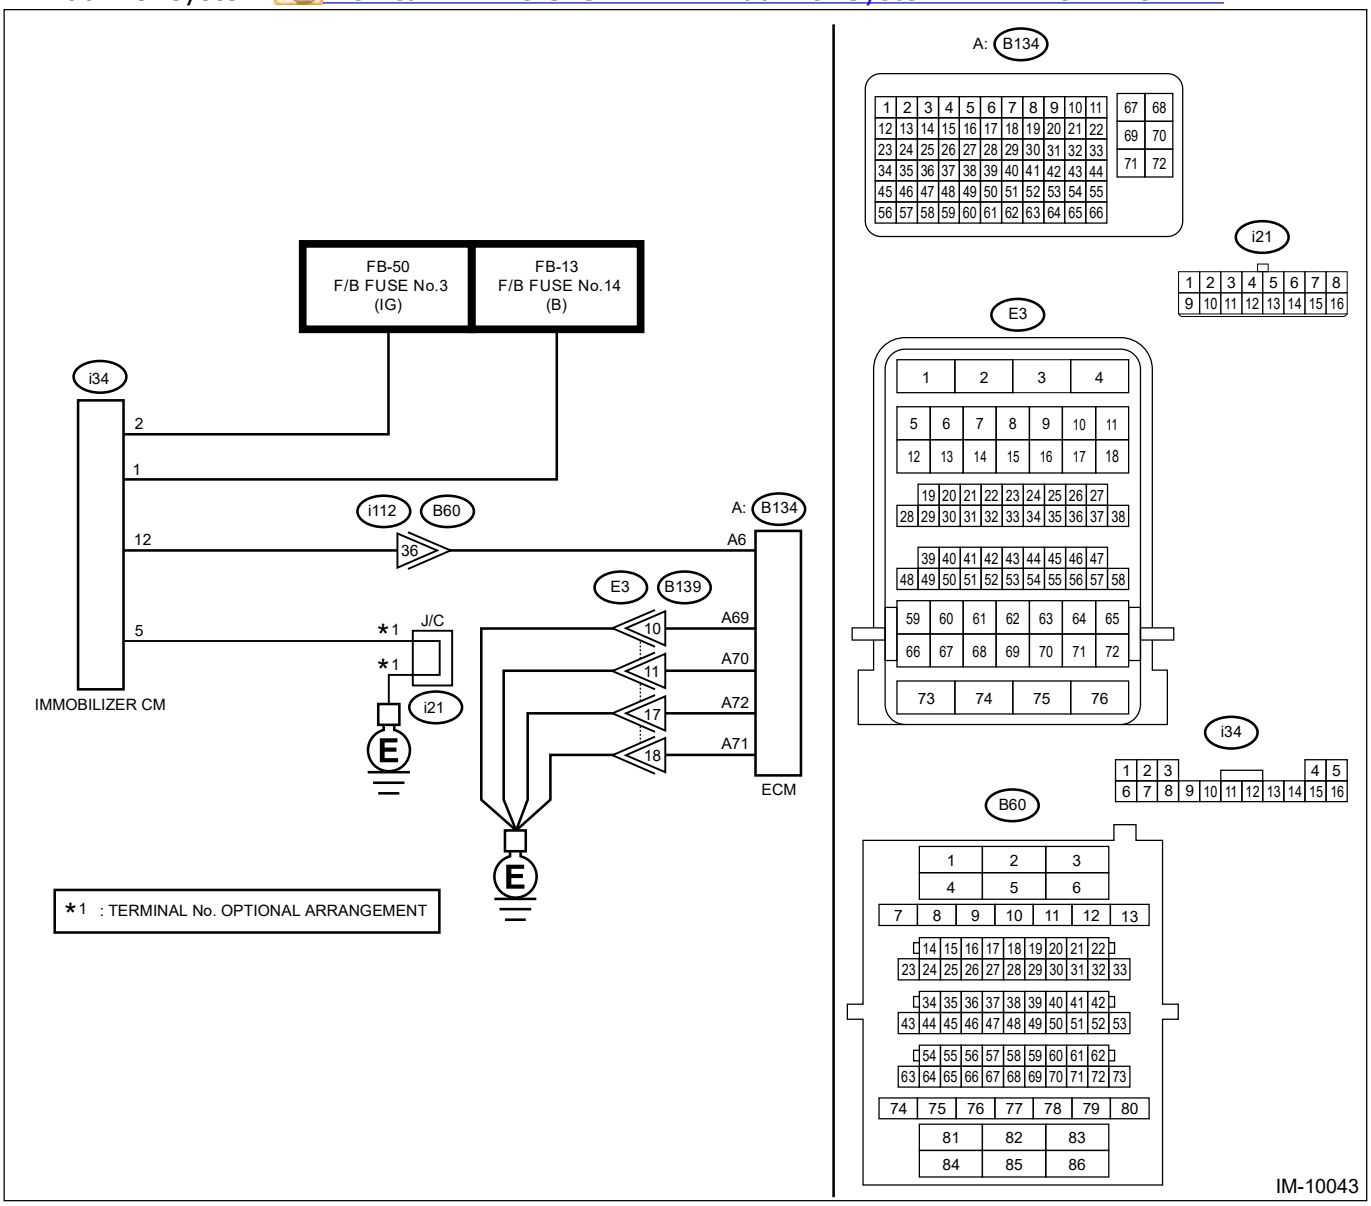
Is DTC B1572 displayed? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Register the ECM. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

2. FOR C5

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

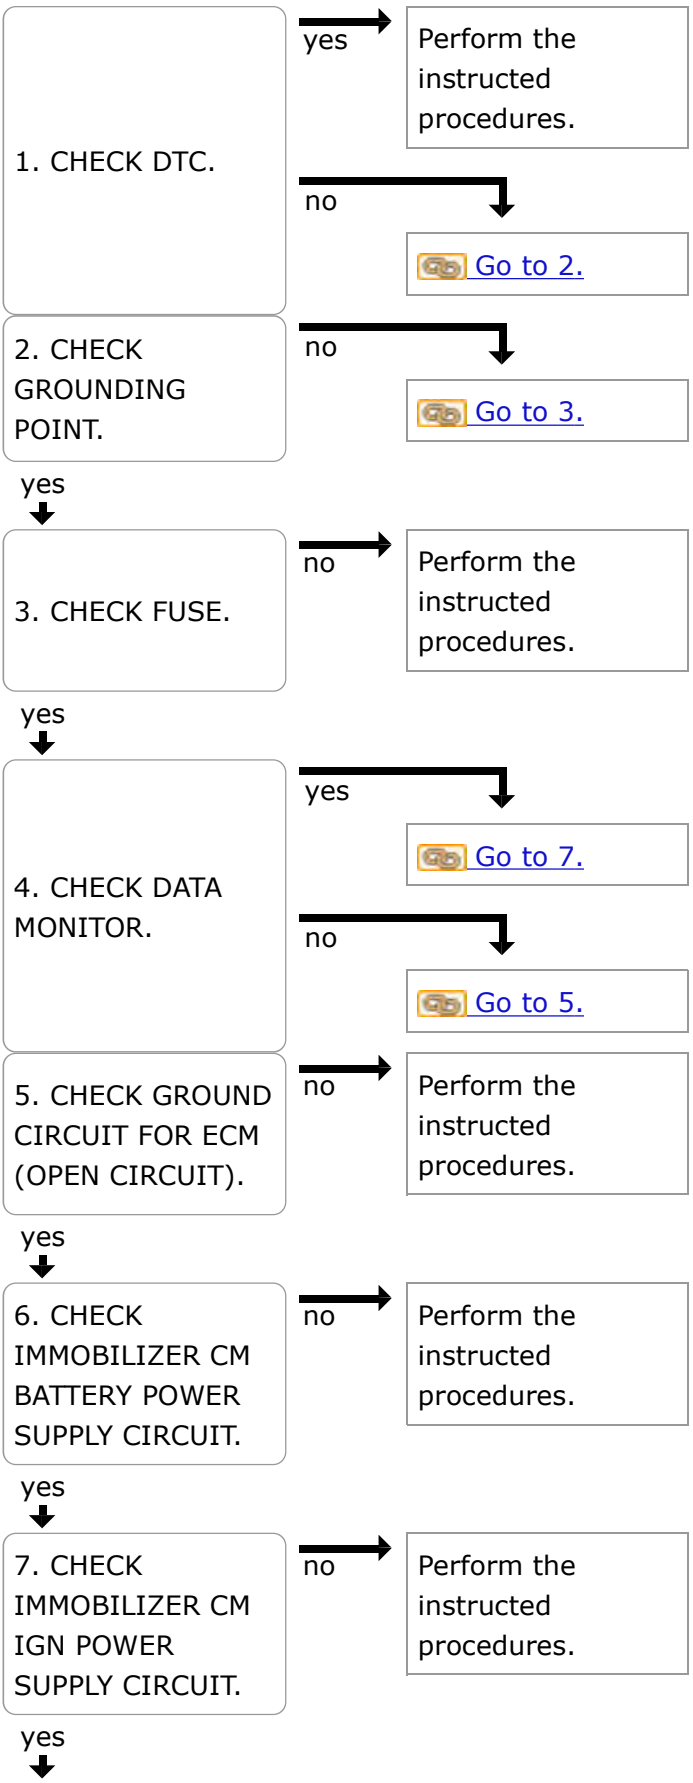
DTC detecting condition:



Communication failure between immobilizer CM and ECM

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.



Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

When the immobilizer CM or ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK DTC.
yes
Perform the instructed procedures.
no
Go to 2.
2. CHECK GROUNDING POINT.
no
Go to 3.
yes
3. CHECK FUSE.
no
Perform the instructed procedures.
yes
4. CHECK DATA MONITOR.
yes
Go to 7.
no
Go to 5.
5. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
6. CHECK IMMOBILIZER CM BATTERY POWER SUPPLY CIRCUIT.
no
Perform the instructed procedures.
yes
7. CHECK IMMOBILIZER CM IGN POWER SUPPLY CIRCUIT.
no
Perform the instructed procedures.
yes

8. CHECK IMMOBILIZER CM GROUND CIRCUIT (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

9. CHECK HARNESS BETWEEN IMMOBILIZER CM AND ECM (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

10. CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

yes → Perform the instructed procedures.

no → Go to 11.

11. CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).

yes → Perform the instructed procedures.

no → Go to 12.

12. CHECK ECM.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Immobilizer] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC for [Immobilizer] displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK GROUNDING POINT.

Check the grounding point of the engine ground and chassis ground.

Is there any looseness? Are there any foreign matters caught on the ground or contact surface? Are there any oil-soiled areas?

Yes	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Read the DTC Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)., and when DTC B1572 is still displayed, Go to 3.
No	Go to 3.

3. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and immobilizer CM.

4. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Immobilizer].
Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

- [Battery Voltage]

Is the display 10 V or more?

Yes	Go to 7.
No	Go to 5.

5. CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).

1. Disconnect the ECM connector.
2. Measure the resistance between the ECM connector and engine ground.
   Connector & terminal
   (B134) No. 69 — Engine ground:
   (B134) No. 70 — Engine ground:
   (B134) No. 72 — Engine ground:
   (B134) No. 71 — Engine ground:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Repair the open circuit in harness between ECM connector and chassis ground.

6. CHECK IMMOBILIZER CM BATTERY POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the immobilizer CM connector.
3. Measure the voltage between immobilizer CM connector and chassis ground.
   Connector & terminal
   (i34) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 7.
No	Repair the open or short circuit of harness between the immobilizer CM connector and fuse.

7. CHECK IMMOBILIZER CM IGN POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Measure the voltage between immobilizer CM connector and chassis ground.
   Connector & terminal
   (i34) No. 2 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 8.
No	Repair the open or short circuit of harness between the immobilizer CM connector and ignition switch.

8. CHECK IMMOBILIZER CM GROUND CIRCUIT (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Measure the resistance between immobilizer CM connector and chassis ground.
   Connector & terminal
   (i34) No. 5 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 9.
No	Repair the open circuit of harness between the immobilizer CM connector and chassis ground.

9. CHECK HARNESS BETWEEN IMMOBILIZER CM AND ECM (OPEN CIRCUIT).

Measure the resistance between immobilizer CM connector and ECM connector.
Connector & terminal
(i34) No. 12 — (B134) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 10.
No	Repair the open circuit of harness between the immobilizer CM connector and ECM.

10. CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between ECM connector and engine ground.
   Connector & terminal
   (B134) No. 6 (+) — Engine ground (-):

Is the voltage 6 V or more?

Yes	Repair the short circuit to power supply in harness between immobilizer CM connector and ECM connector.
No	Go to 11.

11. CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).

1. Turn the ignition switch to OFF.
2. Measure the resistance between immobilizer CM connector and each ground.
   Connector & terminal
   (i34) No. 12 — Chassis ground:
   (I34) No. 12 — Engine ground:

Is the resistance less than 10 Ω?

Yes	Repair the short circuit to ground in harness between immobilizer CM connector and ECM connector.
No	Go to 12.

12. CHECK ECM.

1. Replace the ECM. (Do not perform ECM registration.) Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
2. Connect all connectors.
3. Turn the ignition switch to ON.
4. Wait for 5 seconds.
5. Read the DTC of [Engine Control System] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1572 displayed? (Current malfunction)

Yes	Replace the immobilizer CM. Ref. to SECURITY AND LOCKS>Immobilizer Control Module.
No	Malfunction occurred in ECM. Register the ECM. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1576 EGI CONTROL MODULE EEPROM

Diagnosis start condition:
- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:
- ECM malfunctioning
- Failed to access ROM in ECM during key registration.

Trouble symptom:
- Engine will not start.
- The security indicator illuminates.

Caution:

When the ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Go to 2.

2. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Go to 3.

3. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1577 IMM CONTROL MODULE EEPROM

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:

- Defective body integrated unit (except for C5 model) or immobilizer CM (C5 model)
- Failed to access ROM in the body integrated unit (except for C5 model) or the immobilizer CM (C5 model)

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

Caution:

When the body integrated unit (except for C5 model) or the immobilizer CM (C5 model) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Finish the diagnosis.
No	Go to 2.

2. PERFORM ECM REGISTRATION.

1. Using the Subaru Select Monitor, perform the clear memory of [Engine] and [Immobilizer].
   Ref. to COMMON(diag)>Clear memory.

2. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is registration complete?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the following parts. • Body integrated unit (except for C5 model) Ref. to SECURITY AND LOCKS>Body Integrated Unit. • Immobilizer CM (C5 model) Ref. to SECURITY AND LOCKS>Immobilizer Control Module.

IMMOBILIZER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1578 METER

Diagnosis start condition:

- Battery voltage is 10 V or more.
- The remote engine starter was not used to start the engine.

DTC detecting condition:

Reference code incompatibility between combination meter and body integrated unit or communication failure between body integrated unit and ECM

Trouble symptom:

- Engine will not start.
- The security indicator illuminates.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

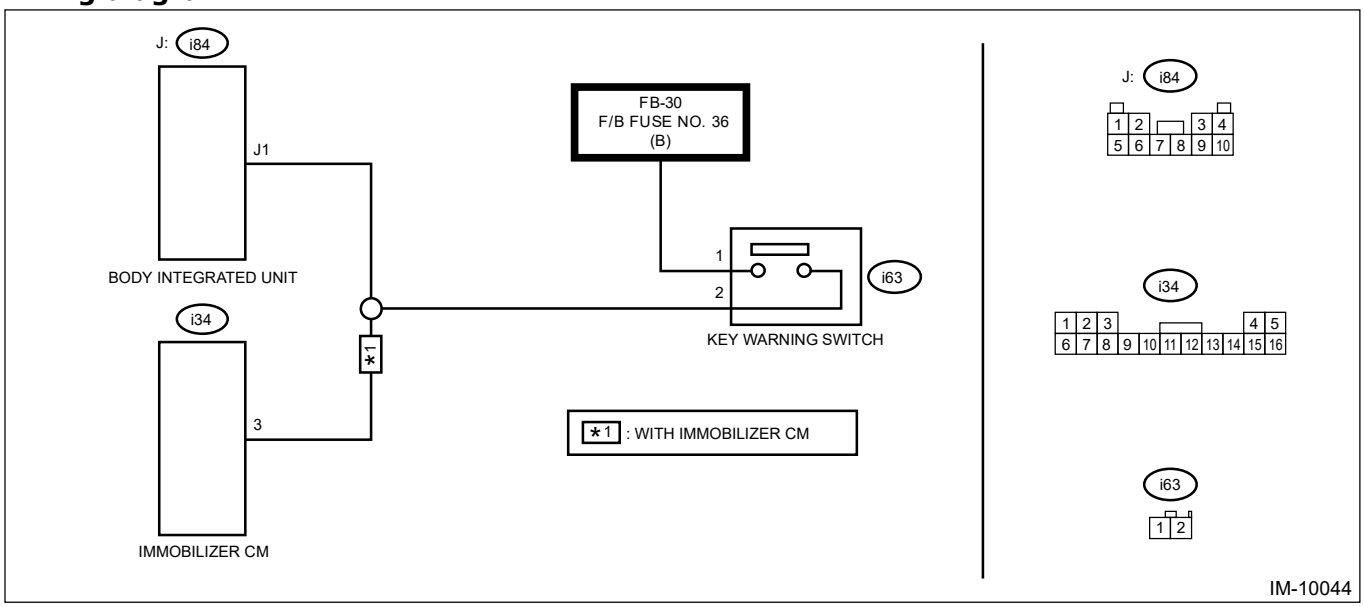
Is DTC B1401, B1407, or B1408 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B1401, B1407 or B1408.
No	Perform the diagnosis of DTC B1572. Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT.

INSPECTION

1. CHECK KEY SWITCH CIRCUIT

Trouble symptom:



Engine does not start.

Trouble causes:

- Key warning switch circuit malfunction
- Key warning switch malfunction

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Wiring diagram:

Caution:

When the body integrated unit (except for C5 model) or the immobilizer CM (C5 model) is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

1. CHECK POWER SUPPLY CIRCUIT.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK KEY WARNING SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK KEY WARNING SWITCH.

no → Perform the instructed procedures.

yes ↓

4. CHECK DATA MONITOR.

yes → Perform the instructed procedures.

no → Go to 5.

5. CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT (EXCEPT FOR C5 MODEL) OR IMMOBILIZER CM (C5 MODEL).

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK POWER SUPPLY CIRCUIT.

1. Disconnect the connector from key warning switch.
2. Measure the voltage between key warning switch connector terminal and chassis ground.

Connector & terminal

(i63) No. 1 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Check the harness for an open or short between the key warning switch and fuse.

2. CHECK KEY WARNING SWITCH.

1. Insert the ignition key in the ignition switch. (OFF or ACC)
2. Measure the resistance between key warning switch connector terminals.
   Terminals
   No. 1 — No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Replace the key warning switch. Ref. to SECURITY AND LOCKS>Key Lock Cylinders.

3. CHECK KEY WARNING SWITCH.

1. Remove the ignition key from ignition switch.
2. Measure the resistance between key warning switch connector terminals.
   Terminals
   No. 1 — No. 2:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Replace the key warning switch. Ref. to SECURITY AND LOCKS>Key Lock Cylinders.

4. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items under the [Data monitor] of [Body Control] or [Immobilizer]. Ref. to IMMOBILIZER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [key-lock warning SW] (body integrated unit)
- [key-lock warning SW Input] (immobilizer CM)

Is the display 10 V or more?

Yes	Replace the body integrated unit (except for C5 model) Ref. to SECURITY AND LOCKS>Body Integrated Unit. or the immobilizer CM (C5 model) Ref. to SECURITY AND LOCKS>Immobilizer Control Module..
No	Go to 5.

5. CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT (EXCEPT FOR C5 MODEL) OR IMMOBILIZER CM (C5 MODEL).

1. Disconnect the connector from the body integrated unit (except for C5 model) or the immobilizer CM (C5 model).
2. Measure the resistance between key warning switch connector terminal and body integrated unit (except for C5 model) or immobilizer CM (C5 model) connector terminal.
   Connector & terminal
   Body integrated unit (except for C5 model)
   (i63) No. 2 — (i84) No. 1:
   Immobilizer CM (C5 model)
   (i63) No. 2 — (i34) No. 3:

Is the resistance less than 10 Ω?

Yes	Replace the body integrated unit (except for C5 model) Ref. to SECURITY AND LOCKS>Body Integrated Unit. or the immobilizer CM (C5 model) Ref. to SECURITY AND LOCKS>Immobilizer Control Module..
No	Repair harness between key warning switch and body integrated unit (except for C5 model) or immobilizer CM (C5 model).

LAN SYSTEM (DIAGNOSTICS)

LAN(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Control Module I/O Signal
6. Diagnostic Procedure for Subaru Select Monitor Communication
7. CAN bus check
8. CAN Communication Circuit Check
9. Diagnostic Trouble Code (DTC)
10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
11. Diagnostics with Phenomenon

LAN SYSTEM (DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:

- **Remove foreign matter (dust, water, oil, etc.) from each control module connector during removal and installation.**
- **Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

Note:

- **Check harness for open or short circuits, shake the suspected trouble spot or connector.**
- **Perform the diagnosis, and when the control module is replaced as a result of judgment that malfunction is the control module, re-check that the control module was actually malfunctioning. Replace to a new control module, and confirm that the malfunction is eliminated. Then, install the previously removed control module again and check that the malfunction reproduces again.**

1. CHECK PRE-INSPECTION.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to LAN SYSTEM (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED).

Check the power supply circuit of the module which might affect CAN communication problem. Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>INSPECTION > INSPECTION WITHOUT USING CAN DIAGNOSTIC.

Is the power supply circuit of each module that is performing CAN communication normal?

Yes	Go to 3.
No	Repair or replace the faulty portion, and Go to 3.

3. BASIC INSPECTION (CAN DIAGNOSTIC IS USED).

Check the registration status of the body integrated unit which might affect CAN communication problem. Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>INSPECTION > INSPECTION USING CAN DIAGNOSTIC.

Does the registration status of the body integrated unit match with the vehicle specification? (When the Subaru Select Monitor and the body integrated unit cannot communicate, and the registration status cannot be checked, Go to 5.)

Yes	Go to 4.
No	Match the registration status of the body integrated unit with the vehicle specification, and Go to 4.

4. CHECK COMMUNICATION FOR INITIALIZING.

Communicate with the all systems by connecting the Subaru Select Monitor.

Is the communication for initializing finished for all modules?

Yes	Go to 5.
No	Check the error of communication for initializing. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication>INSPECTION.

5. CHECK DTC.

1. Start the engine and read all DTCs.

Note:

- **When the engine does not start, perform the diagnosis for the engine start malfunction. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon.**
- **For detailed operation procedures, refer to "Application help".**

2. Record all DTCs (current malfunction and past malfunction), time stamp and freeze frame data.

Note:

For time stamp, refer to "TIME STAMP" of Common (Diagnostics). Ref. to COMMON(diag)>Time Stamp.

Is DTC U**** displayed on Subaru Select Monitor? (Current malfunction)

Yes	Go to 6.
No	Using the diagnostics with phenomenon, perform inspection. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon.

6. CHECK USING THE DTC CHECK SHEET.

Perform the inspection using the DTC check sheet. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST > CHECK USING THE DTC CHECK SHEET.

Is CAN communication line faulty?

Yes	Repair or replace the faulty portion of the harness. And then, Go to 7.
No	Perform the diagnosis for the displayed DTCs. And then, Go to 7.

7. PERFORM DIAGNOSIS.

1. Using the Subaru Select Monitor, perform the clear memory of all DTCs. Ref. to COMMON(diag)>Clear memory.

2. Start the engine and read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat the Basic Diagnostic Procedure from the beginning until DTC is not shown.
No	Finish the diagnosis.

CHECK

Inspect the following items regarding the vehicle’s state.

1. DISPLAY STATUS IN THE COMBINATION METER

Display status in the combination meter	Engine coolant temperature gauge display	❑ OK / ❑ NG
	Fuel gauge display	❑ OK / ❑ NG
	Tachometer display	❑ Normal /❑ Abnormal (0 rpm at idling, etc.)
Display of other indicators	Malfunction indicator light	❑ ON / ❑ Blink / ❑ OFF
	Sport indicator light (AT warning light)	❑ ON / ❑ Blink / ❑ OFF
	ABS warning light	❑ ON / ❑ Blink / ❑ OFF
	VDC warning light	❑ ON / ❑ Blink / ❑ OFF
	Security indicator light	❑ ON / ❑ Blink / ❑ OFF
	AT OIL TEMP warning light	❑ ON / ❑ Blink / ❑ OFF
	Tire pressure warning light	❑ ON / ❑ Blink / ❑ OFF
	Engine coolant temperature warning light	❑ Blue light ON / ❑ Red light ON / ❑ Red light blinks / ❑ Blue and red lights blink
	CRUISE indicator	❑ ON / ❑ Blink / ❑ OFF
	Shift indicator	❑ OK / ❑ NG
	Fuel level warning light	❑ ON / ❑ Blink / ❑ OFF
	Airbag warning light	❑ ON / ❑ OFF
	VDC OFF indicator	❑ ON / ❑ OFF
	Brake warning light	❑ ON / ❑ OFF
	EyeSight warning light	❑ ON / ❑ Blink / ❑ OFF
	Lane departure warning OFF indicator light	❑ ON / ❑ OFF
	Pre-collision brake OFF indicator light	❑ ON / ❑ OFF
	Headlight beam leveler indicator	❑ ON / ❑ OFF

2. CONDITIONS UNDER WHICH TROUBLE OCCURS

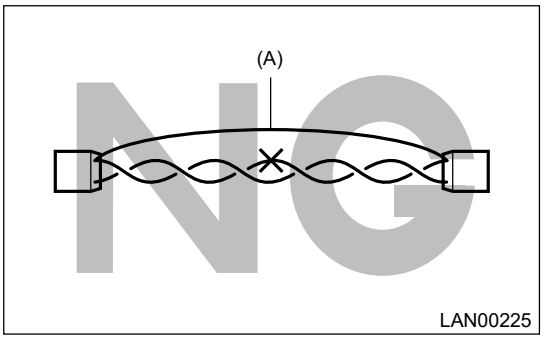
Driving condition	❑ At standstill (while idling)	
	❑ When the vehicle is running	Vehicle speed km/h (MPH)
	❑ While accelerating	Acceleration km/h (MPH) to km/h (MPH)
	❑ Decelerating (with braking)	Deceleration km/h (MPH) to km/h (MPH)
	❑ Decelerating (without braking)	Deceleration km/h (MPH) to km/h (MPH)
	❑ Flat road ❑ Uphill ❑ Downhill	

❑ Gravel road
❑ Bumpy road
❑ Snowy road

Does it occur when operating any part?
Operated part:
Trouble symptom:

Are there any other troubles occurred?
From where:
Trouble symptom:

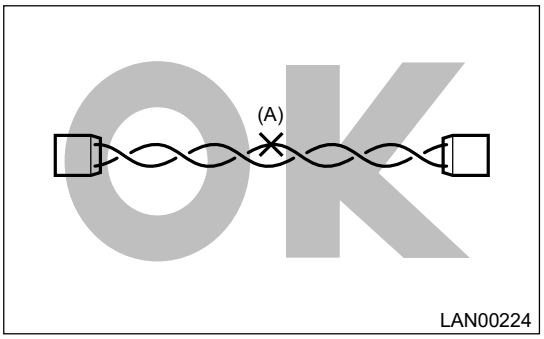
LAN SYSTEM (DIAGNOSTICS) > General Description



CAUTION

1. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.



2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to by-pass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).

(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with electrical tape etc.

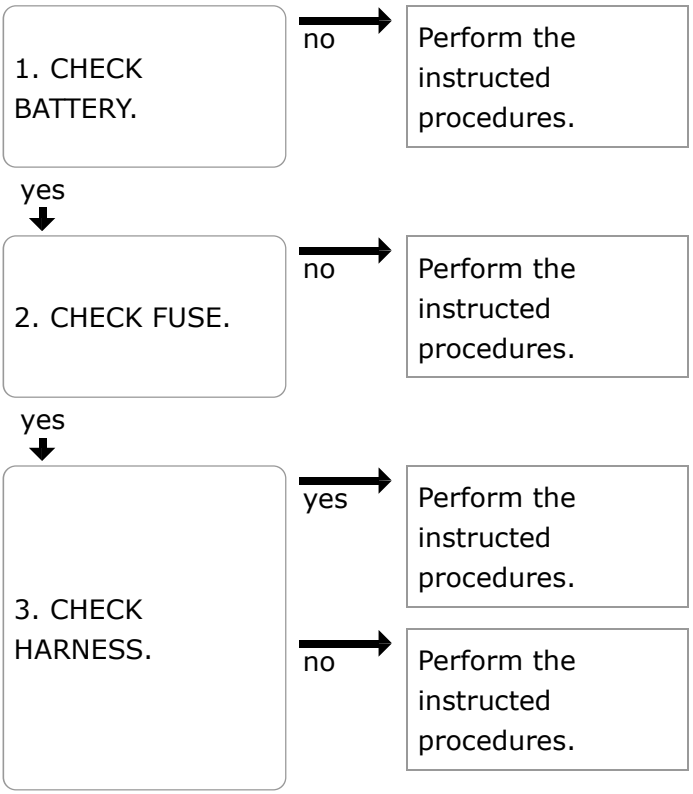
(A) Soldering and protection with electrical tape

3. TIME STAMP

There are three types of record data for the information of time stamp, and they are stored together with diagnostic codes. For time stamp, refer to Common (Diagnostics). Ref. to COMMON(diag)>Time Stamp.

LAN SYSTEM (DIAGNOSTICS) > General Description

INSPECTION



1. INSPECTION WITHOUT USING CAN DIAGNOSTIC

Trouble causes:

- Electrical system malfunction
- Faulty harness and harness connector

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Charge or replace the battery.

2. CHECK FUSE.

Check the fuse which might affect the problem.

Is the check result OK?

Yes	Go to 3.
No	Replace the fuse. If the replaced fuse blows out easily, some type of fault is present. Therefore, repair the faulty portion.

3. CHECK HARNESS.

Check the harness and harness connector connection which might affect the problem.

Is the check result OK?

Yes	Go to step 3 in the Basic Diagnostic Procedure. Ref. to LAN SYSTEM (DIAGNOSTICS) > Basic Diagnostic Procedure > PROCEDURE > >FLOW1>BASIC INSPECTION (CAN DIAGNOSTIC IS USED)..
No	Repair or replace the faulty harness or harness connector.

2. INSPECTION USING CAN DIAGNOSTIC

Trouble causes:

Improper body integrated unit setting

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK BODY INTEGRATED UNIT REGISTRATION STATUS.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK BODY INTEGRATED UNIT CUSTOMIZE SETTING.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK FACTORY INITIAL SETTING OF BODY INTEGRATED UNIT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK BODY INTEGRATED UNIT REGISTRATION STATUS.

Check that settings of body integrated unit correspond to vehicle equipment. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit.

Does the vehicle equipment correspond to settings?

Yes	Go to 2.
No	Match the settings of the body integrated unit with the vehicle equipment.

2. CHECK BODY INTEGRATED UNIT CUSTOMIZE SETTING.

Check that settings of body integrated unit correspond to vehicle condition. Ref. to BODY CONTROL(DIAGNOSTICS)>Customize.

Do the customize settings correspond to the vehicle condition?

Yes	Go to 3.
No	Match the settings of the body integrated unit with the vehicle condition.

3. CHECK FACTORY INITIAL SETTING OF BODY INTEGRATED UNIT.

Confirm [Factory initial setting] of body integrated unit registrations is [Market]. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit.

Is it set to [Market]?

Yes	Go to step 4 in the Basic Diagnostic Procedure. Ref. to LAN SYSTEM (DIAGNOSTICS) > Basic Diagnostic Procedure > PROCEDURE > >FLOW1>CHECK COMMUNICATION FOR INITIALIZING..
No	Switch from [Factory] to [Market].

LAN SYSTEM (DIAGNOSTICS) > General Description

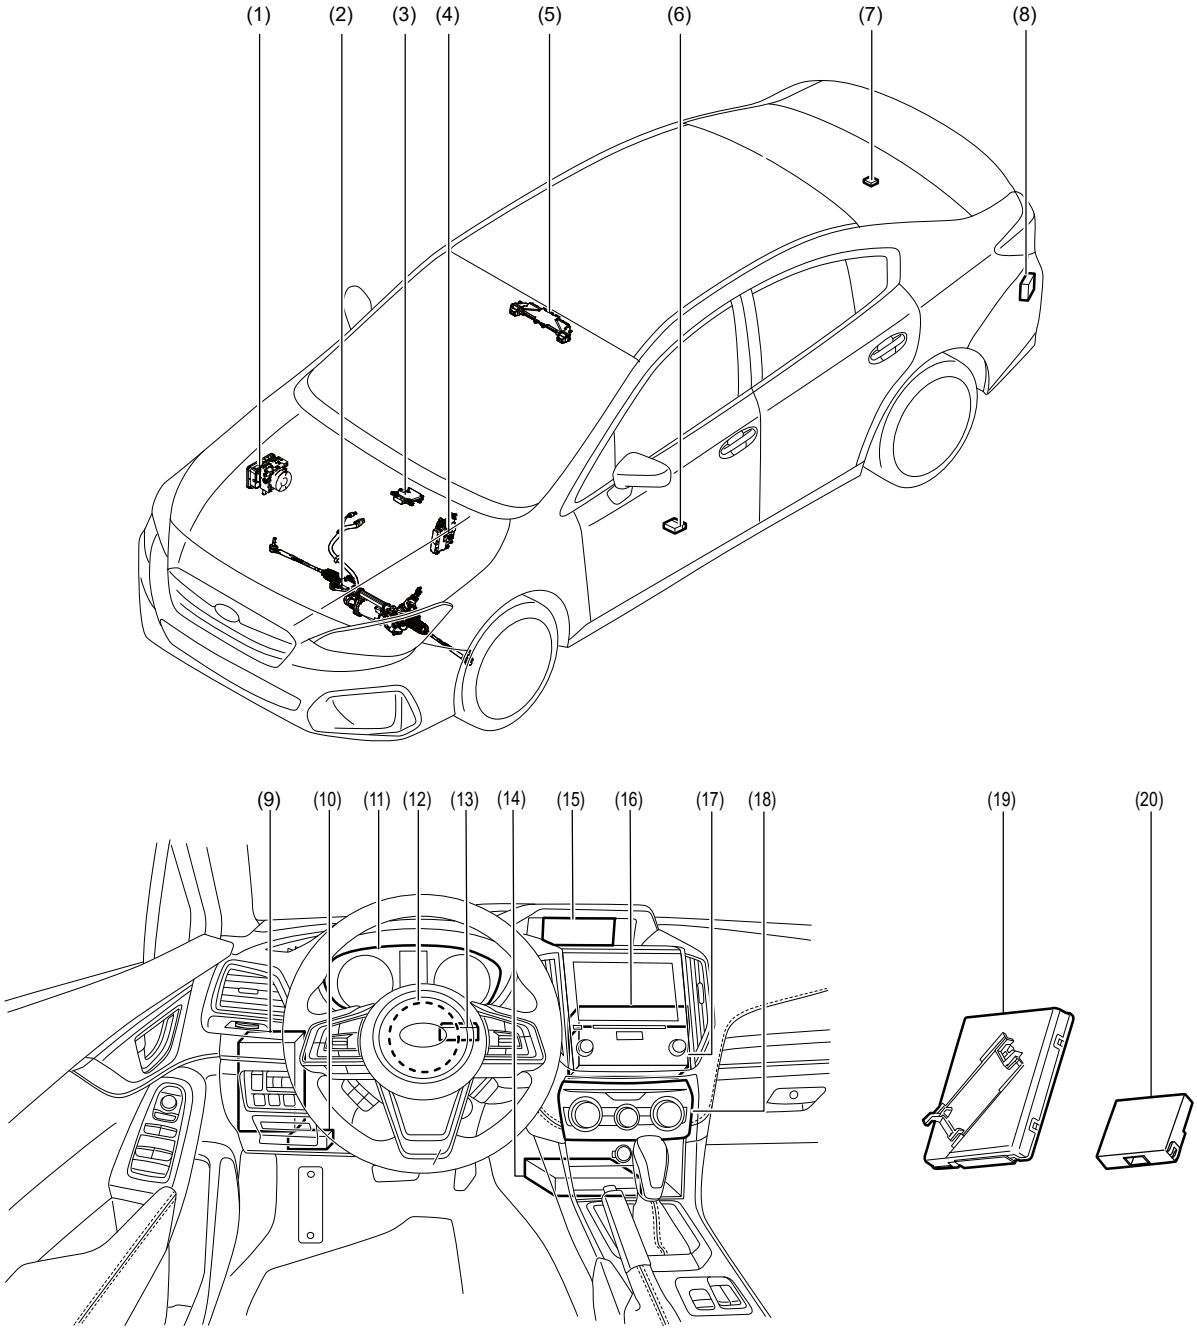
PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.



3. PREPARATION ITEMS

ITEM NAME	REMARKS

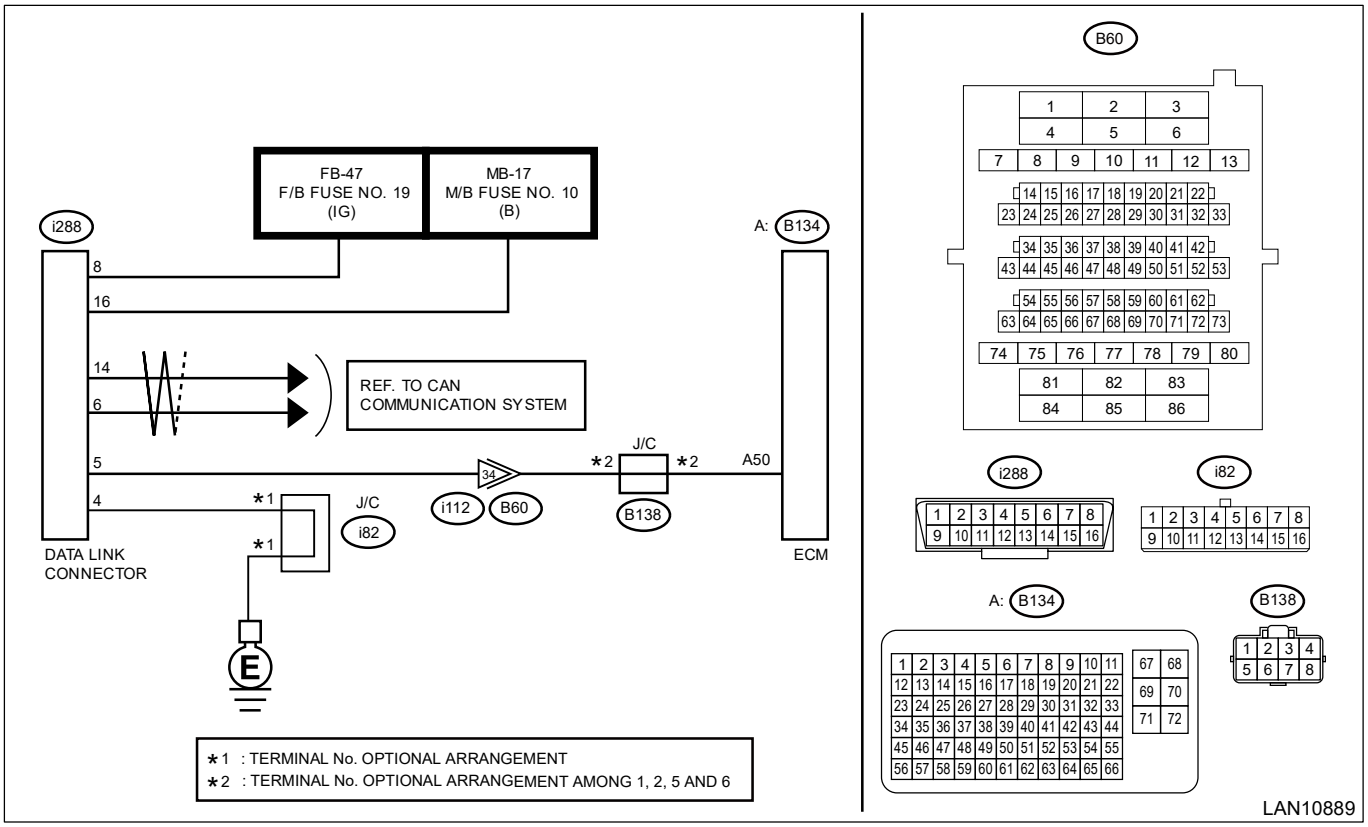
  For I/O signals of the RAB CM, refer to Reverse Automatic Braking (DIAGNOSTICS). Ref. to Reverse Automatic Braking(DIAGNOSTICS)>Control Module I/O Signal.
- Stereo camera
  For I/O signals of stereo camera, refer to EyeSight (DIAGNOSTICS). Ref. to EyeSight (DIAGNOSTICS)>Control Module I/O Signal.
- Data link connector
  For I/O signals of data link connector, refer to COMMON (DIAGNOSTICS). Ref. to COMMON(diag)>Data Link Connector.

LAN SYSTEM (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Diagnosis:



Subaru Select Monitor communication line is open or shorted.

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

1. CHECK SUBARU SELECT MONITOR.

1. Connect the Subaru Select Monitor to another vehicle.
2. Check communication condition between Subaru Select Monitor and vehicle.

Is communication performed normally?

Yes	Go to 2.
No	Subaru Select Monitor unit or diagnosis cable is faulty. Or check the fuse on the vehicle side.

2. CHECK DATA LINK CONNECTOR.

Use a tester to check for continuity in the ground circuit.

Connector & terminal

(i288) No. 4 — Chassis ground:

(i288) No. 5 — (B134) No. 56:

Is there continuity?

Yes	Go to 3.
No	Repair or replace the open circuit.

3. CHECK DATA LINK CONNECTOR.

1. Turn the ignition switch to ON.
2. Using a tester, check the power supply of data link connector.

Connector & terminal

(i288) No. 8 (+) — Chassis ground (−):

(i288) No. 16 (+) — Chassis ground (−):

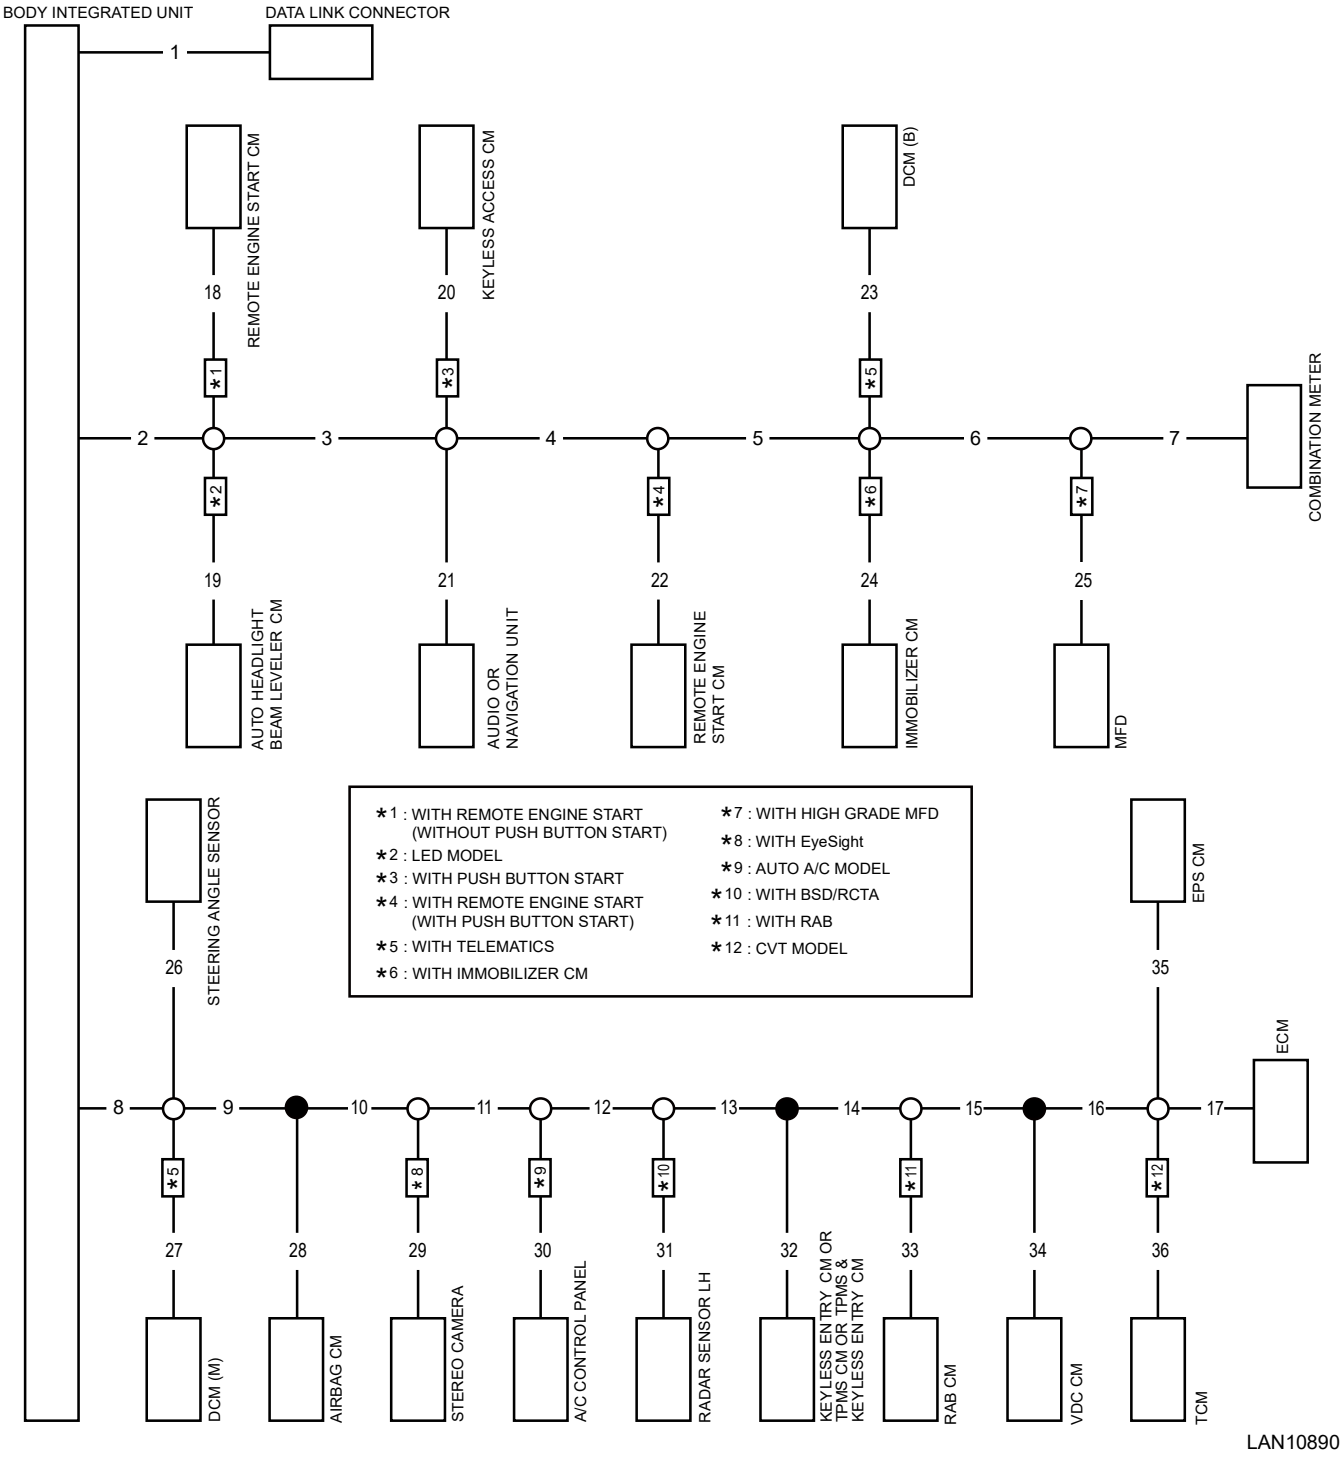
Is the voltage 10 V or more?

Yes	Go to 4.
No	Check the power supply circuits to the data link connector.

4. CHECK COMMUNICATION FOR INITIALIZING ERROR.

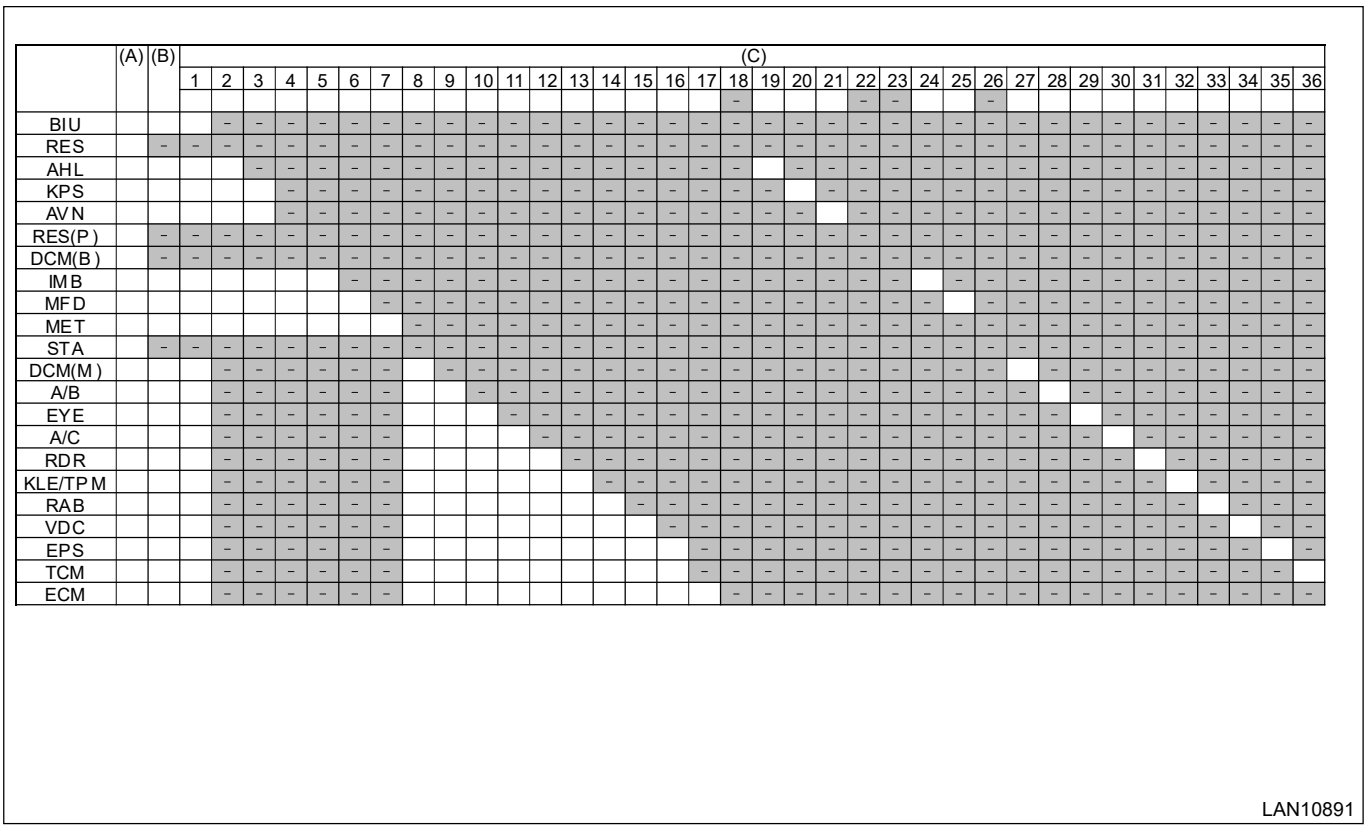
Perform the communication for initializing with each module by connecting the Subaru Select Monitor. (For systems whose module can communicate with diagnostic devices)

Note:



By performing [CAN bus connected ECU], confirmation of minimal connection modules is possible. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN bus check.

Is the communication possible with all modules?



Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Perform the inspection using the check sheet of communication for initializing. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication>INSPECTION > CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING.

1. CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING

- Network diagram

- Check sheet of communication for initializing

(A) Installation check

(B) Communication initialization

(C) Wiring location

BIU: Body integrated unit

RES: Remote engine start CM (without push button start)

AHL: Auto headlight beam leveler CM

KPS: Keyless access CM

AVN: Audio or navigation unit

RES (P): Remote engine start CM (with push button start)

DCM(B): Data communication module (BODY CAN)

IMB: Immobilizer CM

MFD: MFD

MET: Combination meter

STA: Steering angle sensor

DCM(M): Data communication module (MAIN CAN)

A/B: Airbag CM

EYE: Stereo camera

A/C: A/C control panel

RDR: Radar sensor

KLE/TPM: TPMS & keyless entry CM, TPMS CM or keyless entry CM

RAB: RAB CM

VDC: VDC CM

EPS: Power steering CM

TCM: TCM

ECM: ECM

1. MODULE INSTALLATION CHECK.

1. Using the check sheet for communication for initializing, check the vehicle installation module (module targeted for CAN communication).
2. Write "-" marks in the field for installation check (A) if the vehicle to be inspected does not have relevant module.
3. Write "-" marks in all blank fields on the same row that the "-" mark has filled in.

Was the module installation check above performed?

Yes	Go to 2.
No	Perform the module installation check, Go to 2.

2. SUBARU SELECT MONITOR COMMUNICATION INITIALIZATION CHECK.

1. Connect the Subaru Select Monitor to the vehicle.
2. Check if communication with the module installed on the vehicle is possible.
3. Write "○" marks in the field for communication initialization (B) if the module succeeded in the communication for initializing with Subaru Select Monitor. If the module failed in the communication, write a "×".
4. Write "○" marks in all blank fields on the same row that the "○" mark has filled in.
5. When at least one field in a column of wiring location (C) is filled with the "○" mark, then the wiring for that location is normal. Write "○" marks in all blank fields on the same column that the "○" mark has filled in under the circled number.

Was the communication checked with all the modules installed on the vehicle?

Yes	Go to 3.
No	Perform the communication check, Go to 3.

3. CHECK FIELD FOR COMMUNICATION FOR INITIALIZING (B).

Check if communication with all the modules installed on the vehicle was possible.

Is "×" written in all the fields for communication for initializing (B)? (Communication is not possible between all the modules and the Subaru Select Monitor)

Yes	Go to 6.
No	Go to 4.

4. CHECK WIRING LOCATION OF MODULE THAT CANNOT PERFORM COMMUNICATION.

Using the check sheet for communication for initializing, check open circuit of the modules which have no "○" mark in their columns of the wiring location (C) in ascending order by referring to the network diagram.

Is CAN communication line faulty?

Yes	Repair or replace the faulty portion of the harness.
No	Go to 5.

5. CHECK POWER SUPPLY CIRCUIT OF CONTROL MODULE.

Check power supply circuit of the control module that cannot perform communication. (Check the harness between control module connector and battery, and check the fuse.)

Is power supply circuit faulty?

Yes	Repair or replace the faulty portion of the power supply circuit.
No	Go to step 5 in the Basic Diagnostic Procedure. Ref. to LAN SYSTEM (DIAGNOSTICS) > Basic Diagnostic Procedure > PROCEDURE > >FLOW1>CHECK DTC..

6. CHECK CAN COMMUNICATION LINE.

Check for short circuit to ground of CAN communication line. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > GROUND SHORT INSPECTION.

Is CAN communication line faulty?

Yes	Repair or replace the faulty portion of the harness.
No	Go to 7.

7. CHECK CAN COMMUNICATION LINE.

Check for short circuit to power supply of CAN communication line. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > CHECK POWER SUPPLY SHORT.

Is CAN communication line faulty?

Yes	Repair or replace the faulty portion of the harness.
No	Go to 8.

8. CHECK CAN COMMUNICATION LINE.

Check for short circuit between the CAN communication lines. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 52 Ω OR LESS.

Is CAN communication line faulty?

Yes	Repair or replace the faulty portion of the harness.
No	Go to 9.

9. CHECK CAN COMMUNICATION LINE.

Check the data link connector harness. (Check for open circuit of network diagram No. 1)

Is CAN communication line faulty?

Yes	Repair or replace the faulty portion of the harness.
No	Go to 10.

10. CHECK SUBARU SELECT MONITOR.

Connect the Subaru Select Monitor to another vehicle to check whether the communication can be executed normally.

Is the Subaru Select Monitor OK?

Yes	It is possible that poor contact occurs at the data link connector.
No	The Subaru Select Monitor is faulty. Replace with a normal Subaru Select Monitor, and perform the diagnosis.

2. EXAMPLE OF WRITING FOR THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING

- When No. 1 is open

Note:

Perform the inspection from step 6 using the check sheet of communication for initializing. (There may be a malfunction other than open circuit) Go to 6.

LAN10907

- When No. 18 is open

Note:

This is the same as for No. 23 and No. 26, but if the remote engine starter does not operate even though no DTC has been detected, check the lines of the remote engine starter.

LAN10913

- When No. 26 is open

Note:

This is the same as for No. 18, No. 22 and No. 23, but it is possible to diagnose using examples of lost communication detection in each module.

LAN SYSTEM (DIAGNOSTICS) > CAN bus check

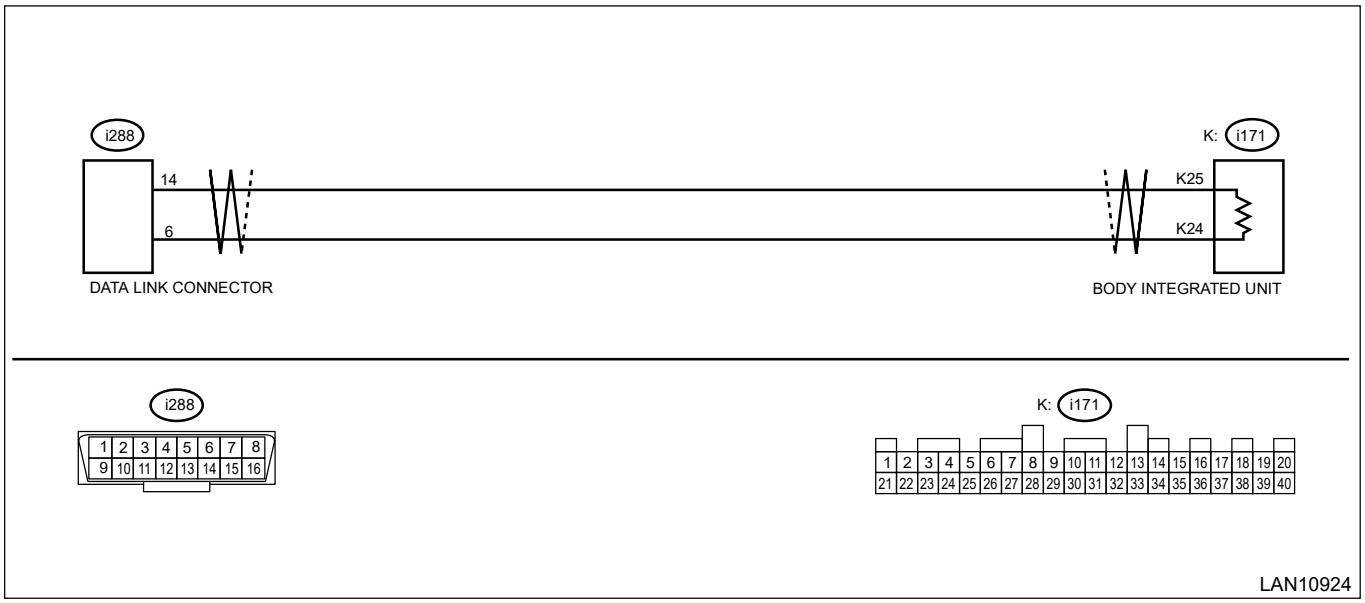
OPERATION

Systems connected to vehicle CAN bus and require communicating with the Subaru Select Monitor will be displayed.
List of the systems displayed does not mean the confirmation of communication. It displays presence or absence of the systems required. And, even when a system is equipped, it may not be displayed because of a communication trouble etc.

1. Turn the ignition switch to ON.
2. On [Start] display, select [Diagnosis].
3. On [Vehicle selection] display, input the target vehicle information and select [OK].
4. On [Main Menu] display, select [CAN bus check].
5. After a while, systems connected to vehicle CAN bus will be displayed.
6. In communication for initializing, communication is confirmed in each control module.
   Note:
   - **This function does not function normally, when the ignition switch is OFF.**
   - **Optional control modules and control modules that are equipped differently depending on grades may not be displayed.**
   - **For detailed operation procedures, refer to "Application help".**

LAN SYSTEM (DIAGNOSTICS) > CAN Communication Circuit Check

PROCEDURE



1. DIAG-CAN

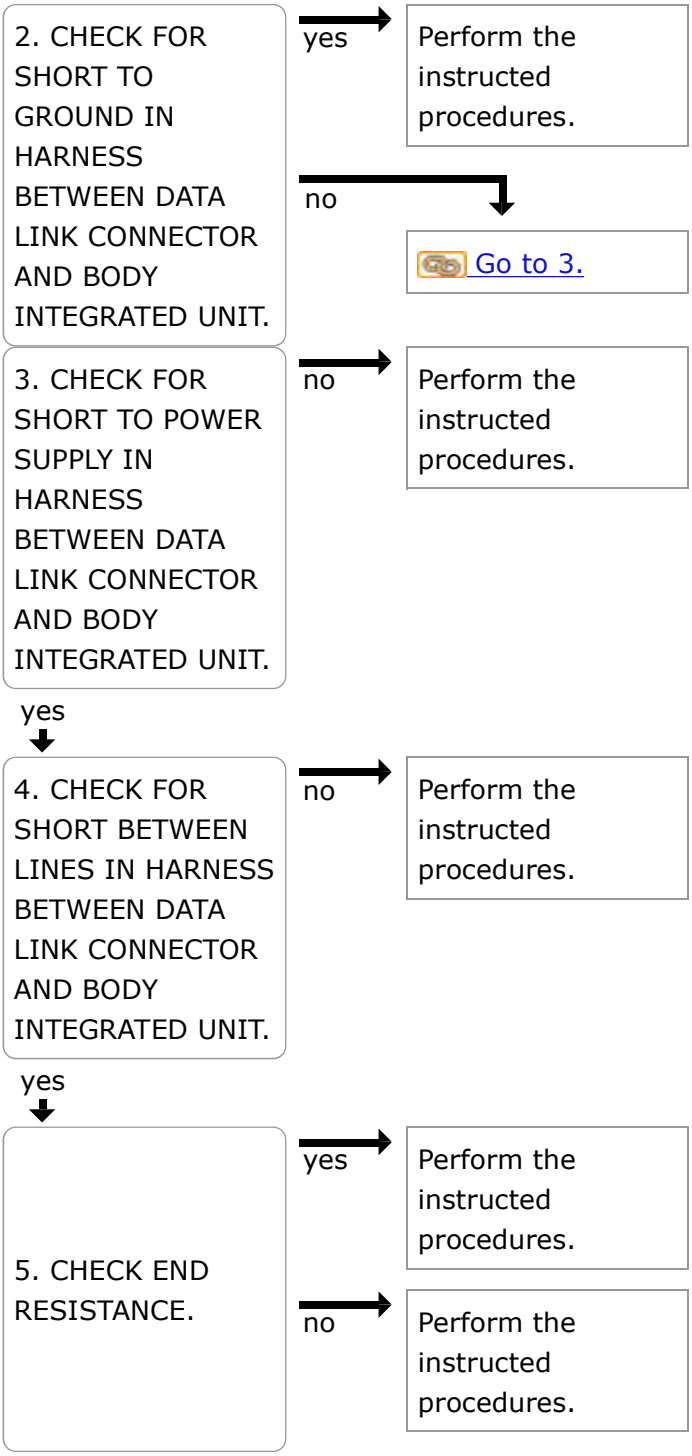
Trouble causes:

- DIAG-CAN communication circuit is shorted to ground.
- DIAG-CAN communication circuit is shorted to power supply.
- DIAG-CAN communication circuit is shorted between lines.
- Body integrated unit malfunction

Wiring diagram:

CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:



Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

Note:

When measuring the resistance of CAN communication circuit, measure it in sleep status.
To enter sleep status
– With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
– On model with the keyless access with push button start, keep the access key 2 m or more away from the vehicle.

1. CHECK BASIC DIAGNOSTIC PROCEDURE.	no →	Perform the instructed procedures.

yes ↓

2. CHECK FOR SHORT TO GROUND IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.
yes
Perform the instructed procedures.
no
Go to 3.
3. CHECK FOR SHORT TO POWER SUPPLY IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.
no
Perform the instructed procedures.
yes
4. CHECK FOR SHORT BETWEEN LINES IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.
no
Perform the instructed procedures.
yes
5. CHECK END RESISTANCE.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK BASIC DIAGNOSTIC PROCEDURE.

Check that the basic diagnosis has been performed up to STEP 3.

Note:

Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing "CHECK CAN COMMUNICATION CIRCUIT" using a tester.

Was the basic diagnostic procedure performed?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

2. CHECK FOR SHORT TO GROUND IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Using the tester, measure the resistance between data link connector and chassis ground.

Connector & terminal

(i288) No. 6 — Chassis ground:

(i288) No. 14 — Chassis ground:

Is the resistance 10 Ω or less?

Yes	Repair or replace the short circuit to ground of the harness between data link connector and body integrated unit.
No	Go to 3.

3. CHECK FOR SHORT TO POWER SUPPLY IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 6 (+) — Chassis ground (−):
   (i288) No. 14 (+) — Chassis ground (−):

Is the voltage 5 V or less?

Yes	Go to 4.
No	Repair or replace the short circuit to power supply of the harness between data link connector and body integrated unit.

4. CHECK FOR SHORT BETWEEN LINES IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.

1. Turn the ignition switch to OFF.
2. Using the tester, measure the resistance between terminals.
   Connector & terminal
   (i288) No. 6 — (i288) No. 14:

Is the resistance 1 MΩ or more?

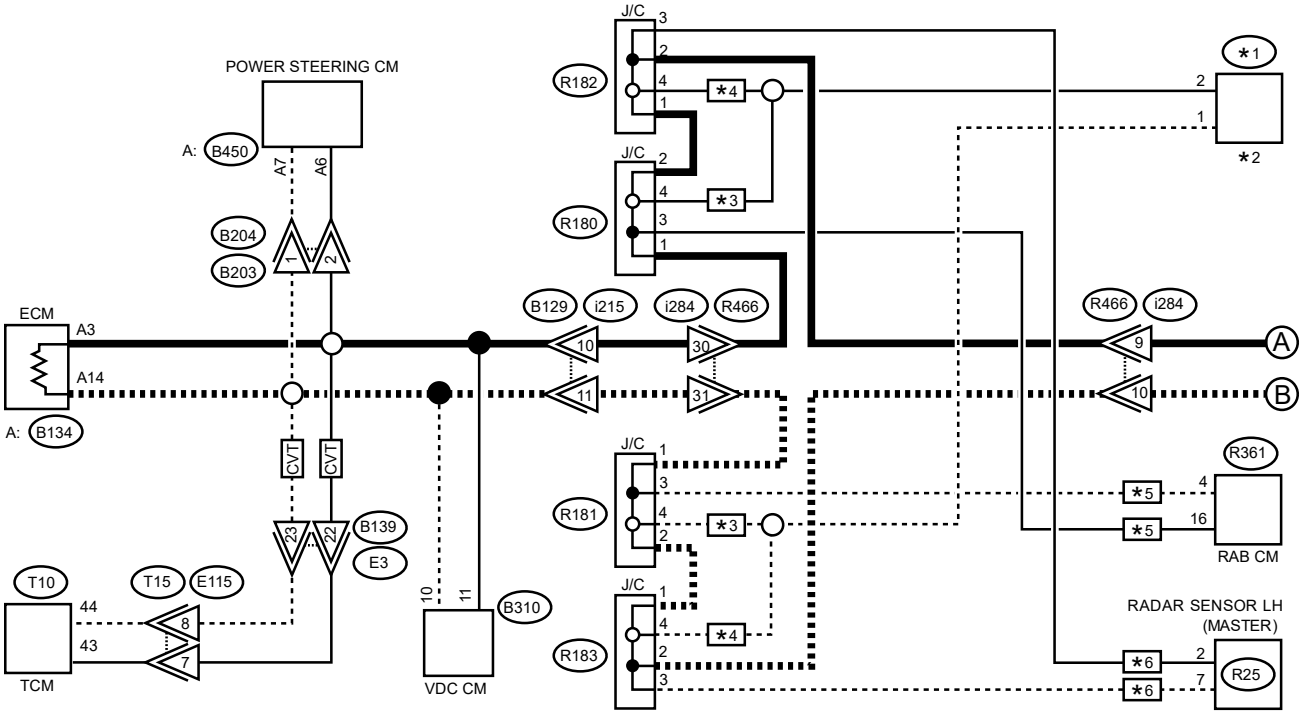
Yes	Go to 5.
No	Repair or replace the short circuit between lines of the harness between data link connector and body integrated unit.

5. CHECK END RESISTANCE.

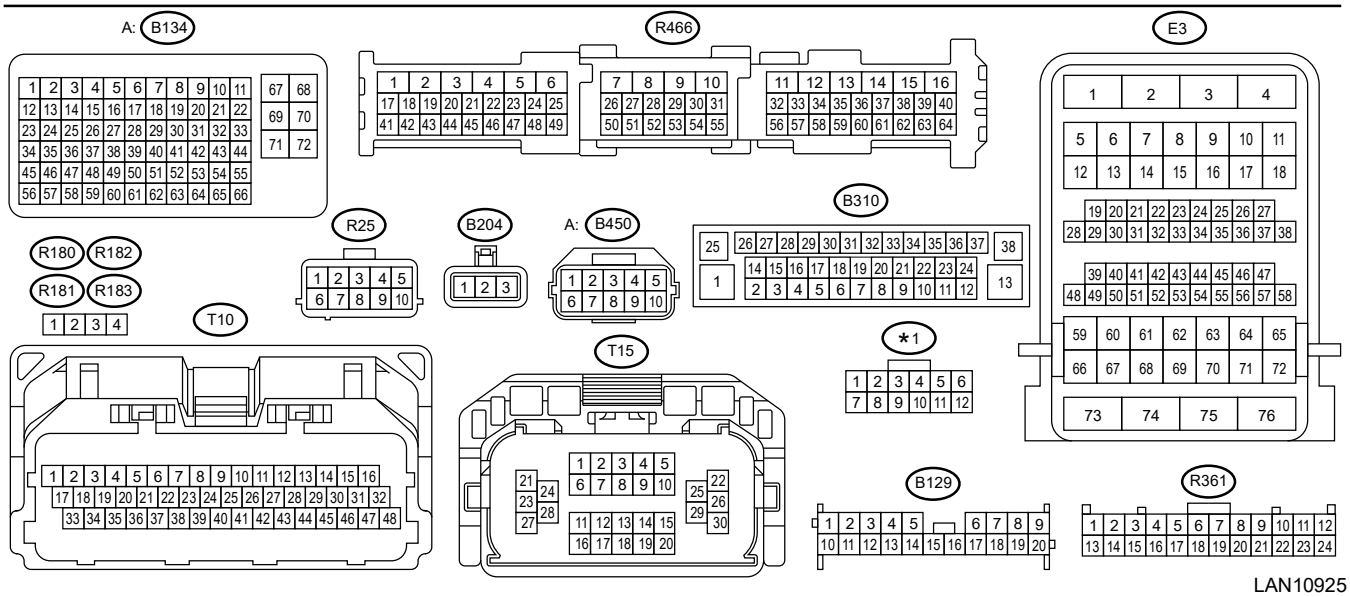
1. Connect the body integrated unit connector.
2. Using a tester, measure the resistance between terminals of data link connector.
   Connector & terminal
   (i288) No. 6 — (i288) No. 14:

Is the resistance 114 — 126 Ω?

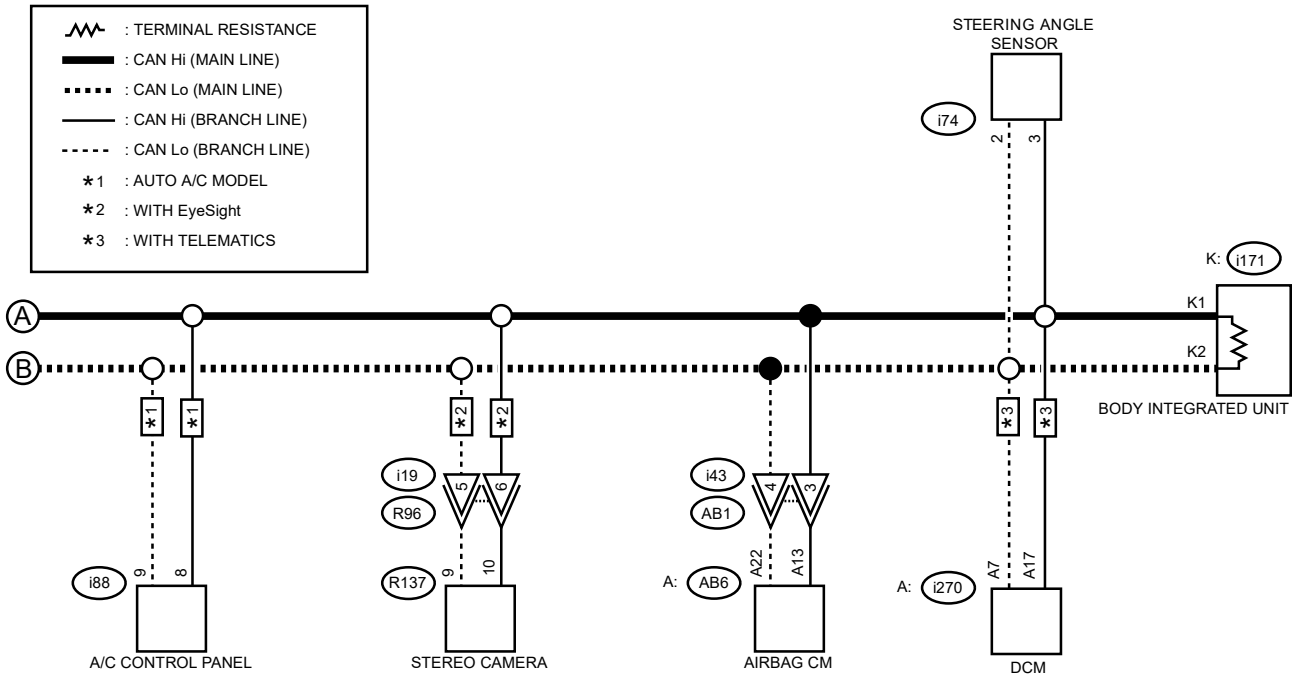
Yes	CAN communication circuit is normal.
No	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.



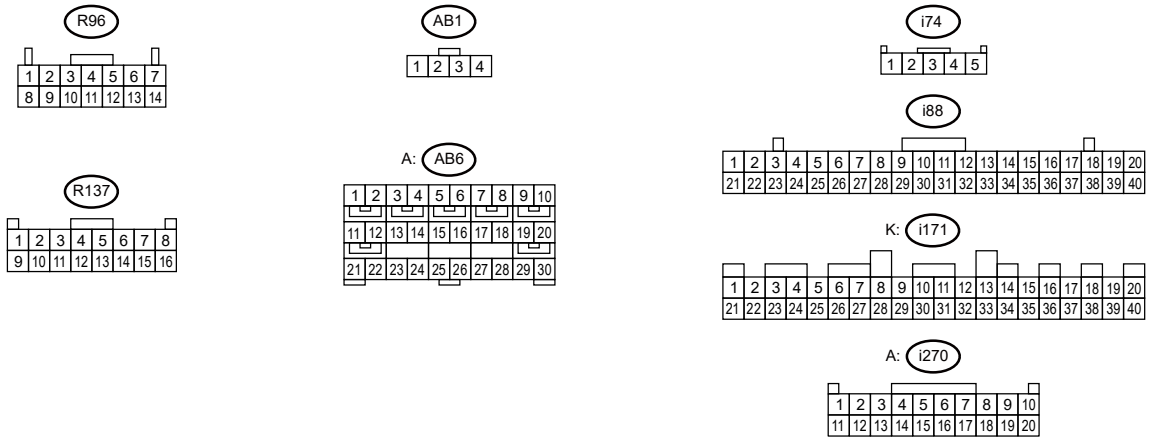
2. MAIN-CAN



Trouble causes:



- MAIN-CAN communication circuit is shorted to ground.
- MAIN-CAN communication circuit is shorted to power supply.
- MAIN-CAN communication circuit is shorted between lines.



Wiring diagram:

CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

LAN10925

LAN10926

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

Note:

- **When measuring the resistance of CAN communication circuit, measure it in sleep status.**
  To enter sleep status
  – With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
  – On model with the keyless access with push button start, keep the access key 2 m or more away from the vehicle.
- **When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in body integrated unit can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. If the measured resistance value becomes 52 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 62 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.**
  Also, even when the resistance value falls within approx. 53 — 61 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance cannot be between approx. 53 — 61 Ω if the main wiring harness is open.)

1. CHECK BASIC DIAGNOSTIC PROCEDURE.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK FOR SHORT TO GROUND IN MAIN-CAN COMMUNICATION CIRCUIT.
   - yes → Perform the instructed procedures.
   - no → Go to 3.
3. CHECK FOR SHORT TO POWER SUPPLY IN MAIN-CAN COMMUNICATION CIRCUIT.
   - no → Perform the instructed procedures.
   - yes ↓

4. CHECK FOR SHORT IN MAIN-CAN COMMUNICATION CIRCUIT.	yes →	Perform the instructed procedures.
	no →	Go to 5.
5. CHECK FOR OPEN CIRCUIT IN MAIN-CAN COMMUNICATION CIRCUIT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK BASIC DIAGNOSTIC PROCEDURE.

Check that the basic diagnosis has been performed up to STEP 3.

Note:

Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing "CHECK CAN COMMUNICATION CIRCUIT" using a tester.

Was the basic diagnostic procedure performed?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

2. CHECK FOR SHORT TO GROUND IN MAIN-CAN COMMUNICATION CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the steering sensor connector.
3. Using a tester, measure the resistance between the steering sensor connector and chassis ground.

   Connector & terminal

   (i74) No. 2 — Chassis ground:

   (i74) No. 3 — Chassis ground:

Is the resistance 10 Ω or less?

Yes	Check for ground short. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > GROUND SHORT INSPECTION.
No	Go to 3.

3. CHECK FOR SHORT TO POWER SUPPLY IN MAIN-CAN COMMUNICATION CIRCUIT.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the steering sensor connector and chassis ground.

   Connector & terminal

   (i74) No. 2 (+) — Chassis ground (−):

   (i74) No. 3 (+) — Chassis ground (−):

Is the voltage 5 V or less?

Yes	Go to 4.
No	Check for power supply short. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > CHECK POWER SUPPLY SHORT.

4. CHECK FOR SHORT IN MAIN-CAN COMMUNICATION CIRCUIT.

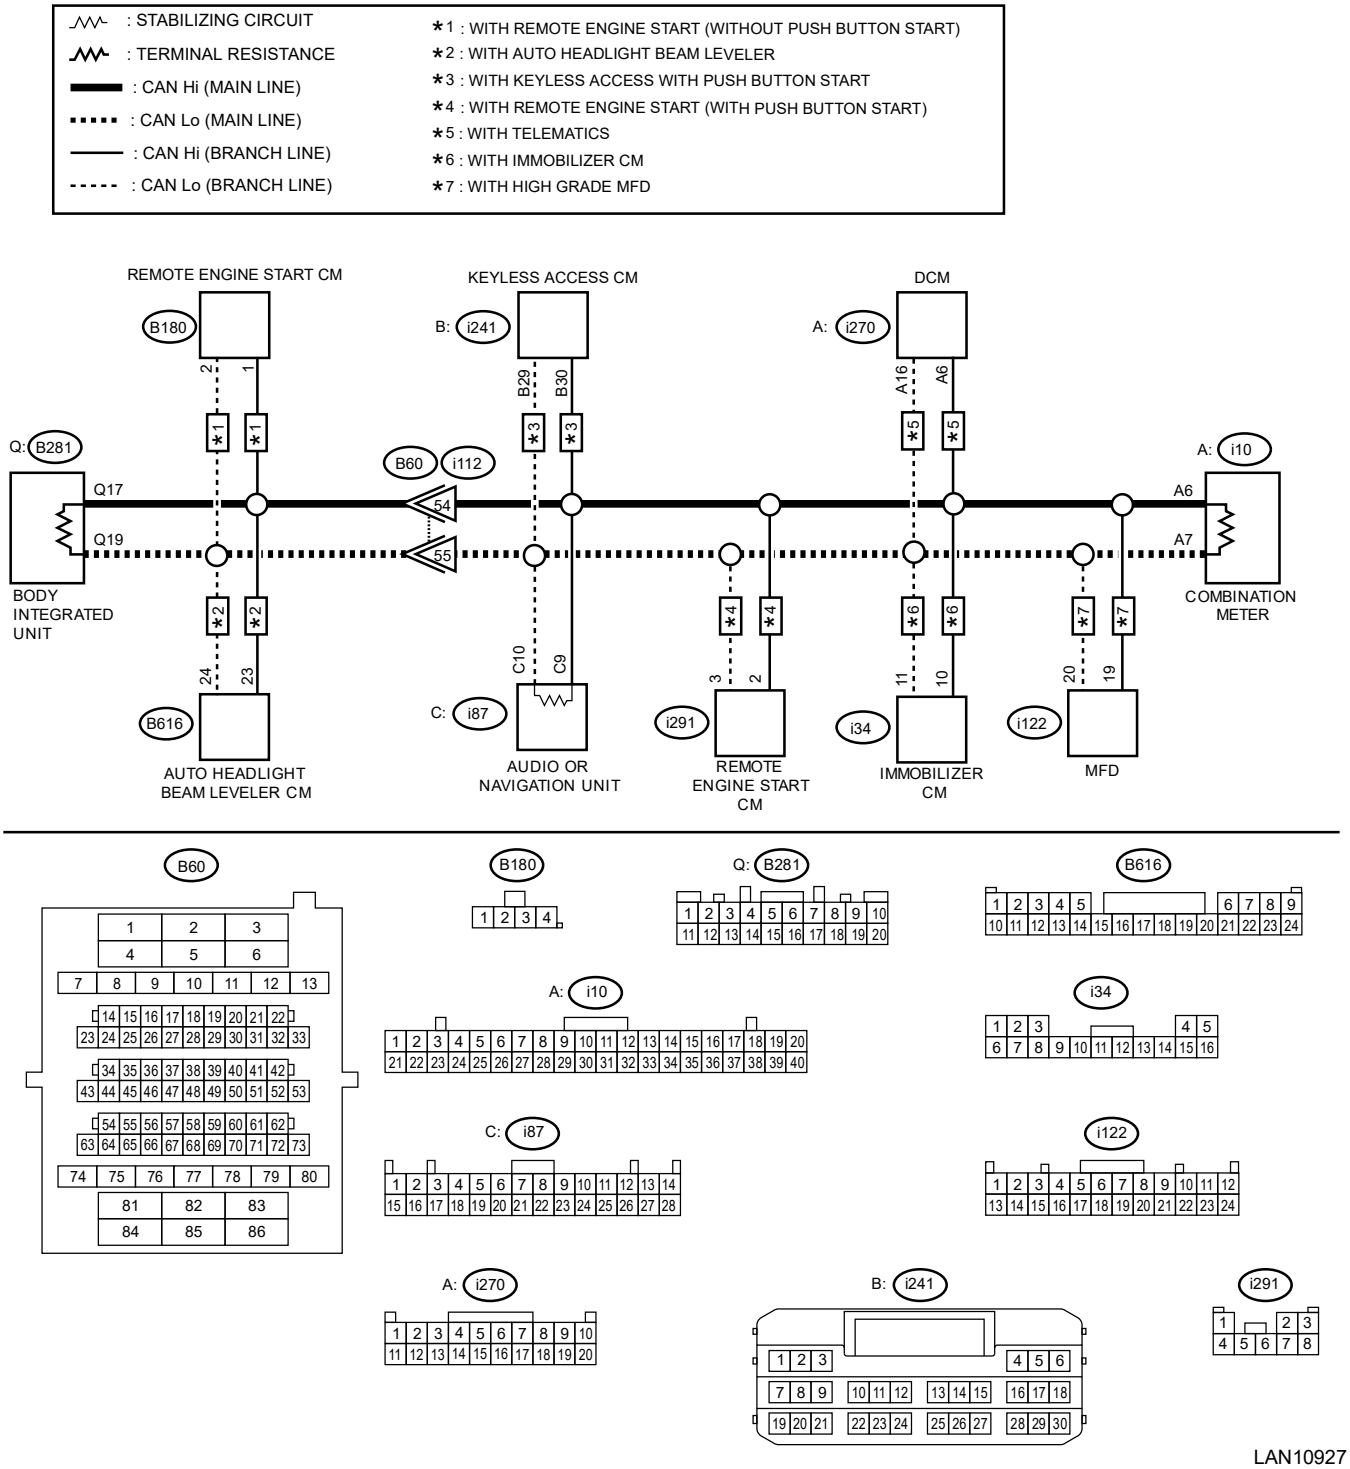
1. Turn the ignition switch to OFF.
2. Using a tester, measure the resistance between terminals of steering sensor connector.
   Connector & terminal
   (i74) No. 2 — (i74) No. 3:

Is the resistance 52 Ω or less?

Yes	Perform the inspection for resistance of 52 Ω or less. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 52 Ω OR LESS.
No	Go to 5.

5. CHECK FOR OPEN CIRCUIT IN MAIN-CAN COMMUNICATION CIRCUIT.

Using a tester, measure the resistance between terminals of steering sensor connector.
Connector & terminal
(i74) No. 2 — (i74) No. 3:



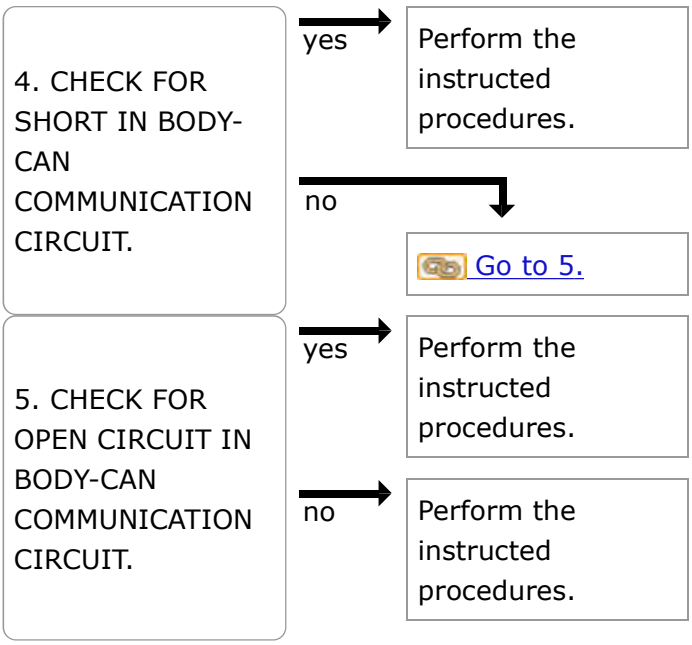
Is the resistance 62 Ω or more?

Yes	Perform the inspection for resistance of 62 Ω or more. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 62 Ω OR MORE.
No	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>LIST.

3. BODY-CAN

Trouble causes:
- BODY-CAN communication circuit is shorted to ground.
- BODY-CAN communication circuit is shorted to power supply.
- BODY-CAN communication circuit is shorted between lines.

Wiring diagram:
CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.



Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

Note:

- **When measuring the resistance of CAN communication circuit, measure it in sleep status.**
  To enter sleep status
  – With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
  – On model with the keyless access with push button start, keep the access key 2 m or more away from the vehicle.
- **When the bus line is measured, combined resistance of the end resistance (120 Ω) in body integrated unit and the end resistance (120 Ω) in combination meter can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. If the measured resistance value becomes 52 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 62 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.**
  Also, even when the resistance value falls within approx. 53 — 61 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance cannot be between approx. 53 — 61 Ω if the main wiring harness is open.)

1. CHECK BASIC DIAGNOSTIC PROCEDURE.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK FOR SHORT TO GROUND IN BODY-CAN COMMUNICATION CIRCUIT.
   - yes → Perform the instructed procedures.
   - no → Go to 3.
3. CHECK FOR SHORT TO POWER SUPPLY IN BODY-CAN COMMUNICATION CIRCUIT.
   - no → Perform the instructed procedures.
   - yes ↓

1. CHECK BASIC DIAGNOSTIC PROCEDURE.

Check that the basic diagnosis has been performed up to STEP 3.

Note:

Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing "CHECK CAN COMMUNICATION CIRCUIT" using a tester.

Was the basic diagnostic procedure performed?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

2. CHECK FOR SHORT TO GROUND IN BODY-CAN COMMUNICATION CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the audio or navigation unit connector.
3. Using a tester, measure the resistance between audio or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 9 — Chassis ground:

(i87) No. 10 — Chassis ground:

Is the resistance 10 Ω or less?

Yes	Check for ground short. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > GROUND SHORT INSPECTION.
No	Go to 3.

3. CHECK FOR SHORT TO POWER SUPPLY IN BODY-CAN COMMUNICATION CIRCUIT.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between audio or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 9 (+) — Chassis ground (−):

(i87) No. 10 (+) — Chassis ground (−):

Is the voltage 5 V or less?

Yes	Go to 4.
No	Check for power supply short. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > CHECK POWER SUPPLY SHORT.

4. CHECK FOR SHORT IN BODY-CAN COMMUNICATION CIRCUIT.

1. Turn the ignition switch to OFF.
2. Using a tester, measure the resistance between audio or navigation unit connector terminals.
   Connector & terminal
   (i87) No. 9 — (i87) No. 10:

Is the resistance 52 Ω or less?

Yes	Perform the inspection for resistance of 52 Ω or less. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 52 Ω OR LESS.
No	Go to 5.

5. CHECK FOR OPEN CIRCUIT IN BODY-CAN COMMUNICATION CIRCUIT.

Using a tester, measure the resistance between audio or navigation unit connector terminals.
Connector & terminal
(i87) No. 9 — (i87) No. 10:

Is the resistance 62 Ω or more?

Yes	Perform the inspection for resistance of 62 Ω or more. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 62 Ω OR MORE.
No	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>LIST.

LAN SYSTEM (DIAGNOSTICS) > CAN Communication Circuit Check

LIST

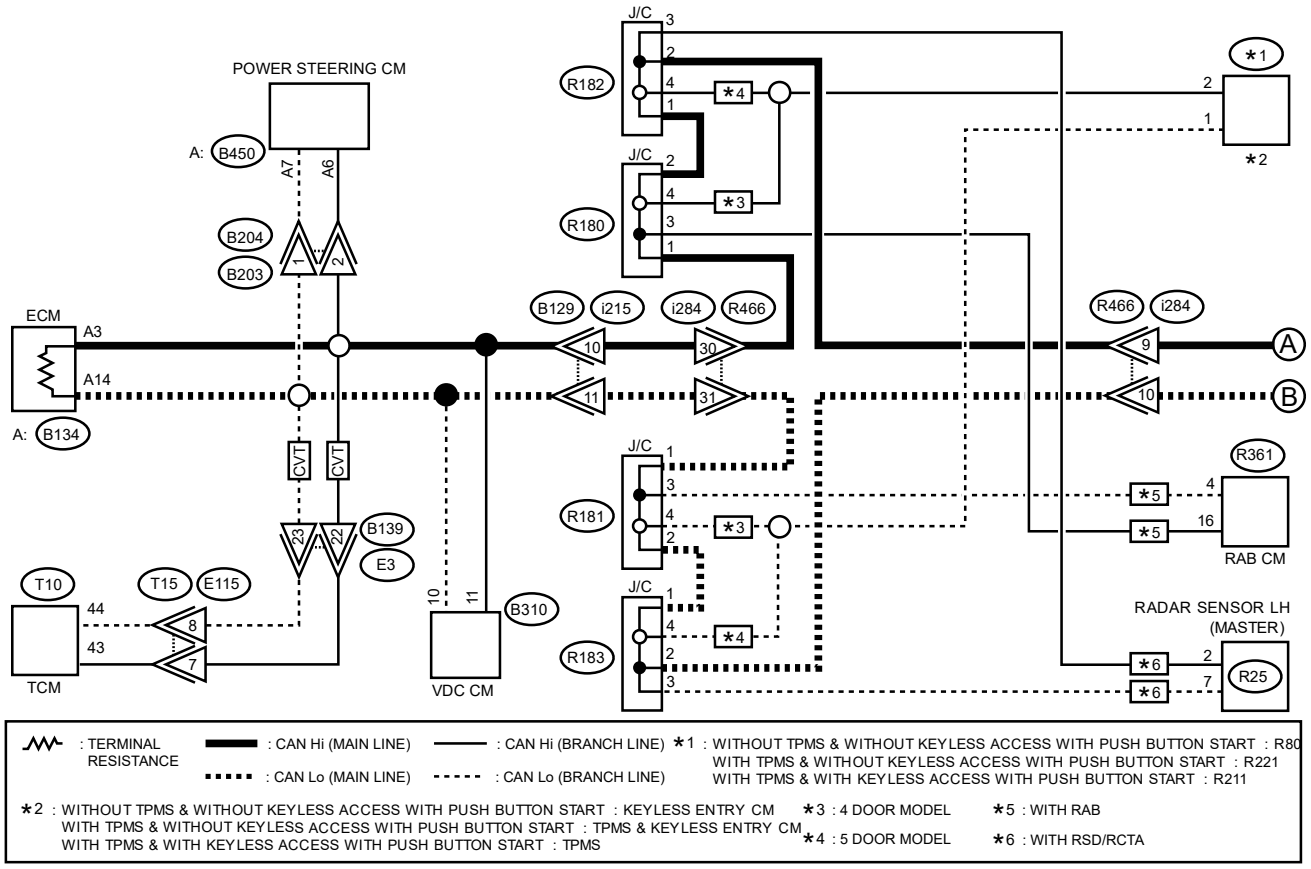
Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Ground short inspection	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > GROUND SHORT INSPECTION.	Shorted to ground in the communication circuit or control module.

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Check power supply short	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > CHECK POWER SUPPLY SHORT.	Shorted to battery power supply in the communication circuit or control module.
53 — 61 Ω	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 53 — 61 Ω.	Combined resistance of end resistance does not have malfunction; short to ground or +B short of the CAN communication circuit is possible, however.
52 Ω or less	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 52 Ω OR LESS.	Resistance is lower than combined resistance of end resistance. Short to CAN Hi and CAN Lo on the CAN communication circuit is possible.
62 Ω or more	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > 62 Ω OR MORE.	Resistance is higher than combined resistance of end resistance. Open circuit of CAN communication circuit is possible.
Related lines 53 — 61 Ω (TCM)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (TCM).	No TCM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (steering angle sensor)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (STEERING ANGLE SENSOR).	No steering angle sensor data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (A/C control panel)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (A/C CONTROL PANEL).	No A/C data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (power steering CM)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED	No power steering data is received. Perform inspection when faulty is detected.

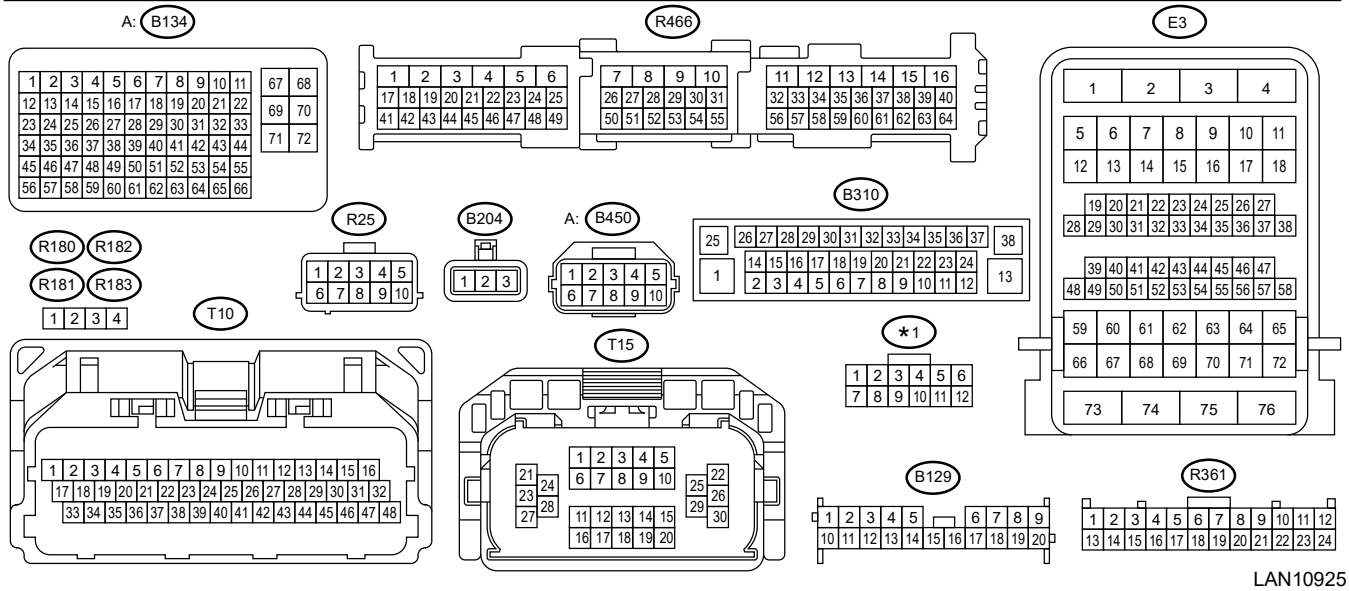
Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
	LINES 53 — 61 Ω (POWER STEERING).	
Related lines 53 — 61 Ω (combination meter)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (COMBINATION METER).	No meter data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (infotainment system)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (INFOTAINMENT SYSTEM).	No infotainment data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (airbags)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (AIRBAG CM SYSTEM).	No airbag data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (keyless access system)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (KEYLESS ACCESS SYSTEM).	No keyless access CM data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (BSD/RCTA)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (BSD/RCTA).	No BSD/RCTA data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (headlight beam leveler)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (HEADLIGHT BEAM LEVELER).	No headlight beam leveler data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (remote engine starter)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (REMOTE ENGINE STARTER).	Perform inspection when the remote engine starter does not operate, while the mobile key side operates normally.

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Related lines 53 — 61 Ω (stereo camera)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (STEREO CAMERA).	No stereo camera data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (immobilizer system)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (IMMOBILIZER SYSTEM).	No immobilizer data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (Telematics)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (TELEMATICS).	No telematics data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (RAB)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (RAB).	Perform inspection when no RAB data is received, or invalid data is detected.
Related lines 53 — 61 Ω (VDC)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (VDC).	No VDC data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (Keyless entry/TPMS)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (KEYLESS ENTRY/TPMS).	No keyless entry/TPMS data is received. Perform inspection when faulty is detected.
Related lines 53 — 61 Ω (MFD)	Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>INSPECTION > RELATED LINES 53 — 61 Ω (MFD).	No MFD data is received. Perform inspection when faulty is detected.

LAN SYSTEM (DIAGNOSTICS) > CAN Communication Circuit Check

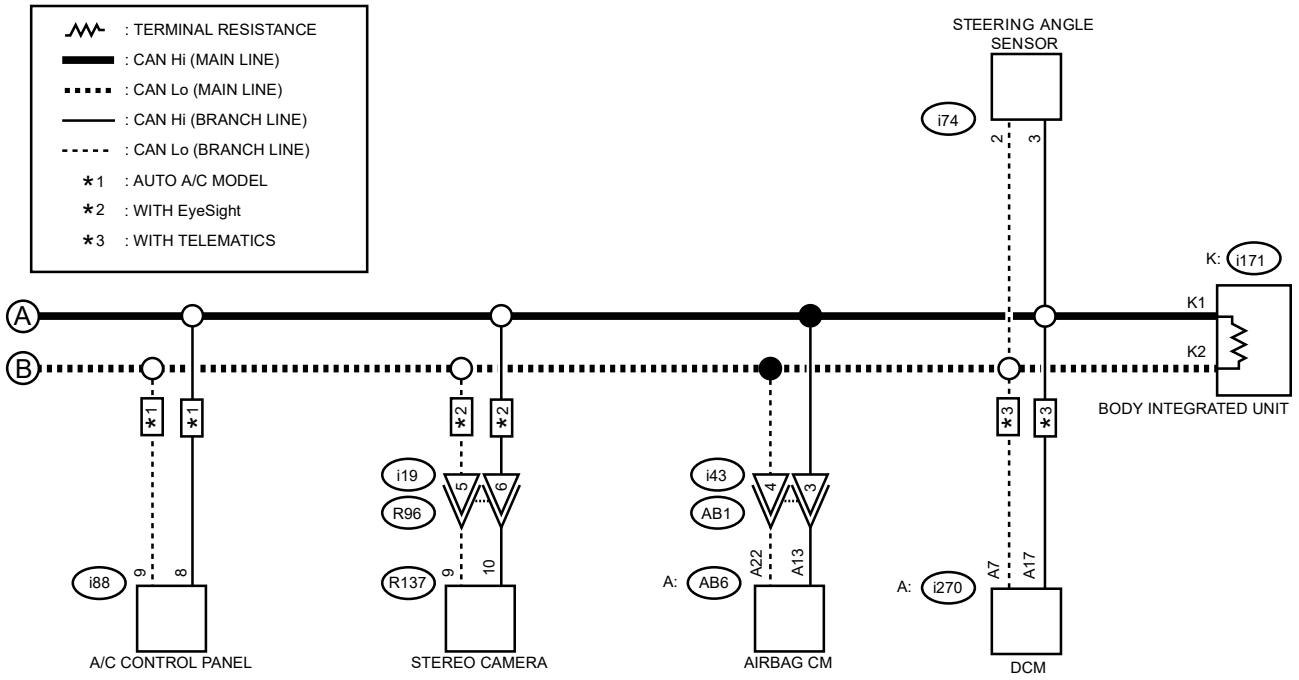


INSPECTION

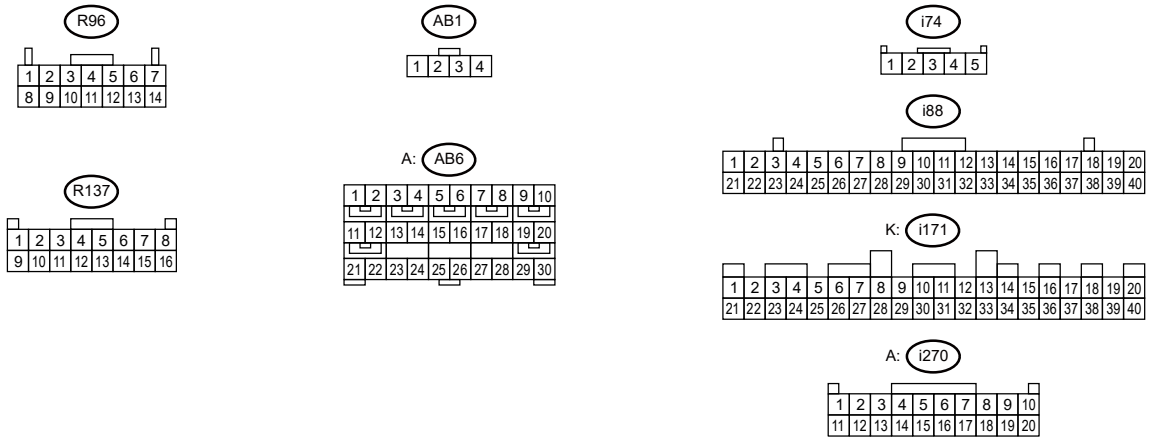


1. GROUND SHORT INSPECTION

- MAIN-CAN



Wiring diagram:



CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

LAN10925

LAN10926

Note:

Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the steering sensor connector.
3. Using a tester, measure the resistance between the steering sensor connector and chassis ground.

Connector & terminal

(i74) No. 2 — Chassis ground:

(i74) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 2.
No	Currently, it is normal.

2. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i74) No. 2 — Chassis ground:

(i74) No. 3 — Chassis ground:

Did the resistance change to 10 Ω or more?

Yes	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to 3.
No	Repair or replace the short circuit of the main wiring harness and related lines between body integrated unit and ECM.

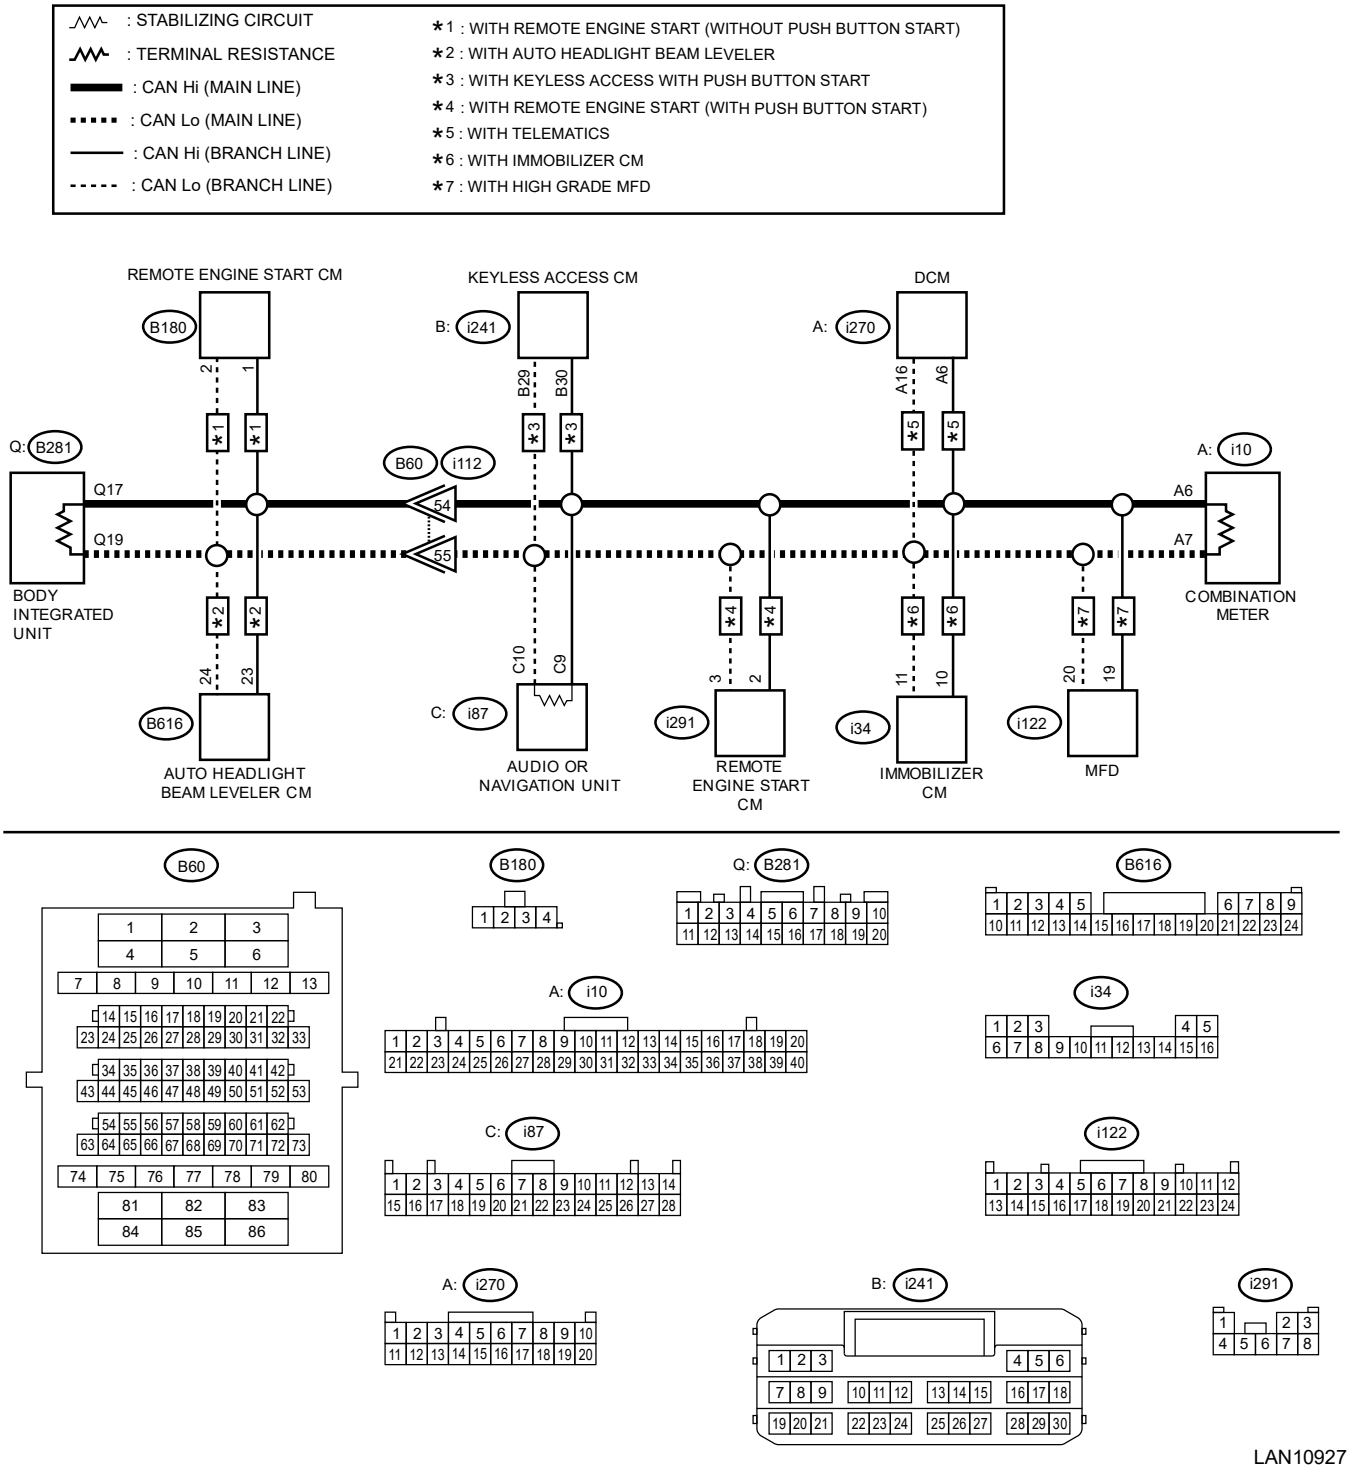
3. CHECK BETWEEN MAIN WIRING HARNESSES.

Measure the resistance between body integrated unit connector and chassis ground using tester.

Connector & terminal

(i171) No. 1 — Chassis ground:

(i171) No. 2 — Chassis ground:



Is the resistance less than 10 Ω?

Yes	Repair or replace the short circuit of the main wiring harness and related lines between ECM — body integrated unit.
No	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL.

- BODY-CAN

  Wiring diagram:

  CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Note:

Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the audio or navigation unit connector.
3. Using a tester, measure the resistance between audio or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 9 — Chassis ground:

(i87) No. 10 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 2.
No	Currently, it is normal.

2. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i87) No. 9 — Chassis ground:

(i87) No. 10 — Chassis ground:

Did the resistance change to 10 Ω or more?

Yes	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to 3.
No	Repair or replace the short circuit of the main wiring harness and related lines between body integrated unit — combination meter.

3. CHECK BETWEEN MAIN WIRING HARNESSES.

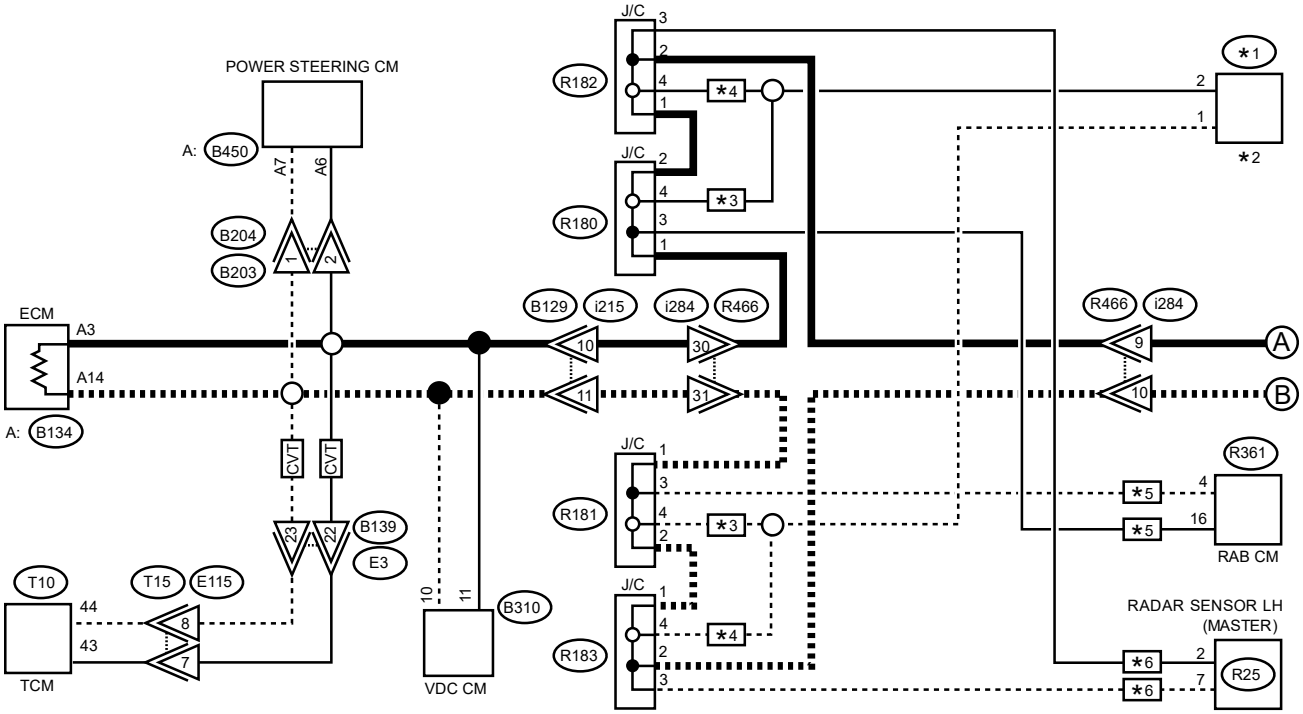
Measure the resistance between body integrated unit connector and chassis ground using tester.

Connector & terminal

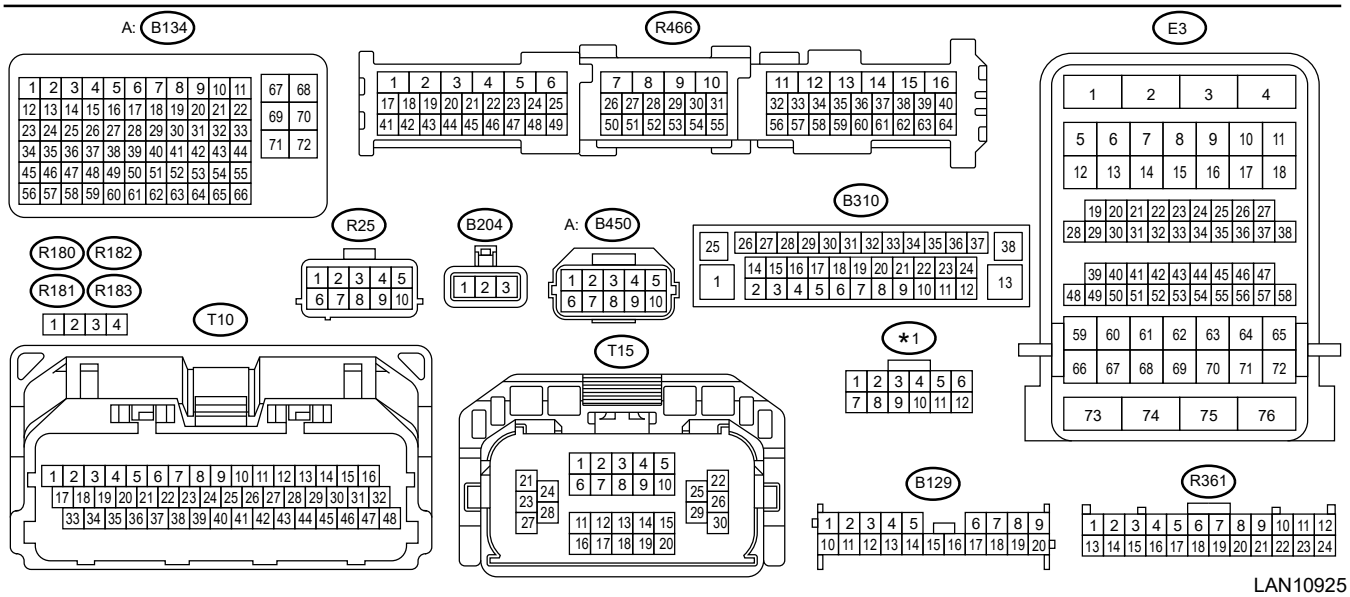
(B281) No. 17 — Chassis ground:

(B281) No. 19 — Chassis ground:

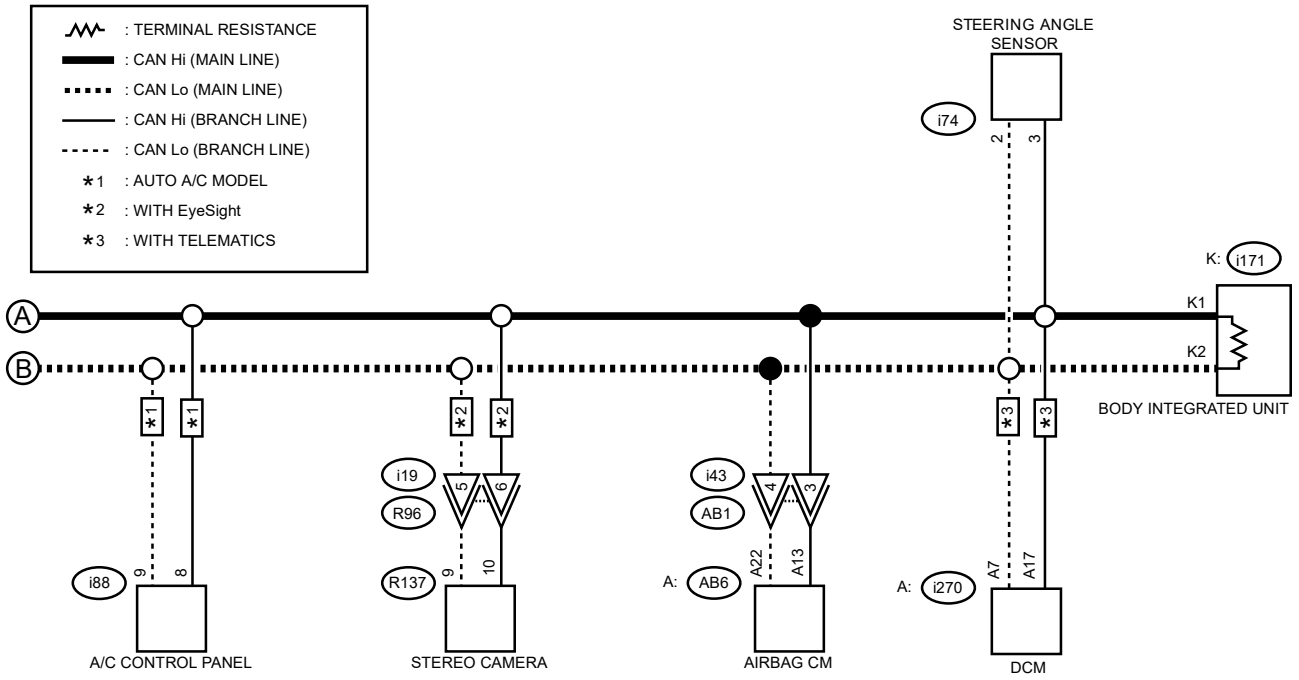
Is the resistance less than 10 Ω?



Yes	Repair or replace the short circuit of the main wiring harness and related lines between combination meter — body integrated unit.
No	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL.



2. CHECK POWER SUPPLY SHORT



- MAIN-CAN

Note:

Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the steering sensor connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the steering sensor connector and chassis ground.

Connector & terminal

(i74) No. 2 (+) — Chassis ground (−):

(i74) No. 3 (+) — Chassis ground (−):

Is the voltage 5 V or less?

Yes	Currently, it is normal.
No	Go to 2.

2. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i74) No. 2 (+) — Chassis ground (−):

(i74) No. 3 (+) — Chassis ground (−):

Did the voltage change to 5 V or less?

Yes	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to 3.
No	Repair or replace the short circuit of the harness between body integrated unit and ECM.

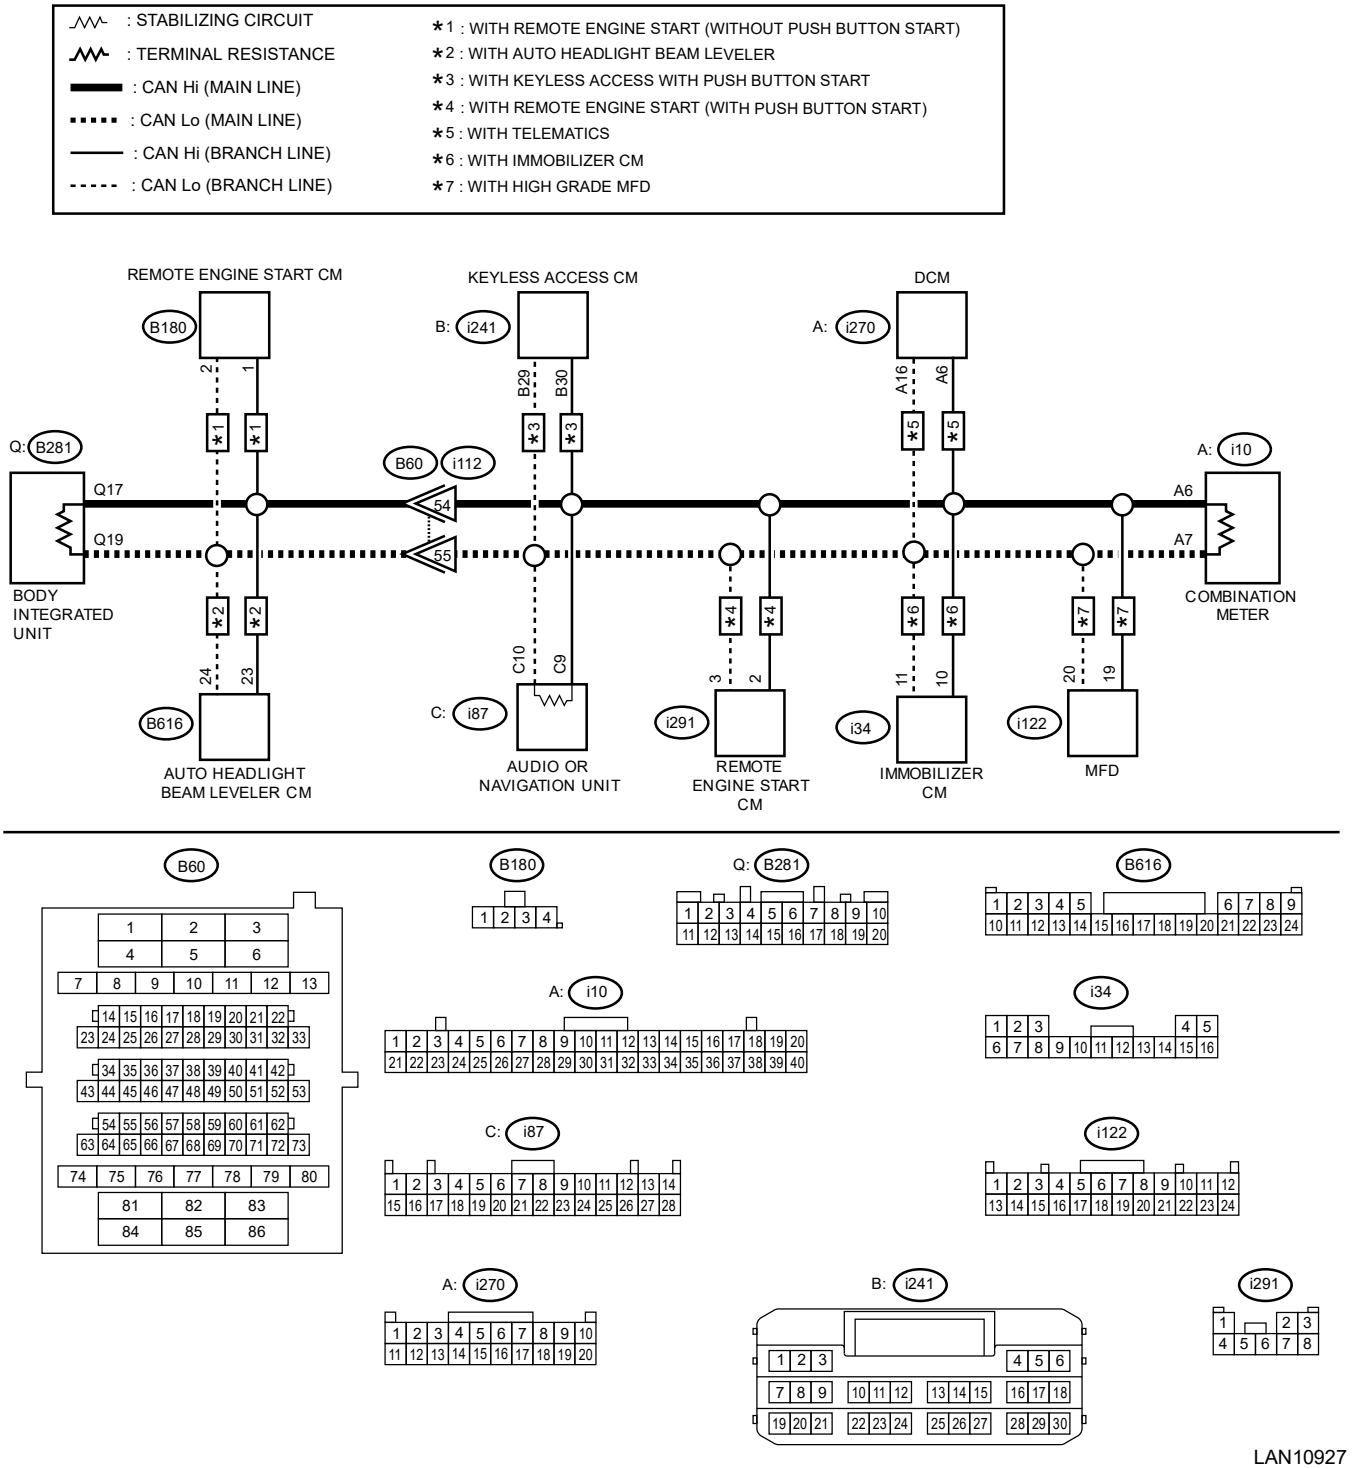
3. CHECK BETWEEN MAIN WIRING HARNESSES.

Measure the voltage between body integrated unit connector and chassis ground using tester.

Connector & terminal

(i171) No. 1 (+) — Chassis ground (−):

(i171) No. 2 (+) — Chassis ground (−):



Is the voltage 5 V or less?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL.
No	Repair or replace the short circuit to power supply of the harness between ECM — body integrated unit.

- BODY-CAN

  Wiring diagram:

  CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Note:

Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the audio or navigation unit connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between audio or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 9 (+) — Chassis ground (−):

(i87) No. 10 (+) — Chassis ground (−):

Is the voltage 5 V or less?

Yes	Currently, it is normal.
No	Go to 2.

2. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i87) No. 9 (+) — Chassis ground (−):

(i87) No. 10 (+) — Chassis ground (−):

Did the voltage change to 5 V or less?

Yes	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to 3.
No	Repair or replace the short circuit of the harness between body integrated unit — audio or navigation unit.

3. CHECK BETWEEN MAIN WIRING HARNESSES.

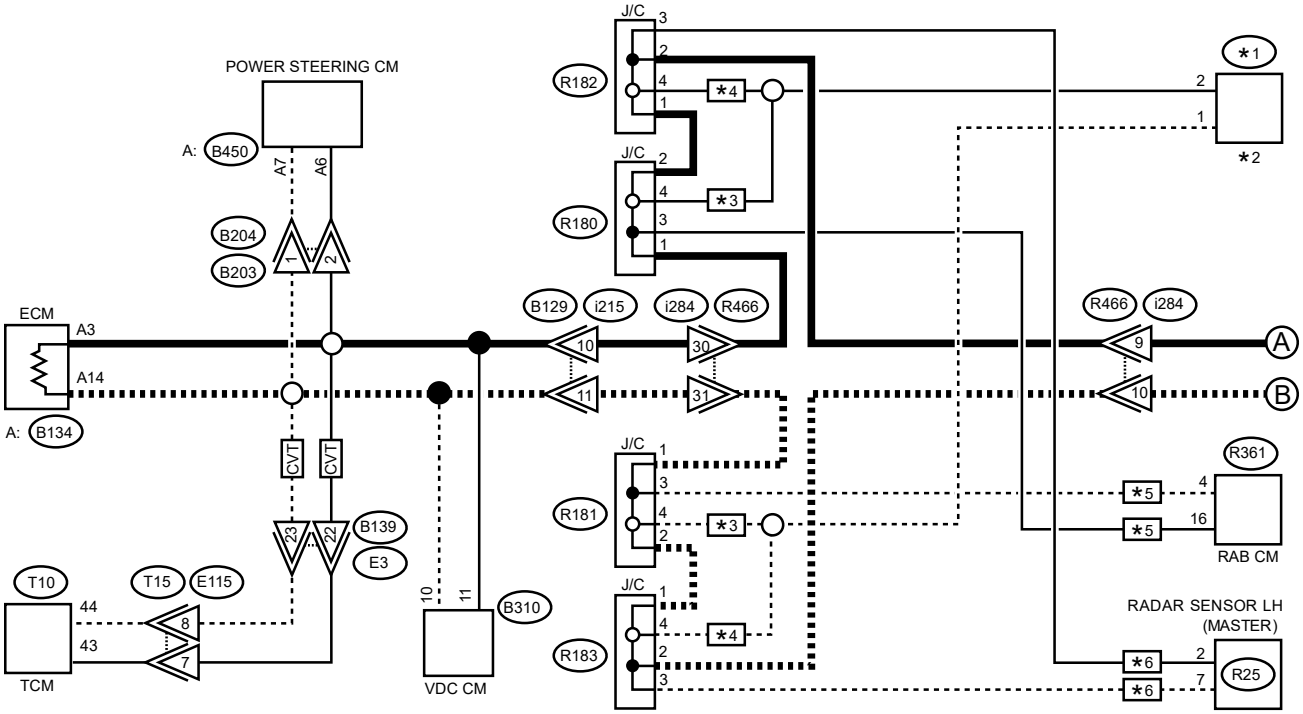
Using the tester, measure the voltage between terminals.

Connector & terminal

(B281) No. 17 (+) — Chassis ground (−):

(B281) No. 19 (+) — Chassis ground (−):

Is the voltage 5 V or less?



Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL.
No	Repair or replace the short circuit of the harness between combination meter — body integrated unit.

LAN10926

Note:

When the measured resistance value is 53 — 61 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related lines may be open.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the steering sensor connector.
3. Using a tester, measure the resistance between the steering sensor connector and chassis ground.

Connector & terminal

(i74) No. 2 — Chassis ground:

(i74) No. 3 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 2.
No	Go to 3.

2. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i74) No. 2 — Chassis ground:

(i74) No. 3 — Chassis ground:

Did the resistance change to 10 Ω or more?

Yes	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL. Go to 3.
No	Repair or replace the short circuit of the harness between body integrated unit and ECM.

3. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the steering sensor connector and chassis ground.
   Connector & terminal
   (i74) No. 2 (+) — Chassis ground (−):
   (i74) No. 3 (+) — Chassis ground (−):

Is the voltage 5 V or less?

Yes	CAN communication circuit is normal.
No	Go to 4.

4. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.
Note:
Disconnect the body integrated unit at the end.
Connector & terminal
(i74) No. 2 (+) — Chassis ground (−):
(i74) No. 3 (+) — Chassis ground (−):

Did the voltage change to 5 V or less?

Yes	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL. Go to 5.
No	Repair or replace the short circuit of the harness between body integrated unit and ECM.

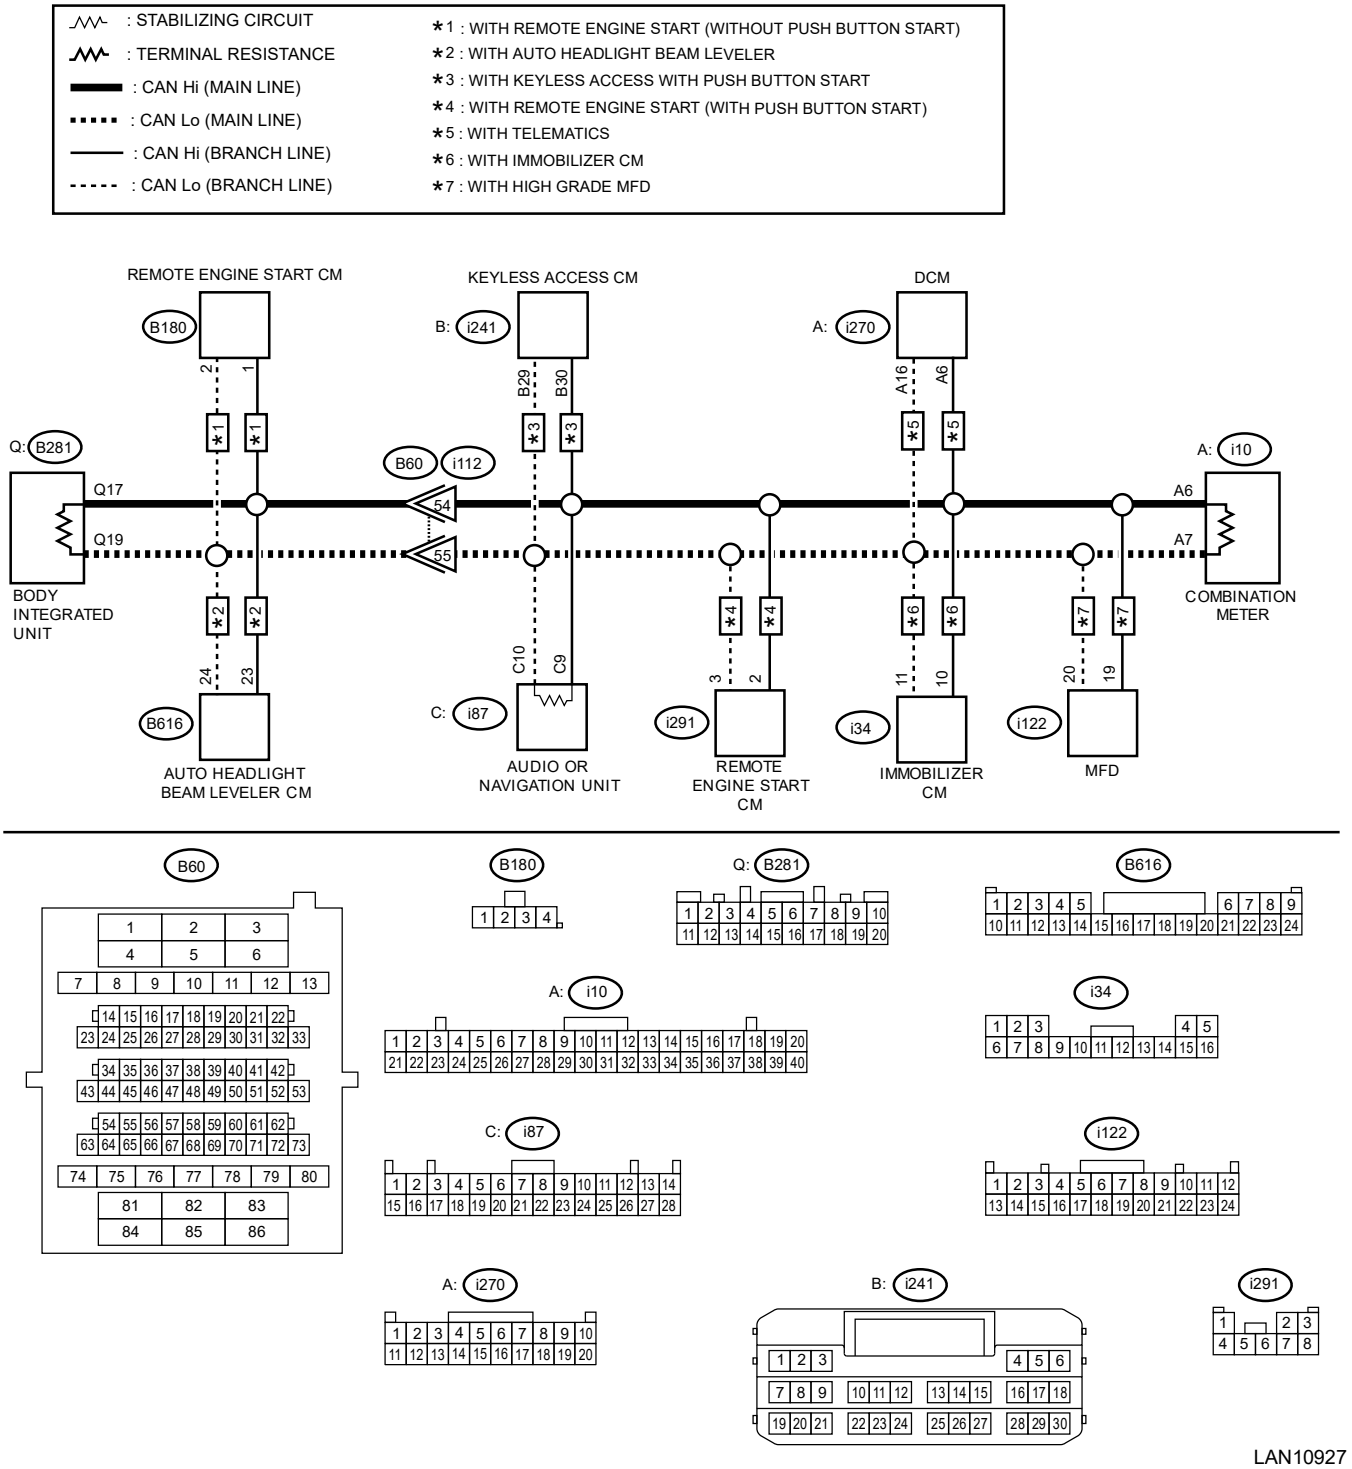
5. CHECK HARNESS.

Measure the voltage between body integrated unit connector and chassis ground using tester.

Connector & terminal

(i171) No. 1 (+) — Chassis ground (−):

(i171) No. 2 (+) — Chassis ground (−):



Is the voltage 5 V or less?

Yes	CAN communication circuit is normal.
No	Repair or replace the short circuit of the harness between ECM — body integrated unit.

- BODY-CAN

  Wiring diagram:

  CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Note:

When the measured resistance value is 53 — 61 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related lines may be open.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the audio or navigation unit connector.
3. Using a tester, measure the resistance between audio or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 9 — Chassis ground:

(i87) No. 10 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 2.
No	Go to 3.

2. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i87) No. 9 — Chassis ground:

(i87) No. 10 — Chassis ground:

Did the resistance change to 10 Ω or more?

Yes	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL. Go to 3.
No	Repair or replace the short circuit of harness between body integrated unit — combination meter.

3. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between audio or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 9 (+) — Chassis ground (−):

(i87) No. 10 (+) — Chassis ground (−):

Is the voltage 5 V or less?

Yes	CAN communication circuit is normal.
No	Go to 4.

4. CHECK CONTROL MODULE.

With the tester connected, disconnect control module.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i87) No. 9 (+) — Chassis ground (−):

(i87) No. 103 (+) — Chassis ground (−):

Did the voltage change to 5 V or less?

Yes	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL. Go to 5.
No	Repair or replace the short circuit of the harness between body integrated unit and ECM.

5. CHECK HARNESS.

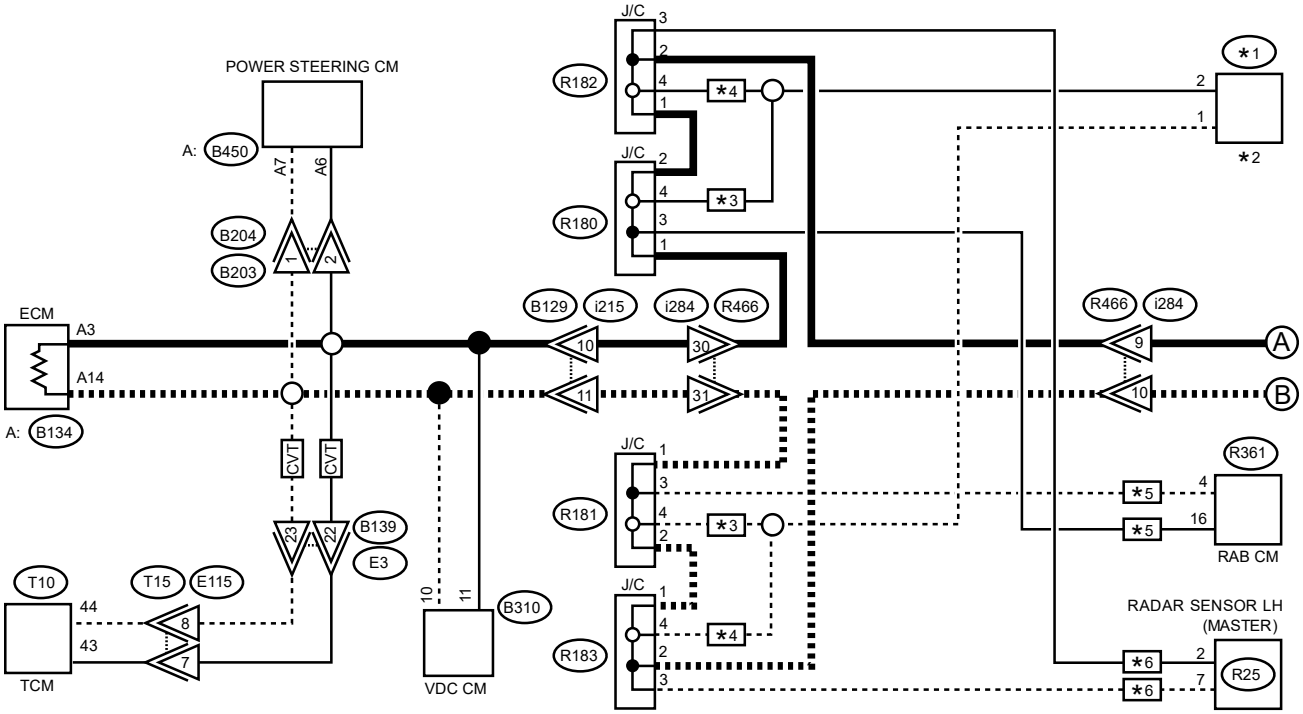
Measure the voltage between body integrated unit connector and chassis ground using tester.

Connector & terminal

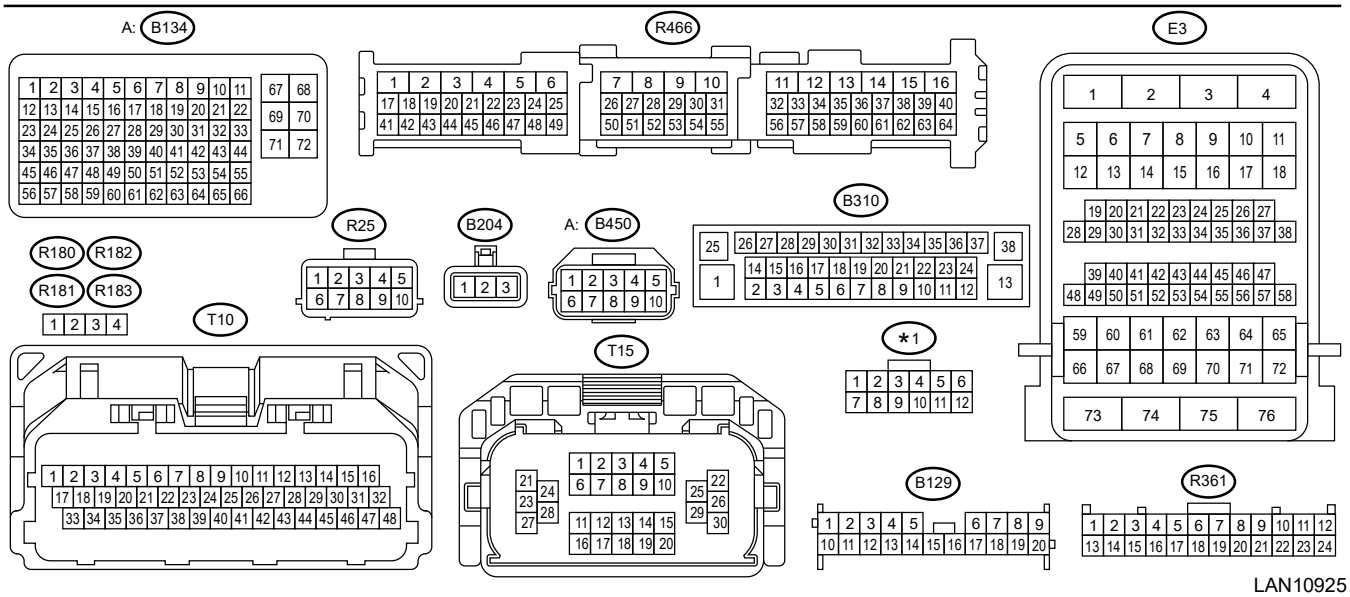
(B281) No. 17 (+) — Chassis ground (−):

(B281) No. 19 (+) — Chassis ground (−):

Is the voltage 5 V or less?



Yes	CAN communication circuit is normal.
No	Repair or replace the short circuit of the harness between combination meter — body integrated unit.



4. 52 Ω OR LESS

Note:

When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in body integrated unit can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the steering sensor connector.
3. Using a tester, measure the resistance between the steering sensor connector and chassis ground.
   Connector & terminal
   (i74) No. 2 — (i74) No. 3:

Is the resistance less than 10 Ω?

Yes	Go to 2.
No	Go to 3.

2. CHECK MAIN WIRING HARNESS AND RELATED LINES.

With a tester connected, disconnect control module connectors in order.

Note:
Disconnect the body integrated unit at the end.

Connector & terminal
(i74) No. 2 — (i74) No. 3:

Is there any control module whose condition has changed from short state?

Yes	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL. Go to 3.
No	Repair or replace the short circuit of the harness between body integrated unit and ECM.

3. CHECK CONTROL MODULE.

1. Disconnect the connectors of ECM and body integrated unit.
2. Using a tester, measure the resistance between control module terminals.

Connector & terminal

(B134) No. 3 — (B134) No. 14:

(i171) No. 1 — (i171) No. 2:

Is the resistance 114 — 126 Ω?

Yes	Go to 4.
No	Replace the control module whose end resistance value is out of the specified range.

4. CHECK HARNESS.

Measure the resistance between body integrated unit connector terminals using tester.

Connector & terminal

(i171) No. 1 — (i171) No. 2:

Is the resistance 1 MΩ or more?

Yes	CAN communication circuit is normal.
No	Go to 5.

5. CHECK CONTROL MODULE.

With a tester connected, disconnect control modules in order.

Connector & terminal

(i171) No. 1 — (i171) No. 2:

Are there any control modules whose resistance changed to 1 MΩ or more?

Yes	Replace the control module that has changed.
No	Repair or replace the harness part which has resistance component.

Note:

When the bus line is measured, combined resistance of the end resistance (120 Ω) in body integrated unit and the end resistance (120 Ω) in combination meter can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the audio or navigation unit connector.
3. Using a tester, measure the resistance between audio or navigation unit connector terminals.
   Connector & terminal
   (i87) No. 9 — (i87) No. 10:

Is the resistance less than 10 Ω?

Yes	Go to 2.
No	Go to 3.

2. CHECK MAIN WIRING HARNESS AND RELATED LINES.

With a tester connected, disconnect control module connectors in order.

Note:

Disconnect the body integrated unit at the end.

Connector & terminal

(i87) No. 9 — (i87) No. 10:

Is there any control module whose condition has changed from short state?

Yes	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL. Go to 3.
No	Repair or replace the short circuit of harness between body integrated unit — combination meter.

3. CHECK CONTROL MODULE.

1. Disconnect the connectors of the body integrated unit and combination meter.
2. Using a tester, measure the resistance between control module terminals.

Connector & terminal

(B281) No. 17 — (B281) No. 19:

(i10) No. 6 — (i10) No. 7:

Is the resistance 114 — 126 Ω?

Yes	Go to 4.
No	Replace the control module whose end resistance value is out of the specified range.

4. CHECK HARNESS.

Using a tester, measure the resistance between the combination meter connector terminals.

Connector & terminal

(i10) No. 6 1 — (i10) No. 7:

Is the resistance 1 MΩ or more?

Yes	CAN communication circuit is normal.
No	Go to 5.

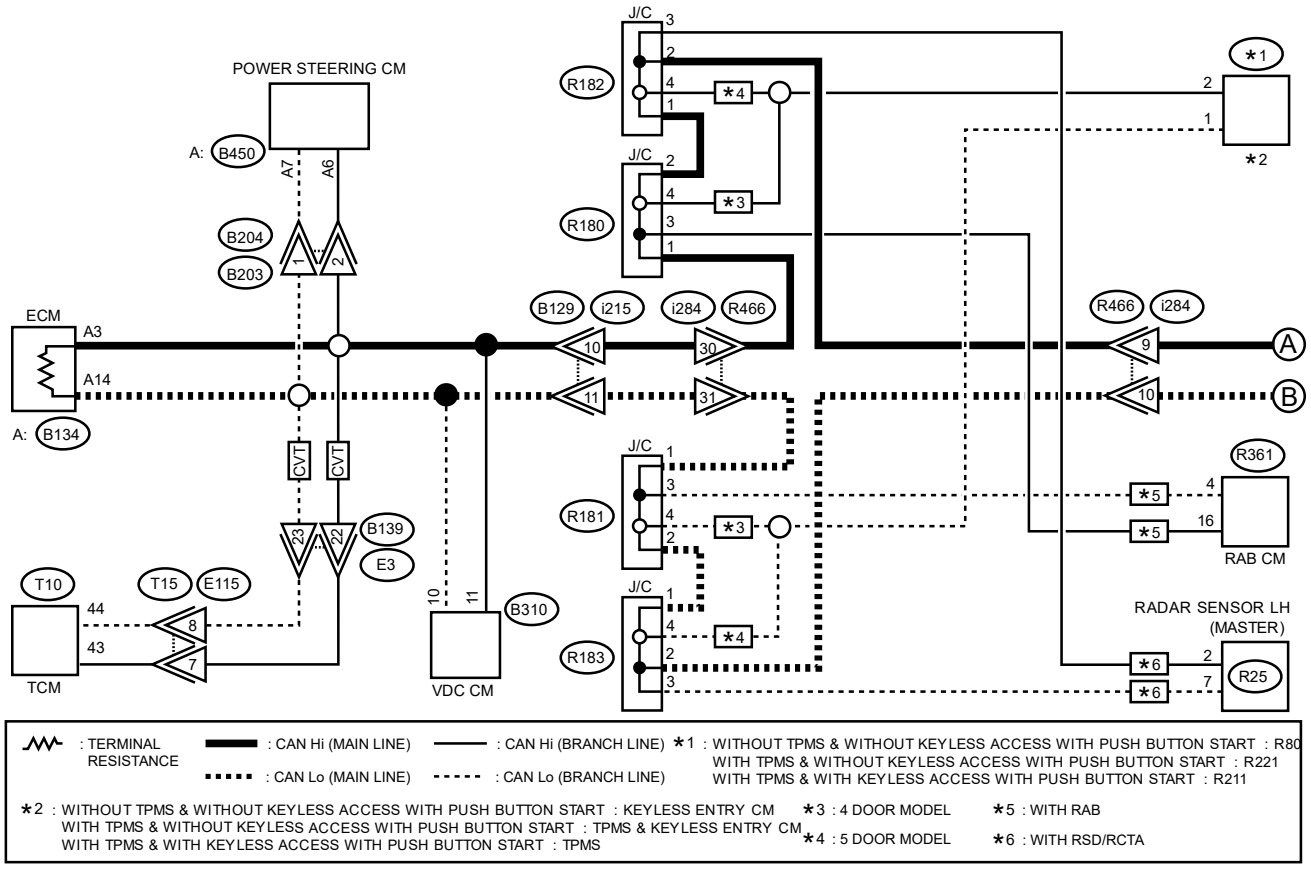
5. CHECK CONTROL MODULE.

With a tester connected, disconnect control modules in order.

