## C-17, Az üzemanyag vezeték nyomás érzékelő áramköre

### MEGJEGYZÉS:

A diagnózis megkezdése előtt ellenőrizzük az üzemanyag vezeték nyomását vizsgálókészülék segítségével.

Az érték ellenőrzéséhez lásd ennek a fejezetnek a „B-02, Adatlista” című pontját.

Ha az érték kisebb, mint 0,15 V vagy nagyobb, mint 4,85 V, menjünk a „C-17, Az üzemanyag vezeték érzékelő áramköre” című pontra. Ha nem, menjünk a „C-18, A vezeték olajnyomás érzékelő áramköre” című pontra.

### MEGJEGYZÉS:

Ez a készlet az alábbiakat tartalmazza:

1. Tech 2, 2. PCMCIA kártya, 3. DLC kábel, 4. SAE 16/19 adapter, 5. Szivargyújtó kábel,
6. DLC visszavezető adapter, 7. Akkumulátor kábel, 8. RS232 kábel, 9. RS232 adapter,
10. RS232 visszavezető csatlakozó, 11. Tároló doboz, 12. Tápegység

## 6A3 FEJEZET

# MOTORMECHANIKA (Z13DT MOTOR)

### VIGYÁZAT:

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” című részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

### FIGYELEM:

Feltétlenül olvassuk el a 6E3 fejezetben leírt „Övintézkedést”, mielőtt lekapcsoljuk az üzemanyag vezetéket, vagy leszerelnénk az üzemanyag rendszer valamelyik alkatrészét/alkatrészeit. Az „Övintézkedések” figyelmen kívül hagyása az üzemanyag ellátó rendszer szükségtelen javításához vezethet.

# A gépkocsin végzendő szervizmunkák

## A levegőszűrő elemei

1. Levegőszűrő szerelvény	7. Levegőszűrő kivezető tömlő	13. A motorhoz
2. Levegőszűrő átvezető gyűrű	8. Tömlő bilincs Győződjünk meg róla, hogy a bilincs csavarja az ábra szerinti helyen van-e.	14. Felső tag
3. MAF érzékelő szerelvény	9. Szellőző tömlő	Meghúzási nyomaték
4. MAF érzékelő O-gyűrű	10. Szellőző tömlő szorítóbilincs Ügyeljünk arra, hogy a bilincset az ábra szerinti irányba állítsuk.	Ne használjuk fel újra.
5. Levegőszűrő szívócső	11. Szellőző cső	
6. Levegőszívó tömlő	12. A turbófeltöltőhöz	

## A levegőszűrő betét ki- és beszerelése

### Kiszerelés

- 1) Akasszuk ki a levegőszűrő (1) rögzítő kapcsait.
- 2) Nyissuk ki a levegőszűrő szerelvényt.
- 3) Vegyük ki a levegőszűrő betétet a levegőszűrő szerelvényből.

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtsuk végre.

## A levegőszűrő betét ellenőrzése és tisztítása

- Ellenőrizzük a levegőszűrő betétet elszennyeződés szempontjából. Ha túl szennyezett, cseréljük ki.
- Fúvassuk ki a port sűrített levegővel a betét kilépő oldala felől.

## A levegőszűrő szerelvény ki- és beszerelése

### Kiszerelés

- 1) Vegyük le az (1) kiömlő tömlőt a (2) levegőszűrő szerelvényről.
- 2) Kössük le a MAF érzékelő (3) csatlakozóját az (5) MAF érzékelő szerelvényről.
- 3) Szereljük le a (4) levegőszívó tömlőt a (6) levegőszűrő szívócsővel együtt a (2) levegőszűrő szerelvényről.
- 4) Vegyük ki a (2) levegőszűrő szerelvényt.

Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajt-  
suk végre, figyelembe véve az alábbiakat.

- Rögzítsük szilárdan az összes tömlőt.
- Húzzuk meg a levegőszűrő kivezető tömlőjének a bilincsét az előírt nyomatékkal ennek a fejezetnek „A levegőszűrő elemei” című pontja szerint.

A közbenső hűtő elemei

1. Közbenső hűtő	5. Közbenső hűtő kivezető cső	9. A turbófeltöltőhöz
2. Közbenső hűtő bevezető tömlő	6. Közbenső hűtő felerősítő elem	10. A levegőszívó cső csatlakozáshoz
3. A közbenső hűtő 1. sz. kivezető tömlője	 7. Tömlő bilincs Győződjünk meg róla, hogy a bilincs csavar az ábra szerinti helyen van-e.	 Meghúzási nyomaték
4. A közbenső hűtő 2. sz. kivezető tömlője	8. Az alsó taghoz	

## A közbenső hűtő ki- és beszerelése

### Kiszerelés

- 1) Szereljük le a mellső lökhárítót a 9. fejezet „A mellső és hátsó lökhárító le- és felszerelése” című pontja szerint az RM413D esetében, vagy „A mellső és hátsó lökhárító” című pontja szerint az RB413D esetében.
- 2) Szereljük le az (1) kürtöt a (2) tartójával együtt, valamint a vízhűtő (3) jobb oldali tartóját.

- 3) Kössük le a közbenső hűtő (1) 1. sz. kivezető tömlőjét és (2) bevezető tömlőjét a (3) közbenső hűtőről.
- 4) Szereljük ki a közbenső hűtőt a gépkocsiból.

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Húzzuk meg az (1) tömlő bilincset az előírt nyomatékkal.

#### Meghúzási nyomaték

**Közbenső hűtő tömlő bilincs (a): 3 Nm (0,3 kgm)**

- Szereljük fel a mellső lökhárítót a 9. fejezet „A mellső és hátsó lökhárító le- és felszerelése” című pontja szerint az RM413D esetében, vagy „A mellső és hátsó lökhárító” című pontja szerint az RB413D esetében.

A turbófeltöltő elemei

1. Kipufogó gyűjtőcső	7. Rögzítő lemez: Hajlítsuk be a rögzítő lemez megfelelő részét úgy, hogy megakadályozza a katalizátor csavarjának meglazulását.	13. Az olaj visszatérő cső csavarja
2. A turbófeltöltő anyája	8. A katalizátor csavarja	14. Katalizátor felerősítő bilincs
3. Turbófeltöltő	9. Üreges csavar	15. Katalizátor felerősítő csavar
4. Ászokcsavar	10. Turbófeltöltő kenőcső	Meghúzási nyomaték
5. Tömítés	11. Az olaj visszatérő cső csavarja	Ne használjuk fel újra.
6. Katalizátor	12. Olaj visszatérő cső	

## A turbófeltöltő le- és felszerelése

### Leszerelés

#### VIGYÁZAT:

**Az égési sérülések elkerülése érdekében ne szereljük a kipufogórendszert, amíg még meleg. A munkát csak a rendszer lehűlése után kezdjük el.**

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvényel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük le a levegőszűrő (1) kilépő tömlőjét a turbófeltöltőről.
- 4) Szereljük le a közbenső hűtő bevezető tömlőjét ennek a fejezetnek „A közbenső hűtő ki- és beszerelése” című pontja szerint.
- 5) Szereljük le a kipufogó gyújtócső oldali motortartót ennek a fejezetnek „A kipufogó gyújtócső elemei” című pontja szerint.

- 6) Kössük le az izzító gyertya (1) csatlakozókat.

- 7) Szereljük le az (1) kenőcsövet.

8) Kössük le az (1) olaj visszatérő csövet a hengerblokkról.

9) Távolítsuk el a kipufogó gyújtócső (1) burkolatát a kipufogó gyújtócsőről.

10) Szereljük le az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.

11) Kapcsoljuk le a stabilizátort a kereszttagról a 3D fejezet „A stabilizáló rúd és a perselyek le- és felszerelése” című pontja szerint az RM413D esetében, vagy a „Stabilizáló rúd és perselyek” című pontja szerint az RB413D esetében.

12) Szereljük ki az (1) turbófeltöltőt a (2) katalizátorral együtt.

13) Szereljük ki a (2) katalizátort a turbófeltöltőből, miután visszahajlítottuk az (1) rögzítő lemezt, és meglazítottuk a csavarokat.

- 14) Szereljük le az (1) visszatérő csövet a turbófeltöltőről.

### Beszerelés

#### MEGJEGYZÉS:

Tisztítsuk meg a turbófeltöltő, a katalizátor és a kipufogó gyűjtőcső illeszkedő felületeit.

- 1) Szereljük fel az (1) olaj visszatérő csövet új tömítéssel a turbófeltöltőre.

#### Meghúzási nyomaték

Az olaj visszatérő cső csavarja (a): 12 Nm (1,2 kgm)

- 2) Szereljük fel új tömítést, (1) katalizátort és új (2) rögzítő lemezt a turbófeltöltőre.

#### Meghúzási nyomaték

A katalizátor csavarja (a): 25 Nm (2,5 kgm)

- 3) Hajlítsuk be az (1) rögzítő lemez (3) karmait, hogy megakadályozzuk a katalizátor (2) csavarjának kilazulását.

- 4) Szereljük be a turbófeltöltőt az (1) katalizátorral, a turbófeltöltőhöz új (1) anyákat használva.

**Meghúzási nyomaték**

**A turbófeltöltő anyája**

**(a): 25 Nm (2,5 kgm)**

**Katalizátor felerősítő csavar:**

**25 Nm (2,5 kgm)**

- 5) Csatlakoztassuk a stabilizátort a kereszttaghoz a 3D fejezet „A stabilizáló rúd és a perselyek le- és felszerelése” című pontja szerint az RM413D esetében, vagy a „Stabilizáló rúd és perselyek” című pontja szerint az RB413D esetében.

- 6) Szereljük fel a kipufogó gyújtócső (1) burkolatát.

**Meghúzási nyomaték**

**A kipufogó gyújtócső burkolatának anyája (a): 9 Nm (0,9 kgm)**

- 7) Szereljük fel az 1. sz. kipufogócsövet a 6K1 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.

- 8) Csatlakoztassuk az (1) visszatérő csövet a hengerblokkhoz, új tömítést használva.

**Meghúzási nyomaték**

**Az olaj visszatérő cső csavarja (a): 9 Nm (0,9 kgm)**

- 9) Szereljük fel az (1) kenőcsövet, új tömítést használva.

**Meghúzási nyomaték**

**A kenőcső üreges csavarja (a): 12 Nm (1,2 kgm)**

- 10) Szereljük fel a kipufogó gyújtócső oldali motortartót ennek a fejezetnek „A kipufogó gyújtócső elemei” című pontja szerint.

- 11) Kössük be az izzító gyertya (1) csatlakozókat.
- 12) Szereljük fel a közbenső hűtő bevezető tömlőjét ennek a fejezetnek „A közbenső hűtő ki- és beszerelése” című pontja szerint.

- 13) Szereljük fel az (1) levegőszűrő kivezető tömlőjét a turbófeltöltőre, majd húzzuk meg a bilincset az előírt nyomatékkal.

#### **Meghúzási nyomaték**

#### **Levegőszűrő kivezető tömlő bilincs**

**(a): 3,1 Nm (0,31 kgm)**

- 14) Szereljük be a levegőszűrő szerelvényt a MAF érzékelő szerelvényrel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 15) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- 16) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj vagy kipufogógáz szivárgás.

## **A turbófeltöltő ellenőrzése**

Forgassuk meg kézzel az (1) turbina tengelyt, és győződjünk meg róla, hogy simán fut-e, mindenféle szokatlan zaj és jelentős ütés nélkül.

Ha hibát észlelünk, cseréljük ki a turbófeltöltőt.

A levegőszívó cső elemei

1. Levegőszívó cső	4. A levegőszívó cső csavarja	7. EGR cső tömítés	Meghúzási nyomaték
2. Levegőszívó cső csatlakozás	5. A levegőszívó cső csavarja	8. MAP érzékelő	Ne használjuk fel újra.
3. A levegőszívó cső csatlakozás tömítése	6. EGR cső		

A levegőszívó cső le- és felszerelése

Leszerelés

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvénnel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük le a közbenső hűtő 2. sz. kivezető tömlőjét ennek a fejezetnek „A közbenső hűtő elemei” című pontja szerint.
- 4) Szereljük ki az EGR szelep szerelvényt a 6E3 fejezet „Az EGR szelep le- és felszerelése” című pontja szerint.
- 5) Vegyük ki az olajleválasztó (1) csavarját a levegőszívó csőből.
- 6) Szereljük ki az olaj nívópálca (2) vezetőt a nívópálcával együtt.
- 7) Kössük le a csatlakozót a (3) MAP érzékelőről.

4. Olajleválasztó

- 8) Szereljük le az (1) levegőszívó csövet és tömítését a hengerfejről.
- 9) Szereljük le az EGR csövet és a (2) levegőszívó cső csatlakozóját a levegőszívó csőről.

### Beszerezés

A beszerelést a kiserelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Tisztítsuk meg a levegőszívó cső és a hengerfej illeszkedő felületeit.
- Használjunk új tömítést a levegőszívó csőhöz, a levegőszívó cső csatlakozáshoz és az EGR csőhöz.
- Húzzuk meg a levegőszívó cső csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

**A levegőszívó cső csavarja (a): 25 Nm (2,5 kgm)**

- Szereljük be az EGR szelep szerelvényét a 6E3 fejezet „Az EGR szelep le- és felszerelése” című pontja szerint.
- Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- Győződjünk meg arról, hogy minden leszerelt alkatrész visszakerült-e a helyére. Szereljük fel mindent, amit eddig még nem szereltünk fel.

## A kipufogó gyűjtőcső elemei

1. Kipufogó gyűjtőcső burkolat	4. Motor felfüggesztő anya	7. Ászokcsavar	Meghúzási nyomaték
2. A kipufogó gyűjtőcső tömitése	5. A kipufogó gyűjtőcső anyája	8. Motor felfüggesztő	Ne használjuk fel újra.
3. Kipufogó gyűjtőcső	6. A kipufogó gyűjtőcső burkolatának anyája		

## A kipufogó gyűjtőcső le- és felszerelése

### Leszerelés

#### VIGYÁZAT:

**Az égési sérülések elkerülése érdekében ne szereljük a kipufogórendszert, amíg még meleg. A munkát csak a rendszer lehűlése után kezdjük el.**

- 1) Kös­sük le a negatív (–) kábelt az akku­mu­lá­torról.
- 2) Engedjük le a hűtőfolyadékot a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 3) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvénnel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Szereljük le a turbófeltöltőt ennek a fejezetnek „A turbófeltöltő le- és felszerelése” című pontja szerint.

5) Szereljük le az (1) hűtőfolyadék tápcsövet.

6) Szereljük le az (1) kipufogó gyűjtőcsövet és a (2) kipufogó gyűjtőcső tömítést.

### Felszerelés

1) Szereljük fel az (1) kipufogó gyűjtőcsövet új (3) tömítéssel, új (2) anyák felhasználásával.

#### Meghúzási nyomaték

**A kipufogó gyűjtőcső anyája (a): 23 Nm (2,3 kgm)**

2) Szereljük fel az (1) hűtőfolyadék tápcsövet.

#### Meghúzási nyomaték

**A hűtőfolyadék tápcső csavarja (a): 9 Nm (0,9 kgm)**

- 3) Szereljük fel a turbófeltöltőt ennek a fejezetnek „A turbófeltöltő le- és felszerelése” című pontja szerint.
- 4) Szereljük be a levegőszűrő szerelvényt a MAF érzékelő szerelvényrel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 5) Töltsük fel a hűtőrendszert a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 6) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- 7) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj, hűtőfolyadék vagy kipufogógáz szivárgás.

## A vákuumszivattyú le- és felszerelése

### FIGYELEM:

Soha ne szereljük szét a vákuumszivattyút.

A szétszereléssel alkalmatlanná válik arra, hogy betöltse az eredeti rendeltetését.

Ha hibásnak találjuk, cseréljük ki egy újra.

### Kiszerelés

- 1) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvényrel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 2) Szereljük le az (1) relé tartót és az előmelegítő (2) vezérlő egységét.

- 3) Szereljük le az (1) vákuumtömlőt a vákuumszivattyúról.

- 4) Szereljük ki az üzemanyag tápcső (1) csavarját a hengerfejből és a vákuumszivattyúból.

2. Üzemanyag tápcső

5) Szereljük le az (1) vákuumszivattyút a hengerfejről.

### Beszerezés

1) Szereljük fel az (1) vákuumszivattyút a hengerfejre.

Húzzuk meg fokozatosan a vákuumszivattyú csavarjait a következők szerint.

- a) Húzzuk meg a vákuumszivattyú csavart 5 Nm (0,5 kgm) nyomatékkal az ábrán látható számozás sorrendjében.
- b) Az a) lépéshez hasonló módon húzzuk meg a csavarokat 10 Nm (1,0 kgm) nyomatékkal.

#### Meghúzási nyomaték

**A vákuumszivattyú csavarja (a):**

Húzzuk meg 5 Nm (0,5 kgm) és 10 Nm (1,0 kgm) nyomatékkal a leírt eljárás szerint.

2) Szereljük be az üzemanyag tápcső csavarjait a hengerfejbe és a vákuumszivattyúba.

2. Üzemanyag tápcső

3) Szereljük fel az (1) vákuumtömlőt a vákuumszivattyúra.

4) Szereljük fel az (1) relé tartót és az előmelegítő (2) vezérlő egységét.

5) Szereljük be a levegőszűrő szerelvényt és a MAF érzékelő szerelvényt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.

## Az olajnyomás kapcsoló le- és felszerelése

### Leszerelés

- 1) Szereljük le a levegőszűrő kivezető tömlőjét.
- 2) Kössük le az olajnyomás kapcsoló csatlakozóját.
- 3) Szereljük le az (1) olajnyomás kapcsolót és a (2) tömítést a hengerfejről.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- Használjunk új (2) tömítést.
- Húzzuk meg az (1) olajnyomás kapcsolót az előírt nyomatékkal.

#### Meghúzási nyomaték

**Olajnyomás kapcsoló (a): 32 Nm (3,2 kgm)**

- Ellenőrizzük, hogy nincs-e olajszivárgás.

## Az olajhűtő elemei

1. Töltőnyílás sapka	4. Olajszűrő ház fedél	7. Hűtőközeg tápcső	Meghúzási nyomaték
2. O-gyűrű	5. Motorolaj szűrő	8. A hűtőközeg tápcső csavarja	Ne használjuk fel újra.
3. Tömítés	6. Az olajhűtő csavarja	9. Olajhűtő szerelvény: Soha ne szereljük szét az olajhűtő szerelvényt.	

## Az olajhűtő ki- és beszerelése

### FIGYELEM:

**Soha ne szereljük szét az olajhűtő szerelvényt.**

**A szétszereléssel alkalmatlanná válik arra, hogy betöltse az eredeti rendeltetését.**

**Ha hibásnak találjuk, cseréljük ki egy újra.**

### Leszerelés

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Engedjük le a hűtőfolyadékot a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 3) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvényt együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.

- 4) Szereljük le a levegőszűrő (1) kivezető tömlőjét.
- 5) Szereljük le a közbenső hűtő bevezető tömlőjét és az 1. sz. kivezető tömlőjét ennek a fejezetnek „A közbenső hűtő ki- és beszerelése” című pontja szerint.
- 6) Szereljük le a kenőcsövet ennek a fejezetnek „A turbófeltöltő le- és felszerelése” című pontja szerint.

- 7) Szereljük le az (1) hűtőközeg tápcsövet és a vízhűtő kivezető tömlőjét.

- 8) Vegyük le a (1) kábelbilincseket a (2) betöltő nyílásról.
- 9) Szereljük le az olajsűrő ház (3) fedelét és az olajsűrőt.
- 10) Szereljük le a (4) olajhűtő szerelvényt.

## Felszerelés

- 1) Szereljük fel az (1) olajhűtő szerelvényt, új tömítést használva.

### Meghúzási nyomaték

**Az olajhűtő csavarja (a): 9 Nm (0,9 kgm)**

- 2) Csatlakoztassuk a (3) kábelbilincseket a (2) betöltőnyílásra.
- 3) Szereljük fel az olajsűrőt, a (4) olajsűrő ház fedelét új O-gyűrűvel, a 0B fejezet „Motorolaj és szűrőcsere” című pontja szerint.

- 4) Szereljük fel az (1) hűtőfolyadék tápcsövet és az alsó tömlőt.

### Meghúzási nyomaték

**A hűtőfolyadék tápcső csavarja (a): 9 Nm (0,9 kgm)**

- 5) Szereljük fel a kenőcsövet ennek a fejezetnek „A turbófeltöltő le- és felszerelése” című pontja szerint.
- 6) Szereljük fel a közbenső hűtő bevezető tömlőjét és az 1. sz. kivezető tömlőt ennek a fejezetnek „A közbenső hűtő ki- és beszerelése” című pontja szerint.

- 7) Szereljük fel a levegőszűrő (1) kivezető tömlőjét a turbófeltöltőre.

### Meghúzási nyomaték

**A levegőszűrő kivezető tömlőjének bilincse (a): 3,1 Nm (3,1 kgm)**

- 8) Szereljük be a levegőszűrő szerelvényt a MAF érzékelő szerelvénnel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 9) Töltsük fel a hűtőrendszert a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 10) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- 11) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj vagy hűtőfolyadék szivárgás.

Az olajteknő le- és felszerelése

Leszerelés

- 1) Vegyük ki az olajnivó pálcát.
- 2) Emeljük fel a gépkocsit.

- 3) Az (1) leeresztő csavart kisserelve eresszük le a motorolajat.
- 4) Vegyük le az olajsint kapcsoló (2) csatlakozóját.
- 5) Szereljük le az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.
- 6) Szereljük le az erőátviteli hajtómű merevítőjét a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.

- 7) Szereljük ki az olajteknő csavarjait és anyáit.

- 8) Vágjuk le a tömítőanyagot az ábra szerinti vonalkázott résznél célszerszám és (1) kalapács segítségével.

**Célszerszám**

**(A): 09921-96510**

**MEGJEGYZÉS:**

Ügyeljünk arra, hogy ne sértsük meg a (4) ászokcsavarokat az olajteknő és a forgattyús ház között, amikor levágjuk a tömítést.

- 9) Vegyük le a (2) olajteknőt a (3) alsó forgattyús házról.

- 10) Vegyük le az (1) rugós rögzítőt és a (2) olajszint kapcsolót az olajteknőről, ha szükséges.

## Felszerelés

- 1) Tisztítsuk meg az olajteknő és az alsó forgattyús ház illeszkedő felületeit.

- 2) Szereljük fel az (1) olajszint kapcsolót az olajteknőre, ha leszereltük.
- 3) Tegyük fel új (3) rugós rögzítőt az olajszint kapcsoló csatlakozójára.

- 4) Vigyük fel folyamatos csíkban tömítőanyagot az olajteknő illeszkedő felületére, az ábrán látható módon.

**„A”:** Locktite 5900

- 5) Miután az olajteknőt felhelyeztük az alsó forgattyús házra, tegyük be a felerősítő csavarokat, és középről kiindulva húzzuk meg azokat: kifelé haladjunk a csavarkulccsal, egyszerre csak egy csavart húzva meg. Húzzuk meg az olajteknő csavarjait és anyáit az előírt nyomatékkal.

#### **Meghúzási nyomaték**

**Az olajteknő csavarja és anyája (a): 9 Nm (0,9 kgm)**

- 6) Szereljük fel az olajteknőre új O-gyűrűt és leeresztő csavart. Húzzuk meg a leeresztő csavart az előírt nyomatékkal.

#### **Meghúzási nyomaték**

**Leeresztő csavar (b): 20 Nm (2,0 kgm)**

- 7) Szereljük fel az erőátviteli hajtómű merevítőjét a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.
- 8) Szereljük fel az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.
- 9) Kössük be az olajszint kapcsoló csatlakozóját.
- 10) Helyezzük be az olajnivó pálcát.
- 11) Töltsük fel a motort motorolajjal a 0B fejezet „A motorolaj és az olajszűrő cseréje” című pontja szerint.
- 12) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj vagy kipufogógáz szivárgás.

## **Az egységek felújítása**

### **A motorszerelvény ki- és beszerelése**

#### **Leszerelés**

- 1) Engedjük el az üzemanyag nyomását a 6E3 fejezet „Az üzemanyag nyomás elengedésének módszere” című pontja szerint.
- 2) Kössük le a negatív kábelt az akkumulátorról.
- 3) Az ablakmosó tömlő levétele után szereljük le a motorháztetőt.
- 4) Engedjük le a hűtőfolyadékot a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 5) Az RB413D esetében szereljük ki az akkumulátor tálcát a kiegyenlítő tartállyal együtt.
- 6) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvényrel együtt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 7) Szereljük le a közbenső hűtő bevezető tömlőjét és a közbenső hűtő 1. sz. és 2. sz. kivezető tömlőjét ennek a fejezetnek „A közbenső hűtő elemei” című pontja szerint.
- 8) Kössük le a következő huzalokat az erőátviteli hajtóműről.
- Tengelykapcsoló huzal
  - Sebességváltó kiválasztó huzal
  - Sebességváltó kapcsoló huzal

- 9) Kössük le az alábbi tömlőket.
  - Fékrásegítő tömlő (1)
  - Üzemanyag visszatérő tömlő (2)
  - Üzemanyag táptömlő (3)
  - Hűtő bevezető (4) és kivezető tömlő
  - Fűtés be- és kivezető tömlők
  - Tartály tömlők (RM413D esetében)
- 10) Kössük le az alábbi villamos vezetékeket.
  - ECM (5)
  - Befecskendező kábelköteg a műszerfal kábelköteghez (6)
  - Befecskendező kábelköteg a fő kábelköteghez
  - Tolatólámpa kapcsoló
  - Az L/K kompresszor mágneses tengelykapcsolójának kapcsolója (ha van)
  - Generátor (7)
  - Indítómotor (8)
  - Motorolaj szintérzékelő
  - Motor tesztelés (9)
  - Mindegyik kábelbilincs
- 11) Szereljük le a jobb és bal oldali alsó motorburkolatot.
- 12) Szereljük le a vízszivattyú és a generátor hajtószíját a 6B3 fejezet „A hajtószíj le- és felszerelése” című pontja szerint.
- 13) Rajta hagyott tömlővel együtt szereljük le az L/K kompresszort a tartóbakjáról (ha van).

#### MEGJEGYZÉS:

**Függesztjük fel az L/K kompresszort olyan helyen, ahol az nem sérülhet meg a motorszerelvény ki- és beszerelése alatt.**

- 14) Engedjük le a motorolajat a 0B fejezet „A motorolaj és az olajszűrő cseréje” című pontja szerint.
- 15) Engedjük le az erőátviteli berendezés olaját a 7A3 fejezet „A kézi erőátviteli hajtómű olajának cseréje” című pontja szerint.
- 16) Az RM413D esetében szereljük le az (1) kereszttagot.
- 17) Szereljük le az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.
- 18) Szereljük le a stabilizátort a 3D fejezet „A stabilizáló rúd és a perselyek le- és felszerelése” című pontja szerint az RM413D esetében, vagy a „Stabilizáló rúd és perselyek” című pontja szerint az RB413D esetében.
- 19) Szereljük le a jobb és bal oldali hajtótengely csuklókat a differenciálműről a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint az RM413D esetében, vagy a 4A2 fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint az RB413D esetében.

#### MEGJEGYZÉS:

**A motor és az erőátviteli hajtómű kiszéréséhez nem szükséges kiszerni a hajtótengelyeket a kormány tengelycsonkból.**

- 20) Támasszuk alá a motort a megfelelő emelő készülékkel.

- 21) Szereljük ki a hátsó motortartó gumibak (1) csavarjait, a bal oldali motortartó felerősítő (2) anyáit, és a jobb oldali motortartó gumibak (3) csavarjait.
- 22) Mielőtt a motort az erőátviteli hajtóművel együtt kiemelnénk a gépkocsiból, még egyszer ellenőrizzük, hogy minden tömlőt, villamos vezetékét és kábelt leszereltünk-e a motorról és az erőátviteli hajtóműről.

- 23) Engedjük le a motort az erőátviteli hajtóművel együtt a gépkocsiból.

#### MEGJEGYZÉS:

**A motor leengedése előtt, hogy elkerüljük az L/K kompresszor sérülését, emeljük ki azt a motor forgattyús tengely szíjtárcsa felőli nyíláson át. Eközben ügyeljünk arra, hogy ne feszítsük meg túlságosan a hozzá csatlakozó tömlőket.**

- 24) Szereljük le az erőátviteli berendezést a motorról a 7A3 fejezet „Az erőátviteli berendezés le- és felszerelése” című pontja szerint.
- 25) Szereljük le a tengelykapcsoló burkolatát és a tengelykapcsoló tárcsát a 7C3 fejezet „A tengelykapcsoló burkolat, a tengelykapcsoló tárcsa és a lendkerék le- és felszerelése” című pontja szerint.

## Beszerezés

- 1) Szereljük fel a tengelykapcsoló burkolatát és a tengelykapcsoló tárcsát a 7C3 fejezet „A tengelykapcsoló burkolat, a tengelykapcsoló tárcsa és a lendkerék le- és felszerelése” című pontja szerint.
- 2) Szereljük fel az erőátviteli berendezést a motorra a 7A3 fejezet „Az erőátviteli berendezés le- és felszerelése” című pontja szerint.
- 3) Emeljük be a motort az erőátviteli hajtóművel együtt a motortérbe, de ne vegyük le az emelő készülékről.
- 4) Szereljük be a hátsó motortartó gumibak (1) csavarjait, a bal oldali motortartó felerősítő (2) anyáit, és a jobb oldali motortartó gumibak (3) csavarjait.  
Húzzuk meg ezeket a csavarokat és anyákat az előírt nyomatékkal.

- 12) Csatlakoztassuk a tömlőket, huzalokat és elektromos vezetékeket, amelyeket a szétszerelés során lekötöttünk.
- 13) Szereljük fel a közbenső hűtő bevezető tömlőjét és a közbenső hűtő 1. sz. és 2. sz. kivezető tömlőjét ennek a fejezetnek „A közbenső hűtő elemei” című pontja szerint.
- 14) Szereljük be a levegőszűrő szerelvényt ennek a fejezetnek „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 15) Az RB413D esetében, szereljük be az akkumulátor tálcát a kiegyenlítő tartállyal együtt.

- 16) Győződjünk meg arról, hogy minden leszerelt alkatrész visszakerült-e a helyére. Szereljünk fel mindent, amit eddig még nem szereltünk fel.
- 17) Töltsük fel a motorolajat a 0B fejezet „A motorolaj és az olajszűrő cseréje” című pontja szerint.
- 18) Töltsük fel az erőátviteli berendezés olaját a 7A3 fejezet „A kézi erőátviteli hajtómű olajának cseréje” című pontja szerint.
- 19) Töltsük fel a hűtőrendszert a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 20) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 21) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs üzemanyag, hűtőfolyadék, motorolaj vagy kipufogógáz szivárgás.

# A MOTOR HŰTÉSE (Z13DT MOTOR)

6B3

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

Általános leírás

A hűtési rendszer a hűtősapkából, hűtőből, hűtőfolyadék kiegyenlítő tartályból, tömlőkből, vízszivattyúból, hűtőventilátorból és a termosztátból áll. A hűtő csöves–lamellás rendszerű.

A hűtési rendszer elvi vázlata

[B]: Amikor a termosztát nyit	3. Motorolaj hűtő	6. Kiegyenlítő tartály sapka (vízhűtő sapka)	9. EGR hűtő

## Hűtőközeg kiegyenlítő tartály

Az (1) kiegyenlítő tartály az átlátszó műanyag tartályból, a tömlőből és a (2) záró sapkából áll.

Működés közben a kiegyenlítő tartály nyomás alatt áll. Ahogy a hűtőközeg felmelegszik és kitágul, a hűtőközeg szintje a tartályban megemelkedik. Másrészt, a szint csökken, ha a hűtőközeg lehül és összehúzódik. Ha a kiegyenlítő tartály belsejében a nyomás folyamatosan túllépi az előírt értéket, a nyomás kiegyenlítődik a tartály zárósapkáján keresztül.

Ezért a hűtőközeg szintjének a kiegyenlítő tartály (3) „FULL” (tele) és (4) „LOW” (alacsony) jelzései között kell lennie.

## Diagnosztika

### Diagnosztikai táblázat

Állapot	Lehetséges ok	Javítás módja
<b>A motor túlmelegszik (akkor, amikor a hűtő- ventilátor működik)</b>	Laza vagy szakadt vízszivattyú hajtósíj	Állítsuk be, vagy cseréljük ki.
	Kevés a hűtőfolyadék	Ellenőrizzük a hűtőfolyadék szintet, és ha kell, töltsük fel.
	Hibás termosztát	Cseréljük ki.
	Hibás vízszivattyú	Cseréljük ki.
	Szennyezett vagy elgörbült vízhűtő lamellák	Tisztítsuk meg, vagy javítsuk.
	A hűtőfolyadék elszívárog a rendszerből	Javítsuk meg.
	Eltömődött vízhűtő	Ellenőrizzük, és ha kell, cseréljük ki a vízhűtőt.
	Hibás kiegyenlítő tartály sapka	Cseréljük ki.
	A fékek súrlódnak	Állítsuk be a fékeket.
	A tengelykapcsoló csúszik	Állítsuk be, vagy cseréljük ki.
	Az akkumulátor gyenge	Ellenőrizzük, és ha kell, cseréljük ki.
	A generátor gyengén tölt	Ellenőrizzük, és javítsuk meg.
	Az ECT (hűtőfolyadék hőmérséklet) érzékelő hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	Az ECM (motorvezérlő egység) hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	A huzalozás vagy a testelés hibás	Szükség szerint javítsuk meg.
	Túl sok villamos fogyasztó van felszerelve	Szereljük le.
	A hűtőventilátor motor hibás	Ellenőrizzük, és ha kell, cseréljük ki.
<b>A motor túlmelegszik (akkor, amikor a hűtő- ventilátor nem működik)</b>	A biztosíték kiolvadt	Ellenőrizzük a relé/biztosíték dobozban a 30A biztosítékot, majd ellenőrizzük, hogy nem testzárlatos-e.
	Hűtőventilátor relé	Ellenőrizzük, és ha kell, cseréljük ki.
	Az ECT (hűtőfolyadék hőmérséklet) érzékelő hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	A hűtőventilátor motor hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	A huzalozás vagy a testelés hibás	Szükség szerint javítsuk meg.
	Az ECM (motorvezérlő egység) hibás	Ellenőrizzük, és ha kell, cseréljük ki.

## A hűtőfolyadék

Amikor a rendszer lehűl, a hűtőfolyadék visszaáramlik a vízhűtőbe.

A hűtőrendszer gyárilag fel van töltve minőségi hűtőközeggel, amely víz és etilén-glikol fagyálló folyadék 50–50% arányú keveréke.

Ez az 50–50 % keverési arányú hűtőfolyadék -36 °C hőmérsékletig nyújt biztonságot befagyás ellen.

- Tartsuk a hűtési rendszer fagyvédelmét -36 °C-on korrózióvédelmi okokból és a hűtőfolyadék elforrásának megakadályozására.  
Ezt még akkor is tartsuk be, ha nem várható fagypont alatti hőmérsékletek.
- Ha a hűtőfolyadék veszteség pótlására, vagy ha -36 °C-nál alacsonyabb hőmérsékletek elleni védelem céljából utántöltésre van szükség, etilén-glikol alapú hűtőfolyadékot töltünk be.

### Fagyálló folyadék adagolási táblázat

Fagypont	°C	-36

A fagyálló aránya a vízhez	liter	2,65/2,65

### Hűtőfolyadék térfogat

	Motor, vízhűtő fűtőtest és nyomáskiegyenlítő tartály, stb.
liter	5,3

### MEGJEGYZÉS:

- Soha ne használjunk alkohol vagy metanol alapú hűtőfolyadékot vagy tiszta vizet a hűtési rendszerben, mert ez a hűtési rendszer károsodását okozhatja.
- A hűtőközeget ásványi anyagoktól mentes vagy desztillált vízzel kell keverni.

## Karbantartás

### VIGYÁZAT:

- A személyi sérülés elkerülése érdekében tartsuk távol a motor hűtőventilátorától a kezünket, a szerszámokat, és a ruházatunkat. A ventilátor villamos hajtású, és attól függetlenül elindulhat, hogy a gépkocsi motorja jár-e vagy sem. A ventilátor önműködően elindulhat az ECM utasítására, ha a gyújtáskapcsoló be van kapcsolva.
- Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg.  
Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

## A hűtőfolyadék szintjének ellenőrzése

### Hűtőfolyadék szint

#### VIGYÁZAT:

Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg.

Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

A hűtőfolyadék szintjének ellenőrzéséhez emeljük fel a motorház fedelet és nézzük meg az áttetsző (1) kiegyenlítő tartályt. A hűtőfolyadék szintjének ellenőrzéséhez nem kell levenni a (2) hűtősapkát.

A motor hideg állapotában ellenőrizzük a folyadék szintjét az (1) kiegyenlítő tartályban.

Rendes körülmények között a hűtőfolyadék szintjének a kiegyenlítő tartály (3) „FULL” (tele) és (4) „LOW” (alacsony) jelzései között kell állnia.

Ha a hűtőfolyadék szintje a „LOW” jelzés alatt van, vegyük le a kiegyenlítő tartály sapkáját és töltsük fel a tartályt megfelelő összetételű hűtőfolyadékkal a „FULL” jelzésig. Ezután helyezzük vissza a nyomáskiegyenlítő tartály sapkáját, ügyelve arra, hogy a sapka füle egy vonalban legyen a nyomáskiegyenlítő tartály (5) csővével.

#### MEGJEGYZÉS:

- Ha megfelelő minőségű fagyállót használunk, nincs szükség olyan külön inhibitorok vagy adalékanyagok hozzáadására, melyekről azt állítják, hogy hasznára válnak a rendszernek.

Ezek károsan befolyásolhatják a rendszer kifogástalan működését, és felesleges kiadást okoznak.

## A hűtőrendszer ellenőrzése és szervizelése

#### VIGYÁZAT:

Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg.

Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

A hűtőrendszer karbantartását az alábbiak szerint kell végezni.

- 1) Ellenőrizzük a hűtési rendszert szivárgás vagy sérülések szempontjából.
- 2) Amikor levesszük a hűtősapkát a hideg motorról, mossuk meg a hűtősapkát és a betöltő nyílást tiszta vízzel.
- 3) Ellenőrizzük a hűtőfolyadék szintjét és fagyállóságának mértékét.

- 4) Egy (1) nyomásmérő segítségével ellenőrizzük, hogy a rendszer és a (2) nyomáskiegyenlítő tartály sapka megfelelően tartja-e a nyomást. Ha a sapkát cserélni kell, csak ehhez a gépkocsi típushoz előírt sapkát használjunk.

**A hűtőrendszer és a nyomáskiegyenlítő tartály sapka nyomástartó képessége (ellenőrzéshez):**

**140 kPa (1,4 kg/cm<sup>2</sup>)**

- 5) Tegyük fel a nyomáskiegyenlítő tartály sapkát a nyomáskiegyenlítő tartályra, ütközésig elfordítva az óramutató járásával megegyező irányban.
- 6) Húzzuk meg a tömlő bilincseket, és ellenőrizzük minden tömlőt. A repedt, kiöblösödött vagy más sérülést mutató tömlőket cseréljük ki.
- 7) Tisztítsuk meg a vízhűtő homlokfelületét.

## A hűtési rendszer átöblítése és feltöltése

### VIGYÁZAT:

**Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg. Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.**

- 1) Hideg motor mellett vegyük le a nyomáskiegyenlítő tartály sapkát.  
Forgassuk el a sapkát 90°-kal lassan, az óramutató járásával ellentétes irányban.  
Várjuk meg, amíg a nyomás kiegyenlítődik (ezt sziszegő hang jelzi), ekkor fordítsuk tovább az óramutató járásával ellenkező irányban.
- 2) Levett nyomáskiegyenlítő tartály sapka mellett járassuk addig a motort, amíg a hűtő felső tömlője fel nem melegszik (ez azt mutatja, hogy a termosztát kinyitott, és a hűtőfolyadék átfolyik a rendszeren).
- 3) Állítsuk le a motort, és ürítsük le a hűtőfolyadékot.
- 4) Zárjuk az (1) leeresztő csavart. Töltsük tele a rendszert vízzel, és járassuk a motort addig, amíg a hűtő felső tömlője ismét meg nem melegszik.
- 5) Ismételjük meg néhányszor a 3. és 4. lépést, amíg a leeresztett folyadék szintelennek nem tekinthető.
- 6) Ürítsük le a rendszert, és szorosan zárjuk le az (1) leeresztő csavart.

- 7) Kössük le a felső oldali hűtőfolyadék tömlőt a termosztát házról. Ha a tömlőt nehéz lehúzni a bilincs eltávolítása után, nyomjuk meg, hogy egy kicsit tovább csússzon a csövön abból a célból, hogy ne tapadjon hozzá, majd húzzuk le.
- 8) Vegyük le a (2) nyomáskiegyenlítő tartály sapkáját az alábbi módon.
  - a) Forgassuk el a sapkát 90°-kal lassan, az óramutató járásával ellentétes irányban.
  - b) Várjunk, amíg a nyomás kiegyenlítődik, majd fordítsuk tovább az óramutató járásával ellentétes irányban.
- 9) Töltsünk hűtőfolyadékot (jó minőségű etilén-glikol fagyálló és víz 50–50 %-os keverékét) a nyomáskiegyenlítő tartályba a (3) „FULL” jelzésig. Tegyük géprongyot a lekapcsolt tömlővég alá, hogy ne folyjon hűtőfolyadék a motorra és a padlóra, mivel kisebb mennyiségű levegőbuborék és/vagy hűtőfolyadék jöhet ki belőle.
- 10) Csatlakoztassuk a tömlőt a termosztát házhoz.
- 11) Járassuk a motort levett (2) nyomáskiegyenlítő tartály sapkával, amíg a hűtő bevezető tömlője forró nem lesz.
- 12) A motort alapjáraton járattva töltsünk hűtőfolyadékot az (1) nyomáskiegyenlítő tartályba, amíg a szint el nem éri a (3) „FULL” jelet.  
Tegyük fel a (2) nyomáskiegyenlítő tartály sapkát, ütközésig elfordítva az óramutató járásával megegyező irányban.

## A vízszivattyú/generátor hajtósíj feszessége ellenőrzése

### VIGYÁZAT:

Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg. Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Ellenőrizzük az (1) hajtósíjat lazaság, repedések, bevágások, deformáció, kopás és tisztaság szempontjából. Ha bármilyen hibát észlelünk, cseréljük ki a hajtósíjat ennek a fejezetnek „A vízszivattyú/generátor hajtósíj le- és felszerelése” című pontja szerint.
- 3) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.

## A gépkocsin végzendő szervizmunkák

### **VIGYÁZAT:**

- Mielőtt a hűtési rendszer bármelyik alkatrészét leszerelnénk, győződjünk meg arról, hogy a motor hűtőfolyadék hideg-e.
- Feltétlenül kössük le az akkumulátorról a negatív kábelt, mielőtt a hűtési rendszer bármelyik alkatrészét leszerelnénk.

## A hűtési rendszer leeresztése

- 1) Vegyük le kiegyenlítő tartály sapkát.
- 2) Lazítsuk meg az (1) leeresztő csavart a (2) vízhűtőn, hogy leereszsjük a hűtőfolyadékot.
- 3) A hűtőfolyadék leengedése után gondosan húzzuk meg a leeresztő csavart.

## A hűtési rendszer feltöltése

- 1) Töltsünk jó minőségű etilén-glikol fagyálló és víz 50–50%-os keverékét az (1) nyomáskiegyenlítő tartályba. Töltsük fel a (3) „FULL” jelzésig.
- 2) Járassuk a motort levett (2) nyomáskiegyenlítő tartály sapkával, amíg a hűtő felső tömlője forró nem lesz.
- 3) A motort alapjáraton járatva töltsünk hűtőfolyadékot az (1) nyomáskiegyenlítő tartályba, amíg a szint el nem éri a „FULL” jelzést. Tegyük fel a (2) nyomáskiegyenlítő tartály sapkát, ütközésig elfordítva az óramutató járásával megegyező irányban.

## A hűtővíz csövek és tömlők

### Leszerelés

- 1) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 2) A csövek vagy tömlők levételéhez oldjuk meg a tömlők bilincseit, és húzzuk le a tömlő végét.

### Felszerelés

A leszerelt alkatrészek felszerelését a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Csatlakoztassuk szilárdan az összes bilincset ennek a fejezetnek „A hűtőrendszer elemei” című pontja szerint.
- Töltsük fel a hűtőrendszert a megfelelő hűtőfolyadékkal ennek a fejezetnek „A hűtőrendszer feltöltése” című pontja szerint.

## A termosztát ház szerelvény le- és felszerelése

### FIGYELEM:

Ne szereljük szét a termosztát ház szerelvényt. A szétszereléssel alkalmatlanná válik arra, hogy betöltsse az eredeti rendeltetését. Ha a termosztát ház szerelvény hibás, egybefüggő szerelvényként cseréljük ki.

### Leszerelés

- 1) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 2) Vegyük le a (2) motor kivezető tömlőt, a (3) vízhűtő bevezető tömlőt, a (4) hűtőfolyadék táptömlőt, az (5) ECT érzékelő csatlakozót és a termosztát ház tömlőt a termosztát házról.
- 3) Szereljük le az (1) termosztát házat.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- A felszereléshez használunk új O-gyűrűt.
- Húzzuk meg a termosztát ház csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

**Termosztát ház csavar (a): 25 Nm (2,5 kgm)**

- Ha az (1) ECT érzékelőt kissereltük, kenjük be az ECT érzékelőt menetörzítő ragasztóval, és beszereléskor húzzuk meg az előírt nyomatékkal. A menetörzítő ragasztó és a meghúzási nyomaték előírt értékeit lásd a 6E3 fejezet „A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) le- és felszerelése” című pontjában.
- Töltsük fel a hűtőrendszert ennek a fejezetnek „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- Mindegyik csatlakozásnál ellenőrizzük, hogy nincs-e hűtőfolyadék szivárgás.

## A vízhűtő le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 3) Ürítsük ki a hűtőközeget az L/K rendszerből az 1B fejezet „Az L/K rendszer leürítése” című pontja szerint az RM413D, vagy a „Leürítés és feltöltés” című pontja szerint az RB413D esetében.
- 4) Kössük le a hűtőventilátor motor csatlakozóját.
- 5) Szereljük le a mellső lökhárítót a 9. fejezet „A mellső és hátsó lökhárító le- és felszerelése” című pontja szerint az RM413D esetében, vagy „A mellső és hátsó lökhárító” című pontja szerint az RB413D esetében.
- 6) Szereljük ki a kondenzátor szerelvényt az 1B fejezet „A kondenzátor szerelvény le- és felszerelése” című pontja szerint az RM413D esetén, vagy „Az L/K kondenzátor szerelvény” című pontja szerint RB413D esetén.
- 7) Szereljük ki a közbenső hűtőt a 6A3 fejezet „A közbenső hűtő ki- és beszerelése” című pontja szerint.
- 8) Szereljük ki az (1) nyomáskiegyenlítő tartályt.
- 9) Kössük le a (2) vízhűtő bevezető tömlőt és a (3) vízhűtő kivezető tömlőt a (4) vízhűtő szerelvényről.
- 10) Vegyük le az (5) motorhűtő ventilátor szerelvényt a vízhűtőről.
- 11) Szereljük le a (6) vízhűtő tartókat, majd szereljük ki a vízhűtőt.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Töltsük fel a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer feltöltése” című pontja szerint.
- Töltsük fel az L/K rendszert az 1B fejezet „Feltöltés” című pontja szerint az RM413D, vagy a „Leürítés és feltöltés” című pontja szerint az RB413D esetén.
- A feltöltés után mindegyik csatlakozásnál ellenőrizzük, nincs-e szivárgás.

## A vízhűtő ellenőrzése

Ellenőrizzük a vízhűtőt szivárgás és sérülések szempontjából. Ha elgörbült lamellát találunk, egyenesítsük ki.

## A vízhűtő tisztítása

Tisztítsuk meg a vízhűtő homlokfelületét.

## A hűtőventilátor relé ellenőrzése

Lásd a 6E3 fejezet „Üzemanyag szivattyú relé és ventilátor relé 1, 2, 3 ellenőrzése” című pontját.

## A hűtőventilátor le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 3) Szereljük ki az (1) nyomáskiegyenlítő tartályt.
- 4) Vegyük le a hűtőventilátor motor csatlakozóját.
- 5) Szereljük le a vízhűtő bevezető tömlőt a vízhűtőről.

- 6) Vegyük le az (1) hűtőventilátor motort a vízhűtőről.

## Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- Töltsük fel a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer feltöltése” című pontja szerint.
- A felszerelés után mindegyik csatlakozásnál ellenőrizzük, hogy nincs-e hűtőfolyadék szivárgás.

## A hűtőventilátor ellenőrzése

- 1) Ellenőrizzük a vízhűtő hűtőventilátorának kis fordulatszámu működését az alábbiak szerint.
  - a) Kössük az akkumulátort a ventilátor motor csatlakozójára az ábra szerint.
  - b) Ellenőrizzük, hogy a hűtőventilátor simán forog-e, és az árammérő az előírt áramerősséget mutatja-e.  
Ha bármilyen rendellenességet találunk, cseréljük ki a ventilátor motort.

**A ventilátor motor felvett áramerőssége 12 V esetén maximum 10,0 A**

- 2) Ellenőrizzük a vízhűtő hűtőventilátorának nagy fordulatszámu működését az alábbiak szerint.
  - a) Kössük az akkumulátort a ventilátor motor csatlakozójára az ábra szerint.
  - b) Ellenőrizzük, hogy a hűtőventilátor simán forog-e, és az árammérő az előírt áramerősséget mutatja-e.  
Ha bármilyen rendellenességet találunk, cseréljük ki a ventilátor motort.

**A ventilátor motor felvett áramerőssége 12 V esetén maximum 15,0 A**

## A vízszivattyú/generátor hajtósíjának le- és felszerelése

### Leszerelés

- 1) Vegyük le a (2) hajtósíjat, eközben az (1) szíj feszítőt forgassuk ütközésig az óramutató járásával megegyező irányban.

## Felszerelés

- 1) Szereljük fel a (2) hajtószíjat, közben az (1) szíjfeszítőt forgassuk ütközésig az óramutató járásával megegyező irányban.
- 2) Ellenőrizzük a hajtószíj feszességét ennek a fejezetnek „A vízszivattyú/generátor hajtószíj feszesség ellenőrzése” című pontja szerint.

## A vízszivattyú/generátor hajtószíj feszítő szerelvény le- és felszerelése

### FIGYELEM:

Ne szereljük szét a hajtószíj feszítő szerelvényt. A szétszereléssel alkalmatlanná válik arra, hogy betöltse az eredeti rendeltetését. Ha a szíjfeszítő szerelvény hibás, egybefüggő szerelvényként cseréljük ki.

## Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 3) Szereljük le az (1) szíjfeszítőt.

## Felszerelés

- 1) Szereljük fel az (1) szíjfeszítőt.  
Húzzuk meg a (2) szíjfeszítő csavart az előírt nyomatékkal.

### Meghúzási nyomaték

**Szíjfeszítő csavar (a): 50 Nm (5,0 kgm)**

- 2) Szereljük fel a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 3) Ellenőrizzük a hajtószíj feszességét ennek a fejezetnek „A vízszivattyú/generátor hajtószíj feszesség ellenőrzése” című pontja szerint.

## A vízszivattyú le- és felszerelése

### Leszerelés

- 1) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 2) Szereljük le a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 3) Szereljük le az (1) vízszivattyú szerelvényt.

### Felszerelés

- 1) Tegyük fel új (2) O-gyűrűt a vízszivattyúra.
- 2) Szereljük fel az (1) vízszivattyú szerelvényt a hengerblokkra, és húzzuk meg az anyákat az előírt nyomatékkal.

#### Meghúzási nyomaték

**Vízszivattyú anya (a): 9 Nm (0,9 kgm)**

- 3) Szereljük fel a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 4) Töltsük fel a hűtőrendszert ennek a fejezetnek „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 5) Ellenőrizzünk minden alkatrészt szivárgás szempontjából.

## A vízszivattyú ellenőrzése

### FIGYELEM:

**A vízszivattyút ne szedjük szét.**

**Ha a szivattyú javítást igényel, egybefüggő egységként cseréljük ki.**

- Forgassuk meg kézzel a vízszivattyút, hogy ellenőrizzük az akadálytalan működését.

Ha a szivattyú nem forog simán, vagy rendellenes hangja van, cseréljük ki.

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

### VIGYÁZAT:

Mielőtt bármiféle szervizmunkához kezdenénk az üzemanyag rendszeren, a tűz és a személyi sérülés kockázatának elkerülése érdekében mindig tartsuk be az alábbi óvintézkedéseket.

- Kössük le a negatív kábelt az akkumulátorról.
- Ne dohányozzunk, és a munkaterület környékén helyezünk el dohányzást tiltó táblákat.
- Feltétlenül legyen kéznél CO<sub>2</sub> tűzoltó készülék.
- A munkát csak jól szellőztetett területen, mindenféle nyílt lángtól (például gázmelegítőtől) távol végezzük.
- Viseljünk védőszemüveget.
- Az üzemanyag tartályban uralkodó nyomás elengedéséhez vegyük le a üzemanyag betöltőnyílás sapkáját, majd helyezzük vissza.
- Az üzemanyag vezeték megbontása után egy kevés üzemanyag kifolyhat. A személyi sérülés veszélyének csökkentése érdekében a megbontandó csatlakozót takarjuk le gépronggyal. A csatlakozó megbontása után ezt a rongyot feltétlenül az erre a célra rendszeresített gyűjtőedénybe tegyük.
- Figyeljük meg, hogy az üzemanyag tömlők csatlakozásai a csövek fajtájától függően különbözőek. Ügyeljünk arra, hogy mindegyik tömlőt a megfelelő módon csatlakoztasuk és bilinccsel rögzítsük, az ábra szerint.
- Mielőtt egy üzemanyag tömlőt vagy csövet leválasztunk, legalább 60 másodpercig várjunk a motor leállása után, hogy az üzemanyag rendszerben megszűnjön a nyomás.
- Az üzemanyag rendszer kisserelt elemeit ne hagyjuk porosodni. Mindig tartsuk tisztán azokat.

[A]: Rövid cső esetében a tömlőt egészen ütközésig toljuk fel, az ábrán látható módon.

[B]: Ennél a cső típusnál a tömlőt a kiszélesedő részig toljuk fel, az ábrán látható módon.

[C]: Hajlított cső esetében a tömlőt a hajlatig, vagy a „b” hosszúságban toljuk fel, az ábrán látható módon.

[D]: Egyenes csőnél a „b” hosszúságban toljuk fel a tömlőt.

[E]: Piros jelzéssel ellátott csőnél a tömlőt a piros jelzésig toljuk fel a csőre.

[F]: Az üzemanyag tartály töltő tömlőt a kiöblösödésig vagy a hegesztési varratig toljuk fel.

1. Cső

2. Tömlő

3. Bilincs

4. Piros jelzés

„a”: A bilinccsel szilárdan rögzítsük, a tömlő végétől 3 – 7 mm távolságban.

„b”: 20 – 30 mm

[c]: 0 – 5 mm

(d): 5 – 12 mm

(e): 40 mm

## Az üzemanyag szűrő vízleeresztője

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Tegyük edényt az (1) leeresztő csavar alá, majd ennek meglazításával eresszük le az üzemanyagot.
- 3) Húzzuk meg a leeresztő csavart.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## Az üzemanyag rendszer légtelenítése

A légtelenítést akkor kell végrehajtani, amikor az üzemanyag rendszert szétszereltük, vagy a gépkocsiból kifogyott az üzemanyag. Az üzemanyag szivattyú működtetése céljából kapcsoljuk be a gyújtást, majd körülbelül 5 másodperc elteltével kapcsoljuk ismét ki. Ismételjük meg 6 alkalommal, majd ellenőrizzük a motor indítását.

## Az üzemanyag vezetékek ellenőrzése

### FIGYELEM:

**Tekintve, hogy az (1) üzemanyag tápvezeték nagy nyomás alatt áll, szervizelésénél különös gonddal járjunk el.**

Szemrevételezéssel ellenőrizzük az üzemanyag vezetékeket szivárgás, a tömlők repedezettsége, elhasználódása vagy sérülése szempontjából.

Győződjünk meg arról, hogy minden bilincs szilárdan rögzít-e. A hibás alkatrészeket szükség szerint cseréljük ki.

## Az üzemanyag cső le- és felszerelése

### VIGYÁZAT:

**Az üzemanyag tömlő megbontása után kifolyhat egy kevés üzemanyag. A személyi sérülés veszélyének csökkentése érdekében a megbontandó tömlőt és csövet takarjuk le gépronggyal.**

**A csatlakozó megbontása után ezt a rongyot feltétlenül az erre a célra rendszeresített gyűjtőedénybe tesszük.**

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.

2) Szereljük le a kormánymű ház szerelvényt. Lásd a 3B fejezet „A kormánymű ház le- és felszerelése” című pontját az RM413D esetén, vagy „A kézi fogasléc-fogaskerekes szerelvény (kormánymű ház)” című pontját a RB413D esetén.

3) Szereljük ki a (2) csőburkolatot a gépkocsiból.

4) Az egyes üzemanyag csövek elejéről és végéről oldjuk le a csőkötéseket és az üzemanyag tömlőket.

A (3) gyorscsatlakozót a következő módon vegyük le:

- Sűrített levegőt ráfújva távolítsuk el a (4) cső és a csatlakozó közül a sarat, port és/vagy egyéb idegen anyagokat.
- A cső és a csatlakozó közé célszerszámot helyezve oldjuk ki a csatlakozót.

### Célszerszám

(A): 09919-47020

c) Vegyük le a (3) csatlakozót a (4) csőről.

1. Bilincs

5) Jelöljük meg a (2) üzemanyag csövön az (1) bilincsek helyét, hogy visszaszereléskor oda kerüljenek, ahol voltak.

6) Szereljük le a (2) csöveket az (1) bilincsekkel együtt a gépkocsiról.

7) Vegyük le az (1) bilincseket a (2) csövekről.

### Felszerelés

1) Helyezzük a bilincseket a csöveken megjelölt helyekre. Ha a bilincs deformálódott vagy a körme elgörbült vagy letört, használjunk új bilincset.

2) Rögzítsük a csöveket a csőbilincsekkel a gépkocsihoz.

- 3) Csatlakoztassuk az üzemanyag tömlőket és csöveket minden egyes csőhöz.

#### FIGYELEM:

Amikor csatlakozó csőidomot illesztünk be, tisztítsuk meg a cső külsejét, ahova a csatlakozó idom kerül, toljuk be a csövet a csatlakozó idomba, amíg a retesz be nem kattán, majd ellenőrizzük, hogy a cső szilárdan illeszkedik-e, különben üzemanyag szivárgás állhat elő.

- 4) Szereljük be az (1) csőburkolatot a gépkocsiba.
- 5) Szereljük be a kormánymű házat a 3B fejezet „A kormánymű ház le- és felszerelése” című pontja szerint az RM413D esetén, vagy „A kézi fogasléces-fogaskerekes szerelvény (kormánymű ház)” című pontja szerint a RB413D esetén.
- 6) Bekapcsolt gyújtás, de álló motor mellett ellenőrizzük, nincs-e valahol üzemanyag szivárgás.

## Az üzemanyag betöltő nyílás záró sapkájának ellenőrzése

Vegyük le az (1) sapkát, és ellenőrizzük a tömítést elhasználódás, sérülés, vagy a betöltő nyílás egyenletes lenyomata szempontjából. Ha a (2) tömítés rossz állapotban van, cseréljük ki a sapkát.

#### MEGJEGYZÉS:

Ha a sapka cserére szorul, csak ugyanolyan jellemzőkkel rendelkező sapkát használjunk. Nem megfelelő sapka használata a rendszer alapvetően hibás működését eredményezheti.

## Az üzemanyag tartály töltőszelepének ki- és beszerelése

#### VIGYÁZAT:

Az alábbi eljárás megkezdése előtt vegyük figyelembe ennek a fejezetnek az „Övintézkedések” című pontjában foglaltakat.

#### Leszerelés

- 1) Vegyük le az üzemanyag töltőnyílás sapkáját.
- 2) Helyezzük be egy kézi szivattyú szívó tömlőjét az (1) üzemanyag-töltő tömlőbe, és szívjuk ki az üzemanyagot az ábrán „A”-val jelölt részből.

#### FIGYELEM:

Ne erőltessük be a szivattyú tömlőjét az üzemanyag tartályba, mert az tönkretelheti az üzemanyag tartály (2) töltőszelepét.

- 3) Emeljük meg a gépkocsit, és vegyük le az üzemanyag tartályról a (2) bilincset és az (1) töltő tömlőt.

- 4) Lapos végű (2) rúddal vagy hasonló eszközzel vegyük ki az (1) üzemanyag tartály töltőszepjét.

**FIGYELEM:**

Ügyeljünk arra, hogy a (2) lapos végű rúddal vagy hasonló eszközzel ne sértsük meg az üzemanyag tartály (1) töltőszepjét.

**Felszerelés**

- 1) Helyezzük be az (1) üzemanyag tartály töltőszepjét az üzemanyag tartályba.

- 2) Erősítsük fel az (1) üzemanyag töltő tömlőt az üzemanyag tartályra, és rögzítsük a (2) bilincssel.  
A bilincs megfelelő elhelyezését lásd ennek a fejezetnek „Az üzemanyag rendszer elemei” című pontjában.
- 3) Engedjük le a gépkocsit, és tegyük fel a töltőnyílás sapkáját.

## Az üzemanyag tartály töltőszelepének ellenőrzése

Ellenőrizzük az üzemanyag tartály (1) töltőszelepét az alábbi szempontokból.

- Sérülés
- Akadálytalan nyitás és zárás

Ha bármilyen sérülést vagy hibás működést észlelünk, cseréljük ki.

