DTC	C2125/25	No Signal from Transmitter ID5 in Main Mode
DTC	C2181/81	Transmitter ID1 not Received (Test Mode DTC)
DTC	C2182/82	Transmitter ID2 not Received (Test Mode DTC)
DTC	C2183/83	Transmitter ID3 not Received (Test Mode DTC)
DTC	C2184/84	Transmitter ID4 not Received (Test Mode DTC)
DTC	C2185/85	Transmitter ID5 not Received (Test Mode DTC)

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressure of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.

The tire pressure warning valve and transmitters constantly send radio waves to the tire pressure warning antenna and receiver.

Under the following conditions below, the tire pressure warning antenna and receiver is unable to receive the signals from the tire pressure warning valves and transmitters, and a DTC is stored.

- Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.

HINT:

When no signals are received for 51 minutes or more, a DTC is output.

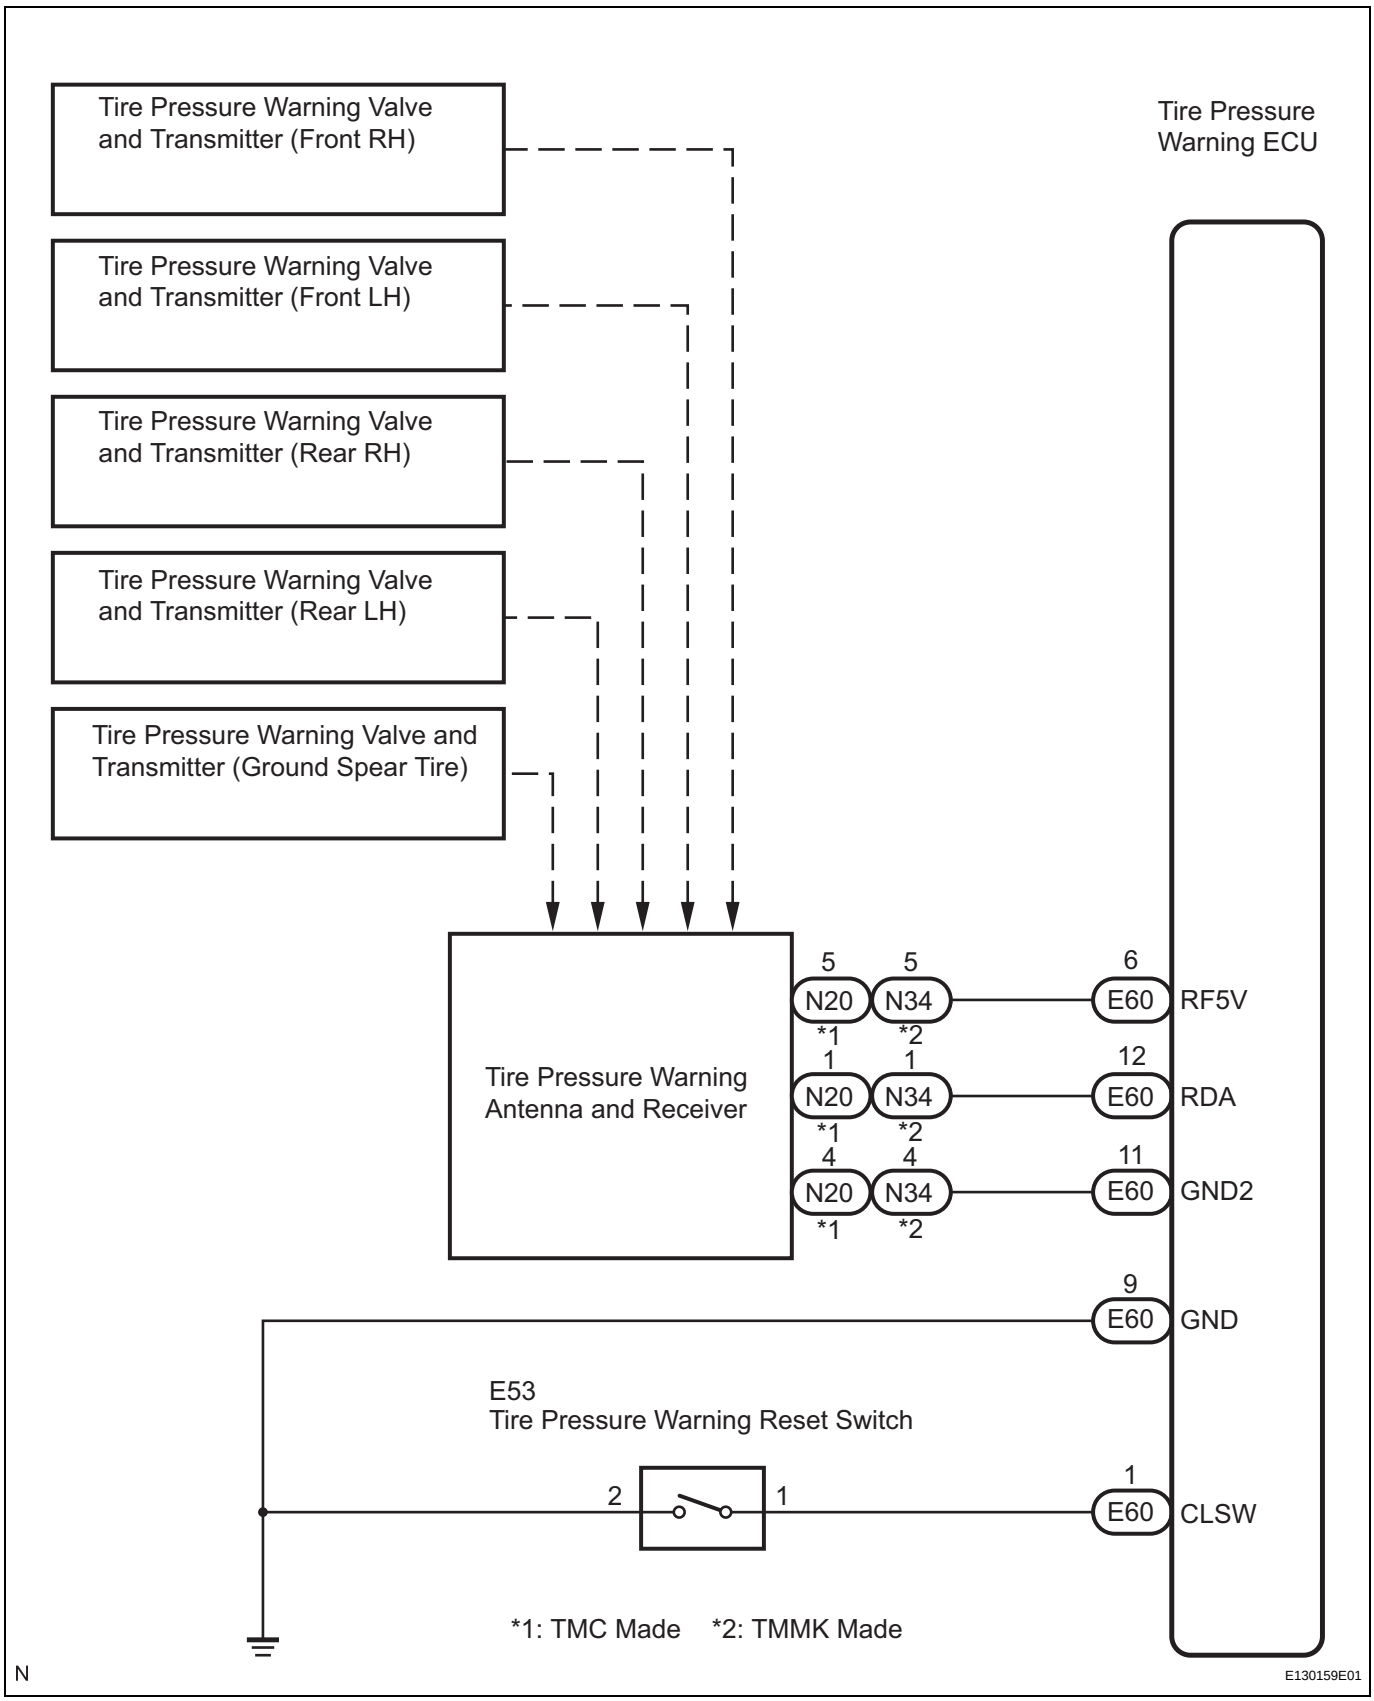
DTCs from C2121/21 to C2125/25 can only be cleared by using the tester. DTCs from C2181/81 to C2184/84 or C2185/85 can be cleared when the transmitter in the tire pressure warning valve and transmitter sends a forced transmission signal or test mode ends. DTCs from C2181/81 to C2184/84 or C2185/85 are output only in test mode.

DTC No.	DTC Detecting Condition	Trouble Area
C2121/21 C2122/22 C2123/23 C2124/24 C2125/25	These DTCs are detected when no signals are received for 51 minutes or more.	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2181/81 C2182/82 C2183/83 C2184/84 C2185/85	Malfunction in the transmitting/receiving circuit	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU

HINT:

- It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.
- DTCs C2125/25 and C2185/85 are used only when the vehicle is equipped with a ground spare tire.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-18) after registration (See page TW-15) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

HINT:

Set the tire pressure to the specified value.

1	CHECK FREQUENCY RECEIVING CONDITION

(a) Check if the vehicle is not located in areas such as described below:

(1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in areas described above, the tire pressure warning light may come on only in a particular area.

(2) Devices using similar radio frequencies are used in the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio frequency may be interrupted due to surroundings or devices installed by user.

NG → **CHECK IF ANY DEVICE IS INSTALLED BY USER**

OK

2	IDENTIFY TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressure to the appropriate specified values.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	210 (2.1, 31)	210 (2.1, 31)
P215/55R17 93V	220 (2.2, 32)	220 (2.2, 32)

(b) Select "Tire inflation Pressure" by following the prompts displayed on the intelligent tester.

Item	Measurement Item/Range (display)	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS2	ID2 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-

Item	Measurement Item/Range (display)	Normal Condition	Diagnostic Note
TIREPRESS3	ID3 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS4	ID4 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS5	ID5 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-

(c) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.41 kg/cm^2, 5.8 psi) within 30 seconds.

(d) Check the DATA LIST.

NOTICE:

- **It takes about 1 minute or more to display the updated tire pressure data.**
- **When no "Tire Inflation Pressure" data has changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.**
- **Record the transmitter ID of which "Tire Inflation Pressure" data corresponds to each tire.**

(e) After confirming that one of "Tire Inflation Pressure" data for one tire (ID1 to ID4 or ID5) has changed, repeat this procedure one by one. Identify the transmitter that corresponds to DTC.

DTC	C2141/41	Transmitter ID1 Error

DTC	C2142/42	Transmitter ID2 Error

DTC	C2143/43	Transmitter ID3 Error

DTC	C2144/44	Transmitter ID4 Error

DTC	C2145/45	Transmitter ID5 Error

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressure of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.
When the internal circuit of the tire pressure warning valve and transmitter is malfunctioning, this DTC is output.

DTC No.	DTC Detecting Condition	Trouble Area
C2141/41 C2142/42 C2143/43 C2144/44 C2145/45	If an "ERROR" signal is received 3 times consecutively, the tire pressure warning valve and transmitter will be judged as defective and a DTC will be output. This will happen in situations where the inflation pressure is outside the range 0 to 637.5 kPa (0 to 6.48 kgf/cm^2, 0 psi to 92.2 psi), the temperature inside the tire is outside the specified range -40 to 120°C (-40 to 253°F), or an error occurs in the tire pressure warning valve and transmitter or the surrounding area.	• Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:
- It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.
- DTC 2145/45 is used only when the vehicle is equipped with ground spare tire.

INSPECTION PROCEDURE

NOTICE:
- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-18) after registration (See page TW-15) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

1	IDENTIFY TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressure to the specified value.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94W	210 (2.1, 31) *1 240 (2.4, 35)*2	210 (2.1, 31) *1 240 (2.4, 35)*2
P215/55R17 93V	220 (2.2, 32) *1 240 (2.4, 35)*2	220 (2.2, 32) *1 240 (2.4, 35)*2

*1: For driving under 100 mph (160 km/h)
*2: For driving at 100 mph (160 km/h) or over

(b) Display the "Tire Inflation Pressure" data for each wheel using the intelligent tester.

(c) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.41 kg/cm^2, 5.8 psi) within 30 seconds. If "Tire Inflation Pressure" displayed on the tester (ID1 to ID4 or ID5) does not change, the tire pressure monitor valve corresponds to the DTC that was detected.
HINT:
- Identify the malfunctioning tire pressure monitor valve by repeatedly decreasing the tire pressure for each tire.
- Record which "TIREPRESS" data (ID1 to ID4 or ID5) corresponds to each tire.

Item	Measurement Item/Range (display)	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS2	ID2 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS3	ID3 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS4	ID4 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS5	ID5 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-

(d) Check the DATA LIST.

Result

REPLACE TIRE PRESSURE WARNING ECU

DTC	C2165/65	Abnormal Temperature Inside ID1 Tire

DTC	C2166/66	Abnormal Temperature Inside ID2 Tire

DTC	C2167/67	Abnormal Temperature Inside ID3 Tire

DTC	C2168/68	Abnormal Temperature Inside ID4 Tire

DTC	C2169/69	Abnormal Temperature Inside ID5 Tire

DESCRIPTION

Each tire pressure warning valve and transmitter measures the internal temperature of its tire as well as tire pressure, and transmits the information to the tire pressure warning ECU along with the transmitter ID. If the measured temperature is out of the specified range, the tire pressure warning ECU recognizes it as a malfunction, outputs DTCs, and blinks the tire pressure warning light.

DTC No.	DTC Detecting Condition	Trouble Area
C2165/65 C2166/66 C2167/67 C2168/68 C2169/69	Temperature inside the tire exceeds 119°C (246.2°F) more than once.	• Tires • Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:

- It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.
- DTC 2169/69 is used only when the vehicle is equipped with ground spare tire.

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal.**
- **It is necessary to perform initialization (See page TW-18) after registration (See page TW-15) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

HINT:

Set the tire pressure to the specified value.

1	CHECK TIRES

(a) Check the tire is not flat, and there is no indication of air pressure drop.

OK:

Tire is normal.

HINT:

If a tire is damaged, the tire pressure warning valve and transmitter may also have been damaged at the same time.

NG → **REPLACE TIRE AND TIRE PRESSURE WARNING VALVE AND TRANSMITTER**

OK

2	IDENTIFY TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressure to the specified value.

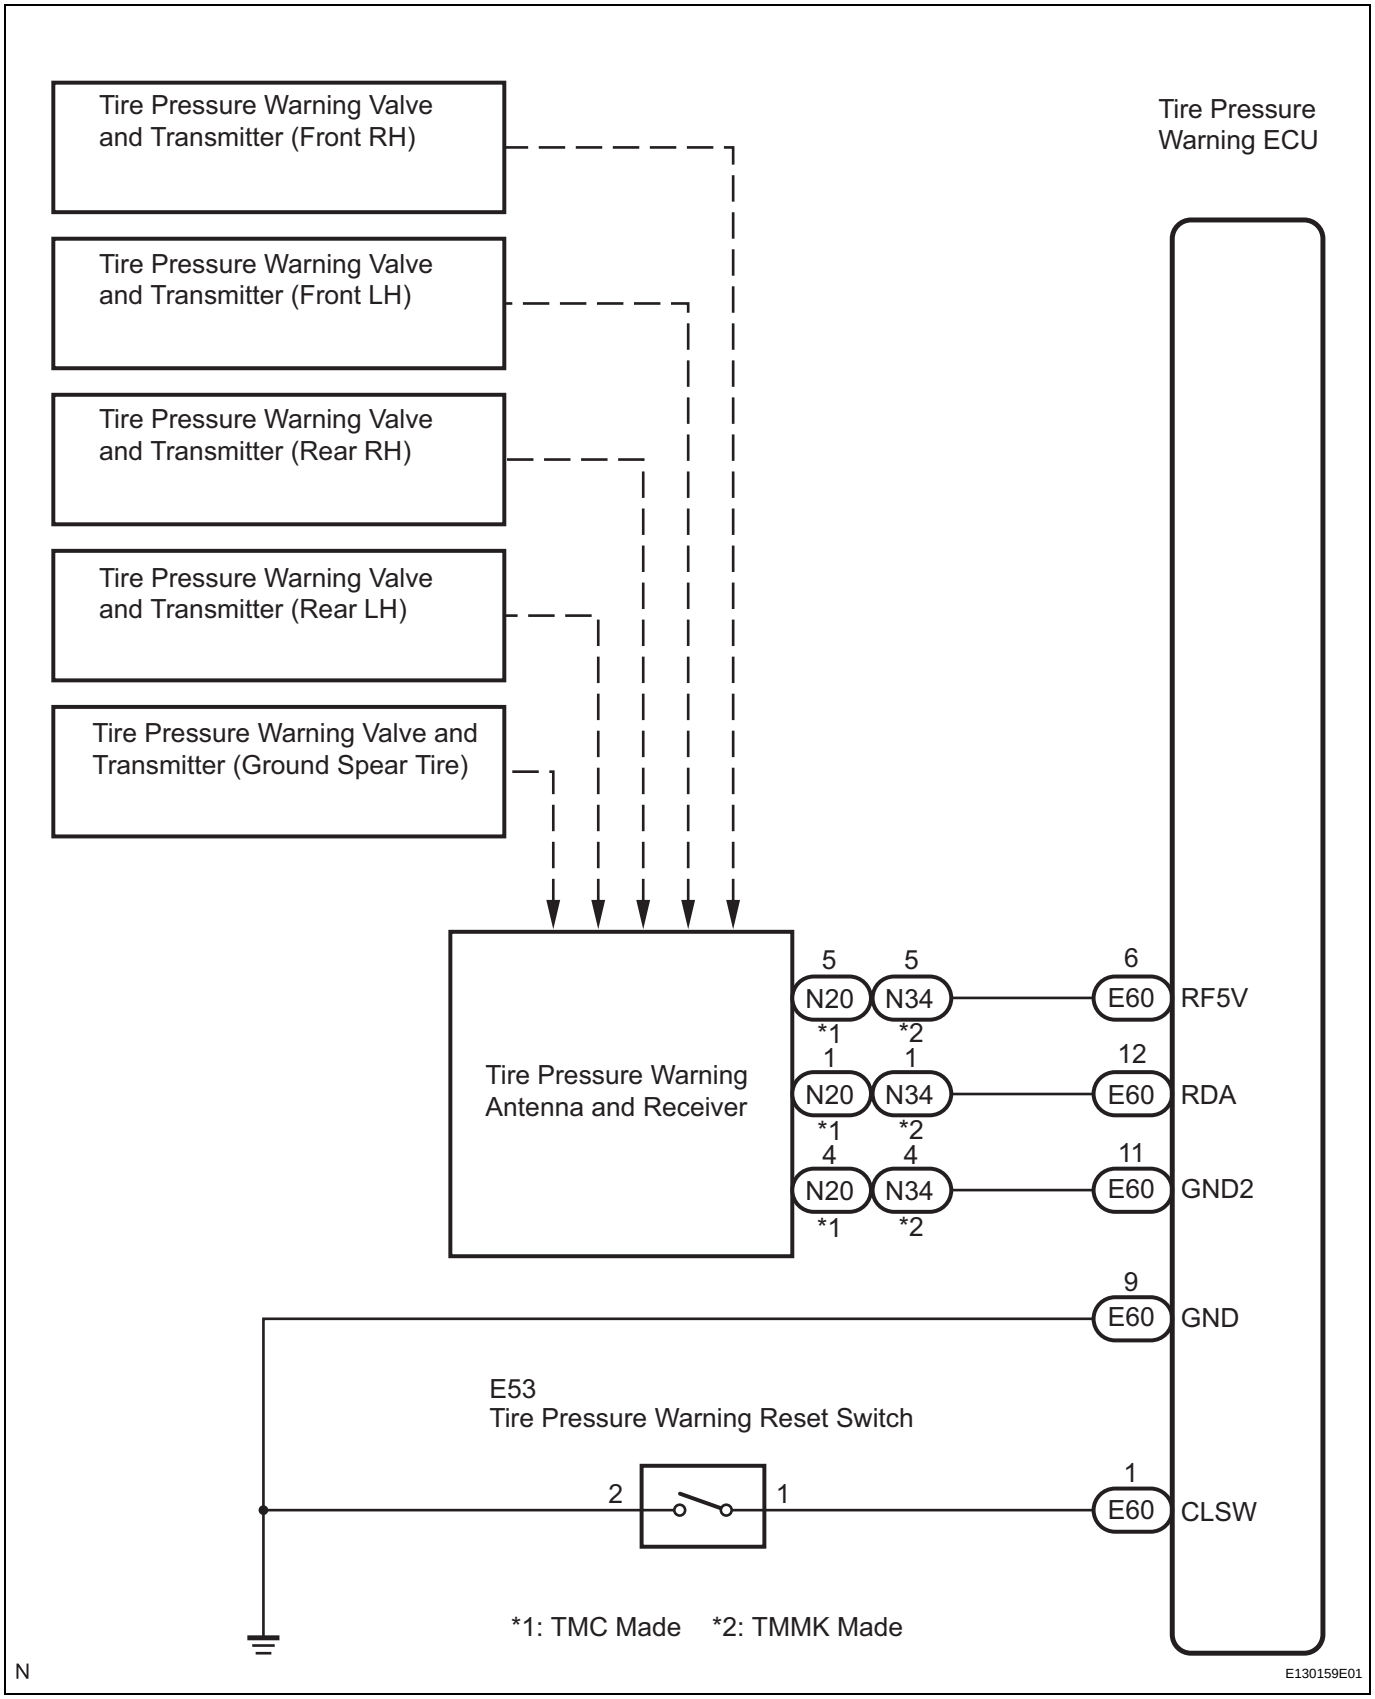
DTC	C2177/77	Initialization not Completed

DESCRIPTION

Initialization is necessary after replacing any of the ECU, tires with different tire pressure, or tire pressure warning valve and transmitter, after rotating the tires or when a new vehicle is delivered.

DTC No.	DTC Detection Condition	Trouble Area
C2177/77	Initialization is not completed after vehicle speed of 5 mph (8 km/h) or more continues for 20 minutes or more (total).	• Tire pressure warning valve and transmitter • Tire pressure warning ECU • Tire pressure warning antenna and receiver • Tire pressure warning reset switch • Wire harness or connector

WIRING DIAGRAM



TW

INSPECTION PROCEDURE

1	CHECK DTC

(a) Check for a DTC.

Result

Condition	Proceed to
Only DTC C2177/77 is output.	A
DTC C2177/77 and any of the DTCs from C2121/21 to C2125/25 are output.	B (See page TW-38)

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A

TW

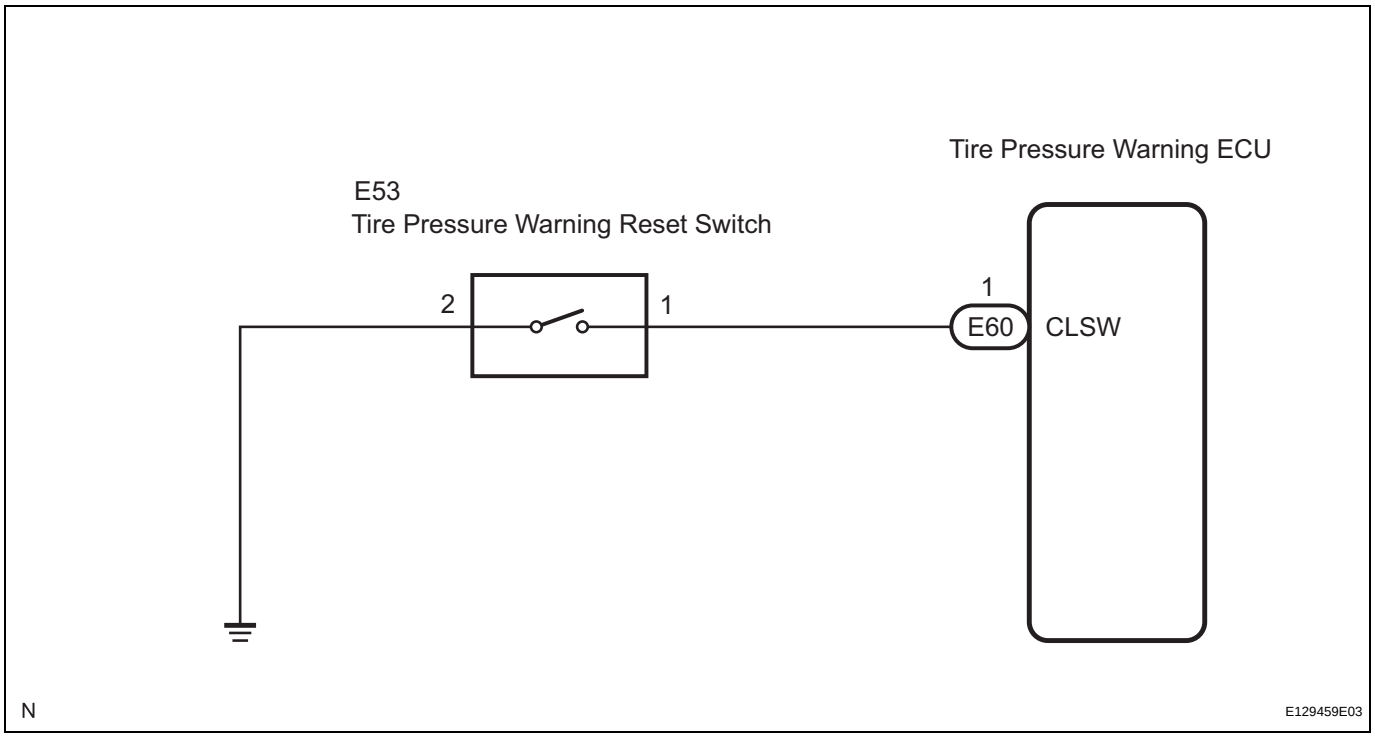
REPLACE TIRE PRESSURE WARNING ECU

Tire Pressure Warning Reset Switch Circuit

DESCRIPTION

Receiving a signal from the tire pressure warning reset switch, the tire pressure warning ECU and receiver indicates the initialization of the pressure warning system.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK TIRE PRESSURE WARNING RESET SWITCH FUNCTION

(a) Perform the tire pressure warning reset switch test in TEST MODE PROCEDURE (See page TW-20).

OK:

Reset switch ON:

Tire pressure warning light comes on.

Reset switch OFF:

Tire pressure warning light blinks.

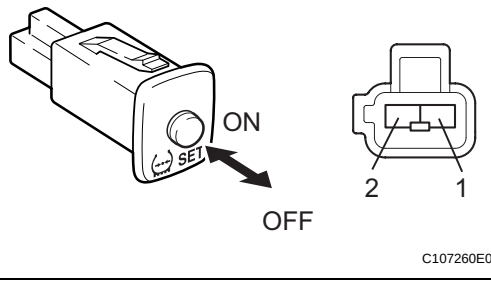
NG → **Go to step 2**

OK

END

2	INSPECT TIRE PRESSURE WARNING RESET SWITCH

Tire Pressure Warning Reset Switch:



(a) Disconnect the tire pressure warning reset switch connector.
(b) Measure the resistance between terminals 1 and 2 of the tire pressure warning reset switch when the tire pressure warning switch is ON and OFF.
Standard resistance

Switch Condition	Specified Condition
ON	Below 1 Ω
OFF	10 kΩ or higher

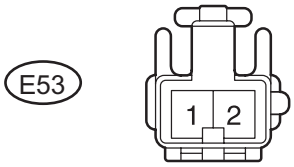
NG → **REPLACE TIRE PRESSURE WARNING RESET SWITCH**

TW

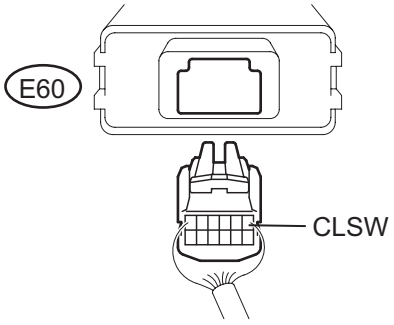
OK

3	CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING RESET SW - TIRE PRESSURE WARNING ECU)

Tire Pressure Warning Reset Switch: (harness side connector)



Tire Pressure Warning ECU:



(a) Disconnect the tire pressure warning reset switch E53 connector and tire pressure warning ECU E60 connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Switch Condition	Specified Condition
E60-1 (CLSW) - E53-1	Below 1 Ω
E60-1 (CLSW) - Body ground	10 kΩ or higher
E53-2 - Body ground	Below 1Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE TIRE PRESSURE WARNING ECU

DTC	C2191/91	Vehicle Speed Signal Error (Test Mode DTC)

DESCRIPTION

The tire pressure warning ECU receives a speed signal from the combination meter. This DTC is stored upon entering test mode, and cleared when a vehicle speed signal of 12 mph (20 km/h) is detected for 3 seconds or more. This DTC is output only in test mode.

DTC No.	DTC Detecting Condition	Trouble Area
C2191/91	Speed sensor circuit malfunction	• Vehicle speed sensor • Tire pressure warning ECU • Combination meter • Wire harness or connector

WIRING DIAGRAM

TW

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-18) after registration (See page TW-15) of the transmitter IDs into the tire pressure warning ECU after the ECU have been replaced.**

1	READ VALUE ON INTELLIGENT TESTER

(a) Connect the intelligent tester to DLC3.
(b) Turn the ignition switch on (IG), and turn the intelligent tester on.
(c) Select the item below in the Data List, and read the value displayed on the intelligent tester.

HINT:
Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / DATA LIST.

METER

Item	Normal Condition
VEHICLE SPD	Almost same as actual vehicle speed

(d) Check that the values indicated on the tester and on the combination meter are the same.
OK:
Vehicle speed indicated on the intelligent tester indicates the actual speed.

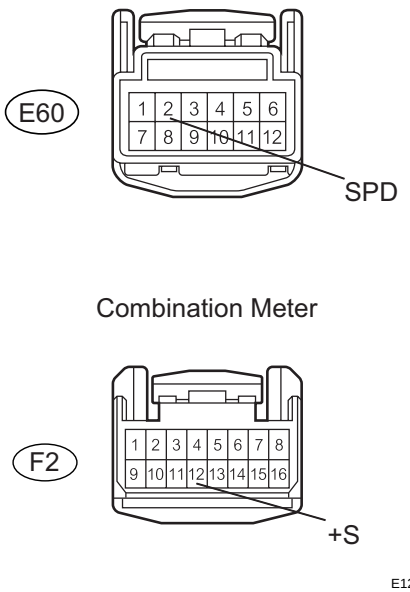
NG → **GO TO METER / GAUGE SYSTEM**

OK

TW

2 CHECK HARNESS AND CONNECTOR (ECU - COMBINATION METER)

Wire Harness Side Connector Front View:



(a) Disconnect the E60 ECU connector.
(b) Disconnect the F2 meter connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
E60-2 (SPD) - F2-12 (+S)	Below 1 Ω
E60-2 (SPD) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

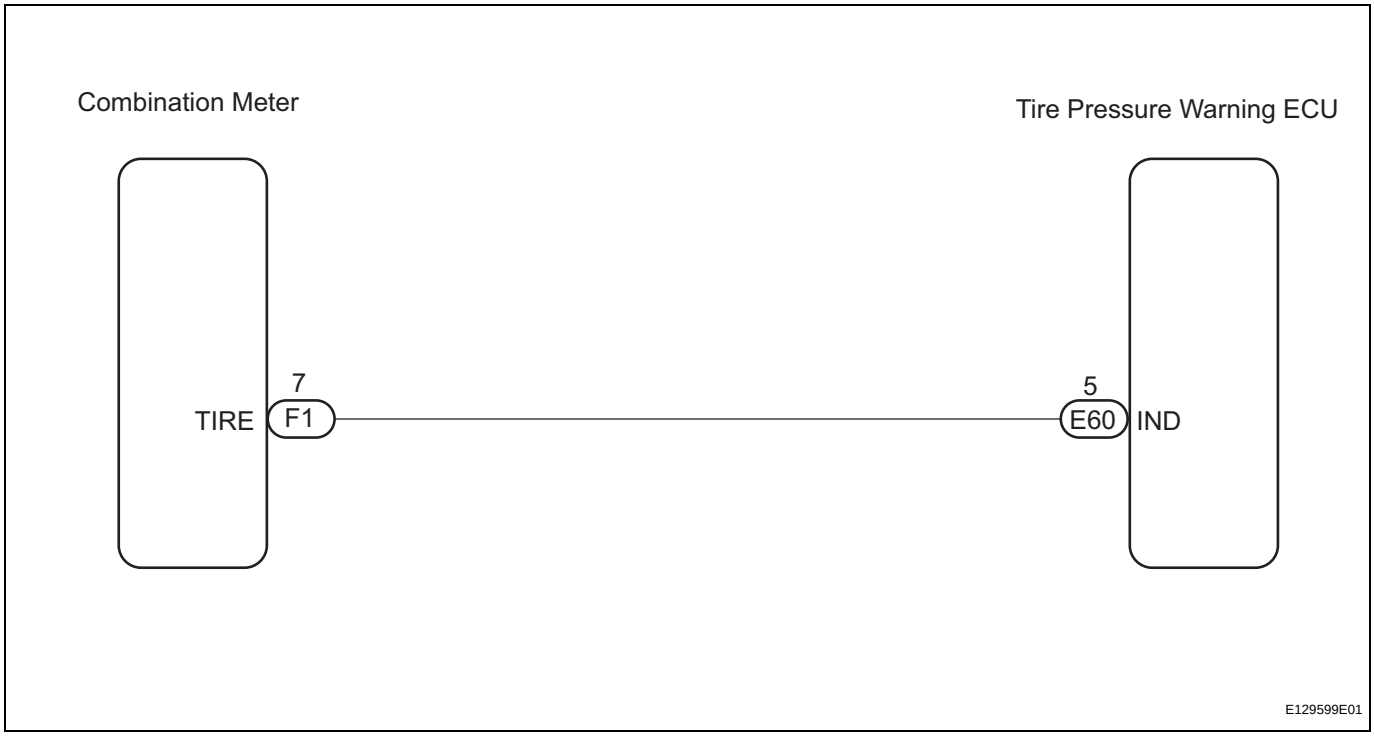
REPLACE TIRE PRESSURE WARNING ECU

Tire Pressure Warning Light Circuit

DESCRIPTION

If the ECU detects trouble, the tire pressure warning light blinks (comes on after blinking for 1 minute) and tire pressure monitor is cancelled at the same time. At this time, the ECU records a DTC in the memory. Connect terminals TC and CG of DLC3 to make the tire pressure warning light blink and output the DTC.

WIRING DIAGRAM



INSPECTION PROCEDURE

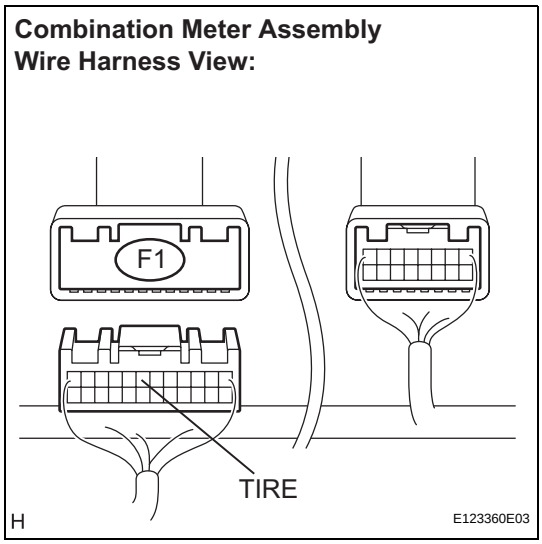
NOTICE:

It is necessary to perform initialization (See page TW-18) after registration (See page TW-15) of the transmitter IDs into the tire pressure warning ECU, after the ECU have been replaced.

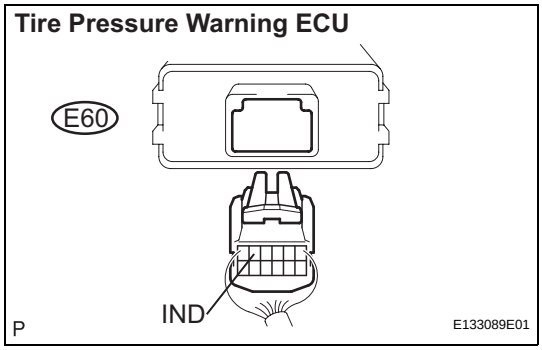
HINT:

This procedure must be performed according to the PROBLEM SYMPTOMS TABLE.

1	CHECK HARNESS AND CONNECTOR (COMBINATION METER - TIRE PRESSURE WARNING ECU)



(a) Disconnect the F1 combination meter connector.



(b) Disconnect the E60 tire pressure warning ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

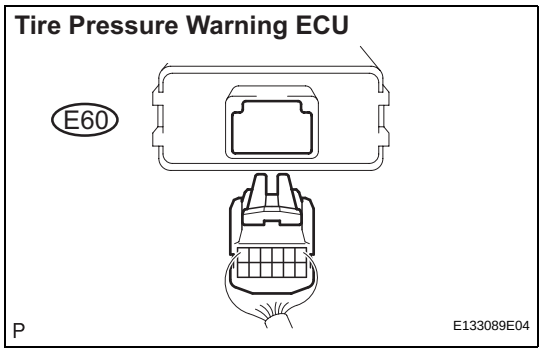
Standard resistance

Tester Connection	Specified Condition
F1-7 (TIRE) - E60-5 (IND)	Below 1 Ω
F1-7 (TIRE) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT COMBINATION METER



(a) Disconnect the connector from the tire pressure warning ECU.

(b) Turn the ignition switch on (IG), check the condition of the tire pressure warning light illumination.

Result

Condition	Proceed to
Illuminates	A
Does not illuminate	B

B → **REPLACE COMBINATION METER**

A

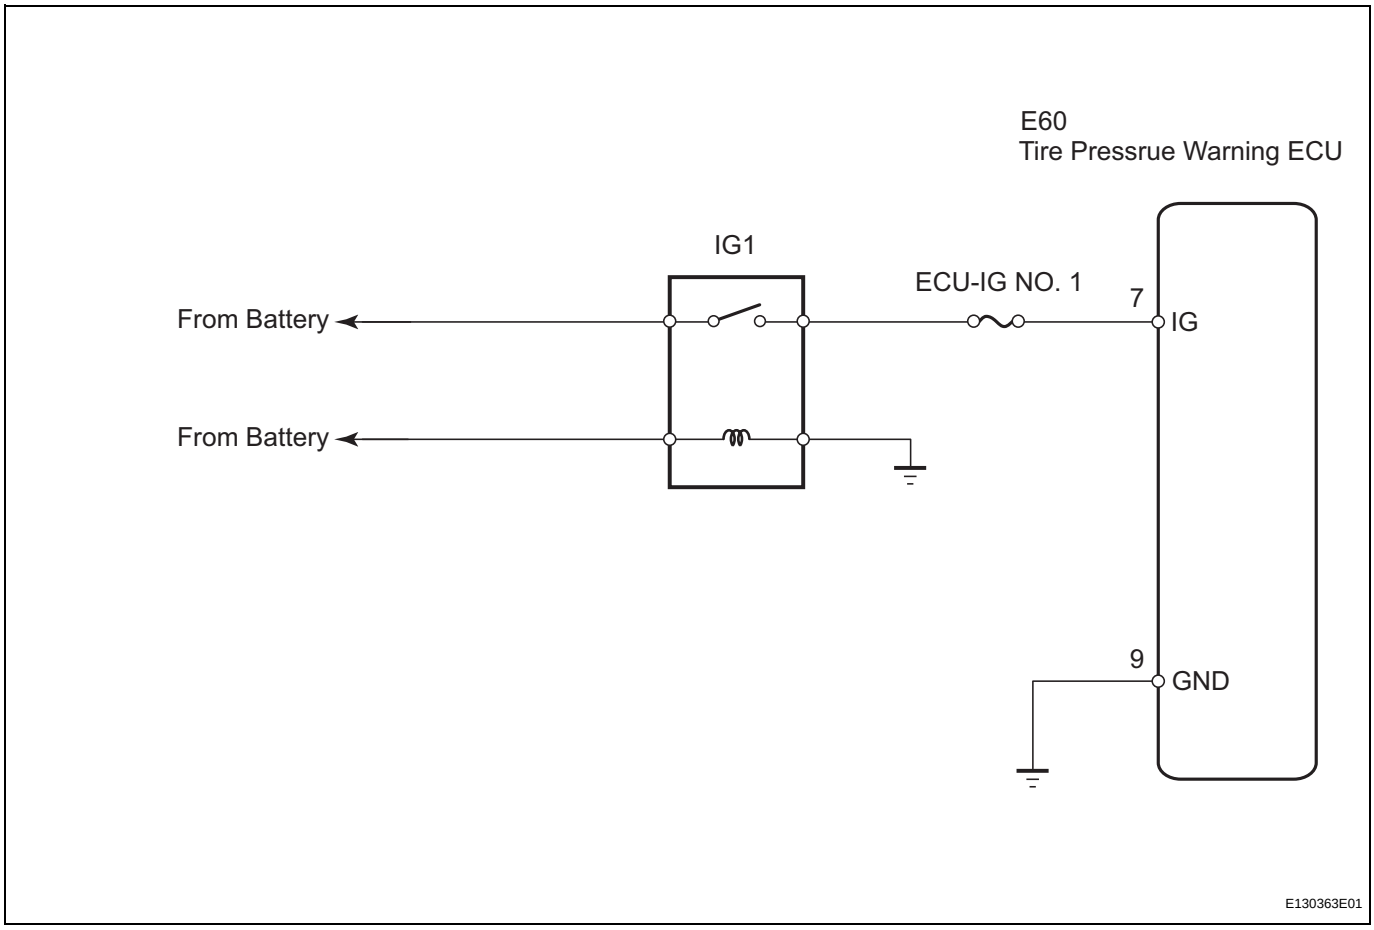
REPLACE TIRE PRESSURE WARNING ECU

ECU Power Source Circuit

DESCRIPTION

This is the power source for the tire pressure warning ECU.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

It is necessary to register an ID code after replacing the tire pressure warning valve and transmitter and/or the tire pressure warning ECU (See page TW-15).

1	INSPECT FUSE (ECU-IG NO. 1)

(a) Remove the ECU-IG NO. 1 fuse from the instrument panel junction block.

(b) Measure the resistance of the fuse.

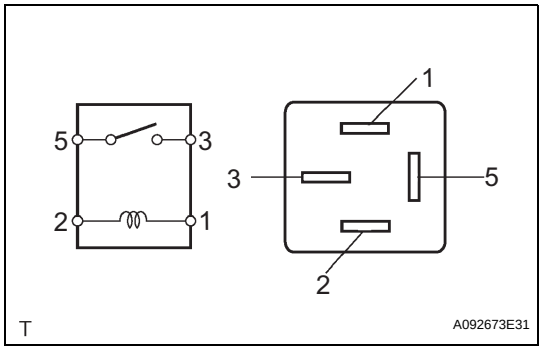
Standard resistance:

Below 1 Ω

NG → **REPLACE FUSE**

OK

2	INSPECT IG1 RELAY



(a) Remove the IG1 relay from the instrument panel junction block.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

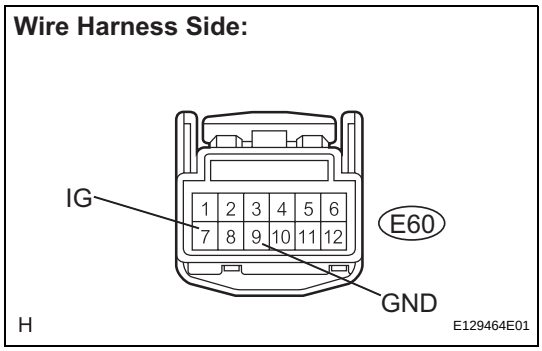
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → REPLACE IG1 RELAY

TW

OK

3	CHECK HARNESS AND CONNECTOR (ECU - BATTERY AND BODY GROUND)



(a) Disconnect the E60 ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Switch Condition	Specified Condition
E60-7 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V
	Ignition switch off	Below 1 V

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E60-9 (GND) - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

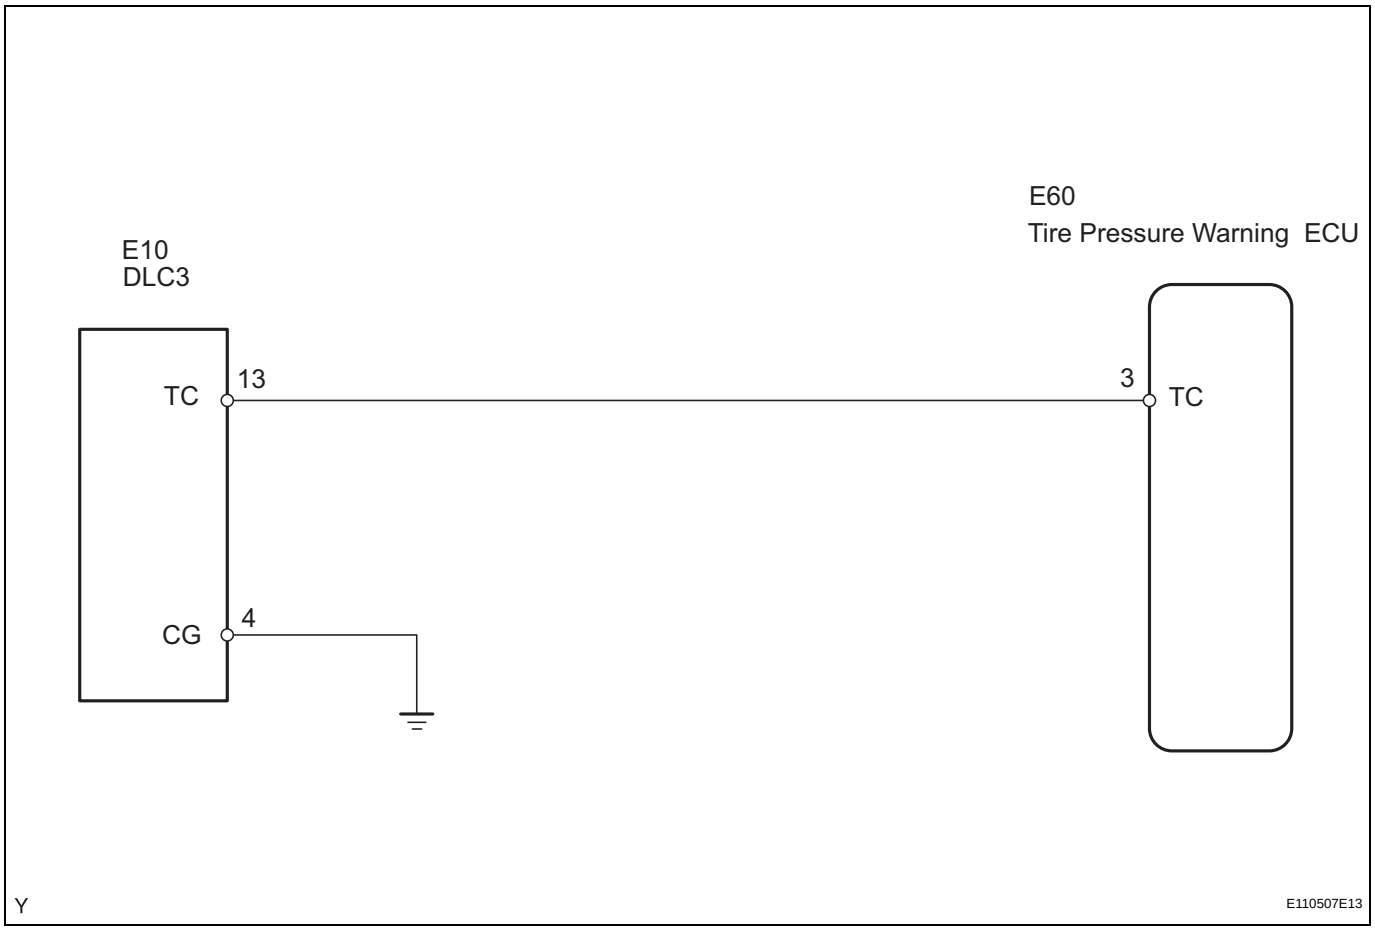
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals 13 (TC) and 4 (CG) of the DLC3. The DTCs are indicated by the blinking of the tire pressure warning light.

WIRING DIAGRAM

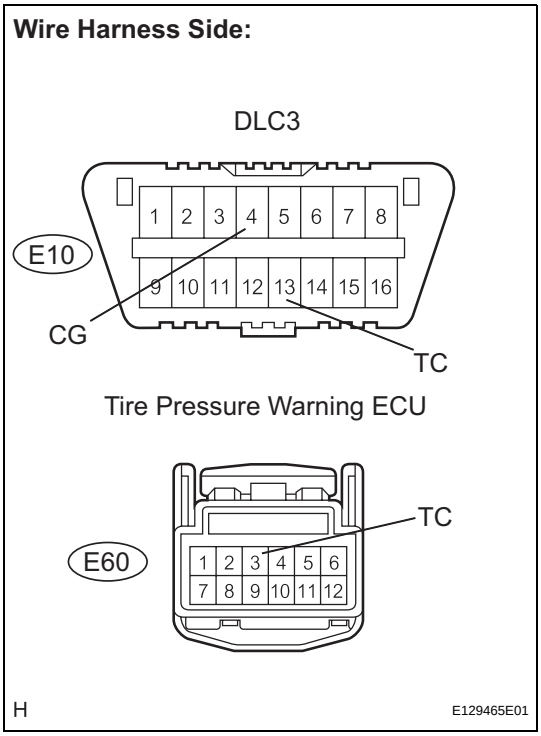


HINT:
When each warning light blinks continuously, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in an ECU connected to this circuit may have occurred.

INSPECTION PROCEDURE

NOTICE:
It is necessary to register an ID code after replacing the tire pressure warning valve and transmitter and/or the tire pressure warning ECU (See page TW-15).

1	CHECK HARNESS AND CONNECTOR (DLC3 - TIRE PRESSURE WARNING ECU)



(a) Disconnect the E60 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E60-3 (TC) - E10-13 (TC)	Below 1 Ω
E10-4 (CG) - Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TW

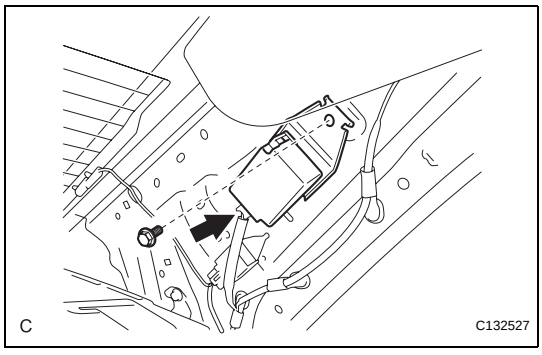
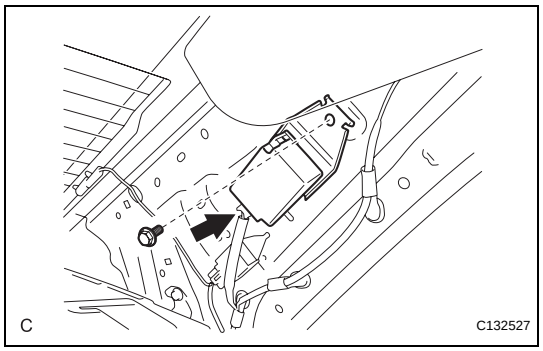
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
3. **REMOVE REAR SEAT HEADREST ASSEMBLY (for Fixed Seat Type)**
4. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY (for Fixed Seat Type)**
5. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
6. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
7. **REMOVE REAR SIDE SEATBACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)**
8. **REMOVE REAR SEAT HEADREST ASSEMBLY (for Reclining Seat Type)**
9. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
10. **REMOVE REAR SEATBACK COVER (for Reclining Seat Type) (See page SE-63)**
11. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)**
12. **REMOVE INNER ROOF SIDE GARNISH LH (See page IR-26)**
13. **REMOVE TIRE PRESSURE WARNING RECEIVER ASSEMBLY**
    (a) Remove the bolt.
    (b) Disconnect the connector and remove the tire pressure warning receiver assembly.





INSTALLATION

1. **INSTALL TIRE PRESSURE WARNING RECEIVER ASSEMBLY**
   (a) Connect the connector to the tire pressure warning receiver assembly.
   (b) Install the tire pressure warning receiver assembly with the bolt
   Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
2. **INSTALL INNER ROOF SIDE GARNISH LH (See page IR-52)**
3. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
4. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY (for Fixed Seat Type)**
5. **INSTALL REAR SEAT HEADREST ASSEMBLY (for Fixed Seat Type)**
6. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
7. **INSTALL REAR SIDE SEATBACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
8. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**
9. **INSTALL REAR SEATBACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)**
10. **INSTALL REAR SEATBACK COVER (for Reclining Seat Type)**
11. **INSTALL REAR SEAT HEADREST ASSEMBLY (for Reclining Seat Type)**
12. **INSTALL BENCH TYPE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**
13. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
14. **INSPECT TIRE PRESSURE WARNING SYSTEM**

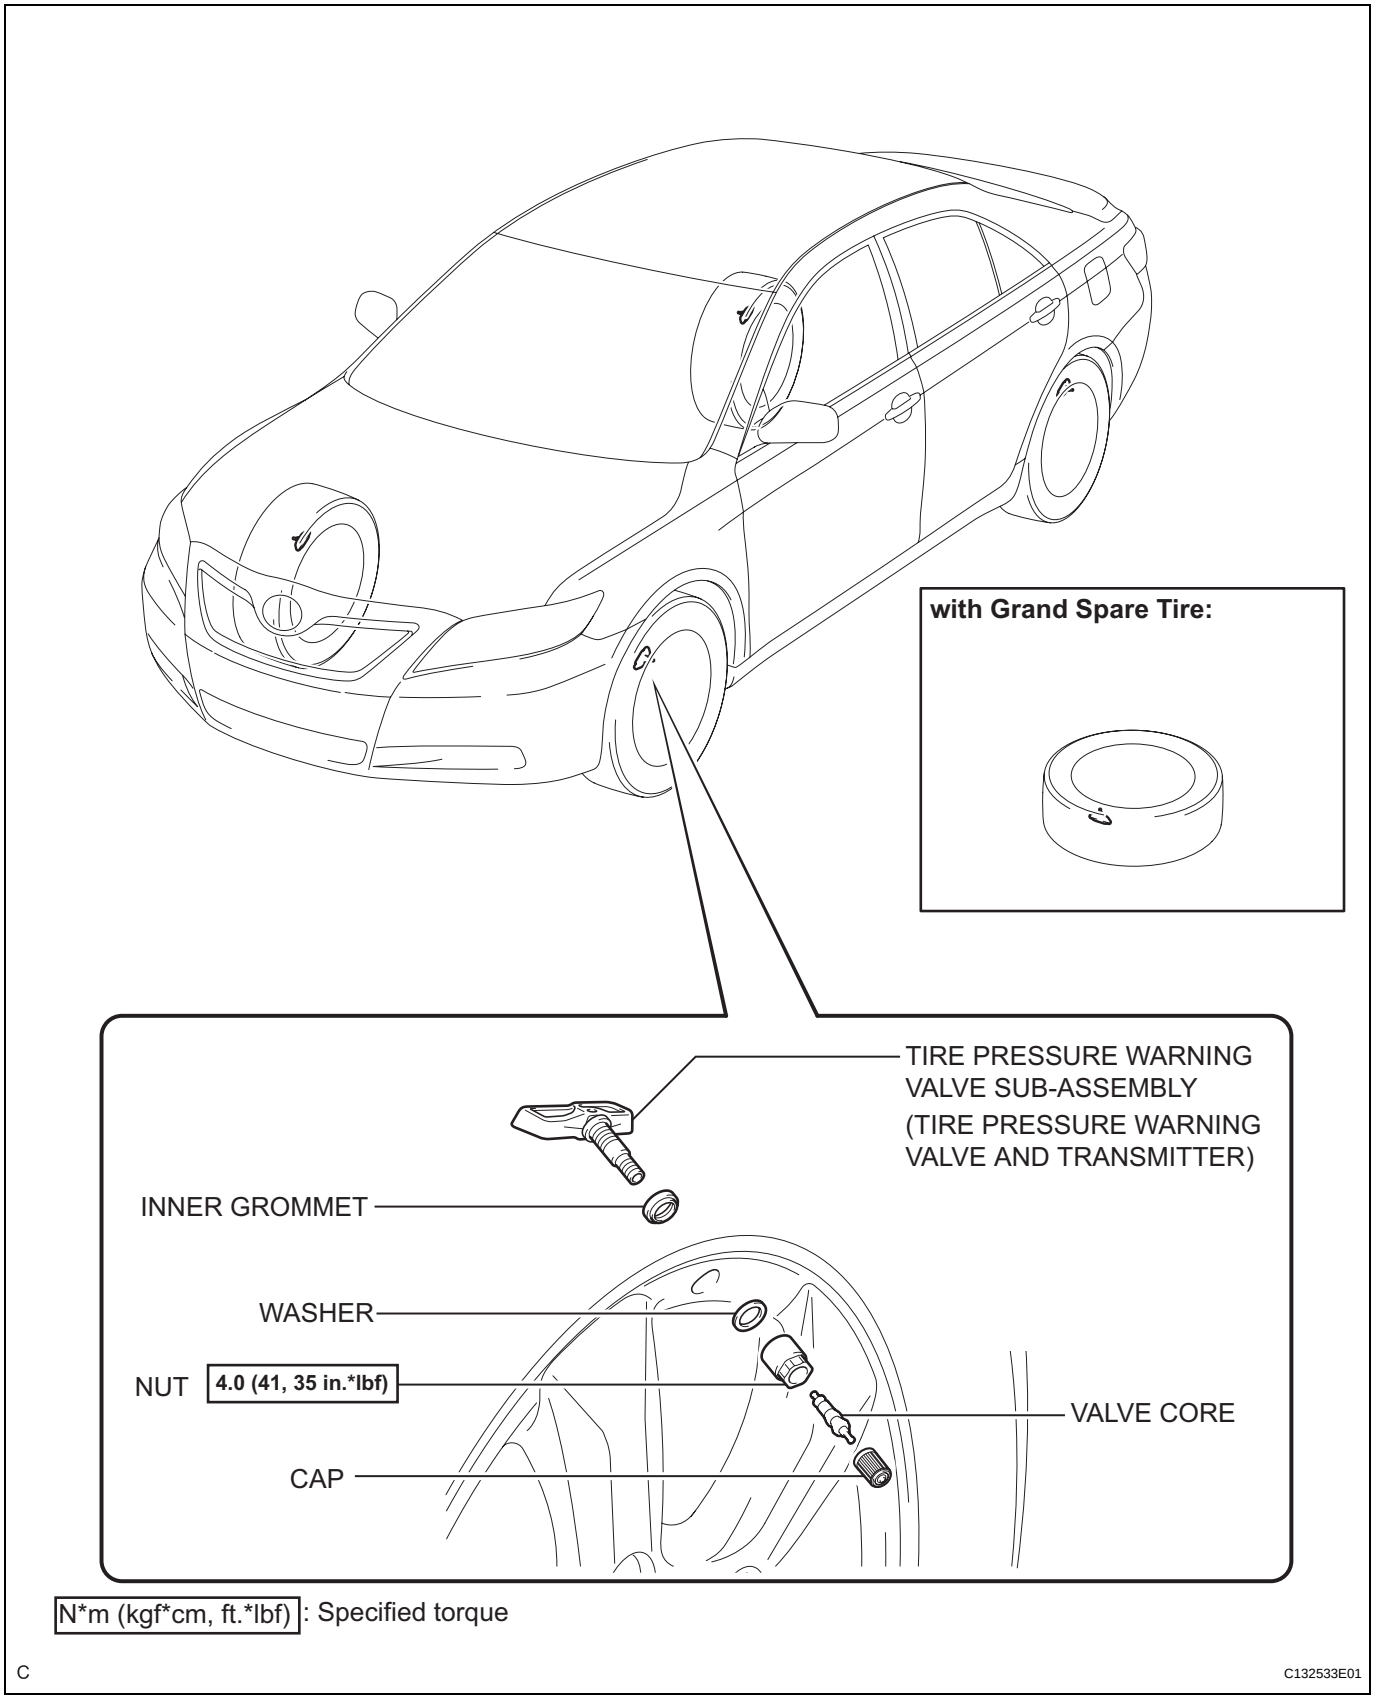
TIRE PRESSURE WARNING VALVE AND TRANSMITTER

COMPONENTS

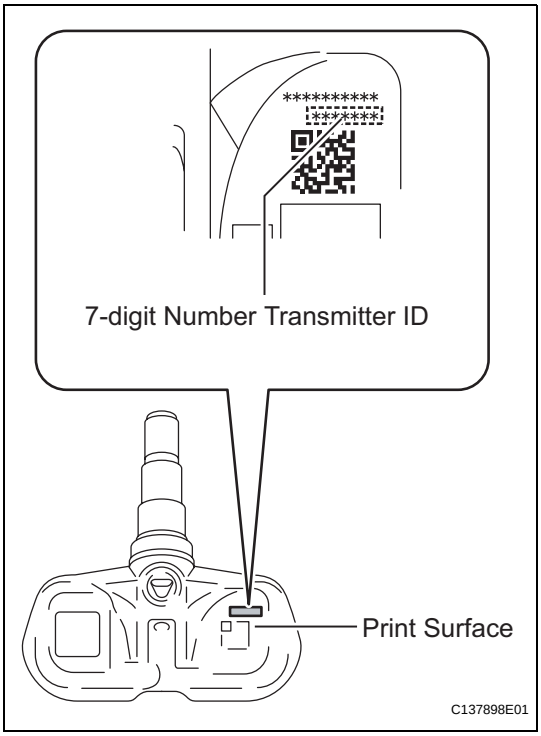


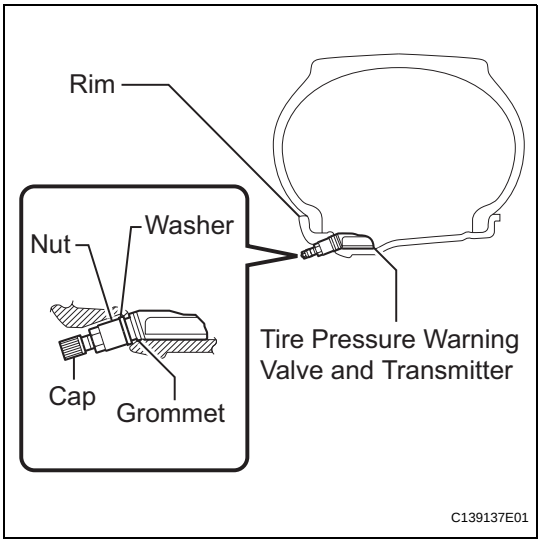
REMOVAL

1. **REMOVE FRONT WHEEL**
2. **REMOVE REAR WHEEL**
3. **REMOVE GRAND SPARE TIRE (w/ Grand Spare Tire)**
4. **REMOVE TIRE PRESSURE WARNING VALVE SUB-ASSEMBLY**
   (a) Remove the valve core and cap, and release the air from the tire.
   (b) After ensuring that a sufficient amount of air has been released, remove the nut and washer that are used to secure the tire pressure warning valve and transmitter. Drop the tire pressure warning valve and transmitter inside the tire.
   HINT:
   Keep the removed cap, valve core, nut, and washer.

   (c) After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead using the shoe of the tire remover.
   NOTICE:
   Be careful not to damage the tire pressure warning valve and transmitter due to interference between the tire pressure warning valve and transmitter and the tire bead.
   (d) Remove the bead on the upper side in the usual way.
   (e) Take out the tire pressure warning valve and transmitter from the tire and remove the bead on the lower side in the usual way.
   HINT:
   Check that no cracks or damage are identified on the grommet. If any damage is found, replace the grommet, washer, and nut.

TW





INSTALLATION

1. INSTALL TIRE PRESSURE WARNING VALVE SUB-ASSEMBLY

(a) Insert the tire pressure warning valve and transmitter into the valve installation hole. Insert it from the inside of the rim so that the print surface can be seen.

NOTICE:

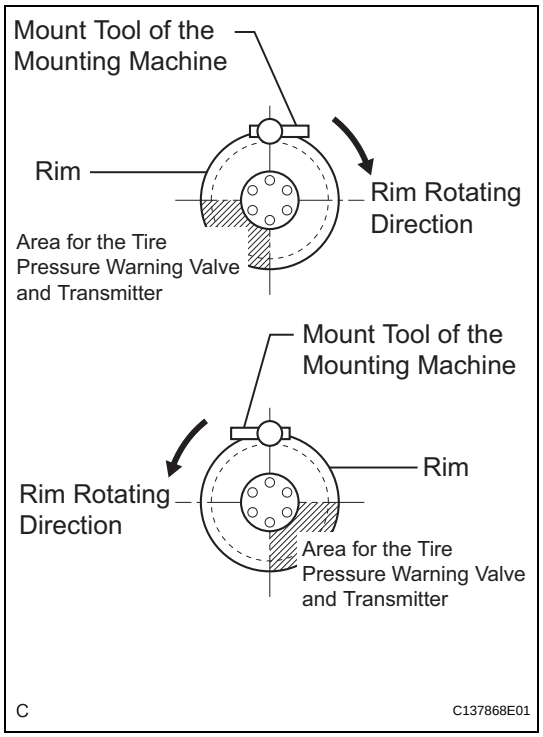
- **Check that there is no visible deformation, damage, or other abnormalities on the tire pressure warning valve and transmitter.**
- **Check that there is no foreign matter on the inner grommet and around the rim hole.**
- **If the tire pressure warning valve and transmitter is installed in the reverse direction, it may be damaged or fail to transmit signals when running at high speeds.**
- **If installing a new tire pressure warning valve and transmitter, write down the ID number before installation.**
- **It is necessary to register the ID in the ECU after installation (See page TW-15).**

(b) Install the washer on the tire pressure warning valve and transmitter from the rim side and tighten the nut.

Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

NOTICE:

- **Do not tighten the nut further after tightening it to the specified torque.**
- **Check that there is no foreign matter on the washer and nut.**
- **If the tire and tire pressure warning valve and transmitter have been removed, check that there is no damage or cuts visible, and no foreign matter, such as mud, dirt, or sand attached to the grommet. Replace the grommet with a new one if any of the defects mentioned above are found.**
- **Check that there is no oil, water, or lubricant around the rim hole, tire pressure warning valve and transmitter, washer, and nut. Failing to do so may result in improper installation.**



(c) Set the wheel disc to the mounting machine and install the lower tire bead. Position the main body of the tire pressure warning valve and transmitter in the shaded area as shown in the illustration.
NOTICE:
- **If the tire pressure warning valve and transmitter is positioned outside this area, it will be interfered with the tire bead, and may cause damage to the tire pressure warning valve and transmitter.**
- **If the use of lubricant is required when installing the bead, do not apply the lubricant directly to the tire pressure warning valve and transmitter.**

(d) Install the upper bead.
NOTICE:
Make sure that the tire bead and tool do not interfere with the main body of the tire pressure warning valve and transmitter and that it is not clamped by the bead.

(e) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque and then check for air leaks with soapy water.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
NOTICE:
Do not tighten the nut further after tightening it to the specified torque.

2. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

3. **INSTALL REAR WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. **INSTALL GRAND SPARE TIRE (w/ Grand Spare Tire)**

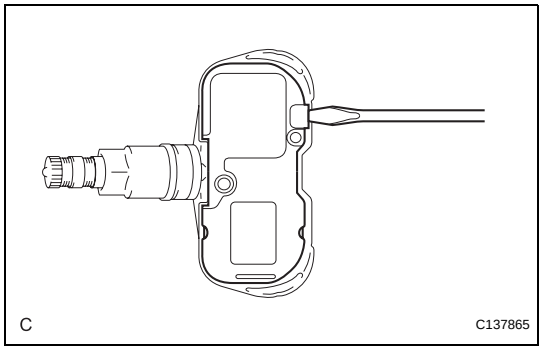
5. **INSPECT TIRE**
HINT:
(See page TW-3)

6. **REGISTER TRANSMITTER ID**
HINT:
(See page TW-15)

7. **INSPECT TIRE PRESSURE WARNING SYSTEM**
HINT:
(See page TW-20)

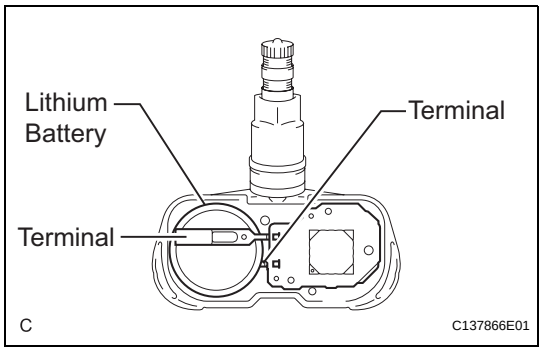
DISPOSAL

HINT:
The tire pressure warning valve sub-assembly is powered by a lithium battery. When disposing of the tire pressure warning valve sub-assembly, remove the battery and dispose of it correctly.



1. DISPOSE OF TIRE PRESSURE WARNING VALVE SUB-ASSEMBLY

(a) Use the tip of a screwdriver to pry off the back cover.



(b) The battery and base board covered with resin are exposed. While taking out the battery, cut the 2 terminals that connect the battery to the base board.

TW

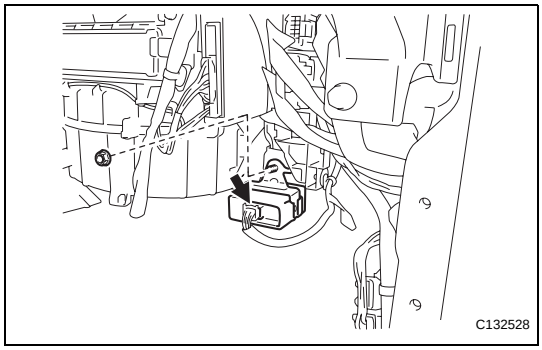
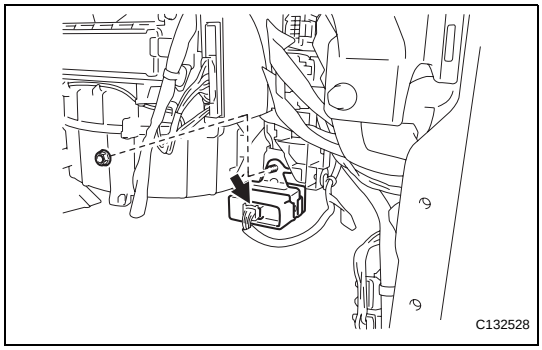
REMOVAL

NOTICE:
Before removing the tire pressure warning ECU, read the registered transmitter IDs of all wheels and write them down to use for re-registration of transmitter IDs (See page TW-15).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**
4. **REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-23)**
5. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)**
6. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)**
7. **REMOVE TIRE PRESSURE WARNING ECU**
   (a) Remove the nut.
   (b) Disconnect the connector and remove the tire pressure warning ECU.





INSTALLATION

1. **INSTALL TIRE PRESSURE WARNING ECU**
   (a) Connect the connector to the tire pressure warning ECU.
   (b) Install the tire pressure warning ECU with the nut.
   Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
2. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
3. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
4. **INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-56)**
5. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
6. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**
7. **CONNECT CABLE TO BATTERY NEGATIVE TERMINAL**

8. **REGISTER TRANSMITTER ID**
HINT:
(See page TW-15)

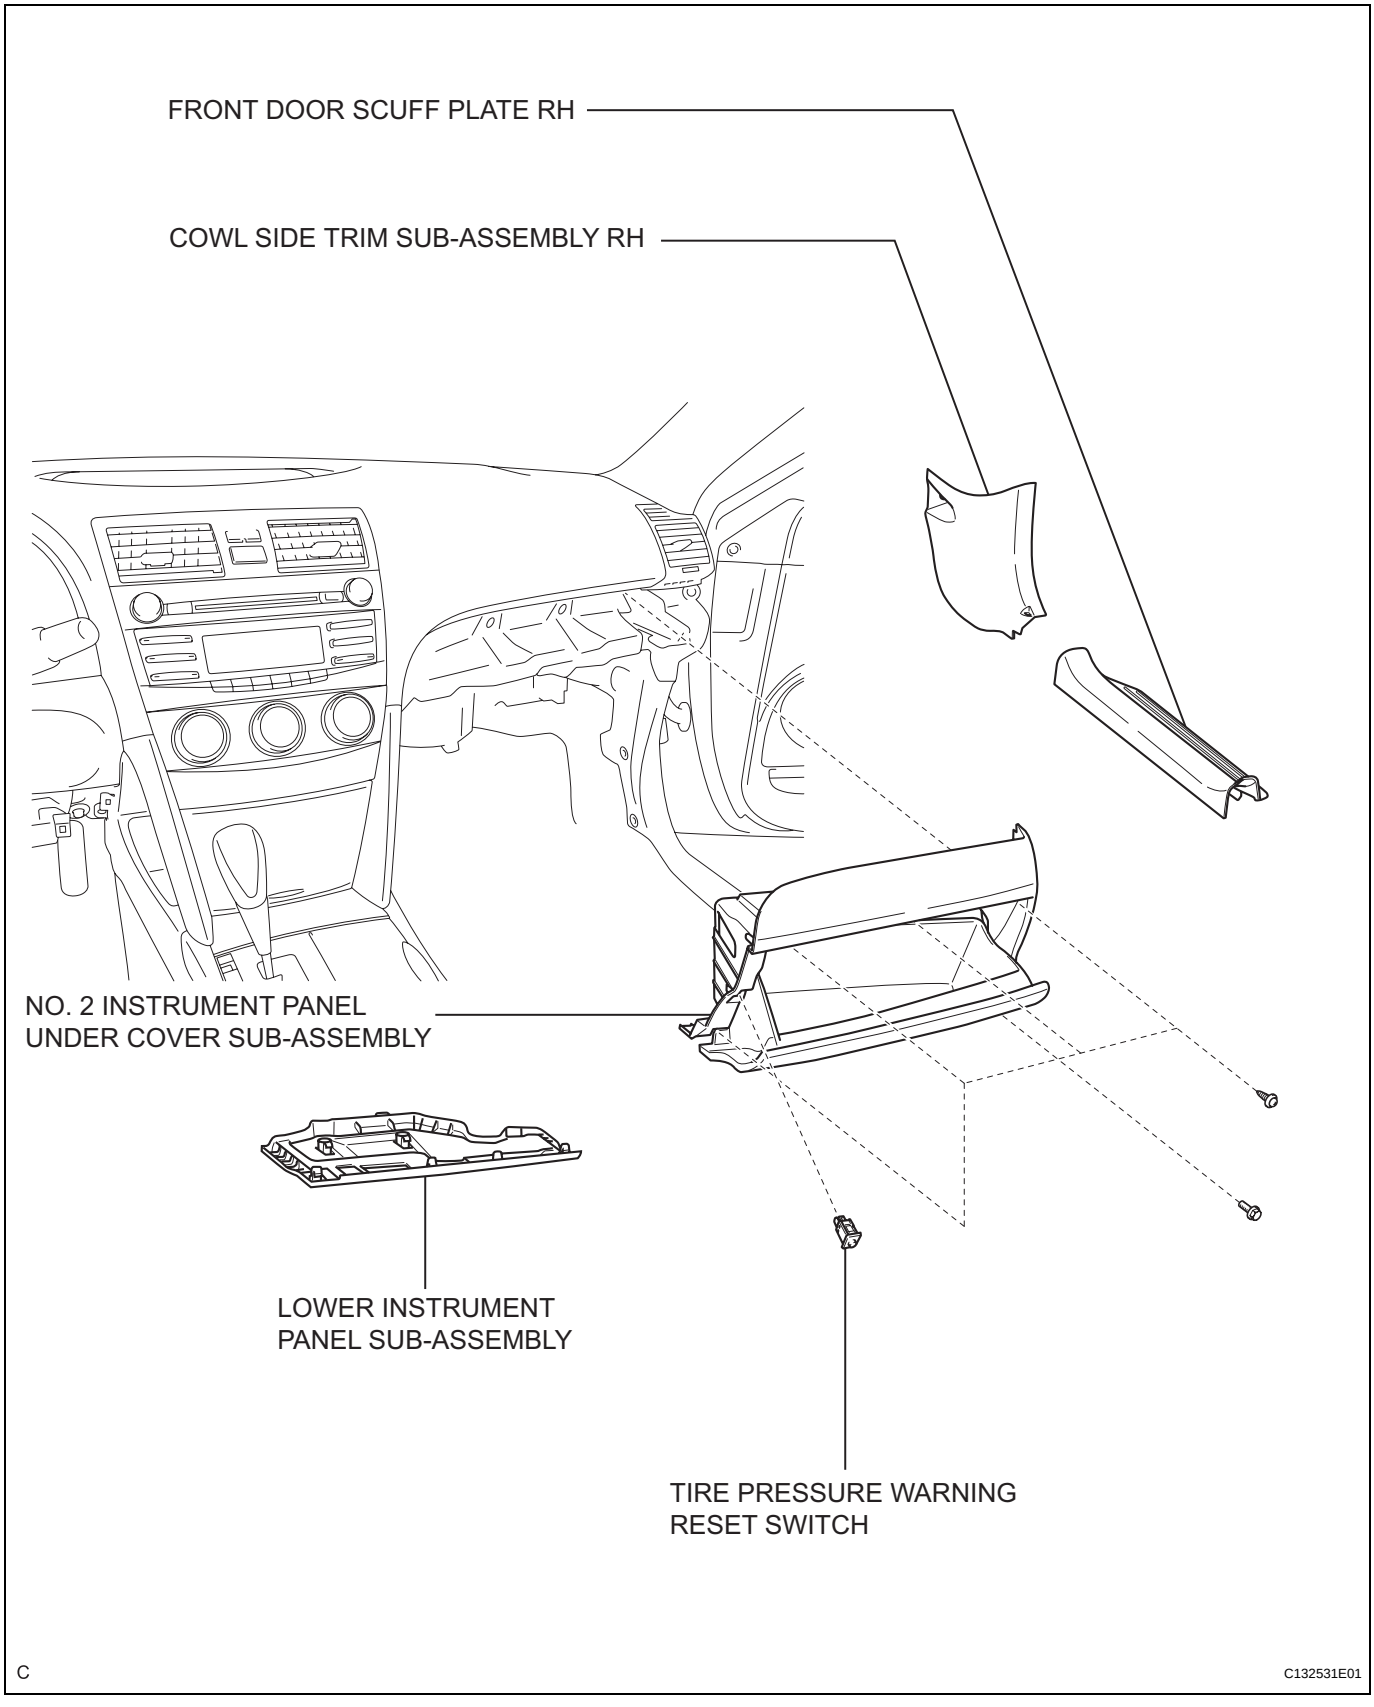
9. **INITIALIZE SYSTEM**
NOTICE:
- **Be sure to register the transmitter IDs of all tires including the grand spare tire in the ECU before initialization.**
- **Be sure to inflate all tires including the grand spare tire to the proper inflation pressure before initialization.**

HINT:
(See page TW-18)

10. **INSPECT TIRE PRESSURE WARNING SYSTEM**
HINT:
(See page TW-20)

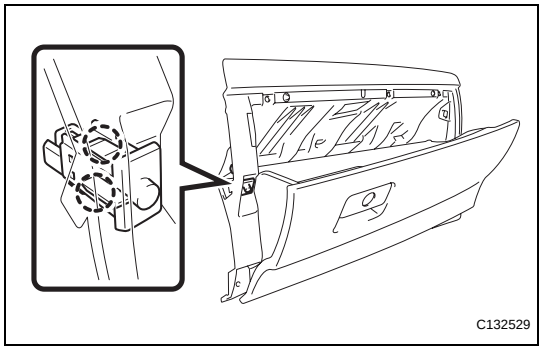
TIRE PRESSURE WARNING RESET SWITCH

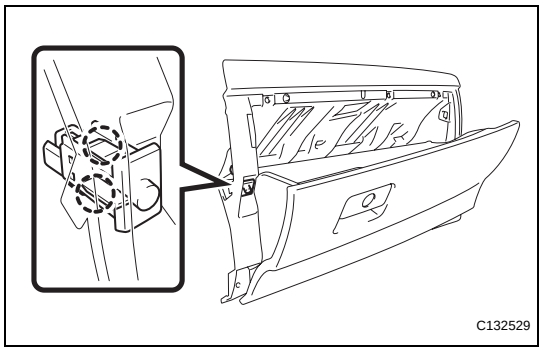
COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**
4. **REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-23)**
5. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)**
6. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)**
7. **REMOVE TIRE PRESSURE WARNING RESET SWITCH**
   (a) Disengage the 2 claws and remove the tire pressure warning reset switch from the lower instrument panel sub-assembly.





INSTALLATION

1. **INSTALL TIRE PRESSURE WARNING RESET SWITCH**
   (a) Engage the 2 claws to install the tire pressure warning reset switch.
2. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
3. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
4. **INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (See page IP-56)**
5. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
6. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
8. **INITIALIZE SYSTEM**
   NOTICE:
   Be sure to inflate all tires including the grand spare tire to the proper inflation pressure before initialization.
   HINT:
   (See page TW-18)

9. INSPECT TIRE PRESSURE WARNING SYSTEM

HINT:

(See page TW-20)

AUTOMATIC TRANSAXLE SYSTEM

PRECAUTION

NOTICE:

- **Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM (See page AX-16).**
- **Perform the REGISTRATION (VIN registration) when replacing the ECM (See page ES-16).**

HINT:
RESET MEMORY can not be completed by only disconnecting the battery cable.

1. EXPRESSION OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

Switch Type / Expression	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	Off
Ignition switch on (IG)	ON	On (IG)
Ignition switch on (ACC)	ACC	On (ACC)
Engine start	START	Start

H

E116900E03

2. The automatic transaxle is composed of highly precision-finished parts which need careful inspection before reassembly. Even a small nick could cause fluid leakage or affect the performance. The instructions here are organized so that you work on only one component group at a time. This will help avoid confusion caused by similar-looking parts of different sub-assemblies being on your workbench at the same time. The component groups are inspected and repaired from the converter housing side. Complete the inspection, repair and

reassembly before proceeding to the next component group as much as possible. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because some parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups. Recommended: ATF WS

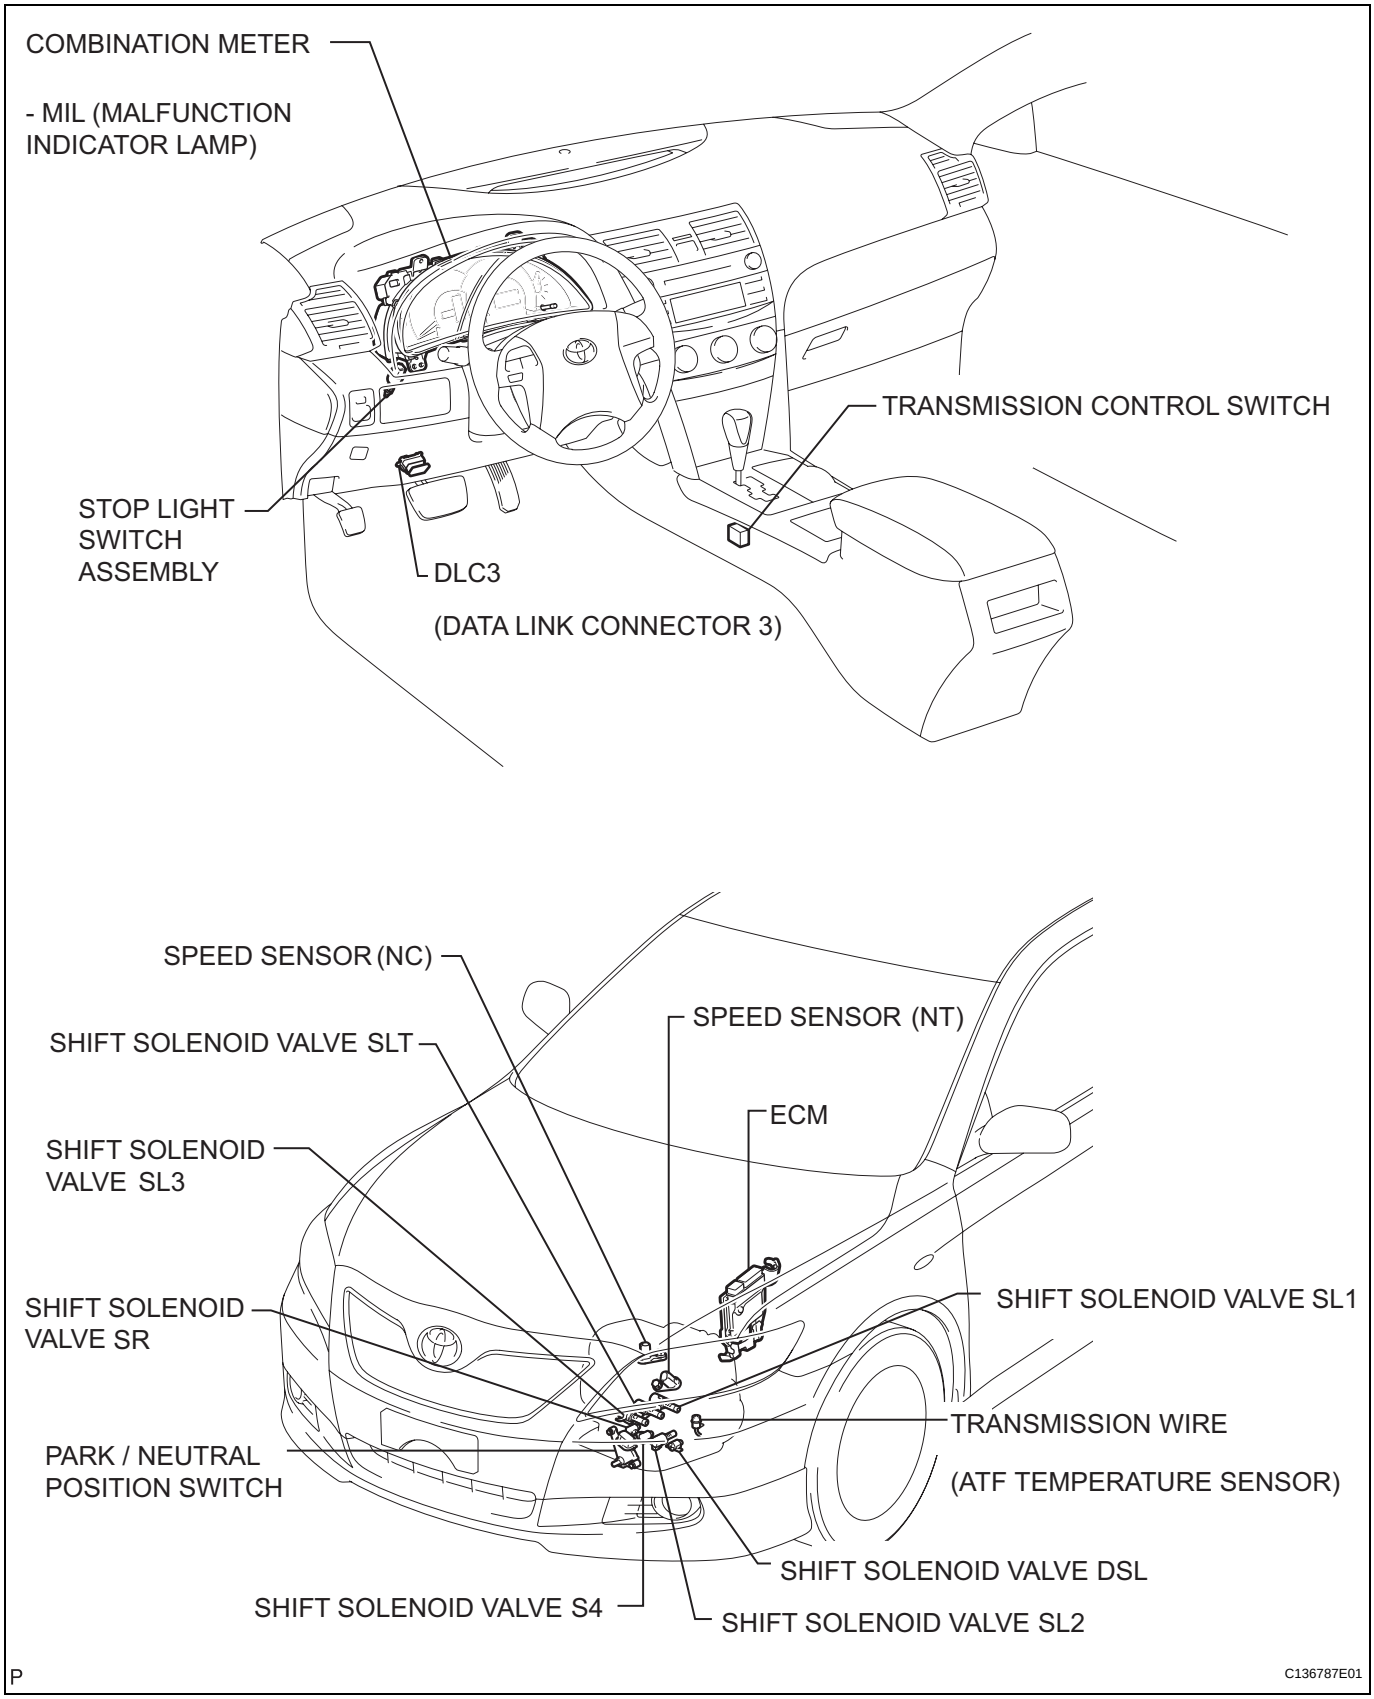
3. **All disassembled parts should be washed clean and any fluid passages and holes should be blown through with compressed air.**
4. **Dry all parts with compressed air. Never use a shop rag or a piece of cloth to dry them.**
5. **When using compressed air, always aim away from yourself to prevent accidentally spraying ATF or kerosene in your face.**
6. **Only recommended automatic transaxle fluid or kerosene should be used for cleaning.**
7. **After cleaning, the parts should be arranged in the correct order for efficient inspection, repair, and reassembly.**
8. **When disassembling a valve body, be sure to match each valve together with the corresponding spring.**
9. **New discs for the brakes and clutches that are to be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.**
10. **All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.**
11. **All gaskets and rubber O-rings should be replaced with new ones.**
12. **Do not apply adhesive cements to gaskets and similar parts.**
13. **Make sure that the ends of a snap ring are not aligned with one of the cutouts and are installed in the groove correctly.**
14. **When replacing a worn bushing, the sub-assembly containing the bushing must also be replaced.**
15. **Check thrust bearings and races for wear or damage. Replace them as necessary.**
16. **When working with FIPG material, you must observe the following:**
    - Using a razor blade and a gasket scraper, remove all the old packing (FIPG) material from the gasket surface.
    - Thoroughly clean all components to remove any loose material.
    - Clean both sealing surfaces with a non-residue solvent.

- Parts must be reassembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

DEFINITION OF TERMS

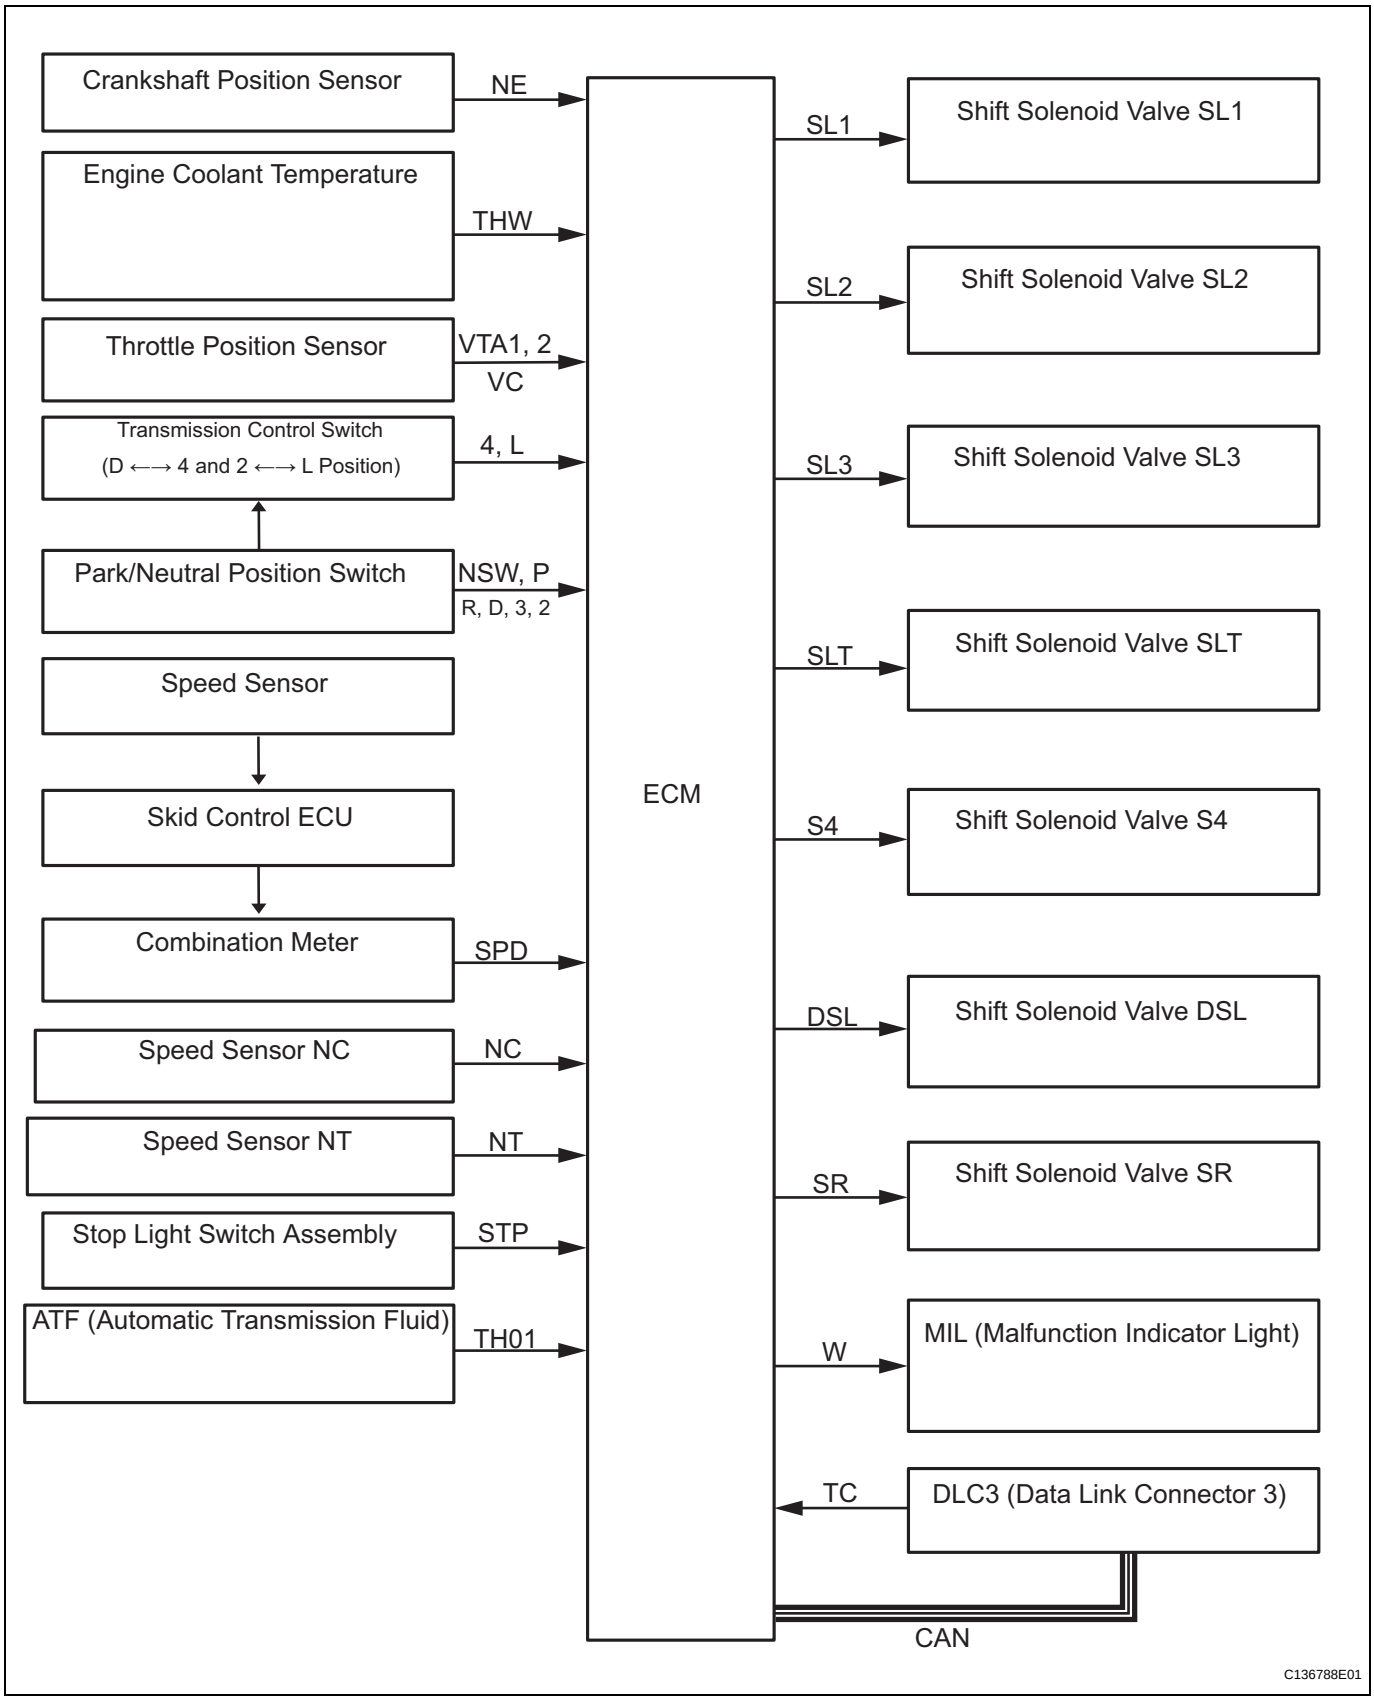
Term	Definition
Monitor description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	Diagnostic code
Typical enabling condition	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While another sensor is being monitored, the next sensor or component will not be monitored until the previous monitoring has concluded.
Required sensor/components	The sensors and components that are used by the ECM to detect malfunctions.
Frequency of operation	The number of times that the ECM checks for malfunctions per driving cycle. "Once per driving cycle" means that the ECM detects malfunction only one time during a single driving cycle. "Continuous" means that the ECM detects malfunction every time when enabling condition is met.
Duration	The minimum time that the ECM must sense a continuous deviation in the monitored value(s) before setting a DTC. This timing begins after the "typical enabling conditions" are met.
Malfunction thresholds	Beyond this value, the ECM will conclude that there is a malfunction and set a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediately" means that the ECM illuminates MIL the instant the ECM determines that there is a malfunction. "2 driving cycle" means that the ECM illuminates MIL if the same malfunction is detected again in the 2nd driving cycle.
Component operating range	Normal operation range of sensors and solenoids under normal driving conditions. Use these ranges as a reference. They cannot be used to judge if a sensor or solenoid is defective or not.

PARTS LOCATION



SYSTEM DIAGRAM

The configuration of the electronic control system in the U250E automatic transaxles is as shown in the following chart.



SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transmission/transaxle) is an automatic transmission/transaxle that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission performance are improved.

Shift shock has been reduced by controlling the engine and transmission simultaneously.

In addition, the ECT has features such as follows:

- Diagnostic function.
- Fail-safe function when a malfunction occurs.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The ECM of this system is connected to the CAN and multiplex communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN and multiplex communication systems.
- The intelligent tester can be used at steps 3, 4, 6, and 9.

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F) in the normal operation.

(a) D position test:

Shift into the D position and fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up-shifts take place, and that the shift points conform to the automatic shift schedule (See page SS-40).

HINT:

5th Gear Up-shift Prohibition Control

- Engine coolant temperature is 55°C (131°F) or less and vehicle speed is at 70 km/h (43 mph) or less.
- ATF temperature is -2°C (28°F) or less.

5th and 4th Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check for shift shock and slip.

Check for shock and slip at the 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 → 2, 2 → 3, 3 → 4, and 4 → 5 while driving with the shift lever in the D position, and also check while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick-down operation.

Check vehicle speeds when the 2nd to 1st, 3rd to 2nd, 4th to 3rd, and 5th to 4th kick-downs take place while driving with the shift lever in the D position. Confirm that each speed is within the applicable vehicle speed range indicated in the automatic shift schedule (See page SS-40).

(5) Check abnormal shock and slip at kick-down.
(6) Check the lock-up mechanism.
- Drive in D position (5th gear), at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
- There is no lock-up in the 1st and 2nd gear.
- 4th lock-up operates while uphill-downhill is active in the D position.
- If there is a big jump in engine speed, there is no lock-up.

(b) 4 (O/D OFF) position test:
Shift into the 4 position and fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1 → 2, 2 → 3 and 3 → 4 up-shift take place and that the shift point conforms to the automatic shift schedule (See page SS-40).
HINT:
There is no 5th up-shift in the 4 position.
(2) Check engine braking.
While driving in the 4 position and 4th gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noise during acceleration and deceleration, and for shock at up-shift and down-shift.

(c) 3 position test:
Shift into the 3 position and fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1 → 2 and 2 → 3 up-shift take place and that the shift point conforms to the automatic shift schedule (See page SS-40).
HINT:
There is no 4th up-shift and lock-up in the 3 position.
(2) Check engine braking.
While running in the 3 position and 3rd gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noise during acceleration and deceleration, and for shock at up-shift and down-shift.

(d) 2 position test:
Shift into the 2 position and fully depress the accelerator pedal and check the following points.
(1) Check up-shift operation.
Check that the 1 →2 up-shift takes place and that the shift point conforms to the automatic shift schedule (See page SS-40).
HINT:
There is no 3rd up-shift and lock-up in the 2 position.
(2) Check engine braking.
While running in the 2 position and 2nd gear, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noise during acceleration and deceleration, and for shock at up-shift and down-shift.

(e) L position test:
Shift into the L position and fully depress the accelerator pedal and check the following points.
(1) Check no up-shift.
While running in the L position, check that there is no up-shift to 2nd gear.
HINT:
There is no lock-up in the L position.
(2) Check engine braking.
While running in the L position, release the accelerator pedal and check the engine braking effect.
(3) Check for abnormal noise during acceleration and deceleration.

(f) R position test:
Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.
CAUTION:
Before conducting this test ensure that the test area is free from people and obstruction.

(g) P position test:
Stop the vehicle on the grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

(h) Uphill/downhill control function test:
(1) Check that the gear does not up-shift to the 4th or 5th gear while the vehicle is driving uphill.
(2) Check that the gear automatically down-shifts from 5th to 4th or from the 4th to 3rd gear when brake is applied while the vehicle is driving downhill.

MECHANICAL SYSTEM TESTS

1. PERFORM MECHANICAL SYSTEM TESTS

(a) Measure the stall speed.
The object of this test is to check the overall performance of the transaxle and engine by measuring the stall speeds in the D position.
NOTICE:
- **Driving test should be done on a paved road (a nonskid road).**
- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F).**
- **Do not continuously run this test for longer than 10 seconds.**
- **To ensure safety, do this test in a wide, clear level area which provides good traction.**
- **The stall test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is doing the test.**

(1) Chock the 4 wheels.
(2) Connect the intelligent tester to the DLC3.
(3) Fully apply the parking brake.
(4) Keep your left foot pressed firmly on the brake pedal.
(5) Start the engine.
(6) Shift into the D position. Press all the way down on the accelerator pedal with your right foot.
(7) Quickly read the stall speed at this time.
Stall speed:
2,310 +- 150 rpm

Evaluation:

Problem	Possible cause
(a) Stall engine speed is low in D position	• Engine power output may be insufficient • Stator one-way clutch not operating properly HINT: If the value is less than the specified value by 600 rpm or more, the torque converter could be faulty.
(b) Stall engine speed is high in D position	• Line pressure is too low • Forward clutch slipping • U/D (Underdrive) brake slipping • U/D (Underdrive) one-way clutch is not operating properly • No.1 one-way clutch not operating properly • Improper fluid level

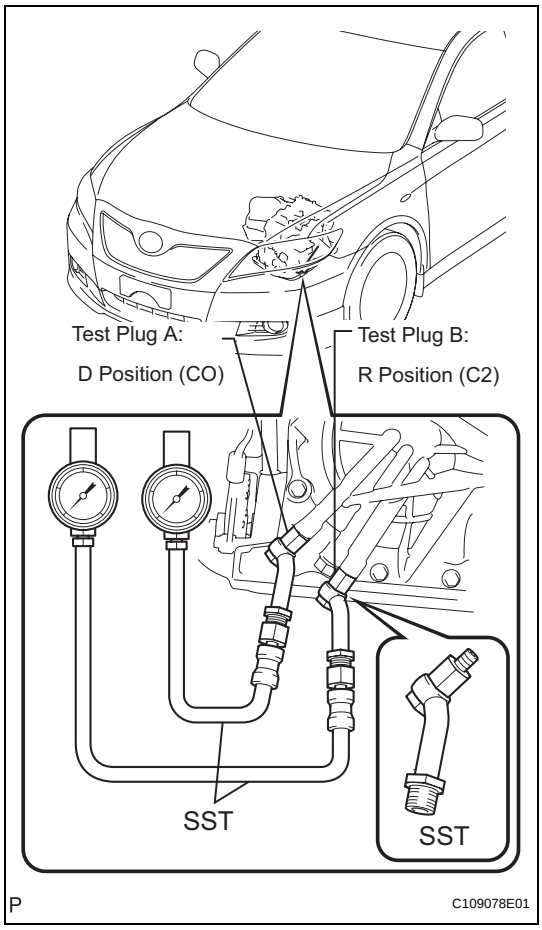
(b) Measure the time lag.
(1) When the shift lever is shifted while the engine is idling, there will be a certain time lapse or lag before the shock can be felt. This is used for checking the condition of the clutch and brake.
NOTICE:
- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).**

- **Be sure to allow 1 minute interval between tests.**
- **Perform the test three times, and measure the time lags. Calculate the average value of the three time lags.**

(2) Connect the intelligent tester to the DLC3.
(3) Fully apply the parking brake.
(4) Start and warm up the engine and check idle speed.
Idle speed:
approx. 700 rpm (In N position and A/C OFF)
(5) Shift the lever from N to D position. Using a stop watch, measure the time from when the lever is shifted until the shock is felt.
Time lag:
N → D less than 1.2 seconds
(6) In the same way, measure the time lag for N → R.
Time lag:
N → R less than 1.5 seconds

Evaluation (If N → D or N → R time lag is longer than the specified):

Problem	Possible cause
N → D time lag is longer	• Line pressure is too low • Forward clutch worn • No.1 one-way clutch is not operating properly • U/D (Underdrive) one-way clutch is not operating • U/D (Underdrive) brake worn
N → R time lag is longer	• Line pressure is too low • Reverse clutch worn • 1st and reverse brake worn • U/D (Underdrive) brake worn



HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.

NOTICE:

- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).**
- **The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.**
- **Be careful to prevent SST hose from interfering with the exhaust pipe.**
- **This Check must be conducted after checking and adjusting engine.**
- **Perform under condition that A/C is OFF.**
- **When conducting stall test, do not continue more than 10 seconds.**

(1) Warm up the ATF (Automatic Transmission Fluid).

(2) Lift the vehicle up.

(3) Remove the engine under cover.

(4) Connect intelligent tester to DLC3.

(5) Remove the test plug A on the transaxle case front left side and install the SST.

SST 09992-00095 (09992-00231, 09992-00271)

NOTICE:

There is a difference in installation point between D position and R position.

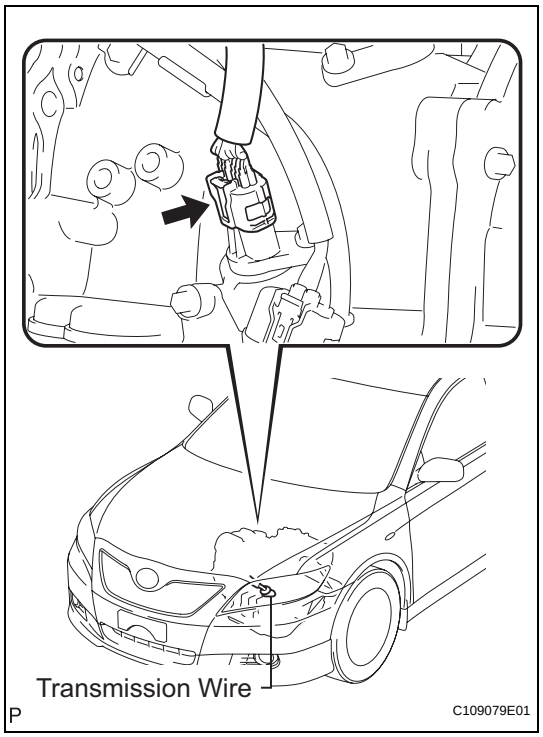
(6) Start the engine.

(7) Using intelligent tester, shift to D position and hold 3rd gear by active test, and measure the line pressure in idling.

Specified line pressure:

Condition	D position kPa (kgf / cm^2, psi)
Idling	372 to 412 kPa (3.8 to 4.2 kgf/cm^2, 54 to 60 psi)

(8) Turn the ignition switch off.



(9) Disconnect the connector of the transmission wire.
HINT:
Disconnect the connector only when performing the D position stall test.
(10) Start the engine.
(11) Firmly depress the brake pedal, shift to the D position, depress the accelerator pedal all the way down and check the line pressure while the stall test is performed.
Specified line pressure:

Condition	D position kPa (kgf / cm^2, psi)
Stall test	931 to 1,031 kPa (9.5 to 10.5 kgf/cm^2, 135 to 150 psi)

(12) Turn the ignition switch off.
(13) Remove the SST, install the test plug A.
(14) Remove the test plug B, install the SST and start engine.
SST 09992-00095 (09992-00231, 09992-00271)
(15) Connect the transmission wire connector, depress the brake pedal firmly, shift to the R position and check that the line pressure while the engine is idling and during the stall test.
Specified line pressure:

Condition	R position kPa (kgf / cm^2, psi)
Idling	672 to 742 kPa (6.9 to 7.6 kgf/cm^2, 97 to 108 psi)
Stall test	1,768 to 1,968 kPa (18.0 to 20.1 kgf/cm^2, 256 to 285 psi)

(16) Remove the SST, install the test plug B.
(17) Clear the DTC.

Evaluation:

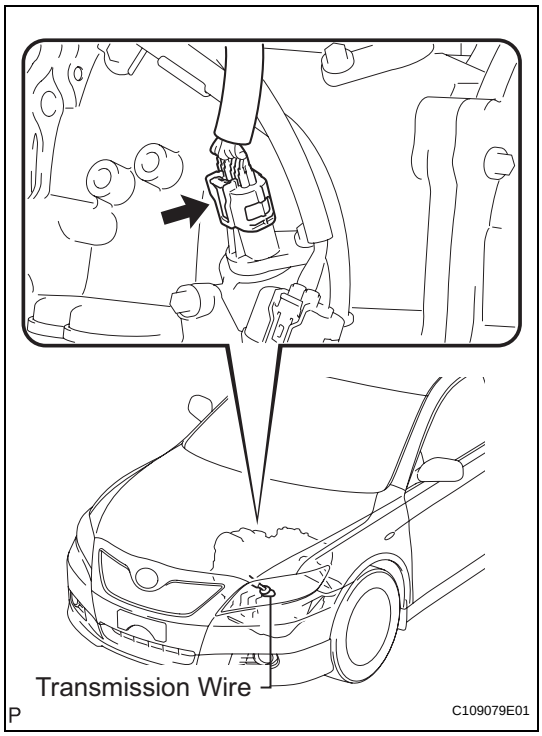
Problem	Possible cause
Measured values are higher than specified in all positions	• Shift solenoid valve (SLT) defective • Regulator valve defective
Measured values are lower than specified in all positions	• Shift solenoid valve (SLT) defective • Regulator valve defective • Oil pump defective • U/D (Underdrive) direct clutch defective
Pressure is low in the D position only	• D position circuit fluid leak • Forward clutch defective
Pressure is low in the R position only	• R position circuit fluid leak • Reverse clutch defective • 1st and reverse brake defective

MANUAL SHIFTING TEST

1. PERFORM MANUAL SHIFTING TEST

HINT:

- With this test, it can be determined whether the trouble occurs in the electrical circuit or is a mechanical problem in the transaxle.
- If any abnormalities are found in the following test, the problem is in the transaxle itself.



(a) Disconnect the connector of the transmission wire.

(b) Drive with the transmission wire disconnected. Shifting the shift lever in the order of L, 2, 3, 4 and D position to check whether the shifting condition changes the table below.

Shift Position	Shifting Condition
L ⟷ 2	No Shift (Not Change)
2 ⟷ 3	Down Shift ⟷ Up Shift
3 ⟷ 4 ⟷ D	No Shift (Not Change)

HINT:

When driving with the transmission wire disconnected, the shift lever position is in L or 2, the gear position is held in 3rd and the shift lever position is in 3, 4 or D, the gear position is held in 4th. However, when the shift position is in R or P, the operation is same as usual.

(c) Connect the connector of the transmission wire.

(d) Clear the DTC.

INITIALIZATION

1. RESET MEMORY

NOTICE:

- **Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.**
- **The RESET MEMORY can be performed only with the Intelligent tester.**

HINT:

The ECM memorizes the condition that the ECT controls the automatic transaxle assembly and engine assembly according to those characteristics. Therefore, when the automatic transaxle assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

Reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the intelligent tester to the DLC3.

(c) Turn the ignition switch on (IG) position and push the intelligent tester main switch on.

(d) Select the item "DIAGNOSIS / ENHANCED OBD II".

(e) Perform the reset memory procedure from the ENGINE menu.

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST (See page AX-9) described earlier.

HINT:

The ECM is learned by performing the ROAD TEST.

(1) Tester menu flow:

MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT malfunctions. (The DTCs may not be detected due the actual driving conditions. And some codes may not be detected through this drive pattern.)

HINT:

Preparation for driving

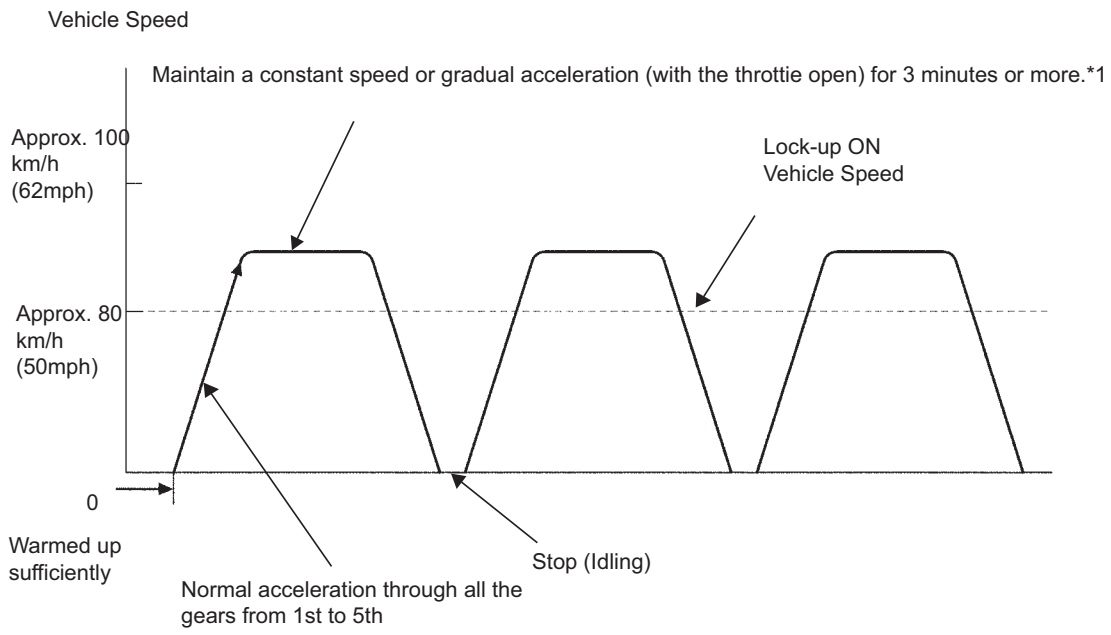
- Warm up the engine sufficiently. (Engine coolant temperature is 60°C (140°F) or higher)
- Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. (Malfunction is not detected when the atmospheric temperature is less than -10°C (14°F))

Driving note

- Drive the vehicle through all gears. Stop → 1st → 2nd → 3rd → 4th → 5th → 5th (lock-up ON).
- Repeat the above driving pattern three times or more.

NOTICE:

- **The monitor status can be checked using the OBD II scan tool or intelligent tester. When using the intelligent tester, monitor status can be found in the "ENHANCED OBD II / DATA LIST" or under "CARB OBD II".**
- **In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.**
- **Perform this drive pattern on a level road as much as possible and strictly observe the posted speed limits and traffic laws while driving.**



HINT:
*1: Drive at such a speed in the uppermost gear, to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.
NOTICE:
If necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (ATF temperature sensor malfunction).

PROBLEM SYMPTOMS TABLE

HINT:

- If a normal code is displayed during the diagnostic trouble code check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.
- The Matrix Chart is divided into 2 chapters.
- When the circuit on which mark *1 is attached is a malfunction, DTC could be output.

Chapter 1:

Refer to the table below when the trouble cause is considered to be electrical the instruction "Proceed to next circuit inspection shown on matrix chart" is given in the flow chart of each circuit, proceed to the circuit with the next highest number in the table to continue the check. If the trouble still occurs even though there are no abnormalities in any of the other circuits, check and replace the ECM.

1. Chapter 1: Electronic Circuit Matrix Chart

Symptom	Suspected area	See page
No down-shift (A particular gear, from 1st to 4th gear, is not down-shifted)	ECM	IN-40
No down-shift (5th -> 4th)	1. Transmission control switch (4 <--> D position) circuit *1	AX-39
	2. Shift solenoid valve (S4) circuit *1	AX-106
	3. ECM	IN-40
No up-shift (A particular gear, from 1st to 4th gear, is not up-shifted)	ECM	IN-40
No up-shift (4th -> 5th)	1. Transmission control switch (4 <--> D position) circuit *1	AX-39
	2. Shift solenoid valve (S4) circuit *1	AX-106
	3. ECM	IN-40
No lock-up	1. Stop light switch circuit *1	AX-60
	2. Engine coolant temp. sensor circuit *1	ES-53
	3. ECM	IN-40
No lock-up off	ECM	IN-40
Shift point too high or too low	1. Throttle position sensor circuit *1	ES-53
	2. ECM	IN-40
Up-shift to 5th from 4th while shift lever is in 4 position	1. Transmission control switch (4 <--> D position) circuit *1	AX-39
	2. ECM	IN-40
Up-shift to 5th from 4th while engine is cold	1. Engine coolant temp. sensor circuit *1	ES-53
	2. ECM	IN-40
Up-shift to 2nd from 1st while shift lever is in L position	1. Transmission control switch (2 <--> L position) circuit *1	AX-39
	2. ECM	IN-40
Harsh engagement (N -> D)	1. Shift solenoid valve (SL1) circuit *1	AX-73
	2. ECM	IN-40
Harsh engagement (Lock-up)	ECM	IN-40
Harsh engagement (Any driving position)	ECM	IN-40
Poor acceleration	ECM	IN-40
No kick-down	ECM	IN-40
Engine stalls when starting off or stopping	ECM	IN-40
Malfunction in shifting	1. Park/neutral position switch circuit *1	AX-39
	2. ECM	IN-40

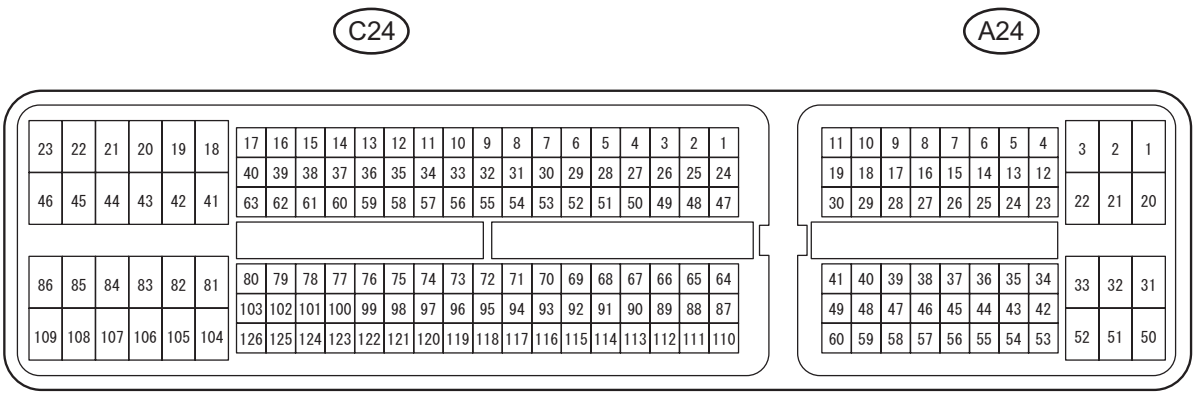
2. Chapter 2: On-Vehicle Repair and Off-Vehicle Repair

Symptom	Suspected area	See page
Vehicle does not move in any forward position and in reverse positions	1. Valve body assembly	AX-138
	2. U/D brake (B3)	AX-204
	3. Torque converter clutch	AX-193
Vehicle does not move in R position	1. Valve body assembly	AX-138
	2. Reverse clutch (C2)	AX-204
	3. 1st and reverse brake (B2)	AX-204
No up-shift (1st -> 2nd)	1. Valve body assembly	AX-138
	2. 2nd and O/D brake (B1)	AX-204
No up-shift (2nd -> 3rd)	1. Valve body assembly	AX-138
	2. Direct and O/D clutch (C0)	AX-204
No up-shift (3rd -> 4th)	1. Valve body assembly	AX-138
	2. 2nd and O/D brake (B1)	AX-204
No up-shift (4th -> 5th)	1. Shift solenoid valve (S4)	AX-295
	2. Valve body assembly	AX-138
	3. U/D clutch (C3)	AX-204
No down-shift (5th -> 4th)	1. Shift solenoid (S4)	AX-295
	2. Valve body assembly	AX-138
No down-shift (4th -> 3rd)	Valve body assembly	AX-138
No down-shift (3rd -> 2nd)	Valve body assembly	AX-138
No down-shift (2nd -> 1st)	Valve body assembly	AX-138
No lock-up or No lock-up off	1. Shift solenoid valve (DSL)	AX-295
	2. Valve body assembly	AX-138
	3. Torque converter clutch	AX-193
Harsh engagement (N -> D)	1. Shift solenoid valve (SL1)	AX-295
	2. Valve body assembly	AX-138
	3. C1 accumulator	AX-204
	4. Forward clutch (C1)	AX-204
	5. One-way clutch No.1 (F1)	AX-204
	6. U/D one-way clutch (F2)	AX-204
Harsh engagement (Lock-up)	1.Shift solenoid valve (SL2)	AX-295
	2. Valve body assembly	AX-138
	3. Torque converter clutch	AX-193
Harsh engagement (N -> R)	1. Valve body assembly	AX-138
	2. C2 accumulator	AX-204
	3. Reverse clutch (C2)	AX-204
	4. 1st and reverse brake (B2)	AX-204
Harsh engagement (1st -> 2nd -> 3rd -> 4th -> 5th)	1. Shift solenoid valve (SLT)	AX-295
	2. Valve body assembly	AX-138
Harsh engagement (1st -> 2nd)	1. Valve body assembly	AX-138
	2. 2nd and O/D brake (B1)	AX-204
Harsh engagement (2nd -> 3rd)	1. Valve body assembly	AX-138
	2. C0 accumulator	AX-204
	3. Direct and O/D clutch (C0)	AX-204
Harsh engagement (3rd -> 4th)	1. Valve body assembly	AX-138
	2. 2nd and O/D brake (B1)	AX-204
Harsh engagement (4th -> 5th)	1. Valve body assembly	AX-138
	2. C3 accumulator	AX-204
	3. U/D clutch (B3)	AX-204

Symptom	Suspected area	See page
Harsh engagement (5th -> 4th)	1. Valve body assembly	AX-138
	2. B3 accumulator	AX-204
Slip or shudder (Forward and reverse: After warm-up)	1. Valve body assembly	AX-138
	2. Oil strainer	AX-138
	3. Direct and O/D clutch (C0)	AX-204
	4. Forward clutch (C1)	AX-204
	5. U/D clutch (C3)	AX-204
	6. 2nd and brake (B1)	AX-204
	7. U/D brake (B3)	AX-204
	8. One-way clutch No.1 (F1)	AX-204
	9. U/D one-way clutch (F2)	AX-204
	10. Torque converter clutch	AX-193
Slip or shudder (Particular position: Just after engine starts)	Torque converter clutch	AX-193
Slip or shudder (R position)	1. Reverse clutch (C2)	AX-204
	2. 1st and reverse brake (B2)	AX-204
Slip or shudder (1st)	1. Forward clutch (C1)	AX-204
	2. One-way clutch No. 1 (F1)	AX-204
	3. U/D one-way clutch (F2)	AX-204
Slip or shudder (2nd)	2nd and O/D brake (B1)	AX-204
Slip or shudder (3rd)	Direct and O/D clutch (C0)	AX-204
Slip or shudder (4th)	2nd and O/D brake (B1)	AX-204
Slip or shudder (5th)	U/D clutch (C3)	AX-204
Shift position too high or too low	Shift solenoid valve (SLT)	AX-295
No engine braking (1st +- 4th: D position)	U/D brake (B3)	AX-204
No engine braking (1st: L (1) position)	1. Valve body assembly	AX-138
	2. 1st and reverse brake (B2)	AX-204
No engine braking (2nd: 2 position)	1. Valve body assembly	AX-138
	2. 2nd and O/D brake (B1)	AX-204
No engine braking (3rd: 3 position)	U/D brake (B3)	AX-204
No kick-down	Valve body assembly	AX-138
Poor acceleration (All positions)	1. Shift solenoid valve (SLT)	AX-295
	2. Torque converter clutch	AX-193
Poor acceleration (5th)	1. U/D clutch (C3)	AX-204
	2. U/D planetary gear unit	AX-204
Engine stalls when starting off or stopping	1. Shift solenoid valve (DSL)	AX-295
	2. Torque converter clutch	AX-193

TERMINALS OF ECM

1. ECM

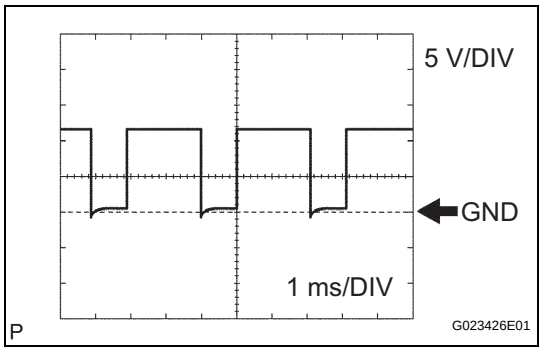


A107881E12

HINT:
Each ECM terminal's standard voltage is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to inspected. The standard voltage between the terminals is shown under "Specific Condition".
Use the illustration above as a reference for the ECM terminals.

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
D (C24-56) - E1 (C24-104)	G - W-B	D shift position switch signal	Ignition switch on (IG) and shift lever D and 4 position	10 to 14 V
			Ignition switch on (IG) and shift lever except D and 4 position	Below 1 V
R (C24-53) - E1 (C24-104)	P - W-B	R shift position switch signal	Ignition switch on (IG) and shift lever R position	10 to 14 V
			Ignition switch on (IG) and shift lever except R position	Below 1 V
SPD (A24-8) - E1 (C24-104)	L - W-B	Speed signal	Vehicle speed 20 km/h (12mph)	Pulse generation (See waveform 8)
STP (A24-36) - E1 (C24-104)	W - W-B	Stop light switch signal	Brake pedal is depressed	7.5 to 14 V
			Brake pedal is released	Below 1.5 V
4 (A24-25) - E1 (C24-104)	G - W-B	4 shift position switch signal	Ignition switch on (IG) and shift lever 4 position	10 to 14 V
			Ignition switch on (IG) and shift lever except 4 position	Below 1 V
3 (A24-26) - E1 (C24-104)	G - W-B	3 shift position switch signal	Ignition switch on (IG) and shift lever 3 position	10 to 14 V
			Ignition switch on (IG) and shift lever except 3 position	Below 1 V
2 (C24-55) - E1 (C24-104)	V - W-B	2 shift position switch signal	Ignition switch on (IG) and shift lever 2 and L position	10 to 14 V
			Ignition switch on (IG) and shift lever except 2 and L position	Below 1 V

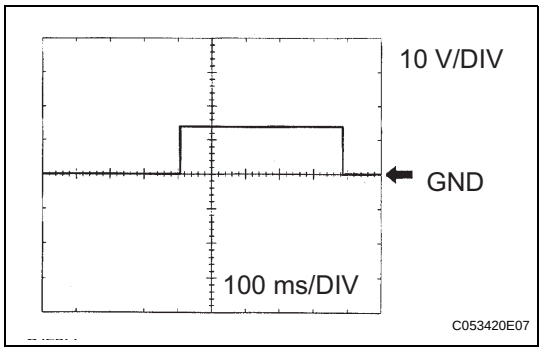
Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
L (C24-74) - E1 (C24-104)	BR - W-B	L shift position switch signal	Ignition switch on (IG) and shift lever L position	10 to 14 V
			Ignition switch on (IG) and shift lever except L position	Below 1 V
P (C24-73) - E1 (C24-104)	GR - W-B	Park position switch signal	Ignition switch on (IG) and shift lever P position	10 to 14 V
			Ignition switch on (IG) and shift lever except P position	Below 1 V
N (C24-54) - E1 (C24-104)	SB - W-B	Neutral position switch signal	Ignition switch on (IG) and shift lever N position	10 to 14 V
			Ignition switch on (IG) and shift lever except N position	Below 1 V
NSW (C24-52) - E1 (C24-104)	SB - W-B	Park neutral switch signal	Ignition switch on (IG) and shift lever P and N position	Below 2 V
			Ignition switch on (IG) and shift lever except P and N position	10 to 14 V
DSL (C24-79) - E1 (C24-104)	BR - W-B	DSL solenoid signal	Vehicle speed 65 km/h (40mph), lock-up (ON to OFF)	Pulse generation (See waveform 2)
SR (C24-80) - E1 (C24-104)	G - W-B	SR solenoid signal	Ignition switch on (IG)	Below 1 V
			3rd, 4th or 5th gear	10 to 14 V
			1st or 2nd gear	Below 1 V
S4 (C24-78) - E1 (C24-104)	GR - W-B	S4 solenoid signal	Ignition switch on (IG)	Below 1 V
			5th gear	10 to 14 V
			Except 5th gear	Below 1 V
SL3+ (C24-60) - SL3- (C24-61)	O - Y	SL3 solenoid signal	Engine idle speed	Pulse generation (See waveform 3)
SL2+ (C24-58) - SL2- (C24-59)	G - R	SL2 solenoid signal	Engine idle speed	Pulse generation (See waveform 4)
SL1+ (C24-57) - SL1- (C24-77)	L - L-G	SL1 solenoid signal	Engine idle speed	Pulse generation (See waveform 5)
NC+ (C24-101) - NC- (C24-102)	LG - P	Speed sensor (NC) signal	Vehicle speed 30 km/h (19mph): (3rd gear) Engine speed 1,400 rpm	Pulse generation (See waveform 6)
NT+ (C24-125) - NT- (C24-124)	G - W	Speed sensor (NT) signal	Vehicle speed 20 km/h (12mph)	Pulse generation (See waveform 7)
SLT+ (C24-76) - SLT- (C24-75)	L - W	SLT solenoid signal	Engine idle speed	Pulse generation (See waveform 1)
THO1 (C24-72) - ETHO (C24-95)	Y - BR	ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V



(a) Waveform 1

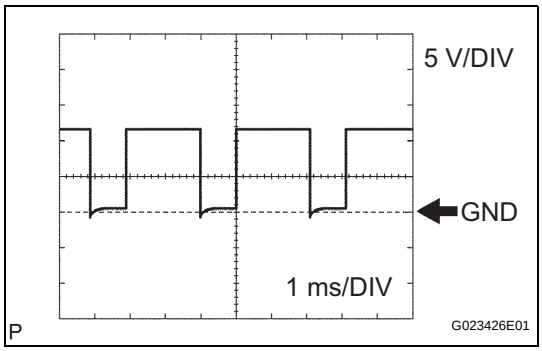
Reference:

Terminal	SLT+ - SLT-
Tool setting	5 V/DIV, 1ms/DIV
Vehicle condition	Engine idle speed



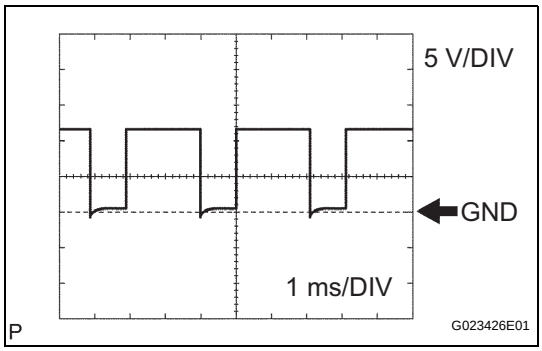
(b) Waveform 2
Reference:

Terminal	DSL - E1
Tool setting	10 V/DIV, 100ms/DIV
Vehicle condition	Vehicle speed 65 km/h (40 mph), lock-up (ON to OFF)



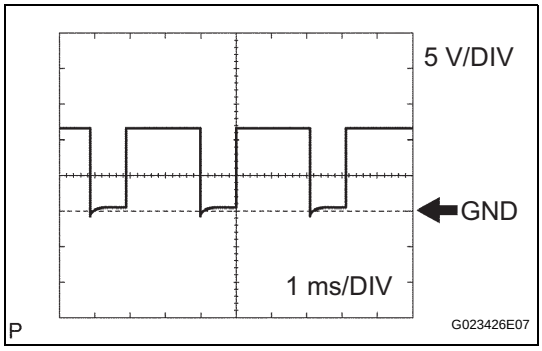
(c) Waveform 3
Reference:

Terminal	SL3+ - SL3-
Tool setting	5 V/DIV, 1ms/DIV
Vehicle condition	Engine idle speed



(d) Waveform 4
Reference:

Terminal	SL2+ - SL2-
Tool setting	5 V/DIV, 1ms/DIV
Vehicle condition	Engine idle speed



(e) Waveform 5
Reference:

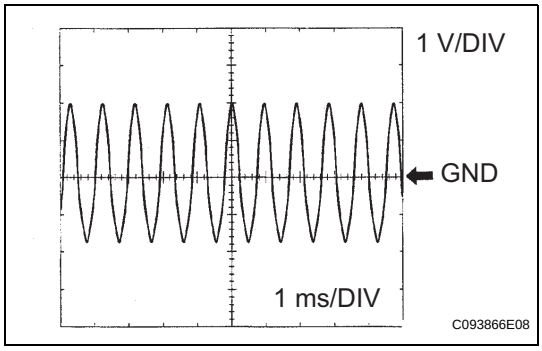
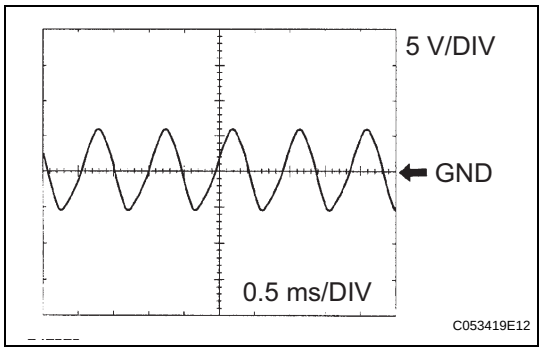
Tool setting	5 V/DIV, 1ms/DIV
Vehicle condition	Engine idle speed



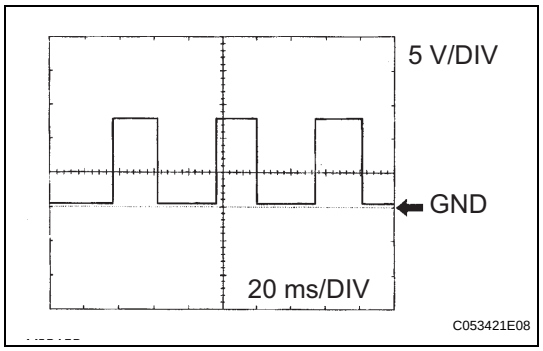
(f) Waveform 6
Reference:

Terminal	NC+ - NC-
Tool setting	1 V/DIV, 1ms/DIV
Vehicle condition	Vehicle speed 30 km/h (19 mph): (3rd gear) Engine speed 1.400 rpm



(g) Waveform 7
Reference:

Terminal	NT+ - NT-
Tool setting	5 V/DIV, 0.5ms/DIV
Vehicle condition	Vehicle speed 20 km/h (12 mph)



(h) Waveform 8
Reference:

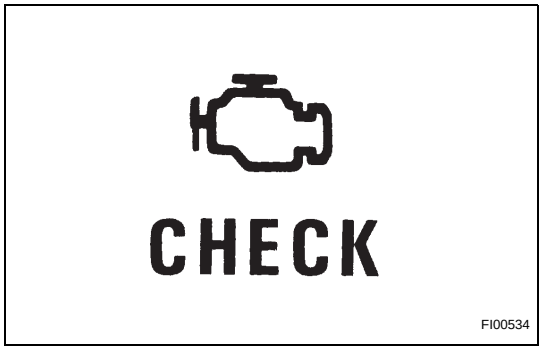
Terminal	SPD - E1
Tool setting	5 V/DIV, 20ms/DIV
Vehicle condition	Vehicle speed 20 km/h (12 mph)

HINT:
Depending on the vehicle, the output waveform voltage, influenced by optionally installed systems, may become 5V.

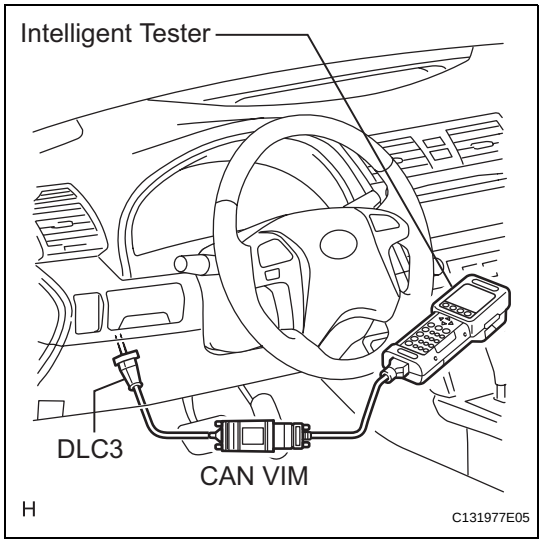
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) When troubleshooting OBD II vehicles, the only difference from the usual troubleshooting procedure is to connect an OBD II scan tool complying with SAE J1987 or a intelligent tester to the vehicle, and read off various data output from the vehicle's ECM.



(b) OBD II regulations require that the vehicle's on-board computer illuminate the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in the computer itself or in the drive system components which affect the vehicle emissions. In addition to illuminating the MIL when a malfunction is detected, the applicable DTCs prescribed by SAE J2012 are recorded in the ECM memory (See page AX-35).
If the malfunction does not occur in 3 consecutive trips, the MIL goes off but the DTCs remain in the ECM memory.



(c) To check the DTCs, connect the OBD II scan tool or intelligent tester to the DLC3 of the vehicle. The OBD II scan tool or intelligent tester also enables you to erase the DTCs and check freeze frame data and various forms of engine data (For operating instructions, see the instruction book).

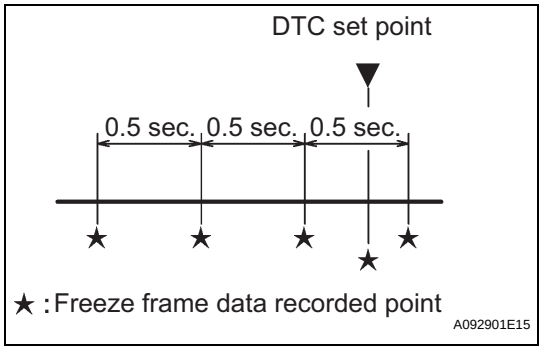
(d) The DTCs include SAE controlled codes and Manufacturer controlled codes. SAE controlled codes must be set as prescribed by the SAE, while Manufacturer controlled codes can be set freely by a manufacturer within the prescribed limits (See page AX-35).

(e) The diagnosis system operates in "normal mode" during the normal vehicle use. In normal mode, "2-trip detection logic" is used to ensure accurate detection of malfunction. "Check mode" is also available to technicians as an option. In check mode, "1-trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunction.

(f) *2 trip detection logic: When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). IF the ignition switch is turned off and then turned on (IG) again, and same malfunction is detected again, the MIL will illuminate.

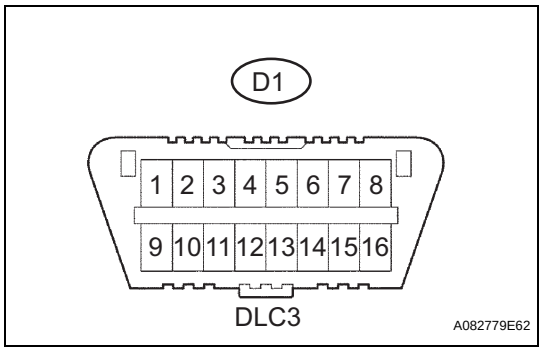
(g) The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

(h) The intelligent tester displays freeze frame data recorded at five different points: 1) 3 times before the DTC is set, 2) once when the DTC is set, and 3) once after the DTC is set. The data can be used to simulate the vehicle's condition around the time of the malfunction. The data may be helpful in determining the cause of a malfunction. It may also be helpful in determining whether a DTC is being caused by a temporary malfunction.



2. INSPECT THE DLC3

(a) The vehicle's ECM uses ISO 15765-4for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4format.



Terminals of DLC 3

Symbol	Terminal No.	Name	Reference Terminal	Result	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	Below 1 Ω	Always
SG	5	Signal ground	Body ground	Below 1 Ω	Always
BAT	16	Battery positive	Body ground	11 to 14 V	Always
CANH	6	CAN bus line	CANL	54 to 69 Ω	IG switch OFF*
CANH	6	HIGH-level CAN bus line	Battery positive	6 kΩ or higher	IG switch OFF*
CANH	6	HIGH-level CAN bus lineCG	CG	200 Ω or higher	IG switch OFF*
CANL	14	LOW-level CAN bus line	Battery positive	6 kΩ or higher	IG switch OFF*
CANL	14	LOW-level CAN bus line	CG	200 Ω or higher	IG switch OFF*

CAUTION:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

The DLC3 is the interface prepared for reading various data from the vehicle's ECM. After connecting the cable of the intelligent tester to the CAN VIM, turn the ignition switch ON and turn the tester ON. If a communication failure message is displayed on the tester screen (on the tester: UNABLE TO CONNECT TO VEHICLE), a problem exists in either the vehicle or tester. In order to identify the location of the problem, connect the tester to another vehicle.

- If the communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If the communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself, so consult the Service Department listed in the tool's instruction manual.

3. CHECK BATTERY VOLTAGE

(a) Measure the battery voltage.

Battery voltage:

11 to 14 V

If voltage is below 11 V, replace the battery before proceeding.

4. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch on (IG).

HINT:

If the MIL does not light up, troubleshoot the combination meter.

(b) When the engine is started, the MIL should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

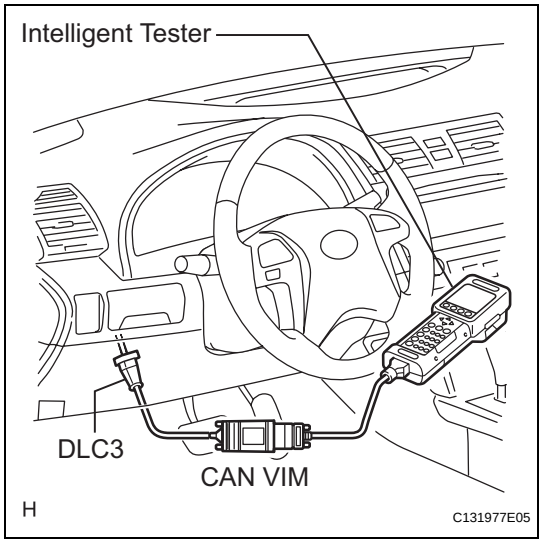
DTC CHECK / CLEAR

1. DTC CHECK (NORMAL MODE)

NOTICE:

When the diagnostic system is switched from the normal mode to the check mode, all the DTCs and freeze frame data recorded in the normal mode will be erased. So before switching modes, always check the DTCs and freeze frame data, and note them down.

DTCs which are stored in the ECM can be displayed with the intelligent tester or generic OBD II scan tool. These scan tools can display pending DTCs and current DTCs. Some DTC aren't stored if the ECM doesn't detect a malfunction during consecutive driving. However, the detected malfunction during once driving is stored as pending DTC.



(a) Checking DTCs using the OBD II scan tool or intelligent tester.

(1) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(2) Turn the ignition switch on (IG).

(3) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES (or PENDING CODE).

(4) Use the OBD II scan tool or intelligent tester to check the DTCs and freeze frame data and note them down (For operating instructions, see the OBD II scan tool's instruction book).

NOTICE:

When simulating symptoms with an OBD II scan tool (excluding intelligent tester) to check the DTCs, use the normal mode. For codes on the DTCs chart which are subject to "2 trip detection logic",

Turn the engine switch off after the symptom is simulated once. Then repeat the simulation process again. When the problem has been simulated twice, the MIL illuminates and the DTCs are recorded in the ECM.

2. DTC CLEAR

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES and press YES.

CHECK MODE PROCEDURE

HINT:
Check mode has a higher sensitivity to malfunctions and can detect malfunction that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1-trip detection logic.

1. DTC CHECK (CHECK MODE)

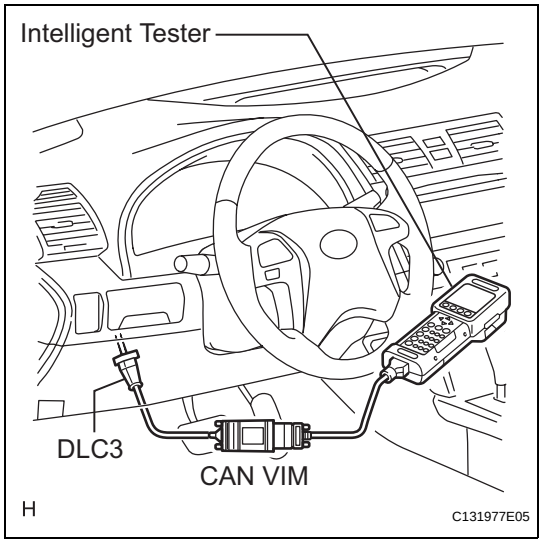
HINT:
Intelligent tester only: Compared to the normal mode, the check mode is more sensitive for detecting malfunctions. Furthermore, the same diagnostic items which are detected in the normal mode can also be detected in the check mode.

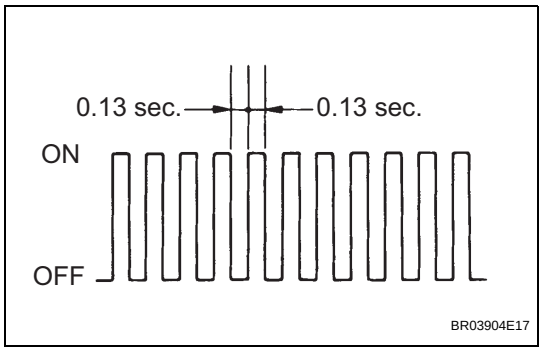
(a) Procedure for Check Mode using the intelligent tester.

(1) Check the initial conditions.
- Battery positive voltage 11 V or more
- Throttle valve fully closed
- Transaxle in the P or N position
- A/C switch is off

(2) Turn the ignition switch off.

(3) Connect the intelligent tester together with the Controller Area Network Vehicle Interface Module (CAN VIM) to the DLC3.





(4) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.

(5) Select the item "DIAGNOSIS/ENHANCED OBD II/CHECK MODE" (Check that the MIL flashes).
NOTICE:
All DTCs and freeze frame data recorded will be erased if: 1) the intelligent tester is used to change the ECM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from the on (IG) to ACC position or turned OFF.

(6) Start the engine (the MIL goes off after the engine starts).

(7) Perform "MONITOR DRIVE PATTERN" for the ECT test (See page AX-17). (Or, simulate the conditions of the malfunction described by the customer).
NOTICE:
Leave the ignition switch on (IG) until you have checked the DTCs, etc.

(8) After simulating malfunction conditions, use the intelligent tester diagnosis selector to check the DTCs and freeze frame data, etc.

(9) When you use intelligent tester: Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".
(10) After checking the DTC, inspect the applicable circuit.
(11) (See page AX-35) to confirm the details of the DTCs.

2. DTC CLEAR

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES and press YES.

FAIL-SAFE CHART

1. FAIL-SAFE

This function minimizes the loss of the ECT functions when any malfunction occurs in a sensor or solenoid.

(a) ATF (Automatic Transmission Fluid) temperature sensor:
When the ATF temperature sensor has a malfunction, 5th upshift is prohibited.

(b) Counter gear speed sensor NC (Speed sensor NC):
When the counter gear speed sensor has a malfunction, 5th upshift is prohibited.

(c) Shift solenoid valve DSL:
When the solenoid valve DSL has a malfunction, the current to the solenoid valve is stopped.
This stops lock-up control, then fuel economy decreases.

(d) Shift solenoid valve SL1, SL2, SL3 and S4:
Fail safe function:
If either of the shift solenoid valve circuits develops an open or short, the ECM turns the other shift solenoid "ON" and "OFF" in order to shift into the gear positions shown in the table below.
Manual shifting as shown in the following table must be done (In case of a short circuit, the ECM stops sending the current to the short circuited solenoid).
Even if starting the engine in the fail-safe mode, the gear position remains in the same position.
HINT:
FL: Flex Lock-up

Normal	Solenoid Valve	SL1	ON	OFF	ON	OFF	OFF
		SL2	ON	ON	OFF	FL	FL
		SL3	OFF	OFF	OFF	ON	ON
		S4	OFF	OFF	OFF	OFF	ON
	Gear Position		1st	2nd	3rd	4th	5th
SL1 Malfunction (During driving at 1st or 2nd)	Solenoid Valve	SL1	OFF				
		SL2	ON	ON	OFF to ON	FL to ON	FL to ON
		SL3	OFF	OFF	OFF	ON to OFF	ON to OFF
		S4	OFF	OFF	OFF	OFF	ON to OFF

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

According to the DATA LIST displayed by the intelligent tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(d) Turn the ignition switch to the on position.

(e) Turn on the tester.

(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".

(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
STOP LIGHT SW	Stop light switch Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	-
PNP SW [NSW]	PNP switch Status/ ON or OFF	Shift lever position is; P and N: ON Except P and N: OFF	When the shift lever position displayed on the Intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, See page AX-39.
REVERSE	PNP switch Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	↑
DRIVE	PNP switch Status/ ON or OFF	Shift lever position is; D and 4 : ON Except D and 4: OFF	↑
2ND	PNP SW Status/ ON or OFF	Shift lever position is; 2 and L : ON Except 2 and L: OFF	↑
LOW	PNP SW Status/ ON or OFF	Shift lever position is; L : ON Except L: OFF	↑
4TH/DRIVE	PNP SW Status/ ON or OFF	Shift lever position is; 4 : ON Except 4: OFF	↑
3RD	PNP SW Status/ ON or OFF	Shift lever position is; 3 : ON Except 3: OFF	↑

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
SHIFT	Actual Gear Position/ 1st, 2nd, 3rd, 4th or 5th (O/D)	Shift Lever Position is; • L: 1st • 2: 1st or 2nd • 3: 1st, 2nd or 3rd • 4: 1st, 2nd, 3rd or 4th • D (O/D ON): 1st, 2nd, 3rd, 4th or 5th	-
LOCK UP SOL	Lock Up Solenoid Status/ ON or OFF	• Lock Up: ON • Except Lock Up: OFF	-
SOLENOID (SLT)	Shift Solenoid SLT Status/ ON or OFF	• Accelerator pedal is depressed: OFF • Accelerator pedal is released: ON	-
AT FLUID TEMP	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approx. 80°C (176°F) • Equal to ambient temperature when cold soak	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temp. sensor circuit is opened or shorted.
SPD (NC)	Counter Gear Speed/ display: 50 r/min	HINT: 3rd when shift lever position is D position (After warming up the engine); • Intermediate shaft speed (NC) becomes close to the engine speed.	-

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch to the ON position.
(e) Push the "ON" button of the intelligent tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST".
(g) According to the display on tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] • IDL: ON • Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves.

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid DSL to set the automatic transaxle to the lock-up condition. [Vehicle Condition] • Vehicle Speed: 60 km/h (37 mph) or more	Possible to check the DSL operation.
SOLENOID (SL1)	[Test Details] Operate the shift solenoid SL1 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	-
SOLENOID (SL2)	[Test Details] Operate the shift solenoid SL2 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	-
SOLENOID (SL3)	[Test Details] Operate the shift solenoid SL3 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	-
SOLENOID (S4)	[Test Details] Operate the shift solenoid S4 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	-
SOLENOID (SR)	[Test Details] Operate the shift solenoid SR [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	-
SOLENOID (DSL)	[Test Details] Operate the shift solenoid DSL [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	-
SOLENOID (SLT)*	[Test Details] Operate the shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped. • IDL: ON HINT: OFF: Line pressure up (When the active test of "SOLENOID (SLT)" is performed, the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-

*: "SOLENOID (SLT)" in the ACTIVE TEST is performed to check the line pressure changes by connecting the SST to the automatic transaxle, which is used in the HYDRAULIC TEST (See page AX-14) as well.
HINT:
The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the parts listed in the table below and proceed to the page given.
HINT:

- *1: Comes on MIL (Malfunction Indicator Lamp) light up
- *2: "DTC stored" mark means ECM memorizes the malfunction code if the ECM detects the DTC detection condition.
- This DTC may be output when the clutch, brake and gear components etc. inside the automatic transmission are damaged.

AUTOMATIC TRANSMISSION SYSTEM

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	1. Open or short in park/neutral position switch circuit 2. Park/neutral position switch 3. ECM	Comes on	DTC stored	AX-39
P0710	Transmission Fluid Temperature Sensor "A" Circuit	1. Open or short in ATF temperature sensor circuit 2. Transmission wire (ATF temperature sensor) 3. ECM	Comes on	DTC stored	AX-48
P0711	Transmission Fluid Temperature Sensor "A" Performance	1. Transmission wire (ATF temperature sensor)	Comes on	DTC stored	AX-53
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input	1. Short in ATF temperature sensor circuit 2. Transmission wire (ATF temperature sensor) 3. ECM	Comes on	DTC stored	AX-48
P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input	1. Open in ATF temperature sensor circuit 2. Transmission wire (ATF temperature sensor) 3. ECM	Comes on	DTC stored	AX-48
P0717	Turbine Speed Sensor Circuit No Signal	1. Open or short in transmission revolution sensor NT (speed sensor NT) circuit 2. Transmission revolution sensor NT (speed sensor NT) 3. ECM 4. Automatic transaxle assembly	Comes on	DTC stored	AX-57
P0724	Brake Switch "B" Circuit High	1. Short in stop light switch circuit 2. Stop light switch 3. ECM	Comes on	DTC stored	AX-60

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0741	Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve DSL)	1. Shift solenoid valve DSL remains open or closed 2. Valve body is blocked 3. Torque converter clutch 4. Automatic transaxle (clutch, brake or gear etc.) 5. Line pressure is too low	Comes on	DTC stored	AX-63
P0746	Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1)	1. Shift solenoid valve SL1 remains open or closed 2. Valve body is blocked 3. Automatic transaxle (clutch, brake or gear etc.)	Comes on	DTC stored	AX-69
P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)	1. Open or short in shift solenoid valve SL1 circuit 2. Shift solenoid valve SL1 3. ECM	Comes on	DTC stored	AX-73
P0766	Shift Solenoid "D" Performance (Shift Solenoid Valve S4)	1. Shift solenoid valve S4 remains open or closed 2. Valve body is blocked (Brake control valve) 3. Automatic transmission (clutch, brake or gear, etc.)	Comes on	DTC stored	AX-77
P0771	Shift Solenoid "E" Performance (Shift Solenoid Valve SR)	1. Shift solenoid valve SR remains open or closed 2. Valve body is blocked 3. Automatic transaxle (clutch, brake or gear etc.)	Comes on	DTC stored	AX-81
P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)	1. Shift solenoid valve SL2 remains open or closed 2. Valve body is blocked 3. Automatic transaxle (clutch, brake or gear etc.)	Comes on	DTC stored	AX-85
P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)	1. Open or short in shift solenoid valve SL2 circuit 2. Shift solenoid valve SL2 3. ECM	Comes on	DTC stored	AX-90
P0793	Intermediate Shaft Speed Sensor "A"	1. Open or short in transmission revolution sensor NC (speed sensor NC) circuit 2. Transmission revolution sensor NC (speed sensor NC) 3. ECM	Comes on	DTC stored	AX-94

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0796	Pressure Control Solenoid "C" Performance (Shift Solenoid Valve SL3)	1. Shift solenoid valve SL3 remains open or closed 2. Valve body is blocked 3. Automatic transaxle (clutch, brake or gear etc.)	Comes on	DTC stored	AX-98
P0798	Pressure Control Solenoid "C" Electrical (Shift Solenoid Valve SL3)	1. Open or short in shift solenoid valve SL3 circuit 2. Shift solenoid valve SL3 3. ECM	Comes on	DTC stored	AX-102
P0982	Shift Solenoid "D" Control Circuit Low (Shift Solenoid Valve S4)	1. Short in shift solenoid valve S4 circuit 2. Shift solenoid valve S4 3. ECM	Comes on	DTC stored	AX-106
P0983	Shift Solenoid "D" Control Circuit High (Shift Solenoid Valve S4)	1. Open in shift solenoid valve S4 circuit 2. Shift solenoid valve S4 3. ECM	Comes on	DTC stored	AX-106
P0985	Shift Solenoid "E" Control Circuit Low (Shift Solenoid Valve SR)	1. Short in shift solenoid valve SR circuit 2. Shift solenoid valve SR 3. ECM	Comes on	DTC stored	AX-109
P0986	Shift Solenoid "E" Control Circuit High (Shift Solenoid Valve SR)	1. Open in shift solenoid valve SR circuit 2. Shift solenoid valve SR 3. ECM	Comes on	DTC stored	AX-109
P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)	1. Shift solenoid valve SLT remains closed 2. Valve body is blocked 3. Automatic transaxle (clutch, brake or gear etc.)	Comes on	DTC stored	AX-112
P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)	1. Open or short in shift solenoid valve SLT circuit 2. Shift solenoid valve SLT 3. ECM	Comes on	DTC stored	AX-116
P2769	Torque Converter Clutch Solenoid Circuit Low (Shift Solenoid Valve DSL)	1. Short in shift solenoid valve DSL circuit 2. Shift solenoid valve DSL 3. ECM	Comes on	DTC stored	AX-120
P2770	Torque Converter Clutch Solenoid Circuit High (Shift Solenoid Valve DSL)	1. Open in shift solenoid valve DSL circuit 2. Shift solenoid valve DSL 3. ECM	Comes on	DTC stored	AX-120

DTC	P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0705	(A) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • P input signal is ON. • N input signal is ON. • R input signal is ON. • D input signal is ON. • 3 input signal is ON. • 2 input signal is ON. (B) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • NSW input signal is ON. • R input signal is ON. • D input signal is ON. • 3 input signal is ON. • 2 input signal is ON. (C) All switches are OFF simultaneously for NSW, P, R, N, D, 3 and 2 positions (2-trip detection logic). (D) Both 1 and 2 are met (2-trip detection logic) 1. One of the following is met (a) NSW input signal is ON. (b) P input signal is ON. (c) N input signal is ON. (d) R input signal is ON 2. One of the following is met (a) 4 input signal is ON. (b) L input signal is ON.	• Open or short in park / neutral position switch circuit • Park / neutral position switch • ECM

MONITOR DESCRIPTION

These DTCs indicate a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.
The park/neutral position switch detects the shift lever position and sends a signal to the ECM.
For security, the park/neutral position switch detects the shift lever position so that engine can be started only when the shift lever is in the P or N position
The park/neutral position switch sends a signal to the ECM according to the shift position (P, R, N or D). The ECM determines that there is a problem with the switch or related parts if in receives more than 1 position signal simultaneously. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P0705: Park/neutral position switch/Verify switch input
Required sensors/Components	Park/neutral position switch
Frequency of operation	Continuous
Duration	2 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

The monitor will run whenever this DTC is not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

TYPICAL MALFUNCTION THRESHOLDS

1. One of the following conditions is met: Condition (A), (B), (C) and (D)

Condition (A)

If 2 or more of the following signal outputs exist at the same time

P switch	ON
N switch	ON
R switch	ON
D switch	ON
3 switch	ON
2 switch	ON

Condition (B)

If 2 or more of the following signal outputs exist at the same time

NSW switch	ON
R switch	ON
D switch	ON
3 switch	ON
2 switch	ON

Condition (C)

All of following conditions are met

NSW switch	OFF
P switch	OFF
N switch	OFF
R switch	OFF
D switch	OFF
3 switch	OFF
2 switch	OFF

Condition (D)

Both (i) and (ii) are met

(i) One of the following is met

NSW switch	ON
P switch	ON
N switch	ON
R switch	ON

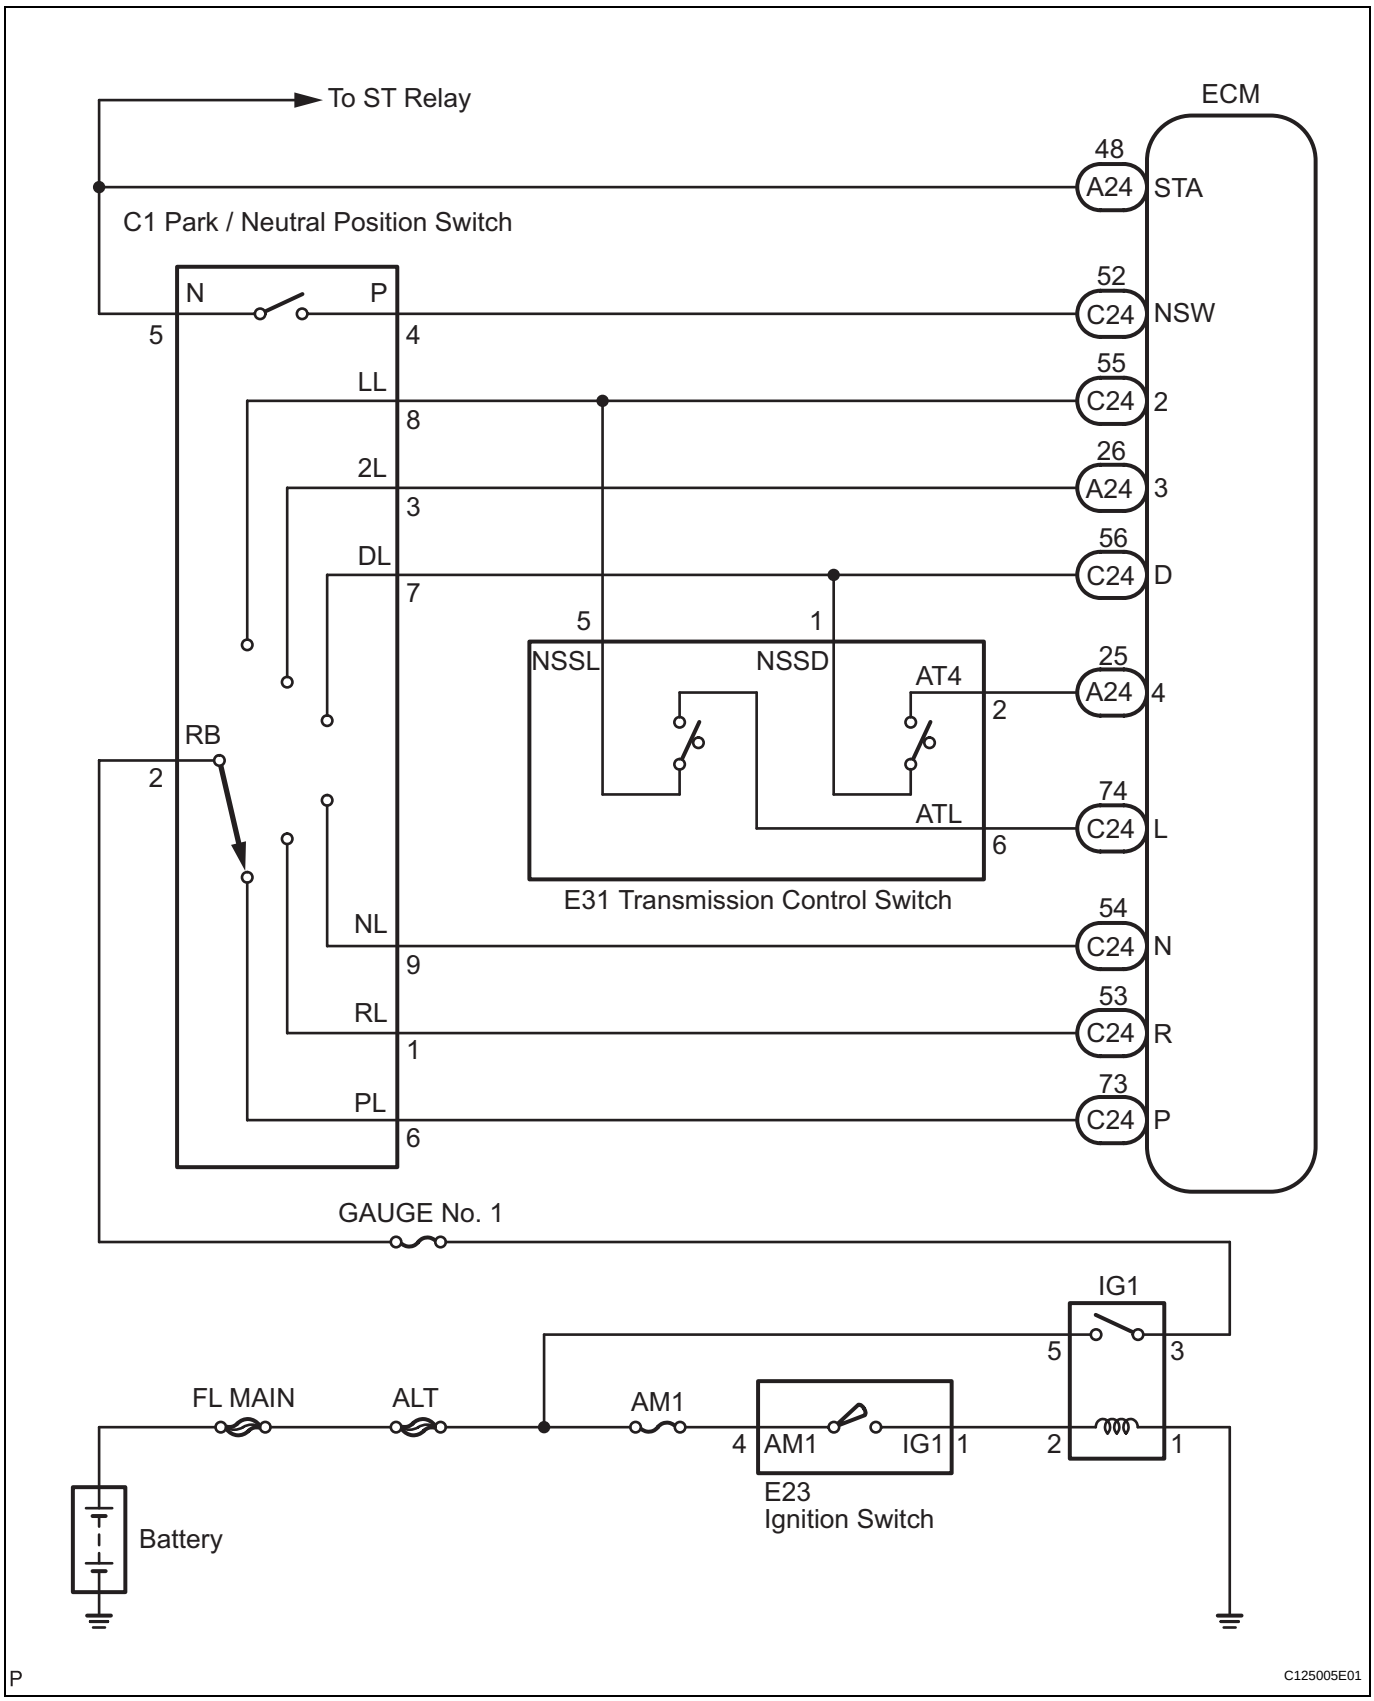
(ii) One of the following is met

4 switch	ON
L switch	ON

COMPONENT OPERATING RANGE

Park/neutral Position switch	The park/neutral position switch sends only one signal to the ECM.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

According to the DATA LIST displayed by the intelligent tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. READ DATA LIST

(a) Turn the ignition switch off.

(b) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn on the tester.

(e) Select the item "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".

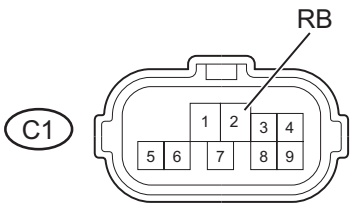
(f) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
PNP SW [NSW]	PNP SW Status / ON or OFF	Shift lever position is; P and N: ON Except P or N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
REVERSE	PNP SW Status / ON or OFF	Shift lever position is; R: ON Except R: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
DRIVE	PNP SW Status / ON or OFF	Shift lever position is; D and 4: ON Except D and 4: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
2ND	PNP SW Status / ON or OFF	Shift lever position is; 2 and L: ON Except 2 and L: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
LOW	PNP SW Status / ON or OFF	Shift lever position is; L: ON Except L: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
4TH/DRIVE	PNP SW Status / ON or OFF	Shift lever position is; 4: ON Except 4: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
3RD	PNP SW Status / ON or OFF	Shift lever position is; 3: ON Except 3: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.

1	CHECK HARNESS AND CONNECTOR (BATTERY - PARK/NEUTRAL POSITION)

Wire Harness Side:

(Connector Front View):



Y C117645E06

(a) Disconnect the park/neutral position switch connector.
(b) Turn the ignition switch on (IG).
(c) Measure voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
2 - Body ground	10 to 14 V

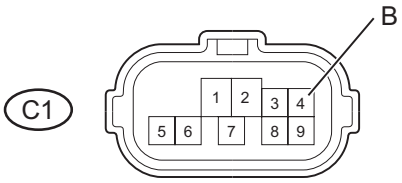
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK HARNESS AND CONNECTOR (OUTPUT SIGNAL)

Wire Harness Side:

(Connector Front View):



Y C117645E07

(a) Turn the ignition switch on (IG).
(b) Measure voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
4 - Body ground	10 to 14 V

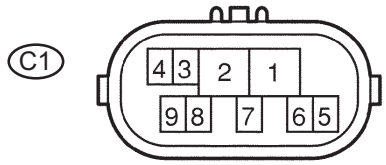
NG → **Go to step 8**

OK

3 INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

Switch Side:

(Connector Front View):



P

C110340E34

(a) Measure resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
P	2 - 6 and 4 - 5	Below 1 Ω
Except P		10 kΩ or higher
R	2 - 1	Below 1 Ω
Except R		10 kΩ or higher
N	2 - 9 and 4 - 5	Below 1 Ω
Except N		10 kΩ or higher
D and 4	2 - 7	Below 1 Ω
Except D and 4		10 kΩ or higher
3	2 - 3	Below 1 Ω
Except 3		10 kΩ or higher
2 and L	2 - 8	Below 1 Ω
Except 2 and L		10 kΩ or higher

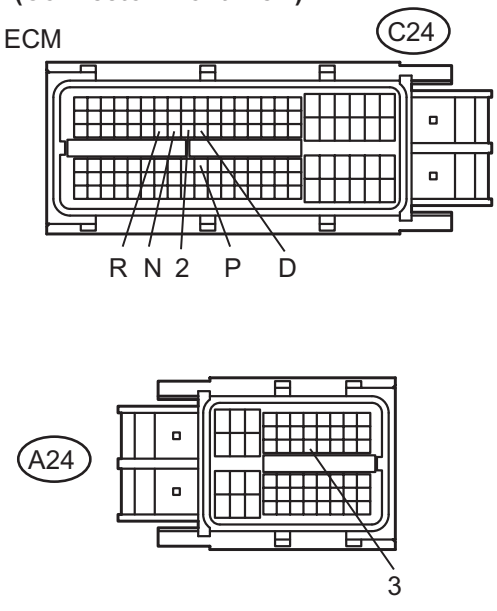
NG → **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

OK

4 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)

Wire Harness Side:

(Connector Front View):



C136857E03

(a) Connect the park/neutral position switch connector.
(b) Disconnect the ECM connectors.
(c) Turn the ignition switch on (IG), and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
P	C24-73 (P) - Body ground	10 to 14 V
Except P		Below 1 V
N	C24-54 (N) - Body ground	10 to 14 V
Except N		Below 1 V
R	C24-53 (R) - Body ground	10 to 14 V*
Except R		Below 1 V
D and 4	C24-56 (D) - Body ground	10 to 14 V
Except D and 4		Below 1 V
3	A24-26 (3) - Body ground	10 to 14 V
Except 3		Below 1 V
2 and L	C24-55 (2) - Body ground	10 to 14 V
Except 2 and L		Below 1 V

HINT:

*: The voltage will drop slightly due to lighting up of the back up light.

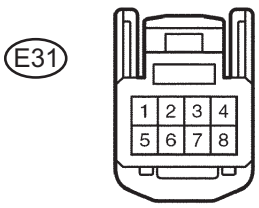
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - TRANSMISSION CONTROL SWITCH)

Wire Harness Side:

(Connector Front View):



C110345E17

(a) Disconnect the transmission control switch connector of shift lock control unit assembly.

(b) Measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

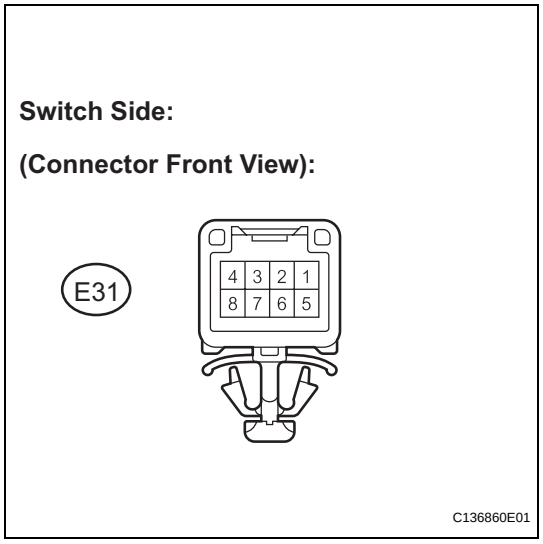
Standard voltage

Shift Position	Tester Connection	Specified Condition
D and 4	1 - Body ground	10 to 14 V
Except D and 4		Below 1 V
2 and L	5 - Body ground	10 to 14 V
Except 2 and L		Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 INSPECT TRANSMISSION CONTROL SWITCH



(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

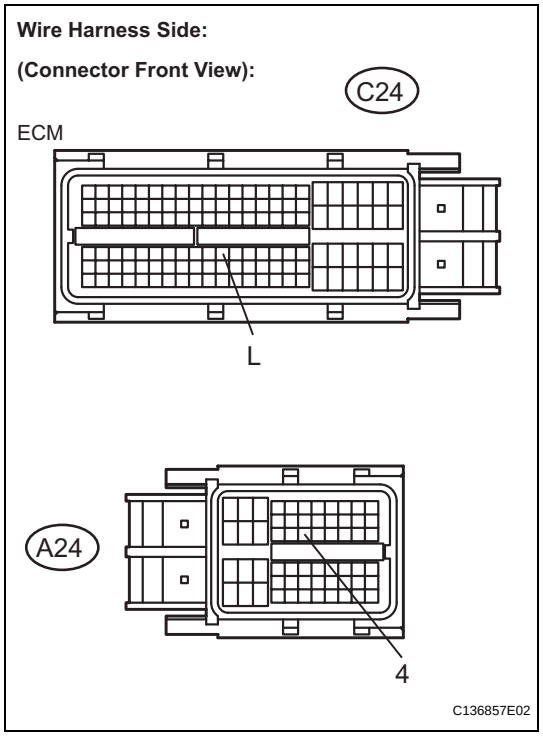
Standard resistance

Shift Position	Tester Connection	Specified Condition
4 and 3	1 - 2	Below 1 Ω
Except 4 and 3		10 kΩ or higher
L	5 - 6	Below 1 Ω
Except L		10 kΩ or higher

NG → REPLACE TRANSMISSION CONTROL SWITCH

OK

7 CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL SWITCH - ECM)



(a) Connect the transmission control switch connector of shift lock control unit assembly.

(b) Turn the ignition switch to the ON position, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage

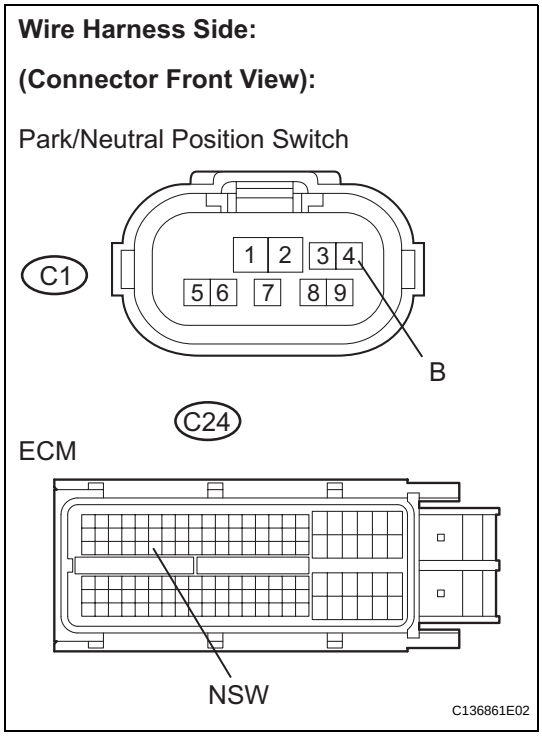
Shift Position	Tester Connection	Specified Condition
4	A24-25 (4) - Body ground	10 to 14 V
Except 4		Below 1 V
L	C24-74 (L) - Body ground	10 to 14 V
Except L		Below 1 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM

8	CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)



(a) Disconnect the ECM connectors.
(b) Turn the ignition switch off.
(c) Measure resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
B (C1-4) - NSW (C24-52)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
B (C1-4) or NSW (C24-52) - Body ground	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM

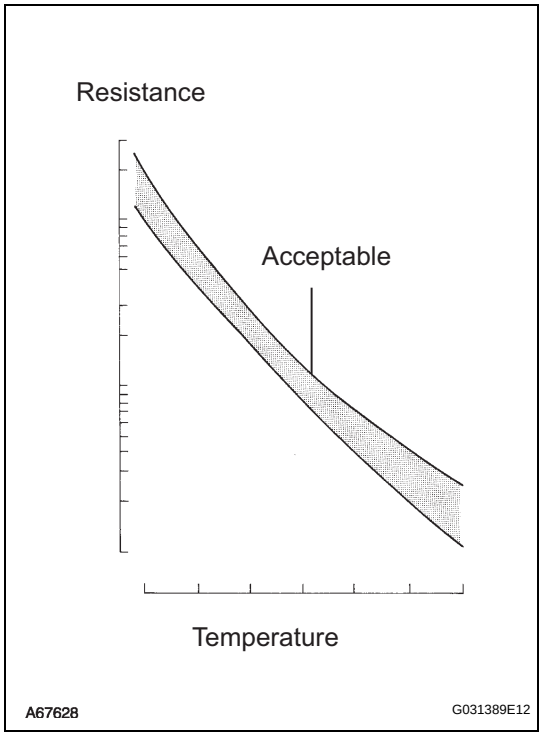
DTC	P0710	Transmission Fluid Temperature Sensor "A" Circuit

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input

DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.
The ECM applies a voltage to the temperature sensor through ECM terminal THO1.
The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.
One terminal of the sensor is grounded so that the sensor resistance decreases and the voltage goes down as the temperature becomes higher.
The ECM calculates the fluid temperature based on the voltage signal.



DTC No.	DTC Detection Condition	Trouble Area
P0710	(a) and (b) are detected momentarily within 0.5 sec. when neither P0712 nor P0713 is detected (1-trip detection logic) (a) ATF temperature sensor resistance is less than 79 Ω. (b) ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 sec., the malfunction switches from (a) to (b) or from (b) to (a)	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM
P0712	ATF temperature sensor resistance is less than 79 Ω for 0.5 sec. or more (1-trip detection logic)	• Short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM

DTC No.	DTC Detection Condition	Trouble Area
P0713	ATF temperature sensor resistance is more than 156 kΩ when 15 minutes or more have elapsed after the engine start DTC is detected for 0.5 sec. or more (1-trip detection logic)	• Open in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the automatic transmission fluid (ATF) temperature sensor (TFT sensor) circuit. The automatic transmission fluid (ATF) temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and the ECM detects an opens or shorts in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω *1or more than 156 kΩ *2, the ECM interprets this as a fault in the ATF sensor or wiring. The ECM will turn on the MIL and store the DTC.
*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.
*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.
HINT:
The ATF temperature can be checked on the intelligent tester display.

MONITOR STRATEGY

Related DTCs	P0710: ATF temperature sensor/Range check (Chattering) P0712: ATF temperature sensor/Range check (Low resistance) P0713: ATF temperature sensor/Range check (High resistance)
Required sensors/Components	ATF temperature sensor (TFT sensor)
Frequency of operation	Continuous
Duration	0.5 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0710: Range check (Chattering)
P0712: Range check (Low resistance)

The monitor will run whenever these DTCs are not present.	None
The typical enabling condition is not available.	-

P0713: Range check (High resistance)

The monitor will run whenever this DTC is not present.	None
Time after engine start	15 min. or more

TYPICAL MALFUNCTION THRESHOLDS

P0710: Range check (Chattering)

TFT (Transmission fluid temperature) sensor resistance	Less than 79 Ω or More than 156 kΩ

P0712: Range check (Low resistance)

TFT sensor resistance	Less than 79 Ω

P0713: Range check (High resistance)

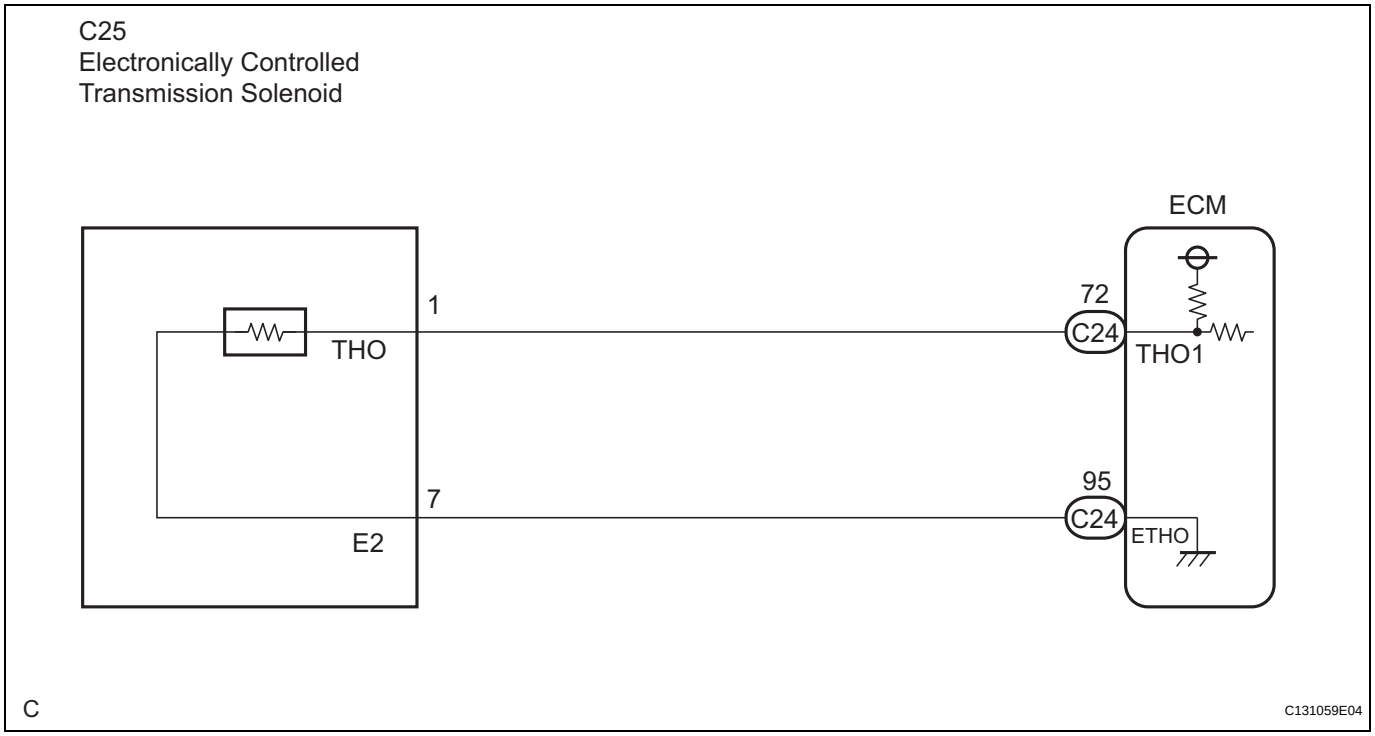
TFT sensor resistance	More than 156 kΩ

AX

COMPONENT OPERATING RANGE

TFT sensor.	Atmospheric temperature to approx. 130°C (266°F)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

According to the DATA LIST displayed by the OBD II scan tool or intelligent tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

NOTICE:

In the table below, the value listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether apart is faulty or not.

1. READ DATA LIST

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
AT FLUID TEMP	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	Approx. 80°C (176°F) (After Stall Test)

HINT:

When DTC P0712 is output and OBD II scan tool or intelligent tester output is 150°C (302°F), there is a short circuit.

When DTC P0713 is output and OBD II scan tool or intelligent tester output is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO1 (THO) and body ground.

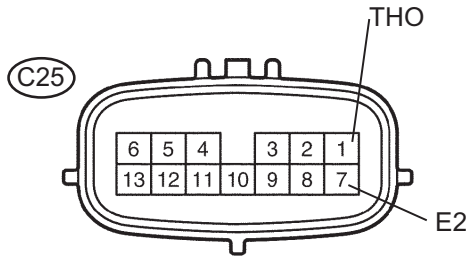
Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF temperature sensor become open, P0713 is immediately set (in 0.5 second).
When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1 INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)

Transmission Wire Side:

(Connector Front View):



C113969E24

(a) Disconnect the transmission wire connector from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
1 (THO) - 7 (E2)	79 Ω to 156 kΩ
1 (THO) - Body ground	10 kΩ or higher
7 (E2) - Body ground	10 kΩ or higher

HINT:
If the resistance is out of the specified range with either the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature	Specified Condition
20°C (68°F)	3 to 5 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

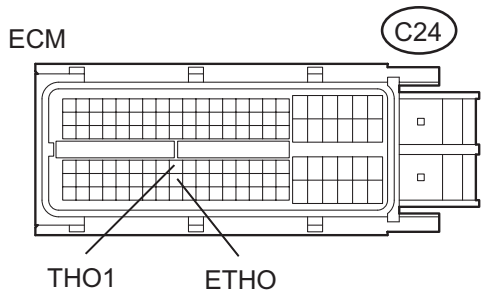
NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)

Wire Harness Side:

(Connector Front View):



A136781E01

(a) Connect the transmission wire connector to the transaxle.
(b) Disconnect the ECM connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
C24-72 (THO1) - C24-95 (ETHO)	79 Ω to 156 kΩ

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
C24-72 (THO1) - Body ground	10 kΩ or higher
C24-95 (ETHO) - Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0711	Transmission Fluid Temperature Sensor "A" Performance

DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0711	(A) Both (a) and (b) are detected: (2-trip detection logic) (a) Intake air and engine coolant temperatures are more than -10°C (14°F) at engine start (b) After normal driving for over 19 min. and 9 km (6 mile) or more, ATF temp. is less than 20°C (68°F) (B) When engine coolant temp. is less that 35°C (95°F) at engine start, the ATF temp. is 110°C (230°F) or more after 17 min. of engine start (2-trip detection logic).	Transmission wire (ATF temperature sensor)

MONITOR DESCRIPTION

The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects an open or short in the ATF temperature circuit or a fault in the ATF temperature sensor.
After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 20°C (68°F) after running the vehicle for a certain period, the ECM interprets this as a fault, and turns on the MIL.
When the ATF temperature is 110°C (230°F) or more after 17 minutes of engine cold start, the ECM also determines this as a fault, turns on the MIL, and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check
Required sensors/Components	ATF temperature sensor (TFT sensor)
Frequency of operation	Continuous
Duration	3 sec.: Condition (A) 10 sec.: Condition (B)
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

The monitor will run whenever this DTC is not present.	None
Time after engine start	16 min. and 40 sec. or more
ECT (Engine coolant temperature)	-15°C (5°F) or more
ATF sensor circuit	Not circuit malfunction
ECT sensor circuit	Not circuit malfunction
IAT sensor circuit	Not circuit malfunction
ETCS	Not circuit malfunction

Condition (A):

Time After engine start	18 min. and 20 sec.
Driving distance after engine start	9 km (5.6 mile) or more
IAT (Intake air temperature) (12 sec. after starting engine)	-10°C (14°F) or more
ECT (12 sec. after starting engine)	-10°C (14°F) or more

Condition (B):

ECT (Current temperature)	60°C (140°F) or more
ECT (12 sec. after engine start)	Less than 35°C (95°F)

TYPICAL MALFUNCTION THRESHOLDS

Condition (A):

ATF temperature sensor	Less than 20°C (68°F)

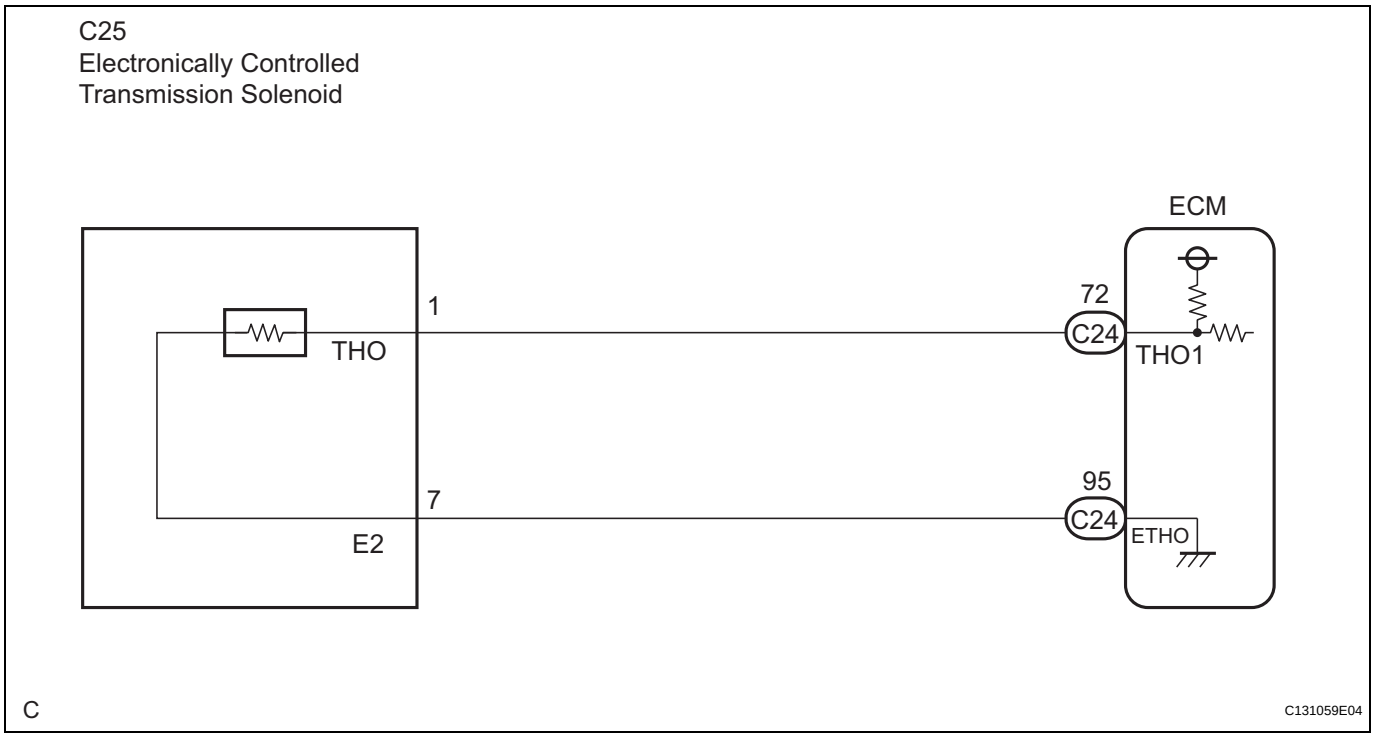
Condition (B):

ATF temperature sensor	110°C (230°F) or more

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature to approx. 130°C (266°F)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

According to the DATA LIST displayed by the OBD II scan tool or intelligent tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

NOTICE:

In the table below, the value listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether apart is faulty or not.

1. READ DATA LIST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
AT FLUID TEMP	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	Approx. 80°C (176°F) (After Stall Test)

HINT:
When DTC P0712 is output and OBD II scan tool or intelligent tester output is 150°C (302°F), there is a short circuit.
When DTC P0713 is output and OBD II scan tool or intelligent tester output is -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal THO1 (THO) and body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 second).
When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1 CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)

(a) Connect the OBD II scan tool or the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and push the OBD II scan tool or the intelligent tester main switch ON.
(c) When you use intelligent tester:
Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the OBD II scan tool or the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0711" is output	**A**
"P0711" and other DTCs	**B**

HINT:
If any other codes besides "P0711" are output, perform troubleshooting for those DTCs first.

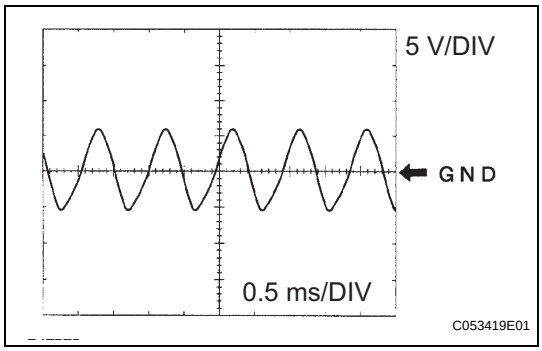
REPLACE TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)

DTC	P0717	Turbine Speed Sensor Circuit No Signal

DESCRIPTION

This sensor detects the rotation speed of the input turbine. By comparing the input turbine speed signal (NT) with the counter gear speed sensor signal (NC), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus, providing smooth gear shift.

DTC No.	DTC Detection Condition	Trouble Area
P0717	ECM detects conditions (a), (b) and (c) continuously for 5 sec. or more: (1-trip detection logic) (a) Vehicle speed: 50 km/h (31 mph) or more (b) Park/neutral position switch (STAR and R) is OFF (c) Speed sensor (NT): less than 300 rpm	• Open or short in transmission revolution sensor NT (speed sensor NT) circuit • Transmission revolution sensor NT (speed sensor NT) • ECM • Automatic transaxle assembly



Reference (Using an oscilloscope):
Check the waveform between terminals NT+ and NT- of the ECM connector.
Standard: Refer to the illustration.

Terminal	Tool setting	Vehicle condition
NT+ - NT-	5 V/DIV, 0.5ms/DIV	Vehicle speed 20 km/h (12 mph)

MONITOR DESCRIPTION

The NT terminal of the ECM detects a revolution signal from the speed sensor (NT) (input RPM). The ECM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).
While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the input shaft revolution is less than 300 rpm *1although the output shaft revolution is more than 1,000 rpm *2, the ECM detects the trouble, illuminates the MIL and stores the DTC.
*1: Pulse is not output or is irregularly output.
*2: The vehicle speed is 50 km/h (31 mph) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NT) / Verify pulse input
Required sensors/Components	Speed sensor (NT), Speed sensor (NC)
Frequency of operation	Continuous
Duration	5 sec.
MIL operation	Immediate
Sequence of operation	None

AX

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve (range))

Shift change	Shift change is completed and before starting next shift change operation
ECM selected gear	2nd, 3rd, 4th or 5th
Output shaft rpm	1,000 rpm or more
NSW switch	OFF
R switch	OFF
L switch	OFF
Engine	Running
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

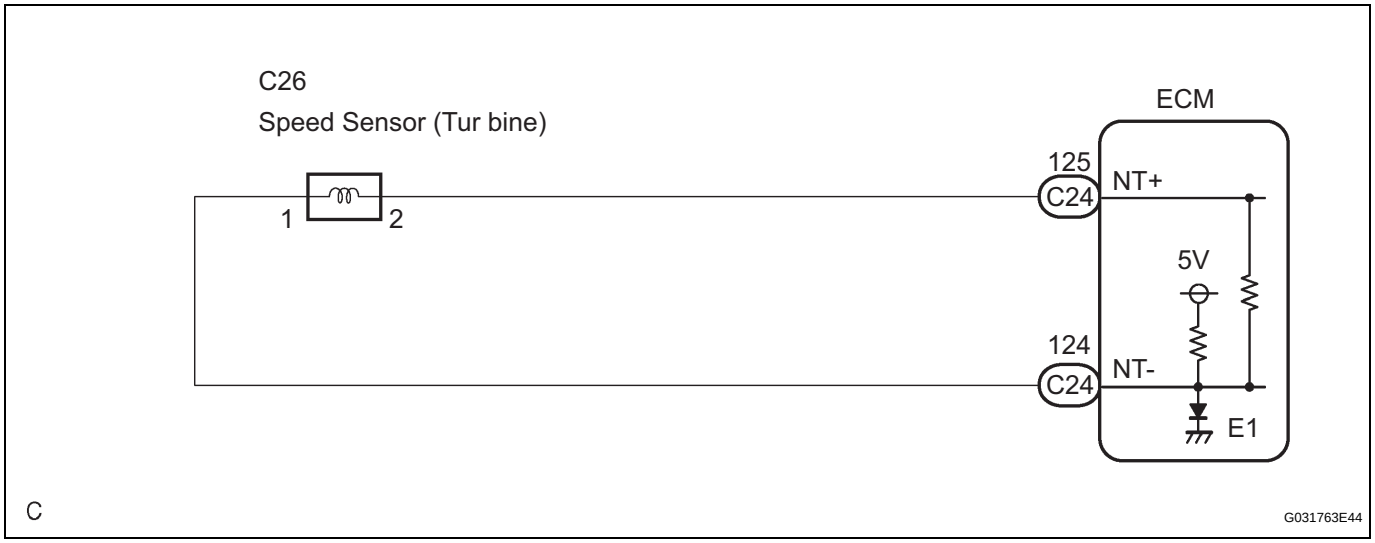
TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

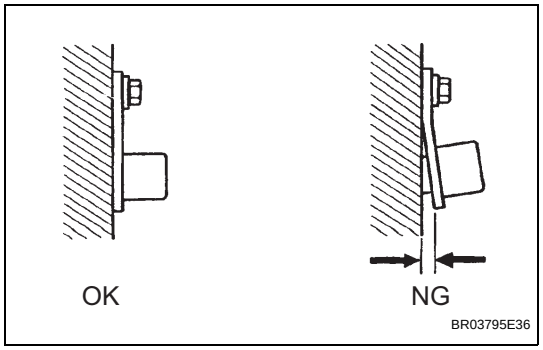
Speed sensor (NT)	Turbine speed is equal to engine speed with lock-up ON

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT SPEED SENSOR INSTALLATION

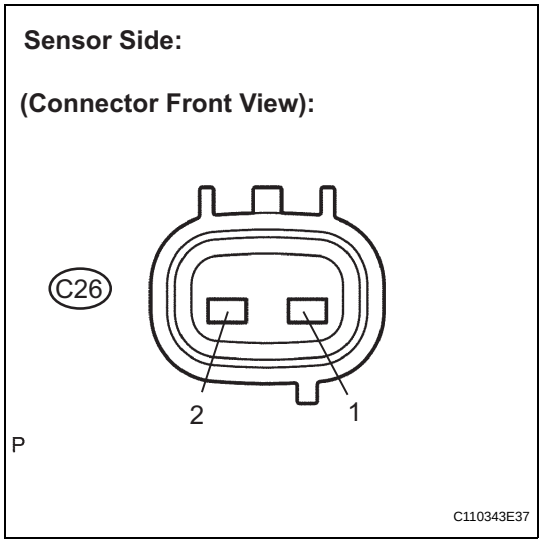


(a) Check the speed sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG	REPLACE SPEED SENSOR (NT)

OK

2	INSPECT SPEED SENSOR (NT)



(a) Disconnect the speed sensor connector from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.

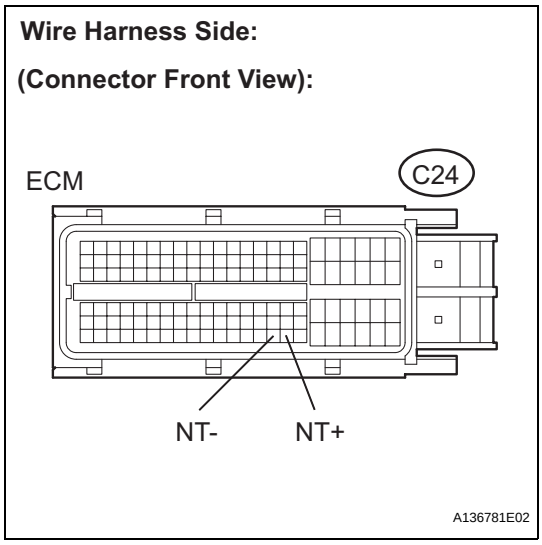
Standard resistance

Tester Connection	Specified Condition 20 °C (68 °F)
1 - 2	560 to 680 Ω

NG → REPLACE SPEED SENSOR (NT)

OK

3	CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)



(a) Connect the speed sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
C24-125 (NT+) - C24-124 (NT-)	560 to 680 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
C24-125 (NT+) - Body ground	10 kΩ or higher
C24-124 (NT-) - Body ground	

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM

DTC	P0724	Brake Switch "B" Circuit High

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in lock-up condition when brakes are suddenly applied.
When the brake pedal is depressed, this switch sends a signals to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC No.	DTC Detecting Condition	Trouble Area
P0724	The stop light switch remains ON even when the vehicle is driven in a STOP (less than 3 km/h (2 mph) and GO (30 km/h (19 mph) or more) fashion 5 times. (2-trip detection logic).	• Short in stop light switch circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains on. When the stop light switch remains ON during "stop and go" driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 3 km/h (2 mph)) and go (30 km/h (19 mph) or more) 5 times for two driving cycles in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Rationality
Required sensors/Components	Stop light switch, Vehicle speed sensor
Frequency of operation	Continuous
Duration	GO and STOP 5 times
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	None
Ignition switch	ON
Starter	OFF
Battery voltage	8 V or more
GO (Vehicle speed is 30 km/h (18.63 mph) or more)	Once
STOP (Vehicle speed is less than 3 km/h (1.86 mph))	Once

TYPICAL MALFUNCTION THRESHOLDS

Brake switch	Remain ON during GO and STOP 5 times

WIRING DIAGRAM

See page ES-234.

INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST

HINT:
According to the DATA LIST displayed by the OBD II scan tool or intelligent tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester..
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(g) According to the display on the tester, read the "DATA LIST".

DATA LIST

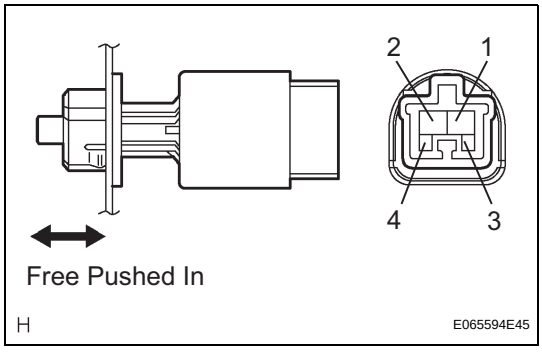
Item	Measurement Item/ Range (display)	Normal Condition
STOP LIGHT SW	Stop light SW Status/ ON or OFF	• Brake pedal is depressed: ON • Brake pedal is released: OFF

NOTICE:
In the table below, the value listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether apart is faulty or not.

OK → **Go to step 3**

NG

2	INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Remove the stop light switch assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Switch position	Tester Connection	Specified Condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin pushed in		10 kΩ or higher
Switch pin free	3 - 4	10 kΩ or higher
Switch pin pushed in		Below 1 Ω

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

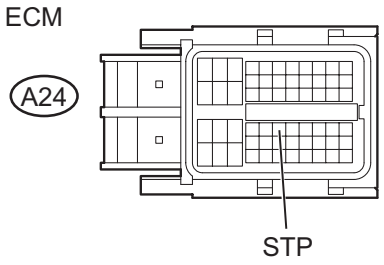
OK

AX

3	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - ECM)

Wire Harness Side:

(Connector Front View):



A115671E29

(a) Install the stop light switch assembly.
(b) Measure the voltage according to the value(s) in the table below when the brake pedal is depressed and released.

Standard voltage

Condition	Tester Connection	Specified Condition
Brake pedal is depressed	A24-36 (STP) - Body ground	10 to 14 V
Brake pedal is released		Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0741	Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve DSL)

SYSTEM DESCRIPTION

The ECM uses the signals from the throttle position sensor, air-flow meter, turbine (input) speed sensor, intermediate (counter) shaft speed sensor and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.
Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect a mechanical problems of the shift solenoid valve DSL, valve body and torque converter clutch.

DTC No.	DTC Detection CondS1ition	Trouble Area
P0741	Lock-up does not occur when driving in the lock-up range (normal driving at 80 km/h [50 mph]), or lock up remains ON in the lock-up OFF range. (2-trip detection logic)	• Shift solenoid valve DSL remains open or closed • Valve body is blocked • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on the speed sensor (NT), speed sensor (NC), engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to counter gear rpm (NC). When conditions are appropriate, the ECM requests "lock-up" by applying control voltage to the shift solenoid DSL. When the DSL is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.
If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve DSL or lock-up system performance. The ECM will turn on the MIL and store the DTC.
HINT:
Example:
When any of the following is met, the system judges it as a malfunction.

- There is a difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up.
  (Engine speed is at least 75 rpm greater than input turbine speed.)
- There is no difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up off.
  (The difference between engine speed and input turbine speed is less than 35 rpm.)

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction or ON malfunction OFF malfunction:

Engine Speed - Input (turbine) speed	100 rpm or more

ON malfunction:

Difference between engine speed and input (turbine) speed	Less than 35 rpm

INSPECTION PROCEDURE

HINT:

Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.

(b) Turn the ignition switch off.

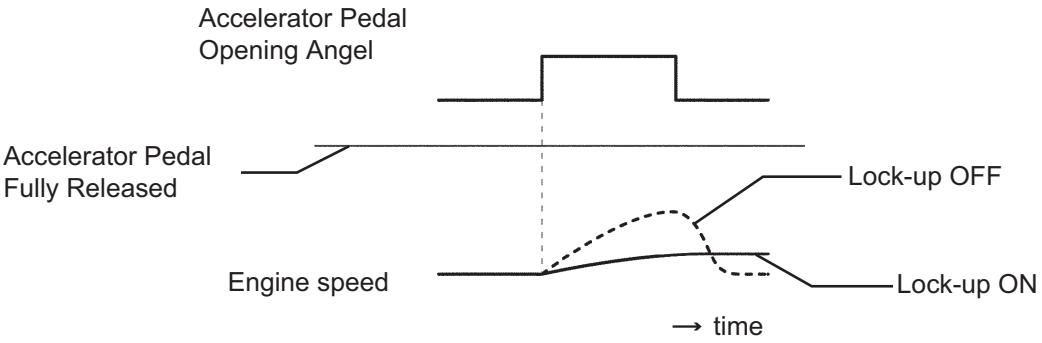
(c) Connect the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.

(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST".
(g) According to the display on the tester, perform the "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid DSL to set the automatic transaxle to the lock-up condition. [Vehicle Condition] Vehicle Speed: 60 km/h (37 mph) or more	Possible to check the DSL operation.

HINT:
- This test can be conducted when the vehicle speed is 60 km/h (37 mph) or more.
- This test can be conducted in the 5th gear.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.
HINT:
- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off.)



1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0741)

(a) Connect the OBD II scan tool or the intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(b) Turn the ignition switch on (IG) and turn the OBD II scan tool or the intelligent tester main switch ON.
(c) When you use intelligent tester:
Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the OBD II scan tool or the intelligent tester.

Result

AX

Display (DTC output)	Proceed to
Only "P0741" is output	A
"P0741" and other DTCs	B

HINT:
If any other codes besides "P0741" are output, perform the troubleshooting for those DTCs first.

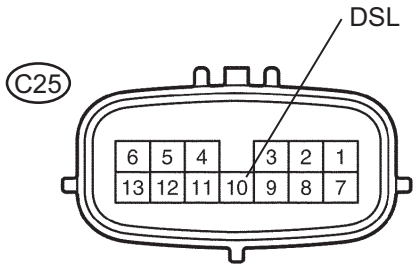
B → GO TO DTC CHART

A

2 INSPECT TRANSMISSION WIRE (DSL)

Transmission Wire Side:

(Connector Front View):



C113969E25

(a) Disconnect the transmission wire connector from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
10 - Body ground	11 to 13 Ω

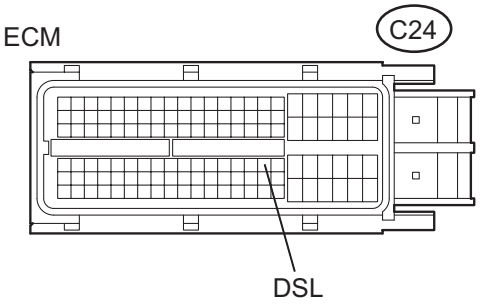
NG → Go to step 4

OK

3 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)

Wire Harness Side:

(Connector Front View):



A136781E03

(a) Connect the transmission wire connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

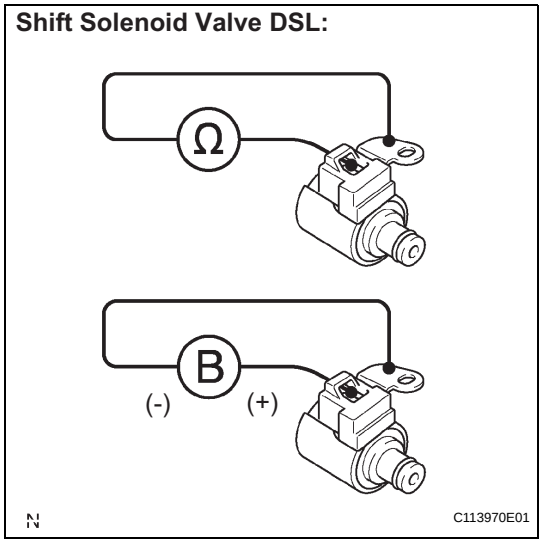
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
C24-79 (DSL) - Body ground	11 to 13 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4	INSPECT SHIFT SOLENOID VALVE (DSL)



(a) Remove the shift solenoid valve DSL.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (DSL) - Solenoid Body (DSL)	11 to 13 Ω

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

The solenoid valve makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE (DSL)**

OK

5	CHECK TRANSMISSION WIRE

OK:

The connectors and pins are securely installed.
There is no open or short on the wire harness.

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK

6	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve.

REPAIR AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0746	Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake or gear etc.).

DTC No.	DTC Detecting Condition	Trouble Area
P0746	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve SL1 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL.
HINT:
Example:
When either condition (a) or (b) is met, the ECM detects a malfunction.
(a) The ECM commands the 1st gear, but the actual gear is 2nd.
(b) The ECM commands the 2nd gear, but the actual gear is 1st.

DTC	P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0748	The ECM checks for an open or short in the shift solenoid valve SL1 circuit while driving and shift gears. (1-trip detection logic) • Output signal duty equals to 100 %. (NOTE: SL1 output signal duty is less than 100 % under normal condition.)	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.)
(See page AX-30).

MONITOR STRATEGY

DTC	P0771	Shift Solenoid "E" Performance (Shift Solenoid Valve SR)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake or gear etc.).

DTC No.	DTC Detecting Condition	Trouble Area
P0771	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve SR remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL and stores the DTC.

ECM lock-up command	ON
ECM selected gear	3rd, 4th or 5th
Vehicle speed	25 km/h (15.5 mph) or more

ON malfunction (A):

ECM lock-up command	OFF

ON malfunction (B):

ECM selected gear	1st
Vehicle speed	Less than 40 km/h (24.9 mph)
Throttle valve opening angle	4.5% or more at engine speed 1,900 rpm (Varies with engine speed)

ON malfunction (C):

ECM selected gear	3rd
Throttle valve opening angle	4.5% or more at engine speed 1,900 rpm (Varies with engine speed)

ON malfunction (D):

Duration time from shift command of ECM	15 sec. or more
ECM selected gear	4th or 5th

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction (A) and (B), or ON malfunction (A), (B), (C) and (D)

OFF malfunction (A):

Intermediate shaft speed/Output speed	1.34 to 1.48

OFF malfunction (B):

Engine speed - Input (turbine) speed	75 rpm or more

ON malfunction (A):

Difference between engine speed and input (turbine) speed	150 rpm or more

ON malfunction (B):

Input (turbine) speed/Intermediate shaft speed	0.93 to 1.07

ON malfunction (C):

Input (turbine) speed/Intermediate shaft speed	0.93 to 1.07

ON malfunction (D):

Input (turbine) speed/Intermediate shaft speed	0.64 to 0.74

INSPECTION PROCEDURE

HINT:
Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SHIFT".
(g) According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be forcibly changed with the intelligent tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AX-30).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:
- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the intelligent tester.

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0771)

(a) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(b) Turn the ignition switch on (IG) and turn the OBD II scan tool or the intelligent tester main switch ON.
(c) When you use intelligent tester:
Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the OBD II scan tool or the intelligent tester.

Result

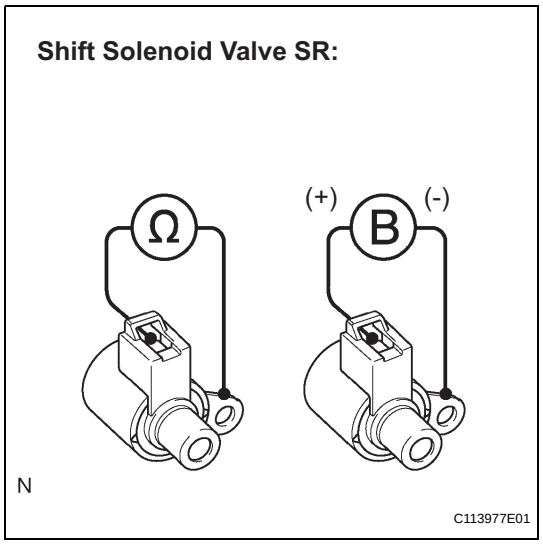
Display (DTC output)	Proceed to
Only "P0771" is output	A
"P0771" and other DTCs	B

HINT:
If any other codes besides "P0771" are output, perform the troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2 INSPECT SHIFT SOLENOID VALVE (SR)



(a) Remove the shift solenoid valve SR.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (SR) - Solenoid Body (SR)	11 to 15 Ω

(c) Connect positive (+) lead to the terminal of solenoid connector, negative (-) lead to the solenoid body.

OK:

The solenoid makes an operating sound.

NG → REPLACE SHIFT SOLENOID VALVE (SR)

OK

3 INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve.

NG → REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK

4 INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

OK:

The torque converter clutch operates normally.

NG → REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake or gear etc.).

DTC No.	DTC Detecting Condition	Trouble Area
P0776	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve SL2 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0776: Shift solenoid valve SL2/OFF malfunction Shift solenoid valve SL2/ON malfunction
Required sensors/Components	Shift solenoid valve SL2, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)

Shift solenoid valve SR circuit	Not circuit malfunction
Shift solenoid valve DSL circuit	Not circuit malfunction
Electronic throttle system	Not circuit malfunction

OFF malfunction (A):

ECM lock-up command	OFF
Vehicle speed	Less than 60 km/h (37.3 mph)
Throttle valve opening angle	8.5% or more

OFF malfunction (B):

ECM selected gear	1st
Vehicle speed	Less than 40 km/h (24.9 mph)
Throttle valve opening angle	4.5% or more at engine speed 1,900 rpm (Varies with engine speed)

OFF malfunction (C):

ECM selected gear	3rd
Throttle valve opening angle	4.5% or more at engine speed 1,900 rpm (Varies with engine speed)

OFF malfunction (D):

Duration time from shift command of ECM	15 sec. or more
ECM selected gear	4th or 5th

ON malfunction (A):

ECM selected gear	1st
Vehicle speed	Less than 40 km/h (24.9 mph)
Throttle valve opening angle	4.5% or more at engine speed 1,900 rpm (Varies with engine speed)

ON malfunction (B):

ECM selected gear	3rd
Throttle valve opening angle	7.0% or more at output speed 1,400 rpm (Varies with engine speed)
Malfunction of pressure control solenoid "B" (SL2) and "C" (SL3)	Not detected

ON malfunction (C):

Throttle valve opening angle	7.0% or more at output speed 1,050 rpm (Varies with engine speed)
Malfunction of pressure control solenoid "B" (SL2)	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction (A), (B), (C) and (D), or ON malfunction (A), (B) and (C)

OFF malfunction (A):

Difference between engine speed and input (turbine) speed	Less than 35 rpm

OFF malfunction (B) and (C):

Input (turbine) speed/Intermediate shaft speed	0.93 to 1.07

OFF malfunction (D):

Input (turbine) speed/Intermediate shaft speed	0.64 to 0.74

ON malfunction (A):

Input (turbine) speed/Intermediate shaft speed	2.72 to 2.86

ON malfunction (B):

Input (turbine) speed - Intermediate shaft speed	700 rpm or more

ON malfunction (C):

Input (turbine) speed - Intermediate shaft speed	Less than -500 rpm or 700 rpm or more

INSPECTION PROCEDURE

HINT:
Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SHIFT".
(g) According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be forcibly changed with the intelligent tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AX-30).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:
- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the intelligent tester.

1	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0776)**

(a) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(b) Turn the ignition switch on (IG) and turn the OBD II scan tool or the intelligent tester main switch ON.
(c) When you use intelligent tester:
Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".

(d) Read the DTCs using the OBD II scan tool or the intelligent tester.

Result

Display (DTC output)	Proceed to

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0778	ECM checks for an open or short circuit in shift solenoid valves SL2 (1-trip detection logic) Hybrid IC for solenoid indicates fail.	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.)
(See page AX-30).

MONITOR STRATEGY

Related DTCs	P0778: Shift solenoid valve SL2/Range check
Required sensors/Components	Shift solenoid valve SL2
Frequency of operation	Continuous
Duration	1 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	None
Solenoid current cut status	Not cut
Battery voltage	11 V or more
Ignition switch	ON
Starter	OFF
CPU commanded duty ratio to SL2	19% or more

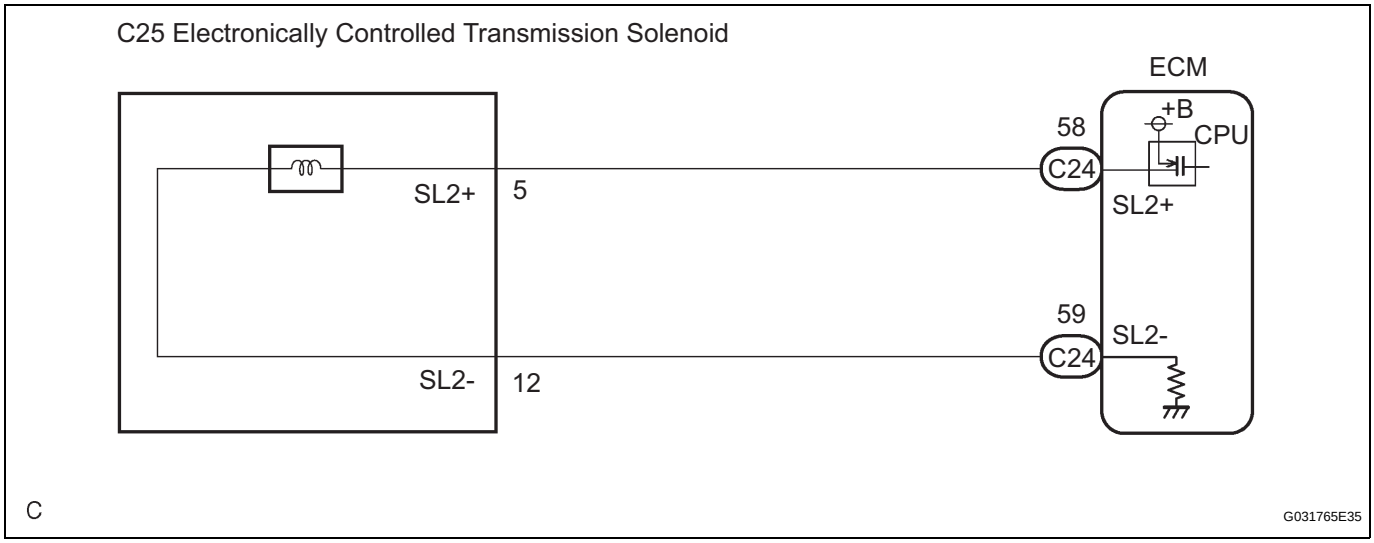
TYPICAL MALFUNCTION THRESHOLDS

Solenoid status from MIC	Fail (Open or short)

COMPONENT OPERATING RANGE

Output signal duty	Less than 100%

WIRING DIAGRAM

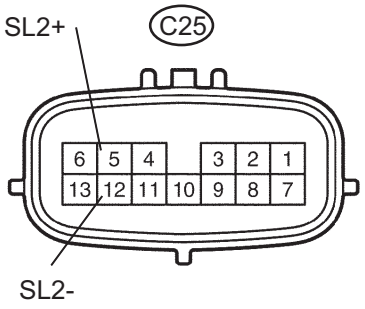


INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SL2)

Transmission Wire Side:

(Connector Front View):



(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
5 (SL2+) - 12 (SL2-)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
5 (SL2+) - Body ground	10 kΩ or higher
12 (SL2-) - Body ground	10 kΩ or higher

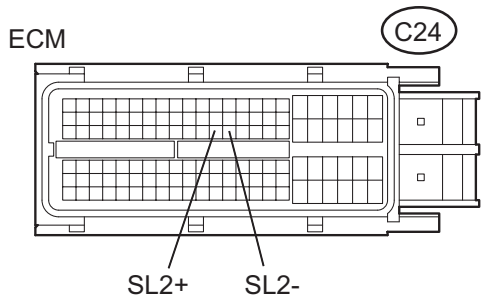
NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)

Wire Harness Side:

(Connector Front View):



A136781E05

(a) Connect the transmission connector to the transaxle.
(b) Disconnect the connector from the ECM.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
C24-58 (SL2+) - C24-59 (SL2-)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
C24-58 (SL2+) - Body ground	10 kΩ or higher
C24-59 (SL2-) - Body ground	

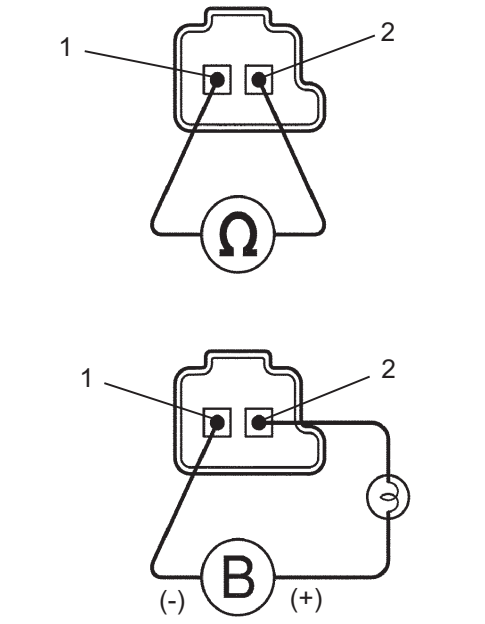
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE (SL2)

Shift Solenoid Valve SL2:



P

G020767E28

(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE (SL2)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

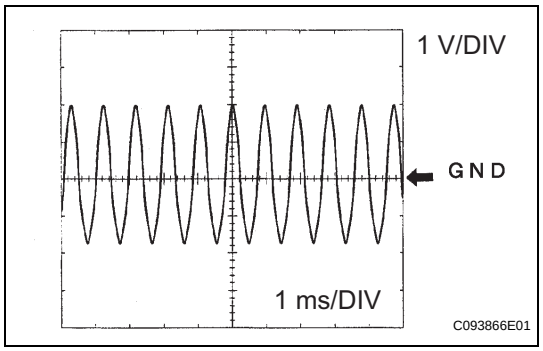
DTC	P0793	Intermediate Shaft Speed Sensor "A"

DESCRIPTION

This sensor detects the rotation speed of the counter gear. By comparing the counter gear speed signal (NC) with the direct clutch speed sensor signal (NT), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus smooth gear shifting is performed.

DTC No.	DTC Detection Condition	Trouble Area
P0793	ECM detects conditions (a), (b) and (c) continuously for 5 sec. or more: (1-trip detection logic) (a) Vehicle speed: 50 km/h (31 mph) or more (b) Park/neutral position switch (STAR) is OFF (c) Speed sensor (NC): less than 300 rpm	• Open or short in transmission revolution sensor NC (speed sensor NC) circuit • Transmission revolution sensor NC (speed sensor NC) • ECM

Reference (Using an oscilloscope):
Check the waveform between terminals NC+ and NC- of the ECM connector.



Standard: Refer to the illustration.

Terminal	NC+ - NC-
Tool setting	1 V/DIV, 1ms/DIV
Vehicle condition	Vehicle speed 30 km/h (19 mph): (3rd gear) Engine speed 1,400 rpm

MONITOR DESCRIPTION

The NC terminal of the ECM detects a revolution signal from the speed sensor (NC) (counter gear rpm). The ECM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).
While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the counter gear revolution is less than 300 rpm *1although the output shaft revolution is more than 1,000 rpm *2, the ECM detects the trouble, illuminates the MIL and stores the DTC.
*1: Pulse is not output or is irregularly output.
*2: The vehicle speed is 50 km/h (31 mph) or more.

MONITOR STRATEGY

Related DTCs	P0793: Speed sensor (NC)/Verify pulse input
Required sensors/Components	Speed sensor (NC), Speed sensor (NT), Park/neutral position switch
Frequency of operation	Continuous
Duration	5 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve(range))
Engine	Running
NSW switch	OFF
Output shaft rpm	1,000 rpm or more
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

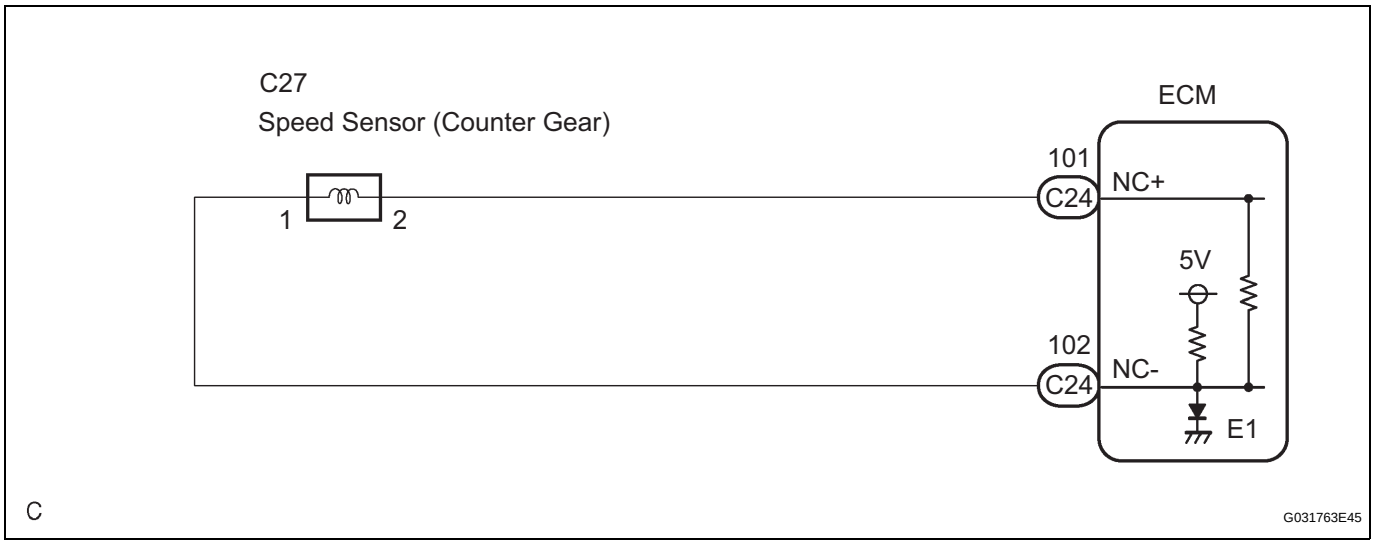
TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Counter gear speed sensor (NC)	HINT: 3rd when shift lever position is D position (After warming up the engine); • Intermediate shaft speed (NC) becomes close to the engine speed.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

According to the DATA LIST displayed by the OBD II scan tool or intelligent tester, you can read the value of the switch, sensor, actuator and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten labor time.

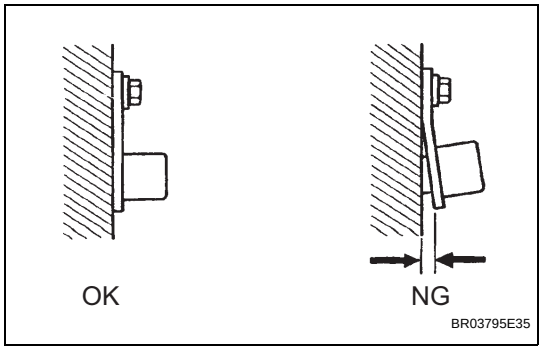
1. READ DATA LIST

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(g) According to the display on the tester, read the "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (NC)	Counter Gear Speed/ display: 50 r/min	[HINT] 3rd when shift lever position is D position (After warming up the engine); • Intermediate shaft speed (NC) becomes close to the engine speed.

HINT:
- SPD (NC) is always 0 while driving:
  Open or short in the sensor or circuit.
- SPD (NC) is always more than 0 and less than 300 rpm while driving the vehicle at 50 km/h (31 mph) or more:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR INSTALLATION

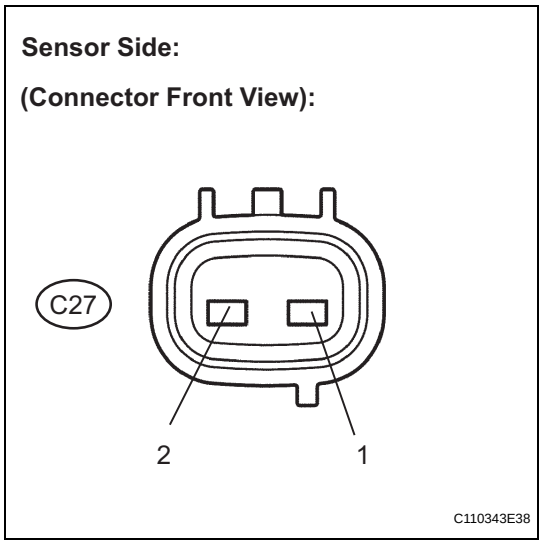


(a) Check the speed sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG → **REPLACE SPEED SENSOR (NC)**

OK

2 INSPECT SPEED SENSOR (NC)



(a) Disconnect the speed sensor connector from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20 °C (68 °F)
1 - 2	560 to 680 Ω

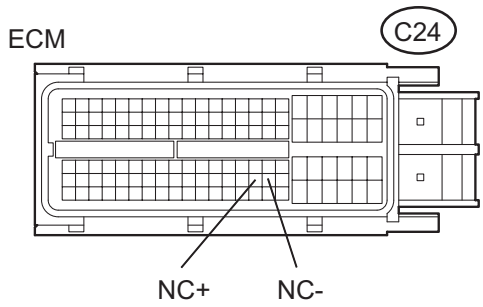
NG → **REPLACE SPEED SENSOR (NC)**

OK

3	CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)

Wire Harness Side:

(Connector Front View):



A136781E06

(a) Connect the speed sensor connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20 °C (68 °F)
C24-101 (NC+) - C24-102 (NC-)	560 to 680 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
C24-101 (NC+) - Body ground	10 kΩ or higher
C24-102 (NC-) - Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

DTC	P0796	Pressure Control Solenoid "C" Performance (Shift Solenoid Valve SL3)

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical troubles of the shift solenoid valves and valve body.

DTC No.	DTC Detecting Condition	Trouble Area
P0796	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve SL3 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0796: Shift solenoid valve SL3/OFF malfunction Shift solenoid valve SL3/ON malfunction
Required sensors/Components	Shift solenoid valve SL3, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	OFF malfunction (A) 0.8 sec. OFF malfunction (B) 1 sec. ON malfunction (A) and (B) 0.8 sec. ON malfunction (C) 0.4 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

The monitor will run whenever this DTC is not present.	P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve (range))

ON malfunction (C):

Throttle valve opening angle	7.0% or more at output speed 1,050 rpm (Varies with engine speed)
Malfunction of pressure control solenoid "B" (SL2)	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction (A) and (B), or ON malfunctions (A), (B) and (C)

2 detections are necessary per driving cycle:

1st detection; temporary flag ON

2nd detection; pending fault code ON

OFF malfunction (A):

Input (turbine) speed/Intermediate shaft speed	0.93 to 1.07

OFF malfunction (B):

Intermediate shaft speed/Output speed	0.95 to 1.09

ON malfunction (A):

Input (turbine) speed/Intermediate shaft speed	0.93 to 1.07

ON malfunction (B):

Input (turbine) speed - Intermediate shaft speed	700 rpm or more

ON malfunction (C):

Input (turbine) speed - Intermediate shaft speed	Less than -500 rpm or 700 rpm or more

INSPECTION PROCEDURE

HINT:
Performing the ACTIVE TEST using the intelligent tester allows the relay, VSV, actuator and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one method to shorten labor time.
It is possible to display the DATA LIST during the ACTIVE TEST.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Select the item "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SHIFT".
(g) According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be forcibly changed with the intelligent tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AX-30).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Vehicle Condition] Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves.

HINT:
- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the intelligent tester.

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0796)

(a) Connect the OBD II scan tool or intelligent tester together with the CAN VIM (controller area network vehicle interface module) to the DLC3.
(b) Turn the ignition switch on (IG) and turn the OBD II scan tool or the intelligent tester main switch ON.
(c) When you use intelligent tester:
Select the item "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the OBD II scan tool or the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0796" is output	A
"P0796" and other DTCs	B

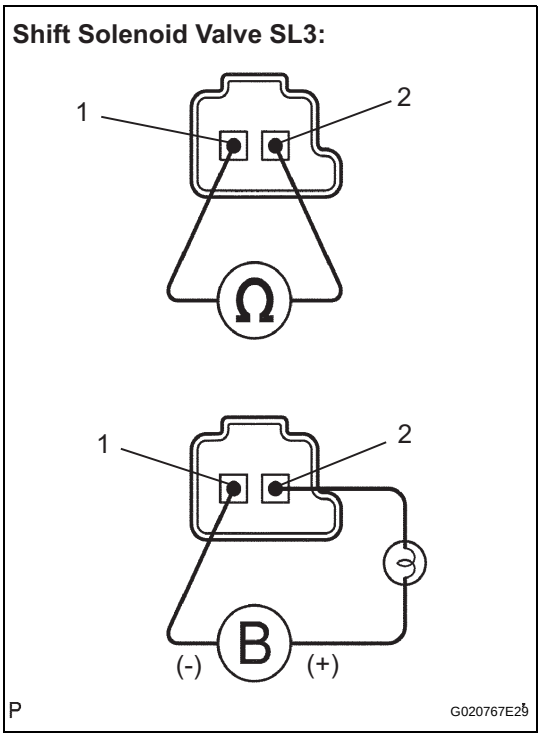
HINT:
If any other codes besides "P0796" are output, perform the troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2 INSPECT SHIFT SOLENOID VALVE (SL3)

Shift Solenoid Valve SL3:



(a) Remove the shift solenoid valve SL3.
(b) Measure the resistance according to the value(s) in the table below.

Resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG → REPLACE SHIFT SOLENOID VALVE (SL3)

OK

3 INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve.

NG → REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK

4 INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

OK:

The torque converter clutch operates normally.

NG → REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY

OK

AX

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0798	Pressure Control Solenoid "C" Electrical (Shift Solenoid Valve SL3)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0798	The ECM checks for an open or short in the shift solenoid valve SL3 circuit while driving and shifting gears. (1-trip detection logic) – Output signal duty equals to 100 %. (NOTE: SL3 output signal duty is less than 100 % under normal condition.)	• Open or short in shift solenoid valve SL3 circuit • Shift solenoid valve SL3 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.)
(See page AX-30).

MONITOR STRATEGY

Related DTCs	P0798: Shift solenoid valve SL3/Range check
Required sensors/Components	Shift solenoid valve SL3
Frequency of operation	Continuous

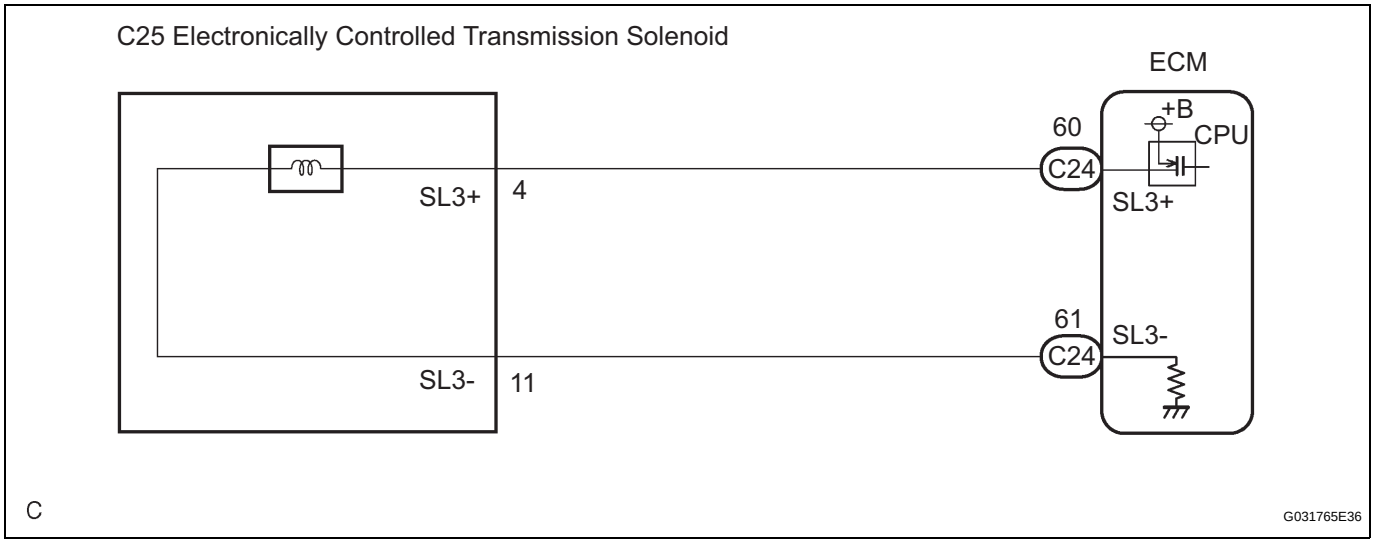
Output signal duty	Less than 100%

WIRING DIAGRAM

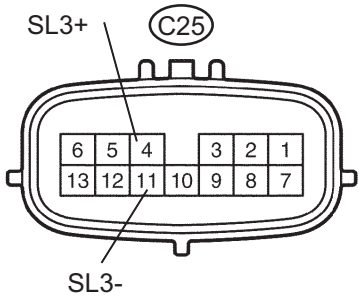


INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SL3)

Transmission Wire Side:

(Connector Front View):



(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
4 (SL3+) - 11 (SL3-)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
4 (SL3+) - Body ground	10 kΩ or higher
11 (SL3-) - Body ground	

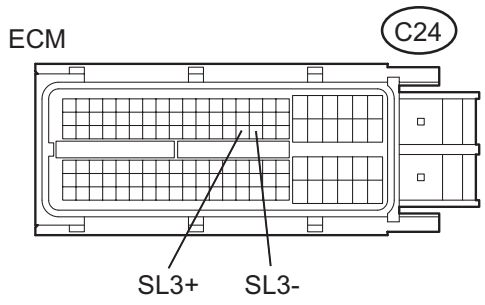
NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)

Wire Harness Side:

(Connector Front View):



A136781E07

(a) Connect the transmission connector to the transaxle.
(b) Disconnect the connector from the ECM.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
C24-60 (SL3+) - C24-61 (SL3-)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
C24-60 (SL3+) - Body ground	10 kΩ or higher
C24-61 (SL3-) - Body ground	

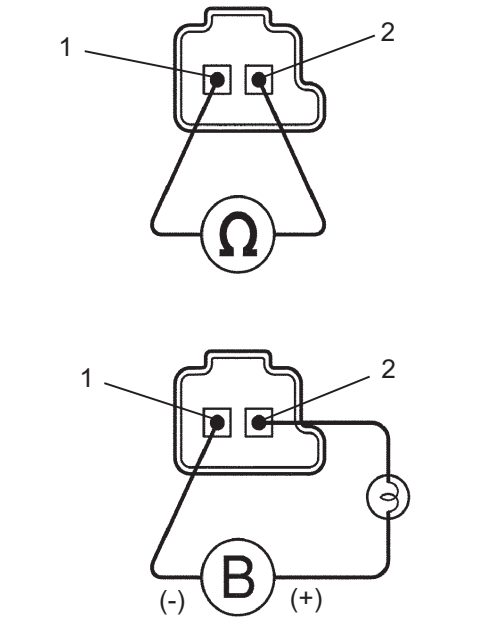
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE (SL3)

Shift Solenoid Valve SL3:



P

G020767E29

(a) Remove the shift solenoid valve SL3.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE (SL3)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0982	Shift Solenoid "D" Control Circuit Low (Shift Solenoid Valve S4)

DTC	P0983	Shift Solenoid "D" Control Circuit High (Shift Solenoid Valve S4)

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detection Condition	Trouble Area
P0982	ECM detects short in solenoid valve S4 circuit 2 times when solenoid valve S4 is operated (1-trip detection logic)	• Short in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM
P0983	ECM detects open in solenoid valve S4 circuit 2 times when solenoid valve S4 is not operated (1-trip detection logic)	• Open in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.) DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)

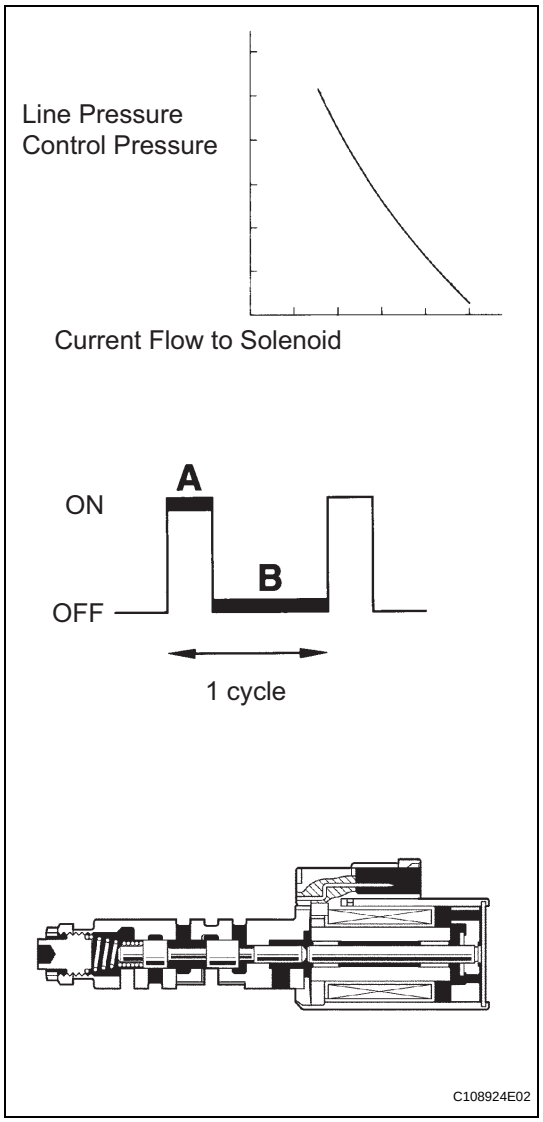
SYSTEM DESCRIPTION

The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty ratio (*) of the SLT solenoid valve to control hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.