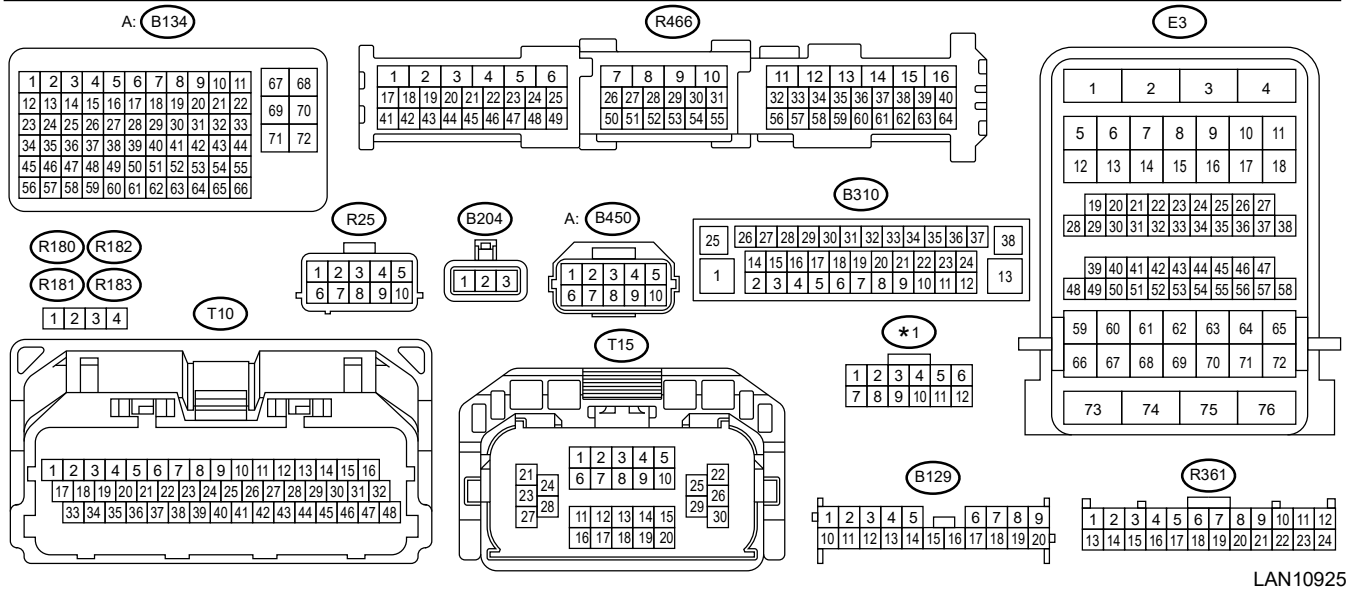
Connector & terminal

(i10) No. 6 — (i10) No. 7:

Are there any control modules whose resistance changed to 1 MΩ or more?

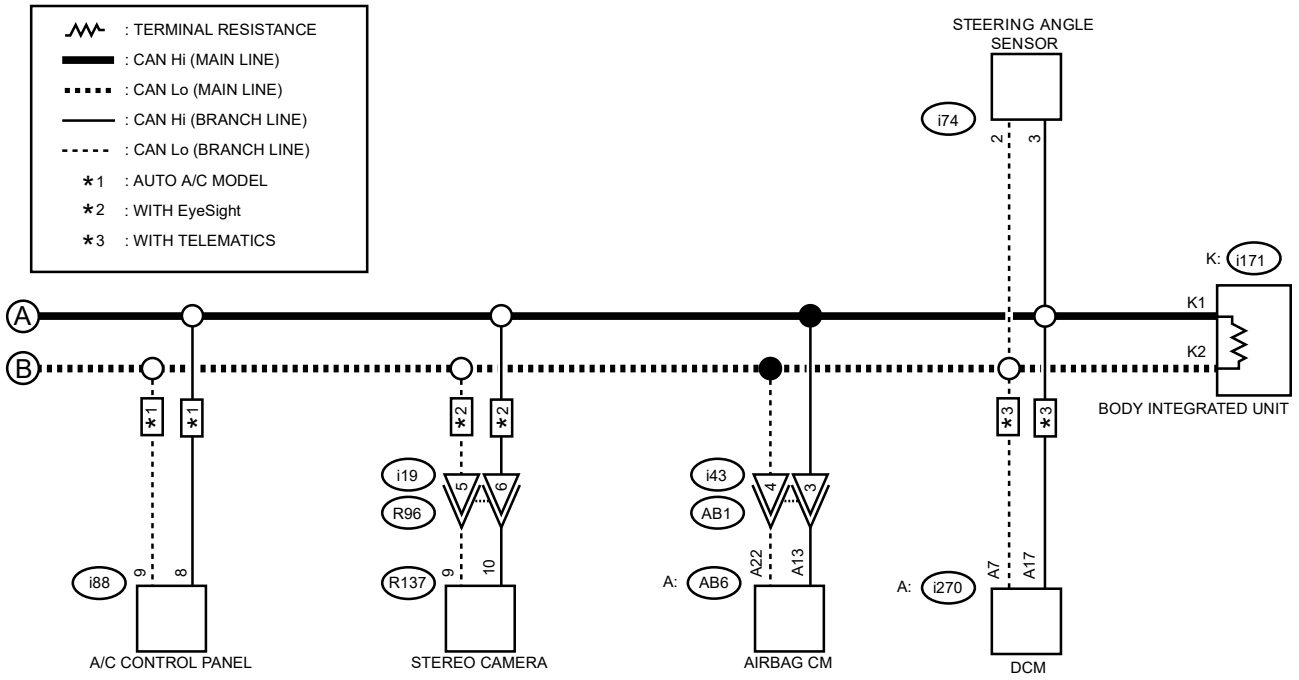


Yes	Replace the control module that has changed.
No	Repair or replace the harness part which has resistance component.

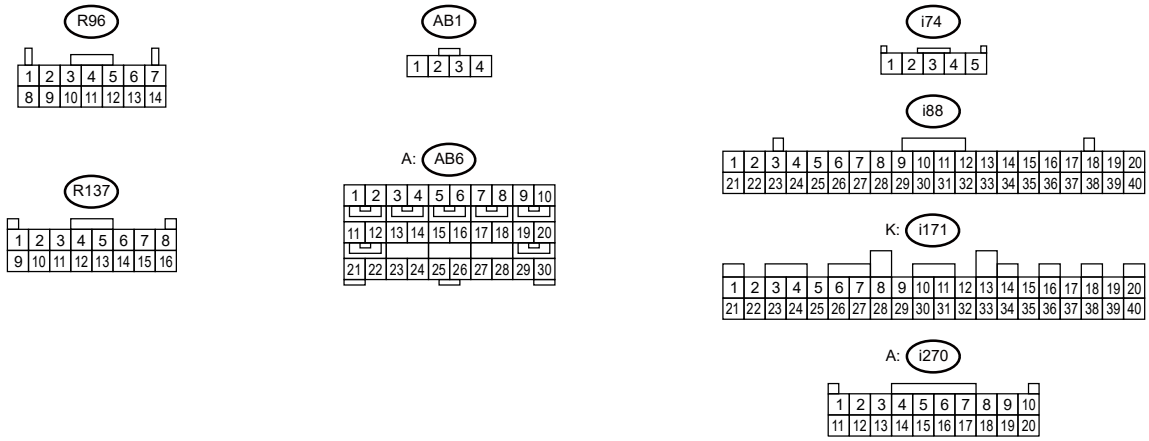


5. 62 Ω OR MORE

- MAIN-CAN



Wiring diagram:



CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

LAN10925

LAN10926

Note:

When the CAN communication circuit is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in body integrated unit can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

1. CHECK CONTROL MODULE.

1. Disconnect the connectors of ECM and body integrated unit.
2. Using a tester, measure the resistance between control module terminals.

Connector & terminal

(B134) No. 3 — (B134) No. 14:

(i171) No. 1 — (i171) No. 2:

Is the resistance 114 — 126 Ω?

Yes	Go to 2.
No	Replace the control module whose value is out of the specification.

2. CHECK HARNESS.

1. Disconnect the steering sensor connector.
2. Using a tester, measure the resistance between steering sensor connector and ECM connector, and between steering sensor connector and body integrated unit connector.

Connector & terminal

(i74) No. 3 — (B134) No. 3:

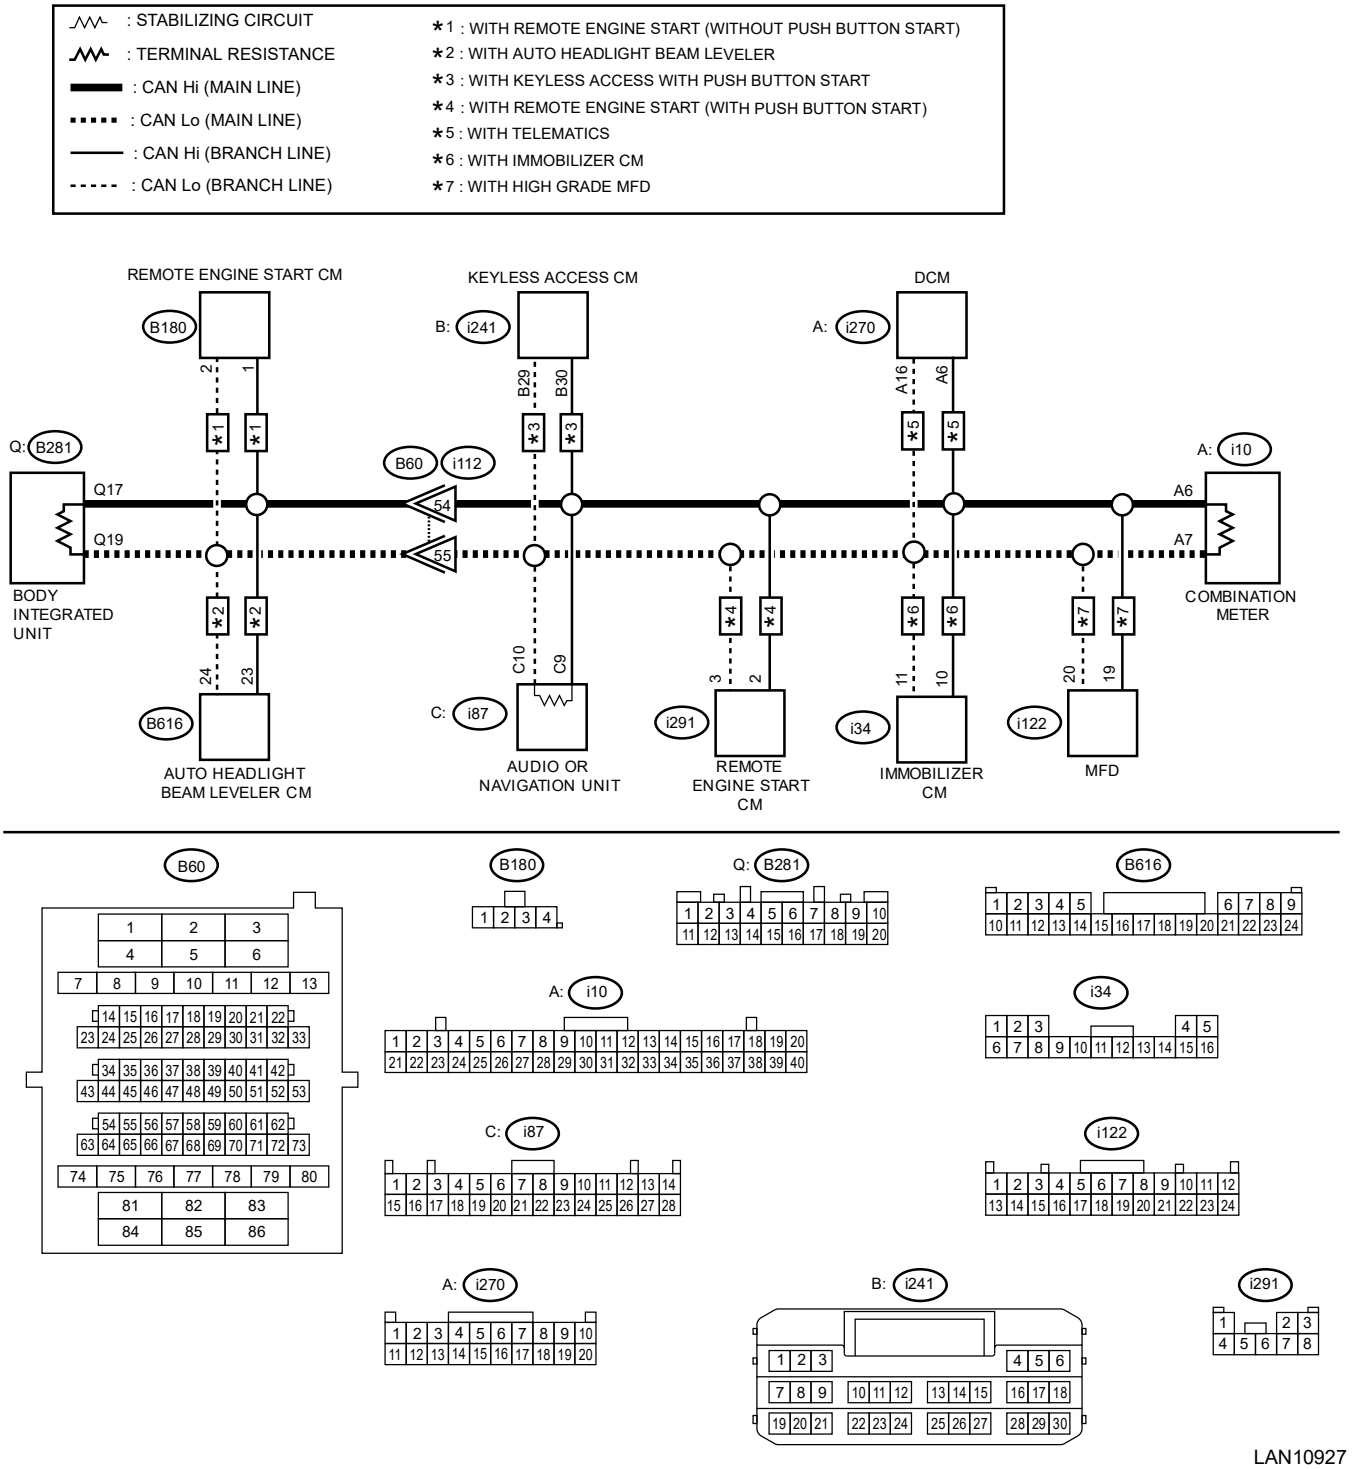
(i74) No. 3 — (i171) No. 1:

(i74) No. 2 — (i171) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.



3. CHECK HARNESS.

1. Disconnect the combination meter connector.
2. Using a tester, measure the resistance between the combination meter connector and body integrated unit connector.
   Connector & terminal
   (B281) No. 17 — (i10) No. 6:
   (B281) No. 19 — (i10) No. 7:

Is the resistance less than 10 Ω?

Yes	It is possible that temporary poor communication occurs.
No	Repair or replace the open circuit of harness.

- BODY-CAN
  Wiring diagram:
  CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Note:

When the CAN communication circuit is measured, combined resistance of the end resistance (120 Ω) in body integrated unit and the end resistance (120 Ω) in combination meter can be measured. The combined resistance is approximately 53 — 61 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

1. CHECK CONTROL MODULE.

1. Disconnect the connectors of the body integrated unit and combination meter.
2. Using a tester, measure the resistance between control module terminals.
   Connector & terminal
   (B281) No. 17 — (B281) No. 19:
   (i10) No. 6 — (i10) No. 7:

Is the resistance 114 — 126 Ω?

Yes	Go to 2.
No	Replace the control module whose value is out of the specification.

2. CHECK HARNESS.

1. Disconnect the steering sensor connector.
2. Disconnect the ECM connector.
3. Disconnect the body integrated unit connector.
4. Using a tester, measure the resistance between steering sensor connector and ECM connector, and between steering sensor connector and body integrated unit connector.
   Connector & terminal

1. CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.

1. Disconnect the power steering CM connector.
2. Using a tester, measure the resistance between terminals of power steering CM connector.
   Connector & terminal
   (B450) No. 6 — (B450) No. 7:

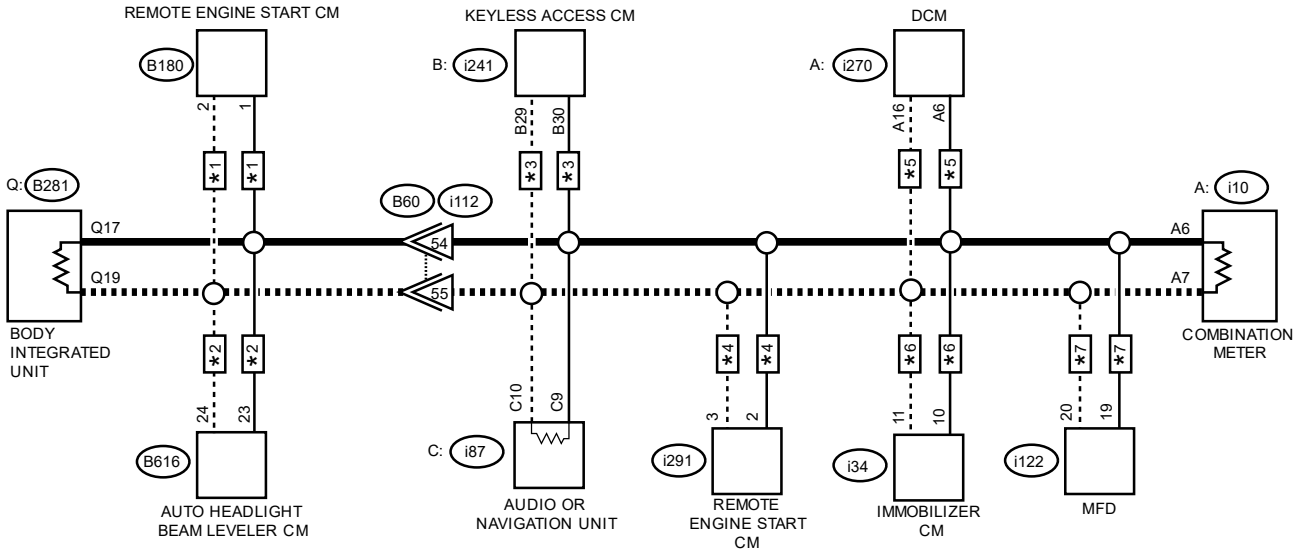
Is the resistance 400 Ω or more?

Yes	A related line or main wiring harness between power steering CM and main wiring harness is open at two places or more.
No	Go to 2.

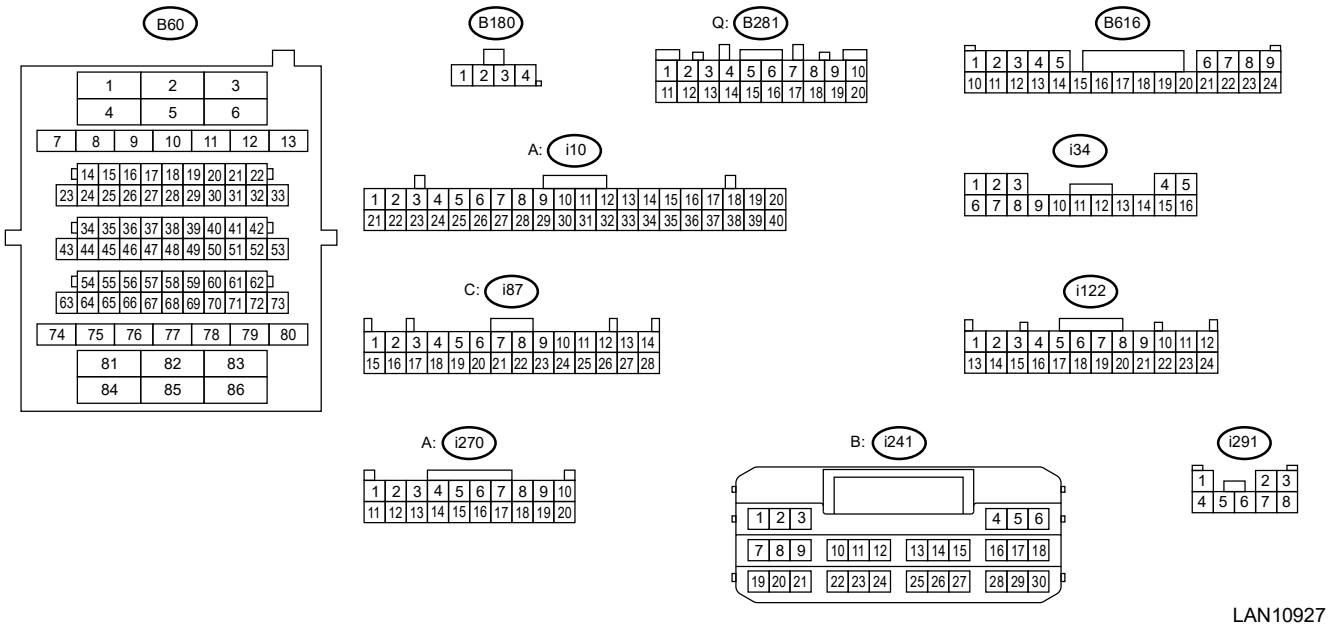
2. CHECK RELATED LINES.

1. Disconnect the steering sensor connector.
2. Using a tester, measure the resistance between the power steering CM connector and steering sensor connector.
   Connector & terminal
   (B450) No. 6 — (i74) No. 3:
   (B450) No. 7 — (i74) No. 2:

Is the resistance 10 Ω or more?



Yes	Repair or replace the open circuit portion of power steering CM related lines.
No	Check DTC of power steering CM. Ref. to POWER STEERING (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



10. RELATED LINES 53 — 61 Ω (COMBINATION METER)

Is the resistance 400 Ω or more?

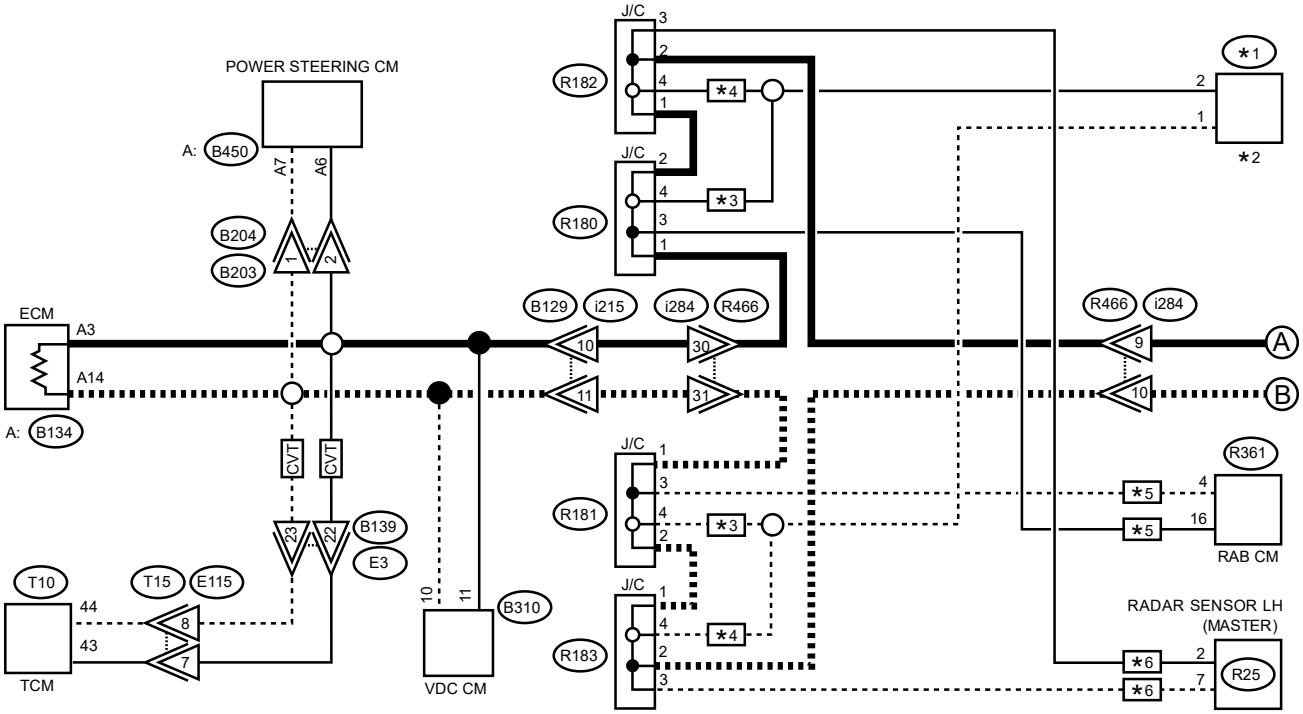
Yes	A related line between DCM and main wiring harness is open, or main wiring harness is open at two places or more.
No	Go to 2.

2. CHECK RELATED LINES.



1. Disconnect the steering sensor connector. (MAIN-CAN)
2. Disconnect the audio or navigation unit connector. (BODY-CAN)
3. Using the tester, measure the resistance between terminals.

1. CHECK USING THE DTC CHECK SHEET

DTC check sheet

| | (A) | (C) | | | | | | | | | | | | | | | | | | | | | | | | | | (D) | | | | | | | | | | | | | | | | | | |

1. MODULE INSTALLATION CHECK.

1. Using the check sheet for communication for initializing, check the vehicle installation module (module targeted for CAN communication).
2. Write "-" marks in the field for installation check (A) if the vehicle to be inspected does not have relevant module.
3. Write "-" marks in all blank fields on the same row that the "-" mark has filled in.

Was the module installation check above performed?

Yes	Go to 2.
No	Perform the module installation check, Go to 2.

2. CHECK DTC (BUS OFF DETECTION / DATA NOT RECEIVED).

Check the DTC. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

It becomes impossible for CAN diagnostic module to read DTC, if there is a current malfunction of open harness (data not received). If this occurs, perform the "Check using the check sheet of communication for initializing" Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication>INSPECTION > CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING., and use this check sheet to confirm that the corresponding part becomes the past malfunction.

Is DTC bus off or data not received?

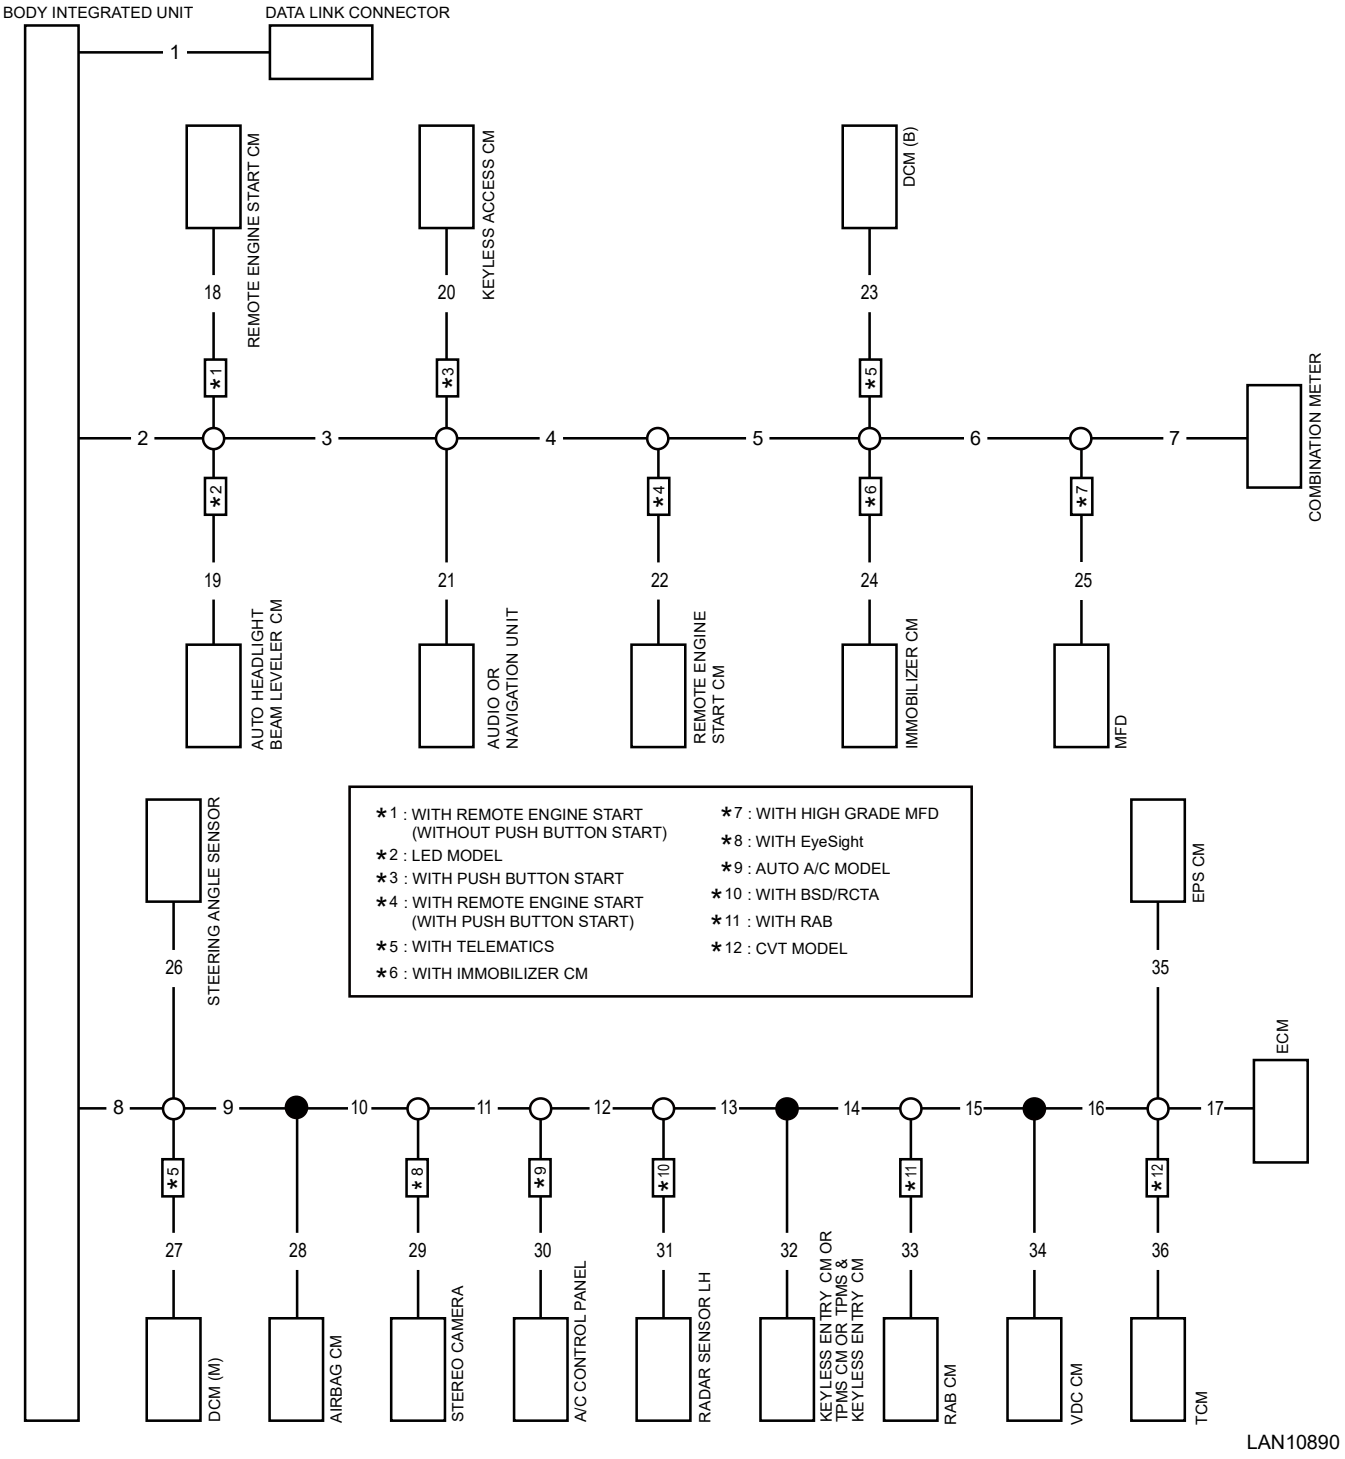
Yes	Go to 3.
No	Perform the diagnosis for the displayed DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

3. CHECK DTC (BUS OFF DETECTION / DATA NOT RECEIVED).

Mark “X” in the field corresponding to the DTCs that has been detected by each module in the DTC check sheet.

Were all the corresponding field in the DTC check sheet filled?

Yes	Go to 4.
No	Fill all the corresponding field in the DTC check sheet, Go to 4.



4. CHECK CAN COMMUNICATION LINE.

Check the CAN communication line by referring to the example of DTC data not received.

Is CAN communication line faulty?

Yes	Repair or replace the faulty portion of the harness.
No	Perform the diagnosis for the displayed DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

2. EXAMPLE OF DTC DATA NOT RECEIVED

Vicinity of No. 21 DCM (BODY CAN)

| | (A) | (C) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | (D) | | | | | | | | | | | | | | | | | | |

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC detecting condition:
Integrated unit communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0073 displayed? (Current malfunction)

Yes	Go to 3.
No	It may be a temporary poor contact. Perform the clear memory. Ref. to COMMON(diag)>Clear memory.

3. CHECK CAN COMMUNICATION CIRCUIT.

Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>PROCEDURE.

Is CAN communication circuit faulty?

Yes	Repair the faulty portion, following the diagnosis procedure.
No	Go to 4.

4. CHECK DTC.

1. Perform the inspection using the DTC check sheet. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST > CHECK USING THE DTC CHECK SHEET.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0073 displayed? (Current malfunction)

Yes	Go to 5.
No	System is normal.

5. CHECK CONTROL MODULE.

1. Turn the ignition switch to OFF.
2. Disconnect the control modules other than body integrated unit in order.
   Note:
   When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance.
3. Turn the ignition switch to ON.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is there any control module that U0073 is not detected as current malfunction?

Yes	Replace the control module.
No	Repeat step 5 until U0073 is not detected.

DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

DTC detecting condition:
Integrated unit communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0074 displayed? (Current malfunction)

Yes	Go to 3.
No	It may be a temporary poor contact. Perform the clear memory.

3. CHECK CAN COMMUNICATION CIRCUIT.

Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>PROCEDURE.

Is CAN communication circuit faulty?

Yes	Repair the faulty portion, following the diagnosis procedure.
No	Go to 4.

4. CHECK DTC.

1. Perform the inspection using the DTC check sheet. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST > CHECK USING THE DTC CHECK SHEET.
2. Using the Subaru Select Monitor, read DTC of CAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0074 displayed? (Current malfunction)

Yes	Go to 5.
No	System is normal.

5. CHECK CONTROL MODULE.

1. Turn the ignition switch to OFF.
2. Disconnect the control modules other than body integrated unit in order.
   Note:
   When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance.
3. Turn the ignition switch to ON.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is there any control module that U0074 is not detected as current malfunction?

Yes	Replace the control module.
No	Repeat step 5 until U0074 is not detected.

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC detecting condition:
No data is received from ECM.
Trouble symptom:
Cooperation control of transmission may not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0100 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0100 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read DTC of all the systems. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the engine data no-receive detected in several modules? (Current malfunction)

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0100 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

LAN SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

DTC detecting condition:
No data is received from TCM.
Trouble symptom:
Cooperation control with transmission is not performed.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0101 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0101 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read DTC of all the systems. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the transmission data no-receive detected in several modules? (Current malfunction)

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0101 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
No data is received from VDC CM.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0122 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0122 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read DTC of all the systems. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the VDC data no-receive detected in several modules? (Current malfunction)

Yes	Replace the VDC CM. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0122 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

DTC detecting condition:
No data is received from steering angle sensor.
Trouble symptom:
VDC CM does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0126 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0126 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read DTC of all the systems. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the steering angle sensor data no-receive detected in several modules? (Current malfunction)

Yes	Replace the steering angle sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Steering Angle Sensor.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0126 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0127 LOST COMMUNICATION WITH TIRE PRESSURE MONITOR CONTROL MODULE AND/OR KEYLESS ENTRY CONTROL MODULE

DTC detecting condition:
Data does not arrive from TPMS & keyless entry CM or keyless entry CM.
Trouble symptom:
Keyless entry does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (CURRENT MALFUNCTION).

Check the displayed DTC.

Is DTC U0127 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0127 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the keyless entry data no-receive detected in combination meter? (Current malfunction)

Yes	Replace the TPMS & keyless entry CM or keyless entry CM. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Read the DTC using Subaru Select Monitor. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0127 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

DTC detecting condition:
No data is received from VDC CM.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (CURRENT MALFUNCTION).

Check the displayed DTC.

Is DTC U0128 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0128 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the electronic parking data no-receive detected in several modules? (Current malfunction)

Yes	Replace the VDC CM. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0128 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DTC detecting condition:
No data is received from power steering CM.
Trouble symptom:
Cooperation control with power steering CM does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0131 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0131 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the electric power steering data no-receive detected in several modules? (Current malfunction)

Yes	Replace the power steering CM. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Power Steering Control Module.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0131 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC detecting condition:
No data is received from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0140 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0140 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the body integrated data no-receive detected in several modules? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0140 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DTC detecting condition:
No data is received from airbag CM.
Trouble symptom:
Cooperation control with airbag CM does not operate properly.
Caution:
When checking the airbag system, refer to the cautions regarding the airbag system prior to the inspection. Ref. to AIRBAG(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0151 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0151 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the airbag data no-receive detected in several modules? (Current malfunction)

Yes	Replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0151 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:
No data is received from combination meter.
Trouble symptom:
Display of combination meter does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0155 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0155 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the meter data no-receive detected in several modules? (Current malfunction)

Yes	Replace the meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0155 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A"

DTC detecting condition:
No data is received from MFD.
Trouble symptom:
Display of MFD does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0156 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0156 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the MFD data no-receive detected in several modules? (Current malfunction)

Yes	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0156 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0162 LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE

DTC detecting condition:
No data is received from audio or navigation.
Trouble symptom:
The audio or navigation does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0162 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0162 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the AVN data no-receive detected in several modules? (Current malfunction)

Yes	Replace the audio or navigation. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0162 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DTC detecting condition:
No data is received from A/C control panel.
Trouble symptom:
Cooperation control of air conditioner does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0164 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0164 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the air conditioner data no-receive detected in several modules? (Current malfunction)

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0164 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

DTC detecting condition:
No data is received from auto headlight beam leveler CM.
Trouble symptom:
Coordination control of auto headlight beam leveler CM does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0181 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0181 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the auto headlight beam leveler data no-receive detected in several modules? (Current malfunction)

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0181 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

DTC detecting condition:
No data is received from keyless access CM.
Trouble symptom:
Cooperation control of keyless access does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U0327 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0327 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the smart data no-receive detected in several modules? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0327 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC detecting condition:
Defective data from ECM.
Trouble symptom:
Defective data on CAN communication occurs.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0401 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0401 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the engine data abnormal detected in several modules? (Current malfunction)

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0401 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC detecting condition:
Received error data from TCM.
Trouble symptom:
Sport indicator light blinks.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0402 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the TCM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0402 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the transmission data abnormal detected in several modules? (Current malfunction)

Yes	Replace the TCM. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Transmission Control Module (TCM).
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0402 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
Data from VDC CM is faulty.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0416 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the VDC CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0416 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the VDC data abnormal detected in several modules? (Current malfunction)

Yes	Replace the VDC CM. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0416 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE

DTC detecting condition:
Data from VDC CM is faulty.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0417 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the VDC CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0417 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the electronic parking data abnormal detected in several modules? (Current malfunction)

Yes	Replace the VDC CM. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0417 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from EPS CM.
Trouble symptom:
Cooperation control with EPS CM does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0420 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the power steering CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0420 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the electric power steering data abnormal detected in several modules? (Current malfunction)

Yes	Replace the power steering CM. Ref. to POWER ASSISTED SYSTEM (POWER STEERING)>Power Steering Control Module.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0420 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0422 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0422 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the body integrated data abnormal detected in several modules? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0422 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from combination meter.
Trouble symptom:
Display of combination meter does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0423 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the combination meter connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0423 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the meter data abnormal detected in several modules? (Current malfunction)

Yes	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0423 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from A/C control panel.
Trouble symptom:
Cooperation control of air conditioner does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0424 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the A/C control panel connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0424 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the air conditioner data abnormal detected in several modules? (Current malfunction)

Yes	Replace the A/C control panel. Ref. to AIR CONDITIONER>Control Panel.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0424 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from keyless access CM.
Trouble symptom:
Cooperation control of keyless access does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0427 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the keyless access CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0427 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the smart data abnormal detected in several modules? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0427 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

DTC detecting condition:
Defective data was transmitted from steering angle sensor.
Trouble symptom:
VDC CM does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0428 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the steering angle sensor connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0428 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the steering angle sensor data abnormal detected in several modules? (Current malfunction)

Yes	Replace the steering angle sensor. Ref. to VEHICLE DYNAMICS CONTROL (VDC)>Steering Angle Sensor.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0428 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0430 INVALID DATA RECEIVED FROM TIRE PRESSURE MONITOR CONTROL MODULE AND/OR KEYLESS ENTRY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from TPMS & keyless entry CM or keyless entry CM.
Trouble symptom:
Keyless entry or TPMS does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0430 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the TPMS & keyless entry CM or keyless entry CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0430 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the keyless entry invalid data detected in several modules? (Current malfunction)

Yes	Replace the TPMS & keyless entry CM or keyless entry CM. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0430 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DTC detecting condition:
Invalid data was transmitted from airbag CM.
Trouble symptom:
The airbag does not operate normally.
Caution:
When checking the airbag system, refer to the cautions regarding the airbag system prior to the inspection. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0452 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the airbag CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0452 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the airbag CM data abnormal detected in several modules? (Current malfunction)

Yes	Replace the airbag CM. Ref. to AIRBAG SYSTEM>Airbag Control Module.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0452 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0457 INVALID DATA RECEIVED FROM INFORMATION CENTER "A"

DTC detecting condition:
Defective data was transmitted from MFD.
Trouble symptom:
MFD does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0457 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the airbag CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0457 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the MFD invalid data detected in several modules? (Current malfunction)

Yes	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0457 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U0463 INVALID DATA RECEIVED FROM NAVIGATION DISPLAY MODULE

DTC detecting condition:
Defective data was transmitted from audio or navigation.
Trouble symptom:
The audio or navigation does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U0463 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the airbag CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0463 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the AVN invalid data detected in several modules? (Current malfunction)

Yes	Replace the audio or navigation. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U0463 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF

DTC detecting condition:
RAB CM communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

DTC Check

Is DTC U1073 displayed? (Current malfunction)

Yes	Go to 3.
No	It may be a temporary poor contact. Perform the clear memory.

3. CHECK CAN COMMUNICATION CIRCUIT.

Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check>PROCEDURE.

Is CAN communication circuit faulty?

Yes	Repair the faulty portion, following the diagnosis procedure.
No	Go to 4.

4. CHECK DTC.

1. Perform the inspection using the DTC check sheet. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST > CHECK USING THE DTC CHECK SHEET.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1073 displayed? (Current malfunction)

Yes	Go to 5.
No	System is normal.

5. CHECK CONTROL MODULE.

1. Turn the ignition switch to OFF.
2. Disconnect the control modules other than body integrated unit in order.
   Note:
   When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance.
3. Turn the ignition switch to ON.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is there any control module that U1073 is not detected as a current malfunction?

Yes	Replace the control module.
No	Repeat step 5 until U1073 is not detected.

DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
No data is received from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U1140 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1140 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the body integrated data no-receive detected in several modules? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1140 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

DTC detecting condition:
No data is received from radar sensor.
Trouble symptom:
Cooperation control of radar sensor does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U1232 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1232 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the Blind Spot Detection/Rear Cross Traffic Alert data no-receive detected in several modules? (Current malfunction)

Yes	Replace the radar sensor LH. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1232 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE

DTC detecting condition:
No data is received from RAB CM.
Trouble symptom:
Coordination control of RAB CM does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U1233 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

1. Check CAN communication circuit. Ref. to LAN SYSTEM (DIAGNOSTICS)>CAN Communication Circuit Check.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1233 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the sonar data no-receive detected from stereo camera? (Current malfunction)

Yes	Replace the RAB CM. Ref. to Reverse Automatic Braking>Reverse Automatic Braking CM.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1233 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1235 LOST COMMUNICATION WITH EYESIGHT

DTC detecting condition:
No data from stereo camera is received.
Trouble symptom:
Cooperation control of EyeSight does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC.

Check the displayed DTC.

Is DTC U1235 displayed? (Current malfunction)

Yes	Go to 4.
No	Go to 6.

4. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1235 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 6.

5. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the EyeSight data no-receive detected in several modules? (Current malfunction)

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.
No	Replace the module that the DTC has been detected.

6. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1235 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 7.

7. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
Defective data was transmitted from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U1422 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1422 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the body integrated data abnormal detected in several modules? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1422 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1433 INVALID DATA RECEIVED FROM EYESIGHT

DTC detecting condition:
Defective data was transmitted from stereo camera.
Trouble symptom:
Cooperation control of EyeSight does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U1433 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the stereo camera connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1433 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the EyeSight data abnormal detected in several modules? (Current malfunction)

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1433 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1533 INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from radar sensor.
Trouble symptom:
Cooperation control of radar sensor does not operate properly.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U1533 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the radar sensor LH connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1533 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the Blind Spot Detection/Rear Cross Traffic Alert data error detected in several modules? (Current malfunction)

Yes	Replace the radar sensor. Ref. to Blind Spot Detection/Rear Cross Traffic Alert>Radar Sensor.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1533 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU

DTC detecting condition:
Defective data was transmitted from RAB CM.
Trouble symptom:
Coordination control of RAB CM does not operate normally.

1. CHECK CAN COMMUNICATION HARNESS.

Perform the basic diagnostic procedure to check for fault in CAN communication harness. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Was the basic diagnostic procedure performed up to step 7?

Yes	Go to 2.
No	Perform the basic diagnostic procedure. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

2. CHECK DTC (OTHER THAN U-CODE).

Check the displayed DTC.

Is DTC other than U*** displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs other than the displayed U-code.
No	Go to 3.

3. CHECK DTC (U-CODE).

Check the displayed DTC.

Is DTC for the bus off or the data no-receive displayed? (Current malfunction)

Yes	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.
No	Go to 4.

4. CHECK DTC.

Check the displayed DTC.

Is DTC U1534 displayed? (Current malfunction)

Yes	Go to 5.
No	Go to 7.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the RAB CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1534 displayed? (Current malfunction)

Yes	Go to 6.
No	Go to 7.

6. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is the sonar invalid data detected in several modules? (Current malfunction)

Yes	Replace the RAB CM.
No	Replace the module that the DTC has been detected.

7. CHECK HARNESS.

1. Shake the harness, and check for poor contact.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U1534 displayed? (Current malfunction)

Yes	Repair the poor contact of harness, or replace the harness.
No	Go to 8.

8. CHECK CONNECTOR.

Check the connector used for high speed CAN for poor contact.

Is there poor contact of connector?

Yes	Repair the connector that has poor contact, or replace harness.
No	It is possible that temporary poor communication occurs. Delete the DTC.

LAN SYSTEM (DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

Symptoms	Reference
DTC other than U-code is displayed.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > DTC OTHER THAN U-CODE IS DISPLAYED.
Faster/slower vehicle speed than the actual speed is displayed.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > FASTER/SLOWER VEHICLE SPEED THAN THE ACTUAL SPEED IS DISPLAYED.
More/less fuel than the actual amount is displayed.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > MORE/LESS FUEL THAN THE ACTUAL AMOUNT IS DISPLAYED.
Fuel level warning light illuminates despite of sufficient fuel.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > FUEL LEVEL WARNING LIGHT ILLUMINATES DESPITE OF SUFFICIENT FUEL.
Engine coolant temperature light blinks in red and blue alternately.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ENGINE COOLANT TEMPERATURE LIGHT BLINKS IN RED AND BLUE ALTERNATELY.
[S], [I] or [S#] indicator is blinking.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > [S], [I] OR [S#] INDICATOR IS BLINKING.
The VDC warning light illuminates.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE VDC WARNING LIGHT ILLUMINATES.
VDC-OFF indicator illuminates.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > VDC-OFF INDICATOR ILLUMINATES.
Brake warning light illuminates.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > BRAKE WARNING LIGHT ILLUMINATES.

Symptoms	Reference
Shift position is not displayed.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > SHIFT POSITION IS NOT DISPLAYED.
AT oil temperature warning light is blinking.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AT OIL TEMPERATURE WARNING LIGHT IS BLINKING.
Door indicator is not displayed.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > DOOR INDICATOR IS NOT DISPLAYED.
Clearance indicator does not illuminate.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CLEARANCE INDICATOR DOES NOT ILLUMINATE.
HI beam indicator does not illuminate.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > HI BEAM INDICATOR DOES NOT ILLUMINATE.
Front fog light indicator does not illuminate.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > FRONT FOG LIGHT INDICATOR DOES NOT ILLUMINATE.
Illumination is fixed at the maximum brightness.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ILLUMINATION IS FIXED AT THE MAXIMUM BRIGHTNESS.
Cruise control indicator does not illuminate.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CRUISE CONTROL INDICATOR DOES NOT ILLUMINATE.
AWD indicator illuminates.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > AWD INDICATOR ILLUMINATES.
Hill hold indicator does not illuminate.	Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > HILL HOLD INDICATOR DOES NOT ILLUMINATE.

LAN SYSTEM (DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION

1. DTC OTHER THAN U-CODE IS DISPLAYED

Trouble causes:

Many and unspecified

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

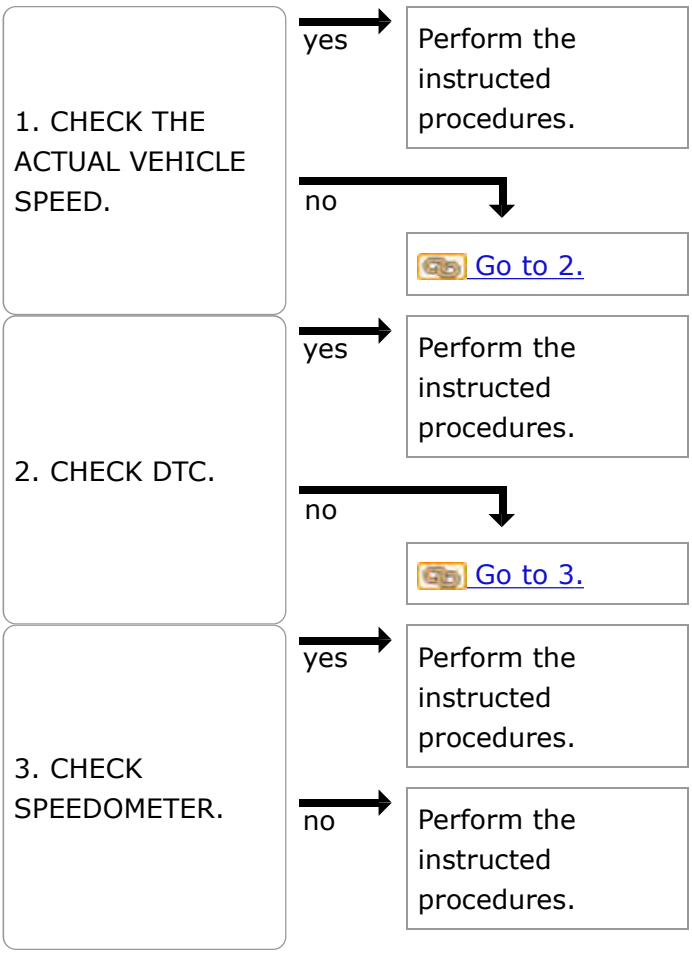
1. CHECK DTC (CURRENT MALFUNCTION).	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC (CURRENT MALFUNCTION).

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC other than U-code displayed? (Current malfunction)

Yes	Perform the diagnosis for DTC other than the U-code.
No	Perform troubleshooting according to phenomenon of the problem. (If no phenomenon of the problem is present, it is normal currently.)



2. FASTER/SLOWER VEHICLE SPEED THAN THE ACTUAL SPEED IS DISPLAYED

Trouble causes:

- CAN communication failure
- Vehicle speed sensor malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK THE ACTUAL VEHICLE SPEED.

Check that the vehicle speed indicated in the meter matches with the actual vehicle speed.

Does the vehicle speed match?

Yes	Currently, it is normal.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK SPEEDOMETER.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Speedometer]

Do the indicated vehicle speed on Subaru Select Monitor and the speedometer indication match?

Yes	Perform a unit inspection for the vehicle speed sensor.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

3. MORE/LESS FUEL THAN THE ACTUAL AMOUNT IS DISPLAYED

Trouble causes:

- CAN communication failure
- Fuel level sensor malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to “CAUTION” in “General Description”.

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK FUEL GAUGE.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is [FUEL SENDER OPEN DETECTED] displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK FUEL GAUGE.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Fuel Meter Operation]

Do the indicated amount on Subaru Select Monitor and the fuel gauge indication match?

Yes	Check the fuel level sensor as a single part. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

4. FUEL LEVEL WARNING LIGHT ILLUMINATES DESPITE OF SUFFICIENT FUEL

Trouble causes:

- CAN communication failure
- Fuel level sensor malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK FUEL LEVEL WARNING LIGHT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is [FUEL SENDER OPEN DETECTED] displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK FUEL LEVEL WARNING LIGHT.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Remaining fuel warning]

Do the indicated amount on Subaru Select Monitor and the fuel level warning light indication match?

Yes	Check the fuel level sensor as a single part. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

5. ENGINE COOLANT TEMPERATURE LIGHT BLINKS IN RED AND BLUE ALTERNATELY

Trouble causes:

- CAN communication failure
- Engine coolant temperature sensor malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Engine] using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Data Monitor.

DTC Check

Is any of [ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE], [ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW], [ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH] displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Water temperature (HOT)]
- [Water temperature (COOL)]

Do the indicated amount on Subaru Select Monitor and the engine coolant temperature light indication match?

Yes	Perform a unit inspection of the engine coolant temperature sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Coolant Temperature Sensor.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

6. [S], [I] OR [S#] INDICATOR IS BLINKING

Trouble causes:

- CAN communication failure
- ECM failure
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs of [Engine] and [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [[S]indicator]
- [[I]indicator]
- [[S#]indicator]

Do the indicated amount on Subaru Select Monitor and the SI-DRIVE indication match?

Yes	Check the engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

7. THE VDC WARNING LIGHT ILLUMINATES

Trouble causes:

- CAN communication failure
- VDC warning light malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK VDC WARNING LIGHT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK VDC WARNING LIGHT.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [VDC operation/failure indicator]

Do the indicated amount on Subaru Select Monitor and the [VDC operation/failure indicator] indication match?

Yes	Check the VDC warning light. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

8. VDC-OFF INDICATOR ILLUMINATES

Trouble causes:

- CAN communication failure
- VDC OFF indicator light malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK VDC OFF INDICATOR LIGHT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK VDC OFF INDICATOR LIGHT.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [VDC OFF indicator]

Do the indicated amount on Subaru Select Monitor and the [VDC OFF indicator] indication match?

Yes	Check the VDC OFF indicator light. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

9. BRAKE WARNING LIGHT ILLUMINATES

Trouble causes:

- CAN communication failure
- Brake warning light malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK BRAKE WARNING LIGHT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK BRAKE WARNING LIGHT.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [BRAKE warning]

Do the indicated amount on Subaru Select Monitor and the [BRAKE warning] indication match?

Yes	Check the brake warning light. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

10. SHIFT POSITION IS NOT DISPLAYED

Trouble causes:

- CAN communication failure
- Shift indicator malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK SHIFT INDICATOR.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Transmission] using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

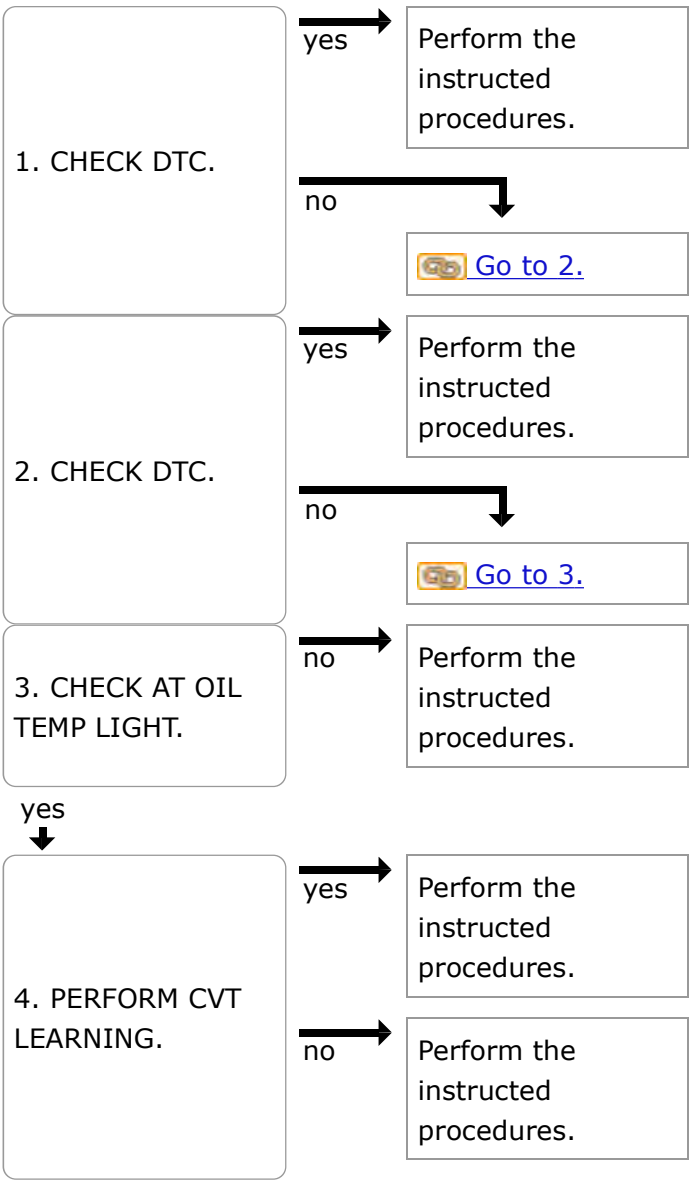
3. CHECK SHIFT INDICATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Shift Display]

Do the indication on Subaru Select Monitor and the shift indicator indication match?

Yes	Check the shift indicator. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.



11. AT OIL TEMPERATURE WARNING LIGHT IS BLINKING

Trouble causes:

- CAN communication failure
- AT OIL TEMP light malfunction
- Combination meter malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.

Read the DTC of [Transmission] using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK AT OIL TEMP LIGHT.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

- [AT (CVT) oil temperature warning]

Do the indicated amount on Subaru Select Monitor and the [AT (CVT) oil temperature warning] indication match?

Yes	Go to 4.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

4. PERFORM CVT LEARNING.

Connect the Subaru Select Monitor and perform the CVT learning. Ref. to TRANSMISSION (DIAGNOSTICS)>Learning Control.

Does the AT oil temperature warning light go off?

Yes	Currently, it is normal.
No	Check the AT OIL TEMP light. Ref. to TRANSMISSION (DIAGNOSTICS)>AT OIL TEMP Warning Light Display.

12. DOOR INDICATOR IS NOT DISPLAYED

Trouble causes:

- CAN communication failure
- Body integrated unit malfunction
- Combination meter malfunction
- Door switch circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 2.
2. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 3.
3. CHECK DOOR INDICATOR.
   - no → Perform the instructed procedures.
   - yes ↓

4. CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK DOOR INDICATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [All seats door]
- [Driver side door]
- [Passenger side door]
- [Rear side (right) door]
- [Rear side (left) door]

Do the indication on Subaru Select Monitor and the door indicator indication match?

Yes	Go to 4.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

4. CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.

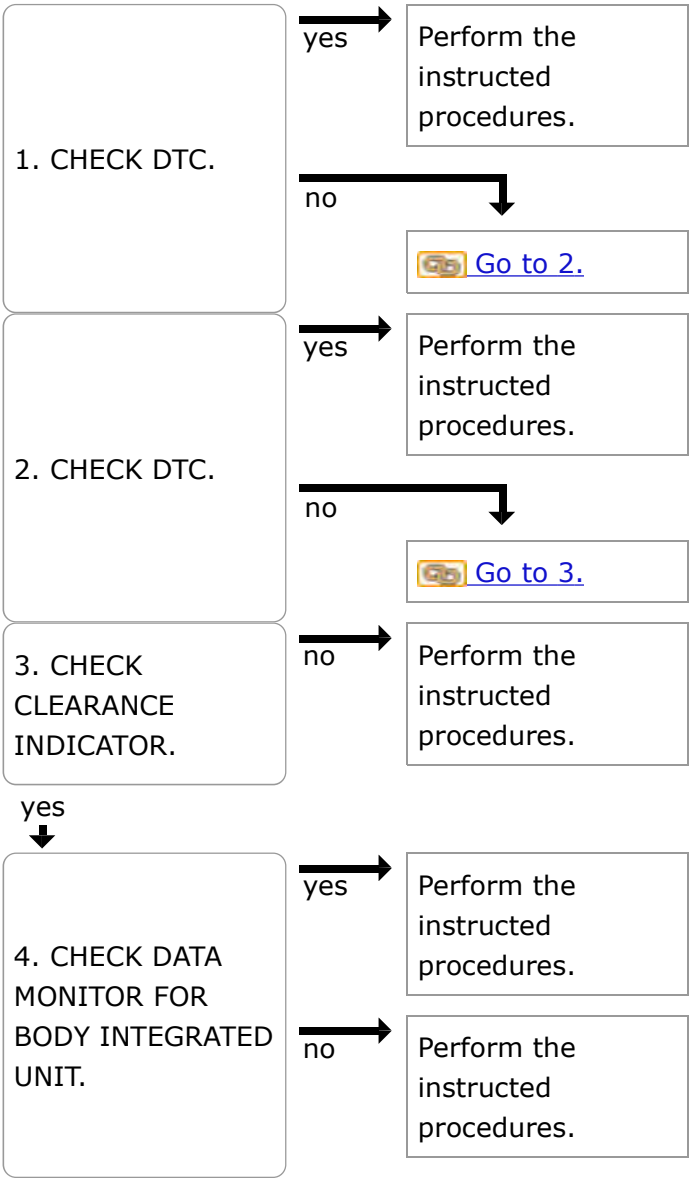
Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Data Monitor

- Driver's door SW input
- P-door SW input
- Rear right door SW input
- Rear left door SW input

Do the door open/close and data indication match?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Inspect door switch circuit. Ref. to SECURITY AND LOCKS>Keyless Entry System>INSPECTION.



13. CLEARANCE INDICATOR DOES NOT ILLUMINATE

Trouble causes:

- CAN communication failure
- Body integrated unit malfunction
- Combination meter malfunction
- Clearance light circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK CLEARANCE INDICATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Position light indicator]

Do the indication on Subaru Select Monitor and the clearance indicator indication match?

Yes	Go to 4.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

4. CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.

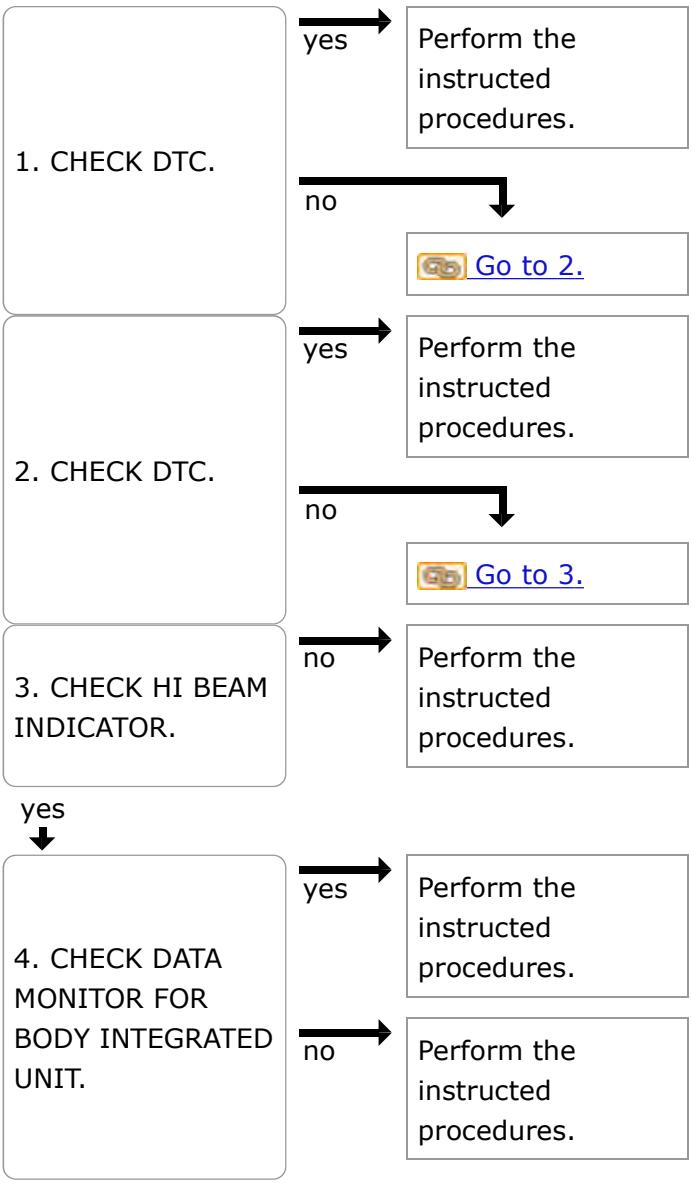
Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Lighting I Switch Input]

Do the switch operation and data indication match?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Check the clearance light. Ref. to LIGHTING SYSTEM>Clearance Light and Illumination Light System.



14. HI BEAM INDICATOR DOES NOT ILLUMINATE

Trouble causes:

- CAN communication failure
- Body integrated unit malfunction
- Combination meter malfunction
- Headlight system circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK HI BEAM INDICATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [High-beam indicator]

Do the indication on Subaru Select Monitor and the HI beam indicator indication match?

Yes	Go to 4.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

4. CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control].
Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Dimmer Hi Switch Input]

Do the switch operation and data indication match?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Check the headlight system. Ref. to LIGHTING SYSTEM>Headlight System.

15. FRONT FOG LIGHT INDICATOR DOES NOT ILLUMINATE

Trouble causes:

- CAN communication failure
- Body integrated unit malfunction
- Combination meter malfunction
- Front fog light system circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK THE FRONT FOG LIGHT INDICATOR.	no →	Perform the instructed procedures.

yes

4. CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

DTC Check

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK THE FRONT FOG LIGHT INDICATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Front fog light indicator]

Do the indication on Subaru Select Monitor and the front fog light indicator indication match?

Yes	Go to 4.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

4. CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.

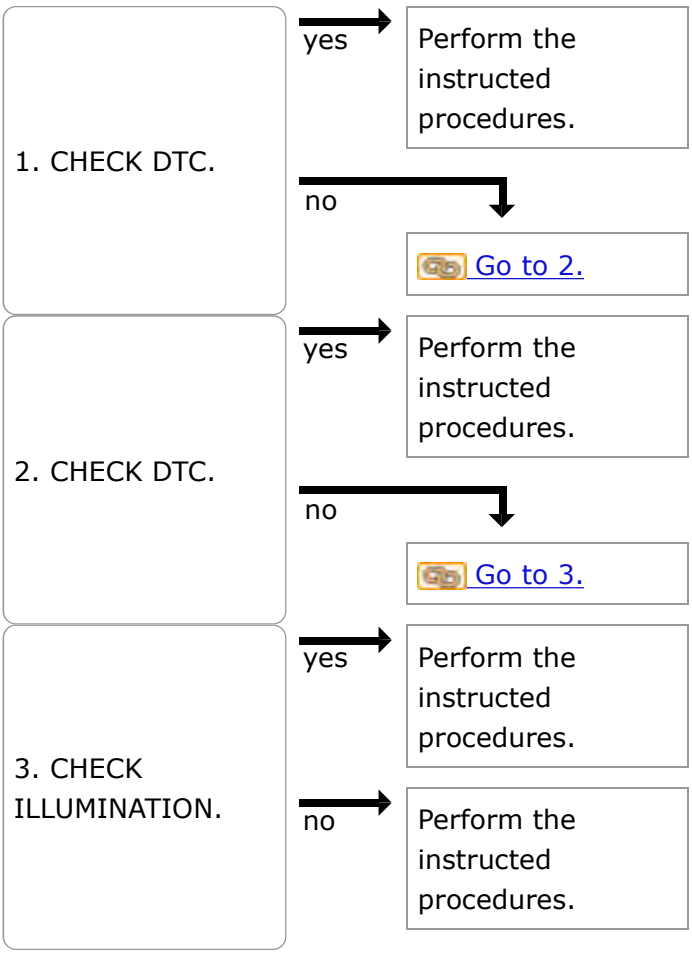
Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Front fog lamp SW input]

Do the switch operation and data indication match?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Check the front fog light system. Ref. to LIGHTING SYSTEM>Front Fog Light System.



16. ILLUMINATION IS FIXED AT THE MAXIMUM BRIGHTNESS

Trouble causes:

- CAN communication failure
- Body integrated unit malfunction
- Combination meter malfunction
- Illumination system circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

3. CHECK ILLUMINATION.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [Illumination check]

Do the indication on Subaru Select Monitor and the indicator indication match?

Yes	Check the clearance light & illumination light system. Ref. to LIGHTING SYSTEM>Clearance Light and Illumination Light System.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

17. CRUISE CONTROL INDICATOR DOES NOT ILLUMINATE

Trouble causes:

- CAN communication failure
- Combination meter malfunction
- Cruise control command switch circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK DATA MONITOR OF ENGINE.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 2.

2. CHECK DATA MONITOR OF ENGINE.

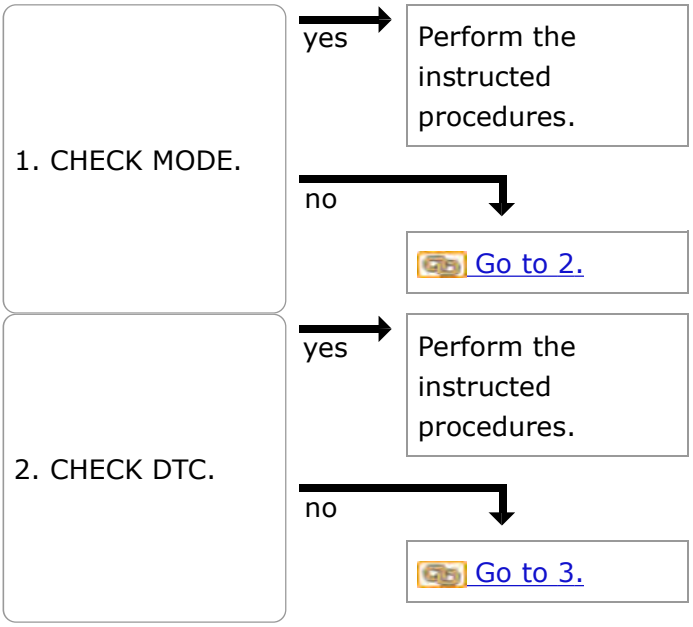
Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Engine]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Main Switch]

Do the switch operation and data indication match?

Yes	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Check the cruise control command switch. Ref. to CRUISE CONTROL SYSTEM>Cruise Control Command Switch.



18. AWD INDICATOR ILLUMINATES

Trouble causes:

- CAN communication failure
- Combination meter malfunction
- TCM failure
- AWD indicator circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

3. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 4.
4. CHECK AWD INDICATOR.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK MODE.

Connect the Subaru Select Monitor and change to AWD mode.

Note:

When AWD ON/OFF switching mode is not available, go to step 2.

Did the AWD indicator go off?

Yes	Currently, it is normal.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Transmission] using the Subaru Select Monitor. Ref. to TRANSMISSION (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 3.

3. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 4.

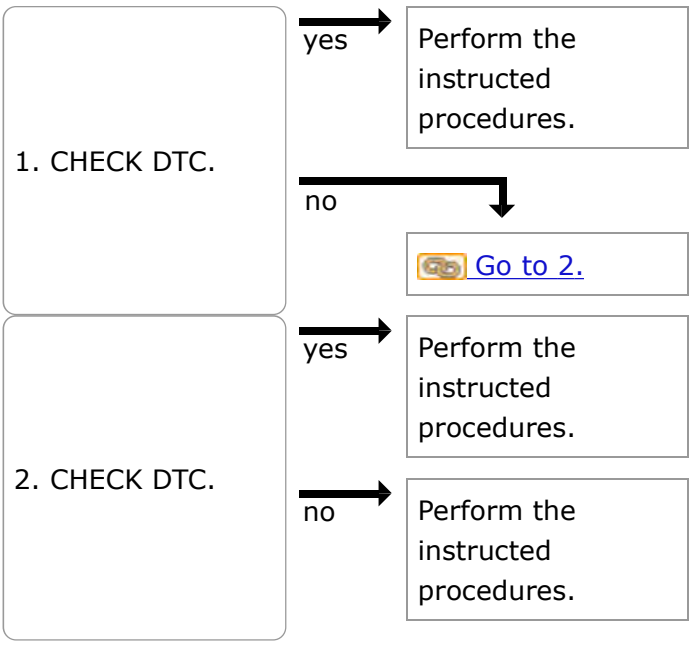
4. CHECK AWD INDICATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to TRANSMISSION (DIAGNOSTICS)>Active Test.

- [AWD warning]

Do the indication on Subaru Select Monitor and the AWD indicator indication match?

Yes	Check the AWD indicator. Ref. to TRANSMISSION (DIAGNOSTICS)>AWD Warning Light Display.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.



19. HILL HOLD INDICATOR DOES NOT ILLUMINATE

Trouble causes:

- CAN communication failure
- Combination meter malfunction
- Hill hold indicator light circuit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description".

1. CHECK DTC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DTC.

1. Start the engine.
2. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>OPERATION.

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Check the hill hold indicator light. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Warning Light Illumination Pattern.

KEYLESS ENTRY(DIAGNOSTICS)

KLE(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Control Module I/O Signal
6. Inspection Mode
7. Diagnostic Procedure for Subaru Select Monitor Communication
8. Data Monitor
9. Freeze Frame Data
10. Work Support
11. Diagnostic Trouble Code (DTC)
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
13. Diagnostics with Phenomenon

KEYLESS ENTRY(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. BASIC INSPECTION.

Perform basic inspection. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Keyless Entry].

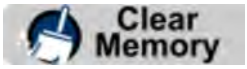
Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Keyless Entry] using the Subaru Select Monitor. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).



DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Keyless entry system is normal.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Keyless Entry]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Inspection Mode.
5. Read the DTC of [Keyless Entry] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown.
No	Finish the diagnosis.

KEYLESS ENTRY(DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="4">Keyless Entry Check List for Interview Date of Vehicle Bring-in Year Month Day</td></tr>

KEYLESS ENTRY(DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. KEYLESS ENTRY

When removing keyless entry-related components, refer to cautions in the security&lock section. Ref. to SECURITY AND LOCKS>General Description>CAUTION.

KEYLESS ENTRY(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect keyless entry related problems.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the fuse condition. Ref. to SECURITY AND LOCKS>Relay and Fuse.
   Make sure that ampere of the fuse is setting value, and it is not blown out.
3. Check the connecting condition of harness and harness connector.

KEYLESS ENTRY(DIAGNOSTICS) > General Description

PREPARATION TOOL

(R221) or (R80) No. 12 ←→ Chassis ground	Battery power supply	Always	9 — 16 V

KEYLESS ENTRY(DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B2771	EEPROM PERFORMANCE	Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2771 EEPROM PERFORMANCE.
B2772	CAN COMMUNICATION (AUDIO) STUCK	Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2772 CONTROL MODULE COMMUNICATION STUCK.
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF.
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE.
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE.
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE.

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Entry]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Keyless Entry] to check that there is no DTC

displayed.

Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

3. Remove the ignition key from the ignition switch, and insert again.
4. Turn the ignition switch OFF → ON, and wait for 10 seconds or more.
5. Using the Subaru Select Monitor, read the DTC of [Keyless Entry] to check that there is no DTC displayed.

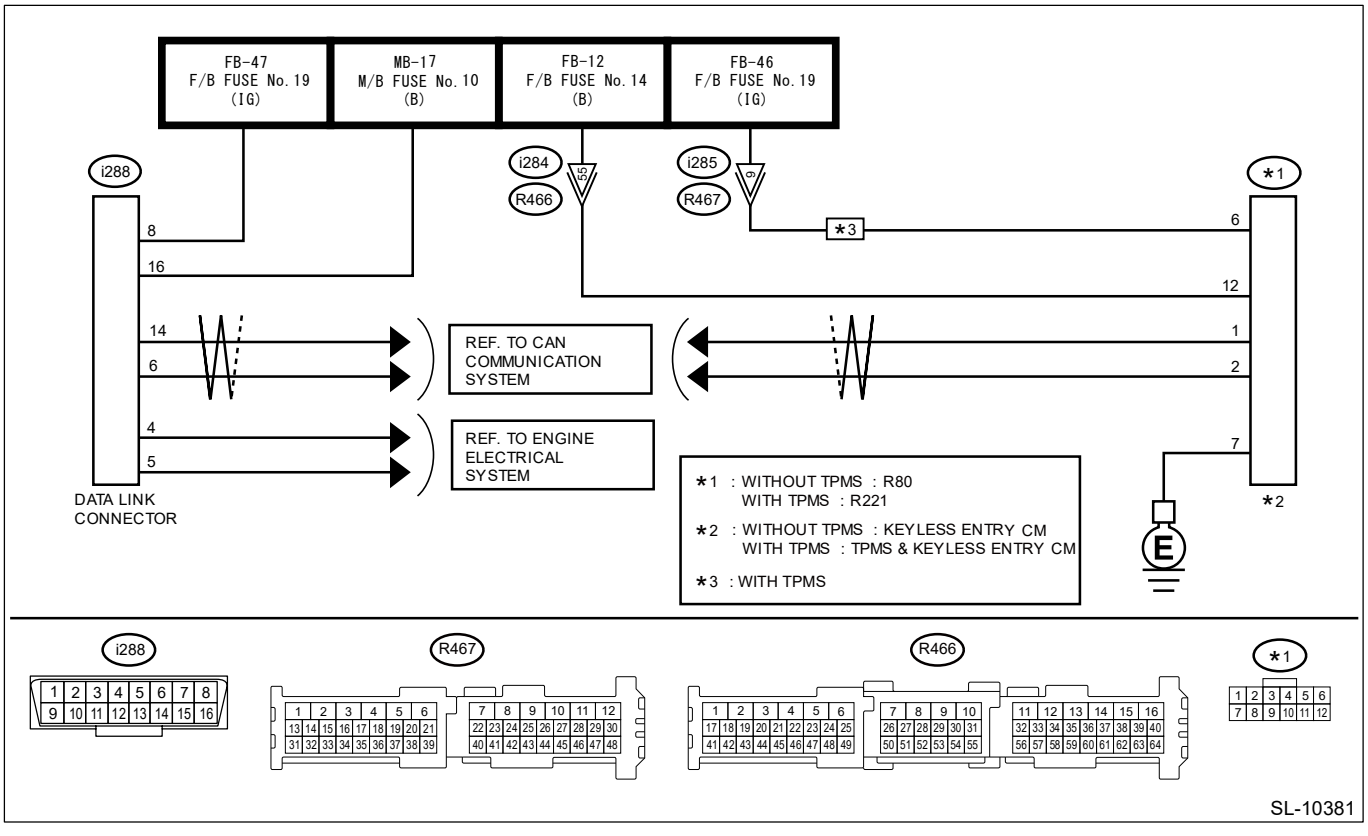
Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Defective TPMS & keyless entry CM or keyless entry CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

- Keyless entry system Ref. to WIRING SYSTEM>Keyless Entry System.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY CIRCUIT.

Connect DST-i to data link connector.

Does DST-i turn ON?

Yes	Go to 4.
No	Go to 2.

2. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 8 (+) — Chassis ground (−):
   (i288) No. 16 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the power supply circuit. **Note:** **In this case, repair the following item:** • **Open or ground short circuit of harness between battery and data link connector** • **Blown out of fuse**

3. CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).

1. Turn the ignition switch to OFF.
2. Using the tester, measure the resistance between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 4 — Chassis ground:
   (i288) No. 5 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found, Go to 4.
No	Repair the harness and connector.

4. CHECK SUBARU SELECT MONITOR.

1. Connect the Subaru Select Monitor to a normal vehicle.
2. Start the engine and establish communication between the Subaru Select Monitor and vehicle.

Is communication possible?

Yes	Go to 5.
No	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is LAN system OK?

Yes	Go to 6.
No	Perform the inspection according to the diagnosis for LAN system.

6. CHECK CONNECTOR.

Check TPMS & keyless entry CM connector or keyless entry CM connector, data link connector or intermediate connector for poor contact.

Is the connector OK?

Yes	Go to 7.
No	Repair the connector.

7. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Remove a fuse from the fuse box.
3. Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the fuse OK?

Yes	Go to 8.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the TPMS & keyless entry CM or keyless entry CM and fuse.

8. CHECK POWER SUPPLY CIRCUIT FOR TPMS & KEYLESS ENTRY CM OR KEYLESS ENTRY CM CONNECTOR (OPEN CIRCUIT).

1. Disconnect the TPMS & keyless entry CM or keyless entry CM connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between the TPMS & keyless entry CM or the keyless entry CM connector and chassis ground.

Connector & terminal

Without TPMS

(R80) No. 12 (+) — Chassis ground (−):

With TPMS

(R221) No. 6 (+) — Chassis ground (−):

(R221) No. 12 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 9.
No	Check for open or short circuit in the harness between the TPMS & keyless entry CM or keyless entry CM and fuses.

9. CHECK GROUND CIRCUIT FOR TPMS & KEYLESS ENTRY CM OR KEYLESS ENTRY CM (OPEN CIRCUIT).

Measure the resistance in harness between TPMS & keyless entry CM or keyless entry CM connector and chassis ground.

Connector & terminal

Without TPMS

(R80) No. 7 — Chassis ground:

With TPMS

(R221) No. 7 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Check the connection between the data link connector and Subaru Select Monitor.
No	Repair the harness for ground line.

KEYLESS ENTRY(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2771 EEPROM PERFORMANCE

DTC detecting condition:

When all the following conditions are met.

- Battery voltage stays at 10 V or more for longer than one second.
- CAN bus is not in sleep state.
- Clear memory is not in process.
- Attempt to reading/writing EEPROM fails twice consecutively.

Trouble symptom:

- The key cannot be registered.
- Can not be locked/unlocked with keyless entry system.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ENTRY(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the TPMS & keyless entry CM connector or keyless entry CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Keyless Entry]. Ref. to COMMON(diag)>Clear memory.

5. Turn the ignition switch to OFF.
6. Turn the ignition switch to ON.
7. Read the DTC of [Keyless Entry] using the Subaru Select Monitor. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2771 displayed? (Current malfunction)

Yes	Replace the TPMS & keyless entry CM or keyless entry CM. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness, or temporary EEPROM access error has occurred.**

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2772 CONTROL MODULE COMMUNICATION STUCK

DTC detecting condition:

When all the following conditions are met.

- Battery voltage stays at 10 V or more for longer than one second.
- CAN bus is not in sleep state.
- Clear memory is not in process.
- CAN message register freezes in the TPMS & keyless entry CM or the keyless entry CM

Trouble symptom:

- Communication is impossible with Subaru Select Monitor.
- Can not be locked/unlocked with keyless entry system.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ENTRY(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect the TPMS & keyless entry CM connector or keyless entry CM connector.
3. Connect the disconnected connectors.
4. Using the Subaru Select Monitor, perform the clear memory of [Keyless Entry]. Ref. to COMMON(diag)>Clear memory.

5. Turn the ignition switch to OFF.
6. Turn the ignition switch to ON.
7. Read the DTC of [Keyless Entry] using the Subaru Select Monitor. Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2772 displayed? (Current malfunction)

Yes	Replace the TPMS & keyless entry CM or keyless entry CM. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC detecting condition:

When all the following conditions are met.

- Battery voltage stays at 10 V or more for longer than one second.
- CAN bus is not in sleep state.
- Buss off state detected by ISO11898 compliant CAN function is found.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC detecting condition:

When all the following conditions are met.

- Battery voltage stays at 10 V or more for longer than one second.
- CAN bus is not in sleep state.
- Not transitioned to CAN data transmission stop mode.
- When one of reception IDs of body integrated unit becomes and remains in one of the following states for [periodic transmission time (ms)×40 (frame)].
  - No reception
  - Message length of reception ID is shorter than communication software definition length.
  - Message length of reception ID is longer than 8.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:

When all the following conditions are met.

- Battery voltage stays at 10 V or more for longer than one second.
- CAN bus is not in sleep state.
- Not transitioned to CAN data transmission stop mode.
- When one of reception IDs of combination meter becomes and remains in one of the following states for [periodic transmission time (ms)×40 (frame)].
  - No reception
  - Message length of reception ID is shorter than communication software definition length.
  - Message length of reception ID is longer than 8.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC detecting condition:

When all the following conditions are met.

- Battery voltage stays at 10 V or more for longer than one second.
- CAN bus is not in sleep state.
- Not transitioned to CAN data transmission stop mode.
- When one of reception IDs of body integrated unit becomes and remains in one of the following states.
  - Lost communication has not been determined.
  - The targeted message counter of reception ID has not been updated 32 times or more consecutively. Or check sum error has been consecutively detected 3 times.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

Symptoms	Note
Both lock and unlock do not function with keyless entry system.	Ref. to KEYLESS ENTRY(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > BOTH LOCK AND UNLOCK DO NOT FUNCTION WITH KEYLESS ENTRY SYSTEM.

KEYLESS ENTRY(DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION

1. BOTH LOCK AND UNLOCK DO NOT FUNCTION WITH KEYLESS ENTRY SYSTEM

Trouble causes:

- Power supply circuit malfunction in TPMS & keyless entry CM or the keyless entry CM
- Malfunction in TPMS & keyless entry CM or the keyless entry CM
- Keyless key malfunction

Caution:

- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the TPMS & keyless entry CM or keyless entry CM is functioning.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ENTRY(DIAGNOSTICS) >General Description>CAUTION.**

1. CHECK DOOR LOCK SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK FUSE.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK HARNESS (POWER SUPPLY CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK HARNESS (OPEN CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓

5. CHECK HARNESS (GROUND SHORT CIRCUIT).
no → Perform the instructed procedures.
yes ↓

6. CHECK KEYLESS TRANSMITTER.
no → Perform the instructed procedures.
yes ↓

7. CHECK TPMS & KEYLESS ENTRY CM OR KEYLESS ENTRY CM.
yes → Perform the instructed procedures.
no → Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check that lock/unlock operates by operating the keyless transmitter.

Does it lock/unlock normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Replace the fuse.

3. CHECK HARNESS (POWER SUPPLY CIRCUIT).

1. Disconnect the TPMS & keyless entry CM connector or keyless entry CM connector.
2. Using a tester, measure the voltage between TPMS & keyless entry CM connector or TPMS CM connector and chassis ground.

Connector & terminal

Keyless entry CM

(R80) No. 12 (+) — Chassis ground (−):

Keyless entry & TPMS CM

(R221) No. 12 (+) — Chassis ground (−):

Is the voltage 9 — 16 V?

Yes	Go to 4.
No	Repair the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the body integrated unit connector.
2. Using a tester, measure the resistance between TPMS & keyless entry CM connector or keyless entry CM connector and body integrated unit.

Connector & terminal

Keyless entry CM

(R80) No. 2 — (i74) No. 3:

(R80) No. 1 — (i74) No. 2:

Keyless entry & TPMS CM

(R221) No. 2 — (i74) No. 3:

(R221) No. 1 — (i74) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between TPMS & keyless entry CM connector or keyless entry CM connector and chassis ground.

Connector & terminal

Keyless entry CM

(R80) No. 2 — Chassis ground:

(R80) No. 1 — Chassis ground:

Keyless entry & TPMS CM

(R221) No. 2 — Chassis ground:

(R221) No. 1 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK KEYLESS TRANSMITTER.

Check the keyless transmitter battery. Ref. to SECURITY AND LOCKS>Keyless Transmitter>INSPECTION.

Is the battery OK?

Yes	Go to 7.
No	Replace the keyless transmitter battery. Ref. to SECURITY AND LOCKS>Keyless Transmitter.

7. CHECK TPMS & KEYLESS ENTRY CM OR KEYLESS ENTRY CM.

1. Connect the TPMS & keyless entry CM connector or keyless entry CM connector.
2. Turn the ignition switch to OFF and close all doors.
3. Perform lock/unlock operation using the keyless key.

Does the door lock?

Yes	Currently, it is normal.
No	Replace the TPMS & keyless entry CM or keyless entry CM. Ref. to WHEEL AND TIRE SYSTEM>Tire Pressure Monitoring System. Ref. to SECURITY AND LOCKS>Keyless Entry Control Module.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)

KPS(diag)

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:

- **Subaru Select Monitor kit is required for reading DTC, performing diagnosis and reading data monitor.**
- **Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.).**
- **Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

Note:

Using the Function Setting (Customize), check that the keyless access system is not in a cancelled state. Ref. to SECURITY AND LOCKS>Function Setting (Customize)>OPERATION.

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. BASIC INSPECTION.

Perform basic inspection. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

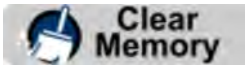
1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select keyless access with push button start.
   Note:
   For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read DTCs of Keyless Access with Push Button Start using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Go to 6.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis according to DTC.
2. Repair or replace the cause of trouble.
3. Clear the memory of Keyless Access with Push Button Start using the Subaru Select Monitor. Ref. to COMMON(diag)>Data Monitor.

4. Execute the inspection mode. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Inspection Mode.
5. Read DTCs of Keyless Access with Push Button Start using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat Go to 5. until DTC is not shown.
No	Finish the diagnosis.

6. CHECK LIST OF DIAGNOSTICS WITH PHENOMENON.

Check “Diagnostics with Phenomenon”. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon.

Is there a symptom that corresponds in the phenomenon list?

Yes	Perform diagnosis according to the procedures in the phenomenon list.
No	Keyless access with push button start system is normal.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="4">Keyless Access with Push Button Start System Trouble Check List for Interview Received Year

<tr><td colspan="2">The access key lockout prevention feature does not function</td><td>❑ Passenger room
❑ Luggage room</td></tr>
<tr><td colspan="3">The LED does not illuminate when the access key button is pressed</td></tr>
</table>

	The external buzzer does not beep
	The passenger room buzzer does not sound
❑ Other	The room light or map light does not illuminate
	( )

Note:

- **Perform the diagnosis according to the basic diagnostic procedure. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Basic Diagnostic Procedure.**
- **If the room light or map light does not illuminate and the keyless access does not function at the same time, the back-up fuse may be loose or blown.**

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. KEYLESS ACCESS WITH PUSH BUTTON START

When removing keyless access with push button start related parts, refer to Cautions in SECURITY AND LOCKS. Ref. to SECURITY AND LOCKS>General Description>CAUTION.

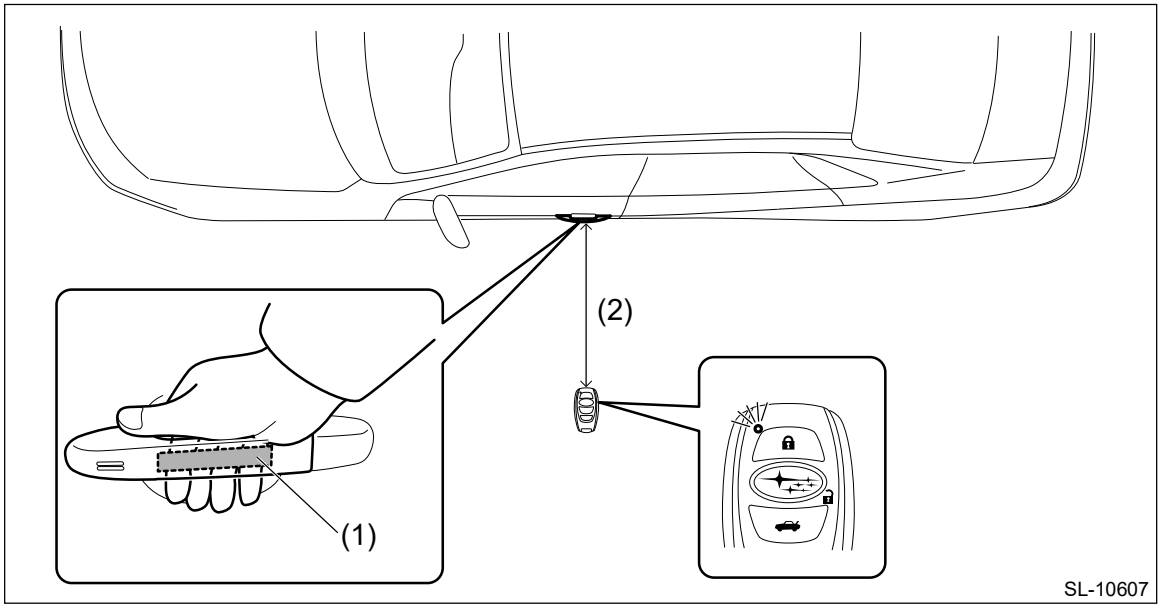
KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect keyless access with push button start system problems.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the fuse condition. Ref. to SECURITY AND LOCKS>Relay and Fuse.
   Make sure that ampere of the fuse is setting value, and it is not blown out.
3. Check the connecting condition of harness and harness connector.



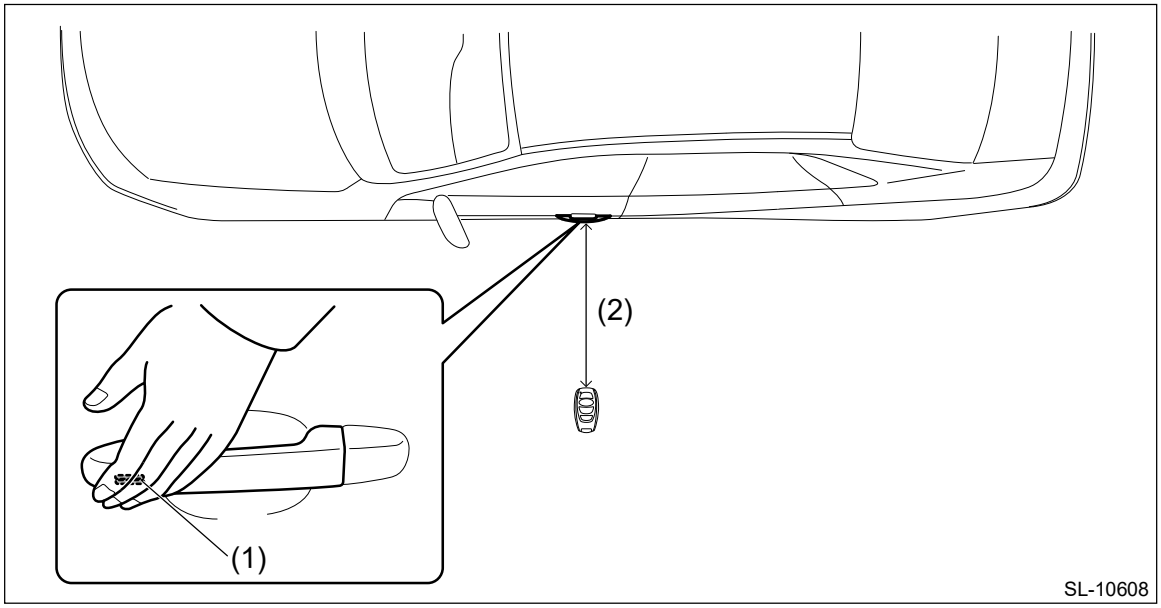
2. CHECK OPERATION

Note:

- **Using the function setting (ECM customizing), check that the keyless access system is not OFF. Ref. to SECURITY AND LOCKS>Function Setting (Customize)>OPERATION.**
- **The dark current is approx. 400 mA if there is communication between the vehicle and access key.**
- **The dark current is approx. 40 mA if there is no communication between the vehicle and access key.***

*** No communication with the vehicle means that the keyless access function has been cancelled or that the access key has not been near the vehicle for 15 minutes or more after door locking.**

1. Keyless access door unlock function check



(1) Touch sensor (unlock) (back face of steering wheel)
(2) 40 — 80 cm

(1) When carrying the access key with all doors locked by keyless lock operation, check that when the touch sensor (unlock) built in to the back side surface of door outer handle of front door is touched, the driver's door will unlock (when touched on the driver's side) or all doors will unlock (when touched on the passenger's side) and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice).
(2) In the keyless access door unlock detection area, hold the access key at the same height as the outer handle (approx. 80 cm from the ground) and in the direction shown in the figure, and check that the vehicle becomes unlock mode [access key LED (red) blinks] at 40 to 80 cm from the vehicle.

Note:

Check the access key battery if the LED (red) does not illuminates when the access key button is pressed. Ref. to SECURITY AND LOCKS>Access Key>INSPECTION.

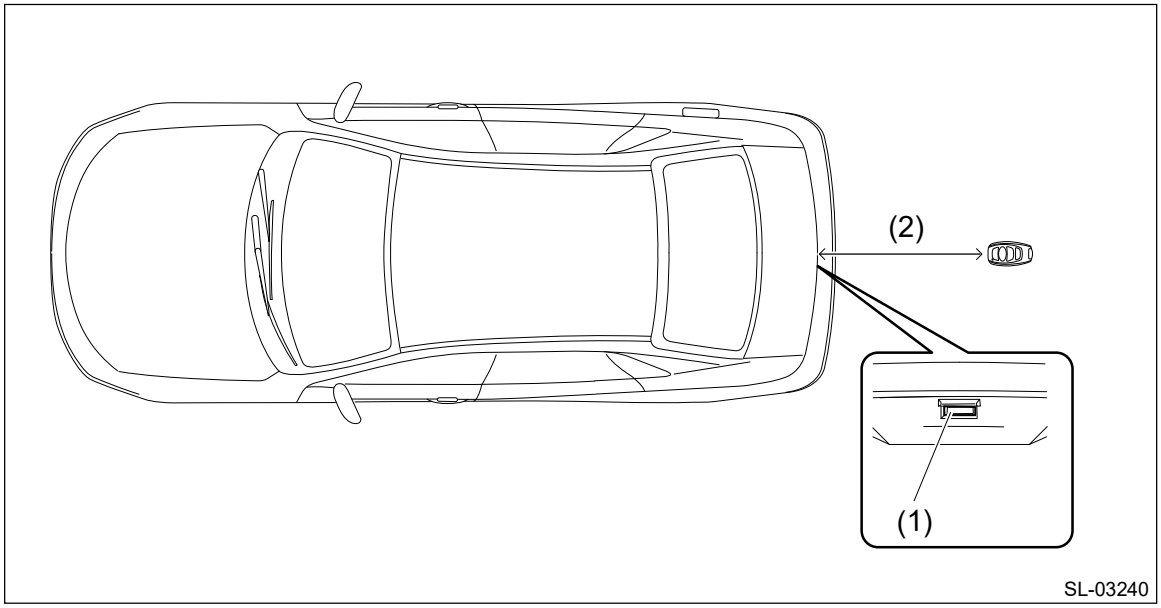
2. Keyless access door lock function check

(1) Touch sensor (lock) (2) Approx. 30 cm

(1) When carrying the access key outside of the vehicle with all doors closed and unlocked, check that when the touch sensor (lock) on the surface of door outer handle of front door is touched, all doors will lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once).

Caution:

If the access key is within the vehicle but not within the detection area (in the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket), then lockout protection will not function when the doors are locked and the access key will be locked into the vehicle.



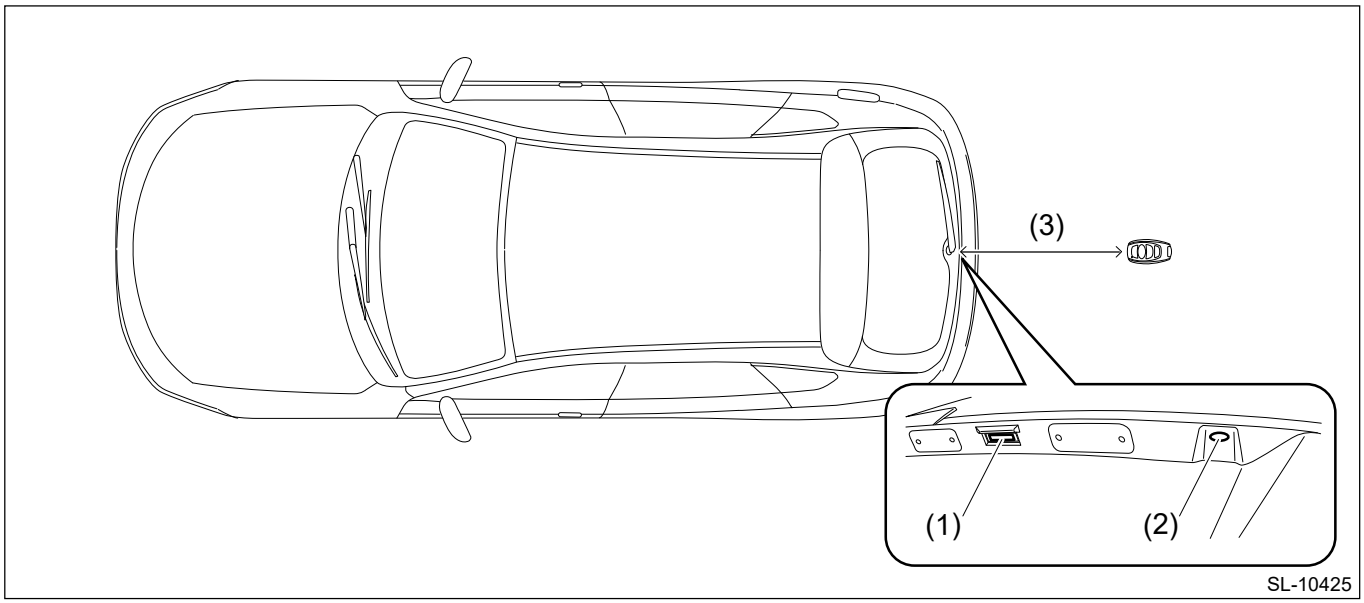
(2) To check the keyless access door lock operation range, hold the access key at a height of 10 cm under the bottom edge of the door glass (approx. 80 cm from the ground), point it in the direction shown in the figure at a distance of approx. 30 cm from the vehicle, and check that all doors lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once) when you touch the touch sensor (lock).

(3) Check the passenger's side door in the same manner.

Note:

- **When the door cannot lock if the touch sensor (lock) is touched, touch the touch sensor (lock) with palm.**
- **Since communication is not possible within close range (20 cm or less) of the door outer handle, the access key may not operate if you touch the touch sensor (lock) with the same hand you are holding the access key.**
- **If the lockout prevention buzzer sounds, it is possible that the interior transmitter has radio wave leakage.**

3. Check of the keyless access trunk open function



(1) Trunk opener button (2) 40 — 80 cm

(1) With the trunk closed, check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when you press the trunk opener button while carrying the access key.

(2) To check the keyless access trunk open operation range, hold the access key behind and in the center of the vehicle at the same height as the trunk opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when the trunk opener button is pressed.

4. Check of the keyless access rear gate function

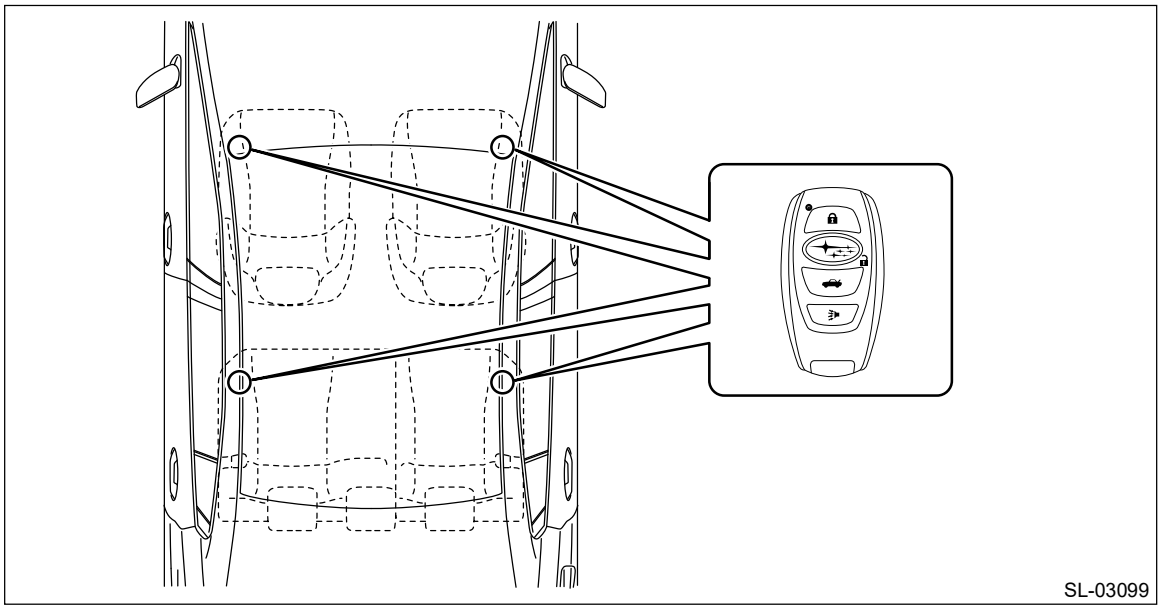
(1) Rear gate opener button (2) Rear lock button (3) 40 — 80 cm

(1) With the rear gate locked, the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when you

press the rear gate opener button while carrying the access key.

(2) To check the range for keyless access rear gate open operation, hold the access key behind and in the center of the vehicle at the same height as the rear gate opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the all doors unlocks and the rear gate opens simultaneously and the answer-back function operates (hazard light blinks twice, external buzzer sounds twice) when the rear gate opener button is pressed.

(3) With the rear gate unlock, check that the all doors lock and the answer-back function operates (hazard light blinks once, external buzzer sounds once) when rear lock button is pressed while carrying the access key.



5. Keyless access ignition switching function check

(1) With the ignition OFF, enter the vehicle while carrying the access key. With the shift lever in the P range, check that the push button ignition switch indicator illuminates in green when you depress the brake pedal, then check that the engine starts when you press the push button ignition switch while the indicator green light is on.

(2) While carrying the access key, check that the status changes as follows each time you press the push button ignition switch without depressing the brake pedal: 'Ignition OFF'→'ACC ON'→'Ignition ON'→'Ignition OFF'. However, if the shift lever is a range other than the P range and the push button ignition switch is pressed from ignition ON, then the status does not change to ignition OFF and instead will change to ACC ON.

(3) After the vehicle has stopped, press the push button ignition switch and ignition is turned OFF (engine stopped • all power supplies OFF). However, if the shift lever is in any range except for the P range and the push button ignition switch is pressed with the vehicle stopped, then the ignition is not turned OFF and instead the power supplies changes to ACC ON. Check that the steering lock operates if you open the door in the ignition OFF state (the shift lever must be in P range).

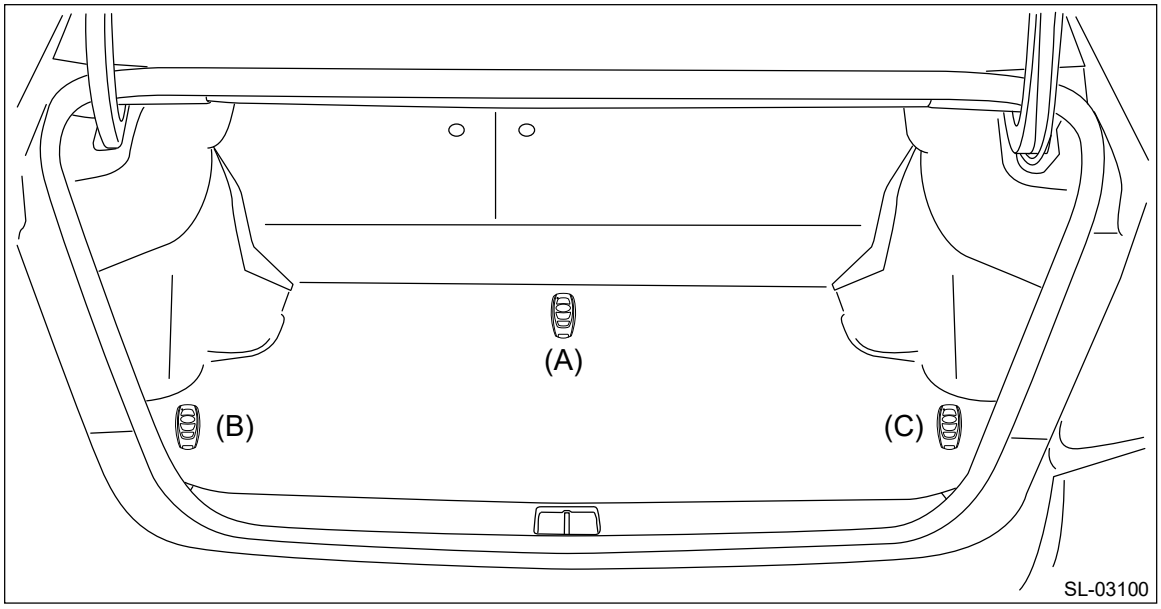
(4) To check the range of the keyless access ignition operation, check that the engine can start when you set the access key at the check position on the seat in the direction indicated in the figure.

Caution:

The access key may not be correctly detected even though it is within the detection area within the passenger room, if it is on the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket.

Note:

Perform the check multiple times, once each with the access key positioned on the driver's seat, on the passenger's seat, and on the rear seat in 2 locations.



6. Lockout protection function check with the access key in the trunk

Caution:

Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

(1) With all doors closed and locked, and with the access key in the trunk room and the trunk closed, check that the access buzzer sounds (approx. 2 seconds). Also check that the trunk opens when you press the trunk opener button.

(2) To check the detection range of the lockout protection function with the access key in the trunk, position the access key in the direction shown in the figure, and check that the lockout protection function operates normally when you check the lockout protection function for the access key locked in the trunk.

Caution:

The lockout protection function will not operate if the access key is any of the locations described below.

- **Near the spare tire or on the edge of the trunk room.**
- **Inside a bag made of metallic material or near metal objects.**

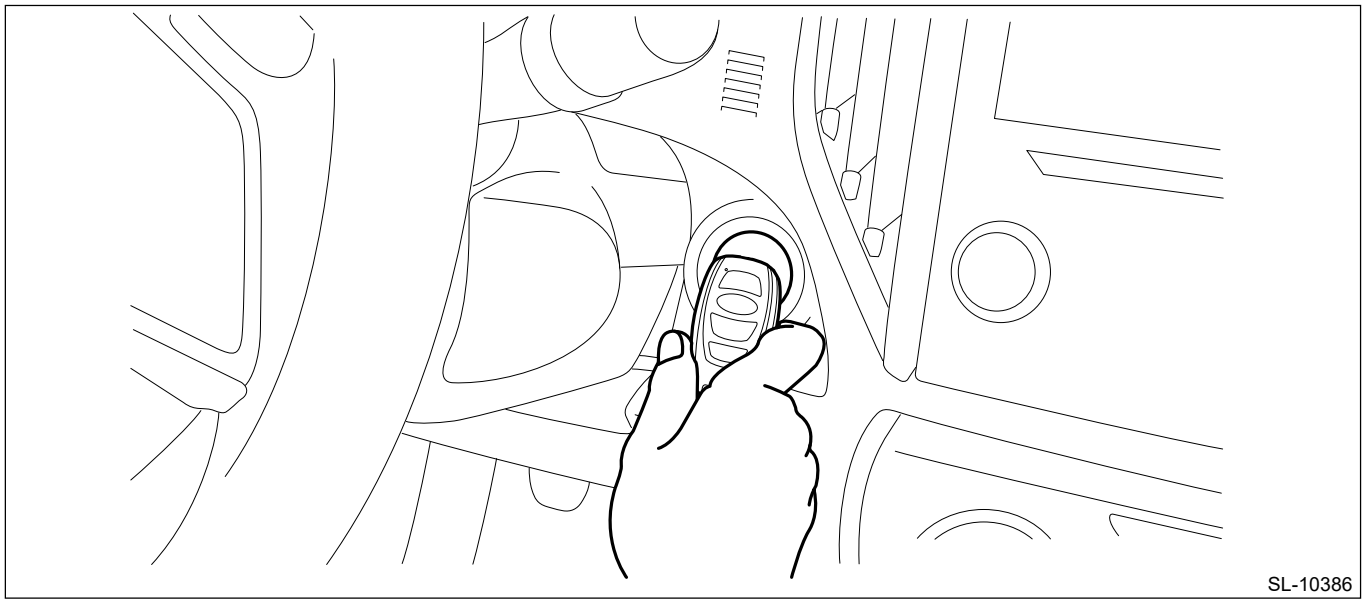
Note:

Check the trunk in two locations or more.

7. Lockout protection function check (in the passenger room)

Caution:

Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.



(1) Position the access key on the driver's or passenger's seat.

(2) Close all doors. (With all doors unlocked)
(3) Check that the doors do not lock and the lockout protection buzzer (exterior) sounds for 2 seconds when you touch the touch sensor (lock) of either the driver's or passenger's door.

8. Keyless access cancel function check
(1) After setting the keyless access cancel function, check that all keyless access and start system (keyless access) functions are inoperable. (For cancel setting, refer to Ref. to SECURITY AND LOCKS>Function Setting (Customize)>OPERATION..)

Note:

When keyless access is cancelled, door lock and unlock can be operated by access key button operation and the starter system can be operated by passing the access key over the push button ignition switch with the access key button toward you.

9. Access key diagnostic mode
(1) Connect the Subaru Select Monitor and select Diagnosis on [Start] display.
(2) On [Vehicle selection] display, input the target vehicle information and select [OK].
(3) On [Main Menu] display, select Each System.
(4) On [Select System] display, select Keyless Access with Push Button Start, and then select [Enter].
(5) On Select Function display, select Work Support.
(6) On Work Support display, select [Keyless access system check].
(7) Select the transmitter to check from the items.
(8) Check that the door lock buzzer sounds (short blips, a continuous beeping sound for the center room antenna) when the access key is near the selected transmitter or antenna.

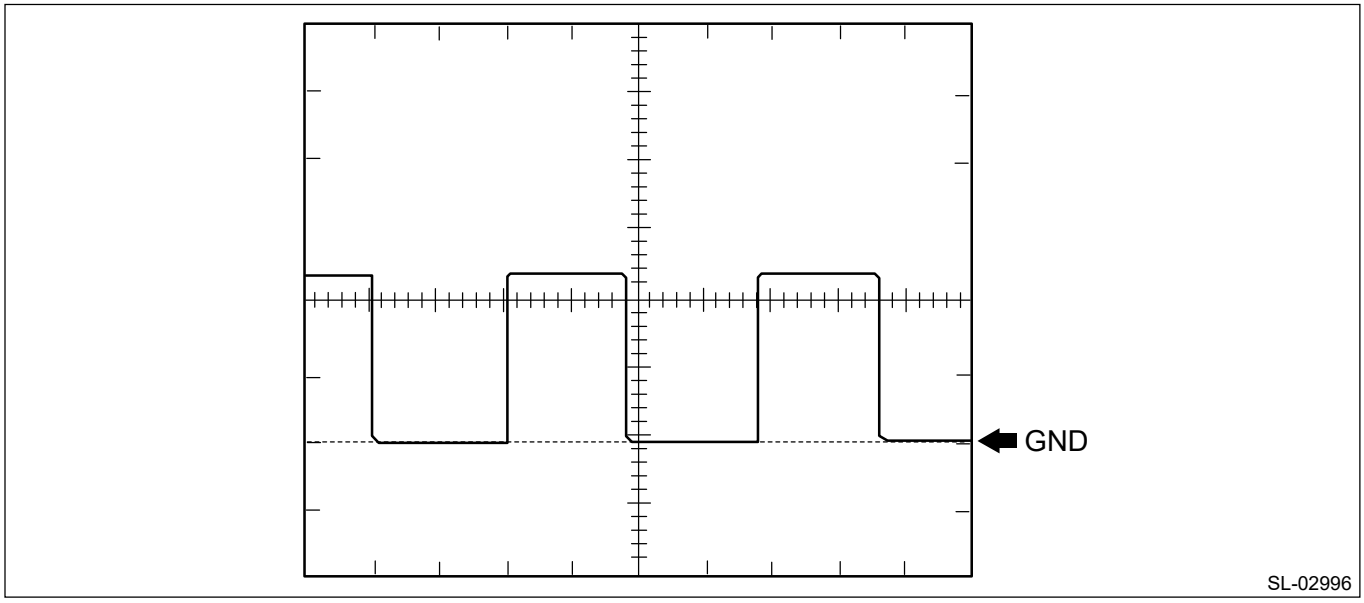
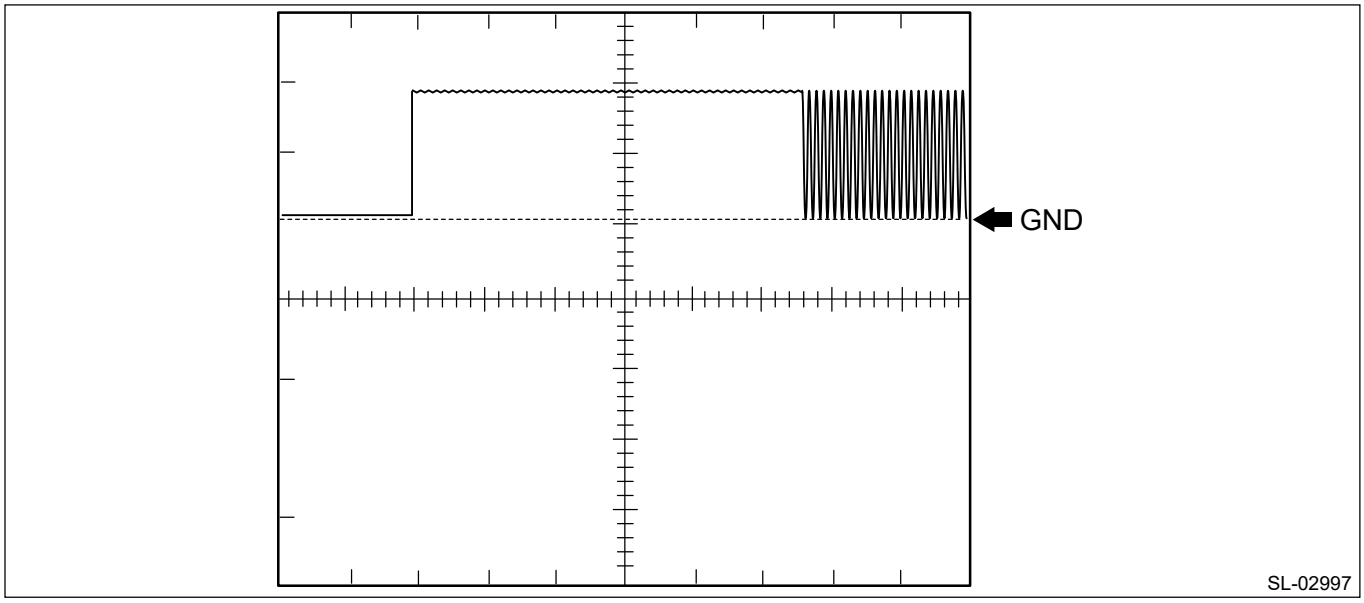
*1: Executed with the keyless access CM connector disconnected.



1. Waveform 1

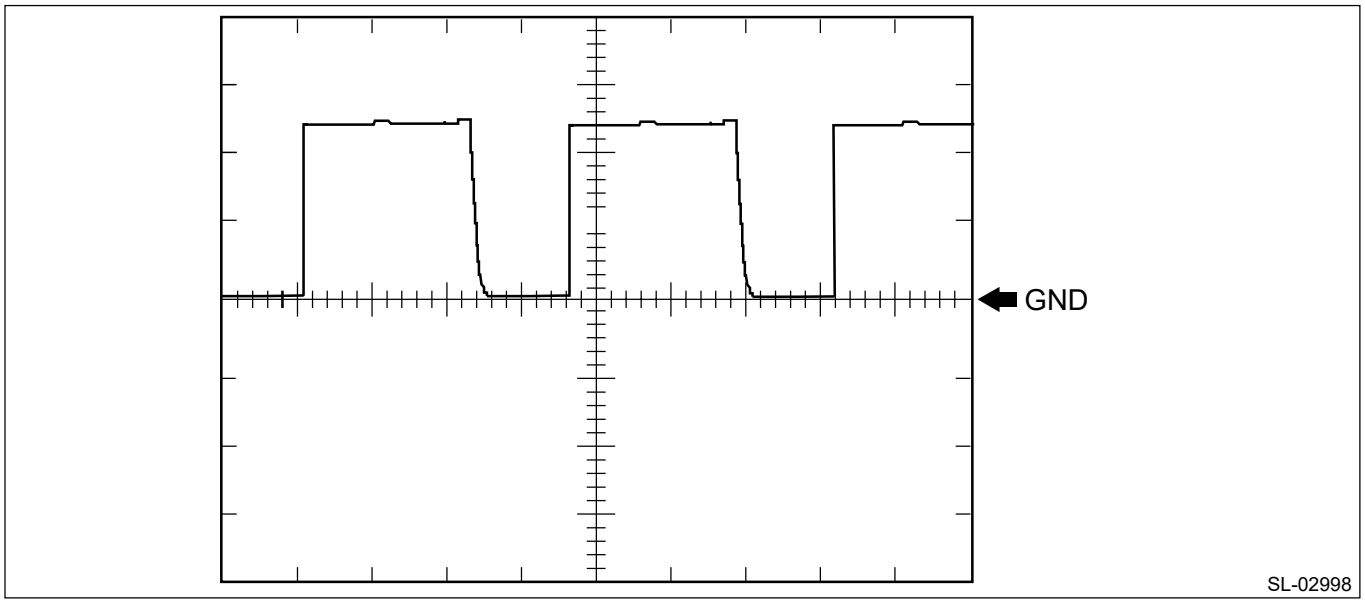
Item	Contents
Measured terminal	(i241) No. 22 (CODE) ←→ (i241) No. 17 (GND2)
Equipment setting	2 V/DIV, 20 ms/DIV



Item	Contents
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch (with the access key battery removed).

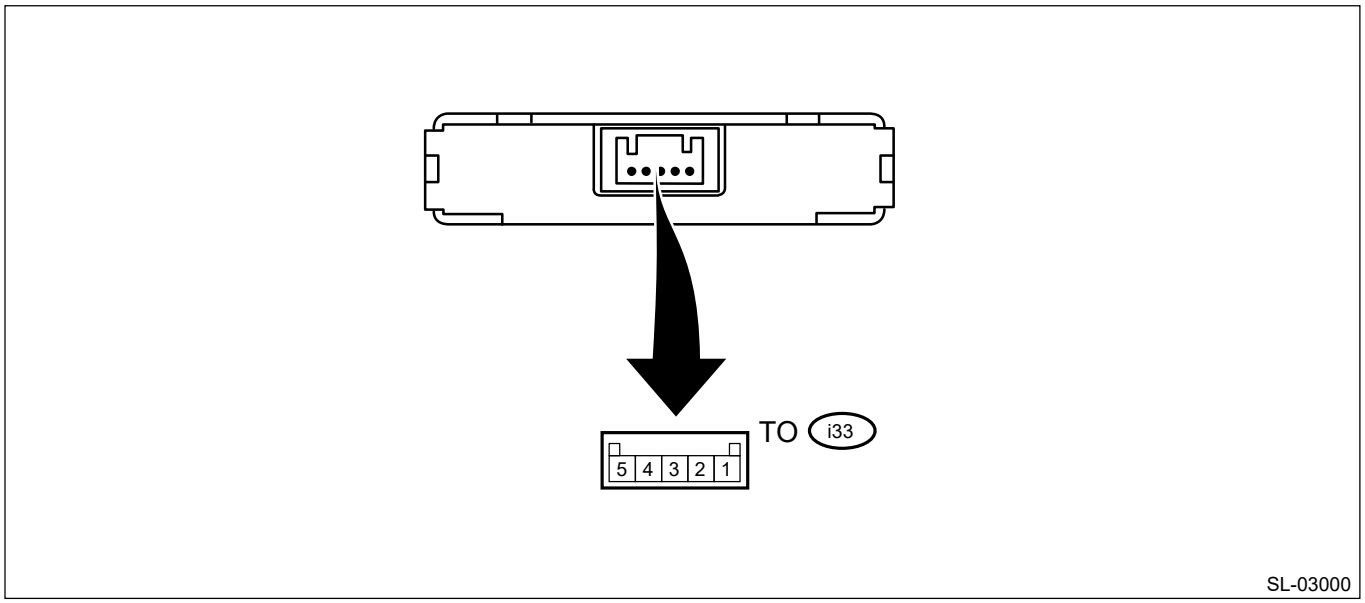
2. Waveform 2

Item	Contents
Measured terminal	(i75) No. 6 (TACH) ⟷ Chassis ground
Equipment setting	5 V/DIV, 100 ms/DIV
Measuring condition	While engine idling



3. Waveform 3

Item	Contents
Measured terminal	(i241) No. 19 (TXCT) ⟷ (i241) No. 17 (GND2)

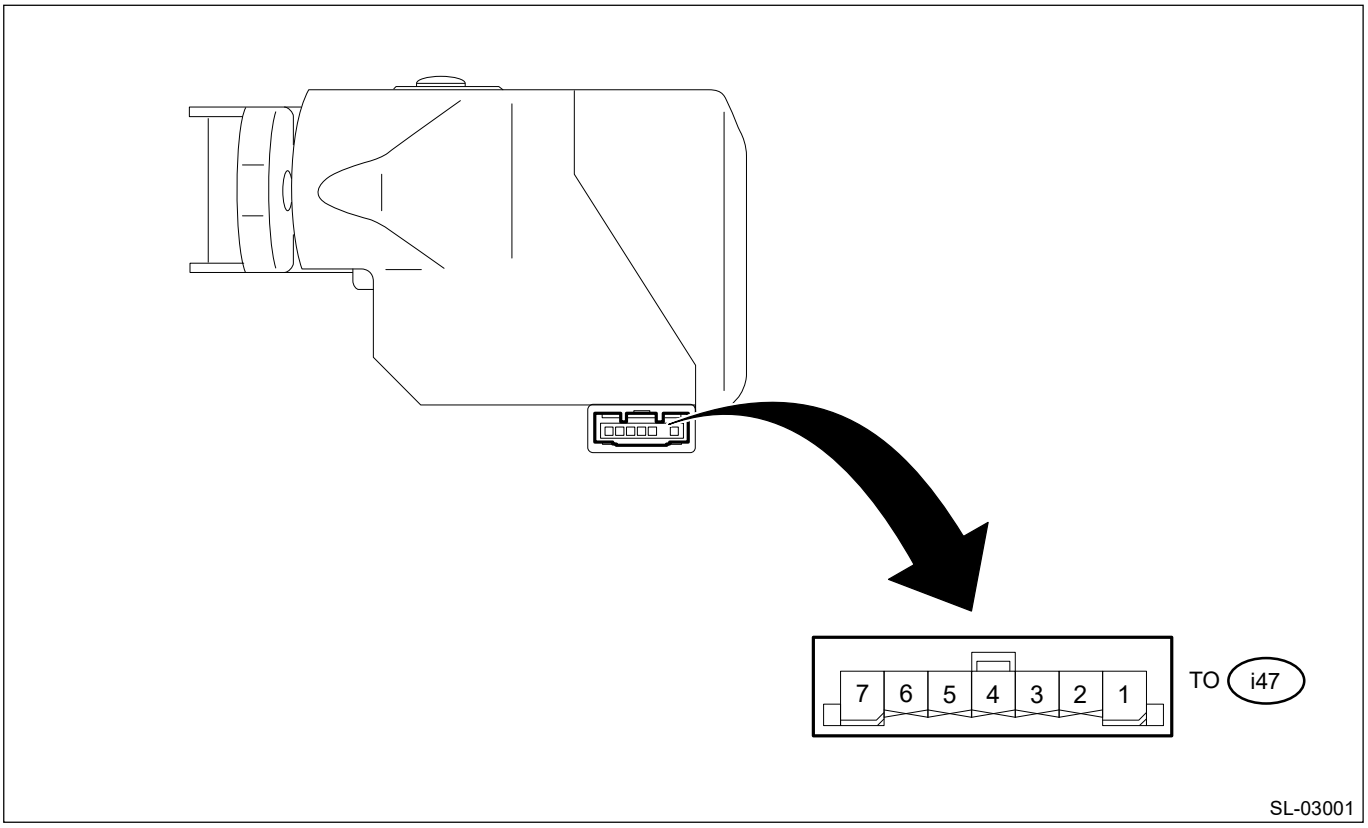


Item	Contents
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch (with the access key battery removed).

4. Waveform 4

Item	Contents
Measured terminal	(i241) No. 21 8VC5) ←→ (i241) No. 17 (GND2)
Equipment setting	2 V/DIV, 200 ms/DIV
Measuring condition	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room

2. ID CODE BOX



Terminal No.	Contents	Measuring condition	Standard
(i33) No. 1 ←→ 5	Battery power supply	Always *1	9.5 V or more
(i33) No. 2	LIN communication	ACC ON, IGN ON or power OFF, and open/close the door	Pulse generation
(i33) No. 3	—	—	—
(i33) No. 4 ←→ 5	Immobilizer communication 1	Ignition switch OFF	0 V
		Ignition switch ON	7 V or more → pulse generates temporarily
(i33) No. 5 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω

*1: Executed with the ID code box connector disconnected.

3. BODY INTEGRATED UNIT

For I/O signals of the body integrated unit, refer to Body Control (Diagnostics). Ref. to BODY CONTROL(DIAGNOSTICS)>Control Module I/O Signal>ELECTRICAL SPECIFICATION.

4. STEERING LOCK CM

Terminal No.	Contents	Measuring condition	Standard
(i47) No. 1 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω
(i47) No. 2	—	—	—
(i47) No. 3 ←→ Chassis ground	Steering lock motor drive power supply	Motor not operating → Motor operating	9.5 V or more → 1 V or less

Terminal No.	Contents	Measuring condition	Standard
(i47) No. 4 ←→ Chassis ground	Unlock position output	Lock → Unlock	9.5 V or more → 1 V or less
(i47) No. 5	LIN communication	ACC ON, IGN ON or power OFF, and open/close the door	Pulse generation
(i47) No. 6 ←→ Chassis ground	Ignition power supply	Ignition switch ON *1	9.5 V or more
(i47) No. 7 ←→ Chassis ground	Battery power supply	Always *1	9.5 V or more

*1: Executed with the ID code box connector disconnected.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0074	CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF	—
U0100	Lost Communication With ECM/PCM "A"	—
U0101	Lost Communication With TCM	—
U0122	Lost Communication With Vehicle Dynamics Control Module	—
U0140	Lost Communication With Body Control Module	—
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	—
U0401	Invalid Data Received From ECM/PCM "A"	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
U1422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN	—
B2271	IGN relay control circuit	—
B2274	ACC relay control circuit	—
B2275	Engine start request control circuit	—
B2276	ACC relay off signal	—
B2277	Keyless access control module (water detection)	—
B227B	PUSH ENGINE START SWITCH INPUT PERFORMANCE	—
B227C	P RANGE SIGNAL PERFORMANCE	—
B2285	Steering lock position signal correlation	—
B2286	Engine speed signal(without Auto Start Stop)	—
B228A	ENGINE SPEED SIGNAL(WITH AUTO START STOP)	—
B2781	Steering Lock CM control circuit	—
B2782	Steering lock drive request signal correlation	—
B2785	LIN communication	—
B2786	Steering Lock CM communication	—
B2788	IGN signal correlation (Steering Lock CM)	—
B2789	ID Code Box communication	—
B278B	CAN CONTROL MODULE STUCK	—

DTC	Item	Note
B278D	ID Code Box judgment circuit	—
B2793	BACKUP POWER	—

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.
3. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4. Start the engine, and let it idle for 40 seconds or more.
5. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

2. INSPECTION MODE 2

DTC	Item	Note
B2779	Remote control engine starter collation	—

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.
3. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4. Register the remote engine starter, and operate it.
5. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

3. INSPECTION MODE 3

DTC	Item	Note
B2784	Antenna circuit (Push Engine Switch)	—
B2790	ID Code Box circuitB2790B2790	—
B27A1	Driver side external antenna open	—
B27A2	Passenger side external antenna open	—
B27A5	Front internal antenna open	—
B27A6	Rear internal antenna open	—
B27A7	Trunk/rear gate internal antenna open	—
B27A8	Trunk/rear gate external antenna open	—

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.
3. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   Note:

   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

4. INSPECTION MODE 4

DTC	Item	Note
B2282	Vehicle speed signal correlation	—
B2283	Vehicle speed sensor	—

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.
3. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   Note:

   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4. Drive for 20 seconds or more at a vehicle speed of 25 km/h (15.5 MPH) or more.
5. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

5. INSPECTION MODE 5

DTC	Item	Note
B2784	Antenna circuit (Push Engine Switch)	—
B278A	Push Engine Switch power supply circuit	—

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.
3. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4. Hold the access key that doesn't have a battery over the push button start SW for collation.
5. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

6. INSPECTION MODE 6

DTC	Item	Note
B2284	Brake signal correlation	—

Diagnostic procedure:

1. Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.
3. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4. Turn the ignition switch to ON, depress and hold the brake pedal for 20 seconds of more, then release the brake pedal and wait for 20 seconds and more.

5. Using Subaru Select Monitor, read the DTC of [Keyless Access with Push Button Start] to check that there is no DTC displayed. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

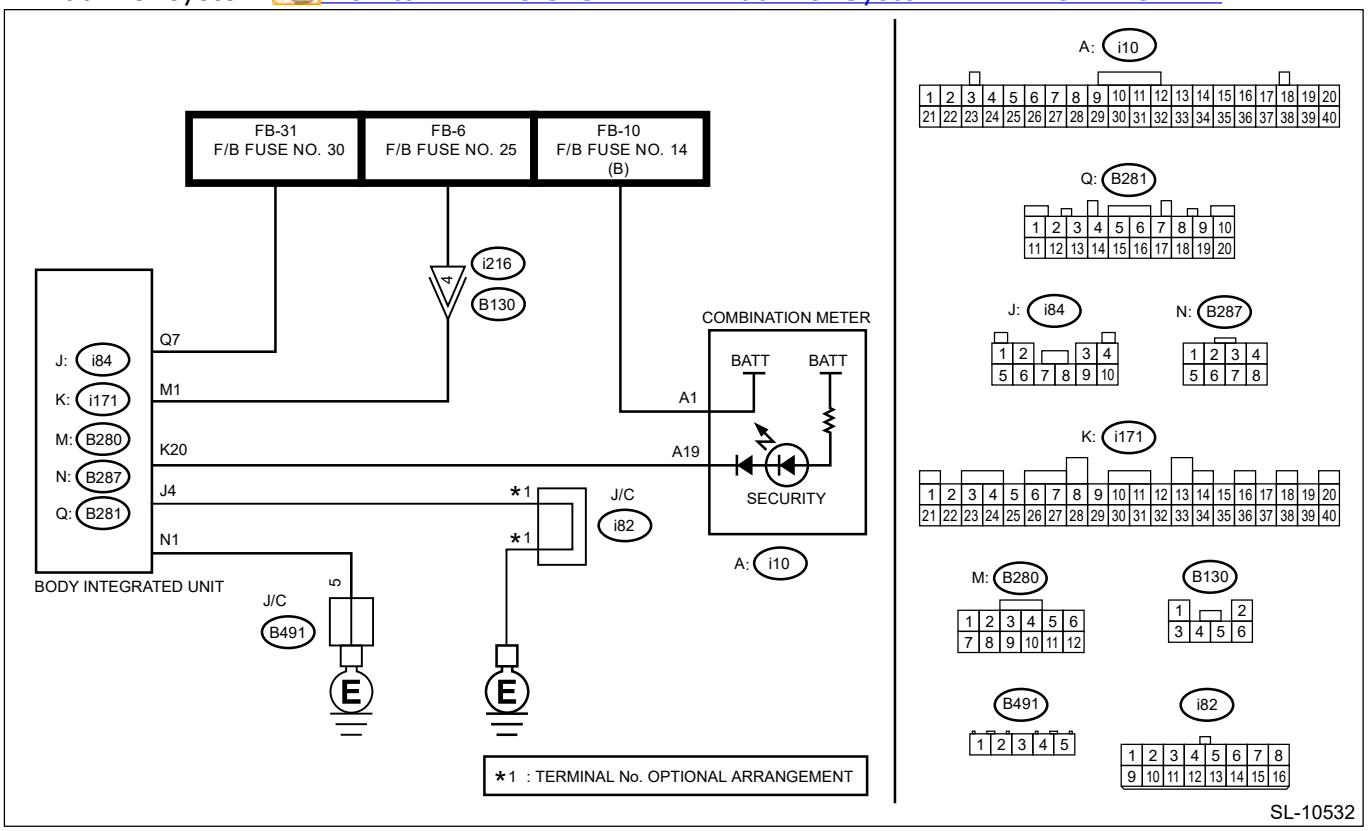
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Warning Light Illumination Pattern

INSPECTION

- Security indicator light
  Blinks slowly once with the push button ignition switch not pressed.
  Goes off when the push button ignition switch is pressed while carrying the regular access key.
  The indicator light continues to blink and the engine is not allowed to start when the push button ignition switch is pressed while carrying a key other than the regular access key.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Warning Light Illumination Pattern



WARNING LIGHT DOES NOT ILLUMINATE

Trouble causes:

- Power supply circuit malfunction
- Ground circuit malfunction
- Body integrated unit malfunction
- Combination meter malfunction
- Malfunction of harness between combination meter and body integrated unit

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse (F/B No. 25, 30). Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.

2. CHECK SECURITY INDICATOR LIGHT.

1. Disconnect the connector from body integrated unit. Disconnect the connector from body integrated unit.
2. Connect the resistor (100 Ω) between the body integrated unit connector terminal (i171) No. 20 and chassis ground.

Does the security indicator light illuminate?

Yes	Go to 3.
No	Go to 5.

3. CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.

Measure the resistance between the body integrated unit connector terminal and chassis ground.

Connector & terminal

(i84) No. 4 — Chassis ground:

(B287) No. 1 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Repair the open circuit of the body integrated unit ground circuit.

4. CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.

Measure the voltage between the body integrated unit connector terminal and chassis ground.

Connector & terminal

(B281) No. 7 (+) — Chassis ground (−):

(B280) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Check the harness for open or short circuit between body integrated unit and fuse.

5. CHECK COMBINATION METER CIRCUIT.

1. Remove the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
2. Measure the voltage between combination meter connector terminal and chassis ground.
   Connector & terminal
   (i10) No. 1 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 6.
No	Check for an open or short circuit in the harness between the combination meter and fuse.

6. CHECK COMBINATION METER CIRCUIT.

Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal.
Connector & terminal
(i171) No. 20 — (i10) No. 19:

Is the resistance less than 10 Ω?

Yes	LED bulb is defective. Replace the combination meter case assembly. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Repair the harness or connector.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Warning Light Illumination Pattern

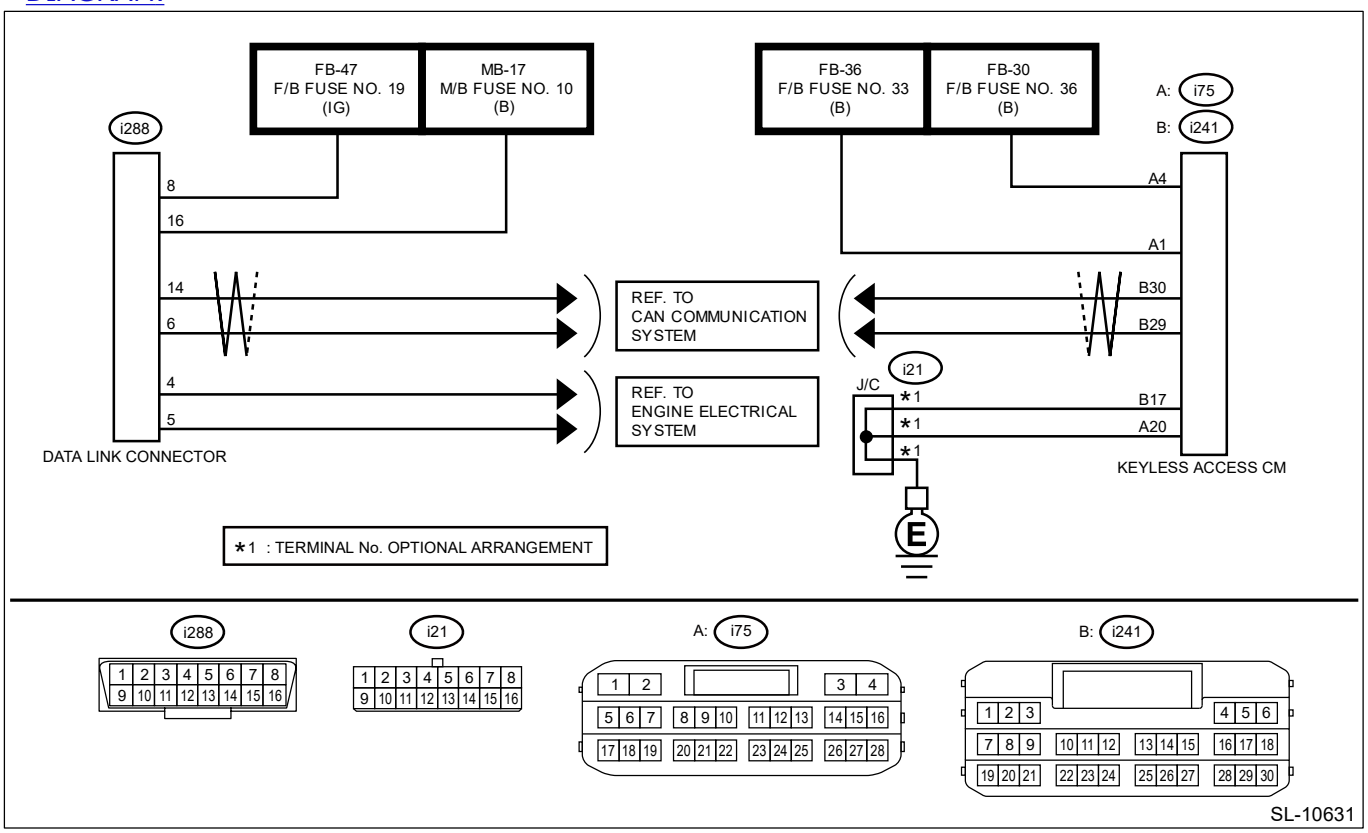
WARNING LIGHT REMAINS ON

Note:
For the diagnostic procedures, refer to "WARNING LIGHT DOES NOT COME ON". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Warning Light Illumination Pattern>WARNING LIGHT DOES NOT ILLUMINATE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Detecting condition:



- Defective harness
- Power supply circuit malfunction
- Defective keyless access CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

Wiring diagram:

- Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK POWER SUPPLY CIRCUIT.

Connect DST-i to data link connector.

Does DST-i turn ON?

Yes	Go to 4.
No	Go to 2.

2. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 8 (+) — Chassis ground (–):
   (i288) No. 16 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the power supply circuit. **Note:** **In this case, repair the following item:** • **Open or ground short circuit of harness between battery and data link connector** • **Blown out of fuse**

3. CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).

1. Turn the ignition switch to OFF.
2. Using a tester, measure the resistance between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 4 — Chassis ground:
   (i288) No. 5 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found, Go to 4.
No	Repair the harness and connector.

4. CHECK SUBARU SELECT MONITOR.

1. Connect the Subaru Select Monitor to a normal vehicle.
2. Start the engine and perform communication between the Subaru Select Monitor and vehicle.

Is communication possible?

Yes	Go to 5.
No	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 6.
No	Perform the diagnosis for LAN system.

6. CHECK CONNECTOR.

Check poor contact of keyless access CM connector, data link connector and coupling connector.

Is the check result OK?

Yes	Go to 7.
No	Repair the connector.

7. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse of keyless access CM. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the check result OK?

Yes	Go to 8.
No	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between keyless access CM and fuse.

8. CHECK KEYLESS ACCESS CM CONNECTOR POWER SUPPLY CIRCUIT (OPEN).

1. Disconnect the keyless access CM connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (–):

(i75) No. 1 (+) — Chassis ground (–):

Is the voltage 10 V or more?

Yes	Go to 9.
No	Check for open or short circuit in the harness between keyless access CM and fuse.

9. CHECK GROUND CIRCUIT OF KEYLESS ACCESS CM (OPEN).

Measure the resistance in harness between keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 20 — Chassis ground:

(i241) No. 17 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Check the connection between the data link connector and Subaru Select Monitor.
No	Repair the harness for ground line.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor>LIST.**

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Data Monitor

LIST

Item	Contents	Standard/Unit	Note
Trip Count [count]	Time stamp information Ref. to COMMON(diag)>Time Stamp.	time	—
Count		—	—

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

DTC detecting condition:

Incompatibility of reference code between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM occurs.

Trouble symptom:

Engine will not start.

Caution:

- **For replacement procedure of keyless access CM (model without ID code BOX) or ID code box (model with ID code BOX), refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK ECM.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is ECM registration finished? And does the engine start?

Yes	ECM registration was not performed properly.
No	Go to 2.

2. REPLACE ECM.

1. Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed.
2. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is ECM registration finished? And does the engine start?

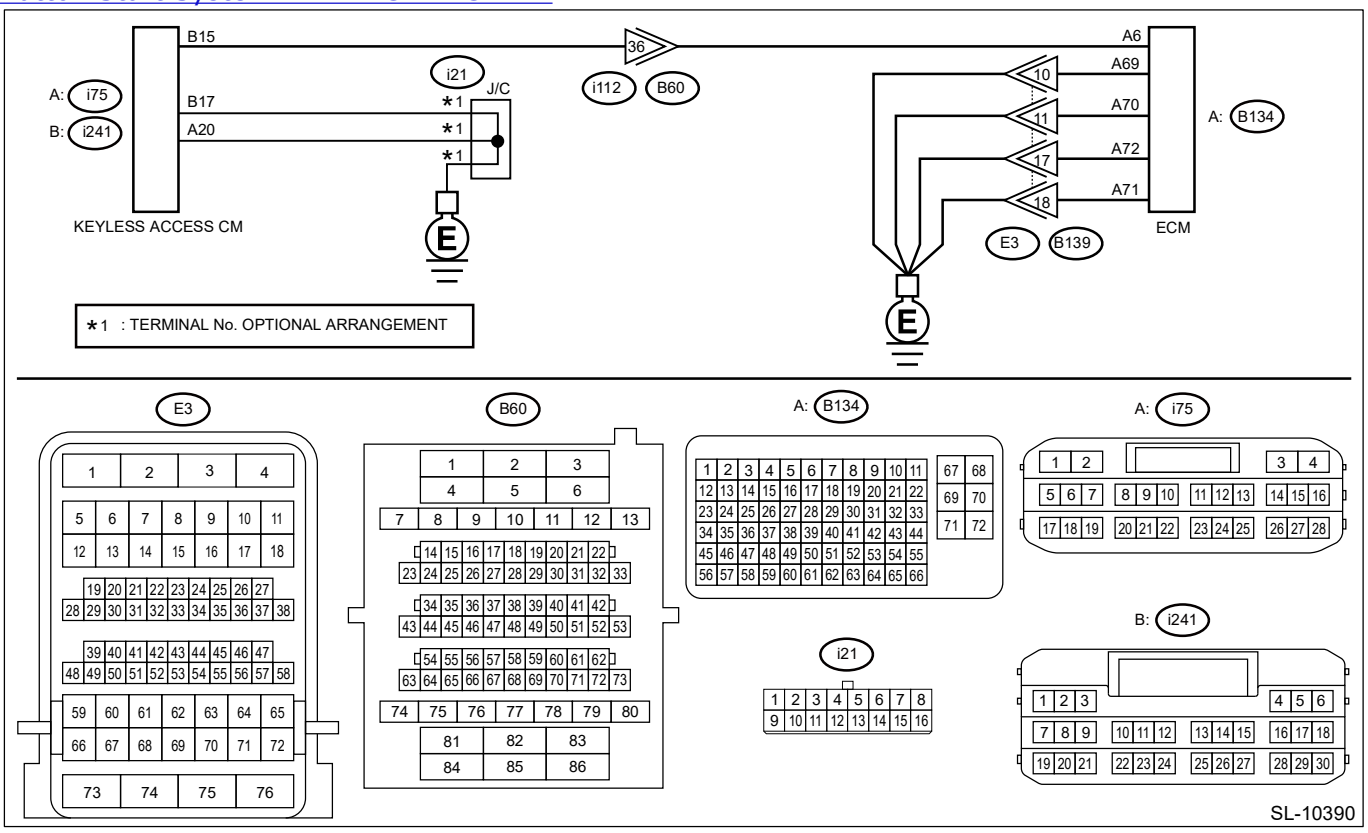
Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL. Install the ECM from other vehicle to the original vehicle.
No	Replace the keyless access CM (model without ID code box) Ref. to SECURITY AND LOCKS>Keyless Access CM. or the ID code box (model with ID code box). Ref. to SECURITY AND LOCKS>ID Code Box.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. EXCEPT FOR C5 MODEL

DTC detecting condition:



Communication error between keyless access CM and ECM

Trouble symptom:

Engine will not start.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM and ECM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK GROUNDING POINT.

no → Go to 2.

yes ↓

2. CHECK DATA MONITOR.
- no → Perform the instructed procedures.
- yes ↓

3. CHECK DATA MONITOR.
- no → Perform the instructed procedures.
- yes ↓

4. CHECK HARNESS (OPEN CIRCUIT).
- no → Perform the instructed procedures.
- yes ↓

5. CHECK HARNESS (OPEN CIRCUIT).
- no → Perform the instructed procedures.
- yes ↓

6. CHECK ECM.
- yes → Perform the instructed procedures.
- no → Perform the instructed procedures.

1. CHECK GROUNDING POINT.

Check the grounding point of the engine ground and chassis ground.

Is there any looseness? Are there any foreign matters caught on the ground or contact surface? Are there any oil-soiled areas?

Yes	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check the DTC, and when DTC B1572 is still displayed, Go to 2.
No	Go to 2.

2. CHECK DATA MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check [Data monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.
3. Display the next data. [Immobilizer] [Engine start] [Unlock confirmation]

Data Monitor

Data

[Immobilizer] = [Unset]
[Engine start] = [E/G Start Permission]
[Unlock confirmation] = [Confirmed]

Is the data displayed as described above?

Yes	Go to 3.
No	Perform diagnostics with phenomenon. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon.

3. CHECK DATA MONITOR.

Use the Subaru Select Monitor to check the following items with [Data monitor] of [Keyless Access with Push Button Start] when holding down the push button ignition switch while depressing the brake pedal (CVT model) or the clutch pedal (MT model). Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

Data

[EGI code reception status] = [Receive]

Note:

If [Receive] is displayed, the status changes to [No receive] in 10 seconds. When performing the check again, perform the check after turning the ignition switch to OFF.

Is the data displayed as described above?

Yes	Go to 4.
No	Repair or replace the harness between keyless access CM and ECM.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the keyless access CM connector and ECM connector.
3. Using a tester, measure the resistance between the keyless access CM connector and ECM connector.

Connector & terminal

(i241) No. 15 — (B134) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

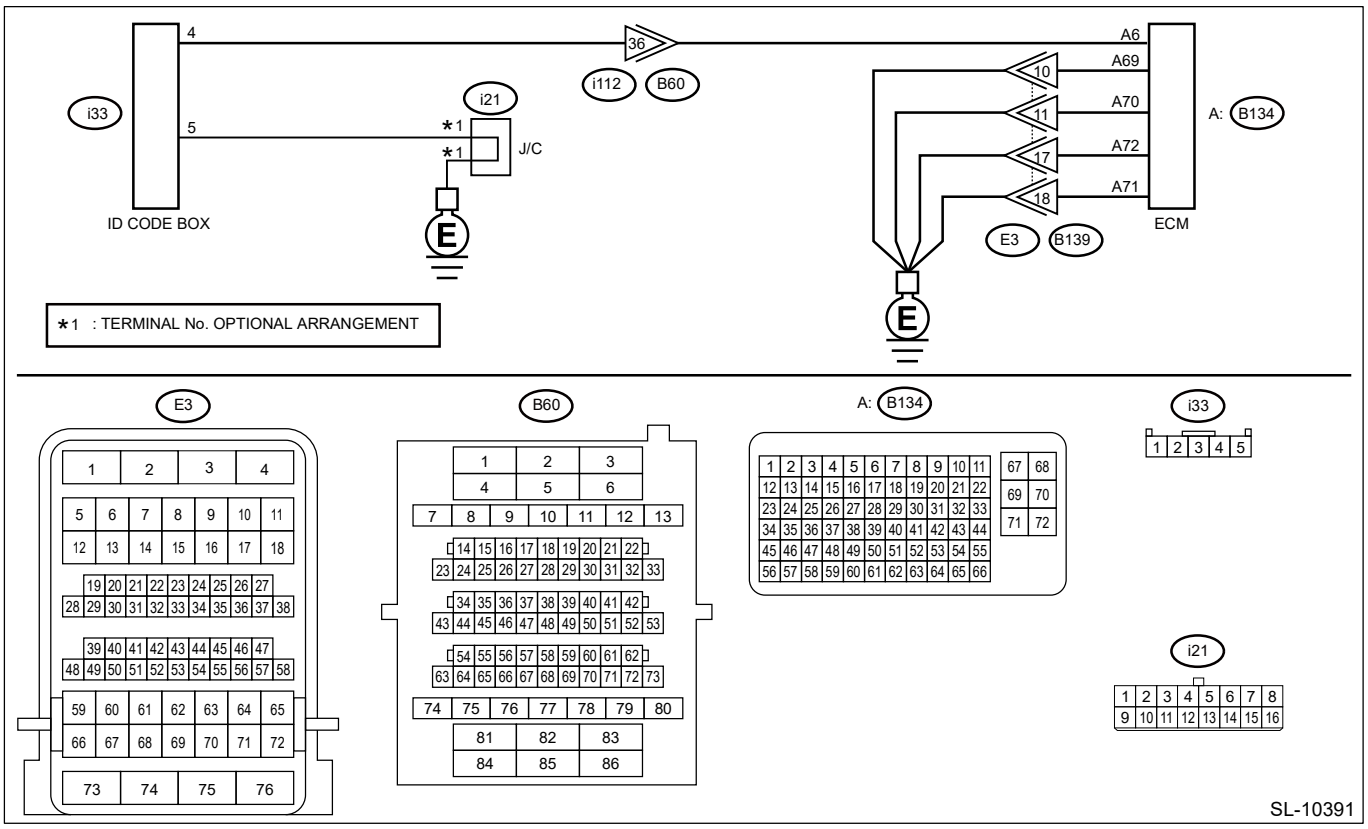
(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK ECM.