## Az üzemanyag tartály ki- és beszerelése

### Kiszzerelés

#### VIGYÁZAT:

- Az alábbi eljárás megkezdése előtt vegyük figyelembe ennek a fejezetnek az „Óvintézkedések” című pontjában foglaltakat.
- Az üzemanyag tömlő megbontása után kifolyhat egy kevés üzemanyag. A személyi sérülés veszélyének csökkentése érdekében a megbontandó tömlőt és csövet takarjuk le gépronggyal. A csatlakozó megbontása után ezt a rongyot feltétlenül az erre a célra rendszeresített gyűjtőedénybe tesszük.

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Emeljük fel a gépkocsit.
- 3) Vegyük le a (3) töltőcsonkról az (1) üzemanyag töltő tömlőt és a (2) szellőző tömlőt.

#### FIGYELEM:

**Az üzemanyag tartály töltőnyílásáról soha se vegyük le az (1) üzemanyag töltő tömlőt. Ha a tartályban a fele mennyiségű vagy még több üzemanyag maradt, ebben az esetben túlcsondul és kifolyik.**

- 4) Mivel az üzemanyag tartályon nincs leeresztő csavar, a tartályból az üzemanyagot a töltőnyíláson keresztül szivattyúzással ürítsük ki.

Az üzemanyag tartály kiürítéséhez kézi működtetésű szivattyút használjunk.

#### FIGYELEM:

- Ne erőltessük be a szivattyú tömlőjét az üzemanyag tartályba, mert az tönkretelheti az üzemanyag tartály töltőszelepét.
- Soha se töltsük az üzemanyagot nyitott edénybe, és ilyenben ne is tároljuk a tűz vagy robbanás veszélye miatt.

5) Vegyük le az üzemanyag csatlakozó idomokat a csövekről.

Az (1) gyorscsatlakozót a következő módon vegyük le:

- Sűrített levegőt ráfújva távolítsuk el a (2) cső és a csatlakozó idom közül a sarat, port és/vagy egyéb idegen anyagokat.
- A (2) cső és az (1) csatlakozó idom közé célszerszámot helyezve oldjuk ki az (1) csatlakozó idom reteszét.

#### Célszerszám

(A): 09919-47020

- Vegyük le a csatlakozó idomot a csőről.

6) Támasszuk alá az (1) üzemanyag tartályt a (2) emelővel, és szereljük ki a felerősítő csavarjait.

7) Engedjük le az üzemanyag tartályt annyira, hogy leköthessük a villamos vezeték (1) csatlakozóját, majd vegyük ki az üzemanyag tartályt.

### Beszerelés

#### FIGYELEM:

- Amikor csatlakozó csőidomot illesztünk be, tisztítsuk meg a cső külsejét, ahova a csatlakozó kerül, toljuk be a csövet a csatlakozó idomba, amíg a retesz be nem kattan, majd ellenőrizzük, hogy a cső szilárdan illeszkedik-e, különben üzemanyag szivárgás állhat elő.
- Vigyázzunk, hogy az üzemanyag tömlők ne hogy hozzáérjenek az ABS érzékelő kábelkötegéhez (ha van ABS).

1) Ha szereltünk le alkatrészeket az üzemanyag tartályról, szereljük azokat vissza, mielőtt a tartályt visszatesszük a gépkocsiba.

- 2) Emeljük meg az (1) üzemanyagtartályt az emelővel, kössük be az üzemanyag szivattyú és a szintmérő csatlakozóját, és a vezetékköteget rögzítsük bilincssel.
- 3) Szereljük be az (1) üzemanyag tartályt a gépkocsiba.

**Meghúzási nyomaték**

**Üzemanyag tartály csavarja (a): 23 Nm (2,3 kgm)**

- 4) Csatlakoztassuk az (1) üzemanyag töltő tömlőt és a (2) szellőző tömlőt a (3) töltőcsonkhoz az ábrán látható módon, és a bilincsekkel szilárdan rögzítsük.

**Meghúzási nyomaték**

**Üzemanyag töltő tömlő bilincs csavarja**

**(a): 1,5 Nm (0,15 kgm)**

- 5) Kössük be az (1) üzemanyag visszatérő tömlőt és a (2) páraelvezető tömlőt az egyes csövekhez az ábrán látható módon, és a bilincsekkel szilárdan rögzítsük.
- 6) Csatlakoztassuk a negatív kábelt az akkumulátorra.  
Bekapcsolt gyújtás, de álló motor mellett ellenőrizzük, nincs-e valahol üzemanyag szivárgás.

## Az üzemanyag tartály ellenőrzése

Az üzemanyag tartály kiszerelése után ellenőrizzük az üzemanyag tartályhoz csatlakozó tömlőket és csöveket szivárgás, laza kötések, elhasználódás és sérülések szempontjából. Ugyancsak ellenőrizzük, hogy nem szivárognak-e az üzemanyag szivattyú szerelvény tömítései; szemrevételezzük a tartályt, hogy nem szivárog és nem sérült-e.

Minden sérült vagy rossz állapotú alkatrészt cseréljünk ki.

## Az üzemanyag tartály átöblítésének módszere

### VIGYÁZAT:

Ez az öblítési eljárás nem távolít el a tartályból minden üzemanyag párárt.

Semmilyen hővel vagy lánggal járó javítást ne végezzünk a tartályon, mert az személyi sérüléssel járó robbanást okozhat.

### FIGYELEM:

Mosás után soha ne maradjon víz a tartályban, mert a tartály belsejében korrózió lép fel.

Az üzemanyag tartályt az alábbi módszerrel öblítsük át.

- 1) Miután az üzemanyag tartályt kisereltük, vegyünk le róla minden tömlőt és csövet, továbbá szereljük ki az üzemanyag szivattyú szerelvényét.
- 2) Öntsük ki a tartályból a maradék üzemanyagot.
- 3) Vigyük a tartályt olyan helyre, ahol az öblítés elvégezhető.
- 4) Töltsük meg a tartályt meleg vízzel vagy csapvízzel, alaposan rázzuk fel, majd öntsük ki a vizet. Ezt addig ismételjük, amíg a tartály belseje tiszta nem lesz.  
Ha a tartály belseje rozsdás, cseréljük ki.
- 5) Mosás után teljes mértékben távolítsuk el a vizet a tartályból.

## Az üzemanyag szivattyú szerelvény ki- és beszerelése

### VIGYÁZAT:

Az alábbi eljárás megkezdése előtt vegyük figyelembe ennek a fejezetnek az „Óvintézkedések” című pontjában foglaltakat.

### FIGYELEM:

Ne szereljük szét az üzemanyag szivattyú szerelvényét. A szétszereléssel alkalmatlanná válik arra, hogy betöltse az eredeti rendeltetését.

### Kiszerelés

- 1) Szereljük ki az üzemanyag tartályt a gépkocsiból ennek a fejezetnek „Az üzemanyag tartály ki- és beszerelése” című pontja szerint.
- 2) Kössük le az (1) üzemanyag szellőző tömlőt, a (2) üzemanyag visszatérő tömlőt, a (3) üzemanyag tápvezetékét és a (4) üzemanyag páratömlőt az üzemanyag szivattyú szerelvényről. Amikor lekötjük az üzemanyag tápvezeték csatlakozó idomait az üzemanyag szivattyú csöveiről, a csatlakozó idomot úgy oldjuk ki, hogy előbb célszerszámot helyezünk a cső és a csatlakozó idom retesze közé.

Célszerszám

(A): 09919-47020

- 3) Szereljük le az (1) üzemanyag szivattyú szerelvényt a (2) üzemanyag tartályról.

### Beszerelés

#### FIGYELEM:

Amikor csatlakozó csőidomot illesztünk be, tisztítsuk meg a cső külsejét, ahova a csatlakozó idom kerül, toljuk be a csövet a csatlakozó idomba, amíg a retesz be nem kattán, majd ellenőrizzük, hogy a cső szilárdan illeszkedik-e, különben üzemanyag szivárgás állhat elő.

- 1) Tisztítsuk meg az (1) üzemanyag szivattyú szerelvény és a tartály illeszkedő felületeit.
- 2) Szereljük új (2) tömitést és (3) karimát az (1) üzemanyag szivattyú szerelvényre, majd szereljük be az üzemanyag szivattyú szerelvényt az üzemanyag tartályba.

#### Meghúzási nyomaték

Üzemanyag szivattyú csavarja (a): 10,5 Nm (1,05 kgm)

- 3) Kössük be az (1) üzemanyag szellőző tömlőt, a (2) üzemanyag visszatérő tömlőt, a (3) üzemanyag tápvezetékét és a (4) üzemanyag páratömlőt az üzemanyag szivattyú szerelvényre.
- 4) Szereljük be az üzemanyag tartályt a gépkocsiba ennek a fejezetnek „Az üzemanyag tartály ki- és beszerelése” című pontja szerint.

## Az üzemanyag szivattyú ellenőrzése

- Ellenőrizzük, nem sérült-e az üzemanyag szivattyú szerelvény.
- Ellenőrizzük, hogy nincs-e elszennyeződve az (1) üzemanyag szívó szűrő.  
Ha igen, tisztítsuk meg vagy cseréljük ki, és ellenőrizzük, nincs-e szennyező anyag az üzemanyag tartályban.
- A üzemanyag szintjelző ellenőrzését lásd a 8C fejezet „Az üzemanyagszint érzékelő (szintjelző egység) ellenőrzése” című pontjában.

## Az üzemanyag szűrőbetét ki- és beszerelése

### Kiszerelés

- 1) Kössek le a negatív kábelt az akkumulátorról.
- 2) Tegyük egy edényt az (1) leeresztő csavar alá, és azt meglazítva eresszük le az üzemanyagot.

- 3) Kössek le az (1) üzemanyag szűrő csatlakozót a (2) üzemanyag szűrőről.

A (3) gyorscsatlakozót a következő módon vegyük le:

- a) Sűrített levegőt ráfújva távolítsuk el a sarat, port és/vagy egyéb idegen anyagokat az (5) üzemanyag szűrő csatlakozó idom és az (1) gyorscsatlakozó közül.
- b) Oldjuk ki a gyorscsatlakozót, célszerszámmal helyezve az üzemanyag szűrő csatlakozó és a gyorscsatlakozó közé.

### Célszerszám

(A): 09919-47020

- c) Kössek le az (1) üzemanyag szűrő csatlakozót az üzemanyag szűrőről.
- 4) Kössek le a (4) csatlakozókat az üzemanyag szűrőről.

- 5) Az üzemanyag szűrő (1) rögzítőjét az óramutató járásával ellentétes irányba fordítva távolítsuk el az (1) üzemanyag szűrő rögzítőt a (4) üzemanyag szűrő házról, célszerszám és (5) satu segítségével.

#### Célszerszám

(A): 09919-48610

- 6) Vegyük le az üzemanyag szűrő (2) tetejét, és vegyük ki az üzemanyag (3) szűrőbetétet.

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Ügyeljünk arra, hogy új üzemanyag szűrőbetétet és O-gyűrűt szereljünk be.
- Tisztítsuk meg az üzemanyag szűrő házat az alábbiak szerint.
  - a) Tegyük edényt a leeresztő csavar alá, és ezt meglazítva eresszük le az üzemanyagot.
  - b) Húzzuk meg a leeresztő csavart.
  - c) Szereljük ki az üzemanyag szűrő házat.
  - d) Öntsünk dízelolaj helyettesítőt (kerdán, dilutin vagy paraffin) az üzemanyag szűrő házba.
  - e) Tisztítsuk meg az üzemanyag szűrő házat kefével.
  - f) Szárítsuk meg és töröljük ki az üzemanyag szűrő házat.
- Húzzuk meg az üzemanyag szűrő (1) rögzítőt az előírt nyomatékkal, célszerszám és (2) satu segítségével.

#### Célszerszám

(A): 09919-48610

#### Meghúzási nyomaték

#### Üzemanyag szűrő rögzítő

(a): 30 Nm (3,0 kgm)

- Légtelenítsük a rendszert ennek a fejezetnek a „Légtelenítési eljárás” című pontja szerint.
- Indítsuk be a motort, és ellenőrizzük, hogy nem szivárogo-e az üzemanyag.

## Az üzemanyag szűrő szerelvény ki- és beszerelése

### Kiszerelés

- 1) Kössük le az üzemanyag csöveket ennek a fejezetnek „Az üzemanyag szűrőbetét ki-és beszerelése” alatti „Kiszerelés” című pont 1 – 4. lépése szerint.
- 2) Szereljük ki az üzemanyag szűrő szerelvényt.

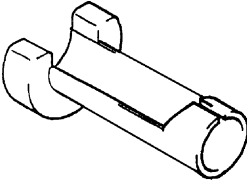

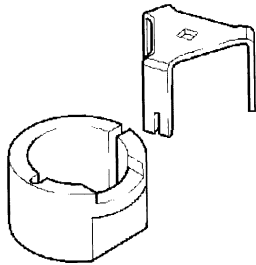

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtuk végre, figyelembe véve az alábbiakat.

- Légtelenítsük a rendszert ennek a fejezetnek „Az üzemanyag rendszer légtelenítése” című pontja szerint.
- Indítsuk be a motort, és ellenőrizzük, hogy nem szivárogo-e az üzemanyag.

# A MOTOR SZABÁLYOZÓ ÉS EMISSZIÓ CSÖKKENTŐ RENDSZER (Z13DT MOTOR)

6E3

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a 10B fejezet „Általános leírás” részében „A rendszer elemeinek, vezetékeinek és csatlakozóinak elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzuk át a 10B fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## A gépkocsin végzendő szervizmunkák

### Az alapjárat ellenőrzése

- 1) Kapcsoljuk a sebességváltót üres helyzetbe.
- 2) Indítsuk el a motort, és melegítsük fel a rendes üzemi hőmérsékletre.
- 3) Kapcsoljunk ki minden elektromos terhelést.
- 4) A SUZUKI vizsgálókészülékkel ellenőrizzük, hogy az alapjárat fordulatszám az előírt értékeken belül van-e.

**Motor fordulatszám: 720 – 880 ford/min**

- 5) Ha nem, lásd a „B-11 észrevétel: motor üresjárat” című pontot a 6-3 fejezetben.

### A levegőszívó rendszer

#### A vákuumszivattyú le- és felszerelése

##### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük ki az üzemanyag tápcső (1) rögzítő csavarjait.

- 4) Szereljük le az (1) fékrásegítő tömlőt a vákuumszivattyúról.
- 5) Szereljük le a (2) vákuumszivattyút a vezérműtengely csapágyházról.

## Felszerelés

1) Helyezzünk új tömítést a vákuumszivattyúra.

2) Szereljük fel a (2) vákuumszivattyút a vezérműtengely csapágyházra.

Illesszük a vákuumszivattyú tengelykapcsoló karmait a vezérműtengely hornyába.

3) Húzzuk meg a vákuumszivattyú (1) csavarjait a következők szerint.

a) Húzzuk meg a vákuumszivattyú csavarjait 5 Nm (0,5 kgm) nyomatékkal.

b) Húzzuk meg a vákuumszivattyú csavarjait 20 Nm (2,0 kgm) nyomatékkal.

### Meghúzási nyomaték

#### Vákuumszivattyú csavarja

**(a): 5 Nm (0,5 kgm) majd 20 Nm (2,0 kgm)**

4) Szereljük fel a (3) fékrásegítő tömlőt a vákuumszivattyúra.

5) Húzzuk meg az üzemanyag tápcső (1) rögzítő csavarjait.

6) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.

7) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## Az üzemanyag szállító rendszer

### VIGYÁZAT:

- Az üzemanyag pára veszélyes. Nagyon könnyen bellobbanhat, súlyos sérülést és kárt okozva. Mindig tartsunk távol mindennemű szikrát és lángot az üzemanyagtól. Az üzemanyag vezeték szakadásai és szivárgásai veszélyesek. Az üzemanyag bellobbanhat, és súlyos sérüléseket vagy halált és kárt okozhat.
- Az üzemanyag ingerelheti a bőrt és a szemet is. Ennek elkerülése érdekében mindig tegyük meg az alábbi „Óvintézkedéseket”.

### Óvintézkedések

- Mielőtt egy üzemanyag tömlőt vagy csövet megbontanánk, várjunk legalább 60 másodpercet a gyújtáskapcsoló kikapcsolása után, hogy megszűnjön a nyomás az üzemanyag rendszerben.
- Mielőtt kiszernénk az üzemanyag rendszer elemeit, alaposan tisztítsuk meg mindegyik csatlakozást.
- Ne tegyük ki az üzemanyag rendszer kiszertelt elemeit (nagynyomású üzemanyag szivattyú, üzemanyag befecskendező, üzemanyag szűrő stb.) pornak. Mindig tartsuk tisztán azokat.
- Az üzemanyag rendszert a karbantartási munka után ellenőrizni kell szivárgás szempontjából ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

6. Nagynyomású cső	12. Az üzemanyag tápvezetékhez	18. Nagynyomású cső hollandi anya (üzemanyag befecskendező felőli oldal)	

## Az üzemanyag szivárgás ellenőrzése

- 1) Kapcsoljuk be a gyújtást.
- 2) Ellenőrizzük mindegyik karbantartott alkatrészt szivárgás szempontjából.
- 3) Indítsuk be a motort, majd ellenőrizzük mindegyik karbantartott alkatrészt szivárgás szempontjából.
- 4) Járassuk a motort 4000 ford/min fordulatszámon mintegy 30 másodpercig, majd állítsuk le a motort.
- 5) Ellenőrizzük mindegyik karbantartott alkatrészt szivárgás szempontjából.

## Az üzemanyag szivattyú ellenőrzése beszerelt állapotban

- 1) Ellenőrizzük, hogy az üzemanyag szivattyú működési zaja az üzemanyag szivattyúnál mintegy 20 másodpercig hallható, majd leáll, amikor bekapcsoljuk a gyújtáskapcsolót.  
Ha a fenti ellenőrzés eredménye nem kielégítő, ismételt ellenőrizzük, hogy a rendszer mindegyik lépésben jó állapotban van-e, a 6-3 fejezet „C-06, az üzemanyag szivattyú relé áramköre” című pontja szerint.

- 2) Ellenőrizzük, hogy a gyújtáskapcsoló bekapcsolása után kb. 20 másodpercig az (1) üzemanyag táptömlőn érezzük-e az üzemanyag nyomását.  
Ha nem érezzük az üzemanyag nyomását, ellenőrizzük, hogy nincs-e üzemanyag szivárgás az üzemanyag vezetéknél, vagy nincs-e eldugulva az üzemanyag vezetékek.

## Az üzemanyag szivattyú le- és felszerelése

Lásd a 6C3 fejezet „Az üzemanyag szivattyú szerelvény ki- és beszerelése” című pontját.

## Az üzemanyag szivattyú ellenőrzése

Lásd a 6C3 fejezet „Az üzemanyag szivattyú ellenőrzése” című pontját.

## Az üzemanyag befecskendező szelep ellenőrzése beszerelt állapotban

- 1) Járó, vagy önindítóval forgatott motor mellett sztetoszkóp vagy hasonló eszköz segítségével ellenőrizzük a befecskendező szelep működési hangját.

A működési hang szaporaságának a motor fordulatszámával kell változnia.

Ha nem hallunk hangot, vagy szokatlan hangot hallunk, ismételt ellenőrizzük, hogy a rendszer mindegyik lépésben jó állapotban van-e a 6-3 fejezet „C-24, az 1. sz. henger befecskendező áramköre”, „C-25, a 2. sz. henger befecskendező áramköre”, „C-26, a 3. sz. henger befecskendező áramköre” vagy „C-27, a 4. sz. henger befecskendező áramköre” című pontjai szerint.

- 2) Vegyük le a csatlakozót a befecskendező szelepről, kössünk ohmmérőt a befecskendező szelep érintkezői közé, és mérjük meg az ellenállást.

Ha a mért ellenállás kívül esik a megadott határértékeken, cseréljük ki a szelepet.

**A befecskendező szelep ellenállása körülbelül 0,5  $\Omega$**

- 3) Kössük be a csatlakozót szilárdan a befecskendező szelepre.

## Az üzemanyag befecskendező szelep ki- és beszerelése

### MEGJEGYZÉS:

Az (1) kalibrációs kód az a kód, amellyel mindegyik befecskendező szelep rendelkezik, és amely az üzemanyag befecskendező szelep teljesítmény jellemzőit képviseli. Ez az ECM-ben van regisztrálva, és az ECM vezérli az üzemanyag befecskendezést az üzemanyag befecskendező szelep teljesítmény jellemzője szerint. Ezért az üzemanyag befecskendező szelepek kicserélése után ügyeljünk arra, hogy úgy szereljük vissza azokat, ahogy eredetileg voltak. Ha az üzemanyag befecskendező szelepeket újra cseréljük ki, ügyeljünk arra, hogy minden egyes kalibrációs kódot regisztráljunk az ECM-ben ennek a fejezetnek az „ECM regisztrálása” című pontja szerint. Tájékozódás céljából meg tudható, hogy jelenleg milyen kalibrációs kódok vannak regisztrálva az ECM-ben.

## Kiszerelés

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Vegyük le az (1) bilincseket, majd kapcsoljuk le a (2) visszatérő tömlőt az üzemanyag befecskendező szelepekről.
- 4) Kössük le az üzemanyag befecskendező szelep (3) csatlakozóit.

- 5) Szereljük le az (1) nagynyomású csöveket.  
Amikor meglazítjuk a nagynyomású cső hollandi anyáját, villáskulccsal tartjuk meg a (4) üzemanyag befecskendező szelep (7) hollandi anyáját.
- 6) Szereljük ki a befecskendező szelep (3) tartó anyáját.
- 7) Szereljük le az üzemanyag befecskendező szelepeket az (5) tartójukkal együtt a vezérműtengely házról.
- 8) Szereljük le a (6) tömítő gyűrűket a vezérműtengely csapágyházból.

2. Közös vezetékek

## Beszerezés

- 1) Tegyük új (2) tömítő gyűrűket az (1) üzemanyag befecskendező szelepekre.
- 2) Helyezzük a (3) üzemanyag befecskendező szelep tartót az üzemanyag befecskendező szelepekre.
- 3) Szereljük fel az üzemanyag befecskendező szelepeket a vezérműtengely házra, majd húzzuk meg a befecskendező szelep tartó (4) anyáját ideiglenesen, kézzel.
- 4) Szereljük fel új (6) nagynyomású csöveket, és húzzuk meg mindegyik hollandi anyáját ideiglenesen, kézzel.
- 5) Húzzuk meg az üzemanyag befecskendező szelep tartó anyáját az előírt nyomatékkal.

### Meghúzási nyomaték

#### Üzemanyag befecskendező tartó anya

### 5. Közös vezeték

- 7) Csatlakoztassuk az (1) visszatérő tömlőt az üzemanyag befecskendező szelepekhez, majd tegyük fel a (2) bilincseket a befecskendező szelepekre.
- 8) Kössük be a (3) üzemanyag befecskendező szelep csatlakozókat.
- 9) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 10) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.  
Abban az esetben, ha az üzemanyag befecskendező szelepe(ke)t kicseréltük, végezzük el ennek a fejezetnek „Az ECM regisztrálása” című pontját, hogy regisztráljuk az üzemanyag befecskendező szelep kalibrációs kódját az ECM-ben.
- 11) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

## A közös vezeték (nagynyomású üzemanyag befecskendező vezeték) le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.

- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük ki a vákuumszivattyút ennek a fejezetnek „A vákuumszivattyú ki- és beszerelése” című pontja szerint.
- 4) Szereljük le a nagynyomású tápcsövet ennek a fejezetnek „A közös vezeték (nagynyomású üzemanyag befecskendező vezeték) le- és felszerelése” részében a „Leszerelés” című pont 3) lépése szerint.
- 5) Kössük le az (1) üzemanyag táptömlőt és a (2) üzemanyag visszatérő tömlőt a befecskendező szivattyúról.

- 6) Szereljük le az (1) befecskendező szivattyút a vezérműtengely házról a 3 db (2) csavar eltávolításával.

### Felszerelés

- 1) Tisztítsuk meg a befecskendező szivattyú és a vezérműtengely ház illeszkedő felületeit.

- 2) Tegyük új (1) tömítést a befecskendező szivattyúra.
- 3) Szereljük fel a (2) befecskendező szivattyút a vezérműtengely csapágyházra.  
Illesszük a befecskendező szivattyú tengelykapcsolójának (3) karmait a vezérműtengely (4) hornyába.
- 4) Húzzuk meg a befecskendező szivattyú csavarjait az előírt nyomatékkal.

**Meghúzási nyomaték**

**Befecskendező szivattyú csavar (a): 15 Nm (1,5 kgm)**

- 5) Csatlakoztassuk az (1) üzemanyag táptömlőt és a (2) üzemanyag visszatérő tömlőt a befecskendező szivattyúra.

- 6) Szereljük be új nagynyomású tápcsövet ennek a fejezetnek „A közös vezeték (nagynyomású üzemanyag befecskendező vezeték) le- és felszerelése” részében a „Felszerelés” című pont 2) és 4) lépései szerint.
- 7) Szereljük be a vákuumszivattyút ennek a fejezetnek „A vákuum-szivattyú ki- és beszerelése” című pontja szerint.
- 8) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 9) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 10) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

## Az elektronikus vezérlő rendszer

### A motor vezérlő egység (ECM) le- és felszerelése

**FIGYELEM:**

Mivel az ECM precíziós alkatrészeket tartalmaz, óvjuk a nagyobb ütésektől.

[A]: Az ECM csatlakozó lekötésének módja	2. ECM tartó	4. Üzemanyag cső
1. ECM	3. L/K hűtőközeg cső	5. Üzemanyag szűrő szerelvény

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Vegyük le a csatlakozót az üzemanyag szűrő szerelvényről, majd szereljük ki az üzemanyag szűrő szerelvényt az ECM tartójából.
- 3) Vegyük ki az üzemanyag cső rögzítő csavarjait és az L/K hűtőközeg cső rögzítő csavarját.

- 4) Kössük le a csatlakozókat az ECM-ről az alábbiak szerint.
  - a) Húzzuk ki a retesz csúszkát, hogy feloldjuk a reteszelő kar zárását.
  - b) Húzzuk felfelé a reteszelő kart.

- 5) Vegyük ki az ECM-et a tartójával együtt a gépkocsiból.
- 6) Vegyük ki az ECM-et az ECM tartóból.

### Felszerelés

#### MEGJEGYZÉS:

Ha az ECM-et kicseréljük, regisztráljuk a gépkocsi adatait (üzemanyag befecskendező szelep kalibrációs kód, gépkocsi változat, az indításgátló rendszer jelszava és az indításgátló rendszer titkos kulcsa) az ECM-ben, ennek a fejezetnek „Az ECM regisztrálása” és a 8G3 fejezet „Eljárás az ECM cseréje után” című pontja szerint.

A felszerelést a leszerelés műveleteinek a fordított sorrendjében hajtjuk végre.

## **Az ECM regisztrálása**

### **Teendők az ECM cseréje után**

- 1) Csatlakoztassuk a SUZUKI vizsgálókészüléket a DLC-hez.
- 2) Regisztráljuk a következő adatokat az ECM számára „A SUZUKI vizsgálókészülék kezelési útmutatója” szerint.
  - Az üzemanyag befecskendező szelep kalibrációs kódja
  - Gépkocsi változat (a gépkocsi felszereltsége (olyan berendezések, mint az ABS és a L/K))
- 3) A SUZUKI vizsgálókészülék segítségével regisztráljuk az indításgátló rendszer titkos kulcskódját (SKC) és jelszavát „A SUZUKI vizsgálókészülék kezelési útmutatója” szerint.
- 4) Ellenőrizzük a regisztrációs adatokat ennek a fejezetnek „A regisztrációs adatok ellenőrzése” című pontja szerint.

### **Teendők az üzemanyag befecskendező szelep cseréje után**

- 1) Csatlakoztassuk a SUZUKI vizsgálókészüléket a DLC-hez.
- 2) Regisztráljuk az újonnan beszerelt üzemanyag befecskendező szelep kalibrációs kódját az ECM-ben „A SUZUKI vizsgálókészülék kezelési útmutatója” szerint.
- 3) Ellenőrizzük a regisztrációs adatokat ennek a fejezetnek „A regisztrációs adatok ellenőrzése” című pontja szerint.

## A regisztrációs adatok ellenőrzése

- 1) Csatlakoztassuk a SUZUKI vizsgálókészüléket az adatátviteli csatlakozóhoz (DLC), amely a vezető oldalán, a műszerfal alatt helyezkedik el.

### Célszerszám

#### SUZUKI vizsgálókészülék

- 2) Kapcsoljuk be a gyújtást.
- 3) Válasszuk a SUZUKI vizsgálókészülék SELECT MODE menüjében a „MISC Test” parancsban az „ECM registration” alatti „Data List” menüpontot.
- 4) Nyugtázzuk, ha az üzemanyag befecskendező szelep kalibrációs kódja és a gépkocsi változat (a gépkocsi felszereltsége (olyan berendezések, mint az ABS és a L/K)) megfelelnek a SUZUKI vizsgálókészüléken kijelzett adatoknak. Regisztráljuk az üzemanyag befecskendező szelep kalibrációs kódját és a gépkocsi változatot (a gépkocsi felszereltsége (olyan berendezések, mint az ABS és a L/K)) az ECM-ben, ennek a fejezetnek „Az ECM regisztrálása” című pontja szerint, ha az nem megfelelő.
- 5) Nyomjuk meg a SUZUKI vizsgálókészülék „EXIT” gombját.

## A levegő tömegáram (MAF) és a beszívott levegő hőmérséklet (IAT) érzékelő ki- és beszerelése

### FIGYELEM:

- Ne tisztítsuk meg a MAF és az IAT érzékelőt.
- Ha a MAF és az IAT érzékelőt leejtettük, ki kell cserélni.
- Ne szereljük szét a MAF és az IAT érzékelőt.
- Ne tegyük ki semmilyen ütésnek sem a MAF és az IAT érzékelőt.
- Ne fúvassuk le az érzékelőket sűrített levegővel, levegő fúvó pisztolyt vagy hasonlót használva.
- Ne tegyük az ujjunkat vagy bármilyen egyéb tárgyat a MAF és az IAT érzékelőbe. Hibás működés következhet be.

### Kiszerelés

- 1) Kössük le az akkumulátorról a negatív kábelt, majd kössük le az (1) MAF és az IAT érzékelő csatlakozóját.
- 2) Kössük le a levegőszűrő (2) kivezető tömlőjét a MAF és az IAT érzékelőről.
- 3) Szereljük le a MAF és az IAT érzékelőt a levegőszűrő (3) házáról.

### Beszerelés

- 1) Ellenőrizzük a MAF és az IAT érzékelő (1) O-gyűrűjét sérülés és elhasználódás szempontjából.  
Ha hibát találunk, cseréljük ki az O-gyűrűt.
- 2) Szereljük fel a (2) MAF és az IAT érzékelőt a levegőszűrő (4) házára.
- 3) Csatlakoztassuk a levegőszűrő (3) kilépő tömlőjét.  
Húzzuk meg a tömlő bilincset az előírt nyomatékkal, a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Szilárdan kössük be a MAF érzékelő csatlakozóját.
- 5) Csatlakoztassuk a negatív akkumulátor kábelt az akkumulátorra.

## Az izzító gyertya ki- és beszerelése

### Kiszerelés

#### FIGYELEM:

- Ne sértsük meg az izzító gyertya fűtő részét.
- Leejtett izzító gyertyát ne használjunk fel.
- Amikor kiszereljük az izzító gyertyát, először lazítsuk meg szerszám segítségével úgy, hogy egy vagy több menet még fogjon, majd lazítsuk meg, és kézzel vegyük ki.

1) Kössük le a negatív (–) kábelt az akkumulátorról.

2) Húzzuk le az izzító gyertya (1) kábeleit.

3) Szereljük ki a (2) izzító gyertyát a hengerfejből.

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- Húzzuk meg az (1) izzító gyertyát az előírt nyomatékkal.

#### Meghúzási nyomaték

**Izzító gyertya (a): 9 Nm (0,9 kgm)**

- Szilárdan csatlakoztassuk az izzító gyertya (2) kábeleit.

## A pedál helyzet érzékelő ki- és beszerelése

1. Gázpedál szerelvény	3. A pedál helyzet érzékelő csatlakozója	: Meghúzási nyomaték
2. Gázpedál tartó	4. Pedál helyzet érzékelő csatlakozó reteszelő kar	

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Kössük le a csatlakozót a pedál helyzet érzékelőről, a reteszelő kar kihúzásával.
- 3) Szereljük ki a gázpedál szerelvényt a gépkocsi karosszériából.

### Beszerelés

A beszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Szilárdan kössük be a gázpedál helyzetérzékelő csatlakozóját.
- Húzzuk meg a gázpedál szerelvény rögzítő anyáit az előírt nyomatékkal.

### Meghúzási nyomaték

#### Gázpedál felerősítő anya

(a): 9 Nm (0,9 kgm)

## Az üzemanyag melegítő és hőmérséklet érzékelő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki az üzemanyag melegítőt és hőmérséklet érzékelőt (üzemanyag szűrő fedél) a 6C3 fejezet „Az üzemanyag szűrő elemeinek ki- és beszerelése” című pontja szerint.

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtsuk végre.

## Az üzemanyag hőmérséklet érzékelő ellenőrzése

- 1) Szereljük ki az üzemanyag hőmérséklet érzékelőt ennek a fejezetnek „Az üzemanyag szűrő elemeinek ki- és beszerelése” című pontja szerint.
- 2) Ellenőrizzük az ellenállást az üzemanyag hőmérséklet érzékelő érintkezői között.  
Ha az nem az előírás szerinti érték, cseréljük ki az üzemanyag melegítőt és hőmérséklet érzékelőt.

### Az üzemanyag hőmérséklet érzékelő ellenállása

## Az üzemanyag nyomás érzékelő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Kössük le az üzemanyag nyomás érzékelő csatlakozóját.

- 4) Szereljük ki az (1) üzemanyag nyomás érzékelőt a (2) közös vezetékből.

## Beszerezés

- 1) Szereljük be az (1) üzemanyag nyomás érzékelőt a (2) közös vezetékbe.  
Húzzuk meg az üzemanyag nyomás érzékelőt az előírt nyomatékkal.

### Meghúzási nyomaték

#### Üzemanyag nyomás érzékelő

(a): 35 Nm (3,5 kgm)

- 2) Csatlakoztassuk az üzemanyag nyomás érzékelő csatlakozóját.
- 3) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 5) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

## Az üzemanyag nyomásszabályozó ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki a vákuumszivattyút ennek a fejezetnek „A vákuumszivattyú ki- és beszerelése” című pontja szerint.
- 3) Kössük le az üzemanyag nyomásszabályozó csatlakozóját.
- 4) Húzzuk ki az (1) üzemanyag nyomásszabályozót a (2) közös vezetékből úgy, hogy kézzel elfordítjuk az óramutató járásával ellentétes irányban.

### Beszerezés

- 1) Kenjük be üzemanyaggal az üzemanyag nyomásszabályozó (1) tömítő gyűrűt.
- 2) Új (2) tömítést használva nyomjuk be a (3) üzemanyag nyomásszabályozót a (4) közös vezetékbe úgy, hogy közben kézzel elfordítjuk az óramutató járásával megegyező irányban.
- 3) Húzzuk meg az üzemanyag nyomásszabályozó (5) csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

#### Az üzemanyag nyomásszabályozó csavarja

(a): 5 Nm (0,5 kgm)

- 4) Szereljük be a vákuumszivattyút ennek a fejezetnek „A vákuumszivattyú ki- és beszerelése” című pontja szerint.
- 5) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 6) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

### Az üzemanyag nyomásszabályozó ellenőrzése

Ellenőrizzük az ellenállást az üzemanyag nyomásszabályozó érintkezői között.

Ha az ellenállás az előírt értéken kívül esik, cseréljük ki az üzemanyag nyomásszabályozót ennek a fejezetnek „Az üzemanyag nyomásszabályozó ki- és beszerelése” című pontja szerint.

**Az üzemanyag nyomásszabályozó ellenállása**  
**2,07 – 2,53 Ω 20 °C-on**

### A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) le- és felszerelése

#### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Ürítsük le a hűtési rendszert.
- 3) Kössük le a fűtés (1) kivezető csövét.
- 4) Vegyük le az ECT érzékelő csatlakozóját.
- 5) Szereljük le a (2) ECT érzékelőt a (3) termosztát házáról.

## Felszerelés

- 1) Kenjük be menetrögzítő ragasztóval az ECT érzékelő menetes részét.

### „A”: Menetrögzítő ragasztó (piros)

- 2) Szereljük fel az (1) ECT érzékelőt a (2) termosztát hátra. Húzzuk meg az ECT érzékelőt az előírt nyomatékkal.

### Meghúzási nyomaték

#### ECT érzékelő

(a): 34 Nm (3,4 kgm)

- 3) Kössük be az ECT érzékelő csatlakozóját.
- 4) Szereljük fel a fűtés (3) kivezető csövét.

- 5) Töltsük fel a hűtő rendszert a 6B3 fejezet „A hűtő rendszer utántöltése és feltöltése” című pontja szerint.
- 6) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 7) Ellenőrizzük a hűtő rendszert szivárgás szempontjából a 6B3 fejezet „A motor hűtő rendszer ellenőrzése és karbantartása” című pontja szerint.

## A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) ellenőrzése

- 1) Szereljük ki az ECT érzékelőt ennek a fejezetnek „A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) le- és felszerelése” című pontja szerint.
- 2) Merítsük az ECT érzékelő hőre érzékeny részét vízbe, és a víz fokozatos melegítése közben mérjük meg az ellenállást az érzékelő érintkezői között.

Ha a mért ellenállás nem az ábra görbéje szerint változik, cseréljük ki az ECT érzékelőt.

## A vezérműtengely helyzet érzékelő (CMP érzékelő) le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Kössük le a CMP érzékelő csatlakozóját.
- 4) Szereljük le az (1) CMP érzékelőt a (2) vezérműtengely házáról.

### Felszerelés

- 1) Szereljük fel az (1) CMP érzékelőt a (2) vezérműtengely házra. Húzzuk meg a CMP érzékelő csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

**A CMP érzékelő csavarja (a): 7 Nm (0,7 kgm)**

- 2) Kössük be a CMP érzékelő csatlakozóját.
- 3) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## A forgattyús tengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Emeljük fel a gépkocsit.
- 3) Kössük le az CKP érzékelő csatlakozóját.
- 4) Szereljük ki az (1) CKP érzékelőt a hengerblokkból.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- Tisztítsuk meg a CKP érzékelőt és az érzékelő forgórészének a fogait a visszaszerelés előtt.

## A forgattyús tengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) ellenőrzése

- 1) Szereljük ki a CKP érzékelőt ennek a fejezetnek „A forgattyús tengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) le- és felszerelése” című pontja szerint.
- 2) Ellenőrizzük, hogy az (1) CKP érzékelő és a (2) érzékelő forgórész foga mindenféle fémrészecskétől és sérüléstől mentes-e.

- 3) Ellenőrizzük, hogy a CKP érzékelő érintkezői között az ellenállás megfelel-e az előírt értéknek.  
Ha az ellenőrzés eredménye az előírt értéken kívül esik, cseréljük ki a CKP érzékelőt.

**A CKP érzékelő ellenállása: 632 – 948  $\Omega$**

## A motorolaj szintkapcsoló ki- és beszerelése

### Kiszerelés

- 1) Kössek le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki az olajteknőt a 6A3 fejezet „Az olajteknő ki- és beszerelése” című pontja szerint.
- 3) Vegyük ki az (1) rögzítő gyűrűt.
- 4) Vegyük ki a (2) motorolaj szintkapcsolót az olajteknőből.

### Beszerelés

- 1) Ellenőrizzük a motorolaj szintkapcsoló (1) O-gyűrűjét deformáció vagy sérülés szempontjából.  
Ha hibásnak találjuk, cseréljük ki a motorolaj szintkapcsolót.
- 2) Szereljük be a (2) motorolaj szintkapcsolót az olajteknőbe.
- 3) Szereljük fel a (3) rögzítő gyűrűt szilárdan a motorolaj szintkapcsoló csatlakozójára.

- 4) Szereljük be az olajteknőt a 6A3 fejezet „Az olajteknő ki- és beszerelése” című pontja szerint.
- 5) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 6) Ellenőrizzük, hogy nincs-e olajszivárgás.

### A motorolaj szintkapcsoló ellenőrzése

- 1) Kössek le a negatív kábelt az akkumulátorról.
- 2) Emeljük fel a gépkocsit.
- 3) Ellenőrizzük a villamos kapcsolatot a motorolaj szintkapcsoló érintkezői között.  
Ha hibásnak találjuk, cseréljük ki a motorolaj szintkapcsolót.

#### A motorolaj szintkapcsoló előírt értékei

**Ha a motorolaj az előírt szintig fel van töltve: Van villamos kapcsolat**

**Ha a motorolaj le van eresztve: Nincs villamos kapcsolat**

## A rásegítő nyomás érzékelő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Kössük le a csatlakozót az (1) rásegítő nyomás érzékelőről.
- 3) Szereljük le a rásegítő nyomás érzékelőt a levegőszívó csőről.

### Beszerelés

- 1) Ellenőrizzük az (1) rásegítő nyomás érzékelő (2) O-gyűrűjét deformáció vagy sérülés szempontjából.  
Ha hibát találunk, cseréljük ki a rásegítő nyomás érzékelőt.
- 2) Szereljük be az (1) rásegítő nyomás érzékelőt a (3) levegőszívó csőbe.  
Húzzuk meg a rásegítő nyomás érzékelő csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

#### Rásegítő nyomás érzékelő csavarja

(a): 9 Nm (0,9 kgm)

- 3) Szilárdan kössük be a csatlakozót a rásegítő nyomás érzékelőhöz.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## A hűtőventilátor vezérlő rendszerének ellenőrzése

### VIGYÁZAT:

A személyi sérülés elkerülése érdekében tartsuk távol a motor hűtőventilátorától a kezünket, a szerszámokat és a ruházatunkat. A ventilátor villamos hajtású, és attól függetlenül elindulhat, hogy a gépkocsi motorja jár-e vagy sem. Ha a gyújtás be van kapcsolva, a ventilátor az ECT érzékelőtől kapott jel hatására önműködően elindulhat.

Ellenőrizzük a rendszer működését a 6. fejezet „A C-32 ventilátor áramköre” című pontja szerint.

Ha a hűtőventilátor nem működik megfelelően, ellenőrizzük a relét, a hűtőventilátort és a villamos áramkört.

## Az üzemanyag szivattyú relé és a hűtőventilátor relé 1, 2, 3 ellenőrzése

### MEGJEGYZÉS:

Ellenőrizzük mindegyik relé beépítési helyét ennek a szervizkönyvnek az „Előszó” részében a „Villamos kapcsolási rajz” című pont szerint.

- 1) Ellenőrizzük, hogy nincs-e villamos kapcsolat a „c” és a „d” érintkezők között.  
Ha van villamos kapcsolat, cseréljük ki a relét.
- 2) Kössük az akkumulátor pozitív (+) sarkát a relé „b” érintkezőjére. Kössük az akkumulátor negatív (–) sarkát a relé „a” érintkezőjére.  
Ellenőrizzük a villamos kapcsolatot a „c” és a „d” érintkezők között.  
Ha nincs villamos kapcsolat, amikor a relét az akkumulátorra kötjük, cseréljük ki a relét.

## A fő relé és az üzemanyag melegítő relé ellenőrzése

### MEGJEGYZÉS:

Ellenőrizzük mindegyik relé beépítési helyét ennek a szervizkönyvnek az „Előszó” részében a „Villamos kapcsolási rajz” című pont szerint.

- 1) Ellenőrizzük, hogy nincs-e villamos kapcsolat a „c” és a „d” érintkezők között.  
Ha van villamos kapcsolat, cseréljük ki a relét.
- 2) Kössük az akkumulátor pozitív (+) sarkát a relé „b” érintkezőjére.  
Kössük az akkumulátor negatív (–) sarkát a relé „a” érintkezőjére.  
Ellenőrizzük a villamos kapcsolatot a „c” és a „d” érintkezők között.  
Ha nincs villamos kapcsolat, amikor a relét az akkumulátorra kötjük, cseréljük ki a relét.

## Az izzítás vezérlő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Vegyük le a (2) relé dobozt a tartójáról.
- 3) Vegyük le az (1) izzítás vezérlőt a tartóról.

- 4) Kössük le a csatlakozót az izzítás vezérlőről.

### Beszerezés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtjuk végre.

## Az EGR szelep szerelvény le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Ürítsük le a hűtési rendszert.
- 3) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Szereljük le a közbenső hűtő kivezetés 2. sz. tömlőjét a 6A3 fejezet „A közbenső hűtő elemei” című pontja szerint.
- 5) Szereljük le a levegőszívó csatlakozást a 6A3 fejezet „A levegőszívó cső le- és felszerelése” című pontja szerint.
- 6) Kössük le az üzemanyag visszatérő tömlőt a közös vezetékről.
- 7) Vegyük le az (1) relé dobozt és a (2) izzítás vezérlőt a tartóról.

- 8) Szereljük le az (1) fűtés bevezető és a (2) 2. sz. kivezető tömlőt a fűtőtestről.

- 9) Vegyük le a fűtés (1) kivezető csővét.

- 10) Kössük le az EGR szelep csatlakozóját.

- 11) Kössük le az EGR (2) hűtő tömlőjét a termosztát házról.
- 12) Szereljük le az (1) EGR szelep szerelvényt a hengerfejről, eltávolítva a 3 db (3) csavart és a (4) bilincset.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Tisztítsuk meg az EGR szelep szerelvény és a hengerfej illeszkedő felületeit.
- Használjunk új tömítéseket.
- Húzzuk meg az EGR szelep szerelvény rögzítő csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

#### EGR szelep szerelvény rögzítő csavarja

(a): 22 Nm (2,2 kgm)

- Használjunk új hűtő tömlő bilincseket.
- Szereljük fel a levegőszívó csatlakozást a 6A3 fejezet „A levegőszívó cső le- és felszerelése” című pontja szerint.
- Szereljük fel a közbenső hűtő kivezetés 2. sz. tömlőjét a 6A3 fejezet „A közbenső hűtő elemei” című pontja szerint.
- Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- Töltsük fel a hűtő rendszert a 6B3 fejezet „A hűtő rendszer utántöltése és feltöltése” című pontja szerint.
- Ellenőrizzük a hűtő rendszert szivárgás szempontjából a 6B3 fejezet „A motor hűtő rendszer ellenőrzése és karbantartása” című pontja szerint.

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légsák) rendszerrel ellátott gépkocsik esetében:

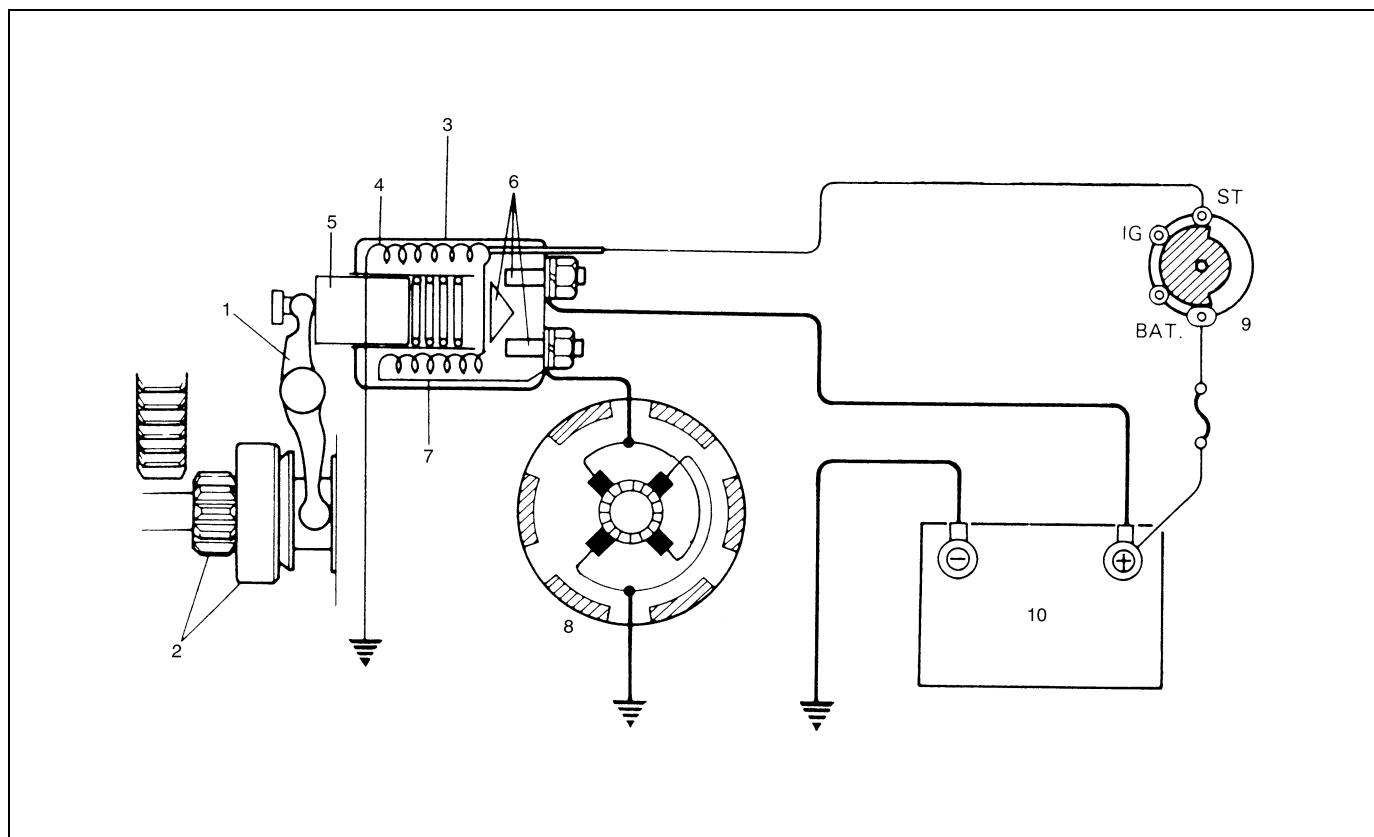

- A légsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a 10B fejezet „Általános leírás” részében „A rendszer elemeinek, vezetékeinek és csatlakozóinak elhelyezkedése” című pontot, hogy megállapíthassuk, a légsák-rendszer elemein vagy vezetékein, illetve azok közelében végzünk-e szervizmunkát. Mielőtt a légsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a 10B fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## Diagnosztika

### Az önindító rendszer tüneti diagnosztikája

Az indító rendszer üzemzavara miatti hibatünetek az alábbiak lehetnek:

- Az indítómotor nem forog (vagy lassan forog)
- Az indítómotor forog, de a gépkocsi motorját nem forgatja meg
- Rendellenes zaj

Megfelelő hiba meghatározást kell végezni annak pontos megállapítására, hogy mi okozza a zavart: az akkumulátor, a villamos vezetékek (beleértve az indítómotor kapcsolót is), az indítómotor vagy a gépkocsi motorja.

Ne szereljük le azonnal az indítómotort, ha nem működik. Ellenőrizzük az alábbi pontokat, és szűkítsük a lehetséges hibaforrások körét.

- 1) Hiba körülmények
- 2) A csatlakozás szorossága az akkumulátor sarkain (beleértve a testelő kábel motor oldali rögzítését is) és az indítómotor kapcsain
- 3) Az akkumulátor lemerülése
- 4) Az indítómotor felszerelése

Állapot	Lehetséges ok	Javítás módja
<b>Az indítómotor nem forog (Nem hallatszik a mágneskapcsoló működési hangja)</b>	Az akkumulátor lemerült	Töltsük fel az akkumulátort.
	Az akkumulátor elhasználódása miatt túl alacsony a feszültség	Cseréljük ki az akkumulátort.
	Rossz érintkezés az akkumulátor csatlakozóin	Húzzuk meg, vagy cseréljük ki.
	Laza a testelő kábel csatlakozása	Húzzuk meg.
	A biztosíték kilazult vagy kiolvadt	Szorítsuk meg, vagy cseréljük ki.
	Rossz érintkezés a gyújtáskapcsolóban vagy a mágneskapcsolóban	Cseréljük ki.
	A vezeték csatlakozó meglazult	Húzzuk meg.
	Szakadás a gyújtáskapcsoló és a mágneskapcsoló közötti áramkörben	Javítsuk meg.
	Szakadás a behúzó tekercsben	Cseréljük ki az indítómotort.
	A szénkefék rosszul érintkeznek, vagy kopottak a szénkefék	Cseréljük ki az indítómotort.
	A behúzó vasmag és/vagy a fogaskerék nehezen csúszik el	Cseréljük ki az indítómotort.

	A kis fogaskerék vagy a fogaskoszorú fogai kopottak	Cseréljük ki az indítómotort vagy a lendkereket.
	A kis fogaskerék nehezen csúszik el (nem tér vissza)	Cseréljük ki az indítómotort.
	Kopott belső fogazás vagy bolygókerék fogak	Cseréljük ki az indítómotort.
	Az alkatrészek kenésének hiánya	Cseréljük ki az indítómotort.
<b>Az indítómotor nem áll le</b>	A mágneskapcsoló érintkezési pontjai összeolvadtak	Cseréljük ki az indítómotort.
	Rövidzárlat a mágneskapcsoló tekercs menetei között (tekercsréteg zárlat)	Cseréljük ki az indítómotort.
	A gyújtáskapcsoló nem áll vissza	Cseréljük ki.

## Az önindító rendszer vizsgálata

### FIGYELEM:

A próbákat legfeljebb 3 – 5 másodpercig végezzük, hogy elkerüljük a tekercs leégését.

### Behúzási próba

Kössük az akkumulátort a mágneskapcsolóra az ábrán látható módon.

Ellenőrizzük, hogy a behúzó vasmag és a kis fogaskerék mozog-e kifelé.

Ha a behúzó vasmag és a kis fogaskerék nem mozdul, cseréljük ki az indítómotort.

### MEGJEGYZÉS:

A próba előtt vegyük le a (3) vezetéket a (2) „M” jelű kivezetésről.

1. „S” jelű kivezetés

### Benntartási próba

A fenti kapcsolásban, kitolt behúzó vasmag mellett vegyük le a negatív vezetéket az „M” jelű kivezetésről.

Ellenőrizzük, hogy a behúzó vasmag és a kis fogaskerék kint marad-e.

Ha a behúzó vasmag és a kis fogaskerék visszafelé (befelé) mozdul, cseréljük ki az indítómotort.

### Behúzó vasmag és fogaskerék visszatérési próba

Vegyük le a negatív kábelt a indítómotor házáról.

Ellenőrizzük, hogy a behúzó vasmag és a kis fogaskerék elmozdul-e visszafelé (befelé).

Ha a behúzó vasmag és a kis fogaskerék nem tér vissza, cseréljük ki az indítómotort.

## Terheletlen működési próba

Kössük az (1) vezeték a (2) „M” jelű kivezetéshez.

Kössük az akkumulátort az indítómotorra az ábrán látható módon.

Ellenőrizzük, hogy az indítómotor simán és folyamatosan forog-e, miközben a fogaskerék kitolódik.

Ha az ellenőrzés eredménye nem kielégítő, cseréljük ki az indítómotort.

#### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki az akkumulátort és az akkumulátor tálcát, ha szükséges.
- 3) Húzzuk ki a gumifedele a sebességváltó házából, hogy kivesszük az indítómotor rögzítő csavarját.
- 4) Szereljük ki az indítómotor rögzítő csavarját (felső oldal).

#### MEGJEGYZÉS:

- 6) Szereljük ki az indítómotor rögzítő csavarját (alsó oldal).
- 7) Szereljük le az indítómotort.

#### Visszaszerelés

A visszaszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- Vigyázzunk, hogy az indítómotor rögzítő csavarja (felső oldal) be ne essen a sebességváltó házba.
- Húzzuk meg az indítómotor rögzítő csavarjait az előírt nyomatékkal.

## Általános leírás

### Az akkumulátor leírása

Az akkumulátor a villamos rendszerben három fő feladattal rendelkezik.

- Energiaforrásként szolgál a motor indításához.
- Stabilizálja a villamos rendszer feszültségét.
- Korlátozott ideig energiát szolgáltat, ha a villamos terhelés meghaladja a generátor leadott teljesítményét.

### A tartó és a lefogó kengyel

Az akkumulátor tartószerkezetének jó állapotban kell lennie, hogy szilárdan alátámassza és vízszintesen tartsa az akkumulátort.

Az akkumulátor beszerelése előtt a tartó és a lefogó kengyel legyen tiszta és korróziómentes, továbbá bizonyosodjunk meg arról, hogy nincs-e idegen tárgy a tálcában.

Ahhoz, hogy az akkumulátor ne billegjen a helyén, a leszorító csavarokat elegendően szorosan meg kell húzni, de nem szabad túlfeszíteni.

### Az elektrolit befagyása

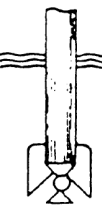

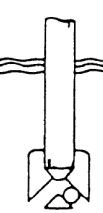

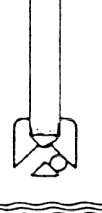

Az elektrolit fagyáspontja a folyadék fajlagos sűrűségétől függ. Mivel a befagyás tönkretelheti az akkumulátort, úgy védekezzünk a befagyás ellen, hogy teljesen feltöltött állapotban tartjuk. Ha az akkumulátor mégis befagyott, addig nem szabad tölteni, amíg fel nem melegedett.

### Szulfátosodás

Ha az akkumulátort hosszabb ideig feltöltetlen állapotban hagyjuk állni, az ólomszulfát kemény, kristályos anyaggá alakul át, amely a rákövetkező töltés során nehezen változik vissza aktív anyaggá. A „szulfátosodás” kifejezés a reakció folyamatát és annak eredményét is jelenti. Az ilyen akkumulátort csak nagyon lassú töltéssel lehet újra feléleszteni, és bár visszaállítható használható állapotba, a kapacitása a korábbinál kisebb lesz.

### A beépített állapotjelző (ha van)

Az akkumulátor tetején beépített, hőmérséklet kompenzált jelzőkészülék van. Ez a jelzőkészülék az alábbi diagnosztikai módszerrel használható. A jelzőkészülék vizsgálatakor az akkumulátor teteje legyen tiszta. Gyengén megvilágított helyen lámpára is szükség lehet.

D I A G N O S T I K A	FELTÖLTVE	TÖLTÉS SZÜKSÉGES	ALACSONY FOLYADÉK- SZINT CSERÉL- JÜK KI AZ AKKUMULÁTORT
	K J E L Z Ő	K J E L Z Ő	K J E L Z Ő
	MÉRŐ GÖLYÖ	MÉRŐ GÖLYÖ	MÉRŐ GÖLYÖ
	Zöld pont 	Sötét 	Átlátszó 
			

Rendes üzemi körülmények között az alábbi háromféle jelzés jelenhet meg.

- Zöld pont  
Az akkumulátor kellőképpen fel van töltve a vizsgálathoz.

- Sötét  
Az akkumulátort a vizsgálat előtt fel kell tölteni.

Ha indítási nehézségek jelentkeznek, az akkumulátort a Diagnosztika című pontban leírtak szerint kell megvizsgálni. Ebből az alkalomból a feltöltést és a villamos rendszereket is célszerű ellenőrizni.

- Átlátszó vagy világossárga

Ez azt jelenti, hogy a folyadékszint a folyadéksűrűség mérő alsó vége alatt van. Ennek lehetséges oka a túl erős vagy túl hosszú töltés, a törött akkumulátor ház, a túlzott megdőlés vagy az akkumulátor tönkremenetele. Ha az akkumulátor ilyen állapotba került, lehetséges, hogy a nagy töltő feszültséget a hibás töltő rendszer okozza, és ezért mind a töltő, mind a villamos rendszert ellenőrizni kell. Ha indítási nehézségek jelentkeznek, és ezek oka az akkumulátor, akkor ki azt kell cserélni.

## Az akkumulátor gondozása

### VIGYÁZAT:

- Soha ne tegyük ki az akkumulátort nyílt láng vagy villamos szikrák hatásának, mert az akkumulátor gyúlékony és robbanásveszélyes gázt fejleszt.
- Az akkumulátor elektrolit ne kerüljön a szemünkbe, a bőrünkre, a ruhánkra vagy festett felületekre, mert ez a folyadék maró hatású sav. Minden beszennyeződött felületet azonnal és alaposan mossunk le vízzel.
- Az akkumulátorokat mindig úgy kell tartani, hogy gyermekek ne férjenek hozzá.

- 1) Az akkumulátor igen megbízható alkatrész, de rendszeres gondozást igényel.
  - Az akkumulátor tartó szerkezetét tartsuk tisztán.
  - Gátoljuk meg a korrózió kialakulását az akkumulátor sarkain.
  - Tartsuk az elektrolit szintjét a felső szintjelzés közelében, mindegyik cellában egyformán.
  - Ha az akkumulátort hosszú időn keresztül a gépkocsiban tartjuk, kövessük az alábbi tanácsokat.
    - Hetenként indítsuk el a motort, és addig járassuk 2000 – 3000 ford/min fordulatszámon, amíg el nem éri a rendes üzemi hőmérsékletét. Mielőtt otthagyjuk a gépkocsit, győződjünk meg arról, hogy mindegyik villamos fogyasztó ki van kapcsolva.
    - Havonta kétszer töltsük fel az akkumulátort a túlzott mértékű kisülés elkerülése érdekében. Ez különösen akkor fontos, amikor a környezeti hőmérséklet alacsony.

Az akkumulátor akkor is kisül, ha a leállított gépkocsiban nem használjuk. Ha az akkumulátor nincs megfelelő mértékben feltöltve, akkor hideg időben az elektrolit befagyhat, és az akkumulátor háza megrepedhet.
- 2) Tartsuk tisztán az akkumulátor kábelek csatlakozásait.
 

A kábelcsatlakozók hajlamosak a korrózióra, különösen a pozitív (+) sarkon. A korrózió vagy rozsda a vezetők illeszkedő felületein elektromos ellenállás réteget képez.