(*): Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then

Duty Ratio= A/(A+B) x 100(%)



DTC No.	DTC Detection Condition	Trouble Area
P2714	ECM detects a malfunction on SLT (ON side) according to the revolution difference of the turbine, intermediate and the output shaft, and also by the oil pressure. (2-trip detection logic)	• Shift solenoid valve SLT remains closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

In any forward position, when the difference between the revolutions of the turbine, Intermediate and output shaft exceeds the specified value (varies with Intermediate, output speed) determined by the ECM, the ECM illuminates the MIL and outputs the DTC.
When shift solenoid valve SLT remains on, the oil pressure goes down and the clutch engagement force decreases.
NOTICE:
If you continue driving under these conditions, the clutch will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

Related DTCs	P2714: Shift solenoid valve SLT/ON malfunction
Required sensors/Components	Shift solenoid valve SLT, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)

DTC	P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)

DESCRIPTION

The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty cycle of the SLT solenoid valve to control hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.

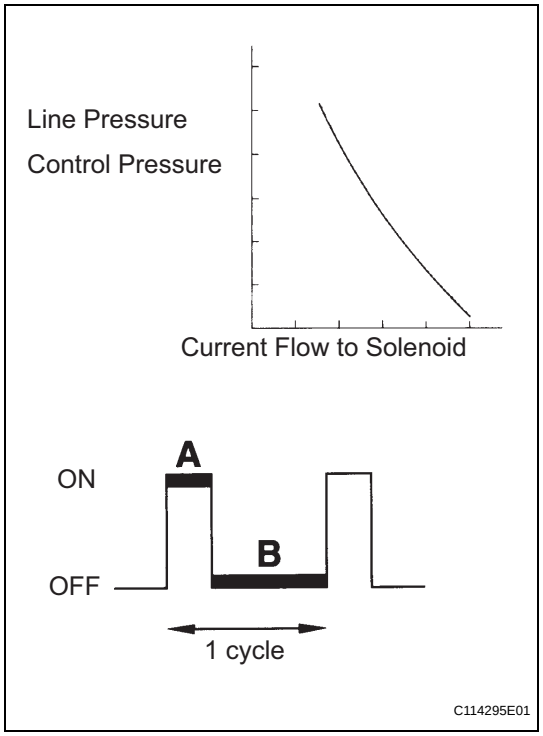
(*): Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle.

For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then

Duty Ratio=A/(A + B) x 100(%)

DTC No.	DTC Detection Condition	Trouble Area
P2716	Open or short is detected in shift solenoid valve SLT circuit for 1 second or more while driving (1-trip detecting logic).	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • ECM



MONITOR DESCRIPTION

When an open or short in the linear solenoid valve (SLT) circuit is detected, the ECM interprets this as a fault. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P2716: Shift solenoid valve SLT/Range check

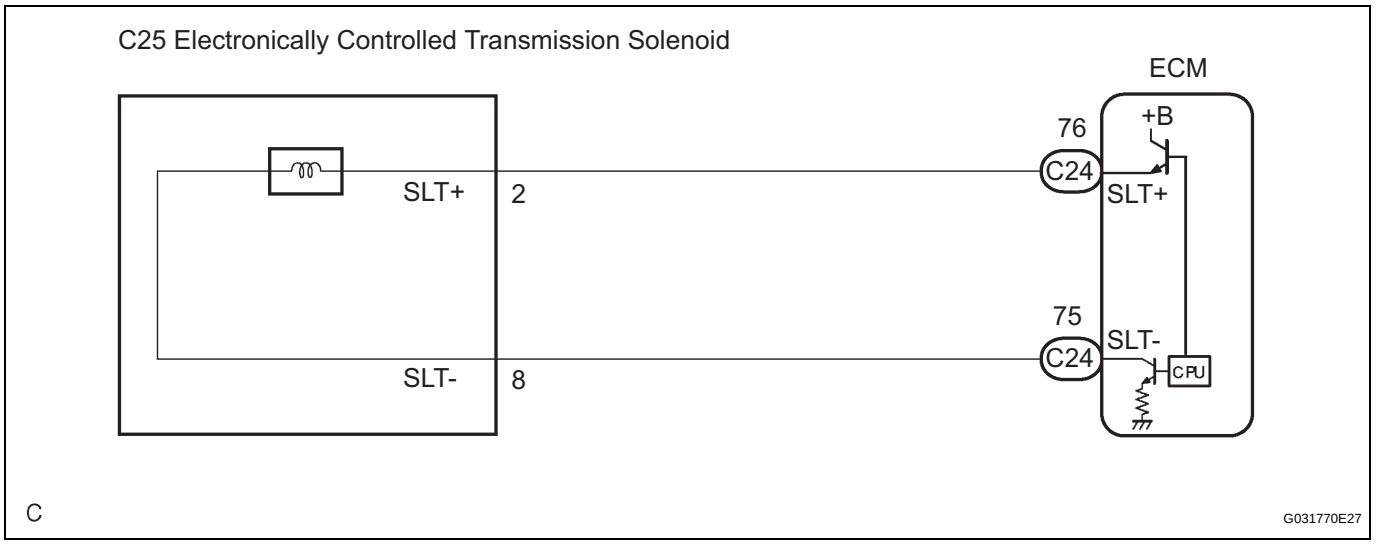
WIRING DIAGRAM

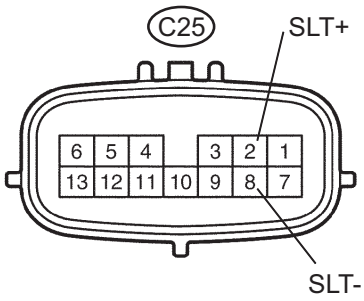


INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE (SLT)

Transmission Wire Side:

(Connector Front View):



C113969E31

(a) Disconnect the transmission wire connector from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
2 (SLT+) - 8 (SLT-)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
2 (SLT+) - Body ground	10 kΩ or higher
8 (SLT-) - Body ground	

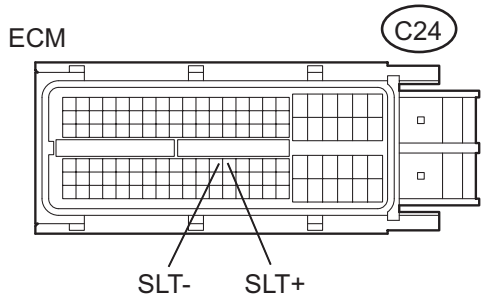
NG → **Go to step 3**

OK

2 CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)

Wire Harness Side:

(Connector Front View):



A136781E10

(a) Connect the transmission wire connector to the transaxle.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
C24-76 (SLT+) - C24-75 (SLT-)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

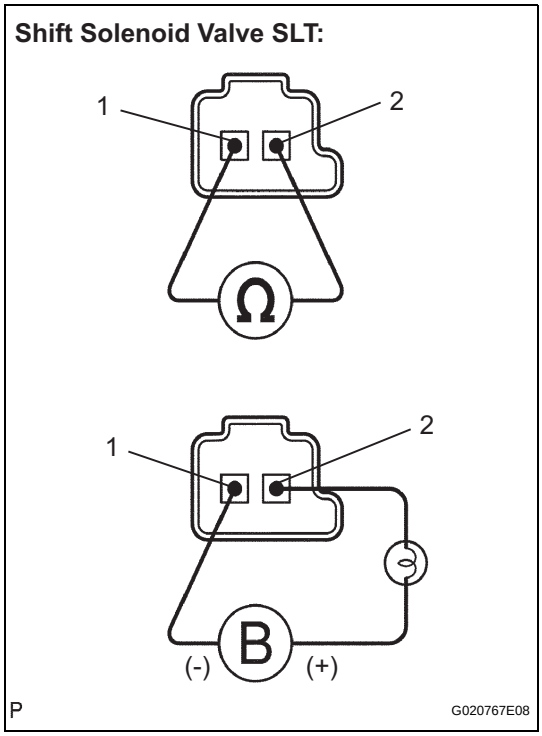
Tester Connection	Specified Condition
C24-76 (SLT+) - Body ground	10 kΩ or higher
C24-75 (SLT-) - Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE (SLT)



(a) Remove the shift solenoid valve (SLT).

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE (SLT)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2769	Torque Converter Clutch Solenoid Circuit Low (Shift Solenoid Valve DSL)

DTC	P2770	Torque Converter Clutch Solenoid Circuit High (Shift Solenoid Valve DSL)

DESCRIPTION

The shift solenoid valve DSL is turned "ON" and "OFF" by signals from the ECM in order to control the hydraulic pressure operation, the lock-up relay valve, which then controls operation of the lock-up clutch.

DTC No.	DTC Detection Condition	Trouble Area
P2769	ECM detects short in solenoid valve DSL circuit (0.1 sec.) when solenoid valve DSL is operated (2-trip detection logic)	• Short in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM
P2770	ECM detects open in solenoid valve DSL circuit (0.1 sec.) when solenoid valve DSL is not operated (2-trip detection logic)	• Open in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and shift range selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to counter gear rpm (NC). When conditions are appropriate, the ECM requests "lock-up" by applying control voltage to the shift solenoid DSL. When the DSL is opened, it applies pressure to the lock-up relay valve and locks the torque converter clutch. If the ECM detects an open or short in the DSL solenoid circuit, the ECM interprets this as a fault in the DSL solenoid or circuit. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P2769: Shift solenoid valve DSL/Range check (Low resistance) P2770: Shift solenoid valve DSL/Range check (High resistance)
Required sensors/Components	Shift solenoid valve DSL

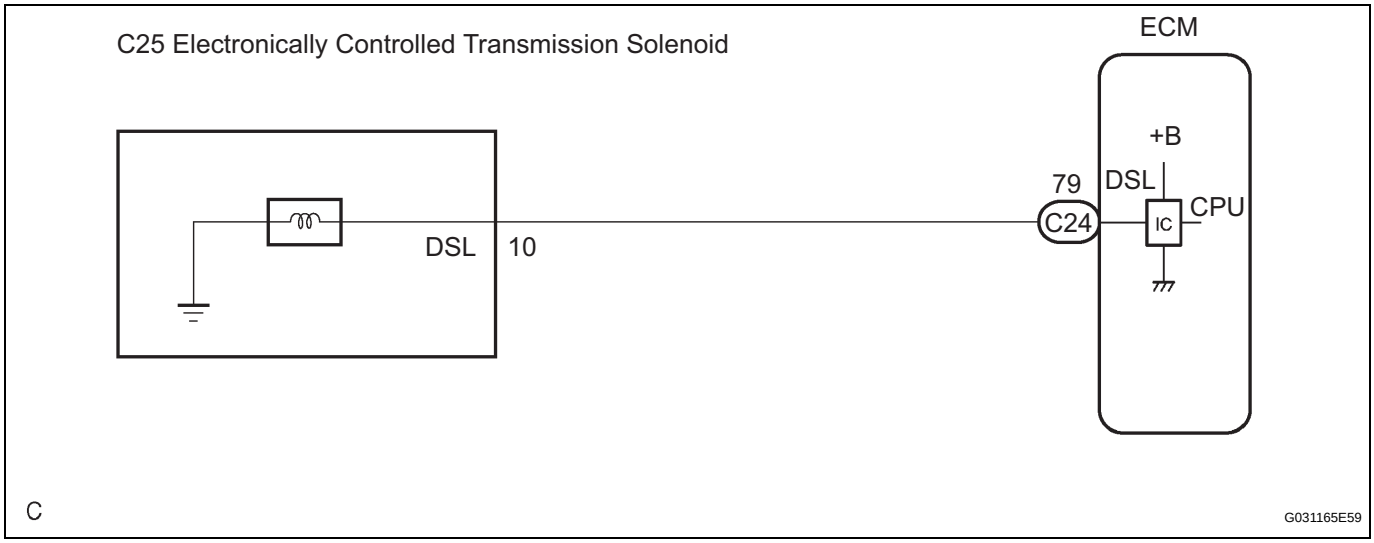
Shift solenoid valve DSL resistance	100 kΩ or more

COMPONENT OPERATING RANGE

Shift solenoid valve DSL	Resistance: 11 to 13 Ω at 20°C (68°F)

WIRING DIAGRAM

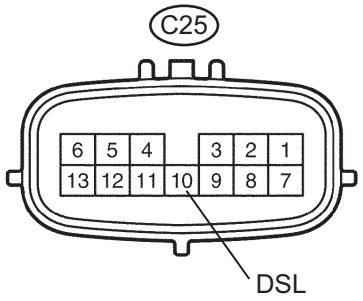


INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (DSL)

Transmission Wire Side:

(Connector Front View):



(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

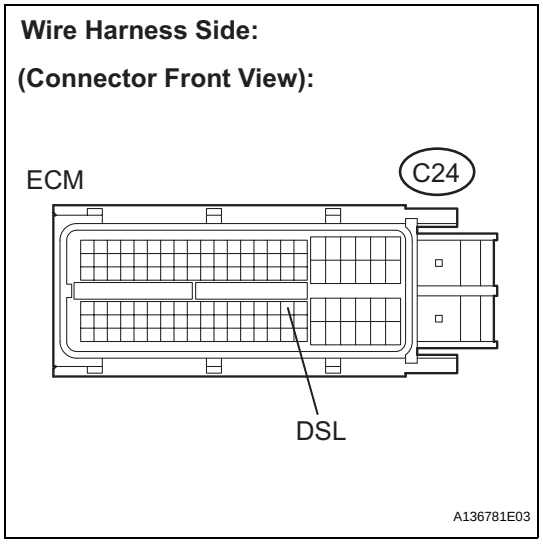
Tester Connection	Specified Condition 20°C (68°F)
10 - Body ground	11 to 13 Ω

NG	Go to step 3

AX

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)



(a) Connect the transmission wire connector.
(b) Disconnect the ECM connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

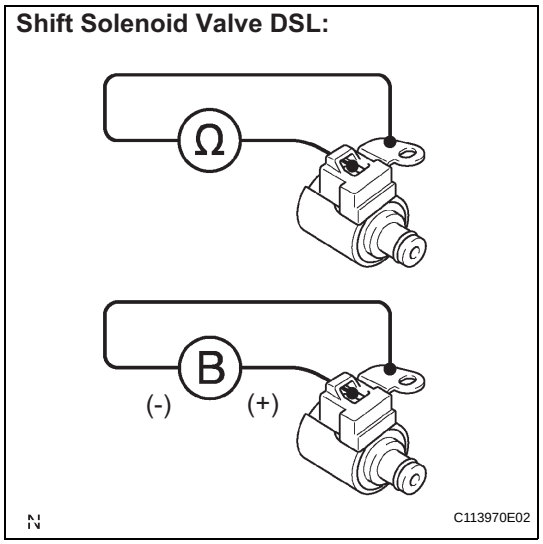
Tester Connection	Specified Condition 20°C (68°F)
C24-79 (DSL) - Body ground	11 to 13 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE (DSL)



(a) Remove the shift solenoid valve DSL.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (DSL) - Solenoid Body (DSL)	11 to 13 Ω

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

The solenoid valve makes an operating sound.

NG → **REPLACE SHIFT SOLENOID VALVE (DSL)**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

AUTOMATIC TRANSAXLE FLUID

ON-VEHICLE INSPECTION

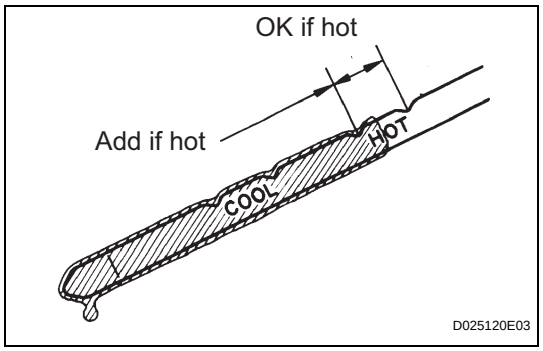
1. CHECK FLUID LEVEL

HINT:

Drive the vehicle so that the engine and transaxle are at normal operating temperature.

Fluid temperature:

70 to 80°C (158 to 176°F)



(a) Park the vehicle on a level surface and set the parking brake.

(b) With the engine idling and the brake pedal depressed, move the shift lever to all positions from P to L. Then return it to P.

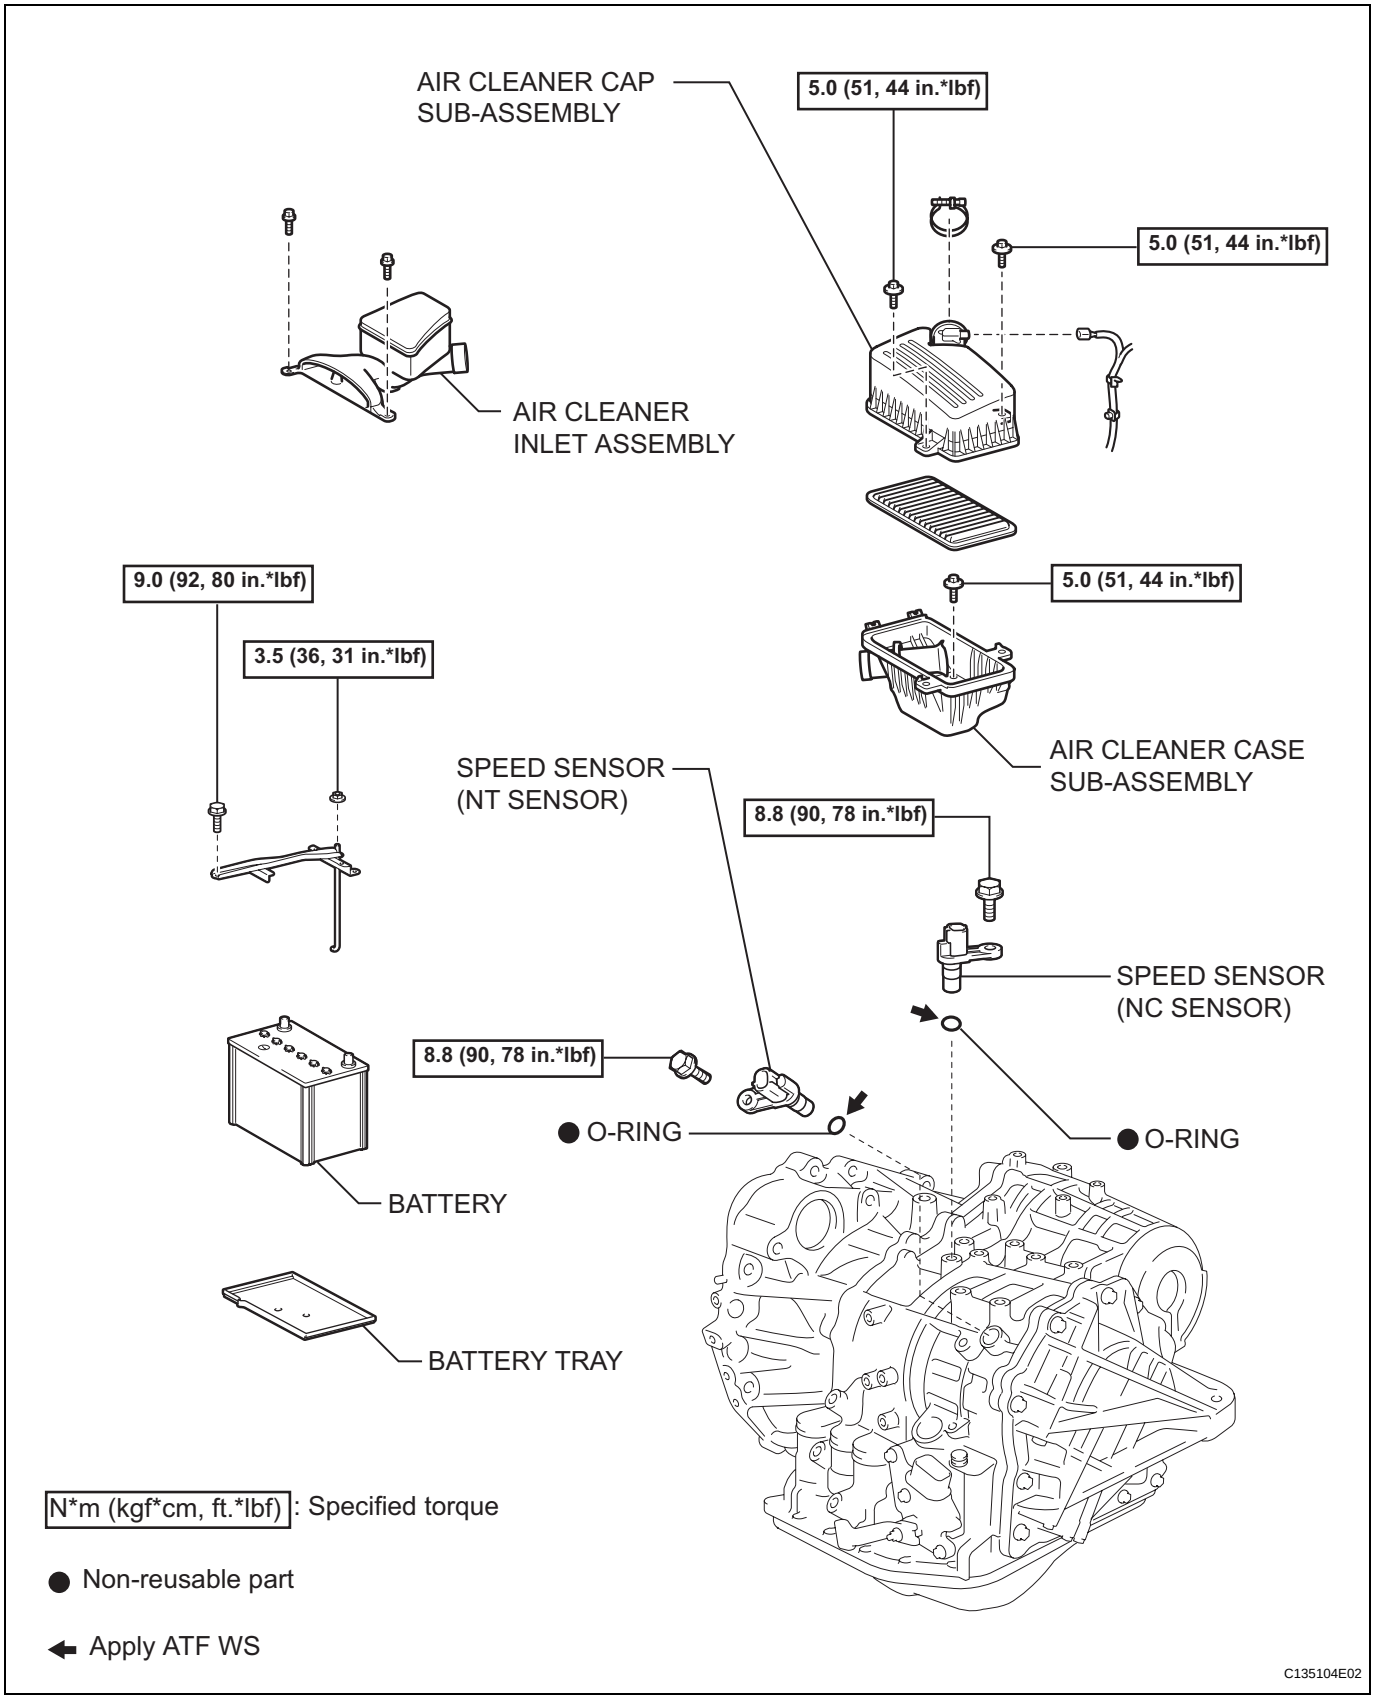
(c) Pull out the dipstick and wipe it clean.

(d) Push it back fully into the pipe.

(e) Pull it out again and check that the fluid level is within the HOT range. If the fluid level is below the HOT range, add new fluid and recheck the fluid level. If the fluid level exceeds the HOT range, drain the fluid once, add proper amount of new fluid and recheck the fluid level.

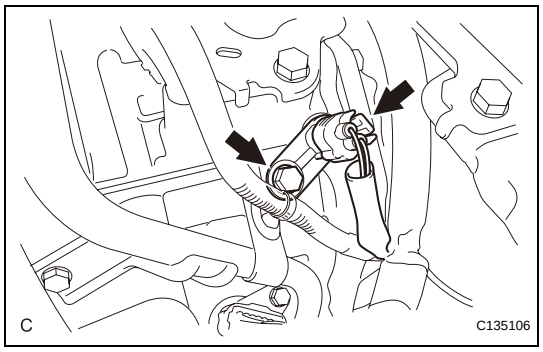
SPEED SENSOR

COMPONENTS

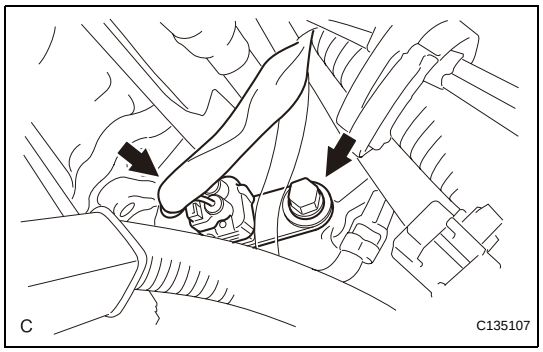


REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE BATTERY (See page EM-95)**
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
6. **REMOVE SPEED SENSOR (NT SENSOR)**
   (a) Disconnect the speed sensor connector.
   (b) Remove the bolt and speed sensor.
   (c) Remove the O-ring from the speed sensor.



7. **REMOVE SPEED SENSOR (NC SENSOR)**
   (a) Disconnect the speed sensor connector.
   (b) Remove the bolt and speed sensor.
   (c) Remove the O-ring from the speed sensor.



INSPECTION

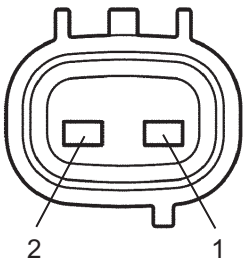
1. **INSPECT SPEED SENSOR (NT SENSOR)**
   (a) Disconnect the speed sensor connector from the transaxle.
   (b) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Specified Condition (20°C (68°F))
1 - 2	560 to 680 Ω

If the resistance value is not as specified, replace the speed sensor.

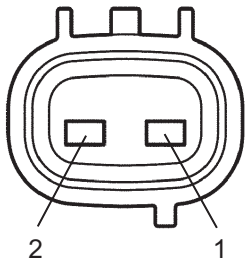
Sensor Side:

(Connector Front View)



Sensor Side:

(Connector Front View)



C113863E05

2. INSPECT SPEED SENSOR (NC SENSOR)

(a) Disconnect the speed sensor connector from the transaxle.

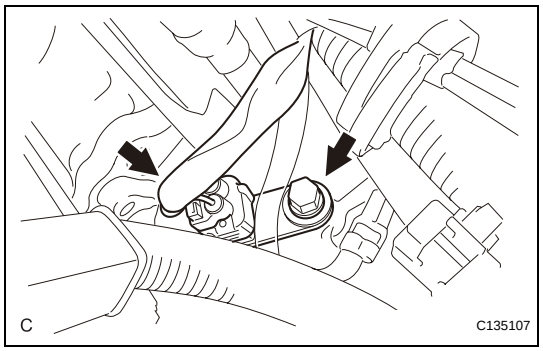
(b) Measure the resistance according to the value(s) in the table below.

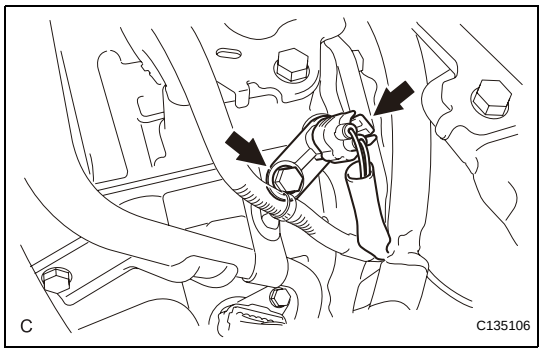
Standard resistance

Tester Connection	Specified Condition (20°C (68°F))
1 - 2	560 to 680 Ω

If the resistance value is not as specified, replace the speed sensor.

INSTALLATION





1. **INSTALL SPEED SENSOR (NC SENSOR)**
   (a) Coat a new O-ring with ATF WS and install it to the speed sensor.
   (b) Install the speed sensor with the bolt.
   Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)
   (c) Connect the speed sensor connector.
2. **INSTALL SPEED SENSOR (NT SENSOR)**
   (a) Coat a new O-ring with ATF WS and install it to the speed sensor.
   (b) Install the speed sensor with the bolt.
   Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)
   (c) Connect the speed sensor connector.
3. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
5. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
6. **INSTALL BATTERY (See page EM-119)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

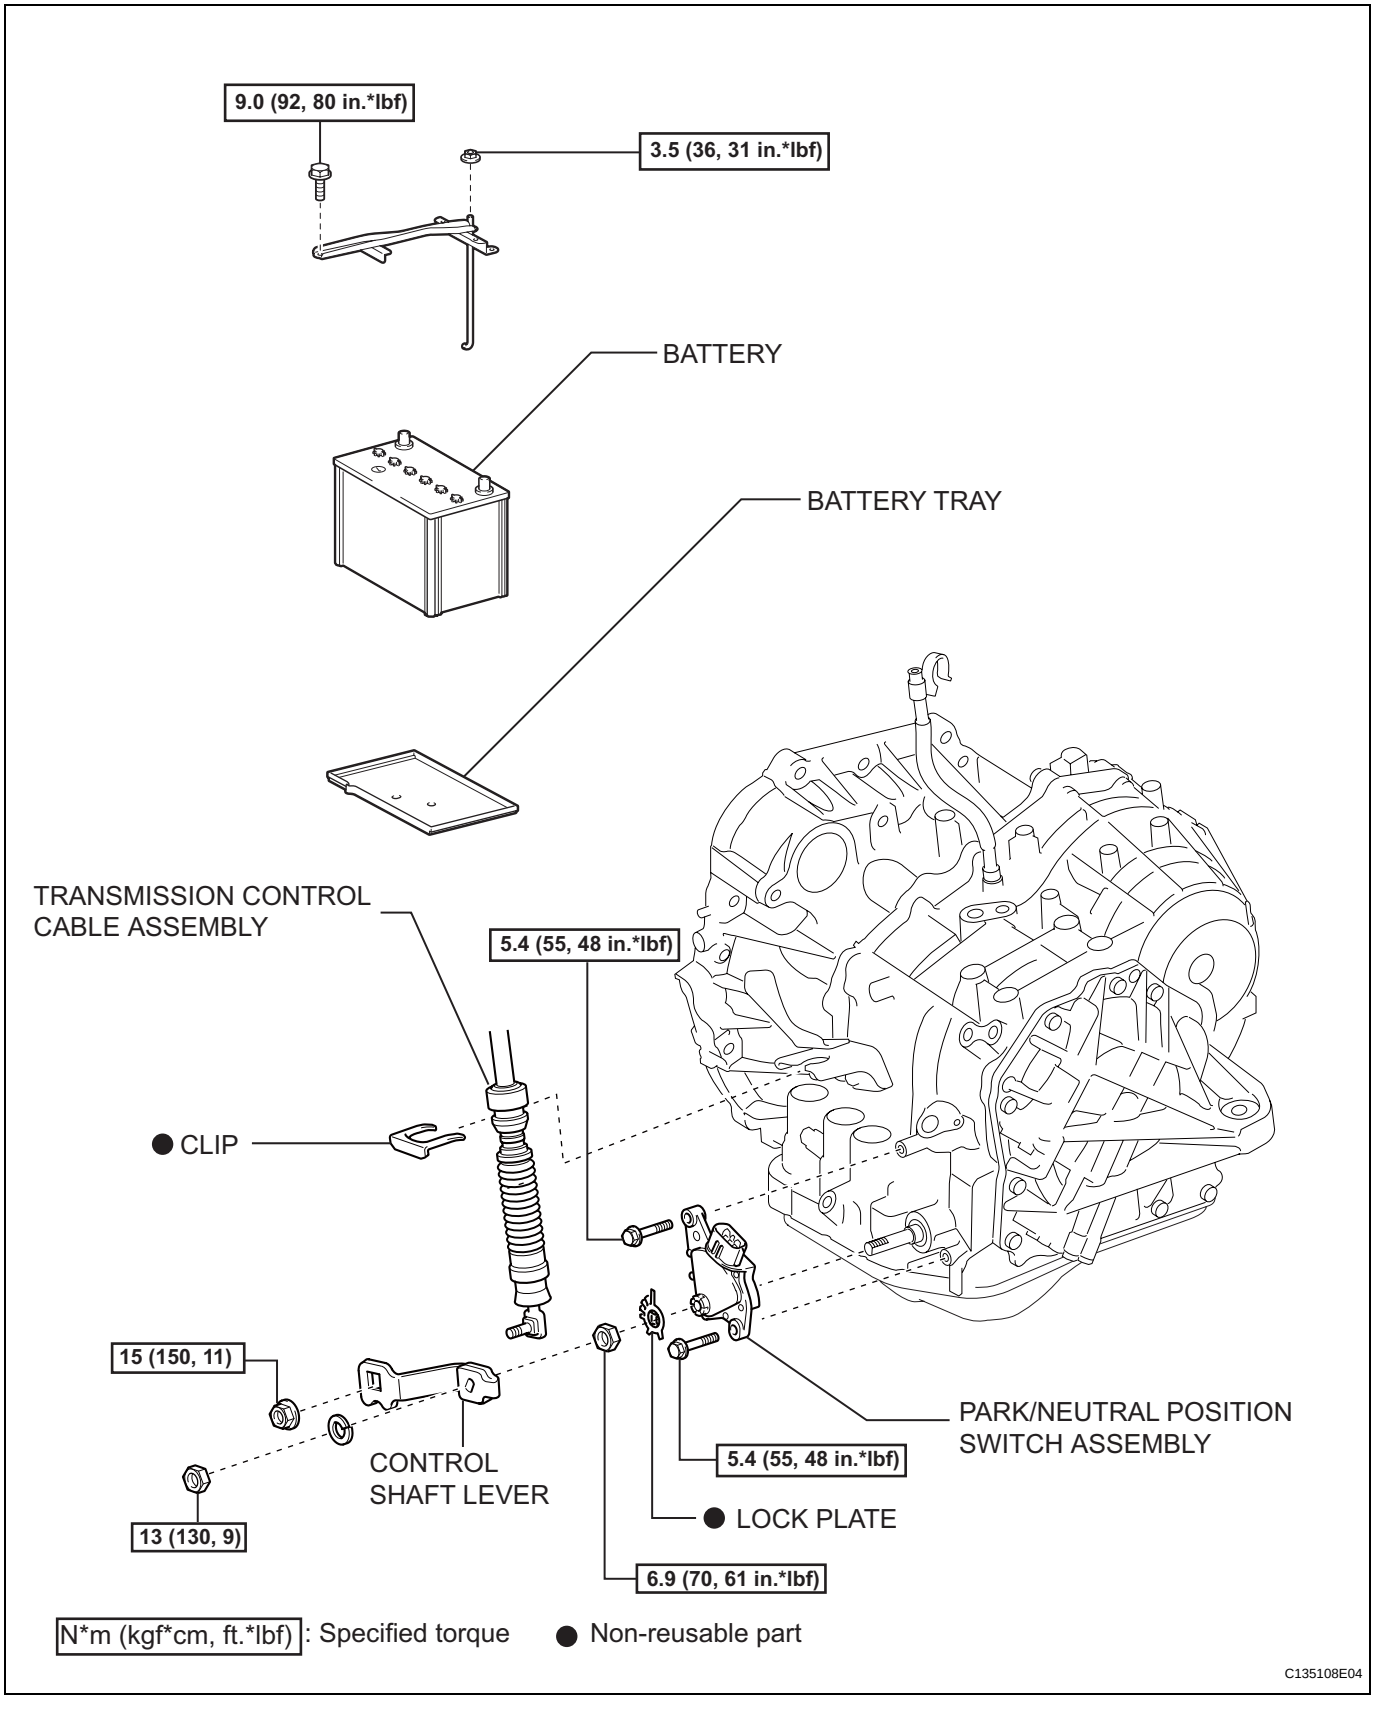
COMPONENTS



REMOVAL

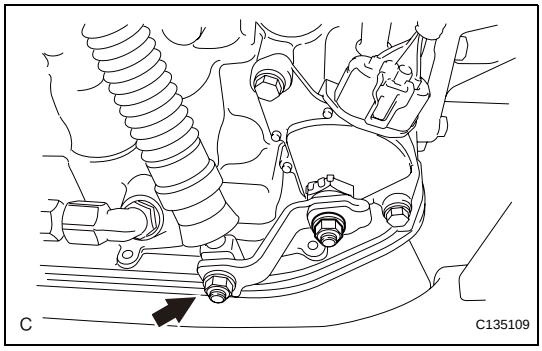
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE BATTERY (See page EM-95)

3. SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY

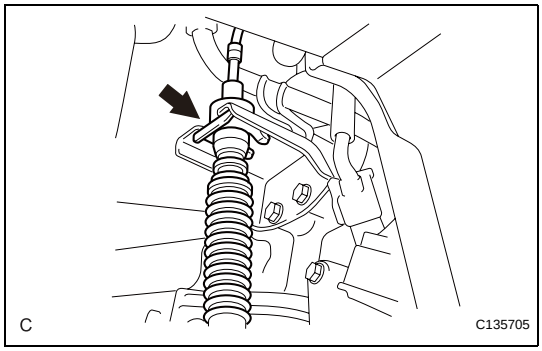
(a) Remove the nut from the control shaft lever.

(b) Disconnect the transmission control cable assembly from the control shaft lever.



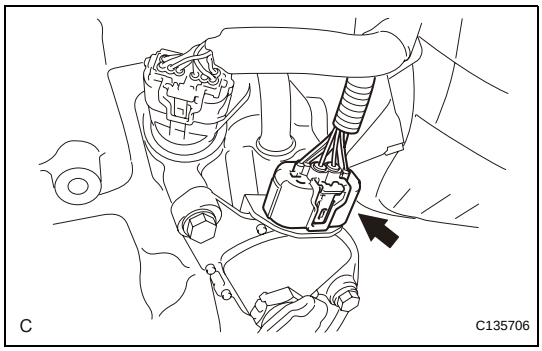
(c) Remove the clip and disconnect the transmission control cable assembly from the No. 1 control cable bracket.

NOTICE:
Do not hold the resin guide pipe.

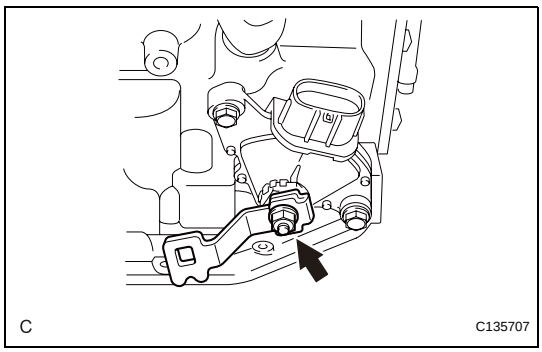


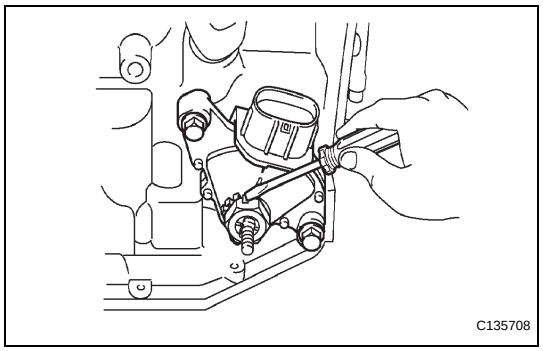
4. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Disconnect the park/neutral position switch connector.

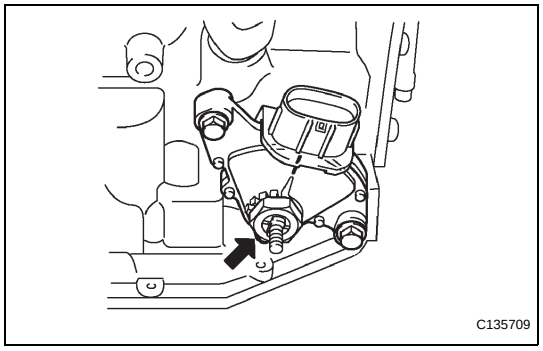


(b) Remove the nut, washer and control shaft lever.

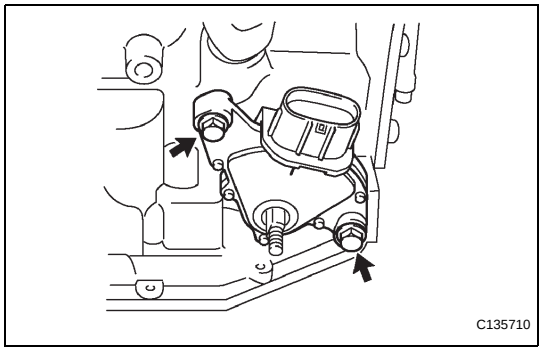




(c) Using a screwdriver, pry up the lock plate.



(d) Remove the lock nut and the lock plate.



(e) Remove the 2 bolts and pull out the park/neutral position switch.

INSPECTION

1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY OPERATION

(a) Apply the parking brake and turn the ignition switch to the ON position.

(b) Depress the brake pedal and check that the engine starts only when the shift lever is set in the N or P position.

(c) Check that the back-up light comes on and the reverse warning buzzer sounds only when the shift lever is set in the R position and the light and buzzer do not operate when the shift lever is in other positions.

If a failure is found, check the park/neutral position switch.

2. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Jack up the vehicle.

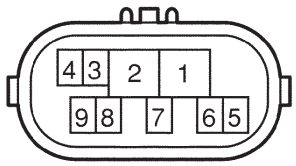
(b) Disconnect the park/neutral position switch connector.

(c) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance

Switch Side:

(Connector Front View):



C110340E36

Shift Position	Tester Connection	Specified Condition
P	2 - 6 and 4 - 5	Below 1 Ω
Except P		10 kΩ or higher
R	2 - 1	Below 1 Ω
Except R		10 kΩ or higher
N	2 - 9 and 4 - 5	Below 1 Ω
Except N		10 kΩ or higher
D and 4	2 - 7	Below 1 Ω
Except D and 4		10 kΩ or higher
3	2 - 3	Below 1 Ω
Except 3		10 kΩ or higher
2 and L	2 - 8	Below 1 Ω
Except 2 and L		10 kΩ or higher

If operation cannot be done as specified, replace the park/neutral position switch.

ADJUSTMENT

1. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY

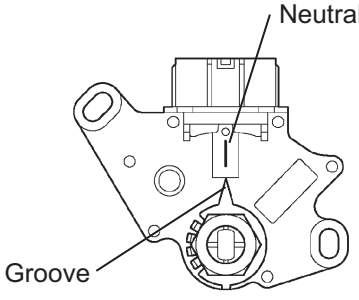
(a) Loosen the 2 bolts of the park/neutral position switch and move the shift lever to the N position.

(b) Align the groove with the neutral basic line.

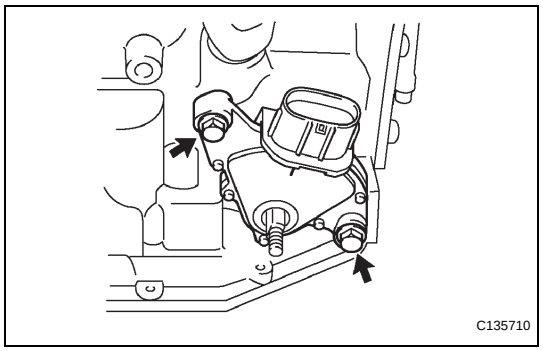
(c) Hold the switch in position and tighten the 2 bolts.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(d) After adjustment, perform the inspection (See page AX-129).



D025514E01

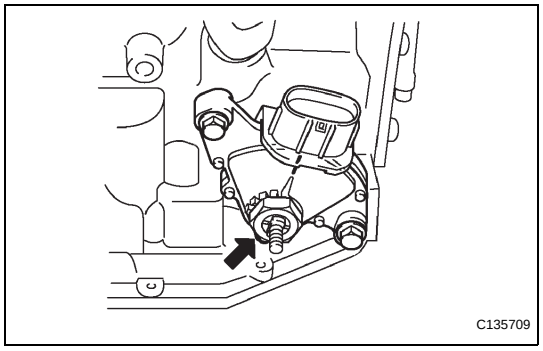


INSTALLATION

1. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

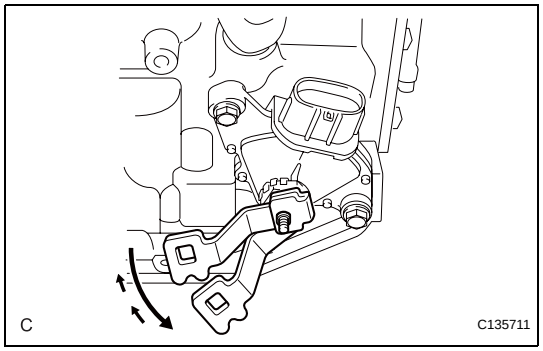
(a) Install the park/neutral position switch to the manual valve shaft.

(b) Temporarily install the 2 bolts.



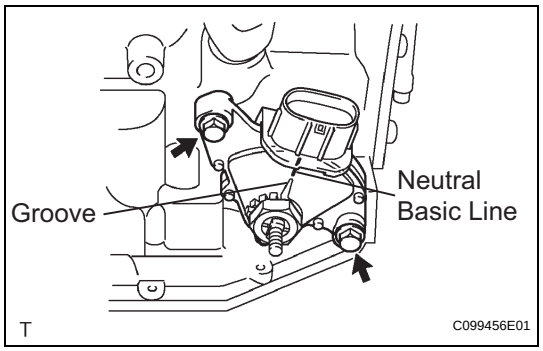
(c) Place a new lock plate and tighten the nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

(d) Temporarily install the control shaft lever.



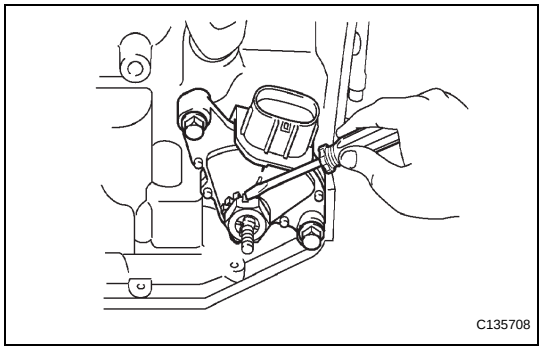
(e) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.

(f) Remove the control shaft lever.

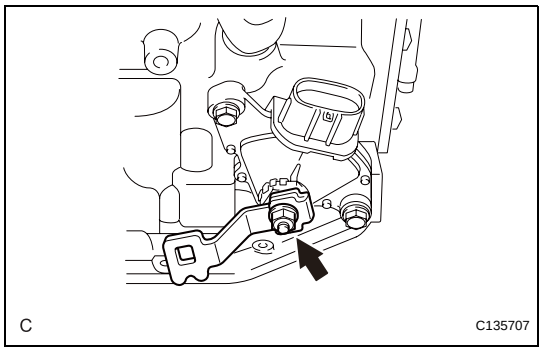


(g) Align the groove with the neutral basic line.

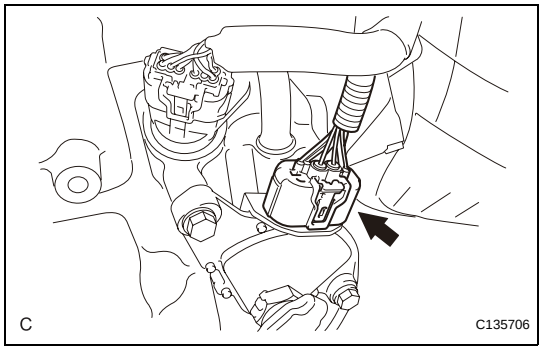
(h) Hold the switch in position and tighten the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



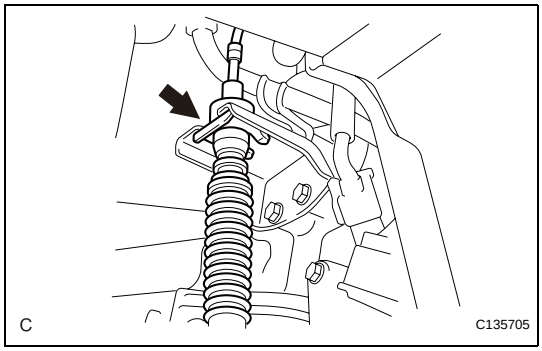
(i) Using a screwdriver, stake the nut with the lock plate.



(j) Install the control shaft lever, washer and nut.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

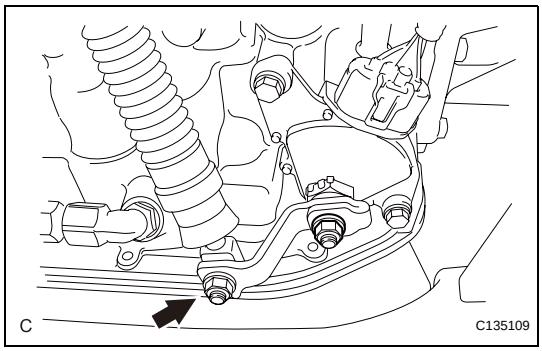


(k) Connect the park/neutral position switch connector.



2. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Connect the transmission control cable to the bracket with a new clip.



(b) Connect the transmission control cable assembly to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)

3. INSTALL BATTERY (See page EM-119)

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

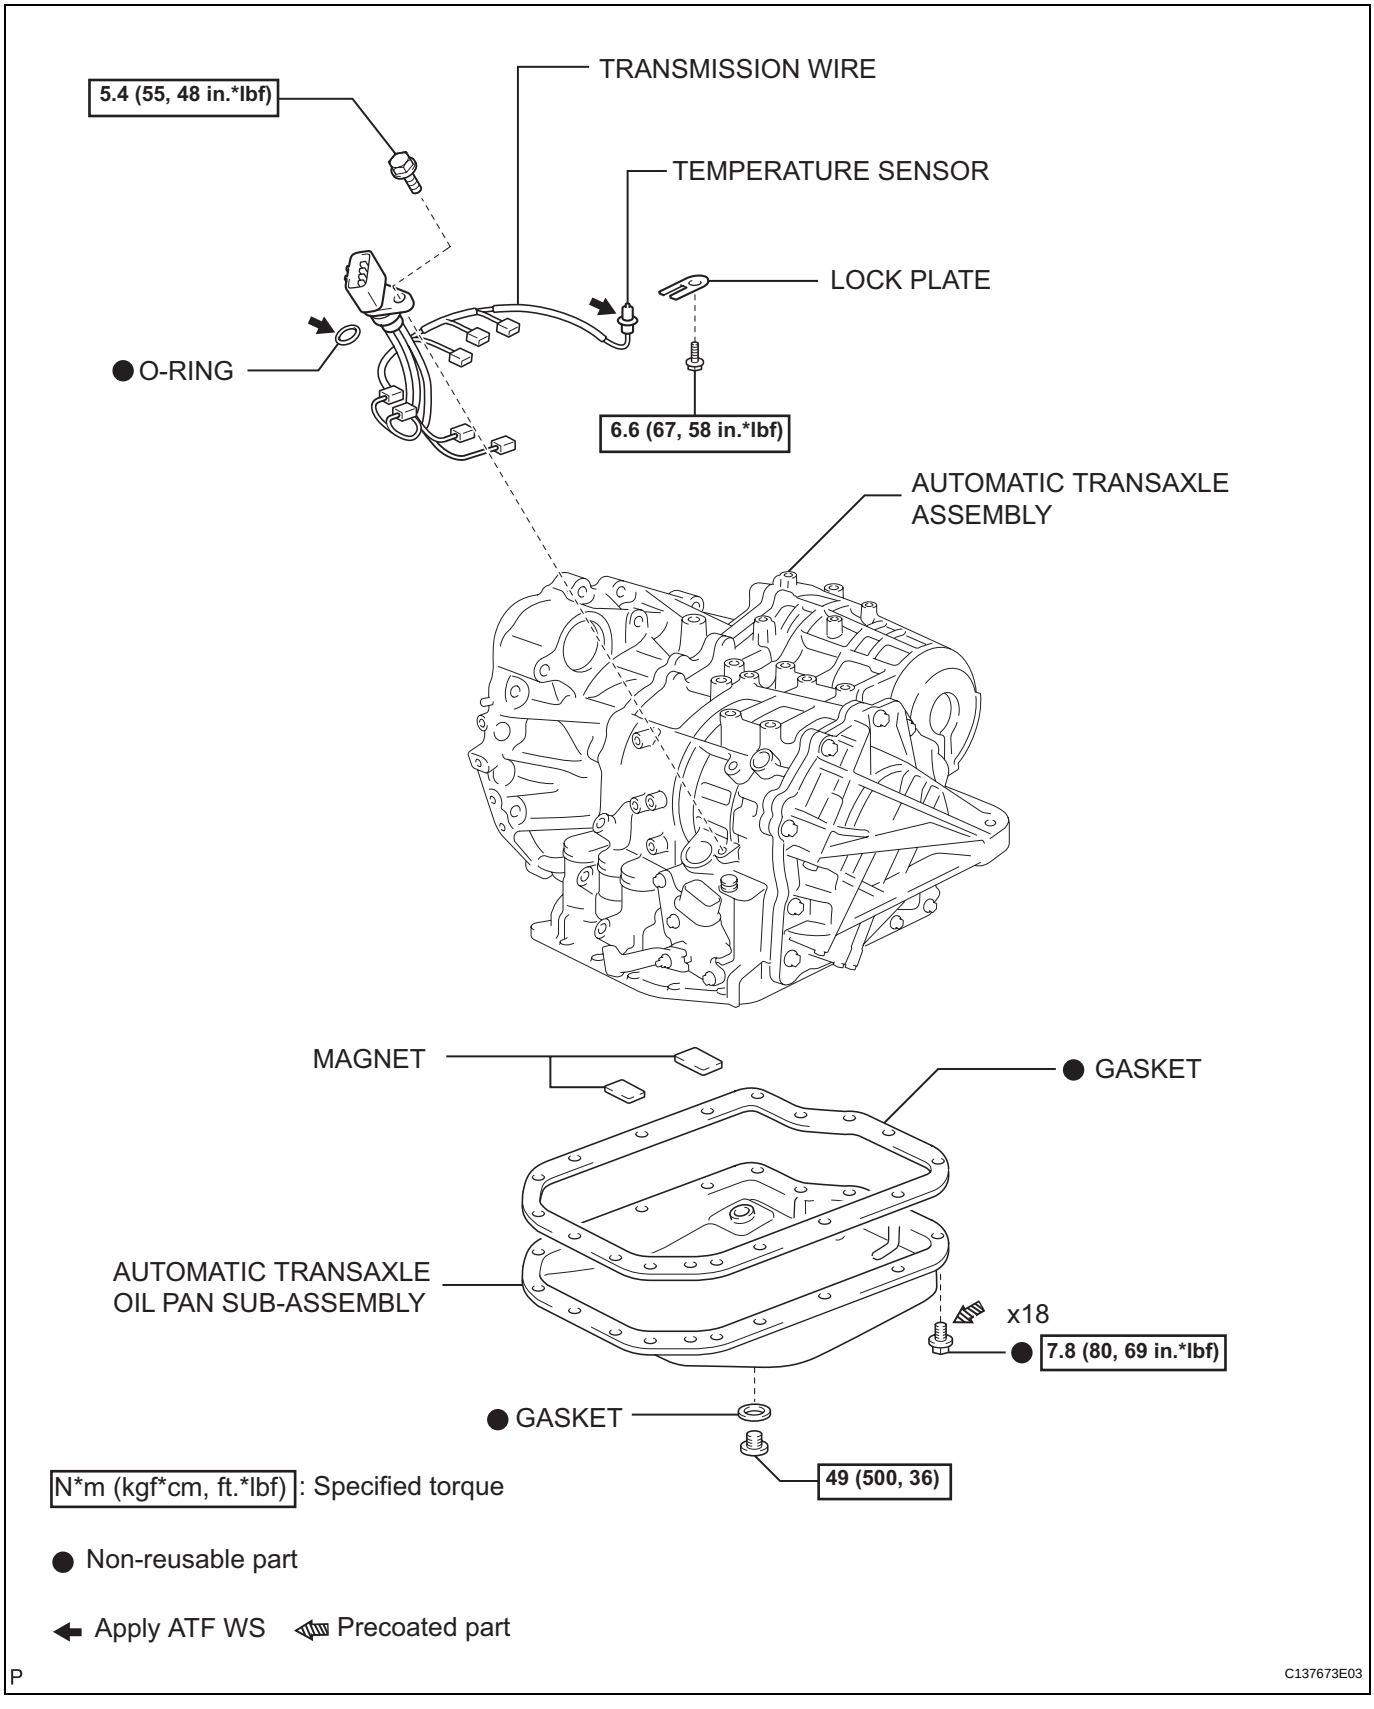
5. INSPECT SHIFT LEVER POSITION (See page AX-146)

6. ADJUST SHIFT LEVER POSITION (See page AX-146)

7. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY
HINT:
See page AX-129.

TRANSMISSION WIRE

COMPONENTS

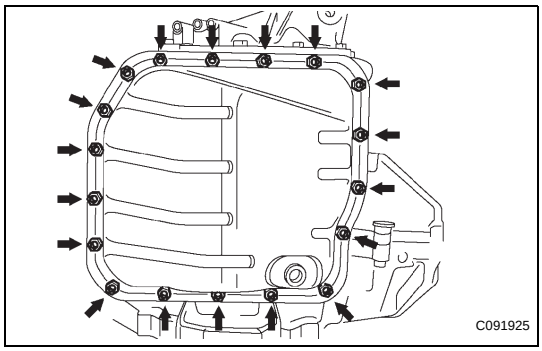


REMOVAL

1. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

HINT:

See page AX-162.

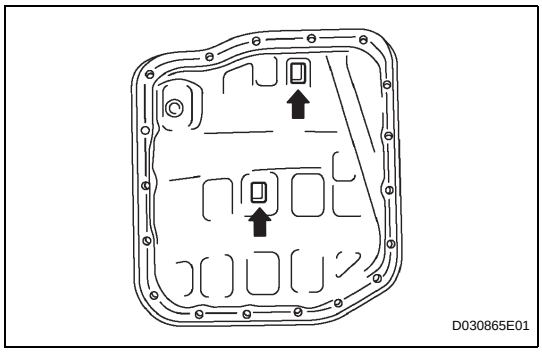


2. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

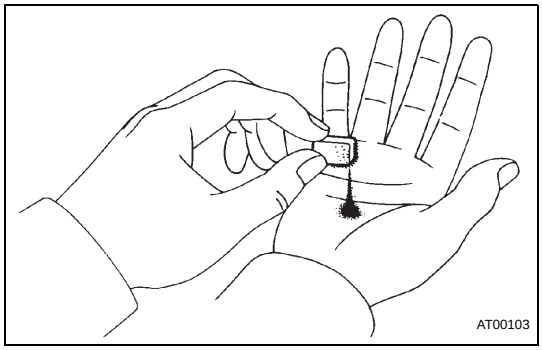
(a) Remove the 18 bolts, oil pan and gasket.

NOTICE:

Some fluid will remain in the oil pan. Remove all the pan bolts, and carefully remove the oil pan assembly.



(b) Remove the 2 magnets from the oil pan.



(c) Examine particles in the pan.

(1) Collect any steel chips with the removed magnets. Look carefully at the chips and particles in the pan and on the magnets to see the type of wear which might be found in the transaxle.

Steel (magnetic): bearing, gear and plate wear

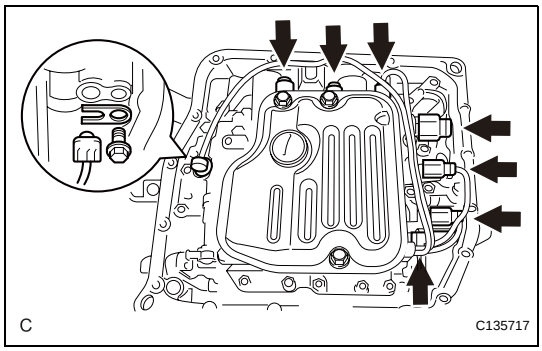
Brass (non-magnetic): bearing wear

Result:

Steel (magnetic):
bearing, gear and plate wear

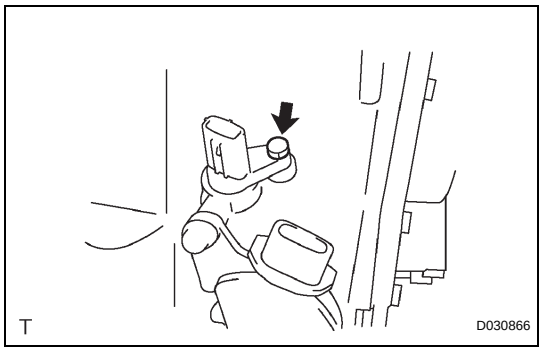
Brass (non-magnetic):
bearing wear

3. DISCONNECT TRANSMISSION WIRE



(a) Disconnect the 7 shift solenoid valve connectors.

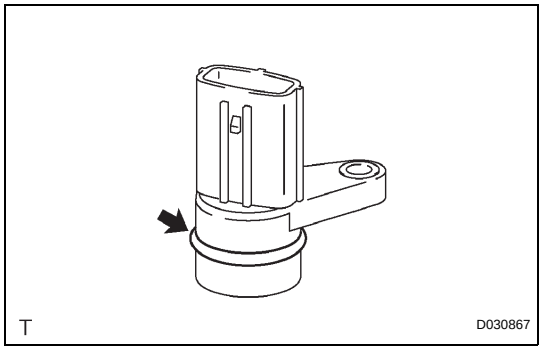
(b) Remove the bolt and lock plate, and disconnect the ATF temperature sensor.



4. REMOVE TRANSMISSION WIRE

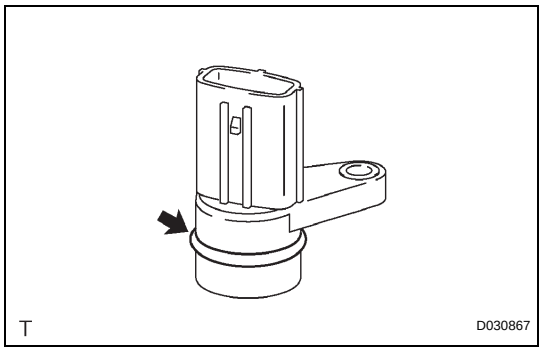
(a) Disconnect the transmission wire connector.

(b) Remove the bolt and transmission wire.



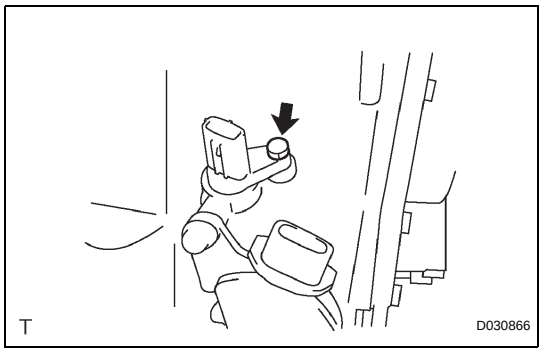
(c) Remove the O-ring from the transmission wire.

INSTALLATION



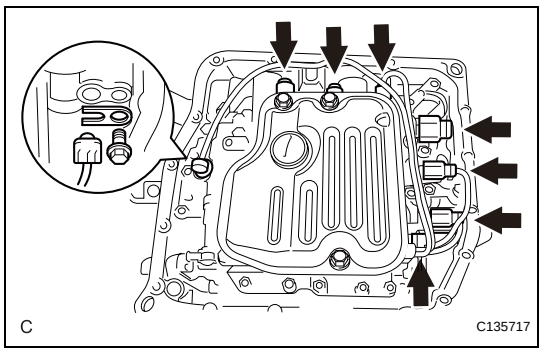
1. INSTALL TRANSMISSION WIRE

(a) Coat a new O-ring of the transmission wire connector with ATF WS and install it to the transmission wire.



(b) Install the transmission wire with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(c) Connect the transmission wire connector.

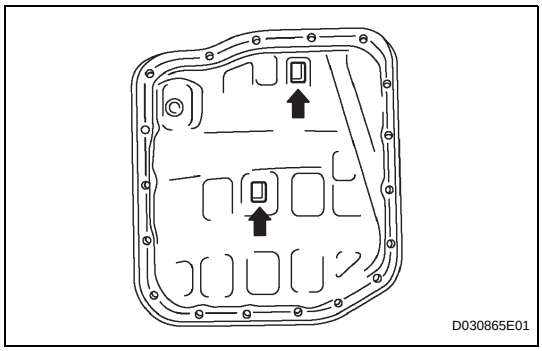


2. CONNECT TRANSMISSION WIRE

(a) Coat the O-ring of the ATF WS temperature sensor with ATF.

(b) Install the ATF temperature sensor with the lock plate and bolt.
Torque: 6.6 N*m (67 kgf*cm, 58 in.*lbf)

(c) Connect the 7 shift solenoid valve connectors.



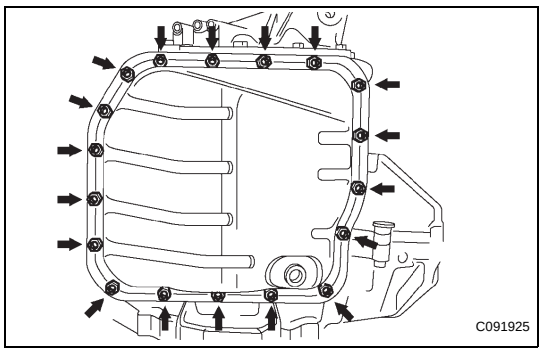
3. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets in the oil pan.

(b) Apply adhesive or equivalent to new 18 bolts.

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent



(c) Using a new gasket, install the oil pan to the transaxle case with the 18 bolts.

Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

NOTICE:

Since the bolts should be seal bolts, apply adhesive to the bolts and tighten them within 10 minutes of application.

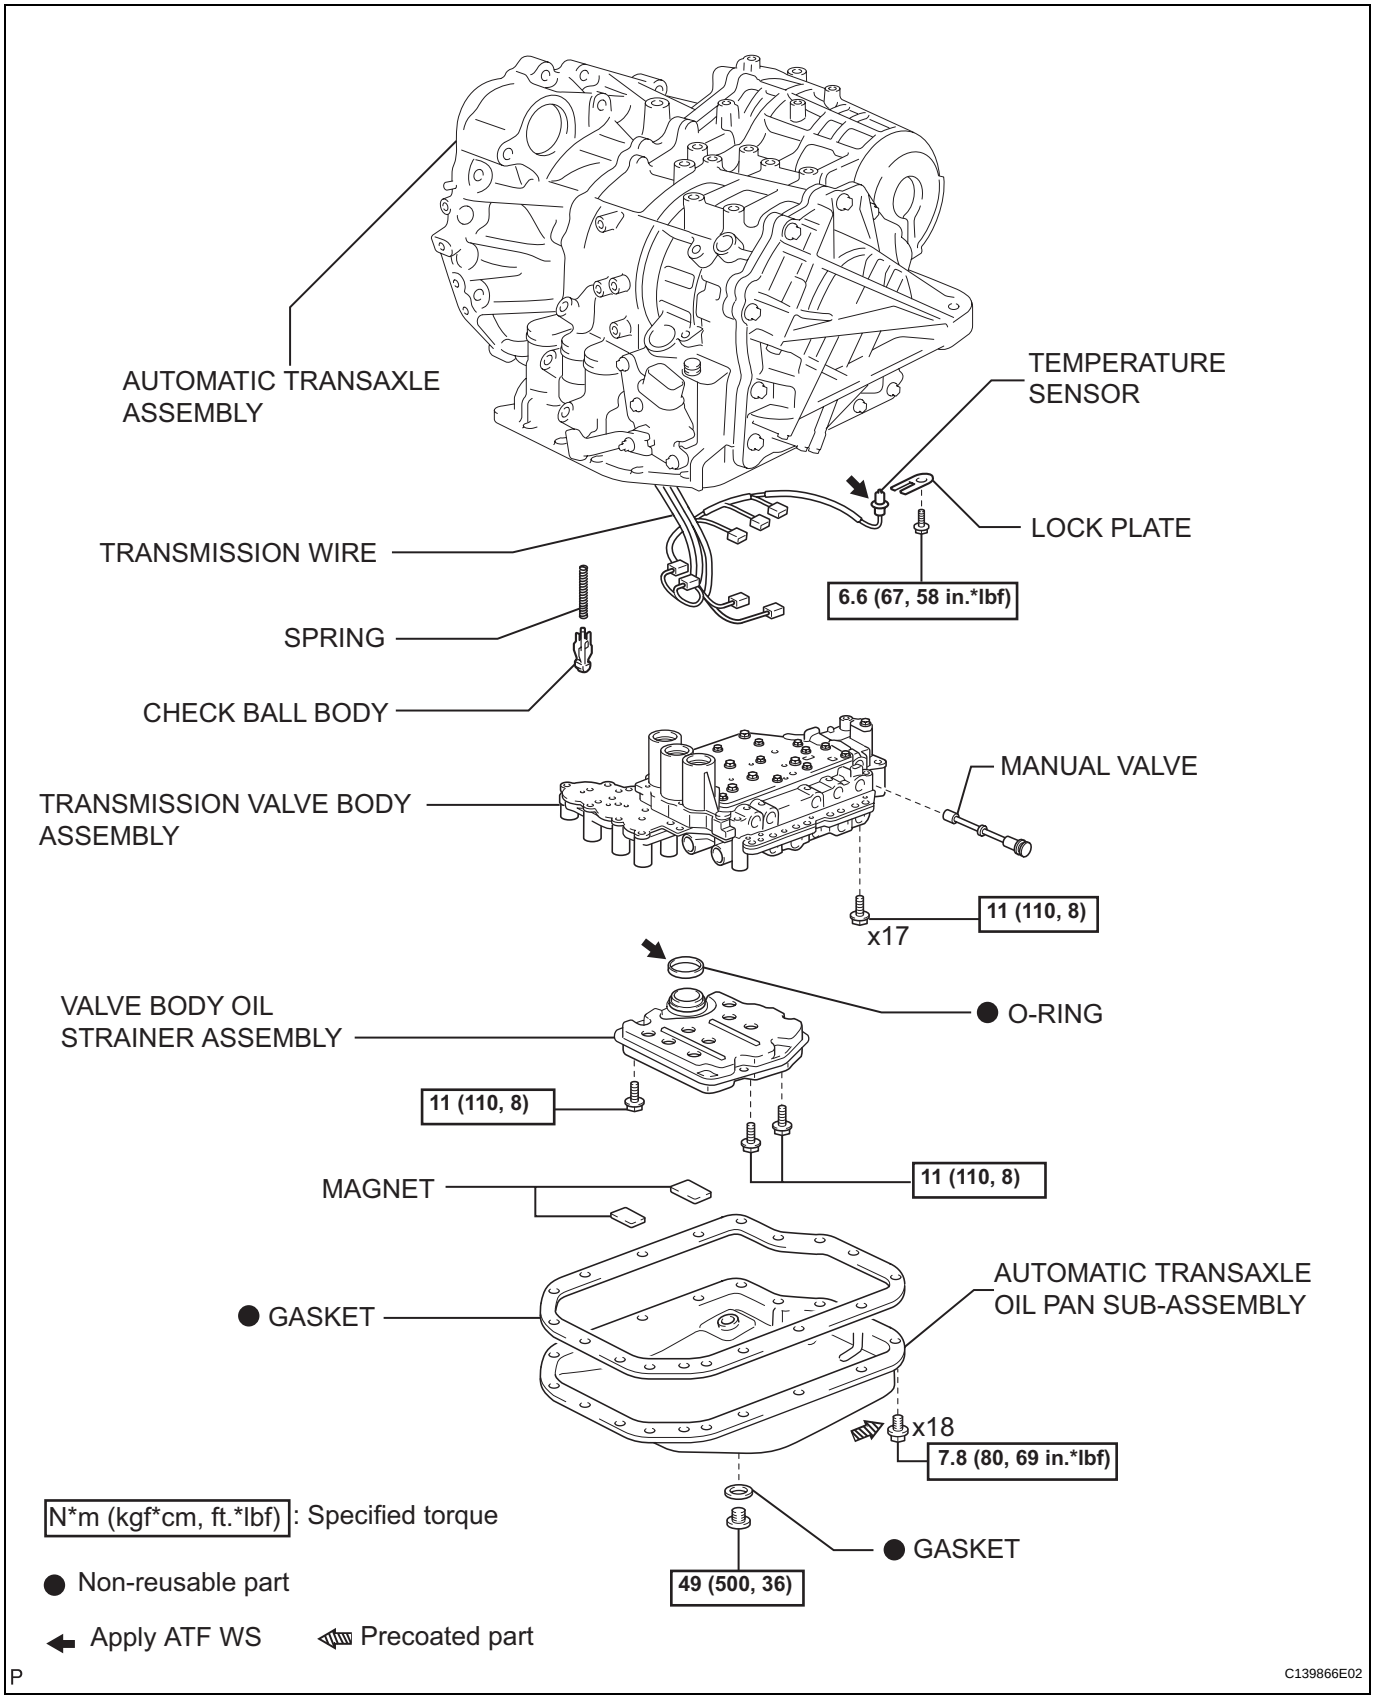
4. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

HINT:

See page AX-168.

VALVE BODY ASSEMBLY

COMPONENTS



REMOVAL

1. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

HINT:

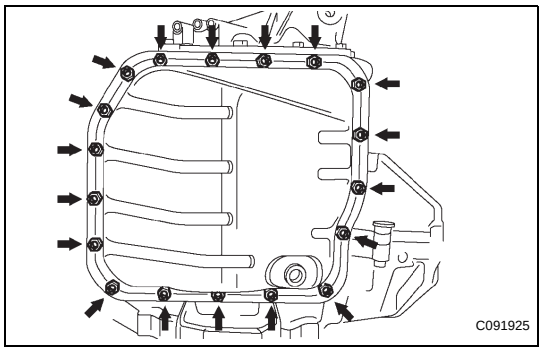
See page AX-162.

2. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

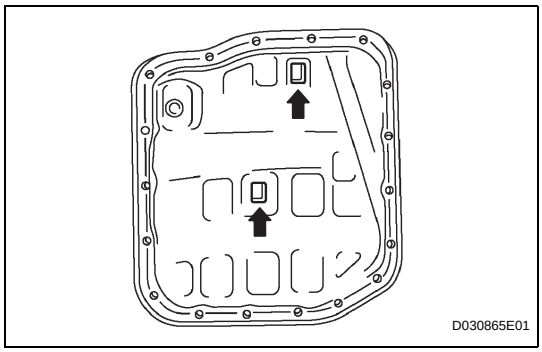
(a) Remove the 18 bolts, oil pan and gasket.

NOTICE:

Some fluid will remain in the oil pan. Remove all the pan bolts, and carefully remove the oil pan assembly.



(b) Remove the 2 magnets from the oil pan.

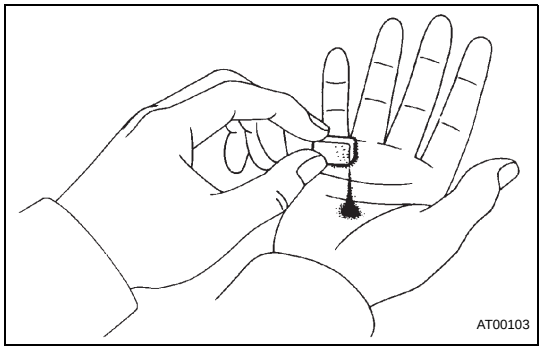


(c) Examine particles in the pan.

(1) Collect any steel chips with the removed magnets. Look carefully at the chips and particles in the pan and on the magnets to see the type of wear which might be found in the transaxle.

Result:

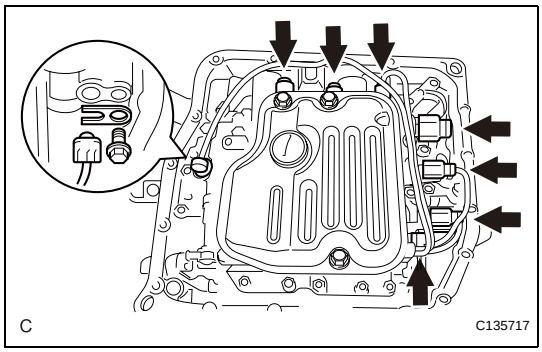
Steel (magnetic):
bearing, gear and plate wear
Brass (non-magnetic):
bearing wear

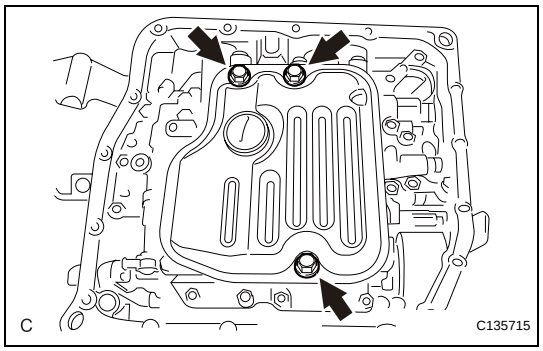


3. DISCONNECT TRANSMISSION WIRE

(a) Disconnect the 7 shift solenoid valve connectors.

(b) Remove the bolt and lock plate, and disconnect the ATF temperature sensor.



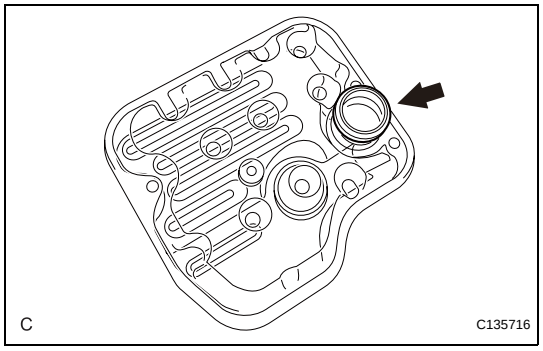


4. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

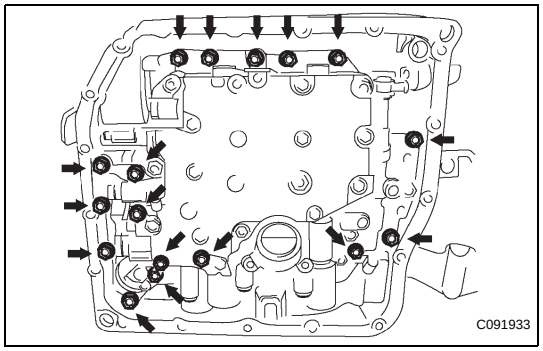
(a) Remove the 3 bolts and oil strainer.

NOTICE:

Be careful that some fluid will come out of the oil strainer.



(b) Remove the O-ring from the oil strainer.

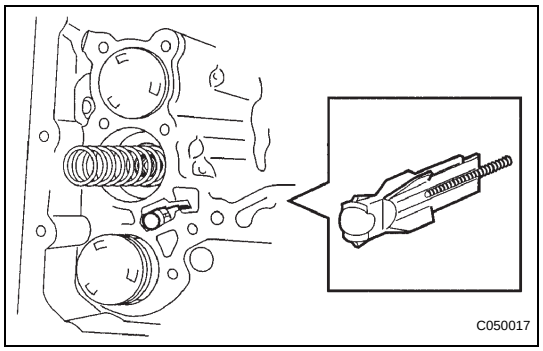


5. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Support the valve body assembly and remove the 17 bolts and the valve body assembly.

NOTICE:

Be careful not to drop the check ball, spring and accumulator piston.



(b) Remove the check ball body and spring.

6. REMOVE MANUAL VALVE

(a) Remove the manual valve from the valve body assembly.

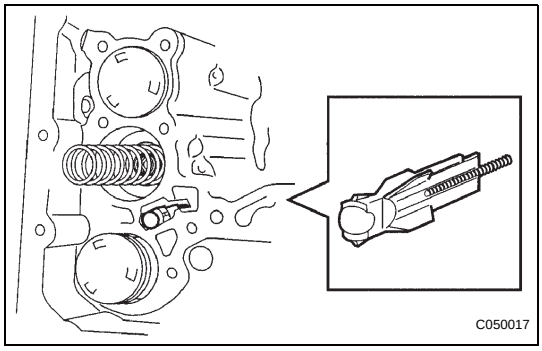
INSTALLATION

1. INSTALL MANUAL VALVE

(a) Install the manual valve to the valve body assembly.

2. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

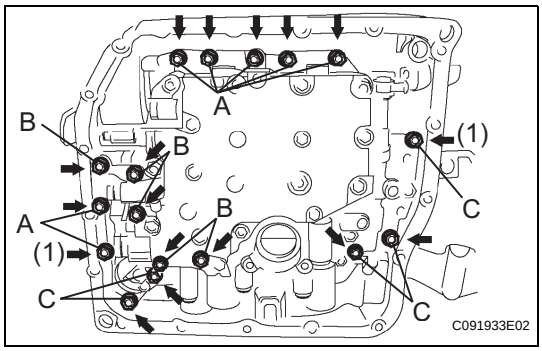
(a) Install the spring and check ball body.



(b) Align the groove of the manual valve with the pin of the lever.

(c) Install the valve body with the 17 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)
NOTICE:
- **Push the valve body against the accumulator piston spring and the check ball body to install it.**
- **First, temporarily tighten the bolts marked by (1) in the illustration because they are positioning bolts.**

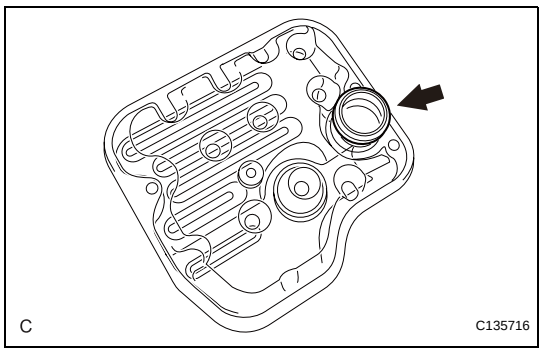
Bolt length:
Bolt A: 25 mm (0.984 in.)
Bolt B: 57 mm (2.244 in.)
Bolt C: 41 mm (1.614 in.)



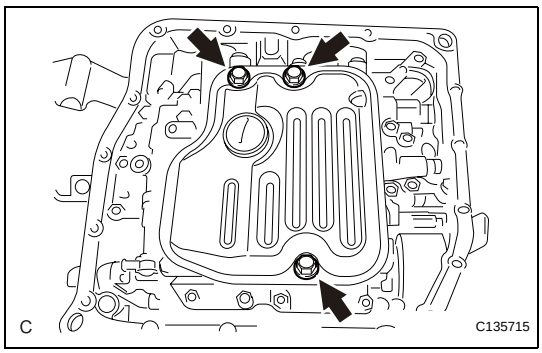
3. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

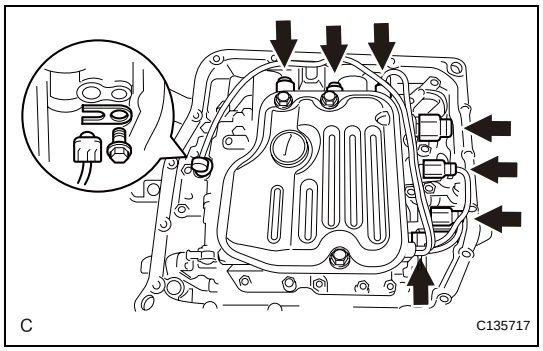
(a) Coat a new O-ring with ATF WS.

(b) Install the O-ring to the oil strainer.



(c) Install the oil strainer with the 3 bolts.
Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)





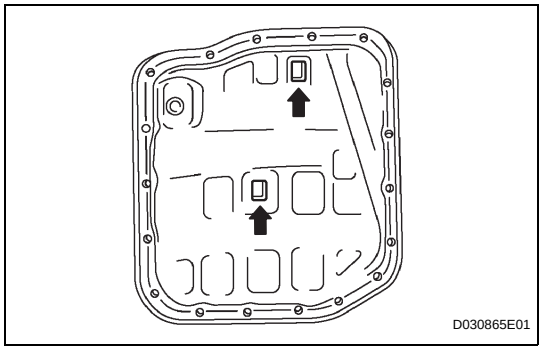
4. INSTALL TRANSMISSION WIRE

(a) Coat the O-ring with ATF WS.

(b) Install the ATF temperature sensor with the lock plate and bolt.

Torque: 6.6 N*m (67 kgf*cm, 58 in.*lbf)

(c) Connect the 7 shift solenoid valve connectors.



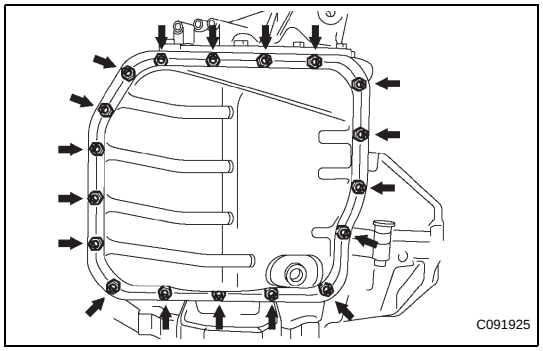
5. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets in the oil pan.

(b) Apply adhesive or equivalent to new 18 bolts.

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent



(c) Using a new gasket, install the oil pan to the transaxle case with the 18 bolts.

Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

NOTICE:

Since the bolts should be seal bolts, apply adhesive to the bolts and tighten them within 10 minutes of application.

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

7. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

HINT:

See page AX-168.

SHIFT LOCK SYSTEM

ON-VEHICLE INSPECTION

1. CHECK SHIFT LOCK OPERATION

(a) Move the shift lever to the P position.
(b) Turn the ignition switch to the LOCK position.
(c) Check that the shift lever cannot be moved to any position other than P.
(d) Turn the ignition switch to the on position, depress the brake pedal and check that the shift lever can be moved to another position. If operation cannot be done as specified, inspect the shift lock control unit.

2. CHECK SHIFT LOCK RELEASE BUTTON OPERATION

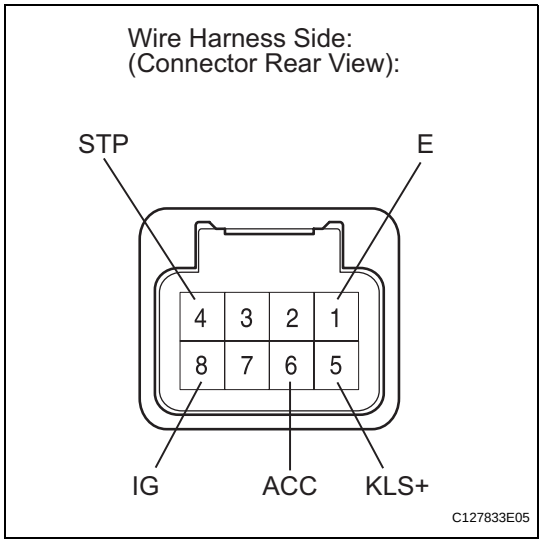
(a) Using a screwdriver, remove the shift lock release cover.
(b) When operating the shift lever with the shift lock release button pressed, check that the lever can be moved to any position other than P.
If operation cannot be done as specified, check the shift lever assembly installation condition.

3. CHECK KEY INTERLOCK OPERATION

(a) Turn the ignition switch to the ON position.
(b) Depress the brake pedal and move the shift lever to any position other than P.
(c) Check that the ignition key cannot be turned to the LOCK position.
(d) Move the shift lever to the P position, turn the ignition key to the LOCK position and check that the ignition key can be removed.
If operation cannot be done as specified, inspect the shift lock control unit.

4. INSPECT SHIFT LOCK CONTROL ECU

(a) Measure the voltage according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control ECU connector.

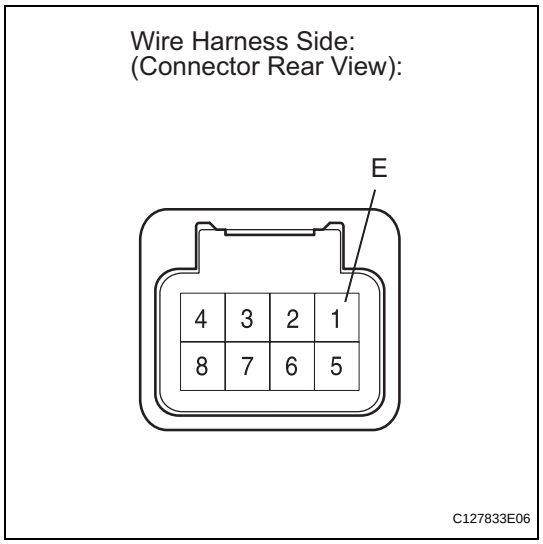


Standard voltage

Terminal	Measuring Condition	Voltage (V)
6 (ACC) - 1 (E)	Ignition switch ON	10 to 14
6 (ACC) - 1 (E)	Ignition switch ACC	10 to 14

AX

Terminal	Measuring Condition	Voltage (V)
6 (ACC) - 1 (E)	Ignition switch OFF	Below 1
4 (STP) - 1 (E)	Depress brake pedal	10 to 14
4 (STP) - 1 (E)	Release brake pedal	Below 1
5 (KLS+) - 1 (E)	1. Ignition switch ACC and shift lever P position 2. Ignition switch ACC and shift lever except P position 3. Ignition switch ACC and shift lever P position (After approx. 1 second)	7.5 to 11 Below 1 6 to 9
8 (IG) - 1 (E)	Ignition switch ON	10 to 14
8 (IG) - 1 (E)	Ignition switch OFF	Below 1



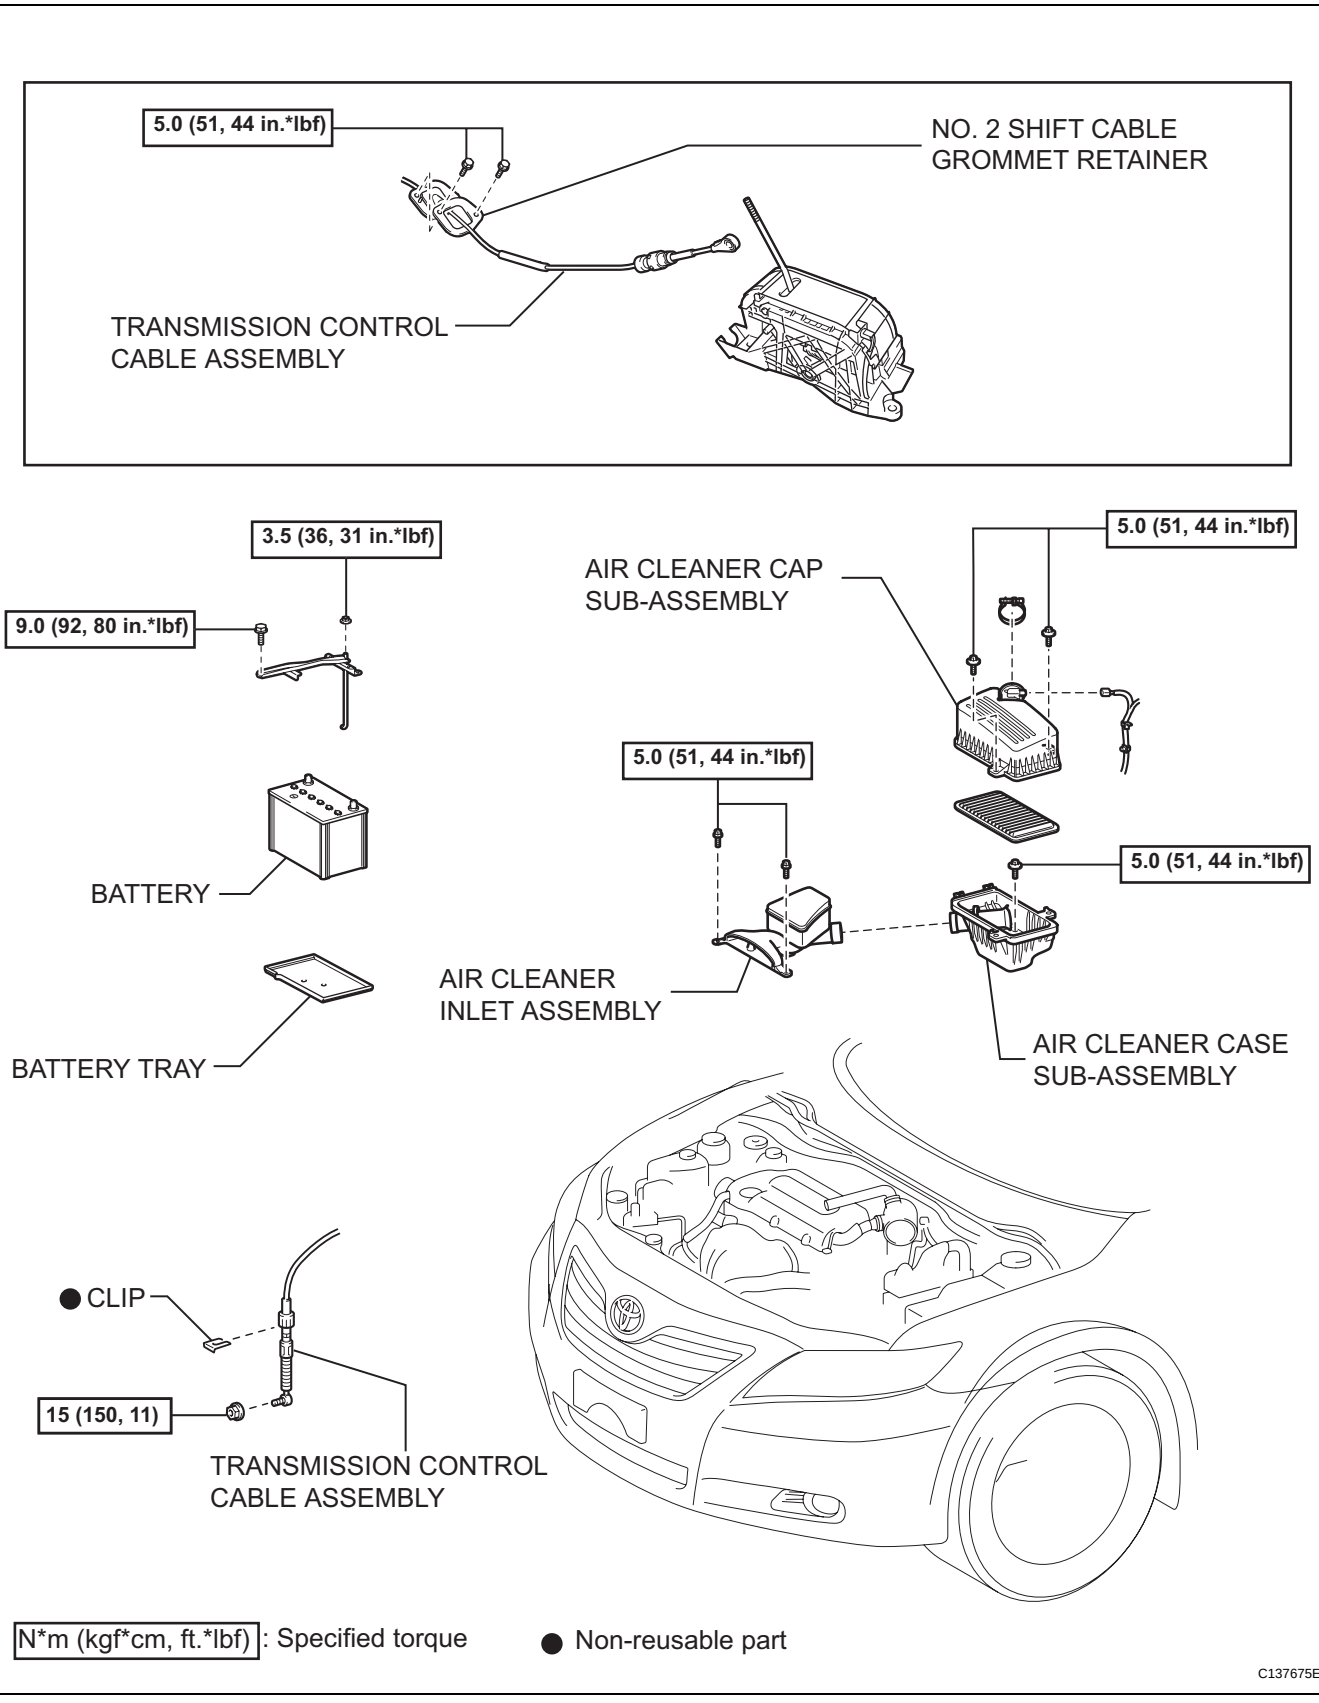
(b) Measure the resistance according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control ECU connector.
If the result is not as specified, replace the shift lock control ECU.

Standard resistance

Terminal	Measuring Condition	Specified Value
1 (E) - Body ground	Always	Below 1 Ω

TRANSMISSION CONTROL CABLE ASSEMBLY

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque ● Non-reusable part

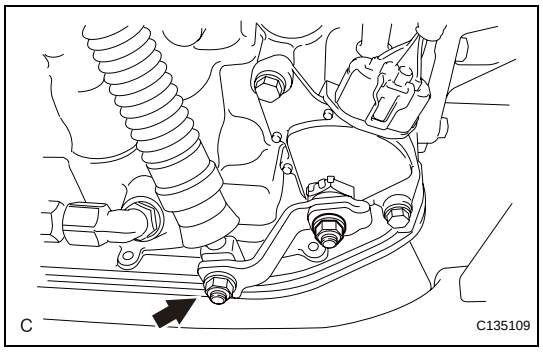
C137675E04

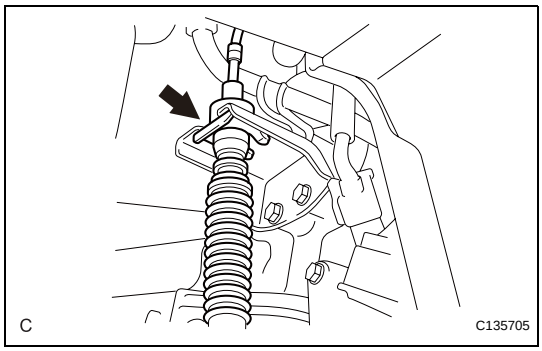
REMOVAL

1. **REMOVE AIR CONDITIONING UNIT**
   HINT:
   See page AC-151.
2. **REMOVE BATTERY (See page EM-95)**
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-94)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-416)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-95)**
6. **DISCONNECT NO. 2 SHIFT CABLE GROMMET RETAINER**
   (a) Disconnect the transmission control cable assembly from the transmission floor shift assembly while pushing the 2 claws of the floor shift cable.
   (b) Turn back the carpet.

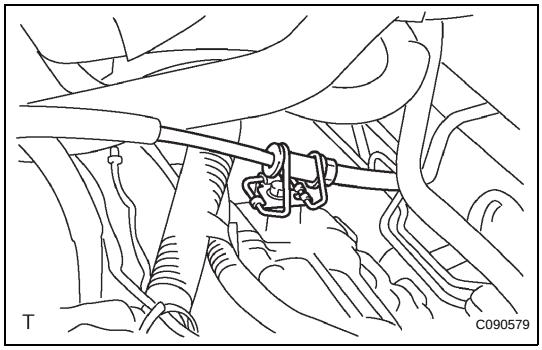
   (c) Remove the 2 bolts and disconnect the No. 2 shift cable grommet retainer.
   (d) Remove the No. 2 shift cable grommet retainer.

7. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Remove the nut from the control shaft lever.
   (b) Disconnect the transmission control cable assembly from the control shaft lever.





(c) Remove the clip and disconnect the transmission control cable assembly from the No. 1 control cable bracket.



(d) Disconnect the transmission control cable assembly from the control cable clamp.
(e) Pull out the transmission control cable assembly from the body.

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION

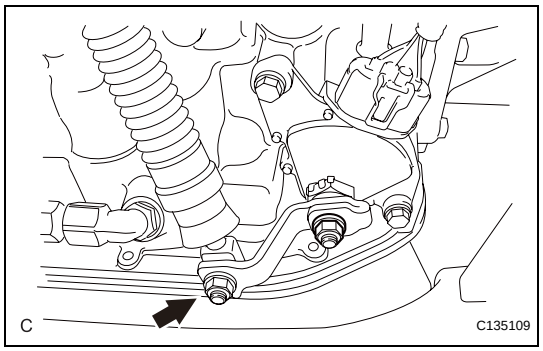
(a) When shifting from the P to the R position with the ignition switch on and brake pedal depressed, make sure that the shift lever moves smoothly and moves correctly into position.

(b) Start the engine and make sure that the vehicle moves forward when shifting from the N to the D position and moves rearward when shifting to the R position.

If operation cannot be done as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

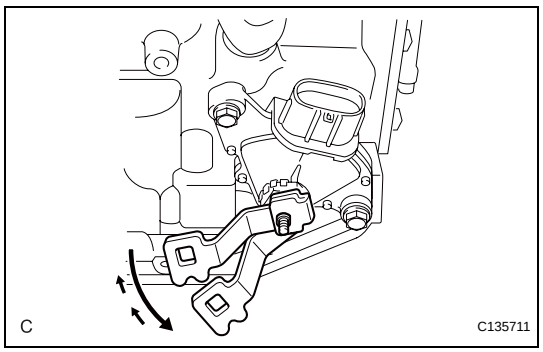
2. ADJUST SHIFT LEVER POSITION

(a) Move the shift lever to the N position.



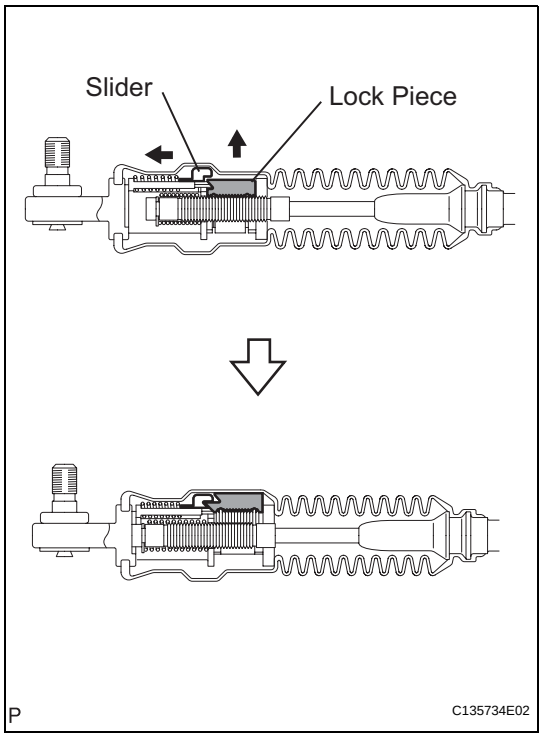
(b) Remove the nut from the control shaft lever.

(c) Disconnect the transmission control cable assembly from the control shaft lever.

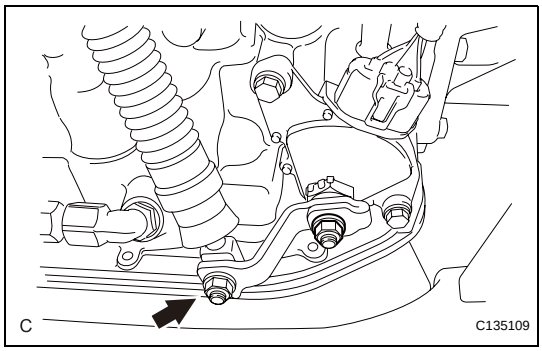


(d) Push the control shaft fully downward.

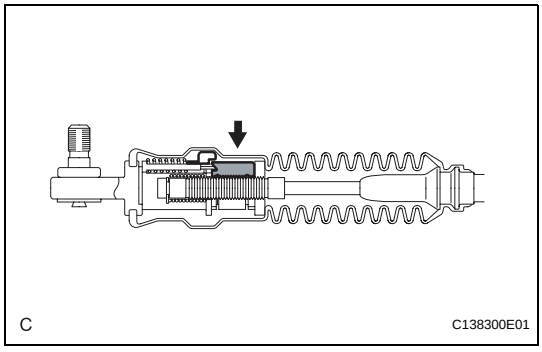
(e) Return the control shaft lever 2 notches to the N position.



(f) Move the slider in the directions indicated by the arrows and pull up the lock piece.
NOTICE:
Do not damage the boot.



(g) Install the transmission control cable to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)
NOTICE:
- **If the control cable end is excessively pushed up, the shift lever cannot be adjusted.**
- **When tightening the nut, confirm that the control cable is properly stretched.**



(h) Push in the lock piece.
NOTICE:
Firmly push in the lock piece until the slider lock is engaged.

(i) Start the engine and make sure that the vehicle moves forward when moving the lever from the N to the D position and moves rearward when moving it to the R position.
If it becomes hard to move the shift lever, readjust the shift lever position.

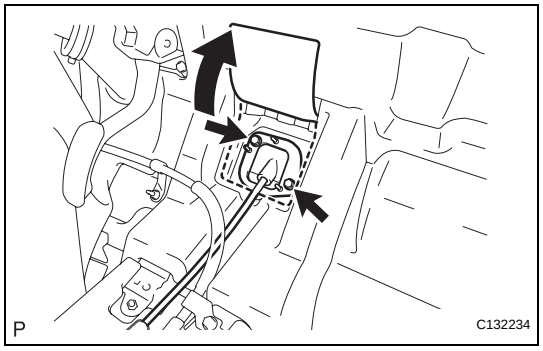
INSTALLATION

1. INSTALL NO. 2 SHIFT CABLE GROMMET RETAINER

(a) Pass the transmission control cable assembly from the cabin to the engine compartment.

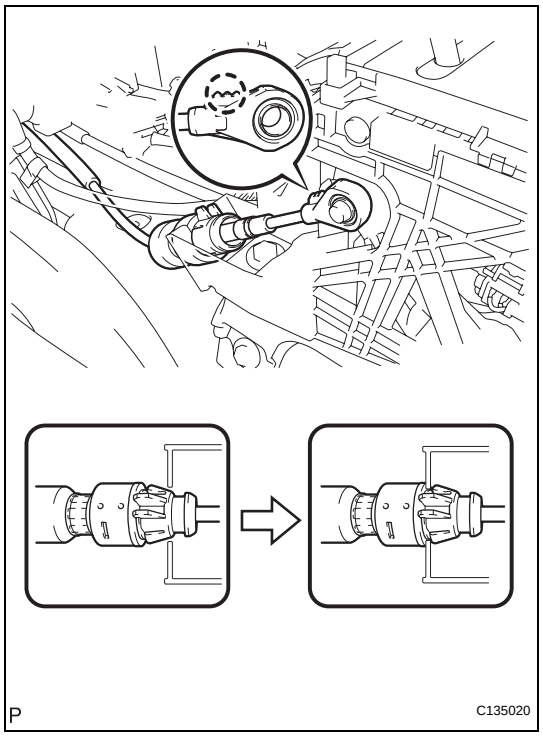
(b) Install the No. 2 shift cable grommet retainer to the transmission control cable assembly.

(c) Install the No. 2 shift cable grommet retainer with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

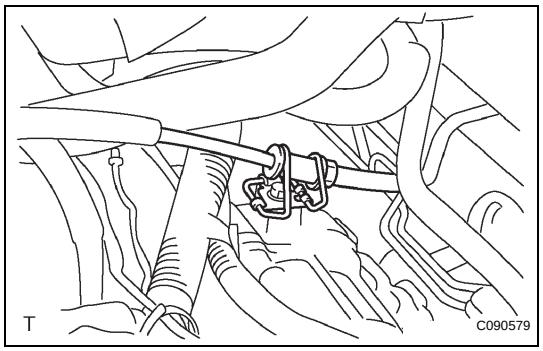


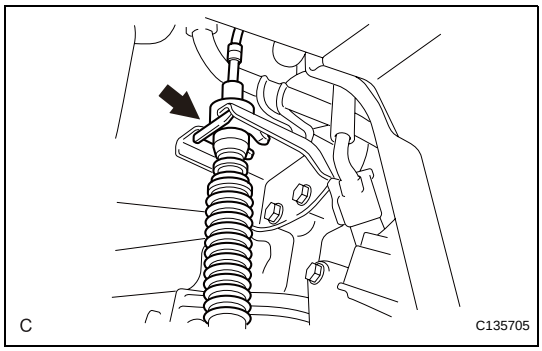
2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the transmission control cable assembly as shown in the illustration.
HINT:
- Install the floor shift cable with the uneven surface facing up.
- Securely engage the claws of the floor shift cable.

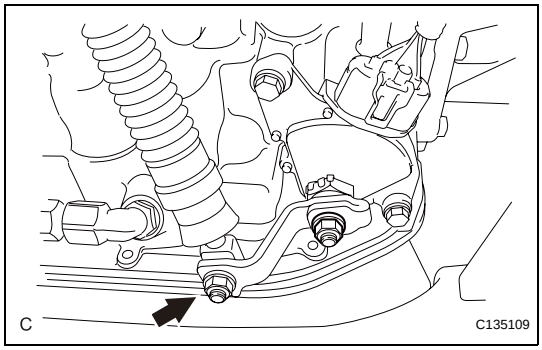


(b) Connect the control cable to the control cable clamp.

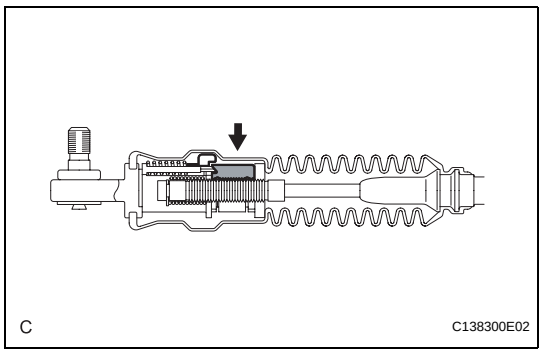




(c) Connect the control cable to the bracket with a new clip.



(d) Install the transmission control cable to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)

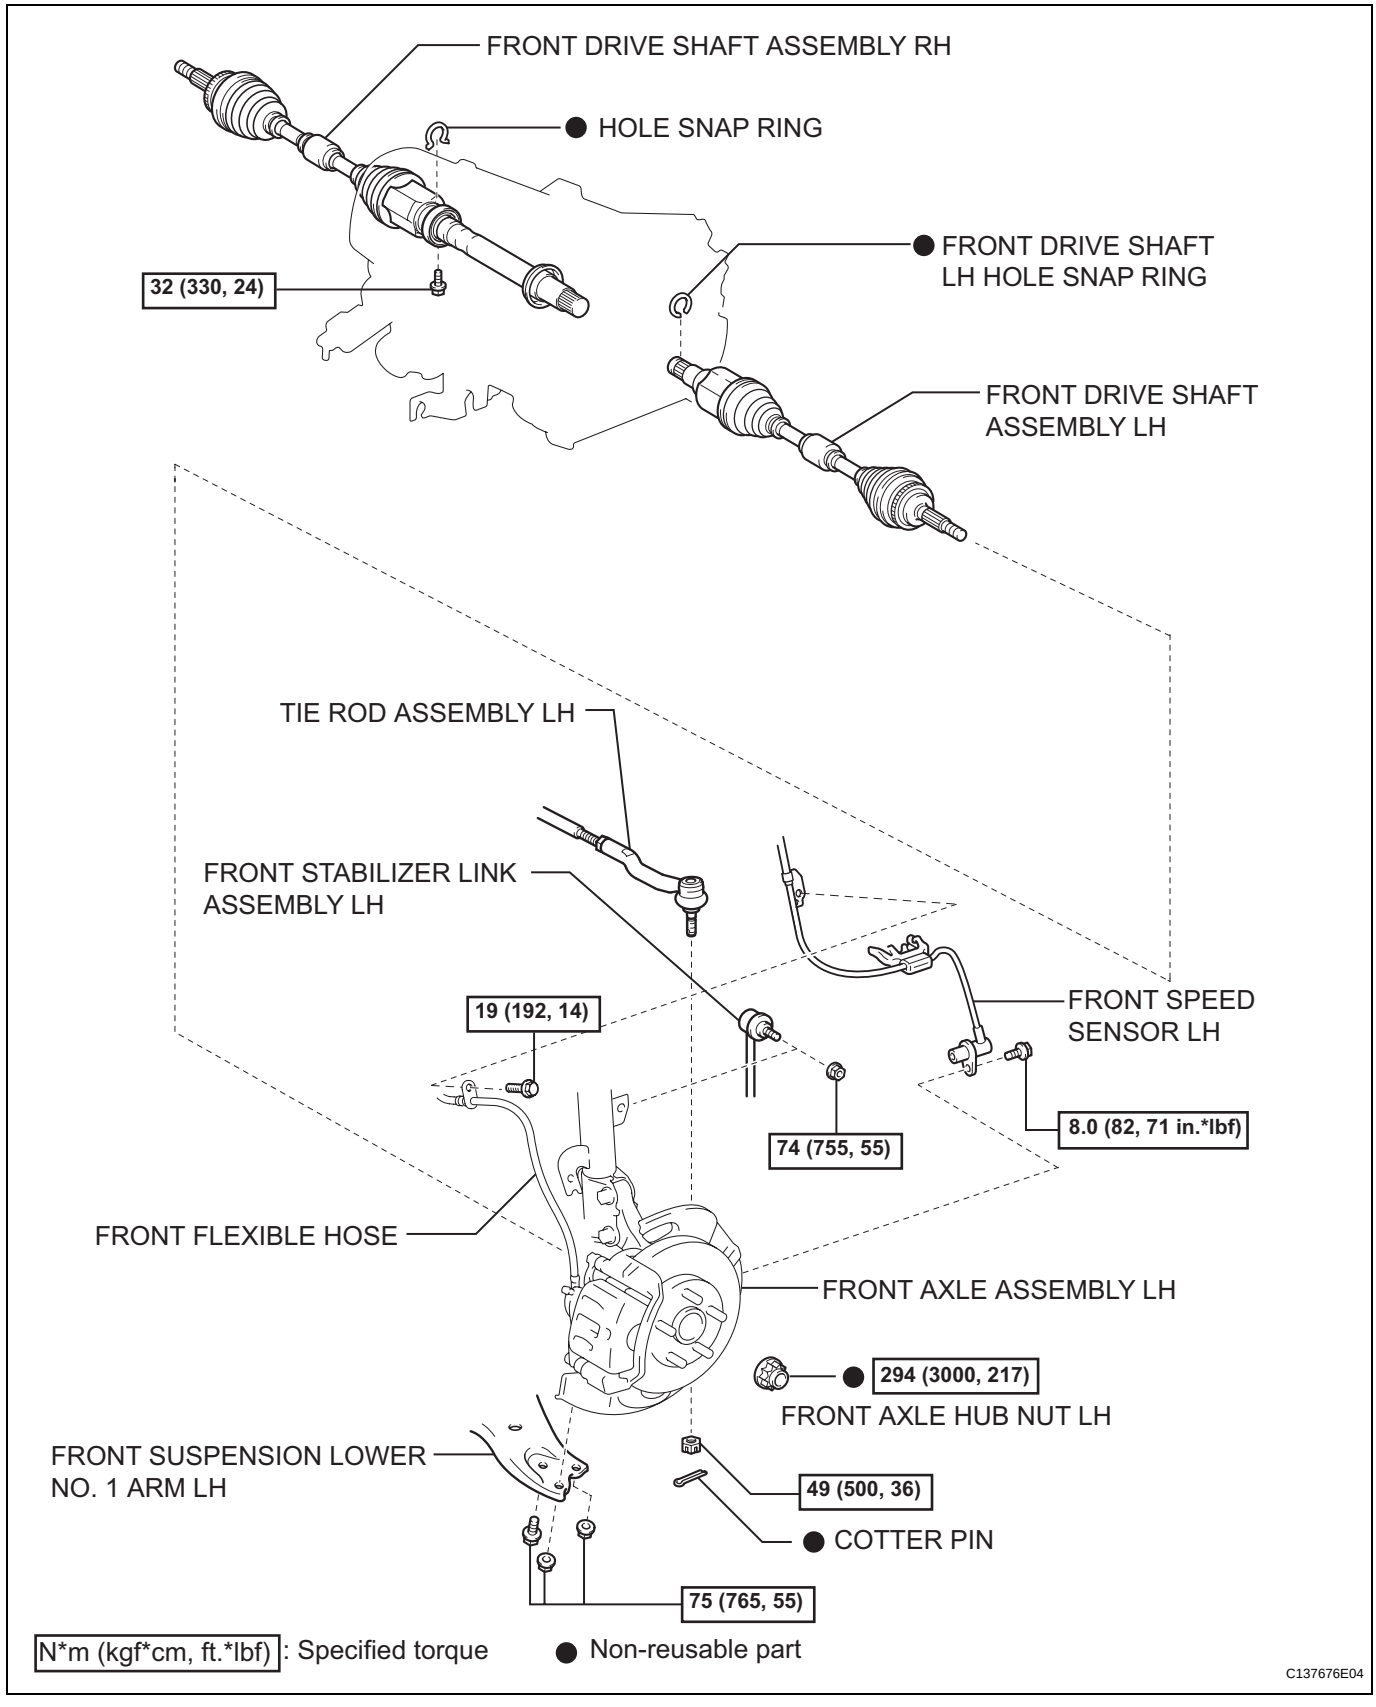


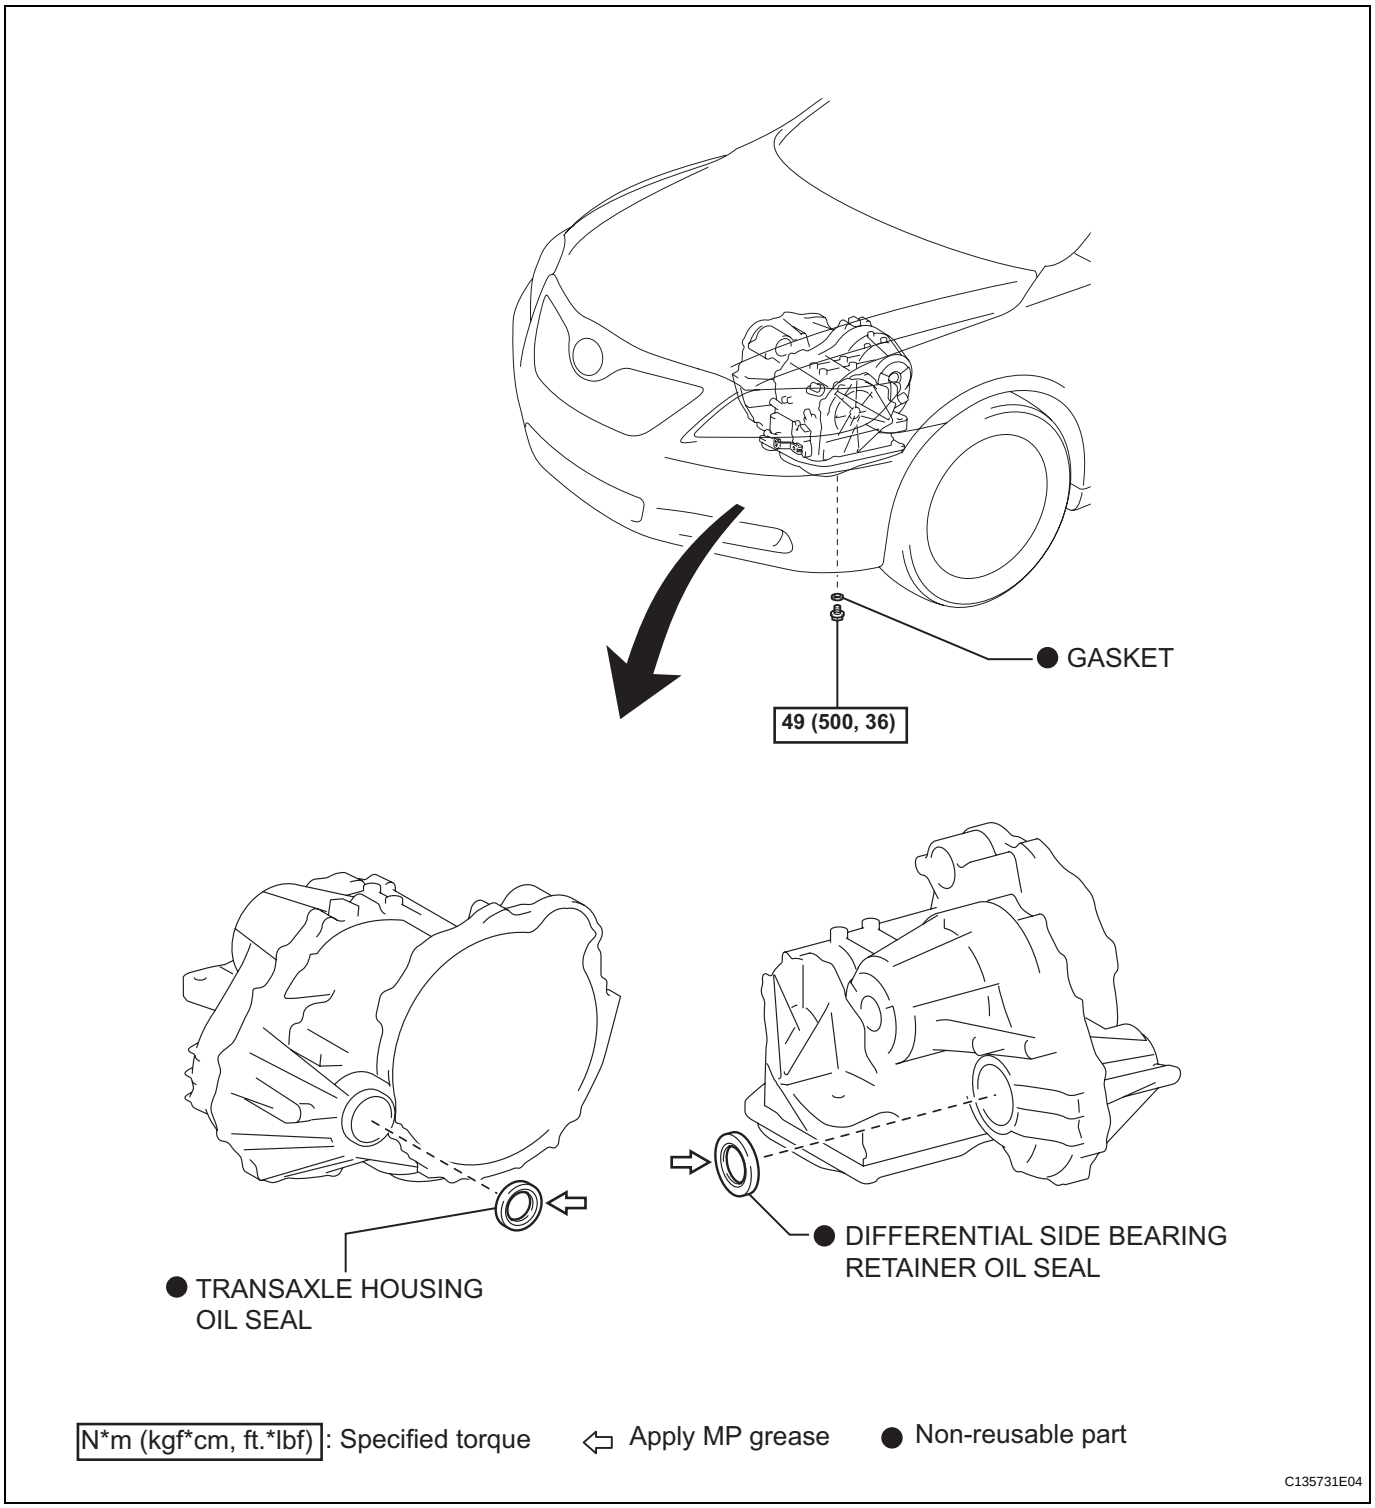
(e) Push in the lock piece of the transmission control cable.
NOTICE:
Firmly push in the lock piece until the slider lock is engaged.
HINT:
After pushing in the lock piece, make sure that the boot is not deformed.

3. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
5. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
6. **INSTALL BATTERY (See page EM-119)**
7. **INSTALL AIR CONDITIONING UNIT**
HINT:
See page AC-173.
8. **INSPECT SHIFT LEVER POSITION (See page AX-146)**
9. **ADJUST SHIFT LEVER POSITION (See page AX-146)**

DIFFERENTIAL OIL SEAL

COMPONENTS

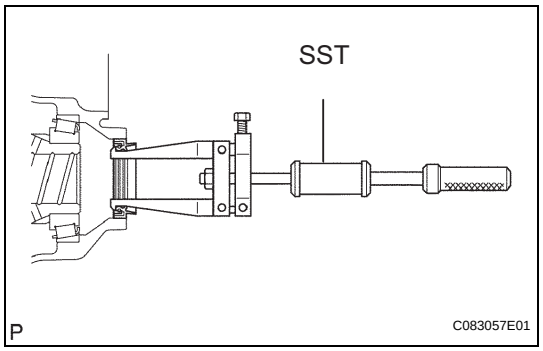




● GASKET
49 (500, 36)
● TRANSAXLE HOUSING OIL SEAL
● DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL
N*m (kgf*cm, ft.*lbf): Specified torque
⇦ Apply MP grease
● Non-reusable part
C135731E04

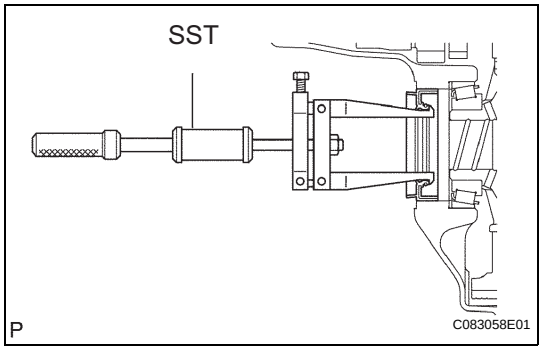
REMOVAL

1. **DRAIN AUTOMATIC TRANSAXLE FLUID (See page AX-162)**
2. **REMOVE FRONT WHEEL**
3. **REMOVE FRONT AXLE HUB NUT LH (See page DS-7)**
4. **REMOVE FRONT AXLE HUB NUT RH**
   HINT:
   Use the same procedures described for the LH side.
5. **SEPARATE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-7)**
6. **SEPARATE FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.
7. **SEPARATE FRONT SPEED SENSOR LH (See page DS-7)**
8. **SEPARATE FRONT SPEED SENSOR RH**
9. **SEPARATE TIE ROD ASSEMBLY LH (See page DS-8)**
10. **SEPARATE TIE ROD ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
11. **SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-8)**
12. **SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM RH**
    HINT:
    Use the same procedures described for the LH side.
13. **SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-8)**
14. **SEPARATE FRONT AXLE ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
15. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)**
16. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-9)**
17. **FIX FRONT AXLE ASSEMBLY LH (See page DS-9)**
18. **FIX FRONT AXLE ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.



19. REMOVE TRANSAXLE HOUSING OIL SEAL

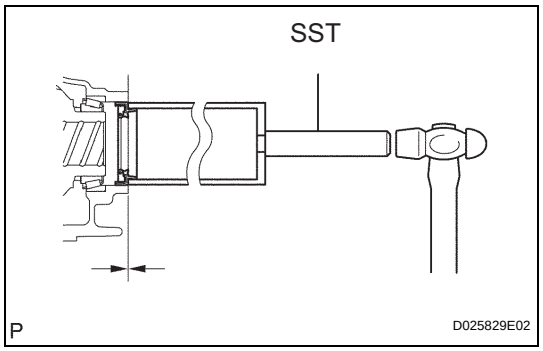
(a) Using SST, pull out the oil seal.
SST 09308-00010



20. REMOVE DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Using SST, pull out the oil seal.
SST 09308-00010

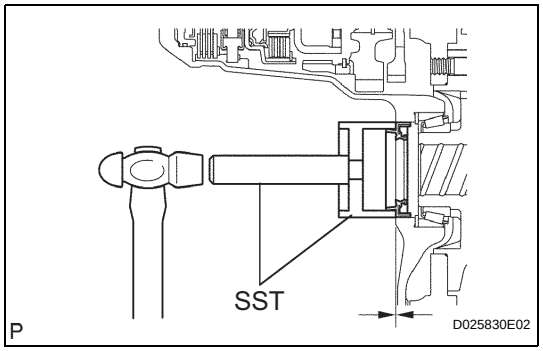
INSTALLATION



1. INSTALL TRANSAXLE HOUSING OIL SEAL

(a) Using SST and a hammer, install a new oil seal.
SST 09316-60011 (09316-00011)
Oil seal installation depth:
-0.5 to 0.5 mm (-0.020 to 0.020 in.)

(b) Coat the lip of the oil seal with MP grease.



2. INSTALL DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Using SST and a hammer, install a new oil seal.
SST 09649-17010, 09950-70010 (09951-07150)
Oil seal installation depth:
-0.5 to 0.5 mm (-0.020 to 0.020 in.)

(b) Coat the lip of the oil seal with MP grease.

3. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)

4. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)

5. INSTALL FRONT AXLE ASSEMBLY LH (See page DS-21)

6. INSTALL FRONT AXLE ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

7. INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-21)

8. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH**
   HINT:
   Use the same procedures described for the LH side.
9. **INSTALL TIE ROD ASSEMBLY LH (See page DS-21)**
10. **INSTALL TIE ROD ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
11. **INSTALL FRONT SPEED SENSOR LH (See page DS-21)**
12. **INSTALL FRONT SPEED SENSOR RH**
    HINT:
    Use the same procedures described for the LH side.
13. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-22)**
14. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.
15. **INSTALL FRONT AXLE HUB NUT LH (See page DS-22)**
16. **INSTALL FRONT AXLE HUB NUT RH**
    HINT:
    Use the same procedures described for the LH side.
17. **INSTALL FRONT WHEEL (See page DS-22)**
18. **ADD AUTOMATIC TRANSAXLE FLUID (See page AX-175)**
19. **INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-123)**
20. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    See page SP-4.
21. **CHECK ABS SPEED SENSOR SIGNAL**
    HINT:
    See page BC-11.

21. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-96)**
22. **DISCONNECT NO. 1 VACUUM HOSE CONNECTOR (See page EM-96)**
23. **DISCONNECT RADIATOR HOSE INLET (See page EM-96)**

24. **DISCONNECT RADIATOR HOSE OUTLET (See page EM-96)**

25. **DISCONNECT OIL COOLER INLET HOSE (See page CO-22)**

26. **DISCONNECT OIL COOLER OUTLET HOSE (See page CO-23)**

27. **DISCONNECT HEATER INLET WATER HOSE (See page EM-97)**

28. **DISCONNECT HEATER OUTLET WATER HOSE (See page EM-97)**

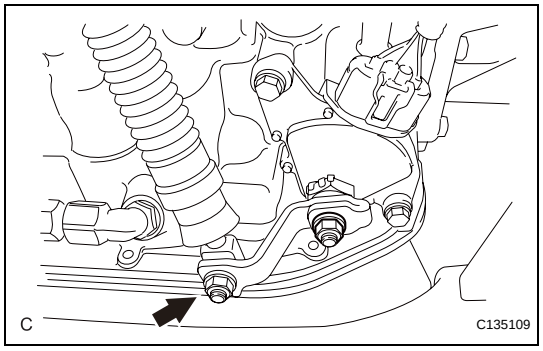
29. **REMOVE ECM (See page EM-97)**

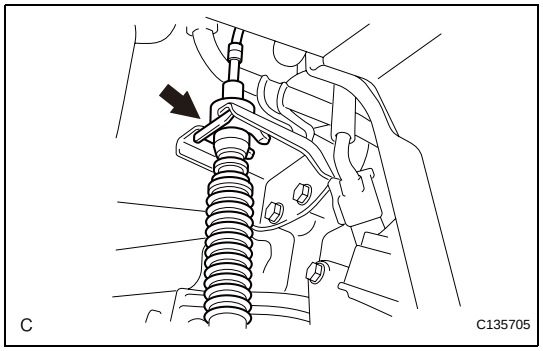
30. **DISCONNECT ENGINE WIRE (See page EM-97)**

31. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**

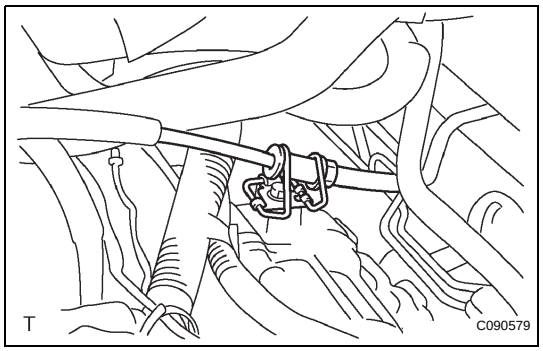
(a) Remove the nut from the control shaft lever.

(b) Disconnect the transmission control cable assembly from the control shaft lever.





(c) Remove the clip and disconnect the transmission control cable assembly from the No. 1 control cable bracket.



(d) Disconnect the transmission control cable assembly from the control cable clamp.

32. **DISCONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE (See page EM-98)**

33. **DISCONNECT RETURN TUBE SUB-ASSEMBLY (See page EM-99)**

34. **DISCONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-99)**

35. **REMOVE GENERATOR ASSEMBLY (See page CH-11)**

36. **SEPARATE COMPRESSOR AND MAGNETIC CLUTCH (See page EM-99)**

37. **REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-3)**

38. **REMOVE FRONT AXLE HUB NUT LH (See page DS-7)**

39. **REMOVE FRONT AXLE HUB NUT RH**
HINT:
Use the same procedures described for the LH side.

40. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-7)**

41. **REMOVE FRONT STABILIZER LINK ASSEMBLY RH**
HINT:
Use the same procedures described for the LH side.

42. **REMOVE FRONT SPEED SENSOR LH (See page DS-7)**

43. **REMOVE FRONT SPEED SENSOR RH**
HINT:
Use the same procedures described for the LH side.

44. **DISCONNECT TIE ROD ASSEMBLY LH (See page DS-8)**

45. **DISCONNECT TIE ROD ASSEMBLY RH**
HINT:
Use the same procedures described for the LH side.

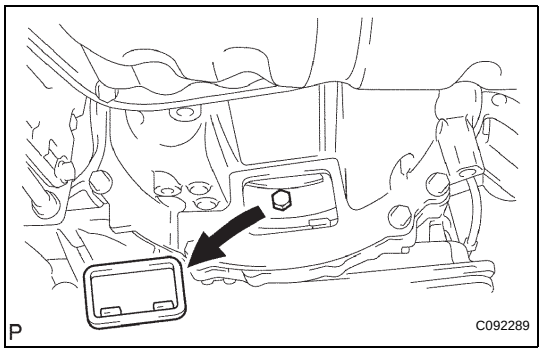
46. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-8)**

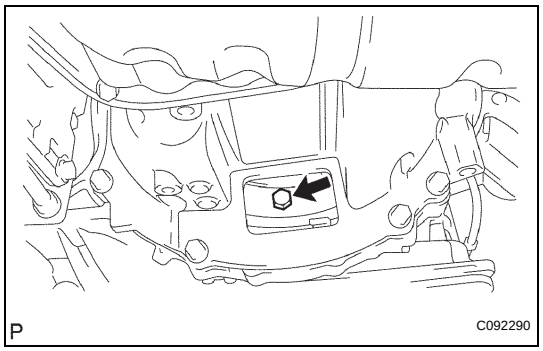
47. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM RH**
HINT:
Use the same procedures described for the LH side.

48. **SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-8)**

49. **SEPARATE FRONT AXLE ASSEMBLY RH**
HINT:
Use the same procedures described for the LH side.

50. **REMOVE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT**
(a) Remove the flywheel housing under cover.





(b) Turn the crankshaft to gain access and remove the 6 bolts while holding the crankshaft pulley bolt with a wrench.
HINT:
There will be one green colored bolt.

51. SEPARATE STEERING SLIDING YOKE (See page PS-40)

52. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE (See page EM-100)

53. REMOVE VANE PUMP ASSEMBLY (See page EM-101)

54. REMOVE FRONT FRAME ASSEMBLY (See page EM-101)

55. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)

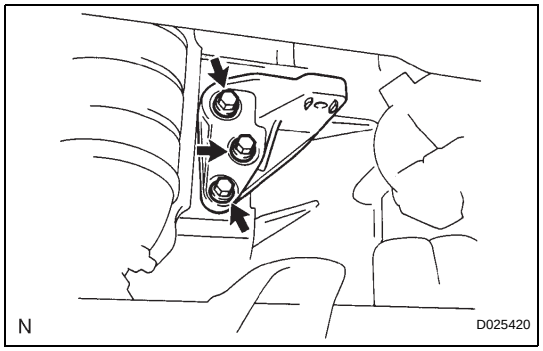
56. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-9)

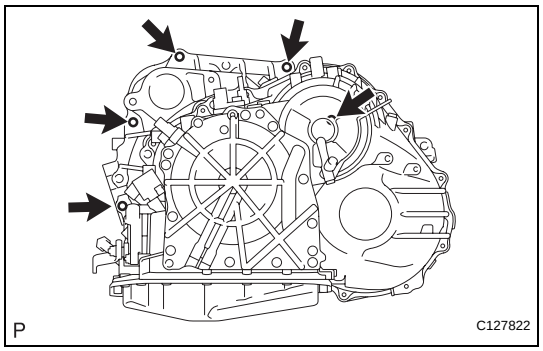
57. REMOVE ENGINE WIRE

58. REMOVE STARTER ASSEMBLY (See page ST-5)

59. REMOVE ENGINE MOUNTING FRONT BRACKET

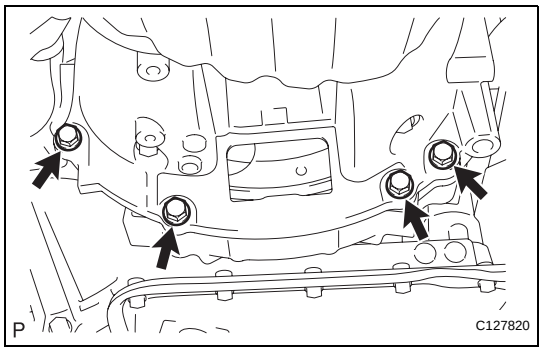
(a) Remove the 3 bolts and engine mounting front bracket.





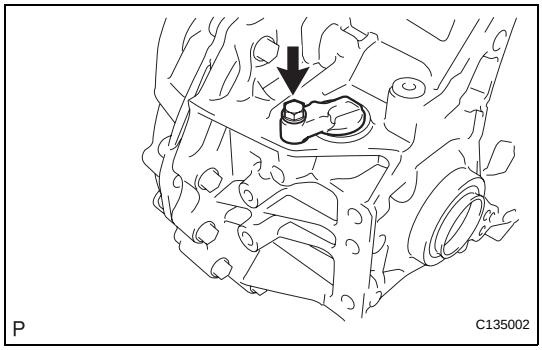
60. SEPARATE AUTOMATIC TRANSAXLE ASSEMBLY

(a) Remove the 5 bolts.

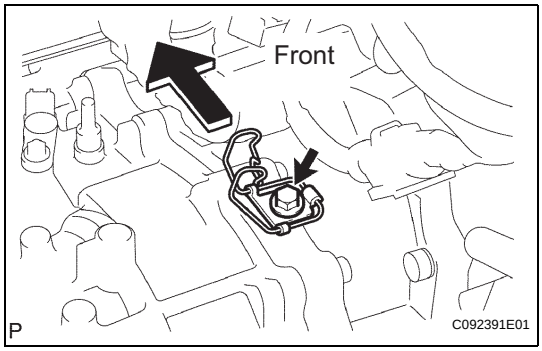


(b) Remove the 4 lower side mounting bolts.
(c) Separate and remove the automatic transaxle.

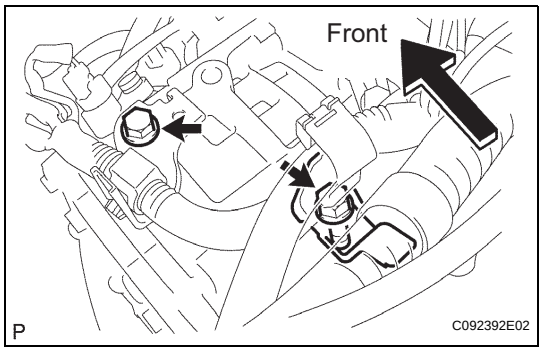
61. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY



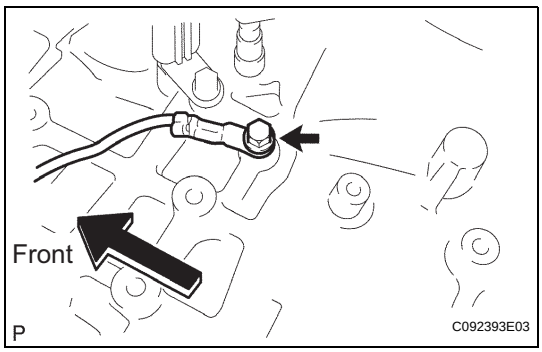
62. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY
(a) Remove the bolt and hole cover from the transaxle case.
(b) Remove the O-ring from the hole cover.



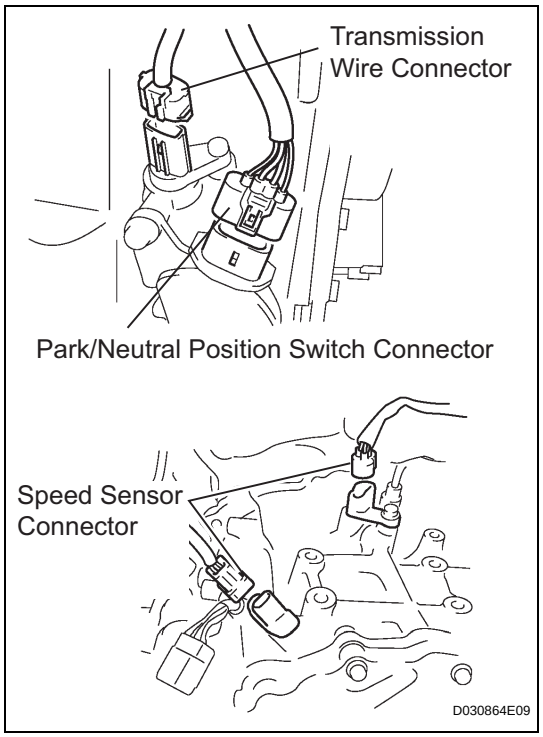
63. REMOVE NO. 2 TRANSMISSION CONTROL CABLE BRACKET
(a) Remove the bolt and No. 2 transmission control cable bracket.



64. REMOVE WIRE HARNESS CLAMP BRACKET
(a) Disconnect the wire harnesses from the 2 brackets.
(b) Remove the 2 bolts and 2 clamps.

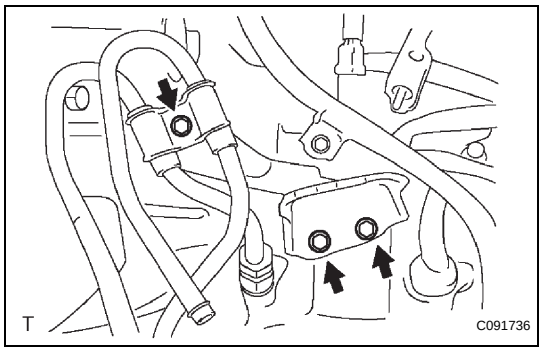


65. DISCONNECT WIRE HARNESS
(a) Remove the bolt and disconnect the wire harness.



66. DISCONNECT CONNECTORS

(a) Disconnect the transmission wire connector.
(b) Disconnect the park/neutral position switch connector.
(c) Disconnect the 2 speed sensor connectors.

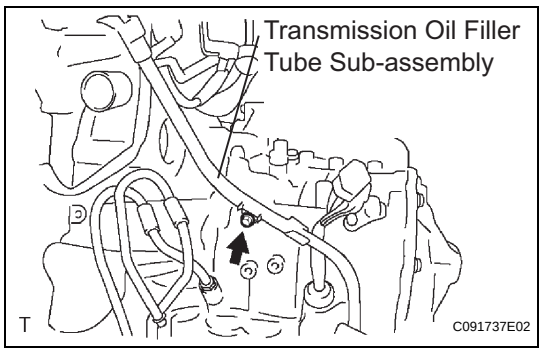


67. REMOVE NO. 1 TRANSMISSION CONTROL CABLE BRACKET

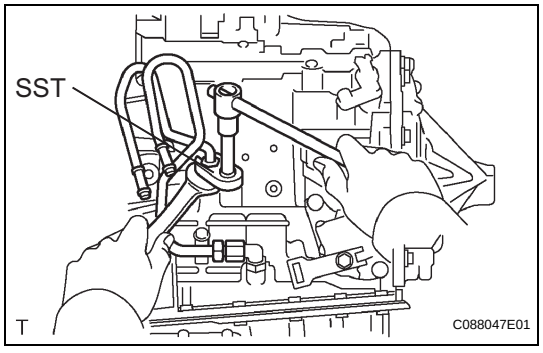
(a) Remove the bolt and oil cooler tube clamp.
(b) Remove the 2 bolts and No. 1 transmission control cable bracket.

68. REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

(a) Remove the ATF level gauge.



(b) Remove the bolt and transmission oil filler tube sub-assembly.
(c) Remove the O-ring from the oil filler tube sub-assembly.

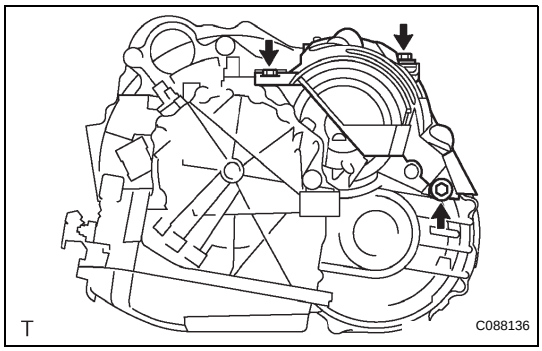


69. REMOVE NO. 1 OIL COOLER INLET TUBE

(a) Using SST and a wrench, disconnect the No. 1 oil cooler inlet tube.
SST 09023-12701

70. REMOVE NO. 1 OIL COOLER OUTLET TUBE

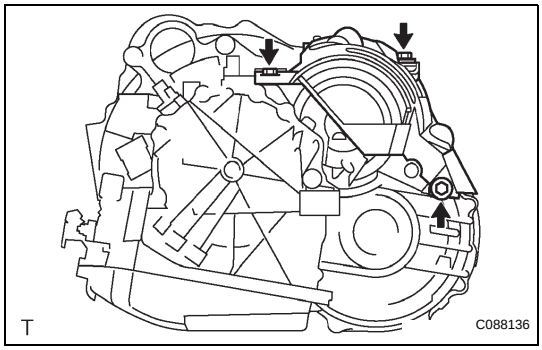
(a) Using SST and a wrench, disconnect the No. 1 oil cooler outlet tube.
SST 09023-12701



71. REMOVE TRANSAXLE CASE UPPER COVER

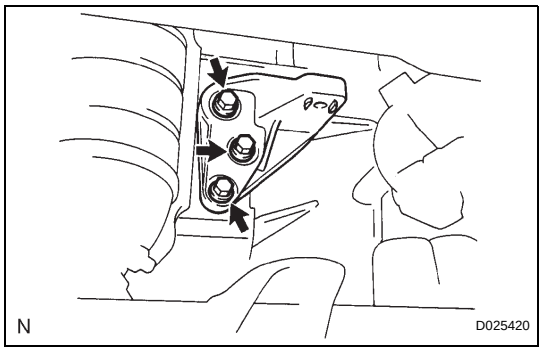
(a) Remove the 3 bolts and transaxle case upper cover.

INSTALLATION



1. INSTALL TRANSAXLE CASE UPPER COVER

(a) Install the transmission case upper cover with the 3 bolts.
Torque: 12 N*m (117 kgf*cm, 8 ft.*lbf)

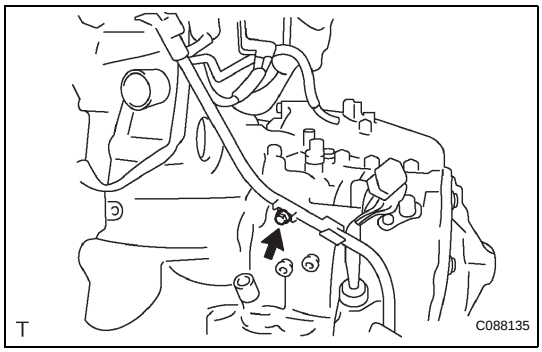


2. INSTALL ENGINE MOUNTING FRONT BRACKET

(a) Install the engine mounting front bracket to the automatic transaxle with the 3 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

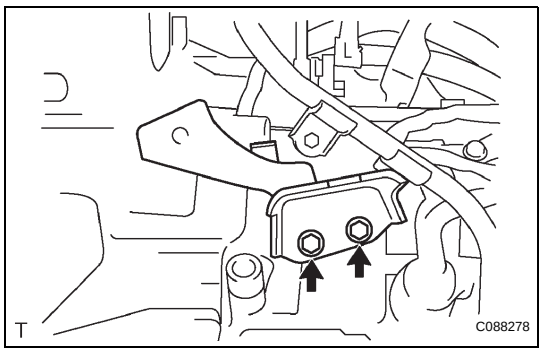
3. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

(a) Coat a new O-ring with ATF, and install it to the oil filler tube.



(b) Install the oil filler tube to the automatic transaxle with the bolt.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(c) Install the ATF level gauge.



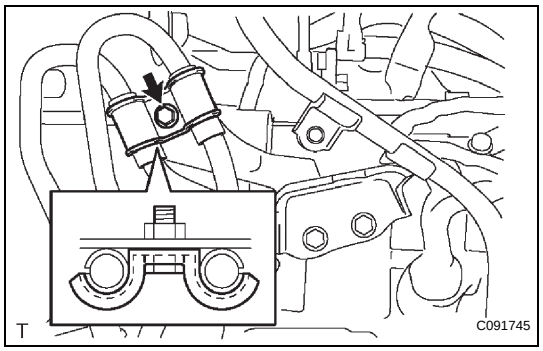
4. INSTALL NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Install the No. 1 control cable bracket with the 2 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

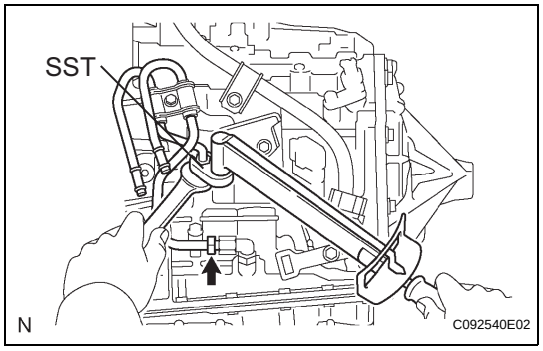
5. INSTALL NO. 1 OIL COOLER INLET TUBE

(a) Temporarily install the No. 1 oil cooler outlet tube.

(b) Temporarily install the No. 1 oil cooler inlet tube.



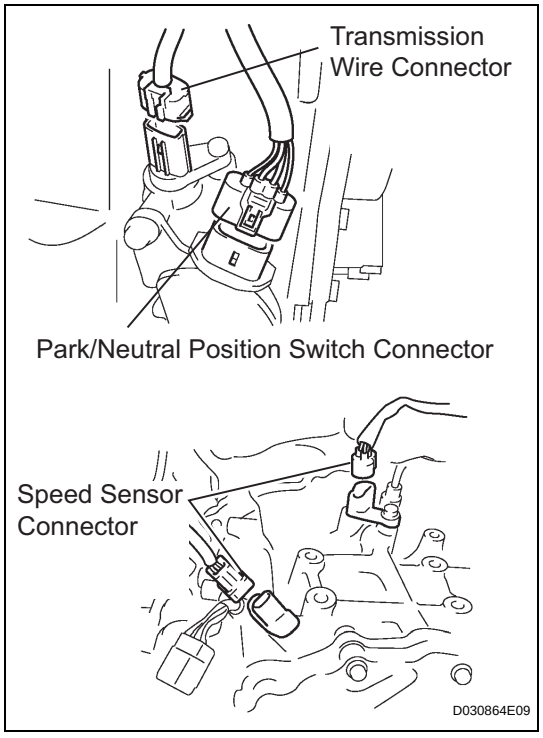
(c) Install the oil cooler tube clamp with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
HINT:
Install the oil cooler tube clamp so that the oil cooler tube cushions are positioned as shown in the illustration.



(d) Using SST and a wrench, tighten the No. 1 oil cooler inlet tube.
SST 09023-12701
Torque: For use without SST
34 N*m (350 kgf*cm, 25 ft.*lbf)
For use with SST
32 N*m (322 kgf*cm, 24 ft.*lbf)
HINT:
Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).

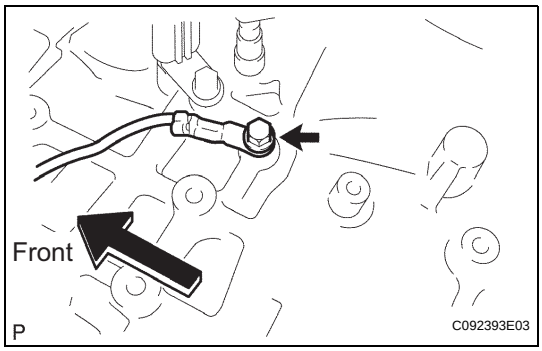
6. INSTALL NO. 1 OIL COOLER OUTLET TUBE

(a) Using SST and a wrench, tighten the No. 1 oil cooler outlet tube.
SST 09023-12701
Torque: For use without SST
34 N*m (350 kgf*cm, 25 ft.*lbf)
For use with SST
32 N*m (322 kgf*cm, 24 ft.*lbf)
HINT:
Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).



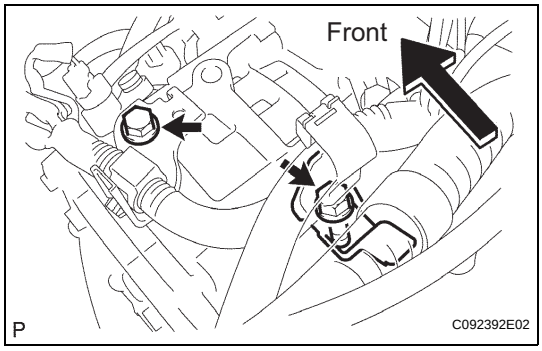
7. CONNECT CONNECTORS

(a) Connect the transmission wire connector.
(b) Connect the park/neutral position switch connector.
(c) Connect the 2 speed sensor connectors.



8. CONNECT WIRE HARNESS

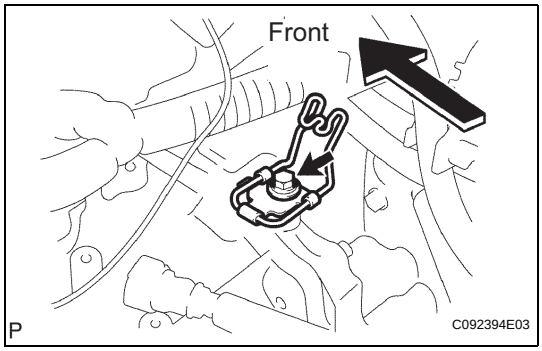
(a) Connect the wire harness with the bolt.
Torque: 12 N*m (130 kgf*cm, 9 ft.*lbf)



9. INSTALL WIRE HARNESS CLAMP BRACKET

(a) Install the 2 brackets with the 2 bolts.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)

(b) Connect the wire harnesses to the clamps.

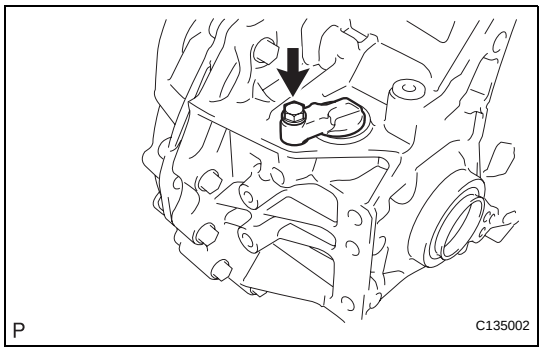


10. INSTALL NO. 2 TRANSMISSION CONTROL CABLE BRACKET

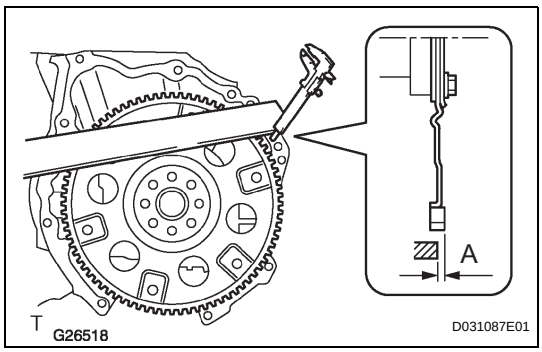
(a) Install the No. 2 transmission control cable bracket with the bolt.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

11. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Coat a new O-ring with ATF WS, and install it to the hole cover.

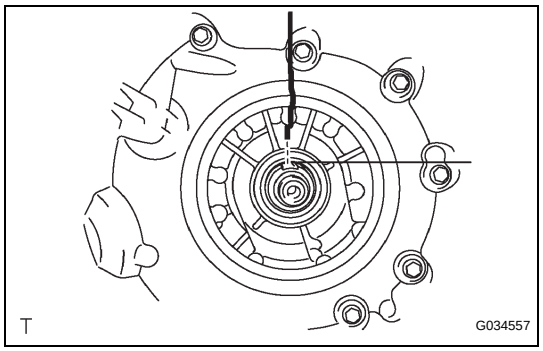


(b) Install the hole cover to the transaxle case with the bolt.
Torque: 5.5 N*m (56 kgf*cm, 47 in.*lbf)

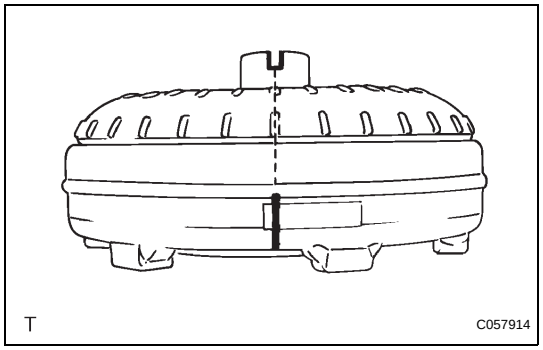


12. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

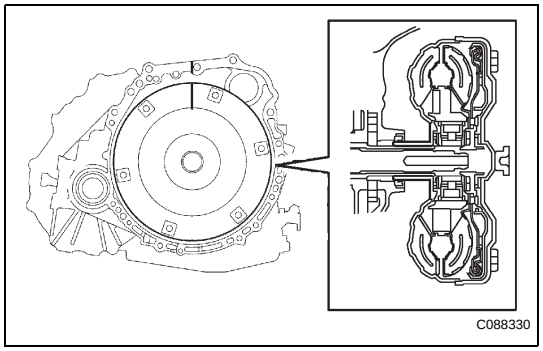
(a) Using vernier calipers and a straight edge, measure dimension "A" between the transaxle fitting part of the engine and the converter fitting part of the drive plate (#1).



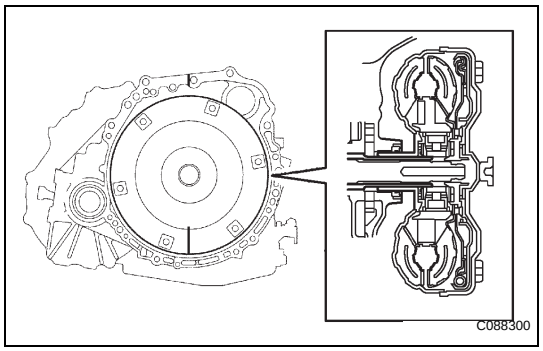
(b) Set the key of the front oil pump drive gear to the top and put a mark on the housing.



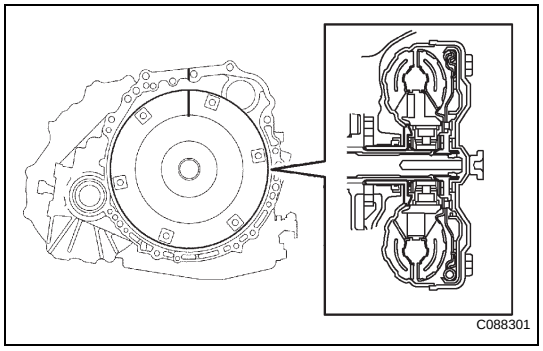
(c) Put a mark on the torque converter clutch so that its groove can be clearly indicated.



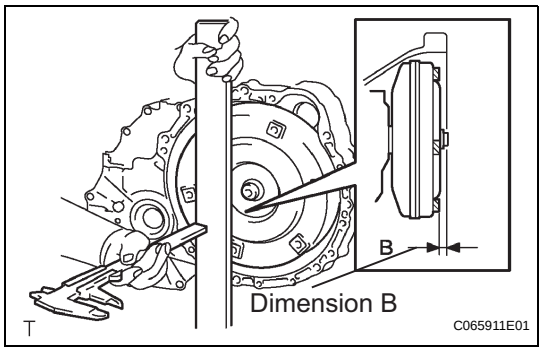
(d) Align the 2 marks on the transaxle case and torque converter clutch and fit the splined part of the input shaft to the spline part of the turbine runner.



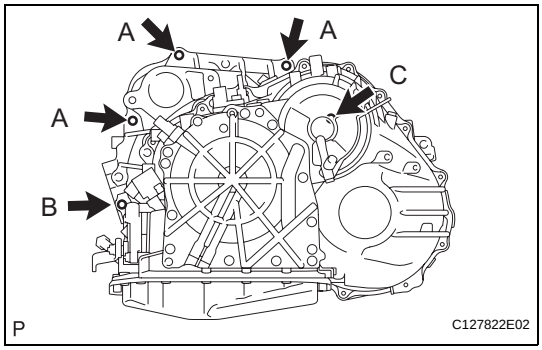
(e) Rotating the torque converter clutch, fit the spline part of the stator shaft to the spline part of the stator.
HINT:
Rotate it about 180 degrees.



(f) Rotating the torque converter clutch, align the 2 marks on the case and the torque converter clutch again and fit the key of the oil pump drive gear into the key way of the torque converter clutch.
CAUTION:
When rotating the torque converter clutch, do not push it with excessive force.

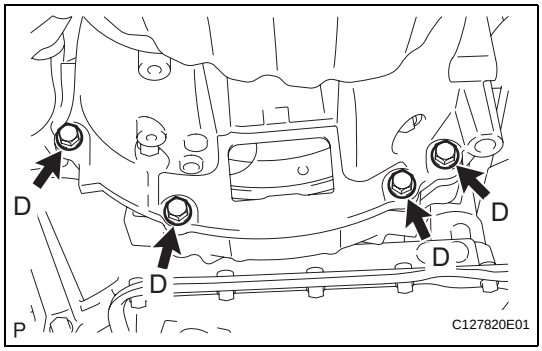


(g) Using vernier calipers and a straight edge, measure dimension "B" shown in the illustration and check that "B" is greater than "A" (measured in step (#1)).
Standard:
A + 1 (0.04 in.) mm or more
NOTICE:
Remember to minus the thickness of the straight edge.



13. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

(a) Install the automatic transaxle to the engine with the 5 bolts.
Torque: Bolt A
64 N*m (653 kgf*cm, 47 ft.*lbf)
Bolt B
46 N*m (469 kgf*cm, 34 ft.*lbf)
Bolt C
46 N*m (469 kgf*cm, 34 ft.*lbf)



(b) Install the 4 lower side mounting bolts.
Torque: Bolt D
44 N*m (449 kgf*cm, 32 ft.*lbf)

14. INSTALL STARTER ASSEMBLY (See page ST-13)

15. INSTALL ENGINE WIRE

16. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)

17. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)

18. INSTALL FRONT FRAME ASSEMBLY (See page EM-112)

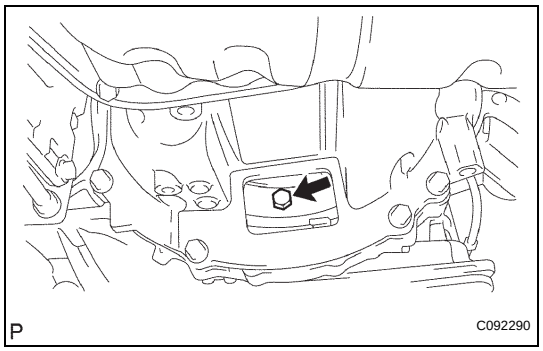
19. INSTALL VANE PUMP ASSEMBLY (See page EM-113)

20. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE (See page EM-114)

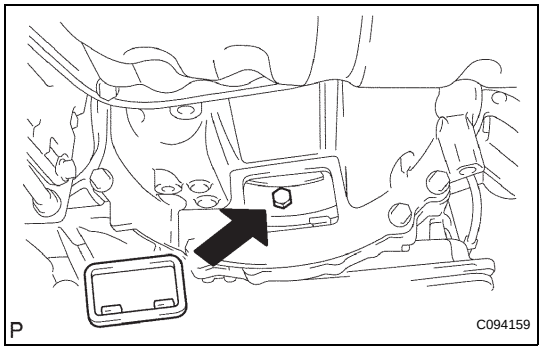
21. INSTALL STEERING SLIDING YOKE (See page PS-65)

22. INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT

(a) Apply a few drops of adhesive to 2 threads on the tip of the 6 torque converter clutch mounting bolts.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent.



(b) Install the 6 torque converter clutch mounting bolts.
Torque: 41 N*m (418 kgf*cm, 30 ft.*lbf)
NOTICE:
First install the black colored bolt, and then the remaining 5 bolts.



(c) Install the flywheel housing under cover.

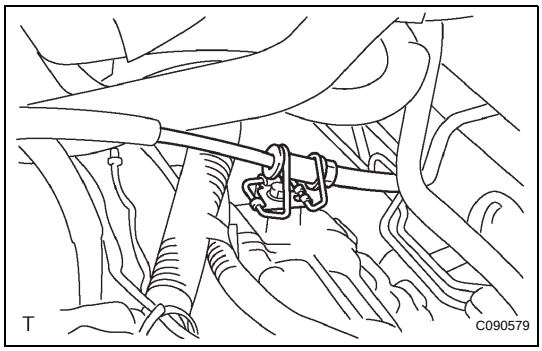
23. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-21)**
24. **INSTALL FRONT AXLE ASSEMBLY RH**
HINT:
Use the same procedures described for the LH side.
25. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-21)**
26. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH**
HINT:
Use the same procedures described for the LH side.
27. **INSTALL TIE ROD ASSEMBLY LH (See page DS-21)**
28. **INSTALL TIE ROD ASSEMBLY RH**
HINT:
Use the same procedures described for the LH side.
29. **INSTALL FRONT SPEED SENSOR LH (See page DS-21)**
30. **INSTALL FRONT SPEED SENSOR RH**
HINT:
Use the same procedures described for the LH side.
31. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-22)**
32. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
HINT:
Use the same procedures described for the LH side.
33. **INSTALL FRONT AXLE HUB NUT LH (See page DS-22)**
34. **INSTALL FRONT AXLE HUB NUT RH**
HINT:
Use the same procedures described for the LH side.
35. **INSTALL FRONT EXHAUST PIPE ASSEMBLY (See page EX-3)**
36. **CONNECT COMPRESSOR AND MAGNETIC CLUTCH (See page EM-115)**
37. **INSTALL GENERATOR ASSEMBLY (See page CH-19)**

38. **CONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-115)**

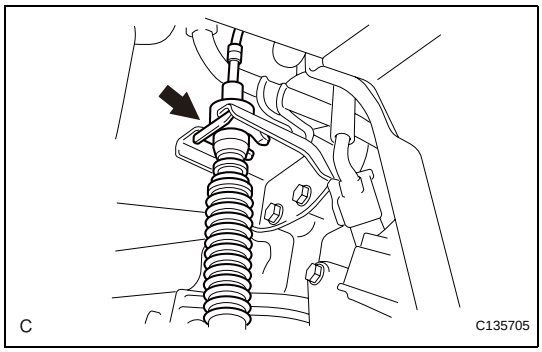
39. **CONNECT RETURN TUBE SUB-ASSEMBLY (See page EM-116)**

40. **CONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE (See page EM-116)**

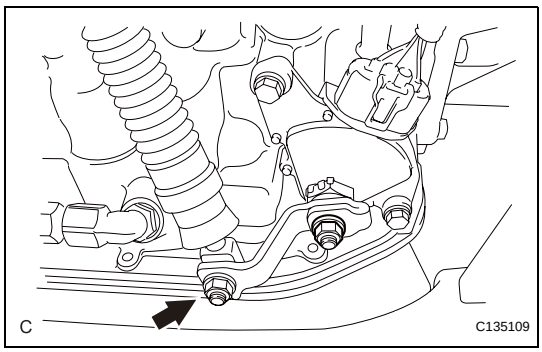
41. **CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY**



(a) Connect the transmission control cable assembly to the control cable clamp.



(b) Connect the transmission control cable to the bracket with a new clip.



(c) Connect the transmission control cable assembly to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)

42. **CONNECT ENGINE WIRE (See page EM-117)**

43. **INSTALL ECM (See page EM-117)**

44. **CONNECT HEATER INLET WATER HOSE (See page EM-117)**

45. **CONNECT HEATER OUTLET WATER HOSE (See page EM-118)**

46. **CONNECT OIL COOLER INLET HOSE (See page CO-30)**

47. **CONNECT OIL COOLER OUTLET HOSE (See page CO-30)**

48. **CONNECT RADIATOR HOSE INLET (See page EM-118)**

49. **CONNECT RADIATOR HOSE OUTLET (See page EM-118)**

50. **CONNECT NO. 1 VACUUM HOSE CONNECTOR (See page EM-118)**

51. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-118)**

52. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-119)**
53. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-119)**
54. **INSTALL BATTERY (See page EM-119)**
55. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-120)**
56. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-419)**
57. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-120)**
58. **INSTALL V-RIBBED BELT (See page EM-6)**
59. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-426)**
60. **INSTALL WINDSHIELD WIPER LINK ASSEMBLY**
    HINT:
    See page WW-13.
61. **INSTALL FRONT WHEEL (See page EM-120)**
62. **ADD ENGINE OIL**
63. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-120)**
64. **ADD ENGINE COOLANT (See page CO-5)**
65. **ADD AUTOMATIC TRANSAXLE FLUID**
    Fluid type:
    Toyota Genuine ATF WS
66. **ADD POWER STEERING FLUID**
67. **BLEED POWER STEERING FLUID (See page PS-7)**
68. **INSPECT AUTOMATIC TRANSAXLE FLUID (See page AX-123)**
69. **CHECK FOR FUEL LEAKS (See page FU-9)**
70. **CHECK FOR ENGINE OIL LEAKS**
71. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
72. **CHECK FOR EXHAUST GAS LEAKS**
73. **CHECK FOR SHIFT LEVER POSITION (See page AX-179)**
74. **ADJUST SHIFT LEVER POSITION (See page AX-182)**
75. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    See page SP-4.
76. **CHECK IGNITION TIMING (See page EM-1)**
77. **CHECK ENGINE IDLE SPEED (See page EM-2)**

78. **INSPECT CO/HC (See page EM-3)**
79. **INSTALL FRONT FENDER APRON SEAL RH**
80. **INSTALL ENGINE UNDER COVER LH**
81. **INSTALL ENGINE UNDER COVER RH**
82. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-121)**
83. **CHECK ABS SPEED SENSOR SIGNAL**
    HINT:
    See page BC-11.

N*m (kgf*cm, ft.*lbf) : Specified torque

C135729E04

ON-VEHICLE INSPECTION

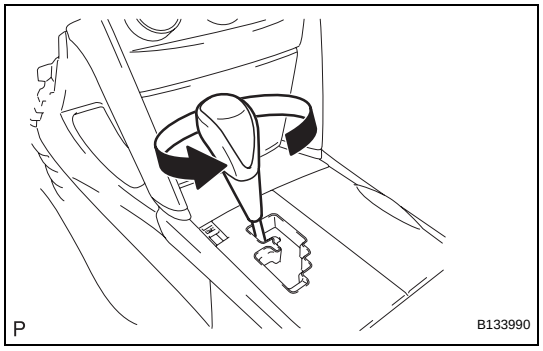
1. INSPECT SHIFT LEVER POSITION

(a) When shifting from the P to the R position with the ignition switch on and the brake pedal depressed, make sure that the shift lever moves smoothly and moves correctly into the position.

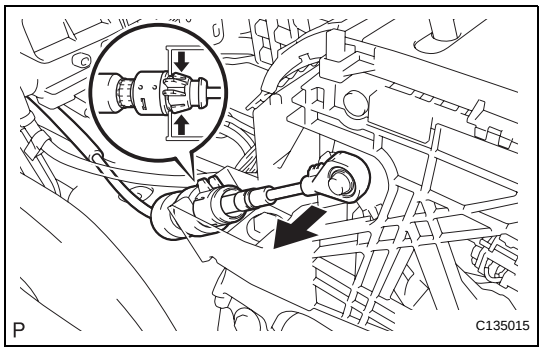
(b) Start the engine and make sure that the vehicle moves forward when shifting from the N to the D position and moves rearward when shifting to the R position. If operation cannot be done as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
6. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-22)**
7. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
   (a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.



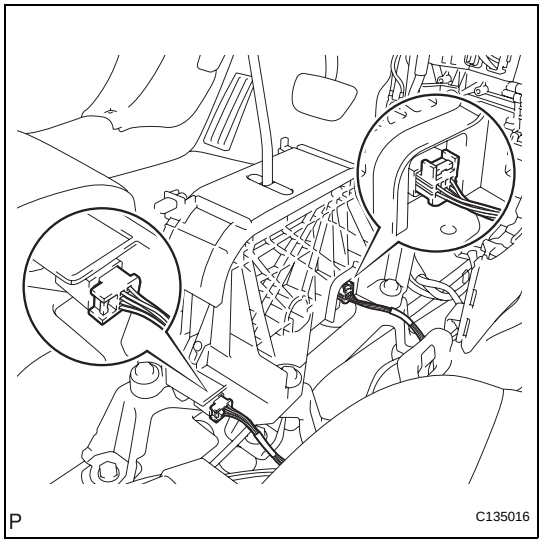
8. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
9. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
10. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-25)**
11. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-26)**
12. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)**
13. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)**
14. **REMOVE CONSOLE BOX POCKET (See page IP-28)**
15. **REMOVE CONSOLE BOX CARPET (See page IP-28)**
16. **REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)**
17. **REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)**
18. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)**
19. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**
20. **REMOVE FLOOR CARPET BRACKET LH (See page AC-155)**
21. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
    (a) Disconnect the end of the transmission control cable assembly from the shift lock control unit.



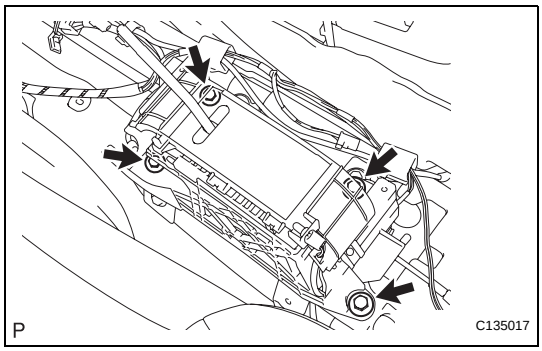
(b) Disconnect the transmission control cable assembly from the shift lock control unit.

22. REMOVE SHIFT LOCK CONTROL UNIT

(a) Disconnect the shift lock control ECU connector and transmission control switch wire connector.



(b) Remove the 4 bolts and shift lever.

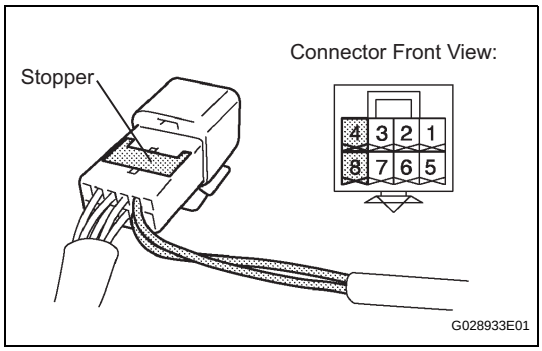


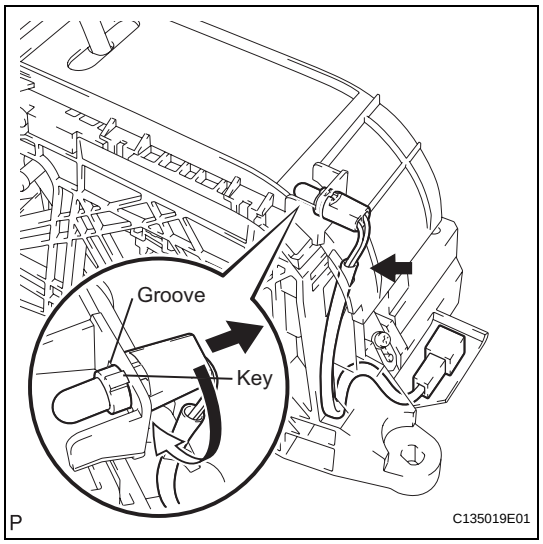
DISASSEMBLY

1. REMOVE INDICATOR LIGHT WIRE SUB-ASSEMBLY

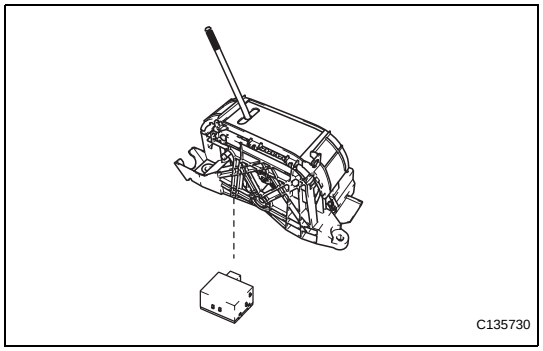
(a) Using a screwdriver, release the stopper.

(b) Using a screwdriver, disengage the locking lug of terminals (4) and (8), and pull the terminals out from the rear of the connector.



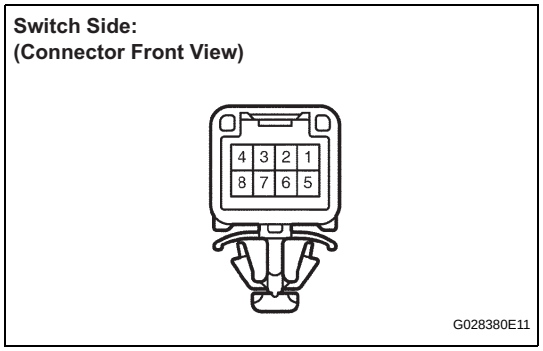


(c) Release the indicator light wire from the clamp on the shift lock control unit.
(d) Turn the indicator light guide counterclockwise.
(e) Align the indicator light guide key with the groove on the shift lock control unit to remove the indicator light wire.



2. REMOVE SHIFT LOCK CONTROL ECU

(a) Remove the shift lock control ECU from the shift lock control unit.



INSPECTION

1. INSPECT TRANSMISSION CONTROL SWITCH

(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
4 and 3	1 - 2	Below 1 Ω
Except 4 and 3		10 kΩ or higher
L	5 - 6	Below 1 Ω
Except L		10 kΩ or higher

If the resistance value is not as specified, replace the transmission control switch.

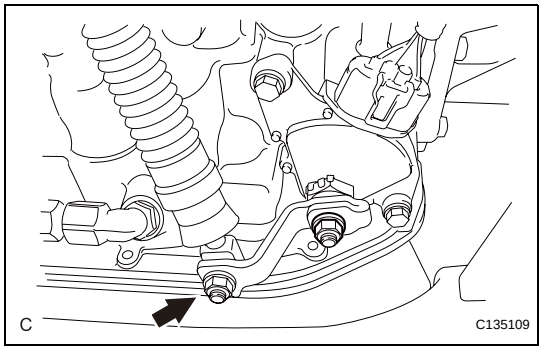
ADJUSTMENT

1. ADJUST SHIFT LEVER POSITION

(a) Move the shift lever to the N position.

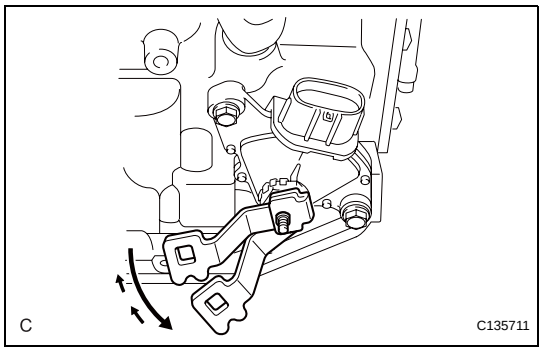
(b) Remove the nut from the control shaft lever.

(c) Disconnect the transmission control cable assembly from the control shaft lever.

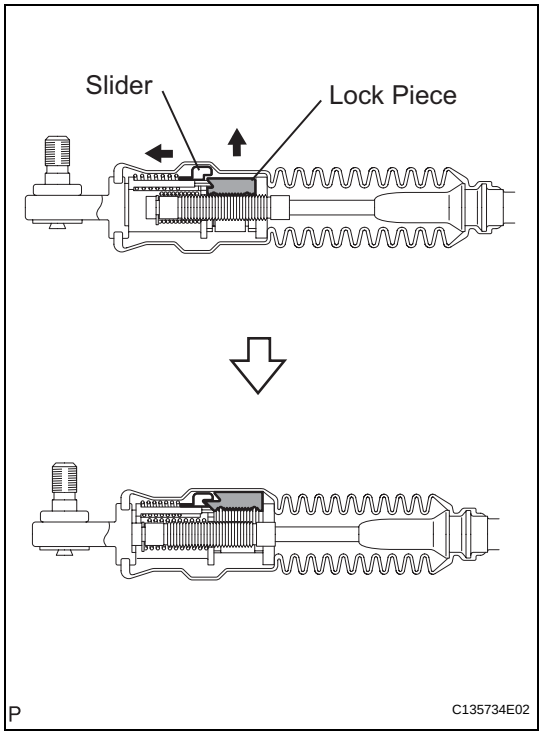


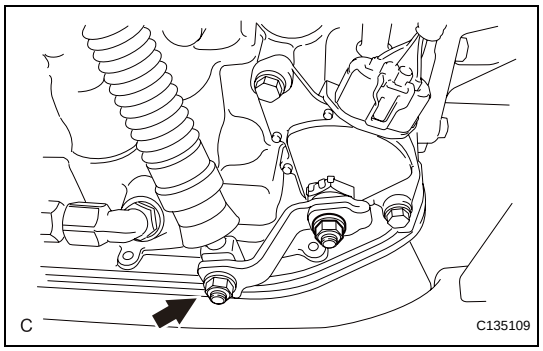
(d) Push the control shaft fully downward.

(e) Return the control shaft lever 2 notches to the N position.

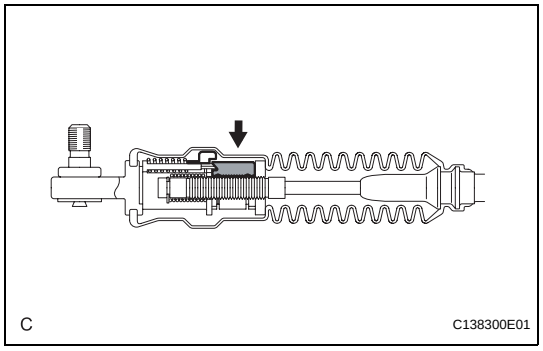


(f) Move the slider in the directions indicated by the arrows and pull up the lock piece.
NOTICE:
Do not damage the boot.





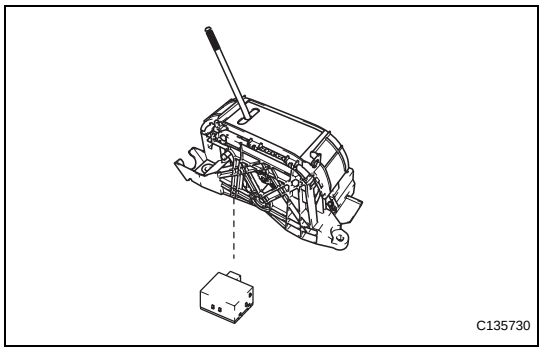
(g) Connect the transmission control cable assembly to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)



(h) Push in the lock piece.
NOTICE:
Firmly push in the lock piece until the slider lock is engaged.

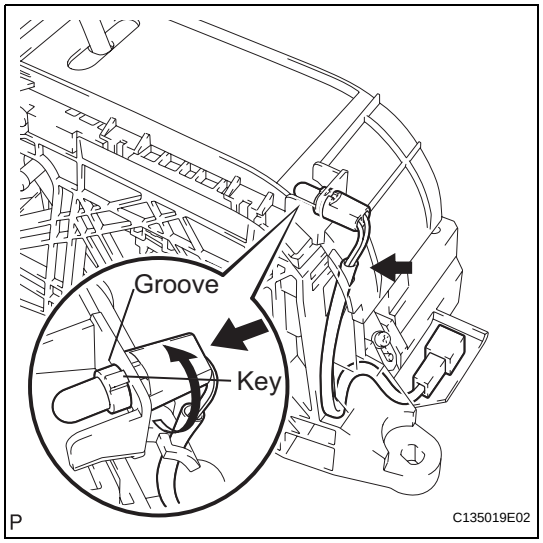
(i) Start the engine and make sure that the vehicle moves forward when moving the lever from the N to the D position and moves rearward when moving it to the R position.
If it becomes hard to move the shift lever, readjust the shift lever position.

REASSEMBLY



1. INSTALL SHIFT LOCK CONTROL ECU

(a) Install the shift lock control ECU to the shift lever.

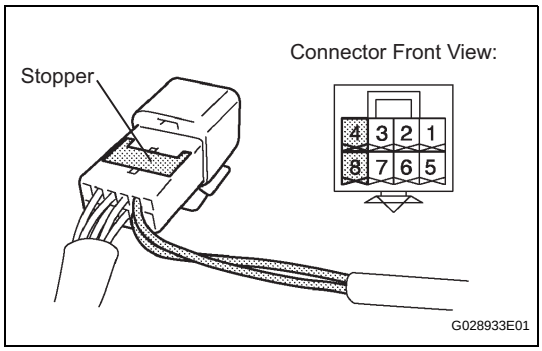


2. INSTALL INDICATOR LIGHT WIRE SUB-ASSEMBLY

(a) Insert the indicator light wire into the shift lock control unit while aligning the groove on the unit with the indicator light guide key.

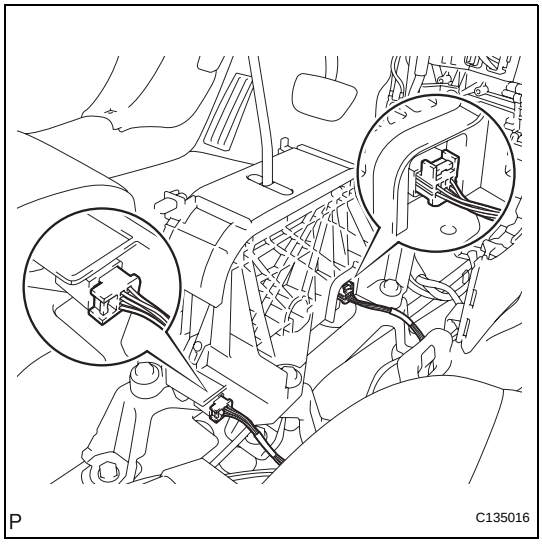
(b) Install the indicator light guide by turning it clockwise until it securely locks.

(c) Install the indicator light wire to the clamp on the shift lock control unit.

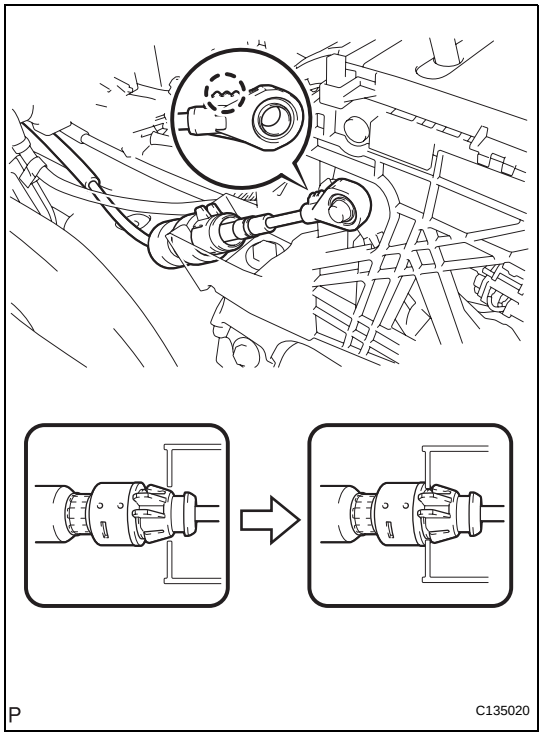


(d) Connect terminals (4) and (8) of the indicator light wire.
(e) Push the stopper.

INSTALLATION



1. INSTALL SHIFT LOCK CONTROL UNIT
(a) Connect the shift lock ECU connector and transmission control switch wire connector.
(b) Install the 4 bolts and shift lock control unit.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)



2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY
(a) Install the transmission control cable assembly as shown in the illustration.
HINT:
- Install the floor shift cable with the uneven surface facing up.
- Securely engage the claws of the floor shift cable.

3. INSTALL FLOOR CARPET BRACKET LH

4. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)

5. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)

6. INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)

7. INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)

8. INSTALL CONSOLE BOX CARPET (See page IP-51)

9. INSTALL CONSOLE BOX POCKET (See page IP-51)

10. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)

11. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)**
12. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)**
13. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-53)**
14. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
15. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
16. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY**
    (a) Install the shift lever knob sub-assembly.
17. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-57)**
18. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
19. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
20. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
21. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
22. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)
23. **INSPECT SHIFT LEVER POSITION (See page AX-146)**
24. **ADJUST SHIFT LEVER POSITION (See page AX-146)**

REMOVAL

1. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

HINT:

See page AX-162.

INSPECTION

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

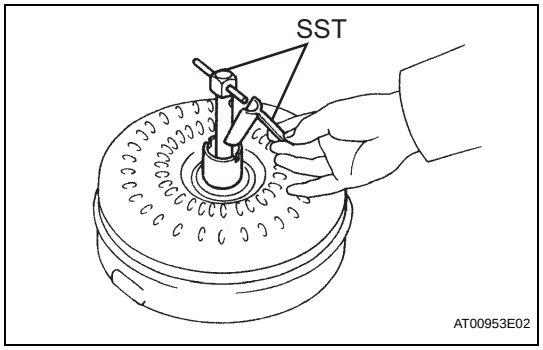
(a) Inspect the one-way clutch.

(1) Set SST into the inner race of the one-way clutch.

SST 09350-32014 (09351-32010)

(2) Install SST so that it fits in the notch of the converter hub and outer race of the one-way clutch.

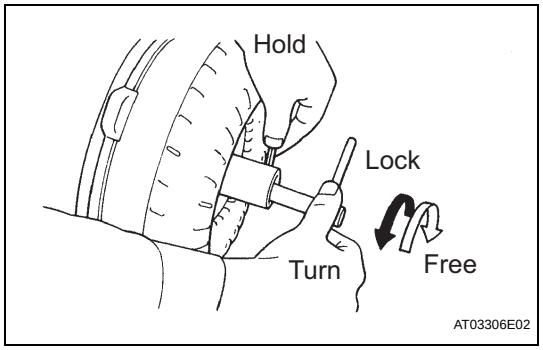
SST 09350-32014 (09351-32010, 09351-32020)



(3) Stand the torque converter up and turn the SST.

Standard:

If the one-way clutch is turned clockwise, it rotates freely and if turned counterclockwise, it locks.



(b) Determine the condition of the torque converter clutch assembly.

(1) If the inspection result of the torque converter clutch assembly satisfies the following conditions, replace the torque converter clutch assembly.

Malfunction item:

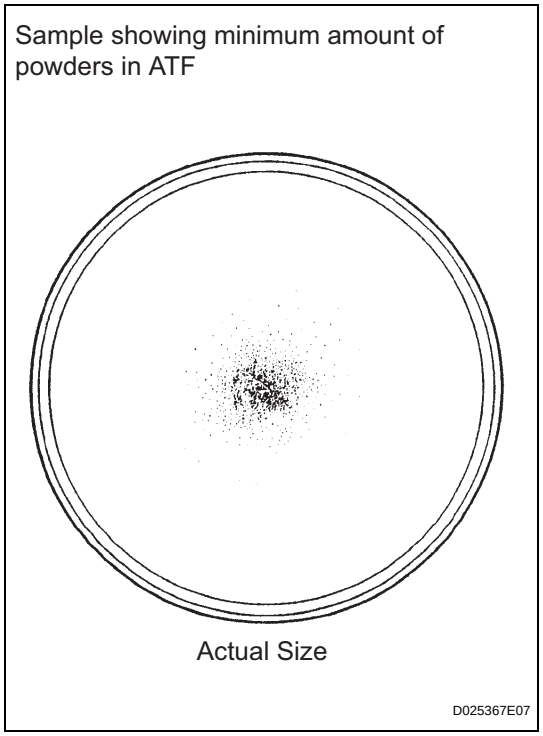
A metallic sound is emitted from the torque converter clutch assembly during the stall test or when the shift lever is moved to the N position.

The one-way clutch is free or locked in both directions.

The amount of powder in the ATF is greater than the sample shown in the illustration (see the sample).

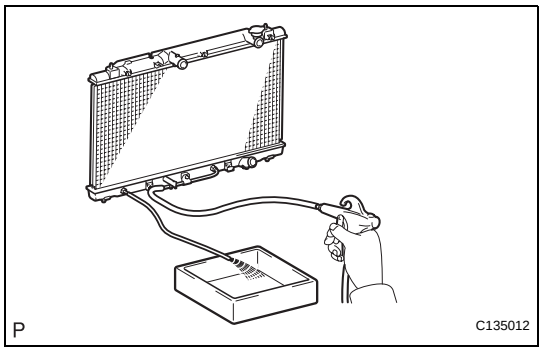
HINT:

The sample shows the auto fluid of approximately 0.25 liters (0.26 US qts, 0.22 Imp. qts) that is taken out from the removed torque converter clutch.



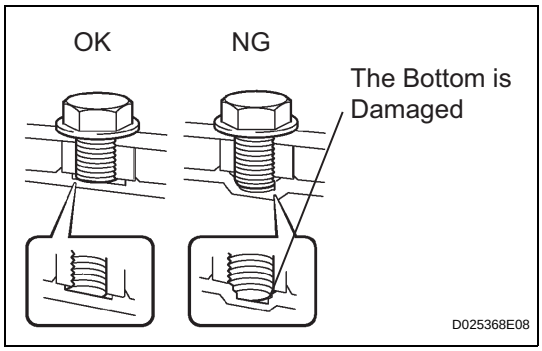
(c) Exchange the ATF in the torque converter clutch.

(1) If the ATF is discolored and/or has a foul odor, completely stir the ATF in the torque converter clutch and drain it.

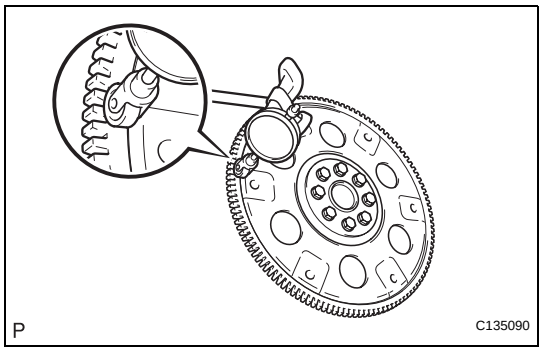


(d) Clean and check the oil cooler and oil pipe line.
(1) If the torque converter clutch is inspected or the ATF is exchanged, clean the oil cooler and oil pipe line.
HINT:
- Spray compressed air of 196 kPa (2 kgf/cm^2, 28 psi) from the inlet hose.
- If plenty of fine powders are identified in the ATF, add new ATF using a bucket pump and clean it again.

(2) If the ATF is cloudy, inspect the oil cooler (radiator).



(e) Prevent deformation of the torque converter clutch and damage to the oil pump gear.
(1) When there is any damage to the end of the bolt for the torque converter clutch and to the bottom of the bolt hole, replace the bolt and the torque converter clutch.
(2) All of the bolts must be the same length.
(3) Bolts with washers must be used.



2. INSPECT DRIVE PLATE & RING GEAR SUB-ASSEMBLY

(a) Set up a dial indicator with a roller instrument and measure the drive plate runout.
(b) Check for damage of the ring gear.
Maximum runout:
0.20 mm (0.0079 in.)
If runout is not within specification or the ring gear is damaged, replace the drive plate.

INSTALLATION

1. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

HINT:

See page AX-168.

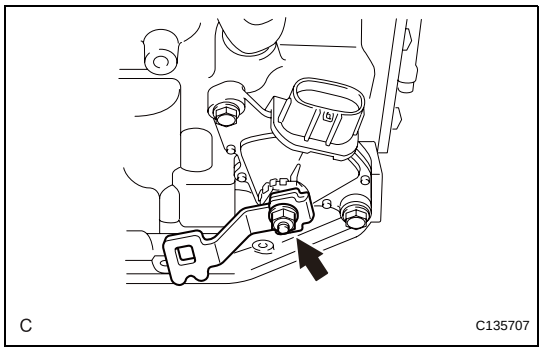
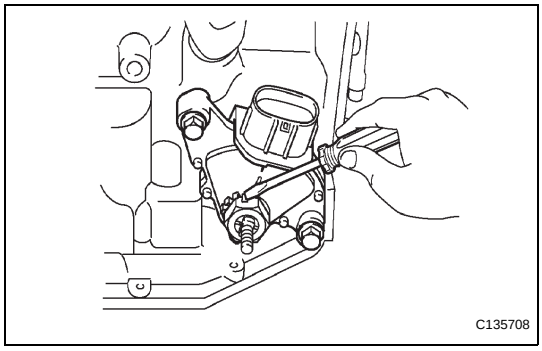
DISASSEMBLY

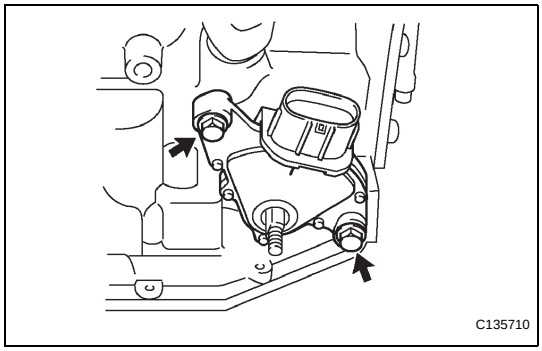


1. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

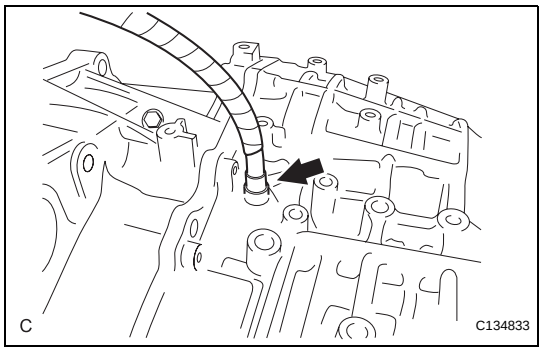
(a) Remove the nut, washer, and control shaft lever.



(b) Using a screwdriver, unstake the lock plate, and remove the lock nut and nut stopper.

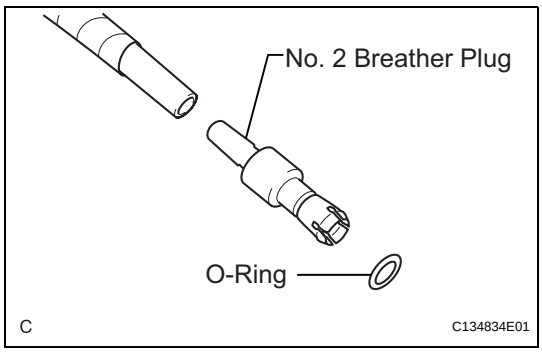


(c) Remove the 2 bolts and pull out the park/neutral position switch.

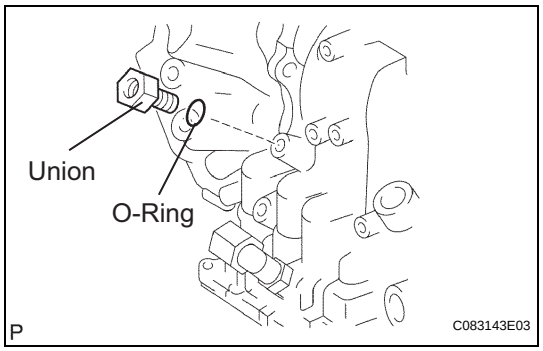


2. REMOVE NO. 2 BREATHER PLUG

(a) Remove the No. 2 breather plug from the transaxle case.

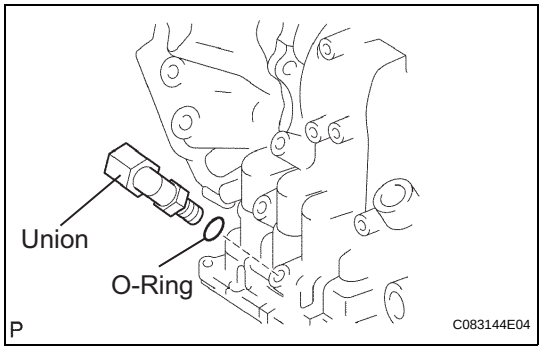


(b) Remove the hose and O-ring from the No. 2 breather plug.



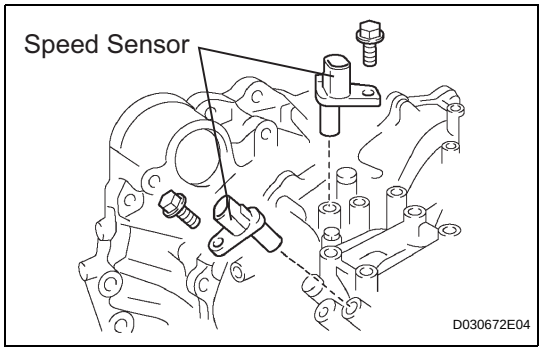
3. REMOVE OIL COOLER TUBE UNION (INLET OIL COOLER UNION)

(a) Remove the union.
(b) Remove the O-ring from the union.



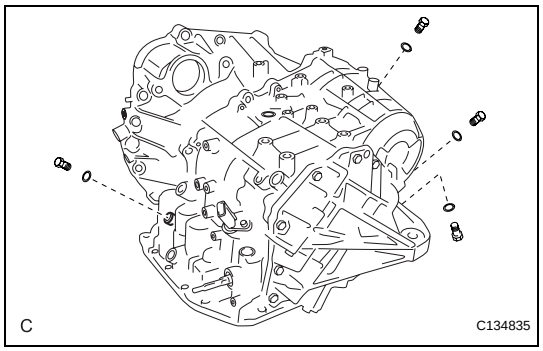
4. REMOVE OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)

(a) Remove the union.
(b) Remove the O-ring from the union.



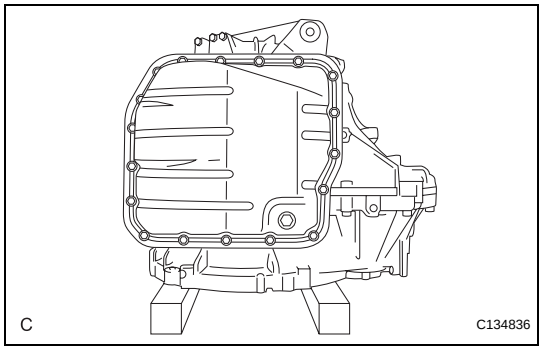
5. REMOVE SPEED SENSOR

(a) Remove the 2 bolts and the 2 speed sensors from the transaxle assembly.



6. REMOVE NO. 1 TRANSAXLE CASE PLUG

(a) Remove the 4 No. 1 transaxle case plugs from the transaxle case.
(b) Remove the 4 O-rings from the 4 No. 1 transaxle case plugs.

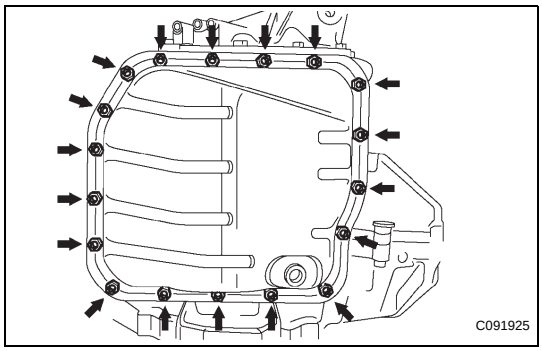


7. FIX AUTOMATIC TRANSAXLE ASSEMBLY

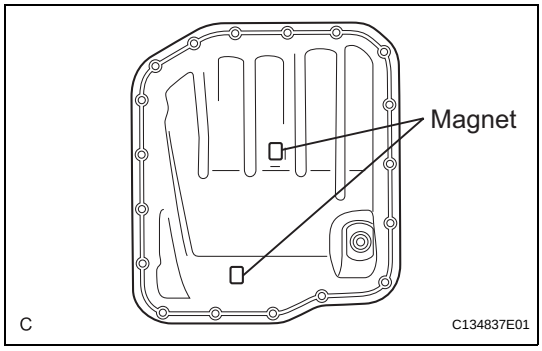
(a) Fix the transaxle assembly.

8. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

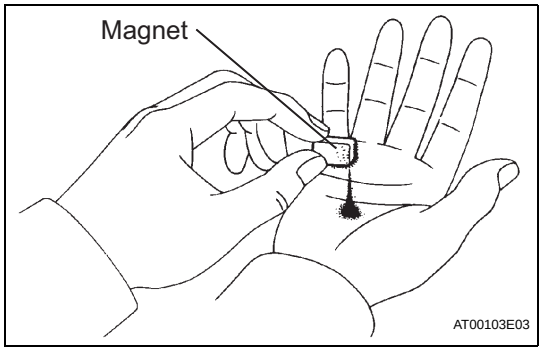
(a) Remove the drain plug and drain plug gasket from the oil pan.



(b) Remove the 18 bolts, oil pan, and gasket.



(c) Remove the 2 transmission oil cleaner magnets from the oil pan.

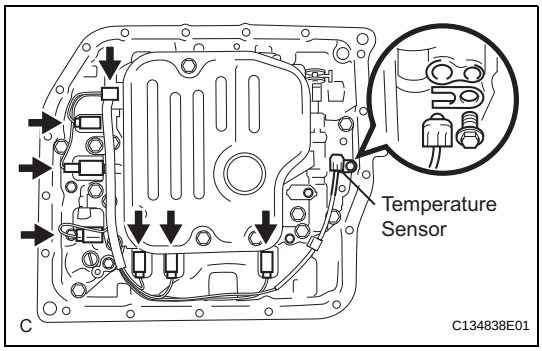


9. INSPECT TRANSMISSION OIL CLEANER MAGNET

(a) Remove the magnets and use them to collect any steel chips. Examine the chips and particles in the pan and on the magnet to determine what type of wear has occurred in the transaxle:

Result:

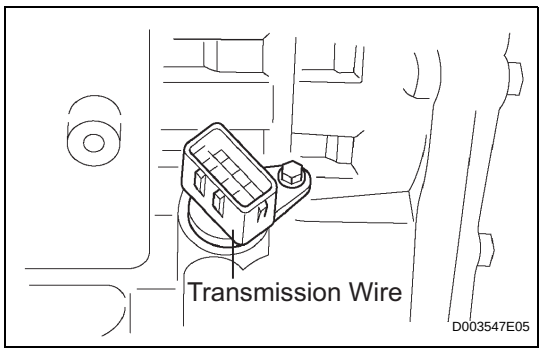
Steel (magnetic):
bearing, gear, and plate wear
Brass (non-magnetic):
bushing wear



10. DISCONNECT TRANSMISSION WIRE

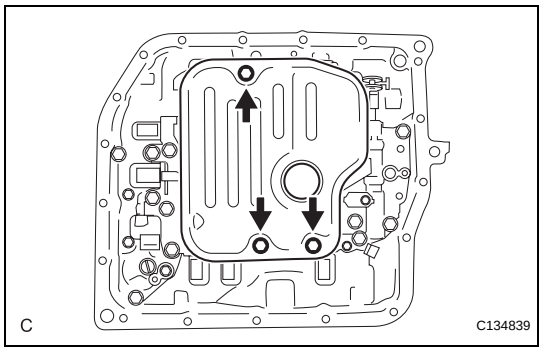
(a) Disconnect the 7 connectors from the shift solenoid valves.

(b) Remove the bolt, lock plate, and ATF temperature sensor.



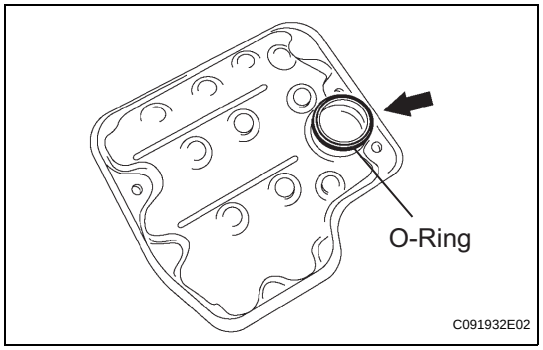
11. REMOVE TRANSMISSION WIRE

(a) Remove the bolt and transmission wire from the transaxle case.

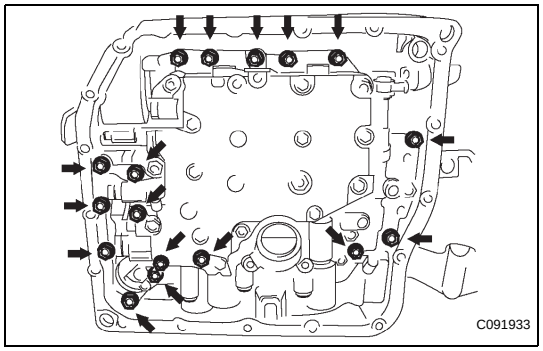


12. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

(a) Remove the 3 bolts and oil strainer.

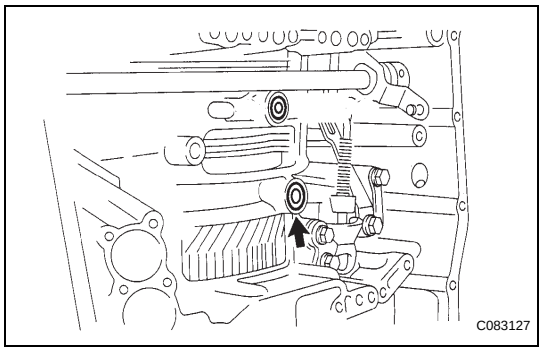


(b) Remove the O-ring from the oil strainer.



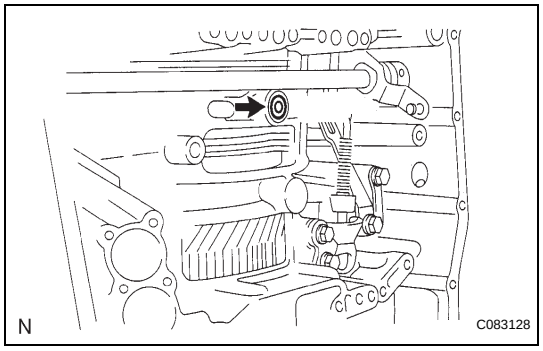
13. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Support the valve body assembly and remove the 17 bolts and valve body assembly.



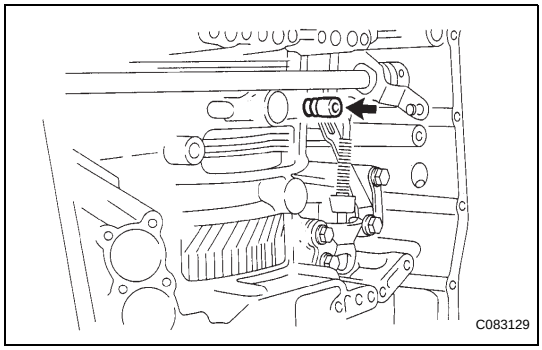
14. REMOVE NO. 1 GOVERNOR APPLY GASKET

(a) Remove the No. 1 governor apply gasket from the transaxle case.



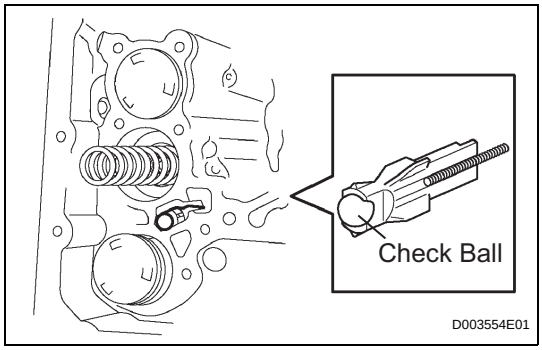
15. REMOVE TRANSAXLE CASE 2ND BRAKE GASKET

(a) Remove the transaxle case 2nd brake gasket from the transaxle case.



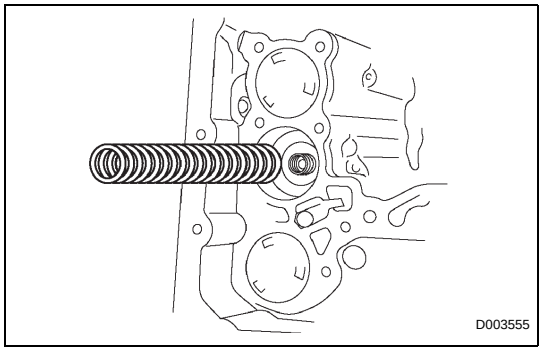
16. REMOVE BRAKE DRUM GASKET

(a) Remove the brake drum gasket from the transaxle case.



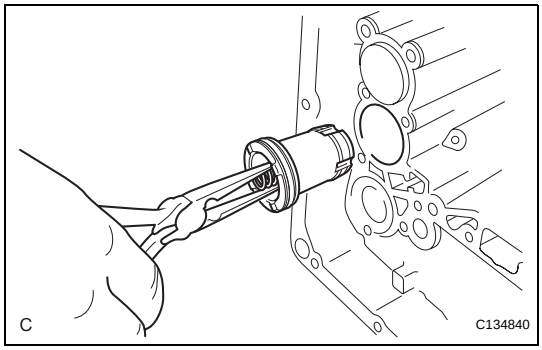
17. REMOVE CHECK BALL BODY

(a) Remove the check ball body and spring from the transaxle case.

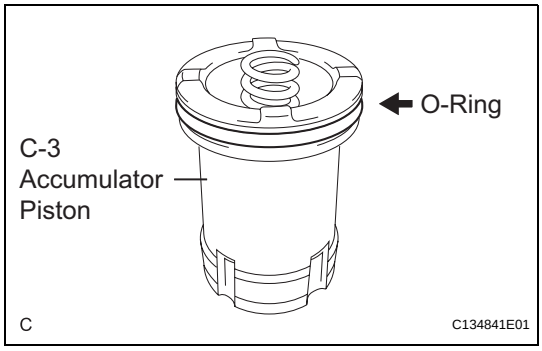


18. REMOVE C-3 ACCUMULATOR PISTON

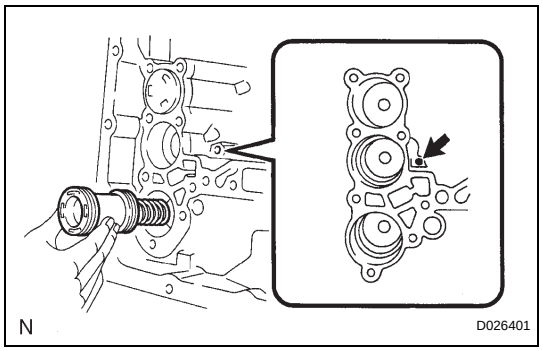
(a) Remove the spring from the C-3 accumulator piston.



(b) Using needle-nose pliers, remove the the C-3 accumulator piston from the transaxle case.



(c) Remove the O-ring from the C-3 accumulator piston.



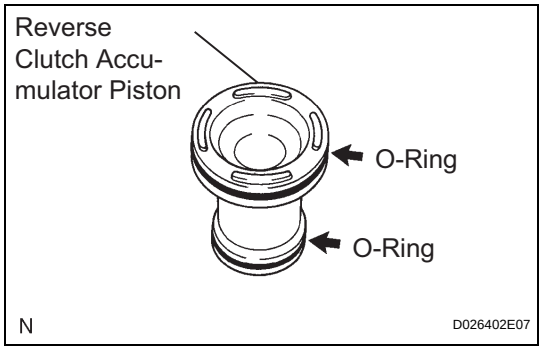
19. REMOVE REVERSE CLUTCH ACCUMULATOR PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the reverse accumulator piston and spring.

NOTICE:

- **Applying compressed air may cause the piston to jump-out. When removing the piston, hold it by hand using a waste cloth.**
- **Take care not to splash ATF when applying the air.**

(b) Remove the 2 O-rings from the reverse clutch accumulator piston.



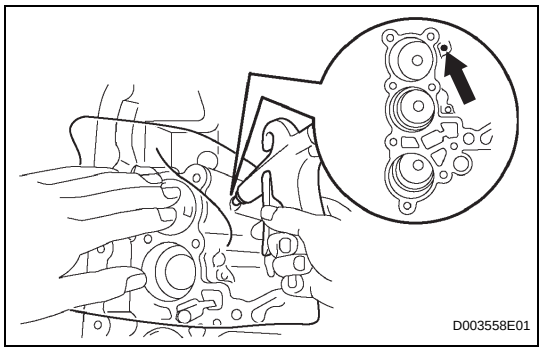
20. REMOVE B-3 ACCUMULATOR PISTON

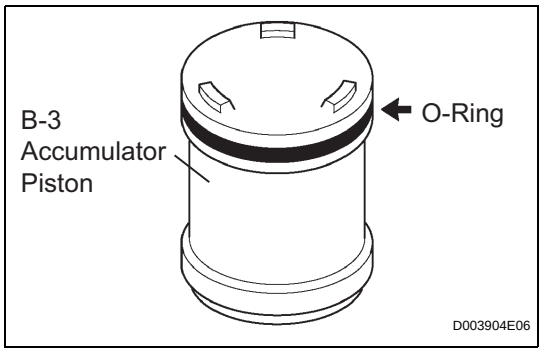
(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole and remove the B-3 accumulator piston and 2 springs.

NOTICE:

- **Applying compressed air may cause the piston to jump-out. When removing the piston, hold it by hand using a waste cloth.**
- **Take care not to splash ATF when applying the air.**

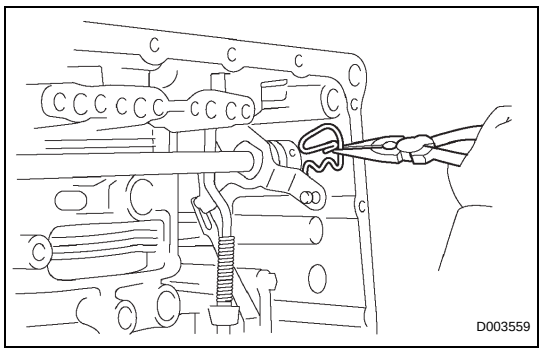
(b) Remove the O-ring from the B-3 accumulator piston.

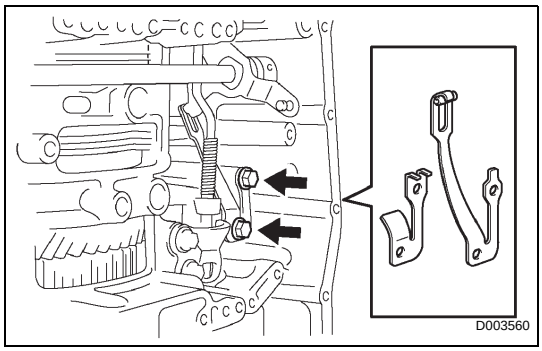




21. REMOVE MANUAL VALVE LEVER SHAFT RETAINER SPRING

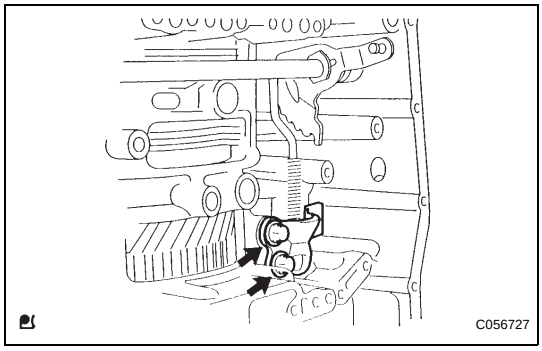
(a) Using needle-nose pliers, remove the manual valve lever shaft retainer spring.





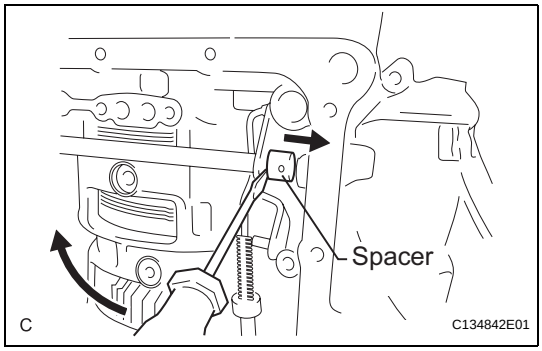
22. REMOVE MANUAL DETENT SPRING SUB-ASSEMBLY

(a) Remove the 2 bolts and manual detent spring sub-assembly.



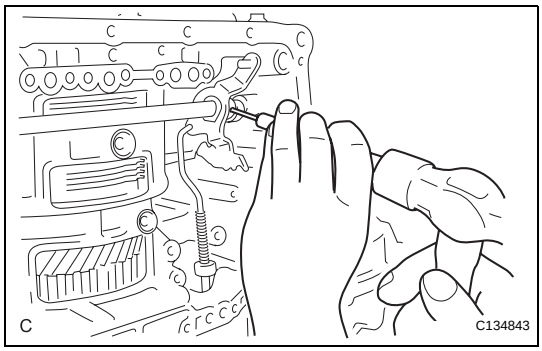
23. REMOVE PARKING LOCK PAWL BRACKET

(a) Remove the 2 bolts and parking lock pawl bracket.

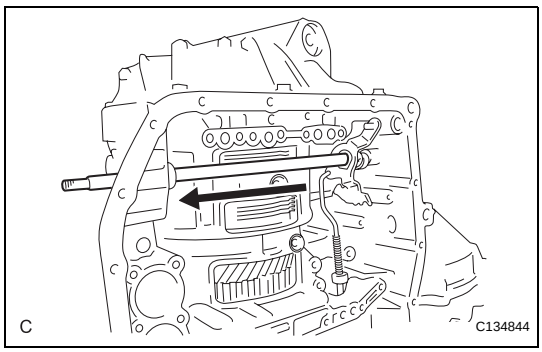


24. REMOVE MANUAL VALVE LEVER SUB-ASSEMBLY

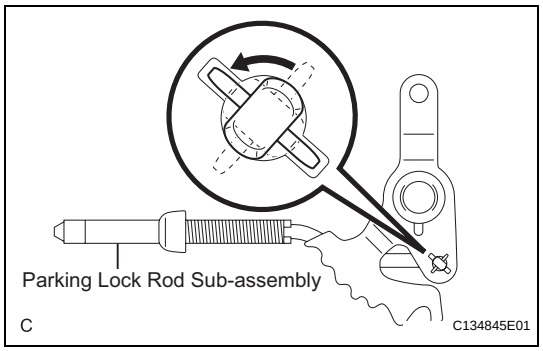
(a) Using a screwdriver, slide the spacer.



(b) Using a pin punch (ϕ3 mm) and hammer, drive out the pin.
HINT:
Slowly drive out the pin so that it will not fall into the transaxle case.

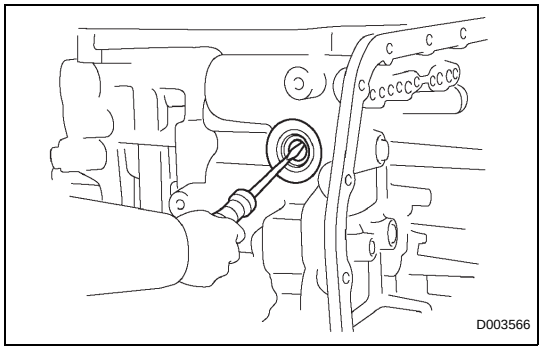


(c) Remove the manual valve lever shaft, manual valve lever, and spacer.



25. REMOVE PARKING LOCK ROD SUB-ASSEMBLY

(a) Remove the parking lock rod sub-assembly from the manual valve lever sub-assembly.
HINT:
Align the dial with the notches on the manual valve lever sub-assembly to remove the parking lock rod sub-assembly.



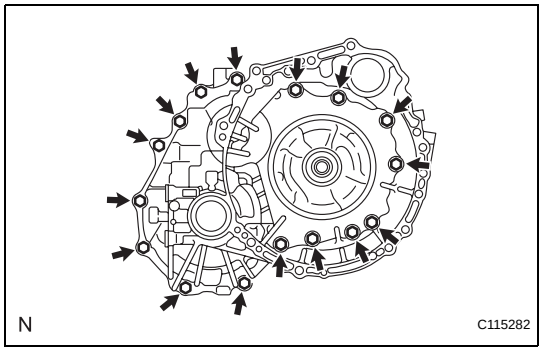
26. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Using a screwdriver, remove the oil seal from the transaxle case.

27. FIX AUTOMATIC TRANSAXLE ASSEMBLY

(a) Fix the transaxle case with the oil pump side facing up.

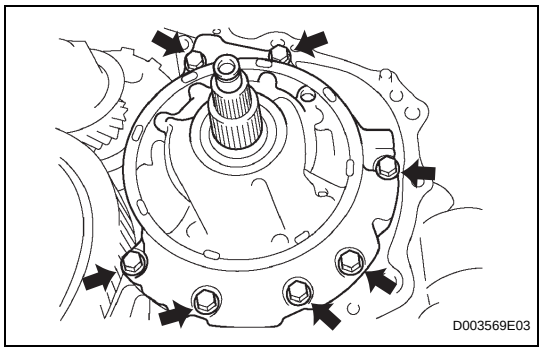
28. INSPECT INPUT SHAFT END PLAY (See page AX-231)



29. REMOVE TRANSAXLE HOUSING

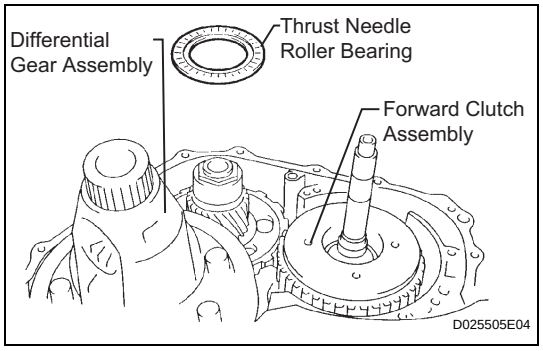
(a) Remove the 16 bolts.

(b) Tap on the circumference of the transaxle housing with a plastic hammer to remove the transaxle housing from the transaxle case.
NOTICE:
The differential may be accidentally removed when the transaxle housing is removed.



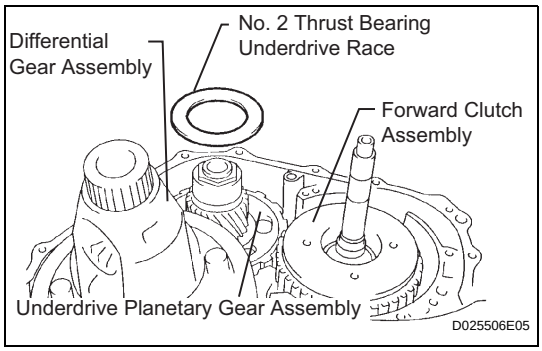
30. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 7 bolts and oil pump from the transaxle case.



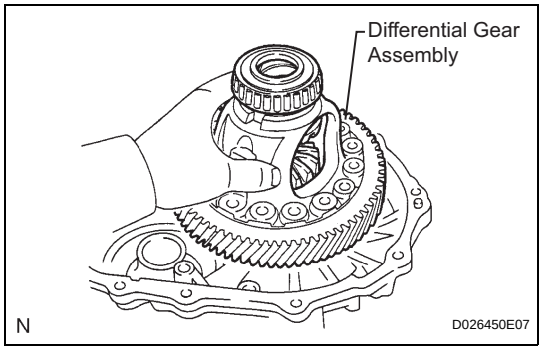
31. REMOVE THRUST NEEDLE ROLLER BEARING

(a) Remove the thrust needle roller bearing from the underdrive planetary gear assembly.



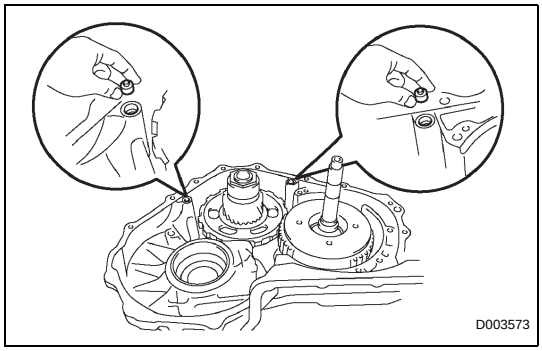
32. REMOVE NO. 2 THRUST BEARING UNDERDRIVE RACE

(a) Remove the No. 2 thrust bearing underdrive race from the underdrive planetary gear assembly.



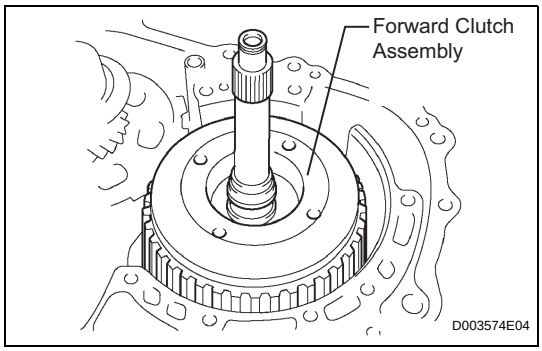
33. REMOVE DIFFERENTIAL GEAR ASSEMBLY

(a) Remove the differential gear assembly from the transaxle case.



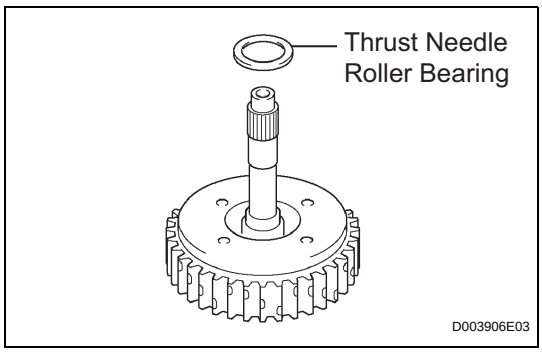
34. REMOVE OVERDRIVE BRAKE GASKET

(a) Remove the 2 overdrive brake gaskets from the transaxle case.

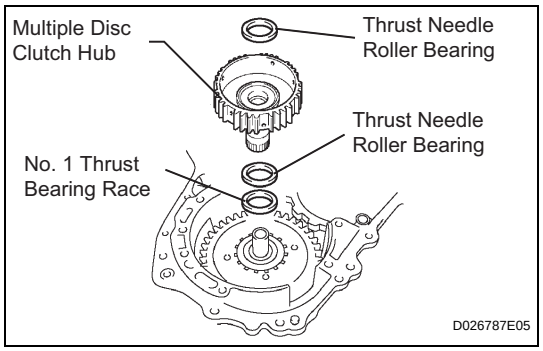


35. REMOVE FORWARD CLUTCH ASSEMBLY

(a) Remove the forward clutch assembly from the transaxle case.



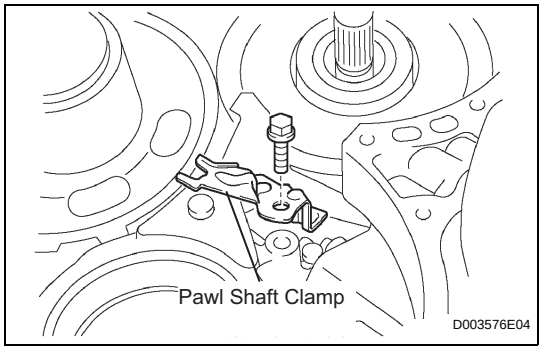
(b) Remove the thrust needle roller bearing from the forward clutch.



36. REMOVE MULTIPLE DISC CLUTCH HUB

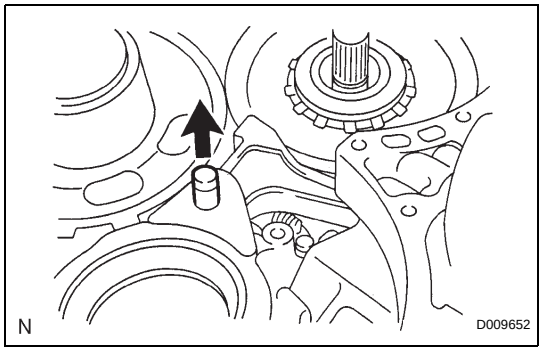
(a) Remove the thrust needle roller bearing, multiple disc clutch hub, thrust needle roller bearing and No. 1 thrust bearing race from the transaxle case.

37. INSPECT MULTIPLE DISC CLUTCH HUB (See page AX-228)

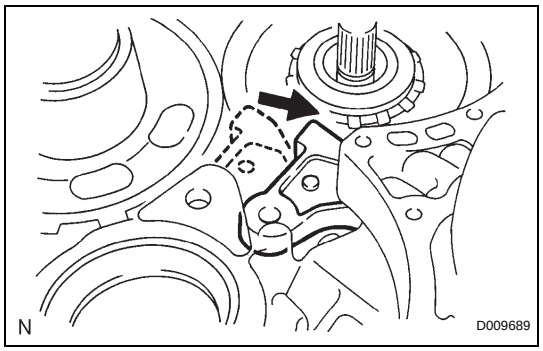


38. REMOVE UNDERDRIVE PLANETARY GEAR ASSEMBLY

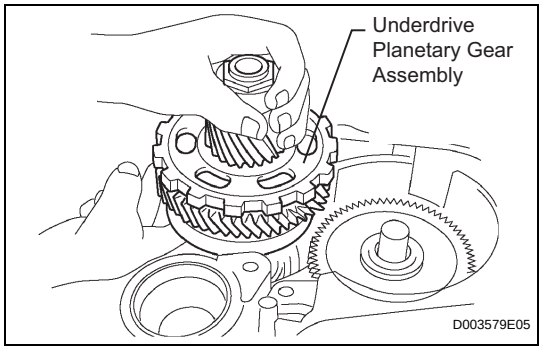
(a) Remove the bolt and pawl shaft clamp from the transaxle case.



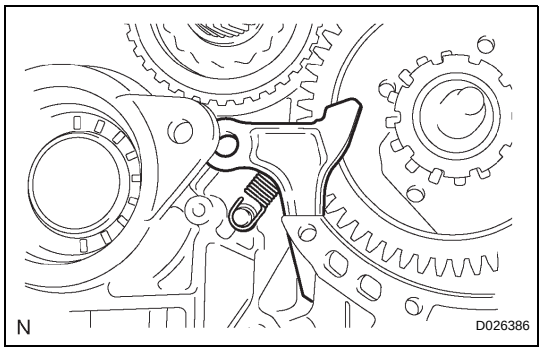
(b) Remove the parking lock pawl shaft from the transaxle case.



(c) Push the parking lock pawl.
HINT:
Failure to do so will cause interference when the underdrive planetary gear is removed.

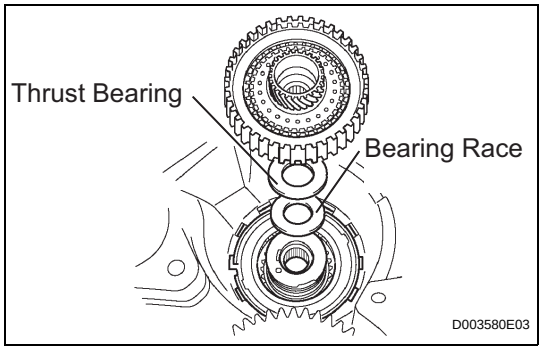


(d) Remove the underdrive planetary gear assembly from the transaxle case.
NOTICE:
Do not drop the underdrive planetary gear assembly.



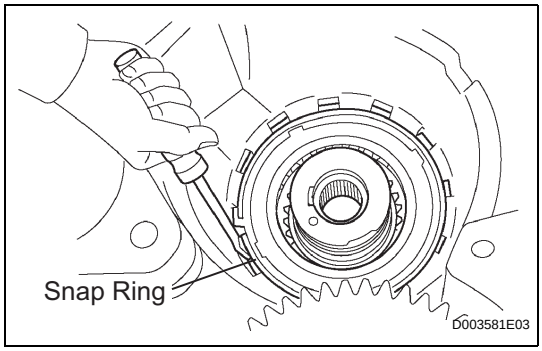
39. REMOVE PARKING LOCK PAWL

(a) Remove the spring, pawl pin and parking lock pawl.



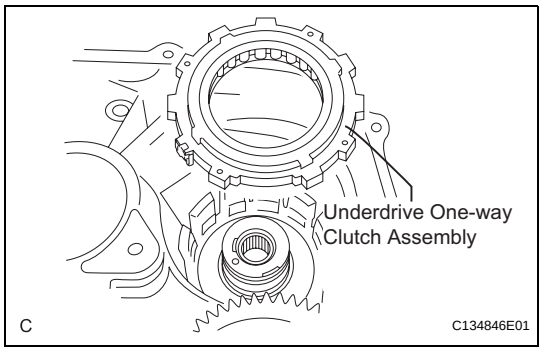
40. REMOVE UNDERDRIVE CLUTCH ASSEMBLY

(a) Remove the underdrive clutch assembly, thrust bearing, and bearing race from the transaxle case.

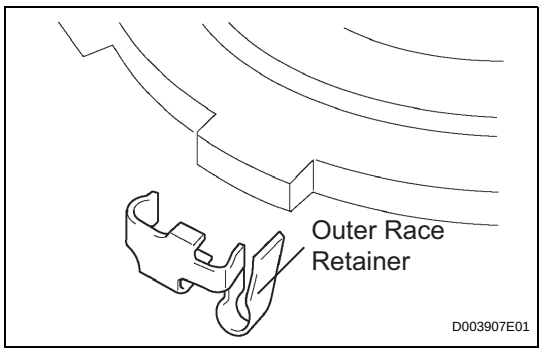


41. REMOVE UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY

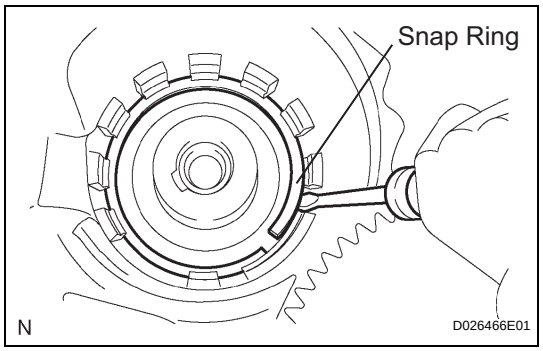
(a) Using a screwdriver, remove the snap ring from the transaxle case.



(b) Remove the underdrive one-way clutch from the transaxle case.

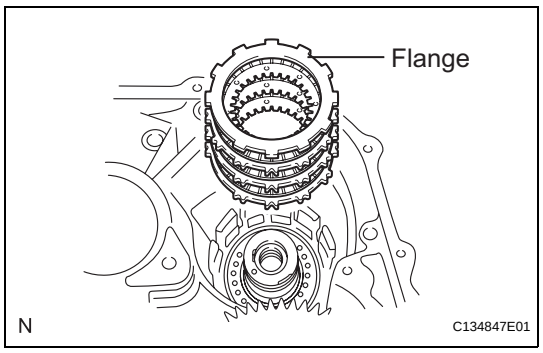


(c) Remove the outer race retainer from the one-way clutch.



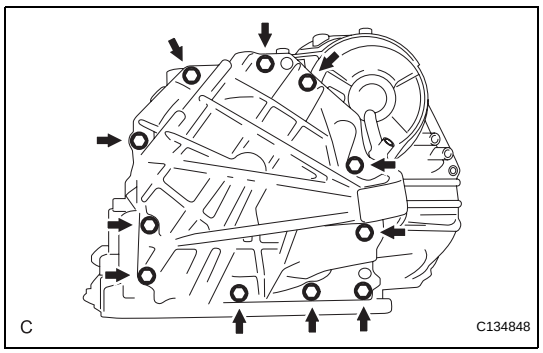
42. REMOVE NO. 2 UNDERDRIVE CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.



(b) Remove the flange, 3 discs and 3 plates from the transaxle case.

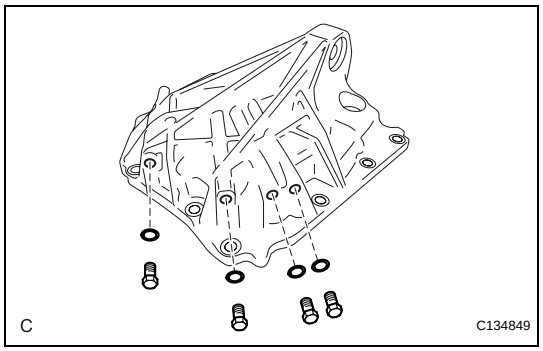
43. INSPECT NO. 2 UNDERDRIVE CLUTCH DISC (See page AX-228)



44. REMOVE TRANSAXLE REAR COVER SUB-ASSEMBLY

(a) Remove the 11 bolts.

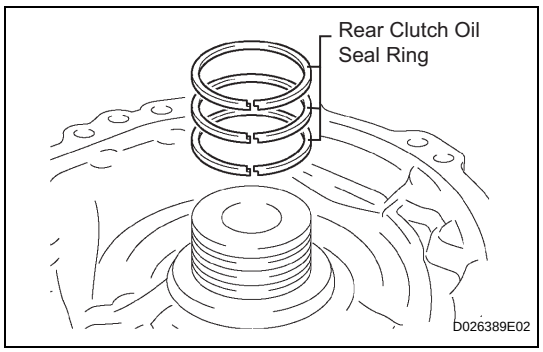
(b) Tap on the circumference of the rear cover with a plastic hammer to remove the transaxle rear cover from the transaxle case.



45. REMOVE NO. 1 TRANSAXLE CASE PLUG

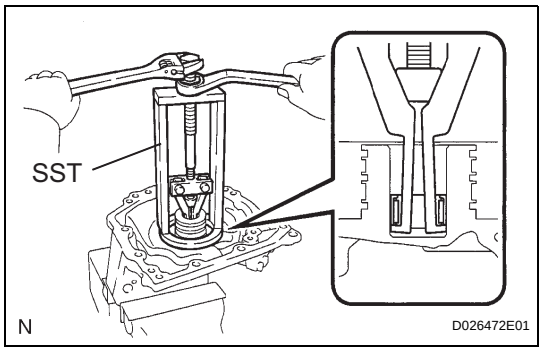
(a) Remove the 4 No. 1 transaxle case plugs from the transaxle rear cover.