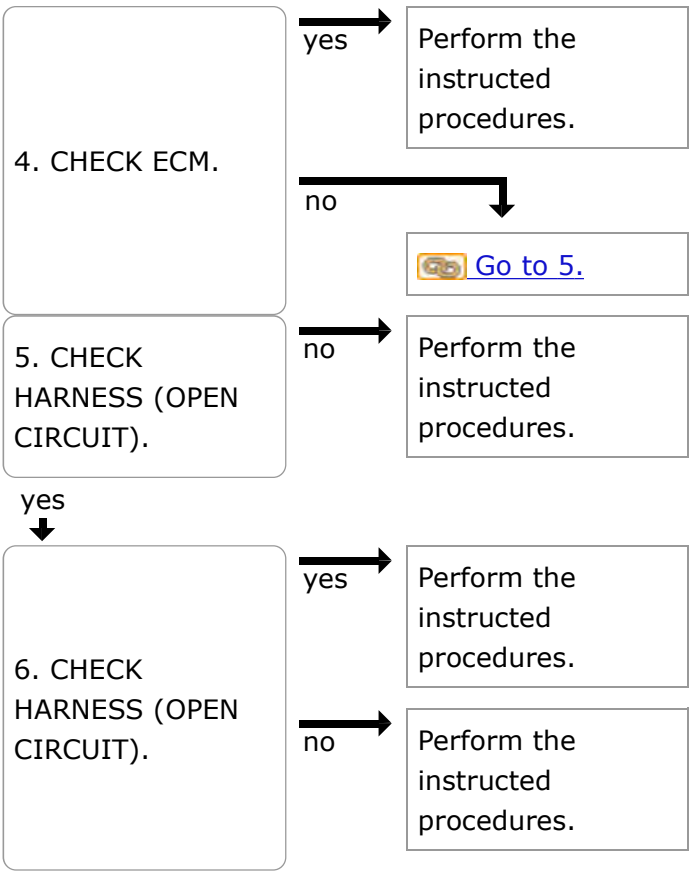


1. Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed.
2. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is ECM registration finished? And does the engine start?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL. Install the ECM from other vehicle to the original vehicle.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

2. C5 MODEL



DTC detecting condition:
Communication error between ID code box and ECM
Trouble symptom:
Engine will not start.
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of ID code box and ECM, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK GROUNDING POINT.
   - no → Go to 2.
   - yes ↓
2. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓

1. CHECK GROUNDING POINT.

Check the grounding point of the engine ground and chassis ground.

Is there any looseness? Are there any foreign matters caught on the ground or contact surface? Are there any oil-soiled areas?

Yes	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check the DTC, and when DTC B1572 is still displayed, Go to 2.
No	Go to 2.

2. CHECK DATA MONITOR.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check [Data monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.
3. Display the next data. [Immobilizer] [Engine start] [Unlock confirmation]

Data Monitor

Data

[Immobilizer] = [Unset]
[Engine start] = [E/G Start Permission]
[Unlock confirmation] = [Confirmed]

Is the data displayed as described above?

Yes	Go to 3.
No	Perform diagnostics with phenomenon. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon.

3. CHECK DATA MONITOR.

Use the Subaru Select Monitor to check the following items with [Data Monitor] of [Keyless Access with Push Button Start] when holding down the push button ignition switch while depressing the brake pedal (CVT model) or the clutch pedal (MT model).

Data Monitor

Data

[EGI code reception status] = [Receive]

Note:

If [Receive] is displayed, the status changes to [No receive] in 10 seconds. When performing the check again, perform the check after turning the ignition switch to OFF.

Is the data displayed as described above?

Yes	Go to 4.
No	Repair or replace the harness between ID code box and ECM.

4. CHECK ECM.

1. Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed.
2. Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is ECM registration finished? And does the engine start?

Yes	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL. Install the ECM from other vehicle to the original vehicle.
No	Go to 5.

5. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the ID code box connector and the ECM connector.
3. Using a tester, measure the resistance between ID code box connector and ECM connector.
   Connector & terminal
   (i33) No. 4 — (B134) No. 6:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between ID code box connector and chassis ground.
Connector & terminal
(i33) No. 5 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Replace the ID code box. Ref. to SECURITY AND LOCKS>ID Code Box.
No	Repair or replace the open circuit of harness.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1576 EGI CONTROL MODULE EEPROM

DTC detecting condition:

- ECM malfunctioning
- When the ROM in ECM was inaccessible during registration.

Trouble symptom:

Engine cannot be started.

Caution:

- **For replacement procedure of ECM, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is ECM registration complete?

Yes	Make sure that the engine can start. This completes the work.
No	Go to 2.

2. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is ECM registration complete?

Yes	Make sure that the engine can start. This completes the work.
No	Go to 3.

3. PERFORM ECM REGISTRATION.

Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

Is ECM registration complete?

Yes	Make sure that the engine can start. This completes the work.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1577 IMM CONTROL MODULE EEPROM

1. EXCEPT FOR C5 MODEL

DTC detecting condition:

- Defective keyless access CM
- When inaccessible to ROM in keyless access CM.

Trouble symptom:

Engine cannot be started.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch to OFF.
4. Remove and install the battery.
5. Turn the ignition switch to ON.
6. After 5 seconds or more elapse, read the DTC of [Engine] using the Subaru Select Monitor. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC B1577 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. C5 MODEL

DTC detecting condition:

- ID code box malfunction
- When inaccessible to ROM in ID code box.

Trouble symptom:

Engine cannot be started.

Caution:

- **For replacement procedure of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

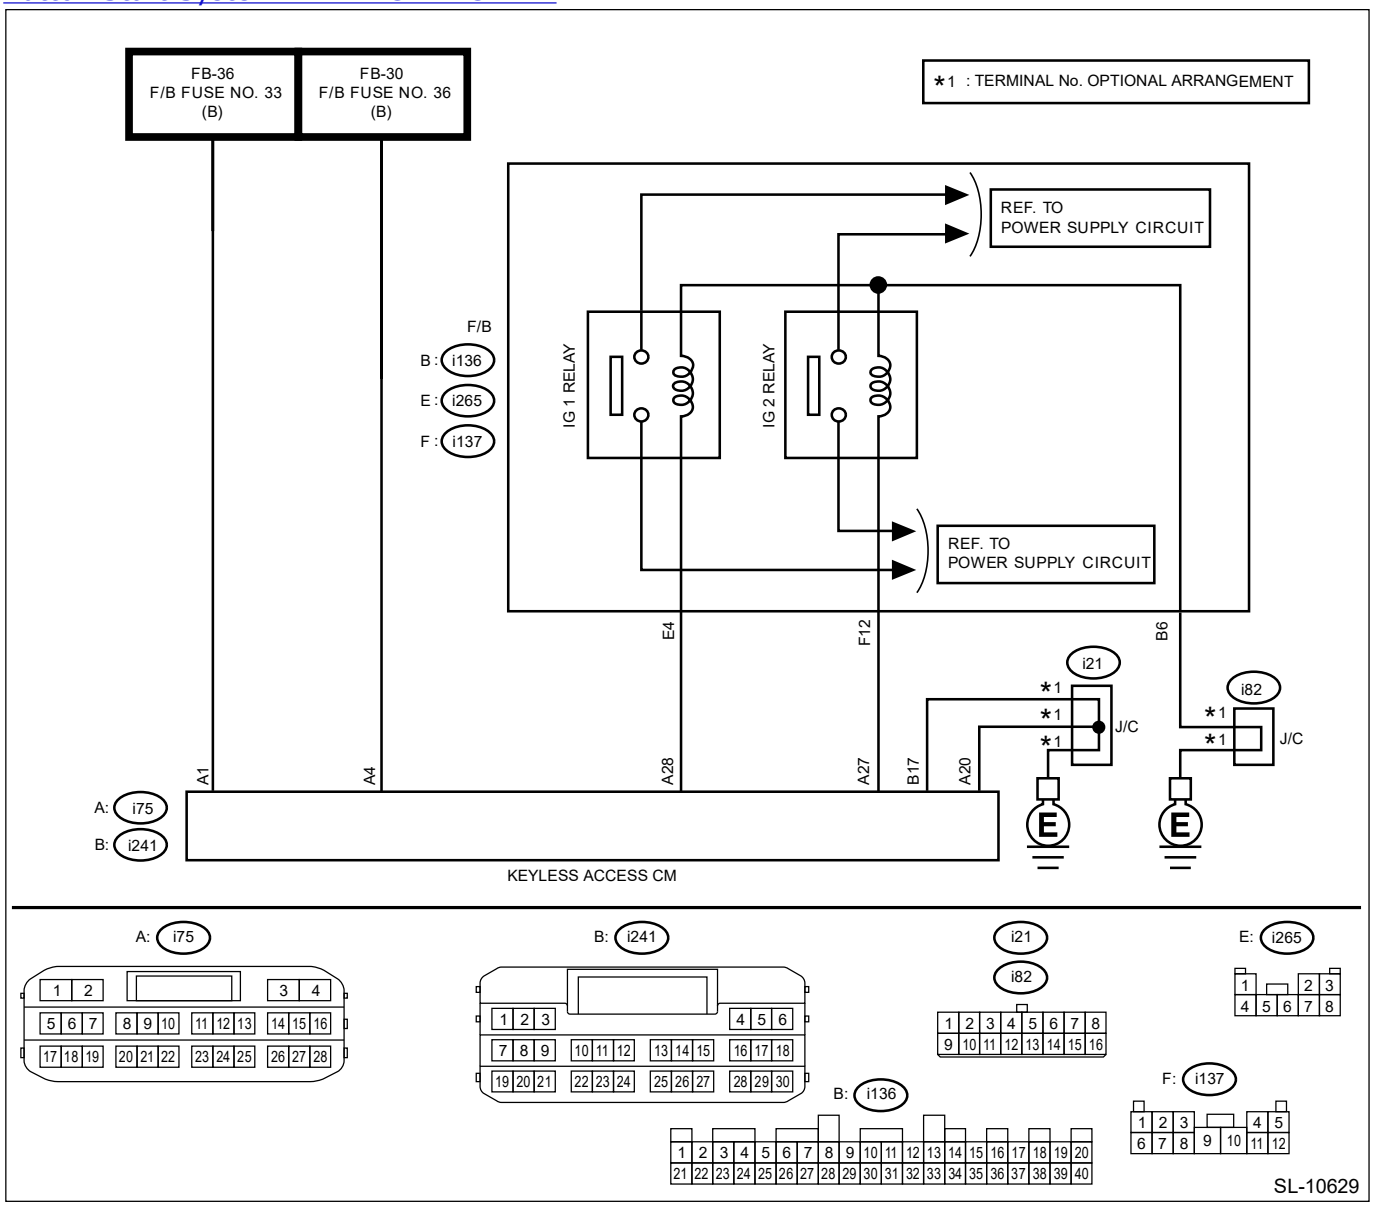
1. CHECK DTC.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Engine]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch to OFF.
4. Register the ID code box.
5. Read the DTC of [Engine] using the Subaru Select Monitor again. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC B1577 displayed? (Current malfunction)

Yes	Replace the ID code box. Ref. to SECURITY AND LOCKS>ID Code Box.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**



KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2271 IGN RELAY CONTROL CIRCUIT

DTC detecting condition:
When malfunction judgment (difference occurs between output value and monitoring result) continues 3 times at one second interval (periodical check) during transition of power supply status from ACC ON → IGN SW ON (initial check) or with IGN SW ON.
Trouble symptom:
Not all functions operate at IGN ON.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the check result OK?

Yes	Go to 3.
No	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

3. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

   Connector & terminal

   (i75) No. 27 — Chassis ground:

Is the resistance 74.15 — 460.88 Ω? (at 20°C)

Yes	Go to 6.
No	Check IG relay 2. Go to 7.

6. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 28 — Chassis ground:

Is the resistance 50.87 — 72.17 Ω? (at 20°C)

Yes	Go to 8.
No	Check IG relay 1. Go to 7.

7. CHECK RELAY.

Perform unit inspection of IG relay 1 and IG relay 2. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION > CHECK RELAY.

Is the check result OK?

Yes	Go to 8.
No	Replace the relay. Ref. to SECURITY AND LOCKS>Relay and Fuse.

8. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 27 (+) — Chassis ground (−):

(i75) No. 28 (+) — Chassis ground (−):

Does the voltage change as 1 V or less → 9.5 — 16 V according to the operation of ACC → IGN ON?

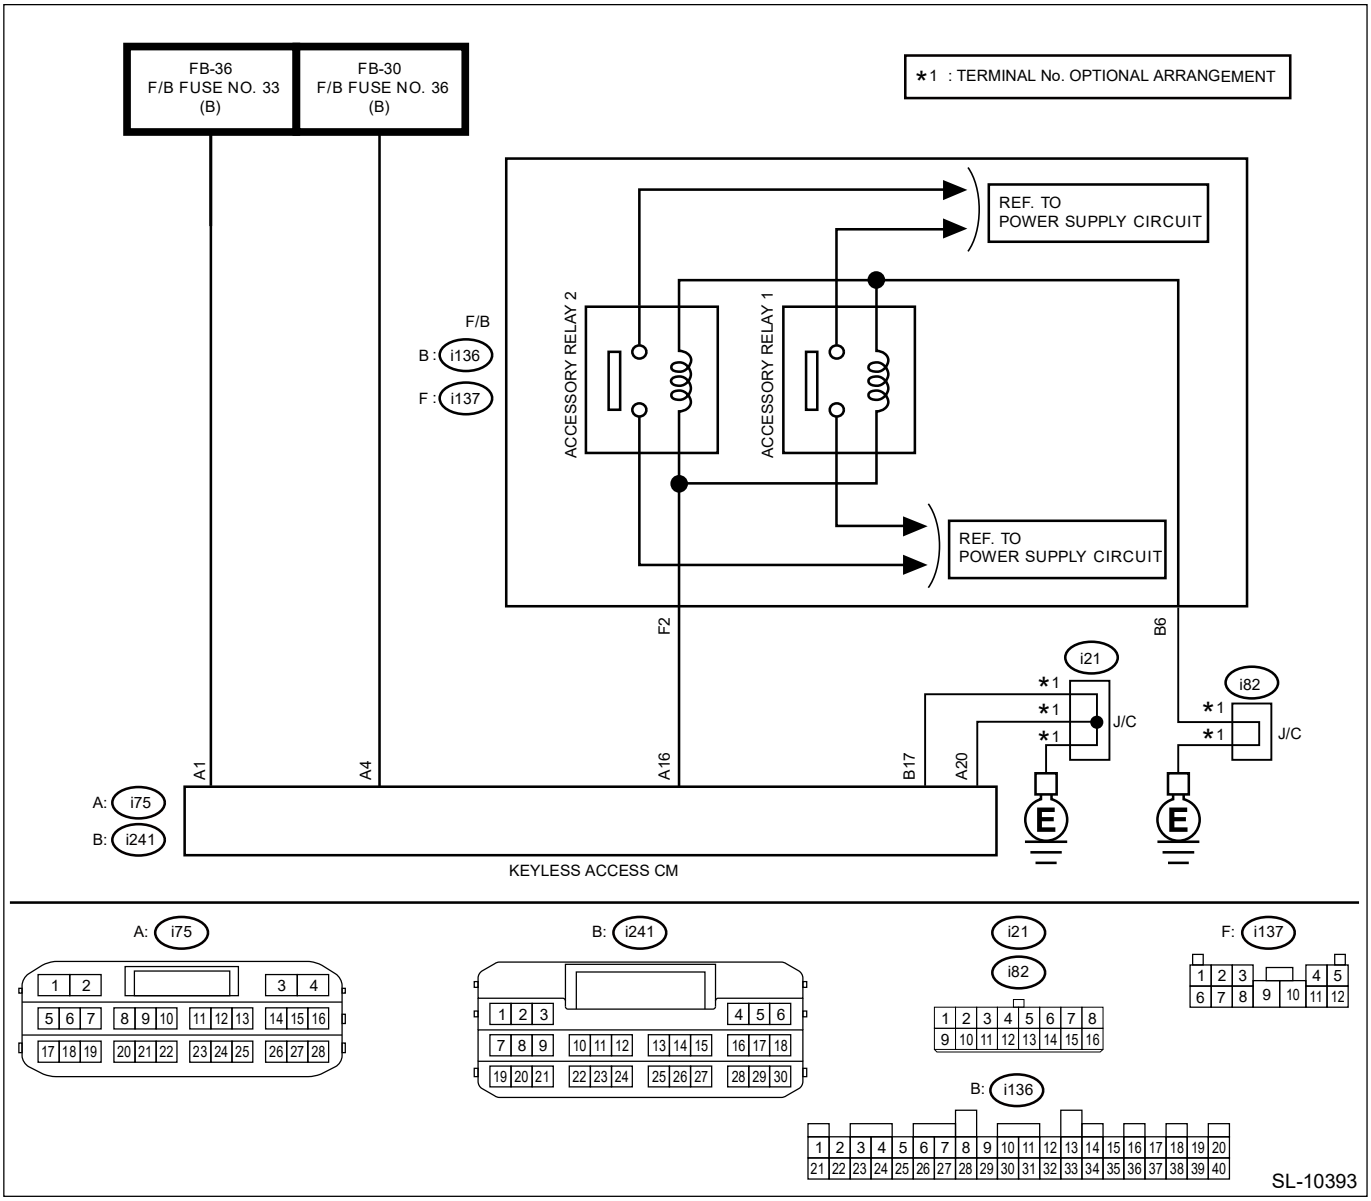
Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2274 ACC RELAY CONTROL CIRCUIT

DTC detecting condition:

When any of the following conditions is established.



- Both ACC output ON and output circuit monitor result OFF continues for 10 seconds.
- Starter output OFF, output circuit monitor result ON and remote engine starter not under control all continue for 10 seconds.

Trouble symptom:

Each function does not operate at the ACC position.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the check result OK?

Yes	Go to 3.
No	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

3. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

   Connector & terminal

   (i75) No. 16 — Chassis ground:

Is the resistance 152.61 — 216.5 Ω? (at 20°C)

Yes	Go to 7.
No	Go to 6.

6. CHECK RELAY.

Perform inspection of ACC relay unit. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the relay OK?

Yes	Go to 7.
No	Replace the relay.

7. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and the accessory relay (push button start), and between the accessory relay (push button start) and chassis ground.

Connector & terminal

(i75) No. 16 — (i137) No. 2:

(i136) No. 6 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace the open circuit of harness.

8. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector.
2. Using a tester, measure the voltage between keyless access CM connectors.

Connector & terminal

(i75) No. 16 (+) — Chassis ground (−):

Does the voltage change as 1 V or less → 9.5 — 16 V according to the operation of OFF → ACC ON?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

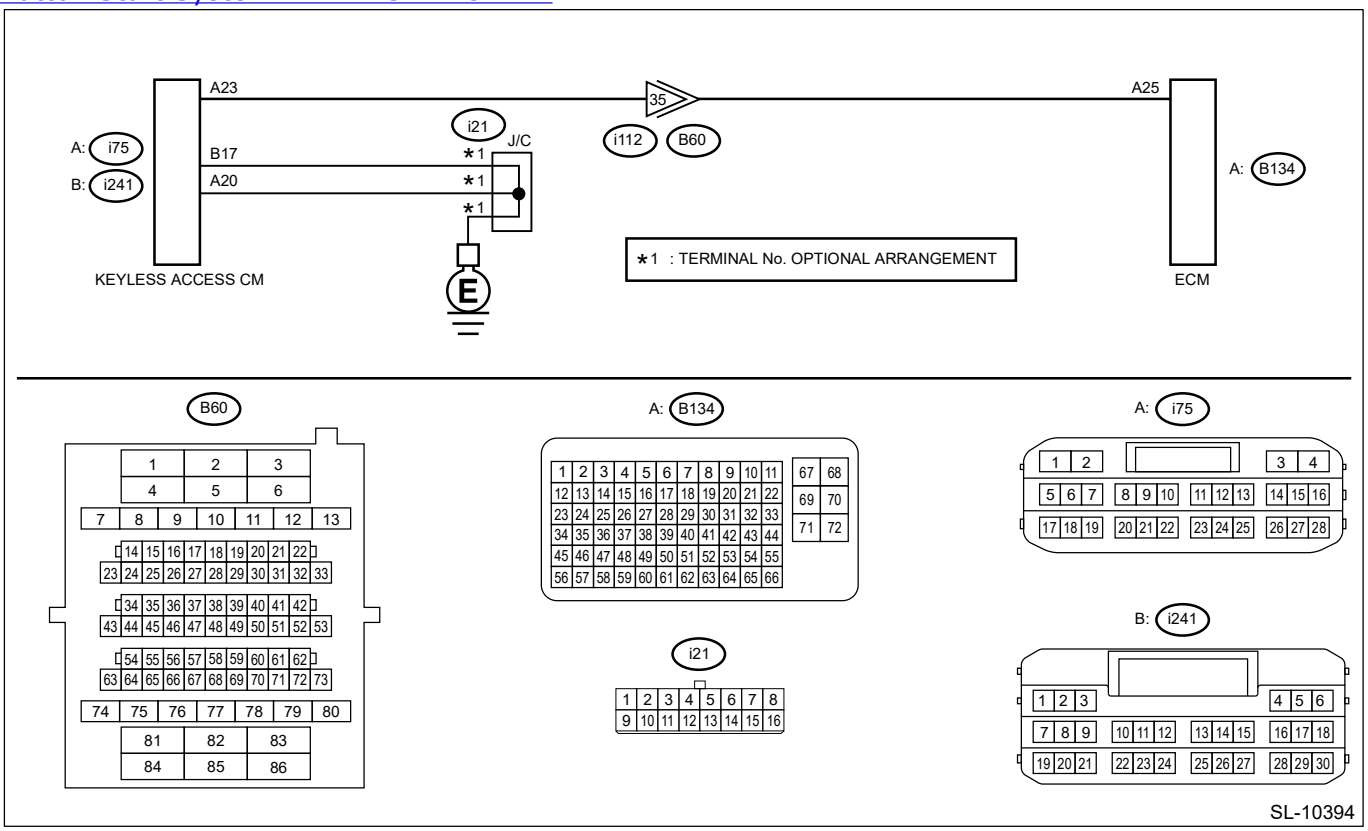
KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2275 ENGINE START REQUEST CONTROL CIRCUIT

DTC detecting condition:

When any of the following conditions is established with ignition switch ON.

- Both starter output ON and output circuit monitor result OFF are successful 3 times in a row.
- Starter output OFF, output circuit monitor result ON and remote engine starter not under control all



continue for 10 seconds.

Trouble symptom:

Engine will not start.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the check result OK?

Yes	Go to 3.
No	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector and ECM connector.
2. Using a tester, measure the resistance between the keyless access CM connector and ECM.
   Connector & terminal
   (i241) No. 23 — (B134) No. 25:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 23 (+) — Chassis ground (−):

Is the voltage 1 V or less?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 23 — Chassis ground:

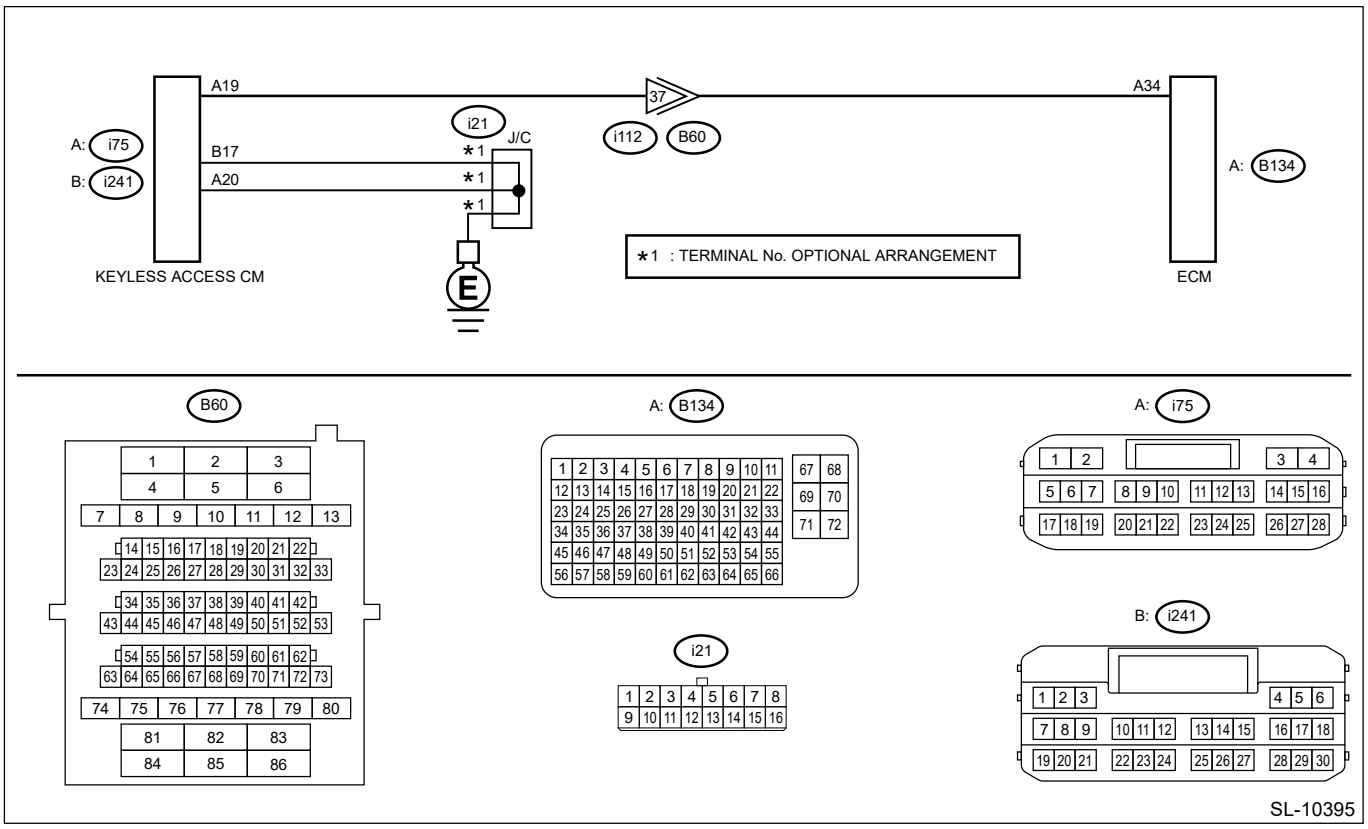
Is the resistance 10 kΩ or more?

Yes	Go to 7.
No	Repair or replace the short circuit of the harness.

7. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector and ECM connector.
2. Using a tester, measure the voltage between the terminals of keyless access CM connector.
   Connector & terminal
   (i75) No. 23 (+) — (i175) No. 20 (−):

Does the voltage change as 2 V or less → 9 V or more when the push button ignition switch is turned on while depressing the brake pedal with the shift position in P or N (CVT model) or while depressing clutch pedal (MT model)?



Yes	Perform inspection according to the diagnosis of engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2276 ACC RELAY OFF SIGNAL

DTC detecting condition:
When ACC cut input ON (“L” level) continues for 40 seconds with ignition switch ON.
Trouble symptom:
- The accessory power supply is not cut during engine start.
- Starter rotation is slow.

Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM and ECM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector and ECM connector.
2. Using a tester, measure the resistance between the keyless access CM connector and ECM.
   Connector & terminal
   (i75) No. 19 — (B134) No. 34:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal
(i75) No. 19 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal
(i241) No. 17 — Chassis ground:
(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 (+) — Chassis ground (−):

(i75) No. 20 (+) — Chassis ground (−):

Is the voltage 1 V or less?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector and ECM connector.
2. Using a tester, measure the voltage between terminals of the keyless access CM connector when the push button ignition switch is pressed, while depressing the brake pedal with the shift lever in the "P" range (for CVT model) or while depressing the clutch pedal (for MT model).

   Connector & terminal

   (i75) No. 19 (+) — (i75) No. 20 (−):

Does the voltage show 9.5 — 16 V → 1 V or less?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM)>REMOVAL.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2277 SUBMERGING CIRCUIT

DTC detecting condition:

Submersion circuit monitor result ON continues for 300 seconds.

Trouble symptom:

- The ignition can be turned ON, but cannot be turned OFF.
- Engine will not start.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK SUBMERSION CONDITION.

Check the keyless access CM and environment of equipment, and check the harness for any trace of water submersion.

Is there any trace of water submersion?

Yes	Take necessary measures against water submersion and replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B227B PUSH ENGINE START SWITCH INPUT PERFORMANCE

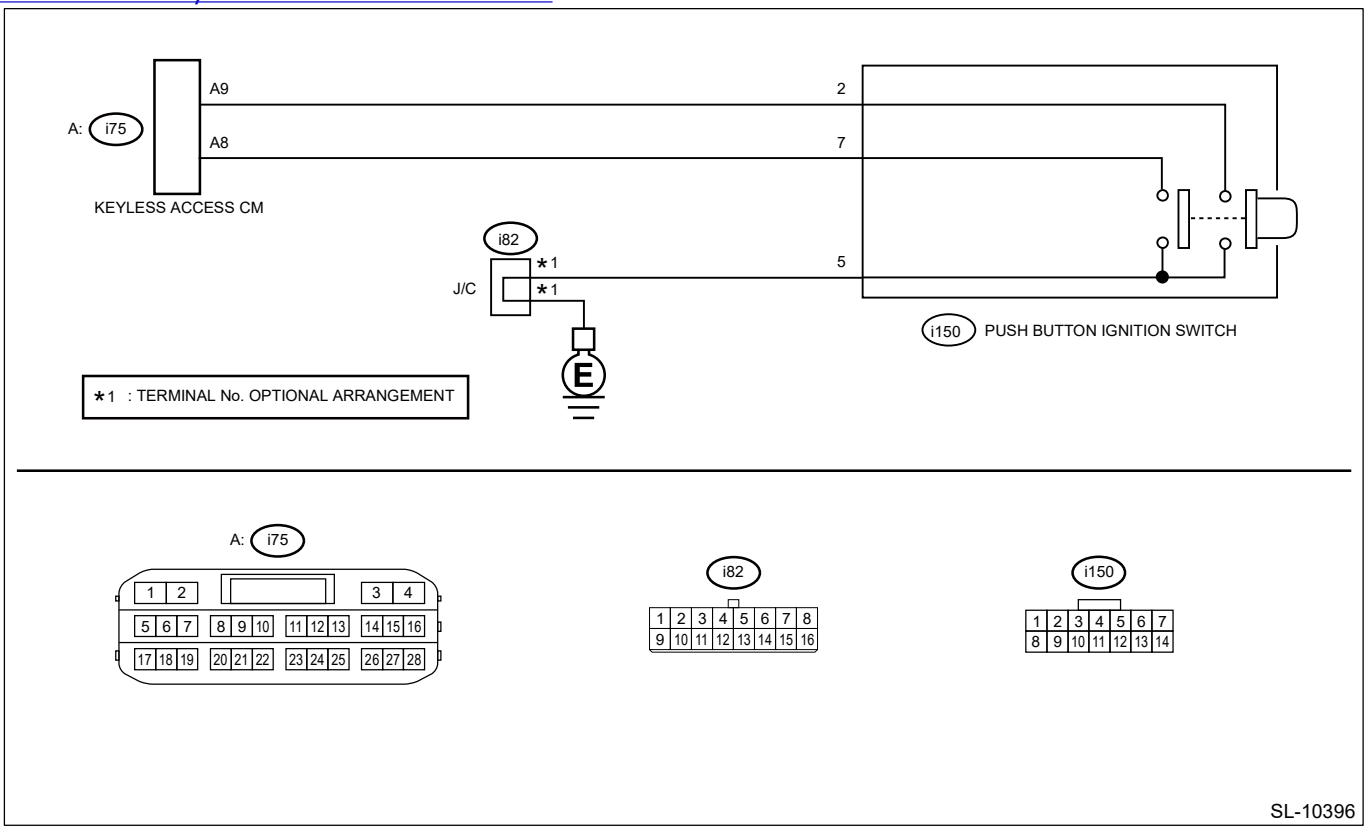
DTC detecting condition:

When any of the following conditions is established.

- Judgment of Switch ON stuck is present. (When any of the following conditions is established)
  1. The status continues for 40 seconds where push button ignition switch input (SSW1 terminal) is ON ("L" level) and push button ignition switch input (SSW2 terminal) is OFF ("H" level).
  2. The status continues for 40 seconds where push button ignition switch input (SSW1 terminal) is OFF ("H" level) and push button ignition switch input (SSW2 terminal) is ON ("L" level).
- Judgment of OFF stuck is present. (When any of the following conditions is established 10 times in a

row)

Only when a series of judgment is continuously made with the same judgment condition under either condition of 1 or 2.



1. Push button ignition switch input (SSW1 terminal) is OFF (“H” level) → ON (“L” level) → OFF, and push button ignition switch input (SSW2 terminal) is OFF (“H” level).
2. Push button ignition switch input (SSW1 terminal) is OFF (“H” level), and push button ignition switch input (SSW2 terminal) is OFF (“H” level) → ON (“L” level) → OFF.

Trouble symptom:

- Power supply cannot be turned ON.
- Power supply cannot be turned OFF.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.**
- **Before performing diagnosis, refer to “CAUTION” in “General Description”. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

2. Press the push button ignition switch to perform OFF → ACC ON → IGN ON respectively for one minute.
3. Disconnect and reconnect the keyless access CM connector.
4. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B227B displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the push button ignition switch connector.
2. Disconnect the keyless access CM connector.
3. Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector.
   Connector & terminal
   (i150) No. 2 — (i75) No. 9:
   (i150) No. 7 — (i75) No. 8:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK PUSH BUTTON IGNITION SWITCH UNIT.

Perform individual inspection of the push button ignition switch. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.

Is the check result OK?

Yes	Go to 4.
No	Replace the push button ignition switch. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.

4. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Push start SW 1]
- [Push start SW 2]

Is it turned ON when pressing the push button ignition switch?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

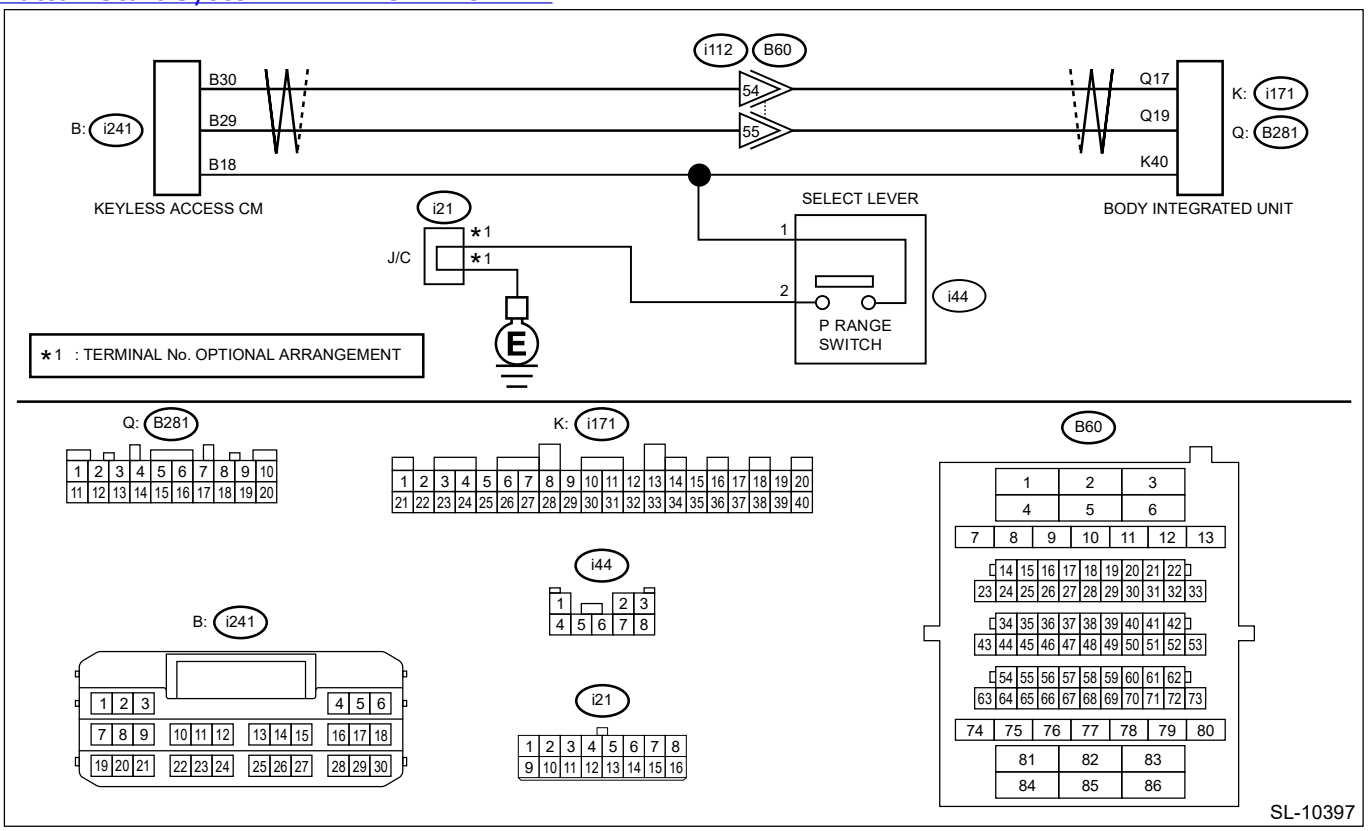
KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B227C P RANGE SIGNAL PERFORMANCE

DTC detecting condition:

When any of the following conditions is established for CVT model.

- The status continues for 20 seconds where the ignition switch is ON, and the shift position (P terminal) is in shift P (“L” level), and the shift information on CAN is other than P.
- The status continues for 20 seconds where the ignition switch is ON, and the shift position (P terminal)



is in other than shift P (“H” level), and the shift information on CAN is P.

Trouble symptom:

- Engine will not start.
- Power supply control cannot be executed.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.**
- **Before performing diagnosis, refer to “CAUTION” in “General Description”. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

2. Turn the IGN switch to ON.
3. Place the shift lever in other than P and leave it for one minute.
4. Disconnect and reconnect the keyless access CM connector.
5. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Is DTC B227C displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the P range switch connector.
2. Disconnect the keyless access CM connector.
3. Using a tester, measure the resistance between the P range switch connector and the keyless access CM connector.
   Connector & terminal
   (i44) No. 1 — (i241) No. 18:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the P range switch connector.
2. Using a tester, measure the resistance between body integrated unit connector and keyless access CM connector.
   Connector & terminal
   (B281) No. 17 — (i241) No. 30
   (B281) No. 19 — (i241) No. 29

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start].

Data Monitor

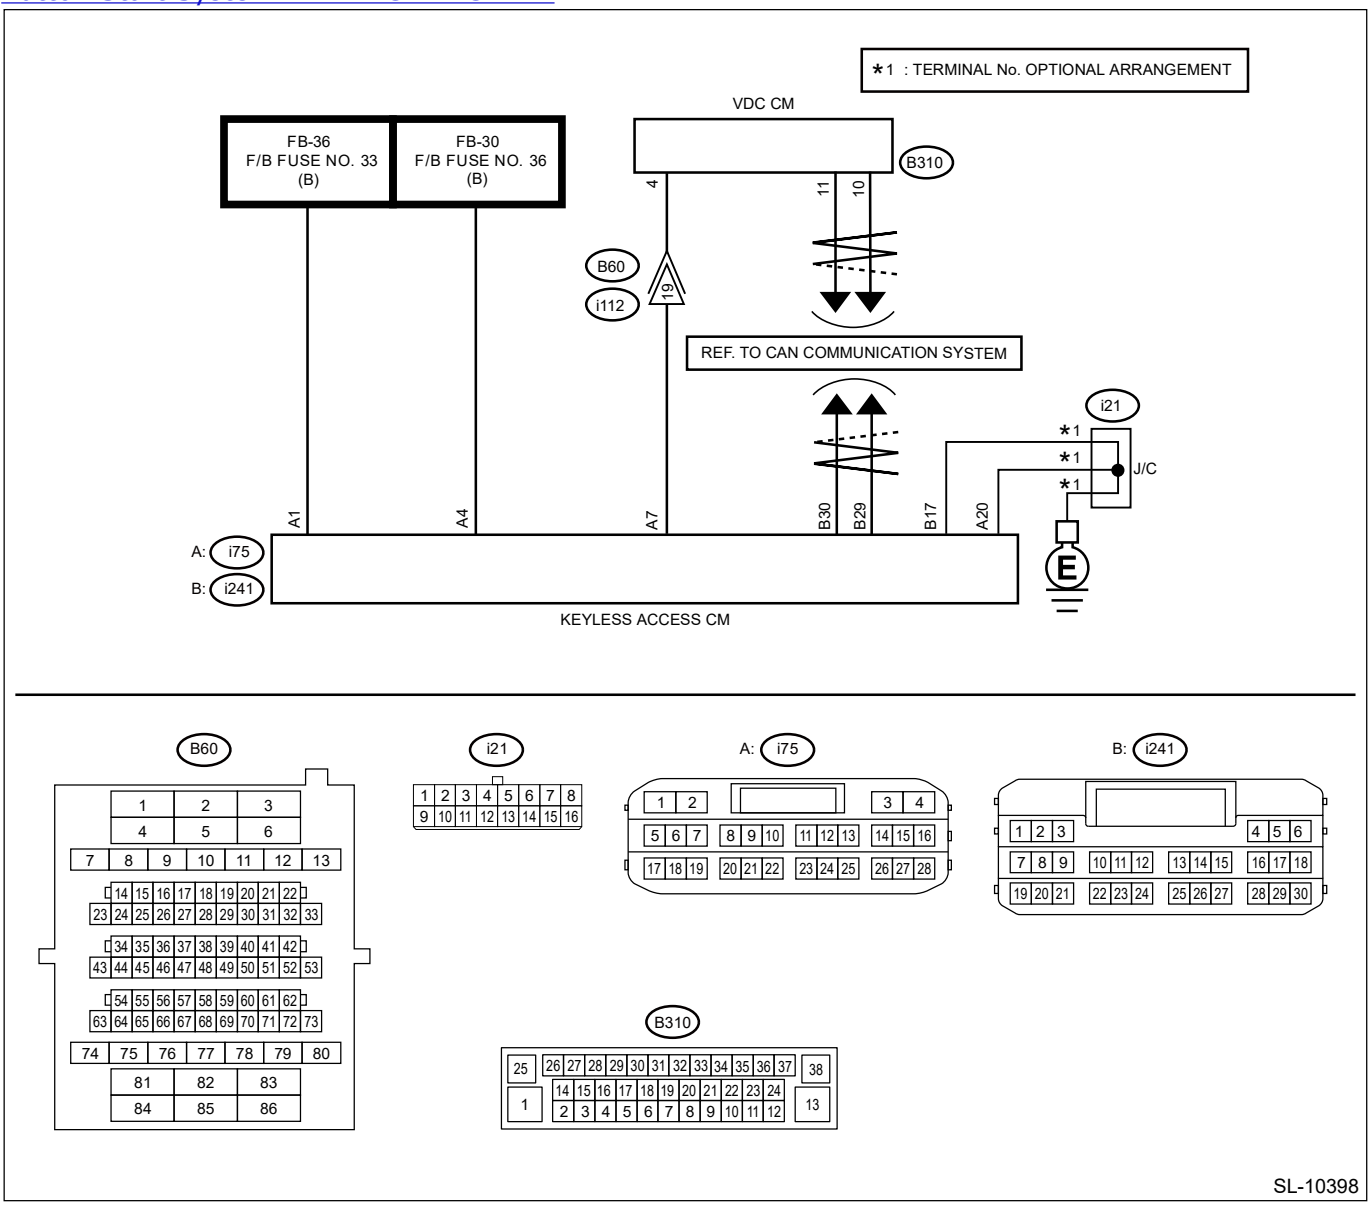
- [Shift P signal(AT only)]

Is it turned ON when the shift position is "P"? Is it turned OFF when the shift position is other than "P"?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2282 VEHICLE SPEED SIGNAL CORRELATION



DTC detecting condition:
When any of the following conditions is established with ignition switch ON.
- The status continues for 20 seconds where a vehicle speed signal on direct line is less than 5 km/h and

a vehicle speed signal on CAN is 25 km/h or more.

- The status continues for 20 seconds where a vehicle speed signal on direct line is 25 km/h or more and a vehicle speed signal on CAN is less than 5 km/h.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK COMBINATION METER.

Check that the speedometer is displayed normally.

Is the meter display normal?

Yes	Go to 3.
No	Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Vehicle speed signal]

Is the display normal according to the parked state or driving state?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the combination meter connector.
3. Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector.

Connector & terminal

(i75) No. 7 — (B310) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 7 — Chassis ground:

Is the resistance 30 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK KEYLESS ACCESS CM.

1. Connect each connector.
2. Using an oscilloscope, measure the waveform between the keyless access CM connector and chassis ground.
   Connector & terminal
   (i75) No. 7 — Chassis ground:

Is 3.54 Hz displayed when the vehicle is driven approx. at 5 km/h (3 MPH)? Or does the value change from 3.54 Hz when the vehicle stops?

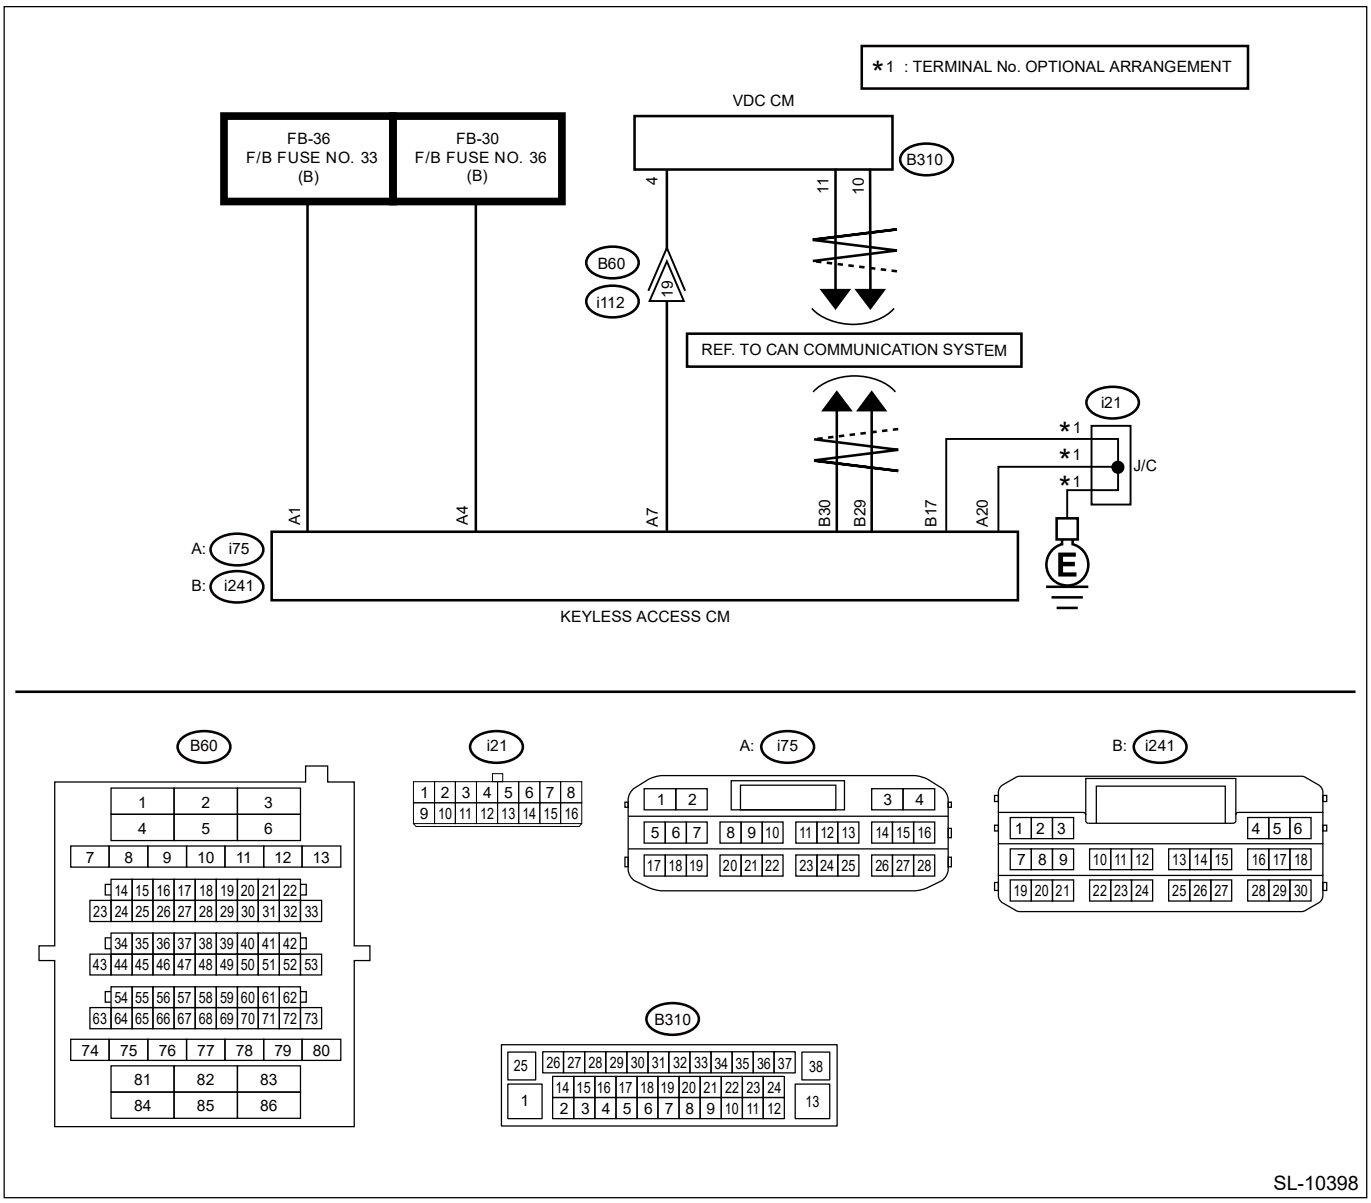
Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2283 VEHICLE SPEED SENSOR

DTC detecting condition:

When any of the following conditions is established with ignition switch ON.



- After the status continues for 10 seconds where a vehicle speed signal on CAN or direct line is 50 km/h or more, the vehicle speed signal on CAN and direct line becomes 0 km/h within one second.
- For CVT model, the status continues for 300 seconds where a vehicle speed signal on CAN and direct line is 0 km/h, or an engine speed signal on CAN or direct line is 2000 rpm or more, and the sift position is in other than P (P-SW or CAN) or N (CAN) range, and accessory cut relay signal input information level is ≈ “L”.
- For MT model, the status continues for 300 seconds where vehicle speed (CAN = 0 km/h and direct line = 0 km/h) and engine speed (CAN or direct line) is equal to or greater than 2000 rpm with clutch SW OFF and accessory cut relay signal input information ≈ “L” level.

Trouble symptom:

The steering lock cannot be released.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK COMBINATION METER.

Check that the speedometer is displayed normally.

Is the check result OK?

Yes	Go to 3.
No	Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Vehicle speed signal]

Is the display normal according to the parked state or driving state?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the combination meter connector.
3. Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector.

Connector & terminal

(i75) No. 7 — (B310) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (SHORT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

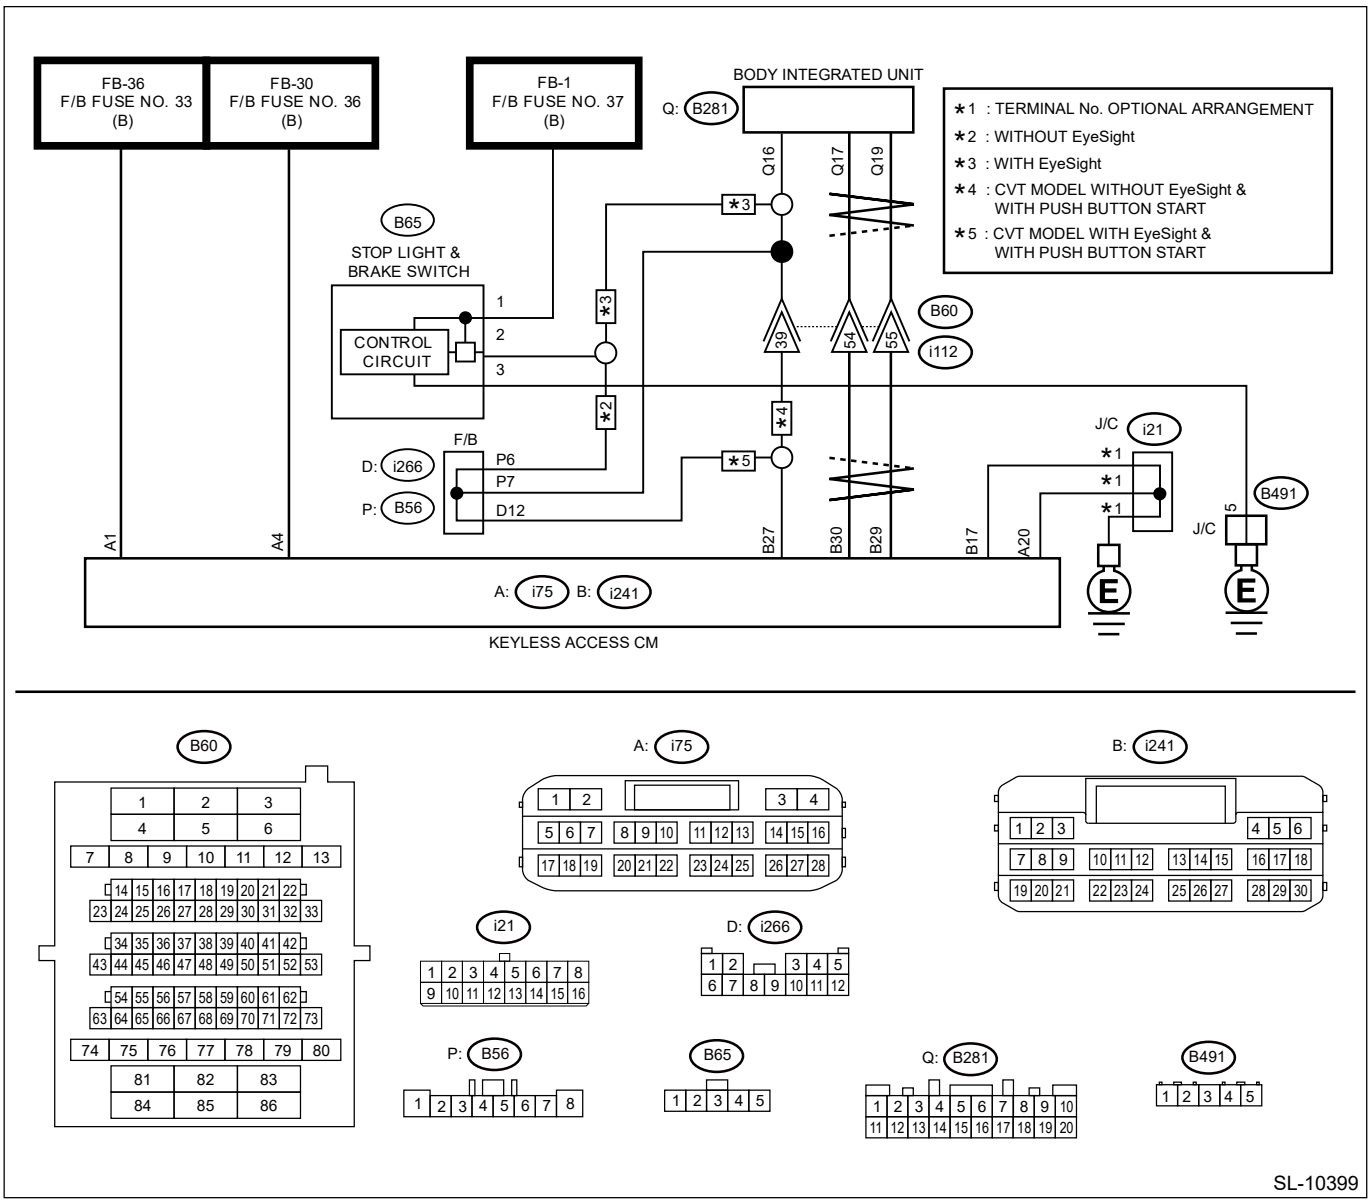
(i75) No. 7 — Chassis ground:

Is the resistance 30 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK KEYLESS ACCESS CM.

1. Connect each connector.
2. Using an oscilloscope, measure the waveform between the keyless access CM connector and chassis ground.
   Connector & terminal
   (i75) No. 7 — Chassis ground:



Is 3.54 Hz displayed when the vehicle is driven approx. at 5 km/h (3 MPH)? Or does the value change from 3.54 Hz when the vehicle stops?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Check the VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2284 BRAKE SIGNAL CORRELATION

DTC detecting condition:
For CVT model, the status continues for 20 seconds where brake signals (ON/OFF) between direct line and CAN do not match with ignition switch ON.
Trouble symptom:
If the hard-wired brake signal is faulty, the engine will not start.
Wiring diagram:
Stop light system Ref. to WIRING SYSTEM>Stop Light System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

- [Stop Light Switch]

Is DTC displayed normally according to the brake pedal operation?

Yes	Go to 3.
No	Check the stop light system.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Data Monitor

- [Stop Light Switch]

Is DTC displayed normally according to the brake pedal operation?

Yes	Go to 4.
No	Check the body integrated unit and the stop light switch circuit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure.

4. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 5.
No	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

5. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 6.
No	Check the power supply circuit.

6. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the stop light switch connector.
2. Using a tester, measure the resistance between the keyless access CM connector and stop light switch connector.

Connector & terminal

(i75) No. 27 — (B65) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace the open circuit of harness.

8. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 27 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 9.
No	Repair or replace the short circuit of the harness.

9. CHECK HARNESS.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the brake pedal is depressed.

Connector & terminal

(i75) No. 27 (+) — Chassis ground (−):

Does the voltage change as follows? Brake pedal not depressed: 1 V or less → Brake pedal depressed: 11 — 14 V

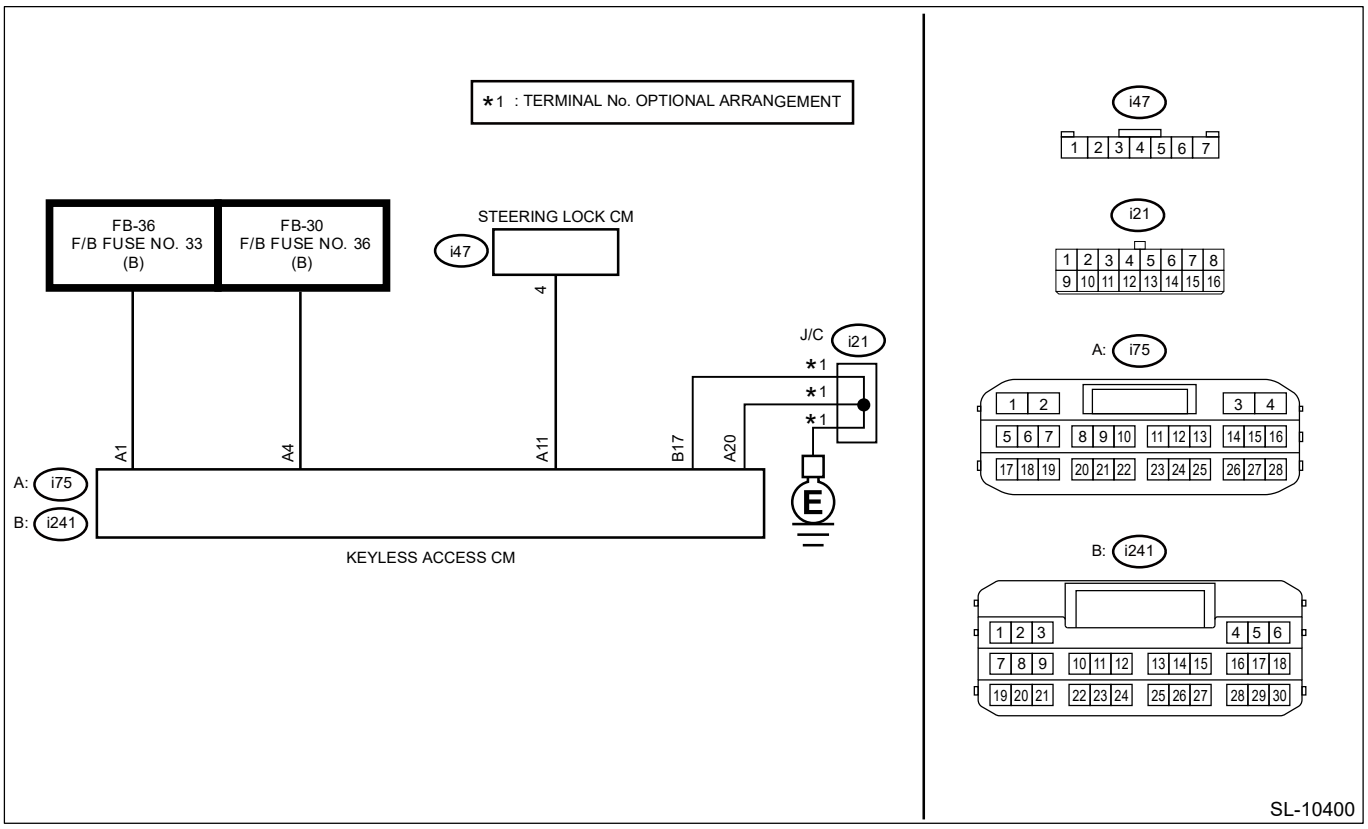
Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.
No	Check the power supply circuit of stop light switch.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2285 STEERING LOCK POSITION SIGNAL CORRELATION

DTC detecting condition:

When any of the following conditions is established with ignition switch ON.



- The status continues for 40 seconds where steering lock position information on direct line is unlock ("L" level), and steering lock position information on LIN communication is other than unlock.
- The status continues for 40 seconds where steering lock position information on direct line is other than unlock ("H" level), and steering lock position information on LIN communication is unlock.

Trouble symptom:

- There are conditions when the steering lock is not released.
- Engine will not start.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK DTC.

Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2785 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B2785. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2785 LIN COMMUNICATION.
No	Go to 3.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

When locked:
- [Lock side sensor status]: ON
- [Unlock side sensor status]: OFF
- [Lock confirmation]: Set
- [Unlock confirmation]: Unconfirmed

When unlocked:
- [Lock side sensor status]: OFF
- [Unlock side sensor status]: ON
- [Lock confirmation]: Unconfirmed
- [Unlock confirmation]: OK

Note:
To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.

Is the display shown as above according to the steering lock status?

Yes	Go to 4.
No	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.

4. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

When locked:
- [Steering unlock SW]: OFF

When unlocked:
- [Steering unlock SW]: ON

Note:
To lock the steering lock, turn off the power, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.

Is the display shown as above according to the steering lock status?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.
No	Go to 5.

5. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 6.
No	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

6. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between keyless access CM connectors.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 7.
No	Check the power supply circuit.

7. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 8.
No	Repair or replace the open circuit of harness.

8. CHECK STEERING LOCK CM.

Using a tester, measure the resistance between the steering lock CM connector and chassis ground.

Connector & terminal

(i47) No. 4 — Chassis ground:

Does the following occur? Steering lock: 10 kΩ or more → Steering unlock: less than 1 Ω

Yes	Go to 9.
No	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.

9. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the steering lock CM connector.
3. Using a tester, measure the resistance between the keyless access CM connector and steering lock CM connector.

   Connector & terminal

   (i75) No. 11 — (i47) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 10.
No	Repair or replace the open circuit of harness.

10. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 11 — Chassis ground:

Is the resistance 10 kΩ or more?

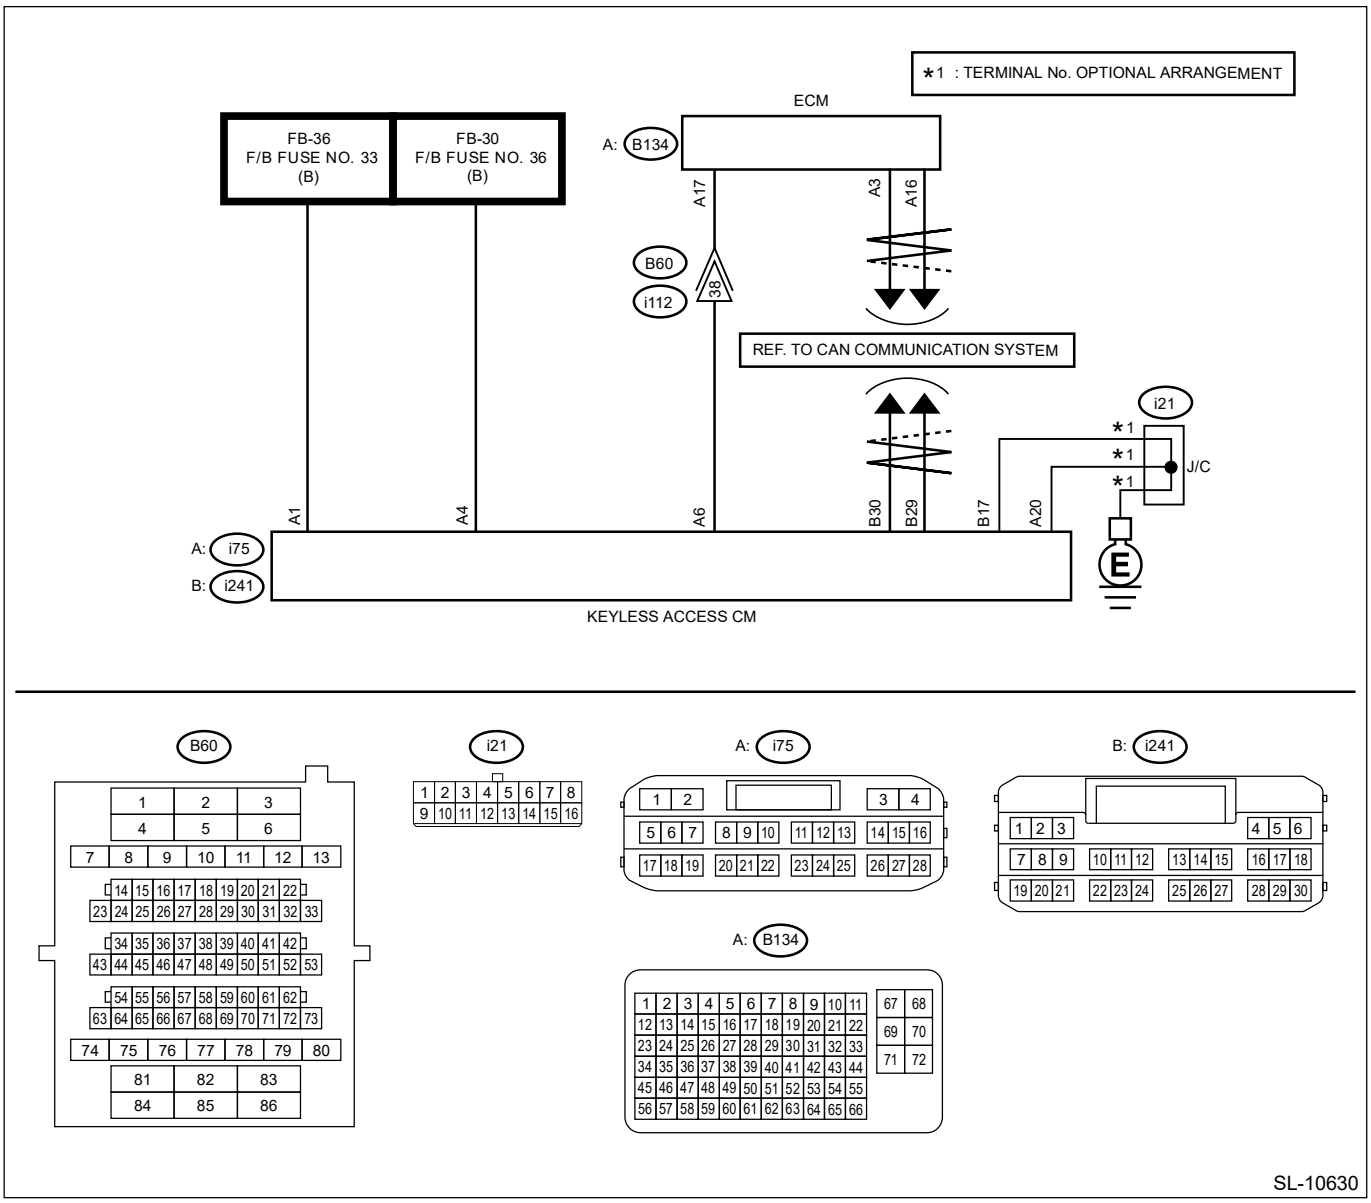
Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.
No	Repair or replace the short circuit of the harness.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2286 ENGINE SPEED SIGNAL(WITHOUT AUTO START STOP)

DTC detecting condition:

For model without Auto Start Stop, when any of the following conditions continues for 20 seconds with ignition switch ON.



- Engine speed signal on direct line is more than 200 rpm, and engine speed signal on CAN is 1000 rpm or less.
- Engine speed signal on direct line is 1000 rpm or more, and engine speed signal on CAN is less than 200 rpm.

Trouble symptom:

Cannot start the engine, or the engine stops after starting.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK COMBINATION METER.

Confirm that the speedometer is displayed normally.

Is combination meter display OK?

Yes	Go to 3.
No	Perform the diagnosis for the engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Engine Speed]

Can the data be read normally?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the ECM connector.
3. Using a tester, measure the resistance between the keyless access CM connector and ECM connector.

Connector & terminal

(i241) No. 6 — (B134) No. 17:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 6 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK HARNESS.

1. Connect the keyless access CM connector and ECM connector.
2. Using an oscilloscope, measure the waveform between the keyless access CM connector and chassis ground.

   Connector & terminal

   (i75) No. 6 — Chassis ground:

Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?

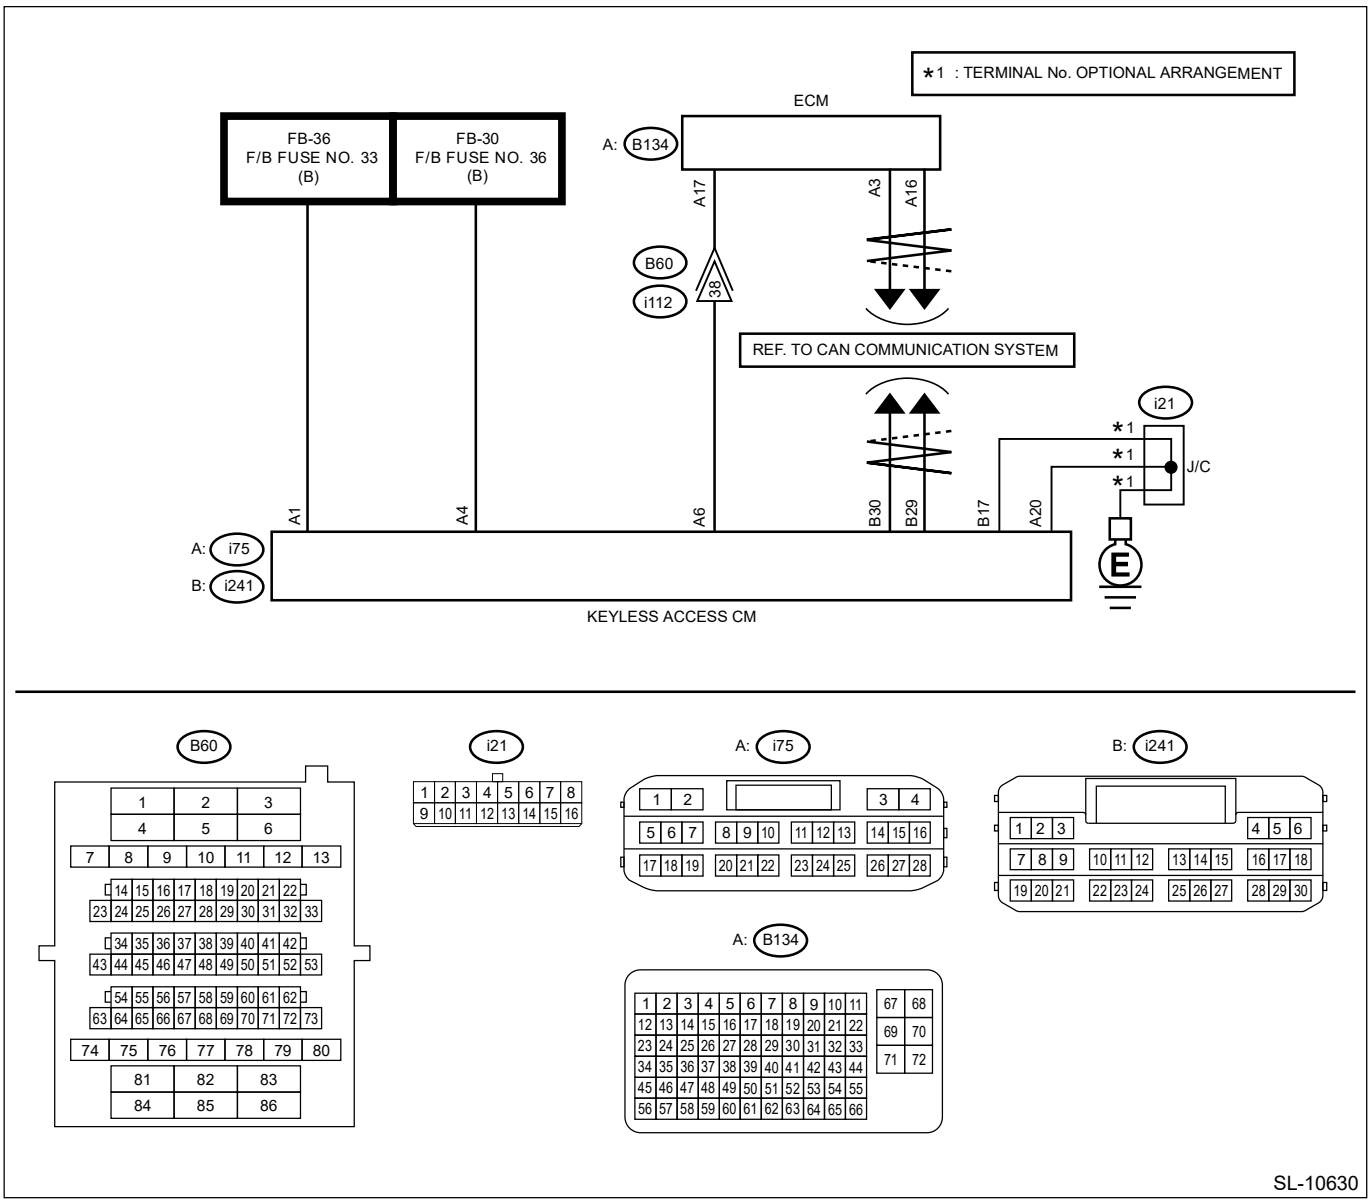
Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Perform the diagnosis for the engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B228A ENGINE SPEED SIGNAL(WITH AUTO START STOP)

DTC detecting condition:

For model with Auto Start Stop, when any of the following conditions continues for 20 seconds with ignition switch ON.



- Engine speed signal on direct line is more than 200 rpm, and engine speed signal on CAN is 1000 rpm or less.
- Engine speed signal on direct line is 1000 rpm or more, and engine speed signal on CAN is less than 200 rpm.

Trouble symptom:

Cannot start the engine, or the engine stops after starting.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK COMBINATION METER.

Confirm that the speedometer is displayed normally.

Is combination meter display OK?

Yes	Go to 3.
No	Perform the diagnosis for the engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Engine Speed]

Can the data be read normally?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the ECM connector.
3. Using a tester, measure the resistance between the keyless access CM connector and ECM connector.

Connector & terminal

(i75) No. 6 — (B134) No. 17:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 6 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK HARNESS.

1. Connect the keyless access CM connector and ECM connector.
2. Using an oscilloscope, measure the waveform between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 6 — Chassis ground:

Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Perform the diagnosis for the engine. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION

DTC detecting condition:

When any of the following conditions is established regarding remote control engine starter registration or remote control engine starter operation.

- No response is obtained from remote control engine starter (including retry).
- Cryptographic communication does not match with remote control engine starter (including retry).

Trouble symptom:

Remote engine starter does not function.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.

1. REGISTER THE REMOTE ENGINE STARTER.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

2. Register the remote engine starter using the Subaru Select Monitor. (Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.)
Note:
When the registration failed, refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2779 displayed? (Current malfunction)

Yes	Replace the remote engine starter.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2781 STEERING LOCK CM CONTROL CIRCUIT

DTC detecting condition:
When any of the following conditions is established.
- Steering lock position (inside steering lock CM) sensor malfunction
- Steering lock motor driver (inside steering lock CM) short circuit malfunction
- Steering lock motor driver (inside steering lock CM) open circuit malfunction

Trouble symptom:
- The steering lock cannot be released.
- Engine will not start.

Caution:

- **For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

Note:

When all ECMs connected to collation system LIN bus cannot communicate with the keyless access CM, DTC B2785 is output. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2785 LIN COMMUNICATION.

1. CHECK DTC.

Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2785 displayed? (Current malfunction)

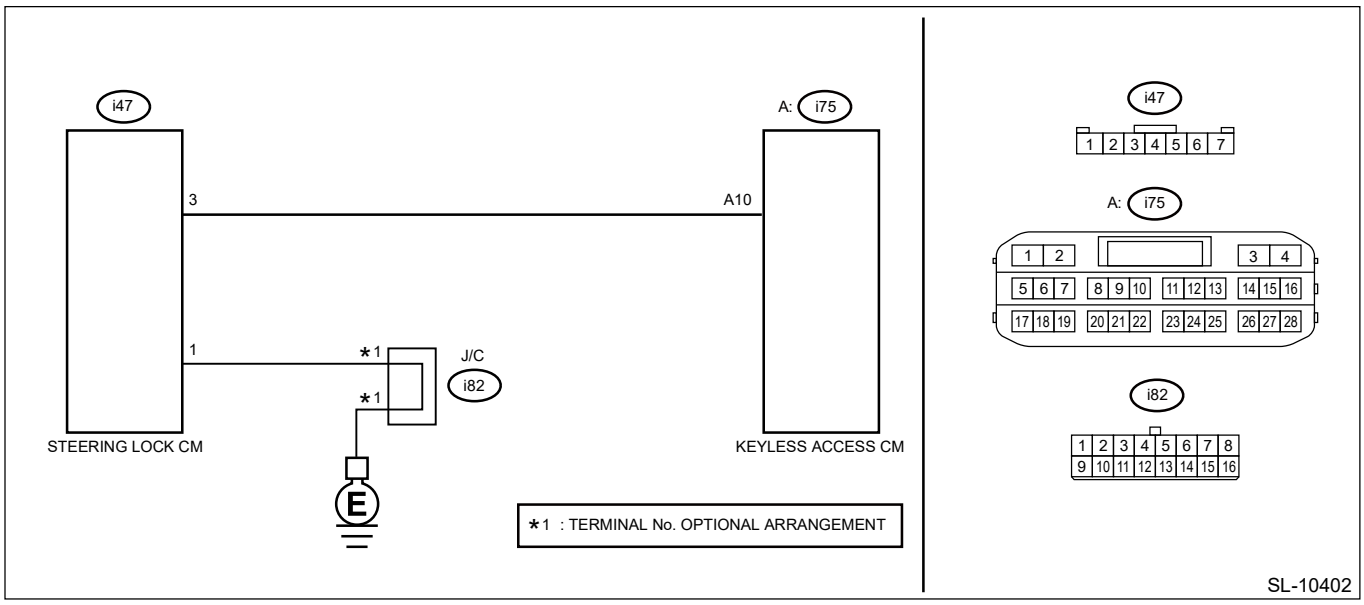
Yes	Perform the diagnosis of DTC B2785. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2785 LIN COMMUNICATION.
No	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2782 STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION

DTC detecting condition:

When any of the following conditions is established.



- Motor power supply terminal (SLR+terminal) short circuit malfunction
- Motor power supply terminal (SLR+terminal) open circuit malfunction

Trouble symptom:

- The steering lock cannot be released.
- Engine will not start.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the steering lock CM connector.
2. Using a tester, measure the resistance between the steering lock CM connector and chassis ground.

   Connector & terminal

   (i47) No. 1 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair or replace the open circuit of harness.

2. CHECK STEERING LOCK CM.

1. Connect the steering lock CM connector.
2. Set to ACC OFF, IGN OFF, and shift position P.
3. Using a tester, open the door, and measure the voltage between terminals of steering CM connector when the steering lock motor is driven.

   Connector & terminal

   (i47) No. 3 (+) — (i47) No. 1 (−):

Does the voltage change as follows? When steering lock motor is in operation, 1 V or less → When steering lock motor is not in operation, 11 — 14 V

Yes	Go to 3.
No	Go to 4.

3. CHECK DTC.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch to OFF.
4. Disconnect the battery ground cable and reconnect it, and then clear the abnormal information displayed on [Data Monitor].
5. Turn the ignition switch to ON.
6. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2782 displayed? (Current malfunction)

Yes	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

4. CHECK CONNECTOR.

1. Disconnect the steering lock CM connector.
2. Disconnect the keyless access CM connector.
3. Check each connector.

Is the check result OK?

Yes	Go to 5.
No	Repair or replace the connector.

5. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between steering lock CM connector and keyless access CM connector.

Connector & terminal

(i75) No. 10 — (i47) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(B574) No. 29 — Chassis ground:

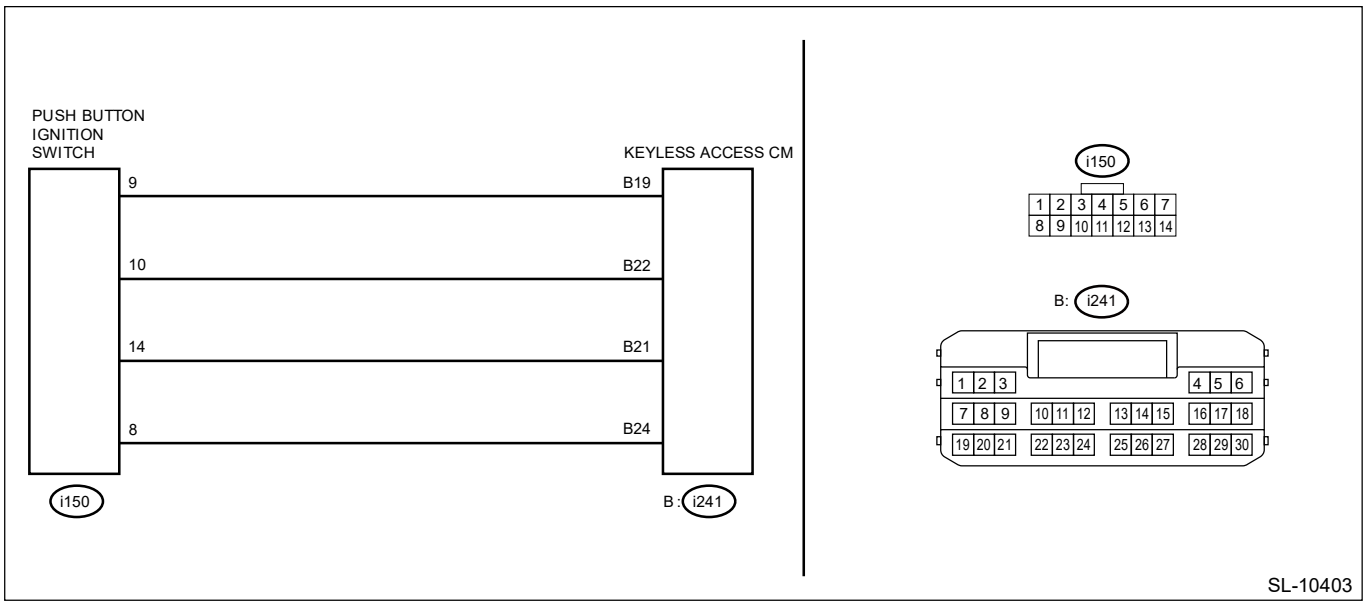
Is the resistance 10 kΩ or more?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Repair or replace the short circuit of the harness.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH)

DTC detecting condition:



When data of Abnormal antenna coil is received from transponder key amplifier by keyless access CM via transponder communication (communication between keyless access CM - push button ignition SW) during initial operation of transponder collation.

Trouble symptom:

The keyless access function may not be operable.

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System.

Caution:

- **For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK STEERING LOCK CM.

1. Disconnect the push button ignition switch connector.
2. Disconnect the keyless access CM connector.
3. Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector.

   Connector & terminal

   (i150) No. 9 — (i241) No. 19:
   (i150) No. 10 — (i241) No. 22:
   (i150) No. 14 — (i241) No. 21:
   (i150) No. 8 — (i241) No. 24:

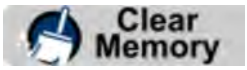
Is the resistance less than 1 Ω?

Yes	Go to 2.
No	Repair or replace the open circuit of harness.

2. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the push button ignition switch connector and chassis ground.

Connector & terminal



(i150) No. 14 — Chassis ground:
(i150) No. 9 — Chassis ground:
(i150) No. 10 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 3.
No	Repair or replace the short circuit of the harness.

3. CHECK PUSH BUTTON IGNITION SWITCH.

1. Replace the push button ignition switch. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

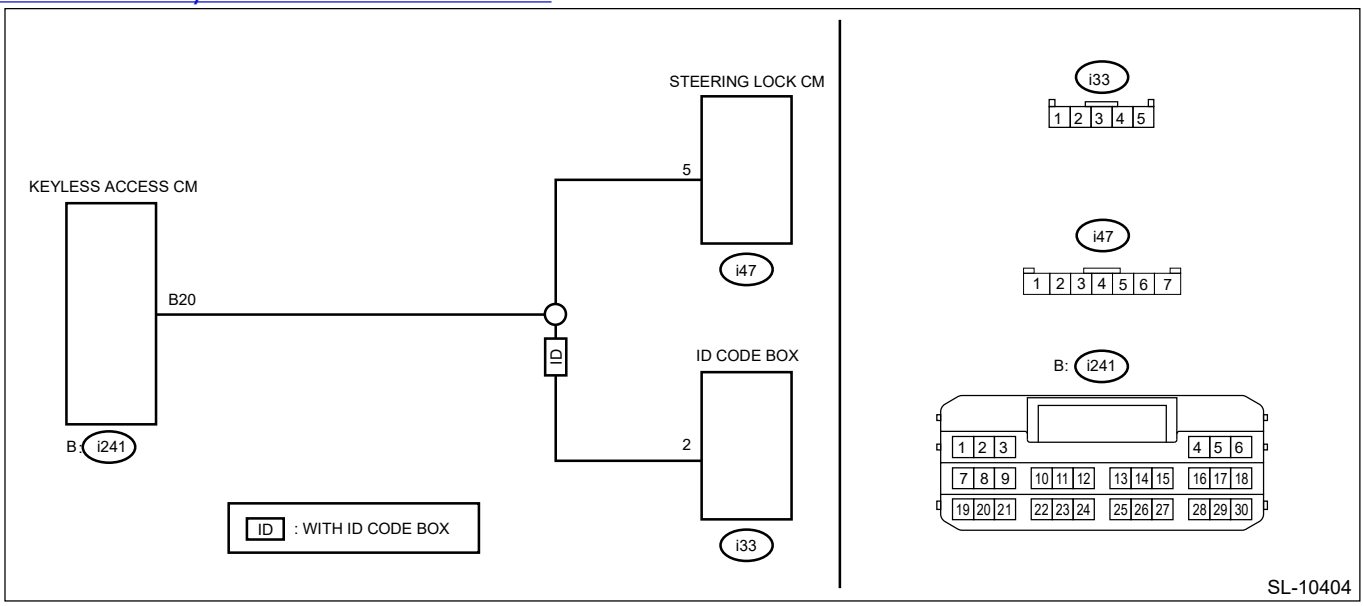
Is DTC B2784 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Malfunction occurred in the push button ignition switch.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2785 LIN COMMUNICATION

DTC detecting condition:



When LIN communication error is detected 3 times in a row.
(Communication cannot be received because a problem occurs such as a series of noise continuously generated in LIN communication bus during power supply or ground short circuit in LIN communication bus)

Trouble symptom:

The keyless access function may not be operable.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2785 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (BETWEEN KEYLESS ACCESS CM AND STEERING LOCK CM).

1. Disconnect the ground cable from battery.
2. Disconnect the keyless access CM connector.
3. Disconnect the steering lock CM connector.
4. Using the tester, measure the resistance between terminals.
   Connector & terminal
   (i241) No. 20 — (i47) No. 5:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector or steering lock CM connector and chassis ground.

Connector & terminal

(i241) No. 20 — Chassis ground:

(i47) No. 5 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Using a tester, measure the voltage between the keyless access CM connector or steering lock CM connector and chassis ground.

Connector & terminal

(i241) No. 20 — Chassis ground:

(i47) No. 5 — Chassis ground:

Is the voltage 1 V or less?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK HARNESS (BETWEEN KEYLESS ACCESS CM AND ID CODE BOX).

1. Disconnect the ID code box connector.
2. Using the tester, measure the resistance between terminals.
   Connector & terminal
   (i241) No. 20 — (i33) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2785 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Go to 7.

7. CHECK STEERING LOCK CM.

1. Connect the steering lock CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

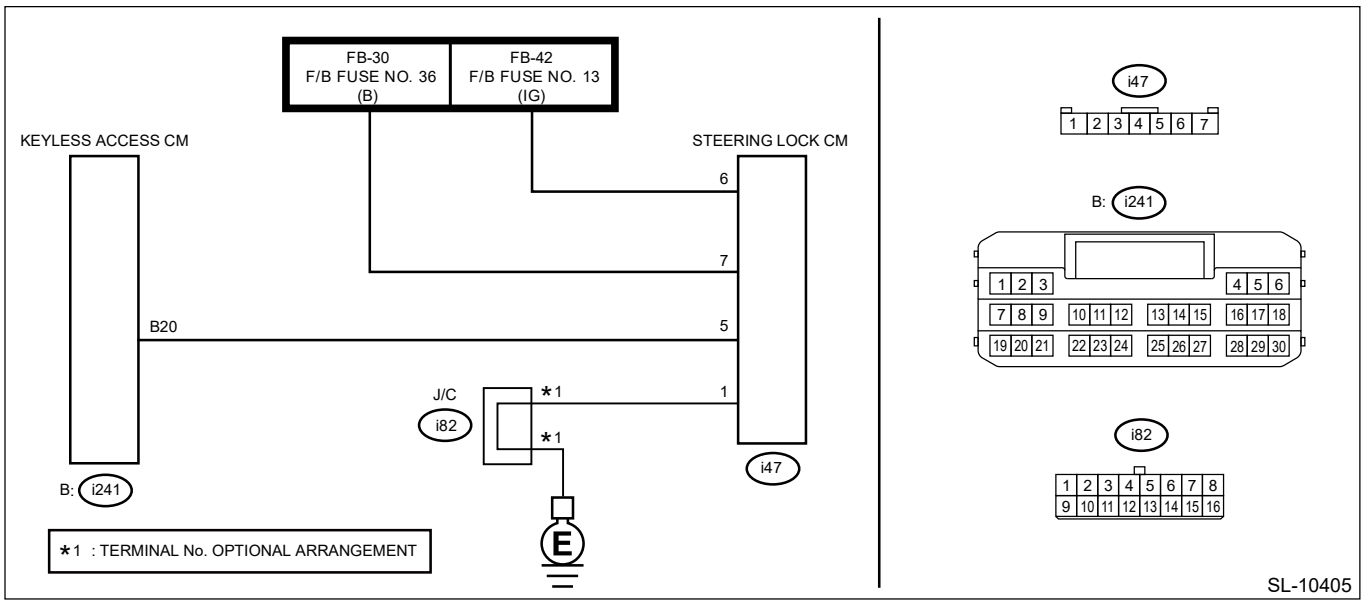
Is DTC B2785 displayed? (Current malfunction)

Yes	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
No	Go to 8.

8. CHECK ID CODE BOX.

1. Connect the ID code box connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B2785 displayed? (Current malfunction)

Yes	Replace the ID code box. Ref. to SECURITY AND LOCKS>ID Code Box.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2786 STEERING LOCK CM COMMUNICATION

DTC detecting condition:
When LIN transmission frame is received from steering lock CM once, but cannot be received for 10 seconds in a row during LIN bus Wake-up.
Trouble symptom:
The steering lock cannot be released.
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are DTCs other than DTC B2786 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTCs other than B2786. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the steering lock CM connector.
3. Using the tester, measure the resistance between terminals.

Connector & terminal

(i241) No. 20 — (i47) No. 5:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM and chassis ground.

Connector & terminal

(i241) No. 20 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the steering lock CM connector and chassis ground.

Connector & terminal

(i47) No. 1 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS.

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the steering lock CM connector and chassis ground.
   Connector & terminal
   (i47) No. 6 (+) — Chassis ground (−):
   (i47) No. 7 (+) — Chassis ground (−):

Is the voltage 11 — 14 V?

Yes	Go to 6.
No	Repair or replace the faulty portion of the power supply circuit.

6. CHECK STEERING LOCK CM.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

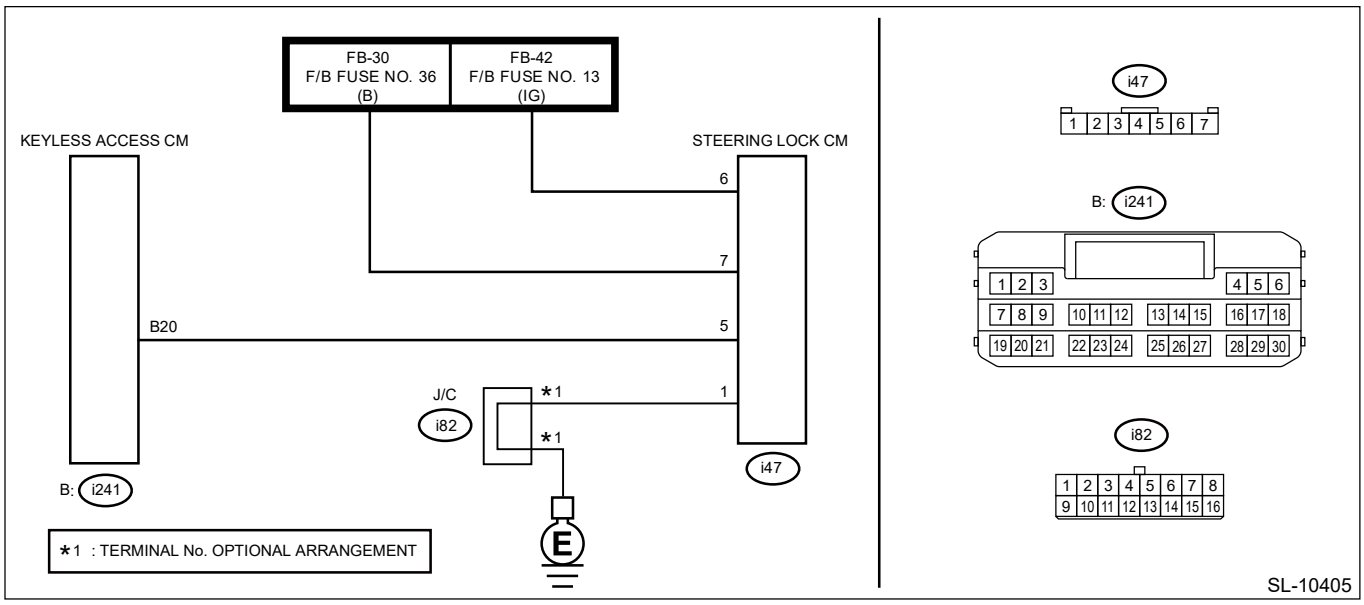
Is DTC B2785 displayed?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Go to 7.

7. CHECK STEERING LOCK CM.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B2786 displayed? (Current malfunction)

Yes	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2788 IGN SIGNAL CORRELATION (STEERING LOCK CM)

DTC detecting condition:
When one second elapses while the ignition switch status is not compatible between LIN communication and direct line.
Trouble symptom:
The steering lock cannot be released.
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [IGN SW]

Is the display normal according to the ignition switch operation?

Yes	Go to 3.
No	Go to 5.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the steering lock CM connector.
2. Using a tester, measure the resistance between the steering lock CM connector and chassis ground.
   Connector & terminal
   (i47) No. 1 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS.

1. Connect the steering lock CM connector.
2. Using a tester, measure the voltage between the steering lock CM connector terminals.
   Connector & terminal
   (i47) No. 6 (+) — (i47) No. 1 (−):

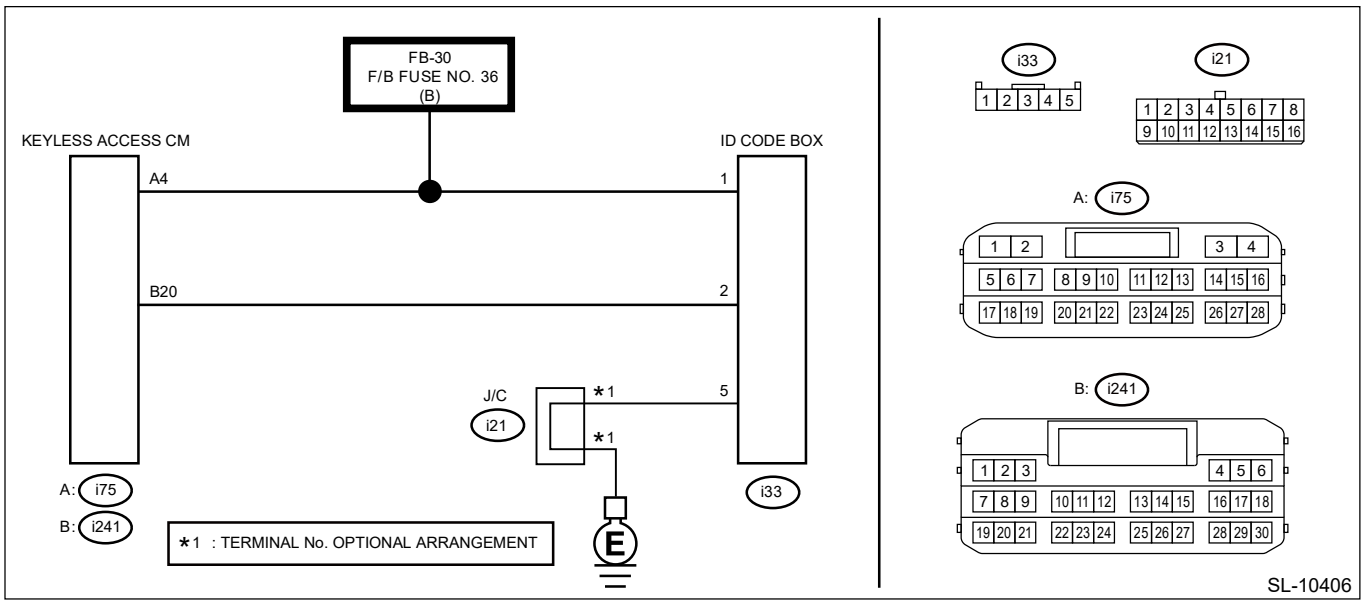
Is the voltage 11 — 14 V with IG ON?
Is the voltage less than 1 V with IG OFF?

Yes	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
No	Check the DC power supply circuit.

5. CHECK DTC.

Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check



Is DTC B2271 displayed? (Current malfunction)

Yes	Perform the diagnosis of DTC B2271. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2271 IGN RELAY CONTROL CIRCUIT.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2789 ID CODE BOX COMMUNICATION

DTC detecting condition:
When LIN transmission frame is received from ID code BOX once, but cannot be received for 10 seconds in a row during LIN bus Wake-up.
Trouble symptom:
Engine will not start.
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM and ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

   Clear Memory

2. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   DTC Check

Is DTC B2789 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (GROUND SHORT CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 20 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 3.
No	Repair or replace the short circuit of the harness.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the ID code box connector.
2. Using a tester, measure the resistance between the keyless access CM connector and the ID code box connector.

Connector & terminal

(i241) No. 20 — (i33) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between ID code box connector and chassis ground.

Connector & terminal

(i33) No. 5 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS.

Using a tester, measure the voltage between ID code box connector and chassis ground.

Connector & terminal

(i33) No. 1 (+) — Chassis ground (−):

Is the voltage 11 — 14 V?

Yes	Go to 6.
No	Repair or replace the faulty portion of the power supply circuit.

6. CHECK ID CODE BOX.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2785 displayed? (Current malfunction)

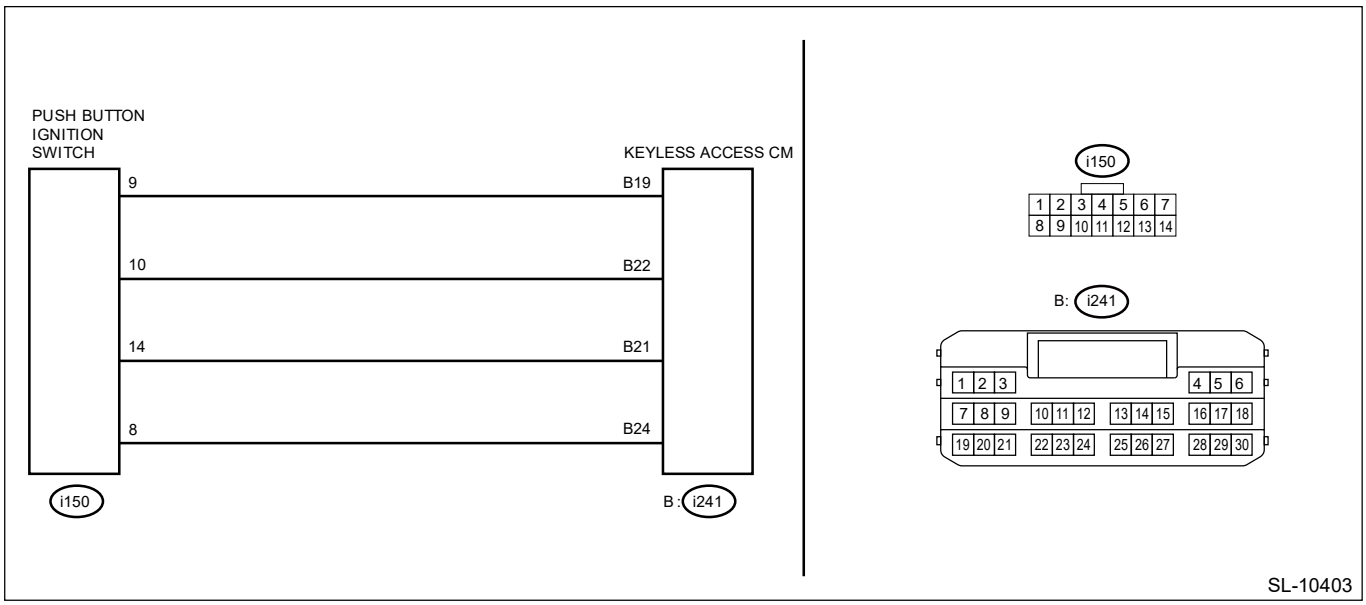
Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Go to 7.

7. CHECK STEERING LOCK CM.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2789 displayed? (Current malfunction)



Yes	Replace the ID code box. Ref. to SECURITY AND LOCKS>ID Code Box.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

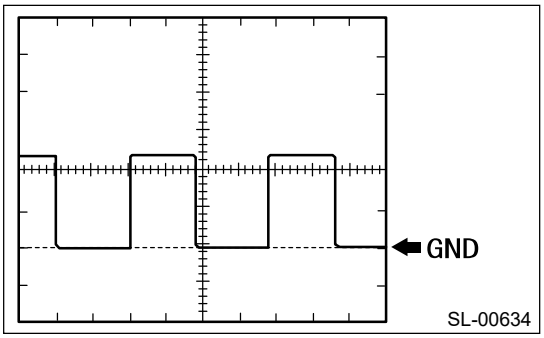
KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT

DTC detecting condition:
Short circuit to ground in transponder power supply (VC5 terminal) at initial operation of transponder collation.
(determined as short circuit to ground when judged as “L” level for transponder power supply (VC5 terminal) by monitoring transponder power supply (VC5 terminal) output level inside keyless access CM at “H” level output.)
Trouble symptom:
- Engine will not start.
- The keyless access with push button start system function does not operate.

Wiring diagram:
Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:



- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK KEYLESS ACCESS CM.

1. Turn the ignition switch to OFF.
2. Take the access key out of the passenger room.
3. Using an oscilloscope, measure the waveform between the push button ignition switch connectors. (waveform within 30 seconds after push button ignition switch is pressed)

Connector & terminal

(i150) No. 14 — (i150) No. 8:

Is a waveform as above displayed?

Yes	Replace the push button ignition switch. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch.
No	Go to 2.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the push button ignition switch connector.
3. Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector.

Connector & terminal

(i150) No. 14 — (i241) No. 21:

(i150) No. 8 — (i241) No. 24:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 21 — Chassis ground:

(i241) No. 24 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

2. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B278A displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B278B CAN CONTROL MODULE STUCK

DTC detecting condition:

When incompatible state is detected two times in a row in every Wake-up of microcomputer, after detecting incompatible state between written data and read-out data to/from register for CAN check after resetting.

(When incompatible state is detected three times in a row which consist of one time at resetting + two times at Wake-up of microcomputer)

Trouble symptom:

The operation is performed with information of the last value as right, but basically the system operation is deactivated.

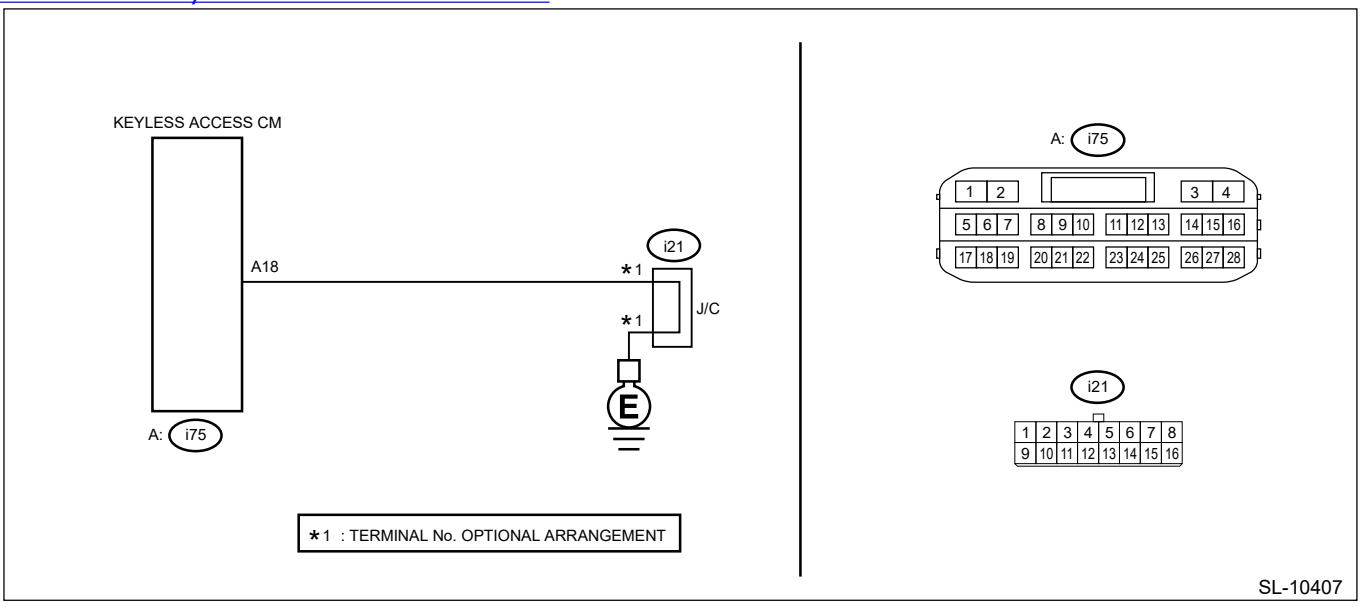
Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B278D ID CODE BOX JUDGMENT CIRCUIT

DTC detecting condition:



When there is no connection of harness for ID code BOX presence judgment and ID code BOX LIN response is present while keyless access CM has no key registration.

Trouble symptom:

Initial registration for the access key is not possible.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch to OFF → ON.
4. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B278D displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

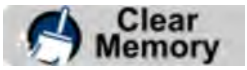
2. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Measure the resistance between keyless access CM connector and chassis ground.
   Connector & terminal
   (i75) No. 18 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Repair or replace the short circuit of the harness.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC B2790 ID CODE BOX CIRCUIT

DTC detecting condition:
When EEPROM cannot be written in or readout response is absent.
Trouble symptom:
Engine will not start.
Caution:

- **For replacement procedure of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

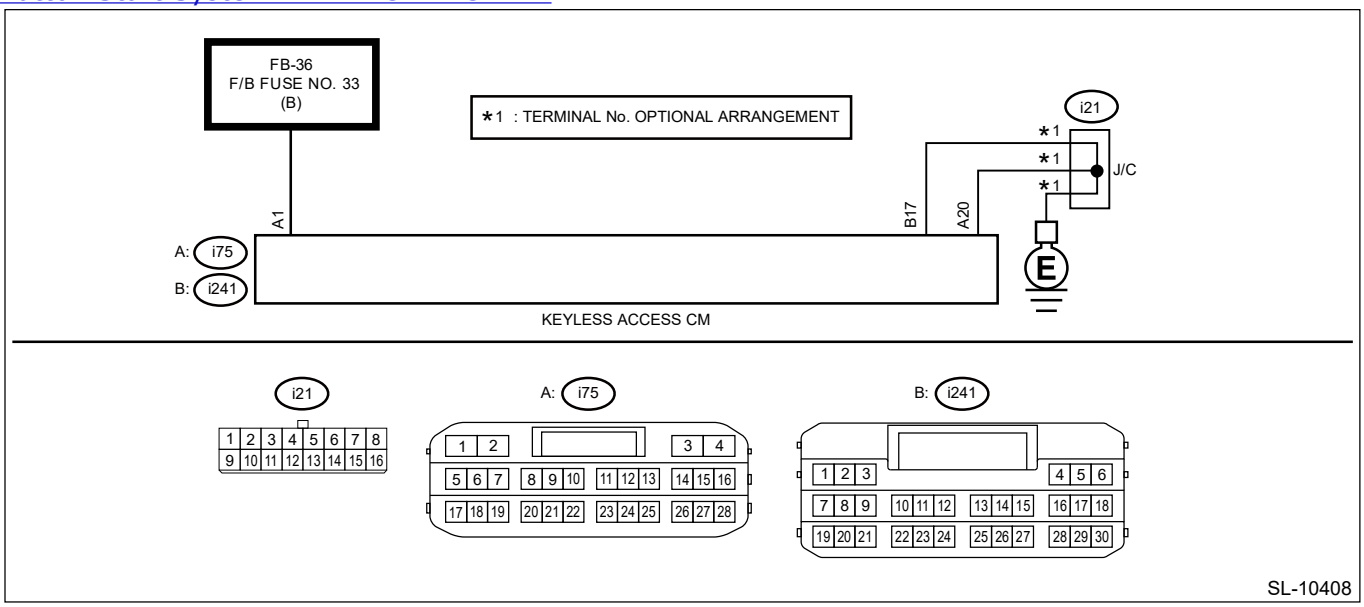
1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch to OFF → ON.
4. Register the ID code box. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
5. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2790 displayed? (Current malfunction)

Yes	Replace the ID code box. Ref. to SECURITY AND LOCKS>ID Code Box.
No	ID code box registration was not performed properly.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC B2793 BACKUP POWER

DTC detecting condition:
When backup power supply input is less than 8.5 V continuously for 10 seconds with ignition switch ON. (Voltage check is executed every one second)
Trouble symptom:

- Entry cannot be made.
- Power supply control cannot be executed.

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Control Module Voltage(Backup)]

Is [ON] displayed?

Yes	Go to 2.
No	Go to 3.

2. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

2. Start the engine, and let it idle for 40 seconds or more.
3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2793 displayed? (Current malfunction)

Yes	Go to 3.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK FUSE.

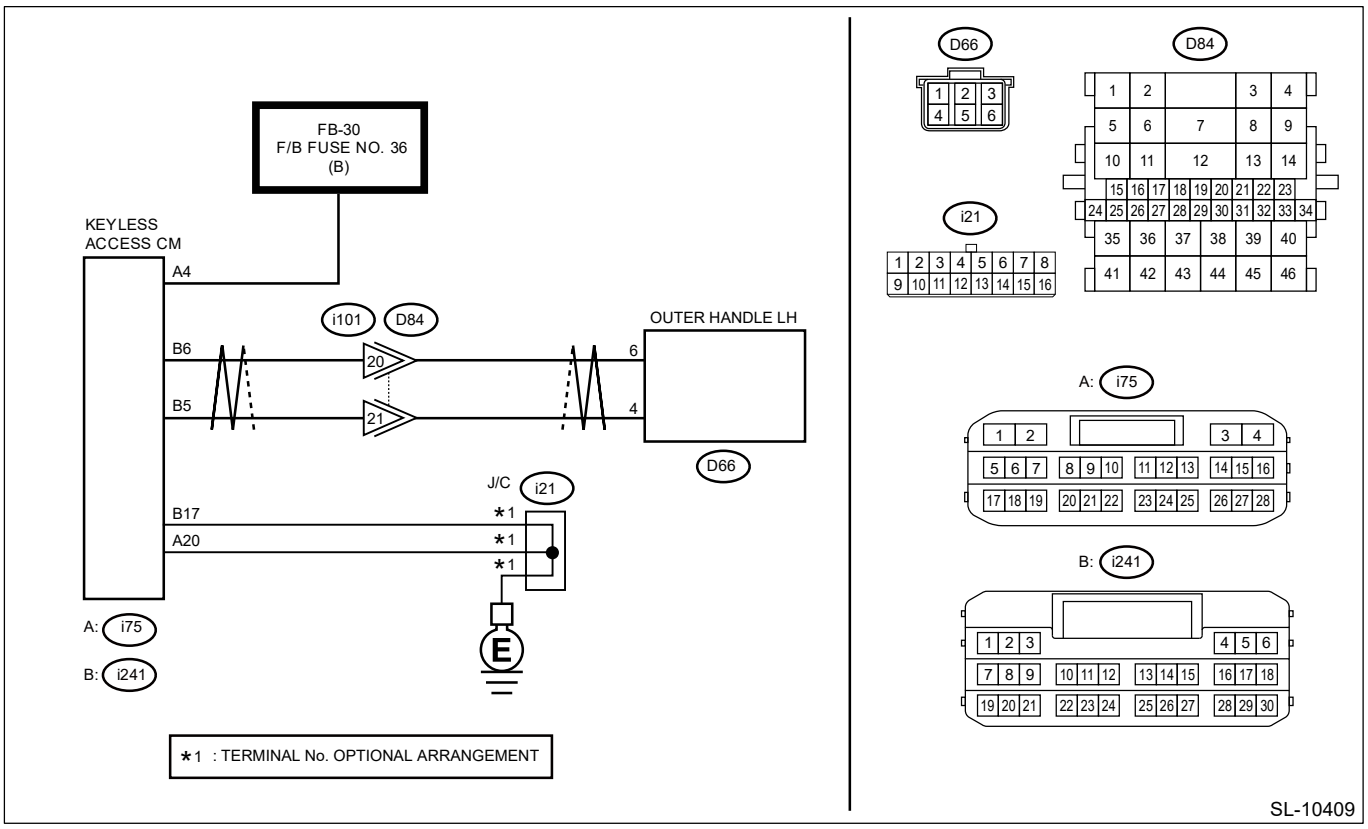
Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 4.
No	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

4. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.
   Connector & terminal
   (i241) No. 1 (+) — Chassis ground (−):



Is the voltage 9.5 — 16 V?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Repair or replace the open circuit of harness.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle.
Trouble symptom:
The keyless access with push button start system does not operate.
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK CONNECTOR.

1. Disconnect the keyless access CM connector.
2. Disconnect the front door outer handle connector.
3. Check the connector.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the connector.

3. CHECK POWER SUPPLY CIRCUIT.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and front door outside handle connector, and between keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 5 — (D66) No. 4:
(i241) No. 6 — (D66) No. 6:
(i241) No. 17 — Chassis ground:
(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

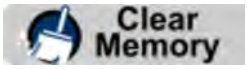
Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 5 — Chassis ground:



(i241) No. 6 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK DTC.

1. Connect the keyless access CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

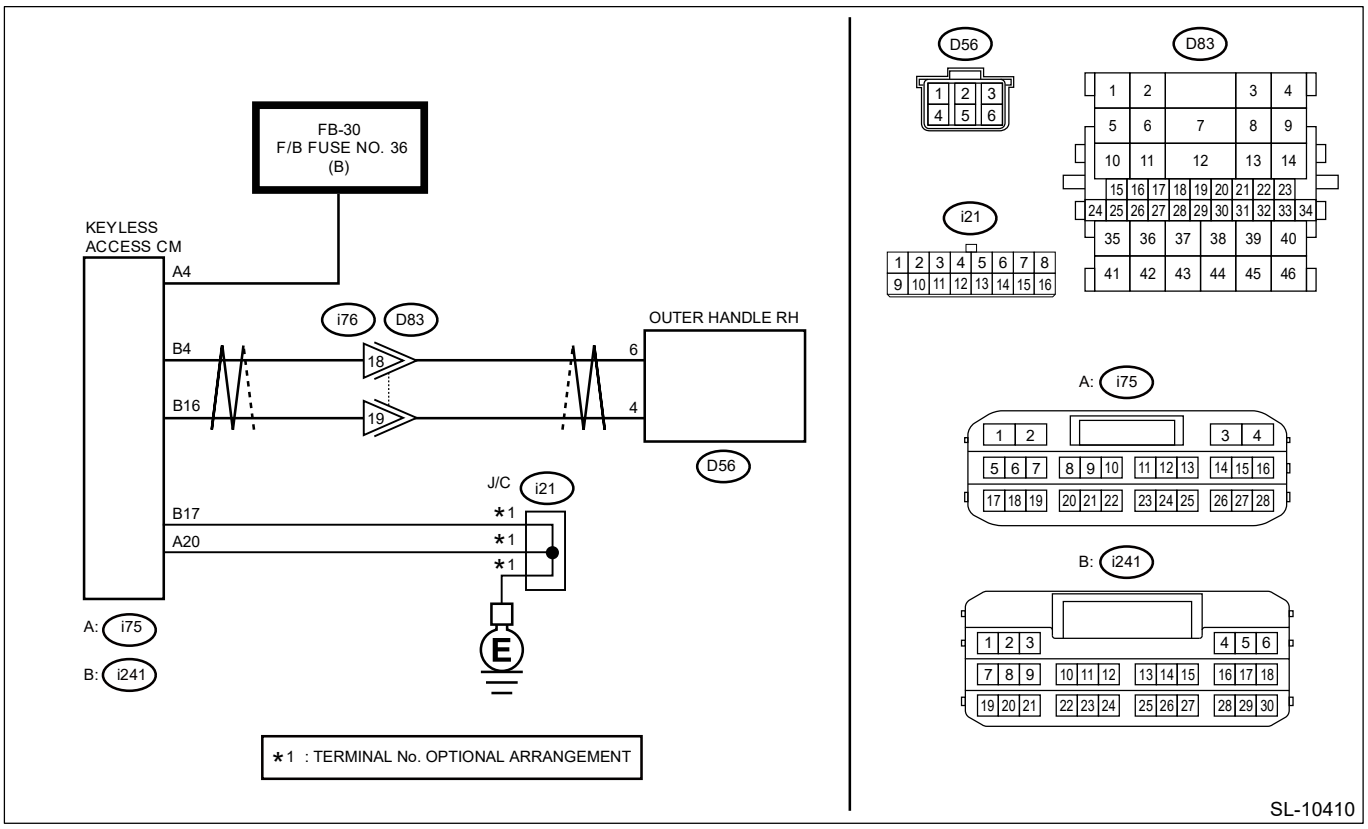
Is DTC B27A1 displayed? (Current malfunction)

Yes	Go to 7.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

7. CHECK FRONT DOOR OUTER HANDLE.

1. Replace the driver's side front door outer handle with the passenger's front door outer handle.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B27A1 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the driver's side front door outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle.
Trouble symptom:
The keyless access with push button start system does not operate.
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK CONNECTOR.

1. Disconnect the keyless access CM connector.
2. Disconnect the front door outer handle connector.
3. Check the connector.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the connector.

3. CHECK POWER SUPPLY CIRCUIT.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and front door outside handle connector, and between keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 4 — (D56) No. 6:
(i241) No. 16 — (D56) No. 4:
(i241) No. 17 — Chassis ground:
(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

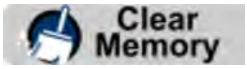
Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 4 — Chassis ground:



(i241) No. 16 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK DTC.

1. Connect the keyless access CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

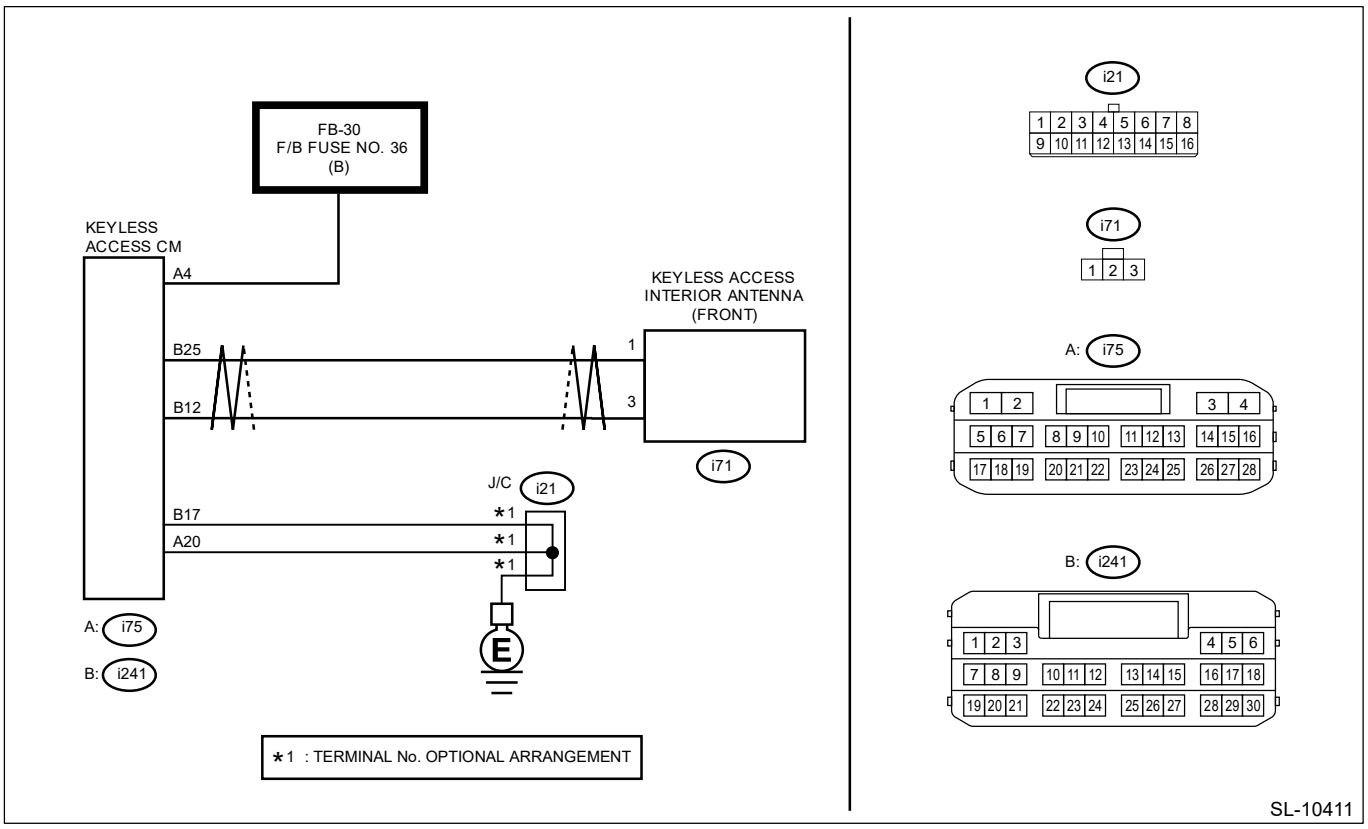
Is DTC B27A2 displayed? (Current malfunction)

Yes	Go to 7.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

7. CHECK FRONT DOOR OUTER HANDLE.

1. Replace the passenger's side front door outer handle with the driver's front door outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B27A2 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the passenger's side front door outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B27A5 FRONT INTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and front interior antenna.
Trouble symptom:
The keyless access with push button start system does not operate. (When the access key is in the front area of the passenger room)
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK CONNECTOR.

1. Disconnect the keyless access CM connector.
2. Disconnect the front interior antenna connector.
3. Check the connector.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the connector.

3. CHECK POWER SUPPLY CIRCUIT.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and front interior antenna connector, and between keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 25 — (i71) No. 1:
(i241) No. 12 — (i71)No. 3:
(i241) No. 17 — Chassis ground:
(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

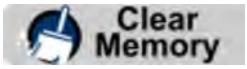
Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 25 — Chassis ground:



(i241) No. 12 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK DTC.

1. Connect the keyless access CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

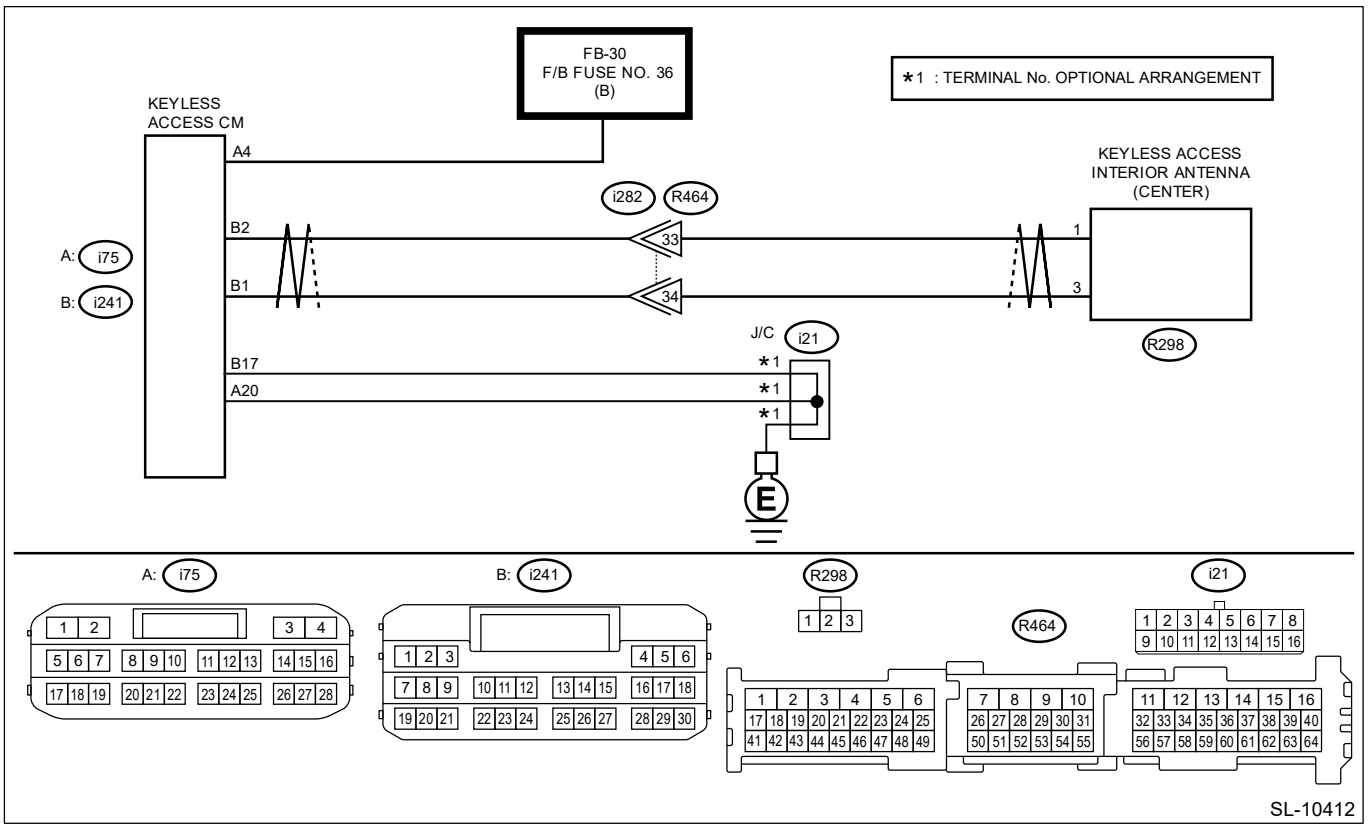
Is DTC B27A5 displayed?

Yes	Go to 7.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

7. CHECK FRONT INTERIOR ANTENNA.

1. Replace the rear interior antenna with the front interior antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B27A5 displayed?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Malfunction occurred in the front interior antenna.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B27A6 REAR INTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and center interior antenna.
Trouble symptom:
Keyless access system does not function. (when the access key is in the rear area of the passenger room (near the seat))
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK CONNECTOR.

1. Disconnect the keyless access CM connector.
2. Disconnect the center interior antenna connector.
3. Check the connector.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the connector.

3. CHECK POWER SUPPLY CIRCUIT.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and center interior antenna connector, and between keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 2 — (R298) No. 1:
(i241) No. 1 — (R298) No. 3:
(i241) No. 17 — Chassis ground:
(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

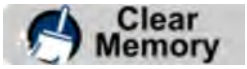
Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 2 – Chassis ground:



(i241) No. 1 – Chassis ground:

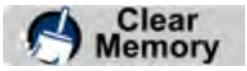
Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK DTC.

1. Connect the keyless access CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



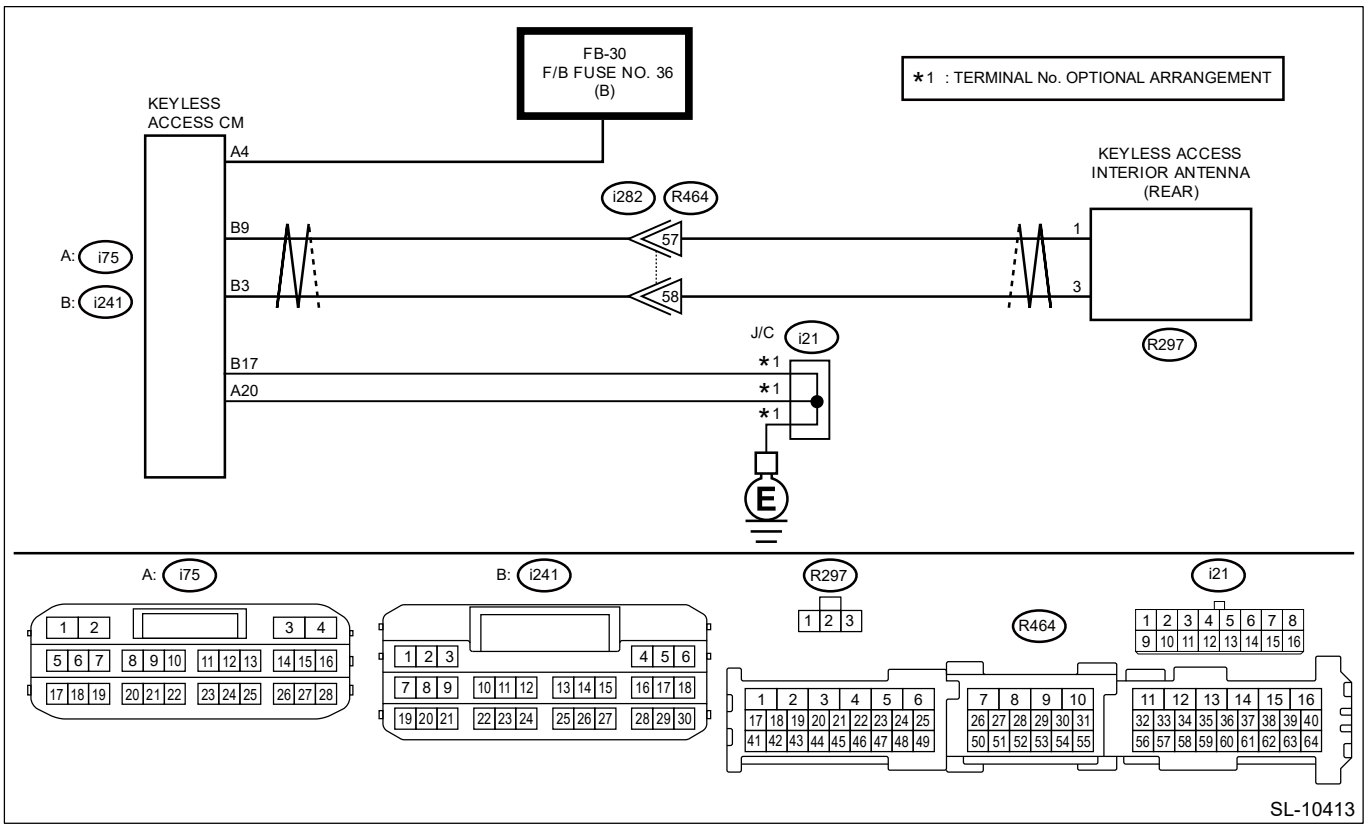
Is DTC B27A6 displayed? (Current malfunction)

Yes	Go to 7.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

7. CHECK CENTER INTERIOR ANTENNA.

1. Replace the center interior antenna with the front interior antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B27A6 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Malfunction occurred in the center interior antenna.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and rear interior antenna.
Trouble symptom:
The keyless access with push button start system does not operate. (When the access key is in the rear area of the passenger room (in the luggage room or trunk))
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK CONNECTOR.

1. Disconnect the keyless access CM connector.
2. Disconnect the rear interior antenna connector.
3. Check the connector.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the connector.

3. CHECK POWER SUPPLY CIRCUIT.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and rear interior antenna connector, and between keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 9 — (R297) No. 1:
(i241) No. 3 — (R297) No. 3:
(i241) No. 17 — Chassis ground:
(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

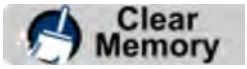
Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 2 — Chassis ground:



(i241) No. 1 — Chassis ground:

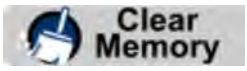
Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK DTC.

1. Connect the keyless access CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



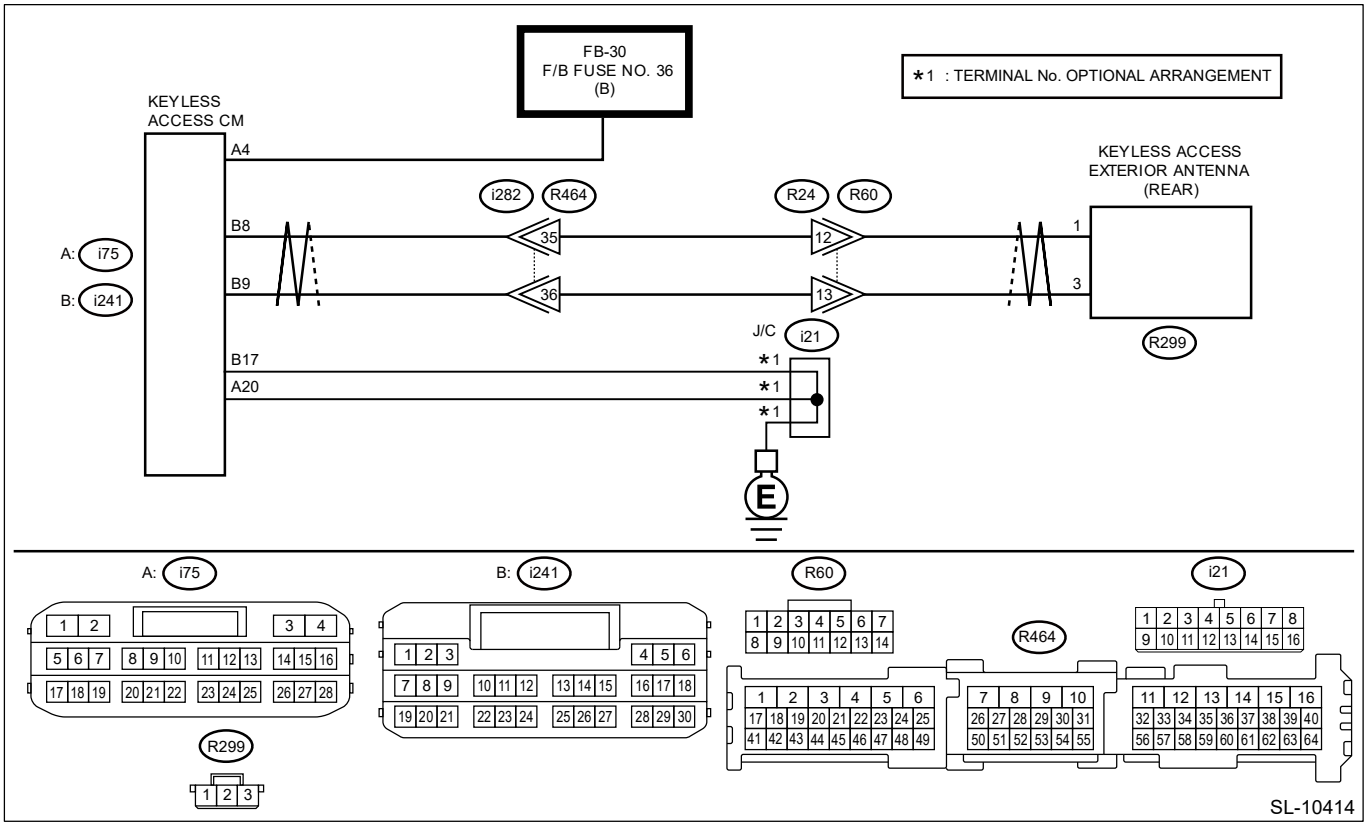
Is DTC B27A7 displayed? (Current malfunction)

Yes	Go to 7.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

7. CHECK REAR INTERIOR ANTENNA.

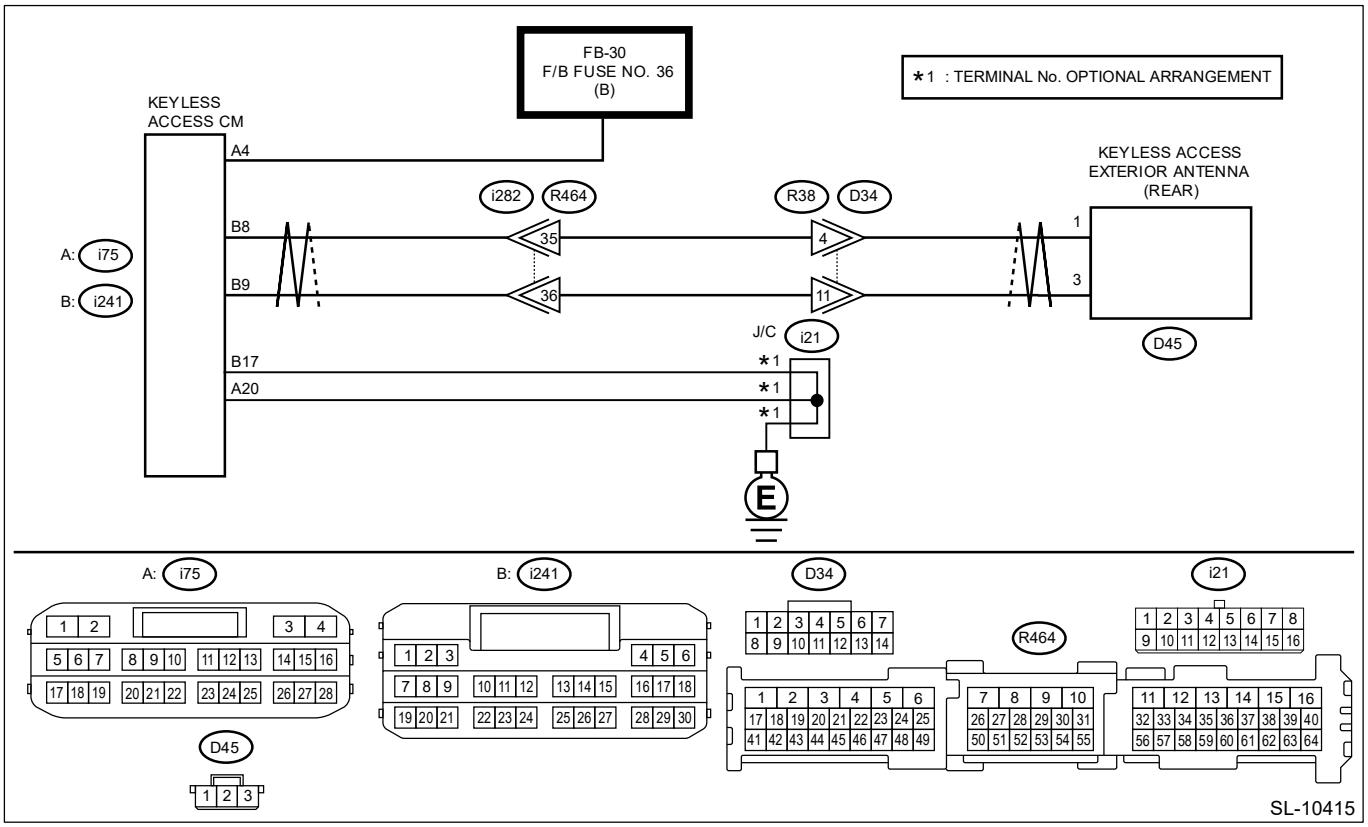
1. Replace the rear interior antenna with the front interior antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B27A7 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Malfunction occurred in the rear interior antenna.



KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and rear exterior antenna.
Trouble symptom:
Keyless access system does not function.
(Unable to unlock with the rear gate opener button, or unable to lock with the rear lock button. Or trunk does not open or close with the trunk opener button)
Wiring diagram:
Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK CONNECTOR.

1. Disconnect the keyless access CM connector.
2. Disconnect the rear exterior antenna connector.
3. Check the connector.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the connector.

3. CHECK POWER SUPPLY CIRCUIT.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 4.
No	Check the power supply circuit.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and rear exterior antenna connector, and between keyless access CM connector and chassis ground.

Connector & terminal

4 door model

(i241) No. 8 — (R299) No. 1:

(i241) No. 9 — (R299) No. 3:

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

5 door model

(i241) No. 8 — (D45) No. 1:

(i241) No. 9 — (D45) No. 3:

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is the resistance less than 1 Ω?

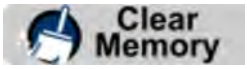
Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 8 — Chassis ground:



(i241) No. 9 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK DTC.

1. Connect the keyless access CM connector.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B27A8 displayed? (Current malfunction)

Yes	Go to 7.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

7. CHECK KEYLESS ACCESS CM.

1. Replace the rear exterior antenna with the rear interior antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna. Ref. to SECURITY AND LOCKS>Keyless Access Outdoor Antenna.
2. Using the Subaru Select Monitor, perform the clear memory of [Keyless Access with Push Button Start]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B27A8 displayed? (Current malfunction)

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Malfunction occurred in the rear external antenna.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

DTC detecting condition:

When bus off is detected 6 times in a row by CAN function complying with ISO 11898.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC detecting condition:

When reception ID frame is not normally and continuously received for 10 seconds, with ignition switch ON.

(Including when frame is abandoned by DLC (data length code) check error)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

DTC detecting condition:

When reception ID frame is not normally and continuously received for 10 seconds, with ignition switch ON.

(Including when frame is abandoned by DLC (data length code) check error)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:

When reception ID frame is not normally and continuously received for 10 seconds, with ignition switch ON.

(Including when frame is abandoned by DLC (data length code) check error)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:

When reception ID frame is not normally and continuously received for 10 seconds during CAN bus Wake-up.

(Including when frame is abandoned by DLC (data length code) check error)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC detecting condition:

When the following conditions are all established.

- Data no-receive DTC of monitored node is not in current malfunction.
- Fail detection counter of monitored node is not updated 32 times in a row. Or checksum error is detected 3 times in a row.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC detecting condition:

When the following conditions are all established.

- Data no-receive DTC of monitored node is not in current malfunction.
- Fail detection counter of monitored node is not updated 32 times in a row. Or checksum error is detected 3 times in a row.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1120 LOST COMMUNICATION WITH AUTOSTART STOP CONTROL MODULE

DTC detecting condition:

When reception ID frame is not normally and continuously received for 10 seconds, with ignition switch ON.

(Including when frame is abandoned by DLC (data length code) check error)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

DTC detecting condition:

When reception ID frame is not normally and continuously received for 10 seconds during CAN bus Wake-up.

(Including when frame is abandoned by DLC (data length code) check error)

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

DTC detecting condition:

When the following conditions are all established.

- Data no-receive DTC of monitored node is not in current malfunction.
- Fail detection counter of monitored node is not updated 32 times in a row.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

1. IMMOBILIZER SYSTEM

Symptoms	Note
Engine does not start	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ENGINE DOES NOT START.
	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH).
	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT.
	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2785 LIN COMMUNICATION.
	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2789 ID CODE BOX COMMUNICATION.
	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2790 ID CODE BOX CIRCUIT.
	Check the brake switch. Ref. to BRAKE>Stop Light Switch>INSPECTION.
	Check the parking switch signal. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and “P” Range Switch>INSPECTION.
	Check DTC of ECM. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).
Cannot register the immobilizer.	Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
Engine does not start with the remote engine starter.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION.

2. KEYLESS ACCESS SYSTEM

Symptoms	Note

All doors cannot be locked/unlocked with keyless access.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS.
Cannot lock with keyless access from the driver’s door.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR.
Cannot lock/unlock from the driver’s door with keyless access.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR.
Cannot unlock from the driver’s door with keyless access.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR.
Cannot lock from the passenger’s door with keyless access.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR.
Cannot lock/unlock from the passenger’s door with keyless access.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR.
Cannot unlock from the passenger’s door with keyless access.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR.
Trunk does not open with the trunk opener button.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > TRUNK WILL NOT OPEN WITH KEYLESS ACCESS.
Access key lockout protection function in the trunk does not operate.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE.
Keyless access passenger room buzzer does not sound.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND.
Keyless access external buzzer does not beep.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP.

Interior collation does not function.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > INTERIOR COLLATION DOES NOT FUNCTION.
Rear gate cannot be unlocked with the rear gate opener button.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > REAR GATE CANNOT BE UNLOCKED WITH THE REAR GATE OPENER BUTTON.
Rear gate can not be locked when using the rear lock button.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON.

3. STEERING LOCK SYSTEM

Symptoms	Note
The steering lock cannot be released (Cannot start the engine).	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE STEERING LOCK IS NOT RELEASED.
The steering lock does not operate.	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE STEERING LOCK DOES NOT OPERATE.

4. POWER SUPPLY SWITCHING SYSTEM

Symptoms	Note
Power will not turn ON (both accessory and ignition).	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION).
Power will not turn ON (accessory only).	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON).
Power will not turn ON (ignition only).	Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON).

KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION

1. KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF

THE DOORS

Trouble causes:

- Malfunction of exterior antenna, oscillator, touch sensor, lock/unlock buttons
- Malfunction of access key, access key battery
- Malfunction of door lock control system
- Malfunction of keyless access CM power supply circuit
- Keyless access CM malfunction

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK OPERATION OF KEYLESS DOOR LOCK.
   - yes → Perform the instructed procedures.
   - no → Go to 2.
2. CHECK ACCESS KEY.
   - no → Go to 4.
   - yes ↓
3. CHECK ACCESS KEY.
   - yes → Perform the instructed procedures.
   - no → Perform the instructed procedures.
4. CHECK DOOR LOCK.
   - no → Perform the instructed procedures.
   - yes ↓

5. CHECK HARNESS.

no → Perform the instructed procedures.

yes ↓

6. CHECK HARNESS (OPEN CIRCUIT).

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK OPERATION OF KEYLESS DOOR LOCK.

Using the keyless function of the access key, check the operation of the door lock.

Does it lock/unlock normally?

Yes	Check the exterior antenna, oscillator, touch sensor, lock/unlock buttons.
No	Go to 2.

2. CHECK ACCESS KEY.

Check for whether lock and unlock is possible with the registered access key.

Is there any access key which can lock/unlock when the touch sensor is operated?

Yes	Check the access key that does not operate. Go to 3.
No	Go to 4.

3. CHECK ACCESS KEY.

Measure the battery voltage of the access key that does not operate.

Is the voltage 2.5 — 3.2 V?

Yes	Replace the access key.
No	Replace the battery.

4. CHECK DOOR LOCK.

Operate the driver’s center door lock switch.

Does the door lock operate?

Yes	Go to 5.
No	Check the door lock control system. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION.

5. CHECK HARNESS.

Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage 10 V or more when the ignition switch is turned to ON?

Yes	Go to 6.
No	Check the keyless access CM power supply circuit.

6. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

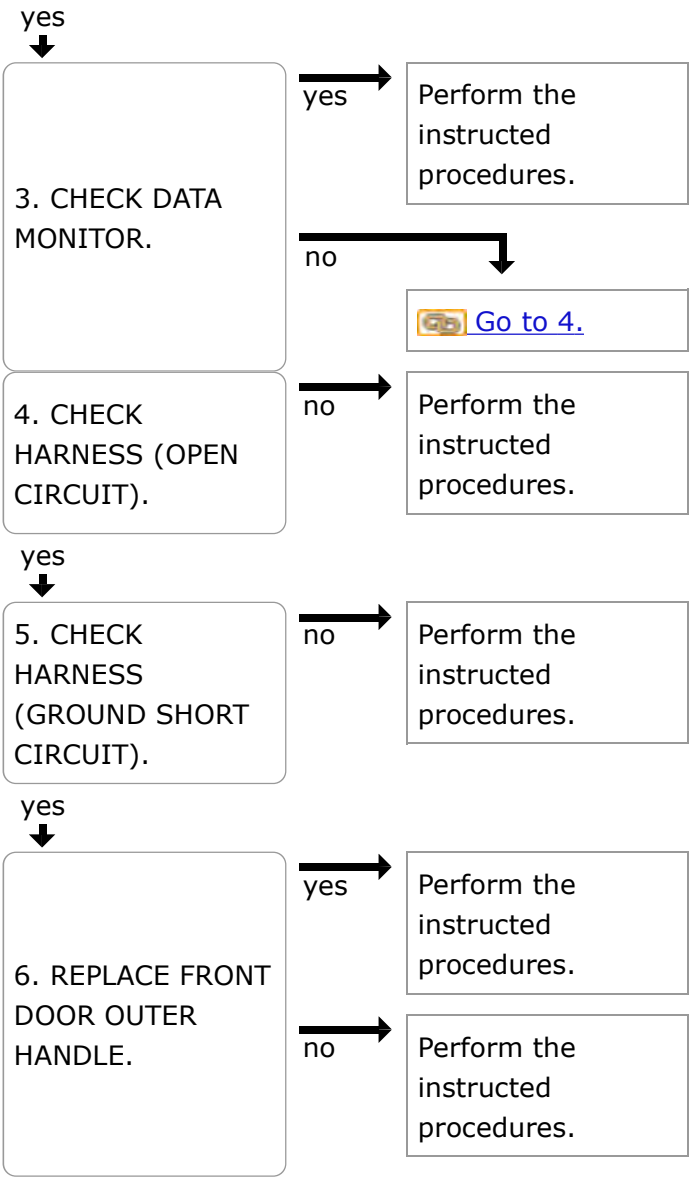
(i75) No. 20 — Chassis ground:

(i241) No. 17 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.
No	Repair or replace the open circuit of harness.

2. CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR



Trouble causes:

- Malfunction of door lock control system
- Door lock switch circuit malfunction
- Malfunction of harness between keyless access CM and front door outer handle
- Keyless access CM malfunction
- Malfunction of front door outer handle

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DOOR LOCK SWITCH.	no →	Perform the instructed procedures.
yes ↓		
2. CHECK DATA MONITOR.	no →	Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check that the lock/unlock operates with the driver’s door lock switch.

Does it lock/unlock normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Driver's seat lock status SW input]
2. Read the data when locking/unlocking the driver’s side lock actuator.

Does the data change from ON/OFF?

Yes	Go to 3.
No	Check the door lock switch circuit.

3. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Driver's lock touch sensor SW]

Does the data change from ON/OFF according to the sensor operation?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the front outer handle connector.
3. Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector.

Connector & terminal

(i241) No. 6 — (D66) No. 6:

(i241) No. 5 — (D66) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 6 — Chassis ground:

(i241) No. 5 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. REPLACE FRONT DOOR OUTER HANDLE.

Replace the driver's side front outer handle with the passenger's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

Does it operate properly?

Yes	Replace the driver's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

3. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

Trouble causes:

- Malfunction of door lock control system
- Malfunction of keyless access CM power supply circuit
- Malfunction of harness between keyless access CM and front door outer handle
- Keyless access CM malfunction
- Malfunction of front door outer handle

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DOOR LOCK SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK FUSE.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK HARNESS.
no → Perform the instructed procedures.
yes ↓

4. CHECK HARNESS (GROUND SHORT CIRCUIT).
no → Perform the instructed procedures.
yes ↓

5. CHECK KEYLESS ACCESS CM.
no → Perform the instructed procedures.
yes ↓

6. REPLACE FRONT DOOR OUTER HANDLE.
yes → Perform the instructed procedures.
no → Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check that the lock/unlock operates with the driver’s door lock switch.