Rendszeresen tisztítsuk meg az akkumulátor sarkait és a szerelvényeket a jó fémes érintkezés biztosítása érdekében, és minden tisztítás után zsírozzuk be a csatlakozásokat, hogy megvédjük azokat a rozsdásodástól.
- 3) Mindig legyünk tisztában azzal, hogy az akkumulátor mennyire feltöltött állapotban van. A feltöltés mértékét a legegyszerűbben a folyadék sűrűségének mérésével állapíthatjuk meg. A folyadéksűrűség mérő olyan készülék, amely az akkumulátor elektrolit fajlagos sűrűségét méri. Az elektrolit fajlagos sűrűsége pedig jelzi a feltöltés mértékét.

A generátor leírása

A generátor kisméretű, nagy teljesítményű típus, beépített integrált áramkörös (IC) szabályozóval. A belső alkatrészek villamos kapcsolása az alábbi ábrán látható.

A generátor főbb jellemzői:

- A félvezető szabályozó a generátor belsejébe van beépítve.
- A szabályozó minden alkatrészét zárt öntvény foglalja magában.
- Ez az egység a szénkefe tartóval együtt a generátor házának hátsó részére van szerelve.
- Az IC szabályozó integrált áramkörökből áll és a generátor által előállított feszültséget szabályozza, de a beállított feszültség nem módosítható.
- A generátor forgórész csapágiai elegendő zsírt tartalmaznak ahhoz, hogy ne igényeljenek rendszeres karbantartást. A két szénkefe két csúszógyűrűn át továbbítja az áramot a forgórészre szerelt gerjesztő tekercshez, és rendes körülmények között hosszú ideig nem igényelnek felügyeletet.
- Az állórész tekercselés a generátor ház részét képező lemezelt mag belsején helyezkedik el.

## Diagnosztika

### Az akkumulátor ellenőrzése

#### Szemrevételezés

Ellenőrizzük a szembetűnő sérüléseket, mint amilyen a repedt ház vagy fedél, ami elektrolit veszteséget okozhat. Ha szembetűnő hibát találunk, cseréljük ki az akkumulátort. Állapítsuk meg a sérülés okát, és szükség szerint küszöböljük ki.

### A generátor tüneti diagnosztikája

#### FIGYELEM:

- Ne kapcsoljunk terhelést az L és az E jelzésű kivezetések közé.
- Amikor töltő berendezést vagy külső akkumulátort kötünk a gépkocsi akkumulátorához, vegyük figyelembe ennek a fejezetnek az „Indítás szükséghelyzetben” című pontjában leírtakat.

A töltő rendszer zavarát az alábbi körülmények jelezhetik:

- 1) A hibajelző lámpa rendellenes működése.
- 2) Az akkumulátor gyengén feltöltött állapota, amit a lassú indítómotor forgás vagy a jelzőlámpa elsötétülése tanúsít.
- 3) Túltöltött akkumulátor, amit a szellőző nyílásokon kibuggyanó elektrolit jelez.

A generátor zajosságát laza szíjtárcsa, laza rögzítő csavar, kopott vagy elszennyeződött csapágy, hibás dióda vagy sérült állórész okozhatja.

Állapot	Lehetséges ok	Javítás módja
Bekapcsolt gyújtás és álló motor mellett a töltésjelző lámpa nem ég.	A biztosíték kiolvadt	Ellenőrizzük a biztosítékot.
	A jelzőlámpa (LED) hibás az RM413D esetében	Cseréljük ki a kombinált műszert.
	Kiégett a lámpa az RB413D esetében	Cseréljük ki az izzót.
	A vezeték csatlakozás laza	Húzzuk meg a laza csatlakozásokat.
	Az IC szabályozó vagy a gerjesztő tekercs hibás	Cseréljük ki a generátort.
Járó motornál a töltésjelző lámpa nem alszik ki (gyakran kell tölteni az akkumulátort)	A hajtószíj laza vagy kopott	Állítsuk be vagy cseréljük ki a hajtószíjat.
	Az IC szabályozó vagy a generátor hibás	Ellenőrizzük a töltő rendszert.
	A vezetékek hibásak	Javítsuk ki a vezetékeket.
A rádió recseg	Hibás kondenzátor	Cseréljük ki a generátort.

## **Elégtelenül feltöltött akkumulátor**

Ezt az állapotot, amit az indítómotor lassú forgása vagy az elektrolit kis sűrűsége jelez, az alábbi körülmények egyike (vagy akár több is) okozhatja, még akkor is, ha a töltésjelző lámpa rendesen működik. Az alábbi eljárás voltmérővel és ampermérővel felszerelt gépkocsira is vonatkozik.

- Győződjünk meg arról, hogy az akkumulátor gyenge töltését nem a hosszabb ideig bekapcsolva hagyott segédberendezések okozták.
- Ellenőrizzük, hogy megfelelő-e a hajtószíj feszessége.
- Ha az akkumulátor hibájára gyanakszunk, nézzük át ennek a fejezetnek „Az akkumulátor leírása” című pontját.
- Vizsgáljuk meg, nem hibásak-e a vezetékek. Ellenőrizzük mindegyik csatlakozás szorosságát és tisztaságát, a kábelcsatlakozásokat az akkumulátornál, az indítómotor és a gyújtás testelő vezetékeit.

## A gépkocsin végzendő szervizmunkák

### Indítás szükséghelyzetben

#### Külső (rásegítő) akkumulátorról

##### FIGYELEM:

Ha a gépkocsi kézi sebességváltóval és katalizátorral van ellátva, ne próbáljuk meg betolással vagy vontatással elindítani. Ez az emisszió csökkentő rendszer és/vagy más alkatrészek tönkremenetelét eredményezheti.

Áthidaló kábel használata esetén mind a külső, mind a lemerült akkumulátort körültekintéssel kell kezelni. Kövessük az alább vázolt eljárást, és vigyázzunk arra, hogy ne okozzunk szikrát.

##### VIGYÁZAT:

- Ha eltérünk ezektől a feltételektől vagy eljárásoktól, úgy az alábbi következmények állhatnak elő:
  - Súlyos személyi sérülés (különösen szemsérülés) vagy vagyoni kár az akkumulátor felrobbanása, a kifolyt akkumulátorsav vagy a villamos áram okozta égések következtében.
  - Elektronikus berendezések tönkremenetele a két gépkocsi bármelyikén.
- Vegyünk le gyűrűt, órát és egyéb ékszereket. Viseljünk biztonsági védőszemüveget.
- Nagyon vigyázzunk arra, hogy fém szerszám vagy az áthidaló kábel ne érjen hozzá az akkumulátor pozitív sarkához (vagy vele kapcsolatban álló fémhez) és a gépkocsi bármely más fém részéhez, mert rövidzárlat következhet be.

##### VIGYÁZAT:

**Ne csatlakoztassuk a negatív kábelt közvetlenül a lemerült akkumulátor negatív sarkához.**

- 1) Húzzuk be a kéziféket, és tegyük üresbe a kézi sebességváltót. Kapcsoljuk ki a gyújtást, a világítást és minden más villamos fogyasztót.
- 2) Ellenőrizzük az elektrolit szintjét. Ha az alsó szint alatt van, töltsük fel desztillált vízzel.
- 3) Erősítsük az egyik áthidaló kábel végét a külső akkumulátor pozitív sarkához és ugyanannak a kábelnek a másik végét a lemerült akkumulátor pozitív sarkához. (A motor külső indításához csak 12 V feszültségű akkumulátort használjunk.)
- 4) A másik kábel egyik végét erősítsük a külső akkumulátor negatív sarkához, a másik végét pedig a motor egy megbízható testelő pontjához (például a kipufogó gyújtócsőhöz), legalább 45 cm távolságra az indítandó gépkocsi akkumulátorától.
- 5) Indítsuk el annak a gépkocsinak a motorját, amelyikben a külső akkumulátor van, és kapcsoljuk ki a felesleges villamos fogyasztókat. Ezek után indítsuk el annak a gépkocsinak a motorját, amelyikben a lemerült akkumulátor van.
- 6) A kábeleket pontosan fordított sorrendben távolítsuk el.

### Töltő berendezésről

##### FIGYELEM:

Ha a motort külső akkumulátortöltő berendezésről indítjuk, csakis 12 V feszültségű, negatív testelésű készüléket használjunk. Ne használjunk 24 V feszültségű töltőt. Ilyen készülék használata súlyosan károsíthatja a villamos rendszert vagy az elektronikus berendezéseket.

## Az akkumulátor ki- és visszaszerelése

### Kiszerelés

- 1) Kössük le az akkumulátorról az (1) negatív kábelt.
- 2) Kössük le az akkumulátorról a (2) pozitív kábelt.
- 3) Vegyük le a (3) rögzítő kengyelt.
- 4) Vegyük ki a (4) akkumulátort.

5. Karosszéria testelő csavar
6. Helybentartó csavar

### Kezelés

Az akkumulátor kezelése során tartsuk be az alábbi óvintézkedéseket:

- Az akkumulátor hidrogéngázt termel. Egy akkumulátor-közelben láng vagy szikra meggyújthatja a gázt.
- Az akkumulátor folyadék erős sav. Vigyázzunk arra, hogy ne kerüljön a ruhánkra vagy más szövetanyagra. A kifolyt elektrolitot bő vízzel azonnal le kell öblíteni, és le kell tisztítani.

### Visszaszerelés

- 1) A visszaszerelést a kiszerelés műveleteinek fordított sorrendjében hajtsuk végre.
- 2) Húzzuk meg az akkumulátor kábelcsatlakozóit az előírt nyomatékkal.

#### MEGJEGYZÉS:

**Ellenőrizzük, hogy a testelő kábel akkumulátorra csatlakozása és a motorháztető között elegendő távolság van-e.**

#### Meghúzási nyomaték

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) A leszerelést az ábrán mutatott sorrendben végezzük.
- 3) A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre.

## Általános leírás

A kipufogó rendszer a kipufogó gyűjtőcsőből, a háromutas katalizátorból (TWC), a turbófeltöltőből, a kipufogócsőből, a hangtompítóból és a tömítésekből, stb. áll.

A háromutas katalizátor a kipufogó rendszerbe iktatott emisszió csökkentő berendezés, amelynek feladata a szennyező szénhidrogének (HC), szénmonoxid (CO) és nitrogénoxidok (NOx) kibocsátási szintjének a csökkentése a kipufogó gázban.

## Karbantartás

### VIGYÁZAT:

**Az égési sérülések elkerülése érdekében ne érintsük meg a kipufogó rendszert, amíg még meleg. A kipufogó rendszeren csak hideg állapotban szabad bármilyen szervizmunkát végezni.**

Minden rendszeres karbantartás alkalmával, vagy ha a gépkocsit más szervizelés céljából felemeljük, ellenőrizzük a kipufogó rendszert az alábbiak szerint:

- Ellenőrizzük, hogy az (1) felfüggesztő gumi elemek nincsenek-e megsérülve vagy elhasználódva, és nem mozdultak-e el.
- Ellenőrizzük, hogy a kipufogó rendszeren nincs-e szivárgás, laza csatlakozás, horpadás és sérülés.
- Ha a csavarok vagy anyák meglazultak, húzzuk meg azokat az előírt nyomatékkal ennek a fejezetnek „A kipufogó rendszer elemei” című pontja szerint.
- Ellenőrizzük a kipufogó rendszer közelében a karosszéria elemeket, nincs-e rajtuk sérülés, hiányzó vagy rosszul elhelyezett alkatrész, kinyílt hegesztési varrat, lyuk, laza csatlakozás vagy más olyan hiba, ami lehetővé teheti a kipufogógázok beszivárgását a gépkocsiba.
- Bizonyosodjunk meg arról, hogy a kipufogó rendszer elemei elég távol vannak a padlólemezről ahhoz, hogy elkerülhető legyen a túlmelegedés és a padlószőnyeg esetleges tönkremenetele.
- Minden hibát azonnal ki kell javítani.

A kipufogócső cseréjéhez feltétlenül emeljük fel a gépkocsit, tartsuk be ennek a fejezetnek a „Karbantartás” című pontjában a „VIGYÁZAT” címszó alatti megjegyzéseket, valamint az alábbiakat.

#### FIGYELEM:

**A kipufogócsőben háromutas katalizátor helyezkedik el, amelyet nem szabad nagyobb ütésnek kiténni. Vigyázzunk arra, hogy ne ejtsük le, és ne üssük hozzá semmihez.**

- Összeszereléskor a csavarokat és az anyákat az előírt nyomatékkal húzzuk meg ennek a fejezetnek „A kipufogó rendszer elemei” című pontja szerint.

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## Általános leírás

### A kézi erőátviteli hajtómű kialakítása és szervizelése

Az erőátviteli hajtómű öt előremeneti és egy hátrameneti fokozattal rendelkezik, ezek kapcsolását három szinkronkapcsoló és három tengely-csoportkerék (behajtótengely), főtengely és a hátrameneti fogaskerék tengelye végzi. Valamennyi előremeneti fogaskerék állandó kapcsolatban van egymással, csak a hátramenetnél kapcsolódik be egy elcsúszó előtét fogaskerék.

Az 1. és 2. sebesség szinkronizálója a főtengelyre van szerelve, és a főtengely 1. vagy 2. fogaskerekével kapcsolódik, ugyanígy a 3. és 4. szinkronizáló is a főtengelyen van, és a főtengely 3. vagy 4. fogaskerekével kapcsolódik.

Az 5. sebesség szinkronizálója a főtengelyen a kerékcsoportra szerelt 5. fogaskerékkel kapcsolódik.

Az 1. és 2. sebességfokozat szinkronizáló berendezésénél alkalmazott kétkúpos szinkronkapcsoló mechanizmus azt a célt szolgálja, hogy az 1. és 2. sebességfokozatba kapcsolást hatékonyabbá tegye.

A főtengely a kihajtó fogaskereket és a differenciálmű szerelvényt hajtja, és ezeken keresztül hajtja a mellső kerekekhez kapcsolódó mellső hajtótengelyeket.

A szervizelés során az alumíniumból készült erőátviteli hajtómű ház illeszkedő felületein eredeti vagy azzal egyenértékű tömítőanyagot kell használni. A ház összeerősítő csavarjait nyomatékkulcs segítségével, az előírt nyomatékkal kell meghúzni. Az is igen fontos, hogy összeszerelés előtt mindegyik alkatrészt tisztítófolyadékkal megtisztítsuk, és levegő ráfúvatással megszársítsuk.

Az új szinkrongyűrűket tilos az összeszerelés előtt csiszolómasszát használva összezsírozni a hozzájuk tartozó fogaskerék kúpokkal.

## A gépkocsin végzendő szervizmunkák

### FIGYELEM:

Ne használjuk fel újra a rögzítő gyűrűket, rugós illesztő szegeket, E-kapcsokat, olajtömítő gyűrűket, tömítéseket, önbiztosító anyákat, és a külön megnevezett alkatrészeket. Ezek ismételt felhasználása hibát eredményezhet.

### A kézi erőátviteli hajtómű olaj cseréje

- 1) Az olaj cseréje vagy ellenőrzése előtt feltétlenül állítsuk le a motort, majd emeljük fel a gépkocsit vízszintes helyzetben.
- 2) A megemelt gépkocsin ellenőrizzük az olajszintet és a szivárgásmentességet. Ha szivárgást találunk, küszöböljük ki.
- 3) Vegyük ki a (2) olajszint jelző csavart, majd eresszük le az olajat az (1) differenciálmű fedél eltávolításával.
- 4) Szereljük fel az (1) differenciálmű fedelet új tömítéssel.

**A differenciálmű fedél csavarja (a): 18 Nm (1,8 kgm)**

- 5) Szereljük le a (3) légtelenítő csavart.
- 6) Töltsük fel előírt minőségű és mennyiségű olajjal a (4) légtelenítő nyíláson keresztül (a szintjelző furatig).
- 7) Húzzuk meg az (2) olajszint jelző csavart és a légtelenítő csavart az alábbiak szerint.

#### MEGJEGYZÉS:

- Ajánlott az API GL-4 75W-85 hajtómű olaj használata.
- Még akkor is minden esetben ellenőrizzük, hogy nincs-e olajszivárgás, ha a gépkocsit nem az olajcsere miatt emeljük fel.

## A differenciálmű oldalsó olajtömítő gyűrűjének cseréje

- 1) Engedjük le az erőátviteli hajtómű olajat ennek a fejezetnek „A kézi erőátviteli hajtómű olaj cseréje” című pontja szerint.
- 2) Szereljük le a mellső hajtótengelyeket a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint.
- 3) Célszerszám segítségével szereljük ki az (1) olajtömítő gyűrűket.

**Célszerszám**

**(A): 09913-58610**

2. Ház toldat fedél

- 4) Célszerszám és kalapács segítségével nyomjuk a helyére az (1) olajtömítő gyűrűt.

### MEGJEGYZÉS:

**Beszereléskor az olajtömítő gyűrű rugós oldala befelé nézzen.**

**Célszerszám**

**(A): 09926-28610**

- 5) Kenjük meg zsírral az olajtömítő gyűrű peremét, és ugyanakkor vizsgáljuk meg a hajtótengely simaságát azon a részén, ahol az olajtömítő gyűrűvel érintkezik.

**„A”: 99000-25010 zsír**

- 6) Szereljük fel a mellső hajtótengelyeket a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint.
- 7) Töltsük fel az erőátviteli hajtóművet olajjal ennek a fejezetnek „A kézi erőátviteli hajtómű olaj cseréje” című pontja szerint, és győződjünk meg arról, hogy az olajtömítő gyűrű mellett nem szivárog ki olaj.

## A sebességváltó kar és huzal elemei

## A sebességváltó kar és huzal le- és felszerelése

### Leszerelés

- 1) Szereljük le a konzolboxot.
- 2) Szereljük le az (1) sebességváltó kapcsoló és választó huzalokat a (2) sebességváltó kar szerelvényről.
  - a) A (4) körmöt megnyomva akasszuk ki a huzal szerelvényt az (5) tartóból.
  - b) Nyomjuk fel a szabályozó (6) körmét, és húzzuk ki az (1) huzalokat.
- 3) Szereljük le a sebességváltó kar (3) csavarjait és a (2) sebességváltó kar szerelvényt a karosszériáról.
- 4) Kössük ki az (1) kapcsoló- és választó huzalokat az erőátviteli hajtóműből.
- 5) A huzal átvezető gyűrű csavarjának kiszerelese után vegyük ki a kapcsoló- és választó huzalt az átvezető gyűrűvel együtt a karosszériából.

### Felszerelés

- 1) Szereljük be a kapcsoló- és választó huzal szerelvényt a karosszériába, majd húzzuk meg a huzal átvezető gyűrű csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

**Huzal átvezető gyűrű csavarja: 9 Nm (0,9 kgm)**

- 2) Szereljük fel a kapcsoló- és választó huzalt az erőátviteli hajtóműre.
- 3) Szereljük be a sebességváltó kar szerelvényt a karosszériába, majd húzzuk meg a sebességváltó kar csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

**Sebességváltó kar csavarja: 5 Nm (0,5 kgm)**

- 4) Erősítsük be a kapcsoló- és választó huzal szerelvényt a tartóba.
- 5) Szereljük be a kapcsoló huzalt és a választó huzalt a hozzájuk tartozó szabályozóba.

### MEGJEGYZÉS:

**Először a kapcsoló huzalt szereljük be.**

- 6) Szereljük fel a konzolboxot.
- 7) Ellenőrizzük, hogy simán mozog-e, amikor az egyes helyzetekbe kapcsoljuk.

## A tolatólámpa kapcsoló ki- és beszerelése

### Kiszerelés

- 1) Kössek le a negatív kábelt az akkumulátorról.
- 2) Kössek le az tolatólámpa kapcsoló (1) csatlakozóját.
- 3) Szereljük le a (2) tolatólámpa kapcsolót.

### Beszerezés

- 1) Szereljük be a tolatólámpa kapcsolót új (1) tömítéssel.

#### Meghúzási nyomaték

**Tolatólámpa kapcsoló: 20 Nm (2,0 kgm)**

- 2) Kössek be a tolatólámpa kapcsoló csatlakozóját.
- 3) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 4) Ohmmérő segítségével ellenőrizzük, hogy hátrameneti fokozatban bekapcsol-e a tolatólámpa kapcsolója.

## A tolatólámpa kapcsoló ellenőrzése

Ohmmérő segítségével ellenőrizzük a tolatólámpa kapcsolójának működését.

**Kapcsoló BE (A): Van villamos kapcsolat**

**Kapcsoló KI (B): Nincs villamos kapcsolat**

## Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki az akkumulátor tálcát a hűtőfolyadék tartállyal együtt.
- 3) Szereljük ki a levegőszűrőt és a rezonátort.
- 4) Szereljük le a vízcső bilincset és a víztömlőket.
- 5) Szereljük le a tengelykapcsoló huzalt a tengelykapcsoló kioldó tengelyről és tartóról.
- 6) Kössük le a kapcsoló- és választó huzalt az erőátviteli hajtóműről, majd szereljük le az erőátviteli hajtóművön elhelyezett tartóját.
- 7) Válasszuk szét a tolatólámpa csatlakozót.
- 8) Támasszuk meg a motort, motor felfüggesztőt használva.

- 9) Szereljük ki az erőátviteli hajtóművet a motorral összefogó (1) csavarokat. (Felső oldal)
- 10) Engedjük le az erőátviteli hajtómű olajat ennek a fejezetnek „A kézi erőátviteli hajtómű olaj cseréje” című pontja szerint.
- 11) Szereljük le a mellső hajtótengelyeket a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint.
- 12) Szereljük le a kipufogócsövet.
- 13) Szereljük le az alsó tagot. (Az RM413D esetén)
- 14) Kössük le a testelő kábelt az erőátviteli hajtóműről.
- 15) Szereljük ki a tartót, amely az erőátviteli hajtóművet a motorral összeköti.
- 16) Támasszuk alá az erőátviteli hajtóművet erőátvitel emelővel.

- 17) Szereljük le a bal oldali motortartó gumibakot az (1) konzollal együtt.

- 18) Szereljük le a hátsó motortartó gumibakot a (2) konzollal együtt.

- 19) Szereljük ki a csavarokat, amelyek az erőátviteli hajtóművet a motorral összekötik. (Alsó oldal)
- 20) Húzzuk ki az erőátviteli hajtóművet úgy, hogy leválasztjuk a csoportkereket a tengelykapcsoló tárcsáról, majd engedjük le.

## Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- A tartó előírt nyomatékát lásd az ábrán „Az erőátviteli hajtómű egység le- és felszerelése” című pontban.
- Szilárdan rögzítsük mindegyik vezeték bilincset.
- A tengelykapcsoló huzal bekötése után feltétlenül állítsuk be a tengelykapcsoló huzal anya helyzetét a 7C3 fejezet „A tengelykapcsoló huzal beállítása” című pontja szerint.
- Szereljük fel a mellső hajtótengelyeket a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint.
- Töltsük fel az erőátviteli hajtóművet az előírt minőségű olajjal ennek a fejezetnek „A kézi erőátviteli hajtómű olaj cseréje” című pontja szerint.
- Csatlakoztassuk az akkumulátort, majd ellenőrizzük a motor, a tengelykapcsoló és az erőátviteli hajtómű működését.

## A kapcsolókar ki- és beszerelése

### Kiszzerelés

Távolítsuk el a kapcsolókar (1) csavarját, majd a (2) kapcsolókar szerelvényt.

### Beszerelés

A beszerelést a kiszzerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Na használjuk fel újra a kapcsolókar burkolat tömítését.
- Kenjük be tömítőanyaggal a kapcsolókar burkolat csavarját. Húzzuk meg az burkolat csavarját az előírt nyomatékkal.

„A”: 99000-32110 menetrögzítő ragasztó

Meghúzási nyomaték

Váltókar burkolat csavar (a): 15 Nm (1,5 kgm)

## Az 5. sebesség fogaskerekeinek ki- és beszerelése

### Kiszzerelés

- 1) Szereljük ki a ház toldat fedél csavarjait, és vegyük le a ház toldat fedelét.

#### FIGYELEM:

Ügyeljünk arra, hogy ne deformáljuk a ház toldat fedelet, amikor levesszük a bal oldali házrészről.

- 2) Szereljük ki az 5. sebesség kapcsoló villa (1) csavarjait, majd az 5. sebesség (2) kapcsoló villát.

#### MEGJEGYZÉS:

Ha a rögzítő csavarok szorulnak, melegítsük fel a (4) toldat csapágyapajzs házat hőlégfúvóval mintegy 80 °C hőmérsékletre.

- 3) Célszerszám segítségével vegyük le a (3) rögzítő gyűrűket.

#### Célszerszám

(A): 09900-06107

- 4) Szereljük le az 5. sebesség (1) agy szerelvényét a főtengelyről fogaskerek lehúzó szerszámmal.  
5) Szereljük le az 5. sebesség tűgörgős csapágyát a főtengelyről.

- 6) Szereljük le az (1) csoport 5. fogaskerekét a csoportkerékről fogaskerek lehúzó szerszámmal.

#### Beszerelés

#### MEGJEGYZÉS:

A beszerelés előtt kenjük be mindegyik alkatrészt hajtómű olajjal.

- 1) Szereljük fel az (1) csoport 5. fogaskerekét a csoportkerékre, célszerszámot használva.

#### Célszerszám

(A): 09913-84510

- 2) Szereljük össze az 5. sebesség agy szerelvényét ((3) agy, (1) persely és (4) reteszek), az ábra szerint.

2. Leélezés
5. Szinkrongyűrű
6. 5. fogaskerék

- 3) Szereljük fel a tűgörgős csapágyat, az 5. fogaskereket és a szinkrongyűrűt a főtengelyre.

Húzzuk fel az 5. fogaskerék szerelvényt a főtengelyre úgy, hogy a hüvely leélezése a ház toldat fedél felé nézzen, célszerszámot és kalapácsot használva.

#### Célszerszám

(A): 09913-70123

- 4) Helyezzük be a (2) rögzítő gyűrűt, és győződjünk meg arról, hogy az szilárdan helyezkedik el a horonyban.

#### Célszerszám

(A): 09900-06107

- 5) Szereljük fel az 5. sebesség kapcsoló villát, majd húzzuk meg az (1) új csavarokat az előírt nyomatékkal.

#### Meghúzási nyomaték

Az 5. sebesség választó villa csavarja (a): 22 Nm (2,2 kgm)

#### FIGYELEM:

Ne használjuk fel újra az 5. sebesség kapcsolóvilla (1) csavarjait. Feltétlenül új, ragasztóval előre bevont csavarokat használjunk. Ellenkező esetben a csavarok kilazulhatnak.

- 6) Szereljük fel a ház toldat (1) fedelet új tömítéssel, majd húzzuk meg a csavarokat az előírt nyomatékkal.

#### Meghúzási nyomaték

Ház toldat fedél csavar

(a): 29 Nm (2,9 kgm)

(b): 12 Nm (1,2 kgm)

## A főtengely szét- és összeszerelése

### Szét szerelés

- 1) Szereljük le az 1. sebesség (2) kopólemezt, majd vegyük ki az 1. sebesség (1) fogaskerékét, az 1. sebesség tűgörgős csapágyát és az 1. sebesség szinkrongyűrű szerelvényét.

- 2) Célszerszám segítségével távolítsuk el a 2. sebesség (1) rögzítő gyűrűjét.

#### Célszerszám

(A): 09900-06107

- 3) Szereljük le húzó szerszámot a 2. fogaskerekre, és húzzuk le az (1) 1. és 2. sebesség egy szerelvényét a (2) 2. fogaskerékkel együtt, hidraulikus sajtó segítségével.

#### FIGYELEM:

Annak érdekében, hogy elkerüljük a 2. fokozat fogaskerék fogainak a sérülését, a csapáglehúzó lapos oldalával támasszuk meg azokat.

- 4) Távolítsuk el a 2. sebesség tűgörgős csapágyát.

- 5) Távolítsuk el a 2. sebesség (1) nyomóalátétjét és a 4. sebesség (2) kopólemezt.
- 6) Vegyük ki a (3) 3. fogaskereket, a 3. fogaskerék tűgörgős csapágyát, valamint a 3. és 4. szinkrongyűrűt.

7) Célszerszám segítségével vegyük le az (1) rögzítő gyűrűt.

**Célszerszám**

**(A): 09900-06107**

8) Szereljük lehúzó szerszámot a (2) 4. fogaskerékre, és húzzuk le a (1) 3. sebesség agy szerelvényét a 4. fogaskerékkel együtt, hidraulikus sajtó segítségével.

**FIGYELEM:**

**Annak érdekében, hogy elkerüljük 4. fokozat fogaskerék fogainak a sérülését, a csapáglehúzó lapos oldalával támasszuk meg azokat.**

9) Távolítsuk el a 4. sebesség tűgörgős csapágyát.

### Összeszerelés

1) Alaposan tisztítsuk meg mindegyik alkatrészt, vizsgáljuk meg, hogy nem látunk-e rajtuk rendellenességet, és ha kell, cseréljük ki új alkatrészekre.

2) A kenés biztosítása érdekében fúvassuk át sűrített levegővel az (1) olajfuratokat, és ellenőrizzük, hogy nincsenek-e eldugulva.

3) Szereljük fel a két darab (1) tűgörgős csapágyat a főtengelyre, a 4. fogaskerék számára.

**MEGJEGYZÉS:**

**Állítsuk egy vonalba a tűgörgős csapágyak (2) hornyait.**

- 4) Szereljük össze a 3. és 4. sebesség agy szerelvényét ((5) agy, (1) persely és (4) reteszek), az ábra szerint.

2. A leélezés hornya
3. Szinkrongyűrű

- 5) Szereljük fel a (2) 4. fogaskereket és a szinkrongyűrűt a főtengelyre.

Sajtoljuk a helyére célszerszám és hidraulikus sajtó segítségével a 3. és 4. fogaskerék (1) agy szerelvényét a főtengelyen úgy, hogy a hüvely leélezésének hornya a 3. fogaskerék felé nézzen.

#### MEGJEGYZÉS:

Miután a 3. és 4. fogaskerék agy szerelvényét felsajtoltuk, ellenőrizzük, hogy a 4. sebességfokozat (2) fogaskereke szabadon forog-e.

- 6) Célszerszám segítségével helyezünk fel új (1) rögzítő gyűrűt.

#### Célszerszám

(A): 09900-06107

- 7) Szereljük fel a 3. fogaskerék tűgörgős csapágát ugyanúgy, mint az 5) lépésben.  
8) Nyomjuk be a 3. fogaskereket.

- 9) Szereljük fel a 2. sebesség (1) nyomóalátétjét és a 4. sebesség (2) kopólemezt.

- 10) Szereljük össze a (1) 2. fogaskereket, a (2) szinkrongyűrű szerelvényét, a (3) 2. fogaskerék tűgörgős csapágát és az 1. és 2. fogaskerék agy szerelvényét ((4) agy, (5) hüvely és (6) reteszek).

**MEGJEGYZÉS:**

**A (7) hüvely fogaskerék felőli oldala a 2. fogaskerék felé néz.**

- 11) Sajtoljuk rá a főtengelyre a 12) lépésben összeszerelt alkatrészeket célszerszám és hidraulikus sajtó segítségével.

**Célszerszám**

**(A): 09924-07710**

**MEGJEGYZÉS:**

**Miután az 1. és 2. fogaskerék (1) agy szerelvényét felsajtoltuk, ellenőrizzük, hogy a 2. sebességfokozat (2) fogaskereke szabadon forog-e.**

- 12) Célszerszám segítségével helyezzünk fel a 2. fogaskerék számára új (1) rögzítő gyűrűt.

**Célszerszám**

**(A): 09900-06107**

- 13) Szereljük fel az 1. sebesség szinkrongyűrű szerelvényét a főtengelyre.  
14) Szereljük fel az 1. fogaskerék tűgörgős csapágát a főtengelyre.

- 15) Nyomjuk a helyére az (1) 1. fogaskereket, majd szereljük fel az 1. fogaskerék (2) kopólemezt.

## A csoportkerék és a főtengely ellenőrzése

- Ellenőrizzük, hogy mindegyik fokozat szabadon forog-e.
  - Ellenőrizzük a csoportkereket és a főtengely szerelvényét kopás, deformáció vagy sérülés szempontjából.
- Ha bármilyen hibát észlelünk, cseréljük ki a hibás alkatrészt új darabra.

## A erőátviteli hajtóműház szét- és összeszerelése

# A TENGELYKAPCSOLÓ (Z13DT MOTOROS MODELL)

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## Általános leírás

A tengelykapcsoló hasított tányérrugós, száraz, egytárcsás szerkezet. A hasított tányérrugó összefüggő külső körgyűrűből kiágazó, befelé keskenyedő rugó lamellákból áll.

A csavarrugóval ellátott tengelykapcsoló tárcsa az erőátviteli hajtómű behajtottengelyéhez evolvens profilú tengelybordákon keresztül csatlakozik.

A lendkerékre felerősített tengelykapcsoló fedél tartja a hasított tányérrugót oly módon, hogy a tányérrugó kerületi része nyomja rá a nyomólapot (a köztük elhelyezett tengelykapcsoló tárcsán keresztül) a lendkerékre olyankor, amikor a tengelykapcsoló kinyomó csapágya visszahúzódik. Ez a tengelykapcsoló bekapcsolt állapota.

A tengelykapcsoló pedál lenyomásakor a kinyomó csapággy előre mozdul, és megnyomja a tányérrugó kúpos lamelláinak a végeit. Ekkor a hasított tányérrugó elhúzza a nyomólapot a lendkeréktől, és ezáltal megszakad a tengelykapcsoló tárcsa nyomaték átvitele a lendkerék és az erőátviteli hajtómű csoportkereke között.

## Diagnosztika

### Diagnosztikai táblázat

Állapot	Lehetséges ok	Javítás módja
<b>Csúszás</b>	Nem megfelelően beállított tengelykapcsoló huzal	Állítsuk be a kapcsoló huzalt.
	A tengelykapcsoló tárcsa felülete kopott vagy olajos	Cseréljük ki a tengelykapcsoló tárcsát.
	Deformálódott tengelykapcsoló tárcsa, nyomótárcsa vagy lendkerék	Cseréljük ki a tengelykapcsoló tárcsát, a tengelykapcsoló fedelet vagy a lendkereket.
	Meggyengült hasított tányérrugó	Cseréljük ki a tengelykapcsoló fedelet.
	A tengelykapcsoló huzal rozsdás	Cseréljük ki a huzalt.
<b>Súrlódó tengelykapcsoló</b>	Nem megfelelően beállított tengelykapcsoló huzal	Állítsuk be a kapcsolóhuzalt.
	Meggyengült a hasított tányérrugó, vagy kopottak a rugó lamellák végei	Cseréljük ki a tengelykapcsoló fedelet.
	Rozsdás csoportkerék bordák	Kenjük meg.
	A csoportkerék bordái sérültek vagy kopottak	Cseréljük ki a csoportkereket.
	Erősen imbolygó tengelykapcsoló tárcsa	Cseréljük ki a tengelykapcsoló tárcsát.
	A tengelykapcsoló érintkező felületei repedtek vagy olajjal szennyezettek	Cseréljük ki a tengelykapcsoló tárcsát.
<b>A tengelykapcsoló berezeg</b>	Kifényesedett (üvegszerűvé vált) a tengelykapcsoló súrlódó betétek felülete	Javítsuk meg, vagy cseréljük ki a tárcsát.
	A tengelykapcsoló tárcsa felületei olajjal szennyezettek	Cseréljük ki a tengelykapcsoló tárcsát.
	A kinyomó csapággy akadozva csúszik a csoportkeréken	Kenjük meg, vagy cseréljük ki a csoportkereket.
	Imbolygó tengelykapcsoló tárcsa, vagy rossz érintkezés a súrlódó felületeken	Cseréljük ki a tengelykapcsoló tárcsát.

## A tengelykapcsoló huzal elemei

[A]: Az RM413D esetén	 4. Tengelykapcsoló huzal anyá: A tengelykapcsoló huzal anyát kenjük meg 99000-25010 zsírral
[B]: Az RB413D esetén	 5. Tengelykapcsoló huzal horog: A huzal horgot kenjük meg 99000-25010 zsírral
1. Tengelykapcsoló huzal	6. Tengelykapcsoló pedál
2. Összekötő alátét	7. Tengelykapcsoló huzal külső csavar
3. Tengelykapcsoló kinyomó tengely	 8. Tengelykapcsoló pedál határoló csavar: Soha ne lazítsuk meg a tengelykapcsoló határoló csavarját.

## A tengelykapcsoló huzal le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Vegyük le a (3) összekötő alátétet a tengelykapcsoló huzalról.
- 3) Lazítsuk meg a tengelykapcsoló (1) huzal anyát, és vegyük le a tengelykapcsoló huzalt a tengelykapcsoló (2) kinyomó tengelyéről.
- 4) Válasszuk le a tengelykapcsoló huzalt a tengelykapcsoló huzal bilincsről.

- 5) Távolítsuk el a tengelykapcsoló huzalt az alábbiak szerint.

#### RM413D esetén [A]

- a) Akasszuk le az (1) huzalhorgot a (4) tengelykapcsoló pedálról.
- b) Vegyük le a (3) tengelykapcsoló huzalt az (5) tengelykapcsoló pedál tartóról, az ábrán látható módon 90°-kal elfordítva a tengelykapcsoló (2) sapkáját.

#### RB413D esetén [B]

- a) Vegyük ki a tengelykapcsoló huzal (1) külső csavarját a (2) műszerfal motorház felőli oldalán.
- b) Kössük le a huzalhorgot a tengelykapcsoló pedálról, majd vegyük ki a huzalt.

## Felszerelés

- 1) Zsírozzuk meg a tengelykapcsoló huzal (2) anyát és az (1) huzalhorgot a huzal beszerelése előtt.

„A”: 99000-25010 zsír

- 2) Akasszuk rá a huzal végét a pedálra csavarhúzó vagy hosszúcsőrű fogó segítségével, az utastér felől.

[A]: Az RM413D esetén

[B]: Az RB413D esetén

- 3) Szereljük fel a tengelykapcsoló huzalt az alábbiak szerint.

### RM413D esetén [A]

- a) Szereljük fel a (2) tengelykapcsoló huzalt a (3) tengelykapcsoló pedál tartóra, az ábrán látható módon 90°-kal elfordítva a tengelykapcsoló (1) sapkáját.

### RB413D esetén [B]

- a) Rögzítsük a huzalt az (5) 2 db csavarral a (6) műszerfalhoz.

### Meghúzási nyomaték

#### Tengelykapcsoló huzal külső csavar

(a): 8,5 Nm (0,85 kgm)

- 4) Szereljük fel a tengelykapcsoló huzalt a tengelykapcsoló huzal bilincsre.
- 5) Csatlakoztassuk a tengelykapcsoló huzalt a tengelykapcsoló huzal anyához, majd szereljük fel a tengelykapcsoló huzal anyát a kinyomó tengelyre.
- 6) Csavarjuk be a tengelykapcsoló huzal anyát, és állítsuk be a tengelykapcsoló huzalt ennek a fejezetnek „A tengelykapcsoló huzal beállítása” című pontja szerint.

### MEGJEGYZÉS:

Ügyeljünk arra, hogy a (4) huzal átvezetőnek meghatározott beszerelési iránya van, ahogyan az ábrán látható.

- 7) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 8) Járó motor mellett ellenőrizzük a tengelykapcsoló kifogástalan működését.

## A tengelykapcsoló huzal ellenőrzése

Ellenőrizzük a tengelykapcsoló huzalt, és ha az alábbi hibák bármelyikével találkozunk, cseréljük ki.

- A huzal erős súrlódása
- Kopott huzal
- Elgömbült vagy megtört huzal
- Szakadt védőkarmantyúk
- Kopott huzalvég

## A tengelykapcsoló huzal beállítása

- 1) Vegyük le az összekötő alátétet a tengelykapcsoló huzalról.
- 2) Ellenőrizzük az „a” hézagot az a) és a b) esetben, és állítsuk be az előírt hézagot a (2) huzal anyá forgatásával, ha nem felel meg az előírásnak.
  - a) Nyomjuk az (1) kinyomó tengelyt az „A” irányba, amíg a kinyomó tengely hézag el nem tűnik.
  - b) Húzzuk a (3) tengelykapcsoló huzalt a „B” irányba.

**Hézag (használt huzal esetén)**

„a”: 4 – 6 mm

**MEGJEGYZÉS:**

Új tengelykapcsoló huzal felszerelésekor a hézagot 2 – 4 mm méretűre állítsuk be.

- 3) Szereljük fel az (1) összekötő alátétet a megadott helyre.

**Az összekötő alátét beszerelési helyzete**

„d”: 0 – 2 mm

# A tengelykapcsoló pedál és a tengelykapcsoló pedál tartó elemei

## Az RM413D esetén

1. Tengelykapcsoló pedál tartó	7. Pedál távtartó
 2. A pedál tartó csavarja: A pedál tartó csavarját a pedál tartó anyá után kell meghúzni.	8. Pedál tengely anya

1. A kinyomó tengely 1. sz. perselye	 8. Kinyomó tengely csapágy: A csapágy és a kinyomó tengely illeszkedő felületeit, valamint a csapágy belsejét kenjük meg 99000-25010 zsírral.
 2. Tengelykapcsoló kinyomó villa: Kenjük meg 99000-25010 zsírral a kinyomó villa végét. (3 g)	9. A tengelykapcsoló fedél
 3. Tengelykapcsoló kinyomó tengely: A kinyomó tengely végét kenjük meg 99000-25010 zsírral. 0,12 – 0,36 g	10. Tengelykapcsoló fedél csavar
4. Kinyomó tengely 2. sz. perselye	11. Tengelykapcsoló tárcsa
 5. Tengelykapcsoló kinyomó villa csavarja: Húzzuk meg 25 Nm (7,0 kgm) 90° és 15°-kal az előírt módszer szerint	12. Tengelykapcsoló kinyomó tengely gallér
6. Csoportkerék fedél	 Meghúzási nyomaték
7. Csoportkerék fedél csavar	 Ne használjuk fel újra.

## A tengelykapcsoló fedél és a tengelykapcsoló tárcsa ki- és beszerelése

### Kiszerelés

- 1) Szereljük le az erőátviteli hajtóművet a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.
- 2) Célszerszám segítségével rögzítsük a lendkereket, majd szereljük ki az (1) tengelykapcsoló fedél csavarokat, a (2) tengelykapcsoló fedelet és a tengelykapcsoló tárcsát.

#### Célszerszám

(A): 09924-17810

### Beszerelés

- 1) Célszerszám segítségével egy vonalba állítva a tengelykapcsoló tárcsa és a lendkerék középpontját, szereljük fel az (1) tengelykapcsoló fedelet és a csavarokat. Húzzuk meg a csavarokat az előírt nyomatékkal.

#### MEGJEGYZÉS:

- A tengelykapcsoló fedél csavarok meghúzása során a (B) célszerszám segítségével, kézzel nyomjuk össze a tengelykapcsoló tárcsát úgy, hogy központos legyen.
- A fedél csavarjait kis lépésekben, egyenletesen, átlós sorrendben húzzuk meg.

#### Célszerszám

(A): 09924-17810

(B): 09923-36320

#### Meghúzási nyomaték

A tengelykapcsoló fedél csavarja (a): 15 Nm (1,5 kgm)

- 2) Kis mértékben kenjük meg az (1) csoportkereket zsírral, majd szereljük össze az erőátviteli hajtómű szerelvényt a motorral a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.

„A”: 99000-25210 zsír

#### MEGJEGYZÉS:

Amikor az erőátviteli hajtómű csoportkerekeit a tengelykapcsoló tárcsába illesztjük, forgassunk egy keveset a forgattyús tengelyen, hogy a bordás tengelykötés elemei egymásba illeszkedjenek.

## A tengelykapcsoló fedél ellenőrzése

### A tengelykapcsoló fedél

- 1) Ellenőrizzük, nincs-e rendellenes kopás vagy sérülés az (1) hasított tányérrugón.
- 2) Ellenőrizzük a (2) nyomólapot kopás és beégések szempontjából.
- 3) Ha rendellenességet találunk, cseréljük ki a tengelykapcsoló fedelet. Az (1) tányérrugót és a (2) nyomólapot ne szereljük szét.

## A tengelykapcsoló kinyomó szerkezet ki- és beszerelése

### Kiszerelés

- 1) Távolítsuk el a tengelykapcsoló kinyomó villa (1) csavarját, majd hajtsuk ki a tengelykapcsoló (2) kinyomó tengelyét.
- 2) Távolítsuk el a kinyomó tengely (3) csapágát és a tengelykapcsoló (4) kinyomó villáját.
- 3) Hajtsuk ki a tengelykapcsoló kinyomó tengely (5) 1. sz. perselyét és a tengelykapcsoló kinyomó tengely (6) 2. sz. perselyét a erőátviteli hajtómű házából.

- 4) Szereljük le az (1) csoportkerék fedelet.

## Beszerezés

- 1) Szereljük fel az (1) csoportkerék fedelet, és húzzuk meg a (2) csavart az előírt nyomatékkal.

### Meghúzási nyomaték

**Csoportkerék fedél csavar (a): 5 Nm (0,5 kgm)**

- 2) Hajtsuk be a tengelykapcsoló kinyomó tengely 1. sz. és 2. sz. perselyét az erőátviteli hajtómű házába.
- 3) Szereljük be a kinyomó tengely csapágyát és a kinyomó villát.

- 4) Zsírozzuk meg a (2) tengelykapcsoló kinyomó tengelyt, majd szereljük be a tengelykapcsoló kinyomó tengelyt, és húzzuk meg az (1) villa csavarját az előírt nyomatékkal.

**„A”: 99000-25010 zsír**

### Meghúzási nyomaték

**Tengelykapcsoló kinyomó villa csavar**

**(a): Húzzuk meg 25 Nm (7,0 kgm) 90° és 15°-kal az előírt módszer szerint**

## A tengelykapcsoló kinyomó szerkezet ellenőrzése

### A tengelykapcsoló kinyomó tengely

Ellenőrizzük a tengelykapcsoló kinyomó tengelyt és a tengelykapcsoló kinyomó villáját elgörbülés vagy egyéb sérülés szempontjából.

Ha bármilyen rendellenességet találunk, cseréljük ki.

## VIGYÁZAT/FIGYELEM/MEGJEGYZÉS

Olvassuk el ezt a szervizkönyvet és gondosan kövessük a benne foglalt utasításokat. A különleges információk hangsúlyozása céljából a **VIGYÁZAT**, **FIGYELEM** és **MEGJEGYZÉS** szavaknak különleges jelentősége van. Fordítsunk különös figyelmet azokra a tájékoztatásokra, melyek ezekkel a szavakkal vannak kiemelve.

### VIGYÁZAT:

Olyan lehetséges veszélyekre hívja fel a figyelmet, amelyek halált vagy sérülést okozhatnak.

### FIGYELEM:

Olyan lehetséges veszélyekre hívja fel a figyelmet, amelyek a gépkocsi károsodását okozhatják.

### MEGJEGYZÉS:

A karbantartást megkönnyítő vagy az utasításokat jobban megvilágító, különleges információkat jelez.

### VIGYÁZAT:

Ez a szervizkönyv csak hivatalos Suzuki márkakereskedők és képzett szerviz-szerelők számára készült. Megtörténhet, hogy gyakorlatlan szerelők vagy olyanok, akik nem rendelkeznek alkalmas szerszámokkal és felszereléssel, nem tudják megfelelően elvégezni az ebben a szervizkönyvben leírt szervizmunkákat. A helytelen javítás a szerelő sérülését okozhatja, és veszélyessé teheti a gépkocsit a vezető és az utasok számára.

### VIGYÁZAT:

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környékén, szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein illetve azok közelében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein illetve azok környékén szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében található minden vigyázat címszó alatti megjegyzést és „Szervizbiztonsági előírás”-t. Ha a VIGYÁZAT alatti utasításokat nem követjük, akkor a rendszer szándékunk ellenére aktiválódhat vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- Ha a légzsák-rendszer mellett más rendszer is javításra szorul, a Suzuki azt ajánlja, hogy először a légzsák-rendszert javítsuk meg, hogy elkerüljük a légzsák nem kívánt felfúvódását.
- Ne végezzünk módosítást a kormánykeréken, a műszerfalon vagy a légzsák-rendszer bármely más elemén (a légzsák-rendszer elemein vagy vezetékein valamint azok környezetében). A módosítás hátrányosan befolyásolhatja a légzsák-rendszer teljesítőképességét és sérüléshez vezethet.
- Ha a gépkocsit 93 °C-nál magasabb hőmérsékleti hatás érheti (például festék-ráégetési eljárás során) előtte szereljük ki a légzsák-rendszer elemeit az elemek károsodásának és a légzsák-rendszer nem kívánt felfúvódásának az elkerülésére.

A ferde vonallal áthúzott kör ebben a szervizkönyvben azt jelenti: „Ne tegyük”, vagy „Ezt akadályozzuk meg”

# Előszó

Ez a KIEGÉSZÍTŐ SZERVIZKÖNYV az IGNIS (RM413) SZERVIZKÖNYV és a Wagon R+ (RB310/413) SZERVIZKÖNYV kiegészítése. Kifejezetten a következő modellhez készült.

**A leírtak a következő modellre vonatkoznak:**

**Z13DT dízelmotorral (RM413D) felszerelt IGNIS és Z13DT dízelmotorral (RB413D) felszerelt Wagon R+**

A szervizkönyv csak a fenti modellek Z13DT dízelmotorjára, a kézi sebességváltójára és a tengelykapcsolójára vonatkozó szerviz információkat tartalmazza. A jármű egyéb részeire - amely nem a motorja, sebességváltója és tengelykapcsolója - vonatkozó információkért lásd az alábbi kapcsolódó szervizkönyveket.

Az alkatrészek cseréjénél vagy a szétszereléssel járó szervizelés során ajánlatos eredeti SUZUKI alkatrészeket, szerszámokat és szervizanyagokat (kenőanyagok, tömítőanyagok stb.) használni, az egyes fejezetekben található leírásoknak megfelelően.

Az ebben a könyvben szereplő minden információ, ábra és műszaki leírás a közzététel jóváhagyásának időpontjában rendelkezésre álló legújabb termékinformációkon alapul. A leírások fő tárgya a standard kivitelű gépkocsi.

Ezért vegyük tekintetbe, hogy az ábrák olykor különbözhetnek az éppen szervizelt gépkocsitól.

A bármikor bekövetkező, előzetes figyelmeztetés nélküli módosítás jogát fenntartjuk.

## MEGJEGYZÉS:

„SUZUKI márkakereskedők” alatt a Meghatalmazott Suzuki Szervizeket értjük (Európában).

# MOTOR, ÁLTALÁNOS TÁJÉKOZTATÓ ÉS DIAGNOSZTIKA (Z13DT MOTOR)

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## Általános tájékoztató

### A tisztaságra és gondosságra vonatkozó megállapítások

Egy gépkocsi motor számos megmunkált, hónolt, csiszolt és leppelt felületet foglal magában, amelyek tűrés értékei ezred-milliméterekben mérhetők. Ennek megfelelően a motor bármely belső részének szervizelése során nagyon fontos a gondos kezelés és a tisztaság. Az ebben a fejezetben leírt munkák során mindig szem előtt kell tartani, hogy a megmunkált és egymáson elmozduló felületek megtisztítása és megóvása a javítási eljárás lényeges részét képezi. Ezt akkor is a rendes műhelymunka részének kell tekinteni, ha külön nincs is megemlítve.

- Az összeszerelés során a súrlódó felületeket bőségesen meg kell kenni motorolajjal, hogy a működés kezdeti szakaszában a felületek védve és kenve legyenek.
- Ha a szervizelés során leszereljük a vezérmű berendezés alkatrészeit, a dugattyúkat, dugattyú gyűrűket, a hajtórudakat, hajtórúd csapágyakat vagy a főtengely csapágyait, ezeket sorrendben tegyük le. Az összeszerelés során az alkatrészeket ugyanarra a helyre és ugyanahhoz az illeszkedő felülethez szereljük vissza, ahonnan leszereltük.
- A motoron végzett minden nagyobb munka előtt kössük le az akkumulátor kábeleket. Ha elmulasztjuk lekötni a kábeleket, az a kábelkötegek vagy más villamos berendezések tönkremenetelét okozhatja.
- Ebben a szervizkönyvben a motor négy hengerét mindvégig számok azonosítják: Az (1) 1. sz., a (2) 2. sz., a (3) 3. sz. és a (4) 4. sz. számozás a forgattyús tengely (5) szíjtárcsa oldaláról indul, és a lendkerék oldal felé halad.

### A motor szervizelésére vonatkozó általános tájékoztatás

A motor szervizelésére vonatkozó alábbi tájékoztatást gondosan be kell tartani, mert az itt leírtak fontosak mind a károsodások elkerülése, mind pedig a motor megbízható teljesítőképességének biztosítása szempontjából.

- Ha a motort bármilyen okból felemeljük vagy alátámasztjuk, ne helyezzünk emelőt az olajteknő alá. Mivel az olajteknő és az olajszivattyú szűrője között csak igen szűk rés van, helytelen alátámasztás esetén az olajteknő nekifeszülhet az olajszűrőnek, és ez tönkretelheti az olajfelszívó egységet.
- A motoron végzett munka során tartsuk szem előtt, hogy a 12 V feszültségű villamos rendszer komoly károkat okozó, nagy erejű rövidzárlatot hozhat létre. Ha olyan munkát végzünk, amelynek során esetleg bekövetkezhet villamos érintkezők testelődése, az akkumulátorról le kell venni a testelő kábelt.
- Ha bármikor leszereljük a levegőszűrőt, a levegőszűrő kivezető tömlőjét, a turbófeltöltőt, a közbenső hűtőt, a közbenső hűtő kivezető tömlőjét vagy a levegőszívó csövet, a szívónyílást le kell takarni. Ez megakadályozza, hogy véletlenül olyan idegen tárgyak kerüljenek oda, amelyek a szívó csatornán keresztül a hengerekbe juthatnak, és a motor indításakor súlyos károsodást okozhatnak.

Óvintézkedések az üzemanyag rendszer szervizelése során

- A munkát jól szellőztetett helyiségben kell végezni, távol minden nyílt lángtól, és tilos a dohányzás.
- Az üzemanyag vezeték megbontása után kifolyhat egy kevés üzemanyag.  
A személyi sérülés veszélyének csökkentése érdekében a megbontandó csatlakozót takarjuk le gépronggyal. A csatlakozó megbontása után ezt a rongyot az erre a célra rendszeresített gyűjtőedénybe tesszük.
- Amikor a motor és a kipufogó rendszer meleg, ne járassuk a motort, ha a fő relé ki van iktatva.

- Az üzemanyag vagy üzemanyag pára tömlők csatlakozásai a csövek fajtájától függően különbözőek. Amikor az üzemanyag vagy üzemanyag pára tömlőket visszaszereljük, mindegyik tömlőt a megfelelő módon csatlakoztassuk, és bilinccsel rögzítsük, az ábra szerint.

A tömlők csatlakoztatása után ellenőrizzük, nincsenek-e megcsavarodva vagy megtörve.

[A]: Rövid csőnél a tömlőt egészen ütközésig toljuk fel, az ábrán látható módon.
[B]: Az ilyen fajta csőnél a tömlőt a körkörös kiemelkedő részig toljuk fel, az ábrán látható módon.
[C]: Meghajlított csőnél a tömlőt a hajlatig toljuk fel az ábrán látható módon, vagy a cső 20 – 30 mm-re nyúljon be a tömlőbe.
[D]: Egyenes csőnél a cső 20 – 30 mm-re nyúljon be a tömlőbe.
1. Tömlő
2. Cső
3. Bilincs
4. Szilárdan rögzítsük a bilinccsel, 3 – 7 mm-re a tömlő végétől.
5. 20 – 30 mm

- Amikor az üzemanyag szűrő üreges csavarját vagy leeresztő csavarját szereljük be, mindig használjunk új tömítést, és húzzuk meg a csavart az előírt nyomatékkal.
- A befecskendező szelepek, az üzemanyag tápcsövek vagy az üzemanyag nyomásszabályozó felszerelésekor kenjük meg az O-gyűrűket orsóolajjal vagy üzemanyaggal.
- Az üzemanyag csövek hollandi anyáinak szerelésekor az anyát először kézzel húzzuk meg, és csak aztán húzzuk meg az előírt nyomatékkal, villáskulcsot használva.

## Motor diagnosztika

### Általános leírás

A gépkocsi diagnosztikai koncepció fő célja a hibák helyének behatárolása és kiküszöbölése a lehető legrövidebb idő alatt. Ezért iránymutatóként a következő diagnosztikai stratégiát fejlesztettük ki, amely a szerelőket egyenes úton vezeti el a hiba forrásához:

Kiinduló pont a gépkocsi, amely bizonyos számú elektronikus rendszert tartalmaz, mint például a motor vezérlő rendszert.

Minden egyes ilyen elektronikus rendszer úgynevezett „funkcionális csoportokból” áll, amelyek funkcionális kapcsolatban vannak egymással. A hűtőfolyadék hőmérséklet érzékelő áramkör például ilyen funkcionális csoportot képvisel.

Az egyes funkcionális csoportok számos alkatrészből állnak, mint például a kapcsolók, érzékelők, huzalok stb. A hőmérséklet érzékelő áramkör például érzékelőből, kábelkötegből, vezérlő egységből és a vezérlő egység szoftveréből áll.

E szerkezeti felépítés alapján az első diagnosztikai lépésnek a hibás elektronikai rendszer azonosításának és behatárolásának kell lennie, ezután a megfelelő hibás funkcionális csoport diagnózisa következik, végezetül megkeressük és kijavítjuk a hibás alkatrészt az adott csoporton belül.

Az ellenőrzési eljárás során a diagnosztikai rendszer ellenőrzése (az A táblázat – Diagnosztikai rendszer ellenőrzése – írja le) ezt a diagnosztikai utat követi. Valamely elektronikai rendszer diagnózisa a fent leírt alapelv szerint mindig ezzel a Fő ellenőrzéssel kezdődik.

A Diagnosztikai rendszer ellenőrzése című fejezetben leírt utasításokat szigorúan be kell tartani. Minden olyan esetben, amikor egy vizsgálat vagy egy vizsgálati lépés hiba nélkül lezajlott, a diagnosztikai rendszer ellenőrzése a következő lépéssel folytatódik. Némelyik vizsgálat hivatkozásokat tartalmaz az érintett funkcionális csoportokra vonatkozóan (B-x táblázatok). Ha hiba van, végrehajtjuk a megfelelő funkcionális csoportok vizsgálatait a hibás funkcionális csoport észlelése céljából. Amikor azonosítottuk a csoportot, a hibakereső táblázatokat (C-x) használjuk a hibás alkatrész helyének a behatárolására. A hiba kijavítása után az érintett funkcionális csoportot (B-x táblázatok) újra ellenőrizni kell, hogy ez után az ellenőrzés után a diagnosztikai rendszer ellenőrzése (A táblázat) megfelelő pontjánál folytassuk.

Amikor sikeresen befejeztük a diagnosztikai rendszer ellenőrzésének mindegyik lépését, a rendszer teljes mértékben működőképes.

#### MEGJEGYZÉS:

**A diagnosztikai folyamatban közölt csatlakozó sorszám és érintkező sorszám ennek a szervizkönyvnek az előszavában említett „Villamos kapcsolási rajz” című kötetében található.**

### Adatátviteli csatlakozó (DLC)

Az (1) DLC a felszerelési helye, a csatlakozó alakja és a tűk kiosztása szempontjából megfelel az SAE J1962 szabványnak.

A SUZUKI vizsgálókészülékhez vagy az általános vizsgálókészülékhez ISO 9141 szerinti K (4) vezetékét használunk az adatforgalom céljára az ECM, ABS vezérlő egységgel, az EPS vezérlővel, az SDM és az indításgátló vezérlő egységgel.

2. B+
4. ECM testelés
5. Karosszéria testelés

### Óvintézkedések a hibák diagnosztizálása során

- Ne kössük le az ECM csatlakozóit, az akkumulátor kábelt az akkumulátorról, az ECM testelő vezetékét a motorról, és ne vegyük ki a fő biztosítékot, amíg le nem kérdeztük az ECM memóriájában tárolt diagnosztikai információkat.
- Az ECM memóriájában tárolt diagnosztikai információk a SUZUKI vizsgálókészülékkel vagy egy általános diagnosztikai vizsgálókészülékkel törölhetők, illetve hívhatók le. A vizsgálókészülék használata előtt gondosan olvassuk el annak kezelési utasítását, hogy pontos képünk legyen a rendelkezésre álló funkciókat és azok alkalmazását illetően.
- Az ellenőrzés megkezdése előtt feltétlenül olvassuk el a 0A fejezet „Óvintézkedések a villamos áramkörök szervizelésénél” című pontját, és vegyük figyelembe az abban leírtakat.
- Az ECM regisztrálása  
Ha az ECM-et kicseréljük, regisztráljuk a gépkocsi műszaki adatait (üzemanyag befecskendező szelep kalibrációs kód, gépkocsi változat, az indításgátló rendszer jelszava és az indításgátló rendszer titkos kulcskódja) az ECM-ben, a 6E3 fejezetnek „Az ECM regisztrálása” című pontja szerint.
- Az üzemanyag befecskendező szelep kalibrációs kódjának regisztrálása  
Ha üzemanyag befecskendező szelepet cserélünk, regisztráljuk az üzemanyag befecskendező szelep kalibrációs kódját az ECM-ben a 6E3 fejezetnek „Az ECM regisztrálása” című pontja szerint.  
Ellenkező esetben ez kedvezőtlen hatást gyakorol a motorra.

## A diagnosztikai hibakódok (DTC) lekérdezése

- 1) Készítsük elő az általános diagnosztikai vizsgálókészüléket vagy a SUZUKI vizsgálókészüléket.
- 2) Csatlakoztassuk az (1) adatátviteli csatlakozóhoz (DLC), amely a vezető oldalán, a műszerfal alatt található.

### Célszerszám

#### (A): SUZUKI vizsgálókészülék

- 3) Kapcsoljuk be a gyújtást, és győződjünk meg arról, hogy a HJL és az SVS lámpa világít.
- 4) Olvassuk le a DTC-t a vizsgálókészüléken megjelenő utasításoknak megfelelően, és nyomtassuk ki vagy írjuk le azokat. További részletek a Vizsgálókészülék kezelési útmutatóban találhatók.