(b) Remove the 4 O-rings from the 4 No. 1 transaxle case plugs.



46. REMOVE REAR CLUTCH OIL SEAL RING

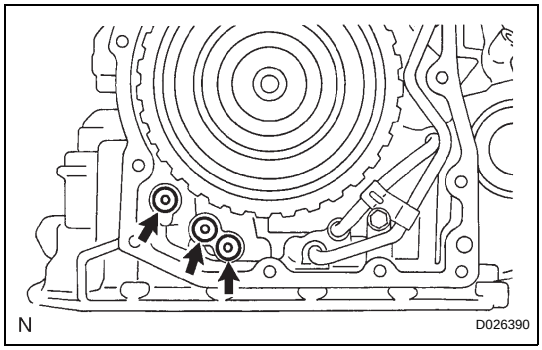
(a) Remove the 3 rear clutch oil seal rings from the transaxle rear cover.



47. REMOVE NEEDLE ROLLER BEARING

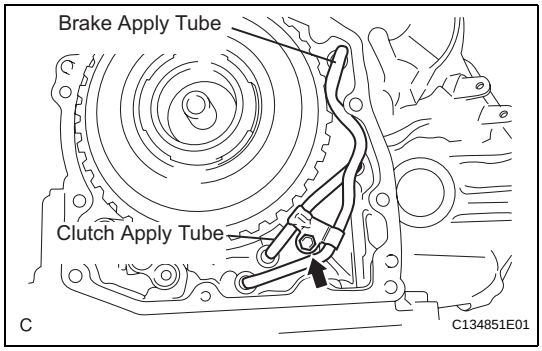
(a) Using SST, remove the needle roller bearing from the transaxle rear cover.

SST 09387-00041 (09387-01021, 09387-01030, 09387-01040)



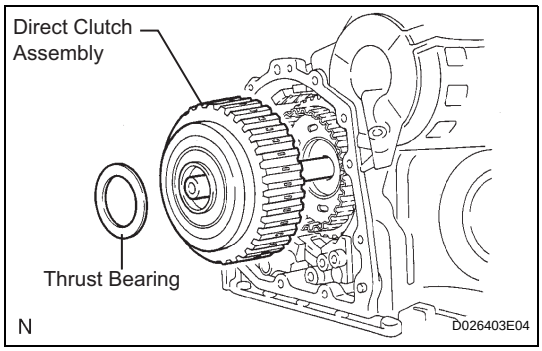
48. REMOVE NO. 1 GOVERNOR APPLY GASKET

(a) Using a screwdriver, remove the 3 apply gaskets.



49. REMOVE BRAKE APPLY TUBE

(a) Remove the bolt, clamp and brake apply tube.
(b) Remove the clutch apply tube.
(c) Remove the brake apply tube from the clamp.

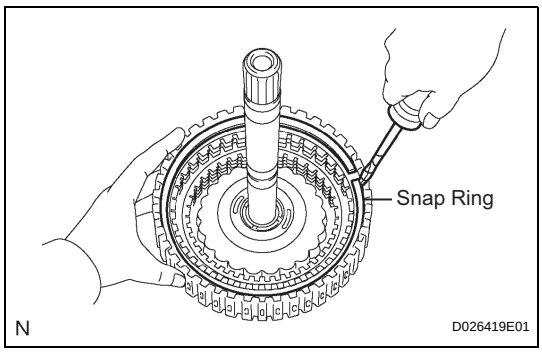


50. REMOVE DIRECT CLUTCH ASSEMBLY

(a) Remove the thrust bearing and the direct clutch assembly from the transaxle case.

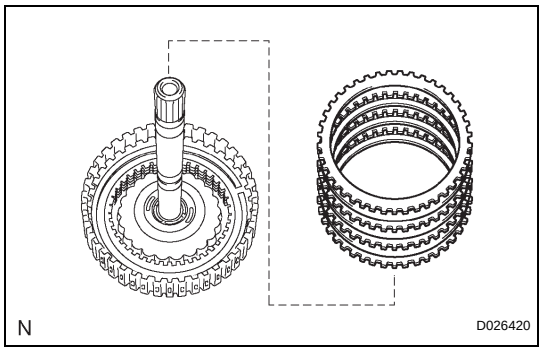
51. INSPECT PACK CLEARANCE OF DIRECT CLUTCH (See page AX-232)

52. INSPECT PACK CLEARANCE OF OVERDRIVE CLUTCH (See page AX-232)



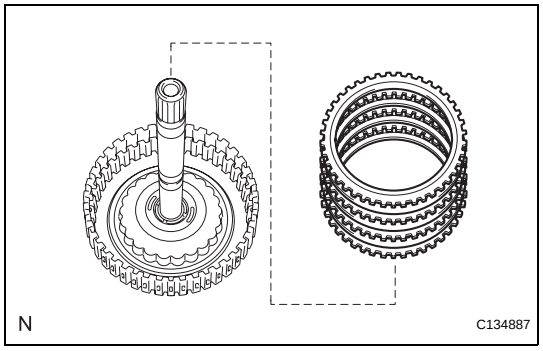
53. REMOVE DIRECT MULTIPLE DISC CLUTCH DISC

(a) Using a screwdriver, remove the snap ring from the intermediate shaft.



(b) Remove the flange, 3 discs, 3 plates and cushion plate from the intermediate shaft.

54. INSPECT DIRECT MULTIPLE DISC CLUTCH DISC (See page AX-231)

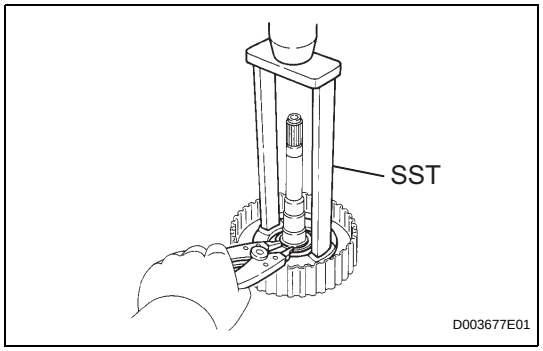


55. REMOVE OVERDRIVE DIRECT CLUTCH DISC

(a) Using a screwdriver, remove the snap ring from the intermediate shaft.

(b) Remove the flange, 3 discs and 3 plates from the intermediate shaft.

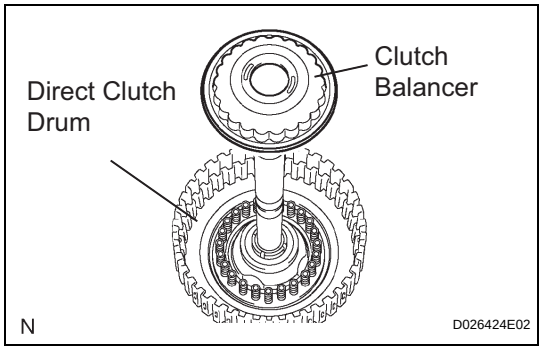
56. INSPECT OVERDRIVE DIRECT CLUTCH DISC (See page AX-231)



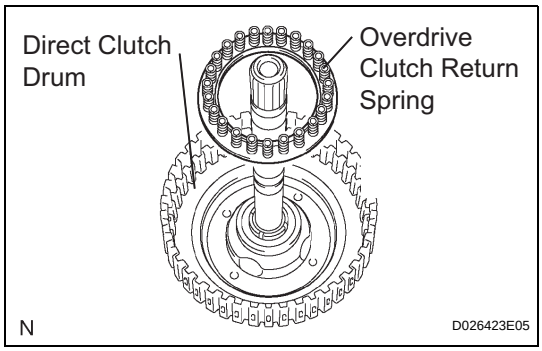
57. REMOVE OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the clutch balancer and compress the spring with a press.
SST 09387-00020

(b) Using a snap ring expander, remove the snap ring from the direct clutch drum.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove. This prevents the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**

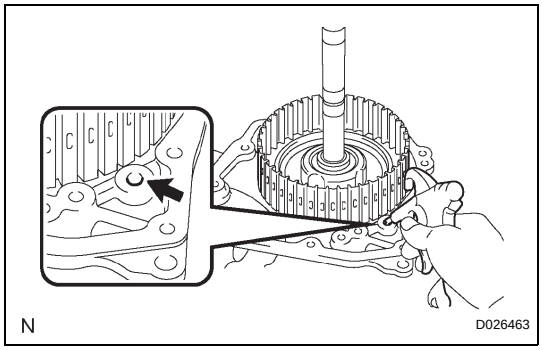


(c) Remove the clutch balancer from the overdrive direct clutch drum.



(d) Remove the overdrive clutch return spring from the overdrive direct clutch drum.

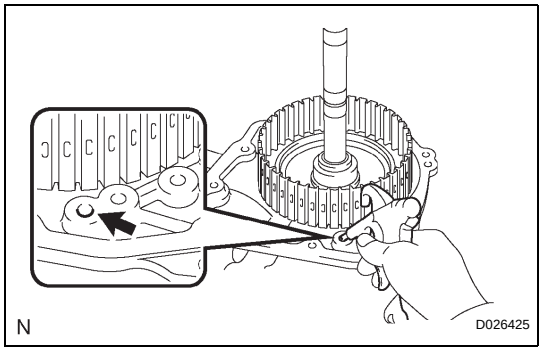
58. INSPECT OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY (See page AX-231)



59. REMOVE OVERDRIVE DIRECT CLUTCH PISTON

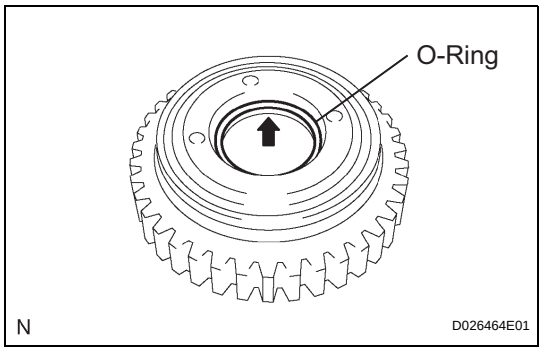
(a) Install the intermediate shaft on the transaxle rear cover.

(b) Holding the direct clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle rear cover to remove the direct clutch piston.



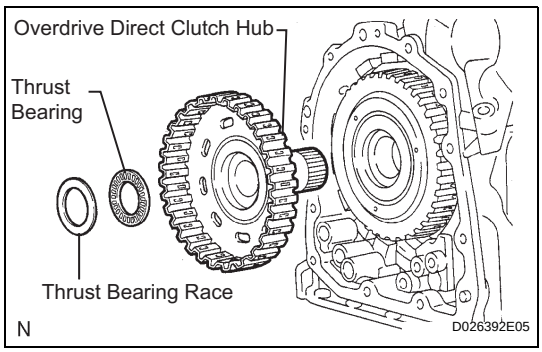
60. REMOVE OVERDRIVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

(a) Holding the direct clutch drum by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle rear cover to remove the direct clutch drum.



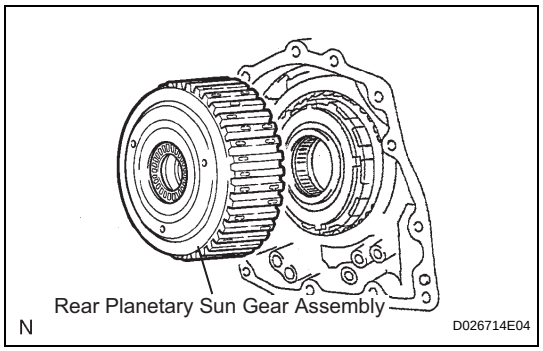
61. REMOVE OVERDRIVE DIRECT CLUTCH O-RING

(a) Using a screwdriver, remove the O-ring from the direct clutch drum.



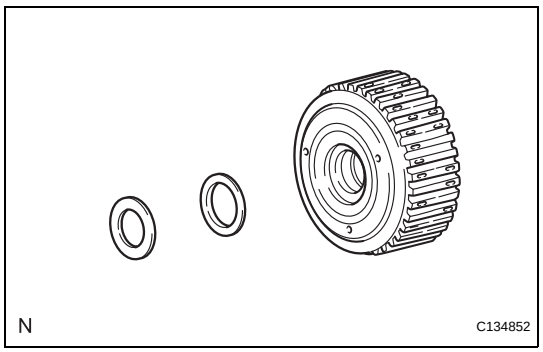
62. REMOVE OVERDREVE DIRECT CLUTCH HUB SUB-ASSEMBLY

(a) Remove the thrust bearing race, thrust bearing, and overdrive direct clutch hub from the planetary gear assembly.

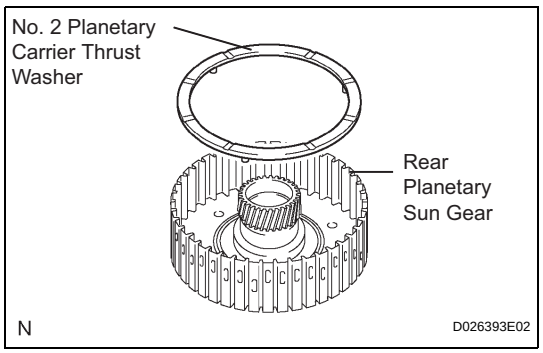


63. REMOVE REAR PLANETARY SUN GEAR ASSEMBLY

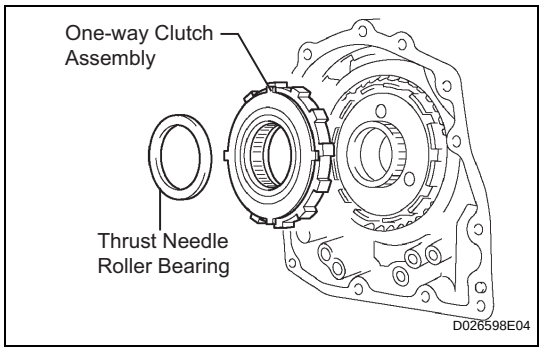
(a) Remove the rear planetary sun gear assembly from the transaxle case.



(b) Remove the thrust needle roller bearing and thrust bearing race from the rear planetary sun gear assembly.

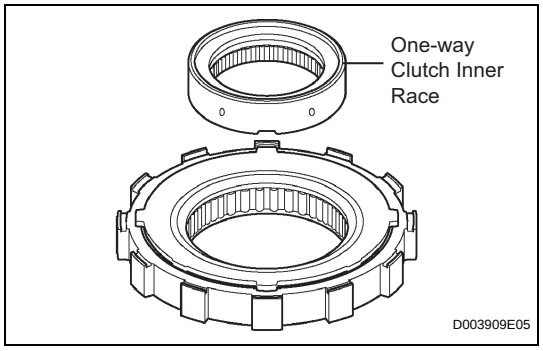


(c) Remove the No. 2 planetary carrier thrust washer from the rear planetary sun gear assembly.

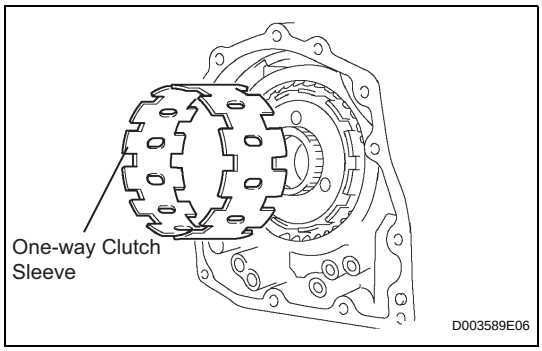


64. REMOVE ONE-WAY CLUTCH ASSEMBLY

(a) Remove the one-way clutch assembly and the thrust needle roller bearing from the transaxle case.

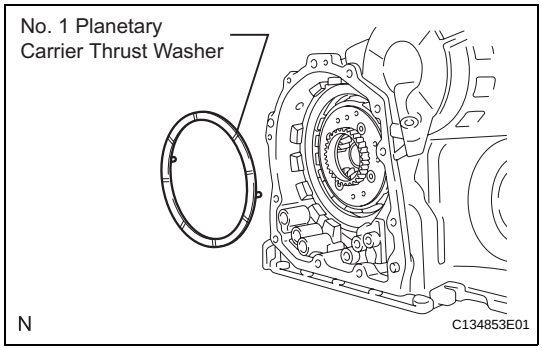


(b) Remove the one-way clutch inner race from the one-way clutch assembly.



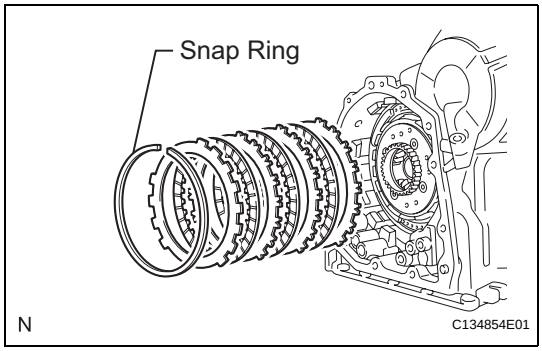
65. REMOVE ONE-WAY CLUTCH SLEEVE

(a) Remove the one-way clutch sleeve from the transaxle case.



66. REMOVE NO. 1 PLANETARY CARRIER THRUST WASHER

(a) Remove the No. 1 planetary carrier thrust washer from the planetary gear assembly.

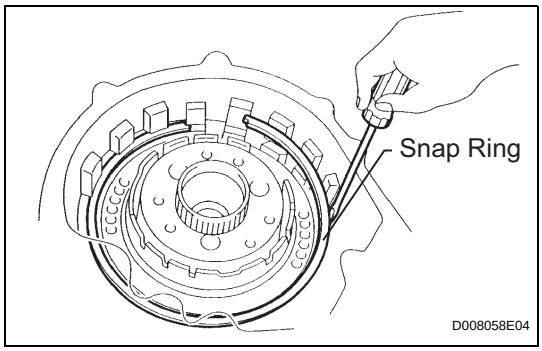


67. REMOVE 2ND BRAKE DISC

(a) Using a screwdriver, remove the snap ring.

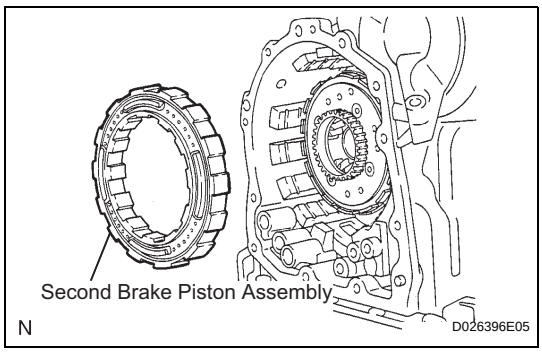
(b) Remove the flange, 3 discs and 3 plates from the transaxle case.

68. INSPECT 2ND BRAKE DISC (See page AX-228)

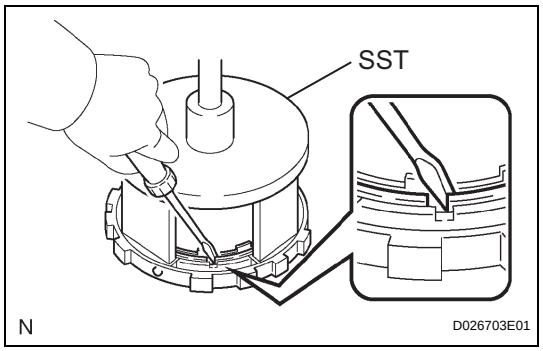


69. REMOVE SECOND BRAKE PISTON ASSEMBLY

(a) Using a screwdriver, remove the snap ring.



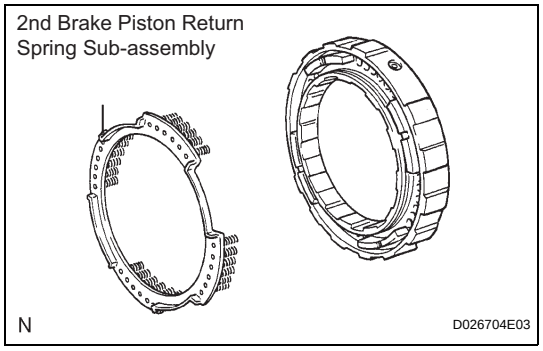
(b) Remove the second brake piston assembly from the transaxle case.



70. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

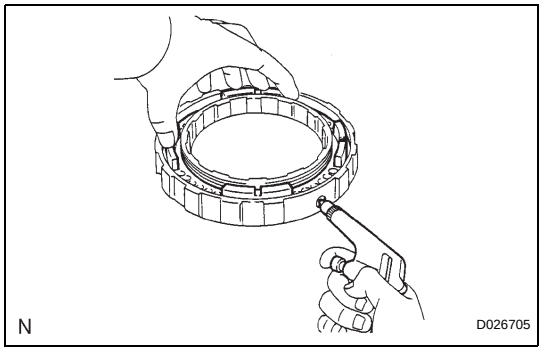
(a) Place SST on the return spring and compress it with a press.
SST 09387-00060

(b) Using a screwdriver, remove the snap ring.



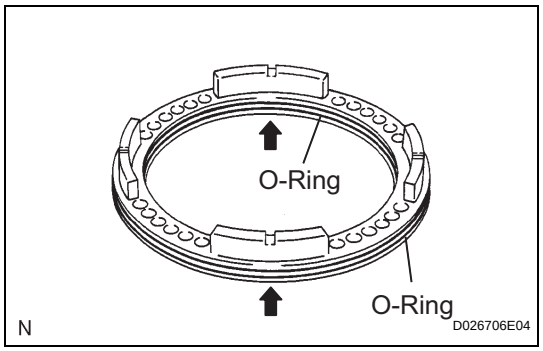
(c) Remove the 2nd brake piston return spring sub-assembly.

71. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY (See page AX-234)



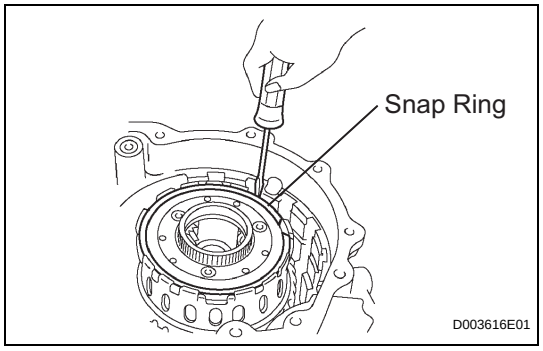
72. REMOVE 2ND BRAKE PISTON

(a) Hold the 2nd brake piston and apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the 2nd brake cylinder to remove the 2nd brake piston.



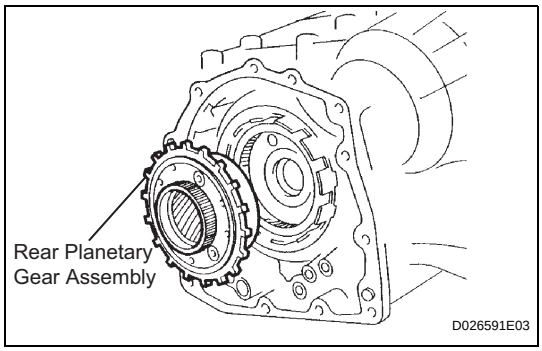
73. REMOVE 2ND BRAKE PISTON O-RING

(a) Remove the 2 O-rings from the 2nd brake piston.

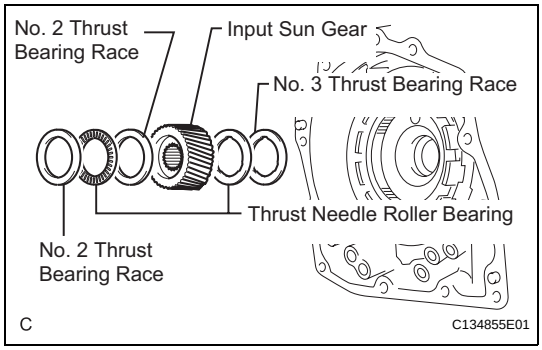


74. REMOVE REAR PLANETARY GEAR ASSEMBLY

(a) Using a screwdriver, remove the snap ring.

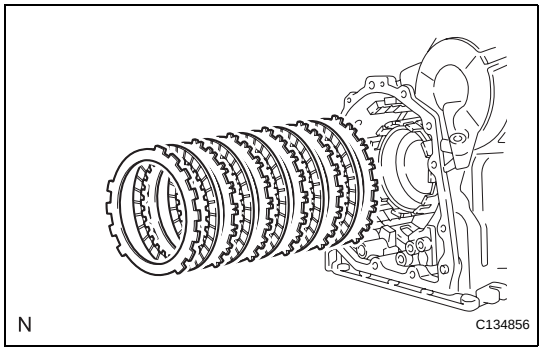


(b) Remove the rear planetary gear assembly from the transaxle case.



75. REMOVE INPUT SUN GEAR

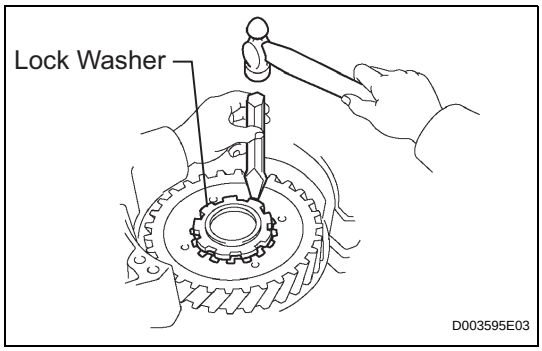
(a) Remove the 2 thrust needle roller bearings, No. 2 thrust bearing races, No. 3 thrust bearing race, and input sun gear from the transaxle case.



76. REMOVE 1ST AND REVERSE BRAKE DISC

(a) Remove the flange, 5 discs and 5 plates from the transaxle case.

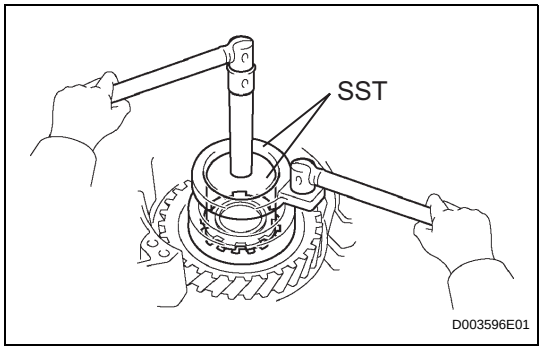
77. INSPECT 1ST AND REVERSE BRAKE DISC (See page AX-229)



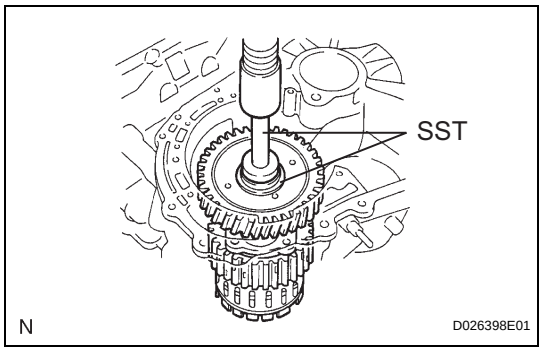
78. REMOVE FRONT PLANETARY GEAR ASSEMBLY

(a) Using a chisel and hammer, unstake the lock washer.

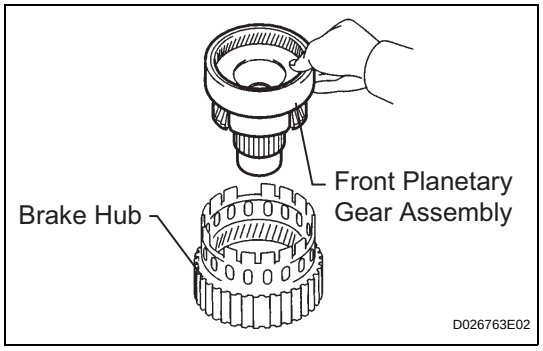
NOTICE:
Push down all claws of the washer. Otherwise SST cannot be fully pressed against the nut, and the nut cannot be loosened.



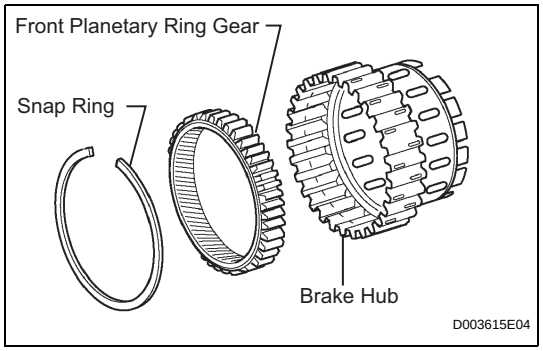
(b) Using SST, remove the nut and washer.
SST 09387-00030, 09387-00080



(c) Using SST and a press, remove the front planetary gear assembly from the counter drive gear.
SST 09950-60010 (09951-00450), 09950-70010 (09951-07100)

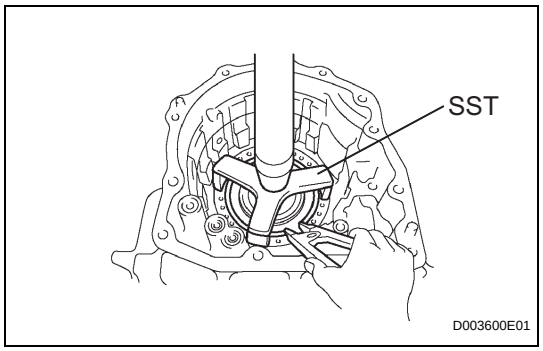


(d) Remove the front planetary gear assembly from the brake hub.



79. REMOVE FRONT PLANETARY RING GEAR

(a) Using a screwdriver, remove the snap ring and front planetary ring gear from the brake hub.



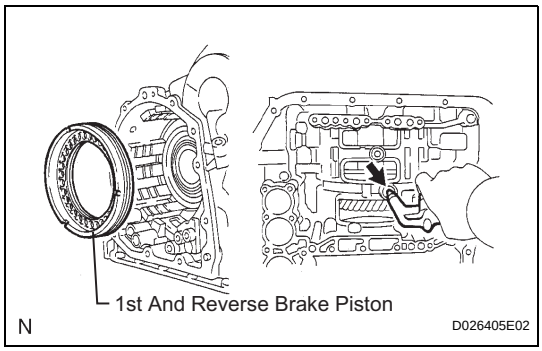
80. REMOVE 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the return spring, and compress the return spring with a press.
SST 09387-00070

(b) Using a snap ring expander, remove the snap ring.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove to prevent the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**

(c) Remove the return spring.

81. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY (See page AX-229)

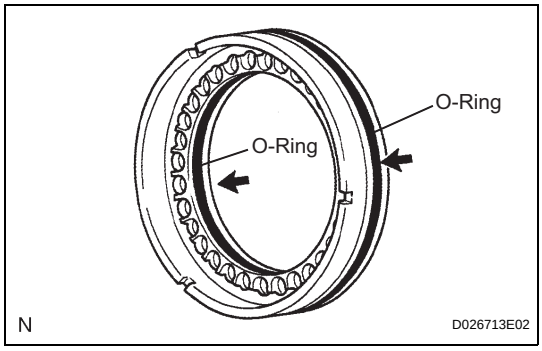


82. REMOVE 1ST AND REVERSE BRAKE PISTON

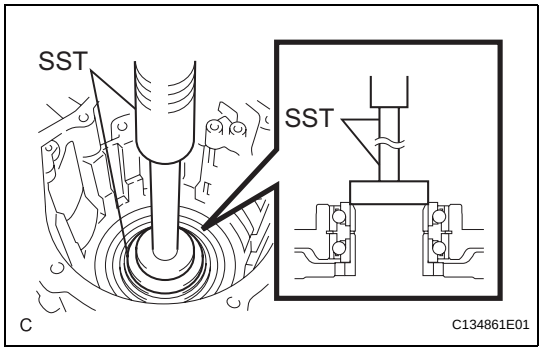
(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the 1st and reverse brake piston.

NOTICE:

- **Applying compressed air may cause the piston to jump-out. When removing the piston, hold it by hand using a waste cloth.**
- **Take care not to splash ATF when applying the air.**



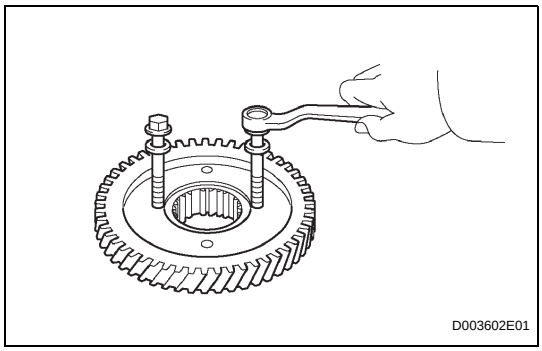
(b) Remove the 2 O-rings from the 1st and reverse brake piston.



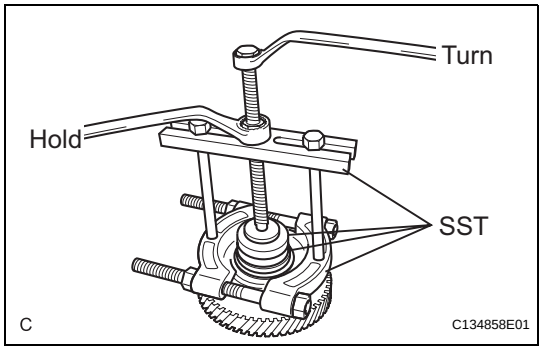
83. REMOVE COUNTER DRIVE GEAR

(a) Using SST and a press, remove the counter drive gear from the transaxle case.

SST 09950-60010 (09951-00590), 09950-70010 (09951-07100)

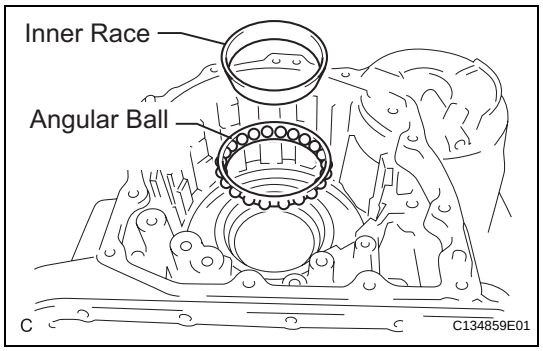


(b) Tighten the 2 bolts evenly and make clearance of approx. 20.0 mm (0.797 in.) between the counter drive gear and the inner race.



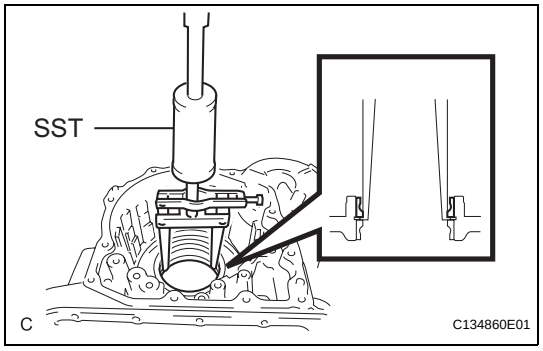
(c) Using SST, remove the tapered roller bearing inner race.

SST 09950-00020, 09950-00030, 09950-60010 (09951-00590)

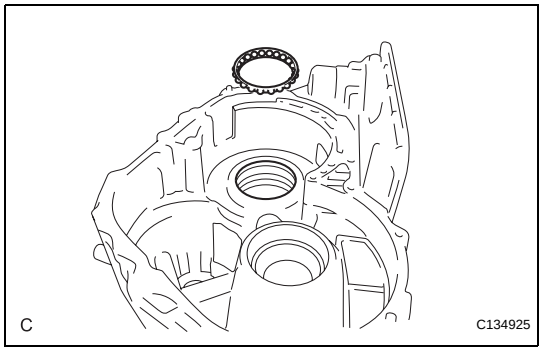


84. REMOVE COUNTER DRIVE ANGULAR BALL BEARING

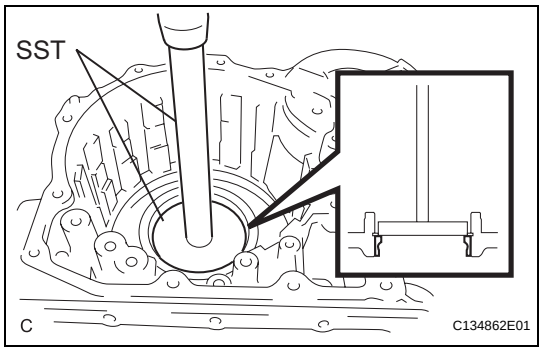
(a) Remove the bearing inner race (rear side) and angular ball (rear side).



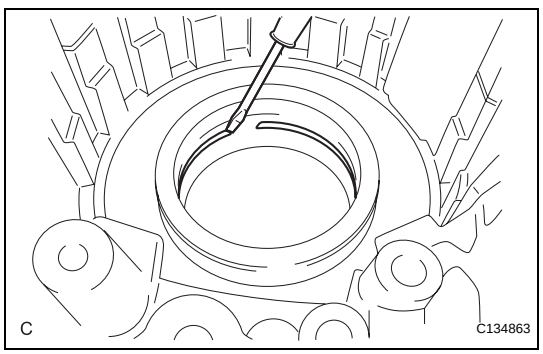
(b) Using SST, remove the bearing outer race (rear side) from the transaxle case.
SST 09308-00010



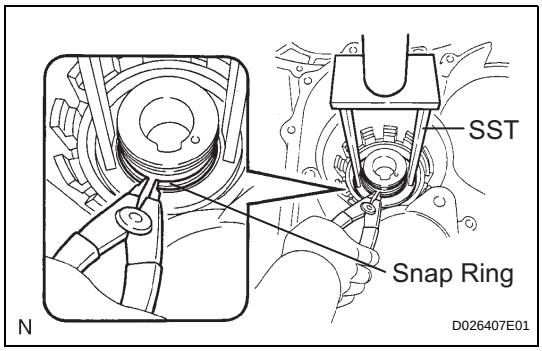
(c) Remove the angular ball (front side).



(d) Using SST and a press, remove the bearing outer race (front side) from the transaxle case.
SST 09950-60020 (09951-00810), 09950-70010 (09951-07200)



(e) Using a screwdriver, remove the snap ring from the transaxle case.



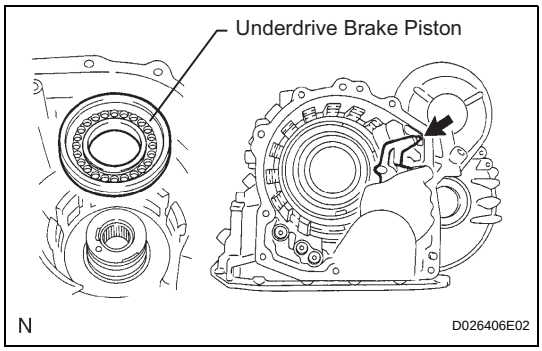
85. REMOVE UNDERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the return spring, and compress the return spring with a press.
SST 09387-00020

(b) Using a snap ring expander, remove the snap ring.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove to prevent the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**

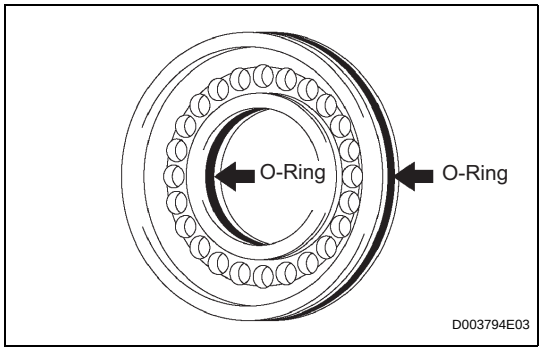
(c) Remove the return spring.

86. INSPECT UNDERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY (See page AX-229)

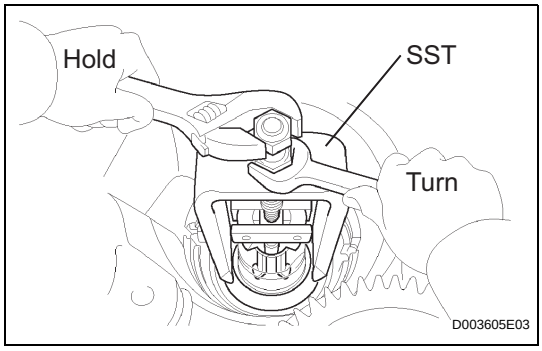


87. REMOVE UNDERDRIVE BRAKE PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the underdrive brake piston.

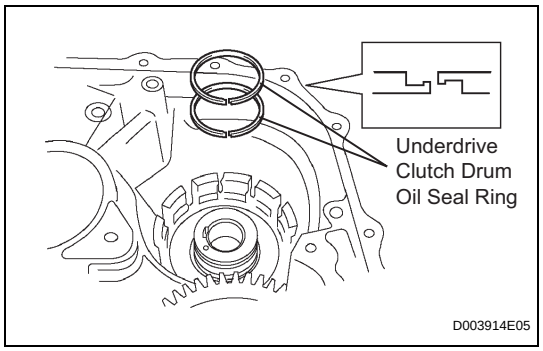


(b) Remove the 2 O-rings from the underdrive brake piston.



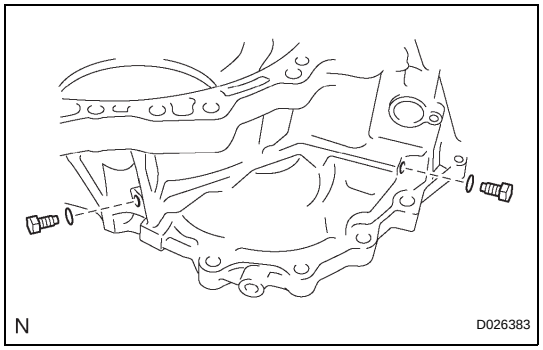
88. REMOVE NEEDLE ROLLER BEARING

(a) Using SST, remove the needle roller bearing from the transaxle case.
SST 09387-00041 (09387-01010, 09387-01030, 09387-01040)



89. REMOVE UNDERDRIVE CLUTCH DRUM OIL SEAL RING

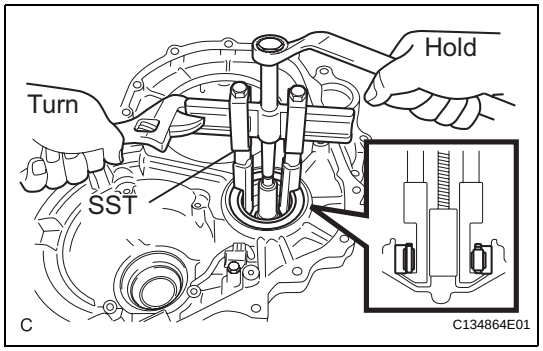
(a) Remove the 2 oil seal rings from the transaxle case.



90. REMOVE NO. 1 TRANSAXLE CASE PLUG

(a) Remove the 2 No. 1 transaxle case plugs.

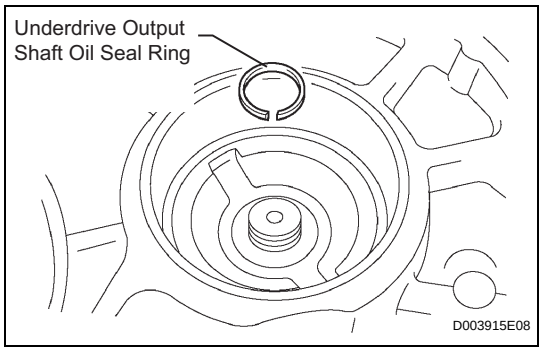
(b) Remove the 2 O-rings from the 2 No. 1 transaxle case plugs.



91. REMOVE UNDERDRIVE CYLINDRICAL ROLLER BEARING

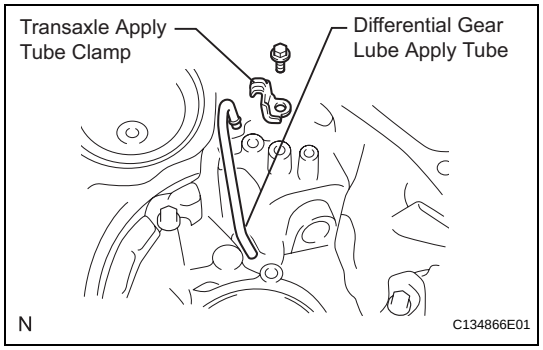
(a) Using SST, remove the underdrive cylindrical roller bearing from the transaxle case.

SST 09820-00031, 09950-40011 (09952-04010, 09954-04010, 09955-04061, 09957-04010), 09950-50013 (09951-05010, 09953-05020)



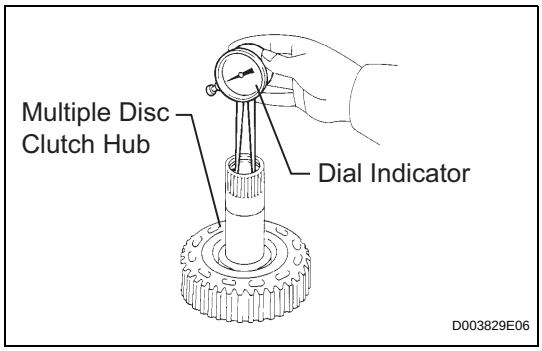
92. REMOVE UNDERDRIVE OUTPUT SHAFT OIL SEAL RING

(a) Remove the oil seal ring from the transaxle housing.



93. REMOVE DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Remove the bolt, transaxle apply tube clamp and differential gear lube apply tube from the transaxle housing.



INSPECTION

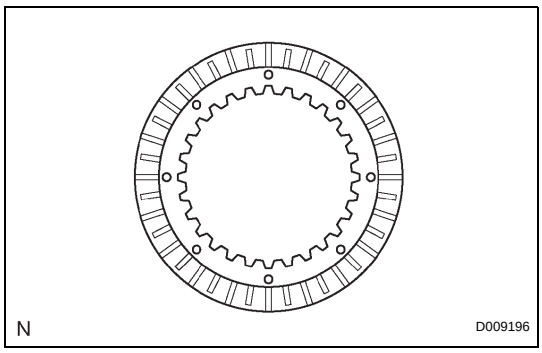
1. INSPECT MULTIPLE DISC CLUTCH HUB

(a) Using a dial indicator, measure the inside diameter of the multiple disc clutch hub bushing.

Standard inside diameter:
23.025 to 23.046 mm (0.9065 to 0.9073 in.)
Maximum inside diameter:
23.09 mm (0.9091 in.)

If the diameter is greather than the maximum, replace the multiple disc clutch hub with a new one.

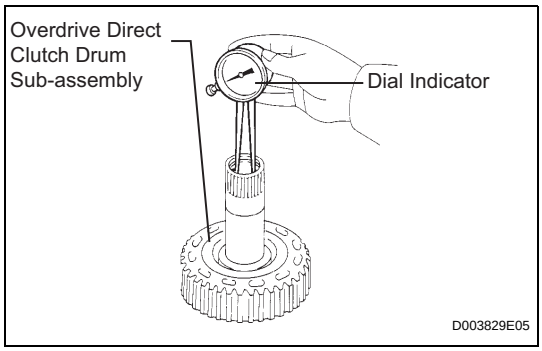
NOTICE:
Check the contact surface of the bushing in the direct clutch shaft. If any scratch or discolor is identified, replace the direct clutch sub-assembly with a new one.



2. INSPECT NO. 2 UNDERDRIVE CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt.
If necessary, replace them.

NOTICE:
- **If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



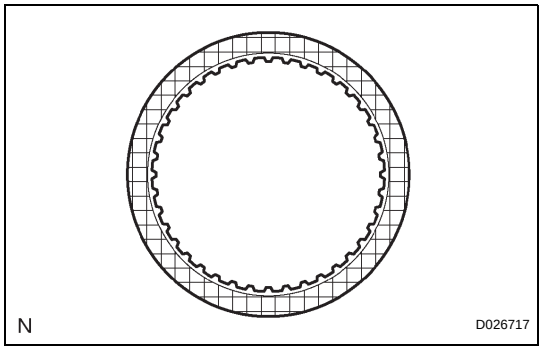
3. INSPECT OVERDRIVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the overdrive direct clutch drum sub-assembly bushing.

Standard inside diameter:
23.025 to 23.046 mm (0.9065 to 0.9073 in.)
Maximum inside diameter:
23.09 mm (0.9091 in.)

If the diameter is greather than the maximum, replace the overdrive direct clutch drum sub-assembly.

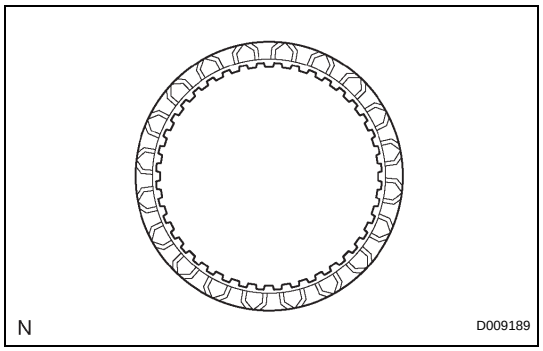
NOTICE:
Check the contact surface of the bushing in the direct clutch shaft. If any scratch or discolor is identified, replace the direct clutch sub-assembly with a new one.



4. INSPECT 2ND BRAKE DISC

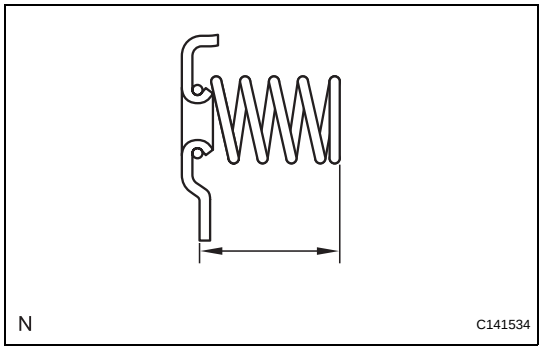
(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt.
If necessary, replace them.

NOTICE:
- **If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



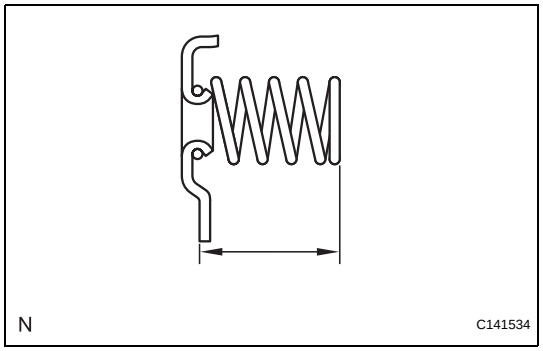
5. INSPECT 1ST AND REVERSE BRAKE DISC

(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt.
If necessary, replace them.
NOTICE:
- **If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



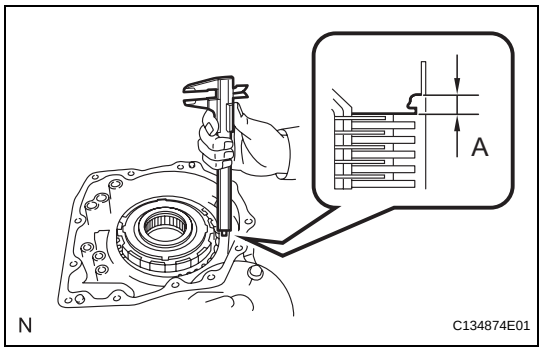
6. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
17.63 mm (0.6941 in.)
If the free length is shorter than the standard free length, replace the 1st and reverse brake return spring sub-assembly.



7. INSPECT UNDERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
13.24 mm (0.5213 in.)
If the free length is shorter than the standard free length, replace the under drive brake return spring sub-assembly.



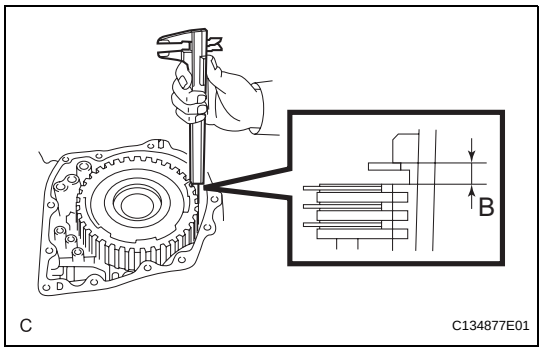
8. INSPECT PACK CLEARANCE OF FIRST AND REVERSE BRAKE

(a) Using vernier calipers, measure the distance between the disc surface and the contact surface of the 2nd brake cylinder and transaxle case (Dimension A).

(b) Select an appropriate flange so that the pack clearance will be within the specified range.
Pack clearance:
0.745 to 1.21 mm (0.0293 to 0.0476 in.)
HINT:
Piston stroke = Dimension A - Flange thickness
Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
1	1.8 (0.071)	5	2.2 (0.087)
2	1.9 (0.075)	6	2.3 (0.091)
3	2.0 (0.079)	7	2.4 (0.094)
4	2.1 (0.083)	8	2.5 (0.098)

(c) Install the flange.



9. INSPECT PACK CLEARANCE OF SECOND BRAKE

(a) Using vernier calipers, measure the distance between the disc surface and snap ring surface (Dimension B).

(b) Select an appropriate flange so that the pack clearance will be within the specified range.

Pack clearance:

0.53 to 0.91 mm (0.0209 to 0.0358 in.)

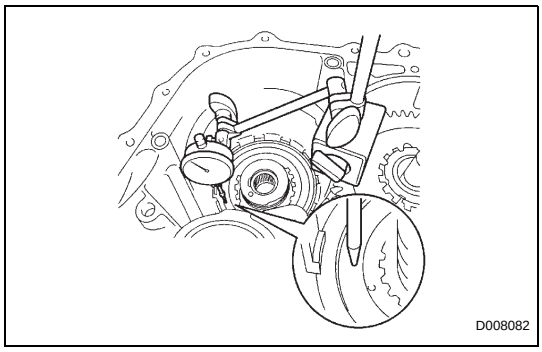
HINT:

Piston stroke = Dimension B - Flange thickness - Snap ring thickness 1.6 mm (0.063 in.)

Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
0	2.9 (0.114)	5	3.4 (0.134)
1	3.0 (0.118)	6	3.5 (0.138)
2	3.1 (0.122)	7	3.6 (0.142)
3	3.2 (0.126)	8	3.7 (0.146)
4	3.3 (0.130)	-	-

(c) Install the flange.



10. INSPECT PACK CLEARANCE OF NO. 2 UNDERDRIVE CLUTCH

(a) Using a dial indicator, measure the underdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

1.645 to 2.20 mm (0.0648 to 0.0866 in.)

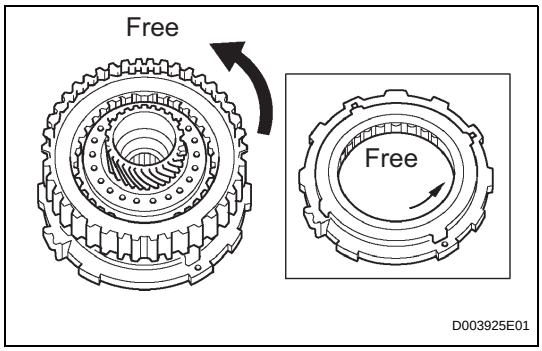
(b) Select an appropriate flange from the table below so that the pack clearance will be within the specified range.

Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
Y	2.8 (0.110)	C	3.4 (0.134)
A	3.0 (0.118)	D	3.6 (0.142)
B	3.2 (0.126)	-	-

(c) Temporarily remove the snap ring and attach the flange to the transaxle case.

(d) Reinstall the snap ring to the transaxle case.

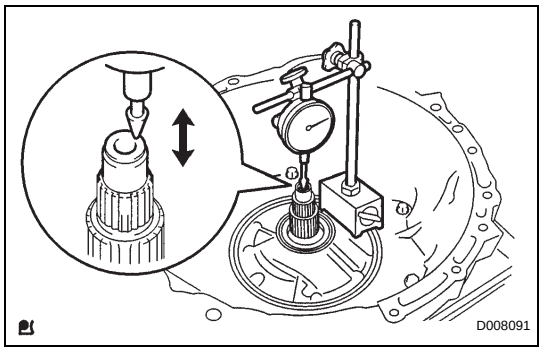


11. INSPECT UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY

(a) Install the underdrive clutch assembly to the one-way clutch.

(b) Rotate the underdrive clutch assembly to check the rotating direction for the lock or free operation.

(c) Remove the underdrive clutch assembly from the one-way clutch.

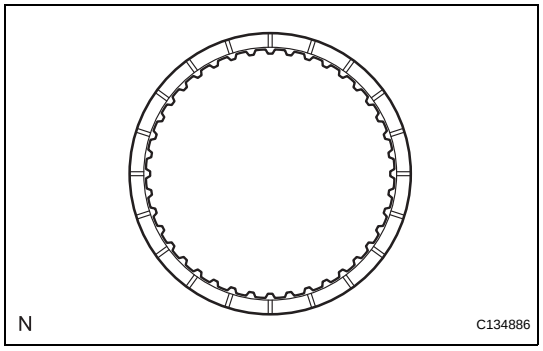


12. INSPECT INPUT SHAFT END PLAY

(a) Using a dial indicator, measure the input shaft end play.

End play:

0.262 to 1.244 mm (0.01 to 0.049 in.)

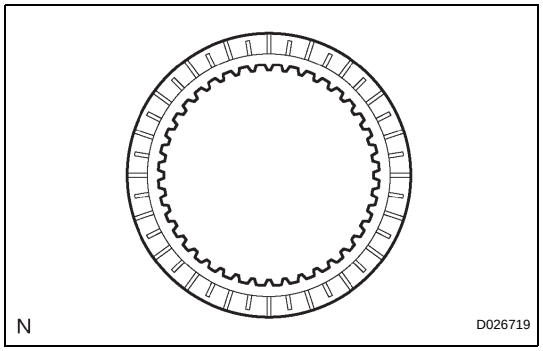


13. INSPECT DIRECT MULTIPLE DISC CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:

- **If the lining of a disc comes off or discolors, or a groove is damaged, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**

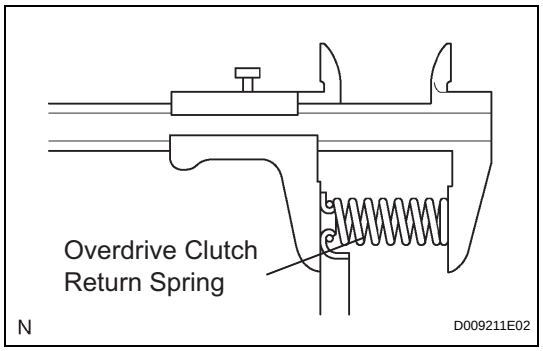


14. INSPECT OVERDRIVE DIRECT CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:

- **If the lining of a disc comes off or discolors, or a groove is damaged, replace all discs.**
- **Before assembling new discs, soak them in ATF for at least 15 minutes.**



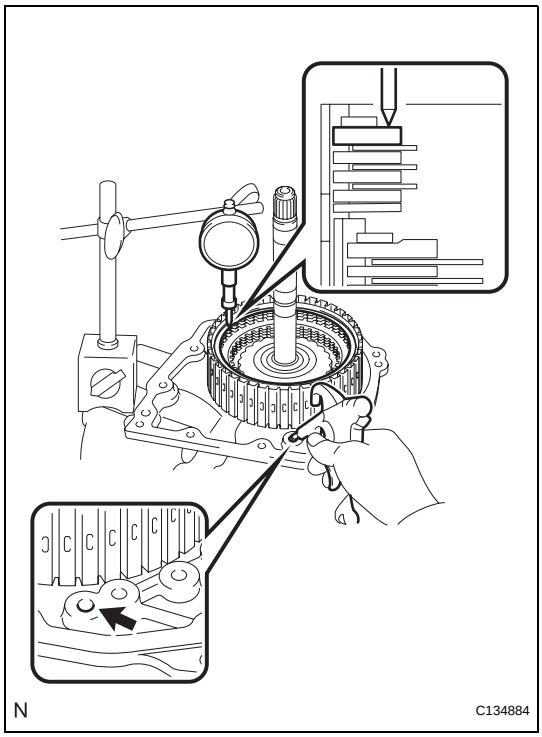
15. INSPECT OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the spring together with the spring seat.

Standard free length:

25.91 mm (1.0201 in.)

If the free length is shorter than the standard free length, replace the overdrive clutch return spring sub-assembly.



16. INSPECT PACK CLEARANCE OF DIRECT CLUTCH

(a) Install the intermediate shaft and needle roller bearing on the transaxle rear cover.

NOTICE:

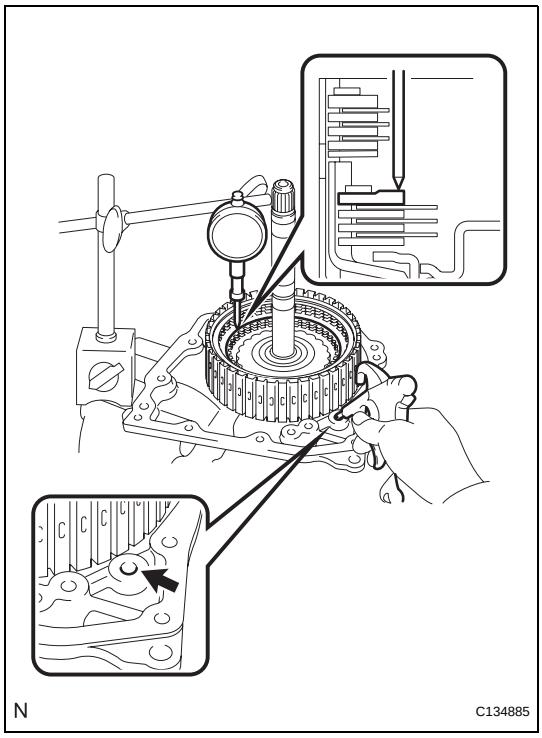
Be careful not to damage the oil seal ring outers.

(b) Using a dial indicator, measure the direct clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

0.60 to 0.82 mm (0.02362 to 0.03228 in.)

If the pack clearance is not as specified, inspect the discs, plates and flange.



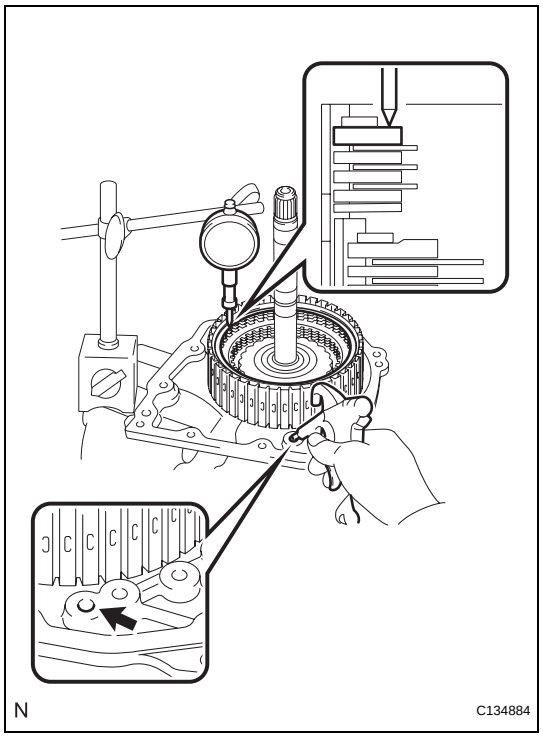
17. INSPECT PACK CLEARANCE OF OVERDRIVE CLUTCH

(a) Using a dial indicator, measure the overdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

0.52 to 0.83 mm (0.02047 to 0.03268 in.)

If the pack clearance is not as specified, inspect the discs, plates and flange.



18. INSPECT PACK CLEARANCE OF DIRECT CLUTCH

(a) Install the intermediate shaft on the transaxle rear cover.

(b) Using a dial indicator, measure the direct clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

0.60 to 0.82 mm (0.02362 to 0.03228 in.)

If the pack clearance is less than the minimum, parts may have been assembled incorrectly, so check and reassemble.

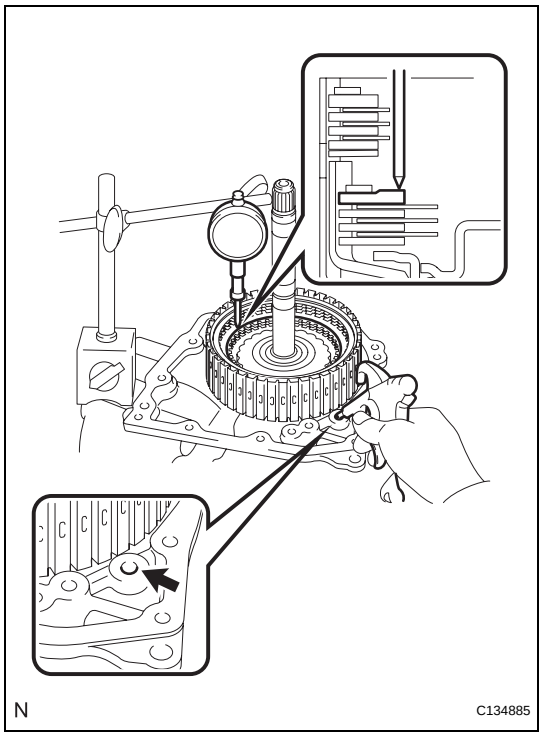
If the clearance is not as specified, select another flange.

HINT:

There are 8 different thicknesses of flanges available.

Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
0	2.9 (0.114)	4	3.3 (0.130)
1	3.0 (0.118)	5	3.4 (0.134)
2	3.1 (0.122)	6	3.5 (0.138)
3	3.2 (0.126)	7	3.6 (0.142)



19. INSPECT PACK CLEARANCE OF OVERDRIVE CLUTCH

(a) Using a dial indicator, measure the overdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

0.52 to 0.83 mm (0.02047 to 0.03268 in.)

If the pack clearance is less than the minimum, parts may have been assembled incorrectly, so check and reassemble.

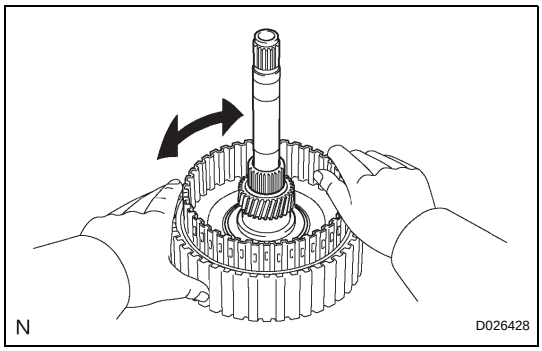
If the clearance is not as specified, select another flange.

HINT:

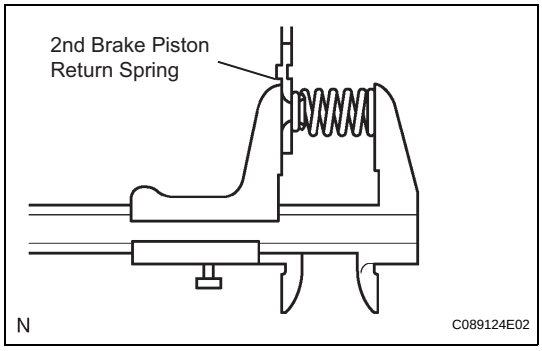
There are 7 different thicknesses of flanges available.

Flange thickness: mm (in.)

Mark	Thickness	Mark	Thickness
0	2.5 (0.098)	4	2.9 (0.114)
1	2.6 (0.102)	5	3.0 (0.118)
2	2.7 (0.106)	6	3.1 (0.122)
3	2.8 (0.110)	-	-



(b) Check that the disc rotates when rotating the disc after inserting the rear planetary sun gear.
NOTICE:
Do not place the rear planetary sun gear in a vise.

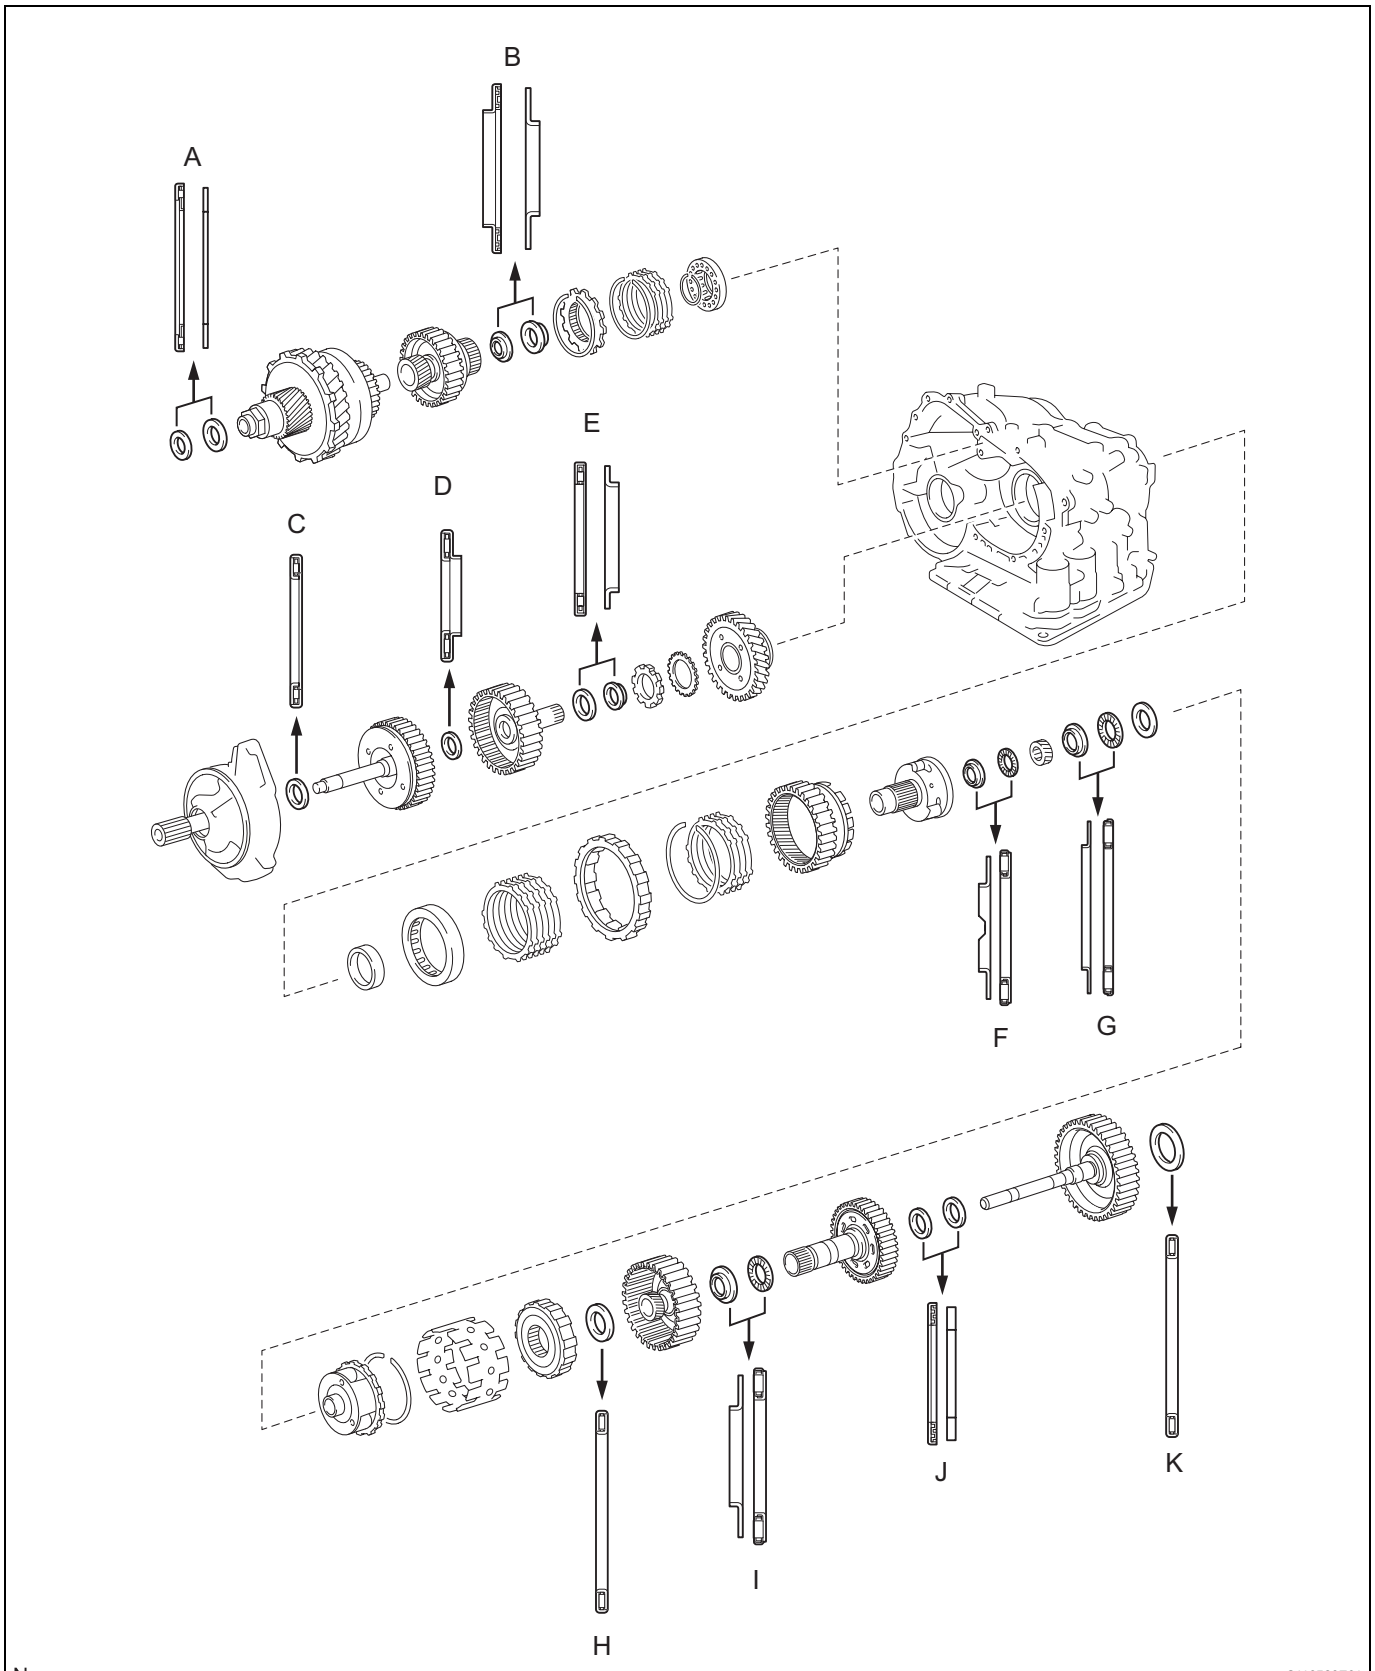


20. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

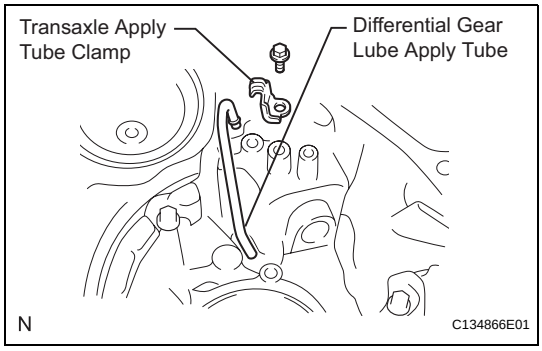
(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
16.61 mm (0.6539 in.)
If the free length is shorter than the standard free length, replace the 2nd brake piston return spring sub-assembly.

REASSEMBLY

1. BEARING POSITION

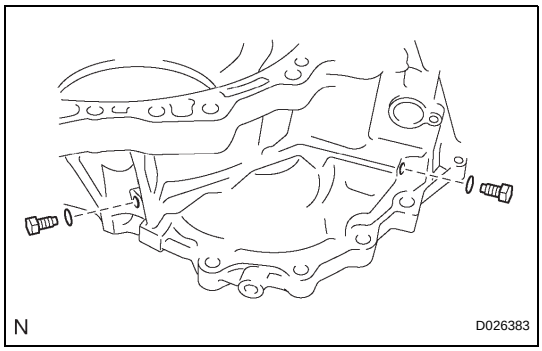


Mark	Front Race Diameter Inside / Outside (mm (in.))	Thrust Bearing Diameter Inside / Outside (mm (in.))	Rear Race Diameter Inside / Outside (mm (in.))
A	-	53.0 (2.087) / 78.2 (3.079)	52.1 (2.051) / 75.5 (2.972)
B	-	37.73 (1.4854) / 58.0 (2.284)	29.9 (1.177) / 55.5 (2.185)
C	-	33.85 (1.3327) / 52.2 (2.055)	-
D	-	23.5 (0.925) / 44.0 (1.732)	-
E	-	36.3 (1.429) / 52.2 (2.055)	34.5 (1.358) / 48.5 (1.909)
F	34.5 (1.358) / 56.82 (2.2370)	32.4 (1.276) / 56.62 (2.2291)	-
G	40.3 (1.587) / 58.0 (2.284)	38.6 (1.520) / 60.0 (2.362)	38.6 (1.520) / 58.0 (2.284)
H	-	53.6 (2.110) / 69.6 (2.740)	-
I	33.1 (1.303) / 45.4 (1.787)	31.85 (1.2539) / 45.2 (1.780)	-
J	-	25.0 (0.984) / 39.5 (1.555)	23.6 (0.929) / 36.6 (1.441)
K	-	55.9 (2.201) / 76.0 (2.992) or 76.6 (3.016)	-



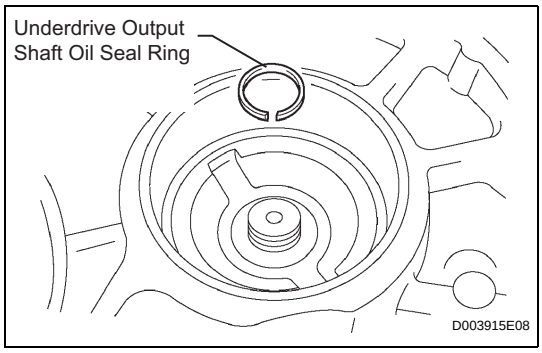
2. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Install the differential gear lube apply tube and transaxle apply tube clamp to the transaxle housing with the bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
NOTICE:
Make sure to insert the pipe to the stopper.



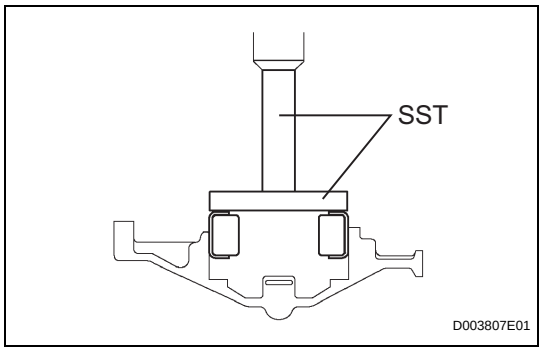
3. INSTALL NO. 1 TRANSAXLE CASE PLUG

(a) Install 2 new O-rings to the 2 No. 1 transaxle case plugs.
(b) Install the 2 No. 1 transaxle case plugs to the transaxle rear housing.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)



4. INSTALL UNDERDRIVE OUTPUT SHAFT OIL SEAL RING

(a) Coat a new oil seal ring with ATF and install it to the transaxle housing.



5. INSTALL UNDERDRIVE CYLINDRICAL ROLLER BEARING

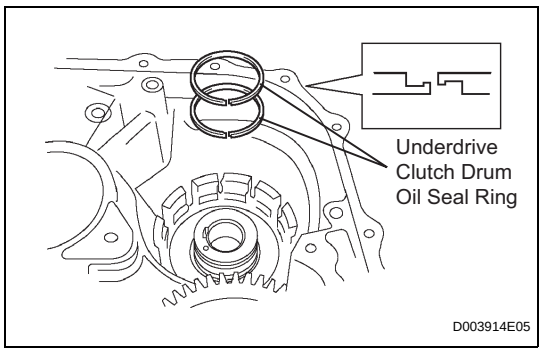
(a) Coat the underdrive cylindrical roller bearing with ATF.

(b) Using SST and a press, install the underdrive cylindrical roller bearing.

SST 09950-60020, 09950-70010 (09951-00780, 09951-07100)

NOTICE:

Do not apply excessive pressure to it.

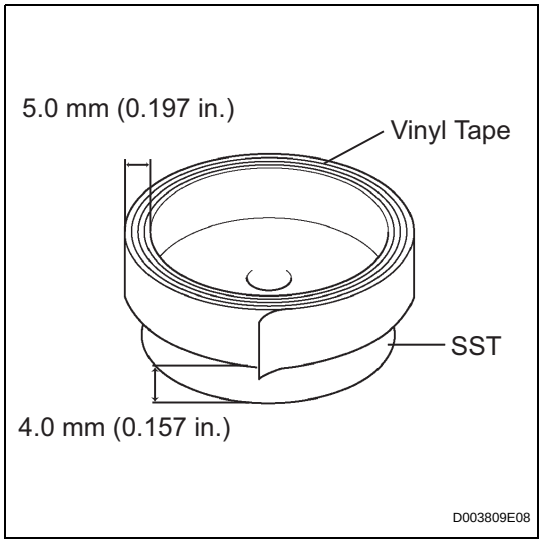


6. INSTALL UNDERDRIVE CLUTCH DRUM OIL SEAL RING

(a) Coat 2 new oil seal rings with ATF, and install them to the transaxle rear cover.

NOTICE:

- **Do not expand the gap of the oil seal ring excessively.**
- **Securely engage the hooks. Confirm the smooth rotation.**



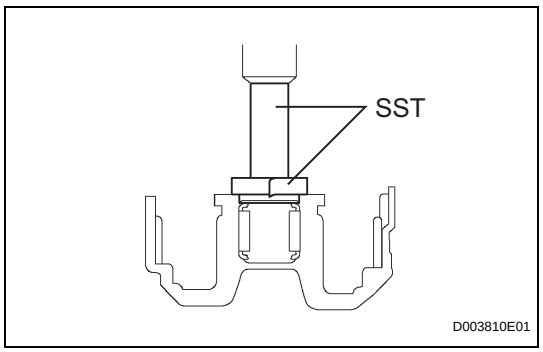
7. INSTALL NEEDLE ROLLER BEARING

(a) Wind vinyl tape around SST at the place 4.0 mm (0.157 in.) above the bottom end until the thickness of the wound tape is about 5.0 mm (0.197 in.).

NOTICE:

Clean SST to remove deposited oil before winding vinyl tape.

(b) Coat a new needle roller bearing with ATF.

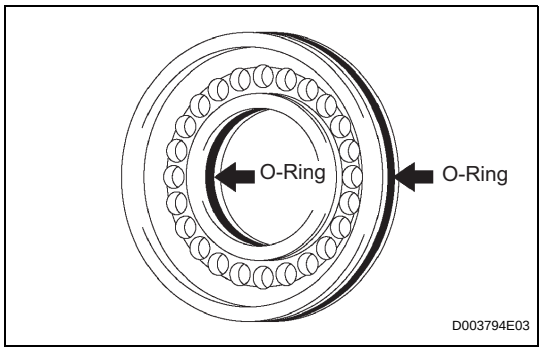


(c) Using SST and a press, install the needle roller bearing to the transaxle case.

SST 09950-60010 (09951-00320), 09950-70010 (09951-07100)

NOTICE:

When the wound vinyl tape contacts the transaxle case, stop press-fitting.



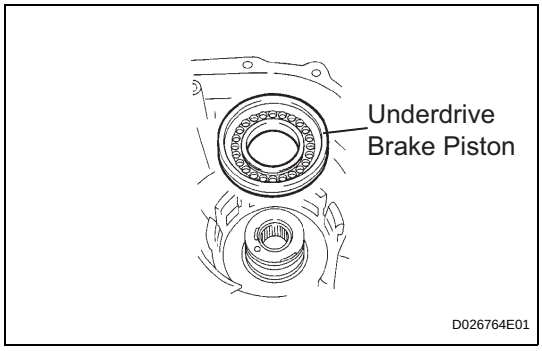
8. INSTALL UNDERDRIVE BRAKE PISTON

(a) Coat 2 new O-rings with ATF, and install them to the underdrive brake piston.

NOTICE:

- **Install the the O-rings carefully not to have a twist or a pinching.**
- **Apply enough ATF to the O-rings prior to installation.**

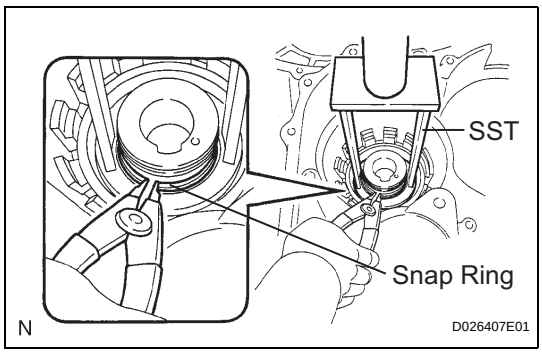
(b) Coat the underdrive brake piston with ATF.



(c) Install the underdrive brake piston to the transaxle case.

NOTICE:

Be careful not to damage the O-rings.



9. INSTALL UNDERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

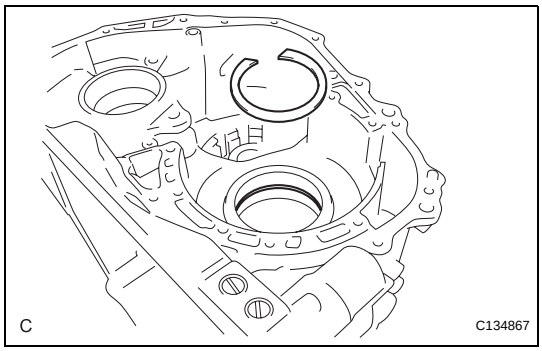
(a) Place SST on the return spring and compress the return spring with a press.

SST 09387-00020

(b) Using a snap ring expander, install the snap ring to the transaxle case.

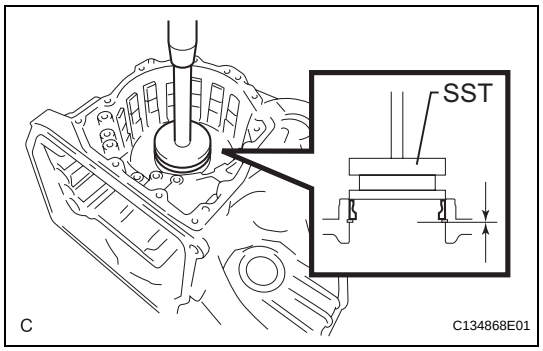
NOTICE:

- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove to prevent the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**
- **After installing the spring sub-assembly, check all of the springs are fitted in the piston correctly.**
- **The snap ring should be securely engaged in the groove of the transaxle case.**

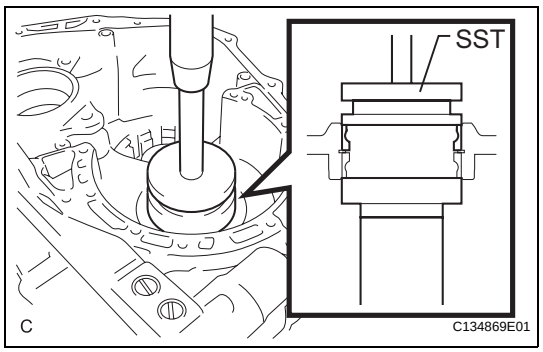


10. INSTALL COUNTER DRIVE GEAR BEARING

(a) Install the snap ring to the transaxle case.



(b) Using SST and a press, install the bearing outer race (rear side) to the transaxle case.
SST 09316-12010, 09950-60020 (09951-00810), 09950-70010 (09951-07150)
NOTICE:
- **Ensure that the snap ring is securely installed.**
- **Do not apply excessive pressure to the bearing outer race.**

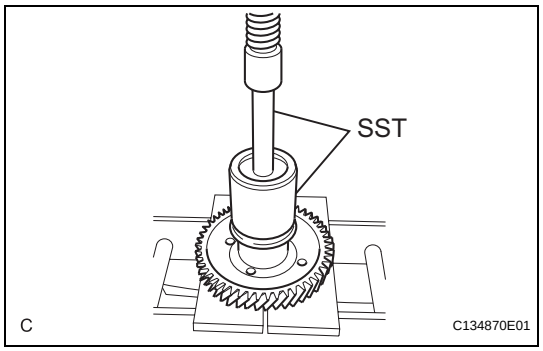


(c) Using SST and a press, install the bearing outer race (front side) to the transaxle case.
SST 09316-12010, 09502-24010, 09523-36010, 09950-60020 (09951-00810), 09950-70010 (09951-07150)
NOTICE:
- **Do not apply excessive pressure to the bearing outer race.**
- **Install the bearing outer race with a press while holding the bearing outer race with SST (09502-24010, 09523-36010).**

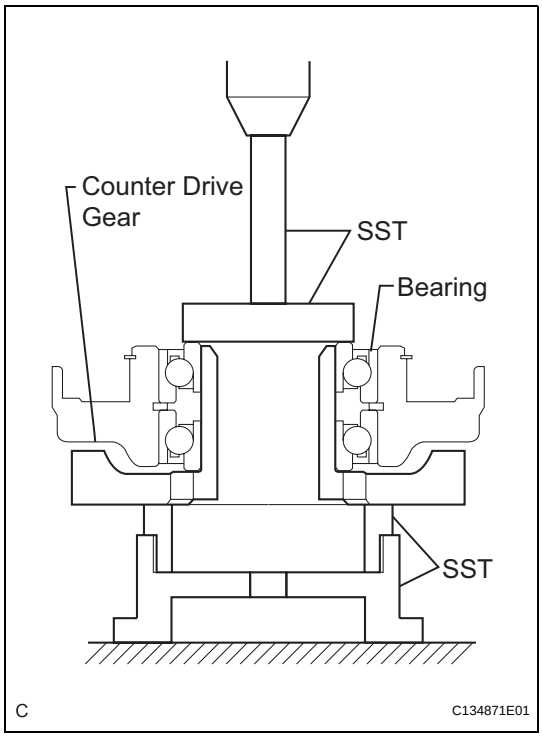
(d) Install the 2 angular balls to the transaxle case.

11. INSTALL COUNTER DRIVE GEAR

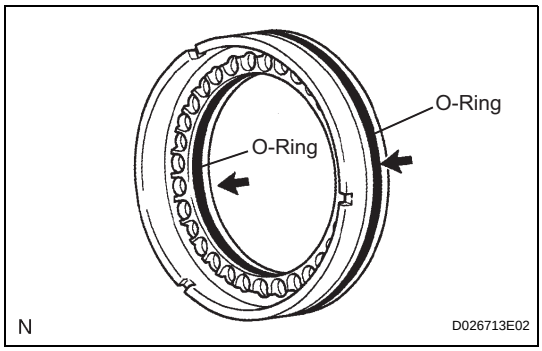
(a) Coat the counter drive gear with ATF.



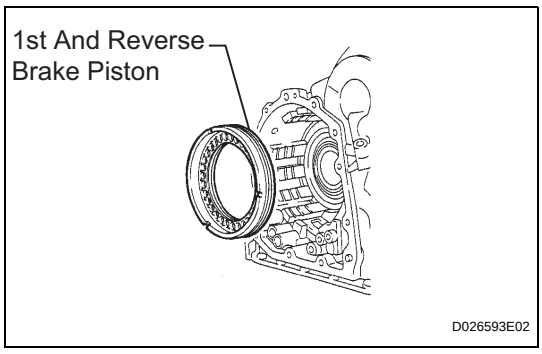
(b) Using SST and a press, install the tapered roller bearing inner race (front side) to the counter drive gear.
SST 09649-17010, 09950-70010 (09951-07150)
NOTICE:
Do not apply excessive pressure to the bearing inner race.



(c) Using SST and a press, install the counter drive gear and bearing inner race (rear side) to the transaxle case.
SST 09223-15030, 09527-17011, 09950-60020 (09951-00720), 09950-70010 (09951-07150)
NOTICE:
Do not apply excessive pressure to the counter drive gear and bearing inner race.

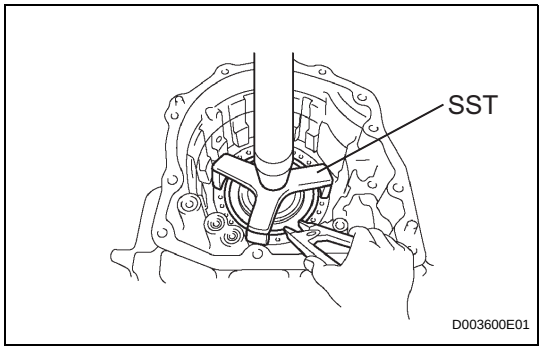


12. INSTALL 1ST AND REVERSE BRAKE PISTON
(a) Coat 2 new O-rings with ATF.
(b) Install the 2 O-rings to the 1st and reverse brake piston.
NOTICE:
- **Install the O-rings carefully not to have a twist or a pinching.**
- **Apply enough ATF to the O-rings prior to installation.**



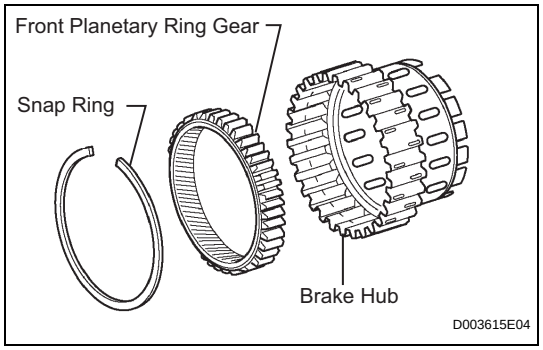
(c) Coat the 1st and reverse brake piston with ATF, and install it to the transaxle case.
NOTICE:
Be careful not to damage the O-rings.

13. INSTALL 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY
(a) Install the return spring.



(b) Place SST on the return spring and compress the return spring with a press.
SST 09387-00070
(c) Using a snap ring expander, install the snap ring to the transaxle case.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove to prevent the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**

- **After installing the spring sub-assembly, check all of the springs are fitted in the piston correctly.**
- **The snap ring should be securely engaged in the groove of the cylinder.**

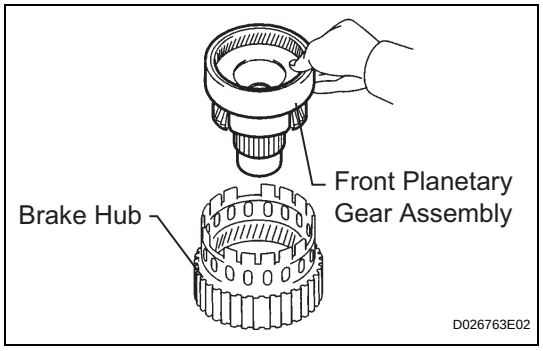


14. INSTALL FRONT PLANETARY RING GEAR

(a) Using a screwdriver, install the front planetary ring gear and snap ring to the brake hub.

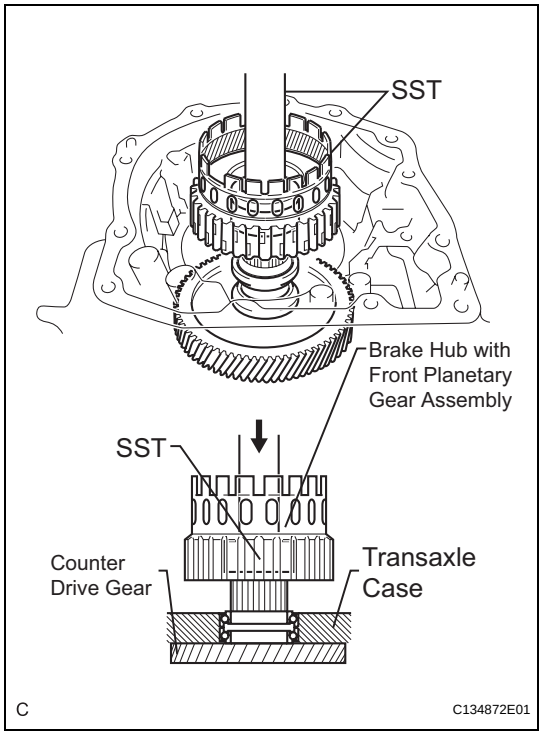
NOTICE:

Confirm that the snap ring is engaged in the groove of the brake hub correctly.



15. INSTALL FRONT PLANETARY GEAR ASSEMBLY

(a) Install the front planetary gear assembly to the brake hub.

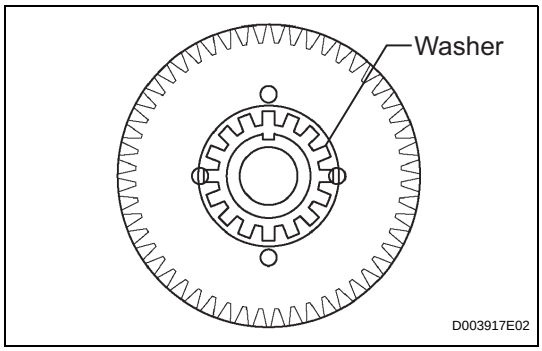


(b) Using SST and a press, press-fit the front planetary gear assembly.

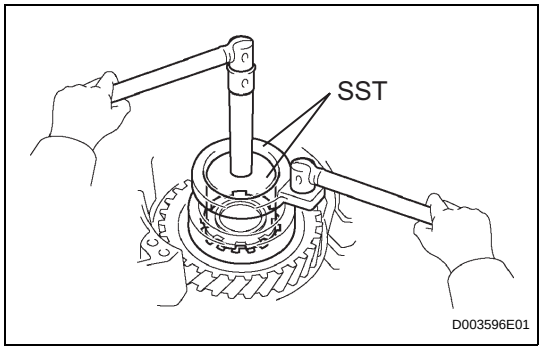
SST 09950-60010 (09951-00500), 09950-70010 (09951-07100)

NOTICE:

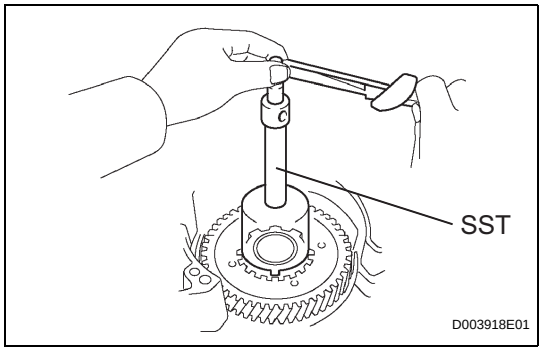
- **Do not apply excessive pressure to the front planetary gear assembly.**
- **Press the inner race of the LH tapered roller bearing, counter gear, and front planetary gear assembly to the position where no pre-load is applied to one pair of tapered roller bearings (left and right).**



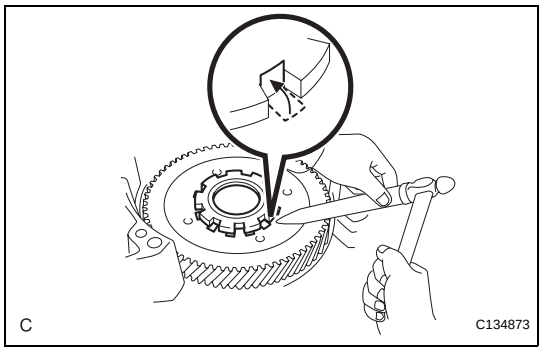
(c) Install a new washer as shown in the illustration.



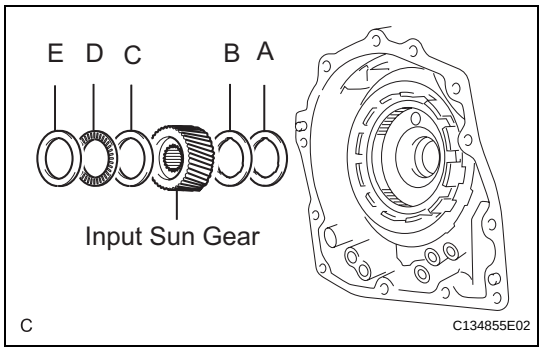
(d) Using SST, install the nut.
SST 09387-00030, 09387-00080
Torque: 185 N*m (1,886 kgf*cm, 136 ft.*lbf)



(e) Using SST and a torque wrench, measure the turning torque of the bearing while rotating SST at 60 rpm. If the measured value is not within the specified range, gradually tighten the nut until the turning torque falls within the specified range.
SST 09387-00080
Torque: 350 N*m (3,569 kgf*cm, 258 ft.*lbf) (a limit)
Bearing Turning Torque:
0.19 to 0.4 N*m (1.9 to 4.1 kgf*cm, 1.7 to 3.5 in.*lbf)
HINT:
Use a torque wrench with a fulcrum length of 160 mm (6.3 in.) to measure the turning torque.



(f) Using a chisel and hammer, stake the front lock washer.



16. INSTALL INPUT SUN GEAR

(a) Coat the 2 thrust bearings with ATF.

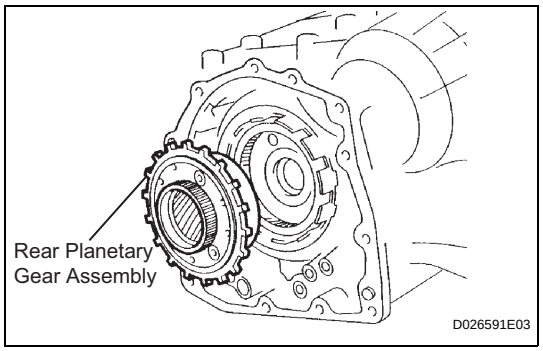
(b) Install the input sun gear, 2 thrust needle roller bearings, 2 No. 2 thrust bearing races, and No. 3 thrust bearings to the transaxle case.

NOTICE:

Ensure that the parts are installed in the correct order and direction.

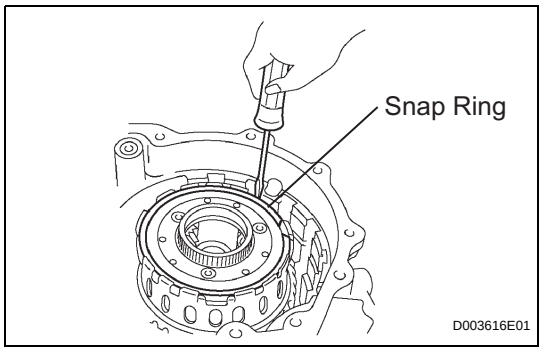
Thrust bearing and bearing race diameter: mm (in.)

	Inside	Outside
Bearing Race, A	34.5 (1.358)	56.82 (2.2370)
Thrust Bearing, B	32.4 (1.276)	56.62 (2.2291)
Bearing Race, C	40.3 (1.587)	58.0 (2.284)
Thrust Bearing, D	38.6 (1.520)	60.0 (2.362)
Bearing Race, E	38.6 (1.520)	58.0 (2.284)



17. INSTALL REAR PLANETARY GEAR ASSEMBLY

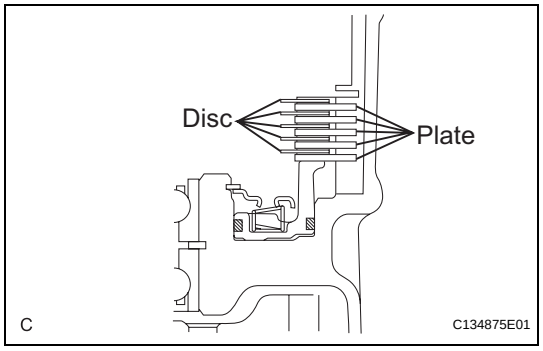
(a) Install the rear planetary gear assembly to the brake hub.



(b) Using a screwdriver, install the snap ring.

NOTICE:

Confirm that the snap ring is engaged in the groove of the 1st and reverse brake hub correctly.



18. INSTALL 1ST AND REVERSE BRAKE DISC

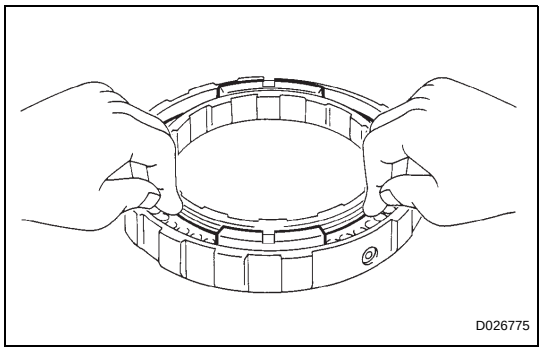
(a) Coat the 5 discs with ATF.

(b) Install the 5 plates and 5 discs.

NOTICE:

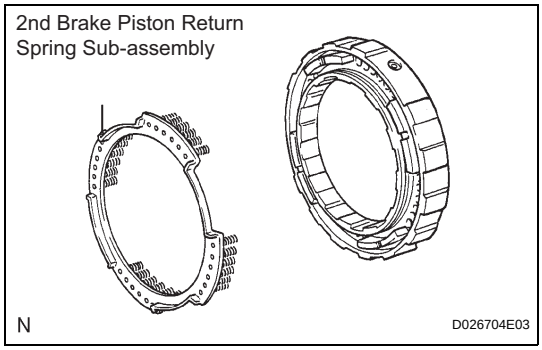
Be careful about the order of discs and plates.

19. INSPECT PACK CLEARANCE OF FIRST AND REVERSE BRAKE (See page AX-229)



20. INSTALL 2ND BRAKE PISTON

(a) Coat the 2nd brake piston with ATF, and install it to the 2nd brake cylinder.

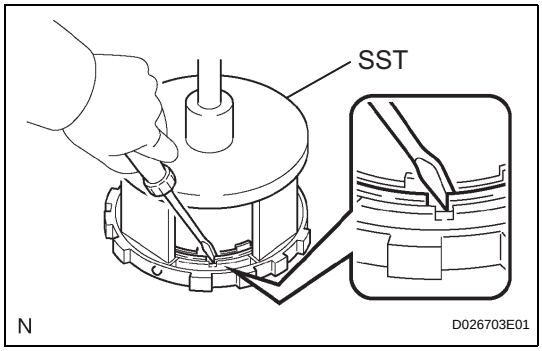


21. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Install the 2nd brake piston return spring sub-assembly.

NOTICE:

Ensure that all springs are fitted in the piston correctly.



(b) Place SST on the piston return spring, and compress it with a press.

SST 09387-00060

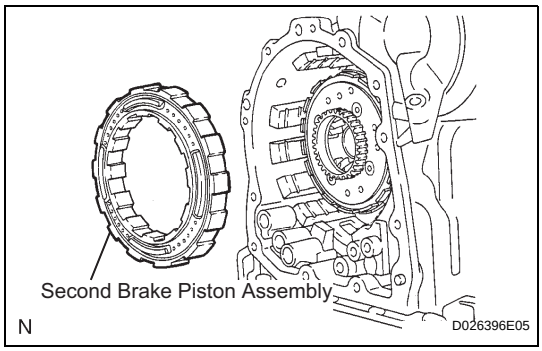
(c) Using a screwdriver, install the snap ring.

NOTICE:

Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove. This prevents the spring seat from being deformed.

22. INSTALL SECOND BRAKE PISTON ASSEMBLY

(a) Install the second brake piston assembly to the transaxle case.



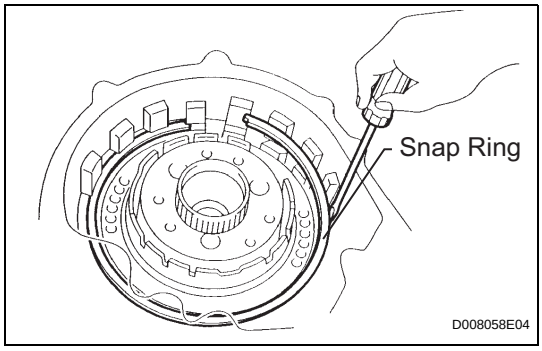
(b) Install the snap ring and measure the inside diameter.

Inside diameter:

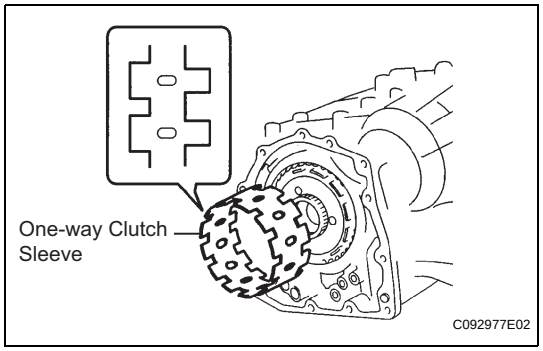
More than 167 mm (6.57 in.)

NOTICE:

- **Make sure to install the tapered snap ring in the correct direction.**
- **When the diameter does not meet the specified value, replace the snap ring with a new one.**



- **After installing the snap ring, confirm that there is no clearance between the second brake cylinder and the fitting surface of the cylinder in the transaxle case.**

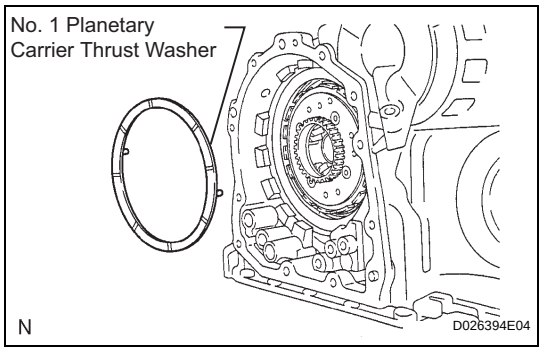


23. INSTALL ONE-WAY CLUTCH SLEEVE

(a) Install the one-way clutch sleeve to the 2nd brake cylinder assembly.

NOTICE:

Check the positioning direction of the outer sleeve.

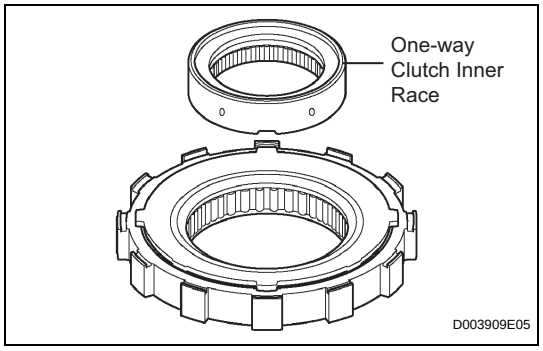


24. INSTALL NO. 1 PLANETARY CARRIER THRUST WASHER

(a) Coat the No. 1 planetary carrier thrust washer with ATF, and install it onto the planetary sun gear assembly.

NOTICE:

After installing the washer, confirm that the projections on the washer are securely fitted in the holes of the planetary sun gear assembly.

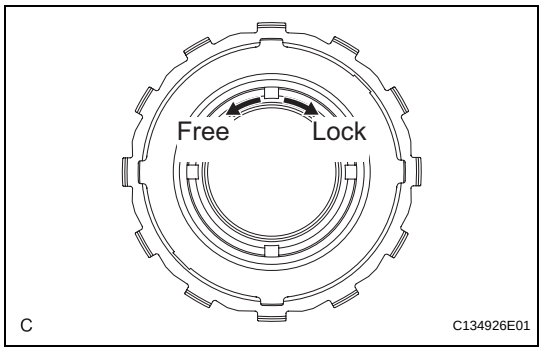


25. INSTALL ONE-WAY CLUTCH ASSEMBLY

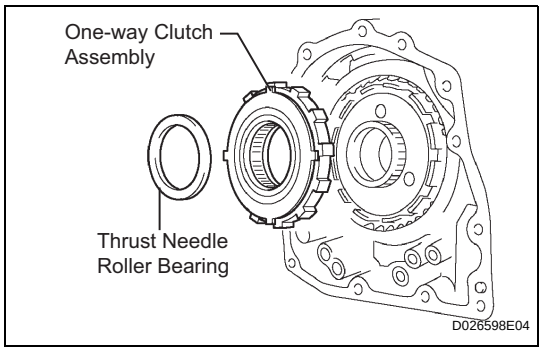
(a) Install the one-way clutch inner race to the one-way clutch.

NOTICE:

- **Check the direction of the inner race.**
- **Confirm that the discrimination mark can be seen.**



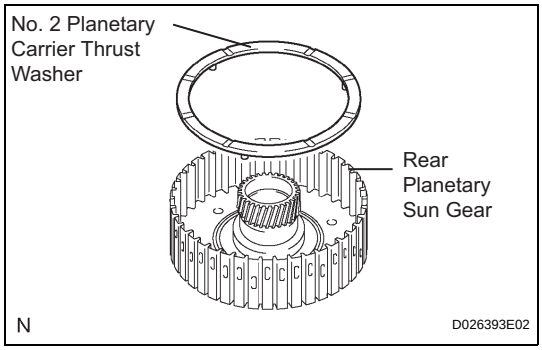
(b) Check the rotating direction of the one-way clutch inner race for the lock or free operation, as shown in the illustration.



(c) Install the one-way clutch and thrust needle roller bearing to the one-way clutch sleeve outer.
Bearing diameter: mm (in.)

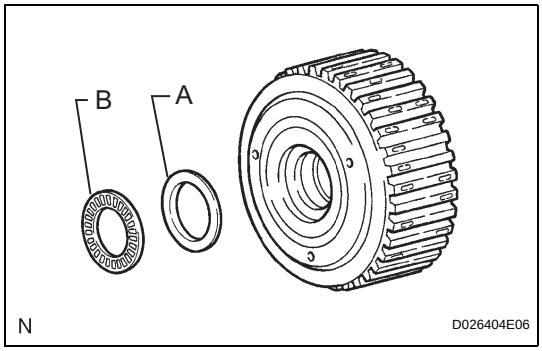
	Inside	Outside
Bearing	53.6 (2.110)	69.4 (2.732)

NOTICE:
Install the thrust bearing properly so that non-colored race will be visible.



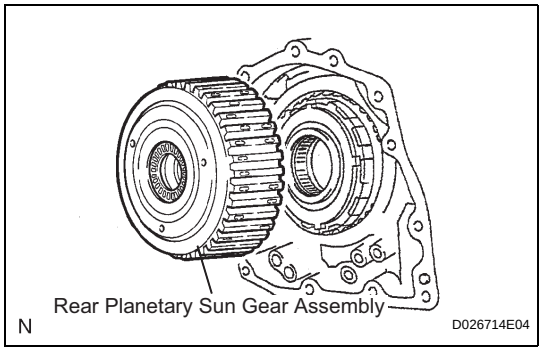
26. INSTALL REAR PLANETARY SUN GEAR ASSEMBLY

(a) Coat the No. 2 planetary carrier thrust washer with ATF, and install it onto the rear planetary sun gear.

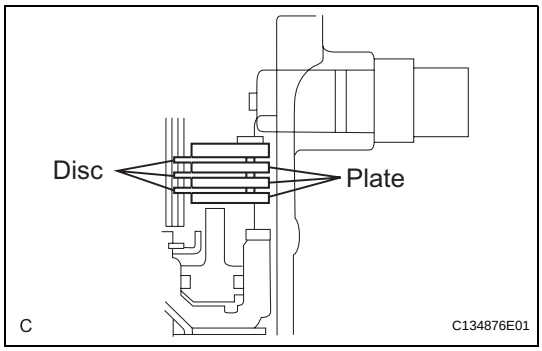


(b) Coat the bearing with yellow petrolatum, and install it onto the rear planetary sun gear.
Bearing diameter: mm (in.)

	Inside	Outside
Race, A	33.1 (1.303)	45.4 (1.787)
Bearing, B	31.85 (1.254)	45.2 (1.78)



(c) Install the rear planetary sun gear assembly to the rear planetary gear.
NOTICE:
After installing the rear planetary sun gear assembly, confirm that the B1 discs engage.

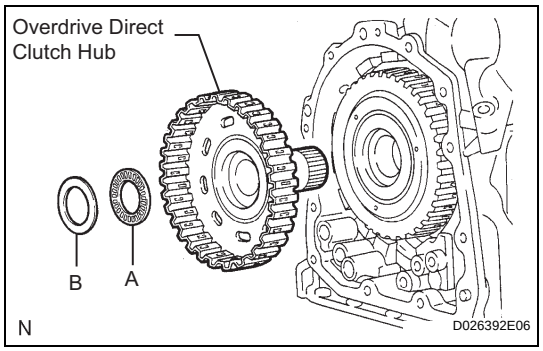


27. INSTALL 2ND BRAKE CLUTCH DISC

(a) Coat the 3 discs with ATF.
(b) Install the 3 discs and 3 plates to the transaxle case.
(c) Install the snap ring.

28. INSPECT PACK CLEARANCE OF SECOND BRAKE

HINT:
See page



29. INSTALL OVERDRIVE DIRECT CLUTCH HUB SUB-ASSEMBLY

(a) Install the direct clutch hub to the planetary gear assembly.

NOTICE:

Be careful not to damage the bushing inside the overdrive clutch hub during installation.

(b) Coat the thrust bearing with ATF.

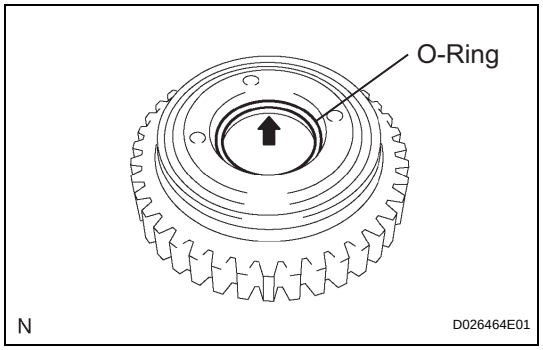
(c) Install the bearing race and the thrust bearing to the direct clutch hub.

NOTICE:

When installing the bearing, hold the side of the overdrive clutch hub.

Bearing and race diameter: mm (in.)

	Inside	Outside
Bearing, A	25.0 (0.984)	39.5 (1.555)
Race, B	23.6 (0.929)	36.6 (1.441)

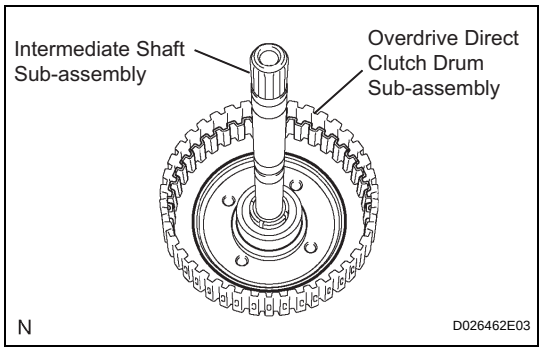


30. INSTALL OVERDRIVE DIRECT CLUTCH O-RING

(a) Coat a new O-ring with ATF, and install it to the direct clutch drum.

NOTICE:

Ensure that the O-ring is not twisted or pinched.

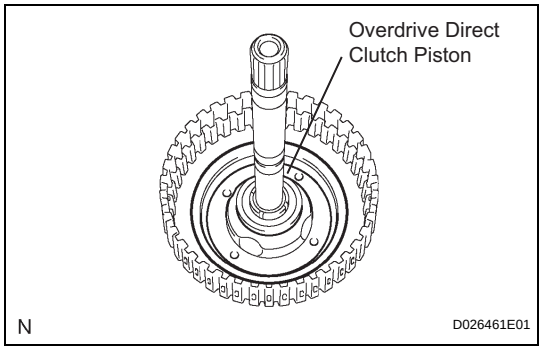


31. INSTALL OVERDRIVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

(a) Coat the direct clutch drum with ATF, and install it to the intermediate shaft.

NOTICE:

- **Be careful not to damage the O-ring.**
- **Be careful not to damage the lip seal of the direct clutch drum.**

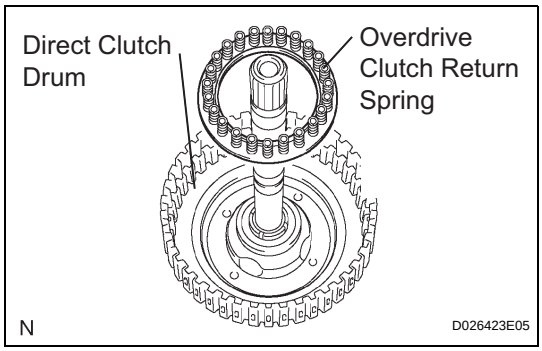


32. INSTALL OVERDRIVE DIRECT CLUTCH PISTON

(a) Coat the overdrive direct clutch piston with ATF, and install it to the overdrive direct clutch drum sub-assembly.

NOTICE:

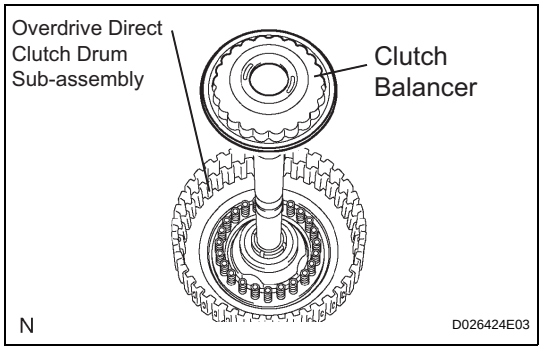
Be careful not to damage the lip seal of the direct clutch piston.



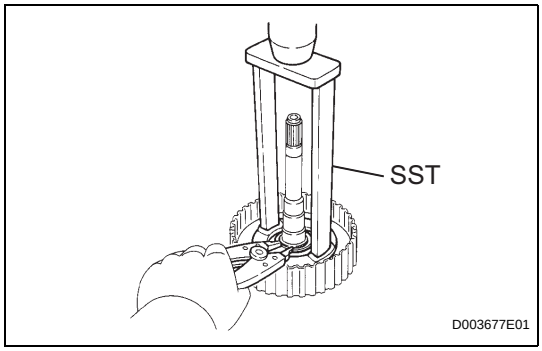
33. INSTALL OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Install the overdrive clutch return spring sub-assembly to the overdrive direct clutch drum sub-assembly.
NOTICE:
When installing the spring sub-assembly, ensure that all springs are fitted in the piston correctly.

(b) Coat the clutch balancer with ATF.

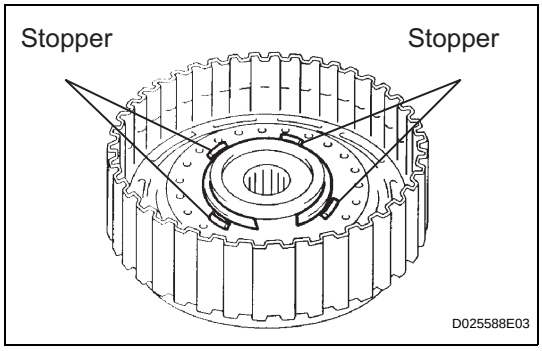


(c) Install the clutch balancer to the overdrive direct clutch drum sub-assembly.
NOTICE:
- **Be careful not to damage the lip seal of the direct clutch balancer.**
- **Ensure that the clutch balancer is not pinched and there are no other defects at the sealing lip.**
- **Apply enough ATF to the sealing lip prior to installation.**

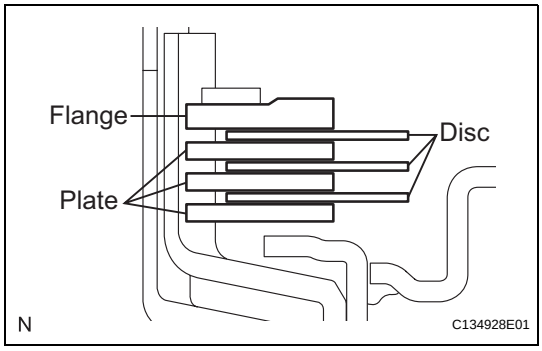


(d) Place SST on the clutch balancer and compress the piston return spring with a press.
SST 09387-00020

(e) Using a snap ring expander, install the snap ring to the direct clutch drum.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove. This prevents the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**



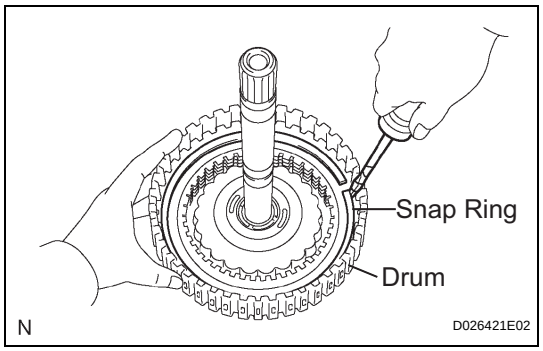
(f) Position the end gap of the snap ring in the piston as shown in the illustration.
NOTICE:
Ensure that the end gap of the snap ring is not aligned with any of the stoppers.



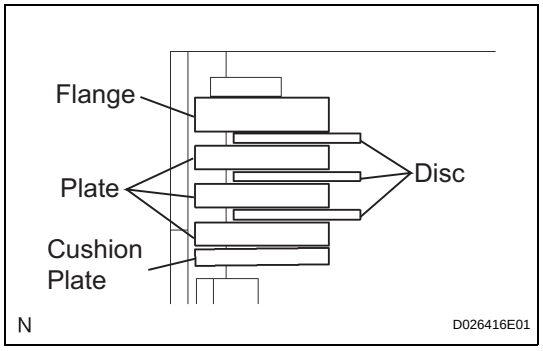
34. INSTALL OVERDRIVE DIRECT CLUTCH DISC

(a) Coat the 3 discs with ATF.

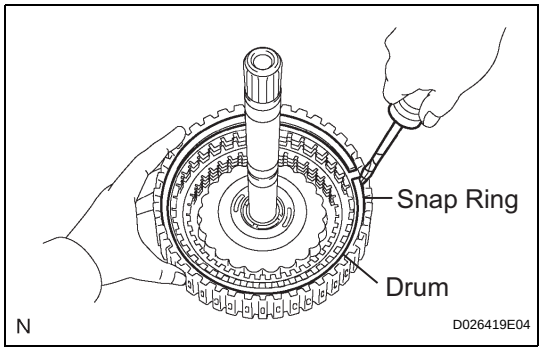
(b) Install the 3 plates, 3 discs and flange to the intermediate shaft.
NOTICE:
Be careful about the order of the discs, plates and flange.



(c) Using a screwdriver, install the snap ring.
NOTICE:
The snap ring should be securely engaged in the groove of the drum.



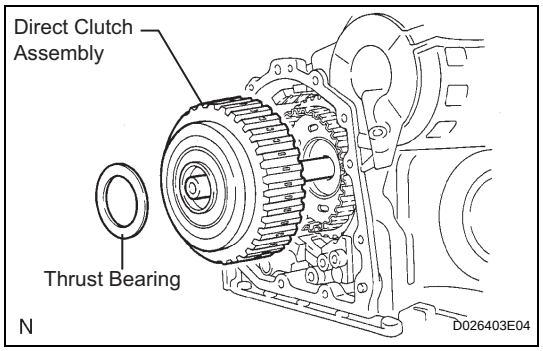
35. INSTALL DIRECT MULTIPLE DISC CLUTCH DISC
(a) Coat the 3 discs with ATF.
(b) Install the cushion plate, 3 plates, 3 discs and flange to the intermediate shaft.
NOTICE:
- **Install the cushion plate with the mark on the white surface facing the plate.**
- **Be careful about the order of discs, plates and flange.**



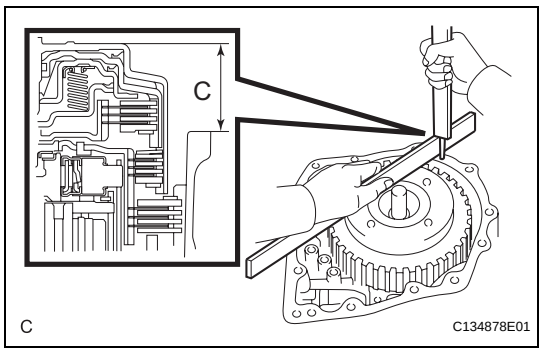
(c) Using a screwdriver, install the snap ring.
NOTICE:
The snap ring should be securely engaged in the groove of the drum.

36. INSPECT PACK CLEARANCE OF DIRECT CLUTCH (See page AX-232)

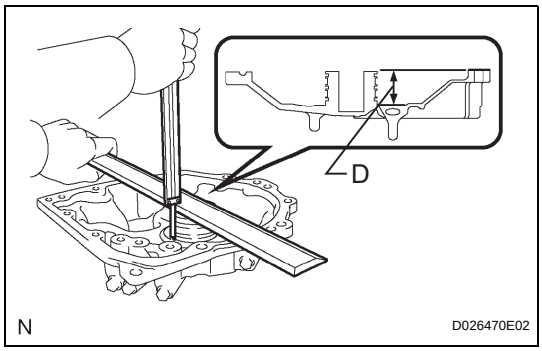
37. INSPECT PACK CLEARANCE OF OVERDRIVE CLUTCH (See page AX-232)



38. INSTALL DIRECT CLUTCH ASSEMBLY
(a) Coat the thrust bearing with ATF.
(b) Install the direct clutch assembly and thrust bearing to the rear planetary sun gear assembly.
NOTICE:
The disc in the direct clutch should completely match with the hub attached outside the rear planetary sun gear. Otherwise, the rear cover cannot be installed.



(c) Clean the contact surfaces of the transaxle case and the rear cover.
(d) As shown in the illustration, place a straight edge on the direct clutch drum and measure the distance between the transaxle case and the straight edge using vernier calipers (Dimension C).



(e) Using vernier calipers and a simple straight edge, measure the dimension shown in the illustration.

(f) Calculate the end play value using the following formula. Select a thrust bearing which satisfies the specified end play value and install it.

End play:

0.199 to 0.970 mm (0.0078 to 0.0382 in.)

NOTICE:

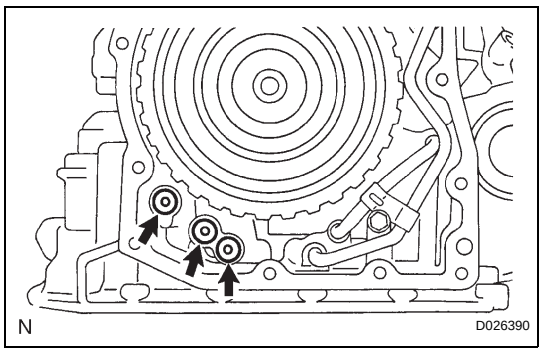
Make sure that the non-colored race side is facing the direct clutch assembly.

HINT:

End play = Dimension D - Dimension C

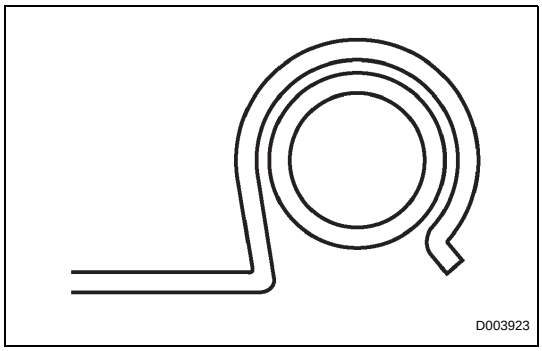
Bearing thickness and diameter: mm (in.)

Thickness	Inside	Outside
3.6 (0.1417)	55.9 (2.201)	76.0 (2.992)
3.8 (0.150)	55.9 (2.201)	76.6 (3.016)



39. INSTALL NO. 1 GOVERNOR APPLY GASKET

(a) Install 3 new No. 1 governor apply gaskets to the transaxle case.



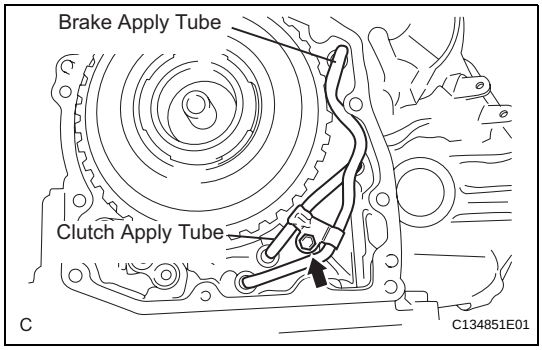
40. INSTALL BRAKE APPLY TUBE

(a) Install the clamp to the brake apply tube.

NOTICE:

Make sure to install the clamp to the apply tube before installing the apply tube to the transaxle case. This prevents the apply tube from being deformed or damaged.

(b) Install the clutch apply tube.

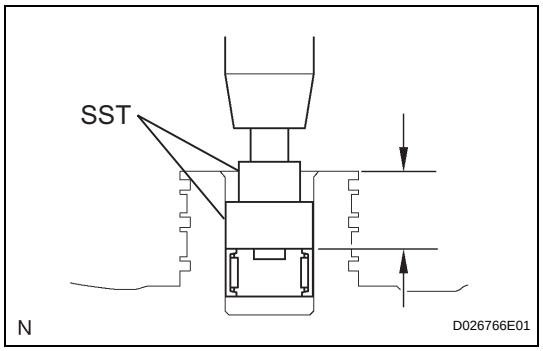


(c) Install the brake apply tube to the transaxle case with the bolt.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NOTICE:

Each pipe should be securely inserted until it reaches the stopper.



41. INSTALL NEEDLE ROLLER BEARING

(a) Using SST and a press, install the needle roller bearing to the transaxle rear cover.

SST 09950-60010 (09951-00230, 09952-06010, 09951-00360)

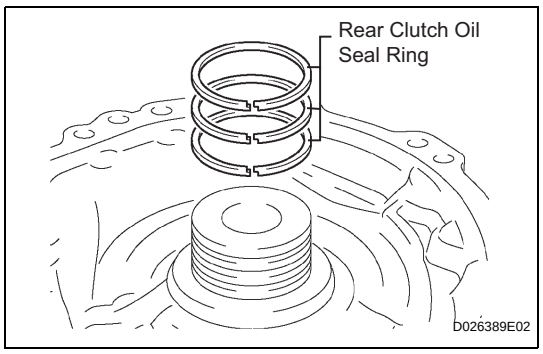
Press fit depth:

20.55 to 21.25 mm (0.8091 to 0.8366 in.)

NOTICE:

- **Face the inscribed mark side of the bearing race up.**
- **Keep pressing until the specified value is obtained.**

(b) Coat the needle roller bearing with ATF.

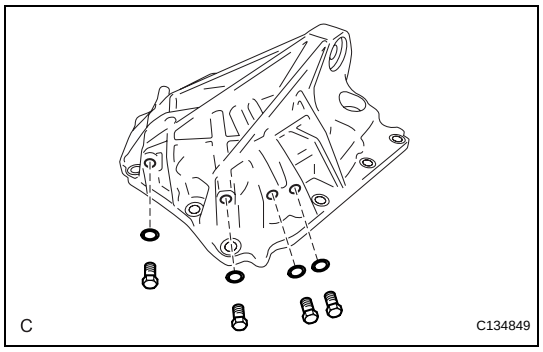


42. INSTALL REAR CLUTCH OIL SEAL RING OUTER

(a) Coat 3 new rear clutch oil seal rings with ATF, and install them to the transaxle rear cover.

NOTICE:

The rear clutch oil seal rings should be securely engaged in the grooves of the drum.

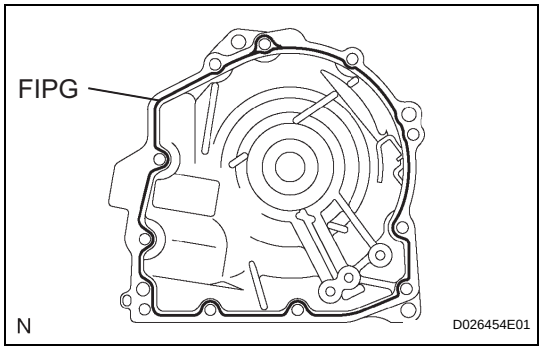


43. INSTALL NO. 1 TRANSAXLE CASE PLUG

(a) Install 4 new O-rings to the 4 No. 1 transaxle case plugs.

(b) Install the 4 No. 1 transaxle case plugs to the transaxle rear cover.

Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)



44. INSTALL TRANSAXLE REAR COVER SUB-ASSEMBLY

(a) Remove any packing material and keep the contact surfaces of the transaxle rear cover and the transaxle case away from oil.

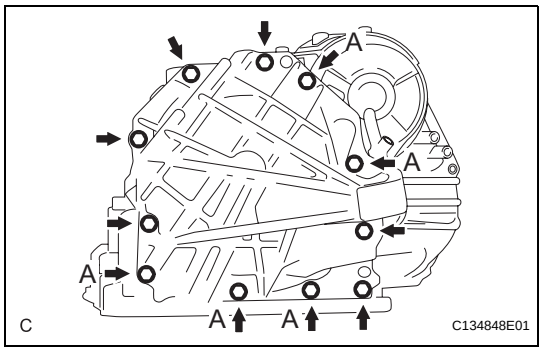
(b) Apply FIPG to the cover.

FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or Equivalent

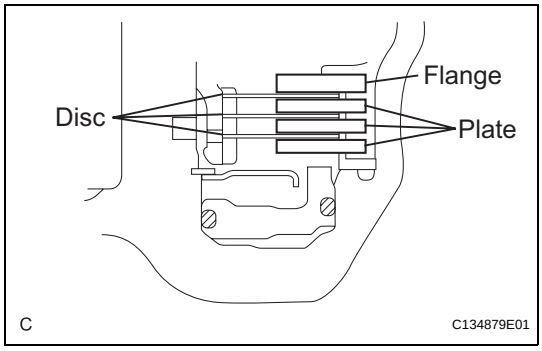
NOTICE:

Apply FIPG in a continuous line (width 1.2 mm (0.047 in.)) along the sealing surface.



(c) Apply liquid sealer to the threads of bolt A.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

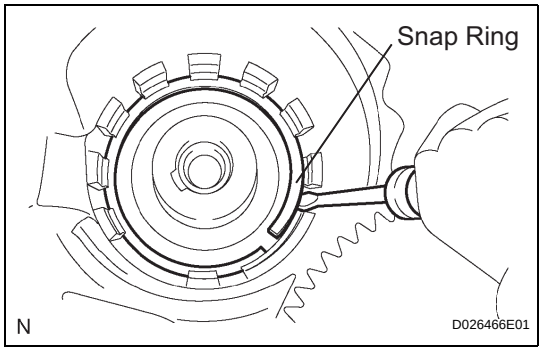
(d) Install the 11 bolts.
Torque: Bolt A
19 N*m (190 kgf*cm, 14 ft.*lbf)
Other bolts
25 N*m (250 kgf*cm, 18 ft.*lbf)



45. INSTALL NO. 2 UNDERDRIVE CLUTCH DISC

(a) Coat the 3 discs with ATF.

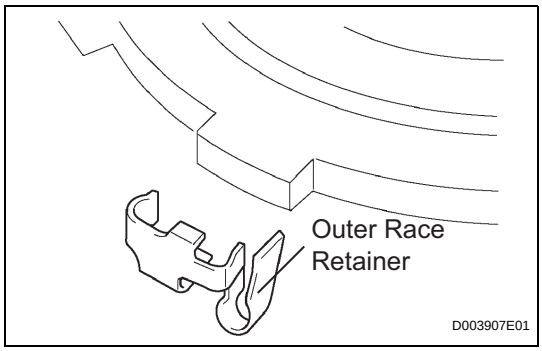
(b) Install the 3 discs, 3 plates and flange to the transaxle case.
NOTICE:
Be careful about the order of discs, plates and flange.



(c) Using a screwdriver, install the snap ring.
NOTICE:
The snap ring should be securely engaged in the groove of the drum.

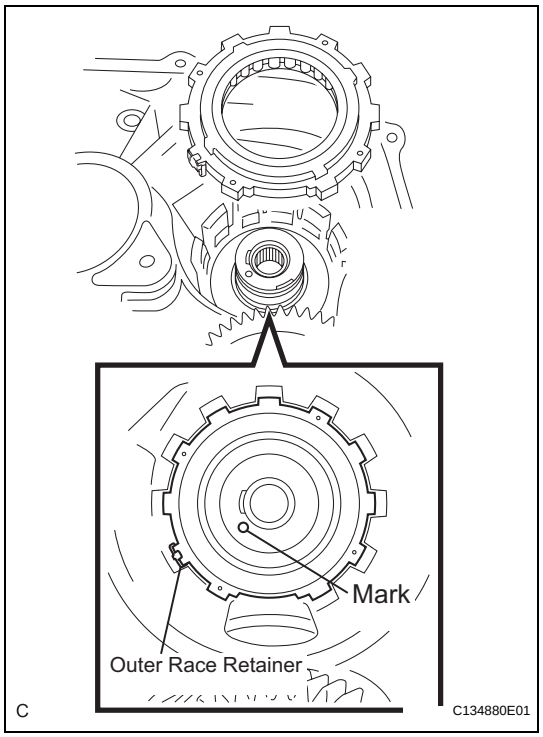
46. INSPECT PACK CLEARANCE OF NO. 2 UNDERDRIVE CLUTCH (See page AX-230)

47. INSPECT UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY (See page AX-230)

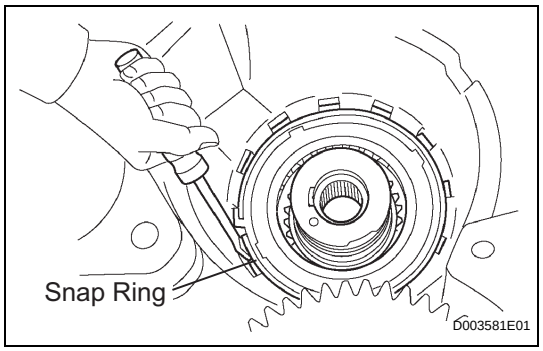


48. INSTALL UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY

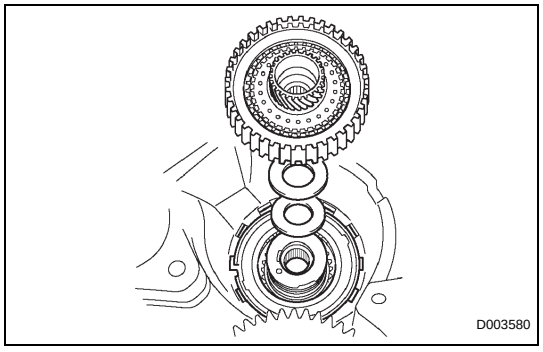
(a) Install the outer race retainer to the one-way clutch.
NOTICE:
Securely install the outer race retainer onto the external tooth of the one-way clutch.



(b) Install the one-way clutch to the transaxle case.
NOTICE:
Ensure that the outer race retainer and the mark on the transaxle case are aligned.



(c) Using a screwdriver, install the snap ring to the transaxle case.
NOTICE:
The snap ring should be securely engaged in the groove of the transaxle case.

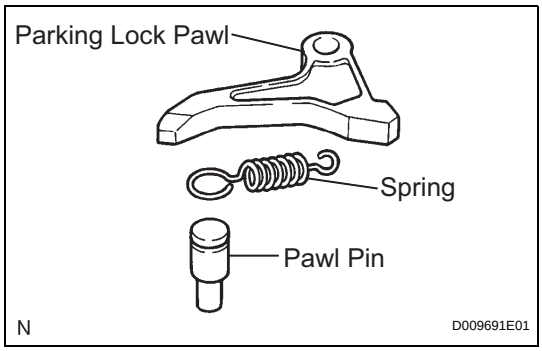


49. INSTALL UNDERDRIVE CLUTCH ASSEMBLY

(a) Coat the bearing and bearing race with ATF, and install them onto the underdrive clutch.
Bearing and bearing race diameter: mm (in.)

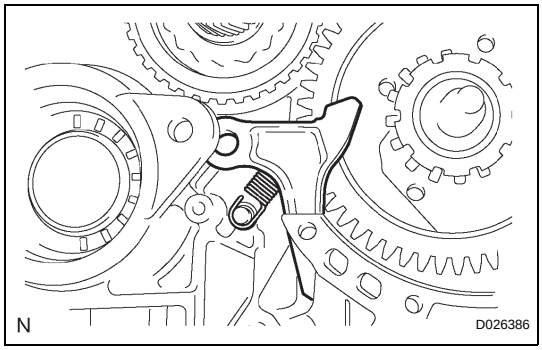
	Inside	Outside
Bearing	37.73 (1.4854)	58.0 (2.284)
Race	29.9 (1.177)	55.5 (2.185)

(b) Install the underdrive clutch assembly to the transaxle case.
NOTICE:
When installing the underdrive clutch drum sub-assembly, do not damage the oil seal ring.

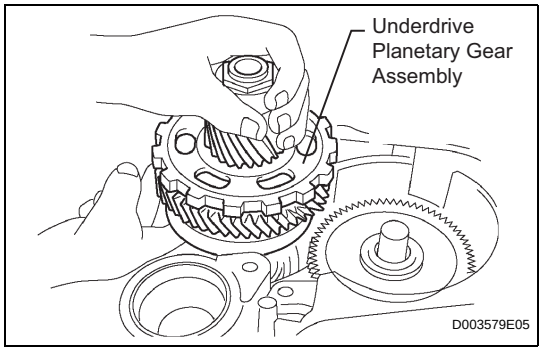


50. INSTALL PARKING LOCK PAWL

(a) Install the pawl pin and spring to the parking lock pawl.



(b) Temporarily install the parking lock pawl, pin and spring to the transaxle case as shown in the illustration.

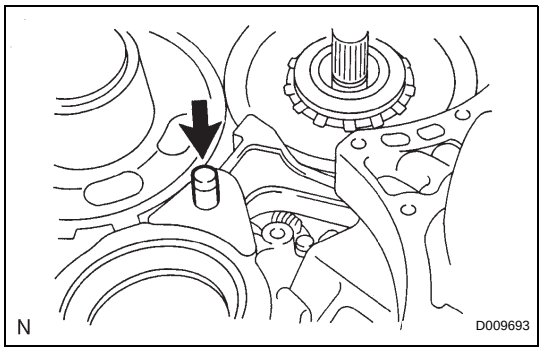


51. INSTALL UNDERDRIVE PLANETARY GEAR ASSEMBLY

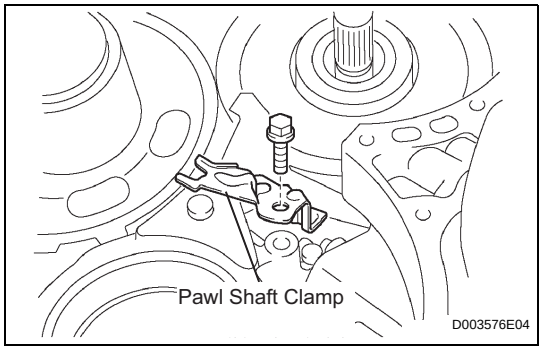
(a) Install the underdrive planetary gear assembly to the transaxle case.

NOTICE:

Firmly engage all the discs of the underdrive clutch with the hub splines of the underdrive planetary gear assembly and securely assemble them.

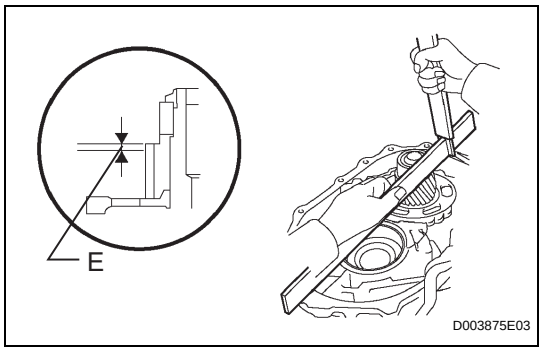


(b) Install the parking lock pawl shaft.

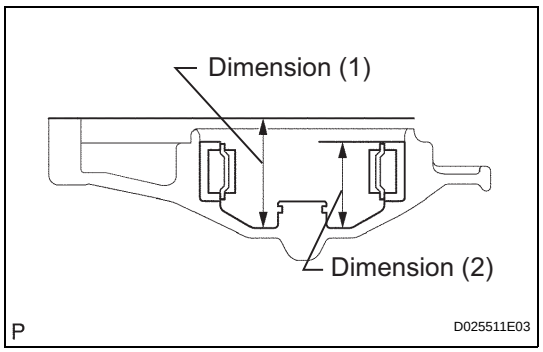


(c) Install the pawl shaft clamp with the bolt.

Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

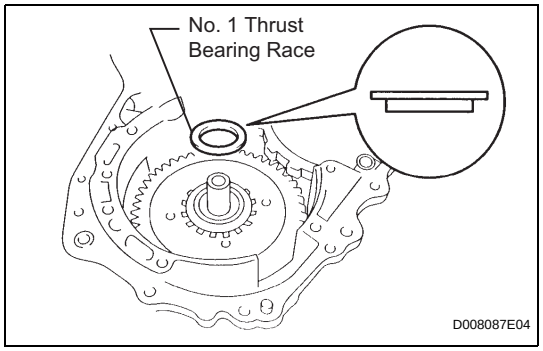


(d) Using a straight edge and vernier calipers as shown in the illustration, measure the gap between the top of the differential drive pinion in the underdrive planetary gear and contact surface of the transaxle case and housing (Dimension E).
NOTICE:
Note down dimension E because it is necessary for the following process.



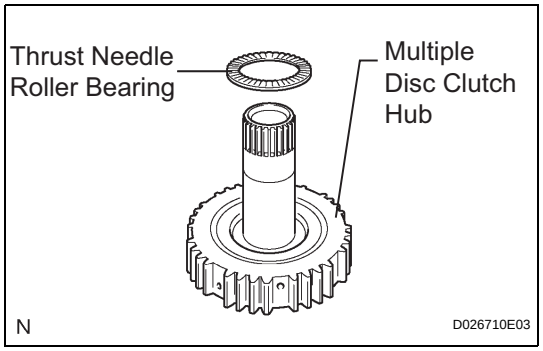
(e) As shown in the illustration, measure the 2 places of the transaxle housing, and calculate dimension F using the following formula.
NOTICE:
Note down dimension F because it is necessary for the following process.
HINT:
Dimension F = Dimension (1) - Dimension (2)

52. INSTALL MULTIPLE DISC CLUTCH HUB



(a) Install the No. 1 thrust bearing race to the transaxle case while checking its direction.
Bearing race diameter: mm (in.)

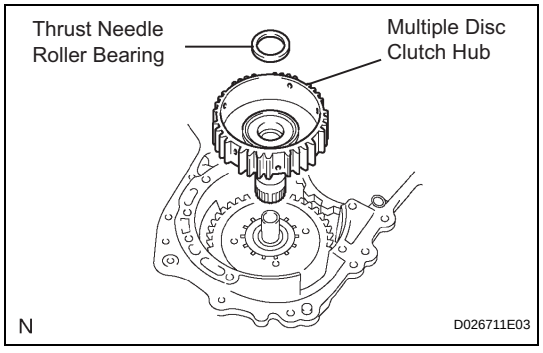
	Inside	Outside
Bearing Race	34.5 (1.359)	48.5 (1.909)



(b) Coat the thrust needle roller bearing and race with ATF, and install them onto the multiple disc clutch hub.
Thrust bearing and race diameter: mm (in.)

	Inside	Outside
Thrust Bearing	36.4 (1.433)	52.2 (2.055)

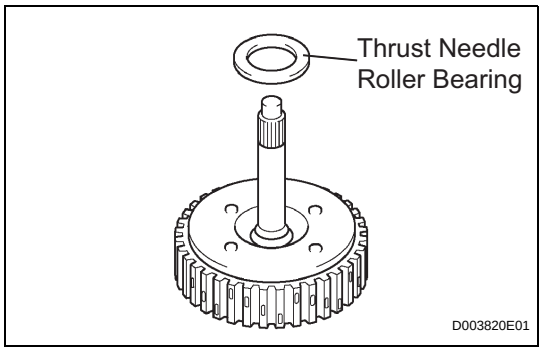
(c) Coat the needle roller bearing with ATF.



(d) Install the needle roller bearing to the multiple disc clutch hub.
Bearing diameter: mm (in.)

	Inside	Outside
Bearing	23.5 (0.925)	44.0 (1.732)

(e) Install the multiple disc clutch hub to the transaxle case.



53. INSTALL FORWARD CLUTCH ASSEMBLY

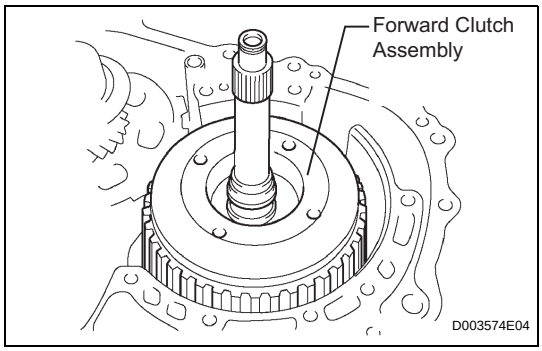
(a) Coat the thrust needle roller bearing with ATF.

(b) Install the thrust needle roller bearing to the forward clutch.

Thrust bearing diameter: mm (in.)

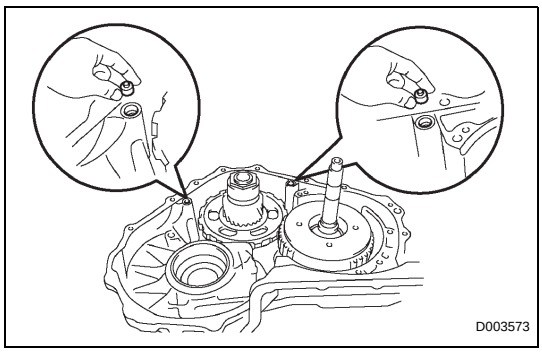
	Inside	Outside
Thrust Bearing	33.85 (1.3327)	52.2 (2.0551)

NOTICE:
Install the thrust bearing properly so that the temper colored side of the race will be visible.



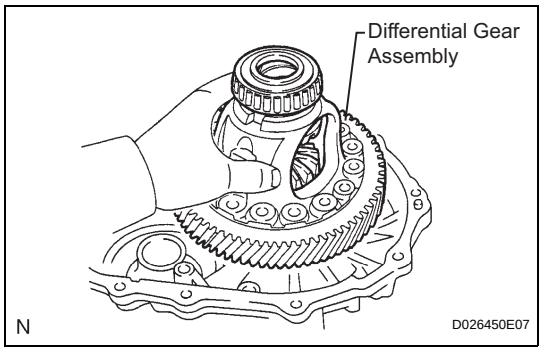
(c) Install the forward clutch to the forward clutch assembly.

NOTICE:
- **Align the splines of all discs in the forward clutch with those of the multiple clutch hub to assemble them securely.**
- **Be careful not to damage the bush inside the forward clutch hub during installation.**



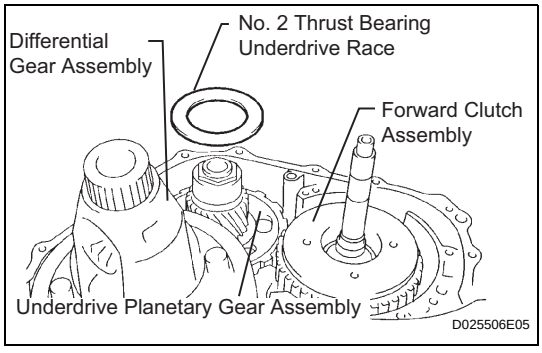
54. INSTALL OVERDRIVE BRAKE GASKET

(a) Install 2 new overdrive brake gaskets.



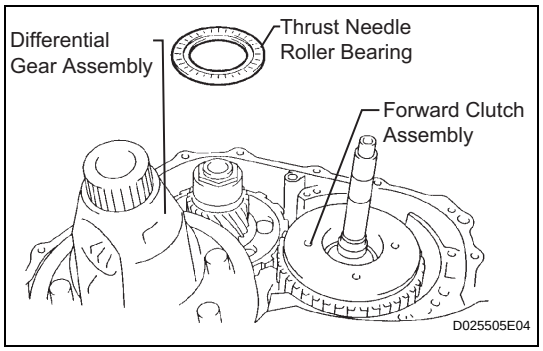
55. INSTALL DIFFERENTIAL GEAR ASSEMBLY

(a) Install the differential gear assembly to the transaxle case.



56. INSTALL NO. 2 THRUST BEARING UNDERDRIVE RACE

(a) Install the No. 2 thrust bearing underdrive race to the underdrive planetary gear assembly.



57. INSTALL THRUST NEEDLE ROLLER BEARING

(a) Coat the thrust needle roller bearing with ATF.

(b) Calculate the end play value using the following formula and values of Dimensions E and F that ware measured when installing the cylindrical roller bearing and underdrive planetary gear. Select an appropriate underdrive planetary gear thrust bearing race No. 2 which satisfies the specified end play value, and install it.

End play:

0.198 to 0.693 mm (0.00779 to 0.02728 in.)

HINT:

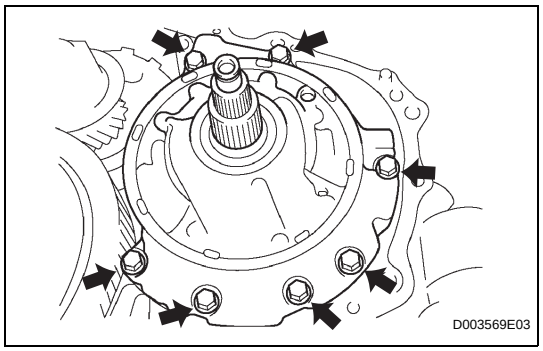
End play = Dimension F - Dimension E - Thrust bearing thickness 2.5 mm (0.0984 in.) - Underdrive thrust bearing race No. 2 thickness.

Race thickness: mm (in.)

F - E	Thickness
Less than 7.339 (0.28894)	3.5 (0.138)
7.339 (0.28894) or more	3.8 (0.150)

Bearing and bearing race diameter: mm (in.)

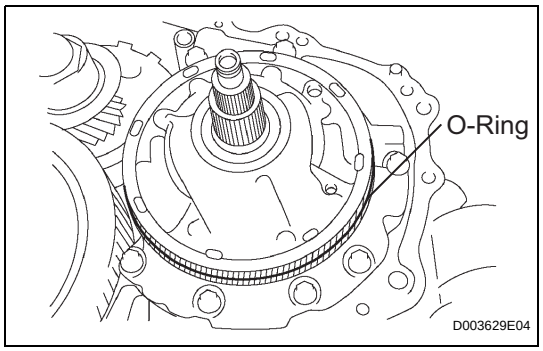
	Inside	Outside
Bearing	53.0 (2.087)	78.2 (3.079)
Bearing race	52.1 (2.051)	75.5 (2.972)



58. INSTALL OIL PUMP ASSEMBLY

(a) Install the oil pump to the transaxle case with the 7 bolts.

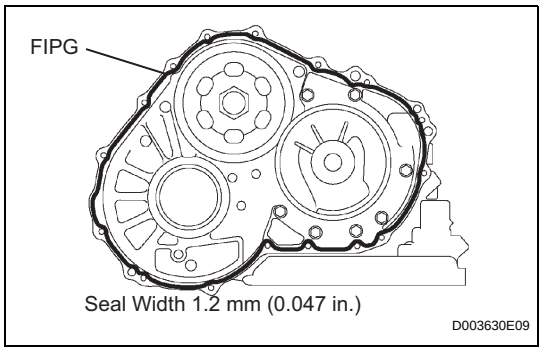
Torque: 22 N*m (225 kgf*cm, 16 ft.*lbf)



(b) Coat the O-ring of the oil pump with ATF.

NOTICE:

Confirm the input shaft rotates smoothly with the manual operation after installing the oil pump.



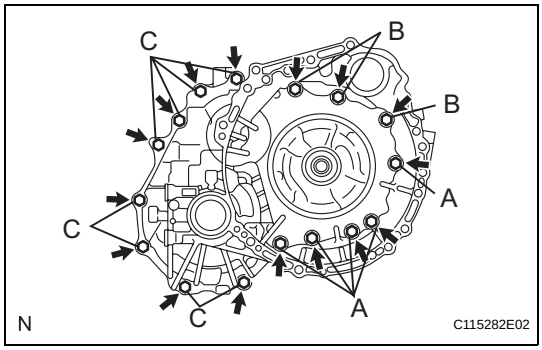
59. INSTALL TRANSAXLE HOUSING

(a) Remove any parking material and keep the contact surfaces of the transaxle case and transaxle housing away from oil.

(b) Apply FIPG to the transaxle case.

FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or Equivalent



(c) Install the transaxle housing to the transaxle case with the 16 bolts.

Torque: Bolt A

22 N*m (225 kgf*cm, 16 ft.*lbf)

Bolt B

29 N*m (296 kgf*cm, 21 ft.*lbf)

Bolt C

29 N*m (296 kgf*cm, 21 ft.*lbf)

HINT:

Apply seal packing or equivalent to bolts A and C.

Seal packing:

Toyota Genuine Seal Packing 1344, Three Bond 1344 or Equivalent

Bolt length

Bolt A:

50 mm (1.969 in.)

Bolt B:

50 mm (1.969 in.)

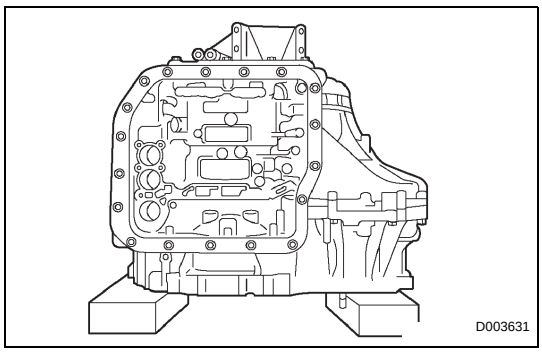
Bolt C:

42 mm (1.654 in.)

NOTICE:

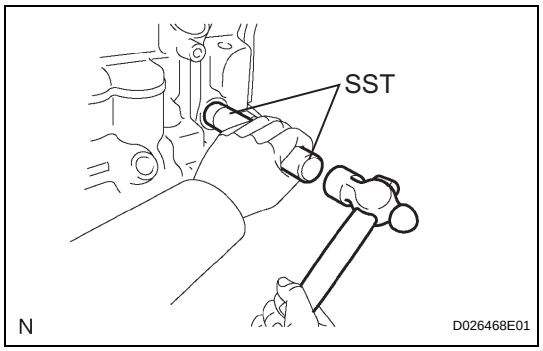
Apply seal packing to new bolts and tighten them within 10 minutes of application.

60. INSPECT INPUT SHAFT END PLAY (See page AX-231)



61. FIX AUTOMATIC TRANSAXLE ASSEMBLY

(a) Fix the transaxle assembly.



62. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

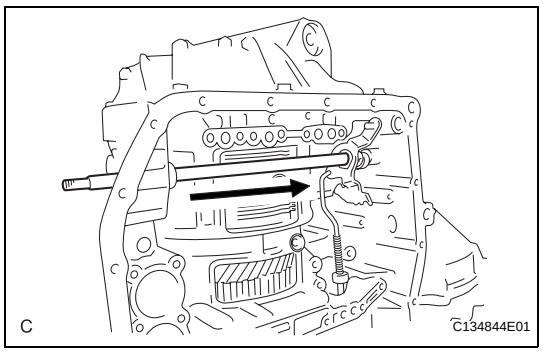
(a) Coat a new oil seal with MP grease.

(b) Using SST, install the oil seal to the transaxle case.

SST 09950-60010 (09951-00230), 09950-70010 (09951-07100)

Oil seal drive in depth:

-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

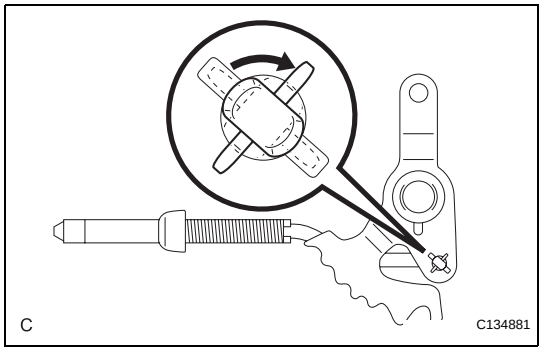


63. INSTALL PARKING LOCK ROD SUB-ASSEMBLY

(a) Install the parking lock rod to the manual valve lever.

HINT:

Align the dial with the notches on the manual valve lever and turn the dial 90° to install the parking lock rod.

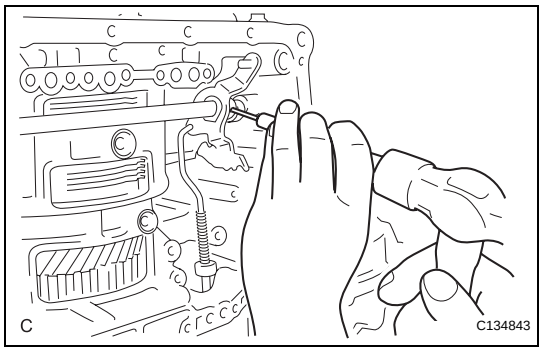


64. INSTALL MANUAL VALVE LEVER SUB-ASSEMBLY

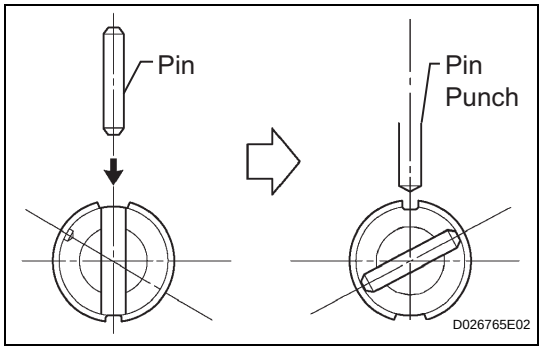
(a) Install a new spacer and the manual valve lever shaft to the transaxle case.

NOTICE:

Do not damage the oil seal while installing the shaft to the transaxle case.



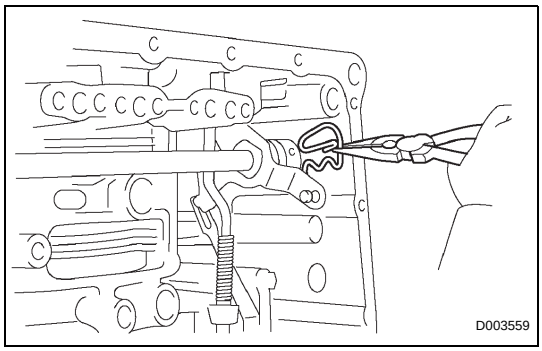
(b) Using a pin punch and hammer, drive in a new pin.



(c) Turn the spacer and the lever shaft to align the smaller hole of the spacer with the staking position mark on the lever shaft.

(d) Using a pin punch, stake the spacer through the small hole.

(e) Check that the spacer does not turn.

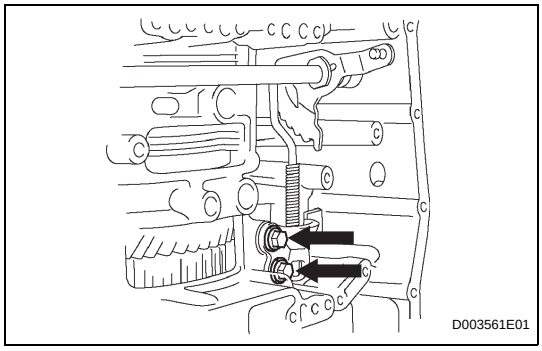


65. INSTALL MANUAL VALVE LEVER SHAFT RETAINER SPRING

(a) Using needle-nose pliers, install the retainer spring.

NOTICE:

Hang the spring on the shaft securely.



66. INSTALL PARKING LOCK PAWL BRACKET

(a) Install the parking lock pawl bracket with the 2 bolts.

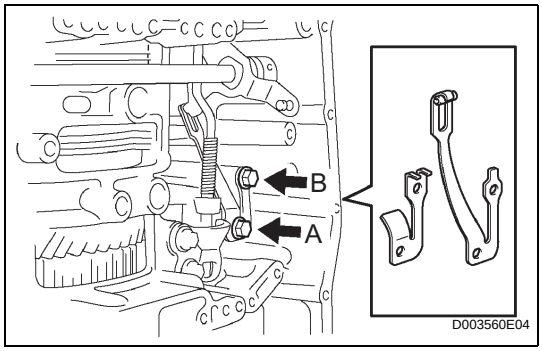
Torque: 20 N*m (205 kgf*cm, 15 ft.*lbf)

Bolt length:

25 mm (0.98 in.)

NOTICE:

Be sure the parking rod is placed between the parking pawl and the guide of the parking bracket after the parking bracket is installed.



67. INSTALL MANUAL DETENT SPRING SUB-ASSEMBLY

(a) Install the manual detent spring sub-assembly with the 2 bolts.

NOTICE:

Make sure to install the manual detent spring and cover in this order.

HINT:

Tighten the bolts in the order of A and B.

Torque: Bolt A

20 N*m (205 kgf*cm, 15 ft.*lbf)

Bolt B

12 N*m (120 kgf*cm, 9 ft.*lbf)

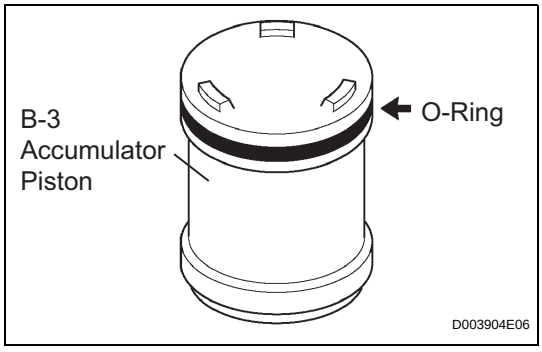
Bolt length:

Bolt A:

27 mm (1.06 in.)

Bolt B:

16 mm (0.63 in.)

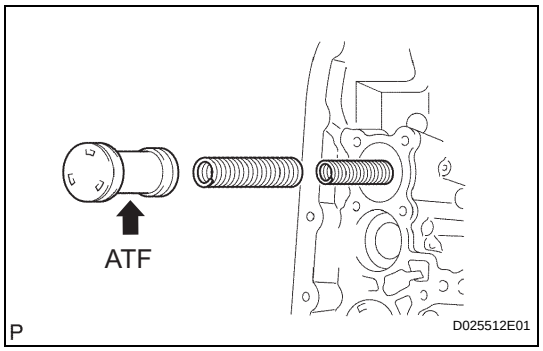


68. INSTALL B-3 ACCUMULATOR PISTON

(a) Coat a new O-ring with ATF, and install it to the B-3 accumulator piston.

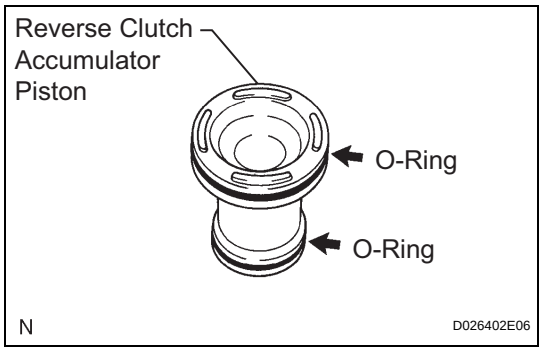
NOTICE:

Install the O-ring to the accumulator piston not to have a twist or a pinching. Apply enough ATF to the O-ring prior to installation. Be sure about the installation position.



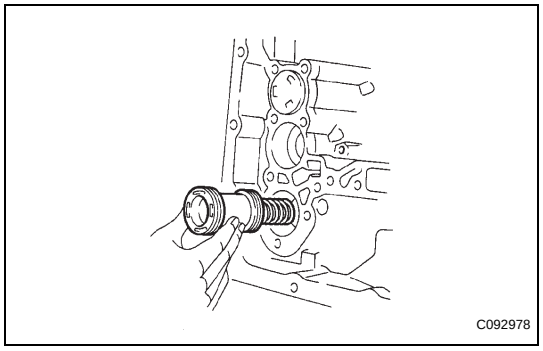
(b) Coat the piston and springs with ATF, and install them to the transaxle case.
NOTICE:
Install the correct springs to the B-3 accumulator piston by checking the color or dimension of the springs.
Accumulator spring:

Free length / Outer diameter (mm (in.))	Color
Inner: 62.00 (2.4409) / 15.50 (0.610)	Purple
Outer: 74.23 (2.9224) / 21.70 (0.854)	Purple



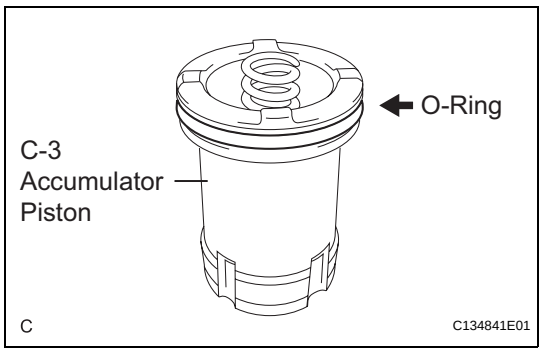
69. INSTALL REVERSE CLUTCH ACCUMULATOR PISTON

(a) Coat 2 new O-rings with ATF, and install them to the reverse clutch accumulator piston.
NOTICE:
Install the O-rings to the accumulator piston not to have a twist or a pinching. Apply enough ATF to the O-rings prior to installation. Be sure about the installation positions.



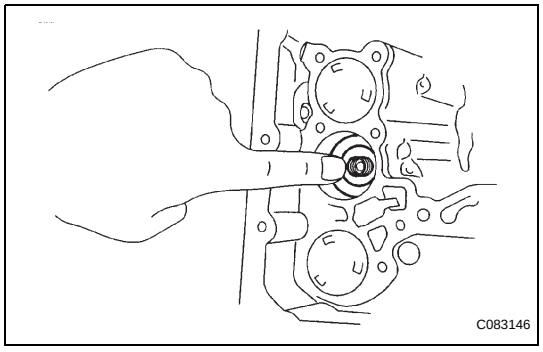
(b) Coat the piston and spring with ATF, and install them to the transaxle case.
NOTICE:
Install the correct spring to the reverse clutch accumulator piston by checking the color or dimension of the spring.
Accumulator spring:

Free length / Outer diameter (mm (in.))	Color
60.96 (2.3999) / 14.10 (0.555)	Yellow

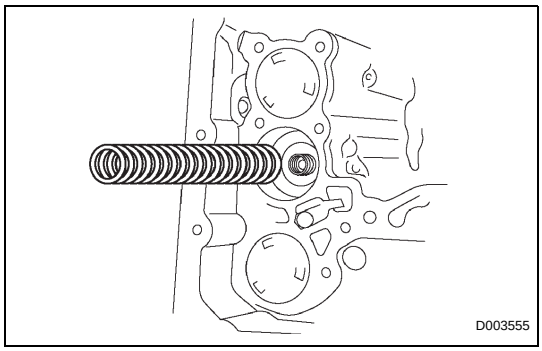


70. INSTALL C-3 ACCUMULATOR PISTON

(a) Coat a new O-ring with ATF, and install it to the C-3 accumulator piston.
NOTICE:
Install the O-ring to the accumulator piston not to have a twist or a pinching. Apply enough ATF to the O-ring prior to installation. Be sure about the installation position.

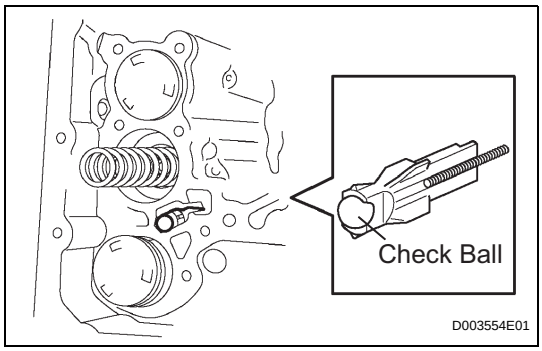


(b) Coat the piston with ATF, and install it to the transaxle case.

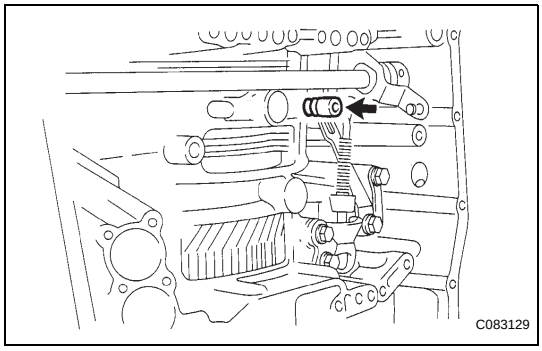


(c) Install the spring to the C-3 accumulator piston.
NOTICE:
Install the correct spring to the C-3 accumulator piston by checking the color or dimension of the spring.
Accumulator spring:

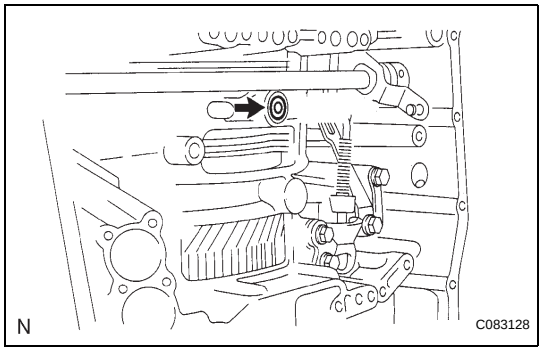
Free length / Outer diameter (mm (in.))	Color
72.20 (2.8425) / 19.0 (0.748)	Colorless



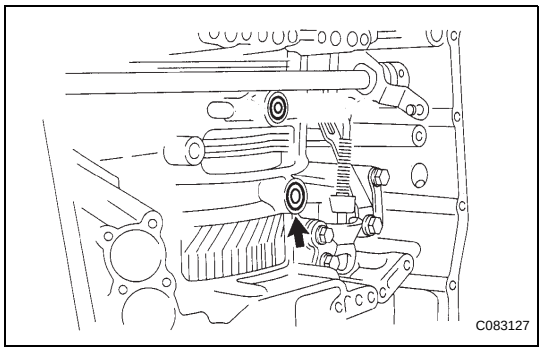
71. INSTALL CHECK BALL BODY
(a) Coat the check ball body with ATF.
(b) Install the check ball body and spring.
NOTICE:
Regarding the installation of the spring for the check ball body, be sure to place the spring in the hole in the ball body. Be careful about the orientation of the parts.



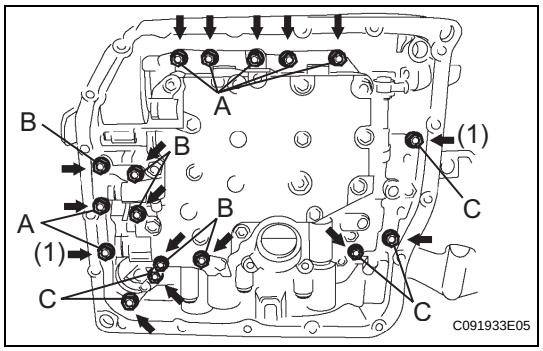
72. INSTALL BRAKE DRUM GASKET
(a) Coat a new brake drum gasket with ATF, and install it to the transaxle case.
NOTICE:
Do not damage the lip portion of the brake drum gasket when inserting the gasket to the case. Apply enough ATF to the gasket prior to installation. Be careful about the orientation of the parts.



73. INSTALL TRANSAXLE CASE 2ND BRAKE GASKET
(a) Coat a new transaxle case 2nd brake gasket with ATF, and install it to the transaxle case.
NOTICE:
Do not damage the lip portion of the transaxle case 2nd brake gasket when inserting the gasket to the case. Apply enough ATF to the gasket prior to installation. Be careful about the orientation of the parts.



74. INSTALL NO. 1 GOVERNOR APPLY GASKET
(a) Coat a new No. 1 governor apply gasket with ATF, and install it to the transaxle case.
NOTICE:
Do not damage the lip portion of the No. 1 governor apply gasket when inserting the gasket to the case. Apply enough ATF to the gasket prior to installation. Be careful about the orientation of the parts.



75. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

(a) Check the manual valve lever position. Install the valve body to the transaxle case with the 17 bolts.

Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)

Bolt length:

Bolt A:

25 mm (0.984 in.)

Bolt B:

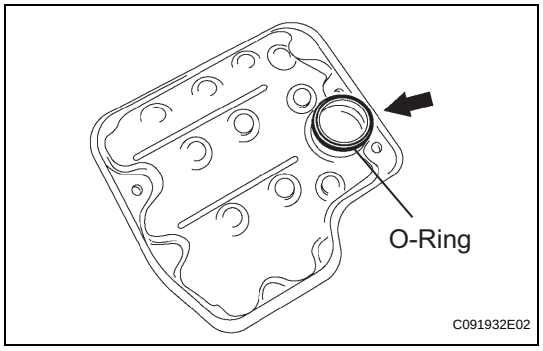
57 mm (2.244 in.)

Bolt C:

41 mm (1.614 in.)

NOTICE:

- **Push the valve body against the accumulator piston spring and the check ball body to install it.**
- **When installing the valve body to the transaxle case, do not hold the solenoids.**
- **Temporarily tighten the bolts marked by (1) in the illustration first because they are positioning bolts.**

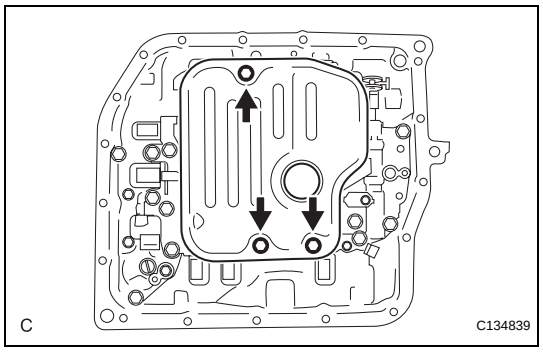


76. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Coat a new O-ring with ATF, and install it to the oil strainer.

NOTICE:

Install the O-ring carefully not to have a twist or a pinching. Apply enough ATF to the O-ring prior to installation.

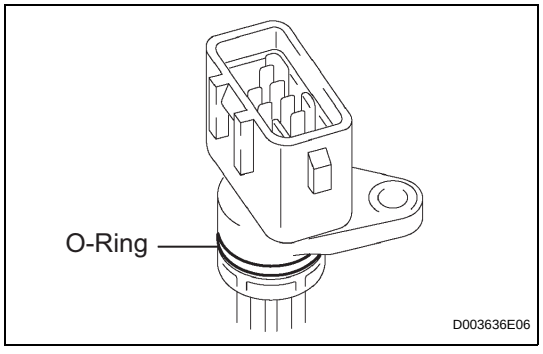


(b) Install the oil strainer to the valve body with the 3 bolts.

Torque: 11 N*m (110 kgf*cm, 8 ft.*lbf)

NOTICE:

Apply ATF to the bolts prior to installation.

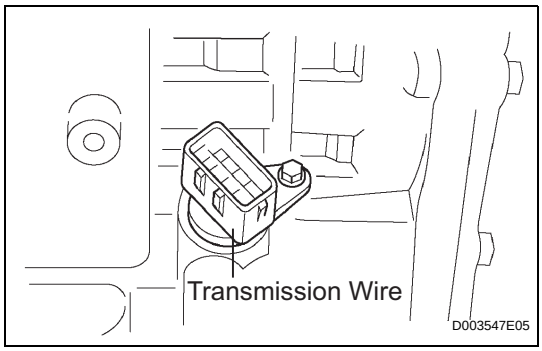


77. INSTALL TRANSMISSION WIRE

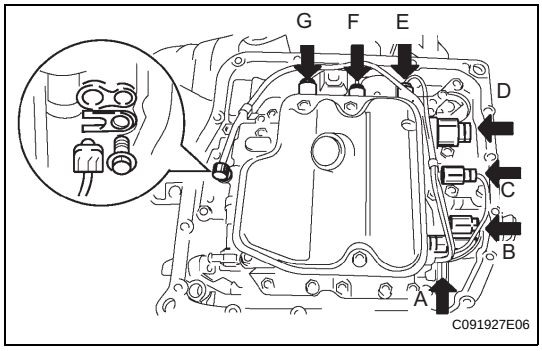
(a) Coat a new O-ring with ATF, and install it to the transmission wire.

NOTICE:

Install the O-ring not to have a twist or pinching. Apply enough ATF to the O-ring prior to installation.



(b) Install the transmission wire retaining bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

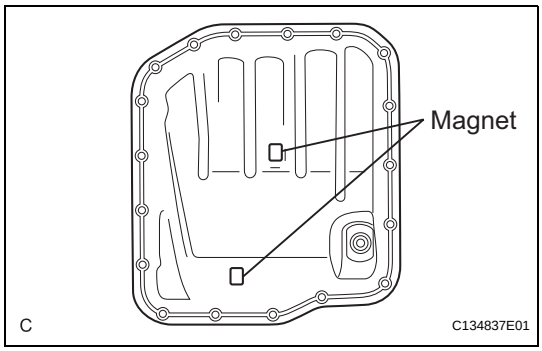


78. CONNECT TRANSMISSION WIRE

(a) Coat an O-ring of the ATF temperature sensor with ATF.

(b) Install the ATF temperature sensor with the lock plate and bolt.
Torque: 6.6 N*m (67 kgf*cm, 58 in.*lbf)

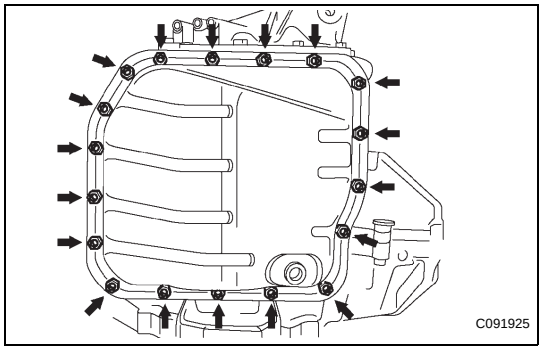
(c) Connect the 7 solenoid connectors.
NOTICE:
- **Connect the connectors to A, B, C, D, E, F and G, starting with the shorter ones.**
- **Apply ATF to the bolt prior to installation.**



79. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets in the oil pan.

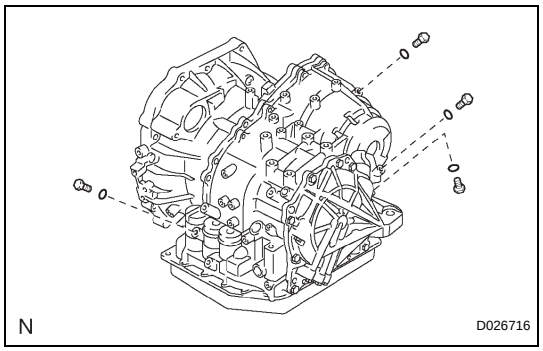
(b) Apply seal packing or equivalent to the 18 bolts.
Seal packing:
Toyota Genuine Seal Packing 1344, Three Bond 1344 or Equivalent



(c) Install a new oil pan gasket and the oil pan to the transaxle case with the 18 bolts.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)
NOTICE:
- **Apply seal packing to new bolts and tighten them within 10 minutes of application.**
- **Remove any oil or grease from the contact surface of the transaxle case and the oil pan with the gasket completely before installing the oil pan to the case.**

(d) Install a new gasket to the drain plug.

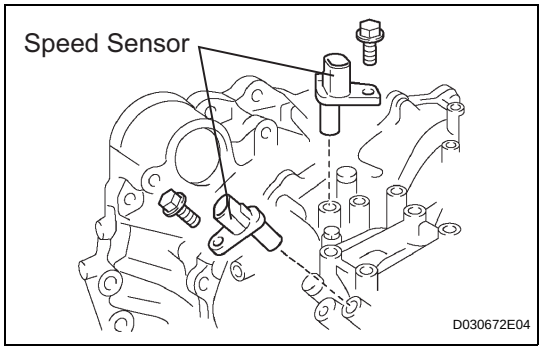
(e) Install the drain plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)



80. INSTALL NO. 1 TRANSAXLE CASE PLUG

(a) Coat 4 new O-rings with ATF, and install them to the 4 No. 1 transaxle case plugs.

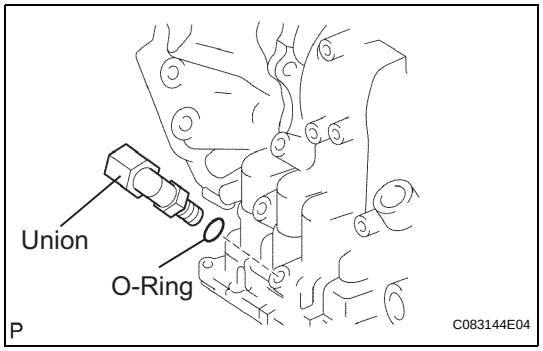
(b) Install the 4 No. 1 transaxle case plugs to the transaxle case.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)



81. INSTALL SPEED SENSOR

(a) Apply liquid sealer to the "A" bolt threads.
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

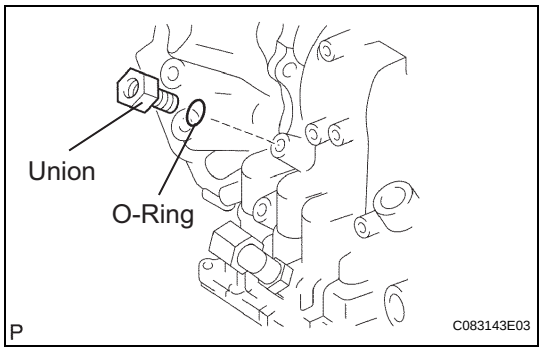
(b) Install the 2 sensors to the transaxle case with the 2 bolts.
Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)



82. INSTALL OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)

(a) Coat a new O-ring with ATF, and install it to the union.

(b) Install the union to the transaxle case.
Torque: 27 N*m (276 kgf*cm, 20 ft.*lbf)



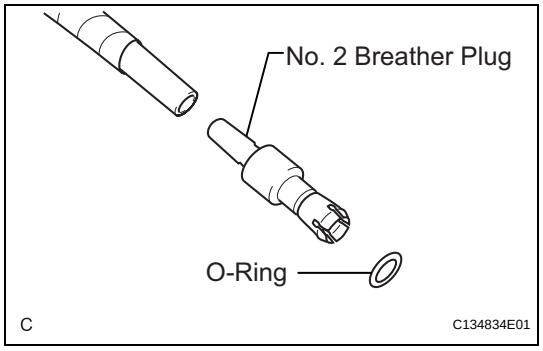
83. INSTALL OIL COOLER TUBE UNION (INLET OIL COOLER UNION)

(a) Coat a new O-ring with ATF, and install it to the union.

(b) Install the union to the transaxle case.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

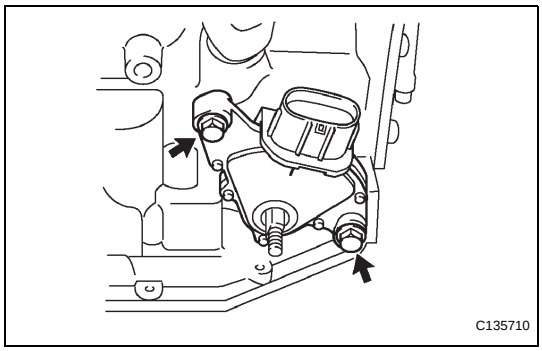
84. INSTALL NO. 2 BREATHER PLUG

(a) Coat a new O-ring with ATF.



(b) Install the hose and a new O-ring to the breather plug.

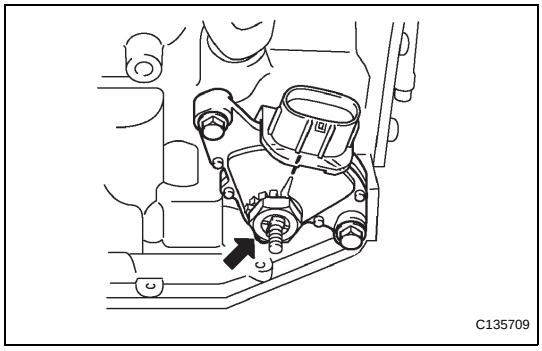
(c) Install the No. 2 breather plug hose to the transaxle case.



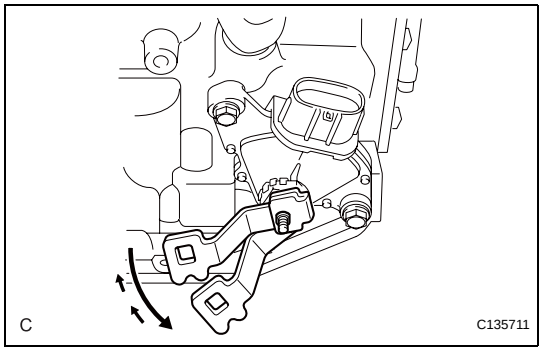
85. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch onto the manual valve lever shaft and temporarily install the 2 adjusting bolts.

(b) Install a new nut stopper and nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

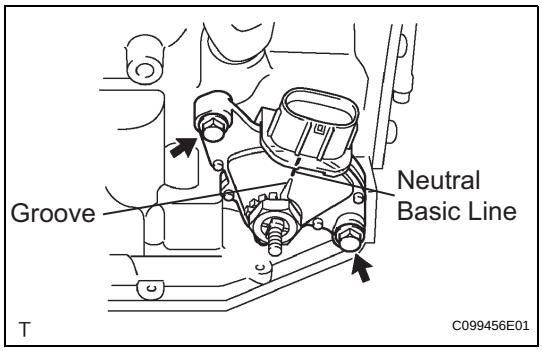


(c) Temporarily install the control shaft lever.



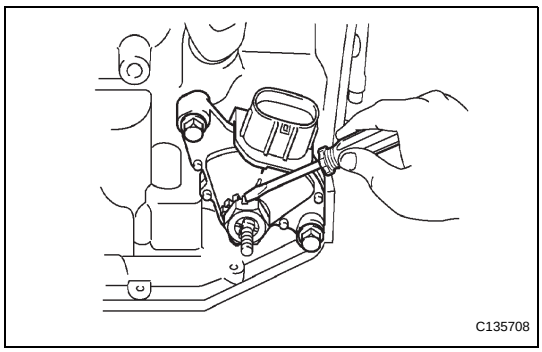
(d) Turn the lever counterclockwise until it stops, and then turn it clockwise 2 notches.

(e) Remove the control shaft lever.

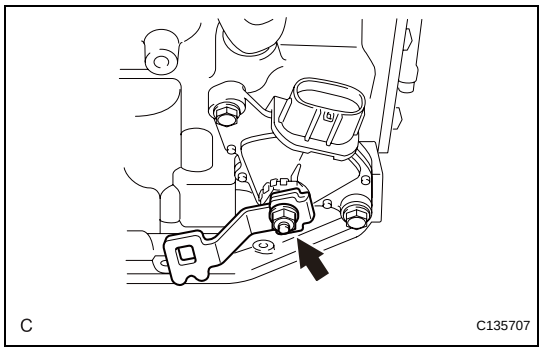


(f) Align the groove with the neutral basic line.

(g) Hold the switch in position and tighten the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



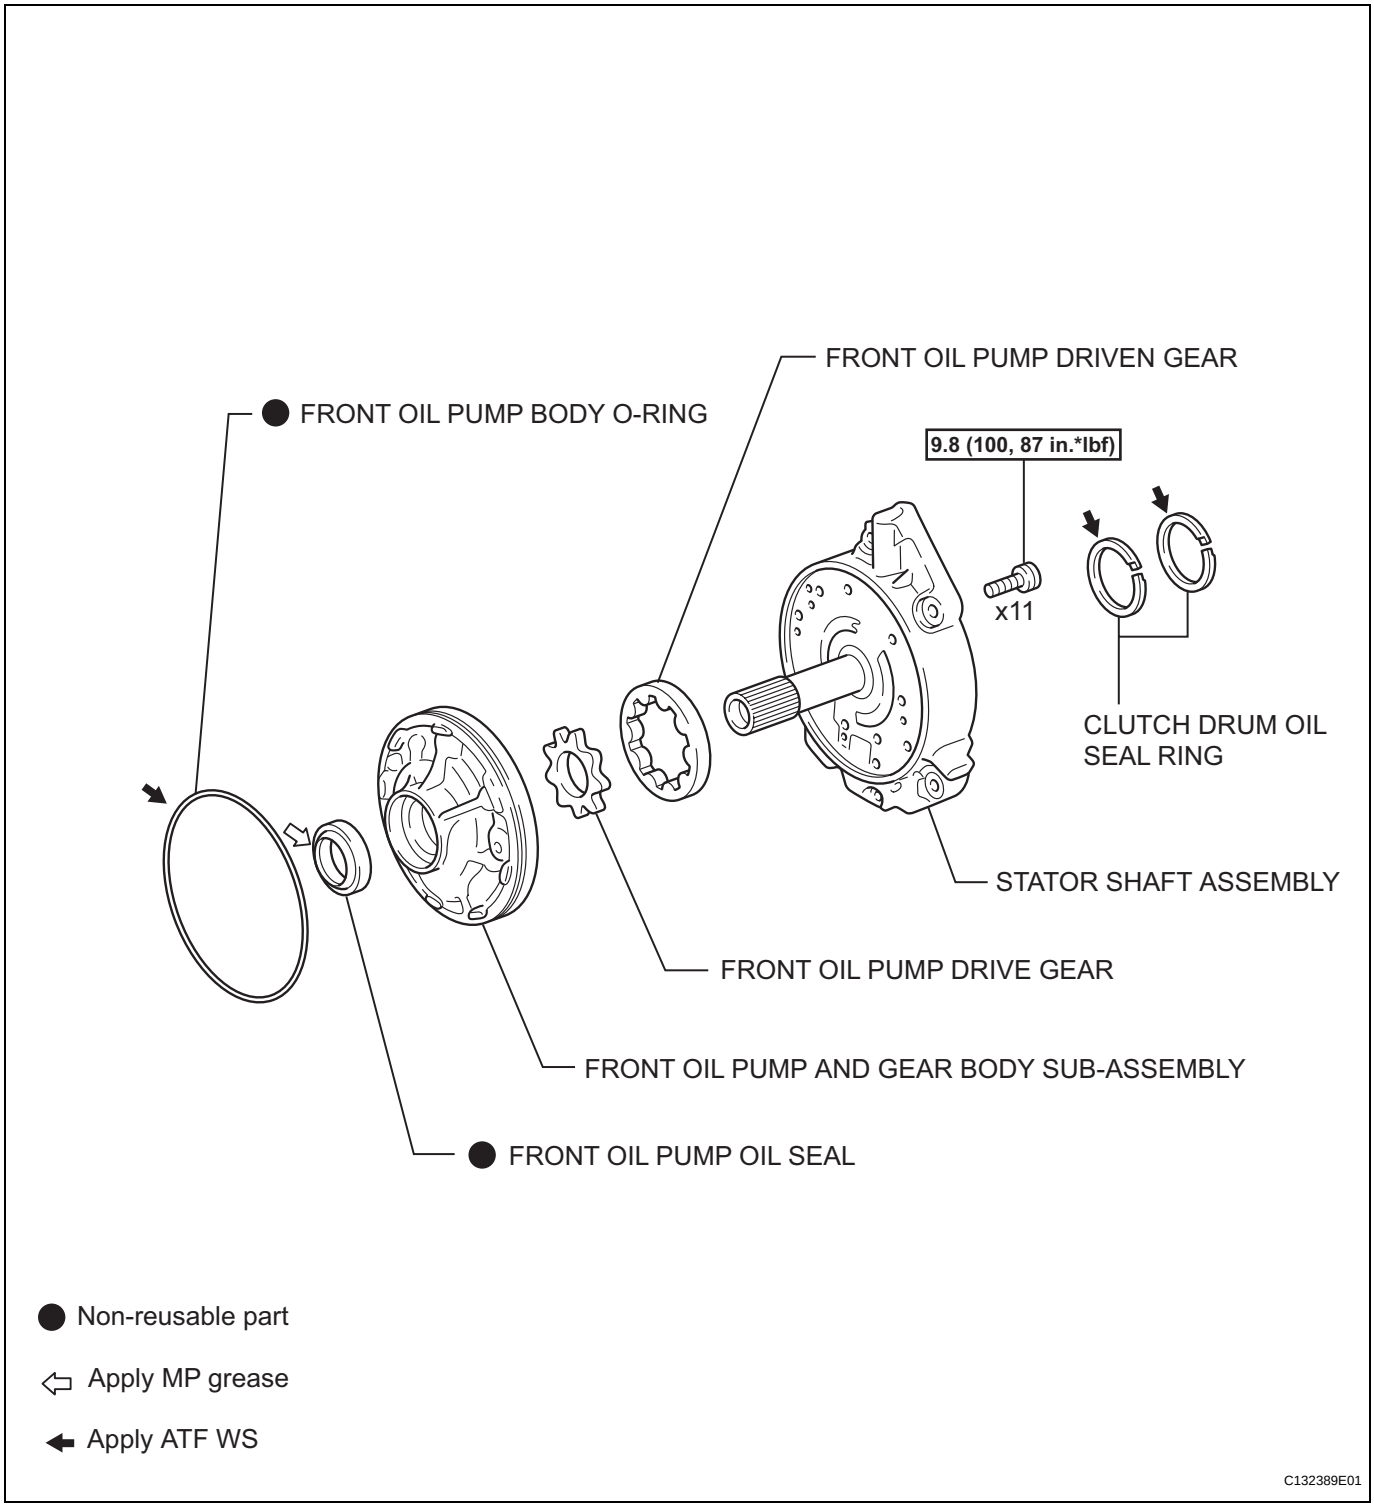
(h) Using a screwdriver, stake the nut with the nut stopper.



(i) Install the control shaft lever, washer and nut.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

OIL PUMP

COMPONENTS



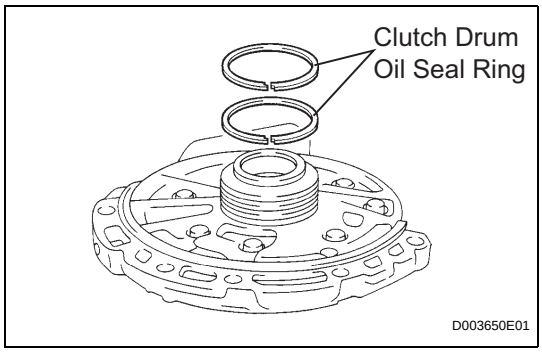
REMOVAL

1. **REMOVE OIL PUMP ASSEMBLY (See page AX-211)**

DISASSEMBLY

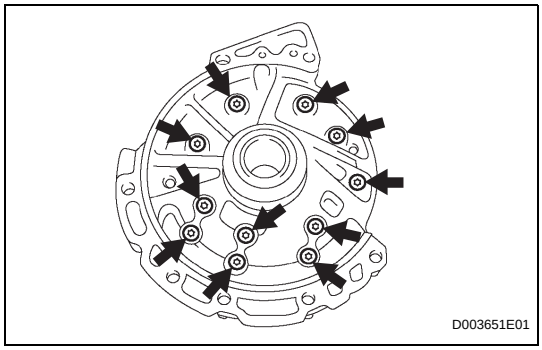
1. **INSPECT OIL PUMP ASSEMBLY (See page AX-270)**

2. **REMOVE CLUTCH DRUM OIL SEAL RING**
   (a) Remove the 2 clutch drum oil seal rings.

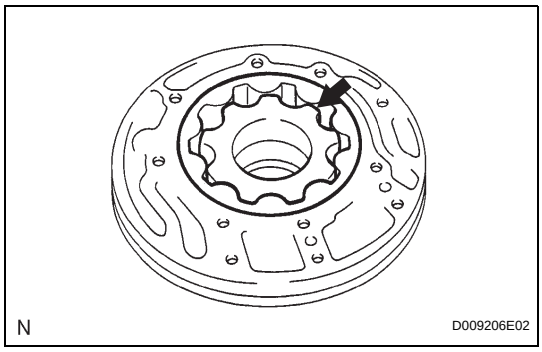


3. **REMOVE STATOR SHAFT ASSEMBLY**
   (a) Using a torx socket (T30), remove the 11 bolts and stator shaft.
   (b) Keep the gears in assembling order.

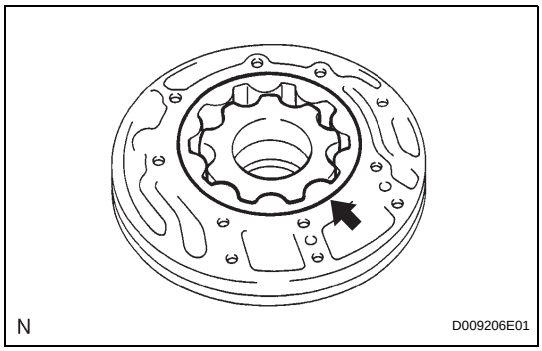
4. **INSPECT CLEARANCE OF OIL PUMP ASSEMBLY (See page AX-270)**

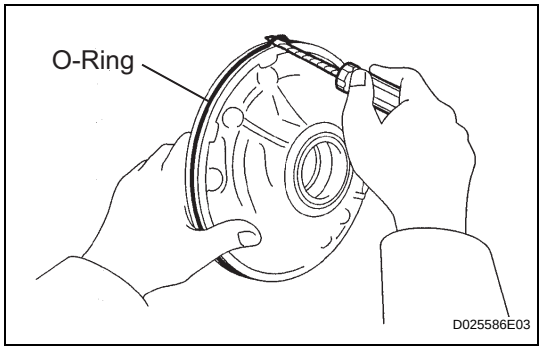


5. **REMOVE FRONT OIL PUMP DRIVE GEAR**
   (a) Remove the front oil pump drive gear.



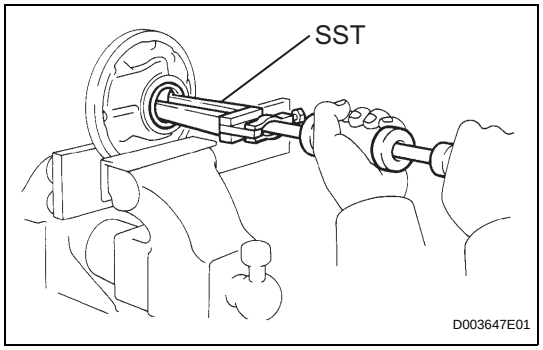
6. **REMOVE FRONT OIL PUMP DRIVEN GEAR**
   (a) Remove the front oil pump driven gear.





7. REMOVE FRONT OIL PUMP BODY O-RING

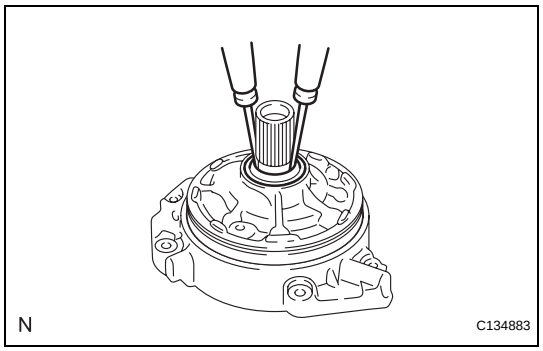
(a) Using a screwdriver, remove the O-ring.
HINT:
Tape the screwdriver tip before use.



8. REMOVE FRONT OIL PUMP OIL SEAL

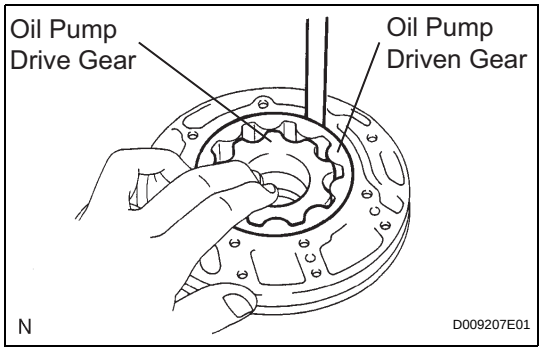
(a) Mount the oil pump in a soft jaw vise.
(b) Using SST, remove the oil seal from the oil pump body.
SST 09308-00010

INSPECTION



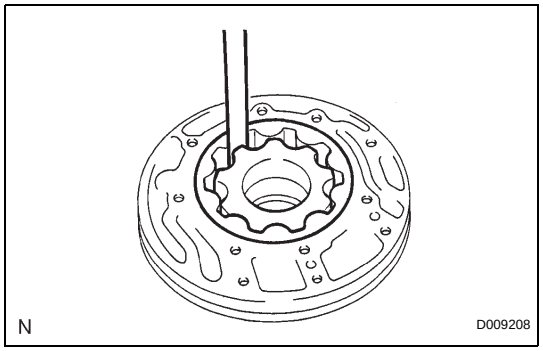
1. INSPECT OIL PUMP ASSEMBLY

(a) Turn the drive gear with 2 screwdrivers and make sure that it rotates smoothly.
NOTICE:
Be careful not to damage the oil seal lip.

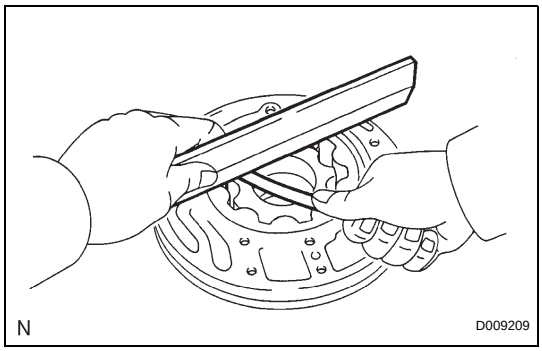


2. INSPECT CLEARANCE OF OIL PUMP ASSEMBLY

(a) Push the driven gear to one side of the body.
(b) Using a feeler gauge, measure the clearance.
Standard body clearance:
0.10 to 0.17 mm (0.0039 to 0.0067 in.)
Side clearance:
0.02 to 0.05 mm (0.001 to 0.002 in.)
Maximum body clearance:
0.17 mm (0.0067 in.)
If the body clearance is greater than the maximum, replace the oil pump body sub-assembly.



(c) Using a feeler gauge, measure the tip clearance between the driven gear teeth and drive gear teeth.
Standard tip clearance:
0.07 to 0.15 mm (0.0028 to 0.0059 in.)
Maximum tip clearance:
0.15 mm (0.0059 in.)
If the tip clearance is greater than the maximum, replace the oil pump body sub-assembly.



(d) Using a straight edge and feeler gauge, measure the side clearance of both gears.

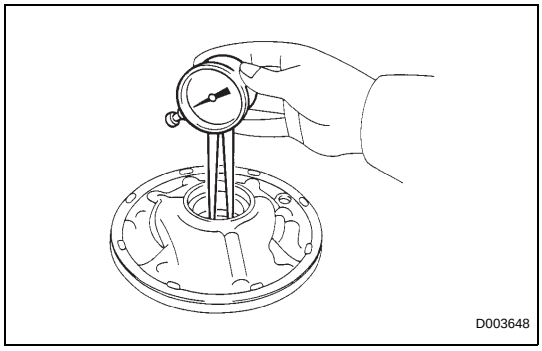
Standard side clearance:
0.02 to 0.05 mm (0.0008 to 0.0020 in.)
Maximum side clearance:
0.05 mm (0.0020 in.)

Drive gear thickness: mm (in.)

Mark	Thickness
A	11.690 to 11.699 (0.4602 to 0.4606)
B	11.700 to 11.709 (0.4606 to 0.4610)
C	11.710 to 11.720 (0.4610 to 0.4614)
D	11.721 to 11.730 (0.4615 to 0.4618)
E	11.731 to 11.740 (0.4619 to 0.4622)

Driven gear thickness: mm (in.)

Mark	Thickness
A	11.690 to 11.699 (0.4602 to 0.4606)
B	11.700 to 11.709 (0.4606 to 0.4610)
C	11.710 to 11.720 (0.4610 to 0.4614)
D	11.721 to 11.730 (0.4615 to 0.4618)
E	11.731 to 11.740 (0.4619 to 0.4622)

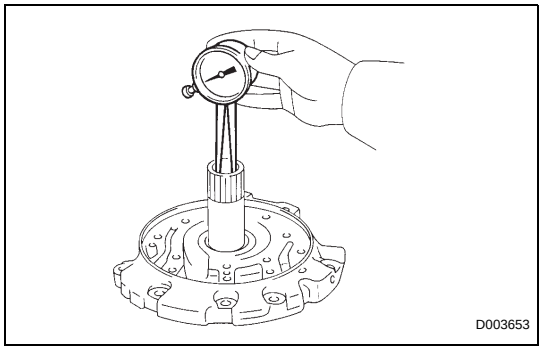


3. INSPECT FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the oil pump body bushing.

Standard inside diameter:
38.113 to 38.138 mm (1.50051 to 1.50149 in.)
Maximum inside diameter:
38.188 mm (1.50346 in.)

If the inside diameter is greater than the maximum, replace the oil pump body sub-assembly.

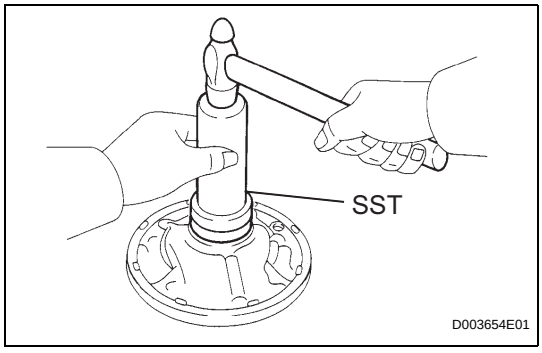


4. INSPECT STATOR SHAFT ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the stator shaft.

Standard inside diameter:
21.500 to 21.526 mm (0.84646 to 0.84748 in.)
Maximum inside diameter:
21.57 mm (0.8492 in.)

If the inside diameter is greater than the maximum, replace the stator shaft.



REASSEMBLY

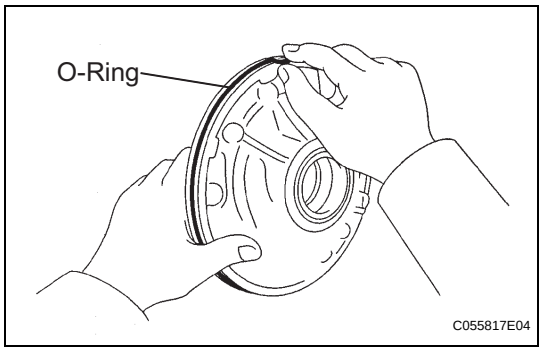
1. INSTALL FRONT OIL PUMP OIL SEAL

(a) Using SST and a hammer, install a new oil seal to the oil pump body.

SST 09350-32014 (09351-32140)

HINT:
The seal end should be flush with the outer edge of the oil pump.

(b) Coat the lip of the oil seal with MP grease.

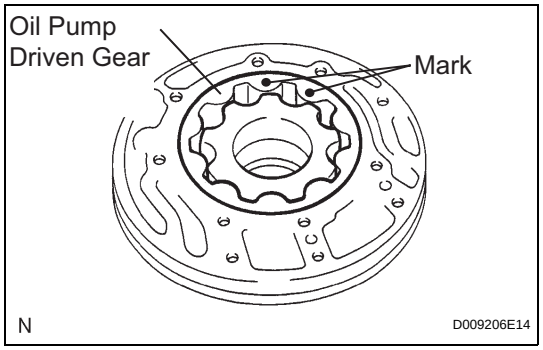


2. INSTALL FRONT OIL PUMP BODY O-RING

(a) Coat a new O-ring with ATF, and install it to the oil pump body.

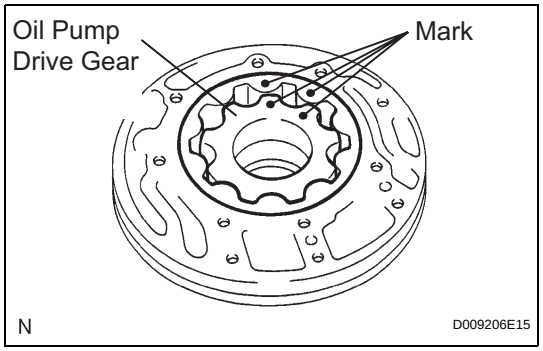
NOTICE:

- **Install the O-ring carefully not to have a twist or a pinching.**
- **Apply enough ATF to the O-ring prior to installation.**



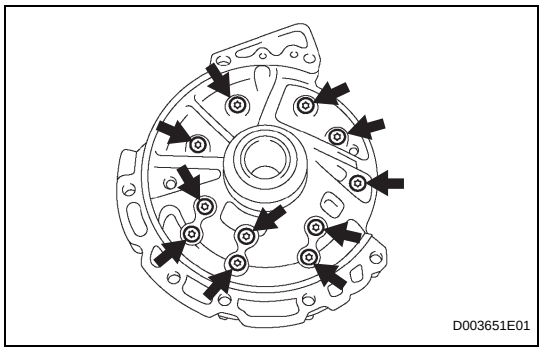
3. INSTALL FRONT OIL PUMP DRIVEN GEAR

(a) Coat the front oil pump driven gear with ATF, and install it to the oil pump body with the marked side up.



4. INSTALL FRONT OIL PUMP DRIVE GEAR

(a) Coat the front oil pump drive gear with ATF, and install it to the oil pump body with the marked side up.

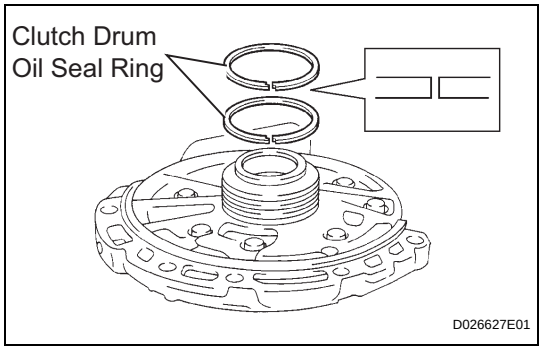


5. INSTALL STATOR SHAFT ASSEMBLY

(a) Align the bolt holes in the stator shaft assembly with those in the front oil pump and gear body sub-assembly.

(b) Using a torx socket (T30), install the 11 bolts.

Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



6. INSTALL CLUTCH DRUM OIL SEAL RING

(a) Coat 2 new clutch drum oil seal rings with ATF.

(b) Install the 2 clutch drum oil seal rings.

NOTICE:

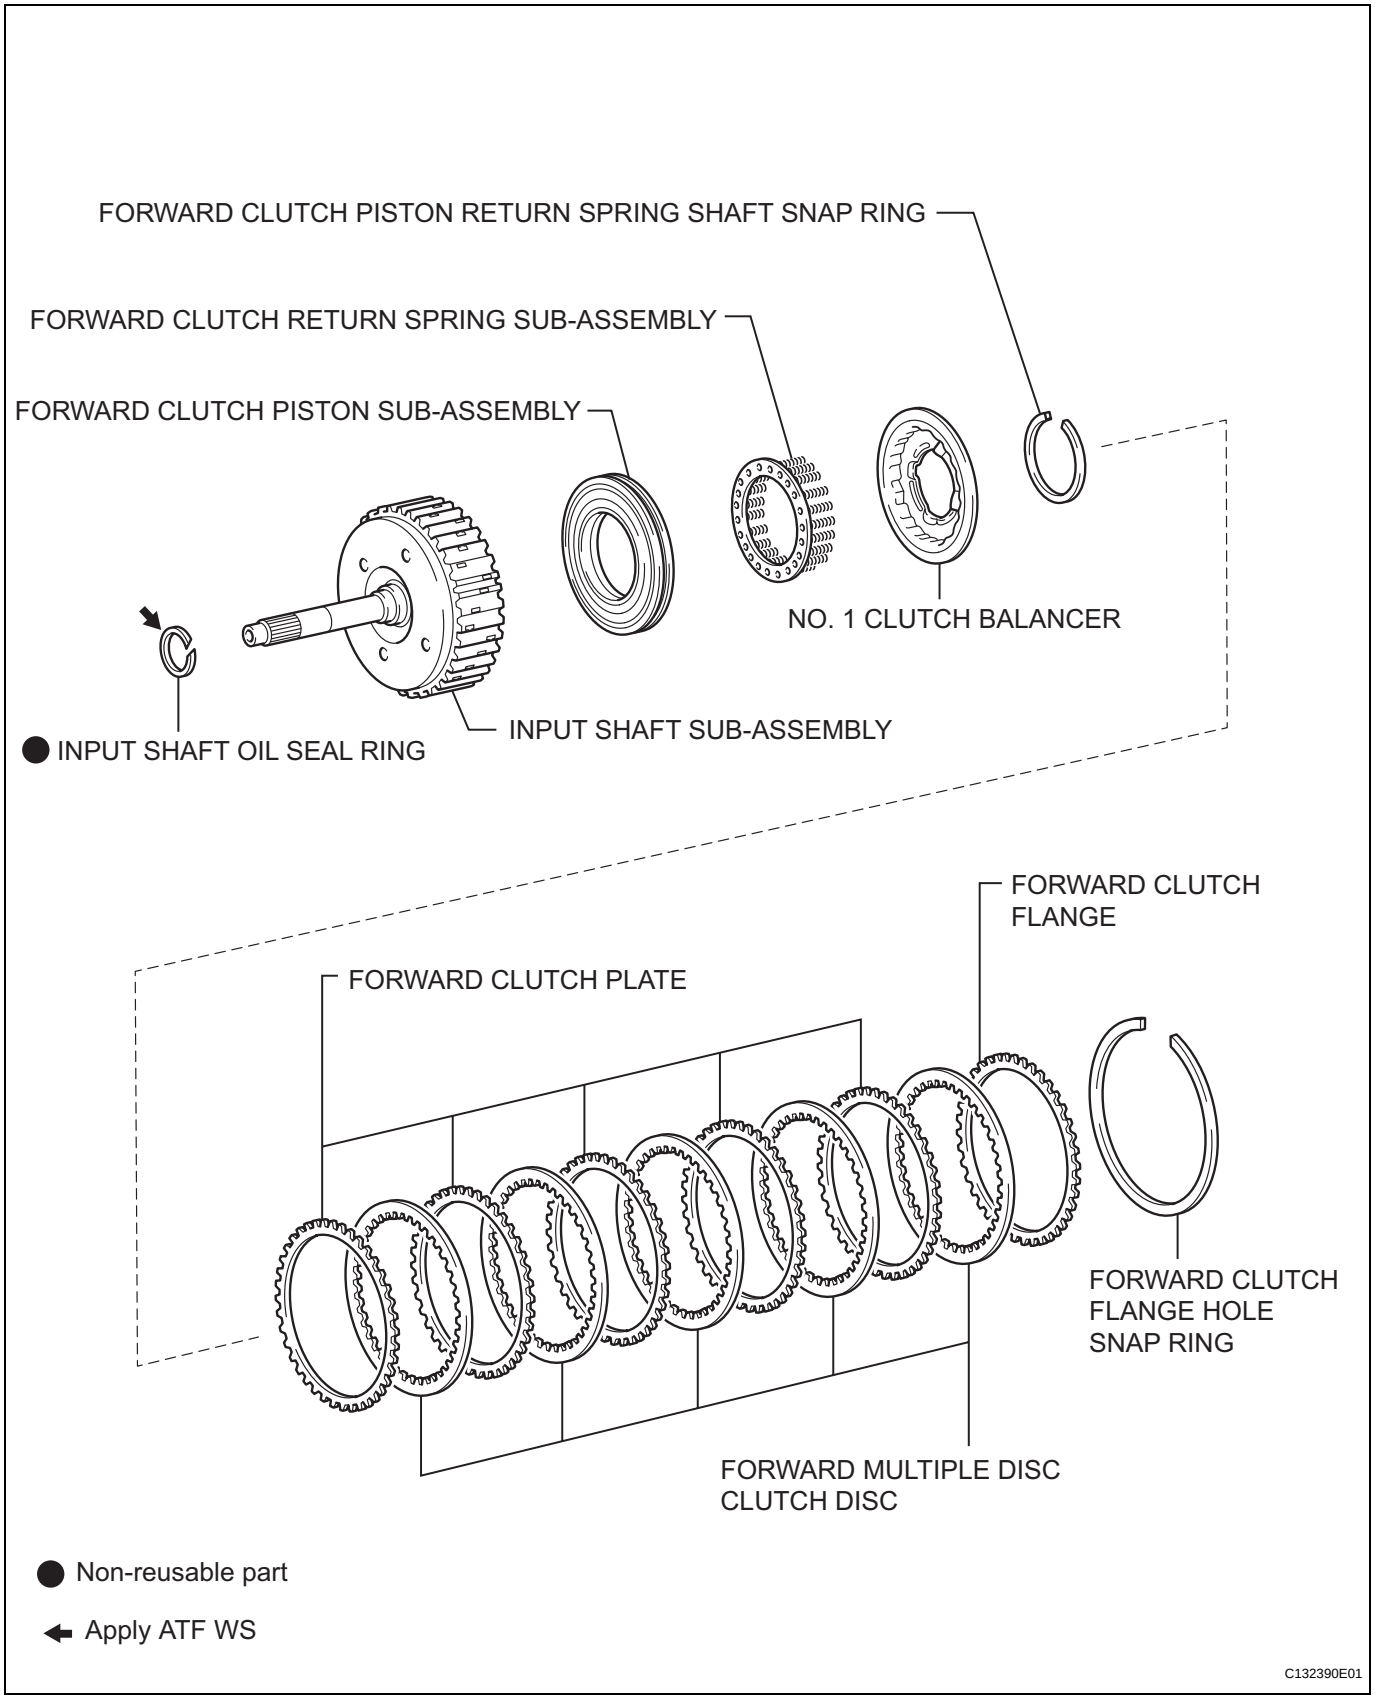
Do not expand the ring ends excessively.

INSTALLATION

1. **INSTALL OIL PUMP ASSEMBLY (See page AX-257)**

FORWARD CLUTCH

COMPONENTS

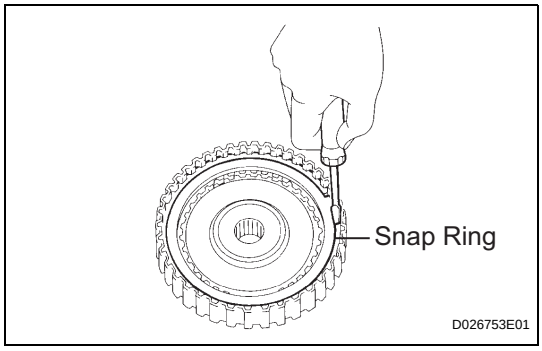


DISASSEMBLY

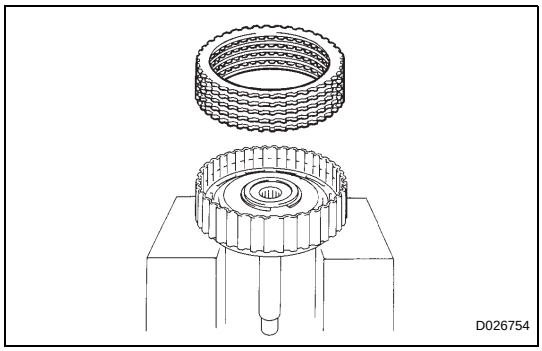
1. INSPECT PACK CLEARANCE OF FORWARD CLUTCH (See page AX-275)

2. REMOVE FORWARD MULTIPLE DISC CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.



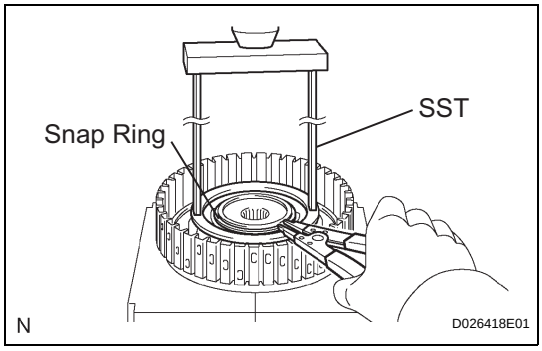
(b) Remove the flange, 5 discs and 5 plates from the input shaft assembly.



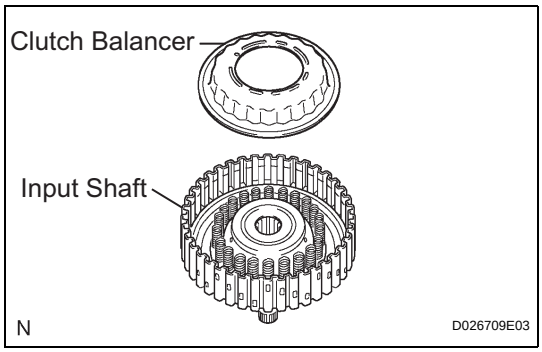
3. REMOVE FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

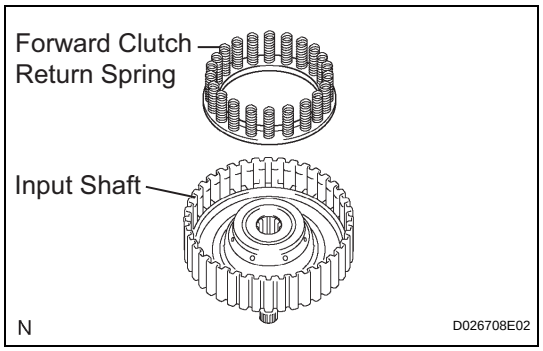
(a) Place SST on the spring retainer and compress the return spring with a press.
SST 09387-00020

(b) Using a snap ring expander, remove the snap ring.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove. This prevents the spring seat from bearing deformed.**
- **Do not expand the snap ring excessively.**

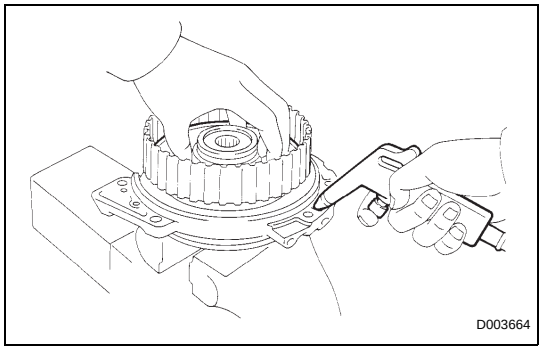


(c) Remove the clutch balancer from the input shaft.





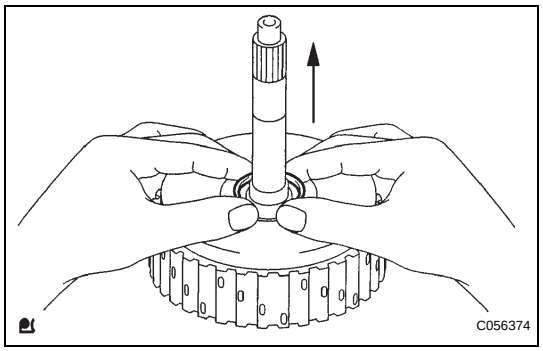
(d) Remove the forward clutch return spring from the input shaft.



4. REMOVE FORWARD CLUTCH PISTON SUB-ASSEMBLY

(a) Place the forward clutch drum onto the oil pump.

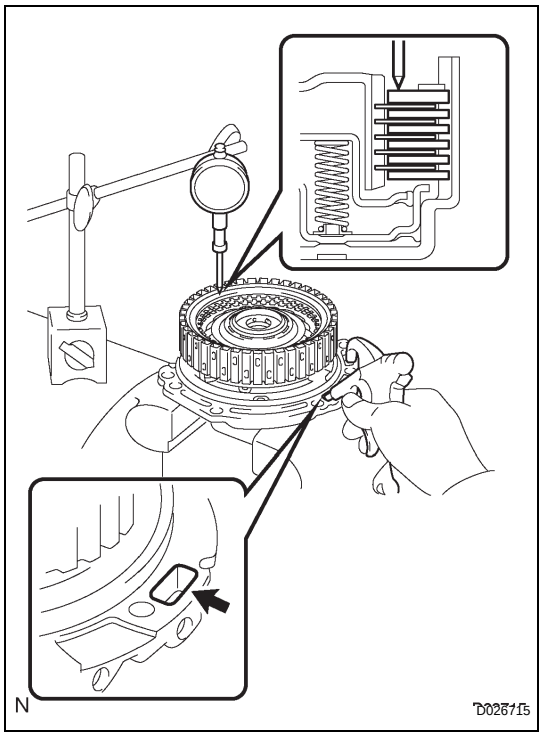
(b) Holding the forward clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil pump to remove the forward clutch piston.
HINT:
When the piston cannot be removed as it is slanted, either blow the air again with the protruding side pushed, or remove the piston using needle nose pliers with the tips taped.



5. REMOVE INPUT SHAFT OIL SEAL RING

(a) Remove the input shaft oil seal ring from the input shaft.

INSPECTION



1. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

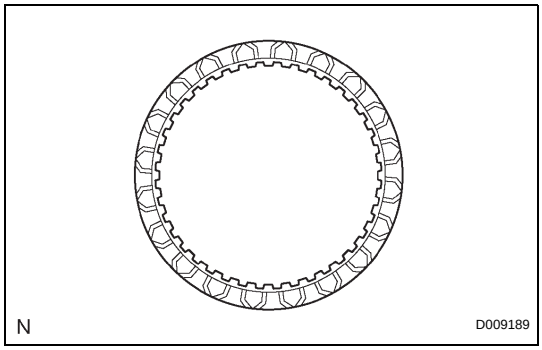
(a) Install the forward clutch on the oil pump.
NOTICE:
Be careful not to damage the oil seal ring of the oil pump.

(b) Using a dial indicator, measure the forward clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).
Pack clearance:
1.00 to 1.25 mm (0.0394 to 0.04921 in.)
If the clearance is not within the standard, inspect the discs, plates and flange.
If the piston stroke is less than the minimum, parts may have been assembled incorrectly. Check and reassemble again.
HINT:
- As the opening is large, cover it with a piece of cloth or shop rag to prevent the compressed air from being released.

- There are 5 different thicknesses of flanges available.

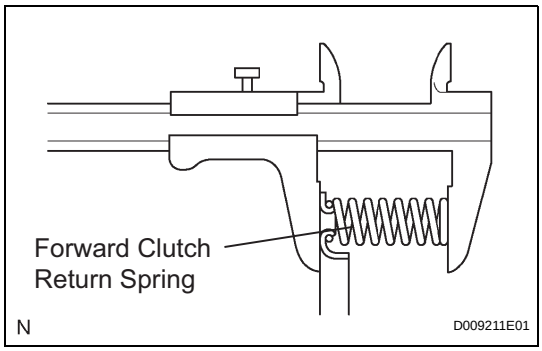
Flange thickness: mm (in.)

No.	Thickness	No.	Thickness
1	3.00 (0.1181)	4	3.45 (0.1358)
2	3.15 (0.1240)	5	3.60 (0.1417)
3	3.30 (0.1299)	-	-



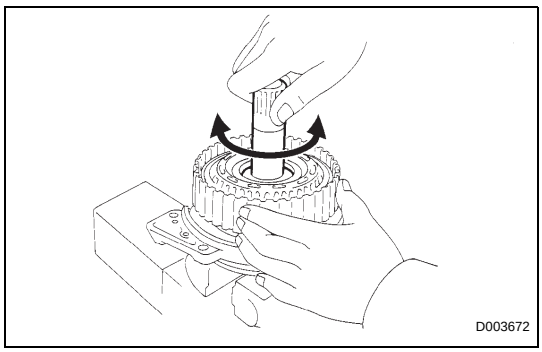
2. INSPECT FORWARD MULTIPLE DISC CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt.
If necessary, replace them.
HINT:
- If the lining of a disc comes off or discolors, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



3. INSPECT FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

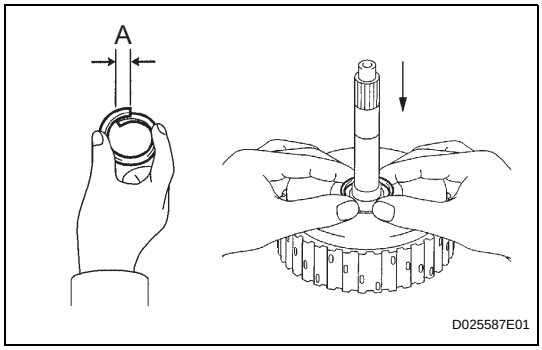
(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
26.74 mm (1.0528 in.)
If the free length is shorter than the standard free length, replace the forward clutch return spring sub-assembly.



4. INSPECT FORWARD MULTIPLE DISC CLUTCH DISC

(a) Check if the disc lightly rotates when rotating the forward clutch assembly after inserting the multiple disc clutch into it.
NOTICE:
Do not place the forward clutch assembly in a vise.

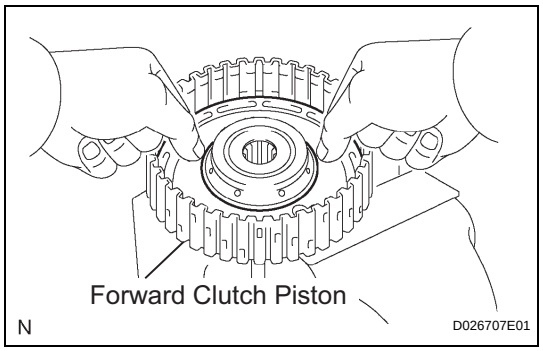
REASSEMBLY



1. INSTALL INPUT SHAFT OIL SEAL RING

(a) Compress a new input shaft oil seal ring from both sides to adjust dimension A.
Dimension A:
5 mm (0.197 in.)

(b) Coat the oil seal ring with ATF and install it to the input shaft.
NOTICE:
Do not expand the gap of the oil seal ring too much. Securely engage the hooks.

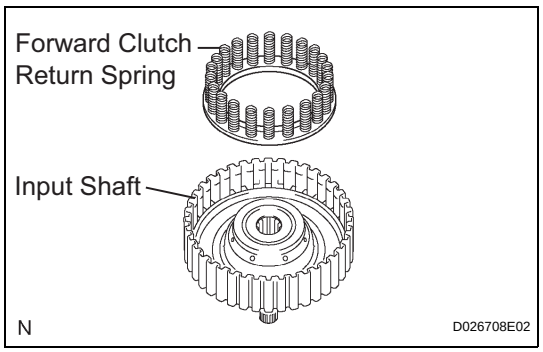


2. INSTALL FORWARD CLUTCH PISTON SUB-ASSEMBLY

(a) Coat the forward clutch piston with ATF, and install it to the input shaft.

NOTICE:

Be careful not to damage the lip seal of the forward clutch piston.



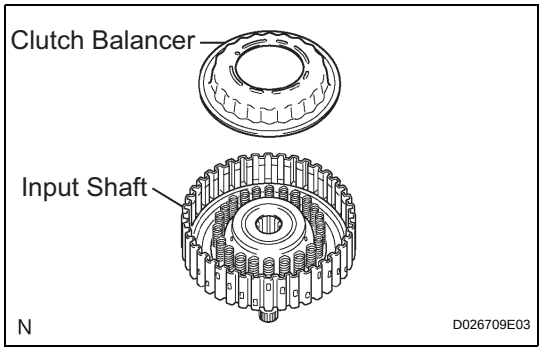
3. INSTALL FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Install the return spring to the input shaft.

NOTICE:

After installing the spring sub-assembly, check all of the springs are fitted in the piston correctly.

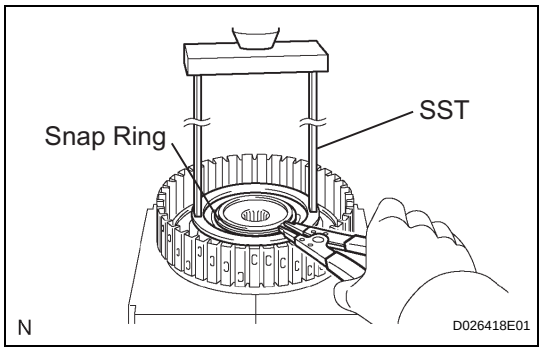
(b) Coat the clutch balancer with ATF.



(c) Install the clutch balancer to the input shaft.

NOTICE:

- **Be careful not to damage the lip seal of the forward clutch balancer.**
- **Install the clutch balancer carefully not to have a pinching or any other defects at the sealing lip.**
- **Apply enough ATF to the sealing lip prior to installation.**



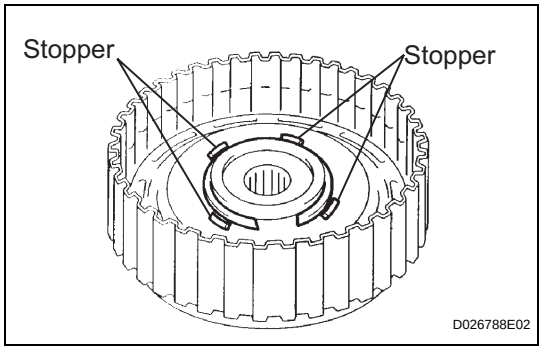
(d) Place SST on the clutch balancer, and compress the clutch balancer with a press.

SST 09387-00020

(e) Install the snap ring with a snap ring expander.

NOTICE:

- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove. This prevents the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**



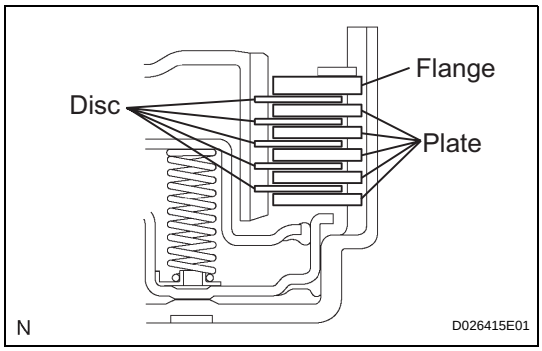
(f) Position the end gap of the snap ring in the piston as shown in the illustration.

NOTICE:

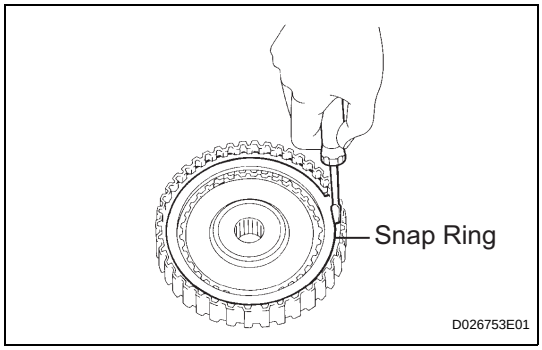
The end gap of the snap ring should not be aligned with any of the stoppers.

4. INSTALL FORWARD MULTIPLE DISC CLUTCH DISC

(a) Coat the 5 discs with ATF.



(b) Install the 5 plates, 5 discs, and flange to the input shaft.
NOTICE:
Be careful about the order of discs, plates, and flange.