Does it lock/unlock normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Replace the fuse.

3. CHECK HARNESS.

1. Disconnect the keyless access CM connector.
2. Disconnect the front outer handle connector.
3. Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector.

Connector & terminal

(i241) No. 6 — (D66) No. 6:

(i241) No. 5 — (D66) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 6 — Chassis ground:

(i241) No. 5 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector.
2. Turn the ignition switch to OFF, close all doors and take the access key out of passenger room.
3. Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors.
   Connector & terminal
   (D66) No. 6 — (D66) No. 4:

Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?

Yes	Go to 6.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

6. REPLACE FRONT DOOR OUTER HANDLE.

Replace the driver's side front outer handle with the passenger's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

Does it operate properly?

Yes	Replace the driver's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

4. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

Trouble causes:

- Malfunction of door lock control system
- Door lock switch circuit malfunction
- Malfunction of harness between keyless access CM and front door outer handle
- Keyless access CM malfunction
- Malfunction of front door outer handle

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DOOR LOCK SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK DATA MONITOR.
   - yes → Perform the instructed procedures.
   - no → Go to 4.
4. CHECK HARNESS (OPEN CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
5. CHECK HARNESS (GROUND SHORT CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓

6. REPLACE FRONT DOOR OUTER HANDLE.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check that the lock/unlock operates with the driver’s door lock switch.

Does it lock/unlock normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Driver's seat lock status SW input]
2. Read the data when locking/unlocking the driver’s side lock actuator.

Does the data change from ON/OFF?

Yes	Go to 3.
No	Check the door lock switch circuit.

3. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Driver's unlock touch sensor switch]
2. Read the data when operating the touch sensor (unlock) of the door outer handle.

Does the data change from ON/OFF according to the sensor operation?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the front outer handle connector.
3. Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector.
   Connector & terminal
   (i241) No. 6 — (D66) No. 6:
   (i241) No. 5 — (D66) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 6 — Chassis ground:

(i241) No. 5 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. REPLACE FRONT DOOR OUTER HANDLE.

Replace the driver's side front outer handle with the passenger's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

Does it operate properly?

Yes	Replace the driver's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

5. CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

Trouble causes:

- Malfunction of door lock control system
- Door lock switch circuit malfunction
- Malfunction of harness between keyless access CM and front door outer handle
- Keyless access CM malfunction
- Malfunction of front door outer handle

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DOOR LOCK SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK DATA MONITOR.
   - yes → Perform the instructed procedures.
   - no → Go to 4.
4. CHECK HARNESS (OPEN CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
5. CHECK HARNESS (GROUND SHORT CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓

6. REPLACE FRONT DOOR OUTER HANDLE.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check that the lock/unlock operates with the driver’s door lock switch.

Does it lock/unlock normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Passenger's seat lock status SW input]
2. Read the data when locking/unlocking the passenger’s side lock actuator.

Does the data change from ON/OFF?

Yes	Go to 3.
No	Check the door lock switch circuit.

3. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Passenger's lock touch sensor SW]
2. Read the data when operating the touch sensor (lock) of the door outer handle.

Does the data change from ON/OFF according to the sensor operation?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the front outer handle connector.
3. Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector.
   Connector & terminal
   (i241) No. 4 — (D56) No. 6:
   (i241) No. 16 — (D56) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 4 — Chassis ground:

(i241) No. 16 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. REPLACE FRONT DOOR OUTER HANDLE.

Replace the passenger's side front outer handle with the driver's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

Does it operate properly?

Yes	Replace the passenger's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

6. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

Trouble causes:

- Malfunction of door lock control system
- Malfunction of keyless access CM power supply circuit
- Malfunction of harness between keyless access CM and front door outer handle
- Keyless access CM malfunction
- Malfunction of front door outer handle

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DOOR LOCK SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK FUSE.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK HARNESS (OPEN CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK HARNESS (GROUND SHORT CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
5. CHECK KEYLESS ACCESS CM.
   - no → Perform the instructed procedures.
   - yes ↓

6. REPLACE FRONT DOOR OUTER HANDLE.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check that the lock/unlock operates with the driver’s door lock switch.

Does it lock/unlock normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Replace the fuse.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the front outer handle connector.
3. Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector.

Connector & terminal

(i241) No. 4 — (D56) No. 6:

(i241) No. 16 — (D56) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 4 — Chassis ground:

(i241) No. 16 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector.
2. Turn the ignition switch to OFF, close all doors and take the access key out of passenger room.
3. Use the Subaru Select Monitor, measure the waveform between the keyless access CM connectors.
   Connector & terminal
   (D56) No. 6 — (D56) No. 4:

Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?

Yes	Go to 6.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

6. REPLACE FRONT DOOR OUTER HANDLE.

Replace the passenger's side front outer handle with the driver's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

Does it operate properly?

Yes	Replace the passenger's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

7. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

Trouble causes:

- Malfunction of door lock control system
- Door lock switch circuit malfunction
- Malfunction of harness between keyless access CM and front door outer handle
- Keyless access CM malfunction
- Malfunction of front door outer handle

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DOOR LOCK SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK DATA MONITOR.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK DATA MONITOR.
   - yes → Perform the instructed procedures.
   - no → Go to 4.
4. CHECK HARNESS (OPEN CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
5. CHECK HARNESS (GROUND SHORT CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓

6. REPLACE FRONT DOOR OUTER HANDLE.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check that the lock/unlock operates with the driver’s door lock switch.

Does it lock/unlock normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Passenger's seat lock status SW input]
2. Read the data when locking/unlocking the passenger’s side lock actuator.

Does the data change from ON/OFF?

Yes	Go to 3.
No	Check the door lock switch circuit.

3. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Passenger's unlock touch sensor switch]
2. Read the data when operating the touch sensor (unlock) of the door outer handle.

Does the data change from ON/OFF according to the sensor operation?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Disconnect the front outer handle connector.
3. Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector.
   Connector & terminal
   (i241) No. 4 — (D56) No. 6:
   (i241) No. 16 — (D56) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 4 — Chassis ground:

(i241) No. 16 — Chassis ground:

Is the resistance 10 kΩ or more?

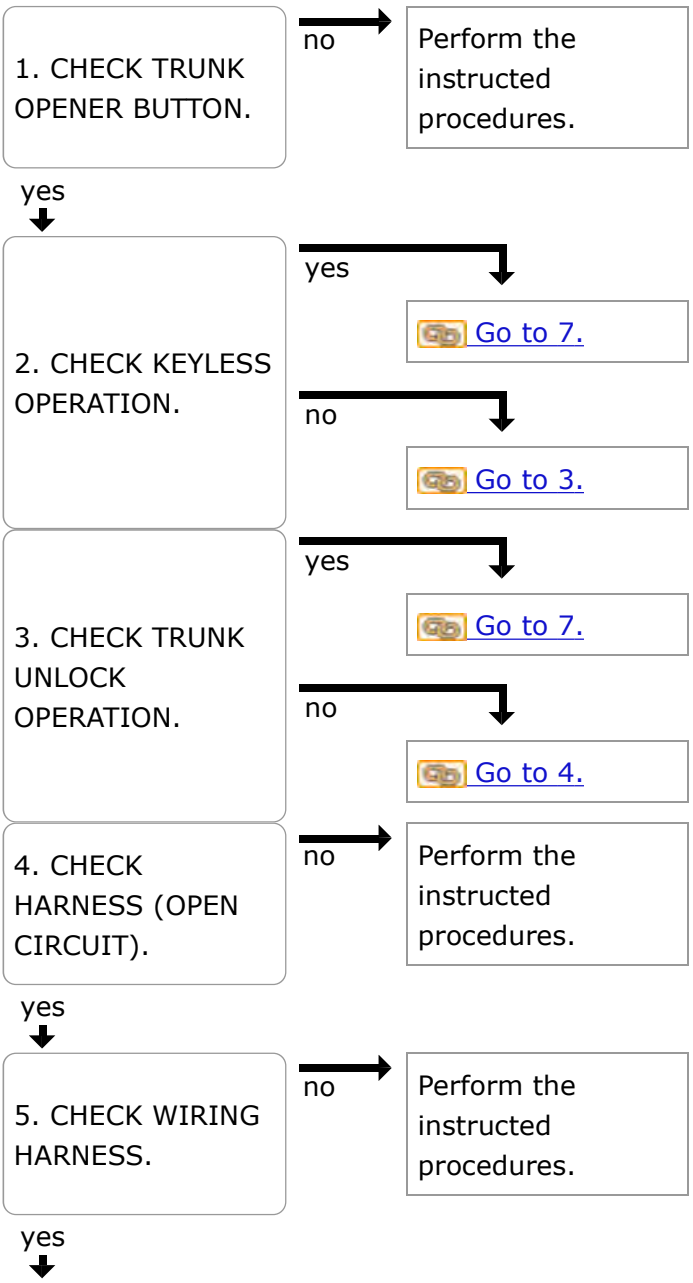
Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. REPLACE FRONT DOOR OUTER HANDLE.

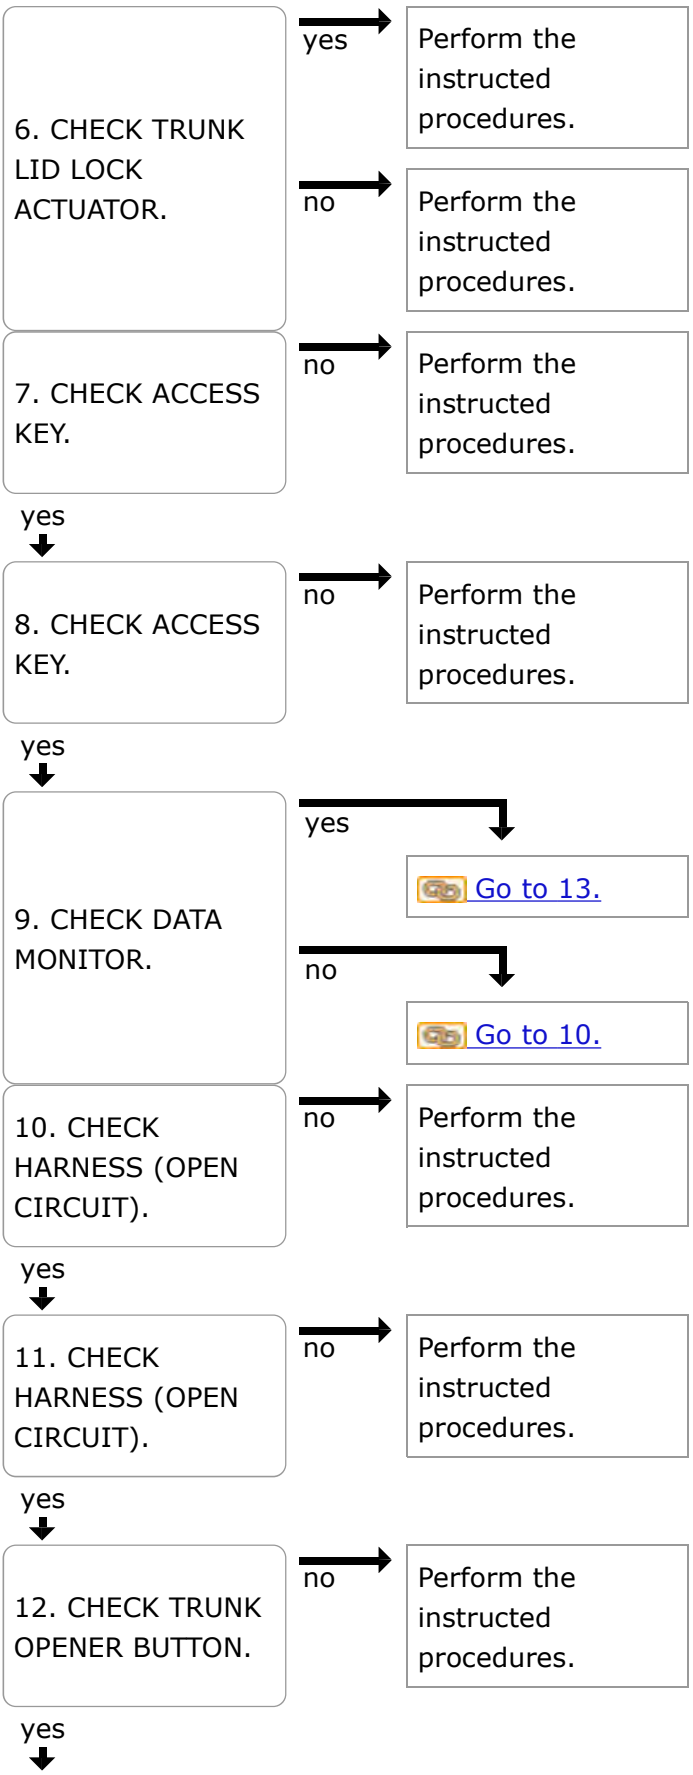
Replace the passenger's side front outer handle with the driver's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.

Does it operate properly?

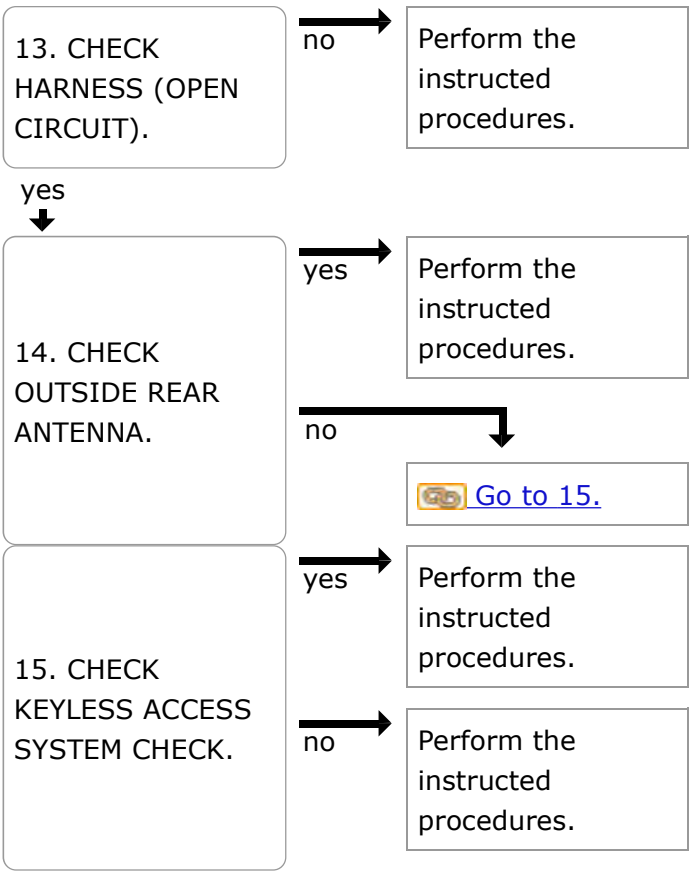
Yes	Replace the passenger's side front outer handle. Ref. to SECURITY AND LOCKS>Door Outer Handle.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.



8. TRUNK WILL NOT OPEN WITH KEYLESS ACCESS



Trouble causes:



- Malfunction of door lock control system
- Malfunction of harness between the body integrated unit and trunk lid lock actuator
- Trunk lid lock actuator malfunction
- Body integrated unit malfunction
- Access key malfunction
- Malfunction of harness between trunk opener button and keyless access CM
- Trunk opener button malfunction
- Keyless access CM malfunction
- Malfunction of harness between exterior rear antenna and keyless access CM
- Exterior rear antenna malfunction

Caution:

- **Check that there are no other registered access keys inside the trunk.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

6. CHECK TRUNK LID LOCK ACTUATOR.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
7. CHECK ACCESS KEY.
no
Perform the instructed procedures.
yes
8. CHECK ACCESS KEY.
no
Perform the instructed procedures.
yes
9. CHECK DATA MONITOR.
yes
Go to 13.
no
Go to 10.
10. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
11. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
12. CHECK TRUNK OPENER BUTTON.
no
Perform the instructed procedures.
yes

1. CHECK TRUNK OPENER BUTTON.

Check that the trunk opens with the driver's seat trunk opener button.

Does it open normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION > SYMPTOM CHART.

2. CHECK KEYLESS OPERATION.

Check that the trunk opens when the trunk opener button of the access key is operated.

Does it open normally?

Yes	Go to 7.
No	Go to 3.

3. CHECK TRUNK UNLOCK OPERATION.

1. Using the Subaru Select Monitor, check the following items of [Active Test] of [Body Control].
   Ref. to BODY CONTROL(DIAGNOSTICS)>Active Test.
   - [R gate/trunk UNLK output]
2. Check that the trunk opens when the R gate/trunk UNLK signal is output.

Does it open normally?

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the body integrated unit connector and trunk lid lock actuator connector.
2. Check the continuity between body integrated unit connector and trunk lid lock actuator connector.
   Connector & terminal
   (i266) No. 7 — (R186) No. 1:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK WIRING HARNESS.

Check the continuity between the trunk lid lock actuator connector and chassis ground.

Connector & terminal

(R186) No. 2 — Chassis ground:

Is there continuity?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK TRUNK LID LOCK ACTUATOR.

Check the trunk lid lock actuator. Ref. to SECURITY AND LOCKS>Trunk Lid Latch and Actuator Assembly.

Is trunk lid actuator normal?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the trunk lid latch & actuator assembly. Ref. to SECURITY AND LOCKS>Trunk Lid Latch and Actuator Assembly.

7. CHECK ACCESS KEY.

Check the access key LED when the trunk opener button of the access key is operated.

Does the access key LED illuminate?

Yes	Go to 8.
No	Replace the access key. Ref. to SECURITY AND LOCKS>Access Key>REPLACEMENT.

8. CHECK ACCESS KEY.

1. Prepare all access keys registered to the vehicle.
2. Check that the trunk opens with each access key.

Does it open normally?

Yes	Go to 9.
No	Replace the access key. Ref. to SECURITY AND LOCKS>Access Key>REPLACEMENT.

9. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   - [Trunk Request SW]
2. Read the data when pressing the trunk opener button.

Does the data display ON?

Yes	Go to 13.
No	Go to 10.

10. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the trunk opener button connector and the keyless access CM connector.
2. Using a tester, check continuity between the trunk opener button connector and keyless access CM connector.
   Connector & terminal
   (R294) No. 1 — (i75) No. 17:

Is there continuity?

Yes	Go to 11.
No	Repair or replace the open circuit of harness.

11. CHECK HARNESS (OPEN CIRCUIT).

1. Using a tester, check the continuity between the trunk opener button connector and chassis ground.
   Connector & terminal
   (R294) No. 2 — Chassis ground:

Is there continuity?

Yes	Go to 12.
No	Repair or replace the open circuit of harness.

12. CHECK TRUNK OPENER BUTTON.

Using a tester, check the continuity between trunk opener button connector terminals.
Terminals
No. 1 — No. 2:

Is there continuity when pressing the switch?

Yes	Go to 13.
No	Replace the trunk opener button. Ref. to SECURITY AND LOCKS>Trunk Opener Button.

13. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the exterior rear antenna connector and the keyless access CM connector.
2. Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector.

Connector & terminal

(R299) No. 1 — (i241) No. 8:
(R299) No. 2 — (i241) No. 9:

Is there continuity?

Yes	Go to 14.
No	Repair or replace the open circuit of harness.

14. CHECK OUTSIDE REAR ANTENNA.

Replace the outside rear antenna with new or properly working parts.

Does it operate properly?

Yes	Replace the outside rear antenna. Ref. to SECURITY AND LOCKS>Keyless Access Outdoor Antenna>REMOVAL.
No	Go to 15.

15. CHECK KEYLESS ACCESS SYSTEM CHECK.

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Out of trunk transmitter + room tuner]

Does the outside buzzer sound?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

9. ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE

Trouble causes:

- Malfunction of door lock control system
- Malfunction of harness between the body integrated unit and trunk lid lock actuator
- Trunk lid lock actuator malfunction
- Body integrated unit malfunction
- Access key malfunction
- Keyless access CM malfunction
- Malfunction of harness between interior rear antenna and keyless access CM
- Interior rear antenna malfunction

Caution:

- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK TRUNK OPENER BUTTON.	no →	Perform the instructed procedures.

yes

2. CHECK KEYLESS OPERATION.

yes → Go to 7.

no → Go to 3.

3. CHECK TRUNK UNLOCK OPERATION.

yes → Go to 7.

no → Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes

5. CHECK HARNESS (OPEN CIRCUIT).

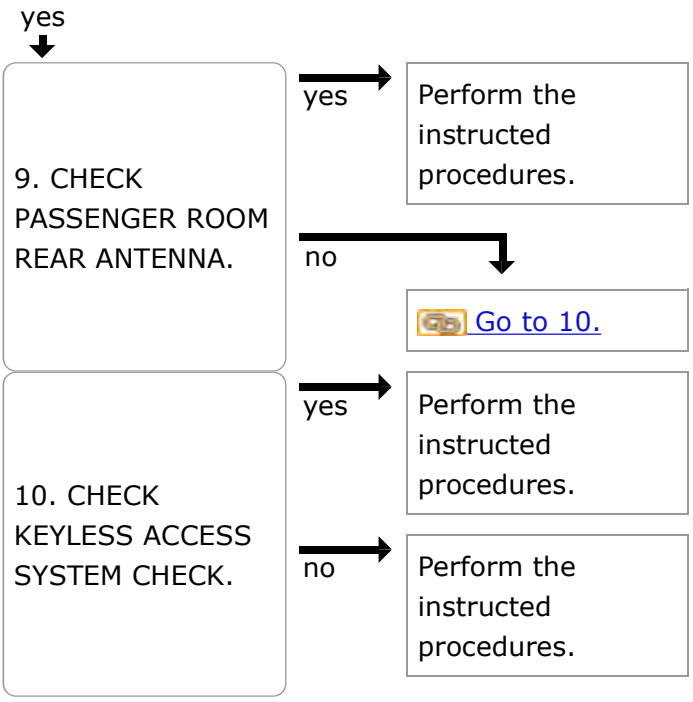
no → Perform the instructed procedures.

yes

6. CHECK TRUNK LID LOCK ACTUATOR.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.



7. CHECK ACCESS KEY.

no → Perform the instructed procedures.

yes

8. CHECK HARNESS.

no → Perform the instructed procedures.

1. CHECK TRUNK OPENER BUTTON.

Check that the trunk opens with the driver's seat trunk opener button.

Does it open normally?

Yes	Go to 2.
No	Check the door lock circuit. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION.

2. CHECK KEYLESS OPERATION.

Check that the trunk opens when the trunk opener button of the access key is operated.

Does it open normally?

Yes	Go to 7.
No	Go to 3.

3. CHECK TRUNK UNLOCK OPERATION.

1. Using the Subaru Select Monitor, select the function check «R gate/trunk UNLK output» of the body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Active Test.
2. Check that the trunk opens when the R gate/trunk UNLK signal is output.

Does it open normally?

Yes	Go to 7.
No	Go to 4.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the body integrated unit connector and trunk lid lock actuator connector.
2. Check the continuity between body integrated unit connector and trunk lid lock actuator connector.

Connector & terminal

(i266) No. 7 — (R186) No. 1:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (OPEN CIRCUIT).

Check the continuity between the trunk lid lock actuator connector and chassis ground.

Connector & terminal

(R186) No. 2 — Chassis ground:

Is there continuity?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK TRUNK LID LOCK ACTUATOR.

Check the trunk lid lock actuator. Ref. to SECURITY AND LOCKS>Trunk Lid Latch and Actuator Assembly.

Is the check result OK?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the trunk lid latch & actuator assembly. Ref. to SECURITY AND LOCKS>Trunk Lid Latch and Actuator Assembly.

7. CHECK ACCESS KEY.

1. Prepare all access keys registered to the vehicle.
2. Check that the trunk opens with each access key.

Does it open normally?

Yes	Go to 8.
No	Replace the access key. Ref. to SECURITY AND LOCKS>Access Key>REPLACEMENT.

8. CHECK HARNESS.

1. Disconnect the interior rear antenna connector and the keyless access CM connector.
2. Using a tester, check continuity between the interior rear antenna connector and keyless access CM connector.

   Connector & terminal

   (R297) No. 1 — (i241) No. 9:

   (R297) No. 3 — (i241) No. 8:

Is there continuity?

Yes	Go to 9.
No	Repair or replace the open circuit of harness.

9. CHECK PASSENGER ROOM REAR ANTENNA.

Replace the passenger room rear antenna with a new or properly functioning part.

Does it operate properly?

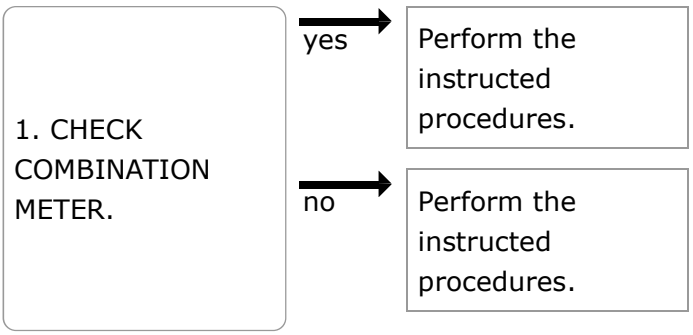
Yes	Replace the passenger room rear antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna>REMOVAL.
No	Go to 10.

10. CHECK KEYLESS ACCESS SYSTEM CHECK.

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Trunk Internal Transmitter + Interior Tuner]
2. Hold the access key 1 m or more away from the center of inside the trunk, then come closer to within 0.8 m.

Does the outside buzzer sound?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.



10. KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND

Trouble causes:

- Combination meter malfunction
- Keyless access CM malfunction

Caution:

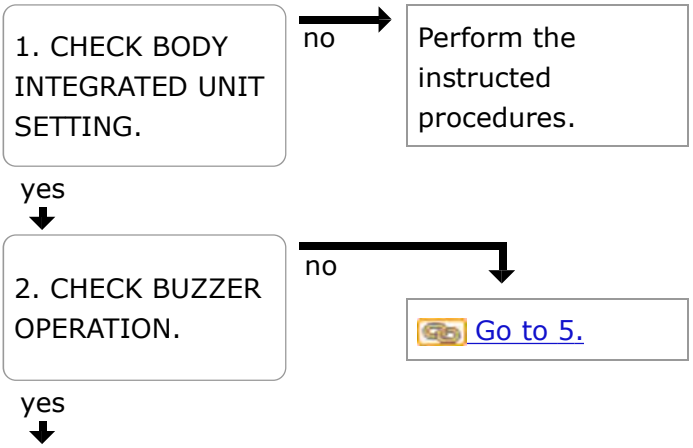
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK COMBINATION METER.

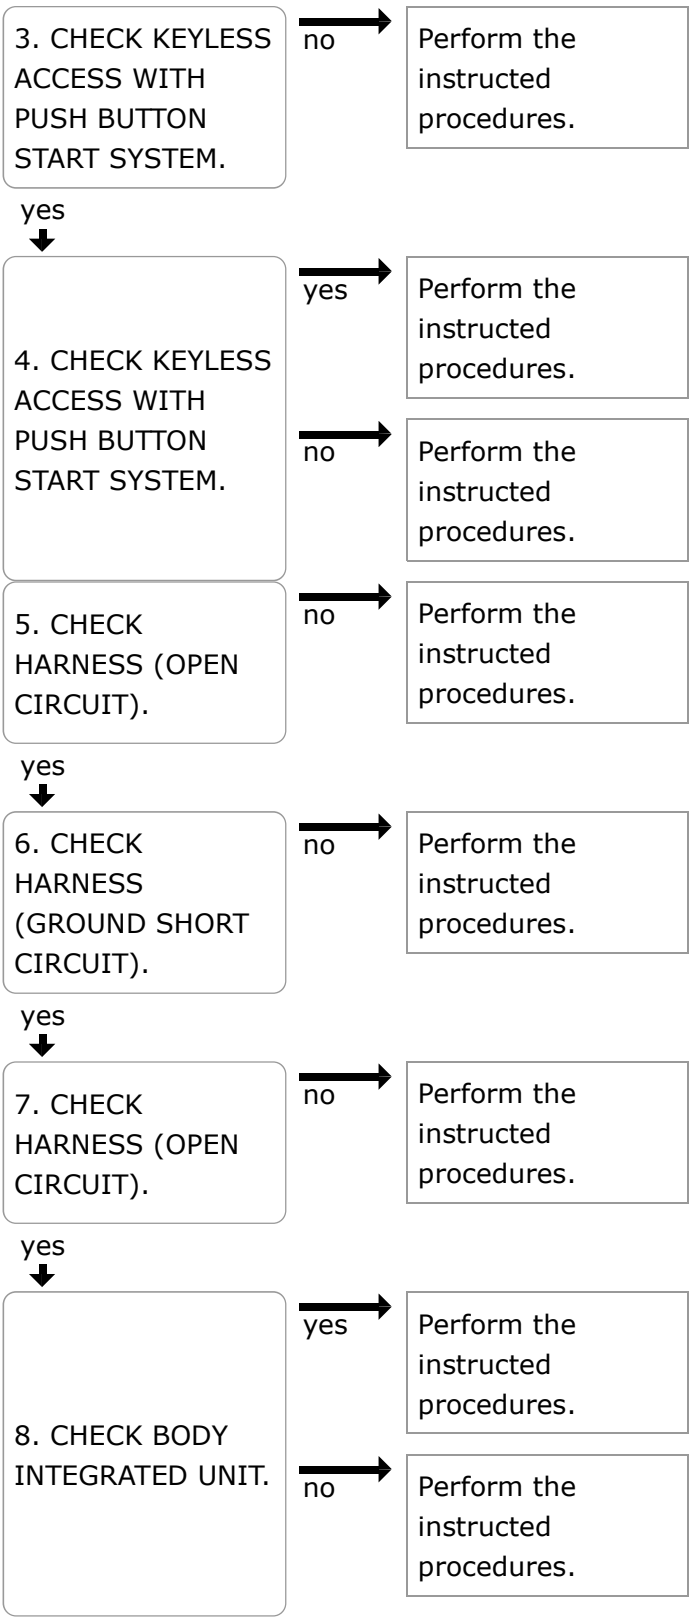
Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter>REMOVAL.



11. KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP



Trouble causes:

- Improper body integrated unit setting
- Malfunction of harness between body integrated unit and keyless buzzer
- Keyless access CM malfunction
- Keyless buzzer malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.

3. CHECK KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM.
no
Perform the instructed procedures.
yes
4. CHECK KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
5. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
6. CHECK HARNESS (GROUND SHORT CIRCUIT).
no
Perform the instructed procedures.
yes
7. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
8. CHECK BODY INTEGRATED UNIT.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK BODY INTEGRATED UNIT SETTING.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control].
Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

- [Answer-back Buzzer]

Is the setting in the [Support]?

Yes	Go to 2.
No	Change the setting to [Support].

2. CHECK BUZZER OPERATION.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Body Control].
Ref. to BODY CONTROL(DIAGNOSTICS)>Active Test.

- [Keyless Buzzer Output]

Does the buzzer sound?

Yes	Go to 3.
No	Go to 5.

3. CHECK KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM.

1. Turn to IGN ON.
2. With all doors closed and the access key carried, touch the touch sensor (lock) on the driver's door handle.

Does the door lock?

Yes	Go to 4.
No	Refer to "CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR" and perform inspection. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR.

4. CHECK KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM.

1. Open the door glass.
2. Place the access key on the driver's seat, and close the door.
3. Touch the touch sensor (lock) on the driver's door handle.

Does the buzzer sound? (Lockout prevention alert)

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.

5. CHECK HARNESS (OPEN CIRCUIT).

1. Turn to IGN OFF.
2. Disconnect the connectors of the body integrated unit and keyless buzzer.
3. Measure the resistance between body integrated unit connector and keyless buzzer connector.
   Connector & terminal
   (B490) No. 1 — (B281) No. 2:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between keyless buzzer connector and chassis ground.
Connector & terminal
(B490) No. 1 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 7.
No	Repair or replace the short circuit of the harness.

7. CHECK HARNESS (OPEN CIRCUIT).

Measure the resistance between keyless buzzer connector and chassis ground.
Connector & terminal
(B490) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 8.
No	Repair or replace the open circuit of harness.

8. CHECK BODY INTEGRATED UNIT.

1. Connect the connector of body integrated unit.
2. Using the Subaru Select Monitor, check the following items in the [Active Test] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Active Test.
   - [Keyless Buzzer Output]
3. Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope.
   Connector & terminal
   (B281) No. 2 (+) — Chassis ground (−):

Is the frequency 2kHz, voltage 9 V or more?

Yes	Replace the keyless buzzer. Ref. to SECURITY AND LOCKS>Keyless Buzzer>REMOVAL.
No	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

12. INTERIOR COLLATION DOES NOT FUNCTION

Trouble causes:

- Access key battery malfunction
- Malfunction of keyless access CM power supply circuit
- Malfunction of harness between keyless access CM and each interior antenna
- Interior antenna malfunction

Caution:

- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK ACCESS KEY. → no → Perform the instructed procedures.

yes ↓

2. CHECK POWER SUPPLY CIRCUIT. → no → Perform the instructed procedures.

yes ↓

3. CHECK INTERIOR ANTENNA (FRONT).

no → Perform the instructed procedures.

yes ↓

4. CHECK INTERIOR ANTENNA (CENTER).

no → Perform the instructed procedures.

yes ↓

5. CHECK INTERIOR ANTENNA (REAR).

no → Perform the instructed procedures.

yes ↓

6. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

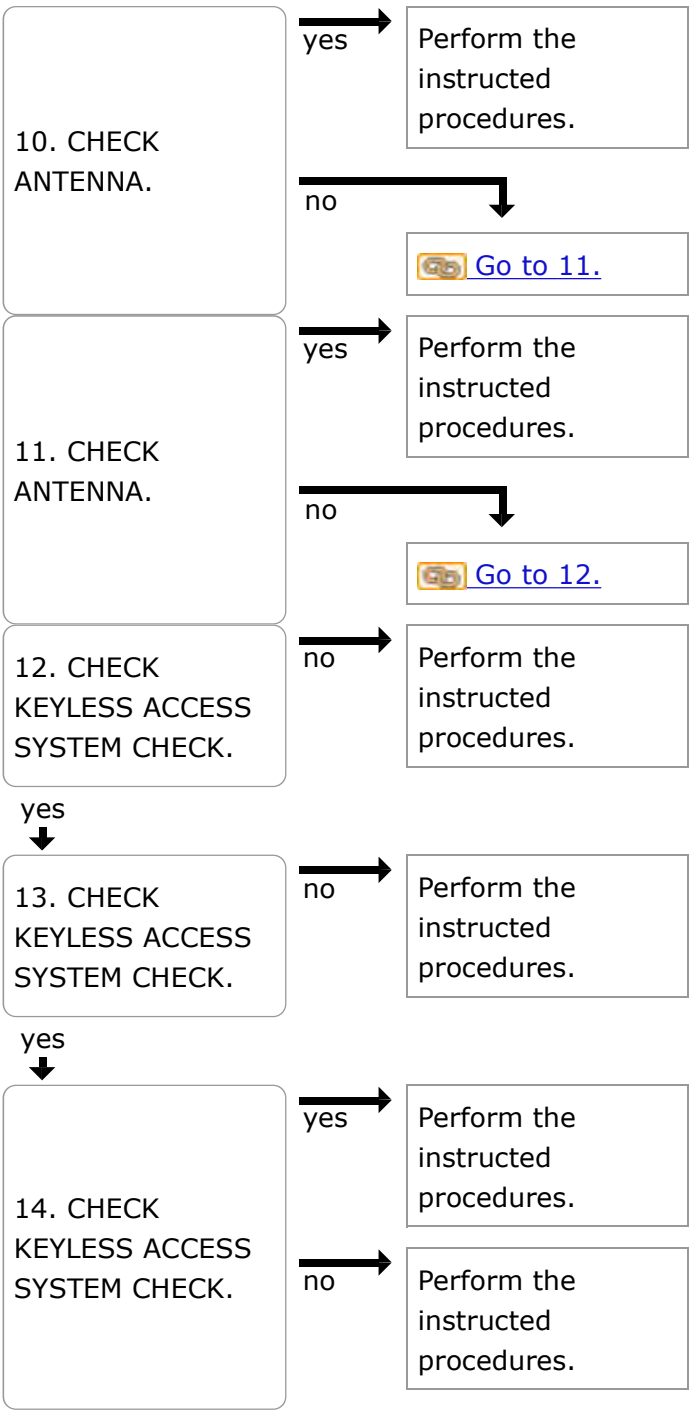
7. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

8. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.



yes ↓

9. CHECK ANTENNA.

yes → Perform the instructed procedures.

no ↓

Go to 10.

10. CHECK ANTENNA.
yes
Perform the instructed procedures.
no
Go to 11.
11. CHECK ANTENNA.
yes
Perform the instructed procedures.
no
Go to 12.
12. CHECK KEYLESS ACCESS SYSTEM CHECK.
no
Perform the instructed procedures.
yes
13. CHECK KEYLESS ACCESS SYSTEM CHECK.
no
Perform the instructed procedures.
yes
14. CHECK KEYLESS ACCESS SYSTEM CHECK.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK ACCESS KEY.

Check the battery of the access key. Ref. to SECURITY AND LOCKS>Access Key>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Replace the battery.

2. CHECK POWER SUPPLY CIRCUIT.

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 4 (+) — Chassis ground (−):

(i75) No. 1 (+) — Chassis ground (−):

Is the voltage 9.5 — 16 V?

Yes	Go to 3.
No	Check the power supply circuit.

3. CHECK INTERIOR ANTENNA (FRONT).

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Fr internal transmitter - internal tuner]
2. Using a tester, check the output between keyless access CM connector terminals while performing [Keyless Access with Push Button Start].
   Connector & terminal
   (i241) No. 25 — (i241) No. 12:

Is a pulse output?

Yes	Go to 4.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

4. CHECK INTERIOR ANTENNA (CENTER).

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Rr internal transmitter - internal tuner]
2. Using a tester, check the output between keyless access CM connector terminals while performing [Keyless Access with Push Button Start].
   Connector & terminal
   (i241) No. 1 — (i241) No. 2:

Is a pulse output?

Yes	Go to 5.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

5. CHECK INTERIOR ANTENNA (REAR).

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Trunk-internal transmitter - trunk-internal tuner]
     or
   - [R gate internal transmitter - internal tuner]
2. Using a tester, check the output between keyless access CM connector terminals while performing [Keyless Access with Push Button Start].
   Connector & terminal
   (i241) No. 3 — (i241) No. 9:

Is a pulse output?

Yes	Go to 6.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the front interior antenna connector and the keyless access CM connector.
2. Using a tester, check continuity between the front interior antenna connector and the keyless access CM connector.
   Connector & terminal
   (i241) No. 25 — (i71) No. 1:
   (i241) No. 12 — (i71) No. 3:

Is there continuity?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the center interior antenna connector and the keyless access CM connector.
2. Using a tester, check continuity between the center interior antenna connector and the keyless access CM connector.
   Connector & terminal
   (i241) No. 2 — (R298) No. 1:
   (i241) No. 1 — (R298) No. 3:

Is there continuity?

Yes	Go to 8.
No	Repair or replace the open circuit of harness.

8. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the rear interior antenna connector and the keyless access CM connector.
2. Using a tester, check continuity between the rear interior antenna connector and the keyless access CM connector.
   Connector & terminal
   (i241) No. 9 — (R297) No. 1:
   (i241) No. 3 — (R297) No. 3:

Is there continuity?

Yes	Go to 9.
No	Repair or replace the open circuit of harness.

9. CHECK ANTENNA.

Replace the front interior antenna with a new or properly functioning part.

Does it operate properly?

Yes	Replace the front interior antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna>REMOVAL.
No	Go to 10.

10. CHECK ANTENNA.

Replace the center interior antenna with a new or properly functioning part.

Does it operate properly?

Yes	Replace the center interior antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna>REMOVAL.
No	Go to 11.

11. CHECK ANTENNA.

Replace the rear interior antenna with a new or properly functioning part.

Does it operate properly?

Yes	Replace the rear interior antenna. Ref. to SECURITY AND LOCKS>Keyless Access Indoor Antenna>REMOVAL.
No	Go to 12.

12. CHECK KEYLESS ACCESS SYSTEM CHECK.

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Fr internal transmitter - internal tuner]
2. Hold the access key 1 m or more away from the audio panel, then come closer to within 0.8 m.

Does the buzzer sound?

Yes	Go to 13.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

13. CHECK KEYLESS ACCESS SYSTEM CHECK.

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Rr internal transmitter - internal tuner]
2. Hold the access key 1 m or more away from the center of the second row seats, then come closer to within 0.8 m.

Does the buzzer sound?

Yes	Go to 14.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

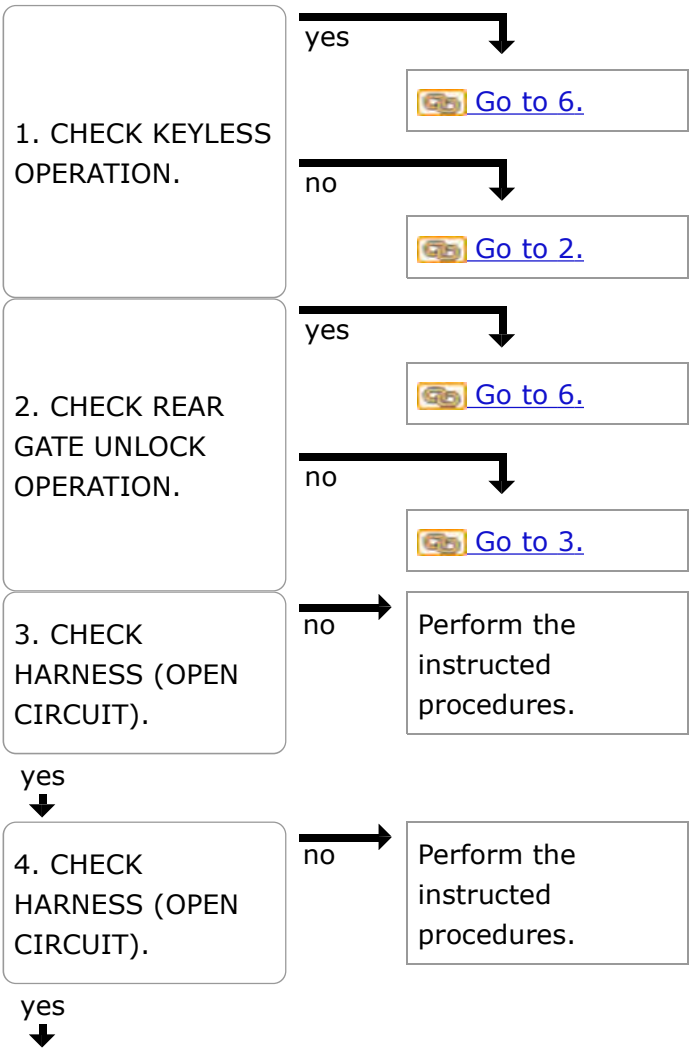
14. CHECK KEYLESS ACCESS SYSTEM CHECK.

1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [Trunk-internal transmitter - trunk-internal tuner]
     or
   - [R gate internal transmitter - internal tuner]
2. Hold the access key 1 m or more away from the back of the rear seat, then come closer to within 0.8 m.

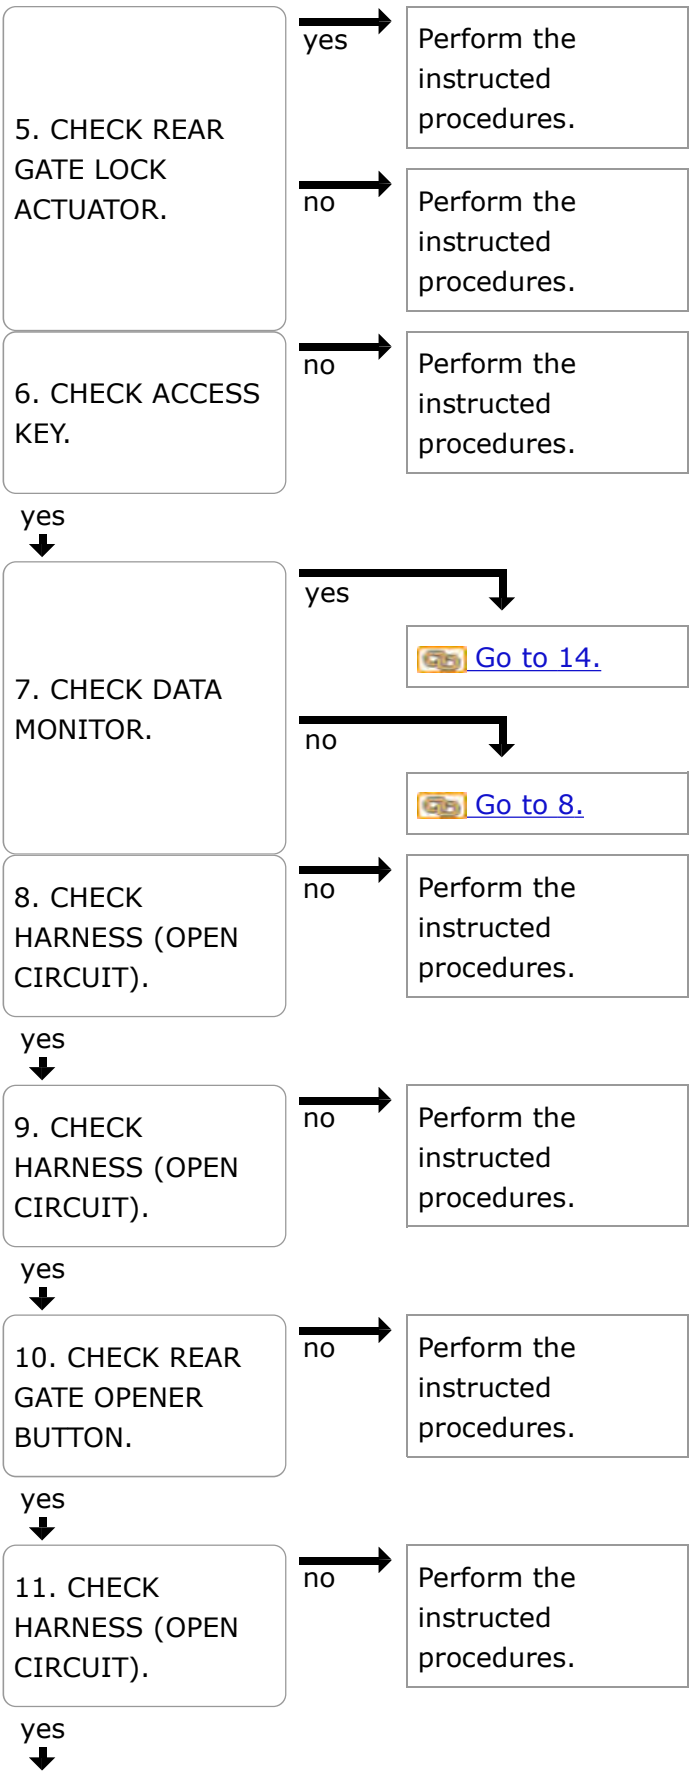
Does the buzzer sound?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

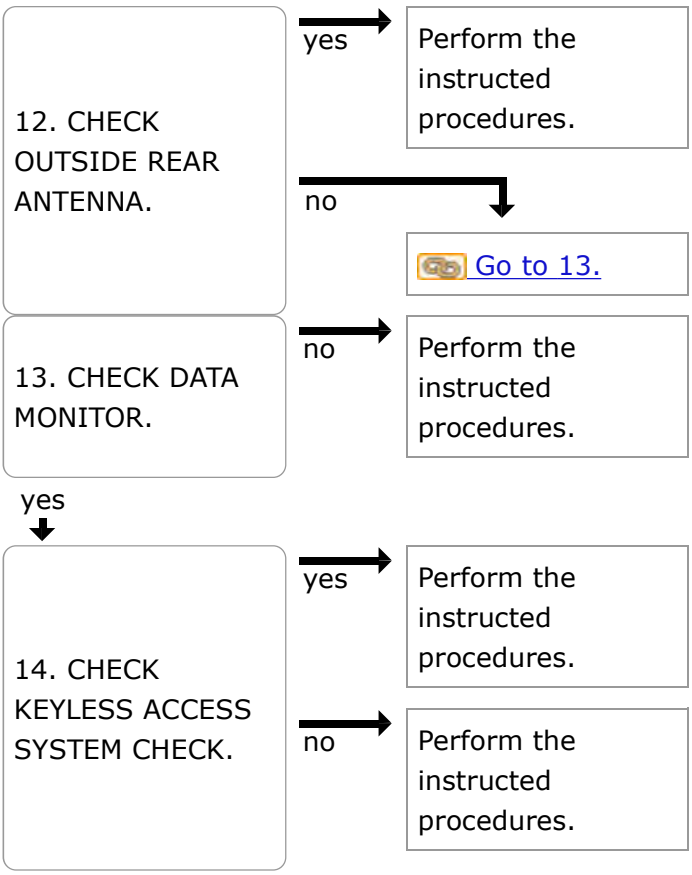
13. REAR GATE CANNOT BE UNLOCKED WITH THE REAR GATE OPENER BUTTON



Trouble causes:



- Malfunction of harness between the body integrated unit and rear gate lock actuator
- Body integrated unit malfunction



- Rear gate lock actuator malfunction
- Access key malfunction
- Malfunction of harness between body integrated unit and rear gate opener button
- Rear gate opener button malfunction
- Malfunction of harness between keyless access CM and exterior rear antenna
- Keyless access CM malfunction
- Exterior rear antenna malfunction

Caution:

- **Check that there are no other registered access keys inside the rear gate.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

5. CHECK REAR GATE LOCK ACTUATOR.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
6. CHECK ACCESS KEY.
no
Perform the instructed procedures.
yes
7. CHECK DATA MONITOR.
yes
Go to 14.
no
Go to 8.
8. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
9. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
10. CHECK REAR GATE OPENER BUTTON.
no
Perform the instructed procedures.
yes
11. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes

1. CHECK KEYLESS OPERATION.

Check that the rear gate unlocks when the trunk open button of the access key is pressed.

Does it operate properly?

Yes	Go to 6.
No	Go to 2.

2. CHECK REAR GATE UNLOCK OPERATION.

1. Using the Subaru Select Monitor, check the following items in the [Active Test] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Active Test.
   - [R gate/trunk UNLK output]
2. Check that the rear gate unlocks when [R gate/trunk UNLK output] is output.

Does it operate properly?

Yes	Go to 6.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the body integrated unit connector and rear gate lock actuator connector.
2. Check the continuity between body integrated unit connector and rear gate lock actuator connector.
   Connector & terminal
   (i266) No. 7 — (D46) No. 1:

Is there continuity?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Check the continuity between the rear gate lock actuator connector and chassis ground.
   Connector & terminal
   (D46) No. 2 — Chassis ground:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK REAR GATE LOCK ACTUATOR.

1. Check the rear gate lock actuator. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly>INSPECTION.

Is the check result OK?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the rear gate latch and actuator assembly. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly.

6. CHECK ACCESS KEY.

1. Prepare all access keys registered to the vehicle.
2. Check that the rear gate lock can be unlocked with each access key.

Is the check result OK?

Yes	Go to 7.
No	Replace the access key. Ref. to SECURITY AND LOCKS>Access Key>REPLACEMENT.

7. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [R Gate Release SW input]
2. Read the data when pressing the rear gate opener button.

Does the data display ON?

Yes	Go to 14.
No	Go to 8.

8. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the rear gate opener button connector and body integrated unit connector.
2. Using a tester, check the continuity between the rear gate opener button connector and body integrated unit connector.
   Connector & terminal
   (D77) No. 1 — (i171) No. 6:

Is there continuity?

Yes	Go to 9.
No	Repair or replace the open circuit of harness.

9. CHECK HARNESS (OPEN CIRCUIT).

1. Using a tester, check the continuity between the rear gate opener button connector and chassis ground.
   Connector & terminal
   (D77) No. 2 — Chassis ground:

Is there continuity?

Yes	Go to 10.
No	Repair or replace the open circuit of harness.

10. CHECK REAR GATE OPENER BUTTON.

Using a tester, check the continuity between rear gate opener button connector terminals.
Terminals
No. 1 — No. 2:

Is there continuity when pressing the switch?

Yes	Go to 11.
No	Replace the rear gate opener button. Ref. to SECURITY AND LOCKS>Rear Gate Opener Button.

11. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the exterior rear antenna connector and the keyless access CM connector.
2. Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector.

Connector & terminal

(D45) No. 1 — (i241) No. 8:

(D45) No. 3 — (i241) No. 9:

Is there continuity?

Yes	Go to 12.
No	Repair or replace the open circuit of harness.

12. CHECK OUTSIDE REAR ANTENNA.

Replace the outside rear antenna with new or properly working parts.

Does it operate properly?

Yes	The outside rear antenna has a failure.
No	Go to 13.

13. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [R gate lock status SW input]
2. Read the data when locking/unlocking the rear gate lock actuator.

Does the data change from ON ←→ OFF?

Yes	Go to 14.
No	Check body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit>REMOVAL.

14. CHECK KEYLESS ACCESS SYSTEM CHECK.

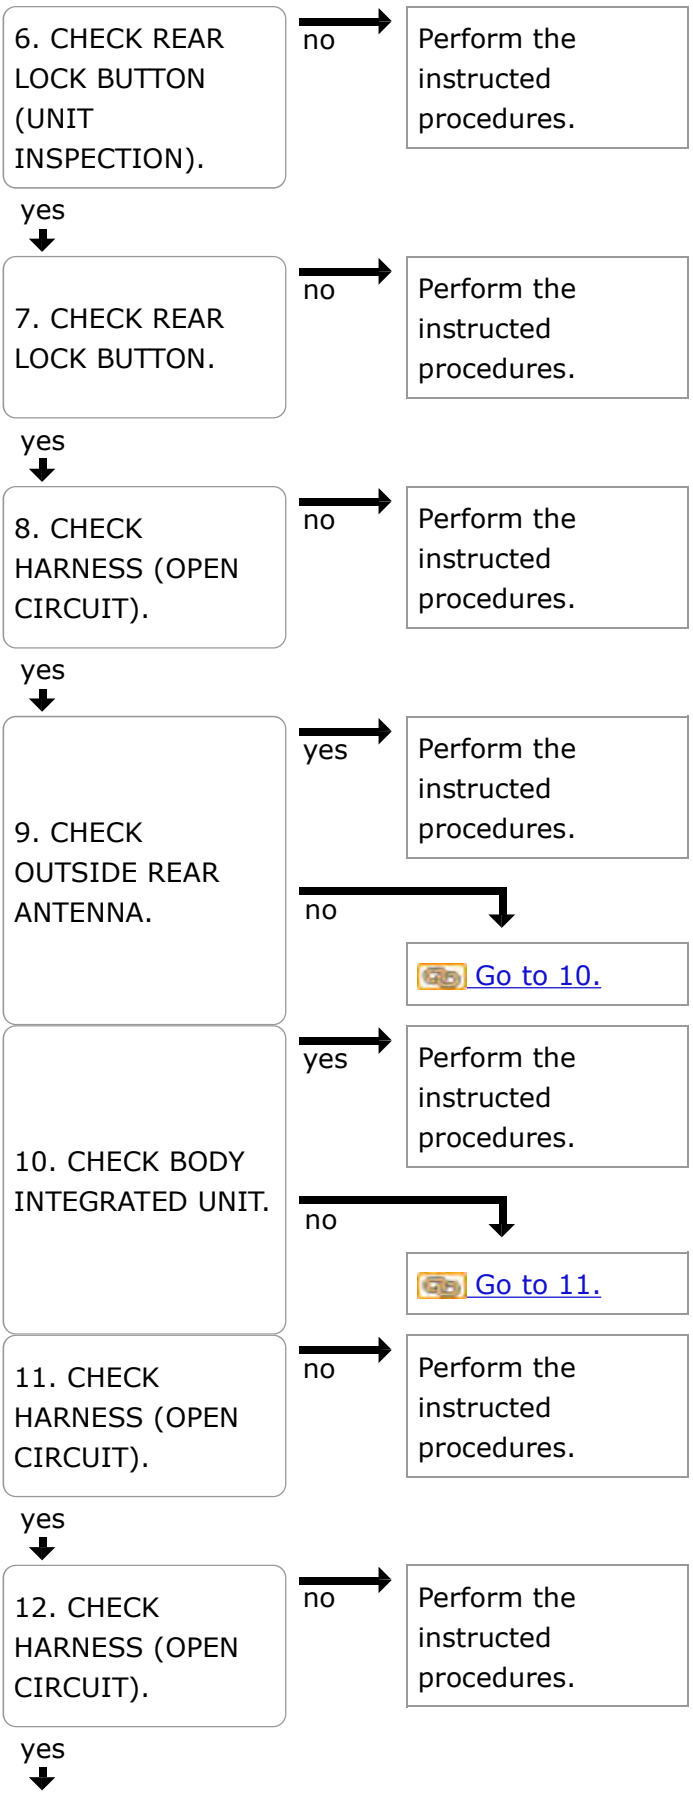
1. Using the Subaru Select Monitor, check the following items in the [Keyless Access with Push Button Start Check] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Keyless Access with Push Button Start Check.
   - [R gate external transmitter - internal tuner]
2. Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.

Does the outside buzzer sound?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

14. CAN NOT LOCK WHEN USING THE REAR LOCK BUTTON

Trouble causes:



- Malfunction of harness between keyless access CM and rear lock button
- Rear lock button malfunction
- Malfunction of harness between keyless access CM and exterior rear antenna
- Keyless access CM malfunction
- Exterior rear antenna malfunction

- Malfunction of harness between the body integrated unit and rear gate lock actuator
- Body integrated unit malfunction
- Rear gate lock actuator malfunction

Caution:

- **Check that there are no other registered access keys inside the vehicle.**
- **Check that the keyless access function is not stopped.**
- **Inspect LAN system or keyless access with push button start system according to the basic diagnostic procedure, and make sure that DTC is not input.**
- **When the access key or keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK REAR GATE ACTUATOR.
   - no → Go to 10.
   - yes ↓
2. CHECK REAR LOCK BUTTON.
   - yes → Go to 8.
   - no → Go to 3.
3. CHECK HARNESS (OPEN CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK HARNESS (GROUND SHORT CIRCUIT).
   - no → Perform the instructed procedures.
   - yes ↓
5. CHECK HARNESS (OPEN CIRCUIT).
   - yes → Go to 7.
   - no → Perform the instructed procedures.

6. CHECK REAR LOCK BUTTON (UNIT INSPECTION).
no
Perform the instructed procedures.
yes
7. CHECK REAR LOCK BUTTON.
no
Perform the instructed procedures.
yes
8. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
9. CHECK OUTSIDE REAR ANTENNA.
yes
Perform the instructed procedures.
no
Go to 10.
10. CHECK BODY INTEGRATED UNIT.
yes
Perform the instructed procedures.
no
Go to 11.
11. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes
12. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes

13. CHECK REAR GATE LOCK ACTUATOR.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK REAR GATE ACTUATOR.

While carrying the access key, operate the touch sensor (lock) and touch sensor (unlock).

When the switch is operated, does the rear gate lock/unlock?

Yes	Go to 2.
No	Go to 10.

2. CHECK REAR LOCK BUTTON.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Rear Gate Request SW]

Does the data change between ON/OFF?

Yes	Go to 8.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the rear lock button connector and the keyless access CM connector.
2. Using a tester, measure the resistance between harness.
   Connector & terminal
   (D77) No. 3 — (i75) No. 17:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of the harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between harness and chassis ground.
Connector & terminal
(D77) No. 3 — Chassis ground:

Is the resistance 10 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short of harness.

5. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between harness and chassis ground.
Connector & terminal
(D77) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 7.
No	Repair or replace the open circuit of the harness.

6. CHECK REAR LOCK BUTTON (UNIT INSPECTION).

Using a tester, measure the resistance between harness and chassis ground.

Terminals

No. 3 — No. 4:

Did the resistance change from 1 MΩ or more to less than 10 Ω?

Yes	Go to 7.
No	Replace the rear lock button. Ref. to SECURITY AND LOCKS>Rear Lock Button>REMOVAL.

7. CHECK REAR LOCK BUTTON.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Rear Gate Request SW]
2. Read the data when operating the rear lock button.

Does the data change between ON/OFF?

Yes	Go to 8.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.

8. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the exterior rear antenna connector and the keyless access CM connector.
2. Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector.
   Connector & terminal
   (D45) No. 1 — (i241) No. 8:
   (D45) No. 3 — (i241) No. 9:

Is there continuity?

Yes	Go to 9.
No	Repair or replace the open circuit of harness.

9. CHECK OUTSIDE REAR ANTENNA.

Replace the outside rear antenna with new or properly working parts. Ref. to SECURITY AND LOCKS>Keyless Access Outdoor Antenna>REMOVAL.

Does it operate properly?

Yes	The outside rear antenna has a failure.
No	Go to 10.

10. CHECK BODY INTEGRATED UNIT.

1. Connect the disconnected connectors.
2. Using the Subaru Select Monitor, check the following items in the [Active Test] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Active Test.
   - [lock actuator LOCK output]
3. Actuate the door lock actuator LOCK output.

Does the rear gate lock actuator lock?

Yes	It is possible that temporary poor communication occurs.
No	Go to 11.

11. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the body integrated unit connector and rear gate lock actuator connector.
2. Check the continuity between body integrated unit connector and rear gate lock actuator connector.
   Connector & terminal
   (i266) No. 7 — (D46) No. 1:

Is there continuity?

Yes	Go to 12.
No	Repair or replace the open circuit of harness.

12. CHECK HARNESS (OPEN CIRCUIT).

1. Check the continuity between the rear gate lock actuator connector and chassis ground.
   Connector & terminal
   (D46) No. 2 — Chassis ground:

Is there continuity?

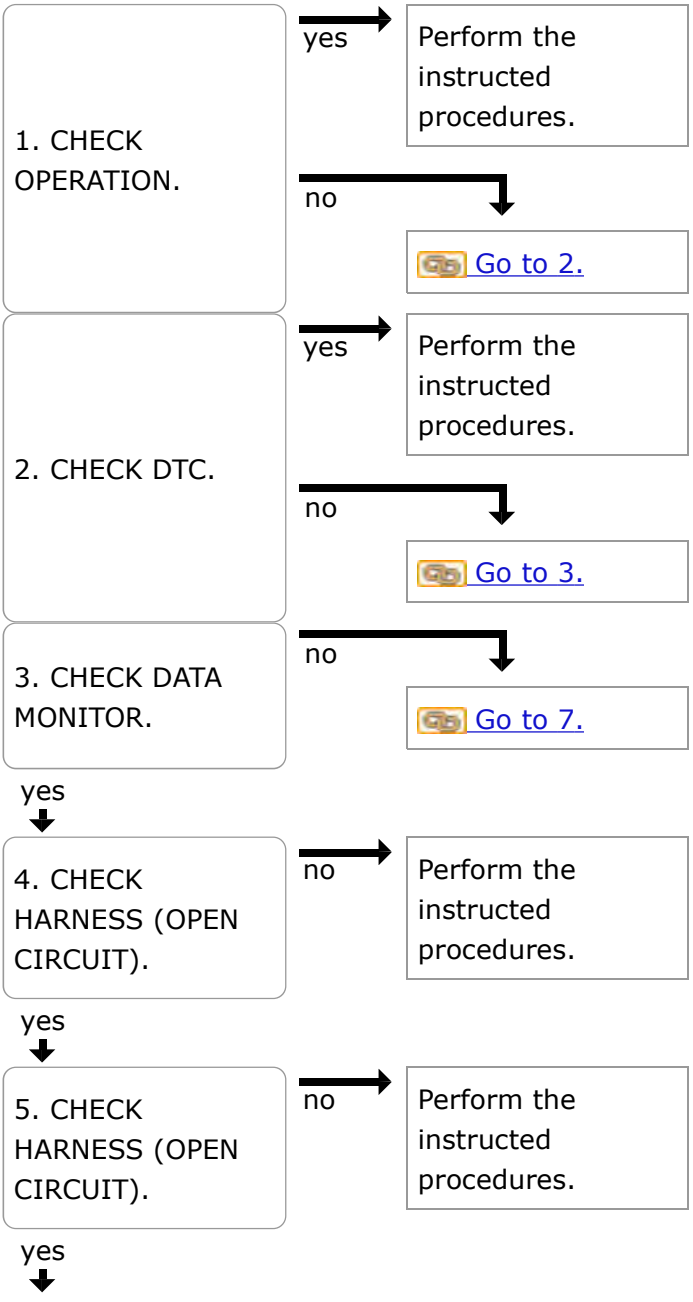
Yes	Go to 13.
No	Repair or replace the open circuit of harness.

13. CHECK REAR GATE LOCK ACTUATOR.

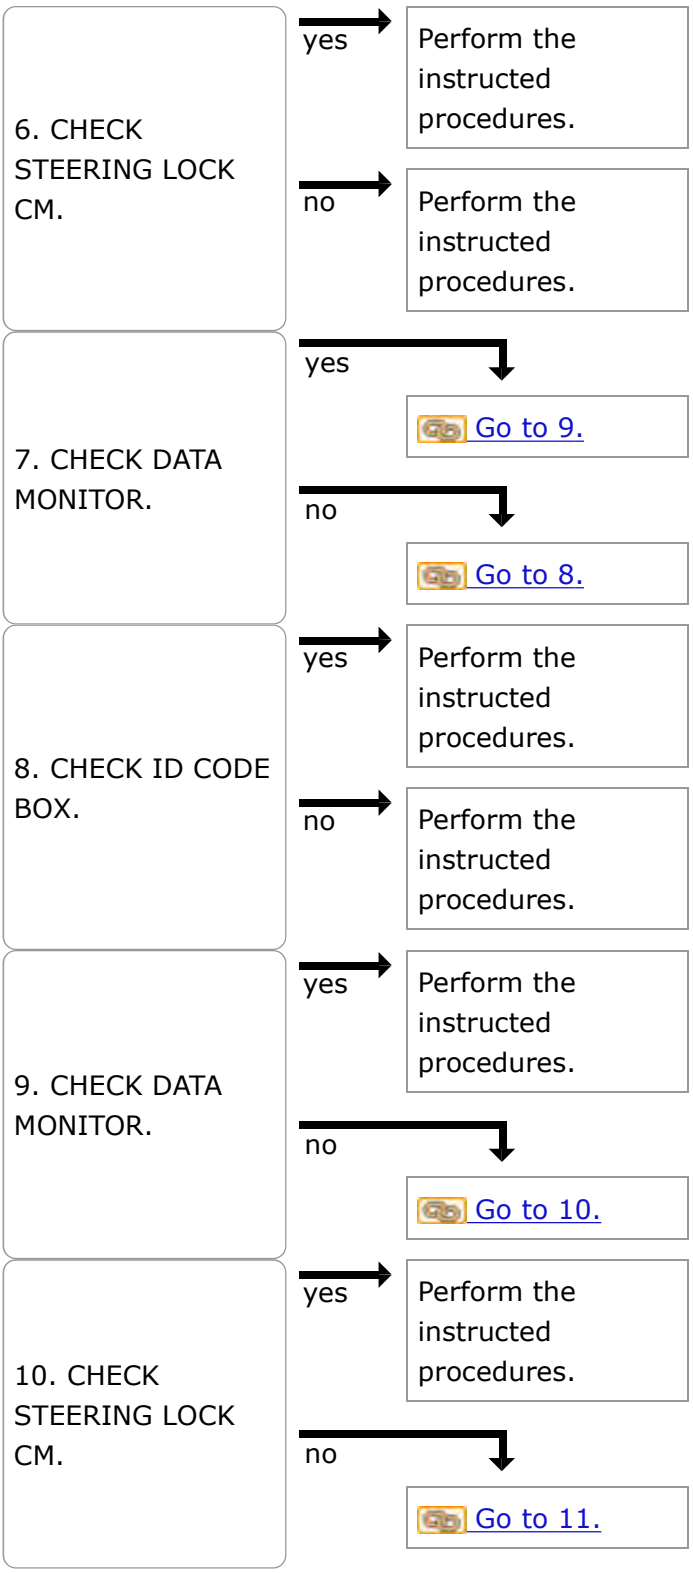
1. Check the rear gate lock actuator. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly>INSPECTION.

Is the check result OK?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Replace the rear gate latch and actuator assembly. Ref. to SECURITY AND LOCKS>Rear Gate Latch and Actuator Assembly.



15. THE STEERING LOCK IS NOT RELEASED



Trouble causes:

- ECM failure
- Steering lock circuit malfunction
- Steering lock CM malfunction
- Keyless access CM malfunction

Caution:

- **For replacement procedure of keyless access CM or steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

6. CHECK STEERING LOCK CM.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
7. CHECK DATA MONITOR.
yes
Go to 9.
no
Go to 8.
8. CHECK ID CODE BOX.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
9. CHECK DATA MONITOR.
yes
Perform the instructed procedures.
no
Go to 10.
10. CHECK STEERING LOCK CM.
yes
Perform the instructed procedures.
no
Go to 11.

11. CHECK ID CODE BOX.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK OPERATION.

1. Depress the brake pedal.
2. While turning the steering wheel lightly to the left and right, press the push button ignition switch.
3. Confirm that the steering lock is released and the engine starts.

Does the engine fail to start with the steering lock released?

Yes	Perform the diagnosis for engine system. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>Diagnostics with Phenomenon.
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 3.

3. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Steering lock unlock request reception status]
     and
   - [Steering lock lock/unlock command reception history]
2. Read the data when the push button ignition switch is pressed while carrying the access key. (Maintain for 10 seconds after switch operation)

Does the data change from "Not yet received" to "Reception", and from "OFF" to "ON"?

Yes	Go to 4.
No	Go to 7.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the steering lock CM connector.
2. Using a tester, measure the voltage between the steering lock CM connector and chassis ground.
   Connector & terminal
   (i47) No. 7 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, check continuity between the steering lock CM connector and chassis ground.

Connector & terminal

(i47) No. 1 — Chassis ground:

Is there continuity?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK STEERING LOCK CM.

1. Connect the disconnected connectors.
2. Using a tester, measure the voltage between steering lock CM terminals right after the ignition switch is turned to ON.

   Connector & terminal

   (i47) No. 3 (+) — (i47) No. 1 (−):

Is the voltage 1 V or less right after the ignition ON?

Yes	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
No	Repair or replace the open circuit of harness.

7. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Code collation result between smart ECM and ID code box]

Is data displayed as being normal?

Yes	Go to 9.
No	Go to 8.

8. CHECK ID CODE BOX.

1. Replace with a properly functioning or new ID code box. Ref. to SECURITY AND LOCKS>ID Code Box.
2. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Code collation result between smart ECM and ID code box]

Is data displayed as being normal?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

9. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Code collation result between steering locked ECM and ID code box]

Is data displayed as being normal?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 10.

10. CHECK STEERING LOCK CM.

1. Replace with a properly functioning or new steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
2. After registering, the steering lock operates when the ignition is turned to OFF and the driver's door is opened and closed.
3. Turn the ignition to ON.
4. Operate the steering and check for whether the steering lock is released.

Is the steering lock released, and does the engine start?

Yes	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
No	Go to 11.

11. CHECK ID CODE BOX.

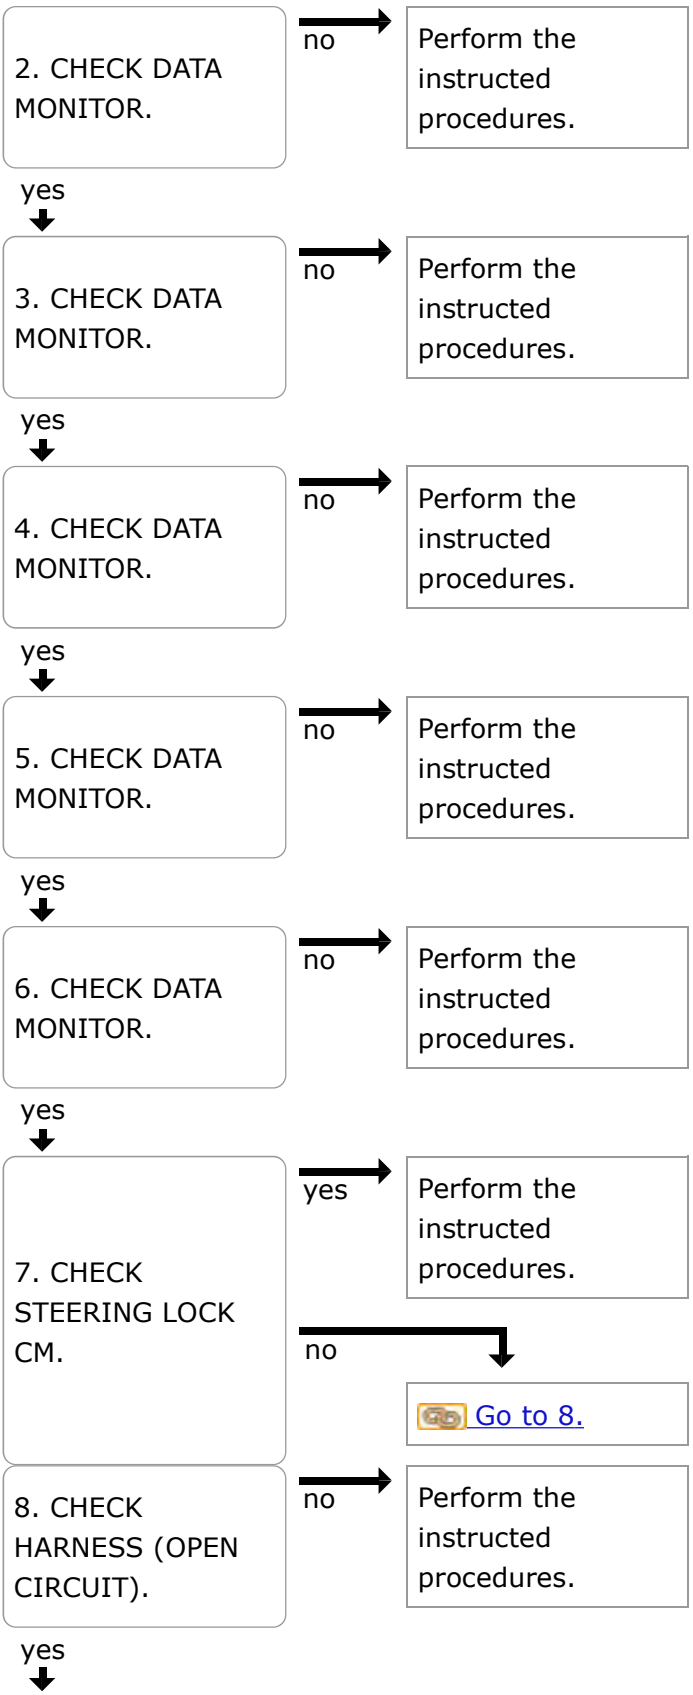
1. Replace with a properly functioning or new ID code box. Ref. to SECURITY AND LOCKS>ID Code Box>NOTE.
2. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

- [Code collation result between steering locked ECM and ID code box]

Is data displayed as being normal?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

16. THE STEERING LOCK DOES NOT OPERATE



Trouble causes:

- Door switch circuit malfunction
- P range switch circuit malfunction
- Steering lock circuit malfunction
- Steering lock CM malfunction
- Keyless access CM malfunction

Caution:

- **For replacement procedure of keyless access CM or steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.

2. CHECK DATA MONITOR.
no
Perform the instructed procedures.
yes
3. CHECK DATA MONITOR.
no
Perform the instructed procedures.
yes
4. CHECK DATA MONITOR.
no
Perform the instructed procedures.
yes
5. CHECK DATA MONITOR.
no
Perform the instructed procedures.
yes
6. CHECK DATA MONITOR.
no
Perform the instructed procedures.
yes
7. CHECK STEERING LOCK CM.
yes
Perform the instructed procedures.
no
Go to 8.
8. CHECK HARNESS (OPEN CIRCUIT).
no
Perform the instructed procedures.
yes

9. CHECK HARNESS (OPEN CIRCUIT).	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 2.

2. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control]. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

   - [Driver's door SW input]
2. Read the data when opening and closing the driver’s door.

Does the data change from ON to OFF according to the opening and closing?

Yes	Go to 3.
No	Inspect door switch circuit.

3. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Shift P signal(AT only)]

Is the status displayed correctly when the shift lever is shifted from P to other than P?

Yes	Go to 4.
No	Check the P range switch and harness.

4. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Code collation result between smart ECM and ID code box]

Is the status normal?

Yes	Go to 5.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.

5. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Code collation result between steering locked ECM and ID code box]

Is the status normal?

Yes	Go to 6.
No	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.

6. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Steering lock lock/unlock command reception history]
2. While in possession of the access key, perform engine start operations, and read data within 10 seconds after starting.

Is data displayed as ON?

Yes	Go to 7.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.

7. CHECK STEERING LOCK CM.

Using an oscilloscope, measure the waveform between steering lock CM terminals immediately after the following operations.
Perform ignition ON, driver's side door close → shift lever "P" range, ignition OFF, and close → open the driver's side door.

Connector & terminal

(i47) No. 3 — (i47) No. 1:

Is the waveform immediately after opening the driver's side door abnormal?

Yes	Replace the steering lock CM. Ref. to SECURITY AND LOCKS>Steering Lock CM.
No	Go to 8.

8. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector and the steering lock CM connector.
2. Using a tester, check continuity between the keyless access CM connector and steering lock CM connector.

   Connector & terminal

   (i47) No. 3 — (i75) No. 10:

Is there continuity?

Yes	Go to 9.
No	Repair or replace the open circuit of harness.

9. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, check continuity between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is there continuity?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM>REMOVAL.
No	Repair or replace the open circuit of harness.

17. POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION)

Trouble causes:

- Malfunction of keyless access CM power supply circuit
- Relay failure
- Push button ignition switch circuit malfunction

Caution:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK FUSE.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK POWER SUPPLY.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK CONNECTOR.

no → Perform the instructed procedures.

yes ↓

4. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

5. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

6. CHECK DTC.

yes → Perform the instructed procedures.

no → Go to 7.

7. CHECK DATA MONITOR.

no → Go to 13.

yes ↓

8. CHECK RELAY (PUSH BUTTON START).

no → Perform the instructed procedures.

yes ↓

9. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

10. CHECK HARNESS (GROUND SHORT CIRCUIT).

yes → Perform the instructed procedures.

no → Go to 11.

11. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

12. CHECK KEYLESS ACCESS CM.

no → Perform the instructed procedures.

yes ↓

13. CHECK PUSH BUTTON IGNITION SWITCH UNIT.

no → Perform the instructed procedures.

yes ↓

14. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

15. CHECK WIRING HARNESS.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse.

2. CHECK POWER SUPPLY.

1. Remove IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start).
2. Using a tester, measure the voltage between the relay block connector and chassis ground.

Is the voltage 10 V or more?

Yes	Go to 3.
No	Check the DC power supply circuit.

3. CHECK CONNECTOR.

Check the engagement of each connector and terminal for any deformation or looseness.

Is the check result OK?

Yes	Go to 4.
No	Repair the connector, or replace harness.

4. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage between 8 V and 16 V?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, check continuity between the keyless access CM connector and chassis ground.

Connector & terminal

(i241) No. 17 — Chassis ground:

(i75) No. 20 — Chassis ground:

Is there continuity?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK DTC.

1. Connect the keyless access CM connector.
2. While in possession of the access key, depress the brake pedal, and push the push button ignition switch.
3. Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 7.

7. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   - [Push start SW 1]
   - [Push start SW 2]
2. Read the data when pressing the push button ignition switch.

Does it change from OFF to ON along with the operation?

Yes	Go to 8.
No	Go to 13.

8. CHECK RELAY (PUSH BUTTON START).

Check IG relay 1 and 2 (push button start), and accessory relay (push button start). Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is each check result OK?

Yes	Go to 9.
No	Replace the faulty relay.

9. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector and F/B connector.
2. Using a tester, check continuity between keyless access CM connector and F/B connector.

Connector & terminal

(i75) No. 28 — (i265) No. 4:
(i75) No. 27 — (i137) No. 12:
(i75) No. 16 — (i137) No. 2:

Is there continuity?

Yes	Go to 10.
No	Repair or replace the open circuit of harness.

10. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, check continuity between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 28 — Chassis ground:
(i75) No. 27 — Chassis ground:
(i75) No. 16 — Chassis ground:

Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Go to 11.

11. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, check the continuity between F/B connector and chassis ground.

Connector & terminal

(i136) No. 6 — Chassis ground:

Is there continuity?

Yes	Go to 12.
No	Repair or replace the open circuit of harness.

12. CHECK KEYLESS ACCESS CM.

1. Connect all the disconnected connectors.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON.

   Connector & terminal

   (i75) No. 28 (+) — Chassis ground (−):
   (i75) No. 28 (+) — Chassis ground (−):
   (i75) No. 16 (+) — Chassis ground (−):

Did the voltage change from 1 V or less to +B-2 V or more?

Yes	Go to 13.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

13. CHECK PUSH BUTTON IGNITION SWITCH UNIT.

1. Disconnect the push button ignition switch connector.
2. Using a tester, check the continuity between the push button ignition switch connector terminals.

Terminals

No. 7 — No. 5:
No. 2 — No. 5:

Did it change to continuity exists, when the button was pressed? (No continuity when button is released)

Yes	Go to 14.
No	Replace the push button ignition switch. Ref. to SECURITY AND LOCKS>Push Button Ignition Switch>REMOVAL.

14. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, check the continuity between the push button ignition switch connector and chassis ground.

Connector & terminal

(i150) No. 4 — Chassis ground:
(i150) No. 5 — Chassis ground:

Is there continuity?

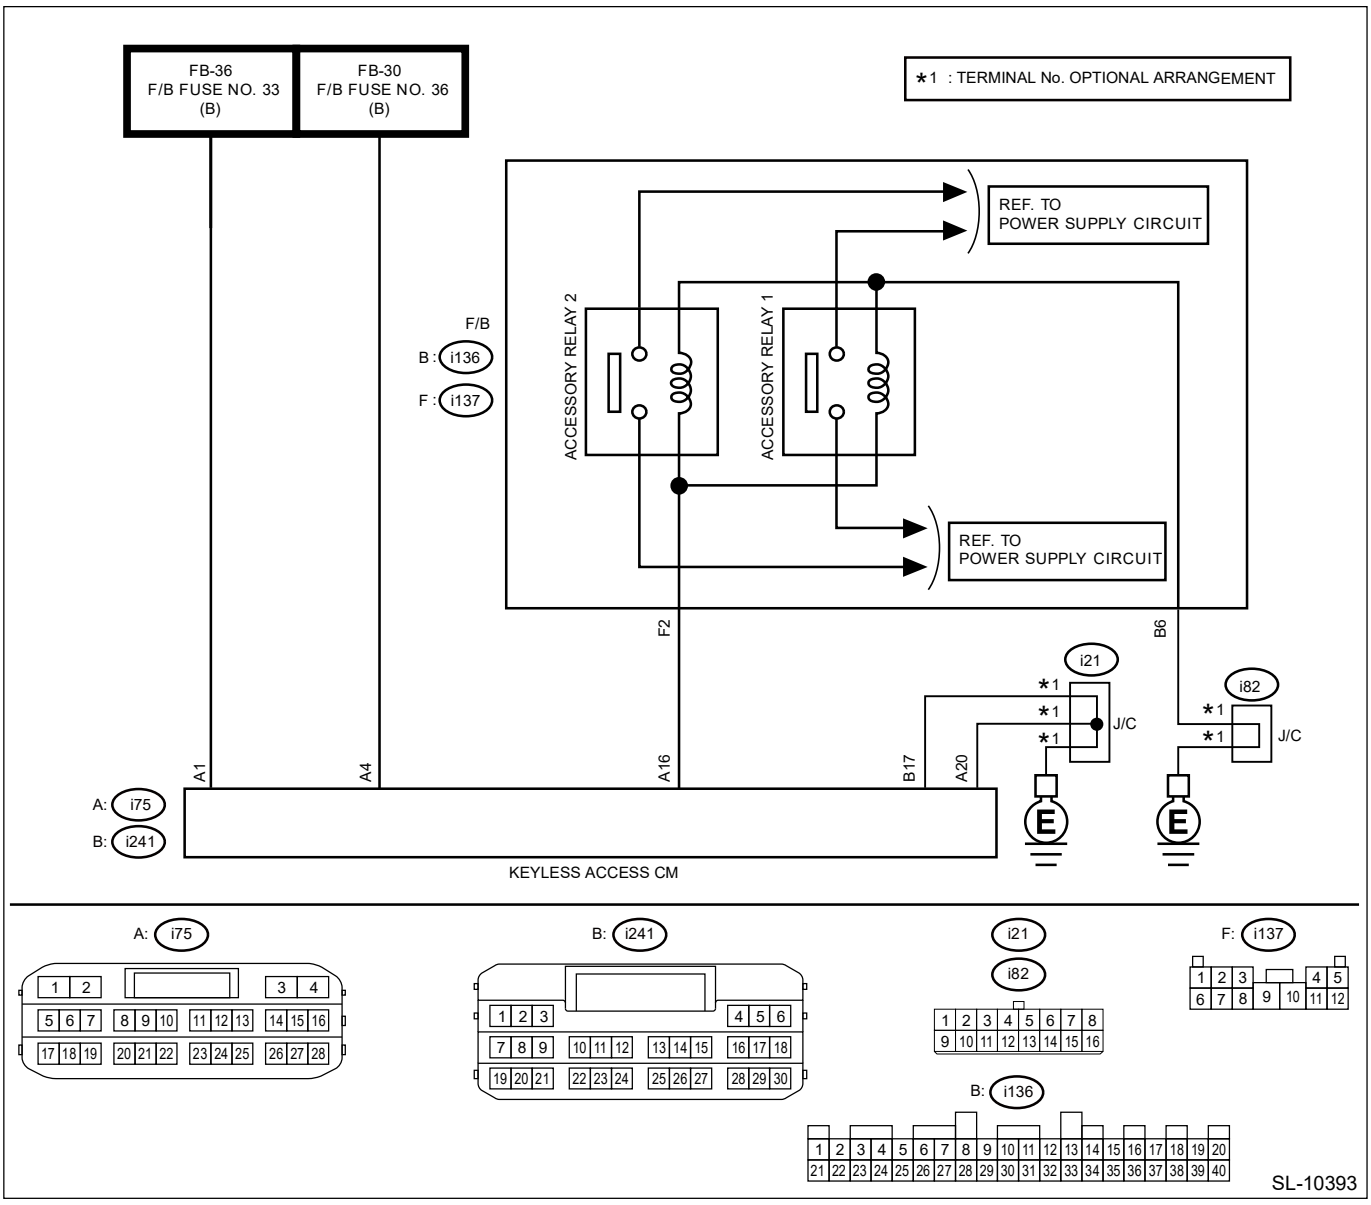
Yes	Go to 15.
No	Repair or replace the open circuit of harness.

15. CHECK WIRING HARNESS.

1. Disconnect the keyless access CM connector.
2. Using a tester, check continuity between the keyless access CM connector and push button ignition switch.
   Connector & terminal
   (i150) No. 7 — (i75) No. 8:
   (i150) No. 2 — (i75) No. 9:

Is there continuity?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Repair or replace the open circuit of harness.



18. POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON)

Trouble causes:

- Malfunction of keyless access CM power supply circuit
- Relay failure
- Push button ignition switch circuit malfunction

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **When the keyless access CM is replaced, registration of the immobilizer is required. For the relevant procedures, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK FUSE.

no → Perform the instructed procedures.

yes ↓

2. CHECK CONNECTOR.

no → Perform the instructed procedures.

yes ↓

3. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

4. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

5. CHECK ACCESSORY RELAY (PUSH BUTTON START) (UNIT INSPECTION).

no → Perform the instructed procedures.

yes ↓

6. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

7. CHECK HARNESS (GROUND SHORT CIRCUIT).

yes → Perform the instructed procedures.

no → Go to 8.

8. CHECK KEYLESS ACCESS CM.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse.

2. CHECK CONNECTOR.

Check the engagement of each connector and terminal for any deformation or looseness.

Is the check result OK?

Yes	Go to 3.
No	Repair the connector, or replace harness.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage between 8 V and 16 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, check continuity between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 20 — Chassis ground:

(i241) No. 17 — Chassis ground:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK ACCESSORY RELAY (PUSH BUTTON START) (UNIT INSPECTION).

Check the accessory relay (push button start). Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the check result OK?

Yes	Go to 6.
No	Replace the relay.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector and F/B connector.
2. Using a tester, check continuity between keyless access CM connector and F/B connector.

Connector & terminal

(i75) No. 16 — (i137) No. 2:

Is there continuity?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, check continuity between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 16 — Chassis ground:

Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Go to 8.

8. CHECK KEYLESS ACCESS CM.

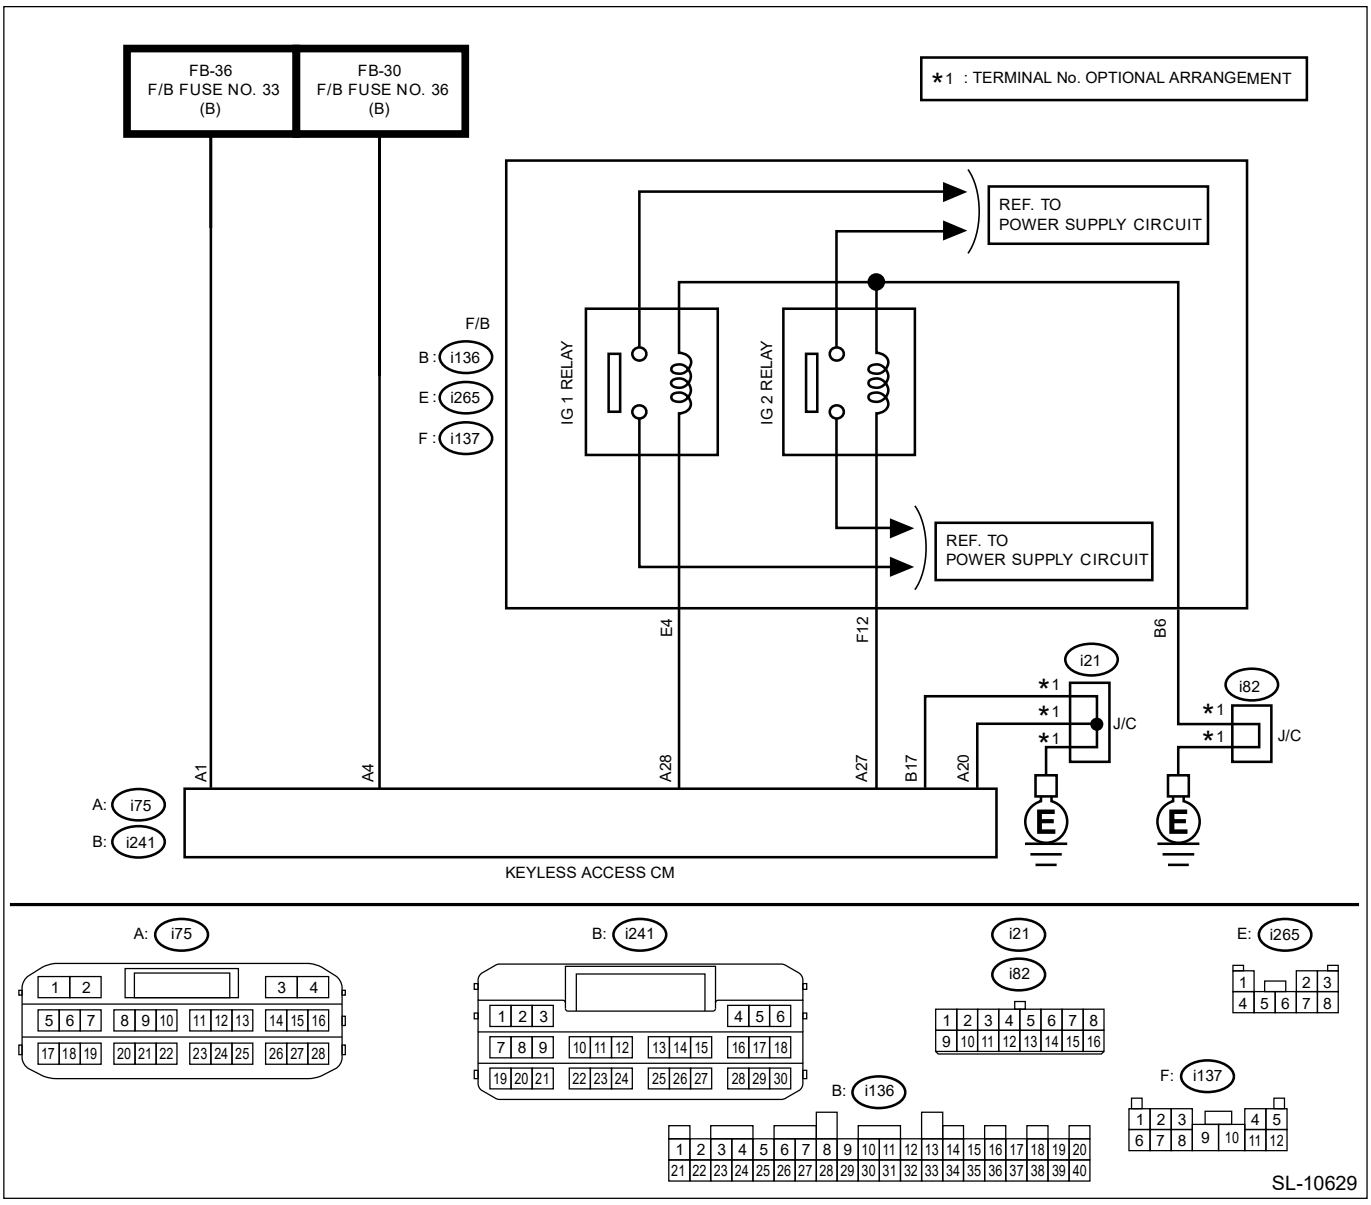
1. Connect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON.

   Connector & terminal

   (i75) No. 16 (+) — Chassis ground (−):

Did the voltage change from 1 V or less → +B-2 V or more?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.



19. POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON)

Trouble causes:

- Malfunction of keyless access CM power supply circuit
- Relay failure
- Push button ignition switch circuit malfunction

Wiring diagram:

Keyless access with push button start system Ref. to WIRING SYSTEM>Keyless Access With Push Button Start System>WIRING DIAGRAM.

Caution:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK FUSE.	no →	Perform the instructed procedures.

yes ↓

2. CHECK CONNECTOR.

no → Perform the instructed procedures.

yes ↓

3. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

4. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

5. CHECK IG Relay 1 AND 2 (PUSH BUTTON START) (UNIT INSPECTION).

no → Perform the instructed procedures.

yes ↓

6. CHECK HARNESS (OPEN CIRCUIT).

no → Perform the instructed procedures.

yes ↓

7. CHECK HARNESS (GROUND SHORT CIRCUIT).

yes → Perform the instructed procedures.

no → Go to 8.

8. CHECK KEYLESS ACCESS CM.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK FUSE.

Check the fuse. Ref. to SECURITY AND LOCKS>Relay and Fuse>INSPECTION.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse.

2. CHECK CONNECTOR.

Check the engagement of each connector and terminal for any deformation or looseness.

Is the check result OK?

Yes	Go to 3.
No	Repair the connector, or replace harness.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 1 (+) — Chassis ground (−):

(i75) No. 4 (+) — Chassis ground (−):

Is the voltage between 8 V and 16 V?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, check continuity between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 20 — Chassis ground:

(i241) No. 17 — Chassis ground:

Is there continuity?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK IG Relay 1 AND 2 (PUSH BUTTON START) (UNIT INSPECTION).

Check IG relay 1 (push button start) and IG relay 2 (push button start). Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the check result OK?

Yes	Go to 6.
No	Replace the relay.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the keyless access CM connector and F/B connector.
2. Using a tester, check continuity between keyless access CM connector and F/B connector.

Connector & terminal

(i75) No. 28 — (i265) No. 4:

(i75) No. 27 — (i137) No. 12:

Is there continuity?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, check continuity between the keyless access CM connector and chassis ground.

Connector & terminal

(i75) No. 28 — Chassis ground:

(i75) No. 27 — Chassis ground:

Is there continuity?

Yes	Repair or replace the short circuit of the harness.
No	Go to 8.

8. CHECK KEYLESS ACCESS CM.

1. Connect the keyless access CM connector.
2. Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON.

   Connector & terminal

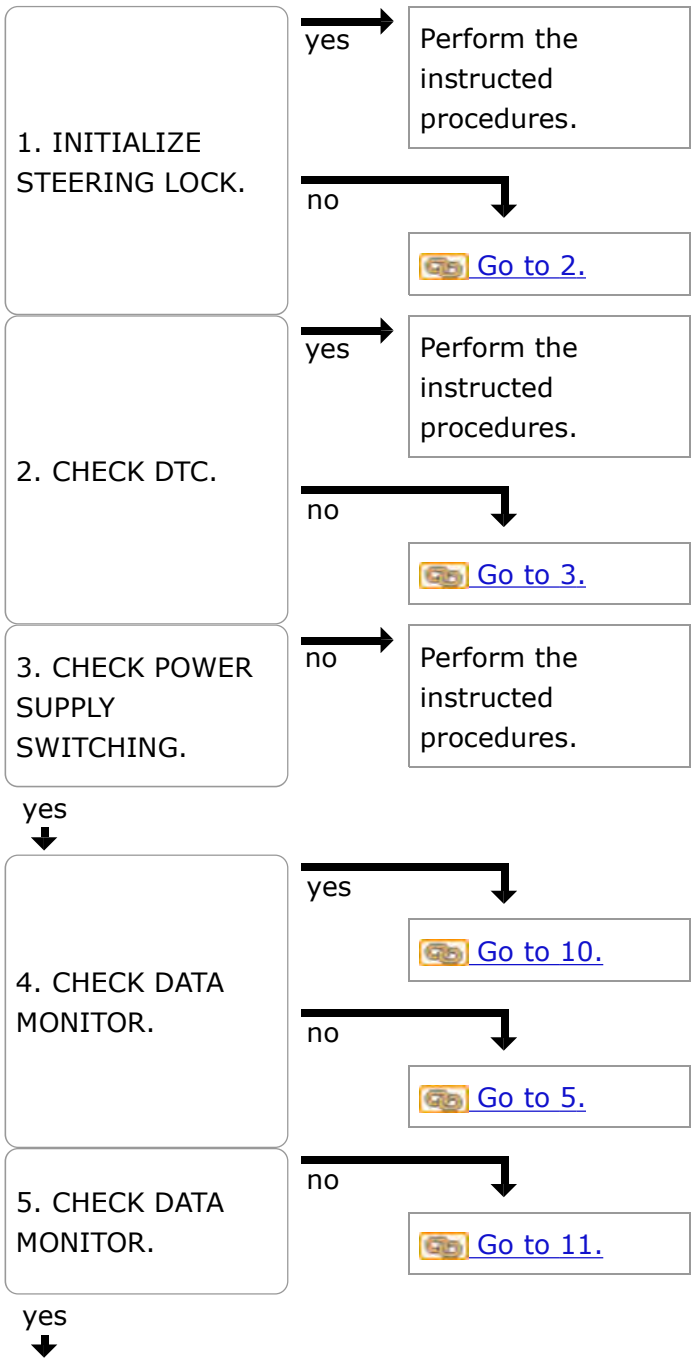
   (i75) No. 28 (+) — Chassis ground (−):

   (i75) No. 27 (+) — Chassis ground (−):

Did the voltage change from 1 V or less → +B-2 V or more?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

20. ENGINE DOES NOT START



Trouble causes:

- Engine system failure
- Keyless access CM malfunction
- Keyless access with push button start system power supply malfunction
- Steering lock system malfunction
- P range switch circuit malfunction
- Stop light switch circuit malfunction
- Inhibitor switch circuit malfunction

- Clutch switch circuit malfunction

Caution:

- **When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.**
- **For replacement procedure of keyless access CM or ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>General Description>CAUTION.**

6. CHECK DATA MONITOR.

no → Go to 13.

yes ↓

7. CHECK DATA MONITOR.

no → Go to 15.

yes ↓

8. CHECK STEERING LOCK.

no → Perform the instructed procedures.

yes ↓

9. CHECK KEYLESS ACCESS CM.

yes → Perform the instructed procedures.

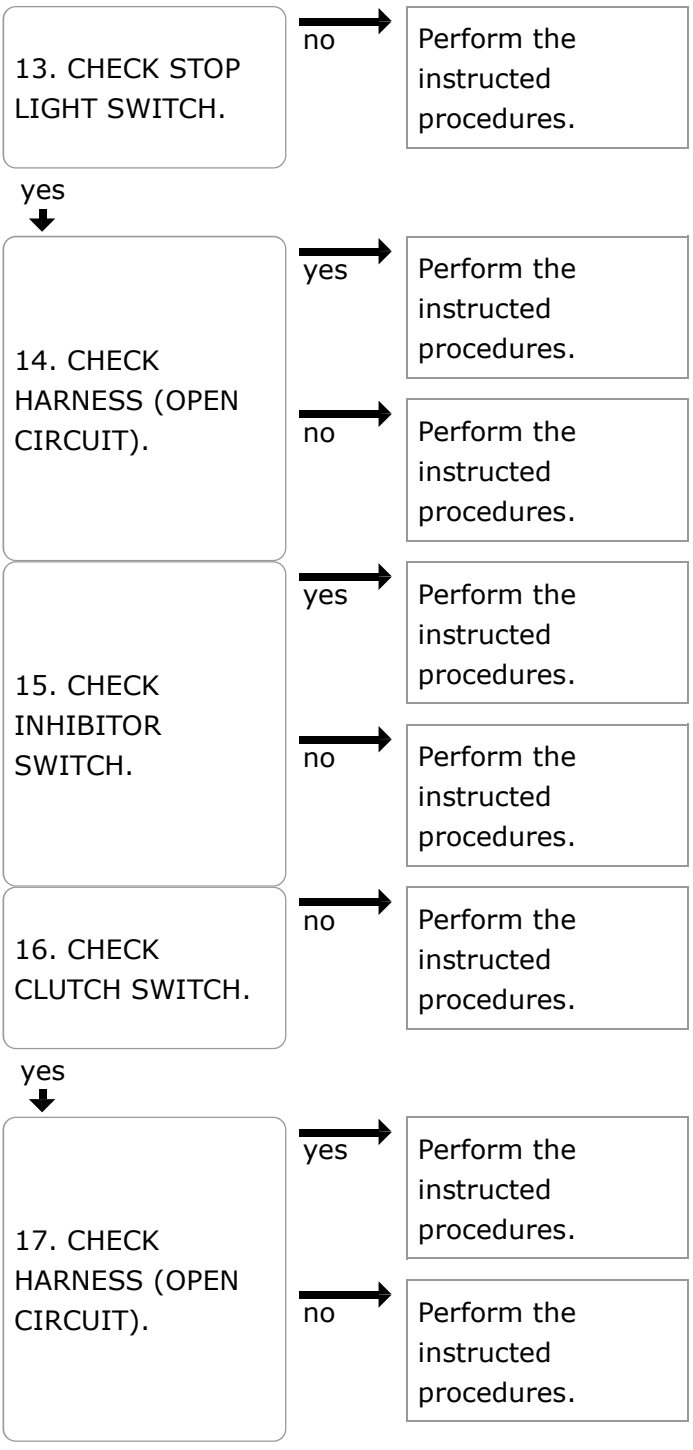
no → Perform the instructed procedures.

10. CHECK DATA MONITOR.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

11. CHECK P RANGE SWITCH ONLY.



no → Perform the instructed procedures.

yes ↓

12. CHECK HARNESS (OPEN CIRCUIT).

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

13. CHECK STOP LIGHT SWITCH.
no
Perform the instructed procedures.
yes
14. CHECK HARNESS (OPEN CIRCUIT).
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
15. CHECK INHIBITOR SWITCH.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
16. CHECK CLUTCH SWITCH.
no
Perform the instructed procedures.
yes
17. CHECK HARNESS (OPEN CIRCUIT).
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. INITIALIZE STEERING LOCK.

1. Shift the shift lever to parking (except for MT model), or neutral for MT model.
2. Operate the driver's door switch ON/OFF with the ignition switch OFF.
3. Wait for 10 seconds.
4. Place the access key on the driver's seat.
5. Depress the brake pedal (except for MT model) or clutch pedal (MT model), and push the push button ignition switch.

Can the engine start?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Keyless Access with Push Button Start] using the Subaru Select Monitor. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis according to the DTC. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK POWER SUPPLY SWITCHING.

1. Place the access key on the driver's seat.
2. Without depressing the brake pedal (except for MT model) or clutch pedal (MT model), push the push button ignition switch.

When the switch is operated, does it change as <IG-OFF> → <ACC-ON> → <IG-ON> → <IG-OFF>?

Yes	Go to 4.
No	Perform the diagnostics according to the symptom for power supply switching system in General Diagnostic Table.

4. CHECK DATA MONITOR.

1. Place the access key on the driver's seat.
2. Depress the brake pedal (except for MT model) or clutch pedal (MT model), and push the push button ignition switch. Depress the brake pedal (except for MT model) or clutch pedal (MT model), and push the push button ignition switch.
3. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   - [STSW signal monitor]

   Note:

   If it is difficult to confirm, press the push button ignition switch for approximately five seconds longer.

Does the data change from OFF → ON?

Yes	Go to 10.
No	Except for MT model: Go to 5. MT model: Go to 7.

5. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Shift P signal(AT only)]

Is ON displayed in parking position, and OFF displayed in other positions?

Yes	Go to 6.
No	Go to 11.

6. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Stop Light Switch]

Is ON displayed when brake pedal depressed, and OFF displayed when brake pedal not depressed?

Yes	Go to 7.
No	Go to 13.

7. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Clutch SW(MT only)]
- [Shift N signal(AT only)]

Except for MT model: is ON displayed in parking and neutral position and OFF displayed in other positions? MT model: is ON displayed when clutch pedal depressed and OFF displayed when clutch pedal not depressed?

Yes	Go to 8.
No	CVT model: Go to 15. MT model: Go to 17.

8. CHECK STEERING LOCK.

Operate the push button ignition switch to perform the power supply switching and check steering lock condition during ACC-ON condition.

Is the steering lock in unlocked condition?

Yes	Go to 9.
No	Perform the diagnostics according to the symptom for steering lock system in General Diagnostic Table.

9. CHECK KEYLESS ACCESS CM.

1. Turn the ignition switch to OFF.
2. Disconnect the ECM connector.
3. Using a tester, measure the voltage between the ECM connector and chassis ground in the following procedures.
   1. Press the push button ignition switch with the brake pedal depressed (MT model: clutch pedal depressed). (Measure within 10 seconds.)
   2. Release the push button ignition switch from the condition of step 1. above.

   Connector & terminal

   (i241) No. 15 (+) — Chassis ground (−):

Does the value change from 1 V or less to +B-2 V or more in the step 1, and return to 1 V or less in the step 2?

Yes	Perform the diagnosis for engine system. Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostics with Phenomenon.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

10. CHECK DATA MONITOR.

1. Connect the disconnected connectors.
2. Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Keyless Access with Push Button Start]. Ref. to KEYLESS ACCESS WITH PUSH BUTTON START(DIAGNOSTICS)>Data Monitor.

   - [Engine start permission request reception status]

Is “Reception” displayed with ignition switch ON, and “Not yet received” displayed in other positions?

Yes	Perform the diagnosis for engine system.
No	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.

11. CHECK P RANGE SWITCH ONLY.

1. Turn the ignition switch to OFF.
2. Disconnect the AT shift lever connector.
3. Using a tester, check the continuity of "P" range switch.
   Connector & terminal
   No. 1 — No. 2:

Does it change from Continuity ←→ No continuity according to shift lever operation?

Yes	Go to 12.
No	Replace the "P" range switch. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and "P" Range Switch>REMOVAL.

12. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the keyless access CM connector.
3. Using a tester, check continuity between the keyless access CM connector and the AT select lever connector, and between the AT select lever connector and chassis ground.
   Connector & terminal
   (i44) No. 1 — (i241) No. 18:
   (i44) No. 2 — Chassis ground:

Is there continuity?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Repair or replace the open circuit of harness.

13. CHECK STOP LIGHT SWITCH.

1. Turn the ignition switch to OFF.
2. Disconnect the stop light switch connector.
3. Using a tester, check continuity of the stop light switch connector.
   Connector & terminal
   No. 1 — No. 2:

Does it change from Continuity ←→ No continuity according to brake pedal operation?

Yes	Go to 14.
No	Replace the stop light switch. Ref. to BRAKE>Stop Light Switch>REMOVAL.

14. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Using a tester, check continuity between the keyless access CM connector and the stop light switch connector, and between the stop light switch connector and fuse.
   Connector & terminal
   (i241) No. 27 — (B65) No. 2:
   (B65) No. 1 — F/B fuse No. 37:

Is there continuity?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Repair or replace the open circuit of harness.

15. CHECK INHIBITOR SWITCH.

Check the inhibitor switch.

Is the inhibitor switch working normal?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Replace the inhibitor switch.

16. CHECK CLUTCH SWITCH.

Check the clutch lower switch. Ref. to CLUTCH SYSTEM>Clutch Switch>INSPECTION.

Is clutch switch OK?

Yes	Go to 17.
No	Replace the inhibitor switch. Ref. to CLUTCH SYSTEM>Clutch Switch>REMOVAL.

17. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the clutch lower switch connector.
3. Using a tester, measure continuity between the keyless access CM connector and the clutch lower switch connector and between the clutch lower switch connector and fuse.
   Connector & terminal
   (i75) No. 14 — (B501) No. 7:
   (B501) No. 2 — F/B fuse No. 33:

Is there continuity?

Yes	Replace the keyless access CM. Ref. to SECURITY AND LOCKS>Keyless Access CM.
No	Repair or replace the open circuit of harness.

BODY CONTROL(DIAGNOSTICS)

BIU(diag)

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
15. General Diagnostic Table
16. Diagnostics with Phenomenon

BODY CONTROL(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:

- **Subaru Select Monitor is required for reading DTC, performing diagnosis and reading data monitor.**
- **Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.**
- **Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

Note:

To check harness for open or short circuits, shake the suspected trouble spot or connector.

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to BODY CONTROL(DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. BASIC INSPECTION.

Perform basic inspection. Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Body Control].

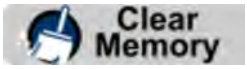
Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Go to 6.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to BODY CONTROL(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown.
No	Finish the diagnosis.

6. PERFORM DIAGNOSTICS WITH PHENOMENON.

Check the "Phenomenon List". Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostics with Phenomenon>LIST > HIGH BEAM ASSIST SYSTEM.

Is there a symptom that corresponds in the phenomenon list?

Yes	Perform diagnosis according to the procedures in the phenomenon list.
No	Go to 7.

7. PERFORM GENERAL DIAGNOSTICS.

Check “General Diagnostic Table”. Ref. to BODY CONTROL(DIAGNOSTICS)>General Diagnostic Table.

Is the check result OK?

Yes	The body control system is normal.
No	Perform inspection using “General Diagnostic Table”.

CHECK

1. BODY CONTROL

Inspect the following items regarding the vehicle's state.

Body Control System Check List for Interview Date of Vehicle Bring-in Year Month Day			
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content			
Date and time when the trouble occurred		Frequency of trouble occurrence	
Condition of trouble occurrence		Weather	
Road conditions		Occurrence location	
Accessory installation condition			
Trouble condition			
❑ DTC		❑ ( )	

- CONDITION OF IGNITION POWER SUPPLY

Ignition position	❑ OFF ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)
Timing	❑ Immediately after turning the ignition ON. ❑ Immediately after turning the ignition to START.

- Symptoms

Note:

The items vary depending on destinations and equipment.

Vehicle condition	Clearance light does not illuminate.	❑Yes / ❑ No
	Clearance light indicator does not illuminate.	❑Yes / ❑ No

Low beam does not illuminate.	❑Yes / ❑ No
High beam does not illuminate.	❑Yes / ❑ No
High beam indicator does not illuminate.	❑Yes / ❑ No
Front fog light does not illuminate.	❑Yes / ❑ No
Front fog light indicator does not illuminate.	❑Yes / ❑ No
Key cannot be removed from key cylinder.	❑Yes / ❑ No
Key can be removed with the shift in a range other than P.	❑Yes / ❑ No
Shift lever can not be operated.	❑Yes / ❑ No
Shift lock does not operate.	❑Yes / ❑ No
Warning buzzer for key left in ignition does not beep.	❑Yes / ❑ No
Immobilizer indicator does not illuminate.	❑Yes / ❑ No
Wiper deicer does not operate.	❑Yes / ❑ No
Combination meter does not dim when headlights are ON.	❑Yes / ❑ No
Rear wiper does not operate.	❑Yes / ❑ No
Doors can not be locked/unlocked with central door lock switch.	❑Yes / ❑ No
Doors and rear gate can not be locked/unlocked with keyless entry system or keyless access.	❑Yes / ❑ No
Trunk can not be opened with keyless entry system or keyless access.	❑Yes / ❑ No
Rear gate can not be opened when rear gate opener button is pressed.	❑Yes / ❑ No
Rear gate can not be opened when rear gate opener button is pressed.	❑Yes / ❑ No
Hazard answer-back does not operate.	❑Yes / ❑ No
Ignition key illumination does not light.	❑Yes / ❑ No
Ignition key illumination blinks.	❑Yes / ❑ No
Room light does not operate in accordance with door open/close operations.	❑Yes / ❑ No
Room light blinks.	❑Yes / ❑ No
Map light does not operate in accordance with door open/close operations.	❑Yes / ❑ No
Map light blinks.	❑Yes / ❑ No
Luggage/trunk room light does not operate in accordance with rear gate/trunk open/close operations.	❑Yes / ❑ No
Luggage/trunk room light is blinking.	❑Yes / ❑ No

Security monitoring does not start	❑Yes / ❑ No
Security cannot be cancelled	❑Yes / ❑ No
Hazard does not blink during security monitoring	❑Yes / ❑ No
Horn does not sound during security monitoring	❑Yes / ❑ No
Alarm operates as soon as security monitor condition occurs.	❑Yes / ❑ No
Engine does not start.	❑Yes / ❑ No

- CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	❑ At standstill (while idling)			
	❑ When the vehicle is running	Vehicle speed	km/h (MPH)	
	❑ While accelerating	Acceleration (MPH)	km/h (MPH) to	km/h
	❑ Decelerating (with braking)	Deceleration (MPH)	km/h (MPH) to	km/h
	❑ Decelerating (without braking)	Deceleration (MPH)	km/h (MPH) to	km/h
	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Bumpy road ❑ Snowy road			
	Does it occur when operating any part? Operated part: Trouble symptom:			
	Are there any other troubles occurred? From where: Trouble symptom:			

2. HIGH BEAM ASSIST

Inspect the following items regarding the vehicle’s state.

High Beam Assist Check List for Interview Date of Vehicle Bring-in Year Month Day			
Customer’s name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content			

Date and time when the symptom occurred	Year Month Date Approximate time		
Frequency of symptom occurrence	Always occurs Sometimes occurs (times per day/ times per month)		
Conditions upon symptom occurrence	Weather	•Fine •Cloudy •Rainy •Snowy•Foggy •Other ( )	
	Temperature	°C (°F) — °C (°F)	
	Vehicle speed	km/h (MPH) — km/h (MPH)	
	Road condition	•Dry •Wet •Accumulated snow •Unpaved road •Bumps (uneven) Other ( )	
	Road conditions	Own vehicle	•Straight •Gentle right-hand curve •Gentle left-hand curve •Sharp right-hand curve •Sharp left-hand curve •Uphill •Downhill •Intersection •Top of the hill •Other ( )
		Oncoming vehicle * Relative position from user’s viewpoint	•No oncoming vehicle •Straight •Gentle right-hand curve •Gentle left-hand curve •Sharp right-hand curve •Sharp left-hand curve •Uphill •Downhill •Intersection •Top of the hill •Other ( )
		Headlight of oncoming vehicle * When the type is unknown, indicate the color.	•HID/LED (white) •Halogen •Only one side was lit •Other ( )
		Preceding vehicle	•No preceding vehicle •Straight •Gentle right-hand curve •Gentle left-hand curve

			•Sharp right-hand curve •Sharp left-hand curve •Uphill •Downhill •Intersection •Top of the hill •Other ( )
		Number of street light ahead	•0 •1 •2 •3 •4 •5 •More ( )
		Reflection board/Signs	•0 •1 •2 •3 •4 •5 •More ( ) •Red •White •Blue •Other ( )
	Vehicle status	Number of passengers: , (Front seats: /Rear seats:)	
		Cargo room load capacity kg (lb)	
		Tire inflation pressure (when vehicle was brought in) •Front wheel kPa (psi) •Rear wheel kPa (psi)	
	Driving duration and distance with the described load condition	•Distance km (mile) •Time minutes	
	Driving environment before symptom occurrence (Approximately 10 minutes before the occurrence)	•Inner city (surroundings are bright by street lights) •Suburbs (surroundings are relatively dark due to sparse street lights)	
Accessory installation condition			
DTC			

Other

Note:

- **Describe things that were noticed, if any.**
- **Attach illustration or photo of the road ahead of the vehicle at the time of the symptom occurrence.**

BODY CONTROL(DIAGNOSTICS) > General Description

CAUTION

1. BODY CONTROL

When removing body control related parts, refer to Cautions in SECURITY AND LOCKS. Ref. to SECURITY AND LOCKS>General Description>CAUTION.

2. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

BODY CONTROL(DIAGNOSTICS) > General Description

INSPECTION

1. BODY CONTROL SYSTEM

Before performing diagnosis, check the following items which might affect body control system problems.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the fuse condition. Ref. to SECURITY AND LOCKS>Relay and Fuse.
   Make sure that ampere of the fuse is setting value, and it is not blown out.
3. Check the connecting condition of harness and harness connector.
4. Confirm settings of body integrated unit are corresponded to vehicle equipment. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit.
5. Make sure that the customizing of the body integrated unit matches the vehicle equipment. Ref. to BODY CONTROL(DIAGNOSTICS)>Customize.
6. Confirm [Factory initial setting] of body integrated unit registrations is [Market].

BODY CONTROL(DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

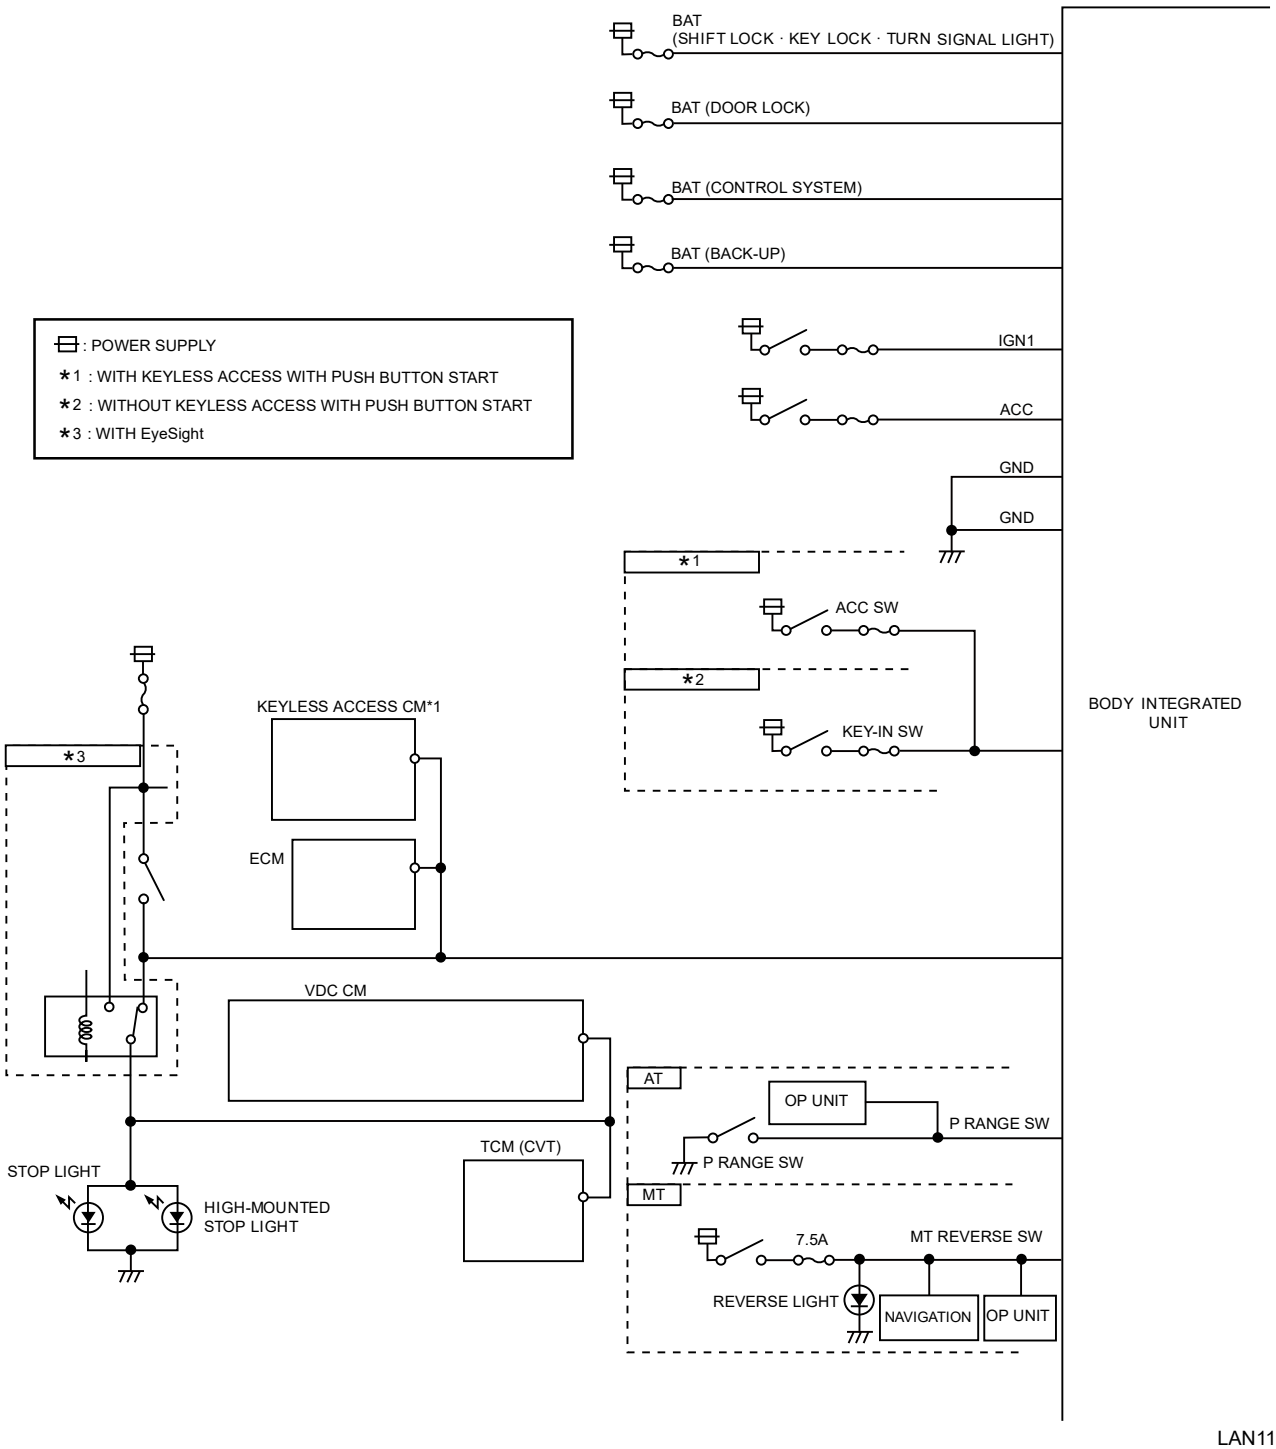


ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
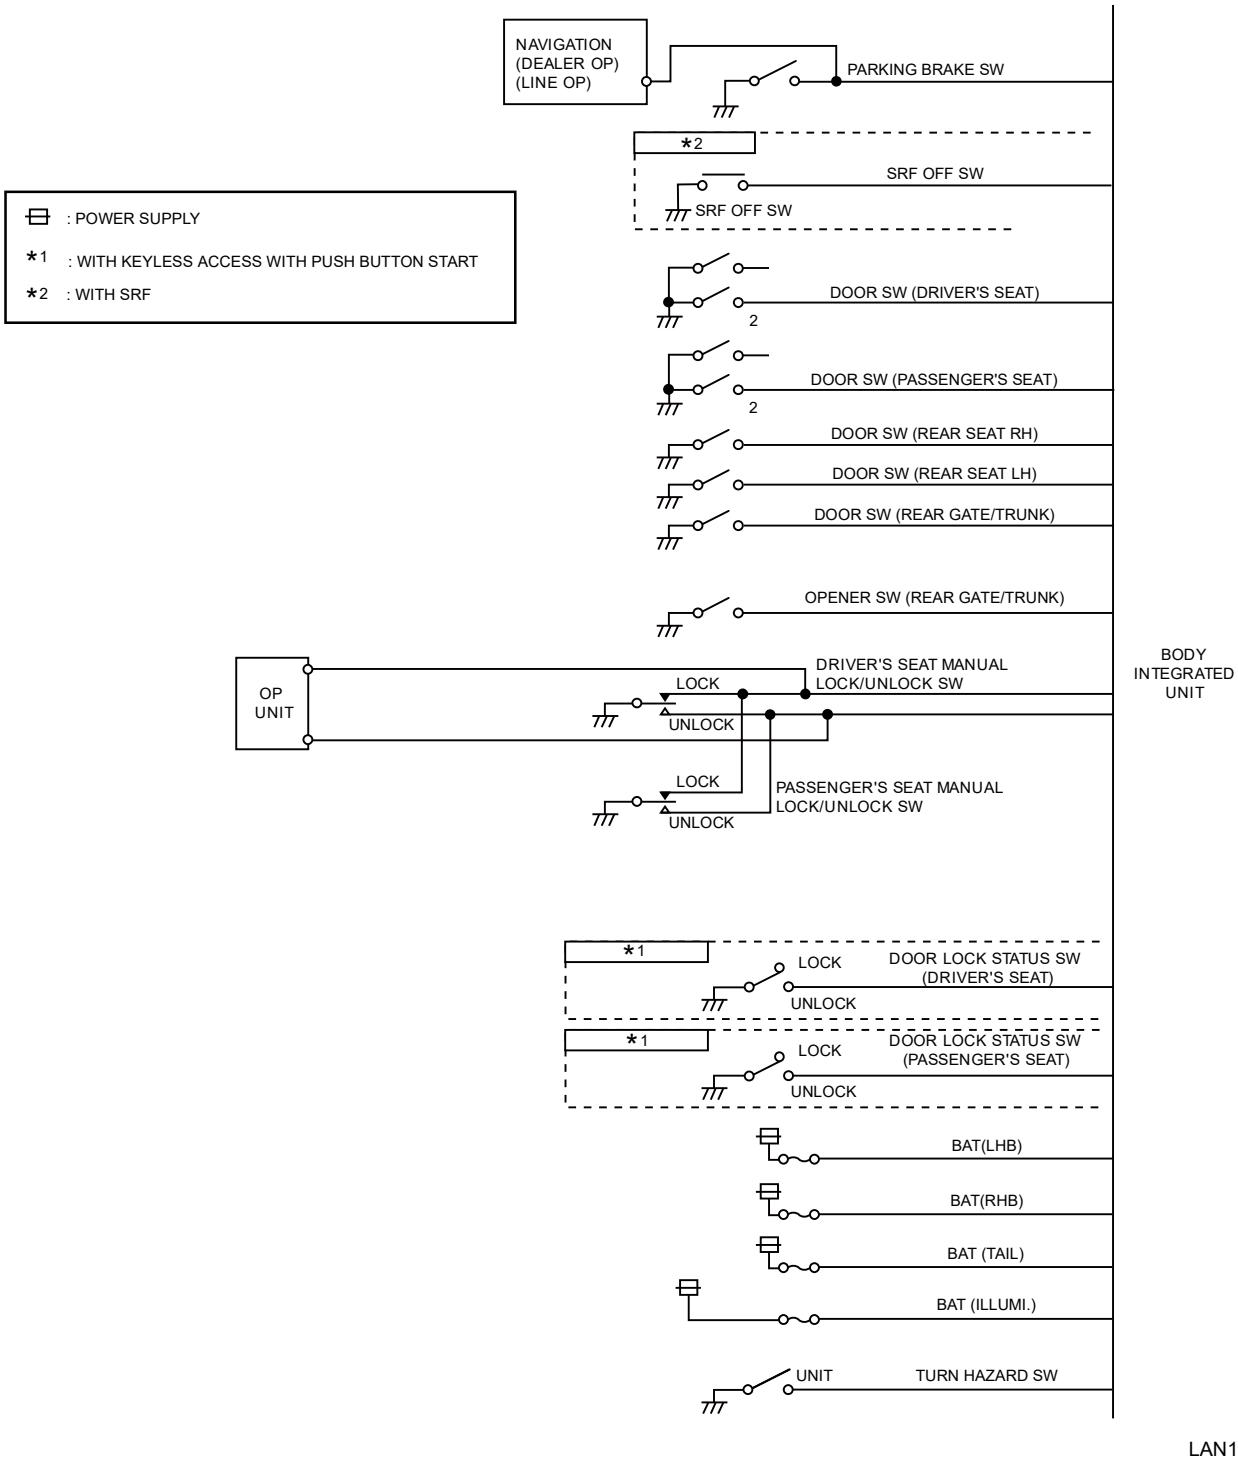
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

BODY CONTROL(DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1010	BODY CONTROL SYSTEM (BIU) MALFUNCTION	—
B1011	BATTERY CONTROL POWER SUPPLY	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
3. Disconnect and reconnect the battery, and then wait for one minute or more.
4. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

2. INSPECTION MODE 2

DTC	Item	Note
B1012	BATTERY BACKUP POWER SUPPLY	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
3. Disconnect and reconnect the back-up fuse, and then wait for one minute or more.
4. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC

displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

3. INSPECTION MODE 3

DTC	Item	Note
B1013	IGNITION POWER	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   Note:

   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
3. After the ignition switch is ON, wait for one minute or more.
4. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   Note:

   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

4. INSPECTION MODE 4

DTC	Item	Note
B1014	ACC POWER	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   Note:

   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
3. After ACC is ON, wait for one minute or more.
4. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

5. INSPECTION MODE 5

DTC	Item	Note
B1015	KEY INTERLOCK CIRCUIT	CVT Model without the keyless access with push button start system

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
3. After the ignition switch is ON, press the shift knob switch and wait for 10 seconds or more.
4. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

6. INSPECTION MODE 6

DTC	Item	Note
B1016	SHIFT LOCK CIRCUIT	CVT model

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
3. After the ignition switch is ON, wait for 10 seconds or more without depressing the brake pedal. Or, after the ignition switch is ON, press the shift knob switch with the brake pedal depressed and wait for 10 seconds or more.
4. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

7. INSPECTION MODE 7

DTC	Item	Note
B1107	CAN COMMUNICATION (BIU) STUCK	—
B1401	COMBINATION METER COLLATION	Model without immobilizer CM
B1402	IMMOBILIZER KEY COLLATION	
B1407	COMBINATION METER COMMUNICATION	
B1408	COMBINATION METER NON-VOLATILE MEMORY	
B1410	TRANSPONDER COMMUNICATION	
B1411	IMMOBILIZER ANTENNA	—
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0074	CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF	—
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0127	LOST COMMUNICATION WITH TIRE PRESSURE MONITOR CONTROL MODULE AND/OR KEYLESS ENTRY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0222	LOST COMMUNICATION WITH DRIVER'S DOOR POWER WINDOW	—
U0223	LOST COMMUNICATION WITH PASSENGER'S DOOR POWER WINDOW	—
U0327	SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE	Model with keyless access with push button start system
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—

DTC	Item	Note
U0427	INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE	Model with keyless access with push button start system
U0430	INVALID DATA RECEIVED FROM TIRE PRESSURE MONITOR CONTROL MODULE AND/OR KEYLESS ENTRY CONTROL MODULE	—
U1235	LOST COMMUNICATION WITH EyeSight	—
U1674	LIN COMMUNICATION BUS 2 ERROR BODY CONTROL MODULE	—
U1822	LOST COMMUNICATION WITH MASTER MAIN SWITCH	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
3. Turn the ignition switch OFF → ON, and wait for 10 seconds or more.
4. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

8. INSPECTION MODE 8

DTC	Item	Note
U0101	LOST COMMUNICATION WITH TCM	—
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	—
U0402	INVALID DATA RECEIVED FROM TCM	—
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Body Control]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1). Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

3. Confirm that [Customize] items of [Body Control] correspond to the vehicle. Ref. to BODY CONTROL(DIAGNOSTICS)>Customize.
4. Turn the ignition switch OFF → ON, and wait for 10 seconds or more.
5. Using the Subaru Select Monitor, read the DTC of [Body Control] to check that there is no DTC displayed. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

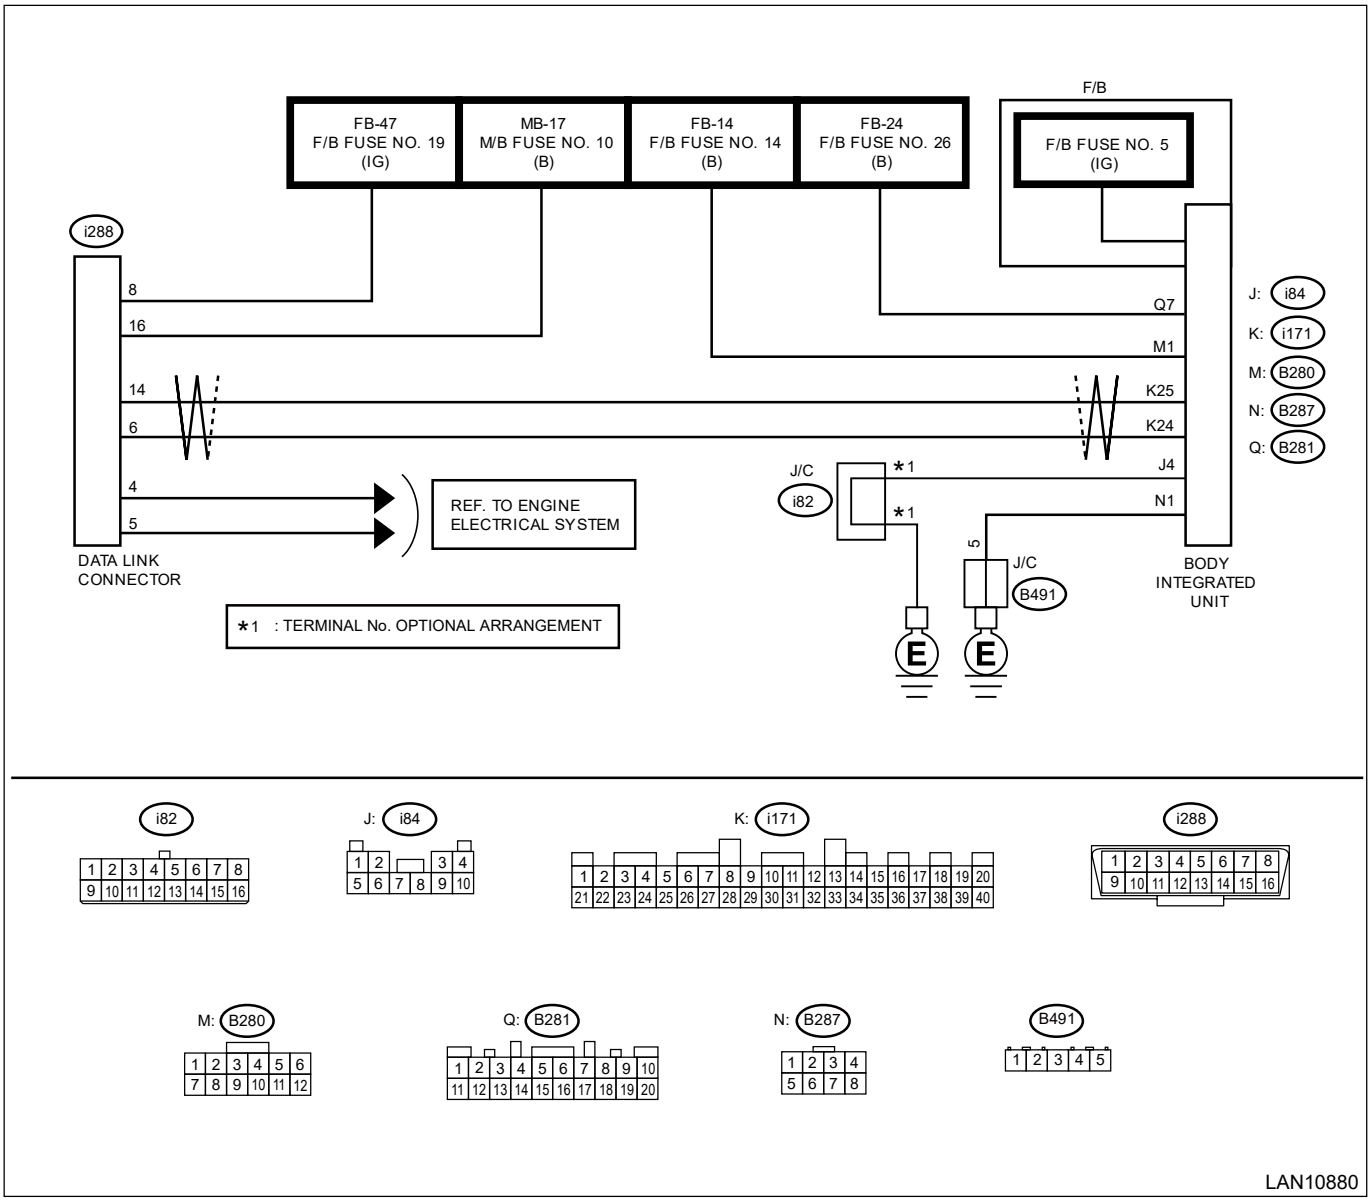
Note:

If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Trouble symptom:



Cannot communicate with [Body Control].

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:

CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POWER SUPPLY CIRCUIT.

Connect DST-i to data link connector.

Does DST-i turn ON?

Yes	Go to 4.
No	Go to 2.

2. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between data link connector and chassis ground.

Connector & terminal

(i288) No. 8 (+) — Chassis ground (−):

(i288) No. 16 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the power supply circuit.

Note:

In this case, repair the following item:

- **Open or ground short circuit of harness between battery and data link connector**
- **Blown out of fuse (M/B No. 10, F/B fuse No. 19)**

3. CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).

1. Turn the ignition switch to OFF.
2. Using the tester, measure the resistance between data link connector and chassis ground.
   Connector & terminal
   (i288) No. 4 — Chassis ground:
   (i288) No. 5 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found,
No	Repair the harness and connector.

4. CHECK SUBARU SELECT MONITOR.

1. Connect the Subaru Select Monitor to a normal vehicle.
2. Start the engine and establish communication between the Subaru Select Monitor and vehicle.

Is communication possible?

Yes	Go to 5.
No	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.

5. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system.

Is the check result OK?

Yes	Go to 6.
No	Perform the diagnosis for LAN system.

6. CHECK CONNECTOR.

Check poor contact of body integrated unit connector, data link connector and coupling connector.

Is the check result OK?

Yes	Go to 7.
No	Repair the connector.

7. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Remove the F/B fuses No. 5, 14, 26 from fuse box.
3. Check the fuse.

Is the check result OK?

Yes	Go to 8.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the body integrated unit and fuse.

8. CHECK BODY INTEGRATED UNIT CONNECTOR POWER SUPPLY CIRCUIT (OPEN).

1. Disconnect the body integrated unit connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between body integrated unit connector and chassis ground.

Connector & terminal

(B281) No. 7 (+) — Chassis ground (−):

(B280) No. 1 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 9.
No	Check the harness for open or short circuit between body integrated unit and fuse.

9. CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).

Measure the resistance in harness between body integrated unit connector and chassis ground.

Connector & terminal

(i84) No. 4 — Chassis ground:

(B287) No. 1 — Chassis ground:

Is the resistance less than 5 Ω?

Yes	Check the connection between the data link connector and Subaru Select Monitor.
No	Repair the harness for ground line.