Ha nem lehetséges az adatátvitel a vizsgálókészülék és az ECM között, nézzük át a „C-01, Nincs adatátvitel a vizsgálókészülék és a vezérlő egység között” című pontot.

- 5) Miután befejeztük a lekérdezést, kapcsoljuk ki a gyújtást, majd kössük le a vizsgálókészüléket az adatátviteli csatlakozóról.

## A diagnosztikai hibakódok (DTC) törlése

- 1) Csatlakoztassunk általános diagnosztikai vizsgálókészüléket vagy SUZUKI vizsgálókészüléket az adatátviteli csatlakozóhoz ugyanúgy, mint a DTC lekérdezésekor.
- 2) Kapcsoljuk ki, majd ismét be a gyújtáskapcsolót (de a motor ne járjon).
- 3) Töröljük a DTC-ket és a feltételes DTC-ket a vizsgálókészüléken kijelzett utasítások szerint. További részletek a Vizsgálókészülék kezelési útmutatóban találhatók.

### MEGJEGYZÉS:

**Amikor DTC-k törlése parancsot hajtunk végre, és a SUZUKI vizsgálókészülék a Suzuki üzemmódba van beállítva, miközben a motor jár, a DTC-k nem törölhetők az ECM memóriából.**

- 4) A törlés végeztével kapcsoljuk ki a gyújtást, majd kössük le a vizsgálókészüléket az adatátviteli csatlakozóról.

**MEGJEGYZÉS:**

- A „-” jel a HJL vagy SVS (Service Vehicle Soon, vigyük a gépkocsit mielőbb szervizbe) oszlopban azt jelenti, hogy a hibajelző lámpa nem ég.
- A DTC P1657-et ne vegyük figyelembe, mert az áramkör javítására még akkor sincs szükség, ha azt az ECM észlelte.

**B-02, Adatlista**

Mivel az alábbi adatok olyan szabványos értékek, amelyek a rendszeren üzemelő gépkocsikon vizsgálókészülék segítségével szerzett értékeken alapulnak, tekintjük ezeket referencia értékeknek. Még amikor a gépkocsi jó állapotban van, akkor is előfordulhatnak olyan esetek, amikor az ellenőrzött érték nem esik a megadott tartományba. Ezért a rendellenességet ne csupán ezeknek az adatoknak az ellenőrzése alapján ítéljük meg.

Továbbá, az alábbi táblázatban szereplő, vizsgálókészülékkel ellenőrizhető körülmények olyanok, amelyeket az ECM észlelt és parancsként továbbított, és lehetnek esetek, melyekben a motor vagy valamelyik működtető egység nem úgy (nem abban az állapotban) működik, ahogyan azt a vizsgálókészülék mutatja.

## **B-03, A vizsgálókészülék csatlakoztatása és az adatátvitel létrehozása**

Frissítsük a diagnosztikai szoftvert a SUZUKI vizsgálókészülékhez a „Tech2 Programozási kézikönyv” szerint, ha a diagnózis nem végezhető el a régi diagnosztikai szoftver miatt. Abban az esetben, ha a diagnózis akkor sem végezhető el, ha a megfelelő diagnosztikai szoftver verziót használjuk, nézzük át a „C-01, Nincs adatátvitel a vizsgálókészülék és a vezérlő egység között” című táblázatot.

## C-17, Az üzemanyag vezeték nyomás érzékelő áramköre

### MEGJEGYZÉS:

A diagnózis megkezdése előtt ellenőrizzük az üzemanyag vezeték nyomását vizsgálókészülék segítségével.

Az érték ellenőrzéséhez lásd ennek a fejezetnek a „B-02, Adatlista” című pontját.

Ha az érték kisebb, mint 0,15 V vagy nagyobb, mint 4,85 V, menjünk a „C-17, Az üzemanyag vezeték érzékelő áramköre” című pontra. Ha nem, menjünk a „C-18, A vezeték olajnyomás érzékelő áramköre” című pontra.

(Lásd a MEGJEGYZÉST)

### MEGJEGYZÉS:

Ez a készlet az alábbiakat tartalmazza:

1. Tech 2, 2. PCMCIA kártya, 3. DLC kábel, 4. SAE 16/19 adapter, 5. Szivargyújtó kábel,
6. DLC visszavezető adapter, 7. Akkumulátor kábel, 8. RS232 kábel, 9. RS232 adapter,
10. RS232 visszavezető csatlakozó, 11. Tároló doboz, 12. Tápegység

## 6A3 FEJEZET

# MOTORMECHANIKA (Z13DT MOTOR)

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környékén, szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein illetve azok közelében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein illetve azok környékén szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében található minden vigyázat címszó alatti megjegyzést és „Szervizbiztonsági előírás”-t. Ha a VIGYÁZAT alatti utasításokat nem követjük, akkor a rendszer szándékunk ellenére aktiválódhat vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviztevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábelének lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai modulban (SDM) tárolt energia hatására aktiválódhat.

**FIGYELEM:**

Feltétlenül olvassuk el a 6E3 fejezetben leírt „Óvintézkedés”-t, mielőtt lekapcsoljuk az üzemanyag vezetéket vagy leszerelnénk az üzemanyag rendszer valamely alkatrészét/alkatrészeit. Az „Óvintézkedések” figyelmen kívül hagyása az üzemanyag ellátó rendszer szükségtelen javításához vezethet.

## Diagnosztika

### A kompresszió ellenőrzése

Ellenőrizzük a kompressziót mind a négy hengernél az alábbiak szerint:

- 1) Melegítsük fel a motort.
- 2) Felforrósítás után állítsuk le a motort.

#### MEGJEGYZÉS:

**Miután a motor felforrósodott, tegyük a sebességváltó karját „üresbe”, húzzuk be a kéziféket és támasszuk ki a hajtó kerekeket.**

- 3) Kössük le a negatív (–) kábelt az akkumulátorról.
- 4) Vegyük le az izzításvezérlő csatlakozóját a 6E3 fejezet „Az izzításvezérlő le- és felszerelése” című pontja szerint.
- 5) Szereljük ki az összes izzítógyertyát a 6E3 fejezet „Az izzítógyertya ki- és beszerelése” című pontja szerint.
- 6) Vegyük le a csatlakozókat az ECM-ről az alábbiak szerint.
  - a) Húzzuk ki a reteszcsúszkát, hogy oldjuk a reteszkar reteszelését.
  - b) Húzzuk fel a reteszkart.

- 7) Helyezzük be a célszerszámokat az izzítógyertya furatba.

#### Célszerszám

(A): 09915-68610

(B): 09912-57821

- 8) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.

- 9) Nyomjuk ki az (1) tengelykapcsolót, hogy a motor könnyebben induljon.

- 10) Jól feltöltött akkumulátor mellett forgassuk meg a motort, és olvassuk le a kompresszió-manométeren a legnagyobb nyomást.
- 11) Hajtsuk végre a 7 – 10. lépést minden hengernél, hogy megkapjuk a négy értéket.

#### MEGJEGYZÉS:

- A kompressziónyomás méréséhez a motort legalább 200 f/min fordulatszámmal forgassuk, teljesen feltöltött akkumulátor segítségével.
- Ha a mért kompressziónyomás a 4 henger egyikénél különösen alacsony, ellenőrizzük a célszerszámok helyes felszerelését. Ha a felszerelés jó, a kompresszió a dugattyúgyűrűknél, a szelepeknél vagy a hengerfej tömítésnél szökhet meg.

#### A kompressziónyomás értékei

Max. különbség bármely két henger között:

**150 kPa (1,5 kg/cm<sup>2</sup>)**

- 12) Kössük le a negatív (–) kábelt az akkumulátorról.
- 13) Ellenőrzés után szereljük be az izzítógyertyákat a 6E3 fejezet „Az izzítógyertya ki- és beszerelése” című pontja szerint.
- 14) Helyezzük fel az ECM csatlakozóját.
- 15) Helyezzük fel az izzításvezérlő csatlakozóját a 6E3 fejezet „Az izzításvezérlő le- és felszerelése” című pontja szerint.
- 16) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.

## Az olajnyomás ellenőrzése

#### VIGYÁZAT:

**Az égési sérülések elkerülése érdekében ne érintsük meg a kipufogó gyújtócsövet, amíg a kipufogórendszer még meleg.**

- 1) Az olajnyomás ellenőrzése előtt ellenőrizzük az alábbiakat.
  - Olajszint az olajteknőben.  
Ha kevés az olaj, töltsük fel, hogy szintje elérje a (3) nivópálca (1) „tele” jelzését.
  - Olajminőség.  
Ha az olaj elszíneződött vagy minősége leromlott, cseréljük ki. A használandó olaj minőségére nézve lásd a 0B fejezet „A motorolaj és az olajsűrő cseréje (Z13DT)” című pontját.
  - Olajszivárgás.  
Ha olajszivárgást találunk, javítsuk ki.

2. Alsó szint jele

- 2) Szereljük le az olajnyomás kapcsolót jelen fejezet „Az olajnyomás kapcsoló le- és felszerelése” című pontja szerint.

3) Az üres menetes furatba szereljük be a célszerszámokat.

**FIGYELEM:**

**Felszereléskor ügyeljünk rá, hogy a célszerszám ne érjen hozzá a kipufogó gyújtócsőhöz, mert a kipufogó gyújtócső igen forró lesz.**

**Célszerszám**

**(A): 09915-77311**

**(B): 09919-46010**

4) Indítsuk el a motort és melegítsük fel rendes üzemi hőmérsékletre.

**MEGJEGYZÉS:**

**Feltétlenül tegyük a sebességváltó karját „üresbe”, húzzuk be a kéziféket és támasszuk ki a hajtó kerekeket.**

5) Miután a motor felmelegedett, az előírt alaplári fordulatszámon mérjük meg az olajnyomást.

**MEGJEGYZÉS:**

**Az előírt alaplári fordulatszámot lásd a 6E3 fejezet „Az alaplári fordulatszám ellenőrzése” című pontjában.**

**Előírt olajnyomás:**

**Kb. 140 kPa (1,4 kg/cm<sup>2</sup>) alaplári fordulatszámon**

- 6) Állítsuk le a motort és szereljük ki az olajnyomás manométert és tartozékait.
- 7) Szereljük fel az olajnyomás kapcsolót jelen fejezet „Az olajnyomás kapcsoló le- és felszerelése” című pontja szerint.
- 8) Indítsuk el a motort és ellenőrizzük, nincs-e szivárgás az olajnyomás kapcsolónál.  
Ha olajszivárgást találunk, javítsuk ki.

4. MAF érzékelő O-gyűrű	10. Szellőző tömlő szorítóbilincs Ügyeljünk arra, hogy a bilincs az ábra szerinti irányban álljon.	Ne használjuk fel újra.
5. Levegőszűrő szívócső	11. Szellőző cső	
6. Levegő szívótömlő	12. A turbófeltöltőhöz	

## A levegőszűrő betét ki- és beszerelése

### Kiszerelés

- 1) Akasszuk ki a levegőszűrő (1) kapcsait.
- 2) Nyissuk ki a levegőszűrő szerelvényt.
- 3) Szereljük ki a levegőszűrő betétet a levegőszűrő szerelvényből.

### Beszerelés

A beszerelés a kiszerelés műveleteinek fordított sorrendű végrehajtásával történik.

## A levegőszűrő betét ellenőrzése és tisztítása

- Ellenőrizzük a levegőszűrő betétet elszennyeződés szempontjából. Ha túl piszkos, cseréljük ki.
- Fújuk le a port sűrített levegővel a betét kilépő oldala felől.

## A levegőszűrő szerelvény ki- és beszerelése

### Kiszerelés

- 1) Vegyük le az (1) kiömlő tömlőt a (2) levegőszűrő szerelvényről.
- 2) Kapcsoljuk le a MAF érzékelő (3) csatlakozóját az (5) MAF érzékelő szerelvényről.
- 3) Szereljük le a (4) levegő szívótömlőt a (6) levegőszűrő szívócsövével (2) a levegőszűrő szerelvényről.
- 4) Szereljük le a (2) levegőszűrő szerelvényt.

Beszerelés

- A beszerelés a kiszerelés műveleteinek fordított sorrendű végrehajtásával történik, figyelembe véve az alábbiakat.
- Rögzítsük biztonságosan az összes tömlőt.
  - Húzzuk meg a levegőszűrő kivezető tömlőjének bilincset az előírt nyomatékkal, jelen fejezet „A levegőszűrő elemei” című pontja szerint.

A közbenső hűtő elemei

1. Közbenső hűtő	5. Közbenső hűtő kivezető cső	9. A turbófeltöltőhöz

4. Közbenső hűtő 2. sz. kivezető tömlője	8. Az alsó taghoz	

## A közbenső hűtő ki- és beszerelése

### Kiszerelés

- 1) Szereljük le a mellső lökhárítót a 9. fejezet „A mellső és hátsó lökhárító le- és felszerelése” című pontja szerint az RM413D esetében, vagy „A mellső és hátsó lökhárító” című pontja szerint az RB413D esetében.
- 2) Szereljük le az (1) kürtöt annak (2) tartójával együtt, valamint a hűtő (3) jobb oldali tartóját.

- 3) Kapcsoljuk le a közbenső hűtő (1) 1. sz. kivezető tömlőjét és (2) bevezető tömlőjét a (3) közbenső hűtőről.
- 4) Szereljük ki a közbenső hűtőt a járműből.

### Beszerelés

A beszerelés a kiszerelés műveleteinek fordított sorrendű végrehajtásával történik, figyelembe véve az alábbiakat.

- Húzzuk meg az (1) tömlőbilincset az előírt nyomatékkal.

#### Meghúzási nyomaték

#### Közbenső hűtő tömlőbilincs (a): 3 Nm (0,3 kgm)

- Szereljük fel a mellső lökhárítót a 9. fejezet „A mellső és hátsó lökhárító le- és felszerelése” című pontja szerint az RM413D esetében, vagy „A mellső és hátsó lökhárító” című pontja szerint az RB413D esetében.

A turbófeltöltő elemei

1. Kipufogó gyűjtőcső	7. Biztosító lemez: Hajlítsuk be a biztosító lemez megfelelő részét úgy, hogy megakadályozza a katalizátor csavarjának meglazulását.	13. Katalizátor felerősítő
2. Turbófeltöltő anya	8. Katalizátor csavar	14. Katalizátor felerősítő csavar
3. Turbófeltöltő	9. Üreges csavar	 Meghúzási nyomaték
4. Ászokcsavar	10. Turbófeltöltő kenőcső	 Ne használjuk fel újra.
5. Tömítés	11. Olaj visszavezető cső csavar	
6. Katalizátor	12. Olaj visszavezető cső	

## A turbófeltöltő le- és felszerelése

### Leszerelés

#### VIGYÁZAT:

**Az égési sérülések elkerülése érdekében ne szereljük a kipufogórendszert, amíg még meleg. A munkát csak a rendszer lehűlése után kezdjük el.**

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvénnel együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük le a levegőszűrő (1) kilépő tömlőjét a turbófeltöltőről.
- 4) Szereljük le a közbenső hűtő bevezető tömlőjét jelen fejezet „A közbenső hűtő ki- és beszerelése” című pontja szerint.
- 5) Szereljük le a kipufogó gyújtócső oldali motortartót jelen fejezet „A kipufogó gyújtócső elemei” című pontja szerint.

- 6) Vegyük le az izzítógyertya (1) csatlakozókat.

- 7) Szereljük le az (1) kenőcsövet.

8) Kapcsoljuk le az (1) olaj visszavezető csövet a hengerblokkról.

9) Szereljük le a kipufogó gyújtócső (1) burkolatát a kipufogó gyújtócsőről.

10) Szereljük le az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.

11) Kapcsoljuk le a stabilizátort a kereszttagról a 3D fejezet „A stabilizátor rúd és a perselyek le- és felszerelése” című pontja szerint a RM413D esetében, vagy a „Stabilizátor rúd és perselyek” című pontja szerint az RB413D esetében.

12) Szereljük ki az (1) turbófeltöltőt a (2) katalizátorral.

13) Szereljük ki a (2) katalizátort a turbófeltöltőből, miután visszahajlítottuk az (1) biztosítólemezt, és meglazítottuk a csavarokat.

- 14) Szereljük le az (1) olaj visszavezető csövet a turbófeltöltőről.

## Felszerelés

### MEGJEGYZÉS:

Tisztítsuk meg a turbófeltöltő, a katalizátor és a kipufogó gyújtócső illeszkedő felületeit.

- 1) Szereljük fel az (1) olaj visszavezető csövet új tömítéssel a turbófeltöltőre.

### Meghúzási nyomaték

Olaj visszavezető cső csavar (a): 9 Nm (0,9 kgm)

- 2) Szereljük fel az új tömítést, az (1) katalizátort és új (2) biztosítólemezt a turbófeltöltőre.

### Meghúzási nyomaték

Katalizátor csavar (a): 25 Nm (2,5 kgm)

- 3) Hajlítsuk be az (1) biztosítólemezek (3) karmait, hogy megakadályozzuk a (2) katalizátor csavar kilazulását.

- 4) Szereljük be a turbófeltöltőt az (1) katalizátorral, új (2) turbófeltöltő anyák használatával.

**Meghúzási nyomaték**

**Turbófeltöltő anyá**

**(a): 25 Nm (2,5 kgm)**

**Katalizátor felerősítő csavar:**

**25 Nm (2,5 kgm)**

- 5) Kapcsoljuk a stabilizátort a kereszttaghoz a 3D fejezet „A stabilizátor rúd és a perselyek le- és felszerelése” című pontja szerint a RM413D esetében, vagy a „Stabilizátor rúd és perselyek” című pontja szerint az RB413D esetében.

- 6) Szereljük fel a kipufogó gyűjtőcső (1) burkolatát.

**Meghúzási nyomaték**

**Kipufogó gyűjtőcső burkolat anyá (a): 9 Nm (0,9 kgm)**

- 7) Szereljük fel az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.

- 8) Csatlakoztassuk az (1) visszatérő csövet a hengerblokkhoz új tömítéssel.

**Meghúzási nyomaték**

**Olaj visszatérő cső csavar (a): 9 Nm (0,9 kgm)**

- 9) Szereljük fel az (1) kenőcsövet új tömítéssel.

**Meghúzási nyomaték**

**Kenőcső üreges csavarja (a): 12 Nm (1,2 kgm)**

- 10) Szereljük fel a kipufogó gyűjtőcső oldali motor függesztőszemet jelen fejezet „A kipufogó gyűjtőcső elemei” című pontja szerint.

- 11) Rakjuk fel az (1) izzítógyertya csatlakozókat.
- 12) Szereljük fel a közbelső hűtő bevezető tömlőjét jelen fejezet „A közbelső hűtő ki- és beszerelése” című pontja szerint.

- 13) Szereljük fel az (1) levegőszűrő kivezető tömlőjét a turbófeltöltőre, majd húzzuk meg a bilincset az előírt nyomatékkal.

#### **Meghúzási nyomaték**

#### **Levegőszűrő kivezető tömlő bilincs**

**(a): 3,1 Nm (3,1 kgm)**

- 14) Szereljük be a levegőszűrő szerelvényt a MAF érzékelő szerelvényt együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 15) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- 16) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj vagy kipufogógáz szivárgás.

## **A turbófeltöltő ellenőrzése**

Forgassuk meg kézzel az (1) turbina tengelyt, és győződjünk meg róla, hogy simán fut, mindenféle szokatlan zaj és jelentős ütés nélkül.

Ha hibát észlelünk, cseréljük ki a turbófeltöltőt.

A levegőelosztó cső elemei

1. Levegőelosztó cső	4. Levegőszívó cső csavar	7. EGR cső tömítés	 Meghúzási nyomaték
2. Levegőszívó cső csatlakozása	5. Levegőelosztó cső csavar	8. MAP érzékelő	 Ne használjuk fel újra.
3. Levegőszívó cső csatlakozás tömítése	6. EGR cső		

A levegőelosztó cső le- és felszerelése

Kiszerelés

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvényrel együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük le a közbenső hűtő 2. sz. kivezető tömlőjét jelen fejezet „A közbenső hűtő elemei” című pontja szerint.
- 4) Szereljük ki az EGR szelep szerelvényt a 6E3 fejezet „Az EGR szelep le- és felszerelése” című pontja szerint.
- 5) Vegyük ki az olajleválasztó (1) csavarját a szívócsőből.
- 6) Szereljük ki az olaj nívópálca (2) vezetőt a nívópálcával.
- 7) Vegyük le a csatlakozót az (3) MAP érzékelőről.

4. Olaj leválasztó

- 8) Szereljük le az (1) levegőelosztó csövet és tömítését a hengerfejről.
- 9) Szereljük le az EGR csövet és a (2) levegőszívó cső csatlakozást a levegőelosztó csőről.

### Felszerelés

A felszerelés a leszerelés műveleteinek fordított sorrendű végrehajtásával történik, figyelembe véve az alábbiakat.

- Tisztítsuk meg a levegőelosztó cső és a hengerfej illeszkedő felületeit.
- Használjunk új tömítést a levegőelosztó csőhöz, a levegőszívó cső csatlakozáshoz és az EGR csőhöz.
- Húzzuk meg a levegőelosztó cső csavarjait az előírt nyomatékkal.

#### Meghúzási nyomaték

**Szívócső csavar (a): 25 Nm (2,5 kgm)**

- Szereljük fel az (1) olaj nívópálca vezetőt a nívópálcával.

#### Meghúzási nyomaték

**Olaj nívópálca vezető felerősítő csavar (a): 9 Nm (0,9 kgm)**

- Szereljük be az EGR szelep szerelvényt a 6E3 fejezet „Az EGR szelep le- és felszerelése” című pontja szerint.
- Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- Győződjünk meg arról, hogy minden leszerelt alkatrész visszakerült a helyére. Szereljük fel mindent, amit eddig még nem szereltünk volna fel.

## A kipufogó gyűjtőcső le- és felszerelése

### Leszerelés

**VIGYÁZAT:**  
Az égési sérülések elkerülése érdekében ne szereljük a kipufogórendszert, amíg még meleg. A munkát csak a rendszer lehűlése után kezdjük el.

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Engedjük le a hűtőfolyadékot a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 3) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvényt együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Szereljük le a turbófeltöltőt jelen fejezet „A turbófeltöltő le- és felszerelése” című pontja szerint.

5) Szereljük le az (1) hűtőfolyadék tápcsövet.

6) Szereljük le az (1) kipufogó gyűjtőcsövet és a (2) kipufogó gyűjtőcső tömítést.

### Felszerelés

1) Szereljük fel az (1) kipufogó gyűjtőcsövet (3) új tömítéssel, (2) új anyák felhasználásával.

#### Meghúzási nyomaték

**Kipufogó gyűjtőcső anyá (a): 23 Nm (2,3 kgm)**

2) Szereljük fel az (1) hűtőfolyadék tápcsövet.

#### Meghúzási nyomaték

**A hűtőfolyadék tápcső csavarja (a): 9 Nm (0,9 kgm)**

- 3) Szereljük fel a turbófeltöltőt jelen fejezet „A turbófeltöltő le- és felszerelése” című pontja szerint.
- 4) Szereljük be a levegőszűrő szerelvényt a MAF érzékelő szerelvényrel együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 5) Töltsük fel a hűtőrendszert a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 6) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- 7) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj, hűtőfolyadék vagy kipufogógáz szivárgás.

## A vákuumszivattyú le- és felszerelése

A le- és felszerelési műveletre vonatkozóan lásd a 6E3 fejezet „A vákuumszivattyú le- és felszerelése” című pontját.

## Az olajnyomás kapcsoló le- és felszerelése

### Leszerelés

- 1) Szereljük le a levegőszűrő kilépő tömlőjét.
- 2) Vegyük le az olajnyomás kapcsoló csatlakozóját.
- 3) Szereljük le az (1) olajnyomás-kapcsolót és a (2) tömítést a hengerfejről.

### Felszerelés

A felszerelés a leszerelés műveleteinek fordított sorrendű végrehajtásával történik, figyelembe véve az alábbiakat.

- Használjunk új (2) tömítést.
- Húzzuk meg az (1) olajnyomás kapcsolót az előírt nyomatékkal.

### Meghúzási nyomaték

**Olajnyomás-kapcsoló (a): 32 Nm (3,2 kgm)**

- Ellenőrizzük, hogy ne legyen olajszivárgás.

## Az olajhűtő elemei

1. Töltőnyílás sapka	4. Olajszűrő ház fedél	7. Hűtőfolyadék tápcső	Meghúzási nyomaték
2. O-gyűrű	5. Motorolaj szűrő	8. Hűtőfolyadék tápcső csavar	Ne használjuk fel újra.
3. Tömítés	6. Olajhűtő csavar	9. Olajhűtő szerelvény: Soha ne szereljük szét az olajhűtő szerelvényt.	

## Az olajhűtő ki- és beszerelése

### FIGYELEM:

**Soha ne szereljük szét az olajhűtő szerelvényt.**

**A szétszereléssel alkalmatlanná válik eredeti funkciója betöltésére.**

**Ha hibásnak találjuk, cseréljük ki egy új példányra.**

### Kiszerelés

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Engedjük le a hűtőfolyadékot a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 3) Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvénnel együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.

- 4) Szereljük le a levegőszűrő (1) kilépő tömlőjét.
- 5) Szereljük le a közbelső hűtő bevezető tömlőjét és az 1. sz. kivezetőt jelen fejezet „A közbelső hűtő ki- és beszerelése” című pontja szerint.
- 6) Szereljük le a kenőcsövet jelen fejezet „A turbófeltöltő le- és felszerelése” című pontja szerint.

- 7) Szereljük le az (1) hűtőfolyadék tápcsövet és a hűtő kivezető tömlőjét.

- 8) Kapcsoljuk le az (1) kábelbilincseket a (2) betöltőnyílásról.
- 9) Szereljük le az olajszűrő ház (3) fedelét és az olajszűrőt.
- 10) Szereljük le az (4) olajhűtő szerelvényt.

## Beszereelés

- 1) Szereljük fel az (1) olajhűtő szerelvényt új tömítés használatával.

### Meghúzási nyomaték

**Olajhűtő csavar (a): 9 Nm (0,9 kgm)**

- 2) Helyezzük vissza a (3) kábelbilincset a (2) betöltőnyílásra.
- 3) Szereljük fel az olajsűrőt, a (4) olajsűrő ház fedelét új O-gyűrűvel, a 0B fejezet „Motorolaj és szűrőcsere” című pontja szerint.

- 4) Szereljük fel az (1) hűtőfolyadék tápcsövet és az alsó tömlőt.

### Meghúzási nyomaték

**A hűtőfolyadék tápcső csavarja (a): 10 Nm (1,0 kgm)**

- 5) Szereljük fel a kenőcsövet jelen fejezet „A turbófeltöltő le- és felszerelése” című pontja szerint.
- 6) Szereljük fel a közbenső hűtő bevezető tömlőjét és az 1. sz. kivezetőt jelen fejezet „A közbenső hűtő ki- és beszerelése” című pontja szerint.

- 7) Szereljük fel a levegőszűrő (1) kilépő tömlőjét a turbófeltöltőre.

### Meghúzási nyomaték

**Levegőszűrő kivezető tömlő bilincs**

**(a): 3,1 Nm (0,31 kgm)**

- 8) Szereljük be a levegőszűrő szerelvényt a MAF érzékelő szerelvénnel együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 9) Töltsük fel a hűtőrendszert a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 10) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.
- 11) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj vagy hűtőfolyadék szivárgás.

Az olajteknő elemei

	2. Olajsint kapcsoló (ha van)	5. Rögzítő kapocs	8. Olajteknő anya	 Ne használjuk fel újra.
	3. Olajsint kapcsoló csavar	6. O-gyűrű		

Az olajteknő le- és felszerelése

Leszerelés

- 1) Vegyük ki az olaj-nívópálcát.
- 2) Emeljük fel a gépkocsit.
- 3) Az (1) leeresztő csavart kisserelve eresszük le a motorolajat.
- 4) Vegyük le az olajsint kapcsoló (2) csatlakozóját (ha van).
- 5) Szereljük le az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.
- 6) Szereljük le az erőátviteli hajtómű merevítőjét a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.
- 7) Szereljük ki az olajteknő csavarjait és anyáit.

- 8) Vágjuk el a tömitést az ábrán látható vonalkázott részen célszerszám és (1) kalapács segítségével.

**Célszerszám**

**(A): 09921-96510**

**MEGJEGYZÉS:**

Ügyeljünk rá, hogy ne sértsük meg a (4) ászokcsavarokat az olajteknő és a forgattyúház között, amikor a tömitést elvágjuk.

- 9) Vegyük le az (2) olajteknőt a (3) alsó forgattyúházzól.

- 10) Szereljük le az (1) rögzítőgyűrűt és a (2) olajszint kapcsolót az olajteknőről, ha szükséges.

## Felszerelés

- 1) Tisztítsuk meg az olajteknő és az alsó forgattyúház illeszkedő felületeit.

- 2) Ha leszereltük, szereljük fel az (1) olajszint kapcsolót az olajteknőre.

### Meghúzási nyomaték

**Olajszint kapcsoló csavar (a): 9 Nm (0,9 kgm)**

- 3) Szereljük fel új (3) rögzítőgyűrűt az olajszint kapcsoló csatlakozójára.

- 4) Vigyünk fel folyamatos csíkban tömítőanyagot az olajteknő illeszkedő felületére, az ábrán látható módon.

**„A”: Loctite 5900®**

- 5) Miután az olajteknőt felhelyeztük az alsó forgattyúházra, tegyük be a felerősítő csavarokat és középről kiindulva húzzuk meg azokat: kifelé haladjunk a csavarkulccsal, egyszerre egy csavart húzva meg.

Húzzuk meg az olajteknő csavarjait és anyáit az előírt nyomatékkal.

#### **Meghúzási nyomaték**

**Olajteknő csavarja és anyája (a): 9 Nm (0,9 kgm)**

- 6) Szereljük fel az olajteknőre új (1) leeresztő csavart új O-gyűrűvel.

Húzzuk meg a leeresztő csavart az előírt nyomatékkal.

#### **Meghúzási nyomaték**

**Leeresztő csavar (b): 20 Nm (2,0 kgm)**

- 7) Szereljük fel az erőátviteli hajtómű merevítőjét a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.
- 8) Szereljük fel az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.
- 9) Csatlakoztassuk az olajsínt kapcsoló csatlakozóját.
- 10) Helyezzük be az olaj-nívópálcát.
- 11) Töltsük fel a motort motorolajjal a 0B fejezet „A motorolaj és az olajsűrő cseréje” című pontja szerint.
- 12) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs motorolaj vagy kipufogógáz szivárgás.

## **Az egységek felújítása**

### **A motor szerelvény ki- és beszerelése**

#### **Kiszerelés**

- Engedjük el az üzemanyag nyomását a 6E3 fejezet „Az üzemanyag-nyomás elengedésének módszere” című pontja szerint.
- Kössük le a negatív kábelt az akkumulátorról.
- Az ablakmosó tömlő levétele után szereljük le a motorháztetőt.
- Engedjük le a hűtőfolyadékot a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- Az RB413D esetben, szereljük ki az akkumulátor tálcát a gáztalanító tartállyal együtt.
- Szereljük ki a levegőszűrő szerelvényt a MAF érzékelő szerelvénnel együtt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- Szereljük le a közbenső hűtő bevezető tömlőjét és a közbenső hűtő 1. sz. és 2. sz. kivezető tömlőjét jelen fejezet „A közbenső hűtő elemei” című pontja szerint.
- Kapcsoljuk le a következő huzalokat az erőátviteli hajtóműről.
  - Tengelykapcsoló huzal
  - Sebességváltó kiválasztó huzal
  - Sebességváltó kapcsoló huzal

- 9) Szereljük le az alábbi tömlőket.
  - Fékrásegítő tömlő (1)
  - Üzemanyag visszatérő tömlő (2)
  - Üzemanyag táptömlő (3)
  - Hűtő bevezető (4) és kivezető tömlő
  - Fűtés be- és kivezető tömlők
  - Tartálytömlők (RM413D esetében)
- 10) Vegyük le az alábbi villamos vezetékeket.
  - ECM (5)
  - Befecskendező kábelköteg a műszerfal kábelköteghez (6)
  - Befecskendező kábelköteg a fő kábelköteghez
  - Tolatólámpa kapcsoló
  - Az L/K kompresszor mágneses tengelykapcsolójának kapcsolója (ha van)
  - Generátor (7)
  - Indítómotor (8)
  - Motorolaj szintérzékelő
  - Motor tesztelés (9)
  - Minden kábelbilincs
- 11) Szereljük le a jobb és bal oldali alsó motorburkolatot.
- 12) Szereljük le a vízszivattyú és a generátor hajtószíját a 6B3 fejezet „A hajtószíj le- és felszerelése” című pontja szerint.
- 13) Rajta hagyott tömlővel együtt szereljük le az L/K kompresszort a tartóbakjáról (ha van).

#### MEGJEGYZÉS:

**Függesztjük fel az L/K kompresszort olyan helyen, ahol az nem sérülhet meg a motor szerelvény ki- és beszerelése alatt.**

- 14) Engedjük le a motorolajat a 0B fejezet „A motorolaj és az olajsűrő cseréje” című pontja szerint.
- 15) Engedjük le az erőátviteli berendezés olaját a 7A3 fejezet „A kézi erőátviteli hajtómű olajának cseréje” című pontja szerint.
- 16) Az RM413D esetében szereljük le az (1) kereszttagot.
- 17) Szereljük le az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.
- 18) Szereljük le a stabilizátort a 3D fejezet „A stabilizátor rúd és a perselyek le- és felszerelése” című pontja szerint az RM413D esetében, vagy a „Stabilizátor rúd és perselyek” című pontja szerint az RB413D esetében.
- 19) Szereljük le a jobb és bal oldali hajtótengely csuklókat a differenciálműről a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint az RM413D esetében, vagy a 4A2 fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint az RB413D esetében.

#### MEGJEGYZÉS:

**A motor és az erőátviteli hajtómű kiszerezéséhez nem szükséges kiszerezni a hajtótengelyeket a kormány tengelycsonkból.**

- 20) Megfelelő emelőkészülékkel támasszuk alá a motort.

- 21) Szereljük ki a hátsó motortartó gumibak (1) csavarjait, a bal oldali motortartó gumibak (2) anyáit és a jobb oldali motortartó gumibak konzol (3) csavarjait.
- 22) Mielőtt a motort az erőátviteli hajtóművel együtt kiemelnénk a járműből, még egyszer ellenőrizzük, hogy minden tömlőt, villamos vezetékét és kábelt leszereltünk-e a motorról és az erőátviteli hajtóműről.

- 23) Engedjük le a motort az erőátviteli hajtóművel együtt a járműből.

#### MEGJEGYZÉS:

**A motor leengedése előtt, elkerülendő az L/K kompresszor sérülését, emeljük ki azt a motor forgattyústengely szíjtárcsa felőli nyíláson át. Eközben ügyeljünk rá, hogy ne feszítsük meg túlságosan a hozzá csatlakozó tömlőket.**

- 24) Szereljük le az erőátviteli berendezést a motorról a 7A3 fejezet „Az erőátviteli berendezés le- és felszerelése” című pontja szerint.
- 25) Szereljük le a tengelykapcsoló burkolatát és a tengelykapcsoló tárcsát a 7C3 fejezet „A tengelykapcsoló burkolat, a tengelykapcsoló tárcsa és a lendkerék le- és felszerelése” című pontja szerint.

## Beszerelés

- 1) Szereljük fel a tengelykapcsoló burkolatát és a tengelykapcsoló tárcsát a 7C3 fejezet „A tengelykapcsoló burkolat, a tengelykapcsoló tárcsa és a lendkerék le- és felszerelése” című pontja szerint.
- 2) Szereljük fel az erőátviteli berendezést a motorra a 7A3 fejezet „Az erőátviteli berendezés le- és felszerelése” című pontja szerint.
- 3) Emeljük be a motort az erőátviteli hajtóművel együtt a motortérbe, de ne vegyük le az emelőkészülekről.
- 4) Szereljük be a hátsó motortartó gumibak (1) csavarjait, a bal oldali motortartó gumibak (2) anyáit és a jobb oldali motortartó gumibak konzol (3) csavarjait.  
Húzzuk meg ezeket a csavarokat és anyákat az előírt nyomatékkal.

### Meghúzási nyomaték

#### Hátsó motortartó gumibak csavar

(a): 55 Nm (5,5 kgm)

#### Bal oldali motortartó gumibak anyá

(b): 55 Nm (5,5 kgm)

#### Jobb oldali motortartó gumibak konzol csavar

(c): 55 Nm (5,5 kgm)

- 5) Távolítsuk el az emelőkészüléket.
- 6) Szereljük fel a jobb és bal oldali hajtótengely csuklókat a differenciálműre a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint az RM413D esetében, vagy a 4A2 fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint az RB413D esetében.
- 7) Szereljük fel a stabilizáló rudat a 3D fejezet „A stabilizáló rúd és a perselyek le- és felszerelése” című pontja szerint.
- 8) Szereljük fel az 1. sz. kipufogócsövet a 6K3 fejezet „A kipufogócső le- és felszerelése” című pontja szerint.
- 9) Az RM413D esetében szereljük fel az (1) kereszttagot.  
Húzzuk meg a kereszttag csavarokat az előírt nyomatékkal.

### Meghúzási nyomaték

#### Kereszttag csavar (a): 60 Nm (6,0 kgm)

- 10) Szereljük fel az L/K kompresszort a tartójára (ha van).
- 11) Állítsuk be a vízszivattyú és a generátor hajtószíj feszességét a 6B3 fejezet „A hajtószíj ellenőrzése és beállítása” című pontja szerint.
- 12) Csatlakoztassuk a tömlőket, huzalokat és elektromos vezetékeket, amelyeket a szétszerelés során lekapcsoltunk.
- 13) Szereljük fel a közbenső hűtő bevezető tömlőjét és a közbenső hűtő 1. sz. és 2. sz. kivezető tömlőjét jelen fejezet „A közbenső hűtő elemei” című pontja szerint.
- 14) Szereljük be a levegőszűrő szerelvényt jelen fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 15) Az RB413D esetében, szereljük be az akkumulátor tálcát a gáztalanító tartállyal együtt.
- 16) Győződjünk meg arról, hogy minden leszerelt alkatrész visszakerült a helyére. Szereljük fel mindent, amit eddig még nem szereltünk volna fel.

- 17) Töltsük fel a motorolajat a 0B fejezet „A motorolaj és az olajsűrő cseréje” című pontja szerint.
- 18) Töltsük fel az erőátviteli berendezés olaját a 7A3 fejezet „A kézi erőátviteli hajtómű olajának cseréje” című pontja szerint.
- 19) Töltsük fel a hűtőrendszert a 6B3 fejezet „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 20) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 21) Győződjünk meg arról, hogy egyetlen csatlakozásnál sincs üzemanyag, hűtőfolyadék, motorolaj vagy kipufogógáz szivárgás.

## A vezérműlánc burkolat és a vezérműlánc ellenőrzése

### A vezérműlánc feszítő

Ellenőrizzük az (1) talpat kopás vagy sérülés szempontjából.  
Ha bármilyen hibát találunk, cseréljük ki a vezérműlánc feszítőt.

### A forgattyústengely vezérműlánc kereke

Ellenőrizzük a lánckerék fogait kopás vagy sérülés szempontjából.  
Ha bármilyen hibát találunk, cseréljük ki a forgattyústengely vezérműlánc kerekét.

### A vezérműlánc

Ellenőrizzük a vezérműláncot kopás vagy sérülés szempontjából.  
Ha bármilyen hibát találunk, cseréljük ki a vezérműláncot.

### A vezérműlánc feszítő beállító-készülék

Ellenőrizzük, hogy a csúszó felületek nem sérültek-e.  
Ha bármilyen hibát találunk, cseréljük ki a vezérműlánc feszítő beállító-készülékét.

### A vezérműlánc terelő

Ellenőrizzük az (1) talpat kopás vagy sérülés szempontjából.  
Ha bármilyen hibát találunk, cseréljük ki a vezérműlánc terelőt.

### A lendkerék

- Ellenőrizzük, nem törtek vagy kopottak-e a fogak.  
Ha bármilyen hibát találunk, cseréljük ki a lendkereket.
- Ellenőrizzük a homlokfelületet sérülés és túlzott kopás szempontjából.  
Ha bármilyen hibát találunk, cseréljük ki a lendkereket.

### A forgattyústengely szíjtárcsa felőli forgattyústengely tömítőgyűrű

Ellenőrizzük, hogy nem sérült-e az olajtömítő gyűrű pereme.  
Ha szükséges, cseréljük ki.

A vezérműtengely ellenőrzése

A vezérműtengely

Ellenőrizzük a tengelycsapokat és a büttyök felületét kopás vagy sérülés szempontjából.  
Ha bármilyen hibát találunk, cseréljük ki a vezérműtengelyt.

A büttyök kopása

- 1) Mikrométer segítségével mérjük meg a büttyök „a” magasságát és „b” szélességét.
- 2) Számítsuk ki a „c” szelepemelkedést az alábbi képlet alapján.  
**„c” = „a” – „b”**
- 3) Ha a „c” szelepemelkedés a megadott értéknél kisebb, cseréljük ki a vezérműtengelyt.

**A „c” szelepemelkedés**  
**Szívóbüttyők: 6,4 mm**  
**Kipufogó büttyők: 7,5 mm**

## A vezérműtengely tengelycsapja

Mikrométer segítségével mérjük meg a vezérműtengely tengelycsap átmérőjét.

Ha a mért átmérő kívül esik a megadott határértékeken, cseréljük ki a vezérműtengelyt.

### A vezérműtengely tengelycsap átmérője

1. sz.: 38,500 – 38,515 mm

2. sz.: 38,000 – 38,015 mm

3. 3. sz. vezérműtengely tengelycsap	6. Forgattyútengely-szíjtárcsa oldal

## A vezérműtengely ház

- Ellenőrizzük a vezérműtengely-csapokat és a vezérműtengely csapágyakat kipattogzás, karcolás, kopás és sérülés szempontjából.

Ha bármilyen hibát találunk, cseréljük ki a vezérműtengely házat.

- Furat-mikrométer segítségével mérjük meg a vezérműtengely csapágyfuratait.

Ha a mért átmérő kívül esik a megadott határértékeken, cseréljük ki a vezérműtengely házat.

### A vezérműtengely csapágyfurat átmérője

**A vezérműtengely lánckerek**

Ellenőrizzük a vezérműtengely lánckereket gödrösödés, karcolások és sérülések szempontjából.

Ha bármilyen hibát találunk, cseréljük ki a vezérműtengely lánckerekét.

**A levegőelosztó cső felőli vezérműtengely fogaskerék és a kipufogó gyűjtőcső felőli vezérműtengely fogaskerék**

Ellenőrizzük a levegőelosztó cső felőli vezérműtengely fogaskereket és a kipufogó gyűjtőcső felőli vezérműtengely fogaskereket gödrösödés, karcolások és sérülések szempontjából.

Ha bármilyen hibát találunk, cseréljük ki a levegőelosztó cső felőli és/vagy a kipufogó gyűjtőcső felőli vezérműtengely fogaskereket.

## A szelepek és a hengerfej szerelvény le- és felszerelése

### FIGYELEM:

Jegyezzük meg az egyes szelephimbák és hidraulikus szelephézag beállítók eredeti beszerelési helyzetét, és majd ebbe az eredeti helyzetbe szereljük vissza azokat.

Ha az egyes szelephimbákat és hidraulikus szelephézag beállítókat nem az eredeti beszerelési helyzetükbe szereljük vissza, romlani fog a motor eredeti teljesítménye.

### Leszerelés

- 1) Szereljük ki a motor szerelvényt a motorházból jelen fejezet „A motor szerelvény ki- és beszerelése” című pontja szerint.
- 2) Szereljük le a vezérműtengely ház szerelvényt jelen fejezet „A vezérműtengely ház szerelvény le- és felszerelése” című pontja szerint.
- 3) Szereljük le a kipufogó gyűjtőcsövet a jelen fejezet „A kipufogó gyűjtőcső le- és felszerelése” című pontja szerint.
- 4) Szereljük le a termosztát ház szerelvényt a 6B3 fejezet „A termosztát ház szerelvény le- és felszerelése” című pontja szerint.
- 5) Szereljük le az olajleválasztót a 6E3 fejezet „Az olajleválasztó és forgattyúház szellőző rendszer le- és felszerelése” című pontja szerint.
- 6) Szereljük le a levegőelosztó csövet jelen fejezet „A levegőelosztó cső le- és felszerelése” című pontja szerint.
- 7) Szereljük le az olajnyomás kapcsolót jelen fejezet „Az olajnyomás kapcsoló le- és felszerelése” című pontja szerint.
- 8) Szereljük ki az izzítógyertyákat a 6E3 fejezet „Az izzítógyertya ki- és beszerelése” című pontja szerint.
- 9) Szereljük ki az (1) hidraulikus szelephézag beállítót a (2) szelephimbával együtt.

### MEGJEGYZÉS:

- A hidraulikus szelephézag beállítót soha ne szereljük szét.
- Soha ne alkalmazzunk (3) erőt a hidraulikus szelephézag beállítón. Olaj fog szivárogni a nagynyomású kamrába.
- Merítsük a kiszerelt hidraulikus szelephézag beállítókat tiszta motorolajba és visszaszerelésig hagyjuk azokat itt, hogy megelőzzük az olajszivárgást.

- 10) Apránként lazítsuk meg az (1) hengerfej csavarokat az ábrán látható számozás sorrendjében, majd vegyük ki azokat.
- 11) Vegyük le a (2) hengerfejet és a (3) hengerfej tömítést.
- 12) Ha szükséges, vegyük ki a (4) illesztőszegeket.
- 13) Nézzünk körül a hengerfej környékén, nem kell-e még valamit leszerelni vagy lekapcsolni.

### Felszerelés

- 1) Tisztogassuk meg a hengerfej és a hengerblokk érintkező felületeit.
- 2) Ha kivettük, helyezzük be a (2) hengerblokkba az (1) illesztőszegeket.

- 3) Válasszunk és szereljük fel új hengerfej tömítést az alábbiak szerint.
  - a) Vegyük le az „A” célszerszámot.

#### Célszerszám

(A): 09912-38300

b) Célszerszám és indikátoróra segítségével mérjük meg a dugattyú „a” kiemelkedését a megadott (2) mérési helyeken, felső holtponti helyzetben, az ábrán látható módon. A műveletet minden (1) dugattyúnál hajtsuk végre.

**Célszerszám**  
**(B): 09910-26510 (OUT 0000005)**

3. Hengerblokk
4. Forgattyústengely-szíjtárcsa oldal

c) Célszerszám segítségével rögzítsük az (1) forgattyústengelyt.

**MEGJEGYZÉS:**  
Ügyeljünk rá, hogy a célszerszám (2) furata pontosan össze legyen igazítva az illesztőszeggel.

**Célszerszám**  
**(A): 09912-38300**

d) Válasszunk hengerfej tömitést a b) lépésben mért legnagyobb értékű „a” kiemelkedés alapján.

	Tömités vastagság	Mért dugattyú kiemelkedés
<b>A típus</b>	<b>0,67 – 0,77 mm</b>	<b>0,028 – 0,127 mm</b>
<b>B típus</b>	<b>0,77 – 0,87 mm</b>	<b>0,128 – 0,227 mm</b>
<b>C típus</b>	<b>0,87 – 0,97 mm</b>	<b>0,228 – 0,327 mm</b>

[A]: A típus (lyuk nélkül)
[B]: B típus (egy lyukkal)
[C]: C típus (két lyukkal)

e) Helyezzünk új (1) hengerfej tömitést a hengerblokkra.

- 4) Szereljük fel az (1) hengerfejet a (2) hengerblokkra az alábbiak szerint.
  - a) Helyezzük fel a hengerfejet és húzzuk meg kézzel a hengerfej csavarokat.
  - b) Egy (5) egyenes vonalzó segítségével igazítsuk egy síkba az (1) hengerfej és a (2) hengerblokk homlokfelületét.
  - c) Húzzuk meg az összes csavart 20 Nm (2,0 kgm) nyomatékkal az ábrán látható számok sorrendjében.
  - d) A c) lépéshez hasonló módon húzzuk meg a csavarokat 40 Nm (4,0 kgm) nyomatékkal.
  - e) Fordítsunk minden csavaron 90°-ot, az ábrán látható számok sorrendjében.
  - f) Ismételjük meg az e) lépést.

#### Meghúzási nyomaték

##### Hengerfej csavar (a):

Húzzuk meg 20 Nm (2,0 kgm) és 40 Nm (4,0 kgm)

nyomatékkal, 90°-kal és 90°-kal a megadott eljárás szerint

- 5) MÉRJÜK MEG az „a” lépcsőt az (1) hengerfej és a (2) hengerblokk között (egysíkúság) indikátorra és célszerszám segítségével, az ábrán látható módon.  
Ha a mért érték nagyobb az előírtnál, szereljük le a hengerfejet és térjünk vissza a 4. lépésre.

#### Célszerszám

(A): 09910-26510 (OUT 0000005)

#### Lépcső a hengerfej és a hengerblokk között (egysíkúság)

„a”: -0,1 és 0,1 mm között

- 6) Kenjük meg motorolajjal az (1) hidraulikus szelephézag beállítókat és a (2) szelephimbákat, és szereljük fel azokat a hengerfejre.
- 7) Szereljük be az izzítógyertyákat a 6E3 fejezet „Az izzítógyertya ki- és beszerelése” című pontja szerint.
- 8) Szereljük fel az olajnyomás kapcsolót jelen fejezet „Az olajnyomás kapcsoló le- és felszerelése” című pontja szerint.
- 9) Szereljük fel a levegőelosztó csövet jelen fejezet „A levegőelosztó cső le- és felszerelése” című pontja szerint.
- 10) Ha leszereltük, szereljük fel az olajleválasztót a 6E3 fejezet „Az olajleválasztó és forgattyúház szellőző rendszer le- és felszerelése” című pontja szerint.
- 11) Szereljük fel a termosztát ház szerelvényt a 6B3 fejezet „A termosztát ház szerelvény le- és felszerelése” című pontja szerint.
- 12) Szereljük fel a kipufogó gyűjtőcsövet jelen fejezet „A kipufogó gyűjtőcső le- és felszerelése” című pontja szerint.

- 13) Szereljük fel a vezérműtengely ház szerelvényt jelen fejezet „A vezérműtengely ház szerelvény le- és felszerelése” című pontja szerint.
- 14) Szereljük be a motor szerelvényt a motorházba jelen fejezet „A motor szerelvény ki- és beszerelése” című pontja szerint.

## A szelepek és a hengerfej szerelvény szét- és összeszerelése

### FIGYELEM:

Jegyezzük meg az egyes szelepek és szeleprugó fészkek eredeti beszerelési helyzetét, és majd ebbe az eredeti helyzetbe szereljük vissza azokat.

Ha az egyes szelepeket és szeleprugó fészkeket nem az eredeti beszerelési helyzetükbe szereljük vissza, romlani fog a motor eredeti teljesítménye.

### Szétszerelés

- 1) Az (A) és (B) célszerszám segítségével nyomjuk össze a szeleprugókat és a (C) célszerszámmal vegyük ki az (1) szelepkúpokat.

#### Célszerszám

(A): 09916-14510

(B): 09916-14521

(C): 09916-84511

- 2) Lazítsuk ki a célszerszámot és vegyük le a szeleprugó tányért és a szeleprugót.
- 3) Vegyük ki a szelepet az égéstér felől.

- 4) Célszerszám segítségével vegyük ki a szelepvezetőből az (1) szelepszár tömítést majd vegyük le a (2) szeleprugó fészket.

#### Célszerszám

(A): 09917-98610

## Összeszerelés

- 1) Szereljük be a szeleprugó fészkeket a hengerfejbe.
- 2) Szereljük (1) új szelepszár tömítést a szelepvezetőbe.  
Miután a tömítést és a célszerszám (szelepvezető beszerelő fogantyú) csapját megkentük motorolajjal, illesszük a szelepszár tömítést a csapra, majd kézzel nyomva a célszerszámot szereljük a tömítést a szelepvezetőbe.  
Felszerelés után ellenőrizzük, hogy a tömítés jól illeszkedik-e a szelepvezetőhöz.

### FIGYELEM:

**Beszerelésnél soha ne üssük meg a célszerszámot kalapáccsal vagy egyéb szerszámmal. A tömítés szelepvezetőbe szerelésekor csak kézzel nyomjuk a célszerszámot. A célszerszám ütögetése tönkretelheti a tömítést.**

### MEGJEGYZÉS:

**Az egyszer már leszedett tömítést ne használjuk újra. Feltétlenül új tömítést használjunk.**

### Célszerszám

**(A): 09916-58210**

**(B): 09917-98221**

- 3) Kenjük meg motorolajjal a szelepszár tömítést, a szelepvezető furatát és a szelepszárat, majd illesszük a szelepet a szelepvezetőbe.
- 4) Szereljük fel a szeleprugót és a szeleprugó tányért.

- 5) Az (A) és (B) célszerszám segítségével nyomjuk össze a szeleprugót. A (C) célszerszám segítségével illesszük be a két (1) szelepkúpot a szelepszár hornyába.

### Célszerszám

## A szelepek és a hengerfej elemeinek ellenőrzése

### A hengerfej

- Távolítsunk el minden kormot az égésterekből.

#### MEGJEGYZÉS:

A lerakódott korom levakarásához ne használjunk éles szerszámot. Vigyázzunk, a koromtalanítás során ne koptassuk el vagy karcoljuk fel a fémfelületet. Ugyanez érvényes a szelepekre és szelepülésekre is.

- Ellenőrizzük a hengerfejet, nincs-e repedés a szívó- és kipufogónyílások és az égéstér környékén, vagy a hengerfej felületén.

Egy egyenes élű vonalzó és hégzagmérő segítségével ellenőrizzük a tömítőfelület sík voltát összesen 2 helyen. Ha az alább megadott deformációs határértéknél nagyobb mérést mérünk, cseréljük ki a hengerfejet.

**A dugattyú oldali hengerfej felület deformációjának határértéke:**

**0,10 mm**

## A szeleprugók

Az alább megadott adatok alapján ellenőrizzük, hogy minden egyes rugó jó állapotban van, sem repedések, sem gyengülés jeleit nem mutatja. Ne feledjük el, hogy a gyenge szeleprugók csattogást okozhatnak, nem is beszélve a gyenge szelepülés-nyomás miatt elszivárgó gáz okozta teljesítmény-csökkenés lehetőségéről.

**A szeleprugók szabad hossza (szívó és kipufogó) „a”:**  
**37,9 mm**

**A szeleprugó előterhelése (szívó és kipufogó):**  
**162 – 180 N (16,2 – 18,0 kg) 31,0 mm-re**  
**361 – 395 N (36,1 – 39,5 kg) 23,5 mm-re**

## A hidraulikus szelephézag beállító és a szelephimba

Ellenőrizzük az (1) hidraulikus szelephézag beállítót és a (2) szelephimbát gödrösödés, karcolások, kopás és sérülés szempontjából. Ha bármilyen hibát találunk, cseréljük ki azokat.

## A dugattyúk, dugattyúgyűrűk, hajtórudak és hengerek elemei

**FIGYELEM:**

- Ha bármelyik cseréje szükségessé válik, a hajtórudat és csapágyfedelét együtt kell kicserélni.
- Jegyezzük meg az egyes dugattyúk, dugattyúgyűrűk, hajtórudak és hajtórúd csapágyfedelek eredeti beszerelési helyzetét, és majd ebbe az eredeti helyzetbe szereljük vissza azokat.

Ha az egyes dugattyúkat, dugattyúgyűrűket, hajtórudakat és hajtórúd csapágyfedeleket nem az eredeti beszerelési helyzetükbe szereljük vissza, romlani fog a motor eredeti teljesítménye.

4. Dugattyú	9. Hajtórúd csapágy fedél	
5. Dugattyúcsap	10. Hajtórúd csapágy fedél csavar: Húzzuk meg 20 Nm (2,0 kgm) nyomatékkal és 40°-kal az előírt módszerrel	

## A dugattyúk, dugattyúgyűrűk, hajtórudak és hengerek ki- és beszerelése

**FIGYELEM:**

- Ha bármelyik cseréje szükségessé válik, a hajtórudat és csapágyfedelét együtt kell kicserélni.
- Jegyezzük meg az egyes dugattyúk, dugattyúgyűrűk, hajtórudak és hajtórúd csapágyfedelek eredeti beszerelési helyzetét, és majd ebbe az eredeti helyzetbe szereljük vissza azokat.

Ha az egyes dugattyúkat, dugattyúgyűrűket, hajtórudakat és hajtórúd csapágyfedeleket nem az eredeti beszerelési helyzetükbe szereljük vissza, romlani fog a motor eredeti teljesítménye.

## Kiszerelés

- 1) Szereljük ki a motor szerelvényt a motorházból jelen fejezet „A motor szerelvény ki- és beszerelése” című pontja szerint.
- 2) Szereljük le a hengerfejet jelen fejezet „A szelepek és a hengerfej le- és felszerelése” című pontja szerint.
- 3) Vegyük ki az (1) olajteknő terelőlemezt az alsó forgattyúházból.

- 4) Vegyük le az (A) célszerszámot.

### Célszerszám

(A): 09912-38300

- 5) A visszaszerelést szem előtt tartva, minden dugattyún jelöljük meg a hengerszámot, ezüst ceruzával vagy gyorsan száradó festékkel.
- 6) Szereljük le az (1) hajtórúd csapágy fedeleket.
- 7) Mielőtt a dugattyút kiszerelnénk a hengerből, távolítsuk el a kormot a henger furatának felső részéről.
- 8) Töljük ki a dugattyú-hajtórúd szerelvényt a hengerfurat felső részén keresztül.

## Beszerelés

- 1) Kenjük meg motorolajjal a dugattyúkat, dugattyúgyűrűket, a hengerek falát, a hajtórúdcsapágyakat és a forgattyúkat.

### MEGJEGYZÉS:

**Ne tegyünk olajat a hajtórúd és csapágyperselye vagy a csapágyfedél és csapágyperselye közé.**

- 2) Amikor a dugattyú-hajtórúd szerelvényt a hengerbe szereljük, a dugattyú tetején lévő (1) nyíl-jel a forgattyústengely (2) szíjtárcsa felőli vége felé nézzen.

- 3) A dugattyú és hajtórúd szerelvényt a szétszereléskor ráírt számoknak megfelelően szereljük be a hengerekbe. A dugattyúgyűrűk összenyomásához célszerszámot (dugattyúgyűrű összenyomó) használunk. Igazítsuk a hajtórúdat a helyére a forgattyústengelyen.

Egy kalapács nyelével ütögessük a dugattyú tetejét, hogy becsússzon a hengerbe. A dugattyúgyűrű összenyomó készüléket szilárdan szorítsuk a hengerblokkhoz mindaddig, amíg az összes dugattyúgyűrű be nem került a hengerbe.

#### Célszerszám

(A): 09916-77310

- 4) Szereljük fel az (1) csapágyfedeleket a megfelelő hengerekhez a csapágyfedeleken és a hajtórúdon lévő (2) hengerszámok alapján, majd húzzuk meg a csapágyfedél csavarokat az alábbiak szerint.

- Húzzuk meg az összes hajtórúd csapágyfedél csavart 20 Nm (2,0 kgm) nyomatékkal.
- Húzzuk tovább a csavarokat, 40°-kal elforgatva azokat.

#### Meghúzási nyomaték

Hajtórúd csapágy fedél csavar (a):

Húzzuk meg 20 Nm (2,0 kgm) nyomatékkal és 40°-kal az előírt módszerrel

- 5) Célszerszám segítségével rögzítsük az (1) forgattyústengelyt.

#### MEGJEGYZÉS:

Ügyeljünk rá, hogy a célszerszám (2) furata pontosan össze legyen igazítva az illesztőszeggel.

#### Célszerszám

(A): 09912-38300

- 6) Helyezzük be az (1) olajteknő terelőlemezt az alsó forgattyúházba.
- 7) Szereljük fel a hengerfejet jelen fejezet „A szelepek és a hengerfej szerelvény le- és felszerelése” című pontja szerint.
- 8) Szereljük fel a vezérműtengely ház szerelvényt jelen fejezet „A vezérműtengely ház szerelvény le- és felszerelése” című pontja szerint.
- 9) Szereljük fel a vezérműláncot és a vezérműlánc burkolatot jelen fejezet „A vezérműlánc burkolat és a vezérműlánc le- és felszerelése” című pontja szerint.
- 10) Szereljük be a motor szerelvényt a motorházba jelen fejezet „A motor szerelvény ki- és beszerelése” című pontja szerint.

## A dugattyúk, dugattyúgyűrűk, hajtórudak és hengerek szét- és összeszerelése

### Szétszerelés

- 1) Dugattyúgyűrű tágitószerszám segítségével vegyük le a felső és a második dugattyúgyűrűt, valamint az olajlehúzó gyűrűt a dugattyúról.
- 2) Húzzuk ki a dugattyúcsapot a hajtórúdból az alábbiak szerint.
  - a) Egy (2) lapos végű csavarhúzó vagy hasonló eszköz segítségével vegyük ki a dugattyúcsap (1) rögzítőgyűrűt.

- b) Húzzuk ki az (1) dugattyúcsapot a (2) dugattyúból.

## Összeszerelés

- 1) Megfelelő szerszám segítségével tisztítsuk le a kormot a dugattyúfenékről és a gyűrűhornyokból.
- 2) Szereljük be a dugattyúcsapot a dugattyúba és a hajtórúdba az alábbiak szerint.
  - a) Kenjük meg motorolajjal a dugattyúcsapot, a dugattyúcsap furatait a dugattyúban és a hajtórúdban, illesszük a hajtórudat a dugattyúhoz úgy, hogy a hajtórúd csapágyrészén a (2) hengerszám és a dugattyú palástján az (1) bemarás ellenkező oldalra essen, majd helyezzük be a dugattyúcsapot a dugattyúba és a hajtórúdba.
  - b) Helyezzük be a dugattyúcsap (5) rögzítőgyűrűit.
  - c) A dugattyúcsap rögzítőgyűrű (4) nyílása a ki- és beszerelésre szolgáló (3) vályúval szembe kerüljön.