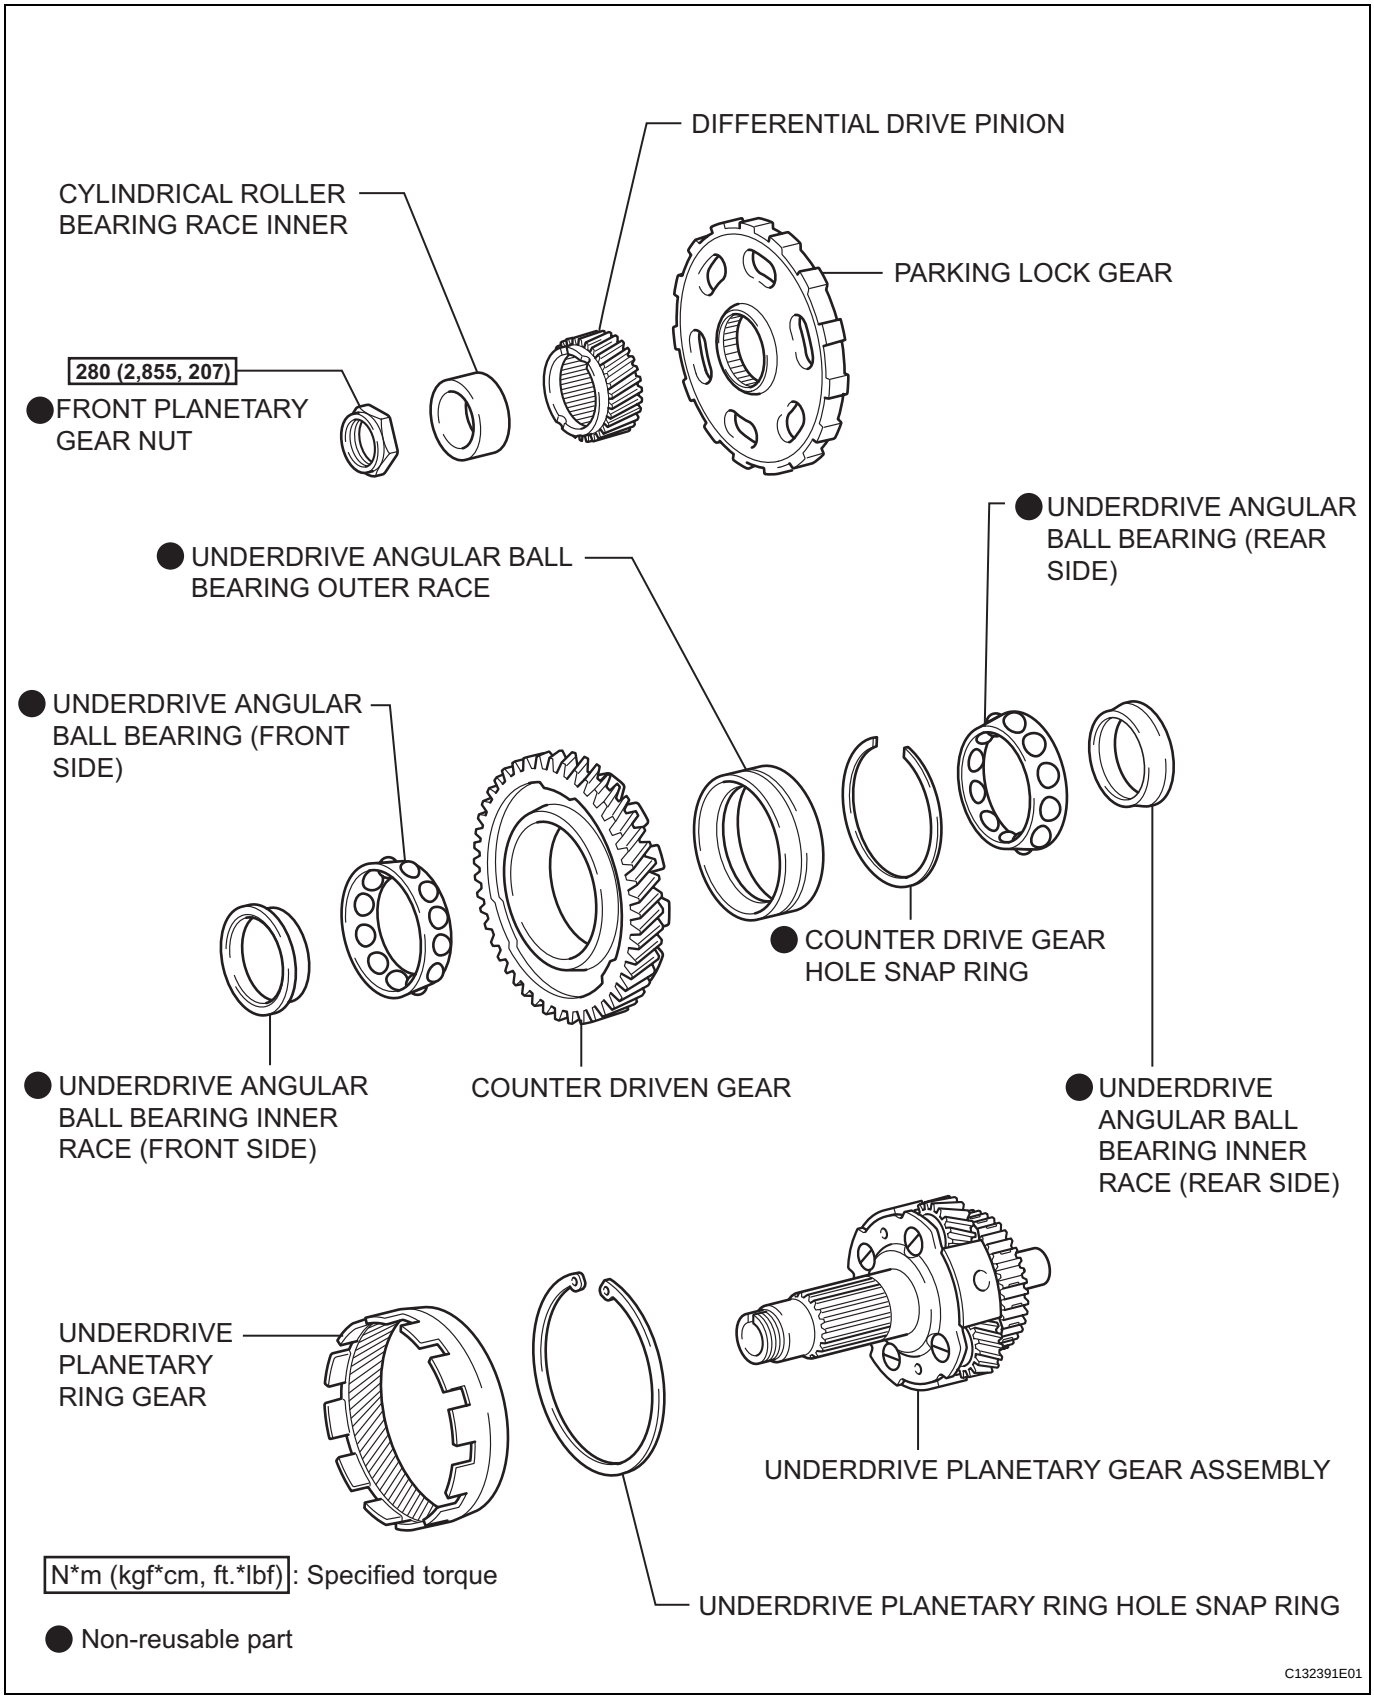
(c) Using a screwdriver, install the snap ring.
(d) Check that the end gap of the snap ring is not aligned with one of the cutouts.
NOTICE:
The snap ring should be securely engaged in the groove of the drum.

5. INSPECT PACK CLEARANCE OF FORWARD CLUTCH (See page AX-275)

6. INSPECT FORWARD MULTIPLE CLUTCH DISC (See page AX-276)

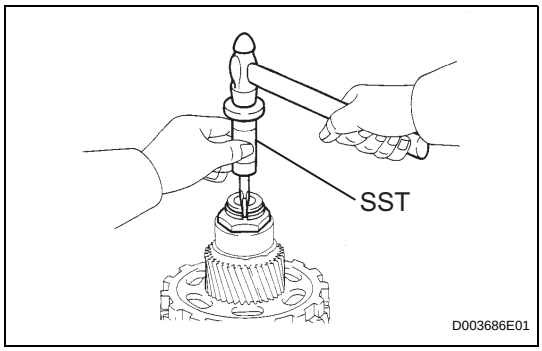
UNDERDRIVE PLANETARY GEAR

COMPONENTS



AX

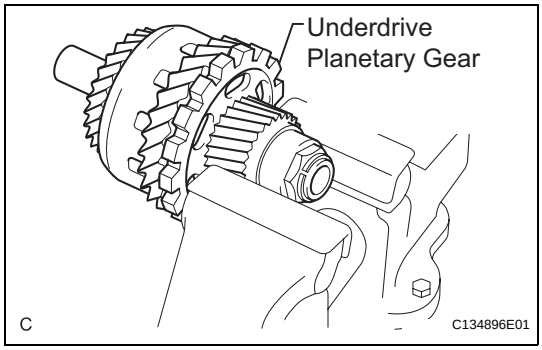
DISASSEMBLY



1. REMOVE FRONT PLANETARY GEAR NUT

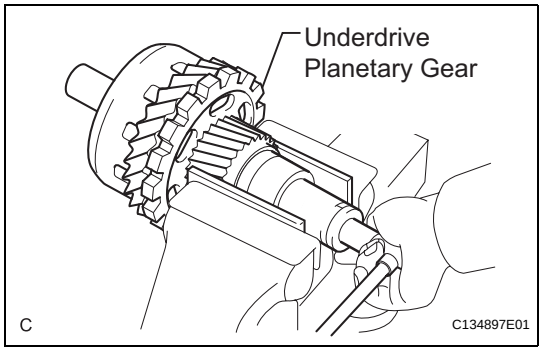
(a) Using SST and a hammer, loosen the staked part of the lock nut.

SST 09930-00010 (09931-00010, 09931-00020), 09387-00050, 09495-65040

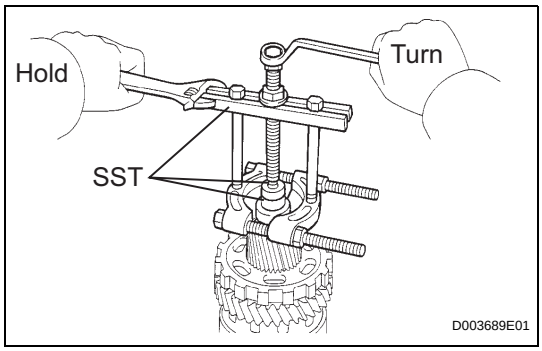


(b) Clamp the underdrive planetary gear in a soft jaw vise.

NOTICE:
Be careful not to damage the differential drive pinion.



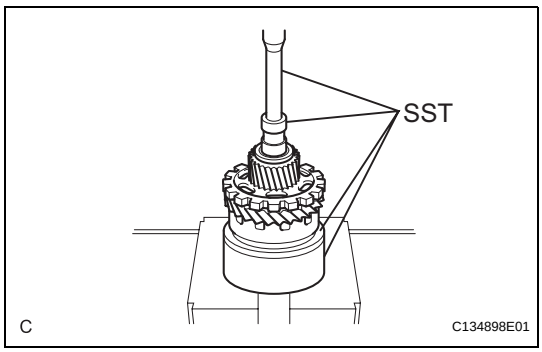
(c) Using a socket wrench, remove the lock nut.



2. REMOVE CYLINDRICAL ROLLER BEARING RACE INNER

(a) Using SST, remove the cylindrical roller bearing race inner.

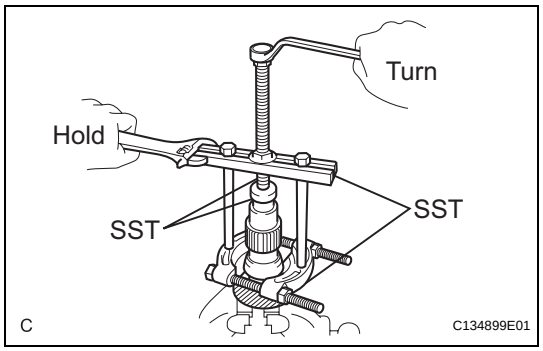
SST 09950-00020, 09950-00030, 09950-40011 (09957-04010), 09950-60010 (09951-00320)



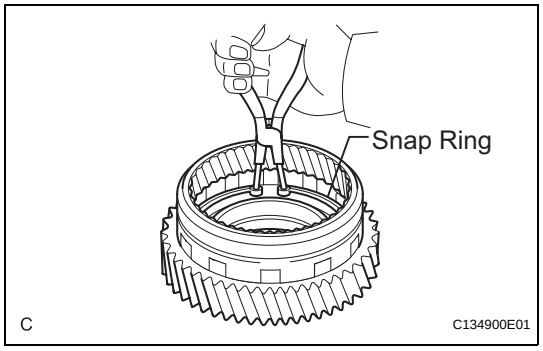
3. REMOVE UNDERDRIVE PLANETARY GEAR ASSEMBLY

(a) Using SST and a press, remove the differential drive pinion, parking lock gear, counter driven gear with underdrive planetary ring gear, and angular ball bearing.

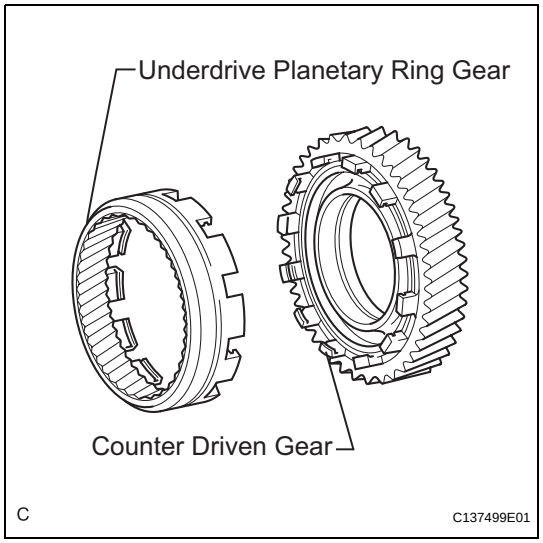
SST 09387-00050, 09495-65040, 09950-60010 (09951-00320), 09950-70010 (09951-07100)



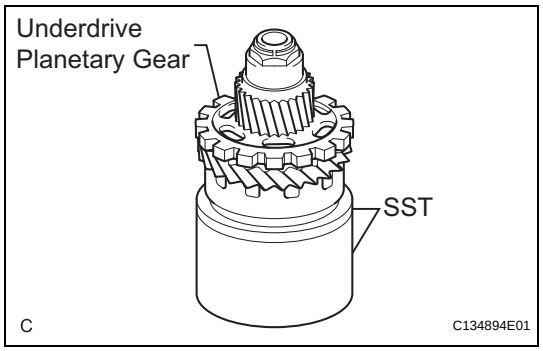
(b) Clamp the underdrive planetary gear in a soft jaw vise.
(c) Using SST, remove the rear angular ball bearing from the underdrive planetary gear.
SST 09950-00020, 09950-00030, 09950-40011 (09957-04010), 09950-60010 (09951-00320)



4. REMOVE UNDERDRIVE PLANETARY RING GEAR
(a) Using snap ring pliers, remove the snap ring.

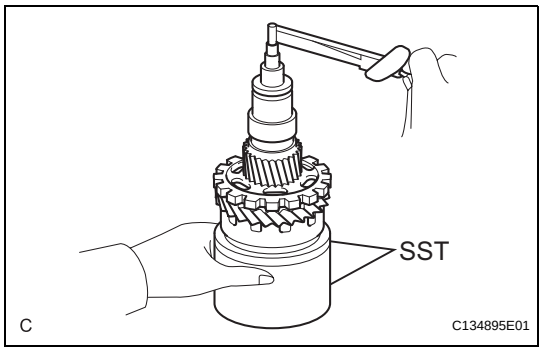


(b) Remove the underdrive planetary ring gear from the counter driven gear.



INSPECTION

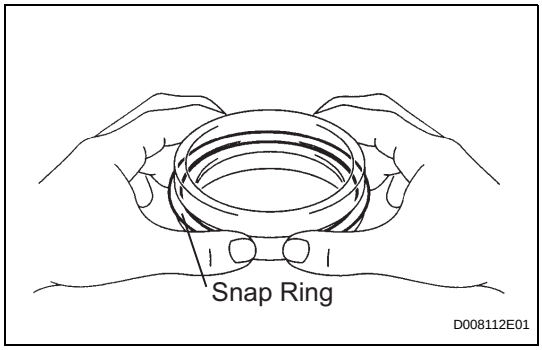
1. INSPECT UNDERDRIVE PLANETARY GEAR PRELOAD
(a) Using SST, fix the underdrive planetary gear assembly.
SST 09387-00050, 09495-65040



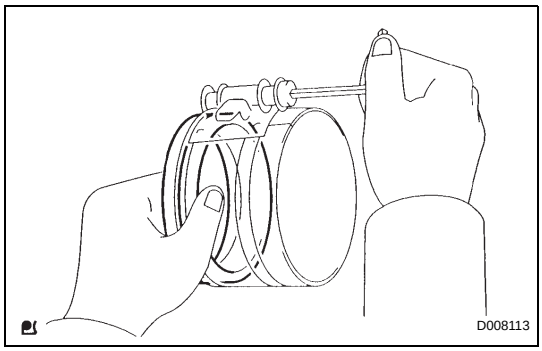
(b) Using SST and a torque wrench, measure the turning torque of the underdrive planetary gear assembly while turning the torque wrench at 60 rpm.
SST 09387-00050, 09495-65040
Turning torque at 60 rpm:
0.28 to 0.89 N*m (2.9 to 9.1 kgf*cm, 2.478 to 7.877 in.*lbf)
HINT:
Use a torque wrench with a fulcrum length of 160 mm (6.3 in.).

REASSEMBLY

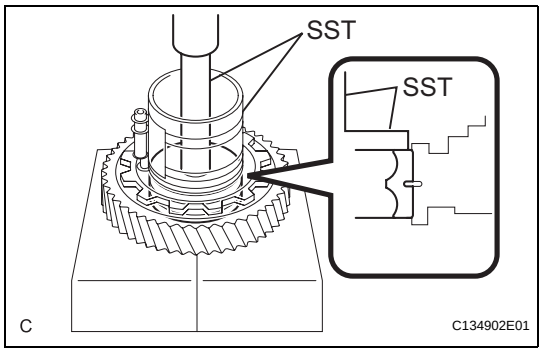
1. INSTALL UNDERDRIVE PLANETARY RING GEAR



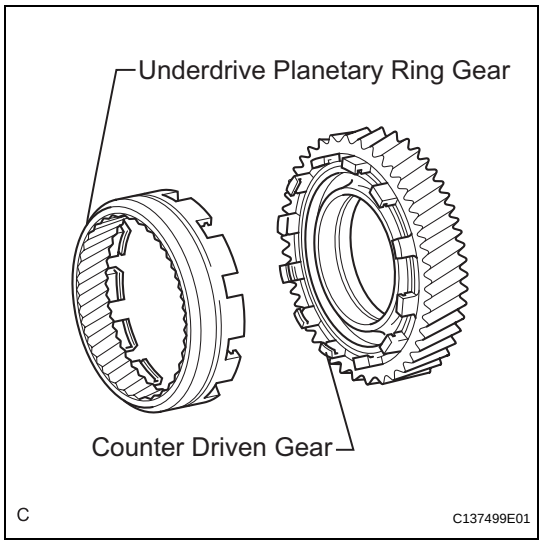
(a) Install a new snap ring to the outer race of the tapered roller bearing.
HINT:
If replacing the bearing, also replace the counter driven gear with a new one.



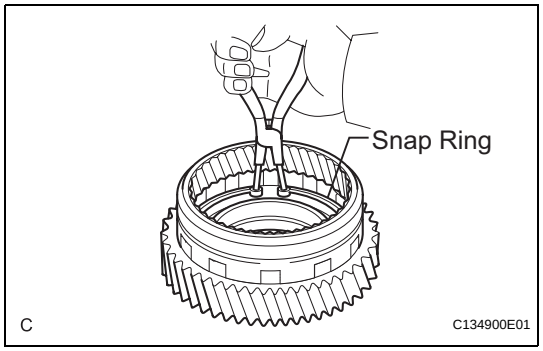
(b) Using a piston ring compressor, squeeze the snap ring.



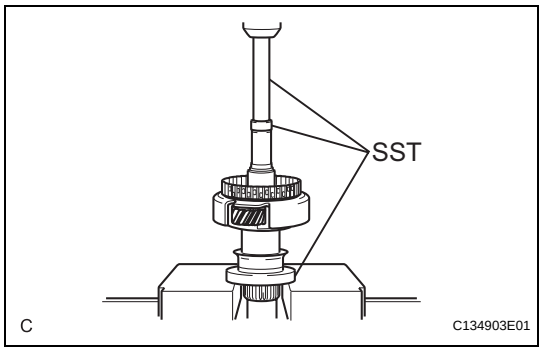
(c) Using SST and a press, press in the outer race of the angular ball bearing.
SST 09950-60020 (09951-00890), 09950-70010 (09951-07100)
NOTICE:
Do not damage the snap ring during installation of the outer race.



(d) Install the underdrive planetary ring gear to the counter driven gear.

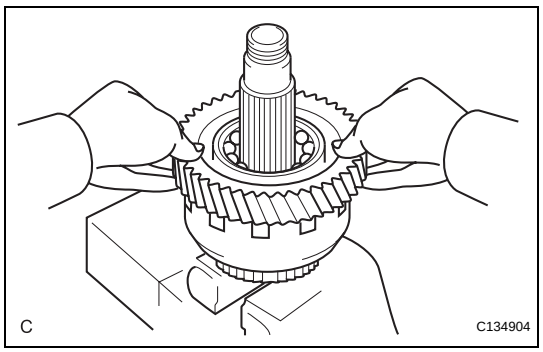


(e) Using snap ring pliers, install the snap ring.

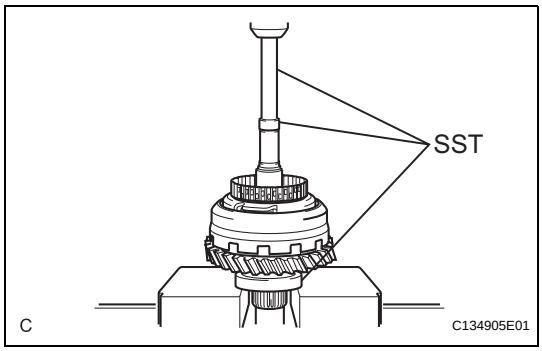


2. INSTALL UNDERDRIVE PLANETARY GEAR ASSEMBLY

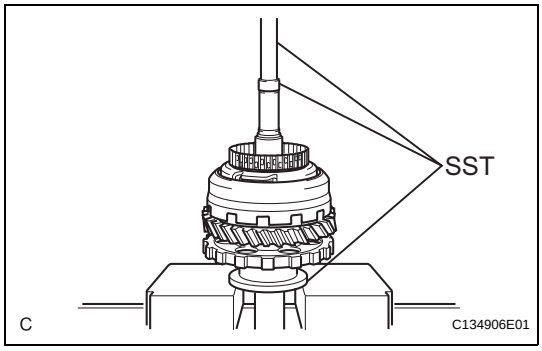
(a) Using a press, press the angular ball bearing inner race (rear side) into the underdrive planetary gear.
SST 09950-60010 (09951-00260), 09950-70010 (09951-07100), 09726-40010



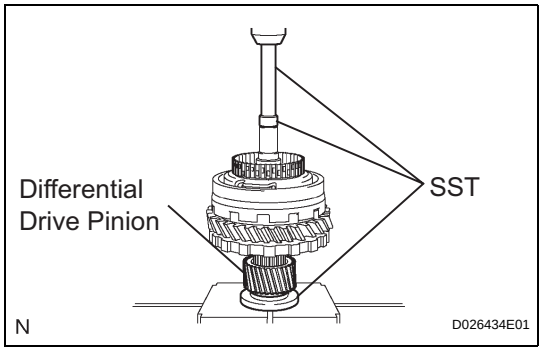
(b) Install the counter driven gear with planetary ring gear to the underdrive planetary gear.



(c) Using SST and a press, press in the angular ball bearing inner race (front side).
SST 09950-60010 (09951-00260), 09950-70010 (09951-07100), 09726-40010
NOTICE:
Press the counter driven gear while rotating it.

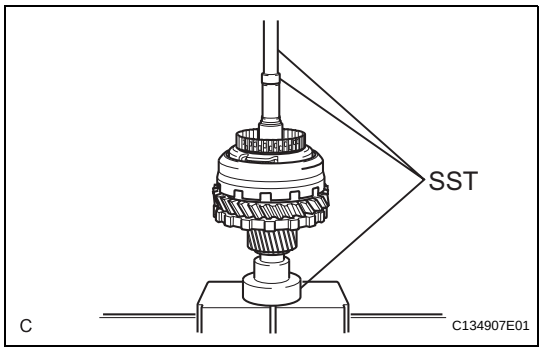


(d) Using a press, press in the parking lock gear.
SST 09950-60010 (09951-00260), 09950-70010 (09951-07100), 09316-20011
NOTICE:
Press the counter driven gear while rotating it.



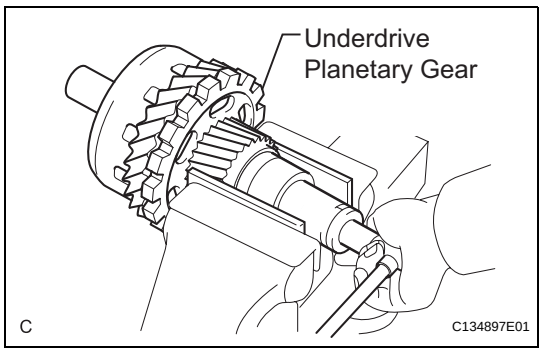
3. INSTALL DIFFERENTIAL DRIVE PINION

(a) Using a press, press in the differential drive pinion.
SST 09726-40010, 09950-60010 (09951-00260), 09950-70010 (09951-07100)
NOTICE:
Press the counter driven gear while rotating it.



4. INSTALL CYLINDRICAL ROLLER BEARING RACE INNER

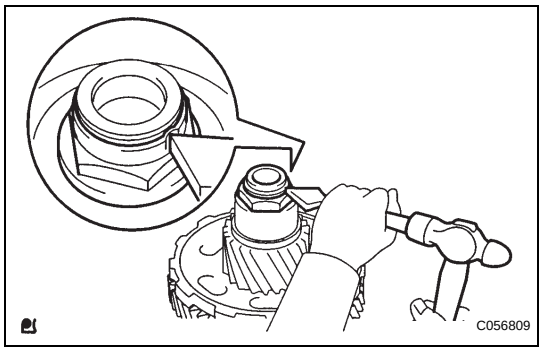
(a) Using a press, press in the cylindrical roller bearing race inner.
SST 09515-21010, 09950-60010 (09951-00260), 09950-70010 (09951-07100)
NOTICE:
Press the counter driven gear while rotating it.



5. INSTALL FRONT PLANETARY GEAR NUT

(a) Clamp the underdrive planetary gear in a soft jaw vise.
NOTICE:
Be careful not to damage the differential drive pinion.

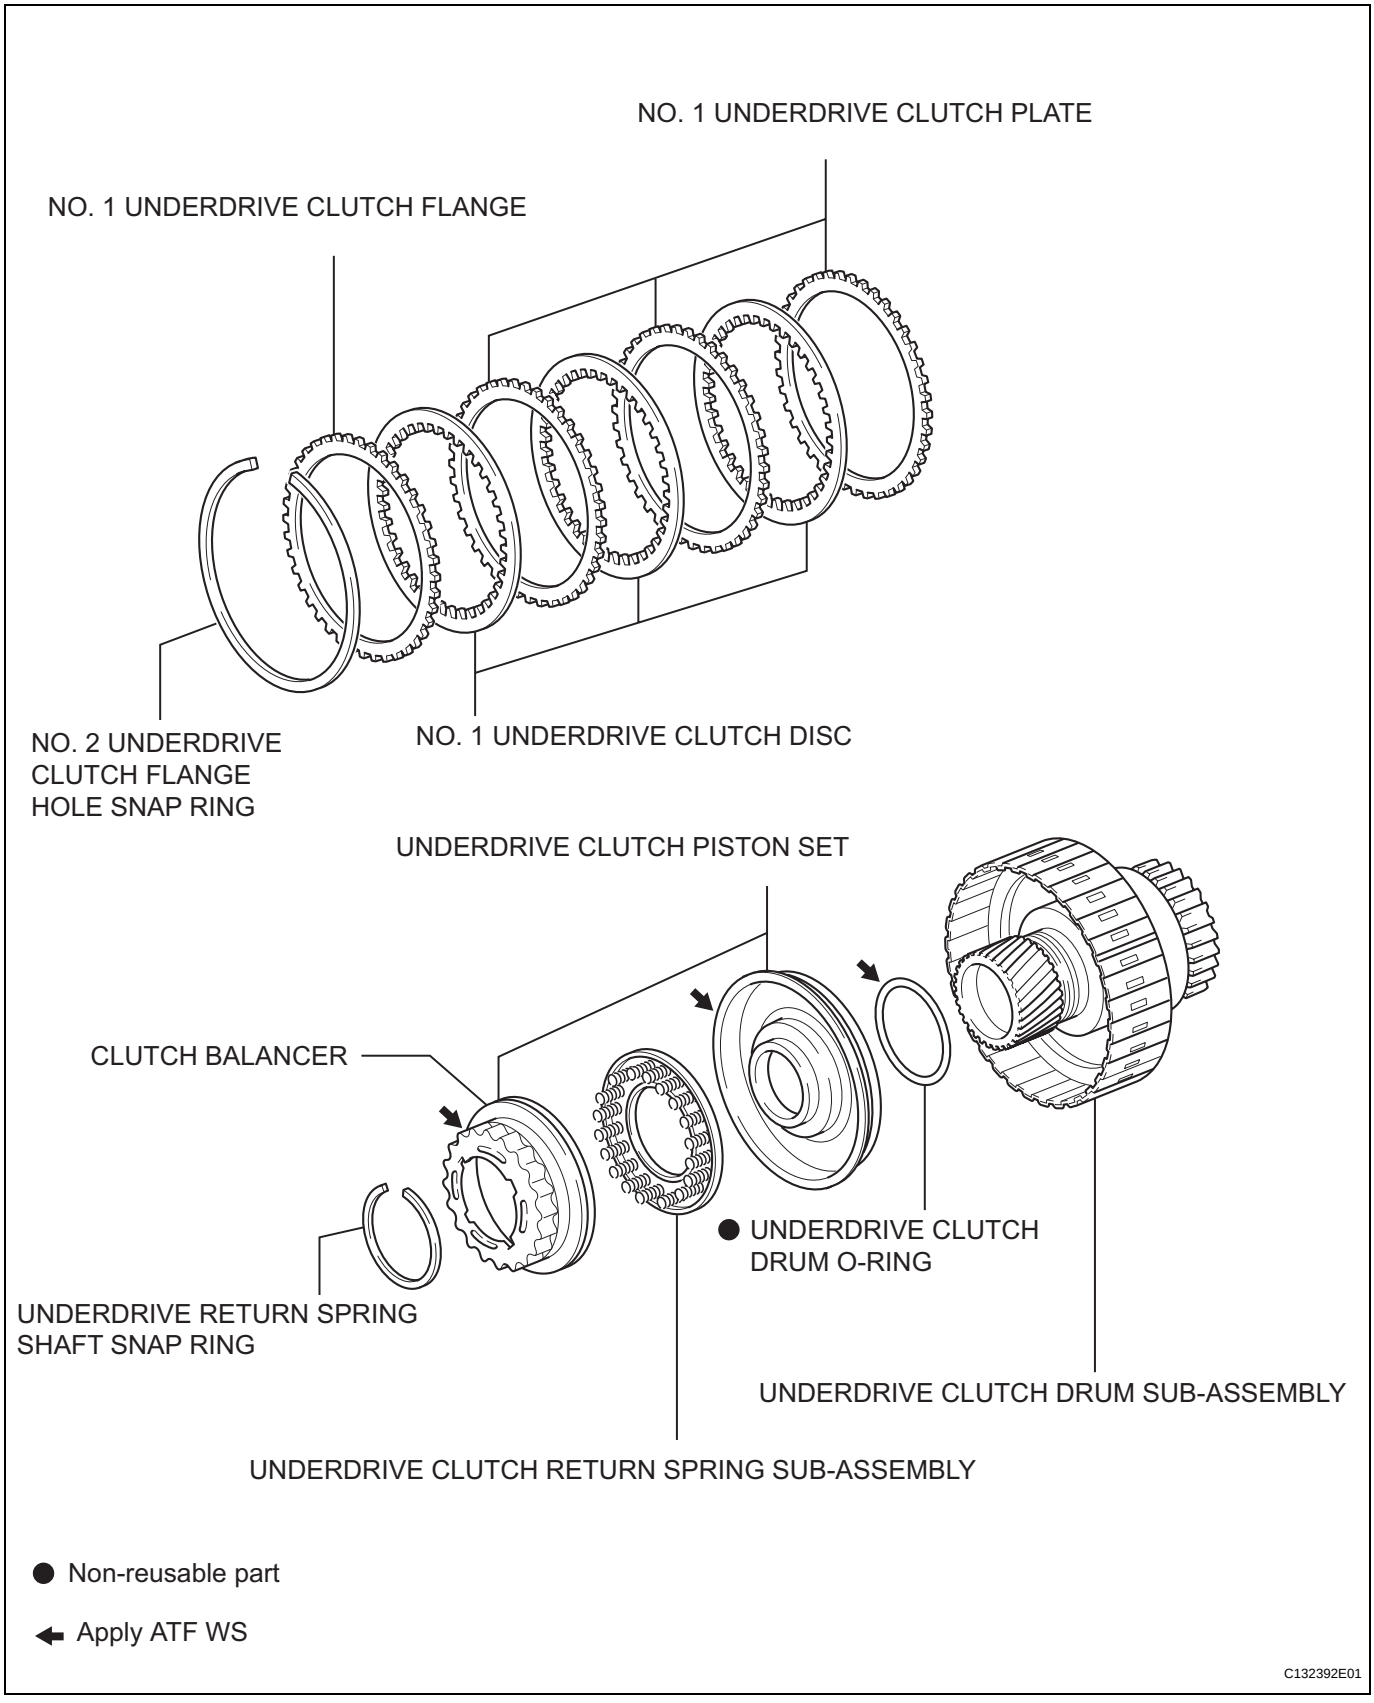
(b) Using a socket wrench, install a new lock nut.
Torque: 280 N*m (2,855 kgf*cm, 207 ft.*lbf)
HINT:
Use a torque wrench with a fulcrum length of 750 mm (29.53 in.).

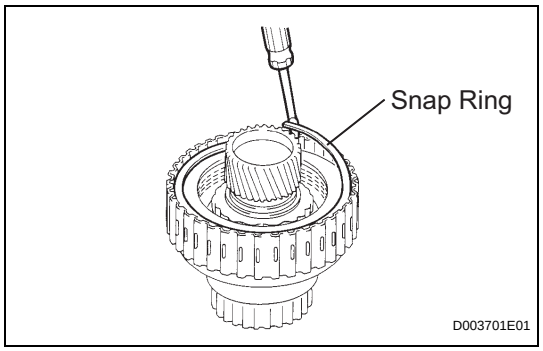


(c) Using a chisel and hammer, stake the lock nut.
CAUTION:
Be sure that there are no cracks on the nut.

UNDERDRIVE CLUTCH

COMPONENTS

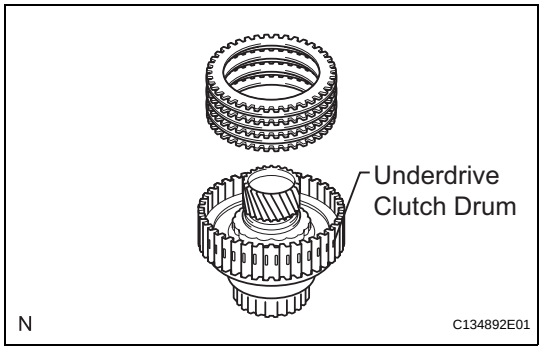




DISASSEMBLY

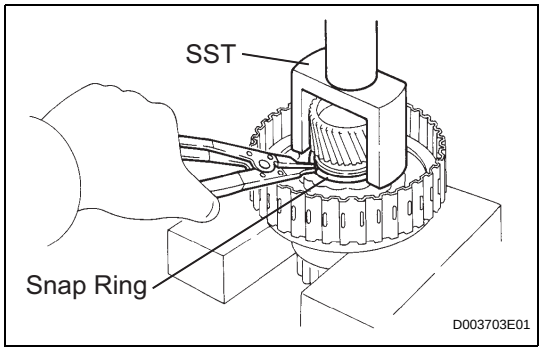
1. REMOVE NO. 2 UNDERDRIVE CLUTCH FLANGE HOLE SNAP RING

(a) Using a screwdriver, remove the No. 2 underdrive clutch flange hole snap ring.



2. REMOVE NO. 1 UNDERDRIVE CLUTCH DISC

(a) Remove the flange, 3 discs, and 3 plates from the underdrive clutch drum.

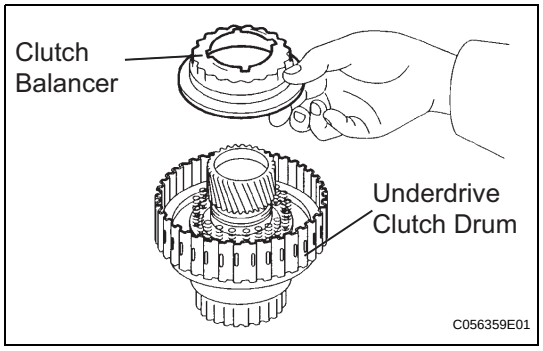


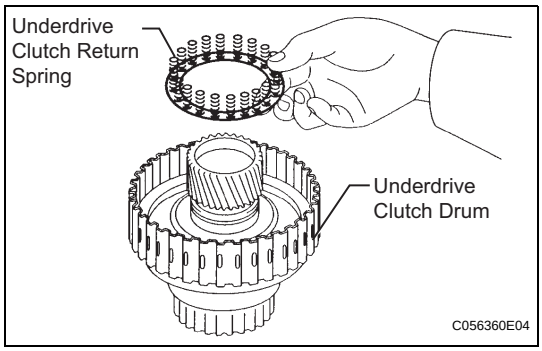
3. REMOVE UNDERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the clutch balancer and compress the spring with a press.
SST 09350-32014 (09351-32070)

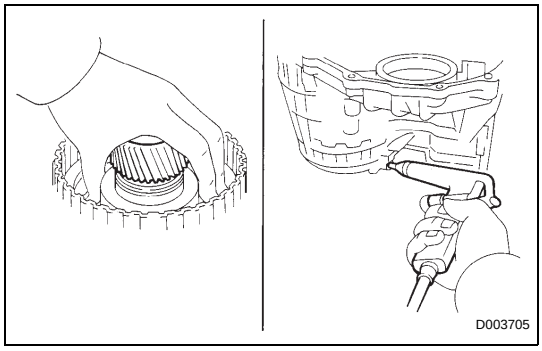
(b) Using a snap ring expander, remove the snap ring.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove. This prevents the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**

(c) Remove the clutch balancer from the underdrive clutch drum.





(d) Remove the return spring from the underdrive clutch drum.



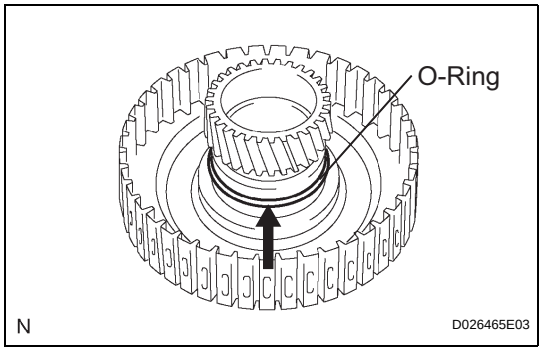
4. REMOVE UNDERDRIVE CLUTCH PISTON SET

(a) Remove the underdrive clutch from the transaxle case.

NOTICE:

Be careful not to damage the oil seal ring.

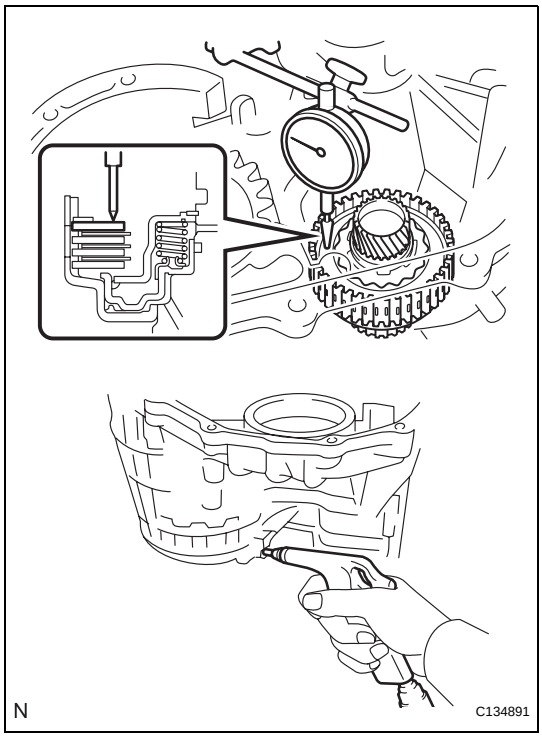
(b) Holding the underdrive clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm ^{2}, 57 psi) to the transaxle case to remove the underdrive clutch piston.



5. REMOVE UNDERDRIVE CLUTCH DRUM O-RING

(a) Using a screwdriver, remove the O-ring from the underdrive clutch drum.

INSPECTION



1. INSPECT UNDERDRIVE PACK CLEARANCE

(a) Install the underdrive clutch to the transaxle case.

NOTICE:

Be careful not to damage the oil seal rings.

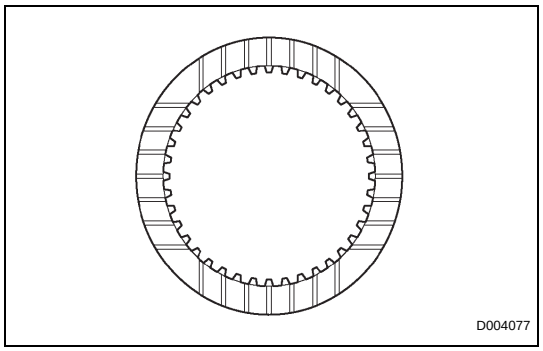
(b) Install a dial indicator as shown in the illustration.

(c) Measure the underdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

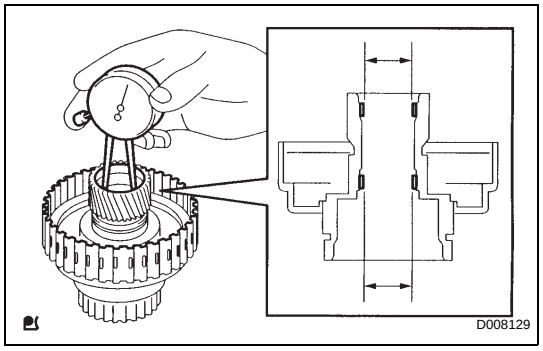
1.51 to 1.71 mm (0.0594 to 0.0673 in.)

If the pack clearance is not within the specified range, inspect the discs, plates, and flange.



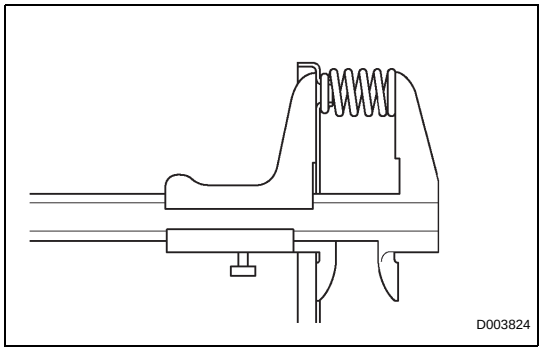
2. INSPECT NO. 1 UNDERDRIVE CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt. If necessary, replace them.
HINT:
- If the lining of a disc comes off or discolors, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



3. INSPECT UNDERDRIVE CLUTCH DRUM SUB-ASSEMBLY

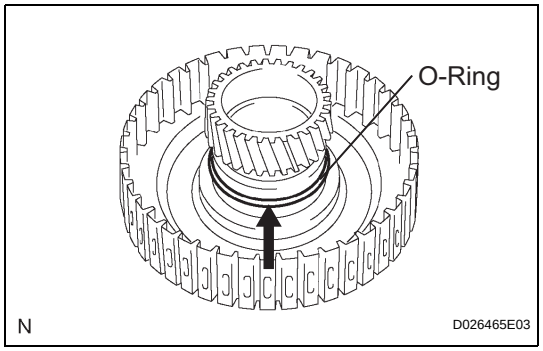
(a) Using a dial indicator, measure the inside diameter of the underdrive clutch drum bushing.
Standard inside diameter:
32.56 to 32.58 mm (1.2818 to 1.2826 in.)
Maximum inside diameter:
32.63 mm (1.2846 in.)
If the inside diameter is greater than the maximum, replace the underdrive clutch drum.



4. INSPECT UNDERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

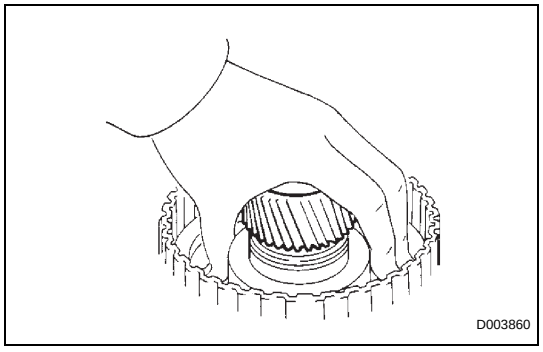
(a) Using vernier calipers, measure the free length of the spring together with the spring seat.
Standard free length:
17.14 mm (0.6748 in.)
If the free length is shorter than the standard free length, replace the underdrive clutch return spring sub-assembly.

REASSEMBLY



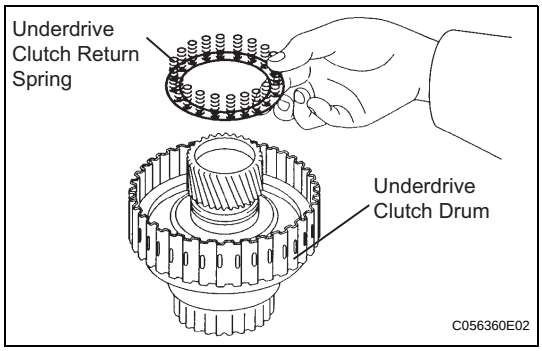
1. INSTALL UNDERDRIVE CLUTCH DRUM O-RING

(a) Coat a new O-ring with ATF, and install it to the underdrive clutch drum.
NOTICE:
Install the O-ring carefully not to have a twist or a pinching.



2. INSTALL UNDERDRIVE CLUTCH PISTON SET

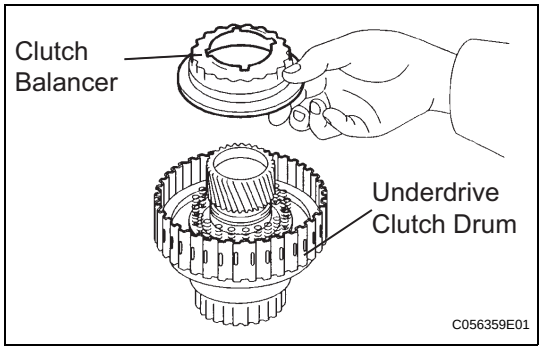
(a) Coat the underdrive clutch piston with ATF, and install it to the underdrive clutch piston drum.
NOTICE:
- **Be careful not to damage the O-ring.**
- **Be careful not to damage the lip seal of the piston.**



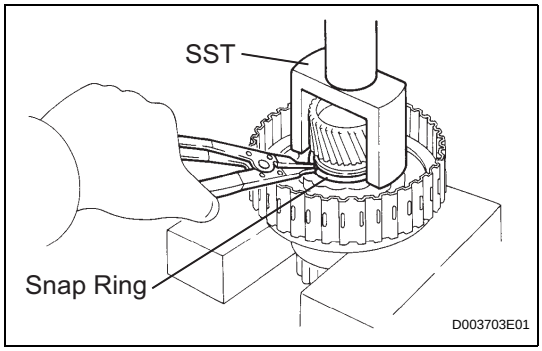
3. INSTALL UNDERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Install the return spring to the underdrive clutch drum.
NOTICE:
After installing the spring sub-assembly, check all of the springs are fitted in the piston correctly.

(b) Coat the clutch balancer with ATF.

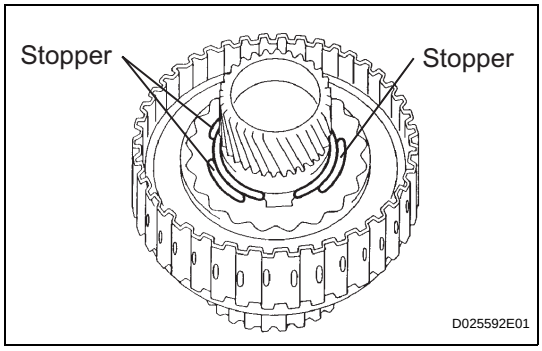


(c) Install the clutch balancer to the underdrive clutch drum.
NOTICE:
Be careful not to damage the lip seal of the clutch balancer.

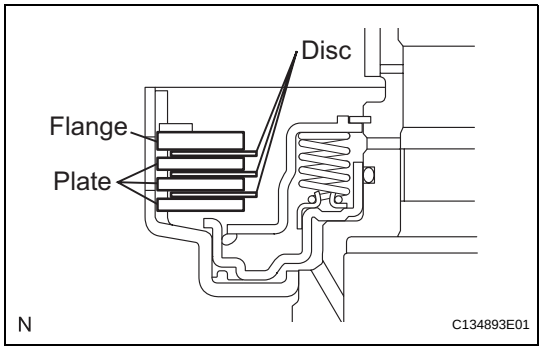


(d) Place SST on the clutch balancer and compress the piston return spring with a press.
SST 09350-32014 (09351-32070)

(e) Using a snap ring expander, install the snap ring to the underdrive clutch drum.
NOTICE:
- **Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove. This prevents the spring seat from being deformed.**
- **Do not expand the snap ring excessively.**



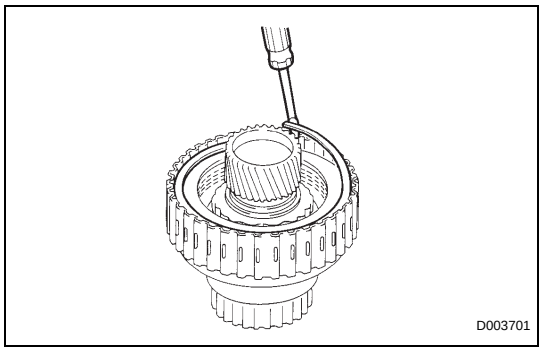
(f) Position the end gap of the snap ring in the underdrive clutch drum as shown in the illustration.
NOTICE:
The end gap of the snap ring should not be aligned with any of the stoppers.



4. INSTALL NO. 1 UNDERDRIVE CLUTCH DISC

(a) Coat the 3 discs with ATF.

(b) Install the 3 plates, 3 discs, and flange to the underdrive clutch drum.
NOTICE:
Be careful about the order of discs, plates, and flange.



5. INSTALL NO. 2 UNDERDRIVE CLUTCH FLANGE HOLE SNAP RING

(a) Using a screwdriver, install the No. 2 underdrive clutch flange hole snap ring.

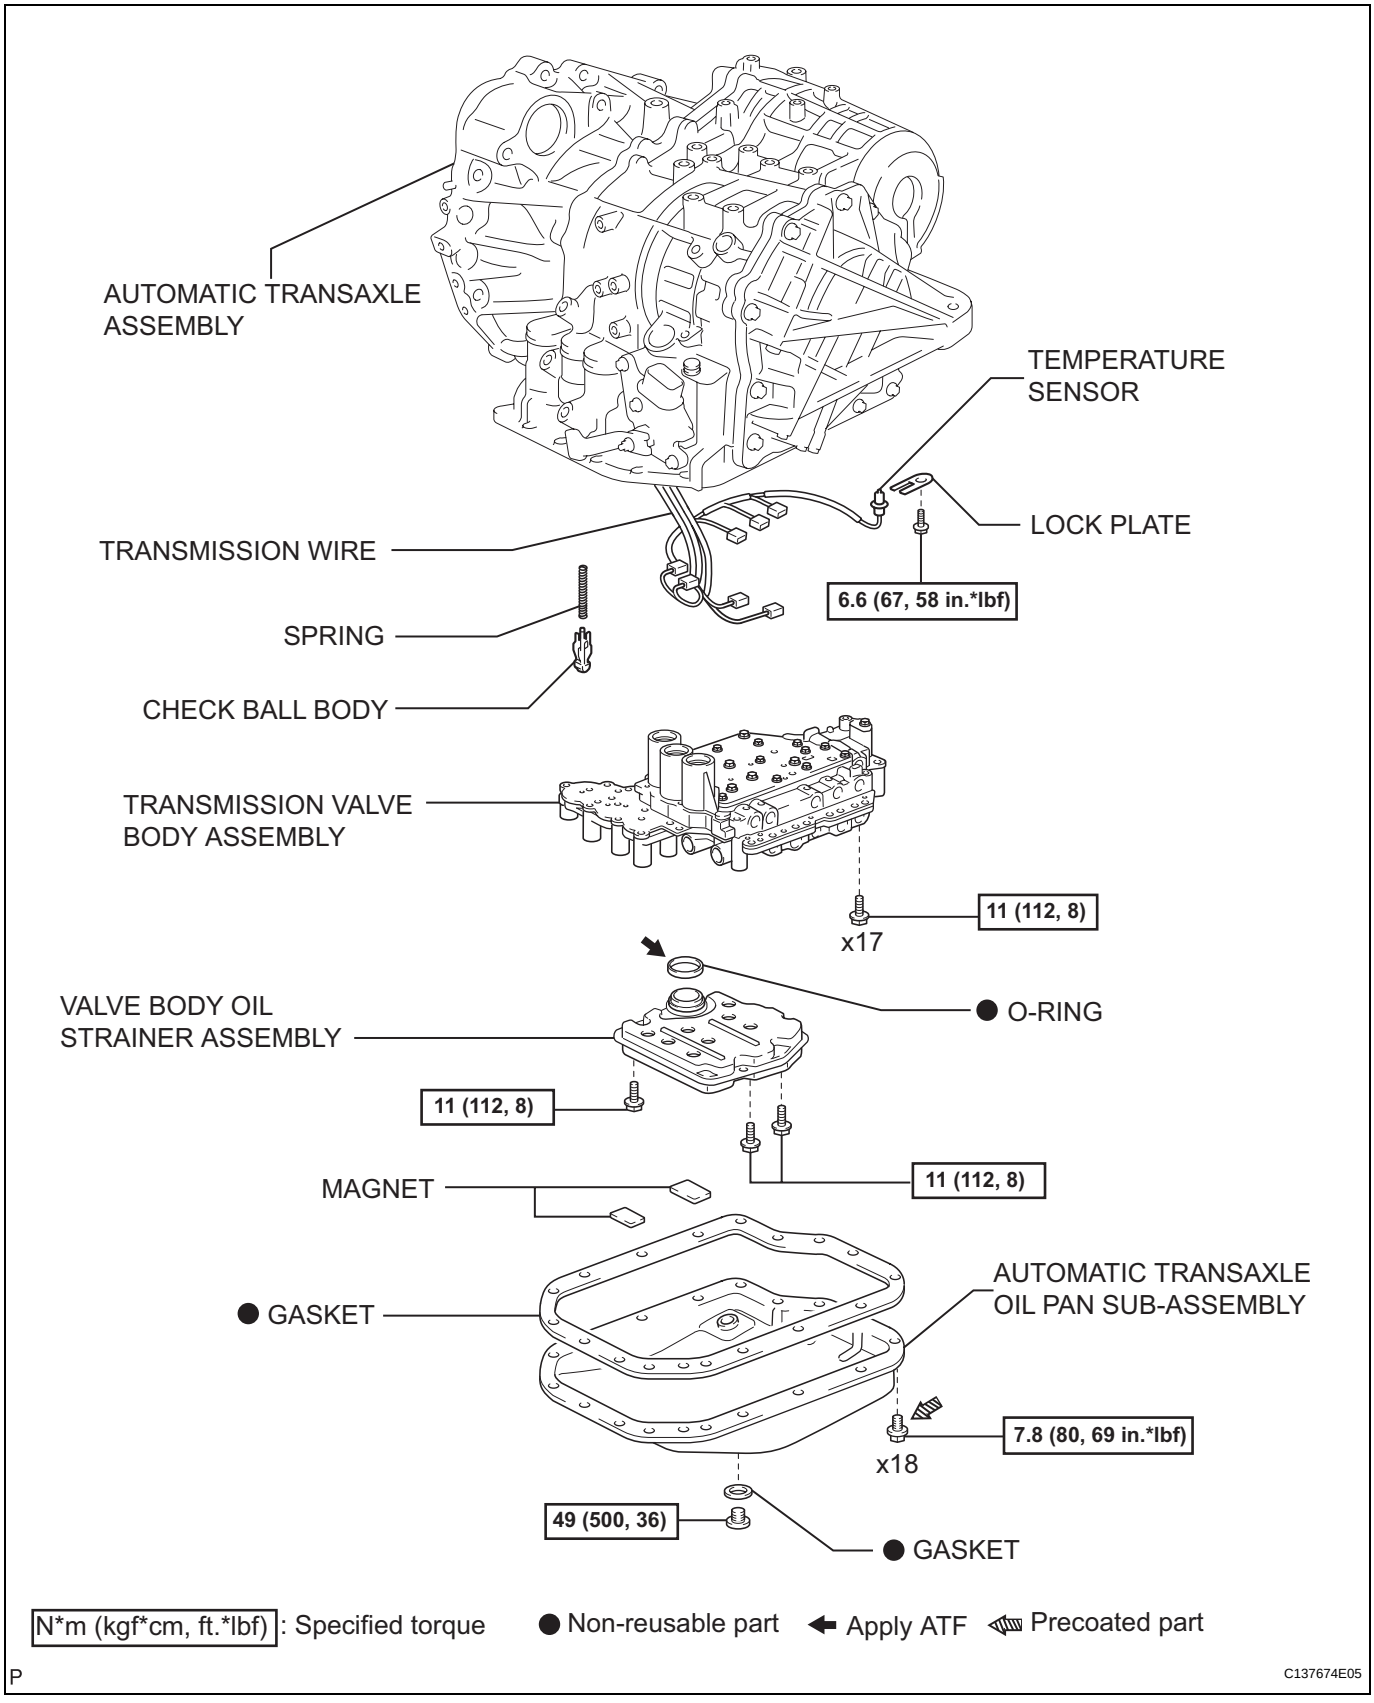
(b) Check that the end gap of the snap ring is not aligned with one of the cutouts.

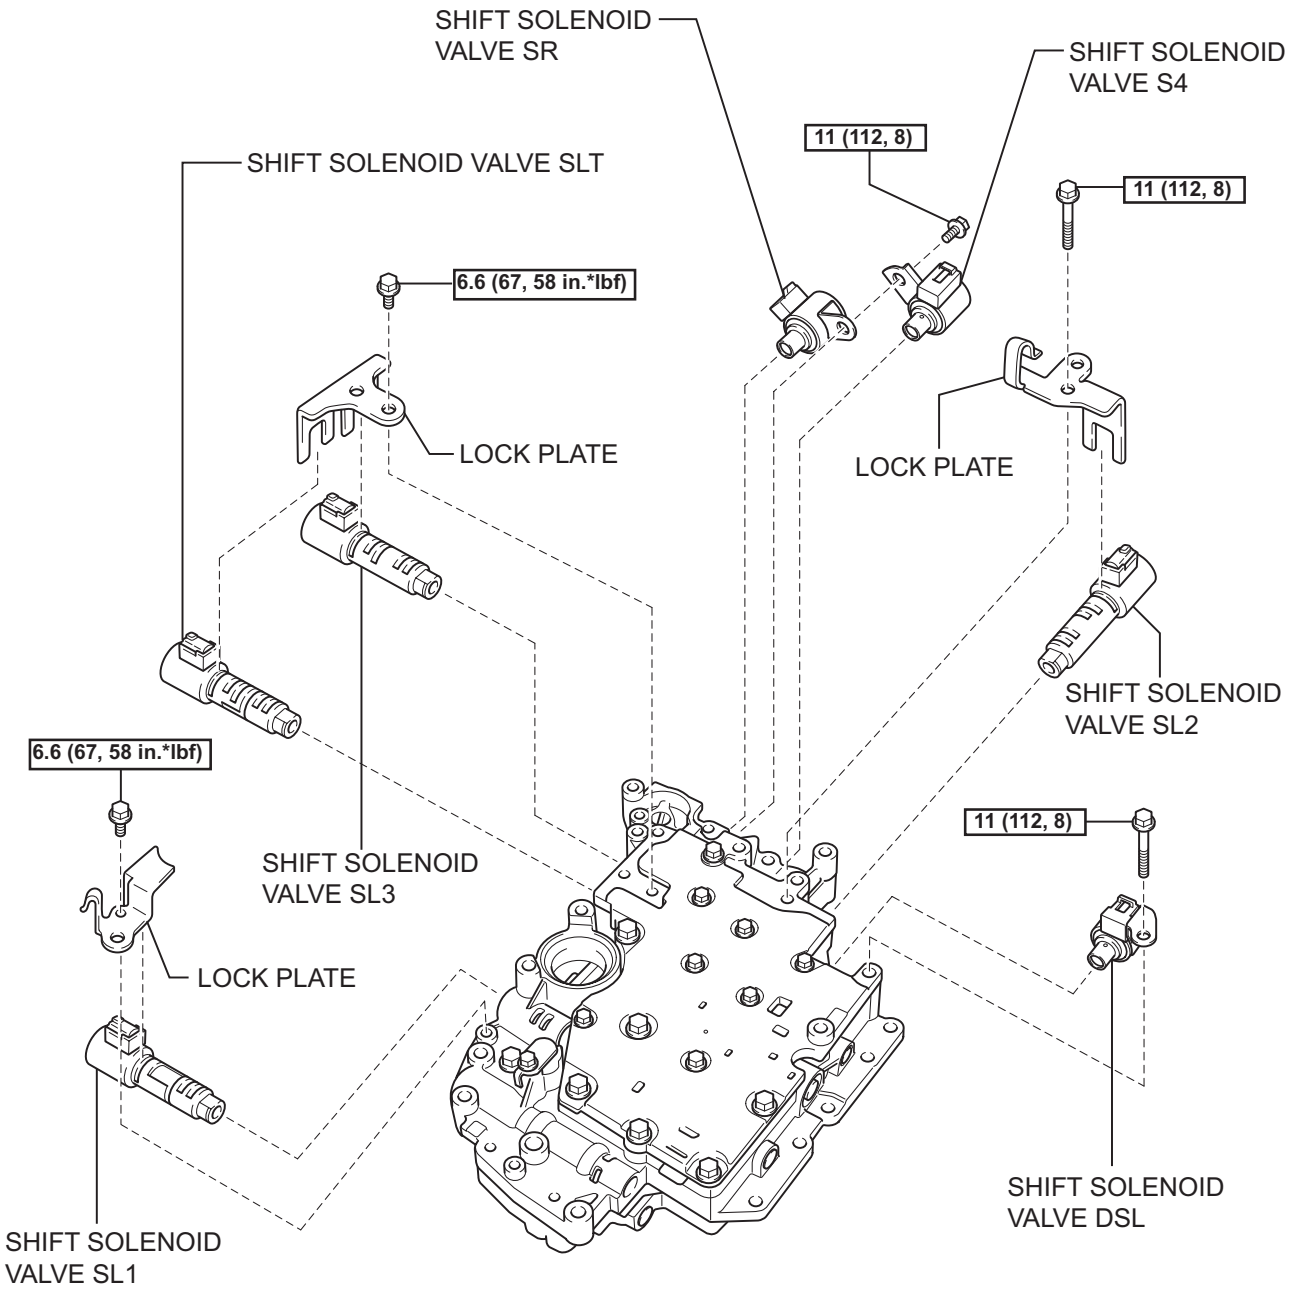
NOTICE:

The snap ring should be securely engaged in the groove of the drum.

SHIFT SOLENOID VALVE

COMPONENTS





N*m (kgf*cm, ft.*lbf): Specified torque

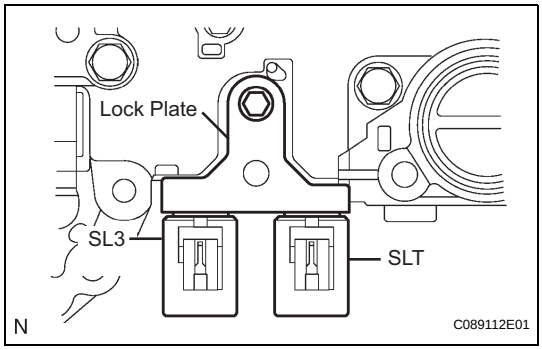
C139867E01

AX

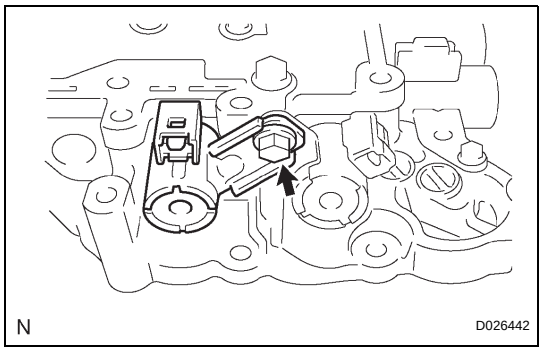
REMOVAL

1. **REMOVE AUTOMATIC TRANSAXLE ASSEMBLY**
   HINT:
   See page AX-162.
2. **REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-138)**
3. **DISCONNECT TRANSMISSION WIRE (See page AX-138)**
4. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AX-139)**
5. **REMOVE TRANSMISSION VALVE BODY ASSEMBLY (See page AX-139)**

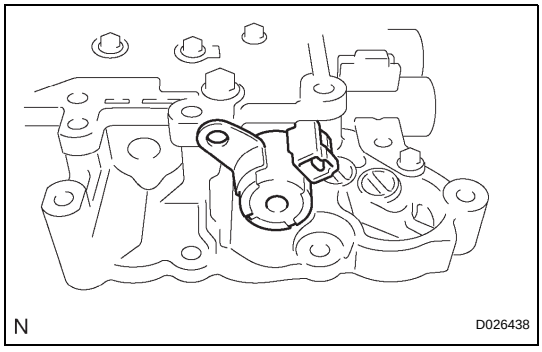
DISASSEMBLY



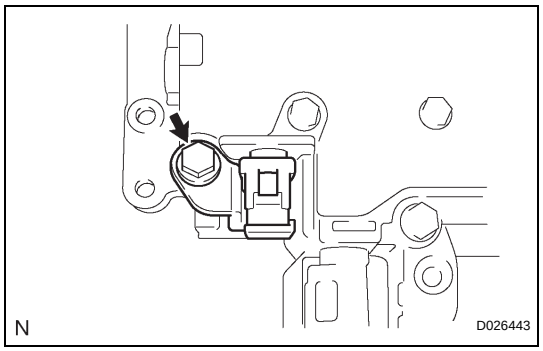
1. **REMOVE SHIFT SOLENOID VALVE SL3**
   (a) Remove the bolt and lock plate from the valve body assembly.
   (b) Remove the shift solenoid valve SL3 from the valve body assembly.
2. **REMOVE SHIFT SOLENOID VALVE SLT**
   (a) Remove the shift solenoid valve SLT from the valve body assembly.



3. **REMOVE SHIFT SOLENOID VALVE S4**
   (a) Remove the bolt and shift solenoid valve S4 from the valve body assembly.

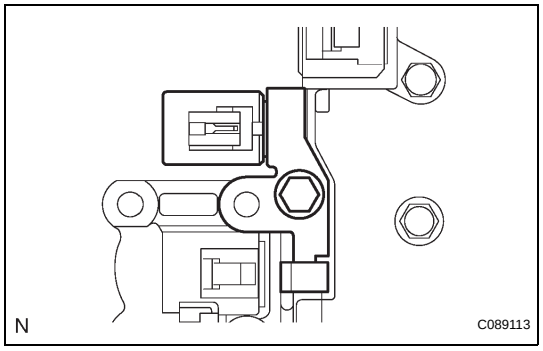


4. **REMOVE SHIFT SOLENOID VALVE SR**
   (a) Remove the shift solenoid valve SR from the valve body assembly.



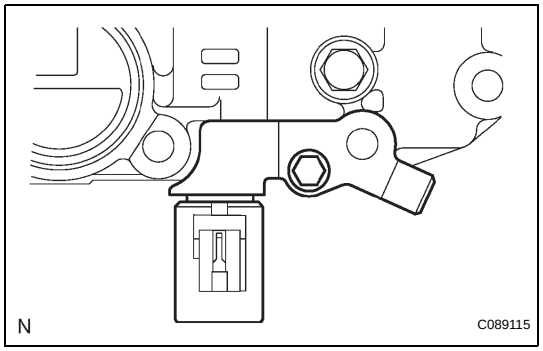
5. REMOVE SHIFT SOLENOID VALVE DSL

(a) Remove the bolt and shift solenoid valve DSL from the valve body assembly.



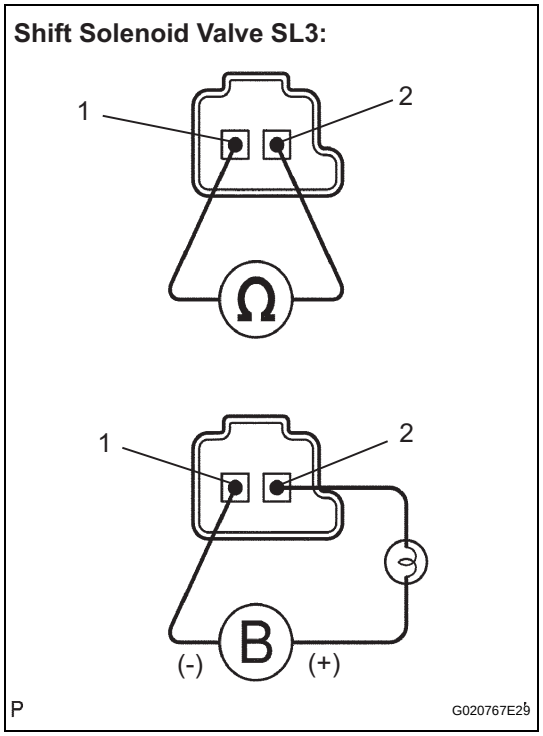
6. REMOVE SHIFT SOLENOID VALVE SL2

(a) Remove the bolt, lock plate and shift solenoid valve SL2 from the valve body assembly.



7. REMOVE SHIFT SOLENOID VALVE SL1

(a) Remove the bolt, lock plate and shift solenoid valve SL1 from the valve body assembly.



INSPECTION

1. INSPECT SHIFT SOLENOID VALVE SL3

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid valve.

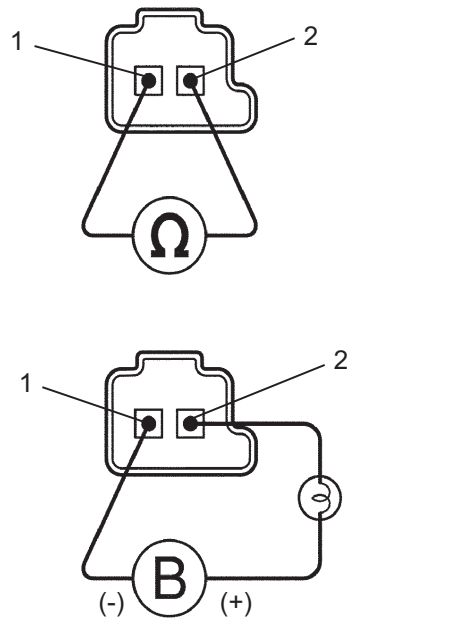
(b) Connect the positive (+) lead to terminal 2 of the solenoid connector, and the negative (-) lead to terminal 1 of the solenoid connector.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.

Shift Solenoid Valve SLT:



2. INSPECT SHIFT SOLENOID VALVE SLT

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid valve.

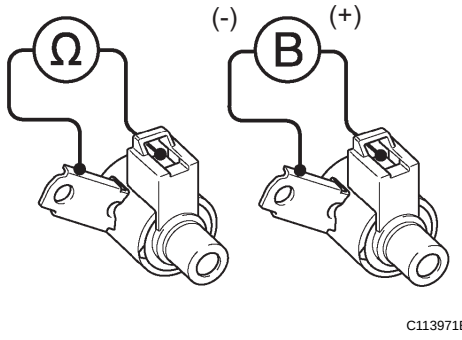
(b) Connect the positive (+) lead to terminal 2 of the solenoid connector, and the negative (-) lead to terminal 1 of the solenoid connector.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.

Shift Solenoid Valve S4:



3. INSPECT SHIFT SOLENOID VALVE S4

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (S4) - Solenoid Body (S4)	11 to 15 Ω

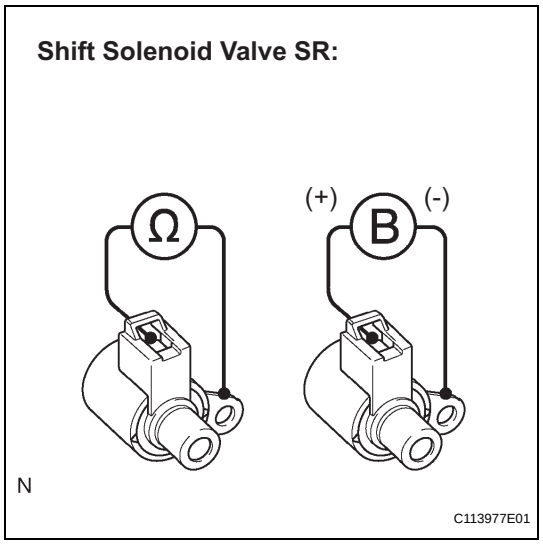
If the value is not as specified, replace the shift solenoid valve.

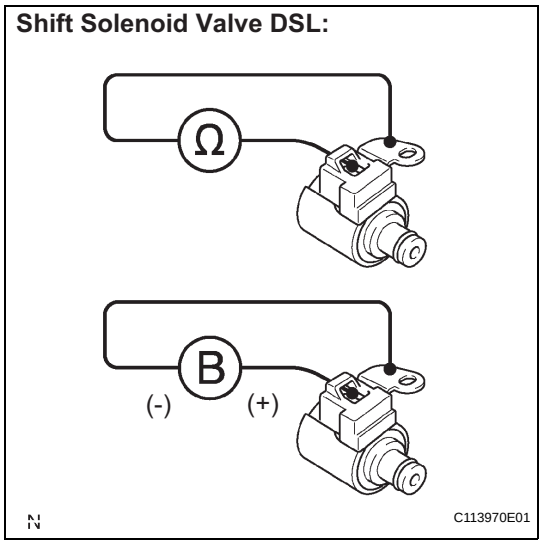
(b) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.





4. INSPECT SHIFT SOLENOID VALVE SR

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (SR) - Solenoid Body (SR)	11 to 15 Ω

If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.

5. INSPECT SHIFT SOLENOID VALVE DSL

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (DSL) - Solenoid Body (DSL)	11 to 15 Ω

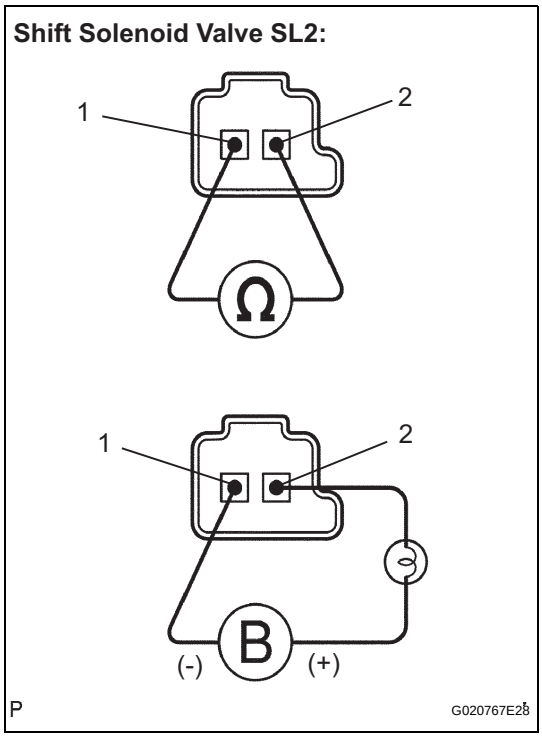
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.



6. INSPECT SHIFT SOLENOID VALVE SL2

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

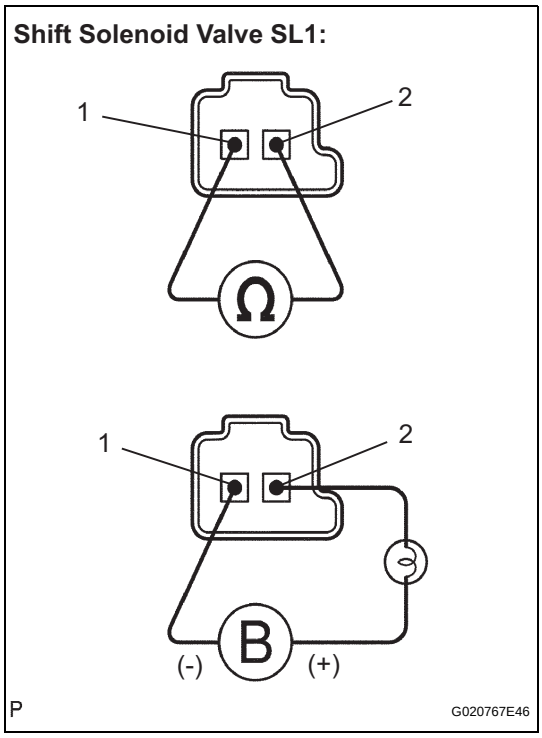
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead to terminal 2 of the solenoid connector, and the negative (-) lead to terminal 1 of the solenoid connector.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.



7. INSPECT SHIFT SOLENOID VALVE SL1

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

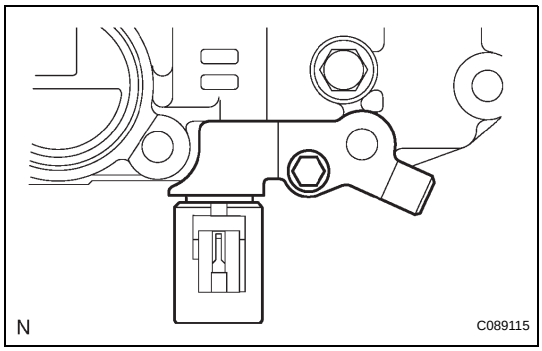
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead to terminal 2 of the solenoid connector, and the negative (-) lead to terminal 1 of the solenoid connector.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve.

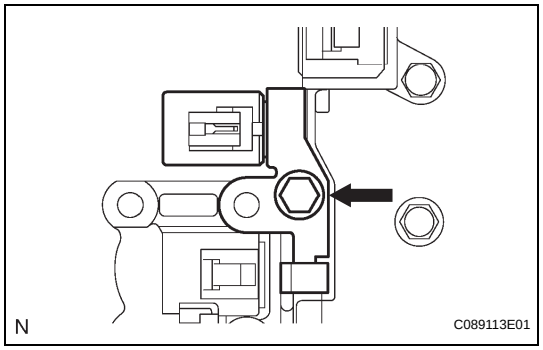


REASSEMBLY

1. INSTALL SHIFT SOLENOID VALVE SL1

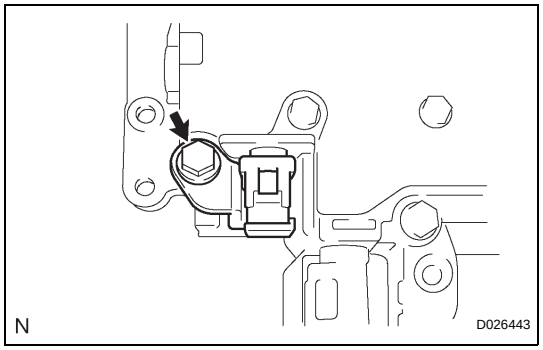
(a) Install the shift solenoid valve SL1 and lock plate to the valve body assembly with the bolt.

Torque: 6.6 N*m (67 kgf*cm, 58 in.*lbf)



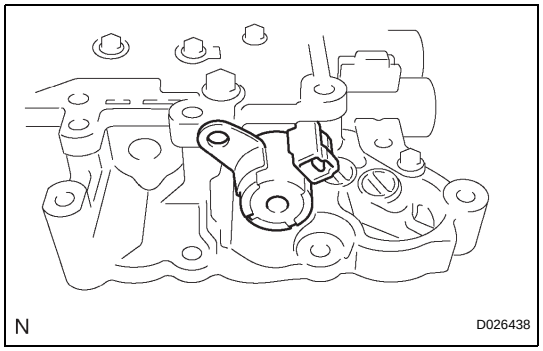
2. INSTALL SHIFT SOLENOID VALVE SL2

(a) Install the shift solenoid valve SL2 and lock plate to the valve body assembly with the bolt.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



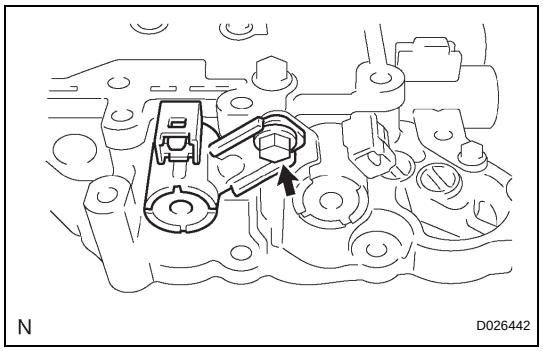
3. INSTALL SHIFT SOLENOID VALVE DSL

(a) Install the shift solenoid valve DSL to the valve body assembly with the bolt.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



4. INSTALL SHIFT SOLENOID VALVE SR

(a) Install the shift solenoid valve SR to the valve body assembly.

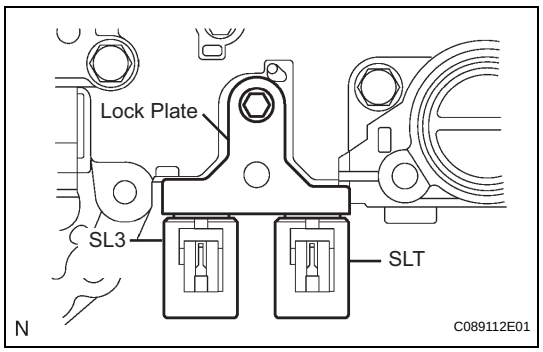


5. INSTALL SHIFT SOLENOID VALVE S4

(a) Install the shift solenoid valve S4 to the valve body assembly with the bolt.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)

6. INSTALL SHIFT SOLENOID VALVE SL3

(a) Install the shift solenoid valve SL3 to the valve body assembly.



7. INSTALL SHIFT SOLENOID VALVE SLT

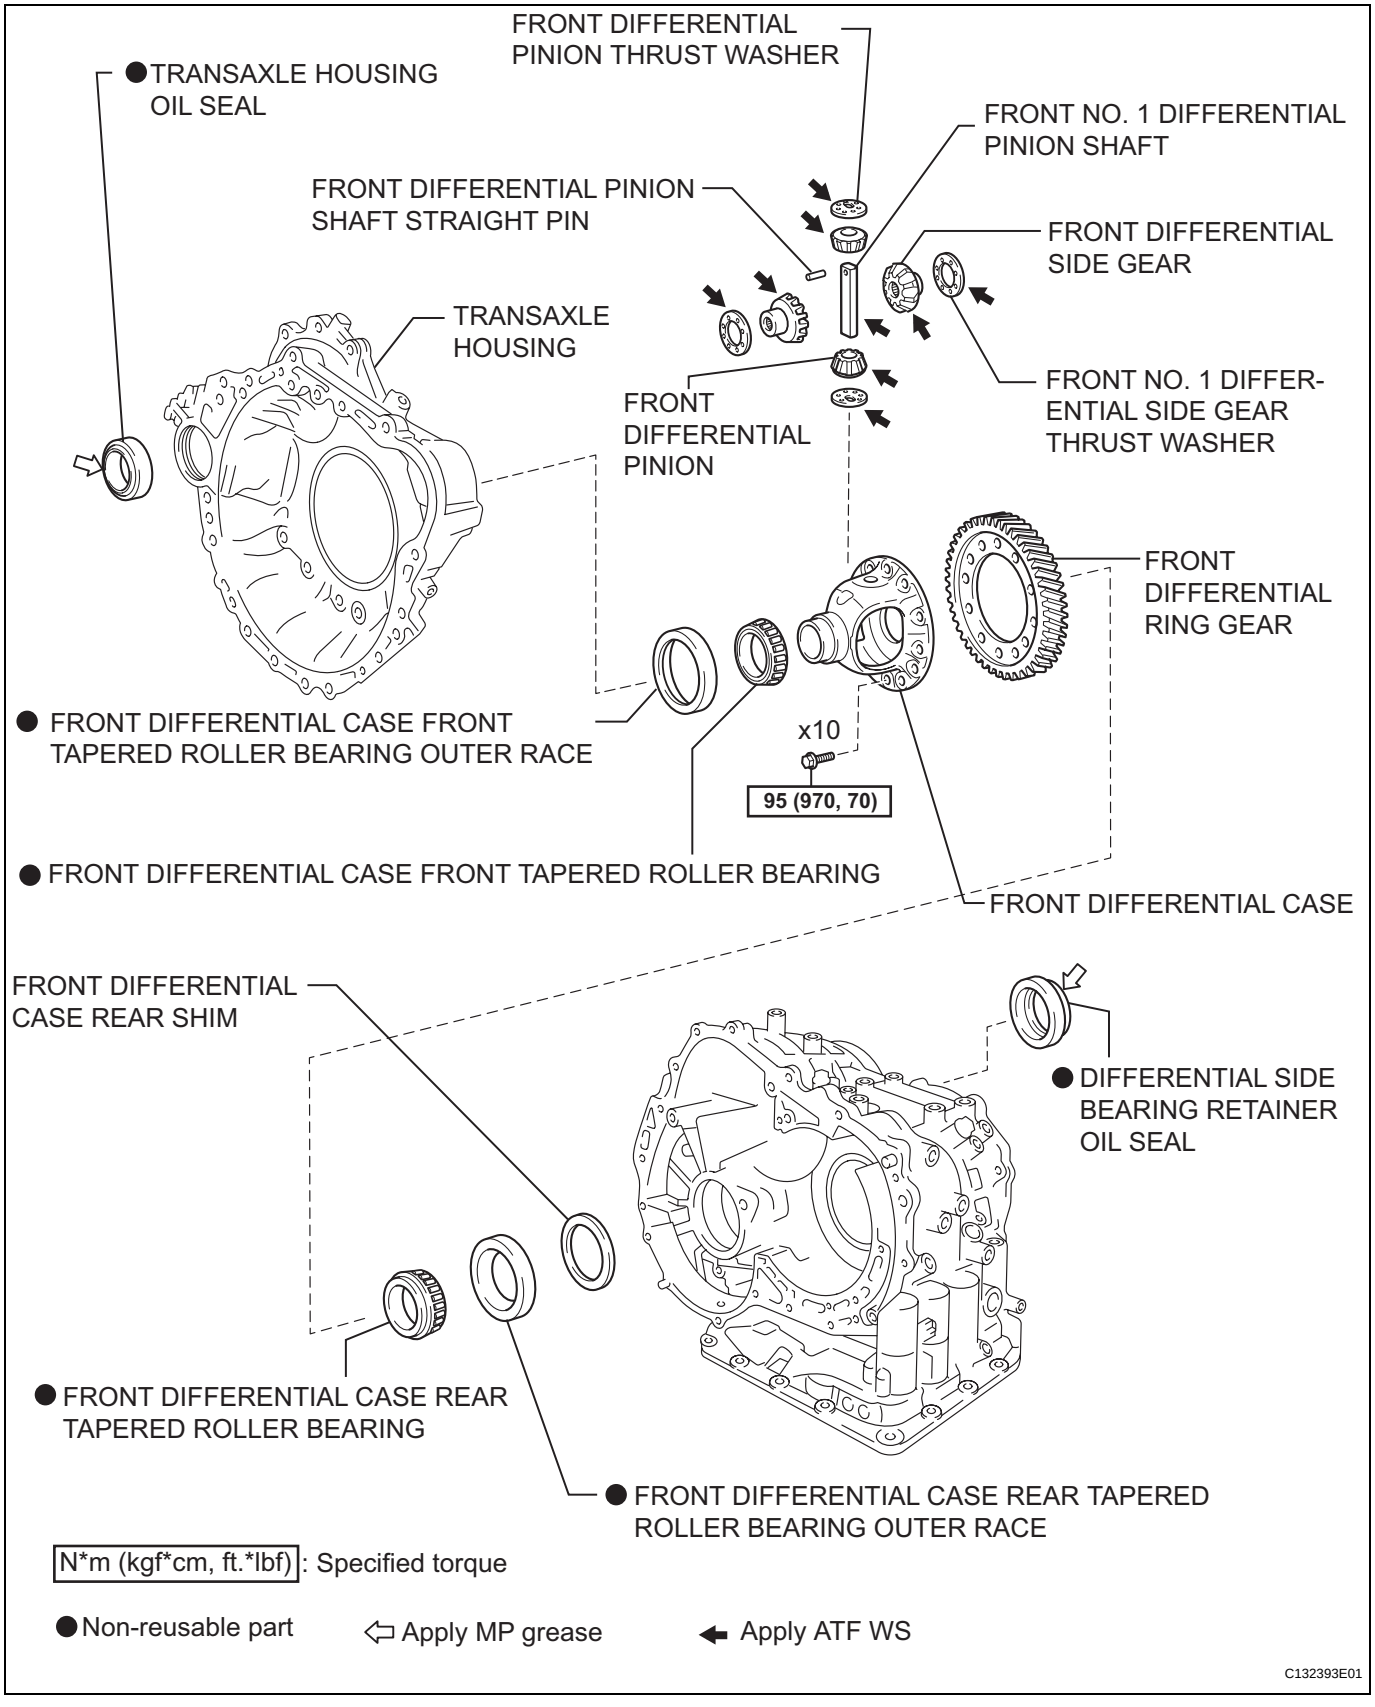
(a) Install the shift solenoid valve SLT and lock plate to the valve body assembly with the bolt.
Torque: 6.6 N*m (67 kgf*cm, 58 in.*lbf)

INSTALLATION

1. **INSTALL TRANSMISSION VALVE BODY ASSEMBLY (See page AX-139)**
2. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AX-140)**
3. **INSTALL TRANSMISSION WIRE (See page AX-140)**
4. **INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-141)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page AX-141)**
6. **INSTALL AUTOMATIC TRANSAXLE ASSEMBLY** (See page AX-168)

DIFFERENTIAL CASE

COMPONENTS



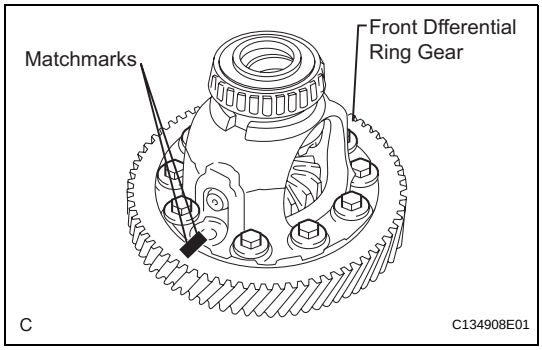
REMOVAL

1. REMOVE DIFFERENTIAL GEAR ASSEMBLY (See page AX-212)

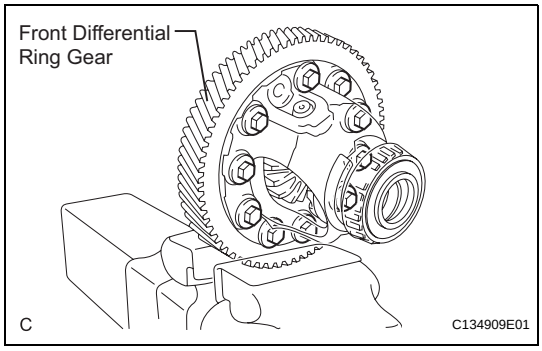
DISASSEMBLY

1. REMOVE FRONT DIFFERENTIAL RING GEAR

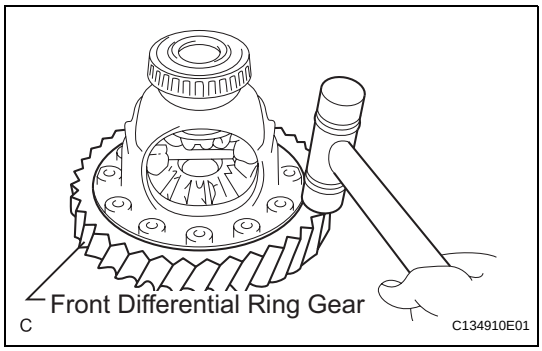
(a) Put matchmarks on the front differential ring gear and differential case.



(b) Remove the 10 bolts.



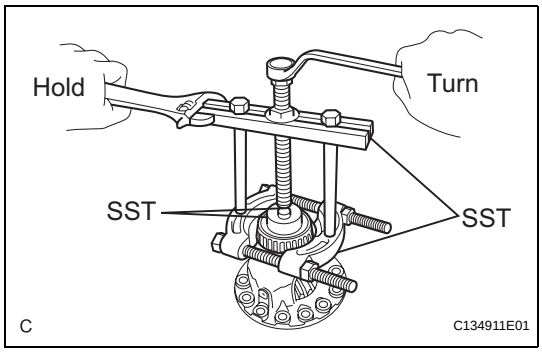
(c) Using a plastic hammer, tap on the front differential ring gear to remove it from the case.

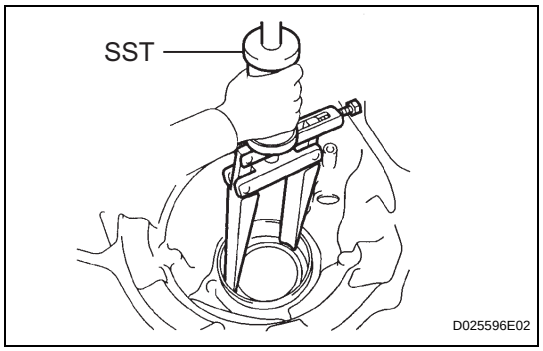


2. REMOVE FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

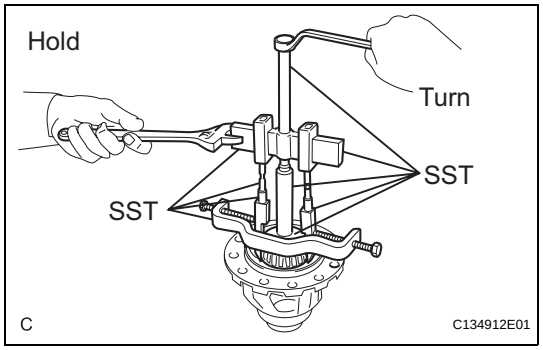
(a) Using SST, remove the front differential case front tapered roller bearing from the differential case.

SST 09950-00020, 09950-00030, 09950-40011 (09957-04010), 09950-60010 (09951-00480)



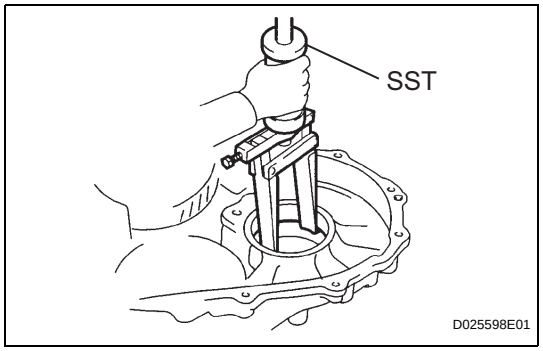


(b) Using SST, remove the front differential case front tapered roller bearing outer race.
SST 09308-00010

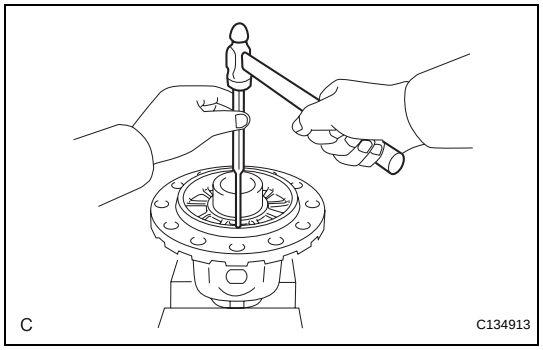


3. REMOVE FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case rear tapered roller bearing from the differential case.
SST 09950-00020, 09950-00030, 09950-40011 (09955-04061, 09957-04010, 09958-04011), 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021, 09955-05010), 09950-60010 (09951-00480), 09950-70010 (09951-07100)

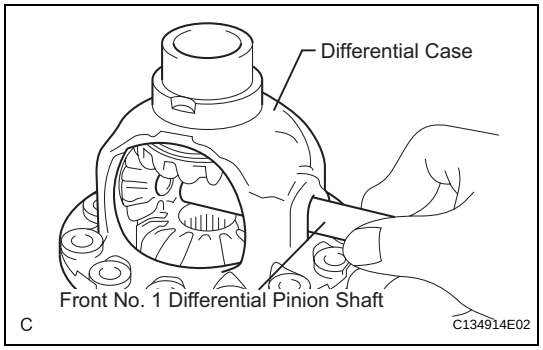


(b) Using SST, remove the front differential case rear tapered roller bearing outer race.
SST 09308-00010



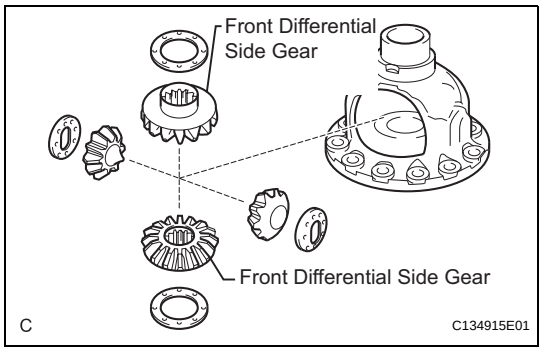
4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch and hammer, remove the straight pin.
NOTICE:
Before removing the straight pin, unstake it with a pin punch.



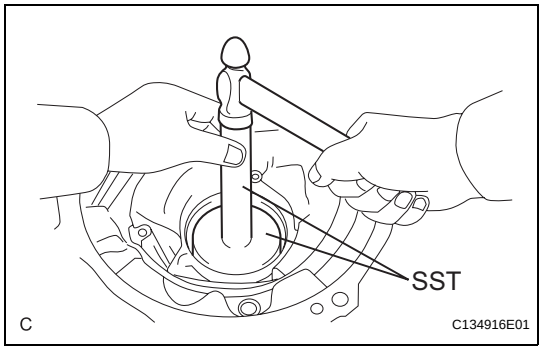
5. REMOVE FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Remove the front No. 1 differential pinion shaft from the differential case.



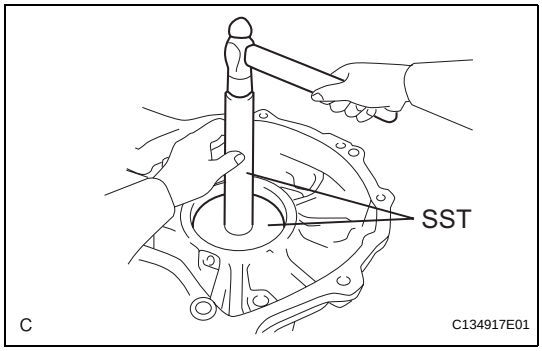
6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 pinion thrust washers, 2 front differential side gears and 2 side gear thrust washers from the differential case.



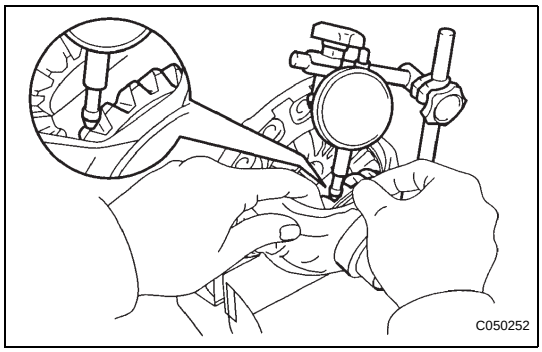
7. REMOVE TRANSAXLE HOUSING OIL SEAL

(a) Using SST and a hammer, remove the oil seal.
SST 09950-70010 (09951-07200), 09950-60010 (09951-00630)



8. REMOVE DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Using SST and a hammer, remove the oil seal.
SST 09950-70010 (09951-07100), 09608-10010

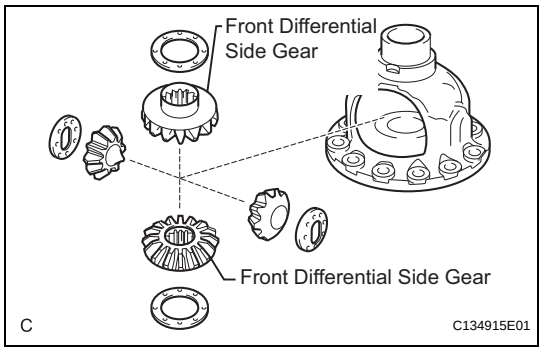


INSPECTION

1. INSPECT BACKLASH

(a) Using a dial indicator, inspect the backlash of the side gear.
Standard backlash:
0.05 to 0.20 mm (0.0020 to 0.0079 in.)
Thrust washer thickness

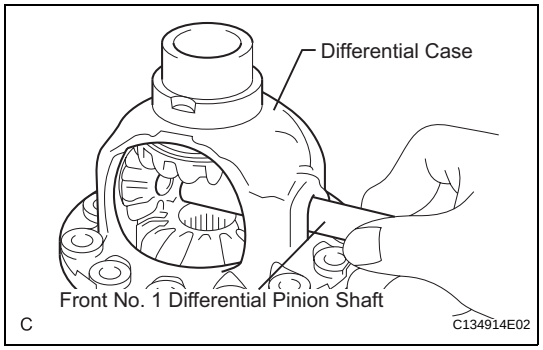
Mark	Thickness
1	1.000 mm (0.0394 in.)
2	1.100 mm (0.0433 in.)
3	1.200 mm (0.0472 in.)
4	1.300 mm (0.0512 in.)



REASSEMBLY

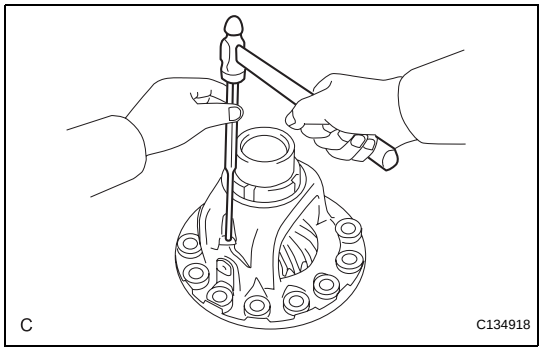
1. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) Coat the 2 front differential side gears, 2 side gear thrust washers, 2 front differential pinions and 2 pinion thrust washers with ATF and install them to the differential case.



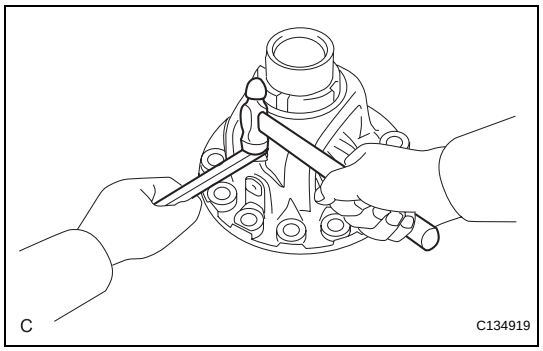
2. INSTALL FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Coat the front No. 1 differential pinion shaft with ATF, and install it to the differential case.



3. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

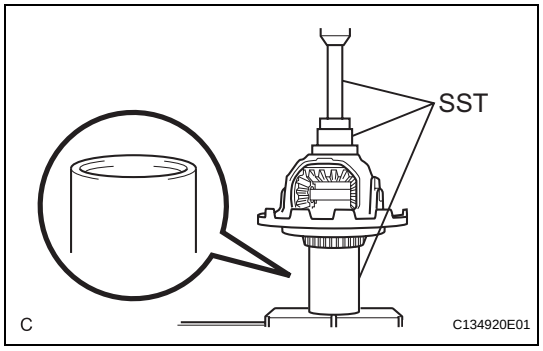
(a) Using a pin punch and hammer, install the pinion shaft straight pin.



(b) Using a chisel and hammer, stake the differential case.

NOTICE:

Stake it after adjusting the backlash.



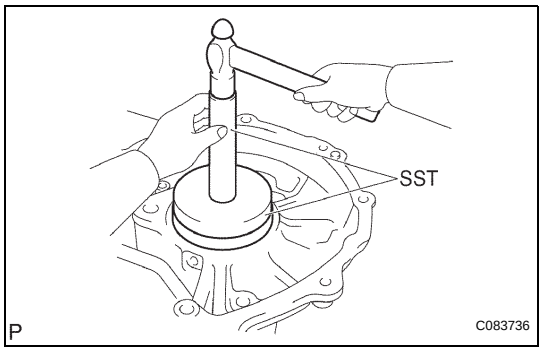
4. INSTALL FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case front tapered roller bearing to the differential case.

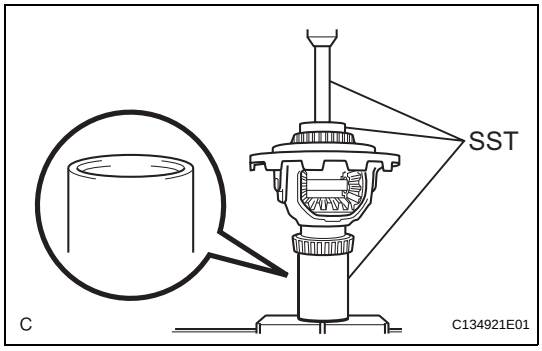
SST 09550-60010 (09951-00480), 09950-70010 (09951-07100), 09710-04081

NOTICE:

Do not damage the bearing cage during installation of the bearing inner race.

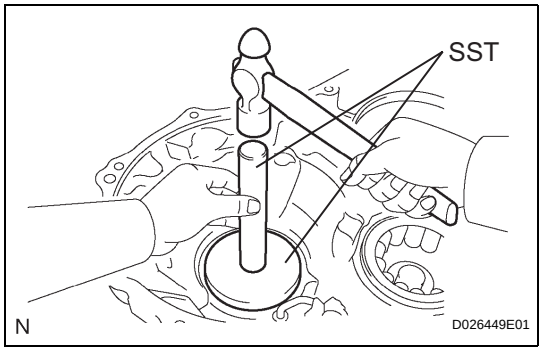


(b) Using SST and a hammer, install the front differential case front tapered roller bearing outer race to the transaxle housing.
SST 09950-60020 (09951-00750), 09950-70010 (09951-07200)

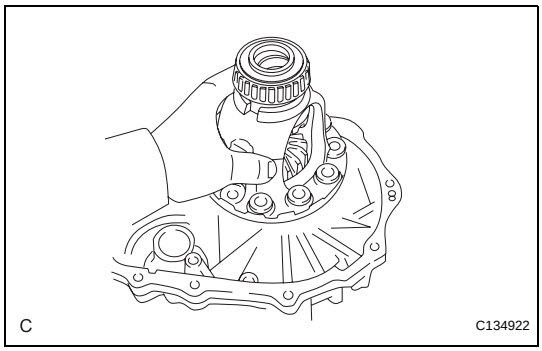


5. INSTALL FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case rear tapered roller bearing to the differential case.
SST 09710-04081, 09550-60010 (09951-00480), 09950-70010 (09951-07100)
NOTICE:
Do not damage the bearing cage during installation of the bearing inner race.

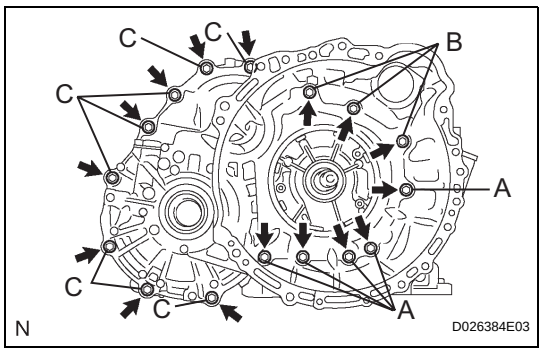


(b) Using SST and a hammer, install the front differential case rear tapered roller bearing outer race to the transaxle housing.
SST 09550-60010 (09951-00790), 09950-70010 (09951-00710)
NOTICE:
Clearance is not allowed between the bearing and transaxle housing.



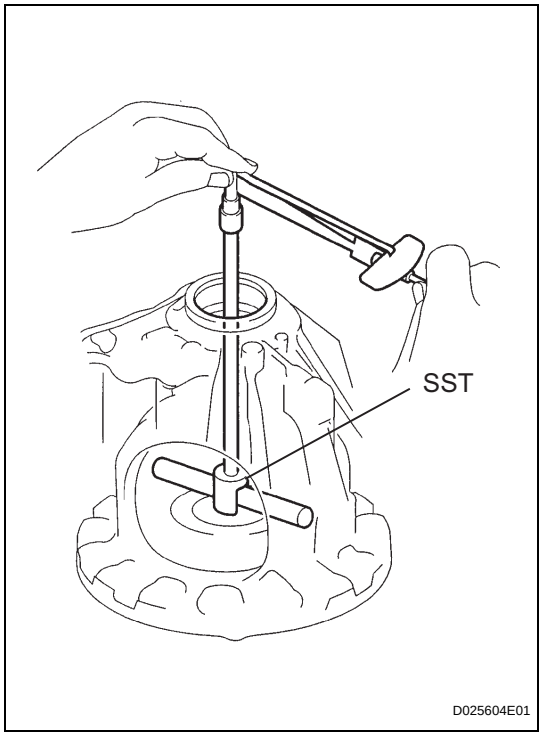
6. ADJUST DIFFERENTIAL SIDE BEARING PRELOAD

(a) Install the differential assembly to the transaxle case.



(b) Clean the matching surfaces of the transaxle case and transaxle housing.
(c) Install the transaxle housing to the transaxle case and tighten them with the 16 bolts.
Torque: Bolt A
22 N*m (225 kgf*cm, 16 ft.*lbf)
Bolt B, C
29 N*m (299 kgf*cm, 22 ft.*lbf)
Bolt length:
Bolt A:
50 mm (1.969 in.)

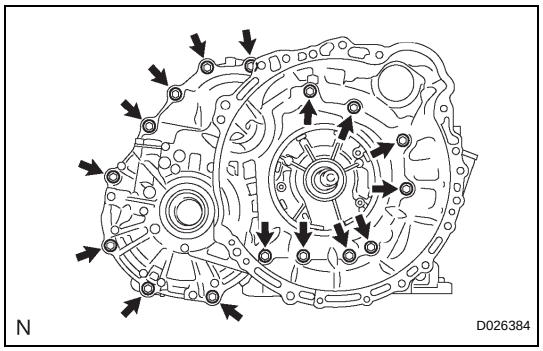
Bolt B:
50 mm (1.969 in.)
Bolt C:
42 mm (1.654 in.)



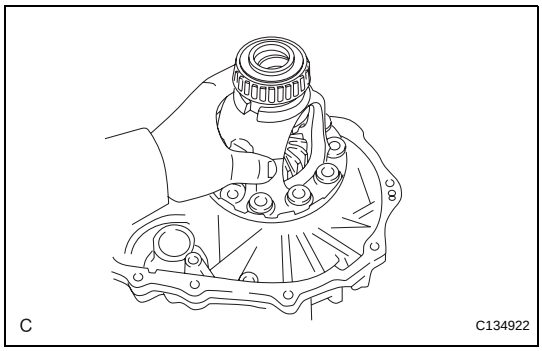
(d) Using SST, turn the differential assembly right and left 2 or 3 times to settle the bearing.
SST 09564-32011

(e) Using SST and a torque wrench, measure the turning torque of the differential.
SST 09564-32011
Turning torque at 60 rpm:
New bearing:
0.20 to 0.69 N*m (2.0 to 7.0 kgf*cm, 1.8 to 6.1 in.*lbf)
Used bearing:
0.10 to 0.35 N*m (1.0 to 3.6 kgf*cm, 0.9 to 3.1 in.*lbf)
HINT:
If the turning torque is not within the specified range, refer to the table below to select a thrust washer so that the turning torque is within the specified range.
Flange thickness: mm (in.)

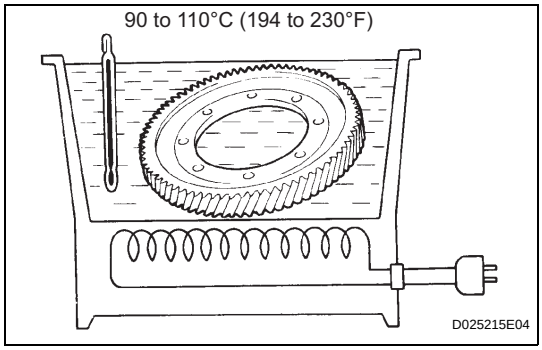
Mark	Thickness	Mark	Thickness
0	1.90 (0.0748)	A	2.40 (0.0945)
1	1.95 (0.0768)	B	2.45 (0.0965)
2	2.00 (0.0787)	C	2.50 (0.0984)
3	2.05 (0.0807)	D	2.55 (0.1004)
4	2.10 (0.0827)	E	2.60 (0.1024)
5	2.15 (0.0846)	F	2.65 (0.1043)
6	2.20 (0.0866)	G	2.70 (0.1063)
7	2.25 (0.0886)	H	2.75 (0.1083)
8	2.30 (0.0906)	J	2.80 (0.1102)
9	2.35 (0.0925)	-	-



(f) Remove the 16 bolts and the transaxle housing.



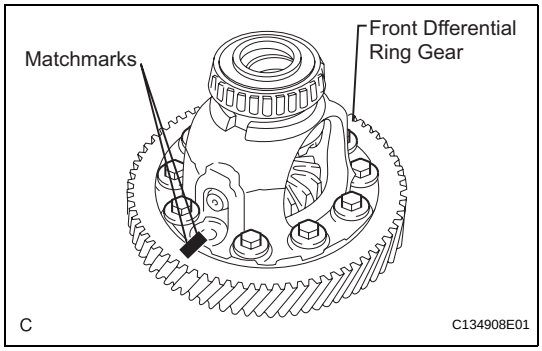
(g) Remove the differential assembly.



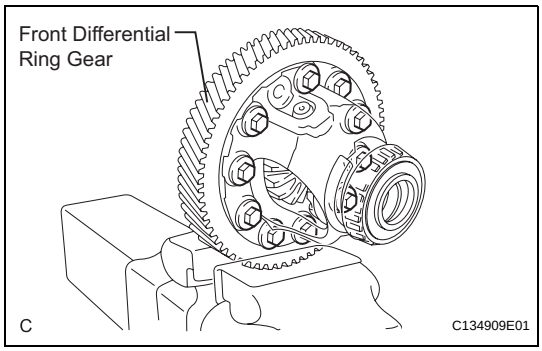
7. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Using ATF and a heater, heat the front differential ring gear to 90 to 110°C (194.0 to 230.0°F).
NOTICE:
Do not overheat the ring gear over 110°C (230.0°F).

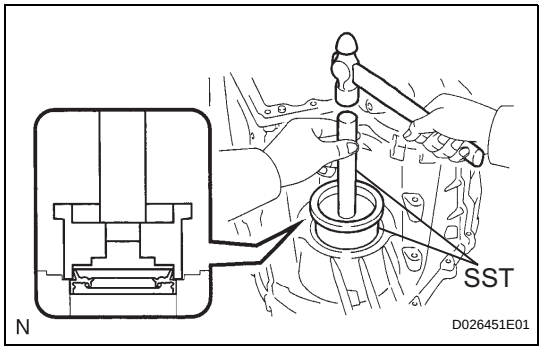
(b) Clean the contact surface of the front differential case.



(c) Align the matchmarks, and install the front differential ring gear case quickly.
NOTICE:
Do not install the bolts while the ring gear is hot.



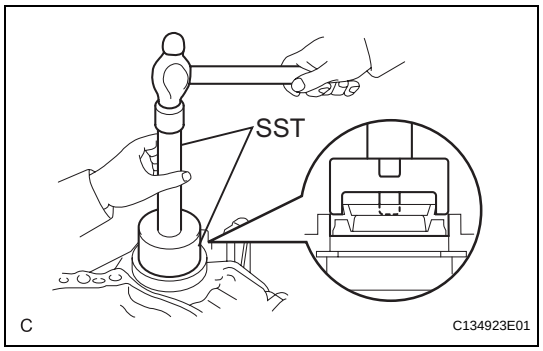
(d) Tighten the 10 bolts.
Torque: 95 N*m (970 kgf*cm, 70 ft.*lbf)
NOTICE:
Tighten the bolts a little at a time in diagonal order.



8. INSTALL TRANSAXLE HOUSING OIL SEAL

(a) Using SST and a hammer, drive in a new oil seal.
SST 09608-32010, 09950-70010 (09951-07150)

(b) Coat the lip of the oil seal with a small amount of MP grease.
Oil seal drive in depth:
-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)



9. INSTALL DIFFERENTIAL SIDE BEARING RETAINER OIL SEAL

(a) Using SST and a hammer, drive in a new oil seal.
SST 09726-36010, 09950-70010 (09951-07150)

(b) Coat the lip of the oil seal with a small amount of MP grease.
Oil seal drive in depth:
-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

INSTALLATION

1. **INSTALL DIFFERENTIAL GEAR ASSEMBLY (See page AX-256)**

AUTOMATIC TRANSAXLE SYSTEM

PRECAUTION

NOTICE:

- **If the following parts have been replaced, initialize the TCM and perform a road test to allow the TCM to learn (See page AX-25).**
  - **Valve body assembly**
  - **Shift solenoid SL3**
  - **Shift solenoid SL4**
- **If the following parts have been replaced, perform a road test to allow the TCM to learn (See page AX-25).**
  - **Shift solenoid SL1**
  - **Shift solenoid SL2**
- **If the TCM or transaxle has been replaced, register the transmission compensation code in the TCM (See page AX-19).**
- **Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM (See page AX-25).**

1. **The automatic transaxle is composed of highly precision-finished parts which need careful inspection before reassembly. Even a small nick could cause fluid leakage or affect transmission performance. The instructions here are organized so that you work on only one component group at a time. This will help avoid confusion caused by similar-looking parts of different sub-assemblies being on your workbench at the same time. The component groups are inspected and repaired from the converter housing side. Complete as much as possible of the inspection, repair and reassembly before proceeding to the next component group. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because some parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups. Recommended: ATF WS**
2. **All disassembled parts should be washed clean and any fluid passages and holes should be blown through with compressed air.**
3. **Dry all parts with compressed air. Never use a shop rag or a piece of cloth to dry them.**
4. **When using compressed air, always aim away from yourself to prevent accidentally spraying ATF or kerosene in your face.**
5. **Only recommended automatic transmission fluid or kerosene should be used for cleaning.**

6. **After cleaning, the parts should be arranged in the correct order for efficient inspection, repair, and reassembly.**
7. **When disassembling a valve body, be sure to match each valve together with its corresponding spring.**
8. **New discs for the brakes and clutches must be soaked in ATF for at least 15 minutes before reassembly.**
9. **All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.**
10. **All gaskets, seals, and rubber O-rings should be replaced with new ones.**
11. **Do not apply adhesive cements to gaskets and similar parts.**
12. **Make sure that the ends of a snap ring are not aligned with one of the cutouts and that the snap ring is installed in the groove correctly.**
13. **When replacing a worn bushing, the sub-assembly containing the bushing must also be replaced.**
14. **Check thrust bearings and races for wear or damage. If they are damaged, replace them.**
15. **When working with FIPG material, you must observe the following:**
    - **Using a razor blade and a gasket scraper, remove all the old packing (FIPG) material from the gasket surface.**
    - **Thoroughly clean all components to remove any loose material.**
    - **Clean both sealing surfaces with a non-residue solvent.**
    - **Parts must be reassembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.**

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.

The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (Position)	Engine Switch (Condition)
Ignition switch off	LOCK	Off
Ignition switch on (IG)	ON	On (IG)
Ignition switch on (ACC)	ACC	ON (ACC)
Engine start	START	Start

DEFINITION OF TERMS

Term	Definition
Monitor description	Description of what the TCM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	Diagnostic code
Typical enabling condition	Preconditions that allow the TCM to detect malfunctions. With all preconditions satisfied, the TCM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While another sensor is being monitored, the next sensor or component will not be monitored until the previous monitoring has concluded.
Required sensor/components	The sensors and components that are used by the TCM to detect malfunctions.
Frequency of operation	The number of times that the TCM checks for malfunctions per driving cycle. "Once per driving cycle" means that the TCM detects malfunction only one time during a single driving cycle. "Continuous" means that the TCM detects malfunction every time when the enabling conditions are met.
Duration	The minimum time that the TCM must sense a continuous deviation in the monitored value(s) before setting a DTC. This timing begins after the "typical enabling conditions" are met.
Malfunction thresholds	Beyond this value, the TCM will conclude that there is a malfunction and set a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediately" means that the TCM illuminates MIL the instant the TCM determines that there is a malfunction. "2 driving cycle" means that the TCM illuminates MIL if the same malfunction is detected again in the 2nd driving cycle.
Component operating range	Normal operation range of sensors and solenoids under normal driving conditions. Use these ranges as a reference. They cannot be used to judge if a sensor or solenoid is defective.

C

C133215E01

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transaxle) is an automatic transaxle that has its shift timing electronically controlled by the Transmission Control Module (TCM). The TCM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver's habits and road conditions. As a result, fuel efficiency and transaxle performance are improved.
Shift shock has been reduced by controlling the engine and transaxle simultaneously.
In addition, the ECT has features such as:

- Diagnostic function.
- Fail-safe function for use when a malfunction occurs.

AX

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The TCM of this system is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up or down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and attempt to duplicate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F) in the normal operation.

(a) D position test:

Shift into the D position and fully depress the accelerator pedal and check the following:

(1) Check up-shift operation.

Check that 1 to 2, 2 to 3, 3 to 4, 4 to 5 and 5 to 6 up-shifts take place, and that the shift points conform to the automatic shift schedule (See page SS-46).

HINT:

6th Gear Up-shift Prohibition Control

- Engine coolant temperature is 60°C (140°F) or less and vehicle speed is 50 mph (80 km/h) or less.

5th Gear Up-shift Prohibition Control

- Engine coolant temperature is 55°C (131°F) or less and vehicle speed is 32 mph (51 km/h) or less.

4th Gear Up-shift Prohibition Control

- Engine coolant temperature is 47°C (117°F) or less and vehicle speed is 31 mph (49 km/h) or less.

Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check for shift shock and slip.

Check for shock and slip at the 1 to 2, 2 to 3, 3 to 4, 4 to 5 and 5 to 6th up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 to 2, 2 to 3, 3 to 4, 4 to 5 and 5 to 6 while driving with the shift lever in the D position, and also while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick-down operation.
Check vehicle speeds when the 2nd to 1st, 3rd to 2nd, 4th to 3rd, 5th to 4th, and 6th to 5th kick-downs take place while driving with the shift lever in the D position. Confirm that each speed is within the applicable vehicle speed range indicated in the automatic shift schedule (See page SS-46).

(5) Check for abnormal shock and slip at kick-down.

(6) Check the lock-up mechanism.
- Drive the vehicle with the shift lever in the D position (2nd, 3rd, 4th, 5th or 6th gear) at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
- There is no lock-up function in the 1st gears.
- If there is a jump in engine speed, this indicates that lock-up is not operating.

(b) S position test
Shift to the S position, depress the accelerator pedal and check the following:

(1) Check shift operation.
- With the shift lever in the S position (while the vehicle is stopped), shift into the "+" position to check that the shift position on the combination meter changes as follows: 1 to 2, 2 to 3, 3 to 4, 4 to 5 and 5 to 6.
- While driving in the 5 (S) position and 5th gear (at a vehicle speed of approximately 34 to 40 mph (55 to 65 km/h), shift into the "-" position and check if the 4th gear down-shift occurs and proper engine braking occurs.
- While driving in the 4 (S) position and 4th gear (at a vehicle speed of approximately 19 to 25 mph (30 to 40 km/h), shift into the "-" position and check if the 3rd gear down-shift occurs and proper engine braking occurs.
- While driving in the 3 (S) position and 3rd gear (at a vehicle speed of approximately 12 to 19 mph (20 to 30 km/h), shift into the "-" position and check if the 2nd gear down-shift occurs and proper engine braking occurs.
- While driving in the 2 (S) position and 2nd gear (at a vehicle speed of approximately 6 to 12 mph (10 to 20 km/h), shift into the "-" position and check if the 1st gear down-shift occurs and proper engine braking occurs.

HINT:
Manual shift (S position) is prohibited under either of the following conditions:
- Down-shifting may cause engine overrun.

- The driver continuously down-shifts. (Down-shifting to 1st gear may not be performed.)

(c) R position test:
Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.
CAUTION:
Before conducting this test ensure that the test area is free from people and obstruction.

(d) P position test:
Stop the vehicle on a grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

MECHANICAL SYSTEM TESTS

1. PERFORM MECHANICAL SYSTEM TESTS

(a) Measure the stall speed.

The object of this test is to check the overall performance of the transaxle and engine by measuring the stall speeds in the D position.

NOTICE:

- **Driving test should be done on a paved road (a nonskid road).**
- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F).**
- **Do not continuously run this test for longer than 5 seconds.**
- **To ensure safety, perform this test in a wide, clear level area which provides good traction.**
- **The stall test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers from a safe location outside the vehicle while the other is doing the test.**

(1) Chock the 4 wheels.

(2) Connect the intelligent tester to the DLC3.

(3) Fully apply the parking brake.

(4) Keep your left foot pressed firmly on the brake pedal.

(5) Start the engine.

(6) Using the intelligent tester, shift into the D position and hold 3rd gear using active test. Press all the way down on the accelerator pedal with your right foot.

(7) Quickly read the stall speed at this time.

Stall speed:

2,520 +- 150 rpm

Evaluation:

Problem	Possible cause
(a) Stall engine speed is low in D position	• Engine power output may be insufficient • Stator one-way clutch is not operating properly HINT: If the value is less than the specified value by 600 rpm or more, the torque converter could be faulty.
(b) Stall engine speed is high in D position	• Line pressure is too low • Clutch No. 1 (C_1) slipping • One-way clutch (F_1) is not operating properly • Improper fluid level

(b) Measure the time lag.

(1) When the shift lever is shifted while the engine is idling, there will be a certain time lapse or lag before the shock can be felt. This is used for checking the condition of the clutches and brakes.

NOTICE:

- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).**
- **Be sure to allow 1 minute interval between tests.**
- **Perform the test three times and measure the time lags. Calculate the average value of the three time lags.**

(2) Connect the intelligent tester to the DLC3.

(3) Fully apply the parking brake.

(4) Start and warm up the engine and check idle speed.

Idle speed:

approx. 650 rpm (In N position and A/C OFF)

(5) Shift the lever from N to D position. Using a stop watch, measure the time from when the lever is shifted until the shock is felt.

Time lag:

N to D less than 1.2 seconds

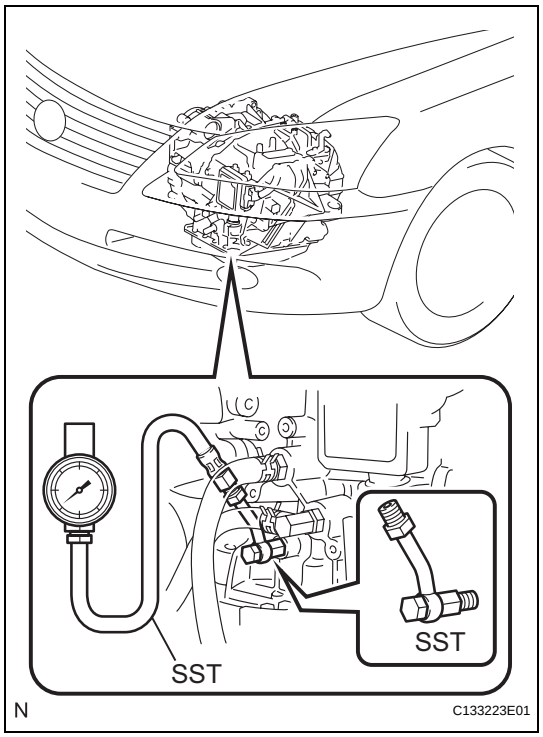
(6) In the same way, measure the time lag for N to R.

Time lag:

N to R less than 1.5 seconds

Evaluation (If N to D or N to R time lag is longer than the specified time):

Problem	Possible cause
N to D time lag is longer	• Line pressure is too low • Clutch No.1 (C_1) is worn • One-way clutch (F_1) is not operating properly
N to R time lag is longer	• Line pressure is too low • Brake No. 2 (B_2) is worn • Brake No. 3 (B_3) is worn



HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.

NOTICE:

- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).**
- **The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.**
- **Be sure to prevent SST hose from interfering with the exhaust pipe.**
- **This check must be conducted after checking and adjusting engine.**
- **Perform the test with the A/C is OFF.**
- **When conducting stall test, do not continue more than 5 seconds.**

(1) Warm up the ATF (Automatic Transmission Fluid).

(2) Lift the vehicle up.

(3) Remove the engine under cover.

(4) Connect the intelligent tester to the DLC3.

(5) Remove the test plug on the transaxle case front left side and install the SST.

SST 09992-00095 (09992-00231, 09992-00271)

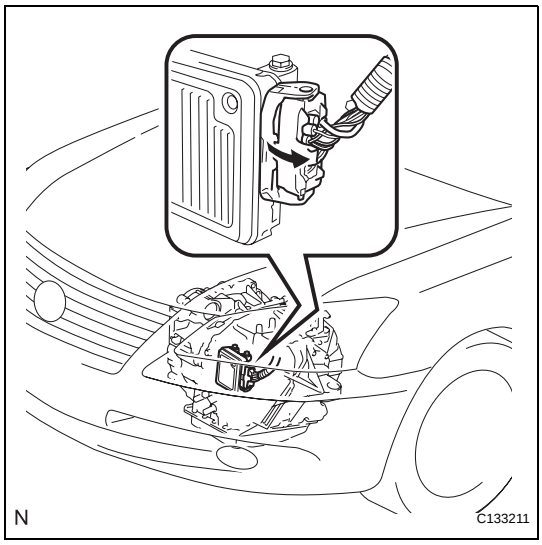
(6) Start the engine.

(7) Shift to the D position, and then use the intelligent tester to hold 3rd gear using active test. Measure the line pressure while the engine is idling.

Specified line pressure:

Condition	D position kPa (kgf/cm^2, psi)
Idling	362 to 412 kPa (3.7 to 4.2 kgf/cm^2, 52 to 60 psi)

(8) Turn the ignition switch OFF.



(9) Disconnect the connector of the TCM.
HINT:
Disconnect the connector only when performing the D position stall test.
(10) Start the engine.
(11) Firmly depress the brake pedal, shift to the D position, depress the accelerator pedal all the way down, and check the line pressure while the stall test is performed.
Specified line pressure:

Condition	D position kPa (kgf/cm^2, psi)
Stall test	1,160 to 1,350 kPa (11.8 to 13.8 kgf/cm^2, 168 to 196 psi)

(12) Turn the ignition switch OFF.
(13) Connect the TCM connector, depress the brake pedal firmly, shift to the R position, and check that the line pressure while the engine is idling and during the stall test.
Specified line pressure:

Condition	R position kPa (kgf/cm^2, psi)
Idling	806 to 916 kPa (8.2 to 9.3 kgf/cm^2, 117 to 133 psi)
Stall test	1,890 to 2,000 kPa (19.3 to 20.4 kgf/cm^2, 274 to 290 psi)

(14) Remove the SST, install the test plug.
(15) Clear the DTC.

Evaluation:

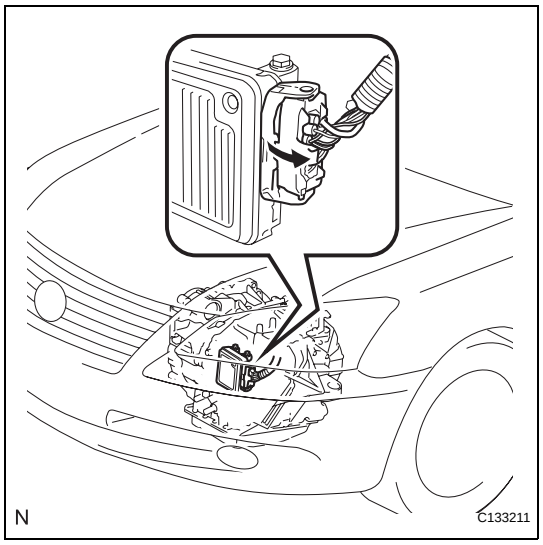
Problem	Possible cause
Measured values are higher than the specified value in all positions	• Shift solenoid valve (SLT) defective • Regulator valve defective
Measured values are lower than the specified value in all positions	• Shift solenoid valve (SLT) defective • Regulator valve defective • Oil pump defective
Pressure is low in the D position only	• D position circuit fluid leak • Clutch No. 1 (C_1) defective
Pressure is low in the R position only	• R position circuit fluid leak • Brake No. 2 (B_2) defective • Brake No. 3 (B_3) defective

MANUAL SHIFTING TEST

1. PERFORM MANUAL SHIFTING TEST

HINT:

- With this test, it can be determined whether trouble occurs in the electrical circuit. Also, trouble can be a mechanical problem in the transaxle.
- If any abnormalities are found in the following test, the problem is in the transaxle itself.



(a) Disconnect the TCM connector.

(b) Drive the vehicle with the TCM disconnected. Shifting the shift lever to the D position to check whether the shifting condition changes as shown in the table below.

Shift Position	Shifting Condition
D	No Shift (No Change)

HINT:

When driving the vehicle with the TCM disconnected, the gear position will be as follows:

- When the shift lever is in the D position, the transmission will stay in 3rd gear.
- When the shift lever is in the R or the P position, the transmission will also be in the R or P position respectively.

(c) Connect the connector of the TCM.

(d) Clear the DTC (See page AX-38).

AX

REGISTRATION

NOTICE:

- **When the automatic transaxle is replaced, the transaxle's compensation code must be input into the TCM (Proceed to step 1).**
- **When the TCM is replaced, the existing transaxle compensation codes must be input into the new TCM (Proceed to step 2).**

1. INPUT COMPENSATION CODE

NOTICE:

Transaxle compensation codes are unique, 60-digit alphanumeric values printed on the QR label. If an incorrect transaxle compensation code is input into the TCM, shift shock may occur.

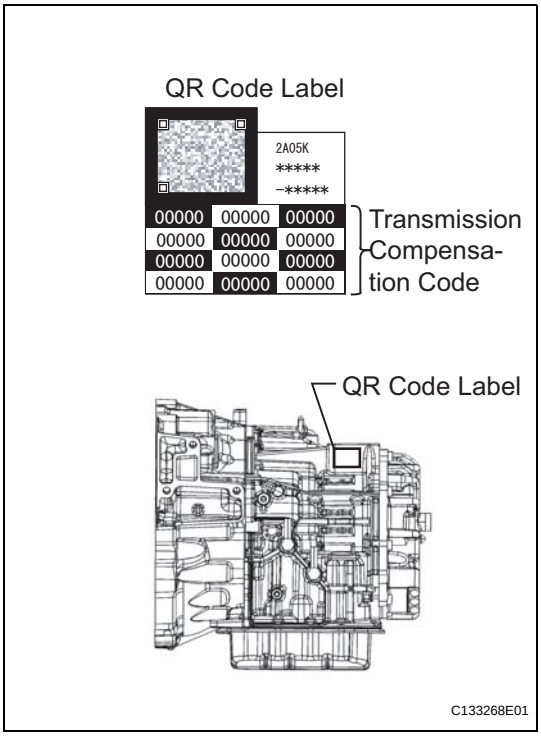
(a) Record the transmission compensation code specified on the QR label.
HINT:
The transaxle compensation code is imprinted on the QR label.

(b) Shift the shift lever to N or P position.

(c) Connect the intelligent tester to the DLC3.

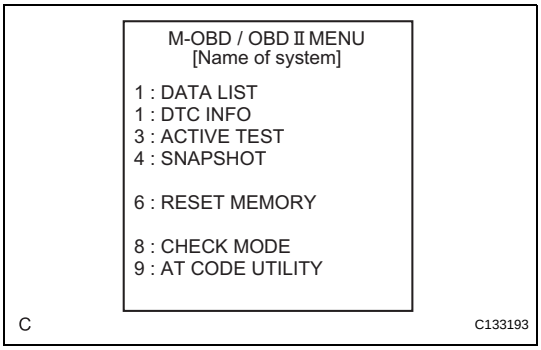
(d) Turn the ignition switch on (IG).

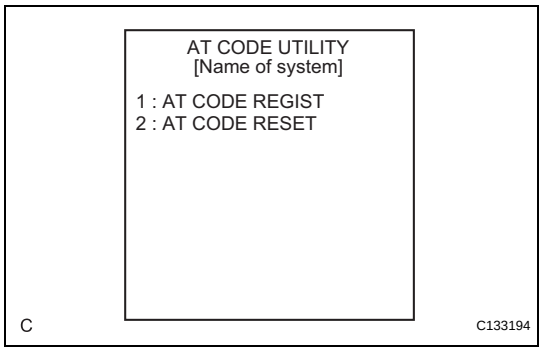
(e) Turn the tester on.
NOTICE:
Do not start the engine.



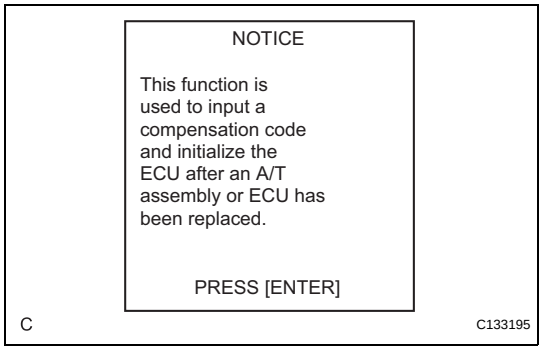
(f) Enter the menu items in this order: DIAGNOSIS / OBD/MOBD / ECT / AT CODE UTILITY.

(g) Press "ENTER".

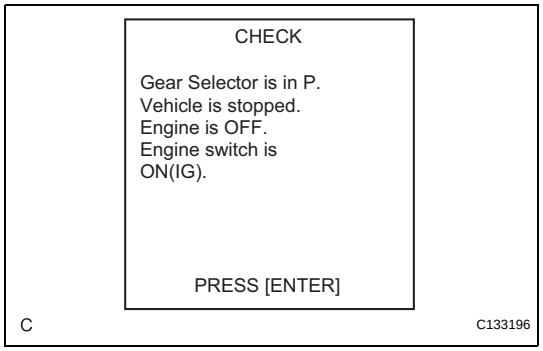




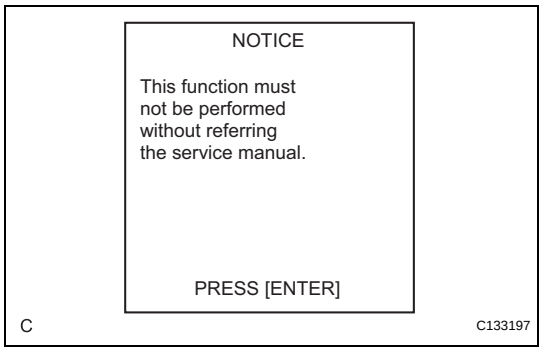
(h) Select "AT CODE REGIST".
(i) Press "ENTER".



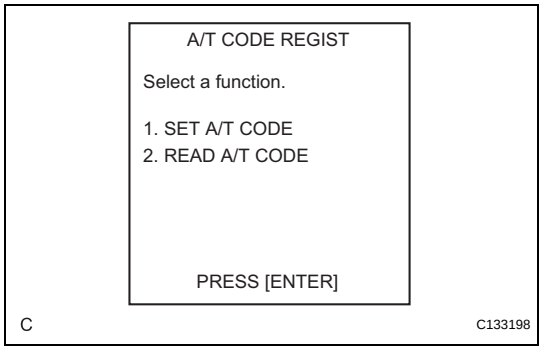
(j) Press "ENTER" again to proceed.



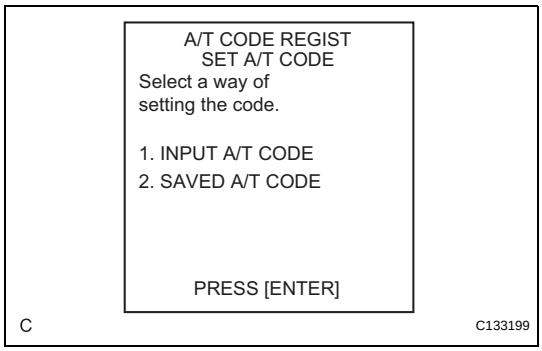
(k) Press "ENTER" again to proceed.



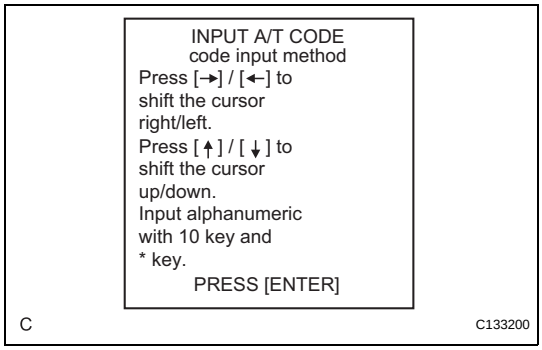
(l) Press "ENTER" again to proceed.



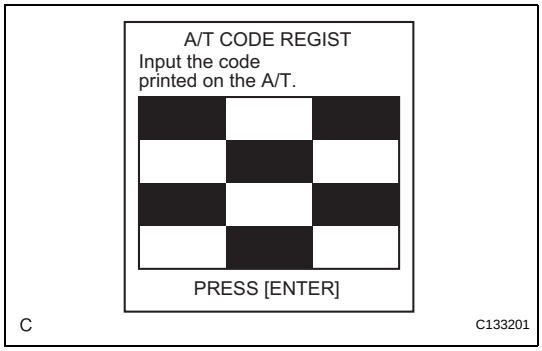
(m) Select "SET A/T CODE".
(n) Press "ENTER".



(o) Select "INPUT A/T CODE".
(p) Press "ENTER".

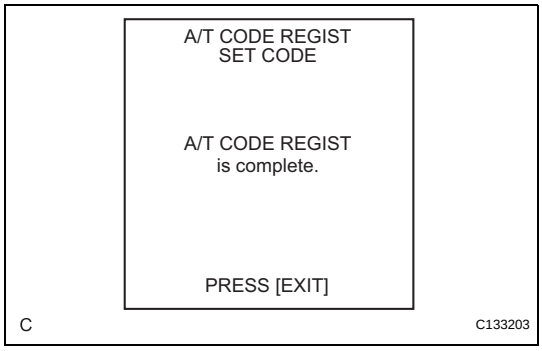


(q) Register the compensation code.
(1) Press "ENTER".



(2) Manually input the transaxle compensation code. The code is a 60-digit alphanumeric value imprinted on the QR label.

(r) Check that the compensation code displayed on the screen is correct by comparing it with the 60-digit alphanumeric value on the QR label.
NOTICE:
If an incorrect transaxle compensation code is input into the TCM, shift shock will occur.
HINT:
Input letters by operating the keys from 0 to 5 while pressing the * key.

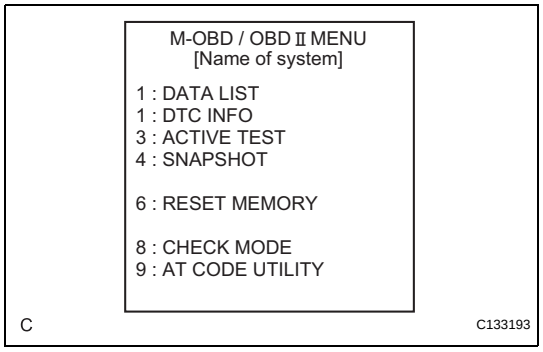


(s) Press "ENTER" to set the compensation code to the TCM.
HINT:
- If the registration process fails, the compensation code may be incorrect. Check the compensation code again.
- If the attempted compensation code is correct, a problem with the wire harness or a bad connection with the DLC3 may cause a registration failure. Check the wire harness and the DLC3 connection. If no problem is found, the TCM may be malfunctioning. Check the TCM and repeat this operation.

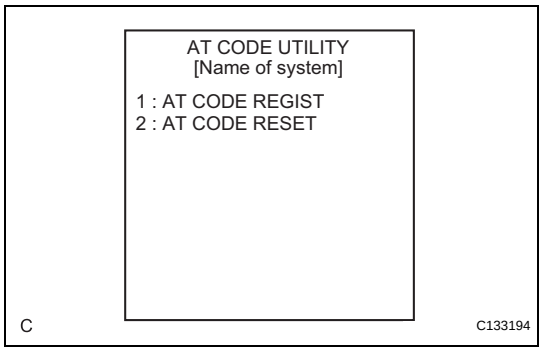
2. TRANSFER COMPENSATION CODE
NOTICE:
Transaxle compensation codes are 60-digit alphanumeric values imprinted on the QR label. If an incorrect transaxle compensation code is input into the TCM, shift shock may occur.

HINT:
The following operation is available for use with TCMs that can transmit the registered transaxle compensation code to the intelligent tester.

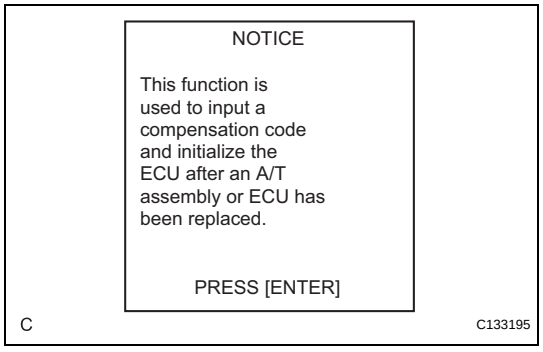
(a) Shift the shift lever to N or P position.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Turn the tester on.
NOTICE:
Do not start the engine.
HINT:
The transaxle compensation code is imprinted on the QR label.



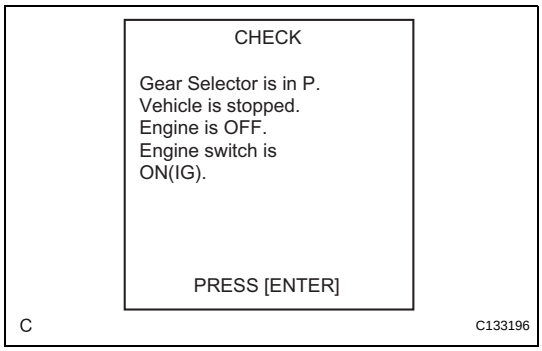
(e) Read the transaxle compensation code.
(1) Enter the menu items in this order: DIAGNOSIS / OBD/MOBD / ECT / AT CODE UTILITY.
(2) Press "ENTER".



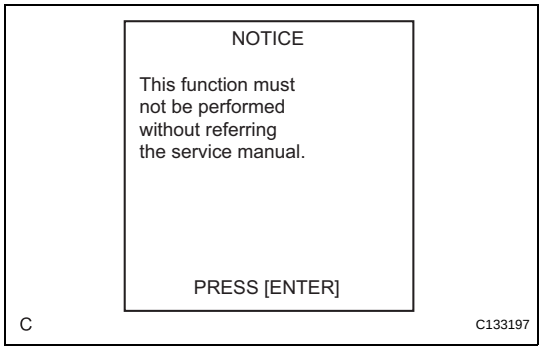
(3) Select "AT CODE REGIST".
(4) Press "ENTER".



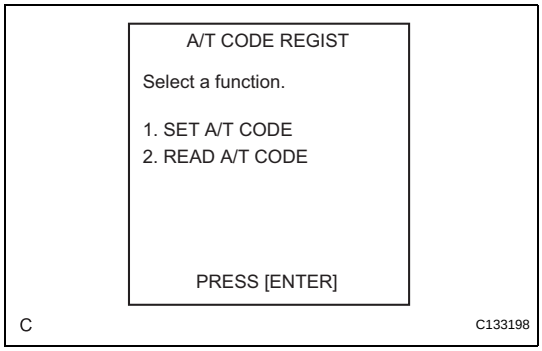
(5) Press "ENTER" again to proceed.



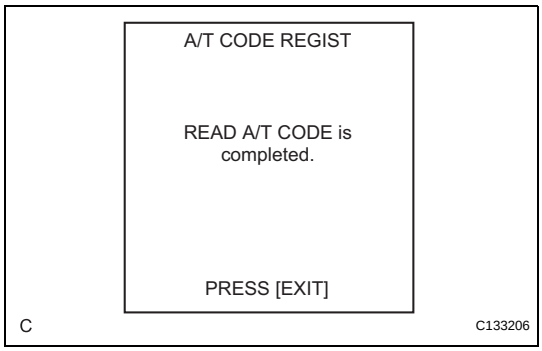
(6) Press "ENTER" again to proceed.



(7) Press "ENTER" again to proceed.



(8) Select "READ A/T CODE".
(9) Press "ENTER".



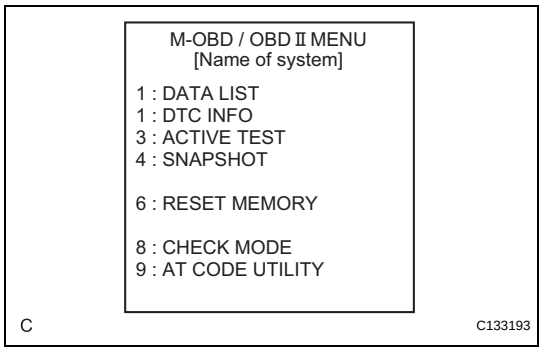
(10) Press "EXIT".

NOTICE:
Do not use the code specified on the transaxle QR label even if the transmission compensation code cannot be read using the intelligent tester. The code printed on an in-service transaxle may not match its current characteristics. Replace the TCM with a new one and perform a road test to allow the TCM to learn.

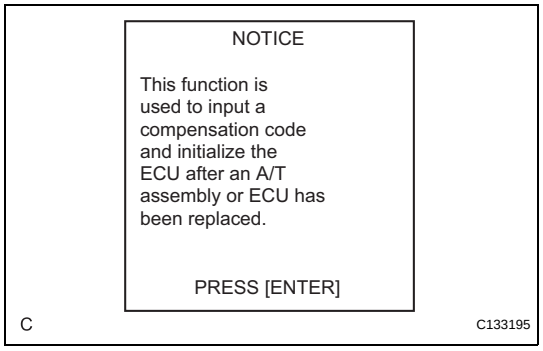
(11) Turn the ignition switch off.

(f) Replace the TCM.

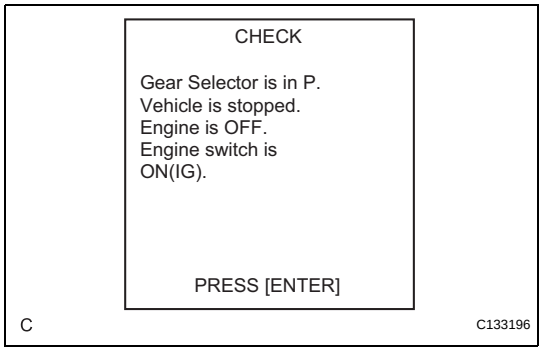
(g) Set the transaxle compensation code.
  (1) Turn the ignition switch on (IG).
  (2) Turn the tester on.



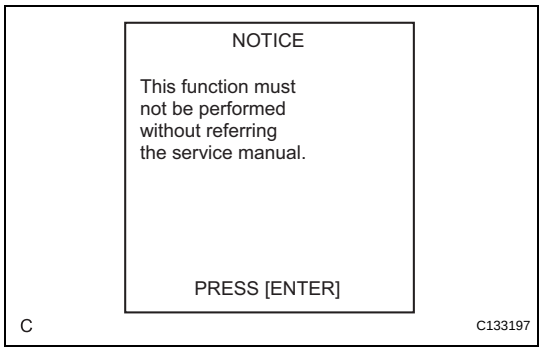
(3) Enter the menu items in this order: DIAGNOSIS / OBD/MOBD / ECT / AT CODE UTILITY.
(4) Press "ENTER".



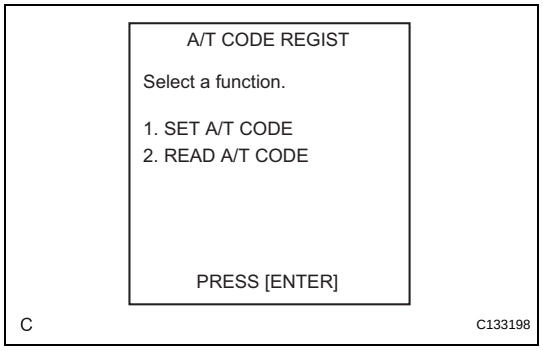
(5) Press "ENTER" again to proceed.



(6) Press "ENTER" again to proceed.

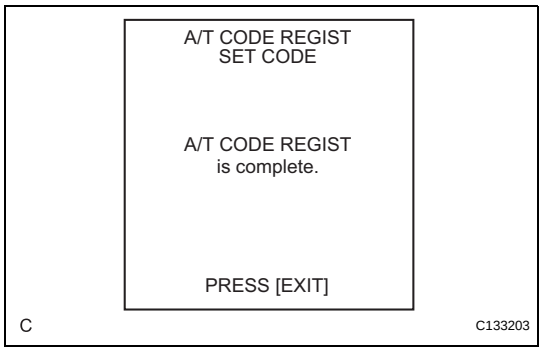


(7) Press "ENTER" again to proceed.

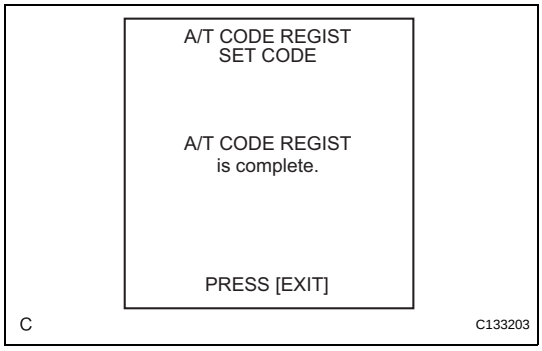


(8) Select "SET A/T CODE".
(9) Press "ENTER".

AX



(10) Select "SAVED A/T CODE".
(11) Press "ENTER".



(12) Press "EXIT".

INITIALIZATION

1. RESET TRANSAXLE COMPENSATION CODE

NOTICE:

The transaxle compensation code can be reset only with the intelligent tester.

HINT:

The TCM memorizes the condition that the ECT controls the automatic transaxle assembly and engine assembly according to those characteristics. Therefore, when the automatic transaxle assembly, engine assembly, or TCM has been replaced, it is necessary to reset the memory so that the TCM can memorize the new information. Reset procedure is as follows.

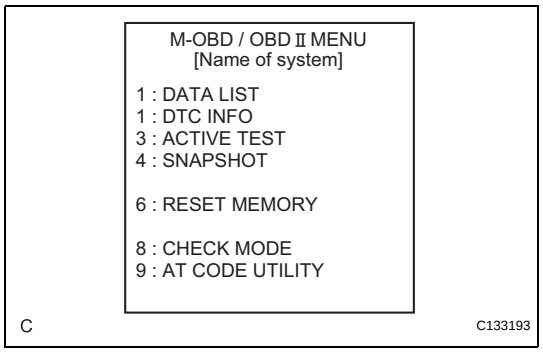
(a) Shift the shift lever to N or P position.

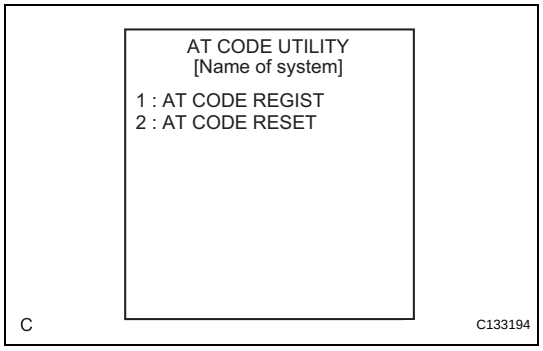
(b) Turn the ignition switch off.

(c) Connect the intelligent tester to the DLC3.

(d) Turn the ignition switch on (IG) and push the intelligent tester main switch on.

(e) Enter the menu items in this order: DIAGNOSIS / OBD/MOBD / ECT / AT CODE UTILITY.





(f) Select "AT CODE RESET".

(g) Press the "ENTER"

CAUTION:

After the transaxle compensation code, be sure to perform a road test to allow TCM to learn.

2. PERFORM ROAD TEST TO ALLOW TCM TO LEARN

NOTICE:

Perform the following procedures while strictly observing all traffic laws and speed limits.

(a) From a standstill, achieve highest possible speed with the accelerator pedal opened 15% or less. Keep the accelerator pedal angle steady while driving the vehicle.

(b) Repeat the previous step until shift shock no longer occurs.

(c) From a standstill, achieve highest possible speed with the accelerator pedal opened 25% or more. Keep the accelerator pedal angle steady while driving the vehicle.

(d) Repeat the previous step until shift shock no longer occurs.

AX

3. RESET MEMORY

NOTICE:

- **Perform the RESET MEMORY (AT initialization) when replacing the engine assembly.**
- **The RESET MEMORY can be performed only with the intelligent tester.**

HINT:

The ECM memorizes the condition that the ECT controls the automatic transmission assembly and engine assembly according to those characteristics. Therefore, when the automatic transmission assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

(a) Reset procedure is as follows.

(1) Turn the engine switch off.

(2) Connect the intelligent tester to the DLC3.

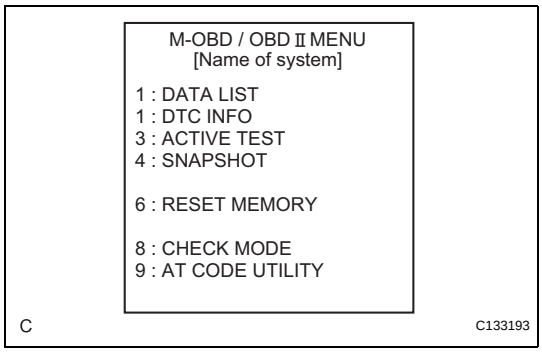
(3) Turn the ignition switch on (IG) position.

(4) Turn the intelligent tester main switch on.

(5) Select the item "DIAGNOSIS / OBD/MOBD / ECT / RESET MEMORY".

NOTICE:

After performing the RESET MEMORY, be sure to perform the ROAD TEST (See page AX-12) described previously.



MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT malfunctions. (The DTCs may not be detected due to differences from the actual driving conditions. Some codes may not be detected using this drive pattern.)

HINT:

Preparation for driving

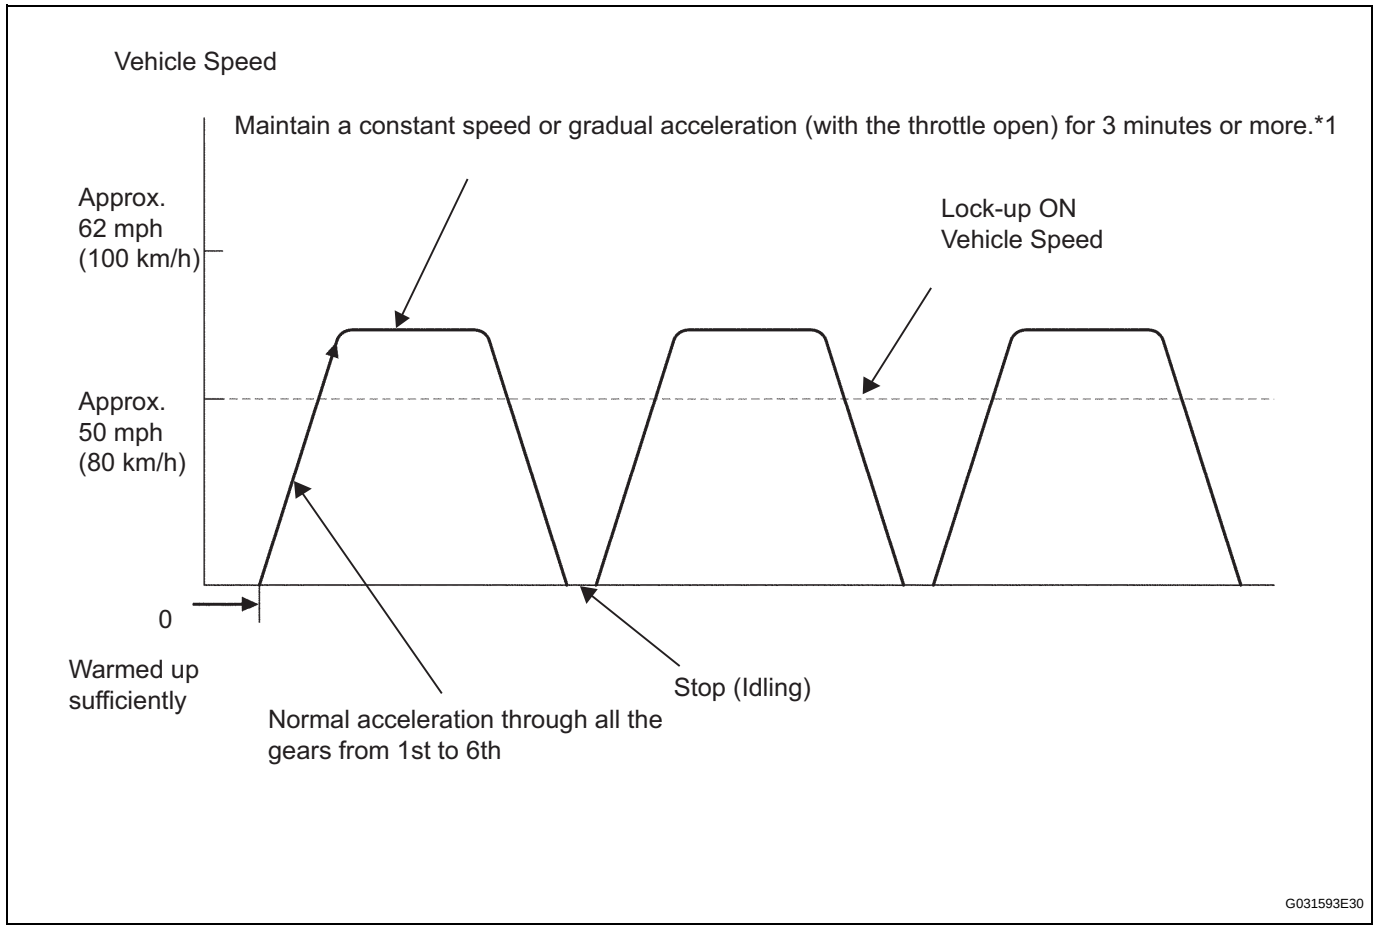
- Warm up the engine sufficiently. (Engine coolant temperature should be 60°C (140°F) or higher)
- Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. (Malfunction may not be detected when the atmospheric temperature is less than -10°C (14°F))

Notice on driving

- Drive the vehicle through all gears. Stop to 1st to 2nd to 3rd to 4th to 5th to 6th (lock-up ON).
- Confirm engine braking using the S position. While driving in the 6 (S) position and 6th gear lock-up, shift to the "-" position to down-shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, 2nd to 1st.
  Check that proper engine braking occurs whenever down-shift takes place.
- Repeat the above driving pattern three times or more.

NOTICE:

- **The monitor status can be checked using the intelligent tester. When using the intelligent tester, monitor status can be found in "OBD/ MOBD / ECT / DATA LIST".**
- **In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.**
- **Perform this drive pattern on a road with the fewest hills possible and strictly observe the posted speed limits and traffic laws while driving.**



HINT:
*1: Drive the vehicle at a sufficient speed in the uppermost gear, to allow lock-up to engage. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.
NOTICE:
It is necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (ATF temperature sensor malfunction).

PROBLEM SYMPTOMS TABLE

HINT:
If a normal code is displayed during the diagnostic trouble code check although the problem or symptom still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages. Proceed to the page given in the chart and perform troubleshooting.
The Matrix Chart is divided into 2 chapters.
Chapter 1:
Refer to the table below when the trouble cause is considered to be electrical.
If the instruction "Proceed to next circuit inspection shown on matrix chart" is given in the flow chart of each circuit, proceed to the circuit with the next highest number in the table to continue the check.
If the trouble still occurs even though there are no abnormalities in any of the other circuits, check and replace the TCM.
Chapter 2:
Chapter 2 covers on and off vehicle repair of the transaxle.
Contents specified in the table below may not match while fail-safe control is operating.

1. Chapter 1: Electronic Circuit Matrix Chart

Symptom	Suspected area	See page
No up-shift (1st to 2nd)	1. Shift solenoid valve (SL3) circuit *1	AX-105
	2. TCM	IN-40
No up-shift (2nd to 3rd)	1. Shift solenoid valve (SL4) circuit *1	AX-148
	2. TCM	IN-40
No up-shift (3rd to 4th)	1. Shift solenoid valve (SL2) circuit *1	AX-92
	2. Engine coolant temp. sensor circuit *1	ES-145
	3. TCM	IN-40
No up-shift (4th to 5th)	1. Shift solenoid valve (SL1) circuit *1	AX-84
	2. Shift solenoid valve (SL4) circuit *1	AX-148
	3. Engine coolant temp. sensor circuit	ES-145
	4. TCM	IN-40
No up-shift (5th to 6th)	1. Engine coolant temp. sensor circuit *1	ES-145
	2. Shift solenoid valve (SL3) circuit *1	AX-105
	3. Shift solenoid valve (SL4) circuit *1	AX-148
	4. TCM	IN-40
No down-shift (6th to 5th)	1. Shift solenoid valve (SL4) circuit *1	AX-148
	2. TCM	IN-40
No down-shift (5th to 4th)	1. Shift solenoid valve (SL1) circuit *1	AX-84
	2. TCM	IN-40
No down-shift (4th to 3rd)	1. Shift solenoid valve (SL2) circuit *1	AX-92
	2. Shift solenoid valve (SL4) circuit *1	AX-148
	3. TCM	IN-40
No down-shift (3rd to 2nd)	1. Shift solenoid valve (SL4) circuit *1	AX-148
	2. Shift solenoid valve (SL3) circuit *1	AX-105
	3. TCM	IN-40
No down-shift (2nd to 1st)	1. Shift solenoid valve (SL3) circuit *1	AX-100
	2. TCM	IN-40

Symptom	Suspected area	See page
No lock-up	1. Shift solenoid valve (SLU) circuit *1	AX-136
	2. Shift solenoid valve (SL) circuit	AX-139
	3. Engine coolant temp. sensor circuit *1	ES-145
	4. Stop light switch circuit *1	AX-71
	5. Speed sensor NT circuit *1	AX-66
	6. TCM	IN-40
No lock-up off	1. TCM	IN-40
Shift point too high or too low	1. Shift solenoid valve (SLT) circuit *1	AX-128
	2. Speed sensor NT circuit *1	AX-66
	3. Speed sensor NC circuit *1	AX-95
	4. Accelerator pedal position sensor circuit *1	ES-334
	5. ATF temperature sensor circuit *1	AX-55
	6. TCM	IN-40
Up-shift from 3rd to 4th while engine is cold	1. Engine coolant temp. sensor circuit *1	ES-145
	2. TCM	IN-40
Up-shift from 4th to 5th while engine is cold	1. Engine coolant temp. sensor circuit *1	ES-145
	2. TCM	IN-40
No gear change by shifting into "+" or "-" while shifting the lever	1. Transmission control switch circuit	AX-154
	2. TCM	IN-40
Harsh engagement (N to D)	1. Shift solenoid valve (SL1) circuit *1	AX-84
	2. TCM	IN-40
Harsh engagement (Lock-up)	1. Speed sensor NT circuit *1	AX-66
	2. Speed sensor NC circuit *1	AX-95
	3. Shift solenoid valve (SLU) circuit *1	AX-136
	4. TCM	IN-40
Harsh engagement (Any driving position)	1. Accelerator pedal position sensor circuit *1	ES-334
	2. Shift solenoid valve (SLT) circuit *1	AX-128
	3. Speed sensor NC circuit	AX-95
	4. Speed sensor NT circuit *1	AX-66
	5. TCM	IN-40
Poor acceleration	1. Shift solenoid valve (SLT) circuit *1	AX-128
	2. TCM	IN-40
No engine brake	1. TCM	IN-40
No kick-down	1. TCM	IN-40
Engine stalls when starting off or stopping	1. TCM	IN-40
Malfunction in shifting	1. Park/neutral position switch circuit *1	AX-158
	2. Transmission control switch circuit	AX-154
	3. TCM	IN-40
Slip or shudder (5th to 6th and 6th to 5th)	1. Shift solenoid valve (SLT) circuit *1	AX-128
Initial acceleration or subsequent acceleration is improper. Vehicle is stuck in a gear (1st to 6th).	1. Shift solenoid valve (SL1) circuit	AX-84
	2. Shift solenoid valve (SLT) circuit	AX-128
	3. TCM	IN-40
Acceleration is improper when the gear is 4th or higher.	1. Shift solenoid valve (SL2) circuit	AX-92
	2. Shift solenoid valve (SLT) circuit	AX-128
	3. TCM	IN-40
Initial acceleration or subsequent acceleration is improper. Vehicle does not shift down (from 4th to 3rd). Vehicle is stuck in a gear (1st to 4th).	1. Shift solenoid valve (SL2) circuit	AX-92
	2. TCM	IN-40
Acceleration is improper when the gear is 6th.	1. Shift solenoid valve (SL3) circuit	AX-105
	2. TCM	IN-40

Symptom	Suspected area	See page
Acceleration is improper when the gear is 3rd or 5th.	1. Shift solenoid valve (SL4) circuit	AX-148
	2. Shift solenoid valve (SLT) circuit	AX-128
	3. TCM	IN-40
Initial acceleration or subsequent acceleration is improper. Vehicle does not shift down (from 3rd to 2nd). No up-shift (5th to 6th).	1. Shift solenoid valve (SL4) circuit	AX-148
	2. TCM	IN-40

AX

HINT:
*1: When the circuit is defective, a DTC may be output.

2. Chapter 2: On-Vehicle Repair and Off-Vehicle Repair

Symptom	Suspected area	See page
Vehicle does not move in any forward and reverse positions.	1. Valve body assembly	AX-181
	2. Torque converter clutch	AX-239
Vehicle does not move in R position.	1. Valve body assembly	AX-181
	2. Brake No. 2 (B2)	AX-274
	3. Brake No. 3 (B3)	AX-274
	4. Shift solenoid valve (SL4)*1	AX-142
No up-shift (1st to 2nd)	1. Valve body assembly	AX-181
	2. Brake No. 1 (B1)	AX-274
	3. Shift solenoid valve (SL3)*1	AX-100
No up-shift (2nd to 3rd)	1. Valve body assembly	AX-181
	2. Brake No. 3 (B3)	AX-274
	3. Shift solenoid valve (SL4)*1	AX-142
No up-shift (3rd to 4th)	1. Valve body assembly	AX-181
	2. Clutch No. 2 (C2)	AX-274
	3. Shift solenoid valve (SL2)*1	AX-87
No up-shift (4th to 5th)	1. Valve body assembly	AX-181
	2. Brake No. 3 (B3)	AX-274
	3. Shift solenoid valve (SL3)*1	AX-100
No up-shift (5th to 6th)	1.Valve body assembly	AX-181
	2. Brake No. 1 (B1)	AX-274
	3. Shift solenoid valve (SL3)*1	AX-100
No down-shift (6th to 5th)	1. Brake No. 3 (B3)	AX-274
	2. Shift solenid valve (SL4)*1	AX-142
	3. Valve body assembly	AX-181
No down-shift (5th to 4th)	1. Shift solenoid valve (SL1)*1	AX-79
	2. Clutch No. 1 (C1)	AX-274
	3. Valve body assembly	AX-181
No down-shift (4th to 3rd)	1. Brake No. 3 (B3)	AX-274
	2. Shift solenid valve (SL4)*1	AX-142
	3. Valve body assembly	AX-181
No down-shift (3rd to 2nd)	1. Brake No. 1 (B1)	AX-274
	2. Shift solenid valve (SL3)*1	AX-100
	3. Valve body assembly	AX-181
No down-shift (2nd to 1st)	1. Valve body assembly	AX-181
No lock-up or No lock-up off	1. Valve body assembly	AX-181
	2. Torque converter clutch	AX-239

Symptom	Suspected area	See page
Harsh engagement (N to D)	1. Valve body assembly	AX-181
	2. C1 accumulator	AX-274
	3. One-way clutch No. 1 (F1)	AX-274
	4. Clutch No. 1 (C1)	AX-274
	5. Shift solenoid valve (SL1)*1	AX-79
Harsh engagement (Lock-up)	1. Valve body assembly	AX-181
	2. Torque converter clutch	AX-239
	3. Shift solenoid valve (SLU)*1	AX-131
Harsh engagement (N to R)	1. Valve body assembly	AX-181
	2. Brake No. 2 (B2)	AX-274
	3. Brake No. 3 (B3)	AX-274
	4. Shift solenoid valve (SL4)*1	AX-142
Harsh engagement (1 to 2 to 3 to 4 to 5 to 6)	1. Valve body assembly	AX-181
	2. Shift solenoid valve (SLT)*1	AX-121
Harsh engagement (1st to 2nd)	1. Valve body assembly	AX-181
	2. B1 accumulator	AX-274
	3. Brake No. 1 (B1)	AX-274
	4. Shift solenoid valve (SL3)*1	AX-100
Harsh engagement (2nd to 3rd)	1. Valve body assembly	AX-181
	2. B3 accumulator	AX-274
	3. Brake No. 3 (B3)	AX-274
	4. Shift solenoid valve (SL4)*1	AX-142
Harsh engagement (3rd to 4th)	1. Valve body assembly	AX-181
	2. C2 accumulator	AX-274
	3. Clutch No. 2 (C2)	AX-274
	4. Shift solenoid valve (SL2)*1	AX-87
Harsh engagement (4th to 5th)	1. Valve body assembly	AX-181
	2. B3 accumulator	AX-274
	3. Brake No. 3 (B3)	AX-274
	4. Shift solenoid valve (SL4)*1	AX-142
Harsh engagement (5th to 6th)	1. Valve body assembly	AX-181
	2. B1 accumulator	AX-274
	3. Brake No. 1 (B1)	AX-274
	4. Shift solenoid valve (SL3)*1	AX-100
Harsh engagement (6th to 5th)	1. Valve body assembly	AX-181
	2. B3 accumulator	AX-274
	3. Brake No. 3 (B3)	AX-274
	4. Shift solenoid valve (SL4)*1	AX-142
Slip or shudder (Forward and reverse: After warm-up)	1. Valve body assembly	AX-181
	2. Oil strainer	-
	3. Brake No. 1 (B1)	AX-274
	4. Brake No. 2 (B2)	AX-274
	5. Brake No. 3 (B3)	AX-274
	6. One-way clutch No. 1 (F1)	AX-274
	7. Clutch No. 1 (C1)	AX-274
	8. Clutch No. 2 (C2)	AX-274
Slip or shudder (Particular position: just after engine starts)	1. Torque converter clutch	AX-239
Slip or shudder (R position)	1. Brake No. 2 (B2)	AX-274
	2. Brake No. 3 (B3)	AX-274

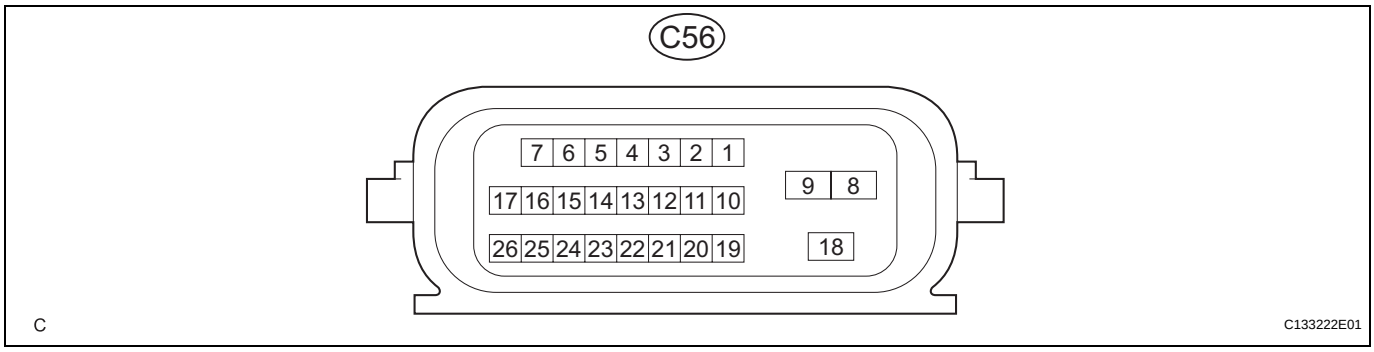
Symptom	Suspected area	See page
Slip or shudder (1 position)	1. One-way clutch No. 1 (F1)	AX-274
	2. Clutch No. 1 (C1)	AX-274
Slip or shudder (2 position)	1. Brake No. 1 (B1)	AX-274
	2. Clutch No. 1 (C1)	AX-274
Slip or shudder (3 position)	1. Brake No. 3 (B3)	AX-274
	2. Clutch No. 1 (C1)	AX-274
Slip or shudder (4 position)	1. Clutch No. 1 (C1)	AX-274
	2. Clutch No. 2 (C2)	AX-274
Slip or shudder (5 position)	1. Brake No. 3 (B3)	AX-274
	2. Clutch No. 2 (C2)	AX-274
Slip or shudder (6 position)	1. Brake No. 3 (B3)	AX-274
	2. Clutch No. 2 (C2)	AX-274
No engine braking (1st position)	1. Valve body assembly	AX-181
	2. Brake No. 2 (B2)	AX-274
No engine braking (2nd position)	1. Valve body assembly	AX-181
	2. Brake No. 1 (B1)	AX-274
No engine braking (3rd position)	1. Valve body assembly	AX-181
	2. Brake No. 3 (B3)	AX-274
No engine braking (4th position)	1. Valve body assembly	AX-181
	2. Clutch No. 2 (C2)	AX-274
No kick-down	1. Valve body assembly	AX-181
Shift point too hight or too low	1. Valve body assembly	AX-181
Poor acceleration (All positions)	1. Valve body assembly	AX-181
	2. Torque converter clutch	AX-239
Poor acceleration (6th)	1. Brake No. 1 (B1)	AX-274
	2. Clutch No. 2 (C2)	AX-274
Engine stalls when starting off or stopping	1. Valve body assembly	AX-181
	2. Torque converter clutch	AX-239

HINT:
*1: When the circuit is defective, a DTC may be output.

AX

TERMINALS OF ECU

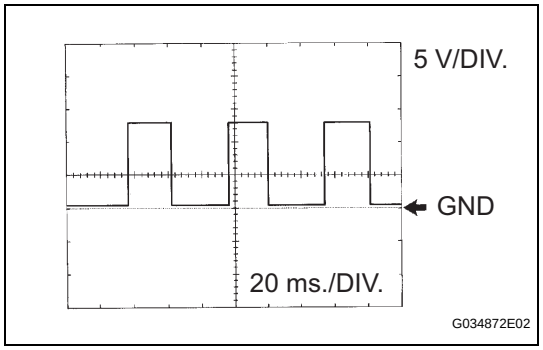
1. TCM



HINT:
Each TCM terminal's standard voltage is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminals No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specified Condition".
Use the illustration above as a reference for the TCM terminals.

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
R (C56-15) - E1 (C56-8)	W - B-W	R shift position switch signal	IG switch ON (IG) and shift lever in R position	10 to 14 V
			IG switch ON (IG) and shift lever in any position except R position	Below 1 V
D (C56-16) - E1 (C56-8)	R - B-W	D shift position switch signal	IG switch ON (IG) and shift lever in D or 3 position	10 to 14 V
			IG switch ON (IG) and shift lever in any position except D and 3 position	Below 1 V
STP (C56-12) - E1 (C56-8)	B - B-W	Stop light switch signal	Brake pedal is depressed	7.5 to 14 V
			Brake pedal is released	Below 1.5 V
NSW (C56-11) - E1 (C56-8)	L - B-W	Park/neutral switch signal	IG switch ON (IG) and shift lever in P or N position	Below 2 V
			IG switch ON (IG) and shift lever in any position except P or N position	10 to 14 V
STA (C56-10) - E1 (C56-8)	Y - B-W	Starter signal	Cranking (shift lever position in P or N position, ignition switch START)	10 to 14 V
			IG switch ON (IG) and shift lever in any position except P or N position	Below 2 V
SPD1 (C56-3) - E1 (C56-8)	BR - B-W	Speed signal from combination meter	Vehicle speed 12 mph (20 km/h)	Pulse generation (See waveform 1)
BATT (C56-1) - E1 (C56-8)	W-L - B-W	Battery (for measuring battery voltage and for TCM memory)	Always	9 to 14 V
IG2 (C56-13) - E1 (C56-8)	L-B - B-W	Ignition switch	Ignition switch ON (IG)	9 to 14 V
+B (C56-18) - E1 (C56-8)	W-L - B-W	Power source of TCM	Ignition switch ON (IG)	9 to 14 V
CAN+ (C56-6) - E1 (C56-8)	B - B-W	CAN communication line	Ignition switch ON (IG)	Pulse generation (See waveform 2)

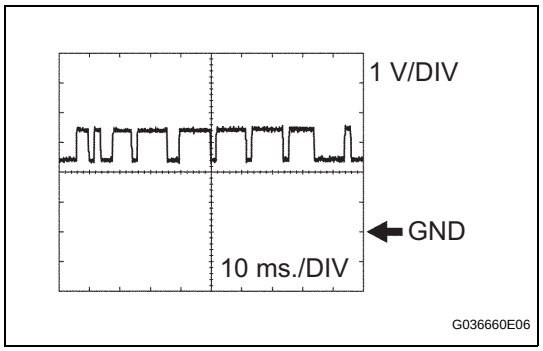
Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CAN- (C56-7) - E1 (C56-8)	Y - B-W	CAN communication line	Ignition switch ON (IG)	Pulse generation (See waveform 3)



(a) Waveform 1

Reference:

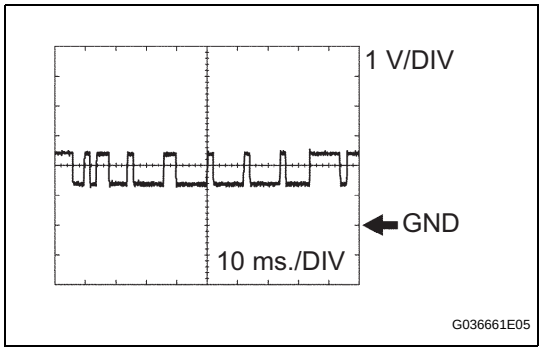
Terminal	SPD1 - E1
Tool setting	2 V/DIV., 20 ms./DIV.
Vehicle condition	Vehicle speed 12 mph (20 km/h)



(b) Waveform 2

Reference:

Terminal	CAN+ - E1
Tool setting	1 V/DIV., 10 ms./DIV.
Vehicle condition	Engine is stopped, ignition ON (IG)



(c) Waveform 3

Reference:

Terminal	CAN- - E1
Tool setting	1 V/DIV., 10 ms./DIV.
Vehicle condition	Engine is stopped, ignition ON (IG)

2. ECM

HINT:

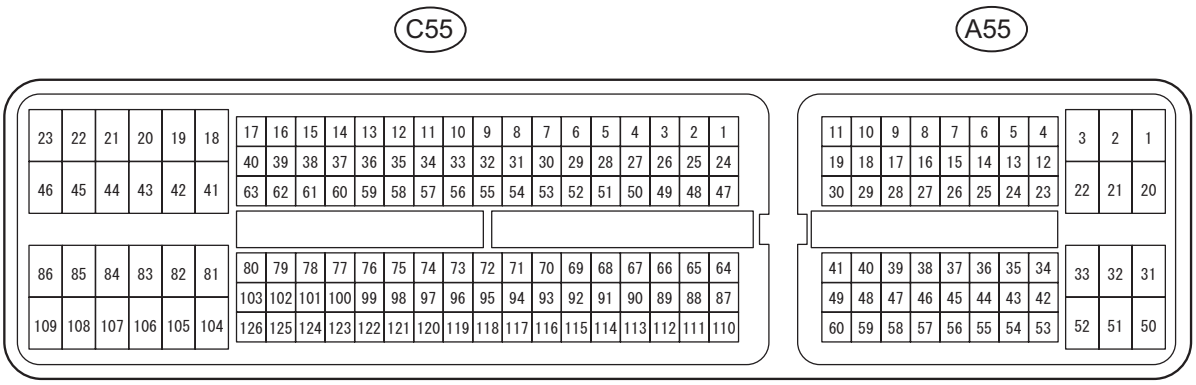
Each ECM terminal's standard voltage is shown in the table below.

In the table, first follow the information under "Condition". Look under "Symbols (Terminals No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specified Condition".

Use the illustration below as a reference for the ECM terminals.

AX

ECM:



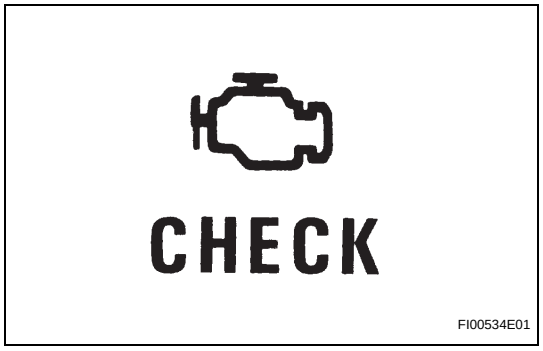
A107881E27

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Specified Condition
S (A55-25) - E1 (C55-81)	Y - W-B	S shift position switch signal	IG switch ON (IG) and shift lever in S position	10 to 14 V
			IG switch ON (IG) and shift lever in any position except S position	Below 1 V
SFTU (A55-16) - E1 (C55-81)	R - W-B	Up shift switch signal	IG switch ON (IG) and shift lever in S position	10 to 14 V
			IG switch ON (IG) and shift lever in "+" position (Up shift)	Below 1 V
SFTD (A55-51) - E1 (C55-81)	L - W-B	Down shift switch signal	IG switch ON (IG) and shift lever in S position	10 to 14 V
			IG switch ON (IG) and shift lever in "-" position (Down shift)	Below 1 V

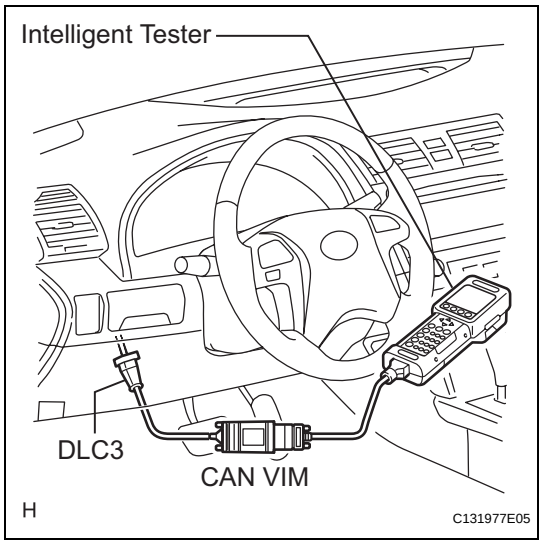
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) When troubleshooting On-Board Diagnostic (OBD II) vehicles, the vehicle must be connected to the OBD II scan tool (complying with SAE J1987). Various data output from the vehicle's TCM can be read then.



(b) OBD II regulations require that the vehicle's on-board computer illuminate the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in:
(1) The emission control system/components
(2) The power train control components (which affect vehicle emissions)
(3) The computer
In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by SAE J2012 are recorded in the TCM memory.
If the malfunction does not reoccur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the TCM memory.



(c) To check DTCs, connect the intelligent tester to the Data Link Connector 3 (DLC3) of the vehicle. The intelligent tester displays DTCs, the freeze frame data and a variety of the engine data.
The DTCs and freeze frame data can be erased with the intelligent tester (See page AX-38).

2. NORMAL MODE AND CHECK MODE

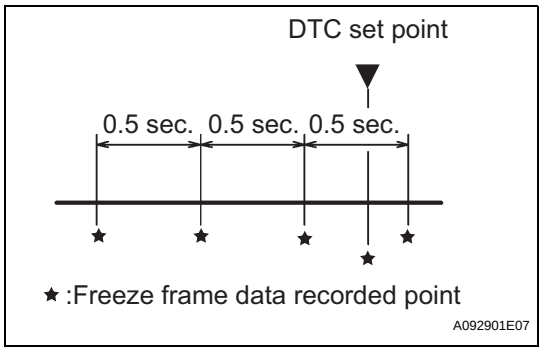
(a) The diagnosis system operates in "normal mode" during normal vehicle use. In normal mode, "2 trip detection logic" is used to ensure accurate detection of malfunctions. "Check mode" is also available to technicians as an option. In check mode, "1 trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions.

3. 2 TRIP DETECTION LOGIC

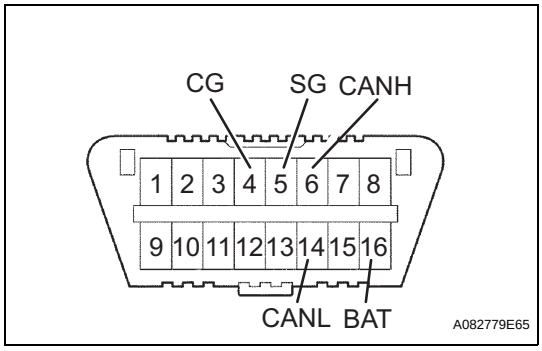
(a) When a malfunction is first detected, the malfunction is temporarily stored in the TCM memory (1st trip). If the ignition switch is turned off and then on (IG) again, and the same malfunction is detected again, the MIL will illuminate.

4. FREEZE FRAME DATA

(a) The TCM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.



(b) The intelligent tester displays freeze frame data recorded at five different points: 1) 3 points before the DTC is set, 2) once when the DTC is set, and 3) once after the DTC is set. The data can be used to simulate the vehicle's condition around the time of the malfunction. The data may be helpful in determining the cause of a malfunction. It may also be helpful in determining whether a DTC is being caused by a temporary malfunction.



5. DLC3 (Data Link Connector 3)

(a) The vehicle's TCM uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.
HINT:
Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side or the tester side.
If the communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
If the communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 kΩ or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

6. CHECK BATTERY VOLTAGE

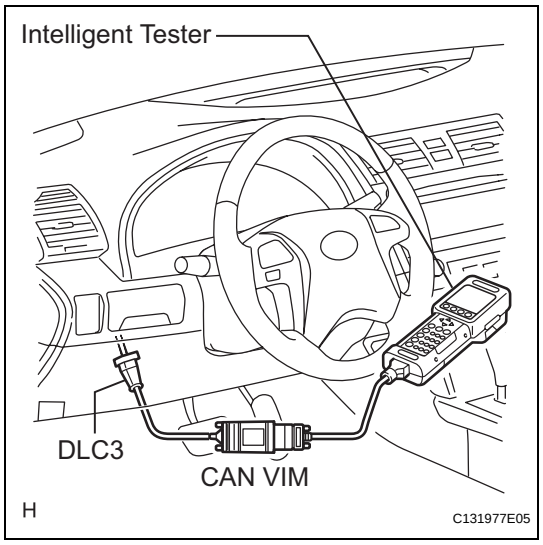
Battery voltage:
11 to 14 V

(a) If the voltage is below 11 V, replace or recharge the battery before proceeding.

7. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch on (IG).
If the MIL does not illuminate, there is a problem in the MIL circuit (See page ES-471).

(b) When the engine is started, the MIL should turn off.



DTC CHECK / CLEAR

1. CHECK DTC

(a) DTCs which are stored in the TCM can be displayed with the intelligent tester.
These scan tools can display pending DTCs and current DTCs. Some DTCs are not stored if the TCM doesn't detect a malfunction during consecutive driving. However, the malfunction detected while a driving is stored as a pending DTC.

(1) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(2) Turn the ignition switch on (IG).

(3) Enter the following menus: DIAGNOSIS / OBD/ MOBD / ECT / DTC INFO / CURRENT CODES (or PENDING CODE).

(4) Confirm the DTCs and freeze frame data and then write them down.

(5) Confirm the details of the DTCs (See page AX-46).

NOTICE:

When a symptom has been duplicated using normal mode, use the intelligent tester to check for DTCs. For DTCs that are subject to "2-trip detection logic", perform the following steps:

Turn the ignition switch OFF after the symptom has occurred once. Repeat the process of attempting to duplicate the symptom. When the problem or symptom happens for the second time and a DTC has been recorded, the MIL will illuminate, and the code will be stored.

2. CLEAR DTC

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / ECT / DTC INFO / CLEAR CODES and press YES.

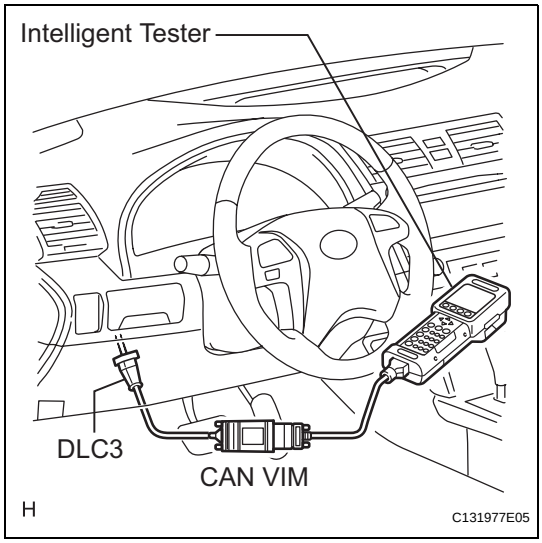
AX

CHECK MODE PROCEDURE

1. DESCRIPTION

(a) Check mode has a higher sensitivity to malfunctions and can detect malfunctions that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1-trip detection logic.

2. CHECK MODE PROCEDURE



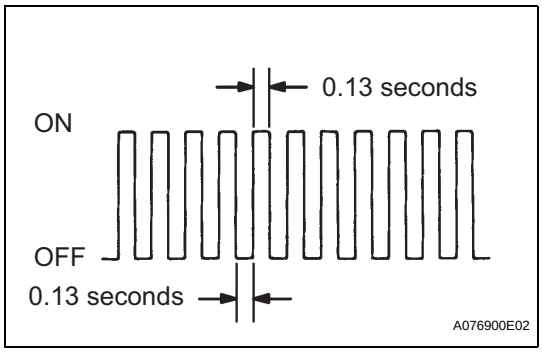
(a) Make sure that the items below are satisfied:
  (1) Battery positive voltage is 11 V or more
  (2) Throttle valve is fully closed
  (3) Transaxle is in the P or N position
  (4) A/C is switched OFF

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the Controller Area Network Vehicle Interface Module (CAN VIM) to the DLC3.

(d) Turn the ignition switch on (IG).

(e) Enter the following menus: DIAGNOSIS / OBD/ MOBD / ECT / CHECK MODE.



(f) Change the TCM to check mode. Make sure that the MIL flashes as shown in the illustration.

NOTICE:

All DTCs and freeze frame data recorded will be erased if: 1) the intelligent tester is used to change the TCM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from on (IG) to on (ACC) or off.

Before entering check mode, make notes of any DTCs and freeze frame data that are present.

(g) Start the engine. The MIL should turn off after the engine starts.

(h) Perform "MONITOR DRIVE PATTERN" for the ECT test (See page AX-27).
(Or, duplicate the conditions of the malfunction described by the customer).

(i) After duplicating the malfunction conditions, use the intelligent tester diagnosis selector to check the DTC and freeze frame data.

FAIL-SAFE CHART

1. Fail-safe

This function minimizes the loss of operation when any abnormality occurs in a sensor or solenoid.

Fail-safe Control List

Malfunction Part	Function
Input Turbine Speed Sensor	Shifting to only either the 1st or 3rd gears is allowed.
Counter Gear Speed Sensor	• The counter gear speed is determined based on the signals from the skid control ECU (speed sensor signals). • Shifting between 1st to 4th gears is allowed.
ATF Temp. Sensor	Shifting between 1st to 4th gears is allowed.
ECT ECU Power Supply (Voltage is Low)	When the vehicle is being driven in 6th gear, the transaxle is fixed in 6th gear. When being driven in any of the 1st to 5th gears, the transaxle is fixed in 5th gear.
CAN communication	Shifting to only either 1st or 3rd gears is allowed.
Knock Sensor	Shifting between 1st to 4th gears is allowed.
Solenoid Valve SL1, SL2, SL3 and SL4	The current to the failed solenoid valve is cut off and operating the other solenoid valves with normal operation performs shift control. (Shift controls in fail-safe mode are described in the table on the next page. For details, refer to Fail-Safe Control Chart)

Solenoid Valve Operation when Normal:

Gear Position		1st	2nd	3rd	4th	5th	6th
Solenoid	SL1	ON	ON	ON	ON	OFF	OFF
	SL2	OFF	OFF	OFF	ON	ON	ON
	SL3	OFF	ON	OFF	OFF	OFF	ON
	SL4	OFF	OFF	ON	OFF	ON	OFF

Fail-safe Control Chart:

	Gear Position in Normal Operation	1st	2nd	3rd	4th	5th	6th
SL1	ON Malfunction (without Fail-safe Control) *1	1st	2nd	3rd	4th	5th	6th
	OFF Malfunction (without Fail-safe Control)	1st to N	2nd to N	3rd to N	4th to N	5th	6th
	Fail-safe Control during OFF Malfunction	Fixed in 3rd or 5th					
	Fail-safe Control during OFF Malfunction (ATF Pressure Switches 1 and 2 Malfunctions)	Fixed in 3rd or 5th					
SL2	ON Malfunction (without Fail-safe Control) *1	1st to 4th	2nd to 4th	3rd to 4th	4th	5th	6th
	OFF Malfunction (without Fail-safe Control)	1st	2nd	3rd	4th to 1st	5th to N	6th to N
	Fail-safe Control during OFF malfunction	1st	2nd	3rd	3rd	3rd	3rd
	Fail-safe Control during OFF Malfunction (ATF Pressure Switches 1 and 2 Malfunctions)	Fixed in 2nd or 3rd					
SL3	ON Malfunction (without Fail-safe Control) *1	1st to 2nd	2nd	3rd	4th	5th	6th
	OFF Malfunction (without Fail-safe Control)	1st	2nd to 1st	3rd	4th	5th	6th to N
	Fail-safe Control during OFF malfunction	1st	3rd	3rd	4th	5th	5th
	Fail-safe Control during OFF Malfunction (ATF Pressure Switches 1 and 2 Malfunctions)	Fixed in 3rd					

	Gear Position in Normal Operation	1st	2nd	3rd	4th	5th	6th
SL4	ON Malfunction (without Fail-safe Control)*1	3rd	3rd	3rd	4th	5th	5th
	OFF Malfunction (without Fail-safe Control)	1st	2nd	3rd to 1st	4th	5th to N	6th
	Fail-safe Control during OFF malfunction	1st *2	2nd *2	4th*2	4th*2	6th	6th
	Fail-safe Control during OFF Malfunction (ATF Pressure Switches 1 and 2 Malfunctions)	Fixed in 2nd					

*1: Fail-safe control is not actuated when the ON malfunction occurs.

*2: Shifting to 5th and 6th gears is prohibited.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the DATA LIST using the intelligent tester allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.

(d) Turn the ignition switch on (IG).

(e) Turn the tester on.

(f) Enter the following menus: "DIAGNOSIS / OBD/ MOBD / ECT / DATA LIST".

(g) According to the display on the tester, read "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
CALC LOAD	Calculated load by ECM: Min.: 0%, Max.: 100%	• 15.0 to 35.0%: Idling • 10.0 to 30.0%: Running without load (2,000 rpm)	-
ENGINE SPD	Engine speed: Min.: 0 rpm, Max.: 16,383.75 rpm	550 to 800 rpm: Idling	-
VEHICLE SPD	Vehicle speed: Min.: 0 km/h, Max.: 255 km/h	Actual vehicle load	-
COOLANT TEMP	Engine coolant temperature: Min.: -40°C (419°F), Max.: 140°C (258°F)	80 to 105°C (176 to 221°F): After warming up	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
THROTTLE POS	Throttle position: Min.: 0%, Max.: 100%	10 to 22%: Idling	Calculated value based on VTA1
THROTTLE POS	Throttle position: Min.: 0%, Max.: 100%	• 0%: Accelerator pedal released • 64 to 96%: Accelerator pedal fully depressed	Recognition valve for throttle opening angle on ECM
SPD (NC)	Min.: 0 rpm, Max.: 12750 rpm	-	-
SPD (NT)	Input turbine speed/ display: 50 r/min	HINT: • Lock-up ON (After warming up the engine): Input turbine speed (NT) equal to the engine speed. • Lock-up OFF (Idling at N position): Input turbine speed (NT) nearly equal to the engine speed.	-
CTP SW	Closed throttle position switch: ON or OFF	• ON: Throttle fully closed • OFF: Throttle open	-

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
PNP SW [NSW]	PNP switch status/ ON or OFF	Shift lever position is; P and N: ON Except P and N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page AX-165.
STOP LIGHT SW	Stop light switch status/ ON or OFF	• Brake pedal is depressed: ON • Brake pedal is released: OFF	-
BATTERY VOLTAGE	Battery voltage: Min.: 0, Max.: 65.535 V	9 to 14 V: Idling	-
TC/TE1	TC and TE1 terminals of DLC3: ON or OFF	-	Active Test support data
FC IDL	Fuel cut idle: ON or OFF	ON: Fuel cut operating	FC IDL= "ON" when throttle valve fully closed and engine speed over 2,800 rpm
FC TAU	Fuel cut TAU (Fuel cut during very light load):	ON: Fuel cut operating	Fuel cut being performed under very light load to prevent engine combustion from becoming incomplete
SHIFT	ECM gear shift command/ 1st, 2nd, 3rd, 4th, 5th or 6th	Shift lever position is; • D: 1st, 2nd, 3rd, 4th, 5th or 6th • S: 1st, 2nd, 3rd, 4th, 5th or 6th	-
REVERSE	PNP switch status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page AX-158
PARKING	PNP switch status/ ON or OFF	Shift lever position is; P: ON Except P: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page AX-158
NEUTRAL	PNP switch status/ ON or OFF	Shift lever position is; N: ON Except N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page AX-158
DRIVE	PNP switch status/ ON or OFF	Shift lever position is; D and S: ON Except D and S: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. HINT: When the failure still occurs even after adjusting these parts, see page AX-158

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
SPORTS UP SW	Sport shift up switch status/ ON or OFF	• Press continuously "+" (Up shift): ON • Release "+" (Up shift): OFF	-
SPORTS DOWN SW	Sport shift down switch status/ ON or OFF	• Press continuously "-" (Down shift): ON • Release "-" (Down shift): OFF	-
MODE SELECT SW	Sport mode select switch status/ ON or OFF	Shift lever position is; S, "+" and "-": ON Except S, "+" and "-": OFF	-
TPS 1 SW	0: OFF / 1: ON	Gear position 1st, 2nd, 3rd or 4th: ON Gear position 5th or 6th: OFF	-
TPS 2 SW	0: OFF / 1: ON	Gear position 4th, 5th or 6th: ON Gear position 1st, 2nd or 3rd: OFF	-
TPS 3 SW	0: OFF / 1: ON	Shift solenoid valve SLU is ON: ON Shift solenoid valve SLU is OFF: OFF	-
A/T OIL TEMP 1	ATF temp. sensor value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After stall test; Approx. 80°C (176°F) • Equal to ambient temperature when cold soak	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temp. sensor circuit is open or shorted.
NT SENS VOL	Min.: 0 V, Max.: 5 V	0.1 to 1.9 V	-
NC SENS VOL	Min.: 0 V, Max.: 5 V	0.1 to 1.9 V	-
ATF	0: OFF / 1: ON		-
LOCK UP	0: OFF / 1: ON	Lock up: ON	-
LOCK UP SOL	Lock up solenoid status/ ON or OFF	• Lock up: ON • Except lock up: OFF	-
SOLENOID (SLU)	Shift Solenoid SLU Status/ ON or OFF	• Lock up: ON • Except lock up: OFF	-
SOLENOID (SLT)	Shift solenoid SLT status/ ON or OFF	• Accelerator pedal is depressed: OFF • Accelerator pedal is released: ON	-
ENGINE SPD	Engine speed: Min.: 0 rpm, Max.: 16,383.75 rpm	550 to 800 rpm: Idling	-
INTAKE AIR TEMP	Intake air temperature Min.: -40°C (-40°F), Max.: 140°C (258°F)	Equivalent to ambient air temperature	• If value -40°C(-40°F): sensor circuit open • If value 140°C(284°F): sensor circuit shorted
COOLANT TEMP	Engine coolant temperature Min.: -40°C (-40°F), Max.: 215°C (419°F)	80 to 105°C (176 to 221°F): After warming up	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
THROTTLE POS	Throttle sensor position: Min.: 0%, Max.: 100%	• Accelerator pedal released: 0% • Accelerator pedal fully depressed: 64 to 96%	Recognition value for throttle opening angle on ECM
THROTTLE POS	Whether throttle position sensor detecting idle: ON or OFF	ON: Idling	-
ACCEL POS	Min.: 0%, Max.: 100%		-
#CODES	# of Codes: Min.: 0, Max.: 255	-	Number of detected DTCs
CHECK MODE	Check mode: 0: OFF, 1: ON	ON: Check mode ON	-

AX

Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
SPD TEST	Check mode result for vehicle speed sensor: 0: COMPL, 1: INCMPL	-	-
MIL	MIL status: ON or OFF	ON: MIL ON	-
MIL ON RUN DIST	MIL ON run distance: Min.: 0 mile (65,535 km), Max.: 110,950 mile (65,535 km)	Distance after DTC detected	-
MIL ON RUN TIME	Running time from MIL ON: Min.: 0 minute, Max.:65,535 minutes	Equivalent to running time after MIL ON	-
ENG RUN TIME	Engine run time: Min.: 0 second, Max.: 65,535 seconds	Time after engine start	-
TIME DTC CLEAR	Time after DTC cleared: Min.: 0 minute, Max.: 65,535 minutes	Equivalent to time after DTCs erased	-
DIST DTC CLEAR	Distance after DTC cleared: Min.: 0 km/h, Max.: 65,535 km/h	Equivalent to time after DTCs erased	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared: Min.: 0, Max.: 255	-	Number of warm-up cycles after DTC cleared

AX

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows relays, VSVs, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST as the first step in troubleshooting is one method to save labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn the intelligent tester on.
(f) Enter the following items: "DIAGNOSIS / OBD/ MOBD / ECT / ACTIVE TEST".
(g) According to the display on tester, perform "ACTIVE TEST".

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Vehicle Condition] • IDL: ON [Others] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves. Upshifts and downshifts should be performed consecutively. A 10-second interval is required between gear changes. Do not downshift at high speeds. Doing so will damage the automatic transaxle.
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transaxle to the lock-up condition. [Vehicle Condition] • Throttle valve opening angle: Less than 35% • Vehicle speed: 37 mph (60 km/h) or more, and 6th gear	Possible to check the SLU solenoid operation.
SOLENOID (SL1)	[Test Details] Operate the shift solenoid SL1 [Vehicle Condition] • Vehicle Stopped • Shift lever in P or N position	-
SOLENOID (SL2)	[Test Details] Operate the shift solenoid SL2 [Vehicle Condition] • Vehicle Stopped • Shift lever in P or N position	-
SOLENOID (SL3)	[Test Details] Operate the shift solenoid SLU [Vehicle Condition] • Vehicle Stopped • Shift lever in P or N position	-

Item	Test Details	Diagnostic Note
SOLENOID (SL4)	[Test Details] Operate the shift solenoid S1 [Vehicle Condition] • Vehicle Stopped • Shift lever in P or N position	-
SOLENOID (SL)	[Test Details] Operate the shift solenoid S2 [Vehicle Condition] • Vehicle Stopped • Shift lever in P or N position	-
SOLENOID (SLT)	[Test Details] Operate the shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped • IDL: ON HINT: OFF: Line pressure up (When the active test of "SOLENOID (SLT)" is performed, the ECM commands the SLT solenoid to turn off). ON: No action (normal operation)	-
SOLENOID (SLU)	[Test Details] Operate the shift solenoid SLU and raise the line pressure. [Vehicle Condition] • Vehicle Stopped. • IDL: ON HINT: OFF: Line pressure up (When the active test of "SOLENOID (SLU)" is performed, the ECM commands the SLU solenoid to turn off). ON: No action (normal operation)	-

*: "SOLENOID (SLT)" in the ACTIVE TEST is performed to check the line pressure changes by connecting the SST to the automatic transaxle. The same SST is used for the HYDRAULIC TEST (See page AX-17) as well.
HINT:
The pressure values in ACTIVE TEST and HYDRAULIC TEST will be different from each other.

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the parts listed in the table below and proceed to the page given.
HINT:

- *1: MIL (Malfunction Indicator Lamp) comes on
- *2: "DTC stored" mark means TCM memorizes the trouble code if the TCM detects that the DTC detection condition is satisfied.
- A DTC may be output when the clutch, brake and gear components, etc. inside the automatic transaxle are damaged.

AUTOMATIC TRANSAXLE SYSTEM

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P0500	Vehicle Speed Sensor "A"	1. Vehicle speed sensor 2. Vehicle speed sensor signal circuit 3. Combination meter 4. TCM	Comes on	DTC stored	AX-50
P0560	System Voltage	1. Open in back-up power source circuit 2. TCM	Comes on	DTC stored	AX-53

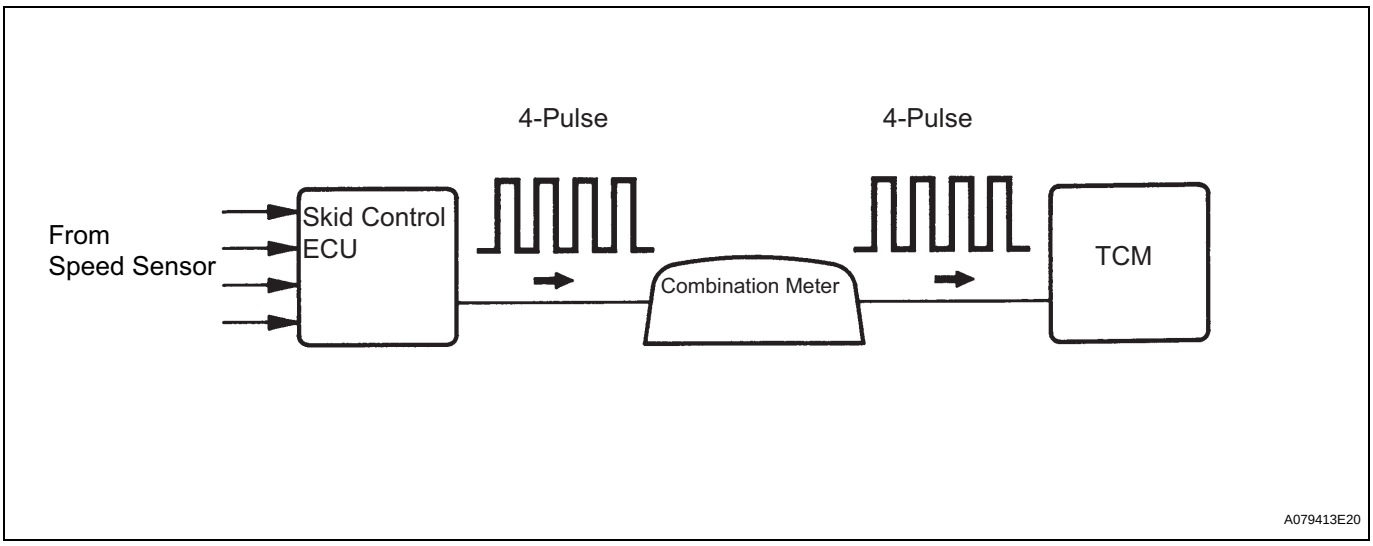
P0873	Transmission Fluid Pressure Switch No.1 Circuit High	1. ATF temperatuer sensor assembly (ATF pressure switch No 1) 2. Transmission wire 3. TCM	-	DTC stored	AX-108
P0877	Transmission Fluid Pressure Switch No.2 Circuit Low	1. ATF temperatuer sensor assembly (ATF pressure switch No. 2) 2. Transmission wire	-	DTC stored	AX-112
P0878	Transmission Fluid Pressure Switch No.2 Circuit High	1. ATF temperatuer sensor assembly (ATF pressure switch No. 2) 2. Transmission wire 3. TCM	-	DTC stored	AX-112
P0989	Transmission Fluid Pressure Switch No.3 Circuit Low	1. ATF temperatuer sensor assembly (ATF pressure switch No. 3) 2. Transmission wire	Comes on	DTC stored	AX-116
P0990	Transmission Fluid Pressure Switch No.3 Circuit High	1. ATF temperatuer sensor assembly (ATF pressure switch No. 3) 2. Transmission wire 3. TCM	Comes on	DTC stored	AX-116
P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)	1. Shift solenoid valve SLT remains open 2. Shift solenoid valve SL1, SL2, SL3 or SL4 remains open or closed 4. Valve body is blocked 5. Automatic transaxle (clutch, brake or gear, etc.)	Comes on	DTC stored	AX-121

DTC No.	Detection Item	Trouble Area	MIL *1	Memory *2	See page
P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)	1. Open or short in shift solenoid valve SLT circuit 2. Shift solenoid valve SLT 3. TCM	Comes on	DTC stored	AX-128
P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)	1. Shift solenoid valve SLU remains open or closed 2. Valve body is blocked 3. Torque converter clutch 4. Automatic transaxle (clutch, brake or gear, etc.) 5. Line pressure is too low	Comes on	DTC stored	AX-131
P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)	1. Open or short in shift solenoid valve SLU circuit 2. Shift solenoid valve SLU 3. TCM	Comes on	DTC stored	AX-136
P2769	Short in Torque Converter Clutch Solenoid Circuit (Shift Solenoid Valve SL)	1. Short in shift solenoid valve SL circuit 2. Shift solenoid valve SL 3. TCM	Comes on	DTC stored	AX-139
P2770	Open in Torque Converter Clutch Solenoid Circuit (Shift Solenoid Valve SL)	1. Open in shift solenoid valve SL circuit 2. Shift solenoid valve SL 3. TCM	Comes on	DTC stored	AX-139
P2808	Pressure Control Solenoid "D" Performance or Stuck OFF (Shift Solenoid Valve SL4)	1. Shift solenoid valve SL4 remains open or closed 2. Valve body is blocked 3. Automatic transaxle (clutch, brake or gear etc.)	Comes on	DTC stored	AX-142
P2810	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SL4)	1. Open or short in shift solenoid valve SL4 circuit 2. Shift solenoid valve SL4 3. TCM	Comes on	DTC stored	AX-148
U0100	Lost Communication with ECM/ PCM "A"	TCM	Comes on	DTC stored	AX-151

DTC	P0500	Vehicle Speed Sensor "A"

DESCRIPTION

The speed sensors detect the wheel speed and sends the appropriate signals to the skid control ECU. The skid control ECU converts these wheel speed signals into a 4-pulse signal and outputs it to the TCM via the combination meter. The TCM determines the vehicle speed based on the frequency of these pulse signals.



DTC No.	DTC Detection Condition	Trouble Area
P0500	When the ECT sensor is normal and the counter gear speed is 300 rpm or more, the vehicle speed signal is not input for 2 seconds or more.	• Vehicle speed sensor • Vehicle speed sensor signal circuit • Combination meter • TCM

MONITOR DESCRIPTION

The TCM assumes that the vehicle is being driven when the transmission counter gear indicates more than 300 rpm and over 30 seconds have passed since the park/neutral position switch was turned off. If there is no signal from the vehicle speed sensor with these conditions satisfied, the TCM concludes that the vehicle speed sensor is malfunctioning. The TCM will turn on the MIL and a DTC will be set.

MONITOR STRATEGY

Related DTCs	P0500: Vehicle Speed Sensor Circuit
Required sensors/components (Main)	Vehicle speed sensor, Combination meter, ABS ECU
Required sensors/components (Sub)	Counter gear Speed (CS) sensor, ECT sensor
Frequency of operation	Continuous
Duration	2 seconds
MIL operation	Immediately
Sequence operation	None

TYPICAL ENABLING CONDITIONS

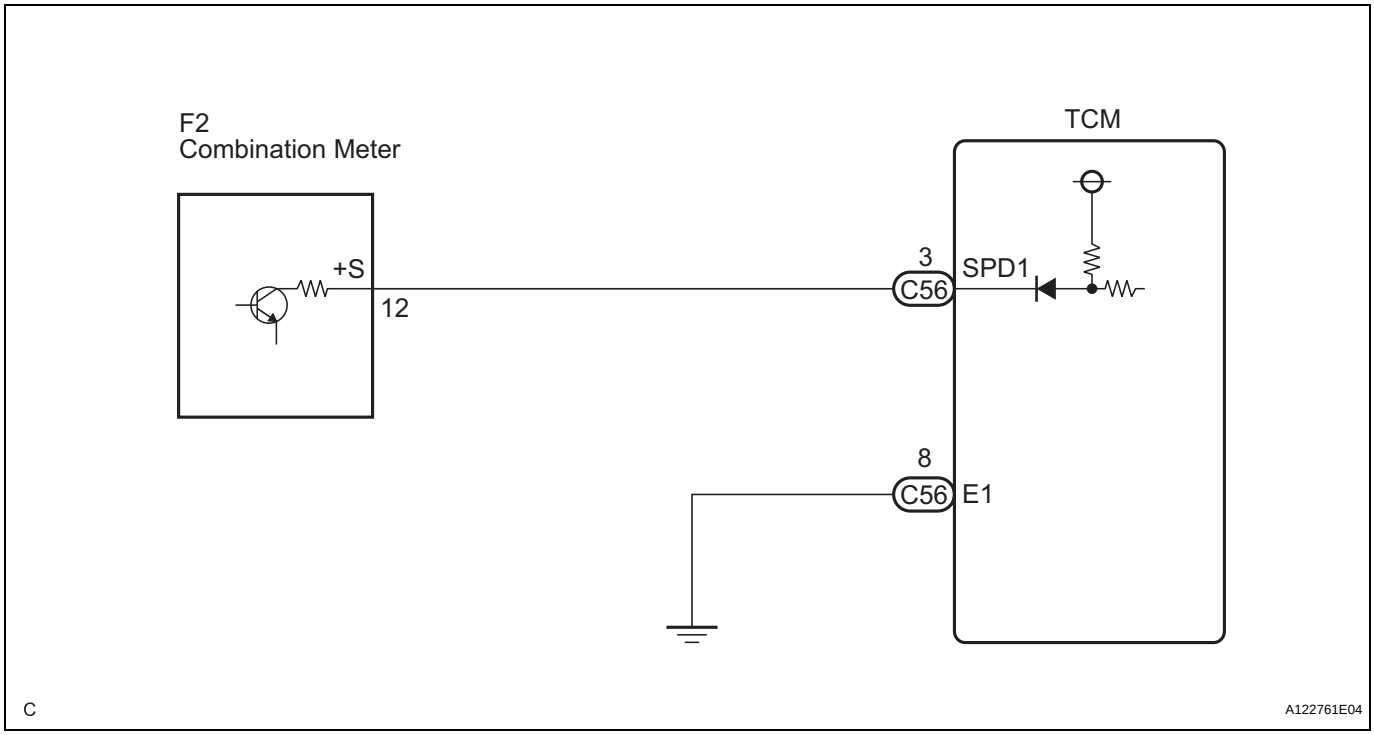
Engine	Running
Transmission counter gear revolution	300 rpm or more
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

Either a or b is met (See below)	
a. All of the following conditions are met	
ECT	20°C (68°F) or more
ECT sensor fail	Not detected
Time after PNP switch ON to OFF	2 sec. or more
b. All of the following conditions are met	
ECT	Less than 20°C (68°F)
ECT sensor fail	Detected
Time after PNP switch ON to OFF	30 sec. or more

TYPICAL MALFUNCTION THRESHOLDS

Vehicle speed sensor signal	No pulse input

WIRING DIAGRAM



INSPECTION PROCEDURE

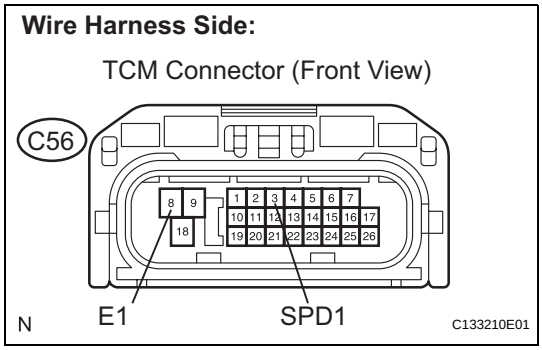
1	INSPECT SPEEDOMETER (METER OPERATION)

(a) Drive the vehicle and check if operation of the speedometer in the combination meter is normal.
HINT:
The vehicle speed sensor is operating normally if the speedometer display is normal.

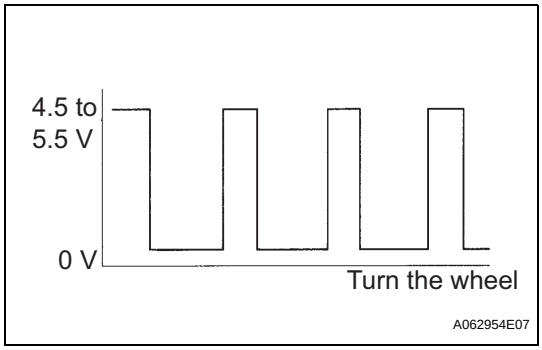
NG → CHECK SPEEDOMETER CIRCUIT

OK

2	INSPECT TCM



(a) Shift the lever to the neutral position.
(b) Jack up the vehicle.
(c) Disconnect the TCM connector.
(d) Turn the ignition switch on (IG).



(e) Measure the voltage according to the value(s) in the table below as the wheel is turned slowly.
Standard

Tester Connection	Specified Condition
C56-3 (SPD1) - C56-8 (E1)	Voltage is generated intermittently

HINT:
The output voltage should fluctuate up and down similarly to the diagram when the wheel is turned slowly.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE TCM

DTC	P0560	System Voltage

DESCRIPTION

The battery supplies electricity to the TCM even when the ignition switch is off. This power allows the TCM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, these memories are cleared and the TCM determines that there is a malfunction in the power supply circuit. When the engine is next started, the TCM will illuminate the MIL and set the DTC.

DTC No.	DTC Detection Condition	Trouble Area
P0560	Open in TCM back-up power source circuit (1 trip detection logic)	• Open in back-up power source circuit • TCM

HINT:
If DTC P0560 is set, the TCM does not store other DTCs.

MONITOR STRATEGY

Related DTCs	P0560: TCM system voltage
Required Sensors/Components (Main)	TCM
Required Sensors/Components (Sub)	-
Frequency of Operation	Continuous
Duration	3 seconds
MIL Operation	Immediate (MIL illuminated after next engine start)
Sequence of Operation	None

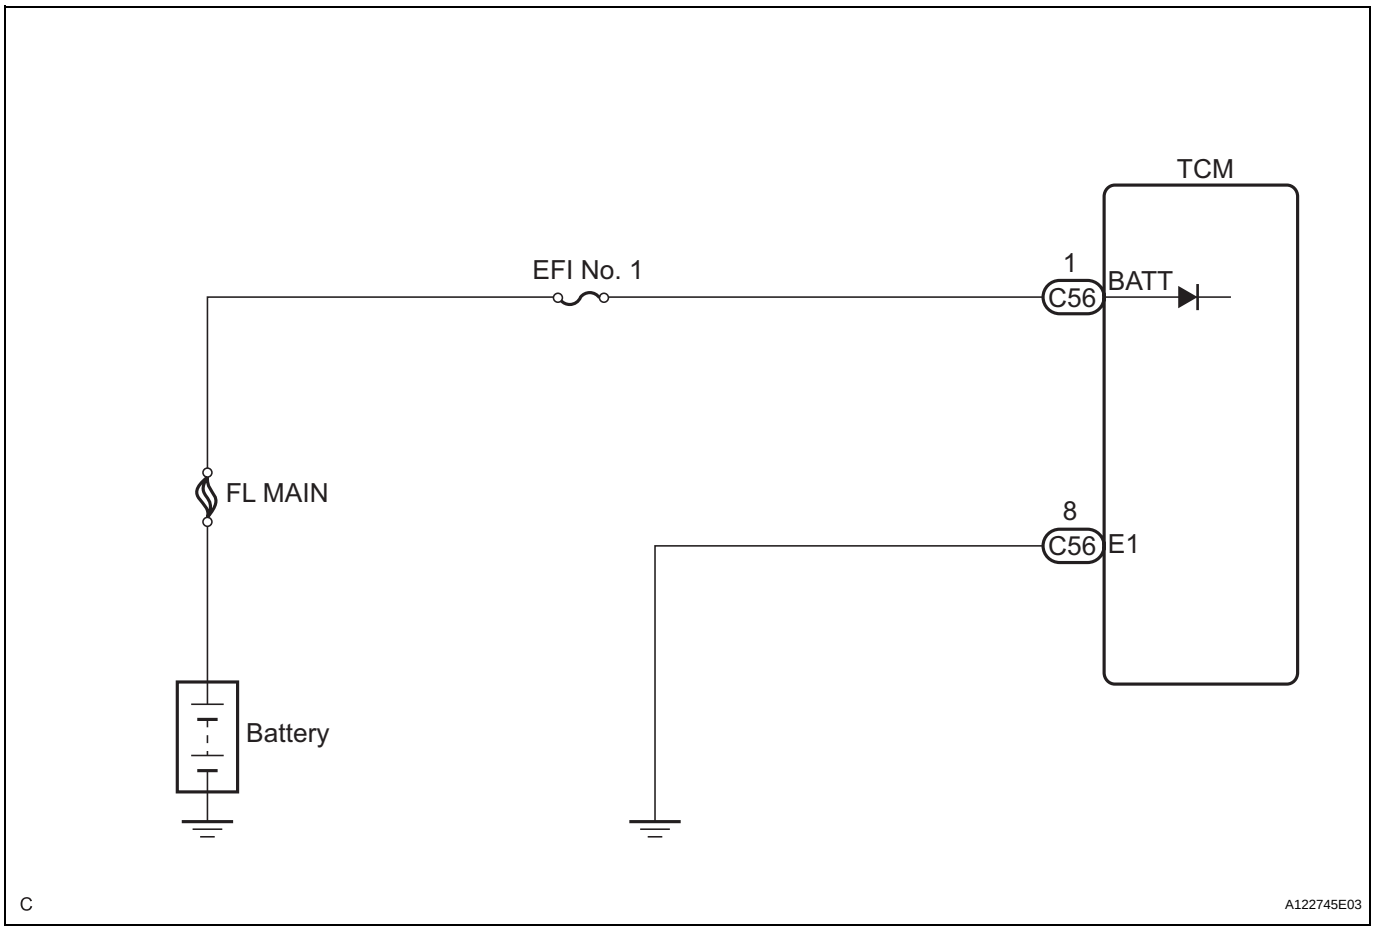
TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present:	None
Stand-by RAM	Initialized

TYPICAL MALFUNCTION THRESHOLDS

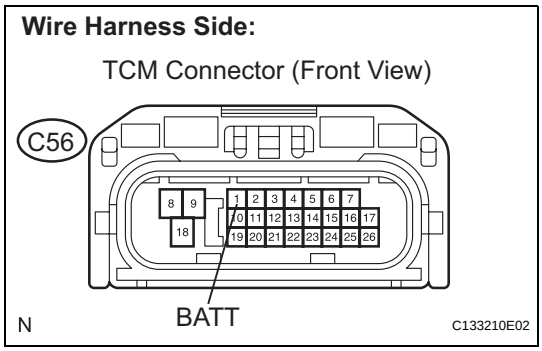
TCM power source	Less than 3.5 V

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT TERMINAL VOLTAGE (BATT VOLTAGE OF TCM)



(a) Disconnect the TCM connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
BATT (C56-1) - E1 (C56-8)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (EFI NO. 1 FUSE - TCM)**

OK

REPLACE TCM

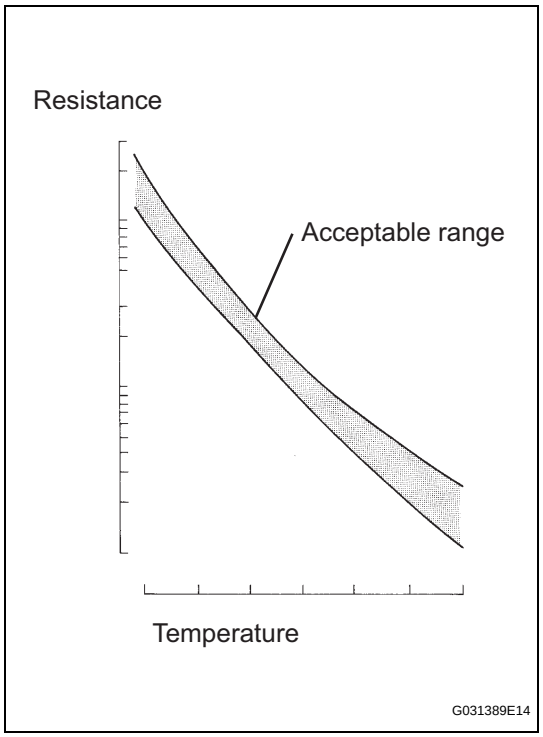
DTC	P0710	Transmission Fluid Temperature Sensor "A" Circuit

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input

DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value for use by the TCM.



The TCM applies a voltage to the temperature sensor through terminal OIL of the TCM.
The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.
One terminal of the sensor is grounded so that the sensor resistance decreases and the voltage goes down as the temperature becomes higher.
The TCM calculates the fluid temperature based on the voltage signal.

DTC No.	DTC Detection Condition	Trouble Area
P0710	(a) and (b) are detected momentarily within 0.5 sec. when neither P0712 nor P0713 is detected (1-trip detection logic) (a) ATF temperature sensor resistance is less than 79 Ω. (b) ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 sec., the malfunction switches from (a) to (b) or from (b) to (a)	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • TCM

DTC No.	DTC Detection Condition	Trouble Area
P0712	ATF temperature sensor resistance is less than 79 Ω for 0.5 sec. or more have (1-trip detection logic)	• Short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • TCM
P0713	ATF temperature sensor resistance is more than 156 kΩ when 15 minutes or more have elapsed after the engine starts DTC is detected for 0.5 sec. or more (1-trip detection logic)	• Open in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • TCM

AX

MONITOR DESCRIPTION

These DTCs indicate an open or short in the automatic transmission fluid (ATF) temperature sensor (TFT sensor) circuit. The automatic transmission fluid (ATF) temperature sensor converts ATF temperature into an electrical resistance value. Based on the resistance, the TCM determines the ATF temperature, and the TCM detects an open or short in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω*1 or more than 156 kΩ*2, the TCM interprets this as a fault in the ATF sensor or wiring. The TCM will turn on the MIL and store the DTC.
*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.
*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.
HINT:
The ATF temperature can be checked on the intelligent tester display.

MONITOR STRATEGY

Related DTCs	P0710: ATF temperature sensor/Range check (Chattering) P0712: ATF temperature sensor/Range check (Low resistance) P0713: ATF temperature sensor/Range check (High resistance)

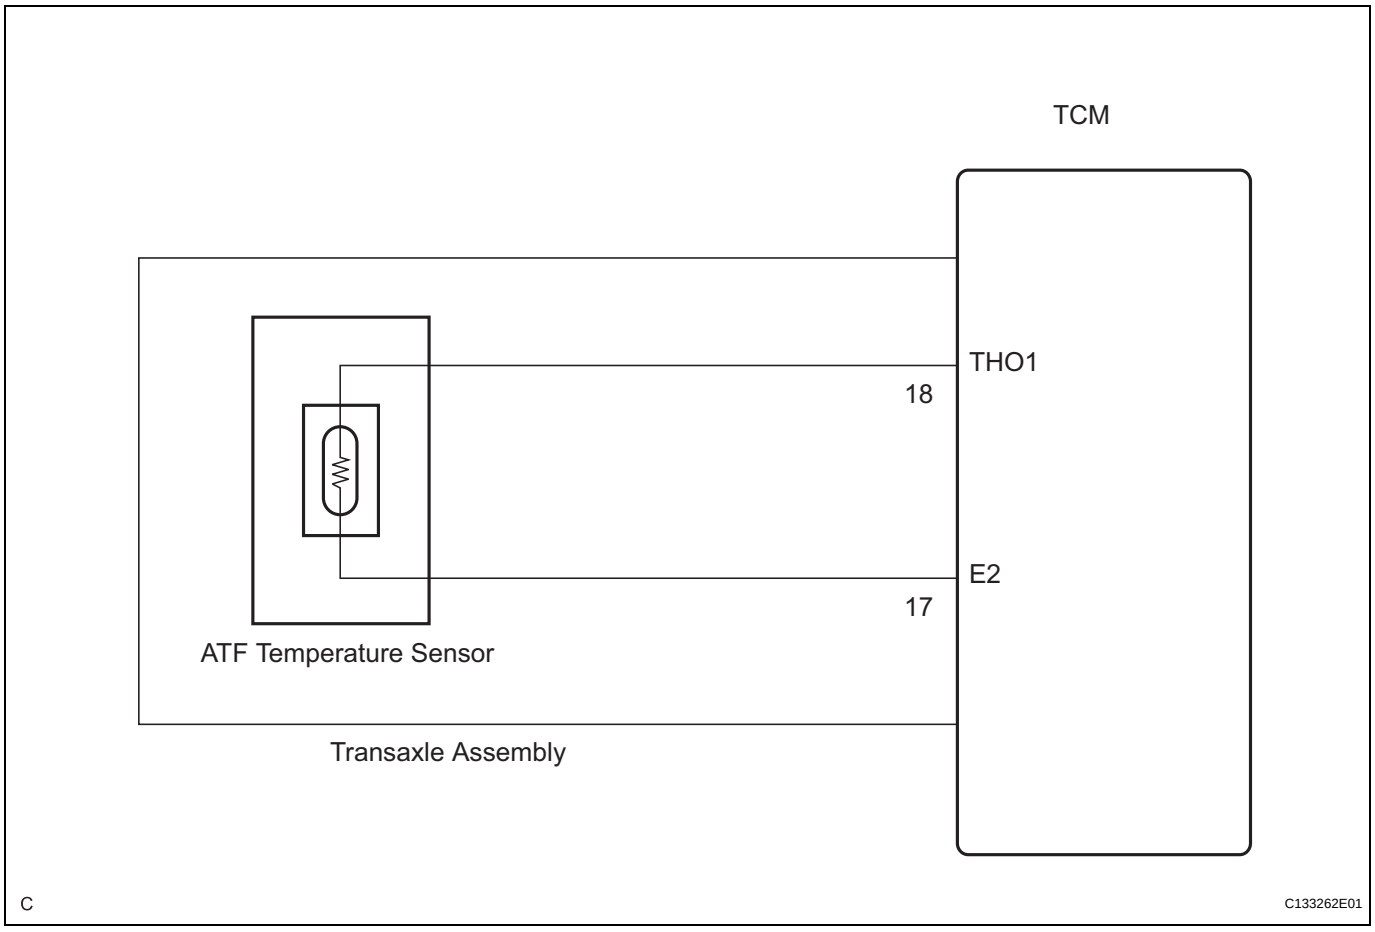
WIRING DIAGRAM



INSPECTION PROCEDURE

1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the value of switches, sensors, actuators and other items without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(g) According to the display on tester, read "DATA LIST".

AX

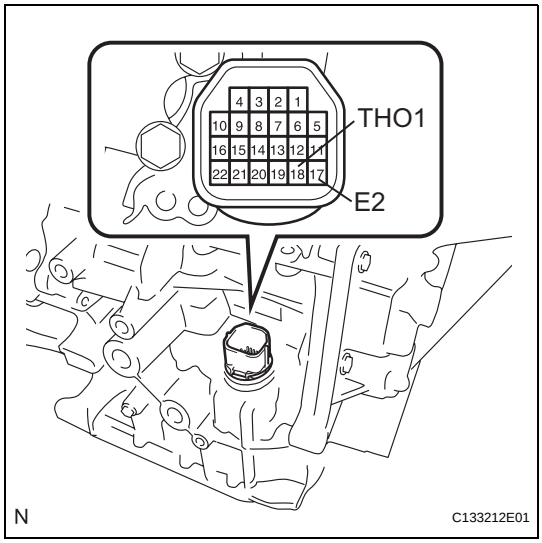
Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP1	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approx. 80°C (176°F) • Equal to ambient temperature when cold soak

HINT:
When DTC P0712 is output and intelligent tester indicates 150°C (302°F) or more, there is a short circuit.
When DTC P0713 is output and intelligent tester indicates -40°C (-40°F), there is an open circuit.
Measure the resistance between terminal OIL and body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150 °C (302°F) or more	Short circuit

HINT:
If the circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 seconds). When P0713 is set, P0711 cannot be detected.
It is not necessary to inspect the circuit when P0711 is set.

1	INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)



(a) Remove the TCM from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
17 (E2) - 18 (THO1)	90 Ω to 156 kΩ
17 (E2) - Body ground	10 kΩ or higher
18 (THO1) - Body ground	10 kΩ or higher

HINT:
If the resistance is out of the specified range with the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

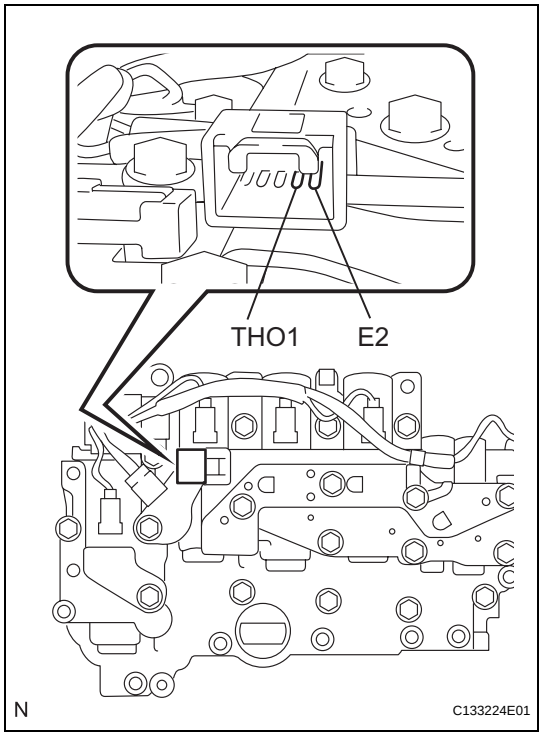
Standard resistance

ATF Temperature	Specified Condition
10 °C (50°F)	5.8 to 7.1 kΩ
110°C (230°F)	0.23 to 0.26 kΩ

OK → REPLACE TCM

NG

2	INSPECT ATF TEMPERATURE SENSOR



(a) Disconnect the ATF temperature sensor connector from the transmission wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E2 - THO1	90 Ω to 156 kΩ
E2 - Body ground	10 kΩ or higher
THO1 - Body ground	10 kΩ or higher

HINT:

If the resistance is out of the specified range with the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

Standard resistance

ATF Temperature	Specified Condition
10 °C (50°F)	5.8 to 7.1 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG → **REPLACE ATF TEMPERATURE SENSOR ASSEMBLY**

OK

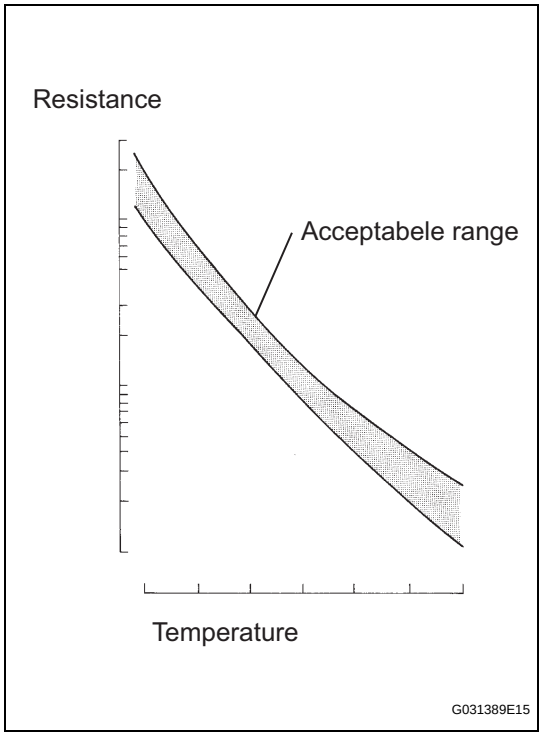
REPLACE TRANSMISSION WIRE

DTC	P0711	Transmission Fluid Temperature Sensor "A" Performance

DESCRIPTION

AX

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value for use by the TCM.



The TCM applies a voltage to the temperature sensor through terminal OIL of the TCM.
The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.
One terminal of the sensor is grounded so that the sensor resistance decreases and the voltage goes down as the temperature becomes higher.
The TCM calculates the fluid temperature based on the voltage signal.

DTC No.	DTC Detection Condition	Trouble Area
P0711	Both (a) and (b) are detected: (2-trip detection logic) (a) Intake air and engine coolant temps. are more than -10°C (14°F) at engine start. (b) After normal driving for over 16 min. and 40 sec. and 5 mile (8 km) or more, ATF temp. is less than 20°C (68°F)	Transmission wire (ATF temperature sensor)

MONITOR DESCRIPTION

This DTC indicates that there is a problem with output signals from the automatic transmission fluid (ATF) temperature sensor (TFT sensor) and that the sensor itself is defective. The ATF temperature sensor converts the ATF temperature into an electrical resistance value. Based on the resistance, the TCM determines the ATF temperature and detects an open or short in the ATF temperature circuit or a fault of the ATF temperature sensor.
After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 20°C (68°F) after running the vehicle for a certain period, the TCM interprets this as a fault, and turns on the MIL.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check
Required sensors/Components	ATF temperature sensor (TFT sensor)
Frequency of operation	Continuous
Duration	3 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

ALL:

The monitor will run whenever this DTC is not present	None
TFT (Transmission fluid temperature) sensor circuit	Circuit is not malfunctioning
ECT (Engine coolant temperature) sensor circuit	Circuit is not malfunctioning
IAT (Intake air temperature) sensor circuit	Circuit is not malfunctioning
Turbine speed sensor circuit	Circuit is not malfunctioning
Intermediate shaft speed sensor	Circuit is not malfunctioning
Shift solenoid valve SL1 circuit	Circuit is not malfunctioning
Shift solenoid valve SL2 circuit	Circuit is not malfunctioning
Shift solenoid valve SL3 circuit	Circuit is not malfunctioning
Shift solenoid valve SL4 circuit	Circuit is not malfunctioning
Knock control sensor circuit	Circuit is not malfunctioning
CAN communication system	Circuit is not malfunctioning
Electronic throttle system	Circuit is not malfunctioning
Time after engine start	16 min. and 40 sec. or more
ECT (Engine coolant temperature)	Above -15°C (5°F)

Condition A:

Time after engine start	18 min. and 20 sec.
Driving distance after engine start	5 miles (8 km) or more
IAT (12 sec. after engine start)	Above -10°C (14°F)
ECT (12 sec. after engine start)	Above -10°C (14°F)
Accumulated driving time *1	200 sec. or more
*1: Following conditions are met	
Engine speed - Turbine speed	50 rpm or more
Output speed	400 rpm or more
Throttle valve opening angle	3% or more
TFT (Transmission fluid temperature)	Less than 20°C (68°F)
Shift position	Not "N" or "P"

Condition B:

Time after engine start	30 min.
Driving distance after engine start	9.3 miles (15 km)
IAT (12 sec. after engine start)	-15°C (5°F) or more
ECT (12 sec. after engine start)	-15°C (5°F) or more
TFT (Transmission fluid temperature)	Less than 20°C (68°F)
Accumulated driving time *1	400 sec. or more

Condition C:

Time after engine start	40 min.
Driving distance after engine start	12.4 miles (20 km)
TFT (Transmission fluid temperature)	Less than 20°C (68°F)

Accumulated driving time *1	550 sec. or more

Condition D:

Time after ECT reaches 60°C (140°F)	10 sec. or more
TFT (12 sec. after engine start)	110°C (230°F) or more
ECT (12 sec. after engine start)	35°C (95°F) or less

AX

TYPICAL MALFUNCTION THRESHOLDS

Condition A, B and C:

TFT	Less than 20°C (68°F) (THO = -10°C (14°F) at engine start) (Conditions vary with THO at engine)

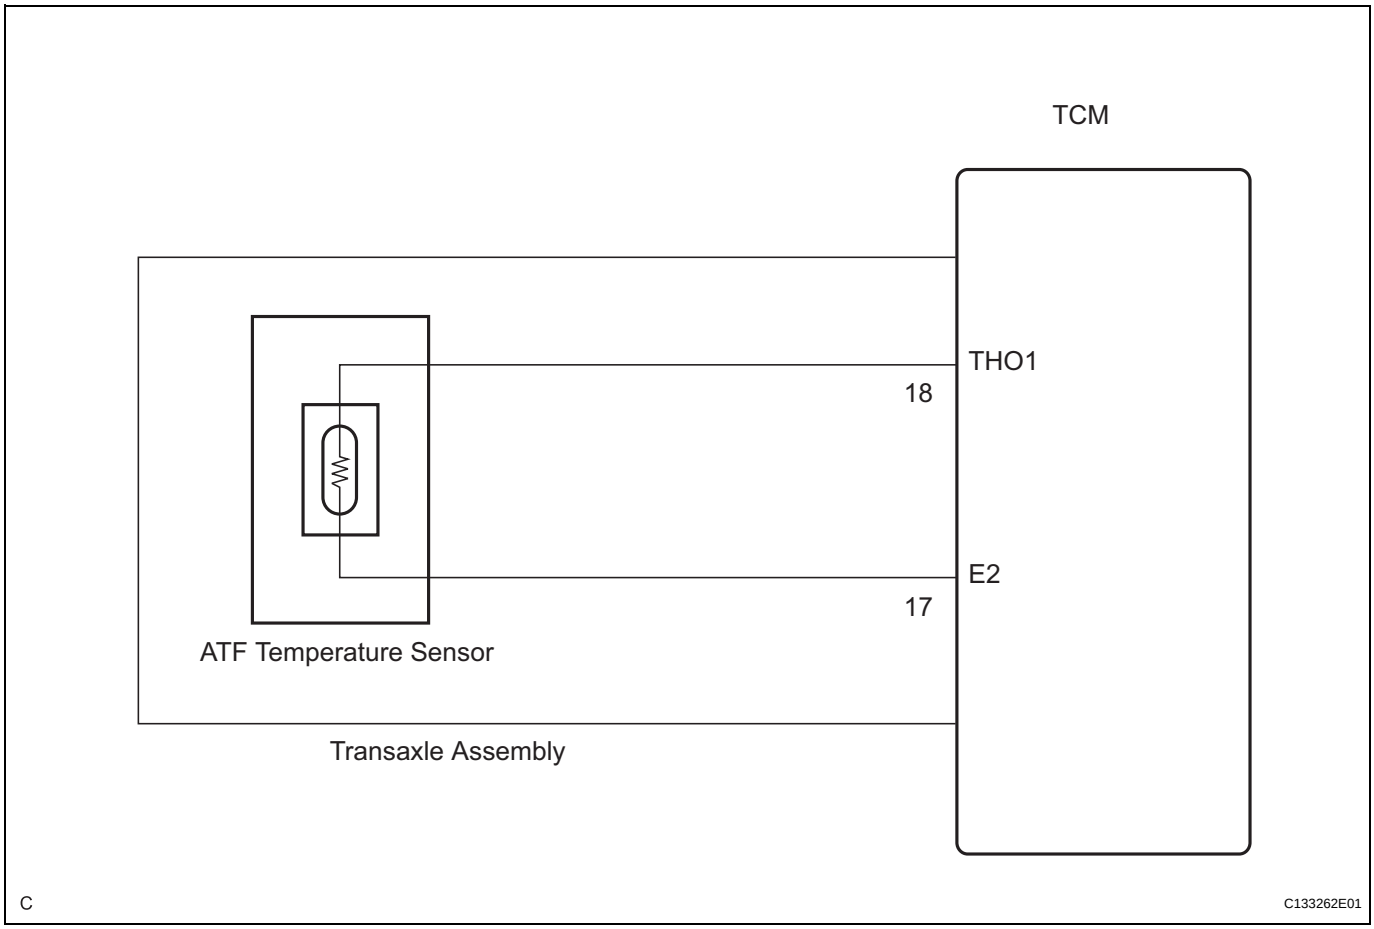
Condition D:

TFT	110°C (230°F) or more

COMPONENT OPERATING RANGE

TFT	Atmospheric temperature - approx. 130°C (266°F)

WIRING DIAGRAM



INSPECTION PROCEDURE

1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the value of switches, sensors, actuators and other items without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(g) According to the display on the tester, read "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
AT OIL TEMP1	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test; Approx. 80°C (176°F) • Equal to ambient temperature when cold soak

HINT:

When DTC P0712 is output and the intelligent tester indicates 150°C (302°F) or more, there is a short circuit.