BODY CONTROL(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor>LIST.**

BODY CONTROL(DIAGNOSTICS) > Data Monitor

LIST

Item	Contents	Standard/Unit	Note
BATT voltage (control)	Constant power supply from the battery. Input value to the body integrated unit.	0 — 21.5 V	-
BATT voltage (BACKUP)	Constant power supply from the battery. Input value to the body integrated unit.	0 — 21.5 V	-
IGN voltage	IG system circuit voltage. Input value to the body integrated unit.	0 — 21.5 V	-
ACC voltage	ACC system circuit voltage. Input value to the body integrated unit.	0 — 21.5 V	-
Front Wheel Speed	Front wheel average speed. CAN data input value. Received from the VDC CM.	km/h	-
Fuel consumption	Injection quantity per 1 sec calculated from an instantaneous fuel injection quantity per 50 msec. CAN data input value. Received from the ECM.	cc/s	-
Coolant Temp.	Engine coolant temperature. CAN data input value. Received from the ECM.	−40 — 215°C	-
Shift Position	Shift position. CAN data input value. Received from the TCM.	1 — 3, D-S, D, N, R, P	-
Buzzer beeping request	Passenger room buzzer beeping request. CAN data output value. Sent to the combination meter.	Status for 'beeping deactivated' Reverse warning Key warning buzzer Light Remained Buzzer	-

Item	Contents	Standard/Unit	Note
		Customize 1 Customize 2 Registration completed 1 Registration completed 2 registered Registration NG	
EPB operating status	EPB operating status. CAN data input value, received from the VDC.	Error Released Operate Operating Releasing Parking	-
Destination	Vehicle destination information. CAN data receiving value. Received from the combination meter.	JPN U4, U5, U6 C0 EC, EA, E2, EL K4, C4, C6 KS EK ER, EN KA, KC EH C6	—
Illumination Sensor Output	Output voltage from the illumination sensor. Body integrated unit input value.	0 — 5 V	—
Off delay time	Interior light off delay time. Body integrated unit custom setting values.	OFF 10 Sec 20 Sec 30 Sec	-
Auto Light Sensitivity Adjustment	Sensitivity of auto light function. Body integrated unit custom setting values.	Dull Normal Sensitive Very sensitive	-
Key-lock Warning SW	Key warning switch ON/OFF status. Body integrated unit input value. Set to ON when the ignition key is inserted.	ON/OFF	Model without keyless access with push button start system
ACC Input	ACC ON/OFF status. Body integrated unit input value. Set to ON when the ignition switch is turned to ACC.	ON/OFF	Model with keyless access with push button start system

Item	Contents	Standard/Unit	Note
Stop Light Switch	Brake switch ON/OFF status. Body integrated unit input value. Set to ON when the brake pedal is pressed.	ON/OFF	-
Front fog lamp SW input	Front fog light switch ON/OFF status. Body integrated unit input value. Set to ON when the front fog light switch is ON.	ON/OFF	-
Driver's door SW input	Driver’s door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
P-door SW input	Passenger’s door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
Rear right door SW input	Rear right door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
Rear left door SW input	Rear left door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
R Gate SW input	Rear gate / trunk switch ON/OFF status. Body integrated unit input value. Set to ON when the rear gate / trunk is open.	ON/OFF	-
Manual lock SW input	ON/OFF status of the manual lock switch located on the power window main switch (or on the passenger’s side power window switch). Body integrated unit input value. Set to ON when the manual lock switch is set to lock.	ON/OFF	-
Manual unlock SW input	ON/OFF status of the manual lock switch located on the power window main switch (or on the passenger’s side power window switch). Body integrated unit input value. Set to ON when the manual lock switch is set to unlock.	ON/OFF	-
P SW	P range switch ON/OFF status. Body integrated unit input value. Set to ON in the P range.	ON/OFF	-

Item	Contents	Standard/Unit	Note
MT Reverse SW	MT back-up light switch ON/OFF status. Body integrated unit input value. Set to ON when the shift lever is set to R range and the back-up light switch is ON.	ON/OFF	-
R wiper ON SW input	Rear wiper ON switch ON/OFF status. Body integrated unit input value. Set to ON when the rear wiper switch is ON.	ON/OFF	-
R wiper INT SW input	Rear wiper INT switch ON/OFF status. Body integrated unit input value. Set to ON when the rear wiper switch is in the INT position.	ON/OFF	-
R washer SW input	Rear washer switch ON/OFF status. Body integrated unit input value. Set to ON when the rear washer switch is ON.	ON/OFF	-
Fr wiper input	Front wiper return switch ON/OFF status. Body integrated unit input value. Set to ON when the front wiper is outside of the stop position.	ON/OFF	-
Driver's seat lock status SW input	ON/OFF status of the driver’s seat lock status switch. Body integrated unit input value. Set to ON when the door status is LOCK.	ON/OFF	Model with keyless access with push button start system
Passenger's seat lock status SW input	ON/OFF status of the passenger’s seat lock status switch. Body integrated unit input value. Set to ON when the door status is LOCK.	ON/OFF	Model with keyless access with push button start system
R gate lock status SW input	ON/OFF status of the rear gate lock status switch. Body integrated unit input value. Set to ON when the rear gate status is LOCK.	ON/OFF	-
R Gate Release SW input	ON/OFF status of the rear gate release switch / trunk opener switch. Body integrated unit input value. Set to ON when the rear gate release switch / trunk opener switch is pressed.	ON/OFF	-
Rr Defogger output	Rear defogger relay output ON/OFF status. Body integrated unit output value. Set to ON when the rear	ON/OFF	-

Item	Contents	Standard/Unit	Note
	defogger is activated.		
lock actuator LOCK output	Door lock actuator output ON/OFF status. Body integrated unit output value. Set to ON when a lock signal is output.	ON/OFF	-
All seat UNLOCK output	ON/OFF status of the all door lock actuator output. Body integrated unit output value. Set to ON when an all door unlock signal is output.	ON/OFF	-
D-seat UNLOCK output	ON/OFF status of the driver’s door lock actuator output Body integrated unit output value. Set to ON when a driver’s door / all door unlock signal is output.	ON/OFF	-
R gate/trunk UNLK output	Rear gate / trunk lock actuator ON/OFF status. Body integrated unit output value. Set to ON when an unlock signal is output.	ON/OFF	-
R wiper output	Rear wiper relay output ON/OFF status. Body integrated unit output value. Set to ON when the rear wiper is activated.	ON/OFF	-
Shift lock solenoid output	Shift lock solenoid output ON/OFF status. Body integrated unit output value. Solenoid is activated to set this item to ON when depressing the brake pedal with the shift lever in P range.	ON/OFF	-
Key lock solenoid output	Key lock solenoid output ON/OFF status. Body integrated unit output value. Solenoid is activated to set this item to ON when the key is inserted with the shift lever in other than P range.	ON/OFF	Model without keyless access with push button start system
wiper deicer output	Wiper deicer output ON/OFF status. Body integrated unit output value. Set to ON while the wiper deicer is operating.	ON/OFF	-
Keyless Buzzer Output	Keyless buzzer ON/OFF status. Body integrated unit output value. Set to ON while the keyless buzzer is sounding.	ON/OFF	-

Item	Contents	Standard/Unit	Note
Horn Output	Security horn output ON/OFF status. Body integrated unit output value. Set to ON while the horn is sounding due to a security breach.	ON/OFF	-
Room lamp output	Room light output ON/OFF status. Body integrated unit output value. Set to ON while the room light illuminates with the switch in DOOR position.	ON/OFF	-
key illumination lamp o/p	Key illumination light output ON/OFF status. Body integrated unit output value. Set to ON while the key illumination light illuminates.	ON/OFF	Model without keyless access with push button start system
Immobilizer lamp output	Security indicator output ON/OFF status. Body integrated unit output value. Set to ON while the security indicator in the combination meter illuminates.	ON/OFF	-
Small Light SW	Lighting 1 relay CAN output ON/OFF status. CAN data sending value. Set to ON when the position light indicator in the combination meter illuminates.	ON/OFF	-
Headlamp	Lighting Lo relay CAN output ON/OFF status. CAN data output value. Set to ON when the headlight Lo illuminates.	ON/OFF	-
High Beam	Lighting Hi relay CAN output ON/OFF status. CAN data output value. Set to ON when the headlight Hi illuminates.	ON/OFF	-
Lane change signal setting	Presence or absence of the one-touch blinker control. Body integrated unit custom setting values.	Support / Not Exist	-
Rear wiper auto setting	Presence or absence of the rear wiper control linked with reverse shift. Body integrated unit custom setting values.	Support / Not Exist	-
Left turn signal input	Left turn signal switch ON/OFF status. Body integrated unit input value. Set to ON while the left turn	ON/OFF	-

Item	Contents	Standard/Unit	Note
	signal switch is ON.		
Right turn signal input	Right turn signal switch ON/OFF status. Body integrated unit input value. Set to ON while the right turn signal switch is ON.	ON/OFF	-
Left turn signal output	Left turn signal light output ON/OFF status. Body integrated unit output value. Set to ON while the left turn signal light illuminates.	ON/OFF	-
Right turn signal output	Right turn signal light output ON/OFF status. Body integrated unit output value. Set to ON while the right turn signal light illuminates.	ON/OFF	-
Driver's Door Unlock Setting	Presence or absence of the driver’s seat select unlock control. Body integrated unit custom setting values.	Selection / ALL	Model with keyless access with push button start system
Rear Gate Unlock Setting	Presence or absence of the rear gate select unlock control. Body integrated unit custom setting values.	Selection / ALL	Model with keyless access with push button start system
Wiper link Auto Light Setup	ON/OFF status of the wiper interlock auto light function control. Body integrated unit custom setting values.	ON/OFF	-
High Beam Assist Function Setting (mirror/EyeSight)	Presence or absence of high beam assist. Body integrated unit custom setting values.	Not Exist / mirror HBA / EyeSight HBA	-
Head Lamp Low Beam Specification	Headlight low beam light source type. Body integrated unit custom setting values.	Halogen / HID / LED	-
Head Lamp High Beam Specification	Headlight high beam light source type. Body integrated unit custom setting values.	Halogen / HID / LED	-
High Beam Assist Current Setting	Presence or absence of high beam assist. Body integrated unit custom setting values.	ON/OFF	-

Item	Contents	Standard/Unit	Note
High Beam Assist Active Indicator	Set to ON when high beam assist is activated. CAN data output value.	Turn_OFF / Turn_ON / Flashing	-
High Beam Assist Failure Indicator	Set to ON when high beam assist fails. CAN data output value.	Turn_OFF / Turn_ON	-
High Beam Assist Failure Message	Sends display status of high beam assist related words. CAN data output value.	No message / HALT / Fail	-
<HBA>High Beam Request Status	Set to Request when high beam is requested for high beam assist module. High beam assist module CAN data output value.	Non Request / Request	-
<HBA>R Range Signal	Set to ON when shift lever is at reverse position. High beam assist module CAN data input value.	ON/OFF	-
<HBA>Head Lamp Low Beam Signal	Set to ON when the headlight low beam illuminates. High beam assist module CAN data input value.	ON/OFF	-
<HBA>Head Lamp High Beam Signal	Set to ON when the headlight high beam illuminates. High beam assist module CAN data input value.	ON/OFF	-
<HBA>High Beam Assist Status	High beam assist module internal status. High beam assist module CAN data output value.	Initialization/No Camera View/Nothing Sensed/Headlight Detect/Tail light Detect/Speed Under Threshold/Day Detect/Village Mode/Yaw Not Used/FAIL /Delay/SAE Mode/Temp Malfunction	-

Item	Contents	Standard/Unit	Note
<HBA>Yaw Rate & Speed Signal	Set to ON during high beam suppression when rounding a curve. High beam assist module CAN data output value.	ON/OFF	-
<HBA>Brightness & Color Detection	Set to Detect when a tunnel is detected. High beam assist module CAN data output value.	No detection / detection	-
<HBA>Street Lamp & Surrounding Detection	Set to Detect when an urban area is detected. High beam assist module CAN data output value.	No detection / detection	-
<HBA>High Speed Signal	Set to ON in high speed mode. High beam assist module CAN data output value.	ON/OFF	-
<HBA>High Beam Assist Camera	Set to Abnormal when camera is faulty. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>ECU	Set to Abnormal when high beam assist module is malfunctioning. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Camera Position Correlation	Set to Abnormal when camera’s angle of view is outside the tolerance. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Adjustment	Set to Completed when high beam assist operation becomes enabled. High beam assist module CAN data output value.	incomplete / Completed	-
<HBA>Registration	Set to Abnormal when specifications are not confirmed. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Lost Communication with VDC	Set to Abnormal when VDC data has not yet arrived. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Invalid Data Received From Vehicle	Set to Abnormal when VDC data is abnormal.	NORMAL / FAIL	-

Item	Contents	Standard/Unit	Note
Dynamics Control Module	High beam assist module CAN data output value.		
<HBA>Lost Communication with Body Integrated Unit(BIU)	Set to Abnormal when body integrated unit data has not yet arrived. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Invalid Data Received from Body Integrated Unit(BIU)	Set to Abnormal when body integrated unit data has not yet arrived. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Lost Communication with Combination Meter (MET)	Set to Abnormal when combination meter data has not yet arrived. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Invalid Data Received from Combination Meter (MET)	Set to Abnormal when combination meter data is abnormal. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Head Lamp Low Beam Specification	High beam assist module CAN data input value. High beam assist module CAN data output value.	Halogen / HID / LED	-
<HBA>Head Lamp High Beam Specification	High beam assist module CAN data input value. High beam assist module CAN data output value.	Halogen / HID / LED	-
<HBA>Lane Recognition Status	High beam assist module lane recognition status. High beam assist module CAN data output value.	Right / Left	-
<HBA>Street Lamp & Surrounding Status	When Street Lamp & Surrounding Status mode is activated, set to Enable. High beam assist module CAN data output value.	Disable / Enable	-
<HBA>Vehicle Yaw Direction	Vehicle input in the yaw direction. High beam assist module CAN data output value.	CENTER / Right / Left	-
<HBA>Destination Code	Vehicle destination. High beam assist module CAN data	JPN U4, U5, U6	-

Item	Contents	Standard/Unit	Note
	output value.	C0 EC, EA, E2, EL K4, C4, C6 KS EK ER, EN KA, KC EH C6	
<HBA>Vehicle Model Information	Vehicle model. High beam assist module CAN data output value.	G/V system/B system/S system	-
<HBA>Vehicle Speed	Vehicle speed (resolution: low). High beam assist module CAN data output value.	-	-
Camera X direction Coordinate	High beam assist module, correction value of the angle of view center position (X coordinate). High beam assist module CAN data output value.	-	-
Camera Y direction Coordinate	High beam assist module, correction value of the angle of view center position (Y coordinate). High beam assist module CAN data output value.	-	-
Lighting I Switch Input	Lighting 1 switch ON/OFF status. Body integrated unit input value. Set to ON while the lighting 1 switch is ON.	ON/OFF	-
Lighting II Switch Input	Lighting 2 switch ON/OFF status. Body integrated unit input value. Set to ON while the lighting 2 switch is ON.	ON/OFF	-
Lighting AUTO input	Lighting AUTO switch ON/OFF status. Body integrated unit input value. Set to ON while the lighting AUTO switch is ON.	ON/OFF	-
Dimmer Hi Switch Input	Dimmer Hi switch ON/OFF status. Body integrated unit input value. Set to ON while the dimmer Hi switch is ON.	ON/OFF	-

Item	Contents	Standard/Unit	Note
Dimmer Pass Switch Input	Dimmer Pass switch ON/OFF status. Body integrated unit input value. Set to ON while the dimmer Pass switch is ON.	ON/OFF	-
Illumination sensor flag	Presence or absence of the illumination sensor. Body integrated unit internal data.	Support / Not Exist	-
Lighting I Lamp Output	Lighting 1 relay output ON/OFF status. Body integrated unit output value. Set to ON while the position light illuminates.	ON/OFF	-
Lighting II Lamp Output	Lighting Lo relay output ON/OFF status. Body integrated unit output value. Set to ON while the lighting Lo illuminates.	ON/OFF	-
Lighting Hi Lamp Output	Lighting Hi relay output ON/OFF status. Body integrated unit output value. Set to ON while the lighting Hi illuminates.	ON/OFF	-
Front Fog Lamp Output	Front fog light relay output ON/OFF status. Body integrated unit output value. Set to ON while the front fog light illuminates.	ON/OFF	-
Power Supply Transistor	Lighting power supply relay output ON/OFF status. Body integrated unit output value. Set to ON while the light illuminates with the key removed or while the key is inserted (including ACC and IGN ON).	ON/OFF	-
Map lamp output	Map light output ON/OFF status. Body integrated unit output value. Set to ON while the map light illuminates with the switch in DOOR position.	ON/OFF	-
Luggage/Trunk lamp output	Luggage/trunk light output ON/OFF status. Body integrated unit output value. Set to ON while the luggage/trunk light illuminates with the switch in DOOR position.	ON/OFF	-
Front washer switch input	ON when the front wiper washer switch is ON. Body integrated unit input value.	ON/OFF	-

Item	Contents	Standard/Unit	Note
Rr Defogger op. mode	Status of the rear defogger operation mode. Body integrated unit custom setting values.	Continuous / Normal	-
Security Alarm Setup	Alarm ON/OFF status when the security system is activated. Body integrated unit custom setting values.	ON/OFF	-
Impact Sensor Setup	Impact sensor ON/OFF status. Body integrated unit custom setting values.	ON/OFF	-
Alarm delay setup	Alarm monitoring delay function ON/OFF status. Body integrated unit custom setting values.	ON/OFF	-
Lockout prevention	Key lockout prevention function ON/OFF status. Body integrated unit custom setting values.	ON/OFF	-
Impact sensor	Presence or absence of the impact sensor. Body integrated unit custom setting values.	Support / Not Exist	-
Answer-back buzzer setup	Answer-back buzzer sounding ON/OFF status. Body integrated unit custom setting values.	ON/OFF	-
Hazard answer-back setup	Hazard answer-back ON/OFF status. Body integrated unit custom setting values.	ON/OFF	-
Answer-back Buzzer	Presence or absence of the answer-back buzzer. Body integrated unit custom setting values.	Support / Not Exist	-
Automatic lock YES/NO	Presence or absence of the auto lock function. Body integrated unit custom setting values.	Support / Not Exist	-
Door open warning	Presence or absence of the door open warning function. Body integrated unit custom setting values.	Support / Not Exist	-
Dome Light Alarm Setting	Room light illumination ON/OFF status when the alarm is activated. Body integrated unit custom setting values.	ON/OFF	-
Auto A/C Setting	Presence or absence of the A/C ECM. Body integrated unit custom setting values.	Support / Not Exist	-

Item	Contents	Standard/Unit	Note
wiperdeicer	Presence or absence of the wiper deicer. Body integrated unit custom setting values.	Support / Not Exist	-
Sedan/Wagon Setting	Vehicle type, Sedan/Wagon (OBK). Body integrated unit custom setting values.	Sedan / Wagon	-
MT/AT Setting	Transmission type, MT/AT (CVT). Body integrated unit custom setting values.	MT/AT	-
Destination Setting	Vehicle destination information. Body integrated unit internal data.	JPN KA,KC KS EU LHD Other than KS Canada (C0, C5) USA (U4, U5, U6, C6) EK,ER	-
Illumination Sensor Setting	Presence or absence of the illumination sensor. Body integrated unit custom setting values.	Support / Not Exist	-

BODY CONTROL(DIAGNOSTICS) > Freeze Frame Data

LIST

Item	Contents	Standard/Unit	Note
BATT voltage (control)	Constant power supply from the battery. Input value to the body integrated unit.	0 — 21.5 V	-
BATT voltage (BACKUP)	Constant power supply from the battery. Input value to the body integrated unit.	0 — 21.5 V	-
IGN voltage	IG system circuit voltage. Input value to the body integrated unit.	0 — 21.5 V	-
ACC voltage	ACC system circuit voltage. Input value to the body integrated unit.	0 — 21.5 V	-
Front Wheel Speed	Front wheel average speed. CAN data input value. Received from the VDC CM.	km/h	-
Fuel consumption	Injection quantity per 1 sec calculated from an instantaneous fuel injection quantity per 50 msec. CAN data input value. Received from the ECM.	cc/s	-
Coolant Temp.	Engine coolant temperature. CAN data input value. Received from the ECM.	−40 — 215°C	-
Shift Position	Shift position. CAN data input value. Received from the TCM.	1 — 3, D-S, D, N, R, P	-
Buzzer beeping request	Passenger room buzzer beeping request. CAN data output value. Sent to the combination meter.	Status for 'beeping deactivated' Reverse warning Key warning buzzer Light Remained Buzzer	-

Item	Contents	Standard/Unit	Note
		Customize 1 Customize 2 Registration completed 1 Registration completed 2 registered Registration NG	
EPB operating status	EPB operating status. CAN data input value, received from the VDC.	Error Released Operate Operating Releasing Parking	-
Destination	Vehicle destination information. CAN data receiving value. Received from the combination meter.	JPN U4, U5, U6 C0 EC, EA, E2, EL K4, C4, C6 KS EK ER, EN KA, KC EH C6	—
Illumination Sensor Output	Output voltage from the illumination sensor. Body integrated unit input value.	0 — 5 V	—
Off delay time	Interior light off delay time. Body integrated unit custom setting values.	OFF 10 Sec 20 Sec 30 Sec	-
Auto Light Sensitivity Adjustment	Sensitivity of auto light function. Body integrated unit custom setting values.	Dull Normal Sensitive Very sensitive	-
Key-lock Warning SW	Key warning switch ON/OFF status. Body integrated unit input value. Set to ON when the ignition key is inserted.	ON/OFF	Model without keyless access with push button start system
ACC Input	ACC ON/OFF status. Body integrated unit input value. Set to ON when the ignition switch is turned to ACC.	ON/OFF	Model with keyless access with push button start system

Item	Contents	Standard/Unit	Note
Stop Light Switch	Brake switch ON/OFF status. Body integrated unit input value. Set to ON when the brake pedal is pressed.	ON/OFF	-
Front fog lamp SW input	Front fog light switch ON/OFF status. Body integrated unit input value. Set to ON when the front fog light switch is ON.	ON/OFF	-
Driver's door SW input	Driver’s door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
P-door SW input	Passenger’s door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
Rear right door SW input	Rear right door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
Rear left door SW input	Rear left door switch ON/OFF status. Body integrated unit input value. Set to ON when the door is open.	ON/OFF	-
R Gate SW input	Rear gate / trunk switch ON/OFF status. Body integrated unit input value. Set to ON when the rear gate / trunk is open.	ON/OFF	-
Manual lock SW input	ON/OFF status of the manual lock switch located on the power window main switch (or on the passenger’s side power window switch). Body integrated unit input value. Set to ON when the manual lock switch is set to lock.	ON/OFF	-
Manual unlock SW input	ON/OFF status of the manual lock switch located on the power window main switch (or on the passenger’s side power window switch). Body integrated unit input value. Set to ON when the manual lock switch is set to unlock.	ON/OFF	-
P SW	P range switch ON/OFF status. Body integrated unit input value. Set to ON in the P range.	ON/OFF	-

Item	Contents	Standard/Unit	Note
MT Reverse SW	MT back-up light switch ON/OFF status. Body integrated unit input value. Set to ON when the shift lever is set to R range and the back-up light switch is ON.	ON/OFF	-
R wiper ON SW input	Rear wiper ON switch ON/OFF status. Body integrated unit input value. Set to ON when the rear wiper switch is ON.	ON/OFF	-
R wiper INT SW input	Rear wiper INT switch ON/OFF status. Body integrated unit input value. Set to ON when the rear wiper switch is in the INT position.	ON/OFF	-
R washer SW input	Rear washer switch ON/OFF status. Body integrated unit input value. Set to ON when the rear washer switch is ON.	ON/OFF	-
Fr wiper input	Front wiper return switch ON/OFF status. Body integrated unit input value. Set to ON when the front wiper is outside of the stop position.	ON/OFF	-
Driver's seat lock status SW input	ON/OFF status of the driver’s seat lock status switch. Body integrated unit input value. Set to ON when the door status is LOCK.	ON/OFF	Model with keyless access with push button start system
Passenger's seat lock status SW input	ON/OFF status of the passenger’s seat lock status switch. Body integrated unit input value. Set to ON when the door status is LOCK.	ON/OFF	Model with keyless access with push button start system
R gate lock status SW input	ON/OFF status of the rear gate lock status switch. Body integrated unit input value. Set to ON when the rear gate status is LOCK.	ON/OFF	-
R Gate Release SW input	ON/OFF status of the rear gate release switch / trunk opener switch. Body integrated unit input value. Set to ON when the rear gate release switch / trunk opener switch is pressed.	ON/OFF	-
Rr Defogger output	Rear defogger relay output ON/OFF status. Body integrated unit output value. Set to ON when the rear	ON/OFF	-

Item	Contents	Standard/Unit	Note
	defogger is activated.		
lock actuator LOCK output	Door lock actuator output ON/OFF status. Body integrated unit output value. Set to ON when a lock signal is output.	ON/OFF	-
All seat UNLOCK output	ON/OFF status of the all door lock actuator output. Body integrated unit output value. Set to ON when an all door unlock signal is output.	ON/OFF	-
D-seat UNLOCK output	ON/OFF status of the driver’s door lock actuator output Body integrated unit output value. Set to ON when a driver’s door / all door unlock signal is output.	ON/OFF	-
R gate/trunk UNLK output	Rear gate / trunk lock actuator ON/OFF status. Body integrated unit output value. Set to ON when an unlock signal is output.	ON/OFF	-
R wiper output	Rear wiper relay output ON/OFF status. Body integrated unit output value. Set to ON when the rear wiper is activated.	ON/OFF	-
Shift lock solenoid output	Shift lock solenoid output ON/OFF status. Body integrated unit output value. Solenoid is activated to set this item to ON when depressing the brake pedal with the shift lever in P range.	ON/OFF	-
Key lock solenoid output	Key lock solenoid output ON/OFF status. Body integrated unit output value. Solenoid is activated to set this item to ON when the key is inserted with the shift lever in other than P range.	ON/OFF	Model without keyless access with push button start system
wiper deicer output	Wiper deicer output ON/OFF status. Body integrated unit output value. Set to ON while the wiper deicer is operating.	ON/OFF	-
Keyless Buzzer Output	Keyless buzzer ON/OFF status. Body integrated unit output value. Set to ON while the keyless buzzer is sounding.	ON/OFF	-

Item	Contents	Standard/Unit	Note
Horn Output	Security horn output ON/OFF status. Body integrated unit output value. Set to ON while the horn is sounding due to a security breach.	ON/OFF	-
Room lamp output	Room light output ON/OFF status. Body integrated unit output value. Set to ON while the room light illuminates with the switch in DOOR position.	ON/OFF	-
key illumination lamp o/p	Key illumination light output ON/OFF status. Body integrated unit output value. Set to ON while the key illumination light illuminates.	ON/OFF	Model without keyless access with push button start system
Immobilizer lamp output	Security indicator output ON/OFF status. Body integrated unit output value. Set to ON while the security indicator in the combination meter illuminates.	ON/OFF	-
Small Light SW	Lighting 1 relay CAN output ON/OFF status. CAN data sending value. Set to ON when the position light indicator in the combination meter illuminates.	ON/OFF	-
Headlamp	Lighting Lo relay CAN output ON/OFF status. CAN data output value. Set to ON when the headlight Lo illuminates.	ON/OFF	-
High Beam	Lighting Hi relay CAN output ON/OFF status. CAN data output value. Set to ON when the headlight Hi illuminates.	ON/OFF	-
Lane change signal setting	Presence or absence of the one-touch blinker control. Body integrated unit custom setting values.	Support / Not Exist	-
Rear wiper auto setting	Presence or absence of the rear wiper control linked with reverse shift. Body integrated unit custom setting values.	Support / Not Exist	-
Left turn signal input	Left turn signal switch ON/OFF status. Body integrated unit input value. Set to ON while the left turn	ON/OFF	-

Item	Contents	Standard/Unit	Note
	signal switch is ON.		
Right turn signal input	Right turn signal switch ON/OFF status. Body integrated unit input value. Set to ON while the right turn signal switch is ON.	ON/OFF	-
Left turn signal output	Left turn signal light output ON/OFF status. Body integrated unit output value. Set to ON while the left turn signal light illuminates.	ON/OFF	-
Right turn signal output	Right turn signal light output ON/OFF status. Body integrated unit output value. Set to ON while the right turn signal light illuminates.	ON/OFF	-
Driver's Door Unlock Setting	Presence or absence of the driver’s seat select unlock control. Body integrated unit custom setting values.	Selection / ALL	Model with keyless access with push button start system
Rear Gate Unlock Setting	Presence or absence of the rear gate select unlock control. Body integrated unit custom setting values.	Selection / ALL	Model with keyless access with push button start system
Wiper link Auto Light Setup	ON/OFF status of the wiper interlock auto light function control. Body integrated unit custom setting values.	ON/OFF	-
High Beam Assist Function Setting (mirror/EyeSight)	Presence or absence of high beam assist. Body integrated unit custom setting values.	Not Exist / mirror HBA / EyeSight HBA	-
Head Lamp Low Beam Specification	Headlight low beam light source type. Body integrated unit custom setting values.	Halogen / HID / LED	-
Head Lamp High Beam Specification	Headlight high beam light source type. Body integrated unit custom setting values.	Halogen / HID / LED	-
High Beam Assist Current Setting	Presence or absence of high beam assist. Body integrated unit custom setting values.	ON/OFF	-

Item	Contents	Standard/Unit	Note
High Beam Assist Active Indicator	Set to ON when high beam assist is activated. CAN data output value.	Turn_OFF / Turn_ON / Flashing	-
High Beam Assist Failure Indicator	Set to ON when high beam assist fails. CAN data output value.	Turn_OFF / Turn_ON	-
High Beam Assist Failure Message	Sends display status of high beam assist related words. CAN data output value.	No message / HALT / Fail	-
[<HBA>High Beam Request Status]	Set to Request when high beam is requested for high beam assist module. High beam assist module CAN data output value.	Non Request / Request	-
<HBA>R Range Signal	Set to ON when shift lever is at reverse position. High beam assist module CAN data input value.	ON/OFF	-
<HBA>Head Lamp Low Beam Signal	Set to ON when the headlight low beam illuminates. High beam assist module CAN data input value.	ON/OFF	-
<HBA>Head Lamp High Beam Signal	Set to ON when the headlight high beam illuminates. High beam assist module CAN data input value.	ON/OFF	-
<HBA>High Beam Assist Status	High beam assist module internal status. High beam assist module CAN data output value.	Initialization/No Camera View/Nothing Sensed/Headlight Detect/Tail light Detect/Speed Under Threshold/Day Detect/Village Mode/Yaw Not Used/FAIL /Delay/SAE Mode/Temp Malfunction	-

Item	Contents	Standard/Unit	Note
<HBA>Yaw Rate & Speed Signal	Set to ON during high beam suppression when rounding a curve. High beam assist module CAN data output value.	ON/OFF	-
<HBA>Brightness & Color Detection	Set to Detect when a tunnel is detected. High beam assist module CAN data output value.	No detection / detection	-
<HBA>Street Lamp & Surrounding Detection	Set to Detect when an urban area is detected. High beam assist module CAN data output value.	No detection / detection	-
<HBA>High Speed Signal	Set to ON in high speed mode. High beam assist module CAN data output value.	ON/OFF	-
<HBA>High Beam Assist Camera	Set to Abnormal when camera is faulty. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA> ECU	Set to Abnormal when high beam assist module is malfunctioning. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Camera Position Correlation	Set to Abnormal when camera’s angle of view is outside the tolerance. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA> Adjustment	Set to Completed when high beam assist operation becomes enabled. High beam assist module CAN data output value.	incomplete / Completed	-
<HBA> Registration	Set to Abnormal when specifications are not confirmed. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Lost Communication with VDC	Set to Abnormal when VDC data has not yet arrived. High beam assist module CAN data output value.	NORMAL / FAIL	-
<HBA>Invalid Data Received from VDC	Set to Abnormal when VDC data is abnormal.	NORMAL / FAIL	-

BODY CONTROL(DIAGNOSTICS) > Active Test

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Body Control], and then select [Enter].
5. On [Select Function] display, select [Active Test].

Note:

For detailed operation procedures, refer to "Application help".

BODY CONTROL(DIAGNOSTICS) > Active Test

LIST

Note:

If not equipped (depending on destination area or vehicle equipment condition), process will not go on.

Active test items	Range	Execution condition	Contents
lock actuator LOCK output	ON/OFF		
All seat UNLOCK output	ON/OFF		
R gate/trunk UNLOCK output	ON/OFF		
Shift lock solenoid output	ON/OFF		
Key lock solenoid output	ON/OFF		
Keyless Buzzer	ON/OFF		
Horn Output	ON/OFF		

BODY CONTROL(DIAGNOSTICS) > Customize

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Body Control], and then select [Enter].
5. On [Select Function] display, select [Customize].
6. When the setting is complete, make sure that the alterations by [Data monitor] are consistent with the actual equipment on the vehicle.

Note:

- **For detailed operation procedures, refer to "Application help".**
- **If not equipped (depending on destination area or vehicle equipment condition), process will not go on.**

BODY CONTROL(DIAGNOSTICS) > Customize

LIST

Caution:

- **The setting items must match the actual vehicle equipment.**
- **Do not change settings except for setting below while setting the functions.**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

Data	Initial setting value	Customize setting	Remarks
Off delay time	30s	OFF 10 Sec 20 Sec 30s	Room light off delay time can be selected.
Auto Light Sensitivity Adjustment	Sensitive	Dull Normal Sensitive Very sensitive	Sensitivity of the automatic lighting can be adjusted.
Lane change signal setting	ON	ON OFF	ON: One-touch blinker function operates. OFF: One-touch blinker function does not operate.
Rear wiper auto setting	OFF (U0, U4, U5 model) ON (C0, C5 model)	ON OFF	ON: Rear wiper operates in sync with the reverse shift. OFF: Rear wiper does not operate in sync with the reverse shift.
Driver's Door Unlock Setting	Selection	Selection ALL	Selection: When the touch sensor (unlock) on the driver's side is touched,

Data	Initial setting value	Customize setting	Remarks
			only the driver’s door is unlocked. When the touch sensor (unlock) on the passenger’s side is touched, all doors are unlocked. ALL: When the touch sensor (unlock) on the driver’s side is touched, all doors are unlocked. When the touch sensor (unlock) on the passenger’s side is touched, all doors are unlocked.
Rear Gate Unlock Setting	Selection	Selection ALL	Selection: When the rear gate opener button is pressed, only the rear gate is unlocked. ALL: When the rear gate opener button is pressed, all doors are unlocked.
Wiper link Auto Light Setup	ON	ON OFF	ON: Wiper interlock auto light function is activated. OFF: Wiper interlock auto light function is deactivated.
High Beam Assist Function Setting (mirror/EyeSight)	— (*1)	None mirror HBA EyeSight HBA	Set to ON for models with high beam assist.
Head Lamp Low Beam Specification	— (*1)	Halogen HID LED	Set according to the headlight type.
Head Lamp High Beam Specification	— (*1)	Halogen HID LED	Set according to the headlight type.
High Beam Assist Current Setting	— (*1)	ON OFF	Set to ON for models with high beam.
Rear defogger operation mode	Normal	Normal Continuous	Normal: Automatically stops in 15 minutes after the switch is turned to ON. Continuous: Repeats the cycle of 15-minute active condition and 2-minute inactive condition until the switch is turned to OFF.
Security Alarm Setup	ON	ON OFF	ON: Warning function (hazard, horn) is activated. OFF: Warning function (hazard, horn) is deactivated.

Data	Initial setting value	Customize setting	Remarks
Impact Sensor Setup	OFF	ON OFF	ON: Impact sensor is activated. OFF: Impact sensor is deactivated. (Set to “OFF” in models without the impact sensor.)
Alarm delay setup	ON	ON OFF	ON: The alarm monitor starts 30 seconds after the keyless lock operation. OFF: The alarm monitor starts immediately after the keyless lock operation.
Lockout prevention	ON	ON OFF	ON: Key lockout prevention function is activated. (The function does not operate if safety knob is locked by hand.) OFF: Key lockout prevention function is deactivated.
Impact sensor	None	ON None	ON: Vehicle is controlled in impact sensor equipped mode. (Make sure to set to “OFF” for models without the impact sensor. When set to “ON”, hazard, horn or siren become activated by keyless lock (alarm monitor start).) OFF: Vehicle is controlled in no impact sensor mode.
Buzzer sounding setting	ON	ON OFF	ON: Buzzer sounds when lock/unlock is selected by keyless entry system. OFF: Buzzer does not sound when lock/unlock is selected by keyless entry system.
Abnormal warning lamp flashing setting	ON	ON OFF	ON: Buzzer sounds when lock/unlock is selected by keyless entry system. OFF: Buzzer does not sound when lock/unlock is selected by keyless entry system.
Initial keyless setting	—	— Execution	—
Initial button setting	—	— Execution	—
Initial Security setting	—	— Execution	—
Door open warning	ON	ON None	ON: If a door stays half shut for 20 minutes, interior lighting linked with the

Data	Initial setting value	Customize setting	Remarks
			door such as room light, map light, luggage room light, trunk room light and key ring illumination go off to prevent battery run-out. OFF: Room light, map light, luggage room light, trunk room light, key ring illumination and door warning light remain lit.
Dome Light Alarm Setting	OFF	ON OFF	ON: Room light illumination is interlocked with the alarm. OFF: Room light illumination is not interlocked with the alarm.
Welcome Light Off Delay Time(Exiting)	30 seconds	OFF 30 seconds 60 seconds 90 seconds	Lighting time length of the welcome lighting (exiting) function can be set.
Welcome Light Off Delay Time(Approaching)	30 seconds	OFF 30 seconds 60 seconds 90 seconds	Lighting time length of the welcome lighting (approaching) function can be set.
Keyless Buzzer Volume	5	1 — 7	Buzzer volume can be set.
Auto Dimmer Cancel Setting	3	0 (OFF) Least 2 Normal 4 Most	Auto dimmer cancel sensitivity can be set.

*1: Customization item according to the actual vehicle equipment

OPERATION

1. CONFIRM CURRENT SETTING

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Body Control], and then select [Enter].
5. On [Select Function] display, select [Customize].
6. Save the setting.

REQUIRED ITEMS FOR NEW REGISTRATION. (EXCEPT FOR SYSTEM NOT EQUIPPED)

2. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

Caution:

For the body integrated unit, function selection is available to control the entire vehicle systems. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.

- **Be sure to match registrations or customizing settings with vehicle equipment.**
- **Do not change the settings of vehicle improperly.**
- **Make sure that the key illumination does not blink with ignition switch ON, or that the body integrated unit registration item [Factory initial setting] is set to [Market]. If [Factory initial setting] is set to [Factory], the key illumination blinks when the ignition switch is turned ON, to notify that the settings are not confirmed. (If the vehicle is a model with the keyless access with push button start system, check by the data monitor of Subaru Select Monitor because no key illumination is available.)**
- **Key illumination does not blink with ignition switch turned to ON and go off with door closed. (Except for model with the keyless access with push button start system)**
- **Be sure to register immobilizer if body integrated unit is replaced with a new part. (Except for model with the keyless access with push button start system)**
- **Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Body Control], and then select [Enter].
5. On [Select Function] display, select [Customize].

Note:

For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen. Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit>OPERATION > DESTINATION SETTING.

6. Change the setting to the contents saved at confirmation of current setting.

Caution:

- **To perform normal operation of vehicle and diagnosis, the above settings must match the actual vehicle equipment.**
- **When the body integrated unit is new or in Factory mode, the key illumination blinks, and customizing is incomplete. Check the customizing settings. (For models with keyless access with push button start system, the room light illuminates.)**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

Note:

"Factory" mode:

- **Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON. (Except for model with the keyless access with push button start system)**
- **All replacement body integrated units are set to "Factory" mode. When replacing a body integrated unit, be sure to perform the registration operation.**

"Market" mode:

- **Each settings have been set. It can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON. (Except for model with the keyless access with push button start system)**

7. Perform the factory initial setting. Select Factory initial setting on [Customize] of Subaru Select Monitor.

8. Change the mode from Factory to Market.

9. Turn the ignition switch to OFF to settle the setting.

10. Perform the customizing. Ref. to BODY CONTROL(DIAGNOSTICS)>Customize.

11. Register the immobilizer key. Follow the procedure of the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. (Models without the keyless access with push button start system, and except for C5 model)

12. For vehicles with remote engine starter, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume and perform registration of the remote engine starter. (Models without the keyless access with push button start system)

3. DESTINATION SETTING

Note:

For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen.

1. CONFIRM CURRENT SETTING.

Always perform confirmation of current setting before replacing the module.
Record the contents of the "Destination Setting".

Note:

Refer to Read Data Monitor and Confirm Current Setting to confirm the current setting.
Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor. **Ref. to BODY CONTROL(DIAGNOSTICS)>Registration Body Integrated Unit>OPERATION > CONFIRM CURRENT SETTING.**

Is the current setting recorded?

Yes	Go to 2.
No	Confirm the current setting. Go to 1.

2. CONFIRM DESTINATION SETTING.

1. Connect the Subaru Select Monitor, and run the application.
2. On [Start] display, select [Diagnosis].
3. On [Vehicle selection] display, input the target vehicle information and select [OK].
4. On [Main Menu] display, select [Each System].
5. On [Select System] display, select [Body Control], and then select [Enter].
6. On [Select Function] display, select [Customize].
7. The vehicle destination screen is displayed.

Is the vehicle destination setting screen displayed?

Yes	Go to 3.
No	Go to 4.

3. CONFIRM DESTINATION SETTING.

Confirm the screen displayed on Subaru Select Monitor and the actual vehicle destination.

Is it necessary to change the destination setting?

Yes	Select Yes, and Go to 4.
No	Select No, and Go to 5.

4. ENTER DESTINATION CODE.

Enter the appropriate code in the screen.
JPN: JP00
KA, KC: KA00
KS: KS00
U4, U5, U6, C6 and C0, C5 (with the keyless access with push button start system): U400
C0, C5 (without the keyless access with push button start system): C000
EK, ER: EK00
Except above: EC00

Is the appropriate code entered?

Yes	Select [OK]. Go to 5.
No	Enter the destination code. Go to 4.

5. REGISTER VEHICLE EQUIPMENT.

Customizing screen is displayed.

Note:

Match the each item setting of body integrated unit registration item list with the vehicle equipment.

Do all setting contents match with the vehicle equipment specification?

Yes	Go to 6.
No	Change the items until each content setting match with the vehicle equipment specification. Go to 5.

6. CONFIRM MARKET MODE.

1. On the customizing screen, select the "Factory initial setting" to change the setting from "Factory mode" to "Market mode".
2. Turn the ignition switch to OFF.
   Note:
   When the setting is changed from "Factory" mode to "Market" mode, turning the ignition switch from ON → OFF confirms the setting.
3. Turn the ignition switch to ON, and check the contents of settings.

Is the mode changed to "Market" mode?

Yes	Go to 7.
No	Perform the destination setting from the first step. Go to 1.

7. CONFIRM MARKET MODE.

Check the following.
Make sure that the "Destination Setting" in the data monitor is the same as the one you confirmed in step 1.

Is the display the same as indicated?

Yes	Registration of body integrated unit is finished.
No	It is possible that harness malfunction may occur. Perform the diagnosis.

BODY CONTROL(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**
- **For details on DTCs, refer to the list. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.**

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1010 BODY CONTROL SYSTEM (BIU) MALFUNCTION

DTC detecting condition:
System error in body integrated unit
Trouble symptom:
LAN communication immobilizer function may not be executed normally.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1010 displayed? (Current malfunction)

Yes	Go to 2.
No	Temporary EEPROM access error occurred.

2. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Connect the disconnected connectors.
4. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1010 displayed? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Temporary EEPROM access error occurred.

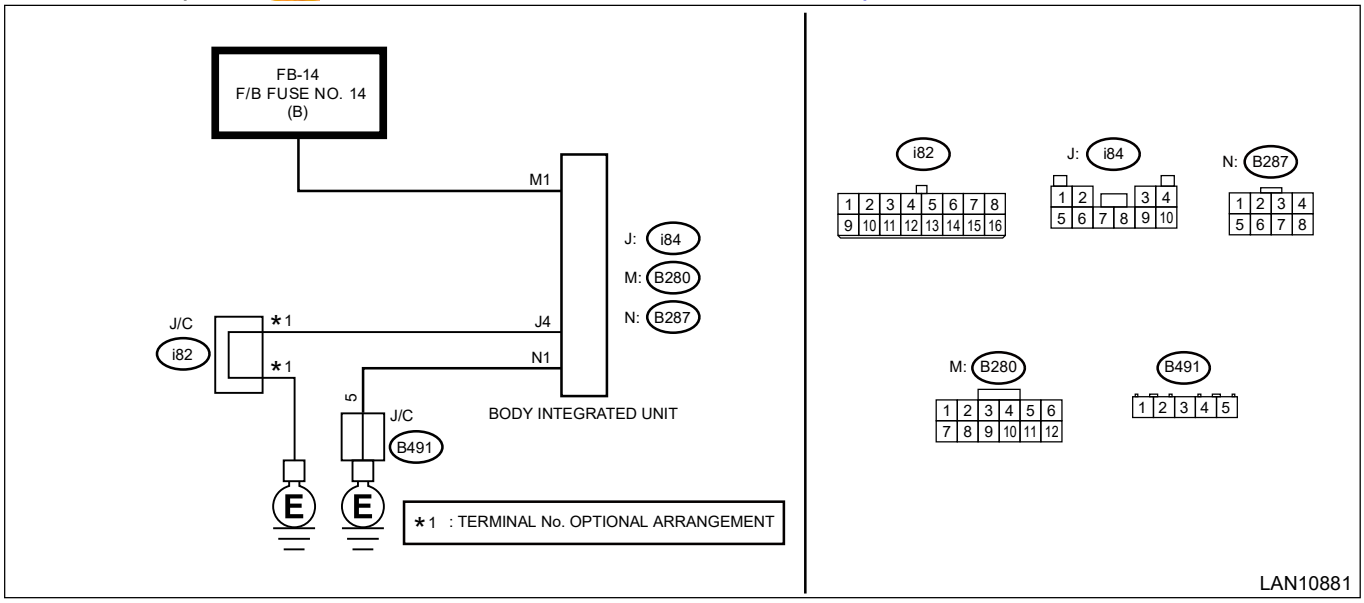
BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1011 BATTERY CONTROL POWER SUPPLY

DTC detecting condition:

- Voltage failure caused by poor contact of battery power supply control circuit
- Battery voltage of body integrated unit is not within the range of 8.5 — 16.5 V.

Trouble symptom:



Functions of body integrated unit stop.

Note:

When [DTC B1012 BATTERY BACKUP POWER SUPPLY] is output at the same time, all function of body integrated unit may not operate.

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1011 displayed? (Current malfunction)

Yes	Go to 2.
No	Go to 5.

2. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect and then connect the body integrated unit connector.
3. Wait approx. 2 minutes.
4. Turn the ignition switch to ON.
5. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1011 displayed? (Current malfunction)

Yes	Go to 3.
No	Go to 5.

3. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the defective fuse.

4. CHECK HARNESS.

1. Disconnect the body integrated unit connector.
2. Using the tester, measure the voltage between terminals.

Connector & terminal

(B280) No. 1 (+) — Chassis ground (−):

Is the voltage 8.5 — 16.5 V?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair the harness between body integrated unit and fuse.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.

Is there poor contact of connector?

Yes	Repair or replace the poor contact of connector.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

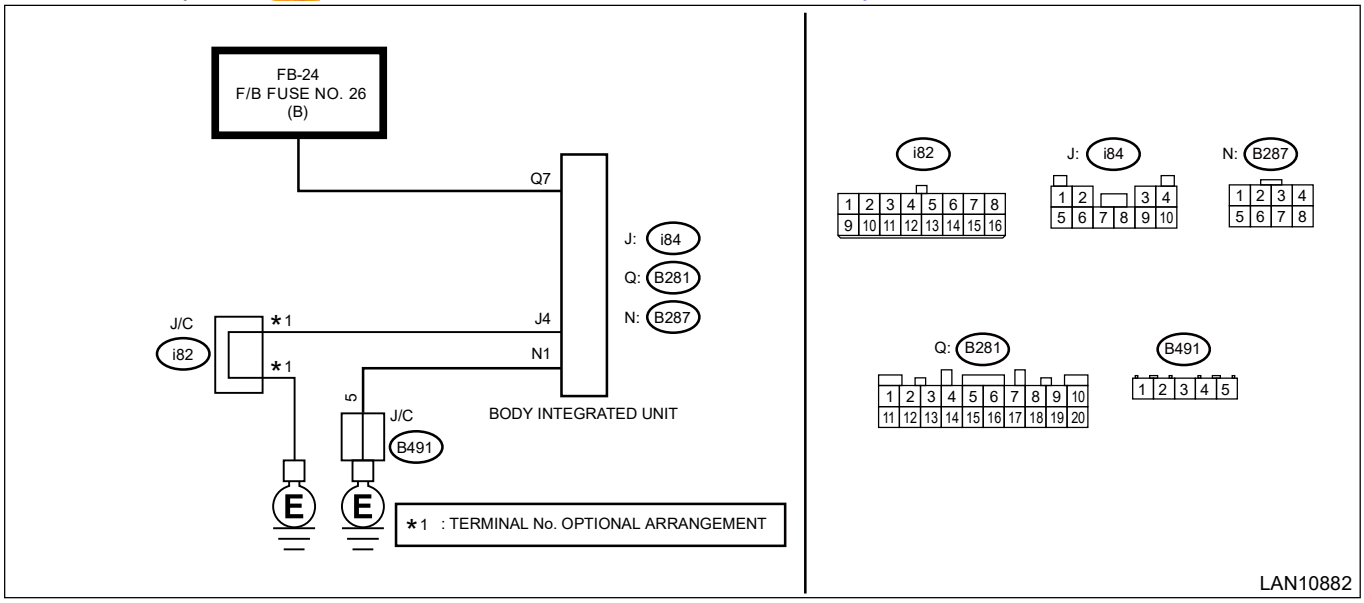
BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1012 BATTERY BACKUP POWER SUPPLY

DTC detecting condition:

Voltage failure caused by poor contact of battery power supply backup circuits

Trouble symptom:



Illuminations for the keyless entry, map light, luggage light, trunk light, room light, and ignition switch do not turn on.

Note:

When [DTC B1011 BATTERY CONTROL POWER SUPPLY] is output at the same time, all function of body integrated unit may not operate.

Wiring diagram:

Immobilizer system Ref. to WIRING SYSTEM>Immobilizer System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1012 displayed? (Current malfunction)

Yes	Go to 2.
No	Go to 5.

2. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect and then connect the body integrated unit connector.
3. Wait approx. 2 minutes.
4. Turn the ignition switch to ON.
5. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1012 displayed? (Current malfunction)

Yes	Go to 3.
No	Go to 5.

3. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the defective fuse.

4. CHECK HARNESS.

1. Disconnect the body integrated unit connector.
2. Using the tester, measure the voltage between terminals.

Connector & terminal

(B281) No. 7 (+) — Chassis ground (−):

Is the voltage 8.5 — 16.5 V?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair the harness between body integrated unit and fuse.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.

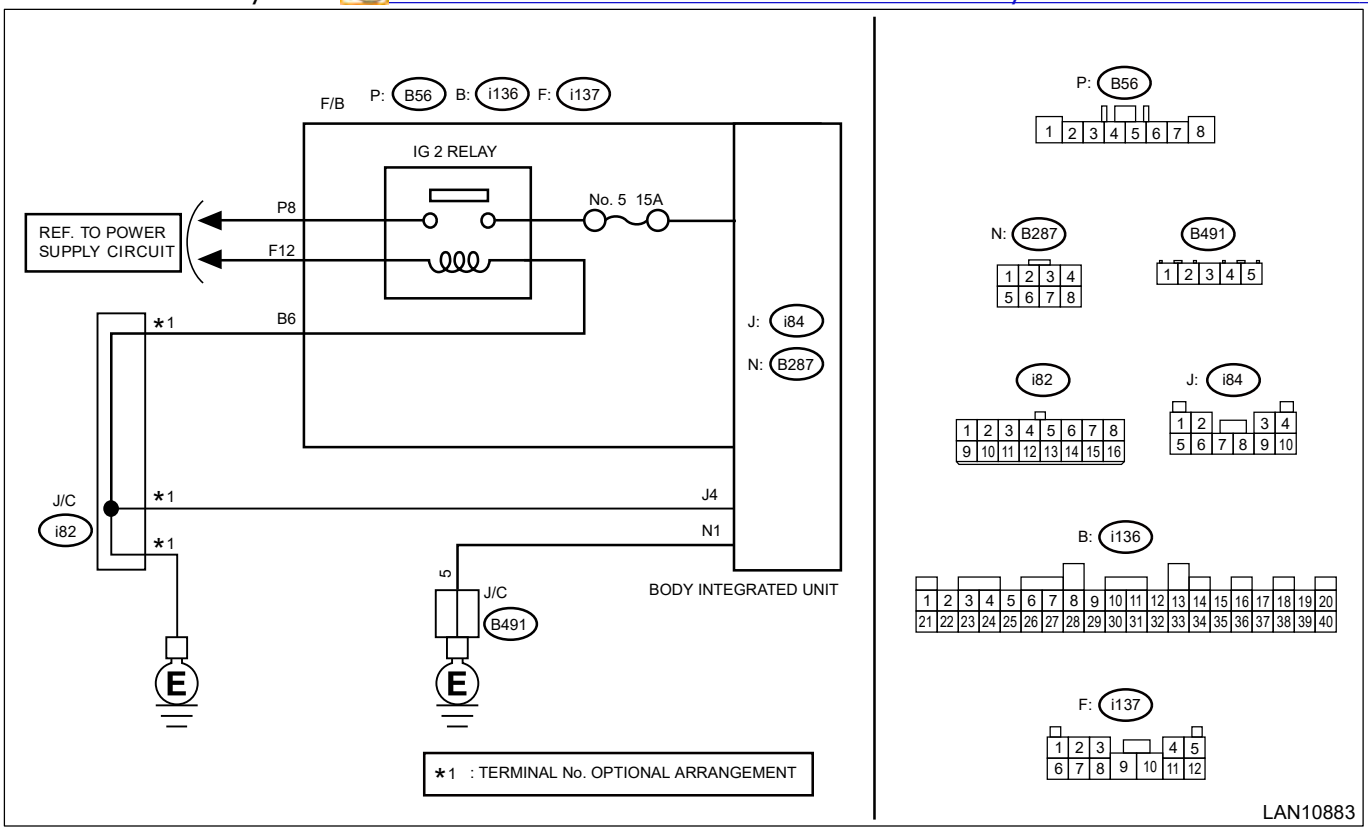
Is there poor contact of connector?

Yes	Repair or replace the poor contact of connector.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1013 IGNITION POWER

DTC detecting condition:



Voltage failure caused by poor contact of IGN power supply circuits

Trouble symptom:

Symptoms such as shift lock or wiper not operating may occur.

Wiring diagram:

Shift lock control system Ref. to WIRING SYSTEM>Shift Lock Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1013 displayed? (Current malfunction)

Yes	Go to 2.
No	Go to 6.

2. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect and then connect the body integrated unit connector.
3. Wait approx. 2 minutes.
4. Turn the ignition switch to ON.
5. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1013 displayed? (Current malfunction)

Yes	Go to 3.
No	Go to 6.

3. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the defective fuse.

4. CHECK HARNESS.

1. Disconnect the F/B connector.
2. Use a tester to measure the voltage between the battery and F/B connector.
   Connector & terminal
   (B56) No. 8 (+) — Chassis ground (−):

Is the voltage 8.5 — 16.5 V?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Go to 5.

5. CHECK RELAY.

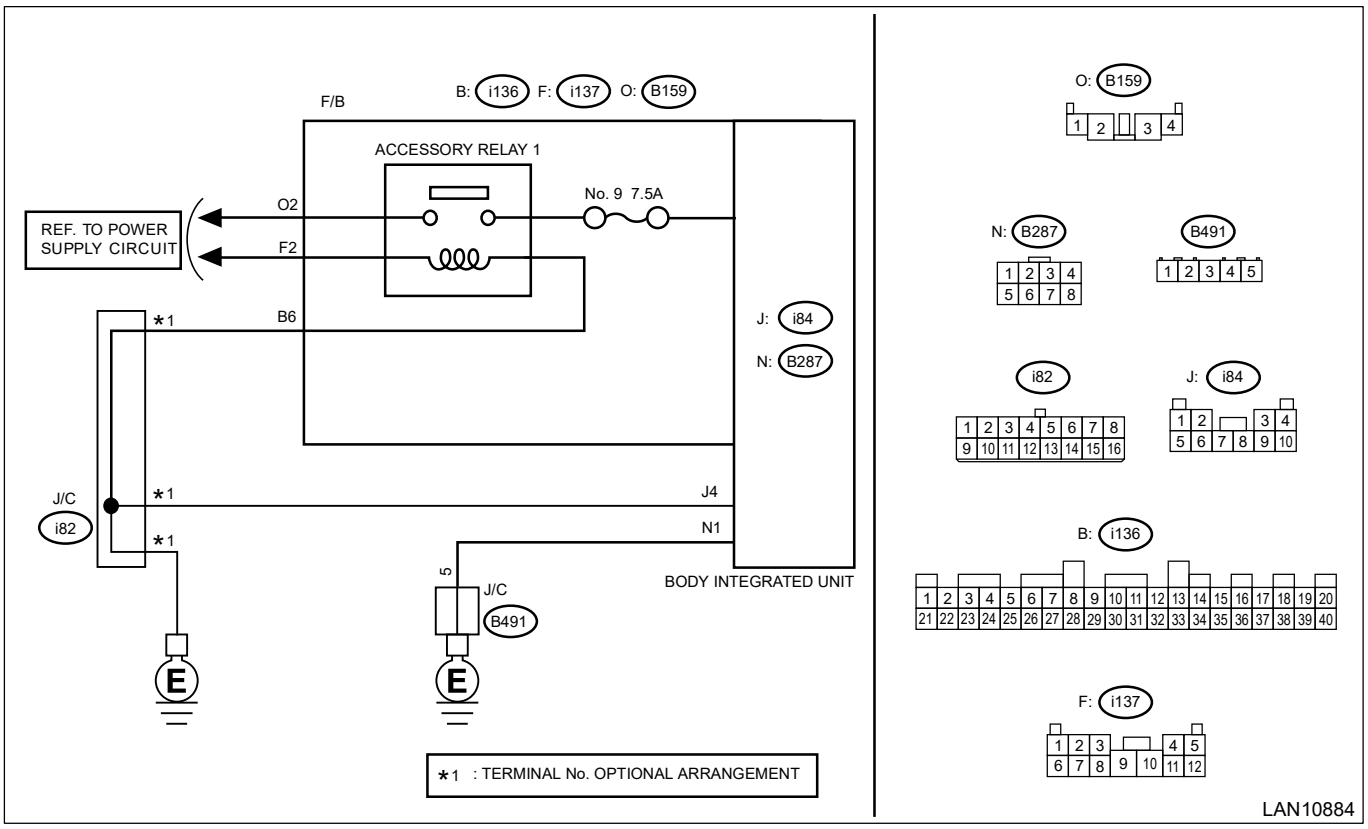
Perform individual inspection of IG2 relay.

Is the relay OK?

Yes	Repair the harness between F/B and M/B.
No	Replace the relay.

6. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.



Is there poor contact of connector?

Yes	Repair or replace the poor contact of connector.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1014 ACC POWER

DTC detecting condition:
Voltage failure caused by poor contact of ACC power supply circuit
Trouble symptom:
DRL may not illuminate.
Wiring diagram:
Shift lock control system Ref. to WIRING SYSTEM>Shift Lock Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1014 displayed? (Current malfunction)

Yes	Go to 2.
No	Go to 6.

2. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Disconnect and then connect the body integrated unit connector.
3. Wait approx. 2 minutes.
4. Turn the ignition switch to ON.
5. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1014 displayed? (Current malfunction)

Yes	Go to 3.
No	Go to 6.

3. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the defective fuse.

4. CHECK HARNESS.

1. Disconnect the F/B connector.
2. Use a tester to measure the voltage between the battery and F/B connector.
   Connector & terminal
   (B159) No. 2 (+) — Chassis ground (−):

Is the voltage 8.5 — 16.5 V?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair the harness between body integrated unit and fuse.

5. CHECK RELAY.

Perform individual inspection of the accessory relay 1. Ref. to SECURITY AND LOCKS>Relay and Fuse.

Is the relay OK?

Yes	Repair the harness between F/B and M/B.
No	Replace the relay.

6. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.

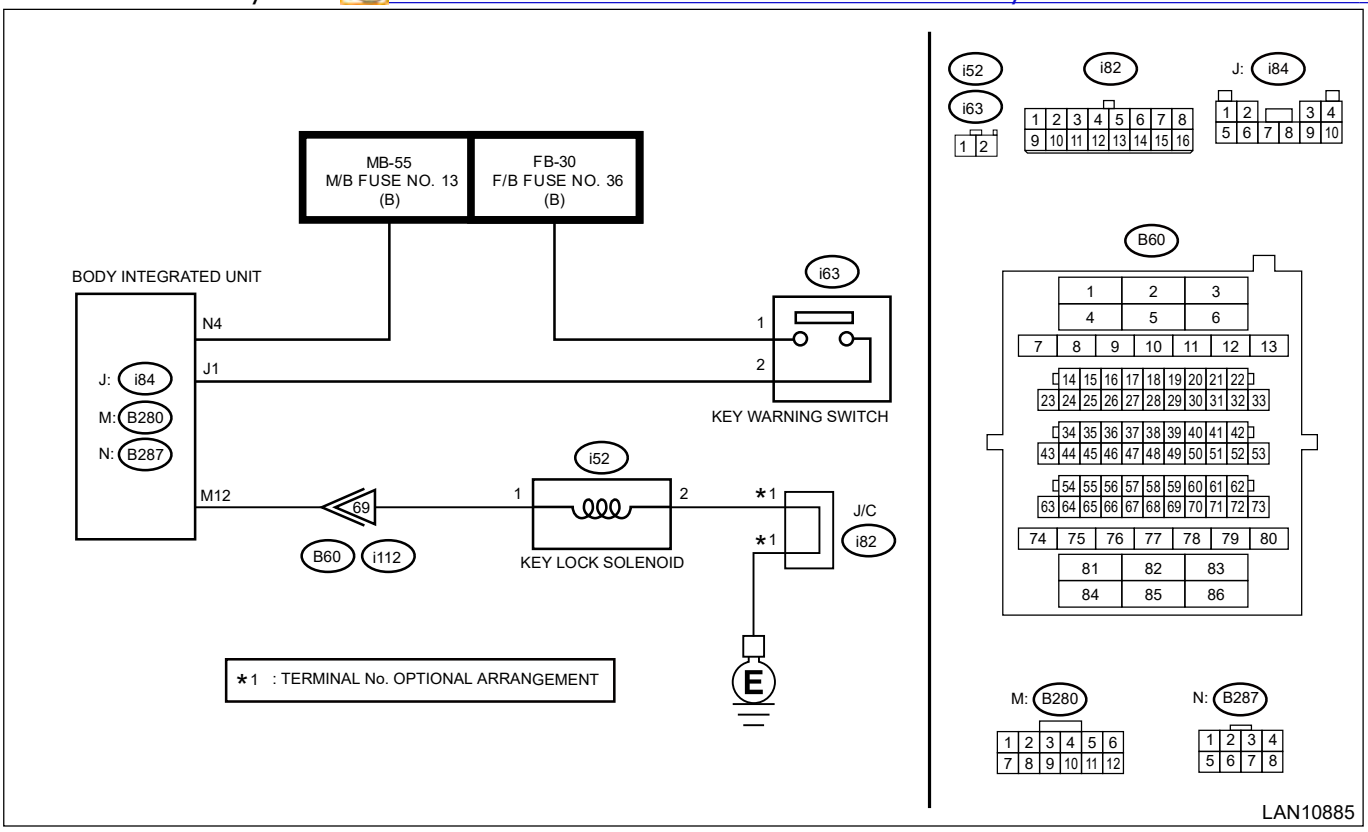
Is the check result OK?

Yes	Repair or replace the poor contact of connector.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1015 KEY INTERLOCK CIRCUIT

DTC detecting condition:



Ground short of key interlock circuit

Trouble symptom:

Key interlock does not keep lock condition.

Wiring diagram:

Shift lock control system Ref. to WIRING SYSTEM>Shift Lock Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Insert the ignition key.
2. Turn the ignition switch to ON.
3. Shift to the Neutral range.
4. Shift into P range.
5. Shift to the Neutral range.
6. Shift into P range.
7. Shift to the Neutral range.
8. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1015 displayed? (Current malfunction)

Yes	Go to 2.
No	Go to 8.

2. CHECK DTC.

1. Shift the select lever to P range.
2. Remove the ignition key.
3. Disconnect the key actuator connector (i52) and body integrated unit connector (B280).
4. Connect the disconnected connectors.
5. Insert the ignition key.
6. Turn the ignition switch to ON and shift into Neutral.
7. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1015 displayed? (Current malfunction)

Yes	Go to 3.
No	Go to 8.

3. CHECK KEY ACTUATOR.

1. Turn the ignition switch to OFF.
2. Disconnect the key actuator connector (i52).
3. Measure the resistance between key actuator connectors.
   Terminals
   Key actuator
   No. 1 — No. 2:

Is the resistance 103 — 115 Ω?

Yes	Go to 4.
No	Replace the key actuator. Ref. to SECURITY AND LOCKS>Key Lock Cylinders.

4. CHECK KEY ACTUATOR.

Connect the battery terminals to the key actuator.
Terminals
Key actuator
No. 1 — Positive terminal:
No. 2 — Ground terminal:

Is the actuator activated and then key locked?

Yes	Go to 5.
No	Replace the key actuator. Ref. to SECURITY AND LOCKS>Key Lock Cylinders.

5. CHECK HARNESS.

1. Disconnect the body integrated unit connector (B280).
2. Measure the resistance between body integrated unit and key actuator using tester.
   Connector & terminal
   (i52) No. 1 — (B280) No. 12:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between body integrated unit and chassis ground using tester.
Connector & terminal
(B280) No. 12 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 7.
No	Repair or replace the short circuit of the harness.

7. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Connect the body integrated unit.
2. Turn the ignition switch to ON.
3. Measure the voltage between body integrated unit and chassis ground using tester.
   Connector & terminal
   (B287) No. 4 (+) — Chassis ground (−):

Is the voltage 6 V or more?

Yes	Go to 8.
No	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

8. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector (B281) and key actuator connector (i52).

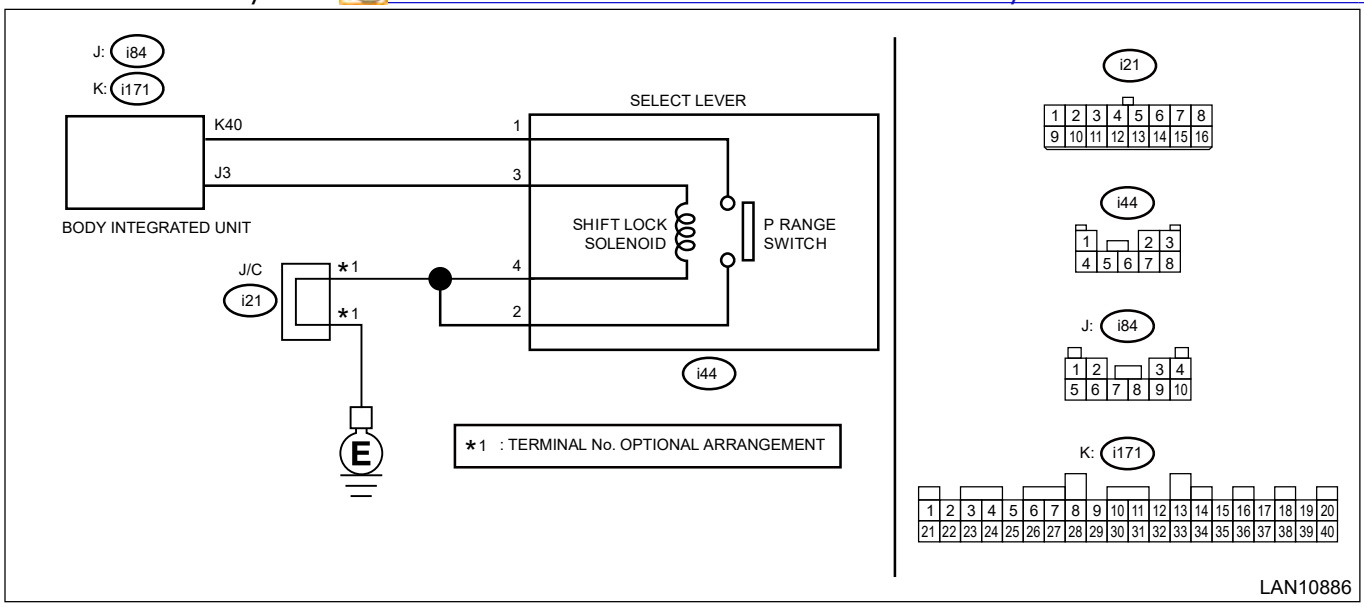
Is there poor contact at disconnected connector terminal?

Yes	Repair or replace the poor contact of connector.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1016 SHIFT LOCK CIRCUIT

DTC detecting condition:



Shift lock circuit is open, or shorted to power or ground.

Trouble symptom:

Shift lock does not be released or remain locked.

Wiring diagram:

Shift lock control system Ref. to WIRING SYSTEM>Shift Lock Control System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to ON.
2. Maintain the shift lever in P range for five seconds or more.
3. Maintain the brake pedal depressed for one second or more.
4. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1016 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the shift lock solenoid connector.
3. Using the tester, measure the resistance between terminals.
   Connector & terminal
   (i44) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK SHIFT LOCK SOLENOID.

Using a tester, measure the resistance between shift lock solenoid terminals.
Terminals
Shift lock solenoid
No. 3 — No. 4:

Is the resistance between 27.6 — 30.5Ω?

Yes	Go to 4.
No	Replace the shift lock solenoid. Ref. to CONTROL SYSTEMS>AT Shift Lock Solenoid and "P" Range Switch>REMOVAL.

4. CHECK HARNESS (OPEN CIRCUIT).

Use a tester to measure the resistance between harness terminals.
Connector & terminal
(i44) No. 3 — (i84) No. 3:
Note:
If body integrated unit and shift lock connector are not disconnected, disconnect them first and then perform measurement.

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between body integrated unit and chassis ground using a tester.
Connector & terminal
(i84) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 6.
No	Repair or replace the ground short circuit of the harness.

6. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between body integrated unit and chassis ground using a tester.

Connector & terminal

(i84) No. 3 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 7.
No	Repair or replace the ground short circuit of the harness.

7. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector and shift lock connector.

Is there poor contact of connector terminal?

Yes	Repair or replace the poor contact of terminal.
No	Go to 8.

8. CHECK DTC.

1. Connect all the disconnected connectors.
2. Turn the ignition switch to ON.
3. Maintain the shift lever in P range and the brake pedal depressed for five seconds or more.
4. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1016 displayed? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1107 CONTROL MODULE COMMUNICATION STICKING

DTC detecting condition:
CAN message in the body integrated unit stuck in register
Time needed for diagnosis:
Immediately
Trouble symptom:
CAN communication can not be executed normally.

1. CHECK DTC.

1. Turn the ignition switch to ON.
2. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1017 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Connect the disconnected connectors.
4. Turn the ignition switch to ON.
5. Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1017 displayed? (Current malfunction)

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1401 METER COLLATION

For diagnosis procedure, refer to IMMOBILIZER (DIAG). Ref. to IMMOBILIZER (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B1401 METER COLLATION.

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

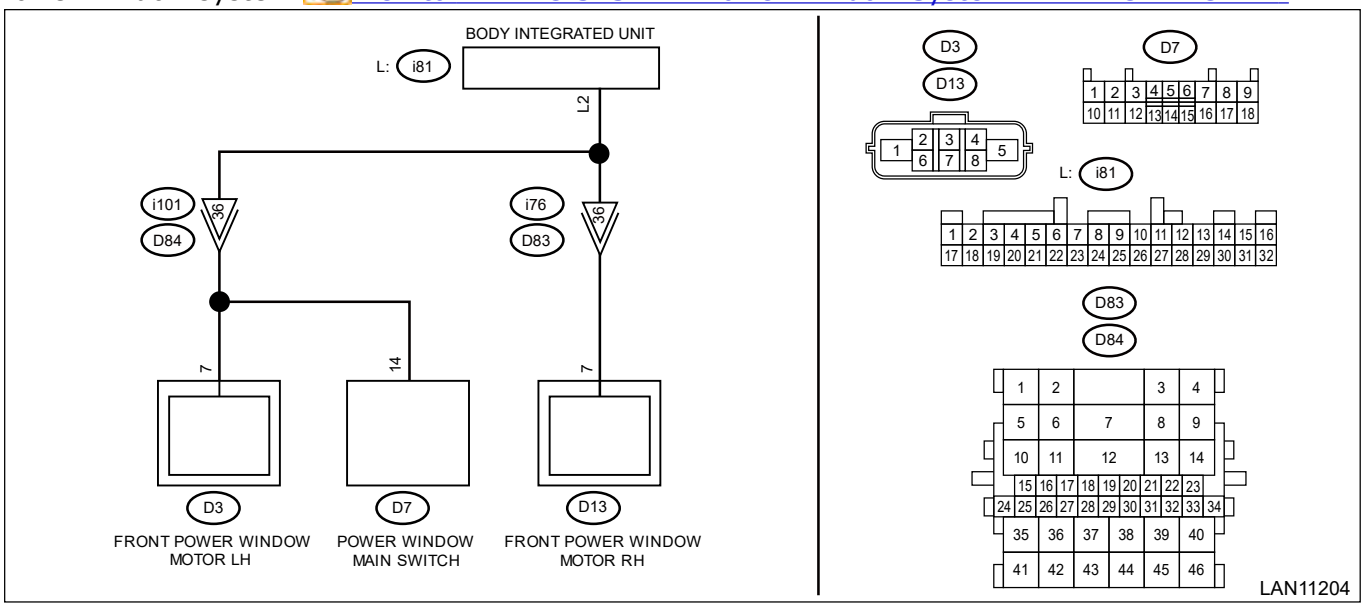
DTC U0222 LOST COMMUNICATION WITH DRIVER'S DOOR POWER WINDOW

DTC detecting condition:



Data does not arrive from driver's front power window motor.

Trouble symptom:

LIN communication is not normal.

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Turn the ignition switch to ON.
3. Wait for 5 seconds.
4. Read the DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0222 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Disconnect the front power window motor LH connector.
4. Measure the resistance between body integrated unit connector and front power window motor LH connector.
   Connector & terminal
   (i81) No. 2 — (D3) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness.

3. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between front power window motor LH connector and body integrated unit connector and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):

(D3) No. 7 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Repair the short circuit to power supply in harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between front power window motor LH connector and body integrated unit connector and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):

(D3) No. 7 (+) — Chassis ground (−):

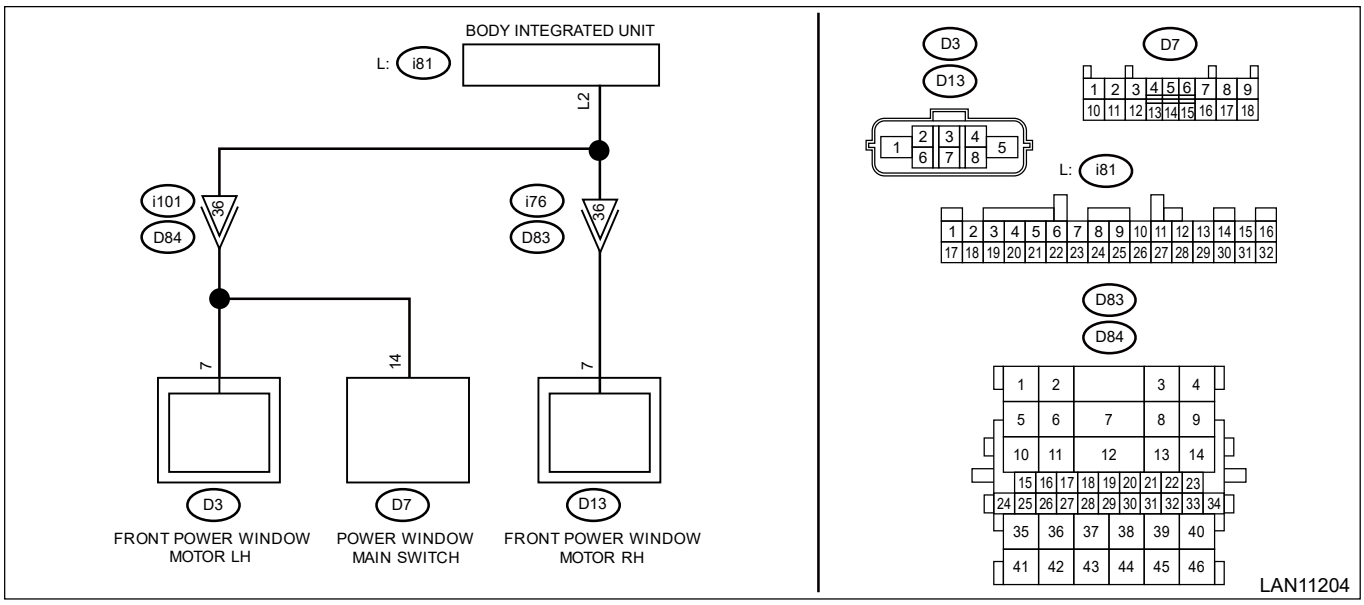
Is the voltage 1 MΩ or more?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair the ground short circuit of harness.

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0223 LOST COMMUNICATION WITH PASSENGER'S DOOR POWER WINDOW

DTC detecting condition:



Data does not arrive from passenger’s front power window motor.

Trouble symptom:

LIN communication is not normal.

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Turn the ignition switch to ON.
3. Wait for 5 seconds.
4. Read the DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC U0223 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Disconnect the front power window motor RH connector.
4. Measure the resistance between body integrated unit connector and front power window motor RH connector.

Connector & terminal

(i81) No. 2 — (D13) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness.

3. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between front power window motor RH connector and body integrated unit and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):

(D13) No. 7 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Repair the short circuit to power supply in harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between front power window motor RH connector and body integrated unit and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):

(D13) No. 7 (+) — Chassis ground (−):

Is the voltage 1 MΩ or more?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair the ground short circuit of harness.

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

No data is received from keyless access CM.

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

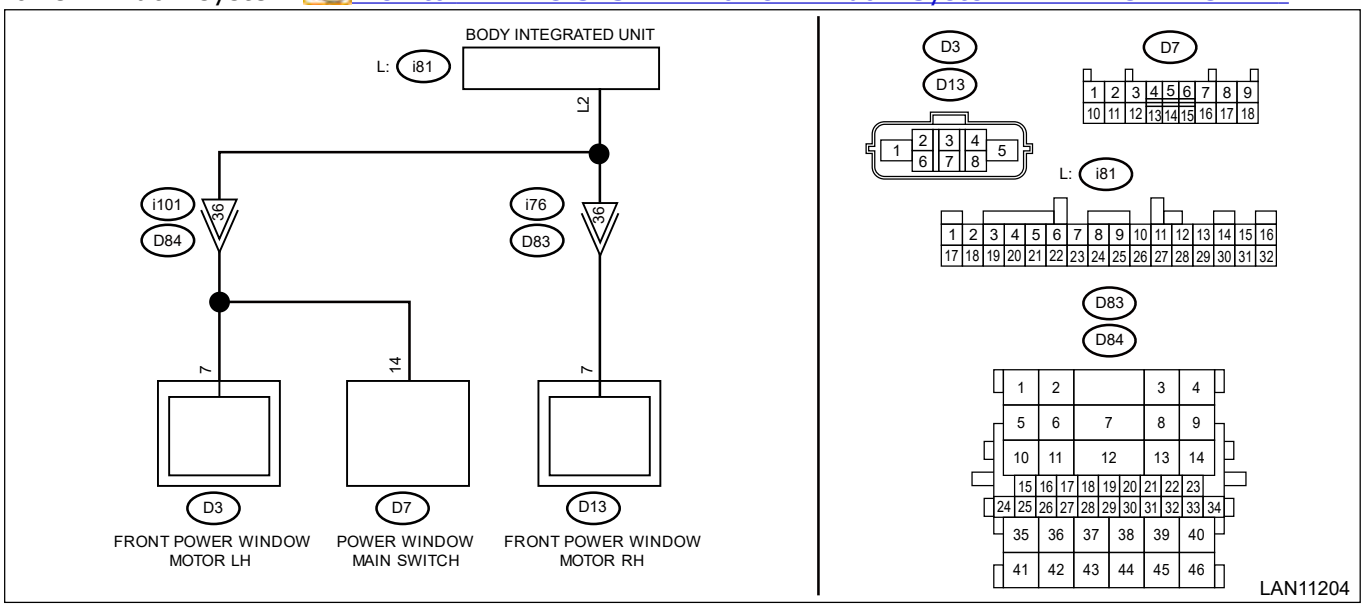
DTC U1674 LIN COMMUNICATION BUS 2 ERROR BODY CONTROL MODULE

DTC detecting condition:



Integrated unit communication is shut down because of LIN error.

Trouble symptom:

LIN communication is not normal.

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Turn the ignition switch to ON.
3. Wait for 5 seconds.
4. Read the DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0222 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK CONTROL MODULE.

1. Turn the ignition switch to OFF.
2. Disconnect the power window main switch connector.
3. Turn the ignition switch to ON.
4. Wait for 5 seconds.
5. Read the DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0222 displayed? (Current malfunction)

Yes	Go to 3.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

3. CHECK CONTROL MODULE.

1. Turn the ignition switch to OFF.
2. Disconnect the front power window motor LH connector. (With the power window main switch connector disconnected)
3. Turn the ignition switch to ON.
4. Wait for 5 seconds.
5. Read the DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0222 displayed? (Current malfunction)

Yes	Go to 4.
No	Replace the front power window motor LH. Ref. to GLASS/WINDOWS /MIRRORS>Front Regulator and Motor Assembly.

4. CHECK CONTROL MODULE.

1. Turn the ignition switch to OFF.
2. Disconnect the front power window motor RH connector. (With the power window main switch connector, front power window motor LH connector disconnected)
3. Turn the ignition switch to ON.
4. Wait for 5 seconds.
5. Read the DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0222 displayed? (Current malfunction)

Yes	Go to 5.
No	Replace the power window motor RH. Ref. to GLASS/WINDOWS /MIRRORS>Front Regulator and Motor Assembly.

5. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Measure the resistance between body integrated unit connector and each unit connector.

Connector & terminal

(i81) No. 2 — (D7) No. 14:
(i81) No. 2 — (D3) No. 7:
(i81) No. 2 — (D13) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 6.
No	Repair the open circuit of harness.

6. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between each unit connector and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):
(D7) No. 14 (+) — Chassis ground (−):
(D3) No. 7 (+) — Chassis ground (−):
(D13) No. 7 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 7.
No	Repair the short circuit to power supply in harness.

7. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between each unit connector and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):

(D7) No. 14 (+) — Chassis ground (−):

(D3) No. 7 (+) — Chassis ground (−):

(D13) No. 7 (+) — Chassis ground (−):

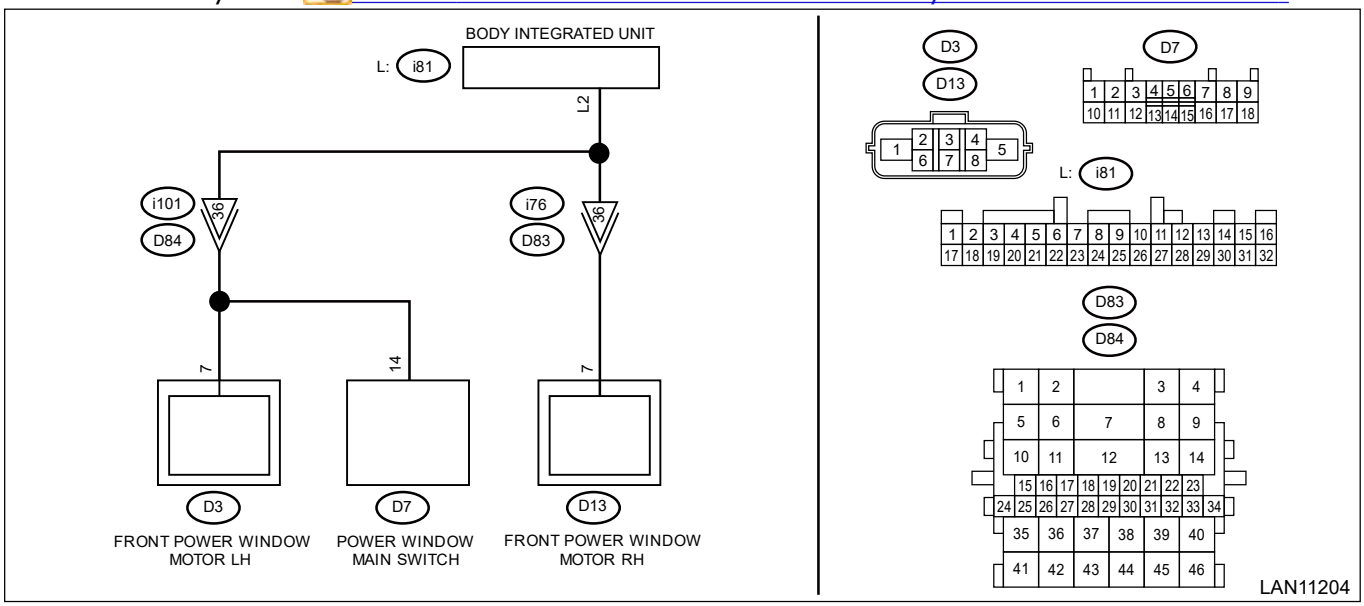
Is the voltage 1 MΩ or more?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair the ground short circuit of harness.

BODY CONTROL(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1822 LOST COMMUNICATION WITH MASTER MAIN SWITCH

DTC detecting condition:



Data does not arrive from power window main switch.

Trouble symptom:

LIN communication is not normal.

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Turn the ignition switch to ON.
3. Wait for 5 seconds.
4. Read the DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U1822 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the body integrated unit connector.
3. Disconnect the power window main switch connector.
4. Measure the resistance between body integrated unit connector and power window main switch connector.
   Connector & terminal
   (i81) No. 2 — (D7) No. 14:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness.

3. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between power window main switch connector and body integrated unit connector and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):

(D7) No. 14 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 4.
No	Repair the short circuit to power supply in harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between power window main switch connector and body integrated unit connector and chassis ground.

Connector & terminal

(i81) No. 2 (+) — Chassis ground (−):

(D7) No. 14 (+) — Chassis ground (−):

Is the voltage 1 MΩ or more?

Yes	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.
No	Repair the ground short circuit of harness.

BODY CONTROL(DIAGNOSTICS) > General Diagnostic Table

INSPECTION

Read the DTC using Subaru Select Monitor. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC). Or check the following data under the data monitor display screen. Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Item	Operation	Specifications		Note
		YES	NO	
DTC	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis for the displayed DTCs.	—
Clearance light (Low beam) (High beam)	Clearance light and low/high beams illuminate normally when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
Auto light	When the area around the light control sensor is darkened after the ignition switch and the lighting switch (AUTO) are turned to ON, the clearance light and the low beam illuminate after 15 seconds. Indicator in the combination meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
	When the ignition switch and the lighting switch (AUTO) are turned to ON after the area around the light control sensor is darkened, the clearance light and the low beam illuminate immediately. Indicator in the combination meter illuminates at the same time.			—
Fog light	Front and rear fog lights illuminate when the switch is operated. Indicator in the meter illuminates at the	System is normal.	Check the lighting system, combination	—

Item	Operation	Specifications		Note
		YES	NO	
	same time.		meter system and LAN system.	
Rear defogger	Rear defogger operates when the switch is operated. The indicator illuminates at the same time.	System is normal.	Check the rear window defogger system and A/C system.	—
Wiper deicer	Wiper deicer operates by operating the switch. The indicator illuminates at the same time. When the ambient temperature is 5°C (41°F) or higher, press the switch 3 seconds or more to forcibly activate the system.	System is normal.	Check the wiper deicer system and A/C system.	Wiper deicer operates when "Wiper deicer setting" of the body integrated unit is set to on.
DRL	After starting the engine and releasing the parking brake with shift lever in other than P range, the DRL illuminates.	System is normal.	Check the lighting system and LAN system.	—
Rear wiper	Rear wiper operates when the switch is operated.	System is normal.	Check wiper or washer system.	Depending on customizing "Sedan/Wagon Setting" of the body integrated unit, vehicle sensory time varies.
Key interlock	• Key cannot be removed in other than P range. • Key can be removed in other than P range.	System is normal.	Check the body control system.	—
Shift lock	The select lever can be moved from the P range to other ranges only when the brake pedal is depressed with IG ON.	System is normal.	Check the body control system.	—
Key warning switch alarm	When the driver's door is open without the key removed, the buzzer sounds.	System is normal.	Check the combination meter and body control system.	—

Item	Operation	Specifications		Note
		YES	NO	
Door lock	The doors lock/unlock when the door switch is operated. Rear gate/trunk opens when the rear gate/trunk release switch is operated.	System is normal.	Check the security & lock and body control system.	If customizing "Sedan/Wagon Setting" is different, trunk and rear gate do not open.
Keyless entry	The lock locks/unlocks when the keyless transmitter is operated. Trunk/rear gate unlocks when trunk/rear gate unlock button is operated.	System is normal.	Check the keyless entry and body control system.	—
Keyless access with push button start system	The lock locks/unlocks when the access key is operated. With the access key held, the touch sensor (lock) operation locks/touch sensor (unlock) operation unlocks. Rear gate unlocks by operating the rear gate unlock button.	System is normal.	Check the keyless access with push button start system and the body control system.	—
Answer back	Answer-back operates when the keyless entry / keyless access with push button start system locks/unlocks.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	—
Room light	Turns ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation.	System is normal.	Check the room light system, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the room light blinks when "Factory mode" is selected. For vehicles with the keyless entry, the room light blinks when the keyless registration mode connector is connected.

Item	Operation	Specifications		Note
		YES	NO	
Map light	Turns ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation. (Except for rear gate)	System is normal.	Check the spot map light, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the map light blinks when "Factory mode" is selected. For vehicles with the keyless entry, the map light blinks when the keyless registration mode connector is connected.
Luggage room light	The light illuminates/goes off according to the rear gate open/close. The light goes off, when the doors are locked with the keyless entry/keyless access with push button start system, or the ignition is turned to ON, while the light is illuminating.	System is normal.	Check the lighting system (interior light system), security & lock, keyless access with push button start system, and LAN system.	—
Trunk room light	The light illuminates/goes off according to the trunk open/close.	System is normal.	Check the lighting system (interior light system), security & lock, keyless access with push button start system, and LAN system.	—
Turn signal & hazard	Each turn signal light illuminates, when the turn signal switch is turned ON. The hazard light and indicator in the combination meter blink, when the hazard switch is turned ON.	System is normal.	Check the lighting system (turn signal light and hazard light system).	—
Key illumination	The light illuminates/goes off according to the driver's	System is normal.	Check the ignition switch	For vehicles with keyless entry, the

Item	Operation	Specifications		Note
		YES	NO	
	door open/close. The light goes off when the doors are locked with the keyless entry and the ignition is turned ON while illuminating.		illumination, security & lock, and LAN system.	key illumination blinks when "Factory" mode is selected.
Engine start	Engine starts.	System is normal.	Check the engine system, immobilizer, and LAN system.	Model without keyless access with push button start system
Vehicle security	Security monitoring/security canceling can be performed by operating the keyless entry/keyless access with push button start system.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	Security monitoring starts and at the same time the warning buzzer sounds, when impact sensor is not connected and user customizing "Impact Sensor" of the body integrated unit is set to on.
Welcome lighting (enter)	When dimming out around the light control sensor after turning the lighting switch (AUTO) to ON, use keyless transmitter or access key to unlock. At this time, the clearance light and headlight low beam illuminates for the preset time. And, use keyless transmitter or access key to lock. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when customization item "Illumination Sensor Setting" in body integrated unit is set to ON and "Welcome Light Off Delay Time (Approaching)" is set to other than OFF.
Welcome lighting (exit)	The clearance light and headlight low beam continues to illuminate, when the ignition switch is OFF (or when the key is removed for vehicles	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless	Operates when customization item "Illumination Sensor Setting" in body integrated unit is set to ON and "Welcome

Item	Operation	Specifications		Note
		YES	NO	
	without keyless access with push button start system) while the auto light function is operating. Use keyless transmitter or access key to lock two consecutive times. At this time, the clearance light and headlight low beam go off.		access with push button start system.	Light (Exit)” is set to other than OFF.

BODY CONTROL(DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

1. HIGH BEAM ASSIST SYSTEM

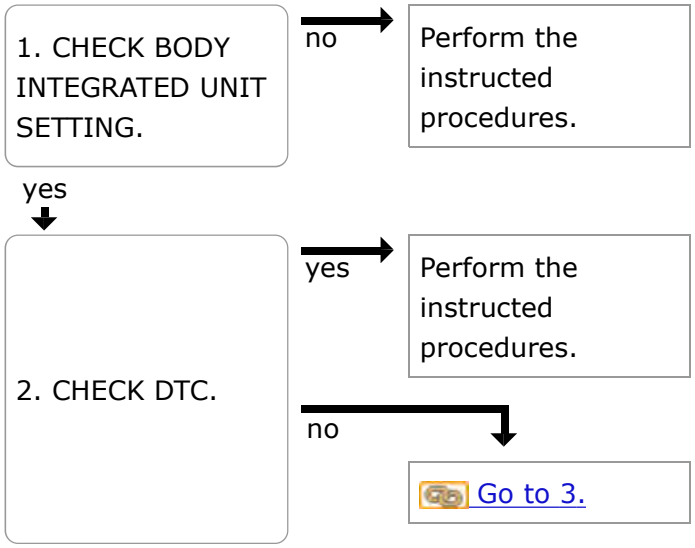
Symptoms	Note
High beam assist indicator does not illuminate.	Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > HIGH BEAM ASSIST INDICATOR DOES NOT ILLUMINATE.
The lighting does not switch from low beam to high beam automatically	Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE LIGHTING DOES NOT SWITCH FROM LOW BEAM TO HIGH BEAM AUTOMATICALLY.
The lighting does not switch from high beam to low beam automatically	Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE LIGHTING DOES NOT SWITCH FROM HIGH BEAM TO LOW BEAM AUTOMATICALLY.

BODY CONTROL(DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION

1. HIGH BEAM ASSIST INDICATOR DOES NOT ILLUMINATE

Trouble symptom:



High beam assist indicator light does not illuminate though the operating conditions for the high beam assist are met.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

Note:

When there is faulty in the combination switch, combination meter, illumination sensor for the auto lighting or the operation of auto lighting, perform the diagnosis for each system in advance.

3. CHECK "EYESIGHT TEMPORARY STOP INDICATOR".	yes →	Perform the instructed procedures.
	no →	Go to 4.
4. CHECK HIGH BEAM ASSIST INDICATOR.	yes →	Perform the instructed procedures.
	no →	Go to 5.
5. CHECK HIGH BEAM ASSIST INDICATOR.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK BODY INTEGRATED UNIT SETTING.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Body Control].
Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [High Beam Assist Function Setting (mirror/EyeSight)]
- [High Beam Assist Current Setting]

Is [High Beam Assist Function Setting (mirror/EyeSight)] set to [ON], and [High Beam Assist Current Setting] set to [EyeSight HBA]?

Yes	Go to 2.
No	Set [High Beam Assist Function Setting (mirror/EyeSight)] to [ON], and set [High Beam Assist Current Setting] to [EyeSight HBA].

2. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK “EYESIGHT TEMPORARY STOP INDICATOR”.

1. Turn the ignition switch to OFF.
2. Turn the ignition switch to ON.
3. Check “EyeSight temporary stop indicator”. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.

Is “EyeSight temporary stop indicator” displayed?

Yes	Perform inspection according to “EyeSight temporary stop code” in “ES (DIAGNOSTICS)”.
No	Go to 4.

4. CHECK HIGH BEAM ASSIST INDICATOR.

1. Turn the ignition switch to ON.
2. Set the light SW position to Auto.
3. Set the dimmer Hi SW to ON.
4. Shade the illumination sensor for the auto lighting.

Does the high beam assist indicator illuminate?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 5.

5. CHECK HIGH BEAM ASSIST INDICATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

- [HBA indicator]

Does the high beam assist indicator illuminate?

Yes	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Replace the body integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

2. THE LIGHTING DOES NOT SWITCH FROM LOW BEAM TO HIGH BEAM AUTOMATICALLY

Trouble symptom:

High beam light does not turn on while the high beam assist indicator is illuminating, even when there is no object in front of the vehicle.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK HIGH BEAM ACTIVATION (CHECK BY MANUAL OPERATION).
→ no → Perform the instructed procedures.

yes ↓

2. CHECK DTC.
→ yes → Perform the instructed procedures.
→ no → Go to 3.

3. CHECK "EYESIGHT TEMPORARY STOP INDICATOR".
→ yes → Perform the instructed procedures.
→ no → Go to 4.

4. PERFORM RECOGNIZATION TEST (JUDGMENT OF NIGHT STATUS).
→ yes → Perform the instructed procedures.
→ no → Perform the instructed procedures.

1. CHECK HIGH BEAM ACTIVATION (CHECK BY MANUAL OPERATION).

Check for the activation of the high beam.

- Light SW position: Second notch
- Dimmer Hi SW: ON

Does the high beam light come on?

Yes	Go to 2.
No	Check the headlight system. Ref. to LIGHTING SYSTEM>Headlight System.

2. CHECK DTC.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to EyeSight (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs.
No	Go to 3.

3. CHECK “EYESIGHT TEMPORARY STOP INDICATOR”.

1. Turn the ignition switch to OFF.
2. Turn the ignition switch to ON.
3. Check “EyeSight temporary stop indicator”. Ref. to EyeSight (DIAGNOSTICS)>EyeSight HALT Code.

Is “EyeSight temporary stop indicator” displayed?

Yes	Perform inspection according to “EyeSight temporary stop code” in “ES (DIAGNOSTICS)”.
No	Go to 4.

4. PERFORM RECOGNIZATION TEST (JUDGMENT OF NIGHT STATUS).

1. Set the light SW position to Auto.
2. Set the dimmer Hi SW to ON.
3. With the vehicle stopped, turn the ignition switch to OFF.
4. Shade the front of the stereo camera.

   Note:

   It is recommended to perform the test under complete dark environment where all illumination is turned off and there is no windows in the room. If it is not possible to perform the test in complete dark environment, perform the test in a room where the direct sunlight is shielded and illumination is turned off, while the windshield, driver's seat, and passenger's seat are covered from outside of the vehicle with cloth etc. having high light-blocking effect.

   Caution:

   In order to avoid touching the lens of the stereo camera, do not apply light-blocking measures directly at the lens portion.
5. Turn the ignition switch to ON.
6. Using the Subaru Select Monitor, check [Data monitor] of [EyeSight]. Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

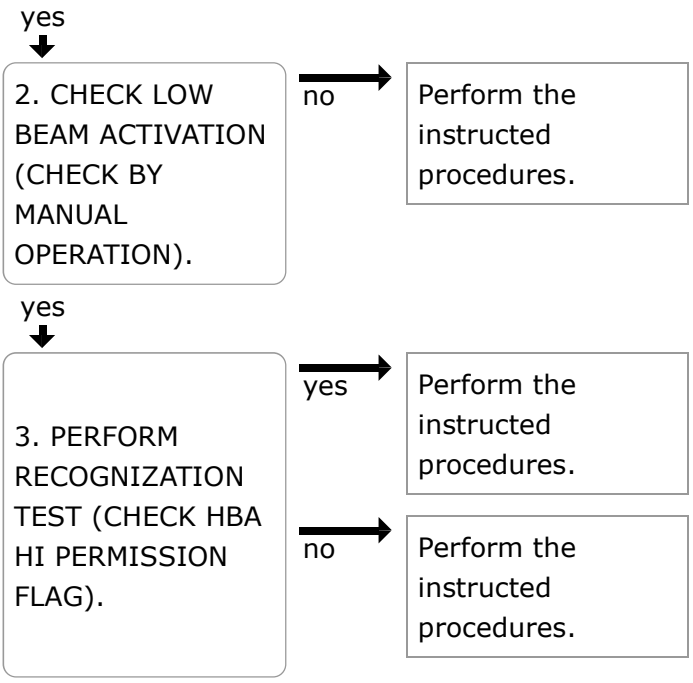
   Data Monitor

   - [Judgment Night]

Is [Judgment Night] set to [Night]?

Yes	System is normal. It is considered that the conditions for the high beam activation are not satisfied enough for an environmental reason.
No	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.

3. THE LIGHTING DOES NOT SWITCH FROM HIGH BEAM TO LOW BEAM AUTOMATICALLY



Trouble symptom:

High beam light does not go off automatically even when the high beam assist indicator is illuminating.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to BODY CONTROL(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK HIGH BEAM ACTIVATION (CHECK BY MANUAL OPERATION).	→ no	Perform the instructed procedures.

1. CHECK HIGH BEAM ACTIVATION (CHECK BY MANUAL OPERATION).

Check for the activation of the high beam.

- Light SW position: Second notch
- Dimmer Hi SW: ON

Does the high beam light come on?

Yes	Go to 2.
No	Check the headlight system. Ref. to LIGHTING SYSTEM>Headlight System.

2. CHECK LOW BEAM ACTIVATION (CHECK BY MANUAL OPERATION).

From the condition in step 1), turn the dimmer Hi SW to OFF.

Does it switch to low beam?

Yes	Go to 3.
No	Check the headlight system. Ref. to LIGHTING SYSTEM>Headlight System.

3. PERFORM RECOGNITION TEST (CHECK HBA HI PERMISSION FLAG).

1. Set the vehicle in a stopped state.
2. Set the light SW position to Auto.
3. Set the dimmer Hi SW to ON.
4. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [EyeSight].
   Ref. to EyeSight (DIAGNOSTICS)>Data Monitor.

   - [HBA Control Permission]

Is [HBA Control Permission] set to [Allowance]?

Yes	Replace the stereo camera. Ref. to EyeSight>Stereo Camera.
No	Check the headlight system. Ref. to LIGHTING SYSTEM>Headlight System.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS)

MFD(diag)

1. Basic Diagnostic Procedure

13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
14. Diagnostics with Phenomenon

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Multi-Function Display].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK CAN COMMUNICATION.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

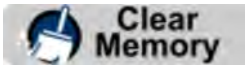
5. CHECK MFD.

Read the DTC of [Multi-Function Display] using the Subaru Select Monitor. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 7.
No	Go to 6.

6. CHECK MFD.



Check MFD operation. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Active Test.

Is the check result OK?

Yes	System is normal. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Active Test.
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

7. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Multi-Function Display]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode.
5. Read the DTC of [Multi-Function Display] using the Subaru Select Monitor. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 7 until DTC is not shown. Go to 7.
No	Finish the diagnosis.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Check List for Interview

CAUTION

1. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. MULTI FUNCTION DISPLAY

When removing MFD-related components, refer to cautions in the instrumentation/driver information section. Ref. to INSTRUMENTATION/DRIVER INFO>General Description>CAUTION.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect MFD problems.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the main and other fuses, harnesses and connectors. Also check grounding.
3. Verify the destination of the vehicle.
4. Verify type of wheel-drive.
5. Verify availability and grade of the head unit installed to the vehicle.
6. Verify availability of EyeSight.
7. Verify availability of RAB.
8. Verify availability of BSD/RCTA.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Inspection Mode

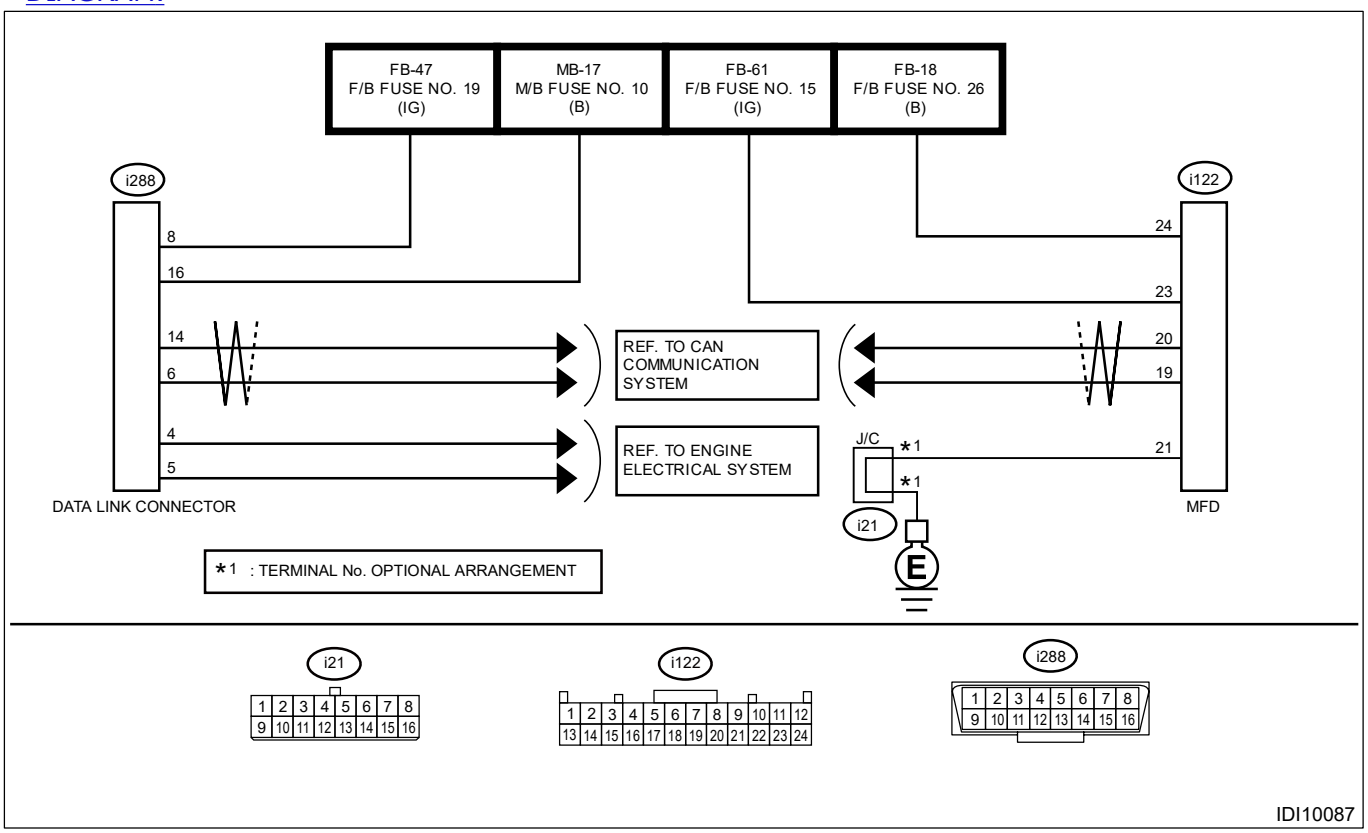
OPERATION

After the ignition switch is ON, wait for 5 seconds.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Trouble symptom:



Cannot communicate with [Multi-Function Display].

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective MFD
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

1. CHECK IGNITION SWITCH.

Check the ignition switch.

Is the ignition switch ON?

Yes	Go to 2.
No	Turn the ignition switch to ON, and select the [Multi-Function Display] using the Subaru Select Monitor.

2. CHECK BATTERY.

1. Turn the ignition switch to OFF.
2. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Charge or replace the battery.

3. CHECK INSTALLATION OF MFD CONNECTOR.

Check the MFD connector.

Is the MFD connector inserted into the MFD until it locks?

Yes	Go to 4.
No	Be sure to insert the MFD connector into the MFD until it is locked.

4. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is there any fault in LAN system?

Yes	Perform the inspection according to the diagnosis for LAN system.
No	Go to 5.

5. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Check whether communication to MFD can be executed normally.

Is communication with [Multi-function Display] possible?

Yes	Read the DTC of [Multi-Function Display] using the Subaru Select Monitor. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Go to 7.

6. CHECK SUBARU SELECT MONITOR.

Connect the Subaru Select Monitor to another vehicle to verify that the communication for initializing can be executed normally.

Is communication for initializing possible?

Yes	Go to 7.
No	Repair or replace the Subaru Select Monitor.

7. CHECK MFD POWER SUPPLY CIRCUIT (OPEN AND SHORT CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the MFD connector and chassis ground.

Connector & terminal

(i122) No. 23 (+) — Chassis ground (−):

(i122) No. 24 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 8.
No	Repair the open or short circuit of harness, or poor contact of connector.

8. CHECK MFD GROUND CIRCUIT (OPEN).

1. Turn the ignition switch to OFF.
2. Measure the resistance between MFD connector and chassis ground.

Connector & terminal

(i122) No. 21 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 9.
No	Repair the open circuit of the MFD ground circuit or poor contact of connector.

9. CHECK POOR CONTACT OF CONNECTOR.

Check MFD power supply, ground circuit and data link connector for poor contact.

Is there poor contact?

Yes	Repair the poor contact.
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Data Monitor>LIST.**

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Data Monitor

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Freeze Frame Data

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Freeze Frame Data.**
- **For details on freeze frame data, refer to the list. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Freeze Frame Data>LIST.**

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Freeze Frame Data

LIST

Items to be displayed	Remarks	Standard/Unit	Note
IGN Counter	Shows number of IGN ON times	—	—
Count	Shows count status	—	—
IG-ON Elapsed Time	Shows the elapsed time after IGN ON	—	—

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Active Test

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Multi-function Display], and then select [Enter].
5. On [Select Function] display, select [Active Test].

Note:

- **For detailed operation procedures, refer to "Application help".**
- **For details on active tests, refer to the list.** **Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Active Test>LIST.**

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Active Test

LIST

Active test item		Remarks	Execution condition
Color check	White indication	By forcibly making the whole screen white, it is possible to check whether white color is properly displayed.	Ignition switch ON (Engine OFF)
	Black indication	By forcibly making the whole screen black, it is possible to check whether black color is properly displayed.	
	Red indication	By forcibly making the whole screen red, it is possible to check whether red color is properly displayed.	
	Green indication	By forcibly making the whole screen green, it is possible to check whether green color is properly displayed.	
	Blue indication	By forcibly making the whole screen blue, it is possible to check whether blue color is properly displayed.	

Active test item			Remarks	Execution condition
Brightness check	Noon Brightness Check	Most Bright	By forcibly changing brightness of the current screen to the brightest level of daytime light, it is possible to check whether the brightness is changed.	
		Bright	By forcibly changing brightness of the current screen to a brighter level of daytime light, it is possible to check whether the brightness is changed.	
		Standard	By forcibly changing brightness of the current screen to a normal level of daytime light, it is possible to check whether the brightness is changed.	
		Dark	By forcibly changing brightness of the current screen to a darker level of daytime light, it is possible to check whether the brightness is changed.	
		Most Dark	By forcibly changing brightness of the current screen to the minimum level of daytime light, it is possible to check whether the brightness is changed.	
	Night Brightness Check	Most Bright	By forcibly changing brightness of the current screen to the maximum level of night-time light, it is possible to check whether the brightness is changed.	

Active test item		Remarks	Execution condition
	Bright	By forcibly changing brightness of the current screen to a brighter level of night-time light, it is possible to check whether the brightness is changed.	
	Standard	By forcibly changing brightness of the current screen to a normal level of night-time light, it is possible to check whether the brightness is changed.	
	Dark	By forcibly changing brightness of the current screen to a darker level of night-time light, it is possible to check whether the brightness is changed.	
	Most Dark	By forcibly changing brightness of the current screen to the minimum level of night-time light, it is possible to check whether the brightness is changed.	

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Customize

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Multi-function Display], and then select [Enter].
5. On [Select Function] display, select [Customize].
6. On [Customize] display, select an item to be customized.

   Note:
   - **For detailed operation procedures, refer to "Application help".**
   - **For details on customization, refer to the list. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Customize>LIST.**
   - **If not equipped (depending on destination area or vehicle equipment condition), some items are not displayed.**

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Customize

LIST

Item		Initial setting value	Setting value	Note	
Maintenance Customizing	Periodic Inspection Update	—	Non-update / Update	Set the periodic inspection update value (distance/time) to the updated value.	This is performed when the value being shown in the MFD display is updated. **Note:** **It is not possible to simultaneously update this value and the setting inside the MFD.**
	Tire Check Update	—	Non-update / Update	Set the tire inspection update value (distance•time) to the updated value.	
	Oil Filter Update	—	Non-update / Update	Set the oil filter update value (distance•time) to the updated value.	
	Engine Oil Update	—	Non-update / Update	Set the engine oil update value (distance•time) to the updated value.	

Item	Initial setting value	Setting value	Note	
All Maintenance Item Update	—	Non-update / Update	Set all maintenance item values (distance•time) to the updated values.	
Periodic Inspection Update Level Change (Distance)	For U5: 6000 For C5: 10000 For C4: 15000	1000 — 50000	Set the values to be updated when periodic inspection update time comes.	It is performed when setting values inside MFD are changed. **Note:** **It is not possible to simultaneously update those values and the values being displayed in MFD.**
Tire Check Update Level Change (Distance)	For U5: 7500 For C5: 12000 For C4: 12000	1000 — 50000	Set the values to be updated when tire inspection update time comes.	
Oil Filter Update Level Change (Distance)	For U5: 6000 For C5: 10000 For C4: 15000	1000 — 50000	Set the values to be updated when oil filter update time comes.	
Engine Oil Update Level Change (Distance)	For U5: 6000 For C5: 10000 For C4: 15000	1000 — 50000	Set the values to be updated when engine oil update time comes.	
Periodic Inspection Update Level Change (Time)	—	0 Months—60 Months	Set the values to be updated when periodic inspection update time comes.	
Tire Check Update Level Change (Time)	For U5: 8 Months For C5: 12 Months For C4: None	0 Months—60 Months	Set the values to be updated when tire inspection update time comes.	

Item	Initial setting value	Setting value	Note
Oil Filter Update Level Change (Time)	For U5: 6 Months For C5: 6 Months For C4: 12 Months	0 Months—60 Months	Set the values to be updated when oil filter check update time comes.
Engine Oil Update Level Change (Time)	For U5: 6 Months For C5: 6 Months For C4: 12 Months	0 Months—60 Months	Set the values to be updated when engine oil check update time comes.
Brightness Customization	—	−10 % —+10 %	Adjust the target brightness level.
Contrast Customization	—	−5 % —+5 %	Adjust the display setting.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

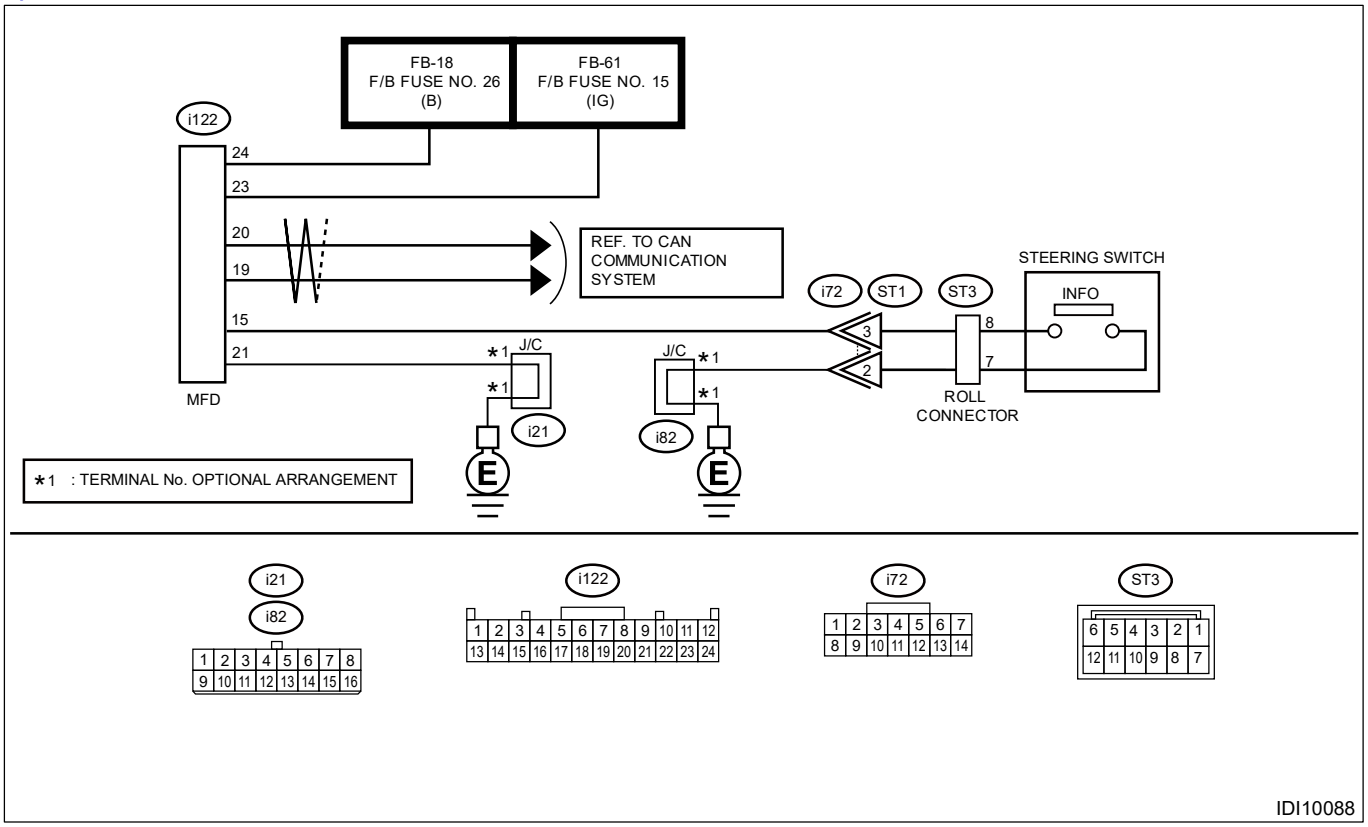
MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2225 MFD INTERNAL COMMUNICATION

DTC detecting condition:



- When response to the request from control microcomputer to image microcomputer is not received, if the system is not restored within 30 to 60 seconds after sending another request.
- Likewise, when response to the request from CPU2 side is not received, if the system is not restored within 30 to 60 seconds after resending the specified request.

Trouble symptom:

- MFD does not start.
- It malfunctions in each operation.

Wiring diagram:

Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Multi-Function Display]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the MFD connector and reconnect it.
4. Turn the ignition switch to ON.
5. Read the DTC of [Multi-Function Display] using the Subaru Select Monitor. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2225 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC (past malfunction) is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (GROUND SHORT CIRCUIT).

1. Disconnect the MFD connector.
2. Using a tester, measure the resistance between MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 1 — 24 (except No. 1, 6, 21) — chassis ground:

Is the resistance 10 kΩ or more?

Yes	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2226 MFD INTERNAL CIRCUIT

DTC detecting condition:

- If the system is not restored within 30 to 60 seconds after restarting the control microcomputer due to timeout of startup sequence.
- When CAN controller register freeze check detects malfunction immediately after startup.

Trouble symptom:

MFD does not start.

Note:

For the diagnostic procedure, refer to DTC B2225. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2225 MFD INTERNAL COMMUNICATION.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2227 MFD VIDEO MICROCOMPUTER

DTC detecting condition:

- When the image microcomputer does not respond to the request from the control microcomputer immediately after starting the system, if the system is not restored within 30 to 60 seconds after restart.
- If the system is not restored within 30 to 60 seconds after restart due to WDP malfunction.

Trouble symptom:

- MFD does not start.
- It malfunctions in each operation.

Note:

For the diagnostic procedure, refer to DTC B2225. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2225 MFD INTERNAL COMMUNICATION.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2228 MFD SDRAM

DTC detecting condition:

When test data is written to a given area of SDRAM immediately after startup and verification detects malfunction.

Trouble symptom:

It malfunctions in each operation.

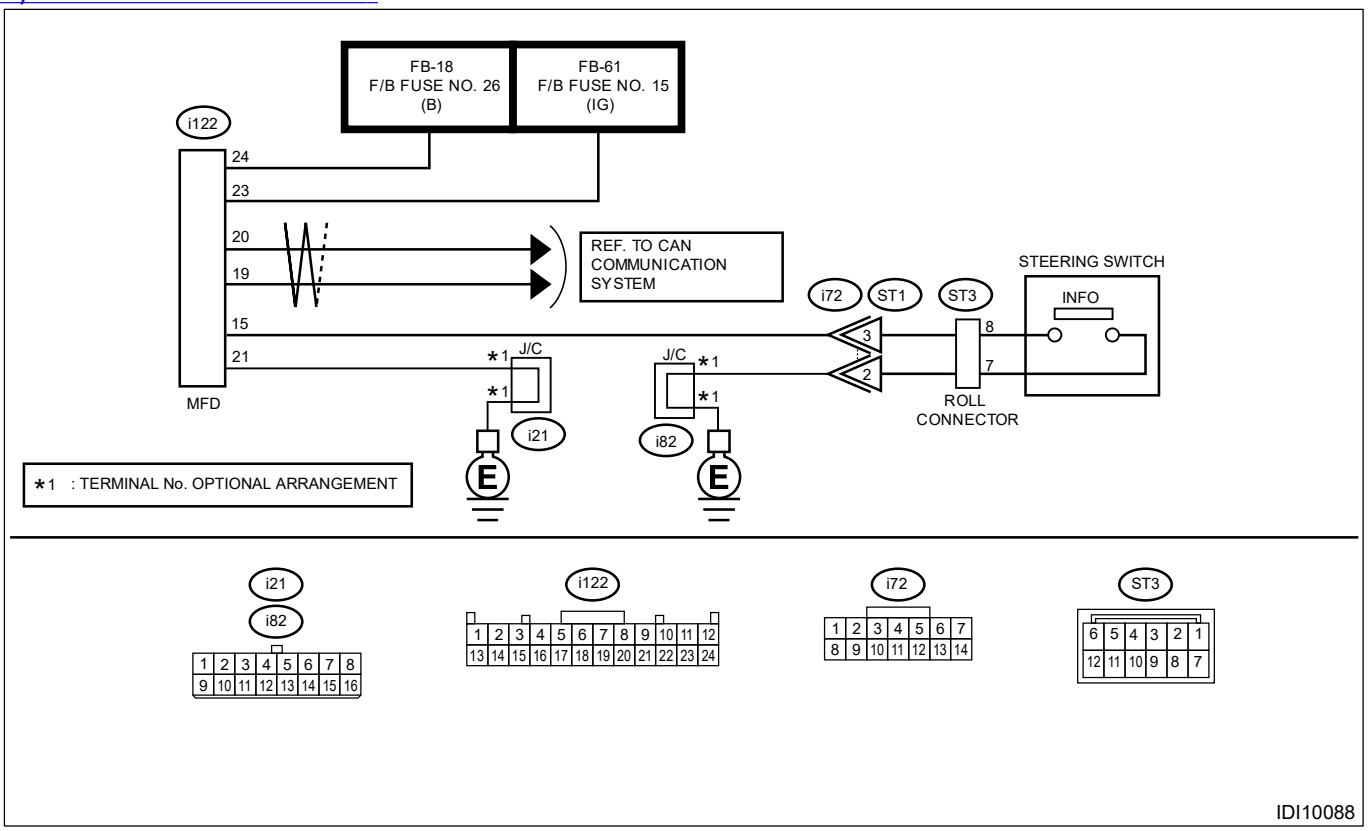
Note:

For the diagnostic procedure, refer to DTC B2225. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2225 MFD INTERNAL COMMUNICATION.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2229 MFD FLASH MEMORY

DTC detecting condition:



When malfunction of backup operation still remains after restarting it 10 times.

Trouble symptom:

- It malfunctions in each operation.
- Backup is not possible. (When an interruption occurs, a screen which is different from the last displayed screen is shown in the return destination screen.)

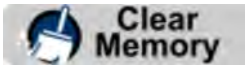
Wiring diagram:

Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK MFD LAST MEMORY.



1. Turn the ignition switch to ON.
2. Press MFD switch and select a screen other than the fuel economy screen.
3. Turn the ignition switch to OFF. (ACC OFF)
4. Turn the ignition switch to ON.

Is the MFD screen the same as the screen shown before the ignition switch is turned to OFF?

Yes	Go to 2.
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).

2. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Multi-Function Display]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the MFD connector and reconnect it.
4. Turn the ignition switch to ON.
5. Read the DTC of [Multi-Function Display] using the Subaru Select Monitor. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

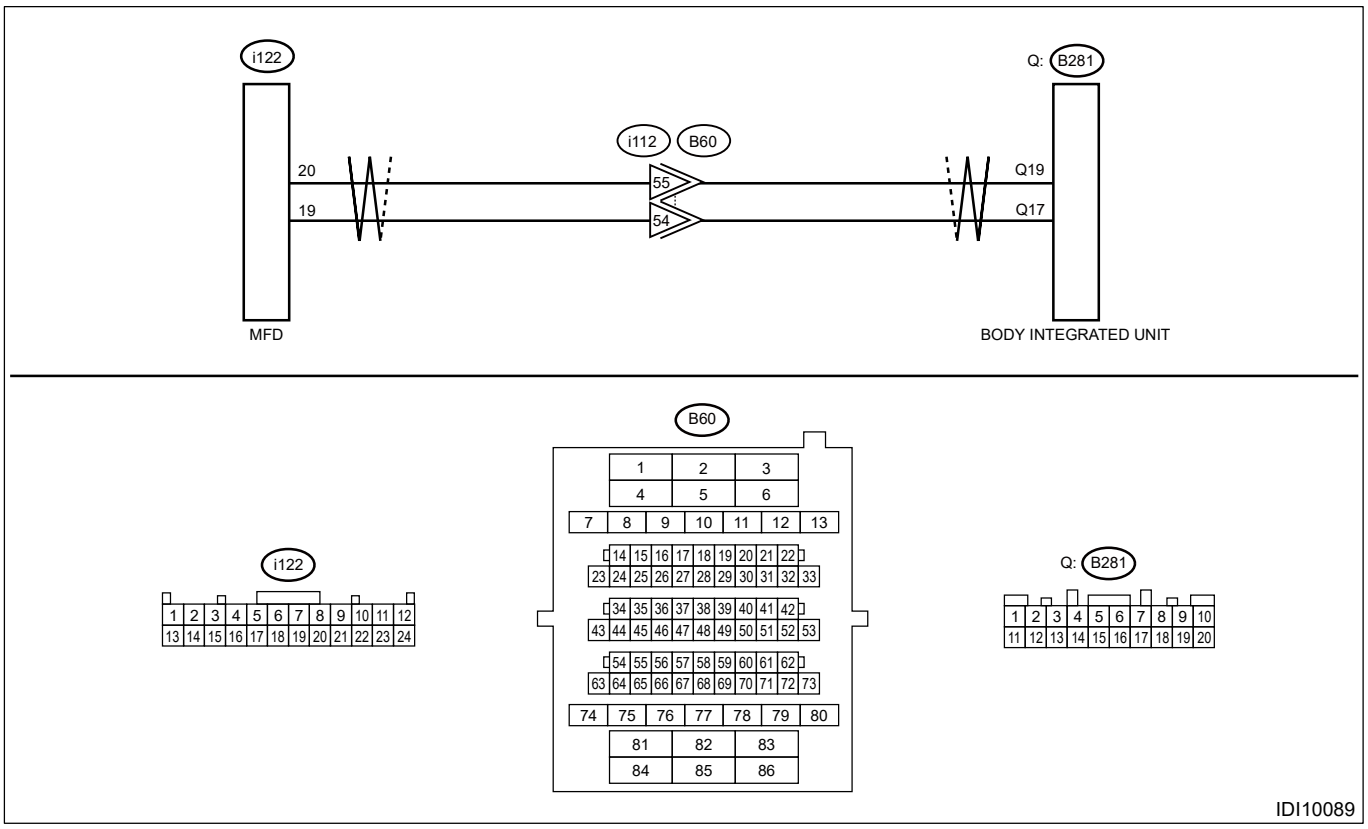
Is DTC B2229 displayed? (Current malfunction)

Yes	Go to 3.
No	Even if DTC (past malfunction) is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

1. Disconnect the MFD connector.
2. Using a tester, measure the resistance between MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 1 — 24 (except No. 1, 6, 21) — chassis ground:

Is the resistance 10 kΩ or more?



Yes	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2230 MFD LED

DTC detecting condition:
When the image microcomputer performs periodical monitoring and after malfunction is detected, malfunction is detected by four consecutive judgments.
Trouble symptom:
- Back-up light illumination fault
- Faulty illumination operation

Wiring diagram:
- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Multi-Function Display]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the MFD connector and reconnect it.
4. Turn the ignition switch to ON.
5. Read the DTC of [Multi-Function Display] using the Subaru Select Monitor. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2230 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC (past malfunction) is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (GROUND SHORT CIRCUIT).

1. Disconnect the MFD connector.
2. Using a tester, measure the resistance between MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 19 — Chassis ground:
   (i122) No. 20 — Chassis ground:

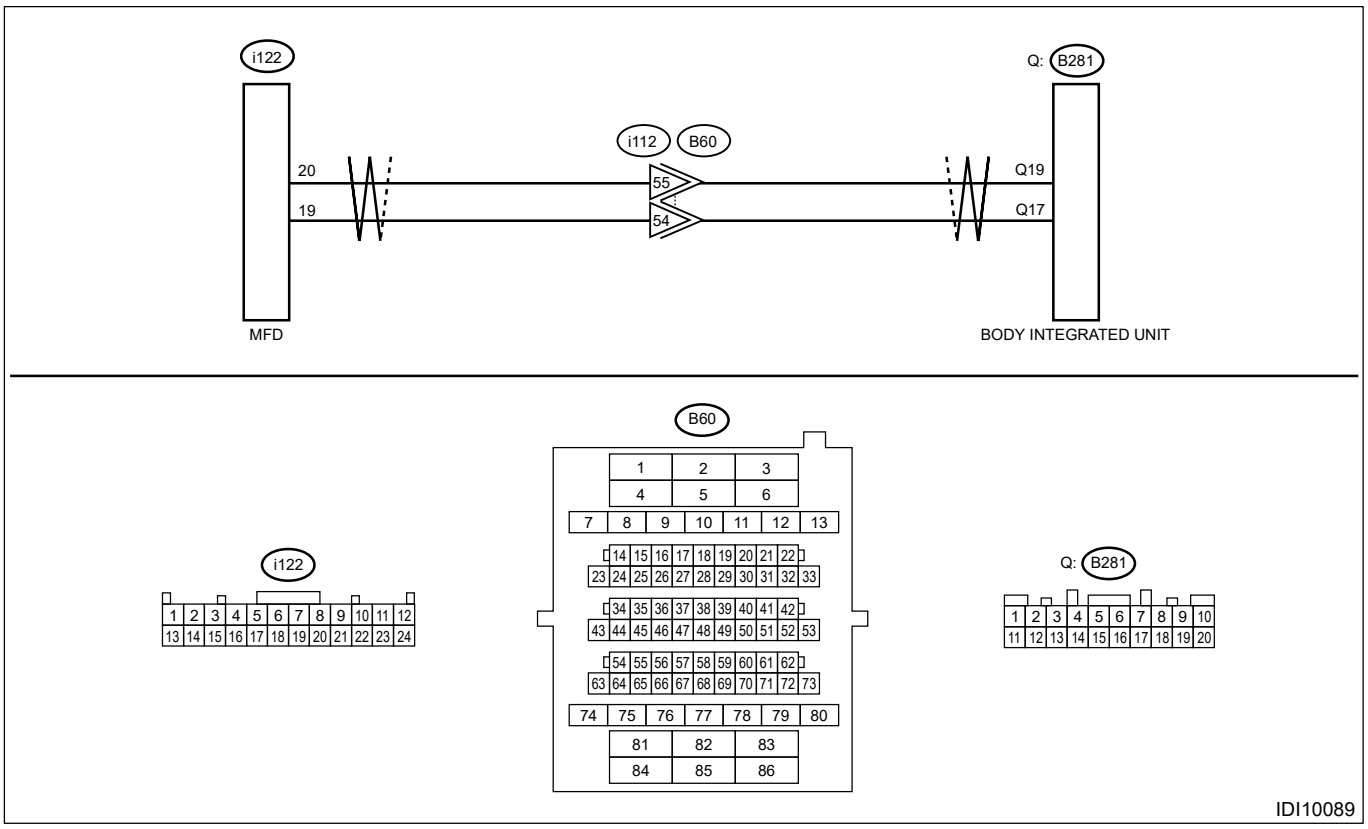
Is the resistance 10 kΩ or more?

Yes	Go to 3.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the body integrated unit connector.
2. Using a tester, measure the resistance between the MFD connector and body integrated unit connector.
   Connector & terminal
   (i122) No. 19 — (B281) No. 17:
   (i122) No. 20 — (B281) No. 19:

Is the resistance 10 Ω or less?



Yes	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
No	Repair or replace the open circuit of harness.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

DTC detecting condition:
Detected when malfunction occurs in CAN line. (Bus off).
Trouble symptom:
In each screen, there are some items that are not displayed.
- Favorite screen is not properly displayed.
- Fuel economy screen is not properly displayed.
- Ambient air temperature is displayed in bar display.
- Only electrical parts operation status screen, preventive safety screen, Favorite screen, fuel economy screen, clock screen, and setting transition screen are displayed.

Wiring diagram:
- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Multi-Function Display]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch to OFF.
3. Disconnect the MFD connector and reconnect it.
4. Turn the ignition switch to ON.
5. Read the DTC of [Multi-Function Display] using the Subaru Select Monitor. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC U0074 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC (past malfunction) is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (GROUND SHORT CIRCUIT).

1. Disconnect the MFD connector.
2. Using a tester, measure the resistance between MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 19 — Chassis ground:
   (i122) No. 20 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 3.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the body integrated unit connector.
2. Using a tester, measure the resistance between the MFD connector and body integrated unit connector.

Connector & terminal

(i122) No. 19 — (B281) No. 17:

(i122) No. 20 — (B281) No. 19:

Is the resistance 10 Ω or less?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
No	Perform the inspection according to the diagnosis for LAN system.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC detecting condition:

CAN data from ECM is abnormal.

Trouble symptom:

- Favorite screen Accelerator opening angle does not change.
- Favorite screen Oil temperature does not change.
- Favorite screen Water temperature does not change.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

DTC detecting condition:
CAN data from TCM is abnormal.
Trouble symptom:
Left side of preventive safety screen (powertrain display) is different between AWD model and 2WD model.
Note:
For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
CAN data from VDCCM is abnormal.
Trouble symptom:
- The on-screen tire angle in the left side of the preventive safety screen (powertrain display) does not change.
- The on-screen tire display in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The on-screen powertrain in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The X-MODE icon in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The VDC operation icon in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The HDC operation icon in the left side of the preventive safety screen (powertrain display) is not shown properly.

Note:
For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

DTC detecting condition:
CAN data from VDCCM is abnormal.
Trouble symptom:
Frequency of advice to take a rest increases. (head unit display)

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC detecting condition:

CAN data from body integrated unit is abnormal.

Trouble symptom:

- After the "Welcome" is displayed, even if the ignition is turned to ACC ON, the screen remains in black and the system does not startup.
- When the ignition is turned to ACC ON while the "Welcome" screen is being displayed, the screen remains the same.
- When the driver's door is opened while the "Good-bye" screen is being displayed, the screen remains the same.
- Frequency of advice to take a rest increases.
- Brightness of multi-function display does not change.
- Brake light status is not displayed correctly in the electrical parts operation status screen.
- Headlight status is not displayed correctly in the electrical parts operation status screen.
- Front fog light status is not displayed correctly in the electrical parts operation status screen.
- Rear fog light status is not displayed correctly in the electrical parts operation status screen.
- Headlight AUTO switch status is not displayed correctly in the electrical parts operation status screen.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:

CAN data from combination meter is abnormal.

Trouble symptom:

- Displayed units are incorrect. (temperature, fuel economy, distance, speed)
- The display order of date (year, month, day) is incorrect.
- Ambient air temperature reading in the regularly displayed bar is not correct. (bar display).
- EyeSight screen is not displayed.
- EyeSight status is not displayed correctly in the electrical parts operation status screen.
- RAB status is not displayed correctly in the electrical parts operation status screen.
- Turn signal status is not displayed correctly in the electrical parts operation status screen.
- Favorite screen Average speed does not change.

- Favorite screen Instantaneous fuel economy does not change.
- Favorite screen Orientation is not displayed.
- Favorite screen Weather is not displayed.
- Favorite screen Speed limit are not displayed.
- Fuel economy screen Instantaneous fuel economy does not change.
- Fuel economy screen Average fuel economy is not displayed.
- Fuel economy screen Remaining fuel cruising distance value is not displayed.
- Illumination brightness is not changed by the bright switch.
- "Welcome" display is not displayed.
- The language shown is different from the language displayed in the combination meter.
- A screen cannot be switched to the setting screen.
- When the setting screen is on, the switches are disabled.
- Orientation screen is not displayed.
- Turn by turn screen is not displayed.
- Weather screen is not displayed.
- Audio screen is not displayed.
- Time is not shared with audio.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0162 LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE

DTC detecting condition:

CAN data from AVN is abnormal.

Trouble symptom:

- Time is not shared with audio.
- Orientation screen is not displayed.
- Turn by turn screen is not displayed.
- Weather screen is not displayed.
- Audio screen is not displayed.
- Favorite screen Orientation is not displayed.
- Favorite screen Weather is not displayed.
- Favorite screen Speed limit are not displayed.
- Orientation is not displayed properly in the orientation screen.
- Orientation shown in the orientation screen is different from one in the navigation system.
- Names of streets and symbols shown in the orientation screen are different from those in the navigation system.
- Speed limit and signs shown in the orientation screen are different from those in the navigation system.
- Arrows shown in the turn by turn screen are different from those in the navigation system.
- Remaining distance shown in the turn by turn screen is different from one in the navigation system.
- Names of the next streets shown in the turn by turn screen are different from those in the navigation

system.

- Weather shown in the weather screen is different from one in the head unit.
- The source display shown in the audio screen is different from one in the head unit.
- Audio information shown in the audio screen is different from one in the head unit.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DTC detecting condition:

CAN data from A/C control panel is abnormal.

Trouble symptom:

- Air conditioner status is not displayed in the regularly display bar.
- Air conditioner status is not displayed correctly in the regularly display bar.
- Setting temperature reading in the regularly displayed bar is not displayed.
- Operating the air conditioner does not display air conditioner interruption.
- Air conditioner status is not displayed correctly in the air conditioner interruption display.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC detecting condition:

CAN data from ECM is abnormal.

Trouble symptom:

- Favorite screen Accelerator opening angle does not change.
- Favorite screen Oil temperature does not change.
- Favorite screen Water temperature does not change.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC detecting condition:

CAN data from TCM is abnormal.

Trouble symptom:
Left side of preventive safety screen (powertrain display) is different between AWD model and 2WD model.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
CAN data from VDCCM is abnormal.

Trouble symptom:

- The on-screen tire angle in the left side of the preventive safety screen (powertrain display) does not change.
- The on-screen tire display in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The on-screen powertrain in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The X-MODE icon in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The VDC operation icon in the left side of the preventive safety screen (powertrain display) is not shown properly.
- The HDC operation icon in the left side of the preventive safety screen (powertrain display) is not shown properly.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE

DTC detecting condition:
CAN data from VDCCM is abnormal.

Trouble symptom:
Frequency of advice to take a rest increases.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC detecting condition:

CAN data from body integrated unit is abnormal.

Trouble symptom:

- After the “Welcome” is displayed, even if the ignition is turned to ACC ON, the screen remains in black and the system does not startup.
- When the ignition is turned to ACC ON while the “Welcome” screen is being displayed, the screen remains the same.
- When the driver’s door is opened while the “Good-bye” screen is being displayed, the screen remains the same.
- Frequency of advice to take a rest increases.
- Brightness of multi-function display does not change.
- Brake light status is not displayed correctly in the electrical parts operation status screen.
- Headlight status is not displayed correctly in the electrical parts operation status screen.
- Front fog light status is not displayed correctly in the electrical parts operation status screen.
- Rear fog light status is not displayed correctly in the electrical parts operation status screen.
- Headlight AUTO switch status is not displayed correctly in the electrical parts operation status screen.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC detecting condition:

CAN data from combination meter is abnormal.

Trouble symptom:

- Displayed units are incorrect. (temperature, fuel economy, distance, speed)
- The display order of date (year, month, day) is incorrect.
- Ambient air temperature reading in the regularly displayed bar is not correct. (bar display)
- EyeSight screen is not displayed.
- EyeSight status is not displayed correctly in the electrical parts operation status screen.
- RAB status is not displayed correctly in the electrical parts operation status screen.
- Turn signal status is not displayed correctly in the electrical parts operation status screen.
- Favorite screen Average speed does not change.
- Favorite screen Instantaneous fuel economy does not change.
- Favorite screen Orientation is not displayed.
- Favorite screen Weather is not displayed.
- Favorite screen Speed limit are not displayed.
- Fuel economy screen Instantaneous fuel economy does not change.
- Fuel economy screen Average fuel economy is not displayed.
- Fuel economy screen Remaining fuel cruising distance value is not displayed.

- Illumination brightness is not changed by the bright switch.
- "Welcome" display is not displayed.
- The language shown is different from the language displayed in the combination meter.
- A screen cannot be switched to the setting screen.
- When the setting screen is on, the switches are disabled.
- Orientation screen is not displayed.
- Turn by turn screen is not displayed.
- Weather screen is not displayed.
- Audio screen is not displayed.
- Time is not shared with audio.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DTC detecting condition:

CAN data from A/C control panel is abnormal.

Trouble symptom:

- Air conditioner status is not displayed in the regularly display bar.
- Air conditioner status is not displayed correctly in the regularly display bar.
- Setting temperature reading in the regularly displayed bar is not displayed.
- Operating the air conditioner does not display air conditioner interruption.
- Air conditioner status is not displayed correctly in the air conditioner interruption display.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0463 INVALID DATA RECEIVED FROM NAVIGATION DISPLAY MODULE

DTC detecting condition:

CAN data from AVN is abnormal.

Trouble symptom:

- Time is not shared with audio.
- Orientation screen is not displayed.
- Turn by turn screen is not displayed.
- Weather screen is not displayed.
- Audio screen is not displayed.
- Favorite screen Orientation is not displayed.
- Favorite screen Weather is not displayed.

- Favorite screen Speed limit are not displayed.
- Orientation is not displayed properly in the orientation screen.
- Orientation shown in the orientation screen is different from one in the navigation system.
- Names of streets and symbols shown in the orientation screen are different from those in the navigation system.
- Speed limit and signs shown in the orientation screen are different from those in the navigation system.
- Arrows shown in the turn by turn screen are different from those in the navigation system.
- Remaining distance shown in the turn by turn screen is different from one in the navigation system.
- Names of the next streets shown in the turn by turn screen are different from those in the navigation system.
- Weather shown in the weather screen is different from one in the head unit.
- The source display shown in the audio screen is different from one in the head unit.
- Audio information shown in the audio screen is different from one in the head unit.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

DTC detecting condition:

CAN data from Blind Spot Detection/Rear Cross Traffic Alert is abnormal.

Trouble symptom:

Blind Spot Detection/Rear Cross Traffic Alert status are not displayed correctly in the electrical parts operation status screen.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1235 LOST COMMUNICATION WITH EYESIGHT

DTC detecting condition:

CAN data from stereo camera is abnormal.

Trouble symptom:

- EyeSight screen is not displayed.
- Forward vehicle is not displayed in the EyeSight screen.
- When EyeSight detects white lines, the white lines are not displayed in the EyeSight screen.
- In lane keep status, lanes are not displayed in the EyeSight screen.
- Braking status of driver’s own vehicle is not displayed correctly in the EyeSight screen.
- Lane departure warning OFF indicator is not displayed correctly in the electrical parts operation status

screen.
- Pre-collision OFF indicator is not displayed correctly in the electrical parts operation status screen.
- RAB status is not displayed correctly in the electrical parts operation status screen.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1433 INVALID DATA RECEIVED FROM EYESIGHT

DTC detecting condition:

CAN data from stereo camera is abnormal.

Trouble symptom:

- EyeSight screen is not displayed.
- Forward vehicle is not displayed in the EyeSight screen.
- When EyeSight detects white lines, the white lines are not displayed in the EyeSight screen.
- In lane keep status, lanes are not displayed in the EyeSight screen.
- Braking status of driver’s own vehicle is not displayed correctly in the EyeSight screen.
- Lane departure warning OFF indicator is not displayed correctly in the electrical parts operation status screen.
- Pre-collision OFF indicator is not displayed correctly in the electrical parts operation status screen.
- RAB status is not displayed correctly in the electrical parts operation status screen.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1533 INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE

DTC detecting condition:

CAN data from Blind Spot Detection/Rear Cross Traffic Alert is abnormal.

Trouble symptom:

Blind Spot Detection/Rear Cross Traffic Alert status are not displayed correctly in the electrical parts operation status screen.

Note:

For the diagnostic procedure, refer to DTC U0074. Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

Symptoms		Reference
1	No display is shown.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > NO DISPLAY IS SHOWN.
2	Light AUTO display is not displayed in the electrical parts operation status screen.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > LIGHT AUTO DISPLAY IS NOT DISPLAYED IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN.
3	EyeSight main display is not displayed in the electrical parts operation status screen.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > EYESIGHT MAIN DISPLAY IS NOT DISPLAYED IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN.
4	In the electrical parts operation status screen, RAB ON/OFF display cannot be switched.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN, RAB ON/OFF DISPLAY CANNOT BE SWITCHED.
5	In the electrical parts operation status screen, Blind Spot Detection/Rear Cross Traffic Alert ON/OFF display cannot be switched.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN, Blind Spot Detection/Rear Cross Traffic Alert ON/OFF DISPLAY CANNOT BE SWITCHED.
6	Only weather screen is not displayed.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ONLY WEATHER SCREEN IS NOT DISPLAYED.
7	Only orientation & Turn by turn screens are not displayed.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > ONLY ORIENTATION & AND TURN BY TURN SCREENS ARE NOT DISPLAYED.
8	Pressing the INFO switch does not change the screen.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PRESSING THE INFO SWITCH DOES NOT CHANGE THE SCREEN.
9	Average fuel economy is not displayed.	Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>Diagnostics with

Symptoms	Reference

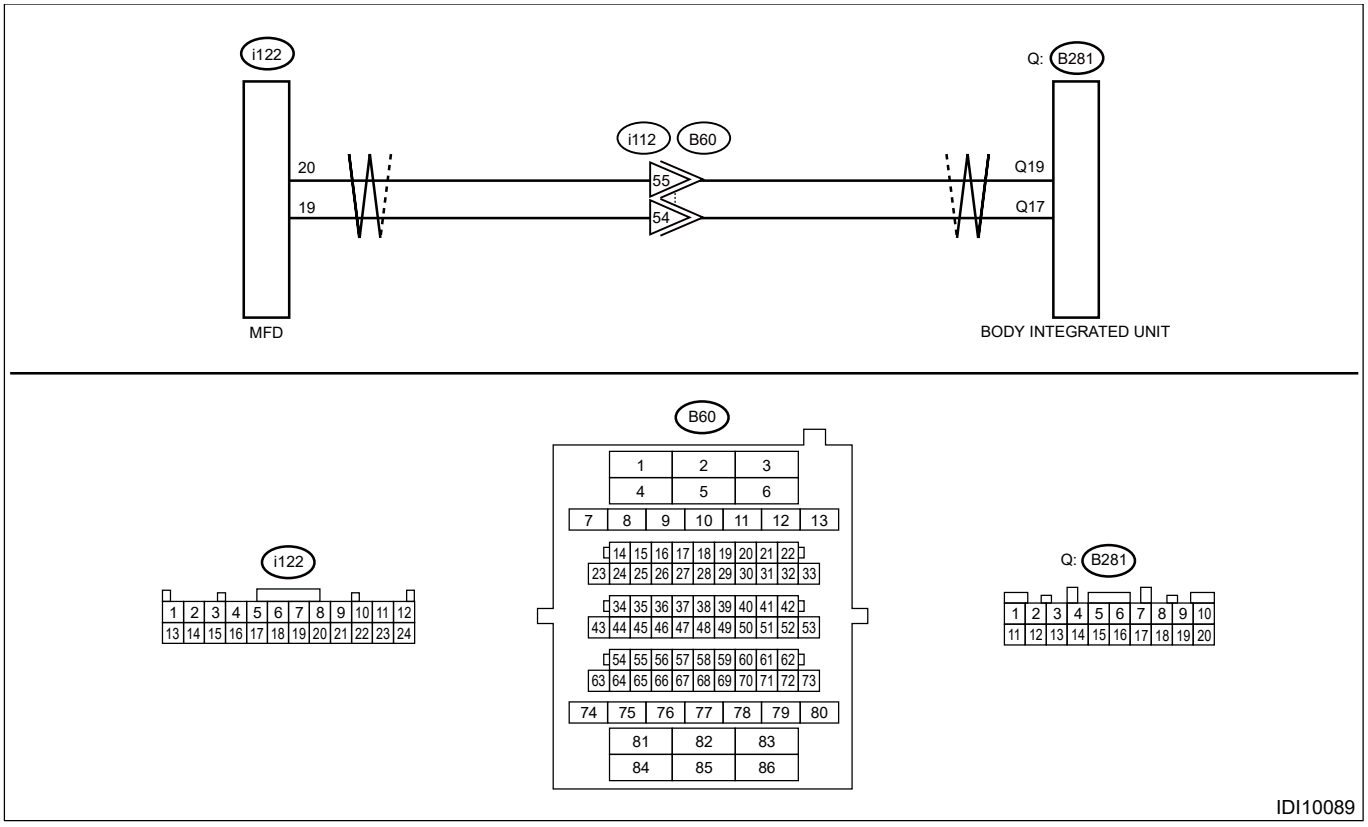
MULTI-FUNCTION DISPLAY(DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION



1. NO DISPLAY IS SHOWN

Detecting condition:

Power supply circuit, ground circuit, communication circuit or MFD is abnormal.

Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POWER SUPPLY CIRCUIT.	no →	Perform the instructed procedures.

yes ↓

2. CHECK GROUND CIRCUIT (OPEN).
→ no → Perform the instructed procedures.
yes ↓

3. CHECK COMMUNICATION CIRCUIT (SHORT CIRCUIT TO GROUND).
→ no → Perform the instructed procedures.
yes ↓

4. CHECK HARNESS BETWEEN MFD AND BODY INTEGRATED UNIT.
→ no → Perform the instructed procedures.
yes ↓

5. CHECK BODY INTEGRATED UNIT.
→ yes → Perform the instructed procedures.
→ no → Perform the instructed procedures.

1. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Using a tester, measure the voltage between the MFD connector and chassis ground.

Connector & terminal

(i122) No. 24 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 2.
No	Repair or replace the open circuit of harness. (Check battery as well as fuse.)

2. CHECK GROUND CIRCUIT (OPEN).

Using a tester, measure the resistance between MFD connector and chassis ground.

Connector & terminal

(i122) No. 21 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK COMMUNICATION CIRCUIT (SHORT CIRCUIT TO GROUND).

Using a tester, measure the resistance between MFD connector and chassis ground.

Connector & terminal

(i122) No. 19 — Chassis ground:

(i122) No. 20 — Chassis ground:

Is the resistance 10 kΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK HARNESS BETWEEN MFD AND BODY INTEGRATED UNIT.

1. Disconnect the body integrated unit connector.
2. Measure the resistance of the harness between MFD connector and body integrated unit connector.

   Connector & terminal

   (i122) No. 19 — (B281) No. 17:

   (i122) No. 20 — (B281) No. 19:

Is the resistance less than 10 Ω?

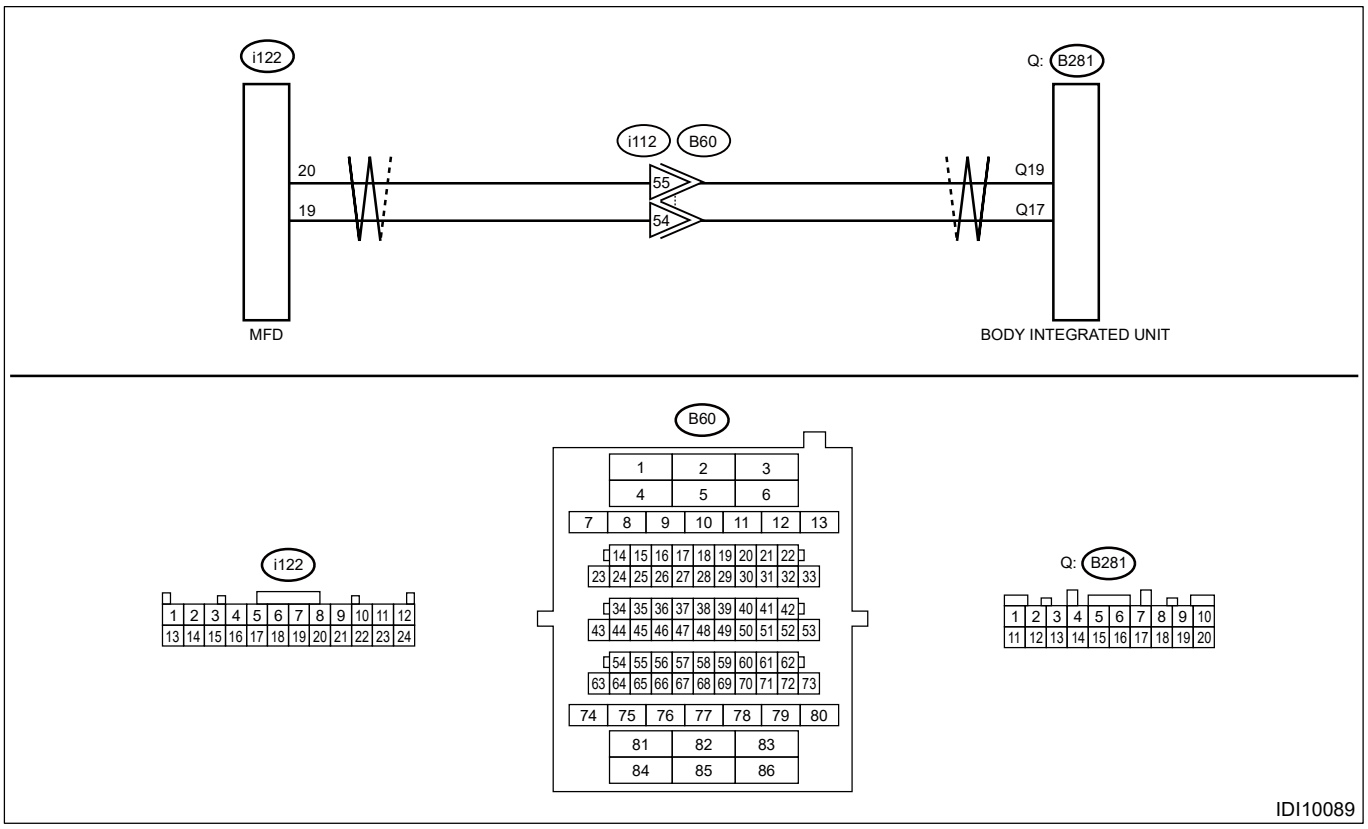
Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK BODY INTEGRATED UNIT.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis according to displayed DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).



2. LIGHT AUTO DISPLAY IS NOT DISPLAYED IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN

Detecting condition:

MFD initial setting, communication circuit or MFD is abnormal.

Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. INITIAL SETTING.
   - yes → Perform the instructed procedures.
   - no → Go to 2.
2. CHECK HARNESS BETWEEN MFD AND BODY INTEGRATED UNIT.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK BODY INTEGRATED UNIT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. INITIAL SETTING.

1. Switch the MFD display screen to the electrical parts operation status screen.
2. Move the light switch to AUTO position.

Is AUTO light displayed?

Yes	Initial setting has not been made.
No	Go to 2.

2. CHECK HARNESS BETWEEN MFD AND BODY INTEGRATED UNIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Disconnect the body integrated unit connector.
4. Measure the resistance of the harness between MFD connector and body integrated unit connector.

   Connector & terminal

   (i122) No. 19 — (B281) No. 17:

   (i122) No. 20 — (B281) No. 19:

Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

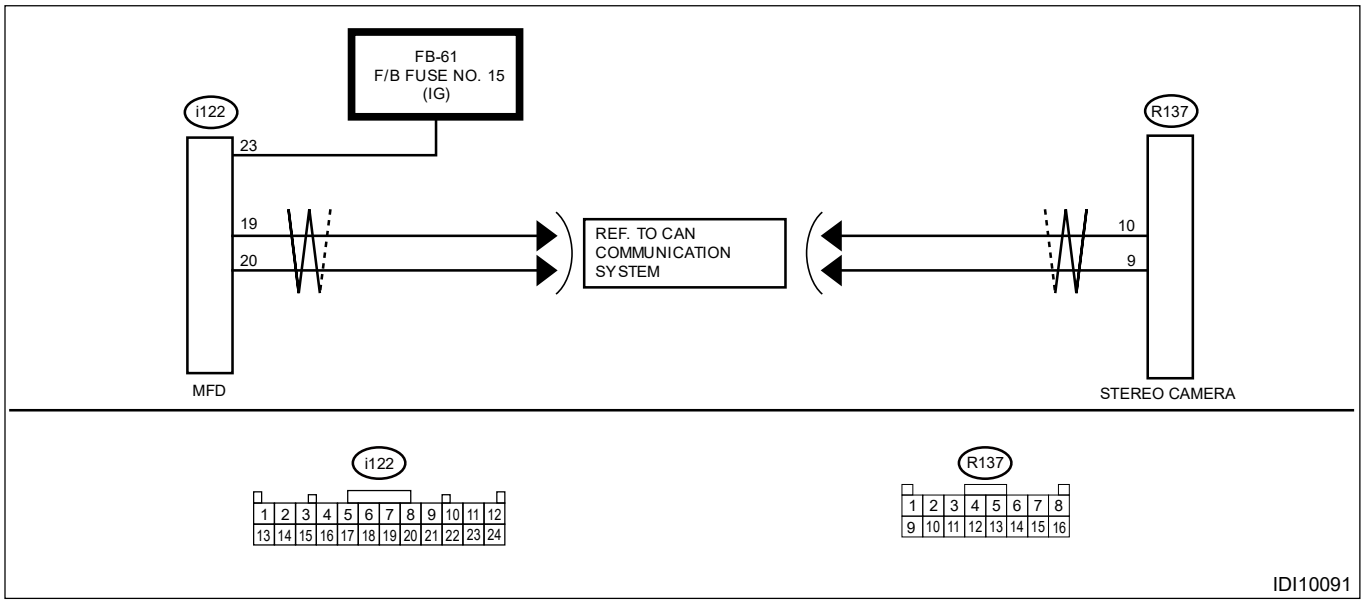
3. CHECK BODY INTEGRATED UNIT.

Read the DTC of [Body Control] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

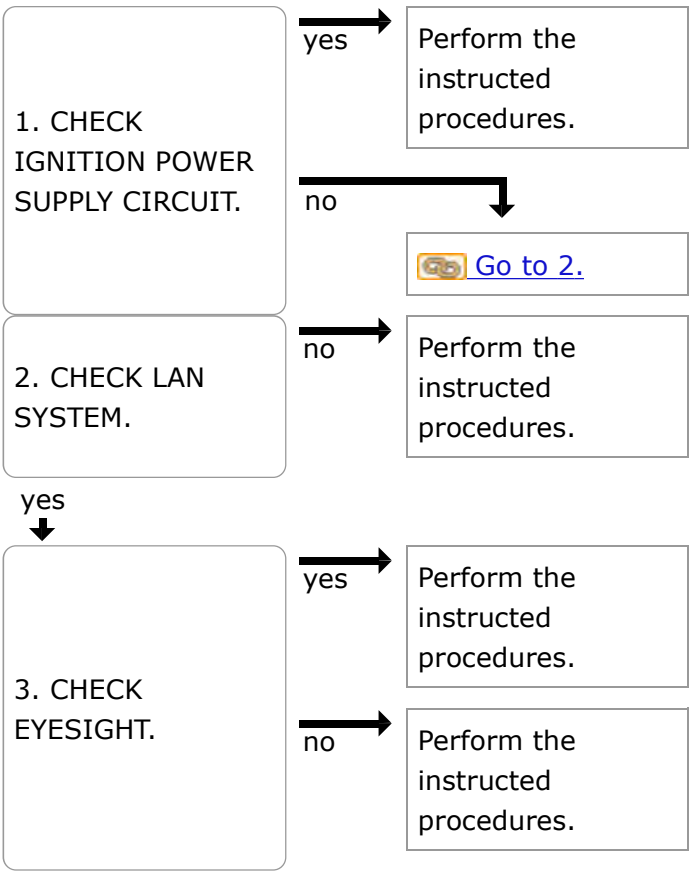
Yes	Perform the diagnosis according to displayed DTC. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).



3. EYESIGHT MAIN DISPLAY IS NOT DISPLAYED IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN

Detecting condition:

Communication circuit, stereo camera or MFD is abnormal.



Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK IGNITION POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the MFD connector and chassis ground.

Connector & terminal

(i122) No. 23 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair or replace the open circuit of harness. (Check battery as well as fuse.)
No	Go to 2.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

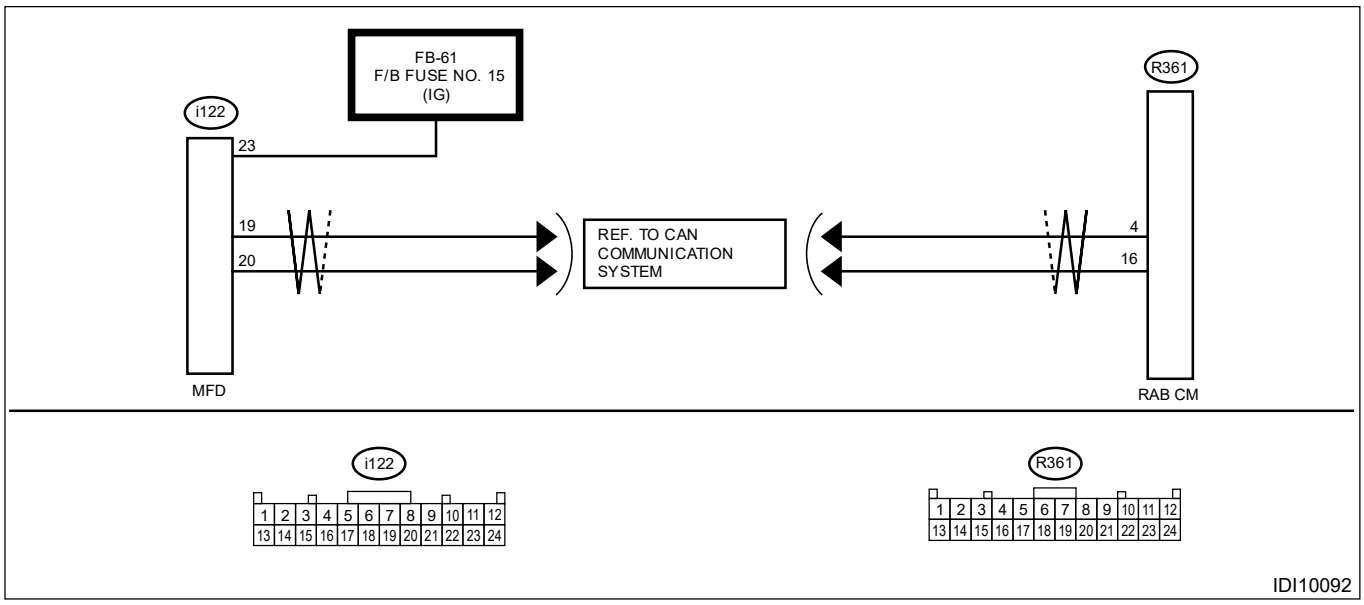
Yes	Go to 3.
No	Perform the inspection according to the diagnosis for LAN system.

3. CHECK EYESIGHT.

Read the DTC of [EyeSight] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis according to displayed DTC.
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).



4. IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN, RAB ON/OFF DISPLAY CANNOT BE SWITCHED

Detecting condition:

Communication circuit, stereo camera, RAB CM or MFD is abnormal.

Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK IGNITION POWER SUPPLY CIRCUIT.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK LAN SYSTEM.	no →	Perform the instructed procedures.
yes ↓		
3. CHECK RAB AND EYESIGHT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK IGNITION POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 23 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair or replace the open circuit of harness. (Check battery as well as fuse.)
No	Go to 2.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 3.
No	Perform the inspection according to the diagnosis for LAN system.

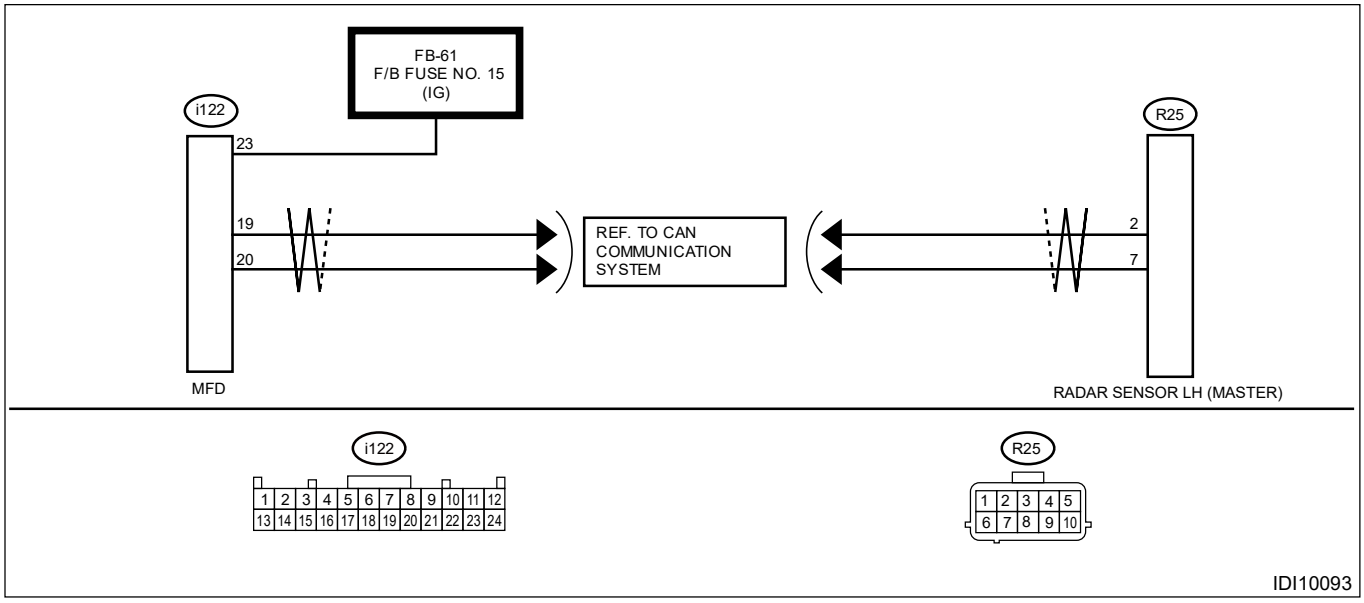
3. CHECK RAB AND EYESIGHT.