- 3) Szereljük fel a dugattyúgyűrűket a dugattyúra, ügyelve az alábbiakra.

### MEGJEGYZÉS:

- Mint az ábrán látható, az első és a második gyűrű „TOP” jellel van megjelölve. A gyűrűk dugattyúra szerelésekor a gyűrűk megjelölt oldala a dugattyúfenék felé nézzen.
- Az (1) 1. gyűrű a (2) 2. gyűrűtől vastagságában és alakjában különbözik. Az ábra alapján különböztessük meg az 1. gyűrűt a 2. gyűrűtől.
- Az olajlehúzó gyűrű felszerelésekor először a (3) spirálgyűrűt tegyük fel és ez után a (4) külső gyűrűt.

- 4) A három (1., 2. és olajlehúzó) gyűrű beszerelése után véghasítékaikat az ábrán látható módon rendezzük el.

1. Nyíl-jel
2. Gyűrű véghasíték

## A dugattyúk, dugattyúgyűrűk, hajtórudak és hengerek ellenőrzése

### A henger

#### Szemrevételezés

Ellenőrizzük, hogy nem láthatók-e a hengerek falán meg nem engedett kopásra utaló karcolások, érdesség vagy barázdák. Ha a henger furata nagyon érdes vagy barázdált, fúrjuk fel a hengert és használjunk túlméretes dugattyút.

## A henger furatának átmérője, kúposága és ovalitása

Egy (1) furatmérő segítségével mérjük meg a henger furatát az ábrán látható helyeken, kereszt- és tengelyirányban.

Ha az alábbiak közül bármelyik körülményt tapasztaljuk, cseréljük ki a hengerblokkot.

- A két magasságban végzett mérés különbsége meghaladja a kúposág megengedett határértékét.
- A kereszt- és tengelyirányban mért értékek különbsége meghaladja az ovalitási hiba megengedett határértékét.

### Henger kúposág tűrése

**Határérték: 0,010 mm**

### Ovalitási hiba

**Határérték: 0,005 mm**

## A dugattyúk

### Szemrevételezés

Ellenőrizzük a dugattyúkat hibák, repedések vagy más sérülések szempontjából.

A sérült vagy hibás dugattyút ki kell cserélni.

### A dugattyúgyűrű-horony hézaga

Ellenőrzés előtt a hornyoknak tisztáknak, szárazaknak és koromlerakódás-menteseknek kell lenniük.

Illesszünk új (1) dugattyúgyűrűt a horonyba és (2) hézagmérővel mérjük meg a gyűrű és a horony fala közötti hézagot. Ha a hézag mérete kívül esik a megadott értékeken, cseréljük ki a dugattyúgyűrűt és/vagy a dugattyút.

### A dugattyúgyűrű-horony hézaga

**Felső dugattyúgyűrű:**

**0,09 – 0,13 mm**

**2. dugattyúgyűrű:**

**0,04 – 0,08 mm**

**Olajlehúzó gyűrű:**

**0,030 – 0,070 mm**

## A dugattyúcsap

- Ellenőrizzük a dugattyúcsapot, a hajtórúd felső csapágyfuratát és a dugattyú csapfuratát kopás vagy sérülés szempontjából, különös figyelmet fordítva a hajtórúd felső csapágyerselyének állapotára. Ha a dugattyúcsap, a hajtórúd felső csapágyfurata vagy a dugattyú furata erősen kopott vagy sérült, cseréljük ki a dugattyúcsapot, a hajtórudat és/vagy a dugattyút.
- A dugattyúcsap átmérője:  
Mérjük meg a dugattyúcsap átmérőjét, a hajtórúd felső végének furatát és a dugattyú furatát.  
Ha a méret kívül esik a megadott értékeken, cseréljük ki a dugattyút, dugattyúcsapot és/vagy a hajtórudat.

### A dugattyúcsap átmérője

**22,982 – 22,987 mm**

### A hajtórúd felső csapágy furata

**22,990 – 22,996 mm**

### A dugattyú furata

**23,006 – 23,012 mm**

## A dugattyúgyűrűk

### Dugattyúgyűrű véghézag

A véghézag megméréséhez helyezük be az (1) dugattyúgyűrűt a hengerbe és úgy mérjük meg a hézagot egy (2) hézagmérő segítségével.

Ha a mért hézag kívül esik a megadott határértékeken, cseréljük ki a dugattyúgyűrűt.

### MEGJEGYZÉS:

**A dugattyúgyűrű behelyezése előtt koromtalanítsuk és tisztítsuk meg a hengerfurat felső részét.**

### Dugattyúgyűrű véghézag

**Felső dugattyúgyűrű: 0,20 – 0,30 mm**

**2. dugattyúgyűrű: 1,00 – 1,50 mm**

**Olajlehúzó gyűrű: 0,25 – 0,50 mm**

## A hajtórúd

- A hajtórúd alsó végének furata és hossza.

- Szereljük fel a (2) csapágyfedelet az (1) hajtórúdra.
- Egy (3) furatmérő segítségével mérjük meg a hajtórúd alsó végének furatátmérőjét.

Ha a furatátmérő mérete kívül esik a megadott határértékeken, egy készletként cseréljük ki a hajtórúdat és a csapágyfedelelet.

**A hajtórúd alsó végének furata:**

**45,734 – 45,744 mm**

## A forgattyúcsapok és a hajtórúd-csapágyak

### Általános tájékoztatás a hajtórúd csapágyakra vonatkozóan

- A csapágyfedél felőli (1) hajtórúd csapágyerselyben az ábrán látható (2) olajozó furat van.  
Ezt az olajozó furattal ellátott perselyfelet a hajtórúd csapágyfedélbe szereljük.
- A hajtórúd felőli (3) csapágyerselyen nincs olajozó furat.

## A hajtórúdcsapágy szemrevételezése

Ellenőrizzük a csapágyerselyeket megolvadás, gödrösödés, beégés és lepattogzás szempontjából és figyeljük meg a hordéképet. A rossz állapotú perselyeket ki kell cserélni.

## A hajtórúdcsapágy hézaga

### MEGJEGYZÉS:

**Ne forgassuk meg a forgattyústengelyt, amíg a műanyag mérőszinór benn van.**

- 1) A csapágyhézag ellenőrzése előtt tisztítsuk meg a csapágyat és a forgattyúcsapot.
- 2) Helyezzük be a csapágyerselyt a hajtórúdba és a csapágyfedélbe.

- 3) Helyezzünk be egy (1) képlékeny mérőcsíkot a forgattyúcsap és a csapágy érintkező felületének teljes hosszán (a forgattyústengellyel párhuzamosan), elkerülve az olajozó furatot.
- 4) Szereljük be a hajtórudat és a csapágyfedelelet jelen fejezet „A dugattyúk, dugattyúgyűrűk, hajtórudak és hengerek elemei” című pontja szerint.

- 5) Vegyük le a csapágyfedelelet, és az (1) léptékvonalzóval mérjük meg az (2) képlékeny anyag bevonat szélességét a legszélesebb részén (hézag).

Ha a hézag nagyobb az előírtnál, cseréljük ki a hajtórúd csapágyat és/vagy a forgattyústengelyt.

Az új csapágyperselyy beszerelése után újra mérjük meg a hézagot.

**A hajtórúdcsapágy hézaga:**

**0,030 – 0,062 mm**

## A főtengelycsapágyak, a forgattyústengely és a hengerblokk elemei

### FIGYELEM:

Jegyezzük meg az egyes főtengelycsapágyak eredeti beszerelési helyzetét, és majd ebbe az eredeti helyzetbe szereljük vissza azokat.

Ha az egyes csapágyakat nem az eredeti beszerelési helyzetükbe szereljük vissza, romlani fog a motor eredeti teljesítménye.

	1. Hengerblokk: Kenjük meg Loctite 5900® tömítőanyaggal „A főtengelycsapágyak, a forgattyústengely és a hengerblokk le- és felszerelése” című pont szerint.	6. Forgattyúház alsó rész	11. Vezérműlánc olajsórozó cső
	2. Forgattyústengely: Az elcsúszó felületeket kenjük meg motorolajjal.	7. Forgattyúház csavar (M10): Húzzuk meg 20 Nm (2,0 kgm) nyomattékkal és 80°-kal az előírt módszerrel.	12. Olajsórozó cső üreges csavarja
	3. Főcsapágy (az axiális csapággal): Az elcsúszó felületeket kenjük meg motorolajjal.	8. Forgattyúház csavar (M8): Húzzuk meg 31 Nm (3,1 kgm) nyomattékkal az előírt módszerrel.	13. Illesztőcsap
	4. Lendkerék oldali forgattyústengely tömítőgyűrű: A tömítés peremét kenjük meg motorolajjal.	9. Olajsórozó fúvóka	Meghúzási nyomatték
	5. Főcsapágy persely: A csapágypersely belső felületeit kenjük meg motorolajjal.	10. Olajsórozó fúvóka csavarja	Ne használjuk fel újra.

## A főtengelycsapágyak, a forgattyústengely és a hengerblokk le- és felszerelése

### FIGYELEM:

Jegyezzük meg az egyes főtengelycsapágyak eredeti beszerelési helyzetét, és majd ebbe az eredeti helyzetbe szereljük vissza azokat.

Ha az egyes főtengelycsapágyakat nem az eredeti beszerelési helyzetükbe szereljük vissza, romlani fog a motor eredeti teljesítménye.

**MEGJEGYZÉS:**

- Minden felszerelendő elemnek tökéletesen tisztának kell lennie.
- A forgattyústengely csapjait, a főcsapágy perselyeket, a főcsapágyat (az axiális csapággal), a forgattyúcsapokat, a hajtórúd csapágyakat, a dugattyúkat, a dugattyúgyűrűket és a hengerek belsejét feltétlenül kenjük meg motorolajjal.

**Leszerelés**

- 1) Szereljük ki a motor szerelvényt a motorházból jelen fejezet „A motor szerelvény ki- és beszerelése” című pontja szerint.
- 2) Szereljük le a hengerfej szerelvényt jelen fejezet „A szelepek és a hengerfej szerelvény le- és felszerelése” című pontja szerint.
- 3) Szereljük le a CKP érzékelőt a 6E3 fejezet „A forgattyústengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) le- és felszerelése” című pontja szerint.
- 4) Szereljük le a fűtés kivezető csövét a 6B3 fejezet „A hűtőrendszer elemei” című pontja szerint.
- 5) Szereljük le az olajhűtő szerelvényt jelen fejezet „Az olajhűtő le- és felszerelése” című pontja szerint.
- 6) Szereljük le a generátort a 6H3 fejezet „A generátor le- és felszerelése” című pontja szerint.
- 7) Szereljük le az indítómotort a 6G3 fejezet „Az indítómotor le- és visszaszerelése” című pontja szerint.
- 8) Szereljük le az L/K kompresszor (1) tartókonzolja (ha van).

- 9) Szereljük le a vezérműlánc (1) olajszóró csövét a hengerblokkról.

- 10) Szereljük le a generátor (1) konzolját a hengerblokkról.
- 11) Szereljük le a forgattyúház szellőző fedelét a hengerblokkról a 6E3 fejezet „Az olajleválasztó és forgattyúház szellőző rendszer le- és felszerelése” című pontja szerint.
- 12) Szereljük ki a dugattyúkat és a hajtórudakat jelen fejezet „A dugattyúk, dugattyógyűrűk, hajtórudak és hengerek ki- és beszerelése” című pontja szerint.

- 13) Apránként lazítsuk meg az (M10) forgattyúház csavarokat és az (M8) forgattyúház csavarokat az ábrán látható számozás sorrendjében, majd vegyük ki azokat.

- 14) Célszámszám segítségével vegyük le a forgattyúház (1) alsó részét a hengerblokkról.

**Célszámszám**  
**(A): 0921-96510**

- 15) Vegyük ki az (1) forgattyústengelyt és a (2) lendkerék oldali forgattyústengely tömítőgyűrűt a hengerblokkból.
- 16) Vegyük ki a (3) főcsapágy perselyeket és a (4) főcsapágyat (az axiális csapágygal) a hengerblokkból és a forgattyúház alsó részéből.

- 17) Ha szükséges, szereljük le az (1) olajszóró fúvókákat a hengerblokkról.
- 18) Ha szükséges, vegyük ki az (2) illesztőszegeket a hengerblokkból.

### Felszerelés

- 1) Ha kivettük, helyezzük vissza az (1) illesztőszegeket a hengerblokkba.
- 2) Ha leszereltük, szereljük vissza a (2) olajszóró fúvókákat a hengerblokkra.

**Meghúzási nyomaték**  
**Olajszóró fúvóka csavarja**  
**(a): 9 Nm (0,9 kgm)**

- 3) Helyezzük be a (3) főcsapágy perselyeket és a (4) főcsapágyat (az axiális csapággal) a hengerblokkba és a forgattyúház alsó részébe, beigazítva az (1) fület a (2) horonyba.

### MEGJEGYZÉS:

**A főcsapágy perselyek egyik felében (5) olajozó horony van. Ezt szereljük a hengerblokkba és a másik, olajhorony nélküli perselyfelet a forgattyúház alsó részébe. Figyeljünk rá, hogy mind a két félen ugyanolyan színjelzés legyen.**

- 4) Ha kivettük, helyezzük be a forgattyústengelybe az (1) illesztőszeget.

### MEGJEGYZÉS:

**Ügyeljünk, hogy az illesztőszeget a forgattyústengely  $\phi$  6,75 mm-es furatába tegyük.**

5) Helyezzük az (1) forgattyústengelyt a hengerblokkba.

6) Kenjük meg az (1) hengerblokkot tömítőanyaggal az ábrán látható módon.

„A”: Loctite 5900®

7) Helyezzük a forgattyúház alsó részét a hengerblokkra.

„a”: 3,0 mm

8) Húzzuk meg az (M10) („1” – „10”) forgattyúház csavarokat és az (M8) („11” – „20”) forgattyúház csavarokat az alábbiak szerint.

#### MEGJEGYZÉS:

A művelet során a csavarokat az ábrán látható számok sorrendjében húzzuk meg.

- Húzzuk meg az (M10) forgattyúház csavarokat 20 Nm (2,0 kgm) nyomatékkal.
- Húzzuk tovább az (M10) forgattyúház csavarokat, 80°-kal elfordítva azokat.
- Húzzuk meg az (M8) forgattyúház csavarokat 30 Nm (3,0 kgm) nyomatékkal.

#### Meghúzási nyomaték

##### Forgattyúház csavar (M10):

Húzzuk meg 20 Nm (2,0 kgm) nyomatékkal és 80°-kal az előírt módszerrel

##### Forgattyúház csavar (M8):

Húzzuk meg 30 Nm (3,0 kgm) nyomatékkal az előírt módszerrel

#### MEGJEGYZÉS:

Miután meghúztuk a forgattyúház alsó részének csavarjait, ellenőrizzük, hogy a forgattyústengely simán forog-e.

- 9) Célszerszám segítségével szereljük be az (1) lendkerék oldali forgattyústengely tömítőgyűrűt az alábbiak szerint.

**Célszerszám**

**(A): 09913-58620**

**(B): 09924-74510**

- Illesszük a forgattyústengely tömítőgyűrűt az (A) célszerszámba.
- Illesszük a (B) célszerszámot az (A) célszerszámba, és a (B) célszerszámot műanyag kalapáccsal könnyedén ütögetve szereljük be a forgattyústengely tömítőgyűrűjét.
- Távolítsuk el az (A) és (B) célszerszámot.

- 10) Szereljük fel a vezérműlánc (1) olajszóró csövét a hengerblokkra.

**Meghúzási nyomaték**

**Olajszóró cső üreges csavarja**

**(a): 6 Nm (0,6 kgm)**

- 11) Szereljük be a dugattyúkat és a hajtórudakat jelen fejezet „A dugattyúk, dugattyúgyűrűk, hajtórudak és hengerek ki- és beszerelése” című pontja szerint.

- 12) Szereljük fel a forgattyúház szellőző fedelét a hengerblokkra a 6E3 fejezet „Az olajleválasztó és forgattyúház szellőző rendszer le- és felszerelése” című pontja szerint.

- 13) Szereljük fel az (1) generátor konzolt a hengerblokkra.

**Meghúzási nyomaték**

**Generátor konzol csavar**

**(a): 25 Nm (2,5 kgm)**

- 14) Ha leszereltük, szereljük fel az L/K kompresszor (1) tartókonzoltját.

**Meghúzási nyomaték**

**L/K kompresszor konzol csavar**

**(a): 20 Nm (2,0 kgm)**

- Szereljük fel az indítómotort a 6G3 fejezet „Az indítómotor le- és visszaszerelése” című pontja szerint.
- Szereljük fel a generátort a 6H3 fejezet „A generátor le- és felszerelése” című pontja szerint.
- Szereljük fel az olajhűtő szerelvényt jelen fejezet „Az olajhűtő le- és felszerelése” című pontja szerint.
- Szereljük fel a fűtés kivezető csövét a 6B3 fejezet „A hűtőrendszer elemei” című pontja szerint.

- 19) Szereljük fel a CKP érzékelőt a 6E3 fejezet „A forgattyústengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) le- és felszerelése” című pontja szerint.
- 20) Szereljük fel a hengerfej szerelvényt jelen fejezet „A szelepek és a hengerfej szerelvény le- és felszerelése” című pontja szerint.
- 21) Szereljük be a motor szerelvényt a motorházba jelen fejezet „A motor szerelvény ki- és beszerelése” című pontja szerint.

## A főtengelycsapágyak, a forgattyústengely és a hengerblokk ellenőrzése

### A forgattyústengely tengelyirányú játéka

- 1) Szereljük össze a főcsapágy perselyeket, a főcsapágyat (az axiális csapággal), a forgattyústengelyt és a forgattyúház alsó részét jelen fejezet „A főtengelycsapágyak, a forgattyústengely és a hengerblokk le- és felszerelése” című pontja szerint.
- 2) Indikátorra segítségével mérjük meg a forgattyústengely tengelyirányú elmozdulását.  
Ha a mért érték kívül esik a megadott tűréshatárokon, cseréljük ki a főcsapágyat (az axiális csapággal).

**A forgattyústengely tengelyirányú játéka**  
**0,055 – 0,265 mm**

### A főcsapágy persely

#### Általános tájékoztató

- A csapágypersely (1) felső felében (2) olajhorony van, mint az ábrán látható.  
Ezt az olajozó horonnyal ellátott csapágypersely-felet a hengerblokkba szereljük.
- A csapágypersely alsó felében nincs olajozó horony.

### Szemrevételezés

Ellenőrizzük a csapágyperselyeket gödrösödés, karcok, kopás vagy sérülések szempontjából.

Ha bármilyen hibát találunk, a felső és alsó csapágypersely-felet együtt cseréljük ki.

Soha ne cseréljük az egyik csapágypersely-felet a másik nélkül.

## A főtengelycsapágy házaga

### MEGJEGYZÉS:

**Ne forgassuk meg a forgattyústengelyt amíg a műanyag mérőszinór benn van.**

- 1) A csapágyház ellenőrzése előtt tisztítsuk meg a csapagyat és a forgattyúcsapot.
- 2) Helyezzük be a csapágyperselyeket a hengerblokkba és a főcsapágy fedélbe jelen fejezet „A főtengelycsapágyak, a forgattyústengely és a hengerblokk le- és felszerelése” című pontja szerint.
- 3) Helyezzünk be egy (1) képlékeny mérőcsíkot a forgattyústengely csap és a csapágy érintkező felületének teljes hosszán (a forgattyústengellyel párhuzamosan), elkerülve az olajozó furatot.
- 4) Szereljük fel a forgattyúház alsó részét jelen fejezet „A főtengelycsapágyak, a forgattyústengely és a hengerblokk le- és felszerelése” című pontja szerint.

- 5) Vegyük le a csapágyfedelelet, és az (1) léptékvonalzóval mérjük meg a (2) képlékeny anyag bevonat szélességét a legszélesebb részén (házaga).  
Ha a mért házaga kívül esik a megadott határértékeken, cseréljük ki a csapágyperselyt. A felső és alsó csapágyperselyt mindig egy egységként cseréljük.

### A főtengelycsapágy házaga:

**0,026 – 0,050 mm**

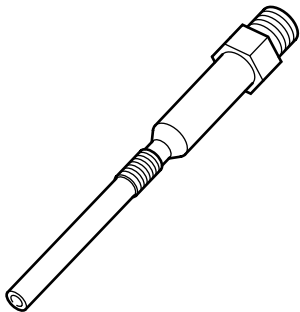

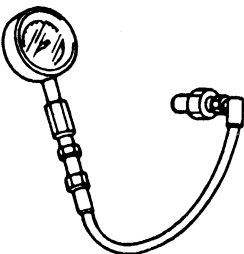

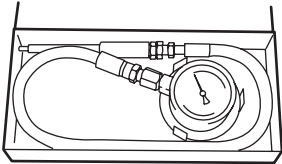

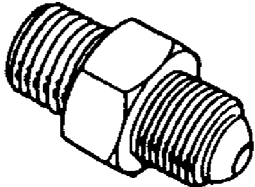

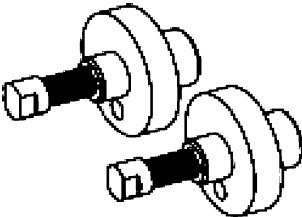

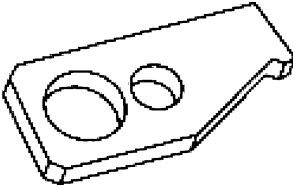

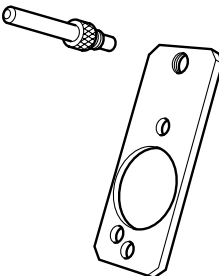

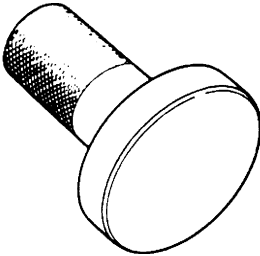

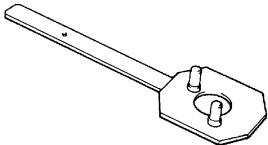

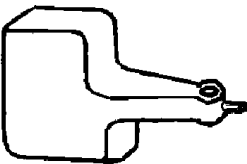

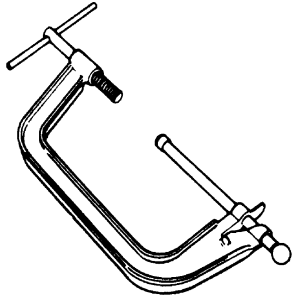

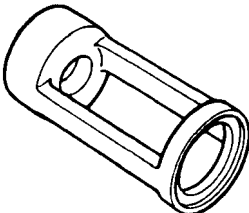

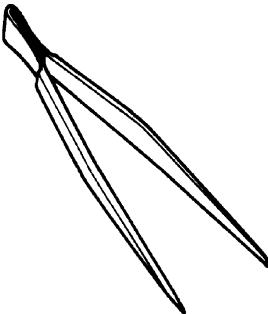

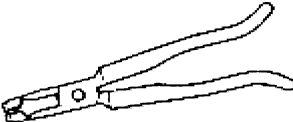

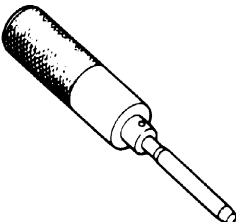

## A lendkerék oldali forgattyústengely tömítőgyűrű

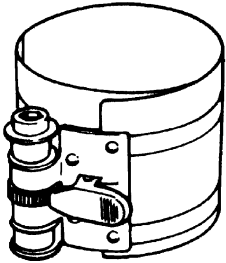

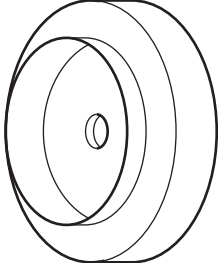

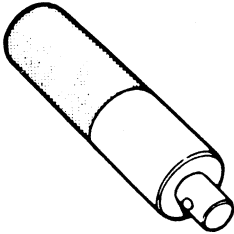

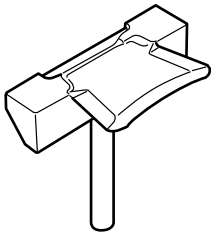

Gondosan ellenőrizzük az (1) lendkerék oldali forgattyústengely tömítőgyűrűt kopás vagy sérülés szempontjából.  
Ha a tömítő perem kopott vagy sérült, cseréljük ki a gyűrűt.

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

Általános leírás

A hűtési rendszer a hűtősapkából, hűtőből, hűtőfolyadék kiegyenlítő tartályból, tömlőkből, vízszivattyúból, hűtőventilátorból és a termosztátból áll. A hűtő csöves–lamellás rendszerű.

A hűtési rendszer elvi vázlata

[A]: Amikor a termosztát zár	2. Termosztát	5. Kiegyenlítő tartály	8 Fűtőtest
[B]: Amikor a termosztát nyit	3. Motorolaj hűtő	6. Kiegyenlítő tartály sapka (vízhűtő sapka)	9. EGR hűtő
1. Vízhűtő	4. Motor	7. Vízszivattyú	

## Hűtőközeg kiegyenlítő tartály

Az (1) kiegyenlítő tartály az átlátszó műanyag tartályból, a tömlőből és a (2) záró sapkából áll.

Működés közben a kiegyenlítő tartály nyomás alatt áll. Ahogy a hűtőközeg felmelegszik és kitágul, a hűtőközeg szintje a tartályban megemelkedik. Másrészt, a szint csökken, ha a hűtőközeg lehül és összehúzódik. Ha a kiegyenlítő tartály belsejében a nyomás folyamatosan túllépi az előírt értéket, a nyomás kiegyenlítődik a tartály zárósapkáján keresztül.

Ezért a hűtőközeg szintjének a kiegyenlítő tartály (3) „FULL” (tele) és (4) „LOW” (alacsony) jelzései között kell lennie.

## Diagnosztika

### Diagnosztikai táblázat

Állapot	Lehetséges ok	Javítás módja
<b>A motor túlmelegszik (akkor, amikor a hűtő- ventilátor működik)</b>	Laza vagy szakadt vízszivattyú hajtósíj	Állítsuk be, vagy cseréljük ki.
	Kevés a hűtőfolyadék	Ellenőrizzük a hűtőfolyadék szintet, és ha kell, töltsük fel.
	Hibás termosztát	Cseréljük ki.
	Hibás vízszivattyú	Cseréljük ki.
	Szennyezett vagy elgörbült vízhűtő lamellák	Tisztítsuk meg, vagy javítsuk.
	A hűtőfolyadék elszívárog a rendszerből	Javítsuk meg.
	Eltömődött vízhűtő	Ellenőrizzük, és ha kell, cseréljük ki a vízhűtőt.
	Hibás kiegyenlítő tartály sapka	Cseréljük ki.
	A fékek súrlódnak	Állítsuk be a fékeket.
	A tengelykapcsoló csúszik	Állítsuk be, vagy cseréljük ki.
	Az akkumulátor gyenge	Ellenőrizzük, és ha kell, cseréljük ki.
	A generátor gyengén tölt	Ellenőrizzük, és javítsuk meg.
	Az ECT (hűtőfolyadék hőmérséklet) érzékelő hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	Az ECM (motorvezérlő egység) hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	A huzalozás vagy a testelés hibás	Szükség szerint javítsuk meg.
	Túl sok villamos fogyasztó van felszerelve	Szereljük le.
	A hűtőventilátor motor hibás	Ellenőrizzük, és ha kell, cseréljük ki.
<b>A motor túlmelegszik (akkor, amikor a hűtő- ventilátor nem működik)</b>	A biztosíték kiolvadt	Ellenőrizzük a relé/biztosíték dobozban a 30A biztosítékot, majd ellenőrizzük, hogy nem testzárlatos-e.
	Hűtőventilátor relé	Ellenőrizzük, és ha kell, cseréljük ki.
	Az ECT (hűtőfolyadék hőmérséklet) érzékelő hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	A hűtőventilátor motor hibás	Ellenőrizzük, és ha kell, cseréljük ki.
	A huzalozás vagy a testelés hibás	Szükség szerint javítsuk meg.
	Az ECM (motorvezérlő egység) hibás	Ellenőrizzük, és ha kell, cseréljük ki.

## A hűtőfolyadék

Amikor a rendszer lehűl, a hűtőfolyadék visszaáramlik a vízhűtőbe.

A hűtőrendszer gyárilag fel van töltve minőségi hűtőközeggel, amely víz és etilén-glikol fagyálló folyadék 50–50% arányú keveréke.

Ez az 50–50 % keverési arányú hűtőfolyadék -36 °C hőmérsékletig nyújt biztonságot befagyás ellen.

- Tartsuk a hűtési rendszer fagyvédelmét -36 °C-on korrózióvédelmi okokból és a hűtőfolyadék elforrásának megakadályozására.  
Ezt még akkor is tartsuk be, ha nem várható fagypont alatti hőmérsékletek.
- Ha a hűtőfolyadék veszteség pótlására, vagy ha -36 °C-nál alacsonyabb hőmérsékletek elleni védelem céljából utántöltésre van szükség, etilén-glikol alapú hűtőfolyadékot töltünk be.

### Fagyálló folyadék adagolási táblázat

### Hűtőfolyadék térfogat

	Motor, vízhűtő fűtőtest és nyomáskiegyenlítő tartály, stb.
liter	5,3

### MEGJEGYZÉS:

- Soha ne használjunk alkohol vagy metanol alapú hűtőfolyadékot vagy tiszta vizet a hűtési rendszerben, mert ez a hűtési rendszer károsodását okozhatja.
- A hűtőközeget ásványi anyagoktól mentes vagy desztillált vízzel kell keverni.

## Karbantartás

### VIGYÁZAT:

- A személyi sérülés elkerülése érdekében tartsuk távol a motor hűtőventilátorától a kezünket, a szerszámokat, és a ruházatunkat. A ventilátor villamos hajtású, és attól függetlenül elindulhat, hogy a gépkocsi motorja jár-e vagy sem. A ventilátor önműködően elindulhat az ECM utasítására, ha a gyújtáskapcsoló be van kapcsolva.
- Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg.  
Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

## A hűtőfolyadék szintjének ellenőrzése

### Hűtőfolyadék szint

#### VIGYÁZAT:

Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg.

Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

A hűtőfolyadék szintjének ellenőrzéséhez emeljük fel a motorház fedelet és nézzük meg az áttetsző (1) kiegyenlítő tartályt. A hűtőfolyadék szintjének ellenőrzéséhez nem kell levenni a (2) hűtősapkát.

A motor hideg állapotában ellenőrizzük a folyadék szintjét az (1) kiegyenlítő tartályban.

Rendes körülmények között a hűtőfolyadék szintjének a kiegyenlítő tartály (3) „FULL” (tele) és (4) „LOW” (alacsony) jelzései között kell állnia.

Ha a hűtőfolyadék szintje a „LOW” jelzés alatt van, vegyük le a kiegyenlítő tartály sapkáját és töltsük fel a tartályt megfelelő összetételű hűtőfolyadékkal a „FULL” jelzésig. Ezután helyezzük vissza a nyomáskiegyenlítő tartály sapkáját, ügyelve arra, hogy a sapka füle egy vonalban legyen a nyomáskiegyenlítő tartály (5) csővével.

#### MEGJEGYZÉS:

- Ha megfelelő minőségű fagyállót használunk, nincs szükség olyan külön inhibitorok vagy adalékanyagok hozzáadására, melyekről azt állítják, hogy hasznára válnak a rendszernek.

Ezek károsan befolyásolhatják a rendszer kifogástalan működését, és felesleges kiadást okoznak.

## A hűtőrendszer ellenőrzése és szervizelése

#### VIGYÁZAT:

Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg.

Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

A hűtőrendszer karbantartását az alábbiak szerint kell végezni.

- 1) Ellenőrizzük a hűtési rendszert szivárgás vagy sérülések szempontjából.
- 2) Amikor levesszük a hűtősapkát a hideg motorról, mossuk meg a hűtősapkát és a betöltő nyílást tiszta vízzel.
- 3) Ellenőrizzük a hűtőfolyadék szintjét és fagyállóságának mértékét.

- 4) Egy (1) nyomásmérő segítségével ellenőrizzük, hogy a rendszer és a (2) nyomáskiegyenlítő tartály sapka megfelelően tartja-e a nyomást. Ha a sapkát cserélni kell, csak ehhez a gépkocsi típushoz előírt sapkát használjunk.

**A hűtőrendszer és a nyomáskiegyenlítő tartály sapka nyomástartó képessége (ellenőrzéshez):**

**140 kPa (1,4 kg/cm<sup>2</sup>)**

- 5) Tegyük fel a nyomáskiegyenlítő tartály sapkát a nyomáskiegyenlítő tartályra, ütközésig elfordítva az óramutató járásával megegyező irányban.
- 6) Húzzuk meg a tömlő bilincseket, és ellenőrizzük minden tömlőt. A repedt, kiöblösödött vagy más sérülést mutató tömlőket cseréljük ki.
- 7) Tisztítsuk meg a vízhűtő homlokfelületét.

## A hűtési rendszer átöblítése és feltöltése

**VIGYÁZAT:**

**Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízhűtő még meleg. Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.**

- 1) Hideg motor mellett vegyük le a nyomáskiegyenlítő tartály sapkát.  
Forgassuk el a sapkát 90°-kal lassan, az óramutató járásával ellentétes irányban.  
Várjuk meg, amíg a nyomás kiegyenlítődik (ezt sziszegő hang jelzi), ekkor fordítsuk tovább az óramutató járásával ellenkező irányban.
- 2) Levett nyomáskiegyenlítő tartály sapka mellett járassuk addig a motort, amíg a hűtő felső tömlője fel nem melegszik (ez azt mutatja, hogy a termosztát kinyitott, és a hűtőfolyadék átfolyik a rendszeren).
- 3) Állítsuk le a motort, és ürítsük le a hűtőfolyadékot.
- 4) Zárjuk az (1) leeresztő csavart. Töltsük tele a rendszert vízzel, és járassuk a motort addig, amíg a hűtő felső tömlője ismét meg nem melegszik.
- 5) Ismételjük meg néhányszor a 3. és 4. lépést, amíg a leeresztett folyadék szintelennek nem tekinthető.
- 6) Ürítsük le a rendszert, és szorosan zárjuk le az (1) leeresztő csavart.

- 7) Kössük le a felső oldali hűtőfolyadék tömlőt a termosztát házról. Ha a tömlőt nehéz lehúzni a bilincs eltávolítása után, nyomjuk meg, hogy egy kicsit tovább csússzon a csövön abból a célból, hogy ne tapadjon hozzá, majd húzzuk le.
- 8) Vegyük le a (2) nyomáskiegyenlítő tartály sapkáját az alábbi módon.
  - a) Forgassuk el a sapkát 90°-kal lassan, az óramutató járásával ellentétes irányban.
  - b) Várjunk, amíg a nyomás kiegyenlítődik, majd fordítsuk tovább az óramutató járásával ellentétes irányban.
- 9) Töltsünk hűtőfolyadékot (jó minőségű etilén-glikol fagyálló és víz 50–50 %-os keverékét) a nyomáskiegyenlítő tartályba a (3) „FULL” jelzésig. Tegyük géprongyot a lekapcsolt tömlővég alá, hogy ne folyjon hűtőfolyadék a motorra és a padlóra, mivel kisebb mennyiségű levegőbuborék és/vagy hűtőfolyadék jöhet ki belőle.
- 10) Csatlakoztassuk a tömlőt a termosztát házhoz.
- 11) Járassuk a motort levett (2) nyomáskiegyenlítő tartály sapkával, amíg a hűtő bevezető tömlője forró nem lesz.
- 12) A motort alapjáraton járatva töltsünk hűtőfolyadékot az (1) nyomáskiegyenlítő tartályba, amíg a szint el nem éri a (3) „FULL” jelet.  
Tegyük fel a (2) nyomáskiegyenlítő tartály sapkát, ütközésig elfordítva az óramutató járásával megegyező irányban.

## A vízszivattyú/generátor hajtósíj feszességének ellenőrzése

### VIGYÁZAT:

Az égési sérülések elkerülése érdekében ne vegyük le a nyomáskiegyenlítő tartály sapkáját, amíg a motor és a vízűtő még meleg. Ha túl hamar vesszük le a sapkát, nyomás alatt álló, forrázást okozó folyadék és gőz fújhat ki a nyíláson.

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Ellenőrizzük az (1) hajtósíjat lazaság, repedések, bevágások, deformáció, kopás és tisztaság szempontjából. Ha bármilyen hibát észlelünk, cseréljük ki a hajtósíjat ennek a fejezetnek „A vízszivattyú/generátor hajtósíj le- és felszerelése” című pontja szerint.
- 3) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.

## A gépkocsin végzendő szervizmunkák

### **VIGYÁZAT:**

- Mielőtt a hűtési rendszer bármelyik alkatrészét leszerelnénk, győződjünk meg arról, hogy a motor hűtőfolyadék hideg-e.
- Feltétlenül kössük le az akkumulátorról a negatív kábelt, mielőtt a hűtési rendszer bármelyik alkatrészét leszerelnénk.

## A hűtési rendszer leeresztése

- 1) Vegyük le kiegyenlítő tartály sapkát.
- 2) Lazítsuk meg az (1) leeresztő csavart a (2) vízhűtőn, hogy leereszsjük a hűtőfolyadékot.
- 3) A hűtőfolyadék leengedése után gondosan húzzuk meg a leeresztő csavart.

## A hűtési rendszer feltöltése

- 1) Töltsünk jó minőségű etilén-glikol fagyálló és víz 50–50%-os keverékét az (1) nyomáskiegyenlítő tartályba. Töltsük fel a (3) „FULL” jelzésig.
- 2) Járassuk a motort levett (2) nyomáskiegyenlítő tartály sapkával, amíg a hűtő felső tömlője forró nem lesz.
- 3) A motort alapjáraton járattva töltsünk hűtőfolyadékot az (1) nyomáskiegyenlítő tartályba, amíg a szint el nem éri a „FULL” jelzést. Tegyük fel a (2) nyomáskiegyenlítő tartály sapkát, ütközésig elfordítva az óramutató járásával megegyező irányban.

## A hűtővíz csövek és tömlők

### Leszerelés

- 1) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 2) A csövek vagy tömlők levételéhez oldjuk meg a tömlők bilincseit, és húzzuk le a tömlő végét.

### Felszerelés

A leszerelt alkatrészek felszerelését a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Csatlakoztassuk szilárdan az összes bilincset ennek a fejezetnek „A hűtőrendszer elemei” című pontja szerint.
- Töltsük fel a hűtőrendszert a megfelelő hűtőfolyadékkal ennek a fejezetnek „A hűtőrendszer feltöltése” című pontja szerint.

## A termosztát ház szerelvény le- és felszerelése

### FIGYELEM:

Ne szereljük szét a termosztát ház szerelvényt. A szétszereléssel alkalmatlanná válik arra, hogy betöltsse az eredeti rendeltetését. Ha a termosztát ház szerelvény hibás, egybefüggő szerelvényként cseréljük ki.

### Leszerelés

- 1) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 2) Vegyük le a (2) motor kivezető tömlőt, a (3) vízhűtő bevezető tömlőt, a (4) hűtőfolyadék táptömlőt, az (5) ECT érzékelő csatlakozót és a termosztát ház tömlőt a termosztát házról.
- 3) Szereljük le az (1) termosztát házat.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- A felszereléshez használunk új O-gyűrűt.
- Húzzuk meg a termosztát ház csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

**Termosztát ház csavar (a): 25 Nm (2,5 kgm)**

- Ha az (1) ECT érzékelőt kiszertük, kenjük be az ECT érzékelőt menetörögztítő ragasztóval, és beszereléskor húzzuk meg az előírt nyomatékkal. A menetörögztítő ragasztó és a meghúzási nyomaték előírt értékeit lásd a 6E3 fejezet „A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) le- és felszerelése” című pontjában.
- Töltsük fel a hűtőrendszert ennek a fejezetnek „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- Mindegyik csatlakozásnál ellenőrizzük, hogy nincs-e hűtőfolyadék szivárgás.

## A vízhűtő le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 3) Ürítsük ki a hűtőközeget az L/K rendszerből az 1B fejezet „Az L/K rendszer leürítése” című pontja szerint az RM413D, vagy a „Leürítés és feltöltés” című pontja szerint az RB413D esetében.
- 4) Kössük le a hűtőventilátor motor csatlakozóját.
- 5) Szereljük le a mellső lökhárítót a 9. fejezet „A mellső és hátsó lökhárító le- és felszerelése” című pontja szerint az RM413D esetében, vagy „A mellső és hátsó lökhárító” című pontja szerint az RB413D esetében.
- 6) Szereljük ki a kondenzátor szerelvényt az 1B fejezet „A kondenzátor szerelvény le- és felszerelése” című pontja szerint az RM413D esetén, vagy „Az L/K kondenzátor szerelvény” című pontja szerint RB413D esetén.
- 7) Szereljük ki a közbenső hűtőt a 6A3 fejezet „A közbenső hűtő ki- és beszerelése” című pontja szerint.
- 8) Szereljük ki az (1) nyomáskiegyenlítő tartályt.
- 9) Kössük le a (2) vízhűtő bevezető tömlőt és a (3) vízhűtő kivezető tömlőt a (4) vízhűtő szerelvényről.
- 10) Vegyük le az (5) motorhűtő ventilátor szerelvényt a vízhűtőről.
- 11) Szereljük le a (6) vízhűtő tartókat, majd szereljük ki a vízhűtőt.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Töltsük fel a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer feltöltése” című pontja szerint.
- Töltsük fel az L/K rendszert az 1B fejezet „Feltöltés” című pontja szerint az RM413D, vagy a „Leürítés és feltöltés” című pontja szerint az RB413D esetén.
- A feltöltés után mindegyik csatlakozásnál ellenőrizzük, nincs-e szivárgás.

## A vízhűtő ellenőrzése

Ellenőrizzük a vízhűtőt szivárgás és sérülések szempontjából. Ha elgörbült lamellát találunk, egyenesítsük ki.

## A vízhűtő tisztítása

Tisztítsuk meg a vízhűtő homlokfelületét.

## A hűtőventilátor relé ellenőrzése

Lásd a 6E3 fejezet „Üzemanyag szivattyú relé és ventilátor relé 1, 2, 3 ellenőrzése” című pontját.

## A hűtőventilátor le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 3) Szereljük ki az (1) nyomáskiegyenlítő tartályt.
- 4) Vegyük le a hűtőventilátor motor csatlakozóját.
- 5) Szereljük le a vízhűtő bevezető tömlőt a vízhűtőről.

- 6) Vegyük le az (1) hűtőventilátor motort a vízhűtőről.

## Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- Töltsük fel a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer feltöltése” című pontja szerint.
- A felszerelés után mindegyik csatlakozásnál ellenőrizzük, hogy nincs-e hűtőfolyadék szivárgás.

## A hűtőventilátor ellenőrzése

- 1) Ellenőrizzük a vízhűtő hűtőventilátorának kis fordulatszámú működését az alábbiak szerint.
  - a) Kössük az akkumulátort a ventilátor motor csatlakozójára az ábra szerint.
  - b) Ellenőrizzük, hogy a hűtőventilátor simán forog-e, és az árammérő az előírt áramerősséget mutatja-e.  
Ha bármilyen rendellenességet találunk, cseréljük ki a ventilátor motort.

**A ventilátor motor felvett áramerőssége 12 V esetén maximum 10,0 A**

- 2) Ellenőrizzük a vízhűtő hűtőventilátorának nagy fordulatszámú működését az alábbiak szerint.
  - a) Kössük az akkumulátort a ventilátor motor csatlakozójára az ábra szerint.
  - b) Ellenőrizzük, hogy a hűtőventilátor simán forog-e, és az árammérő az előírt áramerősséget mutatja-e.  
Ha bármilyen rendellenességet találunk, cseréljük ki a ventilátor motort.

**A ventilátor motor felvett áramerőssége 12 V esetén maximum 15,0 A**

## A vízszivattyú/generátor hajtósíjjának le- és felszerelése

### Leszerelés

- 1) Vegyük le a (2) hajtósíjat, eközben az (1) szíj feszítőt forgassuk ütközésig az óramutató járásával megegyező irányban.

## Felszerelés

- 1) Szereljük fel a (2) hajtószíjat, közben az (1) szíjfeszítőt forgassuk ütközésig az óramutató járásával megegyező irányban.
- 2) Ellenőrizzük a hajtószíj feszességét ennek a fejezetnek „A vízszivattyú/generátor hajtószíj feszesség ellenőrzése” című pontja szerint.

## A vízszivattyú/generátor hajtószíj feszítő szerelvény le- és felszerelése

### FIGYELEM:

Ne szereljük szét a hajtószíj feszítő szerelvényt. A szétszereléssel alkalmatlanná válik arra, hogy betöltse az eredeti rendeltetését. Ha a szíjfeszítő szerelvény hibás, egybefüggő szerelvényként cseréljük ki.

## Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 3) Szereljük le az (1) szíjfeszítőt.

## Felszerelés

- 1) Szereljük fel az (1) szíjfeszítőt.  
Húzzuk meg a (2) szíjfeszítő csavart az előírt nyomatékkal.

### Meghúzási nyomaték

**Szíjfeszítő csavar (a): 50 Nm (5,0 kgm)**

- 2) Szereljük fel a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 3) Ellenőrizzük a hajtószíj feszességét ennek a fejezetnek „A vízszivattyú/generátor hajtószíj feszesség ellenőrzése” című pontja szerint.

## A vízszivattyú le- és felszerelése

### Leszerelés

- 1) Engedjük le a hűtőfolyadékot ennek a fejezetnek „A hűtési rendszer leürítése” című pontja szerint.
- 2) Szereljük le a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 3) Szereljük le az (1) vízszivattyú szerelvényt.

### Felszerelés

- 1) Tegyük fel új (2) O-gyűrűt a vízszivattyúra.
- 2) Szereljük fel az (1) vízszivattyú szerelvényt a hengerblokkra, és húzzuk meg az anyákat az előírt nyomatékkal.

#### Meghúzási nyomaték

**Vízszivattyú anya (a): 9 Nm (0,9 kgm)**

- 3) Szereljük fel a hajtószíjat ennek a fejezetnek „A vízszivattyú/generátor hajtószíj le- és felszerelése” című pontja szerint.
- 4) Töltsük fel a hűtőrendszert ennek a fejezetnek „A hűtőrendszer utántöltése és feltöltése” című pontja szerint.
- 5) Ellenőrizzünk minden alkatrészt szivárgás szempontjából.

## A vízszivattyú ellenőrzése

### FIGYELEM:

**A vízszivattyút ne szedjük szét.**

**Ha a szivattyú javítást igényel, egybefüggő egységként cseréljük ki.**

- Forgassuk meg kézzel a vízszivattyút, hogy ellenőrizzük az akadálytalan működését.

Ha a szivattyú nem forog simán, vagy rendellenes hangja van, cseréljük ki.

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

### VIGYÁZAT:

Mielőtt bármiféle szervizmunkához kezdenénk az üzemanyag rendszeren, a tűz és a személyi sérülés kockázatának elkerülése érdekében mindig tartsuk be az alábbi óvintézkedéseket.

- Kössük le a negatív kábelt az akkumulátorról.
- Ne dohányozzunk, és a munkaterület környékén helyezünk el dohányzást tiltó táblákat.
- Feltétlenül legyen kéznél CO<sub>2</sub> tűzoltó készülék.
- A munkát csak jól szellőztetett területen, mindenféle nyílt lángtól (például gázmelegítőtől) távol végezzük.
- Viseljünk védőszemüveget.
- Az üzemanyag tartályban uralkodó nyomás elengedéséhez vegyük le a üzemanyag betöltőnyílás sapkáját, majd helyezzük vissza.
- Az üzemanyag vezeték megbontása után egy kevés üzemanyag kifolyhat. A személyi sérülés veszélyének csökkentése érdekében a megbontandó csatlakozót takarjuk le gépronggyal. A csatlakozó megbontása után ezt a rongyot feltétlenül az erre a célra rendszeresített gyűjtőedénybe tegyük.
- Figyeljük meg, hogy az üzemanyag tömlők csatlakozásai a csövek fajtájától függően különbözőek. Ügyeljünk arra, hogy mindegyik tömlőt a megfelelő módon csatlakoztasuk és bilinccsel rögzítsük, az ábra szerint.
- Mielőtt egy üzemanyag tömlőt vagy csövet leválasztunk, legalább 60 másodpercig várjunk a motor leállása után, hogy az üzemanyag rendszerben megszűnjön a nyomás.
- Az üzemanyag rendszer kisserelt elemeit ne hagyjuk porosodni. Mindig tartsuk tisztán azokat.

[A]: Rövid cső esetében a tömlőt egészen ütközésig toljuk fel, az ábrán látható módon.

[B]: Ennél a cső típusnál a tömlőt a kiszélesedő részig toljuk fel, az ábrán látható módon.

[C]: Hajlított cső esetében a tömlőt a hajlatig, vagy a „b” hosszúságban toljuk fel, az ábrán látható módon.

[D]: Egyenes csőnél a „b” hosszúságban toljuk fel a tömlőt.

[E]: Piros jelzéssel ellátott csőnél a tömlőt a piros jelzésig toljuk fel a csőre.

[F]: Az üzemanyag tartály töltő tömlőt a kiöblösödésig vagy a hegesztési varratig toljuk fel.

1. Cső

2. Tömlő

3. Bilincs

4. Piros jelzés

„b”: 20 – 30 mm

[c]: 0 – 5 mm

(d): 5 – 12 mm

(e): 40 mm

## Az üzemanyag szűrő vízleeresztője

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Tegyük edényt az (1) leeresztő csavar alá, majd ennek meglazításával eresszük le az üzemanyagot.
- 3) Húzzuk meg a leeresztő csavart.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## Az üzemanyag rendszer légtelenítése

A légtelenítést akkor kell végrehajtani, amikor az üzemanyag rendszert szétszereltük, vagy a gépkocsiból kifogyott az üzemanyag. Az üzemanyag szivattyú működtetése céljából kapcsoljuk be a gyújtást, majd körülbelül 5 másodperc elteltével kapcsoljuk ismét ki. Ismételjük meg 6 alkalommal, majd ellenőrizzük a motor indítását.

## Az üzemanyag vezeték ellenőrzése

### FIGYELEM:

**Tekintve, hogy az (1) üzemanyag tápvezeték nagy nyomás alatt áll, szervizelésénél különös gonddal járjunk el.**

Szemrevételezéssel ellenőrizzük az üzemanyag vezetékeket szivárgás, a tömlők repedezettsége, elhasználódása vagy sérülése szempontjából.

Győződjünk meg arról, hogy minden bilincs szilárdan rögzít-e. A hibás alkatrészeket szükség szerint cseréljük ki.

## Az üzemanyag cső le- és felszerelése

### VIGYÁZAT:

**Az üzemanyag tömlő megbontása után kifolyhat egy kevés üzemanyag. A személyi sérülés veszélyének csökkentése érdekében a megbontandó tömlőt és csövet takarjuk le gépronggyal.**

**A csatlakozó megbontása után ezt a rongyot feltétlenül az erre a célra rendszeresített gyűjtőedénybe tesszük.**

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.

2) Szereljük le a kormánymű ház szerelvényt. Lásd a 3B fejezet „A kormánymű ház le- és felszerelése” című pontját az RM413D esetén, vagy „A kézi fogasléces-fogaskerekes szerelvény (kormánymű ház)” című pontját a RB413D esetén.

3) Szereljük ki a (2) csőburkolatot a gépkocsiból.

4) Az egyes üzemanyag csövek elejéről és végéről oldjuk le a csőkötéseket és az üzemanyag tömlőket.

A (3) gyorscsatlakozót a következő módon vegyük le:

- Sűrített levegőt ráfújva távolítsuk el a (4) cső és a csatlakozó közül a sarat, port és/vagy egyéb idegen anyagokat.
- A cső és a csatlakozó közé célszerszámot helyezve oldjuk ki a csatlakozót.

### Célszerszám

(A): 09919-47020

c) Vegyük le a (3) csatlakozót a (4) csőről.

1. Bilincs

5) Jelöljük meg a (2) üzemanyag csövön az (1) bilincsek helyét, hogy visszaszereléskor oda kerüljenek, ahol voltak.

6) Szereljük le a (2) csöveket az (1) bilincsekkel együtt a gépkocsiról.

7) Vegyük le az (1) bilincseket a (2) csövekről.

### Felszerelés

1) Helyezzük a bilincseket a csöveken megjelölt helyekre. Ha a bilincs deformálódott vagy a körme elgörbült vagy letört, használjunk új bilincset.

2) Rögzítsük a csöveket a csőbilincsekkel a gépkocsihoz.

- 3) Csatlakoztassuk az üzemanyag tömlőket és csöveket minden egyes csőhöz.

#### FIGYELEM:

Amikor csatlakozó csőidomot illesztünk be, tisztítsuk meg a cső külsejét, ahova a csatlakozó idom kerül, toljuk be a csövet a csatlakozó idomba, amíg a retesz be nem kattán, majd ellenőrizzük, hogy a cső szilárdan illeszkedik-e, különben üzemanyag szivárgás állhat elő.

- 4) Szereljük be az (1) csőburkolatot a gépkocsiba.
- 5) Szereljük be a kormánymű házat a 3B fejezet „A kormánymű ház le- és felszerelése” című pontja szerint az RM413D esetén, vagy „A kézi fogasléc-fogaskerekes szerelvény (kormánymű ház)” című pontja szerint a RB413D esetén.
- 6) Bekapcsolt gyújtás, de álló motor mellett ellenőrizzük, nincs-e valahol üzemanyag szivárgás.

## Az üzemanyag betöltő nyílás záró sapkájának ellenőrzése

Vegyük le az (1) sapkát, és ellenőrizzük a tömítést elhasználódás, sérülés, vagy a betöltő nyílás egyenletes lenyomata szempontjából. Ha a (2) tömítés rossz állapotban van, cseréljük ki a sapkát.

#### MEGJEGYZÉS:

Ha a sapka cserére szorul, csak ugyanolyan jellemzőkkel rendelkező sapkát használjunk. Nem megfelelő sapka használata a rendszer alapvetően hibás működését eredményezheti.

## Az üzemanyag tartály töltőszelepének ki- és beszerelése

#### VIGYÁZAT:

Az alábbi eljárás megkezdése előtt vegyük figyelembe ennek a fejezetnek az „Övintézkedések” című pontjában foglaltakat.

#### Leszerelés

- 1) Vegyük le az üzemanyag töltőnyílás sapkáját.
- 2) Helyezzük be egy kézi szivattyú szívó tömlőjét az (1) üzemanyagtöltő tömlőbe, és szívjuk ki az üzemanyagot az ábrán „A”-val jelölt részből.

#### FIGYELEM:

Ne erőltessük be a szivattyú tömlőjét az üzemanyag tartályba, mert az tönkretelheti az üzemanyag tartály (2) töltőszelepét.

- 3) Emeljük meg a gépkocsit, és vegyük le az üzemanyag tartályról a (2) bilincset és az (1) töltő tömlőt.

- 4) Lapos végű (2) rúddal vagy hasonló eszközzel vegyük ki az (1) üzemanyag tartály töltőszepetét.

**FIGYELEM:**

Ügyeljünk arra, hogy a (2) lapos végű rúddal vagy hasonló eszközzel ne sértsük meg az üzemanyag tartály (1) töltőszepetét.

**Felszerelés**

- 1) Helyezzük be az (1) üzemanyag tartály töltőszepet az üzemanyag tartályba.

- 2) Erősítsük fel az (1) üzemanyag töltő tömlőt az üzemanyag tartályra, és rögzítsük a (2) bilinccsel.  
A bilincs megfelelő elhelyezését lásd ennek a fejezetnek „Az üzemanyag rendszer elemei” című pontjában.
- 3) Engedjük le a gépkocsit, és tegyük fel a töltőnyílás sapkáját.

## Az üzemanyag tartály töltőszelepének ellenőrzése

Ellenőrizzük az üzemanyag tartály (1) töltőszelepét az alábbi szempontokból.

- Sérülés
- Akadálytalan nyitás és zárás

Ha bármilyen sérülést vagy hibás működést észlelünk, cseréljük ki.

## Az üzemanyag tartály ki- és beszerelése

### Kiszzerelés

#### VIGYÁZAT:

- Az alábbi eljárás megkezdése előtt vegyük figyelembe ennek a fejezetnek az „Óvintézkedések” című pontjában foglaltakat.
- Az üzemanyag tömlő megbontása után kifolyhat egy kevés üzemanyag. A személyi sérülés veszélyének csökkentése érdekében a megbontandó tömlőt és csövet takarjuk le gépronggyal. A csatlakozó megbontása után ezt a rongyot feltétlenül az erre a célra rendszeresített gyűjtőedénybe tesszük.

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Emeljük fel a gépkocsit.
- 3) Vegyük le a (3) töltőcsonkról az (1) üzemanyag töltő tömlőt és a (2) szellőző tömlőt.

#### FIGYELEM:

**Az üzemanyag tartály töltőnyílásáról soha se vegyük le az (1) üzemanyag töltő tömlőt. Ha a tartályban a fele mennyiségű vagy még több üzemanyag maradt, ebben az esetben túlcsondul és kifolyik.**

- 4) Mivel az üzemanyag tartályon nincs leeresztő csavar, a tartályból az üzemanyagot a töltőnyíláson keresztül szivattyúzással ürítsük ki.

Az üzemanyag tartály kiürítéséhez kézi működtetésű szivattyút használjunk.

#### FIGYELEM:

- Ne erőltessük be a szivattyú tömlőjét az üzemanyag tartályba, mert az tönkreteheti az üzemanyag tartály töltőszelepét.
- Soha se töltsük az üzemanyagot nyitott edénybe, és ilyenben ne is tároljuk a tűz vagy robbanás veszélye miatt.

5) Vegyük le az üzemanyag csatlakozó idomokat a csövekről.

Az (1) gyorscsatlakozót a következő módon vegyük le:

- Sűrített levegőt ráfújva távolítsuk el a (2) cső és a csatlakozó idom közül a sarat, port és/vagy egyéb idegen anyagokat.
- A (2) cső és az (1) csatlakozó idom közé célszerszámot helyezve oldjuk ki az (1) csatlakozó idom reteszét.

#### Célszerszám

(A): 09919-47020

- Vegyük le a csatlakozó idomot a csőről.

6) Támasszuk alá az (1) üzemanyag tartályt a (2) emelővel, és szereljük ki a felerősítő csavarjait.

7) Engedjük le az üzemanyag tartályt annyira, hogy leköthessük a villamos vezeték (1) csatlakozóját, majd vegyük ki az üzemanyag tartályt.

### Beszerelés

#### FIGYELEM:

- Amikor csatlakozó csőidomot illesztünk be, tisztítsuk meg a cső külsejét, ahova a csatlakozó kerül, toljuk be a csövet a csatlakozó idomba, amíg a retesz be nem kattan, majd ellenőrizzük, hogy a cső szilárdan illeszkedik-e, különben üzemanyag szivárgás állhat elő.
- Vigyázzunk, hogy az üzemanyag tömlők ne hogy hozzáérjenek az ABS érzékelő kábelkötegéhez (ha van ABS).

1) Ha szereltünk le alkatrészeket az üzemanyag tartályról, szereljük azokat vissza, mielőtt a tartályt visszatesszük a gépkocsiba.

- 2) Emeljük meg az (1) üzemanyagtartályt az emelővel, kössük be az üzemanyag szivattyú és a szintmérő csatlakozóját, és a vezetékköteget rögzítsük bilincssel.
- 3) Szereljük be az (1) üzemanyag tartályt a gépkocsiba.

**Meghúzási nyomaték**

**Üzemanyag tartály csavarja (a): 23 Nm (2,3 kgm)**

- 4) Csatlakoztassuk az (1) üzemanyag töltő tömlőt és a (2) szellőző tömlőt a (3) töltőcsonkhoz az ábrán látható módon, és a bilincsekkel szilárdan rögzítsük.

**Meghúzási nyomaték**

**Üzemanyag töltő tömlő bilincs csavarja**

**(a): 1,5 Nm (0,15 kgm)**

- 5) Kössük be az (1) üzemanyag visszatérő tömlőt és a (2) páraelvezető tömlőt az egyes csövekhez az ábrán látható módon, és a bilincsekkel szilárdan rögzítsük.
- 6) Csatlakoztassuk a negatív kábelt az akkumulátorra.  
Bekapcsolt gyújtás, de álló motor mellett ellenőrizzük, nincs-e valahol üzemanyag szivárgás.

## Az üzemanyag tartály ellenőrzése

Az üzemanyag tartály kiszerelése után ellenőrizzük az üzemanyag tartályhoz csatlakozó tömlőket és csöveket szivárgás, laza kötések, elhasználódás és sérülések szempontjából. Ugyancsak ellenőrizzük, hogy nem szivárognak-e az üzemanyag szivattyú szerelvény tömítései; szemrevételezzük a tartályt, hogy nem szivárog és nem sérült-e.

Minden sérült vagy rossz állapotú alkatrészt cseréljünk ki.

## Az üzemanyag tartály átöblítésének módszere

### VIGYÁZAT:

Ez az öblítési eljárás nem távolít el a tartályból minden üzemanyag párárt.

Semmilyen hővel vagy lánggal járó javítást ne végezzünk a tartályon, mert az személyi sérüléssel járó robbanást okozhat.

### FIGYELEM:

Mosás után soha ne maradjon víz a tartályban, mert a tartály belsejében korrózió lép fel.

Az üzemanyag tartályt az alábbi módszerrel öblítsük át.

- 1) Miután az üzemanyag tartályt kisereltük, vegyünk le róla minden tömlőt és csövet, továbbá szereljük ki az üzemanyag szivattyú szerelvényét.
- 2) Öntsük ki a tartályból a maradék üzemanyagot.
- 3) Vigyük a tartályt olyan helyre, ahol az öblítés elvégezhető.
- 4) Töltsük meg a tartályt meleg vízzel vagy csapvízzel, alaposan rázzuk fel, majd öntsük ki a vizet. Ezt addig ismételjük, amíg a tartály belseje tiszta nem lesz.  
Ha a tartály belseje rozsdás, cseréljük ki.
- 5) Mosás után teljes mértékben távolítsuk el a vizet a tartályból.