When DTC P0713 is output and the intelligent tester indicates -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO1 (OT) and body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:

If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 seconds). When P0713 is set, P0711 cannot be detected.

It is not necessary to inspect the circuit when P0711 is set.

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)

(a) Connect the the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the the intelligent tester on.
(c) Select the items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0711" is output	**A**
"P0711" and other DTCs	**B**

HINT:
If any other codes besides "P0711" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

AX

A

2 CHECK TRANSMISSION FLUID LEVEL

(a) Check the transmission fluid level (See page AX-164).

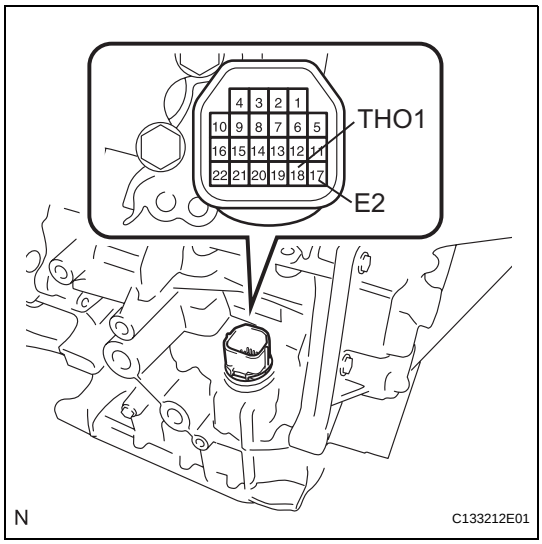
OK:

Automatic transmission fluid level is correct.

NG → ADD FLUID

OK

3 INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)



(a) Remove the TCM from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
17 (E2) - 18 (THO1)	90 Ω to 156 kΩ
17 (E2) - Body ground	10 kΩ or higher
18 (THO1) - Body ground	10 kΩ or higher

HINT:
If the resistance is out of the specified range with the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

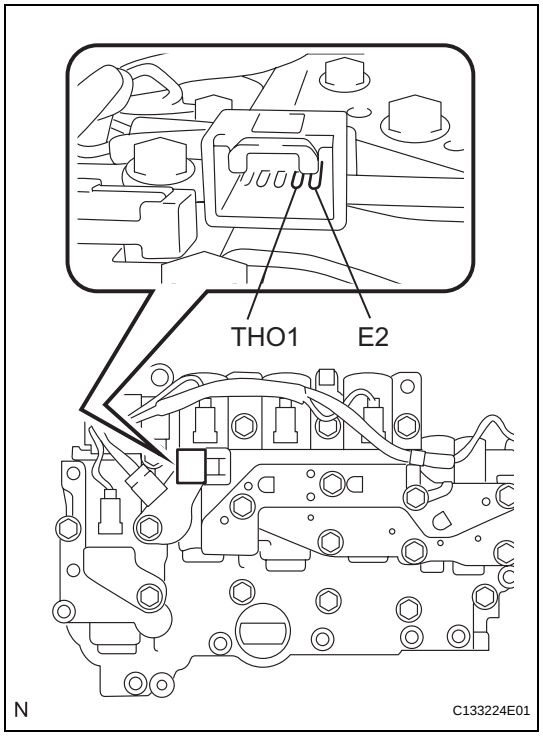
Standard resistance

ATF Temperature	Specified Condition
10 °C (50°F)	5.8 to 7.1 kΩ
110°C (230°F)	0.23 to 0.26 kΩ

OK → REPLACE TCM

NG

4	CHECK ATF TEMPERATURE SENSOR



(a) Disconnect the ATF temperature sensor connector from the transmission wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E2 - THO1	90 Ω to 156 kΩ
E2 - Body ground	10 kΩ or higher
THO1 - Body ground	10 kΩ or higher

HINT:

If the resistance is out of the specified range with the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

Standard resistance

ATF Temperature	Specified Condition
10 °C (50°F)	5.8 to 7.1 kΩ
110°C (230°F)	0.23 to 0.26 kΩ

NG → **REPLACE ATF TEMPERATURE SENSOR ASSEMBLY**

OK

REPLACE TRANSMISSION WIRE

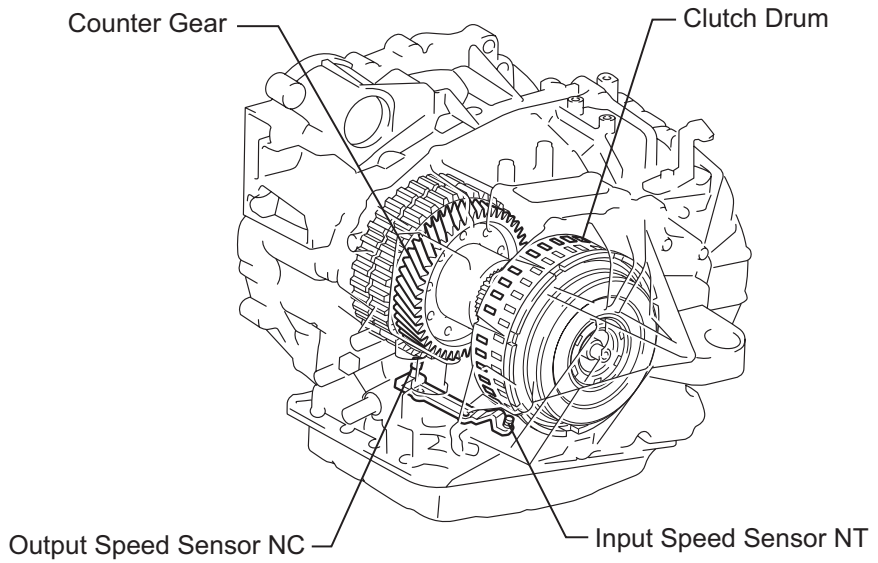
DTC	P0715	Input / Turbine Speed Sensor Circuit Malfunction

DTC	P0717	Input Speed Sensor Circuit No Signal

AX

SYSTEM DESCRIPTION

This sensor detects the rotation speed of the turbine which shows the input revolution of transaxle. By comparing the input turbine speed signal (NT) with the counter gear speed sensor signal (NC), the TCM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions, thus, providing smooth gear shift.



N

C133216E01

DTC No.	DTC Detection Condition	Trouble Area
P0715	When the speed sensor input voltage is either more than 1.9 V or less than 0.1 V for 4.5 seconds or more.	• Transmission revolution sensor (speed sensor NT) • TCM
P0717	ECM detects conditions (a), (b) and (c) continuously for 5 sec. or more: (1-trip detection logic) (a) Vehicle speed: 31 mph (50 km/h) or more (b) Park/neutral position switch (STAR and R) is OFF (c) Speed sensor (NT): less than 300 rpm	

MONITOR DESCRIPTION

The NT terminal of the TCM detects a revolution signal from the speed sensor (NT) (input RPM). The TCM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).
While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the input shaft revolution is less than 300 rpm *1although the output shaft revolution is more than 1,000 rpm *2, the TCM interprets this as a fault, illuminates the MIL and stores the DTC.
*1: Pulse is not output or is irregularly output.
*2: The vehicle speed is 31 mph (50 km/h) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NT)/Verify pulse input

Required sensors/Components	Speed sensor (NT), Speed sensor (NC)
Frequency of operation	Continuous

P0717:

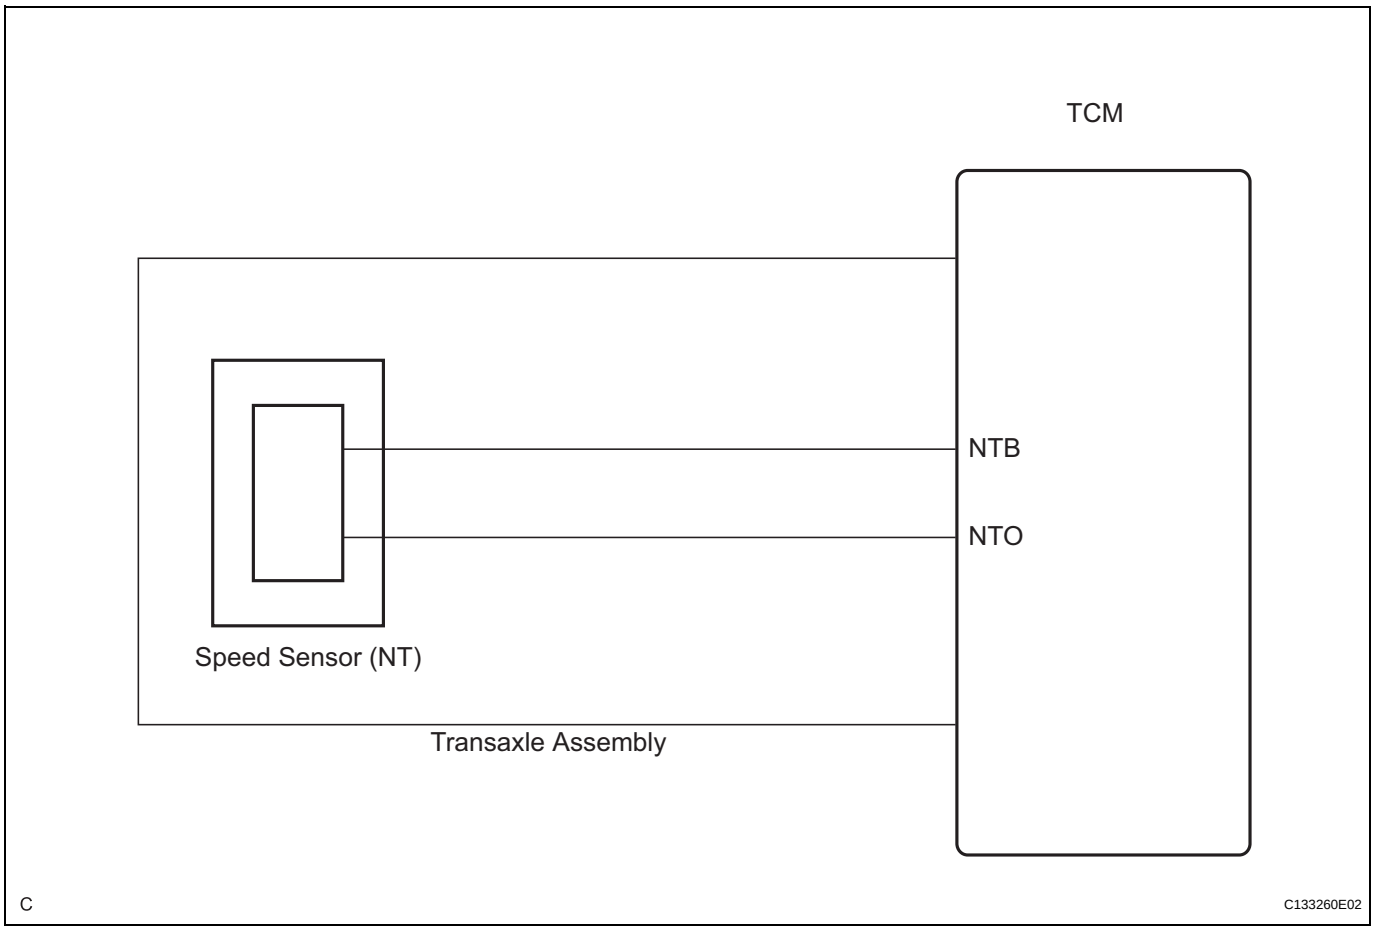
Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Speed sensor (NT)	Turbine speed is equal to engine speed with lock-up ON

AX

WIRING DIAGRAM



INSPECTION PROCEDURE

1. DATA LIST

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty.

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the value of switches, sensors, actuators and other items without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.

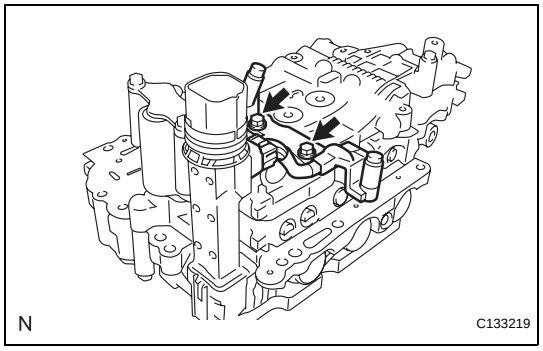
(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(g) According to the display on the tester, read "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (NT)	Input Turbine Speed/display: 50 r/min	HINT: • Lock-up ON (after warming up the engine); input turbine speed (NT) is equal to the engine speed. • Lock-up OFF (Idling at N position); input turbine speed (NT) is nearly equal to the engine speed.

HINT:
- SPD (NT) is always 0 while driving: Open or short in the sensor or circuit.
- SPD (NT) is always more than 0 and less than 300 rpm while driving the vehicle at 31 mph (50 km/h) or more: Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

AX

1 INSPECT SPEED SENSOR (SENSOR INSTALLATION)

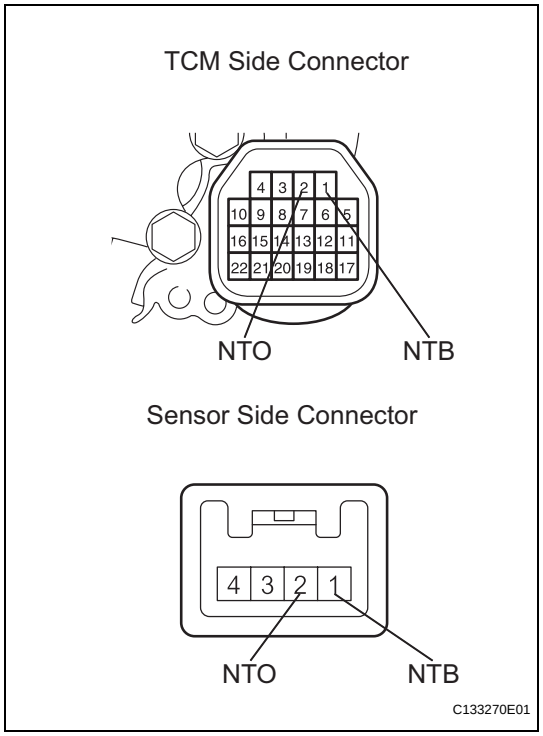


(a) Make sure that the connector is properly connected, and check the speed sensor installation.
OK:
The installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG → **REPAIR OR REPLACE SPEED SENSOR**

OK

2 CHECK TRANSMISSION WIRE



(a) Remove the TCM.
(b) Disconnect the speed sensor connector from the transmission wire.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Condition	Specified Condition
NTO - NTO	Below 1 Ω
NTB - NTB	Below 1 Ω
NTO - NTB	10 kΩ or higher

NG → **REPLACE TRANSMISSION WIRE**

OK

3 REPLACE SPEED SENSOR

NEXT

4	CHECK IF DTC OUTPUT RECURS (SEE IF DTC P0715 AND/OR P0717 OUTPUT AGAIN)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the intelligent tester main switch ON.
(c) Perform the monitor drive pattern (See page AX-27)
(d) When you use the intelligent tester:
Select the item "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(e) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0715 or P0717" is output	A
No output	B

B → END

A → REPLACE TCM

DTC	P0724	Brake Switch "B" Circuit High

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in lock-up condition when brakes are suddenly applied.
When the brake pedal is depressed, this switch sends a signal to the TCM. Then the TCM cancels the operation of the lock-up clutch while braking is in progress.

DTC No.	DTC Detection Condition	Trouble Area
P0724	The stop light switch remains ON even when the vehicle is driven in a STOP (less than 2 mph (3 km/h)) and GO (19 mph (30 km/h) or more) fashion 5 times. (2-trip detection logic).	• Short in stop light switch signal circuit • Stop light switch • TCM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains ON. When the stop light switch remains ON during "stop and go" driving, the TCM interprets this as a fault in the stop light switch, illuminates the MIL, and stores the DTC. The vehicle must stop (less than 2 mph (3 km/h)) and go (19 mph (30 km/h) or more) five times for two consecutive driving cycles in order to set this DTC.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Range check/Rationality
Required sensors/Components	Stop light switch
Frequency of operation	Continuous
Duration	GO and STOP 5 times
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The stop light switch remains ON during GO and STOP 10 times.

GO and STOP are defined as follows;

The monitor will run whenever this DTC is not present.	None
GO: (Vehicle speed is 18.63 mph (30 km/h) or more)	18.7 mph (30 km/h) or more
STOP: (Vehicle speed is less than 1.86 mph (3 km/h))	Less than 1.86 mph (3 km/h)
Starter	OFF
Battery voltage	8 V or more
Ignition switch	ON

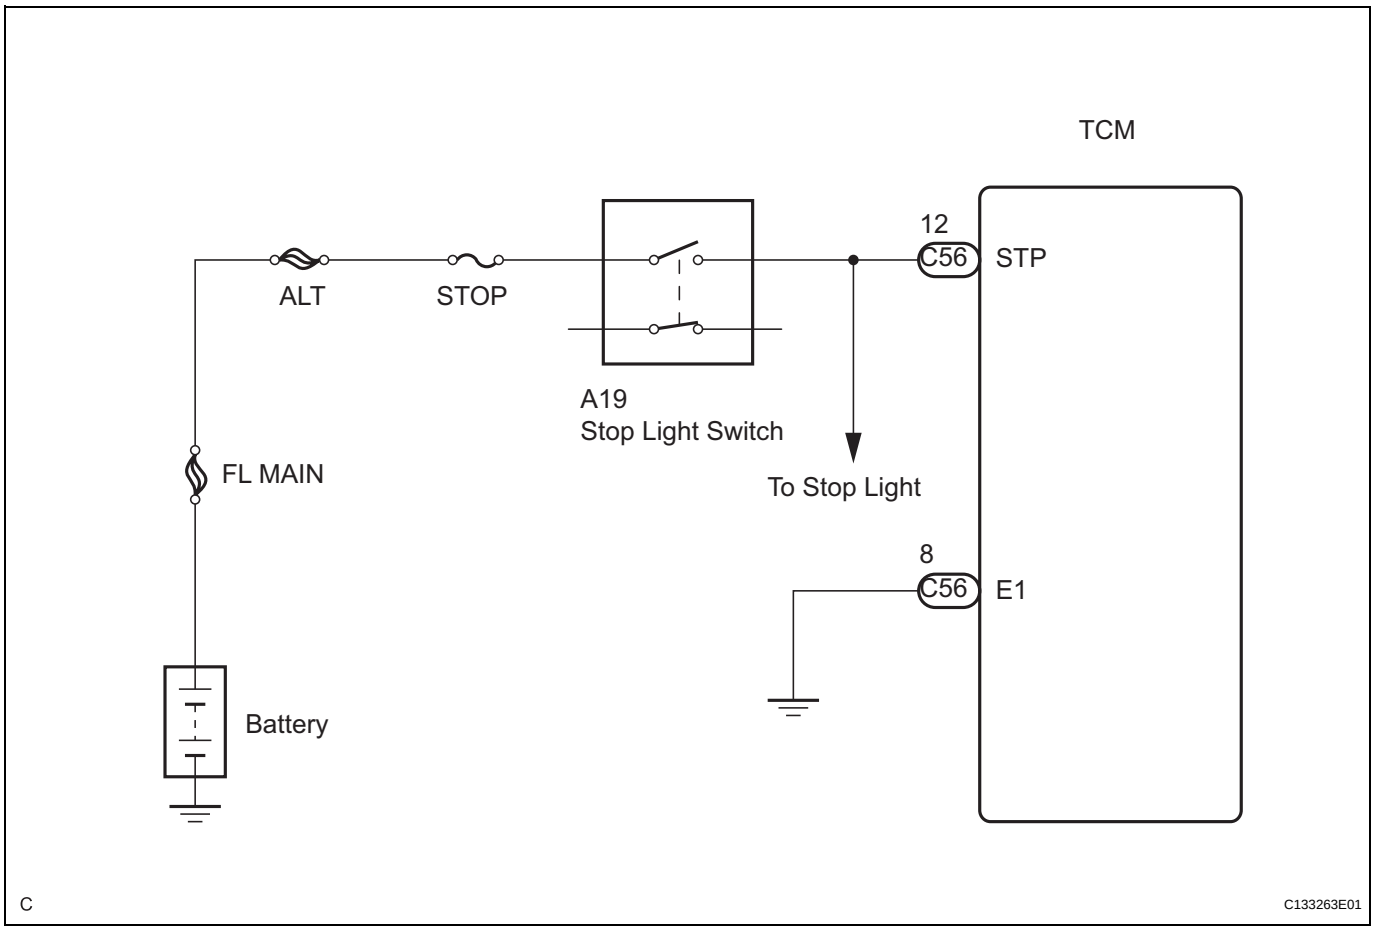
WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (STP SIGNAL)

HINT:
According to the DATA LIST displayed on the intelligent tester, you can read the value of switches, sensors, actuators and other items without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.

(a) Turn the ignition switch off.
(b) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Turn on the tester.
(e) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".
(f) According to the display on the tester, read "DATA LIST".

Standard

Item	Measurement Item/ Range (display)	Normal Condition
STOP LIGHT SW	Stop light switch status/ ON or OFF	• Brake pedal is depressed: ON • Brake pedal is released: OFF

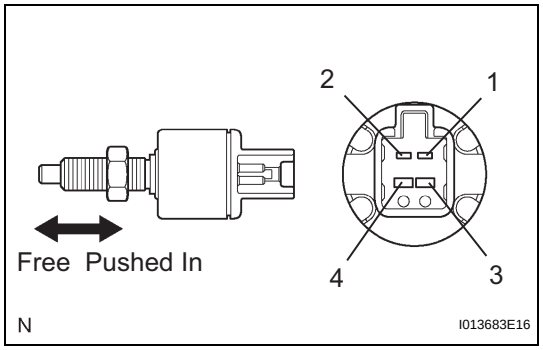
NOTICE:
In the table above, the conditions listed under "Normal Condition" are reference conditions. Do not depend solely on these reference conditions when deciding whether a part is faulty.

OK → **Go to step 3**

AX

NG

2 INSPECT STOP LIGHT SWITCH ASSEMBLY



(a) Remove the stop light switch assembly.
(b) Measure the resistance according to the value(s) in the table below.

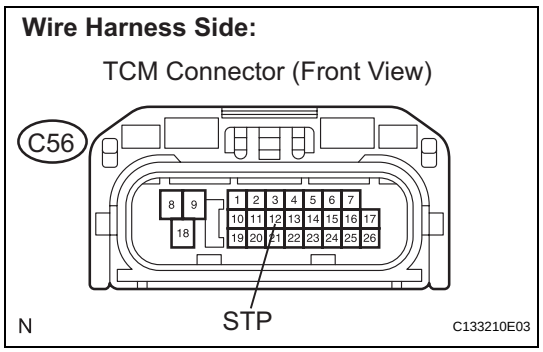
Standard resistance

Switch Position	Tester Connection	Specified Condition
Switch pin free	1 - 2	Below 1 Ω
Switch pin pushed in	1 - 2	10 kΩ or higher
Switch pin free	3 - 4	10 kΩ or higher
Switch pin pushed in	3 - 4	Below 1 Ω

NG → **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK

3 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - TCM)



(a) Install the stop light switch assembly.
(b) Disconnect the TCM connector.
(c) Measure the voltage according to the value(s) in the table below when the brake pedal is depressed and released.

Standard voltage

Condition	Tester Connection	Specified Condition
Brake pedal is depressed	C56-12 (STP) - Body ground	10 to 14 V

REPLACE TCM

DTC	P0741	Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve SL)

SYSTEM DESCRIPTION

AX

The TCM uses signals from the throttle position sensor, air-flow meter, turbine (input) speed sensor, intermediate (counter) speed sensor and crankshaft position sensor to help determine the engagement timing of the lock-up clutch. The TCM monitors the engagement of the clutch using the turbine (input) speed sensor, intermediate (counter) speed sensor and crankshaft position sensor.
Then the TCM compares the engagement condition of the lock-up clutch with the lock-up schedule in the TCM memory to detect shift solenoid valve SL, valve body and torque converter clutch mechanical problems.

DTC No.	DTC Detection Condition	Trouble Area
P0741	When both of the following are detected (2-trip detection logic): • Lock-up does not occur when requested. • Transmission fluid pressure switch No. 3 is ON.	• Shift solenoid valve SL remains closed • Valve body is blocked • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the TCM based on the speed sensor (NT), speed sensor (NC), engine rpm, engine load, engine temperature, vehicle speed, transmission fluid temperature, and gear selection. The TCM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The TCM calculates the actual transmission gear by comparing the input turbine rpm (NT) to the counter gear rpm (NC). When conditions are appropriate, the TCM requests "lock-up" by applying control voltage to the shift solenoid SL. When the SL is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.
If the TCM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the TCM interprets this as a fault in the shift solenoid valve SL or lock-up system performance. The TCM will turn on the MIL and store the DTC.
HINT:
Example:
When any of the following is met, the system judges it as a malfunction.

- There is a difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the TCM commands lock-up.
  (Engine speed is at least 70 rpm greater than the input turbine speed.)
- There is no difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the TCM commands lock-up off.
  (The difference between the engine speed and input turbine speed is less than 20 rpm.)

Turbine speed/Output speed (NT/NO) with 6th	0.568 to 0.695

TYPICAL MALFUNCTION THRESHOLDS

OFF malfunction:

Following conditions are met	(a) and (b)
(a) Engine Speed - Turbine speed	70 rpm or more
(b) Transmission fluid pressure switch	ON

INSPECTION PROCEDURE

HINT:

Performing the ACTIVE TEST using the intelligent tester allows relays, VSVs, actuators and so on to operate without removing any parts. Performing the ACTIVE TEST as the first step in troubleshooting is one method to save labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn the intelligent tester on.
(f) When using the intelligent tester:
Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST".

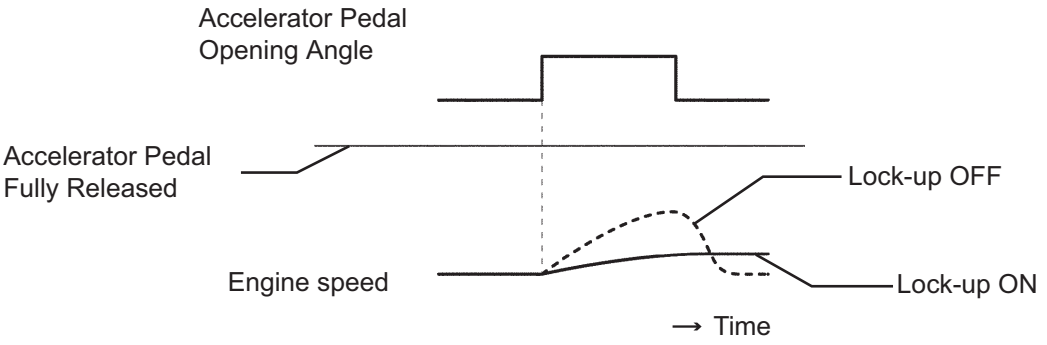
(g) According to the display on the tester, perform "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid SL to set the automatic transaxle to the lock-up condition. [Vehicle Condition] Vehicle Speed: 37 mph (60km/h) or more	Possible to check the SL operation.

AX

HINT:
- This test can be conducted when the vehicle speed is 37 mph (60km/h) or more.
- This test can be conducted in the 5th gear.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.
HINT:
- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off.)



1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0741)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

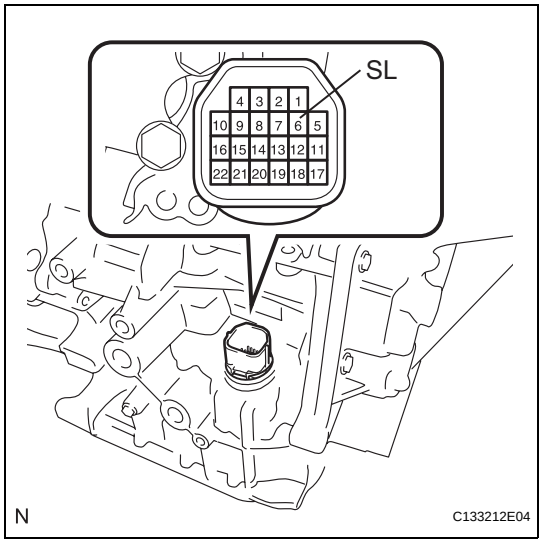
Display (DTC output)	Proceed to
Only "P0741" is output	A
"P0741" and other DTCs	B

HINT:
If any other codes besides "P0741" are output, perform the troubleshooting for those DTCs first.

B	GO TO DTC CHART

A

2 CHECK TRANSMISSION WIRE



(a) Remove the TCM from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

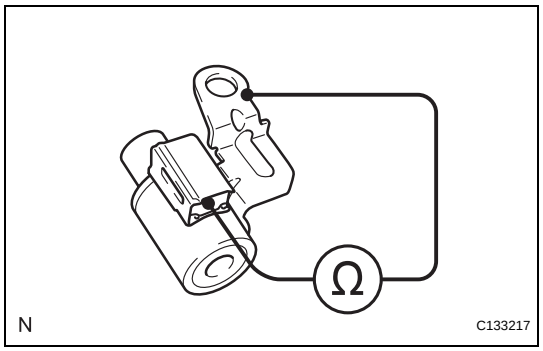
Tester Connection	Specified Condition 20°C (68°F)
6 (SL) - Body ground	11 to 15 Ω

AX

OK → **Go to step 4**

NG

3 CHECK SHIFT SOLENOID VALVE SL (RESISTANCE)



(a) Remove the shift solenoid valve SL.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

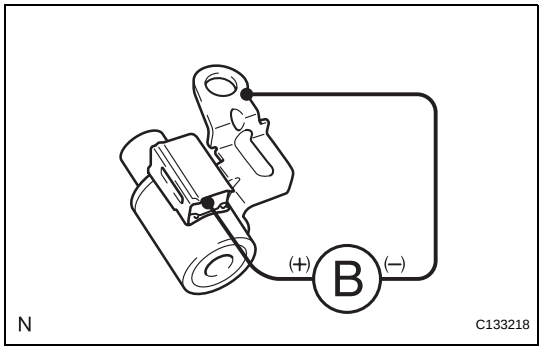
Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (SL) - Solenoid Body (SL)	11 to 15 Ω

NG → **REPLACE SHIFT SOLENOID VALVE SL**

OK

REPLACE TRANSMISSION WIRE

4	CHECK SHIFT SOLENOID VALVE SL (OPERATION)



(a) Remove the shift solenoid valve SL.
(b) Connect a positive (+) lead to the terminal of the solenoid connector, and a negative (-) lead to the solenoid body.
OK:
The solenoid valve makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL**

OK

5	CHECK TRANSMISSION VALVE BODY ASSEMBLY

OK:
There are no foreign objects on each valve and they operate smoothly.

NG → **REPLACE TRANSMISSION WIRE**

OK

6	CHECK TORQUE CONVERTER CLUTCH ASSEMBLY

OK:
The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0746	Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1)

SYSTEM DESCRIPTION

The TCM uses the vehicle speed signal to determine the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear).
Then the TCM compares the actual gear with the shift schedule in the TCM memory to detect mechanical problems of the shift solenoid valves and valve body.

DTC No.	DTC Detecting Condition	Trouble Area
P0746	The engine revs freely when 1st, 2nd, 3rd, or 4th gear is requested (2-trip detection logic). When either of the following is detected twice (2-trip detection logic): • When 5th gear is requested, 4th gear is engaged. • When 6th gear is requested, 4th gear is engaged	• Shift solenoid valve SL1 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The TCM commands gear shifts by turning the shift solenoid valves on or off. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the TCM detects the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear position). When the gear position commanded by the TCM and the actual gear position are not the same, the TCM illuminates the MIL.

MONITOR STRATEGY

Related DTCs	P0746: Shift solenoid valve SL1 OFF malfunction Shift solenoid valve SL1 ON malfunction
Required sensors/Components	Shift solenoid valve SL1, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	ON malfunction: 0.8 sec. OFF malfunction: 0.5 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

ALL:

The monitor will run whenever this DTC is not present.	P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve (range))
Transmission range	"D"
TFT (Transmission fluid temperature)	Above -10°C (14°F)
ECT sensor circuit	Circuit is not malfunctioning
Turbine speed sensor circuit	Circuit is not malfunctioning
Intermediate shaft speed sensor circuit	Circuit is not malfunctioning
Knock control sensor circuit	Circuit is not malfunctioning
Shift solenoid valve SL1 circuit	Circuit is not malfunctioning
Shift solenoid valve SL2 circuit	Circuit is not malfunctioning
Shift solenoid valve SL3 circuit	Circuit is not malfunctioning
Shift solenoid valve SL4 circuit	Circuit is not malfunctioning
CAN communication circuit	Circuit is not malfunctioning
Electronic throttle system	Circuit is not malfunctioning

OFF malfunction:

TCM selected gear	1st, 2nd, 3rd or 4th
TCM indicated pressure value of SL1	1,200 kPa
Throttle valve opening angle	3% or more

ON malfunction:

TCM selected gear	5th or 6th
Vehicle speed	1.2 mph (2 km/h) or more
ETC (Engine coolant temperature)	40°C (104°F) or more
Throttle valve opening angle	4.5% or more at engine speed 2,000 rpm (Varies with engine speed)

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met:

OFF malfunction:

Turbine speed - Output speed x Gear ratio	1,000 or more

ON malfunction:

Input (turbine) speed/Intermediate shaft speed when output speed less than 1,000 rpm	0.998 to 1.138

INSPECTION PROCEDURE

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0746)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0746" is output	A
"P0746" and other DTCs	B

HINT:
If a solenoid is stuck OFF, DTCs for several solenoids including the malfunctioning solenoid will be detected.

A → **Go to step 3**

B

2	PERFORM ACTIVE TEST BY SHIFT

NOTICE:
This test should always be performed with at least 2 people.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SHIFT".

HINT:
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables confirmation of the problem (See page AX-39).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Others] • Press "←" button: Shift up • Press "→" button: Shift down	Possible to check the operation of the shift solenoid valves.

NOTICE:
- **This test can be conducted when the vehicle is stopped.**
- **When shifting gears using the Active Test function, do not operate the accelerator pedal for 2 seconds before and after shifting gears.**

HINT:
The shift position commanded by the TCM is shown in the DATA LIST/SHIFT display on the intelligent tester.

(d) Check the vehicle speed and the gear position when the engine speed is 1,000 rpm.

HINT:
Because the torque converter clutch has not engaged, it may be difficult to obtain the speeds specified in 4th, 5th, and 6th gear, however a difference of speed should still be evident following each gear change.

Standard

1st	2nd	3rd	4th	5th	6th
5 to 7.5 mph (8 to 12 km/h)	9.3 to 11.8 mph (15 to 19 km/h)	13.0 to 15.5 mph (21 to 25 km/h)	19.3 to 21.7 mph (31 to 35 km/h)	27.3 to 29.8 mph (44 to 48 km/h)	32.3 to 34.8 mph (52 to 56 km/h)

(e) Compare the TCM gear shift command and the actual gear position.

Result

Actuator gear position under malfunction		TCM gear shift command						Proceed to
		1st	2nd	3rd	4th	5th	6th	
Shift solenoid SL1	Stuck ON	1st	2nd	3rd	4th	4th	4th	A

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)

DESCRIPTION

AX

Shifting from 1st to 6th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, SL4 and SL which is controlled by the TCM. If an open or short circuit occurs in any of the shift solenoid valves, the TCM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (See page AX-39).

DTC No.	DTC Detection Condition	Trouble Area
P0748	The TCM checks for an open or short in the shift solenoid valve SL1 circuit while driving and shifting between 4th and 5th gears. (1-trip detection logic) • Output signal duty equals 100%. (NOTE: SL1 output signal duty is less than 100% under normal condition.)	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • TCM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL1 circuit. The TCM causes gear shifts to occur by turning the shift solenoid valves on or off. When there is an open or short circuit in any shift solenoid valve circuit, the TCM detects the problem and illuminates the MIL and stores the DTC. The TCM also performs the fail-safe function and turns the other normal shift solenoid valves on or off. (In case of an open or short circuit, the TCM stops sending current to the circuit.)
While driving and shifting between 4th and 5th gears, if the TCM detects an open or short in the shift solenoid valve SL1 circuit, the TCM determines there is a malfunction (See page AX-39).

MONITOR STRATEGY

Related DTCs	P0748: Shift solenoid valve SL1/Range check
Required sensors/Components	Shift solenoid valve SL1

The monitor will run whenever this DTC is not present	None
Ignition switch	ON
Starter	OFF

Malfunction (A):

Battery voltage	12 V or more

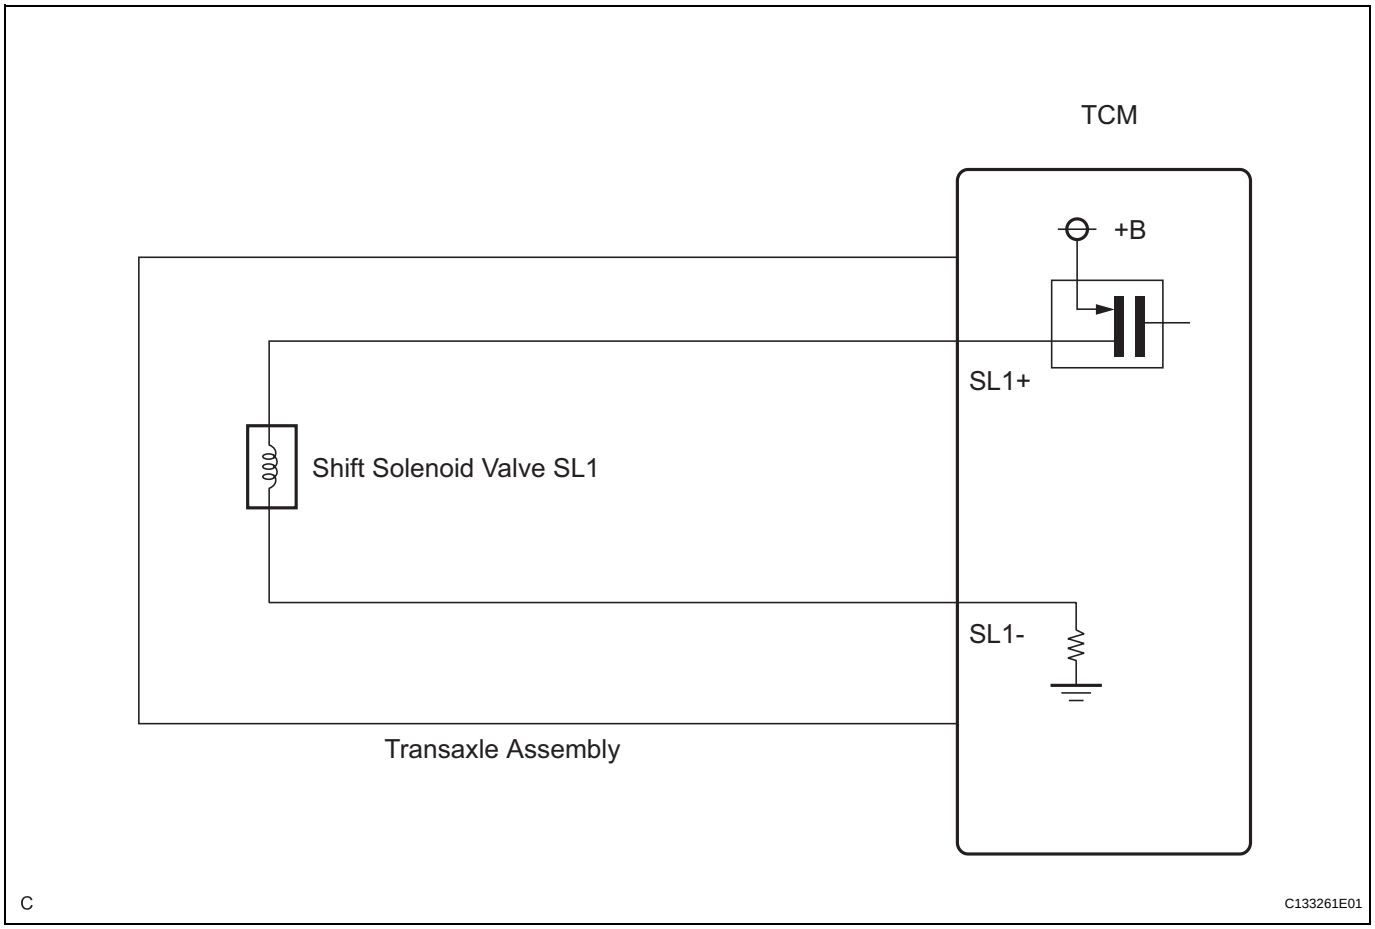
Malfunction (B):

Battery voltage	10 V or more and less than 12 V
CPU commanded duty	Less than 75%

TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100% or more

WIRING DIAGRAM



INSPECTION PROCEDURE

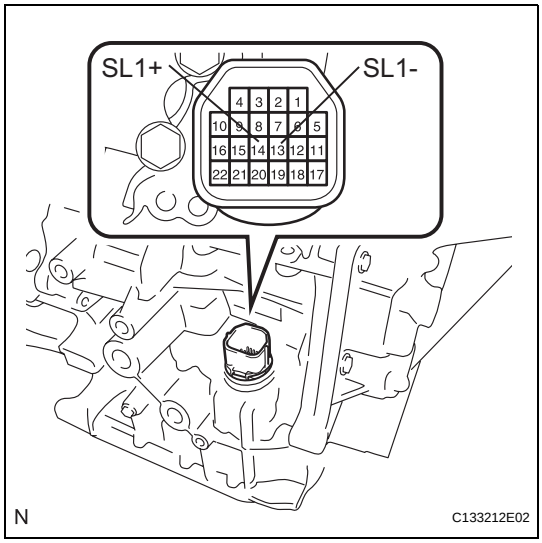
HINT:

The shift solenoid valve SL1 is turned on or off automatically normally when the shift lever is in the D position:

TCM command gearshift	1st	2nd	3rd	4th	5th	6th
Shift solenoid valve SL1	ON	ON	ON	ON	OFF	OFF

AX

1 INSPECT TRANSMISSION WIRE (SL1)



(a) Remove the TCM from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
14 (SL1+) - 13 (SL1-)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Check for short

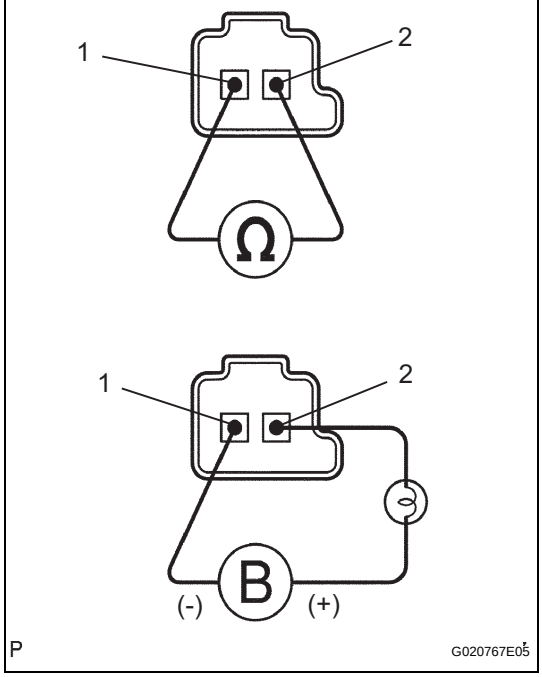
Tester Connection	Specified Condition
14 (SL1+) - Body ground	10 kΩ or higher
13 (SL1-) - Body ground	10 kΩ or higher

OK → REPLACE TCM

NG

2 INSPECT SHIFT SOLENOID VALVE SL1

Shift Solenoid Valve SL1:



(a) Remove the shift solenoid valve SL1.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating sound.

NG → REPLACE SHIFT SOLENOID VALVE SL1

OK

REPLACE TRANSMISSION WIRE

DTC	P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)

SYSTEM DESCRIPTION

The TCM uses the vehicle speed signal to detect the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear).
Then the TCM compares the actual gear with the shift schedule in the TCM memory to detect shift solenoid valves and valve body mechanical problems.

DTC No.	DTC Detecting Condition	Trouble Area
P0776	The engine revs freely when 4th, 5th, or 6th gear is requested (2-trip detection logic). When any of the following is detected twice (2-trip detection logic): • When 1st gear is requested, 4th gear is engaged. • When 2nd gear is requested, 4th gear is engaged. • When 3rd gear is requested, 4th gear is engaged.	• Shift solenoid valve SL2 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The TCM commands gear shifts by turning the shift solenoid valves on or off. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the TCM detects the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear position). When the gear position commanded by the TCM and the actual gear position are not the same, the TCM illuminates the MIL and stores the DTC.

INSPECTION PROCEDURE

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0776)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0776" is output	A
"P0776" and other DTCs	B

HINT:
If a solenoid is stuck OFF, DTCs for several solenoids including the malfunctioning solenoid will be detected.

A	Go to step 3

B

AX

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

NOTICE:
This test should always be performed with at least 2 people.

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SHIFT".
HINT:
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables confirm of the problem (See page AX-39).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Others] • Press "←" button: Shift up • Press "→" button: Shift down	Possible to check the operation of the shift solenoid valves.

NOTICE:
- **This test can be conducted when the vehicle is stopped.**
- **When shifting gears using the Active Test function, do not operate the accelerator pedal for 2 seconds before and after shifting gears.**

HINT:
The shift position commanded by the TCM is shown in the DATA LIST/SHIFT display on the intelligent tester.

(d) Check the vehicle speed and the gear position when the engine speed is 1,000 rpm.
HINT:
Because the torque converter clutch has not engaged, it may be difficult to obtain the speeds specified in 4th, 5th, and 6th gear, however a difference of speed should still be evident following each gear change.

Standard

1st	2nd	3rd	4th	5th	6th
5 to 7.5 mph (8 to 12 km/h)	9.3 to 11.8 mph (15 to 19 km/h)	13.0 to 15.5 mph (21 to 25 km/h)	19.3 to 21.7 mph (31 to 35 km/h)	27.3 to 29.8 mph (44 to 48 km/h)	32.3 to 34.8 mph (52 to 56 km/h)

(e) Compare the TCM gear shift command and the actual gear position.

AX

Result

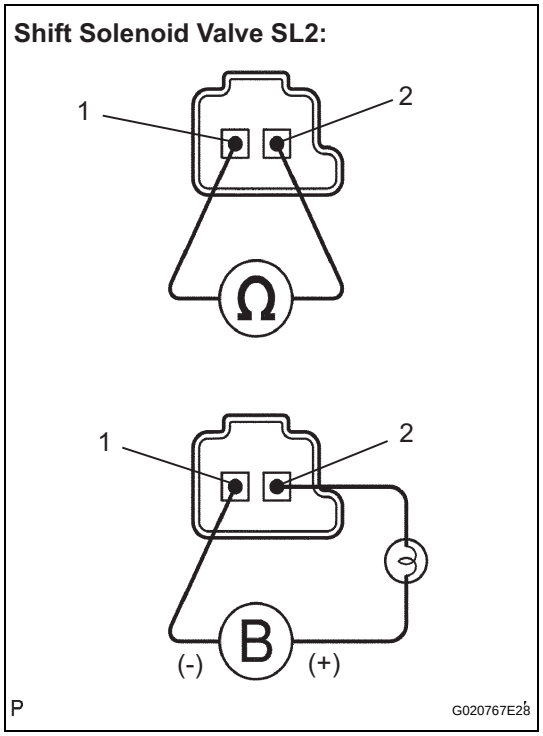
3	INSPECT SHIFT SOLENOID VALVE (SL2)



(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE (SL2)**

OK

4	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

5	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)

DESCRIPTION

AX

Shifting from 1st to 6th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, SL4 and SL which is controlled by the TCM. If an open or short circuit occurs in any of the shift solenoid valves, the TCM controls the remaining normal shift solenoid valve to allow the vehicle to be operated smoothly (See page AX-39).

DTC No.	DTC Detection Condition	Trouble Area
P0778	The TCM checks for an open or short in the shift solenoid valve SL2 circuit while driving and shifting gears. (1-trip detection logic) • Output signal duty equals to 100%. (NOTE: SL2 output signal duty is less than 100% under normal condition.)	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • TCM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL2 circuit. The TCM commands gear shifts by turning the shift solenoid valves on or off. When there is an open or short circuit in any of the shift solenoid valve circuits, the TCM detects the problem and illuminates the MIL and stores the DTC. The TCM also performs the fail-safe function and turns the other normal shift solenoid valves on or off. (In case of an open or short circuit, the TCM stops sending current to the circuit.)
While driving and shifting gears, if the TCM detects an open or short in the shift solenoid valve SL2 circuit, the TCM determines there is a malfunction (See page AX-39).

MONITOR STRATEGY

Related DTCs	P0778: Shift solenoid valve SL2/Range check
Required sensors/Components	Shift solenoid valve SL2
Frequency of operation	Continuous
Duration	1 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

ALL:

The monitor will run whenever this DTC is not present	None
Ignition switch	ON
Starter	OFF

Malfunction (A):

Battery voltage	12 V or more

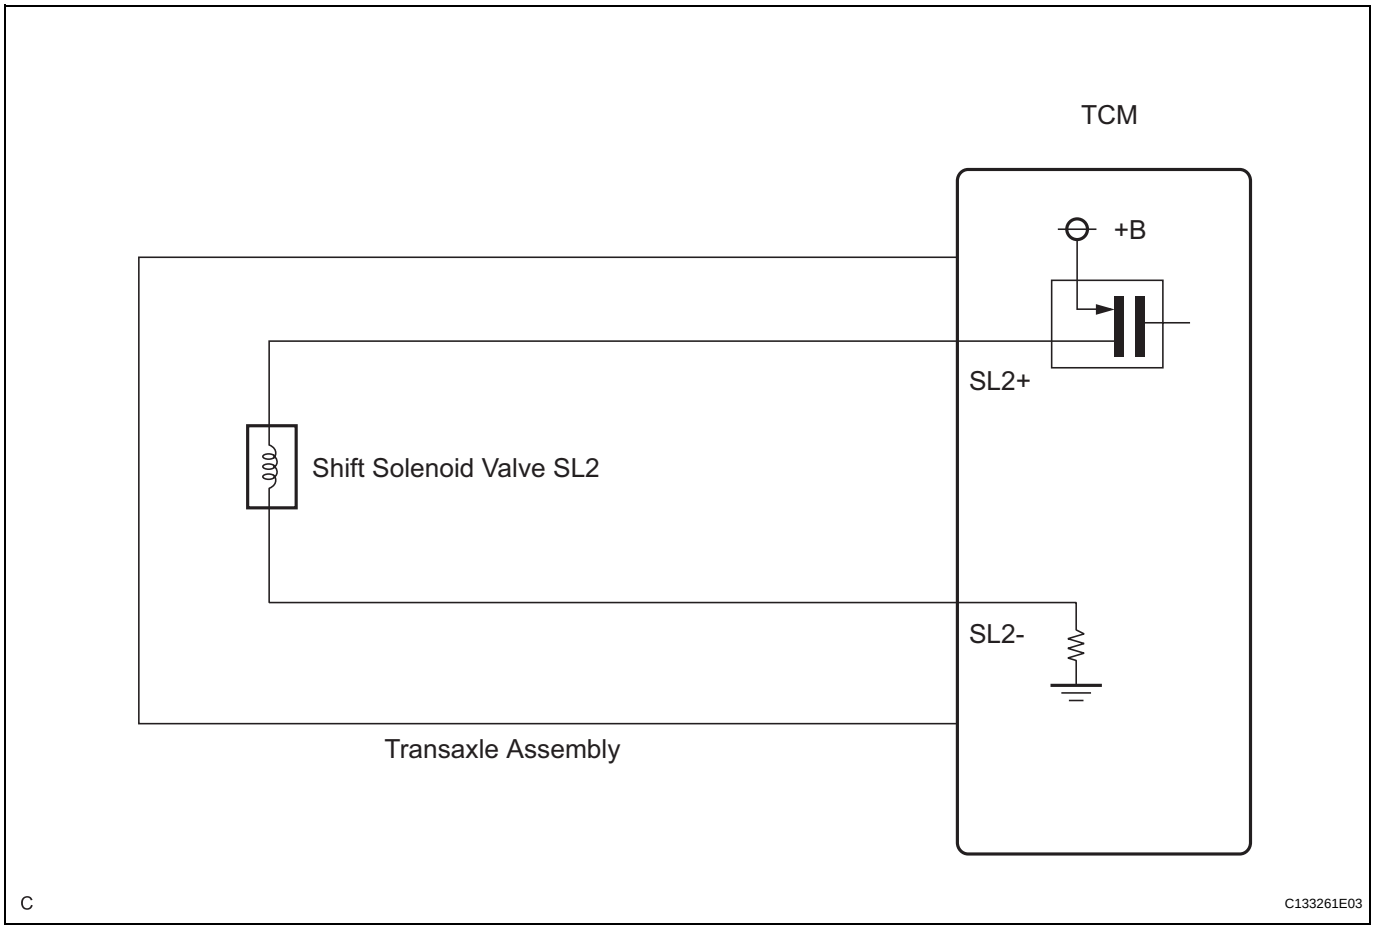
Malfunction (B):

Battery voltage	10 V or more and less than 12 V
CPU commanded duty	Less than 75%

TYPICAL MALFUNCTION THRESHOLDS

Output signal duty	100% or more

WIRING DIAGRAM



INSPECTION PROCEDURE

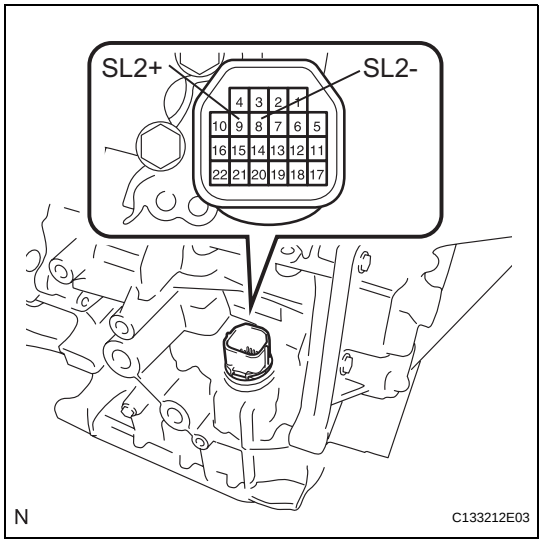
HINT:

The shift solenoid valve SL2 is turned on or off automatically when the shift lever is in the D position:

TCM command gearshift	1st	2nd	3rd	4th	5th	6th
Shift solenoid valve SL2	OFF	OFF	OFF	ON	ON	ON

AX

1 INSPECT TRANSMISSION WIRE (SL2)



(a) Remove the TCM from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
9 (SL2+) - 8 (SL2-)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Check for short

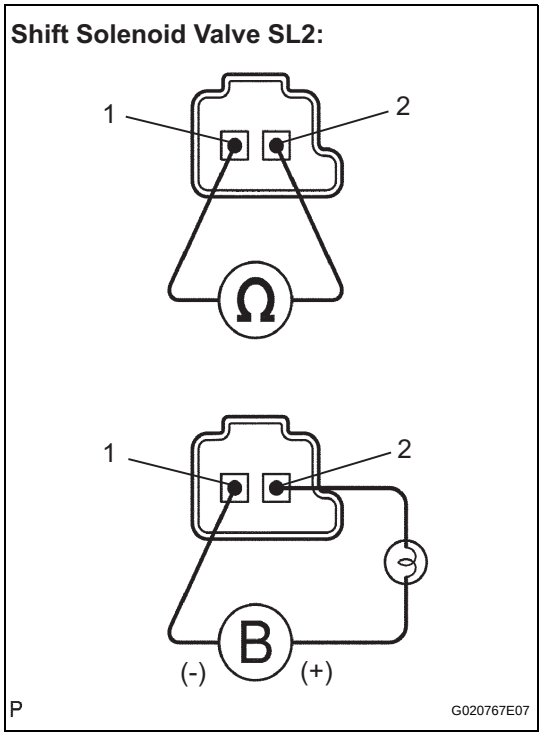
Tester Connection	Specified Condition
9 (SL2+) - Body ground	10 kΩ or higher
8 (SL2-) - Body ground	10 kΩ or higher

OK → REPLACE TCM

NG

2 INSPECT SHIFT SOLENOID SL2

Shift Solenoid Valve SL2:



(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating sound.

NG → REPLACE SHIFT SOLENOID SL2

OK

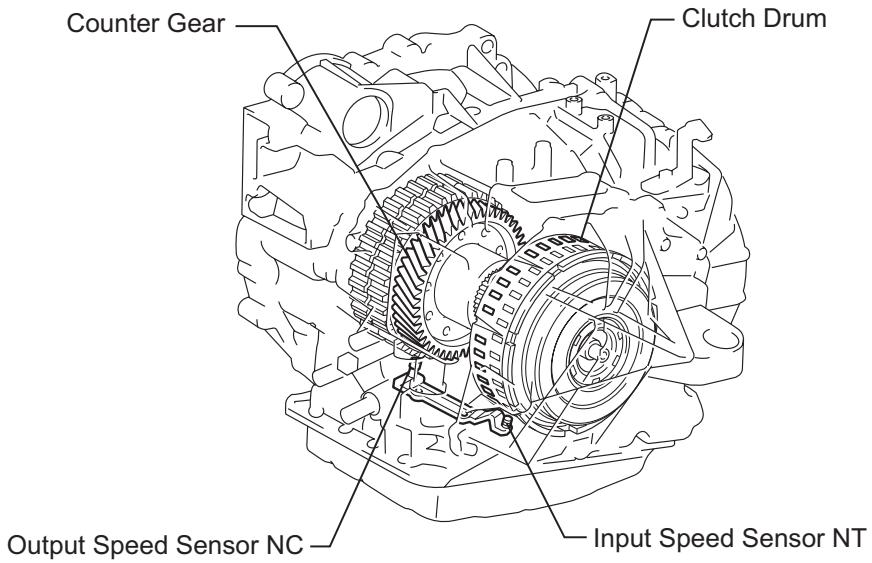
REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0791	Intermediate Shaft Speed Sensor "A" Circuit

DTC	P0793	Intermediate Shaft Speed Sensor "A"

DESCRIPTION

This sensor detects the rotation speed of the turbine which shows the input speed of transaxle. By comparing the input turbine speed signal (NC) with the counter gear speed sensor signal (NC), the TCM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions, thus, providing smooth gear shift.



N C133216E01

DTC No.	DTC Detection Condition	Trouble Area
P0791	When the speed sensor input voltage is either more than 1.9 V or less than 0.1 V for 2 seconds or more.	• Transmission revolution sensor (speed sensor NC) • TCM
P0793	When the vehicle speed is 15.5 mph (25 km/h) or higher, the counter gear speed is less than 300 rpm for 2 seconds or more.	

MONITOR DESCRIPTION

The NT terminal of the TCM detects a revolution signal from the speed sensor (NT) (input RPM). The TCM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).
While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the input shaft revolution is less than 300 rpm *1although the output shaft revolution is more than 1,000 rpm *2, the TCM interprets this as a fault, illuminates the MIL and stores the DTC.
*1: Pulse is not output or is irregularly output.
*2: The vehicle speed is 31 mph (50 km/h) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NT) /Verify pulse input
Required sensors/Components	Speed sensor (NT), Speed sensor (NC)
Frequency of operation	Continuous

Duration	5 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve (range))
Vehicle speed	15.5 mph (25 km/h) or more
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

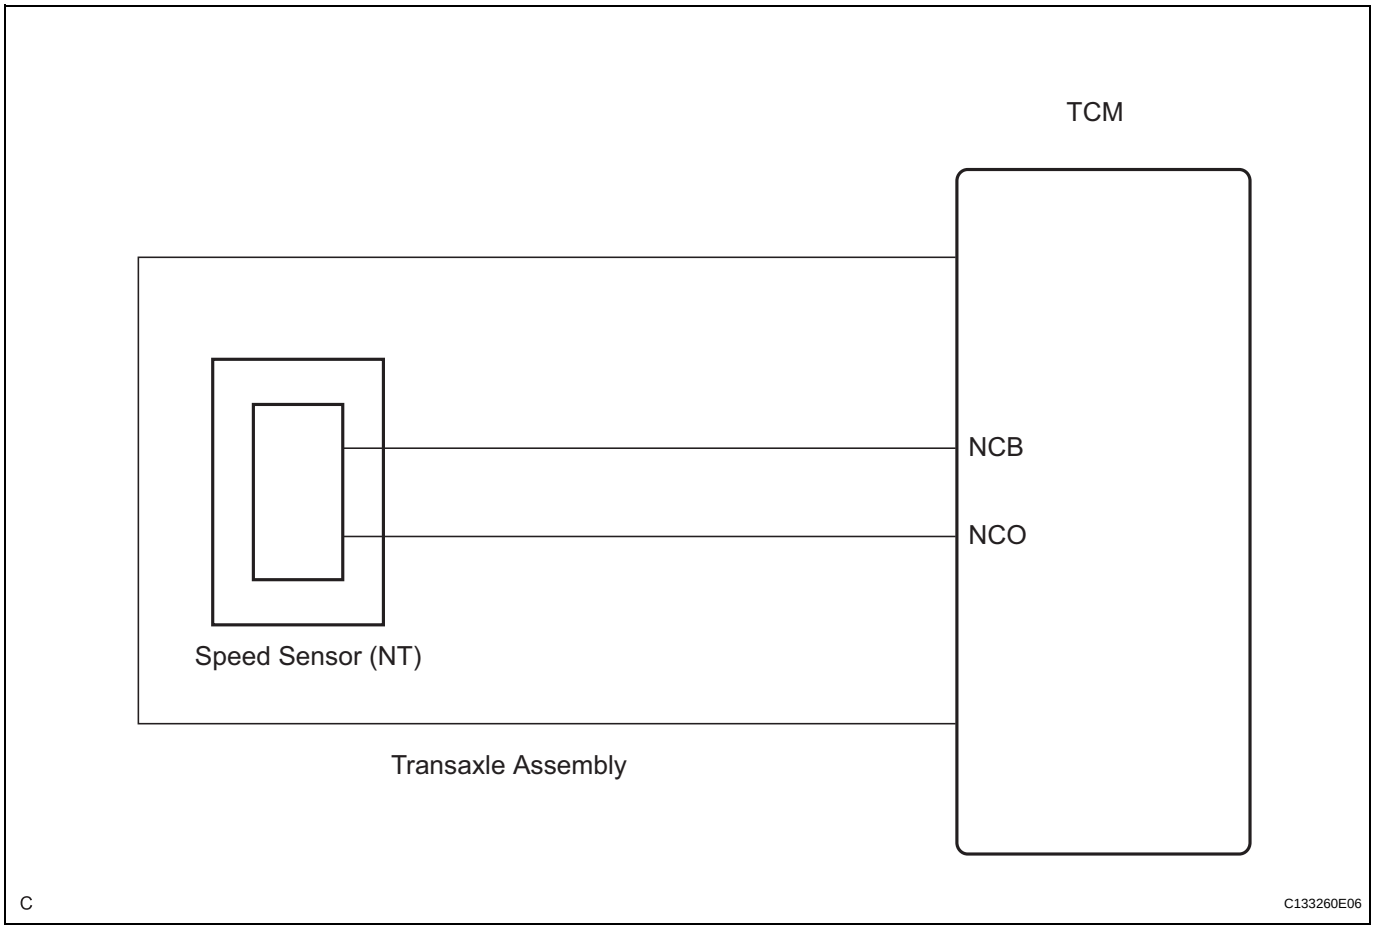
P0791:

Sensor voltage	Less than 0.1 V or more than 1.9 V

P0793:

Sensor signal rpm	Less than 300 rpm

WIRING DIAGRAM



INSPECTION PROCEDURE

1. DATA LIST

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty.

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the value of switches, sensors, actuators and other items without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.

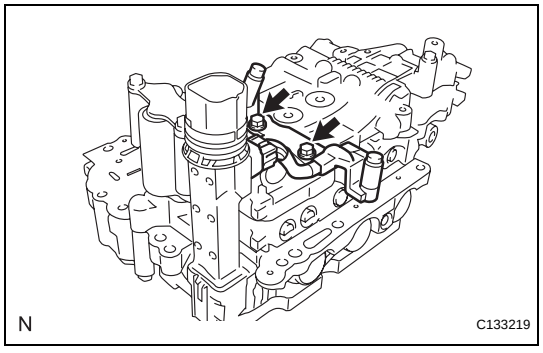
(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Enter the following items: "DIAGNOSIS / ENHANCED OBD / DATA LIST".
(g) According to the display on the tester, read "DATA LIST".

Item	Measurement Item/ Range (display)	Normal Condition
SPD (NC)	Counter Gear Speed/ display: 50 r/min	HINT: • Lock-up ON (after warming up the engine); input turbine speed (NC) is equal to the engine speed. • Lock-up OFF (Idling at N position); input turbine speed (NC) is nearly equal to the engine speed.

HINT:

- SPD (NC) is always 0 while driving: Open or short in the sensor or circuit.
- SPD (NC) is always more than 0 and less than 300 rpm while driving the vehicle at 31 mph (50 km/h) or more: Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1	INSPECT SPEED SENSOR (SENSOR INSTALLATION)



(a) Make sure that the connector is properly connected, and check the speed sensor installation.

OK:

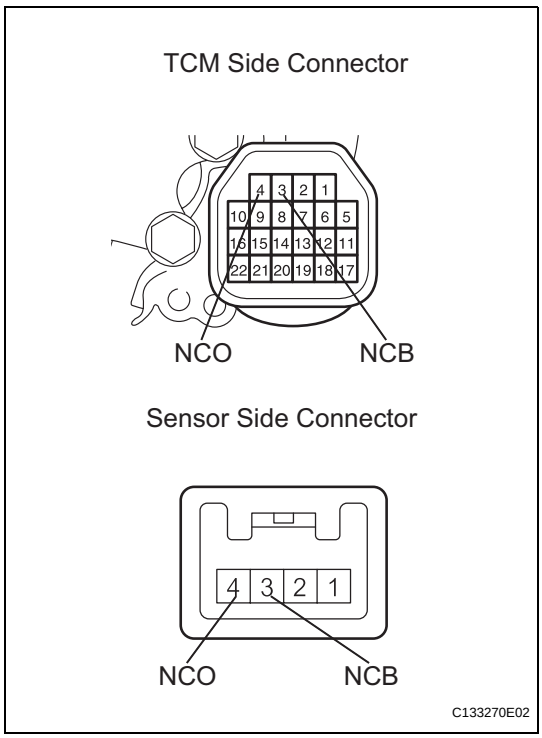
The installation bolts are tightened properly and there is no clearance between the sensor and transaxle case.

NG → **REPAIR OR REPLACE SPEED SENSOR**

OK

AX

2	CHECK TRANSMISSION WIRE



(a) Remove the TCM.
(b) Disconnect the speed sensor connector from the transmission wire.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Condition	Specified Condition
NCO - NCO	Below 1 Ω
NCB - NCB	Below 1 Ω
NCO - NCB	10 kΩ or higher

NG → REPLACE TRANSMISSION WIRE

OK

3	REPLACE SPEED SENSOR

NEXT

4	CHECK IF DTC OUTPUT RECURS (SEE IF DTC P0791 AND/OR P0793 IS OUTPUT AGAIN)

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the intelligent tester main switch ON.
(c) Perform the monitor drive pattern (See page AX-27).
(d) When you use the intelligent tester:
Select the item "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(e) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0791 or P0793" is output	A
No outpur	B

B → END

A

REPLACE TCM

DTC	P0796	Pressure Control Solenoid "C" Performance (Shift Solenoid Valve SL3)

SYSTEM DESCRIPTION

AX

The TCM uses the vehicle speed signal to determine the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear).
Then the TCM compares the actual gear with the shift schedule in the TCM memory to detect shift solenoid valves and valve body mechanical problems.

DTC No.	DTC Detecting Condition	Trouble Area
P0796	The engine revs freely when 2nd or 6th gear is requested (2-trip detection logic). When the following is detected twice (2-trip detection logic): • When 1st gear is requested, 2nd gear is engaged.	• Shift solenoid valve SL3 remains open or closed. • Valve body is blocked. • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The TCM commands gear shifts by turning the shift solenoid valves on or off. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the TCM detects the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear position). When the gear position commanded by the TCM and the actual gear position are not the same, the TCM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0796: Shift solenoid valve SL3/OFF malfunction Shift solenoid valve SL3/ON malfunction
Required sensors/Components	Shift solenoid valve SL3, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	OFF malfunction (A) and (B) 0.5 sec. OFF malfunction (C) and (D) 0.8 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

The monitor will run whenever this DTC is not present.	P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve (range))
Transmission range	"D"
TFT (Transmission fluid temperature)	Above -10°C (-14°F)
Knock control sensor circuit	Circuit is not malfunctioning
ECT sensor circuit	Circuit is not malfunctioning
Turbine speed sensor circuit	Circuit is not malfunctioning
Intermediate shaft speed sensor circuit	Circuit is not malfunctioning
Shift solenoid valve SL1 circuit	Circuit is not malfunctioning
Shift solenoid valve SL2 circuit	Circuit is not malfunctioning
Shift solenoid valve SL3 circuit	Circuit is not malfunctioning
Shift solenoid valve SL4 circuit	Circuit is not malfunctioning
CAN communication system	Circuit is not malfunctioning

Electronic throttle system	Circuit is not malfunctioning

OFF malfunction (A):

TCM selected gear	2nd
Throttle valve opening angle	3% or more
TCM indicated pressure value of SL1	1,200 kPa
TCM indicated pressure value of SL2	0 kPa
TCM indicated pressure value of SL3	1,200 kPa

OFF malfunction (B):

TCM selected gear	6th
Throttle valve opening angle	3% or more
TCM indicated pressure value of SL1	0 kPa
TCM indicated pressure value of SL2	1,200 kPa
TCM indicated pressure value of SL3	1,200 kPa

OFF malfunction (C):

TCM selected gear	2nd
Throttle valve opening angle:	
(When condition "D" is not detected)	4.5% or more at engine speed 2,000 rpm (condition varies with engine speed)
(When condition "D" is detected)	0.5% or more at engine speed 500 rpm (condition varies with engine speed)
ECT (engine coolant temperature)	40°C (104°F) or more

OFF malfunction (D):

Throttle valve opening angle	0.5% or more at engine speed 500 rpm (condition varies with engine speed)

ON malfunction:

TCM selected gear	1st
Vehicle speed	1.2 mph (2 km/h) or more
Engine speed - Turbine speed	50 rpm or more
ECT (engine coolant temperature)	Above 40°C (104°F)

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction (A) or (B) or ((C) and (D)), or ON malfunctions

2 detections are necessary per driving cycle:

1st detection; temporary flag ON

2nd detection; pending fault code ON

OFF malfunction (A):

Turbine speed - Output speed x 2nd gear ratio	1,000 rpm or more

OFF malfunction (B):

Turbine speed - Output speed x 6th gear ratio	1,000 rpm or more

OFF malfunction (C):

Input (turbine) speed/Intermediate shaft speed	3.304 to 7.724

OFF malfunction (D):

Input (turbine) speed/Intermediate shaft speed	3.304 to 7.724

ON malfunction:

Input (turbine) speed/Intermediate shaft speed	1.901 to 2.340

INSPECTION PROCEDURE

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0796)

AX

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0796" is output	A
"P0796" and other DTCs	B

HINT:
If a solenoid is stuck OFF , DTCs for several solenoids including the malfunctioning solenoid will be detected.

A → **Go to step 3**

B

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

NOTICE:
This test should always be performed with at least 2 people.
(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SHIFT".
HINT:
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AX-39).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Others] • Press "←" button: Shift up • Press "→" button: Shift down	Possible to check the operation of the shift solenoid valves.

NOTICE:
- **This test can be conducted when the vehicle is stopped.**
- **When shifting gears using the Active Test function, do not operate the accelerator pedal for 2 seconds before and after shifting gears.**

HINT:
The shift position commanded by the TCM is shown in the DATA LIST/SHIFT display on the intelligent tester.
(d) Check the vehicle speed and the gear position when the engine speed is 1,000 rpm.

HINT:
Because the torque converter clutch has not engaged, it may be difficult to obtain the speeds specified in 4th, 5th, and 6th gear, however a difference of speed should still be evident following each gear change.

Standard

1st	2nd	3rd	4th	5th	6th
5 to 7.5 mph (8 to 12 km/h)	9.3 to 11.8 mph (15 to 19 km/h)	13.0 to 15.5 mph (21 to 25 km/h)	19.3 to 21.7 mph (31 to 35 km/h)	27.3 to 29.8 mph (44 to 48 km/h)	32.3 to 34.8 mph (52 to 56 km/h)

(e) Compare the TCM gear shift command and the actual gear position.

Result

Actuator gear position under malfunction		TCM gear shift command						Proceed to
		1st	2nd	3rd	4th	5th	6th	
Shift solenoid SL1	Stuck ON	1st	2nd	3rd	4th	4th	4th	A
	Stuck OFF	N*1	N*1	N*1	N*1	5th	6th	
Shift solenoid SL2	Stuck ON	4th	4th	4th	4th	5th	6th	B
	Stuck OFF	1st	2nd	3rd	1st	N*1	N*1	
Shift solenoid SL3	Stuck ON	2nd	2nd	3rd	4th	5th	6th	C
	Stuck OFF	1st	1st	3rd	4th	5th	N*1	
Shift solenoid SL4	Stuck ON*3	3rd	3rd	3rd	4th	5th	5th	D
	Stuck OFF	1st	2nd	1st	4th	N*1	6th	
Shift solenoid SLT	Stuck ON	N*2	N*2	N*2	N*2	N*2	N*2	E
	Stuck OFF*3	1st	2nd	3rd	4th	5th	6th	

HINT:
- *1: Neutral
- *2: If the shift solenoid SLT is stuck on, the line pressure will be low. Therefore, the amount of torque that can be transmitted by each gear is lower than the normal limit. When the engine power exceeds this lowered limit, the engine speed will increase freely.
- *3: When shift solenoid SLT is stuck OFF, gear shifting is normal.

A → **GO TO DTC CHART (RELATED SHIFT SOLENOID VALVE (SL1) PERFORMANCE DTC P0746)**

B → **GO TO DTC CHART (RELATED SHIFT SOLENOID VAVLE (SL2) PERFORMANCE DTC P0776)**

D → **GO TO DTC CHART (RELATED SHIFT SOLENOID VALVE (SL4) PERFORMANCE DTC P2808)**

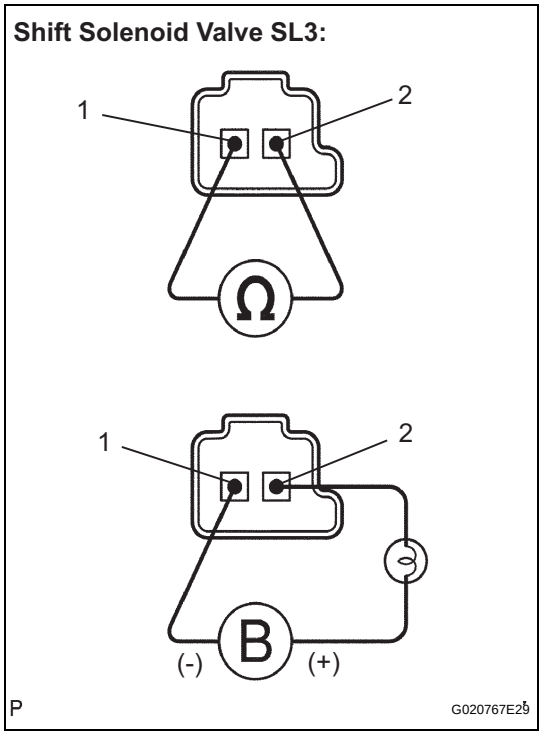
C

3	INSPECT SHIFT SOLENOID VALVE (SL3)

AX



(a) Remove the shift solenoid valve SL3.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE (SL3)**

OK

4	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

5	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0798	Pressure Control Solenoid "C" Electrical (Shift Solenoid Valve SL3)

DESCRIPTION

Shifting gears from 1st through 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3 and SL4 which are controlled by the TCM. If an open or short circuit occurs in any of the shift solenoid valves, the TCM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detecting Condition	Trouble Area
P0798	The TCM checks for an open or short in the shift solenoid valve SL3 circuit while driving and shifting gears. (1-trip detection logic) • Output signal duty equals to 100%. (NOTE: SL3 output signal duty is less than 100% under normal condition.)	• Open or short in shift solenoid valve SL3 circuit • Shift solenoid valve SL3 • TCM

MONITOR DESCRIPTION

The TCM commands gear shifts by turning the shift solenoid valves on or off. When there is an open or short circuit in any shift solenoid valve circuit, the TCM detects the problem and illuminates the MIL and stores the DTC. And the TCM performs the fail-safe function and turns the other normal shift solenoid valves on or off (In case of an open or short circuit, the TCM stops sending current to the circuit.)
(See page AX-39).

MONITOR STRATEGY

Related DTCs	P0798: Shift solenoid valve SL3/Range check
Required sensors/Components	Shift solenoid valve SL3
Frequency of operation	Continuous
Duration	1 sec.

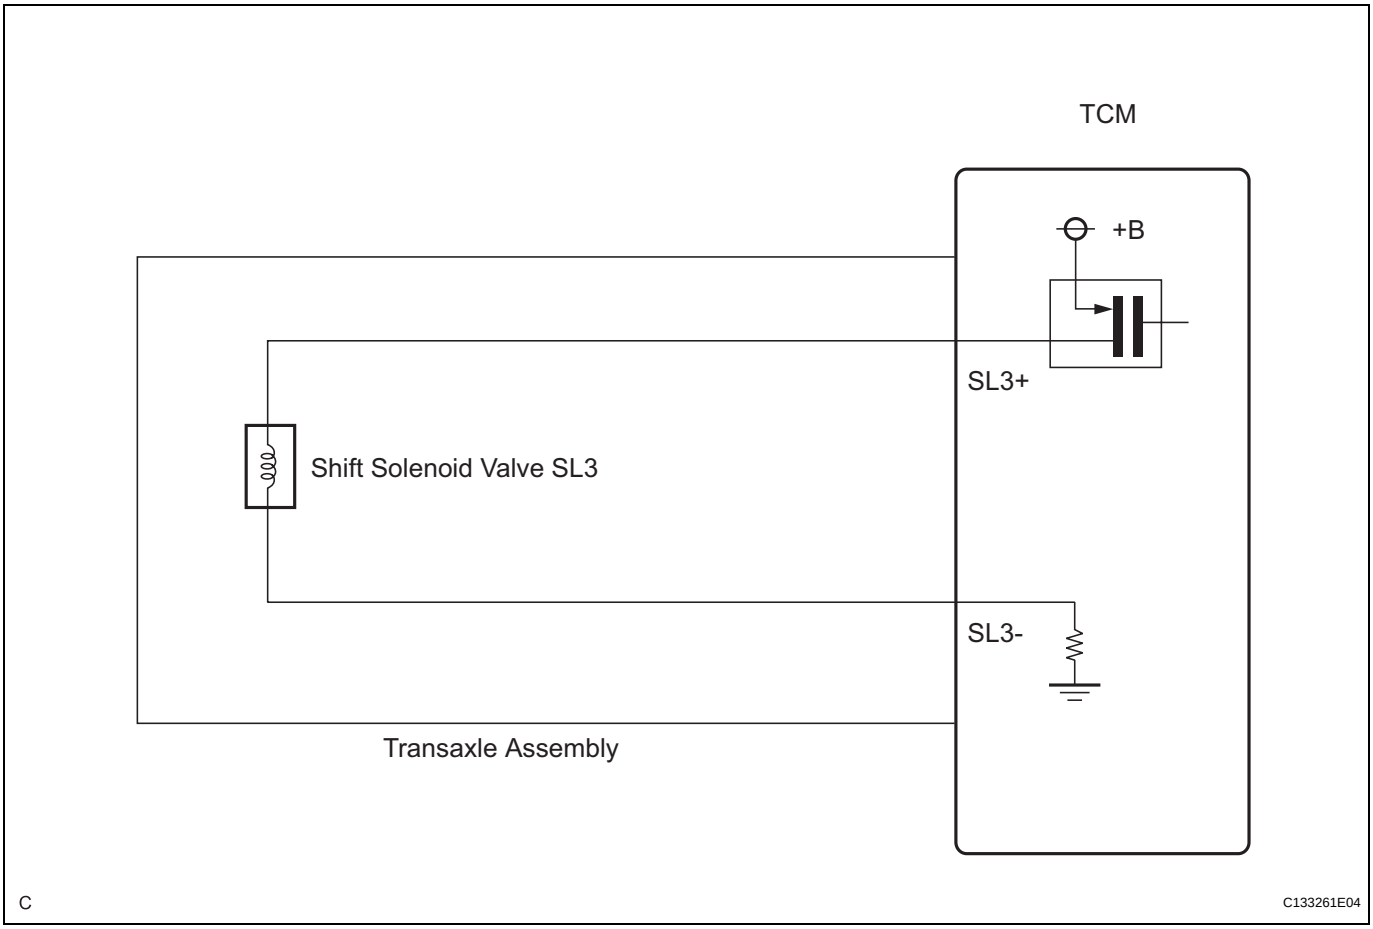
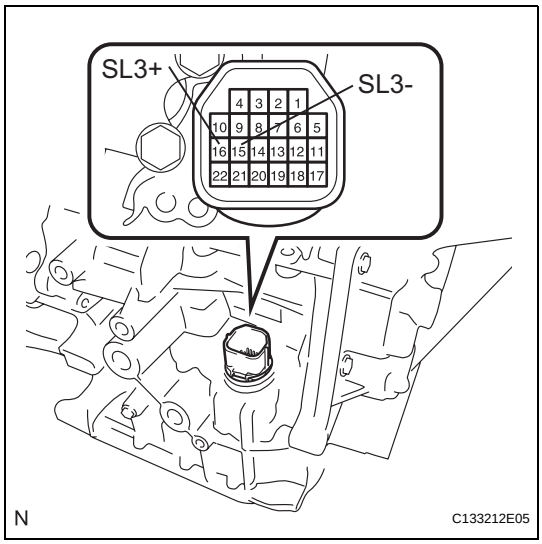
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SL3)



(a) Remove the TCM from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
16 (SL3+) - 15 (SL3-)	5.0 to 5.6 Ω

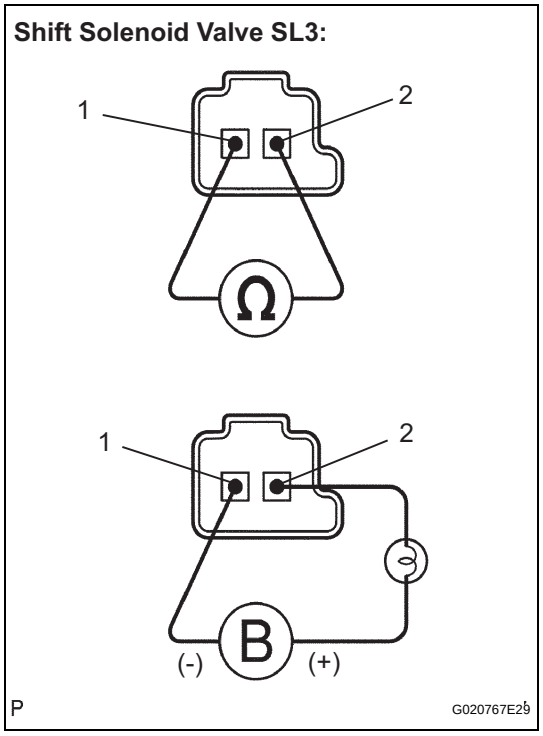
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Check for short

Tester Connection	Specified Condition
16 (SL3+) - Body ground	10 kΩ or higher
15 (SL3-) - Body ground	10 kΩ or higher

OK	REPLACE TCM

NG

2	INSPECT SHIFT SOLENOID VALVE (SL3)



(a) Remove the shift solenoid valve SL3.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead throgh a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE (SL3)**

OK

REPLACE TRANSMISSION WIRE

AX

DTC	P0872	Transmission Fluid Pressure Switch No.1 Circuit Low

DTC	P0873	Transmission Fluid Pressure Switch No.1 Circuit High

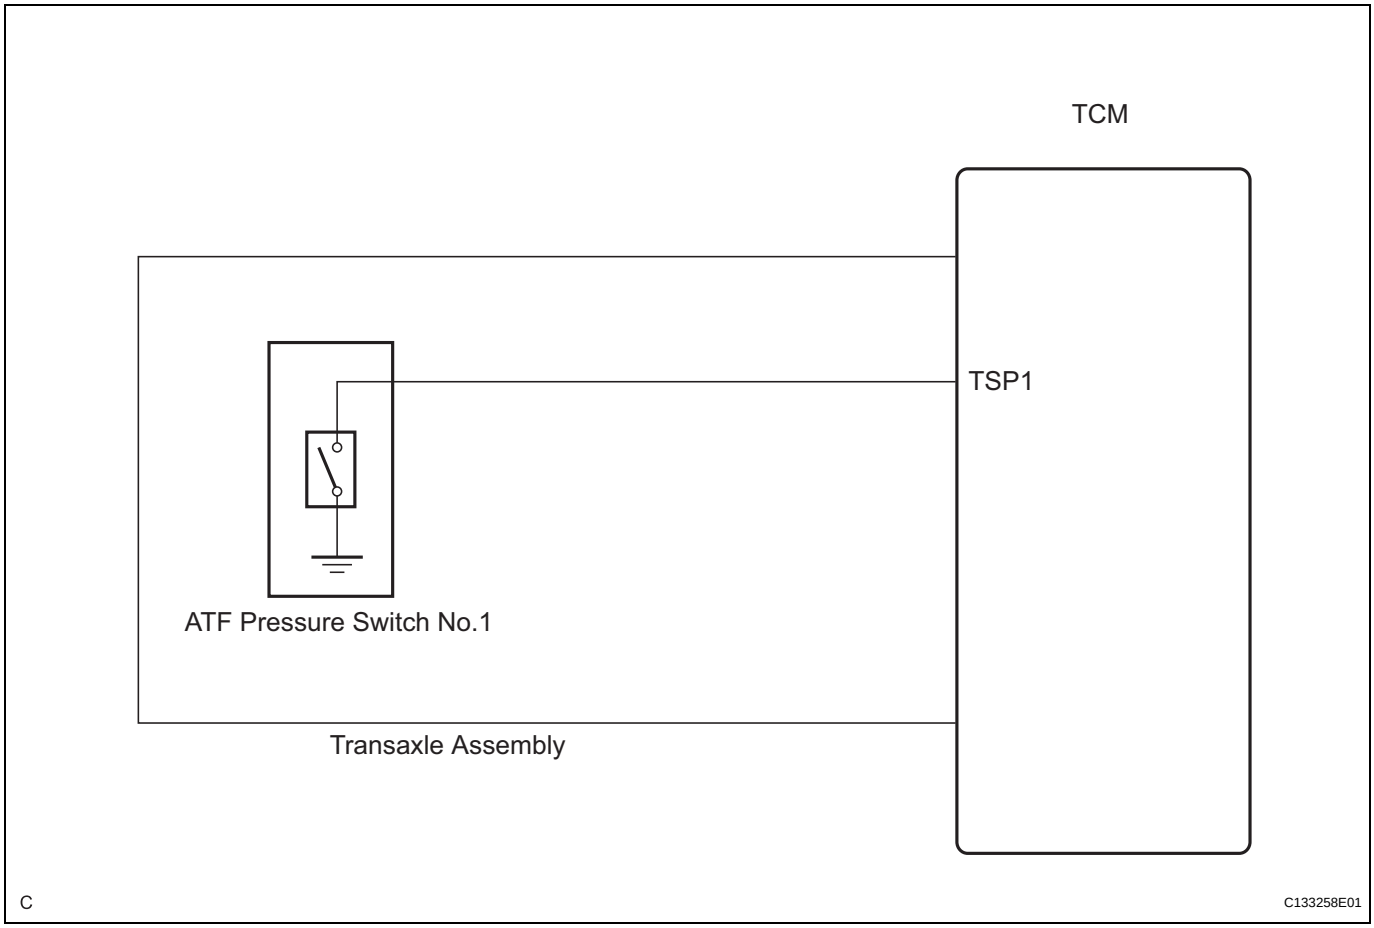
AX

DESCRIPTION

ATF pressure switch No. 1 is installed in the shift solenoid valve ATF output passage. This switch is used to identify the malfunctioning part when a fail-safe operation is performed. If the shift solenoid valve malfunctions when the ATF pressure switch has a malfunction, a fail-safe operation will be performed. This fail-safe operation is different from the fail-safe operation performed when the solenoid valve malfunctions and the ATF pressure switch is normal.

DTC No.	DTC Detecting Condition	Trouble Area
P0872	ATF pressure switch No. 1 OFF is detected twice when any of the gears from 1st to 4th engages normally.	• ATF temperature sensor assembly (ATF pressure switch No. 1) • Transmission wire • TCM
P0873	ATF pressure switch No. 1 ON is detected twice when 5th or 6th gear engages normally.	

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0872 OR P0873)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P0873" is output	A
Only "P0872" is output	B
"P0872 or P0873" and other DTCs	C

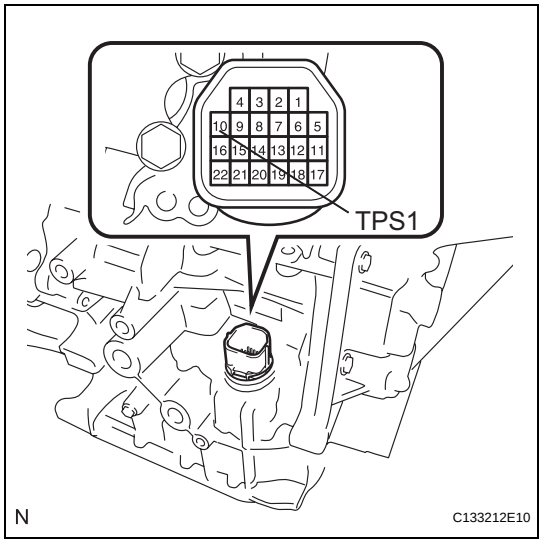
HINT:
If a solenoid is stuck OFF, DTCs for several solenoids including the malfunctioning solenoid will be detected.

B → **Go to step 4**

C → **GO TO DTC CHART**

A

2	CHECK TRANSMISSION WIRE (SHORT TO GROUND)



(a) Remove the TCM.
(b) Measure the resistance according to the value(s) in the table below.

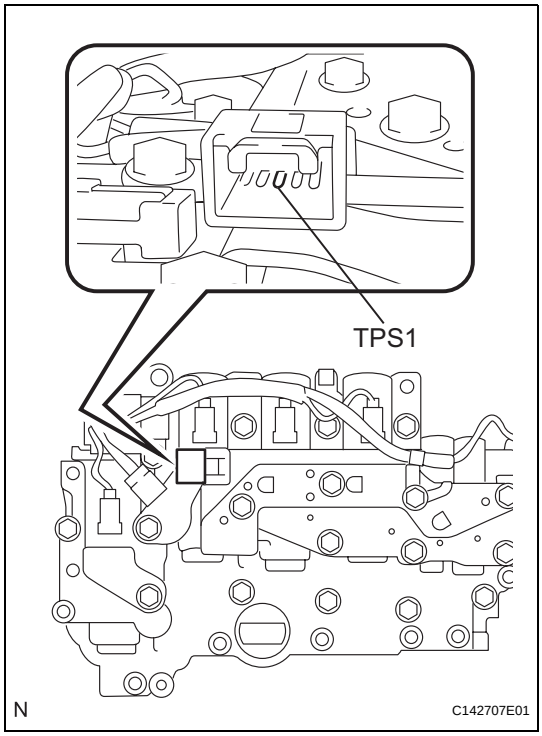
Standard resistance

Tester Condition	Specified Condition
10 (TPS1) - Body ground (Valve body assembly)	10 kΩ or higher

OK → **REPLACE TCM**

NG

3	CHECK ATF TEMPERATURE SENSOR ASSEMBLY (ATF PRESSURE SWITCH NO. 1)



(a) Disconnect the transmission wire connector from the ATF temperature sensor assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

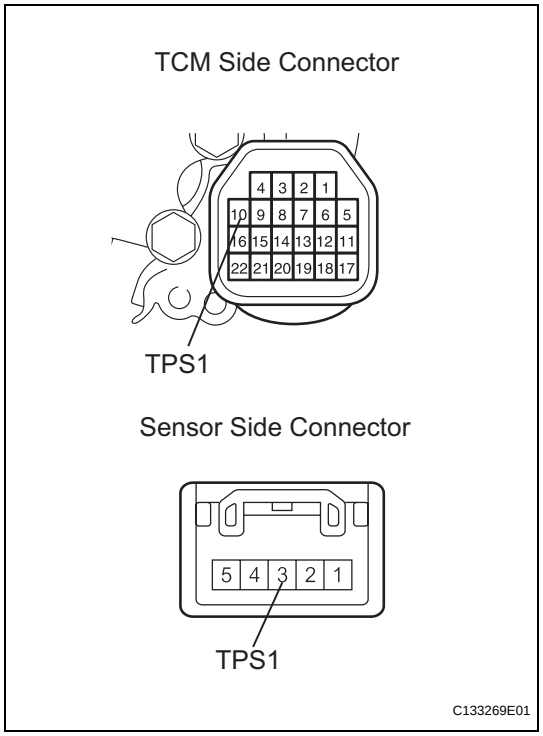
Tester Condition	Specified Condition
3 (TPS1) - Body ground (Valve body assembly)	10 kΩ or higher

NG → **REPLACE ATF TEMPERATURE SENSOR ASSEMBLY**

OK

REPLACE TRANSMISSION WIRE

4	CHECK TRANSMISSION WIRE



(a) Remove the TCM.
(b) Disconnect the connector from the ATF temperature sensor assembly.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Condition	Specified Condition
10 (TPS1) - 3 (TPS1)	Below 1 Ω
10 (TPS1) or 3 (TPS1) - Body ground (Valve body assembly)	10 kΩ or higher

NG → **REPLACE TRANSMISSION WIRE**

OK

REPLACE ATF TEMPERATURE SENSOR ASSEMBLY

AX

DTC	P0877	Transmission Fluid Pressure Switch No.2 Circuit Low

DTC	P0878	Transmission Fluid Pressure Switch No.2 Circuit High

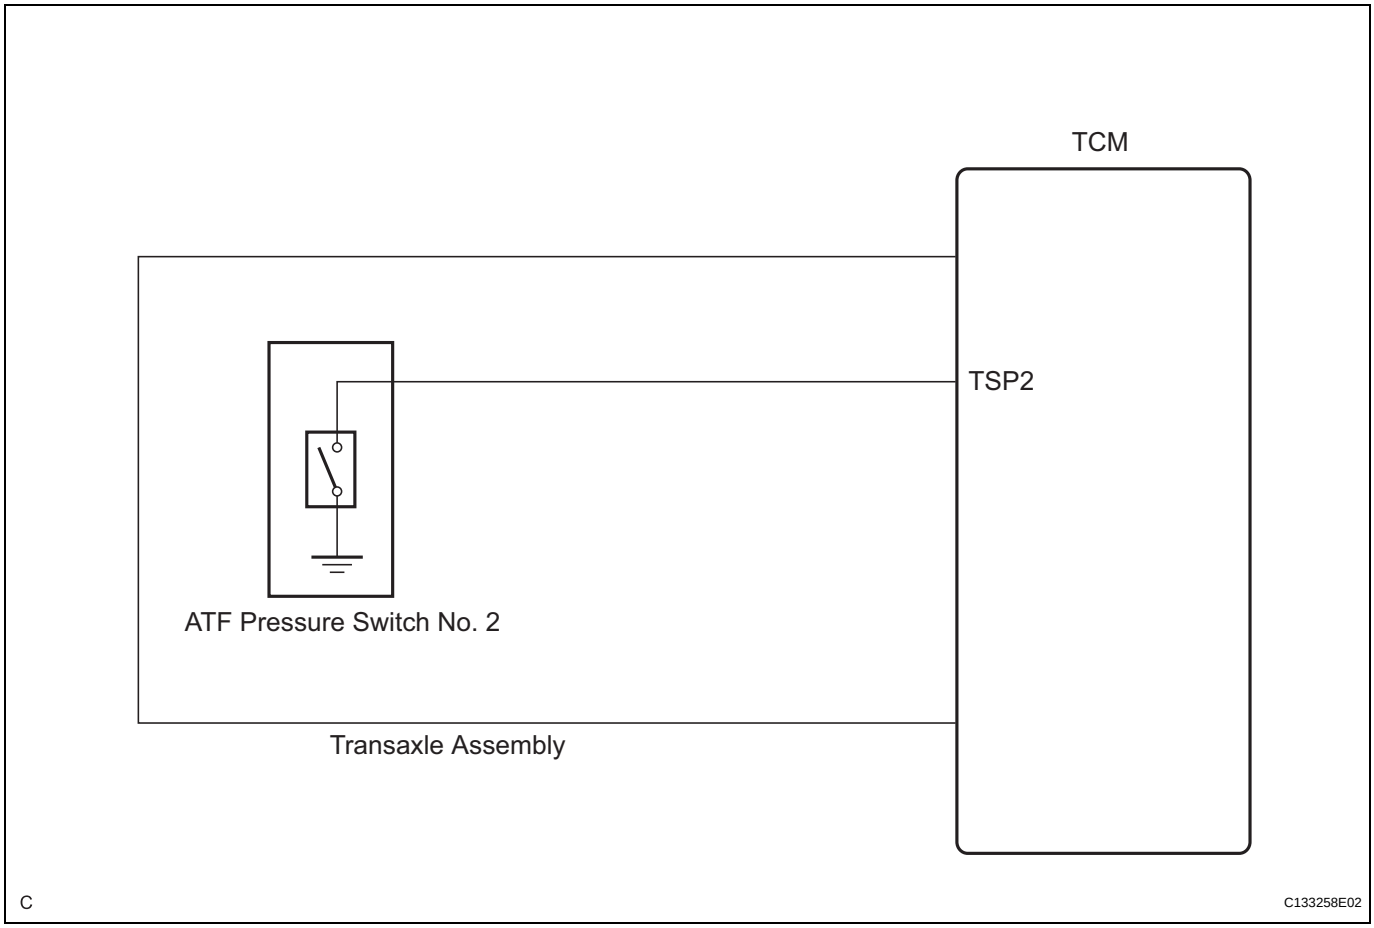
AX

DESCRIPTION

ATF pressure switch No. 2 is installed in the shift solenoid valve ATF output passage. This switch is used to identify the malfunctioning part when a fail-safe operation is performed. If the shift solenoid valve malfunctions when the ATF pressure switch has a malfunction, a fail-safe operation will be performed. This fail-safe operation is different from the fail-safe operation performed when the solenoid valve malfunctions and the ATF pressure switch is normal.

DTC No.	DTC Detecting Condition	Trouble Area
P0877	ATF pressure switch No. 2 OFF is detected twice when any of the gears from 4th to 6th engages normally.	• ATF temperature sensor assembly (ATF pressure switch No. 2) • Transmission wire • TCM
P0878	ATF pressure switch No. 2 ON is detected twice when any of the gears from 1st to 3rd engages normally.	

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0877 OR P0878)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

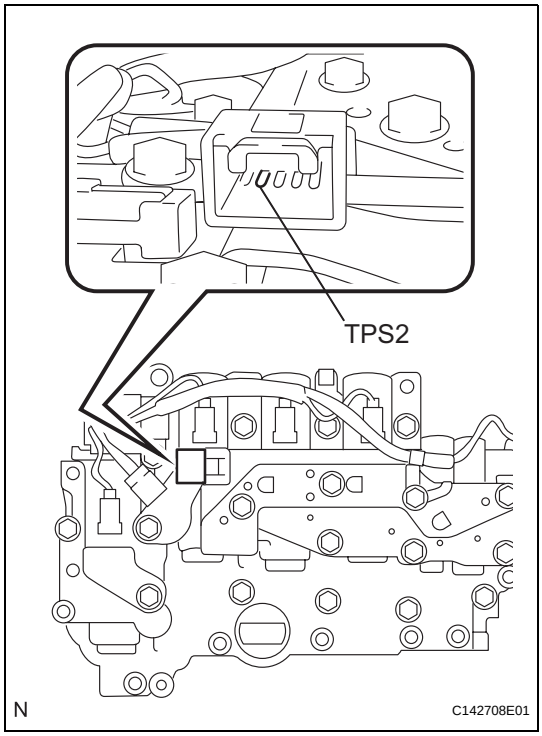
3	CHECK ATF TEMPERATURE SENSOR ASSEMBLY (ATF PRESSURE SWITCH NO. 2)



(a) Disconnect the transmission wire connector from the ATF temperature sensor assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

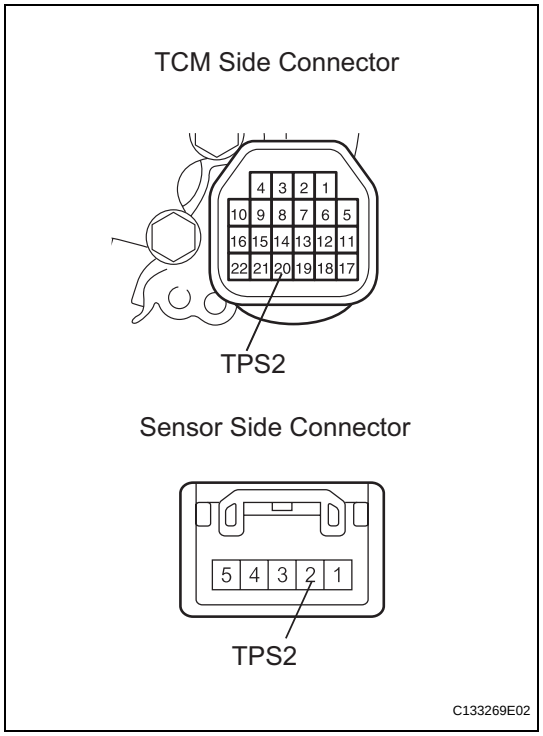
Tester Condition	Specified Condition
4 (TPS2) - Body ground (Valve body assembly)	10 kΩ or higher

NG → **REPLACE ATF TEMPERATURE SENSOR ASSEMBLY**

OK

REPLACE TRANSMISSION WIRE

4	CHECK TRANSMISSION WIRE



(a) Remove the TCM.
(b) Disconnect the connector from the ATF temperature sensor assembly.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Condition	Specified Condition
20 (TPS2) - 2 (TPS2)	Below 1 Ω
20 (TPS2) or 2 (TPS2) - Body ground (Valve body assembly)	10 kΩ or higher

NG → **REPLACE TRANSMISSION WIRE**

OK

REPLACE ATF TEMPERATURE SENSOR ASSEMBLY

DTC	P0989	Transmission Fluid Pressure Switch No.3 Circuit Low

DTC	P0990	Transmission Fluid Pressure Switch No.3 Circuit High

DESCRIPTION

ATF pressure switch No. 3 is installed in the lock-up solenoid ATF output passage and is used to detect a malfunction in the lock-up solenoid.

DTC No.	DTC Detection Condition	Trouble Area
P0989	Transmission fluid pressure switch No. 3 is OFF when lock-up occurs in response to a lock-up request (2 trip detection logic).	• ATF temperature sensor assembly (ATF pressure switch No. 3) • Transmission wire • TCM
P0990	When both of the following are detected (2 trip detection logic): • Transmission fluid pressure switch No. 3 is ON when lock-up does not occur. • Lock-up does not occur when shift solenoid valve (SLU) is requested to turn off in the lock-up range.	

MONITOR DESCRIPTION

The TCM illuminates the MIL and stores the DTC when the TCM detects that the ATF pressure switch is OFF with the lock-up solenoid ON or when the TCM detects that the ATF pressure switch is ON with the lock-up solenoid OFF.

MONITOR STRATEGY

Related DTCs	P0989: Transmission fluid pressure switch No. 3 OFF malfunction P0990: Transmission fluid pressure switch No. 3 ON malfunction
Required sensors/Components	Transmission fluid pressure switch No. 3
Frequency of operation	Continuous
Duration	4 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

ALL:

The monitor will run whenever these DTCs are not present	None
Turbine speed sensor circuit	Circuit is not malfunctioning
Intermediate shaft speed sensor circuit	Circuit is not malfunctioning
Shift solenoid valve SL1 circuit	Circuit is not malfunctioning
Shift solenoid valve SL2 circuit	Circuit is not malfunctioning

INSPECTION PROCEDURE

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0989 OR P0990)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

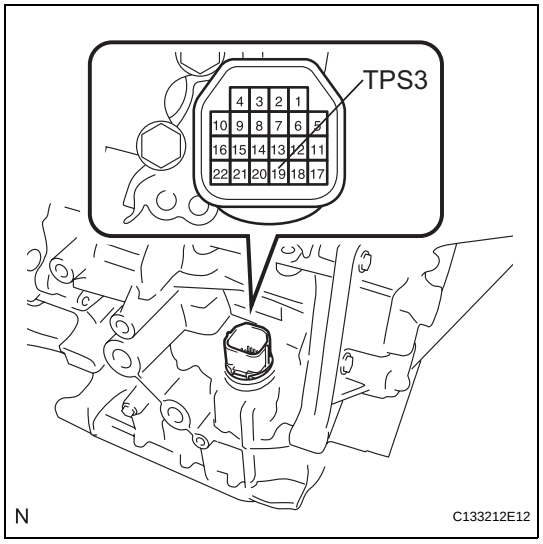
Display (DTC output)	Proceed to
Only "P0990" is output	A
Only "P0989" is output	B
"P0989 or P0990" and other DTCs	C

HINT:
If a solenoid is stuck OFF, DTCs for several solenoids including the malfunctioning solenoid will be detected.

B	Go to step 4
C	GO TO DTC CHART

A

2 CHECK TRANSMISSION WIRE (SHORT TO GROUND)



(a) Remove the TCM.
(b) Measure the resistance according to the value(s) in the table below.

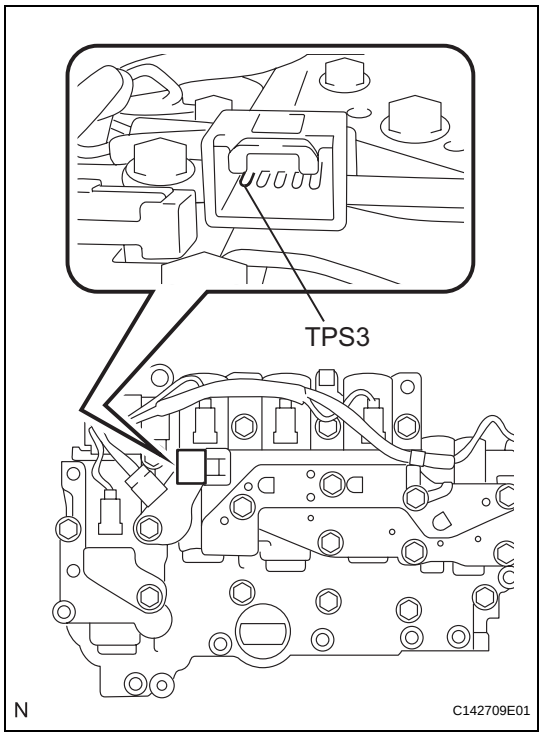
Standard resistance

Tester Condition	Specified Condition
19 (TPS3) - Body ground (Valve body assembly)	10 kΩ or higher

OK → **REPLACE TCM**

NG

3 CHECK ATF TEMPERATURE SENSOR ASSEMBLY (ATF PRESSURE SWITCH NO. 3)



(a) Disconnect the connector from the ATF temperature sensor assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

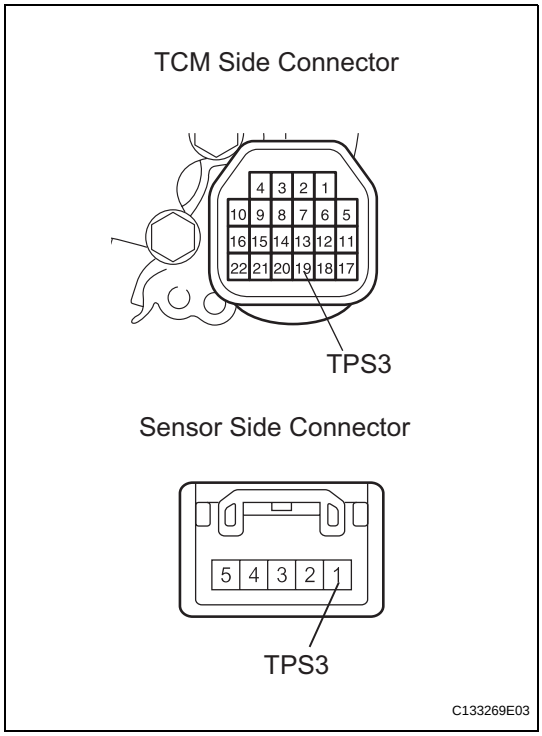
Tester Condition	Specified Condition
5 (TPS3) - Body ground (Valve body assembly)	10 kΩ or higher

NG → **REPLACE ATF TEMPERATURE SENSOR ASSEMBLY**

OK

REPLACE TRANSMISSION WIRE

4	CHECK TRANSMISSION WIRE



(a) Remove the TCM.
(b) Disconnect the connector from the ATF temperature sensor assembly.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Condition	Specified Condition
19 (TPS3) - 1 (TPS3)	Below 1 Ω
19 (TPS3) or 1 (TPS3) - Body ground (Valve body assembly)	10 kΩ or higher

NG → **REPLACE TRANSMISSION WIRE**

OK

REPLACE ATF TEMPERATURE SENSOR ASSEMBLY

DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)

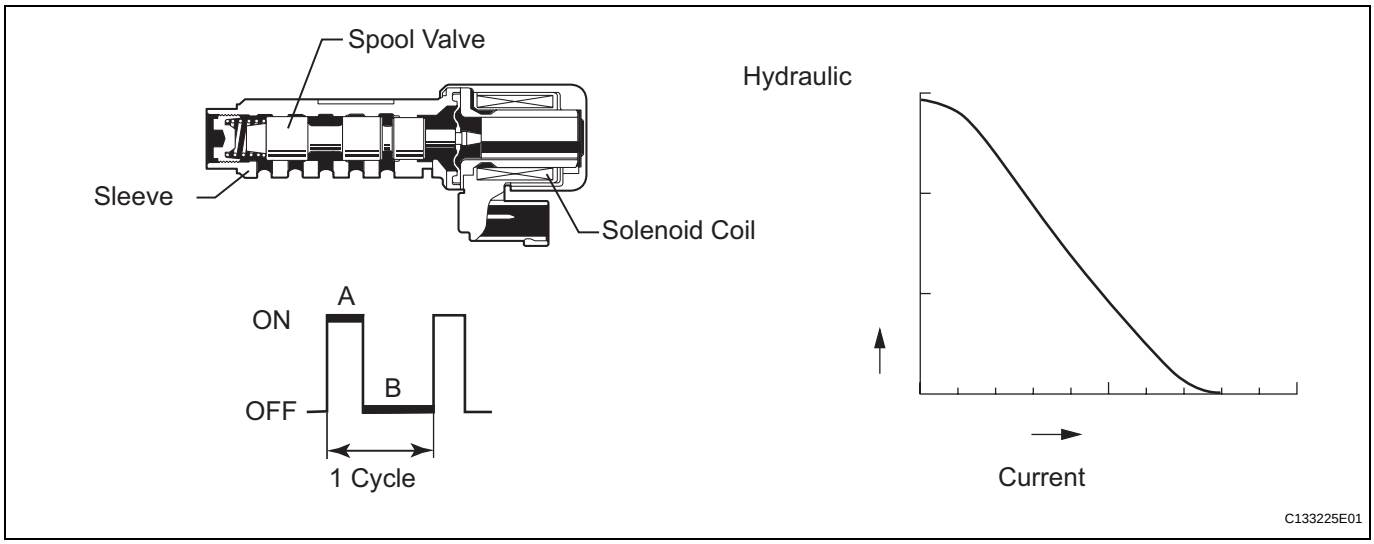
SYSTEM DESCRIPTION

The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The TCM adjusts the duty ratio (*) of the SLT solenoid valve to control hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.

(*): Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then

Duty Ratio= A/(A+B) x 100 (%)



DTC No.	DTC Detection Condition	Trouble Area
P2714	The ECM detects a malfunction in the shift solenoid valve SLT (ON side) according to the difference in the speed between the turbine and the output shaft, and also by the transmission fluid pressure. (2-trip detection logic)	• Shift solenoid valve SLT remains open • Shift solenoid valve SL1, SL2, SL3 or SL4 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

The TCM calculates the amount of heat absorbed by the friction material based on the difference in revolution (clutch slippage) between the turbine and output shaft. The TCM turns on the MIL and outputs this DTC when the amount of heat absorption exceeds the specified value.

When the shift solenoid valve SLT remains on, oil pressure goes down and clutch engagement force decreases.

NOTICE:

If driving continues under these conditions, the clutches will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

Input turbine torque	100 N*m or more
Turbine speed	250 rpm or more
Output speed	250 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

ON malfunction:

Detection criteria	Threshold
Turbine speed - Output speed x Gear ratio at output speed 1,000 rpm (Condition varies with output speed)	75 rpm or more

INSPECTION PROCEDURE

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P2714)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P2714" is output	A
"P2714" and other DTCs	B

HINT:
If a solenoid is stuck ON, DTCs for several solenoids including the malfunctioning solenoid will be detected.

A → INSPECT SHIFT SOLENOID VALVE SLT

B

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SHIFT SOLENOID VALVE SLT)

NOTICE:

- **Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F)**
- **Be sure to prevent SST hose from interfering with the exhaust pipe.**
- **This check must be conducted after checking and adjusting the engine.**
- **Perform the test with the A/C OFF.**

HINT:

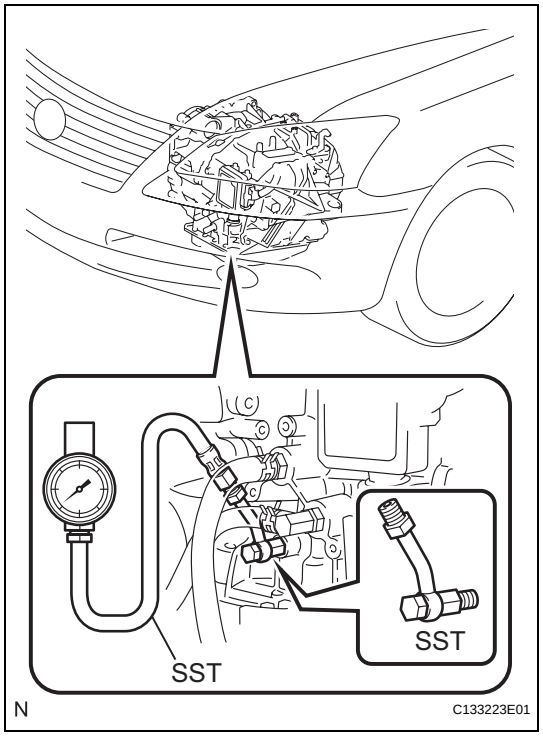
Performing the ACTIVE TEST using the intelligent tester allows relays, VSVs, actuators and other items to operate without removing any parts. Performing the ACTIVE TEST as the first step in troubleshooting is one method to save labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Turn the ignition switch off.
(b) Lift the vehicle up.
(c) Remove the test plug on the transmission case center right side and connect SST.

SST 09992-00095 (09992-00231, 09992-00271)

(d) Lower the vehicle.
(e) Fully apply the parking brake and chock the 4 wheels.
(f) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(g) Start the engine.
(h) Warm up the ATF (Automatic Transmission Fluid).
(i) Measure the line pressure when the engine is idling.
(j) Turn on the tester.
(k) Enter the following items: DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SOLENOID (SLT)".
(l) Follow the instructions on the tester and perform the ACTIVE TEST.
(m) Measure the line pressure with SST.



Item	Test Details
SOLENOID (SLT)*	[Test Details] Operate the shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped. • IDL: ON HINT: OFF: Line pressure up (When the active test of "SOLENOID (SLT)" is performed, the TCM commands the SLT solenoid to turn off). ON: No action (normal operation)

AX

*: "SOLENOID (SLT)" in the ACTIVE TEST is performed to check that the line pressure changes by connecting the SST to the automatic transaxle. The same SST is used in the HYDRAULIC TEST (See page AX-17) as well.

HINT:

The pressure values in ACTIVE TEST and HYDRAULIC TEST are different from each other.

OK:

The line pressure changes as specified when performing the ACTIVE TEST.

NG → **Go to step 5**

OK

3	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SHIFTING TEST)

NOTICE:

This test should always be performed with at least 2 people.

HINT:

Performing the ACTIVE TEST using the intelligent tester allows relays, VSVs, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST as the first step in troubleshooting is one method to save labor time.

The DATA LIST can be displayed during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Start the engine.
(e) Turn on the tester.
(f) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST".
(g) Follow the instructions on the tester and read the ACTIVE TEST.

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] • IDL: ON [Others] • Press "→" button: Shift up • Press "←" button: Shift down	It is possible to check the operation of the shift solenoid valves.

NOTICE:

- **This test can be conducted when the vehicle is stopped.**
- **When shifting gears using the Active Test function, do not operate the accelerator pedal for 2 seconds before and after shifting gears.**

HINT:
The shift position commanded by the TCM is shown on the DATA LIST/SHIFT display on the intelligent tester.

(h) Check the vehicle speed and the gear position when the engine speed is 1,000 rpm.

HINT:
Because the torque converter clutch has not engaged, it may be difficult to obtain the speeds specified in 4th, 5th, and 6th gear, however a difference of speed should still be evident following each gear change.

Standard

1st	2nd	3rd	4th	5th	6th
5 to 7.5 mph (8 to 12 km/h)	9.3 to 11.8 mph (15 to 19 km/h)	13.0 to 15.5 mph (21 to 25 km/h)	19.3 to 21.7 mph (31 to 35 km/h)	27.3 to 29.8 mph (44 to 48 km/h)	32.3 to 34.8 mph (52 to 56 km/h)

(i) Compare the TCM gear shift command and the actual gear position.

Result

Actuator gear position under malfunction		TCM gear shift command						Proceed to
		1st	2nd	3rd	4th	5th	6th	
Shift solenoid SL1	Stuck ON	1st	2nd	3rd	4th	4th	4th	A
	Stuck OFF	N*1	N*1	N*1	N*1	5th	6th	
Shift solenoid SL2	Stuck ON	4th	4th	4th	4th	5th	6th	B
	Stuck OFF	1st	2nd	3rd	1st	N*1	N*1	
Shift solenoid SL3	Stuck ON	2nd	2nd	3rd	4th	5th	6th	C
	Stuck OFF	1st	1st	3rd	4th	5th	N*1	
Shift solenoid SL4	Stuck ON*3	3rd	3rd	3rd	4th	5th	5th	D
	Stuck OFF	1st	2nd	1st	4th	N*1	6th	
Shift solenoid SLT	Stuck ON	N*2	N*2	N*2	N*2	N*2	N*2	E
	Stuck OFF*3	1st	2nd	3rd	4th	5th	6th	

HINT:
- *1: Neutral
- *2: If the shift solenoid SLT is stuck on, the line pressure will be low. Therefore, the amount of torque that can be transmitted by each gear is lower than the normal limit. When the engine power exceeds this lowered limit, the engine speed will increase freely.
- *3: When shift solenoid SLT is stuck OFF, gear shifting is normal.

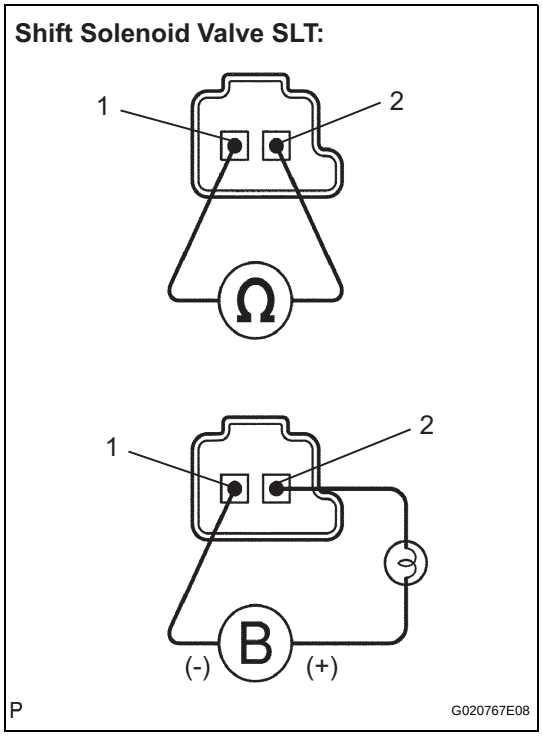
4 INSPECT SHIFT SOLENOID VALVE SLT



(a) Remove the shift solenoid valve SLT.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG → REPLACE SHIFT SOLENOID VALVE SLT

OK

5 INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve.

NG → REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK

6 INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Check the torque converter clutch assembly (See page AX-239).

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)

DESCRIPTION

Refer to DTC P2714 (See page AX-121).

DTC No.	DTC Detection Condition	Trouble Area
P2716	Open or short is detected in shift solenoid valve SLT circuit for 1 second or more while driving (1-trip detection logic).	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • TCM

MONITOR DESCRIPTION

When an open or short in the linear solenoid valve (SLT) circuit is detected, the TCM interprets this as a fault. The TCM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P2716: Shift solenoid valve SLT/Range check
Required sensors/Components	Shift solenoid valve SLT
Frequency of operation	Continuous
Duration	1 sec.
MIL operation	Immediate
Sequence of operation	None

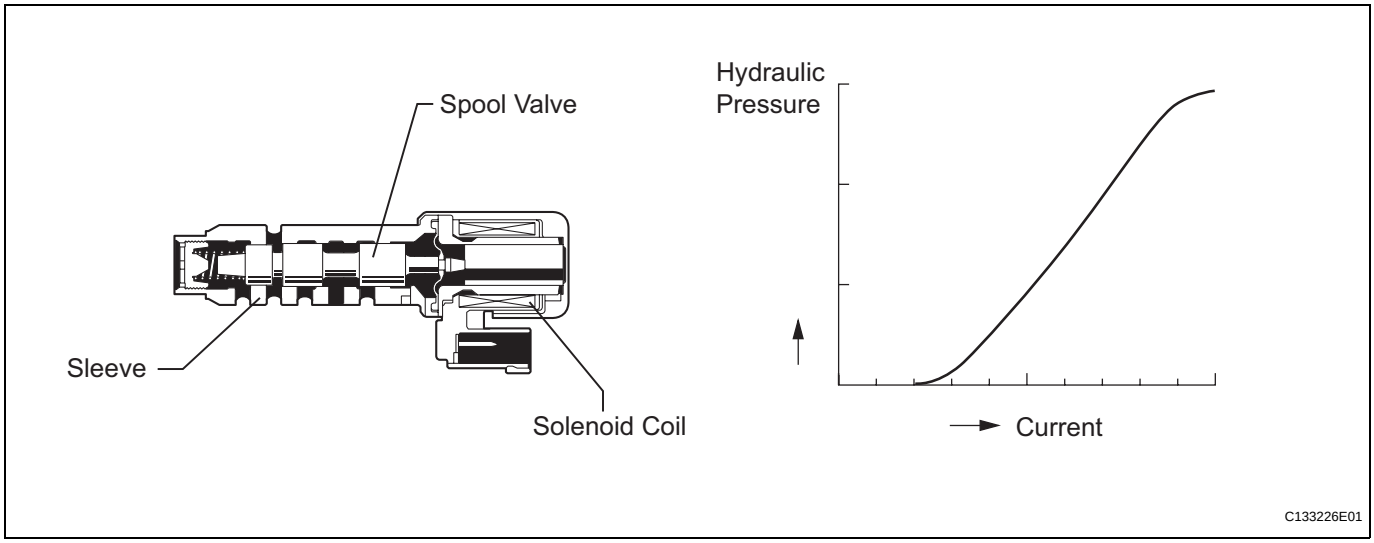
REPLACE TRANSMISSION WIRE

DTC	P2757	Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)

SYSTEM DESCRIPTION

The TCM uses the signals from the throttle position sensor, air-flow meter, turbine (input) speed sensor, output speed sensor and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.



The TCM compares the engagement condition of the lock-up clutch with the lock-up schedule in the TCM memory to detect shift solenoid valve SLU, valve body and torque converter clutch mechanical problems.

DTC No.	DTC Detection Condition	Trouble Area
P2757	When both of the following are detected (2-trip detection logic): • Lock-up does not occur when requested. • Transmission fluid pressure switch No. 3 is OFF. When both of the following are detected (2-trip detection logic): • Transmission fluid pressure switch No. 3 is ON when lock-up does not occur. • Lock-up occurs when the shift solenoid valve SLU is requested to turn on in the lock-up range.	• Shift solenoid valve SLU remains open or closed • Valve body is blocked • Torque converter clutch • Automatic transaxle (clutch, brake or gear, etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the TCM based on the turbine (input) speed sensor NT, output speed sensor NC, engine rpm, engine load, engine temperature, vehicle speed, transmission fluid temperature, and gear selection. The TCM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The TCM calculates the actual transmission gear by comparing input turbine rpm (NT) to output shaft rpm (NC). When conditions are appropriate, the TCM requests "lock-up" by applying control voltage to the shift solenoid SLU. When the SLU is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.
If the TCM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the TCM interprets this as a fault in the shift solenoid valve SLU or lock-up system performance.
The TCM will turn on the MIL and store the DTC.
Example:
When any of the following is met, the system judges it as a malfunction.

- There is a difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the TCM commands lock-up.
  (Engine speed is at least 70 rpm greater than input turbine speed.)
- There is no difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the TCM commands lock-up off.
  (The difference between engine speed and input turbine speed is less than 20 rpm.)

MONITOR STRATEGY

Related DTCs	P2757: Shift solenoid valve SLU OFF malfunction Shift solenoid valve SLU ON malfunction
Required sensors/Components	Shift solenoid valve SLU
Frequency of operation	Continuous
Duration	OFF malfunction (A): 3.5 sec. OFF malfunction (B): 0.05 sec. ON malfunction: 1.8 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following items are common to all conditions below.

The monitor will run whenever this DTC is not present.	None
Turbine speed sensor circuit	Circuit is not malfunctioning
Intermediate shaft speed sensor circuit	Circuit is not malfunctioning
Shift solenoid valve SL1 circuit	Circuit is not malfunctioning
Shift solenoid valve SL2 circuit	Circuit is not malfunctioning
Shift solenoid valve SL3 circuit	Circuit is not malfunctioning
Shift solenoid valve SL4 circuit	Circuit is not malfunctioning
Shift solenoid valve SLU circuit	Circuit is not malfunctioning
Knock sensor circuit	Circuit is not malfunctioning
ETCS (Electric throttle control system)	System is not down
Transmission shift position	"D"
ECT (Engine coolant temperature)	40°C (104°F) or more
Spark advance from Max. retard timing by KCS control	0°CA or more
TFT (Transmission fluid temperature)	Above -10°C (5°F)
TCM selected gear	Not 1st
Vehicle speed	15.5 mph (25 km/h) or more
Torque converter clutch circuit	Circuit is not malfunctioning
ECT circuit	Circuit is not malfunctioning
CAN communication system	Circuit is not malfunctioning
Turbine speed/Output speed (NT/NO) with 1st	3.304 to 7.724
Turbine speed/Output speed (NT/NO) with 2nd	1.901 to 2.340
Turbine speed/Output speed (NT/NO) with 3rd	1.399 to 1.649
Turbine speed/Output speed (NT/NO) with 4th	0.998 to 1.138
Turbine speed/Output speed (NT/NO) with 5th	0.705 to 0.836
Turbine speed/Output speed (NT/NO) with 6th	0.568 to 0.695

OFF malfunction (A):

TCM lock-up command	ON
Duration time from lock-up on command	3 sec. or more
Shift solenoid valve SLU	ON malfunction not occuring

ON malfunction:

TCM lock-up command	OFF (SLU pressure: less than 4 kPa (0.04 kgfcm^2, 0.6 psi)
Duration time from lock-up on command	0.064 sec. or more
Throttle valve opening angle	7% or more
Vehicle speed	Less than 37.3 mph (60 km/h)

TYPICAL MALFUNCTION THRESHOLDS

OFF malfunction:

Following conditions are met	(a) and (b)
(a) Engine speed - Turbine speed	70 rpm or more
(b) Transmission fluid pressure switch	OFF

ON malfunction:

Following conditions are met	(a) and (b)
(a) Engine speed - Turbine speed	Less than 35 rpm
(b) Transmission fluid pressure switch	ON

COMPONENT OPERATING RANGE

Speed sensor (NT)	Input speed is equal to engine speed when lock-up is ON.

INSPECTION PROCEDURE

1. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows relays, VSVs, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST as the first step in troubleshooting is one method to save labor time.

It is possible to display the DATA LIST during the ACTIVE TEST.

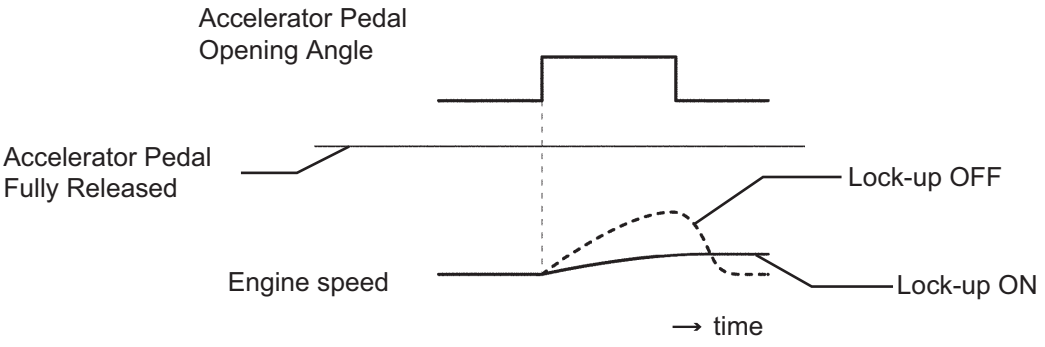
(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST".
(g) According to the display on the tester, perform "ACTIVE TEST".

Item	Test Details	Diagnostic Note
LOCK UP	[Test Details] Control the shift solenoid SLU to set the automatic transaxle to the lock-up condition. [Vehicle Condition] • Throttle valve opening angle: Less than 35% • Vehicle Speed: 37 mph (60 km/h) or more	Possible to check the SLU operation.

HINT:

- This test can be conducted when the vehicle speed is 36 mph (58 km/h) or more.
- This test can be conducted with the 6th gear.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.



HINT:

- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off automatically.)

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P2757)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

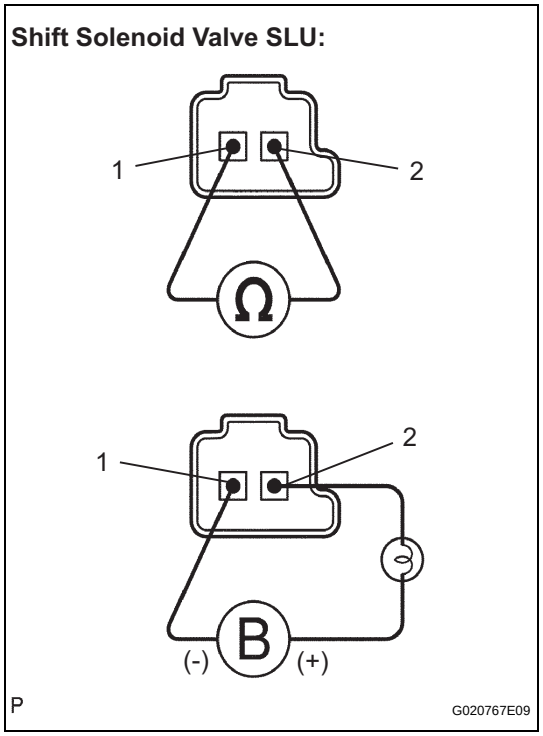
Display (DTC output)	Proceed to
Only "P2757" is output	A
"P2757" and other DTCs	B

HINT:
If any other codes besides "P2757" are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	INSPECT SHIFT SOLENOID VALVE SLU



(a) Remove the shift solenoid valve SLU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

(a) Check the torque converter clutch assembly (See page AX-239).

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

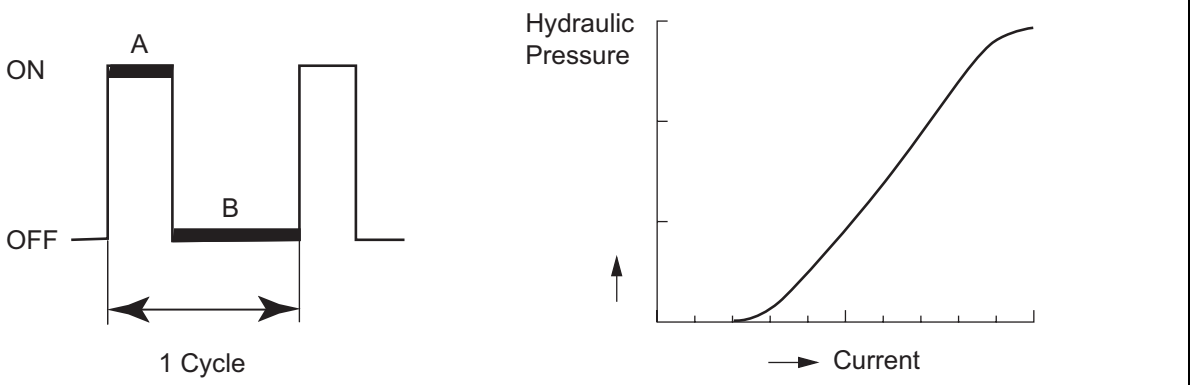
REPLACE AUTOMATIC TRANSMISSION ASSEMBLY

DTC	P2759	Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)

AX

DESCRIPTION

The amount of current flow to the solenoid is controlled by the (*) duty ratio of the TCM output signal. The higher the duty ratio becomes, the higher the lock-up hydraulic pressure becomes during the lock-up operation.



(*) Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then Duty Ratio = A/(A+B) x 100 (%).

DTC No.	DTC Detection Condition	Trouble Area
P2759	Open or short is detected in shift solenoid valve SLU circuit for 1 second or more while driving (1-trip detection logic).	• Open or short in shift solenoid valve SLU circuit • Shift solenoid valve SLU • TCM

MONITOR DESCRIPTION

When an open or short in a shift solenoid valve (SLU) circuit is detected, the TCM determines there is a malfunction. The TCM will turn on the MIL and store this DTC.

MONITOR STRATEGY

REPLACE TRANSMISSION WIRE

DTC	P2769	Short in Torque Converter Clutch Solenoid Circuit (Shift Solenoid Valve SL)

DTC	P2770	Open in Torque Converter Clutch Solenoid Circuit (Shift Solenoid Valve SL)

DESCRIPTION

The shift solenoid valve SL is turned ON or OFF by signals from the TCM to control the hydraulic pressure acting on the lock-up relay valve, which then controls operation of the lock-up clutch.

DTC No.	DTC Detection Condition	Trouble Area
P2769	TCM detects a short in the shift solenoid valve SL circuit when the shift solenoid valve SL is operated (2 trip detection logic).	• Short in shift solenoid valve SL circuit • Shift solenoid valve SL • TCM
P2770	TCM detects an open in the shift solenoid valve SL circuit when the shift solenoid valve SL is not operated (2 trip detection logic).	• Open in shift solenoid valve SL circuit • Shift solenoid valve SL • TCM

Fail-safe function:
If the TCM detects a malfunction, it turns the shift solenoid valve SL OFF.

MONITOR DESCRIPTION

Based on the signals from the throttle position sensor, the air flow meter and the crankshaft position sensor, the TCM sends a signal to the solenoid valve SL to regulate the hydraulic pressure and provide smoother torque converter clutch engagement. The shift solenoid valve SL responds to commands from the TCM. The valve controls the lock-up relay valve to perform the torque-converter lock-up function. If the TCM detects an open or short circuit for shift solenoid valve SL, it will illuminate the MIL.

MONITOR STRATEGY

Related DTCs	P2769: Shift solenoid valve SL/Range check (Low resistance) P2770: Shift solenoid valve SL/Range check (High resistance)
Required sensors/Components	Shift solenoid valve SL
Frequency of operation	Continuous
Duration	1 time
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P2769: Range check (Low resistance):

The monitor will run whenever the following DTCs are not present	None
Solenoid	ON
Time after solenoid OFF to ON	More than 0.008 sec.

P2770: Range check (High resistance):

The monitor will run whenever the following DTCs are not present	None
Solenoid	ON
Time after solenoid ON to OFF	More than 0.008 sec.

TYPICAL MALFUNCTION THRESHOLDS

P2769: Range check (Low resistance):

Intelligent power MOS diagnosis fail signals detected while the solenoid is operated	Fail at solenoid resistance: 8 Ω or less

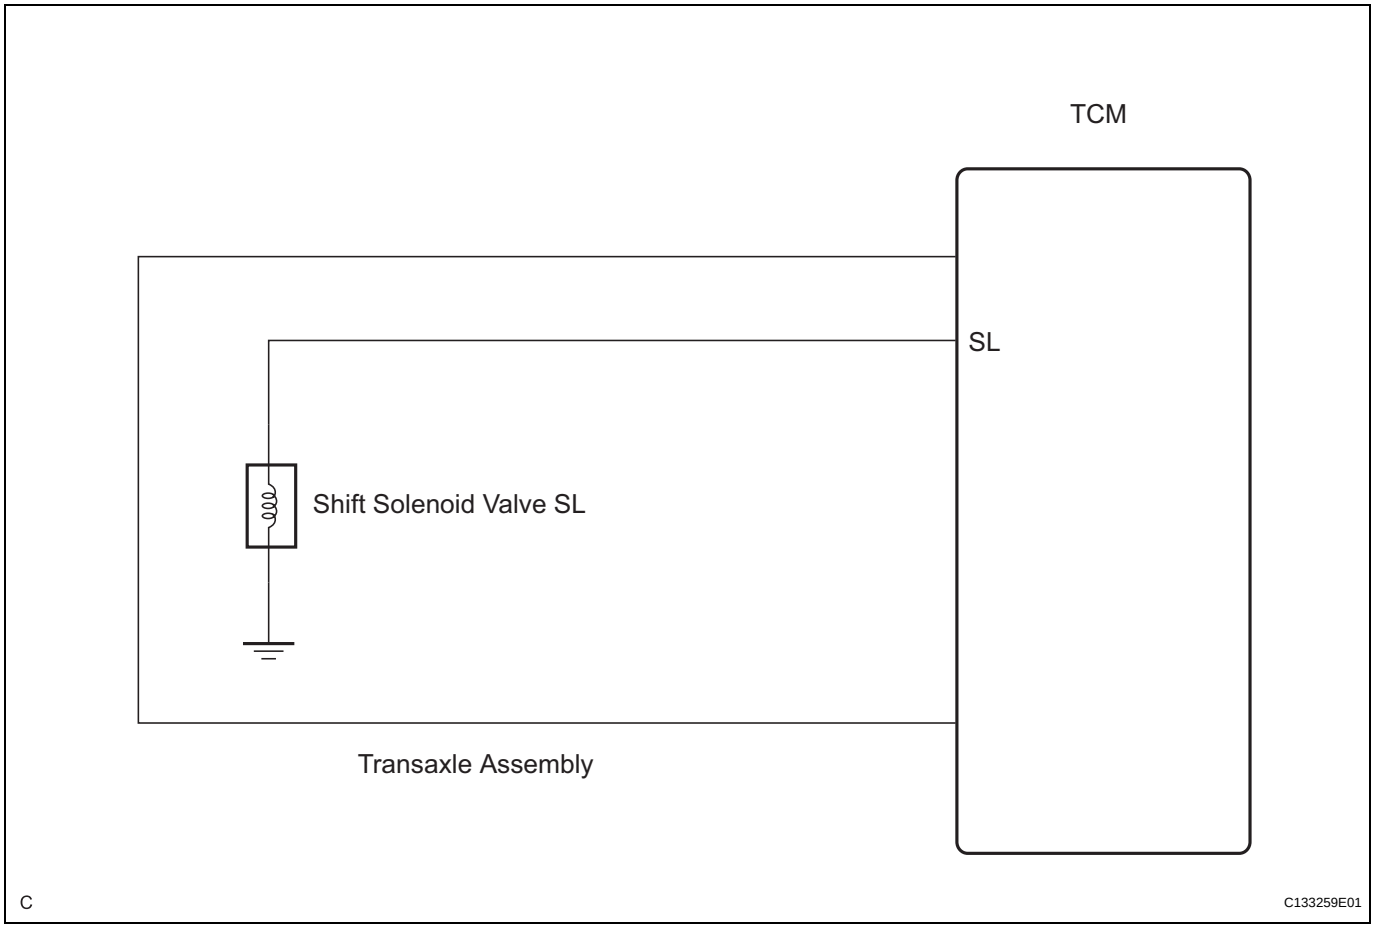
P2770: Range check (High resistance):

Intelligent power MOS diagnosis fail signals detected while the solenoid is not operated	Fail at solenoid resistance: 100 kΩ or more

COMPONENT OPERATING RANGE

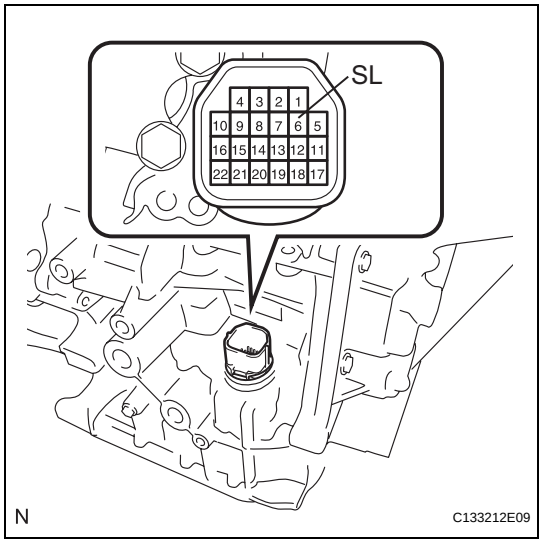
Shift solenoid valve SL	Resistance: 11 to 15 Ω at 20°C (68°F)

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE SL)



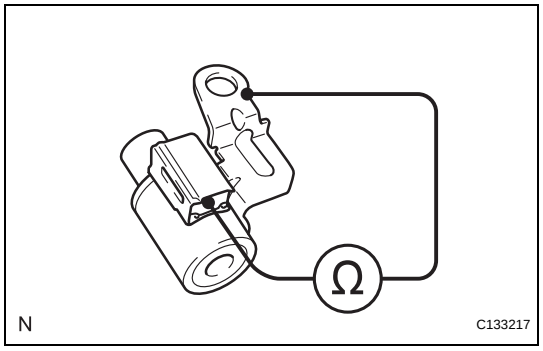
(a) Remove the TCM from the transaxle.
(b) Measure the resistance of the transmission wire.
Standard resistance

Tester Connection	Condition	Specified Condition
6 (SL) - Body ground	20°C (68°F)	11 to 15 Ω

OK → **REPLACE TCM**

NG

2	INSPECT SHIFT SOLENOID VALVE SL (RESISTANCE)



(a) Remove the shift solenoid valve SL.
(b) Measure the resistance between the solenoid valve terminal and solenoid valve body.
Standard resistance:
11 to 15 Ω at 20°C (68°F)

NG → **REPLACE SHIFT SOLENOID VALVE SL**

OK

REPLACE TRANSMISSION WIRE

DTC	P2808	Pressure Control Solenoid "D" Performance or Stuck OFF (Shift Solenoid Valve SL4)

DESCRIPTION

AX

The TCM uses the vehicle speed signal to determine the actual gear position (1st, 2nd, 3rd, 4th, 5th or 6th gear).
Then the TCM compares the actual gear with the shift schedule in the TCM memory to detect shift solenoid valves and valve body mechanical problems.

DTC No.	DTC Detecting Condition	Trouble Area
P2808	The engine revs freely when 3rd or 5th gear is requested. (2-trip detection logic) When any of the following is detected. In addition, the condition that 4th gear is engaged when 4th gear is requested occurs twice. (2-trip detection logic) • When 1st gear is requested, 4th gear is engaged. • When 2nd gear is requested, 4th gear is engaged. • When 6th gear is requested, 4th gear is engaged.	• Shift solenoid valve SL4 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The TCM commands gear shifts by turning the shift solenoid valves on or off. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the TCM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the TCM and the actual gear position are not the same, the TCM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P2808: Shift solenoid valve SL4/OFF malfunction Shift solenoid valve SL4/ON malfunction
Required sensors/Components	Shift solenoid valve SL4, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)

Turbine speed/Output speed (NT/NO) with 4th	0.998 to 1.138
Turbine speed/Output speed (NT/NO) with 5th	0.705 to 0.836
Turbine speed/Output speed (NT/NO) with 6th	0.568 to 0.695

AX

TYPICAL MALFUNCTION THRESHOLDS

OFF malfunction (A):

Engine speed - Turbine speed x Gear ratio	1,000 rpm or more

OFF malfunction (B):

Turbine speed / Output speed	3.304 to 7.724

ON malfunction (A) and (B):

Turbine speed / Output speed	1.399 to 1.649

ON malfunction (C):

Turbine speed / Output speed	0.705 to 0.836

ON malfunction (D):

Turbine speed / Output speed	0.998 to 1.138

INSPECTION PROCEDURE

1	CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P2808)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / DTC INFO / CURRENT CODES".
(d) Read the DTCs using the intelligent tester.

Result

Display (DTC output)	Proceed to
Only "P2808" is output	A
"P2808" and other DTCs	B

HINT:
If a solenoid is stuck OFF, DTCs for several solenoids including the malfunctioning solenoid will be detected.

A → **Go to step 3**

B

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

NOTICE:
This test should always be performed with at least 2 people.

(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the intelligent tester on.
(c) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / ACTIVE TEST / SHIFT".
HINT:
While driving, the shift position can be forcibly changed with the intelligent tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (See page AX-39).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Others] • Press "←" button: Shift up • Press "→" button: Shift down	It is possible to check the operation of the shift solenoid valves.

NOTICE:
- **This test can be conducted when the vehicle is stopped.**
- **When shifting gears using the Active Test function, do not operate the accelerator pedal for 2 seconds before and after shifting gears.**

HINT:
The shift position commanded by the TCM is shown on the DATA LIST/SHIFT display on the intelligent tester.

(d) Check the vehicle speed and the gear position when the engine speed is 1,000 rpm.
HINT:
Because the torque converter clutch has not engaged, it may be difficult to obtain the speeds specified in 4th, 5th, and 6th gear, however a difference of speed should still be evident following each gear change.

Standard

1st	2nd	3rd	4th	5th	6th
5 to 7.5 mph (8 to 12 km/h)	9.3 to 11.8 mph (15 to 19 km/h)	13.0 to 15.5 mph (21 to 25 km/h)	19.3 to 21.7 mph (31 to 35 km/h)	27.3 to 29.8 mph (44 to 48 km/h)	32.3 to 34.8 mph (52 to 56 km/h)

(e) Compare the TCM gear shift command and the actual gear position.

Result

Actuator gear position under malfunction		TCM gear shift command						Proceed to
		1st	2nd	3rd	4th	5th	6th	
Shift solenoid SL1	Stuck ON	1st	2nd	3rd	4th	4th	4th	A
	Stuck OFF	N*1	N*1	N*1	N*1	5th	6th	
Shift solenoid SL2	Stuck ON	4th	4th	4th	4th	5th	6th	B
	Stuck OFF	1st	2nd	3rd	1st	N*1	N*1	

Actuator gear position under malfunction		TCM gear shift command						Proceed to
		1st	2nd	3rd	4th	5th	6th	
Shift solenoid SL3	Stuck ON	2nd	2nd	3rd	4th	5th	6th	C
	Stuck OFF	1st	1st	3rd	4th	5th	N*1	
Shift solenoid SL4	Stuck ON*3	3rd	3rd	3rd	4th	5th	5th	D
	Stuck OFF	1st	2nd	1st	4th	N*1	6th	
Shift solenoid SLT	Stuck ON	N*2	N*2	N*2	N*2	N*2	N*2	E
	Stuck OFF*3	1st	2nd	3rd	4th	5th	6th	

HINT:

- *1: Neutral
- *2: If the shift solenoid SLT is stuck on, the line pressure will be low. Therefore, the amount of torque that can be transmitted by each gear is lower than the normal limit. When the engine power exceeds this lowered limit, the engine speed will increase freely.
- *3: When shift solenoid SLT is stuck OFF, gear shifting is normal.

A → **GO TO DTC CHART (RELATED SHIFT SOLENOID VALVE (SL1) PERFORMANCE DTC P0746)**

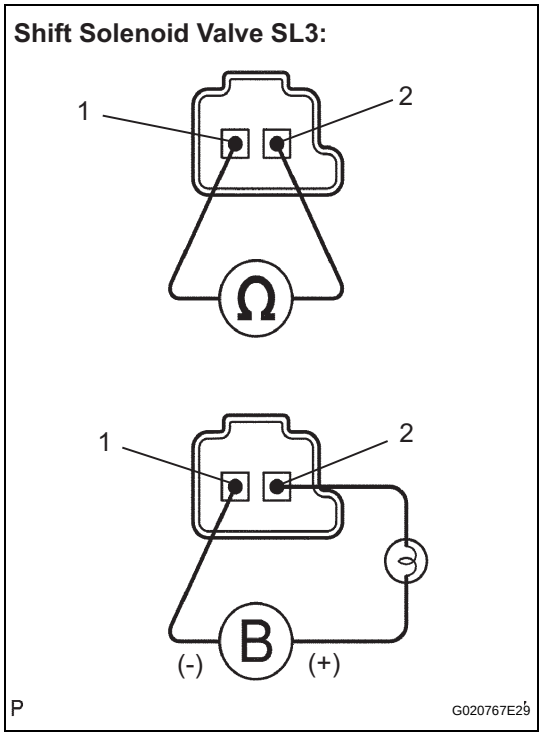
B → **GO TO DTC CHART (RELATED SHIFT SOLENOID VALVE (SL2) PERFORMANCE DTC P0776)**

C → **GO TO DTC CHART (RELATED SHIFT SOLENOID VALVE (SL3) PERFORMANCE DTC P0796)**

E → **GO TO DTC CHART (RELATED SHIFT SOLENOID VALVE (SLT) PERFORMANCE DTC P2714)**

D

3	INSPECT SHIFT SOLENOID VALVE SL4



(a) Remove the shift solenoid valve SL4.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL4**

OK

4	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve and they operate smoothly.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

5	TORQUE CONVERTER CLUTCH ASSEMBLY

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P2810	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SL4)

DESCRIPTION

AX

Shifting gears from 1st through 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3 and SL4 which are controlled by the TCM. If an open or short circuit occurs in either of the shift solenoid valve, the TCM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC No.	DTC Detecting Condition	Trouble Area
P2810	The TCM checks for an open or short in the shift solenoid valve SL4 circuit while driving and shifting gears. (1-trip detection logic) • Output signal duty equals to 100%. (NOTE: SL4 output signal duty is less than 100% under normal condition.)	• Open or short in shift solenoid valve SL4 circuit • Shift solenoid valve SL4 • TCM

MONITOR DESCRIPTION

The TCM commands gear shifts by turning the shift solenoid valves on or off. When there is an open or short circuit in any shift solenoid valve circuit, the TCM detects the problem and illuminates the MIL and stores the DTC. And the TCM performs the fail-safe function and turns the other normal shift solenoid valves on or off (In case of an open or short circuit, the TCM stops sending current to the circuit.)
(See page AX-39).

MONITOR STRATEGY

Related DTCs	P0798: Shift solenoid valve SL3/Range check

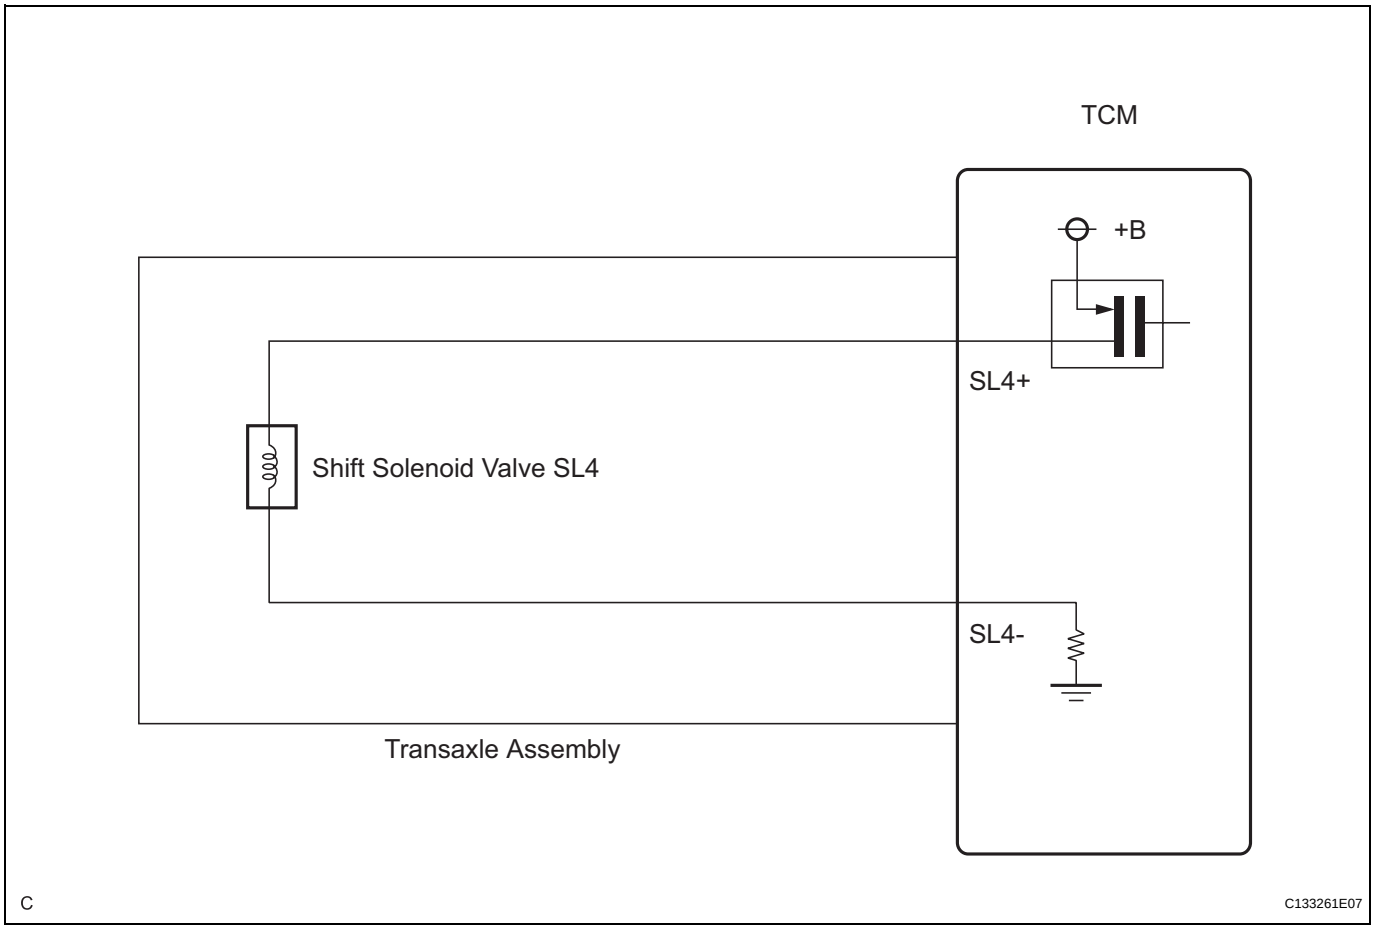
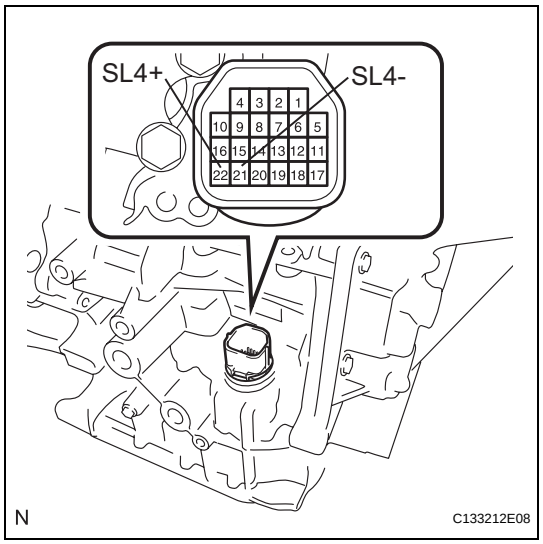
Output signal duty	100% or more

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SL4 CIRCUIT)



(a) Remove the TCM from the transaxle.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
22 (SL4+) - 21 (SL4-)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Check for short

Tester Connection	Specified Condition
22 (SL4+) - Body ground	10 kΩ or higher
21 (SL4-) - Body ground	10 kΩ or higher

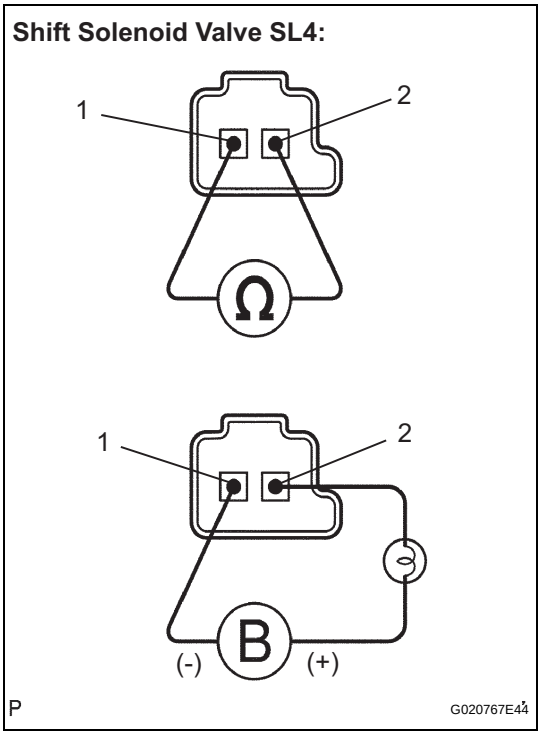
OK	REPLACE TCM

NG

2	INSPECT SHIFT SOLENOID VALVE SL4

AX

Shift Solenoid Valve SL4:



(a) Remove the shift solenoid valve SL4.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

(c) Connect a positive (+) lead through a 21 W bulb to terminal 2 and a negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.
OK:
The solenoid makes an operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL4**

OK

REPLACE TRANSMISSION WIRE

DTC	U0100	Lost Communication with ECM/PCM "A"

DESCRIPTION

The engine control unit intercommunicates with the TCM with the Controller Area Network (CAN). If there is a problem in this intercommunication, the TCM sets a DTC.

DTC No.	DTC Detection Condition	Trouble Area
U0100	Following conditions are met for 1.25 seconds (1 trip detection logic): • Ignition switch ON (IG) • Battery voltage is 10.5 V or more • No intercommunication between the engine control ECU and TCM	TCM

MONITOR STRATEGY

Related DTCs	U0100: Verify communication
Required Sensors/Components (Main)	TCM
Required Sensors/Components (Related)	-

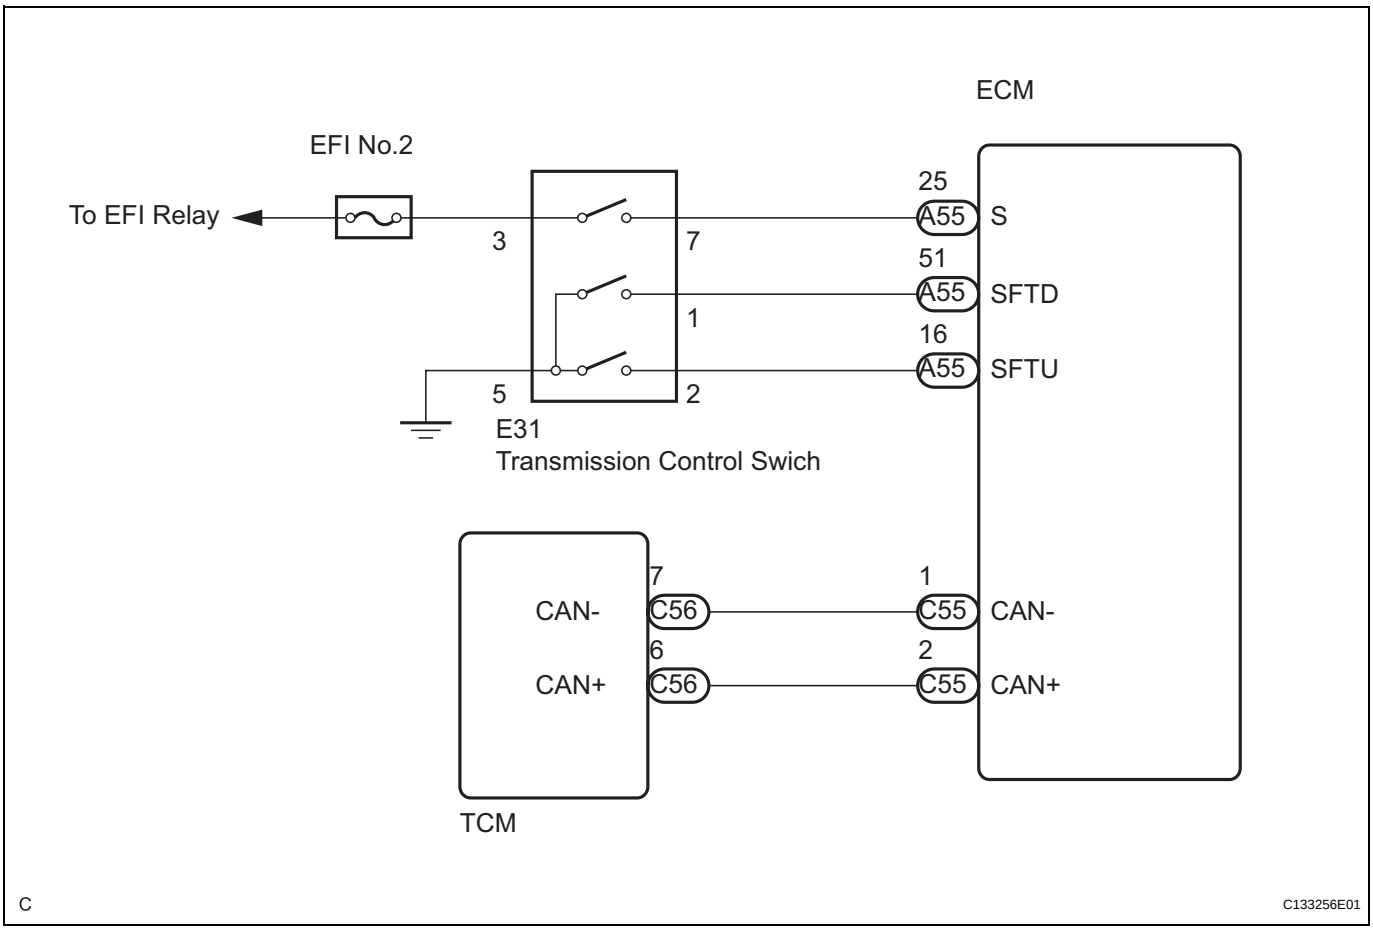
Ignition Switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Communication between TCM and ECM	No communication

AX

WIRING DIAGRAM

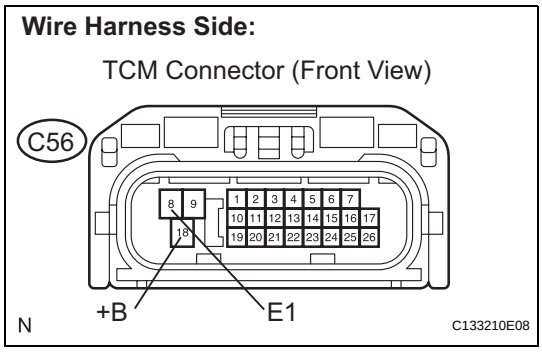


INSPECTION PROCEDURE

HINT:

- Refer to inspection procedure for CAN communication system (See page CA-8).
- If the CAN communication malfunctions, the TCM cannot receive the current data from the ECM. In this case, the freeze frame data output from the TCM has not been updated, so the data will not be useful for the inspection. However, reading the Data List as the first step in troubleshooting is effective to find malfunctions.
- The malfunction area can be checked using the BUS CHECK function on the intelligent tester (See page CA-25).

1	CHECK ECU TERMINAL VOLTAGE (+B AND E1 TERMINALS)



(a) Disconnect the TCM connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage of the TCM connectors.

Standard voltage

Tester Connection	Specified Condition
C56-18 (+B) - C56-8 (E1)	9 to 14 V

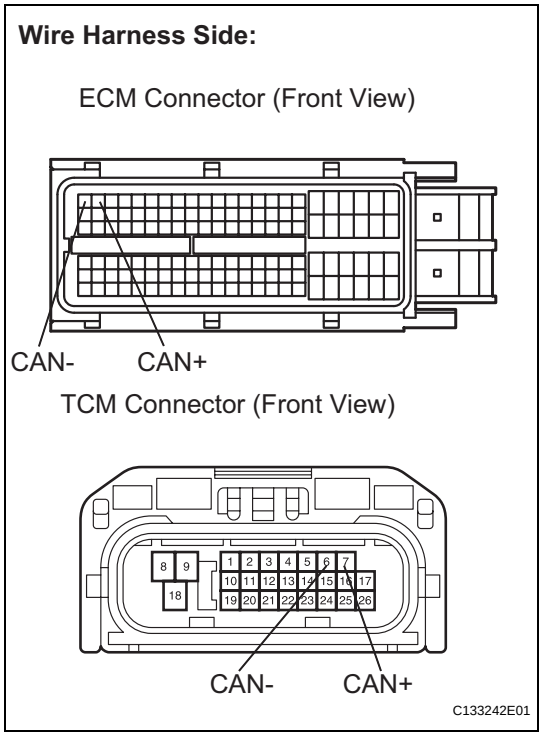
(d) Turn the ignition switch off.
(e) Measure the resistance of the TCM connector.

Tester Connection	Specified Condition
C56-8 (E1) - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2 CHECK HARNESS AND CONNECTOR (TCM - ECM)



(a) Disconnect the C56 TCM connector.
(b) Disconnect the C55 ECM connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
C56-6 (CAN+) - C55-2 (CAN+)	Below 1 Ω
C56-7 (CAN-) - C55-1 (CAN-)	Below 1 Ω
C56-6 (CAN+) or C55-2 (CAN+) - Body ground	1 MΩ or more
C56-7 (CAN-) or C55-1 (CAN-) - Body ground	1 MΩ or more

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK IF DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Clear the DTC.
(c) Replace the TCM.
HINT:
Replace the TCM with a TCM from a normally functioning vehicle of the same model.
(d) Start the engine.
(e) Read the DTCs.

Display (DTC Output)	Proceed to
P0100	A
No DTC	B

B → REPLACE TCM

REPLACE ECM

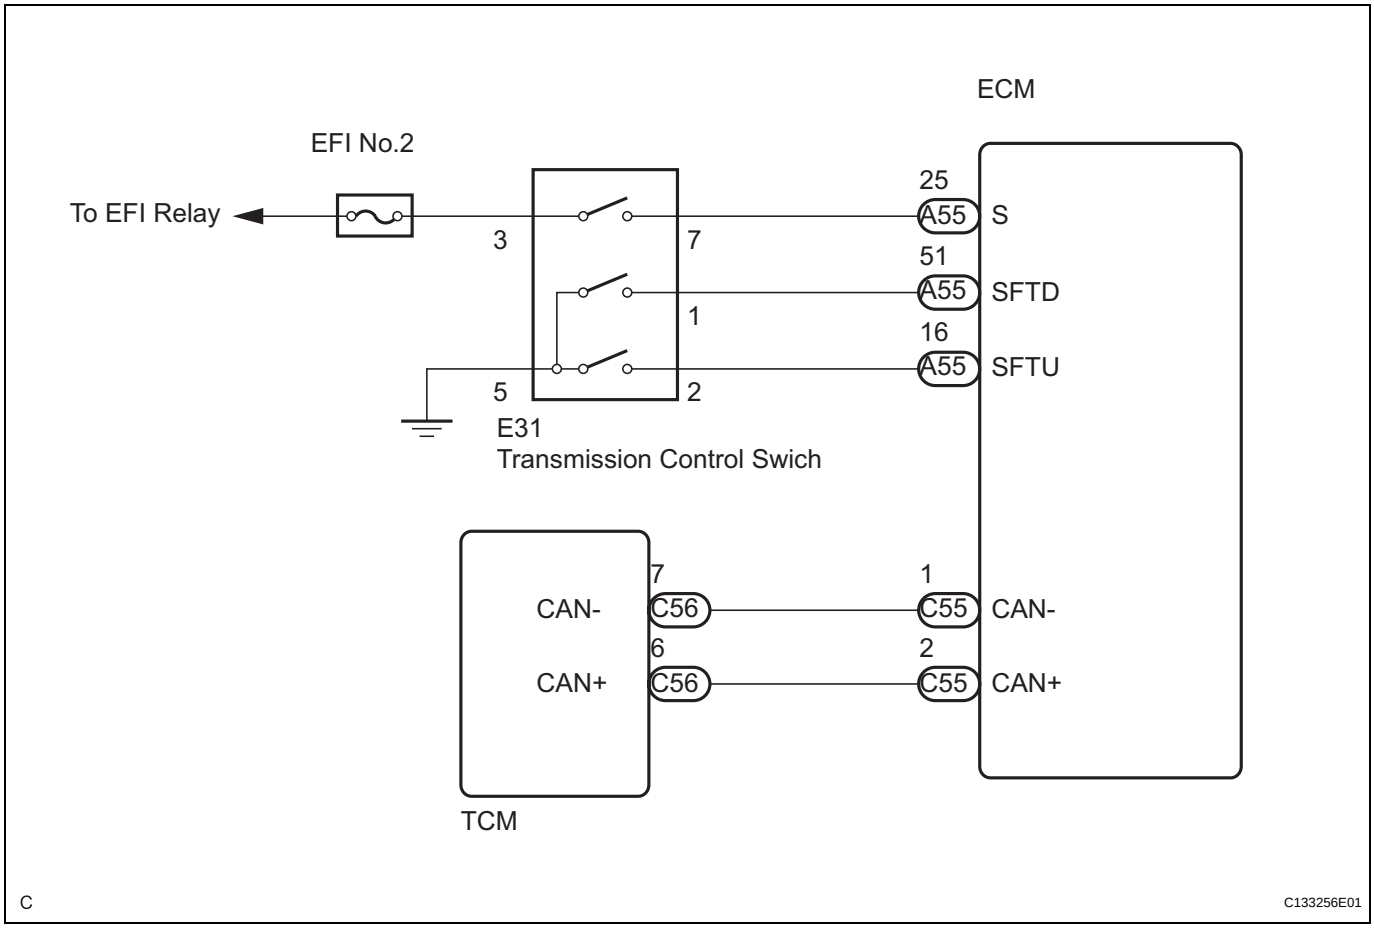
Transmission Control Switch Circuit

DESCRIPTION

When moving the shift lever into the S position using the transmission control switch, it is possible to switch the shift range position between "1" (first range) and "6" (sixth range).
Shifting up "+" once raises one shift range position, and shifting down "-" lowers one shift range position.

AX

WIRING DIAGRAM

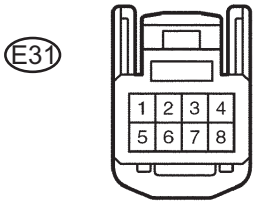


INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (BATTERY - TRANSMISSION CONTROL SWITCH)

Wire Harness Side:

(Connector Front View):



C110345E22

(a) Disconnect the transmission control switch connector of shift lock control unit assembly.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Switch Condition	Tester Connection	Specified Condition
Ignition switch ON (IG)	3 - Body ground	10 to 14 V
Ignition switch OFF		Below 1 V

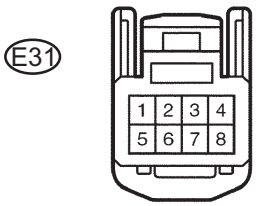
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL SWITCH - BODY GROUND)

Wire Harness Side:

(Connector Front View):



C110345E22

(a) Measure the resistance according to the value(s) in the table below.

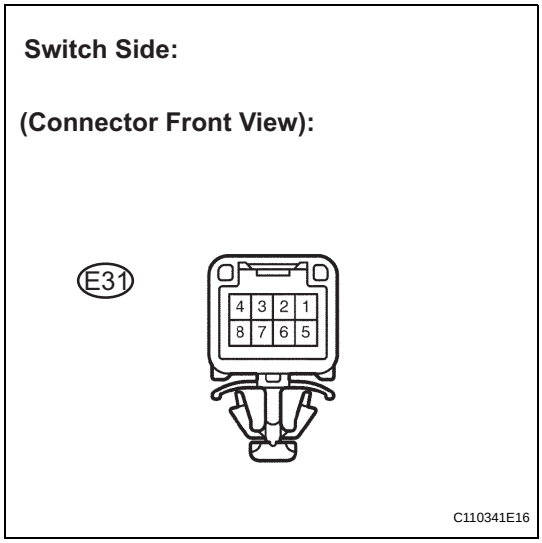
Standard resistance

Tester Connection	Specified Condition
5 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT TRANSMISSION CONTROL SWITCH



(a) Measure the resistance between each terminal of the shift lock control unit assembly when the shift lever is moved to each position.

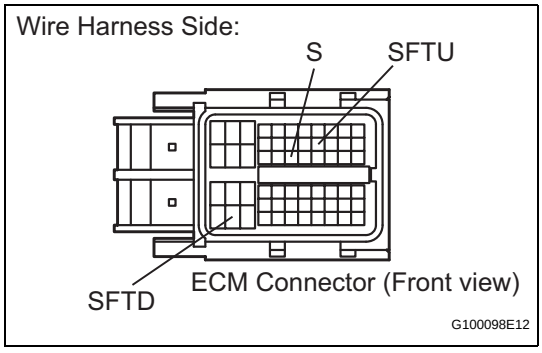
Standard resistance

Shift Position	Tester Connection	Specified Condition
S, "+" and "-"	3 - 7	Below 1 Ω
Except S, "+" and "-"		10 kΩ or higher
Press continuously "+" (Up shift)	2 - 5	Below 1 Ω
S		10 kΩ or higher
Press continuously "-" (Down shift)	1 - 5	Below 1 Ω
S		10 kΩ or higher

NG → **REPLACE TRANSMISSION CONTROL SWITCH**

OK

4 CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL SWITCH - ECM)



(a) Connect the transmission control switch connector of the shift lock control unit assembly.
(b) Disconnect the A55 ECM connector.
(c) Turn the ignition switch on (IG), and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
S, "+" and "-"	A55-25 (S) - Body ground	10 to 14 V
Except S, "+" and "-"		Below 1 V

(d) Turn the ignition switch off.
(e) Disconnect the ECM connector.
(f) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
Press continuously "+" (Up shift)	A55-16 (SFTU) - Body ground	Below 1 Ω
S		10 kΩ or higher
Press continuously "-" (Down shift)	A55-51 (SFTD) - Body ground	Below 1 Ω
S		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

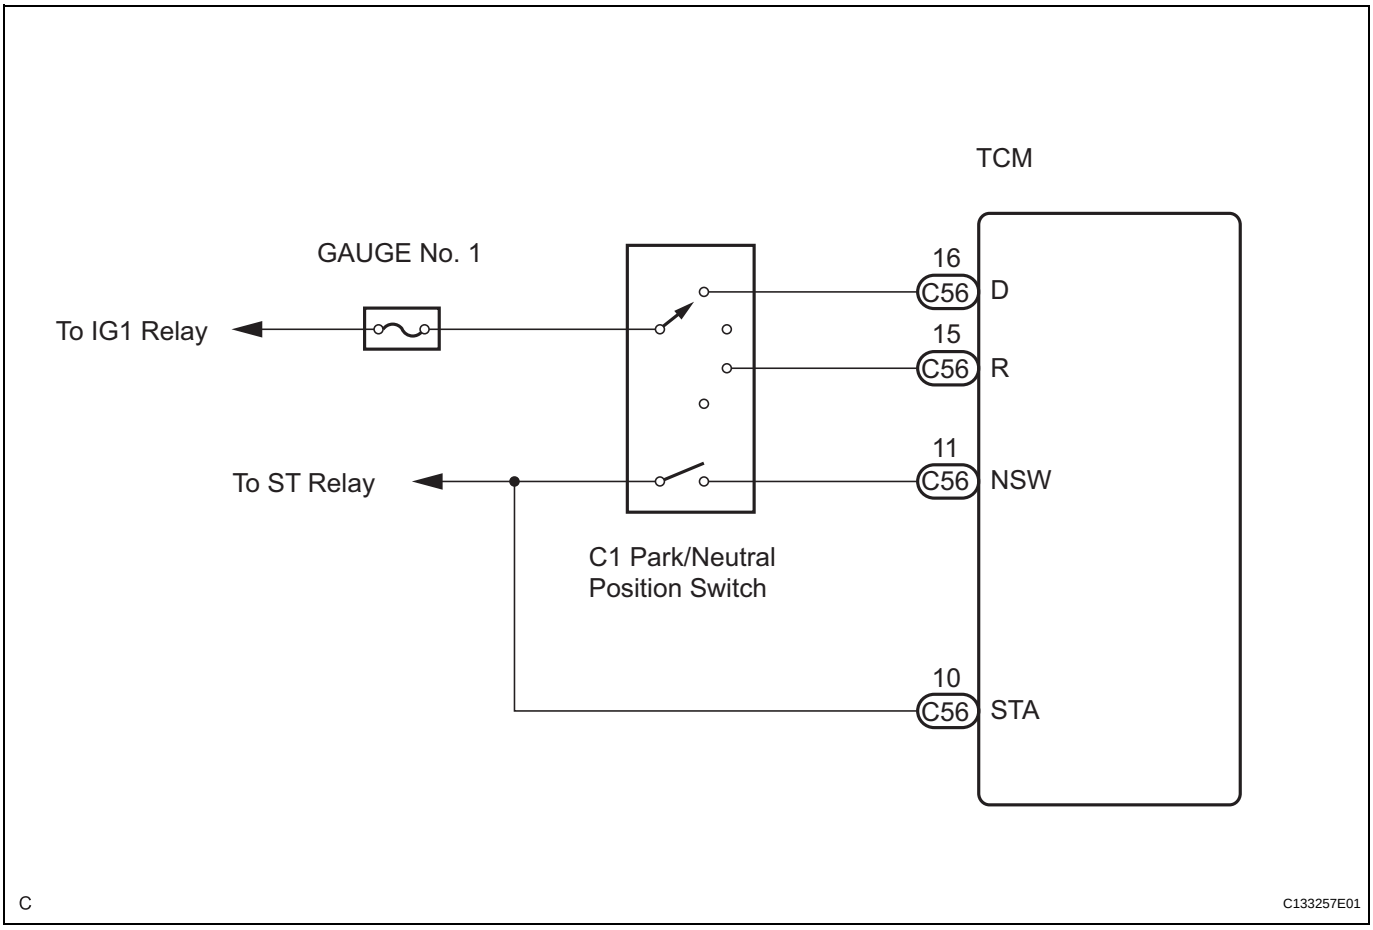
Park / Neutral Position Switch Circuit

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the TCM.

AX

WIRING DIAGRAM



INSPECTION PROCEDURE

1. DATA LIST

HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the value of switches, sensors, actuators and other items without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty.

(a) Warm up the engine.
(b) Turn the ignition switch off.
(c) Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn on the tester.
(f) Enter the following items: "DIAGNOSIS / OBD/MOBD / ECT / DATA LIST".

(g) According to the display on the tester, read "DATA LIST".

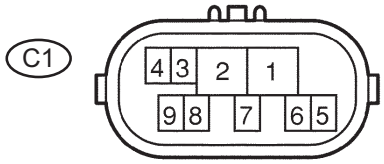
Item	Measurement Item/ Range (display)	Normal Condition	Diagnostic Note
PNP SW [NSW]	PNP Switch Status/ ON or OFF	Shift lever position is; P and N: ON Except P and N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
REVERSE	PNP Switch Status/ ON or OFF	Shift lever position is; R: ON Except R: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
PARKING	PNP Switch Status/ ON or OFF	Shift lever position is; P: ON Except P: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
NEUTRAL	PNP Switch Status/ ON or OFF	Shift lever position is; N: ON Except N: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
DRIVE	PNP Switch Status/ ON or OFF	Shift lever position is; D and S: ON Except D and S: OFF	When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
MODE SELECT SW	Sport Mode Select Switch Status/ ON or OFF	Shift lever position is; S, "+" and "-": ON Except S, "+" and "-": OFF	-

AX

1 INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

Switch Side:

(Connector Front View):



P

C110340E42

(a) Disconnect the park/neutral position switch connector.
(b) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
P	1 - 3 and 4 - 9	Below 1 Ω
Except P		10 kΩ or higher
R	1 - 2	Below 1 Ω
Except R		10 kΩ or higher
N	1 - 8 and 4 - 9	Below 1 Ω
Except N		10 kΩ or higher
D, S, "+" and "-"	1 - 7	Below 1 Ω
Except D, S, "+" and "-"		10 kΩ or higher

NG → REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

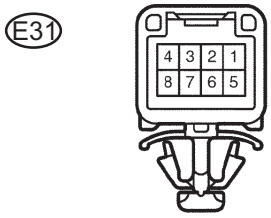
OK

AX

2 INSPECT TRANSMISSION CONTROL SWITCH

Switch Side:

(Connector Front View):



C110341E16

(a) Connect the park/neutral position switch connector.
(b) Disconnect the transmission control switch connector of the shift lock control unit assembly.
(c) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
S, "+" and "-"	3 - 7	Below 1 Ω
Except S, "+" and "-"		10 kΩ or higher

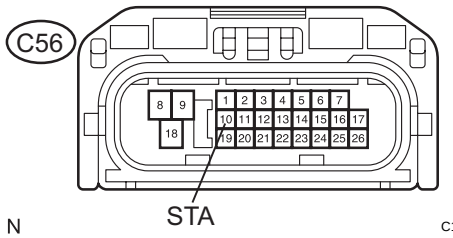
NG → **REPLACE TRANSMISSION CONTROL SWITCH**

OK

3 CHECK ECU TERMINAL VOLTAGE (STA TERMINAL)

Wire Harness Side:

TCM Connector (Front View)



C133210E04

(a) Connect the transmission control switch connector of the shift lock control unit assembly.
(b) Measure the voltage according to the value(s) in the table below while cranking the engine.

Standard voltage

Tester Connection	Specified Condition
STA (C56-10) - Body ground	9 to 14 V

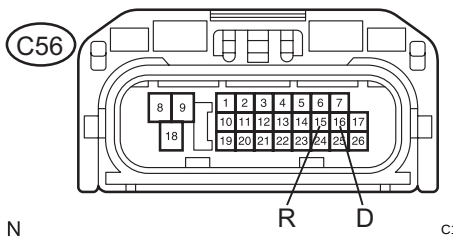
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TCM - ECM)**

OK

4 CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - TCM)

Wire Harness Side:

TCM Connector (Front View)



C133210E05

(a) Disconnect the TCM connector.
(b) Turn the ignition switch on (IG), and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage

Shift Position	Tester Connection	Specified Condition
R	R (C56-15) - Body ground	10 to 14 V *
Except R		Below 1 V
D	D (C56-16) - Body ground	10 to 14 V
Except D		Below 1 V

HINT:
*: The voltage will drop slightly because the back up light is turned on.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (PARK/NEUTRAL POSITION SWITCH - TCM)**

OK

REPLACE TCM

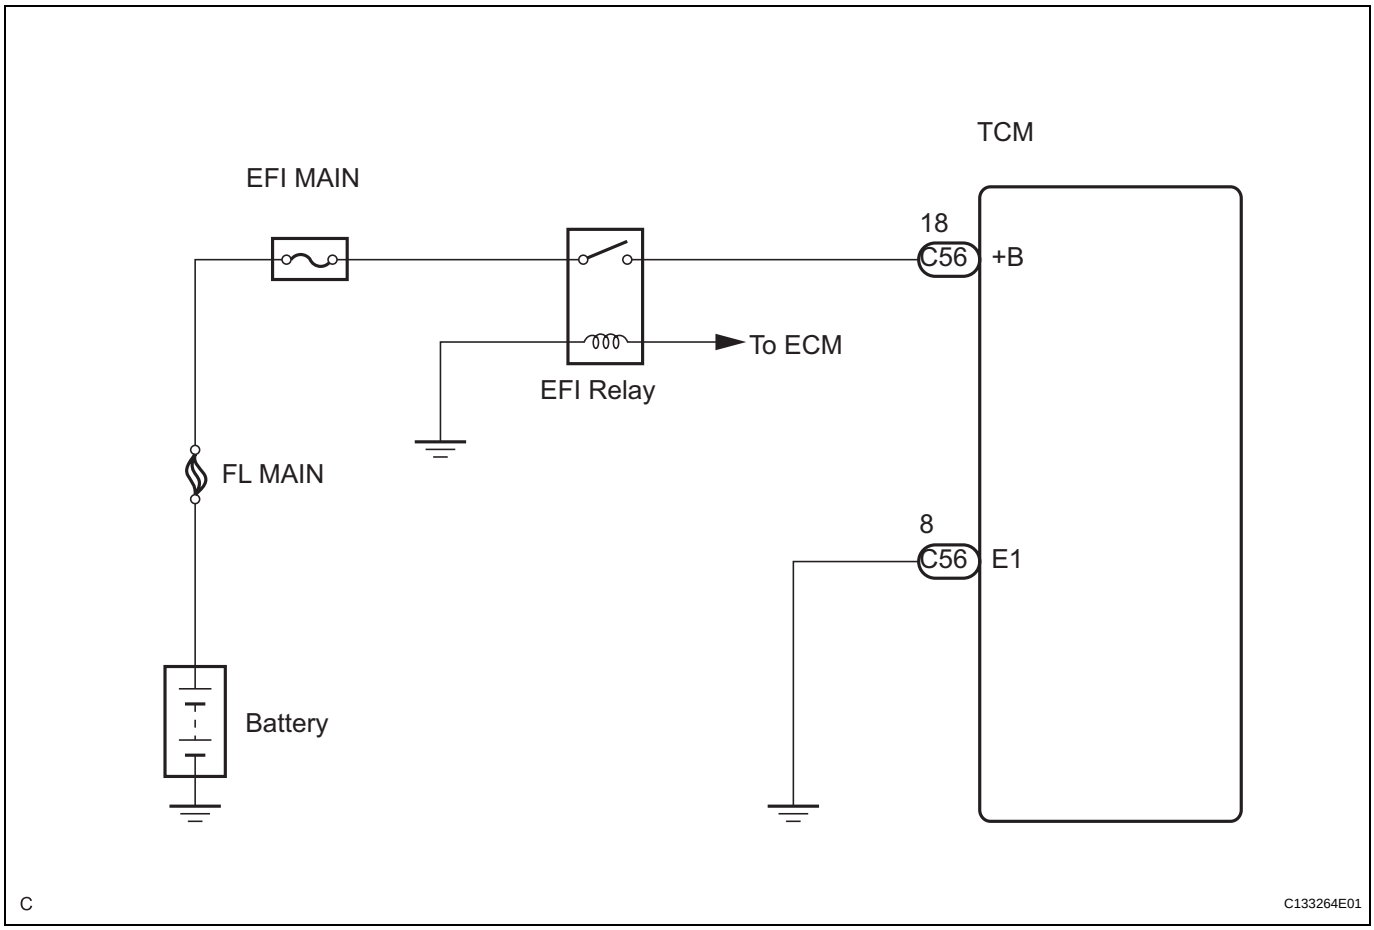
ECU Power Source Circuit

DESCRIPTION

When the ignition switch is turned on (IG), voltage from the ECM's MREL terminal is applied to the EFI relay. This causes the contacts of the EFI relay to close, which supplies power to terminal +B of the TCM.

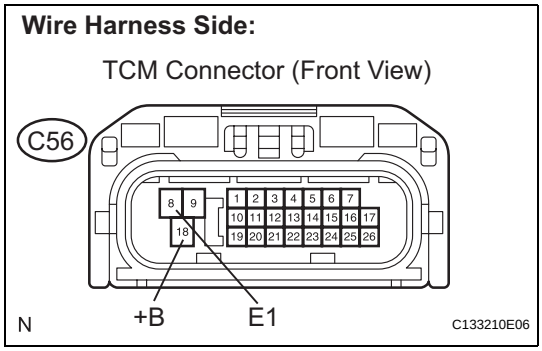
AX

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT ECU TERMINAL VOLTAGE (+B TERMINAL)



(a) Disconnect the TCM connector.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

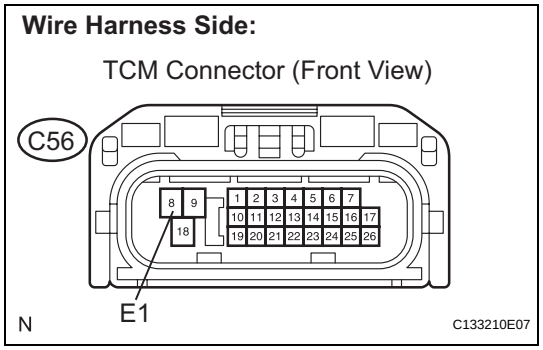
Standard voltage

Tester Connection	Specified Condition
+B (C56-18) - E1 (C56-8)	9 to 14 V

OK → CHECK FOR INTERMITTENT PROBLEMS

NG

2	CHECK HARNESS AND CONNECTOR (TCM - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E1 (C56-8) - Body ground	Below 1 Ω

(b) Reconnect the TCM connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TCM - BODY GROUND)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (TCM - EFI RELAY)

AX

AUTOMATIC TRANSAXLE FLUID

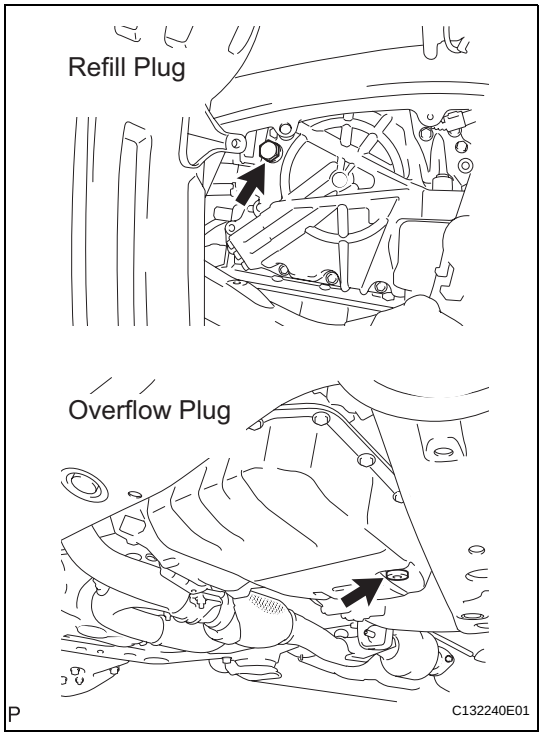
ADJUSTMENT

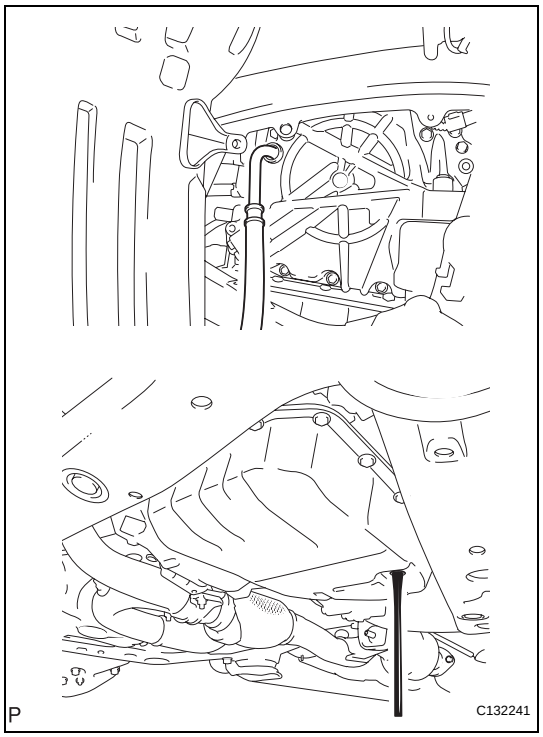
1. BEFORE FILLING TRANSAXLE WITH FLUID

- This transaxle requires Genuine ATF WS transmission fluid.
- After servicing the transaxle, you must refill the transaxle with the correct amount of fluid.
- Maintain the vehicle in a horizontal position while adjusting fluid level.
- Proceed to step 2 if the oil pan, valve body, drive shaft, and/or torque converter has been removed or if the oil seal has been replaced.
- Proceed to step 3 if oil leakage has been repaired and if the oil cooler and cooler hose have been removed.

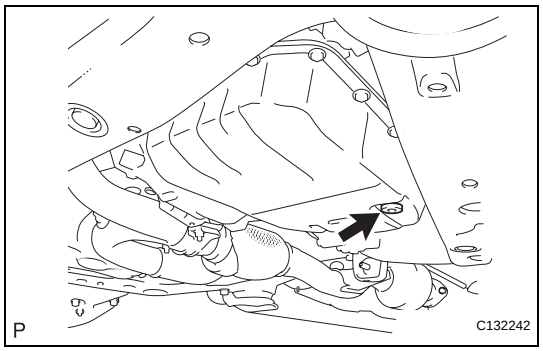
2. FILL TRANSAXLE PAN WITH FLUID

(a) Remove the engine under cover LH.
(b) Remove the engine under cover RH.
(c) Remove the under front fender apron seal RH.
(d) Remove the refill plug and overflow plug.





(e) Fill the transaxle through the refill hole until fluid begins to trickle out of the overflow tube.



(f) Temporarily install the overflow plug.

3. FILL TRANSAXLE WITH FLUID

(a) Fill the transaxle with the correct amount of fluid as listed in the table below.

Standard capacity

Performed Repair	Fill Amount
Replacement of transaxle (a new torque converter is used)	5.3 liters (5.6 US qts, 4.7 Imp. qts)
Replacement of transaxle (the torque converter is reused)	3.4 liters (3.6 US qts, 3.0 Imp. qts)
Removal & installation of oil pan (including oil drain) Removal & installation of drive shaft	2.8 liters (3.0 US qts, 2.5 Imp. qts)
Removal & installation of valve body	3.2 liters (3.4 US qts, 2.8 Imp. qts)
Removal & installation of torque converter	4.8 liters (5.1 US qts, 4.2 Imp. qts)
Repair of oil leakage and removal of oil cooler and cooler hose	0.5 liters (0.5 US qts, 0.4 Imp. qts)

HINT:

If you cannot add the listed amount of fluid, do the following:

(1) Temporarily install the refill plug.
(2) Allow the engine to idle with the air conditioning OFF.
(3) Move the shift lever through entire gear range to circulate fluid.
(4) Move the shift lever to the P position.
(5) Wait for 30 seconds with the engine idling.
(6) Stop the engine.
(7) Remove the refill plug and add fluid.
(8) Reinstall the refill plug.

(b) Temporarily install the refill plug to avoid fluid splash.

4. CIRCULATE AUTOMATIC TRANSAXLE FLUID

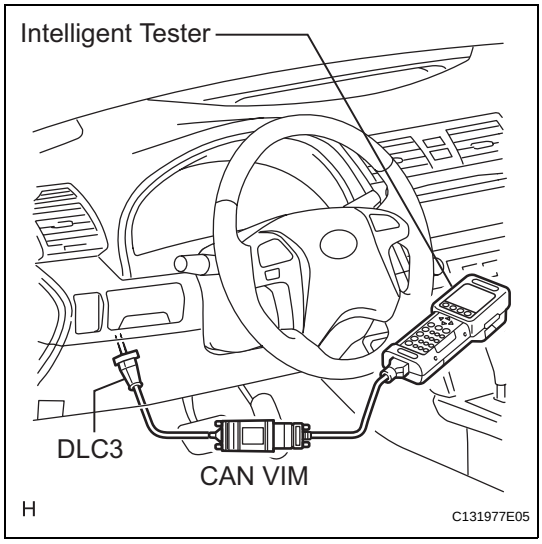
(a) Allow the engine to idle with the air conditioning OFF.

(b) Move the shift lever through entire gear range to circulate the fluid.

5. CHECK FLUID TEMPERATURE

NOTICE:

The fluid temperature should be less than 40°C (104°F) before beginning the fluid temperature check.



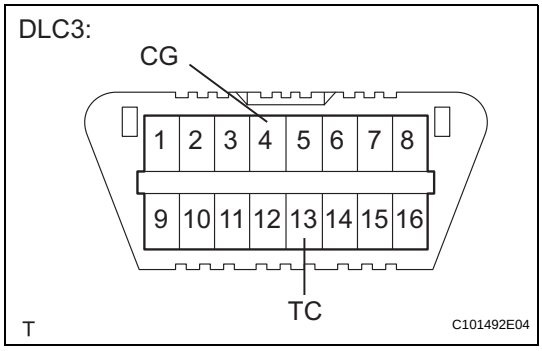
(a) With the intelligent tester:

(1) Connect the intelligent tester to the DLC3.

(2) Select the tester menus: OBD/MOBD, ENGINE, DATA LIST and A/T.

(3) Check A/T OIL TEMP.

(4) Allow the engine to idle until the fluid temperature reaches 39°C (102°F).



(b) Without the intelligent tester (Using D shift indicator):

(1) Connect terminals CG (4) and TC (13) of the DLC3 using SST.

SST 09843-18040

(2) Move the shift lever back and forth between N and D at 1.5 seconds interval for 6 seconds.

(3) The D shift indicator on the combination meter comes on for 2 seconds when the fluid temperature is within the appropriate temperature range.

(4) The D shift indicator will come on again when the fluid temperature reaches 40°C (104°F) and will blink when it exceeds 45°C (113°F).

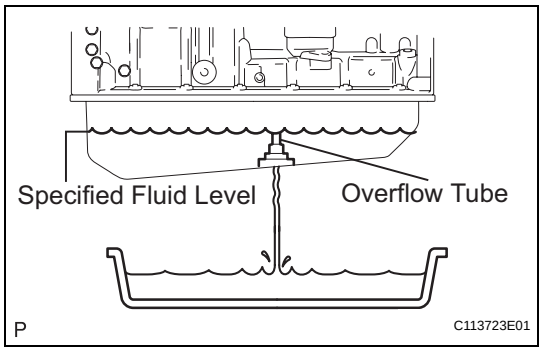
(5) After confirming that the D shift indicator turns off, move the shift lever to the P position and remove the SST from terminals CG and TC.

6. CHECK TRANSAXLE FLUID LEVEL

NOTICE:

The fluid temperature must be between 40°C (104°F) and 45°C (113°F) to accurately check the fluid level.

(a) Remove the overflow plug with the engine idling.



(b) Check that the fluid comes out of the overflow tube.
If fluid does not come out, proceed to step 7.
If fluid comes out, wait until the overflow slows to a trickle and proceed to step 8.

7. ADD FLUID

(a) Install the overflow plug.
(b) Remove the refill plug.
(c) Add the fluid until it comes out of the overflow plug.
(d) Wait until the overflow slows to a trickle.
(e) Install the overflow plug with a new gasket.
(f) Install the refill plug with a new gasket.
(g) Stop the engine.

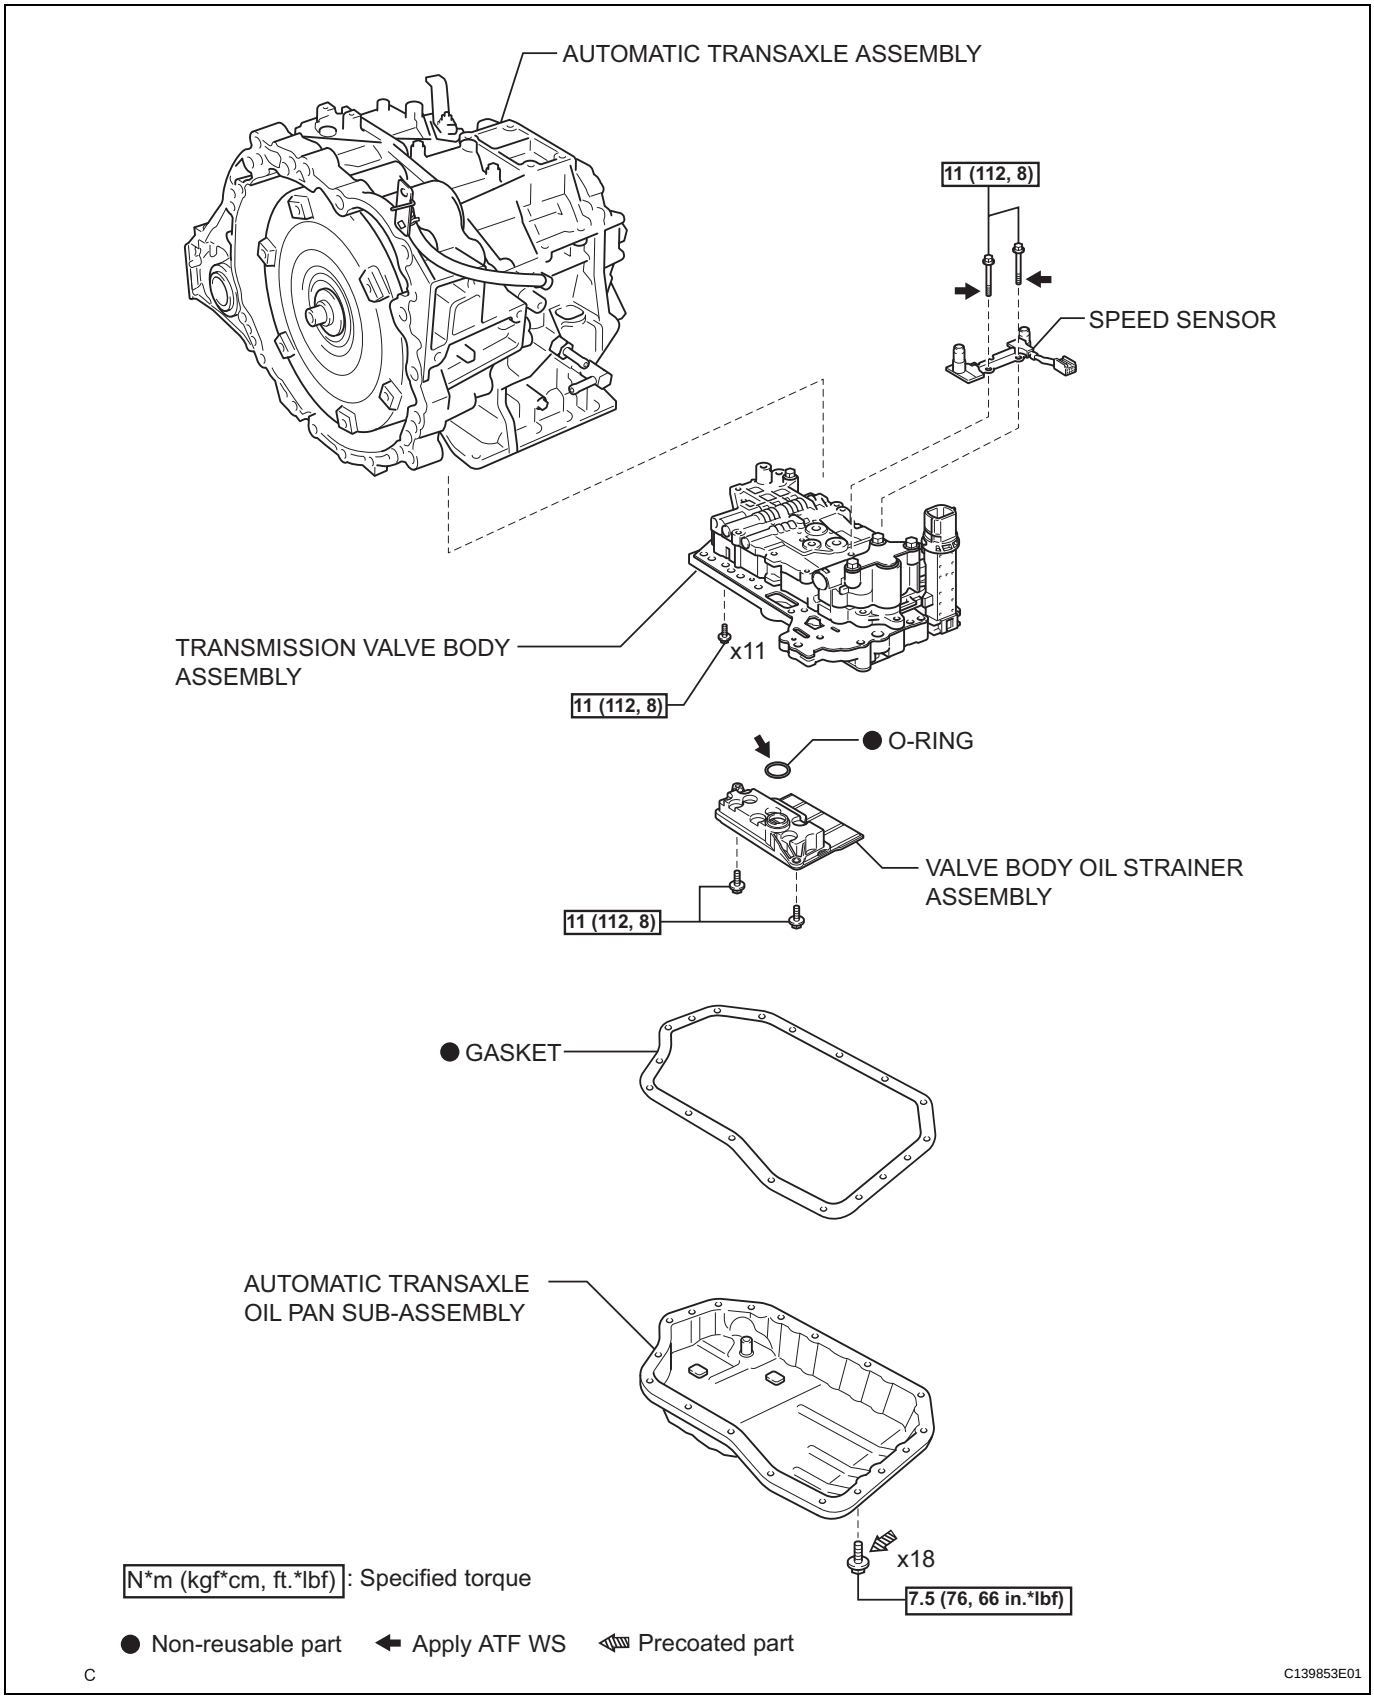
8. AFTER FILLING TRANSMISSION

(a) Install the overflow plug with a new gasket.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)
(b) Install the refill plug with a new gasket.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
(c) Stop the engine.

SPEED SENSOR

COMPONENTS

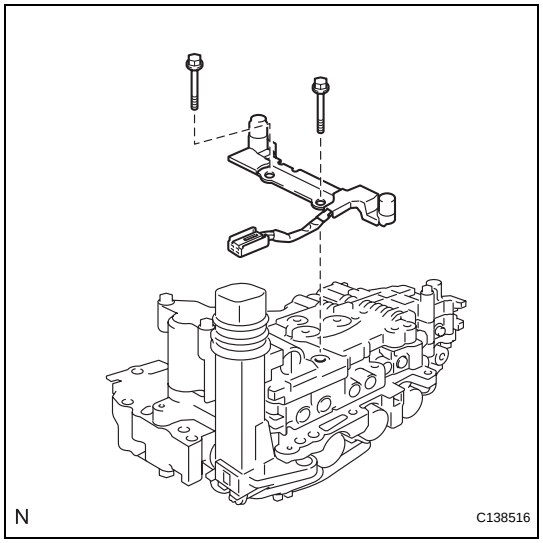
AX

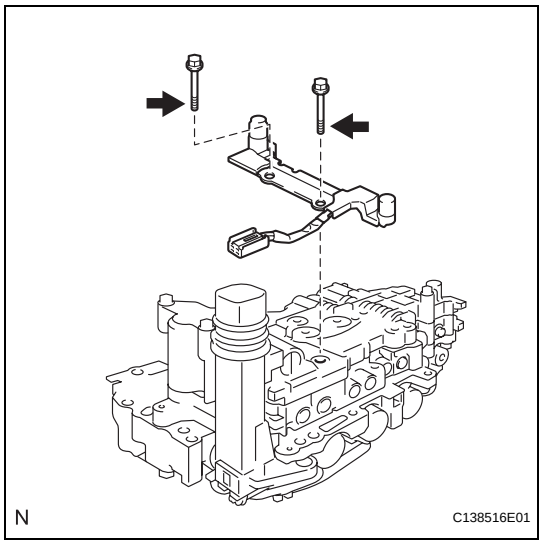


AX

REMOVAL

1. **REMOVE AUTOMATIC TRANSAXLE ASSEMBLY**
   HINT:
   (See page AX-207)
2. **REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-182)**
3. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AX-182)**
4. **REMOVE TRANSMISSION VALVE BODY ASSEMBLY (See page AX-183)**
5. **REMOVE SPEED SENSOR**
   (a) Disconnect the connector.
   (b) Remove the 2 bolts and speed sensor from the valve body.





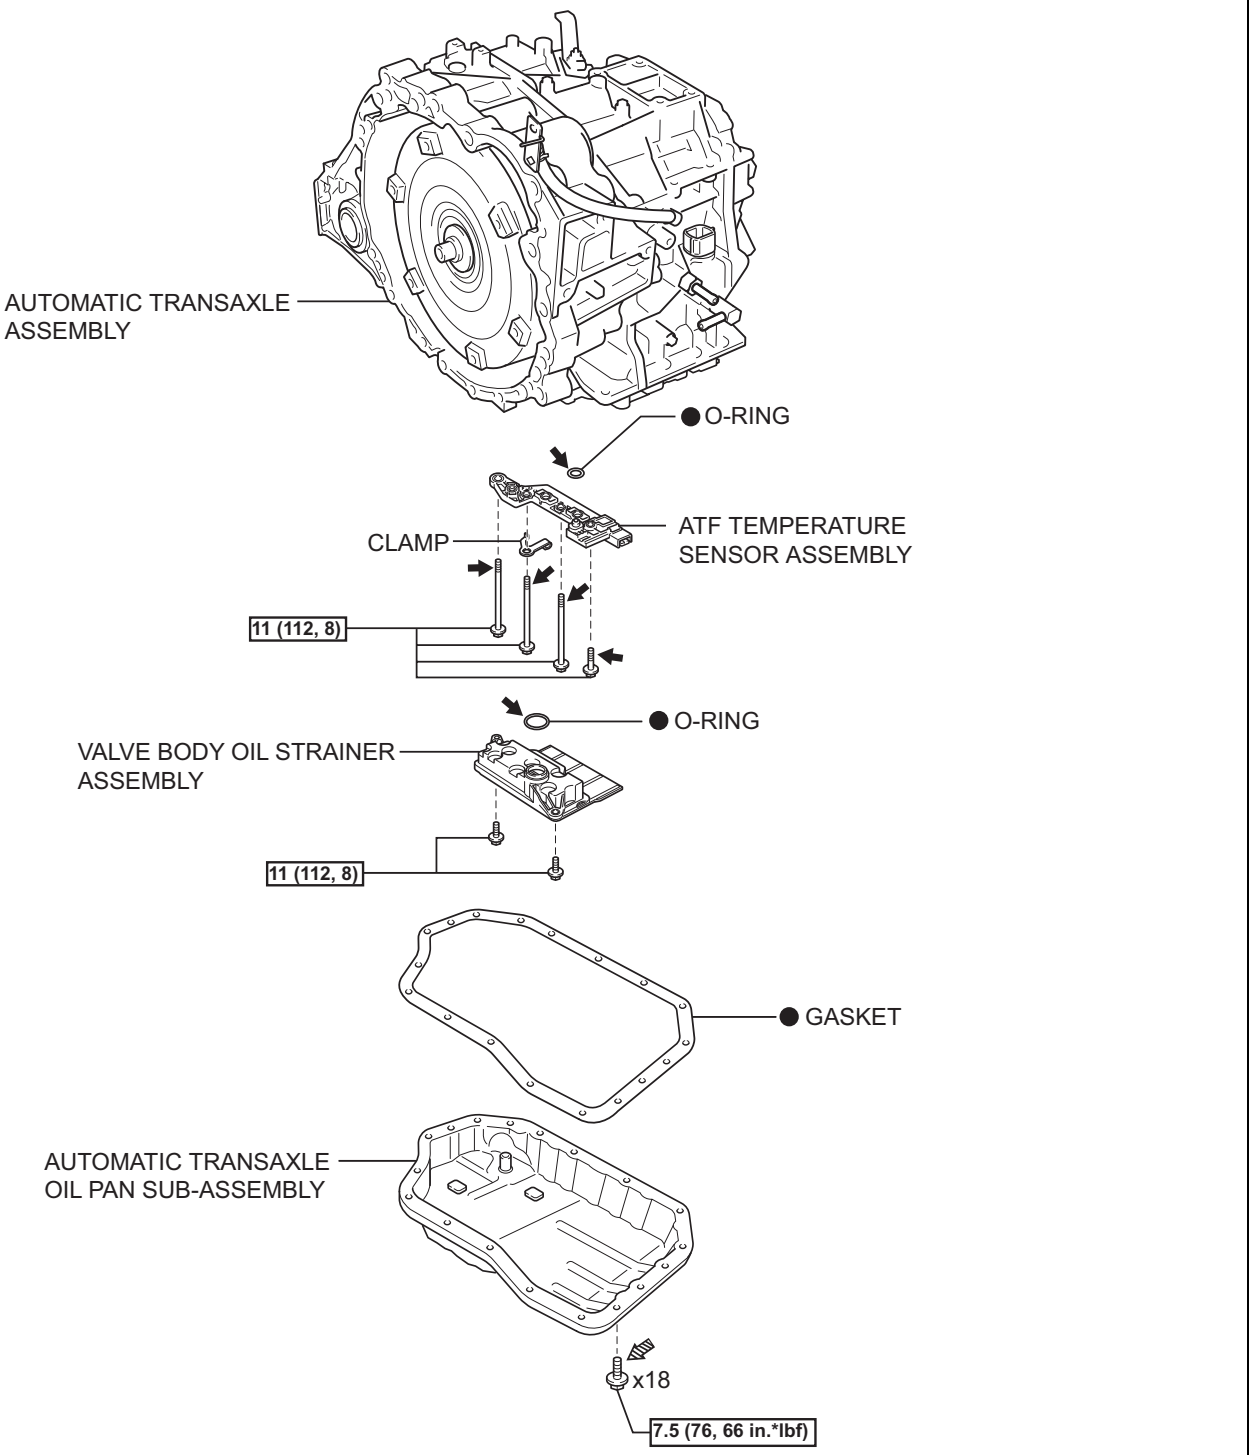
INSTALLATION

1. **INSTALL SPEED SENSOR**
   (a) Coat the 2 bolts with ATF.
   (b) Install the speed sensor to the valve body with the 2 bolts.
   Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)
   (c) Connect the connector.
2. **INSTALL TRANSMISSION VALVE BODY ASSEMBLY (See page AX-183)**
3. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AX-184)**
4. **INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-185)**
5. **INSTALL AUTOMATIC TRANSAXLE ASSEMBLY**
   HINT:
   (See page AX-214)

ATF TEMPERATURE SENSOR

COMPONENTS

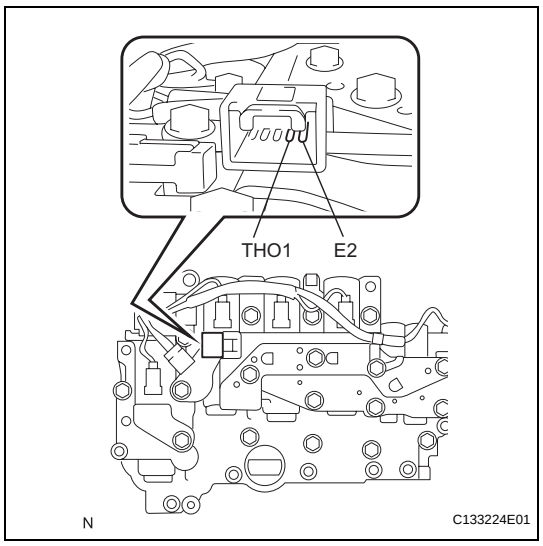
AX



REMOVAL

1. **REMOVE AUTOMATIC TRANSAXLE ASSEMBLY**
   HINT:
   (See page AX-207)
2. **REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-182)**
3. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AX-182)**
4. **REMOVE ATF TEMPERATURE SENSOR ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 4 bolts, ATF temperature sensor assembly and clamp from the valve body.

   (c) Remove the O-ring from the ATF temperature sensor assembly.



INSPECTION

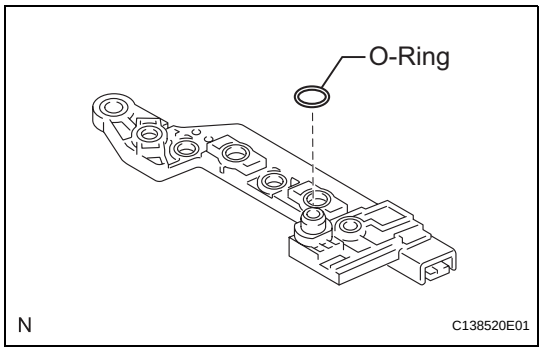
1. **INSPECT ATF TEMPERATURE SENSOR ASSEMBLY**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

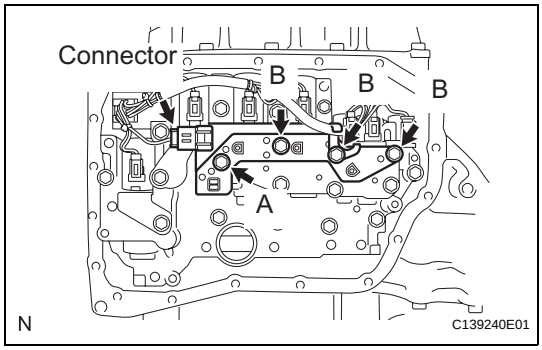
Tester Connection	Specified Condition
E2 - THO1	90 Ω to 156 kΩ
E2 - Body ground	10 kΩ or higher
THO1 - Body ground	10 kΩ or higher

   HINT:
   If the resistance is out of the specified range with the ATF temperature assembly shown in the table below, the driveability of the vehicle may decrease.
   Standard resistance

ATF Temperature	Specified Condition
10 °C (50°F)	5.8 to 7.1 kΩ
110°C (230°F)	0.23 to 0.26 kΩ

   If the result is not specified, replace the ATF temperature sensor assembly.





INSTALLATION

1. INSTALL ATF TEMPERATURE SENSOR ASSEMBLY

(a) Coat a new O-ring with ATF and install it to the ATF temperature sensor assembly .

(b) Coat the 4 bolts with ATF.

(c) Install the ATF temperature sensor assembly and clamp to the valve body with the 4 bolts.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)
Bolt length:
Bolt A:
25 mm (0.98 in.)
Bolt B:
85 mm (3.35 in.)

(d) Connect the connector.

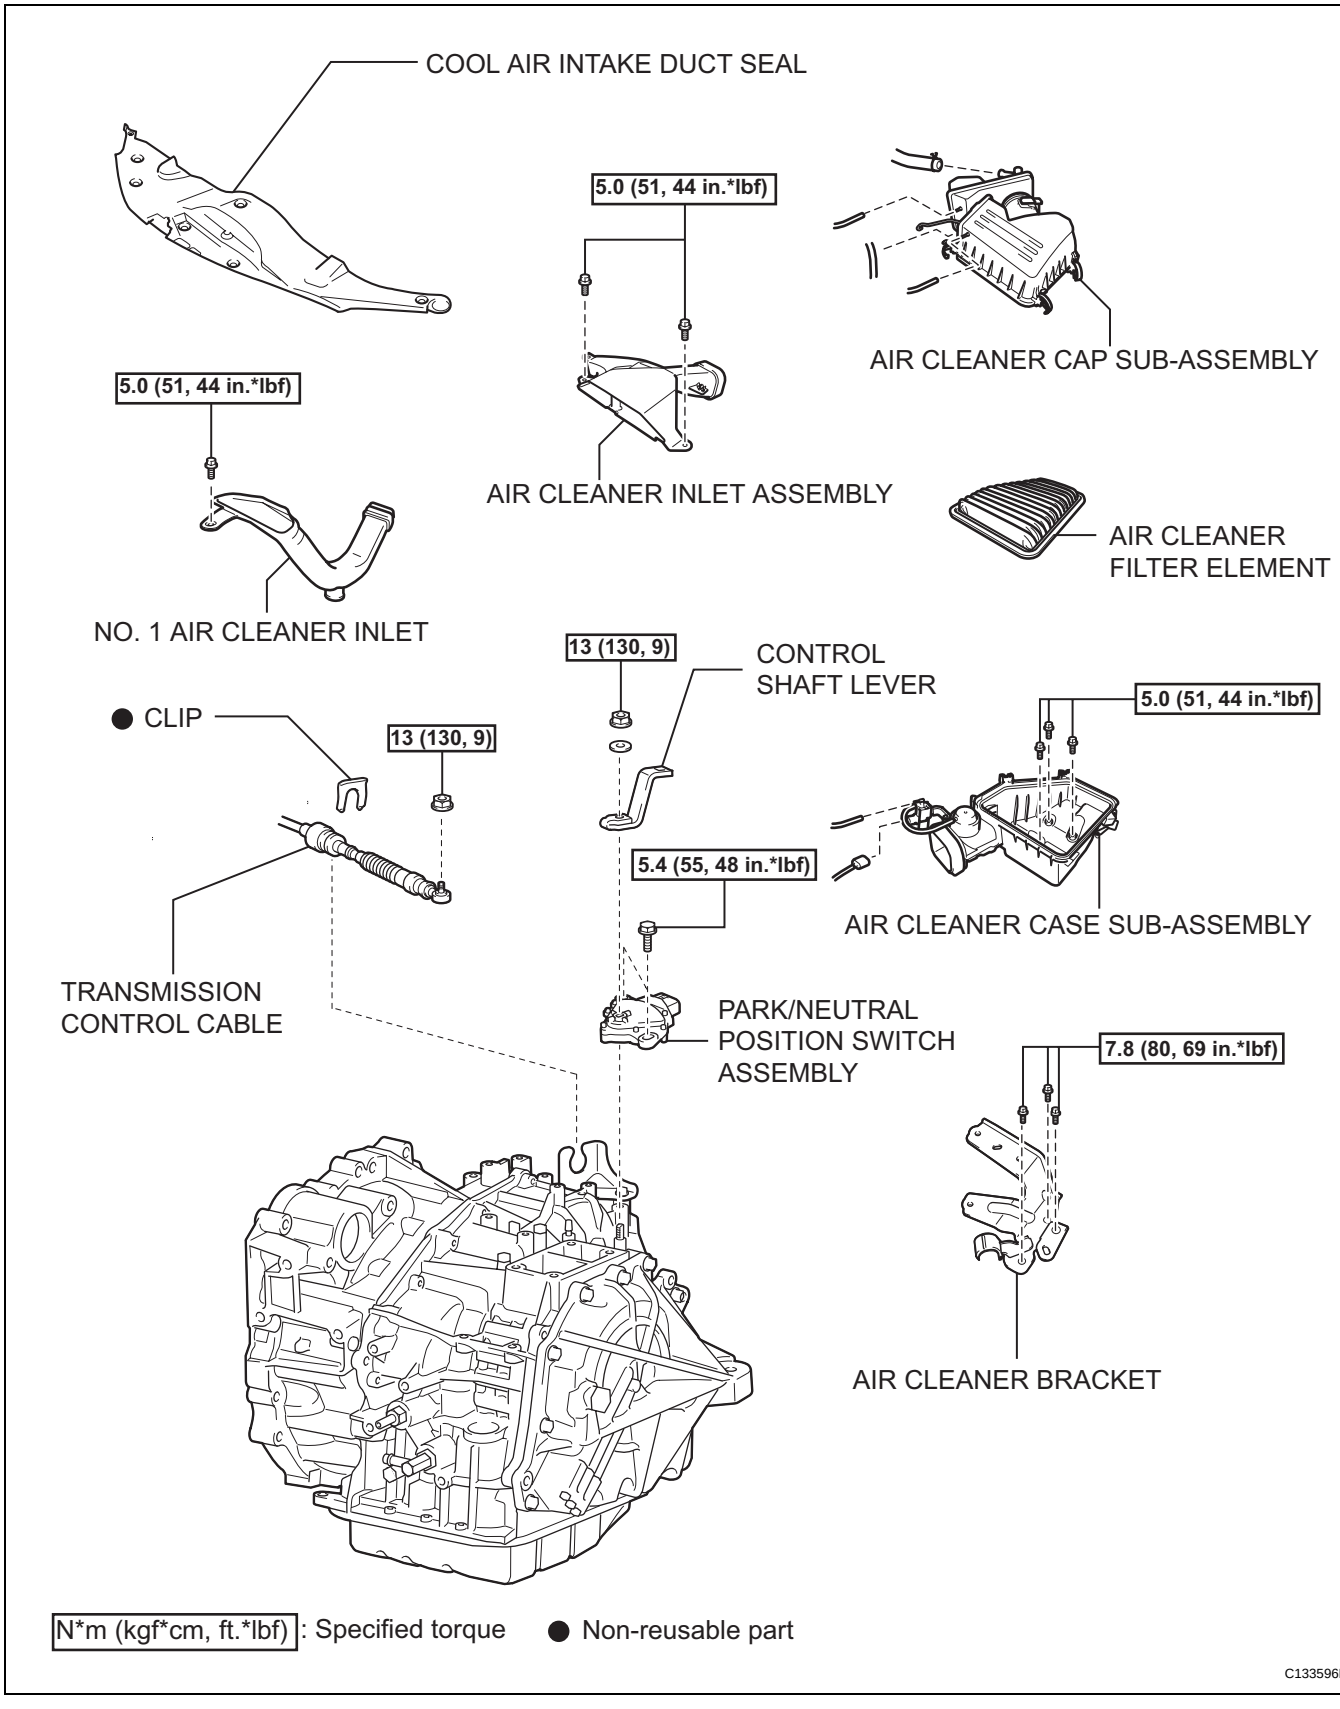
2. INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AX-184)

3. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-185)

4. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY
HINT:
(See page AX-214)

PARK / NEUTRAL POSITION SWITCH

COMPONENTS



AX

ON-VEHICLE INSPECTION

1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY OPERATION

(a) Apply the parking brake.

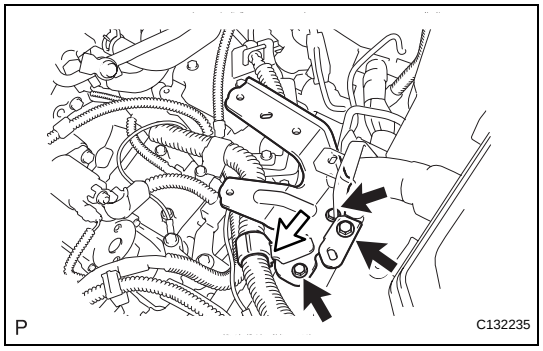
(b) Turn the ignition switch on (IG).

(c) Depress the brake pedal and check that the engine starts when the shift lever is set in the N or P position, but does not start in other positions.

(d) Check that the back-up light comes on and the reverse warning buzzer sounds when the shift lever is set in the R position, but the light and buzzer do not operate in other positions. If a failure is found, check the park/neutral position switch for continuity.

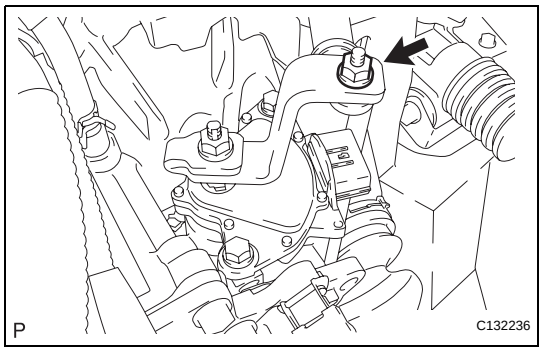
REMOVAL

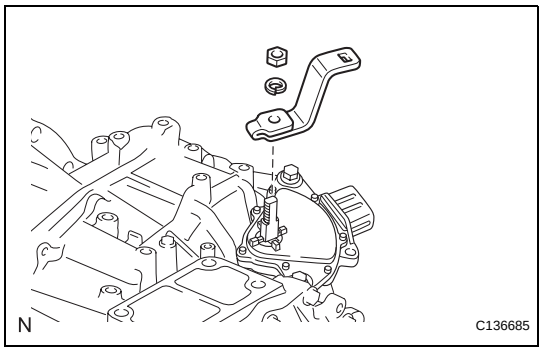
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)**
6. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**
7. **REMOVE AIR CLEANER BRACKET**
   (a) Separate the wire harness clamp.
   (b) Remove the 3 bolts and air cleaner bracket.



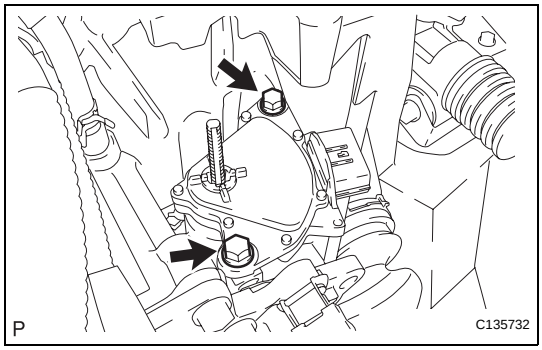
8. **REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**
   (a) Remove the clip from the transmission cable bracket.

   (b) Remove the nut and transmission control cable from the control shaft lever.
   (c) Disconnect the connector from the park/neutral position switch.





(d) Remove the nut, washer and control shaft lever from the control shaft.



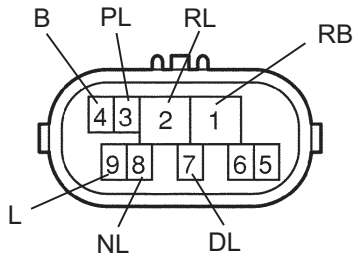
(e) Remove the 2 bolts and park/neutral position switch from the control shaft.

NOTICE:

Before removing the park/neutral position switch, remove any dirt or rust on the installation portion of the control shaft. Be sure to remove the switch straight along the shaft while being careful not to deform the plate spring that supports the shaft. If the plate spring is deformed, the park/neutral switch cannot be reinstalled correctly.

Switch Side:

(Connector Front View):



INSPECTION

1. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance:

Shift Position	Tester Connection	Specified Condition
P	1 (RB) - 3 (PL) and 4 (B) - 9 (L)	Below 1 Ω
Except P	↑	10 kΩ or higher
R	2 (RL) - 1 (RB)	Below 1 Ω
Except R	↑	10 kΩ or higher
N	1 (RB) - 8 (NL) and 4 (B) - 9 (L)	Below 1 Ω
Except N	↑	10 kΩ or higher
D, S, "+" and "-"	1 (RB) - 7 (DL)	Below 1 Ω
Except D, S, "+" and "-"	↑	10 kΩ or higher

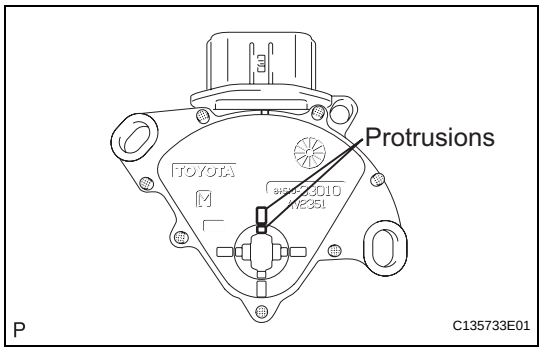
If operation cannot be done as specified, replace the park/neutral position switch.

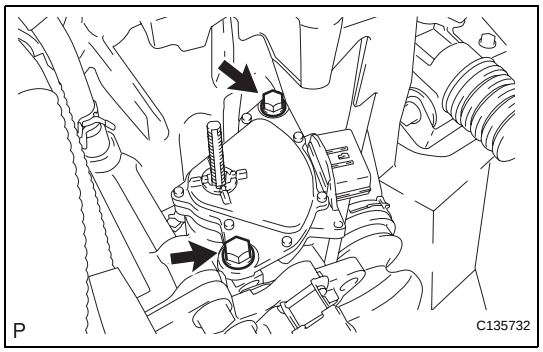
INSTALLATION

1. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

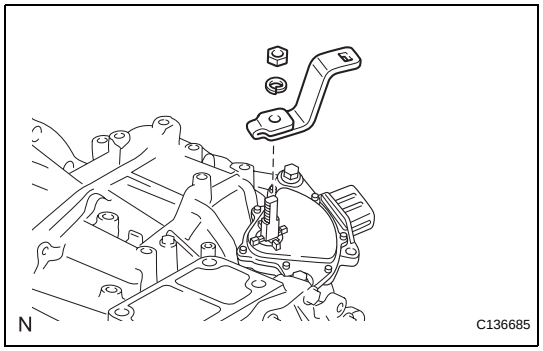
(a) Move the shift lever to the N position.

(b) Align the protrusions of the park/neutral position switch.



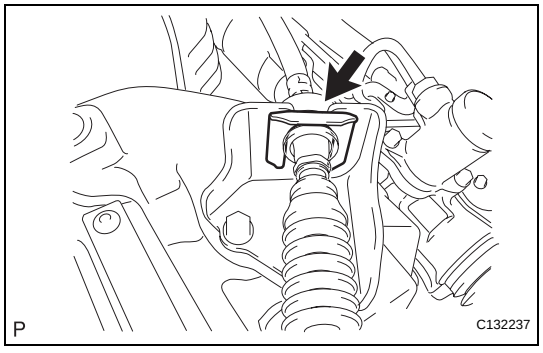


(c) Install the park/neutral position switch to the control shaft with the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
NOTICE:
- **Before installing the park/neutral position switch, remove any dirt or rust on the installation portion of the control shaft. Be sure to install the switch straight along the shaft while being careful not to deform the plate spring that supports the shaft. If the plate spring is deformed, the park/neutral switch cannot be reinstalled correctly.**
- **After installing the park/neutral position switch, confirm that the 2 protrusions on the switch are aligned.**

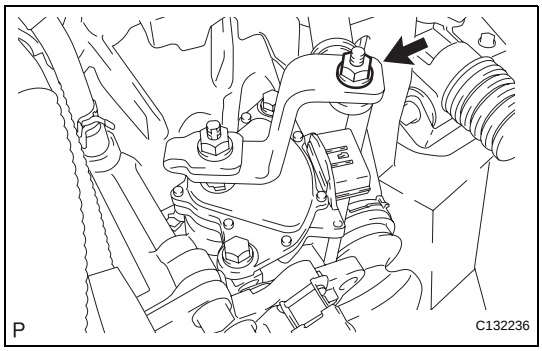


(d) Install the control shaft lever to the control shaft with the nut and washer.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

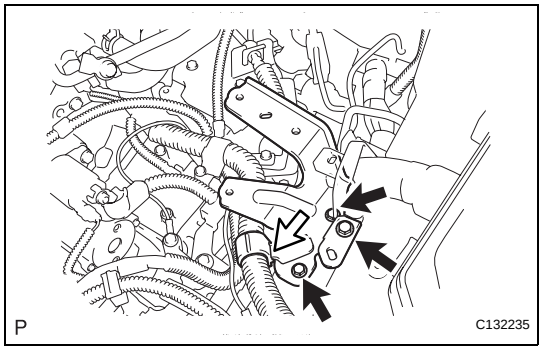
(e) Connect the connector to the park/neutral position switch.



(f) Connect the transmission control cable to the transmission control cable bracket with a new clip.



(g) Connect the transmission control cable to the control shaft lever with the nut.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



2. INSTALL AIR CLEANER BRACKET
(a) Install the air cleaner bracket with the 3 bolts.
Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)
(b) Install the wire harness clamp.

3. INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)

4. INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)

5. INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)

6. INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)

7. INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-51)

9. INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY OPERATION (See page AX-174)

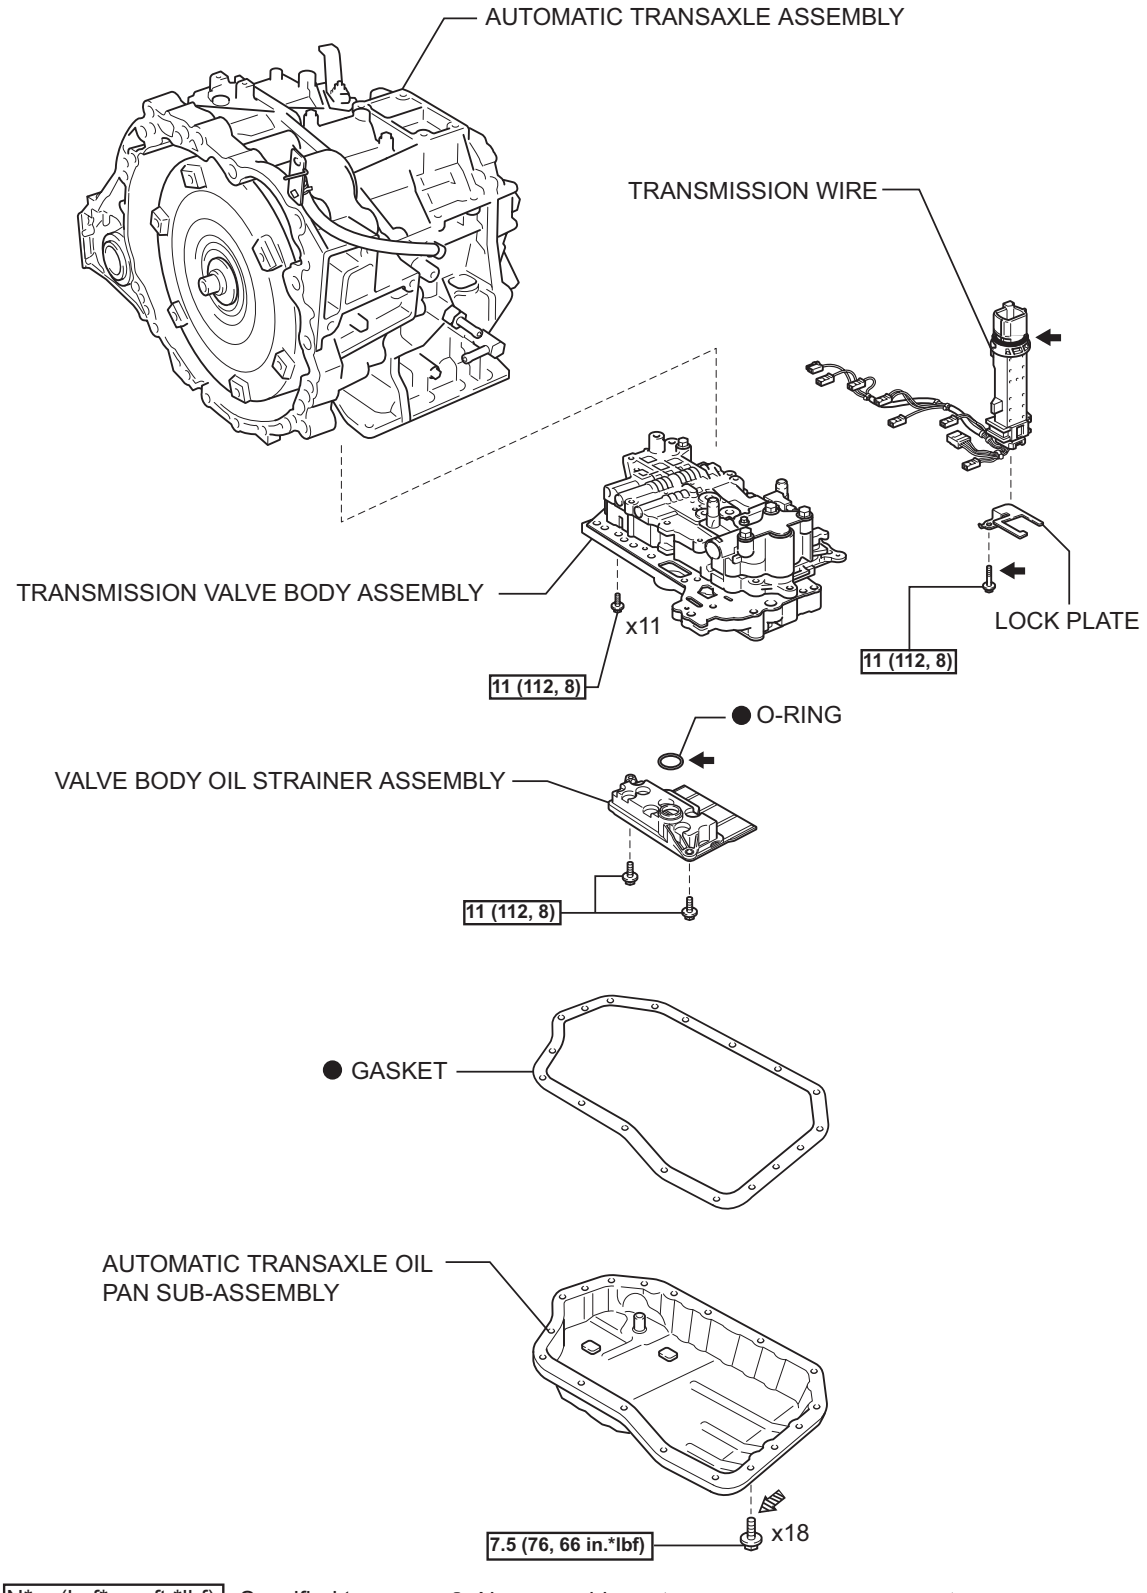
10. INSPECT SHIFT LEVER POSITION (See page AX-191)

11. ADJUST SHIFT LEVER POSITION (See page AX-191)

TRANSMISSION WIRE

COMPONENTS

AX



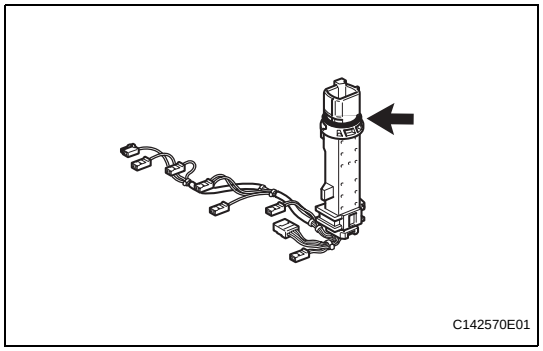
REMOVAL

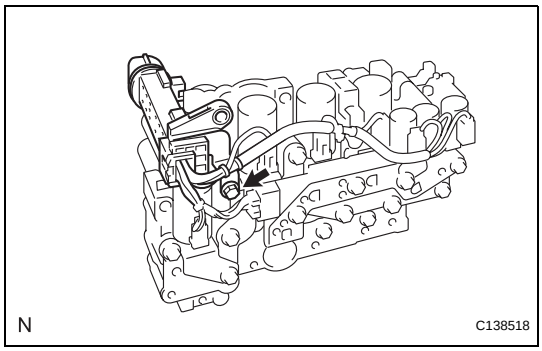
1. **REMOVE AUTOMATIC TRANSAXLE ASSEMBLY**
   HINT:
   (See page AX-207)
2. **REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-182)**
3. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AX-182)**
4. **REMOVE TRANSMISSION VALVE BODY ASSEMBLY (See page AX-183)**
5. **REMOVE TRANSMISSION WIRE**
   (a) Disconnect the 9 connectors.
   (b) Remove the transmission wire from the clamp.