Using the Subaru Select Monitor, read the DTCs of [EyeSight] and [Reverse Automatic Braking].
Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis according to displayed DTC.
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).



5. IN THE ELECTRICAL PARTS OPERATION STATUS SCREEN, Blind Spot Detection/Rear Cross Traffic Alert ON/OFF DISPLAY CANNOT BE SWITCHED

Detecting condition:

Communication circuit, radar sensor or MFD is abnormal.

Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK IGNITION POWER SUPPLY CIRCUIT.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK LAN SYSTEM.	no →	Perform the instructed procedures.
	yes ↓	

3. CHECK Blind Spot Detection/Rear Cross Traffic Alert.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK IGNITION POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 23 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Repair or replace the open circuit of harness. (Check battery as well as fuse.)
No	Go to 2.

2. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 3.
No	Perform the inspection according to the diagnosis for LAN system.

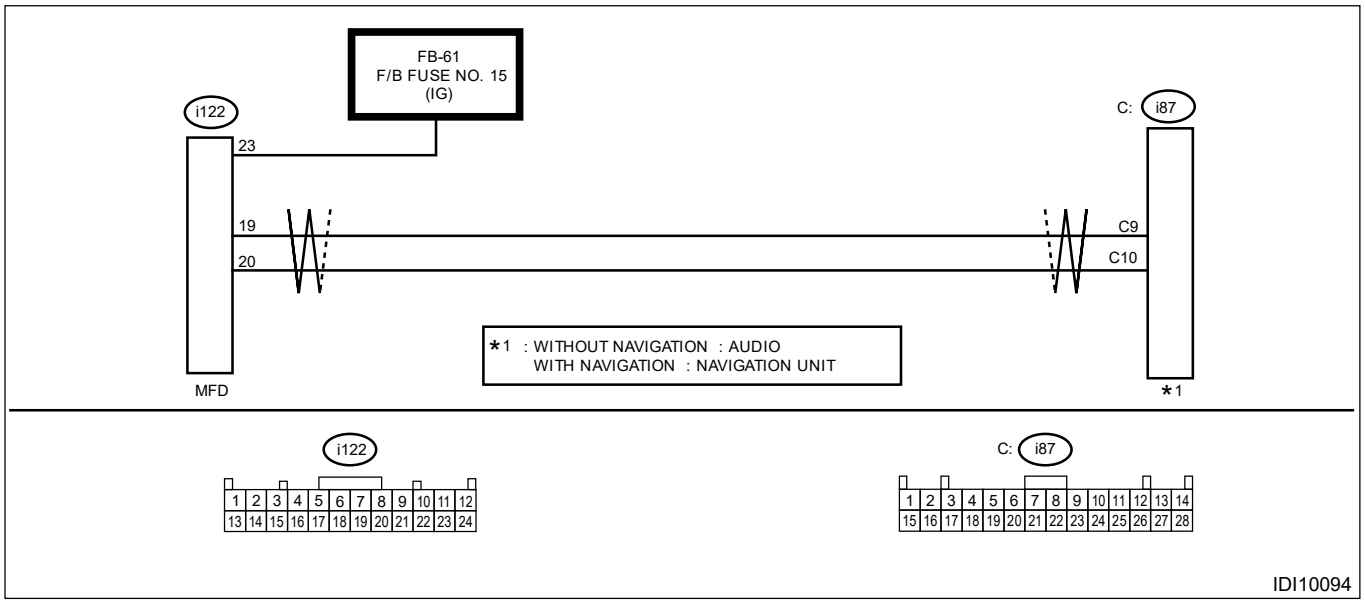
3. CHECK Blind Spot Detection/Rear Cross Traffic Alert.

Using the Subaru Select Monitor, read the DTCs of [Blind Spot Detection/Rear Cross Traffic Alert(RH)] or [Blind Spot Detection/Rear Cross Traffic Alert(LH)]. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

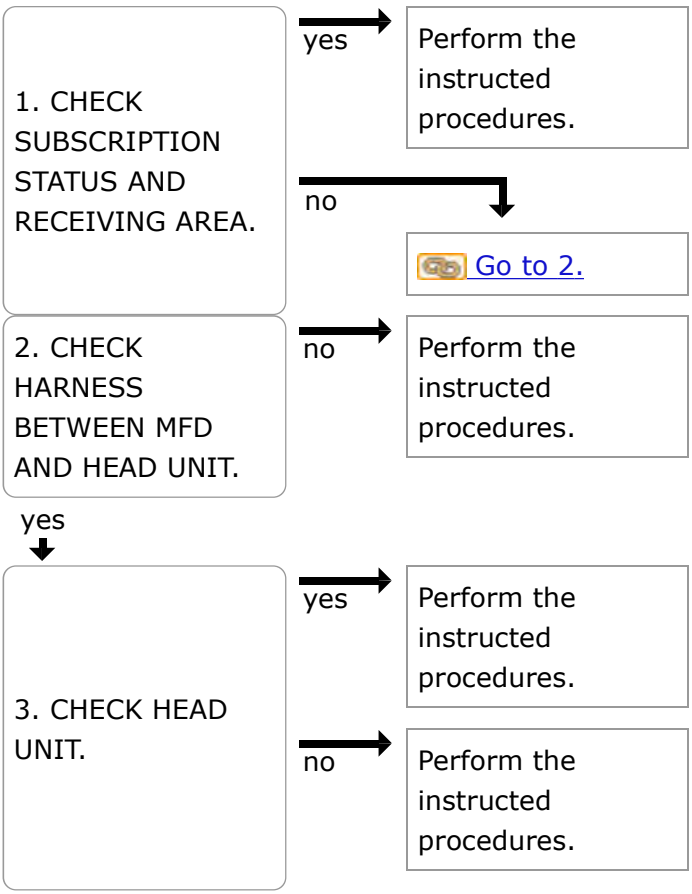
Yes	Perform the diagnosis according to displayed DTC. Ref. to Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).



6. ONLY WEATHER SCREEN IS NOT DISPLAYED

Detecting condition:

Communication circuit, audio or navigation, or MFD is abnormal.



Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK SUBSCRIPTION STATUS AND RECEIVING AREA.

Check user’s XM subscription status, and also areas where displays were not available.

Is there problem in XM subscription status and the areas?

Yes	System is normal. Displays are available only in subscription status and receiving areas.
No	Go to 2.

2. CHECK HARNESS BETWEEN MFD AND HEAD UNIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Disconnect the navigation unit or audio connector.
4. Using a tester, measure the resistance of harness between MFD connector and navigation unit or audio connector.
   Connector & terminal
   (i122) No. 19 — (i87) No. 9:
   (i122) No. 20 — (i87) No. 10:

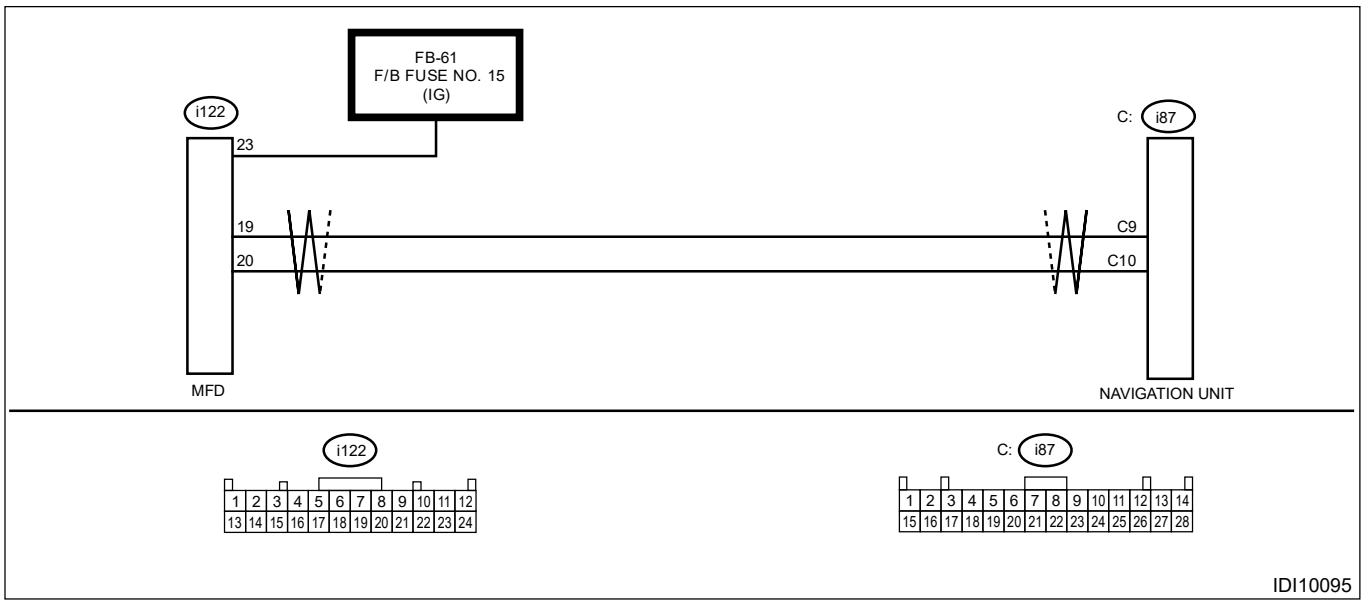
Is the resistance less than 10 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HEAD UNIT.

Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

DTC Check



Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis according to displayed DTC. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).

7. ONLY ORIENTATION & AND TURN BY TURN SCREENS ARE NOT DISPLAYED

Detecting condition:
Communication circuit, navigation or MFD is abnormal.
Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK HEAD UNIT.	no →	Perform the instructed procedures.
yes ↓		
2. CHECK POWER SUPPLY CIRCUIT.	no →	Perform the instructed procedures.
yes ↓		
3. CHECK HARNESS BETWEEN MFD AND HEAD UNIT.	no →	Perform the instructed procedures.
yes ↓		
4. CHECK HEAD UNIT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK HEAD UNIT.

Check the grade of the head unit.

Is it equipped with Hi (with navigation)?

Yes	Go to 2.
No	System is normal. Display is available only on Hi (with navigation).

2. CHECK POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between the MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 23 (+) — Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair or replace the open circuit of harness. (Check battery as well as fuse.)

3. CHECK HARNESS BETWEEN MFD AND HEAD UNIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Disconnect the head unit connector.
4. Using a tester, measure the resistance in harness between the MFD connector and head unit connector.
   Connector & terminal
   (i122) No. 19 — (i87) No. 9:
   (i122) No. 20 — (i87) No. 10:

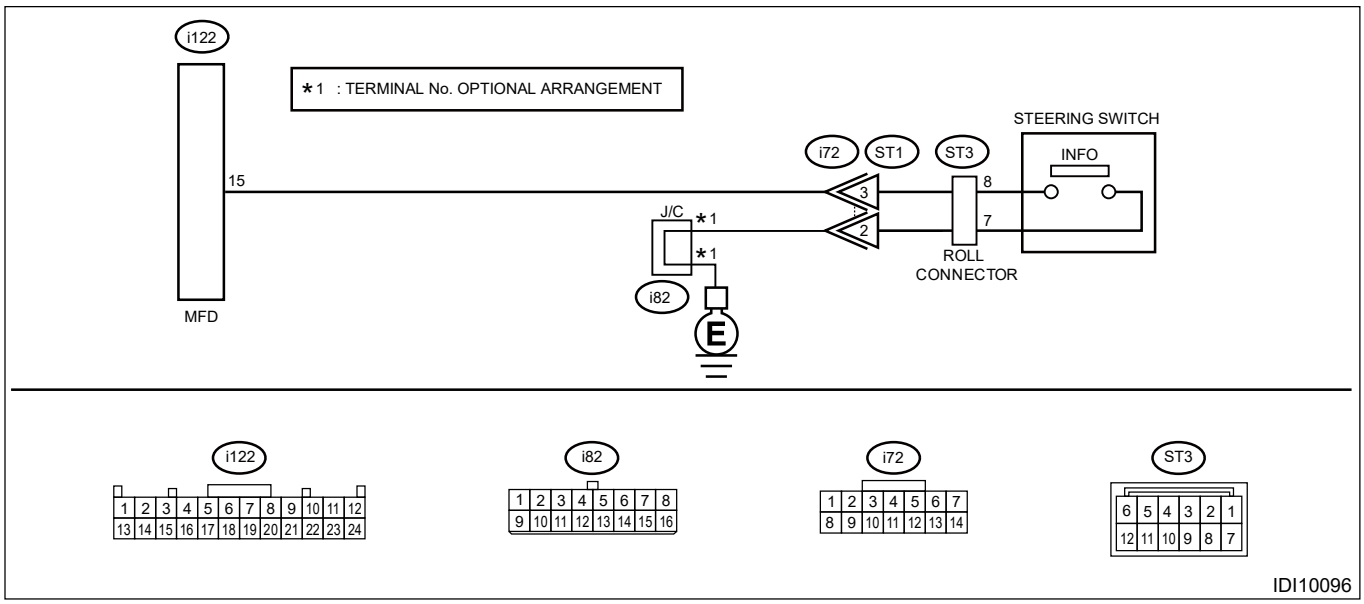
Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HEAD UNIT.

Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

DTC Check



Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis according to displayed DTC. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).

8. PRESSING THE INFO SWITCH DOES NOT CHANGE THE SCREEN

Detecting condition:
Communication circuit or MFD is abnormal.
Wiring diagram:

- Multi-function display (MFD) system Ref. to WIRING SYSTEM>Multi-function Display (MFD) System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK INFO SWITCH CIRCUIT.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK INFO SWITCH.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK INFO SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Using a tester, measure the resistance between MFD connector and chassis ground.
   Connector & terminal
   (i122) No. 15 — Chassis ground:

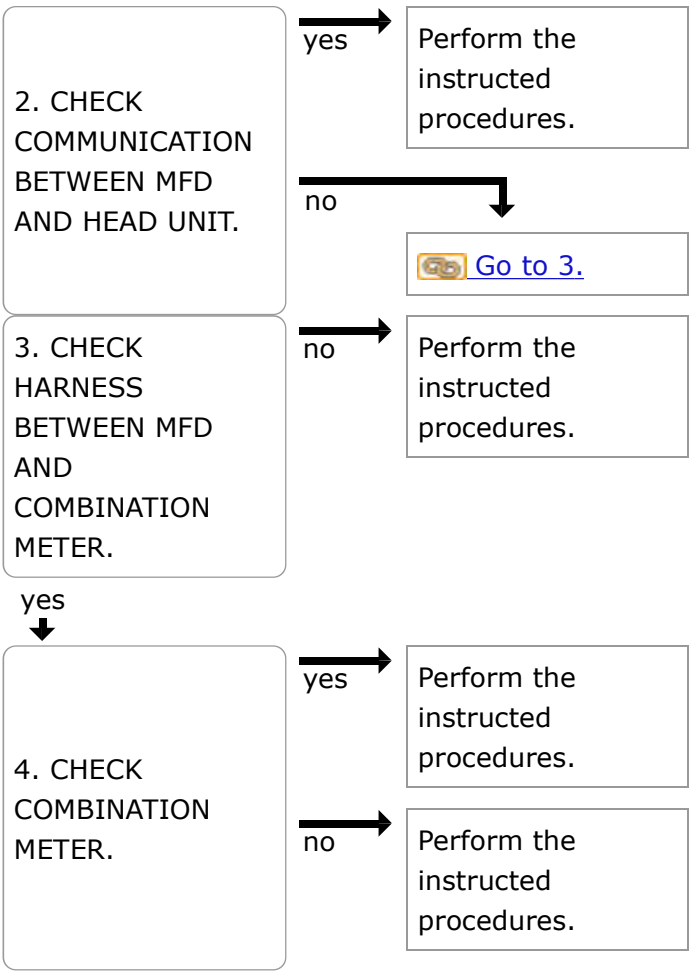
Is the resistance less than 10 Ω when switch is pushed? Is the resistance 10 kΩ or more when switch is not pushed?

Yes	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).
No	Go to 2.

2. CHECK INFO SWITCH.

Perform the inspection of INFO switch unit. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD) System>INSPECTION.

Is the check result OK?



Yes	Repair or replace the open circuit of harness.
No	Replace the INFO switch.

9. AVERAGE FUEL ECONOMY IS NOT DISPLAYED

Detecting condition:
Initial condition, communication circuit or MFD is abnormal.

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to MULTI-FUNCTION DISPLAY(DIAGNOSTICS)>General Description>CAUTION.

1. CHECK INITIAL CONDITION.
   - no → Perform the instructed procedures.
   - yes ↓

1. CHECK INITIAL CONDITION.

Check TRIP value.

Is the 1 km (0.6 mile) or more?

Yes	Go to 2.
No	After driving 1 km (0.6 mile), check the value.

2. CHECK COMMUNICATION BETWEEN MFD AND HEAD UNIT.

1. Switch the screen to the electrical parts operation status screen.
2. Turn ON the headlight and check the headlight illumination on the electrical parts operation status screen.

is the headlight displayed?

Yes	Currently, system is normal.
No	Go to 3.

3. CHECK HARNESS BETWEEN MFD AND COMBINATION METER.

1. Turn the ignition switch to OFF.
2. Disconnect the MFD connector.
3. Disconnect the head unit connector.
4. Using a tester, measure the resistance in harness between the MFD connector and head unit connector.

Connector & terminal

(i122) No. 19 — (i87) No. 6:

(i122) No. 20 — (i87) No. 7:

Is the resistance less than 10 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK COMBINATION METER.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis according to displayed DTC. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Replace the MFD. Ref. to INSTRUMENTATION/DRIVER INFO>Multi-function Display (MFD).

COMBINATION METER (DIAGNOSTICS)

MET(diag)

9. Freeze Frame Data
10. Active Test
11. Customize
12. Diagnostic Trouble Code (DTC)
13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

COMBINATION METER (DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to COMBINATION METER (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection. Ref. to COMBINATION METER (DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Combination Meter].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK CAN COMMUNICATION.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 5.
No	Perform the diagnosis for LAN system.

5. CHECK COMBINATION METER.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 7.
No	Go to 6.

6. CHECK COMBINATION METER.

Check the operation of combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.

Is the operation of combination meter OK?

Yes	System is normal.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

7. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Combination Meter]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to COMBINATION METER (DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 7 until DTC is not shown. Go to 7.
No	Finish the diagnosis.

COMBINATION METER (DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

Combination Meter Check List for Interview Brought in on: MM/DD/YY			
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date and time when the trouble occurred		Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions			
Road condition			
Accessory installation condition			
DTC			
Time stamp			
Control module item number/Ver.			
Condition of trouble occurrence (How the trouble occurs)			
Vehicle bring-in history information			

COMBINATION METER (DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. COMBINATION METER

When removing combination meter related parts, refer to CAUTIONS in INSTRUMENTATION/DRIVER INFO. Ref. to INSTRUMENTATION/DRIVER INFO>General Description>CAUTION.

COMBINATION METER (DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items that might provoke the problems in the combination meter.

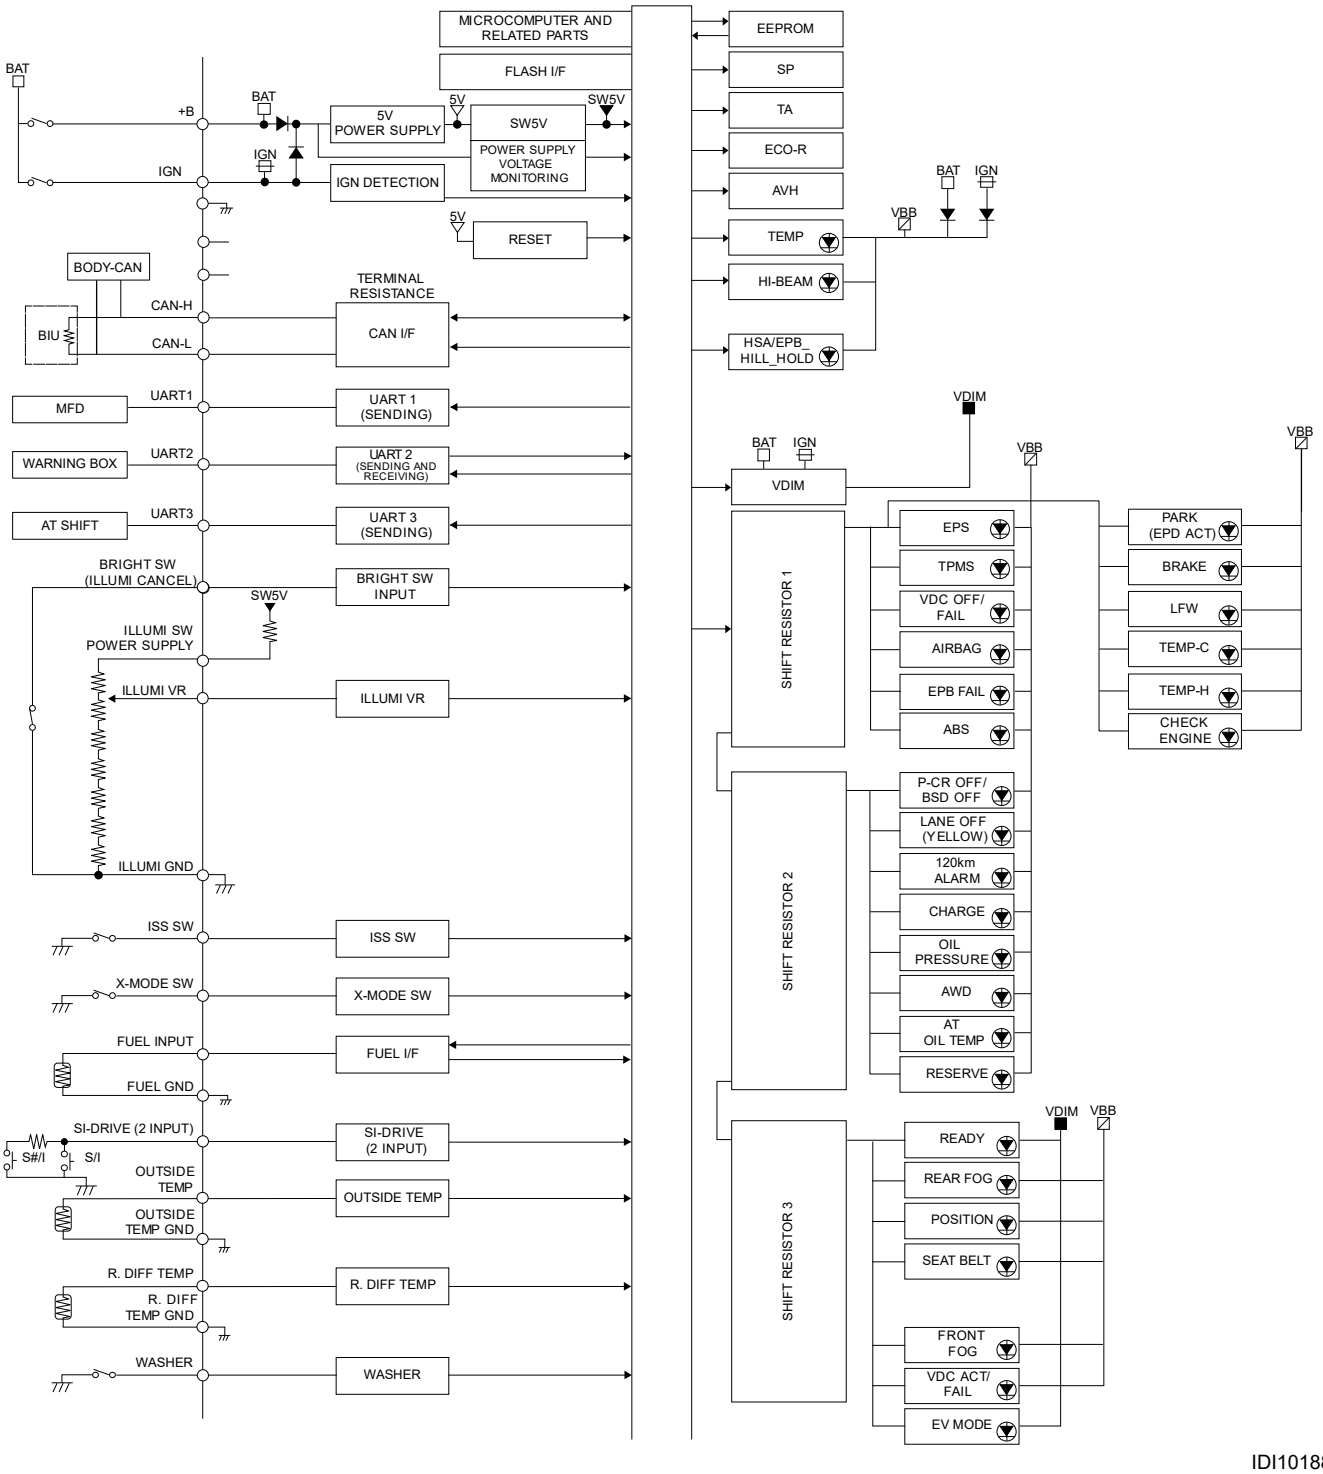
1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the main and other fuses, harnesses and connectors. Also check grounding.

COMBINATION METER (DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

COMBINATION METER (DIAGNOSTICS) > Inspection Mode

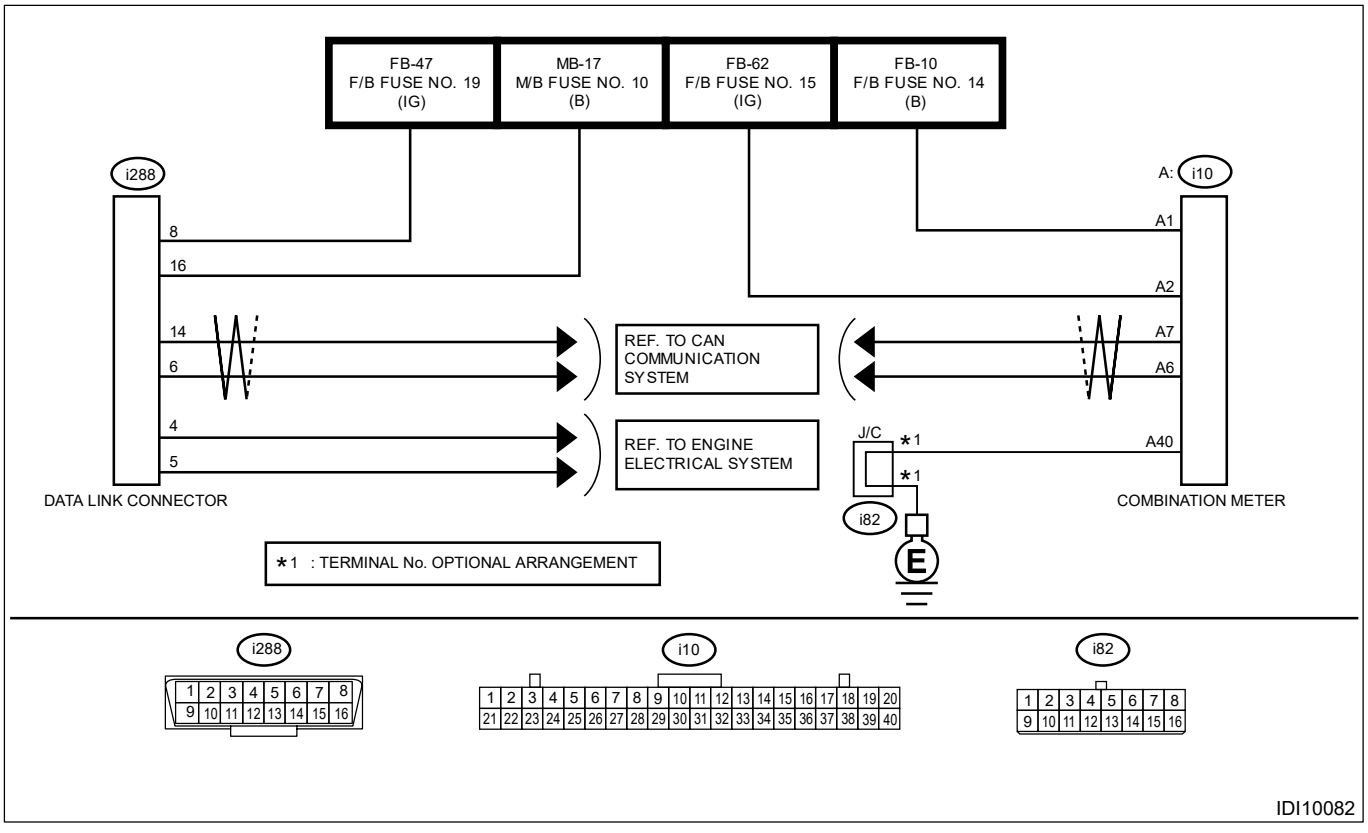
OPERATION

After the ignition switch is ON, wait for 10 seconds.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Trouble symptom:



Cannot communicate with [Combination Meter].

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:

- Combination meter system Ref. to WIRING SYSTEM>Combination Meter System>WIRING DIAGRAM.
- CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

1. CHECK FUSE.

Check the fuse.

Is the fuse OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery — combination meter.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the connector of combination meter.
3. Turn the ignition switch to ON.
4. Use a tester to measure the voltage between the combination meter connector and chassis ground.

Connector & terminal

(i10) No. 1 (+) — Chassis ground (–):

(i10) No. 2 (+) — Chassis ground (–):

Is the voltage 10 — 13 V?

Yes	Go to 3.
No	Repair the open circuit of harness between combination meter connector and fuse.

3. CHECK HARNESS.

Use a tester to measure the resistance between the combination meter connector and chassis ground.

Connector & terminal

(i10) No. 40 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between combination meter connector and chassis ground.

4. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

5. CHECK COMBINATION METER.

1. Turn the ignition switch to OFF.
2. Connect the combination meter connector.
3. Communicate with [Combination Meter] using the Subaru Select Monitor.

Is communication possible?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

COMBINATION METER (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to COMBINATION METER (DIAGNOSTICS)>Data Monitor>LIST.**

COMBINATION METER (DIAGNOSTICS) > Data Monitor

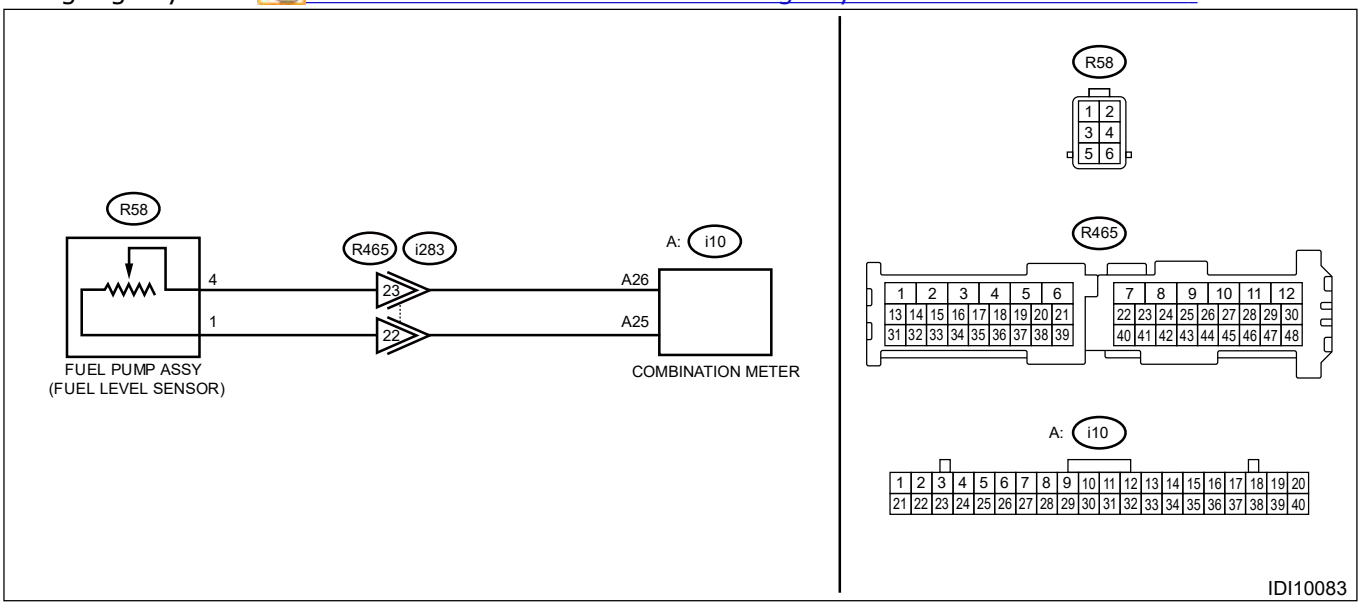
COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1500 FUEL SENDER OPEN DETECTED

DTC detecting condition:



Open circuit in fuel gauge circuit

Trouble symptom:

- Defective fuel gauge.
- Fuel level warning light blinks.

Wiring diagram:

Fuel gauge system Ref. to WIRING SYSTEM>Fuel Gauge System>WIRING DIAGRAM.

1. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1500 displayed? (Current malfunction)

Yes	Go to 2.
No	Go to 6.

2. CHECK COMBINATION METER.

1. Using the Subaru Select Monitor, check the following items in the [Active Test] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Active Test.
   - [Fuel Meter Operation]
   - [Remaining fuel warning]

Is the operation of [Fuel Meter Operation] and [Remaining fuel warning] OK?

Yes	Go to 3.
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the combination meter connector and fuel level sensor connector.
3. Using the tester, measure the resistance between terminals.

Connector & terminal

(i10) No. 25 — (R58) No. 1:

(i10) No. 26 — (R58) No. 4:

Is the resistance 10 Ω or less?

Yes	Go to 4.
No	Repair the open circuit of harness or replace harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using the tester, measure the resistance between terminals.

Connector & terminal

(i10) No. 25 — Chassis ground:

(i10) No. 26 — Chassis ground:

Is the resistance 10 Ω or less?

Yes	Repair the short circuit of harness or replace harness.
No	Go to 5.

5. CHECK FUEL LEVEL SENSOR.

Check the fuel sub level sensor as a single part. Ref. to FUEL INJECTION (FUEL SYSTEMS) (H4DO)>Fuel Level Sensor.

Is the check result OK?

Yes	Go to 6.
No	Replace the sensor. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Fuel Level Sensor.

6. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect connectors.

Is there poor contact of connector?

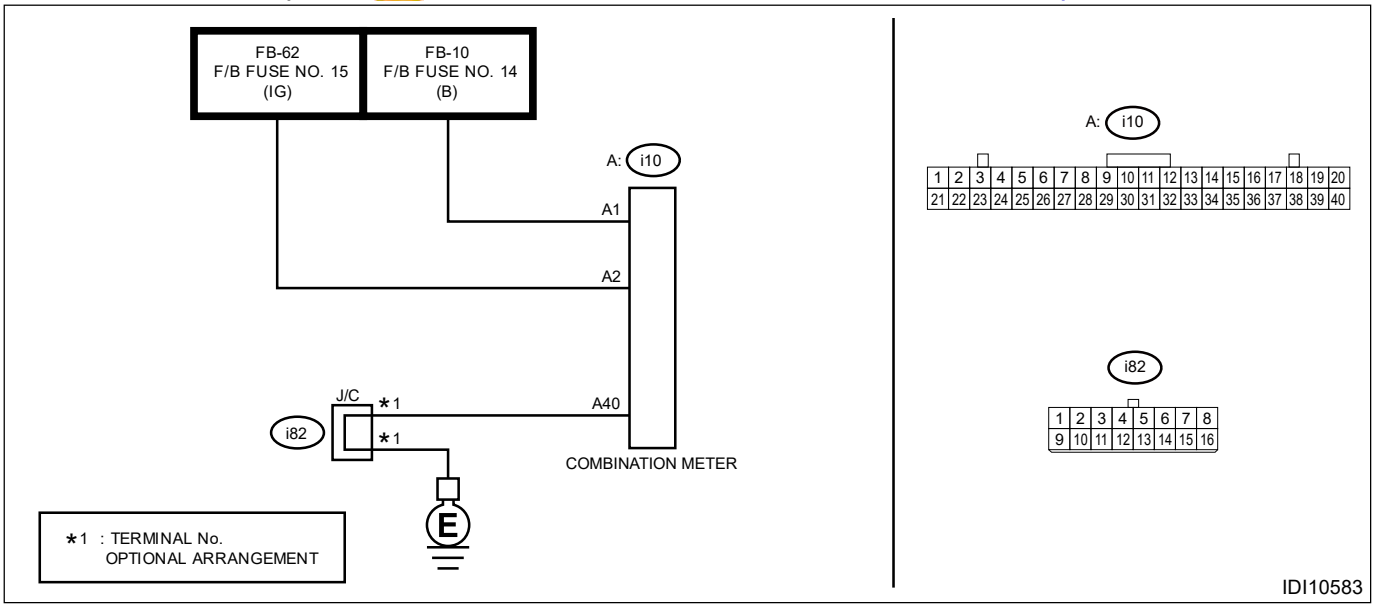
Yes	Repair or replace the poor contact of connector.
No	Go to 7.

7. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Fuel level resistance]



Does [Fuel level resistance] indicate 15 — 480 Ω?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the combination meter. Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1501 POWER SUPPLY SYSTEM ERROR DETECTION

DTC detecting condition:
Open or short in combination meter power supply circuit
Trouble symptom:
Defective operation of combination meter
Wiring diagram:
Combination meter system Ref. to WIRING SYSTEM>Combination Meter System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to COMBINATION METER (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK POWER SUPPLY CIRCUIT.

Turn the ignition switch to ON, and confirm that the illumination of combination meter lights.

Does the illumination light?

Yes	Go to 2.
No	Go to 3.

2. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1501 displayed? (Current malfunction)

Yes	Go to 3.
No	Go to 5.

3. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse. Ref. to INSTRUMENTATION/DRIVER INFO>Relay and Fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the defective fuse.

4. CHECK HARNESS (POWER SUPPLY CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the meter connector.
3. Using the tester, measure the voltage between terminals.

Connector & terminal

(i10) No. 1 (+) — Chassis ground (−):

(i10) No. 2 (+) — Chassis ground (−):

Is the voltage 8.5 — 16.5 V?

Yes	Go to 5.
No	Repair the open circuit of harness or replace harness.

5. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect connectors.
3. Check for poor contact of connector.

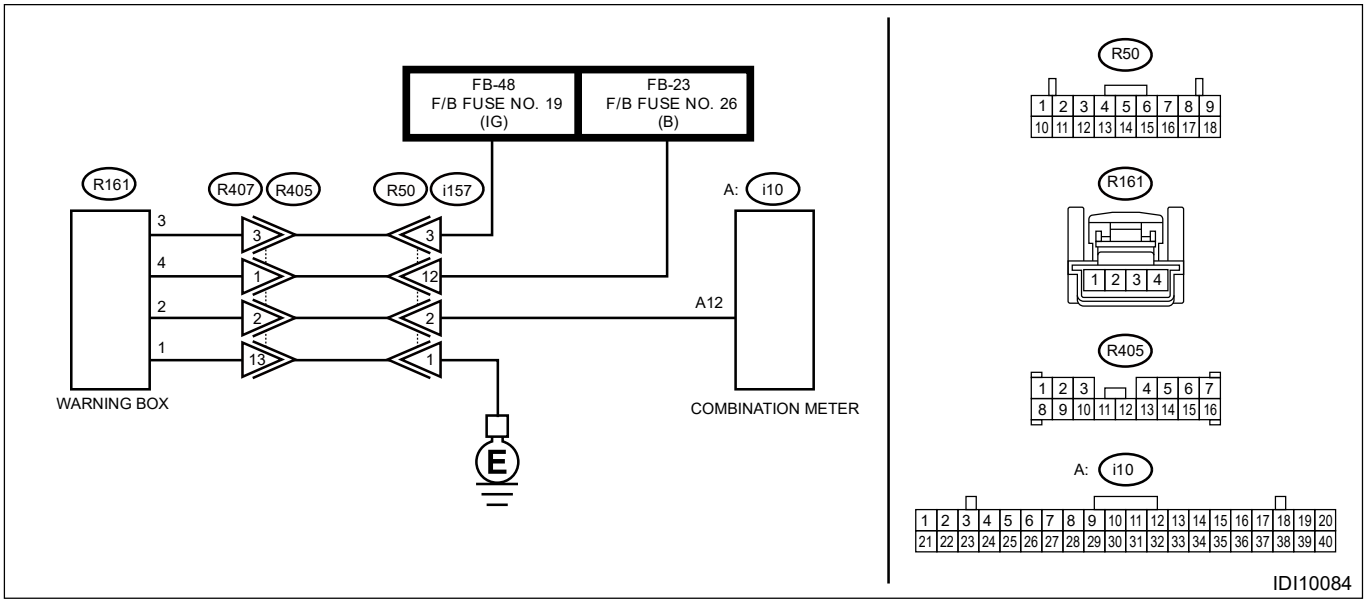
Is the check result OK?

Yes	A temporary change of voltage occurred.
No	Repair or replace the poor contact of connector.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1502 WARNING BOX COMMUNICATION MALFUNCTION

DTC detecting condition:



Communication error between combination meter and spot map light

Trouble symptom:

Malfunction of the warning light inside the spot map light

Wiring diagram:

Combination meter system Ref. to WIRING SYSTEM>Combination Meter System>WIRING DIAGRAM.

1. CHECK POWER SUPPLY CIRCUIT.

Turn the ignition switch to ON, and make sure that the combination meter operates properly.

Is the check result OK?

Yes	Go to 2.
No	Check the combination meter power supply circuit.

2. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B1502 displayed? (Current malfunction)

Yes	Go to 3.
No	Go to 4.

3. CHECK COMMUNICATION CIRCUIT (HARNESS) (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the combination meter connector.
3. Disconnect the warning box connector.
4. Measure the resistance between combination meter connector and warning box connector.
   Connector & terminal
   (i10) No. 12 — (R161) No. 2:

Is the resistance less than 10 Ω?

Yes	Replace the warning box. Ref. to INSTRUMENTATION/DRIVER INFO>Warning Box.
No	Repair the open circuit of harness between combination meter connector and warning box connector.

4. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the combination meter connector.
3. Disconnect the warning box connector.

Is there any fault in the connector?

Yes	Repair or replace the connector.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1503 METER CONTROL MODULE CAN REGISTER STUCK

DTC detecting condition:
Combination meter CAN controller malfunction
Trouble symptom:
Normal operation becomes impossible because the communication with other parts is not established.

1. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

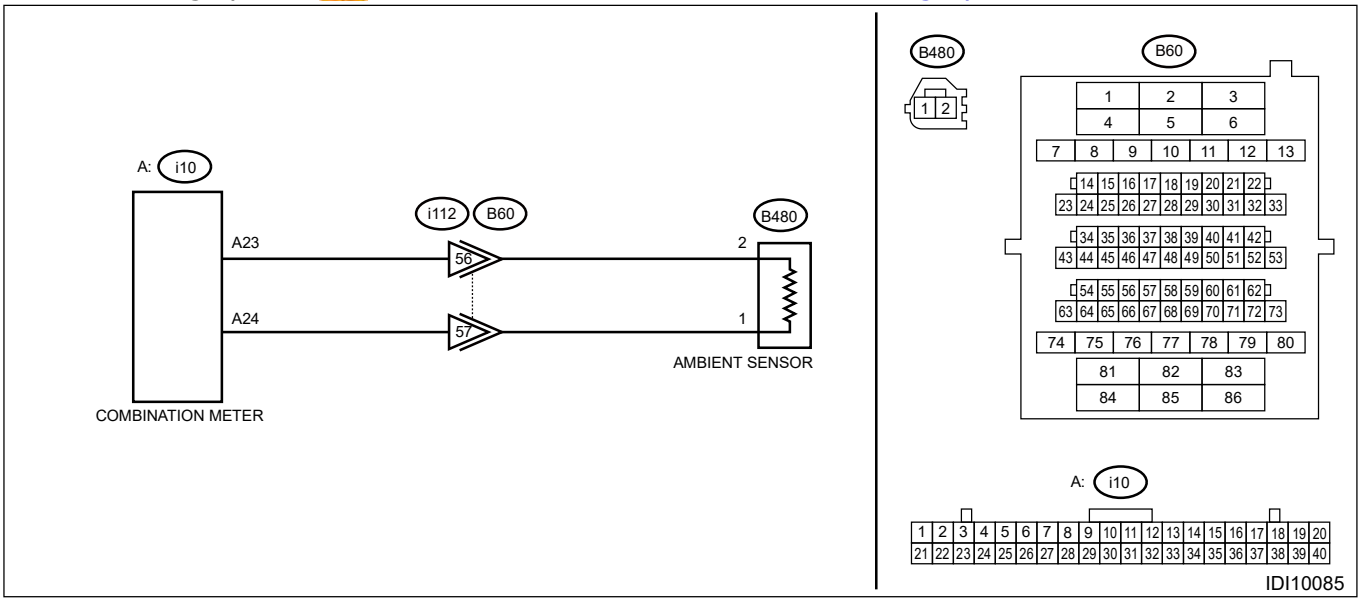
Is DTC B1502 displayed? (Current malfunction)

Yes	Replace the combination meter. (Defective hardware or software) Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.
No	Replace the combination meter. (Temporarily defective hardware or software) Ref. to INSTRUMENTATION/DRIVER INFO>Combination Meter.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B1507 OUTSIDE TEMPERATURE SENSOR OPEN DETECTED

DTC detecting condition:



Open or short circuit in ambient sensor

Trouble symptom:

- Defective ambient temperature display
- Defective air conditioner operation

Wiring diagram:

Air conditioning system Ref. to WIRING SYSTEM>Air Conditioning System>WIRING DIAGRAM.

1. CHECK DTC.

Read the DTC of [Combination Meter] using the Subaru Select Monitor. Ref. to COMBINATION METER (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B1507 displayed? (Current malfunction)

Yes	Go to 2.
No	Go to 6.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Combination Meter]. Ref. to COMBINATION METER (DIAGNOSTICS)>Data Monitor.

- [Ambient air temperature]

Is [Ambient air temperature] displayed?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the meter connector and ambient sensor connector.
3. Using the tester, measure the resistance between terminals.

Connector & terminal

(i10) No. 23 — (B480) No. 2:

(i10) No. 24 — (B480) No. 1:

Is the resistance 10 Ω or less?

Yes	Go to 4.
No	Repair the open circuit of harness or replace harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using the tester, measure the resistance between terminals.

Connector & terminal

(i10) No. 23 — Chassis ground:

(i10) No. 24 — Chassis ground:

Is the resistance 10 Ω or less?

Yes	Repair the short circuit of harness or replace harness.
No	Go to 5.

5. CHECK AMBIENT SENSOR.

Perform the inspection of ambient sensor unit. Ref. to AIR CONDITIONER>Ambient Sensor.

Is the check result OK?

Yes	Go to 6.
No	Replace the sensor. Ref. to AIR CONDITIONER>Ambient Sensor.

6. CHECK CONNECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect connectors.

Is there poor contact of connector?

Yes	Repair or replace the poor contact of connector.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Detected when CAN data from the engine control module (ECM) does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0127 LOST COMMUNICATION WITH TIRE PRESSURE MONITOR CONTROL MODULE AND/OR KEYLESS ENTRY CONTROL MODULE

Detected when CAN data from keyless entry CM or TPMS CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data from electric power steering CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A"

Detected when CAN data from MFD does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0162 LOST COMMUNICATION WITH AUDIO VISUAL NAVIGATION DISPLAY MODULE

Detected when CAN data from AVN does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

Detected when CAN data from A/C control panel does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0167 LOST COMMUNICATION WITH IMMOBILIZER CONTROL MODULE

Detected when CAN data from immobilizer CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

Detected when CAN data is not received from auto headlight beam leveler CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

Detected when CAN data from keyless access CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data is not received from body integrated unit.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

Detected when CAN data from the radar sensor does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1235 LOST COMMUNICATION WITH EYESIGHT

Detected when CAN data from stereo camera does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1433 INVALID DATA RECEIVED FROM EYESIGHT

Detected when CAN data from stereo camera is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

COMBINATION METER (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1533 INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE

Detected when CAN data from radar sensor is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

INFOTAINMENT(DIAGNOSTICS)

INF(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Control Module I/O Signal
6. Inspection Mode
7. Diagnostic Procedure for Subaru Select Monitor Communication
8. Data Monitor
9. Freeze Frame Data
10. Active Test
11. Customize
12. Work Support
13. Diagnostic Trouble Code (DTC)
14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
15. Diagnostics with Phenomenon
16. Service Diagnostics Mode

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to INFOTAINMENT(DIAGNOSTICS) >Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Infotainment].

Note:
For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

DTC Check

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Perform diagnosis according to the procedures in the diagnostics with phenomenon. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to INFOTAINMENT(DIAGNOSTICS) >Inspection Mode.
5. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown. Go to 5.
No	Finish the diagnosis.

INFOTAINMENT(DIAGNOSTICS) > Check List for Interview

CAUTION

1. AIRBAG SYSTEM

Refer to "CAUTION" in "General Description" in AIRBAG SYSTEM. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. INFOTAINMENT SYSTEM

Refer to "CAUTION" in "General Description" in ENTERTAINMENT & MONITORING. Ref. to ENTERTAINMENT & MONITORING>General Description>CAUTION.

INFOTAINMENT(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the problems related to infotainment.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the relay and fuse condition. Ref. to ENTERTAINMENT & MONITORING>Relay and Fuse.
3. Check the connecting condition of harness and harness connector.

INFOTAINMENT(DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

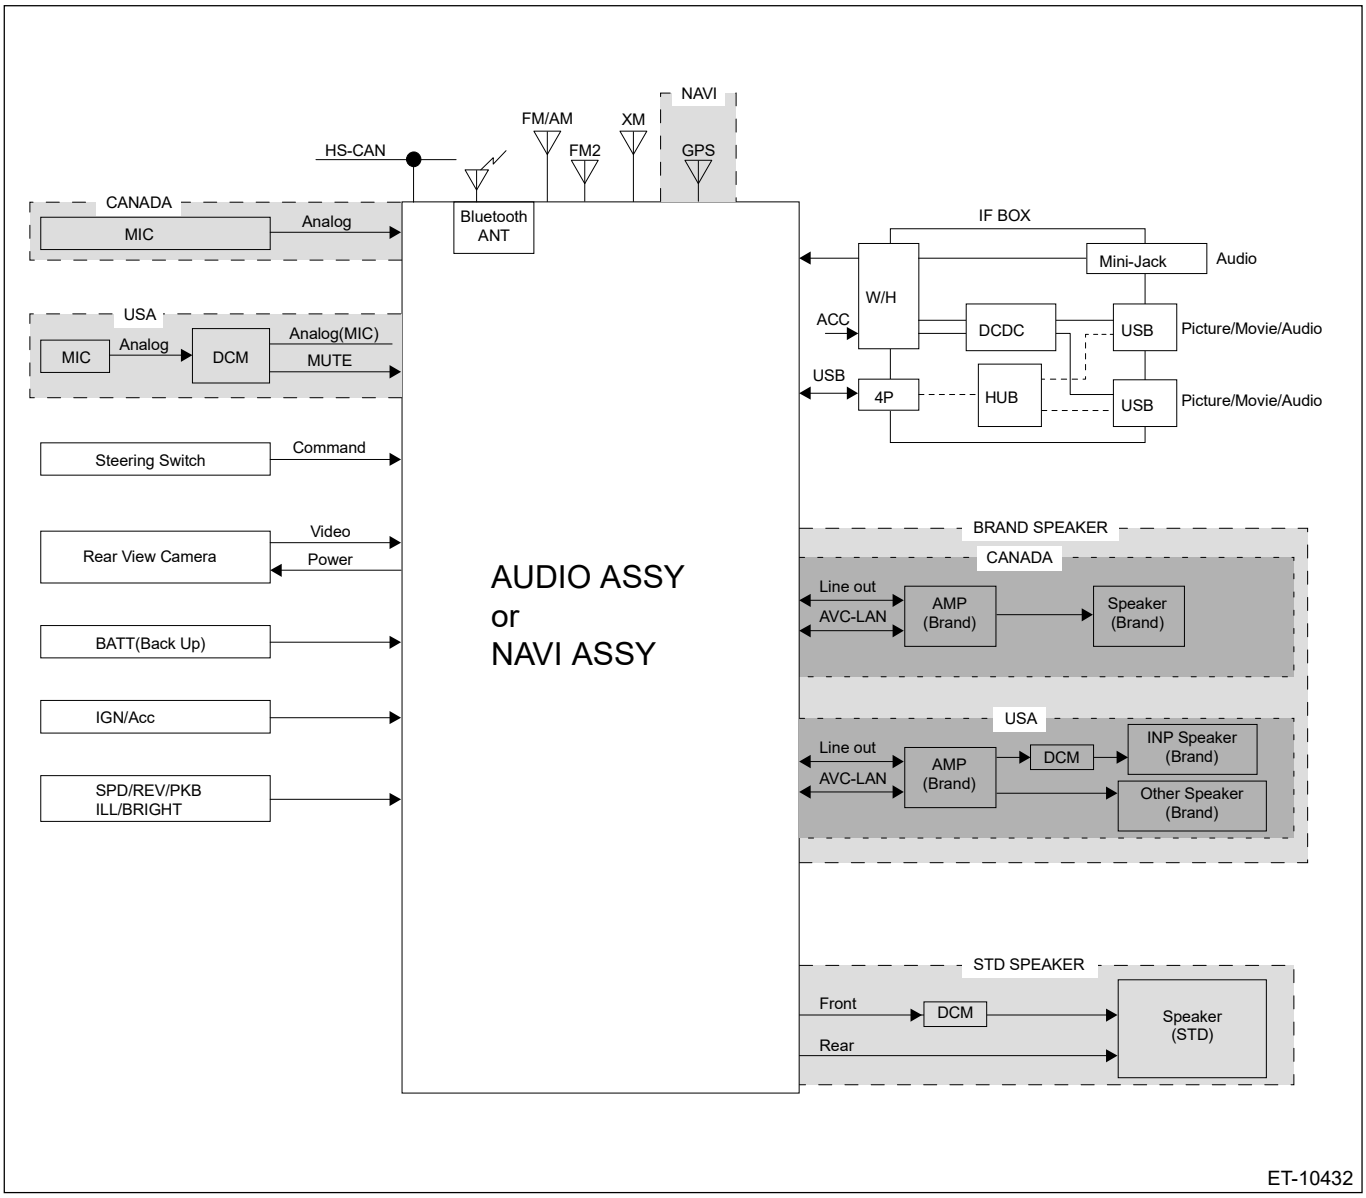

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
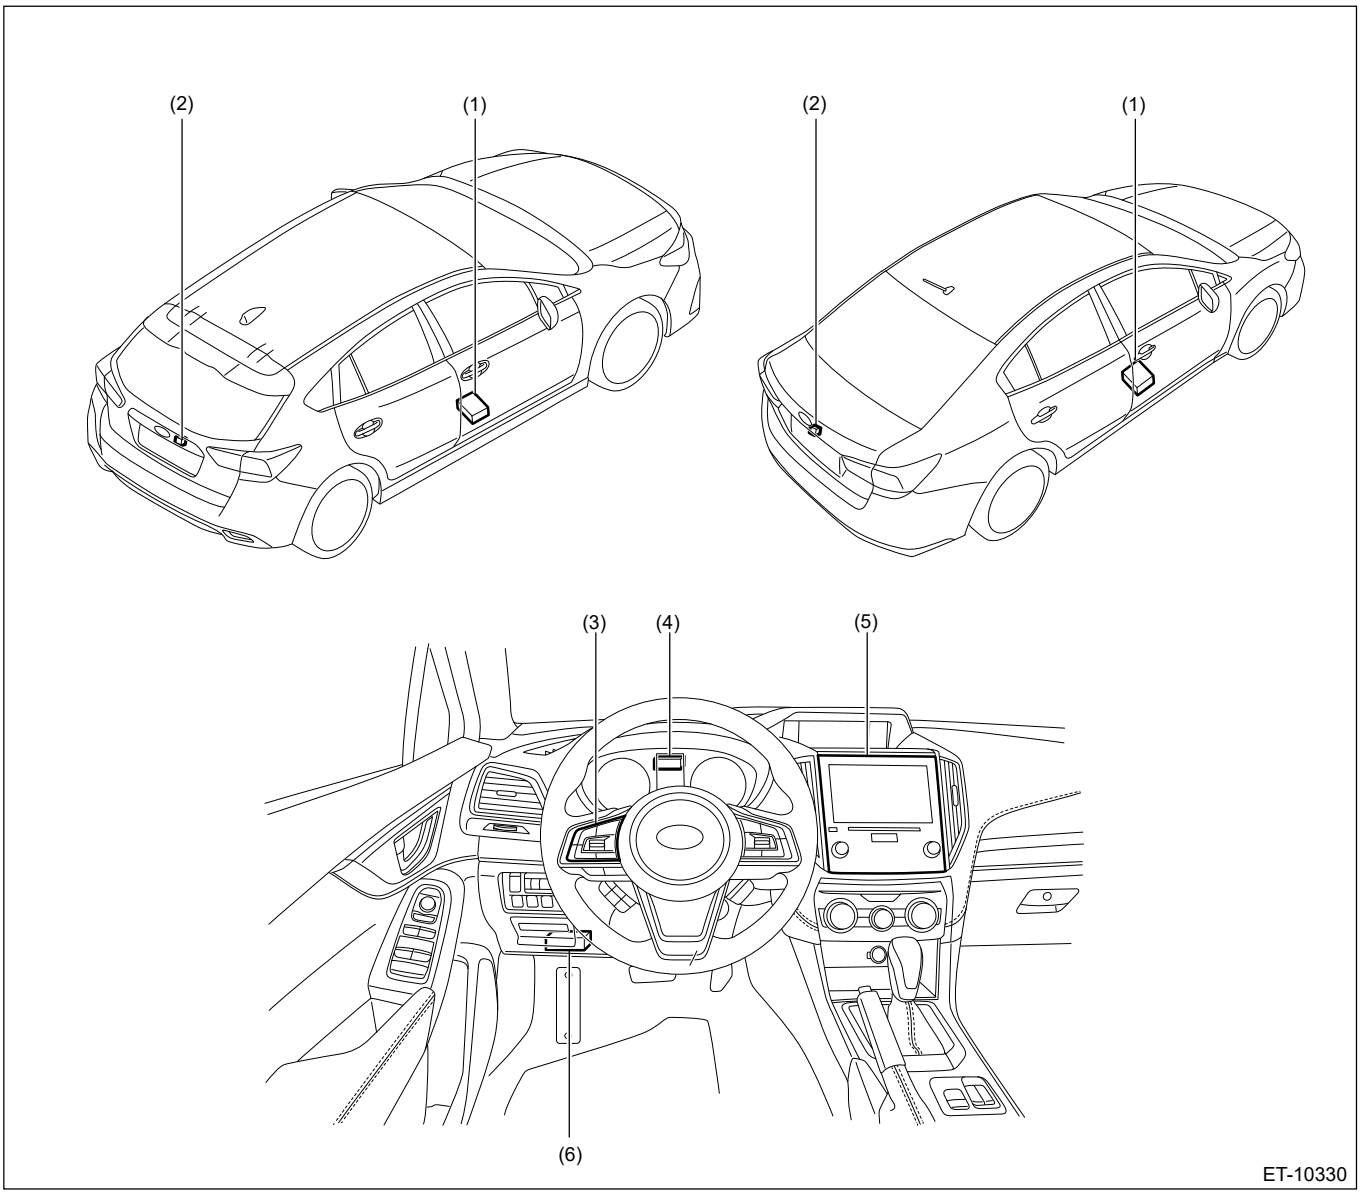
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.



INFOTAINMENT(DIAGNOSTICS) > General Description

INFOTAINMENT(DIAGNOSTICS) > Inspection Mode

PROCEDURE

DTC can be diagnosed by executing the Inspection Mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

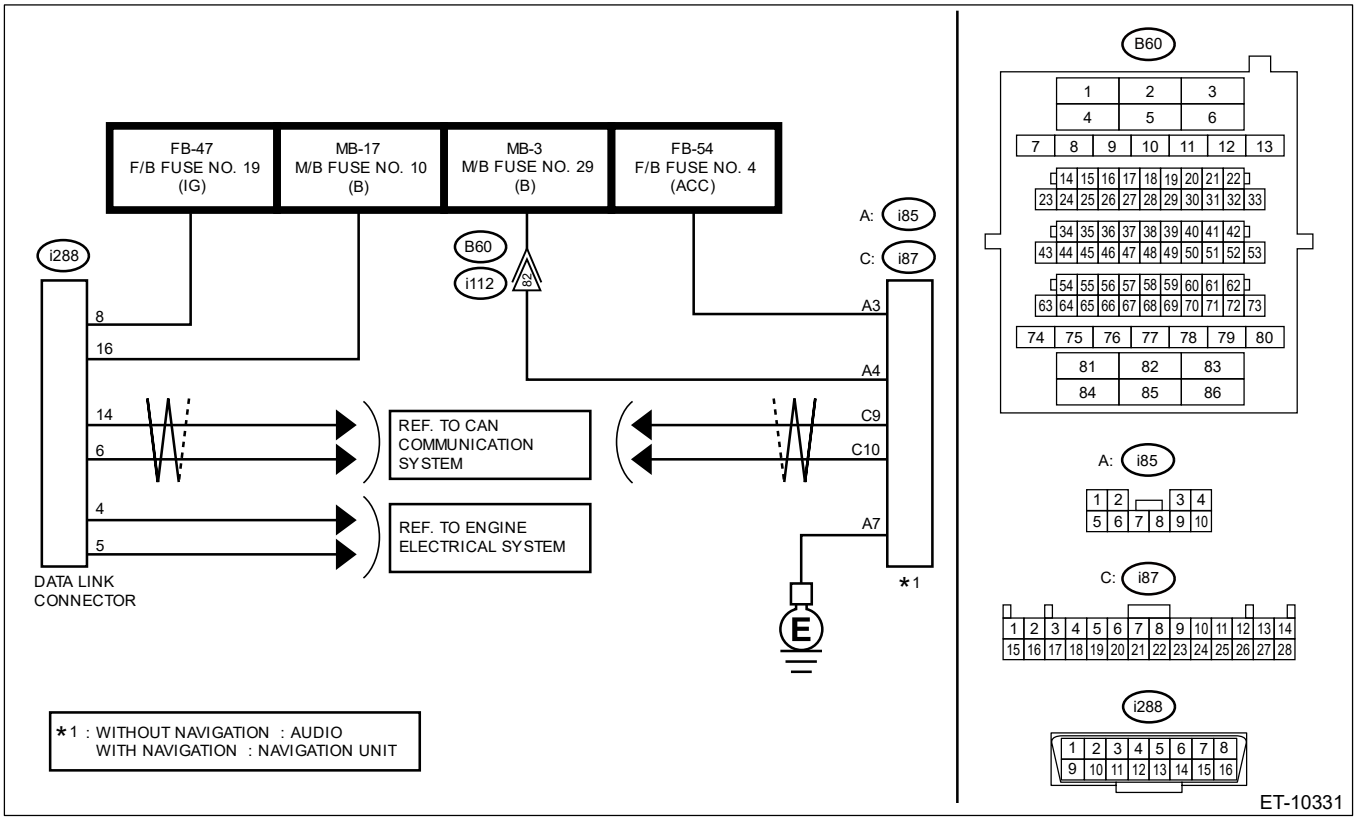
1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Infotainment] to check that there is no DTC displayed. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Turn the ignition switch to ON, and wait for 1 minute or more.
4. Using the Subaru Select Monitor, read the DTC of [Infotainment] to check that there is no DTC displayed. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

When communication with the navigation unit is impossible

Detecting condition:



- Defective harness connector
- Power supply circuit malfunction
- Infotainment system module malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between the infotainment system module and Subaru Select Monitor.

Wiring diagram:

- Audio system Ref. to ENTERTAINMENT & MONITORING>Audio System>WIRING DIAGRAM.
- Navigation system Ref. to ENTERTAINMENT & MONITORING>Navigation System>WIRING DIAGRAM.

1. CHECK OTHER COMMUNICATION.

Communicate with the system other than the infotainment using the Subaru Select Monitor.

Is the communication to other control module possible?

Yes	Go to 2.
No	Perform the “Communication for Initializing Impossible” of LAN system.

2. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 3.
No	Perform the inspection according to the diagnosis for LAN system.

3. CHECK FUSE.

Check the fuse of the infotainment. Ref. to ENTERTAINMENT & MONITORING>Relay and Fuse.

Is the check result OK?

Yes	Go to 4.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit of the harness between the battery and audio connector, or between the navigation unit connectors.

4. CHECK HARNESS (POWER SUPPLY CIRCUIT).

1. Turn off the audio or navigation unit.
2. Disconnect the audio connector or navigation unit connector.
3. Turn the ignition switch to ON.
4. Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground.
   Connector & terminal
   (i85) No. 3 (+) — Chassis ground (−):
   (i85) No. 4 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 5.
No	Repair the open circuit of harness between audio connector or navigation unit connector and fuse.

5. CHECK HARNESS (GROUND CIRCUIT).

1. Turn the ignition switch to OFF.
2. Using the tester, measure the resistance between audio connector or navigation unit connector and chassis ground.
   Connector & terminal
   (i85) No. 7 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 6.
No	Repair the open circuit of harness between audio connector or navigation unit connector and fuse.

6. CHECK INFOTAINMENT SYSTEM MODULE.

1. Turn the ignition switch to OFF.
2. Connect the audio connector or navigation unit connector.
3. Perform the communication with the infotainment system.

Is communication possible?

Yes	It is possible that temporary poor communication occurs.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

INFOTAINMENT(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**

DTC B2240 CAN COMMUNICATION (AUDIO) STUCK

DTC detecting condition:
Detected when the resistor is stuck during the CAN bus communication process.
Trouble symptom:
Screen display does not link with combination meter or vehicle.

1. CHECK DTC.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK NAVIGATION UNIT.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2240 displayed? (Current malfunction)

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2241 CAN COMMUNICATION

DTC detecting condition:
Detected when there has been no proper communication in 10 seconds with the driver control of serial communication between CAN microcomputer and main microcomputer.
Trouble symptom:
Screen display does not link with combination meter or vehicle.

1. CHECK DTC.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

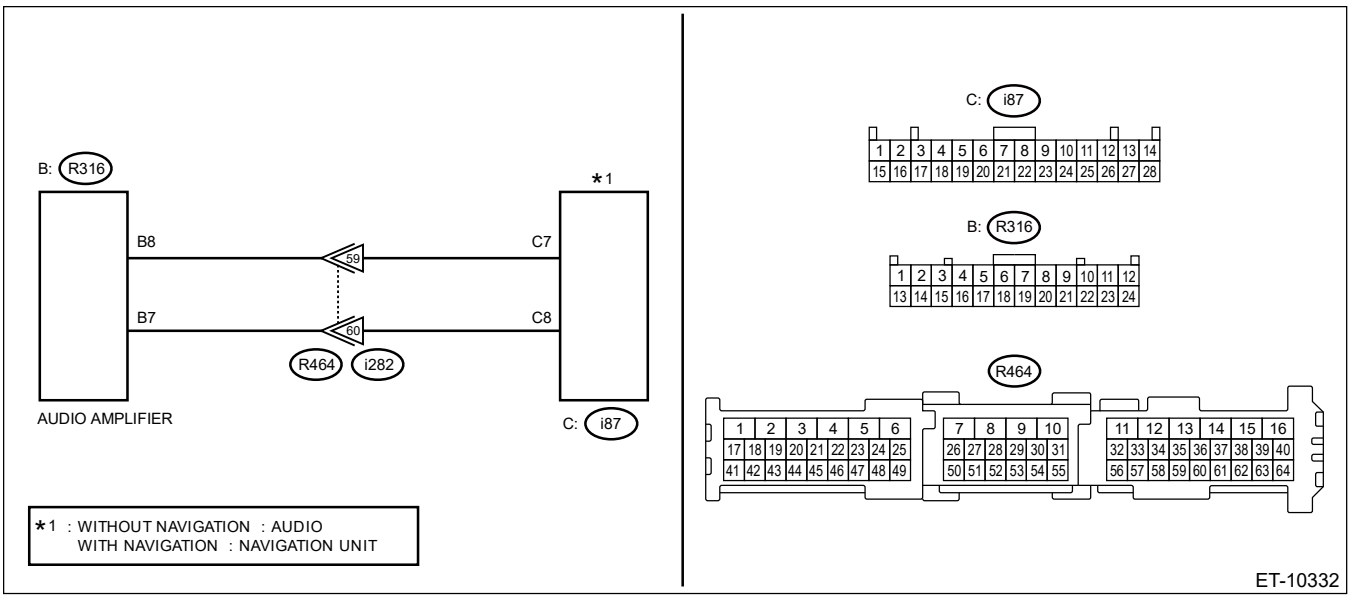
Is the check result OK?

Yes	Go to 2.
No	Perform the inspection according to the diagnosis for LAN system.

2. CHECK AUDIO OR NAVIGATION UNIT.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).



Is DTC B2241 displayed? (Current malfunction)

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2244 AMPLIFIER COMMUNICATION

DTC detecting condition:
Detected when no connection is established because there is no communication with the audio amplifier after the ACC is ON.
Trouble symptom:
Sound does not come out from the speaker.
Wiring diagram:
Audio system Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM.
Navigation system Ref. to WIRING SYSTEM>Navigation System.

1. CHECK FUSE.

Check the fuse. Ref. to ENTERTAINMENT & MONITORING>Relay and Fuse.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and audio amplifier.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the audio connector or navigation unit connector.
2. Disconnect the amplifier connector.
3. Using the tester, measure the resistance of harness between audio connector or navigation unit connector and audio amplifier connector.

Connector & terminal

(i87) No. 7 — (R316) No. 8:

(i87) No. 8 — (R316) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of harness between audio connector or navigation unit connector and audio amplifier.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using the tester, measure the resistance between audio connector or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 7 — Chassis ground:

(i87) No. 8 — Chassis ground:

Is the resistance 1 Ω or more?

Yes	Go to 4.
No	Repair the ground short circuit of the harness between audio connector or navigation unit connector and audio amplifier.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. (With each connector disconnected)
   Connector & terminal
   (i87) No. 7 (+) — Chassis ground (−):
   (i87) No. 8 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the short circuit to power supply in the harness between audio connector or navigation unit connector and audio amplifier.

5. CHECK DTC.

1. Connect all the disconnected connectors.
2. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch OFF → ON.
4. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2244 displayed? (Current malfunction)

Yes	Replace the audio amplifier. Ref. to ENTERTAINMENT & MONITORING>Power Amplifier.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2247 CD MECHANICAL

DTC detecting condition:

- If EJECT error is detected
- If over-current is detected
- If DSP error is detected
- If playback failure is detected

Trouble symptom:

- CD and DVD cannot be played back.
- Cannot be inserted or ejected.

1. CHECK MEDIA.

1. Check for dirt on the disc surface of the media, and clean the disc softly using soft and dry cloth such as a plastic eyeglasses cleaning cloth. When cleaning, make sure that wiping direction is from the center to the edge of the disc.
   Caution:
   To avoid any scratch on the surface, do not apply excessive force with hand or do not use a rough cloth. Do not use solvent such as alcohol, benzene, thinner, etc. as well as chemical cloth to avoid damaging the disc.
2. Insert the media and make sure that it can be played back.

Is the check result OK?

Yes	There were some problems with the media.
No	Go to 2.

2. CHECK MEDIA.

Insert another media which is properly functioning.

Note:

Supported media type: Audio CD, CD-R, CD-RW

Is the check result OK?

Yes	There were some problems with the media.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

DTC B2249 BLUETOOTH MODULE

DTC detecting condition:

- Detected when a connection between the Bluetooth module is lost (or there has already been no connection) and the connection cannot be established even after trying to reset the Bluetooth module hardware three times.
- Detected when the connection with the Bluetooth module has established but the module does not respond to the initialization request, and there is no response from the module even after trying to reset the Bluetooth module three times.

Trouble symptom:

Cannot connect with the Bluetooth device.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2249 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK BLUETOOTH DEVICE.

1. Restart the Bluetooth device, and connect again.
2. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch OFF → ON.
4. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2249 displayed? (Current malfunction)

Yes	Go to 3.
No	Bluetooth device was faulty.

3. CHECK BLUETOOTH DEVICE.

1. Connect another Bluetooth device.
   Note:
   Supported network type: Ver. 3.0 +EDR compatible
   - **Bluetooth Phone**
     Profile
     – HFP: Ver. 1.6
     – OPP: Ver. 1.1
     – PBAP: Ver. 1.1.1
     – MAP: Ver. 1.1
     – SPP: Ver. 1.1
   - **Bluetooth Audio Device**
     Profile
     – A2DP: Ver. 1.3
     – AVRCP: Ver. 1.5
2. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch OFF → ON.
4. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2249 displayed? (Current malfunction)

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Bluetooth device was faulty.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B224A BACKUP CAMERA

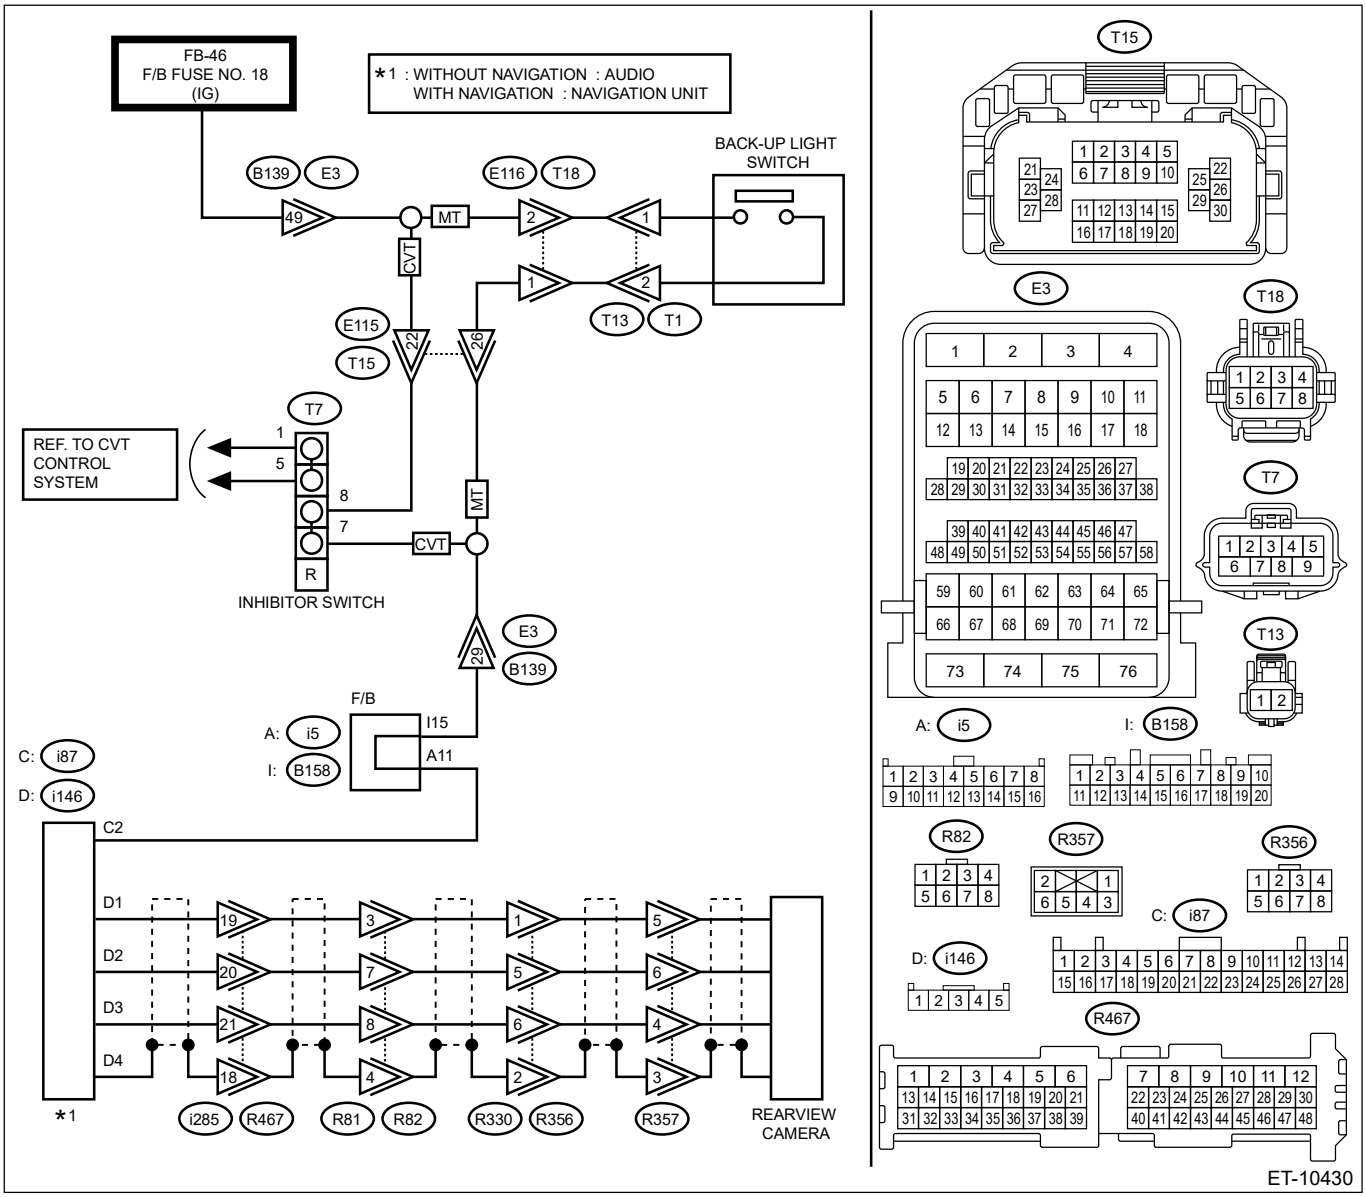
DTC detecting condition:

Detected when the synchronization error occurs in the condition of the picture input.

Trouble symptom:

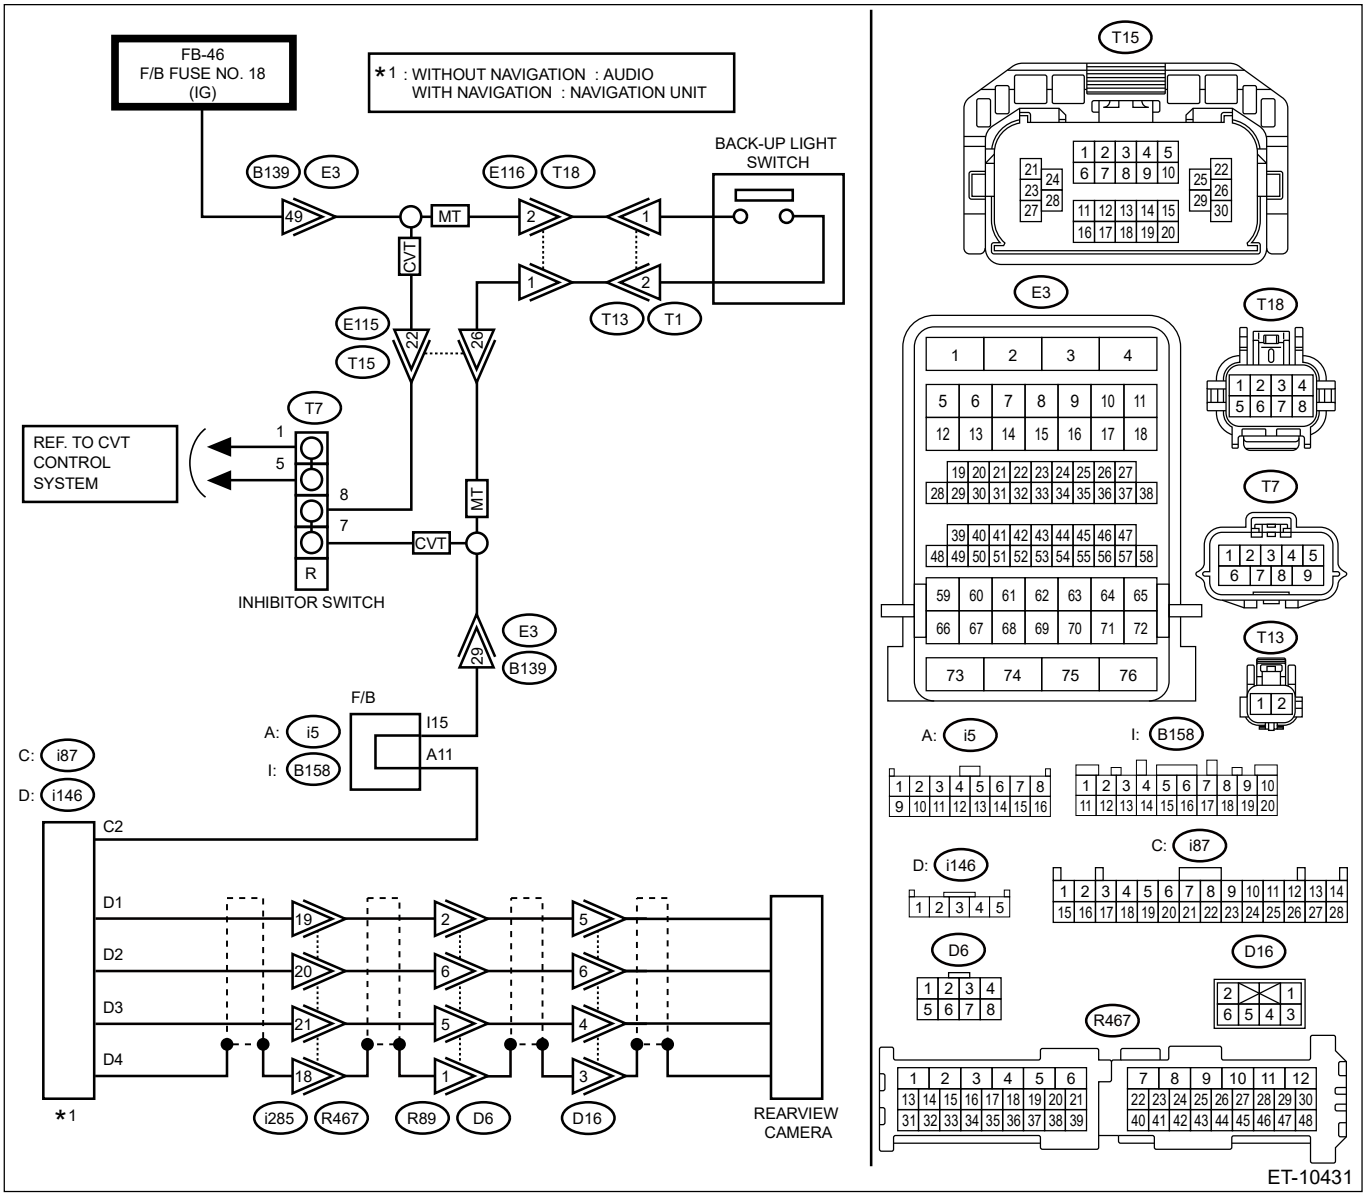
Camera image does not appear.

Wiring diagram:



Rearview camera system Ref. to WIRING SYSTEM>Rearview Camera System>WIRING DIAGRAM.

Navigation system Ref. to WIRING SYSTEM>Navigation System>WIRING DIAGRAM.



Audio system Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM.

Back-up light system Ref. to WIRING SYSTEM>Back-up Light System>WIRING DIAGRAM.

- 4 door model

- 5 door model

1. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Infotainment].
Ref. to INFOTAINMENT(DIAGNOSTICS) >Data Monitor.

Data Monitor

- [Rear camera connection state]

Is [ON] displayed?

Yes — Go to 2.

No — Go to 3.

2. CHECK CURRENT DATA.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Infotainment].
Ref. to INFOTAINMENT(DIAGNOSTICS) >Data Monitor.

Data Monitor

- [Reverse connection state]

Is [ON] displayed when the shift lever is set to the reverse range?

Yes	Go to 3.
No	Go to 6.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the audio connector or navigation unit connector.
2. Disconnect the rearview camera connector.
3. Using the tester, measure the resistance of harness between rearview camera connector and audio connector or navigation unit connector.

Connector & terminal

4 door model

(i146) No. 3 — (D16) No. 4:
(i146) No. 4 — (D16) No. 3:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between audio connector or navigation unit connector and rearview camera.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using the tester, measure the resistance of harness between audio connector or navigation unit connector and chassis ground.

Connector & terminal

(i146) No. 1 — Chassis ground:
(i146) No. 2 — Chassis ground:
(i146) No. 3 — Chassis ground:
(i146) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the ground short circuit of the harness between audio connector or navigation unit connector and rearview camera.

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. (With each connector disconnected)

   Connector & terminal

   (i146) No. 1 (+) — Chassis ground (−):
   (i146) No. 2 (+) — Chassis ground (−):
   (i146) No. 3 (+) — Chassis ground (−):
   (i146) No. 4 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair the short circuit to power supply in the harness between audio connector or navigation unit connector and rearview camera.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the audio connector or navigation unit connector.
2. Disconnect the inhibitor switch connector.
3. Using the tester, measure the resistance of the harness between inhibitor switch connector or back-up light switch connector and audio connector or navigation unit connector.

Connector & terminal

CVT model

(i87) No. 2 — (T7) No. 7:

MT model

(i87) No. 2 — (T13) No. 2:

Is the resistance less than 1 Ω?

Yes	Go to 7.
No	Repair the open circuit of harness between audio connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.

7. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using the tester, measure the resistance of harness between audio connector or navigation unit connector and chassis ground.

Connector & terminal

(i87) No. 2 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 8.
No	Repair the ground short circuit of the harness between audio connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.

8. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using the tester, measure the voltage between audio connector or navigation unit connector and chassis ground. (With each connector disconnected)

Connector & terminal

(i87) No. 2 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 9.
No	Repair the short circuit to power supply in the harness between audio connector or navigation unit connector and inhibitor switch connector or back-up light switch connector.

9. CHECK REARVIEW CAMERA.

Check the rearview camera according to the instructions of rearview camera operation manual.

Is there any fault?

Yes	Replace the rearview camera. Ref. to ENTERTAINMENT & MONITORING>Rearview Camera System.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B224B RADIO ANTENNA FAULTS(SHORTED OR OPEN)

Trouble symptom:
Radio is not received.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B224B displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK RADIO CONDITION.

Select station in the condition where radio is received.

Is radio received?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 3.

3. CHECK ANTENNA.

Visually check the antenna and check the connectors. Ref. to ENTERTAINMENT & MONITORING>Antenna.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Replace the antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

DTC B224D XM / SATELLITE DIGITAL AUDIO RADIO SERVICE ANTENNA FAULTS(SHORTED OR OPEN)

Trouble symptom:
SXM is not received.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B224D displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. RECEIVING SUBSCRIPTION CHECK.

Confirm that user is subscribed to SXM.

Is the user subscribed to SXM?

Yes	Go to 3.
No	Cannot receive because of no subscription.

3. CHECK SXM CONDITION.

Select station in the condition where SXM is received.

Is SXM received?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 4.

4. CHECK ANTENNA.

Visually check the antenna and check the connectors. Ref. to ENTERTAINMENT & MONITORING>Antenna.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Replace the antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2250 USB-BOX OVERCURRENT FAULTS

Trouble symptom:
USB is connected but not detected.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2250 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK USB CHARGE.

Confirm that USB charge is possible.

Is the USB charge possible?

Yes	Go to 3.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

3. CHECK OTHER USB DEVICES.

Check the condition by connecting a USB device that was connected in the past.

Is this USB device detected?

Yes	The device was faulty.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2251 SPEAKER LINE SHORTS TO +B

Trouble symptom:
Does not sound.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2251 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK CONNECTOR.

Check the harness between audio connector or navigation unit connector and audio amplifier.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Repair the harness or replace the components.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2252 SPEAKER LINE SHORTS TO GND

Trouble symptom:
Does not sound.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2252 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK CONNECTOR.

Check the harness between audio connector or navigation unit connector and audio amplifier.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Repair the harness or replace the components.

DTC B2253 DAMAGING A COIL DUE TO THE ELECTRIC CURRENT TO THE SPEAKER COIL

Trouble symptom:
Does not sound.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2253 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK CONNECTOR.

Check the harness between audio connector or navigation unit connector and audio amplifier.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Repair the harness or replace the components.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2254 GPS ANTENNA FAULTS

Trouble symptom:
Navigation system does not operate.

1. CHECK DTC.

1. Using the Subaru Select Monitor, perform the clear memory of [Infotainment]. Ref. to COMMON(diag)>Clear memory.

2. Turn the ignition switch OFF → ON.
3. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2254 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Infotainment]. Ref. to INFOTAINMENT(DIAGNOSTICS) >Data Monitor.

Data Monitor

- [GPS Current Location; Latitude °]
- [GPS Current Location; Longitude °]

Is the displayed data properly received?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 3.

3. CHECK ANTENNA.

Visually check the antenna and check the connectors. Ref. to ENTERTAINMENT & MONITORING>Antenna.

Is the check result OK?

Yes	Replace the navigation unit. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Replace the antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

INFOTAINMENT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data is not received from body integrated unit.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

3. CHECK ABNORMALITY OF SUBARU STARLINK

Symptoms	Counter-measure
SUBARU STARLINK app was terminated.	Perform the procedures described on "Check connection between smartphone and unit". Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT.
Smartphone was powered off while connecting via the SUBARU STARLINK.	
Bluetooth connection stops while connecting via the SUBARU STARLINK.	
Communication gets out of service while connecting via the SUBARU STARLINK.	
Radio wave reception becomes worse while connecting via the SUBARU STARLINK.	

Note:

Possible error messages with relation to the above symptoms. When the message below is displayed, perform inspection according to "Inspection when an error message is displayed (SUBARU STARLINK)". Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>LIST > INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK).

Details of message
Please disconnect mobile device and install the STARLINK application on your mobile device and try again. Bluetooth disconnected, please reconnect and try again. Smartphone data connection is poor, please try to connect again.

4. INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK)

No	Inspection	Possible cause	Action 1	Action 2
1	Check internet connection of smartphone	Check that the Internet sites can be viewed with a web browser of the smartphone. **Note:** **Make sure that the displayed contents are not from previously loaded screen (cache) and that new contents can be reloaded.**	When connection to the Internet fails, confirm that connection can be established where the radio wave condition is good, and go to No. 2.	Check that the smartphone can perform communication.
2	Activate SUBARU STARLINK	Activate the "SUBARU STARLINK" application for the smartphone.	Check that the SUBARU STARLINK application is activated, and go to	If the SUBARU STARLINK application is not installed, go to No.

No	Inspection	Possible cause	Action 1	Action 2
	application for the smartphone		No. 5.	3 and 4.
3	Install the SUBARU STARLINK application (Android)	Search the SUBARU STARLINK on Google Play, and install the application.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)
4	Install the SUBARU STARLINK application (iPhone)	Search the SUBARU STARLINK on APP Store, and install the app.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)
5	Check connection to the SUBARU STARLINK server	Select "SETTING" tab from the SUBARU STARLINK application for the smartphone, and select "Press to check network status".	When "The network connection is good" is displayed, go to No. 8.	For the case other than shown on the left, go to No. 6 or No. 7.
6		When "NETWORK PROBLEMS" is displayed.	Move to a location where the radio wave condition is good, and go to No. 5.	—
7		When "SERVER MAINTENANCE" is displayed.	Wait until the server maintenance completes, and go to No. 5.	—
8	Check the smartphone type	Check the phone type (iPhone or Android).	For iPhone, go to No. 10 or 12.	For Android, go to No. 10.
9	Check Bluetooth connection between smartphone — on-vehicle device	On the on-vehicle device, select [HOME]-[SETTINGS]-Bluetooth tab-"BT devices Connection", and check that Bluetooth setting at the upper right is ON.	When the setting is OFF, switch to ON and go to No. 10.	When the setting is ON, switch to OFF once and to ON again, then go to No. 10.
10		From the Setting app for the smartphone, select Bluetooth and check that it is set to ON. (Note that procedures vary depending on a device.)	When the setting is OFF, switch to ON and go to No. 11.	When the setting is ON, switch to OFF once and to ON again, then go to No. 11.

No	Inspection	Possible cause	Action 1	Action 2
11		Check that Bluetooth pairing is established between the smartphone and on-vehicle device. • The selected smartphone icon is displayed on the on-vehicle device. • The smartphone BT is connected to the on-vehicle device.	If the connection cannot be confirmed, go to No. 9.	—
12	Check USB connection between smartphone — on-vehicle device (with iPhone)	Check that the smartphone and on-vehicle device are connected via USB.	After connecting via USB, go to No. 13.	—
13	Check the SUBARU STARLINK initial screen	On the on-vehicle device, press down [APPS] - [SUBARU STARLINK], and check that the SUBARU STARLINK initial screen is displayed.	If the activation cannot be confirmed, go to No. 14.	—
14	Delete the SUBARU STARLINK connection information inside the on-vehicle device.	Clear the Browser cache on the on-vehicle device. (Select the tool tab from the SETTING menu, select Browser cache “Delete”, and select “OK”. Then, press [SETTINGS] from the APPS screen. From SETTING, select the Bluetooth-tab, and select BT Devices Connection. Select the “Trash can” icon of the registered device. Select “OK” on the confirmation pop-up screen.)	For Android, go to No. 15. For iPhone, go to No. 15 or No. 17.	—
15		Clear the Bluetooth connection information inside the on-vehicle device.	Go to No. 16.	—
16		Turn OFF the power supply of the on-vehicle device, and wait	Go to No. 17.	—

No	Inspection	Possible cause	Action 1	Action 2
		for 30 seconds or more before turning ON the power supply again.		
17	Delete the SUBARU STARLINK connection information inside the smartphone.	Delete data in the SUBARU STARLINK app. (Click the “SETTING” icon of the “SUBARU STARLINK” application. Then, press [CONFIG] from the APPS list screen. Select “Delete the SUBARU STARLINK application data” to delete the data in the application. Activate the Setting app for the smartphone. From SETTING, select the Bluetooth-tab, and select BT Devices Connection. Select the Bluetooth setting item. Select the connection information. Select the “Trash can” icon of the registered device. Select “Forget This Device” to delete the connection information.)	Go to No. 18.	—
18		Delete the Bluetooth connection information.	Go to No. 19.	—
19		Turn OFF the power of the smartphone, then turn it ON again.	Go to No. 20.	—
20	Re-connect SUBARU STARLINK	Establish connection according to the SUBARU STARLINK connection procedure.	—	—

5. ERROR MESSAGE IS DISPLAYED

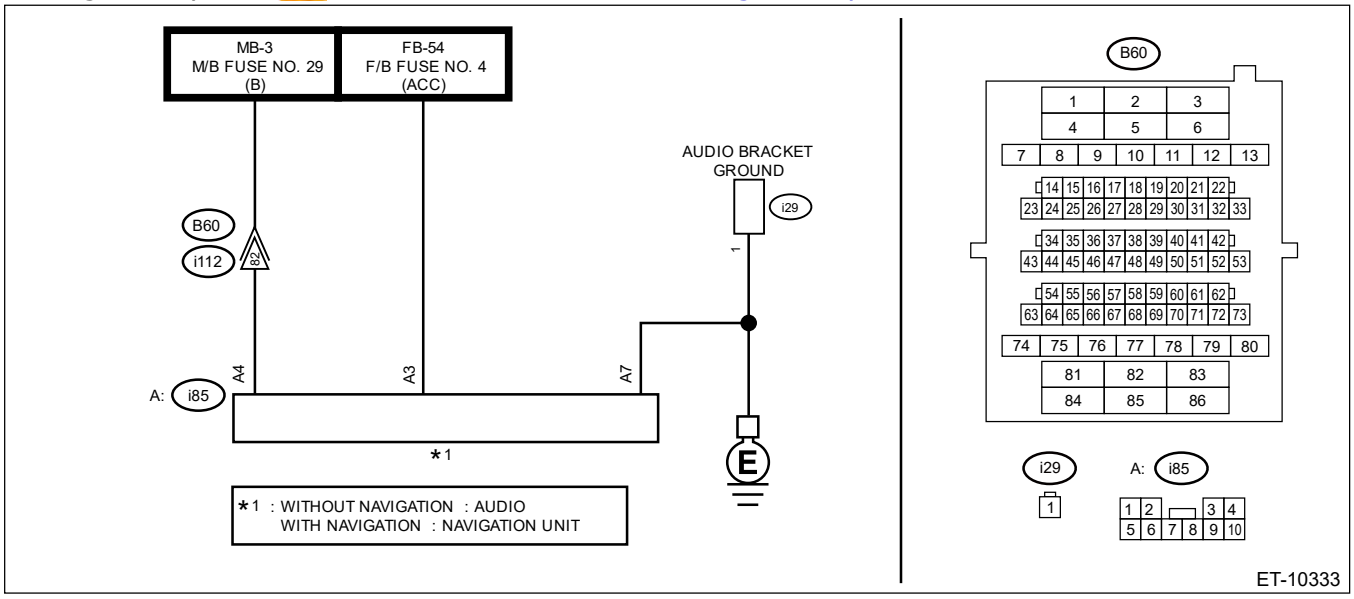
Mode	Message	Cause	Action
aha	“Information acquisition error. (Information acquisition error.)”	When not able to get the requested information.	Please try again (Refresh etc.) later or reconnect it.

Mode	Message	Cause	Action
	"Poor wireless reception. (Poor wireless reception.)"	When a communication error has been detected.	Please try again in a better communications environment.
	"Entry not recognized. (Entry not recognized.)"	When an invalid operation has been executed.	Please try again (Refresh etc.) later or reconnect it.
	"The station list cannot be acquired. (The station list cannot be acquired.)"	When not able to get the requested information.	Please try again (Refresh etc.) later or reconnect it.
	"The content cannot be acquired. (The content cannot be acquired.)"	• When not able to get the content information. • When not able to switch to the Top content when touching.	• Please try again (Refresh etc.) later or reconnect it. • Select the desired station again when the station list appears.
	"Action not available. (Action not available.)"	When content-specific operations such as "fast forward" or "reverse" are not available.	Please try again (Refresh etc.) later or reconnect it.
	"Failed. (Failed.)"	When data transmission failed when touching.	Please try again later.
	"aha communication error - Please check Owner's Manual. (aha communication error - Please check Owner's Manual.)"	• When invalid data is received from the aha application or there is no response. • When the connection to the aha application via Bluetooth is not available. • When the data reception from this unit is rejected.	Please try again (Refresh etc.) later or reconnect it. If it is still not improved, restart the aha application.
	"Please select the type of connection in "aha Settings". (Please select the type of connection in "aha Settings".)"	When aha radio setting is set to (USB) when the Android device is going to be paired via Bluetooth.	When you want to connect to the aha application with the Android device, select (Bluetooth) in the aha radio setting from the setting screen.
Pandora	"No stations have been added to your list. (No stations have been added to your list.)"	When no stations have been registered.	Please register stations.
	"Your ratings information was not saved. (Your ratings information was not saved.)"	When ratings information has not been updated to the Pandora server.	Please try again later.
	"Bookmark not saved. (Bookmark not saved.)"	When bookmark registration information has not been updated to the Pandora	Please try again later.

Mode	Message	Cause	Action
		server.	
	“Pandora is not available at your current location. (Pandora is not available at your current location.)”	When Pandora is used in an area where it is not available.	Please try again at a different location.
	“The selected Pandora station is no longer available. (The selected Pandora station is no longer available.)”	When the selected station has been deleted, or has expired.	Please select another station.
	“Pandora Error. (Pandora Error.)”	When the Pandora server is undergoing maintenance, or another error has occurred.	Please try again later.

INFOTAINMENT(DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION



1. POWER WILL NOT TURN ON

Probable cause:

Power supply circuit malfunction, unit body malfunction

Wiring diagram:

- Audio system Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM.
- Navigation system Ref. to WIRING SYSTEM>Navigation System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to “CAUTION” in “General Description”. Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK CONNECTOR CONNECTION.
- no → Perform the instructed procedures.
- yes ↓

2. CHECK CONNECTOR.
- no → Perform the instructed procedures.
- yes ↓

3. CHECK POWER SUPPLY VOLTAGE.
- yes → Go to 8.
- no → Go to 4.

4. CHECK FUSE.
- no → Perform the instructed procedures.
- yes ↓

5. CHECK HARNESS (POWER SUPPLY).
- no → Perform the instructed procedures.
- yes ↓

6. CHECK HARNESS (GROUND).
- no → Perform the instructed procedures.
- yes ↓

7. CHECK BATTERY.
- no → Perform the instructed procedures.
- yes ↓

8. CHECK OPERATION.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK CONNECTOR CONNECTION.

Check that the connector is connected to the unit.

Is the check result OK?

Yes	Go to 2.
No	Connect the connector.

2. CHECK CONNECTOR.

Check for poor contact of connectors or terminals.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the harness.

3. CHECK POWER SUPPLY VOLTAGE.

1. Disconnect the connector.
2. Turn the ignition switch to ACC.
3. Using a tester, measure the voltage between connector and chassis ground.

Note:

- **Turn the electrical parts to OFF.**

Connector & terminal

(i85) No. 4 (+) — Chassis ground (−):

(i85) No. 3 (+) — Chassis ground (−):

Is the voltage 12 V or more?

Yes	Go to 8.
No	Go to 4.

4. CHECK FUSE.

1. Turn the ignition to OFF.
2. Check the fuse No. 29 inside M/B and fuse No. 4 inside F/B.

Is the check result OK?

Yes	Go to 5.
No	Replace the fuse. If the fuse is blown again, check or replace the short circuit of the power supply harness.

5. CHECK HARNESS (POWER SUPPLY).

Measure the resistance between main fuse box and connector.

Connector & terminal

M/B fuse No. 29 — (i85) No. 4:

F/B fuse No. 4 — (i85) No. 3:

Is the resistance 1 Ω or less?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK HARNESS (GROUND).

Measure the resistance between connector and chassis ground.

Connector & terminal

(i85) No. 7 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

Is the check result OK?

Yes	Go to 8.
No	Charge or replace the battery.

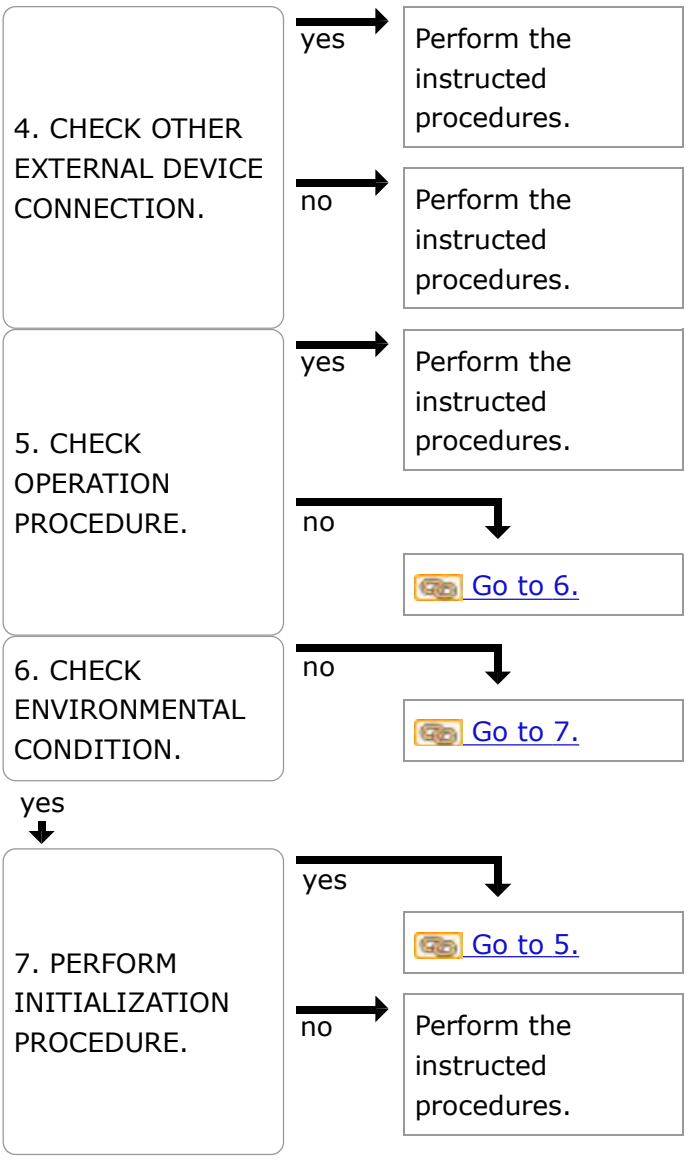
8. CHECK OPERATION.

1. Connect all connectors.
2. Turn the ignition switch to ACC and the power supply switch of the unit to ON.

Does the power turn ON?

Yes	Currently no failure is found.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

2. THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY



Probable cause:

External device malfunction•influence, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK RESTARTING DISPLAY.
   - yes → Go to 5.
   - no → Go to 2.
2. REMOVE OTHER MEDIA OR EXTERNAL DEVICES.
   - no → Go to 6.
   - yes ↓
3. CHECK OTHER EXTERNAL DEVICE CONNECTION.
   - no → Go to 5.
   - yes ↓

1. CHECK RESTARTING DISPLAY.

Turn the ignition switch OFF → leave it for three minutes or more after the display turns off, then turn it to ACC. (The door should be closed at this time.)

Is the screen freeze eliminated?

Yes	Go to 5.
No	Go to 2.

2. REMOVE OTHER MEDIA OR EXTERNAL DEVICES.

Remove the external devices connected to CD and USB. Also, remove the external devices with Bluetooth.

Is the screen freeze eliminated?

Yes	Go to 3.
No	Go to 6.

3. CHECK OTHER EXTERNAL DEVICE CONNECTION.

When screen freeze is eliminated, connect external devices one by one to identify the device that causes screen freeze.

Is the device that reproduces screen freeze identified?

Yes	Go to 4.
No	Go to 5.

4. CHECK OTHER EXTERNAL DEVICE CONNECTION.

1. Replace the identified device with the one that has the same performance.
2. Turn the ignition switch to ACC.

Does the screen freeze occur?

Yes	Replace the unit. Ref. to ENTERTAINMENT & MONITORING>Audio.
No	The external device may be defective.

5. CHECK OPERATION PROCEDURE.

Ask how the user operates when screen freeze occurs, and perform using the same procedure.

Is the check result OK?

Yes	Currently no failure is found.
No	Go to 6.

6. CHECK ENVIRONMENTAL CONDITION.

Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.

Is the check result OK?

Yes	Go to 7.
No	Remove the external device and perform the inspection from step 2 again. If the fault is not fixed: Go to 7.

7. PERFORM INITIALIZATION PROCEDURE.

Perform the initialization procedure for the unit.

Caution:

When the initialization procedure is performed, the data, telephone directory, etc. recorded in the unit body will be deleted. Before initialization, obtain permission from the user.

- **Audio system: Ref. to INFOTAINMENT(DIAGNOSTICS) >Work Support>OPERATION. Ref. to INFOTAINMENT(DIAGNOSTICS) >Service Diagnostics Mode>OPERATION.**
- **Navigation system: Ref. to INFOTAINMENT(DIAGNOSTICS) >Work Support>OPERATION. Ref. to INFOTAINMENT(DIAGNOSTICS) >Service Diagnostics Mode>OPERATION.**

Is the screen freeze eliminated?

Yes	Go to 5. If the screen freeze occurs again, replace the unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

3. THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED

Probable cause:

Power supply circuit malfunction, illumination circuit malfunction, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK RESTARTING DISPLAY.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK POWER SUPPLY BUTTON.	yes →	Perform the instructed procedures.
	no →	Go to 3.

3. CHECK BUTTON ILLUMINATION.

no → Perform the instructed procedures.

yes ↓

4. CHECK INDICATION WITH ILLUMINATION ON.

yes → Go to 7.

no → Go to 5.

5. CHECK HARNESS.

no → Perform the instructed procedures.

yes ↓

6. CHECK INTEGRATED UNIT.

no → Perform the instructed procedures.

yes ↓

7. CHECK UNDER OVERLOAD CONDITION.

no → Perform the instructed procedures.

yes ↓

8. OPERATIONAL CHECK.

yes → Perform the instructed procedures.

no → Go to 9.

9. CHECK EXTERNAL DEVICE.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK RESTARTING DISPLAY.

Turn the ignition switch OFF → leave it for three minutes or more after the display turns off, then turn it to ACC. (The door should be closed at this time.)

Is the screen properly displayed?

Yes	Currently no failure is found.
No	Go to 2.

2. CHECK POWER SUPPLY BUTTON.

Check if the screen OFF mode is turned on by pressing the power supply button of the unit body.

Is the screen properly displayed?

Yes	The screen OFF mode might be activated. Currently no failure is found.
No	Go to 3.

3. CHECK BUTTON ILLUMINATION.

Turn the ignition switch to ACC.

Do the buttons located at bottom of the screen illuminate?

Yes	Go to 4.
No	Perform “Power will not turn ON” in Diagnostics with Phenomenon. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > POWER WILL NOT TURN ON.

4. CHECK INDICATION WITH ILLUMINATION ON.

Turn the lighting switch to ON.

Does the screen brightness change?

Yes	Go to 7.
No	Go to 5.

5. CHECK HARNESS.

Check for poor contact of the harnesses, connectors and terminals that are connected to the unit body.

Is the check result OK?

Yes	Go to 6.
No	Repair or replace the harness.

6. CHECK INTEGRATED UNIT.

Using the Subaru Select Monitor, check the following items in the [Data Monitor] of [Body Control].
Ref. to BODY CONTROL(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Lighting I Switch Input]

Is the input signal OK?

Yes	Go to 7.
No	Replace the integrated unit. Ref. to SECURITY AND LOCKS>Body Integrated Unit.

7. CHECK UNDER OVERLOAD CONDITION.

1. Turn the ignition to OFF.
2. Leave as is for 10 minutes (cooling down), and then turn the ignition to ACC to check the operation.

Is the screen properly displayed?

Yes	Go to 8.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

8. OPERATIONAL CHECK.

Obtain the information about the audio device that the user used (SD, Bluetooth, CD, etc.), and connect the same device. Then play the device for 10 minutes or more.

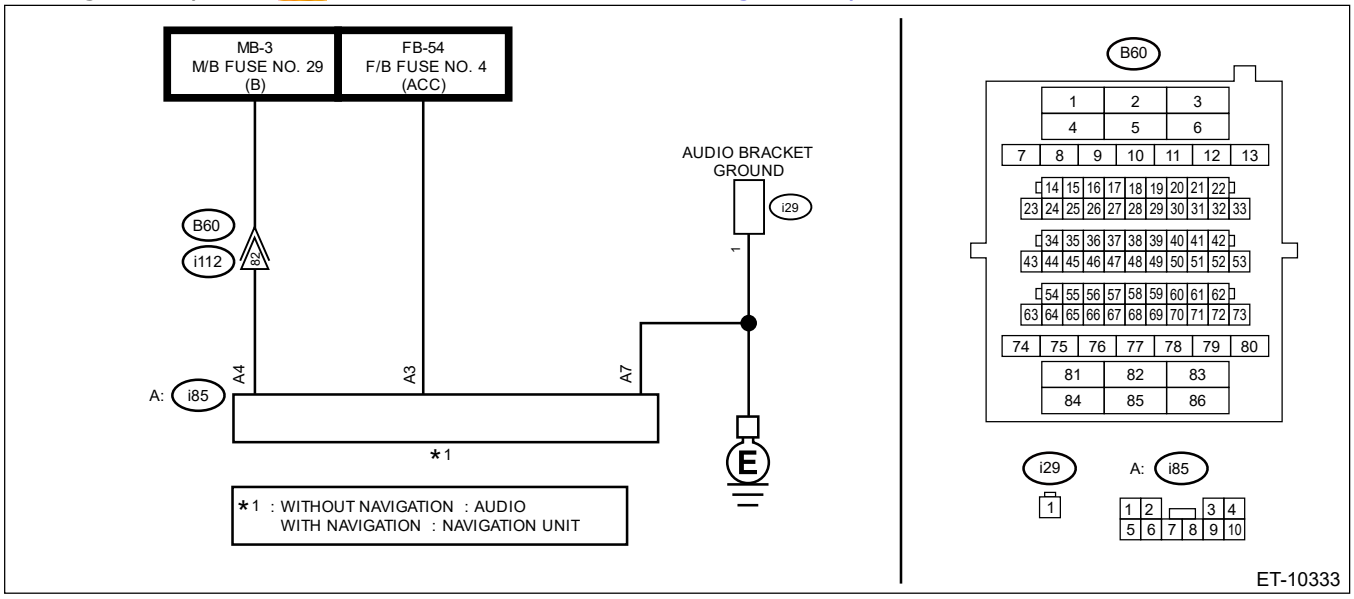
Is the screen properly displayed?

Yes	Currently no failure is found.
No	Go to 9.

9. CHECK EXTERNAL DEVICE.

1. Replace the external device that might cause trouble with another device. (If trouble occurs while using a CD, replace the CD with another one. If trouble occurs while using an external device that is connected via USB, replace the external device with another device.)
2. Operate for 10 minutes or more.

Is the screen properly displayed?



Yes	The external device might have trouble, resulting in the overload state.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

4. SYSTEM IS RESET

Probable cause:

Influence by external devices, power supply circuit malfunction, unit body malfunction
Wiring diagram:

- Audio system Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM.
- Navigation system Ref. to WIRING SYSTEM>Navigation System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK ENVIRONMENTAL CONDITION.
   - no → Go to 2.
   - yes ↓
2. CHECK CONNECTOR CONNECTION.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK CONNECTOR.
   - no → Perform the instructed procedures.
   - yes ↓
4. CHECK POWER SUPPLY VOLTAGE.
   - yes → Go to 8.
   - no → Go to 5.

5. CHECK OPEN CIRCUIT IN HARNESS (POWER SUPPLY).
→ no: Perform the instructed procedures.
↓ yes

6. CHECK OPEN CIRCUIT IN HARNESS (GROUND).
→ no: Perform the instructed procedures.
↓ yes

7. CHECK BATTERY.
→ no: Perform the instructed procedures.
↓ yes

8. CHECK UNIT OPERATION.
→ yes: Perform the instructed procedures.
→ no: Perform the instructed procedures.

1. CHECK ENVIRONMENTAL CONDITION.

Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.

Is the check result OK?

Yes	Go to 2.
No	Remove the external device to check the operation. If the fault is not fixed: Go to 2.

2. CHECK CONNECTOR CONNECTION.

Check that the connector is connected to the unit.

Is the check result OK?

Yes	Go to 3.
No	Connect the connector.

3. CHECK CONNECTOR.

Check for poor contact of connectors or terminals.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the harness.

4. CHECK POWER SUPPLY VOLTAGE.

1. Turn the ignition switch to ACC.
2. Using a tester, measure the voltage between connector and chassis ground.

Note:

Turn the electrical parts to OFF.

Connector & terminal

(i85) No. 4 (+) — Chassis ground (−):

(i85) No. 3 (+) — Chassis ground (−):

Is the voltage 12 V or more?

Yes	Go to 8.
No	Go to 5.

5. CHECK OPEN CIRCUIT IN HARNESS (POWER SUPPLY).

Using the tester, measure the resistance between connector and chassis ground while shaking the harness.

Connector & terminal

(i85) No. 4 — Chassis ground:

(i85) No. 3 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 6.
No	Repair or replace the open circuit of harness.

6. CHECK OPEN CIRCUIT IN HARNESS (GROUND).

Using the tester, measure the resistance between connector and chassis ground while shaking the harness.

Connector & terminal

(i85) No. 7 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

Is the check result OK?

Yes	Go to 8.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

8. CHECK UNIT OPERATION.

1. Connect all connectors.
2. Turn the ignition switch to ACC and the power supply switch of the unit to ON.

Is the reset eliminated?

Yes	Currently no failure is found.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

5. CDS CANNOT BE PLAYED BACK

Probable cause:
CD malfunction, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CONFIRM CD INSERTION CONDITION.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK CD.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK CD.
   - yes → Perform the instructed procedures.
   - no ↓ Go to 4.

4. CHECK DEW CONDENSATION IN UNIT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CONFIRM CD INSERTION CONDITION.

Check that the CD is inserted properly.

Is the check result OK?

Yes	Go to 2.
No	Insert the CD properly.

2. CHECK CD.

Check the CD surfaces are free from scratches or dirt.

Is the check result OK?

Yes	Go to 3.
No	The CD is defective.

3. CHECK CD.

Replace the CD with another one. (Use a playable CD. Refer to owner’s manual for details.)

Is the CD played back?

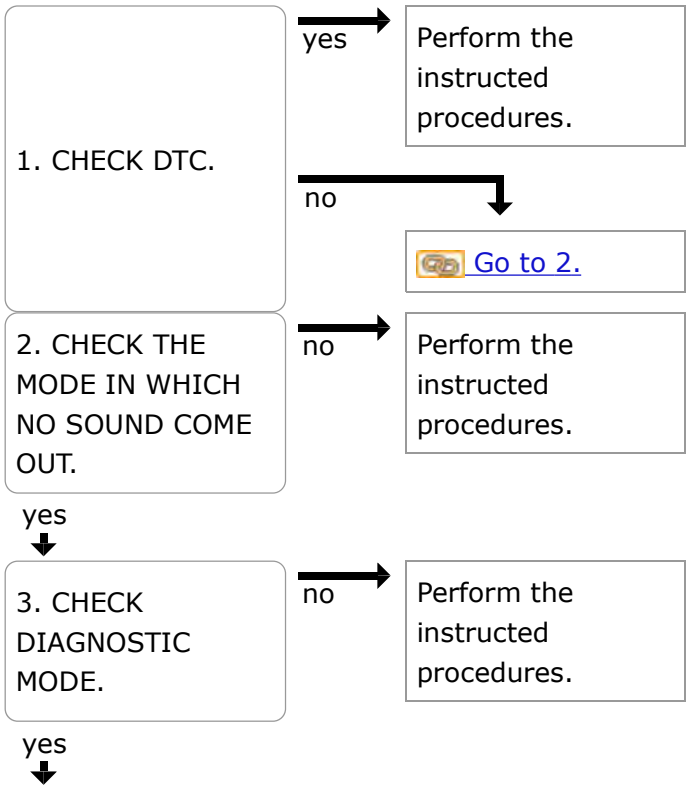
Yes	The CD is defective.
No	Go to 4.

4. CHECK DEW CONDENSATION IN UNIT.

1. After starting the engine, turn ON the air conditioner and dry inside the vehicle for 10 minutes or more.
2. Check the CD operation.

Is the CD played back?

Yes	Dew condensation occurred inside the unit.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.



6. SOUND DOES NOT COME OUT FROM THE SPEAKER

Probable cause:

Speaker malfunction, amplifier malfunction, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

4. CHECK MUTE MODE.	yes →	Perform the instructed procedures.
	no →	Go to 5.
5. CHECK DTC (MODEL WITH TELEMATICS).	yes →	Perform the instructed procedures.
	no →	Go to 6.
6. CHECK CONNECTOR.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

1. Turn the ignition switch OFF → ON.
2. Read the DTC of [Infotainment] using the Subaru Select Monitor. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2244 displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTC B2244. Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2244 AMPLIFIER COMMUNICATION.
No	Go to 2.

2. CHECK THE MODE IN WHICH NO SOUND COME OUT.

Check if sound comes out in each mode such as CD, radio, etc.

Does it have no sound in all modes?

Yes	Go to 3.
No	Check each mode in which no sound come out. For CD: Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > CDS CANNOT BE PLAYED BACK. For radio: Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS. For Bluetooth audio: Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > BLUETOOTH CONNECTION CANNOT BE ESTABLISHED.

3. CHECK DIAGNOSTIC MODE.

Perform {Audio Check} on the {Line Diag} screen. Ref. to ENTERTAINMENT & MONITORING>Audio System>OPERATION > CHECK SPEAKER OUTPUT WITH LINE DIAG MODE AND ANTENNA CONNECTION.

Does it have no sound in all speakers?

Yes	Go to 4.
No	Model with power amplifier: Check the harnesses between the unit and power amplifier and between power amplifier and speaker for open circuit or short circuit. If no fault is found, replace the speaker. Model without power amplifier: Check the harness between the unit and speaker for open circuit or short circuit. If no fault is found, replace the speaker.

4. CHECK MUTE MODE.

Check if the MUTE mode is turned on when the MUTE button is installed.

Is the volume level set to the minimum?

Yes	Since the MUTE mode is on or the volume level is set to the minimum, sound does not come out.
No	Go to 5.

5. CHECK DTC (MODEL WITH TELEMATICS).

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are B2A0E (mute line circuit), B2A05 (left speaker/audio circuit) and B2A06 (right speaker/audio circuit) displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK CONNECTOR.

Check for poor contact in the connector of the unit and the connector of each speaker. Check for poor contact in the amplifier connector for models with amplifier.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Repair or replace the harness.

7. BLUETOOTH CONNECTION CANNOT BE ESTABLISHED

Probable cause:
Bluetooth device malfunction, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK BLUETOOTH DEVICE.	yes →	Perform the instructed procedures.
	no →	Go to 2.
2. CHECK BLUETOOTH DEVICE.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK BLUETOOTH DEVICE.	yes →	Perform the instructed procedures.
	no →	Go to 4.
4. CHECK ENVIRONMENTAL CONDITION.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK BLUETOOTH DEVICE.

Restart the Bluetooth device, and connect again.

Does it start properly?

Yes	Currently no failure is found.
No	Go to 2.

2. CHECK BLUETOOTH DEVICE.

Re-register the Bluetooth device, and connect again.

Is communication successful?

Yes	Currently no failure is found.
No	Go to 3.

3. CHECK BLUETOOTH DEVICE.

1. Connect other Bluetooth device.

Note:

Supported Bluetooth type: Ver. 3.0 +EDR compatible

- **Bluetooth Phone**
  Profile
  – HFP: Ver. 1.6
  – OPP: Ver. 1.1
  – PBAP: Ver. 1.1.1
  – MAP: Ver. 1.1
  – SPP: Ver. 1.1
- **Bluetooth Audio Device**
  Profile
  – A2DP: Ver. 1.3
  – AVRCP: Ver. 1.5

Is communication successful?

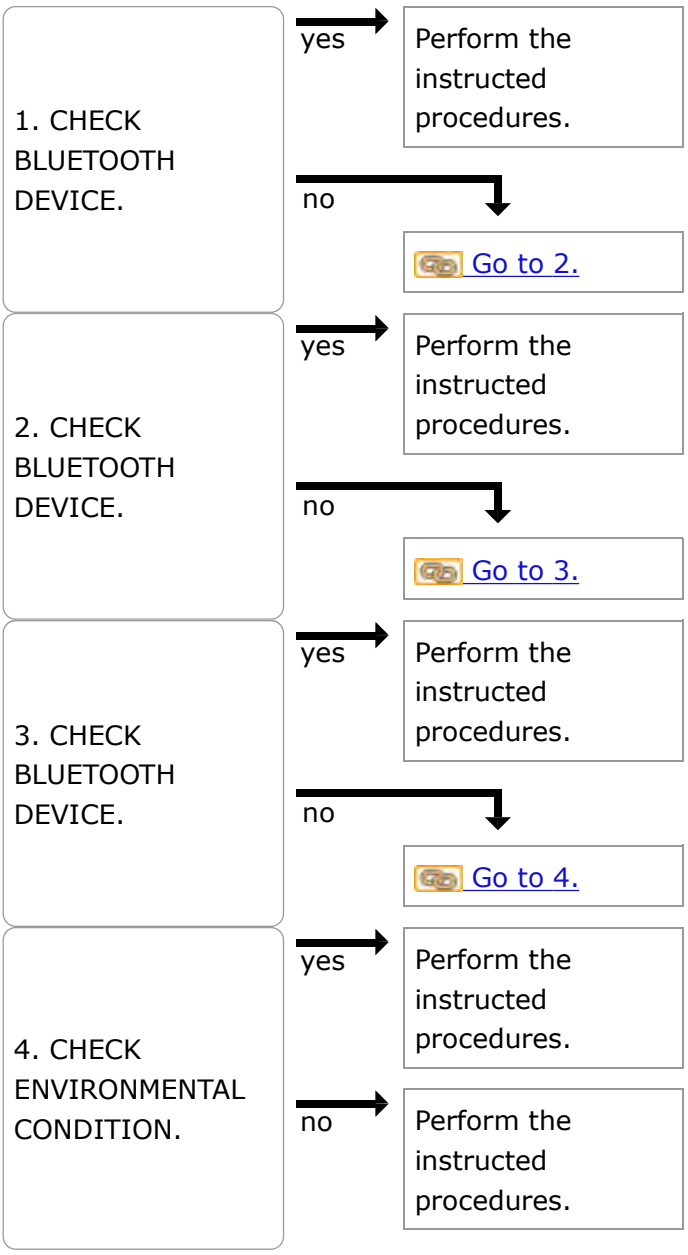
Yes	Bluetooth device which cannot be connected might be faulty.
No	Go to 4.

4. CHECK ENVIRONMENTAL CONDITION.

Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Remove the external device and perform the inspection from step 1 again.



8. BLUETOOTH DOES NOT OPERATE

Probable cause:

Bluetooth device malfunction, influence by external devices, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK BLUETOOTH DEVICE.

Restart the Bluetooth device, and connect again.

Does it start properly?

Yes	Currently no failure is found.
No	Go to 2.

2. CHECK BLUETOOTH DEVICE.

Re-register the Bluetooth device, and connect again.

Is communication successful?

Yes	Currently no failure is found.
No	Go to 3.

3. CHECK BLUETOOTH DEVICE.

1. Connect other Bluetooth device.

Note:

Supported Bluetooth type: Ver. 3.0 +EDR compatible

- **Bluetooth Phone Profile**
  - **– HFP: Ver. 1.6**
  - **– OPP: Ver. 1.1**
  - **– PBAP: Ver. 1.1.1**
  - **– MAP: Ver. 1.1**
  - **– SPP: Ver. 1.1**
- **Bluetooth Audio Device Profile**
  - **– A2DP: Ver. 1.3**
  - **– AVRCP: Ver. 1.5**

Is communication successful?

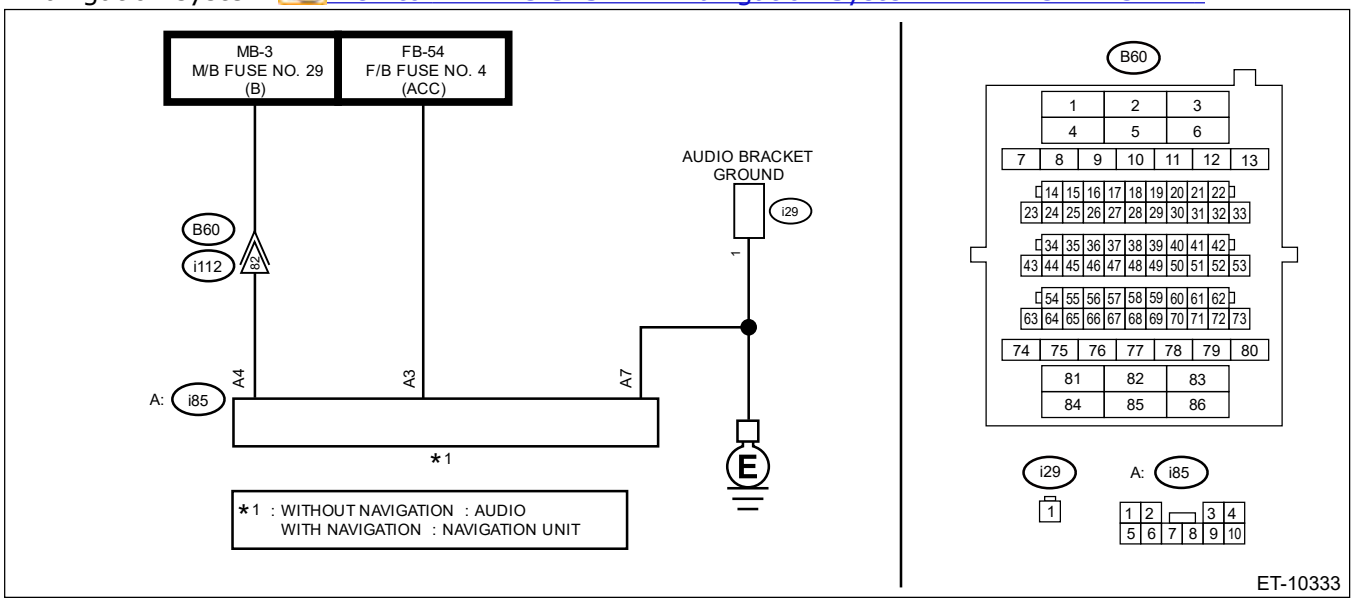
Yes	Bluetooth device which cannot be connected might be faulty.
No	Go to 4.

4. CHECK ENVIRONMENTAL CONDITION.

Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.

Is the check result OK?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Remove the external device and perform the inspection from step 1 again.



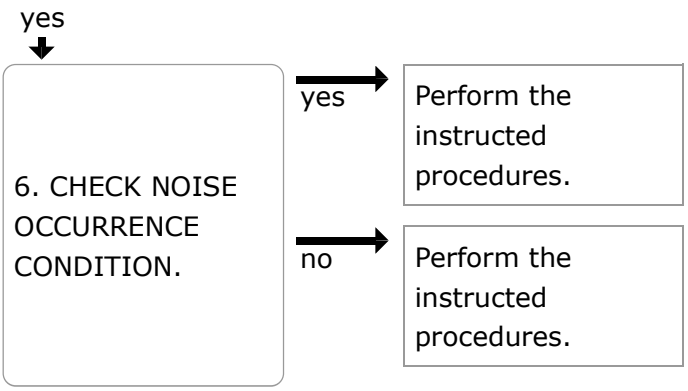
9. RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS

Probable cause:

Reception environment, antenna circuit malfunction, Influence by external devices, ground circuit malfunction, unit body malfunction

Wiring diagram:

- Audio system Ref. to WIRING SYSTEM>Audio System>WIRING DIAGRAM.
- Navigation system Ref. to WIRING SYSTEM>Navigation System>WIRING DIAGRAM.



Caution:

- **If non-genuine electrical parts are installed, they may cause interference noise.**
- **Refer to the following diagnostic procedure if equipped with the digital radio using the Internet connection.**
- **Check SUBARU STARLINK service: Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > CHECK SUBARU STARLINK SERVICE.**
- **Bluetooth connection cannot be established: Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > BLUETOOTH CONNECTION CANNOT BE ESTABLISHED.**
- **Check connection between smartphone and unit: Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.**

Note:

When the volume of AHA and Pandora is low, connect the smartphone to the Internet, and check that AHA and Pandora is audible on the smartphone itself. When it is inaudible, or the volume is too low, there is a problem with the smartphone, Internet connection or service provider. When it is audible with the smartphone without any troubles, there is a problem with connection to the vehicle (USB connection or Bluetooth connection).

1. CHECK SYMPTOM.	no →	Perform the instructed procedures.
yes ↓		
2. CHECK ANTENNA.	no →	Perform the instructed procedures.
yes ↓		
3. CHECK HARNESS.	no →	Perform the instructed procedures.
yes ↓		
4. CHECK UNIT GROUND CIRCUIT.	no →	Perform the instructed procedures.
yes ↓		
5. CHECK ENVIRONMENTAL CONDITION.	no →	Go to 6.

1. CHECK SYMPTOM.

Check in which condition (place) the noise occurs.

Does it occur in any places?

Yes	Go to 2.
No	Radio wave reception condition is poor. (In tunnel, buildings, etc.) There is no failure on the vehicle.

2. CHECK ANTENNA.

Check for poor contact of connectors or terminals.

Is the check result OK?

Yes	Go to 3.
No	Repair or replace the harness.

3. CHECK HARNESS.

Check the antenna harness for an open or short circuit, and check the booster.

Is the check result OK?

Yes	Go to 4.
No	Repair or replace the harness.

4. CHECK UNIT GROUND CIRCUIT.

Check the unit ground connector (1P on back side).

Is the check result OK?

Yes	Go to 5.
No	Repair or replace the ground circuit.

5. CHECK ENVIRONMENTAL CONDITION.

Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.

Is the check result OK?

Yes	Go to 6.
No	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to 6.

6. CHECK NOISE OCCURRENCE CONDITION.

Stop the engine, and turn the ignition switch to ON to check for noise occurrence.

Does the noise occur while the engine stops?

Yes	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Check that the engine ignition system, generator, engine ground circuit and chassis ground circuit are connected securely.

10. WRONG LOCATION OF VEHICLE, NO GPS RECEPTION

Probable cause:

Influence by external devices, GPS antenna circuit malfunction, vehicle seed sensor circuit malfunction, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK SYMPTOM.
   - no → Go to 4.
   - yes ↓
2. CHECK EXTERNAL DEVICE INSTALLATION.
   - no → Go to 3.
   - yes ↓
3. CHECK DIAGNOSTIC MODE.
   - yes → Go to 5.
   - no → Go to 4.

4. CHECK GPS ANTENNA.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.
5. INSPECTION OF VEHICLE SPEED SENSOR.	yes →	Perform the instructed procedures.
	no →	Go to 6.
6. CHECK VEHICLE SPEED SIGNAL.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK SYMPTOM.

Check in which condition (place) the vehicle is located out of position.

Does it occur in any places?

Yes	Go to 2.
No	Go to 4.

2. CHECK EXTERNAL DEVICE INSTALLATION.

Check if an external device is installed near the GPS antenna or unit.

Is the check result OK?

Yes	Go to 3.
No	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to 3.

3. CHECK DIAGNOSTIC MODE.

Check the GPS item on the {Line Diag} screen.

Is the display OK?

Yes	Go to 5.
No	Go to 4.

4. CHECK GPS ANTENNA.

Check that the GPS antenna connector is connected.

Is the connector connected?

Yes	Replace the navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Replace the GPS antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

5. INSPECTION OF VEHICLE SPEED SENSOR.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

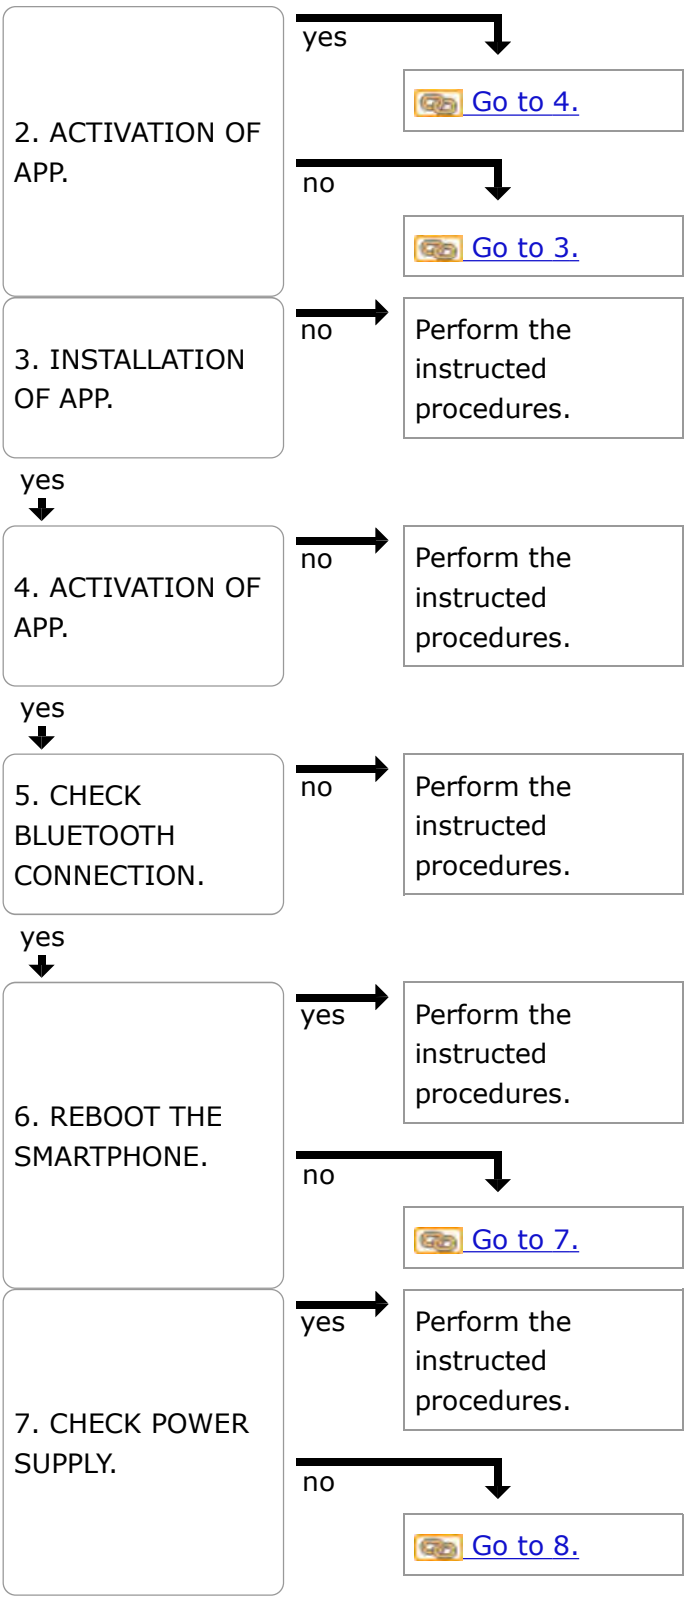
Yes	Perform the diagnosis for the displayed DTCs. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK VEHICLE SPEED SIGNAL.

Check the [Speed] of [Data Monitor] using Subaru Select Monitor.

Is the check result OK?

Yes	Replace the navigation assembly. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.
No	Check the VDC CM. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.



11. CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT

Probable cause:
Smartphone malfunction, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK COMPATIBILITY OF SMARTPHONE.
   - no → Perform the instructed procedures.
   - yes ↓

2. ACTIVATION OF APP.
yes
Go to 4.
no
Go to 3.
3. INSTALLATION OF APP.
no
Perform the instructed procedures.
yes
4. ACTIVATION OF APP.
no
Perform the instructed procedures.
yes
5. CHECK BLUETOOTH CONNECTION.
no
Perform the instructed procedures.
yes
6. REBOOT THE SMARTPHONE.
yes
Perform the instructed procedures.
no
Go to 7.
7. CHECK POWER SUPPLY.
yes
Perform the instructed procedures.
no
Go to 8.

8. DELETE CACHE INFORMATION OF THE UNIT.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK COMPATIBILITY OF SMARTPHONE.

Check that the customer's smartphone is compatible with the system.
- iPhone: iOS 4.3.5 or later
- Android: Android 4.0 or later

Is it compatible?

Yes	Go to 2.
No	The smartphone is not compatible; therefore, it does not work with the system.

2. ACTIVATION OF APP.

Check the SUBARU STARLINK app of the smartphone.

Is it installed?

Yes	Go to 4.
No	Go to 3.

3. INSTALLATION OF APP.

Install SUBARU STARLINK app to smartphone.

Is installation successful?

Yes	Go to 4.
No	Reboot the smartphone, and install the SUBARU STARLINK.

4. ACTIVATION OF APP.

Activate SUBARU STARLINK app.

Is SUBARU STARLINK app activated?

Yes	Go to 5.
No	Reinstall the app and activate it. If you still fail to activate it, the smartphone may be defective.

5. CHECK BLUETOOTH CONNECTION.

Confirm the Bluetooth connection with the unit.

Is Bluetooth connection established?

Yes	Go to 6.
No	Check that the unit can connect with other smartphones. If successful, the smartphone may be defective. If the unit cannot communicate with other smartphones, replace the unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

6. REBOOT THE SMARTPHONE.

1. Reboot the smartphone.
2. Reinstall the SUBARU STARLINK app.

Is it operating normally?

Yes	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.
No	Go to 7.

7. CHECK POWER SUPPLY.

Turn the ignition to OFF → ACC ON.

Is it operating normally?

Yes	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.
No	Go to 8.

8. DELETE CACHE INFORMATION OF THE UNIT.

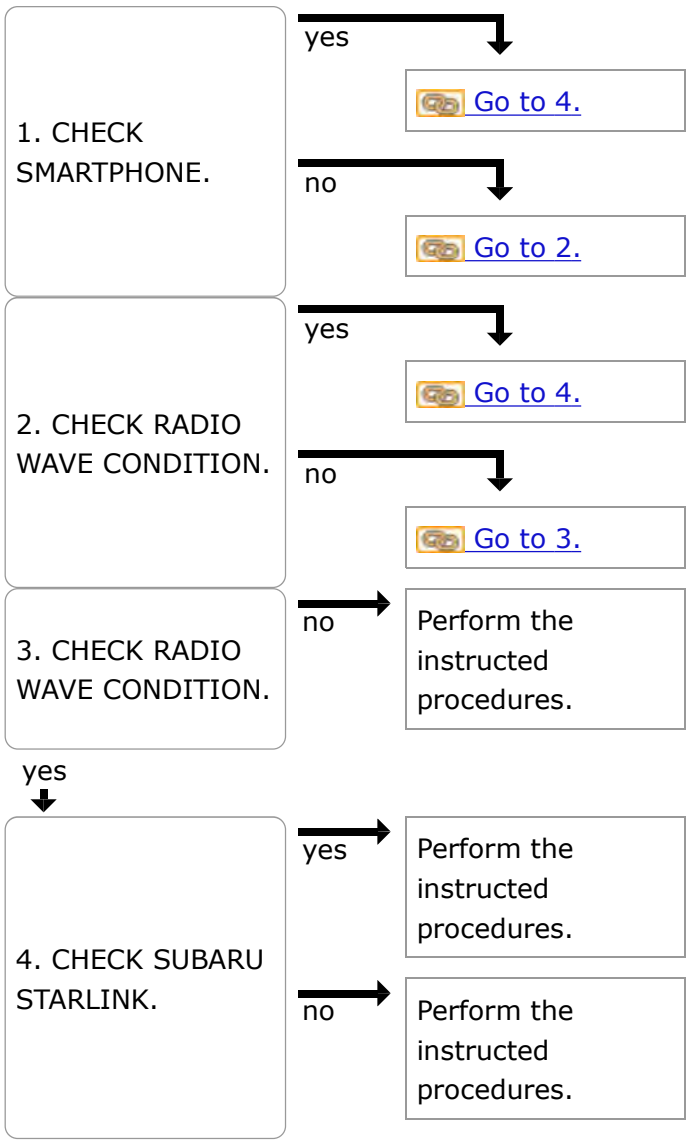
Delete cache information of the unit.

Note:

1. **Select SUBARU STARLINK from the APPS screen.**
2. **On the SUBARU STARLINK display (including an error message screen), press and hold the right bottom corner of the screen for 30 seconds or more.**
3. **Lift your finger off the screen. If the message [Select Audio Source] appears when you lift your finger off the screen, the cache information is successfully deleted.**

Is it operating normally?

Yes	Cache information temporary stored in the unit was corrupted. Currently, it is normal.
No	Perform the procedures described on "Check SUBARU STARLINK service". Ref. to INFOTAINMENT(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > CHECK SUBARU STARLINK SERVICE.



12. CHECK SUBARU STARLINK SERVICE

Probable cause:

Smartphone malfunction, influence by radio wave condition, influence by STARLINK service side, unit body malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to INFOTAINMENT(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK SMARTPHONE.

Check the smartphone connection.

Can the smartphone connect the Internet?

Yes	Go to 4.
No	Go to 2.

2. CHECK RADIO WAVE CONDITION.

Move to a location where the radio wave condition is good, and confirm the connection.

Can the smartphone connect the Internet?

Yes	Go to 4.
No	Go to 3.

3. CHECK RADIO WAVE CONDITION.

Communication network gets busy at times even in a good radio wave location. In this case, wait for some time and then try again.

Can the smartphone connect the Internet?

Yes	Go to 4.
No	The smartphone may be defective.

4. CHECK SUBARU STARLINK.

Check service provision status with SUBARU STARLINK.

Is there any problem in the service provision status?

Yes	Try to connect after the problem in service provision is solved.
No	Replace the audio or navigation unit. Ref. to ENTERTAINMENT & MONITORING>Audio. Ref. to ENTERTAINMENT & MONITORING>Navigation Body.

OPERATION

Note:

Contents indicated in this section generally describe inspection procedures to be performed when Subaru Select Monitor cannot be used. However, some of the inspections described here cannot be performed with Subaru Select Monitor.
For the items that Subaru Select Monitor is not supporting, perform the inspections by referring to information indicated in this section.

1. PROCEDURE TO SWITCH TO SERVICE DIAGNOSTICS MODE

1. Turn the ignition switch to ACC.
2. Press "TUNE/SCROLL" six times while pressing "HOME" button.

2. SERVICE INSPECTION

CONNECTION

On Service Menu, click "Connection" to display the following items.
OK: Each connection device is connected properly.
NG: Connection is not established, or connection status (including harness) is faulty.

Note:

Check the external connection terminals (USB 1, USB 2 and AUX) by connecting memory or a pin jack for inspection.

Check the connection status of the connector and harness. If there are no problems, the connection device or unit could be faulty.

The following shows information to be displayed and its description.

Item	Item detection method	OK judgment condition	Note
GPS	Direct line	GPS antenna is connected. (NG is displayed when short circuit is detected.)	With navigation only
MIC	Direct line	(i87) No. 6 falls to GND level.	—
Rr_CAM	Direct line	Synchronized signals from the camera are input to (i146) No. 3.	—
AUX	Direct line	(i87) No. 25 falls to GND level.	—
USB1	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
USB2	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
SXM	Direct line	XM-ANT is connected. (NG is displayed when short circuit is detected.)	It takes approx. 30 seconds to become recognizable.
CAN	Communication	CAN communication is completed properly.	—

FUNCTION CHECK

On Service Menu, click "Function Check" to display the following items.

1. Panel•Steering Switch Check Panel&Steering Switch Touch Switch

Once the screen is displayed, press the push switches to check that the number of pushed switches matches the number shown in Pushed SW.

If the number of SW does not match, SW conditions are not properly recognized. Therefore, perform inspection for unrecognized switches.

In addition, turn the rotary switch clockwise or counterclockwise to check that the screen indicates correct status according to the operation. If the screen display does not match the actual operation, the rotary SW may be faulty. Perform inspection for the rotary SW.

Note:

The following shows information to be displayed and its description.

Item	Display	Contents
Result	Pressed	Pressing of switch is detected.
Number of switch pushed	1	One pressed switch is detected.
	2	Two pressed switches are detected.
	3	Three pressed switches are detected.
	4	Four pressed switches are detected.
Direction of switch rotation	+ direction	The rotary switch is turned clockwise.
	- direction	The rotary switch is turned counterclockwise.

2. Touch Switch Check

Note:

The Subaru Select Monitor does not have the Touch Switch Check function.

Once the screen appears, touch the screen. + (cursor) appears where you touched.

Note:

The following shows information to be displayed and its description.

Item	Contents
+ (Cursor)	Appears when the screen is touched. The displayed white-outlined + (cursor) stays on, even when a touching finger is removed, until the screen is switched.

3. Microphone Check

On the Function Check/Setting screen, click Microphone Check to perform inspection for microphone.

With the microphone input level screen displayed, make sound toward the microphone.

Fluctuate the sound volume to check that the microphone input level changes accordingly.

If the input level does not become green or the input level does not change even when the sound volume is fluctuated, the microphone may be faulty.

Note:

The microphone input function is enabled while this screen is displayed.

- **The sound volume is indicated in eight levels.**
  The maximum input volume of microphone is equally divided into eight levels from level 0 to level 7.
- **The microphone input level is sampled every 100 ms, and the result is indicated in eight levels.**
  Display of the input level is also updated every 100 ms.
  The microphone input level gauge is updated even during recording.

4. System Sensors Check

GPS related check: Status of the GPS signal reception can be checked. When there is faulty in reception status, position detection or date indication, re-check the reception status at a location

with a fine view and no obstacles around that will interrupt the signal reception. When normal condition is still not obtained, the GPS antenna may be faulty.

- GPS/Reception number: Normal when it is indicated in blue.
- GPS/Status: Normal when OK is indicated.
- GPS/Measurement ratio 3D:
- GPS/Measurement ratio 2D:
- GPS/Date: Normal when current time is indicated. When current date/time is not indicated, click the Date Setting button to set the current date on the displayed date setting screen.
- GPS/Position: Normal when longitude and latitude of the current position are indicated.

SPD check: Status of the vehicle speed sensor signal can be checked.

1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
2. When VDC CM detected DTC, clear the DTC.
3. Drive the vehicle at 9 km/h (6 MPH) or more.
4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.
5. Vehicle speed is not displayed. Or, when different vehicle speed is indicated, check if CAN system DTC is stored. If so, perform the diagnosis according to the DTC. When CAN system DTC is not stored, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the CAN system and vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.

Gyro sensor related check: Status of the Gyro sensor signal can be checked. If fault is found with the Gyro sensor related indications, the main unit could be faulty.

- Gyro sensor/Gyro Voltage: Shake the vehicle to the left and right to check that the voltage changes.
- Gyro/Distance correction study situation: Study situation can be checked.
- Reset: Press and hold the Reset button for three seconds to reset the pulse count of SPD, relative bearing of Gyro sensor, relative angle of inclined angle sensor.

Note:

The following shows information to be displayed and its description.

Item	Display	Contents
GPS/Reception number	Blue	When notification of “Positioning with collected data is used” is received from the GPS reception device. (Status: In-use)
	Yellow	When notification of “Tracking in progress” is received from the GPS reception device. (Status: Reception in progress)
	Transparent	When notification of “Positioning with collected data is not used” or “Searching in progress” is received from the GPS reception device. (Status: Not used)

Item	Display	Contents
GPS/Status	OK (H3D)	When three-dimensional positioning (Hyper 3D positioning) using satellites with less accuracy degradation is used.
	OK (H2D)	When two-dimensional positioning (Hyper 2D positioning) using satellites with less accuracy degradation is used.
	OK (3D)	When three-dimensional positioning is used.
	OK (2D)	When two-dimensional positioning is used.
	NG	When the positioning data is not available.
	error	When a reception error occurred.
	—	For cases other than above.
GPS/Measurement ratio 3D		Displays ratio of three-dimensional positioning satellites.
GPS/Measurement ratio 2D		Displays ratio of two-dimensional positioning satellites.
GPS/Measurement ratio NG		Displays ratio of non-positioning satellites.
GPS/Date	Current date and time	Displays date information obtained from GPS in four digits for year and 24-hour clock for time. Date information is displayed as [Y/M/D].
GPS/Position (latitude)	Current position, latitude information	Displays latitude information of the current position in “degree”, “minute” and “second”. When positioning information is not obtained, it appears as 00° 00’ 00”.
GPS/Position (longitude)	Current position, longitude information	Displays longitude information of the current position in “degree”, “minute” and “second”. When positioning information is not obtained, it appears as 00° 00’ 00”.
SPD/Pulse Count	Pulse count	Displays SPD signal status in the following format. • The number of input pulses accumulated since this screen is displayed. (Indicated in four-digit DEC code.) • The number returns to 0 after 9999. • Reset with ACC OFF/ON.

Item	Display	Contents
SPD/Speed	Speed	Displays SPD signal status in the following format. • LSB: Displays in km-per-hour as 1 [km/h]. • Displays 255 [km/h] for MAX value or more, and 0 [km/h] for MIN value or less.
Gyro sensor/Gyro Voltage	Voltage value.	Voltage value (unit: V, LSB: 1 mV).
Gyro/Distance correction study situation	Gyro/Distance correction study situation.	
Reset	Reset the following display items to [0]. • SPD pulse count • Relative bearing of Gyro sensor • Relative angle of inclined angle sensor	Press and hold the reset button for three seconds or more.

VEHICLE SIGNAL

On Service Menu, click “Vehicle Signal” to display the following items.

- Battery: Status of the battery voltage signal input can be checked.
  Measure the battery voltage using a tester. System is normal when the indicated voltage is almost equivalent to the tester value. When the indicated voltage is different from the tester value, perform inspection for the power supply circuit of main unit.
- Vehicle speed: Status of the vehicle speed signal input can be checked.
  1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
  2. When VDC CM detected DTC, clear the DTC.
  3. Drive the vehicle at 9 km/h (6 MPH) or more.
  4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.
  5. Vehicle speed is not displayed. Or, when different vehicle speed is indicated, check if CAN system DTC is stored. If so, perform the diagnosis according to the DTC. When CAN system DTC is not stored, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the CAN system and vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.
- IG: Status of the IG signal input can be checked.
  Turn the ignition switch to ON, and check that the IG indication appears as ON. If the indication does not appear as ON, check the IG signal line.
- ILL+: Status of the illumination signal input can be checked.
  1. Before starting inspections, turn the ignition switch to ON.
  2. Set the lighting switch to TAIL (small) position.
     Make sure that the bright switch is not turned ON at this time.
  3. Check that ON lights in ILL+ and then the screen becomes dim.
     ON: Normal.
     OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be

faulty.

- PKB: Status of the parking brake signal input can be checked.
- GPS/Position: Normal when longitude and latitude of the current position are indicated.
  Pull the parking brake switch. Check that ON is displayed in PKB.
  ON: Normal.
  OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.
- Bright: Status of the Bright signal input can be checked.
  Operate the dial-type bright switch next to the wheel steering. System is normal when the signal indicates ON.
  If the signal does not indicate ON, check the bright switch.
- REV: Status of the reverse range signal input can be checked.
  1. Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition switch to ON.
  2. Pull the parking brake switch and depress the brake pedal, then place the select lever in reverse.
  3. Check that ON is displayed in REV.
     ON: Normal.
     OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.

Note:

The following shows information to be displayed and its description.