## Az üzemanyag szivattyú szerelvény ki- és beszerelése

### VIGYÁZAT:

Az alábbi eljárás megkezdése előtt vegyük figyelembe ennek a fejezetnek az „Óvintézkedések” című pontjában foglaltakat.

### FIGYELEM:

Ne szereljük szét az üzemanyag szivattyú szerelvényét. A szétszereléssel alkalmatlanná válik arra, hogy betöltse az eredeti rendeltetését.

### Kiszerelés

- 1) Szereljük ki az üzemanyag tartályt a gépkocsiból ennek a fejezetnek „Az üzemanyag tartály ki- és beszerelése” című pontja szerint.
- 2) Kössük le az (1) üzemanyag szellőző tömlőt, a (2) üzemanyag visszatérő tömlőt, a (3) üzemanyag tápvezetékét és a (4) üzemanyag páratömlőt az üzemanyag szivattyú szerelvényről. Amikor lekötjük az üzemanyag tápvezeték csatlakozó idomait az üzemanyag szivattyú csöveiről, a csatlakozó idomot úgy oldjuk ki, hogy előbb célszerszámot helyezünk a cső és a csatlakozó idom retesze közé.

Célszerszám

(A): 09919-47020

- 3) Szereljük le az (1) üzemanyag szivattyú szerelvényt a (2) üzemanyag tartályról.

### Beszerelés

#### FIGYELEM:

Amikor csatlakozó csőidomot illesztünk be, tisztítsuk meg a cső külsejét, ahova a csatlakozó idom kerül, toljuk be a csövet a csatlakozó idomba, amíg a retesz be nem kattán, majd ellenőrizzük, hogy a cső szilárdan illeszkedik-e, különben üzemanyag szivárgás állhat elő.

- 1) Tisztítsuk meg az (1) üzemanyag szivattyú szerelvény és a tartály illeszkedő felületeit.
- 2) Szereljük új (2) tömitést és (3) karimát az (1) üzemanyag szivattyú szerelvényre, majd szereljük be az üzemanyag szivattyú szerelvényt az üzemanyag tartályba.

#### Meghúzási nyomaték

Üzemanyag szivattyú csavarja (a): 10,5 Nm (1,05 kgm)

- 3) Kössük be az (1) üzemanyag szellőző tömlőt, a (2) üzemanyag visszatérő tömlőt, a (3) üzemanyag tápvezetékét és a (4) üzemanyag páratömlőt az üzemanyag szivattyú szerelvényre.
- 4) Szereljük be az üzemanyag tartályt a gépkocsiba ennek a fejezetnek „Az üzemanyag tartály ki- és beszerelése” című pontja szerint.

## Az üzemanyag szivattyú ellenőrzése

- Ellenőrizzük, nem sérült-e az üzemanyag szivattyú szerelvény.
- Ellenőrizzük, hogy nincs-e elszennyeződve az (1) üzemanyag szívó szűrő.  
Ha igen, tisztítsuk meg vagy cseréljük ki, és ellenőrizzük, nincs-e szennyező anyag az üzemanyag tartályban.
- A üzemanyag szintjelző ellenőrzését lásd a 8C fejezet „Az üzemanyagszint érzékelő (szintjelző egység) ellenőrzése” című pontjában.

## Az üzemanyag szűrőbetét ki- és beszerelése

### Kiszerelés

- 1) Kössek le a negatív kábelt az akkumulátorról.
- 2) Tegyük egy edényt az (1) leeresztő csavar alá, és azt meglazítva eresszük le az üzemanyagot.

- 3) Kössek le az (1) üzemanyag szűrő csatlakozót a (2) üzemanyag szűrőről.

A (3) gyorscsatlakozót a következő módon vegyük le:

- a) Sűrített levegőt ráfújva távolítsuk el a sarat, port és/vagy egyéb idegen anyagokat az (5) üzemanyag szűrő csatlakozó idom és az (1) gyorscsatlakozó közül.
- b) Oldjuk ki a gyorscsatlakozót, célszerszámmal helyezve az üzemanyag szűrő csatlakozó és a gyorscsatlakozó közé.

### Célszerszám

(A): 09919-47020

- c) Kössek le az (1) üzemanyag szűrő csatlakozót az üzemanyag szűrőről.
- 4) Kössek le a (4) csatlakozókat az üzemanyag szűrőről.

- 5) Az üzemanyag szűrő (1) rögzítőjét az óramutató járásával ellentétes irányba fordítva távolítsuk el az (1) üzemanyag szűrő rögzítőt a (4) üzemanyag szűrő házról, célszerszám és (5) satu segítségével.

#### Célszerszám

(A): 09919-48610

- 6) Vegyük le az üzemanyag szűrő (2) tetejét, és vegyük ki az üzemanyag (3) szűrőbetétet.

### Beszerezés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Ügyeljünk arra, hogy új üzemanyag szűrőbetétet és O-gyűrűt szereljünk be.
- Tisztítsuk meg az üzemanyag szűrő házat az alábbiak szerint.
  - a) Tegyük edényt a leeresztő csavar alá, és ezt meglazítva eresszük le az üzemanyagot.
  - b) Húzzuk meg a leeresztő csavart.
  - c) Szereljük ki az üzemanyag szűrő házat.
  - d) Öntsünk dízelolaj helyettesítőt (kerdán, dilutin vagy paraffin) az üzemanyag szűrő házba.
  - e) Tisztítsuk meg az üzemanyag szűrő házat kefével.
  - f) Szárítsuk meg és töröljük ki az üzemanyag szűrő házat.
- Húzzuk meg az üzemanyag szűrő (1) rögzítőt az előírt nyomatékkal, célszerszám és (2) satu segítségével.

#### Célszerszám

(A): 09919-48610

#### Meghúzási nyomaték

#### Üzemanyag szűrő rögzítő

(a): 30 Nm (3,0 kgm)

- Légtelenítsük a rendszert ennek a fejezetnek a „Légtelenítési eljárás” című pontja szerint.
- Indítsuk be a motort, és ellenőrizzük, hogy nem szivárogo-e az üzemanyag.

## Az üzemanyag szűrő szerelvény ki- és beszerelése

### Kiszerelés

- 1) Kössük le az üzemanyag csöveket ennek a fejezetnek „Az üzemanyag szűrőbetét ki-és beszerelése” alatti „Kiszerelés” című pont 1 – 4. lépése szerint.
- 2) Szereljük ki az üzemanyag szűrő szerelvényt.

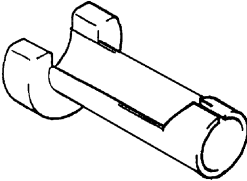

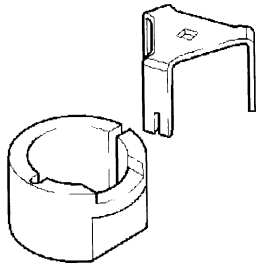

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtuk végre, figyelembe véve az alábbiakat.

- Légtelenítsük a rendszert ennek a fejezetnek „Az üzemanyag rendszer légtelenítése” című pontja szerint.
- Indítsuk be a motort, és ellenőrizzük, hogy nem szivárogo-e az üzemanyag.

## 6E3 FEJEZET

# A MOTOR SZABÁLYOZÓ ÉS EMISSZIÓ CSÖKKENTŐ RENDSZER (Z13DT MOTOR)

6E3

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a 10B fejezet „Általános leírás” részében „A rendszer elemeinek, vezetékeinek és csatlakozóinak elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzuk át a 10B fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## A gépkocsin végzendő szervizmunkák

### Az alapjárat ellenőrzése

- 1) Kapcsoljuk a sebességváltót üres helyzetbe.
- 2) Indítsuk el a motort, és melegítsük fel a rendes üzemi hőmérsékletre.
- 3) Kapcsoljunk ki minden elektromos terhelést.
- 4) A SUZUKI vizsgálókészülékkel ellenőrizzük, hogy az alapjárat fordulatszám az előírt értékeken belül van-e.

**Motor fordulatszám: 720 – 880 ford/min**

- 5) Ha nem, lásd a „B-11 észrevétel: motor üresjárat” című pontot a 6-3 fejezetben.

### A levegőszívó rendszer

#### A vákuumszivattyú le- és felszerelése

##### Leszerelés

##### FIGYELEM:

**Sohase szereljük szét a vákuumszivattyút.**

**A szétszerelés tönkreteszi eredeti funkcióját.**

**Ha hibát találunk, cseréljük ki egy új példányra.**

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük ki az üzemanyag tápcső (1) rögzítő csavarjait.

- 4) Szereljük le az (1) fékrásegítő tömlőt a vákuumszivattyúról.
- 5) Szereljük le a (2) vákuumszivattyút a vezérműtengely csapágyházról.

## Felszerelés

- 1) Helyezzünk új tömítést a vákuumszivattyúra.
- 2) Szereljük fel a (2) vákuumszivattyút a vezérműtengely csapágyházra.  
Illesszük a vákuumszivattyú tengelykapcsoló karmait a vezérműtengely hornyába.
- 3) Húzzuk meg a vákuumszivattyú csavarjait a következők szerint.
  - a) Fokozatosan húzzuk meg a vákuumszivattyú csavarjait 5 Nm (0,5 kgm) nyomatékkal, az ábrán látható számozott sorrend szerint.
  - b) Az a) lépésben leírt módon húzzuk meg a csavarokat 20 Nm (2,0 kgm) nyomatékkal.

### Meghúzási nyomaték

#### Vákuumszivattyú csavarja (a):

**5 Nm (0,5 kgm) majd 20 Nm (2,0 kgm) a megadott eljárás szerint**

- 4) Szereljük fel a (3) fékrásegítő tömlőt a vákuumszivattyúra.
- 5) Húzzuk meg az üzemanyag tápcső (1) rögzítő csavarjait.

- 6) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 7) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## Az üzemanyag szállító rendszer

### VIGYÁZAT:

- Az üzemanyag pára veszélyes. Nagyon könnyen bellobbanhat, súlyos sérülést és kárt okozva. Mindig tartsunk távol mindennemű szikrát és lángot az üzemanyagtól. Az üzemanyag vezeték szakadásai és szivárgásai veszélyesek. Az üzemanyag bellobbanhat, és súlyos sérüléseket vagy halált és kárt okozhat.
- Az üzemanyag ingerelheti a bőrt és a szemet is. Ennek elkerülése érdekében mindig tegyük meg az alábbi „Óvintézkedéseket”.

### Óvintézkedések

- Mielőtt egy üzemanyag tömlőt vagy csövet megbontanánk, várjunk legalább 60 másodpercet a gyújtáskapcsoló kikapcsolása után, hogy megszűnjön a nyomás az üzemanyag rendszerben.
- Az üzemanyag rendszert a karbantartási munka után ellenőrizni kell szivárgás szempontjából ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.
- Az üzemanyag rendszer igen kényes a szennyeződésekre. A szennyeződés bekerülésével járó kockázatok az alábbiak:
  - a nagynyomású befecskendező rendszer és a motor sérülése vagy tönkremenetele.
  - egy elem megszorulása vagy szivárgása.
- A nagynyomású közvetlen befecskendező rendszeren végzett szervizmunkákat igen tiszta körülmények között kell végezni.  
Ez azt jelenti, hogy semmi szennyeződés (néhány mikron méretű részecske) sem kerülhet be a rendszerbe a szétszerelés során, vagy a csővezetékekbe a csőköti elemeken keresztül.
- A tisztasági elvet az üzemanyag szűrőtől kezdve egészen a befecskendező szelepekig be kell tartani.
- Szennyeződést okoz:
  - fém vagy műanyag forgácsok,
  - festék,
  - szálas anyagok: doboz, kefe, papír, ruházat, törlőrongy,
  - idegen testek, pl. haj,
  - környező levegő,
  - stb.
- A motort nem szabad nagynyomású vízszugárral tisztogatni, mert ez tönkretelheti a csatlakozásokat. Ezenfelül a nedvesség behatolhat a csatlakozókba és villamos csatlakozási problémákat okozhat.
- A szerelő tiszta overallt viseljen.
- A csőkötiések szétszereléskor feltétlenül legyenek kéznél a csődugók (célszerszámok). A csődugókat csak egyszer szabad felhasználni. Használat után el kell dobni őket (egyszeri használat során bepiszkolódnak, és a tisztogatás nem teszi őket alkalmassá az ismételt felhasználásra).  
A felhasználatlan dugókat ugyancsak el kell dobni.

### Célszerszám

(A): 09914-65420

(B): 09916-50010

(C): 09919-48320

(D): 09919-48310

### MEGJEGYZÉS:

Ne kövessük az (A) és (B) célszerszámhoz adott kezelési útmutatókat, mert ezek más motoroknál használatosak. Az (A) és (B) célszerszámokat az alábbi ábra szerint szereljük fel.

1. Üzemanyag tápvezeték	4. Közös vezeték (common rail)	7. Üzemanyag szűrő szerelvény
2. Üzemanyag visszavezető tömlő	5. Visszavezető tömlő	⊗ : Ne használjuk fel újra
3. Befecskendező szivattyú	6. Üzemanyag befecskendező szelep	

- Gondoskodjunk róla, hogy legyenek kéznél légmentesen lezárható műanyag tasakok a leszerelt alkatrészek számára. Így a tárolt alkatrészek kevésbé lesznek kitéve a szennyeződés veszélyének. A tasakokat csak egyszer szabad használni, használat után el kell dobni azokat.

- Feltétlenül szőszmentes törölkőt használjunk. Tisztogatáshoz tilos közönséges rongyot vagy papírt alkalmazni. Ezek nem mentesek a szőszöktől és beszennyezhetik a rendszer üzemanyag áramkörét. Minden szőszmentes törölt csak egyszer szabad használni.
- Amennyire csak lehetséges, a szervizelést behelyezett záródugók mellett végezzük, nehogy piszok kerüljön a rendszerbe.
- Az üzemanyag áramkör megbontása előtt betartandó szabályok:
  - Minden művelethez friss oldószert használjunk (a használt oldószerben szennyeződések vannak). Az oldószert tiszta edénybe öntsük.
  - Minden művelethez tiszta, jó állapotban lévő kefét használjunk (a kefe nem hullajthatja a szórét).
  - A megbontandó csatlakozásokat tisztogassuk meg kefével és oldószerral.

- A megtisztított alkatrészeket fúvassuk le sűrített levegővel (az eszközöket ugyanúgy kell megtisztítani mint az alkatrészeket, csatlakozókat és a befecskendező rendszer környezetét). Ellenőrizzük, hogy nem maradtak-e vissza rátapadt kefeszőrök.
- Szükség esetén a műveletek előtt és közben mossunk kezet.
- Bőr védőkesztyűk használata esetén húzzunk rájuk latex kesztyűt is.
- A műveletek során betartandó szabályok.
  - Amint a rendszert megbontottuk, a dugósapkával minden nyílást le kell dugózni, nehogy szennyeződés kerüljön a rendszerbe. A dugókat semmilyen körülmények között sem szabad még egyszer felhasználni.
  - A légmentesen záródó tasakot még akkor is zárjuk be, ha nemsokára ismét ki kell nyitni.  
A környező levegőben szennyező anyagok vannak.
  - A befecskendező rendszer minden leszerelt alkatrészét, a dugók behelyezése után, légmentesen záródó műanyag tasakokban kell tárolni.
  - Ha egyszer megbontottuk az üzemanyag áramkört, szigorúan tilos kefét, oldószert, fúvót, szivacsot vagy közönséges rongyot használni.  
Ezekről könnyen kerülhet szennyeződés a rendszerbe.
  - Egy régi helyett beszerelendő új alkatrészt csak akkor szabad kivenni a tasakjából, amikor felszereljük a gépkocsira.

## Az üzemanyag szivárgás ellenőrzése

- 1) Kapcsoljuk be a gyújtást.
- 2) Ellenőrizzük mindegyik karbantartott alkatrészt szivárgás szempontjából.
- 3) Indítsuk be a motort, majd ellenőrizzük mindegyik karbantartott alkatrészt szivárgás szempontjából.
- 4) Járassuk a motort 4000 ford/min fordulatszámon mintegy 30 másodpercig, majd állítsuk le a motort.
- 5) Ellenőrizzük mindegyik karbantartott alkatrészt szivárgás szempontjából.

## Az üzemanyag szivattyú ellenőrzése beszerelt állapotban

- 1) Ellenőrizzük, hogy az üzemanyag szivattyú működési zaja az üzemanyag szivattyúnál mintegy 20 másodpercig hallható, majd leáll, amikor bekapcsoljuk a gyújtáskapcsolót.  
Ha a fenti ellenőrzés eredménye nem kielégítő, ismételt ellenőrizzük, hogy a rendszer mindegyik lépésben jó állapotban van-e, a 6-3 fejezet „C-06, az üzemanyag szivattyú relé áramköre” című pontja szerint.

- 2) Ellenőrizzük, hogy a gyújtáskapcsoló bekapcsolása után kb. 20 másodpercig az (1) üzemanyag táptömlőn érezzük-e az üzemanyag nyomását.  
Ha nem érezzük az üzemanyag nyomását, ellenőrizzük, hogy nincs-e üzemanyag szivárgás az üzemanyag vezetéknél, vagy nincs-e eldugulva az üzemanyag vezetékek.

## Az üzemanyag szivattyú le- és felszerelése

Lásd a 6C3 fejezet „Az üzemanyag szivattyú szerelvény ki- és beszerelése” című pontját.

## Az üzemanyag szivattyú ellenőrzése

Lásd a 6C3 fejezet „Az üzemanyag szivattyú ellenőrzése” című pontját.

## Az üzemanyag befecskendező szelep ellenőrzése beszerelt állapotban

- 1) Járó, vagy önindítóval forgatott motor mellett sztetoszkóp vagy hasonló eszköz segítségével ellenőrizzük a befecskendező szelep működési hangját.

A működési hang szaporaságának a motor fordulatszámaival kell változnia.

Ha nem hallunk hangot, vagy szokatlan hangot hallunk, ismételt ellenőrizzük, hogy a rendszer mindegyik lépésben jó állapotban van-e a 6-3 fejezet „C-24, az 1. sz. henger befecskendező áramköre”, „C-25, a 2. sz. henger befecskendező áramköre”, „C-26, a 3. sz. henger befecskendező áramköre” vagy „C-27, a 4. sz. henger befecskendező áramköre” című pontjai szerint.

- 2) Vegyük le a csatlakozót a befecskendező szelepről, kössünk ohmmérőt a befecskendező szelep érintkezői közé, és mérjük meg az ellenállást.

Ha a mért ellenállás kívül esik a megadott határértékeken, cseréljük ki a szelepet.

**A befecskendező szelep ellenállása körülbelül 0,5  $\Omega$**

- 3) Kössük be a csatlakozót szilárdan a befecskendező szelepre.

## Az üzemanyag befecskendező szelep ki- és beszerelése

### MEGJEGYZÉS:

Az (1) kalibrációs kód az a kód, amellyel mindegyik befecskendező szelep rendelkezik, és amely az üzemanyag befecskendező szelep teljesítmény jellemzőit képviseli. Ez az ECM-ben van regisztrálva, és az ECM vezérli az üzemanyag befecskendezést az üzemanyag befecskendező szelep teljesítmény jellemzője szerint. Ezért az üzemanyag befecskendező szelepek kicserélése után ügyeljünk arra, hogy úgy szereljük vissza azokat, ahogy eredetileg voltak. Ha az üzemanyag befecskendező szelepeket újra cseréljük ki, ügyeljünk arra, hogy minden egyes kalibrációs kódot regisztráljunk az ECM-ben ennek a fejezetnek az „ECM regisztrálása” című pontja szerint. Tájékozódás céljából meg tudható, hogy jelenleg milyen kalibrációs kódok vannak regisztrálva az ECM-ben.

## Kiszerelés

- 1) Kössük le a negatív (–) kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Vegyük le az (1) bilincseket, majd kapcsoljuk le a (2) visszatérő tömlőt az üzemanyag befecskendező szelepekről.
- 4) Kössük le az üzemanyag befecskendező szelep (3) csatlakozóit.

- 5) Szereljük le az (1) nagynyomású csöveket.  
Amikor meglazítjuk a nagynyomású cső hollandi anyáját, villáskulccsal tartjuk meg a (4) üzemanyag befecskendező szelep (7) hollandi anyáját.
- 6) Szereljük ki a befecskendező szelep (3) tartó anyáját.
- 7) Szereljük le az üzemanyag befecskendező szelepeket az (5) tartójukkal együtt a vezérműtengely házról.
- 8) Szereljük le a (6) tömítő gyűrűket a vezérműtengely csapágyháztól.

2. Közös vezetékek

## Beszerezés

- 1) Tegyük új (2) tömítő gyűrűket az (1) üzemanyag befecskendező szelepekre.
- 2) Helyezzük a (3) üzemanyag befecskendező szelep tartót az üzemanyag befecskendező szelepekre.
- 3) Szereljük fel az üzemanyag befecskendező szelepeket a vezérműtengely házra, majd húzzuk meg a befecskendező szelep tartó (4) anyáját ideiglenesen, kézzel.
- 4) Szereljük fel új (6) nagynyomású csöveket, és húzzuk meg mindegyik hollandi anyát ideiglenesen, kézzel.
- 5) Húzzuk meg az üzemanyag befecskendező szelep tartó anyáját az előírt nyomatékkal.

### Meghúzási nyomaték

#### Üzemanyag befecskendező tartó anya

(a): 20 Nm (2,0 kgm)

- 6) Húzzuk meg a nagynyomású cső hollandi anyáját az előírt nyomatékkal.

Amikor meghúzzuk a nagynyomású cső hollandi anyáját, villáskulccsal tartsuk meg az üzemanyag befecskendező szelep (7) hollandi anyáját.

### Meghúzási nyomaték

#### Nagynyomású cső hollandi anya

(üzemanyag befecskendező felőli oldal)

(b): 24 Nm (2,4 kgm)

#### Nagynyomású cső hollandi anya

(közös vezeték felőli oldal) (c): 28 Nm (2,8 kgm)

### 5. Közös vezeték

- 7) Csatlakoztassuk az (1) visszatérő tömlőt az üzemanyag befecskendező szelepekhez, majd tegyük fel a (2) bilincseket a befecskendező szelepekre.
- 8) Kössük be a (3) üzemanyag befecskendező szelep csatlakozókat.
- 9) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 10) Csatlakoztassuk a negatív (–) kábelt az akkumulátorra.  
Abban az esetben, ha az üzemanyag befecskendező szelepe(ke)t kicseréltük, végezzük el ennek a fejezetnek „Az ECM regisztrálása” című pontját, hogy regisztráljuk az üzemanyag befecskendező szelep kalibrációs kódját az ECM-ben.
- 11) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

## A közös vezeték (nagynyomású üzemanyag befecskendező vezeték) le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük le az (1) nagynyomású tápcsövet a befecskendező szivattyúról és a közös vezetékről.  
Amikor meglazítjuk a nagynyomású cső hollandi anyáját, villáskulccsal tartjuk meg a befecskendező szivattyú (2) hollandi anyáját.

- 4) Szereljük le a nagynyomású csöveket az üzemanyag befecskendező szelepekről és a közös vezetékről ennek a fejezetnek „Az üzemanyag befecskendező szelep ki- és beszerelése” részében a „Leszerelés” című pont 5) lépése szerint.
- 5) Kössük le az (1) üzemanyag visszatérő tömlőket a közös vezetékről.
- 6) Kössük le a csatlakozókat a (2) üzemanyag nyomásszabályozóról és a (3) üzemanyag nyomás érzékelőről.
- 7) Szereljük le a (4) közös vezetéket az (5) tartójáról.

## Felszerelés

- 1) Szereljük fel a (1) közös vezeték a (2) tartójára, és húzzuk meg a közös vezeték (3) csavarjait ideiglenesen, kézzel.
- 2) Szereljük be új nagynyomású csöveket a befecskendező szelepek számára, és új (4) nagynyomású tápcsövet. Húzzuk meg az összes hollandi anyát ideiglenesen, kézzel.
- 3) Húzzuk meg a közös vezeték csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

**Közös vezeték anya (a): 25 Nm (2,5 kgm)**

- 4) Húzzuk meg a nagynyomású tápcső hollandi anyáját az előírt nyomatékkal.  
Amikor meghúzzuk a nagynyomású cső hollandi anyáját, villáskulccsal tartjuk meg a befecskendező szivattyú (5) hollandi anyáját.

### Meghúzási nyomaték

**Nagynyomású tápcső hollandi anya (befecskendező szivattyú felőli oldal) (b): 24 Nm (2,4 kgm)**

**Nagynyomású tápcső hollandi anya (közös vezeték felőli oldal) (c): 28 Nm (2,8 kgm)**

- 5) Húzzuk meg a nagynyomású cső hollandi anyáit az előírt nyomatékkal ennek a fejezetnek „Az üzemanyag befecskendező szelep ki- és beszerelése” részében a „Felszerelés” című pont 6) lépése szerint.
- 6) Kössük be a csatlakozókat a (6) üzemanyag nyomásszabályozóra és a (7) üzemanyag nyomás érzékelőre.
- 7) Csatlakoztassuk a (8) üzemanyag visszatérő tömlőket a közös vezetékre.
- 8) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 9) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 10) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

## A befecskendező szivattyú le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük ki a vákuumszivattyút ennek a fejezetnek „A vákuumszivattyú ki- és beszerelése” című pontja szerint.
- 4) Szereljük le a nagynyomású tápcsövet ennek a fejezetnek „A közös vezeték (nagynyomású üzemanyag befecskendező vezeték) le- és felszerelése” részében a „Leszerelés” című pont 3) lépése szerint.
- 5) Kössük le az (1) üzemanyag táptömlőt és a (2) üzemanyag visszatérő tömlőt a befecskendező szivattyúról.

- 6) Szereljük le az (1) befecskendező szivattyút a vezérműtengely házról a 3 db (2) csavar eltávolításával.

### Felszerelés

- 1) Tisztítsuk meg a befecskendező szivattyú és a vezérműtengely ház illeszkedő felületeit.

- 2) Tegyük új (1) tömítést a befecskendező szivattyúra.
- 3) Szereljük fel a (2) befecskendező szivattyút a vezérműtengely csapágyházra.  
Illesszük a befecskendező szivattyú tengelykapcsolójának (3) karmait a vezérműtengely (4) hornyába.
- 4) Húzzuk meg a befecskendező szivattyú csavarjait az előírt nyomatékkal.

**Meghúzási nyomaték**

**Befecskendező szivattyú csavar (a): 15 Nm (1,5 kgm)**

- 5) Csatlakoztassuk az (1) üzemanyag táptömlőt és a (2) üzemanyag visszatérő tömlőt a befecskendező szivattyúra.

- 6) Szereljük be új nagynyomású tápcsövet ennek a fejezetnek „A közös vezeték (nagynyomású üzemanyag befecskendező vezeték) le- és felszerelése” részében a „Felszerelés” című pont 2) és 4) lépései szerint.
- 7) Szereljük be a vákuumszivattyút ennek a fejezetnek „A vákuum-szivattyú ki- és beszerelése” című pontja szerint.
- 8) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 9) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 10) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

## Az elektronikus vezérlő rendszer

### A motor vezérlő egység (ECM) le- és felszerelése

**FIGYELEM:**

Mivel az ECM precíziós alkatrészeket tartalmaz, óvjuk a nagyobb ütésektől.

[A]: Az ECM csatlakozó lekötésének módja	2. ECM tartó	4. Üzemanyag cső
1. ECM	3. L/K hűtőközeg cső	5. Üzemanyag szűrő szerelvény

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Vegyük le a csatlakozót az üzemanyag szűrő szerelvényről, majd szereljük ki az üzemanyag szűrő szerelvényt az ECM tartójából.
- 3) Vegyük ki az üzemanyag cső rögzítő csavarjait és az L/K hűtőközeg cső rögzítő csavarját.

- 4) Kössük le a csatlakozókat az ECM-ről az alábbiak szerint.
  - a) Húzzuk ki a retesz csúszkát, hogy feloldjuk a reteszelő kar zárását.
  - b) Húzzuk felfelé a reteszelő kart.

- 5) Vegyük ki az ECM-et a tartójával együtt a gépkocsiból.
- 6) Vegyük ki az ECM-et az ECM tartóból.

### Felszerelés

#### MEGJEGYZÉS:

Ha az ECM-et kicseréljük, regisztráljuk a gépkocsi adatait (üzemanyag befecskendező szelep kalibrációs kód, gépkocsi változat, az indításgátló rendszer jelszava és az indításgátló rendszer titkos kulcsa) az ECM-ben, ennek a fejezetnek „Az ECM regisztrálása” és a 8G3 fejezet „Eljárás az ECM cseréje után” című pontja szerint.

A felszerelést a leszerelés műveleteinek a fordított sorrendjében hajtjuk végre.

## **Az ECM regisztrálása**

### **Teendők az ECM cseréje után**

- 1) Csatlakoztassuk a SUZUKI vizsgálókészüléket a DLC-hez.
- 2) Regisztráljuk a következő adatokat az ECM számára „A SUZUKI vizsgálókészülék kezelési útmutatója” szerint.
  - Az üzemanyag befecskendező szelep kalibrációs kódja
  - Gépkocsi változat (a gépkocsi felszereltsége (olyan berendezések, mint az ABS és a L/K))
- 3) A SUZUKI vizsgálókészülék segítségével regisztráljuk az indításgátló rendszer titkos kulcskódját (SKC) és jelszavát „A SUZUKI vizsgálókészülék kezelési útmutatója” szerint.
- 4) Ellenőrizzük a regisztrációs adatokat ennek a fejezetnek „A regisztrációs adatok ellenőrzése” című pontja szerint.

### **Teendők az üzemanyag befecskendező szelep cseréje után**

- 1) Csatlakoztassuk a SUZUKI vizsgálókészüléket a DLC-hez.
- 2) Regisztráljuk az újonnan beszerelt üzemanyag befecskendező szelep kalibrációs kódját az ECM-ben „A SUZUKI vizsgálókészülék kezelési útmutatója” szerint.
- 3) Ellenőrizzük a regisztrációs adatokat ennek a fejezetnek „A regisztrációs adatok ellenőrzése” című pontja szerint.

## A regisztrációs adatok ellenőrzése

- 1) Csatlakoztassuk a SUZUKI vizsgálókészüléket az adatátviteli csatlakozóhoz (DLC), amely a vezető oldalán, a műszerfal alatt helyezkedik el.

### Célszerszám

#### SUZUKI vizsgálókészülék

- 2) Kapcsoljuk be a gyújtást.
- 3) Válasszuk a SUZUKI vizsgálókészülék SELECT MODE menüjében a „MISC Test” parancsban az „ECM registration” alatti „Data List” menüpontot.
- 4) Nyugtázzuk, ha az üzemanyag befecskendező szelep kalibrációs kódja és a gépkocsi változat (a gépkocsi felszereltsége (olyan berendezések, mint az ABS és a L/K)) megfelelnek a SUZUKI vizsgálókészüléken kijelzett adatoknak. Regisztráljuk az üzemanyag befecskendező szelep kalibrációs kódját és a gépkocsi változatot (a gépkocsi felszereltsége (olyan berendezések, mint az ABS és a L/K)) az ECM-ben, ennek a fejezetnek „Az ECM regisztrálása” című pontja szerint, ha az nem megfelelő.
- 5) Nyomjuk meg a SUZUKI vizsgálókészülék „EXIT” gombját.

## A levegő tömegáram (MAF) és a beszívott levegő hőmérséklet (IAT) érzékelő ki- és beszerelése

### FIGYELEM:

- Ne tisztítsuk meg a MAF és az IAT érzékelőt.
- Ha a MAF és az IAT érzékelőt leejtettük, ki kell cserélni.
- Ne szereljük szét a MAF és az IAT érzékelőt.
- Ne tegyük ki semmilyen ütésnek sem a MAF és az IAT érzékelőt.
- Ne fúvassuk le az érzékelőket sűrített levegővel, levegő fúvó pisztolyt vagy hasonlót használva.
- Ne tegyük az ujjunkat vagy bármilyen egyéb tárgyat a MAF és az IAT érzékelőbe. Hibás működés következhet be.

### Kiszerelés

- 1) Kössük le az akkumulátorról a negatív kábelt, majd kössük le az (1) MAF és az IAT érzékelő csatlakozóját.
- 2) Kössük le a levegőszűrő (2) kivezető tömlőjét a MAF és az IAT érzékelőről.
- 3) Szereljük le a MAF és az IAT érzékelőt a levegőszűrő (3) házáról.

### Beszerelés

- 1) Ellenőrizzük a MAF és az IAT érzékelő (1) O-gyűrűjét sérülés és elhasználódás szempontjából.  
Ha hibát találunk, cseréljük ki az O-gyűrűt.
- 2) Szereljük fel a (2) MAF és az IAT érzékelőt a levegőszűrő (4) házára.
- 3) Csatlakoztassuk a levegőszűrő (3) kilépő tömlőjét.  
Húzzuk meg a tömlő bilincset az előírt nyomatékkal, a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Szilárdan kössük be a MAF érzékelő csatlakozóját.
- 5) Csatlakoztassuk a negatív akkumulátor kábelt az akkumulátorra.

## Az izzító gyertya ki- és beszerelése

### Kiszerelés

#### FIGYELEM:

- Ne sértsük meg az izzító gyertya fűtő részét.
- Leejtett izzító gyertyát ne használjunk fel.
- Amikor kiszereljük az izzító gyertyát, először lazítsuk meg szerszám segítségével úgy, hogy egy vagy több menet még fogjon, majd lazítsuk meg, és kézzel vegyük ki.

1) Kössük le a negatív (–) kábelt az akkumulátorról.

2) Húzzuk le az izzító gyertya (1) kábeleit.

3) Szereljük ki a (2) izzító gyertyát a hengerfejből.

#### Célszerszám

(A): 09911-78610

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtuk végre, figyelembe véve az alábbiakat.

- Húzzuk meg az (1) izzító gyertyát az előírt nyomatékkal.

#### Célszerszám

(A): 09911-78610

#### Meghúzási nyomaték

Izzító gyertya (a): 10 Nm (1,0 kgm)

- Szilárdan csatlakoztassuk az izzító gyertya (2) kábeleit.

2. Gázpedál tartó	4. Pedál helyzet érzékelő csatlakozó reteszelő kar	

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Kössük le a csatlakozót a pedál helyzet érzékelőről, a reteszelő kar kihúzásával.
- 3) Szereljük ki a gázpedál szerelvényt a gépkocsi karosszériából.

### Beszerelés

A beszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Szilárdan kössük be a gázpedál helyzetérzékelő csatlakozóját.
- Húzzuk meg a gázpedál szerelvény rögzítő anyáit az előírt nyomatékkal.

### Meghúzási nyomaték

#### Gázpedál felerősítő anya

## Az üzemanyag melegítő és hőmérséklet érzékelő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki az üzemanyag melegítőt és hőmérséklet érzékelőt (üzemanyag szűrő fedél) a 6C3 fejezet „Az üzemanyag szűrő elemeinek ki- és beszerelése” című pontja szerint.

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtjuk végre.

## Az üzemanyag hőmérséklet érzékelő ellenőrzése

- 1) Szereljük ki az üzemanyag hőmérséklet érzékelőt ennek a fejezetnek „Az üzemanyag szűrő elemeinek ki- és beszerelése” című pontja szerint.
- 2) Ellenőrizzük az ellenállást az üzemanyag hőmérséklet érzékelő érintkezői között.  
Ha az nem az előírás szerinti érték, cseréljük ki az üzemanyag melegítőt és hőmérséklet érzékelőt.

## Az üzemanyag nyomás érzékelő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Kössük le az üzemanyag nyomás érzékelő csatlakozóját.

- 4) Szereljük ki az (1) üzemanyag nyomás érzékelőt a (2) közös vezetékből.

## Beszerezés

- 1) Szereljük be az (1) üzemanyag nyomás érzékelőt a (2) közös vezetékbe.  
Húzzuk meg az üzemanyag nyomás érzékelőt az előírt nyomatékkal.

### Meghúzási nyomaték

#### Üzemanyag nyomás érzékelő

(a): 70 Nm (7,0 kgm)

- 2) Csatlakoztassuk az üzemanyag nyomás érzékelő csatlakozóját.
- 3) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 5) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

## Az üzemanyag nyomásszabályozó ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki a vákuumszivattyút ennek a fejezetnek „A vákuumszivattyú ki- és beszerelése” című pontja szerint.
- 3) Kössük le az üzemanyag nyomásszabályozó csatlakozóját.
- 4) Húzzuk ki az (1) üzemanyag nyomásszabályozót a (2) közös vezetékből úgy, hogy kézzel elfordítjuk az óramutató járásával ellentétes irányban.

### Beszerezés

- 1) Kenjük be üzemanyaggal az üzemanyag nyomásszabályozó (1) tömítő gyűrűt.
- 2) Új (2) tömítést használva nyomjuk be a (3) üzemanyag nyomásszabályozót a (4) közös vezetékbe úgy, hogy közben kézzel elfordítjuk az óramutató járásával megegyező irányban.
- 3) Húzzuk meg az üzemanyag nyomásszabályozó (5) csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

#### Az üzemanyag nyomásszabályozó csavarja

(a): 9 Nm (9,0 kgm)

- 4) Szereljük be a vákuumszivattyút ennek a fejezetnek „A vákuumszivattyú ki- és beszerelése” című pontja szerint.
- 5) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 6) Ellenőrizzük az üzemanyag szivárgást ennek a fejezetnek „Az üzemanyag szivárgás ellenőrzése” című pontja szerint.

### Az üzemanyag nyomásszabályozó ellenőrzése

Ellenőrizzük az ellenállást az üzemanyag nyomásszabályozó érintkezői között.

Ha az ellenállás az előírt értéken kívül esik, cseréljük ki az üzemanyag nyomásszabályozót ennek a fejezetnek „Az üzemanyag nyomásszabályozó ki- és beszerelése” című pontja szerint.

**Az üzemanyag nyomásszabályozó ellenállása**  
**2,07 – 2,53 Ω 20 °C-on**

### A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) le- és felszerelése

#### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Ürítsük le a hűtési rendszert.
- 3) Kössük le a fűtés (1) kivezető csövét.
- 4) Vegyük le az ECT érzékelő csatlakozóját.
- 5) Szereljük le a (2) ECT érzékelőt a (3) termosztát házáról.

## Felszerelés

- 1) Kenjük be menetrögzítő ragasztóval az ECT érzékelő menetes részét.

### Loctite omnifit 100 M szerial

- 5) Töltsük fel a hűtő rendszert a 6B3 fejezet „A hűtő rendszer utántöltése és feltöltése” című pontja szerint.
- 6) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 7) Ellenőrizzük a hűtő rendszert szivárgás szempontjából a 6B3 fejezet „A motor hűtő rendszer ellenőrzése és karbantartása” című pontja szerint.

## A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) ellenőrzése

- 1) Szereljük ki az ECT érzékelőt ennek a fejezetnek „A motor hűtőfolyadék hőmérséklet érzékelő (ECT érzékelő) le- és felszerelése” című pontja szerint.
- 2) Merítsük az ECT érzékelő hőre érzékeny részét vízbe, és a víz fokozatos melegítése közben mérjük meg az ellenállást az érzékelő érintkezői között.

Ha a mért ellenállás nem az ábra görbéje szerint változik, cseréljük ki az ECT érzékelőt.

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Kössük le a CMP érzékelő csatlakozóját.
- 4) Szereljük le az (1) CMP érzékelőt a (2) vezérműtengely házáról.

### Felszerelés

- 1) Szereljük fel az (1) CMP érzékelőt a (2) vezérműtengely házra. Húzzuk meg a CMP érzékelő csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

**A CMP érzékelő csavarja (a): 7 Nm (0,7 kgm)**

- 2) Kössük be a CMP érzékelő csatlakozóját.
- 3) Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## A forgattyús tengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Emeljük fel a gépkocsit.
- 3) Kössük le az CKP érzékelő csatlakozóját.
- 4) Szereljük ki az (1) CKP érzékelőt a hengerblokkból.

## Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtjuk végre, figyelembe véve az alábbiakat.

- Tisztítsuk meg a CKP érzékelőt és az érzékelő forgórészének a fogait a visszaszerelés előtt.
- Szereljük fel az (1) CKP érzékelőt a hengerblokkra.

### Meghúzási nyomaték

**CKP érzékelő csavar (a): 9 Nm (0,9 kg-m)**

## A forgattyús tengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) ellenőrzése

- 1) Szereljük ki a CKP érzékelőt ennek a fejezetnek „A forgattyús tengely helyzet (CKP) érzékelő (motor fordulatszám érzékelő) le- és felszerelése” című pontja szerint.
- 2) Ellenőrizzük, hogy az (1) CKP érzékelő és a (2) érzékelő forgórész foga mindenféle fémrészecskétől és sérüléstől mentes-e.

- 3) Ellenőrizzük, hogy a CKP érzékelő érintkezői között az ellenállás megfelel-e az előírt értéknek.  
Ha az ellenőrzés eredménye az előírt értéken kívül esik, cseréljük ki a CKP érzékelőt.

**A CKP érzékelő ellenállása: 632 – 948 Ω**

## A motorolaj szintkapcsoló ki- és beszerelése (ha van)

### Kiszerelés

- 1) Kössek le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki az olajteknőt a 6A3 fejezet „Az olajteknő ki- és beszerelése” című pontja szerint.
- 3) Vegyük ki az (1) rögzítő gyűrűt.
- 4) Vegyük ki a (2) motorolaj szintkapcsolót az olajteknőből.

### Beszerelés

- 1) Ellenőrizzük a motorolaj szintkapcsoló (1) O-gyűrűjét deformáció vagy sérülés szempontjából.  
Ha hibásnak találjuk, cseréljük ki a motorolaj szintkapcsolót.
- 2) Szereljük be a (2) motorolaj szintkapcsolót az olajteknőbe.
- 3) Szereljük fel a (3) rögzítő gyűrűt szilárdan a motorolaj szintkapcsoló csatlakozójára.

- 4) Szereljük be az olajteknőt a 6A3 fejezet „Az olajteknő ki- és beszerelése” című pontja szerint.
- 5) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 6) Ellenőrizzük, hogy nincs-e olajszivárgás.

## A motorolaj szintkapcsoló ellenőrzése (ha van)

- 1) Kössek le a negatív kábelt az akkumulátorról.
- 2) Emeljük fel a gépkocsit.
- 3) Ellenőrizzük a villamos kapcsolatot a motorolaj szintkapcsoló érintkezői között.  
Ha hibásnak találjuk, cseréljük ki a motorolaj szintkapcsolót.

### A motorolaj szintkapcsoló előírt értékei

**Ha a motorolaj az előírt szintig fel van töltve: Van villamos kapcsolat**

**Ha a motorolaj le van eresztve: Nincs villamos kapcsolat**

## A rásegítő nyomás érzékelő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Kössük le a csatlakozót az (1) rásegítő nyomás érzékelőről.
- 3) Szereljük le a rásegítő nyomás érzékelőt a levegőszívó csőről.

### Beszerelés

- 1) Ellenőrizzük az (1) rásegítő nyomás érzékelő (2) O-gyűrűjét deformáció vagy sérülés szempontjából.  
Ha hibát találunk, cseréljük ki a rásegítő nyomás érzékelőt.
- 2) Szereljük be az (1) rásegítő nyomás érzékelőt a (3) levegőszívó csőbe.  
Húzzuk meg a rásegítő nyomás érzékelő csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

#### Rásegítő nyomás érzékelő csavarja

(a): 9 Nm (0,9 kgm)

- 3) Szilárdan kössük be a csatlakozót a rásegítő nyomás érzékelőhöz.
- 4) Csatlakoztassuk a negatív kábelt az akkumulátorra.

## A hűtőventilátor vezérlő rendszerének ellenőrzése

### VIGYÁZAT:

A személyi sérülés elkerülése érdekében tartsuk távol a motor hűtőventilátorától a kezünket, a szerszámokat és a ruházatunkat. A ventilátor villamos hajtású, és attól függetlenül elindulhat, hogy a gépkocsi motorja jár-e vagy sem. Ha a gyújtás be van kapcsolva, a ventilátor az ECT érzékelőtől kapott jel hatására önműködően elindulhat.

Ellenőrizzük a rendszer működését a 6. fejezet „A C-32 ventilátor áramköre” című pontja szerint.

Ha a hűtőventilátor nem működik megfelelően, ellenőrizzük a relét, a hűtőventilátort és a villamos áramkört.

## Az üzemanyag szivattyú relé és a hűtőventilátor relé 1, 2, 3 ellenőrzése

### MEGJEGYZÉS:

Ellenőrizzük mindegyik relé beépítési helyét ennek a szervizkönyvnek az „Előszó” részében a „Villamos kapcsolási rajz” című pont szerint.

- 1) Ellenőrizzük, hogy nincs-e villamos kapcsolat a „c” és a „d” érintkezők között.  
Ha van villamos kapcsolat, cseréljük ki a relét.
- 2) Kössük az akkumulátor pozitív (+) sarkát a relé „b” érintkezőjére. Kössük az akkumulátor negatív (–) sarkát a relé „a” érintkezőjére.  
Ellenőrizzük a villamos kapcsolatot a „c” és a „d” érintkezők között.  
Ha nincs villamos kapcsolat, amikor a relét az akkumulátorra kötjük, cseréljük ki a relét.

## A fő relé és az üzemanyag melegítő relé ellenőrzése

### MEGJEGYZÉS:

Ellenőrizzük mindegyik relé beépítési helyét ennek a szervizkönyvnek az „Előszó” részében a „Villamos kapcsolási rajz” című pont szerint.

- 1) Ellenőrizzük, hogy nincs-e villamos kapcsolat a „c” és a „d” érintkezők között.  
Ha van villamos kapcsolat, cseréljük ki a relét.
- 2) Kössük az akkumulátor pozitív (+) sarkát a relé „b” érintkezőjére.  
Kössük az akkumulátor negatív (–) sarkát a relé „a” érintkezőjére.  
Ellenőrizzük a villamos kapcsolatot a „c” és a „d” érintkezők között.  
Ha nincs villamos kapcsolat, amikor a relét az akkumulátorra kötjük, cseréljük ki a relét.

## Az izzítás vezérlő ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Vegyük le a (2) relé dobozt a tartójáról.
- 3) Vegyük le az (1) izzítás vezérlőt a tartóról.

- 4) Kössük le a csatlakozót az izzítás vezérlőről.

### Beszerelés

A beszerelést a kiszerelés műveleteinek fordított sorrendjében hajtjuk végre.

## Az EGR szelep szerelvény le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Ürítsük le a hűtési rendszert.
- 3) Szereljük le a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 4) Szereljük le a közbenső hűtő kivezetés 2. sz. tömlőjét a 6A3 fejezet „A közbenső hűtő elemei” című pontja szerint.
- 5) Szereljük le a levegőszívó csatlakozást a 6A3 fejezet „A levegőszívó cső le- és felszerelése” című pontja szerint.
- 6) Kössük le az üzemanyag visszatérő tömlőt a közös vezetékről.
- 7) Vegyük le az (1) relé dobozt és a (2) izzítás vezérlőt a tartóról.

- 8) Szereljük le az (1) fűtés bevezető és a (2) 2. sz. kivezető tömlőt a fűtőtestről.

- 9) Vegyük le a fűtés (1) kivezető csővét.

- 10) Kössük le az EGR szelep csatlakozóját.

- 11) Kössük le az EGR (2) hűtő tömlőjét a termosztát házról.
- 12) Szereljük le az (1) EGR szelep szerelvényt a hengerfejről, eltávolítva a 3 db (3) csavart és a (4) bilincset.

### Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- Tisztítsuk meg az EGR szelep szerelvény és a hengerfej illeszkedő felületeit.
- Használjunk új tömítéseket.
- Húzzuk meg az EGR szelep szerelvény rögzítő csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

#### EGR szelep szerelvény rögzítő csavarja

(a): 22 Nm (2,2 kgm)

- Használjunk új hűtő tömlő bilincseket.
- Szereljük fel a levegőszívó csatlakozást a 6A3 fejezet „A levegőszívó cső le- és felszerelése” című pontja szerint.
- Szereljük fel a közbenső hűtő kivezetés 2. sz. tömlőjét a 6A3 fejezet „A közbenső hűtő elemei” című pontja szerint.
- Szereljük fel a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- Töltsük fel a hűtő rendszert a 6B3 fejezet „A hűtő rendszer utántöltése és feltöltése” című pontja szerint.
- Ellenőrizzük a hűtő rendszert szivárgás szempontjából a 6B3 fejezet „A motor hűtő rendszer ellenőrzése és karbantartása” című pontja szerint.

## Az olajleválasztó és a forgattyúház szellőző rendszer fedél le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Szereljük ki a levegőszűrő szerelvényt a 6A3 fejezet „A levegőszűrő szerelvény ki- és beszerelése” című pontja szerint.
- 3) Szereljük le az EGR szelep szerelvényt jelen fejezet „Az EGR szelep szerelvény le- és felszerelése” című pontja szerint.
- 4) Vegyük le az (1) légzőtömlőt az olajleválasztóról.

- 5) Szereljük le a generátor szerelvényt a 6H3 fejezet „A generátor le- és felszerelése” című pontja szerint.

- 6) Szereljük le az (1) olaj nívópálca vezetőt a nívópálcával együtt.
- 7) Szereljük le a generátor (3) konzolját a hengerblokkról, kisserelve a generátor konzol (2) rögzítő csavarjait.

- 8) Szereljük le a (2) 2. sz. szellőző tömlőt az olajleválasztóról.
- 9) Lazítsuk meg az 1. sz. szellőző tömlő bilincsét az olajleválasztónál.
- 10) Szereljük ki az olajleválasztó (3) felerősítő csavarjait.
- 11) Vegyük ki a (4) olajleválasztót, levéve róla az (1) 1. sz. szellőző tömlőt.
- 12) Szereljük le a forgattyúház szellőzés (6) fedelét az 1. sz. szellőző tömlővel együtt, kisserelve a forgattyúház szellőzés fedelének (5) felerősítő csavarjait.

## Felszerelés

A felszerelés a leszerelés műveleteinek fordított sorrendű végrehajtásával történik, figyelembe véve az alábbiakat.

- Tisztogassuk meg a forgattyúház szellőző rendszer fedele és a hengerblokk illeszkedő felületeit.
- Használjunk új tömítést a forgattyúház szellőző rendszer fedeléhez és új szellőzőtömlő bilincseket.
- Húzzuk meg a forgattyúház szellőző rendszer fedél felerősítő csavarjait, az olajválasztó felerősítő csavarjait és a generátor konzol felerősítő csavarjait az előírt nyomatékkal.

### Meghúzási nyomaték

## 6G3 FEJEZET

# AZ ÖNINDÍTÓ RENDSZER (Z13DT MOTOR)

6G3

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légsák) rendszerrel ellátott gépkocsik esetében:

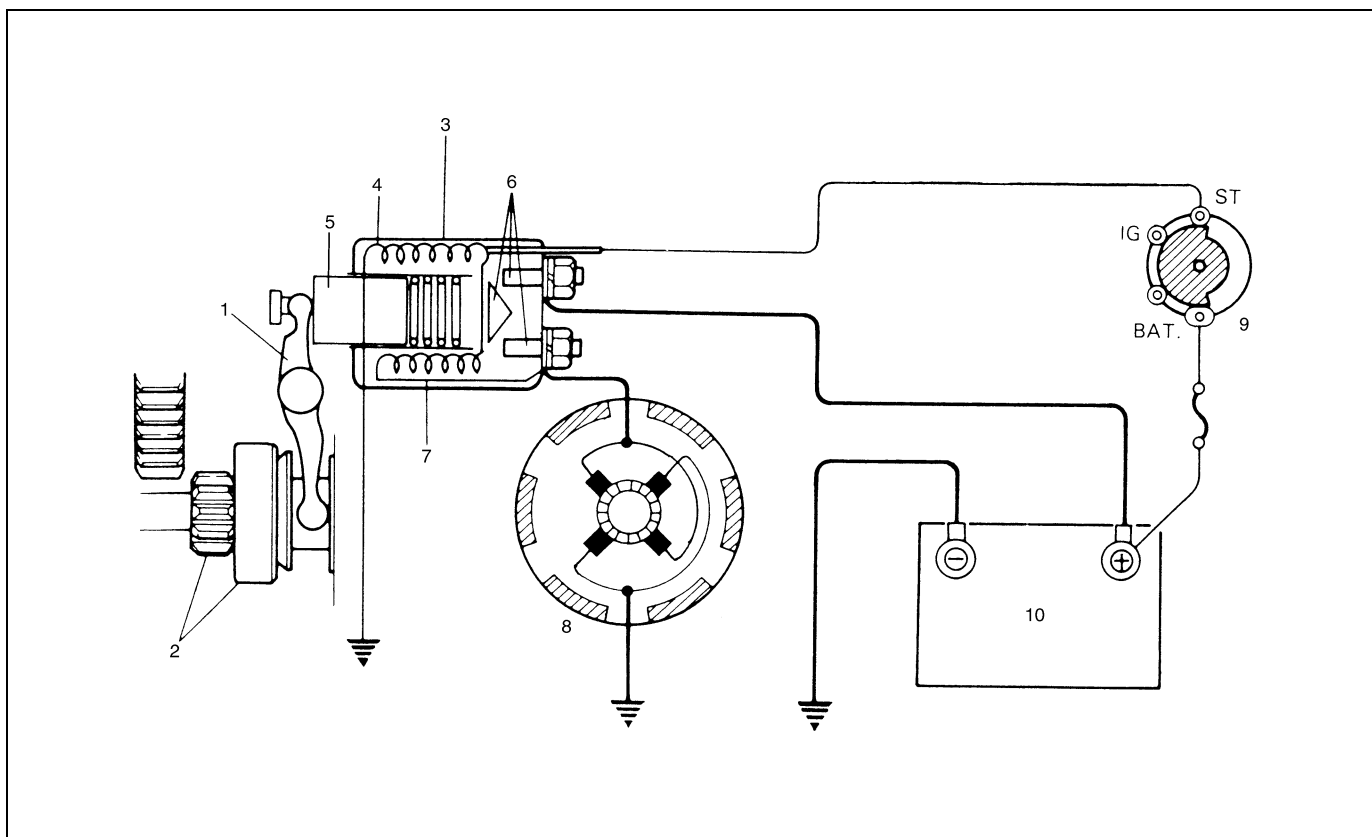

- A légsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a 10B fejezet „Általános leírás” részében „A rendszer elemeinek, vezetékeinek és csatlakozóinak elhelyezkedése” című pontot, hogy megállapíthassuk, a légsák-rendszer elemein vagy vezetékein, illetve azok közelében végzünk-e szervizmunkát. Mielőtt a légsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a 10B fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

4. Benntartó tekercs	8. Indítómotor	

## Diagnosztika

### Az önindító rendszer tüneti diagnosztikája

Az indító rendszer üzemzavara miatti hibatünetek az alábbiak lehetnek:

- Az indítómotor nem forog (vagy lassan forog)
- Az indítómotor forog, de a gépkocsi motorját nem forgatja meg
- Rendellenes zaj

Megfelelő hiba meghatározást kell végezni annak pontos megállapítására, hogy mi okozza a zavart: az akkumulátor, a villamos vezetékek (beleértve az indítómotor kapcsolót is), az indítómotor vagy a gépkocsi motorja.

Ne szereljük le azonnal az indítómotort, ha nem működik. Ellenőrizzük az alábbi pontokat, és szűkítsük a lehetséges hibaforrások körét.

- 1) Hiba körülmények
- 2) A csatlakozás szorossága az akkumulátor sarkain (beleértve a testelő kábel motor oldali rögzítését is) és az indítómotor kapcsain
- 3) Az akkumulátor lemerülése
- 4) Az indítómotor felszerelése

Állapot	Lehetséges ok	Javítás módja
<b>Az indítómotor nem forog (Nem hallatszik a mágneskapcsoló működési hangja)</b>	Az akkumulátor lemerült	Töltsük fel az akkumulátort.
	Az akkumulátor elhasználódása miatt túl alacsony a feszültség	Cseréljük ki az akkumulátort.
	Rossz érintkezés az akkumulátor csatlakozóin	Húzzuk meg, vagy cseréljük ki.
	Laza a testelő kábel csatlakozása	Húzzuk meg.
	A biztosíték kilazult vagy kiolvadt	Szorítsuk meg, vagy cseréljük ki.
	Rossz érintkezés a gyújtáskapcsolóban vagy a mágneskapcsolóban	Cseréljük ki.
	A vezeték csatlakozó meglazult	Húzzuk meg.
	Szakadás a gyújtáskapcsoló és a mágneskapcsoló közötti áramkörben	Javítsuk meg.
	Szakadás a behúzó tekercsben	Cseréljük ki az indítómotort.
	A szénkefék rosszul érintkeznek, vagy kopottak a szénkefék	Cseréljük ki az indítómotort.
	A behúzó vasmag és/vagy a fogaskerék nehezen csúszik el	Cseréljük ki az indítómotort.
<b>Az indítómotor nem forog (Hallatszik a mágneskapcsoló működési hangja)</b>	Az akkumulátor lemerült	Töltsük fel az akkumulátort.
	Az akkumulátor elhasználódása miatt túl alacsony a feszültség	Cseréljük ki az akkumulátort.
	Az akkumulátor kábelek rosszul érintkeznek	Húzzuk meg.
	Beégett fő érintkező, vagy rossz érintkezés a mágneskapcsolóban	Cseréljük ki az indítómotort.
	A szénkefék rosszul érintkeznek, vagy kopottak a szénkefék	Cseréljük ki az indítómotort.
	Gyenge szénkefe rugó	Cseréljük ki az indítómotort.
	Beégett kommutátor	Cseréljük ki az indítómotort.
	Tekercsréteg zárlat a forgórészben	Cseréljük ki az indítómotort.
	A forgattyús tengely forgása akadályozva van	Javítsuk meg.
<b>Az indítómotor forog de csak lassan (kicsi a nyomaték) (ha az akkumulátor és a vezetékek rendben vannak, ellenőrizzük az indítómotort)</b>	Rossz érintkezés a mágneskapcsoló fő érintkezőinél	Cseréljük ki az indítómotort.
	Tekercsréteg zárlat a forgórészben	Cseréljük ki az indítómotort.
	Érintkezés hibás, beégett vagy kopott kommutátor	Cseréljük ki az indítómotort.
	Kopott szénkefék	Cseréljük ki az indítómotort.
	Gyenge szénkefe rugók	Cseréljük ki az indítómotort.
	Beégett vagy rendellenesen kopott hátsó persely	Cseréljük ki az indítómotort.
<b>Az indítómotor jár, de nem forgatja a gépkocsi motorját</b>	A fogaskerék fogai elkoptak	Cseréljük ki az indítómotort.
	A szabadonfutó tengelykapcsoló nehezen csúszik el	Cseréljük ki az indítómotort.
	A szabadonfutó tengelykapcsoló megcsúszik	Cseréljük ki az indítómotort.
	A fogaskoszorú fogai elkoptak	Cseréljük ki a lendkereket.
<b>Zaj</b>	Rendellenesen kopott persely	Cseréljük ki az indítómotort.
	A kis fogaskerék vagy a fogaskoszorú fogai kopottak	Cseréljük ki az indítómotort vagy a lendkereket.
	A kis fogaskerék nehezen csúszik el (nem tér vissza)	Cseréljük ki az indítómotort.
	Kopott belső fogazás vagy bolygókerék fogak	Cseréljük ki az indítómotort.
	Az alkatrészek kenésének hiánya	Cseréljük ki az indítómotort.
<b>Az indítómotor nem áll le</b>	A mágneskapcsoló érintkezési pontjai összeolvadtak	Cseréljük ki az indítómotort.
	Rövidzárlat a mágneskapcsoló tekercs menetei között (tekercsréteg zárlat)	Cseréljük ki az indítómotort.
	A gyújtáskapcsoló nem áll vissza	Cseréljük ki.

## Az önindító rendszer vizsgálata

### FIGYELEM:

A próbákat legfeljebb 3 – 5 másodpercig végezzük, hogy elkerüljük a tekercs leégését.

### Behúzási próba

Kössük az akkumulátort a mágneskapcsolóra az ábrán látható módon.

Ellenőrizzük, hogy a behúzó vasmag és a kis fogaskerék mozog-e kifelé.

Ha a behúzó vasmag és a kis fogaskerék nem mozdul, cseréljük ki az indítómotort.

### MEGJEGYZÉS:

A próba előtt vegyük le a (3) vezetéket a (2) „M” jelű kivezetésről.

1. „S” jelű kivezetés

### Benntartási próba

A fenti kapcsolásban, kitolt behúzó vasmag mellett vegyük le a negatív vezetéket az „M” jelű kivezetésről.

Ellenőrizzük, hogy a behúzó vasmag és a kis fogaskerék kint marad-e.

Ha a behúzó vasmag és a kis fogaskerék visszafelé (befelé) mozdul, cseréljük ki az indítómotort.

### Behúzó vasmag és fogaskerék visszatérési próba

Vegyük le a negatív kábelt a indítómotor házáról.

Ellenőrizzük, hogy a behúzó vasmag és a kis fogaskerék elmozdul-e visszafelé (befelé).

Ha a behúzó vasmag és a kis fogaskerék nem tér vissza, cseréljük ki az indítómotort.

## Terheletlen működési próba

Kössük az (1) vezeték a (2) „M” jelű kivezetéshez.

Kössük az akkumulátort az indítómotorra az ábrán látható módon.

Ellenőrizzük, hogy az indítómotor simán és folyamatosan forog-e, miközben a fogaskerék kitolódik.

Ha az ellenőrzés eredménye nem kielégítő, cseréljük ki az indítómotort.

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a 10B fejezet „Általános leírás” részében „A rendszer elemeinek, vezetékeinek és csatlakozóinak elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a 10B fejezet „A gépkocsin végzendő szervizmunkák” részében található minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## Általános leírás

### Az akkumulátor leírása

Az akkumulátor a villamos rendszerben három fő feladattal rendelkezik.