   (c) Remove the bolt, lock plate and transmission wire from the valve body.

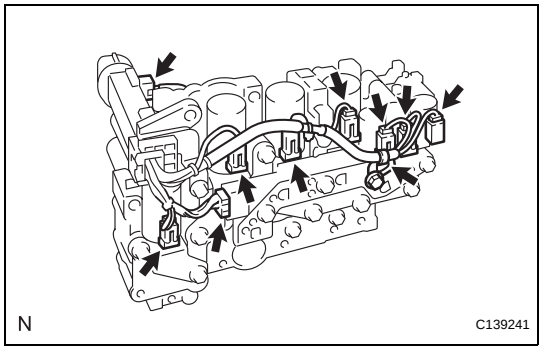
INSTALLATION

1. **INSTALL TRANSMISSION WIRE**
   (a) Coat the O-ring with ATF.
   (b) Coat the bolt with ATF.





(c) Install the transmission wire and lock plate to the valve body with the bolt.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



(d) Install the transmission wire to the clamp.
(e) Connect the 9 connectors.

2. **INSTALL TRANSMISSION VALVE BODY ASSEMBLY (See page AX-183)**
3. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AX-184)**
4. **INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-185)**
5. **INSTALL AUTOMATIC TRANSAXLE ASSEMBLY**
HINT:
(See page AX-214)

VALVE BODY ASSEMBLY

COMPONENTS

C

C139875E03

AX

REMOVAL

1. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

HINT:

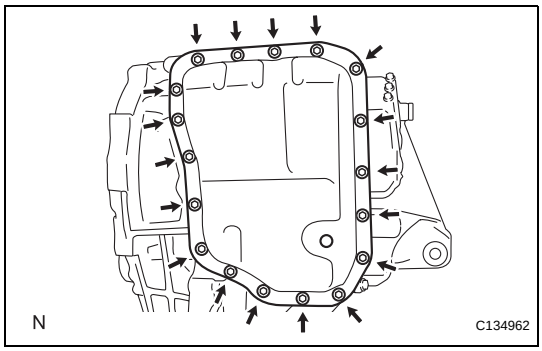
(See page AX-207)

2. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Remove the 18 bolts and oil pan from the transaxle.

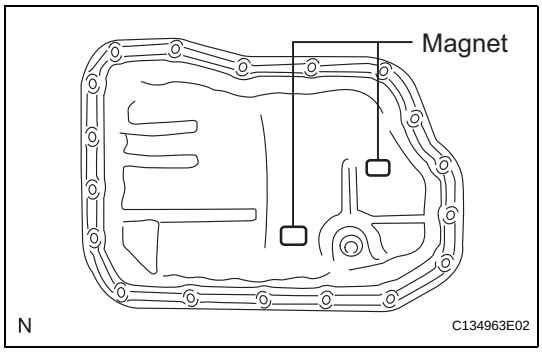
NOTICE:

Some fluid will remain in the oil pan. Remove all the pan bolts, and carefully remove the oil pan assembly.



(b) Remove the gasket from the oil pan.

(c) Remove the 2 magnets from the oil pan.



(d) Examine particles in the oil pan.

(1) Collect any steel chips with the removed magnets. Lock carefully at the chips and particles in the oil pan and on the magnets to see the type of wear which might be found in the transaxle.

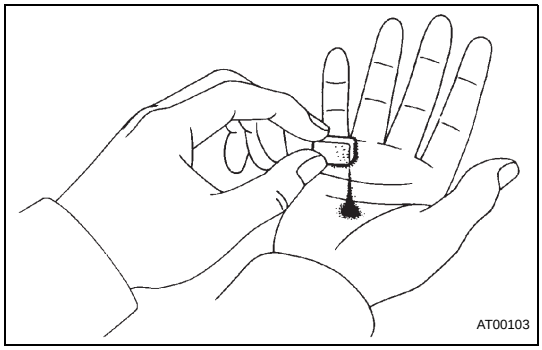
Result:

Steel (magnetic):

Bearing, gear and plate wear

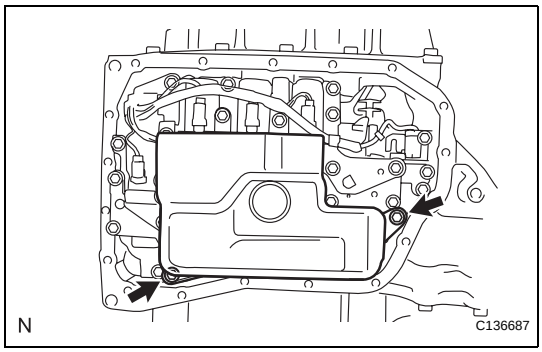
Brass (non-magnetic):

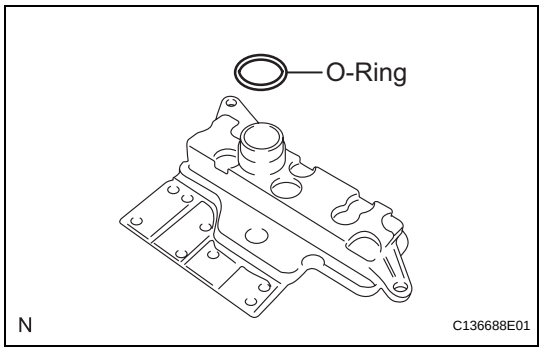
Bearing wear



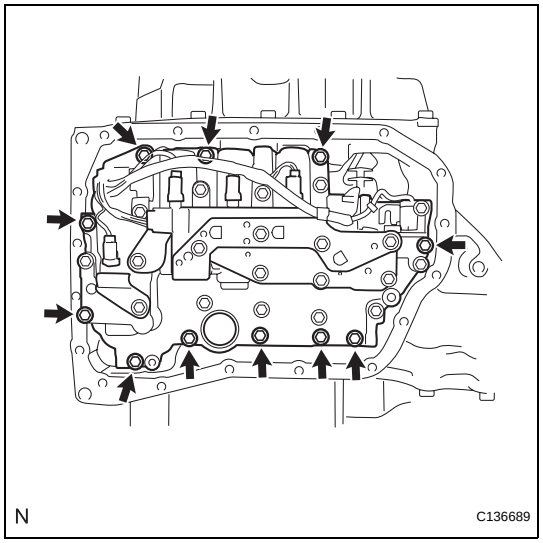
3. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

(a) Remove the 2 bolts and oil strainer from the valve body.





(b) Remove the O-ring from the oil strainer.

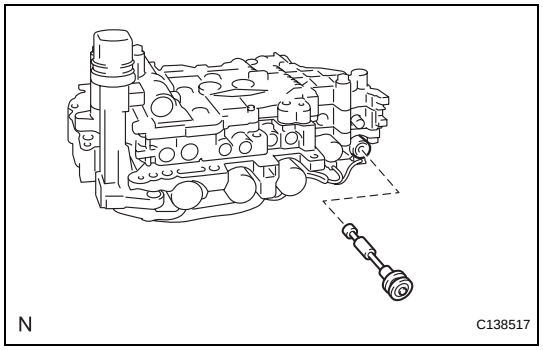


4. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Remove the 11 bolts and valve body from the transaxle.

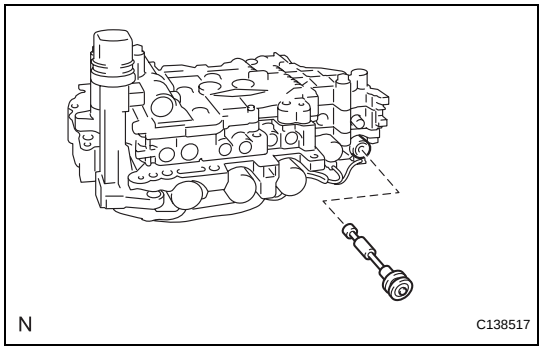
NOTICE:

When removing the transmission valve body assembly, be careful not to allow the transmission revolution sensor and the transaxle case to interfere each other.



5. REMOVE MANUAL VALVE

(a) Remove the manual valve from the valve body.



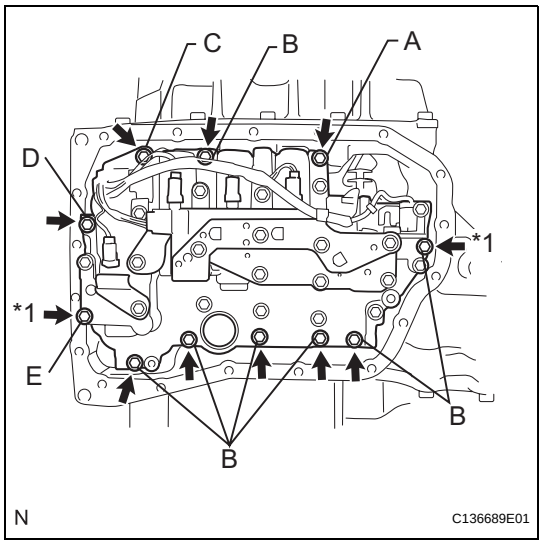
INSTALLATION

1. INSTALL MANUAL VALVE

(a) Coat the manual valve with ATF and install it to the valve body.

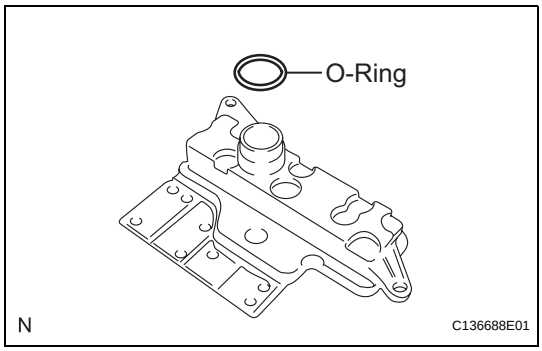
2. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

(a) Coat the O-ring of the transmission wire with ATF.

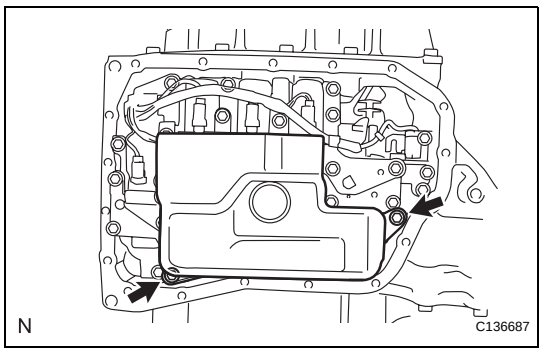


(b) Confirm that the manual valve lever is positioned as shown in the illustration and install the valve body assembly to the transaxle case with the 11 bolts.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)
Bolt length:
Bolt A:
25 mm (0.98 in.)
Bolt B:
30 mm (1.18 in.)
Bolt C:
35 mm (1.38 in.)
Bolt D:
45 mm (1.77 in.)
Bolt E:
55 mm (2.17 in.)
NOTICE:
- **When installing the transmission valve body assembly, be careful not to allow the transmission revolution sensor and transaxle case to interfere each other.**
- **Be sure to insert the pin of the manual valve lever into the groove on the end of the manual valve.**
- **First, temporarily tighten the bolts marked by (*1) in the illustration because they are positioning bolts.**

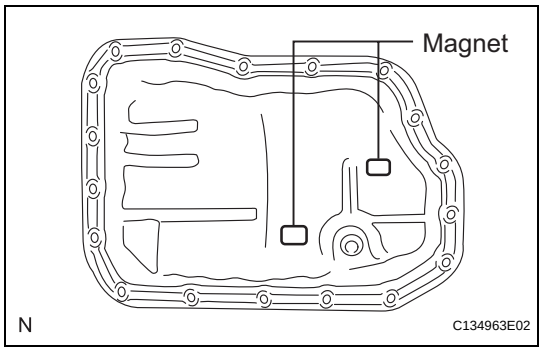
3. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

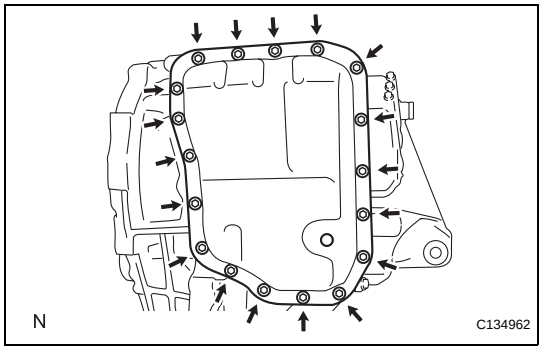


(a) Coat a new O-ring with ATF and install it to the oil strainer.
NOTICE:
Ensure that the O-ring is not twisted or pinched.



(b) Install the oil strainer to the valve body with the 2 bolts.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)





4. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets to the oil pan.

(b) Install a new gasket to the oil pan.

(c) Apply sealant to the 18 bolts.

Sealant:

Toyota Genuine Seal Packing 1344, Three Bond 1344 or equivalent.

(d) Install the oil pan from the automatic transaxle with the 18 bolts.

Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)

NOTICE:

- **In order to ensure proper sealing of the transmission oil pan bolts, apply sealant to the bolts and install them within 10 minutes of sealant application.**
- **Completely remove any oil or grease from the contact surface of the transaxle case and oil pan sub-assembly with the gasket before installation.**

5. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

HINT:

(See page AX-214)

AX

AX

SHIFT LOCK SYSTEM

ON-VEHICLE INSPECTION

1. CHECK SHIFT LOCK OPERATION

(a) Move the shift lever to the P position.
(b) Turn the ignition switch off.
(c) Check that the shift lever cannot be moved to any position other than P.
(d) Turn the ignition switch on (IG), depress the brake pedal and check that the shift lever can be moved to another position.
If operation cannot be done as specified, inspect the shift lock control unit.

2. CHECK SHIFT LOCK RELEASE BUTTON OPERATION

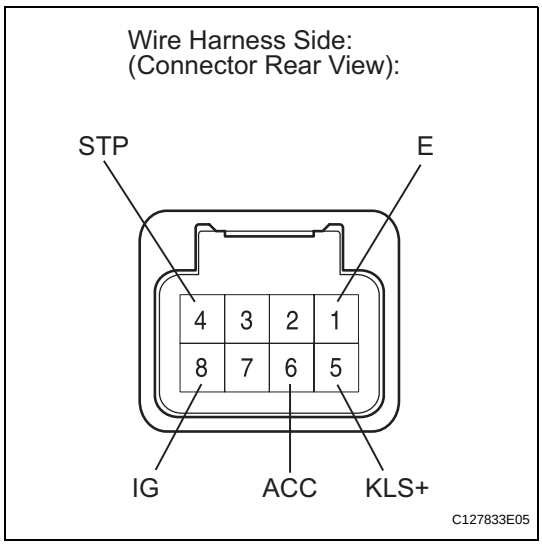
(a) Using a screwdriver, remove the shift lock release cover.
(b) When operating the shift lever with the shift lock release button pressed, check that the lever can be moved to any position other than P.
If operation cannot be done as specified, check the shift lever assembly installation condition.

3. CHECK KEY INTERLOCK OPERATION (w/o Smart Key System)

(a) Turn the ignition switch to the ON position.
(b) Depress the brake pedal and move the shift lever to any position other than P.
(c) Check that the ignition key cannot be turned to the LOCK position.
(d) Move the shift lever to the P position, turn the ignition key to the LOCK position and check that the ignition key can be removed.
If operation cannot be done as specified, inspect the shift lock control unit.

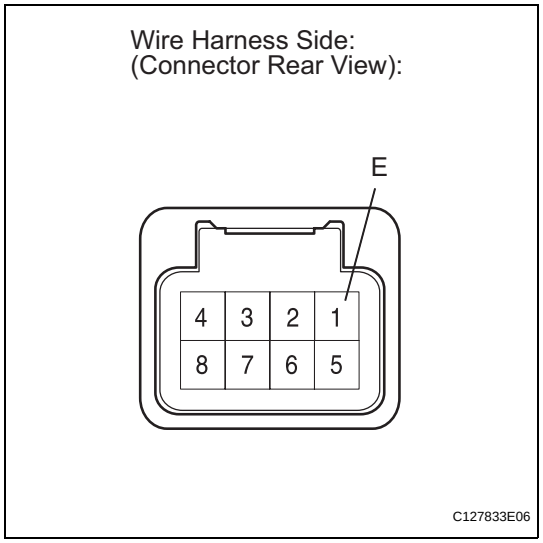
4. INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY (w/o Smart Key System)

(a) Measure the voltage according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control unit assembly connector.



Standard voltage

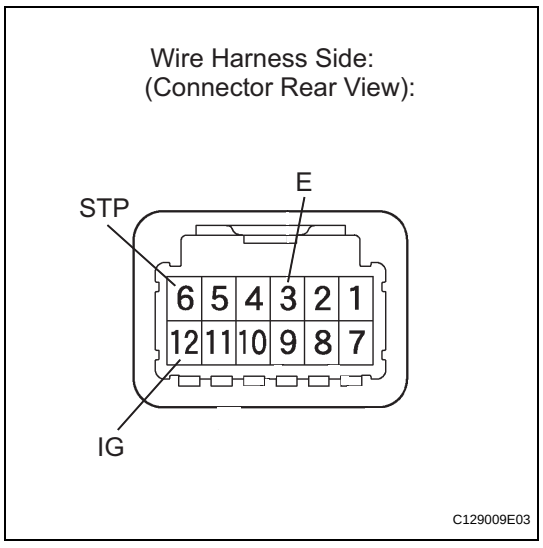
Terminal	Measuring Condition	Voltage (V)
6 (ACC) - 1 (E)	Ignition switch ON	10 to 14
6 (ACC) - 1 (E)	Ignition switch ACC	10 to 14
6 (STP) - 1 (E)	Ignition switch OFF	Below 1
4 (STP) - 1 (E)	Brake pedal depressed	10 to 14
4 (STP) - 1 (E)	Brake pedal released	Below 1
5 (KLS+) - 1 (E)	1. Ignition switch ACC and shift lever P position 2. Ignition switch ACC and shift lever except P position 3. Ignition switch ACC and shift lever P position (After approx. 1 second)	7.5 to 11 Below 1 6 to 9
8 (IG) - 1 (E)	Ignition switch ON	10 to 14
8 (IG) - 1 (E)	Ignition switch OFF	Below 1



(b) Measure the resistance according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control unit assembly connector.
If the result is not as specified, replace the shift lever assembly.

Standard resistance

Terminal	Measuring Condition	Specified Value
1 (E) - Body ground	Always	Below 1 Ω



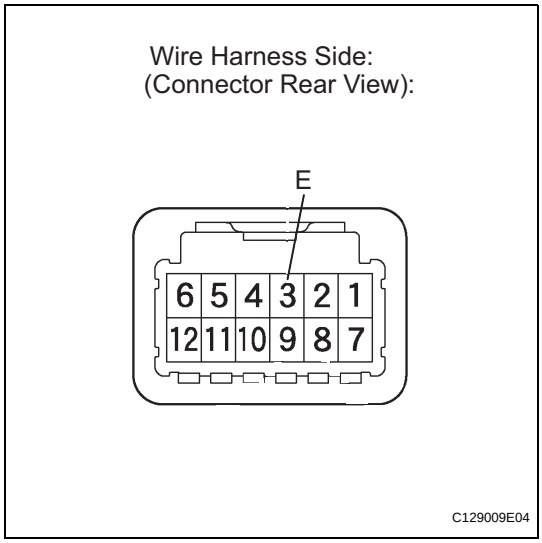
5. INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY (w/ Smart Key System)

(a) Measure the voltage according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control unit assembly connector.

Standard voltage

Terminal	Measuring Condition	Voltage (V)
12 (IG) - 3 (E)	Engine switch on (IG)	10 to 14
12 (IG) - 3 (E)	Engine switch off	Below 1
6 (STP) - 3 (E)	Brake pedal depressed	10 to 14

Terminal	Measuring Condition	Voltage (V)
6 (STP) - 3 (E)	Brake pedal released	Below 1



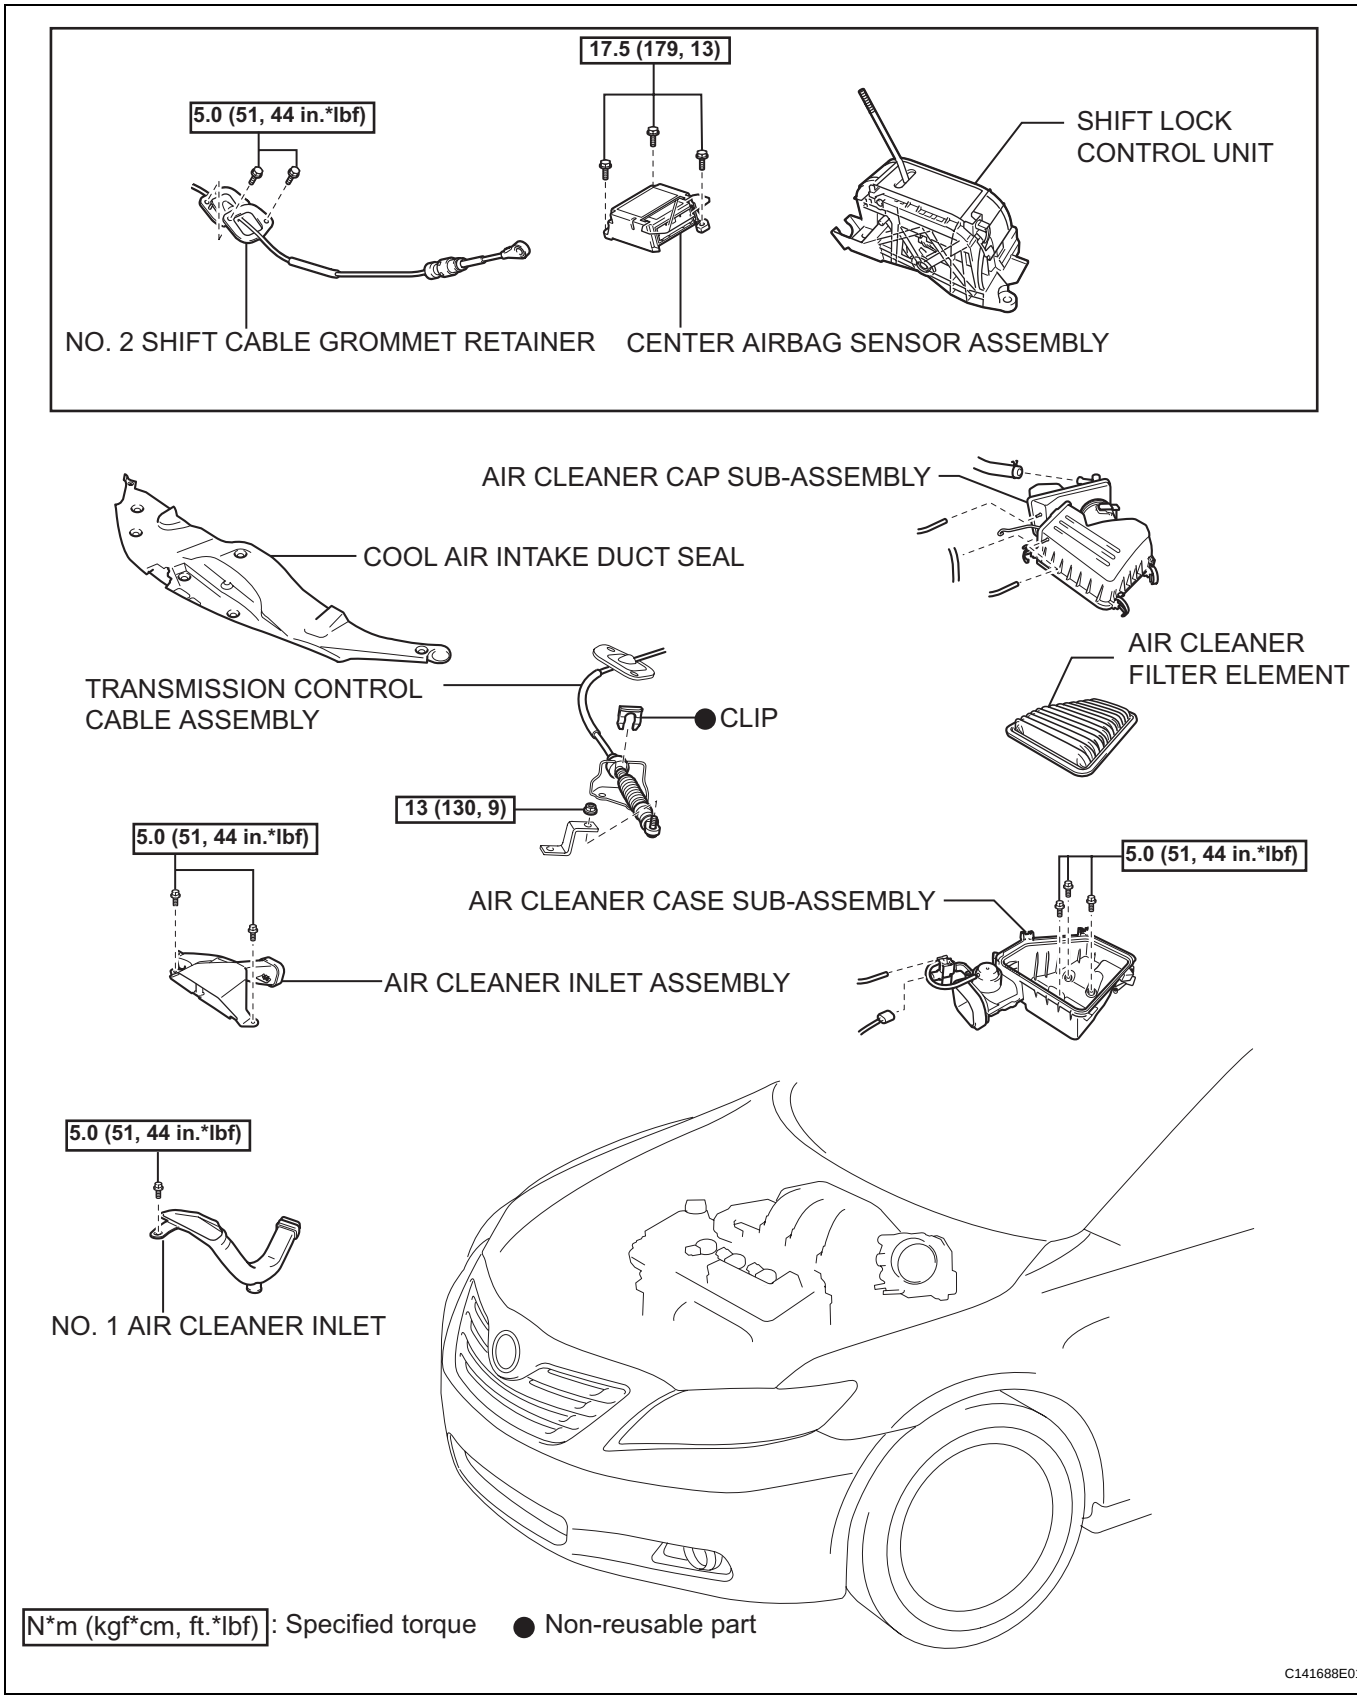
(b) Measure the resistance according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control unit assembly connector.
If the result is not done as specified, replace the shift lever assembly.

Standard resistance

Terminal	Measuring Condition	Specified Value
3 (E) - Body ground	Always	Below 1 Ω

TRANSMISSION CONTROL CABLE ASSEMBLY

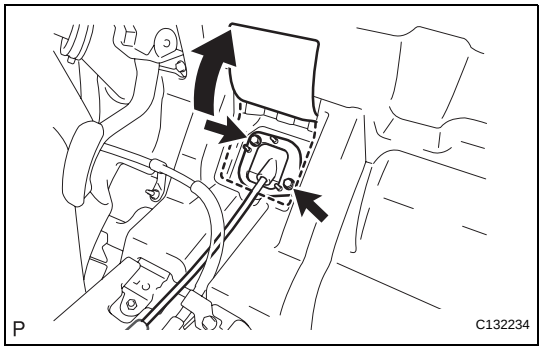
COMPONENTS



AX

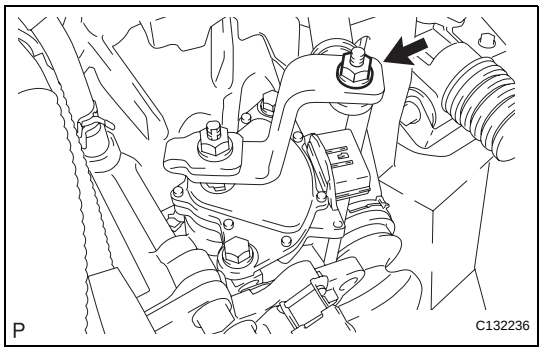
REMOVAL

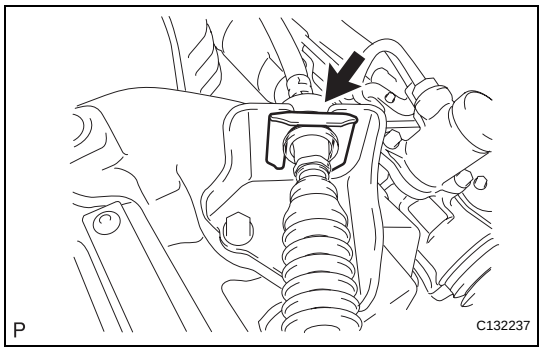
1. **REMOVE AIR CONDITIONING UNIT**
   HINT:
   (See page AC-151)
2. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**
3. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
4. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)**
5. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)**
6. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)**
7. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**
8. **DISCONNECT NO. 2 SHIFT CABLE GROMMET RETAINER**
   (a) Turn back the carpet.
   (b) Remove the 2 bolts and disconnect the No. 2 shift cable grommet retainer.
   (c) Remove the No. 2 shift cable grommet retainer.



9. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Disconnect the end of the transmission control cable assembly from the shift lock control unit.
   (b) Disconnect the transmission control cable assembly from the transmission floor shift assembly while pushing the 2 claws of the floor shift cable.

   (c) Remove the nut and transmission control cable from the control shaft lever.





(d) Remove the clip and disconnect the transmission control cable assembly from the No. 1 control cable bracket.
(e) Pull out the transmission control cable assembly from the body.

AX

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION

(a) When shifting from the P to the R position with the ignition switch on (IG) and brake pedal depressed, make sure that the shift lever moves smoothly and moves correctly into position.

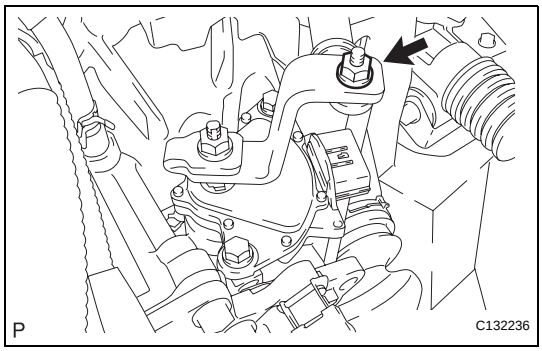
(b) Start the engine and make sure that the vehicle moves forward when shifting from the N to the D position and moves rearward when shifting to the R position.

If operation cannot be done as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

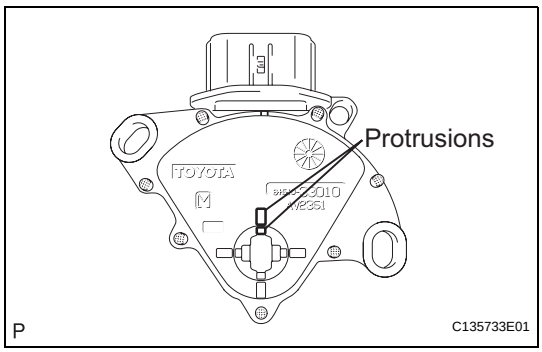
2. ADJUST SHIFT LEVER POSITION

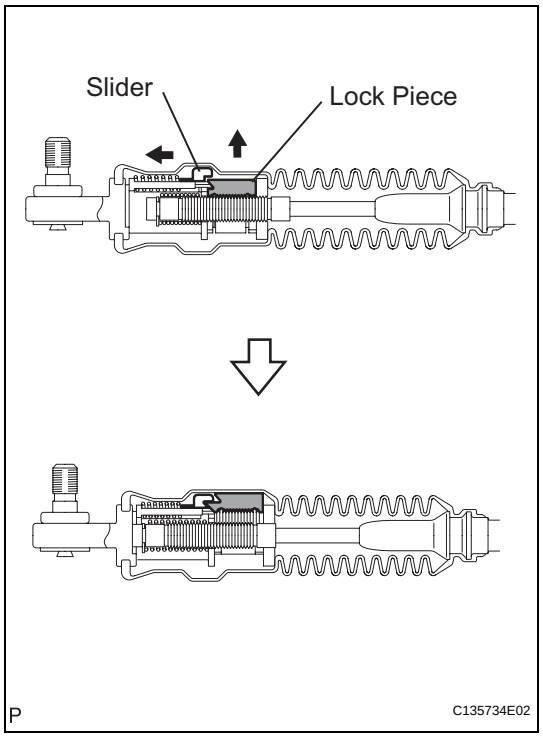
(a) Move the shift lever to the N position.

(b) Remove the nut and transmission control cable from the control shaft lever.

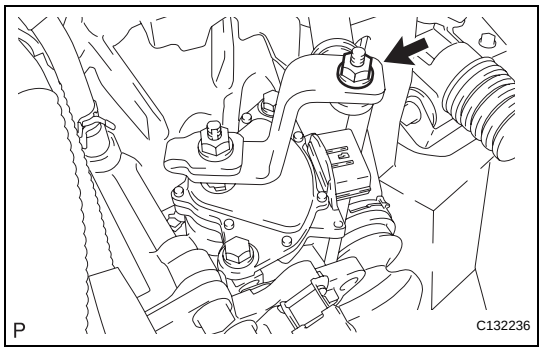


(c) Align the protrusions of the park/neutral position switch.

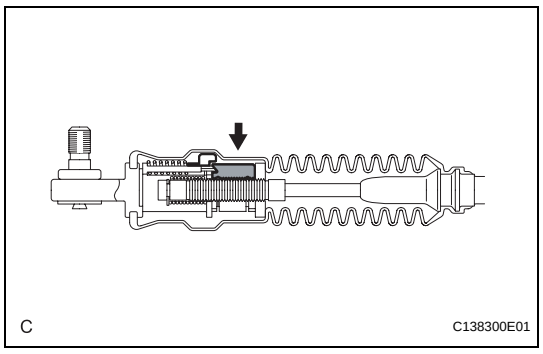




(d) Move the slider in the directions indicated by the arrows and pull up the lock piece.
NOTICE:
Do not damage the boot.



(e) Install the control cable to the control shaft with the nut.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)
NOTICE:
- **If the control cable end is excessively pushed up, the shift lever cannot be adjusted.**
- **When tightening the nut, confirm that the control cable is properly stretched.**



(f) Push in the lock piece.
NOTICE:
Firmly push in the lock piece until the slider lock is engaged.

(g) Start the engine and make sure that the vehicle moves forward when moving the lever from the N to the D position and moves rearward when moving it to the R position. If it becomes hard to move the shift lever, readjust the shift lever position.

AX

INSTALLATION

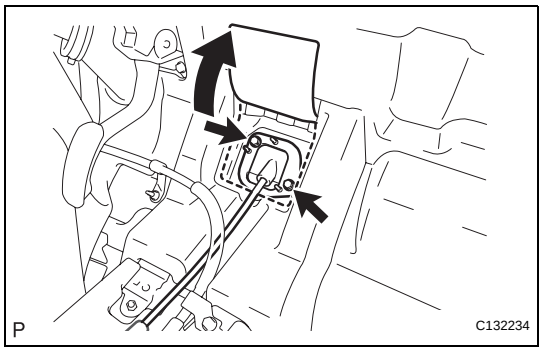
1. INSTALL NO. 2 SHIFT CABLE GROMMET RETAINER

(a) Pass the control cable from the cabin to the engine compartment.

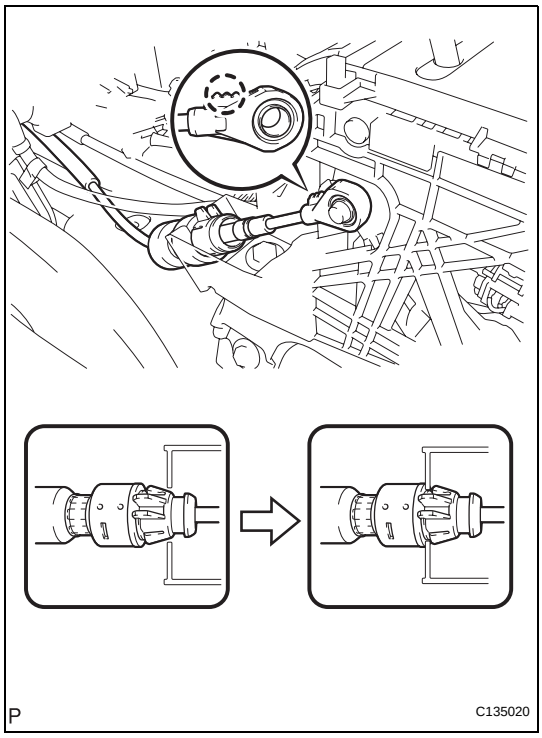
(b) Install the No. 2 shift cable grommet retainer with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

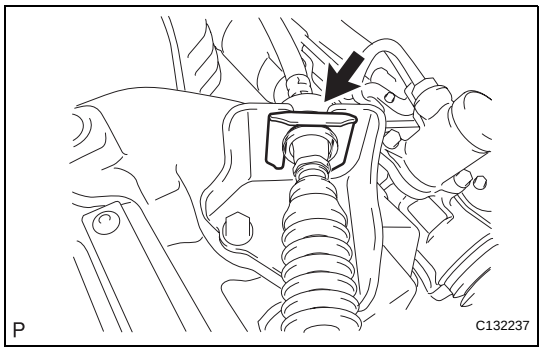
(a) Move the shift lever to the N position.

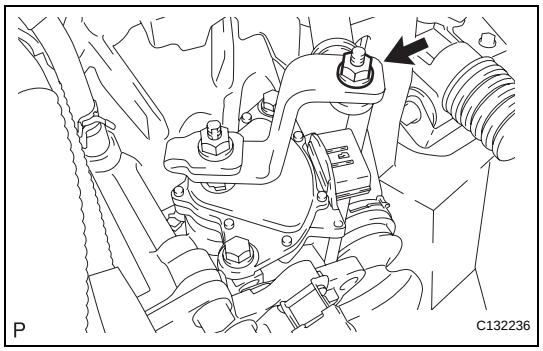


(b) Install the transmission control cable assembly as shown in the illustration.
HINT:
- Install the floor shift cable with the uneven surface facing up.
- Securely engage the claws of the floor shift cable.

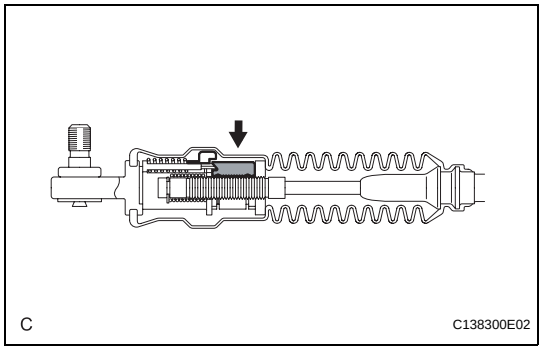


(c) Connect the control cable to the bracket with a new clip.





(d) Install the control cable to the control shaft lever with the nut.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



(e) Push in the lock piece of the transmission control cable.
NOTICE:
Firmly push in the lock piece until the slider lock is engaged.
HINT:
After pushing in the lock piece, make sure that the boot is not deformed.

3. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**
4. **INSTALL AIR CONDITIONING UNIT**
HINT:
(See page AC-173)
5. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
6. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)**
7. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-506)**
8. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**
9. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**
10. **INSPECT SHIFT LEVER POSITION (See page AX-191)**
11. **ADJUST SHIFT LEVER POSITION (See page AX-191)**

    SST 09308-00010

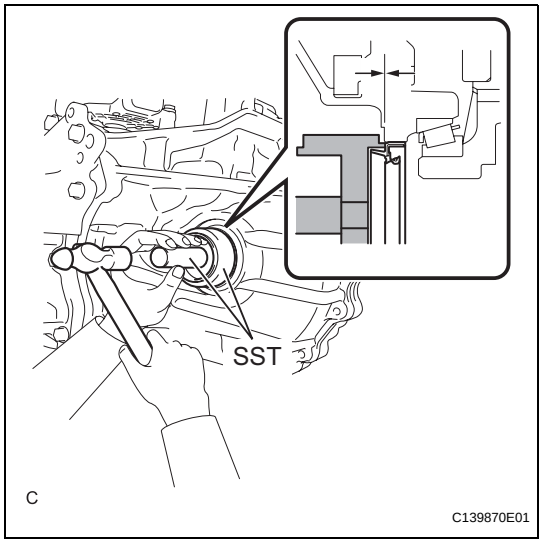
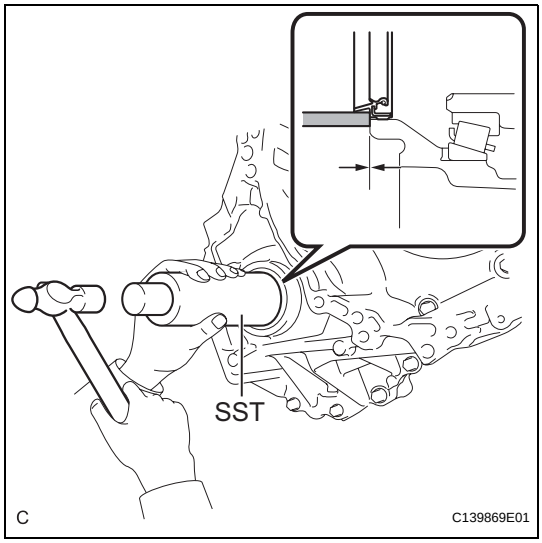
INSTALLATION



1. **INSTALL TRANSAXLE CASE NO. 2 OIL SEAL**
    (a) Using SST and a hammer, install a new oil seal to the transaxle case.
    SST 09316-10010, 09950-70010 (09951-07100)
    Oil seal installation depth:
    -0.5 to 0.5 mm (-0.020 to 0.020 in.)
    (b) Coat the lip of the oil seal with MP grease.



2. **INSTALL FRONT TRANSAXLE CASE NO. 1 OIL SEAL**
    (a) Using SST and a hammer, install a new oil seal to the transaxle housing.
    SST 09308-14010
    Oil seal installation depth:
    -0.5 to 0.5 mm (-0.020 to 0.020 in.)
    (b) Coat the lip of the oil seal with MP grease.
3. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)**
4. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)**
5. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-21)**
6. **INSTALL FRONT AXLE ASSEMBLY RH (See page EM-45)**
7. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-21)**
8. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH (See page EM-45)**
9. **INSTALL TIE ROD ASSEMBLY LH (See page DS-21)**
10. **INSTALL TIE ROD ASSEMBLY RH (See page EM-45)**
11. **INSTALL FRONT SPEED SENSOR LH (See page DS-21)**

12. **INSTALL FRONT SPEED SENSOR RH (See page EM-45)**
13. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-22)**
14. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH (See page EM-45)**
15. **INSTALL FRONT AXLE HUB NUT LH (See page DS-22)**
16. **INSTALL FRONT AXLE HUB NUT RH (See page EM-45)**
17. **INSTALL FRONT WHEELS (See page EM-51)**
18. **ADD AUTOMATIC TRANSAXLE FLUID**
    HINT:
    (See page AX-164)
19. **ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    (See page SP-4)
20. **CHECK ABS SPEED SENSOR SIGNAL**
    (a) ABS: BC-11
    (b) VSC (for BOSCH): BC-290
    (c) VSC (for ADVICS): BC-123

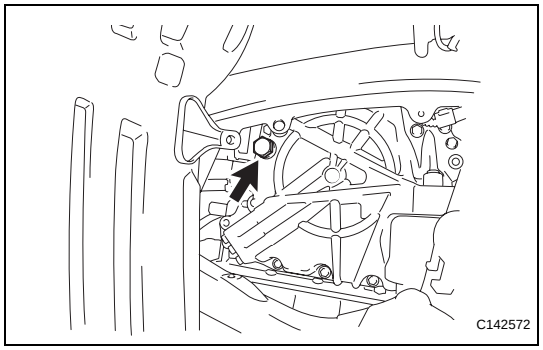
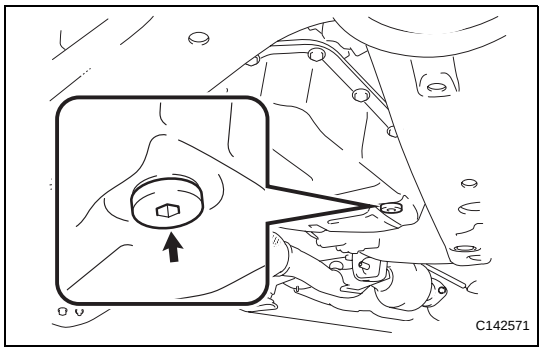
REMOVAL

NOTICE:

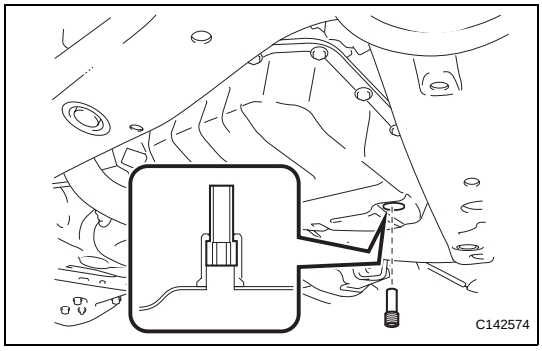
- **When the automatic transaxle is replaced, the transaxle's compensation code must be input into the TCM (See page AX-19).**
- **When the TCM is replaced, the existing transaxle compensation codes must be input into the new TCM (See page AX-22).**
- **If the following parts have been replaced, initialize the TCM and perform a road test to allow the TCM to learn (See page AX-25).**
  - **Valve body assembly**
  - **Shift solenoid SL3**
  - **Shift solenoid SL4**
- **If the following parts have been replaced, perform a road test to allow the TCM to learn (See page AX-25).**
  - **Shift solenoid SL1**
  - **Shift solenoid SL2**
- **If the TCM or transaxle has been replaced, register the transmission compensation code in the TCM (See page AX-19).**
- **Perform the RESET MEMORY (AT initialization) when replacing the automatic transmission assembly, engine assembly or ECM (See page AX-25).**

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE FRONT WHEELS**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE ENGINE UNDER COVER RH**
7. **REMOVE FRONT FENDER APRON SEAL RH**
8. **DRAIN ENGINE OIL**
9. **DRAIN ENGINE COOLANT (See page CO-5)**
10. **DRAIN AUTOMATIC TRANSAXLE FLUID**
    (a) Remove the refill plug and gasket.



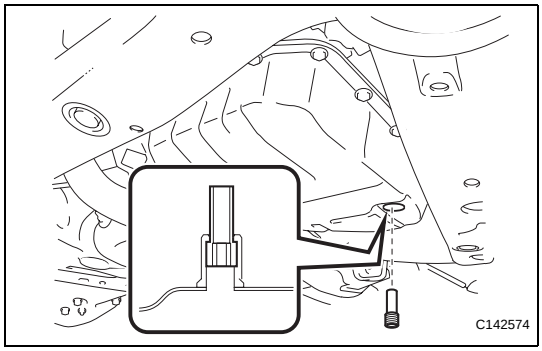


(b) Using a 6 mm socket hexagon wrench, remove the overflow plug and gasket.

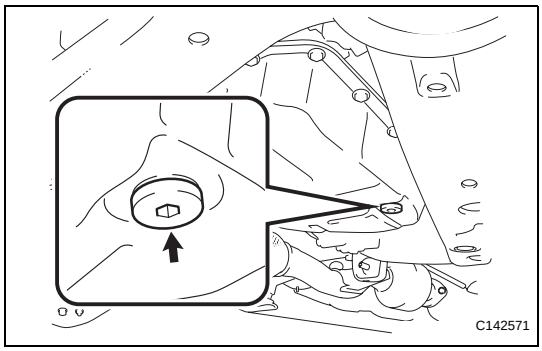


(c) Using a 6 mm socket hexagon wrench, remove the No. 1 transmission oil filler tube.

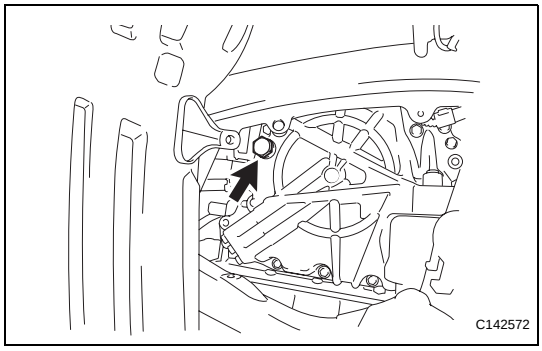
(d) Drain the automatic transaxle fluid.



(e) Using a 6 mm socket hexagon wrench, install the No. 1 transmission oil filler tube.
Torque: 1.7 N*m (17 kgf*cm, 15 in.*lbf)



(f) Using a 6 mm socket hexagon wrench, install the overflow plug with a new gasket.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



(g) Install the refill plug with a new gasket.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

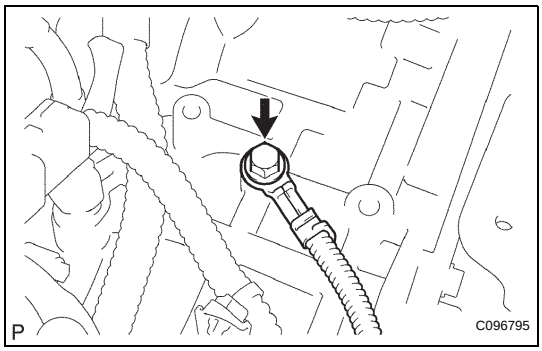
11. REMOVE WINDSHIELD WIPER LINK ASSEMBLY
HINT:
(See page WW-9)

12. REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-481)

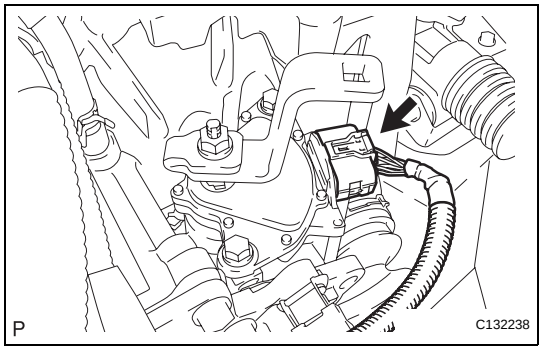
13. REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)

14. REMOVE V-BANK COVER SUB-ASSEMBLY (See page EM-23)
15. REMOVE V-RIBBED BELT (See page EM-6)
16. REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)
17. REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-503)
18. REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-24)
19. REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)
20. REMOVE BATTERY (See page EM-24)
21. REMOVE INTAKE AIR RESONATOR SUB-ASSEMBLY (See page EM-25)
22. REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-25)
23. REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-25)
24. DISCONNECT NO. 1 FUEL VAPOR FEED HOSE (See page EM-25)
25. DISCONNECT CHECK VALVE TO BRAKE BOOSTER HOSE (See page EM-25)
26. REMOVE RADIATOR HOSE INLET (See page EM-26)
27. REMOVE RADIATOR HOSE OUTLET (See page EM-26)
28. DISCONNECT NO. 1 OIL COOLER INLET HOSE (See page EM-26)
29. DISCONNECT NO. 1 OIL COOLER OUTLET HOSE (See page EM-26)
30. DISCONNECT HEATER INLET WATER HOSE (See page EM-26)
31. DISCONNECT HEATER OUTLET WATER HOSE (See page EM-26)
32. REMOVE ECM (See page ES-518)
33. REMOVE RELAY BLOCK COVER UPPER
34. DISCONNECT ENGINE WIRE (See page EM-27)

AX



35. **SEPARATE WIRE HARNESS**
    (a) Remove the bolt and disconnect the wire harness.



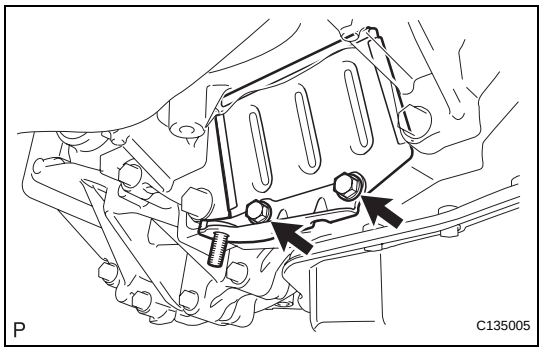
36. **DISCONNECT CONNECTOR**
    (a) Disconnect the park/neutral position switch connector.
37. **DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page EM-27)**
38. **SEPARATE FUEL TUBE SUB-ASSEMBLY (See page EM-28)**
39. **DISCONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE (See page EM-28)**
40. **DISCONNECT RETURN TUBE SUB-ASSEMBLY (See page EM-28)**
41. **REMOVE EXHAUST PIPE NO. 1 SUPPORT BRACKET (See page EX-3)**
42. **REMOVE EXHAUST PIPE ASSEMBLY FRONT (See page EX-3)**
43. **REMOVE FRONT AXLE HUB NUT LH (See page DS-7)**
44. **REMOVE FRONT AXLE HUB NUT RH (See page EM-28)**
45. **DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page DS-7)**
46. **DISCONNECT FRONT STABILIZER LINK ASSEMBLY RH (See page EM-29)**
47. **DISCONNECT FRONT SPEED SENSOR LH (See page DS-7)**
48. **DISCONNECT FRONT SPEED SENSOR RH (See page EM-29)**
49. **DISCONNECT TIE ROD ASSEMBLY LH (See page DS-8)**
50. **DISCONNECT TIE ROD ASSEMBLY RH (See page EM-29)**
51. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-8)**
52. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM RH (See page EM-29)**

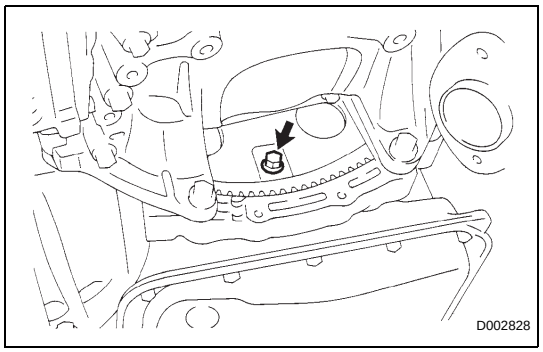
53. **SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-8)**

54. **SEPARATE FRONT AXLE ASSEMBLY RH (See page EM-29)**

55. **REMOVE NO. 1 EXHAUST PIPE SUPPORT BRACKET (See page EM-29)**

56. **REMOVE FLYWHEEL HOUSING UNDER COVER**
    (a) Remove the 2 bolts, exhaust pipe support bracket and flywheel housing under cover.





57. **REMOVE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT**
    (a) Turn the crankshaft to gain access and remove the 6 bolts while holding the crankshaft pulley bolt with a wrench.

58. **DISCONNECT STEERING SLIDING YOKE (See page PS-40)**

59. **REMOVE GENERATOR ASSEMBLY (See page CH-14)**

60. **SEPARATE COOLER COMPRESSOR ASSEMBLY (See page EM-29)**

61. **REMOVE ENGINE ASSEMBLY WITH TRANSAXLE (See page EM-29)**

62. **REMOVE VANE PUMP ASSEMBLY (See page EM-30)**

63. **INSTALL ENGINE HANGERS (See page EM-30)**

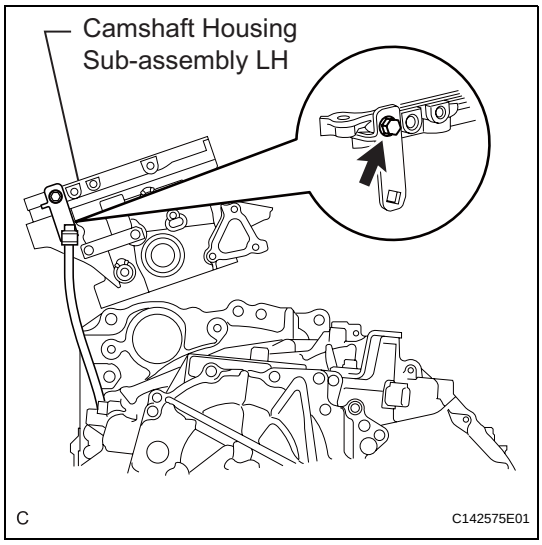
64. **REMOVE FRONT FRAME ASSEMBLY (See page EM-30)**

65. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-9)**

66. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-9)**

67. **REMOVE ENGINE WIRE**

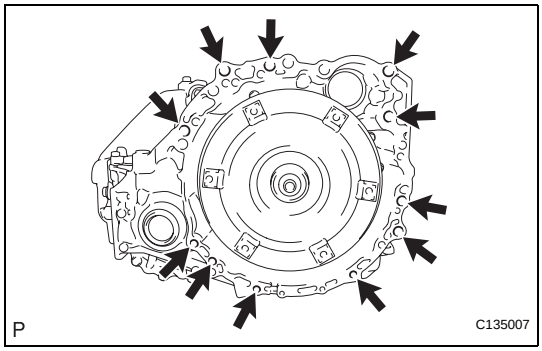
68. **REMOVE STARTER ASSEMBLY (See page ST-141)**



69. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

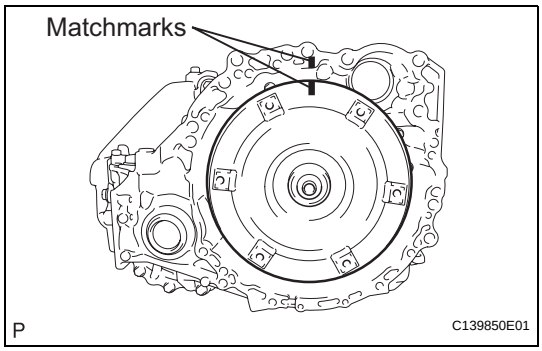
(a) Remove the bolt and breather bracket from the camshaft housing sub-assembly LH.

(b) Remove the breather hose from the breather bracket.



(c) Remove the 11 bolts.

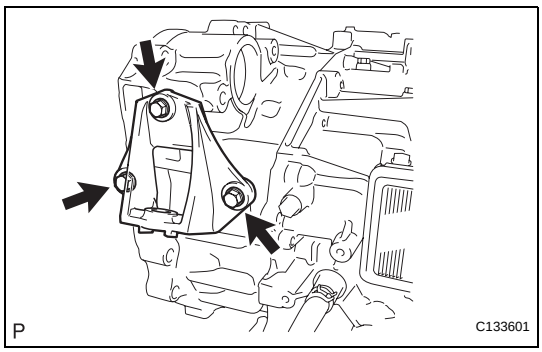
(d) Separate and remove the automatic transaxle.



70. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

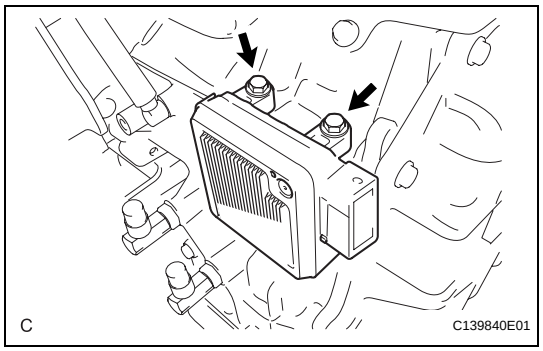
(a) Put matchmarks on the transaxle housing and torque converter clutch assembly.

(b) Remove the torque converter clutch assembly from the automatic transaxle assembly.



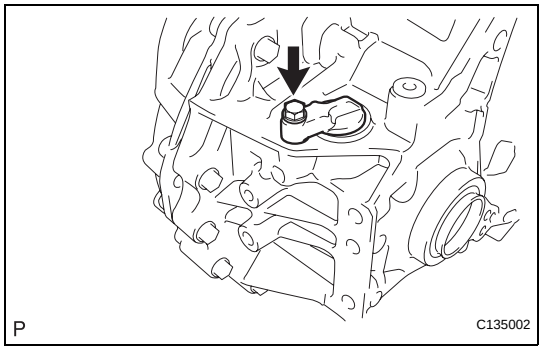
71. REMOVE ENGINE MOUNTING FRONT BRACKET

(a) Remove the 3 bolts and engine mounting front bracket.



72. REMOVE TCM

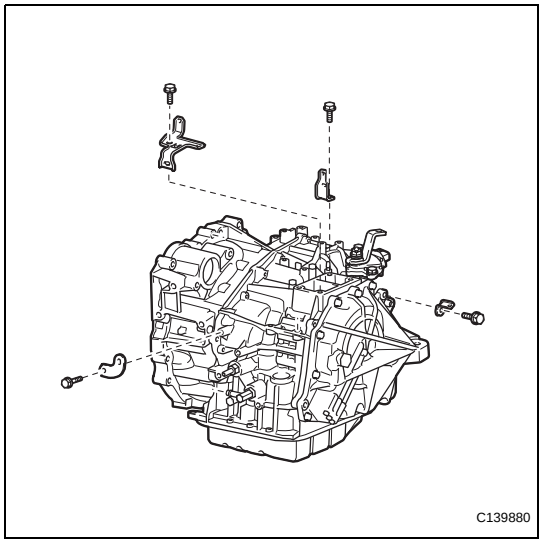
(a) Remove the 2 bolts and TCM from the transaxle.



73. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

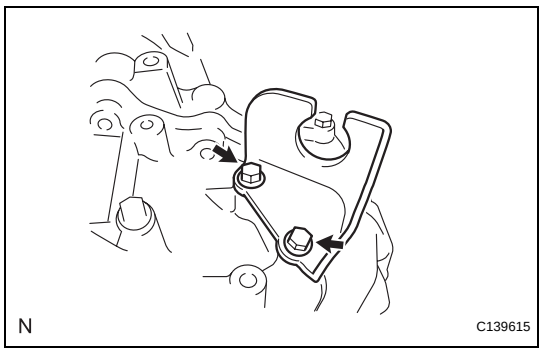
(a) Remove the bolt and hole cover from the transaxle case.

(b) Remove the O-ring from the hole cover.



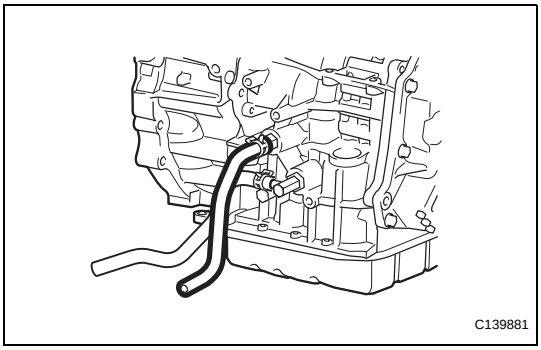
74. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the 4 bolts and 4 clamp brackets.



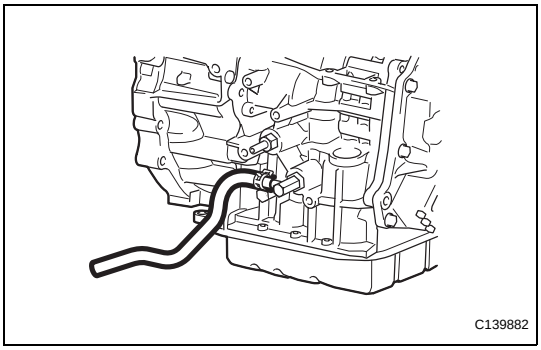
75. REMOVE NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the 2 bolts and No.1 transmission control cable bracket.



76. SEPARATE OIL COOLER OUTLET HOSE

(a) Separate the oil cooler outlet hose.



77. SEPARATE OIL COOLER INLET HOSE

(a) Separate the oil cooler inlet hose.

INSTALLATION

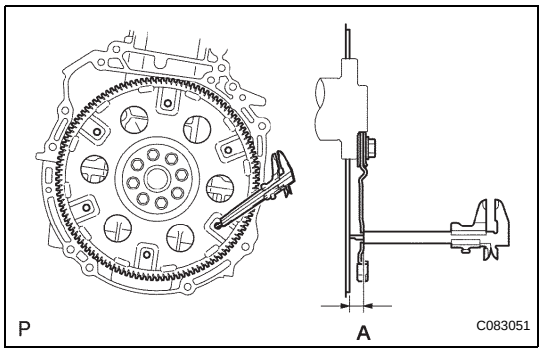
1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

HINT:

(See page AX-239)

2. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

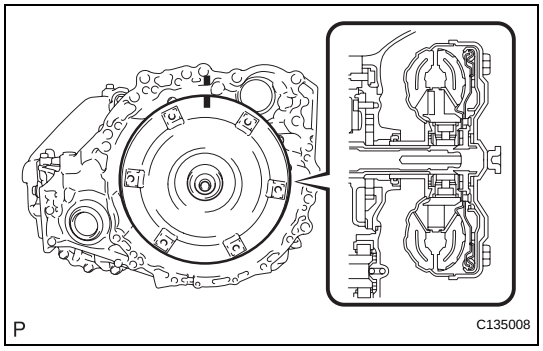
(a) Using vernier calipers and a straightedge, measure dimension "A" between the transaxle fitting part of the engine and the converter fitting part of the drive plate (#).



(b) Aligning the matchmarks on the transaxle case and torque converter clutch assembly, engage the splines of the input shaft and turbine runner.

NOTICE:

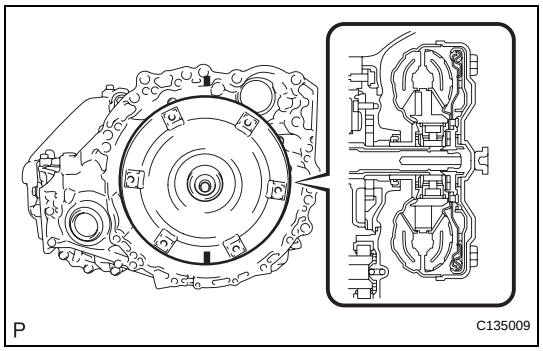
Do not push on the torque converter when aligning the matchmarks.



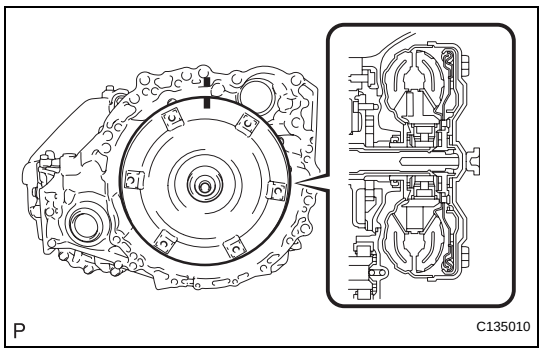
(c) Engage the splines of the stator shaft and the stator while turning the torque converter clutch assembly.

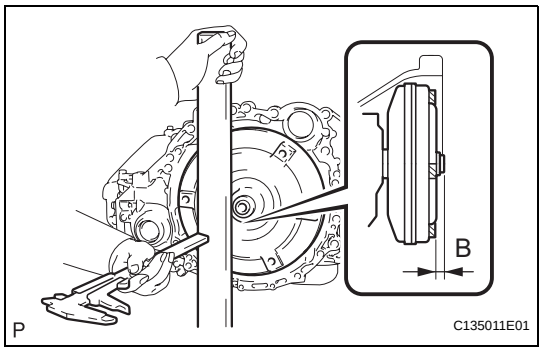
HINT:

Turn the torque converter clutch assembly approximately 180°.

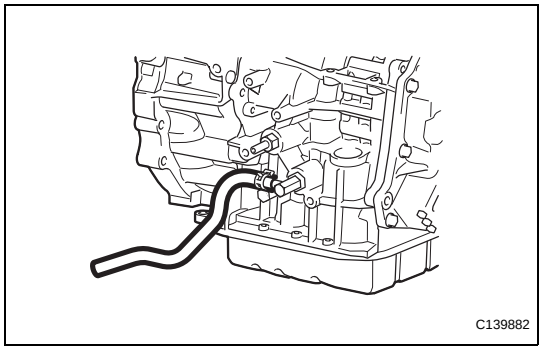


(d) Turn the torque converter clutch assembly and align the matchmarks on the torque converter clutch assembly and transaxle case to engage the key of the oil pump drive gear into the slot on the torque converter clutch assembly.



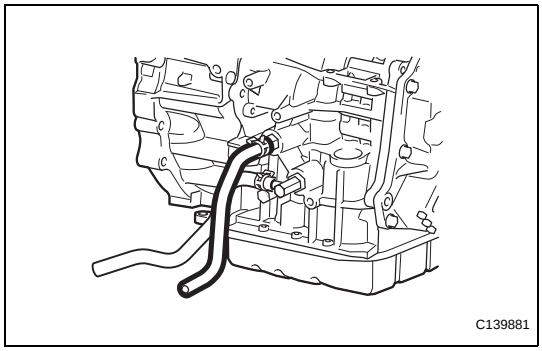


(e) Using vernier calipers and a straightedge, measure dimension "B" shown in the illustration and check that "B" is greater than "A" (measured in step (#)).
Standard:
A + 1 mm (0.04 in.) or more
NOTICE:
Make sure to deduct the thickness of the straightedge.



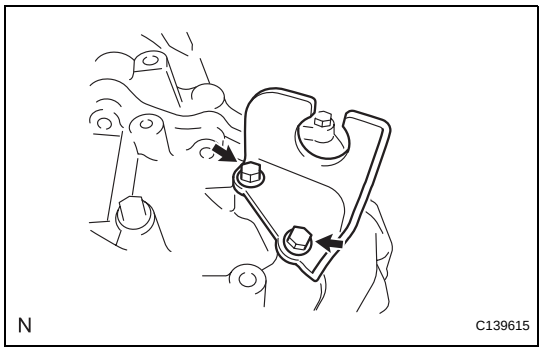
3. INSTALL OIL COOLER INLET HOSE

(a) Install the oil cooler inlet hose.



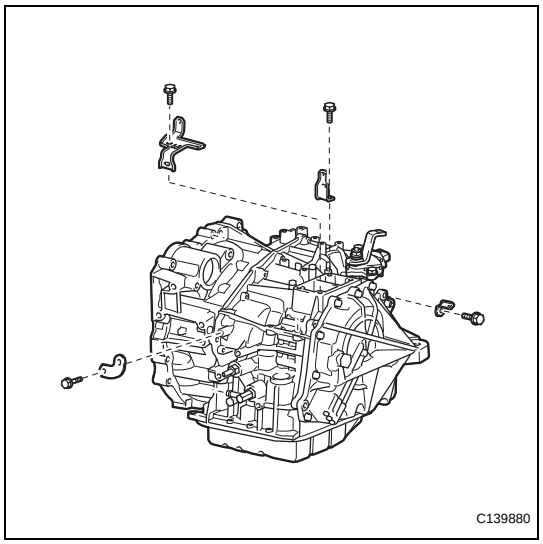
4. INSTALL OIL COOLER OUTLET HOSE

(a) Install the oil cooler outlet hose.



5. INSTALL NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Install the No. 1 transmission control cable bracket with the 2 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

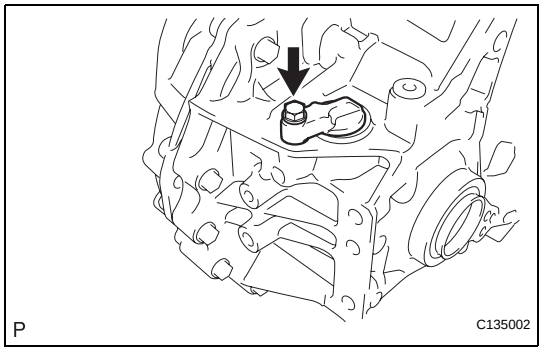


6. INSTALL WIRE HARNESS CLAMP BRACKET

(a) Install the 4 clamp brackets and 4 bolts.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)

7. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

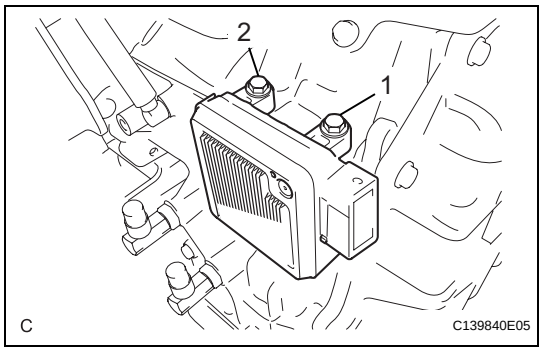
(a) Coat a new O-ring with ATF, and install it to the hole cover.



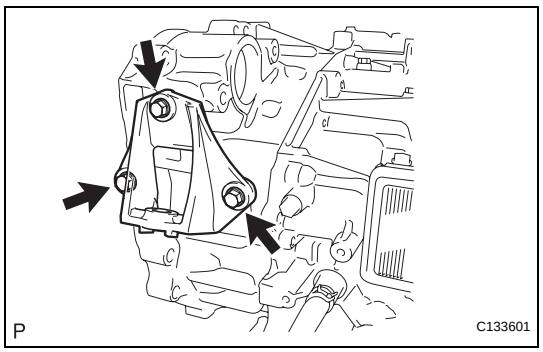
(b) Install the hole cover to the transaxle case with the bolt.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

8. INSTALL TCM

(a) Install the TCM to the transaxle.



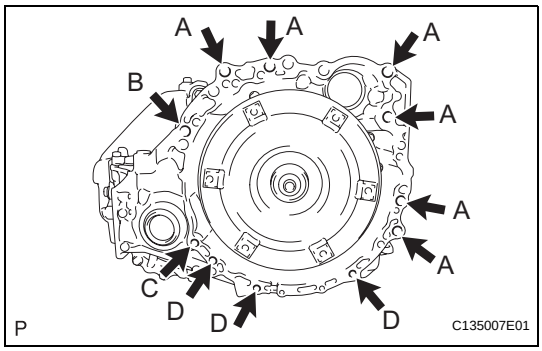
(b) Install and tighten the 2 bolts in the order shown in the illustration.
Torque: 11 N*m (112 kgf*cm, 9 ft.*lbf)



9. INSTALL ENGINE MOUNTING FRONT BRACKET

(a) Install the engine mounting front bracket to the automatic transaxle with the 3 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

AX



10. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

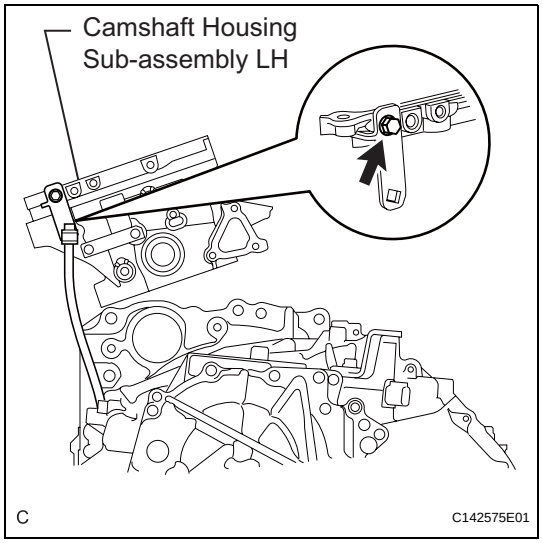
(a) Install the automatic transaxle to the engine with the 11 bolts.

Torque: Bolt A
64 N*m (653 kgf*cm, 47 ft.*lbf)
Bolt B
64 N*m (653 kgf*cm, 47 ft.*lbf)
Bolt C
46 N*m (469 kgf*cm, 34 ft.*lbf)
Bolt D
43 N*m (439 kgf*cm, 32 ft.*lbf)

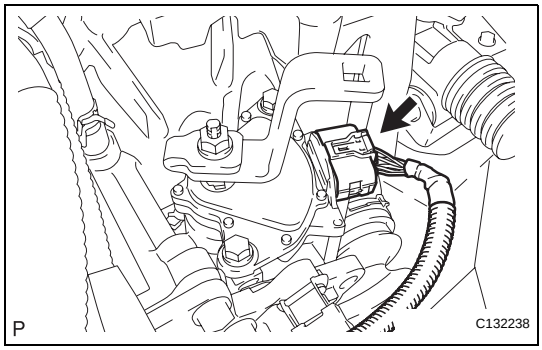
(b) Install the breather bracket to the camshaft housing sub-assembly LH with the bolt.

Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

(c) Install the breather hose to the breather bracket.

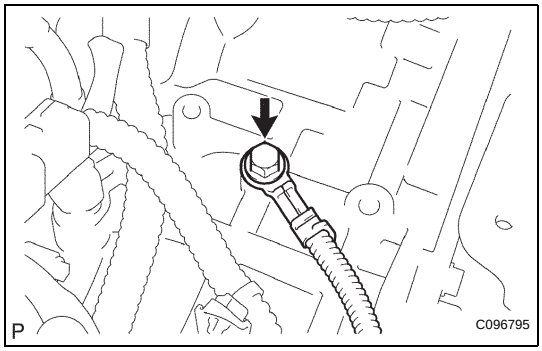


11. INSTALL STARTER ASSEMBLY (See page ST-148)



12. CONNECT CONNECTOR

(a) Connect the park/neutral position switch connector.



13. INSTALL WIRE HARNESS

(a) Connect the wire harness with the bolt.

Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

14. INSTALL ENGINE WIRE

15. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-20)

16. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-21)

17. INSTALL FRONT FRAME ASSEMBLY (See page EM-43)

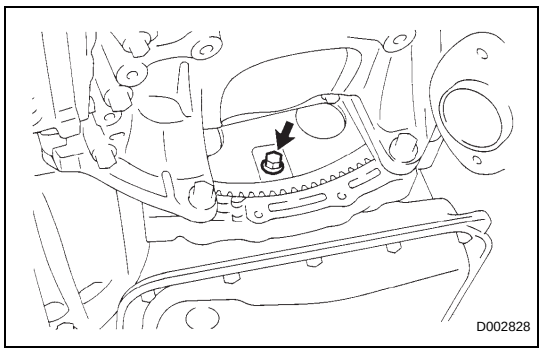
18. INSTALL VANE PUMP ASSEMBLY (See page EM-44)

19. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE (See page EM-44)

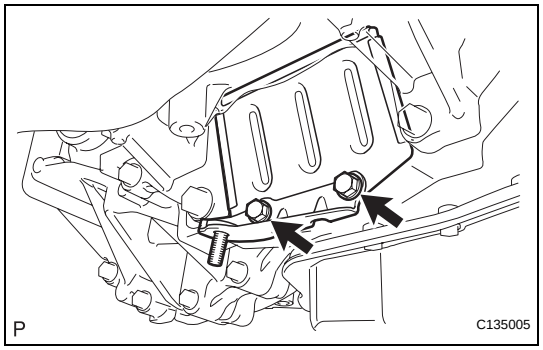
20. **INSTALL COOLER COMPRESSOR ASSEMBLY (See page EM-45)**

21. **INSTALL GENERATOR ASSEMBLY (See page CH-22)**

22. **INSTALL STEERING SLIDING YOKE (See page PS-65)**



23. **INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT**
    (a) Apply a few drops of adhesive to 2 threads on the tip of the 6 torque converter clutch mounting bolts.
    Sealant:
    Toyota Genuine Adhesive 1324, Three Bond 1324 or Equivalent
    (b) Install the 6 torque converter clutch mounting bolts.
    Torque: 41 N*m (418 kgf*cm, 30 ft.*lbf)
    NOTICE:
    First install the black colored bolt, and then the remaining 5 bolts.



24. **INSTALL FLYWHEEL HOUSING UNDER COVER**
    (a) Install the flywheel housing under cover and exhaust pipe support bracket to the automatic transaxle with the 2 bolts.
    Torque: 7.8 N*m (80 kgf*cm, 69 in.*lbf)

25. **INSTALL NO. 1 EXHAUST PIPE SUPPORT BRACKET (See page EM-45)**

26. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-21)**

27. **INSTALL FRONT AXLE ASSEMBLY RH (See page EM-45)**

28. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-21)**

29. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH (See page EM-45)**

30. **INSTALL TIE ROD ASSEMBLY LH (See page DS-21)**

31. **INSTALL TIE ROD ASSEMBLY RH (See page EM-45)**

32. **INSTALL FRONT SPEED SENSOR LH (See page DS-21)**

33. **INSTALL FRONT SPEED SENSOR RH (See page EM-45)**

34. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-22)**

35. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH (See page EM-45)**

36. **INSTALL FRONT AXLE HUB NUT LH (See page DS-22)**

37. **INSTALL FRONT AXLE HUB NUT RH (See page EM-45)**

38. INSTALL EXHAUST PIPE ASSEMBLY FRONT (See page EX-4)
39. INSTALL EXHAUST PIPE NO. 1 SUPPORT BRACKET (See page EM-45)
40. CONNECT NO. 1 OIL RESERVOIR TO PUMP HOSE (See page EM-46)
41. CONNECT RETURN TUBE SUB-ASSEMBLY (See page EM-46)
42. CONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-46)
43. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (See page EM-46)
44. CONNECT ENGINE WIRE (See page EM-47)
45. INSTALL RELAY BLOCK COVER UPPER
46. INSTALL ECM (See page ES-519)
47. CONNECT HEATER INLET WATER HOSE (See page EM-47)
48. CONNECT HEATER OUTLET WATER HOSE (See page EM-47)
49. CONNECT NO. 1 OIL COOLER INLET HOSE (See page EM-48)
50. CONNECT NO. 1 OIL COOLER OUTLET HOSE (See page EM-48)
51. INSTALL RADIATOR HOSE INLET (See page EM-48)
52. INSTALL RADIATOR HOSE OUTLET (See page EM-48)
53. CONNECT CHECK VALVE TO BRAKE BOOSTER HOSE (See page EM-48)
54. CONNECT NO. 1 FUEL VAPOR FEED HOSE (See page EM-48)
55. INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-49)
56. INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-49)
57. INSTALL INTAKE AIR RESONATOR SUB-ASSEMBLY (See page EM-49)
58. INSTALL BATTERY (See page EM-49)
59. INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)
60. INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-50)

ON-VEHICLE INSPECTION

1. INSPECT SHIFT LEVER POSITION

(a) When shifting from the P to the R position with the ignition switch on (IG) and the brake pedal depressed, make sure that the shift lever moves smoothly and moves correctly into the position.

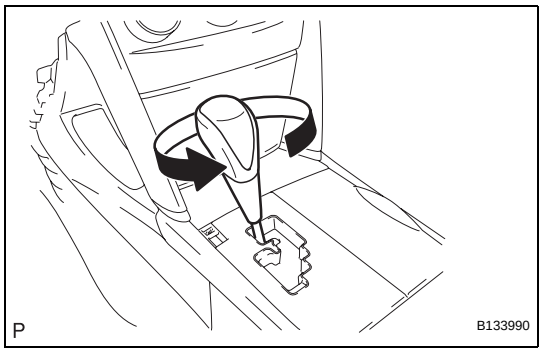
(b) Start the engine and make sure that the vehicle moves forward when shifting from the N to the D position and moves rearward when shifting to the R position. If operation cannot be done as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

AX

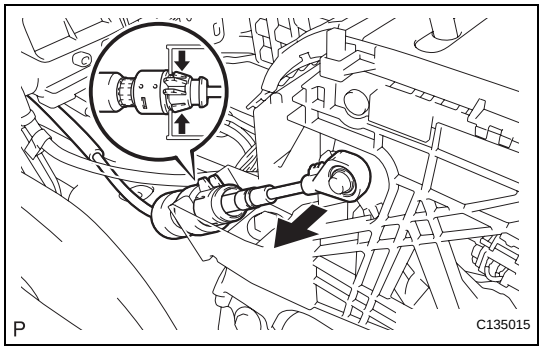
REMOVAL

HINT:
(See page IP-1)

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
6. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (without Smart Key System) (See page IP-22)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (with Smart Key System) (See page IP-22)**
8. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
   (a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.



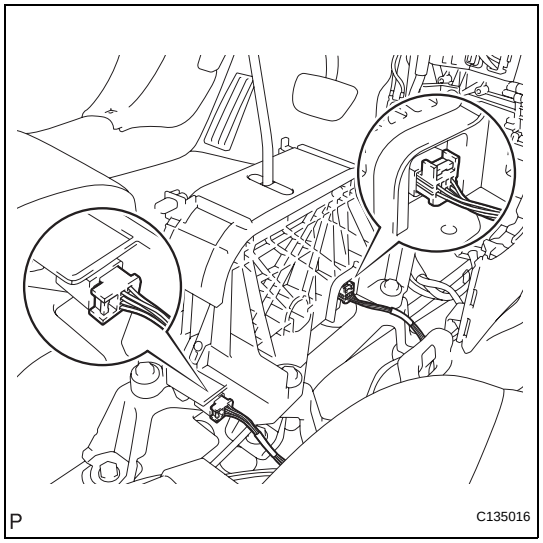
9. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
10. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
11. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-25)**
12. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-26)**
13. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)**
14. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)**
15. **REMOVE CONSOLE BOX POCKET (See page IP-28)**
16. **REMOVE CONSOLE BOX CARPET (See page IP-28)**
17. **REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)**
18. **REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)**
19. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)**
20. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**
21. **REMOVE FLOOR CARPET BRACKET LH (See page AC-155)**



22. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

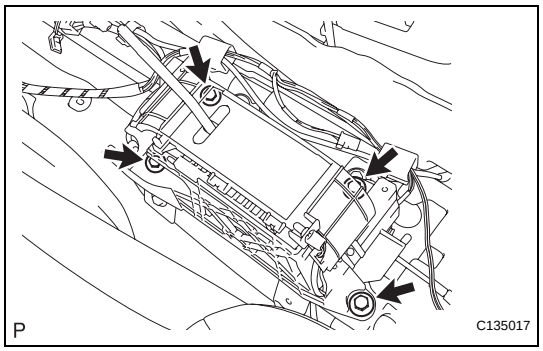
(a) Disconnect the end of the transmission control cable from the shift lock control unit.

(b) Disconnect the transmission control cable assembly from the transmission floor shift assembly while pushing the 2 claws of the floor shift cable.



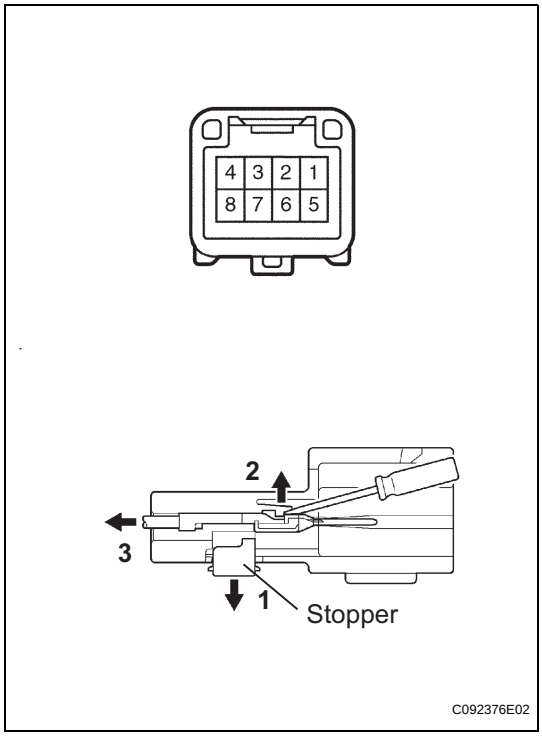
23. REMOVE SHIFT LOCK CONTROL UNIT ASSEMBLY

(a) Disconnect the shift lock control ECU connector and indicator light wire connector.



(b) Remove the 4 bolts and shift control unit assembly.

AX

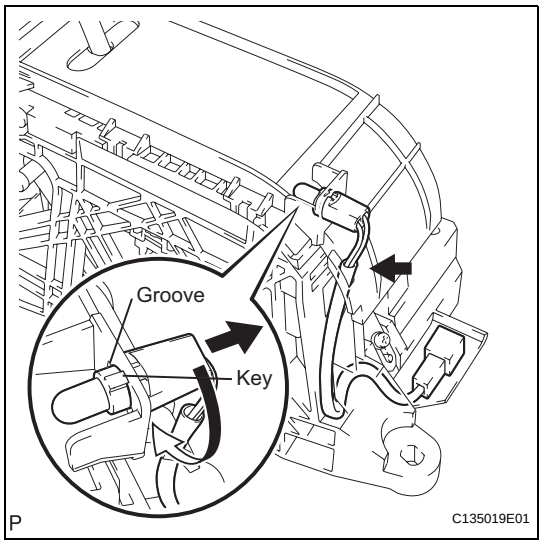


DISASSEMBLY

1. REMOVE INDICATOR LIGHT WIRE SUB-ASSEMBLY

(a) Using a screwdriver, release the stopper.

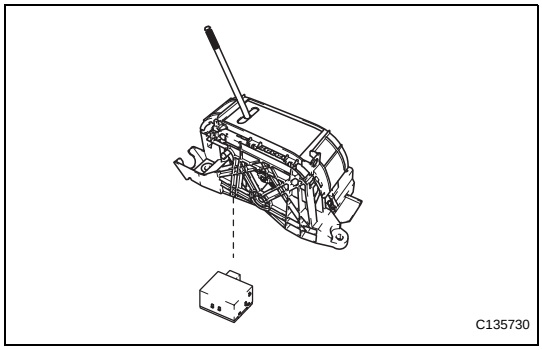
(b) Using a screwdriver, disengage the locking lug of terminals (4) and (8), and pull the terminals out from the rear of the connector.



(c) Release the indicator light wire from the clamp on the shift lock control unit assembly.

(d) Turn the indicator light guide counterclockwise.

(e) Align the indicator light guide key with the groove on the shift lock control unit to remove the indicator light wire.

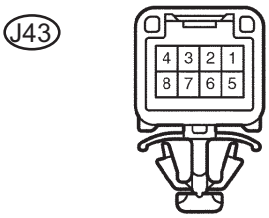


2. REMOVE SHIFT LOCK CONTROL ECU

(a) Remove the shift lock control ECU from the shift lock control unit assembly.

Switch Side:

(Connector Front View):



C110341E15

INSPECTION

1. INSPECT TRANSMISSION CONTROL SWITCH

(a) Measure resistance between each terminal of the shift lock control unit assembly when the shift lever is moved to each position.

Standard resistance

Shift Position	Tester Connection	Specified Condition
S, "+" and "-"	3 - 7	Below 1 Ω
Except S, "+" and "-"	3 - 7	10 kΩ or higher
Press continuously "+" (Up shift)	2 - 5	Below 1 Ω
S	2 - 5	10 kΩ or higher
Press continuously "-" (Down shift)	1 - 5	Below 1 Ω
S	1 - 5	10 kΩ or higher

If the resistance value is not as specified, replace the shift lock control ECU.

AX

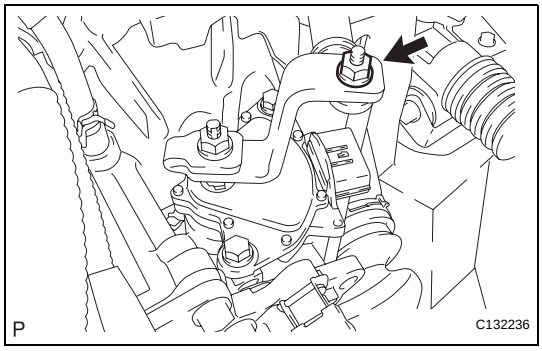
AX

ADJUSTMENT

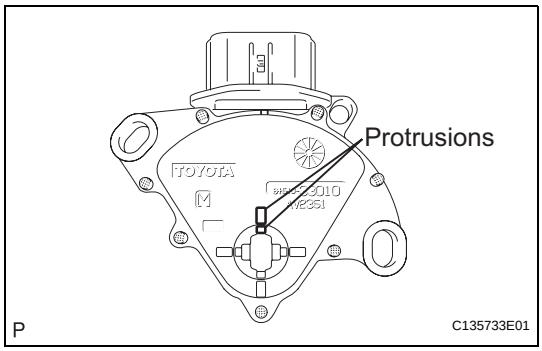
1. ADJUST SHIFT LEVER POSITION

(a) Move the shift lever to the N position.

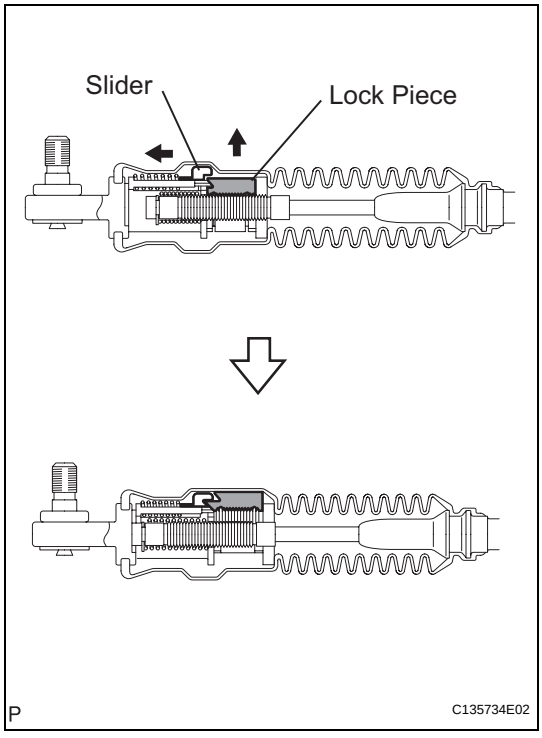
(b) Remove the nut and transmission control cable from the control shaft lever.

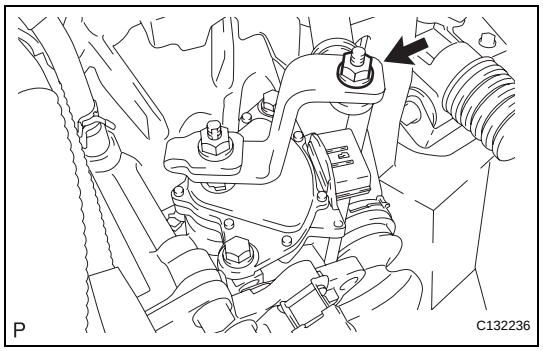


(c) Align the protrusions of the park/neutral position switch.

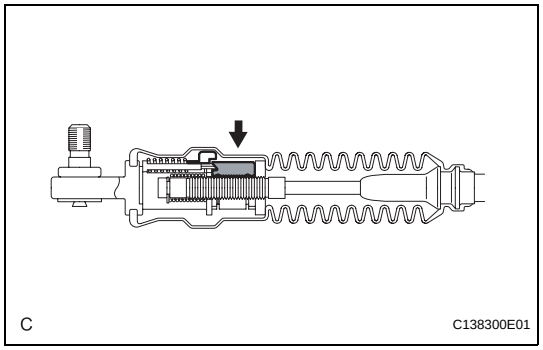


(d) Move the slider in the directions indicated by the arrows and pull up the lock piece.
NOTICE:
Do not damage the boot.





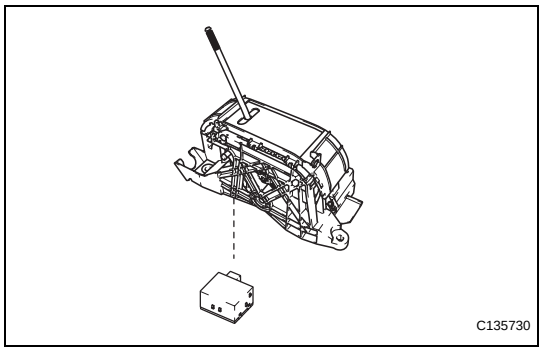
(e) Connect the transmission control cable assembly to the control shaft lever with the nut.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



(f) Push in the lock piece.
NOTICE:
Firmly push in the lock piece until the slider lock is engaged.

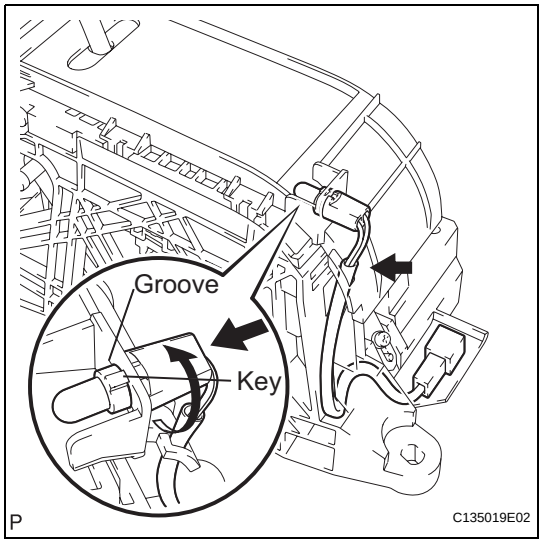
(g) Start the engine and make sure that the vehicle moves forward when moving the lever from the N to the D position and moves rearward when moving it to the R position.
If it becomes hard to move the shift lever, readjust the shift lever position.

REASSEMBLY



1. INSTALL SHIFT LOCK CONTROL ECU

(a) Install the shift lock control ECU to the shift lever.

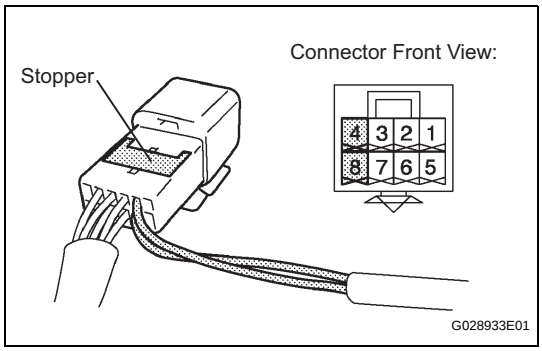


2. INSTALL INDICATOR LIGHT WIRE SUB-ASSEMBLY

(a) Insert the indicator light wire into the shift lock control unit while aligning the groove on the unit with the indicator light guide key.

(b) Install the indicator light guide by turning it clockwise until it securely locks.

(c) Install the indicator light wire to the clamp on the shift lock control unit.

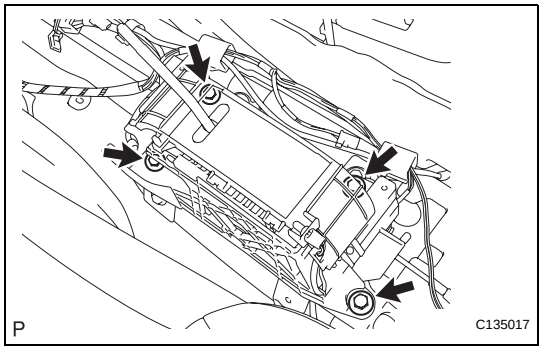


(d) Connect terminals (4) and (8) of the indicator light wire.
(e) Push the stopper.

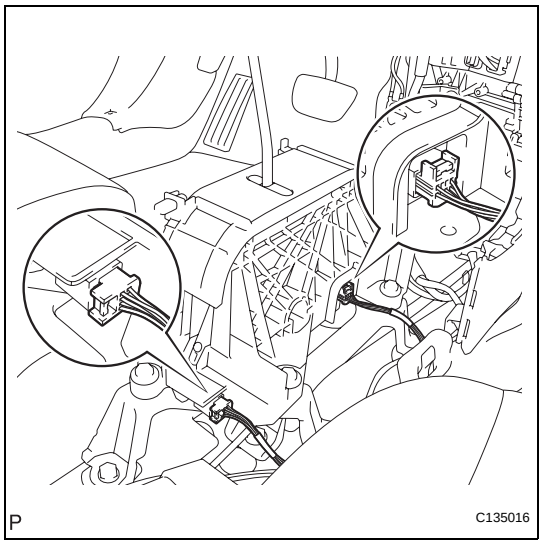
INSTALLATION

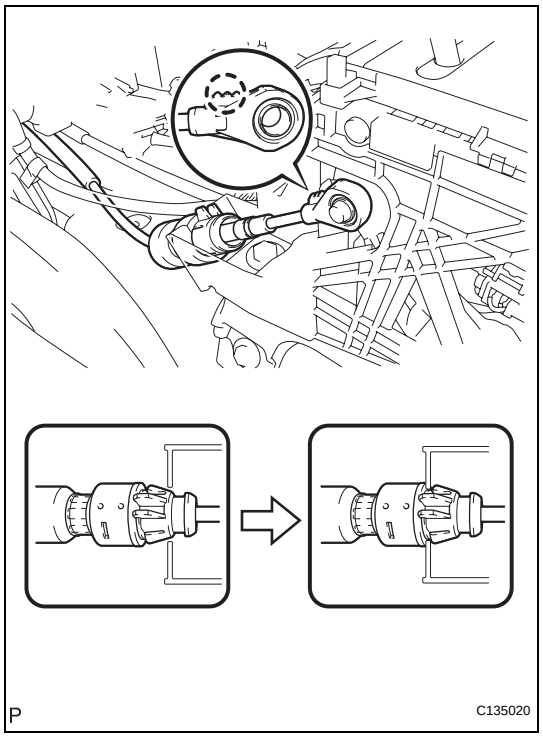
1. INSTALL SHIFT LOCK CONTROL UNIT

(a) Install the 4 bolts and shift lock control unit.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

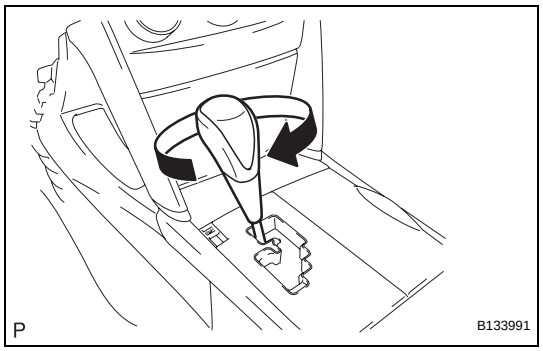


(b) Connect the shift lock ECU connector and transmission control switch wire connector.





2. **INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Install the transmission control cable assembly as shown in the illustration.
   HINT:
   - Install the floor shift cable with the uneven surface facing up.
   - Securely engage the claws of the floor shift cable.
3. **INSTALL FLOOR CARPET BRACKET LH**
4. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)**
5. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
6. **INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)**
7. **INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)**
8. **INSTALL CONSOLE BOX CARPET (See page IP-51)**
9. **INSTALL CONSOLE BOX POCKET (See page IP-51)**
10. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)**
11. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)**
12. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)**
13. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-53)**
14. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
15. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**



16. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY**
    (a) Install the shift lever knob sub-assembly.
17. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (without Smart Key System) (See page IP-57)**
18. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (with Smart Key System) (See page IP-57)**
19. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
20. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
21. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**

AX

22. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
23. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-51)**
24. **INSPECT SHIFT LEVER POSITION (See page AX-191)**
25. **ADJUST SHIFT LEVER POSITION (See page AX-191)**

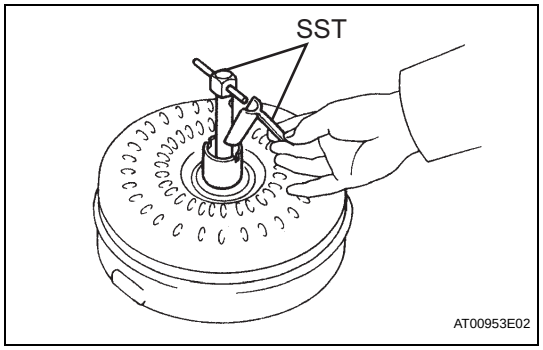
REMOVAL

1. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

HINT:

(See page AX-207)

INSPECTION



1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

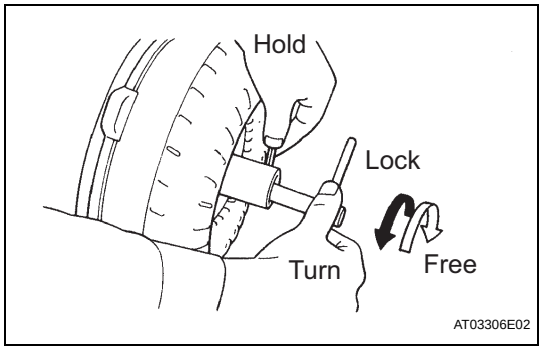
(a) Inspect the one-way clutch.

(1) Set SST into the inner race of the one-way clutch.

SST 09350-32014 (09351-32010)

(2) Install SST so that it fits in the notch of the converter hub and outer race of the one-way clutch.

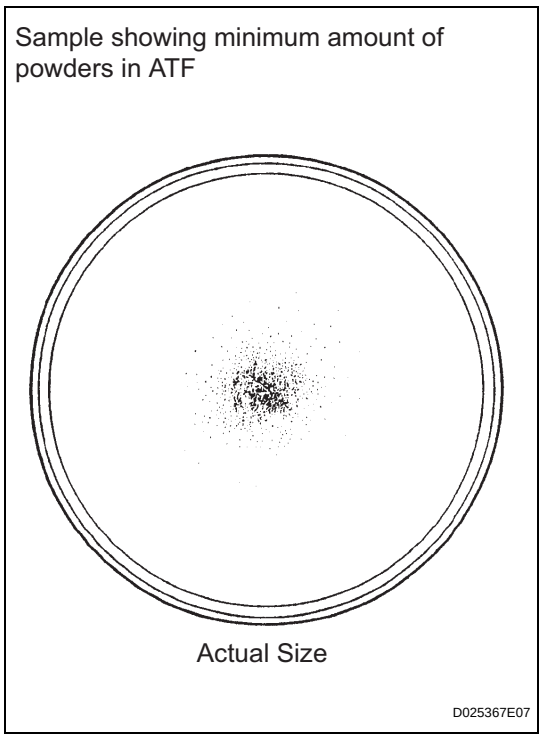
SST 09350-32014 (09351-32010, 09351-32020)



(3) Stand the torque converter up and turn the SST.

Standard:

If the one-way clutch is turned clockwise, it rotates freely and if turned counterclockwise, it locks.



(b) Determine the condition of the torque converter clutch assembly.

(1) If the inspection result of the torque converter clutch assembly satisfies the following conditions, replace the torque converter clutch assembly.

Malfunction item:

A metallic sound is emitted from the torque converter clutch assembly during the stall test or when the shift lever is moved to the N position.

The one-way clutch is free or locked in both directions.

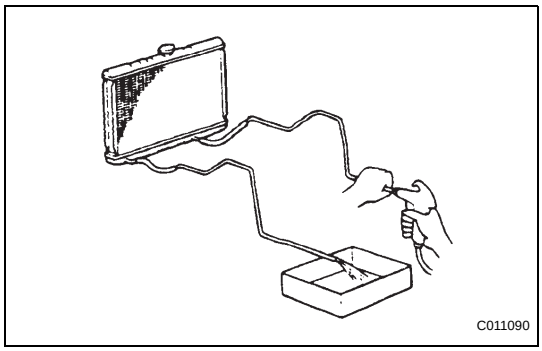
The amount of powder in the ATF is greater than the sample shown in the illustration (see the sample).

HINT:

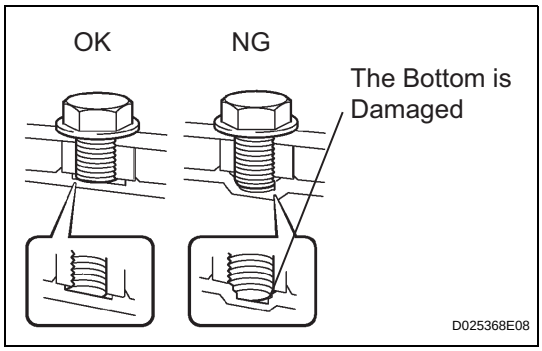
The sample shows the auto fluid of approximately 0.25 liters (0.26 US qts, 0.22 Imp. qts) that is taken out from the removed torque converter clutch.

(c) Exchange the ATF in the torque converter clutch.

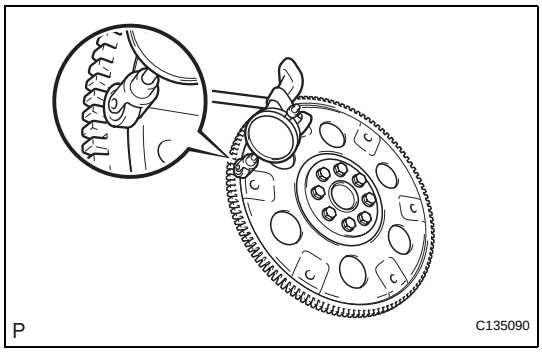
(1) If the ATF is discolored and/or has a foul odor, completely stir the ATF in the torque converter clutch and drain it.



(d) Clean and check the oil cooler and oil pipe line.
  (1) If the torque converter clutch is inspected or the ATF is exchanged, clean the oil cooler and oil pipe line.
  HINT:
  - Spray compressed air of 196 kPa (2 kgf/cm, 28 psi) from the inlet hose.
  - If plenty of fine powders are identified in the ATF, add new ATF using a bucket pump and clean it again.
  (2) If the ATF is cloudy, inspect the oil cooler (radiator).



(e) Prevent deformation of the torque converter clutch and damage to the oil pump gear.
  (1) When there is any damage to the end of the bolt for the torque converter clutch and to the bottom of the bolt hole, replace the bolt and the torque converter clutch.
  (2) All of the bolts must be the same length.
  (3) Bolts with washers must be used.



2. INSPECT DRIVE PLATE & RING GEAR SUB-ASSEMBLY

(a) Set up a dial indicator with a roller instrument and measure the drive plate runout.
  Maximum runout:
  0.20 mm (0.0079 in.)

(b) Check for damage of the ring gear.
  If runout is not within specification or the ring gear is damaged, replace the drive plate.

INSTALLATION

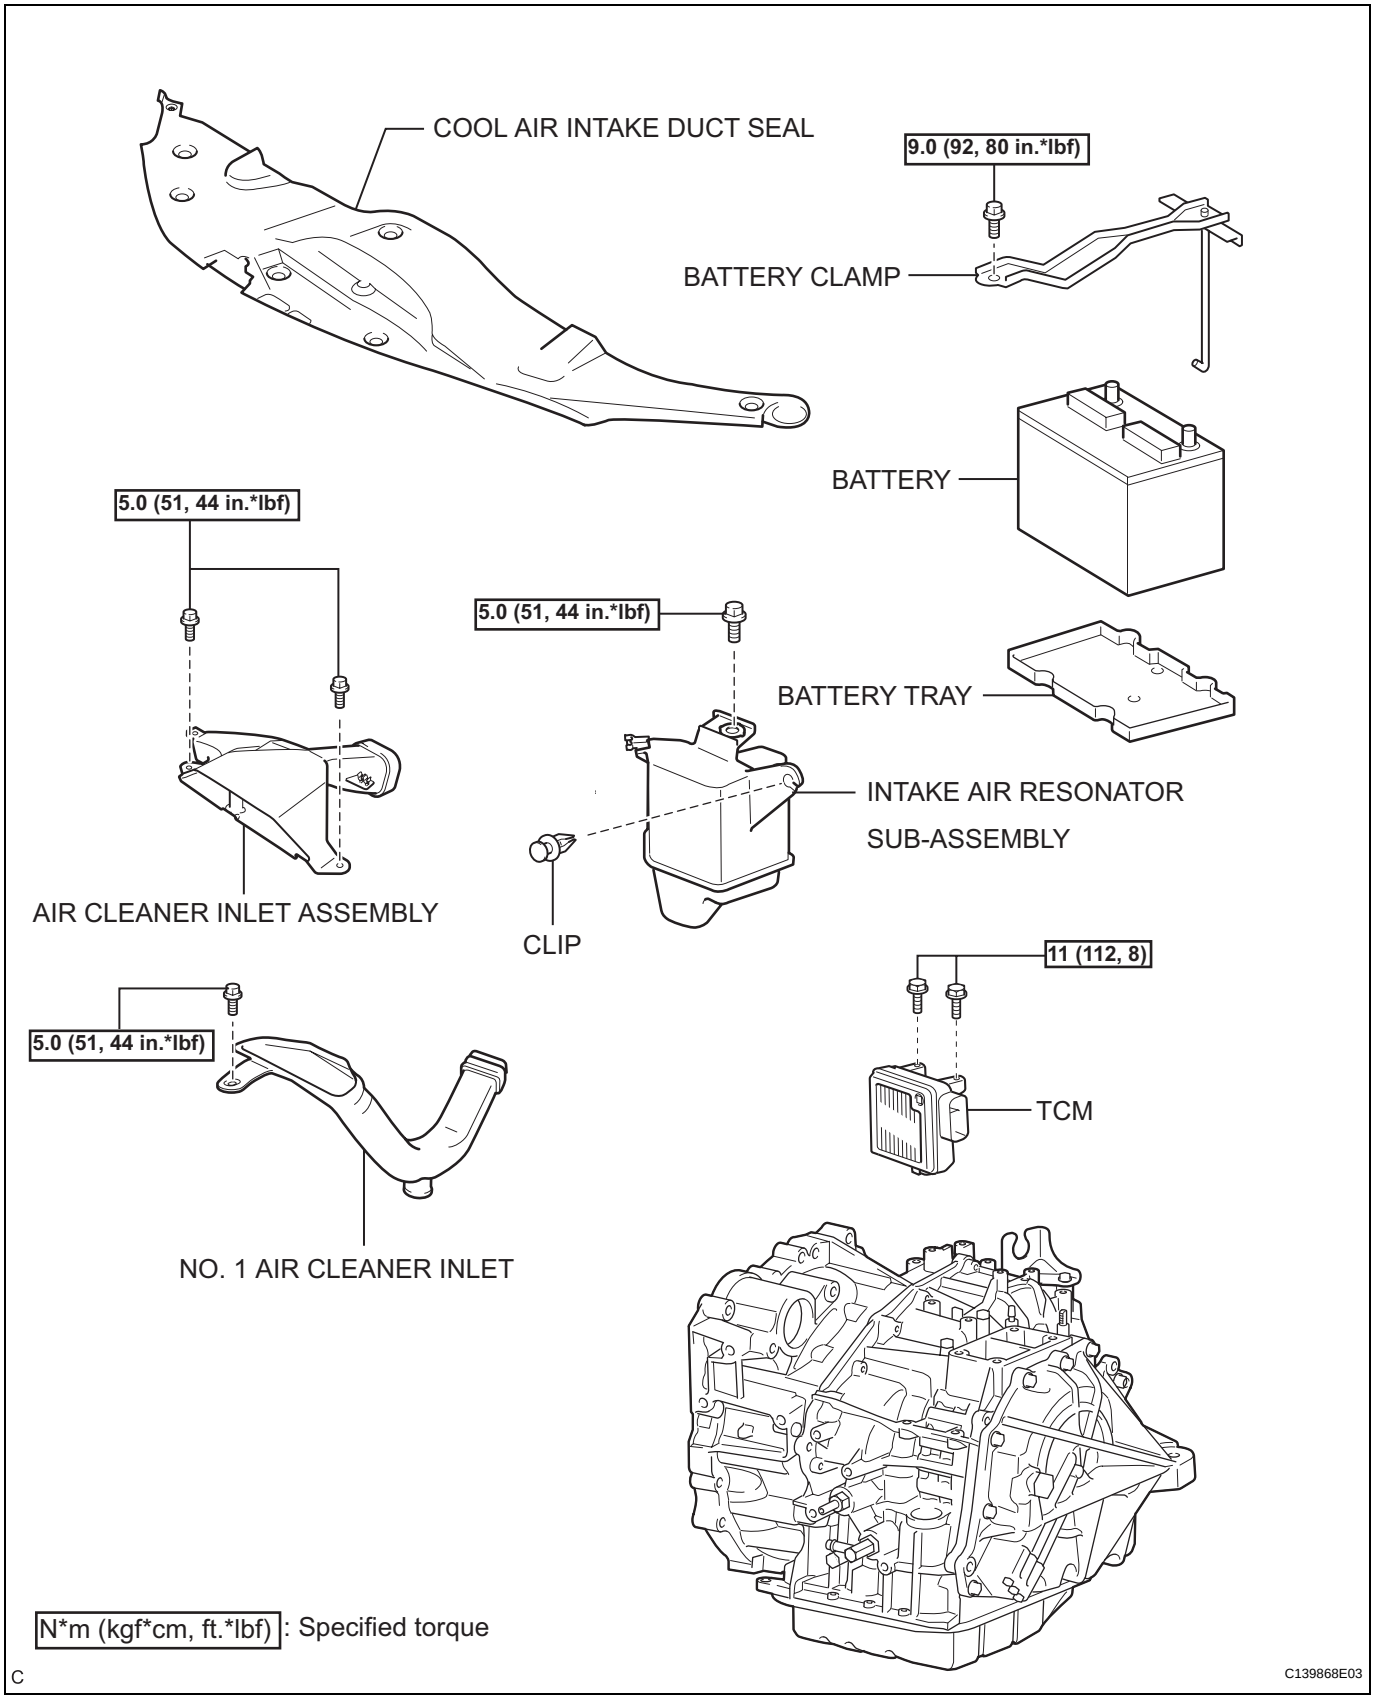
1. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

HINT:

(See page AX-214)

TCM

COMPONENTS



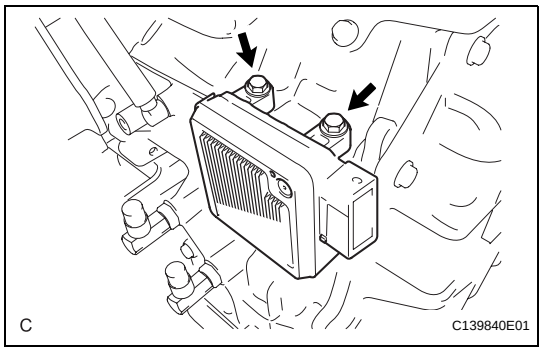
AX

REMOVAL

NOTICE:
When the TCM is replaced, the existing transaxle compensation codes must be input into the new TCM (See page AX-22).

1. **REMOVE COOL AIR INTAKE DUCT SEAL (See page EM-23)**
2. **REMOVE BATTERY (See page EM-24)**
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-24)**
4. **REMOVE NO. 1 AIR CLEANER INLET (See page EM-24)**
5. **REMOVE INTAKE AIR RESONATOR SUB-ASSEMBLY (See page EM-25)**
6. **REMOVE TCM**
   (a) Turn the lock lever and disconnect the connector from the TCM.

   (b) Remove the 2 bolts and TCM from the transaxle.



INSTALLATION

1. **INSTALL TCM**
   (a) Install the TCM to the transaxle.
   (b) Install and tighten the 2 bolts in the order shown in the illustration.
   Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)

   (c) Connect the connector to the TCM.
   (d) Turn the lock lever and secure the connector with the lock lever.

2. **INSTALL INTAKE AIR RESONATOR SUB-ASSEMBLY (See page EM-49)**
3. **INSTALL NO. 1 AIR CLEANER INLET (See page EM-49)**
4. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-50)**
5. **INSTALL BATTERY (See page EM-49)**
6. **INSTALL COOL AIR INTAKE DUCT SEAL (See page EM-52)**
7. **PERFORM TCM REGISTRATION**
   HINT:

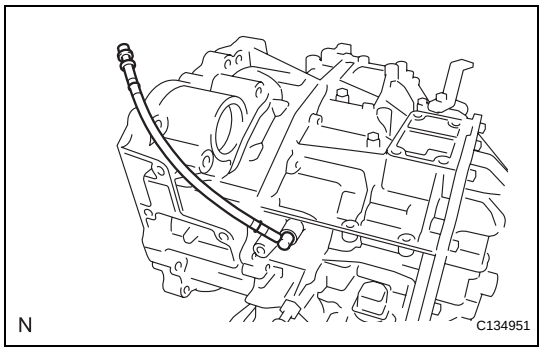
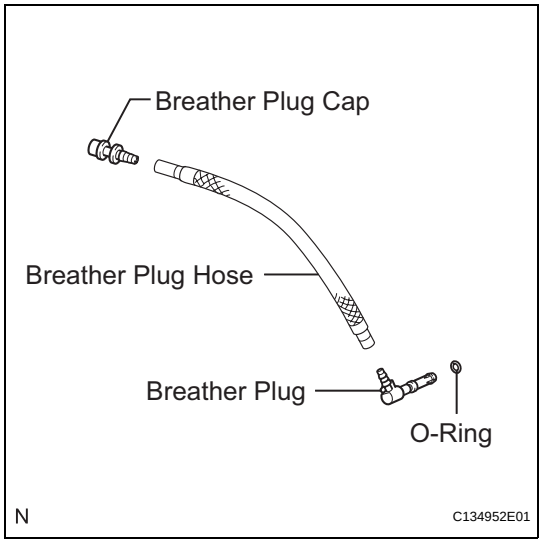
DISASSEMBLY



1. REMOVE NO. 2 BREATHER PLUG

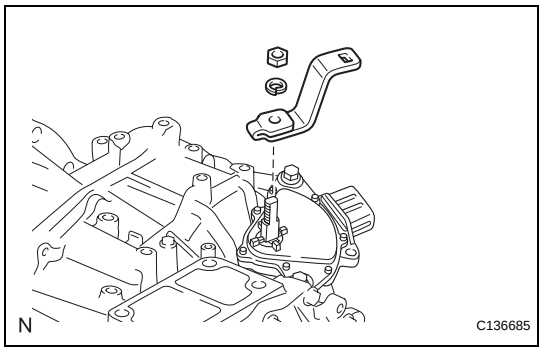
(a) Using a screwdriver, remove the breather plug hose from the transaxle case.



(b) Using a screwdriver, remove the breather plug from the breather plug hose.

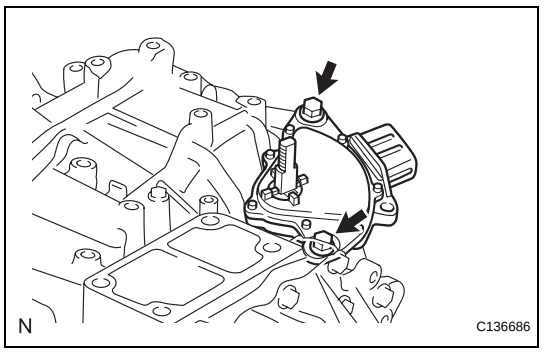
(c) Using a screwdriver, remove the O-ring from the breather plug.

(d) Using a screwdriver, remove the breather plug cap from the breather breather plug hose.



2. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

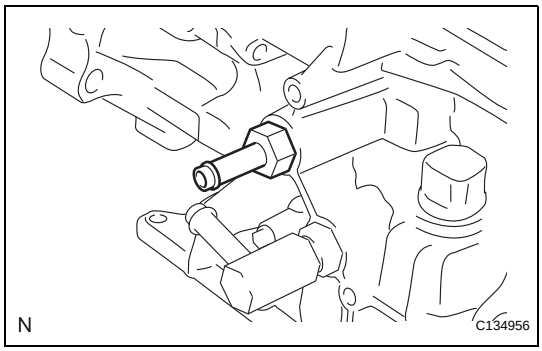
(a) Remove the nut, washer, and control shaft lever from the control shaft.



(b) Remove the 2 bolts and the park/neutral position switch assembly from the transaxle case.

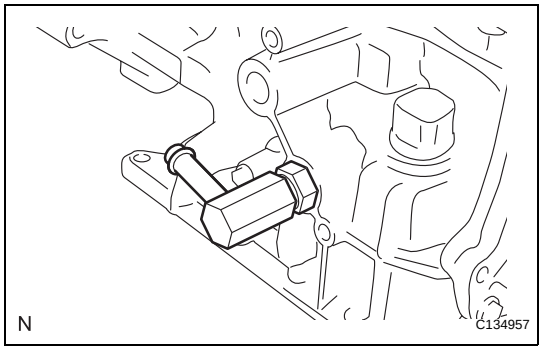
NOTICE:

Before removing the park/neutral position switch, remove any dirt or rust on the installation portion of the control shaft. Be sure to remove the switch straight along the shaft while being careful not to deform the plate spring that supports the shaft. If the plate spring is deformed, the park/neutral switch cannot be reinstalled correctly.



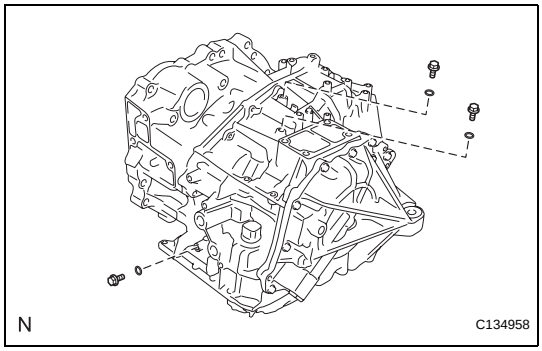
3. REMOVE OIL COOLER TUBE UNION (INLET OIL COOLER UNION)

(a) Loosen the nut while holding the oil cooler tube union (inlet oil cooler union).
(b) Remove the oil cooler tube union (inlet oil cooler union) from the transaxle case.
(c) Remove the O-ring from the oil cooler tube union (inlet oil cooler union).



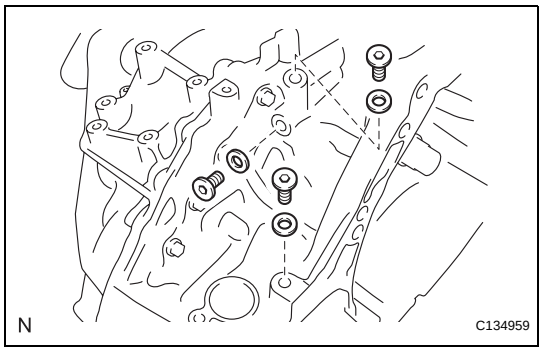
4. REMOVE OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)

(a) Loosen the nut while holding the oil cooler tube union (outlet oil cooler union).
(b) Remove the oil cooler tube union (outlet oil cooler union) from the transaxle case.
(c) Remove the O-ring from the oil cooler tube union (outlet oil cooler union).

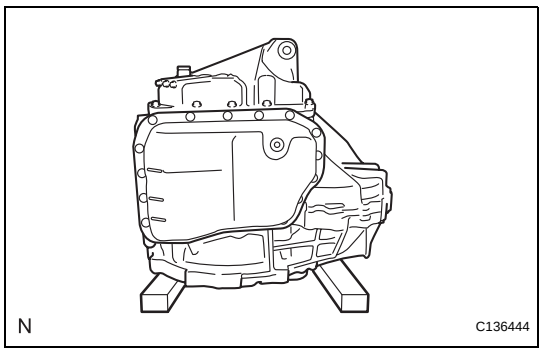


5. REMOVE NO. 1 TRANSAXLE CASE PLUG

(a) Remove the 3 No. 1 transaxle case plugs from the transaxle case.
(b) Using a screwdriver, remove the 3 O-rings from the 3 No. 1 transaxle case plugs.

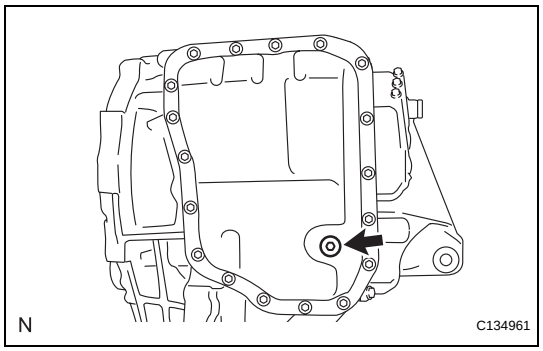


(c) Using a hexagon wrench (6 mm), remove the 3 hexagon bolts from the transaxle housing.
(d) Remove the 3 gaskets from the 3 hexagon bolts.



6. FIX AUTOMATIC TRANSAXLE ASSEMBLY

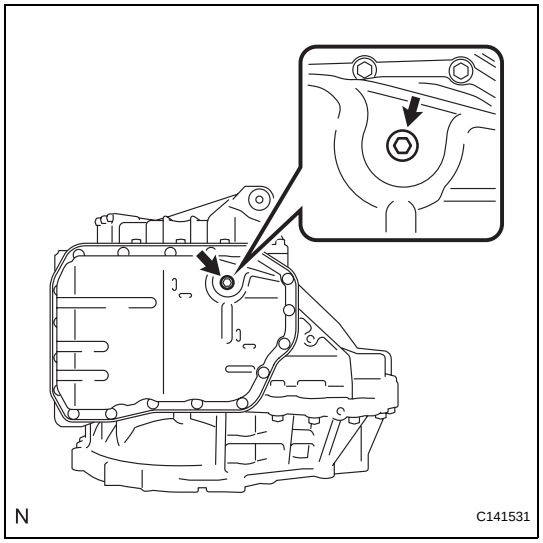
(a) Secure the transaxle assembly on wooden blocks.



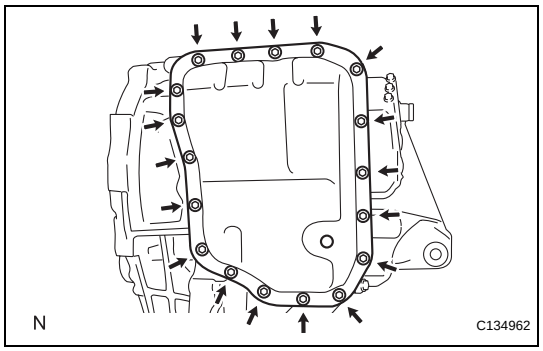
7. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Using a hexagon wrench (6 mm), remove the overflow plug from the automatic transaxle oil pan sub-assembly.

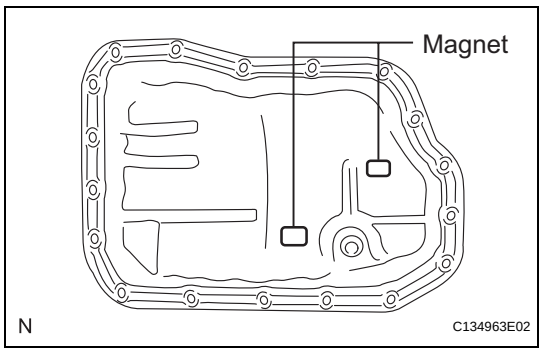
(b) Remove the gasket from the overflow plug.



(c) Using a hexagon wrench (6 mm), remove the No. 1 oil filler tube from the automatic transaxle assembly.

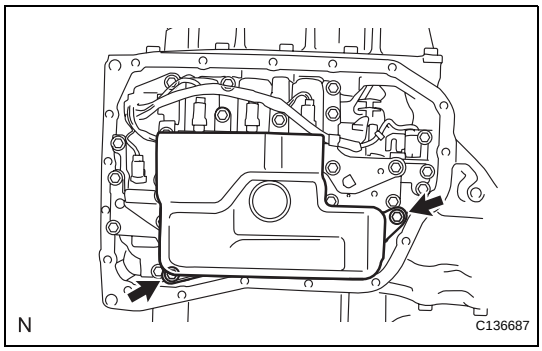


(d) Remove the 18 bolts, automatic transaxle oil pan sub-assembly, and gasket from the automatic transaxle assembly.



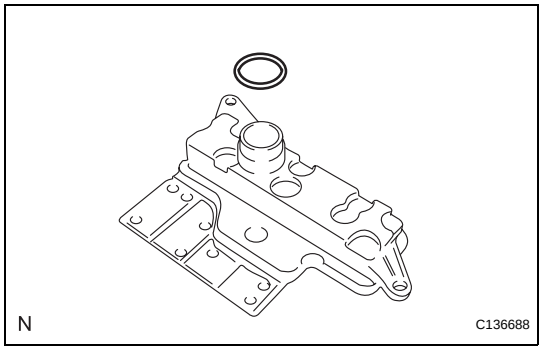
(e) Remove the 2 magnets from the automatic transaxle oil pan sub-assembly.

8. INSPECT TRANSMISSION OIL CLEANER MAGNET (See page AX-274)

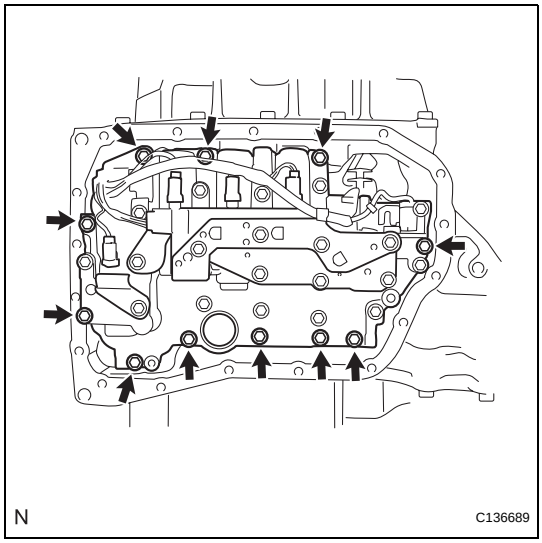


9. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

(a) Remove the 2 bolts and oil strainer assembly from the valve body assembly.



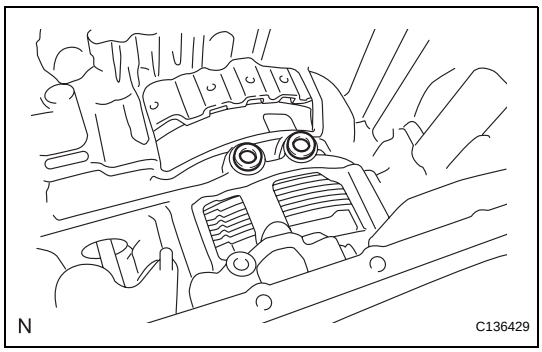
(b) Remove the O-ring from the oil strainer assembly.



10. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Remove the 11 bolts and valve body assembly from the transaxle case.

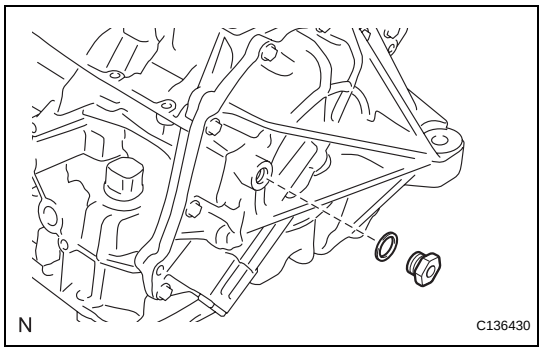
NOTICE:
When removing the transmission valve body assembly, be careful not to allow the transmission revolution sensor and the transaxle case to interfere each other.



11. REMOVE TRANSAXLE CASE GASKET

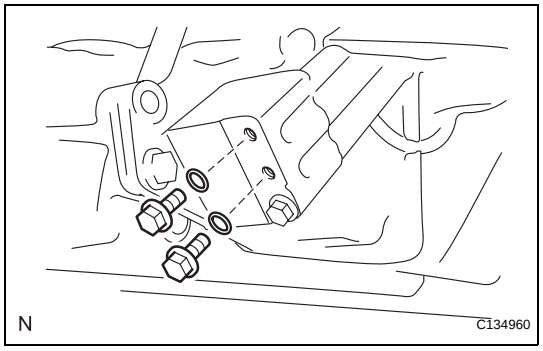
(a) Remove the 2 gaskets from the transaxle case.

12. INSPECT INPUT SHAFT SUB-ASSEMBLY (See page AX-274)

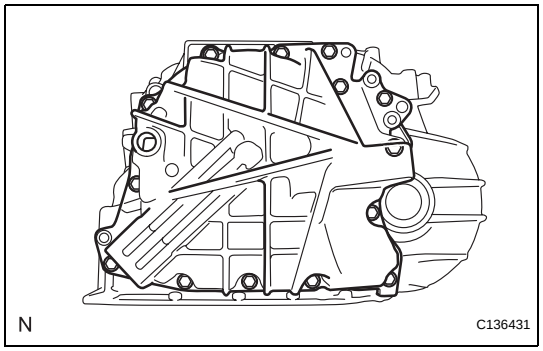


13. REMOVE TRANSAXLE REAR COVER SUB-ASSEMBLY

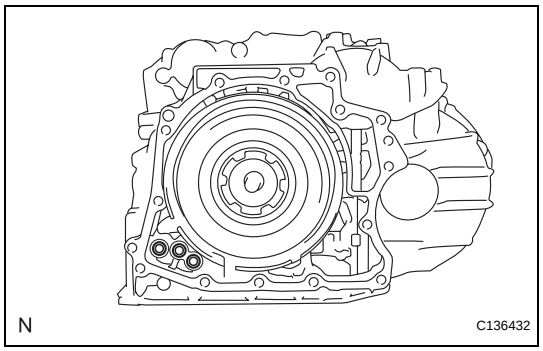
(a) Remove the refill plug from the transaxle rear cover.
(b) Remove the gasket from the refill plug.



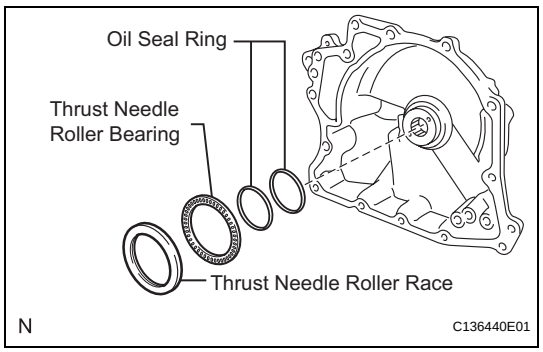
(c) Remove the 2 No. 1 automatic transaxle case plugs from the transaxle rear cover.
(d) Using a screwdriver, remove the 2 O-rings from the 2 No. 1 automatic transaxle case plugs.



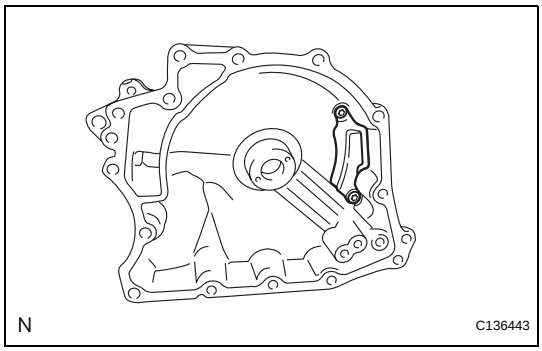
(e) Remove the 14 bolts from the transaxle rear cover.
(f) Using a brass bar and hammer, tap on the circumference of the rear transaxle cover, to remove the transaxle rear cover from the transaxle case.



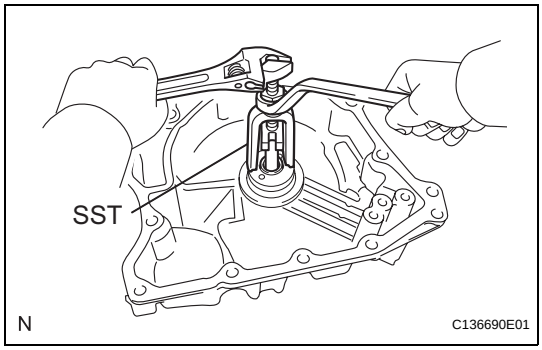
(g) Using a screwdriver, remove the 3 O-rings from the transaxle case.



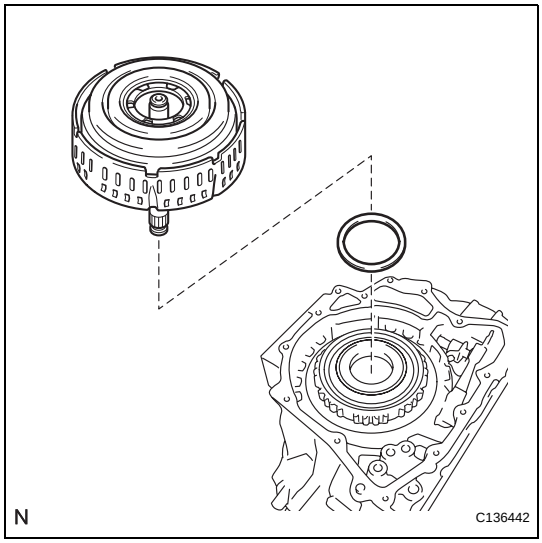
(h) Using a screwdriver, remove the 2 oil seal rings from the transaxle rear cover.
(i) Remove the thrust needle roller bearing and thrust needle roller race from the transaxle rear cover.



(j) Using a "TORX" wrench (T30), remove the 2 "TORX" screws and transaxle rear cover plate from the transaxle rear cover.



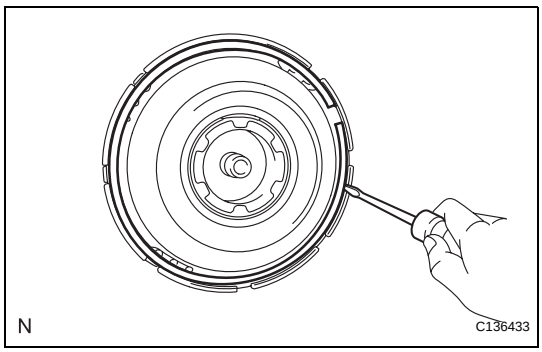
(k) Using SST, remove the needle roller bearing from the transaxle rear cover.
SST 09319-60020



14. REMOVE DIRECT MULTIPLE DISC CLUTCH ASSEMBLY

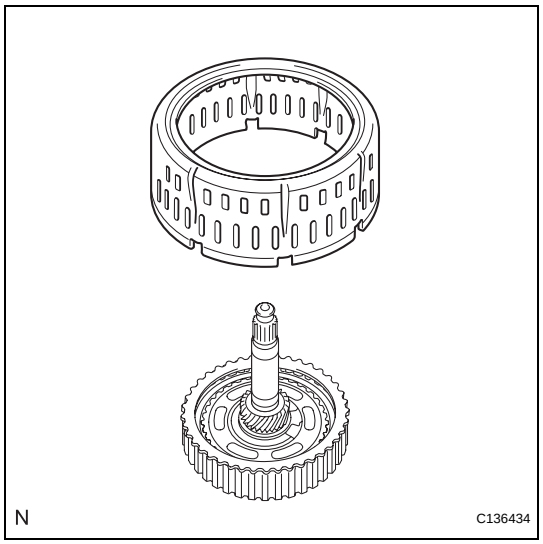
(a) Remove the direct multiple disc clutch assembly from the transaxle case.

(b) Remove the thrust needle roller bearing from the direct multiple disc clutch assembly.

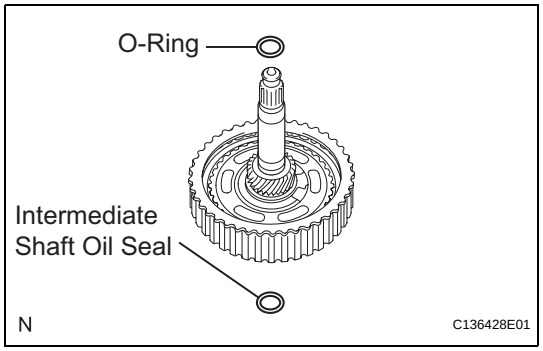


15. REMOVE DIRECT MULTIPLE DISC CLUTCH SNAP RING

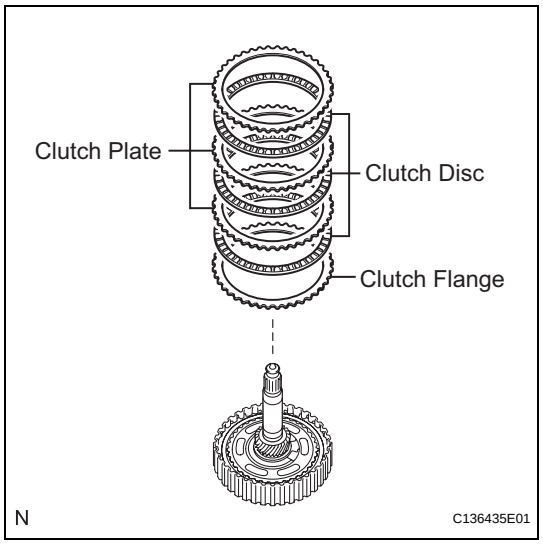
(a) Using 2 screwdrivers, remove the snap ring from the direct multiple disc clutch assembly.



(b) Remove the No. 2 direct clutch piston from the direct multiple disc clutch assembly.



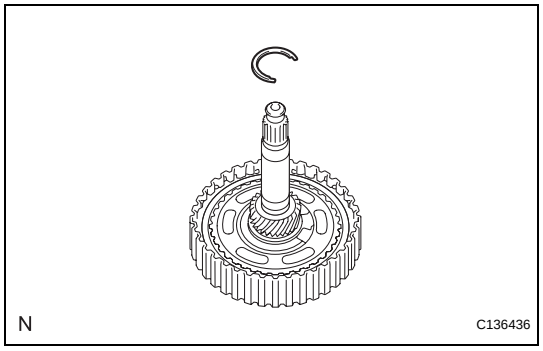
(c) Using a screwdriver, remove the intermediate shaft oil seal ring from the direct No. 2 direct clutch piston.
(d) Using a screwdriver, remove the O-ring from the direct multiple disc clutch assembly.



16. REMOVE NO. 2 DIRECT MULTIPLE DISC CLUTCH FLANGE

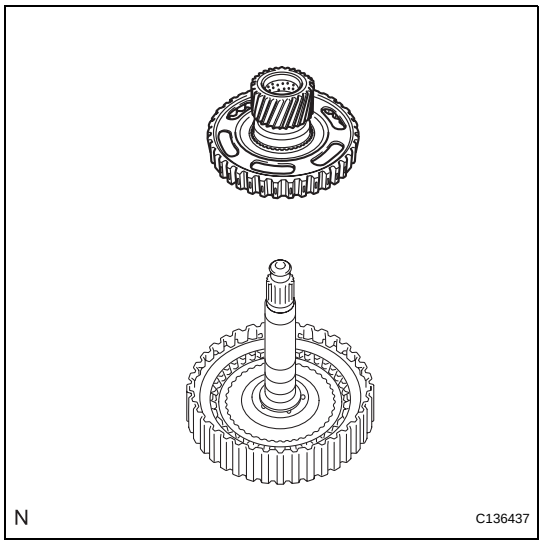
(a) Remove the flange, 3 clutch discs and 3 clutch plates from the direct multiple disc clutch assembly.

17. INSPECT NO. 2 CLUTCH DISC (See page AX-274)

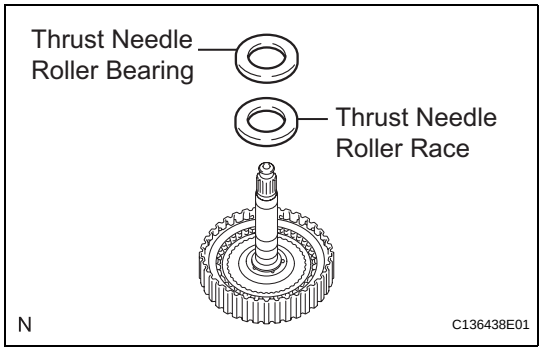


18. REMOVE REAR PLANETARY SUN GEAR ASSEMBLY

(a) Using a snap ring expander, remove the snap ring from the direct multiple disc clutch assembly.

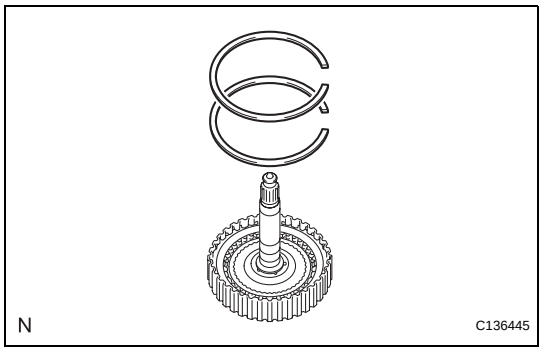


(b) Remove the rear planetary sun gear from the direct multiple disc clutch assembly.



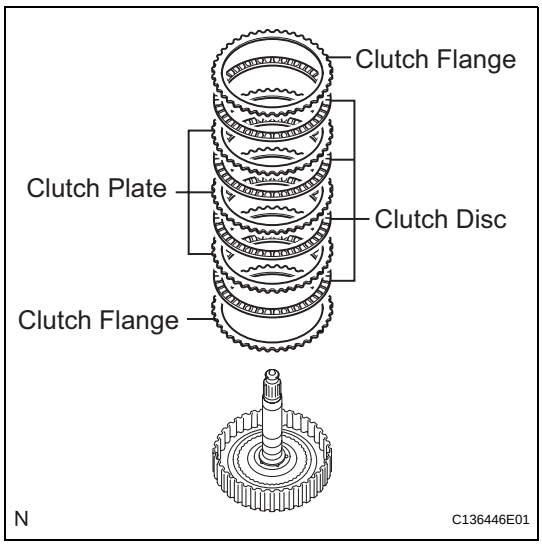
(c) Remove the thrust needle roller bearing and thrust needle roller race from the direct multiple disc clutch assembly.

19. INSPECT REAR PLANETARY SUN GEAR ASSEMBLY (See page AX-276)



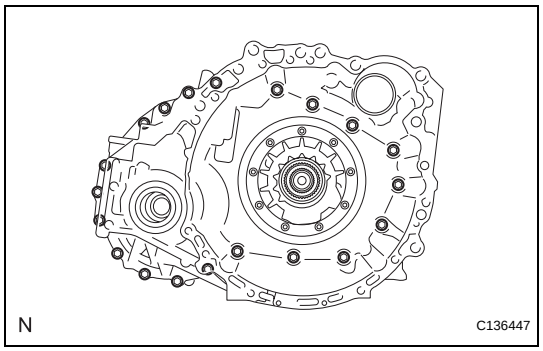
20. REMOVE NO. 1 DIRECT MULTIPLE DISC CLUTCH FLANGE

(a) Using 2 screwdrivers, remove the 2 snap rings from the direct multiple disc clutch assembly.



(b) Remove the flange, 4 clutch discs, and 4 clutch plates from the direct multiple disc clutch assembly.

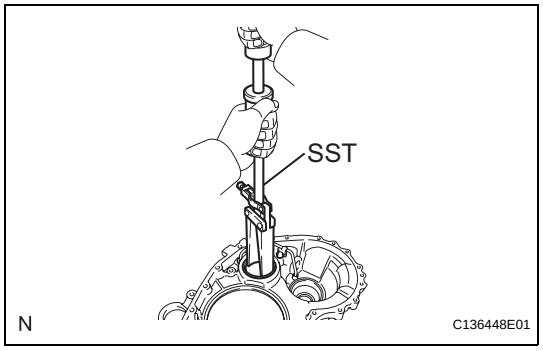
21. INSPECT NO. 1 CLUTCH DISC (See page AX-275)



22. REMOVE TRANSAXLE HOUSING

(a) Remove the 20 bolts from the transaxle housing.

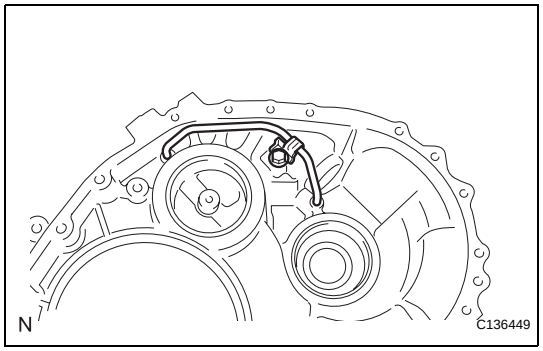
(b) Using a brass bar and hammer, tap on the circumference of the transaxle housing to remove the transaxle housing from the transaxle case.



23. REMOVE COUNTER DRIVEN GEAR FRONT TAPERED ROLLER BEARING OUTER RACE

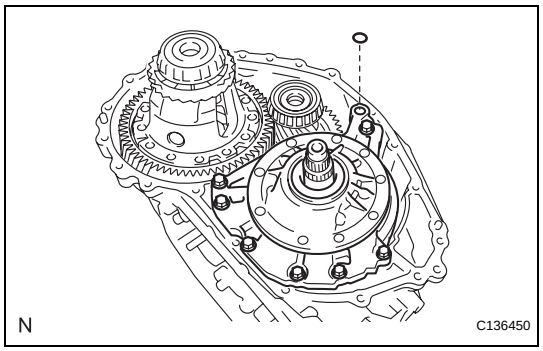
(a) Using SST, remove the counter driven gear front tapered roller bearing outer race and shim from the transaxle housing.

SST 09308-00010



24. REMOVE DIFFERENTIAL GEAR LUBE APPLY TUBE

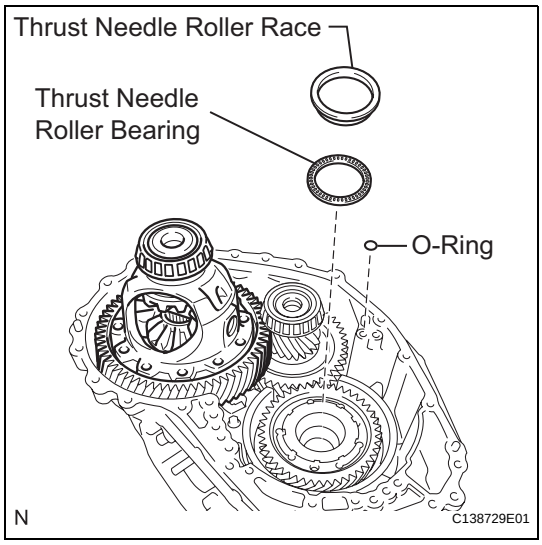
(a) Remove the bolt, clamp, and differential gear lube apply tube from the transaxle housing.



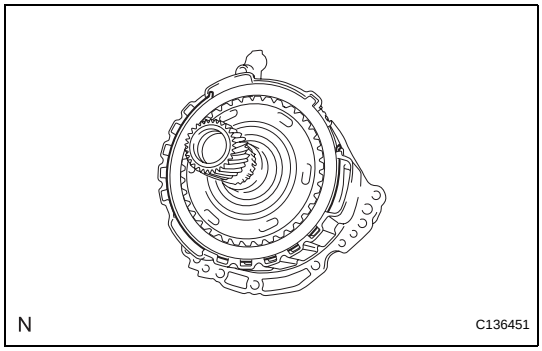
25. REMOVE FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY

(a) Remove the 7 bolts and oil pump from the transaxle case.

(b) Remove the O-ring from the oil pump assembly.

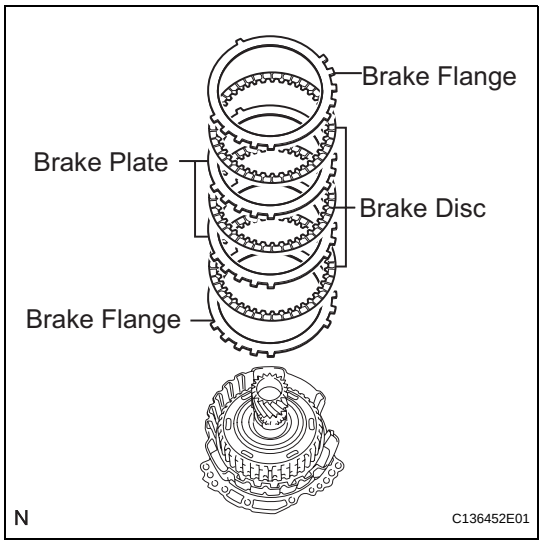


(c) Remove the thrust needle roller bearing and thrust needle roller race from the carrier lock nut.
(d) Remove the O-ring from the transaxle case.



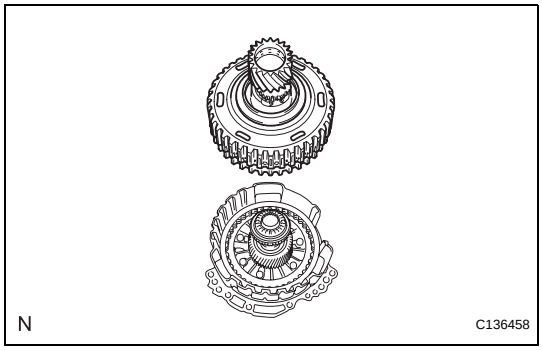
26. REMOVE NO. 3 BRAKE DISC

(a) Using a screwdriver, remove the snap ring from the oil pump assembly.



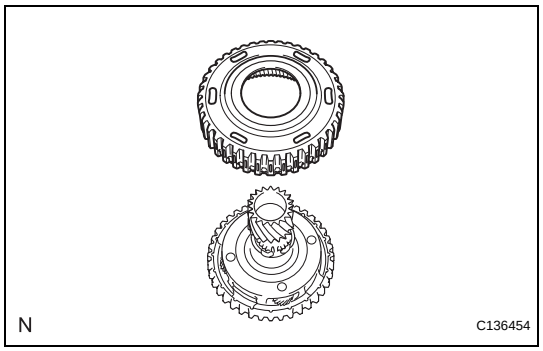
(b) Remove the 2 brake flanges, 3 brake discs, and 2 brake plates from the oil pump assembly.

27. INSPECT NO. 3 BRAKE DISC (See page AX-275)



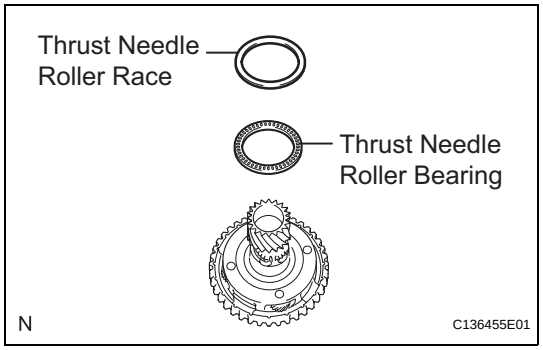
28. REMOVE UNDERDRIVE PLANETARY GEAR ASSEMBLY

(a) Remove the underdrive planetary gear assembly from the oil pump assembly.

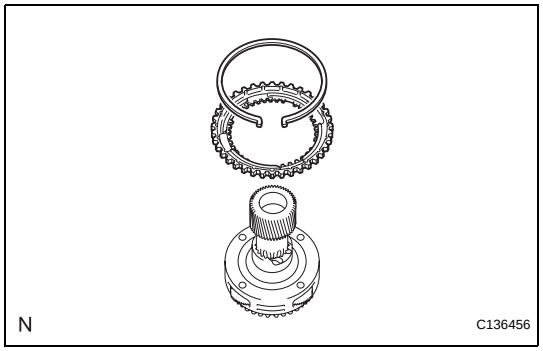


29. REMOVE NO. 3 BRAKE HUB

(a) Remove the No. 3 brake hub from the underdrive planetary gear assembly.



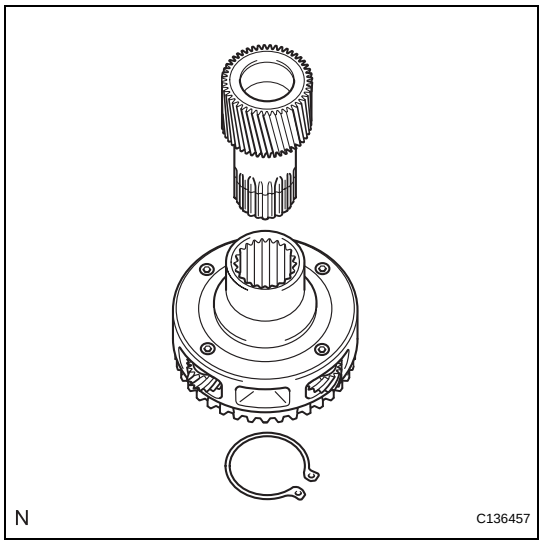
(b) Remove the thrust needle roller bearing and thrust needle roller race from the underdrive planetary gear assembly.



30. REMOVE UNDERDRIVE PLANETARY RING GEAR

(a) Using needle-nose pliers, remove the snap ring from the underdrive planetary ring gear.

(b) Remove the underdrive planetary ring gear from the underdrive planetary gear assembly.



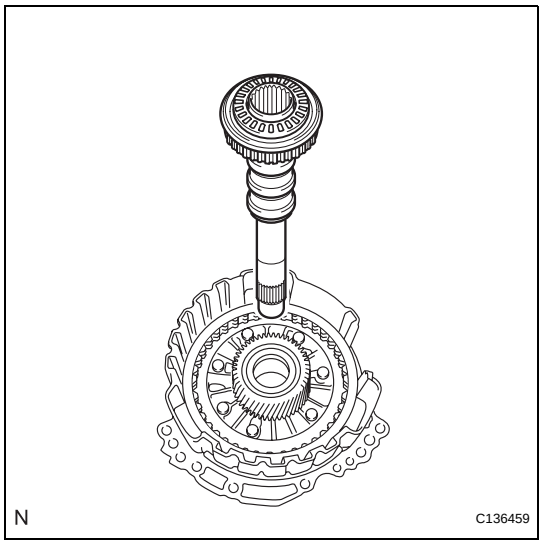
31. REMOVE PLANETARY SUN GEAR SUB-ASSEMBLY

(a) While expanding the snap ring with snap ring pliers, remove the front planetary sun gear from the underdrive planetary gear assembly.

(b) Remove the snap ring from the underdrive planetary gear assembly.

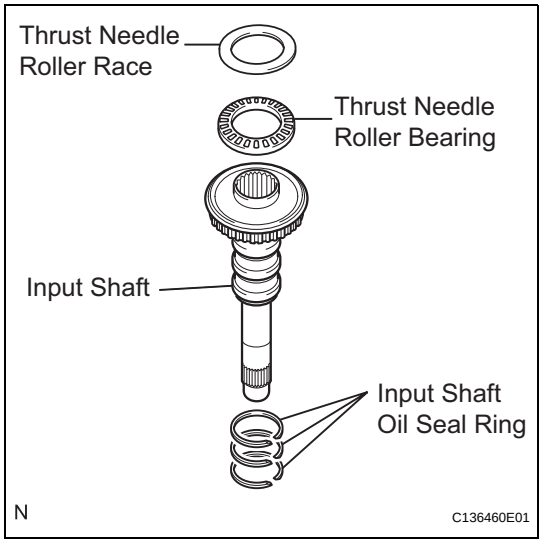
32. INSPECT UNDERDRIVE PLANETARY GEAR ASSEMBLY (See page AX-276)

33. INSPECT PLANETARY SUN GEAR SUB-ASSEMBLY (See page AX-275)



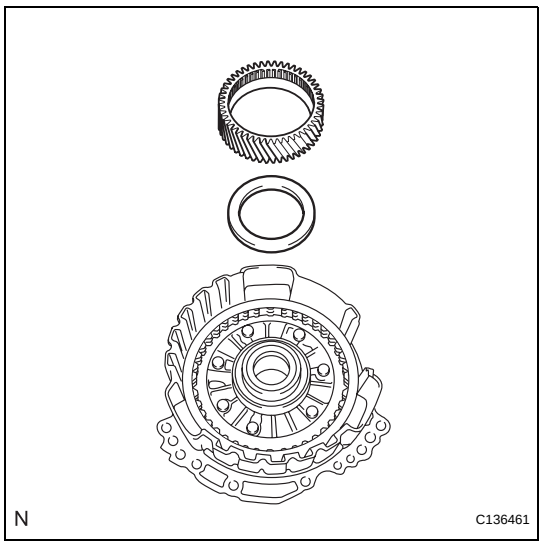
34. REMOVE INPUT SHAFT SUB-ASSEMBLY

(a) Remove the input shaft from the oil pump assembly.



(b) Remove the thrust needle roller bearing and thrust needle roller race from the input shaft.

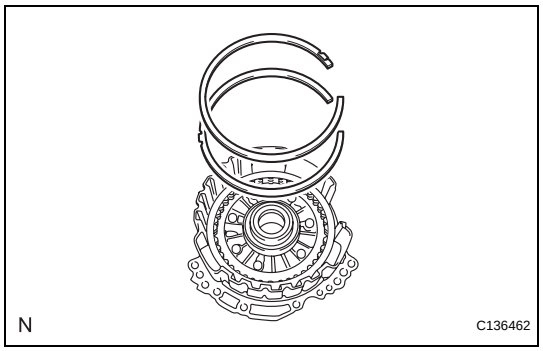
(c) Using a screwdriver, remove the 3 input shaft oil seal rings from the input shaft.



35. REMOVE UNDERDRIVE PLANETARY SUN GEAR

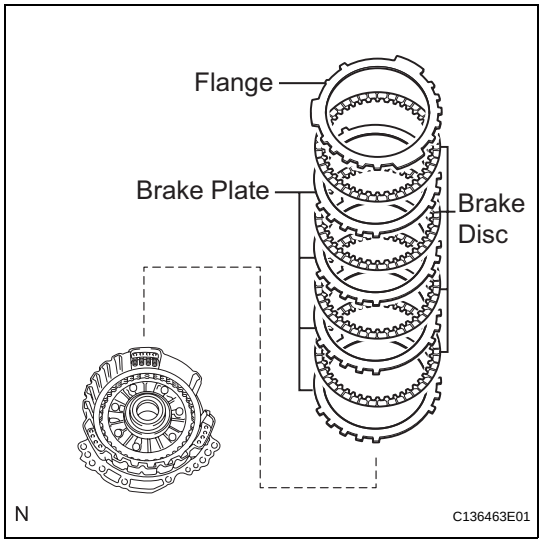
(a) Remove the underdrive planetary sun gear from the oil pump assembly.

(b) Remove the thrust needle roller bearing from the oil pump assembly.



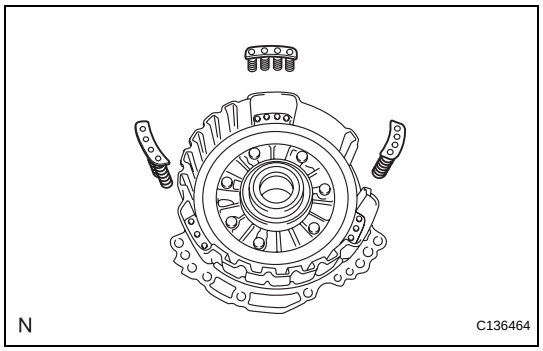
36. REMOVE NO. 1 BRAKE DISC

(a) Using a screwdriver, remove the 2 snap rings from the oil pump assembly.



(b) Remove the flange, 4 brake discs, and 4 brake plates from the oil pump assembly.

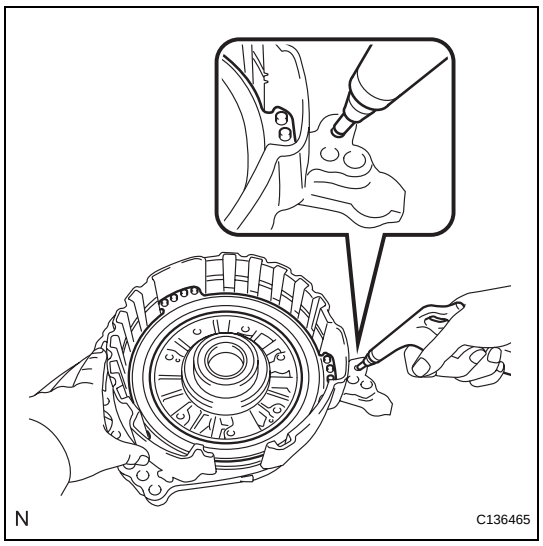
37. INSPECT NO. 1 BRAKE DISC (See page AX-276)



38. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

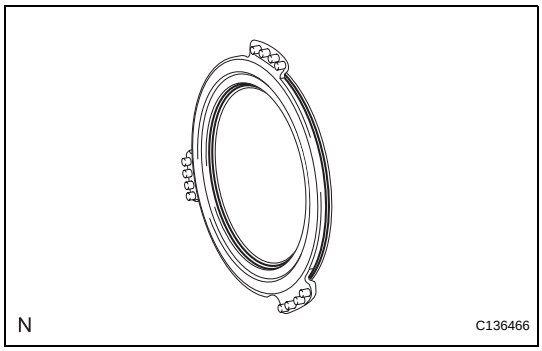
(a) Remove the 3 2nd brake piston return springs from the oil pump assembly.

39. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY (See page AX-277)

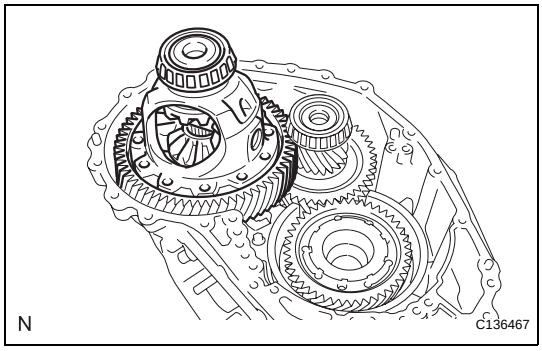


40. REMOVE NO. 1 BRAKE PISTON

(a) Holding the oil pump assembly by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil pump assembly to remove the No. 1 brake piston.

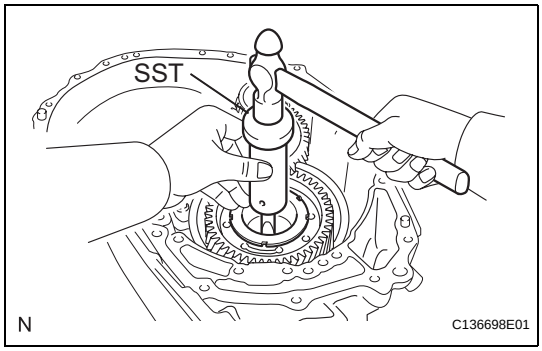


(b) Using a screwdriver, remove the 2 O-rings from the No. 1 brake piston.



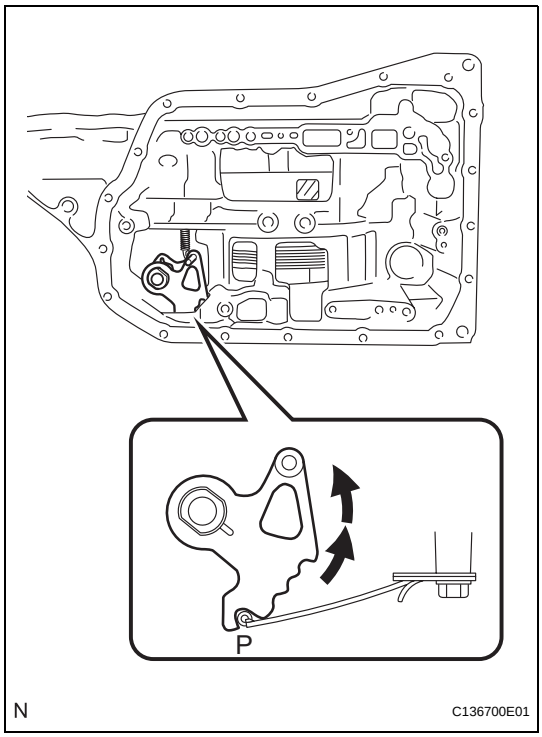
41. REMOVE FRONT DIFFERENTIAL CASE

(a) Remove the differential case sub-assembly from the transaxle case.

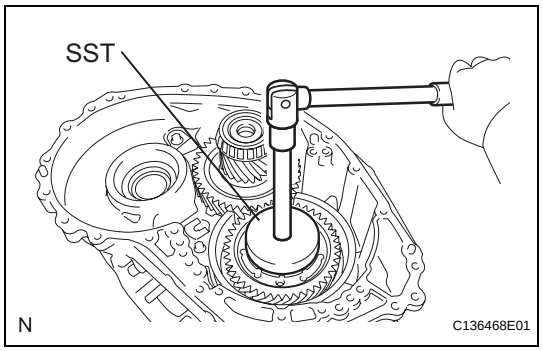


42. REMOVE COUNTER DRIVE GEAR NUT

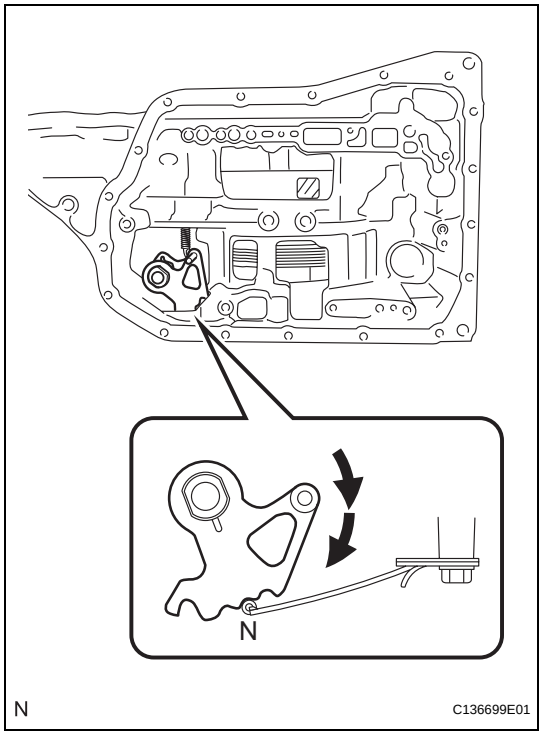
(a) Using a SST and hammer, unstake the nut.
SST 09930-00010



(b) Turn the manual valve lever 2 notches counterclockwise to set it in the P position as shown in the illustration.

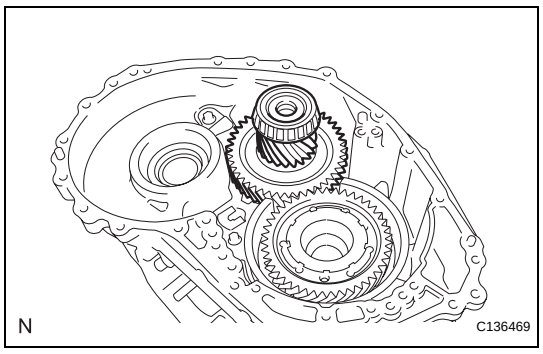


(c) Using SST, remove the nut from the planetary gear assembly.
SST 09387-00130

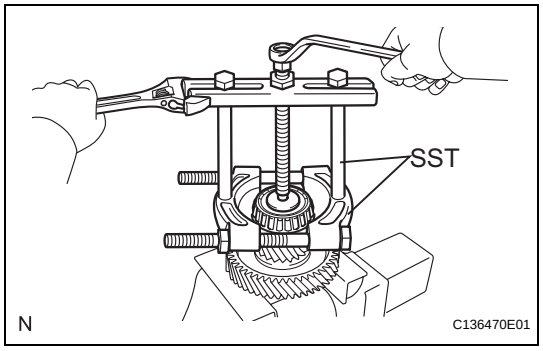


43. REMOVE COUNTER DRIVEN GEAR

(a) Turn the manual valve lever 2 notches clockwise to set it in the N position as shown in the illustration.

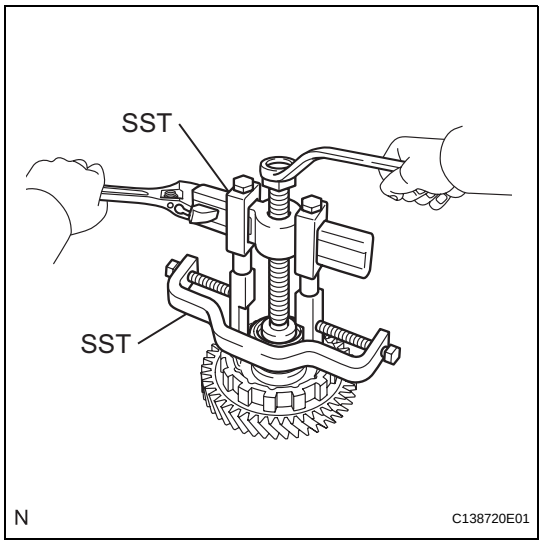


(b) Remove the counter driven gear sub-assembly from the transaxle case.



44. REMOVE COUNTER DRIVEN GEAR FRONT TAPERED ROLLER BEARING

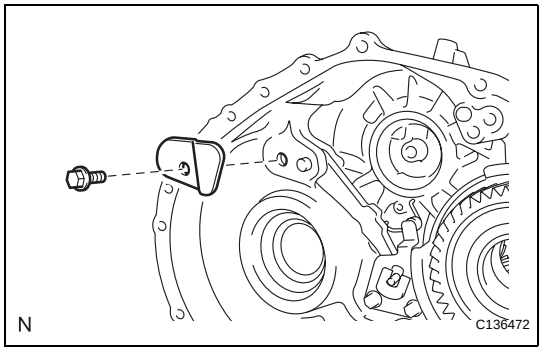
(a) Using SST, remove the counter driven gear front tapered roller bearing from the counter driven gear sub-assembly.
SST 09950-00020, 09950-00030, 09950-60010 (09951-00400)



45. REMOVE COUNTER DRIVEN GEAR REAR TAPERED ROLLER BEARING

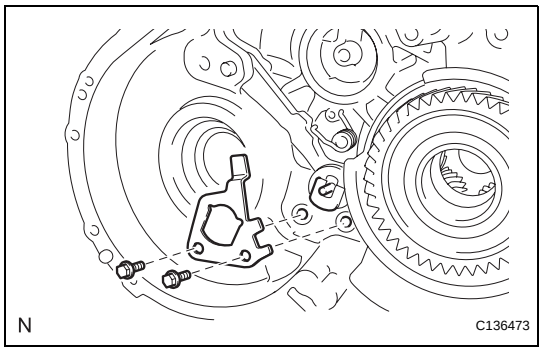
(a) Using SST, remove the counter driven gear rear tapered roller bearing and differential drive pinion from the counter driven gear.

SST 09950-40011 (09951-04010, 09952-04010, 09954-04010, 09953-04020, 09955-04071, 09957-04010, 09958-04011), 09950-60010 (09951-00320)



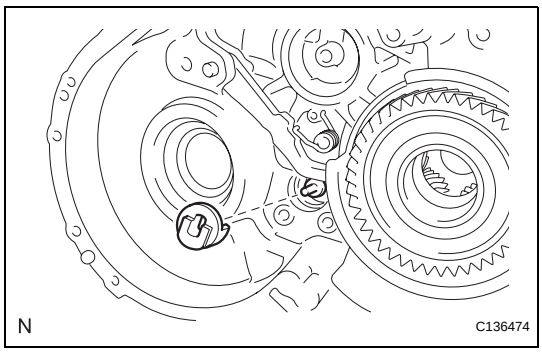
46. REMOVE PAWL SHAFT CLAMP

(a) Remove the bolt and pawl shaft clamp from the transaxle case.



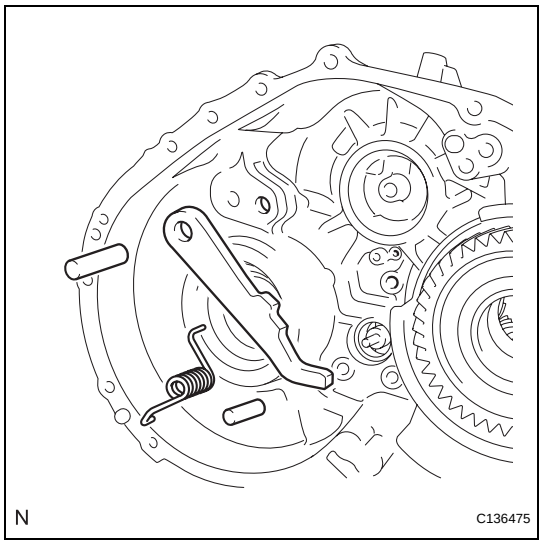
47. REMOVE PAWL STOPPER PLATE

(a) Remove the 2 bolts and pawl stopper plate from the transaxle case.



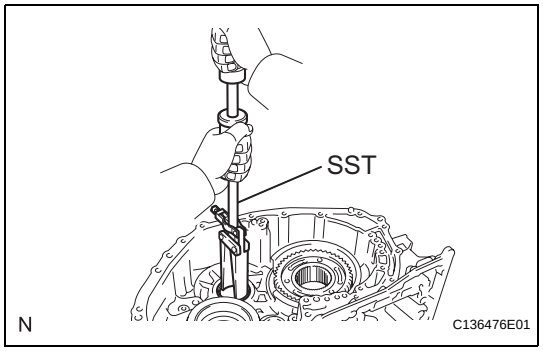
48. REMOVE PARKING LOCK SLEEVE

(a) Remove the parking lock sleeve from the transaxle case.



49. REMOVE PARKING LOCK PAWL

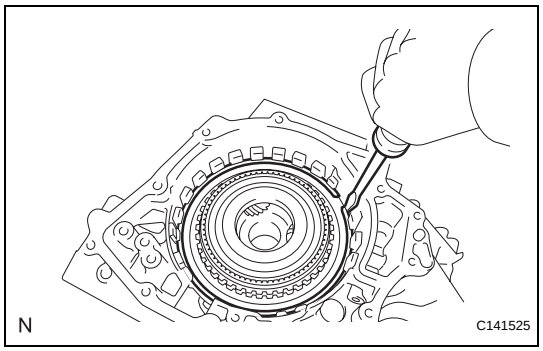
(a) Remove the spring, parking lock pawl pin, parking lock pawl shaft, and parking lock pawl from the transaxle case.



50. REMOVE COUNTER DRIVEN GEAR REAR TAPERED ROLLER BEARING OUTER RACE

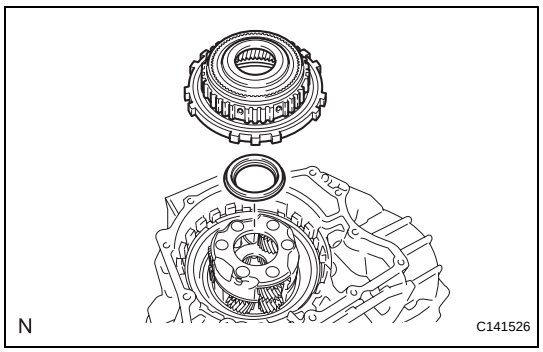
(a) Using SST, remove the counter driven gear rear tapered roller bearing outer race from the transaxle case.

SST 09308-00010



51. REMOVE ONE-WAY CLUTCH ASSEMBLY

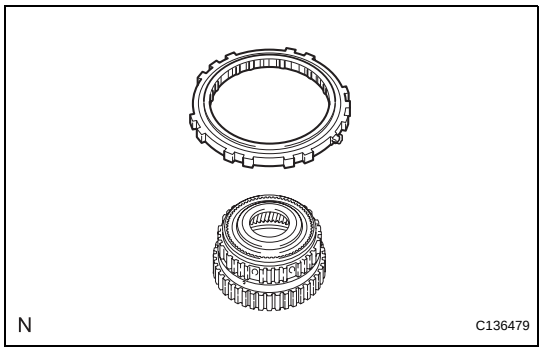
(a) Using a screwdriver, remove the snap ring from the transaxle case.



(b) Remove the one-way clutch assembly with planetary ring gear from the transaxle case.

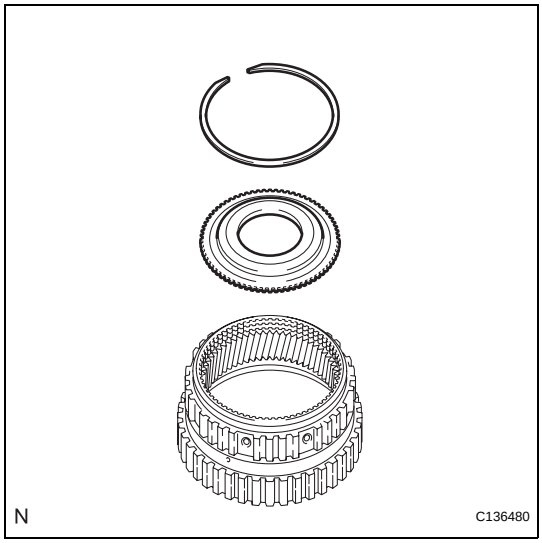
(c) Remove the thrust needle roller bearing from the transaxle case.

52. INSPECT ONE-WAY CLUTCH ASSEMBLY (See page AX-277)



53. REMOVE PLANETARY RING GEAR

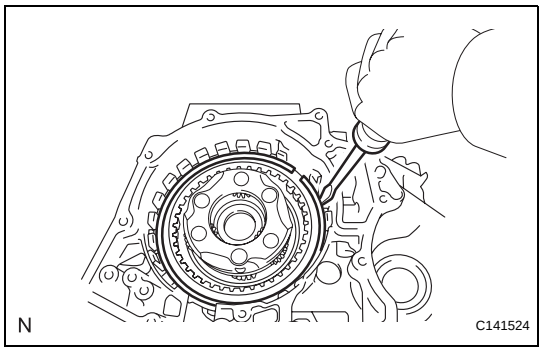
(a) Remove the planetary ring gear from the one-way clutch assembly.



54. REMOVE PLANETARY RING GEAR FLANGE

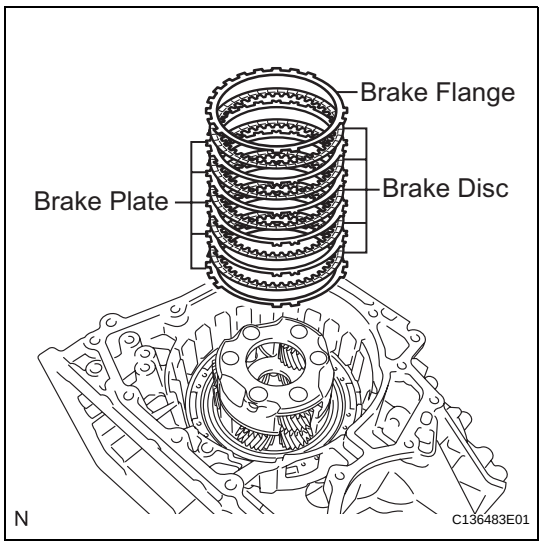
(a) Using a screwdriver, remove the snap ring from the planetary ring gear.

(b) Remove the planetary ring gear flange from the planetary ring gear.



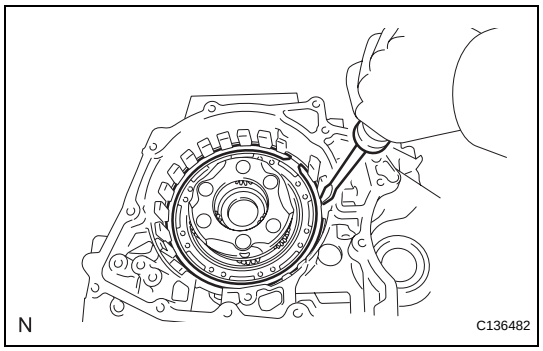
55. REMOVE NO. 2 BRAKE DISC

(a) Using a screwdriver, remove the snap ring from the transaxle case.



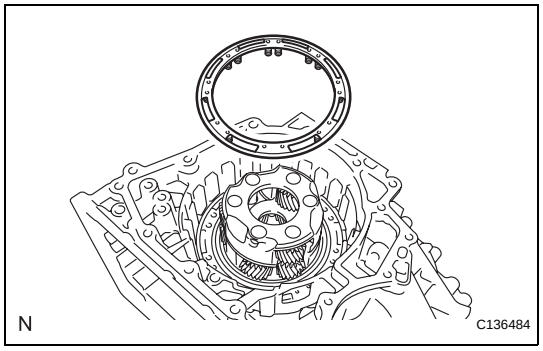
(b) Remove the brake flange, 5 brake discs, and 5 brake plates from the transaxle case.

56. INSPECT NO. 2 BRAKE DISC (See page AX-277)



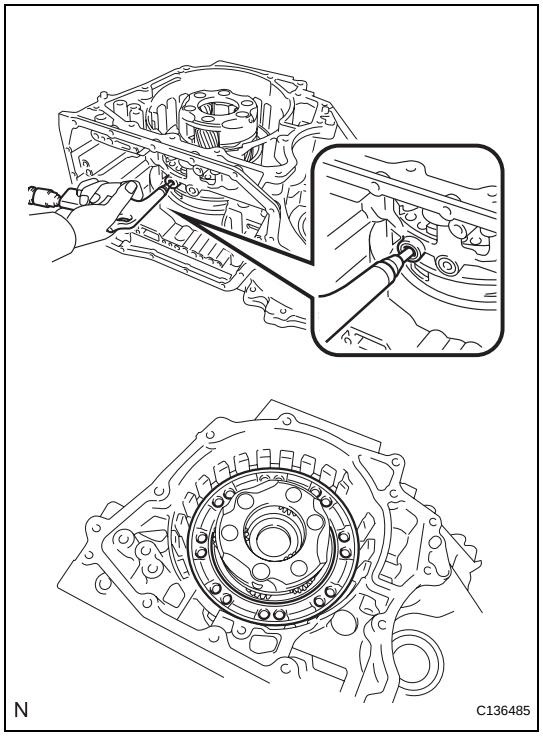
57. REMOVE 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using a screwdriver, remove the snap ring from the transaxle case.



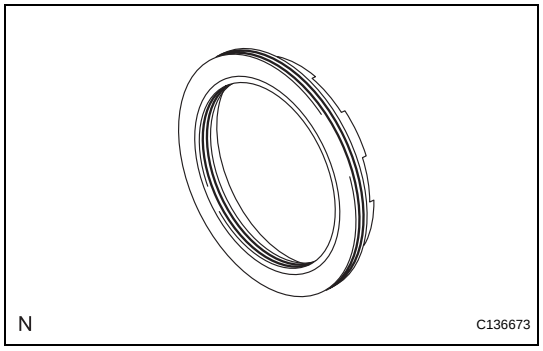
(b) Remove the 1st and reverse brake return spring from the transaxle case.

58. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY (See page AX-278)



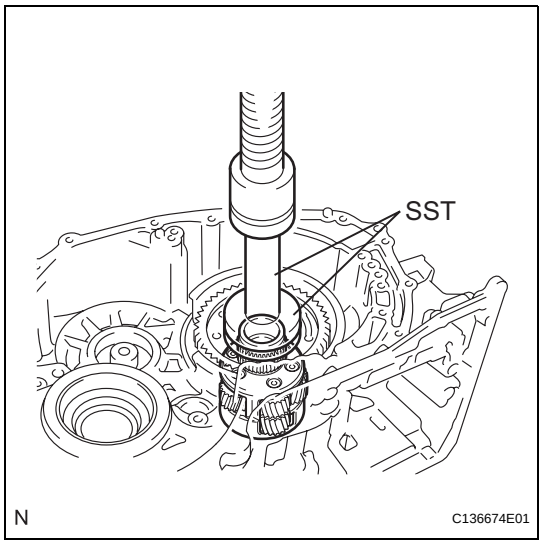
59. REMOVE NO. 2 BRAKE PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the ATF hole indicated by the arrow to remove the No. 2 brake piston assembly from the transaxle case.



(b) Using a screwdriver, remove the 2 O-rings from the No. 2 brake piston.

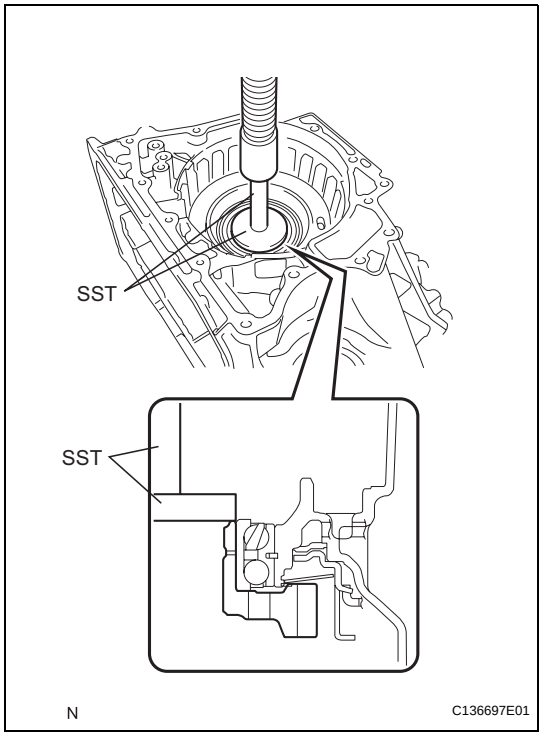
AX



60. REMOVE PLANETARY GEAR ASSEMBLY

(a) Using SST and a press, remove the planetary gear assembly from the transaxle case.

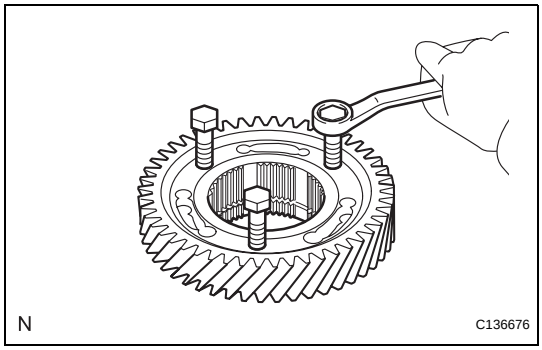
SST 09950-60010 (09951-00580), 09950-70010 (09951-07100)



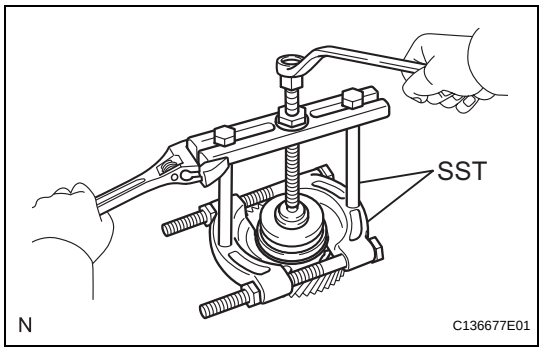
61. REMOVE COUNTER DRIVE GEAR

(a) Using SST and a press, remove the counter drive gear and bearing inner race (rear side) from the transaxle case.

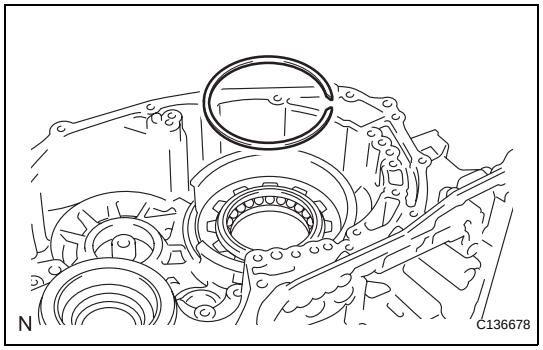
SST 09950-60020 (09951-00710), 09950-70010 (09951-07100)



(b) As shown in the illustration, tighten the 3 bolts evenly and leave a clearance of approximately 20.0 mm (0.797 in.) between the counter drive gear and inner race.

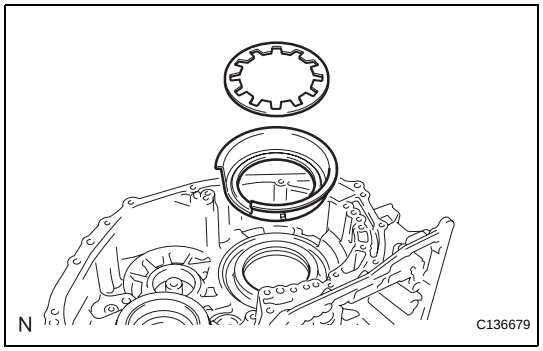


(c) Using SST, remove the bearing inner race (front side) from the counter drive gear.
SST 09950-00020, 09950-00030, 09950-60020 (09951-00710)

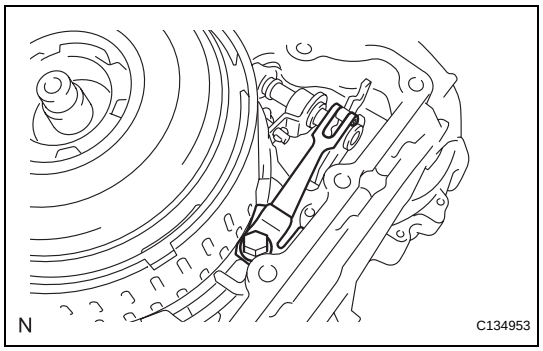


62. REMOVE NO. 3 BRAKE PISTON

(a) Using a screwdriver, remove the snap ring from the transaxle case.

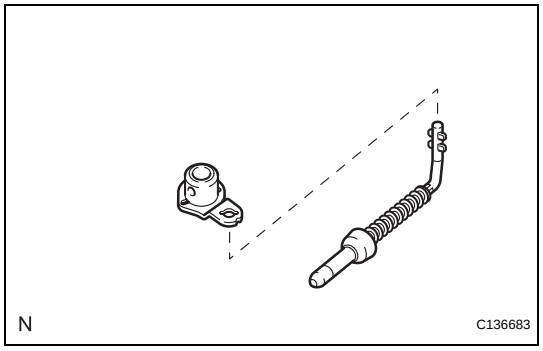


(b) Remove the brake piston return spring from the transaxle case.
(c) Remove the No. 3 brake piston from the transaxle case.



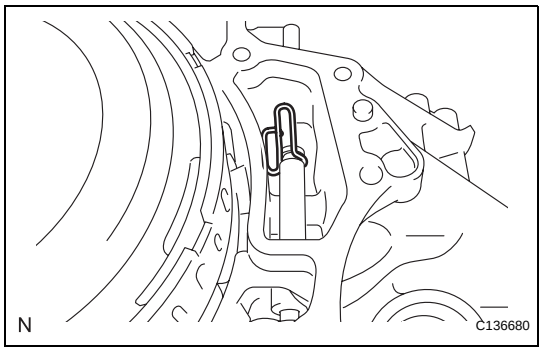
63. REMOVE MANUAL DETENT SPRING SUB-ASSEMBLY

(a) Remove the bolt, cover, and manual detent spring sub-assembly from the transaxle case.



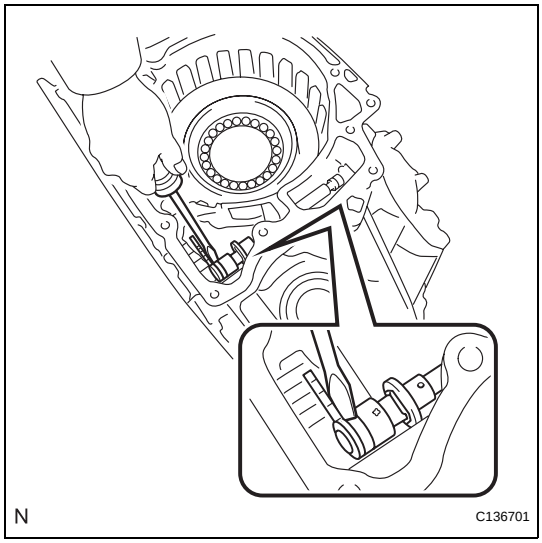
64. REMOVE PARKING LOCK ROD SUB-ASSEMBLY

(a) Remove the parking lock rod sub-assembly from the parking lock lever sub-assembly.
HINT:
Align the dial with the notches on the parking lock lever sub-assembly to remove the parking lock rod sub-assembly.

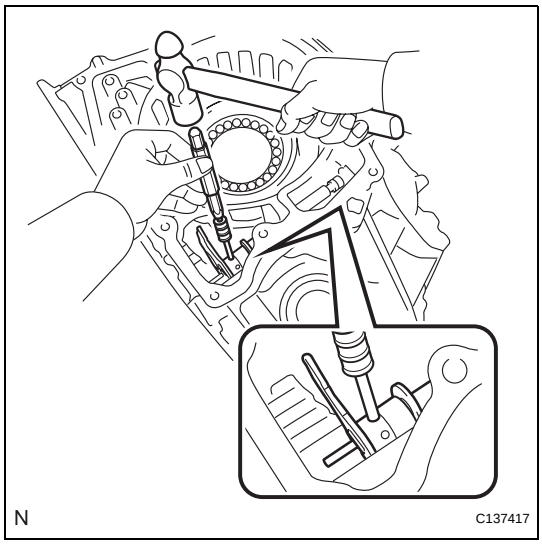


65. REMOVE MANUAL VALVE LEVER SHAFT

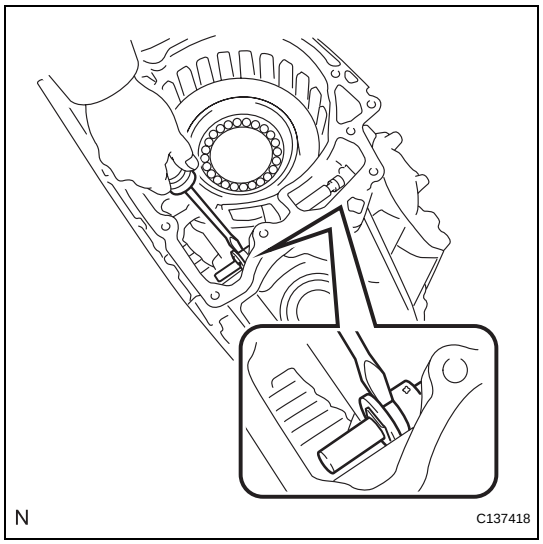
(a) Using needle-nose pliers, remove the manual valve lever shaft retainer spring from the transaxle case.



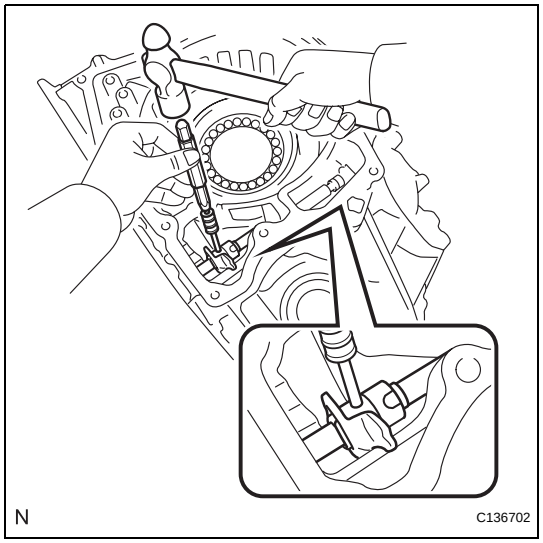
(b) Using a screwdriver, slide the spacer of the manual valve lever sub-assembly.



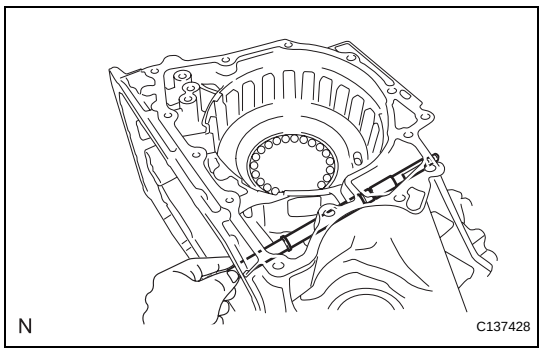
(c) Using a pin punch (3 mm) and hammer, drive out the slotted spring pin from the manual valve lever sub-assembly.
HINT:
Slowly drive out the pin so that it will not fall into the transaxle case.



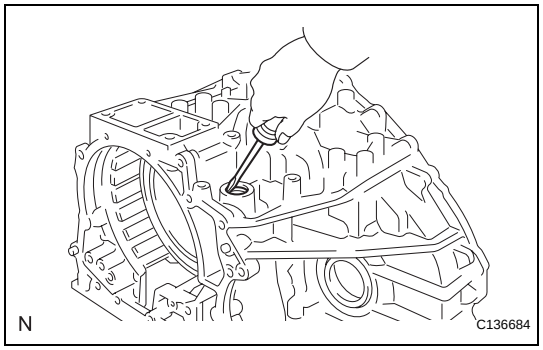
(d) Using a screwdriver, slide the spacer of the parking lock lever sub-assembly.



(e) Using a pin punch (3 mm) and hammer, drive out the slotted spring pin from the parking lock lever sub-assembly.
HINT:
Slowly drive out the pin so that it will not fall into the transaxle case.



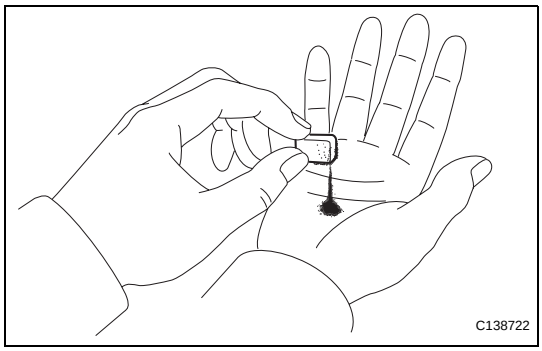
(f) Remove the manual valve lever shaft, manual valve lever sub-assembly, parking lock lever sub-assembly and 2 spacers from the transaxle case.



66. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Using a screwdriver, remove the manual valve lever shaft oil seal from the transaxle case.

AX



INSPECTION

1. INSPECT TRANSMISSION OIL CLEANER MAGNET

(a) Use the removed magnets to collect any steel chips. Examine the chips and particles in the pan and on the magnets to determine what type of wear has occurred in the transaxle:

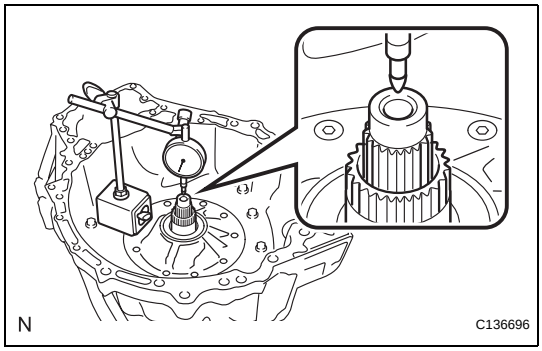
Result:

Steel (magnetic):

Bearing, gear and plate wear

Brass (non-magnetic):

Bearing wear

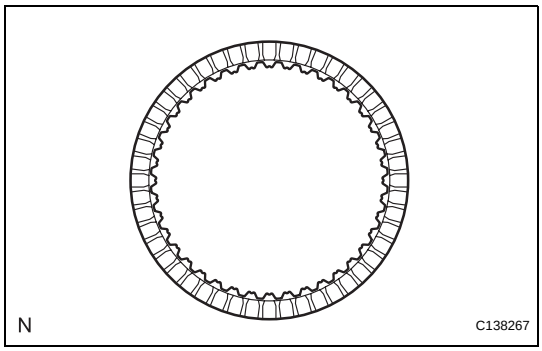


2. INSPECT INPUT SHAFT SUB-ASSEMBLY

(a) Using a dial indicator, measure the input shaft end play.

End play:

0.012 to 1.250 mm (0.0005 to 0.0492 in.)

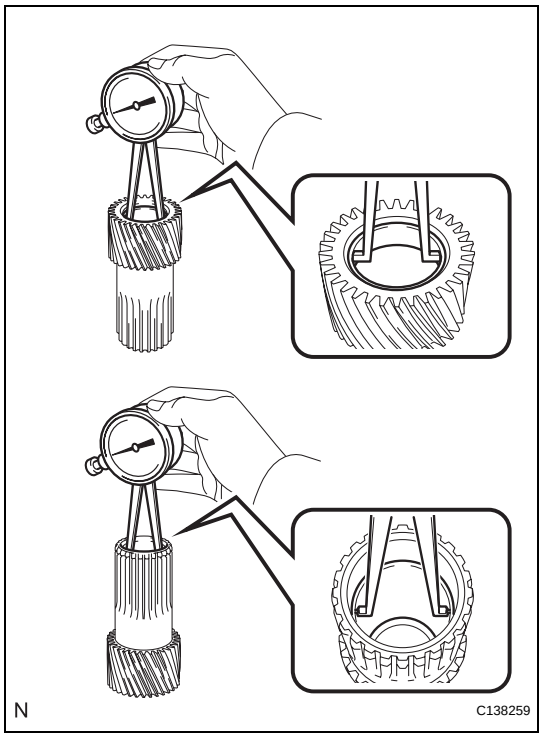


3. INSPECT NO. 2 CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:

If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.



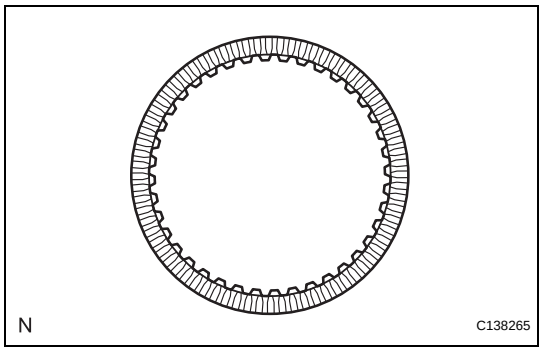
4. INSPECT PLANETARY SUN GEAR SUB-ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the bushings of the planetary sun gear.

Standard inside diameter:
25.525 to 25.546 mm (1.0049 to 1.0057 in.)

Maximum inside diameter:
25.546 mm (1.0057 in.)

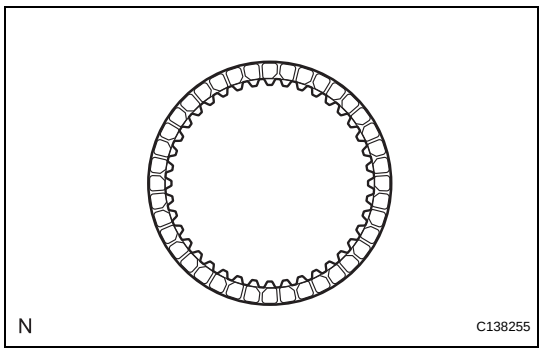
If the inside diameter is greater than the maximum, replace the planetary gear sun gear.



5. INSPECT NO. 1 CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:
If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.

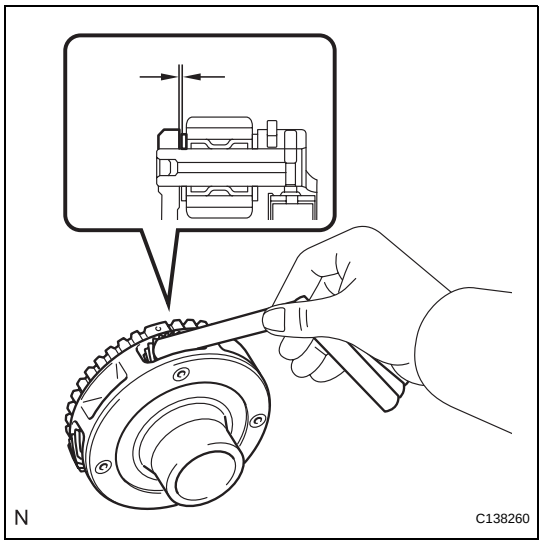


6. INSPECT NO. 3 BRAKE DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:
If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.

AX



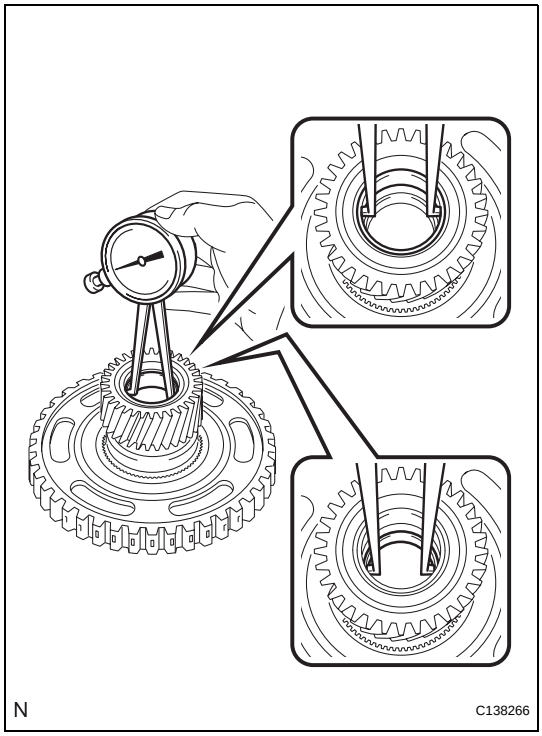
7. INSPECT UNDERDRIVE PLANETARY GEAR ASSEMBLY

(a) Using a feeler gauge, measure the clearance between the underdrive planetary gear and the pinion gear at 4 points.

Standard clearance:

0.18 to 0.54 mm (0.0071 to 0.0213 in.)

If the clearance is greater than the standard clearance, replace the underdrive planetary gear sun gear.



8. INSPECT REAR PLANETARY SUN GEAR ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the bushing of the rear planetary sun gear sub-assembly.

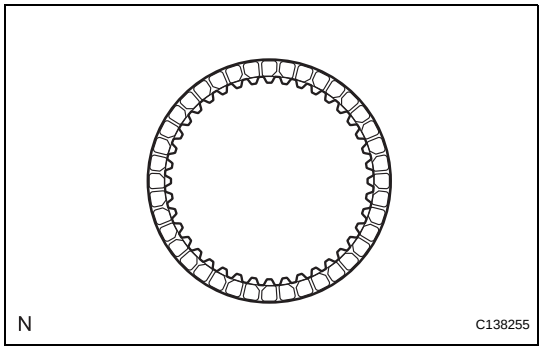
Standard inside diameter:

25.580 to 25.601 mm (1.0071 to 1.0079 in.)

Maximum inside diameter:

25.601 mm (1.0079 in.)

If the inside diameter is greater than the maximum, replace the rear planetary sun gear sub-assembly.

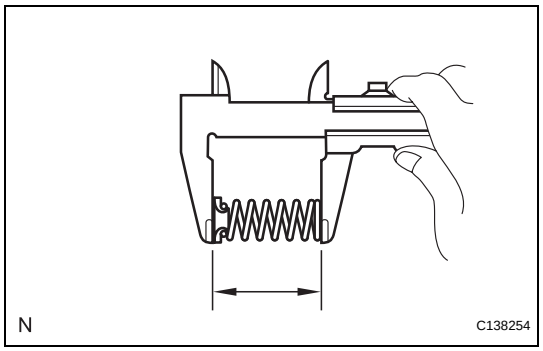


9. INSPECT NO. 1 BRAKE DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:

If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.



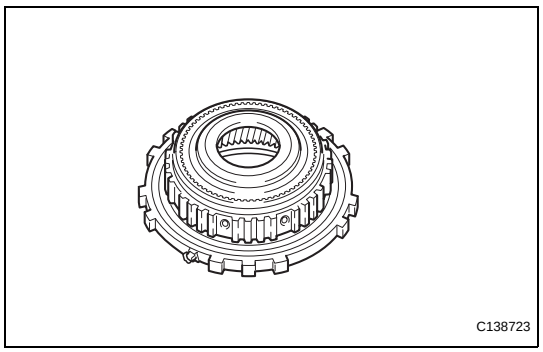
10. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the 3 2nd brake piston return springs including the spring seats.

Standard free length:

23.85 mm (0.9390 in.)

If the free length is shorter than the standard free length, replace the 2nd brake piston return spring.

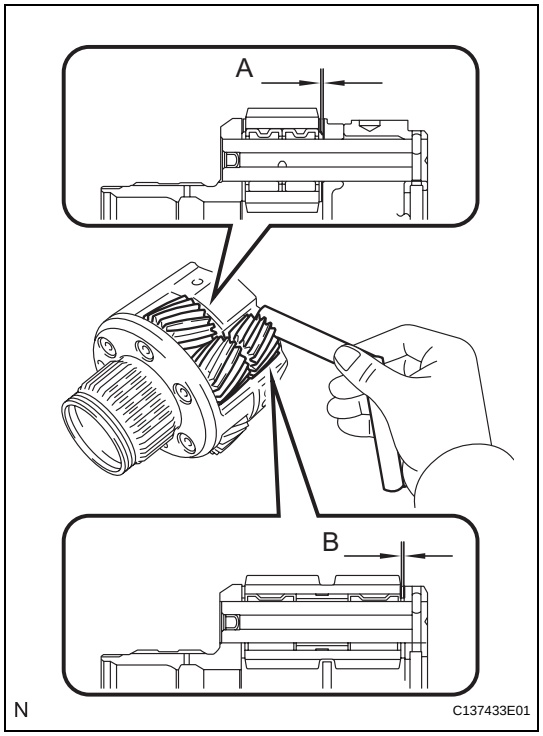


11. INSPECT ONE-WAY CLUTCH ASSEMBLY

(a) Temporarily install the one-way clutch assembly to the planetary ring gear.

(b) Rotate the one-way clutch assembly to check the rotating direction for lock or free operation.

If the one-way clutch assembly does not operate normally, replace it.

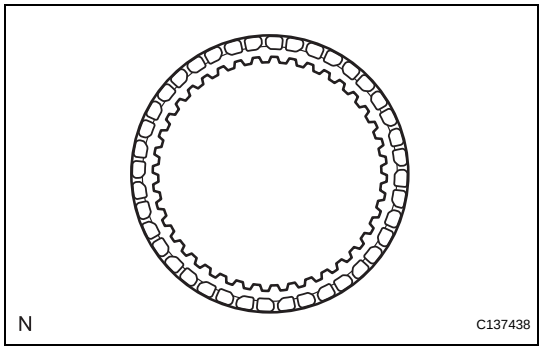


12. INSPECT PLANETARY GEAR ASSEMBLY

(a) Using a feeler gauge, measure the clearance between the planetary gear case and each pinion gear at points A and B.

-	Standard Clearance
A point	0.23 to 0.59 mm (0.0091 to 0.0232 in.)
B point	0.16 to 0.66 mm (0.0063 to 0.02598 in.)

If the clearance is greater than the standard clearance, replace the planetary gear assembly.

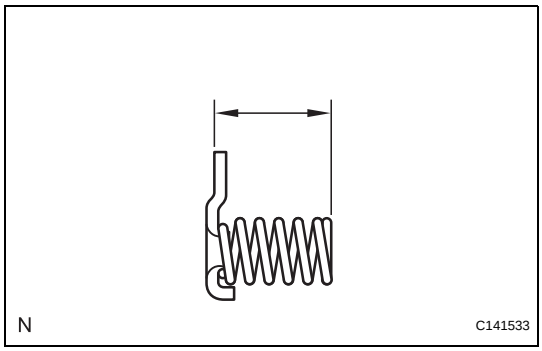


13. INSPECT NO. 2 BRAKE DISC

(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:

If the linings of the discs are peeled off or discolored, or even if a part of the groove is damaged, replace all discs.



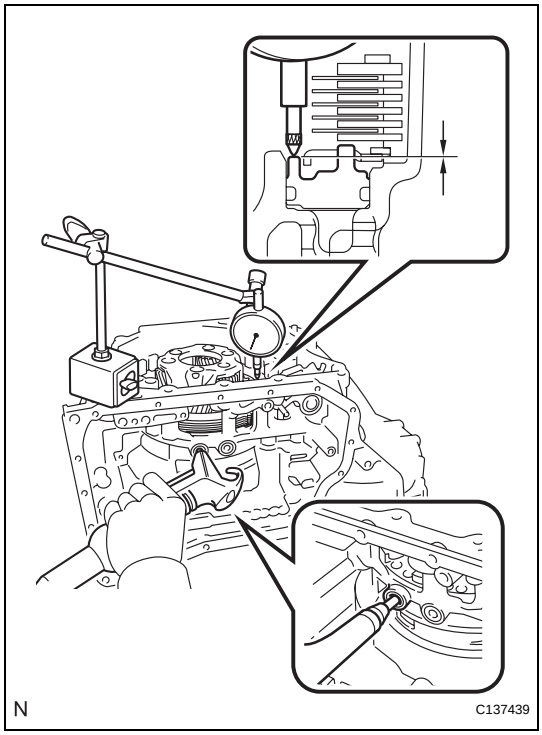
14. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using vernier calipers, measure the free length of the 1st and reverse brake return spring together with the spring seat.

Standard free length:

15.79 mm (0.6217 in.)

If the free length is shorter than the standard free length, replace the 1st and reverse brake return spring.



15. INSPECT CLEARANCE OF NO. 2 BRAKE

(a) Using a dial indicator, measure the clearance of the No. 2 brake while applying compressed air (200 kPa, 2.0 kgf/cm^2, 29 psi).

Standard clearance:

0.884 to 1.196 mm (0.0348 to 0.0471 in.)

HINT:

Measure the clearance at 3 points where the brake piston diameter is approximately 140 mm (5.51 in.) and calculate the average.

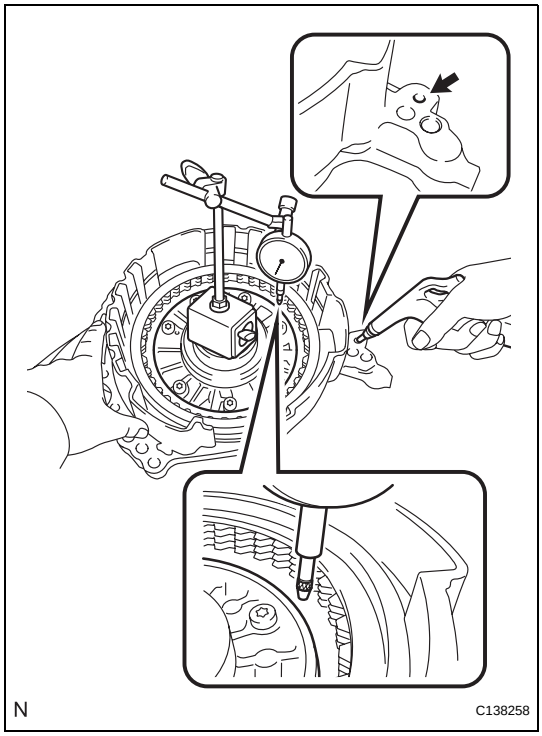
If the clearance is not as specified, select an appropriate No. 2 brake flange so that the clearance will be within the specified range.

HINT:

There are 5 different thicknesses of flanges available.

No. 2 brake flange thickness: mm (in.)

Thickness	Thickness
4.0 (0.157)	4.3 (0.169)
4.1 (0.161)	4.4 (0.173)
4.2 (0.165)	-



16. INSPECT CLEARANCE OF NO. 1 BRAKE

(a) Using a dial indicator, measure the clearance of the No. 1 brake while applying compressed air (200 kPa, 2.0 kgf/cm^2, 29 psi).

Standard clearance:

0.807 to 0.974 mm (0.0318 to 0.0383 in.)

HINT:

Measure the clearance at 3 points where the brake piston diameter is approximately 140 mm (5.51 in.) and calculate the average.

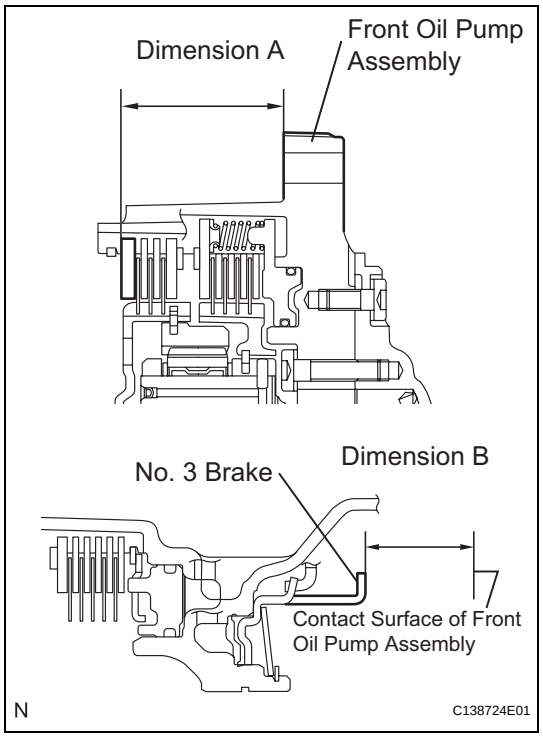
If the clearance is not as specified, select an appropriate No. 1 brake flange so that the clearance will be within the specified range.

HINT:

There are 6 different thicknesses of flanges available.

No. 1 brake flange thickness: mm (in.)

Thickness	Thickness
3.0 (0.118)	3.3 (0.130)
3.1 (0.122)	3.4 (0.134)
3.2 (0.126)	3.5 (0.138)



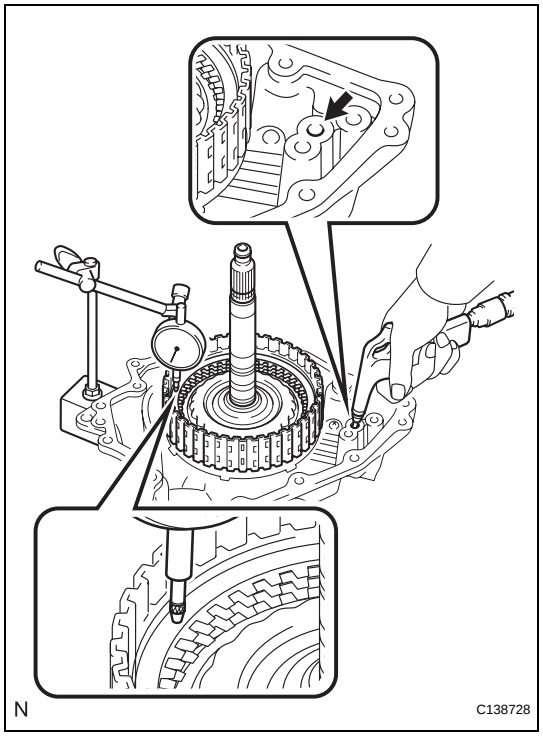
17. INSPECT CLEARANCE OF NO. 3 BRAKE

(a) Using vernier calipers and a straight edge, measure the distance shown in the illustration (Dimension A) while a load of 500 N (51 kgf, 112 lbf) is being applied to the flange.
HINT:
Measure dimension A at 3 points where the flange diameter is approximately 166 mm (6.54 in.) and calculate the average.

(b) Using vernier calipers and a straight edge, measure the distance shown in the illustration. (Dimension B).
HINT:
Measure dimension B at 3 points where the No. 3 brake diameter is approximately 166 mm (6.54 in.) and calculate the average.

(c) Calculate the clearance value using the following formula:
clearance = Dimension B - Dimension A
Standard clearance:
0.599 to 0.761 mm (0.0236 to 0.0300 in.)
If the clearance is not as specified, select an appropriate brake flange so that the clearance will be within the specified range.
HINT:
There are 6 different thicknesses of flanges available.
No. 3 brake flange thickness: mm (in.)

Thickness	Thickness
3.80 (0.150)	4.10 (0.161)
3.90 (0.154)	4.20 (0.165)
4.00 (0.157)	4.30 (0.169)



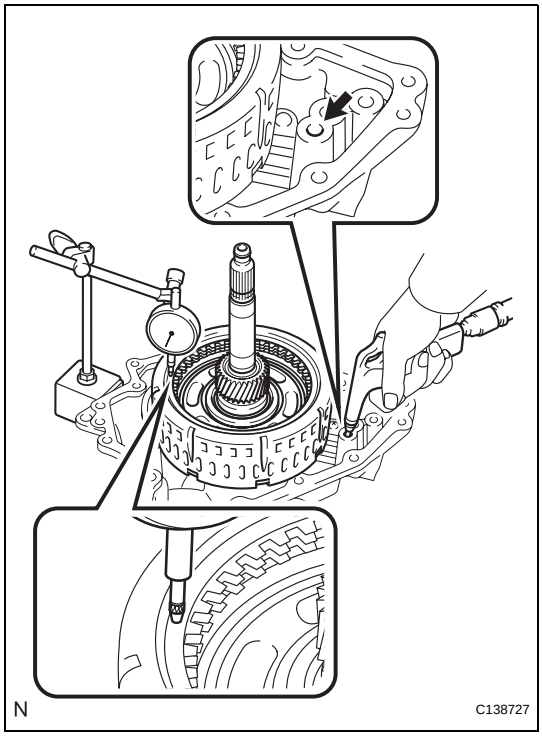
18. INSPECT CLEARANCE OF NO. 1 CLUTCH DISC

(a) Install the direct multiple disc clutch assembly onto the transaxle rear cover.

(b) Using a dial indicator, measure the No. 1 clutch pack clearance while applying and releasing compressed air (200 kPa, 2.0 kgf/cm^2, 29 psi).
HINT:
Measure the clearance at 3 points where the flange diameter is approximately 152 mm (5.98 in.) and calculate the average.
Pack clearance:
0.806 to 0.974 mm (0.0317 to 0.0383 in.)
If the pack clearance is not as specified, inspect the discs, plates and flange.
HINT:
There are 6 different thicknesses of flanges available.
No. 1 clutch flange thickness: mm (in.)

Thickness	Thickness
3.0 (0.118)	3.3 (0.130)
3.1 (0.122)	3.4 (0.134)

Thickness	Thickness
3.2 (0.126)	3.5 (0.138)



19. INSPECT CLEARANCE OF NO. 2 CLUTCH DISC

(a) Install the direct multiple disc clutch assembly onto the transaxle rear cover.

(b) Using a dial indicator, measure the No. 2 clutch pack clearance while applying and releasing compressed air (200 kPa, 2.0 kgf/cm^2, 29 psi).

HINT:

Measure the clearance at 3 points where the diameter of the No. 2 direct multiple clutch piston is approximately 152 mm (5.98 in.) and calculate the average.

Pack clearance:

0.544 to 0.744 mm (0.0214 to 0.0293 in.)

If the pack clearance is not as specified, inspect the discs, plates and flange.

HINT:

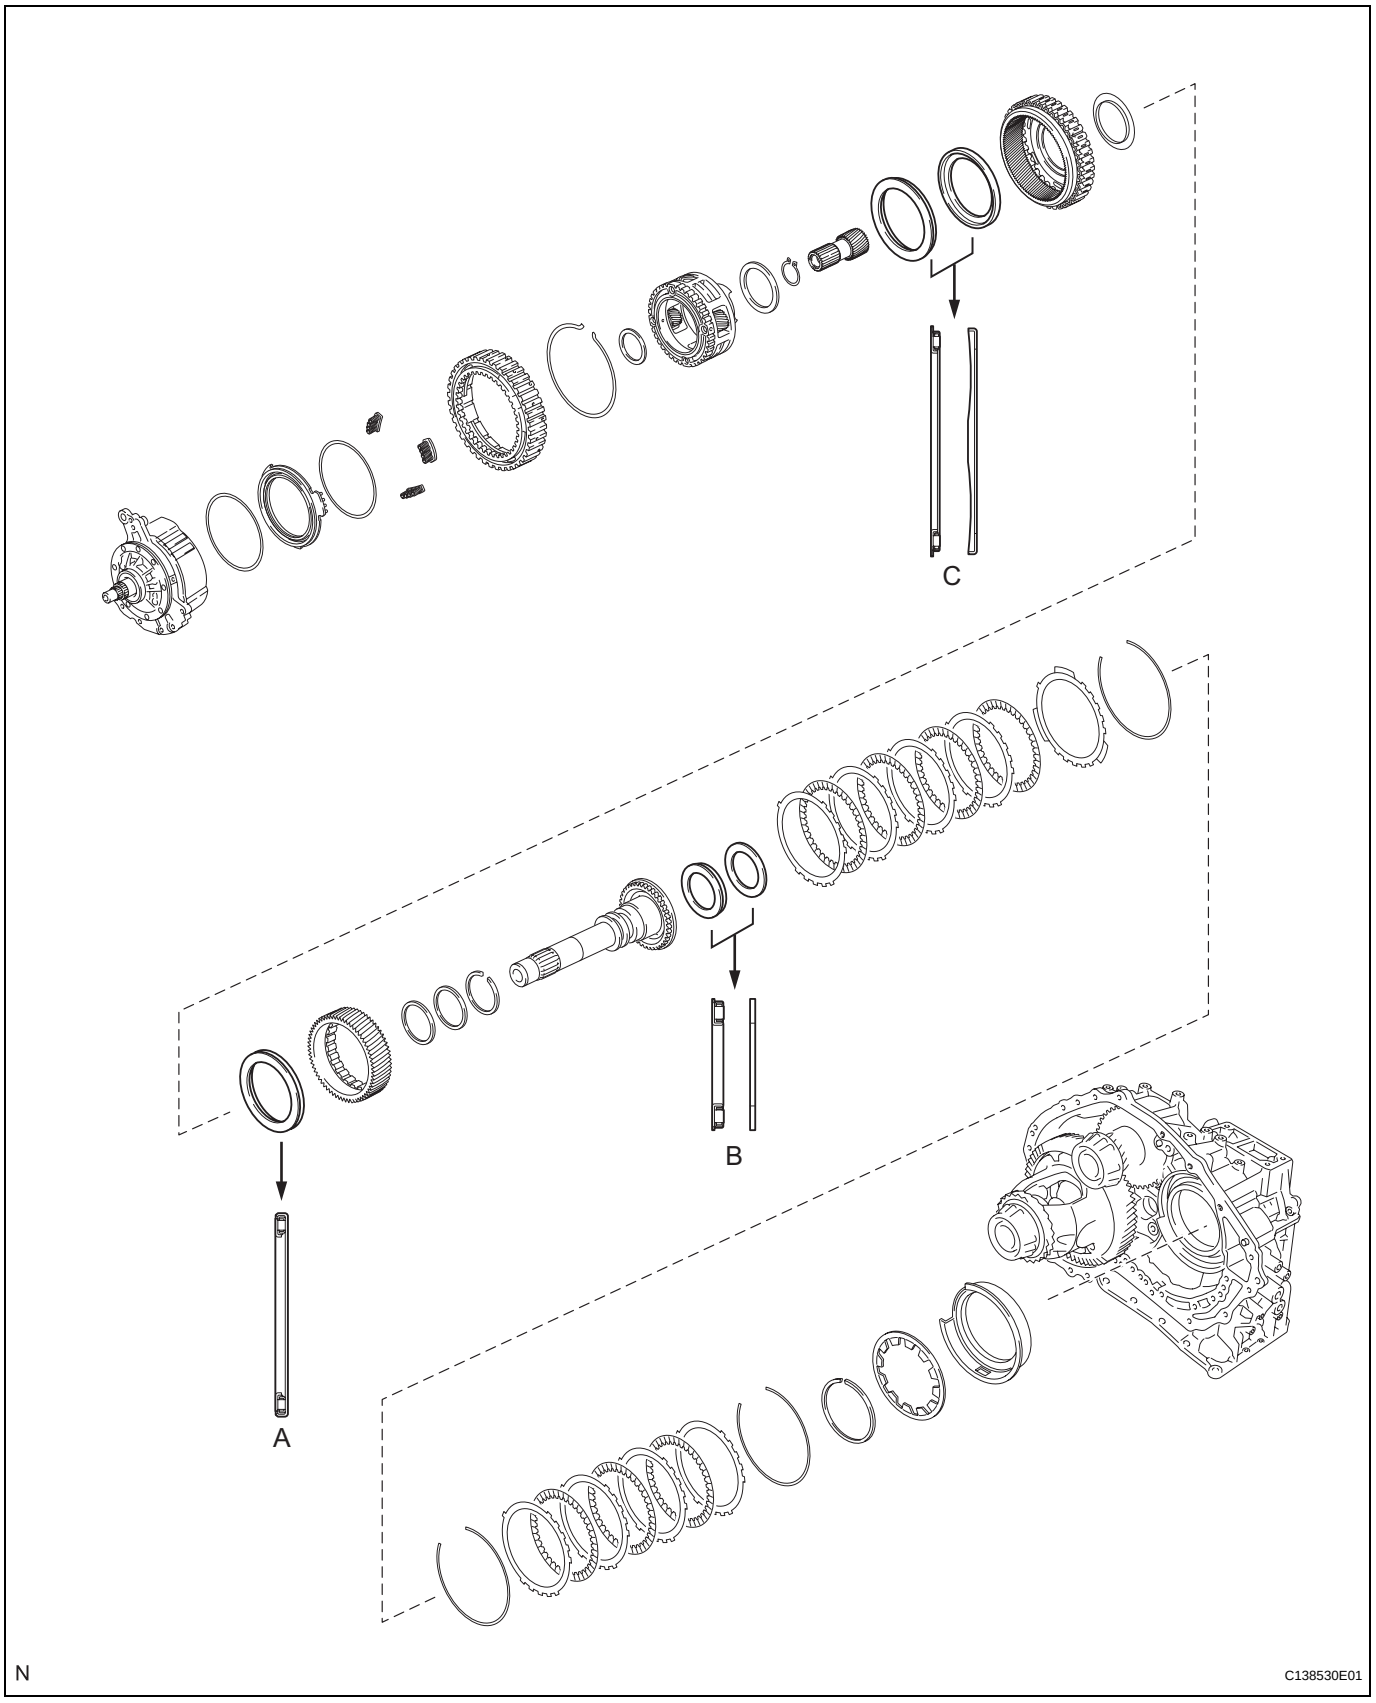
There are 6 different thicknesses of flanges available.

No. 2 clutch flange thickness: mm (in.)

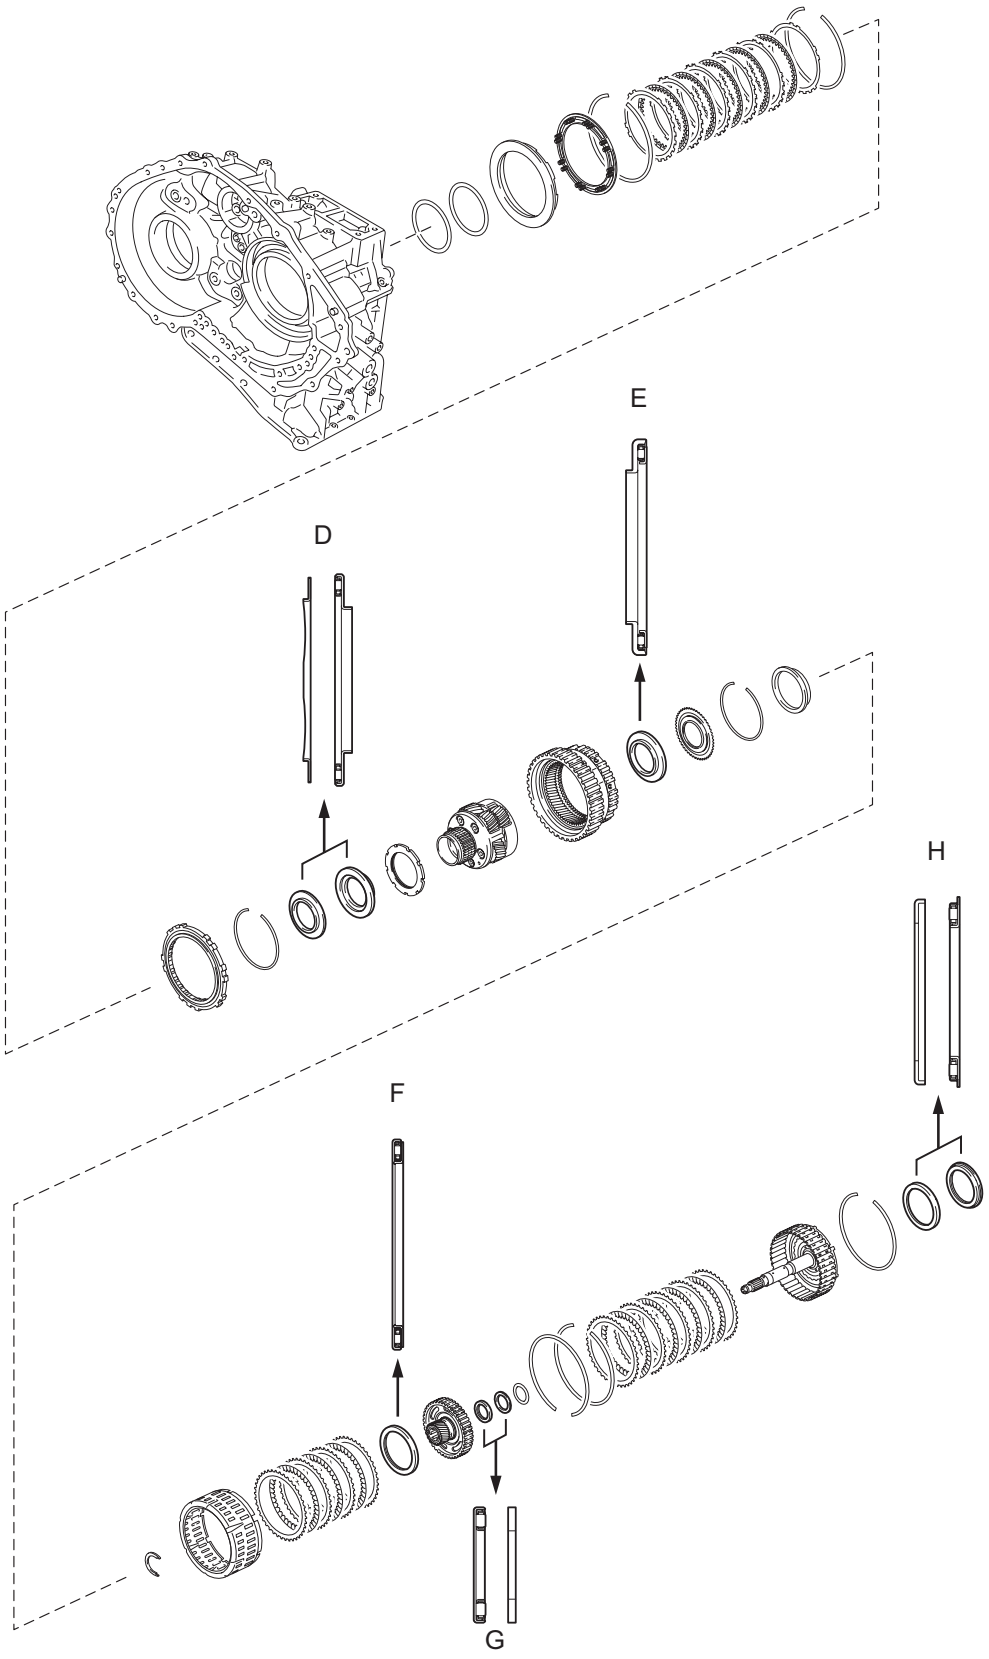
Thickness	Thickness
3.0 (0.118)	3.3 (0.130)
3.1 (0.122)	3.4 (0.134)
3.2 (0.126)	3.5 (0.138)

REASSEMBLY

1. BEARING POSITION



AX



Mark	Front Race Diameter Inside / Outside mm (in.)	Thrust Bearing Diameter Inside / Outside mm (in.)	Rear Race Diameter Inside / Outside mm (in.)
A	-	57.7 (2.271) / 75.2 (2.961)	-
B	-	29.1 (1.146) / 48.6 (1.913)	30.7 (1.209) / 48.3 (1.902)
C	65.9 (2.594) / 80.3 (3.161)	62.6 (2.465) / 82.4 (3.244)	-
D	59.4 (2.339) / 77 (3.032)	53.1 (2.091) / 79 (3.110)	-

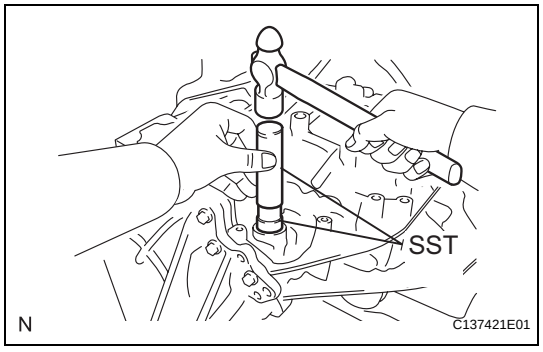
F	-	61.2 (2.409) / 79 (3.110)	-
G	-	28 (1.102) / 47.1 (1.854)	26.1 (1.028) / 44 (1.732)
H	52.2 (2.055) / 70.4 (2.772)	48.9 (1.925) / 72.0 (2.835)	-



2. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Coat the lip of a new manual valve lever shaft oil seal with MP grease.