Item	Display	Contents
Battery voltage	Status of battery voltage	0 [V] — 24.0 [V] (Minimum unit: 0.1 [V])
Vehicle speed	Status of vehicle speed	0 [km/h] — 255 [km/h] (Minimum unit 1 [km/h])
IG	ON	IG power supply ON
	OFF	IG power supply OFF
ILL+	ON	ILL+ signal ON
	OFF	LL+ signal OFF
PKB	ON	PKB signal ON
	OFF	PKB signal OFF
Bright	ON	Bright with dimmer
	OFF	Bright without dimmer
REV	ON	REV signal ON
	OFF	REV signal OFF

SYSTEM INFORMATION

On Service Menu, click “System Information” to display the following items.

- Pandora ID: ID that is required upon using Pandora. When this ID is not indicated, Pandora is not accessible.
- Memory Initialization: This function is used to initialize information stored in the main unit memory.

Caution:

When this function is used, music information and navigation setting information saved in the main unit will be deleted. Therefore, obtain permission from the user before using this function.

When initializing the memory, perform procedures by following the indicated messages.

PRODUCT INFORMATION

On Service Menu, click “Product Information” to display the following items.

- Product Information: Displays the product number of the main unit.
- Connectivity ID: ID that is required upon using the STARLINK functions. When this ID is not indicated, the STARLINK functions are not accessible.
- Pandora ID: ID that is required upon using Pandora. When this ID is not indicated, Pandora is not accessible.

DIAGNOSTIC RECORDER

On Service Menu, click “Diagnostic Recorder” to display the following items.

- ON/OFF: Set diagnostic recorder to ON/OFF.
- Data download: Output the data of diagnostic recorder to USB.

13. Diagnostics with Phenomenon

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

Caution:

For the steering responsive fog light system, perform the diagnosis for the "BODY CONTROL SYSTEM (DIAGNOSTICS)". Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. BASIC INSPECTION.

Perform basic inspection. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Headlight / Foglight].
   Note:
   For detailed operation procedures, refer to "Application help".

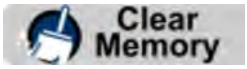
Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check



1. Record all DTCs, time stamp and freeze frame data.
   Note:
   For time stamp, refer to "LAN SYSTEM". Ref. to LAN SYSTEM (DIAGNOSTICS)>General Description>CAUTION > TIME STAMP.

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Perform diagnosis according to the procedures in the diagnostics with phenomenon. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostics with Phenomenon.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis according to the displayed DTC.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

4. Execute the inspection mode. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown.
No	Finish the diagnosis.

CHECK

Inspect the following items regarding the vehicle's state.

1. AUTO HEADLIGHT BEAM LEVELER SYSTEM

Auto Headlight Beam Leveler System Check List for Interview Received Year Month Day			Date the Vehicle is
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date and time when the trouble occurred		Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions		Occurrence location	
Accessory installation condition			
Confirmation of trouble condition			
❑ Diagnostic trouble code			

2. STEERING RESPONSIVE HEADLIGHT

Steering • Responsive • Headlight Check List for Interview Received Year Month Day		Date the Vehicle is
Customer's name	Registration No.	Initial year of registration Year Month Date

		Vehicle model	Frame number

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG SYSTEM

Before performing diagnosis, refer to "CAUTION" in "General Description" in AIRBAG SYSTEM. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. AUTO HEADLIGHT BEAM LEVELER SYSTEM / STEERING RESPONSIVE HEADLIGHT / LED HEADLIGHT SYSTEM

Before performing diagnosis, refer to "CAUTION" in "General Description" in LIGHTING SYSTEM. Ref. to LIGHTING SYSTEM>General Description>CAUTION.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the problems related to auto headlight beam leveler system or steering responsive headlight.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the relay and fuse condition. Ref. to LIGHTING SYSTEM>Relay and Fuse.
3. Check the connecting condition of harness and harness connector.

2. FUNCTION CHECK

AUTO HEADLIGHT BEAM LEVELER SYSTEM

1. Turn the ignition switch to ON.
2. Turn on the headlight low beam.
3. Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.

LED HEADLIGHT SYSTEM

1. Turn the ignition switch to ON.
2. Turn on the headlight low beam.
3. Check that the headlight Low beam illuminates with normal brightness.

STEERING RESPONSIVE HEADLIGHT (THE INITIALIZE FUNCTION)

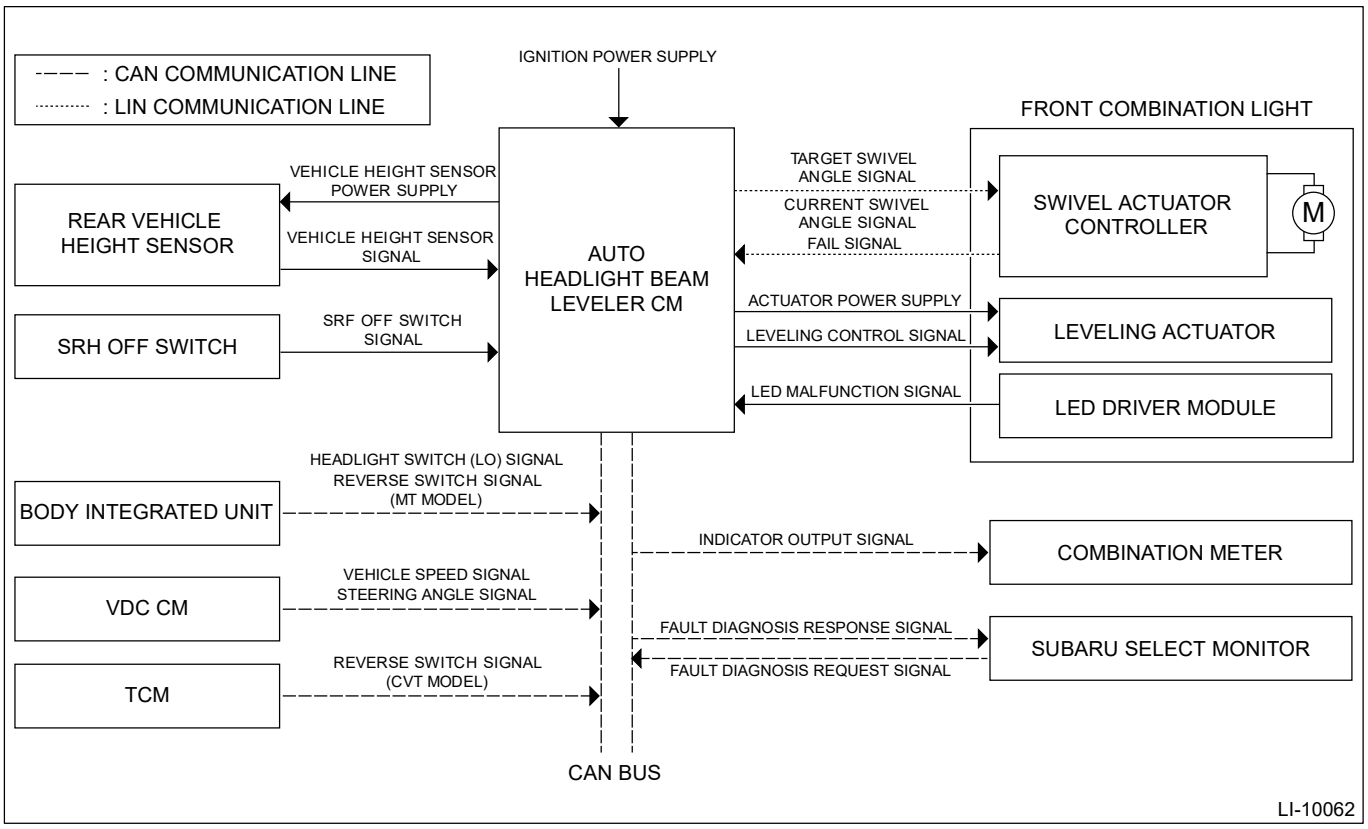
1. Stop the vehicle at approximately 1 m (3.3 ft) away and perpendicular to the wall.
2. Make the vehicle vicinity dark.
3. Set the vehicle headlight switch to Low beam.
4. Make sure that the headlight cut line moves to left and right immediately after the engine started.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

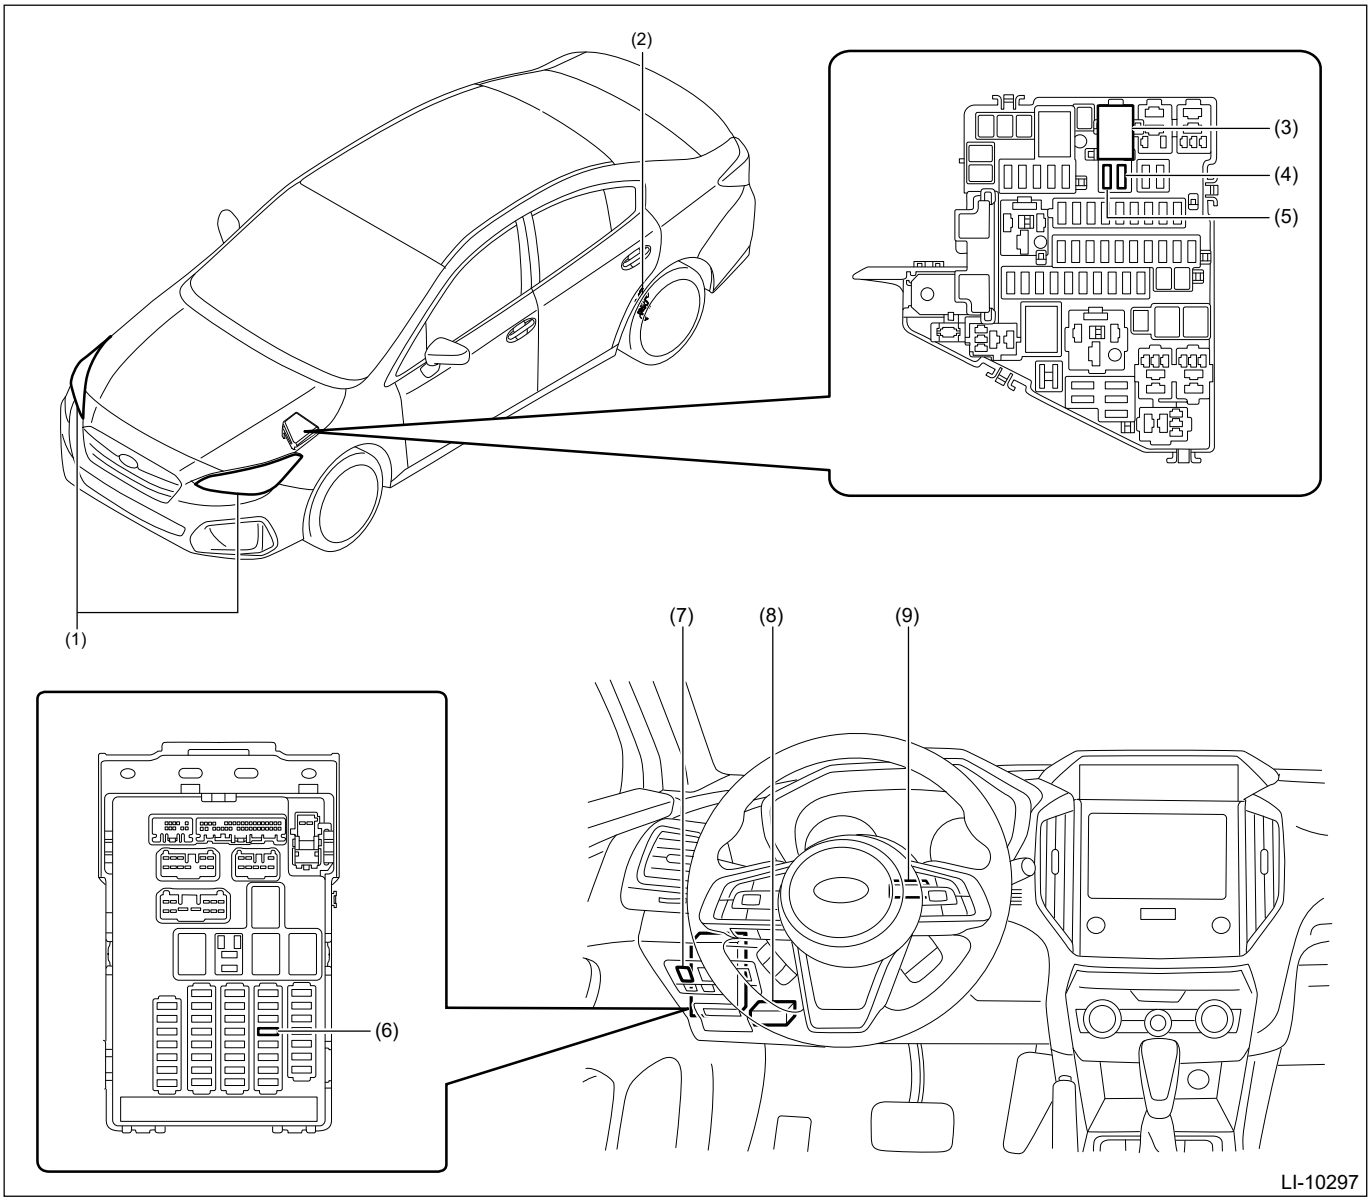
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note:** **For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**



2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > General Description



SYSTEM BLOCK DIAGRAM

- The auto headlight beam leveler is a system that automatically adjusts the headlight beam level (vertical directions) according to the longitudinal inclination angle of the vehicle due to heavy load or passengers' getting in/off a car.
- The steering responsive headlight is a system that calculates the corner R from the steering angle and vehicle speed to illuminate beyond the corner by moving the headlight beam to left and right.

ELECTRICAL SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM

Terminal No.	Contents	Measuring condition	Standard
(B616) No. 1 ←→ Chassis ground	Ignition power supply	Ignition switch ON	8 — 16 V
(B616) No. 2 ←→ Chassis ground	GND	Always	Less than 1 Ω
(B616) No. 3 ←→ Chassis ground	Rr vehicle height sensor GND	Always	Less than 1 Ω
(B616) No. 4	—	—	—
(B616) No. 5 ←→ Chassis ground	RH headlight malfunction signal	Always	1 MΩ or more
(B616) No. 6	—	—	—
(B616) No. 7 ←→ Chassis ground	SRH signal (LIN)*1	Always	1 MΩ or more
(B616) No. 8	—	—	—
(B616) No. 9 ←→ Chassis ground	SRH GND*1	Always	Less than 1 Ω
(B616) No. 10 ←→ Chassis	Leveling actuator power supply	Ignition switch ON	8 — 16 V

Terminal No.	Contents	Measuring condition	Standard
ground			
(B616) No. 11 ←→ Chassis ground	Leveling actuator GND	Always	Less than 1 Ω
(B616) No. 12 ←→ (B616) No. 3	Rr vehicle height sensor power supply	Ignition switch ON	4.75 — 5.25 V
(B616) No. 13	—	—	—
(B616) No. 14	—	—	—
(B616) No. 15	—	—	—
(B616) No. 16 ←→ Chassis ground	LH headlight malfunction signal	Always	1 MΩ or more
(B616) No. 17 ←→ Chassis ground	Leveling actuator signal	Headlight off → on Headlight on, no vehicle height change → change and hold vehicle height for 3 seconds or more	Less than 1 V → 1.0 — 14.4 V (for 17 seconds)
(B616) No. 18	—	—	—
(B616) No. 19 ←→ Chassis ground	Rr sensor signal	IG ON (with no passenger, no load and vehicle stopped)	Approx. 2.5 V (changes according to vehicle condition)
(B616) No. 20	—	—	—
(B616) No. 21	—	—	—
(B616) No. 22 ←→ Chassis ground	SRH OFF switch*1	Switch OFF → ON (at SRH OFF)	1 MΩ or more → less than 1 Ω
(B616) No. 23	CAN-H	Always	1 MΩ or more
(B616) No. 24	CAN-L	Always	1 MΩ or more

*1: Models with steering responsive headlight

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Inspection Mode

PROCEDURE

1. Turn the ignition switch to ON.
2. Turn on the headlight low beam.
3. Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.
4. Using the Subaru Select Monitor, read the DTC of [Headlight / Foglight] to check that there is no DTC displayed. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

   Note:

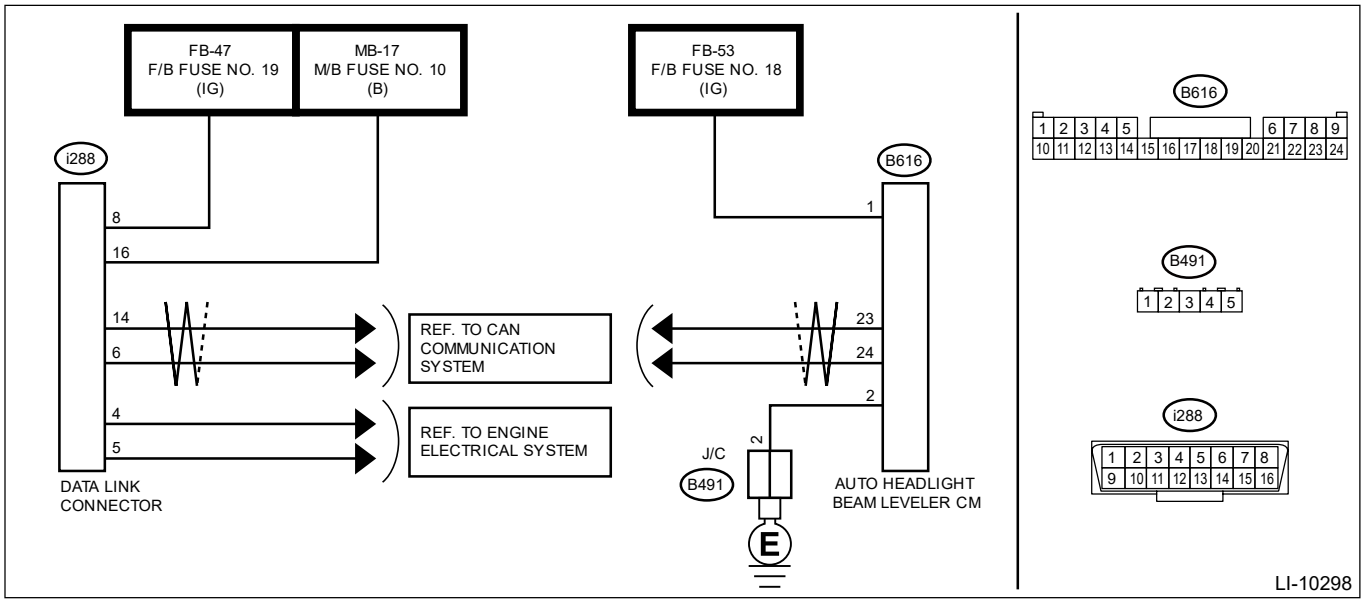
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

Communication error with auto headlight beam leveler CM

Detecting condition:



- Defective harness connector
- Power supply circuit malfunction
- Defective auto headlight beam leveler CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between auto headlight beam leveler CM and Subaru Select Monitor.

Wiring diagram:

Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

Caution:

Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

1. CHECK FUSE.

Check the fuse. Ref. to LIGHTING SYSTEM>Relay and Fuse.

Is the fuse OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between battery and auto headlight beam leveler CM.

2. CHECK HARNESS.

1. Turn the ignition switch to OFF.
2. Disconnect the connector of combination meter.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground.

Connector & terminal

(B616) No. 1 (+) — Chassis ground (–):

Is the voltage 10 — 13 V?

Yes	Go to 3.
No	Repair the open circuit in the harness between auto headlight beam leveler CM connector and fuse.

3. CHECK HARNESS.

Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground.

Connector & terminal

(B616) No. 2 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of harness between auto headlight beam leveler CM connector and chassis ground.

4. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

5. CHECK SUBARU SELECT MONITOR.

1. Connect the select monitor to another vehicle.
2. Check whether the communication for initializing can be executed normally.

Is communication normal?

Yes	Go to 6.
No	Repair or replace the select monitor.

6. CHECK AUTO HEADLIGHT BEAM LEVELER CM.

1. Turn the ignition switch to OFF.
2. Connect the auto headlight beam leveler CM connector.
3. Communicate with [Headlight / Foglight] using the Subaru Select Monitor.

Is communication possible?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor>LIST.**

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Data Monitor

LIST

Item Name	Contents	Standard/Unit	Note
Trip Count	Time stamp information Ref. to COMMON(diag)>Time Stamp.	time	—
Count	Time stamp information, original counter identification information		—
Time Count	Time stamp information, time counter	ms	—
R Sensor Signal	Output voltage value from rear vehicle height sensor	Approx. 2.5 V	Changes according to vehicle condition.
Actuator Signal	Power supply voltage value to headlight beam leveler actuator	Not in operation: 0% In operation: 10 — 90% (17 Sec)	Changes according to vehicle condition.
Control module voltage	IG voltage condition of auto headlight beam leveler CM	8 — 16 V	—
Vehicle speed signal	Status of vehicle speed	Shows vehicle speed	—
H/L Lo Signal	Headlight lighting condition	Light Off: Light switch is OFF ON: Light sensor in operation when light switch is in HEAD or AUTO position	—
LED HEADLAMP(LH) error Signal	Open circuit detection signal status	Light Off: Open circuit undetected ON: Open circuit detected	—
LED HEADLAMP(RH) error Signal	Open circuit detection signal status	Light Off: Open circuit undetected ON: Open circuit detected	—

Item Name	Contents	Standard/Unit	Note
Steering Angle Signal	Steering angle status	−3276.7 — 3276.7 deg	—
Shift Position Signal	Shift lever position	P, R, N, D, D-S, 3 range, 2 range, 1 range	—
MT Reverse SW	Displays reverse switch signal status (MT).	ON: When shift lever is set in reverse position OFF: When shift lever is set in other than reverse position	—
SRH-OFF SW	SRH OFF switch signal	ON: When SRH OFF switch is ON OFF: When SRH OFF switch is OFF	—
Engine Speed	Engine speed signal	0 — 65535 rpm	—
Vehicle Height	Vehicle height signal	Unknown: When other than the followings XV/OBK: When XV/OBK SDN/WGN: When other than SDN/WGN	—
Left Steering Responsive Headlight Current Angle	SRH swivel actuator current angle (LH) signal	−3276.7 — 3276.7 deg	—
Right Steering Responsive Headlight Current Angle	SRH swivel actuator current angle (RH) signal	−3276.7 — 3276.7 deg	—
Left Steering Responsive Headlight Target Angle	SRH swivel actuator target angle (LH) signal	−3276.7 — 3276.7 deg	—
Right Steering Responsive Headlight Target Angle	SRH swivel actuator target angle (RH) signal	−3276.7 — 3276.7 deg	—
Left Steering Responsive Headlight Power Supply Failure	SRH swivel actuator power supply failure (LH) signal	Avail.: At normal condition FAIL: Abnormal	—
Right Steering Responsive Headlight Power Supply Failure	SRH swivel actuator power supply failure (RH) signal	Avail.: At normal condition FAIL: Abnormal	—
Left Steering Responsive Headlight Motor Failure	SRH swivel actuator motor failure (LH) signal	Avail.: At normal condition FAIL: Abnormal	—
Right Steering Responsive Headlight Motor Failure	SRH swivel actuator motor failure (RH) signal	Avail.: At normal condition FAIL: Abnormal	—
Left Steering Responsive Headlight Sensor Failure	SRH swivel actuator sensor error (LH) signal	Avail.: At normal condition FAIL: Abnormal	—
Right Steering Responsive Headlight Sensor Failure	SRH swivel actuator sensor error (RH) signal	Avail.: At normal condition FAIL: Abnormal	—

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Freeze Frame Data

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Freeze Frame Data.**
- **For details on the data monitor, refer to the list. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Freeze Frame Data>LIST.**

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Freeze Frame Data

LIST

Items to be displayed	Contents	Standard/Unit	Note
Trip Count	Time stamp information Ref. to COMMON(diag)>Time Stamp.	time	—
Count	Time stamp information, original counter identification information	—	—
Time Count [msec]	Time stamp information, time counter	ms	—

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Active Test

OPERATION

Available only for models with steering responsive headlight.

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Headlight / Foglight], and then select [Enter].
5. On [Select Function] display, select [Active Test].

Note:

For detailed operation procedures, refer to "Application help".

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Active Test

LIST

Active test items	Range	Contents	Execution condition
Right Steering Responsive Headlight	−5 — 18deg	SRH swivel actuator on the right side operates. **Note:** **Used for unit inspection etc. of the SRH swivel actuator.**	—
Left Steering Responsive Headlight	−5 — 18deg	SRH swivel actuator on the left side operates. **Note:** **Used for unit inspection etc. of the SRH swivel actuator.**	—

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Diagnostic Trouble Code (DTC).**
- **For details on DTCs, refer to the list. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.**

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2900 AHL CONTROL

DTC detecting condition:
Detected when internal malfunction occurs in the auto headlight beam leveler CM.
Trouble symptom:
The auto headlight beam leveler does not operate.
Caution:
Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

1. CHECK DTC.

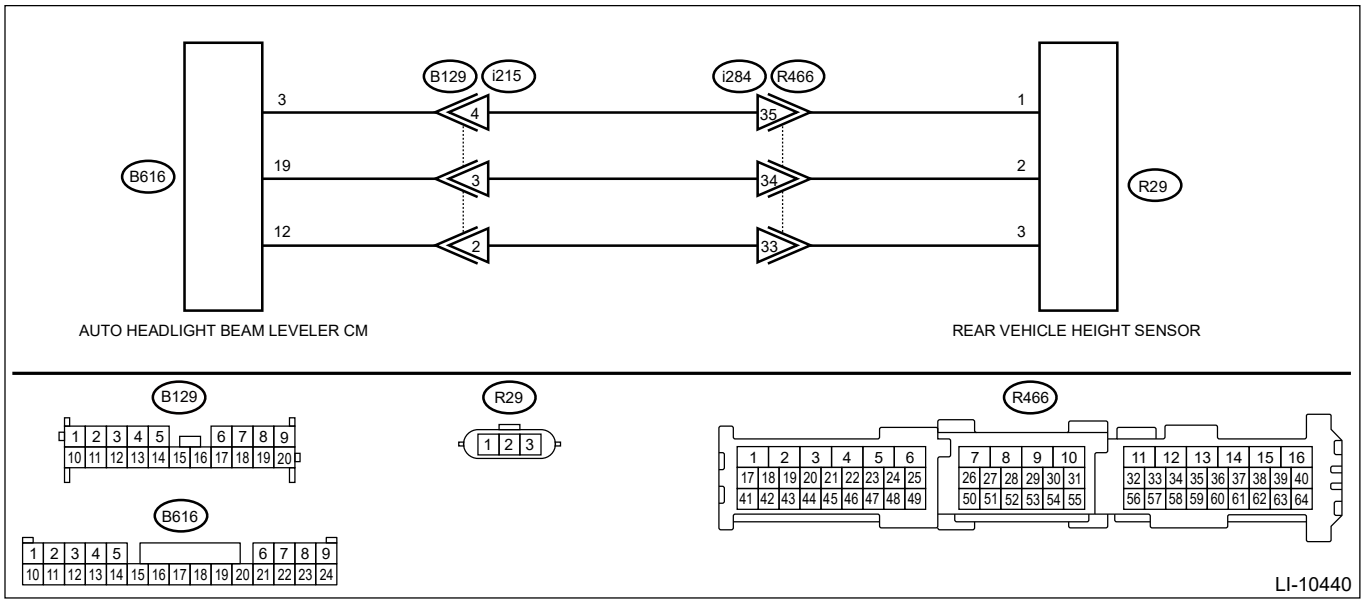
1. Turn the ignition switch OFF → ON.
2. Turn on the headlight low beam.
3. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2900 displayed? (Current malfunction)

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



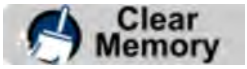
DTC B2902 REAR HEIGHT SENSOR CIRCUIT

DTC detecting condition:
Rear vehicle height sensor error is detected for 10 seconds or more.
Trouble symptom:

The auto headlight beam leveler does not operate.

Wiring diagram:

Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.



Caution:

Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.

1. CHECK DTC.

1. Turn the ignition switch to OFF → ON.
2. Turn on the headlight low beam.
3. Using the Subaru Select Monitor, clear the memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2902 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

- [R Sensor Signal]

Does the data indicate the standard value (approx. 2.5 V when on a level road with one person in the vehicle)?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Go to 3.

3. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

   - [R Sensor Signal]
2. Change the vehicle posture.

Does the data change?

Yes	Go to 6.
No	Go to 4.

4. CHECK OUTPUT VOLTAGE BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND REAR VEHICLE HEIGHT SENSOR.

1. Disconnect the connector from the rear vehicle height sensor.
2. Turn the ignition switch to ON.
3. Measure the voltage between the rear vehicle height sensor connector and chassis ground.
   Connector & terminal
   (R29) No. 3 (+) — Chassis ground (−):

Is the voltage 5 V±0.25?

Yes	Go to 5.
No	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.

5. PERFORM UNIT INSPECTION OF REAR VEHICLE HEIGHT SENSOR.

1. Remove the rear vehicle height sensor.
2. Perform the inspection of rear height sensor unit. Ref. to LIGHTING SYSTEM>Rear Height Sensor>INSPECTION.

Is the check result OK?

Yes	Go to 6.
No	Replace the rear height sensor. Ref. to LIGHTING SYSTEM>Rear Height Sensor.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the auto headlight beam leveler CM connector.
2. Using a tester, measure the resistance between the auto headlight beam leveler CM connector and rear height sensor connector.

Connector & terminal

(B616) No. 3 — (R29) No. 1:
(B616) No. 19 — (R29) No. 2:
(B616) No. 12 — (R29) No. 3:

Is there continuity?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground.

Connector & terminal

(B616) No. 3 — Chassis ground:

(B616) No. 19 — Chassis ground:

(B616) No. 12 — Chassis ground:

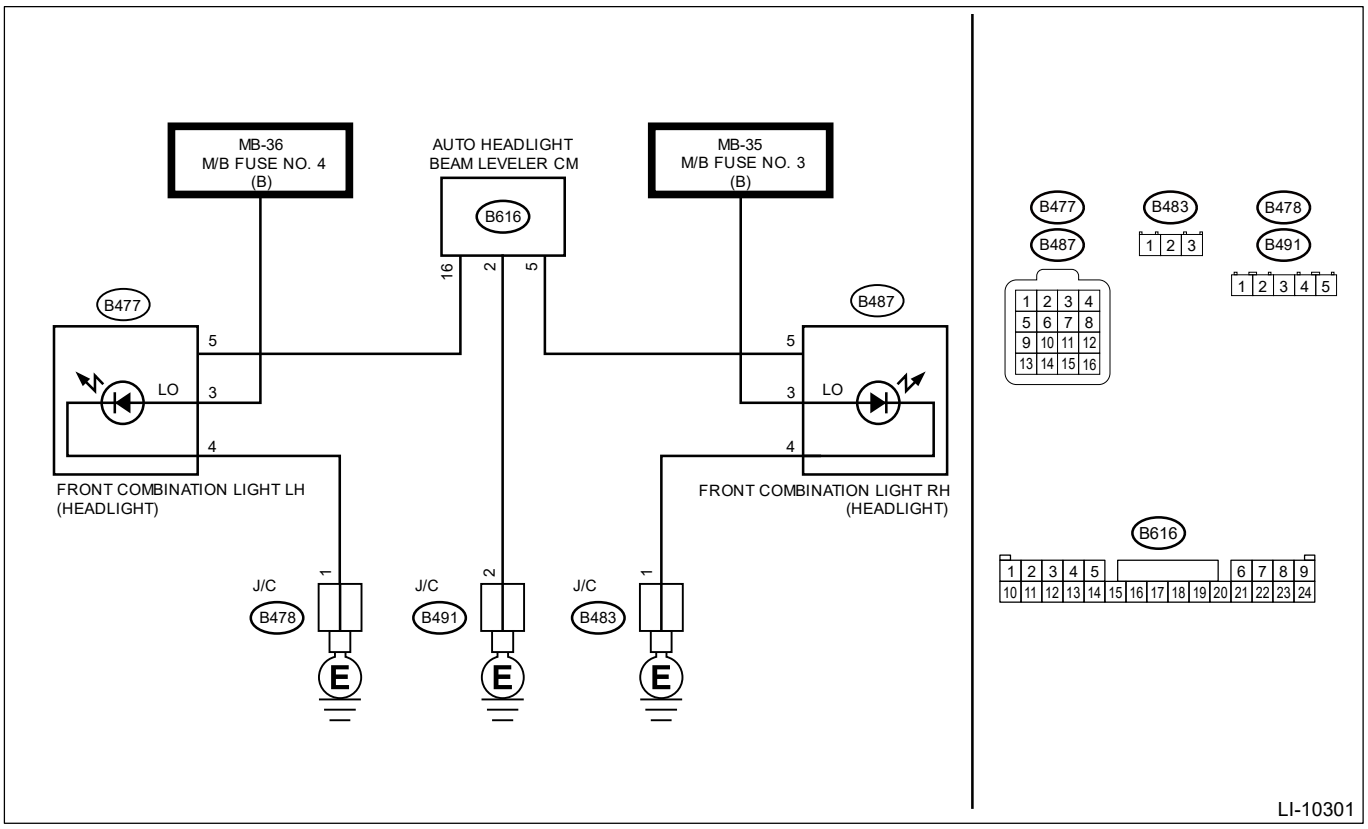
Is the resistance 10 kΩ or more?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Repair or replace the short circuit of the harness.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2904 LED HEADLIGHT CIRCUIT RH

DTC detecting condition:



LED headlight (RH) malfunction signal line error is detected for 2 seconds or more.

Trouble symptom:

LED headlight malfunction, LED headlight indicator illuminates.

Wiring diagram:

- Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.
- Headlight system Ref. to WIRING SYSTEM>Headlight System and Daytime Running Light System.

Caution:

- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**
- **After replacing the headlight assembly, headlight beam adjustment is required. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.**

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch to OFF → ON.
4. Turn the lighting switch to 2 (HEAD).
5. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2904 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

- [LED HEADLAMP(RH) error Signal]

Does the data indicate [Light off]?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Go to 3.

3. CHECK THE HEADLIGHT SYSTEM POWER SUPPLY CIRCUIT.

1. Disconnect the headlight assembly RH and LH connectors.
2. Turn the ignition switch to OFF → ON.
3. Turn the lighting switch to 2 (HEAD).
4. Using a tester, measure the voltage between headlight assembly RH connector and chassis ground.

Connector & terminal

(B487) No. 3 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 4.
No	Repair the headlight system.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between headlight assembly RH connector and chassis ground.

Connector & terminal

(B487) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HEADLIGHT SYSTEM.

1. Connect the headlight assembly RH connector.
2. Turn the ignition switch to OFF → ON.
3. Turn the lighting switch to 2 (HEAD).

Does the headlight come on at normal brightness?

Yes	Go to 6.
No	Replace the headlight. Ref. to LIGHTING SYSTEM>Headlight Assembly.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the auto headlight beam leveler CM connector.
2. Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector.

Connector & terminal

(B616) No. 5 — (B487) No. 5:

Is the resistance less than 10 Ω?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground.

Connector & terminal

(B616) No. 2 — Chassis ground:

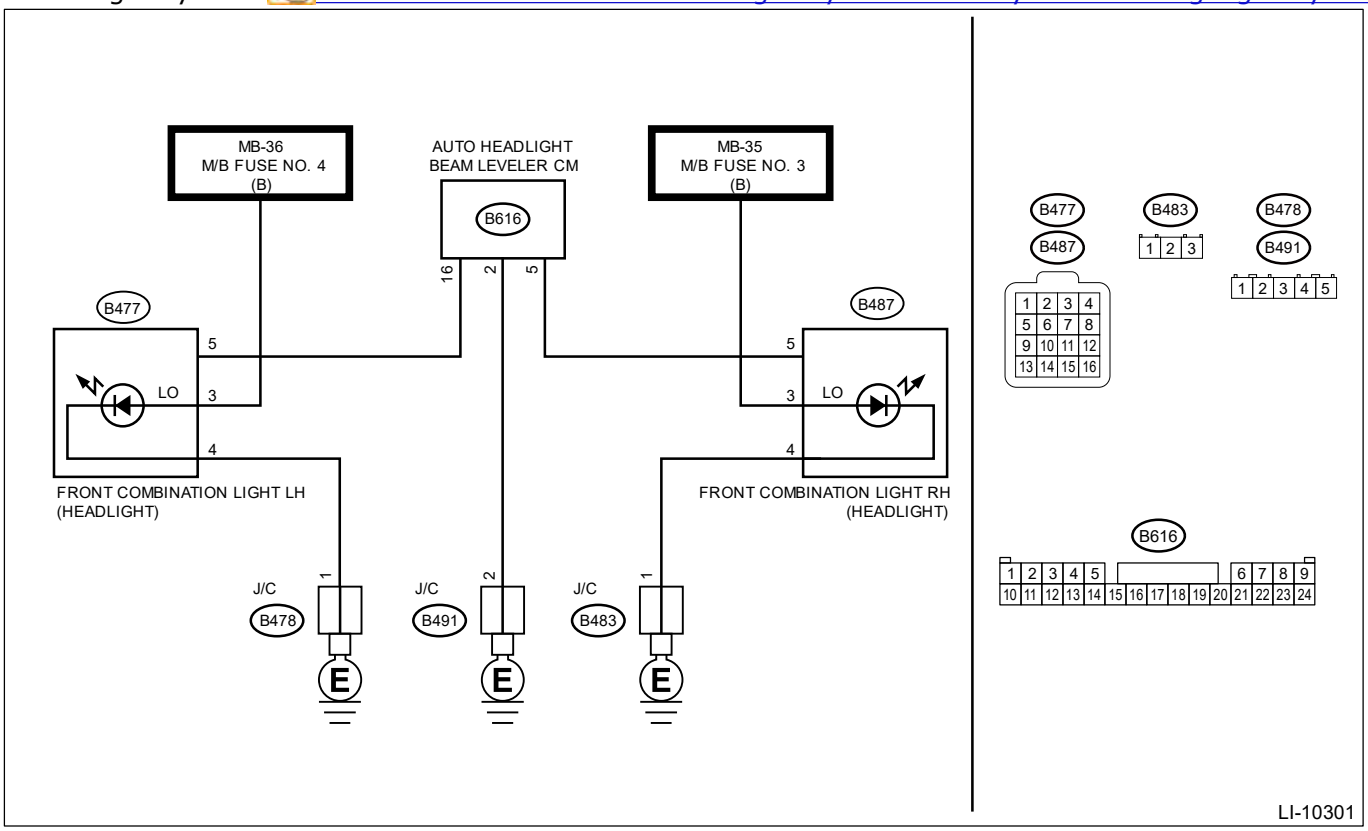
Is the resistance less than 10 Ω?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Repair or replace the open circuit of harness.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2905 LED HEAD LIGHT CIRCUIT LH

DTC detecting condition:



LED headlight (LH) malfunction signal line error is detected for 2 seconds or more.

Trouble symptom:

LED headlight malfunction, LED headlight indicator illuminates.

Wiring diagram:

- Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.
- Headlight system Ref. to WIRING SYSTEM>Headlight System and Daytime Running Light System.

Caution:

- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**
- **After replacing the headlight assembly, headlight beam adjustment is required. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.**

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

3. Turn the ignition switch to OFF → ON.
4. Turn the lighting switch to 2 (HEAD).
5. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2905 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

- [LED HEADLAMP(LH) error Signal]

Does the data display [Extinction]?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Go to 3.

3. CHECK THE HEADLIGHT SYSTEM POWER SUPPLY CIRCUIT.

1. Disconnect the headlight assembly LH and RH connectors.
2. Turn the ignition switch to OFF → ON.
3. Turn the lighting switch to 2 (HEAD).
4. Using a tester, measure the voltage between headlight assembly LH connector and chassis ground.

Connector & terminal

(B477) No. 3 (+) — Chassis ground (−):

Is the voltage 10 — 13 V?

Yes	Go to 4.
No	Repair the headlight system.

4. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between headlight assembly LH connector and chassis ground.

Connector & terminal

(B477) No. 4 — Chassis ground:

Is the resistance less than 10 Ω?

Yes	Go to 5.
No	Repair or replace the open circuit of harness.

5. CHECK HEADLIGHT SYSTEM.

1. Connect the headlight assembly LH connector.
2. Turn the ignition switch to OFF → ON.
3. Turn the lighting switch to 2 (HEAD).

Does the headlight come on at normal brightness?

Yes	Go to 6.
No	Replace the headlight. Ref. to LIGHTING SYSTEM>Headlight Assembly.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the auto headlight beam leveler CM connector.
2. Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector.

Connector & terminal

(B616) No. 16 — (B477) No. 5:

Is the resistance less than 10 Ω?

Yes	Go to 7.
No	Repair or replace the open circuit of harness.

7. CHECK HARNESS (OPEN CIRCUIT).

Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground.

Connector & terminal

(B616) No. 2 — Chassis ground:

Is the resistance less than 10 Ω?

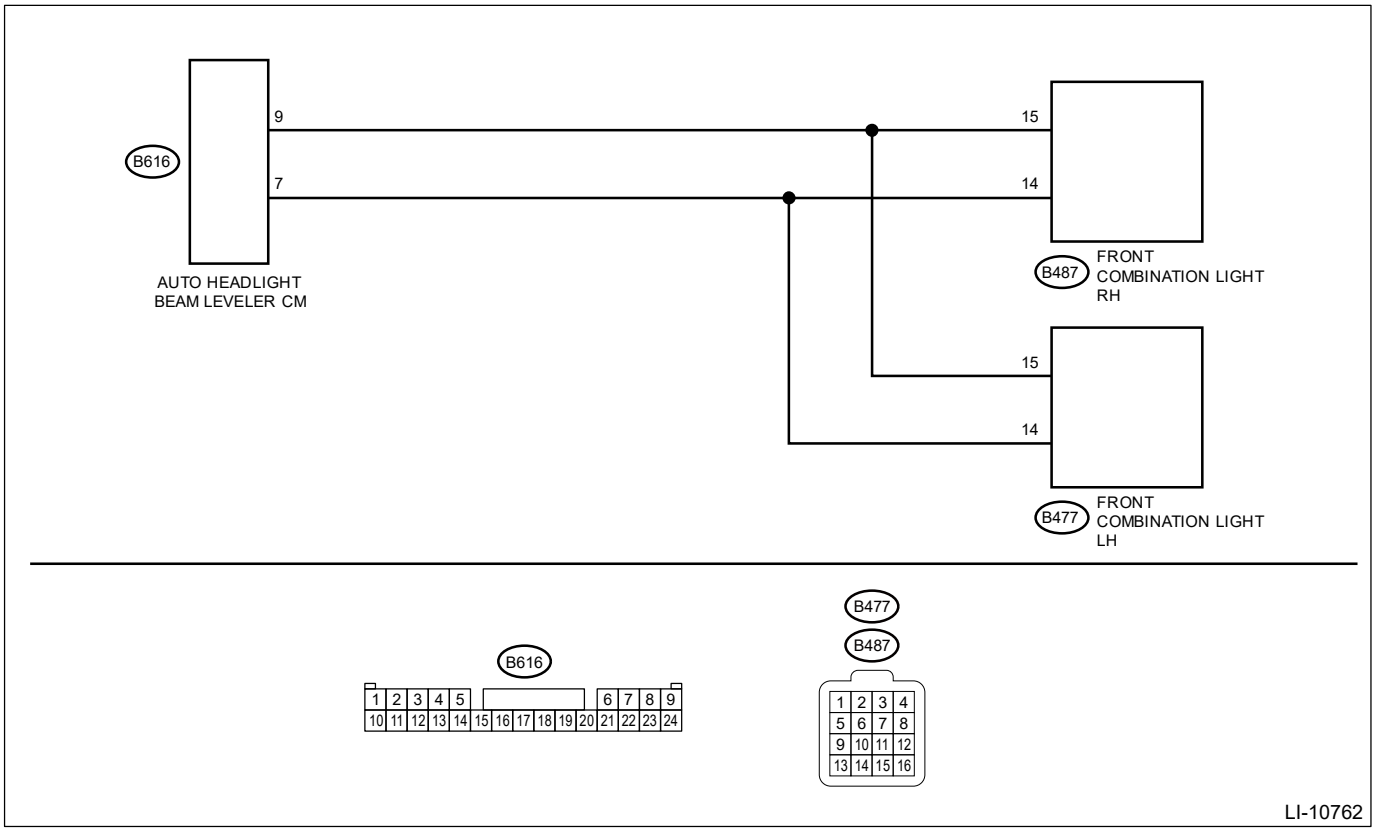
Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Repair or replace the open circuit of harness.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2908 STEERING RESPONSIVE HEADLIGHT ACTUATOR RH

DTC detecting condition:

Fail flag (failures shown below) of the SRH actuator is detected for 1 second or more.



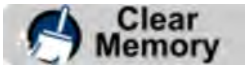
- Overheating of the actuator driving IC is detected.
- Short circuit, open circuit of the motor coil is detected.
- Abnormality of the motor position sensor is detected.
- Motor lock is detected.

Trouble symptom:

The steering responsive headlight does not operate. SRH indicator blinks.

Wiring diagram:

Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.



Caution:

- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**
- **After replacing the headlight assembly, headlight beam adjustment is required. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.**

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Start the engine.
3. Using the Subaru Select Monitor, perform the clear memory for the [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

4. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2908 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DTC.

Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is a DTC other than DTC B2908 displayed?

Yes	Perform the diagnosis other than for DTC B2908 first. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly RH and LH connectors.
3. Disconnect the auto headlight beam leveler CM connector.
4. Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector.

Connector & terminal

(B616) No. 7 — (B487) No. 14:

(B616) No. 9 — (B487) No. 15:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between headlight assembly RH connector and chassis ground.

Connector & terminal

(B616) No. 7 — Chassis ground:

(B616) No. 9 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground.
   Connector & terminal
   (B616) No. 7 (+) — Chassis ground (−):
   (B616) No. 9 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK ACTIVE TEST FOR SWIVEL ACTUATOR.

1. Turn the ignition switch to OFF.
2. Connect all the disconnected connectors.
3. Start the engine.
4. Using the Subaru Select Monitor, check the following items in the [Active Test] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Active Test.
   - [Right Steering Responsive Headlight]

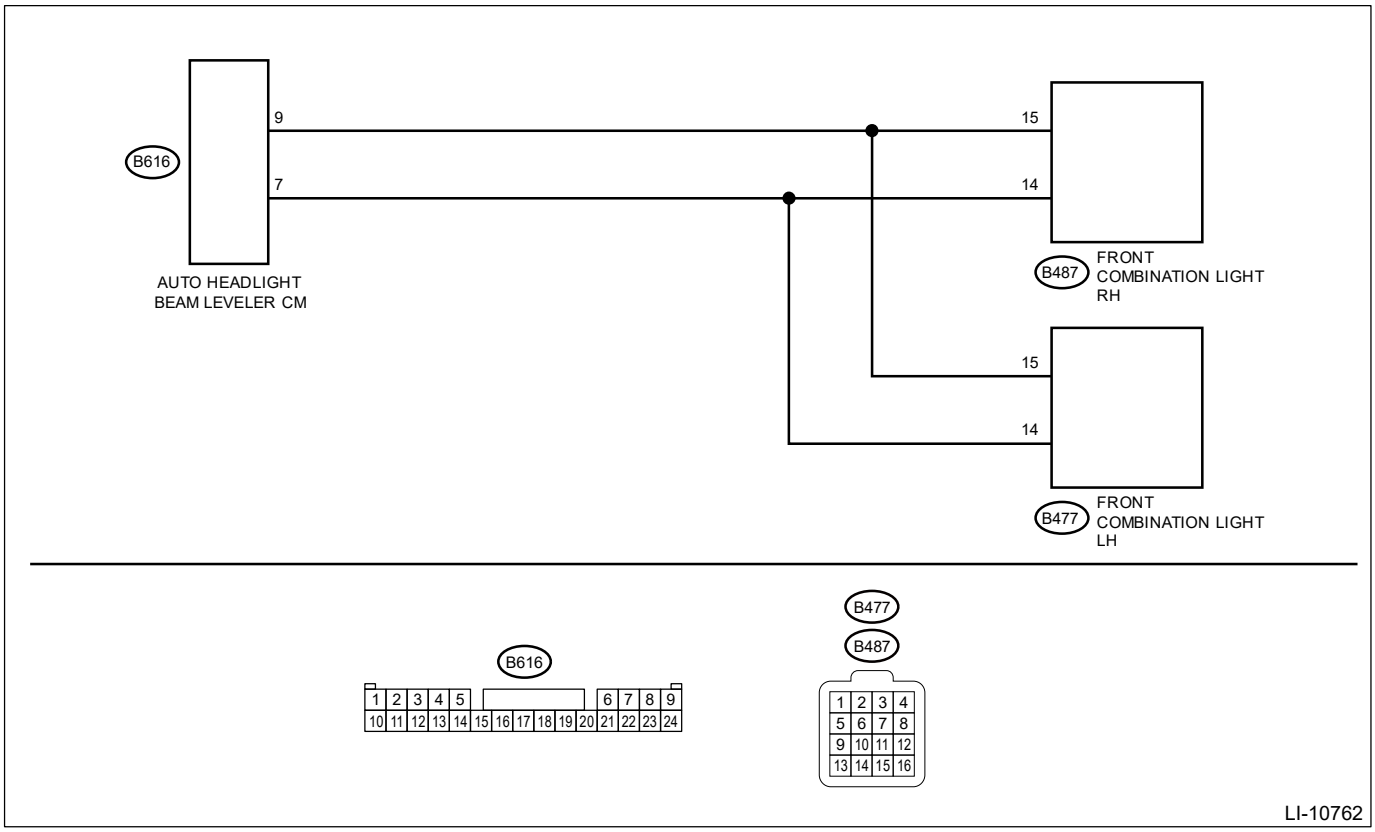
Is the actuator current position value approximately the same as the input value of the actuator control position?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Replace the headlight assembly RH. Ref. to LIGHTING SYSTEM>Headlight Assembly.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2909 STEERING RESPONSIVE HEADLIGHT ACTUATOR LH

DTC detecting condition:
Fail flag (failures shown below) of the SRH actuator is detected for 1 second or more.
- Overheating of the actuator driving IC is detected.
- Short circuit, open circuit of the motor coil is detected.
- Abnormality of the motor position sensor is detected.



- Motor lock is detected.

Trouble symptom:

The steering responsive headlight does not operate. SRH indicator blinks.

Wiring diagram:

Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

Caution:

- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**
- **After replacing the headlight assembly, headlight beam adjustment is required. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.**

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2909 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK DTC.

Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is a DTC other than DTC B2909 displayed? (Current malfunction)

Yes	Perform the diagnosis other than for DTC B2909 first. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly LH and RH connectors.
3. Disconnect the auto headlight beam leveler CM connector.
4. Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector.

   Connector & terminal

   (B616) No. 7 — (B477) No. 14:

   (B616) No. 9 — (B477) No. 15:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between headlight assembly LH connector and chassis ground.

Connector & terminal

(B616) No. 7 — Chassis ground:

(B616) No. 9 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground.
   Connector & terminal
   (B616) No. 7 (+) — Chassis ground (−):
   (B616) No. 9 (+) — Chassis ground (−):

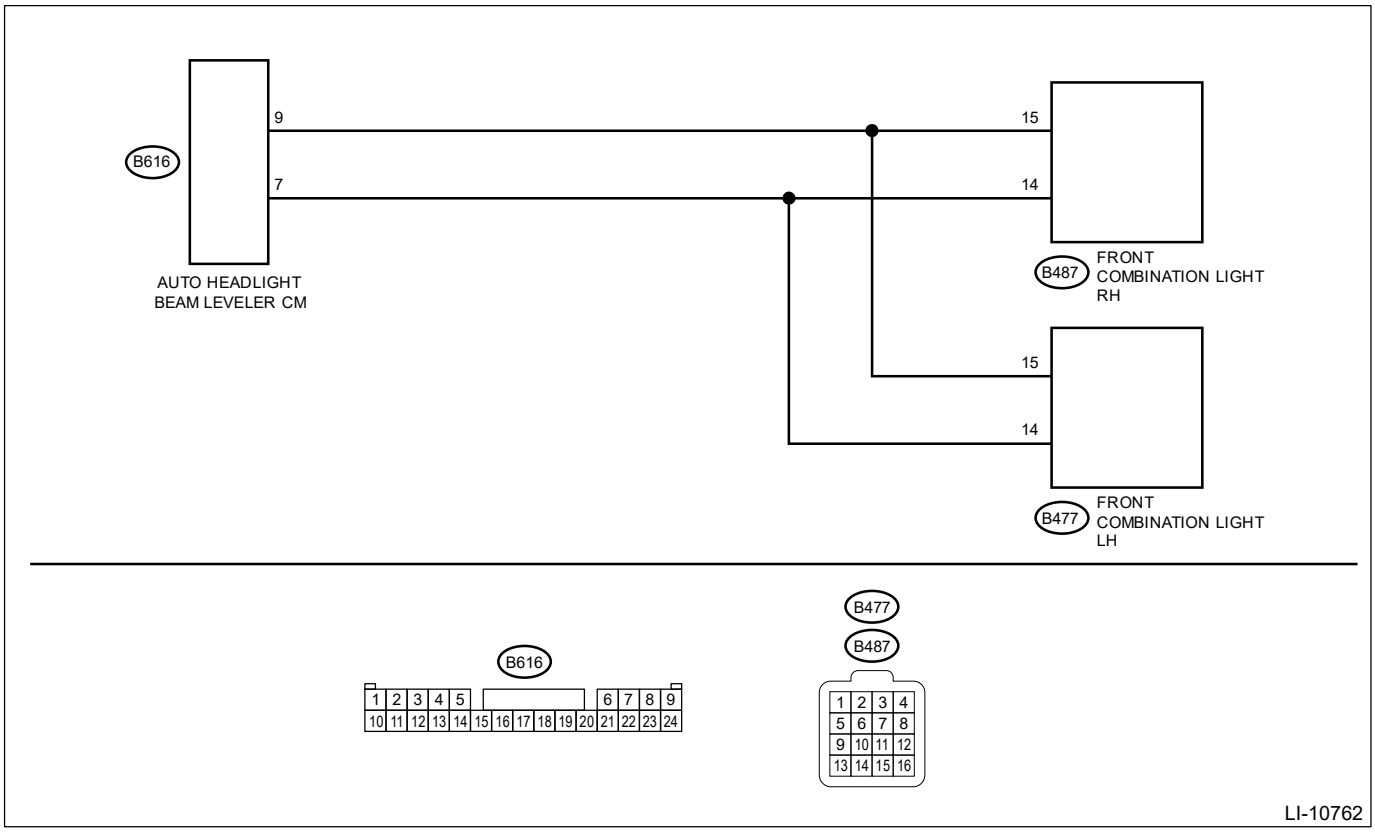
Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK ACTIVE TEST OF SWIVEL ACTUATOR.

1. Turn the ignition switch to OFF.
2. Connect all the disconnected connectors.
3. Start the engine.
4. Using the Subaru Select Monitor, check the following items in the [Active Test] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Active Test.
   - [Left Steering Responsive Headlight]

Is the actuator current position value approximately the same as the input value of the actuator control position?



Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Replace the headlight assembly LH. Ref. to LIGHTING SYSTEM>Headlight Assembly.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2910 STEERING RESPONSIVE HEADLIGHT COMMUNICATION RH

DTC detecting condition:
LIN data no-receive or data abnormal of the SRH actuator is detected (1 or more).
Trouble symptom:
The steering responsive headlight does not operate. SRH indicator blinks.
Wiring diagram:

Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

Caution:

- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**
- **After replacing the headlight assembly, headlight beam adjustment is required. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.**

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2910 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly RH and LH connectors.
3. Disconnect the auto headlight beam leveler CM connector.
4. Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector.
   Connector & terminal
   (B616) No. 7 — (B487) No. 14:
   (B616) No. 9 — (B487) No. 15:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between headlight assembly RH connector and chassis ground.

Connector & terminal

(B616) No. 7 — Chassis ground:

(B616) No. 9 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground.

   Connector & terminal

   (B616) No. 7 (+) — Chassis ground (−):

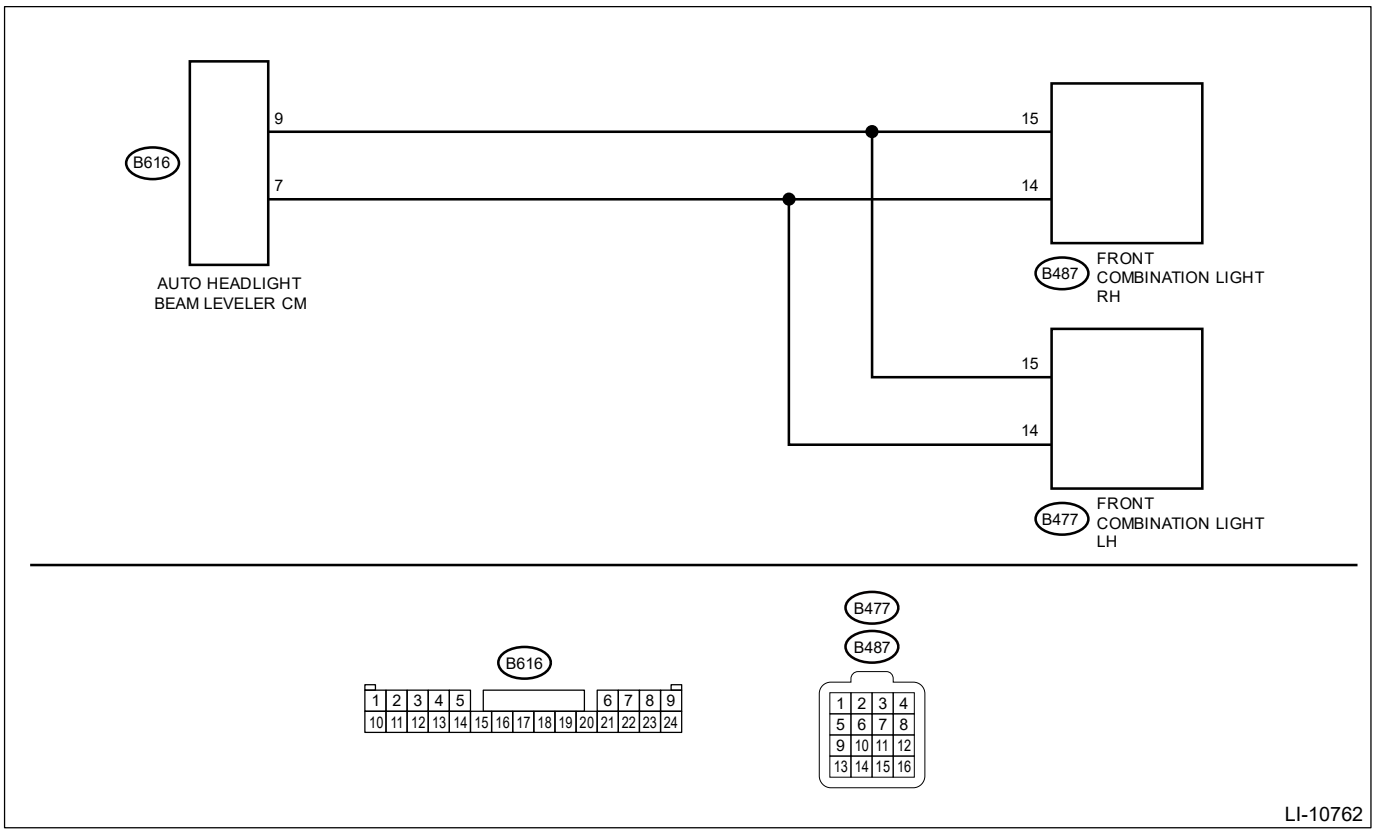
   (B616) No. 9 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Connect all the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Is DTC B2911 displayed in addition to B2910? (Current malfunction)

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Replace the headlight assembly RH. Ref. to LIGHTING SYSTEM>Headlight Assembly.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2911 STEERING RESPONSIVE HEADLIGHT COMMUNICATION LH

DTC detecting condition:
LIN data no-receive or data abnormal of the SRH actuator is detected (1 or more).
Trouble symptom:
The steering responsive headlight does not operate. SRH indicator blinks.
Wiring diagram:
Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

Caution:

- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**
- **After replacing the headlight assembly, headlight beam adjustment is required. Ref. to LIGHTING SYSTEM>Headlight Assembly>ADJUSTMENT.**

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

3. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2911 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly LH and RH connectors.
3. Disconnect the auto headlight beam leveler CM connector.
4. Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector.
   Connector & terminal
   (B616) No. 7 — (B477) No. 14:
   (B616) No. 9 — (B477) No. 15:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between headlight assembly LH connector and chassis ground.

Connector & terminal

(B616) No. 7 — Chassis ground:

(B616) No. 9 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground.

   Connector & terminal

   (B616) No. 7 (+) — Chassis ground (−):

   (B616) No. 9 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Connect all the disconnected connectors.
3. Turn the ignition switch to ON.
4. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2910 displayed in addition to B2911? (Current malfunction)

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Replace the headlight assembly LH. Ref. to LIGHTING SYSTEM>Headlight Assembly.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data (vehicle speed signal) is not received from VDC CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0402 INVALID DATA RECEIVED FROM TCM

Detected when data from TCM is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Detected when data (vehicle speed signal) from VDC CM is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data from body integrated unit (headlight ON signal) does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

Detected when CAN data from body integrated unit (headlight ON signal) is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

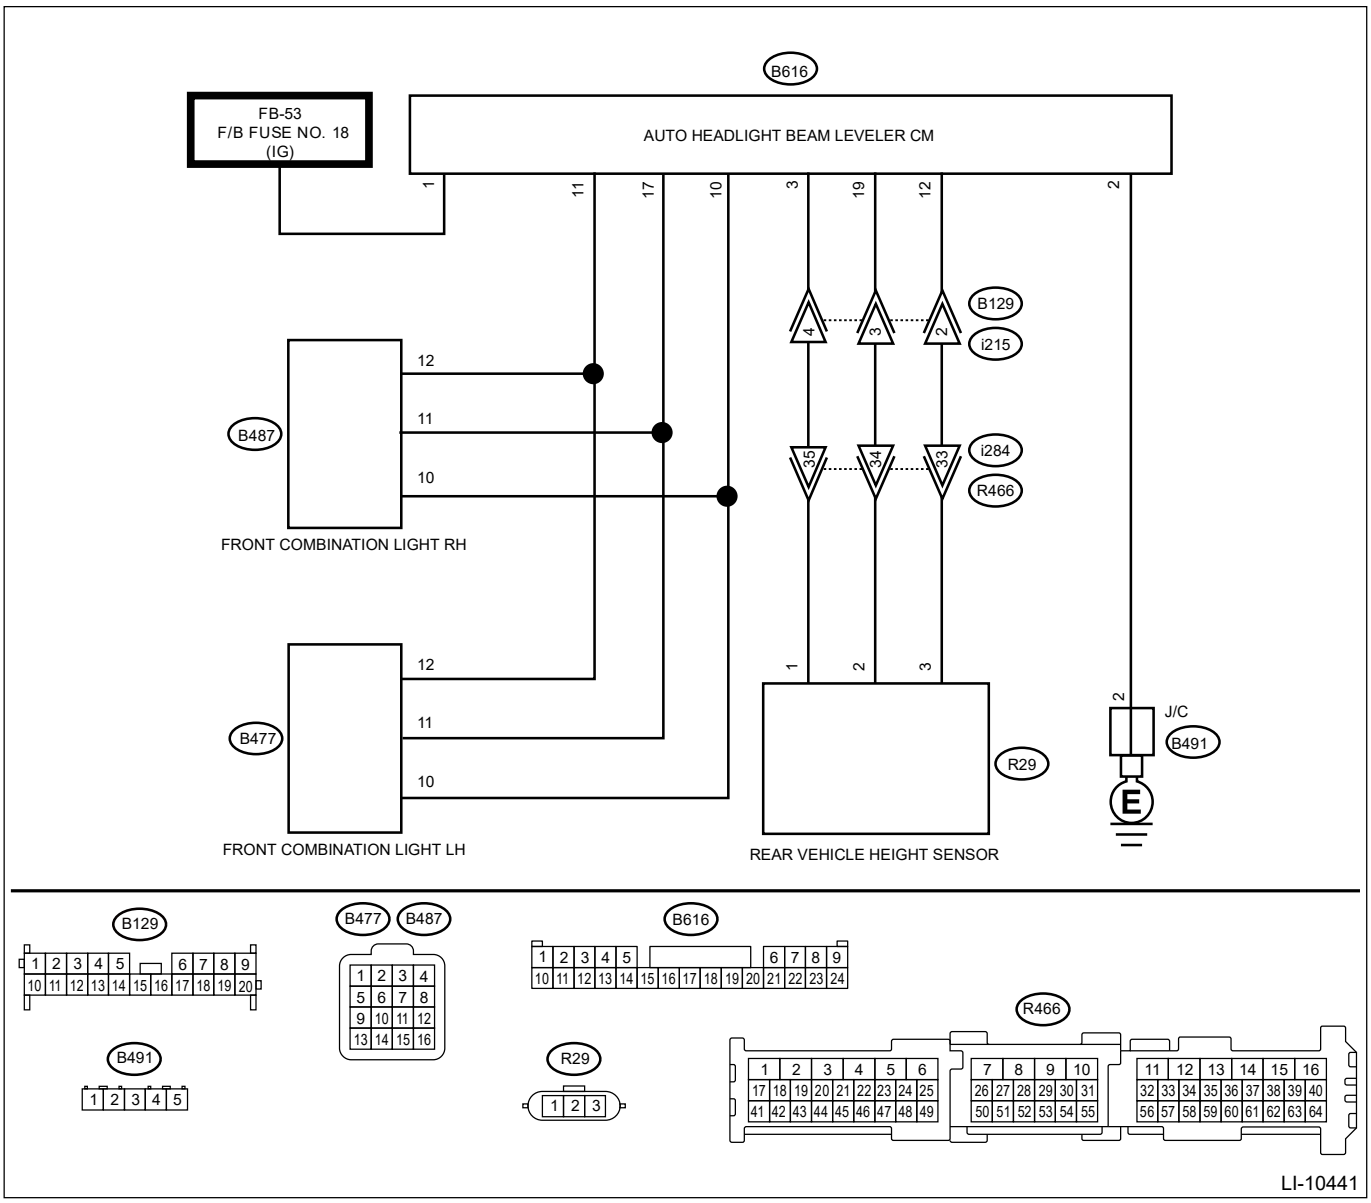
HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

Symptoms	Reference
1. The auto headlight beam leveler does not operate.	Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE AUTO HEADLIGHT BEAM LEVELER DOES NOT OPERATE.
2. The steering responsive headlight does not operate.	Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE STEERING RESPONSIVE HEADLIGHT DOES NOT OPERATE.
3. The steering responsive headlight operates in a direction different from the target.	Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE STEERING RESPONSIVE HEADLIGHT OPERATES IN A DIRECTION DIFFERENT FROM THE TARGET.

HEADLIGHT / FOGLIGHT(DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION



1. THE AUTO HEADLIGHT BEAM LEVELER DOES NOT OPERATE

Detecting condition:

Malfunction of power supply circuit, output circuit, and auto headlight beam leveler CM

Wiring diagram:

Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

Caution:

- **Before performing diagnosis, check the fuse in this circuit. Ref. to LIGHTING SYSTEM>Relay and Fuse.**
- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**

1. CHECK DATA MONITOR.	yes	Go to 3.
	no	Go to 2.

2. CHECK HARNESS BETWEEN POWER SUPPLY — AUTO HEADLIGHT BEAM LEVELER CM.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

3. CHECK INDICATOR OUTPUT.

yes → Go to 5.

no → Go to 4.

4. CHECK DATA MONITOR.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

5. CHECK INDICATOR OUTPUT.

no → Go to 10.

yes

6. CHECK HEADLIGHT ASSEMBLY (ACTUATOR) DRIVE.

yes → Perform the instructed procedures.

no → Go to 7.

7. CHECK HEADLIGHT ASSEMBLY (ACTUATOR) OUTPUT.

no → Perform the instructed procedures.

yes

8. CHECK OUTPUT VOLTAGE BETWEEN HEADLIGHT ASSEMBLY (ACTUATOR).	yes →	Perform the instructed procedures.
	no →	Go to 9.
9. CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND HEADLIGHT ASSEMBLY (ACTUATOR).	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.
10. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Control module voltage]

Does the data monitor indicate the standard value?

Yes	Go to 3.
No	Go to 2.

2. CHECK HARNESS BETWEEN POWER SUPPLY — AUTO HEADLIGHT BEAM LEVELER CM.

1. Disconnect the auto headlight beam leveler CM connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between the auto headlight beam leveler CM connector and chassis ground.

Connector & terminal

(B616) No. 1 (+) — Chassis ground (−):

Is the voltage 8 — 16 V?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Repair or replace the harness.

3. CHECK INDICATOR OUTPUT.

Turn the ignition switch to ON.

Does the warning indicator turn on for three seconds?

Yes	Go to 5.
No	Go to 4.

4. CHECK DATA MONITOR.

1. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

   - [Indicator Signal]
2. Turn the ignition switch to ON.

Is it set as ON for 3 seconds?

Yes	Check the combination meter. Ref. to COMBINATION METER (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
No	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.

5. CHECK INDICATOR OUTPUT.

Leave the ignition switch to ON for 10 seconds.

Does the warning indicator light go off?

Yes	Go to 6.
No	Go to 10.

6. CHECK HEADLIGHT ASSEMBLY (ACTUATOR) DRIVE.

1. Connect the auto headlight beam leveler CM connector.
2. Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times.
3. Check that the headlight beam drops once, then returns to normal.
4. Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.

Does the headlight beam drop down once, and then return?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Go to 7.

7. CHECK HEADLIGHT ASSEMBLY (ACTUATOR) OUTPUT.

1. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Actuator Signal]
2. Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times.
3. Check that the headlight beam drops once, then returns to normal.
4. Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.

Does the data monitor indicate the standard value? (Does the value change at 10 — 90 %?)

Yes	Go to 8.
No	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.

8. CHECK OUTPUT VOLTAGE BETWEEN HEADLIGHT ASSEMBLY (ACTUATOR).

1. Disconnect the auto headlight beam leveler CM connector.
2. Turn the ignition switch to ON.
3. Measure the voltage between the auto headlight beam leveler CM connector and chassis ground.
   Connector & terminal
   (B616) No. 10 (+) — Chassis ground (−):

Is the voltage 8 — 16 V?

Yes	Replace the headlight assembly. Ref. to LIGHTING SYSTEM>Headlight Assembly.
No	Go to 9.

9. CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND HEADLIGHT ASSEMBLY (ACTUATOR).

1. Disconnect the connector of headlight assembly.
2. Measure the continuity between the auto headlight beam leveler CM connector and headlight assembly (actuator) connector.
   Connector & terminal
   - **Headlight beam leveler RH**
     (B616) No. 10 — (B487) No. 10:
     (B616) No. 17 — (B487) No. 11:
     (B616) No. 11 — (B487) No. 12:
   - **Headlight beam leveler LH**
     (B616) No. 10 — (B477) No. 10:
     (B616) No. 17 — (B477) No. 11:
     (B616) No. 11 — (B477) No. 12:

Is there continuity?

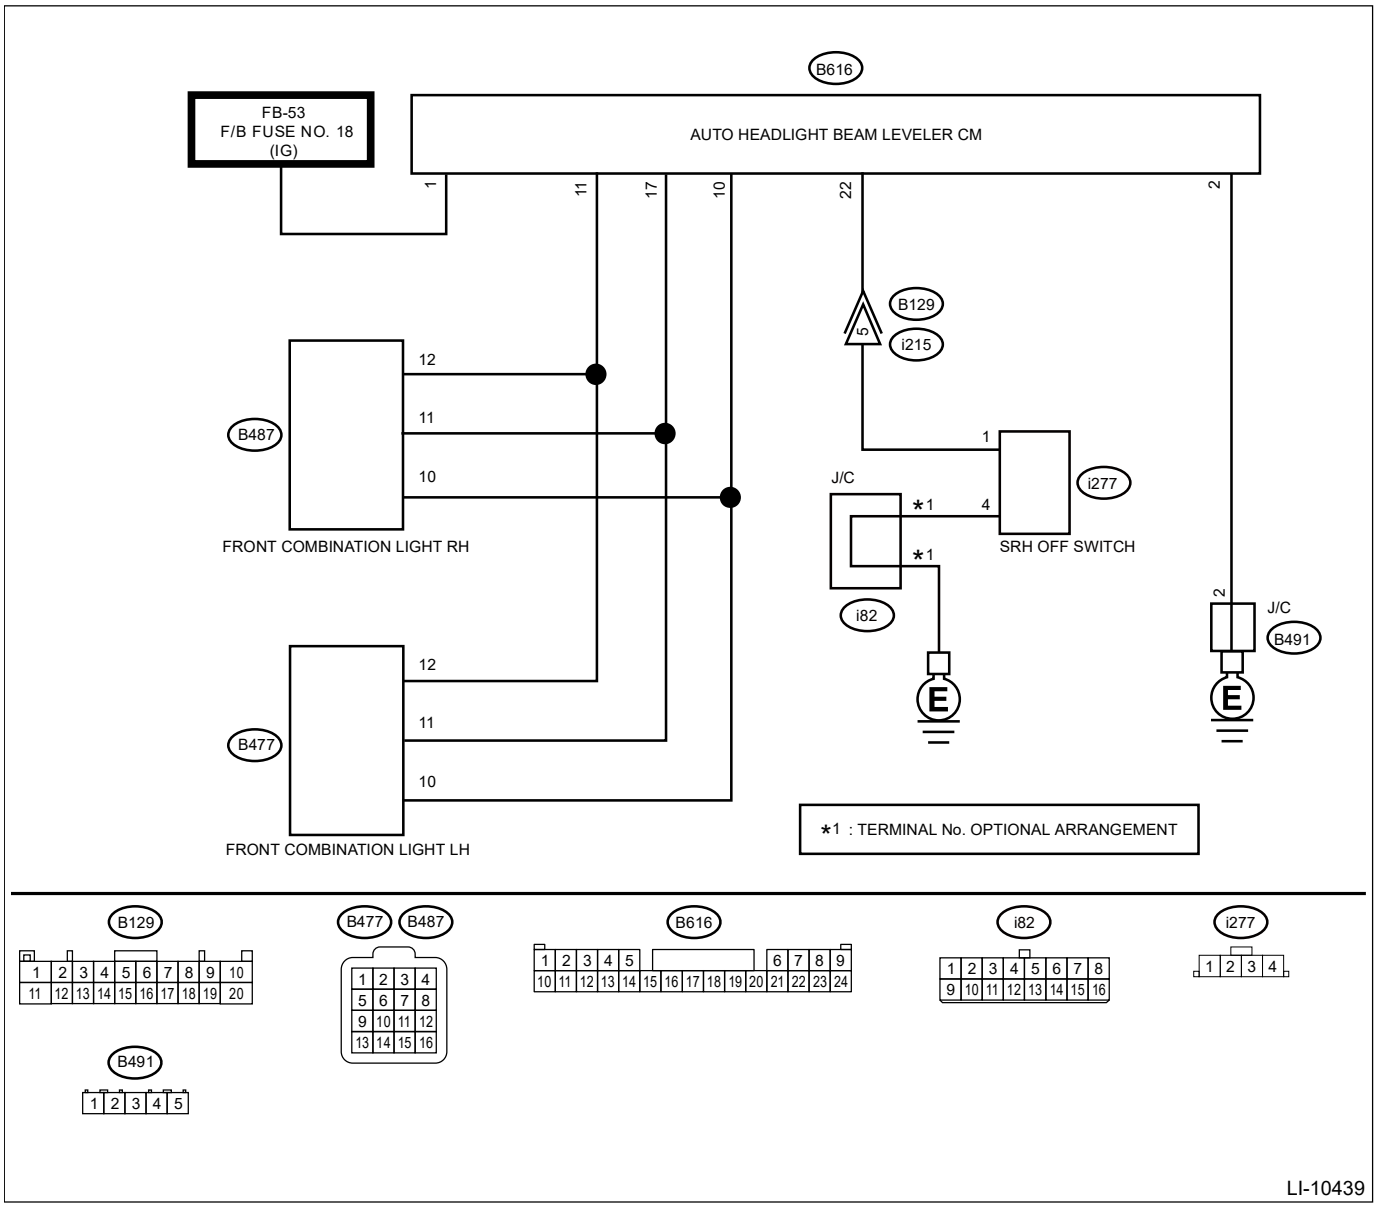
Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Repair the open circuit or poor contact of the connector in the harness between headlight assembly and auto headlight beam leveler CM.

10. CHECK DTC.

Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.



2. THE STEERING RESPONSIVE HEADLIGHT DOES NOT OPERATE

Detecting condition:

Malfunction of VDC CM, LAN communication circuit, actuator power supply circuit, reverse signal circuit, switch circuit, actuator, auto headlight beam leveler CM power supply circuit, auto headlight beam leveler CM

Wiring diagram:

Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

Caution:

- **Before performing diagnosis, check the fuse in this circuit. Ref. to LIGHTING SYSTEM>Relay and Fuse.**
- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**

1. CHECK DTC.

yes → Perform the instructed procedures.

no → Go to 2.

2. CHECK DTC.

yes → Perform the instructed procedures.

no → Go to 3.

3. CHECK DTC.

yes → Perform the instructed procedures.

no → Go to 4.

4. CHECK INITIALIZE FUNCTION.

yes → Go to 6.

no → Go to 5.

5. CHECK SWIVEL ACTUATOR POWER SUPPLY.

yes → Perform the instructed procedures.

no → Go to 12.

6. CHECK SRH OFF SWITCH.

yes → Go to 8.

no → Go to 7.

7. CHECK SRH OFF SWITCH CIRCUIT.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

8. CHECK REVERSE SIGNAL.

yes → Perform the instructed procedures.

no → Go to 9.

9. CHECK SWIVEL ACTUATOR POWER SUPPLY.

no → Go to 11.

yes

10. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.

no → Perform the instructed procedures.

yes

11. CHECK SRH OPERATION.

yes → Perform the instructed procedures.

no → Go to 12.

12. CHECK ACTIVE TEST OF SWIVEL ACTUATOR.

yes → Go to 14.

no → Go to 13.

13. CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.
14. DRIVING CHECK.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Start the engine.
3. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK DTC.

Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC of U-code displayed? (Current malfunction)

Yes	Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Brake Control System] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any DTC related to the vehicle speed and steering angle sensor displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK INITIALIZE FUNCTION.

Perform the function check (the initialize function) for the steering responsive headlight. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>General Description>INSPECTION > BASIC INSPECTION.

Do the left and right headlights operate?

Yes	Go to 6.
No	• Only one side does not operate: Go to 5. • Both sides do not operate: Go to 6.

5. CHECK SWIVEL ACTUATOR POWER SUPPLY.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Left Steering Responsive Headlight Power Supply Failure]
- [Right Steering Responsive Headlight Power Supply Failure]

Is [FAIL] displayed?

Yes	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
No	Go to 12.

6. CHECK SRH OFF SWITCH.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [SRH-OFF SW]

Is [ON] displayed when the ignition switch is turned OFF → ON?

Yes	Go to 8.
No	Go to 7.

7. CHECK SRH OFF SWITCH CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the SRH OFF switch connector.
3. Disconnect the auto headlight beam leveler CM connector.
4. Using a tester, measure the resistance between the auto headlight beam leveler CM connector and the SRH OFF switch connector, and between the SRH OFF switch connector and chassis ground.
   Connector & terminal
   (B616) No. 22 — (i277) No. 1:
   (i277) No. 4 — Chassis ground:

Is the resistance less than 1 Ω?

Yes	Repair or replace the open circuit of harness.
No	Perform unit inspection of the SRH OFF switch. Ref. to LIGHTING SYSTEM>SRF OFF Switch.

8. CHECK REVERSE SIGNAL.

1. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

   - MT model: [MT Reverse Switch]
   - CVT model: [Shift Position Signal]
2. Place the shift in reverse.

For MT model, is [ON] displayed? For CVT model, is [R] displayed?

Yes	For MT model, check the reverse switch or reverse switch harness. Ref. to MANUAL TRANSMISSION AND DIFFERENTIAL(5MT)>Switches and Harness. For CVT model, perform the diagnosis for CVT. Ref. to TRANSMISSION (DIAGNOSTICS)>Basic Diagnostic Procedure. When DTC is not stored, check the inhibitor switch or inhibitor switch harness. Ref. to CONTINUOUSLY VARIABLE TRANSMISSION(TR580)>Inhibitor Switch.
No	Go to 9.

9. CHECK SWIVEL ACTUATOR POWER SUPPLY.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Left Steering Responsive Headlight Power Supply Failure]
- [Right Steering Responsive Headlight Power Supply Failure]

Is [FAIL] displayed?

Yes	Go to 10.
No	Go to 11.

10. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between headlight assembly connector and chassis ground.
   Connector & terminal
   (B487) No. 13 (+) — Chassis ground (−):
   (B477) No. 13 (+) — Chassis ground (−):

Is the voltage 8 — 16 V?

Yes	Go to 11.
No	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.

11. CHECK SRH OPERATION.

1. Turn the ignition switch to OFF.
2. Connect all the disconnected connectors.
3. Drive the vehicle to verify on which side, LH side or RH side, the SRH improper operation occurred.

Note:

At night, drive a curve of steering wheel angle approximately 45 degrees or more with vehicle speed at 40 km/h (25 MPH) or more, or drive a curve of steering wheel angle approximately 80 degrees or more with vehicle speed at 15 km/h (9 MPH) or more to check the SRH operation.

Is the improper operation occurring on either left or right side only?

Yes	Perform «VDC sensor midpoint setting mode». Ref. to VEHICLE DYNAMICS CONTROL (VDC)>VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)>ADJUSTMENT > VDC SENSOR MIDPOINT SETTING MODE.
No	If the fault is not fixed even after the process: Go to 12.

12. CHECK ACTIVE TEST OF SWIVEL ACTUATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

- [Right Steering Responsive Headlight]
- [Left Steering Responsive Headlight]

Is the actuator current position value approximately the same as the input value of the actuator control position? (Within 1.2 seconds)

Yes	Go to 14.
No	When the value is not the same on one side only, replace the headlight assembly of the side where the same value is not achieved. When the value is not the same on both sides, Go to 13.

13. CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.

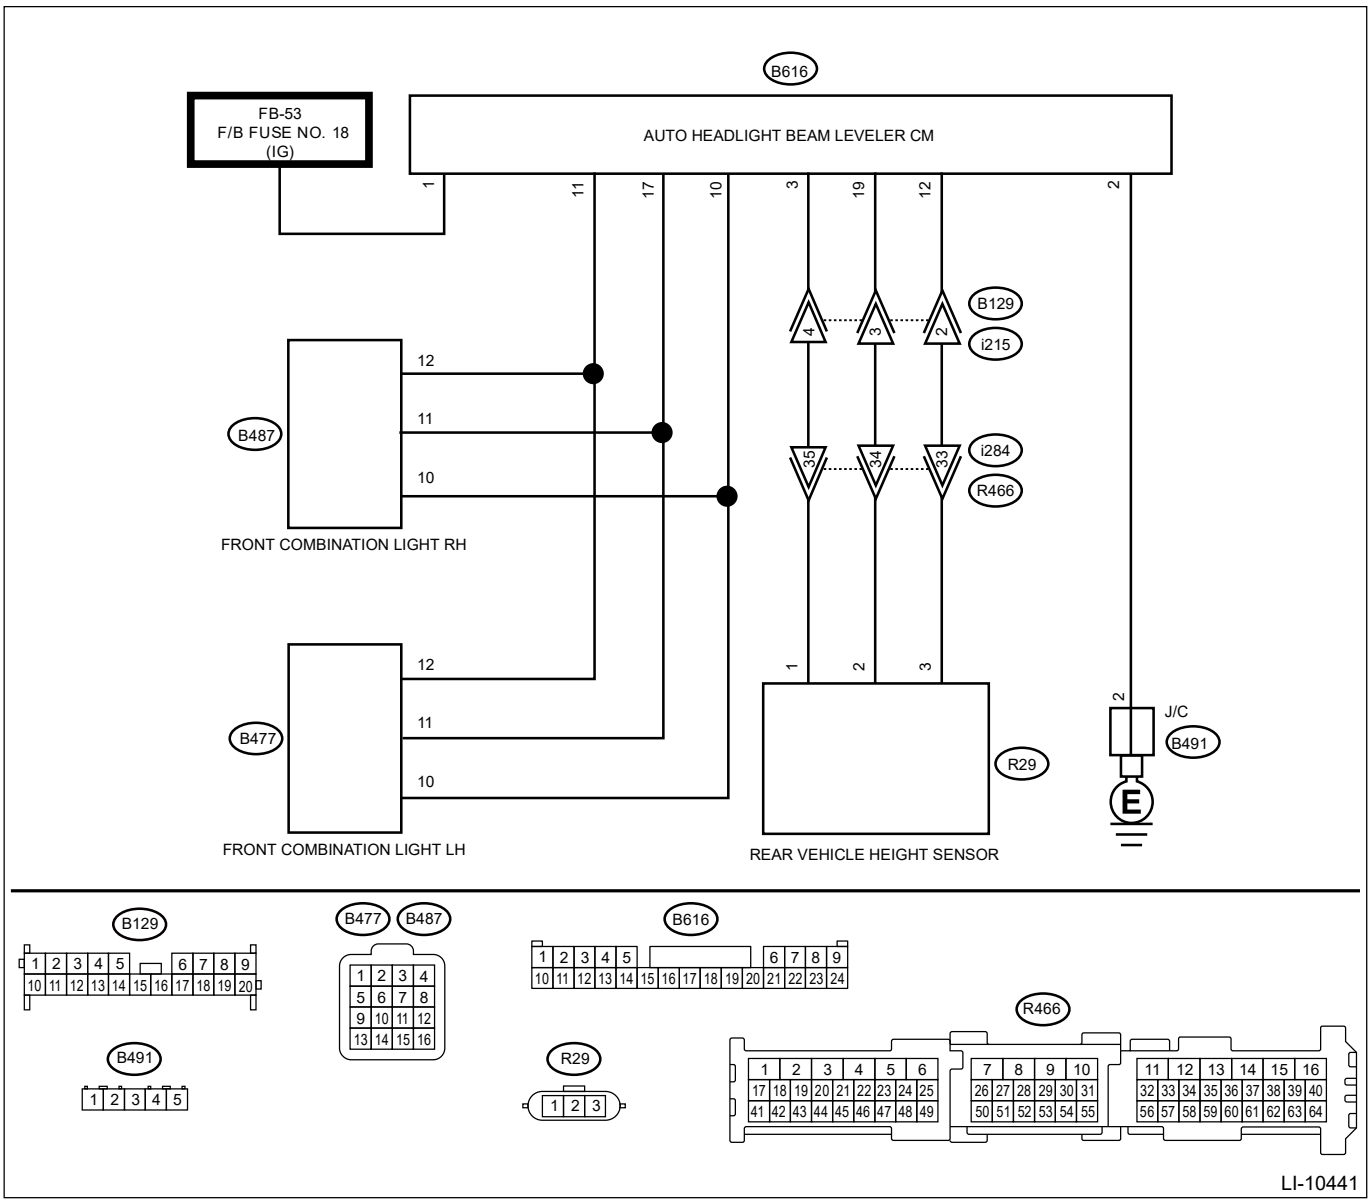
1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

- [Control module voltage]

Is the voltage 8 — 16 V?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.

14. DRIVING CHECK.



Perform the road test to make sure there is no yawing.

Is it yawing?

Yes	Check the vehicle alignment. Ref. to FRONT SUSPENSION>Wheel Alignment.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. THE STEERING RESPONSIVE HEADLIGHT OPERATES IN A DIRECTION DIFFERENT FROM THE TARGET

Detecting condition:
Malfunction of VDC CM, LAN communication circuit, actuator power supply circuit, reverse signal circuit, switch circuit, actuator, auto headlight beam leveler CM power supply circuit, auto headlight beam leveler CM, alignment
Wiring diagram:
Headlight beam leveler system Ref. to WIRING SYSTEM>Headlight Beam Leveler System>WIRING DIAGRAM.

Caution:

- **Before performing diagnosis, check the fuse in this circuit. Ref. to LIGHTING SYSTEM>Relay and Fuse.**
- **Initialization is required after replacing the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler System>PROCEDURE.**

1. CHECK DTC.	yes →	Perform the instructed procedures.
	no →	Go to 2.

2. CHECK DTC.

yes → Perform the instructed procedures.

no → Go to 3.

3. CHECK DTC.

yes → Perform the instructed procedures.

no → Go to 4.

4. CHECK INITIALIZE FUNCTION.

no → Go to 13.

yes

5. CHECK INPUT SIGNAL.

no → Perform the instructed procedures.

yes

6. CHECK SWIVEL ACTUATOR POWER SUPPLY.

yes → Go to 9.

no → Go to 7.

7. CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.

no → Perform the instructed procedures.

yes

8. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

9. CHECK SRH SWIVEL ACTUATOR CURRENT ANGLE.

yes → Go to 12.

no → Go to 10.

10. CHECK SWIVEL ACTUATOR POWER SUPPLY.

yes → Perform the instructed procedures.

no → Go to 11.

11. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

12. CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.

no → Perform the instructed procedures.

yes

13. CHECK SWIVEL ACTUATOR POWER SUPPLY.

yes → Perform the instructed procedures.

no → Go to 14.

14. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.
no → Perform the instructed procedures.
yes ↓

15. CHECK ACTIVE TEST OF SWIVEL ACTUATOR.
no → Perform the instructed procedures.
yes ↓

16. DRIVING CHECK.
yes → Perform the instructed procedures.
no → Perform the instructed procedures.

1. CHECK DTC.

1. Turn the ignition switch to OFF.
2. Start the engine.
3. Using the Subaru Select Monitor, perform the clear memory of [Headlight / Foglight]. Ref. to COMMON(diag)>Clear memory.

4. Read the DTC of [Headlight / Foglight] using the Subaru Select Monitor. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK DTC.

1. Using the Subaru Select Monitor, read all DTCs. Ref. to LAN SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC of U-code displayed? (Current malfunction)

Yes	Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
No	Go to 3.

3. CHECK DTC.

Read the DTC of [Brake Control] using the Subaru Select Monitor. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any DTC related to the vehicle speed and steering angle sensor displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK INITIALIZE FUNCTION.

Perform the function check (the initialize function) for the steering responsive headlight. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>General Description>INSPECTION > BASIC INSPECTION.

Do the left and right headlights operate?

Yes	Go to 5.
No	• Only one side does not operate: Go to 13. • Both sides do not operate: Go to 12.

5. CHECK INPUT SIGNAL.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Vehicle speed signal]
- [Steering Angle Signal]

Is [Vehicle speed signal] 8 km/h (5 MPH) or less, and [Steering Angle Signal] 8.5 deg or less?

Yes	Go to 6.
No	Perform the diagnosis for VDC. Ref. to BRAKE CONTROL (DIAGNOSTICS)>Basic Diagnostic Procedure.

6. CHECK SWIVEL ACTUATOR POWER SUPPLY.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Left Steering Responsive Headlight Power Supply Failure]
- [Right Steering Responsive Headlight Power Supply Failure]

Is the target angle 0 degree?

Yes	Go to 9.
No	Go to 7.

7. CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

- [Control module voltage]

Is the voltage 8 — 16 V?

Yes	Go to 8.
No	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.

8. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between headlight assembly connector and chassis ground.
   Connector & terminal
   (B487) No. 13 (+) — Chassis ground (−):
   (B477) No. 13 (+) — Chassis ground (−):

Is the voltage 8 — 16 V?

Yes	Replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.
No	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.

9. CHECK SRH SWIVEL ACTUATOR CURRENT ANGLE.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Left Steering Responsive Headlight Current Angle]
- [Right Steering Responsive Headlight Current Angle]

Is the current angle 0 degree?

Yes	Go to 12.
No	Go to 10.

10. CHECK SWIVEL ACTUATOR POWER SUPPLY.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Left Steering Responsive Headlight Power Supply Failure]
- [Right Steering Responsive Headlight Power Supply Failure]

Is [FAIL] displayed?

Yes	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
No	Go to 11.

11. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between headlight assembly connector and chassis ground.
   Connector & terminal
   (B487) No. 13 (+) — Chassis ground (−):
   (B477) No. 13 (+) — Chassis ground (−):

Is the voltage 8 — 16 V?

Yes	Replace the headlight assembly. Ref. to LIGHTING SYSTEM>Headlight Assembly.
No	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.

12. CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.

1. Turn the ignition switch to OFF.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [Control module voltage]

Is the voltage 8 — 16 V?

Yes	Go to 13.
No	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.

13. CHECK SWIVEL ACTUATOR POWER SUPPLY.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Left Steering Responsive Headlight Power Supply Failure]
- [Right Steering Responsive Headlight Power Supply Failure]

Is [FAIL] displayed?

Yes	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
No	Go to 14.

14. CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.

1. Turn the ignition switch to OFF.
2. Disconnect the headlight assembly connector.
3. Turn the ignition switch to ON.
4. Using a tester, measure the voltage between headlight assembly connector and chassis ground.
   Connector & terminal
   (B487) No. 13 (+) — Chassis ground (−):
   (B477) No. 13 (+) — Chassis ground (−):

Is the voltage 8 — 16 V?

Yes	Go to 15.
No	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.

15. CHECK ACTIVE TEST OF SWIVEL ACTUATOR.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Headlight / Foglight]. Ref. to HEADLIGHT / FOGLIGHT(DIAGNOSTICS)>Active Test.

- [Right Steering Responsive Headlight]
- [Left Steering Responsive Headlight]

Is the actuator current position value approximately the same as the input value of the actuator control position? (Within 1.2 seconds)

Yes	Go to 16.
No	When the value is not the same on one side only, replace the headlight assembly of the side where the same value is not achieved. Ref. to LIGHTING SYSTEM>Headlight Assembly. When the value is not the same on both sides, replace the auto headlight beam leveler CM. Ref. to LIGHTING SYSTEM>Auto Headlight Beam Leveler Control Module.

16. DRIVING CHECK.

Perform the road test to make sure there is no yawing.

Is it yawing?

Yes	Check the vehicle alignment. Ref. to FRONT SUSPENSION>Wheel Alignment.
No	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

TELEMATICS SYSTEM (DIAGNOSTICS)

TEL(diag)

1. Basic Diagnostic Procedure
2. Check List for Interview
3. General Description
4. Electrical Component Location
5. Control Module I/O Signal
6. Inspection Mode
7. Diagnostic Procedure for Subaru Select Monitor Communication
8. Data Monitor
9. Freeze Frame Data
10. Active Test
11. Diagnostic Trouble Code (DTC)
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
13. Diagnostics with Phenomenon

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview, and Go to 2.

2. PERFORM BASIC INSPECTION.

Perform basic inspection. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Telematics].

Note:
For detailed operation procedures, refer to "Application help".

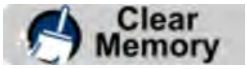
Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure for Subaru Select Monitor Communication.

4. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check



Note:
If DTC is detected, only RED LED will illuminate. For details, refer to "LED operation status list". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Check List for Interview>CHECK > LED ILLUMINATION STATUS LIST.

Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Perform diagnosis according to the procedures in the diagnostics with phenomenon. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon.

5. PERFORM DIAGNOSIS.

1. Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Telematics]. Ref. to COMMON(diag)>Clear memory>OPERATION.

4. Execute the inspection mode. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Inspection Mode.
5. Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown. Go to 5.
No	Finish the diagnosis.

CHECK

1. CHECK LIST FOR INTERVIEW

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="2">Telematics Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td colspan="2">Registration No. Initial year of registration

DTC	

2. LED ILLUMINATION STATUS LIST

LED	Light OFF	Blink	Light ON
RED	Communication with the server and DCM are operating normally (communication failure with the STARLINK server. DTCs are not found within the vehicle unit.)	It is possible that communication with the server/DCM are malfunctioning.	It is possible that communication with the server/DCM are malfunctioning.
GREEN	—	Connection to the server is being attempted and in progress.	Communication status with the server is READY.
RED and GREEN	Telematics function is not activated.	Collation with the server is in progress.	Collation with the server failed. It is possible that the server/DCM are malfunctioning.

TELEMATICS SYSTEM (DIAGNOSTICS) > General Description

CAUTION

1. AIRBAG SYSTEM

Before performing diagnosis, refer to "CAUTION" in "General Description" in AIRBAG SYSTEM. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

2. TELEMATICS

Before performing diagnosis, refer to "CAUTION" in "General Description" in ENTERTAINMENT AND MONITORING. Ref. to ENTERTAINMENT & MONITORING>General Description>CAUTION.

TELEMATICS SYSTEM (DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may affect the problems relating to the telematics system.

1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the relay and fuse condition. Ref. to ENTERTAINMENT & MONITORING>Relay and Fuse.
3. Check harness and connector. Also check grounding.

TELEMATICS SYSTEM (DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode.
After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF.
U0074	Control Module Communication Bus "BODY-CAN" Off	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF.
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A".

B2A0E	MUTE LINE CIRCUIT	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A0E MUTE LINE CIRCUIT.
B2A0F	BACKUP BATTERY DEGRADATION	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic

DTC	Item	Note
		Trouble Code (DTC)>DTC B2A0F BACKUP BATTERY DEGRADATION.
B2A10	Battery Voltage High	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A10 BATTERY VOLTAGE HIGH.

Inspection steps:

1. Using the Subaru Select Monitor, perform the clear memory of [Telematics]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Telematics] to check that there is no DTC displayed. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).
3. Turn the ignition switch to OFF.
4. Turn the ignition switch to ON, and wait for 5 seconds or more.
5. Using the Subaru Select Monitor, read the DTC of [Telematics] to check that there is no DTC displayed. Ref. to AIR CONDITIONER(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC.

2. INSPECTION MODE 2

DTC	Item	Note
B2A04	MIC CIRCUIT	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A04 MIC CIRCUIT.
B2A05	LEFT SPEAKER/AUDIO CIRCUIT	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT.
B2A06	RIGHT SPEAKER/AUDIO CIRCUIT	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT.
B2A0A	RED LED CIRCUIT	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A0A RED LED CIRCUIT.
B2A0B	GREEN LED CIRCUIT	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A0B GREEN LED CIRCUIT.

Inspection steps:

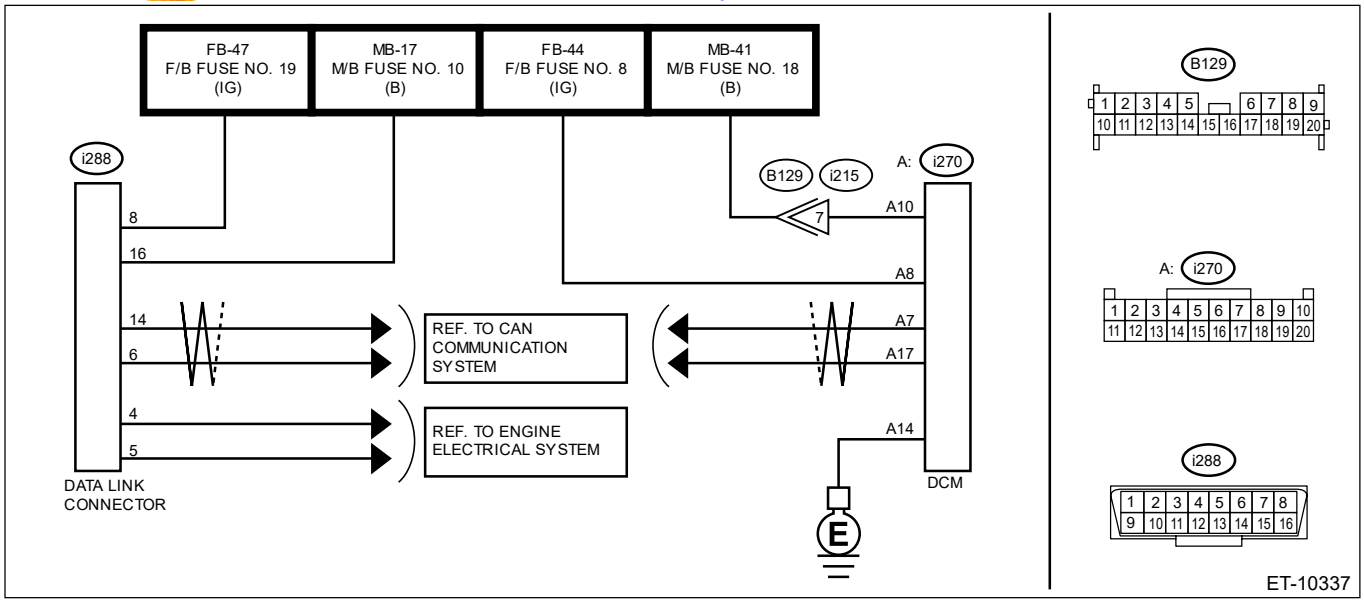
1. Using the Subaru Select Monitor, perform the clear memory of [Telematics]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Telematics] to check that there is no DTC displayed. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).
3. Turn the ignition switch to OFF.
4. Close all doors. (The vehicle enters CAN sleep state.)
5. Wait for approx. 1 minute. After the indicator goes off, wait for another 1 minute. (DCM standby mode)
6. Turn the ignition switch to ON, and wait for 5 seconds or more.
7. Using the Subaru Select Monitor, read the DTC of [Telematics] to check that there is no DTC displayed. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis according to DTC. After solving the DTC, repeat from step 1).

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication

INSPECTION

When communication with DCM is impossible

Detecting condition:



- Defective harness connector
- Power supply circuit malfunction
- Defective DCM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between DCM and Subaru Select Monitor.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**

1. CHECK FUSE.

1. Turn the ignition switch to OFF.
2. Check the fuse of the DCM.

Is the check result OK?

Yes	Go to 2.
No	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — DCM connector.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the DCM connector.
2. Turn the ignition switch to ON.
3. Using a tester, measure the voltage between DCM connector (harness side) and the chassis ground.

   Connector & terminal

   (i270) No. 8 (+) Chassis ground (−):

   (i270) No. 10 (+) Chassis ground (−):

Is the voltage 10 V or more?

Yes	Go to 3.
No	Repair the open circuit in the wiring harness between fuse and DCM connector.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Using a tester, measure the resistance between DCM connector (harness side) and the chassis ground.
   Connector & terminal
   (i270) No. 14 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 4.
No	Repair the open circuit in the wiring harness between fuse and DCM connector.

4. CHECK LAN SYSTEM.

Inspect LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.

Is the check result OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

5. CHECK TELEMATICS.

Communicate with [Telematics] using the Subaru Select Monitor.

Is communication possible?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
No	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

TELEMATICS SYSTEM (DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor>LIST.**

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A00 VIN READING

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
When ignition switch is ON, VIN information (CAN) sent from ECM cannot be read.
Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

Caution:
- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A00 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK DTC.

Read the following DTCs using Subaru Select Monitor.

- [Telematics] Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
- [Engine Control System] Ref. to ENGINE (DIAGNOSTICS)(H4DO)>Diagnostic Trouble Code (DTC).

Is DTC U**** displayed? (Current malfunction)

Yes	Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure.
No	Go to 3.

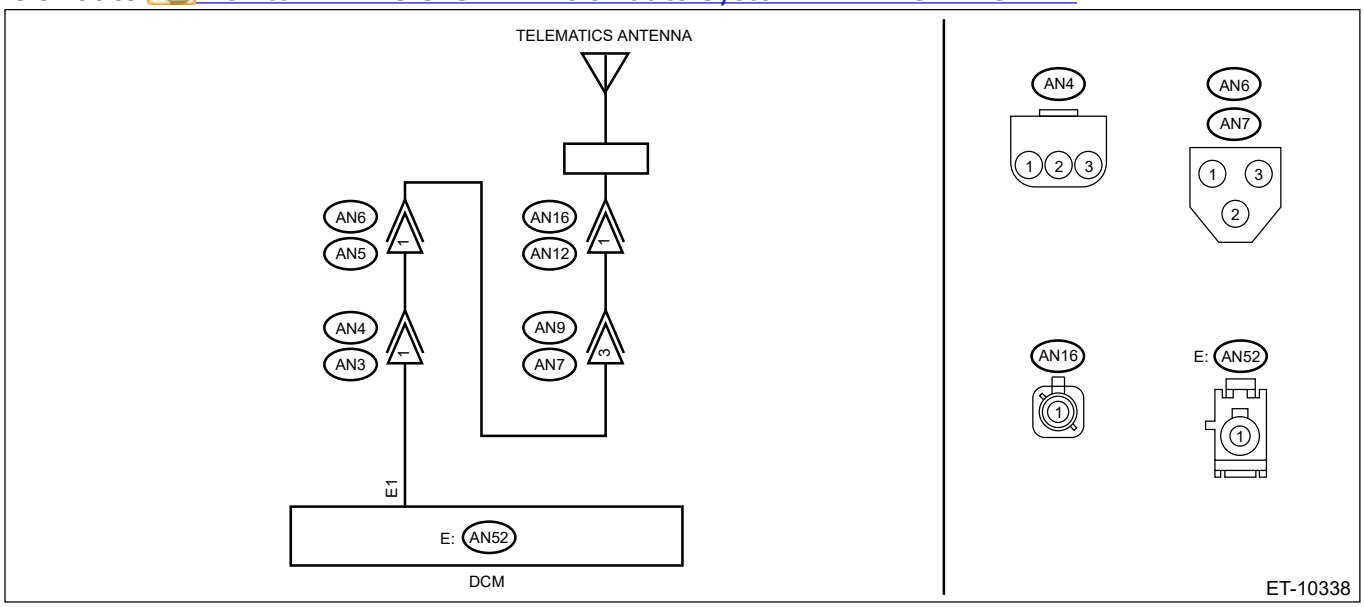
3. CHECK DATA MONITOR.

Confirm VIN information from the engine OBD mode. Ref. to ENGINE (DIAGNOSTICS) (H4DO)>General Scan Tool>OPERATION > MODE $09 (REQUEST VEHICLE INFORMATION).

Is VIN information displayed?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the ECM. Ref. to FUEL INJECTION (FUEL SYSTEMS)(H4DO)>Engine Control Module (ECM).

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC B2A01 LTE1 ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- LTE1 impedance is more than 1 MΩ. (Detached antenna, etc.)
- LTE1 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A01 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the antenna connector.
3. Disconnect the DCM connector.
4. Measure the resistance between antenna connector and DCM connector.
   Connector & terminal
   (AN52) No. 1 — (AN12) No. 1:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.
Connector & terminal
(AN52) No. 1 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Measure the voltage between DCM connector and chassis ground.
   Connector & terminal
   (AN52) No. 1 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK ANTENNA.

Check the telematics antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the telematics antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A02 LTE2 ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- LTE2 impedance is more than 1 MΩ. (Detached antenna, etc.)
- LTE2 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

Caution:
- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A02 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK ANTENNA.

Visually check the telematics sub antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the telematics sub antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A03 GPS ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- GPS antenna impedance is more than 1 MΩ. (Detached antenna, etc.)
- GPS antenna impedance is less than 10 Ω. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A03 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK GPS ANTENNA.

Visually check the GPS antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

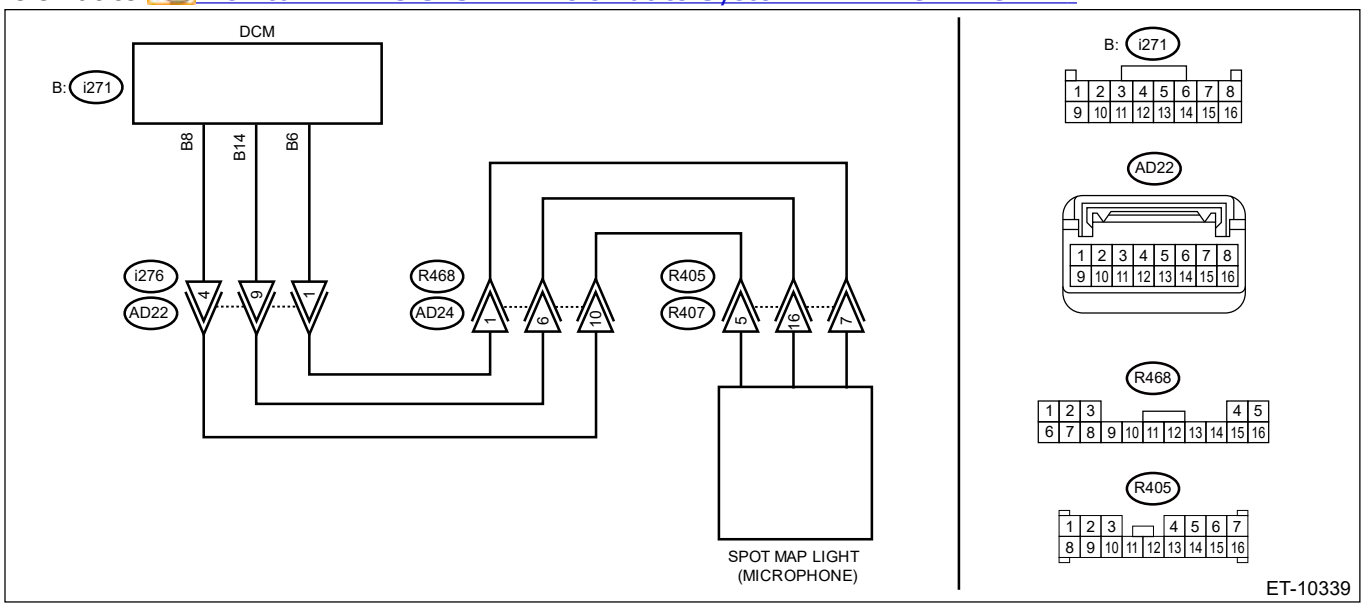
Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the GPS antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A04 MIC CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
Any of the followings continues for 1 second or more.



- MIC impedance is more than 10 kΩ. (Detached MIC, etc.)
- MIC impedance is less than 10 Ω. (Short-circuited MIC, etc.)

Trouble symptom:

- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A04 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the microphone connector.
3. Disconnect the DCM connector.
4. Measure the resistance between microphone connector and DCM connector.

Connector & terminal

(R405) No. 5 — (i271) No. 8:
(R405) No. 16 — (i271) No. 14:
(R405) No. 7 — (i271) No. 6:

Is the resistance 1 Ω or less?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i271) No. 8 — Chassis ground:
(i271) No. 14 — Chassis ground:
(i271) No. 6 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i271) No. 8 (+) — Chassis ground (−):

(i271) No. 14 (+) — Chassis ground (−):

(i271) No. 6 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK MICROPHONE.

Confirm the microphone voice input.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the microphone. Ref. to ENTERTAINMENT & MONITORING>Microphone.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

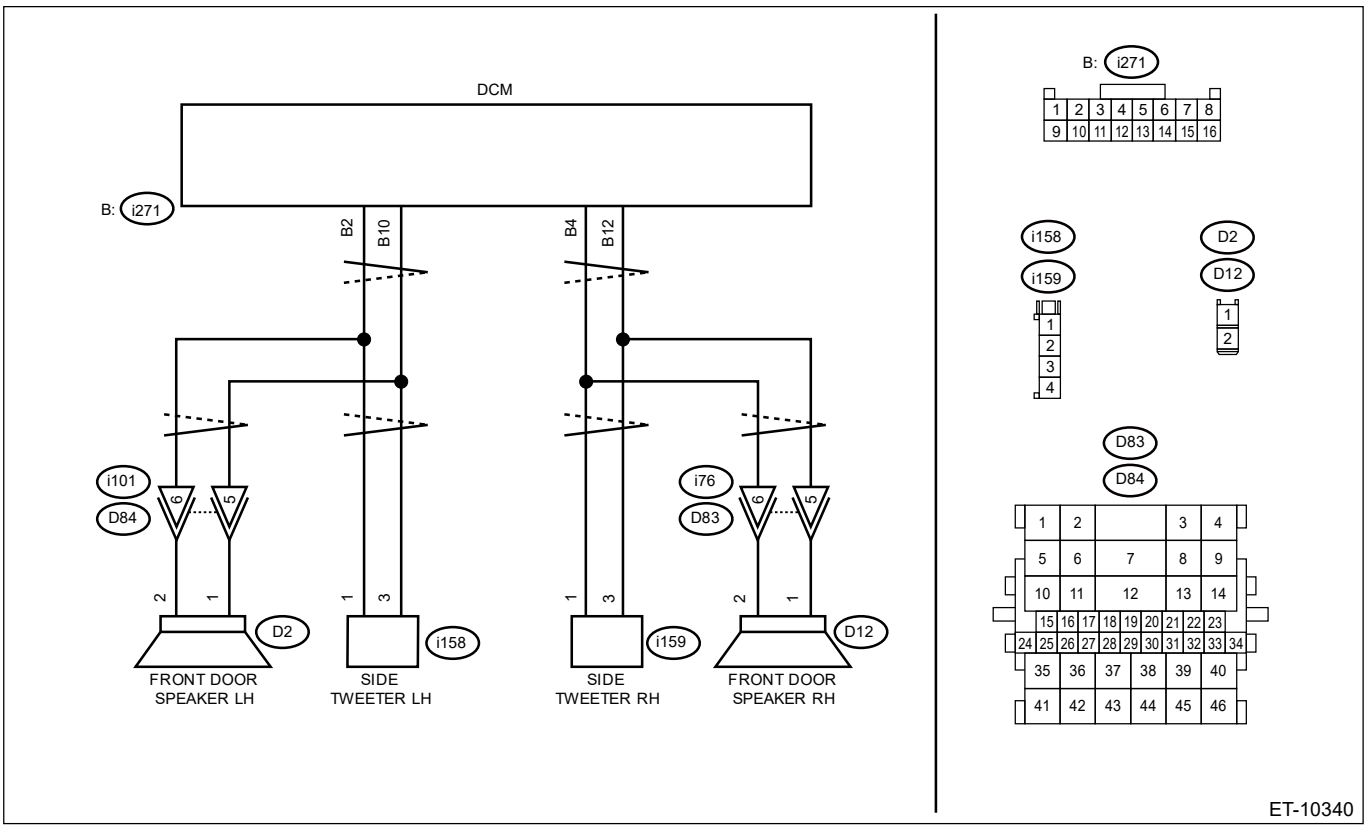
DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT

Diagnosis start condition:

When ACC is ON.

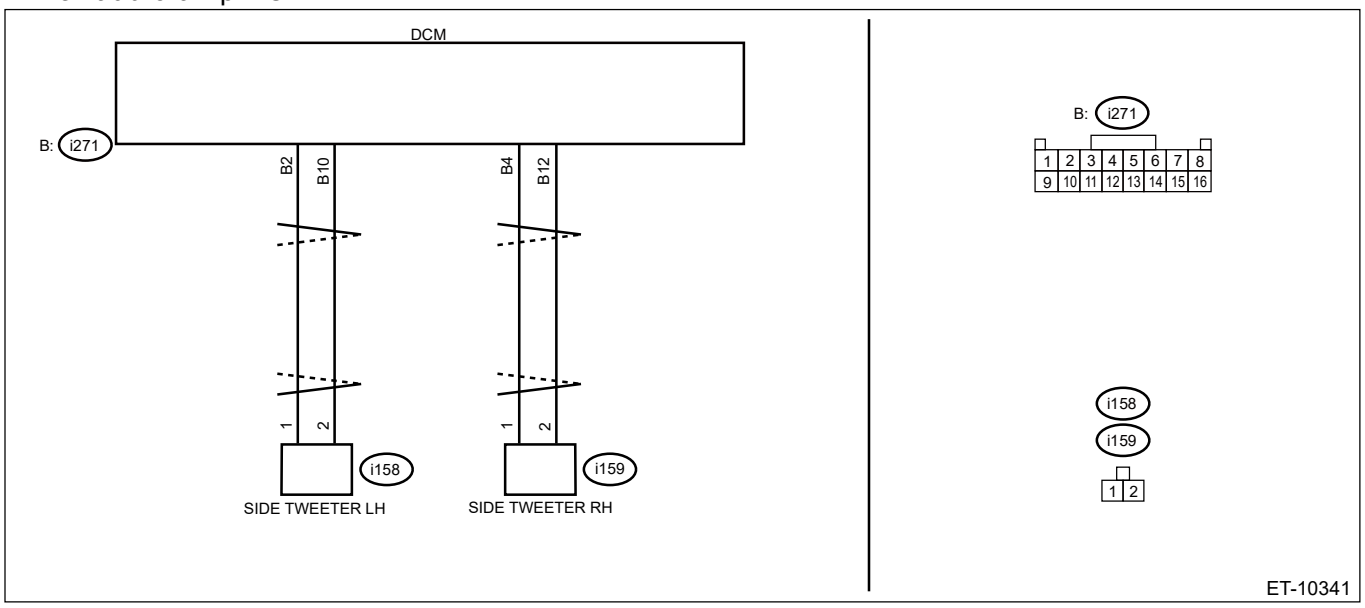
DTC detecting condition:

Speaker impedance is more than 10 kΩ for 100 ms. (Detached speaker connection, etc.)



Trouble symptom:

- Call function cannot be used.
- RED LED illuminates.



Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

- Without audio amplifier

- With audio amplifier

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A05 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. PERFORM ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Active Test.

- [Speaker ON]

Does it sound?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the speaker connector and tweeter connector.
3. Disconnect the DCM connector.
4. Measure the resistance between speaker connector and tweeter connector and DCM connector.

Connector & terminal

Without audio amplifier

(i271) No. 2 — (D2) No. 2:
(i271) No. 2 — (i158) No. 1:
(i271) No. 10 — (D2) No. 1:
(i271) No. 10 — (i158) No. 3:

With audio amplifier

(i271) No. 2 — (i158) No. 2:
(i271) No. 10 — (i158) No. 1:

Is the resistance 1 Ω or less?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i271) No. 2 — Chassis ground:
(i271) No. 10 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i271) No. 2 (+) — Chassis ground (−):

(i271) No. 10 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK THE SPEAKER.

Perform the inspection of speaker unit and tweeter unit. Ref. to ENTERTAINMENT & MONITORING>Front Speaker.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the speaker and tweeter. Ref. to ENTERTAINMENT & MONITORING>Front Speaker.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

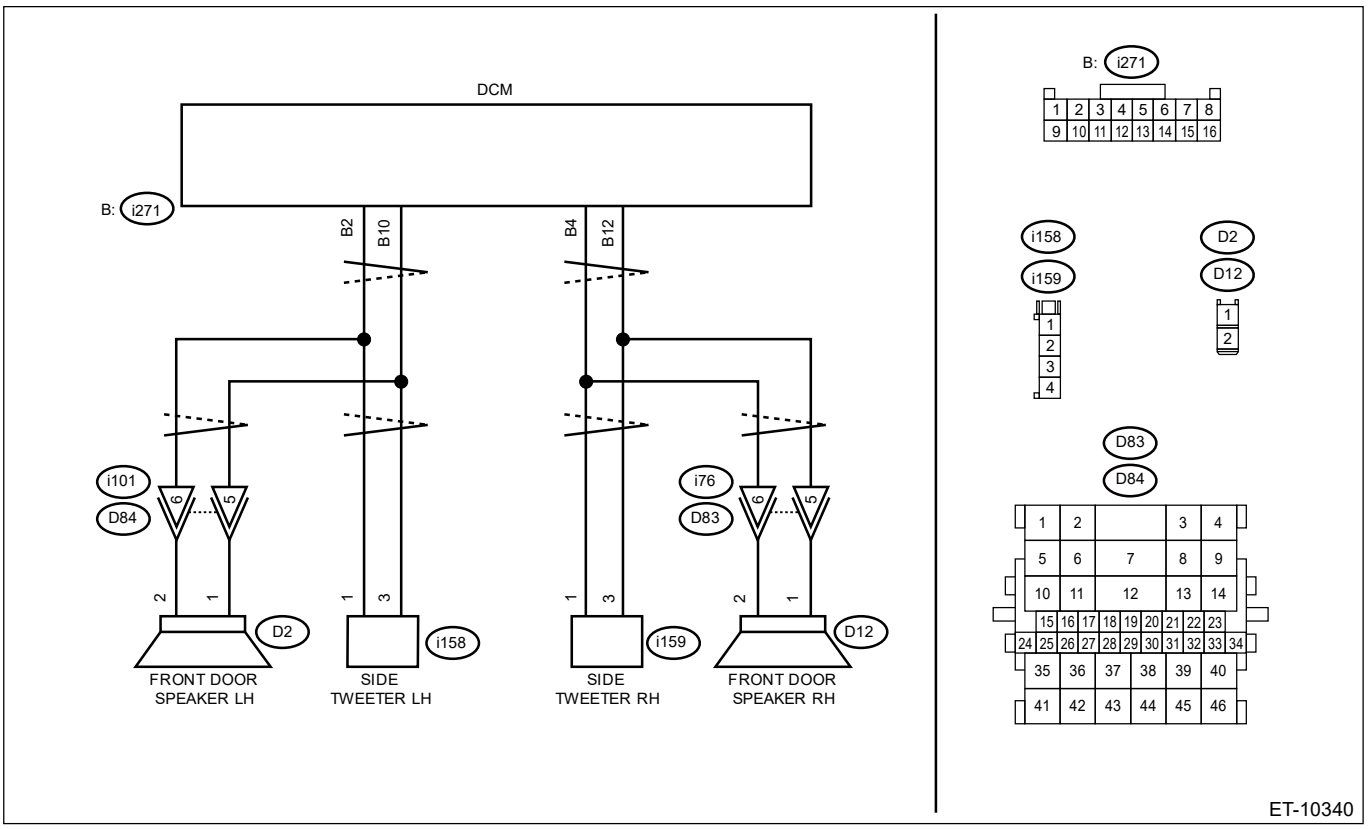
DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT

Diagnosis start condition:

When ACC is ON.

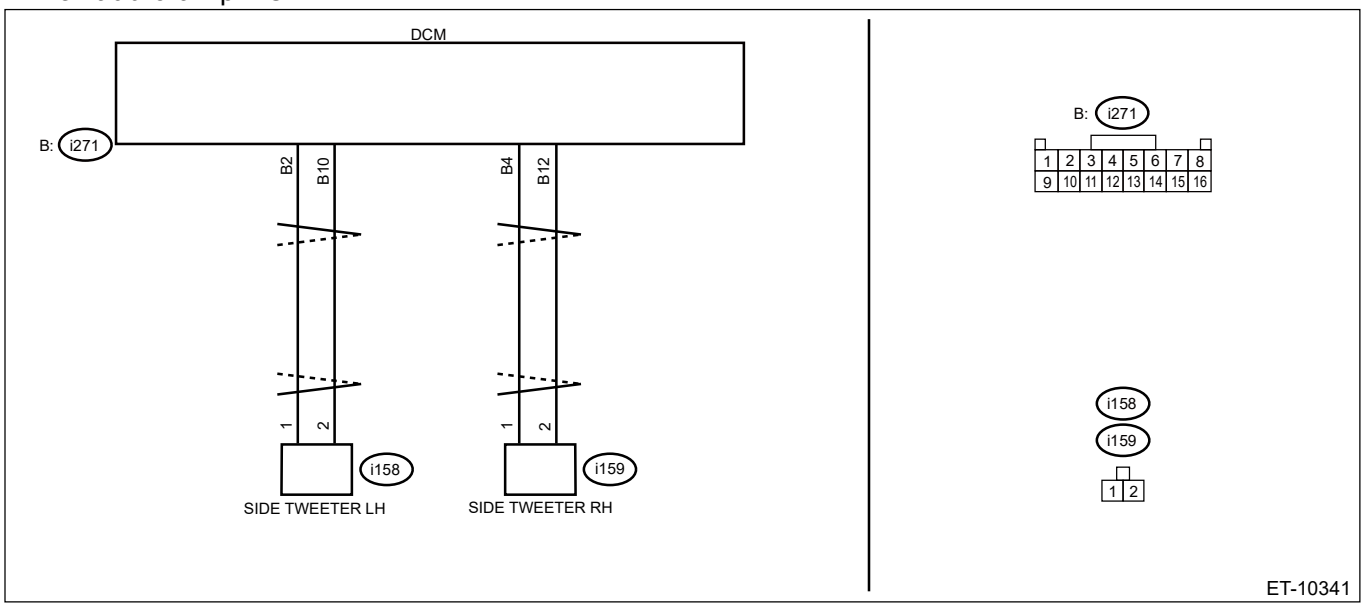
DTC detecting condition:

Speaker impedance is more than 10 kΩ for 100 ms. (Detached speaker connection, etc.)



Trouble symptom:

- Call function cannot be used.
- RED LED illuminates.



Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

- Without audio amplifier

- With audio amplifier

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A06 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. PERFORM ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Active Test.

- [Speaker ON]

Does it sound?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the speaker connector and tweeter connector.
3. Disconnect the DCM connector.
4. Measure the resistance between speaker connector and tweeter connector and DCM connector.

Connector & terminal

Without audio amplifier

(i271) No. 4 — (D12) No. 2:
(i271) No. 4 — (i159) No. 1:
(i271) No. 12 — (D12) No. 1:

With audio amplifier

(i271) No. 4 — (i159) No. 2:
(i271) No. 12 — (i159) No. 1:

Is the resistance 1 Ω or less?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i271) No. 4 — Chassis ground:
(i271) No. 12 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i271) No. 4 (+) — Chassis ground (−):

(i271) No. 12 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK THE SPEAKER.

Perform the inspection of speaker unit and tweeter unit. Ref. to ENTERTAINMENT & MONITORING>Front Speaker.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the speaker and tweeter. Ref. to ENTERTAINMENT & MONITORING>Front Speaker.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

Backup battery is disconnected for at least 5 seconds when the ignition switch is turned ON. (Detached backup battery connection, etc.)

Trouble symptom:

- ACN/SOS function cannot be used when the main battery is disconnected.
- RED LED illuminates.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A07 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK THE BACKUP BATTERY.

1. Remove the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
2. Remove the backup battery cover.
3. Disconnect the backup battery connector.
4. Measure the backup battery voltage.

Is the voltage 2.0 V or more?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the backup battery. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

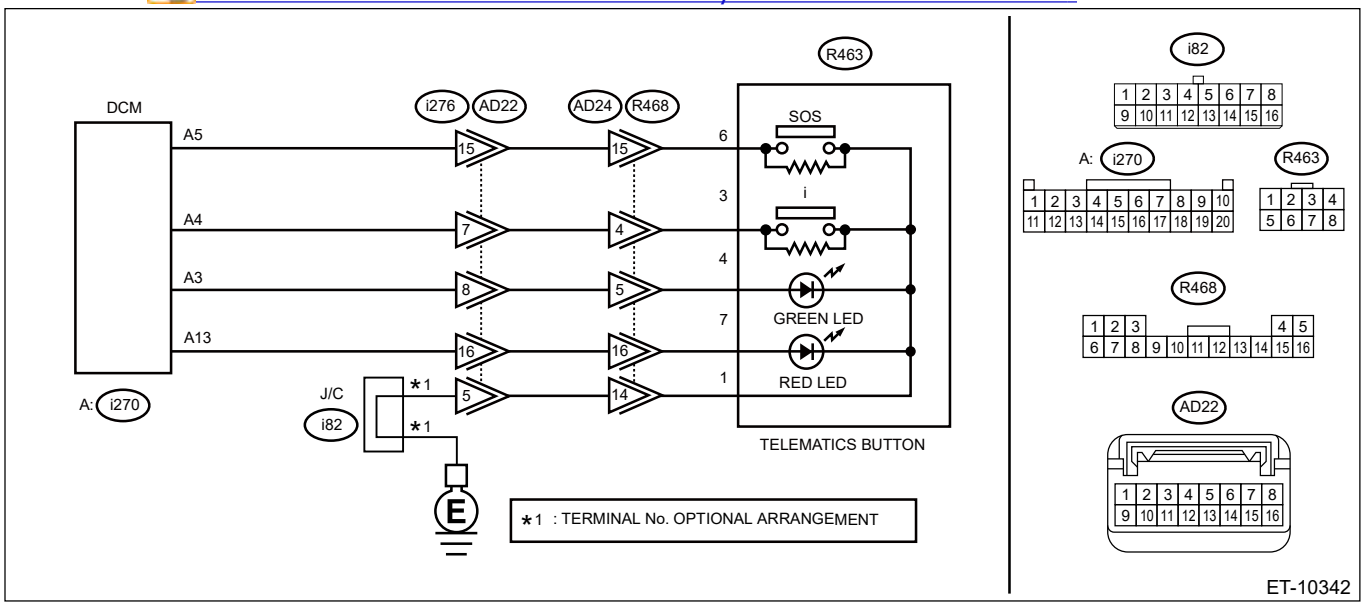
TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A08 SOS BUTTON CIRCUIT

Diagnosis start condition:
When ignition switch is ON.

DTC detecting condition:

The following conditions occur for at least 50 ms.



- SOS button impedance is more than 10 kΩ.
- SOS button is stuck for at least 60 seconds.

Trouble symptom:

- SOS function cannot be used.
- RED LED illuminates.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A08 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the telematics button connector.
3. Disconnect the DCM connector.
4. Measure the resistance between telematics button connector and DCM connector.

Connector & terminal

(i270) No. 5 — (AD24) No. 6:

(R463) No. 14 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i270) No. 5 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i270) No. 5 (+) — Chassis ground (−):

(R463) No. 1 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK THE SOS BUTTON UNIT.

Measure the resistance of the SOS button unit.

Terminals

No. 6 — No. 1:

Is the resistance 1 Ω or less when SOS button is ON, and 1.6 (±5%) kΩ or more when SOS button is OFF?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the telematics button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

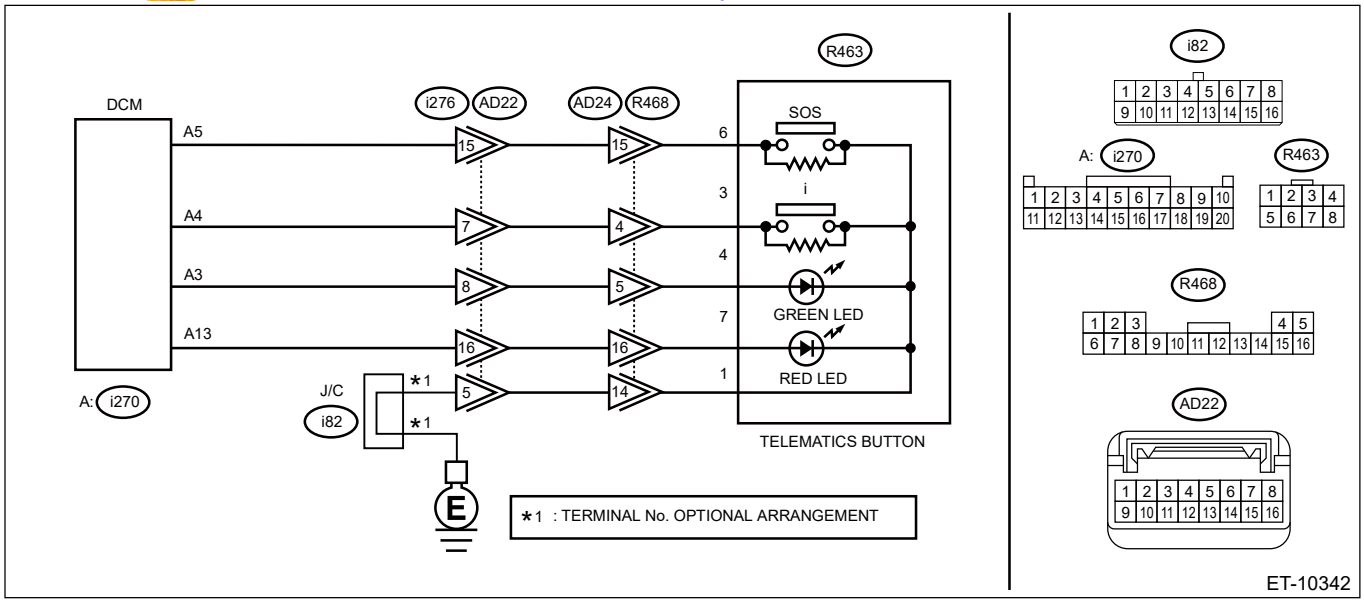
DTC B2A09 I-CALL BUTTON CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

The following conditions occur for at least 50 ms.



- i-button impedance is more than 10 kΩ.
- i-button is stuck for at least 60 seconds.

Trouble symptom:

- i-Call function cannot be used.
- RED LED illuminates.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A09 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the telematics button connector.
3. Disconnect the DCM connector.
4. Measure the resistance between telematics button connector and DCM connector.

Connector & terminal

(i270) No. 4 — (R463) No. 3:

(AR463) No. 1 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i270) No. 4 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i270) No. 4 (+) — Chassis ground (−):

(R463) No. 1 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK THE I-BUTTON.

Measure the resistance of the i-button unit.

Terminals

No. 3 — No. 1:

Is the resistance 1 Ω or less when i-button is ON, and 1.6 (5%) kΩ or more when i-button is OFF?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the telematics button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

(DTC)

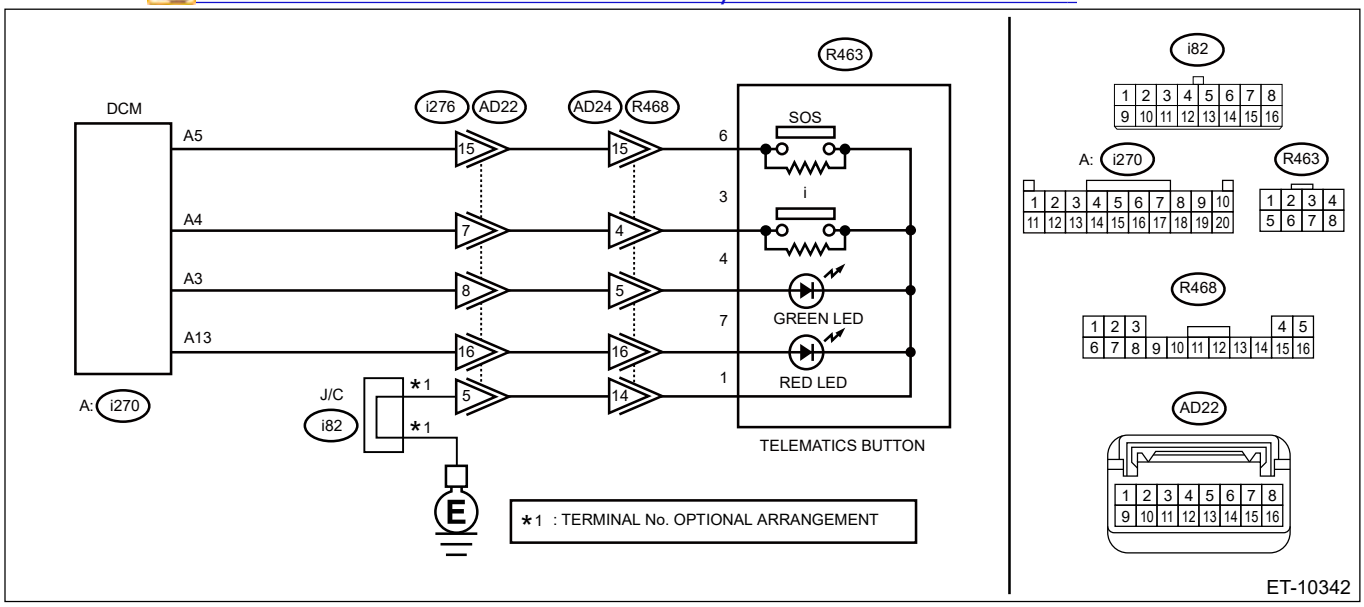
DTC B2A0A RED LED CIRCUIT

Diagnosis start condition:

When ACC is ON.

DTC detecting condition:

The following conditions occur for at least 50 ms.



- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current in LED is more than 200 mA. (Short-circuited LED, etc.)

Trouble symptom:

LED does not illuminate.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A0A displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. PERFORM ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Active Test.

- RED LED Lighting

Does the LED light illuminate?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the telematics button connector.
3. Disconnect the DCM connector.
4. Measure the resistance between telematics button connector and DCM connector.

Connector & terminal

(i270) No. 13 — (R463) No. 7:

(R463) No. 1 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i270) No. 13 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i270) No. 13 (+) — Chassis ground (−):

(R463) No. 1 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK THE TELEMATICS BUTTON (LED) UNIT.

Measure the resistance of the telematics button (LED) unit.

Terminals

No. 7 — No. 1:

Is there continuity?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the telematics button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

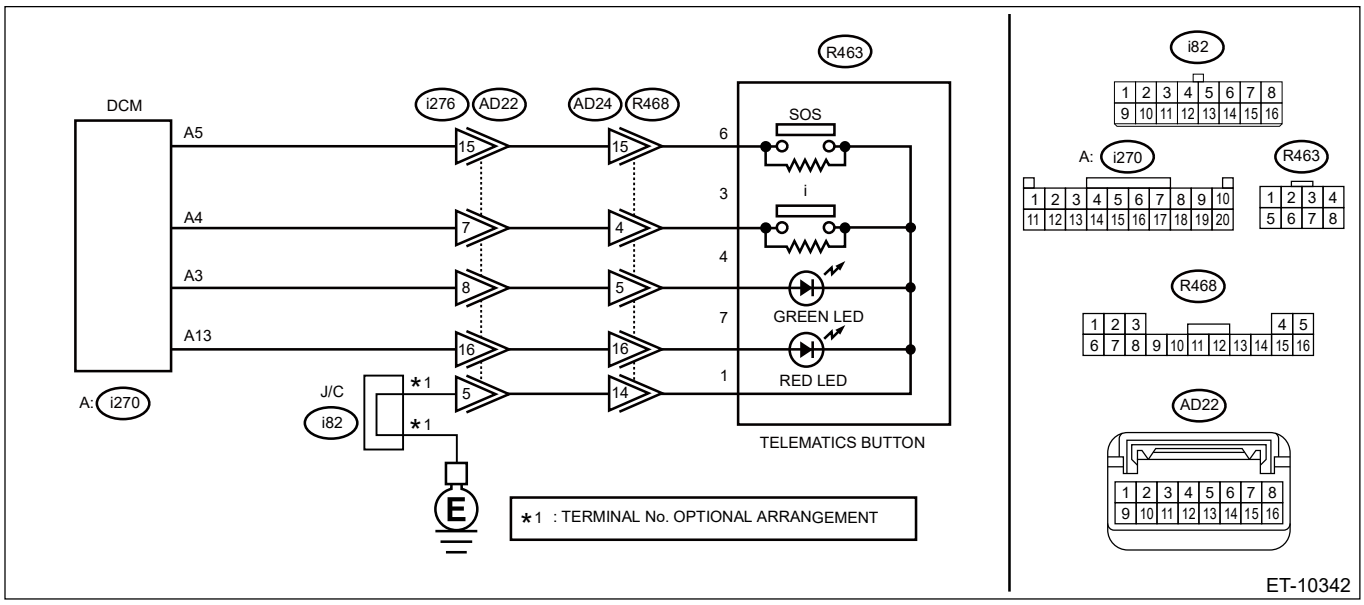
DTC B2A0B GREEN LED CIRCUIT

Diagnosis start condition:

When ACC is ON.

DTC detecting condition:

The following conditions occur for at least 50 ms.



- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current in LED is more than 200 mA. (Short-circuited LED, etc.)

Trouble symptom:

RED LED illuminates.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A0B displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. PERFORM ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Active Test.

- [GREEN LED Lighting]

Does the LED light illuminate?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the telematics button connector.
3. Disconnect the DCM connector.
4. Measure the resistance between telematics button connector and DCM connector.

Connector & terminal

(i270) No. 3 — (R463) No. 4:

(R463) No. 1 — Chassis ground:

Is the resistance 1 Ω or less?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i270) No. 3 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i270) No. 3 (+) — Chassis ground (−):

(R463) No. 1 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair or replace the short circuit of the harness.

6. CHECK THE TELEMATICS BUTTON (LED) UNIT.

Measure the resistance of the telematics button (LED) unit.

Terminals

No. 4 — No. 1:

Is there continuity?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the telematics button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

(DTC)

DTC B2A0C DCM INTERNAL FAULT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
- Main microcomputer and communication circuit IC cannot communicate. (Defective IPC)
- SIM (communication chip) cannot be read. (Defective SIM)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

Caution:
- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

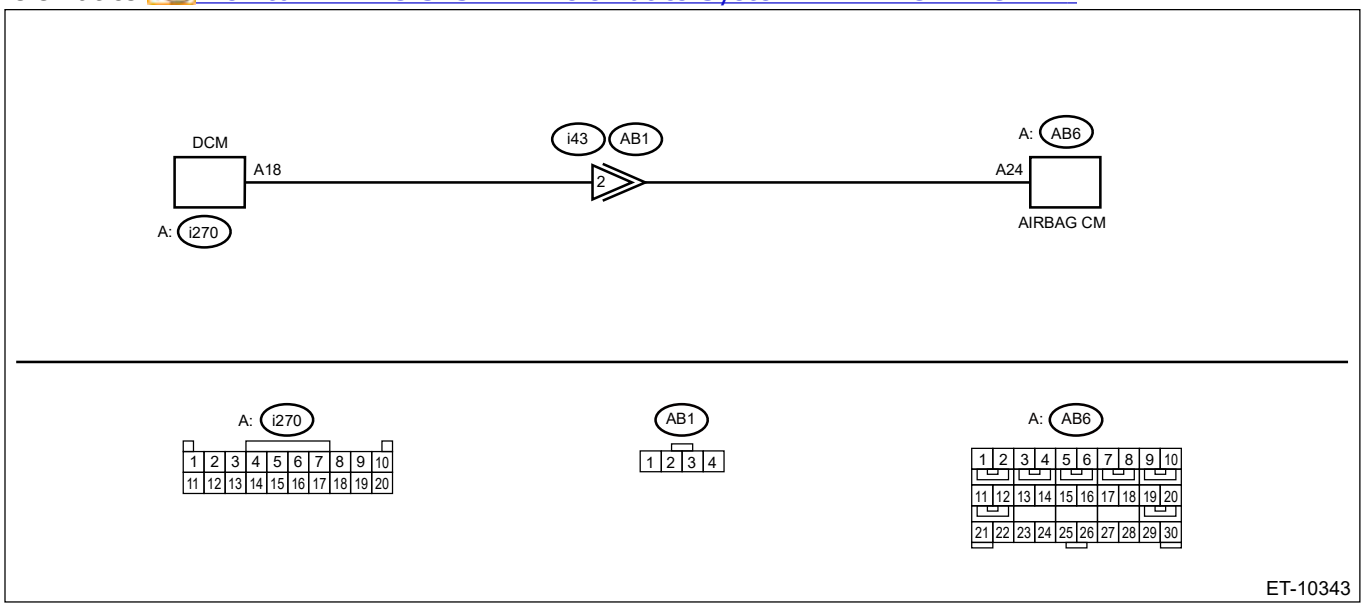
Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A0C displayed? (Current malfunction)

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)



DTC B2A0D AIRBAG SIGNAL

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Either the regular signal or collision detection signal cannot be detected from the airbag CM for at least 30 seconds.
Trouble symptom:
- ACN function does not operate.

- RED LED illuminates.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A0D displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK DTC.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs of airbag. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the airbag CM connector.
3. Disconnect the DCM connector.
4. Measure the resistance between airbag CM connector and DCM connector.

Caution:

To measure the voltage and resistance of airbag system component, be sure to use the specified test harness. Ref. to AIRBAG(DIAGNOSTICS)>General Description.

Connector & terminal

(i270) No. 18 — (AB6) No. 24:

Is the resistance 1 Ω or less?

Yes	Go to 4.
No	Repair or replace the open circuit of harness.

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.

Connector & terminal

(i270) No. 18 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair or replace the short circuit of the harness.

5. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.

Connector & terminal

(i270) No. 18 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Repair or replace the short circuit of the harness.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

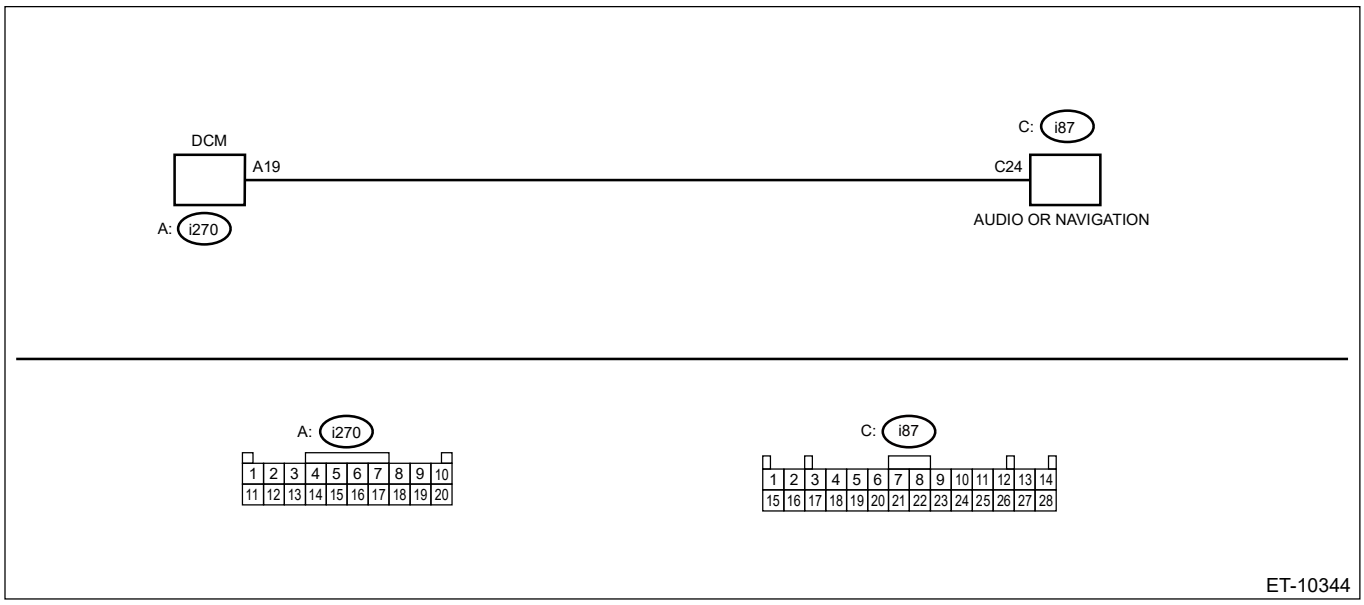
DTC B2A0E MUTE LINE CIRCUIT

Diagnosis start condition:

When ignition switch is ON.

DTC detecting condition:

Any of the following conditions occurs continuously for five seconds or more after the ignition switch is turned to ON when DCM does not mute the audio or navigation system.



- Current in the mute line is less than 1 mA. (Improper line connection, etc.)
- Current exceeds 50 mA. (Short-circuited line, etc.)

Trouble symptom:

- The mute function of audio or navigation system does not operate.
- RED LED illuminates.

Wiring diagram:

Telematics Ref. to WIRING SYSTEM>Telematics System>WIRING DIAGRAM.

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

DTC Check

Is DTC B2A0E displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Turn the ignition switch to OFF.
2. Disconnect the audio or navigation connector.
3. Disconnect the DCM connector.
4. Measure the resistance between audio or navigation connector and DCM connector.
   Connector & terminal
   (i270) No. 19 — (i87) No. 24:

Is the resistance 1 Ω or less?

Yes	Go to 3.
No	Repair or replace the open circuit of harness.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Measure the resistance between DCM connector and chassis ground.
Connector & terminal
(i270) No. 19 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair or replace the short circuit of the harness.

4. CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).

Measure the voltage between DCM connector and chassis ground.
Connector & terminal
(i270) No. 19 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Repair or replace the short circuit of the harness.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A0F BACKUP BATTERY DEGRADATION

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
The voltage does not reach 4.1 V after the backup battery is charged for 7 hours in total (not continuously).
Trouble symptom:
RED LED illuminates.
Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A0F displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK THE BACKUP BATTERY.

Check the backup battery unit. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the backup battery. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2A10 BATTERY VOLTAGE HIGH

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
DCM battery power supply input of 16 V or more continues for 5 seconds.
Trouble symptom:
RED LED illuminates.
Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK DTC.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A10 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. CHECK DATA MONITOR.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [Battery voltage]

Is the [Battery voltage] OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Go to 3.

3. CHECK BATTERY.

Check the battery unit. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

Detected when CAN line abnormality is detected.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Detected when CAN data from ECM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Detected when CAN data from ECM is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

Detected when CAN data from airbag CM is abnormal.

Note:

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

No.	Symptoms	Reference
1	The system does not notify the Telematics Service Provider Center automatically after collision.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION.
2	The system does not notify the center even if the SOS button is pressed.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED.
3	The system places an SOS call unintentionally during driving.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING.
4	The system places an I-CALL unintentionally during driving.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING.
5	The system does not notify the center even if the i-button is pressed upon vehicle malfunction.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION.
6	Remote Vehicle Locator cannot locate the vehicle.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE.
7	Remote Vehicle Locator indicates an incorrect location and therefore the vehicle cannot be located.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE.
8	Remote Door Lock does not lock the doors of the vehicle.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE.

No.	Symptoms	Reference
9	The doors lock unintentionally.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE DOORS LOCK UNINTENTIONALLY.
10	The doors unlock unintentionally.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE DOORS UNLOCK UNINTENTIONALLY.
11	Remote Horn & HAZARD Lights do not operate upon request.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST.
12	When the Vehicle Security Alarm is activated, notification is not sent.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT.
13	When a Malfunction indicator light/warning light is lit, notification is not sent.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT.
14	Maintenance Notifications are not sent.	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > MAINTENANCE NOTIFICATIONS ARE NOT SENT.
15	The LED does not display the status. (LED malfunction)	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING.
16	Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)	Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.).

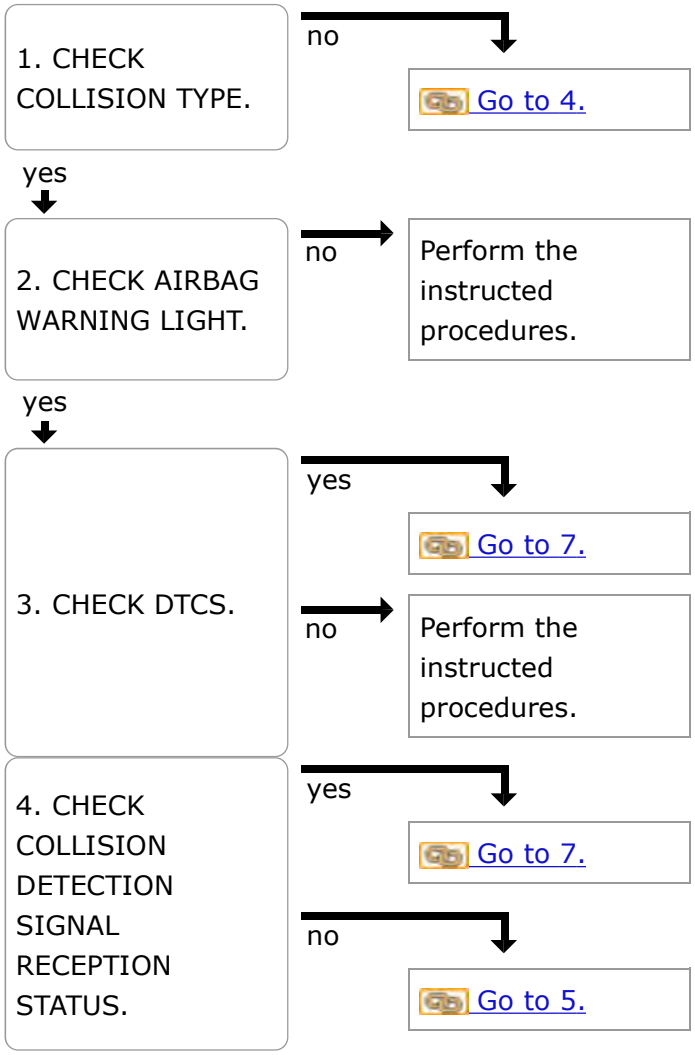
TELEMATICS SYSTEM (DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION

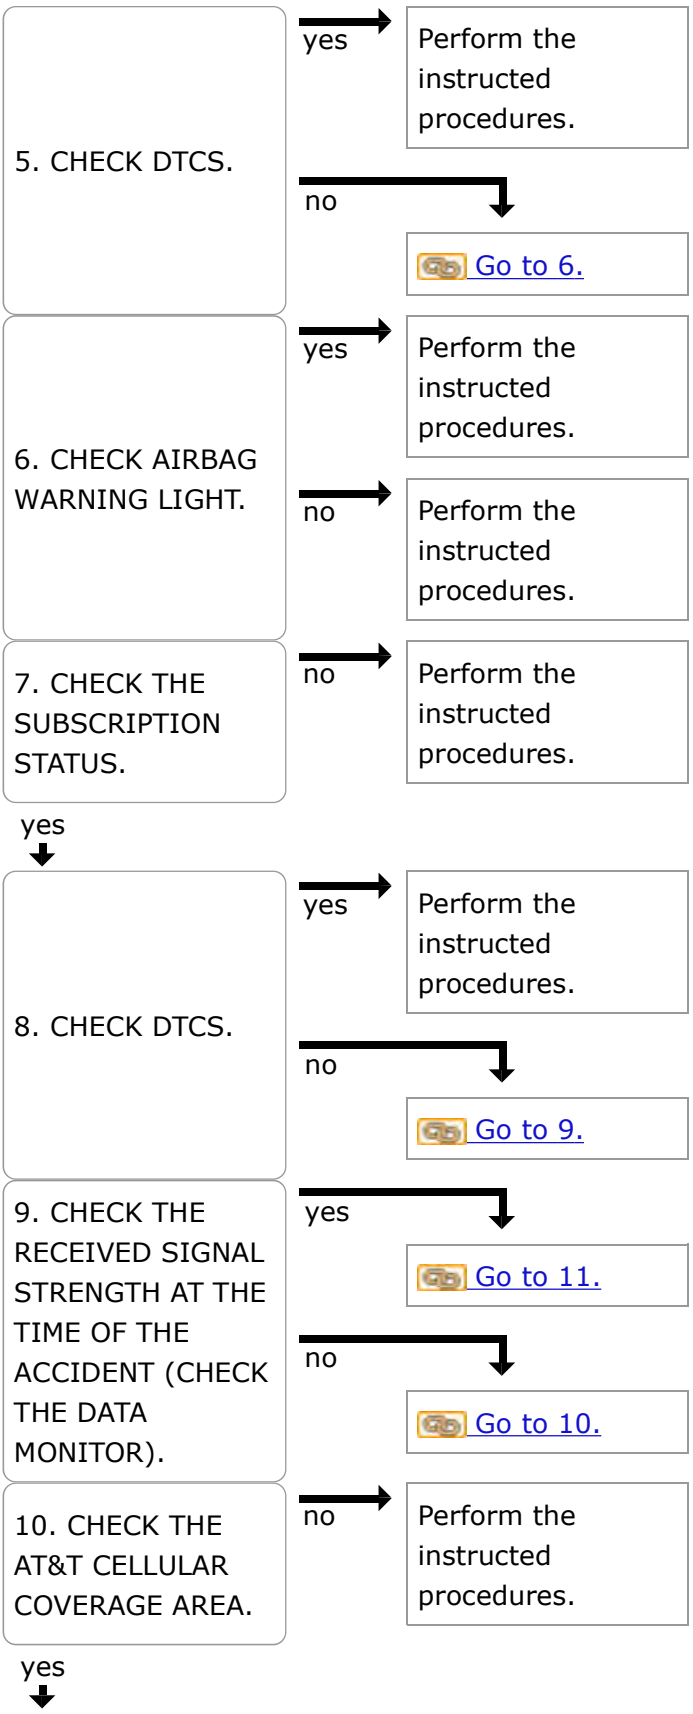
1. THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER

CENTER AUTOMATICALLY AFTER COLLISION

Probable cause:



Airbag CM malfunction, no contract agreement, out of service area, DCM malfunction, antenna malfunction, server side malfunction



Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

Note:

Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.).