- Energiaforrásként szolgál a motor indításához.
- Stabilizálja a villamos rendszer feszültségét.
- Korlátozott ideig energiát szolgáltat, ha a villamos terhelés meghaladja a generátor leadott teljesítményét.

### A tartó és a lefogó kengyel

Az akkumulátor tartószerkezetének jó állapotban kell lennie, hogy szilárdan alátámassza és vízszintesen tartsa az akkumulátort.

Az akkumulátor beszerelése előtt a tartó és a lefogó kengyel legyen tiszta és korróziómentes, továbbá bizonyosodjunk meg arról, hogy nincs-e idegen tárgy a tálcában.

Ahhoz, hogy az akkumulátor ne billegjen a helyén, a leszorító csavarokat elegendően szorosan meg kell húzni, de nem szabad túlfeszíteni.

### Az elektrolit befagyása

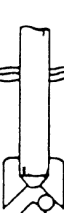

Az elektrolit fagyáspontja a folyadék fajlagos sűrűségétől függ. Mivel a befagyás tönkretelheti az akkumulátort, úgy védekezzünk a befagyás ellen, hogy teljesen feltöltött állapotban tartjuk. Ha az akkumulátor mégis befagyott, addig nem szabad tölteni, amíg fel nem melegedett.

### Szulfátosodás

Ha az akkumulátort hosszabb ideig feltöltetlen állapotban hagyjuk állni, az ólomszulfát kemény, kristályos anyaggá alakul át, amely a rákövetkező töltés során nehezen változik vissza aktív anyaggá. A „szulfátosodás” kifejezés a reakció folyamatát és annak eredményét is jelenti. Az ilyen akkumulátort csak nagyon lassú töltéssel lehet újra feléleszteni, és bár visszaállítható használható állapotba, a kapacitása a korábbinál kisebb lesz.

### A beépített állapotjelző (ha van)

Az akkumulátor tetején beépített, hőmérséklet kompenzált jelzőkészülék van. Ez a jelzőkészülék az alábbi diagnosztikai módszerrel használható. A jelzőkészülék vizsgálatakor az akkumulátor teteje legyen tiszta. Gyengén megvilágított helyen lámpára is szükség lehet.

D I A G N O S Z T I K A	FELTÖLTVE	TÖLTÉS SZÜKSÉGES	ALACSONY FOLYADÉK-SZINT CSERÉLJÜK KI AZ AKKUMULÁTORT
	K I J E L Z Ő	K I J E L Z Ő	K I J E L Z Ő
	Zöld pont 	Sötét 	Átlátszó 
MÉRŐ GÖLYÖ			

Rendes üzemi körülmények között az alábbi háromféle jelzés jelenhet meg.

- Zöld pont  
Az akkumulátor kellőképpen fel van töltve a vizsgálathoz.

- Sötét  
Az akkumulátort a vizsgálat előtt fel kell tölteni.

Ha indítási nehézségek jelentkeznek, az akkumulátort a Diagnosztika című pontban leírtak szerint kell megvizsgálni. Ebből az alkalomból a feltöltést és a villamos rendszereket is célszerű ellenőrizni.

- Átlátszó vagy világossárga

Ez azt jelenti, hogy a folyadékszint a folyadéksűrűség mérő alsó vége alatt van. Ennek lehetséges oka a túl erős vagy túl hosszú töltés, a törött akkumulátor ház, a túlzott megdőlés vagy az akkumulátor tönkremenetele. Ha az akkumulátor ilyen állapotba került, lehetséges, hogy a nagy töltő feszültséget a hibás töltő rendszer okozza, és ezért mind a töltő, mind a villamos rendszert ellenőrizni kell. Ha indítási nehézségek jelentkeznek, és ezek oka az akkumulátor, akkor ki azt kell cserélni.

## Az akkumulátor gondozása

### VIGYÁZAT:

- Soha ne tegyük ki az akkumulátort nyílt láng vagy villamos szikrák hatásának, mert az akkumulátor gyúlékony és robbanásveszélyes gázt fejleszt.
- Az akkumulátor elektrolit ne kerüljön a szemünkbe, a bőrünkre, a ruhánkra vagy festett felületekre, mert ez a folyadék maró hatású sav. Minden beszennyeződött felületet azonnal és alaposan mossunk le vízzel.
- Az akkumulátorokat mindig úgy kell tartani, hogy gyermekek ne férjenek hozzá.

- 1) Az akkumulátor igen megbízható alkatrész, de rendszeres gondozást igényel.
  - Az akkumulátor tartó szerkezetét tartsuk tisztán.
  - Gátoljuk meg a korrózió kialakulását az akkumulátor sarkain.
  - Tartsuk az elektrolit szintjét a felső szintjelzés közelében, mindegyik cellában egyformán.
  - Ha az akkumulátort hosszú időn keresztül a gépkocsiban tartjuk, kövessük az alábbi tanácsokat.
    - Hetenként indítsuk el a motort, és addig járassuk 2000 – 3000 ford/min fordulatszámon, amíg el nem éri a rendes üzemi hőmérsékletét. Mielőtt otthagyjuk a gépkocsit, győződjünk meg arról, hogy mindegyik villamos fogyasztó ki van kapcsolva.
    - Havonta kétszer töltsük fel az akkumulátort a túlzott mértékű kisülés elkerülése érdekében. Ez különösen akkor fontos, amikor a környezeti hőmérséklet alacsony.

Az akkumulátor akkor is kisül, ha a leállított gépkocsiban nem használjuk. Ha az akkumulátor nincs megfelelő mértékben feltöltve, akkor hideg időben az elektrolit befagyhat, és az akkumulátor háza megrepedhet.
- 2) Tartsuk tisztán az akkumulátor kábelek csatlakozásait.
 

A kábelcsatlakozók hajlamosak a korrózióra, különösen a pozitív (+) sarkon. A korrózió vagy rozsda a vezetők illeszkedő felületein elektromos ellenállás réteget képez.

Rendszeresen tisztítsuk meg az akkumulátor sarkait és a szerelvényeket a jó fémes érintkezés biztosítása érdekében, és minden tisztítás után zsírozzuk be a csatlakozásokat, hogy megvédjük azokat a rozsdásodástól.
- 3) Mindig legyünk tisztában azzal, hogy az akkumulátor mennyire feltöltött állapotban van. A feltöltés mértékét a legegyszerűbben a folyadék sűrűségének mérésével állapíthatjuk meg. A folyadéksűrűség mérő olyan készülék, amely az akkumulátor elektrolit fajlagos sűrűségét méri. Az elektrolit fajlagos sűrűsége pedig jelzi a feltöltés mértékét.

A generátor leírása

A generátor kisméretű, nagy teljesítményű típus, beépített integrált áramkörös (IC) szabályozóval. A belső alkatrészek villamos kapcsolása az alábbi ábrán látható.

A generátor főbb jellemzői:

- A félvezető szabályozó a generátor belsejébe van beépítve.
- A szabályozó minden alkatrészét zárt öntvény foglalja magában.
- Ez az egység a szénkefe tartóval együtt a generátor házának hátsó részére van szerelve.
- Az IC szabályozó integrált áramkörökből áll és a generátor által előállított feszültséget szabályozza, de a beállított feszültség nem módosítható.
- A generátor forgórész csapágiai elegendő zsírt tartalmaznak ahhoz, hogy ne igényeljenek rendszeres karbantartást. A két szénkefe két csúszógyűrűn át továbbítja az áramot a forgórészre szerelt gerjesztő tekercshez, és rendes körülmények között hosszú ideig nem igényelnek felügyeletet.
- Az állórész tekercselés a generátor ház részét képező lemezelt mag belsején helyezkedik el.

## Diagnosztika

### Az akkumulátor ellenőrzése

#### Szemrevételezés

Ellenőrizzük a szembetűnő sérüléseket, mint amilyen a repedt ház vagy fedél, ami elektrolit veszteséget okozhat. Ha szembetűnő hibát találunk, cseréljük ki az akkumulátort. Állapítsuk meg a sérülés okát, és szükség szerint küszöböljük ki.

### A generátor tüneti diagnosztikája

#### FIGYELEM:

- Ne kapcsoljunk terhelést az L és az E jelzésű kivezetések közé.
- Amikor töltő berendezést vagy külső akkumulátort kötünk a gépkocsi akkumulátorához, vegyük figyelembe ennek a fejezetnek az „Indítás szükséghelyzetben” című pontjában leírtakat.

A töltő rendszer zavarát az alábbi körülmények jelezhetik:

- 1) A hibajelző lámpa rendellenes működése.
- 2) Az akkumulátor gyengén feltöltött állapota, amit a lassú indítómotor forgás vagy a jelzőlámpa elsötétülése tanúsít.
- 3) Túltöltött akkumulátor, amit a szellőző nyílásokon kibuggyanó elektrolit jelez.

A generátor zajosságát laza szíjtárcsa, laza rögzítő csavar, kopott vagy elszennyeződött csapágy, hibás dióda vagy sérült állórész okozhatja.

	A vezetékek hibásak	Javítsuk ki a vezetékeket.
A rádió recseg	Hibás kondenzátor	Cseréljük ki a generátort.

## **Elégtelenül feltöltött akkumulátor**

Ezt az állapotot, amit az indítómotor lassú forgása vagy az elektrolit kis sűrűsége jelez, az alábbi körülmények egyike (vagy akár több is) okozhatja, még akkor is, ha a töltésjelző lámpa rendesen működik. Az alábbi eljárás voltmérővel és ampermérővel felszerelt gépkocsira is vonatkozik.

- Győződjünk meg arról, hogy az akkumulátor gyenge töltését nem a hosszabb ideig bekapcsolva hagyott segédberendezések okozták.
- Ellenőrizzük, hogy megfelelő-e a hajtószíj feszessége.
- Ha az akkumulátor hibájára gyanakszunk, nézzük át ennek a fejezetnek „Az akkumulátor leírása” című pontját.
- Vizsgáljuk meg, nem hibásak-e a vezetékek. Ellenőrizzük mindegyik csatlakozás szorosságát és tisztaságát, a kábelcsatlakozásokat az akkumulátornál, az indítómotor és a gyújtás testelő vezetékeit.

## A gépkocsin végzendő szervizmunkák

### Indítás szükséghelyzetben

#### Külső (rásegítő) akkumulátorról

##### FIGYELEM:

Ha a gépkocsi kézi sebességváltóval és katalizátorral van ellátva, ne próbáljuk meg betolással vagy vontatással elindítani. Ez az emisszió csökkentő rendszer és/vagy más alkatrészek tönkremenetelét eredményezheti.

Áthidaló kábel használata esetén mind a külső, mind a lemerült akkumulátort körültekintéssel kell kezelni. Kövessük az alább vázolt eljárást, és vigyázzunk arra, hogy ne okozzunk szikrát.

##### VIGYÁZAT:

- Ha eltérünk ezektől a feltételektől vagy eljárásoktól, úgy az alábbi következmények állhatnak elő:
  - Súlyos személyi sérülés (különösen szemsérülés) vagy vagyoni kár az akkumulátor felrobbanása, a kifolyt akkumulátorsav vagy a villamos áram okozta égések következtében.
  - Elektronikus berendezések tönkremenetele a két gépkocsi bármelyikén.
- Vegyünk le gyűrűt, órát és egyéb ékszereket. Viseljünk biztonsági védőszemüveget.
- Nagyon vigyázzunk arra, hogy fém szerszám vagy az áthidaló kábel ne érjen hozzá az akkumulátor pozitív sarkához (vagy vele kapcsolatban álló fémhez) és a gépkocsi bármely más fém részéhez, mert rövidzárlat következhet be.

##### VIGYÁZAT:

**Ne csatlakoztassuk a negatív kábelt közvetlenül a lemerült akkumulátor negatív sarkához.**

- 1) Húzzuk be a kéziféket, és tegyük üresbe a kézi sebességváltót. Kapcsoljuk ki a gyújtást, a világítást és minden más villamos fogyasztót.
- 2) Ellenőrizzük az elektrolit szintjét. Ha az alsó szint alatt van, töltsük fel desztillált vízzel.
- 3) Erősítsük az egyik áthidaló kábel végét a külső akkumulátor pozitív sarkához és ugyanannak a kábelnek a másik végét a lemerült akkumulátor pozitív sarkához. (A motor külső indításához csak 12 V feszültségű akkumulátort használjunk.)
- 4) A másik kábel egyik végét erősítsük a külső akkumulátor negatív sarkához, a másik végét pedig a motor egy megbízható testelő pontjához (például a kipufogó gyújtócsőhöz), legalább 45 cm távolságra az indítandó gépkocsi akkumulátorától.
- 5) Indítsuk el annak a gépkocsinak a motorját, amelyikben a külső akkumulátor van, és kapcsoljuk ki a felesleges villamos fogyasztókat. Ezek után indítsuk el annak a gépkocsinak a motorját, amelyikben a lemerült akkumulátor van.
- 6) A kábeleket pontosan fordított sorrendben távolítsuk el.

### Töltő berendezésről

##### FIGYELEM:

Ha a motort külső akkumulátortöltő berendezésről indítjuk, csakis 12 V feszültségű, negatív testelésű készüléket használjunk. Ne használjunk 24 V feszültségű töltőt. Ilyen készülék használata súlyosan károsíthatja a villamos rendszert vagy az elektronikus berendezéseket.

## Az akkumulátor ki- és visszaszerelése

### Kiszerelés

- 1) Kössük le az akkumulátorról az (1) negatív kábelt.
- 2) Kössük le az akkumulátorról a (2) pozitív kábelt.
- 3) Vegyük le a (3) rögzítő kengyelt.
- 4) Vegyük ki a (4) akkumulátort.

5. Karosszéria testelő csavar
6. Helybentartó csavar

### Kezelés

Az akkumulátor kezelése során tartsuk be az alábbi óvintézkedéseket:

- Az akkumulátor hidrogéngázt termel. Egy akkumulátor-közelben láng vagy szikra meggyújthatja a gázt.
- Az akkumulátor folyadék erős sav. Vigyázzunk arra, hogy ne kerüljön a ruhánkra vagy más szövetanyagra. A kifolyt elektrolitot bő vízzel azonnal le kell öblíteni, és le kell tisztítani.

### Visszaszerelés

- 1) A visszaszerelést a kiszerelés műveleteinek fordított sorrendjében hajtsuk végre.
- 2) Húzzuk meg az akkumulátor kábelcsatlakozóit az előírt nyomatékkal.

#### MEGJEGYZÉS:

Ellenőrizzük, hogy a testelő kábel akkumulátorra csatlakozása és a motorháztető között elegendő távolság van-e.

#### Meghúzási nyomaték

## Általános leírás

A kipufogó rendszer a kipufogó gyűjtőcsőből, a háromutas katalizátorból (TWC), a turbófeltöltőből, a kipufogócsőből, a hangtompítóból és a tömítésekből, stb. áll.

A háromutas katalizátor a kipufogó rendszerbe iktatott emisszió csökkentő berendezés, amelynek feladata a szennyező szénhidrogének (HC), szénmonoxid (CO) és nitrogénoxidok (NOx) kibocsátási szintjének a csökkentése a kipufogó gázban.

## Karbantartás

### VIGYÁZAT:

**Az égési sérülések elkerülése érdekében ne érintsük meg a kipufogó rendszert, amíg még meleg. A kipufogó rendszeren csak hideg állapotban szabad bármilyen szervizmunkát végezni.**

Minden rendszeres karbantartás alkalmával, vagy ha a gépkocsit más szervizelés céljából felemeljük, ellenőrizzük a kipufogó rendszert az alábbiak szerint:

- Ellenőrizzük, hogy az (1) felfüggesztő gumi elemek nincsenek-e megsérülve vagy elhasználódva, és nem mozdultak-e el.
- Ellenőrizzük, hogy a kipufogó rendszeren nincs-e szivárgás, laza csatlakozás, horpadás és sérülés.
- Ha a csavarok vagy anyák meglazultak, húzzuk meg azokat az előírt nyomatékkal ennek a fejezetnek „A kipufogó rendszer elemei” című pontja szerint.
- Ellenőrizzük a kipufogó rendszer közelében a karosszéria elemeket, nincs-e rajtuk sérülés, hiányzó vagy rosszul elhelyezett alkatrész, kinyílt hegesztési varrat, lyuk, laza csatlakozás vagy más olyan hiba, ami lehetővé teheti a kipufogógázok beszivárgását a gépkocsiba.
- Bizonyosodjunk meg arról, hogy a kipufogó rendszer elemei elég távol vannak a padlólemezről ahhoz, hogy elkerülhető legyen a túlmelegedés és a padlószőnyeg esetleges tönkremenetele.
- Minden hibát azonnal ki kell javítani.

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## Általános leírás

### A kézi erőátviteli hajtómű kialakítása és szervizelése

Az erőátviteli hajtómű öt előremeneti és egy hátrameneti fokozattal rendelkezik, ezek kapcsolását három szinkronkapcsoló és három tengely-csoportkerék (behajtótengely), főtengely és a hátrameneti fogaskerék tengelye végzi. Valamennyi előremeneti fogaskerék állandó kapcsolatban van egymással, csak a hátramenetnél kapcsolódik be egy elcsúszó előtét fogaskerék.

Az 1. és 2. sebesség szinkronizálója a főtengelyre van szerelve, és a főtengely 1. vagy 2. fogaskerekével kapcsolódik, ugyanígy a 3. és 4. szinkronizáló is a főtengelyen van, és a főtengely 3. vagy 4. fogaskerekével kapcsolódik.

Az 5. sebesség szinkronizálója a főtengelyen a kerékcsoportra szerelt 5. fogaskerékkel kapcsolódik.

Az 1. és 2. sebességfokozat szinkronizáló berendezésénél alkalmazott kétkúpos szinkronkapcsoló mechanizmus azt a célt szolgálja, hogy az 1. és 2. sebességfokozatba kapcsolást hatékonyabbá tegye.

A főtengely a kihajtó fogaskereket és a differenciálmű szerelvényt hajtja, és ezeken keresztül hajtja a mellső kerekekhez kapcsolódó mellső hajtótengelyeket.

A szervizelés során az alumíniumból készült erőátviteli hajtómű ház illeszkedő felületein eredeti vagy azzal egyenértékű tömítőanyagot kell használni. A ház összeerősítő csavarjait nyomatékkulcs segítségével, az előírt nyomatékkal kell meghúzni. Az is igen fontos, hogy összeszerelés előtt mindegyik alkatrészt tisztítófolyadékkal megtisztítsuk, és levegő ráfúvatással megszársítsuk.

Az új szinkrongyűrűket tilos az összeszerelés előtt csiszolómasszát használva összezsírozni a hozzájuk tartozó fogaskerék kúpokkal.

	Hibás foghézag a nyeles kúpkerek és a fogaskerék között	Cseréljük ki.
	A fogak nem megfelelő érintkezése a nyeles kúpkerek és a fogaskerék közötti kapcsolódásban	Cseréljük ki.

## A gépkocsin végzendő szervizmunkák

### FIGYELEM:

Ne használjuk fel újra a rögzítő gyűrűket, rugós illesztő szegeket, E-kapcsokat, olajtömítő gyűrűket, tömítéseket, önbiztosító anyákat, és a külön megnevezett alkatrészeket. Ezek ismételt felhasználása hibát eredményezhet.

### A kézi erőátviteli hajtómű olaj cseréje

- 1) Az olaj cseréje vagy ellenőrzése előtt feltétlenül állítsuk le a motort, majd emeljük fel a gépkocsit vízszintes helyzetben.
- 2) A megemelt gépkocsin ellenőrizzük az olajszintet és a szivárgásmentességet. Ha szivárgást találunk, küszöböljük ki.
- 3) Vegyük ki a (2) olajszint jelző csavart, majd eresszük le az olajat az (1) differenciálmű fedél eltávolításával.
- 4) Szereljük fel az (1) differenciálmű fedelet új tömítéssel.

#### Meghúzási nyomaték

**A differenciálmű fedél csavarja (a): 18 Nm (1,8 kgm)**

- 5) Szereljük le a (3) légtelenítő csavart.
- 6) Töltsük fel előírt minőségű és mennyiségű olajjal a (4) légtelenítő nyíláson keresztül (a szintjelző furatig).
- 7) Húzzuk meg az (2) olajszint jelző csavart és a légtelenítő csavart az alábbiak szerint.

#### Meghúzási nyomaték

**Erőátviteli hajtómű olajszint jelző csavar**

**(c): 4 Nm (0,4 kgm) és 180° az előírt módszerrel**

### MEGJEGYZÉS:

- Ajánlott az API GL-4 75W-85 hajtómű olaj használata.
- Még akkor is minden esetben ellenőrizzük, hogy nincs-e olajszivárgás, ha a gépkocsit nem az olajcsere miatt emeljük fel.

## A differenciálmű oldalsó olajtömítő gyűrűjének cseréje

- 1) Engedjük le az erőátviteli hajtómű olajat ennek a fejezetnek „A kézi erőátviteli hajtómű olaj cseréje” című pontja szerint.
- 2) Szereljük le a mellső hajtótengelyeket a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint.
- 3) Célszerszám segítségével szereljük ki az (1) olajtömítő gyűrűket.

- 4) Célszerszám és kalapács segítségével nyomjuk a helyére az (1) olajtömítő gyűrűt.

### MEGJEGYZÉS:

**Beszoréskor az olajtömítő gyűrű rugós oldala befelé nézzen.**

**Célszerszám**

**(A): 09926-28610**

- 5) Kenjük meg zsírral az olajtömítő gyűrű peremét, és ugyanakkor vizsgáljuk meg a hajtótengely simaságát azon a részén, ahol az olajtömítő gyűrűvel érintkezik.

**„A”: 99000-25010 zsír**

- 6) Szereljük fel a mellső hajtótengelyeket a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint.
- 7) Töltsük fel az erőátviteli hajtóművet olajjal ennek a fejezetnek „A kézi erőátviteli hajtómű olaj cseréje” című pontja szerint, és győződjünk meg arról, hogy az olajtömítő gyűrű mellett nem szivárog ki olaj.

### Leszerelés

- 1) Szereljük le a konzolboxot.
- 2) Szereljük le az (1) sebességváltó kapcsoló és választó huzalokat a (2) sebességváltó kar szerelvényről.
  - a) A (4) körmöt megnyomva akasszuk ki a huzal szerelvényt az (5) tartóból.
  - b) Nyomjuk fel a szabályozó (6) körmét, és húzzuk ki az (1) huzalokat.
- 3) Szereljük le a sebességváltó kar (3) csavarjait és a (2) sebességváltó kar szerelvényt a karosszériáról.
- 4) Kössük ki az (1) kapcsoló- és választó huzalokat az erőátviteli hajtóműből.
- 5) A huzal átvezető gyűrű csavarjának kisorsolása után vegyük ki a kapcsoló- és választó huzalt az átvezető gyűrűvel együtt a karosszériából.

### Felszerelés

- 1) Szereljük be a kapcsoló- és választó huzal szerelvényt a karosszériába, majd húzzuk meg a huzal átvezető gyűrű csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

**Huzal átvezető gyűrű csavarja: 9 Nm (0,9 kgm)**

- 2) Szereljük fel a kapcsoló- és választó huzalt az erőátviteli hajtóműre.
- 3) Szereljük be a sebességváltó kar szerelvényt a karosszériába, majd húzzuk meg a sebességváltó kar csavarját az előírt nyomatékkal.

#### Meghúzási nyomaték

**Sebességváltó kar csavarja: 5 Nm (0,5 kgm)**

- 4) Erősítsük be a kapcsoló- és választó huzal szerelvényt a tartóba.
- 5) Szereljük be a kapcsoló huzalt és a választó huzalt a hozzájuk tartozó szabályozóba.

### MEGJEGYZÉS:

**Először a kapcsoló huzalt szereljük be.**

- 6) Szereljük fel a konzolboxot.
- 7) Ellenőrizzük, hogy simán mozog-e, amikor az egyes helyzetekbe kapcsoljuk.

## A tolatólámpa kapcsoló ki- és beszerelése

### Kiszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Kössük le az tolatólámpa kapcsoló (1) csatlakozóját.
- 3) Szereljük le a (2) tolatólámpa kapcsolót.

### Beszerelés

- 1) Szereljük be a tolatólámpa kapcsolót új (1) tömítéssel.

#### Meghúzási nyomaték

**Tolatólámpa kapcsoló: 20 Nm (2,0 kgm)**

- 2) Kössük be a tolatólámpa kapcsoló csatlakozóját.
- 3) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 4) Ohmmérő segítségével ellenőrizzük, hogy hátrameneti fokozatban bekapcsol-e a tolatólámpa kapcsolója.

## A tolatólámpa kapcsoló ellenőrzése

## Felszerelés

A felszerelést a leszerelés műveleteinek fordított sorrendjében hajtsuk végre, figyelembe véve az alábbiakat.

- A tartó előírt nyomatékát lásd az ábrán „Az erőátviteli hajtómű egység le- és felszerelése” című pontban.
- Szilárdan rögzítsük mindegyik vezeték bilincset.
- A tengelykapcsoló huzal bekötése után feltétlenül állítsuk be a tengelykapcsoló huzal anya helyzetét a 7C3 fejezet „A tengelykapcsoló huzal beállítása” című pontja szerint.
- Szereljük fel a mellső hajtótengelyeket a 4A fejezet „A mellső hajtótengely szerelvény le- és felszerelése” című pontja szerint.
- Töltsük fel az erőátviteli hajtóművet az előírt minőségű olajjal ennek a fejezetnek „A kézi erőátviteli hajtómű olaj cseréje” című pontja szerint.
- Csatlakoztassuk az akkumulátort, majd ellenőrizzük a motor, a tengelykapcsoló és az erőátviteli hajtómű működését.

## A főtengely szét- és összeszerelése

### Szét szerelés

- 1) Szereljük le az 1. sebesség (2) kopólemezt, majd vegyük ki az 1. sebesség (1) fogaskerékét, az 1. sebesség tűgörgős csapágyát és az 1. sebesség szinkrongyűrű szerelvényét.

- 2) Célszerszám segítségével távolítsuk el a 2. sebesség (1) rögzítő gyűrűjét.

#### Célszerszám

(A): 09900-06107

- 3) Szereljük le húzó szerszámot a 2. fogaskerekre, és húzzuk le az (1) 1. és 2. sebesség egy szerelvényét a (2) 2. fogaskerékkel együtt, hidraulikus sajtó segítségével.

#### FIGYELEM:

Annak érdekében, hogy elkerüljük a 2. fokozat fogaskerék fogainak a sérülését, a csapáglehúzó lapos oldalával támasszuk meg azokat.

- 4) Távolítsuk el a 2. sebesség tűgörgős csapágyát.

- 5) Távolítsuk el a 2. sebesség (1) nyomóalátétjét és a 4. sebesség (2) kopólemezt.
- 6) Vegyük ki a (3) 3. fogaskereket, a 3. fogaskerék tűgörgős csapágyát, valamint a 3. és 4. szinkrongyűrűt.

7) Célszerszám segítségével vegyük le az (1) rögzítő gyűrűt.

**Célszerszám**

**(A): 09900-06107**

8) Szereljük le húzó szerszámot a (2) 4. fogaskerékre, és húzzuk le a (1) 3. sebesség agy szerelvényét a 4. fogaskerékkel együtt, hidraulikus sajtó segítségével.

**FIGYELEM:**

**Annak érdekében, hogy elkerüljük 4. fokozat fogaskerék fogainak a sérülését, a csapáglehúzó lapos oldalával támasszuk meg azokat.**

9) Távolítsuk el a 4. sebesség tűgörgős csapágyát.

**Összeszerelés**

1) Alaposan tisztítsuk meg mindegyik alkatrészt, vizsgáljuk meg, hogy nem látunk-e rajtuk rendellenességet, és ha kell, cseréljük ki új alkatrészekre.

2) A kenés biztosítása érdekében fúvassuk át sűrített levegővel az (1) olajfuratokat, és ellenőrizzük, hogy nincsenek-e eldugulva.

3) Szereljük fel a két darab (1) tűgörgős csapágyat a főtengelyre, a 4. fogaskerék számára.

**MEGJEGYZÉS:**

**Állítsuk egy vonalba a tűgörgős csapágyak (2) hornyait.**

- 4) Szereljük össze a 3. és 4. sebesség agy szerelvényét ((5) agy, (1) persely és (4) reteszek), az ábra szerint.

2. A leélezés hornya
3. Szinkrongyűrű

- 5) Szereljük fel a (2) 4. fogaskereket és a szinkrongyűrűt a főtengelyre.

Sajtoljuk a helyére célszerszám és hidraulikus sajtó segítségével a 3. és 4. fogaskerék (1) agy szerelvényét a főtengelyen úgy, hogy a hüvely leélezésének hornya a 3. fogaskerék felé nézzen.

#### Célszerszám

(A): 09924-07710

#### MEGJEGYZÉS:

Miután a 3. és 4. fogaskerék agy szerelvényét felsajtoltuk, ellenőrizzük, hogy a 4. sebességfokozat (2) fogaskereke szabadon forog-e.

- 6) Célszerszám segítségével helyezünk fel új (1) rögzítő gyűrűt.

#### Célszerszám

(A): 09900-06107

- 7) Szereljük fel a 3. fogaskerék tűgörgős csapágát ugyanúgy, mint az 5) lépésben.  
8) Nyomjuk be a 3. fogaskereket.

- 9) Szereljük fel a 2. sebesség (1) nyomóalátétjét és a 4. sebesség (2) kopólemezt.

- 10) Szereljük össze a (1) 2. fogaskereket, a (2) szinkrongyűrű szerelvényét, a (3) 2. fogaskerék tűgörgős csapágát és az 1. és 2. fogaskerék agy szerelvényét ((4) agy, (5) hüvely és (6) reteszek).

**MEGJEGYZÉS:**

**A (7) hüvely fogaskerék felőli oldala a 2. fogaskerék felé néz.**

- 11) Sajtoljuk rá a főtengelyre a 12) lépésben összeszerelt alkatrészeket célszerszám és hidraulikus sajtó segítségével.

**Célszerszám**

**(A): 09924-07710**

**MEGJEGYZÉS:**

**Miután az 1. és 2. fogaskerék (1) agy szerelvényét felsajtoltuk, ellenőrizzük, hogy a 2. sebességfokozat (2) fogaskereke szabadon forog-e.**

- 12) Célszerszám segítségével helyezzünk fel a 2. fogaskerék számára új (1) rögzítő gyűrűt.

**Célszerszám**

**(A): 09900-06107**

- 13) Szereljük fel az 1. sebesség szinkrongyűrű szerelvényét a főtengelyre.  
14) Szereljük fel az 1. fogaskerék tűgörgős csapágát a főtengelyre.

- 15) Nyomjuk a helyére az (1) 1. fogaskereket, majd szereljük fel az 1. fogaskerék (2) kopólemezt.

## A csoportkerék és a főtengely ellenőrzése

- Ellenőrizzük, hogy mindegyik fokozat szabadon forog-e.
  - Ellenőrizzük a csoportkereket és a főtengely szerelvényét kopás, deformáció vagy sérülés szempontjából.
- Ha bármilyen hibát észlelünk, cseréljük ki a hibás alkatrészt új darabra.

## A erőátviteli hajtóműház szét- és összeszerelése

### Szétszerelés

- 1) Szereljük ki célszerszám segítségével a fogaskerék (1) tűgörgős csapágyát a (3) erőátviteli hajtómű házból.

# A TENGELYKAPCSOLÓ (Z13DT MOTOROS MODELL)

**VIGYÁZAT:**

Kiegészítő biztonsági visszatartó (légzsák) rendszerrel ellátott gépkocsik esetében:

- A légzsák-rendszer elemein és vezetékein, illetve azok környezetében szervizmunkát csak hivatalos SUZUKI márkakereskedő végezhet. Nézzük át a légzsák-rendszerrel foglalkozó fejezet „Általános leírás” részében a „Légzsák-rendszer elemeinek és vezetékeinek elhelyezkedése” című pontot, hogy megállapíthassuk, a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében végzünk-e szervizmunkát. Mielőtt a légzsák-rendszer elemein vagy vezetékein, illetve azok környezetében szervizmunkát végeznénk, tanulmányozzunk át a légzsák-rendszerrel foglalkozó fejezet „A gépkocsin végzendő szervizmunkák” részében minden VIGYÁZAT címszó alatti megjegyzést és „Szervizbiztonsági előírást”. Ha a VIGYÁZAT címszó alatti utasításokat nem követjük, akkor a rendszer a szándékunk ellenére működésbe léphet vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.
- A műszaki szerviz tevékenységet a gyújtáskapcsoló „LOCK” helyzetbe kapcsolásától és az akkumulátor negatív kábel lekötésétől számított 90 másodperc várakozási idő után szabad csak megkezdeni. Ellenkező esetben a rendszer az érzékelő és diagnosztikai egységben (SDM) tárolt energia hatására működésbe léphet.

## Általános leírás

A tengelykapcsoló hasított tányérrugós, száraz, egytárcsás szerkezet. A hasított tányérrugó összefüggő külső körgyűrűből kiágazó, befelé keskenyedő rugó lamellákból áll.

A csavarrugóval ellátott tengelykapcsoló tárcsa az erőátviteli hajtómű behajtottengelyéhez evolvens profilú tengelybordákon keresztül csatlakozik.

A lendkerékre felerősített tengelykapcsoló fedél tartja a hasított tányérrugót oly módon, hogy a tányérrugó kerületi része nyomja rá a nyomólapot (a köztük elhelyezett tengelykapcsoló tárcsán keresztül) a lendkerékre olyankor, amikor a tengelykapcsoló kinyomó csapágya visszahúzódik. Ez a tengelykapcsoló bekapcsolt állapota.

A tengelykapcsoló pedál lenyomásakor a kinyomó csapággy előre mozdul, és megnyomja a tányérrugó kúpos lamelláinak a végeit. Ekkor a hasított tányérrugó elhúzza a nyomólapot a lendkeréktől, és ezáltal megszakad a tengelykapcsoló tárcsa nyomaték átvitele a lendkerék és az erőátviteli hajtómű csoportkereke között.

## Diagnosztika

### Diagnosztikai táblázat

Állapot	Lehetséges ok	Javítás módja
<b>Csúszás</b>	Nem megfelelően beállított tengelykapcsoló huzal	Állítsuk be a kapcsoló huzalt.
	A tengelykapcsoló tárcsa felülete kopott vagy olajos	Cseréljük ki a tengelykapcsoló tárcsát.
	Deformálódott tengelykapcsoló tárcsa, nyomótárcsa vagy lendkerék	Cseréljük ki a tengelykapcsoló tárcsát, a tengelykapcsoló fedelet vagy a lendkereket.
	Meggyengült hasított tányérrugó	Cseréljük ki a tengelykapcsoló fedelet.
	A tengelykapcsoló huzal rozsdás	Cseréljük ki a huzalt.
<b>Súrlódó tengelykapcsoló</b>	Nem megfelelően beállított tengelykapcsoló huzal	Állítsuk be a kapcsolóhuzalt.
	Meggyengült a hasított tányérrugó, vagy kopottak a rugó lamellák végei	Cseréljük ki a tengelykapcsoló fedelet.
	Rozsdás csoportkerék bordák	Kenjük meg.
	A csoportkerék bordái sérültek vagy kopottak	Cseréljük ki a csoportkereket.
	Erősen imbolygó tengelykapcsoló tárcsa	Cseréljük ki a tengelykapcsoló tárcsát.
	A tengelykapcsoló érintkező felületei repedtek vagy olajjal szennyezettek	Cseréljük ki a tengelykapcsoló tárcsát.
<b>A tengelykapcsoló berezeg</b>	Kifényesedett (üvegszerűvé vált) a tengelykapcsoló súrlódó betétek felülete	Javítsuk meg, vagy cseréljük ki a tárcsát.
	A tengelykapcsoló tárcsa felületei olajjal szennyezettek	Cseréljük ki a tengelykapcsoló tárcsát.
	A kinyomó csapággy akadozva csúszik a csoportkeréken	Kenjük meg, vagy cseréljük ki a csoportkereket.
	Imbolygó tengelykapcsoló tárcsa, vagy rossz érintkezés a súrlódó felületeken	Cseréljük ki a tengelykapcsoló tárcsát.
	Meggyengült rezgéscsillapító a lendkerékben	Cseréljük ki a lendkereket.
	Kilazultak a tengelykapcsoló tárcsa szegecsei	Cseréljük ki a tengelykapcsoló tárcsát.
	Deformálódott nyomólap vagy lendkerék felület	Cseréljük ki a tengelykapcsoló fedelet vagy a lendkereket.
	Meggyengült motortartó gumibak, vagy kilazult motortartó gumibak csavar vagy anya	Húzzuk meg, vagy cseréljük ki a motortartó gumibakot.

Állapot	Lehetséges ok	Javítás módja
<b>Zajos a tengelykapcsoló</b>	Kopott vagy törött kinyomó csapágó	Cseréljük ki a kinyomó csapágót.
	A tengelykapcsoló tárcsa agya zörög	Cseréljük ki a tengelykapcsoló tárcsát.
	A tengelykapcsoló tárcsa repedt	Cseréljük ki a tengelykapcsoló tárcsát.
	A nyomólap és a hasított tányérrugó zörög	Cseréljük ki a tengelykapcsoló fedelet.
<b>A tengelykapcsoló szorul</b>	A tengelykapcsoló tárcsa betétek átítatódtak olajjal	Cseréljük ki a tengelykapcsoló tárcsát.
	A tengelykapcsoló tárcsa betétek erősen kopottak	Cseréljük ki a tengelykapcsoló tárcsát.
	A szegecsfejek kiállnak a betétekből	Cseréljük ki a tengelykapcsoló tárcsát.
	Meggyengült rezgéscsillapító a lendkerékben	Cseréljük ki a lendkereket.

1. Tengelykapcsoló huzal	6. Tengelykapcsoló pedál
2. Összekötő alátét	7. Tengelykapcsoló huzal külső csavar
3. Tengelykapcsoló kinyomó tengely	 8. Tengelykapcsoló pedál határoló csavar: Soha ne lazítsuk meg a tengelykapcsoló határoló csavarját.

## A tengelykapcsoló huzal le- és felszerelése

### Leszerelés

- 1) Kössük le a negatív kábelt az akkumulátorról.
- 2) Vegyük le a (3) összekötő alátétet a tengelykapcsoló huzalról.
- 3) Lazítsuk meg a tengelykapcsoló (1) huzal anyát, és vegyük le a tengelykapcsoló huzalt a tengelykapcsoló (2) kinyomó tengelyéről.
- 4) Válasszuk le a tengelykapcsoló huzalt a tengelykapcsoló huzal bilincsről.

- 5) Távolítsuk el a tengelykapcsoló huzalt az alábbiak szerint.

#### RM413D esetén [A]

- a) Akasszuk le az (1) huzalhorgot a (4) tengelykapcsoló pedálról.
- b) Vegyük le a (3) tengelykapcsoló huzalt az (5) tengelykapcsoló pedál tartóról, az ábrán látható módon 90°-kal elfordítva a tengelykapcsoló (2) sapkáját.

#### RB413D esetén [B]

- a) Vegyük ki a tengelykapcsoló huzal (1) külső csavarját a (2) műszerfal motorház felőli oldalán.
- b) Kössük le a huzalhorgot a tengelykapcsoló pedálról, majd vegyük ki a huzalt.

## Felszerelés

- 1) Zsírozzuk meg a tengelykapcsoló huzal (2) anyát és az (1) huzalhorgot a huzal beszerelése előtt.

„A”: 99000-25010 zsír

- 2) Akasszuk rá a huzal végét a pedálra csavarhúzó vagy hosszúcsőrű fogó segítségével, az utastér felől.

[A]: Az RM413D esetén

[B]: Az RB413D esetén

- 3) Szereljük fel a tengelykapcsoló huzalt az alábbiak szerint.

### RM413D esetén [A]

- a) Szereljük fel a (2) tengelykapcsoló huzalt a (3) tengelykapcsoló pedál tartóra, az ábrán látható módon 90°-kal elfordítva a tengelykapcsoló (1) sapkáját.

### RB413D esetén [B]

- a) Rögzítsük a huzalt az (5) 2 db csavarral a (6) műszerfalhoz.

### Meghúzási nyomaték

#### Tengelykapcsoló huzal külső csavar

(a): 8,5 Nm (0,85 kgm)

- 4) Szereljük fel a tengelykapcsoló huzalt a tengelykapcsoló huzal bilincsre.
- 5) Csatlakoztassuk a tengelykapcsoló huzalt a tengelykapcsoló huzal anyához, majd szereljük fel a tengelykapcsoló huzal anyát a kinyomó tengelyre.
- 6) Csavarjuk be a tengelykapcsoló huzal anyát, és állítsuk be a tengelykapcsoló huzalt ennek a fejezetnek „A tengelykapcsoló huzal beállítása” című pontja szerint.

### MEGJEGYZÉS:

Ügyeljünk arra, hogy a (4) huzal átvezetőnek meghatározott beszerelési iránya van, ahogyan az ábrán látható.

- 7) Csatlakoztassuk a negatív kábelt az akkumulátorra.
- 8) Járó motor mellett ellenőrizzük a tengelykapcsoló kifogástalan működését.

## A tengelykapcsoló huzal ellenőrzése

Ellenőrizzük a tengelykapcsoló huzalt, és ha az alábbi hibák bármelyikével találkozunk, cseréljük ki.

- A huzal erős súrlódása
- Kopott huzal
- Elgömbült vagy megtört huzal
- Szakadt védőkarmantyúk
- Kopott huzalvég

## A tengelykapcsoló huzal beállítása

- 1) Vegyük le az összekötő alátétet a tengelykapcsoló huzalról.
- 2) Ellenőrizzük az „a” hézagot az a) és a b) esetben, és állítsuk be az előírt hézagot a (2) huzal anyá forgatásával, ha nem felel meg az előírásnak.
  - a) Nyomjuk az (1) kinyomó tengelyt az „A” irányba, amíg a kinyomó tengely hézag el nem tűnik.
  - b) Húzzuk a (3) tengelykapcsoló huzalt a „B” irányba.

**Hézag (használt huzal esetén)**

„a”: 4 – 6 mm

**MEGJEGYZÉS:**

Új tengelykapcsoló huzal felszerelésekor a hézagot 2 – 4 mm méretűre állítsuk be.

- 3) Szereljük fel az (1) összekötő alátétet a megadott helyre.

**Az összekötő alátét beszerelési helyzete**

„d”: 0 – 2 mm

## A tengelykapcsoló fedél és a tengelykapcsoló tárcsa ki- és beszerelése

### Kiszerelés

- 1) Szereljük le az erőátviteli hajtóművet a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.
- 2) Célszerszám segítségével rögzítsük a lendkereket, majd szereljük ki az (1) tengelykapcsoló fedél csavarokat, a (2) tengelykapcsoló fedelet és a tengelykapcsoló tárcsát.

#### Célszerszám

(A): 09924-17810

### Beszerelés

- 1) Célszerszám segítségével egy vonalba állítva a tengelykapcsoló tárcsa és a lendkerék középpontját, szereljük fel az (1) tengelykapcsoló fedelet és a csavarokat. Húzzuk meg a csavarokat az előírt nyomatékkal.

#### MEGJEGYZÉS:

- A tengelykapcsoló fedél csavarok meghúzása során a (B) célszerszám segítségével, kézzel nyomjuk össze a tengelykapcsoló tárcsát úgy, hogy központos legyen.
- A fedél csavarjait kis lépésekben, egyenletesen, átlós sorrendben húzzuk meg.

#### Célszerszám

(A): 09924-17810

(B): 09923-36320

#### Meghúzási nyomaték

A tengelykapcsoló fedél csavarja (a): 15 Nm (1,5 kgm)

- 2) Kis mértékben kenjük meg az (1) csoportkereket zsírral, majd szereljük össze az erőátviteli hajtómű szerelvényt a motorral a 7A3 fejezet „Az erőátviteli hajtómű egység le- és felszerelése” című pontja szerint.

„A”: 99000-25210 zsír

#### MEGJEGYZÉS:

Amikor az erőátviteli hajtómű csoportkerekeit a tengelykapcsoló tárcsába illesztjük, forgassunk egy keveset a forgattyús tengelyen, hogy a bordás tengelykötés elemei egymásba illeszkedjenek.

## A tengelykapcsoló fedél ellenőrzése

### A tengelykapcsoló fedél

- 1) Ellenőrizzük, nincs-e rendellenes kopás vagy sérülés az (1) hasított tányérrugón.
- 2) Ellenőrizzük a (2) nyomólapot kopás és beégések szempontjából.
- 3) Ha rendellenességet találunk, cseréljük ki a tengelykapcsoló fedelet. Az (1) tányérrugót és a (2) nyomólapot ne szereljük szét.

## A tengelykapcsoló kinyomó szerkezet ki- és beszerelése

### Kiszerelés

- 1) Távolítsuk el a tengelykapcsoló kinyomó villa (1) csavarját, majd hajtsuk ki a tengelykapcsoló (2) kinyomó tengelyét.
- 2) Távolítsuk el a kinyomó tengely (3) csapágát és a tengelykapcsoló (4) kinyomó villáját.
- 3) Hajtsuk ki a tengelykapcsoló kinyomó tengely (5) 1. sz. perselyét és a tengelykapcsoló kinyomó tengely (6) 2. sz. perselyét a erőátviteli hajtómű házából.

- 4) Szereljük le az (1) csoportkerék fedelet.

## Beszerezés

- 1) Szereljük fel az (1) csoportkerék fedelet, és húzzuk meg a (2) csavart az előírt nyomatékkal.

### Meghúzási nyomaték

**Csoportkerék fedél csavar (a): 5 Nm (0,5 kgm)**

- 2) Hajtsuk be a tengelykapcsoló kinyomó tengely 1. sz. és 2. sz. perselyét az erőátviteli hajtómű házába.
- 3) Szereljük be a kinyomó tengely csapágát és a kinyomó villát.

- 4) Zsírozzuk meg a (2) tengelykapcsoló kinyomó tengelyt, majd szereljük be a tengelykapcsoló kinyomó tengelyt, és húzzuk meg az (1) villa csavarját az előírt nyomatékkal.

**„A”: 99000-25010 zsír**

## A tengelykapcsoló kinyomó szerkezet ellenőrzése

### A tengelykapcsoló kinyomó tengely

Ellenőrizzük a tengelykapcsoló kinyomó tengelyt és a tengelykapcsoló kinyomó villáját elgörbülés vagy egyéb sérülés szempontjából.

Ha bármilyen rendellenességet találunk, cseréljük ki.

## A KÉZIKÖNYV TARTALMA ÉS LEÍRÁSA

Ez a kézikönyv a kábelkötegek elhelyezését, a csatlakozók elhelyezését, az egyes egységek (biztosíték, relé, vezérlőegység) felszerelési helyét, a testpontokat, a tápellátás áramkörét és a rendszer kapcsolási rajzát bemutató ábrákat, valamint a csatlakozók jegyzékét tartalmazza.

FEJEZET		LEÍRÁS
A csatlakozók elrendezési rajzai	8A-3	Jelképeket alkalmazó ábrákon bemutatja a gépkocsin használt csatlakozók elrendezését a kábelkötegek helyzetével együtt
Az egyes elemek beépítési helye	8A-4	A gépkocsiba szerelt biztosítékok, relék és vezérlőegységek helyét mutatja meg.
A tesztelési pontok helye	8A-5	A karosszérián lévő tesztelési pontok helyét mutatja meg.
A tápellátási rendszer kapcsolási vázlata	8A-6	Az akkumulátor pozitív pólusától a fő biztosítékon és a biztosítékdobozban található egyes biztosítékokon keresztül vezető villamos összeköttetéseket mutatja meg, és megadja az egyes biztosítékokat terhelő fő rendszerek nevét.
A rendszer-áramkörök kapcsolási vázlatai	8A-7	Az egyes rendszereknek a biztosíték és a testpont közötti áramköri rajzát mutatja be. A kapcsolási rajzok ábrázolási módja olyan, hogy az elektromos áram mindig a rajz felső része felől annak alsó része felé halad.
A csatlakozók jegyzéke	8A-8	Az egyes csatlakozók kialakítását és a csatlakozók érintkezőinek kiosztását mutatja meg.

## ALKALMAZHATÓSÁG

Ez a kézikönyv az alábbiakban felsorolt gépkocsi típusoknál alkalmazható.

## A SZERVIZMUNKÁVAL KAPCSOLATOS FIGYELMEZTETÉSEK

Amikor a gépkocsi elektromos rendszerén szervizmunkát végzünk, akkor az elektromos elemek megóvása és a tüzesetek elkerülése érdekében vegyük figyelembe az alábbi figyelmeztetéseket.

- Amikor az elektromos rendszer ellenőrzése vagy szervizelése során az akkumulátort kissereljük a gépkocsiból, vagy az akkumulátor-kábeleket levesszük az akkumulátorról, először mindig ellenőrizzük azt, hogy a gyújtáskapcsoló és az összes egyéb kapcsoló kikapcsolt állásban van-e. Ellenkező esetben a félvezetők tönkremehetnek.
- Amikor az akkumulátorról levesszük a kábeleket, először mindig a negatív (–) sarokról vegyük le a kábelt és ezt követően a pozitív (+) sarokról.
- A kábelek felhelyezését a fentiekhez képest fordított sorrendben végezzük.

- Amikor a csatlakozó-feleket szétválasztjuk, soha ne a kábelt húzzuk. Először oldjuk ki a csatlakozó reteszt, majd magukat a csatlakozótesteket megfogva húzzuk szét a két felet.

- A csatlakozó-felek összenyomásakor is a csatlakozótesteket fogjuk meg, és nyomjuk össze őket egészen addig, amíg a csatlakozó retesze be nem ugrik (ezt kattánó hang jelzi).

- A kábelköteg felszerelésekor úgy rögzítsük a kapcsokkal a kábelt, hogy az sehol se lógjon lazán.

- Amikor a gépkocsi alkatrészeit beszereljük, ügyeljünk arra, nehogy egy kábelköteg becsípődjön vagy valamelyik alkatrész útjába kerüljön.

- A kábelköteg sérülésének megakadályozása érdekében a kábelköteg minden olyan részét tekerjük be védőszalaggal vagy hasonlóval, amely a gépkocsi valamelyik éles részével érintkezésbe kerülhet.

- A biztosíték cseréjekor ügyeljünk arra, hogy az új biztosíték az előírttal megegyező áramértékű legyen. Az előírtnál nagyobb értékű biztosíték használata az elektromos alkatrészek tönkremenetelét vagy tűz keletkezését okozhatja.

- Mindig ügyeljünk arra, hogy az elektromos alkatrészekkel (számítógép, relé stb.) ne bánjunk durván és azokat ne ejtsük le.

- Ha az elektromos részek közelében 80 °C-nál magasabb hőmérsékletet előidéző tevékenységet folytatunk, akkor a munka megkezdése előtt a hőre érzékeny elektromos rész(ek)e)t szereljük le.

- Ügyeljünk arra, hogy a csatlakozókra és más elektromos részekre ne kerüljön víz, mert az hibát okozhat.

- Amikor egy áramkör folytonosságát vagy feszültségét mérjük, ügyeljünk arra, hogy a műszer mérőcsúcsait mindig a kábelbemenet felől dugjuk be a csatlakozótestbe.

#### VIGYÁZAT:

Ez a gépkocsi kiegészítő utasvédelmi berendezéssel, azaz felfújódó légzsákrendszerrel van felszerelve. A légzsákrendszeren vagy annak környezetében szervizmunkát csak Suzuki márkaszerviz végezhet. Mielőtt a légzsákrendszer elemein vagy vezetékein illetve azok környékén szervizmunkát végeznénk, tanulmányozzunk át a jelen kézikönyv ELŐSZÓ című részében említett szerviz kézikönyv „A gépkocsin végzendő szervizmunkák” című fejezetében valamint „A légzsákrendszer elemei” és „A kábelezés elhelyezési rajza” című részeiben található minden VIGYÁZAT címszó alatti megjegyzést. Ha a VIGYÁZAT alatti utasításokat nem követjük, akkor a rendszer szándékunk ellenére aktiválódhat vagy működésképtelenné válhat. Mindkét esetben súlyos sérülések következhetnek be.

# JELKÉPEK ÉS JELÖLÉSEK

A jelen kézikönyv ábráin az egyes készülékek az alábbi jelképekkel és jelölésekkel vannak ábrázolva.

Akkumulátor	Testpont		Normál biztosíték	Lomha biztosíték
Megszakító	Tekercs, elektromágnes	Fűtőbetét	Izzólámpa	
Szivargyújtó	Motor	Szivattyú	Kürt	Hangszóró
Zümmögő	Dallamcsengő	Kondenzátor	Termisztor	Reed-relé
Ellenállás	Változtatható ellenállás		Tranzisztor	
Fototranzisztor	Dióda	Referencia (zener)-dióda	Világító dióda (LED)	Fotodióda
Piezoelektromos elem	Kábelköteg		Relé

## A VEZETÉKEK SZÍNJELZÉSEI

Jel	Vezetékszín	Jel	Vezetékszín
B	Fekete	Or	Narancs
Bl	Kék	R	Piros
Br	Barna	W	Fehér
G	Zöld	Y	Sárga
Gr	Szürke	P	Rózsaszín
Lbl	Világoskék	V	Lila
Lg	Világoszöld		

A baloldali táblázatban látható módon az egyes színeket az adott színek angol nevének kezdőbetűivel jelöljük.

A vezeték színe kétféle típusú lehet: egyszínű típus vagy kétszínű típus (csíkos). A kétszínű típusnál az első betűjel (a bal oldali ábrán látható példában „G” betűvel jelölve) a vezeték alapszínét (a vezeték szigetelőanyagának színét), a második betűjel (a példában „Y”) pedig a csík színét jelzi.

# HOGYAN ÉRTELMEZZÜK A CSATLAKOZÓK ELRENDEZÉSI RAJZAIT

Ha valamelyik elektromos alkatrész vagy egy közbenső csatlakozó helyének meghatározására van szükség, akkor ezt ennek a rajznak a segítségével könnyen megtehetjük.

Először is a keresett csatlakozó kódjának meghatározásához tanulmányozzuk „A RENDSZER ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” című fejezetet, vagy „A CSATLAKOZÓK ELRENDEZÉSI RAJZAI” fejezet jobb kéz felőli oldalain látható csatlakozó-táblázatokat. Ezután keressük meg az utóbb említett fejezetben azt az ábrát, amelyiken ugyanez a kód szerepel. A kód használatához az alábbi ábra nyújt további felvilágosítást.

Csatlakozó kódja

L 0 1

Csatlakozó száma (sorszám: 01)

Kábelköteg jele (lásd az alábbi táblázatot)

A kábelköteg jele és a megfelelő kábelköteg neve

A : Akkumulátor kábelköteg

B : A légkondicionáló kábelkötege

C : A motor kábelkötege

D : A befecskendező szelep kábelkötege

E : A fő kábelköteg

G : A műszerfal kábelkötege

J : Az ajtó kábelkötege

K : A tető kábelkötege

L : A padló kábelkötege

N : A hátsó páramentesítő vezetéke

O : A hátfali ajtó kábelkötege és a harmadik féklámpa vezetéke

Q : A légzsák kábelkötege

R : Az üzemanyag szivattyú kábelkötege

Ez jelzi a testpont sorszámát.

Ugyanezt a sorszámot használjuk a testpont megnevezéséhez. (A részleteket lásd „A TESTELÉSI PONTOK HELYE” című fejezetben)

Ez jelzi a csatlakozó sorszámát.

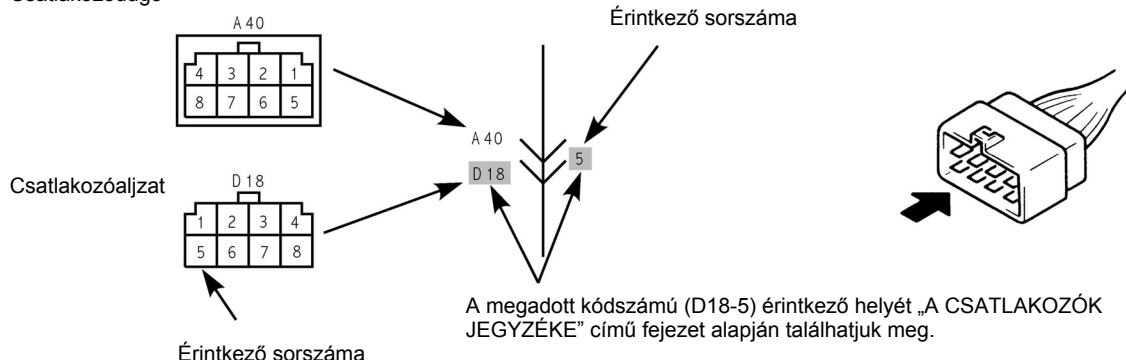

A zárójelben ( ) látható csatlakozó kód ugyanazt jelenti, mint egy közbenső csatlakozónál, de emellett a kábelkötegek folytonosságát is jelzi „A CSATLAKOZÓK ELRENDEZÉSI RAJZAI” fejezet különböző oldalai és ábrái között. Tehát jelzi, hogy a kábelköteg a következő oldalon vagy ábrán is folytatódik, és a kábelköteg folytatása az egyező csatlakozókód alapján azonosítható.

# A CSATLAKOZÓK JELÖLÉSE ÉS EZEK ÉRTELMEZÉSE

A csatlakozók jelölése „A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” című fejezetben az alábbiakban szemléltetett módon történik. A jelen kézikönyvben használt csatlakozó körvonalrajzokat és érintkező-kiosztásokat lásd „A CSATLAKOZÓK JEGYZÉKE” című fejezetben. Az alábbi leírás a csatlakozók jelölését és ezek értelmezését mutatja be.

- A csatlakozódugót kettős körvonallal, a csatlakozó-aljzatot pedig egy egyetlen körvonallal jelöljük.
  - A kábelkötegeket összekapcsoló közbenső csatlakozók esetében mind a dugót, mind az aljzatot megmutatjuk, de egy készülékhez közvetlenül kapcsolódó csatlakozóknál a rajz csak a kábelkötegen lévő csatlakozót mutatja.
  - Az ebben a kézikönyvben leírt csatlakozók tehát minden esetben „kábelköteg végén lévő” csatlakozók, amelyeket a jobb oldali ábrán bemutatott irányból nézve ábrázolunk.

Csatlakozódugó

- A csatlakozás módja alapján háromféle csatlakozót különböztetünk meg, ezek az alábbi ábrákon láthatók.

- Közvetlenül a készülékhez csatlakozik.

- A készülékből kijövő kábelköteg csatlakozójához csatlakozik.

- Kábelkötegek közötti csatlakozás (közbenső csatlakozó)

3. • Ennek a gépkocsinak a kábelezésénél közös csatlakozókat (J/C) is alkalmazunk, amelyek lehetővé teszik azt, hogy egy vezeték több vezetékké ágaztassunk el, illetve azt, hogy több vezetéket egyetlen vezetékben egyesítsünk.
- A közös csatlakozó képe az alábbi ábrán látható.

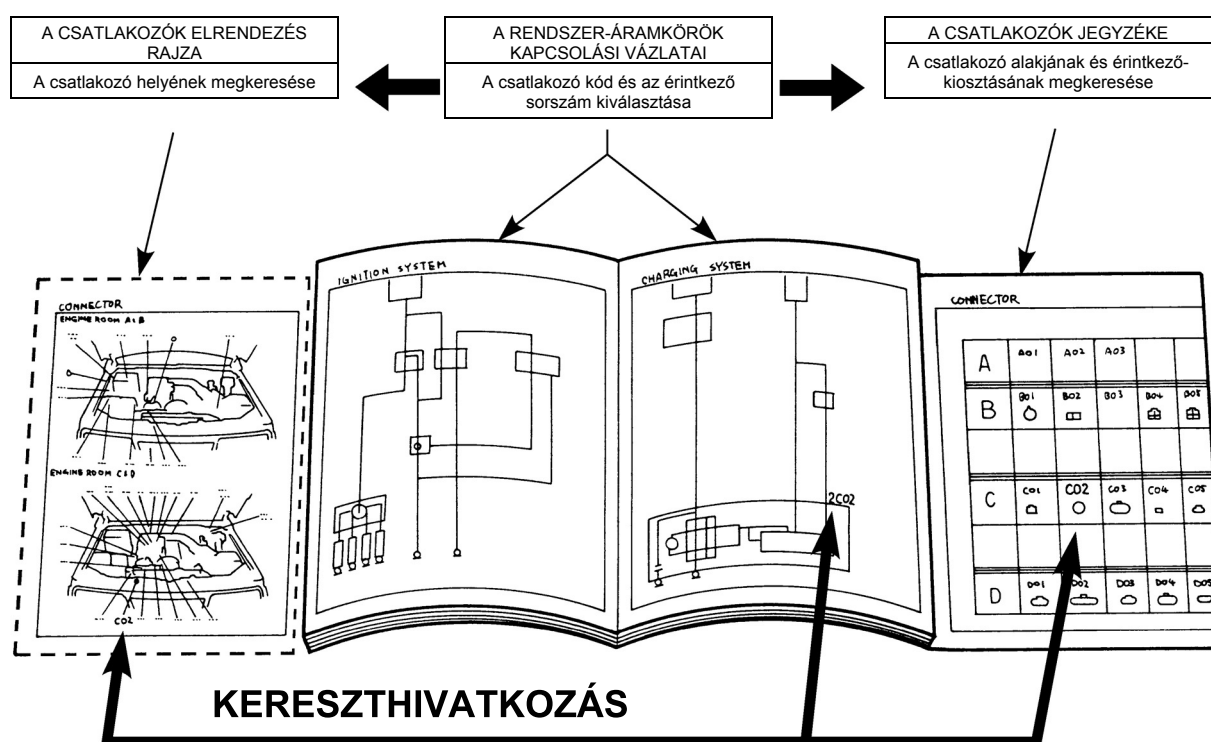

Hogyan értelmezzük a csatlakozó-kódokat és az érintkező sorszámozásokat (hogyan használjuk a kézikönyvet):

„A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” fejezet ábráin jelzett csatlakozó kód alapján meghatározhatjuk az egyes csatlakozók helyét és alakját, az érintkező sorszáma alapján pedig meghatározhatjuk az egyes érintkezők csatlakozón belüli helyét.