(b) Using SST and a hammer, install the manual valve lever shaft oil seal to the transaxle case.

SST 09950-60010 (09951-00230), 09950-70010 (09951-07100)

Oil seal installation depth:
-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

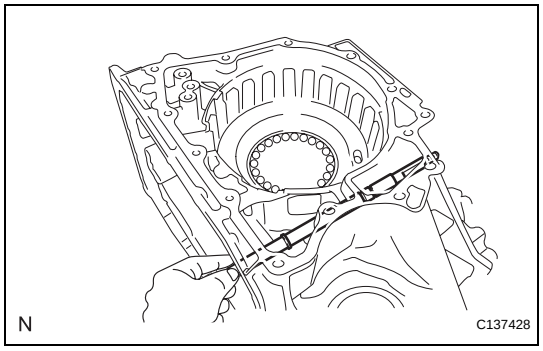
3. INSTALL MANUAL VALVE LEVER SHAFT

(a) Install a new spacer to the parking lock lever sub-assembly.

(b) Install the parking lock lever sub-assembly to the manual valve lever shaft.

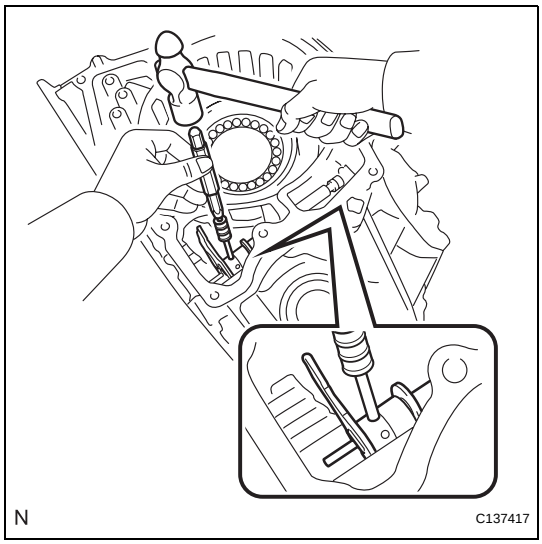
(c) Install a new spacer to the manual valve lever sub-assembly.

(d) Install the manual valve lever sub-assembly to the manual valve lever shaft.

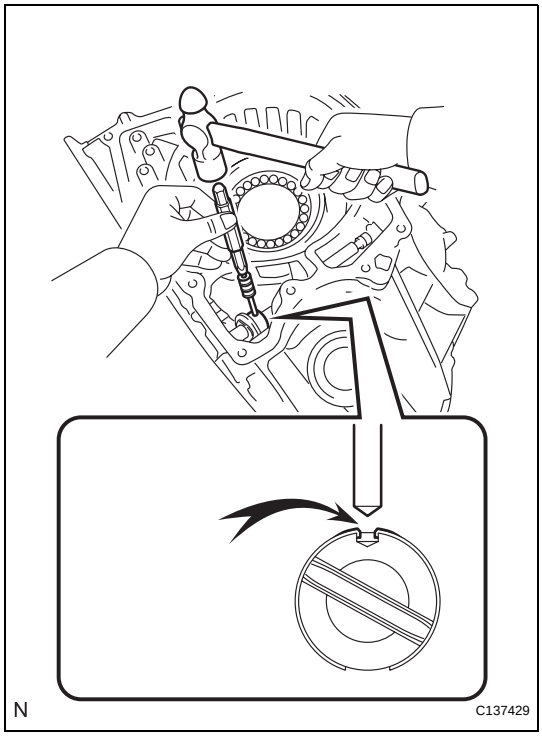


(e) Install the manual valve lever shaft to the transaxle case.

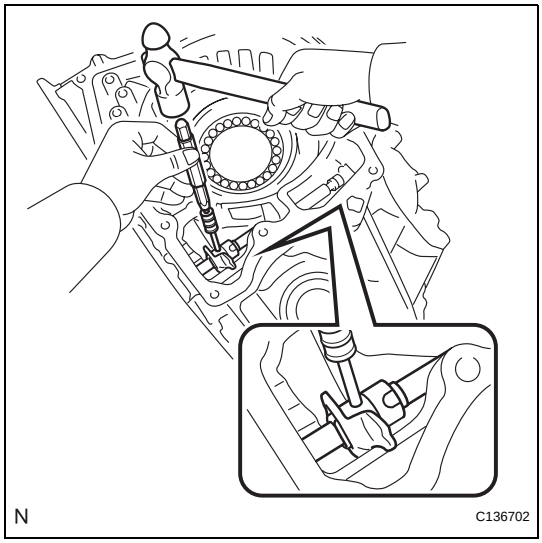
NOTICE:
Do not damage the manual valve lever shaft oil seal while installing the manual valve lever shaft to the transaxle case.



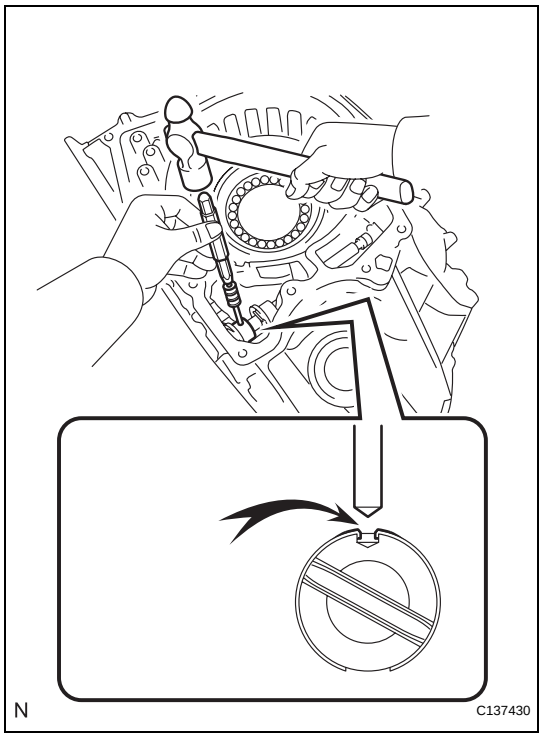
(f) Using a pin punch (3 mm) and hammer, install a new slotted spring pin to the parking lock lever sub-assembly.



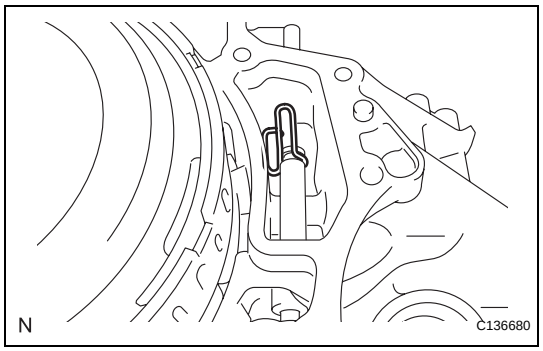
(g) Turn the spacer and the lever shaft to align the smaller hole of the spacer with the staking position mark on the lever shaft.
(h) Using a pin punch, stake the spacer through the small hole.
(i) Check that the spacer does not turn.



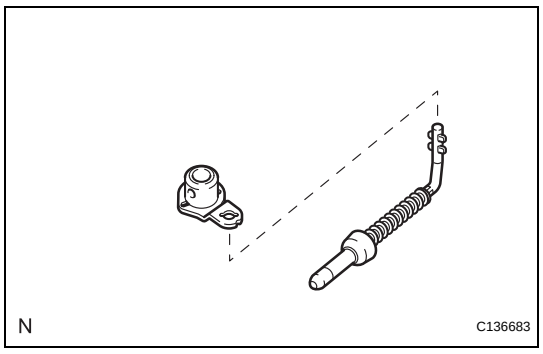
(j) Using a pin punch (3 mm) and hammer, install a new slotted spring pin to the manual valve lever sub-assembly.



(k) Turn the spacer and the lever shaft to align the smaller hole of the spacer with the staking position mark on the lever shaft.
(l) Using a pin punch, stake the spacer through the small hole.
(m) Check that the spacer does not turn.

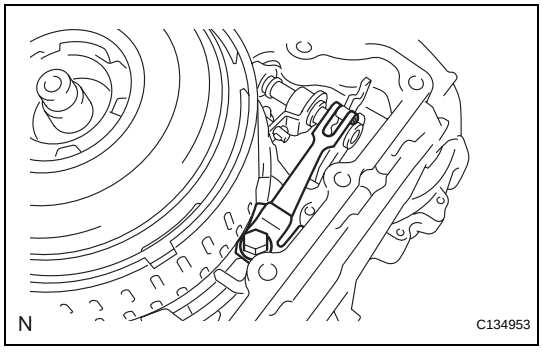


(n) Using needle-nose pliers, install the manual valve shaft retainer spring to the transaxle case.



4. INSTALL PARKING LOCK ROD SUB-ASSEMBLY

(a) Align the dial with the notches on the parking lock lever sub-assembly and install the parking lock rod sub-assembly.



5. INSTALL MANUAL DETENT SPRING SUB-ASSEMBLY

(a) Install the manual detent spring sub-assembly and cover to the transaxle case with the bolt.
Torque: 23 N*m (234 kgf*cm, 17 ft.*lbf)
NOTICE:
Make sure to install the manual detent spring first and then the cover.

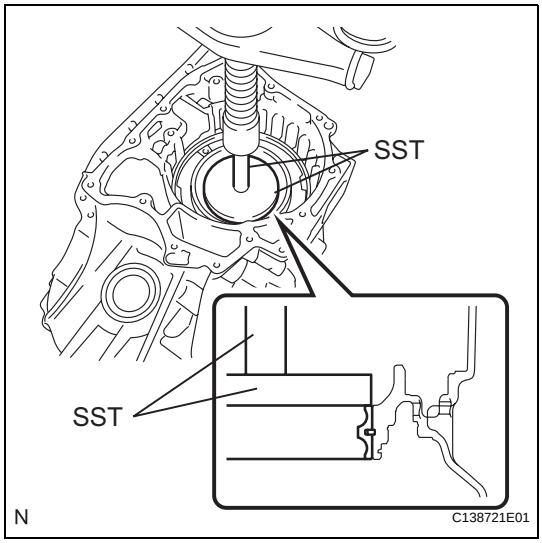
6. INSTALL COUNTER DRIVE GEAR BEARING

NOTICE:

Perform this procedure only when the counter drive gear bearing or transaxle case is replaced.

(a) Using SST and a press, install a new counter drive gear bearing and snap ring to the transaxle case.

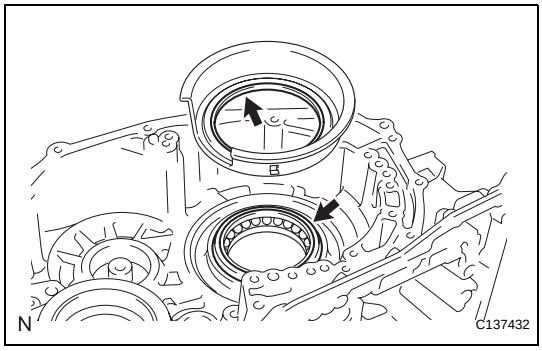
SST 09950-60020 (09951-01030), 09950-70010 (09951-07100)



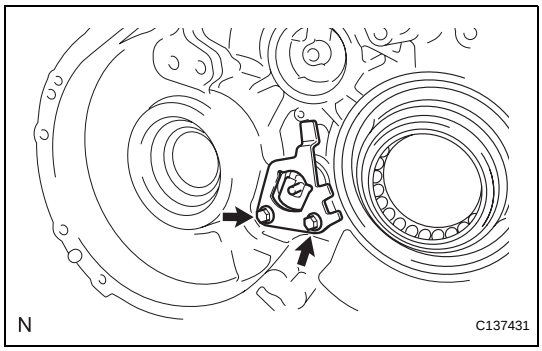
7. INSTALL NO. 3 BRAKE PISTON

(a) Coat the contact surface of the transaxle case with ATF.

(b) Coat the lip seal of the No. 3 brake piston with ATF.



(c) Temporarily install the pawl stopper plate to the transaxle case with the 2 bolts.

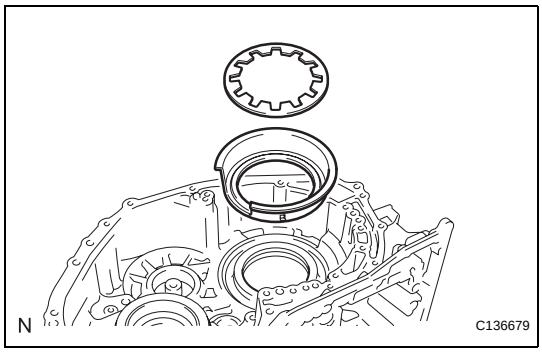


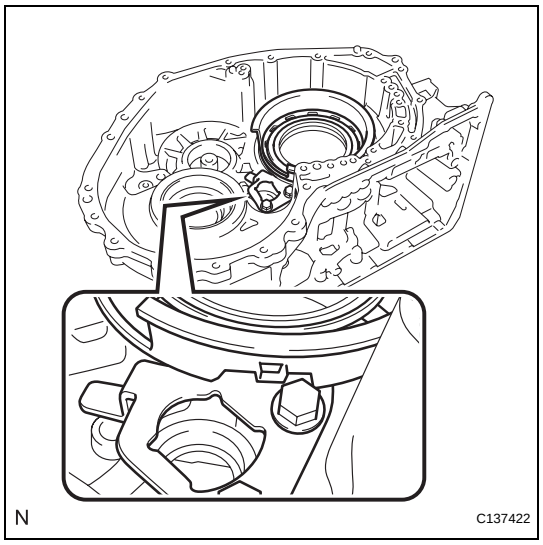
(d) Press the return spring installation surface to install the No. 3 brake piston to the transaxle case.

NOTICE:

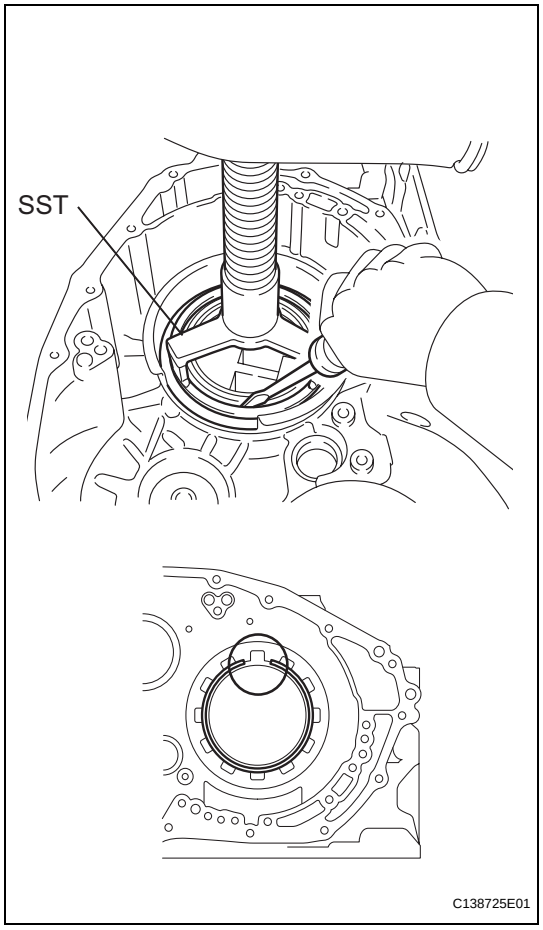
- **Make sure that the lip of the No. 3 brake piston is not twisted and does not get caught in the transaxle case.**
- **After installing, make sure that the protrusions on the No. 3 brake piston and the grooves on the pawl stopper plate are aligned.**

(e) Install the return spring to the transaxle case.



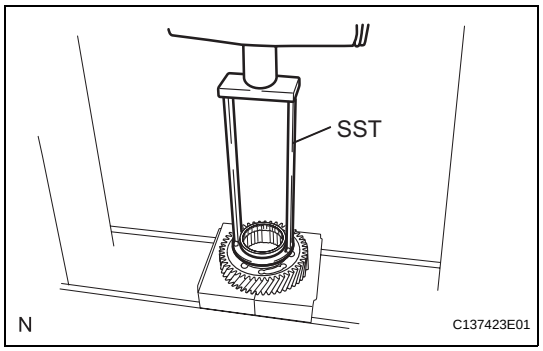


(f) Remove the 2 bolts and pawl stopper plate from the transaxle case.



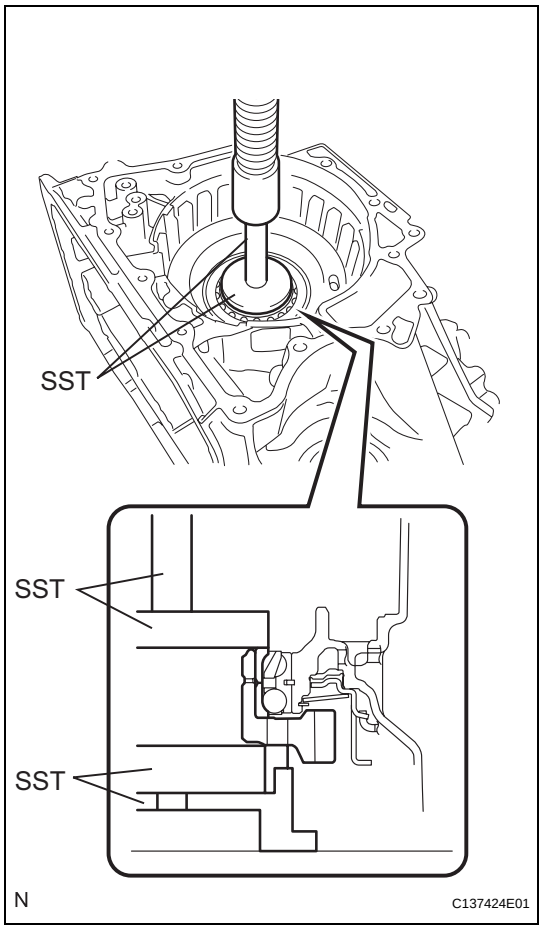
(g) Place SST on the brake piston return spring and compress the brake piston return spring with a press.
SST 09387-00070
NOTICE:
Stop the press when the brake piston return spring is flush with the snap ring groove. This prevents the brake piston return spring from being deformed.

(h) Using a screwdriver, install the snap ring to the transaxle case as shown in the illustration.
NOTICE:
- **Confirm that the snap ring is secured in the groove of the transaxle case.**
- **Be sure to align the opening ends of the snap ring with the protrusions on the brake piston return spring as shown in the illustration.**

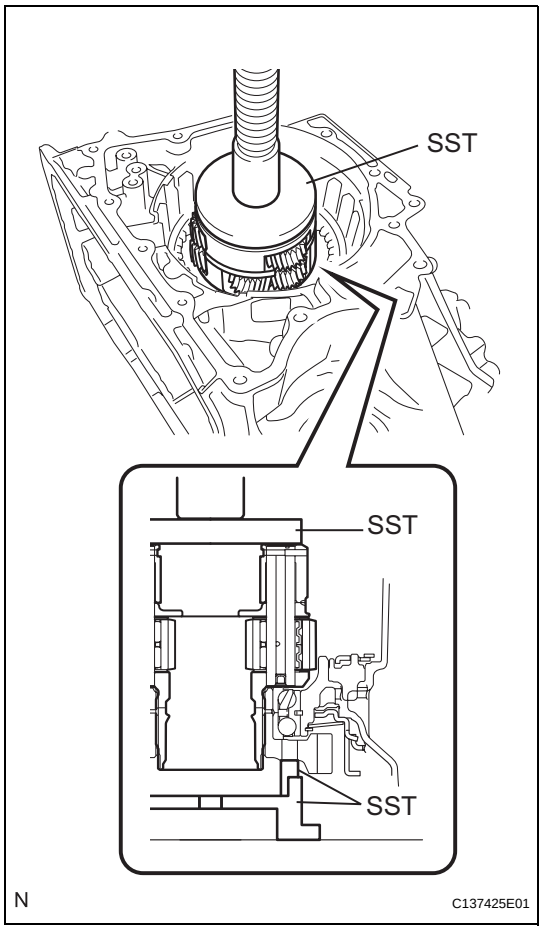


8. INSTALL COUNTER DRIVE GEAR

(a) Using SST and a press, install the bearing inner race (front side) to the counter drive gear.
SST 09387-00020

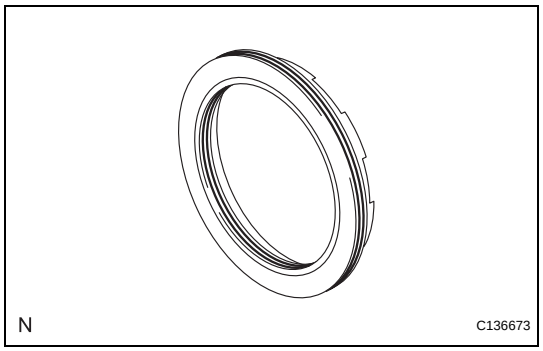


(b) Install the bearing inner race (rear side) and counter drive gear to the transaxle case.
SST 09223-15030, 09527-17011, 09950-60020 (09951-00810), 09950-70010 (09951-07100)
NOTICE:
There should not be any clearance between the bearing inner race (front side) and counter drive gear.



9. INSTALL FRONT PLANETARY GEAR ASSEMBLY

(a) Using SST and a press, press in the planetary gear assembly to the transaxle case.
SST 09223-15030, 09527-17011, 09951-01100

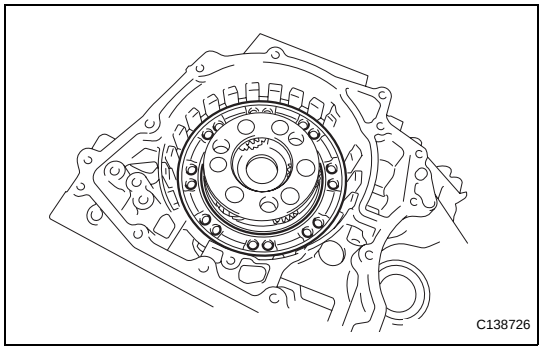


10. INSTALL NO. 2 BRAKE PISTON

(a) Coat 2 new O-rings with ATF and install them to the No. 2 brake piston.

NOTICE:

Ensure that the 2 O-rings are not twisted.



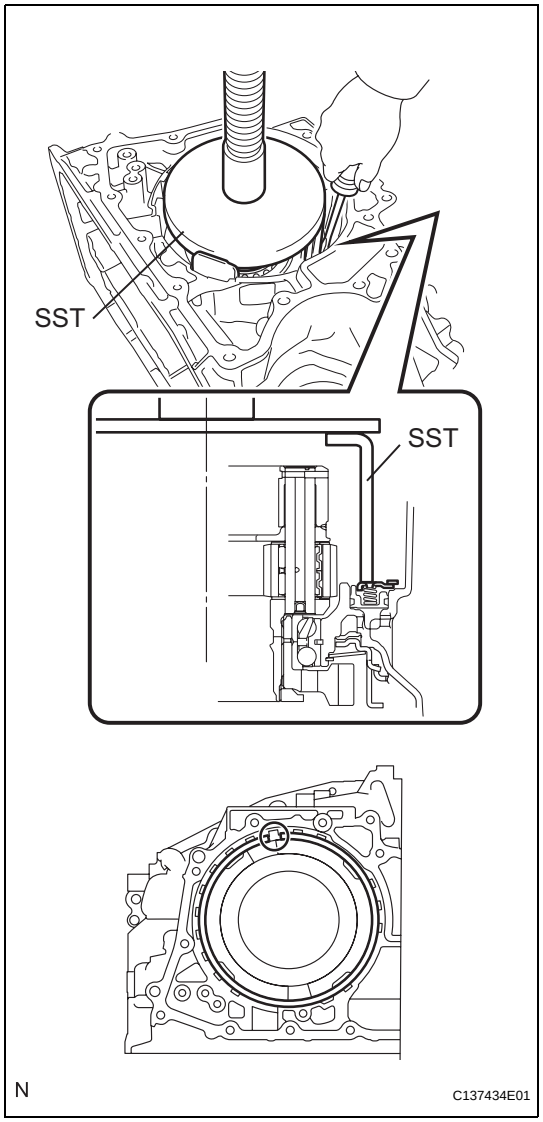
(b) Install the No. 2 brake piston to the transaxle case.

NOTICE:

Be careful not to damage the O-rings.

11. INSTALL 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Install the 1st and reverse brake return spring to the transaxle case.



(b) Place SST on the 1st and reverse brake return spring and compress the 1st and reverse brake return spring with a press.

SST 09387-00060

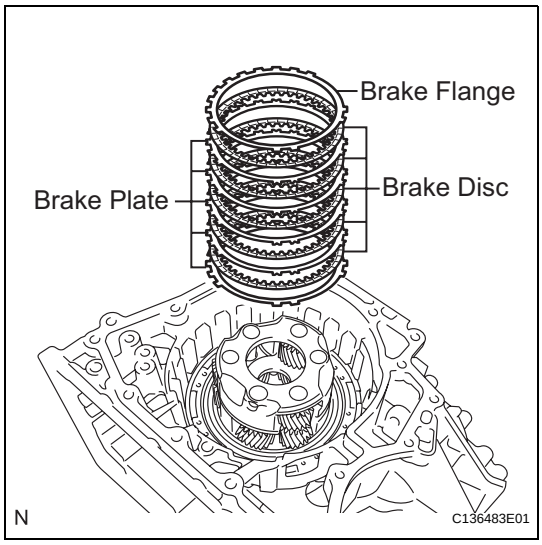
NOTICE:

Stop the press when the 1st and reverse brake return spring is flush with the snap ring groove. This prevents the 1st and reverse brake return spring from being deformed.

(c) Using a screwdriver, install the snap ring to the transaxle case as shown in the illustration.

NOTICE:

- **Confirm that the snap ring is secured in the groove of the transaxle case.**
- **Be sure to align the opening ends of the snap ring with the protrusions on the transaxle case as shown in the illustration.**

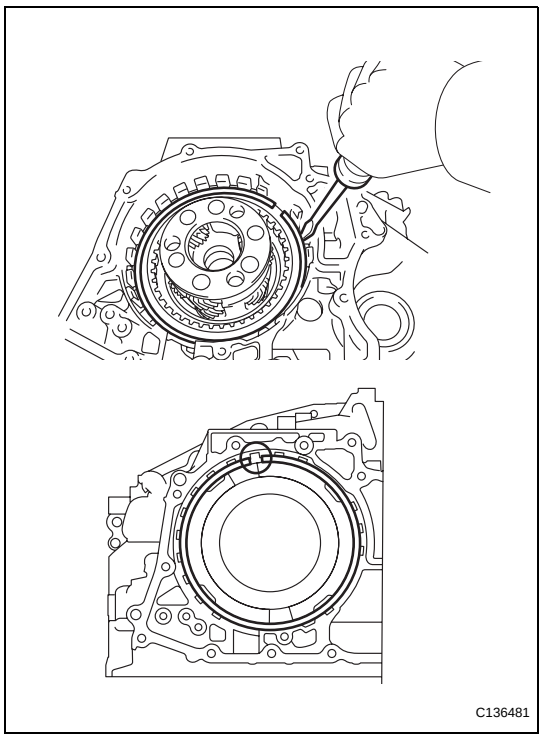


12. INSTALL NO. 2 BRAKE DISC

(a) Install the 5 brake discs, 5 brake plates, and brake flange to the transaxle case.

NOTICE:

Make sure that the discs, plates, and flange are installed in the correct order.

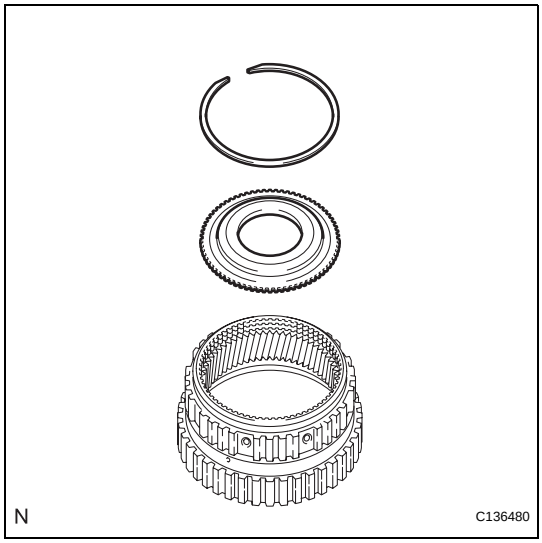


(b) Using a screwdriver, install the snap ring to the transaxle case.

NOTICE:

- **Confirm that the snap ring is secured in the groove of the transaxle case.**
- **Be sure to align the opening ends of the snap ring with the protrusions on the transaxle case as shown in the illustration.**

13. INSPECT CLEARANCE OF NO. 2 BRAKE (See page AX-278)



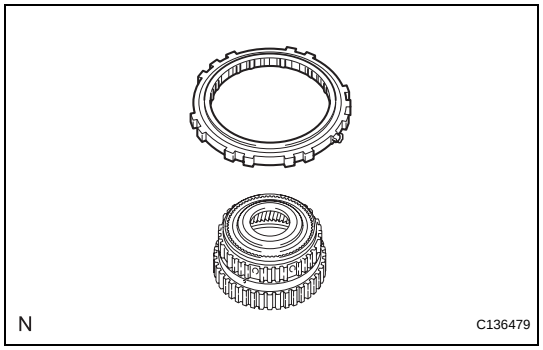
14. INSTALL PLANETARY RING GEAR FLANGE

(a) Install the planetary ring gear flange to the planetary ring gear.

(b) Using a screwdriver, install the snap ring to the planetary ring gear.

NOTICE:

Confirm that the snap ring is secured in the groove of the planetary ring gear.

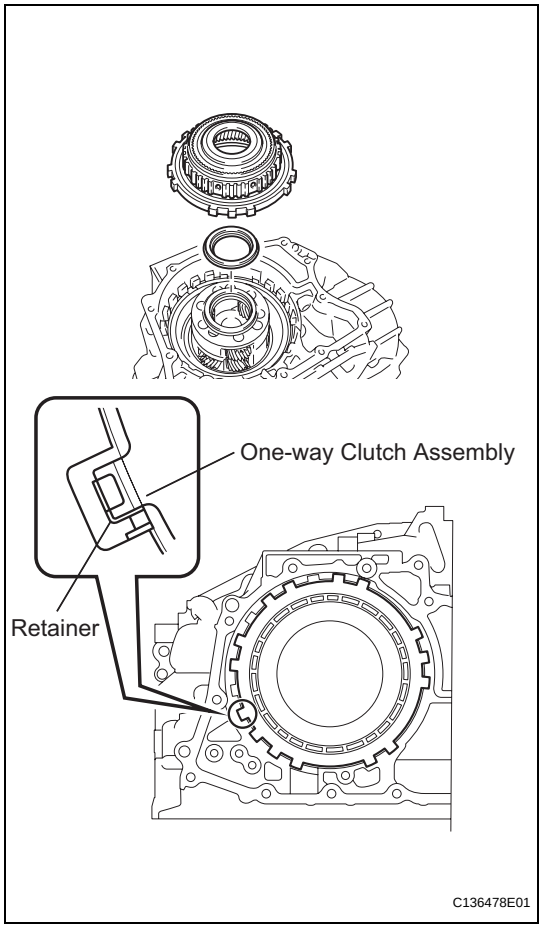


15. INSTALL PLANETARY RING GEAR

(a) Install the planetary ring gear to the one-way clutch assembly.

NOTICE:

Make sure that the one-way clutch assembly is positioned in the correct direction as shown in the illustration.



16. INSTALL ONE-WAY CLUTCH ASSEMBLY

(a) Coat the thrust needle roller bearing with ATF, and install it onto the planetary gear assembly.

Bearing diameter: mm (in.)

-	Inside	Outside
Bearing	56.1 (2.209)	80.9 (3.185)

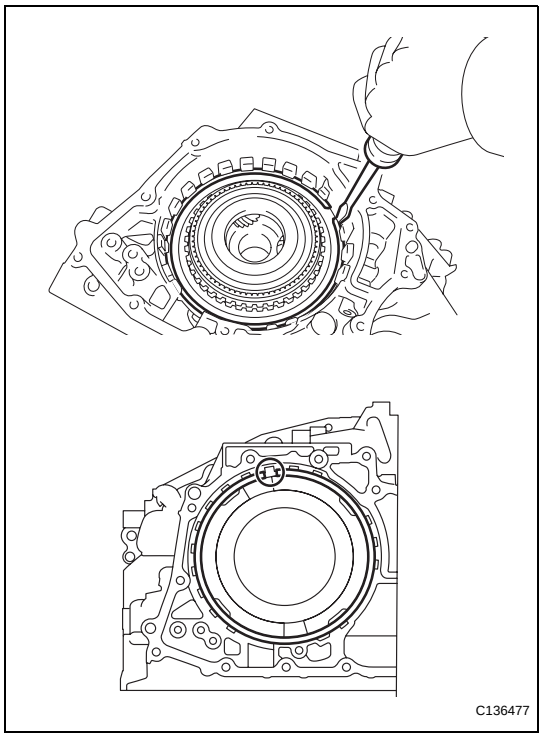
NOTICE:

Install the thrust needle roller bearing properly so that the temper colored side of the race will be visible.

(b) Install the one-way clutch assembly to the transaxle case.

NOTICE:

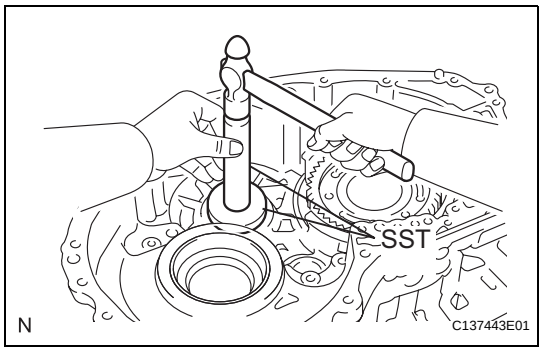
Make sure that there is no clearance between the retainer and the claw on the one-way clutch assembly. If there is any clearance, the spring of the retainer will be deformed.



(c) Using a screwdriver, install the snap ring to the transaxle case.

NOTICE:

- **Confirm that the snap ring is secured in the groove of the transaxle case.**
- **Be sure to align the opening ends of the snap ring with the protrusions on the transaxle case.**



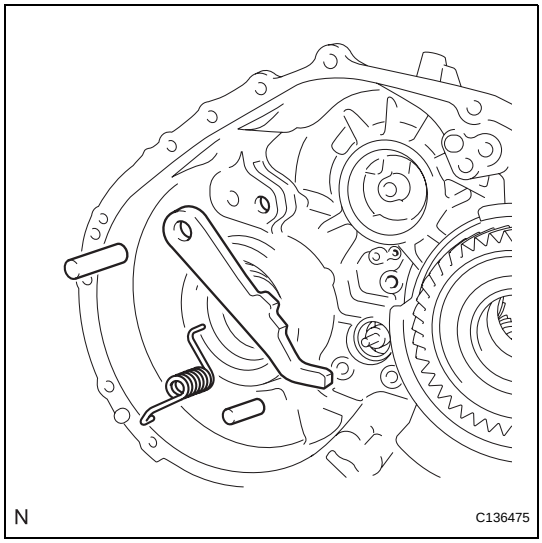
17. INSTALL COUNTER DRIVEN GEAR REAR TAPERED ROLLER BEARING OUTER RACE

(a) Using SST and a hammer, install the counter driven gear rear tapered roller bearing outer race to the transaxle case.

SST 09950-60010 (09951-00650), 09950-70010 (09951-07100)

NOTICE:

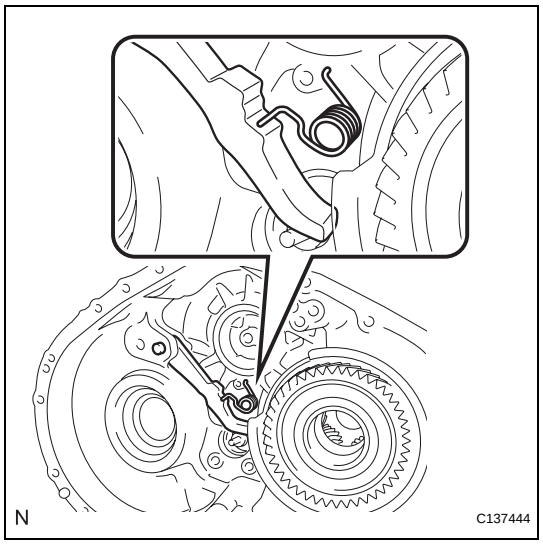
Be sure to install the counter driven gear rear tapered roller bearing outer race so that there is no clearance between the bearing outer race and the transaxle case. If there is any clearance, the turning torque of the counter drive gear cannot be measured correctly.



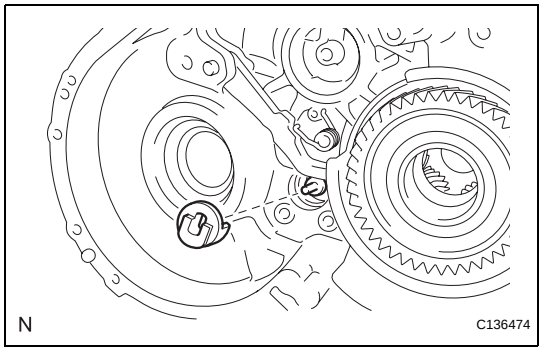
18. INSTALL PARKING LOCK PAWL

(a) Install the parking lock pawl to the transaxle case with the parking lock pawl shaft.

(b) Install the parking lock pawl pin to the transaxle case.

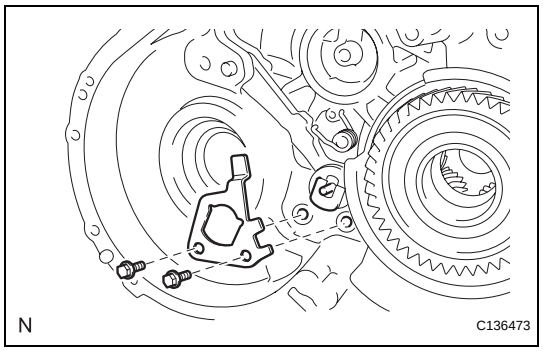


(c) Install the torsion spring to the parking lock pawl.
NOTICE:
Make sure that one end of the spring is fixed in the hole of the transaxle case and the other end is positioned on the parking lock pawl as shown in the illustration.



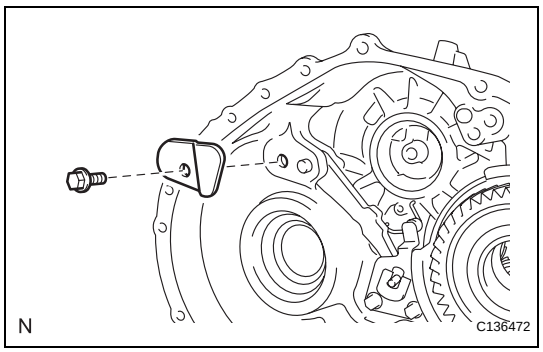
19. INSTALL PARKING LOCK SLEEVE

(a) Install the parking lock sleeve to the transaxle case.



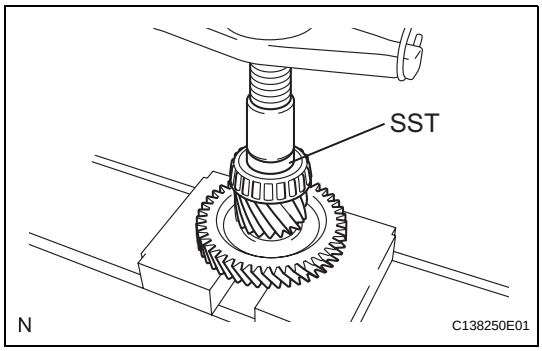
20. INSTALL PAWL STOPPER PLATE

(a) Install the pawl stopper plate to the transaxle case with the 2 bolts.
Torque: 23 N*m (234 kgf*cm, 17 ft.*lbf)



21. INSTALL PAWL SHAFT CLAMP

(a) Install the pawl shaft clamp to the transaxle case with the bolt.
Torque: 23 N*m (234 kgf*cm, 17 ft.*lbf)



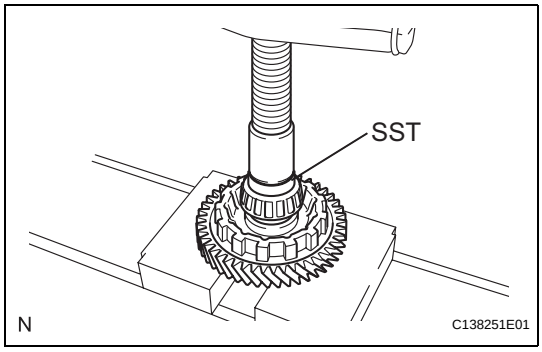
22. INSTALL COUNTER DRIVEN GEAR FRONT TAPERED ROLLER BEARING

(a) Using SST and a press, install a new the counter driven gear front tapered roller bearing to the counter driven gear sub-assembly.

SST 09950-60010 (09951-00530)

NOTICE:

Be sure to install the counter driven gear front tapered roller bearing so that there is no clearance between the bearing and the counter driven gear. If there is any clearance, the turning torque of the counter drive gear cannot be measured correctly.



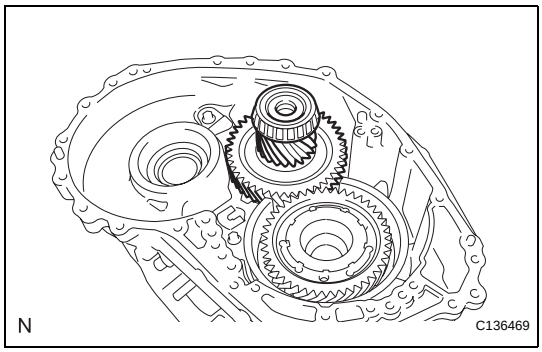
23. INSTALL COUNTER DRIVEN GEAR REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install a new the counter driven gear rear tapered roller bearing to the counter driven gear sub-assembly.

SST 09950-60010 (09951-00420)

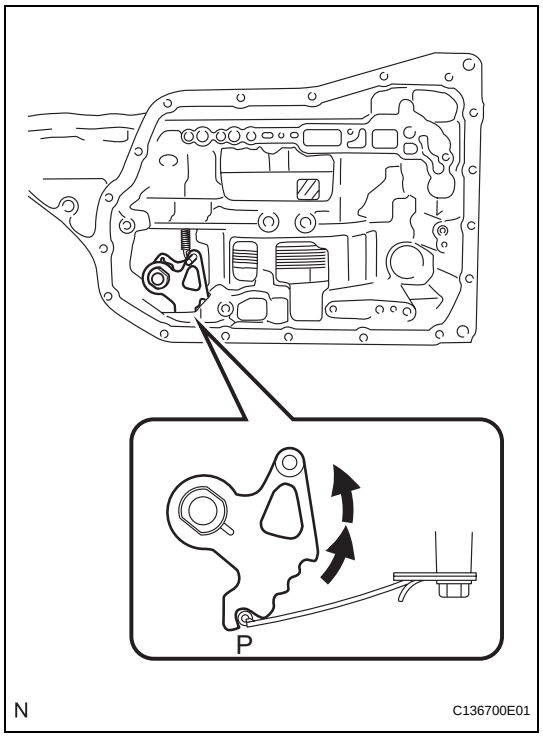
NOTICE:

Be sure to install the counter driven gear rear tapered roller bearing and the differential drive pinion so that there is no clearance between each of them and the counter driven gear.



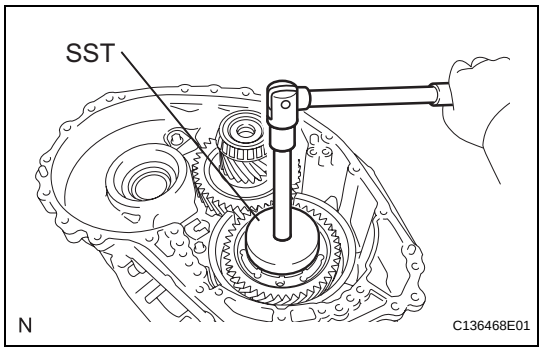
24. INSTALL COUNTER DRIVEN GEAR

(a) Install the counter driven gear sub-assembly to the transaxle case.

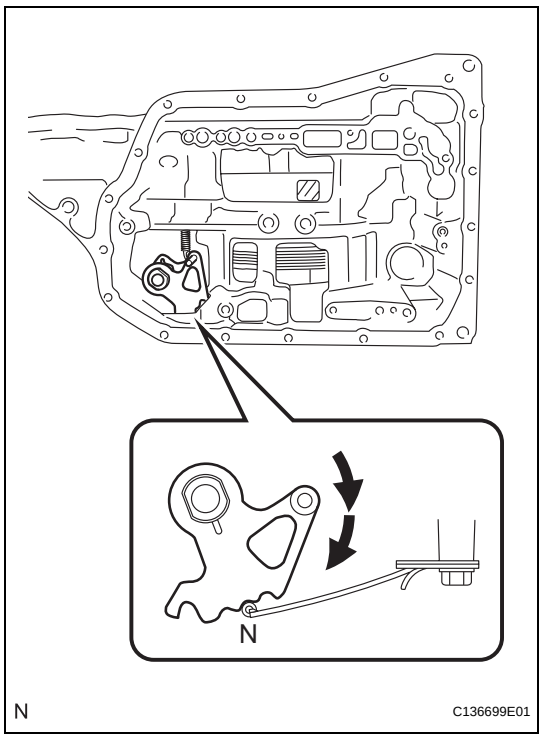


25. INSTALL COUNTER DRIVE GEAR NUT

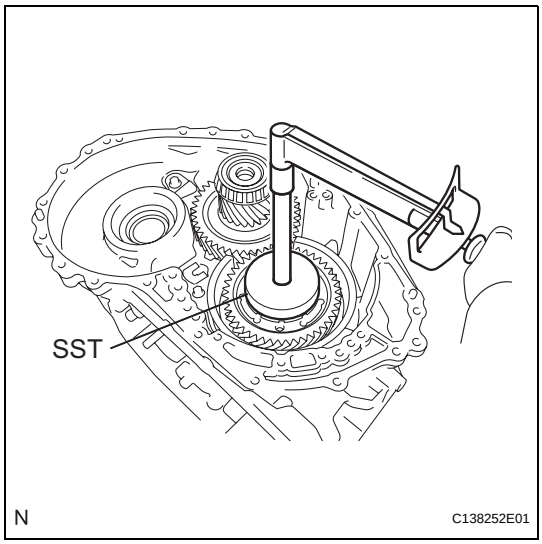
(a) Turn the manual shaft lever 2 notches counterclockwise to set it in the P position as shown in the illustration.



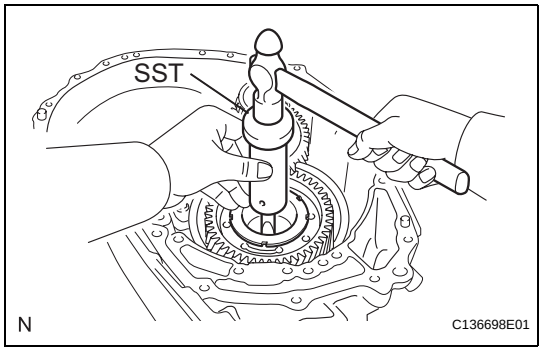
(b) Using SST, install a new nut.
SST 09387-00130
Torque: 120 N*m (1,223 kgf*cm, 88 ft.*lbf)



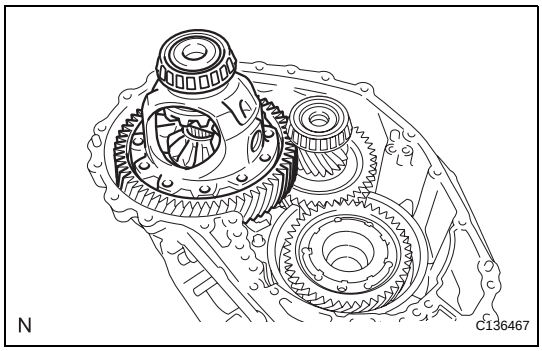
(c) Turn the manual shaft lever 2 notches clockwise to set it in the N position as shown in the illustration.



(d) Using SST and a torque wrench, measure the turning torque of the bearing while rotating SST at 60 rpm.
SST 09387-00130
Turning torque:
0.10 to 0.22 N*m (1.02 to 2.24 kgf*cm, 0.89 to 1.94 in.*lbf)
When the measured value is not within the specified range, gradually tighten the nut until the turning toque falls within the specified range.
Maximum torque:
180 N*m (1,835 kgf*cm, 132 ft.*lbf)

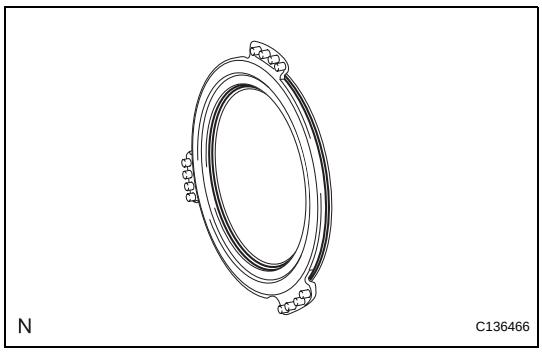


(e) Using SST and a hammer, stake the planetary gear assembly.
SST 09930-00010

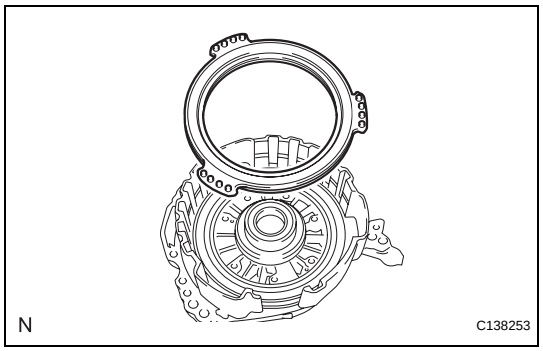


26. INSTALL FRONT DIFFERENTIAL CASE
(a) Install the differential case sub-assembly to the transaxle case.

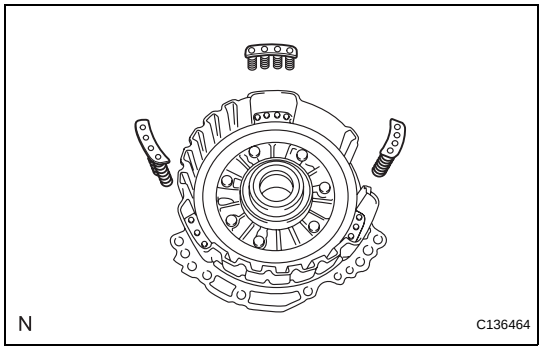
27. INSPECT DIFFERENTIAL SIDE GEAR (See page AX-332)



28. INSTALL NO. 1 BRAKE PISTON
(a) Coat 2 new O-rings with ATF and install them to the No. 1 brake piston.
NOTICE:
Ensure that the 2 O-rings are not twisted.

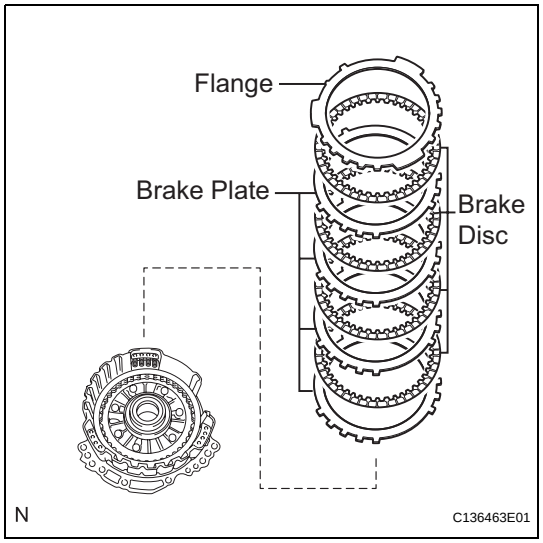


(b) Install the No. 1 brake piston to the oil pump assembly.
NOTICE:
Be careful not to damage the O-rings.



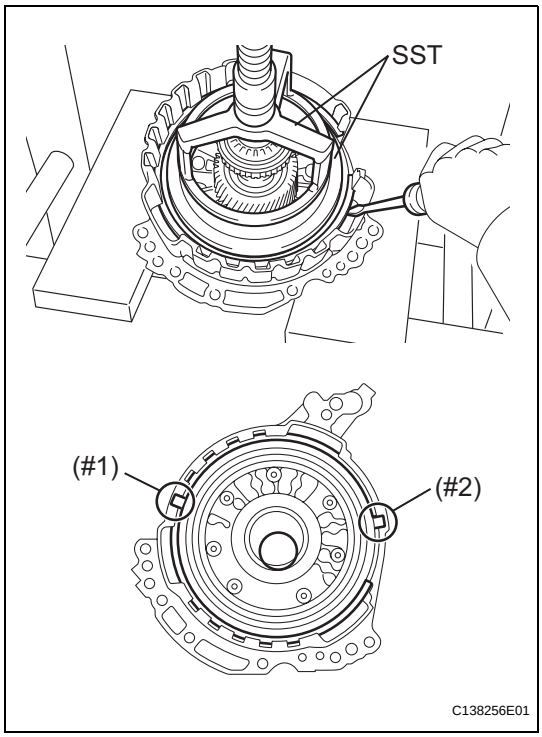
29. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Install the 3 2nd brake piston return springs to the oil pump assembly.
NOTICE:
Make sure that the 3 2nd brake piston return springs are installed straight through the protrusions on the oil pump assembly.



30. INSTALL NO. 1 BRAKE DISC

(a) Install the 4 brake discs, 4 brake plates, and brake flange to the oil pump assembly.
NOTICE:
- **Make sure that the discs, plates, and flange are installed in the correct order.**
- **Be sure to install the flange in the correct direction.**

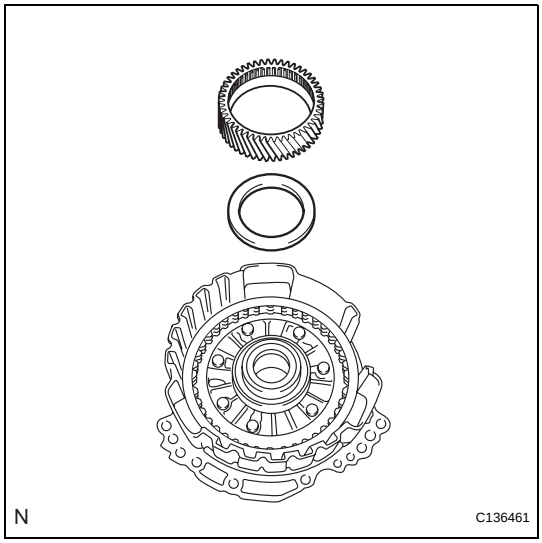


(b) Place SST on the flange and compress the flange with a press.
SST 09387-00070, 09495-65040
NOTICE:
Stop the press when the brake piston return spring is flush with the snap ring groove. This prevents the brake piston return spring from being deformed.

(c) Using a screwdriver, install the snap ring to the transaxle case as shown in the illustration (#1).
NOTICE:
- **Confirm the snap ring is fixed in the groove of the oil pump.**
- **Be sure to align the opening ends of the snap ring with the protrusions on the brake piston return spring as shown in the illustration.**

(d) Using a screwdriver, install the snap ring to the oil pump assembly as shown in the illustration (#2).
NOTICE:
- **Confirm that the snap ring is secured in the groove of the oil pump.**
- **Be sure to align the opening ends of the snap ring with the protrusions on the brake piston return spring as shown in the illustration.**

31. INSPECT CLEARANCE OF NO. 1 BRAKE (See page AX-278)



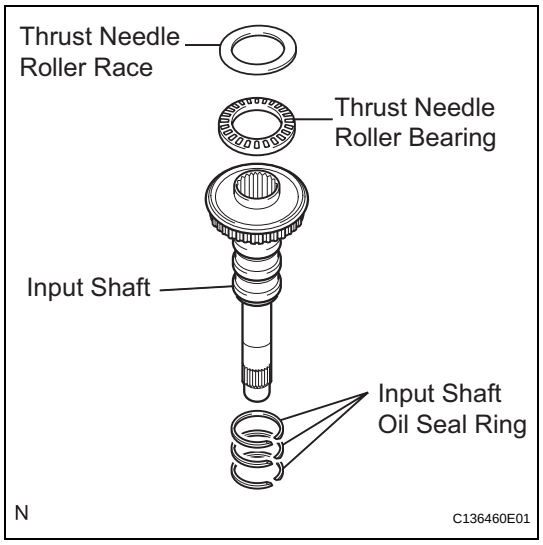
32. INSTALL UNDERDRIVE PLANETARY SUN GEAR

(a) Coat the thrust needle roller bearing with ATF, and install it to the oil pump assembly.
Bearing diameter: mm (in.)

-	Inside	Outside
Bearing	57.7 (2.272)	75.2 (2.961)

NOTICE:
Install the thrust needle roller bearing properly so that the temper colored side of the race will be visible.

(b) Install the underdrive planetary sun gear to the oil pump assembly.



33. INSTALL INPUT SHAFT SUB-ASSEMBLY

(a) Coat the 3 input shaft oil seal rings with ATF and install them to the input shaft.

NOTICE:
Do not expand the gap of the oil seal ring too much.

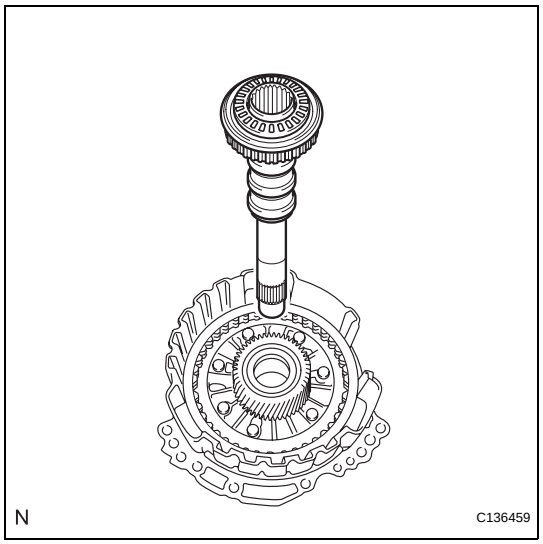
(b) Coat the thrust needle roller bearing and thrust needle roller race with ATF, and install them on the oil pump assembly.

Bearing diameter: mm (in.)

-	Inside	Outside
Bearing	29.1 (1.146)	48.6 (1.913)
Race	30.7 (1.209)	48.3 (1.902)

NOTICE:
Be sure to install the thrust needle roller bearing in the correct direction.

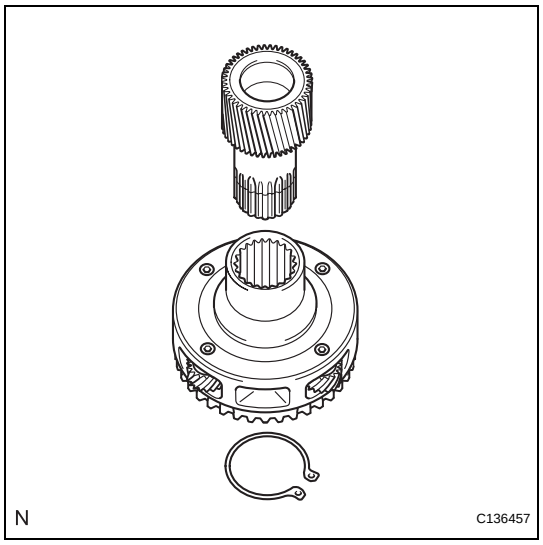
(c) Install the input shaft to the oil pump assembly.



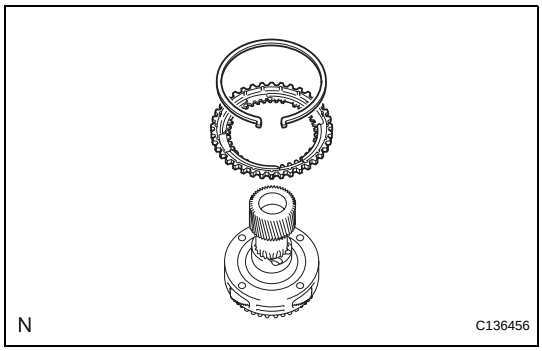
34. INSTALL PLANETARY SUN GEAR SUB-ASSEMBLY

(a) Using a snap ring expander, install the snap ring to the underdrive planetary gear assembly.

(b) Using a snap ring expander, install the front planetary sun gear sub-assembly to the underdrive planetary gear assembly with the snap ring expanded.



AX



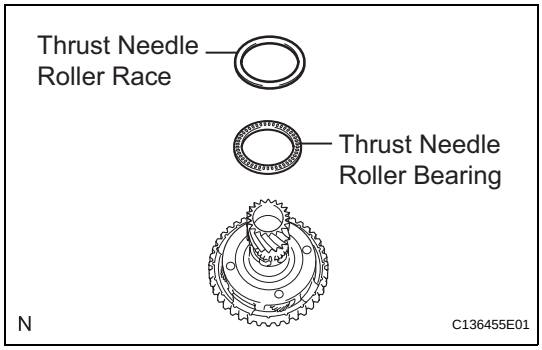
35. INSTALL UNDERDRIVE PLANETARY RING GEAR

(a) Install the underdrive planetary ring gear to the underdrive planetary gear assembly.

(b) Using needle-nose pliers, install the snap ring to the underdrive planetary ring gear.

NOTICE:

Confirm that the snap ring is secured in the groove of the underdrive planetary ring gear.



36. INSTALL NO. 3 BRAKE HUB

(a) Coat the thrust needle roller bearing with ATF and install it on the underdrive planetary gear assembly.

Bearing diameter: mm (in.)

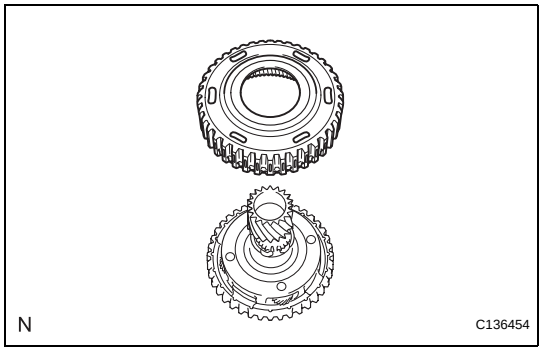
-	Inside	Outside
Bearing	62.6 (2.464)	82.9 (3.263)
Race	65.9 (2.594)	80.3 (3.161)

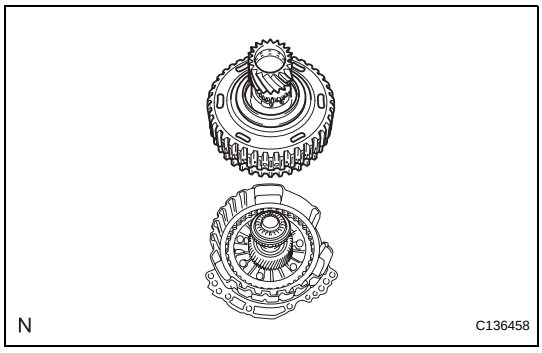
NOTICE:

Install the thrust needle roller bearing properly so that the temper colored side of the race will be visible.

(b) Coat the race with MP grease and install it to the No. 3 brake hub.

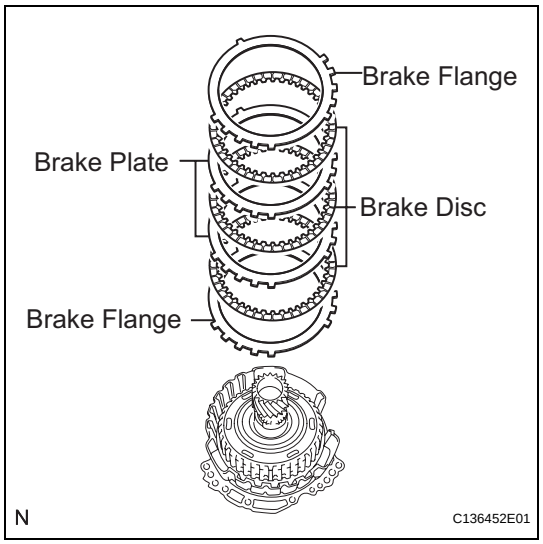
(c) Install the No. 3 brake hub to the underdrive planetary gear assembly.





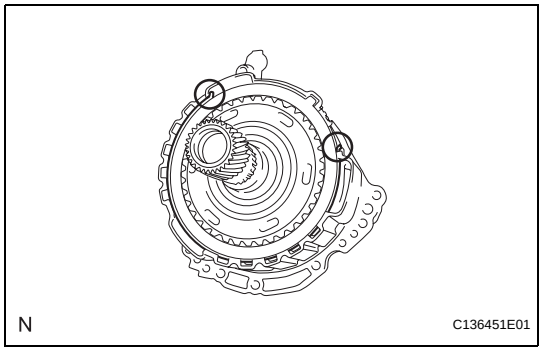
37. INSTALL UNDERDRIVE PLANETARY GEAR ASSEMBLY

(a) Install the underdrive planetary gear assembly to the oil pump assembly.



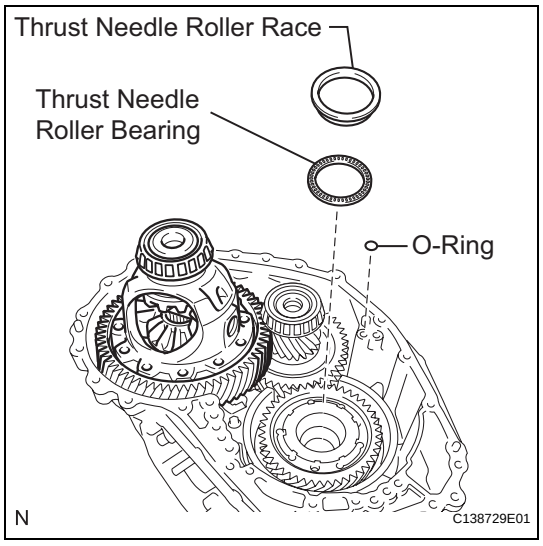
38. INSTALL NO. 3 BRAKE DISC

(a) Install the 2 brake flanges, 3 brake discs, and 2 brake plates to the oil pump assembly.
NOTICE:
Make sure that the discs, plates, and flange are installed in the correct order.



(b) Using a screwdriver, install the snap ring to the oil pump assembly.
NOTICE:
- **Confirm the snap ring is fixed in the groove of the oil pump.**
- **Be sure to align the opening ends of the snap ring with the protrusions on the brake piston return spring as shown in the illustration.**

39. INSPECT CLEARANCE OF NO. 3 BRAKE



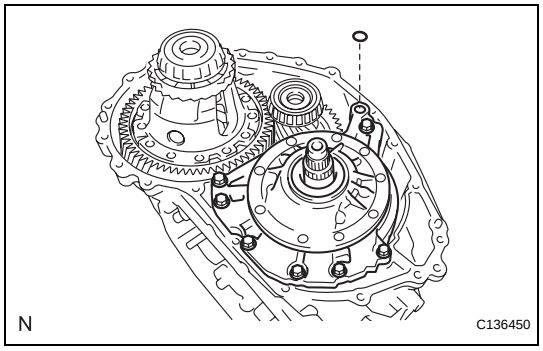
40. INSTALL FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY

(a) Coat the O-ring with ATF and install it to the transaxle case.

(b) Coat the thrust needle roller bearing and thrust needle roller race with ATF and install them on the underdrive planetary gear assembly.
Bearing and race diameter: mm (in.)

-	Inside	Outside
Bearing	53.1 (2.091)	79 (3.11)
Race	59.4 (2.339)	77 (3.03)

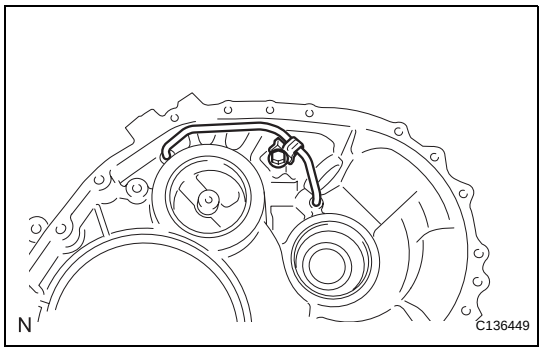
NOTICE:
Install the thrust needle roller bearing properly so that the temper colored side of the race will be visible.



(c) Coat the O-ring with ATF and install it to the oil pump.

(d) Install the oil pump assembly to the transaxle case with the 7 bolts.
Torque: 23 N*m (234 kgf*cm, 17 ft.*lbf)

AX



41. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Install the differential gear lube apply tube to the transaxle housing.

NOTICE:

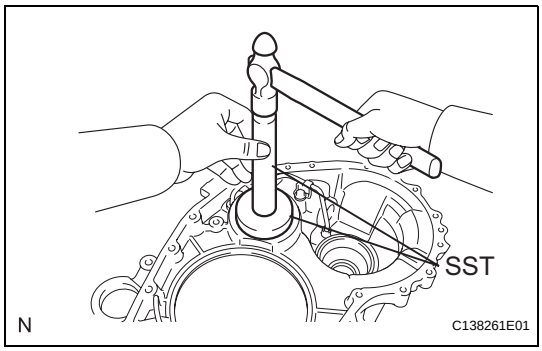
Insert the differential lube apply tube into the transaxle case until it makes contact with the stopper.

(b) Install the apply tube clamp to the differential gear lube apply tube with the bolt.

Torque: 23 N*m (234 kgf*cm, 17 ft.*lbf)

NOTICE:

There should be clearance between the differential lube apply tube and apply tube clamp.



42. INSTALL COUNTER DRIVEN GEAR FRONT TAPERED ROLLER BEARING OUTER RACE

(a) Install the shim to the transaxle housing.

(b) Using SST, install a new counter driven gear front tapered roller bearing outer race to the transaxle housing.

SST 09950-60020 (09951-00810), 09950-70010 (09951-07100)

NOTICE:

Be sure to install the counter driven gear front tapered roller bearing outer race so that there is no clearance between the shim and the transaxle housing.

43. INSTALL TRANSAXLE HOUSING

(a) Remove packing material from the contact surface between the transaxle housing and case.

NOTICE:

Make sure that there is no ATF on the contact surface.

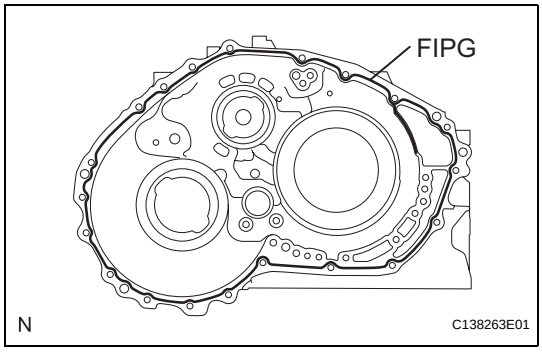
(b) Apply FIPG to the transaxle case.

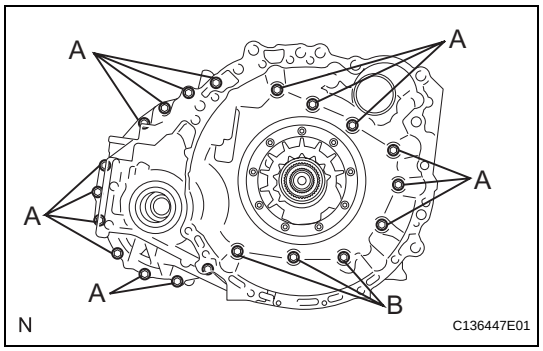
FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent.

NOTICE:

Apply a bead of FIPG (width 1.2 mm (0.047 in.)) along the sealing surface.

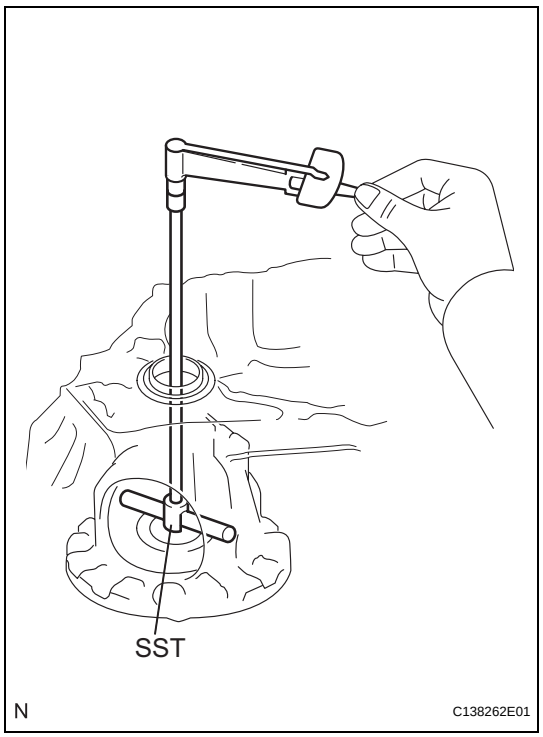




(c) Install the transaxle housing to the transaxle case with the 20 bolts.

Torque: Bolt A
31 N*m (316 kgf*cm, 23 ft.*lbf)
Bolt B
23 N*m (234 kgf*cm, 17 ft.*lbf)

AX



44. ADJUST COUNTER DRIVEN GEAR PRELOAD

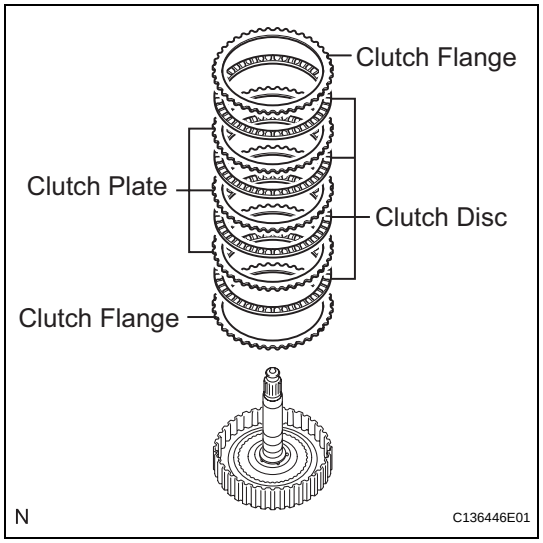
(a) Using SST and a torque wrench, measure the turning torque of the counter driven gear while rotating SST at 10 rpm.

SST 09564-33010

Turning torque:
Differential side bearing preload 3.29 to 6.07 N*m (33.53 to 61.86 kgf*cm, 2.42 to 4.46 ft.*lbf)

If the turning torque is not within the specified range, refer to the table below to select a shim of the counter driven gear front tapered roller bearing outer race so that the turning torque is within the specified range.

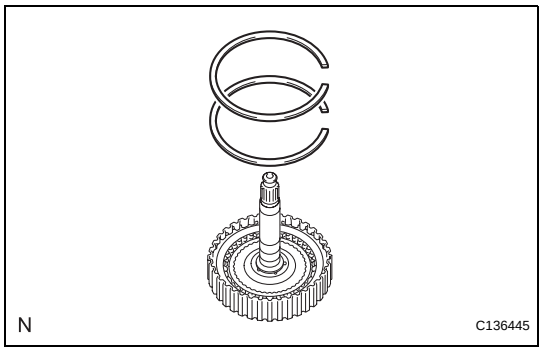
Thickness	Thickness	Thickness	Thickness
2.000 (0.0787)	2.275 (0.0896)	2.525 (0.0994)	2.775 (0.1093)
2.025 (0.0797)	2.300 (0.0906)	2.550 (0.1004)	2.800 (0.1102)
2.050 (0.0807)	2.325 (0.0915)	2.575 (0.1014)	2.825 (0.1112)
2.075 (0.0817)	2.350 (0.0925)	2.600 (0.1024)	2.850 (0.1122)
2.100 (0.0827)	2.375 (0.0935)	2.625 (0.1034)	2.875 (0.1132)
2.125 (0.0837)	2.400 (0.0945)	2.650 (0.1043)	2.900 (0.1142)
2.150 (0.0847)	2.425 (0.0955)	2.675 (0.1053)	2.925 (0.1152)
2.175 (0.0856)	2.450 (0.0965)	2.700 (0.1063)	2.950 (0.1161)
2.200 (0.0866)	2.475 (0.0974)	2.725 (0.1073)	2.975 (0.1171)
2.225 (0.0876)	2.500 (0.0984)	2.750 (0.1083)	3.000 (0.1181)
2.250 (0.0886)	-	-	-



45. INSTALL NO. 1 CLUTCH DISC

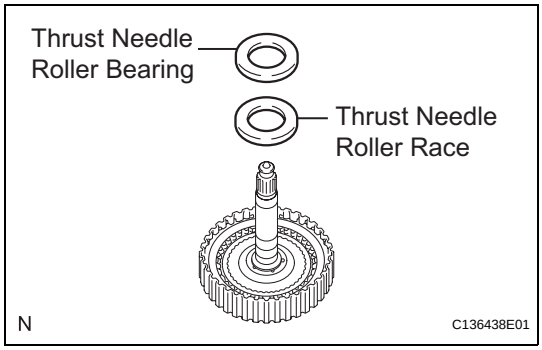
(a) Install the clutch flange, 4 clutch discs, and 4 clutch plates to the direct multiple disc clutch assembly.

NOTICE:
Make sure that the flange, discs, and plates are installed in the correct order.



(b) Using a screwdriver, install the 2 snap rings to the direct multiple disc clutch assembly.
NOTICE:
Confirm that the snap ring is secured in the groove of the direct multiple disc clutch assembly.

46. INSPECT CLEARANCE OF NO. 1 CLUTCH DISC (See page AX-279)



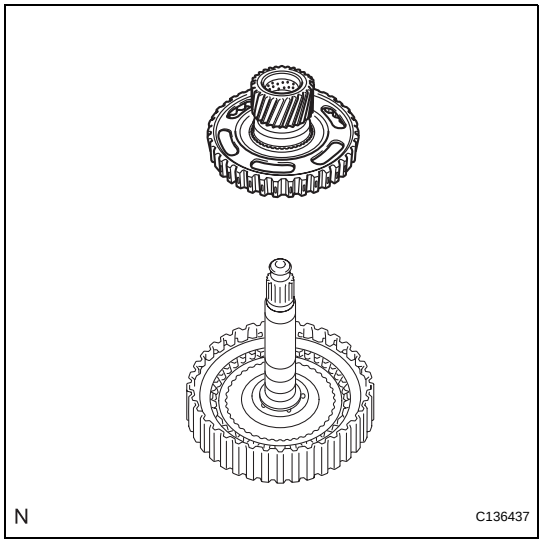
47. INSTALL REAR PLANETARY SUN GEAR ASSEMBLY

(a) Coat the thrust needle roller bearing and thrust needle roller race with ATF, and install them to the direct multiple disc clutch assembly.
Bearing and race diameter: mm (in.)

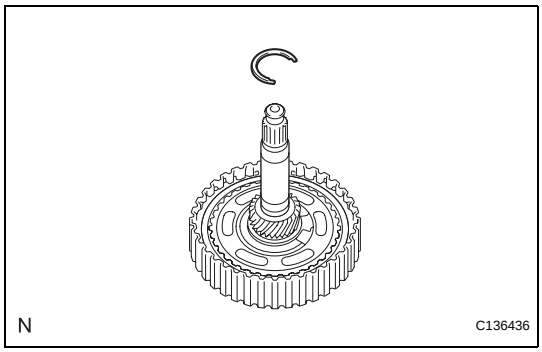
-	Inside	Outside
Bearing	28 (1.10)	47.1 (1.854)
Race	26.1 (1.028)	44 (1.73)

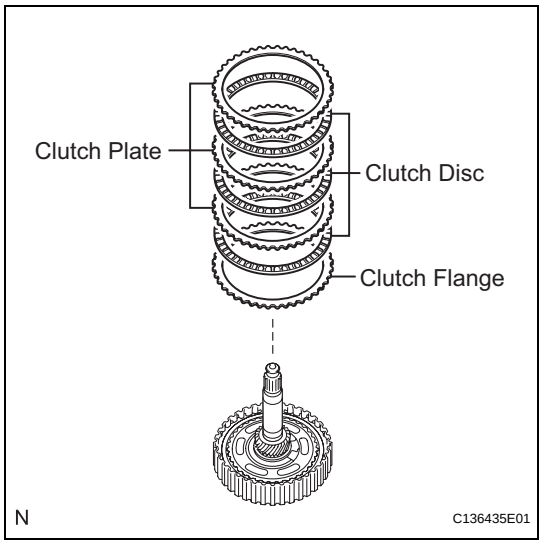
NOTICE:
Install the thrust needle roller bearing properly so that the temper colored side of the race will be visible.

(b) Install the rear planetary sun gear to the direct multiple disc clutch assembly.



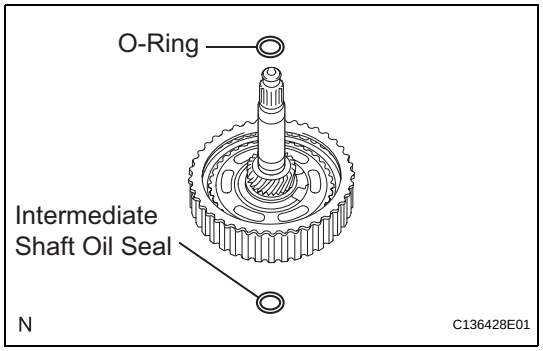
(c) Using a snap ring expander, install the snap ring to the direct multiple disc clutch assembly.





48. INSTALL NO. 2 CLUTCH DISC

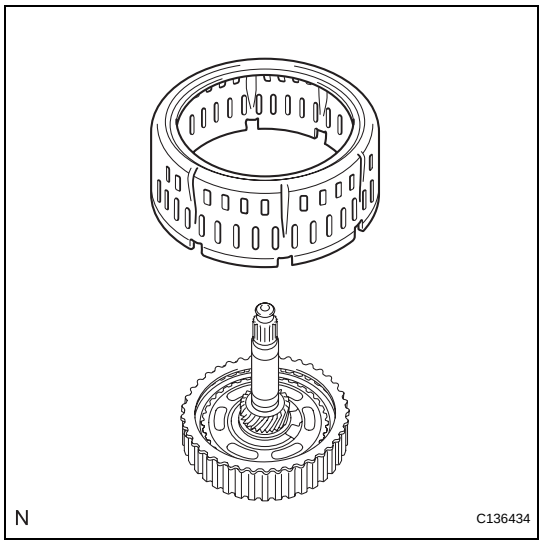
(a) Install the clutch flange, 3 clutch discs, and 3 clutch plates to the direct multiple disc clutch assembly.
NOTICE:
Make sure that the flange, discs, and plates are installed in the correct order.



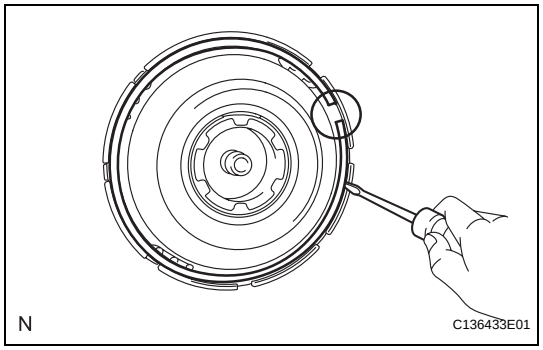
49. INSTALL DIRECT MULTIPLE DISC CLUTCH SNAP RING

(a) Coat a new O-ring with ATF and install it to the direct multiple disc clutch assembly.

(b) Coat a new intermediate shaft oil seal ring with ATF and install it to the intermediate shaft.



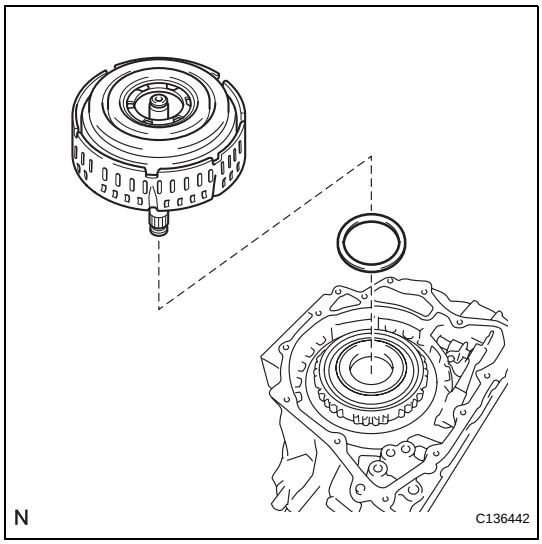
(c) Install the No. 2 direct clutch piston to the direct multiple disc clutch assembly.
NOTICE:
Be sure to engage the claws on the direct multiple disc clutch assembly to the grooves on the No. 2 direct clutch piston.



(d) Using a screwdriver, install the snap ring to the direct multiple disc clutch assembly.
NOTICE:
Position the opening of the snap ring as shown in the illustration.

50. INSPECT CLEARANCE OF NO. 2 CLUTCH DISC (See page AX-280)

AX



51. INSTALL REAR MULTIPLE DISC CLUTCH ASSEMBLY

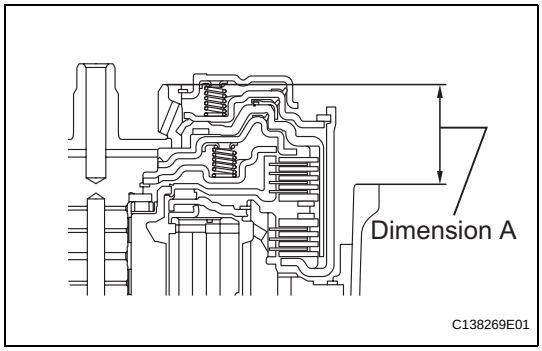
(a) Coat the thrust needle roller bearing with ATF and install it on the transaxle case.

Bearing diameter: mm (in.)

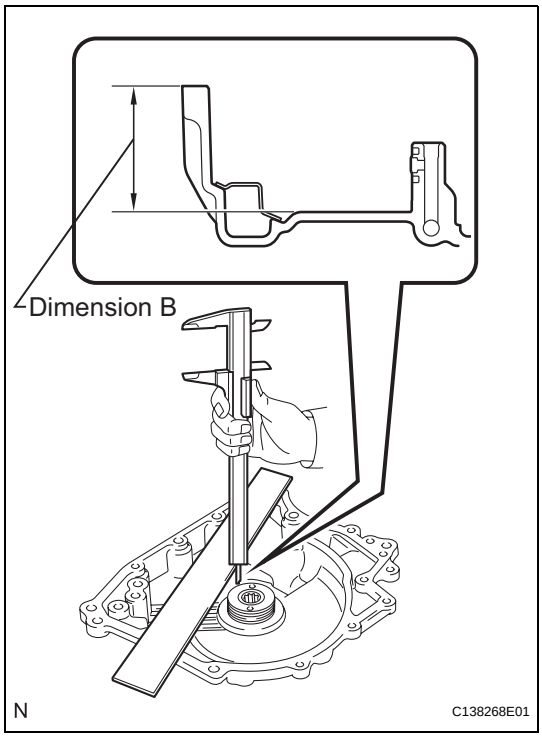
-	Inside	Outside
Bearing	61.2 (2.409)	79 (3.11)

(b) Install the direct multiple disc clutch assembly to the transaxle case.

(c) Clean the contact surface of the transaxle case and transaxle rear cover.



(d) As shown in the illustration, place a straight edge on the multiple direct clutch drum and measure the distance between the transaxle case and the straight edge using vernier calipers (Dimension A).



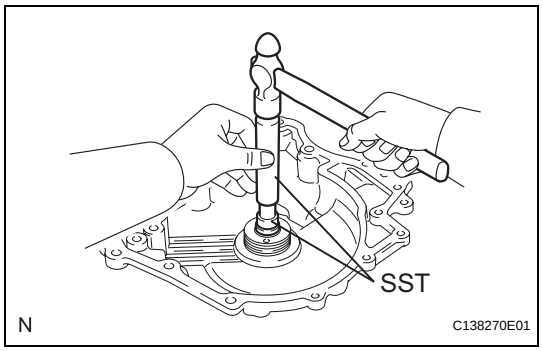
(e) Using vernier calipers and a straight edge, measure the distance shown in the illustration. (Dimension B)

(f) Calculate the end play value using the following formula:

End play = Dimension B - Dimension A

End play:

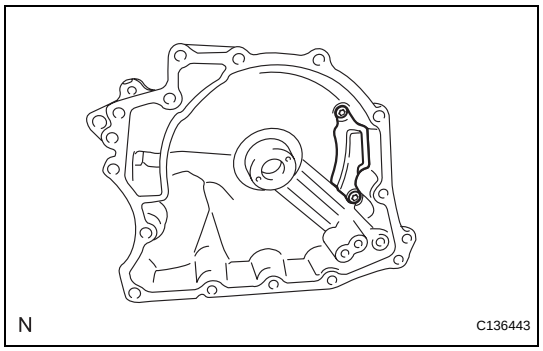
0.007 to 1.113 mm (0.0003 to 0.0438 in.)



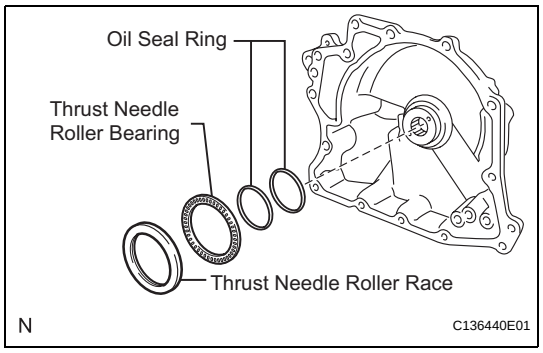
52. INSTALL TRANSAXLE REAR COVER SUB-ASSEMBLY

(a) Using SST and a hammer, install the needle roller bearing into the transaxle rear cover.
SST 09950-60010 (09951-00220), 09950-70010 (09951-07100)
Press installation depth:
21.5 to 21.9 mm (0.8464 to 08622 in.)

(b) Apply sealant to the 2 "TORX" screws.
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



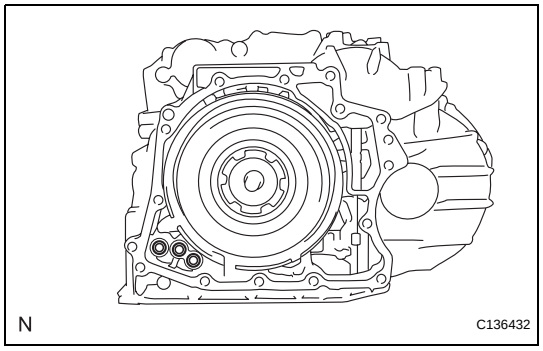
(c) Using a "TORX" wrench (T30), install the transaxle rear cover plate to the transaxle rear cover with the 2 "TORX" screws.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



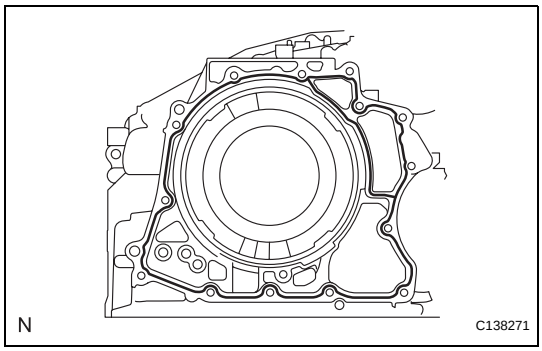
(d) Coat the thrust needle roller bearing and thrust needle roller race with ATF and install it on the transaxle case.
Bearing diameter: mm (in.)

-	Inside	Outside
Bearing	48.9 (1.925)	72.0 (2.835)
Race	52.2 (2.055)	70.4 (2.772)

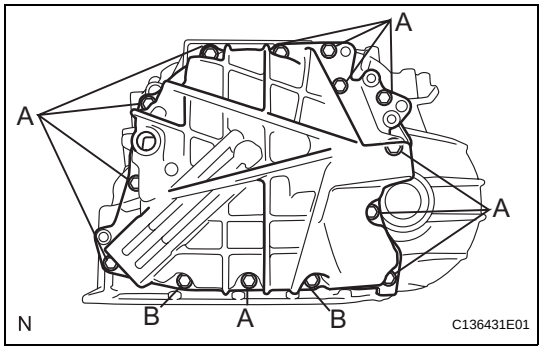
(e) Coat the 2 new oil seals with ATF and install them to the transaxle rear cover.



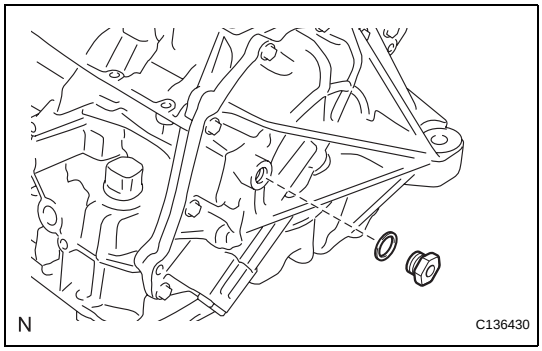
(f) Coat the 3 O-rings with ATF and install them to the transaxle case.
NOTICE:
Ensure that the 3 O-rings are not twisted.



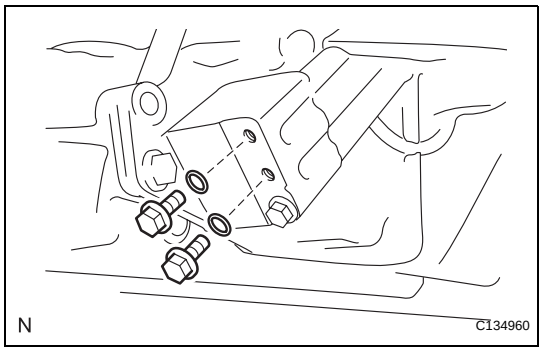
(g) Remove packing material from the contact surfaces between the transaxle rear cover and transaxle case.
NOTICE:
Make sure that there is no ATF on the contact surface.
FIPG:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent.



(h) Install the transaxle rear cover to the transaxle case with the 14 bolts.
Torque: Bolt A
23 N*m (234 kgf*cm, 17 ft.*lbf)
Bolt B
17 N*m (173 kgf*cm, 12 ft.*lbf)

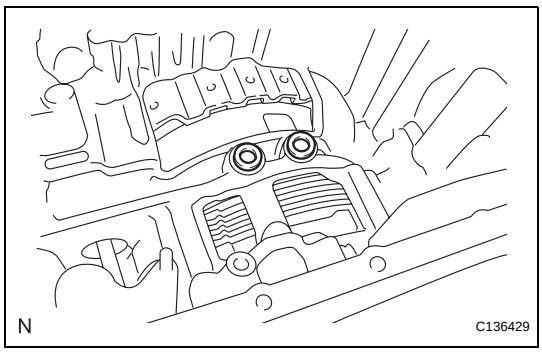


(i) Install a new gasket to the refill plug.
(j) Install the refill plug to the transaxle rear cover.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

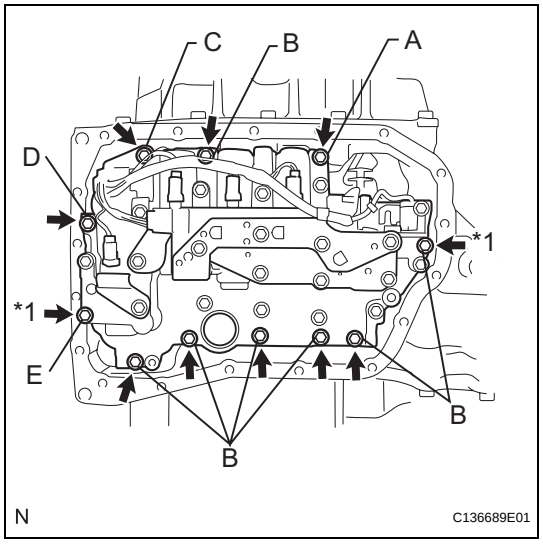


(k) Coat 2 new O-rings with ATF and install them to the 2 No. 1 automatic transaxle case plugs.
(l) Install the 2 No. 1 automatic transaxle case plugs to the transaxle rear cover.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)

53. INSPECT INPUT SHAFT END PLAY (See page AX-274)



54. INSTALL TRANSAXLE CASE GASKET
(a) Coat the 2 gaskets with ATF and install them to the transaxle case.

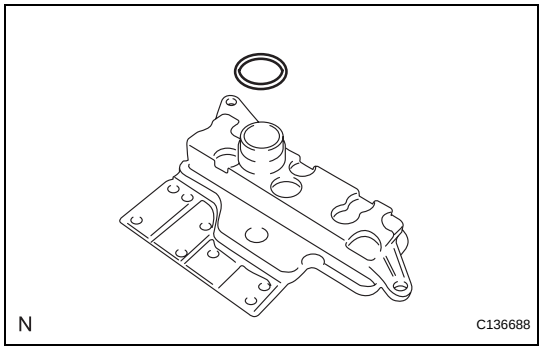


55. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

(a) Install the valve body assembly to the transaxle case with the 11 bolts.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)

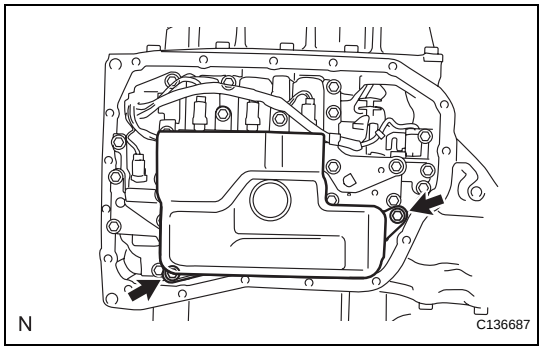
-	Bolt length
Bolt A	25 mm (0.98 in.)
Bolt B	30 mm (1.18 in.)
Bolt C	35 mm (1.38 in.)
Bolt D	45 mm (1.77 in.)
Bolt E	55 mm (2.17 in.)

NOTICE:
- **When installing the transmission valve body assembly, be careful not to allow the transmission revolution sensor and transaxle case to interfere each other.**
- **Be sure to insert the pin of the manual valve lever into the groove on the end of the manual valve.**
- **First, temporarily tighten the bolts marked by (*1) in the illustration because they are positioning bolts.**

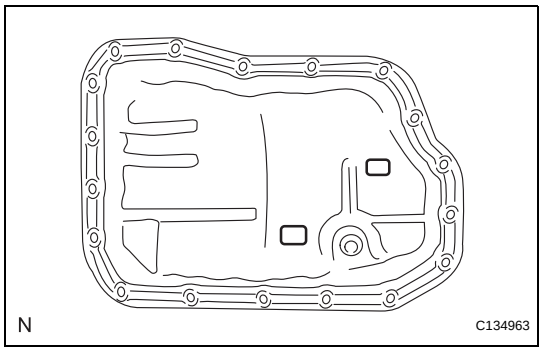


56. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Coat a new O-ring with ATF and install it to the oil strainer assembly.
NOTICE:
Ensure that the O-ring is not twisted or pinched.



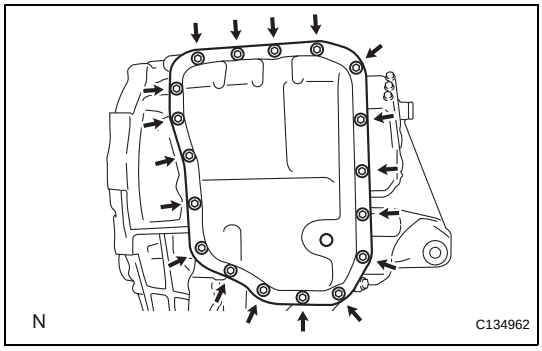
(b) Install the oil strainer assembly to the valve body assembly with the 2 bolts.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



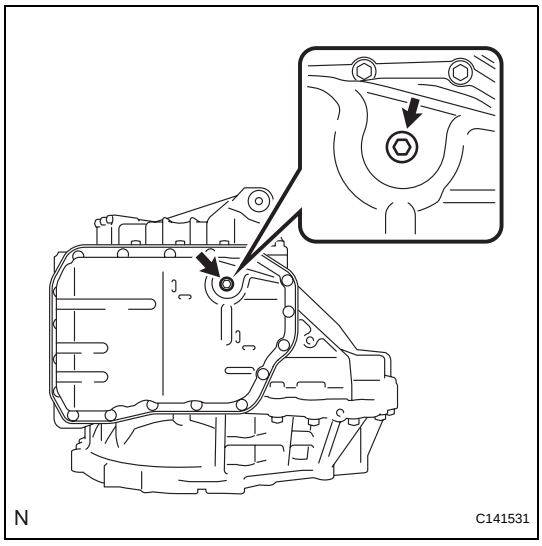
57. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets in the automatic transaxle oil pan sub-assembly.

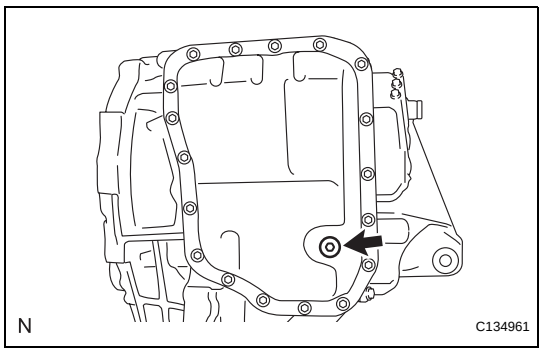
(b) Apply sealant to the 18 bolts.
Sealant:
Toyota Genuine Seal Packing 1344, Three Bond 1344 or equivalent.



(c) Install the automatic transaxle oil pan sub-assembly and a new gasket to the transaxle case with the 18 bolts.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
NOTICE:
- **In order to ensure proper sealing of the transmission pan bolts, apply sealant to the bolts and install them within 10 minutes of sealant application.**
- **Completely remove any oil or grease from the contact surface of the transaxle case and oil pan sub-assembly with the gasket before installation.**



(d) Install the No. 1 oil filler tube from the automatic transaxle assembly.

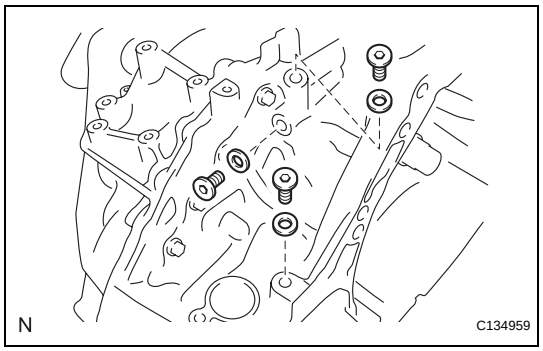


(e) Install the overflow plug and a new gasket to the oil pun sub-assembly.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)

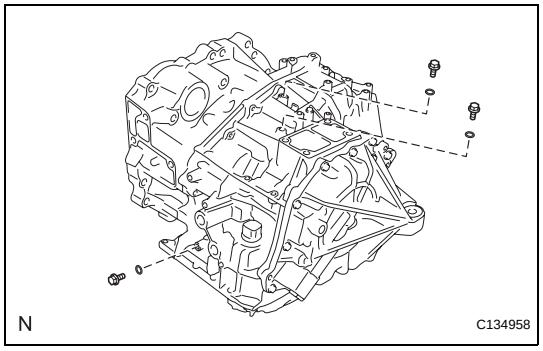
58. INSTALL NO. 1 TRANSAXLE CASE PLUG

(a) Install the 3 gaskets to the 3 hexagon bolts.

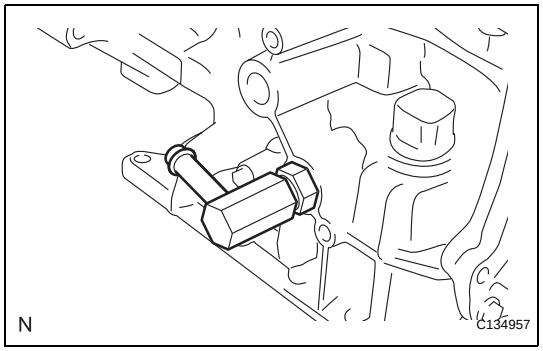
(b) Apply sealant to the 3 hexagon bolts.
Sealant:
Toyota Genuine Seal Packing 1344, Three Bond 1344 or equivalent.
NOTICE:
In order to ensure proper sealing of the hexagon bolts, apply sealant to the bolts and install them within 10 minutes of sealant application.



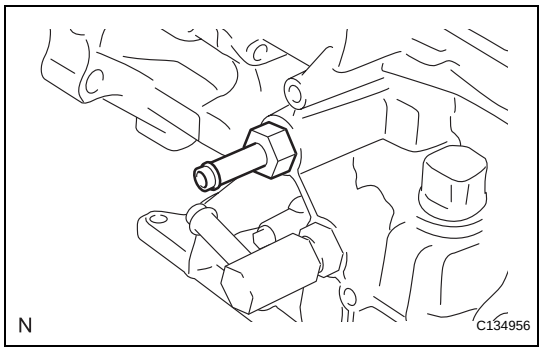
(c) Install the 3 hexagon bolts to the transaxle housing with the gaskets.
Torque: 29 N*m (296 kgf*cm, 21 ft.*lbf)



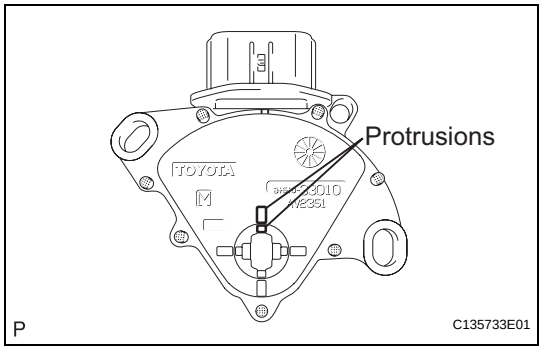
(d) Coat 3 new O-rings with the ATF and install them to the 3 No. 1 transaxle case plugs.
(e) Install the 3 No. 1 transaxle case plugs to the transaxle case.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)



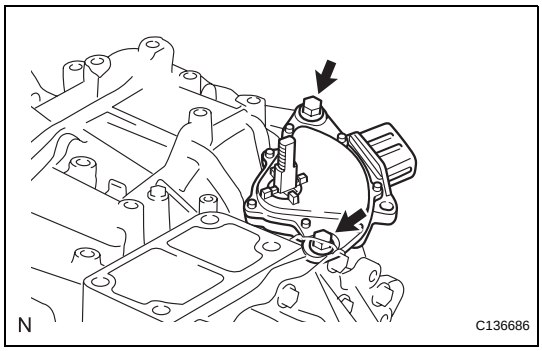
59. INSTALL OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)
(a) Coat a new O-ring with ATF and install it to the oil cooler tube union (outlet oil cooler union).
(b) Install the oil cooler tube union (outlet oil cooler union) to the transaxle case as shown in the illustration.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)



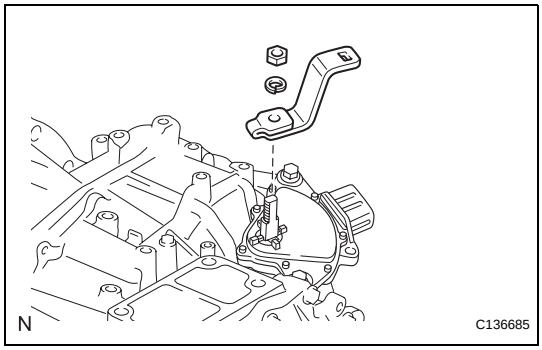
60. INSTALL OIL COOLER TUBE UNION (INLET OIL COOLER UNION)
(a) Coat a new O-ring with ATF and install it to the oil cooler tube union (inlet oil cooler union).
(b) Install the oil cooler tube union (inlet oil cooler union) to the transaxle case.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)



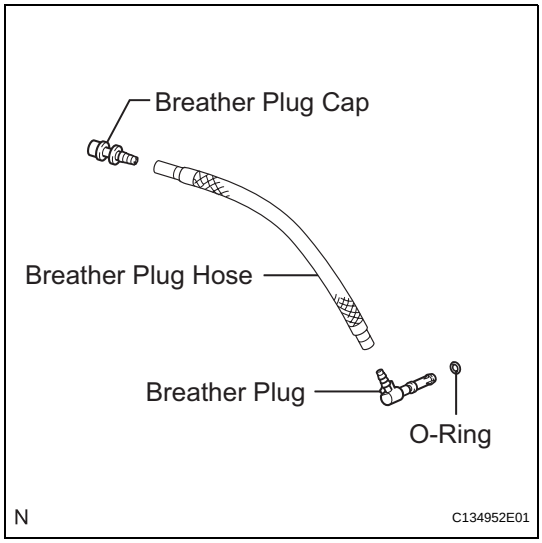
61. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY
(a) Align the protrusions of the park/neutral position switch.



(b) Install the park/neutral position switch to the control shaft with the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
NOTICE:
- **Before installing the park/neutral position switch, remove any dirt or rust on the installation portion of the control shaft. Be sure to install the switch straight along the shaft while being careful not to deform the plate spring that supports the shaft. If the plate spring is deformed, the park/neutral switch cannot be reinstalled correctly.**
- **After installing the park/neutral position switch, confirm that the 2 protrusions on the switch are aligned.**

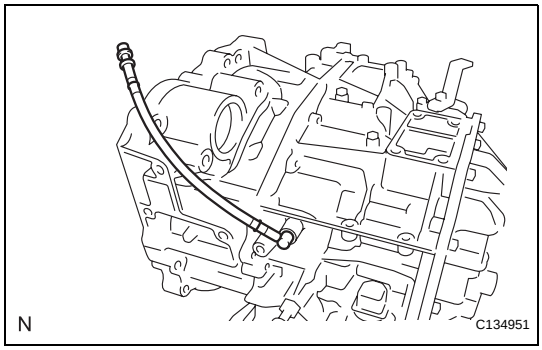


(c) Install the control shaft lever to the control shaft with the washer and nut.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)



62. INSTALL BREATHER PLUG HOSE

(a) Install a new O-ring to the breather plug.
(b) Install the breather plug to the breather plug hose.
(c) Install the breather plug cap to the breather plug hose.



(d) Install the breather plug hose to the transaxle case.

OIL PUMP

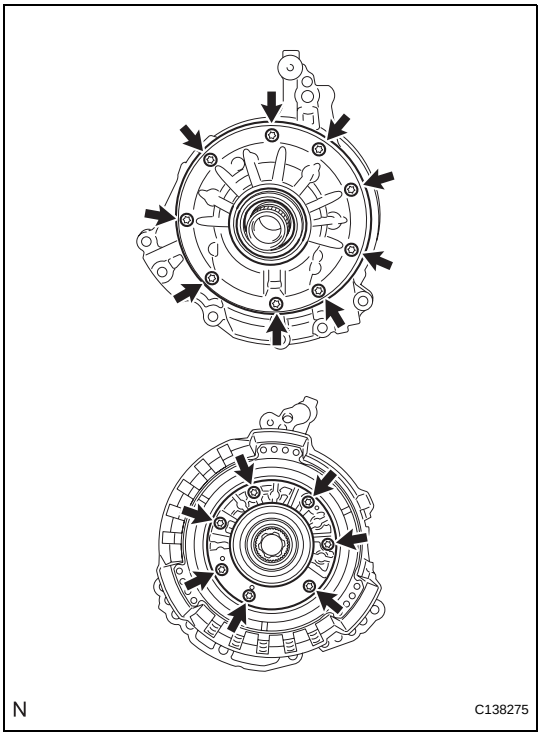
DISASSEMBLY

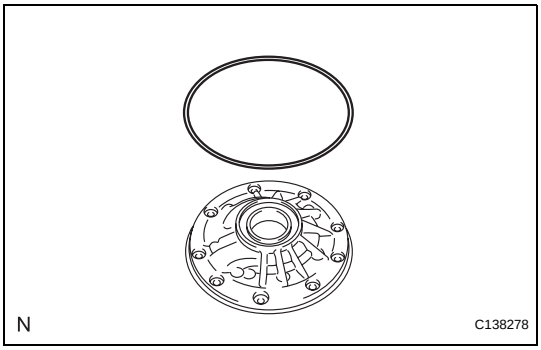
1. **INSPECT FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY (See page AX-315)**

2. **REMOVE STATOR SHAFT ASSEMBLY**
   (a) Using a "TORX" wrench (T30), remove the 16 bolts and stator shaft assembly from the oil pump body.
   NOTICE:
   Keep the gears in the order of installation.

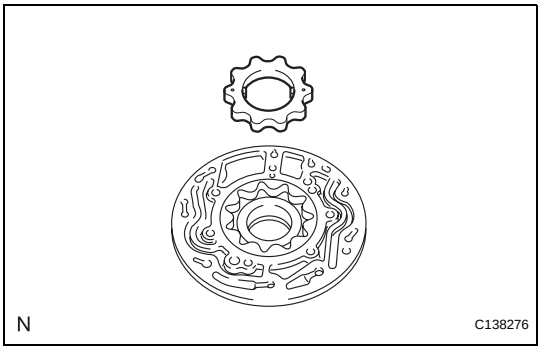
3. **INSPECT CLEARANCE OF FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY (See page AX-315)**

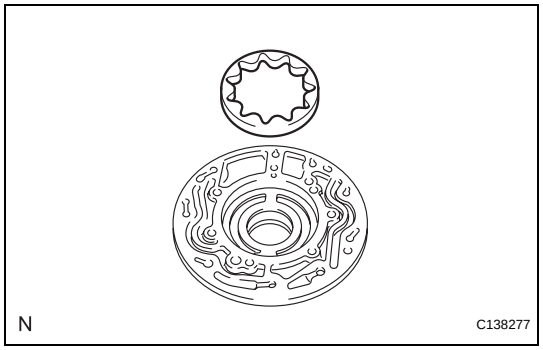


4. **REMOVE FRONT OIL PUMP BODY O-RING**
   (a) Remove the O-ring from the oil pump body.



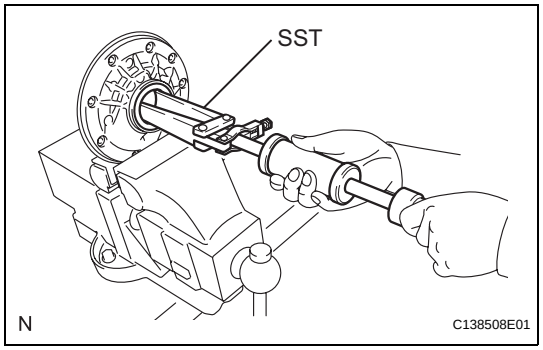
5. **REMOVE FRONT OIL PUMP DRIVE GEAR**
   (a) Remove the front oil pump drive gear from the oil pump body.





6. REMOVE FRONT OIL PUMP DRIVEN GEAR

(a) Remove the front oil pump driven gear from the oil pump body.



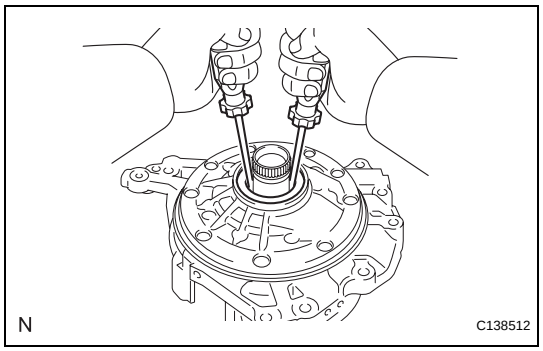
7. REMOVE FRONT OIL PUMP OIL SEAL

(a) Mount the oil pump in a soft jaw vise.

(b) Using SST, remove the oil seal from the oil pump body.

SST 09308-00010

INSPECTION

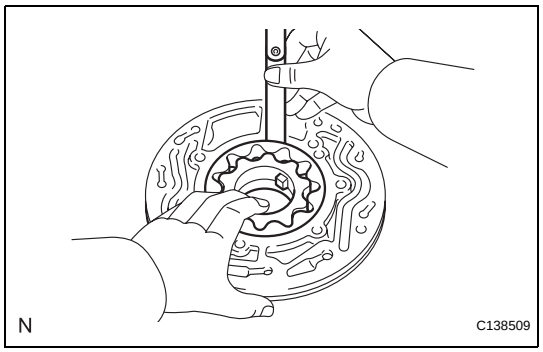


1. INSPECT FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY

(a) Turn the drive gear with 2 screwdrivers and make sure that it rotates smoothly.

NOTICE:

Be careful not to damage the oil seal lip.



2. INSPECT CLEARANCE OF FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY

(a) Push the driven gear to one side of the body.

(b) Using a feeler gauge, measure the clearance.

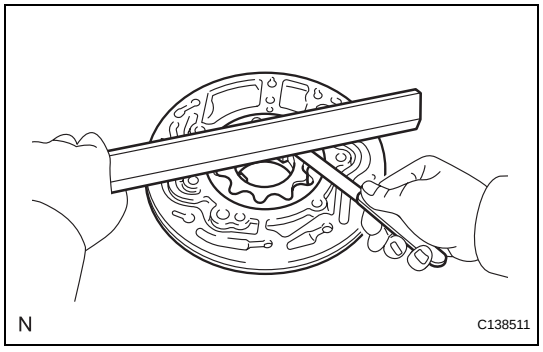
Standard clearance:

0.08 to 0.15 mm (0.0031 to 0.0059 in.)

Maximum clearance:

0.15 mm (0.0059 in.)

If the clearance is greater than the maximum, replace the oil pump body sub-assembly.



(c) Using a straight edge and feeler gauge, measure the side clearance of both gears.

Standard side clearance:

0.025 to 0.04 mm (0.0010 to 0.0016 in.)

Maximum side clearance:

0.04 mm (0.0016 in.)

Drive gear thickness:

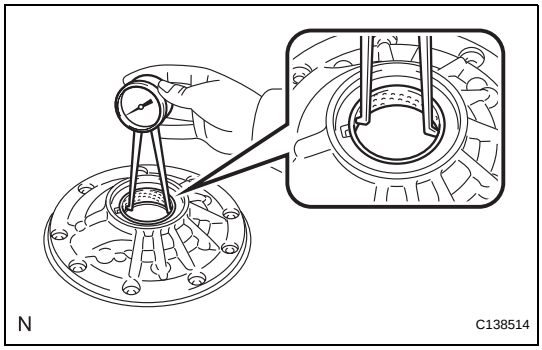
Mark	Thickness
-	11.547 to 11.555 mm (0.4546 to 0.4549 in.)
-	11.555 to 11.563 mm (0.4549 to 0.4552 in.)
-	11.564 to 11.571 mm (0.4553 to 0.4556 in.)

AX

Mark	Thickness
-	11.572 to 11.579 mm (0.4556 to 0.4559 in.)
-	11.580 to 11.587 mm (0.4559 to 0.4562 in.)

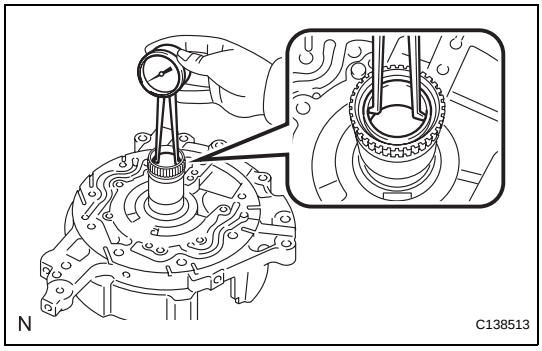
Driven gear thickness:

Mark	Thickness
-	11.547 to 11.555 mm (0.4546 to 0.4549 in.)
-	11.555 to 11.563 mm (0.4549 to 0.4552 in.)
-	11.564 to 11.571 mm (0.4553 to 0.4556 in.)
-	11.572 to 11.579 mm (0.4556 to 0.4559 in.)
-	11.580 to 11.587 mm (0.4559 to 0.4562 in.)



3. INSPECT FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY

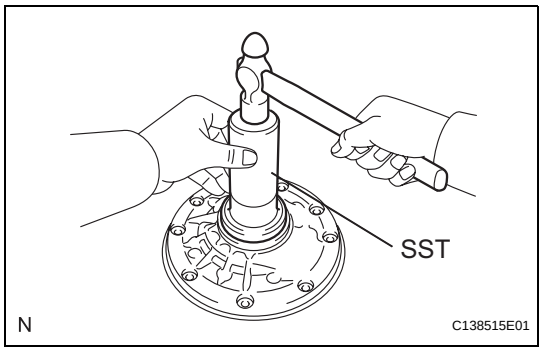
(a) Using a dial indicator, measure the inside diameter of the oil pump body bushing.
Standard inside diameter:
43.113 to 43.138 mm (1.6974 to 1.6983 in.)
Maximum inside diameter:
43.188 mm (1.7003 in.)
If the inside diameter is greater than the maximum, replace the oil pump body sub-assembly.



4. INSPECT STATOR SHAFT ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the oil pump body bushing.
Standard inside diameter:
22.500 to 22.526 mm (0.8858 to 0.8868 in.)
Maximum inside diameter:
22.570 mm (0.8886 in.)
If the inside diameter is greater than the maximum, replace the oil pump body sub-assembly.

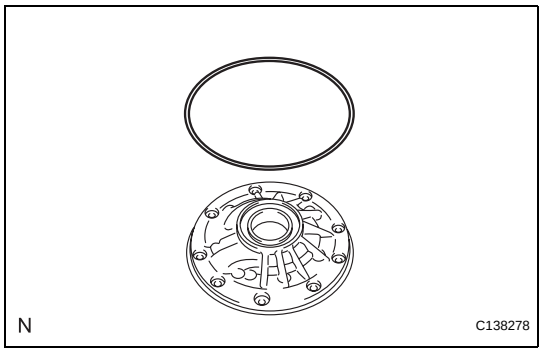
REASSEMBLY



1. INSTALL FRONT OIL PUMP OIL SEAL

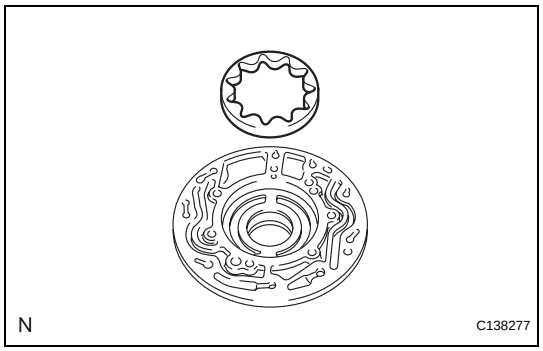
(a) Using SST and a hammer, install a new oil seal to the oil pump body.
SST 09350-32014 (09351-32140)
NOTICE:
The seal end should be level with the outer edge of the oil pump.

(b) Coat the lip of the oil seal with MP grease.



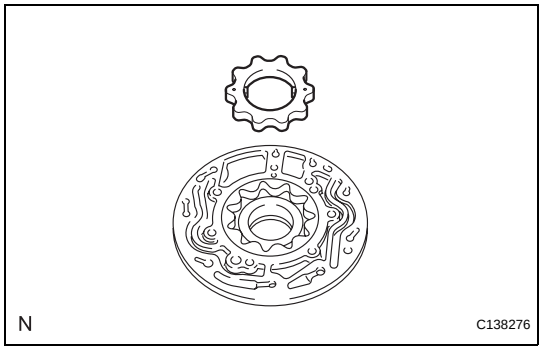
2. INSTALL FRONT OIL PUMP BODY O-RING

(a) Coat a new O-ring with ATF and install it to the oil pump body.
NOTICE:
Ensure that the O-ring is not twisted.



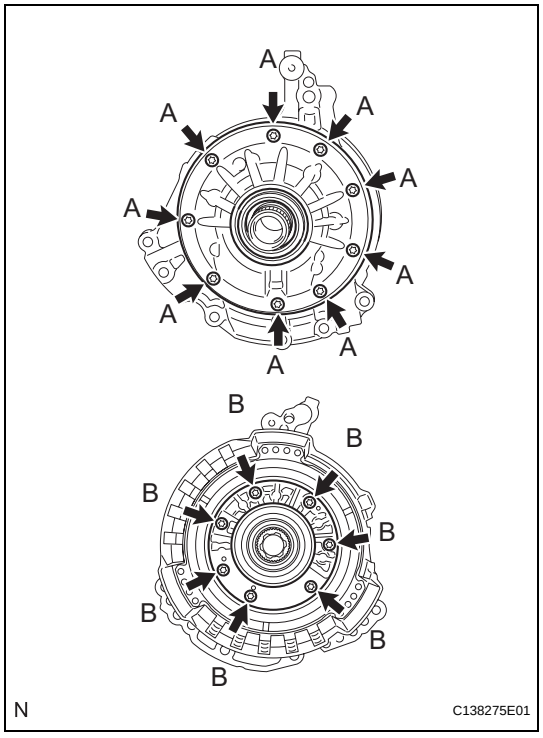
3. INSTALL FRONT OIL PUMP DRIVEN GEAR

(a) Coat the front oil pump driven gear with ATF and install it to the oil pump body with the marked side up.



4. INSTALL FRONT OIL PUMP DRIVE GEAR

(a) Coat the front oil pump drive gear with ATF, and install it to the oil pump body with the marked side up.



5. INSTALL STATOR SHAFT ASSEMBLY

(a) Align each knock pin of the stator shaft with the holes in the oil pump body and install the stator shaft to the oil pump body with the 16 bolts.

(b) Using a "TORX" socket (T30), install the 11 bolts.
Torque: 9.3 N*m (95 kgf*cm, 82 in.*lbf)

-	Bolt length:
Bolt A	14 mm (0.55 in)
Bolt B	26 mm (1.02 in)

6. INSPECT FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY (See page AX-315)

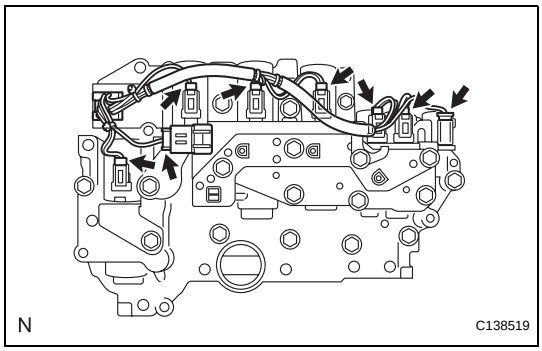
REMOVAL

1. **REMOVE AUTOMATIC TRANSAXLE ASSEMBLY** (See page AX-207)
2. **REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-182)**
3. **REMOVE VALVE BODY OIL STRAINER ASSEMBLY (See page AX-182)**
4. **REMOVE TRANSMISSION VALVE BODY ASSEMBLY (See page AX-183)**

DISASSEMBLY

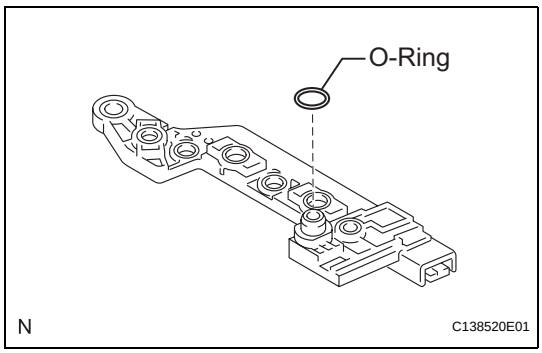
1. **REMOVE TRANSMISSION WIRE**
   (a) Disconnect the connector from the transmission wire.
   (b) Remove the bolt and lock plate from the valve body assembly.

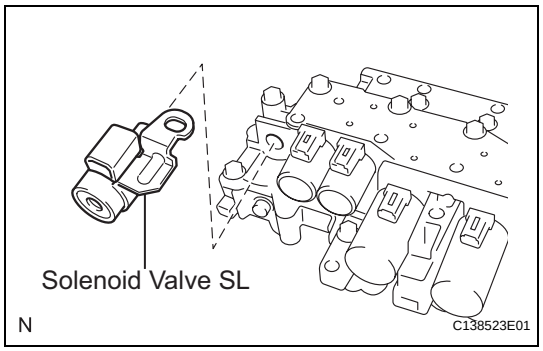
   (c) Disconnect the 8 connectors and remove the transmission wire from the valve body assembly.



2. **REMOVE ATF TEMPERATURE SENSOR ASSEMBLY**
   (a) Remove the 4 bolts, ATF temperature sensor assembly and clamp from the valve body assembly.

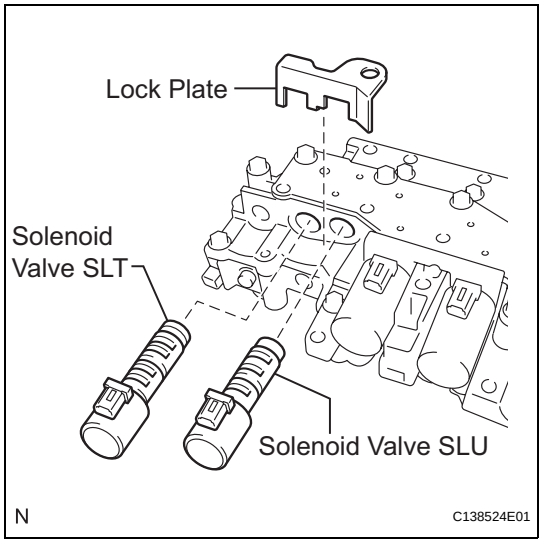
   (b) Remove the O-ring from the ATF temperature sensor assembly. O-ring





3. REMOVE SHIFT SOLENOID VALVE SL

(a) Remove the shift solenoid valve SL from the valve body assembly.

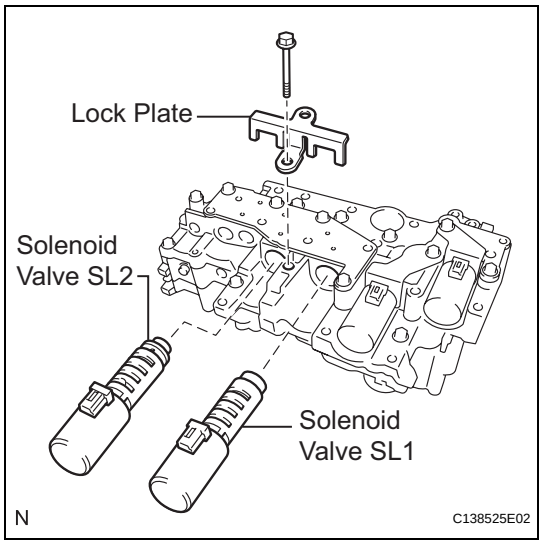


4. REMOVE SHIFT SOLENOID VALVE SLT

(a) Remove the lock plate and shift solenoid valve SLT from the valve body assembly

5. REMOVE SHIFT SOLENOID VALVE SLU

(a) Remove the shift solenoid valve SLU from the valve body assembly.

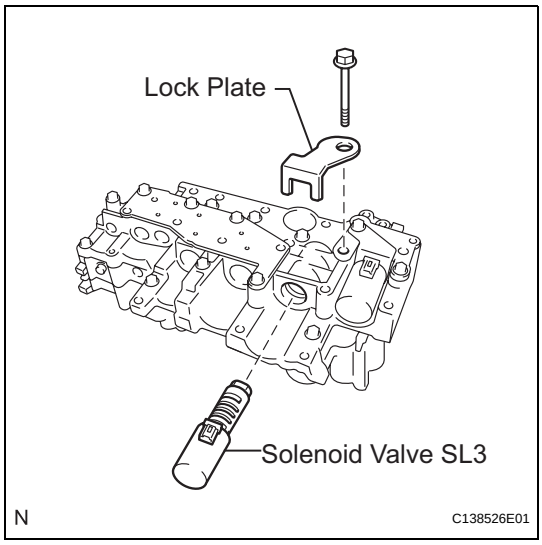


6. REMOVE SHIFT SOLENOID VALVE SL2

(a) Remove the bolt, lock plate and shift solenoid valve SL2 from the valve body assembly.

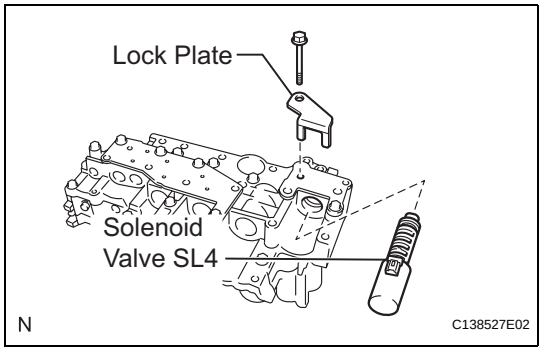
7. REMOVE SHIFT SOLENOID VALVE SL1

(a) Remove the shift solenoid valve SL1 from the valve body assembly.



8. REMOVE SHIFT SOLENOID VALVE SL3

(a) Remove the bolt, lock plate and shift solenoid valve SL3 from the valve body assembly.



9. REMOVE SHIFT SOLENOID VALVE SL4

(a) Remove the bolt, lock plate and shift solenoid valve SL4 from the valve body assembly.

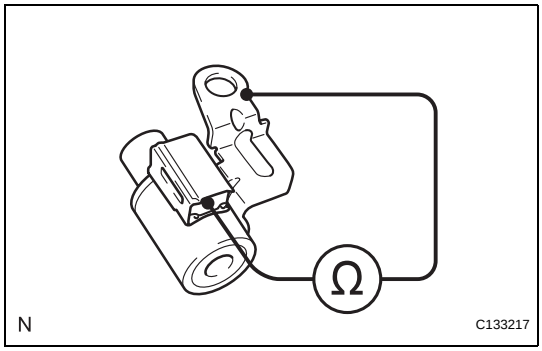
INSPECTION

1. INSPECT SHIFT SOLENOID VALVE SL

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
Solenoid Connector (SL) - Solenoid Body (SL)	11 to 15 Ω



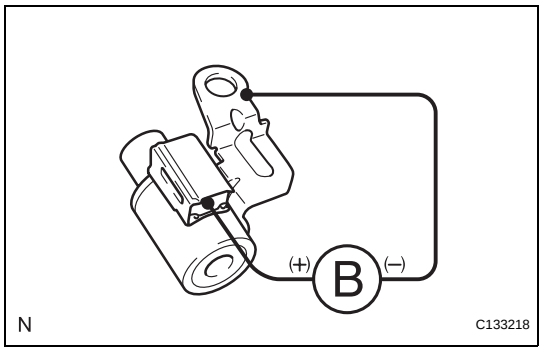
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the shift solenoid valve.

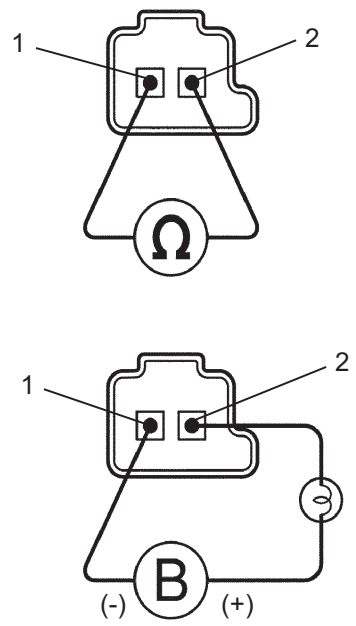
OK:

The solenoid makes an operating noise.

If the operation is not as specified, replace the shift solenoid valve.



Shift Solenoid Valve SLT:



2. INSPECT SHIFT SOLENOID VALVE SLT

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid valve.

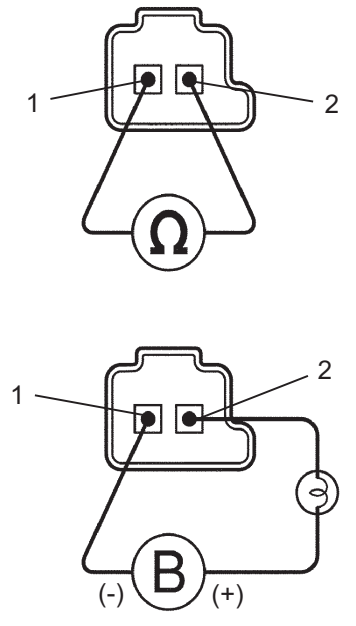
(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the shift solenoid valve.

OK:

The solenoid makes an operating noise.

If the operation is not as specified, replace the shift solenoid valve.

Shift Solenoid Valve SLU:



3. INSPECT SHIFT SOLENOID VALVE SLU

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid valve.

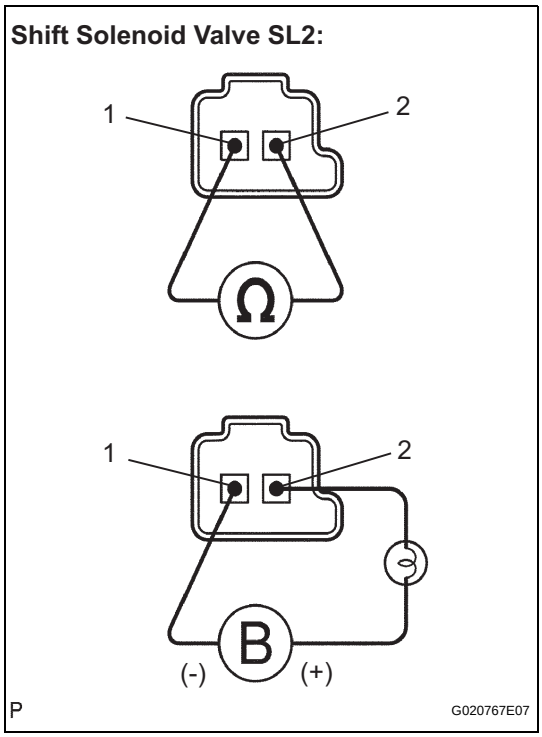
(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the shift solenoid valve.

OK:

The solenoid makes an operating noise.

If the operation is not as specified, replace the shift solenoid valve.

AX



4. INSPECT SHIFT SOLENOID VALVE SL2

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

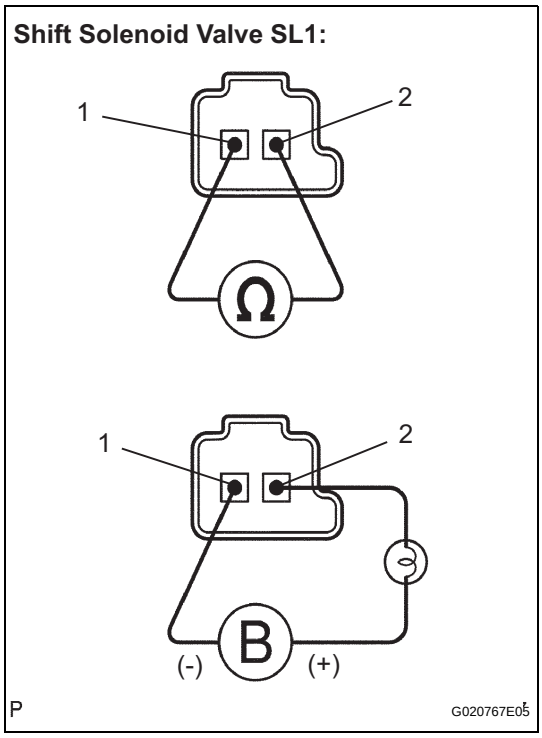
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the shift solenoid valve.

OK:

The solenoid makes an operating noise.

If the operation is not as specified, replace the shift solenoid valve.



5. INSPECT SHIFT SOLENOID VALVE SL1

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

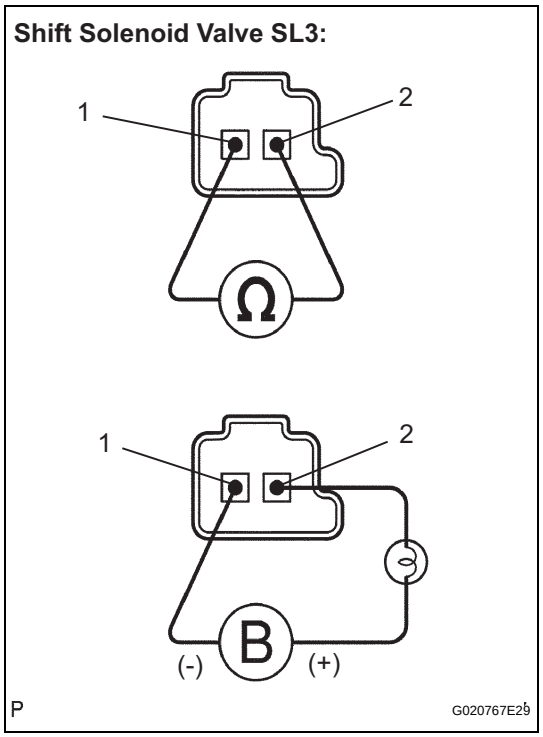
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the shift solenoid valve.

OK:

The solenoid makes an operating noise.

If the operation is not as specified, replace the shift solenoid valve.



6. INSPECT SHIFT SOLENOID VALVE SL3

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

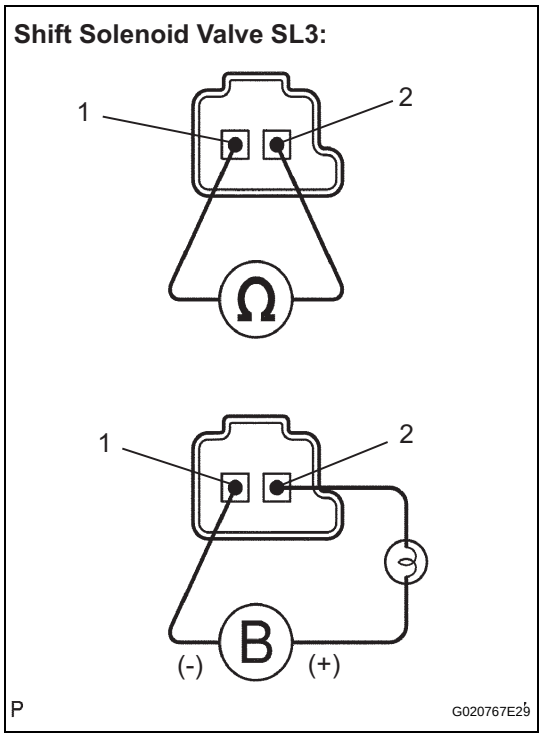
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the shift solenoid valve.

OK:

The solenoid makes an operating noise.

If the operation is not as specified, replace the shift solenoid valve.



7. INSPECT SHIFT SOLENOID VALVE SL4

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition 20°C (68°F)
1 - 2	5.0 to 5.6 Ω

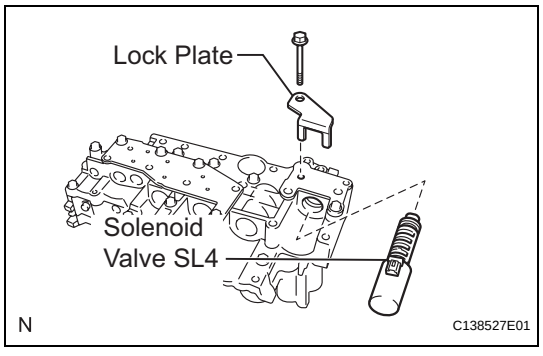
If the value is not as specified, replace the shift solenoid valve.

(b) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the shift solenoid valve.

OK:

The solenoid makes an operating noise.

If the operation is not as specified, replace the shift solenoid valve.



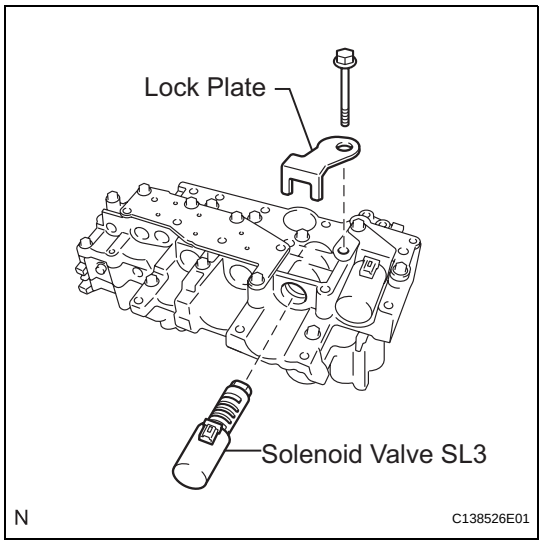
REASSEMBLY

1. INSTALL SHIFT SOLENOID VALVE SL4

(a) Coat the shift solenoid valve SL4 and bolt with ATF.

(b) Install the shift solenoid valve SL4 and lock plate to the valve body assembly with the bolt.

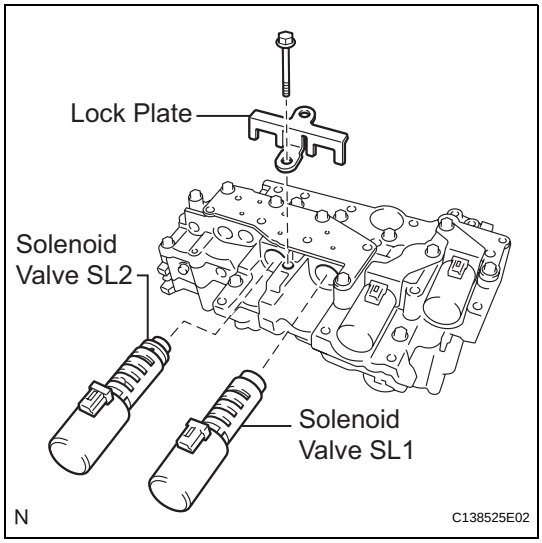
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



2. INSTALL SHIFT SOLENOID VALVE SL3

(a) Coat the shift solenoid valve SL3 and bolt with ATF.

(b) Install the shift solenoid valve SL3 and lock plate to the valve body assembly with the bolt.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



3. INSTALL SHIFT SOLENOID VALVE SL1

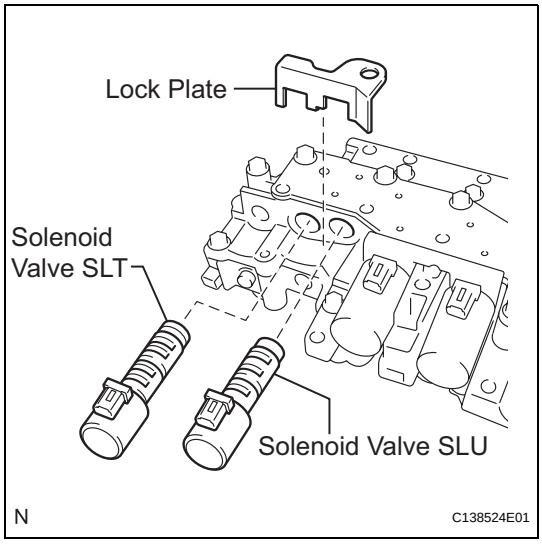
(a) Coat the shift solenoid valve SL1 with ATF.

(b) Install the shift solenoid valve SL1 to the valve body assembly.

4. INSTALL SHIFT SOLENOID VALVE SL2

(a) Coat the shift solenoid valve SL2 and bolt with ATF.

(b) Install the shift solenoid valve SL2 and lock plate to the valve body assembly with the bolt.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



5. INSTALL SHIFT SOLENOID VALVE SLU

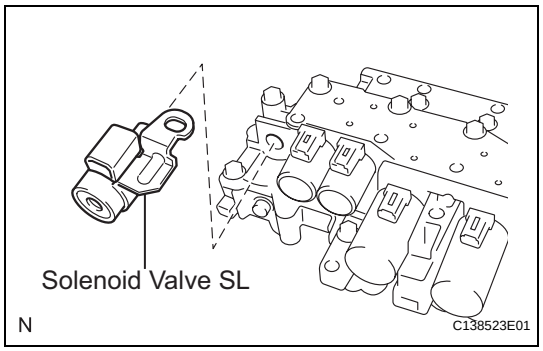
(a) Coat the shift solenoid valve SLU with ATF.

(b) Install the shift solenoid valve SLU to the valve body assembly.

6. INSTALL SHIFT SOLENOID VALVE SLT

(a) Coat the shift solenoid valve SLT with ATF.

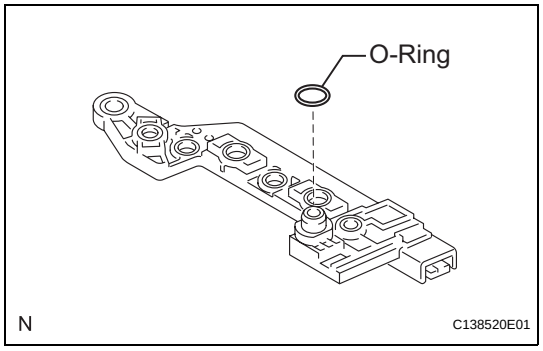
(b) Install the shift solenoid valve SLT and lock plate to the valve body assembly.



7. INSTALL SHIFT SOLENOID VALVE SL

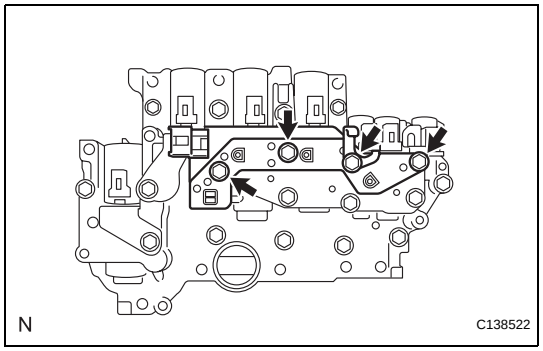
(a) Coat the shift solenoid valve SL with ATF.

(b) Install the shift solenoid valve SL to the valve body assembly.



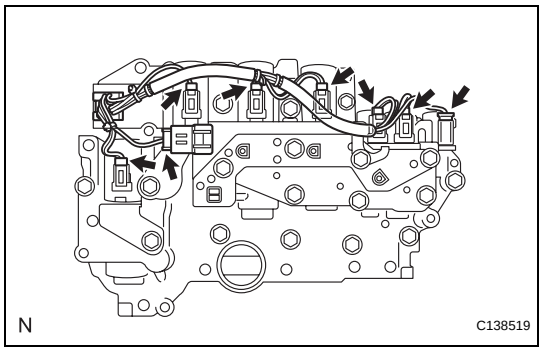
8. INSTALL ATF TEMPERATURE SENSOR ASSEMBLY

(a) Coat a new O-ring with ATF and install it to the ATF temperature sensor assembly.



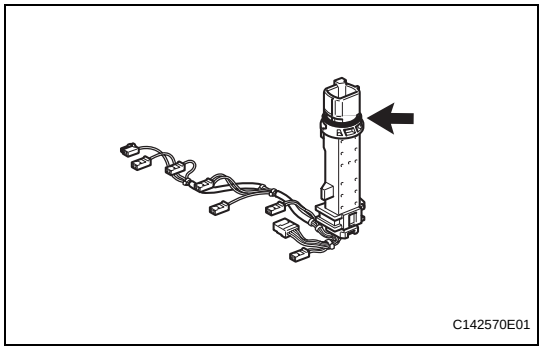
(b) Coat the 4 bolts with ATF.

(c) Install the ATF temperature sensor assembly and clamp to the valve body assembly with the 4 bolts.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)

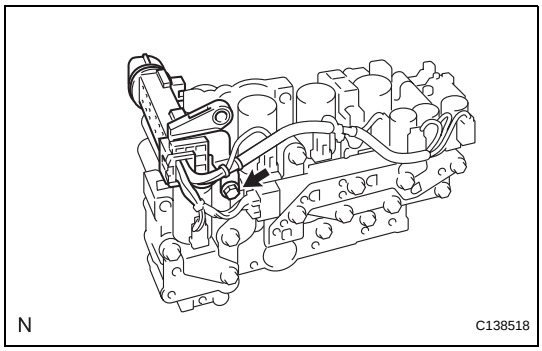


9. INSTALL TRANSMISSION WIRE

(a) Connect the 8 connectors to the valve body assembly.



(b) Coat the O-ring with ATF.



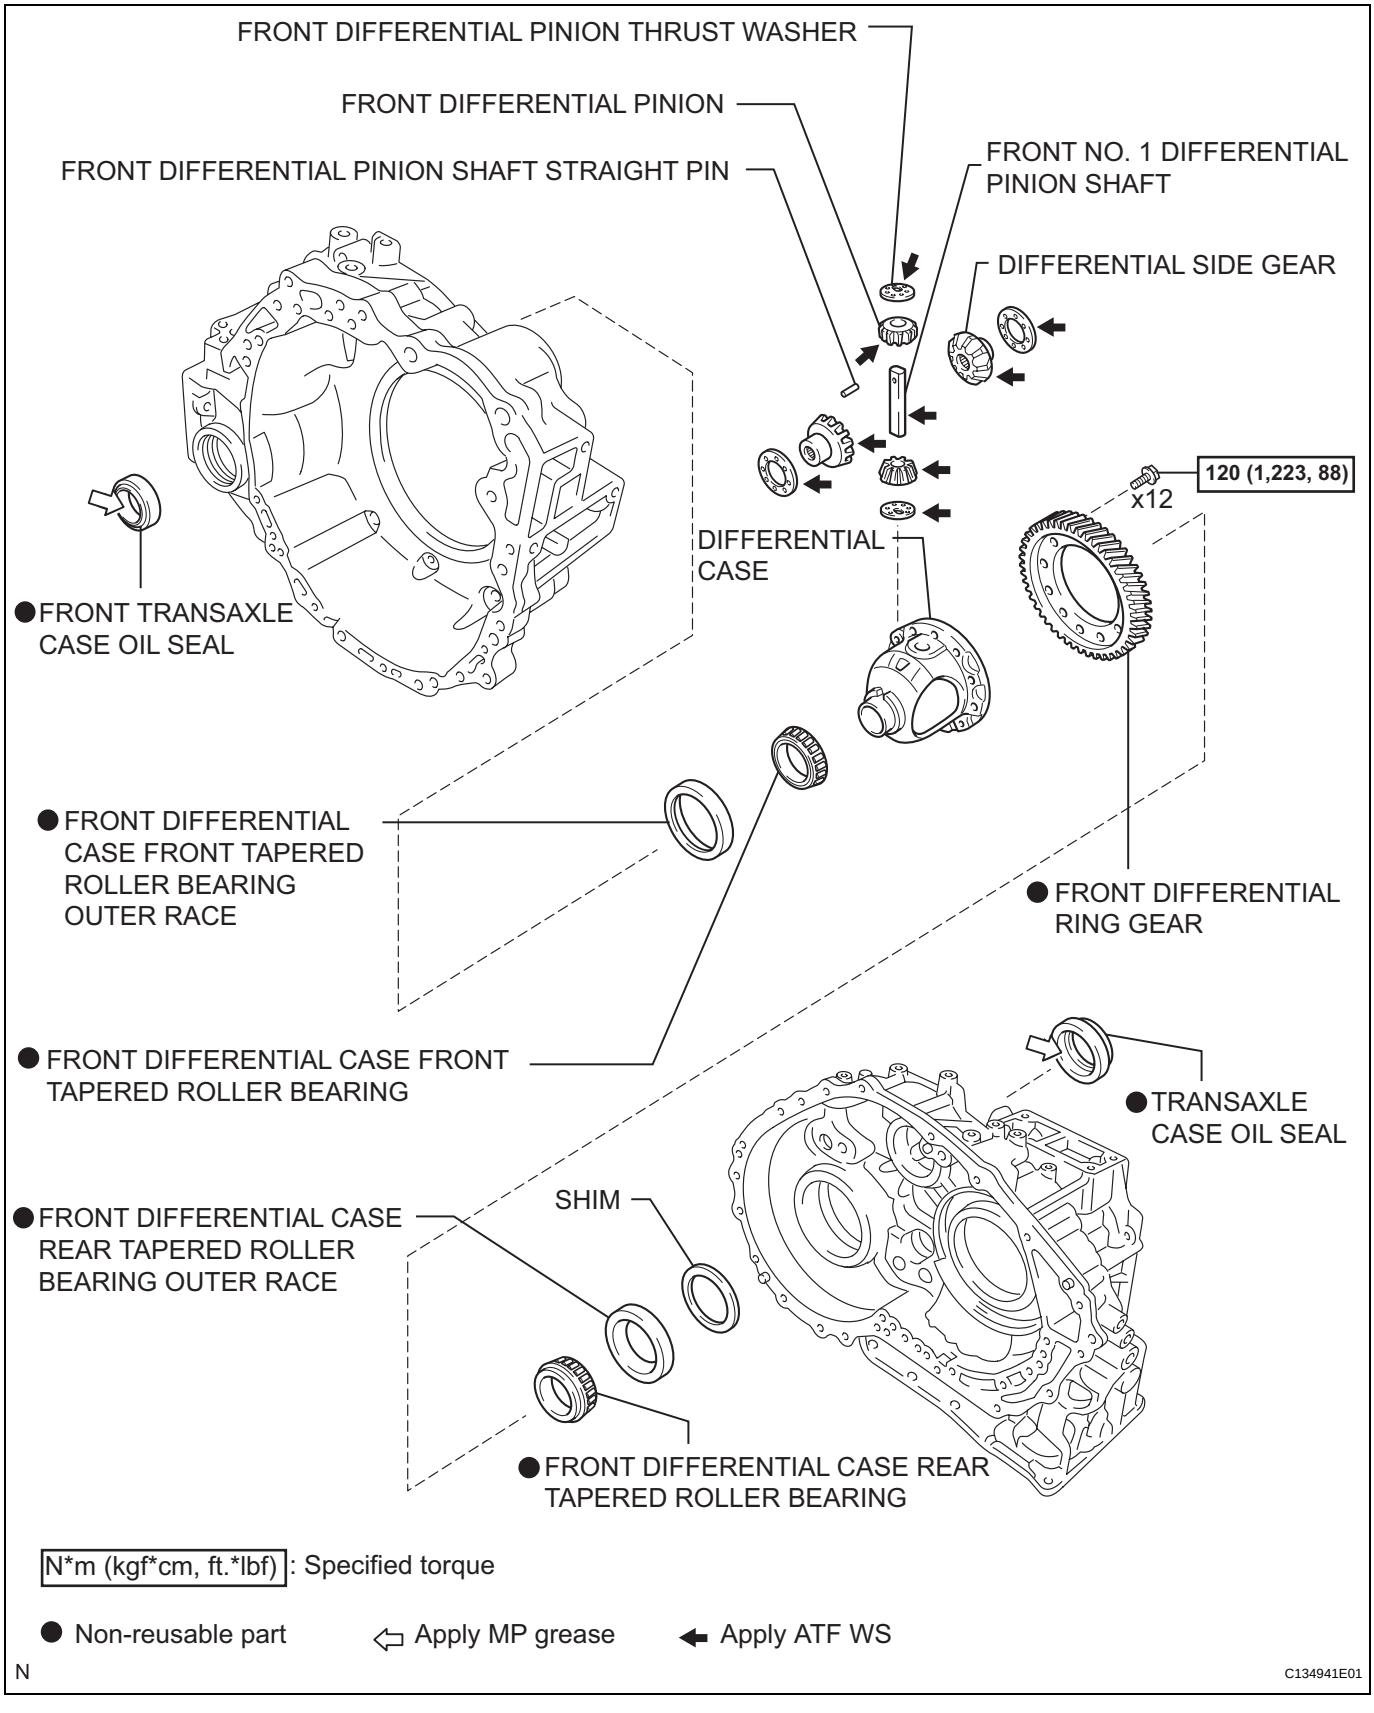
(c) Coat the bolt with ATF.
(d) Install the transmission wire and lock plate to the valve body assembly with the bolt.
Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)

INSTALLATION

1. **INSTALL TRANSMISSION VALVE BODY ASSEMBLY (See page AX-183)**
2. **INSTALL VALVE BODY OIL STRAINER ASSEMBLY (See page AX-184)**
3. **INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY (See page AX-185)**
4. **INSTALL AUTOMATIC TRANSAXLE ASSEMBLY** (See page AX-214)

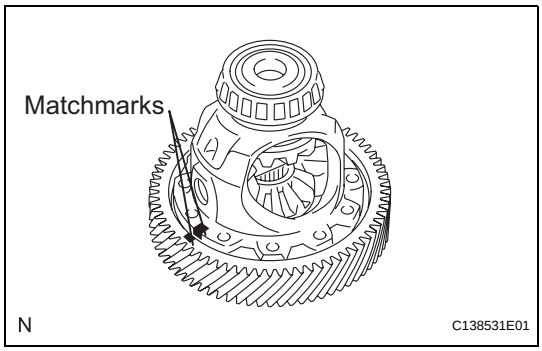
DIFFERENTIAL CASE

COMPONENTS



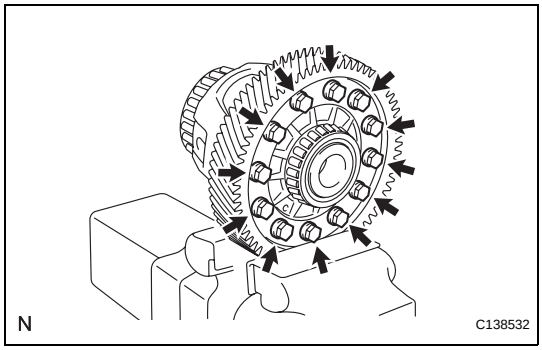
AX

DISASSEMBLY

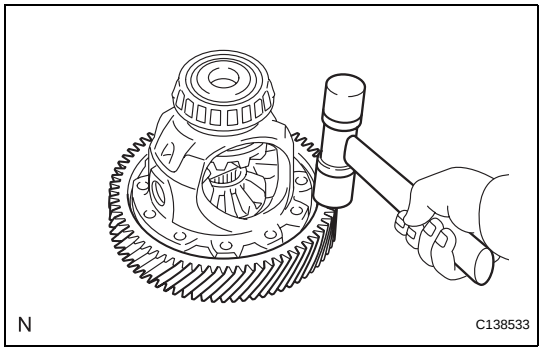


1. REMOVE FRONT DIFFERENTIAL RING GEAR

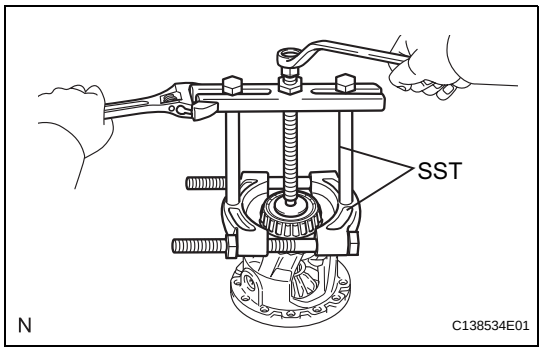
(a) Put matchmarks on the front differential ring gear and differential case.



(b) Remove the 12 bolts.



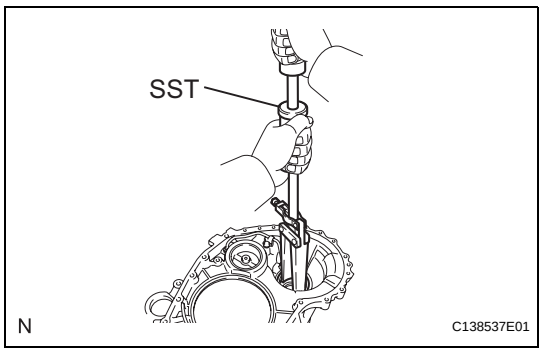
(c) Using a plastic hammer, tap on the front differential ring gear to remove it from the case.



2. REMOVE FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

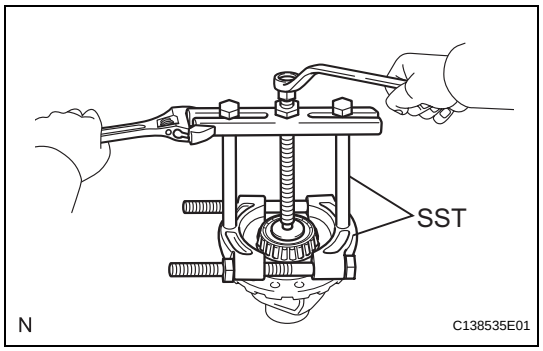
(a) Using SST, remove the front differential case front tapered roller bearing from the differential case.

SST 09950-00020, 09950-00030, 09950-60010 (09951-00480)



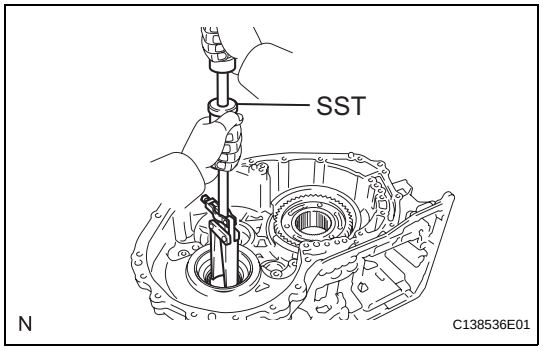
(b) Using SST, remove the front differential case front tapered roller bearing outer race and shim from the transaxle housing.

SST 09308-00010

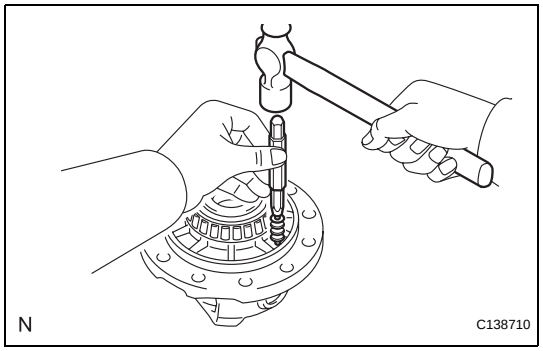


3. REMOVE FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front differential case rear tapered roller bearing from the differential case.
SST 09950-00020, 09950-00030, 09950-60010 (09951-00480)

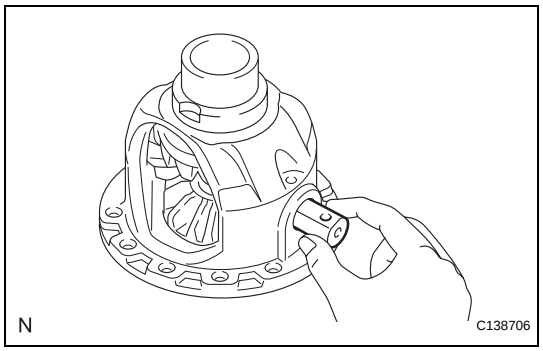


(b) Using SST, remove the front differential case rear tapered roller bearing outer race from the transaxle case.
SST 09308-00010



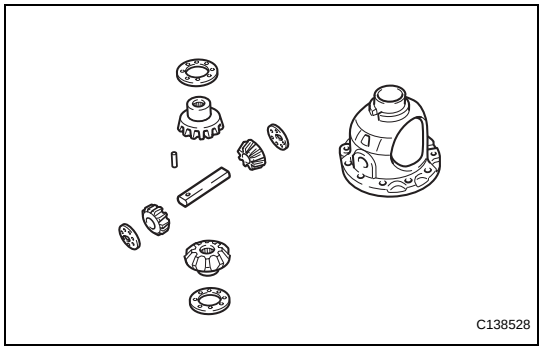
4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch (3 mm) and hammer, remove the straight pin.
NOTICE:
Before removing the straight pin, unstake it with a pin punch.



5. REMOVE FRONT NO. 1 DIFFERENTIAL PINION SHAFT

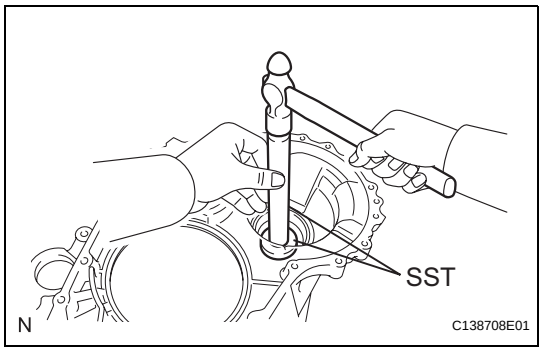
(a) Remove the front No. 1 differential pinion shaft from the differential case.



6. REMOVE DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 pinion thrust washers, 2 front differential side gears, and 2 side gear thrust washers from the differential case.

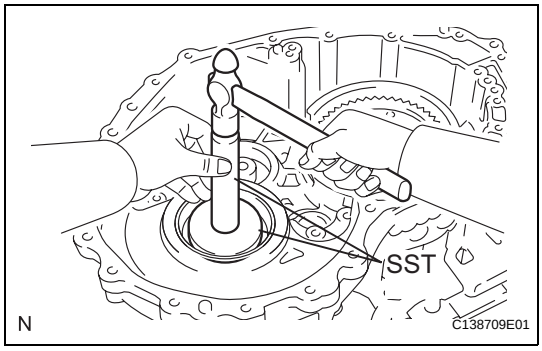
AX



7. REMOVE FRONT TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, remove the front transaxle case oil seal from the transaxle housing.

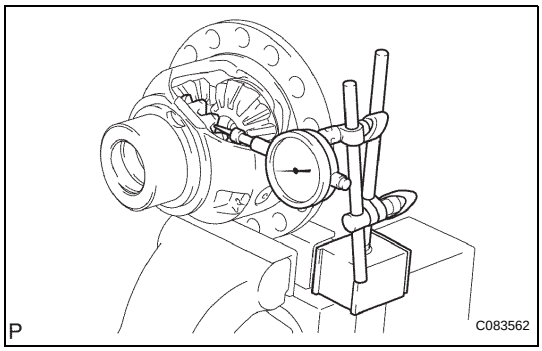
SST 09950-60010 (09951-00540), 09950-70010 (09951-07200)



8. REMOVE TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, remove the transaxle case oil seal from transaxle case.

SST 09950-60010 (09951-00650), 09950-70010 (09951-07100)



INSPECTION

1. INSPECT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Hold the differential case in a vise between aluminum plates.

NOTICE:

Do not overtighten the vise.

(b) Place a dial indicator on the tip of the side gear tooth at a right angle.

(c) Hold the pinion gear in the differential case and measure the backlash of the side gear.

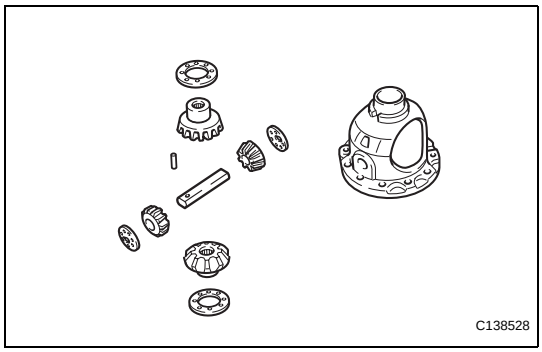
Standard backlash:

0 to 0.15 mm (0 to 0.0059 in.)

Thrust washer thickness

Thickness	Thickness
1.50 mm (0.0591 in.)	1.75 mm (0.0689 in.)
1.55 mm (0.0610 in.)	1.80 mm (0.0709 in.)
1.60 mm (0.0630 in.)	1.85 mm (0.07283 in.)
1.65 mm (0.0650 in.)	1.90 mm (0.07480 in.)
1.70 mm (0.0669 in.)	-

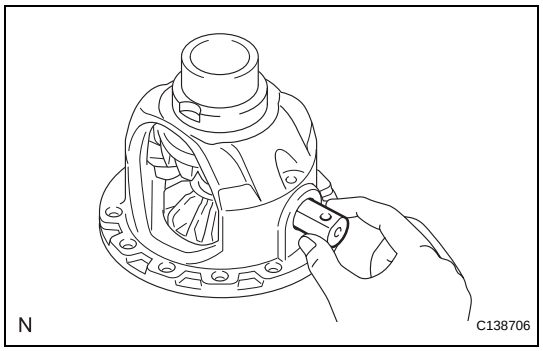
If the backlash is greater than the standard range, select another side gear thrust washer.



REASSEMBLY

1. INSTALL DIFFERENTIAL SIDE GEAR

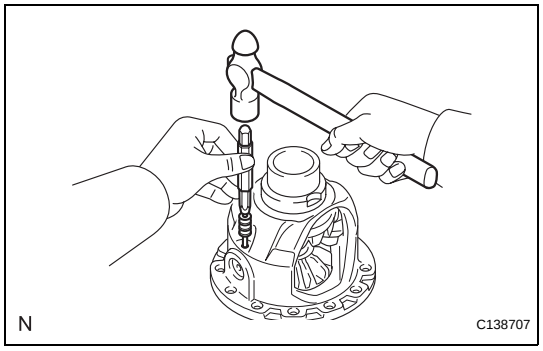
(a) Coat the 2 front differential side gears, 2 side gear thrust washers, 2 front differential pinions and 2 pinion thrust washers with ATF and install them to the differential case.



2. INSTALL FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Coat the front No. 1 differential pinion shaft with ATF, and install it to the differential case.

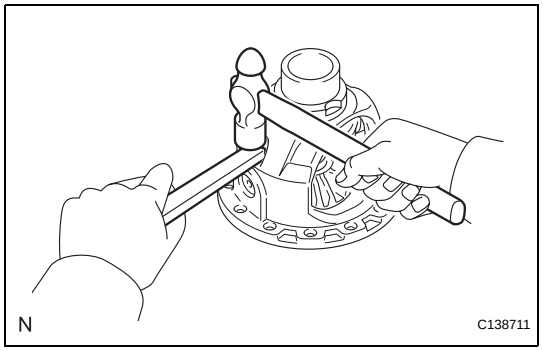
3. INSPECT DIFFERENTIAL SIDE GEAR BACKLASH (See page AX-332)



4. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

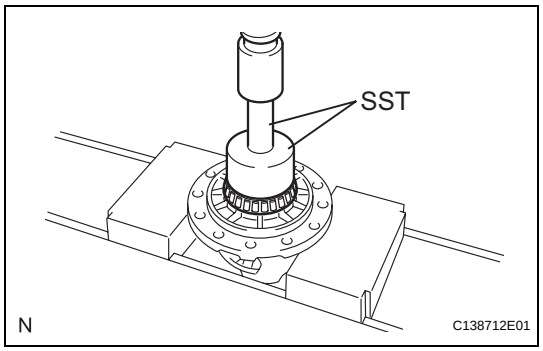
(a) Using a pin punch (3 mm) and hammer, install the pinion shaft straight pin.

NOTICE:
Align the holes, and install the pinion shaft straight pin.



(b) Using a chisel and hammer, stake the differential case.

NOTICE:
Stake the differential case after adjusting the backlash.

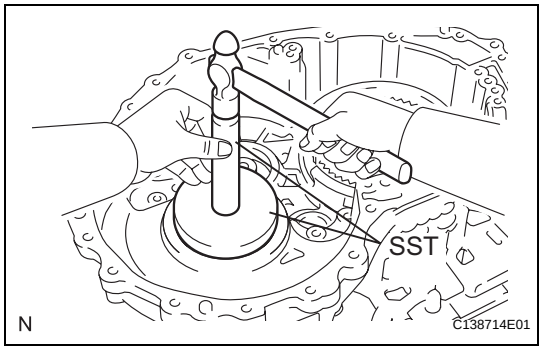


5. INSTALL FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a press, install the front differential case rear tapered roller bearing to the differential case.

SST 09710-04081, 09950-60010 (09951-00480), 09950-70010 (09951-07100)

NOTICE:
Do not damage the bearing cage during bearing inner race installation.

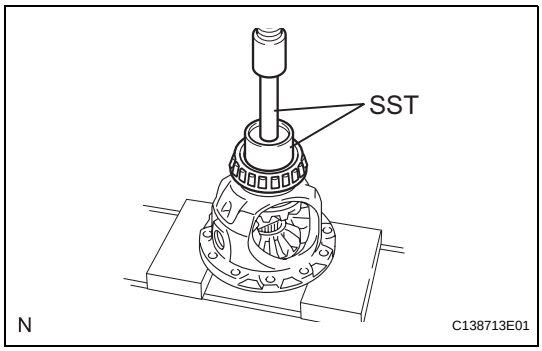


(b) Using SST and a hammer, install the front differential case rear tapered roller bearing outer race to the transaxle case.

SST 09950-70010 (09951-07150), 09950-60020 (09951-00790)

NOTICE:
Ensure that there is no clearance between the bearing and transaxle case.

AX



6. INSTALL FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING

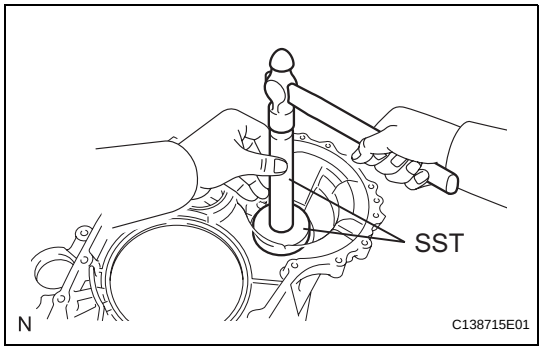
(a) Using SST and a press, install the front differential case front tapered roller bearing to the differential case.

SST 09710-04081, 09950-60010 (09951-00480), 09950-70010 (09951-07100)

NOTICE:

Do not damage the bearing cage during bearing inner race installation.

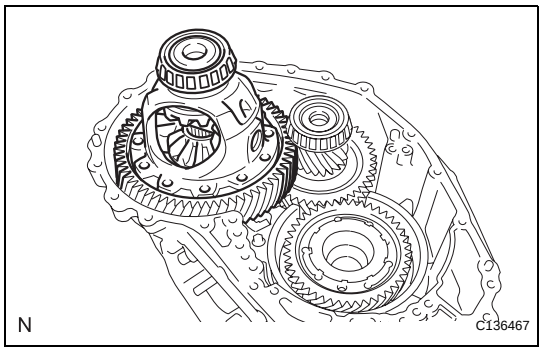
(b) Install the shim to the transaxle housing.



(c) Using SST and a hammer, install the front differential case front tapered roller bearing outer race to the transaxle housing.

NOTICE:

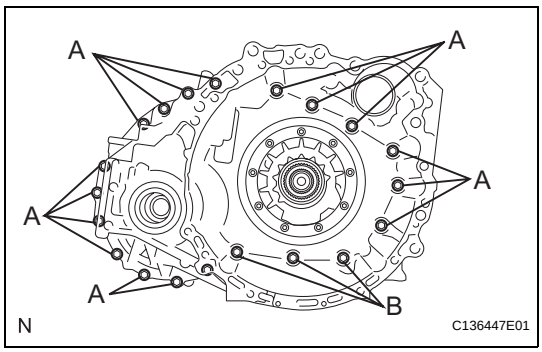
Ensure that there is no clearance between the bearing and transaxle housing.



7. ADJUST DIFFERENTIAL SIDE BEARING PRELOAD

(a) Install the differential assembly to the transaxle case.

(b) Clean the contact surfaces of the transaxle case and transaxle housing.



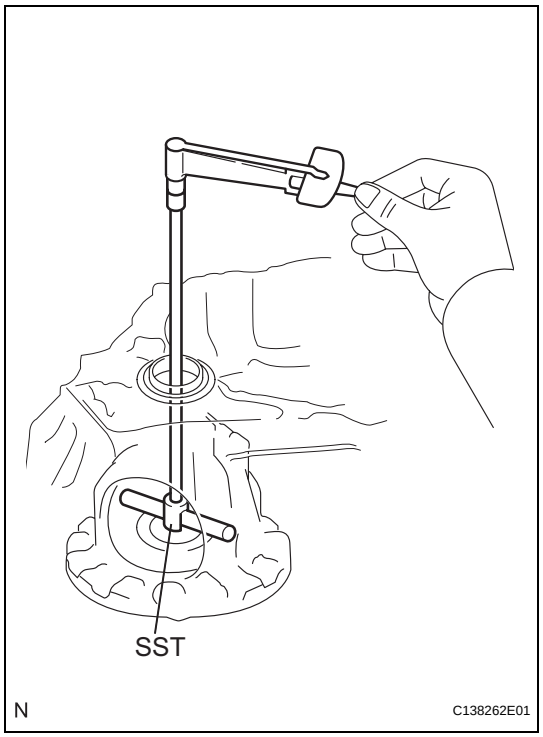
(c) Install the transaxle housing to the transaxle case with the 20 bolts.

Torque: Bolt A

31 N*m (316 kgf*cm, 23 ft.*lbf)

Bolt B

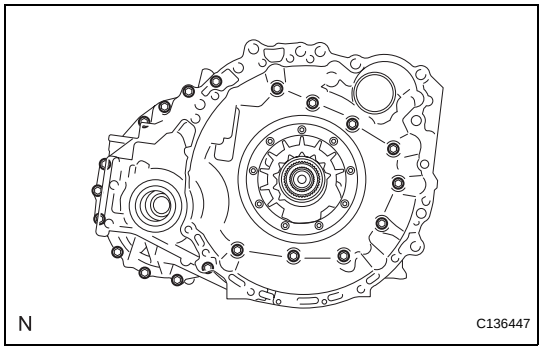
23 N*m (234 kgf*cm, 17 ft.*lbf)



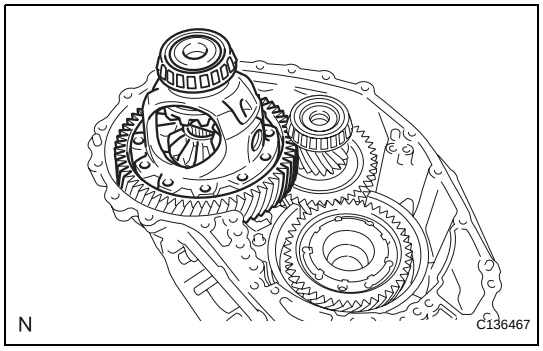
(d) Using SST, turn the differential assembly right and left 2 or 3 times to settle the bearing.
SST 09564-33010

(e) Using SST and a torque wrench, measure the turning torque of the differential side bearing while rotating SST at 10 rpm.
SST 09564-33010
Turning torque:
1.05 to 1.93 N*m (10.70 to 19.67 kgf*cm, 9.29 to 17.08 in.*lbf)
If the turning torque is not within the specified range, refer to the table below to select a shim so that the turning torque is within the specified range.
Shim thickness: mm (in.)

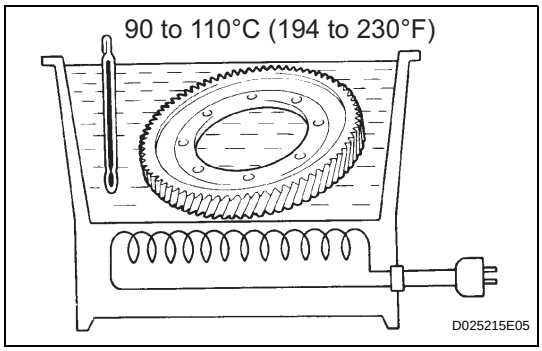
Thickness	Thickness	Thickness	Thickness
2.000 (0.0787)	2.225 (0.0876)	2.450 (0.0965)	2.675 (0.1054)
2.025 (0.0797)	2.250 (0.0886)	2.475 (0.0974)	2.700 (0.1063)
2.050 (0.0807)	2.275 (0.0896)	2.500 (0.0984)	2.725 (0.1073)
2.075 (0.0817)	2.300 (0.0906)	2.525 (0.0994)	2.750 (0.1083)
2.100 (0.0827)	2.325 (0.0915)	2.550 (0.1004)	2.775 (0.1093)
2.125 (0.0837)	2.350 (0.0925)	2.575 (0.1014)	2.800 (0.1102)
2.150 (0.0847)	2.375 (0.0935)	2.600 (0.1024)	2.825 (0.1112)
2.175 (0.0856)	2.400 (0.0945)	2.625 (0.1034)	2.850 (0.1122)
2.200 (0.0866)	2.425 (0.0955)	2.650 (0.1043)	2.875 (0.1132)



(f) Remove the 20 bolts and the transaxle housing from the transaxle case.



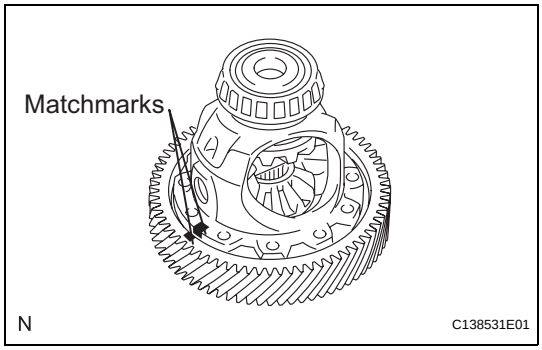
(g) Remove the differential assembly from the transaxle case.



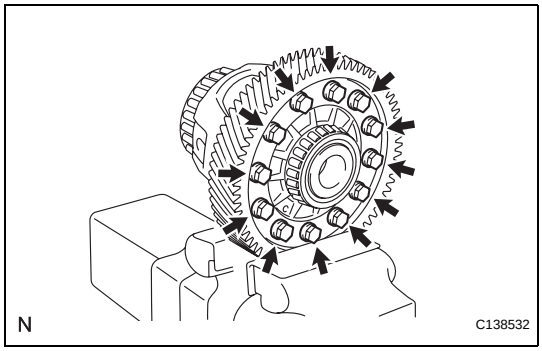
8. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Using ATF and a heater, heat the front differential ring gear to 90 to 110°C (194.0 to 230.0°F).
NOTICE:
Do not heat the ring gear to more than 110°C (230.0°F).

(b) Clean the contact surface of the front differential case.



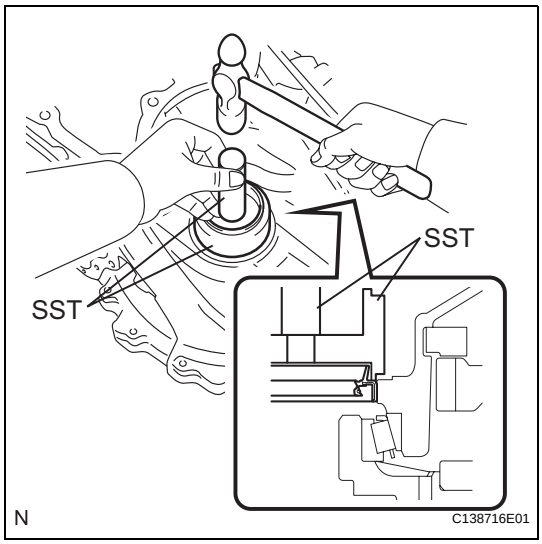
(c) Align the matchmarks, and install the front differential ring gear case quickly.
NOTICE:
Do not install the bolts while the ring gear is hot.



(d) Tighten the 12 bolts.
Torque: 120 N*m (1,223 kgf*cm, 88 ft.*lbf)
NOTICE:
Tighten the bolts a little at a time in diagonal order.

9. INSTALL TRANSAXLE CASE OIL SEAL

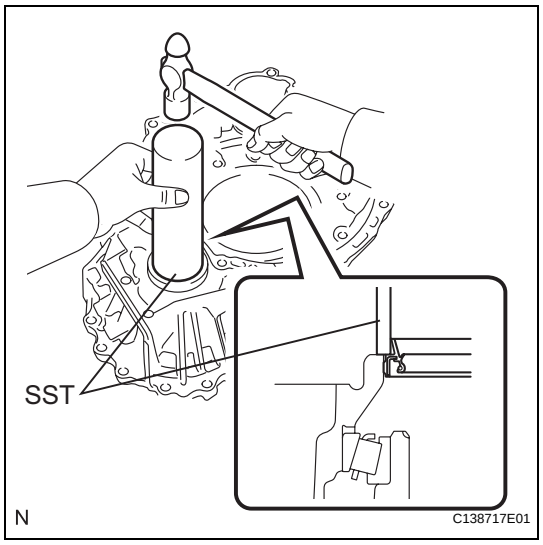
(a) Coat the lip of a new oil seal with MP grease.



(b) Using SST and a hammer, install the oil seal.
SST 09316-10010, 09950-70010 (09951-07100)
Oil seal drive in depth:
-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

10. INSTALL FRONT TRANSAXLE CASE OIL SEAL

(a) Coat the lip of a new oil seal with MP grease.



(b) Using SST and a hammer, install the oil seal.
SST 09308-14010
Oil seal drive in depth:
-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

SYSTEM DESCRIPTION

1. POWER WINDOW CONTROL SYSTEM DESCRIPTION

(a) The power window control system controls the power window operation using the power window regulator motors. The main controls of this system are the power window regulator master switch, which is mounted on the driver side door, and the power window regulator switches, which are mounted on the passenger side door and rear doors. Operating a window switch results in electrical power being transmitted to the corresponding power window regulator motor.

(b) The power window control system has the following functions:

Function	Outline
Manual up-and-down function	Function that causes window to go up while power window switch is being pulled halfway up and to go down while pushed halfway down. Window stops as soon as the switch is released.
Driver's door auto up-and-down function *	Function that enables windows of driver's doors to be fully opened or closed by one press of power window switch.
Jam protection function	Function that automatically stops power window and moves it downward if a foreign object gets jammed in door window during auto-up operation.
Remote control function	Function that allows power window master switch to control MANUAL up-and-down operations of front passenger door window and rear door windows.
Key-off operation function	Function that makes it possible to operate power window for approx. 45 seconds after ignition switch is turned on (ACC) or off, if either front door is not opened.
Key-linked up-and-down function	Function that causes window to go up while driver's door key is turned to lock side for more than 1.5 seconds and to go down while turned to unlock side for more than 1.5 seconds. Window stops as soon as the key is returned to original position.
Diagnosis	Function that allows the power window switch to make a diagnosis for failed section when power window switch detects a malfunction in power window system. Power window switch light comes on or blinks to inform driver.
Fail-safe	A fail-safe function to disable a part of power window functions if pulse sensor in power window motor has a malfunction: Driver's door auto up-and-down function and remote control function are disabled.

*: with Jam Protection

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the power window control system.
- The intelligent tester should be used in steps 3 and 5.

OPERATION CHECK

1. CHECK WINDOW LOCK SWITCH

(a) Check that the front passenger side power window and rear power windows operation are disabled when the window lock switch of the power window master switch is pressed.

Standard:

Front passenger side power window and rear power windows operation are disabled.

(b) Check that the front passenger side power window and rear power windows can be operated when the window lock switch is pressed again.

Standard:

Front passenger side power window and rear power windows can be operated.

2. CHECK MANUAL UP/DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
Ignition switch on (IG)	Driver side	Pulled halfway up	UP (Closed)
		Pushed halfway down	DOWN (Open)

(b) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Switch	Switch Operation	Power Window
• Ignition switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)

3. CHECK AUTO UP/DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

Standard

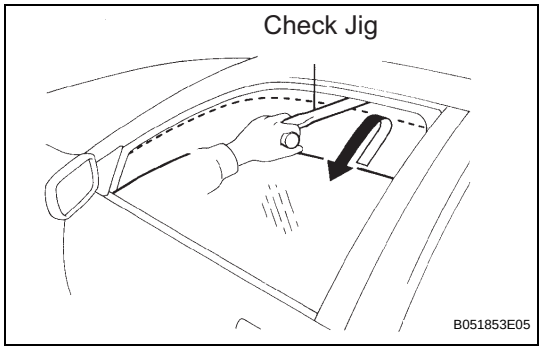
Condition	Master Switch	Switch Operation	Power Window
Ignition switch on (IG)	Driver side	Pulled up fully	UP (Closed)
		Pushed down fully	DOWN (Open)

4. CHECK REMOTE MANUAL UP/DOWN FUNCTION

(a) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
• Ignition switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)



5. CHECK JAM PROTECTION FUNCTION

NOTICE:

- **The jam protection function can activate when either the AUTO UP function or MANUAL UP function is used.**
- **Limbs, fingers or other body parts should not be used to test the jam protection function. Do not allow any body parts to get caught by the moving window or regulator.**

HINT:

The jam protection function can activate when either the AUTO UP function or MANUAL UP function are used with the ignition switch ON. The jam protection function can also activate as long as the driver's door remains closed, within 45 seconds after the ignition switch is turned off.

(a) Check the reversing distance.
  (1) Fully open the door glass.
  (2) Place a check jig measuring 4 to 10 mm (0.16 to 0.40 in.) thick near the window fully closed position.
  (3) When the door glass is closed using AUTO or MANUAL operation, check that the door glass goes down after contacting the check jig. The glass should go 200 to 240 mm (7.90 to 9.44 in.) away from the position where it contacted the check jig.
  (4) While the door glass is going down, verify that the window switch can not be used to make the glass go up.

(b) Check the reversing distance.
  (1) Fully open the door glass.

(2) Place a check jig measuring 200 to 250 mm (7.90 to 9.84 in.) thick near the window fully closed position.
(3) When the door glass is closed using AUTO or MANUAL operation, check that the door glass goes down after contacting the check jig. The door glass should go 80 to 100 mm away from the position where it contacted the check jig.
(4) While the door glass is going down, verify that the window switch can not be used to make the glass go up.

INITIALIZATION

1. INITIALIZE POWER WINDOW REGULATOR MOTOR FRONT LH (WITH JAM PROTECTION)

NOTICE:

- **If the power window motor or power window regulator assembly is replaced, initialization is required (initialization is not necessary when the negative battery terminal is disconnected and reconnected).**
- **No other electrical systems should be operated during initialization. Initialization will be interrupted if a voltage drop occurs in the power being supplied to the power window motor.**
- **Replacing the door glass or door glass run may cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.**

HINT:

- The AUTO UP function will not work unless initialization is completed.
- The indicator on the power window master switch will blink when the ignition switch is ON, until initialization has been completed. The indicator will remain on after initialization is successfully completed.

(a) Connect the negative battery terminal.

(b) Turn the ignition switch on (IG). The indicator on the power window master switch will blink.

(c) Fully close the door glass by operating the power window master switch. After the door glass stops, hold the power window master switch in the AUTO UP position for 1 second or more.

(d) Check that the indicator on the power window master switch remains on.

HINT:

If the indicator does not remain on, this means that initialization has not been completed successfully. In this case, lower the door glass at least 50 mm (1.96 in.) and hold the power window master switch in the AUTO UP position for 1 second after the window closes fully.

2. TO RETURN THE SYSTEM TO THE PRE-INITIALIZES CONDITION

Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

WS

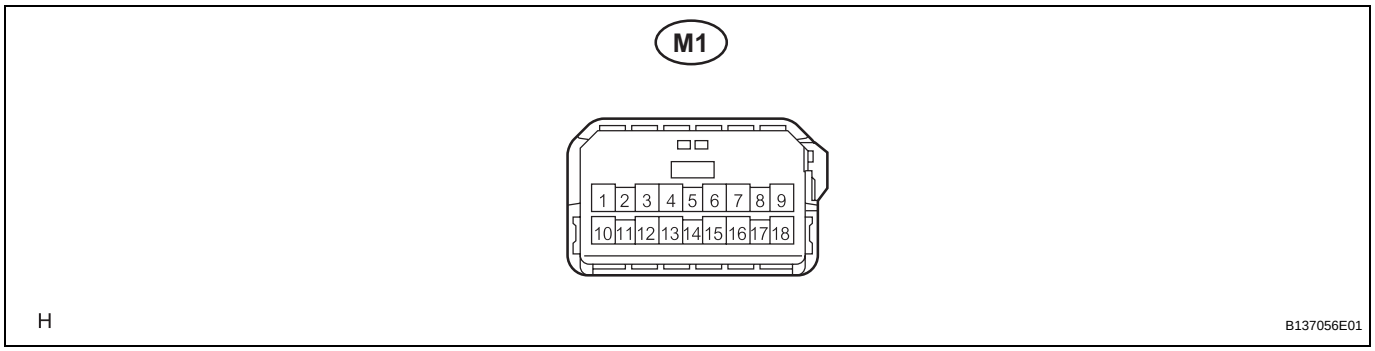
PROBLEM SYMPTOMS TABLE

POWER WINDOW CONTROL SYSTEM

Symptom	Suspected area	See page
Power window does not operate with power window regulator master switch	1. PWR, POWER, RR DOOR LH/RH fuses	-
	2. Power window master switch circuit (power source)	WS-26
	3. Power window regulator motor circuit	WS-33
	4. Power window regulator master switch	-
Front passenger side power window does not operate with power window regulator switch	1. Power window master switch circuit (power source)	-
	2. Power window regulator motor circuit (front passenger side)	WS-36
	3. Power window regulator switch (front LH side)	WS-30
Rear LH side power window does not operate with power window regulator switch	1. Power window regulator switch circuit (power source)	-
	2. Power window regulator motor circuit (rear LH side)	WS-38
	3. Power window regulator switch (rear LH side)	WS-31
Rear RH side power window does not operate with power window regulator switch	1. Power window regulator switch circuit (power source)	-
	2. Power window regulator motor circuit (rear RH side)	WS-40
	3. Power window regulator switch (rear RH side)	WS-32
AUTO UP/DOWN function does not operate on driver side (Only jam protection assistant)	1. Diagnosis check	WS-14
	2. Power window regulator motor reset	WS-8
	3. Power window regulator master switch	-
	4. Wire harness	-
Remote UP/DOWN function does not operate	1. DATA LIST/ACTIVE TEST	WS-17
	2. Power window regulator master switch	-
	3. Wire harness	-
Power window can be operated after ignition switch is turned off even if operated conditions are not met	1. Front door courtesy switch	LI-109
	2. Wire harness (LIN communication line)	-
AUTO UP operation does not fully close power window (Jam protection function is activated)	1. Power window regulator motor reset	WS-8
	2. Check & clean glass run	-
	3. Power window regulator master switch	-
AUTO DOWN function does not operate on driver side (only DOWN AUTO)	1. Power window regulator master switch	-
	2. Power window regulator motor circuit (driver side)	WS-33
	3. Wire harness	-

TERMINALS OF ECU

1. POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY



(a) Disconnect the M1 switch connector.
(b) Measure the voltage and resistance of each terminal according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (M1-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (M1-6) - E (M1-1)	GR - W-B	Power supply	Ignition switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the M1 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:
with Jam protection

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
UP (M1-8) - E (M1-1)	G - W-B	Power window motor UP output	Ignition switch on (IG), driver side power window switch OFF → UP (Manual operation)	10 to 14 V → 0 V
AUTO (M1-4) - E (M1-1)	B - W-B	Power window motor AUTO UP output	Ignition switch on (IG), driver side power window fully open → driver side power window switch UP (AUTO UP position) → driver side power window fully closed	10 to 14 V → 0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Ignition switch on (IG), driver side power window fully closed → driver side power window switch DOWN (AUTO UP position) → driver side power window fully open	10 to 14 V → 0 V → 10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
DN (M1-5) - E (M1-1)	R - W-B	Power window motor DOWN output	Ignition switch on (IG), driver side power window switch OFF → DOWN (Manual operation)	10 to 14 V → 0 V
PU (M1-16) - E (M1-1)	W - W-B	Power window motor UP output	Ignition switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
PD (M1-15) - E (M1-1)	R - W-B	Power window motor DOWN output	Ignition switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
RLU (M1-12) - E (M1-1)	L - W-B	Power window motor UP output	Ignition switch on (IG), rear LH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
RLD (M1-13) - E (M1-1)	B - W-B	Power window motor DOWN output	Ignition switch on (IG), rear LH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
RRU (M1-10) - E (M1-1)	Y - W-B	Power window motor UP output	Ignition switch on (IG), rear RH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
RRD (M1-18) - E (M1-1)	LG - W-B	Power window motor DOWN output	Ignition switch on (IG), rear RH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

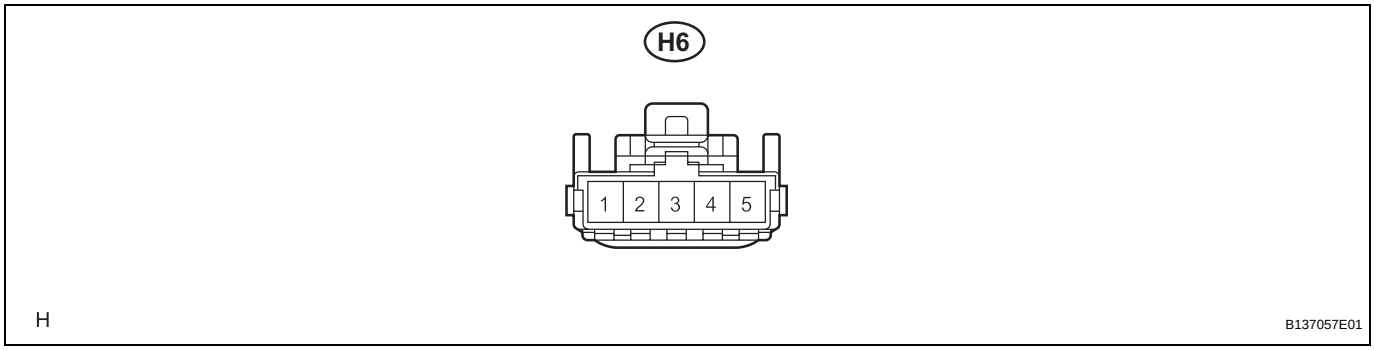
without Jam protection

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
UP (M1-3) - E (M1-1)	G - W-B	Power window motor UP output	Ignition switch on (IG), driver side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
DN (M1-4) - E (M1-1)	G - W-B	Power window motor DOWN output	Ignition switch on (IG), driver side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
		Power window motor AUTO DOWN output	Ignition switch on (IG), driver side power window fully closed → driver side power window switch DOWN (AUTO operation) → driver side power window fully open	10 to 14 V → 0 V → 10 to 14 V
PU (M1-16) - E (M1-1)	W - W-B	Power window motor UP output	Ignition switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
PD (M1-15) - E (M1-1)	R - W-B	Power window motor DOWN output	Ignition switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
RLU (M1-12) - E (M1-1)	L - W-B	Power window motor UP output	Ignition switch on (IG), rear LH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RLD (M1-13) - E (M1-1)	B - W-B	Power window motor DOWN output	Ignition switch on (IG), rear LH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
RRU (M1-10) - E (M1-1)	Y - W-B	Power window motor UP output	Ignition switch on (IG), rear RH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
RRD (M1-18) - E (M1-1)	LG - W-B	Power window motor DOWN output	Ignition switch on (IG), rear RH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

2. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (FRONT RH)



(a) Disconnect the H6 switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (H6-3) - Body ground	GR - Body ground	Power supply	Ignition switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

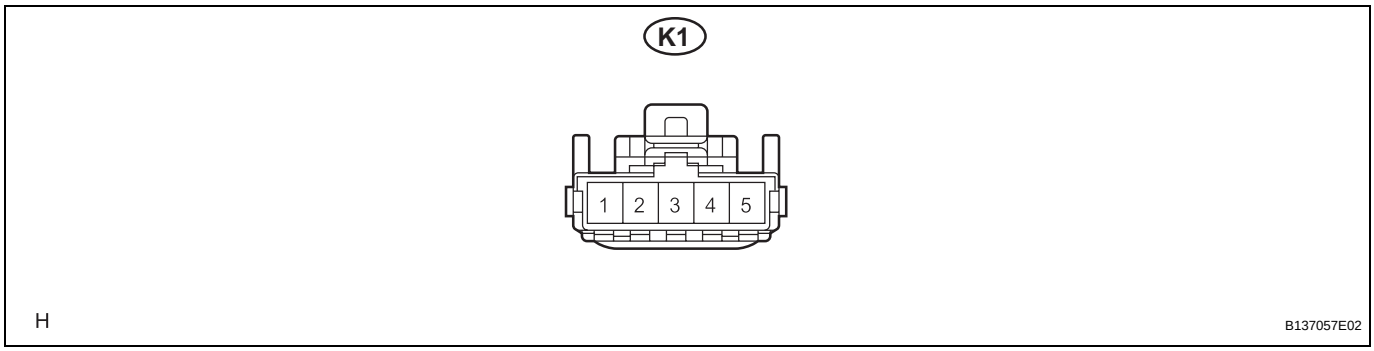
(c) Reconnect the H6 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (H6-4) - Body ground	G - Body ground	Power window motor UP output	Ignition switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
D (H6-1) - Body ground	Y - Body ground	Power window motor DOWN output	Ignition switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

3. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR LH)



(a) Disconnect the K1 switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (K1-3) - Body ground	V - Body ground	Power supply	Ignition switch on (IG)	10 to 14 V

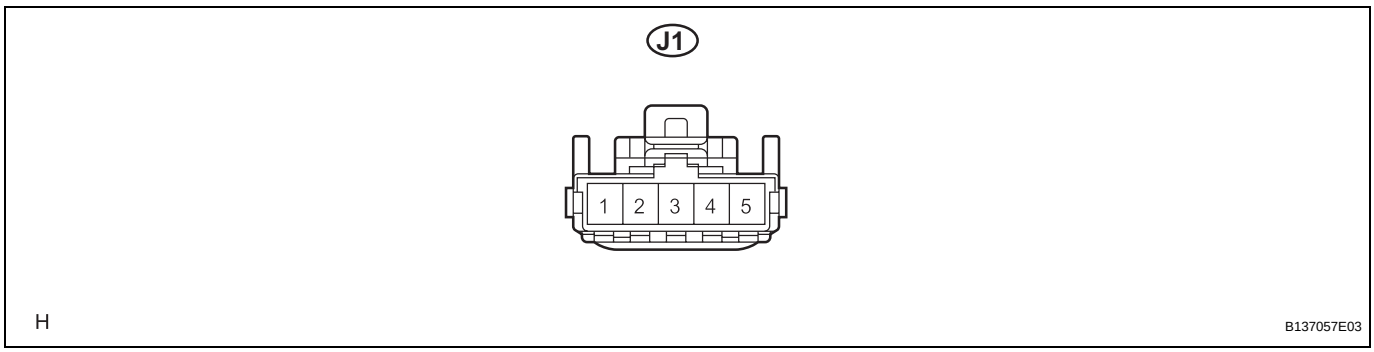
If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the K1 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (K1-4) - Body ground	G - Body ground	Power window motor UP output	Ignition switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
D (K1-1) - Body ground	R - Body ground	Power window motor DOWN output	Ignition switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

4. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR RH)



(a) Disconnect the J1 switch connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (J1-3) - Body ground	G - Body ground	Power supply	Ignition switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the J1 switch connector and reset the power window motor.

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (J1-4) - Body ground	V - Body ground	Power window motor UP output	Ignition switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
D (J1-1) - Body ground	R - Body ground	Power window motor DOWN output	Ignition switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

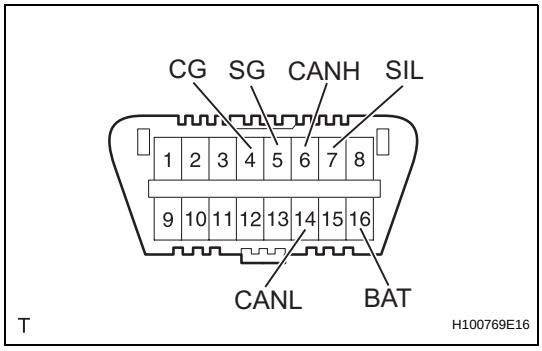
WS

DIAGNOSIS SYSTEM

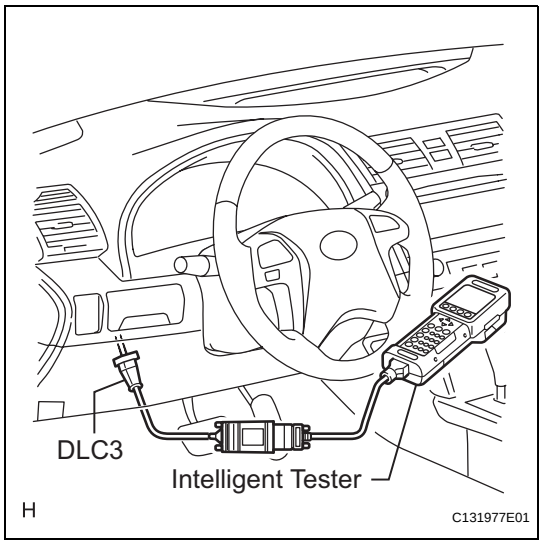
1. DESCRIPTION

(a) The power window control system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3



(a) The ECU uses ISO 15765-4 communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or more

NOTICE:

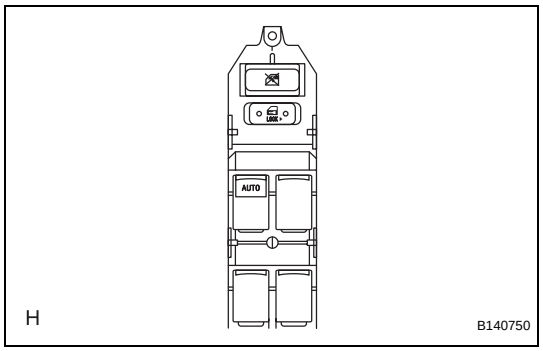
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. CHECK DIAGNOSIS (WITH JAM PROTECTION)

HINT:

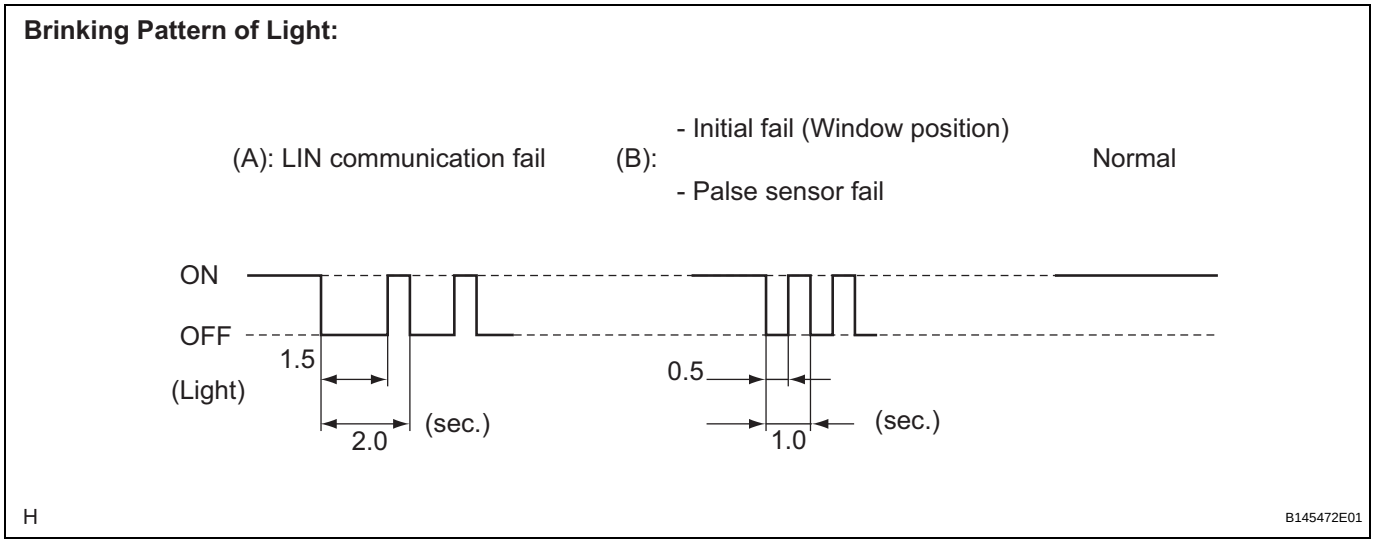
If there is a malfunction in the pulse sensor, manually operating the power window switch will cause the power window switch light to blink.

(a) Turn the ignition switch on (IG).

(b) Manually operate the power window master switch or power window switch on each door.

(c) Check the blinking pattern of the AUTO light as shown in the illustration.

Brinking Pattern of Light:



(1) If pattern (A) is displayed, check the wire harness or power window ECU.

(2) If pattern (B) is displayed, check the power window regulator motor or power window ECU.

(3) If the normal pattern is displayed, replace the power window regulator master switch.

WS

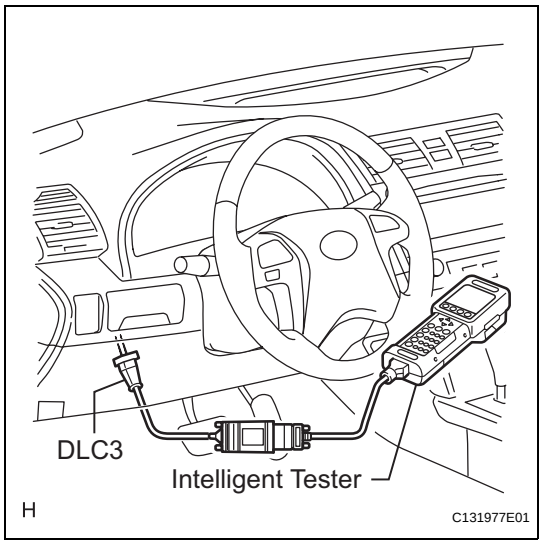
DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Check the DTC(s).

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) .
(c) Clear the DTCs.
(d) Check that "DTCs are cleared" is displayed.
NOTICE:
If any DTCs are output, troubleshoot those DTCs again.



FAIL-SAFE CHART

1. POWER WINDOW OPERATION IN FAIL-SAFE MODE

HINT:

If the pulse sensor built into the power window regulator motor (on the driver side) malfunctions, the power window control system enters fail-safe mode.

Fail mode	Fail Detection Condition
Pulse direction error	With the door glass going up or down, the pulse that indicates door glass operation in the opposite direction is detected for 400 msec.
Pulse stop error	With the door glass going up or down, no pulse is detected for 350 to 450 msec.

(a) The power window control system prohibits the following power window operation when the pulse sensor for the jam protection function has problems and the window position or the learned value is abnormal.

Power window control system

Power window operation	Ignition switch on (IG)	Key-off (Within approx. 45 seconds after ignition switch turned off)	Key-off (After approx. 45 seconds elapsed after ignition switch turned off)
Manual UP	Operation prohibited	Operation prohibited	Operation prohibited
Manual DOWN	Operative (Jam protection not operative)	Operation prohibited	Operation prohibited
AUTO UP (hold switch at AUTO UP position)	Operative (in MANUAL mode) (Jam protection not operative)	Operation prohibited	Operation prohibited
AUTO UP	Operation prohibited	Operation prohibited	Operation prohibited
AUTO DOWN	Operation prohibited	Operation prohibited	Operation prohibited

HINT:

When the pulse sensor is normal, the AUTO UP / DOWN function can be resumed by deactivating fail-safe mode. To deactivate fail-safe mode, pull up the driver door power window switch to the AUTO UP position and hold it for at least 1 second to fully close the window from the fully open position.

(b) If the LIN communication system malfunctions (communication blackout), the power window control system prohibits the following operations.

LIN communication system

Power window operation	Ignition switch on (IG)
MANUAL UP	Operative (Jam protection operative)
MANUAL DOWN	Operative (Jam protection not operative)
AUTO UP (hold switch at AUTO UP position)	Operative (Jam protection operative)
AUTO UP	Operative (Jam protection operative)
AUTO DOWN	Operative (Jam protection not operative)

WS

DATA LIST / ACTIVE TEST

1. USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Monitor the ECU data by following the prompts on the tester screen.

HINT:

The intelligent tester has a "Snapshot" function which records the monitored data. Refer to the intelligent tester operator's manual for further details.

2. DATA LIST

HINT:

Using the DATA LIST displayed on the intelligent tester, the value of the switches, sensors, actuators, etc. can be read without part removal. Reading the DATA LIST as the first step in troubleshooting is one way to shorten the labor time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Read the DATA LIST according to the display on the tester.

Body:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
Communication Master SW	Master switch communication signal OK/STOP	OK: Communication is normal STOP: Communication is stop	-
Ignition Switch	Ignition switch signal/ON or OFF	ON: Power source mode is (IG) OFF: Power source mode is off or on (ACC)	-
D Door Courtesy SW	Driver side door courtesy switch signal/ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
P Door Courtesy SW	Front passenger side door courtesy switch signal/ON or OFF	ON: Front passenger side door is open OFF: Front passenger side door is closed	-

3. ACTIVE TEST

HINT:

Performing the ACTIVE TEST using the intelligent tester allows you to operate the relay, VSV, actuator, etc. without parts removal. Performing the ACTIVE TEST as the first step in troubleshooting is one way to shorten the labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Perform the ACTIVE TEST according to the display on the tester.

Body:

Item	Test Detail	Diagnostic Note
IG OFF P/W Control Permission Output	Operates power window ON/OFF (After ignition OFF)	-

DIAGNOSTIC TROUBLE CODE CHART

POWER WINDOW CONTROL SYSTEM

DTC No.	Detection Item	Trouble Area	See page
B2311	Driver Door Motor Malfunction	1. Battery disconnection when the ignition switch is on (IG) 2. Power window regulator motor (on driver side) 3. Incorrect installation of power window components 4. Overheated power window regulator motor (on driver side)	WS-19
B2312	Driver Side Door Master Switch Malfunction	1. Power window regulator motor (on driver side) 2. Power window regulator master switch 3. Wire harness 4. Power window regulator master switch is held same position for more than 20 seconds	WS-21
B2313	Glass Position Initialization Incomplete	1. Power window regulator motor (on driver side) 2. Power window regulator motor (on driver side) not initialized	WS-24

DTC	B2311	Driver Door Motor Malfunction

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).

DTC B2311 is set when the ECU for the driver door power window regulator motor assembly malfunctions.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

HINT:

- Initialization is required only when the power window regulator motor is replaced. However, replacing the motor may cause the motor gear to be engaged in a different position. This can cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.
- To return the system to the pre-initialized condition:
  Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

DTC No.	DTC Detection Condition	Trouble Area
B2311	When either condition below is met: • The power window regulator motor (on driver side) malfunctions • When the ECU in the power widow regulator motor (on driver side) determines that the fully closed window position has deviated approximately 20 mm (0.79 in.) or more from the normal position	• Battery disconnection when the ignition switch is on (IG) • Power window regulator motor (on driver side) • Incorrect installation of power window components • Overheated power window regulator motor (on driver side)

INSPECTION PROCEDURE

1	INITIALIZE POWER WINDOW CONTROL SYSTEM

(a) Initialize the power window regulator motor assembly (on the driver side) (see page WS-8).

(b) Check that the power window operates normally by opening and closing the window.

OK:

Driver side power window operates normally.

NG → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (for Driver Side)**

OK

2	**CHECK WHETHER PARTS HAVE BEEN INSTALLED CORRECTLY**

(a) Check that the power window components (on the driver side) are installed correctly.

OK:

Power window components (on driver side) are installed correctly.

HINT:

When the power window components are installed correctly, the problem has been caused by battery disconnection while the ignition switch is on (IG), improper installation of the power window components or the motor being overheated.

NG → **INSTALL PARTS CORRECTLY**

OK

END

DTC	B2312	Driver Side Door Master Switch Malfunction

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).

When the ECU determines that the power window master switch is stuck, DTC B2312 is set.

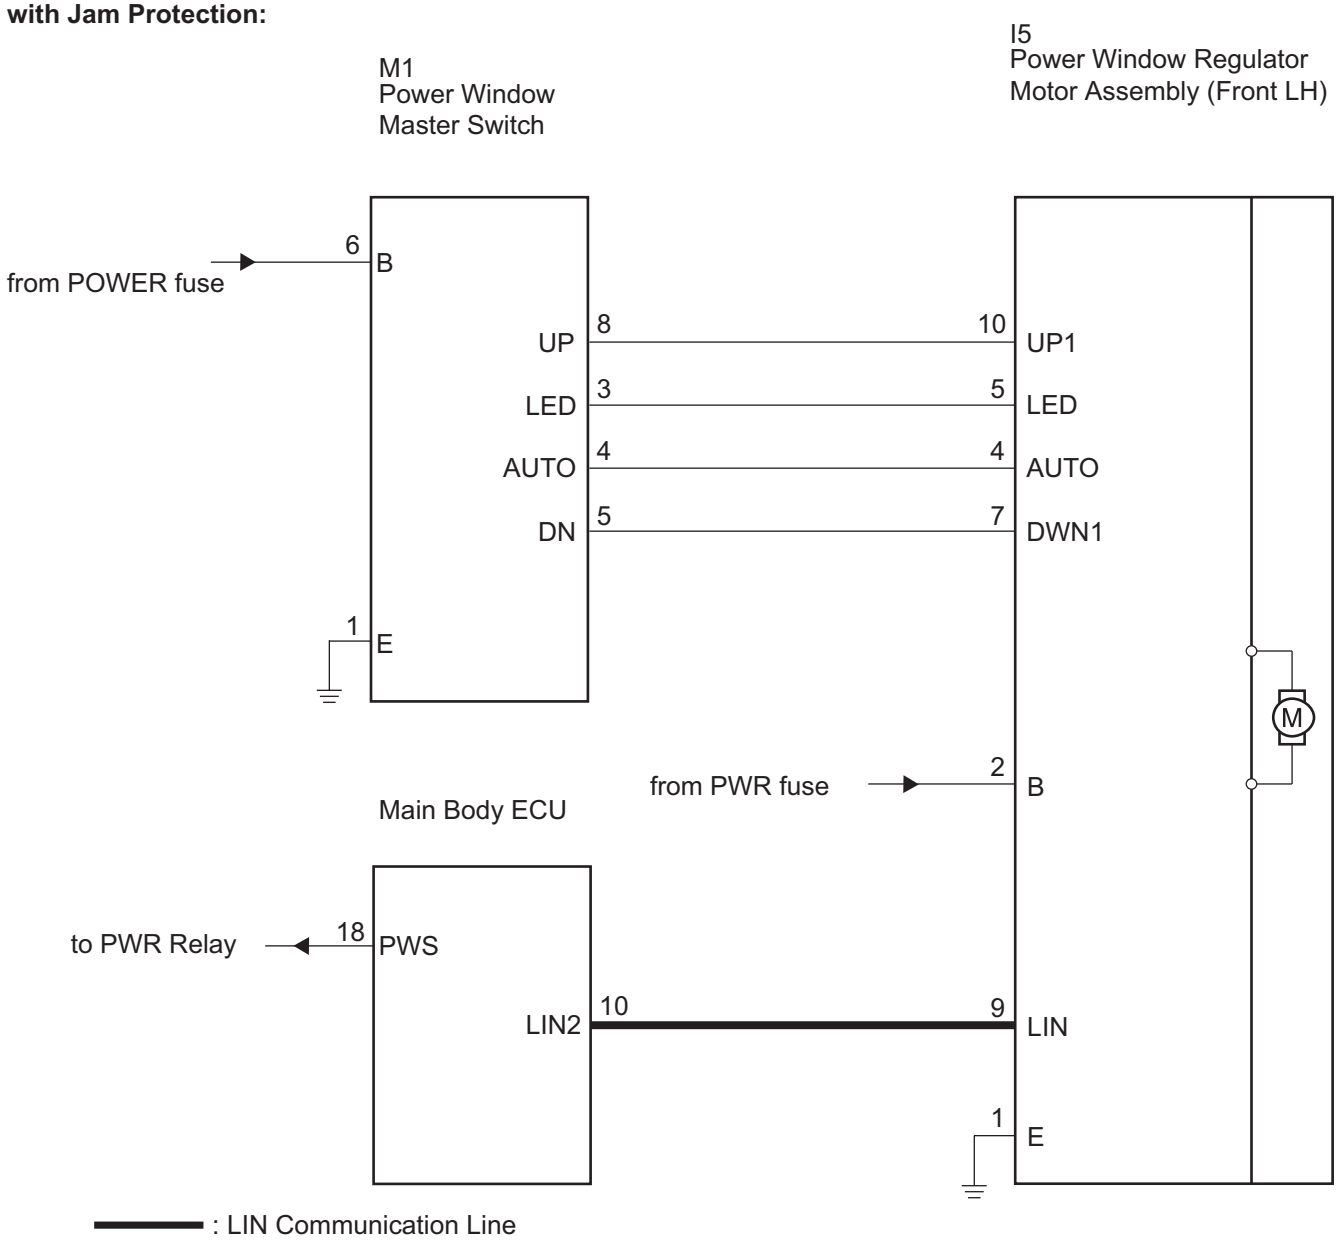
NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

DTC No.	DTC Detection Condition	Trouble Area
B2312	The power window regulator master switch is stuck	• Power window regulator motor (on driver side) • Power window regulator master switch • Wire harness • Power window regulator master switch is held in same position for more than 20 seconds

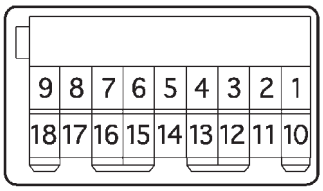
WIRING DIAGRAM

with Jam Protection:



INSPECTION PROCEDURE

1 **INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**



B108710

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

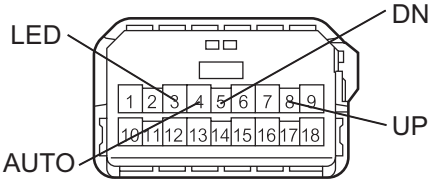
Tester Connection	Condition	Specified Condition
8 (UP) - 1 (E) - 4 (AUTO)	Auto UP	Below 1 Ω
5 (DN) - 6 (B)	Auto UP	Below 1 Ω
8 (UP) - 1 (E)	Manual UP	Below 1 Ω
5 (DN) - 6 (B)	Manual UP	Below 1 Ω
8 (UP) - 5 (DN) - 6 (B)	OFF	Below 1 Ω
5 (DN) - 1 (E)	Manual DOWN	Below 1 Ω
8 (UP) - 6 (B)	Manual DOWN	Below 1 Ω
4 (AUTO) - 5 (DN) - 1 (E)	Auto DOWN	Below 1 Ω
8 (UP) - 6 (B)	Auto DOWN	Below 1 Ω

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH**

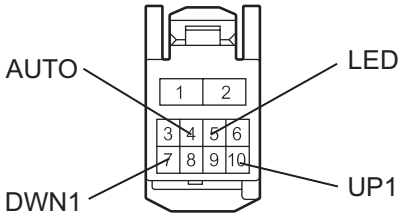
OK

2 **CHECK WIRE HARNESS (WINDOW REGULATOR MASTER SWITCH - WINDOW REGULATOR MOTOR)**

M1
Power Window Regulator Master Switch Assembly:



I5
Power Window Regulator Motor (Front LH):



B137046E02

(a) Disconnect the M1 and I5 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M1-8 (UP) - I5-10 (UP1)	Always	Below 1 Ω
M1-3 (LED) - I5-5 (LED)	Always	Below 1 Ω
M1-4 (AUTO) - I5-4 (AUTO)	Always	Below 1 Ω
M1-5 (DN) - I5-7 (DWN1)	Always	Below 1 Ω
M1-8 (UP) - Body ground	Always	10 kΩ or higher
M1-3 (LED) - Body ground	Always	10 kΩ or higher
M1-4 (AUTO) - Body ground	Always	10 kΩ or higher
M1-5 (DN) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE DRIVER SIDE POWER WINDOW REGULATOR MOTOR ASSEMBLY

DTC	B2313	Glass Position Initialization Incomplete

DESCRIPTION

The portion of the power window control system that is located in the driver door consists of a power window master switch, regulator, and a motor with an integrated ECU. The driver door power window regulator motor is controlled by the ECU when the power window master switch is operated (models with jam protection).

When the ECU determines that the driver's door power window regulator motor assembly has not been initialized, DTC B2313 is set.

NOTICE:

The power window control system uses a serial communication protocol (LIN) to communicate with the main body ECU. Inspect the communication function by following HOW TO PROCEED WITH TROUBLESHOOTING. Troubleshoot the power window control system after confirming that the communication system is functioning properly.

HINT:

- Replacing the door glass or door glass run may cause a difference to exist between the current door glass position and the position memorized in the ECU. In this case, the jam protection function may work improperly. Return the system to the pre-initialized condition and reinitialize the system.
- To return the system to the pre-initialized condition:
  Disconnect the power window regulator motor connector during power window operation. This will return the motor to the pre-initialized condition.

DTC No.	DTC Detection Condition	Trouble Area
B2313	• The power window regulator motor (on driver side) is not initialized • The power window regulator motor (on driver side) malfunctions	• Power window regulator motor (on driver side) • Power window regulator motor (on driver side) not initialized

INSPECTION PROCEDURE

NOTICE:

When using the intelligent tester to troubleshoot the LIN communication line: Connect the intelligent tester to the vehicle, and turn the courtesy light switch on and off at 1.5 second intervals until communication between the tester and vehicle begins.

1	CHECK DTC OUTPUT

(a) Turn the ignition switch off.
(b) Wait for at least 10 seconds, and then turn the ignition switch on (IG).
(c) Check whether the DTC output recurs.
Result

Display (DTC Output)	Proceed to
B2313	A
No output	B

B → END

A

2	SYSTEM INITIALIZE (POWER WINDOW CONTROL SYSTEM)

(a) Turn the ignition switch on (IG) and initialize the power window regulator motor (on the driver side) (see page WS-8).
(b) Turn the ignition switch off.
(c) Wait for at least 10 seconds, and then turn the ignition switch on (IG).
(d) Check whether the DTC output recurs.

Display (DTC Output)	Proceed to
No output	A
B2313	B

B → **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY FRONT LH**

A

END

Power Window Master Switch Circuit

DESCRIPTION

This circuit transmits signal from the power window regulator master switch assembly to the power window regulator switch.

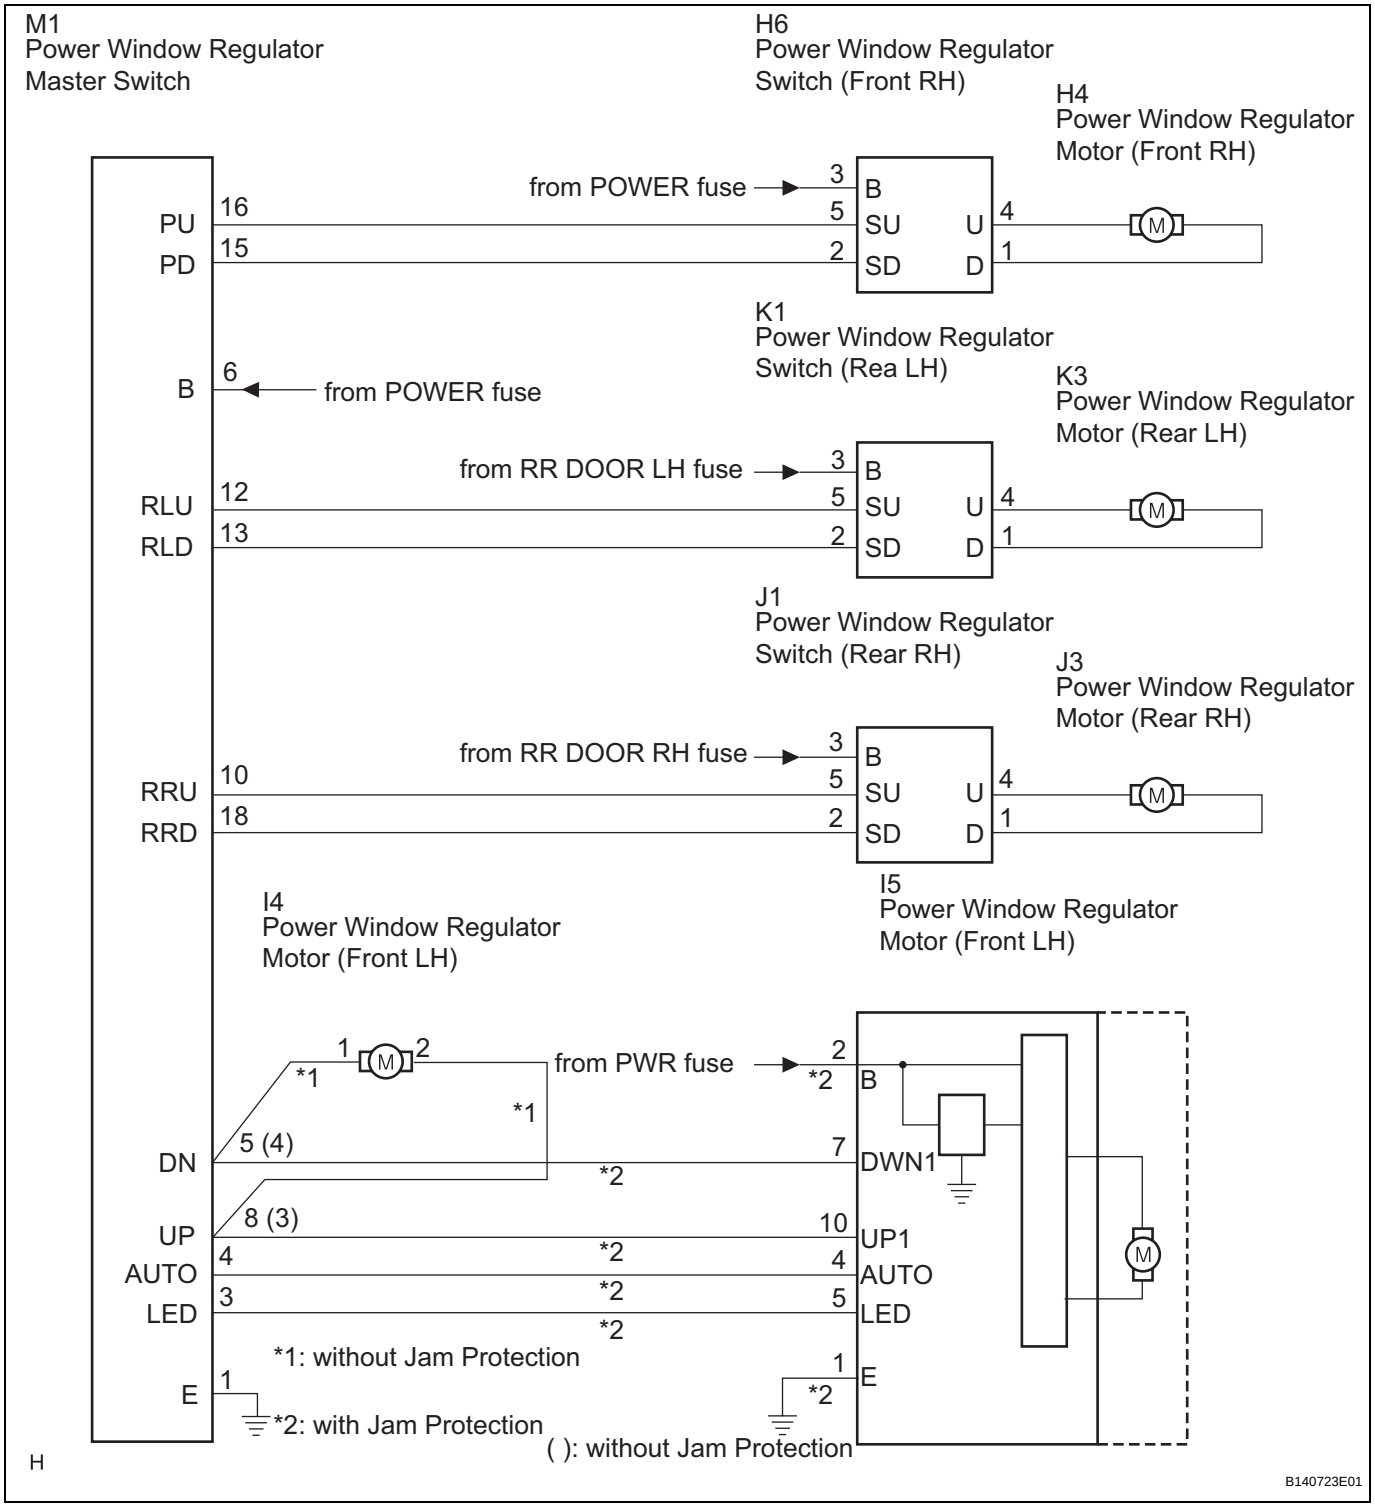
WIRING DIAGRAM



INSPECTION PROCEDURE

1 **CHECK DTC OUTPUT**

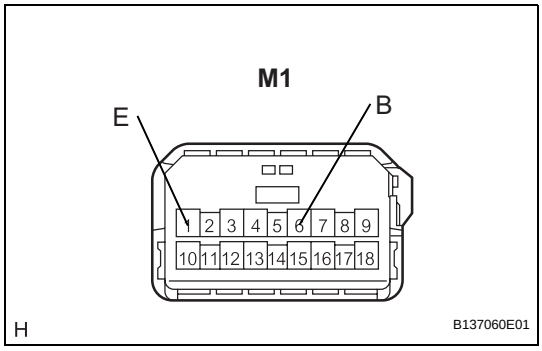
(a) Turn the ignition switch off.
(b) Wait for at least 10 seconds, and then turn the ignition switch on (IG).
(c) Check whether the DTC output recurs.
Result

Display (DTC output)	Proceed to
No output	A
Output DTCs	B

B → **GO TO DTC CHART**

A

2 **INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**



(a) Disconnect the M1 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
6 (B) - Body ground	Ignition switch on (IG)	10 to 14 V

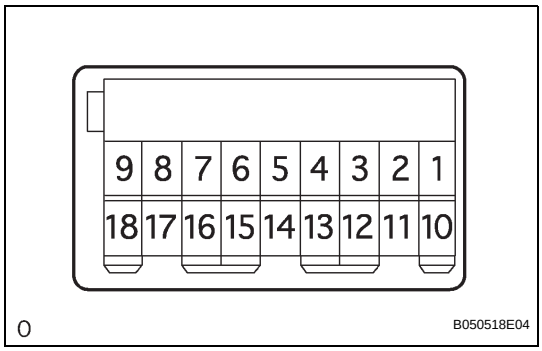
Standard resistance

Tester Connection	Condition	Specified Condition
1 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 **INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance:
(with Jam Protection)

Tester Connection	Condition	Specified Condition
8 (UP) - 1 (E) - 4 (AUTO)	Auto UP	Below 1 Ω
5 (DN) - 6 (B)		Below 1 Ω
8 (UP) - 1 (E)	Manual UP	Below 1 Ω
5 (DN) - 6 (B)		Below 1 Ω
8 (UP) - 5 (DN) - 6 (B)	OFF	Below 1 Ω
5 (DN) - 1 (E)	Manual DOWN	Below 1 Ω
8 (UP) - 6 (B)		Below 1 Ω

Tester Connection	Condition	Specified Condition
4 (AUTO) - 5 (DN) - 1 (E)	Auto DOWN	Below 1 Ω
8 (UP) - 6 (B)		Below 1 Ω
1 (E) - 10 (RRU)	Lock/Unlock switch	UNLOCK (Below 1 Ω) →LOCK (10 kΩ or higher)
1 (E) - 12 (RLU)		
1 (E) - 13 (RLD)		
1 (E) - 15 (PD)		
1 (E) - 16 (PU)		
1 (E) - 18 (RRD)		

(without Jam Protection)

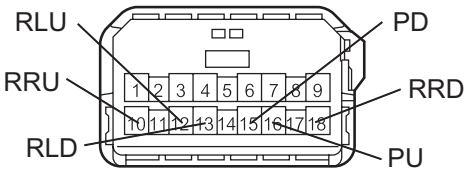
Tester Connection	Condition	Specified Condition
1 (E) - 3 (UP)	OFF	Below 1 Ω
1 (E) - 4 (DN)		Below 1 Ω
1 (E) - 10 (RRU)	Lock/Unlock switch	UNLOCK (Below 1 Ω) →LOCK (10 kΩ or higher)
1 (E) - 12 (RLU)		
1 (E) - 13 (RLD)		
1 (E) - 15 (PD)		
1 (E) - 16 (PU)		
1 (E) - 18 (RRD)		

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

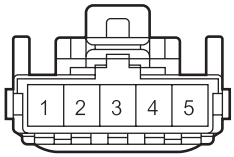
OK

4 CHECK WIRE HARNESS (POWER WINDOW MASTER SWITCH - FRONT LH, REAR LH/RH SWITCH)

M1
Power Window Regulator Master Switch Assembly:



H6 (K1, J1)
Power Window Switch (Front RH, Rear LH/RH):



H B137067E01

(a) Disconnect the M1 and H6 (K1, J1) connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:
Front RH side

Tester Connection	Condition	Specified Condition
M1-16 (PU) - H6-5 (SU)	Always	Below 1 Ω
M1-15 (PD) - H6-2 (SD)	Always	Below 1 Ω
M1-16 (PU) - Body ground	Always	10 kΩ or higher
M1-15 (PD) - Body ground	Always	10 kΩ or higher

Rear LH side

Tester Connection	Condition	Specified Condition
M1-12 (RLU) - K1-5 (SU)	Always	Below 1 Ω
M1-13 (RLD) - K1-2 (SD)	Always	Below 1 Ω
M1-12 (RLU) - Body ground	Always	10 kΩ or higher
M1-13 (RLD) - Body ground	Always	10 kΩ or higher

Rear RH side

Tester Connection	Condition	Specified Condition
M1-10 (RRU) - J1-5 (SU)	Always	Below 1 Ω
M1-18 (RRD) - J1-2 (SD)	Always	Below 1 Ω
M1-10 (RRU) - Body ground	Always	10 kΩ or higher
M1-18 (RRD) - Body ground	Always	10 kΩ or higher

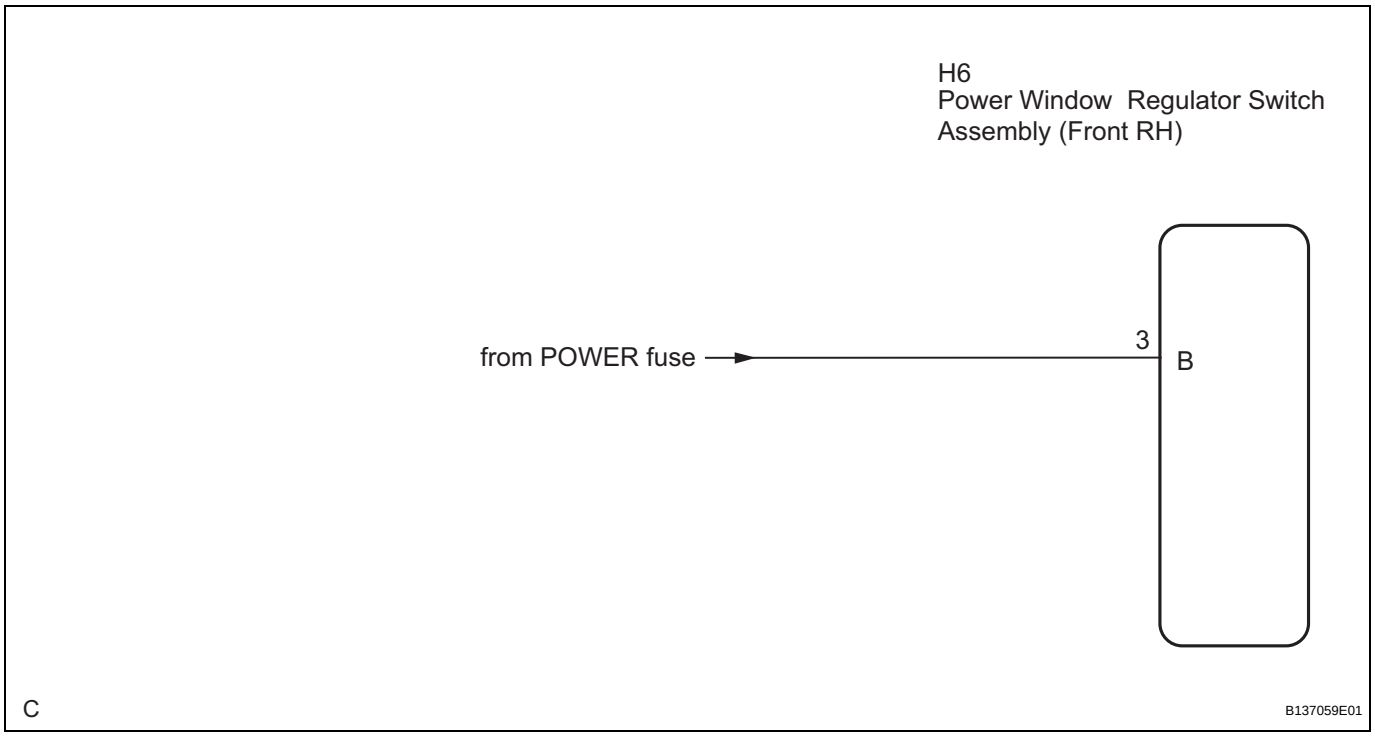
WIRING DIAGRAM



INSPECTION PROCEDURE

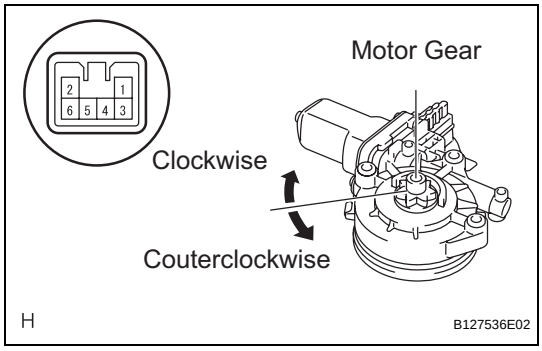
1	INSPECT POWER WINDOW REGULATOR MOTOR



(a) Remove the power window motor.
(b) Apply battery voltage to the motor connector according to the table below.
NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

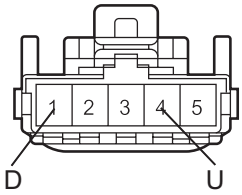
NG → **REPLACE POWER WINDOW REGULATOR MOTOR**

OK

2	CHECK WIRE HARNESS (WINDOW REGULATOR MOTOR - POWER WINDOW REGULATOR SWITCH)

WS

H6
Power Window Regulator Switch Assembly (Front RH):



H4
Power Window Regulator Motor (Front RH):

B137066E01

(a) Disconnect the H6 and H4 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
H6-4 (U) - H4-2	Always	Below 1 Ω
H6-1 (D) - H4-1	Always	Below 1 Ω
H6-4 (U) - Body ground	Always	10 kΩ or higher
H6-1 (D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

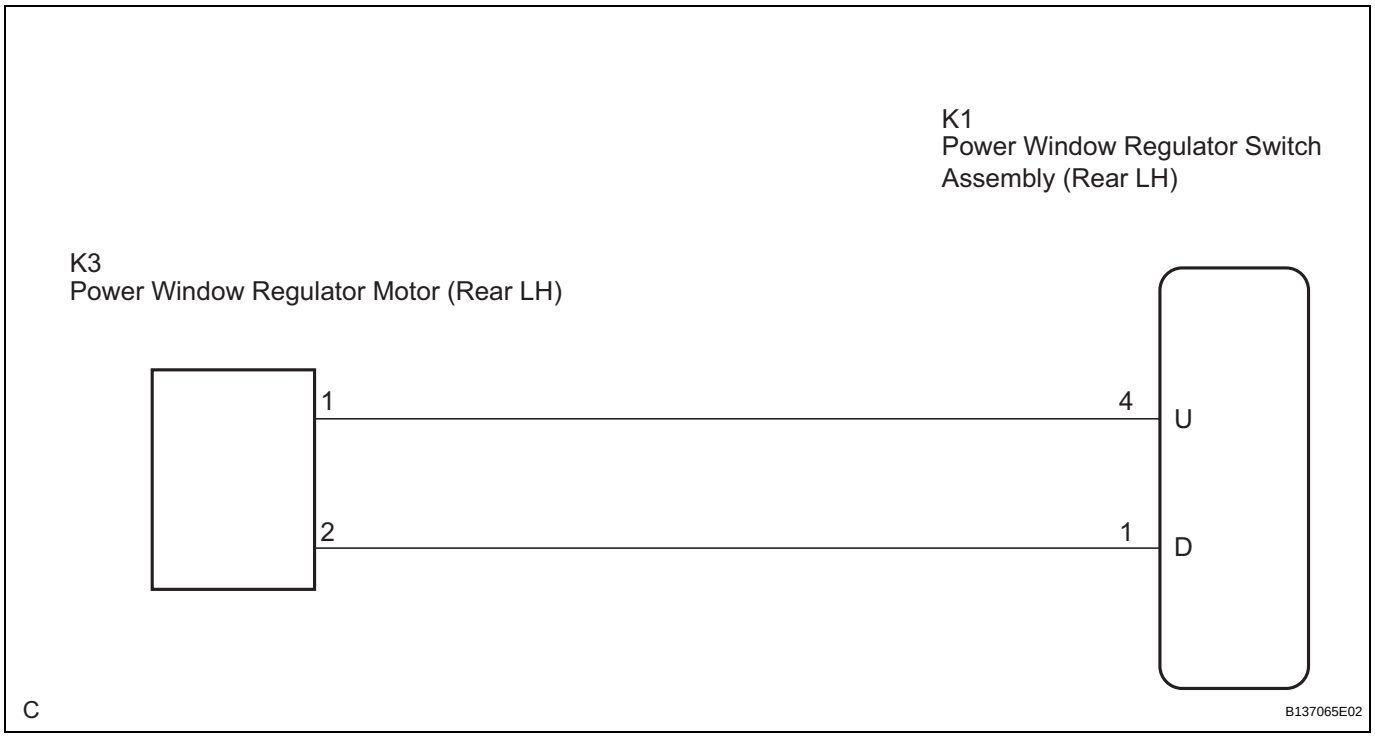
Rear Power Window Motor LH Circuit

DESCRIPTION

This circuit transmits signals from the power window regulator switch assembly (Rear LH) to the power window regulator motor (Rear LH).