5. CHECK DTCS.
yes
Perform the instructed procedures.
no
Go to 6.
6. CHECK AIRBAG WARNING LIGHT.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.
7. CHECK THE SUBSCRIPTION STATUS.
no
Perform the instructed procedures.
yes
8. CHECK DTCS.
yes
Perform the instructed procedures.
no
Go to 9.
9. CHECK THE RECEIVED SIGNAL STRENGTH AT THE TIME OF THE ACCIDENT (CHECK THE DATA MONITOR).
yes
Go to 11.
no
Go to 10.
10. CHECK THE AT&T CELLULAR COVERAGE AREA.
no
Perform the instructed procedures.
yes

11. CHECK THE COMMUNICATION STATUS AT THE TIME OF THE ACCIDENT (CHECK THE DATA MONITOR).

no → Perform the instructed procedures.

yes ↓

12. CHECK THE TIME OF THE ACCIDENT (CHECK THE DATA MONITOR).

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK COLLISION TYPE.

Check the type of collision of the vehicle.

Is it a frontal collision, or a side collision, or a rollover?

Yes	Go to 2.
No	For rear collision, Go to 4.

2. CHECK AIRBAG WARNING LIGHT.

Check the airbag warning light.

Does the airbag warning light illuminate at all times?

Yes	Go to 3.
No	There is no malfunction in the airbag system. Since the airbag CM does not transmit the collision detection signal in the event of a minor collision, it is normal that the automatic notification function does not work.

3. CHECK DTCS.

Read the DTC of [Airbag] using the Subaru Select Monitor. Ref. to AIRBAG(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is any of the DTC [Front Impact Deployment], [Side Impact Deployment], or [Rollover Ignition] displayed?

Yes	There is no malfunction in the airbag system. Go to 7.
No	Perform the diagnosis for the airbag system. Ref. to AIRBAG(DIAGNOSTICS)>Basic Diagnostic Procedure.

4. CHECK COLLISION DETECTION SIGNAL RECEPTION STATUS.

Using the Subaru Select Monitor, check the following items of [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [TimeStamp at ACN Event:Date]
- [TimeStamp at ACN Event:UTC ⁎UTC is the basis for local times worldwide.]

Is a time stamp recorded?

Yes	Go to 7. (Rear collision detection was activated)
No	Go to 5.

5. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 6.

6. CHECK AIRBAG WARNING LIGHT.

Check the airbag warning light.

Does the airbag warning light illuminate at all times?

Yes	Perform the diagnosis for the airbag system. Ref. to AIRBAG(DIAGNOSTICS)>Basic Diagnostic Procedure.
No	There is no malfunction in the airbag system. Since the airbag CM does not transmit the collision detection signal in the event of a minor collision, it is normal that the automatic notification function does not work.

7. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [ACN Active]

Is the data [TRUE]?

Yes	Go to 8.
No	The user does not have a service subscription; therefore, it is not a failure.

8. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 9.

9. CHECK THE RECEIVED SIGNAL STRENGTH AT THE TIME OF THE ACCIDENT (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [RSSI at ACN Event]

Is the data 26% or more?

Yes	Go to 11.
No	Go to 10.

10. CHECK THE AT&T CELLULAR COVERAGE AREA.

1. Check whether the collision occurred within the cellular coverage area.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [GPS Data at ACN Event]

Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Go to 11.
No	The collision occurred outside the cellular coverage area.

11. CHECK THE COMMUNICATION STATUS AT THE TIME OF THE ACCIDENT (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Call Type at ACN Event]

If the data shows [Call Started] or [Call Connected]; Go to A.
If the data shows [Call Not Started]; Go to B.
If the data shows [No Network Service]; Go to C.
If the data shows [Call Ended by SXM]; Go to D.

Yes	A: Go to 12. B: Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module. C: Replace the antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna. D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.
No	—

12. CHECK THE TIME OF THE ACCIDENT (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

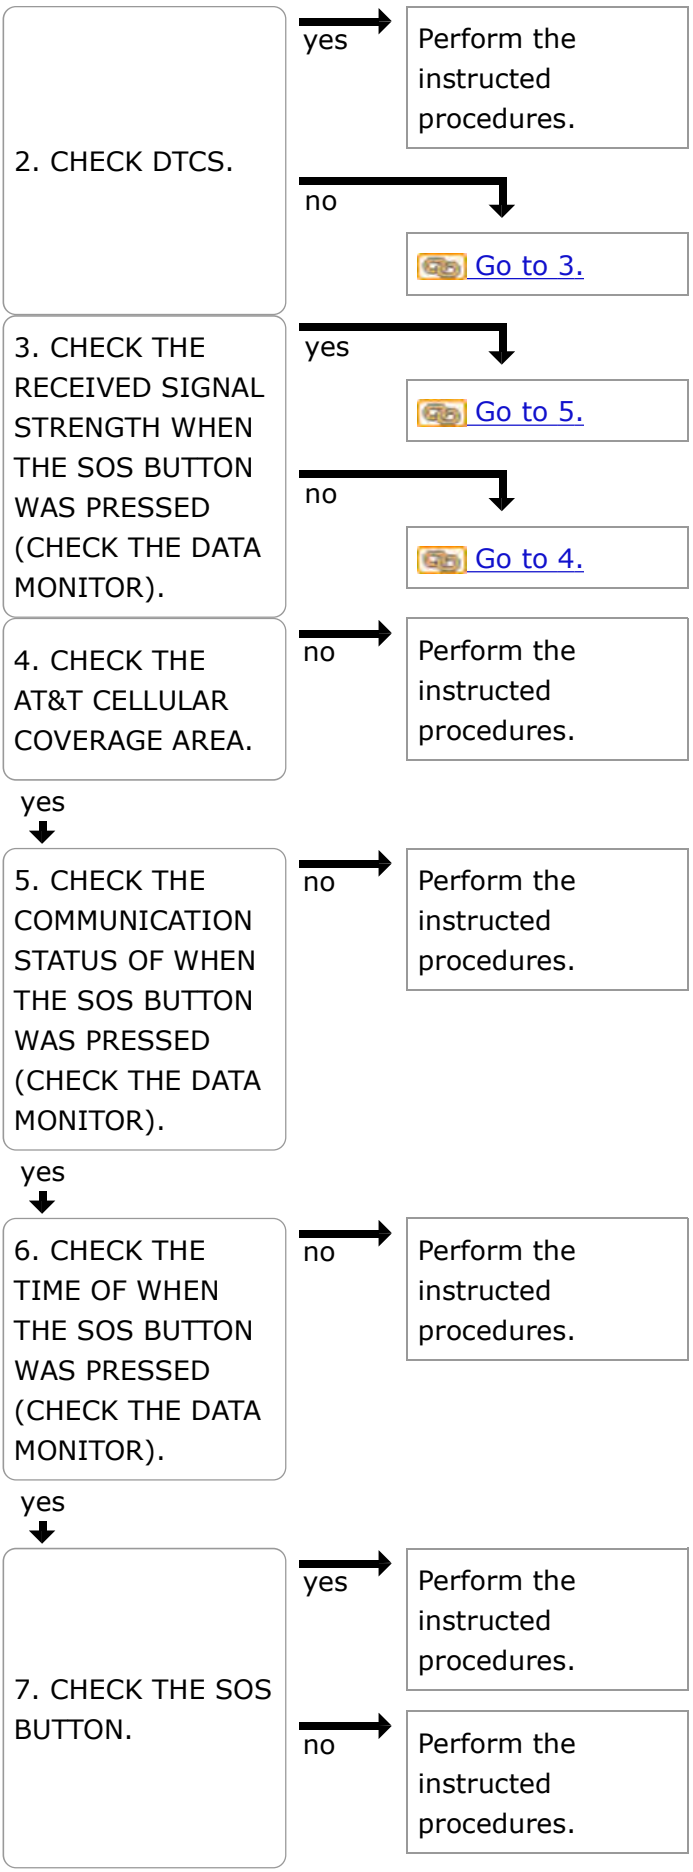
Data Monitor

- [TimeStamp at ACN Event:Date]
- [TimeStamp at ACN Event:UTC *UTC is the basis for local times worldwide.]

Note:
The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use.
Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].

Does the time of the accident match with the data?

Yes	Replace the antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna.
No	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.



2. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED

Probable cause:
No contract agreement, out of service area, DCM malfunction, antenna malfunction, server side malfunction, SOS button malfunction

Caution:
- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

Note:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.).

1. CHECK THE SUBSCRIPTION STATUS.
   - no → Perform the instructed procedures.
   - yes ↓

2. CHECK DTCS.
yes
Perform the instructed procedures.
no
Go to 3.
3. CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE SOS BUTTON WAS PRESSED (CHECK THE DATA MONITOR).
yes
Go to 5.
no
Go to 4.
4. CHECK THE AT&T CELLULAR COVERAGE AREA.
no
Perform the instructed procedures.
yes
5. CHECK THE COMMUNICATION STATUS OF WHEN THE SOS BUTTON WAS PRESSED (CHECK THE DATA MONITOR).
no
Perform the instructed procedures.
yes
6. CHECK THE TIME OF WHEN THE SOS BUTTON WAS PRESSED (CHECK THE DATA MONITOR).
no
Perform the instructed procedures.
yes
7. CHECK THE SOS BUTTON.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [SOS Active]

Is the data [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE SOS BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [RSSI at SOS/ICALL(1)]

Is the data 26% or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK THE AT&T CELLULAR COVERAGE AREA.

1. Check whether the SOS button was pressed within the cellular coverage area.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [GPS Data at Time of Button Push(1):Latitude]
   - [GPS Data at Time of Button Push(1):Longitude]
   - [GPS Data at Time of Button Push(1):Heading]
   - [GPS Data at Time of Button Push(1):Speed]

Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Go to 5.
No	The SOS button was pressed outside the cellular coverage area.

5. CHECK THE COMMUNICATION STATUS OF WHEN THE SOS BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Call status at SOS/ICALL Event(1)]

If the data shows [Call Started] or [Call Connected]; Go to A.
If the data shows [Call Not Started]; Go to B.
If the data shows [No Network Service]; Go to C.
If the data shows [Call Ended by SXM]; Go to D.

Yes	A: Go to 6. B: Go to 7. C: Replace the antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna. D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.
No	—

6. CHECK THE TIME OF WHEN THE SOS BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Timestamp at Time of Button Push(1):Date]
- [Timestamp at Time of Button Push(1):UTC *UTC is the basis for local times worldwide.]

Note:

The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use.

Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].

Does the time of the SOS button operation match with the data?

Yes	Go to 7.
No	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

7. CHECK THE SOS BUTTON.

Check the SOS button. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A08 SOS BUTTON CIRCUIT.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the SOS button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

3. THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING

Probable cause:

DCM malfunction, SOS button malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTCS.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Check the SOS button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

4. THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING

Probable cause:
DCM malfunction, i-button malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTCS.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Check the i-button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

5. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION

Probable cause:

No contract agreement, out of service area, DCM malfunction, antenna malfunction, server side malfunction, i-button malfunction

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

Note:

Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostics with Phenomenon>INSPECTION > PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.).

1. CHECK THE SUBSCRIPTION STATUS.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK DTCS.
   - yes → Perform the instructed procedures.
   - no → Go to 3.

3. CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE I-BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

yes → Go to 5.

no → Go to 4.

4. CHECK THE AT&T CELLULAR COVERAGE AREA.

no → Perform the instructed procedures.

yes ↓

5. CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

no → Perform the instructed procedures.

yes ↓

6. CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

no → Perform the instructed procedures.

yes ↓

7. CHECK THE I-BUTTON.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [ICALL Active]

Is the data [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE I-BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [RSSI at SOS/ICALL(1)]

Is the data 26% or more?

Yes	Go to 5.
No	Go to 4.

4. CHECK THE AT&T CELLULAR COVERAGE AREA.

1. Check whether the i-button was pressed within the cellular coverage area.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

   Data Monitor

   - [GPS Data at Time of Button Push(1):Latitude]
   - [GPS Data at Time of Button Push(1):Longitude]
   - [GPS Data at Time of Button Push(1):Heading]
   - [GPS Data at Time of Button Push(1):Speed]

Is the displayed location data indicated within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Go to 5.
No	The i-button was pressed outside the cellular coverage area.

5. CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Call status at SOS/ICALL Event(1)]

If the data shows [Call Started] or [Call Connected]; Go to A.
If the data shows [Call Not Started]; Go to B.
If the data shows [No Network Service]; Go to C.
If the data shows [Call Ended by SXM]; Go to D.

Yes	A: Go to 6. B: Go to 7. C: Replace the antenna. Ref. to ENTERTAINMENT & MONITORING>Antenna. D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.
No	—

6. CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [Timestamp at Time of Button Push(1):Date]
- [Timestamp at Time of Button Push(1):UTC ⁎UTC is the basis for local times worldwide.]

Note:

The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use.

Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].

Does the time of the i-button operation match with the data?

Yes	Go to 7.
No	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

7. CHECK THE I-BUTTON.

Check the i-button. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A09 I-CALL BUTTON CIRCUIT.

Is the check result OK?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module>REMOVAL > DATA COMMUNICATION MODULE.
No	Replace the i-button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.

6. REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE

Probable cause:

No contract agreement, smartphone malfunction, out of service area, DCM malfunction, server side malfunction, body integrated unit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK THE SUBSCRIPTION STATUS.

no → Perform the instructed procedures.

yes ↓

2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

no → Perform the instructed procedures.

yes ↓

3. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

yes → Perform the instructed procedures.

no → Go to 4.

4. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).

yes → Go to 6.

no → Go to 5.

5. CHECK THE AT&T CELLULAR COVERAGE AREA.

no → Perform the instructed procedures.

yes ↓

6. CHECK DTCS.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [Account Status]

Is the data [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check that the user's smartphone can be connected to the Internet.

Can it be connected to the Internet?

Yes	Go to 3.
No	The user's smartphone or the Internet environment has a problem.

3. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check that the user's smartphone can display the current location.

Is the current location displayed?

Yes	Currently no failure is found. If the current location is not displayed, the user's Internet environment (radio waves, etc.) possibly had a problem.
No	Go to 4.

4. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].

- [Signal Strength]

Is the data 26% or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK THE AT&T CELLULAR COVERAGE AREA.

Ask the user where he/she operated the remote control.

Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Go to 6.
No	The location of the remote control operation was outside the cellular coverage area.

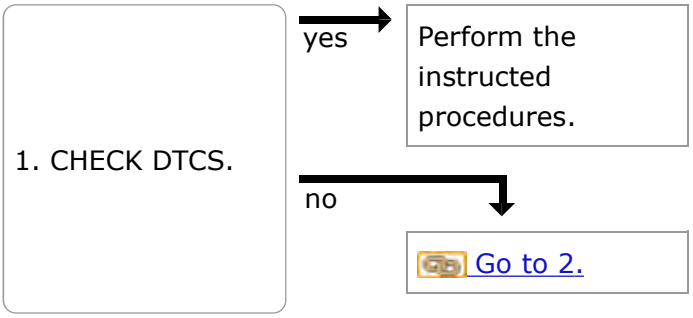
6. CHECK DTCS.

Read the following DTCs using Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

- [Body Control] Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
- [Telematics] Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs of body control, or of telematics. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC). Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.



7. REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE

Probable cause:

GPS reception environment failure, DCM malfunction

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.	yes →	Perform the instructed procedures.
	no →	Go to 3.
3. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 2.

2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check that the user's smartphone can display the current location.

Is it displayed correctly? (Is a deviation, if any, less than 100 m (328 ft)?)

Yes	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.
No	Go to 3.

3. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check again that the user's smartphone can display the current location in a place where the sky is open.

Is it displayed correctly? (Is a deviation, if any, less than 100 m (328 ft)?)

Yes	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.
No	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

8. REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE

Probable cause:

No contract agreement, smartphone malfunction, out of service area, door lock control system malfunction, server side malfunction, DCM malfunction, body integrated unit malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK THE SUBSCRIPTION STATUS.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.
   - no → Perform the instructed procedures.
   - yes ↓
3. CHECK THE DOOR LOCK FUNCTION.
   - yes → Perform the instructed procedures.
   - no → Go to 4.

4. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).

yes → Go to 6.

no → Go to 5.

5. CHECK THE AT&T CELLULAR COVERAGE AREA.

no → Perform the instructed procedures.

yes ↓

6. CHECK THE DOOR LOCK FUNCTION.

no → Perform the instructed procedures.

yes ↓

7. CHECK DTCS.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Account Status]

Is the data [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check that the user's smartphone can be connected to the Internet.

Can it be connected to the Internet?

Yes	Go to 3.
No	The user's smartphone or the Internet environment has a problem.

3. CHECK THE DOOR LOCK FUNCTION.

Check that the user's smartphone can lock the doors in the current situation.

Are the doors locked?

Yes	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.
No	Go to 4.

4. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [Signal Strength]

Is the data 26% or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK THE AT&T CELLULAR COVERAGE AREA.

Ask the user where he/she operated the remote control.

Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Go to 6.
No	The location of the remote control operation was outside the cellular coverage area.

6. CHECK THE DOOR LOCK FUNCTION.

Check that the keyless transmitter can lock the doors of the vehicle.

Are the doors locked?

Yes	Go to 7.
No	Perform the diagnosis according to the inspection for the door lock control system. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION.

7. CHECK DTCS.

Read the following DTCs using Subaru Select Monitor.

DTC Check

- [Body Control] Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
- [Telematics] Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs of body control, or of telematics. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC). Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
No	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

9. THE DOORS LOCK UNINTENTIONALLY

Probable cause:
Server side malfunction, door lock switch malfunction

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DOOR LOCK SWITCH.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check the door lock switch. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION.

Is the check result OK?

Yes	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.
No	Perform the diagnosis according to the inspection for the door lock switch. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION.

10. THE DOORS UNLOCK UNINTENTIONALLY

Probable cause:

Server side malfunction, door lock switch malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DOOR LOCK SWITCH.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK DOOR LOCK SWITCH.

Check the door unlock switch. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION.

Is the check result OK?

Yes	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.
No	Perform the diagnosis according to the inspection for the door lock switch. Ref. to SECURITY AND LOCKS>Door Lock Control System>INSPECTION.

11. REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST

Probable cause:

No contract agreement, smartphone malfunction, out of service area, server side malfunction, keyless transmitter malfunction, horn circuit malfunction, body integrated unit malfunction, DCM malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK THE SUBSCRIPTION STATUS.
   - no → Perform the instructed procedures.
   - yes ↓
2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.
   - no → Perform the instructed procedures.
   - yes ↓

3. CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.

yes → Perform the instructed procedures.

no → Go to 4.

4. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).

yes → Go to 6.

no → Go to 5.

5. CHECK THE AT&T CELLULAR COVERAGE AREA.

no → Perform the instructed procedures.

yes

6. CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.

yes → Go to 8.

no → Go to 7.

7. CHECK HORN OPERATION.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

8. CHECK DTCS.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [Account Status]

Does the data display [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check that the user's smartphone can be connected to the Internet.

Can it be connected to the Internet?

Yes	Go to 3.
No	The user's smartphone or the Internet environment has a problem.

3. CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.

Check that the horn and hazard light currently operate by the user's smartphone.

Do the horn and hazard light operate?

Yes	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.
No	Go to 4.

4. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].

- [Signal Strength]

Does the data indicate 26% or more?

Yes	Go to 6.
No	Go to 5.

5. CHECK THE AT&T CELLULAR COVERAGE AREA.

Ask the user where he/she operated the remote control.

Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Go to 6.
No	The location of the remote control operation was outside the cellular coverage area.

6. CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.

Check that the horn and hazard light operate by the keyless transmitter. (Press the lock button three times.)

Do the horn and hazard light operate?

Yes	Go to 8.
No	Go to 7.

7. CHECK HORN OPERATION.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Body Control].
- [Horn Output]

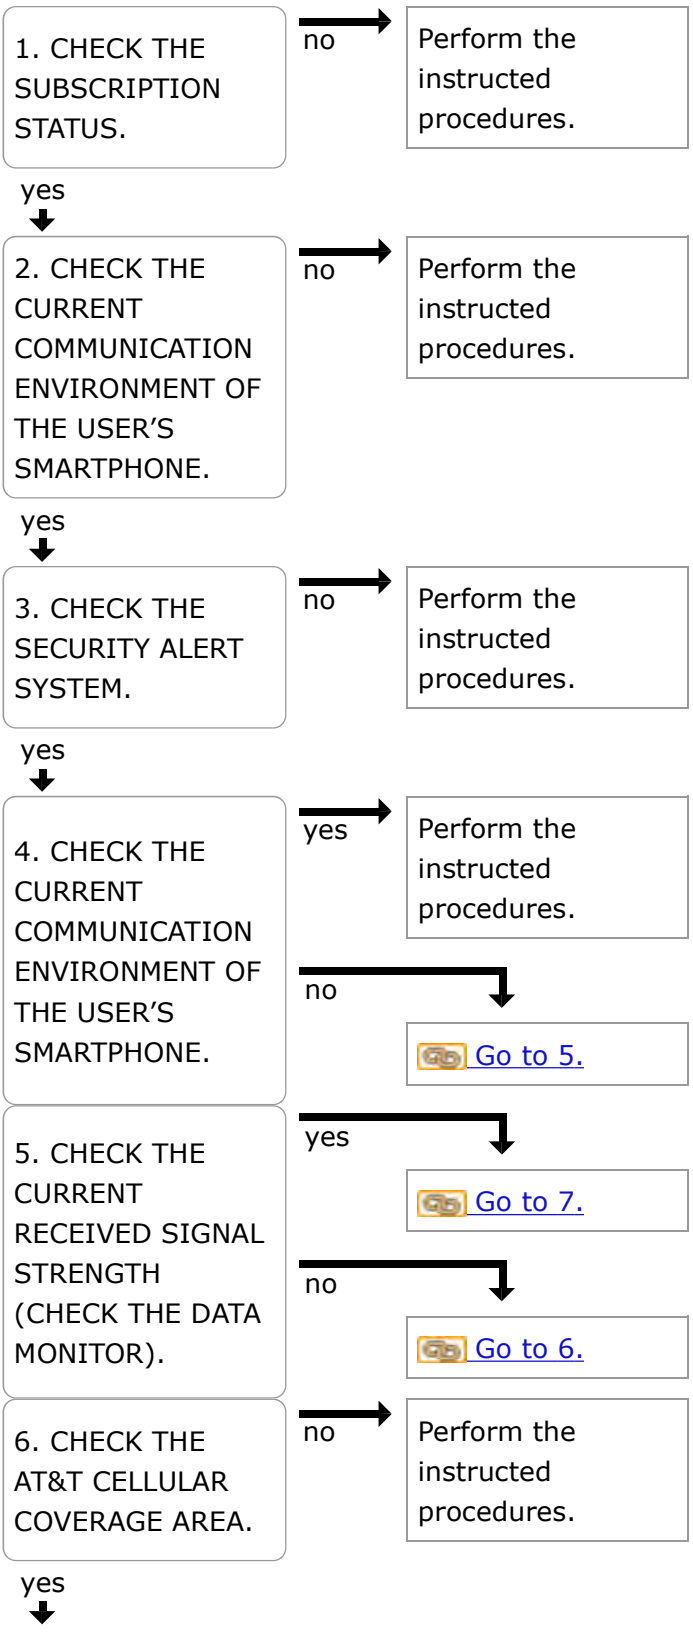
Does the horn sound?

Yes	Check the keyless transmitter. Ref. to SECURITY AND LOCKS>Keyless Transmitter. Ref. to SECURITY AND LOCKS>Access Key.
No	Check the horn circuit. Ref. to WIRING SYSTEM>Horn System.

8. CHECK DTCS.

Read the following DTCs using Subaru Select Monitor.

- [Body Control] Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
- [Telematics] Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).



Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs of body control, or of telematics. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

12. WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT

Probable cause:
No contract agreement, smartphone malfunction, security alert system malfunction, out of service area, server side malfunction, body integrated unit malfunction, DCM malfunction

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK THE SUBSCRIPTION STATUS.
no
Perform the instructed procedures.
yes
2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.
no
Perform the instructed procedures.
yes
3. CHECK THE SECURITY ALERT SYSTEM.
no
Perform the instructed procedures.
yes
4. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.
yes
Perform the instructed procedures.
no
Go to 5.
5. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).
yes
Go to 7.
no
Go to 6.
6. CHECK THE AT&T CELLULAR COVERAGE AREA.
no
Perform the instructed procedures.
yes

7. CHECK DTCS.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Account Status]

Does the data display [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check that the user's smartphone can be connected to the Internet.

Can it be connected to the Internet?

Yes	Go to 3.
No	The user's smartphone or the Internet environment has a problem.

3. CHECK THE SECURITY ALERT SYSTEM.

Operate the security alert system.

Does it operate?

Yes	Go to 4.
No	Check the security alert system. Ref. to SECURITY AND LOCKS>Security System>INSPECTION.

4. CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.

Check that a notification is sent to the user's smartphone after the security alert is activated.

Does the smartphone receive a notification?

Yes	Currently no failure is found.
No	Go to 5.

5. CHECK THE CURRENT RECEIVED SIGNAL STRENGTH (CHECK THE DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Signal Strength]

Does the data indicate 26% or more?

Yes	Go to 7.
No	Go to 6.

6. CHECK THE AT&T CELLULAR COVERAGE AREA.

Ask the user where he/she operated the remote control.

Is the location of the remote control operation within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Go to 7.
No	The location of the remote control operation was outside the cellular coverage area.

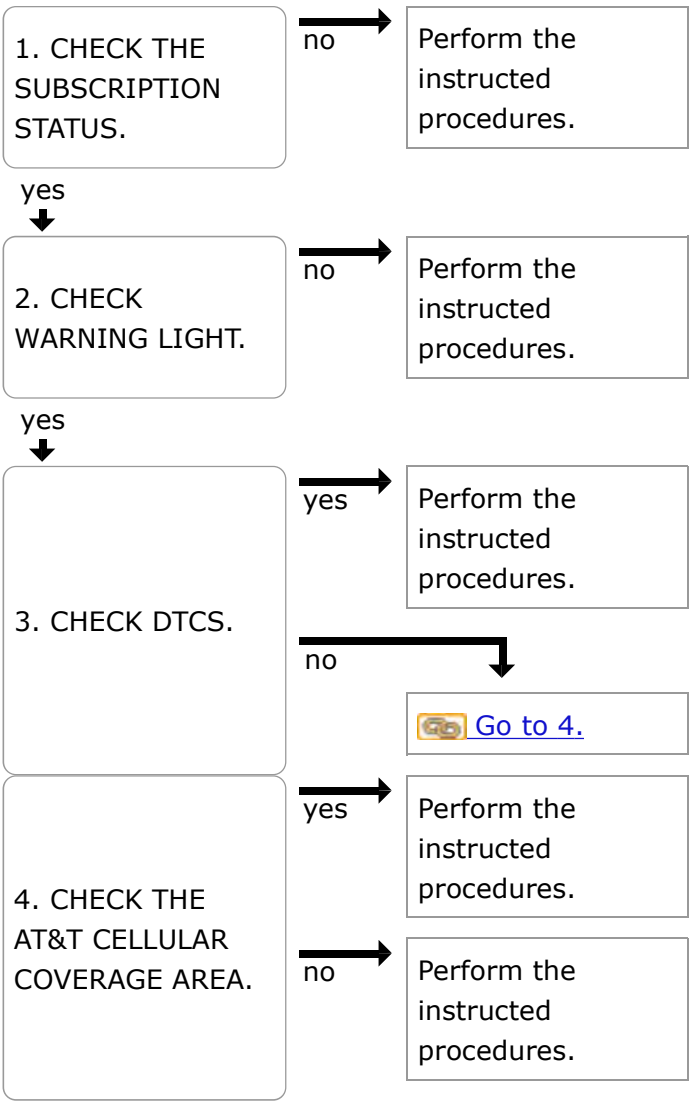
7. CHECK DTCS.

Read the following DTCs using Subaru Select Monitor.

- [Body Control] Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC).
- [Telematics] Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs of body control, or of telematics. Ref. to BODY CONTROL(DIAGNOSTICS)>Diagnostic Trouble Code (DTC). Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.



13. WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT

Probable cause:

No contract agreement, out of service area, server side malfunction, DCM malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

Data Monitor

- [Diagnostic Alert Active]

Does the data display [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK WARNING LIGHT.

Check if the warning light illuminates.

Does it Illuminate?

Yes	Go to 3.
No	Currently no failure is found. Since the warning light is not lit, notification is not sent.

3. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Go to 4.

4. CHECK THE AT&T CELLULAR COVERAGE AREA.

Ask the user where he/she turned the ignition switch to OFF after the warning light was lit.

Is the location, where the ignition switch was turned to OFF after the warning light was lit, within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)

Yes	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.
No	The location where the ignition switch was turned to OFF (where warning light illumination information was sent) was outside the cellular coverage area.

14. MAINTENANCE NOTIFICATIONS ARE NOT SENT

Probable cause:

No contract agreement, server side malfunction, DCM malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK THE SUBSCRIPTION STATUS.	no →	Perform the instructed procedures.
yes ↓		
2. CHECK DTCS.	yes →	Perform the instructed procedures.
	no →	Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [Maintenance Alert Active]

Does the data display [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure.

2. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Are any DTCs displayed?

Yes	Perform the diagnosis for the displayed DTCs. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC)>LIST.
No	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

15. THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION)

Probable cause:
No contract agreement, DCM malfunction, telematics button malfunction

Caution:

- **CommCheck is required after replacing the DCM. Ref. to ENTERTAINMENT & MONITORING>Telematics System>OPERATION > REGISTRATION (COMM CHECK).**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.**

1. CHECK THE SUBSCRIPTION STATUS.

no → Perform the instructed procedures.

yes ↓

2. CHECK THE LED.

yes → Perform the instructed procedures.

no → Go to 3.

3. CHECK DTCS.

yes → Perform the instructed procedures.

no → Go to 4.

4. CHECK THE LED ILLUMINATION CONDITION.

no → Go to 6.

yes ↓

5. CHECK THE LED.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

6. CHECK THE LED.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK THE SUBSCRIPTION STATUS.

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Telematics].
Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Data Monitor.

- [Account Status]

Is the data [TRUE]?

Yes	Go to 2.
No	The user does not have a service subscription; therefore, it is not a failure. (Both LEDs are turned off.)

2. CHECK THE LED.

1. Turn the ignition switch to ON.
2. Check the LED condition.

Does the RED LED go off and the GREEN LED illuminate?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 3.

3. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A0A or B2A0B displayed?

Yes	Perform the diagnosis for the displayed DTC B2A0A or B2A0B. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A0A RED LED CIRCUIT. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A0B GREEN LED CIRCUIT.
No	Go to 4.

4. CHECK THE LED ILLUMINATION CONDITION.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Active Test.

- [RED LED Lighting]
- [GREEN LED Lighting]

Is the LED turned on or off?

Yes	Go to 5.
No	Go to 6.

5. CHECK THE LED.

1. Turn the ignition switch to ON.
2. Check the LED condition.

Does the RED LED go off and the GREEN LED illuminate?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.

6. CHECK THE LED.

Measure the continuity of the telematics button (LED) unit.

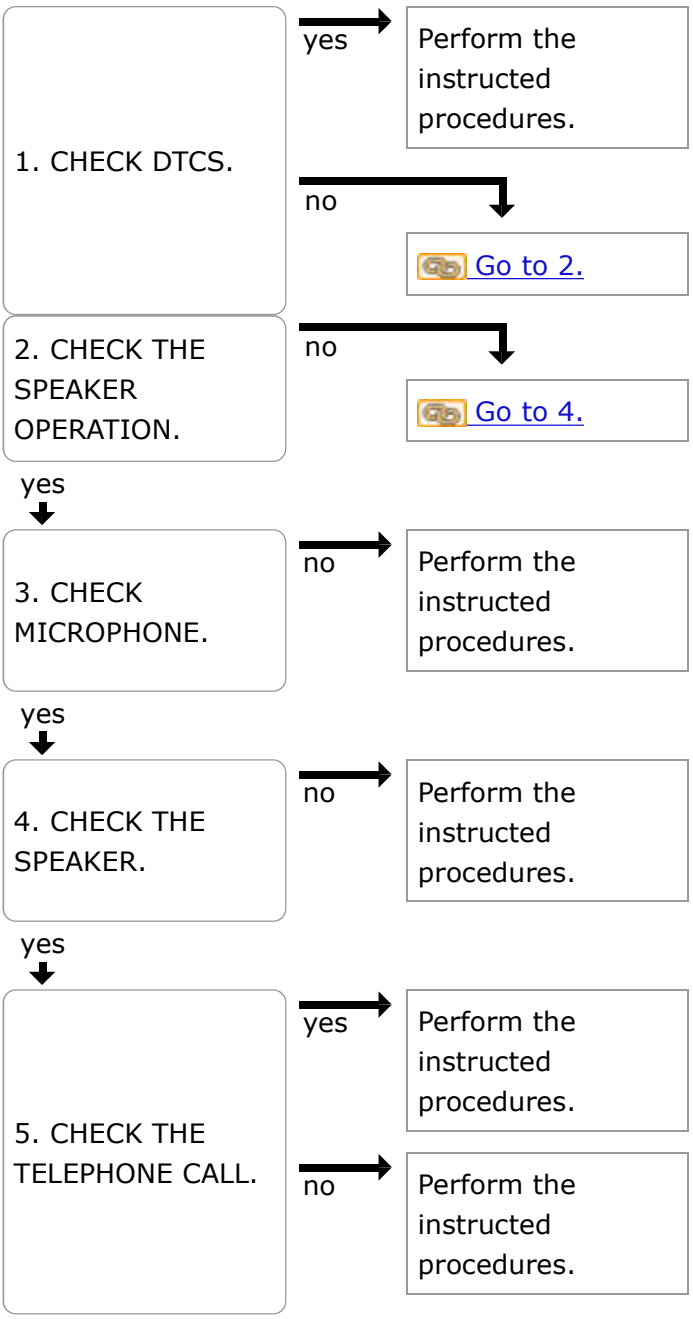
Terminals

No. 7 —No. 1:

No. 4 — No. 1:

Is there continuity?

Yes	Replace the DCM. Ref. to ENTERTAINMENT & MONITORING>Data Communication Module.
No	Replace the telematics button. Ref. to ENTERTAINMENT & MONITORING>Switches and Harness.



16. PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.)

Probable cause:

Microphone malfunction, speaker malfunction, DCM malfunction

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>General Description>CAUTION.

1. CHECK DTCS.
yes
Perform the instructed procedures.
no
Go to 2.
2. CHECK THE SPEAKER OPERATION.
no
Go to 4.
yes
3. CHECK MICROPHONE.
no
Perform the instructed procedures.
yes
4. CHECK THE SPEAKER.
no
Perform the instructed procedures.
yes
5. CHECK THE TELEPHONE CALL.
yes
Perform the instructed procedures.
no
Perform the instructed procedures.

1. CHECK DTCS.

Read the DTC of [Telematics] using the Subaru Select Monitor. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Trouble Code (DTC).

Is DTC B2A04, B2A05 or B2A06 displayed?

Yes	Perform the diagnosis for the displayed DTC B2A04, B2A05 or B2A06. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A04 MIC CIRCUIT. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT.
No	Go to 2.

2. CHECK THE SPEAKER OPERATION.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Telematics]. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Active Test.

- [Speaker ON]

Does it sound?

Yes	Go to 3.
No	Go to 4.

3. CHECK MICROPHONE.

Perform the microphone voice input.

Is the voice recognized?

Yes	Go to 4.
No	Replace the microphone.

4. CHECK THE SPEAKER.

Check the speaker.

Is the check result OK?

Yes	Go to 5.
No	Replace the speaker.

5. CHECK THE TELEPHONE CALL.

1. Place the mobile phone in the vehicle.
2. Establish a Bluetooth connection between the mobile phone in the vehicle and the vehicle unit.
3. Make a call from outside to the mobile phone in the vehicle.
4. Check that a telephone call is available through the in-vehicle microphone with the hands-free function.

Is a telephone call successful?

Yes	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Perform the diagnosis according to inspection for DTC B2A04 MIC CIRCUIT. Ref. to TELEMATICS SYSTEM (DIAGNOSTICS)>Diagnostic Procedure with Diagnostic Trouble Code (DTC)>DTC B2A04 MIC CIRCUIT.

POWER WINDOW(DIAGNOSTICS)

PW(diag)

12. Diagnostic Trouble Code (DTC)
13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)
14. Diagnostics with Phenomenon

POWER WINDOW(DIAGNOSTICS) > Basic Diagnostic Procedure

PROCEDURE

1. PERFORM CUSTOMER INTERVIEW.

Ask the customer when and how the trouble occurred using the interview check list. Ref. to POWER WINDOW(DIAGNOSTICS) >Check List for Interview.

Did you interview the customer?

Yes	Go to 2.
No	Perform the interview.

2. BASIC INSPECTION.

Perform basic inspection. Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>INSPECTION.

Is the check result OK?

Yes	Go to 3.
No	Repair the faulty part found in basic inspection, and Go to 3.

3. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to OFF.
2. Connect the Subaru Select Monitor to data link connector. Ref. to COMMON(diag)>Data Link Connector.
3. Turn the ignition switch to ON and run the Subaru Select Monitor.
4. Select [Power Window (Switch)], [Power Window (Driver)] and [Power Window (Passenger)].
   Note:
   For detailed operation procedures, refer to "Application help".

Is communication possible?

Yes	Go to 4.
No	Check the communication circuit. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Procedure for Subaru Select Monitor Communication.

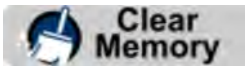
4. CHECK DTC.

Using the Subaru Select Monitor, read the DTCs in [Power Window (Switch)], [Power Window (Driver)] and [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

•[Power Window (Switch)]

•[Power Window (Driver)]

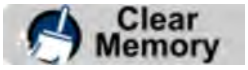
•[Power Window (Passenger)]



Are any DTCs displayed? (Current malfunction)

Yes	Record the DTC, time stamp and freeze frame data, and Go to 5.
No	Perform diagnosis according to the procedures in the diagnostics with phenomenon. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostics with Phenomenon.

5. PERFORM DIAGNOSIS.



1. Perform the diagnosis for the displayed DTCs. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC)>LIST.
2. Repair or replace the cause of trouble.
3. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Switch)], [Power Window (Driver)] and [Power Window (Passenger)]. Ref. to COMMON(diag)>Clear memory.
   - [Power Window (Switch)]

   - [Power Window (Driver)]

   - [Power Window (Passenger)]

4. Execute the inspection mode. Ref. to POWER WINDOW(DIAGNOSTICS) >Inspection Mode.
5. Using the Subaru Select Monitor, read the DTCs in [Power Window (Switch)], [Power Window (Driver)] and [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   - [Power Window (Switch)]

   - [Power Window (Driver)]

   - [Power Window (Passenger)]

Are any DTCs displayed? (Current malfunction)

Yes	Repeat step 5 until DTC is not shown.
No	Finish the diagnosis.

POWER WINDOW(DIAGNOSTICS) > Check List for Interview

CHECK

Inspect the following items regarding the vehicle's state.

POWER WINDOW(DIAGNOSTICS) > General Description

CAUTION

1. POWER WINDOW

When removing power windows-related components, refer to cautions in the glass/windows/mirrors section. Ref. to GLASS/WINDOWS/MIRRORS>General Description>CAUTION.

2. AIRBAG

When removing airbag related parts, refer to Cautions for Airbags. Ref. to AIRBAG SYSTEM>General Description>CAUTION.

POWER WINDOW(DIAGNOSTICS) > General Description

INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect power windows related problems.

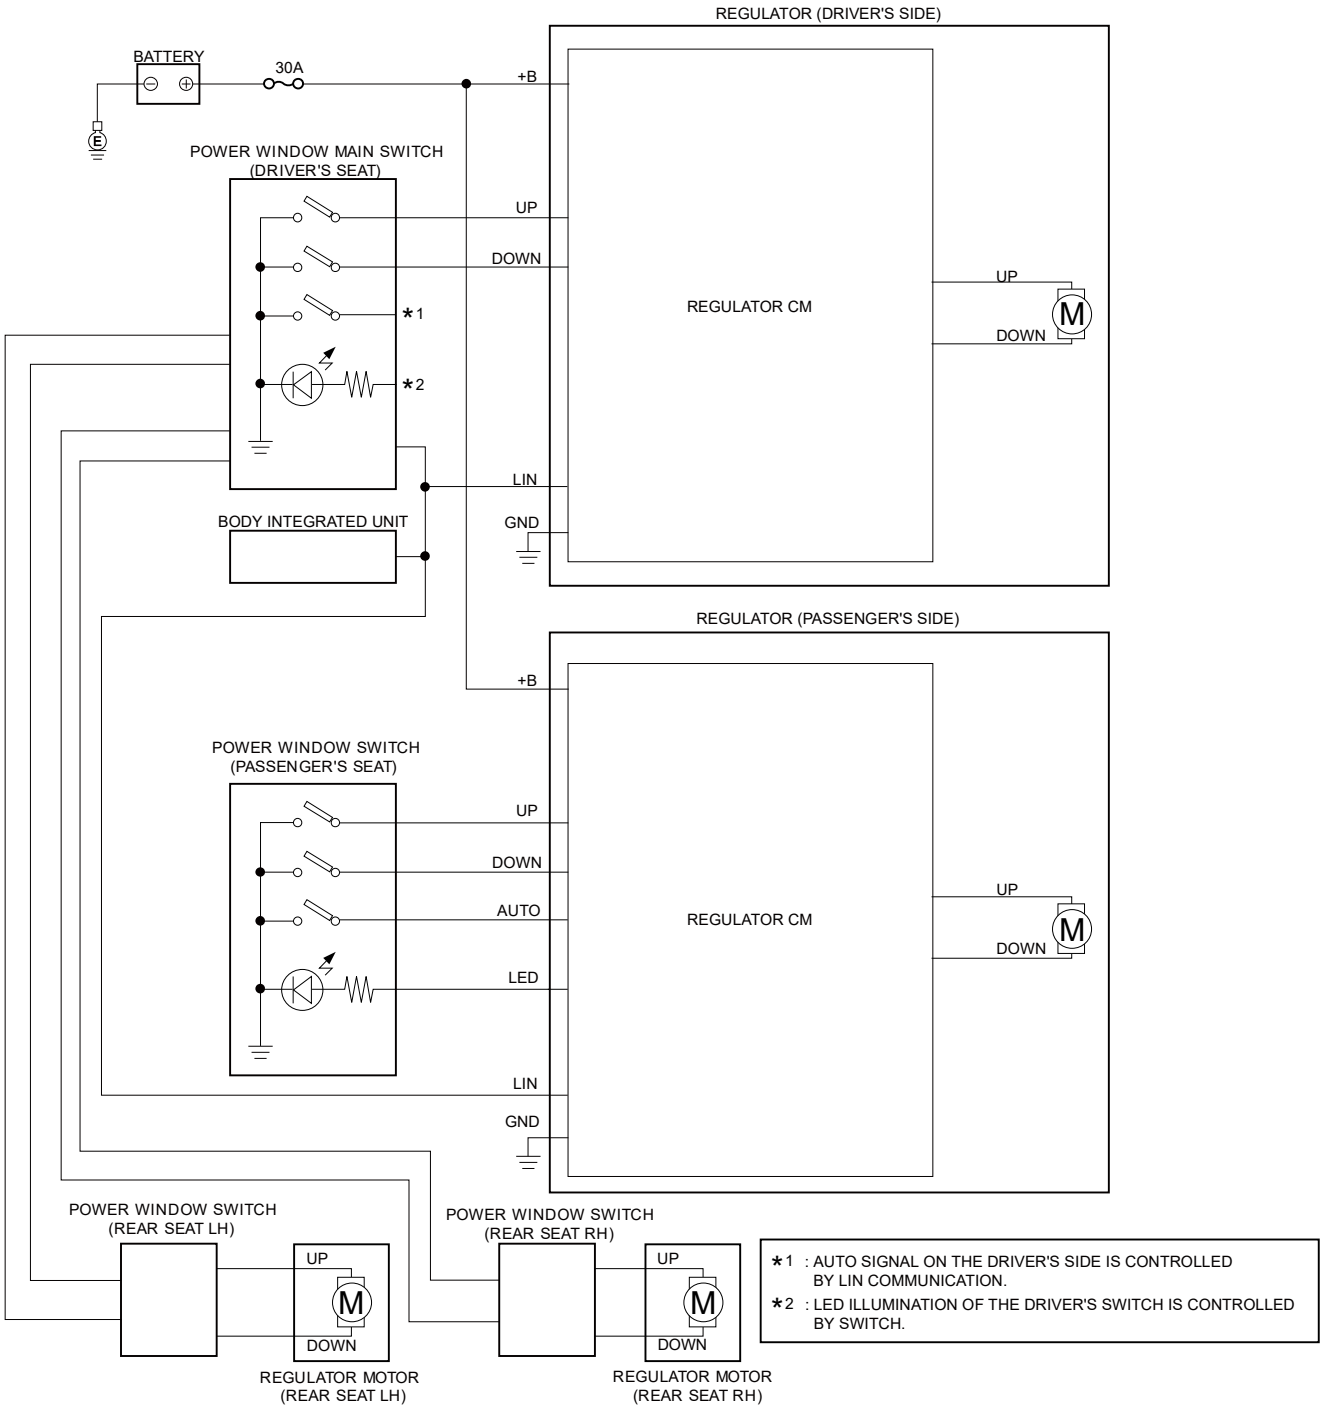
1. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.
2. Check the main and other fuses, and harnesses. Also check for proper grounding.

POWER WINDOW(DIAGNOSTICS) > General Description

PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. **Note: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".**

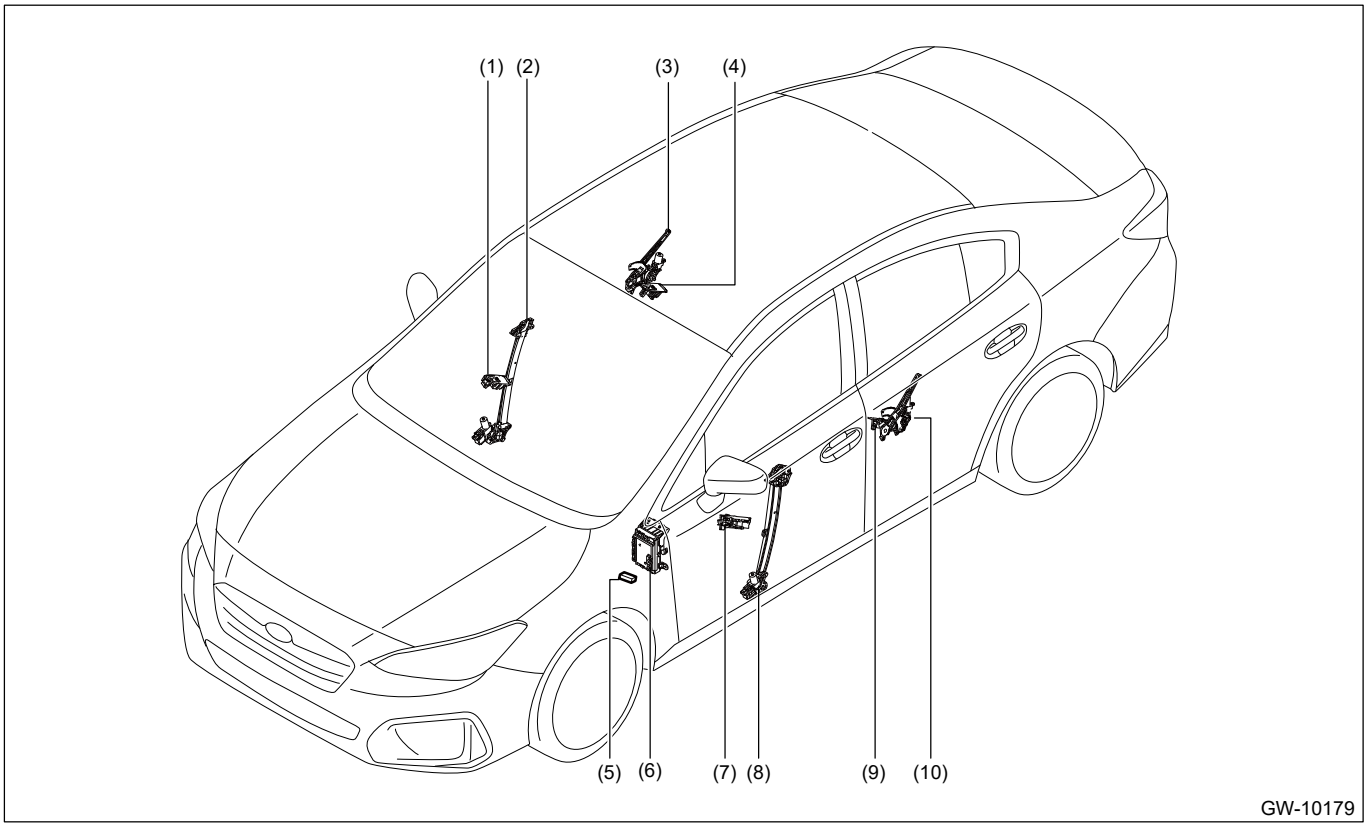


2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

POWER WINDOW(DIAGNOSTICS) > General Description

SYSTEM BLOCK DIAGRAM



The front regulator is equipped with a control module that controls the operational speed. It is connected with the body integrated unit via LIN communication. They are operated by individual switches. Only front windows use PLS signals of motors for reversing and controlling operational speed.

GW-10141

(D3) or (D13) No. 8 ←→ Chassis ground	SW ASSY PW UP operation input	—	—

POWER WINDOW(DIAGNOSTICS) > Inspection Mode

PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

Code	Description & trouble part	Note
B2B00	Driver's Door Power Window Auto Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Driver)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Using the driver's side power window switch, operate the automatic up/down feature and check that the window rolls up and down.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

Code	Description & trouble part	Note
B2B01	Driver's Door Power Window Manual Up Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Driver)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Pull up the driver's side power window switch and check that the window rolls up.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Note:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

Code	Description & trouble part	Note
B2B02	Driver's Door Power Window Manual Down Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Driver)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Press down the driver's side power window switch and check that the window rolls down.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

4. INSPECTION MODE 4

Code	Description & trouble part	Note
B2B03	Driver's Door Power Window Pulse1 and 2 No Signal	—
B2B04	Driver's Door Power Window Pulse 1 No Signal	—
B2B05	Driver's Door Power Window Pulse 2 No Signal	—
B2B06	Driver's Door Power Window Pulse Direction	—
B2B07	Driver's Door Power Window Position	—
B2B08	Driver's Door Power Window Continuous Reversal	—
B2B09	Driver's Door Power Window Control Module EEPROM	—
B2B23	Passenger's Door Power Window Pulse 1 and 2 No Signal	—
B2B24	Passenger's Door Power Window Pulse 1 No Signal	—
B2B25	Passenger's Door Power Window Pulse 2 No Signal	—
B2B26	Passenger's Door Power Window Pulse Direction	—
B2B27	Passenger's Door Power Window Position	—

Code	Description & trouble part	Note
B2B28	Passenger's Door Power Window Continuous Reversal	—
B2B29	Passenger's Door Power Window Control Module EEPROM	—
B2B50	POWER WINDOW MAIN SWITCH FAILURE	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Switch)], [Power Window (Driver)] or [Power Window (Passenger)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the [Power Window (Switch)], [Power Window (Driver)] or [Power Window (Passenger)] DTC and check that the concerned DTC is not displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. After initialization operation Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>NOTE., pull up and press down power window switch at a passenger's own seat, and check that the window rolls up and down automatically.
4. Using the Subaru Select Monitor, read the [Power Window (Switch)], [Power Window (Driver)] or [Power Window (Passenger)] DTC and check that the concerned DTC is not displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

5. INSPECTION MODE 5

Code	Description & trouble part	Note
B2B10	Passenger's Door Power Window Driver's Door Auto Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Driver)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Using the automatic up and down feature of the driver's side main switch and check that the window operates automatically.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Note:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

6. INSPECTION MODE 6

Code	Description & trouble part	Note
B2B11	Passenger's Door Power Window Driver's Door Manual Up Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Driver)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Pull up the driver's side main switch and check that the window rolls up.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

7. INSPECTION MODE 7

Code	Description & trouble part	Note
B2B12	Passenger's Door Power Window Driver's Door Manual Down Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Driver)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Press down the driver's side main switch and check that the window rolls down.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Driver)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

8. INSPECTION MODE 8

Code	Description & trouble part	Note
B2B20	Passenger's Door Power Window Auto Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Passenger)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Passenger)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Using the passenger's side power window switch, operate the automatic up/down feature and check that the window rolls up and down.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Passenger)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

9. INSPECTION MODE 9

Code	Description & trouble part	Note
B2B21	Passenger's Door Power Window Manual Up Switch Stuck	—

Diagnostic procedure:

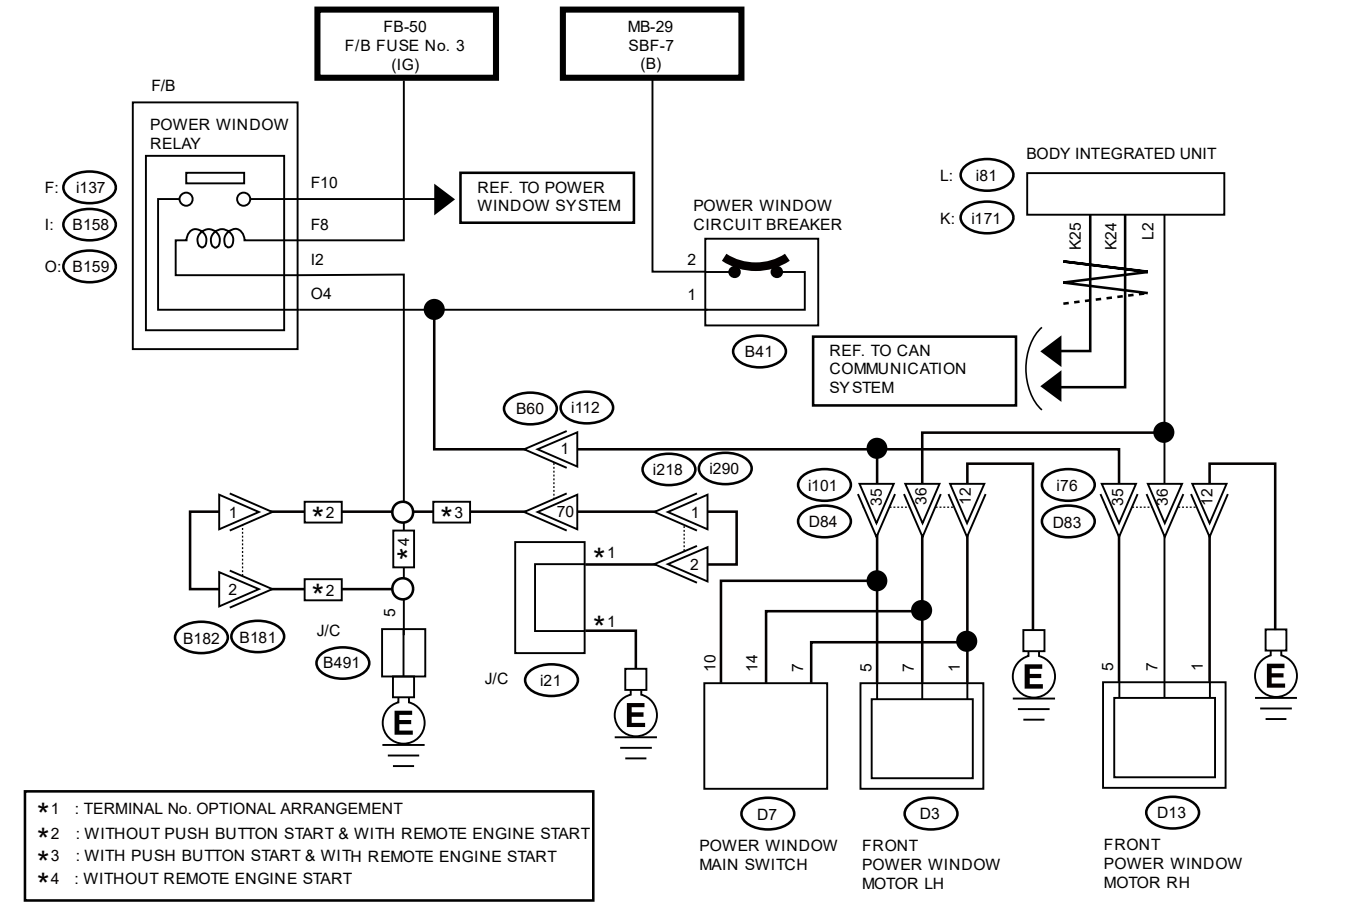
1. Using the Subaru Select Monitor, perform the clear memory of Power Window (Passenger). Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Passenger)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Pull up the passenger's side power window switch and check that the window rolls up.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Passenger)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

10. INSPECTION MODE 10

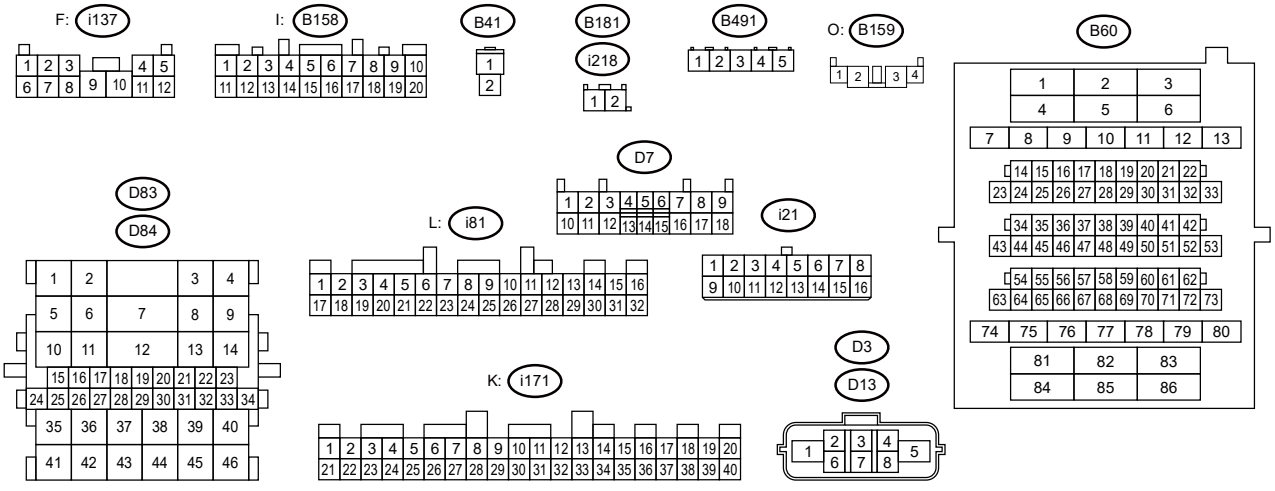
Code	Description & trouble part	Note
B2B22	Passenger's Door Power Window Manual Down Switch Stuck	—

Diagnostic procedure:

1. Using the Subaru Select Monitor, perform the clear memory of [Power Window (Passenger)]. Ref. to COMMON(diag)>Clear memory.
2. Using the Subaru Select Monitor, read the DTC of [Power Window (Passenger)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3. Press down the passenger's side power window switch and check that the window rolls down.
4. Using the Subaru Select Monitor, read the DTC of [Power Window (Passenger)] to check that there is no DTC displayed. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
   Note:
   If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.



POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure for Subaru Select Monitor Communication



INSPECTION

1. POWER WINDOW REGULATOR

Trouble symptom:
Cannot communicate with [Power Window (Driver)] or [Power Window (Passenger)].
Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:
Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.
CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

GW-10181

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK BATTERY TERMINAL.
- yes → Perform the instructed procedures.
- no → Go to 2.

2. CHECK IGNITION SWITCH.
- no → Go to 3.
- yes ↓

3. CHECK BATTERY.
- no → Perform the instructed procedures.
- yes ↓

4. CHECK LAN SYSTEM.
- no → Perform the instructed procedures.
- yes ↓

5. CHECK POWER WIDOW REGULATOR CONNECTOR.
- no → Perform the instructed procedures.
- yes ↓

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.
- yes → Perform the instructed procedures.
- no → Go to 7.

7. CHECK POWER SUPPLY CIRCUIT.
- no → Perform the instructed procedures.
- yes ↓

8. CHECK HARNESS BETWEEN POWER WIDOW REGULATOR AND CHASSIS GROUND.

no → Perform the instructed procedures.

yes ↓

9. CHECK POOR CONTACT OF CONNECTORS.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK BATTERY TERMINAL.

Check battery terminal.

Is there poor contact at battery terminal?

Yes	Replace or tighten the battery terminal.
No	Go to 2.

2. CHECK IGNITION SWITCH.

Check the ignition switch.

Is the ignition switch ON?

Yes	Go to 3.
No	Turn the ignition switch to ON, and Go to 3.

3. CHECK BATTERY.

1. Turn the ignition switch to OFF.
2. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the battery OK?

Yes	Go to 4.
No	Charge or replace the battery.

4. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is LAN system OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

5. CHECK POWER WIDOW REGULATOR CONNECTOR.

1. Turn the ignition switch to OFF.
2. Check power window regulator connector.

Is the power window regulator connector inserted into the power window regulator until the clamp locks?

Yes	Go to 6.
No	Insert the power window regulator connector into the power window regulator.

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check whether the communication with [Power Window (Driver)] and [Power Window (Passenger)] can be executed normally.

Is communication performed normally?

Yes	Read [Power Window (Driver)] and [Power Window (Passenger)] DTCs, and perform the diagnosis for the displayed DTCs. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
No	Go to 7.

7. CHECK POWER SUPPLY CIRCUIT.

1. Disconnect the power window regulator connector.
2. Turn the ignition switch to ON. (Engine OFF)
3. Using a tester, measure the ignition power supply voltage between the power window regulator connector and chassis ground.

Connector & terminal

LH seat

(D3) No. 5 (+) — Chassis ground (−):

RH seat

(D13) No. 5 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 8.
No	Repair the open circuit of harness between the power window regulator and battery.

8. CHECK HARNESS BETWEEN POWER WIDOW REGULATOR AND CHASSIS GROUND.

1. Turn the ignition switch to OFF.
2. Using a tester to measure the harness resistance between the power window regulator connector and chassis ground.
   Connector & terminal
   LH seat
   (D3) No. 1 (+) — Chassis ground (−):
   RH seat
   (D13) No. 1 (+) — Chassis ground (−):

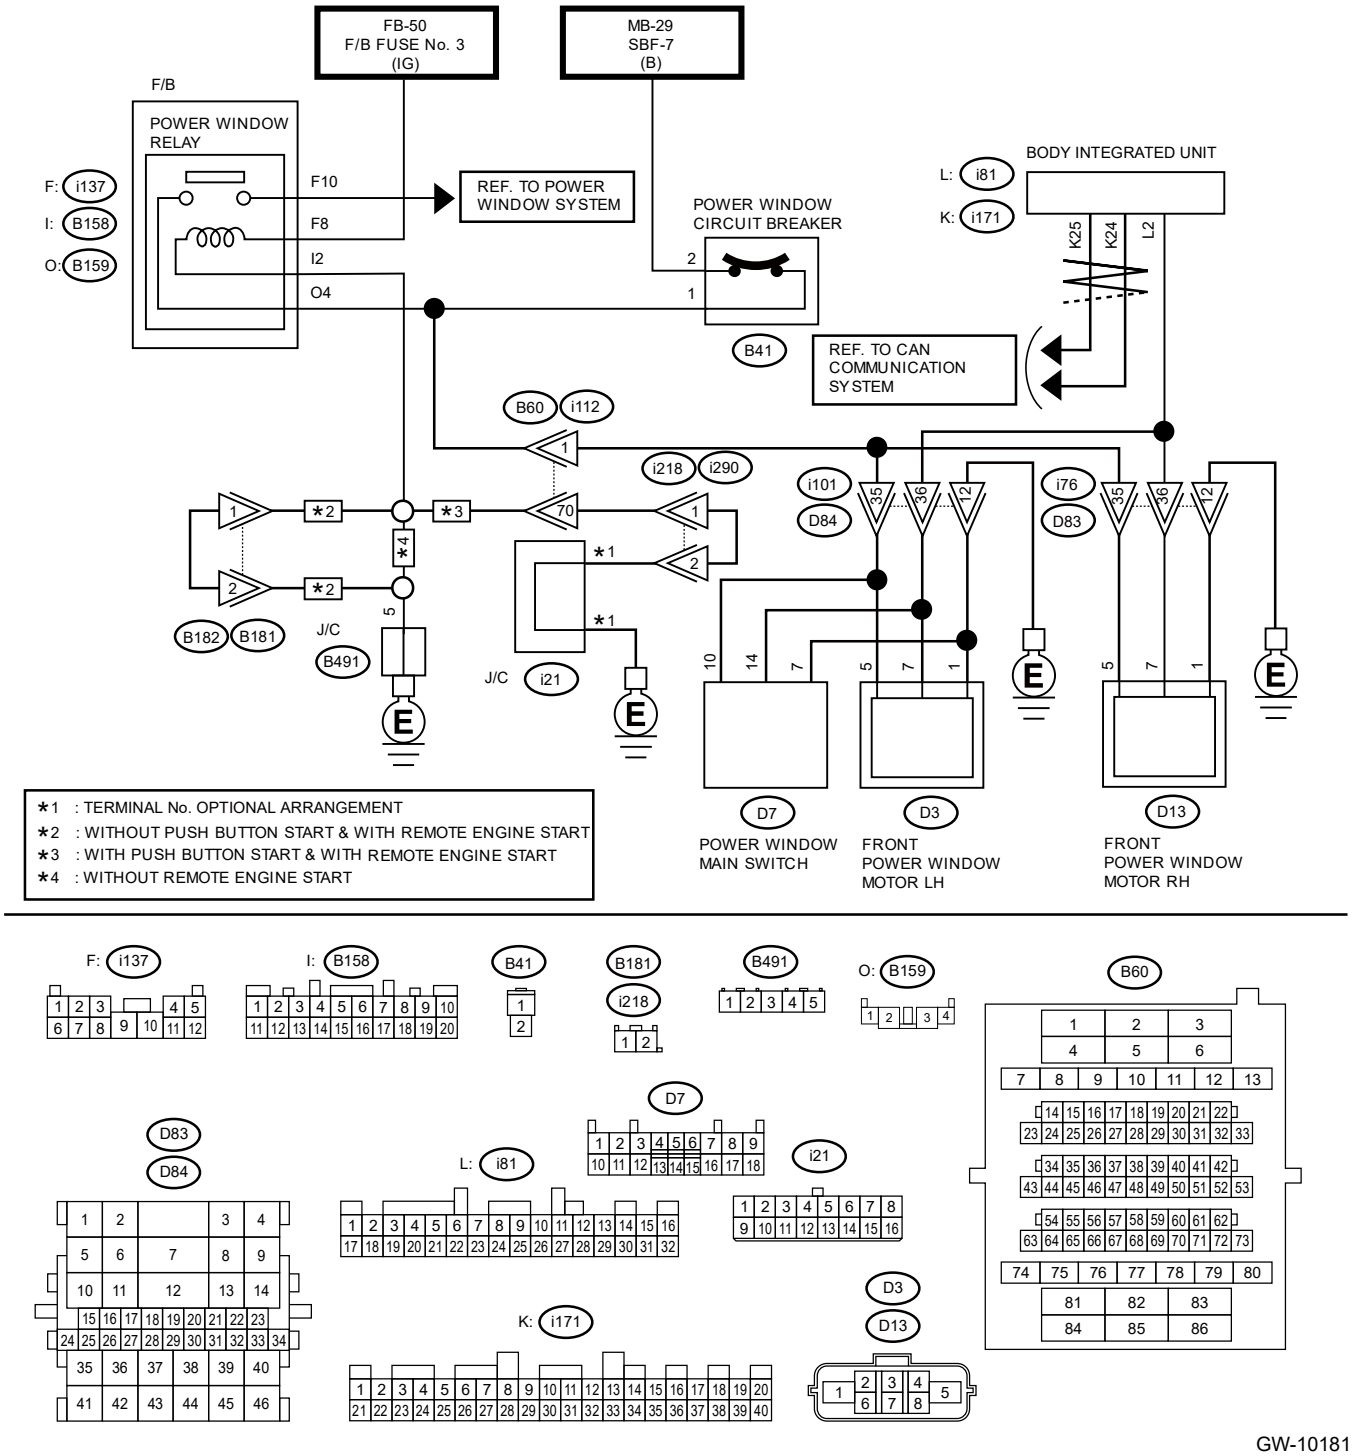
Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair the open circuit of the power window regulator ground circuit and the poor contact of connector.

9. CHECK POOR CONTACT OF CONNECTORS.

Check the power window regulator power supply circuit, ground circuit, or data link connector for poor contact.

Is there poor contact in the power window regulator power supply circuit, ground circuit, or data link connector?



Yes	Repair the poor contact of connector.
No	If initialization communication using Select Monitor is impossible at this time, replace the power window regulator. If the communication is possible, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. POWER WINDOW MAIN SWITCH

Trouble symptom:
Cannot communicate with [Power Window (Switch)].
Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.
CAN communication system Ref. to WIRING SYSTEM>CAN Communication System>WIRING DIAGRAM.

GW-10181

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK BATTERY TERMINAL.
- yes → Perform the instructed procedures.
- no → Go to 2.

2. CHECK IGNITION SWITCH.
- no → Go to 3.
- yes ↓

3. CHECK BATTERY.
- no → Perform the instructed procedures.
- yes ↓

4. CHECK LAN SYSTEM.
- no → Perform the instructed procedures.
- yes ↓

5. CHECK POWER WINDOW MAIN SWITCH CONNECTOR.
- no → Perform the instructed procedures.
- yes ↓

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.
- yes → Perform the instructed procedures.
- no → Go to 7.

7. CHECK POWER SUPPLY CIRCUIT.
- no → Perform the instructed procedures.
- yes ↓

8. CHECK HARNESS BETWEEN POWER WINDOW MAIN SWITCH AND CHASSIS GROUND.

no → Perform the instructed procedures.

yes ↓

9. CHECK POOR CONTACT OF CONNECTORS.

yes → Perform the instructed procedures.

no → Perform the instructed procedures.

1. CHECK BATTERY TERMINAL.

Check battery terminal.

Is there poor contact at battery terminal?

Yes	Replace or tighten the battery terminal.
No	Go to 2.

2. CHECK IGNITION SWITCH.

Check the ignition switch.

Is the ignition switch ON?

Yes	Go to 3.
No	Turn the ignition switch to ON, and Go to 3.

3. CHECK BATTERY.

1. Turn the ignition switch to OFF.
2. Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the battery OK?

Yes	Go to 4.
No	Charge or replace the battery.

4. CHECK LAN SYSTEM.

Perform the diagnosis for LAN system. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.

Is LAN system OK?

Yes	Go to 5.
No	Perform the inspection according to the diagnosis for LAN system.

5. CHECK POWER WINDOW MAIN SWITCH CONNECTOR.

1. Turn the ignition switch to OFF.
2. Check the power window main switch connector.

Is the power window main switch connector inserted into the power window main switch until the clamp locks?

Yes	Go to 6.
No	Insert the power window main switch connector into the power window main switch.

6. CHECK SUBARU SELECT MONITOR COMMUNICATION.

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check whether the communication with [Power Window (Switch)] can be executed normally.

Is communication performed normally?

Yes	Read [Power Window (Switch)] DTCs, and perform the diagnosis for the displayed DTCs. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).
No	Go to 7.

7. CHECK POWER SUPPLY CIRCUIT.

1. Disconnect the power window main switch connector.
2. Turn the ignition switch to ON. (Engine OFF)
3. Using a tester, measure the ignition power supply voltage between the power window main switch connector and chassis ground.
   Connector & terminal
   (D7) No. 10 (+) — Chassis ground (−):

Is the voltage 10 — 15 V?

Yes	Go to 8.
No	Repair the open circuit of harness between the power window main switch and the battery.

8. CHECK HARNESS BETWEEN POWER WINDOW MAIN SWITCH AND CHASSIS GROUND.

1. Turn the ignition switch to OFF.
2. Using a tester, measure the resistance of the harness between the power window main switch connector and chassis ground.
   Connector & terminal
   (D7) No. 7 (+) — Chassis ground (−):

Is the resistance less than 1 Ω?

Yes	Go to 9.
No	Repair the open circuit of the power window main switch ground circuit and the poor contact of connector.

9. CHECK POOR CONTACT OF CONNECTORS.

Check the power window main switch power supply circuit, ground circuit, or data link connector for poor contact.

Is there poor contact in the power window main switch power supply circuit, ground circuit, or data link connector?

Yes	Repair the poor contact of connector.
No	If initialization communication using Select Monitor is impossible at this time, replace the power window main switch. If the communication is possible, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

POWER WINDOW(DIAGNOSTICS) > Data Monitor

OPERATION

Note:

- **Refer to "COMMON (diag)". Ref. to COMMON(diag)>Data Monitor.**
- **For details on the data monitor, refer to the list. Ref. to POWER WINDOW(DIAGNOSTICS) >Data Monitor>LIST.**

POWER WINDOW(DIAGNOSTICS) > Active Test

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Power Window (Driver)] or [Power Window (Passenger)], and then select [Enter].
5. On [Select Function] display, select [Active Test].

POWER WINDOW(DIAGNOSTICS) > Active Test

LIST

Active test items	Range	Remarks	Execution condition
Power Window Operation Test	UP DOWN cancel	By forcibly operating the power window motor, it is possible to determine whether motor's up, down, and stop functions work normally.	• Ignition switch ON • Initialized state • Pulse fail not detected • UP terminal input OFF • DN terminal input OFF • AUTO terminal input OFF • Power window stops
LED Switch Lighting Test (Passenger's side only)	Check cancel	It is possible to determine whether ON and OFF functions of power window passenger's side switch LED work normally. (when Diagnosis mode is switched) **Note:** **The LED should comes on and off as the ignition switch is turned OFF and OFF.**	Ignition switch ON

POWER WINDOW(DIAGNOSTICS) > Work Support

OPERATION

1. SYSTEM INITIALIZATION

Sometimes top dead position or bottom dead position becomes misaligned even if it is initialized by operating the power window switches.
With this procedure, the following data can be initialized.

- Top dead position
- Bottom dead position
- Sliding resistance
- DTC/FFD
- Data monitor history items

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Power Window (Driver)] or [Power Window (Passenger)], and then select [Enter].
5. On [Select Function] display, select [Work Support].
6. On [Work Support] display, select [Initialization Mode].
7. On [Initialization Mode] display, select [System Initialization].
8. Perform operation following directions in the Subaru Select Monitor.

2. CLEARING HISTORY

With this procedure, the following data can be initialized.

- Data monitor history items

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select [Power Window (Driver)] or [Power Window (Passenger)], and then select [Enter].
5. On [Select Function] display, select [Work Support].
6. On [Work Support] display, select [Initialization Mode].
7. On [Initialization Mode] display, select [History Clear].
8. Perform operation following directions in the Subaru Select Monitor.

POWER WINDOW(DIAGNOSTICS) > Work Support

NOTE

1. INITIALIZATION BY POWER WINDOW SWITCH (DRIVER'S SIDE)

Perform registration when any of the following procedures are taken.

- With the ignition switch ON, when a power window is rolled up/down and then the power supply is cut. (This is because the positional information is updated at the moment the power window is moved after the ignition switch is turned ON.)
- When regulator or regulator motor is replaced. (Registration is not necessary when the battery is

replaced.)

1. Turn the ignition switch to ON.
2. Operate the switch - power window main in “DOWN” direction to fully open the driver’s side glass assembly - front door. Once the window is fully opened, hold the switch for longer than one second.
   Note:
   Wherever the glass is at any position, operate the switch in “DOWN” direction.
3. Operate the power window main switch in “UP” direction to fully close the driver’s side glass assembly - front door. Once the window is fully closed, hold the switch for longer than one second.
   Note:
   At this time, do not move the vehicle.
4. Operate the power window main switch in “AUTO DOWN” direction to check whether the window fully opens properly. Also, operate the switch in “AUTO UP” direction to check whether the window fully closed properly.
   Note:
   If the window does not fully open/close properly, repeat steps 1) to 4).

2. INITIALIZATION BY POWER WINDOW SWITCH (PASSENGER’S SIDE)

Perform registration when any of the following procedures are taken.

- With the ignition switch ON, when a power window is rolled up/down and then the power supply is cut. (This is because the positional information is updated at the moment the power window is moved after the ignition switch is turned ON.)
- When regulator or regulator motor is replaced. (Registration is not necessary when the battery is replaced.)

1. Turn the ignition switch to ON.
2. Operate the switch - power window main or passenger’s side switch - power window in “DOWN” direction to fully open the driver’s side glass assembly - front door. Once the window is fully opened, hold the switch for longer than one second.
   Note:
   - **Wherever the glass is at any position, operate the switch in “DOWN” direction.**
   - **The operation can be done from both switch - power window main and passenger’s side switch - power window.**
3. Operate the switch - power window main or passenger’s side switch - power window in “UP” direction to fully close the driver’s side glass assembly - front door. Once the window is fully closed, hold the switch for longer than one second.
   Note:
   At this time, do not move the vehicle.
4. Operate the switch - power window main or passenger’s side switch - power window in “AUTO DOWN” direction to check whether the window fully opens properly. Also, operate the switch in “AUTO UP” direction to check whether the window fully closed properly.
   Note:
   - **If the window does not fully open/close properly, repeat steps 1) to 4).**
   - **The operation can be done from both switch - power window main and passenger’s side switch - power window.**

3. HOW TO RESET THE FULL OPEN STOP POSITION

When the full open stop position becomes misaligned, it can be reset by performing the following

procedure.

1. Turn the ignition switch to ON.
2. Operate and hold the switch - power window in “AUTO DOWN” direction (fully pull up the switch) for three seconds.

   Note:

   For the driver’s side window, this can be done with the switch - power window main, and for the passenger’s side window the switch - power window main or the passenger’s side switch - power window can be used.
3. Check that the glass assembly - front door starts rolling down and fully opens.
4. Operate the switch - power window in “AUTO UP” direction to check whether the window fully closes properly.

4. HOW TO RESET THE FULL CLOSE STOP POSITION

When the full close stop position becomes misaligned, it can be reset by performing the following procedure.

1. Turn the ignition switch to ON.
2. Operate and hold the switch - power window in “AUTO UP” direction (fully pull up the switch) for three seconds.

   Note:

   For the driver’s side window, this can be done with the switch - power window main, and for the passenger’s side window the switch - power window main or the passenger’s side switch - power window can be used.
3. Check that the glass assembly - front door starts rolling down and fully closes.
4. Operate the switch - power window in “AUTO DOWN” direction to check whether the window fully opens properly.

POWER WINDOW(DIAGNOSTICS) > Diagnostic Trouble Code (DTC)

OPERATION

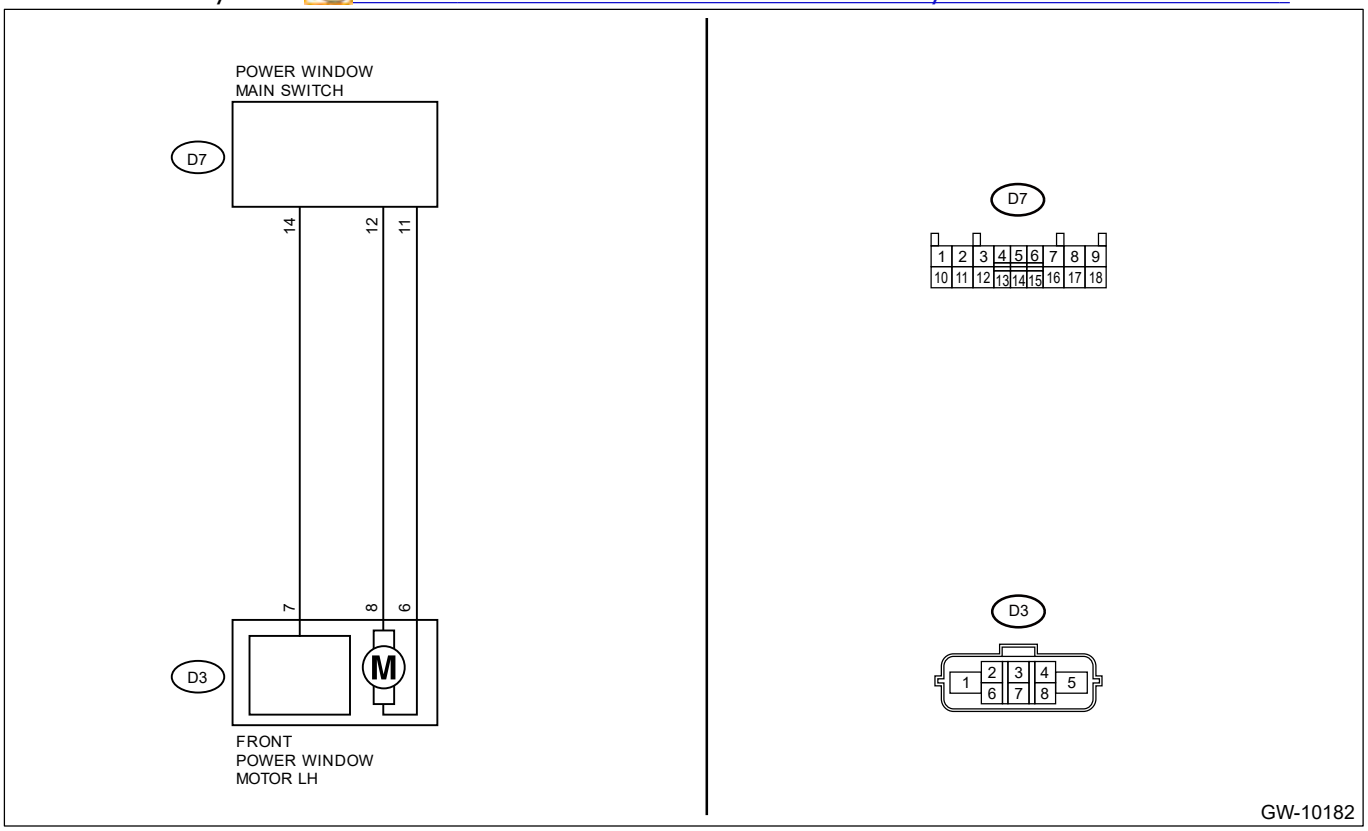
POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B00 DRIVER'S DOOR POWER WINDOW AUTO SWITCH STUCK

DTC detecting condition:



When AUTO Terminal Input ON state continues for 20±1 second or longer.

Trouble symptom:

- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK POWER WINDOW MAIN SWITCH UNIT.

Perform the inspection of power window main switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the power window main switch OK?

Yes	Go to 2.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly LH connector.
3. Disconnect the front regulator & motor assembly RH connector.
4. Disconnect the body integrated unit connector.
5. Using a tester, measure the resistance between power window main switch connector and front regulator & motor assembly connector.
   Connector & terminal
   (D7) No. 14 — (D3) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & motor assembly connector.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the power window main switch connector and chassis ground.

Connector & terminal

(D7) No. 14 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the open harness causing short-to ground condition between power window main switch connector and front regulator & motor assembly connector.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the power window main switch connector and chassis ground.

   Connector & terminal

   (D7) No. 14 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the open harness causing short-to power supply condition between power window main switch connector and front regulator & motor assembly connector.

5. CHECK FRONT REGULATOR & MOTOR ASSEMBLY.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 6.
No	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

6. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

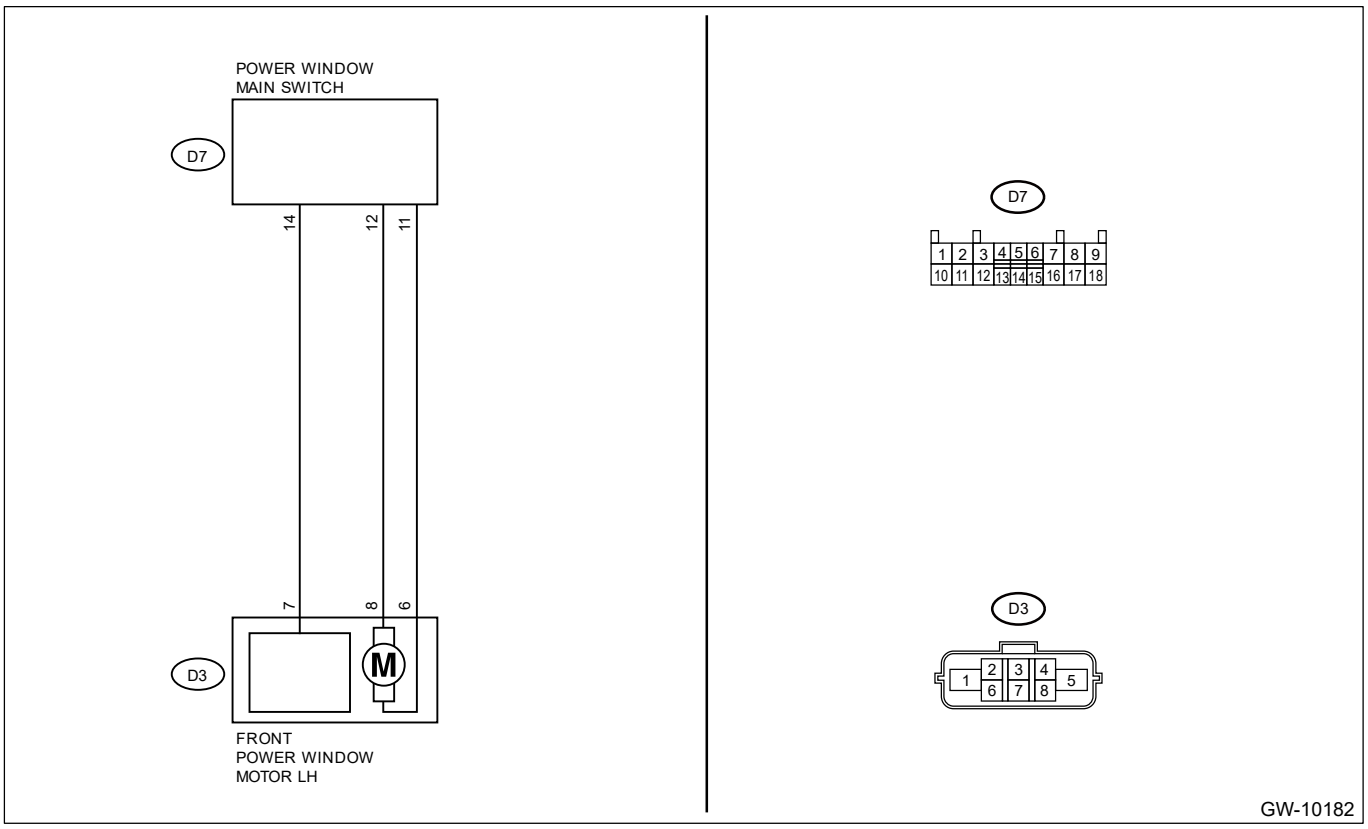
Is DTC B2B00 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B01 DRIVER'S DOOR POWER WINDOW MANUAL UP SWITCH STUCK

DTC detecting condition:



UP Terminal Input ON state continues for 20±1 second or longer.

Trouble symptom:

- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK POWER WINDOW MAIN SWITCH UNIT.

Perform the inspection of power window main switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the power window main switch OK?

Yes	Go to 2.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly LH connector.
3. Disconnect the front regulator & motor assembly RH connector.
4. Disconnect the body integrated unit connector.
5. Using a tester, measure the resistance between power window main switch connector and front regulator & motor assembly connector.

Connector & terminal

(D7) No. 14 — (D3) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & motor assembly connector.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the power window main switch connector and chassis ground.

Connector & terminal

(D7) No. 14 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the open harness causing short-to ground condition between power window main switch connector and front regulator & motor assembly connector.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the power window main switch connector and chassis ground.
   Connector & terminal
   (D7) No. 14 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the open harness causing short-to power supply condition between power window main switch connector and front regulator & motor assembly connector.

5. CHECK FRONT REGULATOR & MOTOR ASSEMBLY.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

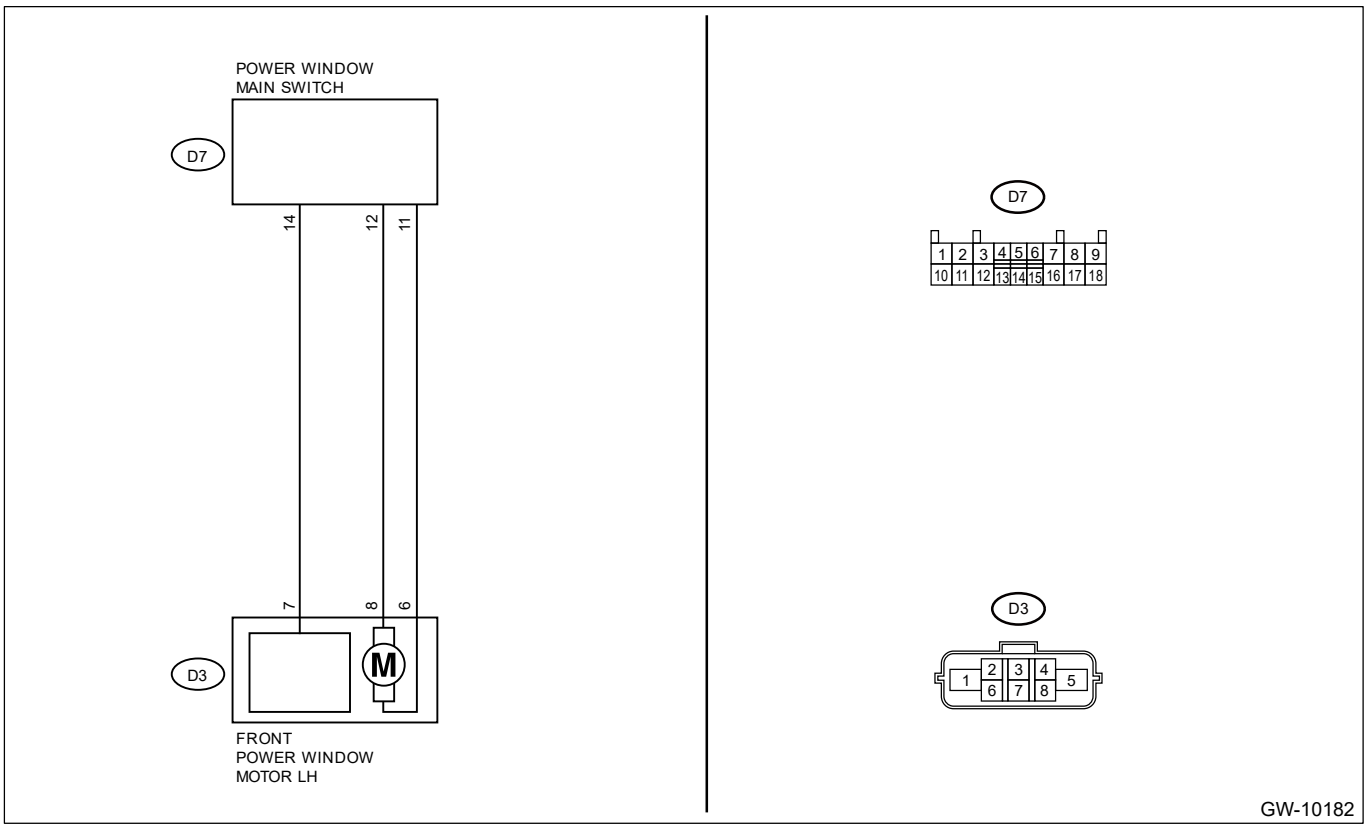
Does the window roll up and down?

Yes	Go to 6.
No	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

6. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B01 displayed? (Current malfunction)



Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B02 DRIVER'S DOOR POWER WINDOW MANUAL DOWN SWITCH STUCK

DTC detecting condition:
UP Terminal Input ON state continues for 20±1 second or longer.
Trouble symptom:
- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:
Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK POWER WINDOW MAIN SWITCH UNIT.

Perform the inspection of power window main switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the power window main switch OK?

Yes	Go to 2.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly LH connector.
3. Disconnect the front regulator & motor assembly RH connector.
4. Disconnect the body integrated unit connector.
5. Using a tester, measure the resistance between power window main switch connector and front regulator & motor assembly connector.

Connector & terminal

(D7) No. 14 — (D3) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & motor assembly connector.

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the power window main switch connector and chassis ground.

Connector & terminal

(D7) No. 14 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the open harness causing short-to ground condition between power window main switch connector and front regulator & motor assembly connector.

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the power window main switch connector and chassis ground.
   Connector & terminal
   (D7) No. 14 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the open harness causing short-to power supply condition between power window main switch connector and front regulator & motor assembly connector.

5. CHECK FRONT REGULATOR & MOTOR ASSEMBLY.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 6.
No	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

6. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B02 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B03 DRIVER'S DOOR POWER WINDOW PULSE1 AND 2 NO SIGNAL

DTC detecting condition:

When all the following conditions are established.

1. When sensing areas are recognized.
2. When no-pulse-input state continues in both pulse 1 and 2 phases.
3. When "absolute value judgment" is detected during UP operation.
4. After the condition 3 is met, when motor lock (no-pulse-input state in both pulses 1 and 2 phases for 300±10 milliseconds) is detected during reverse operation.

Trouble symptom:

- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window main switch and roll driver's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B03 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B04 DRIVER'S DOOR POWER WINDOW PULSE 1 NO SIGNAL

DTC detecting condition:

When the power window is rolling up (except in fully closed zone), change in pulse 1 phase (edge) is not detected while pulse 2 phase is producing 10 edges.

Trouble symptom:

- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Driver)].
   Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window main switch and roll driver's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B04 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B05 DRIVER'S DOOR POWER WINDOW PULSE 2 NO SIGNAL

DTC detecting condition:

When the power window is rolling up (except in fully closed zone), change in pulse 2 phase (edge) is not detected while pulse 1 phase is producing 10 edges.

Trouble symptom:

- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window main switch and roll driver's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B05 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B06 DRIVER'S DOOR POWER WINDOW PULSE DIRECTION

DTC detecting condition:
In UP/DOWN operation, when one hour of initial masking has elapsed since the motor is started, six edges of continuous pulse that are opposite to the window's moving direction are detected.
Trouble symptom:
- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Driver)].
   Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window main switch and roll driver's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B06 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B07 DRIVER'S DOOR POWER WINDOW POSITION

DTC detecting condition:

Top dead position error: In UP operation, when the window position counter reads -80 edge or less. (except uninitialized state)

Bottom dead position error: In DOWN operation, when the window position counter reads +130 edge or less of the bottom dead position. (except uninitialized state)

Trouble symptom:

- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. INITIALIZATION BY POWER WINDOW SWITCH (DRIVER'S SIDE).

1. Perform initialization using the power window switch. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>NOTE.
2. Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B07 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B07 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B08 DRIVER'S DOOR POWER WINDOW CONTINUOUS REVERSAL

DTC detecting condition:
When the number of times for detected continuous reverse operation counts 10 times or more. (Condition for addition: completion of reserve operation due to anti-pinch feature)
Trouble symptom:
- When the power window main switch is operated, driver's side window does not work.
- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK GLASS SLIDING SURFACE.

Check sliding surface of glass and running channel.

Is it free from any foreign matter?

Yes	Go to 2.
No	Remove the foreign matter, and Go to 2.

2. PERFORM SYSTEM RESTORATION PROCEDURES.

1. Operate the power window main switch and roll down the window to the full open position.
2. Operate the power window main switch and roll up the window to the full close position.
3. Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B08 displayed? (Current malfunction)

Yes	Go to 3.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 4.
No	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

4. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B08 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B09 DRIVER'S DOOR POWER WINDOW CONTROL MODULE EEPROM

DTC detecting condition:

When one of the following data cannot be read from the non-volatile memory as the CPU is reset.

- Window position
- Sliding learn value
- Initialization completed state
- Full open stop position

Trouble symptom:

- When the power window main switch is operated, driver's side window does not work.

- When the power window main switch is operated, driver's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. INITIALIZATION BY POWER WINDOW SWITCH (DRIVER'S SIDE).

1. Perform initialization using the power window switch. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>NOTE.
2. Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

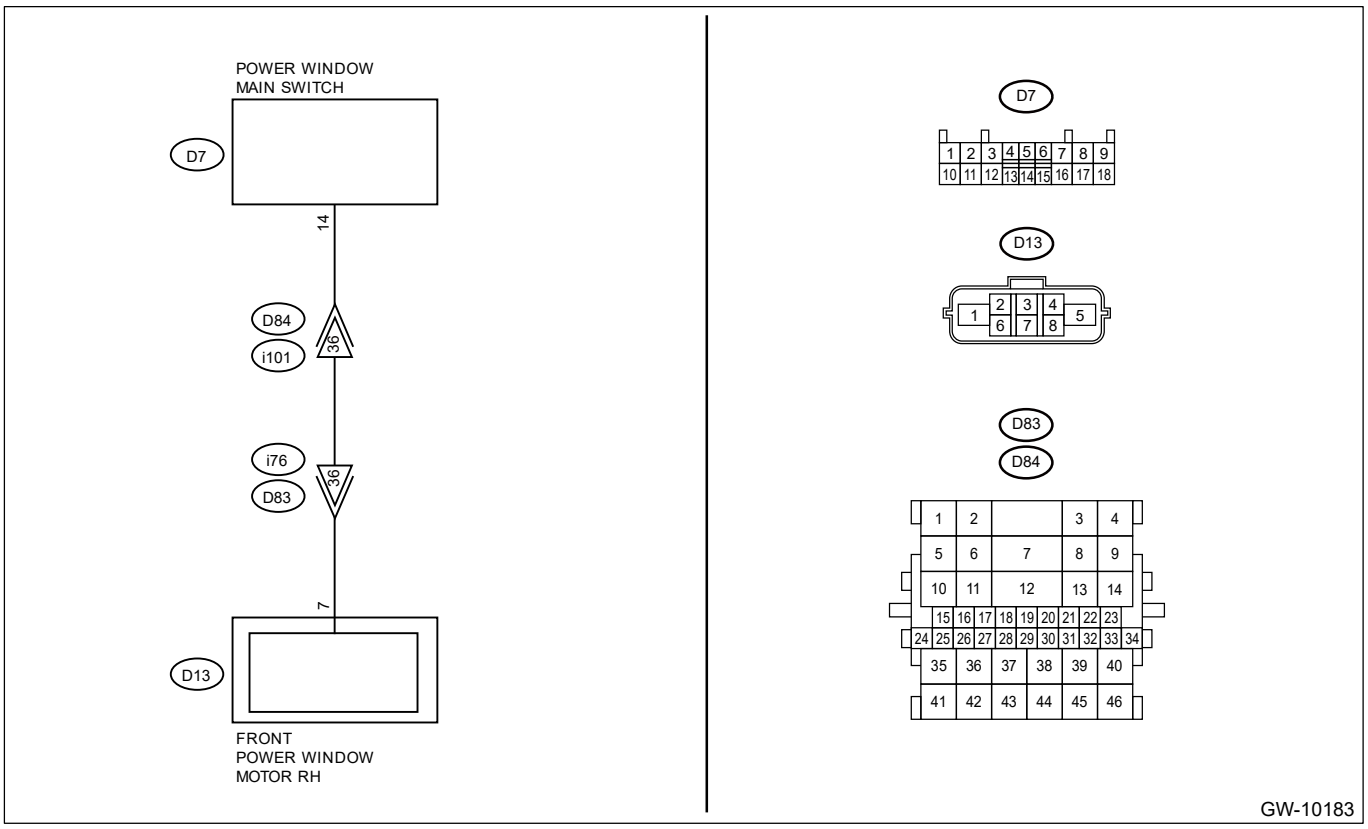
Is DTC B2B09 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B09 displayed? (Current malfunction)



Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B10 PASSENGER'S DOOR POWER WINDOW DRIVER'S DOOR AUTO SWITCH STUCK

DTC detecting condition:
When AUTO SW signal ON is received for 20±1 second or longer.
Trouble symptom:
- When the power window main switch is operated, passenger's side window does not work.
- When the power window main switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:
Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK POWER WINDOW MAIN SWITCH UNIT.

Perform the inspection of power window main switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the power window main switch OK?

Yes	Go to 2.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK [Remote switch] (DATA MONITOR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

   Data Monitor

   - [Remote switch]

Is «AUTO UP/ DOWN» displayed?

Yes	Go to 6.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly LH connector.
3. Disconnect the front regulator & motor assembly RH connector.
4. Disconnect the body integrated unit connector.
5. Using a tester, measure the resistance between power window main switch connector and front regulator & motor assembly connector (passenger's side).
   Connector & terminal
   (D7) No. 14 — (D13) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & assembly connector (passenger's side).

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the power window main switch connector and chassis ground.

Connector & terminal

(D7) No. 14 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the open harness causing short-to ground condition between power window main switch connector and front regulator & motor assembly connector (passenger's side).

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the power window main switch connector and chassis ground.

   Connector & terminal

   (D7) No. 14 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair the open harness causing short-to power supply condition between power window main switch connector and front regulator & motor assembly connector.

6. CHECK FRONT REGULATOR & MOTOR ASSEMBLY.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 7.
No	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

7. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

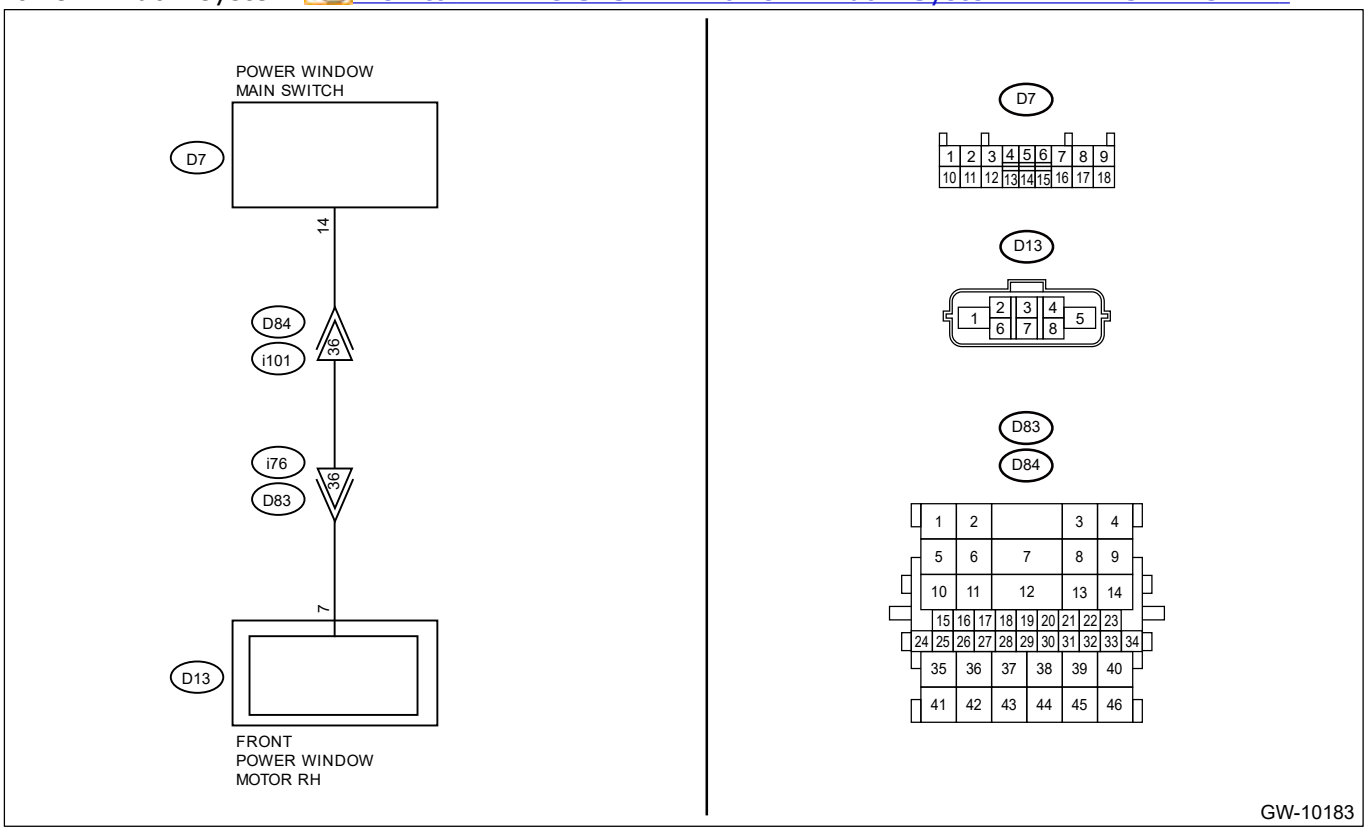
Is DTC B2B10 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B11 PASSENGER'S DOOR POWER WINDOW DRIVER'S DOOR MANUAL UP SWITCH STUCK

DTC detecting condition:



When Remote P/W signal UP is received for 20±1 second or longer.

Trouble symptom:

- When the power window main switch is operated, passenger's side window does not work.
- When the power window main switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK POWER WINDOW MAIN SWITCH UNIT.

Perform the inspection of power window main switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the power window main switch OK?

Yes	Go to 2.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK [Remote switch] (DATA MONITOR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Remote switch]

Is [UP] displayed?

Yes	Go to 6.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly LH connector.
3. Disconnect the front regulator & motor assembly RH connector.
4. Disconnect the body integrated unit connector.
5. Using a tester, measure the resistance between power window main switch connector and front regulator & motor assembly connector (passenger's side).
   Connector & terminal
   (D7) No. 14 — (D13) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & assembly connector (passenger's side).

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the power window main switch connector and chassis ground.

Connector & terminal

(D7) No. 14 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the open harness causing short-to ground condition between power window main switch connector and front regulator & motor assembly connector (passenger's side).

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the power window main switch connector and chassis ground.

   Connector & terminal

   (D7) No. 14 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair the open harness causing short-to power supply condition between power window main switch connector and front regulator & motor assembly connector.

6. CHECK FRONT REGULATOR & MOTOR ASSEMBLY.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 7.
No	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

7. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

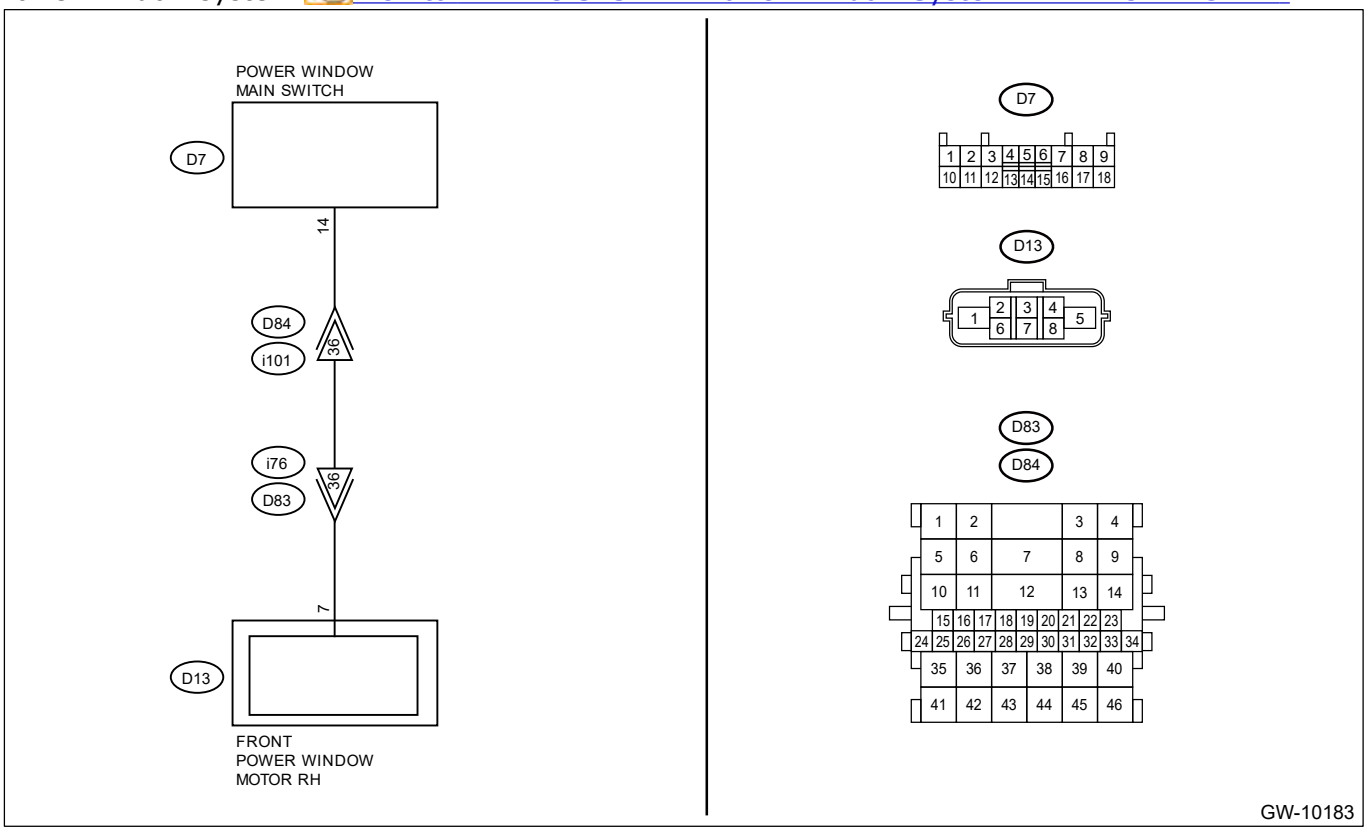
Is DTC B2B11 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B12 PASSENGER'S DOOR POWER WINDOW DRIVER'S DOOR MANUAL DOWN SWITCH STUCK

DTC detecting condition:



When Remote P/W signal DOWN is received for 20±1 second or longer.

Trouble symptom:

- When the power window main switch is operated, passenger's side window does not work.
- When the power window main switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK POWER WINDOW MAIN SWITCH UNIT.

Perform the inspection of power window main switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the power window main switch OK?

Yes	Go to 2.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK [Remote switch] (DATA MONITOR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Remote switch]

Is [DOWN] displayed?

Yes	Go to 6.
No	Go to 3.

3. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly LH connector.
3. Disconnect the front regulator & motor assembly RH connector.
4. Disconnect the body integrated unit connector.
5. Using a tester, measure the resistance between power window main switch connector and front regulator & motor assembly connector (passenger's side).
   Connector & terminal
   (D7) No. 14 — (D13) No. 7:

Is the resistance less than 1 Ω?

Yes	Go to 4.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & assembly connector (passenger's side).

4. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the power window main switch connector and chassis ground.

Connector & terminal

(D7) No. 14 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 5.
No	Repair the open harness causing short-to ground condition between power window main switch connector and front regulator & motor assembly connector (passenger's side).

5. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the power window main switch connector and chassis ground.

   Connector & terminal

   (D7) No. 14 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 6.
No	Repair the open harness causing short-to power supply condition between power window main switch connector and front regulator & motor assembly connector.

6. CHECK FRONT REGULATOR & MOTOR ASSEMBLY.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 7.
No	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

7. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

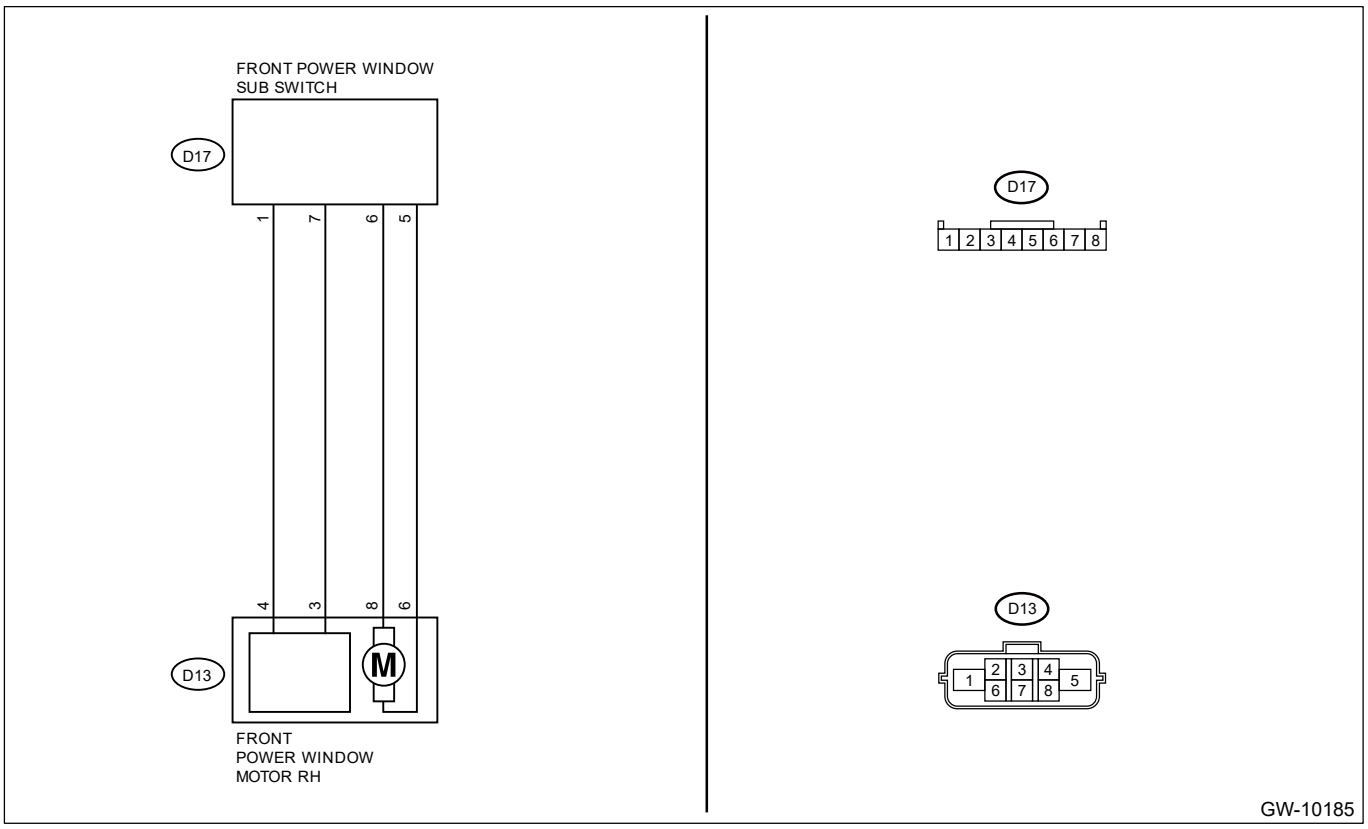
Is DTC B2B12 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B20 PASSENGER'S DOOR POWER WINDOW AUTO SWITCH STUCK

DTC detecting condition:



When AUTO Terminal Input ON is received for 20±1 second or longer.

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK FRONT POWER WINDOW SUB-SWITCH UNIT.

Perform the inspection of front power window sub-switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the front power window sub-switch OK?

Yes	Go to 2.
No	Replace the front power window sub-switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the front power window sub-switch connector.
2. Disconnect the front regulator & motor assembly connector (passenger's side).
3. Disconnect the body integrated unit connector.
4. Using a tester, measure the resistance between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).
   Connector & terminal
   (D17) No. 1 — (D13) No. 4:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the front power window sub-switch connector and chassis ground.

Connector & terminal
(D17) No. 1 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the open harness causing short-to ground condition between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the front power window sub-switch connector and chassis ground.
   Connector & terminal
   (D17) No. 1 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the open harness causing short-to power supply condition between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

5. ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 6.
No	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

6. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B20 displayed? (Current malfunction)

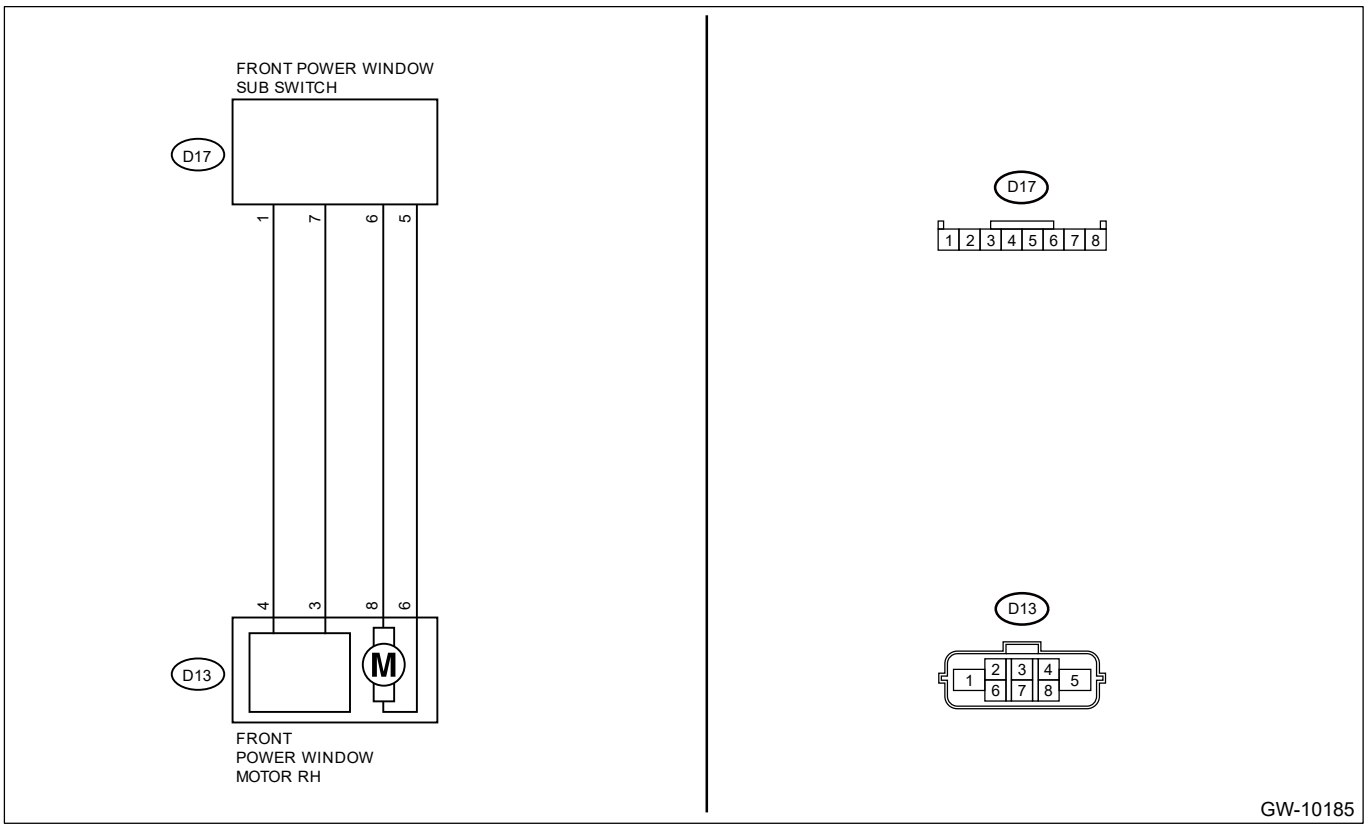
Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B21 PASSENGER'S DOOR POWER WINDOW MANUAL UP SWITCH STUCK

DTC detecting condition:

When UP Terminal Input ON is received for 20±1 second or longer.



When the front power window sub-switch is operated, passenger's side window does not work.

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK FRONT POWER WINDOW SUB-SWITCH UNIT.

Perform the inspection of front power window sub-switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the front power window sub-switch OK?

Yes	Go to 2.
No	Replace the front power window sub-switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the front power window sub-switch connector.
2. Disconnect the front regulator & motor assembly connector (passenger's side).
3. Disconnect the body integrated unit connector.
4. Using a tester, measure the resistance between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).
   Connector & terminal
   (D17) No. 6 — (D13) No. 8:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the front power window sub-switch connector and chassis ground.

Connector & terminal
(D17) No. 6 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the open harness causing short-to ground condition between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the front power window sub-switch connector and chassis ground.
   Connector & terminal
   (D17) No. 6 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the open harness causing short-to power supply condition between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

5. ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 6.
No	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

6. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

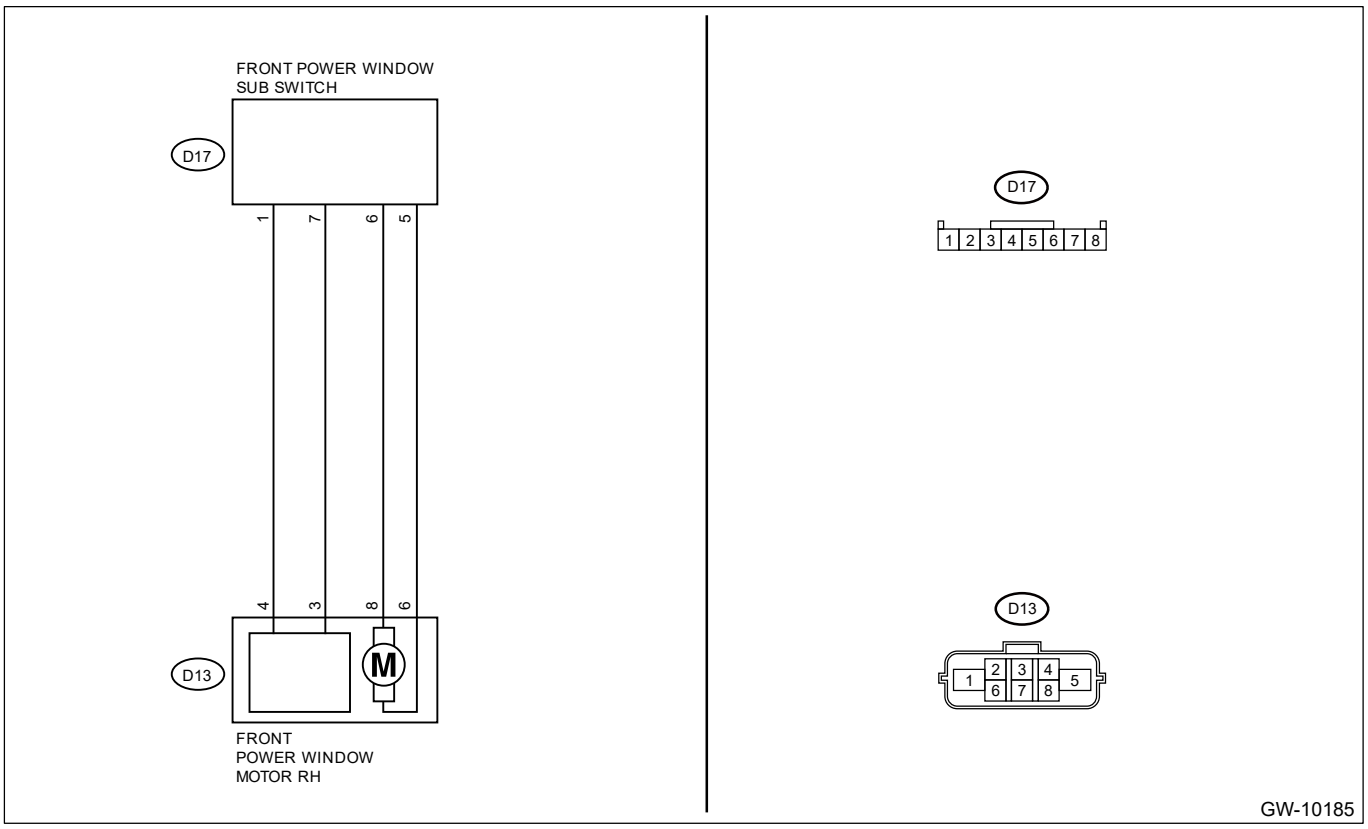
Is DTC B2B21 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B22 PASSENGER'S DOOR POWER WINDOW MANUAL DOWN SWITCH STUCK

DTC detecting condition:



When DOWN Terminal Input ON is received for 20±1 second or longer.

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK FRONT POWER WINDOW SUB-SWITCH UNIT.

Perform the inspection of front power window sub-switch unit. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

Is the front power window sub-switch OK?

Yes	Go to 2.
No	Replace the front power window sub-switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

2. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the front power window sub-switch connector.
2. Disconnect the front regulator & motor assembly connector (passenger's side).
3. Disconnect the body integrated unit connector.
4. Using a tester, measure the resistance between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).
   Connector & terminal
   (D17) No. 5 — (D13) No. 6:

Is the resistance less than 1 Ω?

Yes	Go to 3.
No	Repair the open circuit of the harness between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

3. CHECK HARNESS (GROUND SHORT CIRCUIT).

Using a tester, measure the resistance between the front power window sub-switch connector and chassis ground.

Connector & terminal
(D17) No. 5 — Chassis ground:

Is the resistance 1 MΩ or more?

Yes	Go to 4.
No	Repair the open harness causing short-to ground condition between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

4. CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).

1. Turn the ignition switch to ON.
2. Using a tester, measure the voltage between the front power window sub-switch connector and chassis ground.
   Connector & terminal
   (D17) No. 5 (+) — Chassis ground (−):

Is the voltage less than 1 V?

Yes	Go to 5.
No	Repair the open harness causing short-to power supply condition between front power window sub-switch connector and front regulator & motor assembly connector (passenger's side).

5. ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 6.
No	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

6. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B22 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B23 PASSENGER'S DOOR POWER WINDOW PULSE 1 AND 2 NO SIGNAL

DTC detecting condition:

When all the following conditions are established.

1. When sensing areas are recognized.
2. When no-pulse-input state continues in both pulse 1 and 2 phases.
3. When "absolute value judgment" is detected during UP operation.
4. After the condition 3 is met, when motor lock (no-pulse-input state in both pulses 1 and 2 phases for 300±10 milliseconds) is detected during reverse operation.

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window sub-switch and roll passenger's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B23 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B24 PASSENGER'S DOOR POWER WINDOW PULSE 1 NO SIGNAL

DTC detecting condition:

When the power window is rolling up (except in fully closed zone), change in pulse 1 phase (edge) is not detected while pulse 2 phase is producing 10 edges.

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.

   Note:

   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window sub-switch and roll passenger's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B24 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B25 PASSENGER'S DOOR POWER WINDOW PULSE 2 NO SIGNAL

DTC detecting condition:

When the power window is rolling up (except in fully closed zone), change in pulse 2 phase (edge) is not detected while pulse 1 phase is producing 10 edges.

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window sub-switch and roll passenger's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B25 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B26 PASSENGER'S DOOR POWER WINDOW PULSE DIRECTION

DTC detecting condition:
In UP/DOWN operation, when one hour of initial masking has elapsed since the motor is started, six edges of continuous pulse that are opposite to the window's moving direction are detected.
Trouble symptom:
- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Operate the power window sub-switch and roll passenger's side window up and down.

Does the window roll up and down?

Yes	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**
No	Go to 2.

2. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B26 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B27 PASSENGER'S DOOR POWER WINDOW POSITION

DTC detecting condition:

Top dead position error: In UP operation, when the window position counter reads -80 edge or less. (except uninitialized state)

Bottom dead position error: In DOWN operation, when the window position counter reads +130 edge or less of the bottom dead position. (except uninitialized state)

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. INITIALIZATION BY POWER WINDOW SWITCH (PASSENGER'S SIDE).

1. Perform initialization using the power window switch. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>NOTE.
2. Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B27 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B27 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B28 PASSENGER'S DOOR POWER WINDOW CONTINUOUS REVERSAL

DTC detecting condition:
When the number of times for detected continuous reverse operation counts 10 times or more. (Condition for addition: completion of reserve operation due to anti-pinch feature)
Trouble symptom:
- When the power window sub-switch is operated, passenger's side window does not work.
- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK GLASS SLIDING SURFACE.

Check sliding surface of glass and running channel.

Is it free from any foreign matter?

Yes	Go to 2.
No	Remove the foreign matter, and Go to 2.

2. PERFORM SYSTEM RESTORATION PROCEDURES.

1. Operate the power window sub-switch and roll down the window to the full open position.
2. Operate the power window sub-switch and roll up the window to the full close position.
3. Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B28 displayed? (Current malfunction)

Yes	Go to 3.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

3. ACTIVE TEST.

Using the Subaru Select Monitor, check the following items in the [Active Test] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Active Test.

- [Power Window Operation Test]

Does the window roll up and down?

Yes	Go to 4.
No	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

4. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B28 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B29 PASSENGER'S DOOR POWER WINDOW CONTROL MODULE EEPROM

DTC detecting condition:

When one of the following data cannot be read from the non-volatile memory as the CPU is reset.

- Window position
- Sliding learn value
- Initialization completed state
- Full open stop position

Trouble symptom:

- When the power window sub-switch is operated, passenger's side window does not work.

- When the power window sub-switch is operated, passenger's side window rolls down only in manual down operation, or inches up. (Inch up: Operating the switch rolls up the window about 10 mm only)

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. INITIALIZATION BY POWER WINDOW SWITCH (PASSENGER'S SIDE).

1. Perform initialization using the power window switch. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>NOTE.
2. Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B29 displayed? (Current malfunction)

Yes	Go to 2.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

2. SYSTEM INITIALIZATION.

1. Using the Subaru Select Monitor, perform [System Initialization] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Work Support>OPERATION > SYSTEM INITIALIZATION.
   Note:
   Record the DTCs and FFD because they will be erased when the initialization is performed.
2. Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Is DTC B2B29 displayed? (Current malfunction)

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. **Note:** **In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.**

POWER WINDOW(DIAGNOSTICS) > Diagnostic Procedure with Diagnostic Trouble Code (DTC)

DTC B2B50 POWER WINDOW MAIN SWITCH FAILURE

DTC detecting condition:
When D-seat AUTO SW, P-seat MANUAL UP SW, P-seat MANUAL DOWN SW, or P-seat AUTO SW is ON for 20±1 second or longer.
Trouble symptom:
Switch cannot be turned OFF.
Caution:
Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.
Note:
Replace the power window main switch when this DTC is detected. Ref. to GLASS/WINDOWS/MIRRORS>Power Window Control Switch.

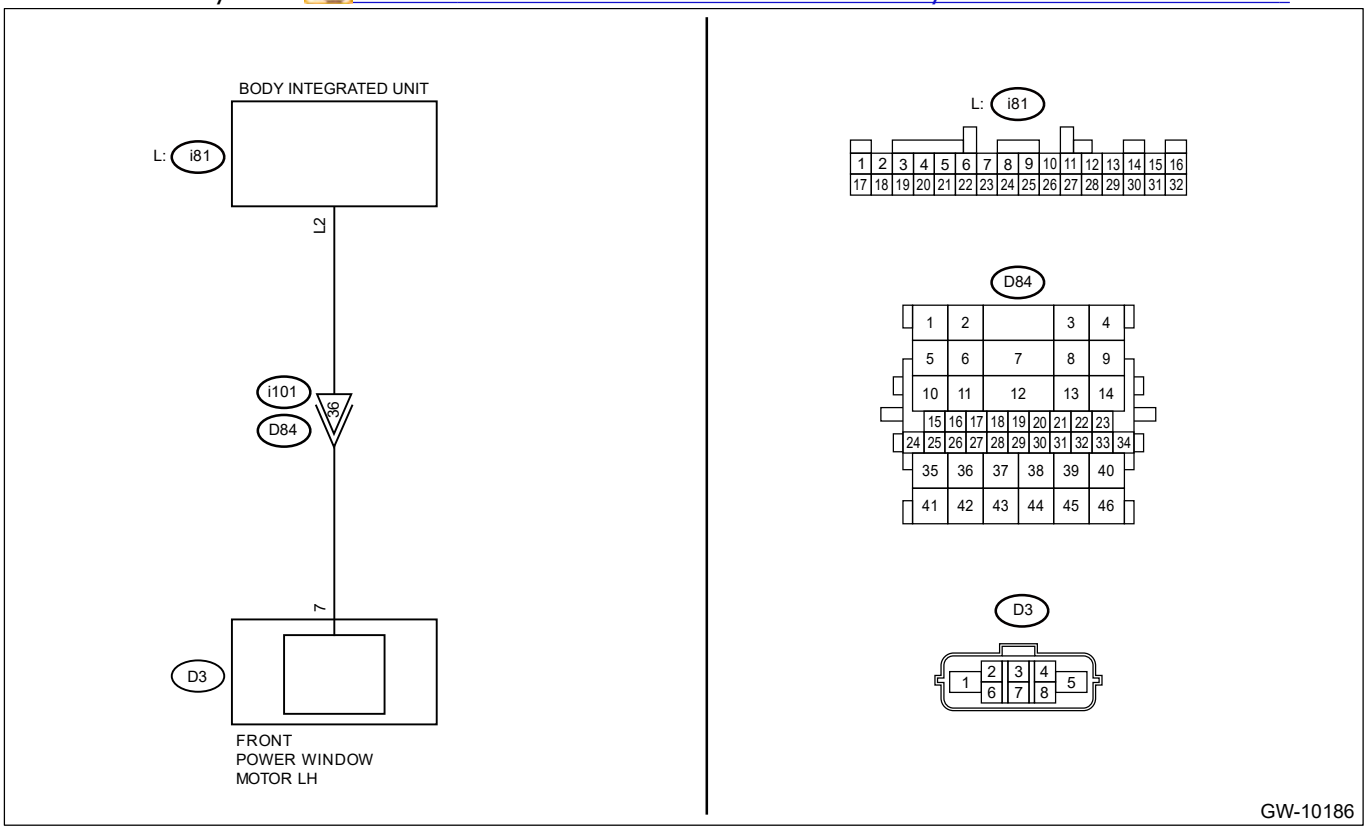
POWER WINDOW(DIAGNOSTICS) > Diagnostics with Phenomenon

LIST

Symptoms	Reference
Driver's side power window does not work.	Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > DRIVER'S SIDE POWER WINDOW DOES NOT WORK.
Passenger's side power window does not work.	Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostics with Phenomenon>INSPECTION > PASSENGER'S SIDE POWER WINDOW DOES NOT WORK.

POWER WINDOW(DIAGNOSTICS) > Diagnostics with Phenomenon

INSPECTION



1. DRIVER'S SIDE POWER WINDOW DOES NOT WORK

Trouble causes:

- Front regulator & motor assembly (driver's side) power supply circuit failure
- Front regulator & motor assembly (driver's side) failure
- Power window main switch failure
- LIN communication error
- Body integrated unit malfunction

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK BATTERY.
   - no → Perform the instructed procedures.
   - yes ↓

2. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 3.

3. CHECK Power Supply Voltage (DATA MONITOR).
   - no → Perform the instructed procedures.
   - yes ↓

4. CHECK Operation Enable Signal (DATA MONITOR).
   - no → Perform the instructed procedures.
   - yes ↓

5. CHECK POWER WINDOW MAIN SWITCH.
   - no → Perform the instructed procedures.
   - yes ↓

6. CHECK HARNESS (OPEN CIRCUIT).
   - yes → Perform the instructed procedures.
   - no → Perform the instructed procedures.

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the battery OK?

Yes	Go to 2.
No	Charge or replace the battery.

2. CHECK DTC.

Read the DTC of [Power Window (Driver)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK [Power Supply Voltage] (DATA MONITOR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Data Monitor.

- [Power Supply Voltage]

Is the displayed voltage approximately 8.0 V or more?

Yes	Go to 4.
No	Inspect the body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure. If no fault is found in the body integrated unit, replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

4. CHECK [Operation Enable Signal] (DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Power Window (Driver)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Data Monitor.

- [Operation Enable Signal]

Is [ON] displayed?

Yes	Go to 5.
No	Inspect the body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure. If no fault is found in the body integrated unit, replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

5. CHECK POWER WINDOW MAIN SWITCH.

Operate the power window main switch and roll down the window to the full open position. Operate the power window main switch and roll up the window to the full close position.

Does the window roll up and down?

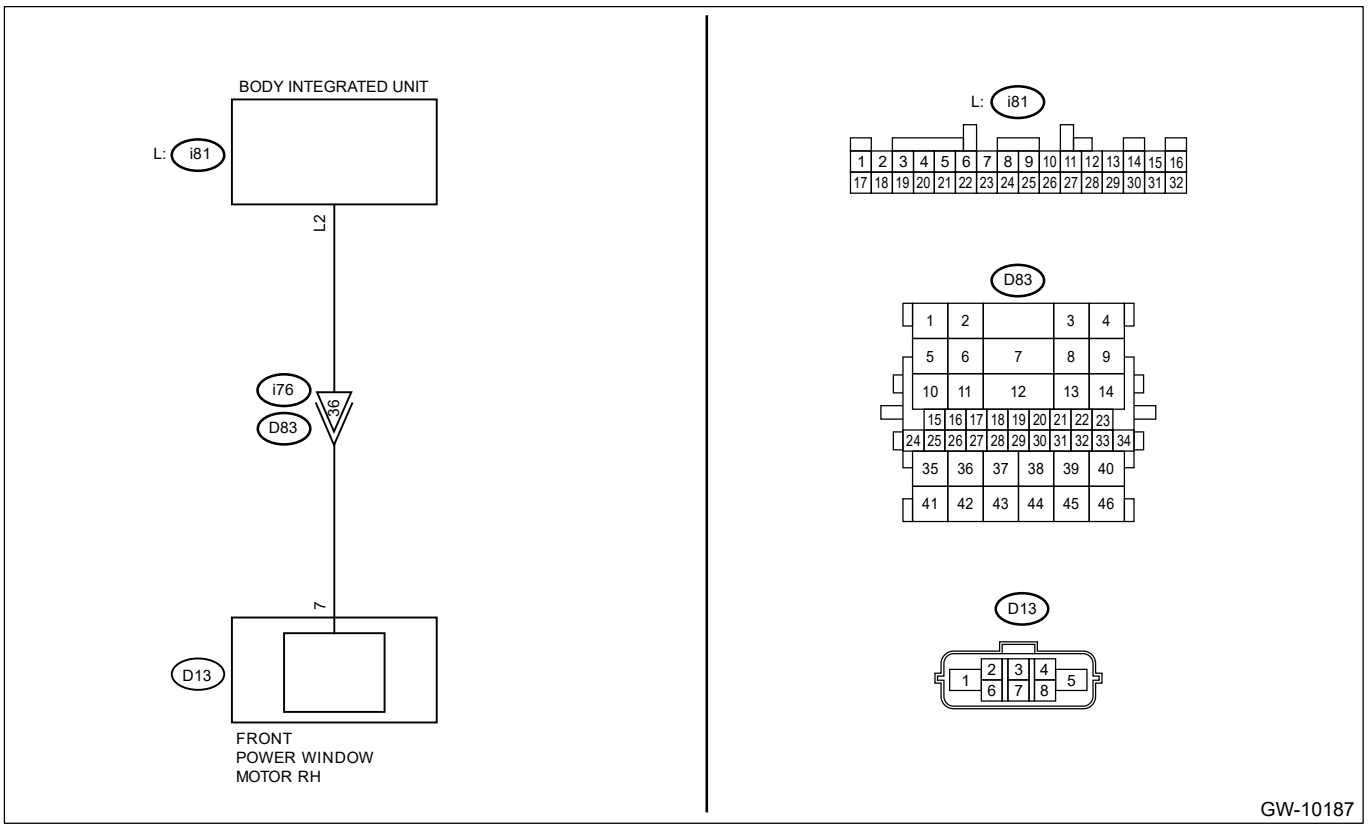
Yes	Go to 6.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

6. CHECK HARNESS (OPEN CIRCUIT).

1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly connector (driver's side).
3. Using a tester, measure the resistance between power window main switch connector and front regulator&motor assembly connector (driver's side).
   Connector & terminal
   (i81) No. 2 — (D3) No. 7:

Is the resistance less than 10 Ω?

Yes	Replace the front regulator & motor assembly (driver's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & motor assembly connector (driver's side).



2. PASSENGER'S SIDE POWER WINDOW DOES NOT WORK

Trouble causes:

- Front regulator & motor assembly (passenger's side) power supply circuit failure
- Front regulator & motor assembly (passenger's side) failure
- Power window main switch failure
- LIN communication error
- Body integrated unit malfunction

Wiring diagram:

Power window system Ref. to WIRING SYSTEM>Power Window System>WIRING DIAGRAM.

Caution:

Before performing diagnosis, refer to "CAUTION" in "General Description". Ref. to POWER WINDOW(DIAGNOSTICS) >General Description>CAUTION.

1. CHECK BATTERY.
   - no → Perform the instructed procedures.
   - yes ↓

2. CHECK DTC.
   - yes → Perform the instructed procedures.
   - no → Go to 3.

3. CHECK Power Supply Voltage (DATA MONITOR).
   - no → Perform the instructed procedures.
   - yes ↓

4. CHECK Operation Enable Signal (DATA MONITOR).
→ no → Perform the instructed procedures.

yes ↓

5. CHECK POWER WINDOW MAIN SWITCH.
→ no → Perform the instructed procedures.

yes ↓

6. CHECK HARNESS (OPEN CIRCUIT).
→ yes → Perform the instructed procedures.
→ no → Perform the instructed procedures.

1. CHECK BATTERY.

Check the battery. Ref. to STARTING/CHARGING SYSTEMS(H4DO)>Battery>INSPECTION.

Is the battery OK?

Yes	Go to 2.
No	Charge or replace the battery.

2. CHECK DTC.

Read the DTC of [Power Window (Passenger)] using the Subaru Select Monitor. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC).

Are any DTCs displayed? (Current malfunction)

Yes	Perform the diagnosis for the displayed DTCs. Ref. to POWER WINDOW(DIAGNOSTICS) >Diagnostic Trouble Code (DTC)>LIST.
No	Go to 3.

3. CHECK [Power Supply Voltage] (DATA MONITOR).

1. Turn the ignition switch to ON.
2. Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Data Monitor.

- [Power Supply Voltage]

Is the displayed voltage approximately 8.0 V or more?

Yes	Go to 4.
No	Inspect the body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure. If no fault is found in the body integrated unit, replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

4. CHECK [Operation Enable Signal] (DATA MONITOR).

Using the Subaru Select Monitor, check the following items in the [Data monitor] of [Power Window (Passenger)]. Ref. to POWER WINDOW(DIAGNOSTICS) >Data Monitor.

- [Operation Enable Signal]

Is [ON] displayed?

Yes	Go to 5.
No	Inspect the body integrated unit. Ref. to BODY CONTROL(DIAGNOSTICS)>Basic Diagnostic Procedure. If no fault is found in the body integrated unit, replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.

5. CHECK POWER WINDOW MAIN SWITCH.

Operate the power window main switch and roll down the window to the full open position. Operate the power window main switch and roll up the window to the full close position.

Does the window roll up and down?

Yes	Go to 6.
No	Replace the power window main switch. Ref. to GLASS/WINDOWS /MIRRORS>Power Window Control Switch.

6. CHECK HARNESS (OPEN CIRCUIT).

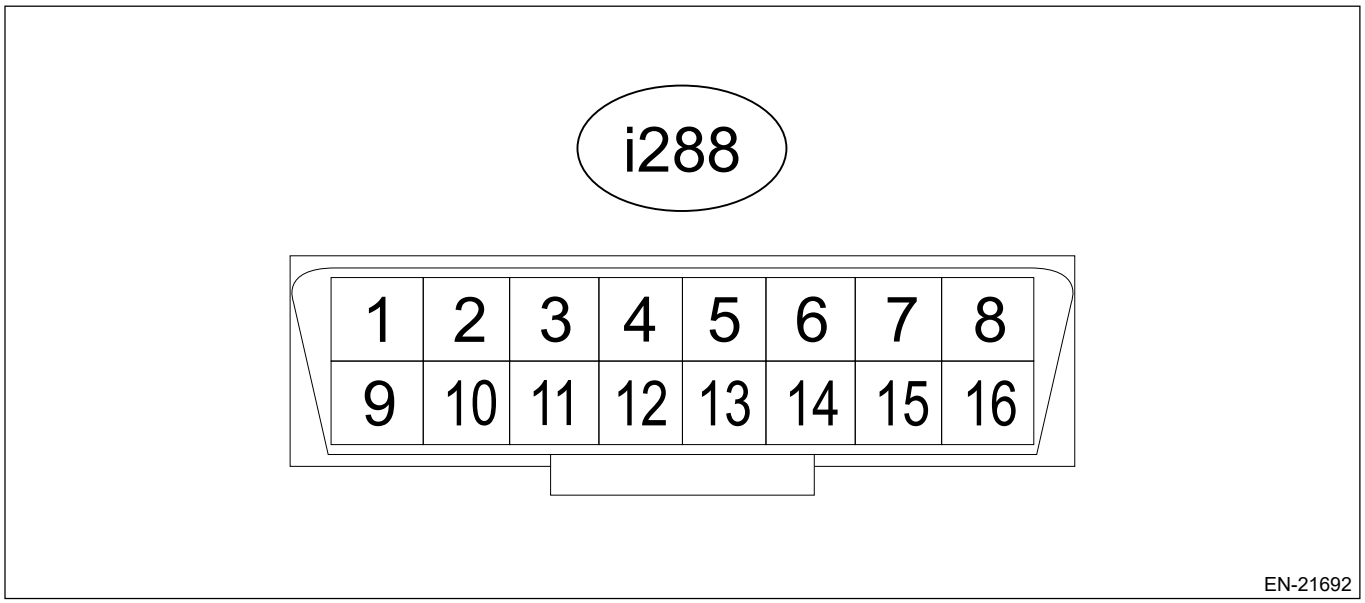
1. Disconnect the power window main switch connector.
2. Disconnect the front regulator & motor assembly connector (passenger's side).
3. Using a tester, measure the resistance between power window main switch connector and front regulator & motor assembly connector (passenger's side).
   Connector & terminal
   (i81) No. 2 — (D13) No. 7:

Is the resistance less than 10 Ω?

Yes	Replace the front regulator & motor assembly (passenger's side). Ref. to GLASS/WINDOWS/MIRRORS>Front Regulator and Motor Assembly.
No	Repair the open circuit of the harness between power window main switch connector and front regulator & motor assembly connector (passenger's side).

CMN(diag)

1. Data Link Connector
2. Diagnostic Trouble Code (DTC)
3. Clear memory
4. Data Monitor
5. Freeze Frame Data
6. Time Stamp



COMMON(diag) > Data Link Connector

NOTE

This connector is used for Subaru Select Monitor.
For detailed connection procedures, refer to “Application help”.

Caution:

Do not connect any tools other than Subaru Select Monitor or general scan tool because the circuit for Subaru Select Monitor may be damaged.

COMMON(diag) > Data Link Connector

LOCATION

(1) Data link connector

COMMON(diag) > Diagnostic Trouble Code (DTC)

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select the corresponding system and select [Enter].
5. On [Select Function] display, select [DTC].

   Note:

   - **For detailed operation procedures, refer to "Application help".**
   - **Sub screen may appear in the system selection display. In that case, select appropriate items in accordance with the contents of the display.**
   - **Current malfunction is a diagnostic code displayed when the system is judging the current malfunction. However, if a DTC is recorded due to poor contact etc., the code remains displayed as current malfunction during the drive cycle even after the poor contact has resolved.**
   - **Past malfunction is a diagnostic code recorded when the current malfunction is not occurring but the system has detected a malfunction in the past. When the current malfunction is recorded, it is also recorded to the past malfunction at the same time.**

COMMON(diag) > Clear memory

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select the corresponding system and select [Enter].
5. On [Select Function] display, select [DTC].
6. On [DTC] display, select [Clear memory].

   Note:

   - **For detailed operation procedures, refer to "Application help".**
   - **Sub screen may appear in the system selection display. In that case, select appropriate items in accordance with the contents of the display.**
   - **When the clear memory is performed, diagnostic code (DTC) and freeze frame data (FFD) necessary in diagnosis will also be deleted.**
   - **Before performing the clear memory, be sure to save the diagnostic code (DTC) and freeze frame data (FFD) stored in the module.**
   - **Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.**

COMMON(diag) > Data Monitor

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select the corresponding system and select [Next].
5. On [Select Function] display, select [Data monitor].

   Note:

   - **For detailed operation procedures, refer to "Application help".**
   - **Sub screen may appear in the system selection display. In that case, select appropriate items in accordance with the contents of the display.**

COMMON(diag) > Freeze Frame Data

OPERATION

1. On [Start] display, select [Diagnosis].
2. On [Vehicle selection] display, input the target vehicle information and select [OK].
3. On [Main Menu] display, select [Each System].
4. On [Select System] display, select the corresponding system and select [Next].
5. On [Select Function] display, select [DTC].
6. On [DTC] display, select [FFD].

   Note:

   - **For detailed operation procedures, refer to "Application help".**
   - **Sub screen may appear in the system selection display. In that case, select appropriate items in accordance with the contents of the display.**
   - **Freeze frame data is cleared by clearing memory.**

COMMON(diag) > Time Stamp

GENERAL DESCRIPTION

There are three types of record data for the information of time stamp, and they are stored together with diagnostic codes.

Note:

Depending on DTCs, time stamp may not be stored.

a. **Trip Count [count]**

This indicates the number of times that the ignition has been turned to ON since the vehicle was manufactured. The ignition ON count of when the diagnostic code is stored is displayed on the diagnostic code check screen.

Note:

Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble part	**Trip Count [count]**	Time Count	Group
B14E1	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT WIRE BREAK (DRIVER'S SEAT)	**983**	18000	Common
B14E7	HEATER CORE REAR SENSOR CIRCUIT WIRE BREAK	**984**	117800	Common

Furthermore, the current IG ON count (times) can be checked at the data monitor of body control. By comparing the current Trip Count and the Trip Count of when the diagnostic code was stored, it is possible to determine that it is how many ignition-ON operations ago that DTC was stored.

b. **Time Count**

The elapsed time from when the ignition is turned to ON to when the diagnostic code is stored is displayed on the diagnostic code check screen. It is possible to determine the length of time that passed between when the user started driving and when the diagnostic code was stored. Therefore, if Trip Count until the vehicle-received-date is determined by interviewing the user, it is possible to estimate where the user was driving when the diagnostic code was stored, using the information such as Trip Count and Time Count. This estimate is useful information to perform diagnosis including checking of repeatability.

Note:

Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble part	Trip Count [count]	**Time [msec]**	Group
B14E1	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT WIRE BREAK (DRIVER'S SEAT)	983	**18000**	Common
B14E7	HEATER CORE REAR SENSOR CIRCUIT WIRE BREAK	984	**117800**	Common

When multiple diagnostic codes are recorded for one trouble, it is extremely important to determine the diagnostic code that was stored first. (It is important to perform the diagnosis for the first recorded diagnostic code.) In this case, it is also possible to immediately determine which diagnostic

code was recorded first, using the information such as Trip Count and Time Count.

c. **Group**

Each unit individually counts the elapsed time since the ignition is turned to ON. However, these time counts may have some errors, and therefore, the control modules need to be adjusted to the time carried by the master-time unit (the body integrated unit). When the count is set as common, it means that each control module is already adjusted to the master time, and the display for the master integrated unit is always indicated as Common. When the count is indicated as Originally, it means that the time is not synchronized with the master time. In this case, check the communication between the corresponding control module and integrated unit. When all controls other than the body integrated unit is indicated as Originally, perform the basic inspection for the body integrated unit.< xref id="s059501e45">

Note:

Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble part	Trip Count [count]	Time Count [msec]	**Group**
B14E1	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT WIRE BREAK (DRIVER'S SEAT)	983	18000	**Common**
B14E7	HEATER CORE REAR SENSOR CIRCUIT WIRE BREAK	984	117800	**Common**

Even when multiple diagnostic codes are stored in multiple control modules, it is possible to determine the code stored first through the count function.

Note:

Troubleshooting for CAN system U-code occurrence

When the first stored diagnostic code is a U-code for CAN system, perform the troubleshooting as a U code combination, instead of a U code alone. In addition, when CAN open circuit occurs, communication of the diagnostic device itself becomes impossible beyond the particular areas. However, trouble positions can also be determined by the combination of initial communication success/failure. Thus, by performing the basic diagnostic procedure in LAN system, trouble positions can be determined efficiently on the principle above. Ref. to LAN SYSTEM (DIAGNOSTICS)>Basic Diagnostic Procedure>PROCEDURE.