- \* A csatlakozó helyének kikeresése:  
Lapozzuk fel „A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” fejezetet, és állapítsuk meg belőle a keresett csatlakozó kódját. Ez után lapozzuk fel „A CSATLAKOZÓK ELRENDEZÉSI RAJZAI” fejezetet, és keressük ki a keresett csatlakozó kódjával megegyező kódszámot. Az a hely, ahol a kódot megtaláljuk, a keresett csatlakozó helyével azonos.
- \* A csatlakozó alakjának és az érintkező sorszámnak kikeresése:  
Lapozzuk fel „A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” fejezetet, és állapítsuk meg belőle a keresett csatlakozó kódját és a keresett érintkező sorszáma. Ezután lapozzuk fel „A CSATLAKOZÓK JEGYZÉKE” című fejezetet, ahogy az alábbi ábra jobb oldalán is látható, keressük meg az adott csatlakozó-kódot, amely alatt megtaláljuk a keresett csatlakozó körvonalrajzát. Ez különösen kényelmes akkor, amikor hasonló csatlakozók közül kell megtalálnunk a keresett csatlakozót. Ugyanennek az oldalnak a segítségével „A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” fejezetből megállapított érintkező sorszáma alapján a keresett érintkezőnek a csatlakozón belüli helyét is megállapíthatjuk. Ez különösen akkor hasznos, amikor az adott érintkezők közötti összeköttetés ellenőrzéséhez kell az érintkezők helyét kikeresni.

A csatlakozó helyének, alakjának vagy az érintkezők helyének kikereséséhez használjuk „A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI”, „A CSATLAKOZÓK ELRENDEZÉSI RAJZAI” és „A CSATLAKOZÓK JEGYZÉKE” fejezetek közötti kereszthivatkozásokat az alábbiak szerint:

# HOGYAN ÉRTELMEZZÜK AZ EGYES ELEMOK BEÉPÍTÉSI HELYÉNEK LEÍRÁSÁT

„AZ EGYES ELEMOK BEÉPÍTÉSI HELYE” című fejezet ábráin a járműben használatos egyes biztosítékok, relék és vezérlőegységek elhelyezése látható. Ezek az alábbiak szerint vannak ábrázolva.

## A MOTORTÉR (JOBB KORMÁNYOS GÉPKOCSI)

## HOGYAN ÉRTELMEZZÜK A TESTELÉSI PONTOK LEÍRÁSÁT

A testpontok azokat a helyeket jelentik, ahol a kábelkötegek negatív vezetői a testre csatlakoznak. A „TESTELÉSI PONTOK HELYE” című fejezet ábrái ezeket a testpontokat mutatják be. A „RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” című fejezetben számos testpont jelzés található, amelyek mellett fekete körben szám (10) látható. Ez azt jelenti, hogy az adott vezeték ilyen fekete körrel jelölt vége a jármű valamilyen részén a testre csatlakozik.

A testpont megkeresését (helyének megállapítását) „A TESTELÉSI PONTOK HELYE” fejezet segítségével végezhetjük el.

### „A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” fejezet

#### ■ SZÉLVÉDŐ TÖRLŐ ÉS-MOSÓ

[Hogyan keressük meg a testpont helyét]

Keressük meg „A TESTELÉSI PONTOK HELYE” című fejezetben azt a fekete körbe írt számot (10), amelyet a keresett testpontnál „A RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” című fejezetben leolvastunk.

#### MEGJEGYZÉS:

Ha valamelyik elektromos egység testelési pontját nem találjuk meg „A TESTELÉSI PONTOK HELYE” című fejezetben, akkor az adott egység maga szolgál testpontként.

### „A TESTELÉSI PONTOK HELYE” fejezet

**KERESZTHIVATKOZÁS**

# HOGYAN ÉRTELMEZZÜK A TÁPELLÁTÁSI RENDSZER KAPCSOLÁSI VÁZLATÁT

A tápellátási rendszer kapcsolási rajza az akkumulátor pozitív pólusától az egyes biztosítékokhoz menő áramköröket mutatja és jelzi, hogy az egyes biztosítékok hova csatlakoznak (vagyis megadja az egyes rendszeráramkörök nevét). Emellett a rajzról az egyes biztosítékok áram-értéke is leolvasható.

Mint ahogy „A RENDSZER ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATA” minden esetben valamelyik biztosítékból kivezető áramkörből indul ki, az áramkörök felső részének folytatását az ott megjelölt biztosíték sorszám, például (21) alapján visszakereshetjük „A TÁPELLÁTÁSI RENDSZER KAPCSOLÁSI VÁZLATA” rajzán.

## A TÁPELLÁTÁSI RENDSZER KAPCSOLÁSI VÁZLATA

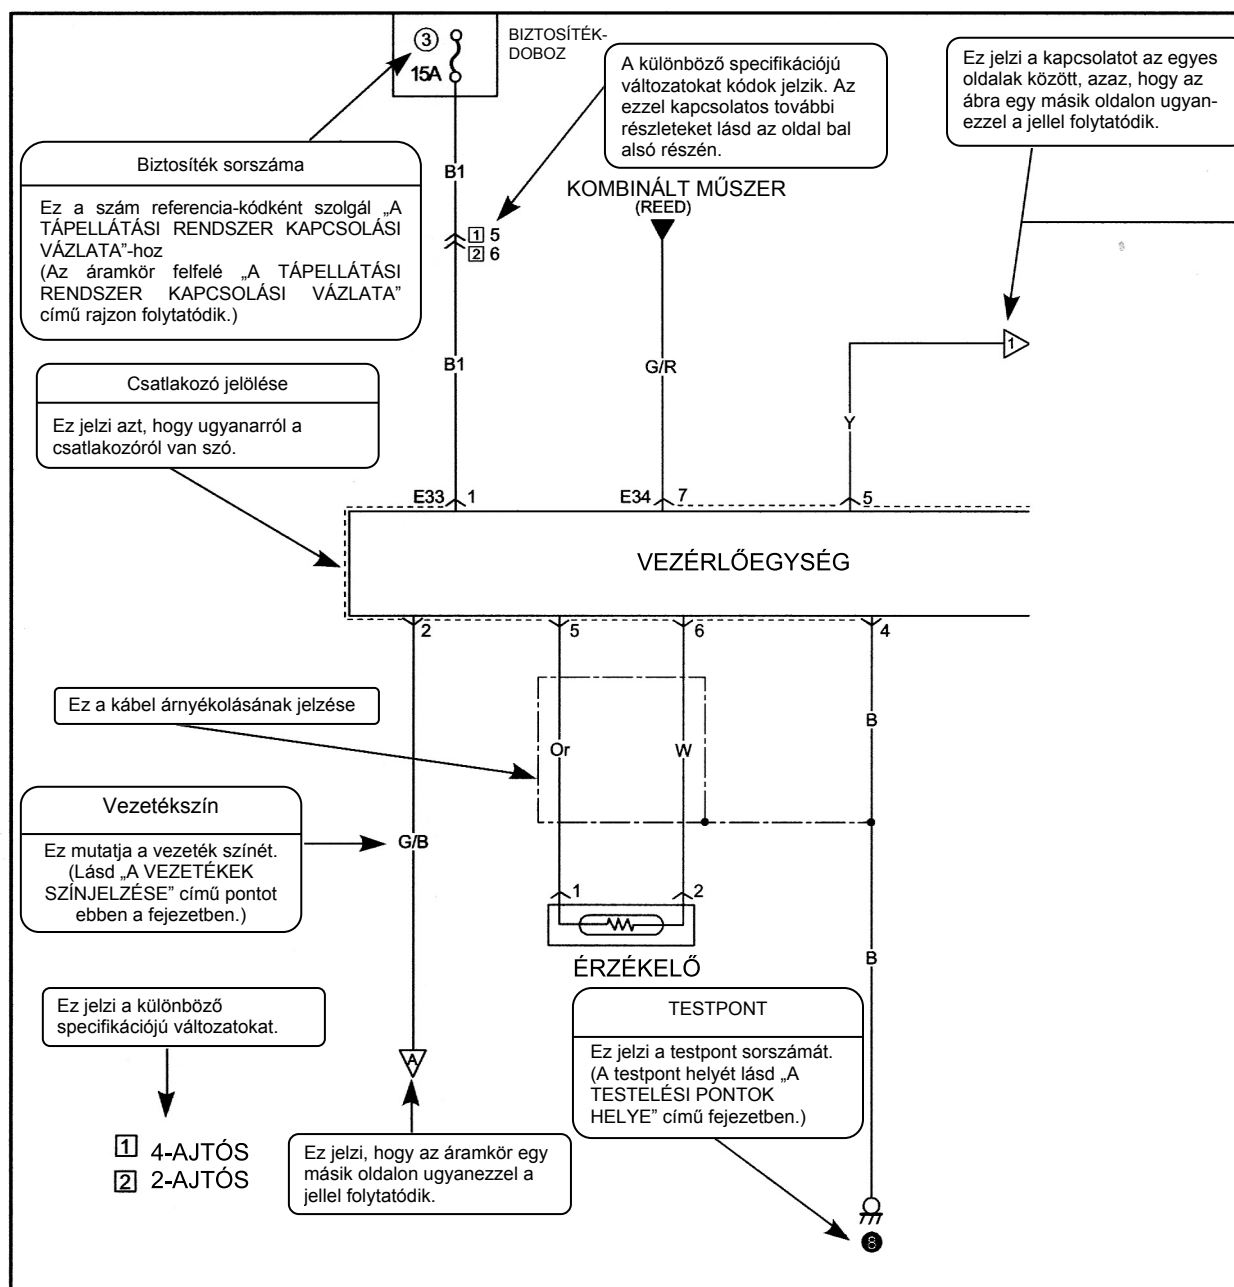

## A RENDSZER ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATA

# HOGYAN ÉRTELMEZZÜK A RENDSZER ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAIT

Minden egyes rendszer kapcsolási rajza a főbiztosítéktól, a biztosítékdoboztól vagy a gyújtáskapcsolótól (a rajz felső szélétől) egészen a testpontig (a rajz alsó széléig) haladva ábrázolja az elektromos áramkört, így az áramkör az ellenőrzés és a javítás során könnyen áttekinthető.

A csatlakozókra, testpontokra és biztosítékokra vonatkozóan további információt is nyerhetünk, ha „A RENDSZER ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATA”-it összevetjük a jelen fejezet korábbi részeiben leírt fejezetekkel. Kereszthivatkozásként a csatlakozó kód, a testpont sorszáma és a biztosíték sorszáma használható.

## HOGYAN ÉRTELMEZZÜK A CSATLAKOZÓK JEGYZÉKÉT

A „CSATLAKOZÓK JEGYZÉKE” című fejezet megkönnyíti azt, hogy a keresett csatlakozót több hasonló közül kiválasszuk, hogy az egyes érintkezők csatlakozón belüli helyzetét a csatlakozás folytonosságának vizsgálatához megállapítsuk stb. Ne feledjük, hogy a jegyzék a csatlakozók alaptípusainak leírására készült és a jegyzékben szereplő némely csatlakozó egyes konkrét, eltérő specifikációjú csatlakozóhoz képest eltéréseket mutathat.

Hogyan használjuk a csatlakozók jegyzékét:

A „RENDSZER-ÁRAMKÖRÖK KAPCSOLÁSI VÁZLATAI” című fejezetben szereplő csatlakozó-kód és érintkező-sorszám alapján a keresett csatlakozó és az egyes érintkezők helye a „CSATLAKOZÓK JEGYZÉKE” című részből könnyen kikereshető.

A használatra vonatkozó további részleteket lásd a „CSATLAKOZÓK JELÖLÉSE ÉS EZEK ÉRTELMEZÉSE” című fejezetben.

## Voorwoord

Deze handleiding bevat HOOFDSTUK 8a “Bedradingsdiagram” dat deel uitmaakt van het hoofdstuk Elektrisch systeem van de onderhoudshandleiding.

**Model dat van toepassing is:**

**Met M13A motor (benzine)/met M15A motor (benzine)  
/met dieselmotor**

Alle informatie, afbeeldingen en specificaties in dit document zijn gebaseerd op de laatste productinformatie die voorhanden was op het moment van goedkeuring van publicatie. De beschrijvingen in deze handleiding zijn gebaseerd op standaard- of basismodelspecificaties. Houd er daarom rekening mee dat het voertuig waarop onderhoud wordt uitgevoerd kan verschillen van de handleiding. MAGYAR SUZUKI CORPORATION behoudt zich het recht voor om op elk moment zonder voorafgaande kennisgeving wijzigingen aan te brengen.

Houd er rekening mee dat de handleiding verwijst naar apparatuur die mogelijk niet in alle landen op de markt wordt gebracht.

Voor inspectie en onderhoudswerkzaamheden, zie de hieronder opgegeven onderhoudshandleiding(en).

### OPMERKING:

In de handleiding worden de circuits getoond van alle mogelijke variaties in productiespecificaties. Afhankelijk van de specificaties van het voertuig waarop u onderhoud wilt uitvoeren, kan het echter voorkomen dat een aantal circuits of bedrading die in deze handleiding worden weergegeven niet in de kabelset van dit voertuig zijn opgenomen.

# Precautions

## WARNING:

(For the vehicles with the Supplemental Restraint System (Air Bags) and/or the Seat Belt Pretensioner System) Service on or around the air bag system / Seat belt pretensioner system components or their wiring must be performed only by an authorized SUZUKI dealer. Observe all the warnings in the service manual and disable the systems before servicing on or around the components and the wiring of the systems. The service manual(s) is (are) mentioned in the FOREWORD of this manual. Failure to follow the Warnings could result in unintended activation of the systems or could render the systems inoperative. Either of these two conditions may result in severe injury.

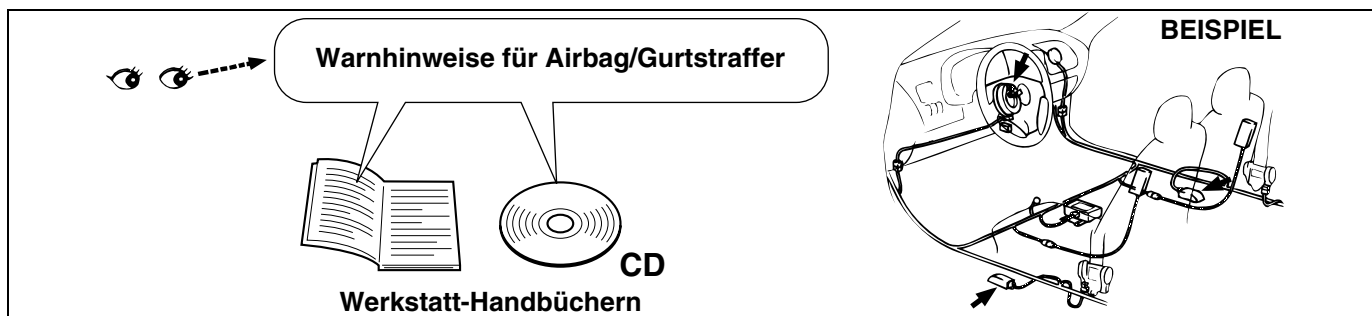

## CAUTION:

To prevent damage to the electrical/ electronic parts (especially computers or semi-conductors) or to prevent fire.

- When disconnecting the battery terminals, be sure to (1) turn off the ignition switch and all other switches, (2) disconnect the negative (–) terminal wire and then (3) disconnect the positive (+) terminal wire. Connect the wires in the reverse order of disconnecting.
- When disconnecting the connectors, be sure to unlock the connector lock (if equipped) and then pull the connector shells to detach them. Do not pull the wires.
- Connect the connectors by holding the connector shells. Make sure they are securely locked.
- Install the wiring harness securely without any slack.
- When installing parts, make sure the wiring harness is not interfered with or pinched by them.
- Avoid routing the wiring harness near or around a sharp corner or edge of the vehicle body or parts as much as possible. If necessary, protect the wiring harness by winding tape or the like around on it.
- When replacing a fuse, make sure to use the specified capacity fuse. Using a fuse with a larger capacity can cause damage to the electrical parts or a fire.
- Do not handle electrical/ electronic parts (computer, relay, etc.) roughly or drop them.
- Do not expose electrical/ electronic parts to high temperature (Approximately 80°C (176°F) or higher) or water.
- For open back connectors, be sure to insert the tester probe into the back side (wiring harness side) of the connector for inspection. For sealed back connectors, apply the tester probe to the terminal as gently as possible not to damage or deform the terminal.

# Vorsichtsmaßnahmen

## WARNUNG:

(Für Fahrzeuge, die mit einem aufblasbaren Zusatzrückhaltesystem (Airbag) und/oder Sicherheitsgurtstrammersystem ausgerüstet sind)

Wartungsarbeiten an Komponenten oder Verdrahtung des Airbag-Systems bzw. Gurtstrammersystems oder in dessen Bereich dürfen nur von einem autorisierten SUZUKI-Fachhändler ausgeführt werden. Bitte beachten Sie jegliche Warnungshinweise in den Werkstatt-Handbüchern, und deaktivieren Sie die Systeme, bevor Sie mit irgendwelchen Arbeiten an den Systemkomponenten oder deren Verdrahtung beginnen. Das Werkstatt-Handbuch bzw. die Werkstatt-Handbücher sind im VORWORT dieser Anleitung aufgeführt. Eine nichtbeachtete Warnung könnte eine unbeabsichtigte Auslösung eines Systems zur Folge haben oder ein System außer Funktion setzen. Jede dieser Bedingungen könnte zu schweren Verletzungen führen.

## VORSICHT:

Gewährleisten Sie den Schutz vor Beschädigung elektrischer bzw. elektronischer Teile (besonders von Computern oder Halbleitern) sowie den Brandschutz wie nachstehend.

- Vor dem Abklemmen der Kabel von den Batteriepolen immer (1) den Zündschalter und alle anderen Schalter ausschalten, (2) das Minuskabel (–) abziehen und dann (3) das Pluskabel (+) abziehen. Die Kabel sind umgekehrt zur Reihenfolge des Abnehmens wieder anzuschließen.
- Beim Abklemmen der Stecker zuerst die Steckerverriegelung (falls vorhanden) entriegeln und dann durch Erfassen der Stecker auseinanderziehen. Niemals an der Leitung selbst ziehen.
- Beim Anschließen wiederum die Steckerverriegelungen erfassen und zusammenschieben. Darauf achten, daß sie eindeutig einrasten.
- Die Kabelbäume so befestigen, daß sie keinen Durchhang aufweisen.
- Achten Sie beim Montieren der Komponenten darauf, daß die Kabelbäume nicht davon behindert oder eingeklemmt werden.
- Den Kabelbaum nicht über scharfe Kanten oder andere Teile verlegen, die Beschädigungen verursachen können. Falls nötig den Kabelbaum durch Umwickeln von Isolierband o.ä. schützen.
- Beim Auswechseln der Sicherungen immer darauf achten, daß die Sicherung die vorgeschriebene Kapazität aufweist. Verwendung einer Sicherung mit größerer Kapazität könnte Schäden an der elektrischen Anlage oder einen Brand verursachen.
- Elektrische Teile (Computer, Relais usw.) müssen grundsätzlich vorsichtig behandelt werden; nicht fallen lassen.
- Elektrische und elektronische Komponenten dürfen keinen hohen Temperaturen (über 80°) oder Wasser ausgesetzt werden.
- Im Falle von Steckverbindungen mit offener Rückseite muß bei der Überprüfung die Prüfspitze unbedingt von der Rückseite (Kabelbaumseite) des Steckers her eingesteckt werden. Im Falle von Steckverbindungen mit versiegelter Rückseite muß die Prüfspitze so vorsichtig wie möglich eingesteckt werden, damit die Klemme nicht beschädigt oder verformt wird.

# Précautions

## AVERTISSEMENT :

**(Véhicules avec système de retenue supplémentaire (airbags) et/ou système de ceintures de sécurité à prétendeur)**

Les opérations d'entretien sur ou autour des composants du système à airbags / système de ceintures de sécurité à prétendeur ou de leur câblage doivent être exclusivement effectuées par un concessionnaire SUZUKI agréé. Bien se conformer à tous les avertissements donnés dans le manuel d'entretien et mettre les systèmes hors service avant de procéder aux opérations d'entretien sur ou autour des composants et du câblage des systèmes. Le(s) manuel(s) d'entretien est (sont) mentionné(s) en AVANT-PROPOS de ce manuel. Le non respect des consignes données dans les avertissements peut résulter dans le brusque déploiement des systèmes ou mettre ceux-ci hors d'usage et résulter dans les deux cas en accident grave.

## ATTENTION :

**pour éviter toute détérioration des parties électriques/électroniques (en particulier les ordinateurs ou les semi-conducteurs) ou pour éviter tout risque d'incendie.**

- Pour débrancher les plots de la batterie, (1) mettre le contacteur d'allumage et toutes les commandes hors circuit, (2) débrancher le câble du plot négatif (–) et (3) débrancher le câble du plot positif (+). Raccorder les câbles en procédant en ordre inverse de la dépose.
- Pour déconnecter les connecteurs, les déverrouiller (le cas échéant) et tirer sur le corps du connecteur. Ne pas tirer sur les câbles.
- Raccorder les connecteurs en les saisissant par leur corps. Vérifier qu'ils sont bien verrouillés en place.
- Implanter soigneusement les faisceaux de câbles sans laisser de mou dans les câbles.
- A l'installation des pièces, vérifier que le faisceau de câbles ne se trouve pas sur l'emplacement de ces pièces et qu'il ne risque pas d'être coincé à leur installation.
- Éviter dans toute la mesure du possible de disposer le faisceau de câbles près ou autour d'arêtes vives de la caisse ou de pièces du véhicule. Si nécessaire, protéger le faisceau de câbles à l'aide de bande adhésive ou autre.
- Toujours utiliser des fusibles de rechange de capacité appropriée. Ne pas utiliser des fusibles de capacité supérieure sous peine de détérioration des systèmes électriques ou d'incendie.
- Traiter les pièces électriques/électroniques (ordinateur, relais etc..) avec soin et ne pas les faire tomber.
- Ne pas exposer les pièces électriques/électroniques à des températures excessives (environ 80° C ou plus) ou à l'eau.
- Pour le contrôle des connecteurs à dos ouvert, insérer la pointe du testeur dans le dos du connecteur (côté faisceau de câbles). Pour les connecteurs à dos scellé, appliquer la pointe du testeur sur le contact le plus légèrement possible de sorte à ne pas détériorer ou déformer ce contact.

# Voorzorgsmaatregelen

## WAARSCHUWING:

(Voor voertuigen met het aanvullende Restraint System (airbag)- en/of het voorspanner veiligheidsgordel-systeem)

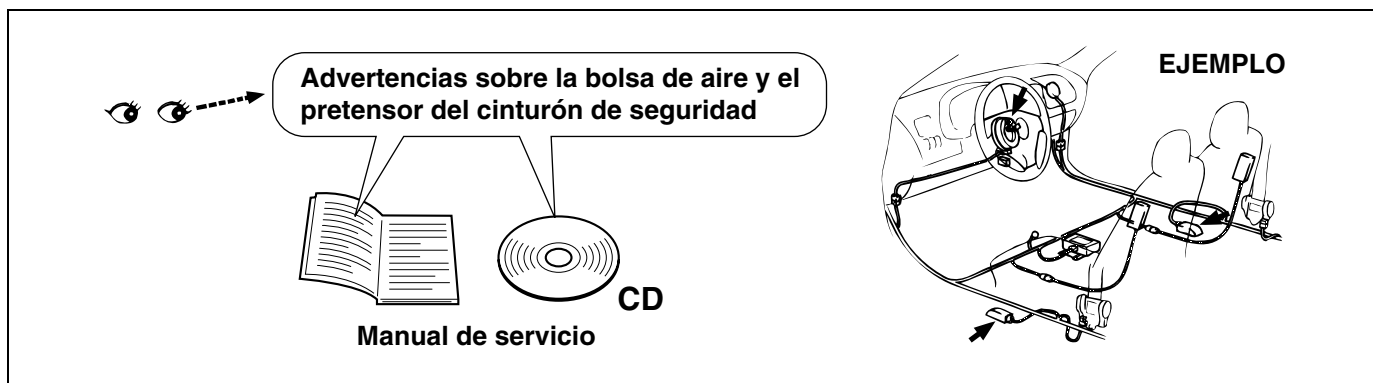

Onderhoud aan of rondom de onderdelen of de bedrading van het airbag/voorspanner veiligheidsgordel-systeem mag uitsluitend worden uitgevoerd door een officiële SUZUKI-dealer. Neem alle waarschuwingen in de onderhoudshandleiding in acht en schakel de systemen uit voordat u onderhoud aan of rondom de onderdelen of de bedrading van de systemen uitvoert. De onderhoudshandleiding(en) wordt/worden in het Voorwoord van deze handleiding genoemd. Het niet opvolgen van deze WAARSCHUWINGEN kan er toe leiden dat de systemen onvoorzien in werking treden of defect raken. Beide omstandigheden kunnen leiden tot ernstig letsel.

## OPGEPAST:

**Brandpreventie en het voorkomen van beschadiging van elektrische/elektronische onderdelen (met name computers of semi-conductors).**

- Zorg er bij het loskoppelen van de accuklemmen voor dat u (1) het contactslot en alle andere schakelaars uitzet, (2) de negatieve (–) poolkabel en vervolgens (3) de positieve (+) poolkabel loskoppelt. Sluit de kabels in omgekeerde volgorde weer aan.
- Als u de stekkers loskoppelt, moet u ervoor zorgen dat de stekkervergrendeling (indien geïnstalleerd) wordt ontgrendeld. Haal daarna de stekkerhulzen weg om de stekkers los te maken. Trek niet aan de draden.
- Sluit de stekkers aan door de stekkerhulzen vast te maken. Zorg ervoor dat deze goed vast zitten.
- Maak de kabelset goed vast.
- Als u onderdelen installeert, moet u ervoor zorgen dat deze niet met de kabelset in aanraking komen of in de kabels drukken.
- Vermijd zoveel mogelijk om de kabelset langs of in de buurt van scherpe hoeken of kanten van het voertuig of delen daarvan te leiden. Bescherm, indien nodig, de kabelset door er tape of iets dergelijks omheen te draaien.
- Bij het verwisselen van een zekering, moet u ervoor zorgen dat u de voorgeschreven zekeringsterkte gebruikt. Als u een zekering met een hogere sterkte gebruikt, kan dit leiden tot brand of schade aan de elektrische onderdelen.
- Ga voorzichtig om met de elektrische/elektronische onderdelen (computer, relais, etc.) en laat deze niet vallen.
- Stel elektrische/elektronische delen niet bloot aan water of aan hoge temperaturen (ongeveer 80°C).
- Zorg er bij open stekkers voor dat u het testinstrument ter inspectie aan de achterkant van de stekker (de kant van de kabelset) aanbrengt. Voor gesloten stekkers geldt dat u het testinstrument zo voorzichtig mogelijk op de pool moet aanbrengen zodat u de pool niet beschadigt of vervormt.

# Precauciones

## ADVERTENCIA:

**(Para vehículos con sistema de protección suplementaria (bolsas de aire) y/o sistema de pretensor de seguridad)**

El servicio en o alrededor de los componentes del sistema de la bolsa de aire/sistema del pretensor del cinturón de seguridad o de sus conexiones debe ser realizado únicamente por un concesionario SUZUKI autorizado. Observe todas las advertencias que figuran en el manual de servicio y desactive los sistemas antes de realizar el servicio en o alrededor de los componentes o del conector de los sistemas. El(los) manual(es) de servicio está(n) mencionado(s) en el PROLOGO de este manual. La negligencia en la observación de las advertencias puede producir una activación no intencional de los sistemas o los mismos podrían quedar inoperantes. Cualquiera de estas dos condiciones puede provocar lesiones de gravedad.

## PRECAUCION:

**Para evitar daños en las piezas eléctricas/electrónicas (especialmente computadoras o semiconductores), o para evitar incendios.**

- Cuando desconecte los terminales de la batería, asegúrese de: (1) desconectar el interruptor de encendido y todos los demás interruptores, (2) desconectar el cable del terminal negativo (–) y (3) desconectar el cable del terminal positivo (+). Conecte los cables invirtiendo el orden de desconexión.
- Cuando desconecte los conectores, asegúrese de destrabar el bloqueo del conector (de equiparse) y luego tire de la envuelta de los conectores para sacarlos. No tire de los cables.
- Conecte los conectores sujetándolos por las envueltas. Asegúrese de que queden firmemente bloqueados.
- Instale firmemente el cableado preformado, sin ninguna flojedad.
- Cuando instale las piezas, hágalo de manera que no interfieran en el cableado preformado y que los cables no queden aprisionados.
- Procure no tender el cableado preformado cerca o alrededor de una esquina o borde afilado de la carrocería o de las piezas del vehículo. De requerirse, proteja el cableado preformado enrollándolo con una cinta o similar.
- Cuando reemplace un fusible, asegúrese de utilizar el fusible de la capacidad especificada. El uso de un fusible de una capacidad mayor puede dañar las piezas eléctricas o provocar un incendio.
- Preste atención cuando manipule las piezas eléctricas/electrónicas (computadora, relé, etc.) y no dejarlas caer.
- No exponga las piezas eléctricas/electrónicas a altas temperaturas (aproximadamente 80°C o superior) ni al agua.
- Para la inspección, asegúrese de insertar la sonda de prueba sobre el lado del cableado preformado del conector. En cuanto a los conectores abiertos atrás, asegúrese de insertar la sonda del probador en el lado trasero (lado del mazo de conductores) del conector para la inspección. En cuanto a los conectores sellados, aplique la sonda del probador al terminal con la mayor suavidad posible para evitar daños o deformación en el terminal.

## AVVERTENZA:

**(Per i veicoli con il Sistema di Ritenuta Supplementare (Airbag) e/o il Sistema del Pretensionatore delle Cinture di Sicurezza)**

La manutenzione e la riparazione di o attorno al sistema airbag / ai componenti del sistema del pretensionatore delle cinture di sicurezza o al loro cablaggio deve essere eseguita esclusivamente da un'officina autorizzata SUZUKI. Fare attenzione a tutte le avvertenze riportate nel manuale di manutenzione e riparazione e disattivare i sistemi prima di effettuare le riparazioni ai componenti e al cablaggio dei sistemi stessi o attorno a questi. Il manuale(i) di manutenzione e riparazione è(sono) citato(i) nell'INTRODUZIONE del presente manuale. Il mancato rispetto delle Avvertenze potrebbe portare ad un'involontaria attivazione dei sistemi oppure rendere tali sistemi inoperativi. Ciascuna di queste due condizioni potrebbe portare a gravi danni alle persone.

## ATTENZIONE:

**Per prevenire i danni alle parti elettriche/elettroniche (specialmente computer o semiconduttori) o per prevenire incendi dell'auto.**

- Quando si scollegano i terminali della batteria, assicurarsi di (1) spegnere l'interruttore dell'accensione e tutti gli altri interruttori, (2) scollegare il cavo del terminale negativo (-) e poi (3) scollegare il cavo del terminale positivo (+). Collegare i cavi seguendo in ordine inverso le istruzioni per scollegarli.
- Quando si scollegano i connettori, assicurarsi di sbloccare il loro bloccaggio (se presente) e poi tirare i corpi dei connettori per staccarli. Non tirare i cavi.
- Collegare i connettori tenendoli dal corpo. Assicurarsi che siano ben bloccati.
- Installare saldamente il cablaggio senza che ci sia lasco.
- Nell'installare le varie parti, assicurarsi che queste non vadano ad interferire con il cablaggio o lo schiaccino.
- Evitare, per quanto possibile, di far girare il cablaggio accanto o attorno ad un angolo o spigolo vivo del corpo o delle parti del veicolo. Se necessario, proteggere il cablaggio avvolgendolo con nastro adesivo o simili.
- Quando si sostituisce un fusibile, assicurarsi di utilizzare il fusibile della portata indicata. Se si utilizza un fusibile con una portata maggiore si possono provocare danni alle parti elettriche o un incendio.
- Maneggiare con cautela le parti elettriche/elettroniche (computer, relè, etc.) e fare attenzione che non cadano.
- Non esporre le parti elettriche/elettroniche ad alte temperature (circa 80°C o superiori) o al contatto con acqua.
- In caso di connettori aperti, assicurarsi di inserire la sonda del tester nella parte posteriore (lato cablaggio) del connettore per un controllo. In caso di connettori stagni, applicare la sonda del tester al terminale il più delicatamente possibile, in modo da non danneggiare o deformare il terminale stesso.

Verbindungsstecker (J/C)

Connecteur commun (J/C)

Verbindingsstekker (J/C)

Conector de empalme (J/C)

Connettore di giunzione (J/C)

### NOTE:

The joint connector (J/C) connects several different wires with the same wire color at one place instead of connecting them by welding or caulking one by one. It is not an ordinary connector but a part of the continuous wire in the harness.

### ZUR BEACHTUNG:

Der Verbindungsstecker (J/C) bringt verschiedene Leitungsdrähte derselben Farbe an einer Stelle zusammen, anstatt daß sie durch Löten oder Verstemmen einzeln angeschlossen werden. Diese Art von Stecker ist also nicht eine normale Steckverbindung, sondern Teil einer ununterbrochenen Leitung im Kabelbaum.

### NOTE:

Un connecteur commun (J/C) assure le raccordement de plusieurs câbles de même couleur en un même endroit en évitant leur soudage ou leur jonction de manière individuelle. Ce n'est pas un connecteur ordinaire mais une partie d'un câble continu dans un faisceau.

### OPMERKING:

Met de verbindingsstekker worden verschillende kabels met dezelfde kleur op één plaats met elkaar verbonden in plaats van dat deze één voor één worden gelasd of gebreeuwd. Dit is geen normale stekker maar een onderdeel van de ononderbroken bedrading in de kabelset.

### NOTA:

El conector de empalme (J/C) conecta diferentes cables del mismo color en un solo lugar en lugar de conectarlos uno por uno mediante soldadura o calafateo. No se trata de un conector común, sino de una parte del cable continuo en el cableado preformado.

### NOTA:

Il connettore di giunzione (J/C) collega diversi fili con il medesimo colore di filo in un unico punto invece di collegarli per saldatura o calafataggio uno per uno. Non si tratta di un connettore normale, ma di una parte del cavo continuo nel cablaggio.

The circuit diagram is designed so the current flows from the top of the diagram (power source) to the bottom of the diagram (ground (earth)) as if giving an image of water flow.

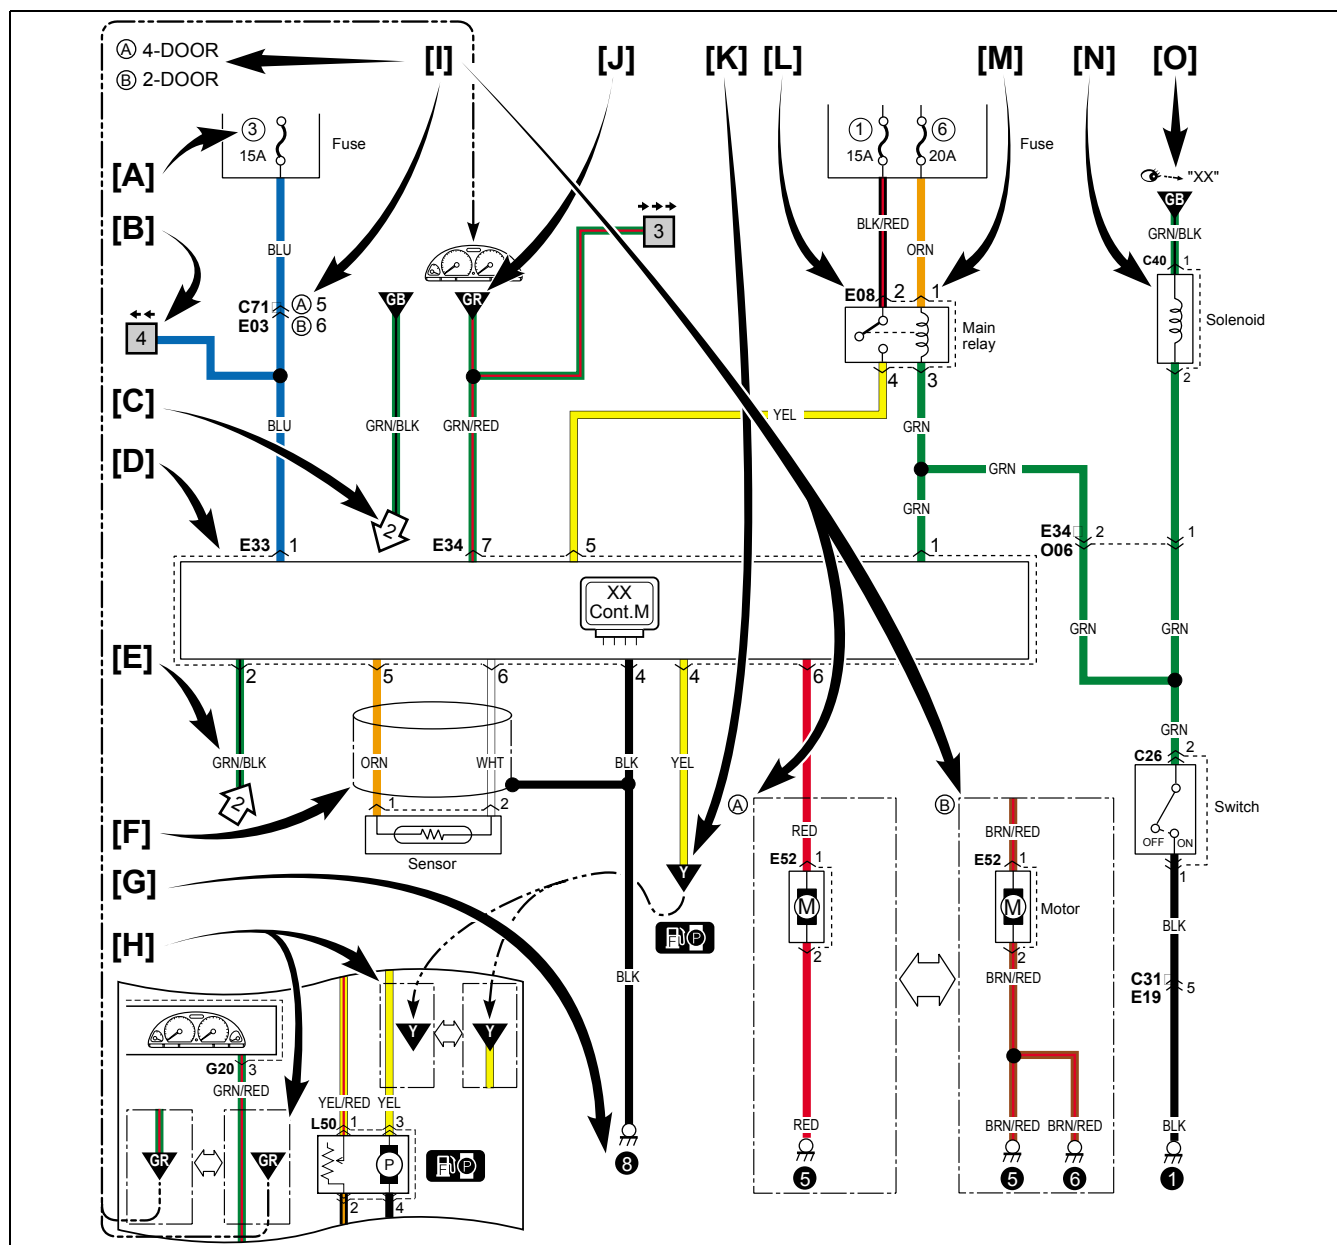

Das Verdrahtungsschema zeigt den Stromfluß vom Schema oben (Stromversorgung) zum Schema unten (Masse (Erde)) im Sinne eines Wasserverlaufs.

Le schéma du circuit est dessiné de telle sorte que le courant circule depuis le haut du schéma (source d'alimentation électrique) vers le bas (masse(terre)) comme le ferait un écoulement d'eau.

In het circuitschema loopt de stroom van de bovenkant van de grafiek (stroombron) naar de onderkant van de grafiek (aardpunt), vergelijkbaar met de stroom die water volgt.

El diagrama de circuito ha sido diseñado de manera que la corriente circule desde la parte superior del diagrama (fuente de alimentación) hacia la parte inferior del mismo (masa (tierra)), siguiendo la imagen de una corriente de agua.

Lo schema del circuito è stato studiato in modo che la corrente fluisca dall'alto (fonte di alimentazione) verso il basso del diagramma (terra), come se si trattasse di un flusso d'acqua.

	<p>Circuit jumping page / direction This means "Jump to the page directed with the arrow(s) by their number.(For example:" Two arrows directing left" means" Jump to two pages before".) You will find the same symbol with the arrows directing opposite in the referenced page. The circuit continues between the symbols.</p> <p>Drahtüberbrückungsseite/Richtung Bedeutet "Weiter zur durch Anzahl von Pfeilen bezeichneten Seite. (Zum Beispiel: "Zwei Pfeile nach links weisend" bedeutet "Weiter zur vorvorigen Seite".) Auf der jeweiligen Bezugsseite finden Sie dann dasselbe Symbol mit den Pfeilen in der umgekehrten Richtung. Der Schaltkreis wird zwischen den Symbolen fortgesetzt.</p> <p>Page de saute des fils/direction Ceci signifie "Passer à la page repérée par le nombre correspondant de flèches. (Par exemple: "Deux flèches orientées vers la gauche" signifie "Revenir deux page en arrière".) Le même symbole se retrouve sur la page de renvoi avec les flèches pointant dans la direction opposée. Le circuit se poursuit entre les symboles.</p>
<b>[B]</b>	<p>Kabel springpagina/richting Dit betekent "Ga door naar de pagina met het door pijlen aangegeven aantal. (Bijvoorbeeld:" Two arrows directing left" means" Jump to two pages before".) Het circuit wordt tussen de symbolen voortgezet.</p> <p>Cable con salto de página/sentido Significa "Salte a la página indicada por el número de la(s) flecha(s)". (Por ejemplo: "Dos flechas que apuntan hacia la izquierda" significa "Salte dos páginas atrás"). Encontrará el mismo símbolo con las flechas apuntando en dirección opuesta en la página de referencia. El circuito continúa entre los símbolos.</p> <p>Salto di pagina / direzione Significa: salta ad una pagina precedente o successiva in base alla direzione ed al numero delle frecce. (Per esempio:" Two arrows directing left" means" Jump to two pages before".) Nella pagina così trovata è riportato lo stesso simbolo con le frecce rivolte in senso contrario. Il circuito continua fra i simboli.</p>
<b>[C]</b>	<p>Circuit jumping point / direction The circuit continues to the same symbol with opposite direction within the page. You will find the other symbol in the direction of the arrow.</p> <p>Drahtüberbrückungspunkt/Richtung Der Schaltkreis läuft zum gleichen Symbol mit entgegengesetzter Ausrichtung auf diesem Blatt weiter. Das andere Symbole ist in der Pfeilrichtung aufzufinden.</p> <p>Point de saute des fils/direction Le circuit se poursuit en direction du même synbole dans le sens opposé sur la même page. Air flow meter	Lufmassenmesser	Debitmetre d'air	Luchtstroommeter	Medidor del flujo de aire	Anemometro
Ambient temperature sensor	Außen-temperatursonde	Capteur de température extérieure	Omgevings-temperatuursensor	Sensor de temperatura ambiente	Sensore temperatura esterna
Back-up light switch wire	Rückfahrlichtschalter-Zuleitung	Câble de contacteur de feu de recul	Noodlichtschakelaar-kabel	Cable del interruptor de luz de marcha atrás	Cavo interruttore faro retromarcia
Boost pressure sensor	Ladedrucksensor	Capteur de surpression	Boost-druksensor	Sensor de presión de refuerzo	Sensore di pressione del boost
Circuit breaker	Leistungsschalter	Coupe-circuit	Circuitonderbreker	Disyuntor	Interruttore di circuito
Clutch pedal position switch	Kupplungspedal-Überschaltungs-schalter	Contacteur de position de pédale d'embrayage	Positieschakelaar koppelingspedaal	Interruptor de posición del pedal embrague	Interruttore posizione pedale della frizione
Clutch switch	Kupplungsschalter	Contacteur d'embrayage	Koppelings-schakelaar	Interruptor del embrague	Interruttore frizione
CO adjusting resistor	CO-Stellwiderstand	Résistor de réglage du CO	CO-afstelweerstand	Resistor de ajuste de CO	Resistore di aggiustaggio CO
Coil antenna	Rahmenantenne	Cadre fixe	Spoeldantenne	Antena de cuadro	Antenna a bobina
Combination switch	Kombischalter	Commutateur commode	Combinatie-schakelaar	Interruptor de combinación	Interruttore combinazione
Condenser fan	Kondensatorgebläse	Ventilateur de condensateur	Condensatorventilator	Ventilador del condensador	Ventola del condensatore
Contact coil	Kontaktspule	Bobine de contact	Contactbobine	Bobina de contacto	Bobina di contatto
Cruise actuator	Tempomat-Stellantrieb	Ensemble d'actionneur de régulation de vitesse	Actuator cruise-control	Conjunto del impulsor de crucero	Comando velocità di crociera
Data link connector	Datenübertragungsteil - anschluß	Contacteur de liaison des données	Datalink-stekker	Conector de enlace de datos	Connettore collegamento dati
Dual cut switch	Gasdruckschalter	Interrupteur de coupure à double action	Dubbele onderbrekings-schakelaar	Interruptor de corte doble	Interruttore doppio

English	Deutsch	Français	Nederlands	Español	Italiano
Dual pressure switch	Doppeldruckschalter	Double pressostat	Schakelaar dubbele druk	Interruptor de dos presiones	Interruttore doppia pressione
EGR stepper motor	EGR-Schrittschaltmotor	Moteur pas-à-pas d'EGR	EGR-stappenmotor	Motor paso a paso EGR	Motore a passo EGR
EVAP canister purge valve	EVAP-Spülluftventil	Soupape de purge de cartouche d'EVAP	Afzuigklep EVAP-koolstoffilter	Válvula de purga de cesto de EVAP	Valvola di sfiato cartuccia EVAP
EVAP canister vent valve	EVAP-Entlüftungsventil	Clapet d'évent de cartouche d'EVAP	Afzuigklep EVAP-koolstoffilter	Válvula de ventilación del cesto EVAP	Valvola di ventilazione cartuccia EVAP
Exhaust gas recirculation	Abgasrückführung	Re circulation des gaz d'échappement	Recirculatie uitlaatgassen	Re circulación de los gases de escape	Ricircolo gas di scarico
Forward clutch cylinder revolution sensor	Vorwärtskupplung-Zylinderdrehzahl-sensor	Capteur de rotation du cylindre d'embrayage avant	Voorwaartskoppeling cilinderomwenteling-sensor	Sensor de rotación del cilindro del embra	Sensore della rotazione del cilindro della marcia avanti
Front clearance light	Vordere Begrenzungsleuchte	Feu de gabarit avant	Begrenzingslicht vóór	Luz de despeje	Luci d'ingombro anteriori
Front combination light	Vordere Kombileuchte	Feu commodo arrière	Combinatielicht voorkant	Luz de combinación delantera	Fanalatura anteriore
Fuel injection	Kraftstoffeinspritzung	Injection de carburant	Brandstofinjectie	Inyección de combustible	Iniezione carburante
Front intermittent timer relay	Vorderes Intervallwischer-Timerrelais	Relais de minuterie essuie-glace intermittent avant	Relais intervaltimer voorkant	Relé del temporizador intermitente delantero	Relè del timer intermittenza tergicristallo anteriore
Fuel heating relay	Kraftstoffheizungsrelais	Relais de chauffage du carburant	Brandstofverwarmer-relais	Relé de calentamiento de combustible	Relé riscaldamento carburante
Fuel level gauge	Kraftstoffstandgeber	Jauge de niveau de carburant	Brandstofpeilometer	Indicador de nivel de combustible	Indicatore del livello di carburante
Fuel pressure sensor	Kraftstoffdrucksensor	Capteur de pression de carburant	Brandstofdruk-sensor	Sensor de presión del combustible	Sensore di pressione del carburante
G sensor	G-Sensor	Capteur de G	G-sensor	Sensor G	Sensore G
Gas generator	Gasgenerator	Générateur de gaz	Gasgenerator	Generador de gas	Generatore di gas
Generator	Generator	Dynamo	Generator	Generador	Generatore
Glow controller	Flammwächter	Régulateur de préchauffage	Gloeiregeleenheid	Controlador de incandescencia	Controller fosforescenza
Hazard warning light	Warnblinker	Feu de détresse	Waarschuwing-lampje	Luz de aviso de peligro	Segnalazione luminosa di pericolo
Headlight beam leveling actuator	Scheinwerfer-Niveau-Stellelement	Actuateur de réglage des projecteurs	Actuator hoogteverstel-systeem koplamp	Actuador de nivelación del haz de los faros	Comando livellamento fari anteriori
Headlight leveling motor	Scheinwerfer-Niveau-Einstellmotor	Moteur de réglage des projecteurs	Motor hoogteverstel-systeem koplampen	Motor de nivelación del haz de los faros	Motorino livellamento dei fari
Heated oxygen sensor	Beheizte Lambda-sonde	Capteur d'oxygène chauffé	Verwarme zuurstof-sensor	Sensor de oxígeno calentado	Sensore dell'ossigeno di riscaldamento
Heater blower motor	Heizgebläsemotor	Moteur de soufflante de chauffage	Motor kachelblazer	Motor del soplador del calefactor	Motorino del generatore di aria calda
Heater resistor	Heizungswiderstand	Résisteur de chauffage	Kachelweerstand	Resistor del calefactor	Resistenza del riscaldatore
High mounted stop light	Dritte Bremsleuchte	Feu de stop supplémentaire	Derde remlicht	Luz de parada de montaje elevado	Luce di stop alta
Ignition coil	Zündspule	Bobine d'allumage	Bobine	Bobina de encendido	Bobina di accensione
Ignition timing resistor	Zündverstellungswiderstand	Résisteur de calage d'allumage	Ontstekingstijdweerstand	Resistor de puesta a punto del encendido	Resistenza fasatura
Ignitor	Schaltgerät	Allumeur	Ontsteker	Ignitor	Ignitore
Illumination controller	Beleuchtungsregler	Régulateur d'éclairage	Regeleenheid verlichting	Controlador de iluminación	Comando dei fari
Input sensor	Eingabesensor	Capteur d'entrée	Invoer-sensor	Sensor de entrada	Sensore d'entrata
Interior (dome) light	Innenbeleuchtung (Dachhimmelleuchte)	Eclairage intérieur (plafonnier)	Cabineverlichting (koepel)	Luz interior (techo)	Luce abitacolo (plafoniera)
Knock sensor	KlopSENSOR	Capteur de cognement	Klopsensor	Sensor de golpeteo	Sensore di detonazione
License plate light	Kennzeichenbeleuchtung	Éclairage de plaque d'immatriculation	Kentekenplaatlampje	Luz de placa de matrícula	Luce targa

English	Deutsch	Français	Nederlands	Español	Italiano
Light emitting diode	Leuchtdiode	Diode à lueurs	Light emitting diode (LED-lampje)	Diodo emisor de luz	Diodo a emissione di luce
lighting controller	Beleuchtungsregler	Commande d'éclairage	Regeleenheid voor verlichting	Controlador de luces	Comando luci
Limit switch	Grenzschalter	Limiteur	Begrenzings-schakelaar	Interruptor limitador	Interruttore di fine corsa
Lock up solenoid	Überbrückungs-magnetventil	Solénoïde de verrouillage	Blokkeringsmagneet	Solenoide de bloqueo	Elettrovalvola di bloccaggio
Meter illumination control	Instrumentenbeleuch-tungsregelung	Commande d'éclairage des Instruments	Instrumenten-verlichtingsregeling	Control De Ilumi-nación del Medidor	Comando illuminazione strumentazione
Mode actuator	Fahrstufen-Stellelement	Actuateur de mode	Modusactuator	Actuador de modo	Attuatore modalità
Mode control switch	Fahrstufenstell-schalter	Contacteur de commande de mode	Modus besturingsschakelaar	Interruptor de control de modo	Interruttore comando modalità
Mode select switch	Fahrstufenwähl-schalter	Sélecteur de mode	Modus keuze-schakelaar	Interruptor selector de modo	Selettore di modalità
Noise suppressor	Störschutz	Anti-parasites	Geluidsdemper	Supresor de ruidos	Soppressore di rumore
O/D cut switch	O/D-trennschalter	Interrupteur O/D	O/D-onderbrekings-schakelaar	Interruptor de corte de O/D	Sezionatore O/D
Oil control valve	Öldruckregelventil	Vanne de régulation d'huile	Olieregelplep	Válvula de control de aceite	Valvola di controllo olio
Oil level switch	Ölpegelschalter	Contacteur de niveau d'huile	Oliepeilschakelaar	Interruptor de nivel de aceite	Interruttore livello dell'olio
Oil pressure switch	Öldruckschalter	Pressostat d'huile	Oliedrukschakelaar	Interruptor de presión de aceite	Pressostato di sicurezza dell'olio
Output diagnosis coupler	Ausgangs-diagnosestecker	Coupleur de diagnostic de sortie	Output diagnose-stekker	Acoplador de diag-nóstico de salida	Accoppiatore analisi potenza sviluppata
Output shaft speed sensor	Ausgangswellen-drehzahlsensor	Capteur de vitesse d'arbre de sortie	Output snelheids-sensor transmissieas	Sensor de velocidad del eje de salida	Sensore di velocità albero motore
Parking brake switch	Handbremsschalter	Contacteur de frein à main	Handremschakelaar	Interruptor del freno de estacionamiento	Interruttore freno a mano
Photo diode	Photodiode	Photo-diode	Fotodiode	Foto diodo	Fotodiodo
Photo transistor	Phototransistor	Photo-transistor	Fototransistor	Foto transistor	Fototransistore
Piezoelectric element	Piezoelement	Élément piézoélectrique	Piëzo-elektrisch element	Elemento piezoeléctrico	Elemento piezoelettrico
Position light	Positionsleuchte	Feu de position	Positielicht	Luz de posición	Luci di posizione
Pressure regulator	Druckregler	Régulateur de pression	Drukregulateur	Regulador de presión	Regolatore di pressione
Pressure switch	Druckschalter	Contacteur de pression	Drukschakelaar	Interruptor de presión	Pressostato
Rear intermittent timer relay	Hinteres Intervallwischer-Timerelais	Relais de minuterie essuie-glace intermittent arrière	Relais intervaltimer achterkant	Relé del temporizador intermitente trasero	Relè timer intermittenza tergicristallo
Reed switch	Reed-Schalter	Contacteur à lame	Reed-schakelaar	Interruptor de lámina	Interruttore a lame
Reference (zener) diode	Bezugsdiode (Zener-diode)	Diode (de Zener) de référence	Referentie (zener)diode	Diodo de referencia (Zener)	Diodo (Zener) di riferimento
Seat belt switch	Sicherheitsgurt-schalter	Contacteur de ceinture de sécurité	Veiligheidsgordel-schakelaar	Interruptor del cinturón de seguridad	Interruttore cinture di sicurezza
Shift illumination	Schalt-beleuchtung	Témoin de sélection de vitesse	Schakelverlichting	Iluminación decambios	Illuminazione del cambio
Shift lock relay	Schaltsperrrelais	Relais de verrouillage de changement de vitesses	Schakelvergrendelings-relais	Relé de bloqueo de cambio	Relè blocco del cambio
Shift lock solenoid	Schaltsperrmagnet	Solénoïde de verrouillage de changement de vitesses	Schakelvergrendelings-magneet	Solenoide de bloqueo de cambio	Elettrovalvola blocco del cambio
Side air-bag inflator	Seiten-Airbag-Gas-generator	Gonfleur d'airbag latéral	Zij-airbag (opblaas-) module	Inflador de la bolsa de aire lateral	Generatore di gas per airbag laterale
Slide switch	Schiebeschalter	Contacteur de toit ouvrant	Schuifschakelaar	Interruptor de deslizamiento	Interruttore a scorrimento
Sliding roof	Schiebedach	Toit ouvrant	Schuifdak	Techo corredizo	Tettuccio apribile

English	Deutsch	Français	Nederlands	Español	Italiano
Solenoid valve	Magnetventil	Electrovanne	Magneetklep	Válvula de solenoide	Elettrovalvola
Starting motor	Starter	Moteur de démarrage	Startmotor	Motor de arranque	Motorino d'avviamento
Tail light	Heckleuchte	Feu arrière	Achterlicht	Luz de cola	Luce di posizione posteriore
Throttle position sensor	Drosselfühler	Capteur de position de papillon	Gaskleppositie sensor	Sensor de posición de mariposa	Sensore di posizione della valvola a farfalla
Tilt switch	Neigungsschalter	Contacteur de basculage	Kantelschakelaar	Interruptor de inclinación	Interruttore d'inclinazione
Torque sensor	Drehmomentsensor	Capteur de couple	Koppelsensor	Sensor de torsión	Sensore di coppia
Transmission control module	Automatikgetriebe-Steuergerät	Module de commande de transmission	Besturingsmodule overbrenging	Módulo de control de transmisión	Modulo di controllo della trasmissione
Transaxle range switch	Fahrbereichsschalter	Contacteur de gamme de transmission	Schakelaar transmissiebereik	Interruptor del rango de transmisión	Interruttore d'intervallo transaxle
Triple pressure switch	Dreifachdruckschalter	Triple pressostat	Drievoudige drukschakelaar	Interruptor de presión triple	Interruttore pressostato triplo
Turn signal light	Fahrtrichtungs-anzeiger	Clignotant	Richtingaanwijzer-lampje	Luz de señal de dirección	Indicatori di direzione

Car model	Wagon R+	Owner	_____
Year	2000-2005	Registration No.	_____
Engine	B13BB	VIN	_____
Maintenance	120,000 km/8 years	1. Reg. Date	_____

Engine compartment		OK	Remarks
1	Check air filter		
2	Change antifreeze		
3	Change automatic transmission oilhoses		
4	Check transmission fluid level (automatic transmission)		
5	Change brake fluid		
6	Check/ Adjust valve clearance		
7	Check battery		
8	Check fuel pipes and hoses (positioning, condition and impermeability)		
9	Change engine oil and filter		

Body/ Cabin		OK	Remarks
10	Check/ Lubricate all hinges, doorstops and locks		
11	Check exterior and interior lamps/ Adjust headlamps		

Chassis/ Underbody				OK	Remarks
12	Check exhaust system and mounting (also Control heat shield)				
13	Check clutch				
14	Check brake pipes and hoses				
15	Check brake drums and shoes (also Control cylinder for leakage)				
16	Check brake discs and pads				
17	Check steering (also servo/tie-rods/ ball joints for freeplay and leakage)				
18	Check suspension system (remember to Control shock absorbers and ball joints for leak age)				
19	Perform rust inspection, enter damage (every year)				
20	Check tyres, adjust inflation pressure and enter tread depth LF: RF: LR: RR: SPARE:				

Testdrive		OK	Remarks
21	Test drive with Control of all vehicle systems		
22	Clean steering wheel and handles after service		
23	Stamping of service manual

Engine compartment		OK	Remarks
1	Check cooling system for leakage		
2	Change engine oil and filter		
3	Check fuel pipes and hoses (positioning, condition and impermeability)		
4	Check battery		
5	Check PCV system		
6	Change driving belts		
7	Check/ Adjust valve clearance		
8	Check distributor cap and rotor		
9	Change brake fluid		
10	Change air filter		
11	Check transmission fluid level (automatic transmission)		
12	Change antifreeze		
13	Change spark plugs		
Body/ Cabin		OK	Remarks
14	Check/ Lubricate all hinges, doorstops and locks		
15	Check exterior and interior lamps/ Adjust headlamps		
Chassis/ Underbody		OK	Remarks
16	Check suspension system (remember to Control shock absorbers and ball joints for leakage)		
17	Check brake pipes and hoses		
18	Check clutch		
19	Check exhaust system and mounting (also Control heat shield)		
20	Check brake drums and shoes (also Control cylinder for leakage)		
21	Check brake discs and pads		
22	Check steering (also servo/tie-rods/ ball joints for freeplay and leakage)		
23	Check drive shafts and gaiters		
24	Check tyres, adjust inflation pressure and enter tread depth LF: RF: LR: RR: SPARE:		
25	Perform rust inspection, enter damage (every year)		
26	Check tank ventilation/ charcoal filter		
27	Check fuel tank (remember to Check tank cap gasket)		
28	Change gearbox oil		
Testdrive		OK	Remarks
29	Test drive with Control of all vehicle systems		
30	Clean steering wheel and handles after service		
31	Stamping of service manual

Maintenance	40,000 km/4 years	1. Reg. Date	_____

Engine compartment		OK	Remarks
1	Check driving belts		
2	Check transmission fluid level (automatic transmission)		
3	Change brake fluid		
4	Check/ Adjust valve clearance		
5	Check ignition cables and wires		
6	Check ignition timing		
7	Change air filter		
8	Check cooling system for leakage		
9	Change engine oil and filter		
10	Check idling		
11	Check battery		
12	Change antifreeze every 40,000 km/ 2 years		
13	Check fuel tank, pipes and hoses (remember to Check tank cap gasket)		
Body/ Cabin		OK	Remarks
14	Check exterior and interior lamps/ Adjust headlamps		
15	Check height and freeplay of brake pedal		
16	Check wiper/ washer system and washer fluid level		
17	Check/ Lubricate all hinges, doorstops and locks		
Chassis/ Underbody		OK	Remarks
18	Check brake discs and pads		
19	Check exhaust system and mounting (also Control heat shield)		
20	Check clutch		
21	Check brake pipes and hoses		
22	Check brake drums and shoes (also Control cylinder for leakage)		
23	Check gearshift joints		
24	Change gearbox oil		
25	Check drive shafts and gaiters		
26	Check suspension system (remember to Control shock absorbers and ball joints for leak age)		
27	Check tyres, adjust inflation pressure and enter tread depth LF: RF: LR: RR: SPARE:		
28	Perform rust inspection, enter damage (every year)		
29	Check hand brake and cables		
Testdrive		OK	Remarks
30	Test drive with Control of all vehicle systems		
31	Clean steering wheel and handles after service		
32	Stamping of service manual