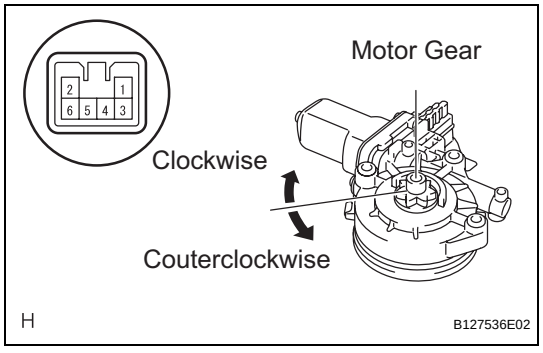
WS

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT POWER WINDOW REGULATOR MOTOR



(a) Remove the power window motor.
(b) Apply battery voltage to the motor connector according to the table below.
NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

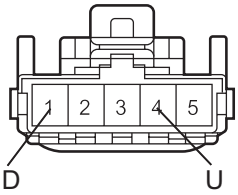
NG → **REPLACE POWER WINDOW REGULATOR MOTOR**

OK

2	CHECK WIRE HARNESS (WINDOW REGULATOR MOTOR - WINDOW REGULATOR SWITCH)

WS

K1
Power Window Regulator Switch Assembly (Rear LH):



K3
Power Window Regulator Motor (Rear LH):

B137066E02

(a) Disconnect the K1 and K3 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
K1-4 (U) - K3-1	Always	Below 1 Ω
K1-1 (D) - K3-2	Always	Below 1 Ω
K1-4 (U) - Body ground	Always	10 kΩ or higher
K1-1 (D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

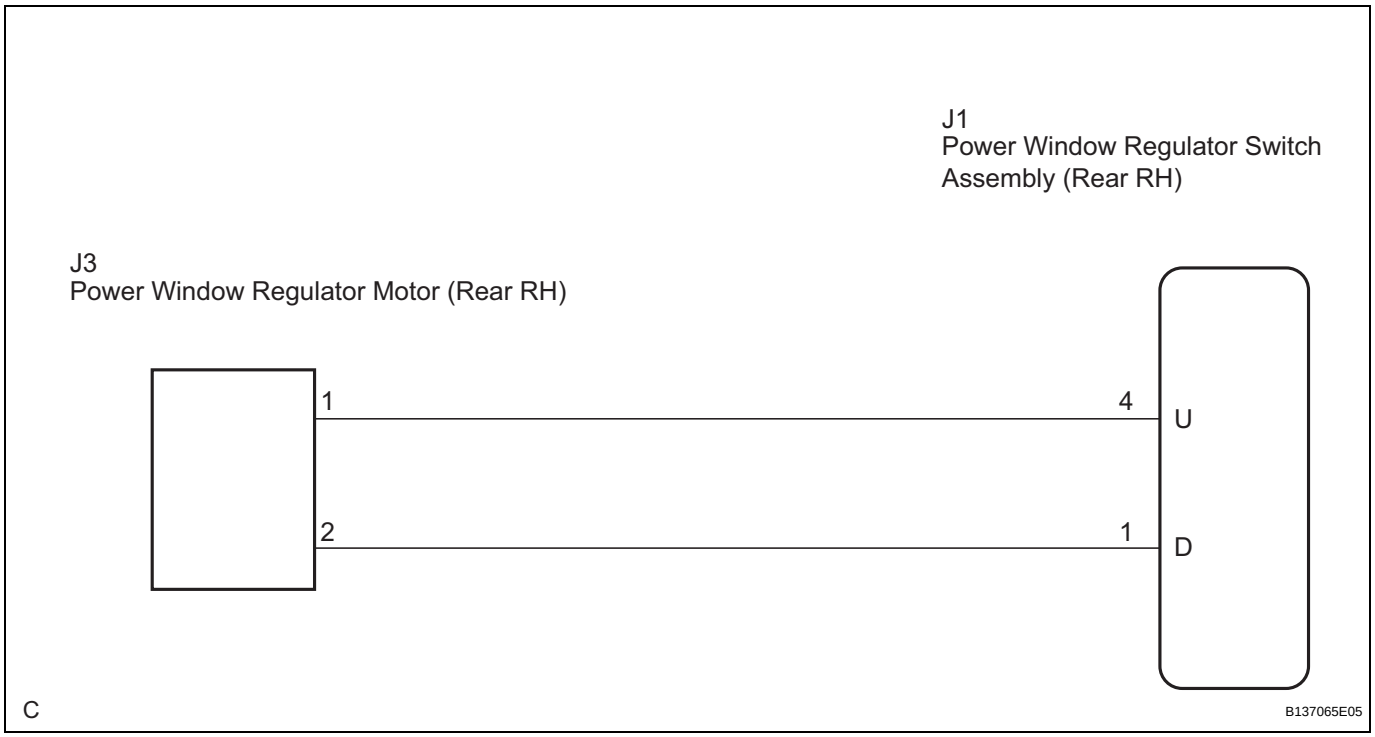
Rear Power Window Motor RH Circuit

DESCRIPTION

This circuit transmits signals from the power window regulator switch assembly (Rear RH) to the power window regulator motor (Rear RH).

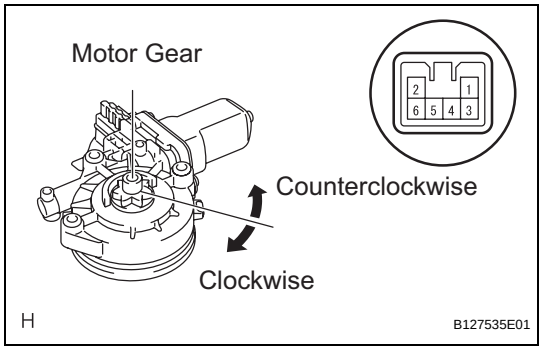
WS

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT POWER WINDOW REGULATOR MOTOR



(a) Remove the power window motor.
(b) Apply battery voltage to the motor connector according to the table below.
NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise

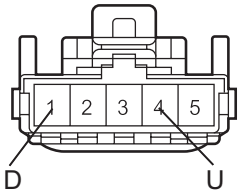
OK

2	CHECK WIRE HARNESS (WINDOW REGULATOR MOTOR - WINDOW REGULATOR SWITCH)

WS

J1
Power Window Regulator Switch Assembly (Rear RH):



J3
Power Window Regulator Motor (Rear RH):

B137066E03

(a) Disconnect the J1 and J3 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

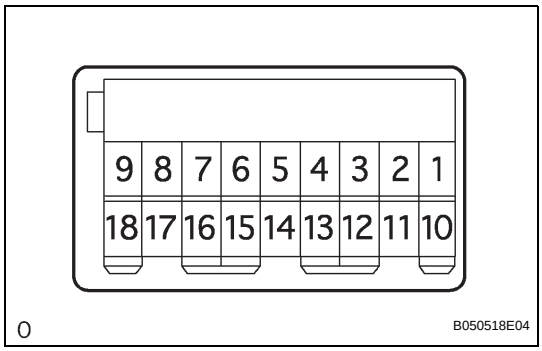
Tester Connection	Condition	Specified Condition
J1-4 (U) - J3-1	Always	Below 1 Ω
J1-1 (D) - J3-2	Always	Below 1 Ω
J1-4 (U) - Body ground	Always	10 kΩ or higher
J1-1 (D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

WS



POWER WINDOW MASTER SWITCH

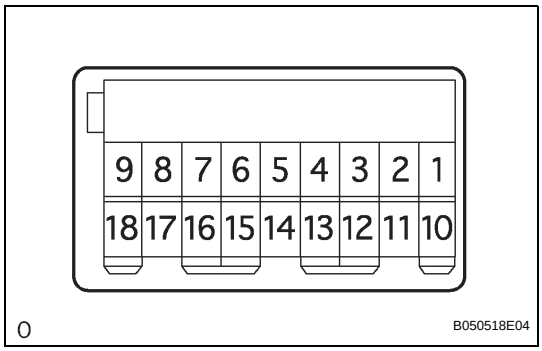
INSPECTION

1. INSPECT POWER WINDOW MASTER SWITCH (w/ Jam Protection Function)

(a) Measure the resistance when the switch is operated according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
8 (UP) - 1 (E) - 4 (AUTO)	Auto UP	Below 1 Ω
5 (DN) - 6 (B)		Below 1 Ω
8 (UP) - 1 (E)	Manual UP	Below 1 Ω
5 (DN) - 6 (B)		Below 1 Ω
8 (UP) - 5 (DN) - 6 (B)	OFF	Below 1 Ω
5 (DN) - 1 (E)	Manual DOWN	Below 1 Ω
8 (UP) - 6 (B)		Below 1 Ω
4 (AUTO) - 5 (DN) - 1 (E)	Auto DOWN	Below 1 Ω
8 (UP) - 6 (B)		Below 1 Ω
1 (E) - 10 (RRU)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)
1 (E) - 12 (RLU)		
1 (E) - 13 (RLD)		
1 (E) - 15 (PD)		
1 (E) - 16 (PU)		
1 (E) - 18 (RRD)		

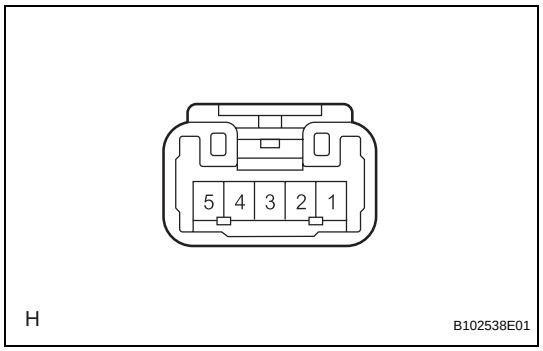


2. INSPECT POWER WINDOW MASTER SWITCH (w/o Jam Protection Function)

(a) Measure the resistance when the switch is operated according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 (E) - 3 (DU)	OFF	Below 1 Ω
1 (E) - 4 (DD)		Below 1 Ω
1 (E) - 10 (RRU)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)
1 (E) - 12 (RLU)		
1 (E) - 13 (RLD)		
1 (E) - 15 (PD)		
1 (E) - 16 (PU)		
1 (E) - 18 (RRD)		



FRONT PASSENGER SIDE POWER WINDOW SWITCH

INSPECTION

1. INSPECT POWER WINDOW SWITCH

(a) Remove the power window switch.

(b) Measure the resistance when the switch is operated according to the value(s) in the table below.

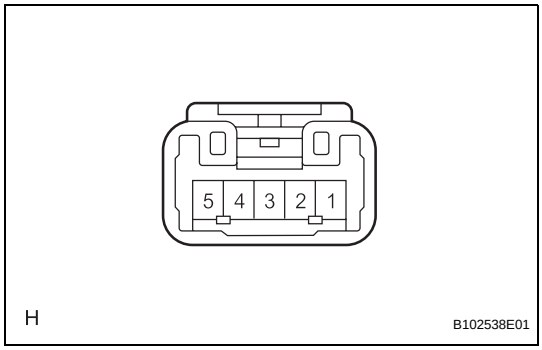
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 (D) - 2 (SD)	UP	Below 1 Ω
3 (B) - 4 (U)		Below 1 Ω
1 (D) - 2 (SD)	OFF	Below 1 Ω
4 (U) - 5 (SU)		Below 1 Ω
4 (U) - 5 (SU)	DOWN	Below 1 Ω
1 (D) - 3 (B)		Below 1 Ω

WS

REAR POWER WINDOW SWITCH

INSPECTION



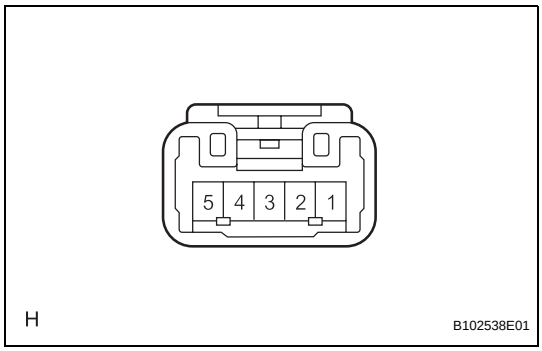
1. INSPECT POWER WINDOW SWITCH (for Rear RH)

(a) Remove the power window switch.

(b) Measure the resistance when the switch is operated according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 (D) - 2 (SD)	UP	Below 1 Ω
3 (B) - 4 (U)		Below 1 Ω
1 (D) - 2 (SD)	OFF	Below 1 Ω
4 (U) - 5 (SU)		Below 1 Ω
4 (U) - 5 (SU)	DOWN	Below 1 Ω
1 (D) - 3 (B)		Below 1 Ω



2. REMOVE POWER WINDOW SWITCH (for Rear LH)

(a) Remove the power window switch.

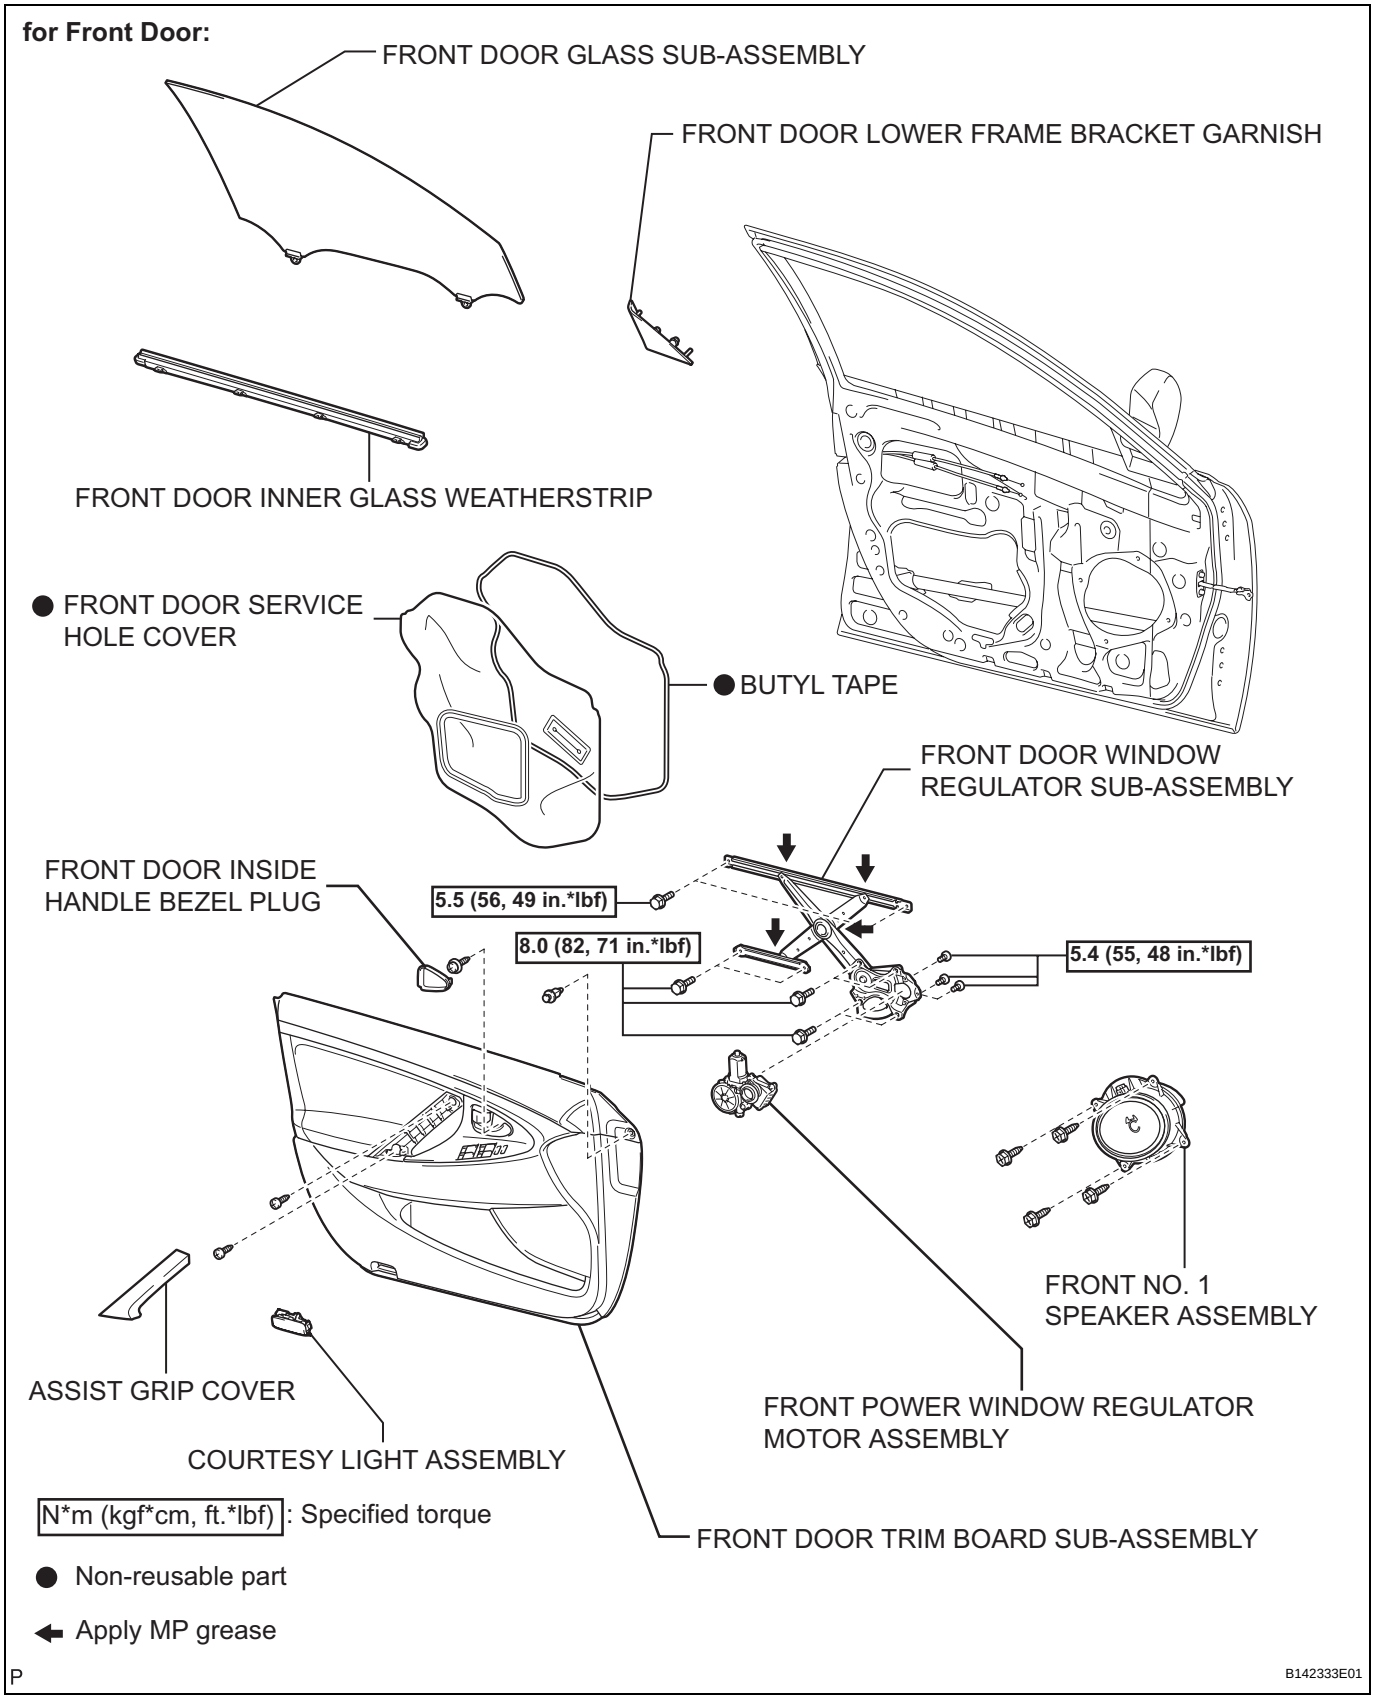
(b) Measure the resistance when the switch is operated according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 (D) - 2 (SD)	UP	Below 1 Ω
3 (B) - 4 (U)		Below 1 Ω
1 (D) - 2 (SD)	OFF	Below 1 Ω
4 (U) - 5 (SU)		Below 1 Ω
4 (U) - 5 (SU)	DOWN	Below 1 Ω
1 (D) - 3 (B)		Below 1 Ω

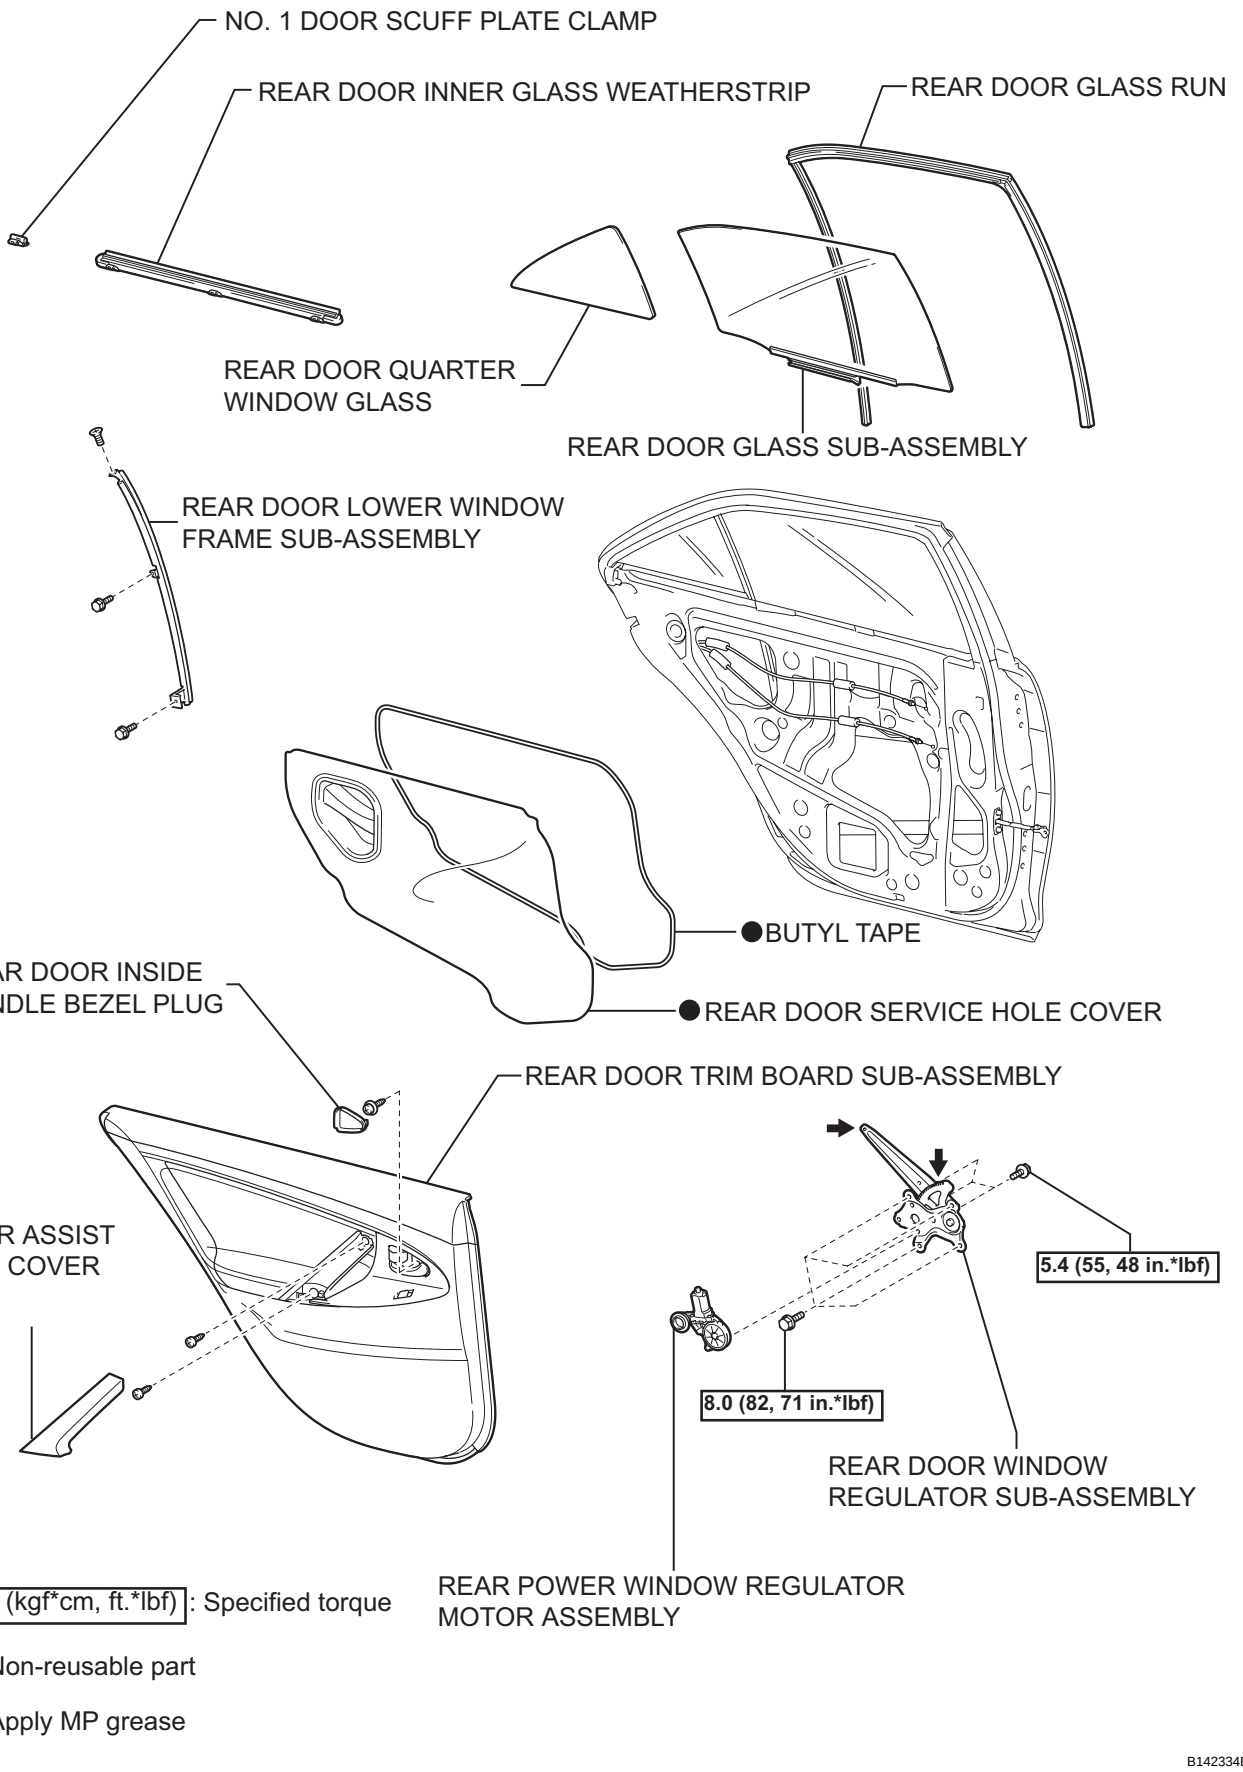
POWER WINDOW REGULATOR MOTOR

COMPONENTS



WS

for Rear Door:



N*m (kgf*cm, ft.*lbf) : Specified torque

● Non-reusable part

◄ Apply MP grease

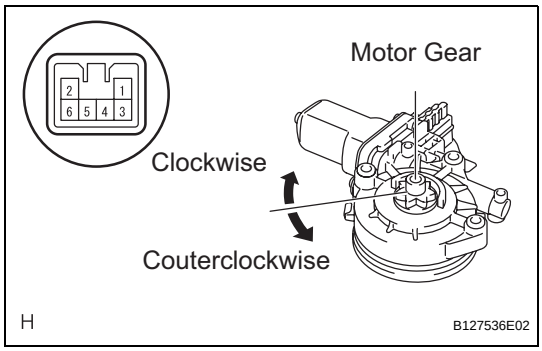
REMOVAL

1. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)
2. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-14)
3. REMOVE ASSIST GRIP COVER (See page ED-15)
4. REMOVE COURTESY LIGHT ASSEMBLY (See page ED-15)
5. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-15)
6. REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-16)
7. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-155)
8. REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-17)
9. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-17)
10. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-18)
11. REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY (See page ED-18)
12. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-38)
13. REMOVE DOOR ASSIST GRIP COVER (See page ED-38)
14. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-39)
15. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-40)
16. REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-41)
17. REMOVE REAR DOOR GLASS RUN (See page ED-42)
18. REMOVE REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY (See page ED-42)
19. REMOVE REAR DOOR QUARTER WINDOW GLASS (See page ED-43)
20. REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-43)
21. REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-43)
22. REMOVE REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY (See page ED-43)

WS



INSPECTION

1. INSPECT POWER WINDOW REGULATOR MOTOR (FRONT RH)

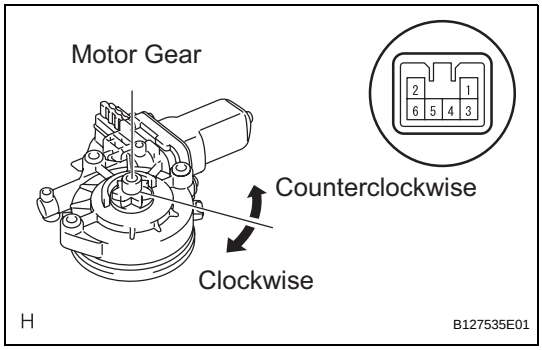
(a) Apply battery voltage to the motor connector according to the table below.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise



2. INSPECT POWER WINDOW REGULATOR MOTOR (FRONT LH)

(a) without Jam protection:

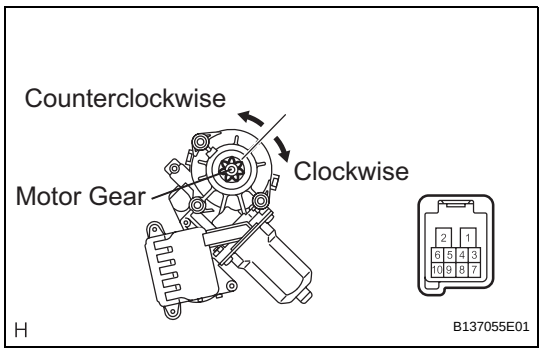
Apply battery voltage to the motor connector according to the table below.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise



(b) with Jam protection:

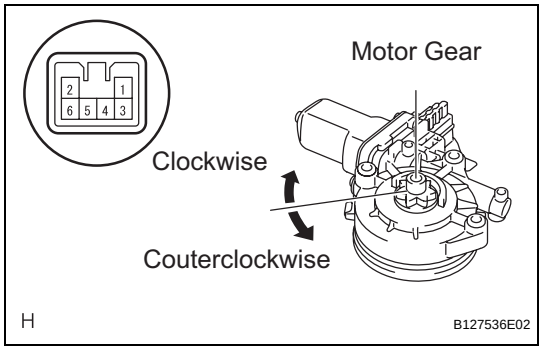
Apply battery voltage to the motor connector according to the table below.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1, 2, 4, 7 and 10.

Standard

Switch Condition	Measurement Condition	Specified Condition
Manual Operation	Battery positive (+) → Terminal 2 (PWR) Battery negative (-) → Terminal 1 (E), 7 (DN)	Motor gear rotates clockwise
	Battery positive (+) → Terminal 2 (PWR) Battery negative (-) → Terminal 1 (E), 10 (UP)	Motor gear rotates counterclockwise
Auto Operation	Battery positive (+) → Terminal 2 (PWR) Battery negative (-) → Terminal 1 (E), 4 (AUTO), 7 (DN)	Motor gear rotates clockwise
	Battery positive (+) → Terminal 2 (PWR) Battery negative (-) → Terminal 1 (E), 4 (AUTO) 10 (UP)	Motor gear rotates counterclockwise

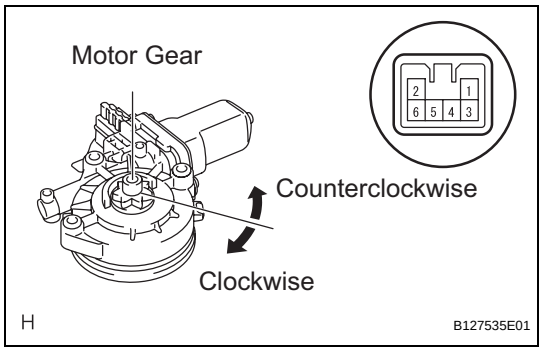


3. INSPECT POWER WINDOW REGULATOR MOTOR (REAR RH)

(a) Apply battery voltage to the motor connector according to the table below.

NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise



4. INSPECT POWER WINDOW REGULATOR MOTOR (REAR LH)

(a) Apply battery voltage to the motor connector according to the table below.

NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal	Motor gear rotates counterclockwise

INSTALLATION

1. **INSTALL REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY (See page ED-51)**
2. **INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (See page ED-51)**
3. **INSTALL REAR DOOR GLASS RUN (See page ED-52)**
4. **INSTALL REAR DOOR GLASS SUB-ASSEMBLY (See page ED-52)**

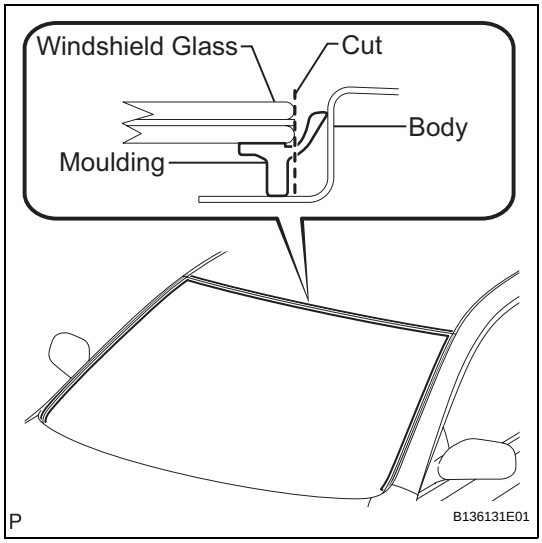
11. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
12. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
13. **REMOVE FRONT PILLAR GARNISH LH (See page IR-27)**
14. **REMOVE FRONT PILLAR GARNISH RH (See page IR-27)**
15. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-28)**
16. **REMOVE VISOR ASSEMBLY LH (See page IR-28)**
17. **REMOVE VISOR ASSEMBLY RH (See page IR-29)**
18. **REMOVE VISOR HOLDER (See page IR-29)**
19. **REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**
20. **REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)**
    It is not necessary to completely remove the roof headlining assembly. Slightly lower the front section of the roof headlining assembly so that the windshield glass can be removed (See page IR-31).

WS

21. REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

It is not necessary to completely remove the roof headlining assembly. Slightly lower the front section of the roof headlining assembly so that the windshield glass can be removed (See page IR-32).



22. REMOVE WINDSHIELD MOULDING

(a) Using a knife, cut off the moulding, as shown in the illustration.

NOTICE:

- **Do not damage the vehicle body with the knife.**
- **If the vehicle body is damaged, repair the damaged portion by applying an anti-rust coating after removing the windshield glass.**

(b) Remove the remaining moulding from the windshield glass.

HINT:

When removing the moulding, make a partial cut, then pull and remove it by hand.

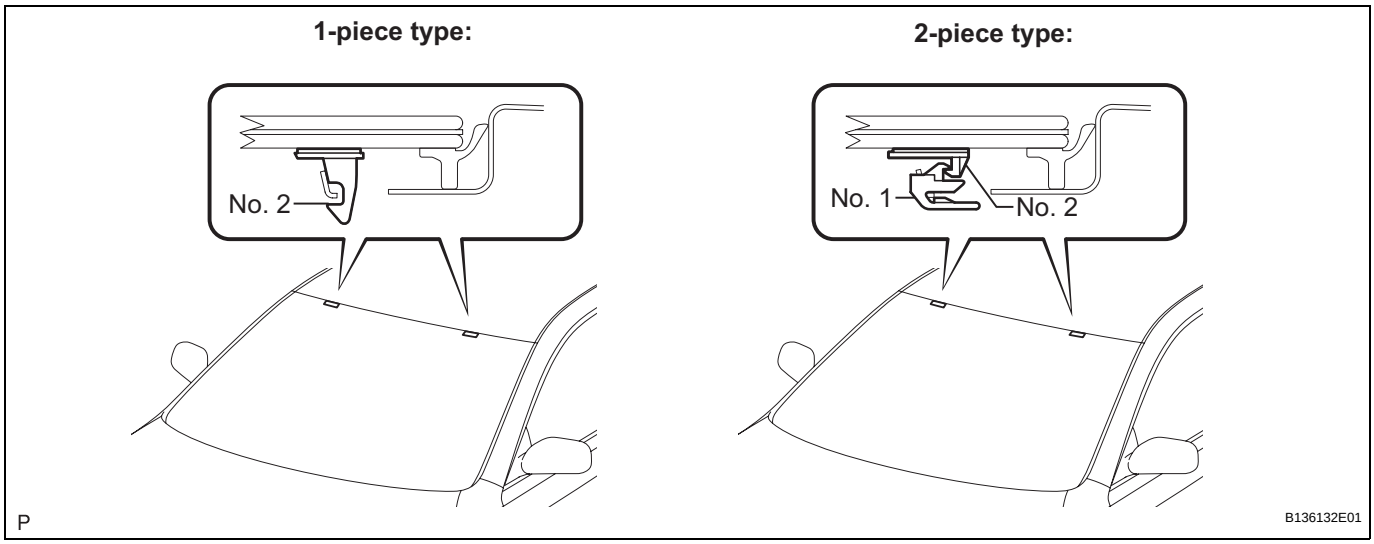
23. REMOVE WINDSHIELD GLASS ASSEMBLY

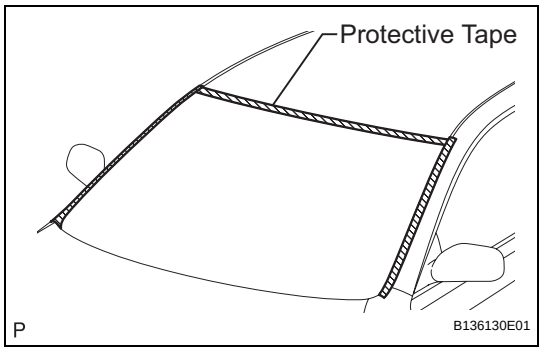
NOTICE:

- **There are No. 1 and No. 2 stoppers on the windshield glass as shown in the illustration. Be careful not to damage the windshield glass when cutting off the adhesive.**
- **To prevent the windshield glass from dropping when performing this operation, be sure to hold the windshield glass using suction cups.**

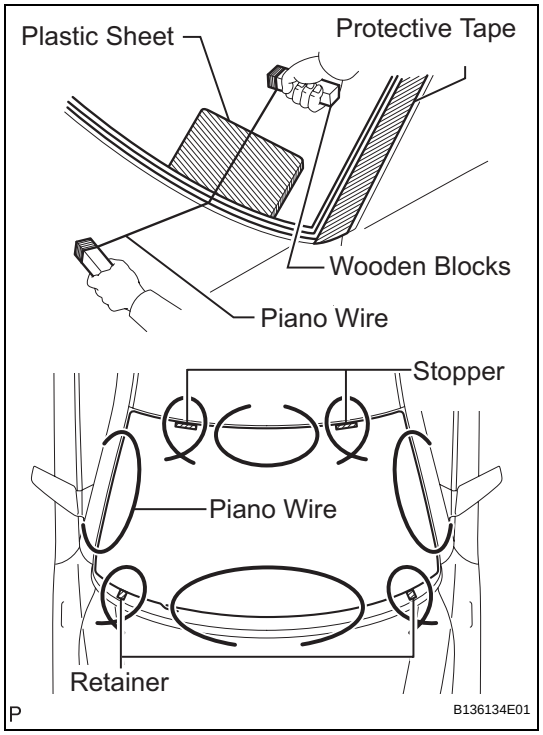
HINT:

Depending on vehicles, a 1-piece or 2-piece type stopper is used.

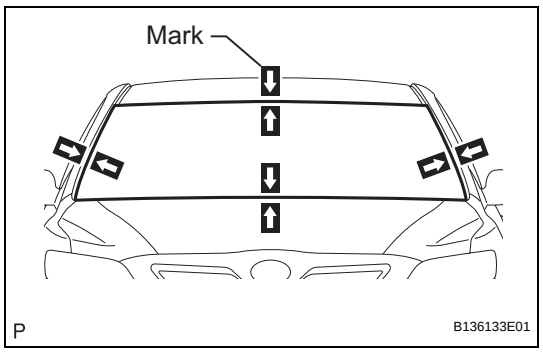




(a) Apply protective tape to the installation position of the windshield glass assembly on the vehicle body.
HINT:
Apply protective tape to the installation surface to prevent it from being scratched.



(b) Pass a piano wire between the vehicle body and glass from the interior.
(c) Tie both wire ends to wooden blocks or similar objects.
(d) Cut off the adhesive by pulling the piano wire around the windshield glass.
NOTICE:
- **When separating the windshield glass, take care not to damage the paint or the interior and exterior ornaments.**
- **To prevent the safety pad from being scratched when removing the windshield glass, place a plastic sheet between the piano wire and safety pad.**



(e) Place matchmarks on the windshield glass and vehicle body on the locations indicated in the illustration.
HINT:
Matchmarks do not need to be placed if the windshield glass is not going to be reused.
(f) Using a suction cup, remove the windshield glass assembly.
NOTICE:
- **Be careful not to drop the windshield glass.**
- **Leave as much adhesive on the vehicle body as possible when removing the windshield glass.**

24. REMOVE WINDOW GLASS ADHESIVE DAM

(a) Using a scraper, remove the adhesive dam.
NOTICE:
- **Be careful not to damage the windshield glass.**
- **Be sure to replace the adhesive dam with a new one.**

25. REMOVE NO. 2 WINDSHIELD GLASS STOPPER

(a) Using a scraper, remove the 2 No. 2 stoppers.

NOTICE:

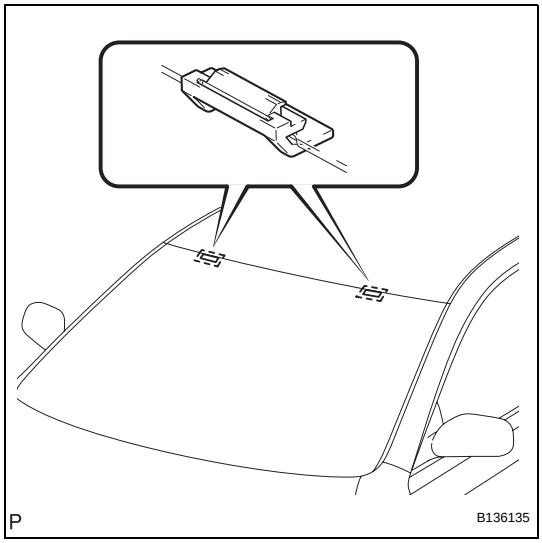
- **Be careful not to damage the windshield glass.**
- **Be sure to replace the No. 2 stoppers with new ones.**

26. REMOVE WINDSHIELD GLASS RETAINER

(a) Using a scraper, remove the 2 retainers.

NOTICE:

- **Be careful not to damage the windshield glass.**
- **Be sure to replace the retainer with a new one.**

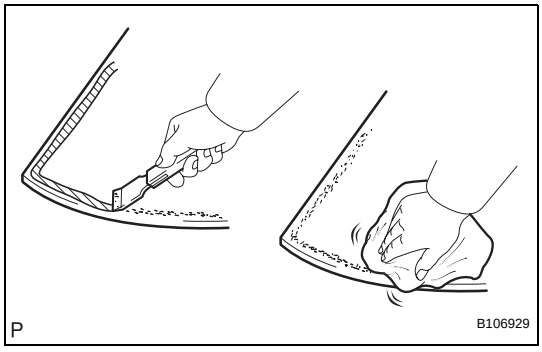


27. REMOVE NO. 1 WINDSHIELD GLASS STOPPER (for 2 Piece Type)

(a) Remove the 2 No. 1 stoppers.

NOTICE:

Be sure to replace the No. 1 stoppers with new ones.



28. CLEAN WINDSHIELD GLASS

(a) Using a scraper, remove the adhesive tape and adhesive sticking to the windshield glass.

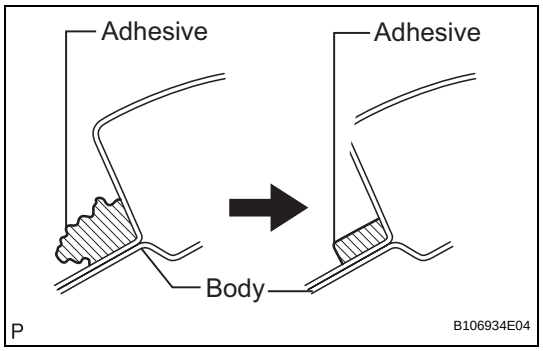
NOTICE:

Be careful not to damage the windshield glass.

(b) Clean the outer circumference of the windshield glass with a non-residue solvent.

NOTICE:

- **Do not touch the windshield glass surface after cleaning it.**
- **Even if using a new windshield glass, clean the windshield glass with a non-residue solvent.**



29. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.

NOTICE:

Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a piece of cloth saturated with cleaner.

HINT:

Even if all the adhesive has been removed, clean the vehicle body.

WS

INSTALLATION

1. INSTALL NO. 2 WINDSHIELD GLASS STOPPER

(a) Using a brush or sponge, coat the application area of the No. 2 stoppers with Primer G.

NOTICE:

- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

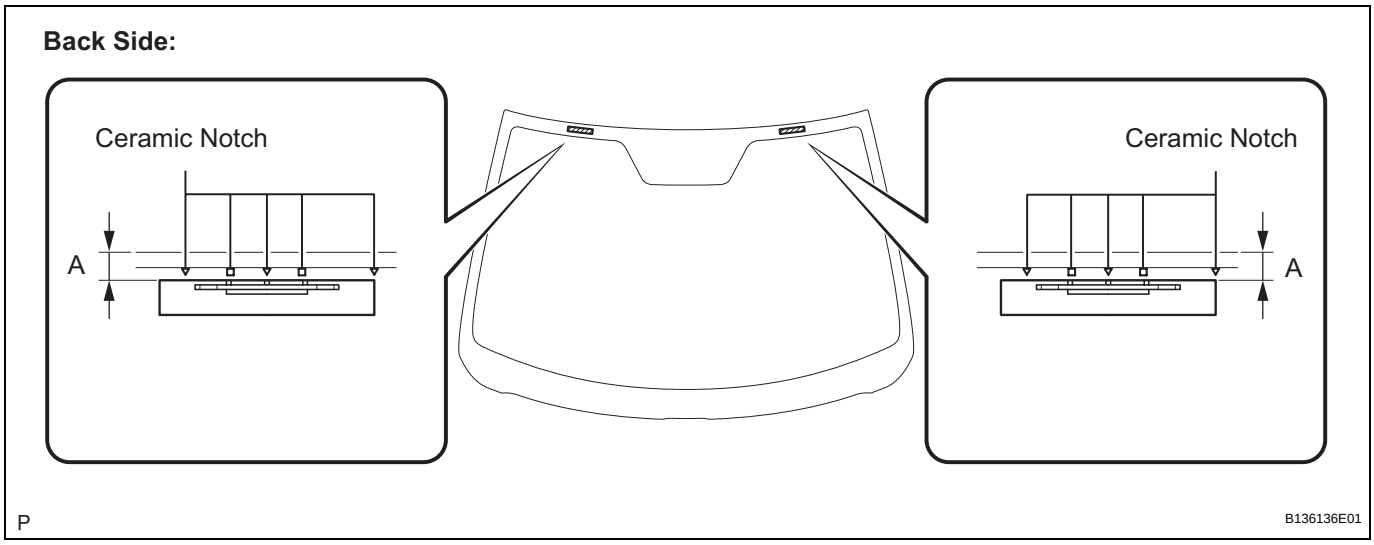
(b) Install 2 new No. 2 stoppers onto the windshield glass, as shown in the illustration.

HINT:

Only 2-piece type No. 1 stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.

Standard dimension

Area	Dimension
A	13.2 mm (0.519 in.)



2. INSTALL WINDSHIELD GLASS RETAINER

(a) Using a brush or sponge, coat the application area of the retainers with Primer G.

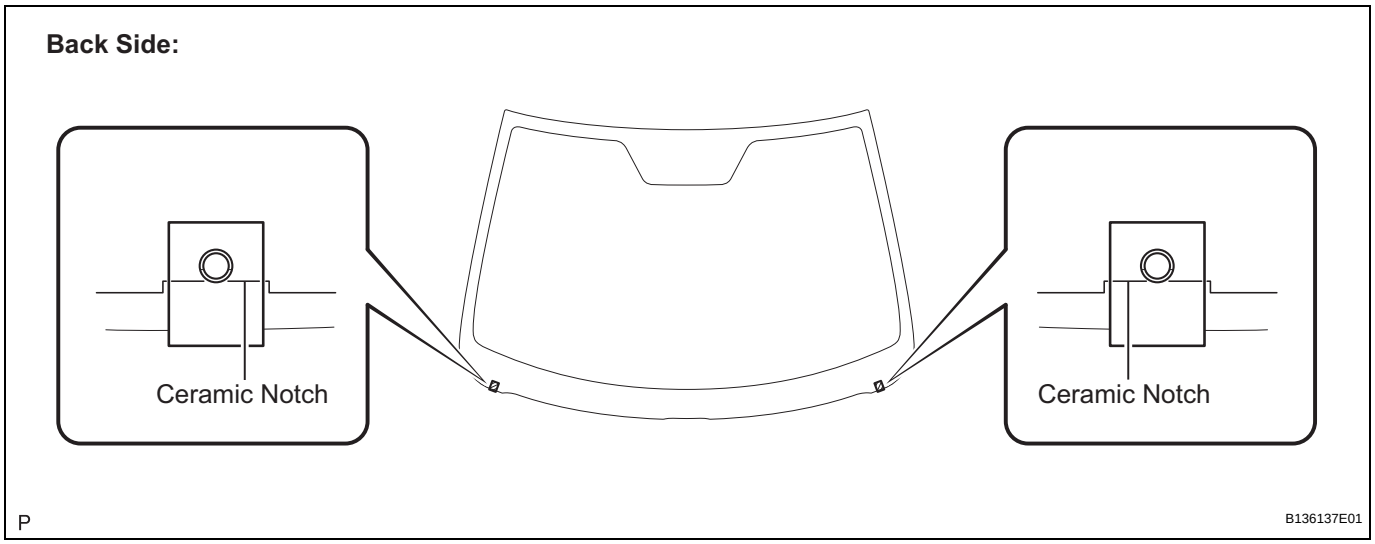
NOTICE:

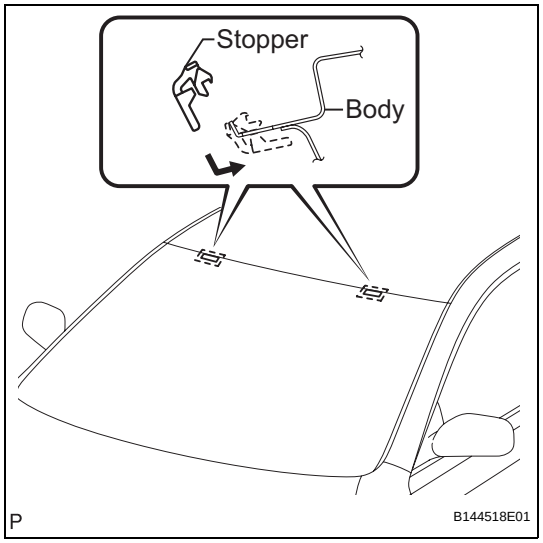
- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Install 2 new retainers onto the windshield glass, as shown in the illustration.





3. INSTALL NO. 1 WINDSHIELD GLASS STOPPER

(a) Install 2 new No. 1 stoppers to the vehicle body, as shown in the illustration.

HINT:

Only 2-piece type No. 1 stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.

4. INSTALL WINDSHIELD MOULDING

(a) Using a brush or sponge, coat the application area of moulding with Primer G.

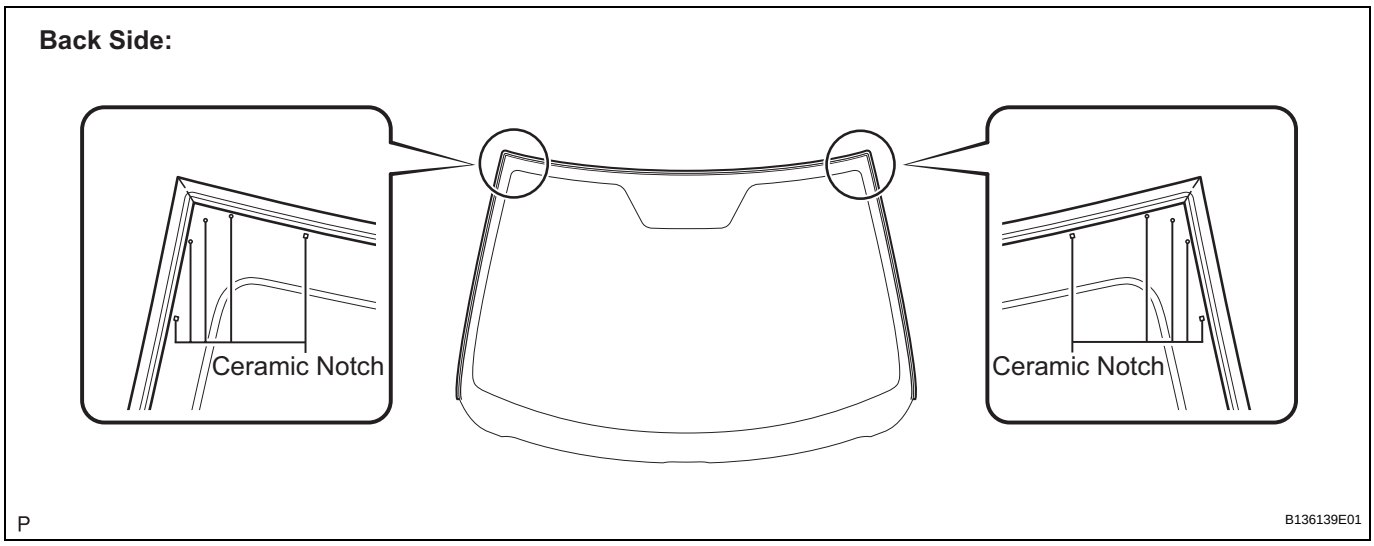
NOTICE:

- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Install a new moulding, as shown in the illustration.



5. INSTALL WINDOW GLASS ADHESIVE DAM

(a) Using a brush or sponge, coat the application area of adhesive dam with Primer G.

NOTICE:

- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Install a new adhesive dam onto the windshield glass, as shown in the illustration.

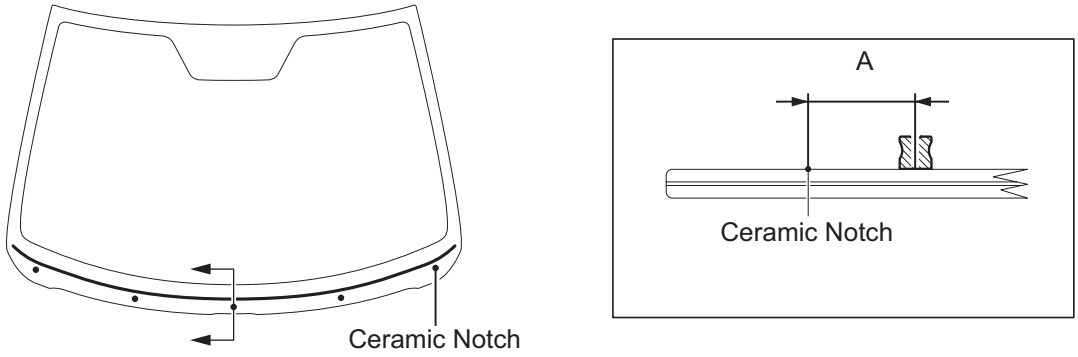
NOTICE:

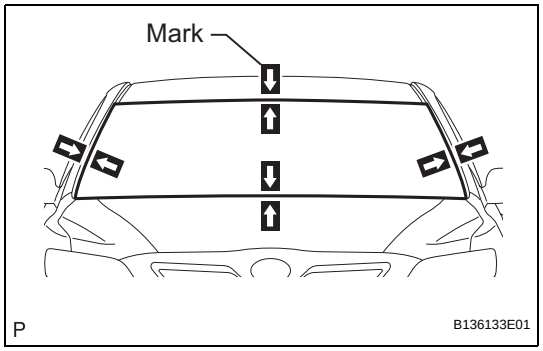
Install the new adhesive dam along the ceramic notches.

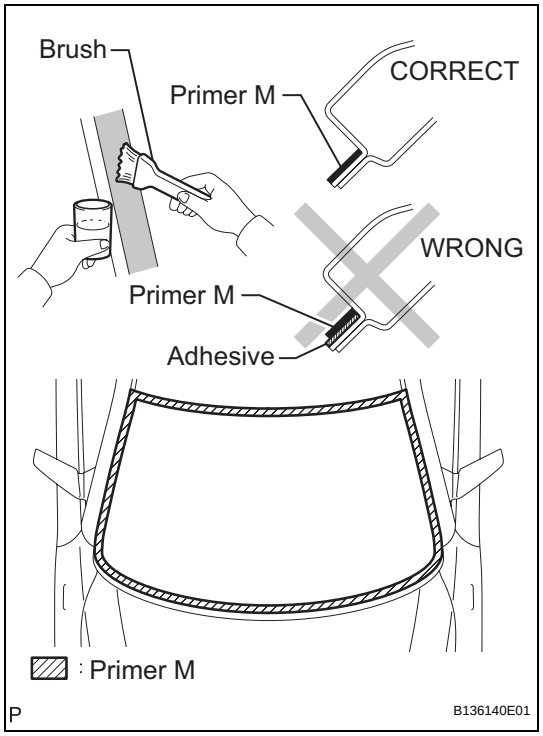
Standard dimension

Area	Dimension
A	6.5 mm (0.255 in.)

Back Side:







6. INSTALL WINDSHIELD GLASS ASSEMBLY

(a) Position the windshield glass assembly.
  (1) Using a suction cup, place the windshield glass assembly in the correct position.
  (2) Check that the whole contact surface of the windshield glass rim is perfectly even.
  (3) Align the matchmarks on the windshield glass and vehicle body.
  NOTICE:
  Check that the windshield glass stoppers are attached to the vehicle body correctly.
  (4) Remove the windshield glass assembly.

(b) Using a brush, coat the installation surface on the vehicle body with Primer M.
NOTICE:
- **Do not coat the adhesive with Primer M.**
- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer M for later use.**

HINT:
If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(c) Using a brush or sponge, coat the application area of adhesive with Primer G.
NOTICE:
- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

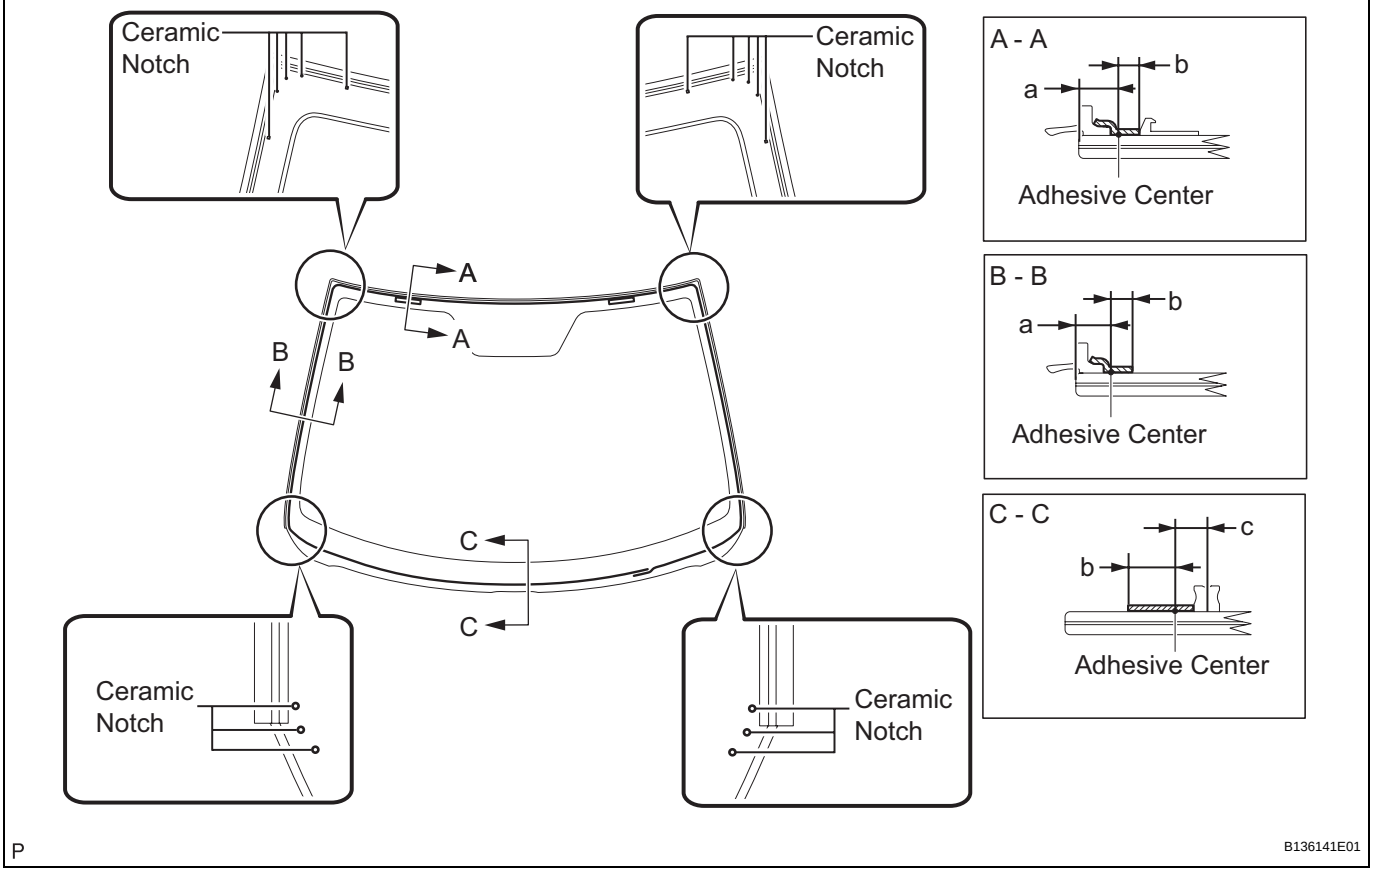
HINT:
- Apply Primer G onto the ceramic notches.
- If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

Standard dimension

Area	Dimension
a	8.7 mm (0.342 in.)
b	7.0 mm (0.275 in.)
c	6.5 mm (0.255 in.)

WS

Back Side:



(d) Apply adhesive (Adhesive: TOYOTA genuine windshield glass adhesive or equivalent).

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Usage time frame

Temperature	Tack-free Time
35°C (95°F)	15 minutes
20°C (68°F)	1 hour and 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with cartridge.

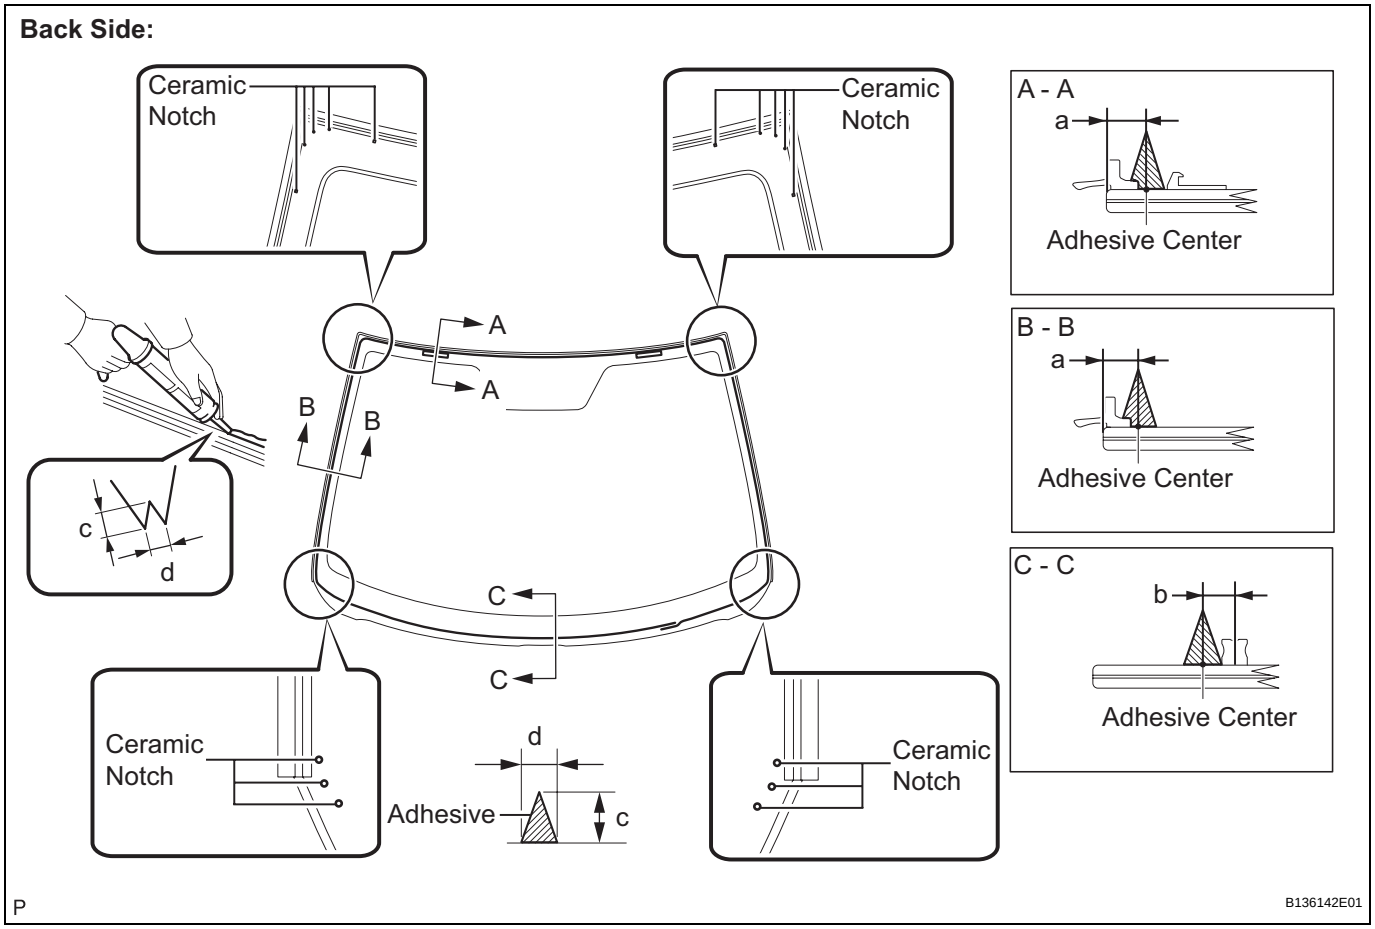
(3) Apply adhesive to the windshield glass, as shown in the illustration.

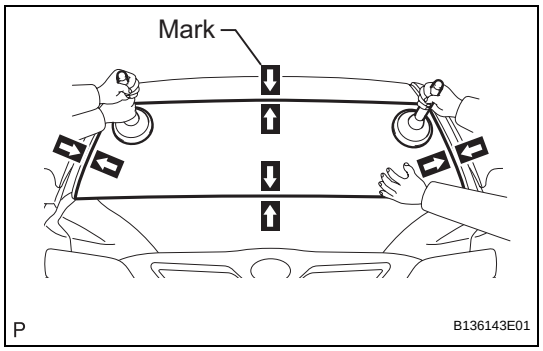
HINT:

Apply adhesive onto the ceramic notches.

Standard dimension

Area	Dimension
a	8.7 mm (0.342 in.)
b	6.5 mm (0.255 in.)
c	12.0 mm (0.472 in.)
d	8.0 mm (0.315 in.)





(e) Install the windshield glass assembly.

(1) Using a suction cup, position the windshield glass so that the matchmarks are aligned, and press it in gently along the rim.

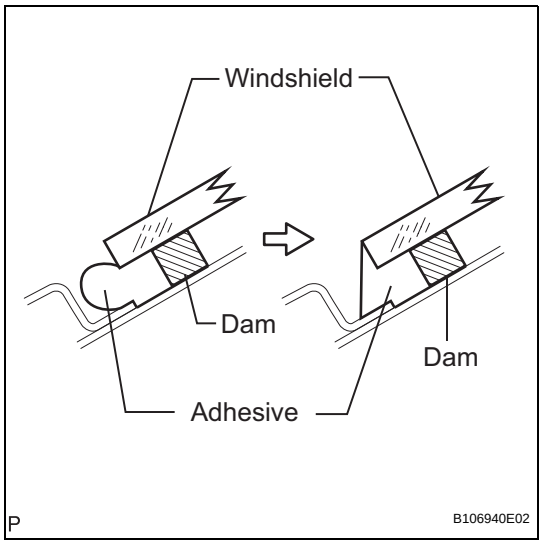
NOTICE:

- **Check that the windshield glass stoppers are attached to the vehicle body correctly.**
- **Check the clearance between the vehicle body and windshield glass.**

(2) Lightly press the front surface of the windshield glass to ensure a close fit.

HINT:

Press the glass with force of 98 N (10 kgf, 22 lb) or more.



(3) If necessary, use a scraper to correct the level or position of adhesive that has been applied.
HINT:
Apply adhesive onto the windshield glass rim.

(4) Hold the windshield glass using protective tape until the applied adhesive becomes hard.
NOTICE:
Do not drive the vehicle for the time described in the table below.
Minimum time

Temperature	Minimum time prior to driving vehicle
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

7. CHECK FOR LEAKS AND REPAIR

(a) After the adhesive has hardened, apply water from the outside of the vehicle. Check that no water leaks into the cabin.

(b) If water leaks into the cabin, allow the water to dry and add adhesive.

(c) Remove the protective tape.

8. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-45)

9. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof) (See page IR-46)

10. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-49)

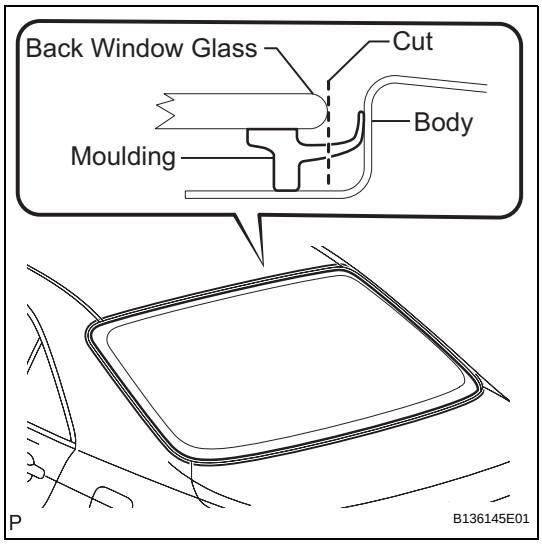
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE REAR SEAT CUSHION ASSEMBLY
3. REMOVE REAR SEAT HEADREST ASSEMBLY
4. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
5. REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)
6. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)
7. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)
8. REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)
9. REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)
10. REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)
11. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)
12. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)
13. REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)
14. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)
15. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH
16. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)
17. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
18. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)
19. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
20. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)

21. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)**
22. **REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)**
23. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-35)**
24. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-35)**
25. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-50)**
26. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-50)**
27. **REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-36)**
28. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-36)**
29. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-37)**
30. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-37)**
31. **REMOVE REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**
32. **REMOVE SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-30)**
33. **REMOVE SUNSHADE TRIM HOLDER (w/ Rear Sunshade) (See page IR-31)**
34. **REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)**
    It is not necessary to completely remove the roof headlining. Slightly lower the rear section of the roof headlining so that the back window glass can be removed (See page IR-31).
35. **REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)**
    It is not necessary to completely remove the roof headlining. Slightly lower the rear section of the roof headlining so that the back window glass can be removed (See page IR-32).



36. REMOVE BACK WINDOW MOULDING

(a) Using a knife, cut off the moulding, as shown in the illustration.

NOTICE:

- **Do not damage the vehicle body with the knife.**
- **If the vehicle body is damaged, repair the damaged portion by applying an anti-rust coating after removing the back window glass assembly.**

(b) Remove the remaining moulding from the back window glass.

HINT:

When removing the moulding, make a partial cut, then pull and remove it by hand.

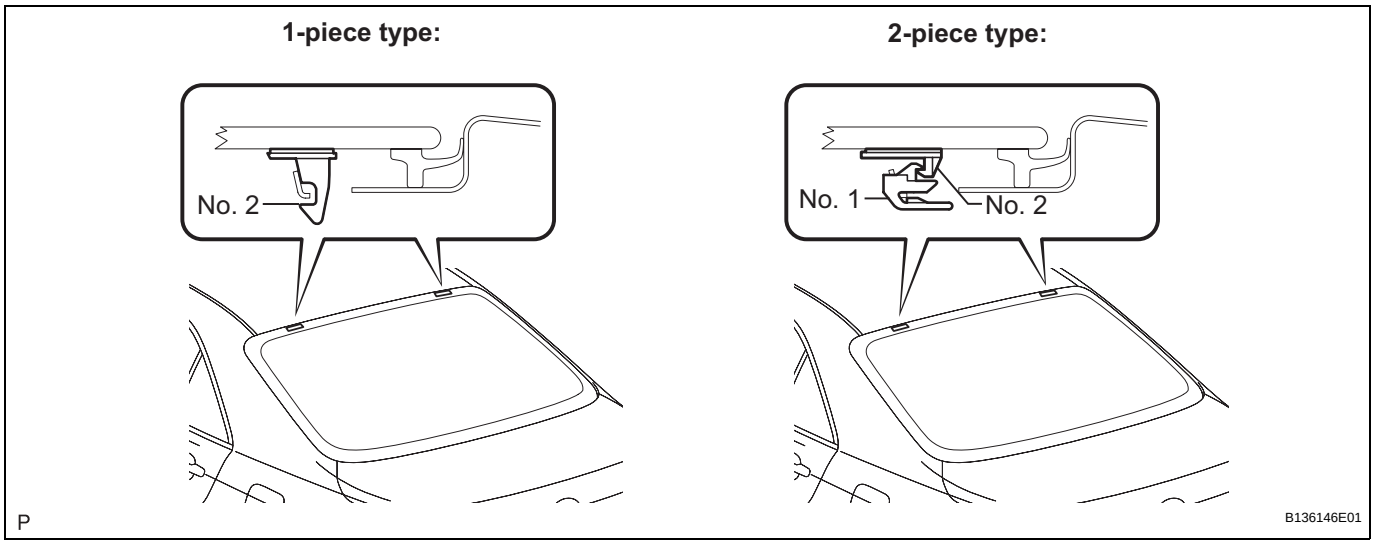
37. REMOVE BACK WINDOW GLASS ASSEMBLY

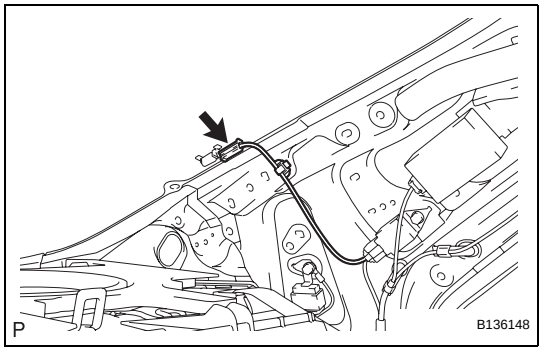
NOTICE:

- **There are No. 1 and No. 2 stoppers on the back window glass as shown in the illustration. Be careful not to damage the back window glass when cutting off the adhesive.**
- **To prevent the back window glass from dropping when performing this operation, be sure to hold the back window glass using suction cups.**

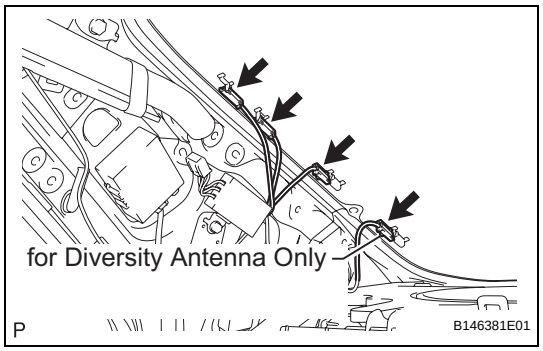
HINT:

Depending on vehicles, a 1-piece or 2-piece type stopper is used.

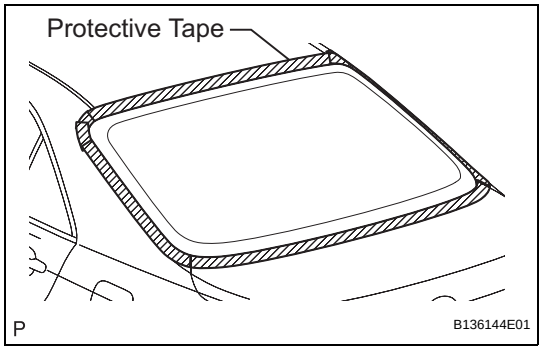




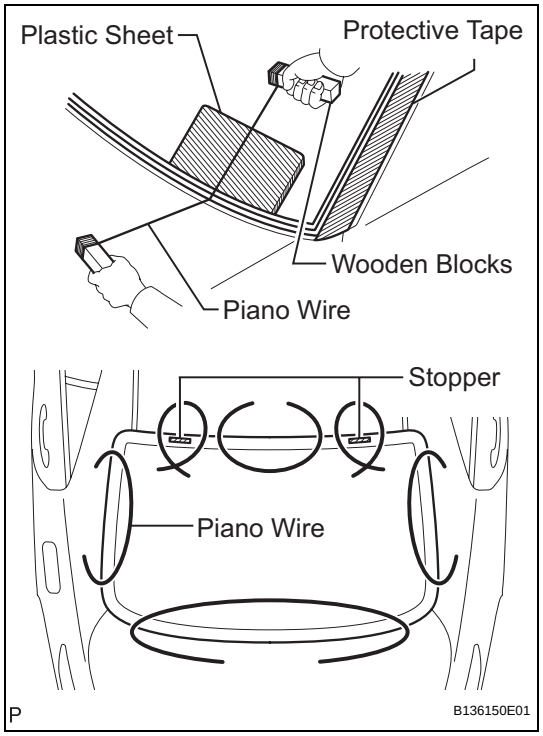
(a) Disconnect the connector.



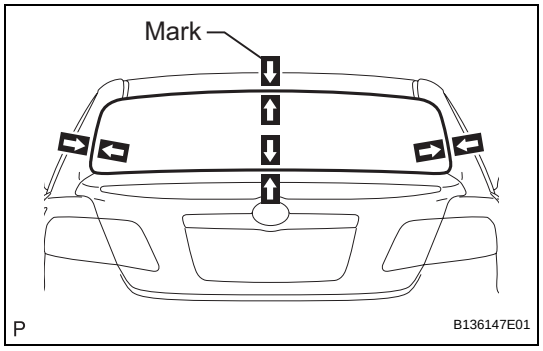
(b) Disconnect the connectors.



(c) Apply protective tape to the installation position of the back window glass assembly on the vehicle body.
HINT:
Apply protective tape to the installation surface to prevent it from being scratched.



(d) Pass a piano wire between the vehicle body and glass from the interior.
(e) Tie both wire ends to wooden blocks or similar objects.
(f) Cut off the adhesive by pulling the piano wire around the back window glass.
NOTICE:
- **When separating the back window glass, take care not to damage the paint or the interior and exterior ornaments.**
- **To prevent the package tray trim panel from being scratched when removing the back window glass, place a plastic sheet between the piano wire and package tray trim panel.**



(g) Place matchmarks on the back window glass and vehicle body on the locations indicated in the illustration.
HINT:
Matchmarks do not need to be placed if the back window glass is not going to be reused.
(h) Using a suction cup, remove the back window glass assembly.
NOTICE:
- **Be careful not to drop the back window glass.**

WS

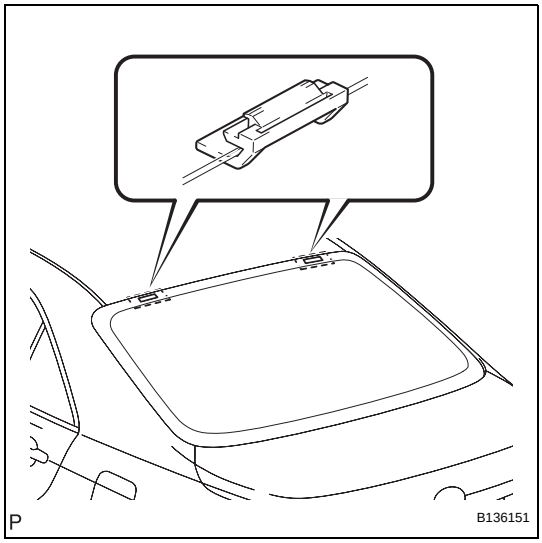
- **Leave as much adhesive on the vehicle body as possible when removing the back window glass.**

38. REMOVE NO. 2 BACK WINDOW GLASS STOPPER

(a) Using a scraper, remove the 2 No. 2 stoppers.

NOTICE:

- **Be careful not to damage the back window glass.**
- **Be sure to replace the No. 2 stoppers with new ones.**

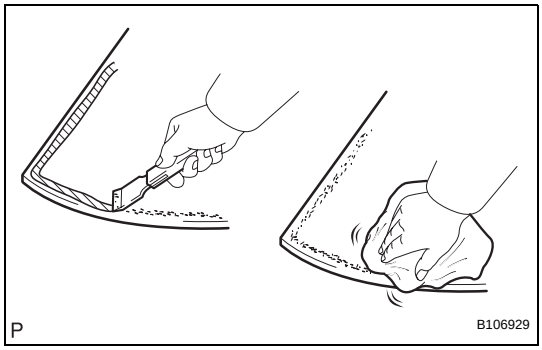


39. REMOVE NO. 1 BACK WINDOW GLASS STOPPER (for 2 Piece Type)

(a) Using a scraper, remove the 2 No. 1 stoppers.

NOTICE:

Be sure to replace the No. 1 stoppers with new ones.



40. CLEAN BACK WINDOW GLASS

(a) Using a scraper, remove the adhesive tape and adhesive sticking to the back window glass.

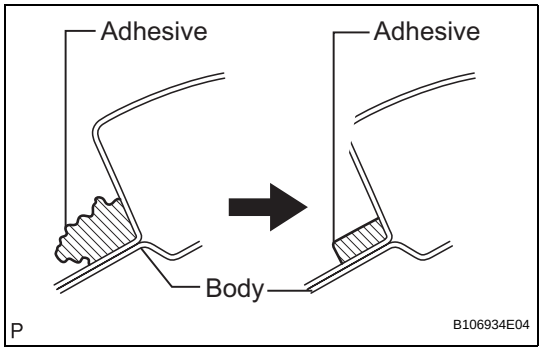
NOTICE:

Be careful not to damage the windshield glass.

(b) Clean the outer circumference of the back window glass with a non-residue solvent.

NOTICE:

- **Do not touch the back window glass surface after cleaning it.**
- **Even if using a new back window glass, clean the back window glass with a non-residue solvent.**



41. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

(1) Using a knife, cut away any rough adhesive on the contact surface of the vehicle body to ensure the appropriate surface shape.

NOTICE:

Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with a piece of cloth saturated with cleaner.
HINT:
Even if all the adhesive has been removed, clean the vehicle body.

INSTALLATION

1. INSTALL NO. 2 BACK WINDOW GLASS STOPPER

(a) Using a brush or sponge, coat the application area of the No. 2 stoppers with Primer G.

NOTICE:

- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

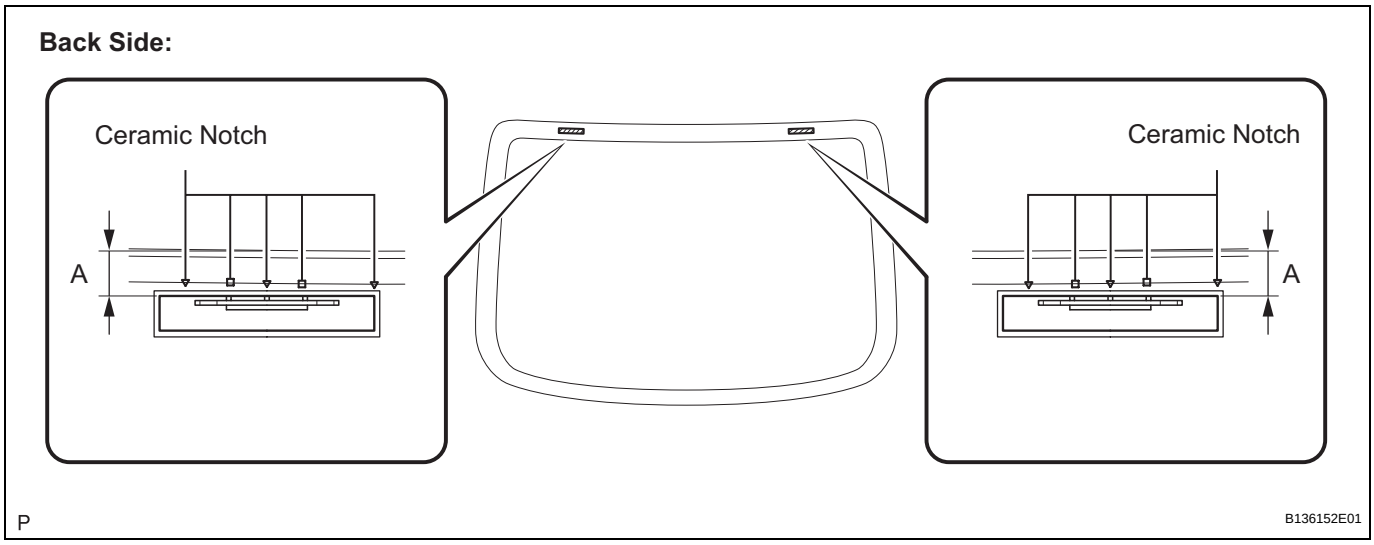
(b) Install 2 new No. 2 stoppers onto the windshield glass, as shown in the illustration.

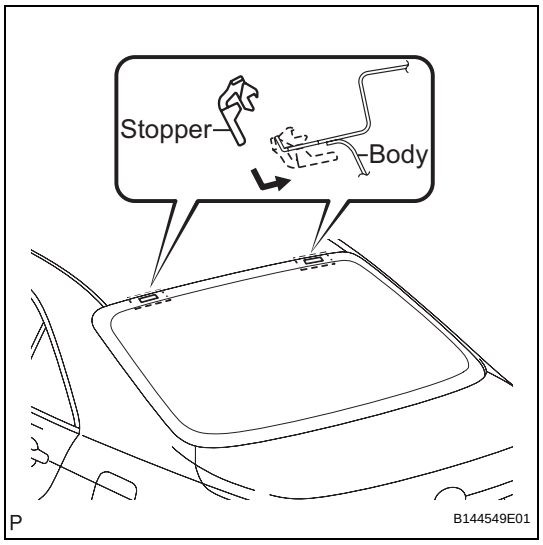
HINT:

Only 2-piece type No. 2 stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.

Standard dimension

Area	Dimension
A	16.4 mm (0.645 in.)



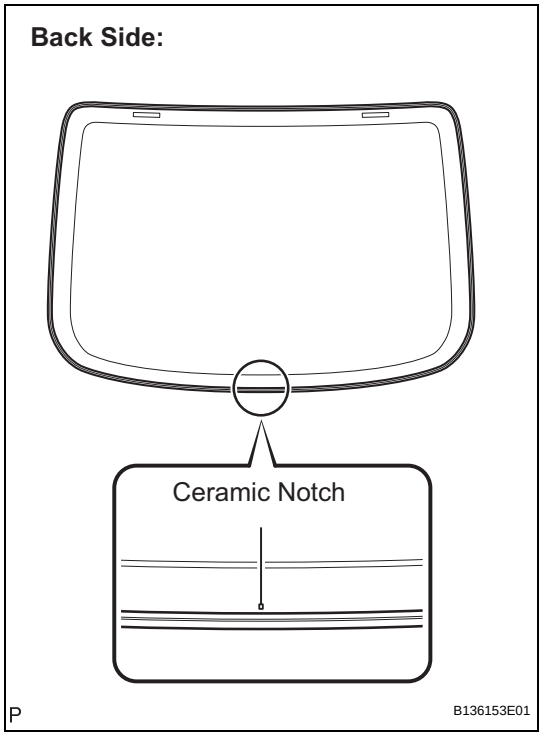


2. INSTALL NO. 1 BACK WINDOW GLASS STOPPER

(a) Install 2 new No. 1 stoppers to the vehicle body, as shown in the illustration.

HINT:

Only 2-piece type No. 1 stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.



3. INSTALL BACK WINDOW MOULDING

(a) Using a brush or sponge, coat the application area of moulding with Primer G.

NOTICE:

- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

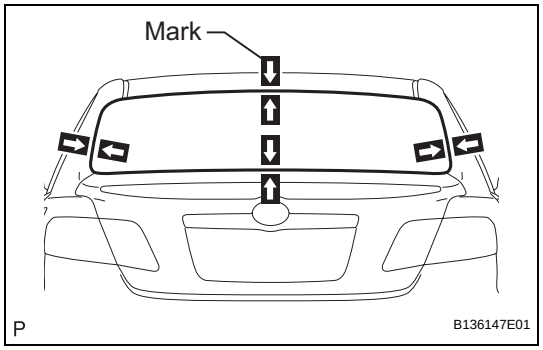
HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(b) Install a new moulding, as shown in the illustration.

NOTICE:

Align the joint of the new moulding with the ceramic notch.



4. INSTALL BACK WINDOW GLASS ASSEMBLY

(a) Position the back window glass assembly.

(1) Using a suction cup, place the back window glass in the correct position.

(2) Check that the whole contact surface of the back window glass rim is perfectly even.

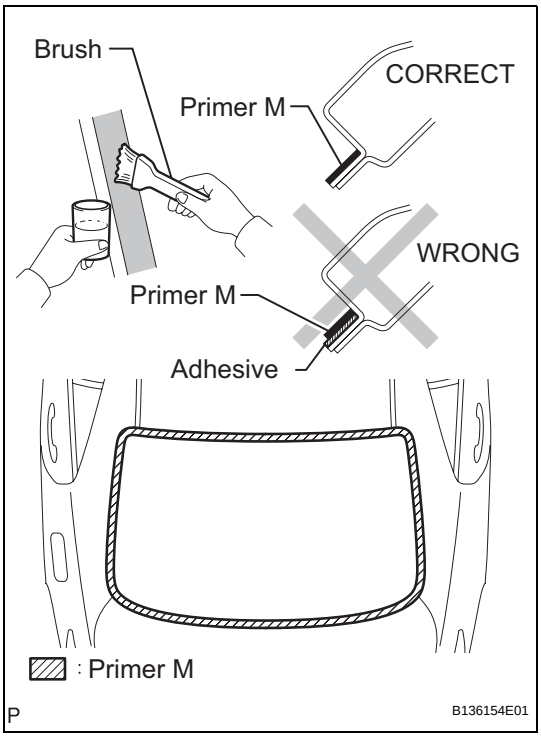
(3) Align the matchmarks on the back window glass and vehicle body.

NOTICE:

Check that the back window glass stoppers are attached to the vehicle body correctly.

(4) Remove the back window glass assembly.

WS



(b) Using a brush, coat the installation surface on the vehicle body with Primer M.

NOTICE:

- **Do not coat the adhesive with Primer M.**
- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer M for later use.**

HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

(c) Using a brush or sponge, coat the application area of adhesive with Primer G.

NOTICE:

- **Do not apply too much primer.**
- **Allow the primer coating to dry for 3 minutes or more.**
- **Do not keep any of the opened Primer G for later use.**

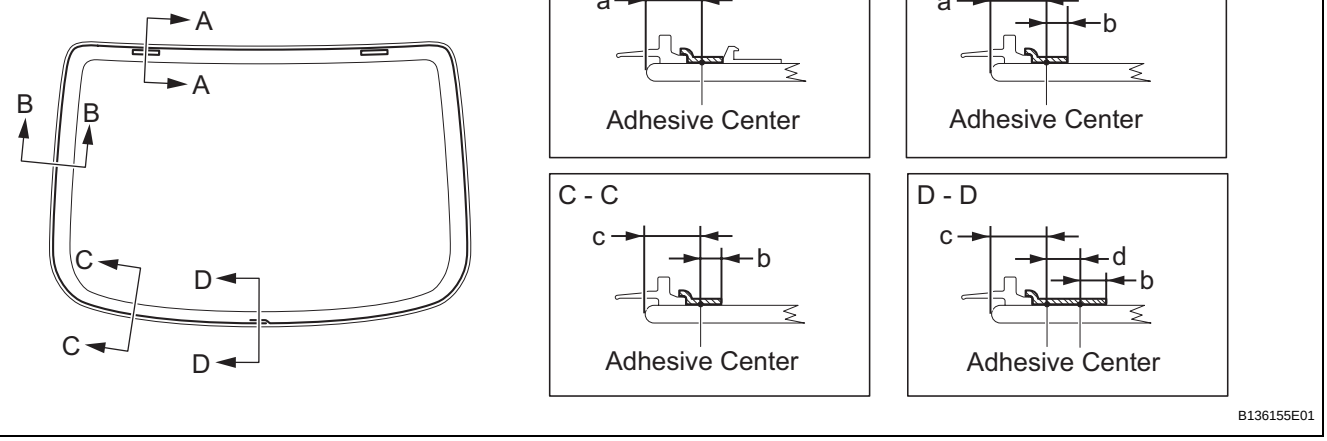
HINT:

If an area other than that specified is coated by accident, wipe off the primer with a clean piece of cloth before it dries.

Standard dimension

Area	Dimension
a	10.75 mm (0.423 in.)
b	7.0 mm (0.275 in.)
c	10.25 mm (0.403 in.)
d	8.0 mm (0.315 in.)

Back Side:



(d) Apply adhesive (Adhesive: TOYOTA genuine windshield glass adhesive or equivalent).

(1) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:

After cutting off the tip, use all adhesive within the time described in the table below.

Usage time frame

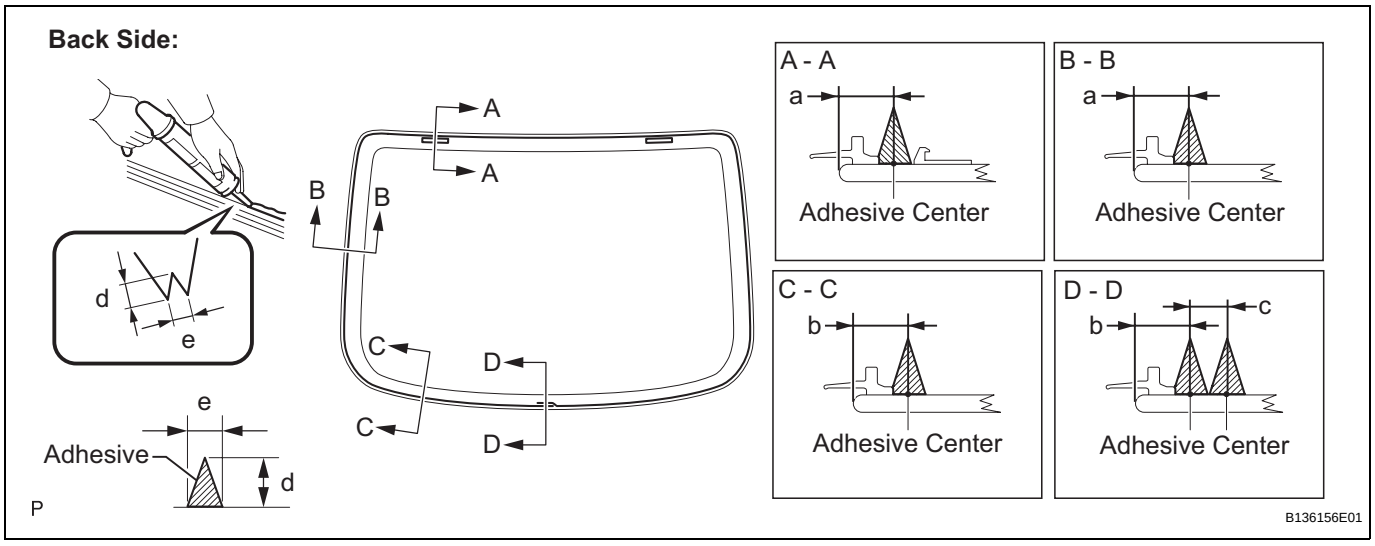
Temperature	Tack-free Time
35°C (95°F)	15 minutes
20°C (68°F)	1 hour and 40 minutes
5°C (41°F)	8 hours

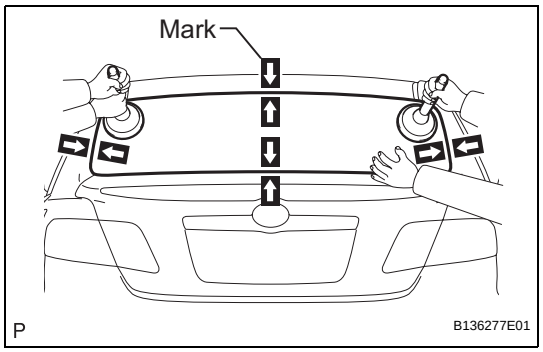
(2) Load the sealer gun with cartridge.

(3) Apply adhesive to the back window glass, as shown in the illustration.

Standard dimension

Area	Dimension
a	10.75 mm (0.423 in.)
b	10.25 mm (0.403 in.)
c	8.0 mm (0.315 in.)
d	12.0 mm (0.472 in.)
e	8.0 mm (0.315 in.)





(e) Install the back window glass assembly.

(1) Using a suction cup, position the back window glass so that the matchmarks are aligned, and press it in gently along the rim.

NOTICE:

- **Check that the back window glass stoppers are attached to the vehicle body correctly.**
- **Check the clearance between the vehicle body and back window glass.**

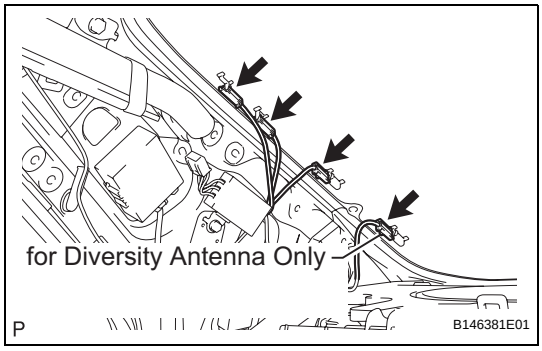
WS

(2) Lightly press the front surface of the back window glass to ensure a close fit.
HINT:
Press the glass with force of 98 N (10 kgf, 22 lb) or more.

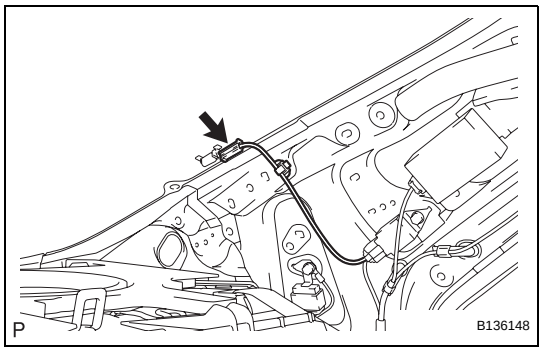
(3) Hold the back window glass using protective tape until applied adhesive becomes hard.
NOTICE:
Do not drive the vehicle for the time described in the table below.
Minimum time

Temperature	Minimum time prior to driving vehicle
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

(f) Connect the connectors.



(g) Connect the connector.



5. CHECK FOR LEAKS AND REPAIR

(a) After the adhesive has hardened, apply water from the outside of the vehicle. Check that no water leaks into the cabin.

(b) If water leaks into the cabin, allow the water to dry and add adhesive.

(c) Remove the protective tape.

6. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-45)

7. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof) (See page IR-46)

8. INSTALL SUNSHADE TRIM HOLDER (w/ Rear Sunshade) (See page IR-47)

9. INSTALL SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-48)

10. INSTALL REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-49)

11. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-38)

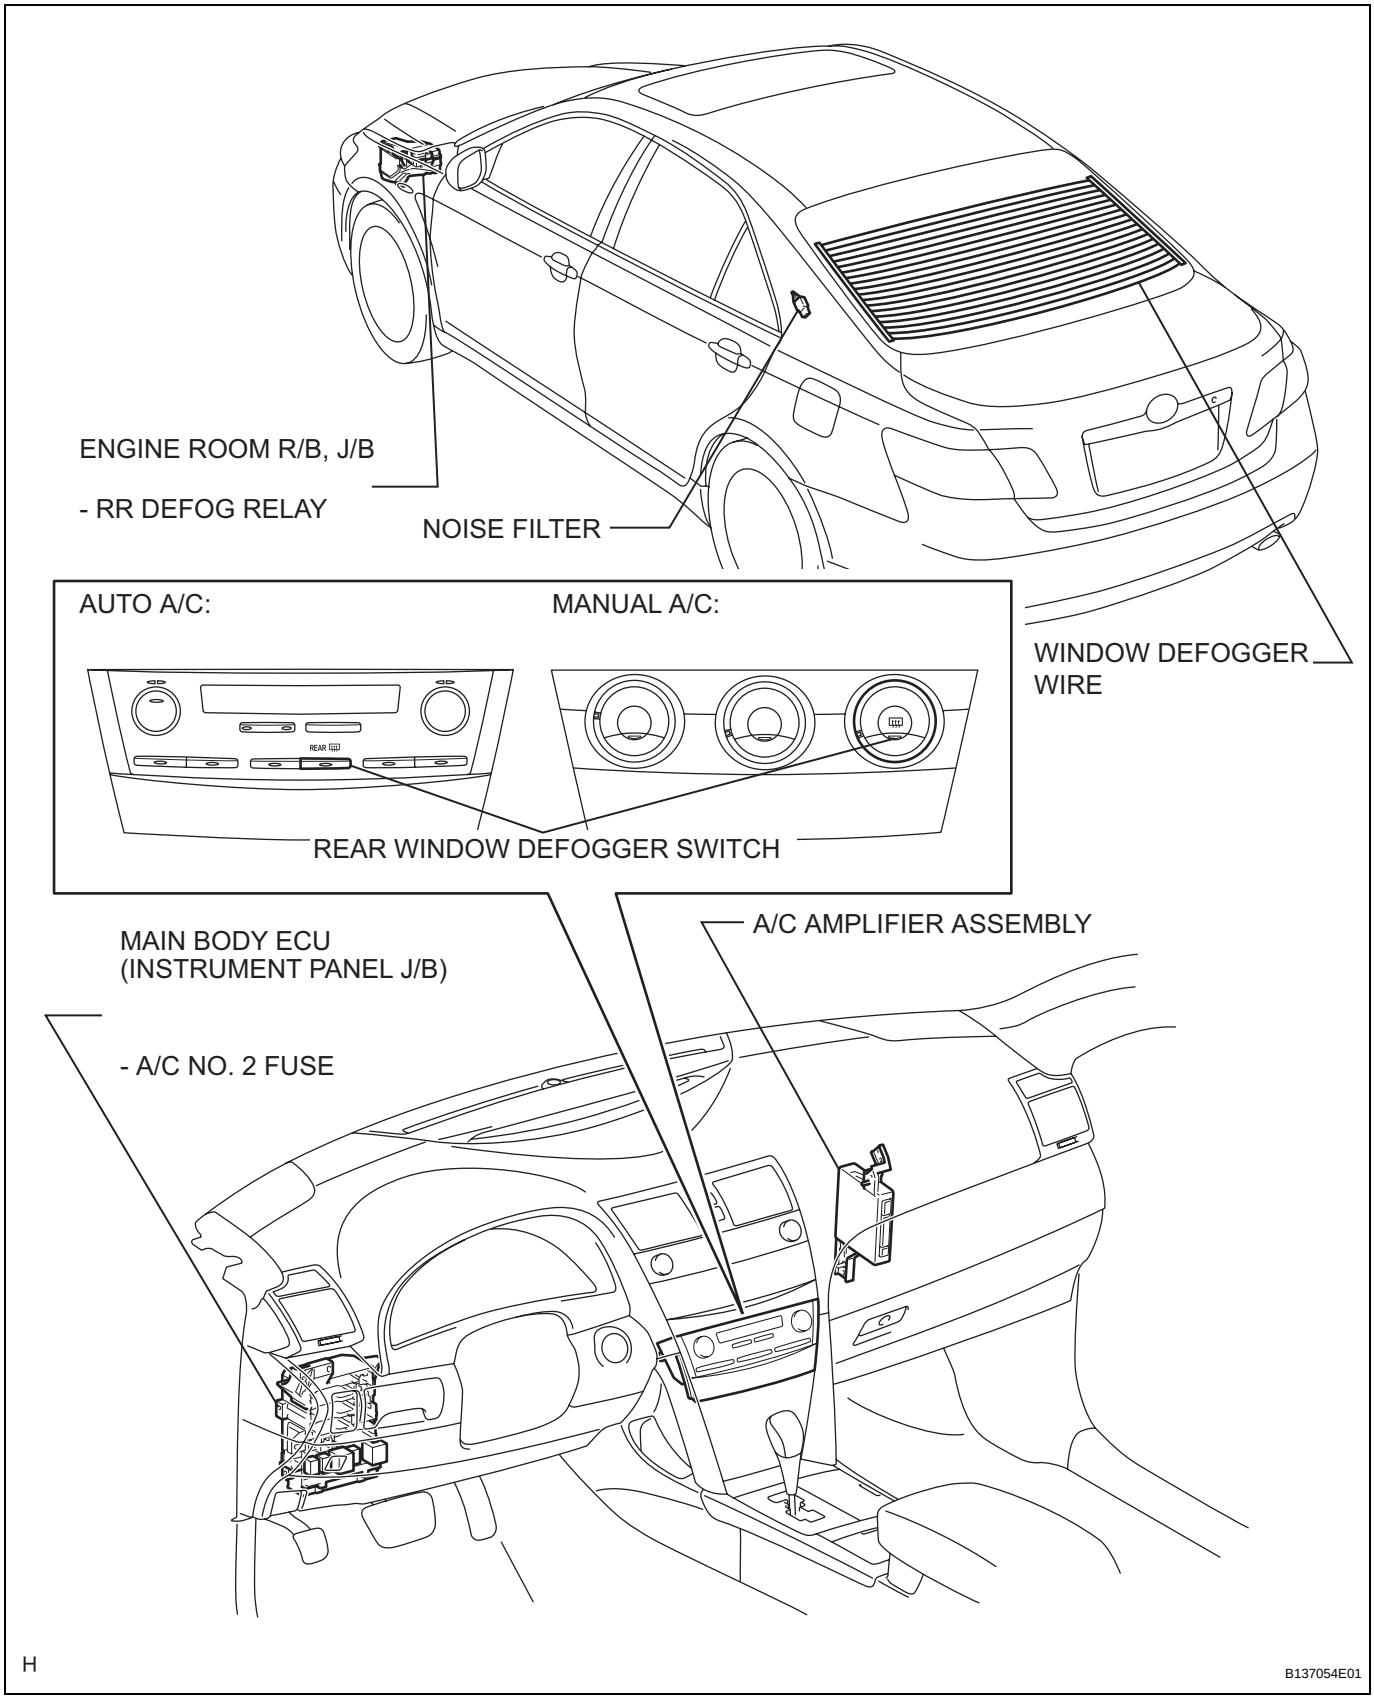
12. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-39)

13. INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-39)
14. INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-39)
15. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-52)
16. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-52)
17. CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-40)
18. CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-40)
19. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)
20. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)
21. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)
22. INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)
23. INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
24. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)
25. INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)
26. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)
27. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)
28. INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)
29. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)
30. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)
31. INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)
32. INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)
33. INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)

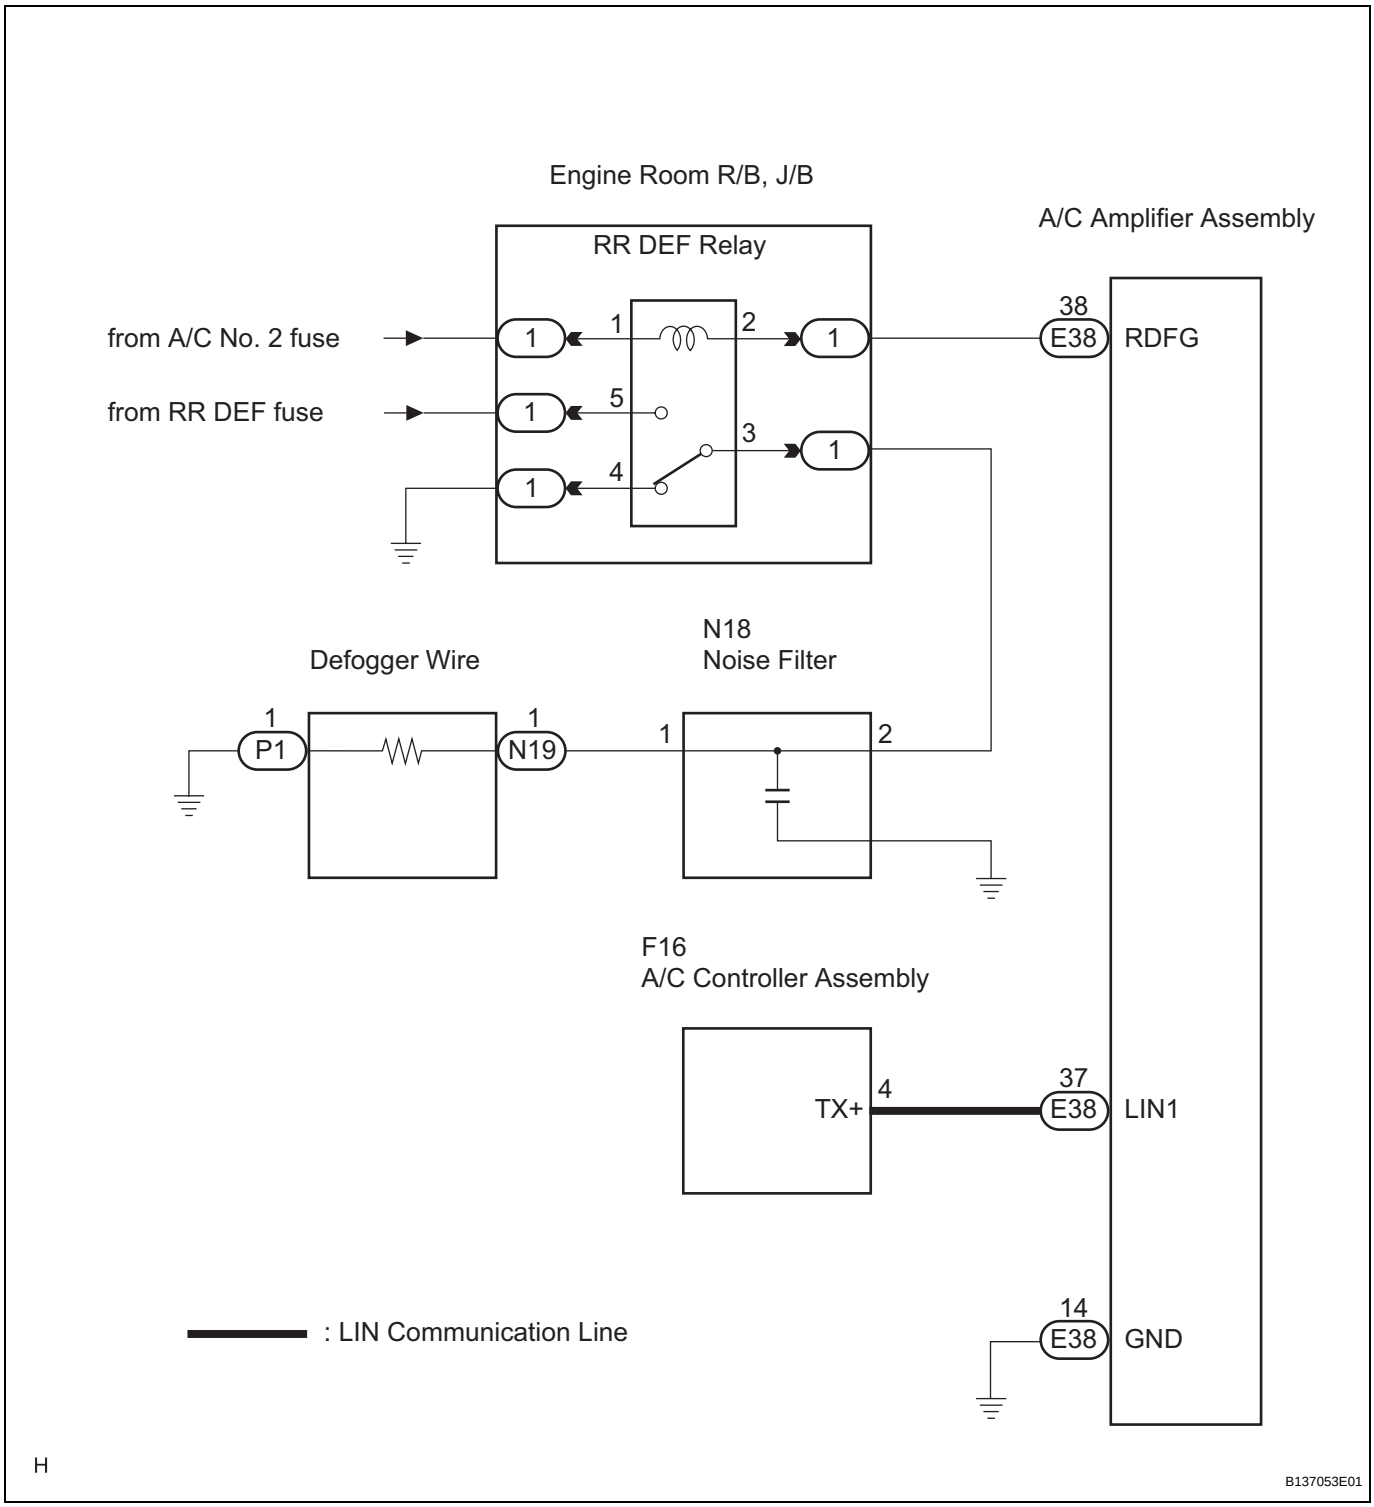
34. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
35. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**
36. **INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
37. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
38. **INSTALL REAR SEAT HEADREST ASSEMBLY**
39. **INSTALL REAR SEAT CUSHION ASSEMBLY**
40. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
41. **INSPECT SRS WARNING LIGHT**
    (See page RS-32)

WINDOW DEFOGGER SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM



WS

SYSTEM DESCRIPTION

1. GENERAL

The defogger system's thin heater wires are attached to the inside of the rear window and defog the window surface quickly. The indicator light illuminates while the system is operating. The system automatically turns off after approximately 15 minutes.

HINT:

The rear window defogger is linked with the mirror defogger.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
RR DEF Relay	Receives rear defogger activation request signals from A/C amplifier assembly (A/C ECU) and supplies power to rear window defogger.
Rear Window Defogger	Receives power from RR DEF relay and heats defogger wire.

3. DESCRIPTION

Function	Outline
Defogs the rear window surface	• Receives rear defogger activation request signals from A/C amplifier assembly (A/C ECU) and supplies power to rear window defogger. • Receives power from DEFOG relay and heats defogger wire.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the defogger system.
- The intelligent tester should be used in step 4.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3	PROBLEM SYMPTOMS TABLE

HINT:

(See page WS-89)

NEXT

4	OVERALL ANALYSIS AND TROUBLESHOOTING

(a) Terminals of ECU (See page WS-89)
(b) Data List/Active Test (See page WS-91)
(c) On-vehicle inspection (See page WS-92)

NEXT

5	REPAIR OR REPLACE

NEXT

6	CONFIRMATION TEST

NEXT

END

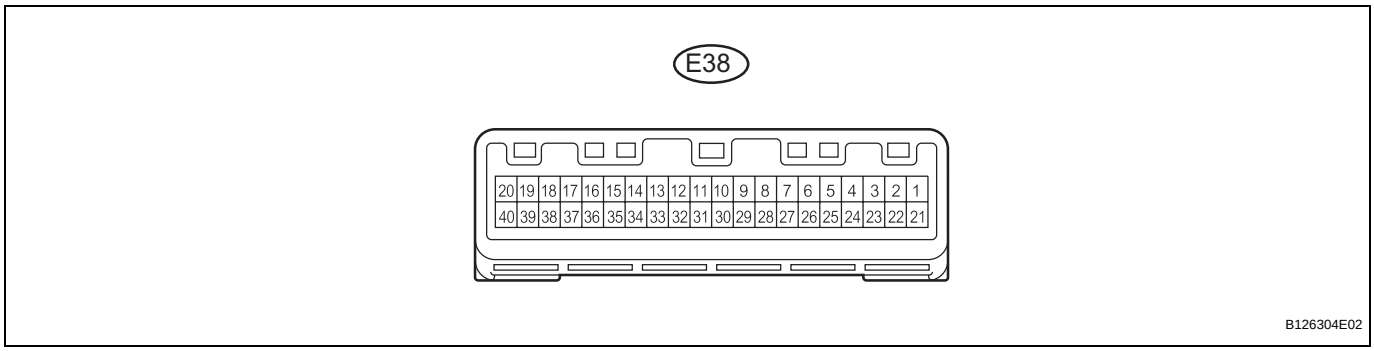
PROBLEM SYMPTOMS TABLE

WINDOW DEFOGGER SYSTEM:

Symptom	Suspected area	See page
Rear window defogger does not operate	1. A/C No. 2, RR DEF fuses	-
	2. RR DEF relay	WS-94
	3. A/C controller assembly	WS-94
	4. A/C amplifier assembly	WS-94
	5. Rear window defogger wire	WS-92
	6. Wire harness	-

TERMINALS OF ECU

1. CHECK A/C AMPLIFIER ASSEMBLY



(a) Measure the voltage and resistance of each terminal of the connectors.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RDFG (E38-38) - GND (E38-14)	G - W-B	Rear Defogger Signal	Ignition switch on (IG), Rear defogger switch OFF	10 to 14 V

Standard resistance

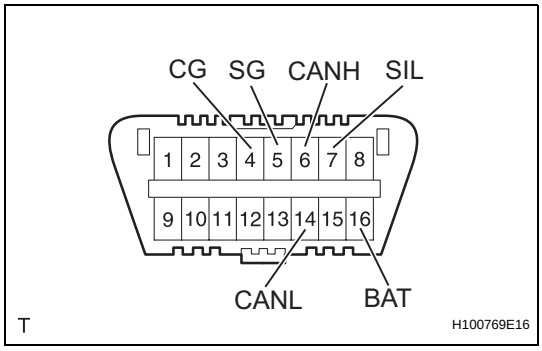
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (E38-14) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

DIAGNOSIS SYSTEM

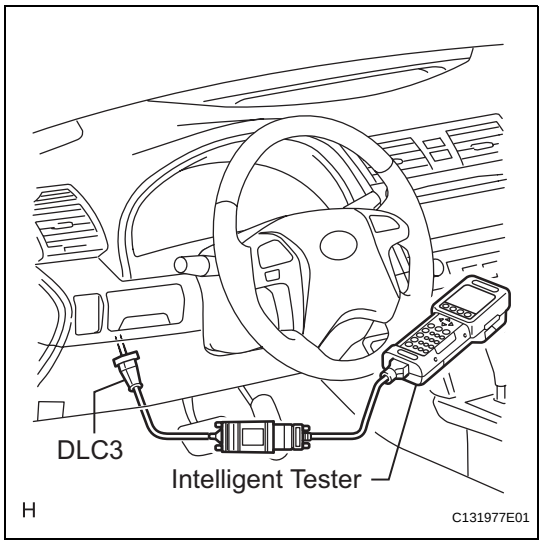
1. DESCRIPTION

(a) The defogger system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3



(a) The ECU uses ISO 15765-4 communication. The terminal arrangement of the DLC3 complies with SAE J 1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or more

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows a relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Perform the ACTIVE TEST according to the display on the tester.

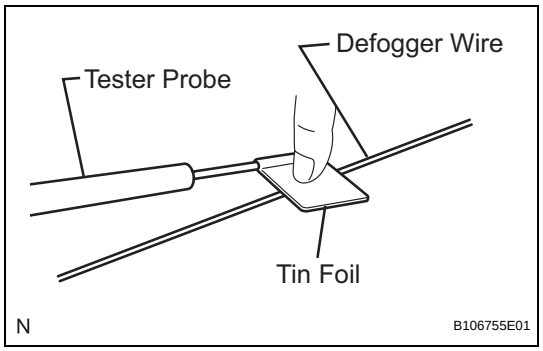
Air Conditioner:

Item	Test Details	Diagnostic Note
Defogger Relay (Rear)	Turns rear window defogger OFF/ON	-

ON-VEHICLE INSPECTION

1. CHECK REAR WINDOW DEFOGGER SYSTEM OPERATION

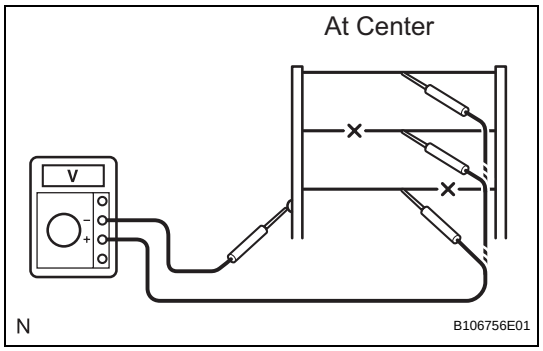
(a) When the ignition switch is turned on (IG) and the defogger switch is pressed, check that the rear window defogger operates.
HINT:
After 15 minutes, check that the defogger automatically turns off.



2. INSPECT BACK WINDOW (DEFOGGER WIRE)

NOTICE:

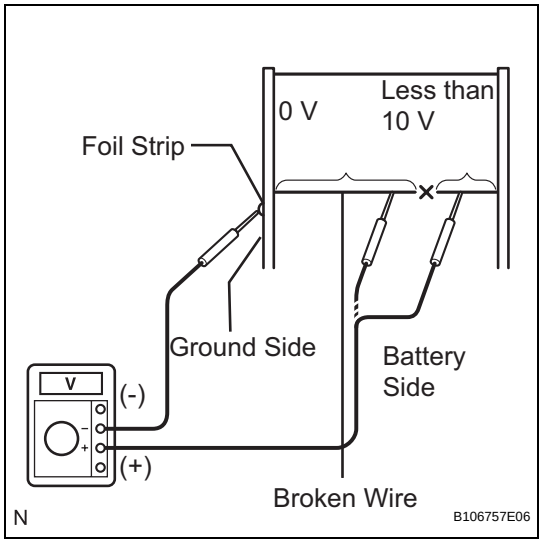
- **When cleaning the glass, wipe the glass along the wire using a soft and dry cloth. Take care not to damage the wires.**
- **Do not use detergents or glass cleaners that have abrasive ingredients.**



- **When measuring voltage, wrap a piece of tin foil around the tip of the negative tester probe and press the foil against the wire with your finger, as shown in the illustration.**

(a) Turn the ignition switch on (IG).

(b) Turn the defogger switch on.



(c) Check the voltage at the center of each defogger wire, as shown in the illustration.
Standard voltage

Voltage	Criteria
Approx. 5 V	Wire is not broken
Approx. 10 or 0 V	Wire is broken

HINT:
If there is approximately 10 V, the wire may be faulty between the center of the wire and the wire end on the battery side. If there is no voltage, the wire may be faulty between the center of the wire and the wire end on the ground side.

(d) Place the voltmeter's positive (+) lead against the defogger wire on the battery side.

(e) Place the voltmeter's negative (-) lead with the foil strip against the wire on the ground side.

(f) Slide the positive (+) lead from the battery side to the ground side.

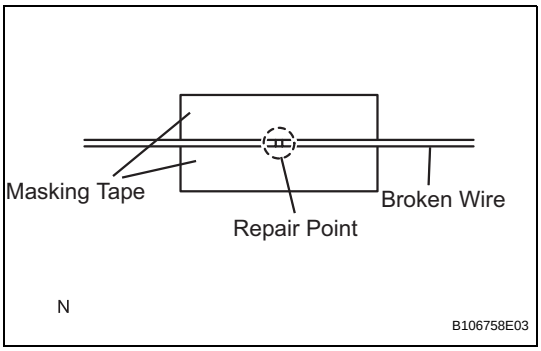
(g) The point where the voltage drops from approximately 10 V to 0 V is the place where the defogger wire is broken.
HINT:
If the defogger wire is not broken, the voltmeter should indicate 0 V at the positive (+) end of the defogger wire but gradually increase to approximately 12 V as the meter probe moves to the other end.

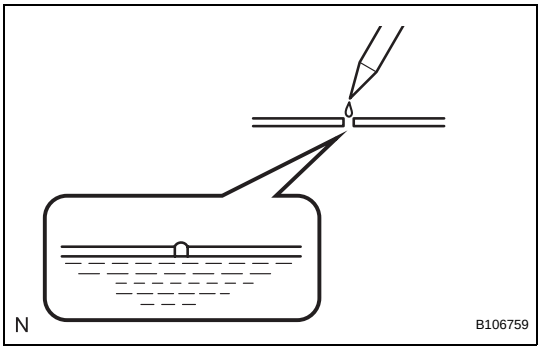
REPAIR

1. REPAIR WINDOW DEFOGGER WIRE

(a) Clean the broken wire tips with a grease, wax and silicone remover.

(b) Place the masking tape along both sides of the wire.





(c) Thoroughly mix the repair agent (Dupont paste No. 4817 or equivalent).

(d) Using a fine tip brush, apply a small amount of the agent to the wire.

(e) After a few minutes, remove the masking tape.
NOTICE:
Do not repair the defogger wire again for at least 24 hours.

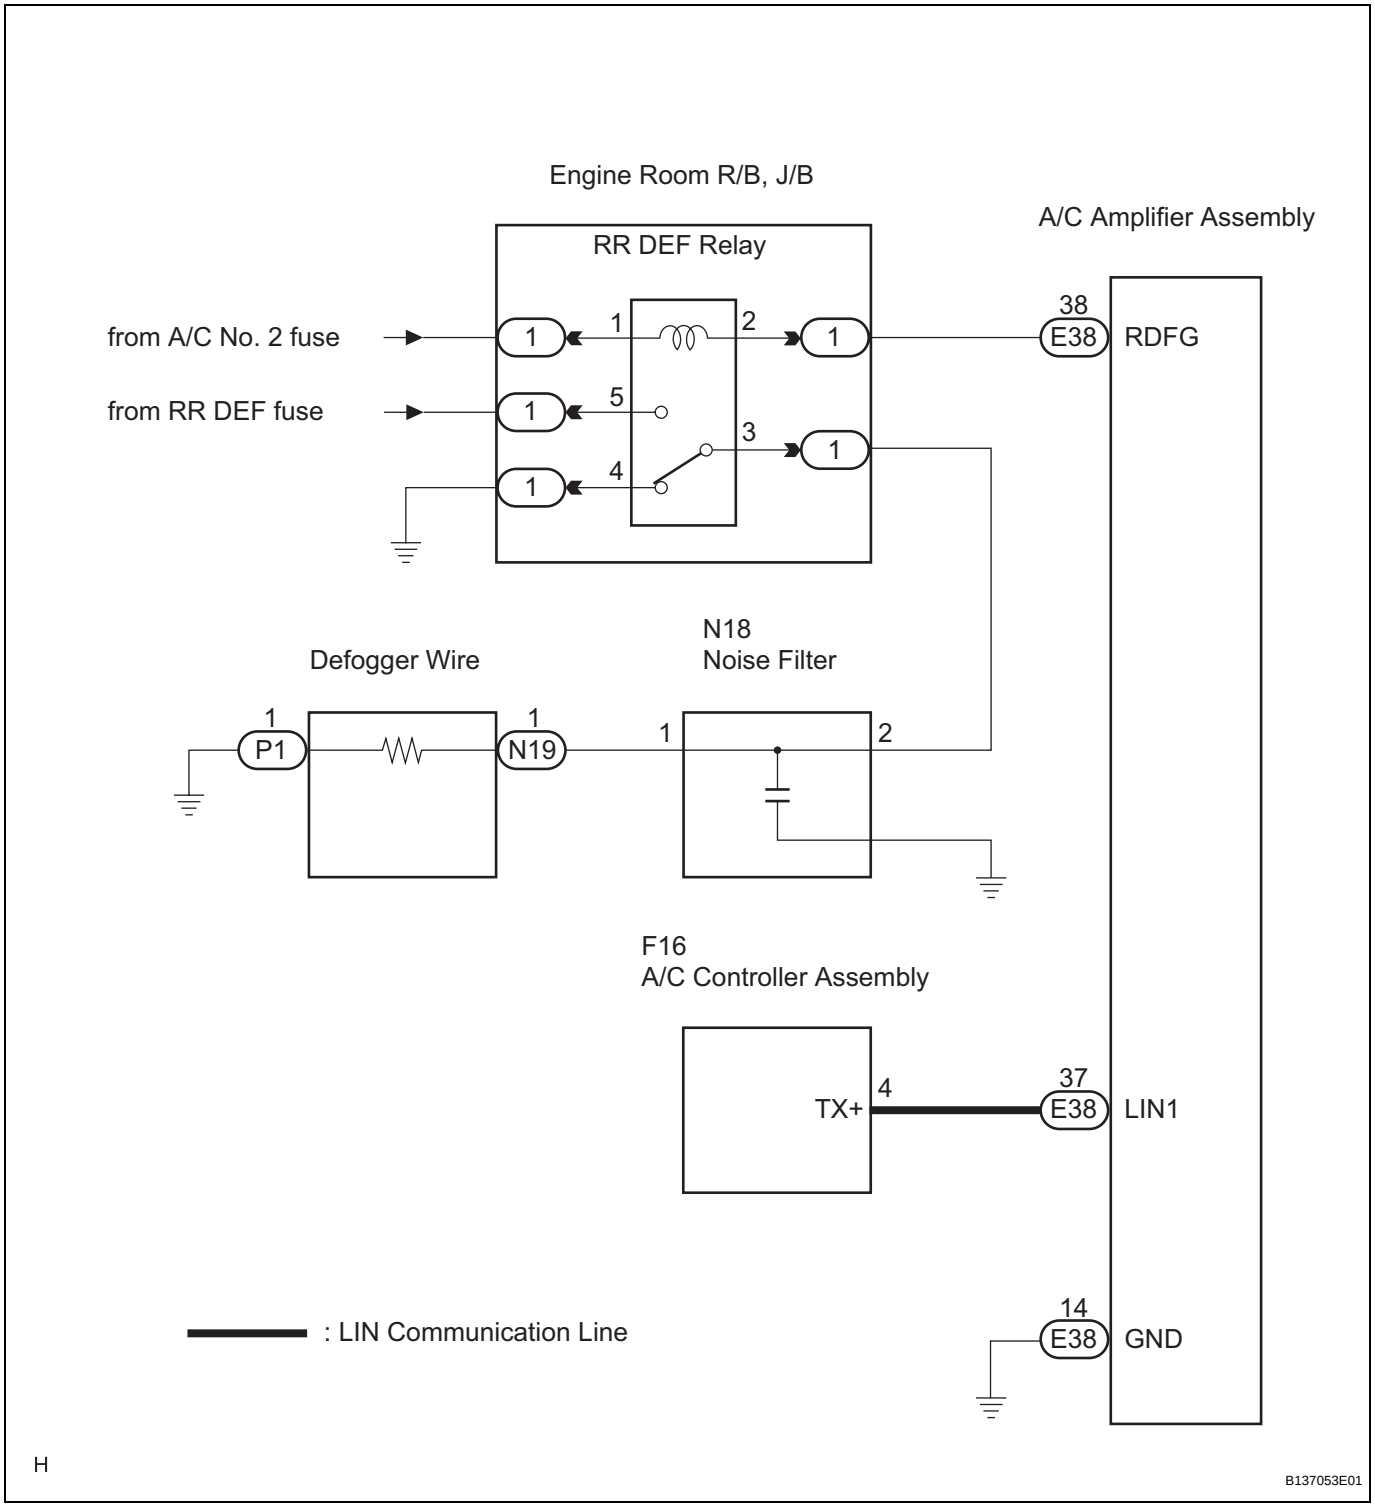
Rear Window Defogger System does not Operate

DESCRIPTION

When the rear window defogger switch, which is built into the heater control assembly, is operated, the operation signals are transmitted to the A/C amplifier assembly through LIN. When the A/C amplifier assembly receives the signals, it turns on the DEFOG relay to operate the rear window defogger.

WS

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK FOR DTCs

(a) Select the DTC check on the intelligent tester to check for communication errors.

Result

Result	Proceed to
Not output DTC codes	A
Output DTC codes (LIN communication)	B

B → GO TO MULTIPLEX COMMUNICATION SYSTEM

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Select the ACTIVE TEST, use the intelligent tester to issue a control command, and then check the window defogger operation.

Air Conditioner

Item	Test Details
Defogger Relay (Rear)	Turns rear window defogger OFF/ON

OK → Go to step 5

NG

3	REPLACE AIR CONDITIONER CONTROL ASSEMBLY

(a) Replace the air conditioner control assembly.

NEXT

4	CONFIRM REAR WINDOW DEFOGGER OPERATION

(a) Turn the ignition switch on (IG), press the defogger switch, and check that the window defogger operates.

OK:

System operates normally

NG → REPLACE A/C AMPLIFIER ASSEMBLY

OK

END

5	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Select the ACTIVE TEST, use the intelligent tester to issue a control command, and then check the DEFOG relay operation.
(b) Check that operation sound of the RR DEF relay is heard.

Result	Proceed to
Relay operating sound is heard	OK
Relay operating sound is not heard	NG

OK → Go to step 9

NG

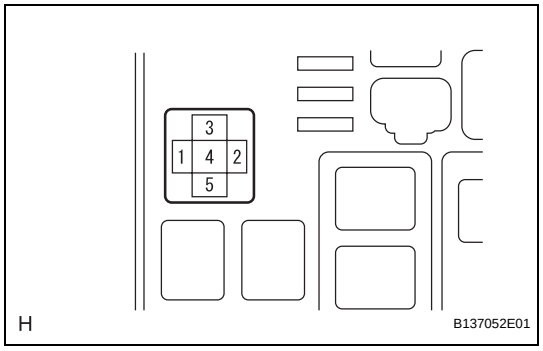
6	INSPECT RR DEF RELAY

See page WS-100.

NG → REPLACE RR DEF RELAY

OK

7	CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE)



(a) Disconnect the RR DEF relay.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage:
Engine room R/B, J/B

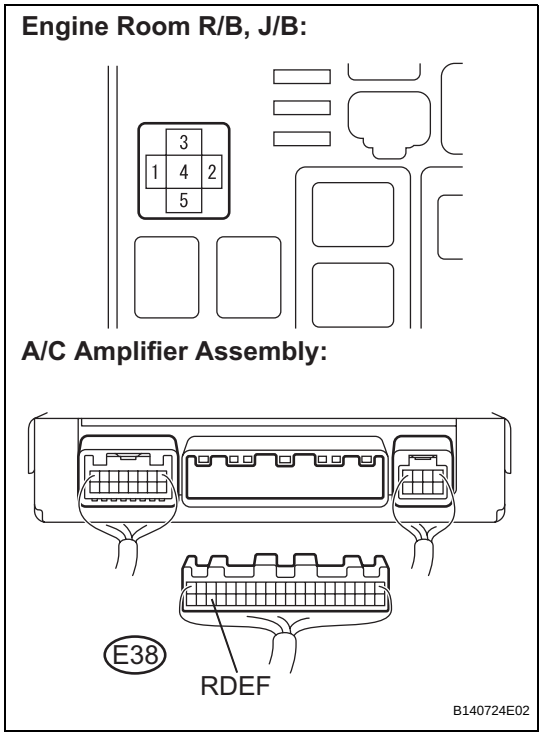
Tester Connection	Condition	Specified Condition
1 - Body ground	Ignition switch on (IG)	10 to 14 V

NG → REPAIR OR REPLACE A/C NO. 2 FUSE, HARNESS OR CONNECTOR

OK

WS

8	CHECK WIRE HARNESS (RR DEF RELAY - A/C AMPLIFIER ASSEMBLY)



(a) Disconnect the RR DEF relay and A/C amplifier assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
2 - E38-38	Always	Below 1 Ω
2 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE A/C AMPLIFIER ASSEMBLY

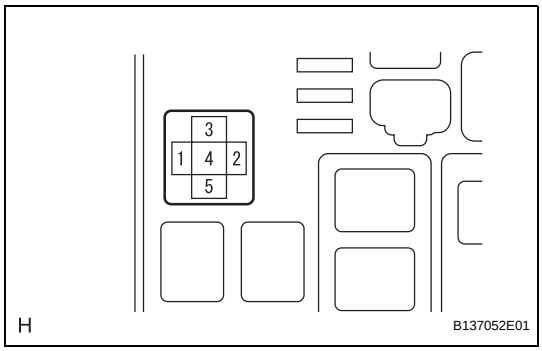
9	INSPECT RR DEF RELAY

See page WS-100.

NG → **REPLACE RR DEF RELAY**

OK

10	CHECK WIRE HARNESS (RR DEF RELAY - BATTERY POSITIVE AND BODY GROUND)



(a) Disconnect the RR DEF relay.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
4 - Body ground	Always	Below 1 Ω

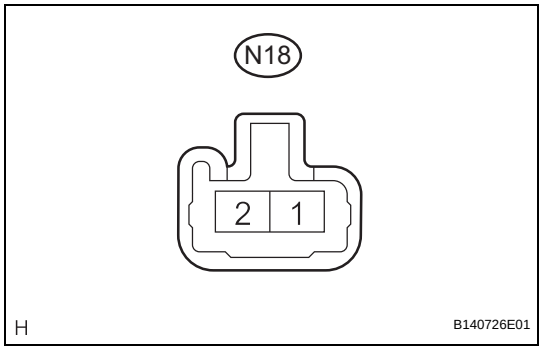
Standard voltage:
Engine room R/B, J/B

Tester Connection	Condition	Specified Condition
5 - Body ground	Always	10 to 14 V

NG → REPAIR OR REPLACE RR DEF FUSE, HARNESS OR CONNECTOR

OK

11 INSPECT NOISE FILTER



(a) Disconnect the noise filter connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

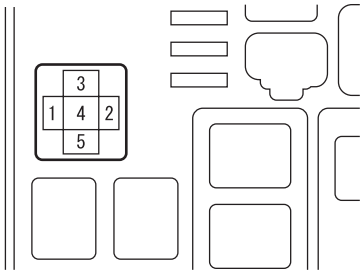
Tester Connection	Condition	Specified Condition
N18-1 - N18-2	Always	Below 1 Ω
N18-1 - Body ground	Always	10 kΩ or higher

NG → REPLACE NOISE FILTER

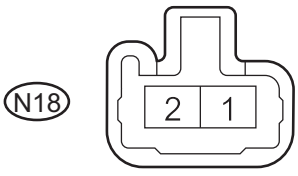
OK

12 CHECK WIRE HARNESS (RR DEF RELAY - NOISE FILTER)

Engine Room R/B, J/B:



Noise Filter:



(a) Disconnect the RR DEF relay and defogger wire connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

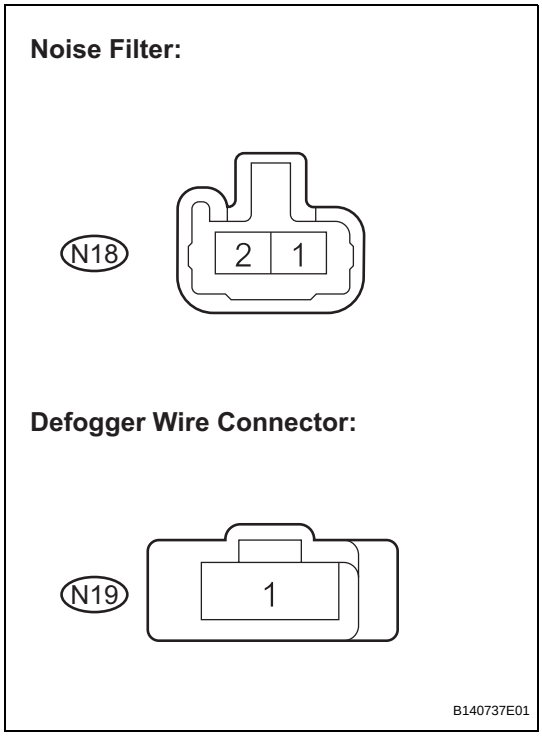
Tester Connection	Condition	Specified Condition
3 - N18-2	Always	Below 1 Ω
3 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

WS

13 CHECK WIRE HARNESS (NOISE FILTER - DEFOGGER WIRE CONNECTOR)



(a) Measure the resistance according to the value(s) in the table below.

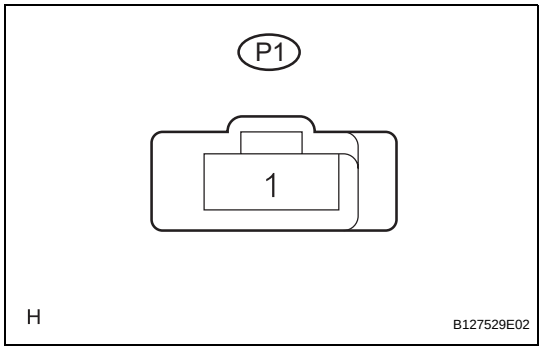
Standard resistance

Tester Connection	Condition	Specified Condition
N18-1 - N19-1	Always	Below 1 Ω
N18-1 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

14 CHECK WIRE HARNESS (DEFOGGER WIRE CONNECTOR - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

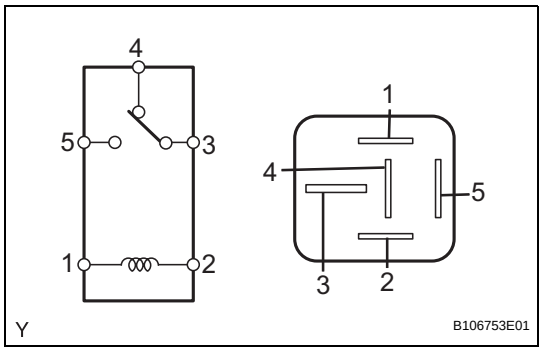
Standard resistance

Tester Connection	Condition	Specified Condition
P1-1 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPAIR OR REPLACE REAR WINDOW DEFOGGER WIRE



DEFOGGER RELAY

ON-VEHICLE INSPECTION

1. INSPECT DEFOGGER RELAY (Marking: DEFOG)

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Condition	Specified Condition
3 - 4	Below 1 Ω (when battery voltage is not applied between terminals)
3 - 5	10 kΩ or higher (when battery voltage is not applied between terminals)
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

WIPER AND WASHER SYSTEM

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

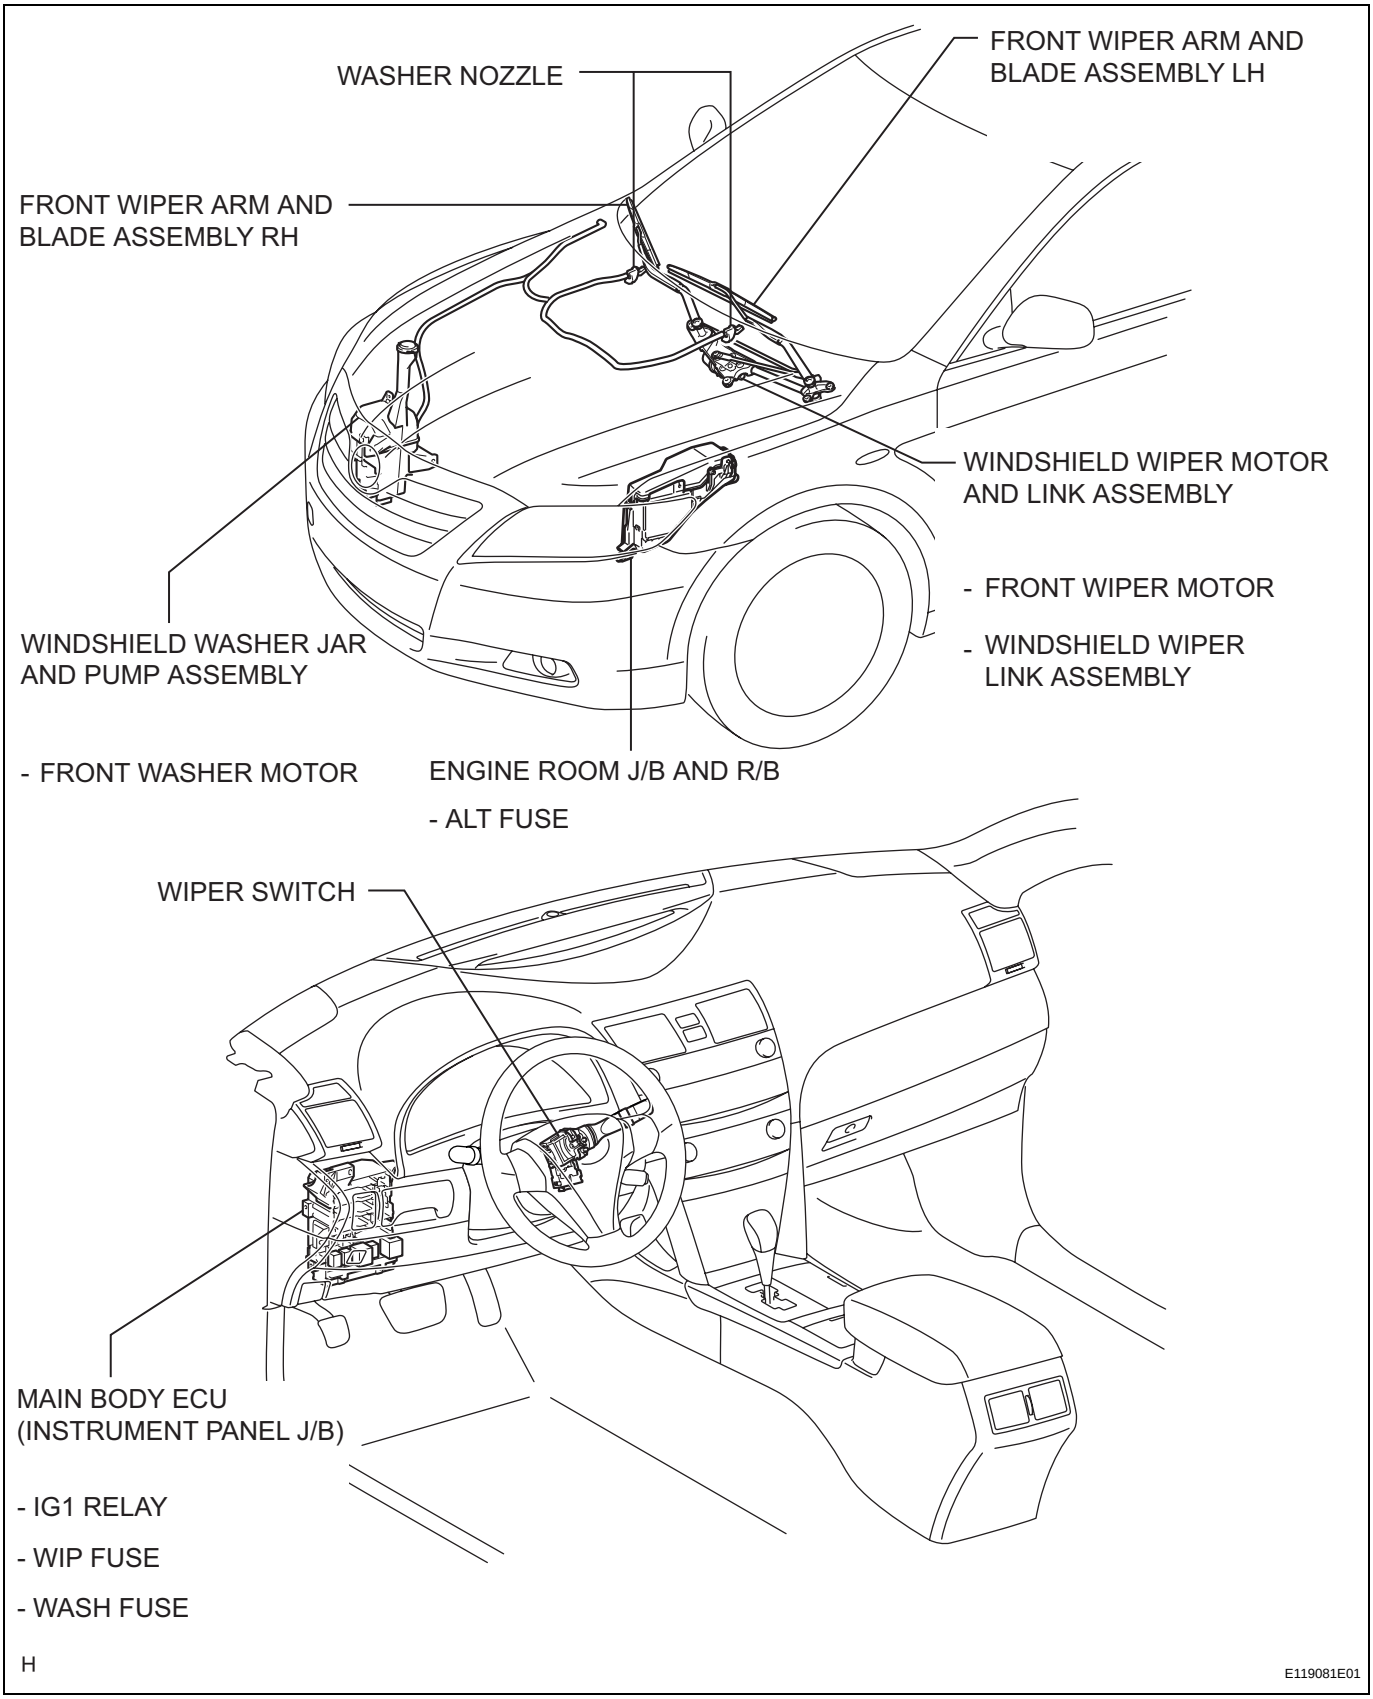
Switch Type		Ignition Switch (position)	Engine Switch (condition)
Expression	Ignition switch off	LOCK	Off
	Ignition switch on (IG)	ON	On (IG)
	Ignition switch on (ACC)	ACC	On (ACC)
	Engine start	START	Start

2. PRECAUTION OF WASHER NOZZLE ADJUSTMENT

(a) Do not clean or adjust the washer nozzle with a safety pin, etc. because;
(1) the washer nozzle tip is made of resin and could be damaged.
(2) adjustment is not necessary because the washer nozzle is a spray type. If it is necessary to change the nozzle angle, replace the washer nozzle with one that has a different nozzle angle. (See page WW-28)

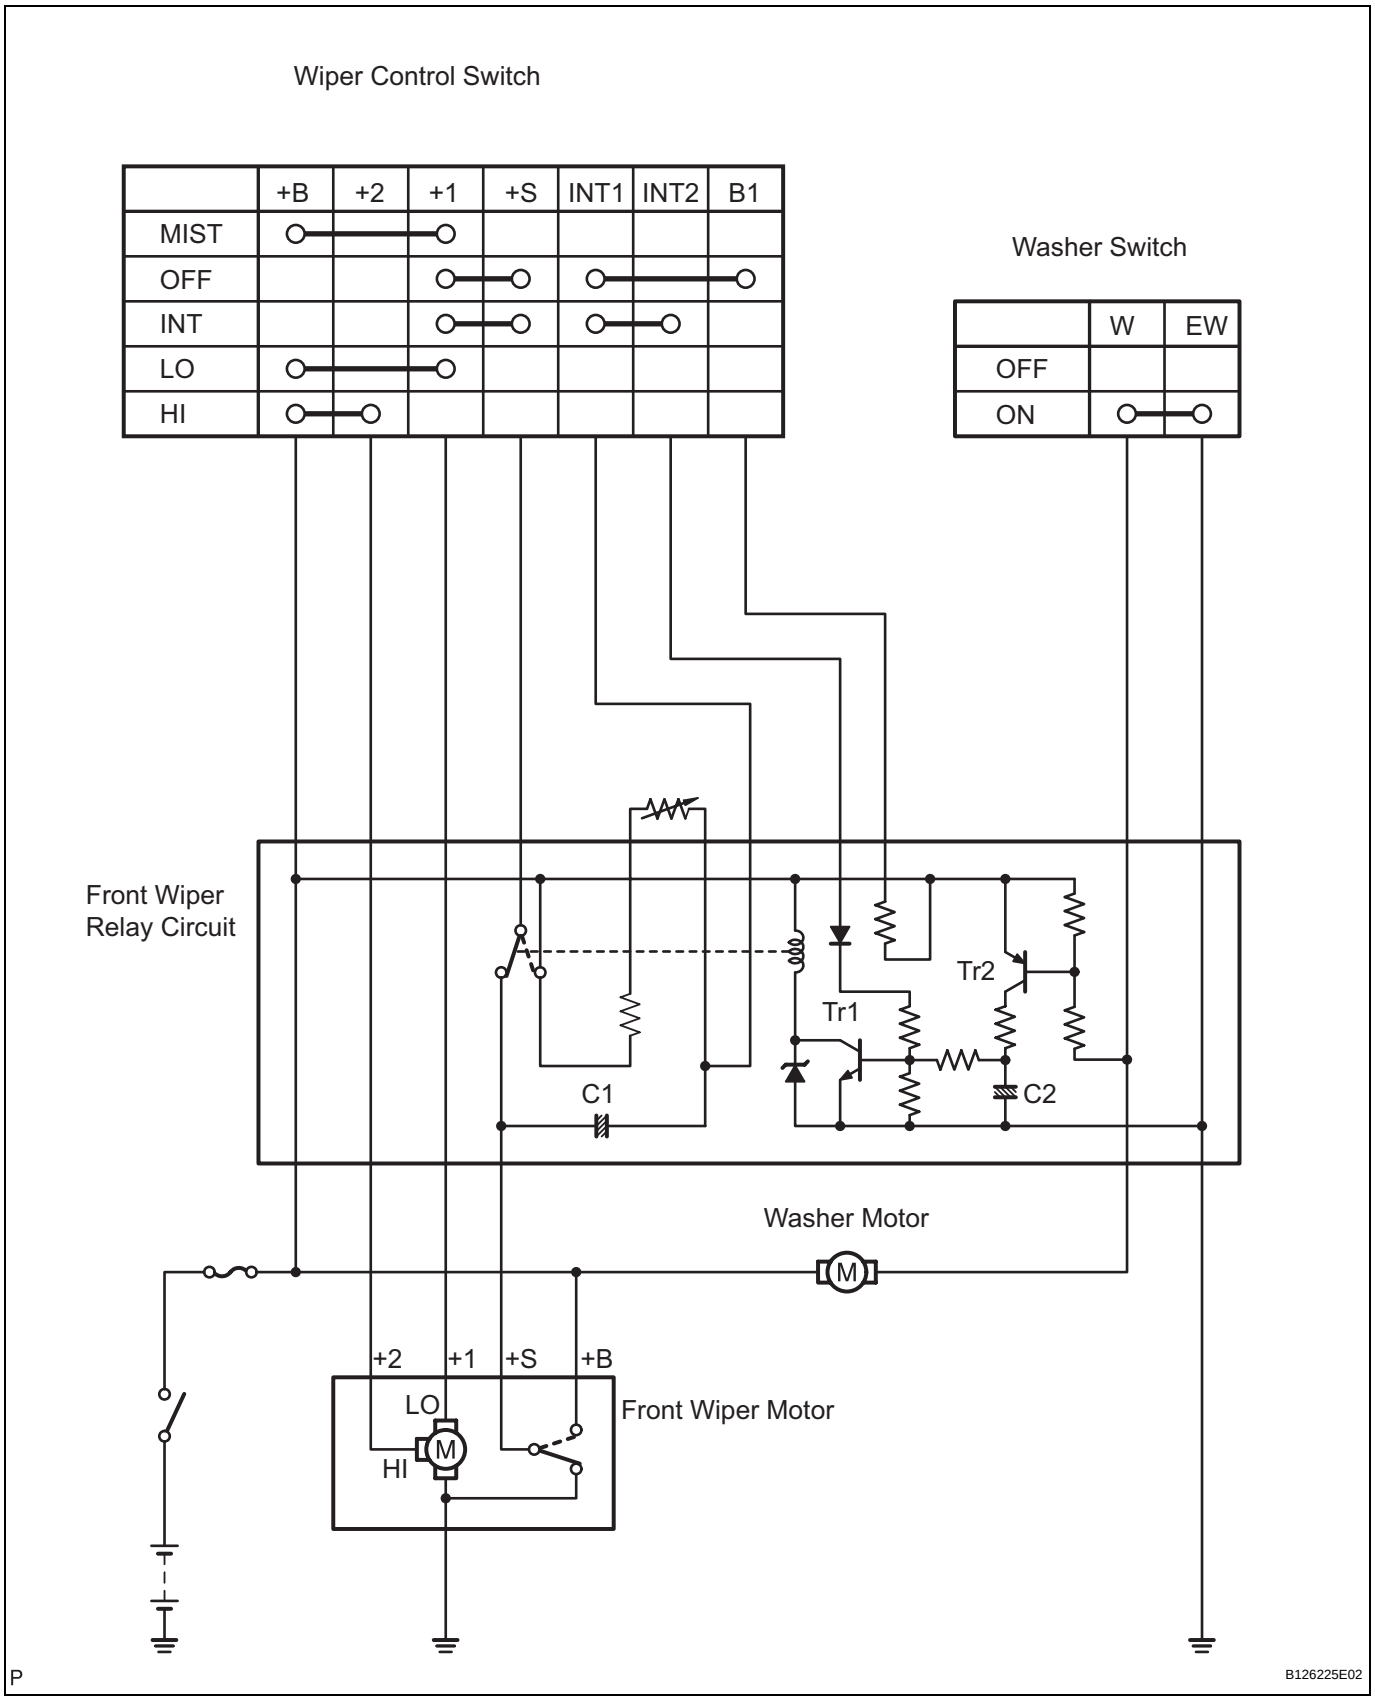
(b) In case the washer nozzle is clogged with wax, etc., remove it and clean the nozzle hole with a soft resin brush, etc.

PARTS LOCATION



WW

SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. WASHER LINKED OPERATION

(a) This system operates the front wipers at a low speed immediately after a jet of washer fluid when the front washer switch is turned on for approximately 0.3 seconds or more. If the switch is turned off within approximately 1.5 seconds, the system stops the wipers when the switch is turned off. If the switch is turned on for approximately 1.5 seconds or more, the system stops the wipers approximately 2.2 seconds after the switch is turned off.

2. INTERMITTENT OPERATION

(a) The system operates the front wipers once in approximately 1.6 to 10.7 seconds when the front wiper switch is turned to the INT position. The intermittent time can be adjusted between 1.6 and 10.7 seconds.

(b) If the wiper control switch is turned to the INT position, current flows from the already charged capacitor C1 to Tr1 (transistor) through terminals INT1 and INT2 of the wiper control switch. When Tr1 turns on, current flows from terminal +S of the wiper control switch to terminal +1 of the wiper control switch, to terminal +1 of the wiper motor, to the wiper motor and finally to the ground, causing the wiper motor to operate. At the same time, current flows from capacitor C1 to terminal INT1 of the wiper control switch and then INT2. When the current flow from capacitor C1 ends, Tr1 turns off to stop the relay contact point and halt the wiper motor. When the relay contact point turns off, capacitor C1 begins to charge again and Tr1 remains off until charging has been completed. This period corresponds to the intermittent time. When capacitor C1 is fully charged, Tr1 turns on and then the relay contact point activates, causing the motor to operate. This cycle is the intermittent operation. The intermittent time can be adjusted by using the intermittent time adjust dial (variable resistor) to change the charge time of capacitor C1.

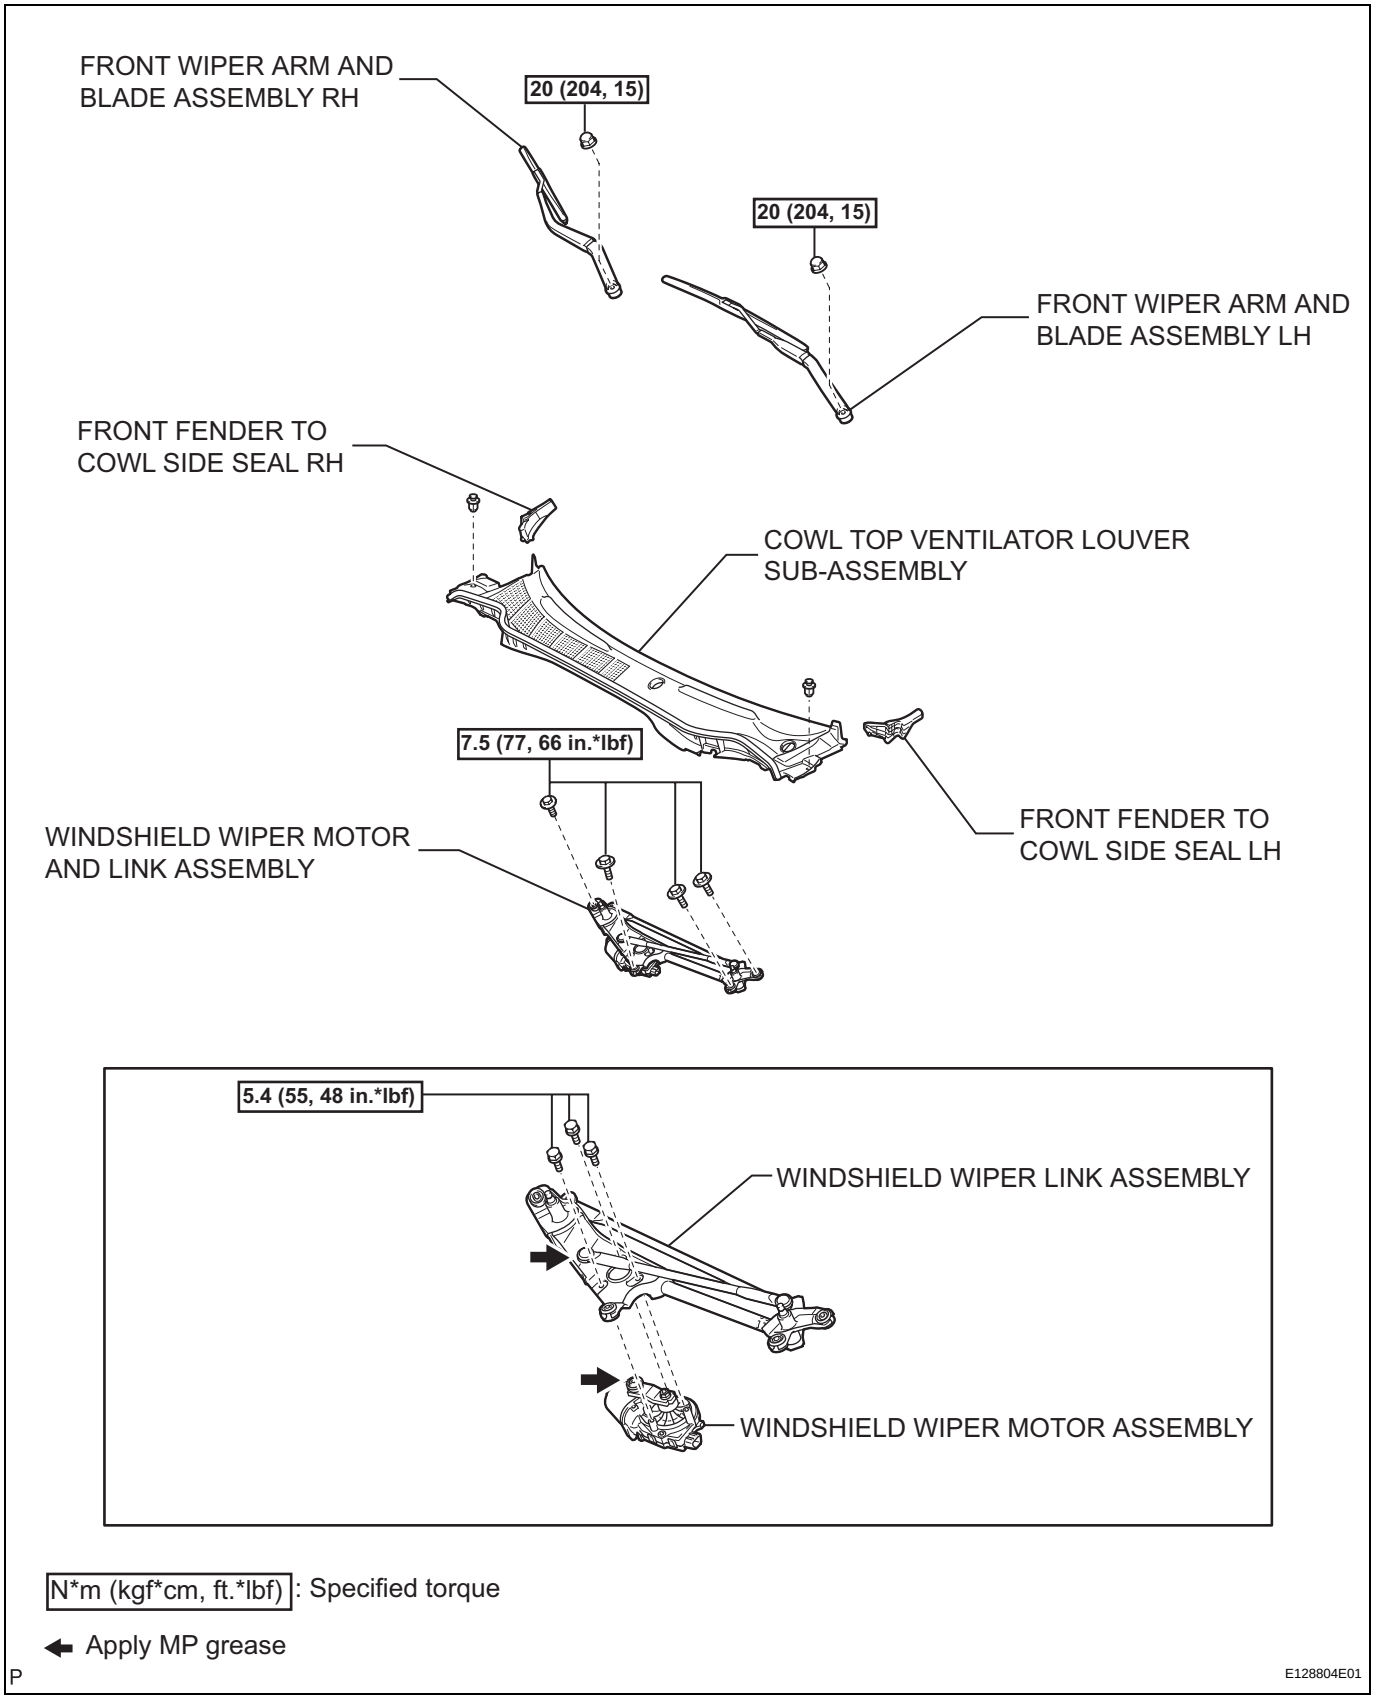
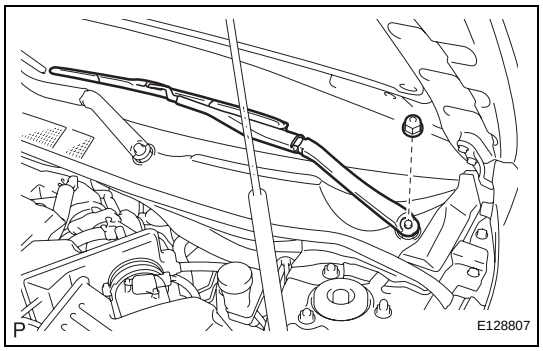
FRONT WIPER MOTOR

COMPONENTS



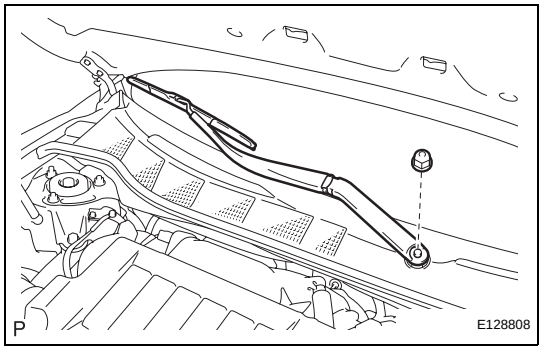
WW



REMOVAL

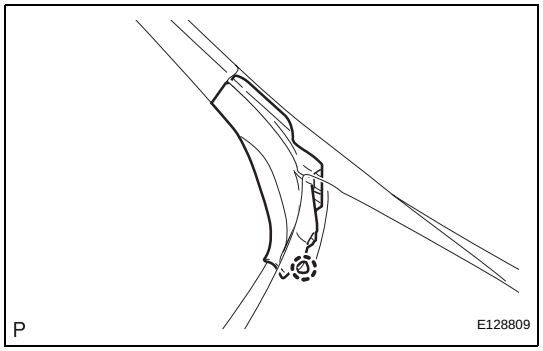
1. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH

(a) Remove the nut and the front wiper arm and blade assembly LH.



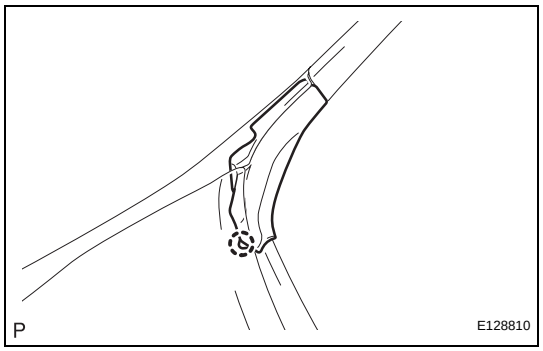
2. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH

(a) Remove the nut and the front wiper arm and blade assembly RH.



3. REMOVE FRONT FENDER TO COWL SIDE SEAL LH

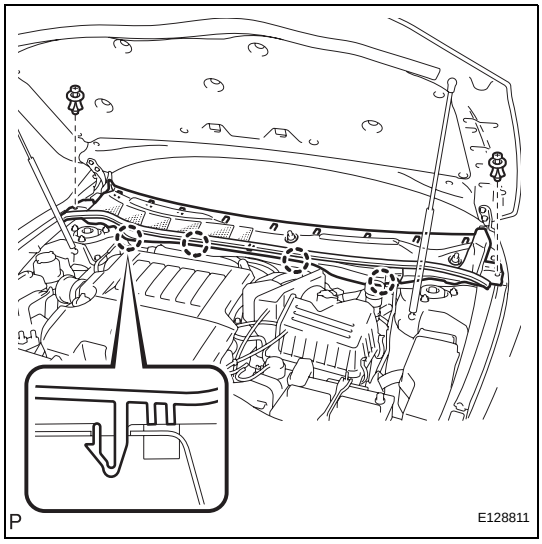
(a) Disengage the claw and remove the front fender to cowl side seal LH.



4. REMOVE FRONT FENDER TO COWL SIDE SEAL RH

(a) Disengage the claw and remove the front fender to cowl side seal RH.

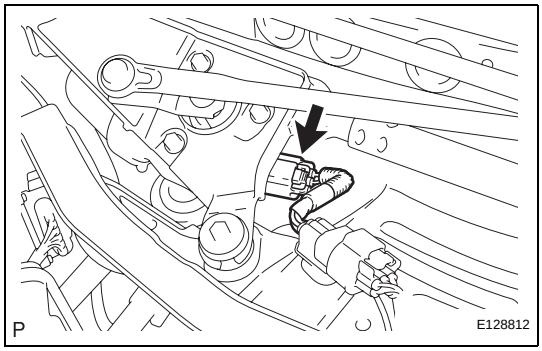
WW



5. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

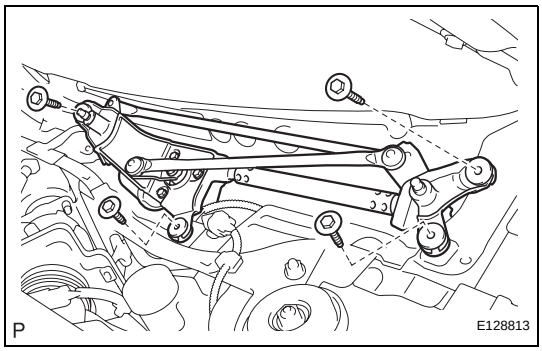
(a) Remove the 2 clips.

(b) Disengage the 4 claws and remove the cowl top ventilator louver sub-assembly.

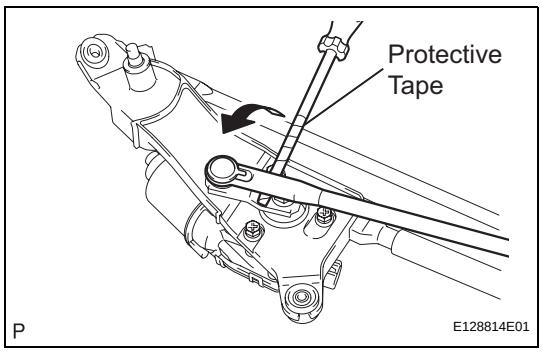


6. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

(a) Disconnect the connector.



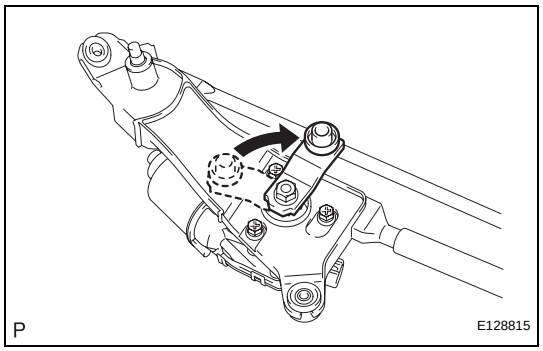
(b) Remove the 4 bolts and the windshield wiper motor and link assembly.



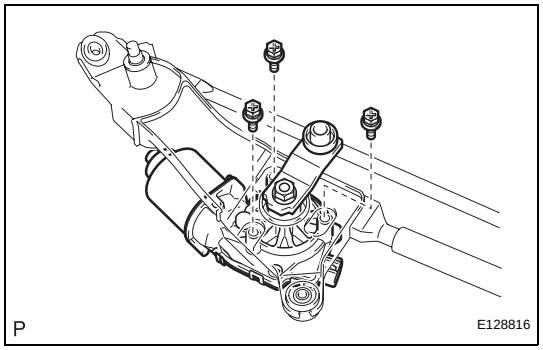
7. REMOVE WINDSHIELD WIPER MOTOR ASSEMBLY

(a) Using a screwdriver, separate the No. 2 windshield wiper link rod from the crank arm pivot of the front wiper motor assembly as shown in the illustration.
HINT:
Tape the screwdriver tip before use.

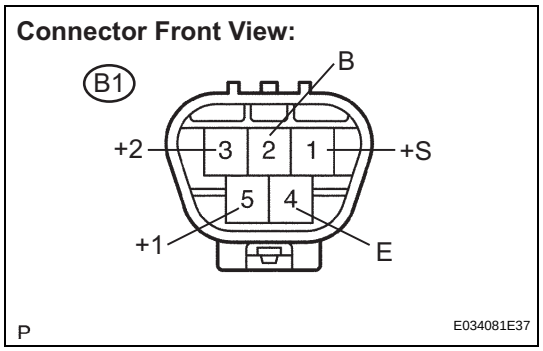
WW



(b) Move the crank arm in the direction indicated by the arrow.



(c) Remove the 3 bolts and the windshield wiper motor assembly from the windshield wiper link assembly.



INSPECTION

1. INSPECT WINDSHIELD WIPER MOTOR ASSEMBLY (for TMC Made)

(a) LO Operation Check

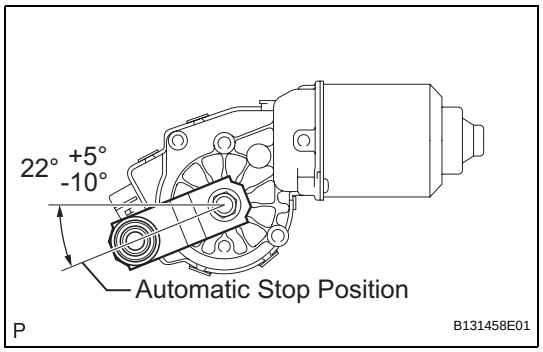
(1) Connect a positive (+) battery lead to terminal B1-5 (+1) of the connector, and a negative (-) battery lead to terminal B1-4 (E), and check that the motor operates at low speed (LO).

(b) HI Operation Check

(1) Connect a positive (+) lead to terminal B1-3 (+2) of the connector, and a negative (-) battery lead to terminal B1-4 (E), and check that the motor operates at high speed (HI).

(c) Automatic Stop Operation Check

(1) Put matchmarks on the windshield wiper motor assembly. The matchmarks will be used to confirm the return of the motor shaft to the park position.

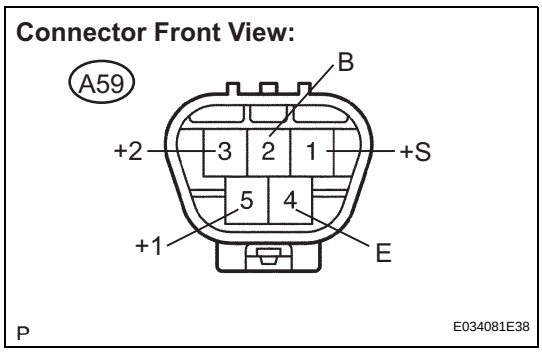


(2) Connect a positive (+) battery lead to terminal B1-5 (+1) of the connector on the wiper motor and connect a negative battery lead to terminal B1-4 (E) of the wiper motor. With the motor operating at low speed (LO), disconnect terminal B1-5 (+1) to stop the wiper motor at a position where the matchmarks do not line up.
HINT:
In the following step, connections will be made at the wiper motor to allow verification of the operation of the park contacts that are operated by the cam in the wiper motor. After the connections have been made, when the motor is not in the park position, current will flow from terminal B1-2 (B) through the park contacts in the wiper motor, to terminal B1-1 (+S). The current will then flow through the jumper wire to terminal B1-5 (+1) through the motor to ground (causing it to operate). When the motor reaches the park position, the park contacts should open, stopping the operation of the wiper motor in the correct location. Terminals B1-2 (B) and B1-1 (+S) are connected by the internal cam in the wiper motor when the wiper motor is not in the park position. Terminals B1-1 (+S) and B1-4 (E) are connected by the internal cam in the wiper motor when the wiper motor is in the park position.

(3) With the ground wire still attached from the previous step, connect a jumper lead between terminal B1-1 (+S) and terminal B1-5 (+1). Next, connect a positive (+) battery lead to terminal B1-2 (B) to cause the wiper motor to operate at low speed. If the wiper motor is operating correctly, the wiper will operate until it reaches the park position. When it reaches the park position, it will automatically stop.

(4) Verify that the matchmarks on the windshield wiper motor assembly are lined up.

WW



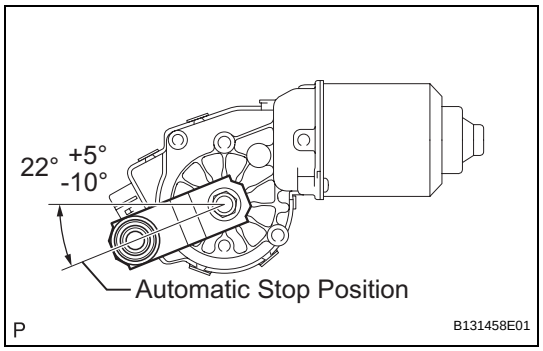
2. INSPECT WINDSHIELD WIPER MOTOR ASSEMBLY (for TMMK Made)

(a) LO Operation Check

(1) Connect a positive (+) battery lead to terminal A59-5 (+1) of the connector, and a negative (-) battery lead to terminal A59-4 (E), and check that the motor operates at low speed (LO).

(b) HI Operation Check

(1) Connect a positive (+) lead to terminal A59-3 (+2) of the connector, and a negative (-) battery lead to terminal A59-4 (E), and check that the motor operates at high speed (HI).



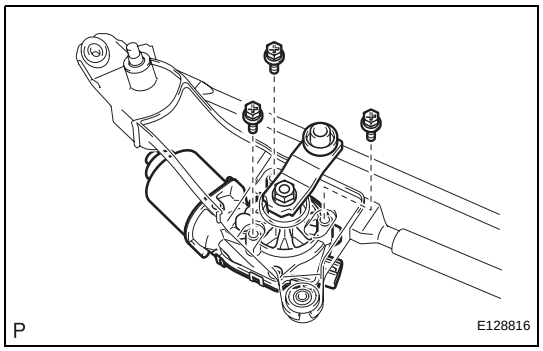
(c) Automatic Stop Operation Check

(1) Put matchmarks on the windshield wiper motor assembly. The matchmarks will be used to confirm the return of the motor shaft to the park position.

(2) Connect a positive (+) battery lead to terminal A59-5 (+1) of the connector on the wiper motor and connect a negative battery lead to terminal A59-4 (E) of the wiper motor. With the motor operating at low speed (LO), disconnect terminal A59-5 (+1) to stop the wiper motor at a position where the matchmarks do not line up.
HINT:
In the following step, connections will be made at the wiper motor to allow verification of the operation of the park contacts that are operated by the cam in the wiper motor. After the connections have been made, when the motor is not in the park position, current will flow from terminal A59-2 (B) through the park contacts in the wiper motor, to terminal A59-1 (+S). The current will then flow through the jumper wire to terminal A59-5 (+1) through the motor to ground (causing it to operate). When the motor reaches the park position, the park contacts should open, stopping the operation of the wiper motor in the correct location. Terminals A59-2 (B) and A59-1 (+S) are connected by the internal cam in the wiper motor when the wiper motor is not in the park position. Terminals A59-1 (+S) and A59-4 (E) are connected by the internal cam in the wiper motor when the wiper motor is in the park position.

(3) With the ground wire still attached from the previous step, connect a jumper lead between terminal A59-1 (+S) and terminal A59-5 (+1). Next, connect a positive (+) battery lead to terminal A59-2 (B) to cause the wiper motor to operate at low speed. If the wiper motor is operating correctly, the wiper will operate until it reaches the park position. When it reaches the park position, it will automatically stop.

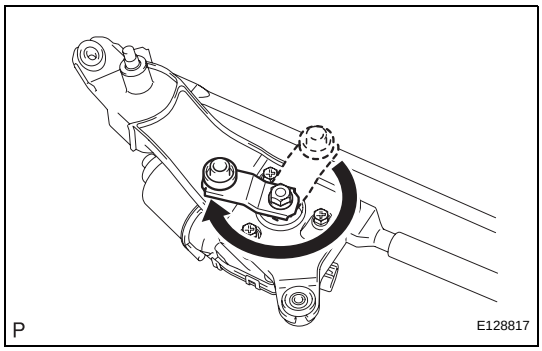
(4) Verify that the matchmarks on the windshield wiper motor assembly are lined up.



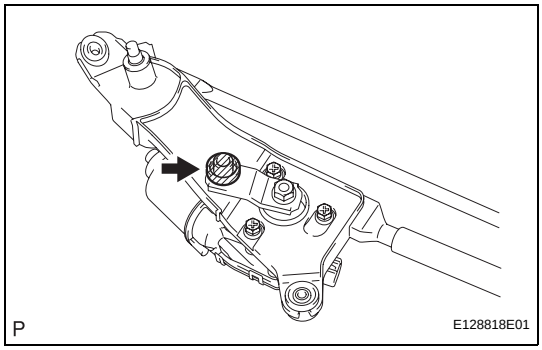
INSTALLATION

1. INSTALL WINDSHIELD WIPER MOTOR ASSEMBLY

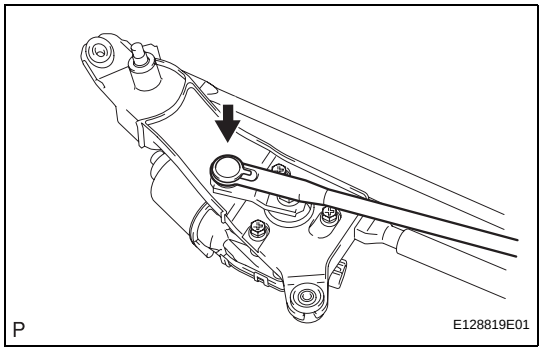
(a) Install the windshield wiper motor assembly with the 3 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



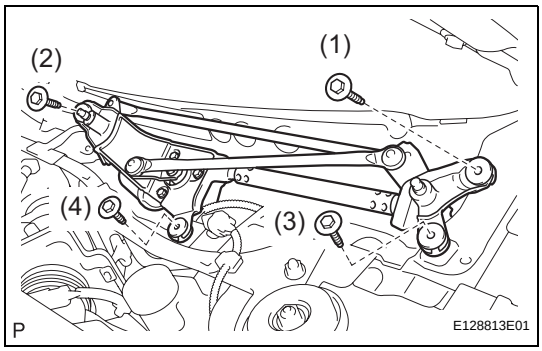
(b) Move the crank arm in the direction indicated by the arrow.



(c) Apply MP grease to the crank arm pivot of the windshield wiper motor assembly.

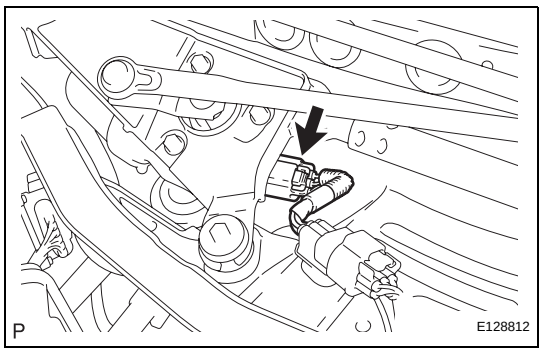


(d) Install the No. 2 windshield wiper link rod to the pivot of the windshield wiper motor assembly.



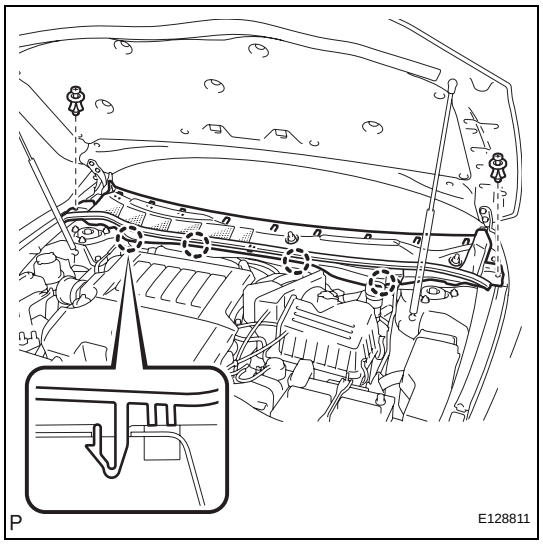
2. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

(a) Install the windshield wiper motor and link assembly with the 4 bolts.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
NOTICE:
Tighten the bolts in the order shown in the illustration.



(b) Connect the connector.

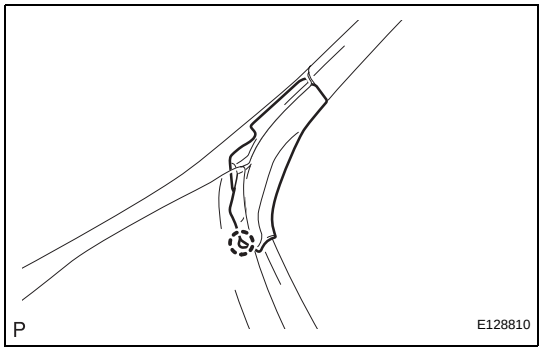
WW



3. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

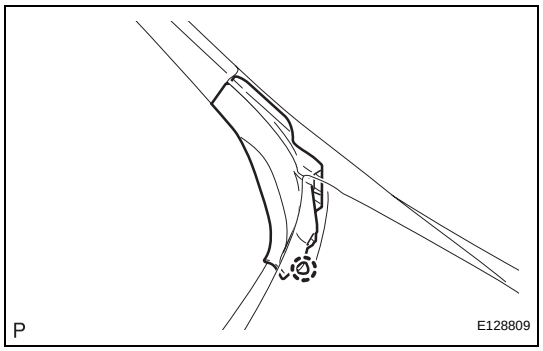
(a) Engage the 4 claws and install the cowl top ventilator louver sub-assembly.

(b) Install the 2 clips.



4. INSTALL FRONT FENDER TO COWL SIDE SEAL RH

(a) Engage the claw and install the front fender to cowl side seal RH.

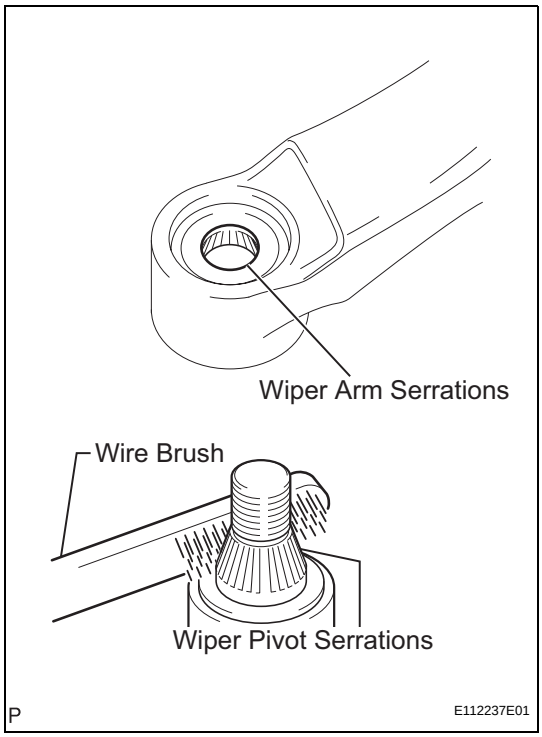


5. INSTALL FRONT FENDER TO COWL SIDE SEAL LH

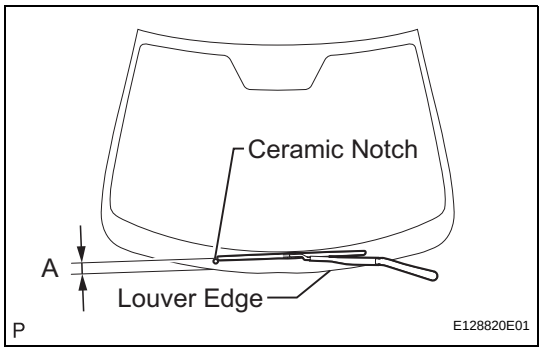
(a) Engage the claw and install the front fender to cowl side seal LH.

6. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH

(a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.



(b) Clean the wiper arm serrations.
(c) When reinstalling:
(1) Clean the wiper pivot serrations with a wire brush.

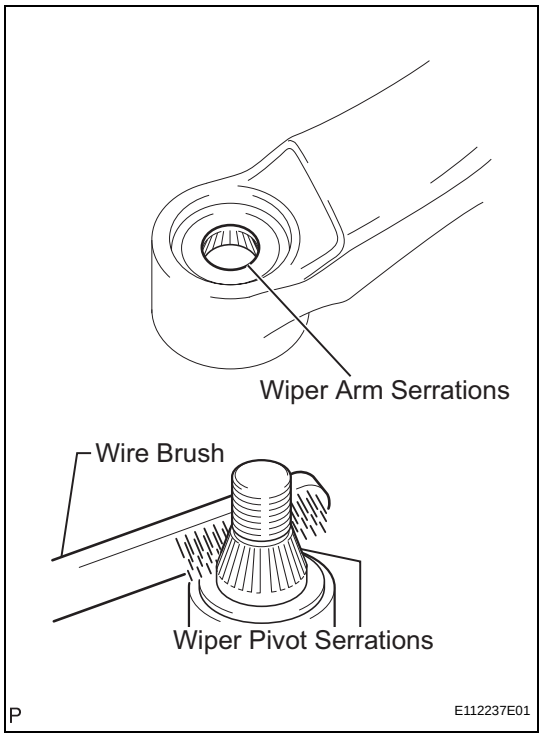


(d) Install the front wiper arm and blade assembly LH with the nut to the position shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
HINT:
Hold the arm hinge by hand to fasten the nut.

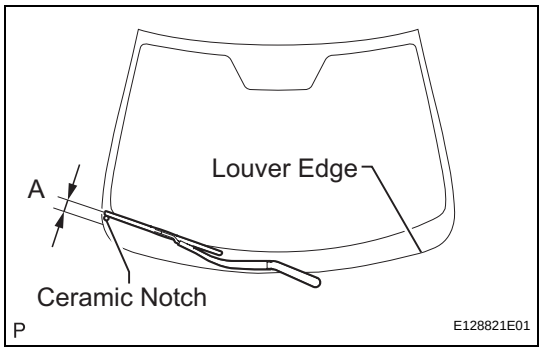
Area	Measurement
A	37 to 52 mm (1.46 to 2.05 in.)

7. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH

(a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.



(b) Clean the wiper arm serrations.
(c) When reinstalling:
  (1) Clean the wiper pivot serrations with a wire brush.



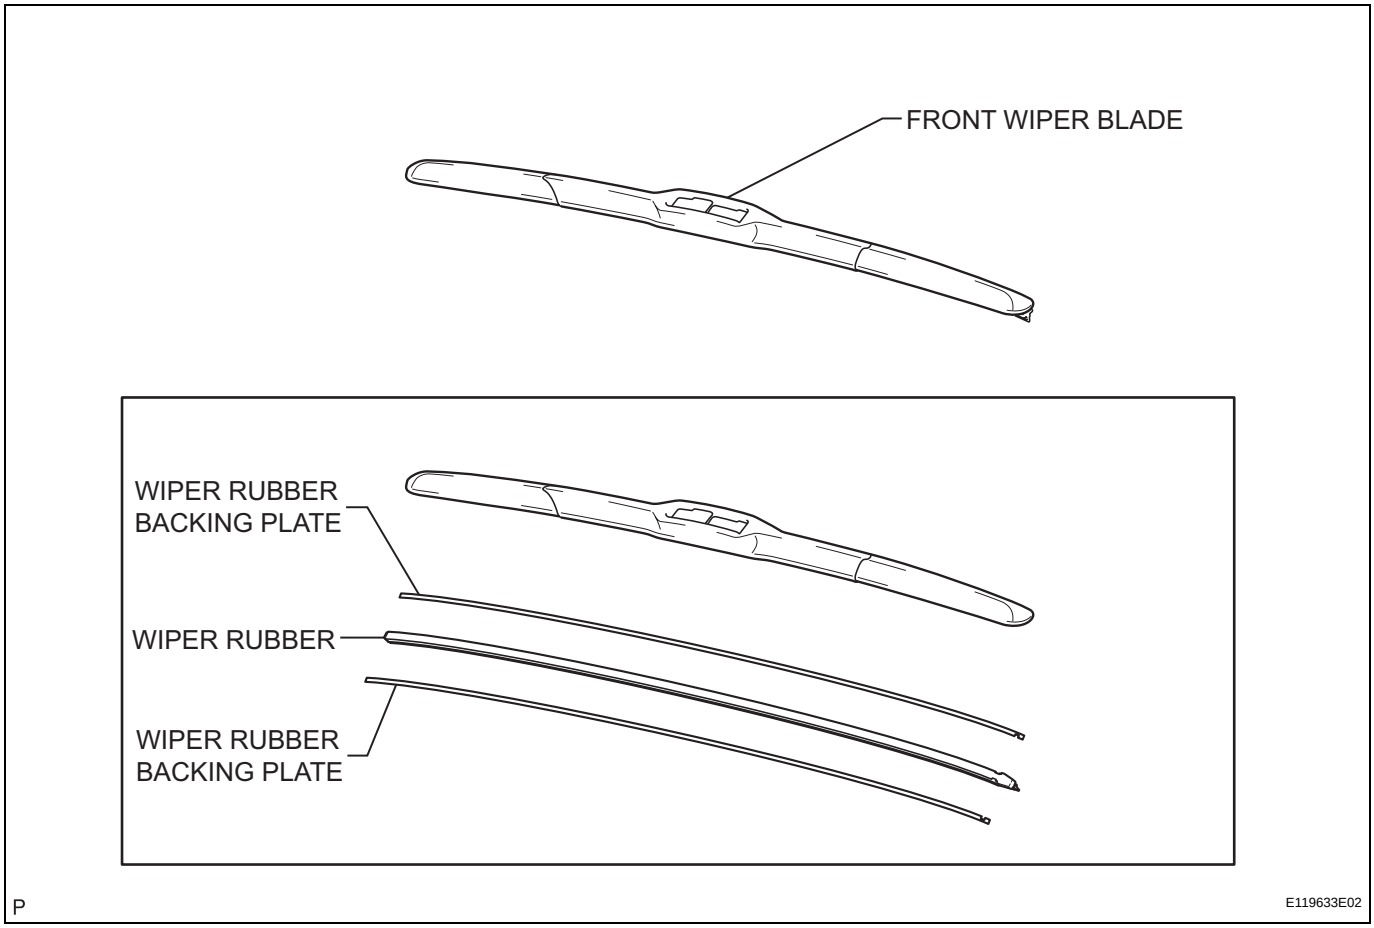
(d) Install the front wiper arm and blade assembly RH with the nut to the position shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
HINT:
Hold the arm hinge by hand to fasten the nut.

Area	Measurement
A	23 to 38 mm (0.90 to 1.49 in.)

(e) Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and the wipers do not come into contact with the vehicle body.

FRONT WIPER RUBBER

COMPONENTS



REMOVAL

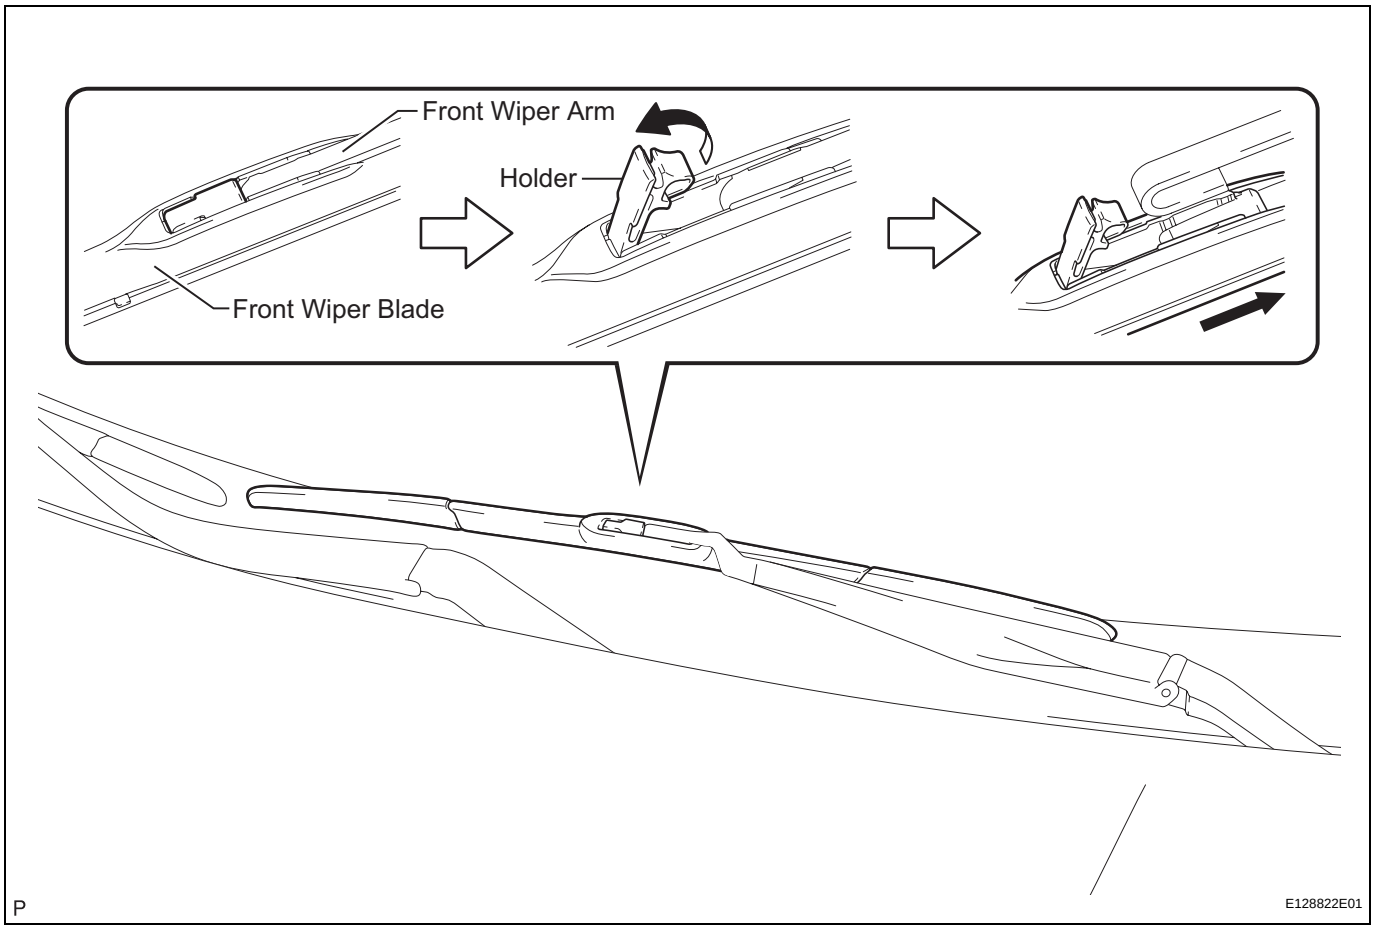
1. REMOVE FRONT WIPER BLADE

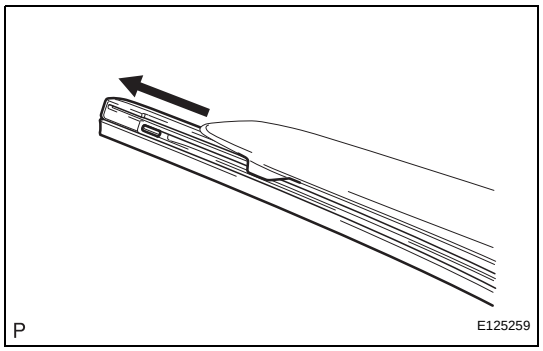
(a) Disengage the holder of the front wiper blade.

(b) Remove the front wiper blade from the front wiper arm as shown in the illustration.

NOTICE:

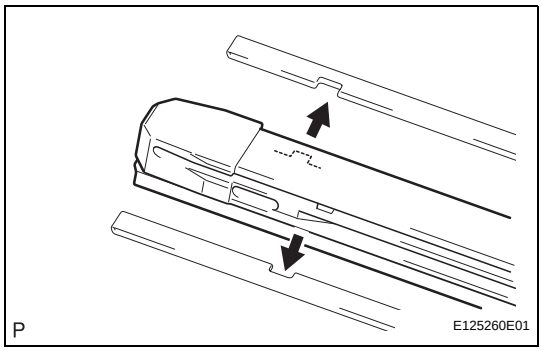
Do not bend the front wiper arm with the front wiper blade removed because the arm tip could damage the windshield surface.



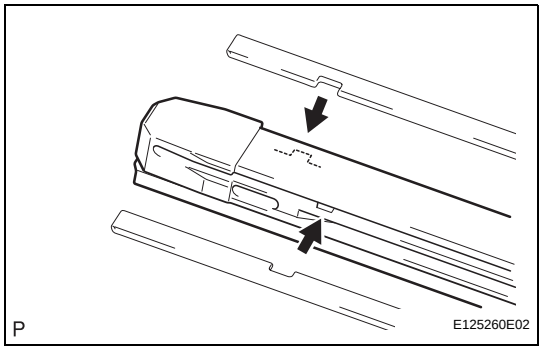


2. REMOVE WIPER RUBBER

(a) Remove the wiper rubber and the wiper rubber backing plates from the front wiper blade.



(b) Remove the 2 wiper rubber backing plates from the wiper rubber.



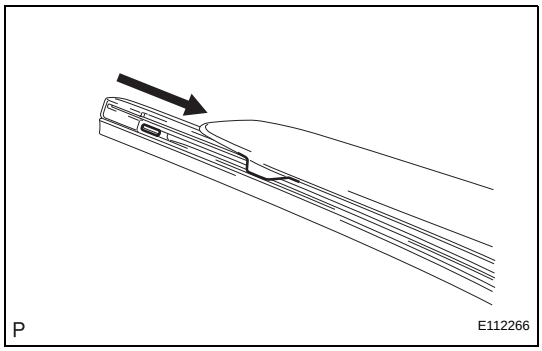
INSTALLATION

1. INSTALL WIPER RUBBER

(a) Install the 2 wiper rubber backing plates to the wiper rubber.

NOTICE:

- **Align the protrusions on the wiper rubber with the notches in the backing plates.**
- **Align the curves of the backing plates with the curve of the glass.**



(b) Install the wiper rubber to the front wiper blade with the tip of the rubber (curved end) facing the axis of the wiper arm.

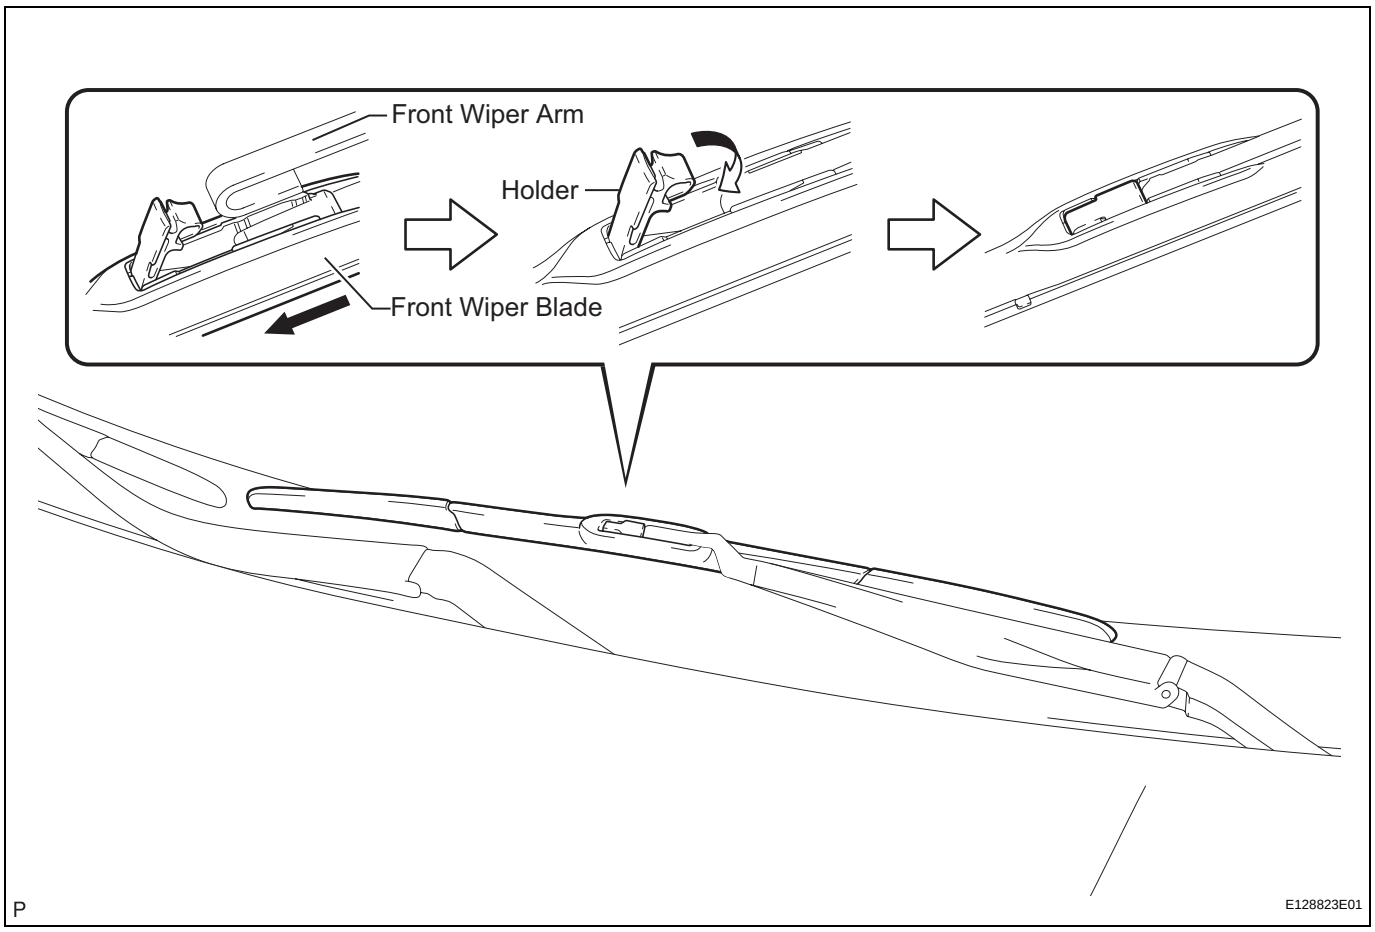
NOTICE:

Firmly push the wiper rubber into the wiper blade to securely engage them.

2. INSTALL FRONT WIPER BLADE

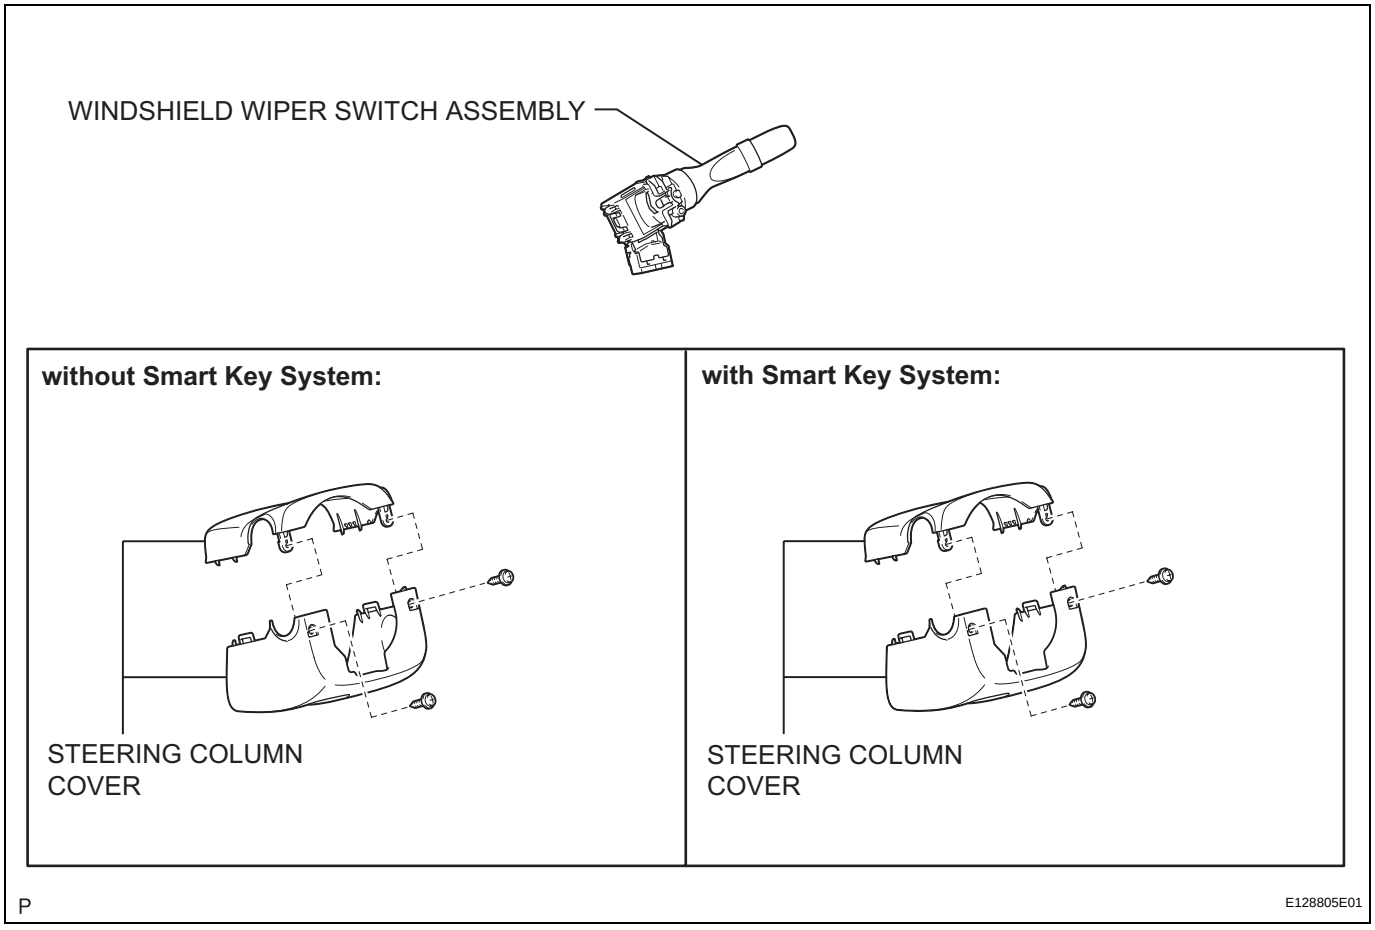
(a) Install the front wiper blade as shown in the illustration.

(b) Install the holder of the front wiper blade.



WIPER SWITCH

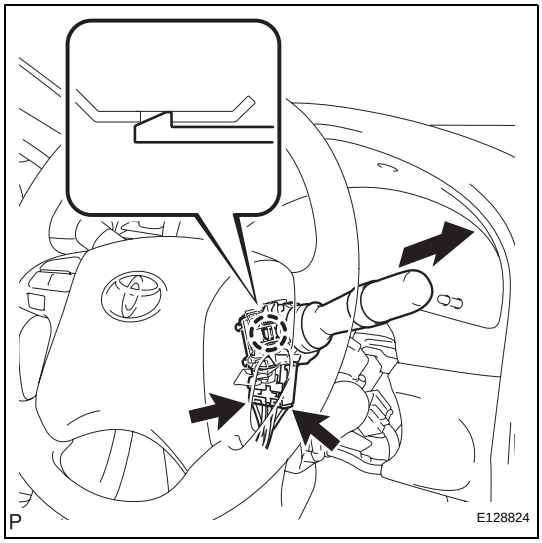
COMPONENTS

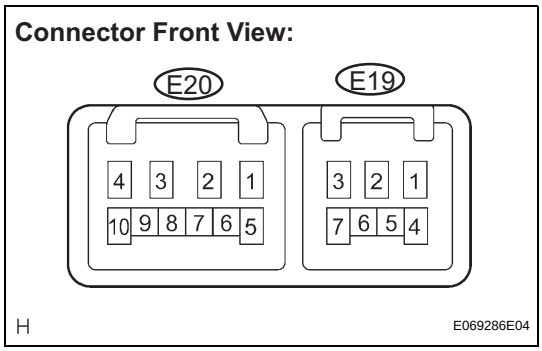


REMOVAL

1. **REMOVE STEERING COLUMN COVER (See page SR-39)**

2. **REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY**
   (a) Disconnect the 2 connectors.
   (b) Disengage the claw and remove the windshield wiper switch assembly as shown in the illustration.
   NOTICE:
   If the claw is pushed with excessive force, it may break.





INSPECTION

1. **INSPECT WINDSHIELD WIPER SWITCH ASSEMBLY**
   (a) Check the continuity of the windshield wiper switch assembly.
      (1) Measure the resistance according to the value(s) in the table below.
      Standard resistance:
      Front Wiper Switch

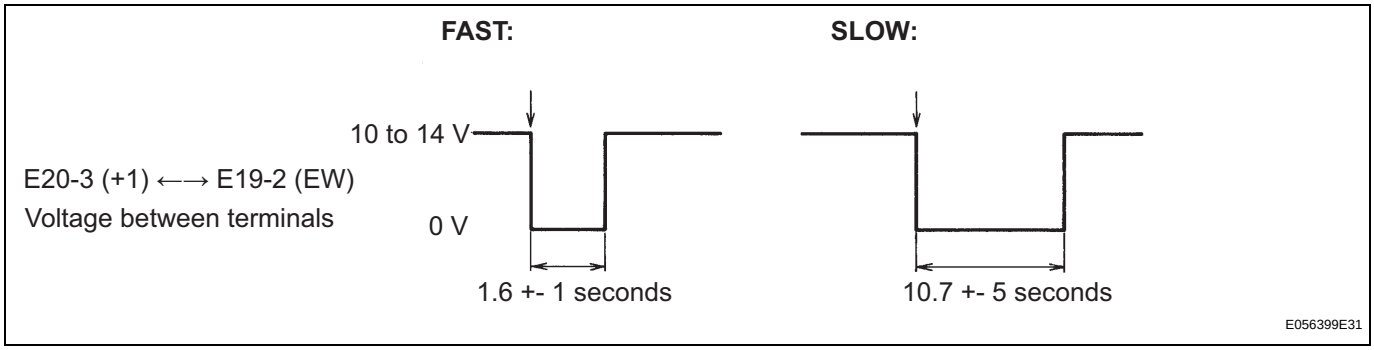
Switch Position	Tester Connection	Specified Resistance
MIST	E20-2 (+B) - E20-3 (+1)	Below 1 Ω
OFF	E20-1 (+S) - E20-3 (+1)	Below 1 Ω
INT	E20-1 (+S) - E20-3 (+1)	Below 1 Ω
LO	E20-2 (+B) - E20-3 (+1)	Below 1 Ω
HI	E20-2 (+B) - E20-4 (+2)	Below 1 Ω

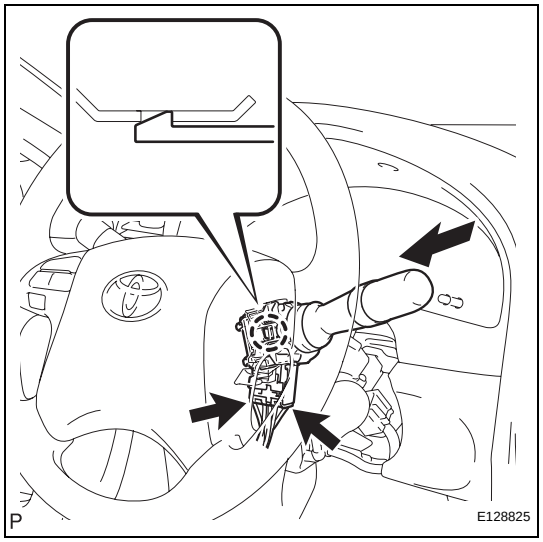
Front Washer Switch

Switch Position	Tester Connection	Specified Resistance
OFF	E19-3 (WF) - E19-2 (EW)	10 kΩ or higher
ON	E19-3 (WF) - E19-2 (EW)	Below 1 Ω

   (b) Intermittent Operation Check
      (1) Connect the voltmeter (+) terminal to terminal E20-3 (+1) of the connector and the voltmeter (-) terminal to terminal E19-2 (EW).
      (2) Connect a positive (+) battery lead to terminal E20-2 (+B) of the connector and a negative (-) battery lead to terminals E19-2 (EW) and E20-1 (+S).
      (3) Turn the wiper switch to the INT position.
      (4) Connect a positive (+) battery lead to terminal E20-1 (+S) of the connector for 5 seconds.

(5) Connect a negative (-) battery lead to terminal E20-4 (+2) of the connector. Operate the intermittent wiper adjustment ring and measure the voltage between terminals E20-3 (+1) and E19-2 (EW).





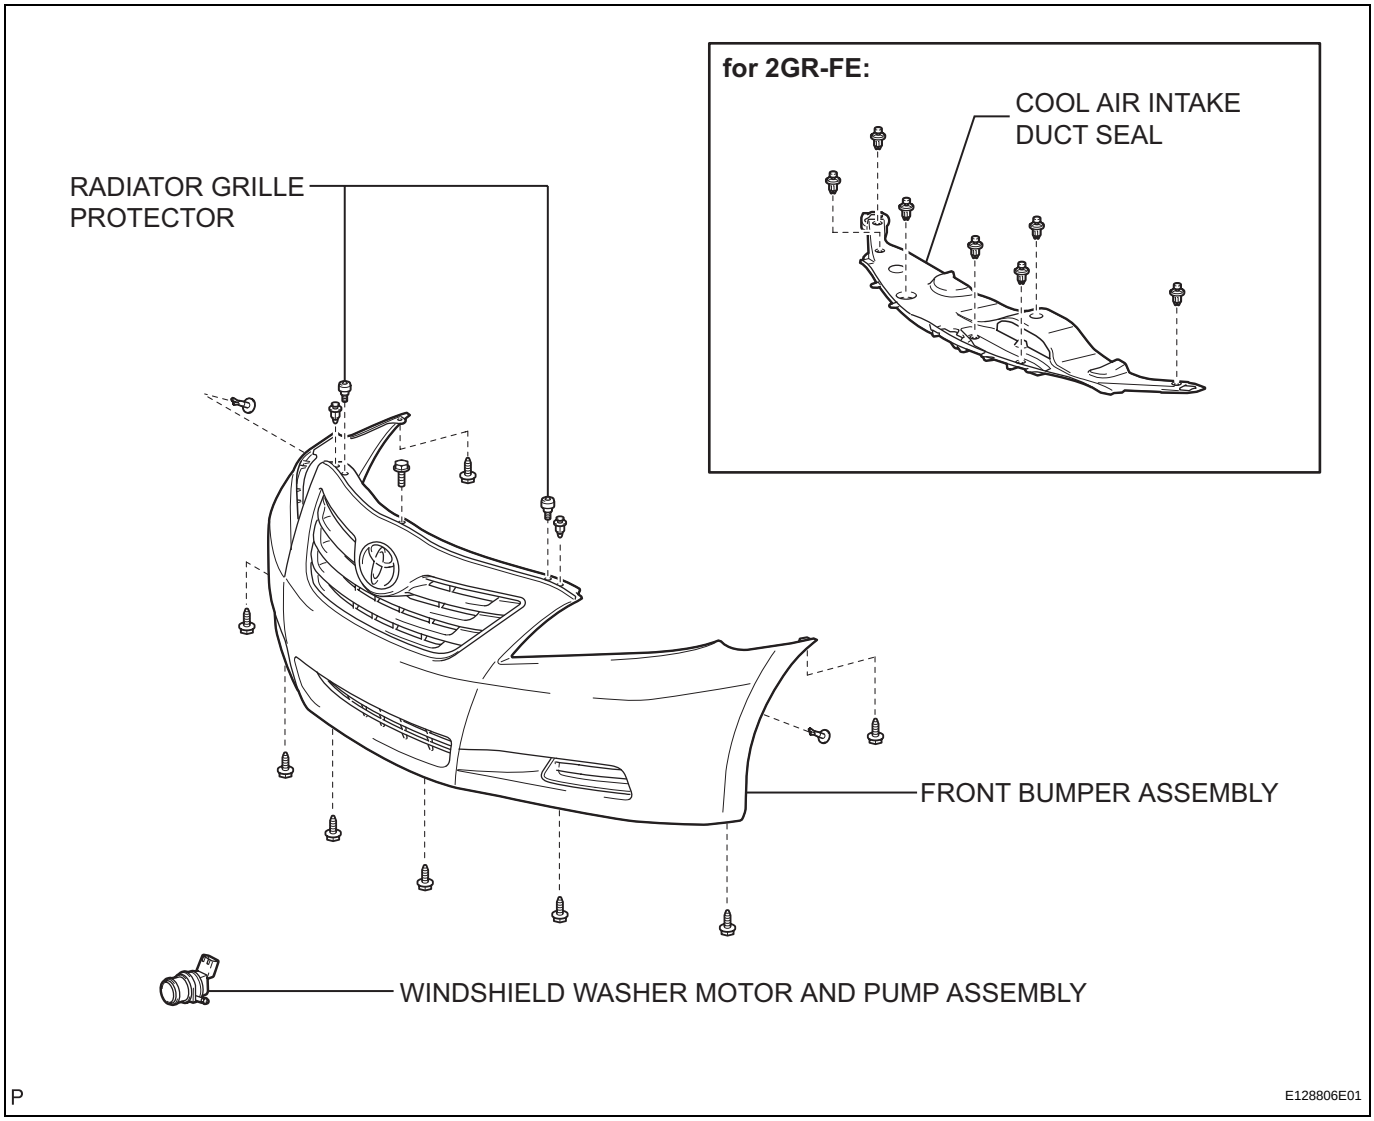
INSTALLATION

1. **INSTALL WINDSHIELD WIPER SWITCH ASSEMBLY**
   (a) Engage the claw and install the windshield wiper switch assembly as shown in the illustration.
   (b) Connect the 2 connectors.
2. **INSTALL STEERING COLUMN COVER (See page SR-50)**

WW

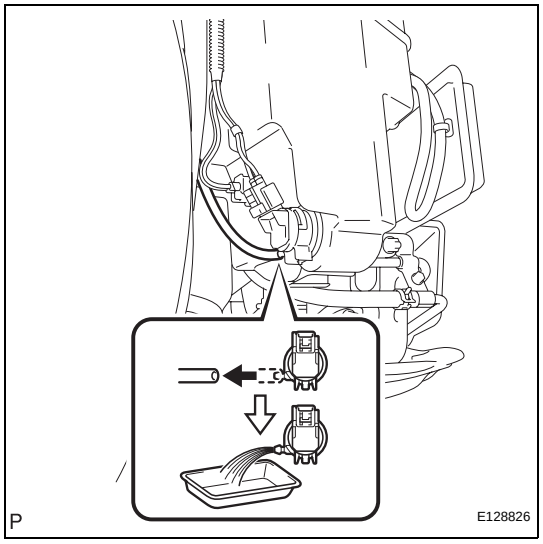
FRONT WASHER MOTOR

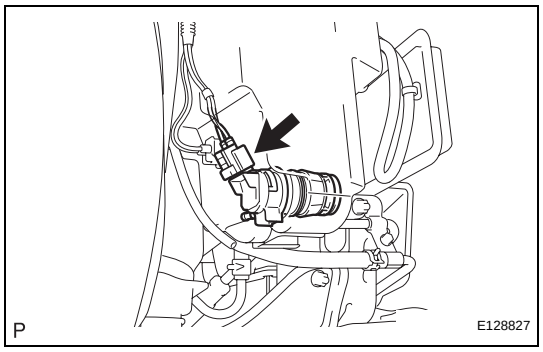
COMPONENTS



REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)**
3. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**
4. **DRAIN WASHER FLUID**
   (a) Disconnect the washer hose from the windshield washer motor and pump assembly, and drain the washer fluid.





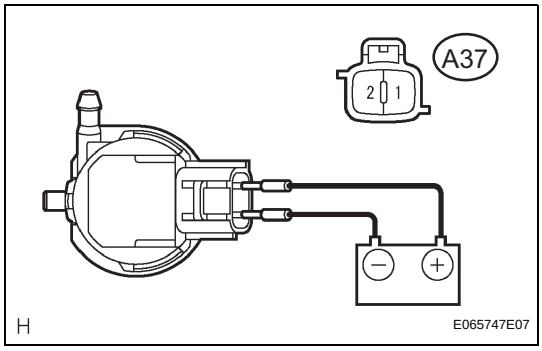
5. **REMOVE WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the windshield washer motor and pump assembly.

WW

INSPECTION

1. INSPECT WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY

HINT:
This check should be performed with the front washer motor and pump installed to the washer jar.



(a) Fill the washer jar with washer fluid.
(b) Connect the positive (+) battery lead to terminal A37-1 of the washer motor and pump, and the negative (-) lead to terminal A37-2.
(c) Check if washer fluid is pumped from the washer jar.
OK:
Washer fluid is pumped from the washer jar.

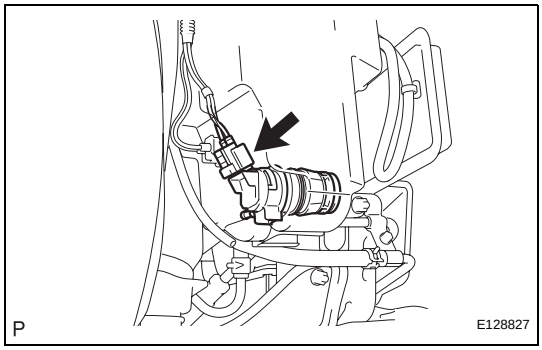
2. INSPECT WASHER FLUID LEVEL SENSOR

HINT:
The following check should be performed with the windshield washer motor and pump installed to the washer jar.

(a) Fill the washer jar with washer fluid.
(b) Disconnect the connector from the washer fluid level sensor.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

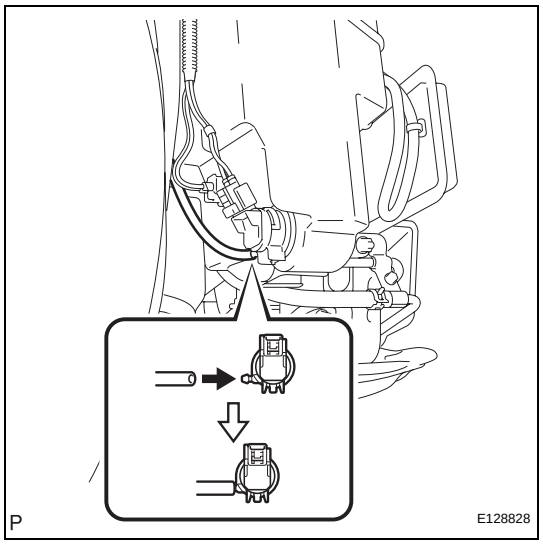
Fluid Volume	Specified Condition
More than 700 to 900 ml	10 kΩ or higher
Less than 700 to 900 ml	Below 1 Ω

INSTALLATION



1. INSTALL WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY

(a) Install the windshield washer motor and pump assembly.
(b) Connect the connector.



2. **FILL UP WASHER JAR WITH WASHER FLUID**
   (a) Connect the washer hose to the windshield washer motor and pump assembly and fill the washer jar with washer fluid.

3. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**

4. **INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**

5. **INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-14)**

WASHER NOZZLE

ON-VEHICLE INSPECTION

1. INSPECT WASHER NOZZLE SUB-ASSEMBLY

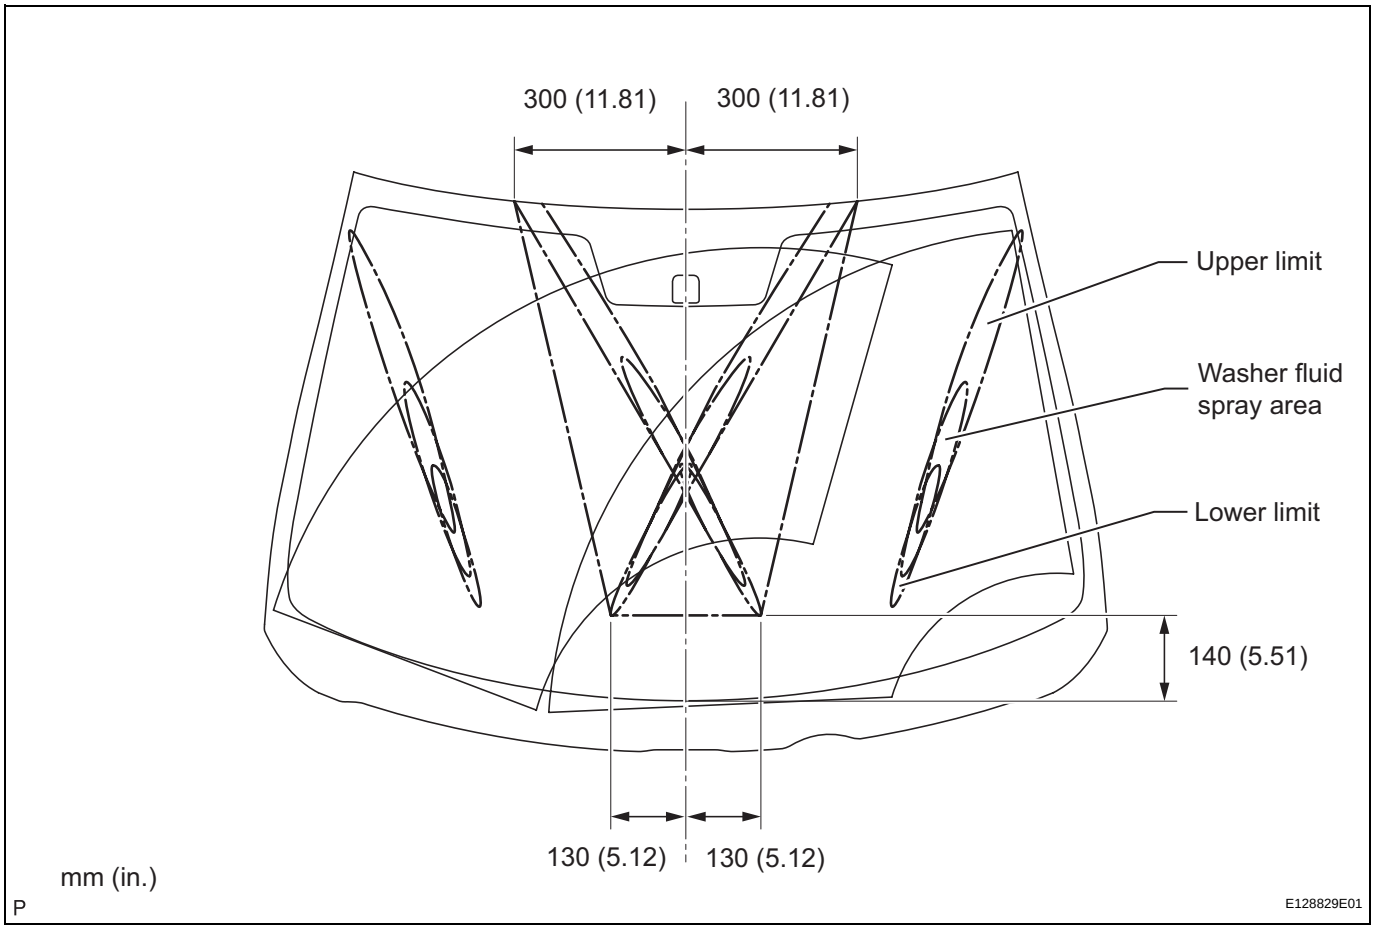
(a) With the engine running, check the position that the washer fluid hits the windshield.

Standard:

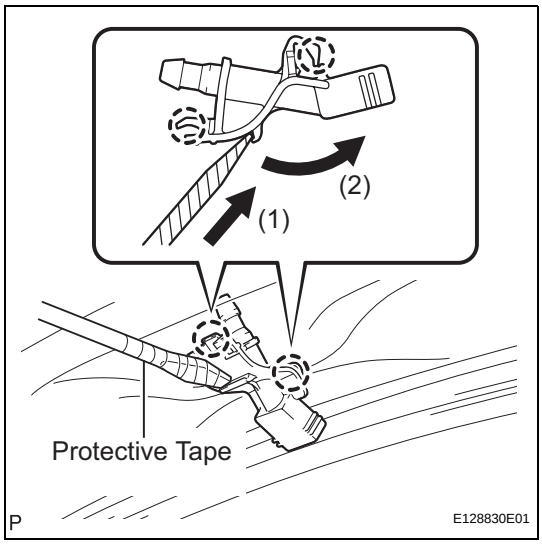
Washer fluid hits the windshield in the areas shown in the illustration.

HINT:

If the result is not as specified, replace the washer nozzle.



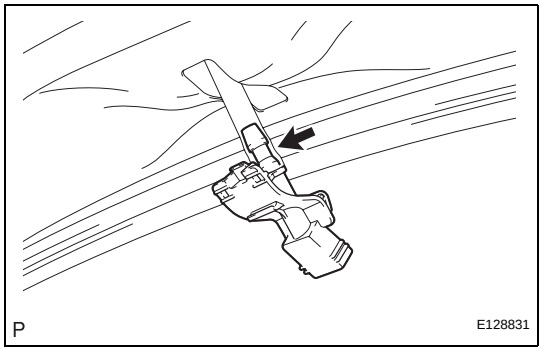
WW



ADJUSTMENT

1. ADJUST WASHER NOZZLE SUB-ASSEMBLY

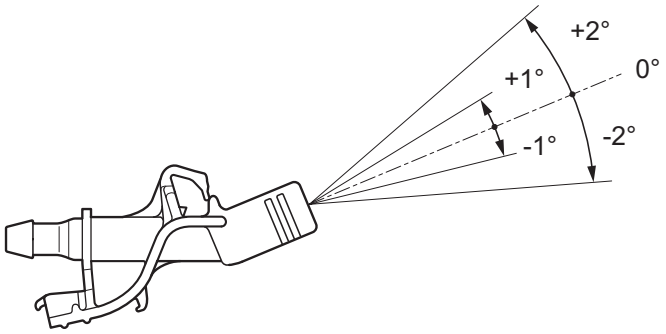
(a) Using a screwdriver, disengage the 2 claws and separate the washer nozzle sub-assembly as shown in the illustration.
NOTICE:
Be careful not to damage the windshield.
HINT:
Tape the screwdriver tip before use.

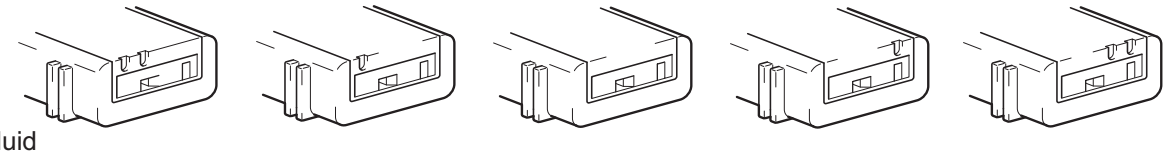


(b) Disconnect the washer nozzle sub-assembly from the washer hose.
NOTICE:
Washer nozzles cannot be reused.

(c) Select a washer nozzle sub-assembly so that the washer fluid spray area is within the standard.

Available Washer Nozzles:





Washer Fluid Spray Angle	-2°	-1°	0°	+1°	+2°
Part Number	85381-30210	85381-30190	85381-30170	85381-30180	85381-30200

P
E128832E01

WW

(d) Connect the selected washer nozzle sub-assembly to the washer hose.
(e) Engage the 2 claws and install the washer nozzle sub-assembly.
